$55 for the CROSLEY 5-50

is again proof positive that this famous manufacturer can and does give a solid, lasting radio value obtainable nowhere else.

Check the Features that make the 5-50 a milestone in radio history:

1. All metal shielded chassis.
2. Crescendon for increasing weak signals.
3. Acuminators for sharp tuning.
4. Graphic drum station selector.
5. Power tube adaptability.

Crosley Dealers Are Reliable. They are building for the future.

Murder?

It almost makes one lose faith in human nature when he finds that some public officials who have been entrusted with upholding the laws of our country wantonly run amuck. Such an irreparable disgrace occurred last week when two Federal Prohibition officers drank too much of the bootleg stuff they should have been Sherlocking. They climbed into a government automobile, started down the wrong side of the street, sidesteped one car and crashed head-on into another. This finished the ride and netted them a man's life and a dangerously injured woman.

It's serious pastime when an ordinary citizen breaks a law, but for an official to do so who has solemnly sworn upon his life and honor to maintain that law, it is a higher crime not only for the violation but for the shaken faith in law on the part of the people. Let's hope those officer-murderers haven't enough pull to escape conviction for first degree murder.

Useless Laws!!

Every nation and individual seems to go through a period of foolishness when their thoughts are turned from the worthwhile things of life to the ridiculous, to the ludicrous and the absurd.

One hundred and fifty years ago we had very few laws to guide our youthful nation. The Congressmen and Legislators realized that they would have to quickly pass a set of laws for the guidance of the people. They went at their job with so much enthusiasm and kept it up so long that they formed the habit of passing new measures. Before long they had passed a law to cover every real need of the people, and when this period arrived they became quite dismayed, for not only were they not able to gratify the habit which they had formed, but they were fearful that they might have to forego a lively and cherished pastime.

The lawmakers, upon looking around to find something which they could use as a basis to inflict more laws on the people, struck upon the subject of personal liberty. They reasoned that the people had forgotten that their fathers had fought for this personal liberty, so they said, "Let us start curtailing their actions." We can put this over with ease, for we will tell them that they should be happy to crimp their personal tendencies for the good of all. This might have been very fine, if they had stopped with just a few personal liberty laws, but having formed the habit of law multiplication they were loath to stop.

In each new Congress and Legislature there would be enough of the old members to show the way to the newer members, so that in time the new members would also form the habit, and on down to our time, when the habit has become an obsession.

The lawmakers are ably assisted in this pernicious habit by the small cliques of busy-body men and women who have apparently nothing else to do but to lobby for their pet measures and to force their ideas upon other people.

An incident occurred in Los Angeles last week which showed how ludicrous our laws are becoming. A young woman appeared on the streets of Los Angeles dressed in men's clothing and, according to reports, was arrested for attiring in such a manner. If there were other circumstances they were not mentioned. Now, what difference does it make to any of us how people dress as long as they are modestly covered. The women of Turkey wear trousers and the men wear skirts. Here in our country and some European countries the mode is just reversed, so it only goes to prove that it is nothing more than convention and what we are used to.

It is about time that we demand that our lawmakers stop curtailing our personal liberty and actions and confine their efforts to passing measures that are really beneficial. Incidentally, they might spend some time nullifying a tremendous number of obsolete laws.
HERE are a few of the features of the Counterphase-Eight. Any one of them is enough to command your attention. Combined in one Receiver, they account for the performance which has caused so many users to write enthusiastic testimonials.

1—REJECTOR STAGE, for Selectivity.
2—SIMPLICITY. One Selector.
3—VISUAL INDICATOR. Each set Calibrated.
4—UNIQUE CABINET DESIGN. Controls concealed when not in use.
5—COUNTERPHASE CIRCUIT. Covered by B-T patents.
6—LONG RANGE. Recognizes no superior.
7—TONE. Equal to any reproducing instrument known.
8—SUPERIOR WORKMANSHIP. The B.T. standard.

Radio Commission Will Reduce Number of Stations on Air

Eventually the Federal Trade Commission, like the radio listeners, manufacturers, engineers and experts, will arrive at the unavoidable conclusion that the total broadcasting stations now on the air must be reduced. This conclusion was manifest unmistakably by all radio interests at the recent hearings, when it was shown that there was no additional room in the ether; it was also successfully demonstrated that the broadcast band should not be widened and that the broadcast channel separations could not be decreased.

The radio fans and the operators of good broadcast stations need have no fear that the Commission will fail to arrive at the above conclusion. If that body attempted to relicense all the active stations it would fail in its prime duty. Congress authorized the licensing of the stations which serve the public, and manifestly only a limited number of reliable stations can be permitted to broadcast if the public is to be benefited. All of them would continue the congestion; therefore, only the best of them can be relicensed. The Commission is going about its business slowly and surely. The reaction upon the four Commissioners in Washington, and upon Admiral Bullard, is psychological. Probably we would all react the same if we were the judges instructed to pronounce death sentence on two or three hundred individuals. It would be natural to sympathize with the unfortunate and make a careful survey of the situation to see if there was not some way to avoid executions. We would try to substitute life imprisonment or some less drastic form of punishment. This is what the Commissioners—the radio judges—are trying to do.

And some way to ameliorate the publicly demanded death sentences of some two or three hundred broadcasters. Sooner or later the Commissioners will realize that there is nothing to do but sign the death warrants—or refuse to sign new license papers, thus establishing a real national radio broadcast service, as they were authorized to do by Congress, and were expected to do by the President when he appointed them. The Department of Justice will defend the Commission if law suits follow.

This action will not be precipitate; applications will be studiously examined, qualifications carefully considered, and all possible allocations attempted before the sentences are pronounced. In the meantime, present active stations which file applications will be authorized to continue to broadcast temporarily beyond April 24th, the present deadline, if their individual cases are not acted upon prior to that date.

Applications Coming In Slowly

To date the Radio Commission has received 118 applications for broadcast licenses from existing stations. It is assumed that most of them are the older and first established stations. But the names of owners who have already applied and the channels and power sought are not to be made public until the Commission has examined the applications. It is assumed that every active broadcaster will file applications prior to April 24th, at which time the two-month period of "leave-way" established by Congress expires. If the Commission is unable to pass judgment on the applications received by that date, extensions of the present licenses will be granted, it is understood.

Many scientists the world over are devoting their researches to the problem of discovering and harnessing a new source of energy. This is one of the crying needs of the world as the natural fuels of the earth which now constitute the chief source of energy will, according to statisticians, be depleted in a comparatively short time.

Hundreds of millions of dollars are being spent in hydro-electric development, but this energy source, even though harnessed to the utmost is incapable of supplying the power needs of the world.

An inviting field, where there is energy in tremendous and inconceivable quantities, is within the molecules and atoms of all matter. The atomic energy could be released and so harnessed as to do useful work, would constitute an unlimited source. Scientists have been doing extensive research work upon the atomic and electronic construction of matter, hoping to strike upon the secret of releasing the enormous store of energy contained therein.

In the course of their experiments certain scientists have discovered means of rearranging the atomic structure of a given metal so as to give it entirely new properties. This sounds like a fairy tale, as though we were speaking of the attempts of the alchemists of old who aspired to convert to gold metals of lesser value.

In this process of atomic juggling many interesting by-products have resulted. One of these, which has been named "Kuproxy," has been found to possess the property of "unilateral electrical conductivity." That mouthful means that through this new element an electric current can pass in one direction but not in the opposite direction. It can therefore be used as a rectifier, not only in radio but in general electrical practice.

Copper is used in the making of Kuproxy. The pure copper is heated to a very high temperature in an electric furnace; heated to the point where the metal vaporizes. It is then condensed in an intense magnetic field, the magnetism serving to rearrange the electrons and atoms as the metal again solidifies. The finished product offers a very low resistance to an electric current in one direction and a very great resistance in the opposite direction, strange as this may seem.

In Kuproxy we have a rectifier which is noiseless, permanent and dry as a bone. It will be used immediately in battery chargers and eliminators for radio as well as many applications in general electricity. Scientists who have developed Kuproxy tell us that by using any desired amount of the new metal, voltages and current of any magnitude may be successfully rectified.

The local representatives of the Kodel Radio Corporation who own the Kuproxy formula and rights submitted a sample to the writer last week for test. This small solid unit connected between a small step-down transformer and a storage battery passed .7 ampere of direct current through the battery. An oscillograph picture of the wave form showed the rectification to be perfect.

It is believed that it is but another step from the small battery chargers and eliminators now ready for the market to larger Kuproxy units which may replace entire electrical substations, permit the operation of interurban trolley cars directly from high tension AC lines, reduce the cost of electric current by minimizing transmission losses, etc.

picked out of the air

by hearl la vern crowthers

A man is never a failure until he himself admits it.

The bird with the most beautiful plumage seldom has the prettiest song.

Getting hot under the collar is bound to raise a blister some place.

As a man thinketh in his own heart so is he. Ah! "in his own heart," there's the rub.

Heaven surely could be nothing finer than a peaceful state of mind. Hell describes itself.

The eyes are the windows of the soul. If one, in passing, glance in let him feel refreshed.

If a man say to you, "Do you really want me to tell you something?" he is just naturally dying to tell you.

It is really surprising at times how large a body is seemingly required to carry around a small mind.

The Chinese situation is naturally a Chinese puzzle. Let China find the solution.

A battle cannot be won by running away from the scene of the conflict. The enemy always gains strength while you believe you are leaving him behind.

Try to understand the true meaning of these words, "Let the dead past bury its dead," then make the future secure by creating nothing that must be buried.
The Man on the Cover

One of the newest artists to be heard over KFXB is Albert Hay Malotte, who is broadcasting a series of nightly dinner-hour programs from his studio of the modern pipe-organ in the Wurlitzer building.

Malotte was formerly solo organist at the Metropolitan theater, where his clever work at the console built for him a huge following. He left the theater in order to devote his full time to his studio, which has been open only a few weeks.

The "DX" Radio Ground is the Original Blue Vitriol Ground!

When C.H. Preston, after more than two years of experimenting, was satisfied that he had perfected a positive ground connection of merit, he made up several of them and gave them to friends for testing. He called his newly developed ground the "Blue Vitriol Ground," because copper sulphate, commonly known as blue vitriol, was one of the ingredients of his secret chemical formula.

Preston's friends tested the new ground and many of them, as well as Preston himself, wrote letters to the publishers of Radio Doings in which they gave lists of stations received by them after installing the Preston Ground. These letters, some of them published in Radio Doings...some of them in various newspapers...created a widespread desire on the part of radio enthusiasts to try the new ground connection.

When, after more than six months of practical tests, Preston decided to market his invention, a new name was sought and the product offered for sale under the name of the Preston "DX" Radio Ground. As such it has created more favorable comment, we believe, than any radio accessory ever offered for sale on the Pacific Coast.

Radio owners who have installed the Preston "DX" Radio Ground are unanimous in saying that it gives them more volume, better selectivity, and clearer signals from distant stations than they had ever experienced before. Their experiences will be duplicated with your receiver when you install the "DX" Radio Ground. See your dealer today.

An Efficient R. F. Amplifier

By E. K. HAYES and V. M. BITZ

With many broadcast stations struggling nightly for supremacy of the air, numerous queries are received as to how the efficiency of a receiver may be increased. Some sets may be improved by circuit tricks that may not be applicable to other sets, therefore, probably the most practical way of minimizing the shortcomings of the average receiver is to install a properly designed stage of R. F. amplification in the loop or antenna circuit as the case may be.

The R. F. amplifier herein described is applicable to most receivers, and particularly so to the super-heterodyne whose superfluous heterodyne points are the bane of the operators existence. This amplifier properly designed when possible and still keep the circuits practically independent of each other as the plate varimenter will have a tendency to tune the grid circuit of the following stage if it is too tightly coupled. The varimenter is considered a more or less obsolete piece of equipment, but nevertheless, it offers the smoothest form of regeneration control in use today, and does not have the detuning effect of the three tap loop or tuning coil arrangement using a feedback condenser. By changing a couple of connections in a General Radio varimenter, the shaft may be insulated away from the circuit eliminating hand capacity, another undesirable characteristic of the midget condenser.

used ahead of the “first detector” in a super eliminates the unnecessary heterodyne points. Impedance coupling is employed. A varimenter is used in the plate circuit to control regeneration, and while accomplishing this, it also raises the impedance of that circuit at the low frequencies keeping the coupling between the R. F. stage and the following stage practically constant over the range of the receiver.

The amplifier is coupled to the following circuit through a capacity which may vary from 5 mmf. to 100 mmf. The idea is, to use as large a capacity as

*Lab. of Radio Standards.

In receivers using an antenna coil, couple the amplifier to the antenna connection and connect the ground tap of the coil to the filament end of the secondary. In three tap loop circuits, replace the loop with three tap coil and couple the amplifier to the grid end. (See dotted lines.) In either case, some experimenting will be necessary to determine the right amount of capacity to use in the coupling condenser to obtain the correct degree of coupling. Better results have been obtained with this circuit designed by the writers than with any method which has been brought to their attention. A description of a special application of this circuit will be published in a later issue.
West Ahead of East

On a per capita basis, there are 50 per cent more radio users on the Pacific Coast than in the east or middle west.

That is the belief of Lyman J. Gage, Jr., president of the Precision Electric Manufacturing Corporation of Los Angeles, who has just returned from a six weeks' trip to New York and intermediate points.

He made a careful study of radio conditions in Chicago, Denver, Salt Lake, St. Louis, Omaha, Kansas City, Philadelphia and New York, spending several days in each city. As the head of a plant producing the Pemco power unit, which eliminates A and B batteries, Mr. Gage was particularly interested in that phase of the industry, but he also included in his survey a study of other matters.

"Radio on the Pacific Coast is looked upon as an entertainment necessity—in the east it is a doubtful luxury, due to the extreme chaos of the air," he said. "This situation is attributed to the lack, up to this time, of control of broadcasting stations. Easterners hope the new Federal Commission will remedy this condition, but are doubtful about it."

Blue Vitriol Ground

Increases Volume — Improves Tone and Adds Selectivity

Cruise in the Wake of the Pirates

Let your thoughts take you back to the land of dreams where Romance rides swiftly on the wings of adventure. Drink deeply in the enjoyment of your favorite Radio program as your thoughts cruise the Spanish Main.

The Enchanter Radio Reproducer will help you to this solace and comfort. The design alone is sufficient incentive, but the perfect tone-reproduced in its full tonal quality and color—will give you rich, melllow reproduction without the usual interruptions and harshness.

The Enchanter combines an art metal design—Spanish motif—of exceptional beauty and decoration, with perfect radio reproduction. Gives you all that a good speaker can, plus that wonderful invitation to cruise with your thoughts.

The grid leak

The grid leak is an extremely important unit in any receiver. Small and apparently insignificant, it is often overlooked when an "efficiency hound" starts in to get the very best possible results from his set.

The purpose of the leak is, as its name implies, to provide a path of high resistance from the grid to filament, to permit a certain degree of leakage. Without the use of the leak the charge which accumulates upon the grid of the tube due to the discharging of the grid condenser would pile up until the normal tube action would be "choked." The polarity of the grid must be maintained in order that the tube may function as a detector on the proper portion of its characteristic curve.

In the early sets the grid leak usually consisted of a pencil line, the tiny graphite particles providing a path of high resistance. The pencil line could be made heavier when less resistance was desired and partly erased for higher resistance. This method was unsatisfactory for the reason that the value of resistance varied with temperature, and furthermore was often very noisy; a noise usually blamed to static.

Much research and experimentation has been done on resistors since those days, and now we have leaks of accurate and permanent values, long life and noiseless operation. The proper value for the different types of detector tubes varies somewhat with the B voltage used; the higher the plate voltage, the higher the grid leak value. Also, the leak value which gives the best quality and volume on loud signals is not the leak value which will give the best weak or DX signals.

In this connection, the engineering staff of the International Resistance Company, gives the following table:

<table>
<thead>
<tr>
<th>Tube Type</th>
<th>Aver. Grid Leak Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>200A</td>
<td>1 to 3 mgs</td>
</tr>
<tr>
<td>201A</td>
<td>2 to 5 mgs</td>
</tr>
<tr>
<td>199</td>
<td>2 to 5 mgs</td>
</tr>
<tr>
<td>WD11 or 12</td>
<td>2 to 4 mgs</td>
</tr>
</tbody>
</table>

Don't Use Filament Rheostats for Volume Control!

Many set operators make the mistake of reducing volume by turning back one or more of the filament rheostats. Especially do they use the R F rheostat for this purpose. Such practice is detrimental to tube-life. It is almost as harmful to operate your tubes with too little voltage as with too much. Too little filament current in time makes the crystalline formation of the filament brittle, and too much current causes an excessive emission and quick exhaustion.

Long tube life is dependent upon the tube being always operated at its rated voltage. The rheostats should be set so that the voltage across the filament of the tube is 5 or 3 volts, as the case may be. Any variation in addition to being harmful to the tube, also introduces distortion in the output.

Volume control can be accomplished by changing the degree of regeneration if an adjustment is provided for this; by a variable resistance unit in shunt with the secondary of the first A F transformer; or by detuning the first tuned circuit.
The "Porta-Tester"

Radio set owners formerly when trouble arose in their receivers, disconnected their sets, carried them out to their cars and took them to a radio store that was equipped with the old cumbersome testing apparatus.

Now all is changed.

The "Porta-Tester" is a small, compact and easily handled portable tester that does all and more than the laboratory arrangement. It is the invention of John G. Haddaway of the Haddaway Manufacturing Company at 1806 West Hoover street, Los Angeles.

Open Evenings Until Nine
Maybe you have noticed in the stores of Southern California a poster of real beauty, suggesting the "Easter gift" idea. Not a bad idea, from many a standpoint. This year Easter is very late, and an Easter-giving will help through what would be a dull period between the Winter tourist exodus and the opening of the Summer season. Then, we all love to give, and it might help carry the Christmas spirit through the year. A suggestion is to choose gifts made in Southern California—and there are lovely things made here—hosiers of the finest silk and best make; knit sports clothes that cannot be surpassed by any Eastern mills; underwear and lingerie most exquisite; pajamas of beauty and utility; and by the way, pajamas make the very best outfit for housewear and work.

An article descriptive of my work at KNX, in a recent issue of the Christian Science Monitor has brought to me a flood of letters from all over the country written by women and girls asking me to tell them how they can do the same work in their city; two of these inquiries are from New York City and Washington, D. C. In all the inquiries the interest seems to be inspired by the idea that it is something that's "easy." It reminds me of a very smart girl of my acquaintance; she has a bright idea and she talks about it; the next day she has another one and she talks about it; the first idea is forgotten. And I wonder as I see her from time to time, when she will begin to work. It seems to take so long to learn that "dogged does it," to use a Cockney phrase.

I've found another happy memory in my file—a recipe labelled "Alice Gittelson's Chicken Dinner"—the memory, a studio in Greenwich Village seven years ago, where the dinner was served, then "Uncle Billy's" studio nearby, where several famous musicians, painters and sculptors gathered, Helfetz coming in later and playing just because he felt like playing. This is the recipe, and it's good enough for the very best Easter Dinner.

Cut up and salt a stewing chicken. Cut into small pieces half a green pepper, one onion, one tomato, one carrot, three stalks of celery; brown in a stew-pan in one tablespoonful of butter. Add 1/2 of a teaspoonful of paprika; 1/8 teaspoonful of nutmeg; 1/4 teaspoonful of ginger, a bit of cayenne, black pepper, thyme, celery salt, and 1 clove of garlic, cut very small. Then brown the chicken slightly in the butter, and add a pint of water. Cook chicken and vegetables together until the chicken is tender. Thicken the gravy and add chopped parsley.

These cream cakes make a nice dessert. Beat together yolks of 5 eggs, juice of half a lemon and grated rind and 1 cup of sugar. Fold in lightly the beaten whites of the 5 eggs and 3/4 of a cup of flour with 1/2 teaspoonful of baking powder. Bake in deep muffin pans in a moderate oven. When done, roll in powdered sugar and cool. Split the cakes and fill with whipped cream.

The first word of this article reminds me of a true story. A friend has two

(Turn to Page 75)
CRUEL AND UNUSUAL PUNISHMENT INFLECTED BY THE OFFICIALS OF LOS ANGELES COUNTY, as reported by our esteemed and dignified contemporary, the Los Angeles Times: "As the jurist's opinion prevails, Jessie Ramirez must spend some little time in the COUNTY PAUL" (!)

STATION KOKO BROADCASTING ON A WAVELENGTH OF 1864 2/3 TAXI-METERS:

"Good evening, folks! Your old pal, Horace Hairoil denouncing—pardon me, AN.nounceing.

"It gives me great pleasure to tell you that at 7:63 sharp this evening we will put on the air Mr. O. Watta Hamm and his company of Shameless Players, fresh from their phenomenal run of nine days in the Watts Opera House. Mr. Hamm's all-star organization (if sober) will favor you with that wonderful old classic, "Cast Up by the Sea—In Six Parts." As an inducement to our many friends in Radio Land to see this thing through, we offer a special prize of one "Improved Static Producer" to the first listener in who telephones the studio and gives us the middle three words of the fourth speech from the end of the play. No kidding, now, folks!

"Following the play we will swing into our very remote control from Bill Loftus' Auto Park, where you will hear Miss Aileen Riggin in her famous high-diving act. Miss Riggin leaps rather hurriedly from a live telegraph wire into a coffee percolator furnished by the Neverlite Electric Company. Listen intently for the splash.

"After this our listeners in (if any) will be favored by Madame Human Screech, the coloraphoto soprano, whose first (and possibly last) number will be that famous old drinking song by Jimini, "When the Swallows Homeward Fly."

"Please stand by till we slip our Wave Length."

DX HOUND, PURE AND SIMPLE!

DX Club:

Being a constant reader of your magazine, I always turn to the DX Club page first, as that is the part that interests me the most. I am a DX hound, pure and simple. I have a Splitdorf, five-tube set. I use no antenna, but have a Preston DX ground, connected to antenna post on set. I have never yet seen a log in your book from a Splitdorf owner, so here goes. I received the following 32 stations, all on loud speaker, during a period of about six weeks:

- KGW, WCCO, KSD, KYA, CNRV, KOAC, KLX, KJR, KFDY, KPO, KFXF, KFQB, KGO, KEX, KON, WOW, KYW, KFEL, KOA, KFRC, KOMO, WHO, KTAB, KFRU, KSL, KFJJ, AMB, KHQ, KOWW, KFSD, KMOX, KWTC.

Besides all locals and Catalina Island. I would like very much to hear from other owners of Splitdorf sets. Would be glad to have any DX hound drop in any time and listen-in with me.

HARRY STRAIN,
Rt. 1, Box 501A,
Veulce, Calif.

3935 Lyceum St.

WELL EQUIPPED

DX CLUB:

While I read your correspondence every week, I have never written you as to some DX work I have been doing recently. This may be of benefit to owners of the BT Counterphase Power Six, of which I am glad to say I am a proud owner. Up until about 6 weeks ago I was using a seven stranded copper wire for aerial. I heard so much about this Goslico aerial wire that I tried it out and the first time I used it I got KDKA on the loud speaker, something I was never able to do with my former aerial. In all, I have 168 distant stations on loud speaker, with plenty of volume. Since I have installed this Goslico aerial, as well as used the Goslico bus bar throughout my set, and one of those DX grounds, with Goslico wire from ground to set, I have logged PWX, CYJ, WJR, KMOX, KGU, WCCO and many others. I find that with this arrangement I have added 35 per cent in volume and selectivity, and can recommend it as an ideal combination. Would also add that I use CeCo tubes entirely. Would be glad to hear from other BT owners.

S. E. CUMMINGS,
708 Mortimer Ave.,
Huntington Park, Calif.

REAL SELECTIVITY

DX CLUB:

Trust I may be admitted to your DX column once again. Here is a feat that some of the DX fans might wish to try. I have tuned in the following stations which are listed as on the same wave with both stations on the air at the same time: WBH, Chicago, and KMTR, Hollywood; WJAX, Jacksonville, Fla., and KNX, Hollywood; WHT, Chicago, and KYA, San Francisco; WNBA, Forest Park, III., and KNRC, Santa Monica. Have been able to cut all the above Eastern stations through on the loud speaker. Use Super-Zenith set and Worthington speaker.

I wonder if all the fans are familiar with Ekko stamps. I am an ardent collector, and believe it a very nice way to secure certifications. I know of no better proof of your DX claims than to say "here is my album." I have more than paid for Ekko stamps with DX prizes.

Sincerely,

MRS. CARL NEWCOMB,
Oxnard, California.

In our issue of April 2nd, a letter in the DX Club from a Sonora owner was printed without a signature as the writer omitted to sign his letter. He has since written, giving his name, in order that any other club members may correspond with him if they should so desire. He is Mr. J. A. Slough, 806 N. Vista St., Hollywood, Calif.
Webster "BC" Unit

The combination of C voltage supply in a B eliminator is advantageous for the reason that the C voltage supplied the set varies with any variation in B voltage, due to fluctuation of the AC supply. This keeps the ratio of C to B voltage constant and insures the preservation of tone quality and tube efficiency.

In the "Little Giant" pictured there are five controls. All three of the B voltages, detector, intermediate amplifier, and power amplifier, are variable, as are also the intermediate and power C voltages.

---

RADIOLA SPECIALISTS

We make any RCA SUPER-HETERODYNE include in its tuning range the stations between 200 and 230 meters, at a nominal cost. Not an attachment, but a fundamentally sound improvement in the circuit. We have also developed improvements for the Radiola 20.

Our Electrical Phonograph

is creating a furor among the music lovers who demand the last word in quality reproduction. We build portable and console models, or this equipment can be installed in your old phonograph. Furthermore we guarantee as faithful reproduction as that given by any machine offered to the public.

Los Angeles, Calif.,
April 5th, 1927.

Palmer Radio Co.
4529 S. Vermont Ave.,
Los Angeles, Calif.

Gentlemen:
About one month ago I had you build for me one of those INFRA DYNEs, and I have had so much success with it and am so well pleased that I just had to sit down and give you some of the results I have had. It is without any exaggeration when I say that I am able to get WENR, Chicago; KYW, Chicago; WTAM, Cleveland; CNRV, Vancouver; WBAP, Fort Worth; KMOX, St. Louis, without any difficulty whatever, and all these on loud speaker with excellent quality and volume. As far as all our local stations are concerned, I cut right through them. I have had two, what I thought were real sets, before I had this INFRA-DYNE, but the set I have now is all that anyone would wish for.

Wishing you your continued success, I am,
Yours truly,
J. C. SMITH.

COUNTERPHASE for DX: H. A. Everest, 1032 N. Ogden Dr. GR. 9915
The New Stewart-Warner 6-Tube receiver with separate or enclosed reproducer

Model 350—$115.00 with built-in Reproducer

For radio enthusiasts who prefer a receiver that stresses the "simplicity of operation" feature, Stewart-Warner offers several models with single dial control. These efficient receivers, to be secured in both table and console types, have a six-tube receiving circuit of proved efficiency.

The Model 350, a table receiver with enclosed reproducer, and the Model 355, a magnificent console attractively priced, have been praised by acoustic experts for their splendid tone. The reproduction unit used in these models is the same as that employed in the Stewart-Warner Model 415 Reproducer—an exclusive Stewart-Warner development that has done much to establish the splendid reputation of Matched Unit Radio.

Any Stewart-Warner dealer will gladly demonstrate either the five or six tube Stewart-Warner receivers in your own home. Arrange for a demonstration today...You'll be surprised at their efficiency...at the exceptionally moderate terms on which they can be purchased.

Anten-A-Limiter

Why Bother with an Unsightly Antenna?
The Anten-A-Limiter, easily and quickly installed on any radio, regardless of make or model, makes it possible to secure 100% radio performance without using unsightly cage aerials... makeshift antennae installations.
This tested and guaranteed antennae eliminator will, without question, increase both volume and selectivity of your radio. It will make it possible for you to tune in short wave stations without background or distortion.

Small—Compact—Easily Installed
The Anten-A-Limiter is the biggest radio value ever offered in a small package... it is but 5 inches in diameter... only 1 3/4 inches thick... it will even fit inside your radio receiver. It is sold on a guarantee of satisfactory performance... you have nothing to lose by trying it. Ask your dealer.

The Radio
Surprise of
the Season

"Turn One
Dial to Get
Everything
On the Air"

Everyone has been waiting for it—a dependable set which combined everything in one cabinet, yet a radio set which was simple—and now it is on the market. A famous set that sweeps the ether with one dial, combined with nationally recognized equipment. It is known as the

Holmes ONE
DIAL
Combination

A five-tube tuned radio-frequency set which has already made thousands of friends. This is combined in a beautiful cabinet with a HOLMES sweet-toned Cone Speaker, five tested and matched CeCo "long distance" tubes, and a PHILCO Socket Power unit. No batteries—no wires—all in one cabinet. The price complete, with installation, is $245.00.

Use the Coupon NOW!
The Coupon below will bring you at once full information regarding this remarkable combination. SEND IT IN TODAY. In the meantime, get in touch with your dealer, who will arrange a free demonstration in your own home. If he hasn't one in stock, call WESTmore 4038 and we will send a factory expert to install one in your home.

TEAR OUT AND MAIL TO--
A. J. Tobey Co.

Fifteenth and Hope Streets, Los Angeles

Please send me full information about the HOLMES Combination Offer.

He Thought It Was Rachmaninoff

A prominent motion picture actor, conversing with one of Hollywood's best known directors in the latter's home, was suddenly startled by the strains of Rachmaninoff's Prelude in C Sharp Minor coming from an adjoining room.

The picture star was a personal friend of the great pianist and composer, and had heard him play his famous Prelude on several occasions. The masterful execution was so much like that of the composer, that the actor rushed into the next room to see if it could possibly be Rachmaninoff himself at the piano.

To his utter astonishment, he found no piano in the room. The marvelous music came from one of the new electric reproducing phonographs.

The perfection of electric reproduction made such an impression upon him that he immediately purchased one of these phonographs for himself at a cost of over $900.00.

Through the perfection of the Elec-Tru-Tone, the Phonograph Modernizer, you can now enjoy the marvels of electric reproduction on your old phonograph in conjunction with your radio set without going to the great expense of purchasing a complete new electric machine.

6:00 to 12:00 p.m.—Cush Branch and his Melody Orchestra.

Program Published as Submitted by the Station.

AFTER THE RAIN

Water rusts copper wire. A rusty aerial distorts reception. WESCO Low Loss Antennae are coated with Egyptian Lacquer, a perservity that has been in use since the days of King Tut-Ankh-Amen four thousand years ago. If you want greater volume on distant stations and clearer tone quality on local broadcasting you should discard your present rusty aerial and install a "WESCO" antenna. It comes complete and is easily installed, requiring but a single 20-foot pole.

If your dealer does not stock them he will be glad to get one for you, or you may order direct.

Radio Salesmen!

Make Big Money Through Training

You can make bigger money selling radios if you know how they're built, what makes them work, and how to fix them when they break. The "Service expert" is the man of the hour— he's making the big money. YOU can, too, with the intensive radio course at National Electrical School.

Visit the West's Largest and Finest Electrical School and See for Yourself

See for yourself! Come and see the $100,000 equipment on which many students are preparing for bigger opportunity and more money through National training. Take the boys aside and ask them what they think of their course—then draw your own conclusions. Send the coupon for full details, then come and visit the biggest, finest Electrical School in the West.

NOW THE SUPREME R-F 5 IS SOLD FACTORY DIRECT TO YOU
5-Tube Console Complete

$59

Built-in speaker, large tubes, 100 A. H. Rubber Case Battery even the inside aerial is included—nothing else to buy.

Selectivity :: Quality :: Distance

New Modified S. L. F. condensers allow ample separation of low wave lengths and gives absolute selectivity on all stations. Using Kellogg's laboratory grade transformers assures you of tone perfection, and for distance the utmost in sensitivity has been achieved through proper design of condensers and inductance.

Made of Finest Parts Obtainable

The Supreme—Made of the finest of material such as Kellogg, Yaxley, Carter. C. R. L., Benjamin. Bakelite coils.

Order Your Set Today

and you'll say, like everyone else that hears the Supreme, "That's the best receiver I ever heard—it's wonderful." It's simply not equalled for purity of tone or fidelity of reproduction. Remember every part is guaranteed to you—you take no chances.

THE PATTERSON FACTORY TO YOU SALES PLAN
puts a guaranteed $155 console, 5-tube receiver in your home for cash at about $33 less than the actual wholesale price. Volume production is the answer.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC. REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912
OF RADIO DOINGS, published weekly at Los Angeles, California, for April 1, 1927.

STATE OF CALIFORNIA,
COUNTY OF LOS ANGELES.

Before me, a Notary Public in and for the State and County aforesaid, personally appeared G. W. MARSHALL, who having been duly sworn according to law, deposes and says that he is the Business Manager of the HORSEWOOD PUBLISHING CO., and that the following is, in the best of his knowledge and belief, a true statement of the ownership, management and circulation (if a daily paper, the circulation, etc., of the amount published for the date shown in the above column, required by the Act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, herein:

1. That the owner is: If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1% or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a noncorporation, or other unincorporated entity, its name and address, as well as those of each individual owner, must be given.

2. That the known bondholders, mortgagees, and other security holders owning or holding 1% or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

3. That the five largest stockholders, giving the names of the persons, stockholders, and security holders, if any, owning not only the 1% of the stockholders and security holders as they appear upon the books of the company but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the names of the persons or corporations for whose benefit he holds, is given; also that the said five stockholders contains statements embracing all the knowledge and belief as to the circulation and conditions under which stockholders and security holders do not appear upon the books of the company, held stock and securities in a quantity other than that of a true fit owner; and this affidavit has been sworn to believe that any previous association, or corporation has any interest, direct or indirect in the said stock, bonds, or other securities than as so stated by him.

4. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is: (This information is required from daily publications only.)

5. That the owned name and address of each issue of this publication sold or distributed, through the mails or otherwise, has been and is shown.

G. W. MARSHALL, Business Manager.

Form 3526—Ed. 1926.

LLOYD MARSHALL.

children, a boy aged 5, and a girl of 3. The children were quite anxious to go to a picture show and begged their mother to take them. Her reply was "Maybe!"

"Jimmy, what does 'Maybe' mean?" asked the 3-year-old.

"Maybe means a little bit of yes and a whole lot of no," answered wise 4-year-old.

Amazing Discovery For Any Radio

Why confine your radio programs to a few local stations when the expensive concepts, dance music and lectures of hundreds of big cities are ready for you? With every order for our treatise, "The Distance Getter," we include FREE our wonderful new Distance Transformer. Tune your set according to our special instructions and presto — note the distant stations roll in!

Satisfaction Guaranteed
Your money instantly refunded if you are not satisfied. The attachment furnished FREE with the "Distance Getter" alone is worth the price.

"Results beyond all expectations. Cuts through local stations like a knife," writes Galloway of Chicago, Ill.

"Send three more for my friends, I get Denver and Calif. easily," says Hines, Ithaca, Ill. "I also get stations in Canada, Chicago, Miami, all on local speaker with sufficient volume to be heard all over the house," says Brooker of Swampscott, Mass.

"Thus far I've pulled in many stations I formerly only heard about" Pringle of Ohio.

FALCK RADIO SALES CO.
1260 W. Second St., Los Angeles
Orval Peterson, whose picture appears on this page, is the vice president and general manager of the Pacific Wholesale, Inc., 1310 South San Pedro street, Los Angeles, California.

Before coming to Los Angeles he was for five years the vice president and sales manager of the Rocky Mountain Radio Corp., of Denver, which is one of the largest and best known radio jobbers in the Rocky Mountain region.

Mr. Peterson was an accepted authority in the Rocky Mountain Region on the subject of radio merchandising. For many years before entering the radio merchandising field he was connected with the United States Government doing special radio and experimental work. He is a veteran of the World War, and served the most of his time as a special communication officer in Europe.

Upon a pleasure trip to Los Angeles he had the pleasure of meeting Mr. Walter Fagan, who was then general sales manager of the Electric Corp. Upon exchanging views, they found that each had an intense desire to get into the distributing business for themselves so decided that if they combined their efforts they could conduct a radio distributing business that could be of real service to the dealers of Los Angeles and Southern California.

Mr. Peterson and Mr. Fagan purchased the entire Los Angeles interest of the Pacific Wholesale Radio, Inc., from the former owners, and have started a special service to the retail trade of Southern California. Mr. Fagan is taking care of the outside sales, and Mr. Peterson is in charge of the inside sales, and management of their establishment.

It is very seldom that two such brilliant men are connected together in one concern, and we predict that it will be but a short time until the Pacific Wholesale, Inc., is one of the best known and largest radio jobbers in the West. Mr. Peterson sends a cordial invitation to all the dealers in this district to come and visit him.
Richard L. "Dick" Strong has opened an exclusive radio store at 19 Pier avenue, Hermosa Beach, and will feature Holmes and Arbortone sets, Philco Power Units; CeCo tubes and Golden Bear speakers. The official opening will take place on Saturday, April 16, when entertainment will be furnished by Uncle Remus and Little Boy Blue and refreshments will be served. The store will be known as "Radio Strong."

G. W. Stackman, the new branch manager for Bosch, was a recent visitor to Los Angeles. The Pacific coast branch office of this company is located at 1263 Post St., San Francisco. T. C. Miller is field sales manager in this territory.

Last week the appointment of Hall Berringer, for many years intimately identified with the California Radio Trade, as sales manager of H. Earle Wright, Incorporated, was announced by M. G. Sues, secretary-treasurer of that organization.

Berringer brings with him to his new position a wide acquaintance with both the wholesale and retail trade and has a detailed knowledge of the major items distributed by H. Earle Wright, Incorporated. He will make his headquarters in San Francisco and will maintain a close contact with radio retail outlets in the north.

The Los Angeles Sales Organization of the Kemper Radio Corporation held its monthly banquet at the Palomar Tennis Club, Monday, April 4th.

Harold H. Cluff, general sales manager, gave a forceful sales talk to the sixty members present.

Entertainment was furnished by a number of KMTR artists, including "Whispering" Jack Don, Jane Parker, Bill Hatch and Louise Howatt.

Herbert H. Horn, 1629 South Hill St., Los Angeles, will be pleased to mail to all dealers requesting same a printed list of all lines carried by him.

J. C. Lester announces the opening of a new store at 452 So. Broadway, where they will handle a complete line of Stewart Warner sets and also all lines of radio accessories and equipment. The store will be open till 9 p.m. daily.

B. R. Hassler, representative of Valley Electric; Brach and Sentinel Manufacturing Co., is now making his headquarters in Los Angeles, and has opened offices in the Allied Crafts building. He was previously located in the New Chronicle building, San Francisco.

The Advance Electric Company, 1260 West Second street, Los Angeles, California, the manufacturers of the famous Paul Battery-Less Receiver, are broadcasting from KMTR every Tuesday and Friday afternoon, from 4 to 5 p.m.

The programs are being arranged and taken care of by Mr. Jeffries of the Waters & McLeod Advertising Agency, Detwiler Building, Los Angeles, California.

The Allied Crafts building is becoming quite a headquarters for the radio trade. We are glad to welcome Carl A. Stone, representative of All-American; Shamrock Manufacturing Co.; Trimm Manufacturing Co.; and Hoosick Falls products who has opened offices at 305 Allied Crafts building. He was previously located at 1050 South Los Angeles street.

Clarke A. Rasey, formerly with the DeForest Company, is now with the Pacific Distributors. Rasey has been associated with Virgil C. Crites in the development of the Orthoformer, which is now on the market.
A tri-weekly hour of cheer and melody, for the special benefit of "shut-ins," was recently inaugurated from KPO, the Itale-Chronicle station of San Francisco, and is already receiving considerable response from the listeners. These programs are known as the "Happy Hours," and are broadcast on Tuesday, Thursday and Friday mornings from 8 to 9 o'clock. They are under the direction of Hugh Barrett Dobbs, KPO's physical culture mentor, who has made KPO's early morning health drills one of the most popular features of the station.

With the signing off of KHJ at Los Angeles on the completion of its fifth anniversary program on April 13 the pioneer station of the west coast completed 10,000 hours on the air during its first five years of broadcast. The present daily schedule omits the afternoon hours, but the station is on the air Tuesdays to Saturdays, inclusive, from 6 to 10 p.m.; Sundays from 10:30 to noon and from 7 to 10 p.m., and Monday is silent day.

That the vogue of the one-man entertainer is not waning is proven, in the opinion of the management of KFXB, by the popularity of the daily request half-hour from 5:15 to 5:45 o'clock, when "Little Eddie Barnes" holds forth with his piano and vocal numbers, and dialect offerings. It is stated that he keeps the phone busy while on the air.

The popularity of KFWO, Catalina Island, is shown by the fact that several of our local Los Angeles stations have arranged with the genial Major to transport to his flower-filled studio groups of their star performers. For instance, on Wednesday night, the 13th, there was a gala program that included such well-known entertainers as the famous Collegians Orchestra; the Three Little Barnes (Eva, May and Eddie); the Stark Sisters (Linnie and Maud); Miss Ditra Flame; Jack Z. Smith, popularly known as the Catcher's Kid. That delightful Novelty Duo—Miss Marlon Bougar and Earl Lawrence, and the celebrated Baron Keyes, who writes "the words and music while you wait," were also on the program. All of the above artists are from KFXB, Los Angeles.

Every Saturday is popular night in the Los Angeles station of KHJ, and a big part of the feature broadcast is the Huaking Bee Dancers who appear in the studio in costumes of 1861. Ed Parr announces the dances. Benjamin Sears is the old-time fiddler, and Mrs. Sears plays the piano chords. The dancers perform in the studio, while radioland hears the shuffle of their feet, the squeak-squeak of the fiddler, and the calling of the dances.
