

SPRING EDITION 1928

# RADIO INDEX

*"THE TUNING BOOK"*

## You Cannot Tune

A Radio Set properly unless you know

- ... the frequency or wavelength to which set is tuned whenever dials are turned
- ... where to set your dials for any station in America whether ever received or not
- ... how to identify the stations you receive without hearing the call letters

RADEX gives all the above information for any dial and any set. Merely fill in your dial numbers as shown on next page.

**CORRECT TO MARCH 1, 1928**

**NSE**

# IF PROPERLY USED RADEX WILL

show the wave length set is tuned to—  
 identify stations without announcements—  
 give dial setting for stations never heard—  
 convert dial numbers into frequencies and vice versa.

## INSTRUCTIONS

The cut above shows the correct way of using RADEX in order to get the greatest benefit and pleasure. When a station is heard first ascertain its frequency by reference either to the Index by Call Letters or the Index by Locations. Second, turn to the Index by Frequencies and fill in your dial readings in the space opposite that frequency. As additional stations are logged, RADEX will show the relation between your dial progression and that of the frequency in kilocycles.

The Federal Radio Commission is grouping stations in classes according to their frequency of vibration as rated in kilocycles (thousands of cycles). All stations on the same frequency must come in at exactly the same spot on your dials regardless of distance and power. If they do not it is because they are temporarily off their "beat" and it is useless to log them.

By referring to sample chart above it will be seen that even though stations on 670 kilocycles, for instance, have not been logged yet if the dials of that set are placed at 68-67 the set will be tuned for their frequency and if they are on the air and within range of the set, they will be tuned in.

To identify programs received where the call letters are not heard, simply compare your dial readings with the dial numbers already entered in the Index by Frequencies. This will show you the frequency or wave length to which your set is tuned and the power of the stations as shown in the second column and the distance from your home will enable you to tell at a glance what station you are hearing.

Stations of 500 watts power or more are in black face type.

## The Short Wave Stations

For the information of those who are exploring the short-wave field, the following list of stations known to be broadcasting between 20.3 and 109.0 meters, is given. The definite wave length used by each station cannot be given as the experiments are being carried on at different frequencies. These frequencies are too high for the ordinary receiver and special instruments must be built

in order to receive these stations. Most of the programs in this field are the same as those in the broadcast bands merely being duplicated at high frequencies in order that they may carry farther and reach distant lands. The stations are designated by the initial letter X with a numeral preceding which indicates the radio district in which the station is located.

# Get All the Fun there is in Radio

The man who gets the most enjoyment out of anything is the man who does things right. Whether it be golf, fishing, or penuche, the man who is content to be a "dub" doesn't get a fraction of the fun out of it the man does who knows just what he is doing and why he is doing it.

So it is with Radio. The man or woman who turns the dials idly, taking what he gets, soon tires of it, tunes in a local and lets it go at that. But the one who tunes intelligently gets new thrills every night. Just imagine the fun of being able to set your dials for any station in America whether you have ever heard it before or not. And what a pleasure it is to turn your dials and name the stations you hear just as fast as you can tune them in, without waiting to catch the call-letters.

All this is possible with RADEX.

Keep up-to-date in Radio. An old index is like a last week's newspaper. RADEX is published monthly during the radio season. Subscribe for it by the year if you want to get the most out of your radio. The dub is satisfied with a last year's book or none at all. Do what you do right or don't do it at all.

Please show RADEX to your friends. Explain to them how it tells at a glance the wave-length or frequency to which the set is tuned whenever the dials are placed. They will be interested and thank you for it.

## Leatherette Covers

We have had so many requests for a binder for RADEX that will protect the book from wear, give a stiff surface for writing and look well on the best set that we have had made a leatherette slip cover which we will send you for 50c. Or we will send you one free for two yearly subscriptions.

## Radio Maps and Distance Tables

The Index by Locations contains a key after each city which shows the location of the station on the RADEX map which is ruled in squares to show the distance from your city. We will send you one of these maps and a table of airline distances free for a two-cent stamp.

The Radex Press  
P. O. Box 143  
Cleveland, Ohio
