Just What Are HARMONICS?

• • • By B. FRANCIS DASHIELL

WHILE the problem of harmonics is difficult to solve, the phenomenon itself is simple and should not be mysterious, for it is a matter of vibration, well-known to students of physics and music.

Before considering harmonics in radio let us seek a simple analogy whereby a better understanding of the subject may be obtained. If a wire be stretched taut between two supports and picked to set it in vibration, the whole will vibrate from end to end. A short, tight wire will vibrate rapidly with a note of high pitch, but a long, loose wire will vibrate slowly with a low pitched note.

These are *fundamentals* or principal vibrations and notes. The rate at which vibrations occur is called the fundamental *frequency*, and the length of the portion of the wire that vibrates, from end to end of motion, is the fundamental *wave length*.

In addition to the fundamental activities of the vibrating wire there are many other vibrations occurring within the fundamentals. These have less intensity of motion or energy, but have higher frequencies and shorter wave lengths than the fundamental. They are, then, *harmonics* of the fundamental or principal vibration. And harmonics are just as natural to radio circuits as they are to piano, violin and musical strings.

When the wire vibrates as a whole at its fundamental frequency, there are also harmonic vibrations contained within it. They are in each of the two halves of the total fundamental length, but have *half* the fundamental wave length and *twice* the principal frequency. This is the *second harmonic*. In addition, the three thirds of the whole also vibrate inde-

pendently of the fundamental motion, at *one-third* of the wave length and *three* times the frequency. This is the *third harmonic*. And the *fourth*, *fifth*, etc., harmonics, obtain in the same manner.

Harmonics, then, are independent vibrations, occurring simultaneously within the main vibrating action. Their wave lengths are fractions— $1/2$, $1/3$, $1/4$, $1/5$, etc.—of the fundamental wave length, but the frequencies are multiples—1, 2, 3, 4, 5, etc.—of the fundamental frequency or rate of vibration per second.

Now, it is known that radio circuits exhibit exactly similar effects. Above we have seen how mechanical vibrations have smaller and simultaneous vibrations or harmonics, especially in musical instruments. But

He got the wrong number but the right girl. Elsie Hitz in "The Magic Voice" CBS Tuesday, 8:15 p. m. EST. and Saturday, 7:45.

in radio we deal with invisible and inaudible oscillations or vibrations. These can only be created through the medium of tubes, inductances (coils of wire) and capacities (condensers). The tuning of a circuit to resonance can cause it to oscillate at a steady rate—fundamental frequency and wave length—just as a permanently stretched wire will always vibrate at a uniform rate and produce the same musical note.

Fundamental Frequencies

Oscillation in a radio circuit is a form of vibration, not mechanical and visible, but electrical because of the rapid swinging back and forth of a high frequency alternating current. The fundamental frequencies may vary from a rate of 300,000,000 cycles in ultra-short waves to 15,000 cycles for the very long waves. These changes in current direction through the inductance and capacity set up a fundamental vibration—the lowest frequency at which the maximum of energy is transmitted. Harmonics, too, are present in the radio circuit, in the same proportion found in mechanical vibrations.

For instance, a broadcasting station tuned to a fundamental wave length of 300 meters and a fundamental frequency of 1,000 kilocycles, will emit a second harmonic on a wave length of 150 meters with a frequency of 2,000 kilocycles. A third harmonic will appear on 100 meters at a frequency of 3,000 kcs., and the fourth harmonic on 75 meters with a frequency of 4,000 kilocycles. Since broadcasting stations are licensed to operate on one fixed wave length, it is a violation of the law to emit harmonics, and they are suppressed as best they can.

Receiver Harmonics

Harmonics are not confined entirely to broadcasting circuits. Any superheterodyne receiver will produce harmonics within itself. Trouble comes when the second harmonic of a superheterodyne oscillator beats against an incoming signal so as to create a frequency equal to that of the fixed in-

termediate frequency transformers and circuit. This in turn beats against the signal and produces a wavering, throbbing and beating heterodyne form of interference. Receivers having an i.f. circuit tuned to even multiples of 5, such as 160, 200, 240, etc., kilocycles, are apt to be troubled with harmonic beats, while those having uneven multiples, such as 175, 195, 225, etc., kilocycles, are less likely to be annoyed.

When nearby commercial, Naval, and aircraft and airways radio stations work on frequencies between 175 and 250 kilocycles, or utilize longer waves capable of creating harmonics falling within the same frequency range, there may be direct pickup by the i.f. circuit of a superheterodyne receiver, thereby sending the interfering signals into the amplifier. Imperfect shielding in this portion of the circuit is largely productive of such interference.

Shielding Essential

Good radio sets have very few internal harmonics. When makers take particular caution to use good shielding, provide perfect grounding of the

The song and dance man of Big Time, Johnny Hart "in Hollywood" Monday, Tuesday, Thursday, 7:45 p. m. EST over WJZ-NBC network.

shields, proper spacing of aerial and ground leads within the set, and correctly locate the plate leads that pass close to the second detector and radio-frequency chokes, there is little likelihood of interfering whistles and beats being created in the r.f. circuits. While some beats, of course, will be natural to many radio sets, they will be so weak as to be practically inaudible.

Introduction of all-wave receivers presents a new problem in harmonics. These sets cover a much wider frequency band and, therefore, are more susceptible to additional harmonics. The tuning limits of an all-wave receiver are from 15 to 550 meters—19,990 to 545 kilocycles. A station

fore, the reception must be by harmonics. But in the all-wave set, which covers the code bands, few listeners will know whether a station is actually short-wave code or merely the harmonic of a nearby Naval or commercial station. By catching the call of the code station it can be identified and its transmitting wave determined by remembering always that the fundamental broadcast wave frequency is lower by $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, etc., than the apparent wave frequency being received.

There is little that can be done to eliminate harmonics in radio. Complete suppression at the source is a step in the right direction. But the question of self generated harmonics

Paul Whiteman's Rhythm Boys are now an integral part of the Whiteman orchestra. They are heard over the NBC networks with the King of Jazz. Left to right: Jimmy Noel, Al Dary, George McDonald and Ray Kulz.

broadcasting on 400 meters and 750 kilocycles, for instance, emits harmonics on 200 meters and 1,500 kcs., 133 meters and 2,250 kcs., 100 meters and 3,000 kcs., 80 meters and 3,750 kilocycles, etc. All of these, and more, may be picked up by an all-wave receiver.

Such harmonics picked up by the antenna cannot be avoided. There are times when we hear dots and dashes of code transmission at several points on the dial. Each happens to be one of a number of the harmonics of the fundamental broadcast frequency. We know that code is not permitted within the broadcast band, and, there-

within a superheterodyne receiver seems not to permit of easy solution. There are always present certain tuning combinations which are inevitable, and when such station frequencies happen to combine there is nothing that will prevent throbbing, beating interferences. Only a mathematical genius can compute the amazing number of combinations that can occur within the broadcast band. The gradual trend, however, toward better transmission facilities and the suppression of harmonics, and the improvements in superheterodyne receivers, promises much in solving the problem of harmonics in the future.

UNIFORMITY NEEDED

in DX RULES ••• Calls or Locations

IN the November issue of this magazine, six rules of DXing were set forth as embodying the opinion of the Editor. These rules have attracted much comment both favorable and adverse. It is to be regretted that there are no uniform rules in DX which can be adopted by all clubs. At present there is much confusion and a member of one club finds, upon joining another, that many entries on his official log are not recognized by the second group.

For the purpose of focusing attention upon this important matter, we are reprinting the six rules with the arguments regarding them both pro and con.

The Rules

First: Do not log a station nor ask for verification unless you are positive in your own mind of the identity of the station.

Second: If a station moves to a new location or a new frequency, you may count it a second time.

Third: If a station merely changes its call letters or increases its power, the second reception does not count.

Fourth: If a station uses two different sets of call letters, you may log each of them.

Fifth: Stations outside the broadcast band such as police broadcasters may be logged if you hear them on your regular broadcast receiver.

Sixth: Short-wave stations heard on harmonics of their regular frequency, such as airport stations, may be entered.

The Opposition

First to be heard is "Dr. H. R. J." of Rockaway Beach, N. Y., who says: "I want to take exception to your claim that stations should be counted by location and not by call letters. Does that mean that I should count WABC three times, because they have moved

their transmitter from New York City to Long Island to Wayne, N. J.? It is manifestly absurd. You get into all sorts of trouble when you try to log by location instead of by call letters. To quote Gracie Allen, 'It's silly.'"

Second at bat is Joseph Stokes, 7318 Woodlawn Ave., Swissvale, Pa.: "I claim that changed call letters constitute a new station because it generally happens when a station changes its call it has new owners, new equipment and quite often the transmitter is moved to a point different from its former location. Under your rule if a transmitter is moved only a block, it's a new location and a new station for the log. How in the dickens are we to keep track of the moving of transmitters? Me for changed call letters—there's not half so much trouble."

Mary Livingstone as Jack's "Jill" happens to be Mrs. Benny. On the new Canada Dry program CBS Thursday, 8:15 and Sunday, 10 p. m. EST.

"A radio log should be a list of the calls used by radio stations," thinks B. L. Ahman, Jr., 3313 Westerwald Ave., Baltimore, Md. "If a station changes its call letters that should constitute a new addition to our log."

"I wish to voice my disapproval, along with many other DXers, of your standard regarding change of call letters," states J. Kenneth Vetter, 964 Waukegan Road, Deerfield, Ill. "Your rule is inconsistent in that you recognize stations with two sets of calls. What's the difference?" Mr. Vetter asked the Newark News DX Club for a ruling on this question and it was given as follows: "The club counts calls and not transmitters. With due regard for the opinions of others and rules of other organizations, we'd all have to be historians to keep an accurate record of broadcasting stations, additions, deletions, changes of calls, and locations over a long period of years."

For the Defense

On the other side of the question on Rule Three, we find L. E. Wallace, 110 N. Duval Street, Tallahassee, Florida: "My policy up to now has been never to count a station a second time unless two of the three factors concerned were changed. In other words, either location and ownership, location and call or call and ownership. Some DXers certainly must be liberal with their consciences to count a change of calls as a new station."

And from A. E. Armstrong, 2021 Bonita Drive, Glendale, Calif.: "When a station changes its call letters I also change the letters on my log but I do not count it as a new station."

So much for changes in calls; now for Rule Two regarding changes in frequency. To this rule Mr. Armstrong takes exception. "I disagree for the reason that a general upheaval of frequencies on the broadcast band would in a short time increase a log of say 400 stations to perhaps 600 or 700 and this would, of course, give an entirely wrong impression of the actual number of stations logged."

And Eugene Martin writes from

Who is this famous Monarch Mystery Singer? Hear him Sundays at 2 p. m. EST with Chas. J. Gilcrest, DX Radio Editor.

Denver, Colo., to say: "I take violent exception to your statement that a station which moves to a different frequency may be counted a second time. If I had followed that system I would have more than 3,000 stations logged. For instance, I would have counted WOAI not once but six times."

"Changing a frequency," thinks Robert R. Rawstron, 296 Main Street, Claremont, N. H., "is merely like changing one's own street address."

Like Mr. Armstrong, Carleton Lord, 137 North Highland Ave., Akron, Ohio, is both "with us and agin us." "If a station changes its call letters a second reception does not count as a new station. This is very logical. However if a station changes its frequency, you call it a new station. How can you back that up? The call is the same, the transmitter is the same and the location hasn't changed. I'm afraid you pulled a boner there."

Summing it Up

The prisoner at the bar now takes the stand in his own defense.

The Editor looks upon DXing as a

WHEN THINGS

contest in which a certain number of problems are presented for conquering. Each of the stations in the broadcast band with its present call, power, frequency and location constitutes one of these problems and a DXer is entitled to credit for solving it. The difficulty of the problem lies in three of its factors: power, frequency and location. The call letters have not the slightest effect upon the problem and any change in them is utterly immaterial so far as having conquered a problem is concerned. But let a station change its location and an entirely new problem is presented to the DXer. By location we do not mean and did not think our rule would be so construed, as a slight movement of the transmitter. RADEX does not show the location of transmitters and it would be folly to try to register calls by transmitter locations. But the DXer who logged WFBC at Knoxville, Tenn., may find it difficult if not impossible to log them from Greenville, S. C. WDIX at Tupelo, Miss., is an entirely different problem from WDIX at Texarkana, Ark. We think that the DXer who logs either of these stations at its new location is entitled to exactly as much credit as he was for its original logging. True, there should be some limit. The movement of KGGF, from South Coffeyville, Okla., perhaps a few blocks to Coffeyville, Kansas, for instance, does not perceptibly increase the difficulty of its logging. But on the other hand, many who logged WJW at Mansfield, Ohio, will not be able to log it from Akron. Or KLO at Salt Lake City instead of Ogden.

On New Frequencies

Similarly, though perhaps not to so great an extent, a change in frequency constitutes a new problem. WDEV on 550 is an entirely different problem from WDEV on 1420. Those who logged WDBO on 1120 may never be able to do so on 580. We had few reports of reception of WKAQ when they were on 890 but now it is regularly picked up on 1240.

(Continued on page 31)

Serviceman "Fixed" It

My Brunswick model S-14 receiver gave some trouble and I sent it to a serviceman who returned it in such shape that no stations came in where they should. He said my condenser plates were bent and he straightened them out, and now states that the trouble cannot be remedied.

The most annoying thing that an inexperienced serviceman can do is to tinker with the tuning condensers and their plates. It is a difficult feat for the careful manufacturer to shape the plates so the dial will track perfectly at 10-kilocycle intervals the full length of the tuning scale. And when someone attempts to adjust these parts, that rarely become defective, the entire tuning scale is apt to be thrown out of adjustment and the dial numbers rendered useless.

In your case, however, it appears that the dial or drum has slipped about ten kilocycles away from the correct setting. Also it is likely the fan leaves of one or more of the condensers have been bent at 640, 900 and 1460 kilocycles. Any well equipped shop should be able to correct this slip and reshape the leaves or plates at the above distorted spots, provided the person doing the work knows his business. It is a relatively simple job. You can loosen the dial or drum on the shaft and slip it until it moves up ten kilocycles so most all stations will come in where they belong. The only error then will be at 640, 900 and 1460 kilocycles.

Tubes for General Electric

I have a 9-tube General Electric a.c. receiver and wish to make it more sensitive and selective by using the new types of tubes in place of those now in operation.

GO WRONG

By the TECHNICAL EDITOR

The -45s in this set should remain, although there is an adapter made so that the new 46s can be substituted. But we do recommend that the present -27s be replaced by the new 56s and no adapters will be needed. You can use the new 57s in place of the -24s with suitable adapters, but the gain in efficiency is doubtful. The greatest improvement is the substitution of 56s for -27s.

Slow Heating Receiver

I have a Brunswick 9-tube set and it gives me a great deal of trouble in cold weather by taking so long to heat up. On cold winter mornings it takes from 15 to 25 minutes to start, and then it goes off with a loud, sharp noise and works perfectly afterward. In warm weather the set does not take so long to start playing. The tubes have been checked and are perfect. How can the trouble be fixed?

Regardless of external thermal conditions no a.c. receiver should require more than 30 seconds at the most to operate properly with full volume of sound. It is difficult to say exactly what causes this trouble without having a thorough continuity test made of every circuit in the set.

However, we are confident that there is a thermal contact in an active line in this receiver which requires a rise of temperature within the set from certain of the tubes or high resistance of the contact itself, to complete the circuit. This may be located in any soldered joint, condenser, coil, voltage divider system, or in a tube, regardless of what a tube tested after being removed.

We recommend that every soldered joint in this receiver be sweated again with a hot soldering iron. Take a hot and well tinned iron and apply it to

"The story of Omar Khayyam" with Stuart Buchanan as Omar and Betty Webb as Nur-Ulan. WABC-CBS Thursdays at 9:30 p. m. EST.

every joint and remelt the solder so as to make the joint anew. Failing in this, an electrical continuity test by a competent service man and testing meters will be necessary. Sometimes, when the set is playing, if every unit and joint is struck or shaken, the defective point will be indicated by a sudden shutting off of the program. Faults such as this are the most difficult to locate of any that befall radio receivers.

Tunes Too Broadly

My Philco model 77A tuned radio frequency circuit will not separate stations between 1000 and 550 kilocycles as well as I believe it should. Stations WTIC and WTAM always interfere, although the former is not 30 miles distant. Why is this?

Radio signals always tune sharper as the frequencies increase or the wave lengths decrease. Thus, above 1000 kcs., and on toward the 1500 kc. end of the dial, you will find the tuning is sharper. On low waves, below 100 meters, or 3000 kcs., the tuning

becomes difficult at times. On higher waves, below 1000 kcs.—toward 550 kcs.—and then on up toward 1000 meters or 300 kcs., the tuning becomes broader, and stations having only 10 kilocycles difference are bound to interfere, although widely separated by distance. Two stations operating on 1060 and 1070 kilocycles, such as WTIC and WTAM, and using such high power, are apt to interfere on any set.

The obvious solution is to treat WTIC like a local station and use a very small antenna that will not pick up WTAM. Also use as short an outside aerial as practicable to receive distant signals. Frequently a small .00025 fixed condenser in series with either the aerial or ground lead wire will make a set tune more sharply. Thousands of people experience similar station interference when stations are one division apart—or 10 kilocycles.

New Rectifier Tubes

I wish to use the new 82 full-wave rectifier tube in place of the -80 now in my set. Can this be done and will any improvement be noticed?

Fanny May Baldrige in "The Miracles of Magnolia." has been collecting negro songs since she was ten years old. NBC-WJZ network irregularly.

If the -80 type rectifier provides sufficient current to operate your set satisfactorily—and it must if it was part of the original design—there is no need for replacement. The rectifier tube does no more than provide the passage of a certain amount of current to operate the radio receiver.

If a change was justified, the new type 82 could not be used to replace the older -80 because the -80 tube requires 5 volts and the 82 only 2.5 volts on the filament. However, the new type 83 tube may be used to replace the -80 by placing a 2000 ohm resistor in each plate lead and a small choke in each plate lead as well. This change is not advised for the reason that an increased consumption of power is not indicated to justify using new type rectifier tubes.

More New Tubes

I wish to replace the -27 type tubes in my Melrose 8-tube set if it will be proper to do so. Will you please advise me?

We recommend the changing of all -27s in your receiver to the new 56s. No adapters are necessary. The improved performance of the 56s justifies the change. See an article in December issue for more detailed information about replacements.

Power Tubes Burn Out

I own a Majestic 70-B receiver which seems to burn out the -71A power tubes too often. A radio serviceman told me the set has too much power for these tubes and that is the cause of the trouble.

The -71A tubes are made to operate with 5 volts on the filaments, and, in this set, two tubes are connected in parallel for push-pull operation. We assume you use the 7BP6 power unit with this set. There are two brown wires that furnish 5 volts for these tube filaments, and they should be tested with a volt meter to see whether the potential is higher than 5 volts. If so, a suitable resistance should be connected in series with one wire to reduce the voltage applied to

the filaments to the proper voltage. This could be the only reason why the tubes burn out.

You could substitute two -45 type tubes for the two -71As, but the filaments must be connected in series for the -45 uses 2.5 volts each. The filament amperage will be three times that of the -71As but, if the power unit does not heat too much, the change will improve your power output.

Using Headphones

How can I attach a pair of headphones to my Clarion model 61 a.c. receiver so I can listen in late at night without disturbing the rest of the family, when asleep, by the noise of the loud speaker?

You must be careful to avoid danger from the high voltage of the plate circuit which might cross the phones and burn them out after heating them to the danger point. First, the speaker voice coil lead must be located where it comes from the secondary of the output transformer, and a small switch inserted so that the speaker can be turned off or on when the headphones are to be used or not.

Locate the detector -24 type tube, and find the connection between its plate and the primary of the audio input transformer. A 0.5 microfarad fixed condenser should be attached to the plate lead and the other terminal of the condenser carried out to a binding post conveniently located beside another binding post that is grounded to the chassis. When the headphones are to be used they are attached to the two binding posts and the speaker switch opened.

The Wunderlitch Tube

I have a Crosley model 124 and a friend has a model RCA 80 and we have been wondering if we could use the new Wunderlitch instead of the detectors now in use and also get automatic volume control out of the sets by using this tube; also can I replace my -35s with the new 58s?

You cannot replace your present detector with the Wunderlitch, which

Richard Crooks, famous tenor, alternates with Lawrence Tibbett on the Firestone program. NBC-Red chain Mondays at 8:30 p. m. EST.

is more or less a special purpose tube best adapted for new circuits designed to meet its requirements. And, if you could use it, you could get no automatic volume control effects unless it was situated particularly to bring this about.

In the Crosley set we do recommend replacing the -27s by the new 56s, and this can be done without the use of adapters. The same holds good for the RCA model 80 set. The -35s of the Crosley may be replaced with the new 58s, using suitable adapters.

Stations Interfere

At times, when radio weather reception conditions are best, my Kolster model 6E seems to tune too broadly and stations interfere with each other.

This is because the signals come in with more power during good, clear and cool weather, and the same effect is produced that would be noticed were the stations powerful semi-local broadcasters. The stations you mention, WJR and WJZ, are only 10 kilocycles apart, and will tend to overlap in the best of receivers at some

(Continued on page 27)

Working the SHORTWAVE SPECTRUM

• • • High Frequency Logging

IN ANOTHER column we are giving a scale showing how the radio waves are allotted among the various services. This should prove helpful in identifying short wave stations heard. We have had many comments upon the convenience of the arrangement by call letters in the last issue. In this issue we are picking the one hundred best stations regularly tuned in by our readers and listing them both by calls and frequencies. We urge our readers to add to this list their most reliable catches. Be sure to give us the wavelength or frequency and if possible the time heard.

For the information of our s. w. listeners let us repeat that a complete list of the foreign s. w. stations was published in the September issue No. 61, arranged by countries. A complete list of all s. w. stations by frequencies was contained in the October edition No. 62. In November, No. 63, the s. w. stations of the U. S. were given by states and in December, No. 64, the s. w. stations of Canada were listed by provinces.

"While I am interested primarily in short waves," comments James Sheehe, 1861 Davis St., Elmira, N. Y., "I listen and DX frequently on the broadcast band. My receiver is a Walker Flexi-Unit short-wave adapter connected to a two-stage audio amplifier which gives me the equivalent of a three-tube set. It tunes 15 to 550 meters. I have received such stations as VK3ME, 12RO, G5SW, Pontoise, LSN, LSX, PRADO, HCJB, HKD, XAM, XIF and many other short-wave stations. Also the broadcast stations, CMC, CMAF, XEFD, XEW, XER, XEN, KFI, CKCI, KOA, and many others. WESG operates on 1270 kcys., with 1000 watts, during

the daylight hours. It was formerly WEAL at Ithaca, N. Y. However, as the owners, Cornell University, could not fill the number of hours on the air required for them, they leased the station to the Elmira Star Gazette, Elmira, N. Y. The transmitter remains unchanged at Ithaca, but the main studios and offices have been moved to the Mark Twain Hotel at Elmira. The old studios are used for a noon-time farm broadcast every day from Ithaca."

"I have a station which I hope you or some of your readers will be able to identify for me," writes George W. Burns, 2466 Wahl Terrace, Cincinnati, Ohio. "I hear it each morning on about 18,290 kcys. very clear and loud. It comes in with conversations in what I believe is Spanish (apparently trans-Atlantic or ship-shore

Fred Allen, bland comic of the stage, now star of the "Bath Club" CBS net Sundays at 9 p. m. EST.

phone), then shortly after 10 A. M. EST a man calls 'Allo Berlin' several times and then carries on a conversation in German. I have never heard this station at any time other than between 9:30 and 10:30 A. M. According to the recent shortwave logs appearing in RADEX, there is a YVQ at Maracay, Venezuela on 18,296 keys., which works Berlin and also tests irregularly around 10 A. M. Could this be my station? I have just recently purchased a Philco model 43 baby-grand as an auxiliary to the large cabinet model Zenith and in the thirteen days which I have had it, have identified 337 s. w. stations, boosting my log from 468 b. c. to a total of 805 on all waves. Except for S. S. Monarch of Bermuda, S. S. Bremen, VRT-ZFB, Bermuda, and LSG, Buenos Aires, my s. w. log is entirely domestic, but even then, I have surely been bitten hard by the short-wave bug."

Gets League of Nations

"I am proud to report the reception of the League of Nations station at Geneva, Switzerland, HBP on 38.47 meters, on October 9, 1932," writes Eugene M. Howard, 2036 Houston St., Indianapolis, Ind. "I heard their broadcast for about forty minutes, with good loudspeaker volume and had very little background noise. I am enclosing a copy of the letter I received in verification of that broadcast. Since I have been reading RADEX I have not noticed a report on the reception of this station. I have noticed that few, if any, reports of DX reception have been reported to you from Indianapolis or vicinity. I have heard that it is a hard spot for good reception. Could this have anything to do with lack of reports?"

"I read C. R. Anderson's inquiry regarding a station which after playing a piece shouts, 'Hello America,'" advises Edwin A. Thompson, 509 Cypress Way, Long Beach, Calif. "I have heard the same station this afternoon, November 3rd, from 3 to 4 PST. Mr. Anderson believes it to be between 15 and 30 meters. I believe it is be-

Here are the blood-curdling noises of the "Fu Manchu Mysteries." The rain falls, the wind moans, an airplane roars. Helen Earle is running the water-fall and Urban Johnson crunches shoes in a pan of corn flakes.

tween 25.58 and 26.00 meters. I have logged VE9JR at 25.58 meters and this apparently 'anonymous' station comes in very close on my dial (Stewart-Warner short-wave converter). I, too, am curious to know what station this could be. It seems to me the pieces played are Mexican or Spanish, perhaps indicating location of the station."

From A. C. Lyell, P. O. Box 795, in far-off Bloemfontein, O. F. S., South Africa, comes a subscription to RADEX with the information that he is picking up quite easily on his Pilot Drag-on all-wave set, a number of the American stations on short waves including New York, Cincinnati, Pittsburgh and W3XAL at Bound Brook. The time in transit between Cleveland and Bloemfontein is exactly one month. It's hard to realize that Mr. Lyell can hear a speaker in the United States even before those in the

back of the very hall in which he is speaking! By the clock he hears the speaker seven hours before he speaks!

"I have a Stewart-Warner combination long- and short-wave radio," says W. H. Bradford, Box 64, Newfields, N. H. "Have picked up over 600 different calls so far. Get talks from ships, police calls, airway reports, as well as programs across the water, but my best one is Sydney, Australia, on a test program. Call letters VK2ME, but only got it once. My set is eight tubes on regular broadcast; when using short waves use ten tubes. Am not using any outside aerial at all. All I have is a short wire from my set to the bed springs."

"I have a new Lafayette ten-tube all-wave set," reports R. A. Gravel, Custom House, Port-au-Prince, Haiti, "and have not been a week in this game, but have picked up some 57 stations, among which W3XAL, Boundbrook, N. J., shortwave broadcast of Sunday, November 13th, has been my best reception from 11 A. M. to 4 P. M.

"It certainly was great," comments Frank E. Switalski, 2819 Victoria Ave., Cincinnati, Ohio, "to see YV1BC included in the regular indices this month. This station uses 5000 watts. I hear them also on 49.49 meters as loud as WLW, every evening. Best shortwave stations at this time are YV1BC, VE9GW, VK2ME and EAQ."

The PROGRESS of RADIO

• • • *A Developing Art*

"The inquiry from Emil Sesto of the Ship E. M. Clark in the October issue, prompts me to write this letter," says W. E. Doty, 127 Riverside Drive, New York. "A few days ago I had a demonstration of a new and simple way of operating an a. c. radio receiver from d. c. current with quiet and excellent results. This device is known as the 'Solar Inverter' and is slightly larger than a cigar box and very simple in construction. It is plugged into the supply line and the receiver plugs into it. It is said to be capable of handling up to 12 tubes. Only one simple adjustment is necessary according to the number of tubes a set uses. It will not function with sets using 250 or 281 tubes. It is also said to filter out the line noises. I was impressed with what I heard and saw and believe other readers would be."

The Solar Inverter

Our Technical Editor says that this Inverter is of the magnetic type instead of the usual rotary motor-generator type and is nearly as efficient; that there are no moving parts to create interference and that it compares favorably with converters; that it has a replaceable unit that is good for 1000 hours of operation. It converts 110 volts of d. c. to 110 volts a. c.

The Solar Inverter is manufactured by the Solar Manufacturing Corp., 599 Broadway, New York, and they have this to say regarding their device:

"The direct current is applied to the primary of a transformer through an interrupter which is tuned to 60 cycles. This interrupter is driven by an electromagnet in the same manner as the familiar bell or buzzer. The pulsating d. c. through the primary induces a. c. in the secondary. The box is of sound-proof material so that no noise is heard within two feet in a quiet room. A filter system suppresses all r. f. disturbances due to the vibrator. The metal box is 11x7x6 inches. The inverter is available for loads up to 150 watts at 110 or 220 volts and from d. c. lines of 32, 110 and 220 volts. The magnetic unit will require replacement in the average home about once a year and a new unit is provided in exchange for \$2.50."

The Solar Inverter may also be secured through the Wholesale Radio Service Co., 100 Sixth Ave., New York City.

A Sixteen-Tuber

We are presenting herewith an illustration of the chassis of the Ozarka V-16 which was unfortunately left out of a previous issue. Every coil and tube in the radio frequency circuit is completely shielded by means of aluminum cans. All of the wiring is effectively shielded by the metal sub-base; and in addition to this, a separate shielding partition is built

The Ozarka Chassis

up underneath the base. So effective is the shielding that undesirable oscillation is said to be entirely eliminated and stray pick-up from local stations reduced to a very low level. With antenna disconnected it is practically impossible, say the makers, to hear even nearby powerful stations.

In the V-16 two speakers are used so that all tones and pitches are clearly received. The speakers are perfectly matched and sound as a single unit. More than 8 watts are supplied to each one of the speaker fields. A power line filter is provided to eliminate any disturbances which might be picked up by the power line. The console in which this chassis is mounted is one of unusual beauty.

A 1933 Auto Radio

Constant improvement is taking place in the automobile-radio field. The Gulbransen Company, 816 North Kedzie Ave., Chicago, presents a seven-tube Superheterodyne of extremely compact size, the chassis container being less than 7x6x9 inches. The midget control panel with illuminated dial and switch attaches to the steering column below the wheel. It has automatic volume control, dynamic speaker and full range tone control. Receiver circuit is compensated so that either a "B" eliminator or "B" batteries may be used. No "C" battery is required.

In the illustration the control unit is shown on the steering column. The receiver unit with special dash mounting at the upper right. The dynamic speaker with single-hole dash mounting is in the center and the "B" Eliminator is at the bottom. The "A" current is taken, of course, from the regular battery of the car.

Long Waves on Midwest

Long wave coils are now available for use in the 16-tube Midwest Receiver, which give a tuning range of 15 to 550 meters and 1000 to 2000 meters. This coverage is obtained without the use of plug-in coils. Five points are used on the wave band selector instead of four.

The Gulbransen Auto-Radio

SCHEDULE OF XEU

In sending their subscription to RADEX, Radio Station XEU, Veracruz, Mexico, give this information regarding their programs and state that everyone reporting the reception of their station will receive a "beautiful picture from the Station and Mexico." They state that it is not necessary to send money or postage; they will answer immediately upon receipt of report. Weekdays: 7:00 to 8:00 a. m. News, weather, financial information, short stories; 10:00 to 11:00 a. m. Special information of interest to women; Noon to 3:00 p. m. Commercial programs with music; 6:00 to 7:00 p. m. Short stories for babies by Uncle Victor; 7:00 to midnight Commercial programs with music. Sundays: 7:00 to 8:00 a. m.; Noon to 4:00 p. m. and 7:00 to 11:00 p. m.

In the EDITORIAL SANCTUM

• • • *The Monthly Confab*

A VERY HAPPY NEW YEAR to all our readers. Nineteen Thirty Two is gone and good riddance. Nineteen Thirty Three is something else again. What changes the years have wrought. Elsewhere in this magazine we are indulging in some editorial reminiscences due to an accidental perusal of the first issue of this publication in magazine form away back in the dark ages of 1926 B.C. (Before the Commission.) We still break out in a cold sweat when we think of the vagaries of radio in those uncontrolled days. Invariably, it seemed, we would no sooner get on the press with the very latest data on stations than hundreds of them would switch to new frequencies. It was as though they were waiting for us to go to press before making the unheralded and wholesale shifts. Once we had to sell an entire edition for junk!

Of course we still have our troubles. Trying to keep up with the stations in Cuba and Mexico is a potent cause for insomnia. But perhaps one of these days our honorable Department of State will get around to negotiating a new radio treaty with those countries. At present they seem to take the position that so long as a station is on the south bank of the Rio Grande, everything is lovely. That must be our "isolationist" policy we read about.

Keeping up with Mexico

We are trying hard to get the correct data on those new Mexicans for this issue but even the people in Mexico do not seem to know much about them. Alvin Oliver, 1921 West Dallas St., Houston, Texas, is close enough to them so he ought to know. He reports that the new station on 885 kcs. is XEPN at Piedras Negras, Coahuilla, with "many thousands" of watts power. We have also had this sta-

tion reported as XETN and the town as Tiedras Negras. None of our maps of Mexico shows either town but it is evidently across the Rio Grande from Eagle Pass, Texas, for this station has a studio there and all mail should be sent to Eagle Pass. Mr. Oliver says this station has not yet begun regular transmission but expects to do so very soon and that their time on the air will be from 6 p. m. until 2:00 a. m. CST. He also writes that he thinks XED at Reynosa has changed its call to XEAW and wants to know when XENT will begin broadcasting.

We have had reports that XEPN will use 100,000 watts and another new one, XETM on 845 at Matamoras, Tamaulipas, will use 150,000 and the new XETN on 1115 at Laredo, Tams., will likewise use 150,000. If this government doesn't soon agree with Mexico upon a division of frequencies, half our stations will be heterodyned by Mexican stations.

Another Report

"I am reporting reception of a new Mexican station that I heard last night," reports Paul Russnak, Bartley, W. Va. "They were broadcasting their third test program and said they were going to have another one tonight (November 16th). I think the call letters are XEPN on 885 keys., with an authorized wattage of 100,000. They are announcing as 'The Voice of the Western Hemisphere.' They have a studio at Eagle Pass, Texas. I could not catch the name of the town, but it was in the state of Coahuila, Mexico."

And There it is

"Please have the photo of Ethel Shutta on one of your cover plates as soon as possible on some future issue of RADEX," pleads Paul Russnak, Bartley, W. Va. "I am like many other of

your ardent fans who would like to see her photo, please."

We strive to please and the charming Ethel graces the front cover of this issue.

More Suggestions

Miss Florence Haist, Box 157, Lindenwold, N. J., is responsible for the suggestion which we are putting into effect with this issue. That is to convert the times on the DX Calendar into Eastern Standard in order that they may be arranged chronologically. We think this is a good idea and one that will add to the convenience of this popular feature.

We have had so many requests for information in regard to attaching headphones with and without adapters that we have asked Mr. Dashiell to prepare a new article for the February issue of this magazine on this subject. What with new sets and new tubes the best method of using phones is ever-changing. So, Eugene Delmore, 2247 N. 15th St., Philadelphia, and others, watch the February number.

No More Tests

Now the darn depression is hitting the Radexers. The Radio Commission is discontinuing the tests as an economy measure and putting it up to each broadcaster to keep on his frequency within fifty cycles either way under penalty of losing his license. Frequency checks will be made only when a station is unable to have it done for themselves. No notices of such tests will be given to the public. This is sad news for many a station would be missing today from thousands of logs except for the rare opportunity of picking them up on these tests.

Let's test the theory that radio signals are better caught west to east than vice versa. WJAG, Norfolk, Nebraska, which is about in the center of the North American continent, will put on another program especially for the Radexers Saturday night, January 14th, from midnight to 1:00 a. m. CST. We will pit the Westerners

against the Easterners and see which side can submit the most reports of reception of this program. The North and the South might enter the contest also.

A little kink that makes for quick reference is submitted by William M. Perry, 517 East Tahlequah Ave., Sulphur, Okla. He takes a pair of shears and with one cut takes off the lower right corner of all the pages of his RADEX from 1 to 46 inclusive. He then moves back a quarter of an inch or so and again clips page 1 to 34 inclusive. This gives him two tabs one of which opens the book instantly to What's on the Air and the other to the Index by Frequencies and Dial Numbers. He hasn't patented the idea.

Switching Signals

"Last night, November 3rd, about 8 o'clock, rather than turn the volume down, I backed off the 1010 frequency to about 1015 keys," writes R. R. Rawstron, 926 Main St., Claremont, N. H. "By using a 270-foot counterpoise I could hear KYW very loudly, and by removing the counterpoise and using only a 130-foot aerial I could hear only one of the New Yorkers very loudly also. This was done by leaving the dial at 1015 keys, and not touching it at all either before or after use of the counterpoise."

Some listeners have several different aerials and grounds connected to switches so that it is possible to use any one of them and very often interference on some particular channel may be entirely eliminated by changing the aerial and ground combination.

"Last week I put up an aerial just on a hunch that it might give results," says W. E. Evans, 2 Woodland Road, Sewickley, Pa. "I purchased 100 feet of solid aerial wire and cut it into four 25-foot lengths, strung one in each direction, north, east, south and west, brought them together at the house and soldered the lead-in to all four of them. Due to my location I was able to get all four wires running

to each direction at a height of about 60 feet. I am using a Midwest 11-tube set which tunes very sharply on any aerial, but after putting up this new one, you have to be right on the station's nose to get its program."

Trolley Troubles

"In the November issue of RADEX I noticed a Mr. Delmore having interference due to a trolley car," writes C. J. Pratt, 167 Oakdean Blvd., Winipeg, Man. "I have a friend who lives on a street where the trolley cars run and who had the same trouble. We experimented with everything and finally the aerial. This seemed to be the source of the trouble. His aerial was parallel with the trolley wire, so we changed it to right angles with it. This change practically stopped all interference and gave better reception. Another friend was having the same trouble so I told him about the aerial. He put up an umbrella aerial instead of changing the old one. This also stopped the interference."

"I live 23 feet from a carline, with heavy automobile traffic, at the front of the house," comments John J. Swatko, Secretary Radio Review DX Club, 216 Fifth Ave., Homestead, Pa. "At the rear of the house there is a railroad, with a telegraph line. At one time I had the same trouble as Mr. Delmore of Philadelphia now has. My troubles were cut by using a 120-foot aerial 'M' shaped. I am using a double ground, one on a cold-water pipe and the other is an outside ground using a pipe with copper wire wrapped around it. One pound of salt and water in pipe. It would be best for Mr. Delmore to have his aerial above all wires if he can do it."

Stranger than Fiction

But here is a reader who picked up a station not only without either aerial or ground but with his tubes burned out. "Doctor Watson, come here, I want you."

"I don't know whether I should write to you or Robert Ripley," comments Richard Canfield, 2401 S.W. 28th St., Miami, Fla. "Yesterday my

set went completely out. Both locals were a mere whisper with the volume on full. But, 'believe it or not' WBT, Charlotte, N. C., 651 miles away, came in fine. I took the set to the shop and they found three tubes burned out. I had no ground or aerial hooked up when WBT was coming in. 'What makes my set do that?' I can prove the above story by three people and hope to have verifications from WBT next week. Incidentally, WKAQ, San Juan, P. R., is on 2 to 4 p. m. and 6 to 10:30 p. m. AST every night."

"Vos you dere, Sharlie?" asks Baron Munchausen, before he tells a whopper.

Here is a rough and ready rule worked out so that we Radexers can measure mathematically the relative

Be a TELEVISION EXPERT

Television is here! Television sets are being sold and serviced right now. Twelve large companies are working night and day behind locked doors to improve their Television sets. Eighteen million radio owners are waiting to buy. Television broadcasting licenses are being issued very cautiously. Thousands will get fabulously rich in the immediate future from Television. Thousands will secure high pay jobs. But only the men who know Television—the men who are especially trained—will reap these profits—these fine jobs. Television moves too fast to bother with untrained men. Why not decide right now to find out for yourself the tremendous possibilities of this fascinating new high-pay profession? You can become an expert here at the world's greatest Television School, occupying the three top floors of Missouri's tallest skyscraper—a big, finely equipped school owning and operating W9XAL, its own Television Broadcasting Station.

First National graduates are already being heard from; for example, Mike McMullen says, in speaking of the job which he secured with First National training, "I am in complete charge of transmitter and control room and doing quite a bit of announcing". Harold Heffing, another graduate, says, "Since completing your Radio Television course, I have been employed as operator of the Topeka Police Radio Station." You, too, can qualify for one of these fine jobs. The first step is up to you. If you are over 17 years of age, send your name and address today for full information.

Sid Noel, President

FIRST NATIONAL TELEVISION

2909 Power & Light Bldg. Kansas City, Mo.

value of our catches. Not a bad idea at that. Try this formula on some of your best ones and let's see who has the highest "quotient."

"Your readers often mention their 'best catches,'" writes R. C. Myretetus, 515 Lincoln Ave., Collingswood, N. J. "I have evolved a system by which these hard-to-get stations can be accurately recorded in figures and use it myself. Using your radio map and taking your home city as a center, draw concentric circles at distances of 100 miles per the scale. Next use this formula: Distance in Miles divided by Power in Watts gives your distance factor. Carry to two decimals. For example, I consider CMHJ, Cienfuegos, Cuba, mine. This is a 75-watter and 1340 miles from Collingswood, N. J. 1340 divided by 75 gives a quotient of 17.86, the figure representing the catch. If you consider this scheme has merit, you can pass it along to your readers and let them send in their best catches showing distance divided by power, and quotient, a higher figure being considered better than a lower one."

Telling them Apart

Can you tell your Aussies from your Newzies? Well, here's how by T. Colegrove, Frankfort, Mich. "In trying to decide whether a certain station is a VK or a ZL, it might help to know that the ZL stations are not allowed to do any advertising whatever while the VK's are much like the U. S. stations in this respect." In connection with Mr. Dashiell's article on harmonics in this issue, this excerpt from Mr. Colegrove's letter is interesting. "I have never yet heard WBAK on the b. c. band, yet the other day I heard him on his sixth harmonic, 8,580 kcs., or 34.9 meters, during his 10:30-11:03 a. m. broadcast. XER is the only foreign station whose harmonic I have heard and then only his second on 1470 kcs. And speaking of harmonics, my receiver is now aboard a boat and we dock less than a quarter of a mile from the wireless station whose standby receiver is always tuned to 410 kcs. except when a

station is being worked. This receiver, being regenerative and therefore a miniature broadcasting station when it is in oscillation, has a second harmonic on 820 kcs. so bad that daytime reception of WHAS is impossible and that of WCCO quite difficult. Even at night this receiver makes a very bad heterodyne with WHAS." Mr. Colgrove is anxious to identify Trans-Pacific stations heard on 540 and 1460 kcs.

Help!

Who knows whether or not they finally caught these men on the roof?

"On November 1st at 6:30 p. m. CST," writes Louis Strand, 3500 Herndon St., Chicago, Ill. "I overheard the following on approximately 1060 keys.: 'Officer Karney, Officer Karney, Officer Karney, come to my house (street and number mentioned) at once. There are some men on top of the roof trying to cut the wires. Officer Karney, Officer Karney, come at once. This broadcast may be interrupted any moment.' That is all I heard and am curious to know if this was a genuine call for police or just a play. It sounded so realistic that I am inclined to think it was a real police call, although I can't see how that could be done on the regular broadcast band. Can you or any of the readers satisfy my curiosity?"

"We have police radio now in Montreal," writes Leslie G. Briscoe, 1743 Hutchinson St., Montreal, Que. "The transmitter has an output of 400 watts and operates, I understand, on about 2800 keys. Their call is UYR. Could any of the readers write me personally and tell me whether it was CHWC or CKCK that broadcast the DX program on November 6th from 3 to 5 a. m. EST, on 960 kcs.? By the way, I now have 2YA in Wellington, N. Z., my first trans-Pacific station. What a kick I got hearing it!"

Les Heron, 378 High Street, East, Moose Jaw, Sask., wants us to give some of the Pacific Coast programs especially those after 9:30 p. m. PST, at which time the eastern network programs carried by the western sta-

tions leave the air. We will see if this can be arranged. We fear that by the time the information gets to us from San Francisco, it may be too late to be any good. Then, too, we are at a loss to know how to provide space for it but if our readers want it, we will make every effort to supply it for them.

"In regard to WJSV," writes John Strong, 1436 Meridian Place N.W., Washington, D. C. "I might tell you that they moved from Mt. Vernon Hills, Va., to Alexandria, Va., and not from Alexandria to Washington. They didn't really move anyhow. It is almost entirely a new station. Already it has been heard in all Canadian provinces, all states in the U. S. and Mexico, in Europe, Australia and South America. It is not operating at full strength yet. They have one vertical strand of wire for the antenna and when they get a real aerial up they expect a 30% increase in signal strength."

All of the 533 stations logged by George Othen, 115 Litchfield Ave., West, Willmar, Minn., come in at the frequencies shown in RADEX with the exception of KMJ which still comes in on 1210. Last September upon information from the Radio Commission, we changed KMJ from 1210 to 580 but evidently it has not yet moved to its new channel. Will some of our California readers let us know about this? Mr. Othen has a Majestic 293 and thinks that RADEX should be in every home where there is a radio. We agree with him.

The Synchronized Channel

"I see in the November RADEX that D. G. P. of Rochester says that WHEC, WOKO, WCAH and WHP are no longer synchronized," comments Harry Lytle, Jr., 491 Linwood Ave., Columbus, Ohio. "I wish to confirm his statement and I am enclosing a day's program of WCAH to prove it. Whenever WCAH wants to broadcast a local program it does so."

VOGY, St. John's, Nfld., on 860 can best be picked up between 3:00 and

5:00 a. m. EST on Sunday mornings, volunteers Robert E. Moran, 1309 Wellington St., Ottawa, Ont. Mr. Moran wants to know if any Radexers have yet received their verification from YV1BC for their program on October 3rd. He hasn't. He is also worrying about KGGM at Albuquerque which hasn't answered his letter of October 9th. Meyer Tuchinsky sends us the letter-head of YV1BC so evidently he got his verification. Their address is Apartado de Correos 290, Caracas, Venezuela, S. A.

NNRC DX Tips

"I thought perhaps your readers might be interested in knowing that this station broadcasts the DX tips of the Newark News Radio Club each Monday, Wednesday, Thursday and Saturday evenings at midnight," writes Radio Station WHOM, Jersey City, N. J.

Benjamin Stein, 435 Aisquith St., Baltimore, Md., reports CMCW on 955 keys. He says CMCQ broadcasts every Tuesday night from midnight to 1:00 a. m. EST. He thinks he is financing the operation of the Cuban station. He has about twenty dimes down there now which aren't bringing him anything. Looks like another job for the marines. Chas. L. Morgan, 800 East 179th St., New York City, says he was advised by a Cuban station not to send any money to a station in that country unless it announced in English. He says he finds this a good rule.

CMCH at Havana, very kindly dedicated a program to RADEX on November 26th but the information regarding it reached us too late for us to get it to our readers. We deeply appreciate this courtesy to Radexers and hope a similar program can be arranged sufficiently in advance for a hundred thousand of us to try to tune it in.

Next Month

Another article by Mr. Dashiell on the use of head-phones with modern all-electric receivers.

WHO'S WHO In Radioland

• • • "Betty" Tells Us

JACK PEARL, alias Baron Münchhausen first saw the light of day in Little Old New York, October 29, 1895. He attended Public School 62 and later DeWitt Clinton High School. Soon after leaving school he secured his first job as an errand boy for a safety razor manufacturer.

A number of various jobs followed until finally, while still a youngster, he was employed in the stock room of the Shapiro Publishing Company, and it was there that he received his first taste of Broadway. In the course of events he became a song and act plugger. In 1910, when his soprano voice was at its prime, he was offered a job at \$12.00 a week by Gus Edwards in a chorus he was forming. Members of the chorus at the time were Walter Winchell, Eddie Buzzell, George Jessel, Eddie Cantor and the Duncan Sisters. With a definite idea of his worth, Pearl held out for the fabulous salary of \$15.00. He didn't get the job!

Not at all chagrined by his failure to "crash" the entertainment field, he continued as a plugger for the Sha-

piro firm until he learned that "School Days" was about to be produced with Herman Timberg in the leading role. He presented himself promptly for a place in the cast and by dint of much persuasion and a little misrepresentation of his age and experience, he finally secured one.

His big chance came when Danny Murphy, the German comedian, became ill. At a moment's notice Pearl was thrust into the part. He acquitted himself notably and thereafter the part was his. He toured with the show in his featured role for two years.

Burlesque and Vaudeville

After that he went into vaudeville on the Keith circuit from 1913 to 1915. On the advice of a friend he entered burlesque for the experience to be had there and trouped in that field for four years until the Shuberts bought up his contract for \$13,000. He was featured in their Winter Garden shows each year from then until 1930. Finally he was headlined in the last Ziegfeld Follies.

Jack is married to Winifred Desborough. He first met her in a revival of "The Belle of New York" in which she played the leading role. Nurtured by the glaring footlights the romance flourished and eventually they were married. They have no children.

The trials of people who don't know what to do with their hands when facing an audience is nothing to the problem of Jack Pearl, who doesn't know what to do with his face since he went into radio. It was his ability to make his face do tricks that brought him his first success on the stage, and now that he is the Baron Münchhausen of the Lucky Strike Thursday night broadcasts

Baron Münchhausen

over the NBC-WEAF network, it's verbal acrobatics and not facial calisthenics that make him funny. When he makes another stage appearance, however, he'll need his face again, and he is afraid he'll lose the ability to distort it into strange shapes. So what's to do about it? He sits before a mirror and makes faces at himself for half an hour each day. Then he spends another thirty minutes practicing the tongue twisting that has made him a radio hit.

Chief of the Royal Canadians

When Guy Lombardo was a small boy in London, Ontario, and his father sent him trudging truculently to his first violin lesson, the outcome could not be foreseen. In the ensuing years, Guy enrolled three younger brothers and several school friends as his musical disciples. The Lombardo boys—Guy, Carmen, Liebert and Victor—gave the home town a new kind of music.

Their first appearance was at a mother's club in London, an event linked in later years to their musical entry in New York. Guy was then 12 years old. He played the violin, young Freddy Kreitzer pounded the piano, Carmen tooted the flute, and little Liebert set up a jazzy racket

with an old kettle and drums purchased for the occasion.

At an early age, Guy rebelled against the "hot" type of jazz, and groped around for a tempo and style which pleased him. Unaware at the time of its full value, he stumbled across the soft legato tempo which won his band its laurels years later.

Cooperating as old friends and resourceful musicians, the Royal Canadians today are at the peak in popular music. They have advanced to increasing favor through their weekly Robert Burns Panatela programs over the Columbia network, and through countless engagements in vaudeville, hotels and summer spots for revellers.

Getting a Start

In early days, the young Lombardos charged \$15 for a private dance performance. They even were willing to reduce the charge when they had swell refreshments and if they danced with the guests during solo numbers. Soon the orchestra was augmented by George Gowans, who turned to the drums while Liebert mastered the trumpet; Francis Henry, who played the guitar, and Fred Higman, saxophonist. They were stepping up the ladder. After a season at Springbank pavilion and an ensuing summer at the London Winter Gardens—a nickel-a-dance place—they experienced their first triumph at Fort Stanley Casino, where they drew crowds to the Lake Erie resort.

Next came an offer to go on a vaudeville tour, and the title "Royal Canadians" was tagged on to add a little swank. They got as far as Cleveland where, after being held over for three weeks, they received a tempting offer from a roadhouse. Chicago was next in line. There they became favorites at the Granada Cafe. Word of their Chicago success spread to New York, where the husband of the woman who had invited them to play at the London Mother's Club years before was instrumental in arranging an offer

from the Hotel Roosevelt. By this time the band was full-fledged. It had enlisted Victor Lombardo, Larry Owen and Jim Dillon, saxophonists; and Ben Davis, bass horn player.

Along came a radio sponsor and for years the Lombardos have retained a wide and devoted audience. They work hard on their programs, and quarrel heatedly but good-naturedly over new arrangements. Guy is the final arbiter. The Royal Canadians merge into perfect harmony when he waves his violin bow. If for any reason Guy is detained, Carmen steps forward with his saxophone to lead the band. Guy is 29 and as quiet and unostentatious as in the days when they were Ontario's boy wonders.

David Ross Announcing

Another one of that strange, mysterious breed—the native New Yorker—was recently smoked out of his hiding place in the Columbia studios. When he emerged into the full light of day he was seen to be David Ross, diminutive CBS announcer. What brought him out of his lair was a glittering gold medal which the American Academy of Arts and Letters has awarded him as the 1932 prize for good diction. The Academy's gold medal is presented each

year to the radio announcer whose diction and pronunciation during the preceding twelve months is judged the best example of vocal perfection.

Newsboy to Poet

In true Alger tradition, David Ross began his working career as a newsboy. After graduation from high school he enrolled for a liberal arts course in the College of the City of New York and later transferred to Rutgers for agricultural training. A brief experience with this convinced him he would never be a good farmer, scientific or otherwise, and he left college to enter the world of business. One of his early jobs was supervisor of an orphan asylum; he was secretary to a temperamental Russian baroness for a while, and he consistently bothered magazine editors with his poetry. With occasional stray parts in musical comedies, writing advertising copy and reviewing a book a week for a magazine, he was able to keep body and soul, so to speak, together. He got his first radio job on the now defunct WGBS in New York and after two years there joined Columbia. He began as a dramatic reader, became a regular announcer and finally developed a program of poetry readings.

Among the programs he has announced for CBS are *Arabesque*, *Around the Samovar*, *To the Ladies*, and many others. Then, too, there is his own program, *Poet's Gold*, in which he reads verse to his heart's content.

Others who have won the diction medal in previous years are Milton J. Cross, 1929; Alwyn Bach, 1930; and John Holbrook, 1931.

MORE DX TIPS

WCLO broadcasts the latest up-to-the minute DX tips for the Transcontinental Radio DX Club, on their DX program the last Wednesday morning of each month from 2:30 to 3:30 a. m. EST, reports Robert H. Weaver, 603 W. Market St., York, Penna. Through the courtesy of this club we are able to include LS-8 at Buenos Aires in our DX Calendar this month.

NEWS of the DX WORLD

••• The Growing Logs

IN spite of the pages recently added to this magazine, our readers seem to be insatiable for DX news, tips and gossip. "More, more," is the cry. "I read every word," says one. "I read each issue over and over," says another. "Print just what they claim; never mind the unbelievers," say many. And then we get one like this: "Print any more of those wild yarns and I for one am off RADEX for life." Well, we'll hew to the line and let the chips fall where they may. So here goes:

"I am always interested in the DX news," writes O. D. Duncan, 811 W. Woodard St., Denison, Texas. "I enjoy trying to get stations but seldom radio past midnight. I have been radioing since 1926 when I got a Crosley, then a Fada, Majestic, RCA, and now have the new 91-L Philco and have it trimmed so close that I can tune out WFAA, a 50,000 watter on 800 kecs., and tune in WGY, Schenectady on 790, and WCCO on 810. Since the first of October I have listened to and logged at least one station on each of the channels on the broadcast band, except two, 730 and 960 kecs. The Mexican stations cause me a lot of grief as they seem to be all over the dial and never seem to give their calls. I listened to one on 910 kycs. one night for an hour and a half and he never gave his call letters. I finally got so disgusted I tuned him out. Do wish that I could find a real good shortwave converter that doesn't cost too much. I tried one but all I got was a lot of noise and W8XK on two different places. Keep that good all-wave radio magazine going and tell the ones who don't believe certain stations can be heard that they just don't know, because I tried for six years to hear a Boston station and then for two nights they were like a local."

Here is a new Radexer joining the family due to a misfortune: "While recovering from a broken back and paralyzed legs," writes D. T. Cantwell from St. Joseph's Hospital, away up in North Bay, Ontario, "I decided to chase away boredom (I've been here seven months so far) by buying a second-hand radio. It's a 7-tube Atwater Kent, all-electric but with headphones only. Now I don't know the first thing about a radio set or DXing. I got a copy of your magazine recently—it's an excellent work, first class, really—and it has helped me a lot. Would you be interested in the list of far-off stations I got in 17 days—48 all told?"

Logging from a Cot

"North Bay has its own station, CFCH, 100 watts on 930 kcs. The town is 200 miles north of Toronto. My aerial stretches from a second-story window to a nearby building. Here are my long distance catches: WJSV, WOWO, WADC, WDOD, WLAC, WWVA, WBZ, WIOD, WFIW, WCKY, WJAX, WWL, WSB, WCCO, XER, WHAS, WSM, WOW, WEAO and CKOK. Yet I can't get Ottawa or Montreal!"

That is a fine list to pull in in a few days from so far north under adverse conditions and what a pleasure it must be to one so sadly handicapped. Come on, Radexers, let's send a New Year card to this game brother who has been lying on his back for the last seven or eight months. Let's hope he soon recovers from his "interference" and that the rest of his life is free from "static." Address him at the hospital. (Two cents postage on cards.)

A Voice from Hawaii

"Living so far out in the middle of the Pacific is my own hard luck," laments Goldie Charlock, P. O. Box 804,

Hilo, Hawaii, "for it is around the eighth of the month before RADEX reaches me. I really don't know what I would do without it as it sure has helped me in DXing. At present my log is 176 stations with 91 verified; have received 37 states, Mexico, Japan, Canada, Cuba and New Zealand. I have heard stations on all frequencies from 540 to 1500 with the exception of 1150 and 1440 and I hope to have these two included before this DX season is over. I want to tell you how much your DX calendar has helped me this month. I never used to know when DX programs were put on and, living so far away from the states made it hard to get the information here in time for the programs. Every month RADEX is getting better and better and is always full of valuable and interesting information."

Uses Loop for Interference

"Have had unusually good luck this month in logging new stations," advises Earl R. Roberts, 105 Gomber Ave., Cambridge, Ohio. "I succeeded in getting a new continent and in finishing up four more states bringing the total of completely logged states to 32. The new continent is South America, YV1BC, Caracas, Venezuela, being the station heard twice this month with the volume of a local each

time. CFLC comes in good now from 5 to 7 p. m. EST each evening; CKCO came in on 885 keys. at 10:45 p. m. Friday, but I had to disconnect my outside aerial and use the directional loop to cut out the interference; CKPC was received last night at 5:30 p. m.; CHNC is a phantom call for CKGW and was used Tuesdays and Fridays 7:30 to 8 p. m. EST. Our Ohio outlaw, WAIR, New Philadelphia, put on a special DX last Saturday from 1 to 2:09 a. m. EST on 850 keys., using only 7½ watts. It came in weak but clear although the modulation was poor on the speech. I received KXO last Wednesday morning at 12:15 to 12:45 a. m. EST with fair volume and WCKY was on at the same time. How's that for selectivity? Had quite a bit of luck last night. I came home early and tried that station on 925 kyes. about 9:30 p. m. It came in after a few minutes of tuning and after listening to a concert orchestra. He announced in Spanish, 'HHK, Port-au-Prince, Haiti,' and then also in English. Talk about surprises!"

Our Little Ones

It looks as though we would have to start a baby department for little sets. Here is a one-peanut-tube set claiming 339 stations. I. H. Nixon,

265 Pacific Ave., Toronto, Ont., is the proud owner. He reports that he brought in 108 new stations in exactly one month, including 48 amateurs, 13 police and two other s. w. He says he can tune down to 160 meters by using his ground as an aerial. G. Dana Boylan, 2205 Monroe Street, Wilmington, Del., has a two-tube receiver which he offers to put up against all the 11, 12 or 14 tube superhets! Living in what he says is radioly the worst location in Wilmington and with his radiator for a ground, he has 316 stations to his credit. He says he hears KFI every night now regardless of the weather. (Page Ripley.) He counts CKWX, Vancouver, B. C., and KGFK, Moorhead, Minn., as among his best. He has HIX verified among 5 Mexicans, 15 Canadians, 9 Cubans, 2 Nova Scotians, and 5 Californians. Dana doesn't tell us what circuit he uses but we greatly fear it is a regenerative which is extremely sensitive but an awful nuisance to everybody for a mile around when it oscillates which it usually does.

Some Good Reports

"Considering my distance from most of the stations in the U. S. and Canada, I believe my log of 500 very good," says L. E. Wallace, 110 N. Duval St., Tallahassee, Fla., "with 492 verifications, and 387 of these stations more than 500 miles from here. This list includes 28 from California, 5 in Oregon, 8 in Washington, and 3 in British Columbia. Among these are KJBS, KFXJ (50 watts), KXO, CKMO (50 watts), CKWX, KPCB, KFIO, and KFVD. I have logged all but two states, Maine and Wyoming, and have completed Florida, Georgia, Kentucky, Louisiana, Mississippi, South Carolina, Tennessee, Utah, and West Virginia. Foreign includes YV1BC, RUS, WKAQ, XEJ, XEFB (using 50), XEV, CMGF (first in U. S. to hear it), CMJG, and KGU,, if KGU can be called foreign. Also on October 29th I picked up my first Trans-Pacific station, 2YA, and held it from 4:27 to 5:34. Total of 20 in Canada, 21 in Cuba, and 18 in Mex-

ico."

"I have a log of 641 stations of which 581 are verified and 56 2000-milers," writes M. Skalicky, Box 332 Terrace P. O., Homeville, Pa. "Some of my best catches are HIX, RUS, YV1BC, WKAQ, VPN, LS9, CKOV, KPQ, KOOS, 10AB, KXRO, KFPM, KXL, KBPS, KGFL, WNBX, WNBW, WHBC, KGU, KGMB, KXO, KERN, KFBK, KFXM, KDB, 10-BP, 10-BQ and 2BL, but 2BL isn't verified yet as I only received them on October 17th; all the others above are verified. I use a 300-foot antenna with a 20-foot lead-in right now. I've been using a 100-foot antenna till this summer, but the 300-foot antenna works the best. The ground I use is about 30 feet long with a lead-in and it is 3 feet above the ground. I have four pipes driven in the ground and the copper wire is stretched from pipe to pipe. It runs the same direction as the antenna. I've tried quite a few different grounds, but the one above is the best I ever used."

"Set received at 6:30 a. m. December 25th, 1931; 75 stations logged by 9:30 p. m. same day; 150 stations by December 27th; 315 stations in the first month; 506 stations in not quite eleven months." This, thinks George B. Holland, Jr., 1340 Baker Ave., Schenectady, N. Y., ought to constitute some kind of a record. He hasn't counted twenty police stations, half a dozen relays and thirty amateurs which he picked up between 1500 and 1715 kcs. He submits the following questions: (1) What station was broadcasting records on about 990 kcs. with no announcements, about 4:30 a. m. Nov. 13th? (2) What station was doing the same on 630 kcs? (3) Where is W2XDF? (4) Where is VE9BM?" Nos. 1 and 2 were stations testing and may have been any of the stations on these two channels. W2XDF is the Faske Engineering Co., Brooklyn, with 500 watts and one of its frequencies is 1604 kcs. VE9BM is the Northern Electric Co., Ltd., 121 Shearer St., Montreal, Que.

Thoughts On An EIGHTH BIRTHDAY

••• *Looking Back in Radio*

THE first issue of RADEX saw the light just before Christmas in 1924. It gave to the radio world the now universal method of logging stations by frequencies. It was published in de luxe form with imitation leather covers and sold for fifty cents the copy. Until then logs had been kept alphabetically by call letters and consequently there was no way of telling where to tune for a station that had never been heard. Stations were allotted (or rather they grabbed) wavelengths and not frequencies.

Stations on the same wavelength came in at different places on the dial. When the idea first came to your Editor of publishing a list of stations in the order in which they would come in on the dial, it was a puzzle to know how this could be done. His first thought was that a space for dial numbers should be given to each station but, due to the fact that stations could not keep on their proper wavelengths, these dial numbers, instead of progressing evenly as they should, were ragged—sometimes up and sometimes down.

Birth of an Idea

It was finally decided to publish a list with a blank for the dial reading for each frequency as measured in kilocycles. This was the birth of the modern plan of grouping stations by kilocycles in even tens rather than unevenly in meters. This gave the dial reading for the channel and if stations on that frequency did not come in where they should, it was just too bad.

For two years RADEX appeared in the form of a log-book but in the autumn of 1926 it appeared as a magazine with 42 pages. From this

issue, No. 15, the following stations, all of which have now disappeared, are taken from the index by frequencies. In order to agree with the zero-to-100 dials then in use, this index began with 1480 kilocycles and ran in reverse. There were no stations listed on the 1490 or 1500 channels in those days.

How many of these old-time stations can you locate?

- On 1480: KFXB, KGBY, WIBS.
- On 1470: WABB.
- On 1460: KFVD, KFXV, KFYF, WFRL, WPDQ.
- On 1450: KGGT, WABW, WJBA.
- On 1440: KNRC.
- On 1430: KGCN, KSMR, WCBR, WCWS, WIBH, WKBA.
- On 1420: KFWC, KFWO.
- On 1410: KFWV.
- On 1390: KFBC, KFQW, WHBM, WHBW, WIBM, WKBG, WPRC, WRST.
- On 1380: KFAF, WFKB, WOK.
- On 1370: KFJC, KFRW, WIBI.
- On 1360: KFUU, WQAA.
- On 1350: WBBW, WBES, WHBD.
- On 1340: KFQP, KFUR, WNRC, WRAF.
- On 1330: KFIU, KFKZ, KFOB, KFQZ, WDAD, WEBL.
- On 1320: KfvN, KGBS, WDBK, WJBR, WMRJ.

Of all the stations on these sixteen channels, only one remains in the same place today—WSVS, The Seneca Vocational School, Buffalo, N. Y., and, oddly enough, it still has the same power. Only one station then had more than 5000 watts—KGBS with 10,000, the "super-power" station at Seattle.

There were no pentode tubes nor screen-grids, no dynamic speakers nor even cones, no volume or tone controls, no local-long distance switches. The sets were mostly home-made affairs and those that were offered for sale were in crude, ugly boxes with the batteries on the floor. The speaker was usually a small tin horn to which was fastened with adhesive tape, a head-phone unit. The tubes were 199, 200, and

201 and few sets had more than three. The circuits were crystal or regenerative and the latter set up horrible squeals when they oscillated, destroying neighboring ear-drums. The broadcast band was full of code from spark sets. The acid from the batteries ate holes in mother's rugs and from the batteries to the set led a maze of wires. Jefferson City, Missouri, with the "King of the Ivories" playing the piano from the state penitentiary, was wonderful DX from Cleveland. Crowds gathered around the shrill, squawking sets in front of radio shops, marvelling open-mouthed.

Those were the days. Those were the days.

By the Technical Editor

(Continued from page 9)

distance when they come in under good conditions of radio reception. We do not think this set will provide better separation of such powerful stations so close to each other.

Make a wave trap of 60 turns of No. 28 covered wire wrapped around a small tube three inches in diameter and shunted in parallel with a .00035 mfd. capacity variable condenser. Connect the device in series with the aerial, which should be as short as consistent with good reception, and it may be possible to sharpen the tuning of interfering stations.

Amfco Condenser Capacity

I have an Amfco receiver which I intend to alter so as to receive down to 80 meters as well as the present broadcast band. Can you tell me the capacity of the variable condensers?

The capacities of all variable condensers used to tune the broadcast band in most all standard receivers varies from .00035 to .0005 mfd. capacity. Many are about .0004 microfarads. It is likely that your condensers range closely within these limits. We see no reason why these condensers should not tune smaller coils used for lower waves, say from 125 to 200 meters, without much diffi-

culty. On the lower waves—80 to 125 meters—the movement of the condensers will be much slower, and consequently the tuning will be more difficult. Small capacity condensers are used for tuning small coils on short waves because the movement is greater and stations are not crowded so close together on the dial. You should not expect to arrange new coils of less wire in your set and get short wave stations below 100 meters with success. We believe you can get the police calls, airplane and amateur stations with smaller coils and the present equipment, without much trouble.

Open Resistor Connection

I have a model 44 Radiola and between 1500 and 1220 kcs. it works with full volume and perfect clarity. From 1220 up to the 550 end of the dial it is necessary for me to decrease the volume in order to keep the set from breaking into oscillation. I recently adjusted the set by ear by tuning the three variable condensers; otherwise, stations roar in from all points. What can be the cause of this annoyance?

The nature of the trouble seems to indicate that the volume control resistor connection is open at the cathode end. This action would raise the screen-grid potential sufficiently to cause oscillation in the radio-frequency portion of the receiver. Make a careful examination and test of the resistor and contacts. The resistance of this control should be 2900 ohms. Also examine the leads from the end of the control resistor to the cathodes of the first and second r.f. -24 tubes.

It is well-known that alignment of the tuning condensers on both the high and low frequencies is difficult to obtain and it is likely that the alignment is good on the high frequencies and allowing oscillations to occur on the lower frequencies. A careful adjustment may remedy the trouble.

Speaker Rumbles

The speaker of my Radiola model 16 set rumbles at all times, even with

the volume control entirely off. The output transformer has been replaced to no avail. The set also oscillates from 1400 to 900 kilocycles with ground wire off, and with ground on as it should be, with volume full, the signals from 900 to 550 kilocycles gradually fall off until at 600 kcs., it entirely disappears.

It is quite common for oscillation to be more persistent on the high frequencies than on the lows. Oscillation in your case may be due to abnormal screen-grid voltage or a defect in one or both of the by-pass circuits. If in the former, look for an open volume control at the cathode end of the resistance, or a short circuit in the resistor in the series screen-grid leads of the radio-frequency tubes (5000 ohms in the red wire of the power unit). There may also be an open screen-grid by-pass condenser (0.1 mfd. condensers between cathode and screen of first two -24 tubes). These would account for the rumble in the speaker as the volume is not under perfect control when the ground end of the control resistance is open at the cathode end. After the above trouble has been remedied the trimmer condensers should be readjusted for sharp tuning over the entire wave band. We are confident this trouble is confined in the radio-frequency end of this receiver, assuming of course, that the speaker is in perfect condition.

Retubing a Scott Set

I have a Scott All Wave receiver—deluxe model—and I wish to use the new tubes by changing the -24s and -35s to 57s and 58s.

Not knowing what model you have we cannot advise fully for so many models use different tubes. The newest uses the latest tubes throughout—four 58s, three 56s, one 57, two -45s and one Wunderlitch. An earlier deluxe model used a -35 or -51 in the pre-selector stage; a -24 first detector; a 56 oscillator; three -24s in i.f. stages, a 56 second detector; two 56s and two -45s in audio stages. These

may give you some idea of the use and combination of new and old tubes. Generally speaking, we think you can use the 58s with adapters in place of the -35s, and if you have any -27s in your set by all means replace them with 56s without adapters.

THAT CRICKET GAME

A number of readers were thrilled to pick up a play-by-play report of a cricket game on some unknown station in the early hours of Friday, Dec. 2. Charles Leboeuf, Box 222, North Grosvenordale, Conn., says it was a game between English and Australian players and was announced by a Mr. Whitelaw who said comments on the game should be addressed to 4 Australia House, London.

Derek Wharton, 22 Elmwood, N. Y., received the program as early as 1:05 a. m. EST, and as that would be 6 a. m. in London, he thinks it unlikely that game was in England.

Douglas Wauchope (address not given) says the announcer mentioned the heat of the day and that he looked for rain before nightfall. As 2 a. m. would be the middle of the afternoon in Australia, he thinks the game was in that country.

Paul Staude, 247 Noble St., Souder-ton, Pa., says the sponsors were a certain soap manufacturing concern. He held the program for two hours. Some listeners reported the station on 910, others on 900 and 920.

As so many received it, we presume the program was relayed by some American station. Who can solve the mystery?

NEW WAVE TRAP IDEA

A wave trap which uses a 199 tube and thus works on an entirely new principle as illustrated and described in the January "Popular Mechanics," page 110. Instead of absorbing the signal of unwanted station, it "bucks" it. Simple and worth trying out.

Tuning the TRANS-PACIFIC'S DXing for JO's, VK's and ZL's

WHILE some listeners are despairing of ever receiving a single Japanese station, here are instances of six and seven JO's coming in on a dial at the same time! Like somebody's salt slogon, when it rains it pours.

"Yesterday morning, November 12th, at 12:40 A. M., PST, I received a program which I believe came from Japan," reports Harold Allen, Prince George, B. C. "I listened to them for an hour and forty minutes, but they never announced the station. Before I turned my set off I moved around the dial and discovered that there were eight more stations apparently broadcasting the same program. I cannot be exactly sure as the program was in Japanese and, of course, I couldn't understand. But on looking up in RADEX I discovered that at each point on the dial there was a powerful Japanese station. The stations coming in loudest were I believe: JFAK, Tokyo, 670 kcys.; JOSK, Kokura, 740; JORK, Osaka, 750; JOHK, Sendai, 770; JOGK, Kumamoto, 790; JOCK, Nagoya, 810; JOIK, Sapporo, 830; JOFK, Hiroshima, 850, and JOAK, Tokyo, 870. I listened to the station on 750 kcys. for an hour and forty minutes and the only English spoken was about five minutes of news and a half-hour story, which was half English and half Japanese. And I would like to know, if possible, whether or not these stations ever broadcast their call letters in English. If they do, I don't mind listening and waiting. If not, I guess it's just too bad."

"Have you any authentic information on the new Jap stations?" is the query of Fred W. Janssen, 220 South Santa Cruz Street, Ventura, Calif. "I have been hearing new Japs on 730 and 920 kcys. for quite

some time and have been unable to find anything showing them to be on those channels. I know there were a number of new stations added over there but no one in this country seems to have any information about them." Will some Pacific Coast Radexer give us this information? Mr. Janssen wants the mail address of the Cubans and we are trying to get this information into this issue. He says he sends out all his reports to Spanish-speaking stations in that language but even that doesn't help much.

Here's the Information

Almost in answer to Mr. Janssen's inquiry comes a letter from Homer G. Gosney, 431 South Elena Ave., Redondo Beach, Calif., making three corrections in the Japanese stations as published in our October issue. JFAK, he says, should be, not Tokyo, but Taihoku, Taiwan, the latter being formerly known as the Isle of Formosa. JOQK at Niigata (not Nilgata) should be on 920 kcys. with 500 watts and JOSK, Kokura, on 735 kcys. with 1000 watts. Mr. Gosney lists the new stations as follows: JORK, Kochi, 720 kcys., 500 watts; JOTK, Matsue, 625 kcys., 500 watts; JOUK, Akita, 645 kcys., 300 watts; JOVK, Hakodate, 680 kcys., 500 watts; JOOK, Kyoto, 960 kcys., 300 watts. Mr. Gosney tells us that six more Japanese stations are coming on the air, Maebashi, Tokushima, Hamamatsu, Fukui, Nagasaki and Asahigawa. To the above Meyer Tuchinsky adds JFBK, Tainan, Formosa, on 1111 kcys. with 1000 watts.

"This morning, November 12th, between 3 and 3:30 A.M. CST, I was surprised to hear JOAK, Tokyo, coming in with a program for the Japanese children," writes Thomas Quaid, University Station, Enid, Okla.

"Then in quick succession I tuned in JFAK, Tokyo; JOBK, Osaka; JOHK, Sendai; JOGK, Kumamoto; JOCK, Nagoya; JOIK, Sapporo; and JOFK, Hiroshima. All eight of these stations were broadcasting the same program. All, except JFAK, came in plenty loud on the speaker. JFAK was not as loud as the others, but plenty loud enough to tell what station it was. They must have been broadcasting a chain program. These eight Japanese stations, plus 2YA which came in last spring, make a total of nine Trans-Pacific stations which I have received. That getting all eight Jap stations was a feat, wasn't it?"

"I believe the Trans-Pacifics are going to come in good this fall and winter," suggests O. R. Queen, 725 W. Portland St., Phoenix, Ariz. "I heard JOIK, Sapporo, Japan, on the air immediately after KOA signed off at midnight, Saturday, November 5th. They announced the call letters in English at 12:15 A.M. and evidently left the air. Last winter I could never tune them in before 2 A.M. MST. Would like to hear from someone in this vicinity who has tuned the Honolulu stations successfully. I don't seem to have any luck with them."

His Patience Rewarded

Never to have heard Australia and then bring in six VK's in two nights is an unusual experience and one that again emphasizes the uncanny performance of the radio waves. And, incidentally, it ought to give the rest of us encouragement in keeping on trying for those elusive Oceanics.

"You may be interested to learn," advises A. E. Armstrong, 2021 Bonita Drive, Glendale, Calif., "that I have increased my broadcast log from 394 to 420. This addition was aided materially by the logging of eight Australian stations. I have been DXing for six years, and, during the DX season have made a practice of sitting up most of the night either Friday or Saturday nights, or

both. In all those years of patient tuning I had never, until a few weeks ago, had any real luck with the Australians, although I had had plenty of Japs and also three stations in New Zealand. Recently, however, I struck two good nights and had the following: 2CO, Carowa, and 2FC, Sydney, N.S.W.; 3AR, Melbourne; 4QG and 4BC, Brisbane, Queens, the latter only 600 watts; 5CL, Adelaide and 5CK, Crystal Brook, S. Australia, and 6WF, Perth, W. Australia. Strangely enough the station that came in clearest and with most power was the 600-watt 4BC. Since those two freak nights I have had no more Australians, and may never have them again. I think this experience illustrates the truth of the contention that no hard and fast rules can be set down on reception of DX stations."

A Good Night

"It seems that the night, or rather the morning, of October 2nd, was good all over the country," comments R. N. Putnam, 920 12th Ave. No., Fargo, N. D. "I was fortunate enough to be tuning at about 4 A.M. and received the following stations: WKAQ, KGU, 2YA, 3YA, 4QG, 2BL, 3LO, 2GB. This was an immense thrill to me as they were my first foreign. My log is now about 300 stations with the above as my best catches. Last evening reception was very bad here and for a while I could scarcely get WLW at all, but on 705 kcys. I was getting that Mexican that bothered us last year. Has anyone definitely found out what it is? I'm very poor at deciphering Mexican so didn't get the calls."

"Every morning at 4 A.M. MST I get a station on 1150 kcys.," reports Russell H. Johnson, 535 Ave. J No., Saskatoon, Sask., "where the announcer speaks distinctly as an Englishman, and 3LO is there. On the other hand, there is ZL2ZJ, Gisborne, New Zealand, only a 20-watt-er, and they use a distinct English accent, and I don't suppose LR8, Buenos Aires, would have an English announcer, would they? Any

advice would be welcome. Cannot seem to hear their station call. Thanks to RADEX, I pulled in 5CK and 2CO this week."

"2BL, 4QG, 3LO, 2YA, 5CK, 2CO, and an unidentified on 730, were all coming in good this morning, November 22nd, better than I've ever heard them," reports Roland Churchill, 4243 N. Richmond St., Chicago, Ill.

The Dx Rules

(Continued from page 6)

But, on the other hand, in what possible way was the difficulty of the problem increased when WJAK changed its call to WTRC or KTBR to KALE? If, then, no new problem was presented in the tuning in of WTRC or KALE to those who already had been given credit for WJAK and KTBR, by what possible logic are they entitled to credit for the second reception of these stations? One might just as well claim credit for a station on Monday night and again on Tuesday.

Some Inconsistency Necessary

It is true as Mr. Carleton Lord pointed out, the rules we have enumerated are inconsistent in that we permit the logging of both calls from one transmitter. In this case however a new factor enters the problem, that of time. Where one transmitter is used by two stations they must necessarily broadcast at different hours. This shift in hours changes the problem to some extent. In any event, however, we think a DXer is entitled to credit for both WFLA and WSUN, for instance, even though their programs take the air from the same transmitter.

We admit that merely counting calls simplifies the matter of records but we claim that it does not give a true indication of the credit due a DXer. Our suggestion in the matter of records is to count our logs by frequencies. Thus we will say that on 540 one has CKX (now 930), Brandon, Manitoba, and CKOK (formerly

CKWO), Windsor, Ontario—two stations. CKX might be counted again on the 930 frequency but CKOK would not be counted if one had already taken credit for CKWO.

We believe there is a field here for the joint action of the DX Clubs in clarifying and standardizing the rules for logging. In the December issue of this magazine, we pointed out another evil to be guarded against and that is shooting in a report of reception to any station on the frequency tuned in in the hope that you may hit the right one. Such a practice cannot be too strongly condemned for it will surely bring DX into disrepute with those who are absolutely necessary to its continuance—the station managers.

The New Zealand Radio Times points out still another evil which they call "wallpapering." "DX means distance," they point out, "and that cannot apply to New Zealand stations. The ridiculousness of writing to powerful nearby stations is apparent while the same thing applies to writing to a smaller station in your own town. Clearly those reports are of no use to those stations and the club, by encouraging its members to write to stations under those conditions, is only fostering the spirit of wall-papering and not true Dxing. If the New Zealand stations are inundated with requests for cards from people in New Zealand there will come a time when those stations will close down on issuing cards. Already they are complaining of the expense to which they are put by a very large number of listeners who want only verifications." This is a matter that should be carefully considered and it would seem that DX Clubs might well put a minimum mileage upon stations which may count in DX contests. When a listener living in Philadelphia writes to WCAU for a verification, for example, he is lowering the standing of all DXers with that station.

Only a few left of the Maps of North America. Closing them out at 15c.

The WORLD on SHORT WAVES

• • • By CLARENCE SARGENT

I TAKE a good deal of interest in reading in your magazine of the people who do not believe in some other folks' records because they do not tune the stations in themselves. I wish I could show them my 800 letters and cards and perhaps they might believe. Just to prove what can be done with high-class receivers, I am submitting my yesterday's log (November 27th) with a photo of my outfit and a few of my verification cards. If all my verifications were to be shown, it would require the whole house.

All of the following short wave stations were tuned in yesterday and this morning on a National AC-45 receiver. (I also have a Lincoln SW-8.) The times are shown in Eastern Standard-

5:20 a.m.	W7FN	Seattle, Wash.	Working 4QZ
5:30	X5N	Rodriguez Dam, Mex.	Working 2KR
5:35	X3B	Pachuca, Mex.	Working 2KR
5:45	W7AQX	Pendleton, Ore.	Working 6BKZ
10:35	W6CNE	Hollywood, Calif.	Working 2ALK
10:40	W5AEB	Bryan, Texas.	Working 4TO
11:00	LSM	Buenos Aires, Arg.	Working New York
11:07	GBB	Rugby, England.	Working CGA
11:35	GBW	Rugby, England.	Testing
11:40	I2RO	Rome, Italy.	Music
11:50	GBC	Rugby, England.	Testing
11:57	FYA	Paris, France.	Music
1:00 p.m.	ZFB	Hamilton, Bermuda.	Testing WNB
1:30	KWO	Dixon, Calif.	Testing KKP
1:32	KKP	Kaunuku, Hawaii.	Working KWO
2:10	W9CJJ	Denver, Colo.	QTT
4:10	LSN	Buenos Aires, Arg.	Music
4:15	HBP	Geneva, Switz.	Testing New York
5:10	EAQ	Madrid, Spain.	Music
5:35	W9EYN	Colo. Springs, Colo.	Working 6CNE

5:40	W6CZ	Los Angeles, Calif.	CQ
10:15	W5VJ	Jackson, Miss.	CQ
2:30 a.m.	W6EDV	Grimes, Calif.	Working 6BJZ
2:40	W7ND	Portland, Ore.	Working 9th Dist.

In addition to the short waves, I took time out to bring in the following stations on the broadcast band with my Philco AC-11: XER, XFI, XEW, XEFO, XEPN, KSL, KOA, KNX, KGO, KPO, KHQ, KHJ, KFRC, KPCB, KMPC, KOIN, KRJ, KEX, KYA, KTAT, KFOX, KLO.

I have been in the DX game for four years and from 15 to 550 meters, I have a log of 1827 stations which I hope to make 2000 before spring. Here is a summary: Cuba 22, Mexico 17, British Columbia 2, Manitoba 7, Alberta 4, Haiti 1, England 18, France 3, Holland 1, Italy 4, Java 1, Argentina 5, Brazil 6, Honduras 1, Columbia 8, Australia 4, Costa Rico 3, Hawaiian Islands 3, Venezuela 1, Chili 1, Bermuda 2, Switzerland 3, Ecuador 3, Spain 1, Denmark 1, Germany 7, Peru 1, Morocco 1, Portugal 1, Egypt 1, Guatemala 1. Our own Pacific Coast 11, Texas 44, Florida 31.

I think your magazine is one of the best ever. For the DX fan it is a wonderful help and has been of much value to me especially on Cuban and Mexican stations. I look forward every month to the new issue.

Clarence Sargent, short wave DXer extraordinary. He lives in Dansville, N. Y., and is a member of the A. R. R. L. and the I. S. W. C.

The DX World

(Continued from page 25)

"Since writing you last December, my log of b.c. stations has grown from 245 to 402 and still growing," says Ernest Ball, 39 Delaware Ave., Ottawa, Ont. "I have logged all frequencies and all the states except North Dakota, Montana and Wyoming. Without the use of earphones I have logged and verified such stations as KABC, KFYO and 10-BP. Other verifications that I consider good are WRBL, Columbus, Ga., a 50-watter, over 1000 miles from Ottawa; 10-BQ, 15 watts; HIX, WKAQ, CMCF and KOY. I got WKAQ at 6 p. m. once, it was the first time I had heard it. They verified that report. I have eight 100-watters verified from over 1000 miles."

"I live in a deep valley in a small city," writes Dane B. Sutfin, 10 William St., Hornell, N. Y. "The broadcast band is not so good while the short waves are nil except amateur code. With a Silver-Marshall 714 super, in just a little more than a year, I have received 309 stations in the b. c. band although reception is good only from about 11 p. m. to 5 a. m., the rest of the hours being fierce with man-made noises. What can you tell me about the long waves, that is above the b. c. band? Has anyone ever received the long wave European broadcasts?" Can anyone give Mr. Sutfin this information?

John Jaeger, 174 Fairview Ave., Jersey City, N. J., as well as several others, write that they miss the blanks formerly given in the index by call letters. They used these to make notes regarding reception, reports and verification. We had to remove these spaces to make room for the time on the air but will have to give the matter some thought with a view to providing spaces for such data.

"I am writing to give you the new winter schedule of station 10AB, Moose Jaw, Sask.," writes Robert McLean, 1149-2nd Ave., N. W., Moose Jaw, Sask. "I am one of the operators and announcers of that station.

10AB is an amateur station operating on a regular schedule. The services of artists, announcers, operators and, in fact, all concerned with the station, are free. The station is kept up by donations from the citizens. We have been in continual operation since 1922."

"Would advise RADEX readers to try for TGW on 45.30 meters, any evening except Monday, Saturday and Sunday," suggests George Nahas, 147 Seeley St., Brooklyn, N. Y. "They are on between 10 p. m. and 12 midnight EST and are using 75 watts power."

"I wish to tell you of a change in time of station XEF-XER from 24 hours daily, to 5:45 p. m. to 7:30 a. m. CST," advises Ermin David, RR 2, Gering, Nebr. "This was announced October 24th by Herbert Dinney, announcer of that station."

That WIBS, about which a number of readers have inquired, is really WRDS, Michigan State Police, thinks R. M. Ballard, Visalia, Calif.

"I have been DXing about six months," advises Walter Balla, 126 Palmerston Road, Rochester, N. Y., "and in a very poor location, but I have managed to log about 260 stations, with about 193 verified. I am using a Crosley 6-tube Gembox. This is a powerful set. I have a 100-foot aerial and a copper plate for a ground. I am a member of the Buffalo Evening News DX Club, and would like to correspond with other DXers."

"I am only sixteen years of age and am not allowed to sit up late for fear of waking the whole house," confesses Henry Bradshaw, 32 Vansitmart Ave., Hamilton, Ont. "However, I can get considerable distance on our Eveready 8-tube set. I have logged 192 stations, only two of which were received later than 10:30 p. m. EST. KFI, Los Angeles, booms in every Sunday night as soon as our local station, CKOC, signs off at 10:30 p. m."

"Thanks to you, I managed to pull

(Continued on page 80)

JANUARY DX CALENDAR

A. M. time is given as of the night before. Thus early Monday morning programs are listed under Sunday night. Time is given in Eastern Standard so that programs may be listed in proper sequence.

SUNDAY NIGHT

Jan. 1st

Mid.-2:00—CMCH, 1405, Havana, Cuba.
2:00-3:00—CHWK, 665 Chilliwaek, B. C.
3:00-5:00—KPCB, 650, Seattle, Wash.

Jan. 1st, 8th, 15th, 22nd, 29th

Mid.-1:00—WSAZ, 580, Huntington, W. Va.
12:30-1:00—KSOO, 1110, Sioux Falls, S. D.
1:00-2:00—WGES, 1360, Oak Park, Ill.

MONDAY NIGHT

Jan. 9th

2:00-3:00—KFYR, 550 Bismarck, N. D.
3:00-5:00—WHBF, 1210 Rock Island, Ill.
3:00-5:00—IOBI, 1200 Prince Albert, Sask.

Jan. 30th

4:00-6:00—KPOF, 880 Denver, Colo.

Jan. 2nd, 9th, 16th, 23rd, 30th

Mid.-2:30—WMIL, 1500, Brooklyn, N. Y.
1:00-5:00—WABZ, 1200, New Orleans, La.
2:00-4:00—KOY, 1390, Phoenix, Ariz.
5:00-6:00—WAWZ, 1350, Zarephath, N. J.
5:15-5:30—WHP, 1430, Harrisburg, Pa.

TUESDAY NIGHT

Jan. 3rd

3:00-6:00—WOPI, 1500, Bristol, Tenn.

Jan. 10th

2:00-3:00—WJMS, 1420, Ironwood, Mich.

Jan. 24th

2:30-3:30—WCLO, 1200, Janesville, Wis.
3:00-4:00—KDLR, 1210, Devils Lake, N. D.
3:00-5:00—LS-8, 1230, Buenos Aires, Argentina.
4:30-6:30—IOBI, 1199, Wingham, Ont.

Jan. 31st

2:30-3:00—CHWK, 665, Chilliwaek, B. C.
2:00-9:00—KGR, 1360, Butte, Mont.
4:00-1:30—KGAR, 1370, Tucson, Ariz.

Jan. 3rd, 10th, 17th, 24th, 31st

Mid.-1:00—XEH, 1132, Monterrey, Mex.
1:00-4:00—WSUI, 880, Iowa City, Iowa.
3:00-4:00—CFJC, 1120, Kamloops, B. C.
3:00-4:00—KFGQ, 1310, Boone, Iowa.

WEDNESDAY NIGHT

Jan. 4th

1:00-3:00—KFJZ, 1370, Ft. Worth, Tex.

Jan. 18th

2:00-1:00—KGVQ, 1200, Missoula, Mo.

Jan. 4th, 11th, 18th, 25th

11:30-12:30—KFUO, 550, St. Louis, Mo.
Mid.-1:00—WHBL, 1410, Sheboygan, Wis.
2:00-3:00—KFXX, 1310, Grand Junction, Colo.
2:30-4:30—CKWX, 730, Vancouver, B. C.
2:30-4:30—KGF, 1420, Shawnee, Okla.

THURSDAY NIGHT

Jan. 5th

10:00-11:00—WKAQ, 1240, Porto Rico.

Jan. 5th, 19th

11:30-3:00—WMBC, 1420, Detroit, Mich.

Jan. 12th, 26th

3:00-5:00—KGF, 1500, Moorhead, Minn.
3:00-5:00—KASA, 1210, Elk City, Okla.

Jan. 19th

2:00-7:00—KGKB, 1500, Tyler, Tex.
6:30-8:30—IOBI, 1200, Prince Albert, Sask.

Jan. 26th

2:00-5:00—WAGM, 1420, Presque Isle, Me.

Jan. 5th, 12th, 19th, 26th

Mid.-1:00—WTEL, 1310, Philadelphia, Pa.
Mid.-2:30—WMIL, 1500, Brooklyn, N. Y.
2:00-3:00—CFAC, 690, Calgary, Alta.
3:00-4:00—CKOV, 1200, Kelowna, B. C.

FRIDAY NIGHT

Jan. 6th

2:00-4:00—IOBQ, 1200, Brantford, Ont.

Jan. 6th 20th

2:00-3:00—WRAM, 1370, Wilmington, N. C.

Jan. 20th

1:00-5:00—KRMD, 1310, Shreveport, La.
5:00-6:00—WJBU, 1210, Lewisburg, Pa.

Jan. 6th, 13th, 20th, 27th

12:30-1:30—WCAJ, 590, Lincoln, Neb.
1:00-2:00—CFCN, 985, Calgary, Alta.
1:00-3:00—CKCL, 580, Toronto, Ont.
1:00-2:00—WENC, 1420, Americus, Ga.
1:00-4:00—CKPR, 890, Ft. William, Ont.
1:30-3:30—KGEK, 1200, Yuma, Colo.

SATURDAY NIGHT

Dec. 31st

12:30-1:30—WACO, 1240, Waco, Texas.
1:30-2:30—CHGS, 1120, Summerside, P. E.
2:00-3:00—CHML, 880, Hamilton, Ont.
4:00-4:30—KGAR, 1370, Tucson, Ariz.

Dec. 31st, Jan. 7th

1:00-5:00—WJEL, 1210, Hagerstown, Md.

Dec. 31st, Jan. 14th

2:30-4:30—IOAB, 1200, Moose Jaw, Sask.

Jan. 7th

Mid.-4:00—WRBX, 1410, Roanoke, Va.
1:00-3:00—WLL, 890, Urbana, Ill.
2:30-4:30—KLPM, 1240, Minot, N. D.
3:00-5:00—CKPC, 880, Preston, Ont.

Jan. 14th

1:00-2:00—WJAG, 1060, Norfolk, Nebr.
2:00-4:00—WHET, 1210, Troy, Ala.
4:00-7:00—KFBI, 1050, Abilene, Kans.

Jan. 21st

2:00-3:00—WTOC, 1260, Savannah, Ga.
4:00-6:00—KGF, 1500, Corpus Christi, Tex.

Jan. 28th

Mid.-4:00—WIBW, 580, Topeka, Kans.
2:00-3:30—WFAS, 1210, White Plains, N. Y.

Jan. 7th, 21st

1:00-3:00—KUSD, 890, Vermilion, S. D.

Jan. 7th, 14th, 21st, 28th

Mid.-1:00—WJBK, 1370, Detroit, Mich.
Mid.-2:00—WCAH, 1430, Columbus, Ohio.
Mid.-2:00—WGBT, 880, Scranton, Pa.
Mid.-3:00—CMCD, 925, Havana, Cuba.
Mid.-3:00—WWR, 1500, Woodside, N. Y.
Mid.-5:00—WTFI, 1450, Athens, Ga.
12:30-3:00—WBBZ, 1200, Ponca City, Okla.

1:00-1:30—WKY, 900, Oklahoma, Okla.

1:00-2:00—KQV, 1380, Pittsburgh, Pa.

1:00-2:00—WGBF, 630, Evansville, Ind.

1:00-2:00—WGES, 1360, Oak Park, Ill.

1:00-3:00—KRLD, 1040, Dallas, Texas.

1:00-3:00—WIBG, 930, Glenville, Pa.

1:00-3:30—WOW, 590, Omaha, Neb.

1:00-1:00—KGU, 750, Honolulu, T. H.

1:15-2:30—WOMT, 1210, Manitowish, Wis.

1:30-3:00—KMAC, 1370, San Antonio, Texas.

2:00-5:00—KFEL, 920, Denver, Colo.

2:00-6:00—WTRC, 1310, Elkhart, Ind.

2:30-4:30—CKWX, 730, Vancouver, B. C.

3:00-1:00—CFCT, 630, Victoria, B. C.

3:00-4:00—CKOV, 1200, Kelowna, B. C.

3:00-4:00—KDB, 1500, Santa Barbara, Calif.

3:00-4:00—KFPX, 920, Denver, Colo.

3:00-4:00—KFXM, 1210, S. Bernardino, Calif.

3:00-4:00—WKBZ, 1500, Ludington, Mich.

3:00-6:00—KGCX, 1310, Wolf Point, Mont.

4:00-6:00—KVOA, 1260, Tucson, Ariz.

Road to Romany, 8:45 p.m., Saturday, B.
Russian Galeries, 8:00 p.m., Sunday, B.
Cesare Sodero, 11:15 p.m., Mon., Tues., Thurs., B.
Waldorf-Astoria Orchestra, 6:00 p.m., Daily, ex. Sun., R.

DANCE BANDS

Ben Bernie, 9:00 p.m. and 12:30 a.m., Tues.; 11:30 p.m., Thurs., R.
Don Bestor, 12 mid., Saturday, B.
Cab Calloway, 12 mid., Wednesday and Friday, B.
Jack Denny, 8:45 p.m., Wed.; 11 p.m., Sat., R.; 12 mid., Mon., B.; 8:45 p.m., Thurs., C.
Emery Deutch, 12:45 p.m., Sunday, C.
Eddie Duchin, 11:30 p.m., Sun.; 12 mid., Thurs., C.
Ted Fiorito, 12 mid., Saturday, C.
George Hall, 6:30 p.m., Tuesday, C.
Isham Jones, 11:30 p.m., Tues., Wed., Thurs., C.
Wayne King, 3:00 p.m., Sunday; 8:30 p.m., Tuesday, R.
Guy Lombardo, 11:30 p.m., Mon., 9 p.m., Wed.; 11:00 p.m., Sat., C.
Vincent Lopez, 12:30 a.m., Saturday, R.
Abel Lyman, 8:00 p.m., Tues., Thurs., Sat., C.
Carl Moore, 12 mid., Thursday, B.
George Olsen, 7:15 p.m., Saturday, R.
Ben Pollack, 12 mid., Friday, C.
Don Redman, 12 mid., Tuesday, Wednesday, C.
Riviera Orchestra, 12 mid., Monday, C.
Harry Salznick, 11:30 p.m., Monday, R.
Andy Sannella, 10:15 p.m., Wednesday, B.
Harold Stern, 11:30 p.m., Saturday, C.
William Stoess, 12 mid., Sunday, B.
Rudy Vallee, 8:00 p.m., Thursday, R.
Anson Weeks, 12:15 a.m., Mon.; 11:00 p.m., Fri., R.; 8:15 p.m., Sat., B.
Ted Weems, 11:00 p.m., Mon.; 12 mid., Sat., R.; 10:00 p.m., Sun.; 8:15 p.m., Thurs., C.
Paul Whiteman, 9:30 p.m., Mon.; 11:30 p.m., Sat., R.; 6:00 p.m., Sun., B.

DIALOG

Al and Pete, 10:30 p.m., Tues. and Thurs., B.
Amos 'n' Andy, 7:00 and 11:00 p.m., Daily, ex. Sat. and Sun., B.
Burns and Allen, 9:00 p.m., Wednesday, C.
Clara Lu 'n' Em, 10:15 a.m., Daily, ex. Sat. and Sun., B.
Cuckoo Program, 7:30 p.m., Saturday, B.
Easy Aces, 10:15 p.m., Mon., Wed., Fri., C.
Willie and Eugene Howard, 7:15 p.m., Wed., Thurs., Fri., B.
Howard and Shelton, 9:00 p.m., Tuesday and Friday, C.
Graucho and Chico Marx, 7:30 p.m., Monday, B.
Baron Munchausen, 10:00 p.m., Thursday, R.
Stoopnagle and Budd, 9:30 p.m., Thursday, C.
Wheatnerville, 7:15 p.m., daily, ex. Fri. and Sat., R.
Ward Wilson, 7:15 p.m., Wed., Thurs., Fri., B.

DRAMA

Red Adams, 8:30 p.m., Sunday, B.
Big Ben's, 5:30 p.m., Sunday, R.

Death Valley Day, 9:00 p.m., Thursday, B.
Eno Crime Club, 9:30 p.m., Wednesday, C.
First Nighter, 9:00 p.m., Friday, B.
Friendship Town, 9:30 p.m., Wednesday, R.
Fu Manchu, 8:45 p.m., Monday, C.
The Goldbergs, 7:45 p.m. and 12:00 mid., daily, ex. Sat. and Sun., R.
Great Moments in History, 7:30 p.m., Sunday, B.
Sherlock Holmes, 9:00 p.m. and 12:15 a.m., Wed., B.
Buck Jones, 7:15 p.m., daily, ex. Sat. and Sun., C.
K-7, 1:00 p.m., Sunday, R.
Phillips Lord, 10:00 p.m., daily, ex. Sat. and Sun., B.
Magic Voice, 8:15 p.m., Tues. and Sat., C.
March of Time, 8:30 p.m., Friday, C.
Moonshine and Honeysuckle, 2:30 p.m., Sunday, R.
Myrt and Marge, 7:00 and 10:45 p.m., daily, ex. Sat. and Sun., C.
Mysteries in Paris, 9:30 p.m., Monday, C.
Pages of Romance, 5:30 p.m., Sunday, B.
Rin Tin Tin, 8:30 p.m., Thursday, B.
Roses and Drums, 5:00 p.m., Sunday, C.
The Shadow, 8:00 p.m., Wednesday, R.
Soconyland Sketches, 8:00 p.m., Monday, R.

PIANO AND ORGAN

Fray and Braggiotti, 10:30 p.m., Monday, C.
Archer Gibson, 8:00 p.m., Sat., R.; 10:30 p.m., Mon., B.
Harding Sisters, 10:45 p.m., Saturday, B.
Ernest Hutcheson, 10:30 p.m., Sunday, C.
Vee Lawnhurst, 4:15 p.m., Sunday, R.
Ohman and Arden, 9:45 p.m., Sun., R.; 2:15 p.m., Sun., C.
Lee Sims, 6:45 p.m., Saturday, B.
Lew White, 11:15 p.m., Saturday, B.

POPULAR PROGRAMS

A. & P. Gypsies, 9:00 p.m., Monday, R.
Fred Allen's Bath Club, 9:00 p.m., Sunday, C.
Antobal's Cubans, 7:45 p.m., Tuesday, B.
Armour Program, 9:30 p.m., Friday, B.

 Howard Thurston, 8:45 p.m., and 12:15 a.m., Thurs. and Fri., B.
 Frederic William Wile, 7:00 p.m., Saturday, C.
 Walter Winchell, 9:30 and 11:15 p.m., Sunday, B.
 Your Government, 8:00 p.m., Tuesday, B.

KEY TO SYMBOLS

As Shown in the Index by
 Frequencies and Dial Numbers

Frequency is given in kilocycles; wavelength in meters. Night power is shown in watts in third column. Daytime power is shown in parenthesis in fourth column in kilowatts, thus (.25) indicating 250 watts. Some stations outside the United States use a "split frequency." Their exact frequency is shown in fourth column. R-C indicates Remote Control. * Where space permits, names of hotels or other buildings used in announcements are shown in parenthesis. These are not mail addresses.

Second Column Symbols

a Verifies reception for return postage.
 b Verifies only occasionally.
 c Does not verify.
 d Verification 25c; reply card 10c.
 e Sends Ekko stamp for 10c.
 f Sends Ekko stamp for 5c.
 g Sends Ekko stamp for postage.
 h Sends own station stamp for 10c.
 i Sends own station stamp for 5c.
 j Sends own station stamp for postage.
 k Has no stamps.
 z Failed to reply.

Fourth Column Symbols

A These stations are synchronized.

B National "Blue" network.
 C Columbia network.
 D Daytime only.
 Dn Daytime with occasional evening hours.
 E Trans-Canada network.
 F Canadian National Railways network.
 G All Canadian networks.
 H Yankee network.
 J Orange and gold network.
 K Mexican networks.
 L Canadian Pacific Ry. network (Dominion).
 M Canadian Radio Corp. network.
 N National "Red" and "Blue" networks.

P Has construction permit only.
 Q Great Lakes network.
 R National "Red" network.
 S Sunday only.
 T Don Lee System.
 U Dixie network.
 V Maritime Broadcasting network.
 W Curtis-Indiana network.
 X Has permit to increase power.
 Y Has permit to change location.
 Z Has permit to change frequency.
 a-b-c. Small letters show stations using same transmitter.
 1-2-3. Figures denote stations sharing time.
 No information.

INDEX BY FREQUENCIES AND DIAL NUMBERS

NOTICE OF COPYRIGHT

The method of logging by wave-lengths or frequencies was devised by The Radex Press in 1924 and has been copyrighted and recopyrighted each year since that time. The arrangement of stations in groups by frequencies or wave-lengths, with dial readings in connection therewith, is fully covered by our copyright and all infringers will be vigorously prosecuted.

Imagine turning a dial and telling instantly the time in any country of the world. Nothing to add or subtract. Tells when you must tune for stations in other countries. The RADEX Time Converter with large Radio Map of the World. Price but 25c post-paid to any country.

One Hundred Best Short Wave Stations

By Frequencies and Wave Lengths

Submitted by our readers as being most regularly received. Times are given in Eastern Standard. First column gives frequency in megacycles (for kilocycles read the decimal point as a comma) and the second column, wave-lengths in meters.

For complete lists of short-wave stations see the following issues of this magazine:

September: Foreign stations arranged by countries.

October: Complete list by frequencies and waves.

November: American stations by states.

December: Canadian stations by provinces and Complete list by call letters.

The DX World

(Continued from page 33)

in YV1BC, Caracas, Venezuela, Sunday, October 2nd," reports Albert Sandham, 99 Page St., St. Catharines, Ont. "So far I have heard programs from seven countries: Canada, United States, Mexico, Cuba, Dominican Republic, Porto Rico and Venezuela. I have been DXing three years and have heard 413 stations so far. I have a Rogers electric set, 1929 model, type 540, using eight tubes."

"Reception is good here in the country," writes Henry C. Arsenault, Box 28, St. Raphael, P. E. I. "I live exactly 12 miles from Summerside. I have a 3-tube radio built by my cousin, Anthony Arsenault of Summerside. It sure gives me good results. I have heard nearly 300 different stations and most of them on the loud speaker. I also get good daytime reception. I would like to hear from radio fans all over the world, and promise to answer all letters I receive."

"DXers should try for these transatlantic stations," suggests Raymond M. Bell, 616 S. Allen St., State College, Pa. "Great Britain, 7:00 p. m. EST, stations on 625, 797, 843, 995, 1040, 1148 keys., with 50 KW; Germany, 6:00 p. m. EST, on 635, 832, 923, 1085 keys., 60 KW; France, Paris, 6:00 p. m. EST, on 914, 60 KW. Also try for Germany midnight EST till sunrise in Germany (about 1:00 a. m. EST)."

"I am only two miles from WSB's transmitter," writes Douglas Wanchope (no address), "and have had some interference from them, until lately when I built a wavetrap. Before, even with the aerial and ground disconnected, this station overlapped about 25 kilocycles each way on the dial, but with the wavetrap in series and my aerial and ground connected, WJZ comes in without a trace of interference."

"I have received 330 and verified over 200 stations on our 9-tube Fada," advises Howard Rung, 64 Lisbon Ave., Buffalo, N. Y. "The only chance I

have to DX is weekends and holidays because of school. My log consists of stations in 43 states and six different countries. I would appreciate hearing from other 14-year old DXers about their records."

"I've kept a list of all the stations I've heard since about 1926," advises Leo Skelly, 125 Lake St., St. Catharines, Ont., "but did not actually start to DX until about 1929. Have a log of 581 to date, including RUS, KPCB, CMHC, KTLG, CKWX, WKAQ and others. I'd like to hear from owners of Sparton radios and promise to answer all letters."

"This morning (October 9th) was great for DXing," reports Jack W. Roberts, 4836 Mulberry St., Philadelphia, Pa. "I managed to get five new stations, all pretty good, which brings my total up to 351. They were KGGM, KFBB, KLZ, KMPC and WEDC. I am hoping to catch at least five more tonight."

"I haven't been DXing for quite a year and my log is 412," says Luther E. Grim, 505 S. Main St., Red Lion, Pa. "My two latest catches (WKAQ and YV1BC) are by far my most prized catches, with KFVD, 10BQ and VAS crowding in close for recognition."

"I have been a DXer for about seven months now, and have a log of 124 stations on my Philco 5-tube Baby Grand," says Myron Force, 1209 Belle Ave., Lakewood, Ohio. "I have three California stations which I think is fairly good for a small radio."

"I use a Crosley Pup, one tube, regular broadcast band set of about eight or nine years ago," says John C. Fulton, 306 Elmwood Ave., Providence, R. I. "I have received 121 stations, including 17 shortwave stations."

"I won a cash prize from WTBO, Cumberland, Md., 100 watts, for their DX in September," boasts G. Wrightman, 1171 W. 32nd Ave., W., Vancouver, B. C. "My report was the most distant. That makes four prizes in eight months."

"On your Right"—the Radio Map of the World with Time Converter.

TELLS THE TIME For the Whole World

Just set the dial for the hour of the day in your zone and—presto—there is the time for every country in the world. No adding nor subtracting. Shows which times are yesterday, today and tomorrow.

Shows where twilight, darkness and dawn lie.

Tells You When You Must Tune for Distant Programs

On the double page inside is a fine map of the world—the size of six pages of RADEX—with all the principal cities and time zones plainly shown. Adds immensely to pleasure of DXing.

On the back is a list of all countries in the world with the call letters assigned to each and zone key for use on the Converter.

Mailed anywhere in the world for 25 cents. Given free with a year's subscription to RADEX; see subscription blank on page 24.

THE RADEX PRESS, INC.

5005 EUCLID AVENUE

CLEVELAND, OHIO, U. S. A.

Sometimes I think there ought to be a law to make everyone do a little studying every week. I didn't think that a year ago because it looked like all the cards were stacked against me. But I am certainly rolling in the money now. Maybe my story will show you the way to larger earnings also.

I Thought Radio Was a Plaything

But Now My Eyes Are Opened, and I'm Making Over \$75.00 a Week!

\$50 a week! Man alive, a year ago I thought anyone making that much was just plain lucky.

Twelve months ago I was just barely getting by. It was the same old story—a little job; a salary as small as the job.

If you had told me that twelve months later I would be making \$75 a week in my own Radio business—I'd thought you were crazy.

But I am getting ahead of my story—let me tell you how it all started. I was hard up a year ago because I had been kidding myself—that's all—not because I had to be. I thought a fellow either had to be lucky or have a string of college degrees a half a mile long to make good money.

One day I picked up a magazine and the headline of an ad attracted me because it seemed to fit my case. It said, "I will show you how to start a spare time or full time Radio business of your own **WITHOUT CAPITAL.**"

"They're trying to kid somebody," I thought; "but I'll find out what it is all about anyway."

I wrote in and within a few days received a 64-page book telling about the opportunities in Radio, how I could prepare right at home in my spare time, and how they would show me how to start making money in my neighborhood selling and repairing Radio sets. It would probably have sounded too good to be true if the promises had not been backed up by 100 letters from fellows who had taken their course and were very enthusiastic about it.

What has happened since seems almost like a dream to me now. I took their course and in about a month I was ready to start making money in my neighborhood—as much as \$5 and \$15 a week. It wasn't long until I had saved enough money to start a little business of my own.

That business has since grown to the point where I am clearing an average of \$75 a week. All this took place under the watchful guidance of my friends at the National Radio Institute. They also offered to train me for other lines—in case I wasn't interested in having my own business. Broadcasting stations, Radio Manufacturers, Operating on Board Ship, Servicing Sets, Aircraft Radio, Television and Talking Movies

are other fields their training covers. And to think, until the day I wrote for that book, I'd been wailing, "I have never had a chance—will never have one because I have no pull and have never had the advantage of a good education!"

Friend—you may not be as bad off as I was—but think it over—are you satisfied? Are you making as much money as you need? Would you sign a contract to stay where you are for the next ten years at the same salary? Those are the things you have to think about—because no one is going to make it his business to push you ahead—you must make it your own business.

Take my tip—write for their book. It won't cost you anything—only a three-cent stamp. It shows you a lot of things which I don't believe you know now—a lot of facts and figures on the opportunities in this new, fast-growing field. Where the jobs are, what they pay, how to get ready for one. Beginners as well as experienced men are making as much as \$1,000 to \$2,000 a year more as a result of N. R. I. training. You place yourself under no obligation because the book is free and is gladly sent to anyone who is ambitious and wants to get ahead. Just address J. E. Smith, President National Radio Institute, Dept. 3AO, Washington, D. C.

**J. E. Smith, President,
National Radio Institute,
Dept. 3AO, Washington, D. C.**

Dear Mr. Smith; Send me your free book, "Rich Rewards in Radio," which points out the opportunities for spare time and full time jobs in Radio and your famous 50-50 method of training men to become Radio Experts through home study. I understand this request places me under no obligation.
