The All Star Five Orchestra, KFSD, San Diego, Calif.
In the Front Ranks of RADIO

No, I am not referring to this firm or to any of the radio products which we distribute. Not the inventor, nor manufacturer, nor wholesaler—but the retail dealer is in the front ranks of radio.

He works 3,000 hours a year. He faces the vital problems of service, credit and selling. On his judgment and ability depend the future of radio.

We recognize his importance and the difficulties which he is successfully meeting every day. As the pioneer in bringing radio to every home in California, he has the active support of every member of this organization.

Prize Radio Program

PROGRAM managers of the broadcasting stations are facing the difficult task of presenting acceptable programs to an unknown audience, an audience they have never seen and therefore are unable to visibly perceive the response as to whether or not the presentation is a success.

The spontaneous applause or the expressive silence quickly indicates to the manager of a theater the degree of success of the entertainment program. A large theater charges a high price for admission and can engage the best of talent. A broadcasting station has to depend entirely upon the “sponsors of programs” for its revenue. These “sponsors” can be charged only a limited amount. Consequently there is only a limited amount with which to engage talent.

It is the wish of everyone to enjoy an interesting and pleasing radio program. In our endeavor to assist in the improvement of broadcasting entertainment we appeal to our friends and readers to send in their idea of a good one-hour radio program. The stations broadcast diversified programs, such as lectures on different subjects, medical information, detective stories, jokes, speeches from prominent men, reports of athletic events, stock reports and the latest news items, operas, light operas, ballads and old-time songs, hymns, military marches, patriotic songs, syncopation and jazz. Your idea can be a diversified program or it can consist of one particular type of entertainment—just whatever you think would please yourself and your family some rainy evening. If your ideal program consists partly or entirely of music, give the names of selections wherever possible, as suggesting the type of music most acceptable. Talks, stories, etc., can be handled the same way. Make it an outline or a letter of not more than 350 words and mail to the Prize Contest Editor, RADIO DOINGS, 407 East Pico.

To the person sending in the best program, in the estimation of our judges, will be given a prize of a $40.00 Stromberg-Carlson Pedestal Tip-Top Table Model Cone Speaker with violin soundboard. This is your opportunity to win one of the best speakers produced and at the same time to give expression to your idea of a perfect one-hour radio program.

This contest is open to all of our subscribers and readers. The winning letter and the name of the writer will be published in Radio Doings, issue of March 20th.

Good Scouts Make Fine Men

This is the seventeenth anniversary of the organization of the Boy Scouts. It is splendid to think that in less than two decades we have over 700,000 mainly, well trained boys who are advancing to better manhood. These boys are carrying the nobler qualities of usefulness, honesty and courtesy with them through life. Wm. G. Messner Post No. 904, Veterans of Foreign Wars, Los Angeles, organized, equipped and is now training a whole troop of Scouts. A fine example in a worthy cause.

Do not be disheartened because you are not richly endowed with worldly goods, for the less you have the more there is to get. Think of the fun you will have in the GETTING.

When dollars are used to cement friendship the cement never lasts.

Some men murder opportunity when they think they are only killing time.

Did you ever stop to think that the truth really is a wonderful thing?

Youth

It is so easy to criticize as it takes little or no effort, giving of very little time and the minimum amount of brain power. Some of the people who are so severely criticizing the youngsters of today for their apparent freedom of action, desire for self-expression and the throwing off of the old shackles of conventionalities should look inwardly and they will probably find that their urge for criticism springs from the deep well of ENVY.

This is the age of Leaders, not Drivers.

Nothing stands still. Nature's immutable law is, "Progress or retrogression." Fortunately man continues to progress, and the youth of this generation are as a whole better specimens, mentally and physically, than the youth of any preceding generation.

Behind the Times

We see that one of our State legislators has presented a bill prohibiting the teaching of evolution in the public schools of California. Too bad he didn't live during the Spanish Inquisition and he would have learned from example that narrow laws and repression of information crumble before knowledge and understanding.

A rule is many times proven by its exception. A principle is infallible and knows no exception.

Be agreeable but not superficial; reserved but not self-conscious; dignified but not snobbish.

Opportunity does knock more than once, but sometimes we are not in. Try and be at home the next time.

Impatience is the curse of mankind, for it brings HURRY, WORRY, DOUBT and FEAR, which mean UNHAPPINESS.

Boulder Dam

Why do our political leaders play small politics instead of looking after the welfare of their people?

All investigations by congressional committees and by the Departments of Commerce and Labor have reported that the Boulder Dam is not only needed by the people of the great Southwest but is an absolute necessity to prevent another calamity such as occurred in 1905-6.

The Weather Bureau reports that there has been a heavier snowfall in the Rocky Mountains this year than at any time within the last twenty years.

If the Colorado goes on another rampage, as it did twenty-one years ago, it will mean the wiping out of a very rich agricultural district and the savings and property of thousands of people. It will be an irreparable loss and the blame will fall squarely on the shoulders of the Congressmen who are blocking the Boulder Dam bill.
Alternating Current Tubes

By K. G. ORMISTON

The operation of a radio vacuum tube depends upon the movement of electrons from one surface to another within the tube. We must therefore use for one of the elements of the tube a material which will give off the desired electron “emission.” A little chunk of radium would do the trick nicely, and the tube would have a life of several million years, but unfortunately could not sell for $1.75 per each.

An economical method is to use an incandescent filament. When sufficiently heated and surrounded by vacuum, the atoms of the filament disintegrate and electrons fly out from it, some immediately returning and the others continuing their outward journey, especially if attracted by a positively charged plate. That’s why you must connect the plate of the tube to the positive terminal of the B battery—to attract as many as possible of the filament’s electrons (negative), rather than let them wander aimlessly about.

The filament is heated to make it “emit,” by the simple method of passing an electric current through it. To do this calls for an A battery, rheostats, battery chargers and what-not. This “heating” current must be steady and smooth or an uneven emission will result, which will seriously interfere with the proper operation of the tube and result in a noisy output.

So far we have been talking about the usual type of tube in which the filament and electron emitter are one and the same. Now the thought which prompted the development of the so-called A. C. tubes was that the emitting surface might be separate from the filament, the latter simply being used to heat the emitting surface to the necessary temperature so that there will be enough excitement among the molecules, atoms and electrons to crowd out some of the last named.

Under these conditions, since the “heater” filament has no electrical connection with the other elements of the tube or with the circuits of the receiving set, it is possible to use an alternating current to heat it. The terminals of this heater unit are brought out at the top of the McCullough tube, and are connected to the secondary of a small step-down transformer whose output is 3 volts. The primary of the transformer plugs into the 110-volt alternating current house lighting circuit. The heater units in the tubes, the transformer and the connection to the house lighting circuit are all absolutely separate and independent of the circuits and apparatus of the radio receiver. Their purpose is simply to warm up the “emitter” surface, which is an element mounted in close proximity to the heater but not in electrical contact with it.

The emitter, which in this tube cannot be called the “filament” as in the standard tubes, should in this tube be called the “cathode,” since it is the negative surface, as contrasted to the positive plate or “anode.” The variations in the alternating current in the heater are too rapid to result in any appreciable variation in the electron emission from the cathode.

The tube has a standard four-prong base, though but three of the prongs connect to the elements of the tube—the grid, plate and “cathode.” The cathode connection is to the negative of the B battery, detector tube grid return, and to the positive of C batteries for the amplifier tubes. The cathode connections should in all cases be grounded also.

About 45 seconds are required from the time the heater voltage is turned on until the cathode reaches its normal operating temperature. This means that from the moment you turn on the set, about a minute must elapse before the tubes will operate at full efficiency.

When these tubes are used there can be no regulation of volume by means of rheostat adjustments, as the temperature of the cathode would be too slow in changing with a change in current through the heater. Other means must therefore be used. In the case of a non-oscillating set a 500,000-ohm potentiometer may be shunted across the secondary of the audio frequency transformer. Where a volume control which will also control the regeneration is needed, a 500,000-ohm variable resistance shunted across the secondary of the radio frequency transformer will suffice, or a 200,000-ohm variable resistance in series with the plate lead to the R.F. amplifiers.
Bathing Suit or Birthday Suit?

The genial proprietor of Station KFWO, Catalina Eye-land, recently offered a cash prize for the best letter on the subject of nude swimming. This subject aroused a storm of discussion prior to the big swim and inspired Major Mott's offer. Two prizes of $25.00 each were offered, one to go to the man writing the best letter, and the second to the writer of the best essay from a woman's hand. The winning letter in the "HE" division, written by a Marine, is reproduced below. Didn't a literary Marine win some kind of a contest or other in Philadelphia a while ago?

UNIVERSITY STATES MARINE CORPS

Base Athletic Office,
Marine Corps Base,
San Diego, Calif.,
December 28, 1926.

Major Mott,
Owner-Operator,
Radio Station KFWO,
Catalina Island, Calif.

Dear Major:

I can see nothing wrong in any man or woman attempting the marathon swim garbed "au naturel." It seems to me that in a great endurance test such as this, the physical strain must be tremendous, and that could be lessened somewhat, no doubt, by the absence of a bathing suit which would add only—weight.

Who will be the most in evidence at this great test of pluck and endurance? I venture to state that the same people who raise all the fuss will be there in strength. Why? Because they think they shouldn't be there; that's human nature.

If I could see this great race, my attention would be riveted on the leading swimmer, not the shapely arm or legs, but the approach to the goal. Is it a crime to swim without a bathing suit on such an occasion as this? Then, why don't these howlers start to reform some of our shows? A little less powder, and some of the chorus girls would be in the same fix as these swimmers wish to be the day of the race.

I would class such people as those with those who dwelt at great length on "Moral Turpitude." If people see anything wrong in swimming minus a suit, then there is something wrong with their "morals." Do not the greatest artists and sculptors use nude models for their work, and do not these "scoffers" spend hours in our art galleries admiring their work?

Forget about these narrow-minded people, Major; the majority of the sensible men and women of America don't give a damn whether the swimmers wear suits or not as long as America wins. To me, the question is of minor importance, and I believe that in the heart of every true American there is only one thought.

It is this:

"Let us hope that at the end of the great swim of the century in America, a tired but triumphant figure will be helped ashore, and from the lips of thousands will ring the cry, 'America Wins!'"

I trust that at the end of the day, when the clear call of the bugle sounds taps, there will have been written in the annals of sport another American triumph.

Very truly yours,

ROBERT HENRY GORDON,
Private, First Class, U. S. M. C.,
Clerk, Base Athletic Office.

The prize-winning letter in the Ladies' Division will be published in a future issue of Radio Doings.
Radio Topics of the Day

A Weekly Review of Radio News, Thought and Opinion

Some Interesting Opinions

"Radio has become a passion with me. I tune a set myself and I enjoy hearing the entire world discourse. I jump from one city to another. Only the other day I heard Pittsburg plainly."

—President Doumergue of France.

"I get the Bronx every night, but have to take the subway to do it."

—"Bugs" Bear.

"Two things I love are radio and jazz."

—Mary Garden.

"I was taken to a chamber where I had to speak a message into the radio. Always a shy business when people are looking on. One feels so completely idiotic, standing in front of a dumb listener who does not even look at you, but stands stolidly there as though defying imagination."

—Queen Marie of Rumania.

"In due course the world's chief broadcasting systems may become so interrelated that the barriers of nationality, language and geography will be overcome."

—J. C. W. Reith, Director, British Broadcasting Company.

Pro and Con

Here are the opinions of two Senators who are busily engaged in debating the proposed Radio Bill as this issue goes to press.

The Hon. Wallace H. White, co-author of the White-Dill Radio Bill, says: "This legislation may fall far short of what it should be, but it is at least a step in the right direction. First and foremost, it asserts unequivocally the power and authority of the United States over this means of communication and gives to the Federal Government power over the vital factors of radio communication."

The Hon. Edwin L. Davis, replies: "This bill is less protective of the public interests and more favorable to the monopoly and the profiteering interests than any radio bill that has passed either branch of Congress, or which has heretofore been reported to either branch of Congress."

And so it goes. Meanwhile the millions of set owners are crying for relief from a situation which daily becomes more chaotic.

Agricultural Station Is Popular

The California Farm Bureau has announced that during the past year more than 2,000,000 words of general farm news was broadcast through station KQW, San Jose, Calif. As a result it is said that the station has received more than 20,000 letters from the farmers served.

The President Speaks

By K. G. ORMISTON

On the 22nd day of this month we will celebrate the birth of George Washington, the first President of these United States.

Two and a half centuries have passed since President Washington was wont to address the handful of statesmen who guided the then frail craft of government through the troubled seas of national and international affairs;—two and a half centuries in which man has learned many of the immutable laws of nature in his struggle to better his condition and in his unceasing and untiring search for an explanation of the mysteries of life.

Presidents have come and gone as science has marched steadily forward. And now we read the announcement that on the day upon which we pay tribute to the memory of our first President, Calvin Coolidge will "address the nation via radio." With bland complacency we accept the astounding fact that the voice of Mr. Coolidge, speaking in the House of Representatives in Washington, will be heard at the fireside of millions of American homes! This is an age in which we are prone to take much for granted.

Through radio the Chief Executive will come to the American citizen in his home; in the bosom of his family; in the quiet of that environment. No crowding into vast auditoriums; no influence of "mob psychology"; no shouting,—but just as a guest for an hour he will sit quietly down in each family circle and speak his thoughts.

Through radio, President Coolidge will speak to at least ten million people. But of far greater importance, he will speak to the very heart of the American Nation—the HOME.

The Presidential address will be released over an extensive chain of sta-

(Continued on page 92)
There comes a time in the life of every listener-in when he wants to be heard as well as to hear. In other words, he gets a "load on his chest," and, finding it useless to "talk back" to his loud speaker, he finally finds an outlet for his long-suppressed ideas by writing them to his friend—Radio Doings. From time to time such letters are published in our columns, especially when they express a new or radical thought. It is understood that the views set forth may or may not be in accord with those of this publication.

Editor, Radio Doings.
Los Angeles, Calif.

I think the average radio fan's attitude in regard to the loud squawks and lamentations in regard to the passage of the radio legislation now before the Senate can be expressed in the words "We should worry." This thing of trying to throw a scare into the fans by telling them that they had better make up their minds to "junk" their sets if the laws are not passed, is a lot of bunk and nonsense, and is unnecessarily alarming a lot of credulous persons.

This sort of thing is doing radio more harm than good. It is just as unreasonable to have said that if we could not have had the "Boulevard Stop" and ordinances regulating left and right turns passed, that we would have to junk our cars.

While it is true that there are a number of low power, badly modulated stations butting in on waves where they have no logical right to be, the condition is no where near as bad as certain interests would have the public believe. The average set owner is not suffering to any great extent. I use a simple one-tube set, with which I go through practically everything here, and get Denver, Salt Lake, San Diego, Oakland's several stations and, for that matter, everything within reasonable range of my set. This, by the way, being Ormiston's old adaptation of the Ultra-audion as described in your 1925 Call Book.

The broadcast stations, equipment manufacturers, and dealers, who have everything at stake will see to it that we never have to junk our receiving sets. The set owners are doing their part. They are buying the sets and accessories, and are a source of steady revenue to the battery and tube manufacturer. Why should they then take up the additional burden of "lobbying" at Washington in order to save the day? Let the big interests take some of their fat profits and go after the legislation themselves, instead of yowling for us to pull their chestnuts out of the fire.

Just keep quiet, "saw wood," and say nothing to the law makers. Everything will work out O.K., in spite of the terrible predictions of the hysterical calamity howlers. The big radio interests have too much money tied up in the industry to let it go to the dogs.

I expect to have my little one-tube set and my five-tube loud speaker set for a great many years yet, for there will be plenty of broadcasting, and still more broadcasting, after I am gone.

I repeat that the manufacturers and station owners will see to it that conditions are regulated so that we will not junk our sets, when they see that the public is not to be bunked into doing it for them. Therefore, "we should worry."

JOHN T. PIERCE.
Los Angeles, Calif.

(Editor's Note:—While Mr. Pierce is correct in stating that the situation here is not as yet intolerable, he must bear in mind that the proposed legislation is for the United States as a whole. Certain portions of the country are experiencing a condition of chaos in radio that is little realized here. For example, there are 49 stations within 60 miles of Chicago! There are 61 stations within 60 miles of New York! There are 715 active stations now on the air, 165 are under course of construction, and 328 are contemplated. Without legislation it is probable that there will soon be a total of more than 1200 stations, and the wave channels were badly overcrowded when there were but 500!

Mr. Pierce draws a comparison with traffic regulations. Would he care to drive his car on Broadway during a rush hour if there were no signals, officers, or regulations?)
Now that a woman has conquered the Catalina Channel, what is she going to do with it? The courage and endurance of Myrtle Huddleston are worthy all the praise and admiration that may be bestowed on her, and it is to be hoped that her accomplishment may bring her something more substantial. It is one more evidence of the spirit pervading society today: women are out to prove that their sphere is the world of sport, adventure, business and what-not; that she can conquer all these fields hitherto conceded as man's, and yet be a wife, a home-maker, and a mother.

I believe you would enjoy the writings of Rosita Forbes, whose adventures make most interesting reading, and her analysis of the present-day relationship of the sexes should inspire any woman who is not content with the limitations of her environment to seek some outlet for her energy.

As a rule men find satisfaction in the mere accomplishment of their great adventure, whether it be in the line of sports, letters or business; but a woman's success unshared means nothing to her, and invariably the inspiration of her efforts is her husband or, as in the case of Myrtle Huddleston, her son. And her happiness in accomplishment is measured by the joy and pride of her son or her husband in her success.

At all seasons of the year the housewife is confronted with the monotony of choosing from the few meats offered at the market. As I heard one little housewife complain to the man behind the counter, "Why don't you get in some new meats?" So I am going to fill my column today with suggestions for the use of oysters. The oyster season is short and one should make better use of the bivalve for a variation of the menu. Remember, oysters should always be fresh and never used after being long from the shell. If cooked they should be just cooked and served instantly, for an oyster let stand after cooking is tough. If served raw they should be taken from the shells just before using and be icy cold.

For a novel relish, make little cups by cutting lemons in halves crosswise and removing the pulp. Half bury the cups in shrewd ice and fill with small oysters and a few bits of the lemon pulp. At the last moment pour over a dressing made of grated horseradish, vinegar, salt and paprika. Cover the top with whipped cream, unsweetened, mixed with a teaspoon of chili sauce.

One of the pleasant times of my life is recalled—an oyster bake on the shores of Matagorda Bay. One New Year's day, in bathing suits we waded along the beach and gathered many sacks of the huge oysters so plentiful in those waters. The unopened oysters were placed on clear live coals and cooked until the shells opened. Sprinkled with salt, pepper and butter and a little pepper sauce, and eaten from the shell while still hot, they were something to remember, and I offer the suggestion for a Sunday night or after-theatre supper to the woman so fortunate as to have an open fireplace.

Another recollection of that day is a tall stone jar, filled with hot oyster chowder, brought to the feast by a fish-
The Woman's Page (Continued)

erman's wife, and this is how you may make it. In a pint of chicken broth boil one-fourth pound of ham and an onion minced fine; season with pepper, salt and butter. Add the strained liquor from a pint of oysters and a cup of tomato juice. Drop in a half dozen dumplings; cover closely and cook 20 minutes without removing the cover. Add the oysters and cook till the edges curl. Lift out each dumpling, lay the oysters on and around them and pour the chowder over all.

An oyster loaf is satisfying. Cut the top from a round loaf of bread and dig out the crumbs; butter the inside of the bread shell and brown in the oven. Fill with hot, creamed oysters and put the cover back on. Then cover the entire loaf with beaten egg yolk and put in the oven to glaze.

Next week I shall have more suggestions for the use of oysters in your menu.

Term 'Socket-Power Unit' Endorsed

There has been considerable misunderstanding regarding the nature and purpose of devices for furnishing A and B power for radio sets from the house lighting source, due largely to the wording of advertisements. The National Better Business Bureau received so many complaints in this connection that they consulted with many of the leading radio authorities, engineers and manufacturers to arrive at a term which would be constructive and definite. The term "Socket-Power Unit" is the result. It was decided that such terms as "B Eliminator" are negative and ambiguous, corresponding to "Horseless Carriage" for automobiles. We are not concerned with what a device eliminates, but rather with what it is and does itself.
DX Club:
Being a DX hound, I am always interested in the DX section of the Red Book of Radio. I have a Stewart-Warner five-tube model 305 set, and am getting fine results; have had the set one month, and have brought in 103 stations in the United States, two in Canada and three foreign stations, CZE, Mexico City; JOAK, Tokyo, Japan, and 4QG, Brisbane, Australia. The last two stations I brought in between 4:00 and 4:30 a.m. JOAK announces in English and Japanese. If any Stewart-Warner owners wish dialing record, would be glad to send them to them. All they have to do is send addressed envelope and I will send by return mail. I find distant reception best here on clear, cool nights, and it is getting better every night. There is a lot of hams down this way that spoil a lot of our reception. I would send a copy of my log, but it is too long to print.

FRED M. ALLISON.

COCKATOO DOES IT!

Editor DX Page:
San Diego, Calif.

The recent letters on the DX page have impressed me so much that I have decided to send in my own record for future writers to shoot at.

Using a non-oscillating crystal bi-reflex, I have received KDKA, WJJ, WEAF, WRNY, JOAK, 2BL, CZE, and many others, which it is useless to mention.

I attribute my unbelievable success to the fact that I hook the loud speaker to the house lighting current, connect the A to the telephone line, and for an aerial use a bird cage containing a cockatoo.

BUFFALO BILL.

BEAT THIS LIST

Los Angeles, Calif.

DX Club:
Why give Zeniths and a very few more a monopoly on telling the world how your set performs. Some of you Radiola owners who are DX hounds lay aside your cloak of modesty and give 'em a broadside of broadcast reception.

I’ll start the ball rolling, and if the printer don’t get paralysis, I will here- with submit my log. I won’t insult your intelligence by saying that I get these stations every time they are on the air, nor that I have listened to them in the very recent past, but I do say that this list represents the stations I have heard on loud speaker. This brings up the question of that fellow who steps to the microphone and rambles all over the world, but apparently feels that he must keep the name of his station and his call letters a secret.

If every announcer would copy Larry Mott’s style, DX would be a pleasure unmarred. When Larry Mott steps to the “Mike” he leaves no question in anybody’s mind as to what his station is.

QUESTION—James Mendill, Los Angeles, asks: Should not the loop on Radiola 28 be directional? I have to keep it always in the same position. There is a floor lamp beside my set and when I pull the plug out of the wall socket a station that was coming in plain drops out.

ANSWER—Very often a loop, such as is used on the Radiola 28, will be found to have no appreciable directional effect. That is, it will give loudest signals when set in a certain fixed position regardless of the direction of the station being received. This is due to the fact that the loop is receiving energy from some other collector close to it, such as the house wiring circuits, or the loose end of an unused antenna. The loop is therefore turned to advantageously pick up energy from this other source rather than to have its plane horizontal to the direction of the station being received as would be the case were there no other influences affecting the loop.

This can often be demonstrated by moving the set out away from the wall where the loop will not be in close proximity to the house wiring or any other possible collector of radio energy. In preserving the directional properties of the loop you increase the selectivity of the receiver, and to accomplish this it is only necessary to see to it that the loop is acquiring energy from the passing wave-front of the transmitting station only, and not from unused antennae, lighting circuits, etc. Place the set so that there are no electrical circuits near the loop, or other metallic collectors.

QUESTION—C. E. M., Hollywood, Cal.: Is there any harm to the radio set by using two loud speakers at the same time? I like the resultant tone when I use my old Rola together with my new cone.

ANSWER—Many fans as well as some of the console radio set manufacturers are solving the quality of reproduction question by the use of two loud speakers. Before the development of the cone speaker the horn type of reproducer failed to pass the low or bass notes and favored the high notes. Then the cone appeared, and for the first time the listener-in heard the bass notes. His delight at this improvement prompted the cone speaker manufacturer to so design the speaker as to further emphasize the low notes, while at the same time improvement in the audio frequency amplifier extended its frequency range downward.

The result of these two factors is that with the modern audio amplifier and the modern cone speaker, the low notes are usually over emphasized and the high notes sacrificed. Certain manufacturers of sets are now incorporating two speakers, one cone and one of the horn type. The result is uniform reproduction over the entire range. Fans have independently in some cases discovered the same pleasing effect through the simultaneous use of their old horn type and the new cone speaker. The two units may be connected either in series or parallel, whichever arrangement gives the best result.

The type of reproducer which is most satisfactory is that used in the Orthophonic and Panatrope talking machines, and the fan possessing one of these machines can do no better than make use of the wonderful horn thus provided.

There were 715 active stations broadcasting on February 7th, according to the records of the Department of Commerce, which licensed ten new stations during the past week and deleted three which have ceased to operate. These may be the last licensed for some time, since the radio bill, which will probably pass the Senate soon, will terminate all licensing until the commission starts functioning. The newcomers in the ether report they will operate low power transmitters in the ten states of Washington, Massachusetts, Nebraska, Oklahoma, New York, Pennsylvania, Iowa, Florida, Ohio and California. On the other side of the balance sheet, Texas, Michigan and Utah each lost a station. There are 328 new stations contemplated.

Of five wave pirates, reporting changes to ether channels of their own selection, three increased their wave lengths and two dropped slightly, apparently to decrease local interference.

The new stations and the changes follow:

**Hours Shown as Submitted by These Stations. For DX Schedule see Page 46**
Anten-A-Liminator

The result of months of experimenting and exhaustive tests. Many times the selectivity of an outside aerial. Will make it possible for you to separate the lower wave length stations.

Small—Compact. Can be put inside or outside of the cabinet. Quickly installed.

Will take the Chaos out of the Air.

Static, extraneous noises, many stations coming in at one time, unsightliness and a fire hazard are some of the disadvantages of an outside aerial.

Why get a jumble of noise from an instrument designed for pleasure?

WHEN YOU BUY THAT NEW SET, INSIST THAT YOUR DEALER INCLUDE

WESTINGHOUSE

Radio "A" Autopower

A combination of "A" battery and charger in one convenient unit, both four and six volt sizes. Just plug it into a light socket. Works automatically. Gives wonderfully smooth even flow of current. Noiseless — non-pulsating — absolutely without hum.

A Revelation in Radio Reproduction

Model 200
22-inch Cone Loudspeaker

Model 210
22-inch Cone Loudspeaker with Panel and easel back

At last—a cone loudspeaker that reproduces *all* the tones as they are broadcast. From the deep voiced "ooohs" of an orchestra to the softest note of a vocal solo—every tone—every sound is reproduced in all its beauty, just as it entered the microphone.

This 22-inch Windsor Cone Loudspeaker will reproduce the softest crooning lullaby in a softly lighted room, or the full throated march music of a band in an auditorium—both with perfect fidelity of sound and tone. The Windsor Cone Loudspeaker Console is the greatest value in the world of radio. When compared with the average cost of cone-type loudspeakers of even similar size, the cost of the complete Windsor—cone loudspeaker and console—is amazingly low.

The Windsor Cone and Horn Loudspeakers combined with attractive pieces of furniture in many models, are being demonstrated by recognized dealers everywhere. Go to your dealer today and examine this astonishing new Cone Loudspeaker Console. If he happens not to have one, write to us and we will tell you the name of the nearest store at which you can see and hear one.

NOTE TO DEALERS

Write or wire today for details of the highly profitable Windsor selling line.

WINDSOR FURNITURE CO.
World's Largest Manufacturers and Originators of Loudspeaker Consoles

1420 Carroll Avenue, Chicago, Illinois
Los Angeles Branch: 917 Maple Avenue

Model 200
$35
Console with Cone Loudspeaker
Ready for Set and Batteries

This Windsor Cone Loudspeaker Console is equipped with a 22-inch Windsor Cone Loudspeaker. Its top is 20 in. x 17 in. and is 20 in. high. The battery shelf provides ample space for batteries, charger, battery eliminator and other equipment. Beautifully finished in either Mahogany or Walnut color.

R. D. 23

The Original

Nathaniel Baldwin

CONSOLE GRAND REPRODUCER

This reproducer, employing the new scientific long air column principle, for true reproduction of the full tone range, is the latest development of the combined laboratory efforts of the Nathaniel Baldwin Co. of Salt Lake City and Newcomb-Hawley Co. of Chicago.

It is said by musical critics to be the best they have ever heard. Baldwin Dealers will find their prestige increased still further by the addition of this wonderful speaker to their present Baldwin stock.

Deliveries can now be obtained through regular jobbers and dealers.

</table>
YOUR RADIO SET

All the new Victor, Columbia and Brunswick records are recorded electrically. Every note of every instrument is recorded in its proper volume. Fortunes were spent in perfecting the methods.

But the old phonographs will not reproduce all that is recorded. Most of the charm is lost.

To get the full benefit of the new records, electric reproducing phonographs already contain most of the parts embodied in these new electric machines. The ELEC-TRU-TONE supplies all the rest in readily attachable form.

But your radio set and old phonograph already contain most of the parts embodied in these new electric machines. The Elec-tru-tone supplies all the rest in readily attachable form.

TONE—so life-like it will thrill you
BASS—full and resonant
PLENTY VOLUME—controllable to a whisper

Sold by dealers that want you to get double use from your radio set.

Manufactured by
The Elec-tru-tone Corp., Hibernian Bldg., Los Angeles
Phone MAin 3843

Distributed Nationally by

Crosley's 6-Tube Batteryless Radios—Childs Lab., 1187 W. 24th
Imperial Cruiser

The Bosch Cruiser chassis in a new decorative creation of full walnut. Its plain, rich beauty of design and workmanship is in perfect taste in any surrounding.

Reiman Wholesale Electric Co.
218 to 228 East Third St.
Los Angeles
WHOLESALE ONLY

MEtropolitan 4280
The New Stewart-Warner
6-Tube receiver
with separate or enclosed reproducer

This six-tube, single-dial-control receiver is, we believe, one of the best “dollar-for-dollar” radio values ever manufactured. The cabinet works beautifully “fits in” as a part of the furnishings of even the most tastefully furnished rooms. The performance of both the receiver and reproducer leaves absolutely nothing to be desired... tone, volume, and selectivity are remarkably present to the highest degree.

This noteworthy radio value can be purchased from any of the Stewart-Warner dealers listed in this advertisement or any other store.

Ask your dealer to also demonstrate the New Castle-Warner radio.

Power Unit for “A” current and the efficient Majestic “B” Eliminator, which make, with the Stewart-Warner radio, a complete home installation operating from the electric lighting current.

This is the Heavy-Duty battery in which the new Layerbilt construction provides greater economy

There's an important discovery in radio economy awaiting all users of loud-speaker sets who have been buying the smaller Light-Duty "B" batteries instead of the large Heavy-Duty size required by such sets. Because the Light-Duty batteries cost somewhat less to buy they seem like an economy, but the surprising fact is that the Eveready Layerbilt No. 486 lasts more than twice as long though it does not cost anywhere near twice as much. It is, therefore, much more economical—we believe it to be the most economical "B" battery ever built.

Eveready Layerbilt's remarkable life is due to its unique construction. All other dry cell "B" batteries are assembled of cylindrical cells, with much waste space between them.

Several years ago we struck boldly out, away from this tradition, seeking a better method. We wanted to avoid waste space, minimize soldering, and get more current and longer life. The Eveready Layerbilt is the result.

This patented, exclusive battery is built in layers of flat current-producing elements, making automatic connection with each other. Every available inch inside the battery is occupied usefully.

Remember this about "B" batteries: All loud-speaker sets require Heavy-Duty batteries, and the Eveready Layerbilt has proved time and again to be the longest lasting and most economical Heavy-Duty "B" battery.

FOR RESULTS

USE AN

INFRA-DYNE

Los Angeles, California,
February 4th, 1927.

The Palmer Radio Laboratory,
4529 S. Vermont Ave.,
Los Angeles, Calif.

Gentlemen:

About three months ago I had you construct for me one of those Infradyne Receivers, and I am so well pleased with the results I get from it that I just have to write to you about it. For a selective set, I haven't seen anything to equal it. As for tone quality and ease of operation, I can't say enough. I have had several sets in my home, but this is without a doubt the best yet. My location is supposed to be rather poor for good reception, but I find no difficulty at all in bringing in distant stations while our locals here are on the air. I can recommend this to anyone wanting a REAL set, and at the same time I will see that you get the job of hooking it up, for your work in every respect has been most satisfactory.

Very truly yours,

J. P. GOOLEY,
Ninth and Burlington Sts.

We can do the same for you. Call upon us and let us demonstrate this remarkable set.

MODEL NO. 24

RADIO POWER BOX

Results Guaranteed

San Pedro, Calif., Jan. 30th, 1925.

Dear Sirs:

About three weeks ago I sent for one of your No. 24 Power Boxes, with which I am more than satisfied.

Last night I brought in J0AK, Japan, and 4CL and 28L, Australia, on LOUD SPEAKER. I also have other Japanese and Australian stations other than these, and, too, I have had New Zealand, in Canada, Mexico, and the United States I have had 290 stations. One 15-watt in San Antonio, Texas, 10-watt in Seattle, and 5-watt in Stockton. I am using a No. 28 Radiola with loop aerial and your booster No. 23 with about 150 feet of No. 14 stranded wire running south for aerial. My ground is six feet of two-inch pipe driven in ground and heavy insulated wire soldered to it, and leads to booster which sits over No. 1 tube, first detector.

Sincerely,

Elliott Kirkpatrick.

Famous Kids

It was perhaps two years ago that little June Giglio first saw an "Our Gang" comedy. From the first she wanted to meet the "Gang" in person. Meanwhile June, herself, has become famous. She has posed for many nationally used pictures, the best known of which is the poster used by Atwater Kent in his radio advertising throughout the nation. This poster gave her the nickname of "The Atwater Kent Radio Girl."

Last Friday June's dream to meet the "Gang" was realized. They all had a radio party together, June using her model 32 receiver. The party was declared a huge success. The "Gang" all thoroughly enjoyed the half-hour of radio entertainment, while June was delighted with their antics.

Sargent to Lecture

E. M. Sargent, the inventor of the famous Infradyne circuit, will give a lecture at the offices of Radio Doings, 400 Allied Crafts Building, corner of Pico and Maple avenue, Los Angeles, at 8 p.m., Thursday, February 24.

All dealers who are building or servicing the Infradyne set, and all fans who own or are contemplating building this well known set, are cordially invited to attend. The lecture will be free and will be illustrated.
Want more distance? Improved tone quality? Tired of changing “B” batteries or charging them?

**WHAT** you need first is silent and dependable light socket “B” Power. Buy a Sterling and you can be certain that you are giving your radio the “B” Eliminator that provides just the right adjustment to make your set do its best in tone quality and long distance reception, regardless of the number or kind of tubes used.

The Sterling “B” Eliminator is not on trial. Thousands are operating, giving unquestioned satisfaction. Buy your Sterling now — be insured for quality reception.

Model RT-41 illustrated above is for sets using up to 6 tubes and especially for Radiolas 25 and 28 — Price $28.00

**The Ether**

By K. G. ORMISTON

In the days when the first wireless dots and dashes were flying around with no visible or tangible means of transit from here to there, the theory of an “ether wave propagation” was advanced to account for an otherwise unaccountable phenomena.

We accepted the idea that radio was a near kin of light, both using the same highway and traveling at the same speed. Things went along without much argument until the range of radio transmission increased to the point where the receiving station was out of sight of the sending station, a chunk of earth intervening due to its natural curvature. “Aha!” cried the skeptic “A beam of light will not go around a corner of its own accord. You must reflect it with something solid like a mirror. How come your radio waves can go ‘round corners?”

A gentleman named Heaviside rose to the occasion and replied that in the upper atmosphere fifty miles or so above the earth’s surface there had to be something which acted as a reflector for our radio waves, sending them back to earth. This theory was welcomed into the family because it at least was an answer to an unanswerable question. Everybody was so thankful to Mr. Heaviside that things had been so nicely explained that they named this upper something the “Heaviside Layer.” Then along came Mr. Einstein and proved there wasn’t any ether! He spilled the beans without giving us anything to take its place. Tesla joined forces with him, and then all that was lacking to give the poor old ether the death blow was a few well chosen remarks from Steinmetz. The ether was buried with honors, and the theorizers got busy all over again to figure out what radio might be.

Now it appears that right up here on (Continued on page 88)
R. M. A. A. Welcomes K. G. Ormiston Home

A most instructive and constructive meeting was held at the Chamber of Commerce on Friday, February 11th, under the auspices of the Radio Manufacturers Agents Association.

Most of the prominent manufacturers, manufacturers agents, jobbers and dealers of Southern California were in attendance.

President Scott of the R. M. A. A. welcomed K. G. Ormiston back to the fold with a very excellent talk. Mr.

Ormiston thanked Mr. Scott for his warm welcome and stated how glad he was to be back with his old friends of the Radio industry.

A very instructive talk was given by Mr. Philip Gough about the new Radio Club which has been formed by the jobbers of Southern California.

Mr. J. A. Hartley, President of the Radio Trades Association, told how the industry was progressing and of the bright outlook for the coming year.

Walter Fagen, Sales Manager of the Electric Corporation, gave some very interesting information about Radio merchandising.

President Scott of the R. M. A. A. cannot be complimented too highly upon bringing together such a representative body of Radio men. There were 67 in attendance.

Herald

$13.75

A FREE-EDGED cone speaker, 18 inches high, with protecting metal frame. Compare this handsome new Herald for volume and tone with any higher priced speaker at your dealer’s.
Forbes Van Why to Devote His Entire Time to Broadcasting

Mr. Forbes Van Why, due to the increased demand upon his time as Chief Engineer of KMTR and Chief Consulting Engineer of KGGE, has had to resign as Technical Editor of Radio Doings. Mr. Van Why wishes to express his appreciation of the pleasure that has been his in the association with the staff of Radio Doings and to the many friends he has made among the readers.

He hopes that by his articles he has been able to give the Radio fans a better understanding of Radio and helped them with some of their problems. Mr. Van Why is one of the outstanding Radio Engineers of the Pacific Coast and it is with extreme regret that we have to announce his resignation.

Mr. Van Why has been in the Radio business since 1912 and has been associated with broadcasting since 1923. He is a member of the Institute of Radio Engineers, Institute of Electrical Engineers and a commissioned officer in the Naval Communication Service.

Browning Radio Device Aroused Great Interest

John M. Browning invented the Browning Machine Gun. Not to be outdone, Wallace Browning, nephew of the gun inventor and son of Mayor George E. Browning of Ogden, Utah, has invented a wonderful little Radio device called the Anteneliminator.

The simple little device has met with such instantaneous success that orders have been pouring in for them from dealers and jobbers throughout the Intermountain district.

The new device is supposed to entirely eliminate the necessity of having an aerial. It will add to the selectivity and will stop the picking up of all static and extraneous noises.

It is particularly adapted for the use of radio sets in hotels and apartment houses.

The George E. Browning Radio Company is composed of Mayor George E. Browning of Ogden and his sons, Wallace, Harold and Roland.

Gold Seal Dividend

The Board of Directors of the Gold Seal Electrical Company (manufacturers of Gold Seal Radio Tubes) have declared a special dividend of 15 cents a share on the capital stock of the corporation, payable March 14, 1927, to stockholders of record March 4, 1927.

The Ether

(Continued from page 86)

our own Mount Wilson some very extensive and very expensive experiments have reinstated the ether. Scientific gentlemen have shown without any doubt that this old solar system of ours is moving through a vast stationary sea of ether, and its "drift" has even been measured!

And now the Bureau of Standards announces that the causes of "fading" exist in the upper atmosphere and not on the earth's surface; that radio transmission, therefore, does not depend upon the so-called ground waves, and that Mr. Heaviside was not all wet.

So we are back where we started from before Mr. Einstein started upsetting things, and now everybody's happy Long live the ether!
Radio Broadcasting

By MISS ALLEENE RAVENSCROFT

When we sit down in the evening and tune in our radio, how many of us think of the significance of this marvelous invention? Although we can get comparatively few stations on the average radio set, radio broadcasting has literally run around the world, until there is hardly a port or city on the globe without a transmitting station. The American interests have led in radio developments, particularly in broadcasting, and aided in linking the nations of the world together by the invisible bonds of radio, and yet the other countries are not far behind the lead we have established. There are today fans in every land and broadcasts offered in nearly every language.

While radio has made marvelous strides since the receiving set first came to us, still there are thousands of families who are still without this "necessity" in their homes. In talking to some of those who are denying themselves this modern convenience of bringing pleasure, entertainment and knowledge into their lives, one cannot but be impressed by the reasons advanced. You will always meet the man or woman, even now, who is waiting for the time when radio is going to be revolutionized, some radic changes to be made that will send to the "junk-heap" all present equipment. These people are unfortunate pessimists, and very uncertain just when this marvel is going to happen, but someone they met at a friend's house once told them to refrain from buying a set now. In the meantime these unhappy people are missing all the wonderful things that are being broadcast daily from our stations.

Radio broadcasting is really a very expensive proposition. First, it costs from $50,000 to $250,000 to build, equip and place a broadcast station in operation. Then practically all the music broadcast in the United States is protected by copyrights, which are supported and sustained by decisions of the Supreme Court; which means that the author of the music demands a fee from the broadcaster, in exchange for the pleasure and entertainment his music affords the listener-in. Willingly or unwillingly, the broadcast station pays this fee so that it may give the radio owner the newest and most tuneful music. However, you are always hearing some person complain about stations being commercialized and programs not being so good; but when you stop and think that the listener-in really pays nothing, and that his entertainment is furnished him absolutely free, you will realize that he has very little reason to complain.

When you know of the enormous expense it takes to build and operate a station you will not be surprised that there is a great deal of advertising or commercializing done through the medium of the radio. However, a station in Los Angeles started out to broadcast nothing but so-called high-class music, with the determination to accept no advertising programs. It was not long before the management found itself compelled to accept paid or advertising programs to meet the high cost of operation.

Although many practical uses have been found for radio, there are many possibilities which only the far-sighted can predict, and only the skilled and expert engineers can carry out.

---

famous "Perfect" ONLY

BELIMINATOR

FOR ANY SET
Makes "B" Batteries obsolete. Cost's much less than a set of 5ells. Ends plate current troubles forever. Break it up just as your old batteries were connected. No "flying" noises caused by old cells. Simmer tuning — more power because of steady flow of current through tubes.

No Extras to Buy

Completely wired and assembled. Our amazingly low price of $4.75 covers everything, just plug in on any light circuit, direct or alternating. Gives power up to 90 volts, using full wave of power supply. Operates any set up to 7 tubes. Thousands of enthusiastic users in all parts of the country.

10 DAYS TRIAL
Money Back If Not Delighted

Just send $1.00 now. Pay postman balance of $3.75 (plus few cents postage) when he delivers your Eliminator. Use it 10 days. If not delighted, return in good condition and we will refund your money. Our guarantee protects you absolutely. Reference—Pearl Market Banc, Cincinnati, Ohio.

PERFECT ELIMINATOR CO.

510 National Theatre Bldg., Cincinnati, Ohio
Meet William McCabe

Mr. McCabe has been actively associated with the wholesale radio trade here for some years. He is now with C. W. Smith Company, distributors for Utah Speakers, Walbert and McMillan sets.

1927 Radio Show Committee Selected

A meeting was held in the offices of the Radio Trades Association in the Commercial Exchange Building, Monday morning, February 14th.

The following men will serve as the Radio Show Committee for 1927:

J. A. Hartley, Pac Wholesale Radio, Inc.
C. W. Griffin, Ray Thomas, Inc.
Al Meyer, Leo J. Meyberg Co.
Les Tauffenbach, Western Radio, Inc.
Lombard J. Smith, Lombard J. Smith Co.
W. L. Scott, Scott Sales Company.
C. H. Mansfield, Fitzgerald Music Co.
John Booth, Barker Bros.
T. C. Bowles, Western Auto Supply Co.

The 1927 Los Angeles Radio Show will probably be the best and largest Radio exposition ever held in the West.

I Am False Pride

I have always refused to take the advice of those whom I had every reason to believe loved me.

I would rather "bull" it through myself without understanding, because that gave me a certain satisfaction—negative, I'll admit, and making me and others unhappy, but there was still false pride to be appeased.

I have never had any happiness, and do not expect any, so consequently I must abide in misery.

I have been too stubborn, too false willed to do the thing that I, in my heart, knew was the good thing to do.

I have let petty, unreasoning jealousies creep into my soul and poison me. That thing I call pride would not let me do otherwise for, after all, I would rather have my own way than be right.

Am I not Mr. False Pride?

I Am Love

I am love, the universal language.
I am the highest pinnacle of your thought, the most essential thing in life.

To possess me is to possess all, for I am the one true foundation of existence.

I am your shroud, to be made visible or invisible, at your will.

You may cover me with sensuality, discord, hypocrisy, dishonesty, or you may refuse to accept these parasites as part of your being.

If you do you will feel a new glow, for I will manifest myself into the uttermost fibre of your soul.

If you accept me, I will make you omnipotent for—

I AM LOVE.

Contributed by—

HEARL LAVERN CROWThERS, D.D.S.
6630 Sunset Boulevard,
Hollywood, Calif.

(Editor's Note—Many of our good friends express themselves in verse rather than in prose. We hope the two short poems above will be accepted in as enthusiastic a manner as they were written.)
Timely Trade Topics

W. H. Trimm of the Trimm Manufacturing Co., Chicago, is arriving in Los Angeles on February 19, with his family and will make his future home here. He will be the guest of Carl A. Stone, Pacific coast representative for the Trimm Company for a few days.

F. D. Kinsor, Pacific Coast representative for Bosch Radio, has just returned from San Diego, where he has appointed Gavin & Co. of San Diego as distributors for San Diego and Imperial Counties for the Bosch line.

Goslen Radio Products Co., of Huntington Park, Calif., report an increasing demand for GOSLEN Super Awirl Wire. Foreign trade is being developed due in a large measure to the interest in trans-oceanic reception. The wire is now electro-plated entirely in their own plant.

J. A. Hartley, of the Pacific Wholesale Radio Company and president of the Radio Trades Association of Southern California, has been called for grand jury duty for this year. With men of this caliber serving on the grand jury we can all rest assured that everyone will get a square deal.

In giving a description of the Haddaway Short Wave Set in a recent issue we gave a wrong address for the Haddaway Manufacturing Company. Their correct address is 1806 South Hoover street, Los Angeles.

The Velvetone Radio Corporation, formerly located at 3729 Avalon boulevard, are now located in their new factory at 237 South Figueroa street.

The new factory is of the most modern design and has in the access of 9000 square feet for manufacturing purposes.

Black Bros., Inc., are introducing a heavy duty bell transformer especially designed and wound to operate the radio from electric light socket. The Blax Transformer, a product of a great deal of experimenting and testing, is used in connection with Blax Polarizer on sets having crystal detector. Among other advantages it has double the capacity of the ordinary bell transformer, which is very necessary for three or four tube sets.

Electricians all know that it is dangerous to overload all electrical devices. The ordinary bell transformer is not designed to be operated beyond its capacity for hour after hour, as is the case when it is used to supply current for a radio set.

The new CeCo Radio Frequency Amplifier tube has been anxiously awaited by the fans, and the local jobbers are already swamped with orders which they are unable to fill. The tube is designed especially for amplification at radio frequencies and is the first tube intended to fill the requirements of that single function.

The amazing efficiency of this new CeCo tube when used in the R. F. end of a modern receiving set is a revelation of tube development and will be a great factor in the general advancement of radio. This tube lists at $3.00 and is a worthy companion of the famous CeCo "H" detector tube that so quickly captured the market.

Mr. Wallace Browning of the George E. Browning Company of Ogden, Utah, has been spending the last week in Los Angeles and Southern California introducing to the trade his new device, the ANTEXELIMINATOR.

The Scott Sales Company of 443 South San Pedro street will be the Southern California sales agents.
Don't Go 'Way!

Charlie Wellman, popular announcer and entertainer, has severed his connection with a suburban station and is back in Hollywood. He will soon be heard on the air in an original and novel idea in program presentation.

IT SHOULD BE

Customer (to photographer who has been in business only a short time): Well, how's the photography business?"
Photographer: "Oh, it's developing."

Heaviside Theory Is Supported

The Bureau of Standards has concluded a series of tests in connection with the variation in the intensity of radio signals commonly called "fading." The results indicate that these variations are caused in the upper atmosphere at a height of 62 miles or more, and not in the portion of the wave traveling along the ground. Their report indicates that radio transmission over any but a short distance depends upon the waves reflected back to earth from the upper atmosphere, and not upon the so-called "ground waves."

The President Speaks
(Continued from page 22)

The Pacific Coast stations to be included in the chain will be KFI, Los Angeles; KPO, San Francisco; KOO, Oakland; KGW, Portland; KOMO, Seattle; KFOA, Seattle, and KHQ, Spokane.

The date—Tuesday, February 22nd. The hour—9:30 to 10:30 a.m., Pacific Standard time.

2-Tube Harkness Changed to 3-Tube, Guaranteed Perfect Tune-Out on Local Stations

Telephone WEstmore 1560
Open Evenings Until 9 o'Clock
A broadcasting station at Chula Vista, Cal., was recently closed down by Col. Dillon, radio supervisor of the Sixth district. The station had come on the air without having first obtained the necessary license from the Department of Commerce. While the government no longer has jurisdiction in the matter of wave-length or hours of operation, the law requiring that both the station and its operators be licensed is still very much in effect, and Col. Dillon has announced that violators will be prosecuted. More power to him!

Fannie Brice made her first appearance before a microphone at KNX recently. She is here with the Music Box Revue and during the opening night the moving picture celebrities and other important personages of Hollywood were introduced over the air, and, later on, Fannie herself and other members of the cast were heard.

Art Mace and his orchestra, playing nightly at the Rendezvous Ball Room, Santa Monica, are now broadcasting over Station KNRC on Tuesdays from 1:30 until 2:30.

This is one of Southern California's most popular dance and radio orchestras, and we know the "fans" will be glad to again hear them on the air.

A long-time series of Community Programs began Monday, the 14th, from Radio Station KMTR. These run daily except Sundays, between 12:30 and 1:30. Radio owners hear programs sponsored by the business men of the various communities. This feature is under the direction of Walter Biddick and is one of several innovations which this experienced program director will present from various local broadcast stations.

The new radio law of 1927 provides a penalty of a jail sentence and a fine of $1,000 for anyone who knowingly utters a slanderous remark by radio. The public will at last be relieved of having to listen to the person who, in the security and seclusion of a broadcast studio, bravely slanders anyone he happens to have a grudge against.

Another interesting provision is that after the first year, any listener-in may enter a protest against the renewal of a license to any station in the United States.

Warner Brothers' Radio Station KFWB is the only one possessing a lady announcer. She is Miss Louise Sullivan of the trio that bears her name, which nightly plays from 6:00 to 7:00 at KFWB.

James W. Foley, distinguished California poet, will be a welcome addition to the KHJ program hereafter once a month. The well known Pasadena literary critic reads his own creations as well as other numbers.

The Don Lee organization, owners of station KFRC, San Francisco, have placed their order with the Western Electric Company for a new station of 1000 watts power. The new plant will be located on the Don Lee Cadillac Building on Van Ness Avenue, the antenna being supported by two steel towers 125 feet high. Formal opening will be about the end of May. The studio will continue in its present location in the German Clay Company building.

Dumb: "I don't see them wearing patent leather shoes any more."
Belle: "No, the patent must have expired."—Science and Invention Magazine.
The 1930 Radio Receiver

Sounds funny—but it’s true. Thousands of them are already in operation and the owners of these sets are hearing stations on the loud speaker which were ordinarily inaudible on the average 10-tube radio set. This new 1930 receiver is the INFRA-DYNE, sponsored by “RADIO” (Magazine), San Francisco. In the March issue of “RADIO,” which most news dealers will have on sale in your vicinity on February 25th, the INFRA-DYNE is more fully described and many practical hints are given on its operation with a set of battery eliminators. Get the whole story of the INFRA-DYNE in the OFFICIAL INFRA-DYNE MANUAL, by Sargent and Rayment, the inventors of the circuit. This complete manual sells for twenty-five cents, postpaid. Drop a quarter in coin in an envelope, mail it to us and we will send the booklet to you postpaid. It’s a story well worth reading and tells you what the 1930 radio set is like. Only a few hundred copies left. Orders must be received now to insure delivery.
