The Federal Radio Commission and other radio authorities advocate expression in terms of kilocycles rather than wave lengths. It is suggested that you adapt yourself to the new practice as quickly as possible.

Read These Instructions Carefully

This radio log is based on the scientific fact that all stations broadcasting at one wave length will be dialed identically the same on any one set. Therefore, one station logged, automatically logs all broadcasting at that wave length. Distant stations should be carefully recorded, otherwise a setting entered every third or fourth wave length is sufficient. You will note that your settings will progress in exact numerical order and stations not logged will be located intermediate to two known settings. The power code above has reference to the letters following the station listing. When two symbols are given they indicate the power of stations in their respective order.

To some recipients of this log, the advantage of the efficient chart will not be immediately apparent. It is this great improvement over other logs, that makes this publication of value to you. While it may be different from the logs to which you have been accustomed in the past, it is part of the general progress of simplifying the operations of receiving sets. Every radio authority interviewed by the author has commented on it in superlative terms. Over 300,000 were used last season. Read the instructions carefully, study the headings, use your pencil. It is scientific but simple. You'll like it.

The "NUTTY CLUB" boasts an international membership. It is estimated that over a million listeners have wired, 'phoned, or written in, to be included in this club program. Conceived four years ago, it is now conducted by Charlie Garland and presented at Sunday midnights from the Granada Cafe.
