COMPLETE LIST OF STATION SLOGANS

Now Available in Book Form for New Subscribers to
**STEVENSON'S BULLETIN OF RADIO BROAD-
CASTING STATIONS**

For a limited period of time, we will give a complete list of station slogans, including all American and Canadian broadcasters, revised to January 1, 1926, to new subscribers to STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS.

STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS is absolutely indispensable if maximum enjoyment is to be obtained from the set. With it almost any station in the world picked up can be identified.

The Book of Station Slogans, in convenient form, will also add to your radio pleasure.

Use the blank below to send us your subscription. The Book of Slogans will also be sent to those who renew their subscriptions.

NATIONAL PUBLISHING CO.,
1220-1222 H Street N. W.,
Washington, D. C.

Enclosed find \$1.00 for which please send me the Book of Station Slogans and STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS for one year, commencing with the _____ issue.

SENATOR DILL ADVOCATES EXTENSION OF BROADCASTING BAND

BY C. C. DILL

United States Senator from Washington and Author of the Dill Radio Bill Now Pending in Congress.

Radio during the last two years has become a source of real public service. It has gradually passed beyond the experimental stage and reached the point where the people of this great country may rely on it for entertainment and instruction.

It is with the thought of dedicating this great service to the permanent use of the people as a whole that Congress is attempting to frame legislation for its regulation. There seems to be no doubt that regulation is necessary and that a new radio law is needed immediately.

The question has arisen during our consideration of the bill as to whether the regulation should be entrusted to the Secretary of Commerce or to any other one man. It is my belief that at the present stage of development, the details of administration should remain with the Department of Commerce, but a non-partisan commission should be established now with authority to pass finally upon questions which may be referred to it by the Secretary of Commerce or any one else. The decisions of this Commission should, of course, be subject to review in the courts.

A highly important feature connected with the administration of the radio law is a new arrangement of wave lengths. The crowding of 536 stations on 89 wave lengths has practically rendered unserviceable a large portion of the broadcasting band—that is from 200 to 280 meters.

I believe a new band of wave lengths, from 150 to 200 meters, should be opened up, and many of the stations now congesting the band from 200 to 280 meters assigned the new wave lengths. I have been assured that if this new band is opened up, apparatus will soon be on the market to pick up these stations.

To put broadcasting stations in the band between 150 and 200 meters would mean, of course, that the amateurs would be deprived of these channels. I have the greatest admiration for these radio pioneers and predict they would cheerfully give up the 150-200 meter band to the greater service of the public as a whole.

NATIONALLY KNOWN MANUFACTURER INDORSES I. C. S. COURSE IN

R A D I O

Wonderful opportunity for ambitious men to win success
in this fast-growing profession. Trained men scarce.

Scores of fortunes have been made in radio since broadcasting began in 1921. In that year about 9½ million dollars' worth of radio apparatus was made. In 1925, more than 150 million dollars' worth was turned out by hundreds of factories!

Fact is, the Radio industry is expanding so rapidly that trained men are at a premium. There is a constant, urgent demand for operators — factory superintendents — engineers — service men — designers — salesmen who know radio.

"Give us more trained men," the leaders in the industry say. "Men who know something about Radio. There's no limit to what they can earn if they are equipped to progress with this business."

We tell you frankly that few industries offer such opportunities to ambitious men today as radio. For this new industry has scarcely scratched the surface of its possibilities. Its great future lies ahead.

There is no better way for you to succeed in this fascinating business than to study the Radio Course of the International Correspondence Schools. This course is new, complete, and up-to-the-minute. It was written by practical authorities in this field. It is endorsed by leading radio experts and radio manufacturers.

Quincy J. Workman writes that he has "nearly doubled his salary" since he took up the I. C. S. Radio Course. He is now manager of the Radio Department in a large store.

J. B. McCune writes that the I. C. S. Radio Course enabled him to start a radio business of his own. This same course enabled John M. Paynter to get a position as Radio Operator and Ship's Electrician. Scores of other men in radio factories, laboratories and stores report similar progress.

You, too, can get in on the ground-floor if you act quickly. But don't delay too long. Mark and mail the coupon today and let us tell you all about the I. C. S.

Radio Course and what it can do for you. It will pay you to learn more about this growing industry. Mail the Coupon for Free Booklet.

"It gives me great pleasure to add a word of commendation of the International Correspondence Schools' new Radio Course.

"I was once a student of the International Correspondence Schools myself and I am familiar with your methods and texts. I recommend them to any young man who is sincerely seeking to improve himself in position and salary."

R. E. THOMPSON,

President, R. E. Thompson Manufacturing Co., makers of famous Thompson Neutrodyne Radio Sets.

International Correspondence Schools,
Box 8326, Scranton, Penna.

Without cost or obligation, please send me all the facts about the new I. C. S. course in

IMPORTANT EVENTS IN RADIO—PEAKS IN THE WAVES OF WIRELESS PROGRESS

1827. Savary found that a steel needle could be magnetized by the discharge from a Leyden jar.

1831. Faraday discovered electromagnetic induction between two entirely separate circuits.

1837. The first patent for an electric telegraph was taken out by Cooke and Wheatstone (London) and by Morse (United States).

1838. Steinheil discovered the use of the earth return.

1840. Henry first produced high frequency electric oscillations and pointed out that the discharge of a condenser is oscillatory.

1842. Morse made wireless experiments by electric conduction through water.

1843. Lindsay suggested that if it were possible to provide stations not more than 20 miles apart all the way across the Atlantic there would be no need of laying a cable.

1845. Lindsay made experiments in transmitting messages across the River Tay by means of electricity or magnetism without submerging wires, using the water as a conductor.

1849. Wilkins revived the same suggestions for wireless telegraphy.

Dr. O'Shaughnessy succeeded in passing intelligible signals without metallic conduction across a river 4,200 feet wide.

1862. Heyworth patented a method of conveying electric signals without the intervention of any continuous artificial conductor.

1867. Maxwell read a paper before the Royal Society in which he laid down the theory of electromagnetism, which he developed more fully in 1873 in his great treatise on electricity and magnetism. He predicted the existence of the electric waves that are now used in wireless telegraphy.

1870. Von Bezold discovered that oscillations set up by a condenser discharge in a conductor give rise to interference phenomena.

1872. Highton made various experiments across the River Thames with Morse's method.

1879. Hughes discovered the phenomena on which depend the action of coherer. The coherer was later used practically by Marconi.

1880. Trowbridge found that signaling might be carried on over considerable distances by electric conduction through the earth or water between places not metallically connected.

1882. Bell's experiments with Trowbridge method on the Potomac River resulted in the detection of signals at a distance of 1½ miles.

Professor Dolbear was awarded a United States patent in March, 1882, for wireless apparatus in connection with which he made the

(Continued on page 27)

Earn \$50 to \$200 a Week in RADIO

You can! Hundreds of ambitious men are already earning thousands of dollars in this wonderful new industry—you, too, can get your share. Mail coupon below for Free Book which describes fully the amazing money-making opportunities in Radio and tells you how **YOU** can earn from \$5,000 to over \$10,000 a year.

THE astounding growth of Radio has created thousands of big money opportunities. Millions of dollars were spent during the past year on Radio, and thousands of young men are needed right now to meet the ever-increasing demand of work.

Men are needed to build, sell and install Radio sets—to design, test, repair—as Radio engineers and executives—as operators at land stations and on ships traveling the world over—as operators at the hundreds of broadcasting stations. And these are just a few of the wonderful opportunities.

Easy to Learn Radio at Home in Spare Time

No matter if you know nothing about Radio now, you can quickly become a Radio expert, by our marvelous new method of practical instruction—instruction which includes all the material for building the latest up-to-date Receiving Sets.

Scores of young men who have taken our course are already earning from \$75 to \$200 a week. Einett Welch, right after finishing his training, started earning \$300 a month and expenses. Still another graduate, only 16 years old, is averaging \$70 a week in a Radio store.

Doubles Salary

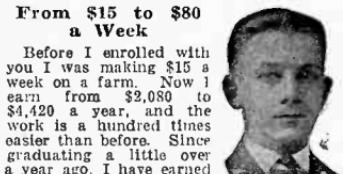

I can very easily make double the amount of money now than before I enrolled with you. Your course has benefited me approximately \$3,000 over and above what I would have earned had I not taken it.

T. WINDER,
Grand Junction, Colo.

From \$15 to \$80 a Week

Before I enrolled with you I was making \$15 a week on a farm. Now I earn from \$2,080 to \$4,420 a year, and the work is a hundred times easier than before. Since graduating a little over a year ago, I have earned almost \$4,000, and I believe the course will be worth at least \$100,000 to me.

(Signed) GEO. A. ADAMS,
Tamaqua, Pa.

Wonderful Opportunities

Hardly a day goes by without our receiving urgent calls for our graduates.

Take advantage of our practical training and the unusual conditions in Radio to step into a big paying position in this wonderful new field. Radio offers you more money than you probably ever dreamed possible—fascinating, easy work—a chance to travel and see the world if you care to, or to take any one of the many Radio positions all around you at home. And Radio offers you a glorious future!

SEND FOR FREE RADIO BOOK

Learn more about this tremendous new field and its remarkable opportunities. Learn how you can quickly become a Radio expert and make big money in Radio.

We have just prepared a new 48-page book which gives a thorough outline of the field of Radio—and describes our amazing practical training in detail. This Free Book, "Rich Rewards in Radio," will be sent to you without the slightest obligation. Mail coupon for it now!

For a short time we are offering a reduced rate to those who enroll at once. Act promptly and save money.

BROADCASTING STATION NOTES

According to R. O. Strook, Chief Engineer of WHT, Chicago, "fading and weakened radio signals are not wholly the result of atmospheric conditions as previously supposed." Mr. Strook claims that both can now be attributed largely to the broadcasting station itself.

WBAL, "The Voice of Baltimore" has been picked up in Germany, according to a letter from Robert Blitz, an electrical engineer now residing at Darmstadt, Germany. According to the operators of the station, WBAL has also been heard from the Arctic Circle to the Equator, and has likewise gone to the Catalina Islands, off the Coast of California.

WOR, Newark, attributes its success during the International tests, when its signals were picked up in Moscow, Russia, to the changes recently made in its antenna. In place of the flat top eight-wire antenna formerly accepted as the most efficient type, WOR has installed a six-wire cage aerial.

"Those who criticise the gentlemen of the microphone generally known as announcers, should take into consideration some of the difficulties they meet with," says KFI, Los Angeles. "How, for instance, would you like to announce that 'Martha Van Hoomissen-Chevallier will play Die Tod und die Verklerung by Strauss, and accompany the Versonkene Glocke by Gretchaninoff, sung by Antoinette Konorachar-akoff?'"

WGN, Chicago, has received thousands of letters of appreciation for "The Old Music Room," which is broadcast every Sunday night at 9:15 o'clock.

KOA, Denver, is trying out a ten-episode mystery serial entitled "A Step on the Stairs." The installments of the mystery play are at 9:40 o'clock each Monday evening.

Archie Coates, announcer at WEAF, was able to identify himself recently by his voice. Coates had occasion to claim a package for which he had forgotten the check. Asked to identify himself, he found he had left his wallet and cash at home. "Isn't there anyone here who listens in on WEAF who can recognize a voice?" asked Coates. He proceeded through the formula of announcing the call letters, the company and studio address. Two nearby clerks came forward and offered to swear that the visitor's voice was that which frequently came forth from their loud speakers. With their support, Coates received the package.

STATION CHANGES

WJZ, Boundbrook-New York, is alternating between 1,000 and 50,000 watts power. The station will continue to experiment with this high power for at least sixty days, after which the Department of Commerce will decide whether the resulting interference can be eliminated.

KFON, Long Beach, Calif., is now owned by the Echophone Radio Shop.

KFNF, Shenandoah, Iowa, has transferred from class A to B and increased its power from 500 to 1,000 watts.

The call signal of KFMQ, Fayetteville, Ark., has been changed to KUOA.

The call signal of WHAT, Minneapolis, has been changed to WGKY.

The power of WEBH, Chicago, has been increased from 1,500 to 2,000 watts.

The power of WLWL, New York, has been increased from 1,500 to 3,500 watts.

Six new stations were licensed temporarily. They follow:

KFUM	Colorado Springs, Colo.	WJBU	Lewisburg, Pa.
KSMR	Santa Maria, Calif.	WLB	Minneapolis, Minn.
WJBR	Omro, Wis.	WKAR	Escanaba, Mich.

Five stations were discontinued. They follow:

KFVH	Manhattan, Kans.	WDBC	Lancaster, Pa.
KDZB	Bakersfield, Calif.	WHBK	Ellsworth, Maine.
KUO	San Francisco, Calif.		

It is the aim of the management of STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS to make it of real and permanent service to the radio public. The present form or arrangement is not considered by any means to be perfect or of lasting quality. To this end, suggestions and criticisms will be highly appreciated.

Specifically, the management would like to have your views as to the change in STEVENSON'S which was inaugurated with this issue.

IMPORTANT EVENTS IN RADIO—PEAKS IN THE WAVES OF WIRELESS PROGRESS

(Continued from page 5)

statement that "electrical communication, using this apparatus, might be established between points certainly more than one-half mile apart, but how much farther I can not say." It appeared that Professor Dolbear made an approach to the method that was, subsequently in the hands of Marconi, to be crowned with success.

1883. Fitzgerald suggested a method of producing electromagnetic waves in space by the discharge of a conductor.

1885. Edison, assisted by Gillilaud, Phelps, and Smith, worked out a system of communication between railway stations and moving trains by means of induction and without the use of conducting wires. Edison took out only one patent on long-distance telegraphy without wires. The application was filed May 23, 1885, at the time he was working on induction telegraphy, but the patent (No. 465971) was not issued until December 29, 1891. In 1903 it was purchased from him by the Marconi Wireless Telegraph Co.

Preece made experiments at Newcastle-on-Tyne which showed that in two completely insulated circuits of square form, each side being 440 yards, placed a quarter of a mile apart, telephonic speech was conveyed from one to the other by induction.

1886. Dolbear patented a plan for establishing wireless communication by means of two insulated elevated plates, but there is no evidence that the method proposed by him did, or could, effect the transmission of signals between stations separated by any distance.

1887. Hertz showed that electromagnetic waves are in complete accordance with the waves of light and heat, and founded the theory upon which all modern radio signaling devices are based.

Heaviside established communication by telephonic speech between the surface of the earth and the subterranean galleries of the Broomhill Collieries, 350 feet deep, by laying above and below ground two complete metallic circuits, each about $2\frac{1}{4}$ miles in length, and parallel to each other.

1889. Thompson suggested that electric waves were particularly suitable for the transmission of signals through fogs and material objects.

1891. Trowbridge suggested that by means of magnetic induction between two separate and completely insulated circuits communication could be effected between distances.

1892. Preece adopted a method which united both conduction and induction as the means of affecting one circuit by the current in another. In this way he established communication between two points on the Bristol Channel and at Lochness in Scotland.

Stevenson, of the Northern Lighthouse Board, Edinburgh, advocated the use of an inductive system for communication between the mainland and isolated lighthouses.

Branly devised an appliance for detecting electromagnetic waves, which was known as a coherer.

1894. Rathenau experimented with a conductive system of wireless telegraphy and signaled through 3 miles of water.

1895. Smith established communication by conduction with the lighthouse on the Fastnet.

Marconi's investigations led him to the conclusion that Hertzian waves could be used for telegraphing without wires.

1896. Marconi lodged his application for the first British patent for wireless telegraphy. He conducted experiments in communicating over a distance of 1½ miles successfully.

The first demonstration of directional wireless using reflectors was given in England. Experiments were conducted to determine the relative speed of propagation of light waves and the electric vibrations which actuated a receiver at a distance of 1½ miles between reflectors.

1897. March: Marconi demonstrated communication being established over a distance of 4 miles.

March 17: Balloons were first used for the suspension of wireless aerials.

July 10-18: Marconi maintained communication between the shore and a ship at sea at distances up to 10 miles.

September and October: Apparatus was erected at Bath, England, and signals received from Salisbury, 34 miles distant.

November 1: First Marconi station erected at the Needles, Alum Bay, Isle of Wight. Experiments were conducted covering a range of 14½ miles.

December 6: Signals transmitted from shore to a ship at sea, 18 miles distant.

December 7: First floating wireless station was completed.

1898. June 3: The first paid radiogram was transmitted from the Needles (Isle of Wight) station.

(To be continued.)

LIST OF STATIONS BY WAVE LENGTHS

It is unusual, with most sets, to pick up distant stations of less than 100 watts power. To prevent this list from becoming too bulky, stations of less than 100 watts power are not included.

Wave Length	Freq. Kilo	Station	Dial Setting		
			No. 1	No. 2	No. 3

The Crosley 4-tube—4-29

The Crosley 5-tube—5-38

The Crescendon

In the 4-29 and the 5-38, the introduction of the Crescendon enables these two highly efficient radios to give almost unbelievable results and has lifted them away and beyond all competition.

The Crescendon is an exclusive Crosley device for increasing the weak signals of distant stations to full volume tones without distortion. Yet with these sets, loud nearby stations can always be softened practically to whispers.

Their striking beauty will please your eye, and your ear will introduce to you new qualities in radio, which you are sure to pronounce a revelation.

Crosley manufactures radio receiving sets which are licensed under Armstrong U. S. Patent No. 1,113,149, or under patent applications of Radio Frequency Laboratories, Inc.

COMPLETE LIST OF STATION SLOGANS

Now Available in Book Form for New Subscribers to
STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS

For a limited period of time, we will give a complete list of station slogans, including all American and Canadian broadcasters, revised to January 1, 1926, to new subscribers to STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS.

STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS is absolutely indispensable if maximum enjoyment is to be obtained from the set. With it almost any station in the world picked up can be identified.

The Book of Station Slogans, in convenient form, will also add to your radio pleasure.

Use the blank below to send us your subscription. The Book of Slogans will also be sent to those who renew their subscriptions.

NATIONAL PUBLISHING CO.,
1220-1222 H Street N. W.,
Washington, D. C.

Enclosed find \$1.00 for which please send me the Book of Station Slogans and STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS for one year, commencing with the _____ issue.

SENATOR DILL ADVOCATES EXTENSION OF BROADCASTING BAND

BY C. C. DILL

United States Senator from Washington and Author of the Dill Radio Bill Now Pending in Congress.

Radio during the last two years has become a source of real public service. It has gradually passed beyond the experimental stage and reached the point where the people of this great country may rely on it for entertainment and instruction.

It is with the thought of dedicating this great service to the permanent use of the people as a whole that Congress is attempting to frame legislation for its regulation. There seems to be no doubt that regulation is necessary and that a new radio law is needed immediately.

The question has arisen during our consideration of the bill as to whether the regulation should be entrusted to the Secretary of Commerce or to any other one man. It is my belief that at the present stage of development, the details of administration should remain with the Department of Commerce, but a non-partisan commission should be established now with authority to pass finally upon questions which may be referred to it by the Secretary of Commerce or any one else. The decisions of this Commission should, of course, be subject to review in the courts.

A highly important feature connected with the administration of the radio law is a new arrangement of wave lengths. The crowding of 536 stations on 89 wave lengths has practically rendered unserviceable a large portion of the broadcasting band—that is from 200 to 280 meters.

I believe a new band of wave lengths, from 150 to 200 meters, should be opened up, and many of the stations now congesting the band from 200 to 280 meters assigned the new wave lengths. I have been assured that if this new band is opened up, apparatus will soon be on the market to pick up these stations.

To put broadcasting stations in the band between 150 and 200 meters would mean, of course, that the amateurs would be deprived of these channels. I have the greatest admiration for these radio pioneers and predict they would cheerfully give up the 150-200 meter band to the greater service of the public as a whole.

NATIONALLY KNOWN MANUFACTURER INDORSES I. C. S. COURSE IN R A D I O

Wonderful opportunity for ambitious men to win success
in this fast-growing profession. Trained men scarce.

Scores of fortunes have been made in radio since broadcasting began in 1921. In that year about 9½ million dollars' worth of radio apparatus was made. In 1925, more than 150 million dollars' worth was turned out by hundreds of factories!

Fact is, the Radio industry is expanding so rapidly that trained men are at a premium. There is a constant, urgent demand for operators — factory superintendents — engineers — service men — designers — salesmen who know radio.

"Give us more trained men," the leaders in the industry say. "Men who know something about Radio. There's no limit to what they can earn if they are equipped to progress with this business."

We tell you frankly that few industries offer such opportunities to ambitious men today as radio. For this new industry has scarcely scratched the surface of its possibilities. Its great future lies ahead.

There is no better way for you to succeed in this fascinating business than to study the Radio Course of the International Correspondence Schools. This course is new, complete, and up-to-the-minute. It was written by practical authorities in this field. It is endorsed by leading radio experts and radio manufacturers.

Quincy J. Workman writes that he has "nearly doubled his salary" since he took up the I. C. S. Radio Course. He is now manager of the Radio Department in a large store.

J. B. McCune writes that the I. C. S. Radio Course enabled him to start a radio business of his own. This same course enabled John M. Paynter to get a position as Radio Operator and Ship's Electrician. Scores of other men in radio factories, laboratories and stores report similar progress.

You, too, can get in on the ground-floor if you act quickly. But don't delay too long. Mark and mail the coupon today and let us tell you all about the I. C. S.

Radio Course and what it can do for you. It will pay you to learn more about this growing industry. Mail the Coupon for Free Booklet.

International Correspondence Schools,

IMPORTANT EVENTS IN RADIO—PEAKS IN THE WAVES OF WIRELESS PROGRESS

1827. Savary found that a steel needle could be magnetized by the discharge from a Leyden jar.

1831. Faraday discovered electromagnetic induction between two entirely separate circuits.

1837. The first patent for an electric telegraph was taken out by Cooke and Wheatstone (London) and by Morse (United States).

1838. Steinheil discovered the use of the earth return.

1840. Henry first produced high frequency electric oscillations and pointed out that the discharge of a condenser is oscillatory.

1842. Morse made wireless experiments by electric conduction through water.

1843. Lindsay suggested that if it were possible to provide stations not more than 20 miles apart all the way across the Atlantic there would be no need of laying a cable.

1845. Lindsay made experiments in transmitting messages across the River Tay by means of electricity or magnetism without submerging wires, using the water as a conductor.

1849. Wilkins revived the same suggestions for wireless telegraphy.

Dr. O'Shaughnessy succeeded in passing intelligible signals without metallic conduction across a river 4,200 feet wide.

1862. Heyworth patented a method of conveying electric signals without the intervention of any continuous artificial conductor.

1867. Maxwell read a paper before the Royal Society in which he laid down the theory of electromagnetism, which he developed more fully in 1873 in his great treatise on electricity and magnetism. He predicted the existence of the electric waves that are now used in wireless telegraphy.

1870. Von Bezold discovered that oscillations set up by a condenser discharge in a conductor give rise to interference phenomena.

1872. Highton made various experiments across the River Thames with Morse's method.

1879. Hughes discovered the phenomena on which depend the action of coherer. The coherer was later used practically by Marconi.

1880. Trowbridge found that signaling might be carried on over considerable distances by electric conduction through the earth or water between places not metallically connected.

1882. Bell's experiments with Trowbridge method on the Potomac River resulted in the detection of signals at a distance of 1½ miles.

Professor Dolbear was awarded a United States patent in March, 1882, for wireless apparatus in connection with which he made the

Earn \$50 to \$200 a Week in RADIO

You can! Hundreds of ambitious men are already earning thousands of dollars in this wonderful new industry—you, too, can get your share. Mail coupon below for Free Book which describes fully the amazing money-making opportunities in Radio and tells you how **YOU** can earn from \$5,000 to over \$10,000 a year.

THE astounding growth of Radio has created thousands of big money opportunities. Millions of dollars were spent during the past year on Radio, and thousands of young men are needed right now to meet the ever-increasing demand of work.

Men are needed to build, sell and install Radio sets—to design, test, repair—as Radio engineers and executives—as operators at land stations and on ships traveling the world over—as operators at the hundreds of broadcasting stations. And these are just a few of the wonderful opportunities.

Easy to Learn Radio at Home in Spare Time

No matter if you know nothing about Radio now, you can quickly become a Radio expert, by our marvelous new method of practical instruction—instruction which includes all the material for building the latest up-to-date Receiving Sets.

Scores of young men who have taken our course are already earning from \$75 to \$200 a week. Emmet Welch, right after finishing his training, started earning \$300 a month and expenses. Still another graduate, only 16 years old, is averaging \$70 a week in a Radio store.

Doubles Salary

I can very easily make double the amount of money now than before I enrolled with you. Your course has benefited me approximately \$3,000 over and above what I would have earned had I not taken it.

T. WINDER,
Grand Junction, Colo.

From \$15 to \$80 a Week

Before I enrolled with you I was making \$15 a week on a farm. Now I earn from \$2,000 to \$4,420 a year and the work is a hundred times easier than before. Since graduating a little over a year ago, I have earned almost \$4,000, and I believe the course will be worth at least \$100,000 to me.

(Signed) GEO. A. ADAMS,
Tamaqua, Pa.

Wonderful Opportunities

Hardly a day goes by without our receiving urgent calls for our graduates.

Take advantage of our practical training and the unusual conditions in Radio to step into a big paying position in this wonderful new field. Radio offers you more money than you probably ever dreamed possible—fascinating, easy work—a chance to travel and see the world if you care to, or to take any one of the many Radio positions all around you at home. And Radio offers you a glorious future!

SEND FOR FREE RADIO BOOK

Learn more about this tremendous new field and its remarkable opportunities. Learn how you can quickly become a Radio expert and make big money in Radio.

We have just prepared a new 48-page book which gives a thorough outline of the field of Radio—and describes our amazing, practical training in detail. This Free Book, "Rich Rewards in Radio," will be sent to you without the slightest obligation. Mail coupon for it now!

For a short time we are offering a reduced rate to those who enroll at once. Act promptly and save money.

BROADCASTING STATION NOTES

According to R. O. Strook, Chief Engineer of WHT, Chicago, "fading and weakened radio signals are not wholly the result of atmospheric conditions as previously supposed." Mr. Strook claims that both can now be attributed largely to the broadcasting station itself.

WBAL, "The Voice of Baltimore" has been picked up in Germany, according to a letter from Robert Blitz, an electrical engineer now residing at Darmstadt, Germany. According to the operators of the station, WBAL has also been heard from the Arctic Circle to the Equator, and has likewise gone to the Catalina Islands, off the Coast of California.

WOR, Newark, attributes its success during the International tests, when its signals were picked up in Moscow, Russia, to the changes recently made in its antenna. In place of the flat top eight-wire antenna formerly accepted as the most efficient type, WOR has installed a six-wire cage aerial.

"Those who criticise the gentlemen of the microphone generally known as announcers, should take into consideration some of the difficulties they meet with," says KFI, Los Angeles. "How, for instance, would you like to announce that 'Martha Van Hoomissen-Chevallier will play Die Tod und die Verklerung by Strauss, and accompany the Versonkene Glocke by Gretchaninnoff, sung by Antoinette Konorachar-akoff?'"

WGN, Chicago, has received thousands of letters of appreciation for "The Old Music Room." which is broadcast every Sunday night at 9:15 o'clock.

KOA, Denver, is trying out a ten-episode mystery serial entitled "A Step on the Stairs." The installments of the mystery play are at 9:40 o'clock each Monday evening.

Archie Coates, announcer at WEAF, was able to identify himself recently by his voice. Coates had occasion to claim a package for which he had forgotten the check. Asked to identify himself, he found he had left his wallet and cash at home. "Isn't there anyone here who listens in on WEAF who can recognize a voice," asked Coates. He proceeded through the formula of announcing the call letters, the company and studio address. Two nearby clerks came forward and offered to swear that the visitor's voice was that which frequently came forth from their loud speakers. With their support, Coates received the package.

STATION CHANGES

WJZ, Boundbrook-New York, is alternating between 1,000 and 50,000 watts power. The station will continue to experiment with this high power for at least sixty days, after which the Department of Commerce will decide whether the resulting interference can be eliminated.

KFON, Long Beach, Calif., is now owned by the Echophone Radio Shop.

KFNF, Shenandoah, Iowa, has transferred from class A to B and increased its power from 500 to 1,000 watts.

The call signal of KFMQ, Fayetteville, Ark., has been changed to KUOA.

The call signal of WHAT, Minneapolis, has been changed to WGKY.

The power of WEBH, Chicago, has been increased from 1,500 to 2,000 watts.

The power of WLWL, New York, has been increased from 1,500 to 3,500 watts.

Six new stations were licensed temporarily. They follow:

KFUM	Colorado Springs, Colo.	WJBU	Lewisburg, Pa.
KSMR	Santa Maria, Calif.	WLB	Minneapolis, Minn.
WJBR	Omro, Wis.	WKAR	Escanaba, Mich.

Five stations were discontinued. They follow:

KFVH	Manhattan, Kans.	WDBC	Lancaster, Pa.
KDZB	Bakersfield, Calif.	WHBK	Ellsworth, Maine.
KUO	San Francisco, Calif.		

It is the aim of the management of STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS to make it of real and permanent service to the radio public. The present form or arrangement is not considered by any means to be perfect or of lasting quality. To this end, suggestions and criticisms will be highly appreciated.

Specifically, the management would like to have your views as to the change in STEVENSON'S which was inaugurated with this issue.

IMPORTANT EVENTS IN RADIO—PEAKS IN THE WAVES OF WIRELESS PROGRESS

(Continued from page 5)

statement that "electrical communication, using this apparatus, might be established between points certainly more than one-half mile apart, but how much farther I can not say." It appeared that Professor Dolbear made an approach to the method that was, subsequently in the hands of Marconi, to be crowned with success.

1883. Fitzgerald suggested a method of producing electromagnetic waves in space by the discharge of a conductor.

1885. Edison, assisted by Gillilaud, Phelps, and Smith, worked out a system of communication between railway stations and moving trains by means of induction and without the use of conducting wires. Edison took out only one patent on long-distance telegraphy without wires. The application was filed May 28, 1885, at the time he was working on induction telegraphy, but the patent (No. 465971) was not issued until December 29, 1891. In 1903 it was purchased from him by the Marconi Wireless Telegraph Co.

Preece made experiments at Newcastle-on-Tyne which showed that in two completely insulated circuits of square form, each side being 440 yards, placed a quarter of a mile apart, telephonic speech was conveyed from one to the other by induction.

1886. Dolbear patented a plan for establishing wireless communication by means of two insulated elevated plates, but there is no evidence that the method proposed by him did, or could, effect the transmission of signals between stations separated by any distance.

1887. Hertz showed that electromagnetic waves are in complete accordance with the waves of light and heat, and founded the theory upon which all modern radio signaling devices are based.

Heaviside established communication by telephonic speech between the surface of the earth and the subterranean galleries of the Broonhill Collieries, 350 feet deep, by laying above and below ground two complete metallic circuits, each about $2\frac{1}{4}$ miles in length, and parallel to each other.

1889. Thompson suggested that electric waves were particularly suitable for the transmission of signals through fogs and material objects.

1891. Trowbridge suggested that by means of magnetic induction between two separate and completely insulated circuits communication could be effected between distances.

1892. Preece adopted a method which united both conduction and induction as the means of affecting one circuit by the current in another. In this way he established communication between two points on the Bristol Channel and at Lochness in Scotland.

Stevenson, of the Northern Lighthouse Board, Edinburgh, advocated the use of an inductive system for communication between the mainland and isolated lighthouses.

Branly devised an appliance for detecting electromagnetic waves, which was known as a coherer.

1894. Rathenau experimented with a conductive system of wireless telegraphy and signaled through 3 miles of water.

1895. Smith established communication by conduction with the lighthouse on the Fastnet.

Marconi's investigations led him to the conclusion that Hertzian waves could be used for telegraphing without wires.

1896. Marconi lodged his application for the first British patent for wireless telegraphy. He conducted experiments in communicating over a distance of 1½ miles successfully.

The first demonstration of directional wireless using reflectors was given in England. Experiments were conducted to determine the relative speed of propagation of light waves and the electric vibrations which actuated a receiver at a distance of 1½ miles between reflectors.

1897. March: Marconi demonstrated communication being established over a distance of 4 miles.

March 17: Balloons were first used for the suspension of wireless aerials.

July 10-18: Marconi maintained communication between the shore and a ship at sea at distances up to 10 miles.

September and October: Apparatus was erected at Bath, England, and signals received from Salisbury, 34 miles distant.

November 1: First Marconi station erected at the Needles, Alum Bay, Isle of Wight. Experiments were conducted covering a range of 14½ miles.

December 6: Signals transmitted from shore to a ship at sea, 18 miles distant.

December 7: First floating wireless station was completed.

1898. June 3: The first paid radiogram was transmitted from the Needles (Isle of Wight) station.

(To be continued.)

LIST OF STATIONS BY WAVE LENGTHS

It is unusual, with most sets, to pick up distant stations of less than 100 watts power. To prevent this list from becoming too bulky, stations of less than 100 watts power are not included.

Wave Length	Freq. Kilo	Station	Dial Setting		
			No. 1	No. 2	No. 3

The Crosley 4-tube—4-29

The Crosley 5-tube—5-38

The Crescendon

In the 4-29 and the 5-38, the introduction of the Crescendon enables these two highly efficient radios to give almost unbelievable results and has lifted them away and beyond all competition.

The Crescendon is an exclusive Crosley device for increasing the weak signals of distant stations to full volume tones without distortion. Yet with these sets, loud nearby stations can always be softened practically to whispers.

Their striking beauty will please your eye, and your ear will introduce to you new qualities in radio, which you are sure to pronounce a revelation.

Crosley manufactures radio receiving sets which are licensed under Armstrong U. S. Patent No. 1,113,149, or under patent applications of Radio Frequency Laboratories, Inc.

THE CROSLEY RADIO CORPORATION

**Powel Crosley, Jr., President
CINCINNATI, OHIO**
