Log of North American Broadcasting Stations

(For Mexico see page 59)

With Stations Listed by Frequency and Wave Length

ALL North American broadcasting stations, with their power, location and call letters are listed here, arranged according to frequency in kilocycles and wave length in meters. A record of where each station comes in on the dial may be placed in the left hand margin.

Stations with 5,000 Watts and over are printed in bold face type. Stations with an asterisk (*) before them broadcast on limited time or day time only.

Through use of STEVENSON'S RADIO LOG it is possible to determine where any station should come in on the dial of your receiver.

Look up the wave length of your local station. Suppose, for example, that the station is on 610 kc (kilocycles), and that it comes in at 90 on your set.

Then the stations on 620 kc, the next channel below, should come in at about 89. Stations on 640 should come in at about 87.

Pick out a few stations which you get regularly, and mark down their dial settings. They will serve as guides to enable you to know just where to look for any particular station you want to get.
