# FM STATION FINDER

(LOG and MAP)

... helps you identify and determine distance of all FM stations in U.S.

Compliments of

## Winegard

ANTENNA SYSTEMS

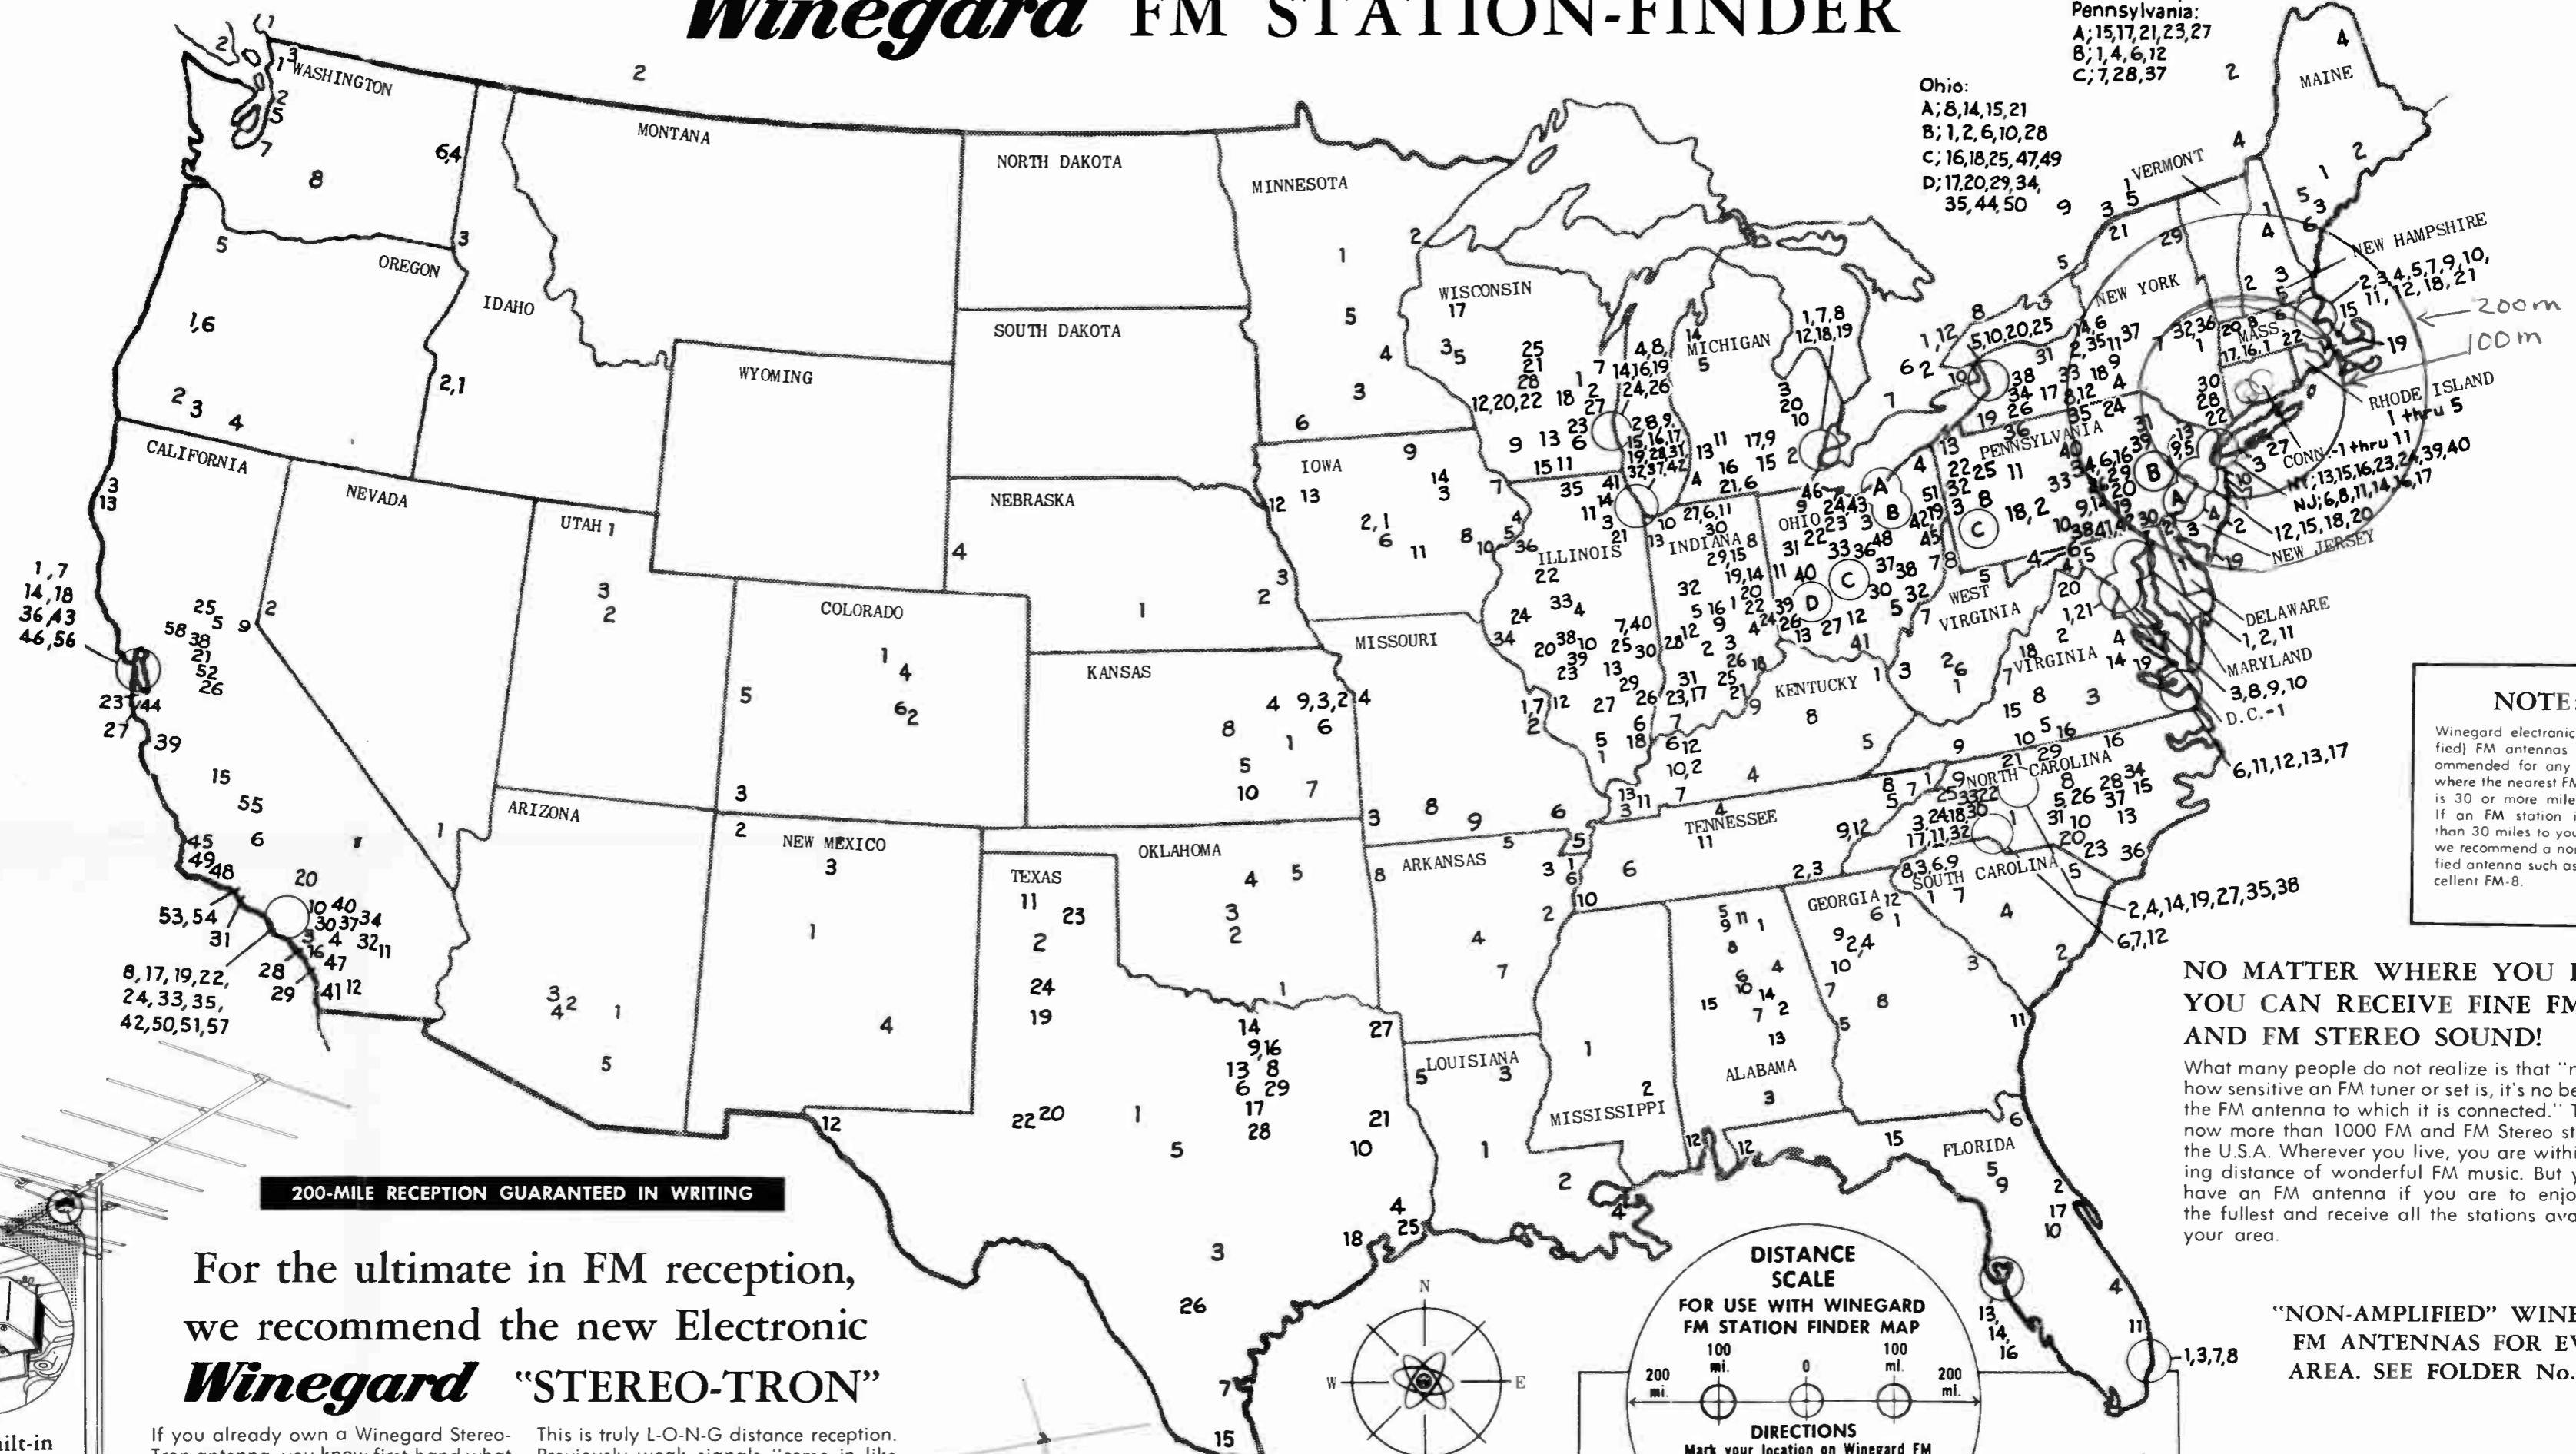

Winegard Co., 3000 Kirkwood Ave., Burlington, Iowa  
and your Winegard Dealer

• Dot before station call letters indicates station that now broadcasts stereophonically via multiplex (or will start in 1962).  
Of course your monaural FM tuner will receive both channels of these multiplex broadcasts and give you full Hi-Fi monaural sound.

Pennsylvania:  
A; 15,17,21,23,27  
B; 1,4,6,12  
C; 7,28,37

Ohio:  
A; 8,14,15,21  
B; 1,2,6,10,28  
C; 16,18,25,47,49  
D; 17,20,29,34,  
35,44,50

**NOTE:**  
Winegard electronic (amplified) FM antennas are recommended for any location where the nearest FM station is 30 or more miles away. If an FM station is closer than 30 miles to your home, we recommend a non-amplified antenna such as our excellent FM-8.

**NO MATTER WHERE YOU LIVE, YOU CAN RECEIVE FINE FM AND FM STEREO SOUND!**

What many people do not realize is that "no matter how sensitive an FM tuner or set is, it's no better than the FM antenna to which it is connected." There are now more than 1000 FM and FM Stereo stations in the U.S.A. Wherever you live, you are within receiving distance of wonderful FM music. But you must have an FM antenna if you are to enjoy FM to the fullest and receive all the stations available in your area.

**"NON-AMPLIFIED" WINEGARD FM ANTENNAS FOR EVERY AREA. SEE FOLDER No. FMS.**

**200-MILE RECEPTION GUARANTEED IN WRITING**

For the ultimate in FM reception, we recommend the new Electronic **Winegard "STEREO-TRON"**

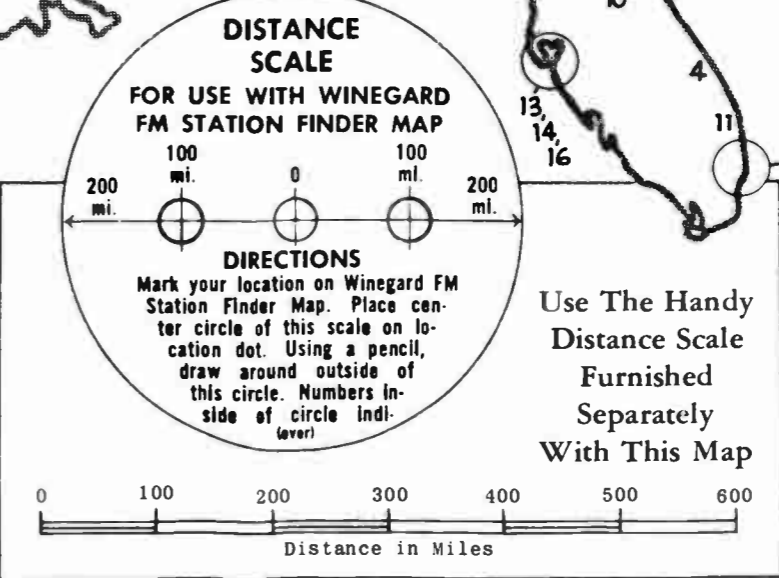

If you already own a Winegard Stereo-Tron antenna, you know first-hand what a wonderful difference it makes in your FM and FM Stereo reception. If you don't have one as yet, you are in for a pleasant surprise. Because of the Stereo-Tron's design and special built-in FM amplifier, we are able to guarantee in writing that you will receive at least 85% of all FM stations in a 200-mile radius over normal terrain with an antenna rotor.

This is truly L-O-N-G distance reception. Previously weak signals "come in like locals" and you get far more enjoyment from your FM tuner. Keep in mind that FM stereo (multiplex) requires an antenna with great sensitivity and gain to offset the power loss of the carrier and subcarrier. The Winegard Stereo-Tron, consequently, is the best antenna you can install for Stereo reception. See the Winegard folder #FMS for complete details on Stereo-Tron antennas.

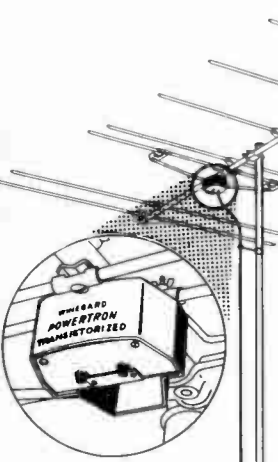

**Electronic "All-Direction"**

For persons who wish to receive FM stations in all directions without using an antenna rotor, Winegard offers the Electronic PF-4 antenna with built-in amplifier. Not as powerful as the PF-8, but will give good results on stations in all directions up to 150 miles or more. See folder #FMS for details.
