ENGINEERING STATEMENT OF DARWIN A. PETERSON
OF THE FIRM OF A. EARL CULLUM, JR., AND ASSOCIATES, CONSULTING ENGINEERS,
IN CONNECTION WITH ADJUSTMENTS AND PROOF OF PERFORMANCE MEASUREMENTS
FOR THE OPERATION OF RADIO STATION KLEO ON 1480 KILOHERTZ
WITH 5 KILOWATTS OF POWER DIRECTIONAL DAYTIME
AND 1 KILOWATT OF POWER DIRECTIONAL NIGHTTIME
FILE NO. BMP-13,000

* * *

I, Darwin A. Peterson, am an engineer associated with the firm of A. Earl Cullum, Jr., and Associates, Consulting Engineers, with offices located in Dallas, Texas. I graduated from Southern Methodist University in 1934 with a Bachelor of Science Degree in Electrical Engineering. I have been employed in an engineering capacity by broadcast stations since 1933. I have been a partner in the firm of A. Earl Cullum, Jr., and Associates since 1940. My qualifications as an engineer are known to the Federal Communications Commission. This engineering statement has been prepared on behalf of Swanco Broadcasting, Inc., licensee of Radio Station KLEO, Wichita, Kansas.

Swanco Broadcasting, Inc., was authorized by construction permit, File No. BMP-13,000, to relocate the transmitting plant to a new location at 5610 East 29th Street, Wichita, Kansas. Subsequently, the City of Wichita gave the official address of the location as 5620 East 29th Street. The location is the same but the street number was changed.

ADJUSTMENTS AND MEASUREMENTS

The antenna system at the new location consists of five towers. The daytime antenna uses towers #1, #2, #3, and #4 arranged in a parallelogram. The nighttime antenna uses towers #1, #2, #4 and #5 arranged in a parallelogram. For nondirectional test operation, tower #3 was fed and the towers #1, #2, #4, and #5 were detuned by adjusting the tap on the sampling line isolation coil for minimum current at the sampling loop. The tap on the isolation coil of tower #3 was then set at the average position of the taps on the other towers. The resistance at the base of tower #3 was measured with a radio-frequency bridge, and found to be 44.9 ohms. The current into tower #3 was maintained at 10.55 amperes for 5 kilowatts of power for nondirectional test operation. The daytime and nighttime patterns were adjusted to comply with the terms of the construction permit. The resistance at the common point of input was measured with a radio-frequency bridge and adjusted to 50 ohms. The current into the common point of input was maintained at 10.4 amperes and 4.65 amperes for 5 kilowatt daytime and 1 kilowatt nighttime operations.

Field intensity measurements were taken along 11 radials for three modes of operation and by the personnel with equipment shown in the following tabulation:

<u>Azimuth</u>	<u>ND</u>	<u>DA-D</u>	<u>DA-N</u>
00°	CMD & LFH	LFH	Not measured
18	CMD & LFH	Not measured	LFH
50	CMD & LFH	LFH	LFH

(Continued on Page 2)

<u>Azimuth</u>	<u>ND</u>	<u>DA-D</u>	<u>DA-N</u>
80°	CMD & LFH	LFH	LFH
110	CMD & LFH	LFH	LFH
155	CMD & LDB	LDB	LDB
190	CMD & LDB	LDB	LDB
215	CMD & LDB	LDB	LDB
258	CMD & LDB	LDB	LDB
302	CMD & LDB	LDB	LDB
345	CMD & LFH	LFH	LFH

CMD: Mr. C. M. Daniell, a partner in the firm of A. Earl Cullum, Jr., and Associates, measured the walk-in points within 1.5 to 2.0 miles with a field intensity meter Type 120E, Serial Number 811, which was last calibrated by Potomac Instruments on July 18, 1969.

LFH: Mr. L. F. Heithecker, an associate engineer in the firm of A. Earl Cullum, Jr., and Associates, measured the more distant points with a field intensity meter Type 120E, Serial Number 1391, which was last calibrated by Vitro Electronics on October 3, 1966.

LDB: Mr. Leonard D. Ballard, Chief Engineer of Swanco Broadcasting, Inc., measured the more distant points with a field intensity meter Type 120E, Serial Number 1707, which was last calibrated by Defense Electronics on June 29, 1970.

Messrs. Daniell, Heithecker, and Ballard are experienced in taking field intensity measurements. The three field intensity meters were compared during the proof of performance work and found to agree within the rated accuracy for these instruments.

The distances to points that were measured close in for nondirectional operation only were scaled from tower #3. The distances to points farther out were scaled from a point midway between the center of the daytime array and the center of the nighttime array.

The impedances at the base of the nondirectional test tower and at the common points of input to the daytime and nighttime antenna coupling equipment were measured by Mr. L. F. Heithecker who is known to me to be qualified for such work.

ATTACHED FIGURES

The following attached figures were prepared under my direction to show the results of the measurements and to furnish the exhibits required by Section II-A of FCC Form 302:

1. Description of the directional antenna system, theoretical and indicated parameters, and meter readings for normal operation.
2. Horizontal radiation patterns and data for nondirectional test operation, daytime directional operation, and nighttime directional operation.
3. Maps showing the 25-mV/m contour and a portion of the 15-mV/m contour for the daytime directional operation and showing the 25- and 5.7-mV/m contours for the nighttime directional operation.

4. Tabulations of field intensity measurement data taken along 11 radials.
5. Graphs of field intensity measurement data taken along 11 radials, together with a copy of Graph 18 of Section 73.184 of the FCC Rules.
6. Maps showing the locations where the field intensity measurements were taken along 11 radials.
7. Monitoring points descriptions and data.
8. Direct power measurement data.

CHANGES IN EQUIPMENT PROPOSED

The application for construction permit proposed to use a Collins Type 820E-1 transmitter. An RCA Type BTA-10U2 transmitter, factory modified for output power not to exceed 5 kilowatts, was installed instead. The transmitter has been type accepted for 5 kW and 1 kW operations. The BTA-10U2 has two 5-kilowatt tubes in the "last radio stage" although it will not operate at 10 kilowatts of power as modified. Operation of the BTA-10U2 at a Class III radio station requires a waiver of Section 73.42 of the Rules.

The application for construction permit proposed to use a Metron Type 506B-1 modulation monitor. An RCA Type BW-66F modulation monitor was installed instead.

The application for construction permit proposed to use a Collins Type 54Z-1 frequency monitor. An RCA Type BW-11A frequency monitor was installed instead.

CONCLUSION

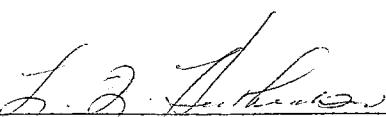

The attached figures show that the KLEO directional antenna patterns have been adjusted to comply with the terms of the construction permit and to conform closely to the radiation patterns proposed in the application for construction permit.

Darwin A. Peterson

Subscribed and Sworn to before me
on this 19th day of March, 1971.

My Commission expires June 1, 1971.

Notary Public, Dallas County, Texas

RADIO STATION KLEO
Wichita, Kansas

1480 kHz, 1 kW, 5 kW-LS, DA-2

DESCRIPTION OF DIRECTIONAL ANTENNA SYSTEM

No. and Type of Elements:	Five (5) uniform cross-section, guyed, series excited vertical steel radiators.				
Height above Insulators:	166' (90°)				
Overall Height:	172'				
Spacing and Orientation:	<u>DAYTIME</u> - uses towers #1, #2, #3 and #4 - forming a parallelogram with long sides 245.5' (133°) bearing 171.62° true - short sides 166' (90°) bearing 205° true. <u>NIGHTTIME</u> - uses towers #1, #2 and #4 of above plus #5 spaced 166' (90°) from #4 on a line bearing 205° true.				
Ground System Consists of:	120 equally spaced buried copper radials 166' long plus 120 interspaced buried copper radials 30' long about the base of each tower. Intersecting radials shortened and bonded to transverse straps midway between adjacent towers.

MONITORING POINT DATA

DAYTIME DIRECTIONAL OPERATION

Date Field Intensity was measured	5 kW Operation - mV/m			
	N 000° E	N 050° E	N 110° E	N 190° E
December 12, 1970	143*	-	237*	-
December 13, 1970	-	67.0*	-	125*
December 18, 1970	138	62.0	232	122
December 20, 1970	140	67.0	237	125
December 21, 1970	145	67.0	238	122
December 22, 1970	132	63.0	223	120
December 23, 1970	135	64.0	233	122
December 26, 1970	135	66.0	235	123
Unattenuated field determined from measured radial	181	213	355	370
Maximum allowable unattenuated field specified in BP-17,341	190	230	370	387
Maximum permissible field at monitoring point	150	72.5	247	131

NIGHTTIME DIRECTIONAL OPERATION

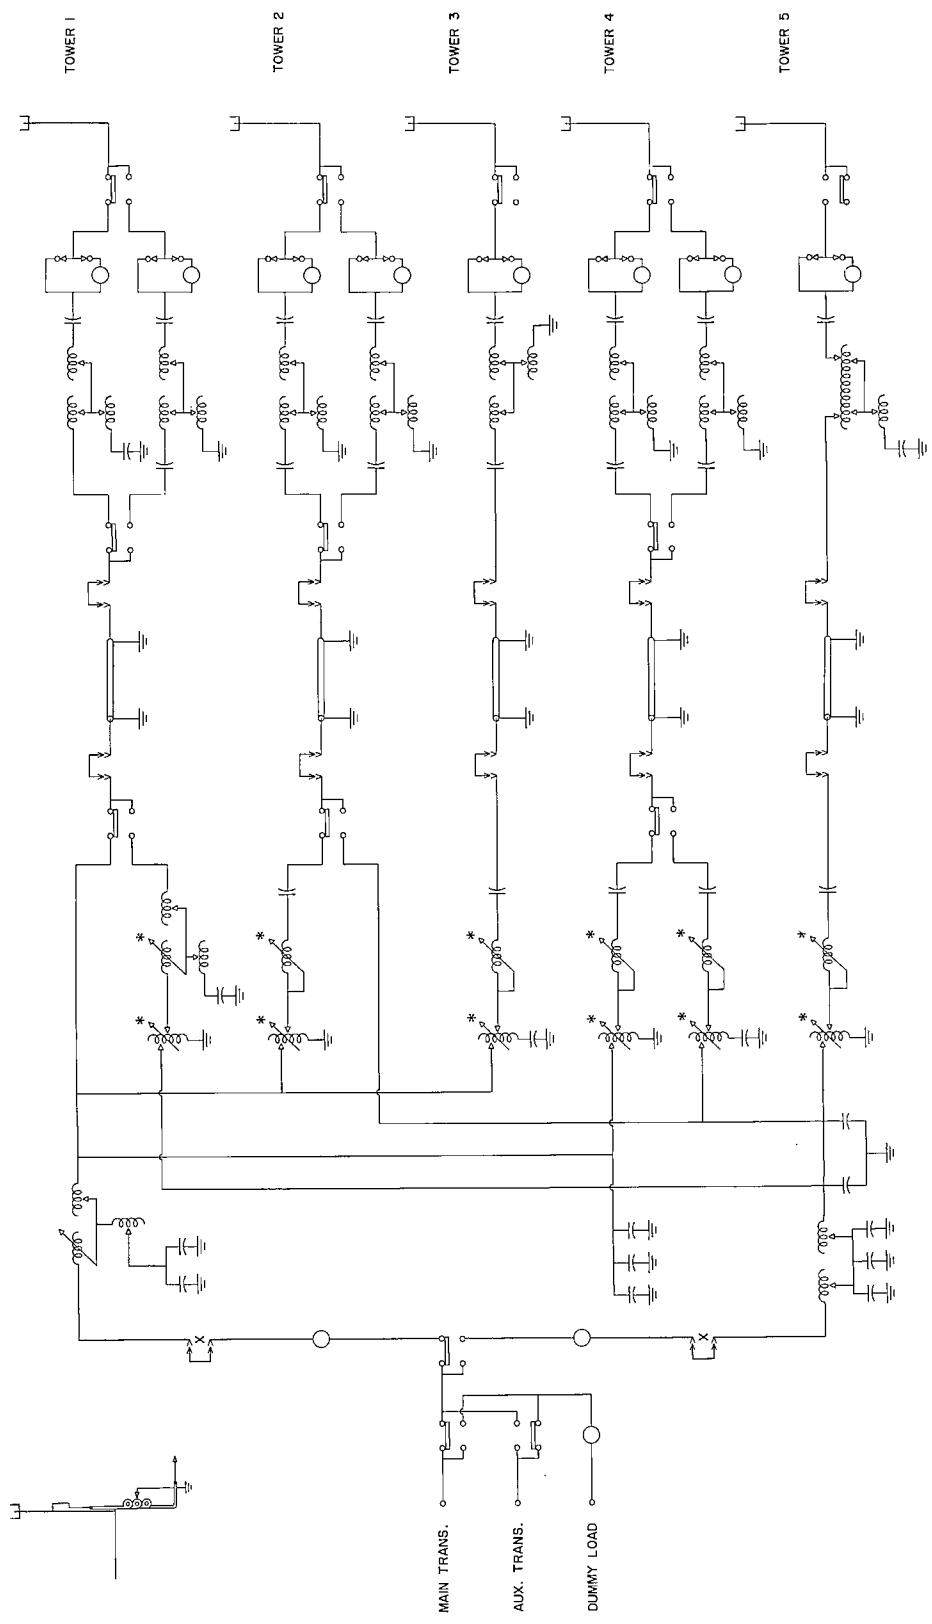

Date Field Intensity was measured	1 kW Operation - mV/m				
	N 050° E	N 110° E	N 155° E	N 190° E	N 215° E
December 9, 1970	8.50*	-	71.0*	75.0*	65.0*
December 10, 1970	-	149*	-	-	-
December 18, 1970	7.30	147	70.0	69.0	60.0
December 20, 1970	7.80	148	71.0	69.0	60.0
December 21, 1970	8.30	149	65.5	69.0	57.0
December 22, 1970	6.20	145	66.0	64.0	57.0
December 23, 1970	7.40	142	66.0	63.5	58.0
December 26, 1970	7.60	145	65.5	65.0	57.0
December 29, 1970	7.80	142	64.0	65.0	57.0
December 30, 1970	8.40	145	64.0	65.0	56.0
Unattenuated field determined from measured radial	19.0	227	139	200	146
Maximum allowable unattenuated field specified in BP-17,341	48	248	160	212	175
Maximum permissible field at monitoring point	21.5	163	81.5	79.5	78.0
