SIX "BREADBOARDS" SOLD IN NORTHEAST TEXAS IN 1971

BREADBOARD SALES UP

Walt Jackson of Dallas purchased an Atwater Kent "breadboard" radio. Jim Cranshaw of Dallas found a Beautiful five tube "breadboard" radio with green components at the tradesday at Canton. Bob Hill of Richardson bought a model 10 "breadboard." Barney Wooters bought a model 10b "breadboard" to place in his Richardson home. Wallace McPeak of Lindale sold two "breadboards" to out-of-state buyers.

HISTORICAL PHOTO

A GALLERY OF TRANSMITTING APPARATUS

In use between 1899 and 1915 set up in the Brooklyn Navy Yard. Mr. Marriott, at the left in the photograph, was the expert witness in a case tried before a United States judge in 1915. In the foreground, to the right, is a ten-inch induction coil, with separate vibrator. This was connected directly to the antenna and was popular until about 1906. Various kinds of glass jar transmitting condensers can be seen. The inductances, of large wire, are "oscillation transformers" and coupled the oscillating circuit, consisting of spark gap and condenser, inductively to the secondary circuit which had taps leading to antenna and ground. This is a most unusual historical photograph

The **Amplion Pedigree**

Thirty-eight years ago—

In 1887 Mr. Alfred Graham invented and demonstrated the first practical loud speaker which the world had ever heard (illustrated above).

In 1893 Graham Loud Speakers placed upon market. In 1894 Graham Loud Speakers first used in British Navy. Graham transmitters applied to phonographs for loud speaker reproduction.

In 1896 Graham Loud Speaking Naval Telephones developed and adopted by British Admiralty.

In 1898 Graham Watertight Loud Speakers patented. Placed on many warships and mercantile vessels, throughout world.

In 1902 Complete Graham Loud Speaker installations, on central battery plan, erected on warships as sole means of communication.

In 1906 The most extensive loud speaking naval installation to date was made by Gramhams. Included a Graham exchange system fitted to H. M. S. Dreadnought.

Onwards Graham Loud Speakers applied to all sorts and conditions of service at home and abroad, ashore and afloat.

By 1910 No less than 12,000 Graham loud speaking installations in operation on ships alone.

In 1920 (before radio loud speakers were in common use) "AMPLION" Loud Speakers produced for radio by Alfred Graham & Co. "AMPLION" trademark registered.

In 1922 Amplions adopted as standard equipment by leading makers of radio sets abroad.

In 1923 Amplions introduced into United States, Canada and other countries. Quickly attained largest throughout-the-world sale of any loud speakers.

In 1924 To supply demand The Amplion Corporation of America was formed to market and manufacture Amplions here.

In 1925 More Amplion companies formed and agents appointed throughout world to keep pace with international demand. The Amplion Corporation of Canada, Limited, organized.

Created by the actual originators and world's oldest makers of loud speakers, it is only logical that the Amplion should be unrivaled for clarity of tone. Some of the countries in which Amplions are used as favorites:

- UNITED STATES
- CANADA
- ENGLAND
- SCOTLAND WALES IRELAND
- NORWAY SWEDEN DENMARK
- HOLLAND BELGIUM
- FRANCE SPAIN SWITZERLAND
- ITALY JAPAN SOUTH AFRICA
- NEW ZEALAND AUSTRALIA

The Amplion of 1926

AMPLION

Alfred Graham & Co., London, England Patentees

To hear this new Amplion Dragon AR-10 is to appreciate why Amplions, year after year, internationally lead in sales. Six models, including phonograph units, \$12 to \$42.50. Write for interesting literature and dealer's address.

SIX "BREADBOARDS" SOLD IN NORTHEAST TEXAS IN 1971

BREADBOARD SALES UP

Walt Jackson of Dallas purchased an Atwater Kent "breadboard" radio. Jim Cranshaw of Dallas found a Beautiful five tube "breadboard" radio with green components at the tradesday at Canton. Bob Hill of Richardson bought a model 10 "breadboard." Barney Wooters bought a model 10b "breadboard" to place in his Richardson home. Wallace McPeak of Lindale sold two "breadboards" to out-of-state buyers.

HISTORICAL PHOTO

A GALLERY OF TRANSMITTING APPARATUS

In use between 1899 and 1915 set up in the Brooklyn Navy Yard. Mr. Marriott, at the left in the photograph, was the expert witness in a case tried before a United States judge in 1915. In the foreground, to the right, is a ten-inch induction coil, with separate vibrator. This was connected directly to the antenna and was popular until about 1906. Various kinds of glass jar transmitting condensers can be seen. The inductances, of large wire, are "oscillation transformers" and coupled the oscillating circuit, consisting of spark gap and condenser, inductively to the secondary circuit which had taps leading to antenna and ground. This is a most unusual historical photograph

The Amplion Pedigree

Thirty-eight years ago—

In 1887 Mr. Alfred Graham invented and demonstrated the first practical loud speaker which the world had ever heard (illustrated above).

In 1893 Graham Loud Speakers placed upon market. Illustration shows the "1893 model."

In 1894 Graham Loud Speakers first used in British Navy. Graham transmitters applied to phonographs for loud speaker reproduction.

In 1896 Graham Loud Speaking Naval Telephones developed and adopted by British Admiralty.

In 1898 Graham Watertight Loud Speakers patented. Placed on many warships and mercantile vessels, throughout world.

In 1902 Complete Graham Loud Speaker installations, on central battery plan, erected on warships as sole means of communication.

In 1906 The most extensive loud speaking naval installation to date was made by Grahams. Included a Graham exchange system fitted to H. M. S. Dreadnought.

Onwards Graham Loud Speakers applied to all sorts and conditions of service at home and abroad, ashore and afloat.

By 1919 No less than 12,000 Graham loud speaking installations in operation on ships alone.

In 1920 (before radio loud speakers were in common use) "AMPLION" Loud Speakers produced for radio by Alfred Graham & Co. "AMPLION" trademark registered.

In 1922 Amplions adopted as standard equipment by leading makers of radio sets abroad.

In 1923 Amplions introduced into United States, Canada and other countries. Quickly attained largest throughout-the-world sale of any loud speakers.

In 1924 To supply demand The Amplion Corporation of America was formed to market and manufacture Amplions here.

In 1925 More Amplion companies formed and agents appointed throughout world to keep pace with international demand. The Amplion Corporation of Canada, Limited, organized.

LIGHT BULB AND RADIO MUSEUM

John Hervey has established a radio museum with a sizeable light bulb collection. The museum is located east of Dallas and it is open to the general public. Hervey has one of the finest large cabinet radio collections in the country. Call 824-3001 in downtown Dallas or 214-327-8350 at his home for an evening or weekend appointment.
