Although Darryl Somers, with Ossie Ostrich sitting beside him, guided the show, Hey Hey was decentered comedy, dispersed through the various figures and performers, who often include the production crew. The show also contained various (changing) segments. "Media Watch" presented mistakes in TV commercials, or funny items, usually taken from the provincial press. "Red Faces" offered amateur acts. "Ad Nauseum" invented a quiz show with questions about TV ads. "What Cheeses Me Off" was a complaints column, and "Beat It" a music quiz.

Hey Hey used all the technical and audiovisual resources of TV itself to make everyone and everything in the show part of the comedy. For example, viewers rarely saw John Blackman, but he was a regular voice off-screen, doing impersonations, being ironic and sarcastic about guest acts and cast members, or making dry jokes and performing "insult comedy." This visual "absence" was countered by the highly visual cartoon jokes flashed on the screen at any moment. When "Media Watch" speculated on possible mistakes in TV commercials, a camera might suddenly focus on a producer. Surrounded by cameras and cords, he held a microphone and said what he thought, though he would earn derision if the others thought he got it wrong. Puppet Ossie Ostrich would comment on everything dryly and ironically. The other puppet, Little Dickie (a blue head held on a stick, with a raspy voice provided by John Blackman), might suddenly rush forward and be rude about someone or something. In turn, in one show Ossie commented of Little Dickie that his stick had "terminal white ant."

The show reveled in the festive abuse that Mikhail Bakhtin has identified as a feature of carnival in early modern Europe. In a society where, he suggests, people were "usually divided by the barriers of caste, property, professions, and age," festive abuse overturned hierarchy in social relations, creating an atmosphere of equality, freedom, and familiarity—Hey Hey exactly.

In Hey Hey all was chaos and anarchy, the reverse of structured sequences guided by the straight person and chief comedian. Darryl Somers as compere was, instead, a relatively still space across which all the mad traffic of jokes, the different comic contributions and voices, traversed and clashed and commented on each other. If he maintained an ongoing program, he was never a central voice of authority, a ringmaster. His strength was in his alertness to what was going on about him as much as in his own comic contributions.

Traditional stage variety entertainment thrived on familiarity and audience involvement. Similarly, Hey Hey actively drew on the vast and intimate knowledge that its audience (in the studio and at home) had of the media, of the rest of popular commercial TV. Like Monty Python's Flying Circus in the early 1970s, Hey Hey was variety for the electronic age. The media were often the material for the comedy: parodying Lotto in "Chook Lotto," the media in "Media Watch," talent shows in "Red Faces," or testing knowledge of pop music in "Beat It."

Involvement by the studio audience was always encouraged. If, for example, a show was declared a 1960s or a Science Fiction night, Darryl and Jacky and Ossie would wear extravagant uniforms and masks. The audience would also dress up—a touch of the masks and disguises of carnival of old, taking people out of their ordinary life and circumstances. In "Red Faces," perennially one of Hey Hey's most popular segments, the audience could override Red's gong if it liked an act.

Clearly, in Hey Hey there was an extreme self-reflexivity; viewers saw camera people with their cameras and crew with mikes and cords going everywhere. For television culture, this built on a very long tradition of self-reflexivity in popular culture and theater. The festive abuse of Hey Hey reminded viewers that a great deal of popular culture, from carnival in early modern Europe to music hall and vaudeville in the 19th century and into the 20th, featured parody and self-parody. This was more than a way of mocking received attitudes and official wisdom. It was a philosophical mode, a cosmology, a way of questioning all claims to absolute truth—including its own. To the degree that our own "wisdom" is drawn from and dependent upon the media, Hey Hey It's Saturday suggested we should look on that knowledge with a wary eye.

High-Definition Television

High-Definition Television (HDTV) is an arbitrary term that applies to any television production, transmission, or reception technology with a scanning rate that exceeds the 525 lines of the present U.S. NTSC standard or the 625 lines of the PAL or SECAM standards. Most U.S. HDTV television displays have at least 720 scanning lines, a wide-screen 16:9 image aspect ratio, and six-channel audio capability. When viewed on a large television tube, a flat-screen display, or projected on a wall screen, digital HDTV images are demonstrably sharper than that of conventional analog television displays.

The first commercial HDTV system was Hi-Vision/MUSE developed by NHK laboratories in Japan in the 1970s. After abortive Japanese attempts to have High-Vision/MUSE adopted as a de facto world television standard in 1986, a European consortium developed an alternative incompatible standard with 1,250 scanning lines.

In 1987, the U.S. Federal Communications Commission (FCC) created an Advisory Committee on Advanced Television Service (ACATS) to conduct a testing program to select an American HDTV standard. After eight years of development and testing, the FCC adopted a digital scheme that includes 18 types of advanced television production and transmission technology. American broadcasters will be able to transmit both HDTV and SDTV (lower-quality Standard Definition) programming via terrestrial towers, over cable television systems, and from broadcast satellites.

The FCC mandated a ten-year conversion period (1997-2006) for the transition from terrestrial analog broadcasting to a system based on all-digital technology. Most large market television stations are transmitting their programming in both analog and digital formats, but many small-market stations and public broadcaster affiliates have yet to make the conversion.

U.S. television networks are simulcasting prime time programming in both analog and digital HDTV formats. Cable television and satellite services are increasing the amount of HDTV programming they transmit as the number of digital television sets sold to consumers increases. A key driver of set sales and cable/satellite HD programming subscriptions are sporting events and feature films transmitted in high-definition. HDTV sets are available at retail prices between $1,000 and $2,000, and prices continue to fall as more consumers purchase advanced television models.

Japan is also making the conversion to digital broadcasting but HDTV adoption is proceeding more slowly in Europe and other regions of the world. The future of global television technology features digital production and transmission with increasing use of wide-screen displays and multi-channel audio playback that replicates that found in motion picture the-
Hill, Benny

Hill, Benny (1925–1992)
British Comedian

Benny Hill was born in Southampton in the south of England in 1925. His family was lower-middle class; Hill’s father was the manager of a medical appliance company. Hill was attracted early to the stage and saw many live stage shows at the two variety theatres in Southampton. Hill served in the army in the later years of World War II; it was there that he began to perform as a comedian. After demobilization, Hill began working in variety theater, where he slowly learned his craft. In 1956, Hill starred in the feature film comedy *Who Done It?* (Ealing Studios) as a hapless, bungling private detective. The film was only mildly funny, although Hill did display touches of the comic slapstick and characterization that were to become part of his genius. The film was moderately successful but did nothing to further Hill’s career. Instead, it was in the new medium of television that he was to shine.

Hill’s career as a British comedian fits between that of earlier figures such as Tony Hancock and later performers such as Frankie Howerd. Whereas Hancock established his definitive comic persona in radio and then extended this to television, Hill was created by television. Yet Hill was also the most traditional of comedians and his programs had strong roots in variety theater, revolving around comic songs, routines, and sketches rather than an on-going comic characterization and situation. And although Hill had his own show on the BBC as early as 1955, his career was actually launched by the 1960s vogue for comedy on British television. Other British comedians such as Ken Dodd, Charlie Drake, and Frankie Howerd also gained their own shows around the same time, but none had the comic genius and stamina of Hill.

Part of this genius lay in his writing. Hill wrote all his own material, a grueling task that helps explain the relatively small number of programs produced. Under his later contract with Thames Television, Hill was given full control of his program, allowing him to delay making a program until, in his opinion, he had accumulated enough comic material. Hill also had a hand in producing some of the offshoots of *The Benny Hill Show* such as the 1970 half-hour silent film *Eddie in August*.

Although all his material was original, Hill nevertheless owed a comic debt to U.S. entertainer Red Skelton. Like Skelton, Hill worked in broad strokes and sometimes in pantomime with a series of recurring comic personas. Hill even adopted Skelton’s departing line from the latter’s show that ran on network television from 1951 to 1971: “Good night, God bless.” However, Hill was without Skelton’s often-maudlin sentimentality, substituting instead a ribald energy and gusto. Hill’s humor was very much in a broad English vaudeville and stage tradition. The Socialist writer George Orwell once drew attention to the kind of humor embodied in the English seaside postcard—hen-pecked and shrunken older men and randy young men, both attracted to beautiful young women with large breasts, and an older, fatter, unattractive mother—and some of these archetypes also fed into Hill’s television comedy, just as it was to feed into the *Carry On* feature films.

While Hill’s publicity often portrayed him as a kind of playboy who liked to surround himself with beautiful, leggy showgirls, this was an extension of his television persona and had nothing to do with his private life. In fact, Hill never married and lived alone in what would have been a lonely life had it not been for the heavy work demands imposed by the television show.

Hill’s humor, with its reliance upon vulgarity and double-entendres, was never entirely acceptable to the moral standards of some, and his sexism made him...
Hill, Benny

seem increasingly old-fashioned. The forces of political correctness finally had their way in 1989, when Thames Television canceled the program due not only to complaints about its smuttiness, but also because its old-fashioned sexism had become increasingly intolerable. In his last television appearance, in 1991, he appeared as himself, the subject of the BBC arts documentary series, *Omnibus*. Although over the last three years of his life, Hill talked in interviews about a comeback, it was the end of his career. He died in hospital, suffering from a chest complaint, in 1992. Benny Hill once told an interviewer that, like Van Gogh, he would be appreciated in 100 years' time. The statement implied that he was not recognized as a great comedian and was belied by the enormous international popularity of his program and by the fact that in the 1970s and 1980s he was several times voted the Funniest Man in the World by the British television audience.

Hill Street Blues

U.S. Police Procedural/Melodrama

Hill Street Blues, one of the most innovative and critically acclaimed television series in recent television history, aired on NBC from 1981 to 1987. Although never highly rated, NBC continued to renew Hill Street for its “prestige value” as well as the demographic profile of its fiercely loyal audience. Indeed, Hill Street is perhaps the consummate example of the complex equation in U.S. network television between “quality programming” and “quality demographics.” Hill Street Blues revolutionized the TV cop show, combining with it elements from the sitcom, soap opera, and cinéma vérité-style documentary. In the process, it established the paradigm for the hour-long ensemble drama: intense, fast-paced, and hyper-realistic, set in a densely populated urban workplace, and distinctly Dickensian in terms of character and plot development.

Hill Street’s key antecedents actually were sitcoms, and particularly the half-hour ensemble workplace comedies of the 1970s such as M*A*S*H, The Mary Tyler Moore Show, and Barney Miller. M*A*S*H was influential not only as a medical series set in a literal “war zone” (versus the urban war zone of Hill Street), but also for the aggressive cinematic style adapted from Robert Altman’s original movie version. The Mary Tyler Moore Show’s influence had to do primarily with its “domesticated workplace,” a function of Mary’s role as nurturer as well as the focus on the personal as well as the professional lives of the principals. The influence of Barney Miller, an ensemble sitcom set in a police precinct, was more direct. In fact the genesis of Hill Street resulted from NBC’s Fred Silverman suggesting that the network develop an hour-long drama blending Barney Miller and the documentary-style anthology drama, Police Story.

To develop the series, NBC turned to Grant Tinker’s MTM Enterprises, which in the early 1970s had specialized in ensemble sitcoms (The Mary Tyler Moore Show, Bob Newhart, and others) before turning to the hour-long ensemble drama in 1977 with Lou Grant. Hill Street was created by Steven Bochco and Michael Kozoll, two veteran TV series writers with extensive experience on various crime series. The two had collaborated on the short-lived police drama Delvecchio in 1976–77 before joining MTM, and they had little interest in doing another cop show unless they were given considerable leeway to vary the form. NBC agreed, and Hill Street debuted as a mid-season replacement in January 1981.

The basic Hill Street Blues formula was simple enough. The series was set in the Hill Street station, a haven of controlled chaos in a crime-infested, racially torn ghetto within an unnamed industrial metropolis. Each episode invariably charted a “day in the life” on the Hill, from the early-morning “roll call” to a late-night rehash of the day’s events.

In the hands of Bochco and Kozoll, who teamed for much of the writing in the first two seasons, this formula provided the framework for a remarkably complex and innovative series—qualities which were evident from the opening roll call. This daybreak ritual was conducted “below decks” in the precinct house by the desk sergeant—most memorably Sgt. Phil Esterhaus (Michael Conrad from 1981 until his death in 1984), who always closed with the trademark line: “Let’s be careful out there.”

A deft expositional stroke, the roll call served a range of narrative functions. It initiated the day-long trajectory; it provided an inventory not only of the current precinct case load but also the potential plot lines for the episode; it reintroduced most of the principal characters, whose commentary on the cases reestablished their individual personalities and professional attitudes. And technically, it set Hill Street’s distinctive vérité tone with its hand-held camera, continual reframing instead of cutting, multi-track sound recording, and edgy, improvisational feel.

After the roll call, the cops filed upstairs to begin their assignments, which set the episode’s multiple crime-related plot lines in motion. Most of the series regulars who worked “out there” on the streets were partners: Hill and Renko (Michael Warren and Charles Haid), Coffey and Bates (Ed Marinaro and Betty Thomas), LaRue and Washington (Kiel Martin and Taurean Blacque). Other notable street cops were Lt. Howard Hunter (James Slicking), the precinct’s SWAT team leader; Mick Belker (Bruce Weitz), a snarling, perpetually unkempt undercover detective; and Norm Buntz (Dennis Franz), an experienced, cynical, street-wise detective prone to head-strong, rule-bending tactics.
With the episode thus set in motion, the focus shifted to Captain Frank Furillo (Daniel Travanti), the professional touchstone and indisputable patriarch of the precinct work-family, and the moral center of Hill Street's narrative universe. Furillo adroitly orchestrated his precinct's ceaseless battle with the criminal element. He also did battle with bureaucrats and self-serving superiors, principally in the character of Chief Fletcher Daniels (Jon Cypher). And on a more personal level, he battled his own demons (alcoholism, a failed marriage) and the human limitations of his officers, ever vigilant of the day-to-day toll of police work in a cesspool of urban blight whose citizenry, for the most part, was actively hostile toward the "police presence."

Furillo also battled Joyce Davenport (Veronica Hamel), a capable, contentious lawyer from the Public Defender's office. Their professional antagonism was countered, however, by an intimate personal relationship—the two were lovers. Their affair remained clandestine until the third season, when they went public and were wed. And through all this, Furillo also maintained a troubled but affectionate rapport with his ex-wife, Fay (Barbara Bosson).

The Furillo-Davenport relationship was Hill Street's most obvious and effective serial plot, while also giving a dramatic focus to individual episodes. As professional adversaries, they endlessly wrangled over the process of law and order; as lovers they examined these same conflicts—and their own lives—in a very different light. Most episodes ended, in fact, with the two of them together late at night, away from the precinct, mulling over the day's events. This interplay of professional and personal conflicts—and of episodic and serial plot lines—was crucial to Hill Street's basic narrative strategy. Ever aware of its "franchise" as a cop show, the series relied on a crime-solution formula to structure and dramatize individual episodes, while the long-term personal conflicts raised the dramatic stakes and fueled the serial dimension of the series.

Hill Street's narrative complexity was reinforced by its distinctive cinematic technique. As Todd Gitlin suggests, "Hill Street's achievement was, first of all, a matter of style." Essential to that style was the "density of look and sound" as well as its interwoven ("knitted") plot lines, which created Hill Street's distinctive ambience. "Quick cuts, a furious pace, a nervous camera made for complexity and congestion, a sense of entanglement and continuous crisis that matched the actual density and convolution of city life." Hill Street's realism also extended to controversial social issues and a range of television taboos, particularly in terms of language and sexuality.

This realism was offset, however, by the idealized portrayal of the principal characters and the professional work-family. Whatever their failings and vulnerabilities, Furillo and his charges were heroic—even tragic, given their fierce commitment to a personal and professional "code" in the face of an insensitive bureaucracy, an uncaring public, and an unrelenting criminal assault on their community. But the Hill Street cops found solace in their work and in one another—which, in a sense, was all they had, since the nature of their work precluded anything resembling a "real life."

Not surprisingly, considering its narrative complexity, uncompromising realism, and relatively downbeat worldview, Hill Street fared better with critics than with mainstream viewers. In fact, it was among TV's lowest-rated series during its first season but was renewed due to its tremendous critical impact and its six Emmy Awards, including Outstanding Drama Series. Hill Street went on to win four straight Emmys in that category, while establishing a strong constituency.
among upscale urban viewers. It also climbed to a respectable rating, peaking in its third season at number 21; but its strength was always the demographic profile rather than the sheer size of its audience.

Thus Hill Street paid off handsomely for NBC, and its long-term impact on TV programming has been equally impressive. In a 1985 TV Guide piece, novelist Joyce Carol Oates stated that the series was as "intellectually and emotionally provocative as a good book," and was positively "Dickensian in its superb character studies, its energy, its variety; above all, its audacity." Critics a decade later would be praising series like NYPD Blue, Homicide, ER, Chicago Hope, and Law and Order in precisely the same terms, heralding a "new golden age" of television drama—a golden age which owes a considerable debt to Hill Street Blues.

The Hill–Thomas Hearings, conducted by the U.S. Senate Judiciary Committee to investigate Professor Anita Hill's allegations of prior sexual harassment by Supreme Court nominee Clarence Thomas, were televised nationally on American television from October 11 to October 13, 1991. Although the hearings themselves had no legal significance, to many observers they symbolized a public referendum on sexual harassment and other gender inequities in late 20th-century America. As such, they have been widely credited with increasing public awareness about gender discrimination, and with motivating female voters during the 1992 congressional elections.

As President George Bush's nominee to replace Thurgood Marshall on the Supreme Court, Thomas had been the subject of confirmation hearings in September 1991; however, the Senate Judiciary Committee was unable to make a recommendation to the full Senate after these hearings. Thomas's appointment seemed further jeopardized by reports in Newsday and on National Public Radio on 6 October that he allegedly sexually harassed a co-worker from 1981 to 1983. These charges, made by Anita Hill during interviews with the FBI, were apparently leaked to the press just days before the Senate's final vote on Thomas' appointment. Responding to demands from feminist organizations and seven female Democratic members of the House of Representatives, the Senate delayed the vote in order to hear more about Hill's allegations.

During the three days of televised hearings, the senators and the viewing public heard testimony from both Hill and Thomas, as well as their supporters. Hill referred to specific incidents of Thomas's behavior, including repeated requests for dates and references to pornographic material. Thomas vehemently denied Hill's allegations and responded with outrage, at one point calling the hearings "a national disgrace...a high-tech lynching for uppity blacks who in any way deign to think for themselves, to do for themselves." So adamant was each sides' accounts that many observers in the press labeled the hearings an example of "He Said, She Said," with both parties offering such vastly differing recollections of events that many wondered if the hearings could ever reveal the truth.

Two days after the hearings ended, with no clear resolution of the discrepancies between Hill's and Thomas's accounts, the Senate voted on Thomas's confirmation. Due to the media coverage of the hearings, public interest in the vote was unusually high, as evidenced by a barrage of phone calls and faxes sent to the capital on this issue. Although opinion polls reported evidence of debate and division among minority groups, including African Americans and women, they also indicated that a majority of voters supported Thomas. Ultimately, the Senate voted 52 to 48 in favor of Thomas's confirmation.

The visual imagery and political symbolism of the hearings may be their most important legacy. In this regard the hearings take their place alongside other
memorable television events, including the Army–McCarthy Hearings and the Watergate Proceedings. These events exemplify television’s ability to galvanize a national audience around matters of crucial social significance, and often they stand as historical markers of significant social and cultural shifts.

Indeed, many feminist groups refer to Anita Hill as the mother of a new wave of awareness of gender discrimination, particularly given the attacks on her credibility that she withstood from the white male senators. To witness a composed, articulate law professor being questioned about her mental state (some senators and Thomas supporters had theorized that Hill was “delusional”) offended many female viewers who themselves had experienced sexual harassment. Harriett Woods, then president of the National Women’s Political Caucus, commented that “Anita Hill focused attention on the fact that there were no women in that Senate panel making decisions about people’s lives.”

As is true for so many cultural memories in the United States, the televised Hill–Thomas hearings etched some clear and unforgettable images into the minds of the American public. To those observers who did not believe Hill’s claims, the hearings represented the gravity of such allegations in a society where gender politics can be divisive. To Hill’s sympathizers, the memory of a lone woman reluctantly speaking out about past painful experiences to a room full of bewildered and unsympathetic men may have been one reason why an unprecedented 29 women were elected in the subsequent congressional elections.

Hillsborough

British Docudrama

Hillsborough was a highly acclaimed docudrama about the 1989 Hillsborough soccer stadium disaster, which claimed the lives of 96 football fans. Scripted by the renowned writer Jimmy McGovern, the 1996 program was a searing criticism of the police in charge at the time of the disaster, and a trenchant attack on the establishment for its appalling handling of the victims’ families and their demands for justice in the aftermath. Described by the TV reviewer Stuart Jeffries as “one of the most upsetting two hours of television you are likely to see,” the program won several international awards and was heralded as a crucial factor in the government’s decision to order a new judicial inquiry into the event.

The tragedy itself took place on Saturday April 15, 1989 when fans descended on Sheffield Wednesday’s Hillsborough soccer stadium for the Football Association (FA) Cup semi-final between teams Liverpool and Nottingham Forest. As crowds built up in the stadium, there was a late surge of Liverpool supporters entering
the back of a standing area, causing those at the front to be pushed against the wire fence separating them from the pitch; 96 fans were killed. Both the soccer community and the city of Liverpool were stunned by the event, and in the week that followed around a million people filed through the gates of Liverpool’s football ground to leave flowers, football scarves, and messages.

In the immediate aftermath, police in charge of crowd control at the match blamed the disaster on drunken Liverpool fans, and this was reported in sections of the tabloid press. In the following coroner’s inquest a verdict of “accidental death” was recorded on the victims, and the public inquiry set up to investigate the event, though critical of crowd management, failed to indict the police officers in charge at the time.

The idea to dramatize the event for television evolved after McGovern had touched on the tragedy in a storyline for Granada Television’s psychological police fiction series Cracker (1993–96). In a three-part episode titled “To Be a Somebody,” the actor Robert Carlyle played a man driven to murder in revenge for the Hillsborough disaster. Concerned that the fictional depiction of a survivor’s reaction might cause distress, the TV company arranged a special screening for victims’ families. The response was very positive and the Hillsborough Families Support Group (HFSG), which had been campaigning for justice after the event, invited McGovern to tackle the subject head on.

With a commission from Granada (a company known for investigative journalism and groundbreaking drama) and the help of a team of researchers, McGovern set about writing the drama based on documented evidence and witness statements. A former schoolteacher from Liverpool, McGovern was no stranger to controversial subject matter, having tackled homosexuality in the Catholic church in Priest (1994), and discord in education in Hearts and Minds (1995). With Hillsborough he set out to do two things: to show that it had been police incompetence that had led to the disaster, and not drunken fans; and to show the grievous injustice the families of the deceased had suffered after the event. Contentiously, the program claimed to provide new evidence, notably that CCTV video tapes which would have demonstrated police failings had gone missing, and that police officers had changed statements and interfered with witnesses.

Yet it was the human drama that made Hillsborough such compelling and upsetting viewing. The story focused on three families who lost teenage children in the disaster, including Trevor Hicks—who went on to become chairman of the HFSG—and his wife Jenni, who lost their two teenage daughters, Sarah, aged 19, and Vicki, aged 15.

The program started with families seen joyfully receiving their tickets, and then the drama quickly moved to the match day itself. As Stuart Jeffries suggests, McGovern’s consummate skill as a scriptwriter made even the advertisement breaks work for him. The first break was placed just as the crowds began to build up at the stadium. Immediately after the break, a father of one of the dead says to camera, “All they had to do was close off the tunnel like they normally did and we would have all had to go round the sides into the pens with plenty of space.” This had the double impact of pointing the finger of blame, while at the same time avoiding a harrowing reconstruction of the crush itself.

Hillsborough followed the families learning the news of the tragedy, the horror of identifying bodies, and the insensitivity of police questioning. The rest of the two hours was filled with the painful aftermath, and the costs of bereavement, including the separation of Trevor and Jenni Hicks, the families’ fight for justice, and the frustration, pain, and anger at the coroner’s inquest and public inquiry.

Hillsborough featured a strong cast, including Ricky Tomlinson and Christopher Eccleston, a regular of McGovern’s dramas. It was directed by Charles McDougall, who had not only previously made an award-winning football-related short film, Arrivederci Millwall (1990), but had also been on the terraces with the Liverpool fans on the day of the tragedy. Members of the cast met with the families before shooting, and the families themselves watched the completed program prior to broadcast, in private screenings.

The first transmission, on December 5, 1996, was watched by approximately 7 million people and made for difficult viewing. It had been sympathetically trailed in the press beforehand and was critically applauded afterwards. The docudrama reinvigorated public debate about the event, and the following summer, after the election of a new Labour government, a judicial inquiry was announced to look at the issues and evidence raised by the campaigners and the program. Hillsborough went on to win a clutch of awards from the Royal Television Society, the British Academy, and won the grand prize at the Banff Television Festival. It also won a prize of £18,000 at the Munich Film Festival; Granada pledged the money to the appeal for the victim’s families.

In February 1998 the government declined a new public inquiry after a judge ruled that the supposed new evidence put forward by campaigners and the program did not add anything significant to the material available at the original inquiry.

Hird, Thora (1911–2003)
British Actor

Dame Thora Hird was one of Britain’s finest character actors. Her career spanned nearly 90 years, from her earliest stage appearance at the age of 8 weeks to her death in 2003; it encompassed work in a range of media, including radio broadcasting and appearances in more than 100 films. In television, she appeared both in her capacity as actress, and as presenter of the popular Your Songs of Praise Choice (later renamed Praise Be!). She also wrote her autobiography, as well as a number of books on prayer.

Hird’s durability was due to both her versatility, revealed by her work in a number of television genres, and paradoxically, her ability to remain distinctly unique and individual. Her work for television included an early drama for BBC TV, The Queen Came By, about life in a draper’s store, set in Queen Victoria’s jubilee year. In the play, her characterization of Emmie Slee proved very popular. She also appeared as the long-suffering wife in the comedy series Meet the Wife, with Freddie Frinton; the nurse in Romeo and Juliet for the BBC in 1967; Billy’s overbearing mother in the situation comedy In Loving Memory (1979–86), set in a funeral parlor; and the tragicomic character in A Cream Cracker under the Settee, one of the acclaimed series of Talking Heads monologues written by Alan Bennett, and broadcast in 1988. Hird also starred in one of the second series of Bennett’s Talking Heads monologues, Waiting for the Telegram (1998), and she played leading roles in ITV’s Wide-Eyed and Legless (1994) and its sequel Lost for Words (1999). In 2001 Hird was visible on British television in a nonacting capacity, serving as spokeswoman in a public service campaign encouraging pensioners to request their full government entitlements.

Many of her television roles offered Hird the opportunity to exercise her particular brand of Lancastrian wit, which was firmly located within the music-hall-based tradition of northern, working-class comedy, characteristically “down to earth,” anecdotal, and always constructed in opposition to the “pretentious and privileged” south of England. In much the same vein as the seaside postcards of her Morecambe birthplace, Hird’s typical roles were as an all-seeing boardinghouse landlady, a gossiping neighbor, or a sharp-tongued mother-in-law, in each case the “eyes and ears” of the (female) community. And, just as the veneer of the garishly painted seaside piers cracks to reveal the old and slightly rotten wood beneath, so Hird’s skillful characterizations offered a hint of the underlying sadness and pathos that is often found beneath the proud facade.

Hird earned considerable recognition and respect within her profession, as well as critical and audience acclaim for many of her roles, and she was the subject
of a South Bank Show monograph in 1995. However, her contributions to television have not been the subject of significant scholarly attention. This neglect may be due to the fact that she tended to play roles that are located within genres such as situation comedy, which is afforded a lowly status in many aesthetic and critical hierarchies. Potentially, however, there is much critical currency in exploring how these roles or types represent working-class women, and indeed, how older actresses may often be subject to typecasting.

Nicola Strange

Television Series (selected)
1956  The Jimmie Wheeler Show
1964-66  Meet the Wife
1968-69  First Lady
1969-70  Ours Is a Nice House
1979-86  In Loving Memory
1980  Flesh and Blood
1983-84  Hallelujah
1986  The Last of the Summer Wine
1993  Goggle Eyes
1998  The Queen’s Nose (mini-series)

Television Plays (selected)
1962  A Kind of Loving
1966  Who’s a Good Boy Then?
1967  Romeo and Juliet
1975  When We Are Married
1977  The Boys and Mrs B
1979  Afternoon Off
1982  Say Something Happened

1982  Intensive Care
1988  Talking Heads: A Cream Cracker under the Settee
1992  Memento Mori
1994  Wide-Eyed and Legless
1994  Pat and Margaret
1998  Talking Heads: Waiting for the Telegram
1999  Lost for Words

As a productive cultural force, television is involved in projecting new modes and forms of historical understanding. These forms do not always follow from traditional scholarly or professional ideas about history. On the contrary, for a number of reasons, television has been widely seen as contributing to the disappearance or loss of history in the contemporary postmodern condition. The emphasis on television's "liveness," based in its technology and its common discursive and rhetorical strategies, has led some theorists to the conclusion that television plays a central role in erasing a sense of the past, and eliminating a common, coherent linear sense of cultural and social development.

It is certainly the case that conventional history is increasingly hard to identify in mass culture, especially in the form of coherent linear narratives, a clear set of major historical players, or readily identifiable class struggles. At the same time, however, television seems obsessed with defining itself in relation to history. Television's ubiquity suggests that its conceptions of history—both its representations of specific events and its appropriation of history as a way of understanding the world—must be taken seriously. Television does not supplant, but rather coexists with, familiar ideas about how we know the past, what we know of the past, and the value of such knowledge. In the process, television produces everyday forms of historical understanding.

As a result, it is probably more accurate to propose that television is contributing to a significant transformation and dispersion of how we think about history, rather than to the loss of historical consciousness. Television offers forms of history that are simultaneously more public than traditional professional history, and more personal and idiosyncratic. This is because the medium's historical narratives are available to mass viewing publics, but also engage viewers in diverse, and even highly idiosyncratic ways. While history may be conceived in both broadly social and intensely personal terms, television has transformed the ways in which individuals understand and position themselves in relation to either of these definitions.

In the case of the United States, it is nearly impossible to think about American culture and its global influence today without including everyday media culture as an integral part of this history. Significant historical events and conjunctures of postwar 20th-century American history—the Vietnam war, the assassination of John F. Kennedy, civil rights and student protests, the Challenger explosion, the first Persian Gulf War, September 11, 2001, the "War on Terrorism"—can hardly be imagined without the television images which carried them into American (and other) homes. Similar conditions, events, and moments, such as the collective memory of the 1953 coronation of Queen Elizabeth for British viewers, exist in other nations of the world which have also had a long experience with television. As these examples suggest, for some established nation-states television can actually connote national identity through a televisual history. Other nations and regions, particularly in the postcolonial world, have yet to see representations of their national identity consistently emerge on their television screens. And yet another group of nations and regions, such as post-apartheid South Africa, are experiencing a transformation of the historical representation of their televisual national identity.

At the beginning of the new millennium, the idea of "video diplomacy" also has increasing importance in a world linked by telecommunications technology and covered by international television news organizations. Indeed, television news—with its emphasis on
being live and up to date—is one of the key places where television most insistently promotes its historical role. The rapid growth of television in the postcolonial world, coincident with the end of the Cold War (since 1989, sets in use worldwide have doubled, with most of that growth in the postcolonial world) suggests that the impact of televisual history first experienced in the United States will now be seen on a world scale. The live televising of coups and crises in post-Soviet Russia is one example of the globalizing trend of television and historical consciousness. Other indicators include the unprecedented global circulation of war reporting, of political journalism, and of the lives and misfortunes of celebrities.

In other contexts, television links history to world-historical events, often before they have even begun. The term “history” is regularly used to designate events before, during, and after they occur. In this vein, television casts all sorts of events as history, including the Middle East peace summit in Madrid; the fall of the Berlin Wall; the annually occurring World Series (baseball); Michael Jordan’s return to basketball; the O.J. Simpson trial; the impeachment proceedings against U.S. President Bill Clinton; and the primetime airing of the final episode of Seinfeld. From the apparently sublime to the apparently inexcusable, “history” is a term and a conceptual field that television often bandies about with surprising frequency and persistence. In the process, conventional ideas of history as a distinctive temporal and narrational discourse are dispersed. “History” becomes a process wherein events and people in the present (and future) are simultaneously implicated in a social, political, and cultural heritage.

Television routinely correlates liveness and historicity in the form of equivalence, alibi, reversals, and identity, especially in the area of news and public affairs/documentary programming. In the context of news coverage, especially events that warrant live coverage, it is not unusual to hear that the events thus presented are “historic.” At the same time, the very presence of television at an event constitutes a record for posterity. In this sense, television acts as an agent of history and memory, recording and preserving representations to be referenced in the future. The institution of television itself becomes the guarantor of history, even as it invokes history to validate and justify its own presence at an event.

Another factor at work in this array is the long-term search by broadcasters for a recognition of their own legitimacy as social institutions. Many critics of television have linked the rise of a televisual historical consciousness and the aggressive self-promotion of the broadcasting industry when criticizing television for its supposed failure to fully advance public ideals. Even while driven by the lure of significant profit, American television broadcasters are often desperate to dissociate themselves from discourses presenting television as a vast wasteland. As part of a spirited defense against their many detractors they point to their unique ability to record and represent history. The “high culture–low culture” debate, so prevalent in analyses of American media, has sunk its roots into this issue as well.

In much of the rest of the world, by contrast, government investment in broadcasting has meant that questions of legitimation, and subsequent defense through claims of unique historical agency, have been less urgent. However, following the worldwide wave of privatization of media outlets, which began in the 1980s, television broadcasters throughout the world may begin to mimic their American predecessors. They, too, may protect their self interests by turning the production of “history on television” and “television as history” into a useable past.

As a result of all these activities, it is possible to see how forms of historical consciousness purveyed by television get transformed in the process of representing current events that are all equally “historic.” Television promotes ideas about history that involve heterogeneous temporal references—past, present, and future. But actual historical events are unstable combinations of public and private experiences, intersecting both global and local perspectives. By proposing combinations and permutations of individual memory and official public document, television produces a new sense of cultural and social identity among its viewers.

For example, in relation to past events, television frequently addresses viewers as subjects of a distinctive historical consciousness: Americans of various ages are all supposed to remember where they were when they first heard and saw that John F. Kennedy was shot, that the space shuttle Challenger had exploded, or when the first plane hit the north tower of New York’s World Trade Center on September 11, 2001. The drama of the everyday can be similarly historicized when, for example, television promotes collective memories of Kathy Fiscus for one American generation or Baby Jessica for another. By addressing viewers in this way, television confirms its own central role as the focal point of the myriad individual experiences and memories of its individual viewers. In the process the medium brings sentimental domestic drama into direct relation with public, domestic, and global histories.

In all these instance, television’s ideas of history are intimately bound up with the history of the medium itself (and indirectly with other audiovisual recording
media), and with its abilities to record, circulate, and preserve images. In other words, the medium’s representations of the past are highly dependent on events that have been recorded on film or video, such that history assumes the form of television’s self-reflection. The uses of available still photography and audio recordings can also, on occasion, play a significant role in this regard. The medium's own mechanisms—its prevailing technologies and discourses—become the defining characteristics of modern historiography. Similarly, the television journalist—particularly the news anchor—can become an embodied icon of television’s ability to credibly produce and represent history. Many nations have (or have had) a number of individuals achieve this status typically associated with an American reporter like Walter Cronkite. Now television journalists seem on the cusp of achieving this at transnational and transcultural levels. Television may in the process also begin to produce a new sense of global histories, along with national and personal histories.

This self-reflective nature of television’s historiography develops in relation to both public events and in relation to the medium’s own programming. American television routinely celebrates its own past in an array of anniversary, reunion, and retrospective shows about its own programs, and even in “bloopers” specials which compile outtakes and mistakes from previously aired programs. Programs of this ilk serve multiple functions, and have various implications with regards to ideas of history. Self-promotion, in the form of inexpensive, recycled programming, is one obvious motivation for these shows, especially as the multi-channel environment means that more “old” shows are rerun on broadcast and cable services. This also becomes a kind of self-legitimation, by means of retrospective logic. For if American programs such as The Tonight Show, The Brady Bunch, or Laverne and Shirley warrant celebratory reunion or retrospective celebration, even years after they are no longer in production, this could mean they are important cultural artifacts/events.

Television thus continually rewrites its own past in the form of “history” as a way of promoting itself and its ongoing programming as a significant, legitimate part of culture. In the process, postwar American popular culture is held up as the measure of social-cultural history more generally. All viewers are enjoined to “remember” this heritage, whether they experienced it first-hand, in first-run, or not. This can even lead to the production of instant nostalgia, when special programs herald popular series’ final episodes (such as occurred with Cheers and Friends), just as those final new episodes air in primetime. This sort of self-promotional and self-reflective hype (in network specials, as well as on talk shows, entertainment news programs, and local news programs around the country) proposes that these programs have been absorbed into a common popular cultural historical heritage from the very moment they are no longer presenting new episodes in primetime.

Programming schedules and strategies in themselves adopt and offer these new ideas about history, especially in terms of popular culture. This is increasingly apparent in the multi-channel universe, as television becomes something of a cultural archive, where movies and television programs from the past are as readily accessible as new programs. This can even be made self-conscious, as in the case of Nick at Nite (a programming subdivision of Nickelodeon, an American cable network), which features American sitcoms from the 1960s and 1970s, and promotes itself as “celebrating our television heritage.” In 1995 Nickelodeon developed a second network, called TV Land, programmed exclusively with old television shows. Once again, the history in question is the medium’s own history, self-referential reproducing itself as having cultural value and utility.

Beyond these strategic constructions of the historical significance of television as medium, a specific sense of history also pervades television’s fiction programs. Because of the nature of American commercial television programming, individual programs develop and project a sense of history in direct proportion to their success—the longer they stay on the air, the more development there is over time. Characters and the actors who portray them not only age, but accrue a sense of density of experience, and viewers may establish variable relationships with these characters and their histories. This sense of continuity and history, linking and intersecting fictive worlds with the lives of viewers, seems strongest and most explicit in serial melodrama, but equally affects any successful, long-running series. It is also complicated by the question of syndication and reruns where the interplay of repetition and development, seriality and redundancy leads to the sense that history is malleable and mutable, at least at the level of individual, everyday experience. While many European television programs intentionally have a limited run of episodes, other long-running programs, such as EastEnders, indicate that this tendency toward openedness is not unique to American television. Furthermore, complicated historical issues can certainly be involved in limited-run series, as suggested by mini-series such as Roots in the United States or Yearnings in China.

As suggested above, many of these ideas about history are powerfully played out in the context of serial melodrama, a genre which may seem as far removed from “history” in the conventional sense as anything on
television. These “soap operas” offer stories that may continue for decades, maintaining viewer allegiances in the process, even though the stories are punctuated by redundancies on the one hand, and unanticipated reversals on the other. These narrative conventions are some of the very things for which the genre is often decried—slow dramatic progress, the ongoing breakdowns of good relationships, the routine revival of characters presumed dead, and sudden revelations that characters were switched at birth, or the product of previously unrevealed affairs, leading to major reconstructions of family relations. These characteristic narrative strategies also produce a subtle and sophisticated sense of historicity and temporality, in the context of the accumulation of a long-term historical fiction and long-term viewing commitments. Among other things, they encourage a persistent reexamination of conventional assumptions and attitudes in patriarchal culture about lineage, and about family and community relations. In the process, they also offer a sense that the force and weight of the past is important, but not always readily transparent, requiring the active interpretive involvement and participation of the most ordinary people, including soap-opera viewers. Complex and contradictory ideas about temporality and narrative contribute to a popular historical consciousness because they have everything to do with individuals’ actual relations to and ideas about historicity. One example is found in the various telenovelas produced and aired in Brazil during the downfall of the Collor presidency in 1992; these telenovelas were read by audiences as socio-political texts imbued with the twists and turns that eventually led to Collor’s resignation.

Television also produces ideas about history through historical fictions, in particular in primetime dramas and historical miniseries. These offer particular revisions and interpretations of the past, often inflected by a sense of anachronism. It is not surprising that many controversial social issues continue to be readily addressed in the context of historical narrative. For viewers, the historical fictions provide the alibi of a safe distance and difference in relation to situations they might encounter in the present. A range of programs have thus explored ideas about race, gender, and multiculturalism in anachronistic historical contexts, allowing the past to become the terrain for displacing and exploring contemporary social concerns. In this way, particular historical moments, however fictionalized, may be revivified in conjunction with contemporary social issues. This occurred, for example, in such programs as Dr. Quinn, Medicine Woman, I’ll Fly Away, and American Dreams.

While these historical frames permit an opportunity for exploring issues that might otherwise be considered overly controversial (especially in the present), they also propose that the issues are not necessarily of current or topical concern, since they are retrospectively projected into the past. In this context, it is also interesting to examine which periods of the past become fertile territory for reexamination. Television often focuses on periods that are based in the recent past and thus overdetermined in their familiarity; or, the chosen moments are widely recognized as eras of national transition or upheaval, providing opportunity for the exploration of many socially charged topics. Even within particular programs dealing with these particular periods, however, the idea of a stable linear historicity is not necessarily the rule.

In various ways, then, television situates itself at the center of a process wherein it produces and reconstructs history for popular consumption. For if the things it reports are historic, sometimes before they have even occurred, and if early television programs are our common cultural heritage, then the medium itself is the agent of historical construction. This reaches extremes when the medium’s presence at an event becomes the “proof” of the event’s historical importance, a tautological process that tends to encourage self-absorption, self-referentiality, and self-legitimation. Watching television and being on television become twin poles of a contemporary cultural experience of historicization. Viewers are likely to get caught up in this process.

There is, for example, the case of a young woman standing in a crowd on an L.A. freeway overpass in the summer of 1994, waiting for O.J. Simpson to pass by in a white Ford Bronco, trailed by police who were trying to arrest him. A reporter from CNN asked her why she was there. She explained that she had been watching it all on television, and realized that O.J. would pass near her house and, she said, “I just wanted to be a part of history.” In the logic of contemporary television culture she achieved her goal, because she was on television and was able to write history in her own voice, live, with her presence and participation in a major televised event.

Caldwell, John Thornton, Televisuality: Style, Crisis, and Authority in American Television, New Brunswick, New Jersey: Rutgers University Press, 1995
The Hitchhiker’s Guide to the Galaxy is a book, television program, radio series, record, cassette, video, and proposed feature film. The six-part BBC Television adaptation of its own original radio comedy is only one small part of a whole universe of merchandising that has sprung from this saga of angst and despair—from illustrated book versions to T-shirts and towels.

The story centers on an Earthman, Arthur Dent, one of a handful of survivors who remain when the planet is demolished to make way for a hyperspace bypass. Arthur travels through the galaxy with a group of companions: his friend Ford Prefect; Zaphod Beeblebrox, two-headed ex-president of the galaxy; a pretty young astrophysicist called Trillian; and a copy of The Hitchhiker’s Guide to the Galaxy, a woefully inaccurate electronic tourist guide.

The tale is a despair-ridden one. Our world, traditionally the center of our “Earthnocentric” view of the universe, becomes “an utterly insignificant blue/green planet,” orbiting a “small, unregarded sun at the unfashionable end of the Western spiral arm of the galaxy.” Indeed, the entire Hitchhiker’s Guide entry for “Earth” says nothing more than “Mostly Harmless.” In the course of the plot, it is repeatedly made clear just how meaningless the universe is. For example, when Deep Thought, the greatest computer of all time, discovers the answer to “Life, the Universe, and Everything,” it turns out to be “Forty-Two.” Indeed, Earth is in fact a huge computer, built to discover the real Question of Life, the Universe, and Everything to which “Forty-Two” is the answer. On discovering this, Arthur Dent exclaims that this explains the feeling he has always had, that there is something going on in the universe which nobody would tell him about. “Oh no,” says Zaphod Beeblebrox, “That’s just perfectly normal paranoia. Everyone in the universe has that.” This whole tone of angst is emphasized by the title sequence of the television program: a single spaceman falls, isolated, against a backdrop of distant stars, while a melancholy mandolin plays in the background.

The form of all the incarnations of this story, not least the television version, is comedy-science fiction. A sparsely populated category even in literature, it is even rarer to find films or television programs that twist the logic of the genres involved to provide innovative science fiction that is also very funny. Films such as Spaceballs, for example, take rules from established comedy genres (in this case, satire) and use a science fiction iconography as little more than a backdrop. Red Dwarf, the BBC’s other successful science fiction program, does a similar thing with its take on the 1980s British landscape.
fiction comedy, relies on well-known science fiction standard scenarios done over as comedy. None of these, were the comedy removed, would stand as notable science fiction in their own right.

Removing the comedy from *Hitchhiker* would also be harmful, but this is because it is a part of the science fiction context, and vice versa. The humor in the program comes from puncturing portentous science fiction themes. For example, there are extraterrestrial beings, but far from being all-knowing or enlightened, they are concerned mainly with drinking and sex. Similarly, Earth is under threat from aliens, not for reasons of power or resources, but simply because it is in the way of a planned bypass.

This comic deflation is an important part of the program’s feeling of despair. The jokes build up expectations of transcendent truths, then knock them down with the realization that everything is meaningless after all. *Hitchhiker*’s is a consistently comic dystopia.

It is also worth noting that the only constant name through all the manifestations of *Hitchhiker* was one of its original authors, Douglas Adams, who died in 2001. It is possible to make an auteur reading of the program in terms of Adams’s other work. He was also a script editor of the BBC’s long-standing science fiction series *Doctor Who*. Over the 26 seasons of that program, its style changed considerably, according to its producer and script editor: from space opera to gothic horror, adventure program to serious science fiction. While Adams was working on the program, he edited and wrote some of the most explicitly humorous episodes in that program’s history. “City of Death,” for example, features an alien creature forcing Leonardo da Vinci to paint multiple copies of the *Mona Lisa* to be sold on the black market; “Shada” was written almost as sitcom, with lines such as, “I am Skagra and I want the globe!—Well, I’m the Doctor, and you can’t have it.”

Focusing on Adam’s authorship underlines other aspects of *Hitchhiker*. The story has been reused across several different formats. The great efficiency of Adams’s recycling is also evident in his earlier work—material from his *Doctor Who* stories “Shada” and “City of Death,” for example, is brought wholesale into his other major enterprise: mystery stories about a “holistic” detective called Dirk Gently.

The most distinctive things about the television production of *Hitchhiker* are the sections of the program that come from “the book”—the fictional *Hitchhiker*’s *Guide* itself. As Arthur encounters the various wonders of the Universe, the live action stops and there are short sections of what is essentially comic monologue—the disembodied voice of the Guide talks, while its comments are illustrated by “computer graphics” (illustrated line drawings). The structure of these programs is somewhat like that of the musical, in that the narrative stops for a short performance. This gives a unique comic feel to the program.

Ultimately, the most impressive fact about *The Hitchhiker’s Guide to the Galaxy* is that so much has so repeatedly been made of so little. This is not to belittle the program in any way, but simply to point out that basically the same narrative was reworked and reissued over more than a decade, consistently finding, with new media, new audiences. This is surely worthy of some respect if for nothing else than being an impressive feat of environmentally sound narrative recycling.

Hockey Night in Canada (HNIC) is one of sports broadcasting’s longest-running and most groundbreaking programs. The contractual foundation for the series was established on an Ontario golf course in 1929 with a handshake between Toronto Maple Leaf’s boss Conn Smythe and advertising agency owner Jack MacLaren. The agreement granted MacLaren and his General Motors client the radio rights to Leafs games once Maple Leaf Gardens had been built. The inaugural General Motors Hockey Broadcast subsequently aired on November 12, 1931, soon after the Gardens was completed, with Foster Hewitt calling a Leafs/Chicago Black Hawks match-up. That same night, a Montreal contest between the Canadiens and the New York Rangers was also transmitted. By the start of 1933, a 20-station hook-up relayed broadcasts in English from both Toronto and Montreal. A telephone survey estimated the combined per-game audience at just under 1 million—in a country of less than 10 million people, many of whom did not even own radio sets. A coast-to-coast ad hoc network for the program was in place by the end of the 1933–34 season.

From 1936 to 1937, Imperial Oil (another MacLaren client) replaced General Motors when GM of Canada’s new president, freshly transferred from the United States, declared that he “did not believe hockey would sell cars.” Meanwhile, on January 1, 1937, the Canadian Broadcasting Corporation (CBC) was launched as a public network and assumed national carriage of the program. Sometime thereafter, the series began to be identified as Hockey Night in Canada.

HNIC’s first publicly televised game originated from Montreal on October 11, 1952. The initial Toronto telecast followed on November 1. The Toronto broadcasts were supervised by George Retzlaff, a 30-year-old technical director from Winnipeg, Manitoba, who had just finished his CBC cameraman’s training when he was named head of CBC Sports and producer of HNIC. Retzlaff’s flair for cogent camera angles and sensitivity to the sound factors of a telecast proved to be vital assets in his new job. Meanwhile, Gerald Renaud, a 24-year-old newspaper sports editor from Ottawa, Ontario, taught himself television and secured the job of Montreal sports producer. Renaud remarked, “The basic principle for the camera positions I wanted to have was an ideal seat from which to watch the game.” HNIC broadcasts originally utilized three overhead cameras. In 1956 Renaud introduced a fourth “goal camera” at ice level to catch the action around one of the nets. This was a natural extension of his daring method for shooting a game and pioneered a tighter, more adventurous school of hockey directing. Toronto’s Retzlaff was an innovator as well. Anticipating the videotape replay, he used a new “hot processor” in 1955–56 to develop a kinescope (film) recording of a goal within 30 seconds for “almost instant” replay. Separately, and in their own ways, Retzlaff and Renaud taught telecasters how to convey the hockey drama. In these early years, Retzlaff was also a master at keeping both the CBC and MacLaren Advertising happy—an essential factor in HNIC’s fiscal stability.

Throughout the 1950s the national feed game alternated weekly between Toronto and Montreal, with the opposite game downgraded to regional status for airing within Ontario or Quebec respectively. Because there was no real liaison between the two units, tensions and differences in coverage styles developed. In 1966, therefore, Ted Hough (whose MacLaren vice presidency made him administrative head of HNIC) hired TV football director Ralph Mellanby to be executive producer of all HNIC telecasts. To make the coverage more interesting, Mellanby began by requiring staff to ledger every stoppage in play and justify what the production featured during each stoppage. He introduced dramatic scripted openings to sell the personality of each particular game in the same way that teasers were used in entertainment series. Mellanby also brought in directional microphones to catch the sounds of crunching bodies and ricocheting pucks and (once colorcasting began after a March 1965 test) put the home team in white uniforms so that succeeding weeks’ matches would benefit from the changing hues of different visitors’ bright road jerseys.

For many years the television production of HNIC dovetailed with the radio coverage. Thus, the series aired on Saturday evenings (with some regional Wednesday games continuing into the 1970s) until Stanley Cup playoff time, when coverage could be almost nightly. However, because of CBC scheduling constraints, the early telecasts did not begin until 9:00 P.M.—the middle of the games’ second period. In
1963–64, sign-on was moved up to 8:30 (near the first period's end) and in 1967–68, an 8:00 start inaugurated full-game coverage. In 1995 a Saturday double-header pattern began, featuring two regional matches at 7:30 followed by a 10:30 nationwide feed from a western venue.

Financial aspects of the series also evolved. In 1958, the Molson family bought controlling interest in the Montreal Canadiens and used this as leverage to acquire part of the HNIC sponsorship for their Molson Breweries. By 1963 their sponsorship share equaled that of Imperial Oil. Ford of Canada also came aboard, initially to air “cover” commercials in provinces where beer advertising was prohibited. Imperial Oil pulled out of partner sponsorship in 1976, as oil shortages made advertising redundant (though it left behind the postgame ritual of picking the “three stars”—a practice begun to promote Imperial’s “Three Star” brand of gas). The CBC then assumed Imperial’s equity, creating a struggle for control with MacLaren’s Canadian Sports Network, the entity that actually produced HNIC. Ultimately, Molson chose to eliminate the MacLaren middleman, setting the stage for a 1988 Molson/CBC pact that kept the series out of the hands of eager independent network CTV, and officially retitled it Molson Hockey Night in Canada on CBC. The CBC thereby solidified its technical and transmission control of the series while Molson subsidiary Molstar Communications strengthened its role as the proprietary producer and holder of exclusive contracts with the key on-air personalities. Ten years later, brewer Molson’s archival supplanted it as lead sponsor and the program became Labatt Hockey Night in Canada on CBC.

Over the years, HNIC’s air talent have been among the most famous people in Canada. Pioneering sportscaster Foster Hewitt was joined by son Bill when television coverage was added. Once HNIC outgrew radio-TV simulcasts, the elder Hewitt let his son handle the bulk of the TV side while he concentrated on his first love, radio. Foster Hewitt’s ability to call a play and anticipate where it was going set the standard for the HNIC personalities who have followed him. Among them is Bob Cole, who replaced the ailing Bill Hewitt in 1973. Cole’s style is to build his voice in a compelling series of plateaus as a play develops to its climax. Another broadcaster, former Vancouver and Detroit coach Harry Neale, inserts pithy lines into his games (“Turnovers in your own end are like ex-wives. The more you have, the more they cost you”). Dick Irvin, Jr., whose father coached both the Maple Leafs and the Canadiens to Stanley Cups, imbues the broadcasts with a genteel sense of heritage. And commentator and ex-coach Don Cherry is a volatile legend himself. Together with adroit foil and master punster Ron MacLean, Cherry’s between-periods Coach’s Corner often attracts more audience than the game itself, as he rails against the “pukes” and “LA-LA land sissies” who would outlaw on-ice fighting and as he draws blustery, unfavorable comparisons between European players and “good Canadian boys who play hockey the way it’s supposed to be played.”

Patricia Hodge is a versatile and familiar face in British television comedy and drama. Her credits extend from the situation comedy Holding the Fort to supporting roles in long-running drama serials, such as Rumpole of the Bailey, and leading parts in specials and miniseries like The Life and Loves of a She-Devil.

Hodge's abilities as an actress were evident even before she completed her training at the London Academy of Music and Dramatic Art, where she won the Eveline Evans Award for Best Actress. Prior to establishing herself in television and film, she gathered valuable stage experience, appearing in major productions of plays as varied as Rookery Nook, Two Gentlemen of Verona, Hair, and Look Back in Anger. With her vivacious good looks, half-closed eyes, and distinctive sharp-lined mouth, she proved herself equally adept at playing sultry temptresses and outraged harpies with a cruel streak, among other contrasting roles. The one factor common to the majority of her characters has been their patently aristocratic birth.

As a television performer, Hodge was warmly received as well-spoken barrister Phyllida Trant in support of a rascally Leo McKern in Rumpole of the Bailey, a role in which she reappeared many times. Her first starring parts came in the situation comedies The Other 'Arf, in which she was Member of Parliament John Standing's snobbish, spurned partner Sybilla Howarth, and Holding the Fort, a somewhat lackluster series in which she was paired with Peter Davison as a newly married young mother experimenting with role reversal, going back to work while her restless husband stayed at home to do the chores.

By now established as a player of ladies of distinctly elevated backgrounds, Hodge was an obvious choice for Lady Antonia Fraser's aristocratic amateur sleuth Jemima Shore in Jemima Shore Investigates, sniffing out crimes among the nobility. Hodge's playing was widely recognized as the best feature of an otherwise very ordinary effort, which, despite her contribution, was fated to be only short-lived. Also wealthy and well-connected was her character in Fay Weldon's far more successful The Life and Loves of a She-Devil: the arrogant and man-stealing best-selling novelist Mary Fisher finally brought low by the vengeful Ruth Patchett (played by Julie T. Wallace). Also worthy of note have been her performances as Julia Merrygrove in Rich Tea and Sympathy and guest appearances in shows ranging from Softly, Softly, The Adventures of Sherlock Holmes, and Inspector Morse, to Victoria Wood: Staying In and The Full Wax, in which she showed a refreshing readiness to allow herself to be made the target of jokes.
Theatre, Edinburgh, 1971; popular leading lady in television drama series.

**Stage**
Hal Holbrook is a highly respected actor whose career in the television medium began in the 1950s when he appeared on daytime soap operas. However, his creation of the stage play *Mark Twain Tonight!* in 1954 was the endeavor that really admitted him into a highly respected career as a television, film, and stage actor. He has since performed onstage as Twain more than 2,000 times.

Holbrook is known to many TV viewers for his regular supporting role in *Evening Shade*, in which he played a cantankerous older newspaper editor whose son-in-law was played by Burt Reynolds. Holbrook is also known for his portrayal of the cunning lawyer Wild Bill McKenzie in the NBC made-for-TV *Perry Mason Mystery* movies of the 1990s. In these movies, Perry Mason is out of town, and Holbrook's McKenzie handles court cases for him. Another regular recurring role introduced Holbrook to television audiences as Reese Watson, boyfriend of the rambunctious Julia Sugarbaker on *Designing Women* (1986–93). Dixie Carter, who portrayed Julia, is Holbrook's wife. However, Holbrook's acting experience is much more expansive than these television excursions indicate.

Holbrook began his acting career on Broadway in the 1950s, when his characterization of Mark Twain won him international recognition. The one-man drama *Mark Twain Tonight!* premiered on Broadway in 1959, and Holbrook won a Tony Award for the play in 1966. He performed the act on network TV and has continued its performance. He also has acted in many other plays and locations. In 1993, for example, he played Shakespeare's *King Lear* at the Old Globe Theatre in San Diego, California, winning both critical and popular acclaim. While touring with *Mark Twain Tonight!* at the Old Globe Theatre in San Diego, California, winning both critical and popular acclaim. While touring with *Mark Twain Tonight!* Holbrook began acting in cinema. He first appeared in *The Group* (1966) and *Wild in the Streets* (1968).

Holbrook began acting on TV as he simultaneously toured *Mark Twain Tonight!* and acted in film. In 1969 he appeared in the made-for-TV movie *The Whole World Is Watching*. This was followed by a quick succession of other TV movies, such as *A Clear and Present Danger*, *Travis Logan, D.A.*, *Suddenly Single*, *Goodbye, Raggedy Ann*, and *That Certain Summer*. Most of his best acting on TV has been in single appearances rather than in series. Many of these performances have been based on historical figures (such as Twain, Lincoln, and Commander Lloyd Bucher of the ship *Pueblo*). He has won Emmy Awards for *The Senator*, *Pueblo*, and *Sandburg’s Lincoln*. His TV credits include working as the sometime-host of *Omnibus* and acting in miniseries such as *North and South*.

Holbrook’s work in the theater has been of enormous benefit to his TV performances. He has learned the craft of acting primarily on the stage. In theater, says Holbrook, the actor is responsible for his/her success or failure. Thus, Holbrook’s acting has improved...
Holbrook, Hal

over several decades due to his professional theater work. However, he has consistently come back to the mass medium of TV to entertain audiences in movies and historical dramas, bringing well-crafted acting, intelligent characterizations, and award-winning performances. As he continues his work in TV and film, he also receives acclaim for his work on stage, winning, for example, the 1998 William Shakespeare Award for Classical Theater.

Hollywood and Television

The history of the vital relationship between Hollywood and television began in the 1920s, as radio broadcasting created new opportunities for showmanship and entertainment. Film entrepreneurs eagerly pursued the possibilities that radio awoke for various aspects of the film business, including production, promotion, and exhibition. One of the earliest pioneers was Samuel L. Rothafel, manager of the Capitol Theater in New York City, owned by the Loews Corporation. “Roxy,” as he was known, took to the air on November 19, 1922, over WEAF as host of The Capitol Theater Gang, a regular Sunday night broadcast of the Capitol Theater’s prefeature stage show. Roxy soon became one of radio’s first celebrity personalities, and Loew’s flagship theater and films received the benefit of national promotion as WEAF became the central hub of the fledgling NBC network. This mutual publicity and benefit showed what a strategic alliance of the two media could accomplish.

Samuel L. Warner parlayed his interest in sound-film technology into a Warner Brothers radio station, KFWB, in 1925, proposing that other studios recognize the potential in this new medium as well. Loew’s New York station, WHN, provided one of the few consistent venues for black jazz musicians in the 1920s and early 1930s. Despite some exhibitors’ objections, both Paramount and MGM announced their intention to form radio networks in the late 1920s. Paramount eventually became half-owner of CBS, until the studio was forced to sell back its stock in 1932; MGM went on to participate in radio program origination with The Maxwell House Showboat in the 1930s; and in a reversal of this pattern RCA, parent of NBC, acquired its own film studio, RKO, in 1929.

With the entry of advertising agencies into radio production in the early 1930s, the somewhat stuffy “potted-palm” aesthetic of NBC gave way to Hollywood-based showmanship, and film stars and film properties made up an increasing proportion of radio’s daily schedules. Hollywood became a major broadcast production center in the mid-1930s, with such programs as Hollywood Hotel, the Lux Radio Theater (hosted by Cecil B. DeMille), and most major variety shows featuring Hollywood talent originating from the West Coast studios of NBC, CBS, and major agencies.

In turn, as radio developed its own roster of stars, the studios capitalized on a long series of radio pictures, from Amos and Andy’s Check and Double Check in 1932 and the Big Broadcast films to the Bob Hope and Bing Crosby “road” movies of the 1940s. The studios also capitalized on the promotional capacity of radio in the form of spot advertising, using audio-only trailers as an important part of film promotion.

This lucrative and mutually beneficial relationship, combined with Federal Communications Commission
Hollywood and Television

(FCC) regulation, kept Hollywood from developing its potential for competition with network broadcasting by restricting the use of recorded material for syndication. Not until the advent of television did film itself present a strong alternative to provision of live programming via networks. Paramount, Warner Brothers, Loew’s-MGM, and 20th Century-FOX had all opened stations or applied for television station licenses in the late 1940s, but indications from the FCC that movie studios would not be looked upon favorably in postfreeze allocations led to experimentation with other methods of capitalizing on the television medium.

Hollywood studios plunged into television on three fronts: first, in the development of pay television systems in the late 1940s, designed to provide feature films on a box-office basis; second, in experiments with theater television, a method for projecting television onto movie theater screens; and third, in direct production for television, both network and syndicated. Paramount experimented with its Telemeter pay-per-view system, along with Zenith’s Phonevision and the Skiatron Corporation’s over the air technology; FCC discouragement of this potentially powerful competition to network broadcasting prevented pay television from becoming a reality and allowed the cable industry to find a foothold. Both FOX and Paramount attempted to develop theater television, but the expansion of individual TV set sales, combined with the FCC’s refusal to allocate part of the mostly unused UHF band for transmission, brought this short-lived technology to a halt. By the early 1950s the studios had turned to television production, led by Hollywood independents but culminating in the Disney/ABC alliance that produced Disneyland in 1954. Warner Brothers and MCA/Universal followed, as network expansion and consolidation allowed a shift from live programming to filmed series. By 1960, 40 percent of network programming was produced by the major Hollywood studios and the proportion continued to grow.

The FCC’s institution of the Financial Interest and Syndication (Fin-Syn) Rules in the mid-1970s finally allowed the production companies to break free of network dominance of the lucrative syndication market. Combined with the growth of cable, where the federal Must-Carry Rule helped provide new audiences for independent stations, the market for Hollywood-produced series, specials, miniseries, and movie packages skyrocketed in the 1980s. Pay-cable companies such as HBO and Showtime provided new funds for production capital.

By the late 1980s, history had come full circle, as Rupert Murdoch’s vertically integrated Twentieth Century-FOX corporation formed the first successful fourth network in U.S. broadcasting history. The new FOX network capitalized on a ready supply of in-house programming, newly powerful independent stations, niche marketing to youth, and favorable FCC regulation in order to prove that the Hollywood film industry and network television broadcasting had only remained separate for 40 years as a result of heavy legislative intervention.

Paramount and Warner Brothers were not slow to take heed, starting up two new networks, the United Paramount Network (UPN, which drew on the success of the syndicated Star Trek series) and the WB (geared primarily to adolescent audiences), in January 1995. That same year, a wave of mergers hit the industry as Westinghouse Corporation bought the CBS network and Time Warner merged with Turner Broadcasting. Disney’s purchase of ABC in 1996 confirmed the studio-network alliance. This alliance also relied on the rewriting of ownership rules in the Telecommunications Act of 1996, which loosened caps on the number of stations an individual or company could own.

By the late 1990s, as cable, telephone, computer and broadcasting companies struggled for favorable alliances with Hollywood-based creative organizations, the relationship of Hollywood and television continued its cruise at warp speed into the integrated and interactive sphere of cyberspace. Upstart Internet provider America OnLine (AOL) purchased entertainment behemoth Time Warner to become AOL Time Warner, a merger which ultimately failed. The potential for high-speed cable access at least partially drove the deal; AOL controlled 54 percent of the Internet access market, while Time Warner Cable reached over 20 percent of the U.S. public with valuable broadband connections. Viacom Corporation, the cable, film, and television production empire and parent of Paramount, purchased CBS in 1999, finally bringing CBS and Paramount together in the networking business again. However, since ownership of more than one television network was illegal under current ownership restrictions, Viacom (which already owned UPN) at once set about lobbying for a further relaxation of the rules, and in 2001 it received permission from the Federal Communications Commission to own both entities. Networks vied for the most prominent web presence, from Warner Brothers’ leadership position on AOL to Disney’s purchase of the web portal SNAP in 1998, and ABC/Disney’s creation of the Go Network, a new portal launched in 1999. However, both Warner and Disney had retreated from the portal business by 2001, even as the new synergy produced glossy websites featuring current film and television productions.

Synergy could have unanticipated results. For example, Twentieth Century-FOX attracted notoriety
early in 2000 when it sought to curb websites featuring its popular series Buffy the Vampire Slayer, The Simpsons, and The X Files, as fans began to circulate their own video clips, audio segments, and transcripts of the show. These and many other ownership, copyright, and competitive issues promised to trouble the now fully integrated film and television industries of the United States in the 21st century, even as those industries continue to expand across the globe.

Holocaust
U.S. Miniseries

Holocaust first aired on NBC from April 16–19, 1978. The most obvious comparison for this nine-and-a-half-hour, four-part series was with Roots, which had aired on ABC a year earlier and on which Holocaust’s director, Marvin Chomsky, had worked. Like Roots’ saga of American slavery, Holocaust’s story of Jewish suffering before and during World War II apparently flew in the face of network programming wisdom, which advised against presenting tales of virtually unrelieved or inexplicable misery. While Holocaust was a smaller ratings success than was Roots (it drew a 49 audience share to Roots’ 66), NBC estimated after the 1979 re-broadcast that as many as 220 million viewers in the United States and Europe had seen Holocaust.

Produced by Herbert Brodkin, Holocaust contrasts the interlocking fates of two German families, the Jewish Weisses and the Nazi Dorfs. At the time of the series’ first airing, critics sniped at the improbability of the proposition that so small a cast of characters would be witnesses to so great a number of the major milestones in the destruction of European Jewry, among them the confabulations of the architects of Hitler’s Final Solution, the slaughter at Babi Yar, the Warsaw Ghetto uprising, and the liberation of Auschwitz. In another sense, however, this emphasis on blood ties conforms to this drama’s major artistic strategy, the employment (overemployment, James Lardner complained in the New Republic) of symbol and archetype. Thus, the Holocaust is, in this conception, the destruction of a family within Europe, just as the infamous smokestacks of the death camps may be emblematized by a moment when the small daughter of Nazi bureaucrat Erik Dorf stuffs a sheaf of Weiss family photographs into the parlor stove and shuts the door firmly upon them.

On its U.S. debut, Holocaust met with a generally positive response but not with unanimous approbation. Holocaust survivor Elie Wiesel protested in the New York Times that it was “untrue, offensive, cheap.” Reviewers generally applauded the cast (which included Meryl Streep, Ian Holm, Fritz Weaver, Rosemary Harris, and Michael Moriarty, who won an Emmy for his portrayal of Dorf) and praised Gerald Green’s script, an overnight best-seller when published in novel form as a tie-in. Still, several critics described a curious “emptiness” at the drama’s heart, emanating from what they identified as excessive melodrama and flat characters who seemed designed to represent particular classes and types more than individuals. Moreover, many viewers were particularly dismayed by the content of the commercial interruptions, which at best seemed to strike a cheerfully vulgar note inappropriate to the subject matter of the series and at other times appeared, horrifyingly, to parody it, as in the juxtaposition of a Lysol ad alerting viewers to the need to combat kitchen odors, with a scene in which Adolf Eichmann complains that the crematoria smells make dining at Auschwitz unpleasant.

When the series aired in West Germany on the Third (Regional) Network in January 1979 (a forum apparently designed to lessen its impact), however, viewer response was little short of stunning. According to German polls intended to measure audience reaction before, immediately after, and several months after
Holocaust appeared, this single television event had a significant effect on West Germans' understanding of this episode in the history of their country. Despite strong opposition to the broadcast before it aired, some 15 million West Germans (roughly half the adult population) tuned in to one or more episodes, breaking what Judith Doneson calls "a thirty-five-year taboo on discussing Nazi atrocities." Among those who saw the series, the number favoring the failed German-resistance plot of 20 July 1944 to assassinate Hitler rose dramatically. Variety reported that "70 percent of those in the 14 to 19 age group declared that they had learned more from the shows about the horrors of the Nazi regime than they had learned in all their years of studying West German history." Such was the public response that the West German government promptly canceled the statute of limitations for Nazi war crimes, formerly scheduled to expire at the end of 1979.

The mixture of prime-time commercialism and emotional commitment that informed Holocaust goes far to explaining both its wide appeal (and, often, powerful effect) and the disappointment it represented for its detractors. Filmed, unlike Roots, on location—in Mauthausen concentration camp, among other places—and reportedly a shattering experience for those who made it, especially for the actors portraying Nazis, the series allowed its producers to take pride in the quality of the research involved; they were creating, they noted, a major television event designed to shape the historical perceptions of millions. But ultimately, it would seem, the critiques of the series arise from the fact that it is no more than the "major television event" that NBC assuredly achieved.

Guild, Hazel, "Germany and the TV Holocaust," Variety (May 23, 1979)
Langer, Lawrence, "The Americanization of the Holocaust on Stage and Screen," in From Hester Street to Hollywood,
In the mid-1980s, FOX Broadcasting’s Barry Diller announced somewhat hyperbolically that if someone didn’t do something soon, Home Box Office (HBO) would take over Hollywood. Former HBO executive George Mair describes the company as “The Cash Cow That Almost Ate Hollywood.” How did a pay cable company, which did not exist fifteen years before, suddenly come to this position of power in the century-old American audio-visual entertainment industry?

Home Box Office, now a subsidiary of AOL Time Warner, currently delivers movies, sports, and original series programming to 35 million households in the United States. This is about a third of the audience for broadcast network television, which currently reaches approximately 100 million households. The difference, however, is that the HBO households pay over $10 per month for the service, generating some $4 billion in revenue every year. For this reason, HBO is able to finance a tremendous percentage of Hollywood films each year.

In addition, HBO produces some of the highest-gloss series in the history of American television, including its break-out sitcoms (The Larry Sanders Show, Sex and the City, and Curb Your Enthusiasm) and hour-long dramas (Oz, The Sopranos, and Six Feet Under). HBO’s in-house programming ranges from high-profile miniseries (From the Earth to the Moon and Band of Brothers) to Made-For-TV movies (Conspiracy, The Laramie Project). Along with PBS’s Frontline, HBO represents the industry standard in documentaries. Under the direction of Sheila Nevins, HBO’s “America Undercover” series provides American documentary filmmakers with a showcase for their work. HBO’s sports documentary shows—On the Record with Bob Costas and Real Sports with Bryant Gumbel—represent the only critical examinations of sports in American life on American television. With the departure of ABC’s Wide World of Sports, boxing coverage on HBO (and pay-cable rival Showtime) is a remaining remnant of what used to be a centerpiece of American broadcasting. HBO’s long-standing commitment to stand-up comedy is maintained via stand-up performance records of all major American comedians (including Jerry Seinfeld, Larry David, and Ellen DeGeneres) and The Dennis Miller Show.

The basic idea for what has become the HBO empire began with Chuck Dolan, owner of Sterling Manhattan Cable, who believed he could deliver movies and sports programming to cable subscribers via what he then called “the Green Channel.” In November 1972, under the direction of Gerald Levin, this dream came to fruition, when HBO delivered a National Hockey League game broadcast from Madison Square Garden and the 1971 Paul Newman film, Sometimes a Great Notion, to a handful of cable subscribers in Wilkes-Barre, PA. In the early 1970s, as a program broker (delivering Hollywood films from the studios to cable subscribers), HBO struggled, relying on the few films it could afford, playing them repeatedly throughout each month of service. As a result, HBO’s business model was crippled by “churning,” a term describing the high turn-over rate for dissatisfied subscribers. For every two new subscribers HBO would sign on, only one would remain at the end of the month.

The turning point came in September 1975, when the company was the first to effectively make use of satellite technology for program delivery. HBO revolutionized the industry by using the RCA satellite, SATCOM I, to deliver “The Thrilla in Manila” (the World Heavyweight title fight between Joe Frazier and Muhammad Ali, fought in Manila) to a national audience in the United States. Previously, network televi-
By the late 1990s, HBO had perfected a full-blown counter-programming strategy, featuring seasons with 13 episodes only. Equally important, HBO series explicitly featured content not available on network television, as in the frank sexuality of *Sex and the City*.

In July 1997, HBO premiered its first foray into hour-long drama, with Tom Fontana's *Oz*, a violent and graphic depiction of life inside a prison. It was with *The Sopranos*, however, that HBO solidified its reputation in hour-long drama. Debuting in January 1999, *The Sopranos* brought a cinematic genre—the gangster film—to television, hybridizing this with a melodrama about the private lives of a mafia family. HBO used the break-out success of the show to announce itself as delivering a product distinct from network television, best exemplified in their motto, “It's Not TV, It's HBO.”

Under Chris Albrecht, head of original programming, HBO continues to glean tremendous critical acclaim for its series television. At the 2000 Emmy awards, 42 percent of all nominations went to HBO shows. In October 2000, *Curb Your Enthusiasm* featured Larry David, the co-creator of *Seinfeld*, in an experimental mockumentary sit-com format, replaying in his “real” life the comedic situations that had formed the central narrative content of *Seinfeld*. In the summer of 2001, HBO debuted its third hour-long drama, *Six Feet Under*, filmmaker Alan Ball’s melodrama about a family living and working in a funeral home.

The fact of the matter is that these shows are much more complexly linked to network television than HBO’s marketing scheme suggests. The shows are outstanding sitcoms and dramas, comparable to such historically significant programs as *Hill Street Blues* and *St. Elsewhere*, and defined by academic critics as “quality television.” However, HBO exploits its difference from network television as an issue of quality only when it is critically advantageous to do so. In other venues—as in the soft-core porn series *G-String Divas*—such a distinction is used for titillation. This is not to say that *Divas*, which represents the lives of pole-dancing strippers, is indefensible. Unlike puritanical network television, the women on *Divas* refreshingly discuss sexuality-as-performance in straightforward, non-censorious terms.

However, most of the HBO original series—most crucially *Sex and the City*—are caught in this contradiction. On the one hand, the series is a continuation of the strain of television melodrama begun by Darren Star on FOX’s critically reviled *Melrose Place*. Yet despite *Sex and the City*’s requisite featuring of breasts and unbridled sexual activity, the show does examine,
in complex ways, a post-feminist, consumerist female community of friends.

Thus, HBO offers programs as interesting as anything on network television (but not necessarily more so). Delivered without commercials, the programs perhaps seem of higher quality, less poisoned by the crass commercialism of their network peers. The fact that one is paying over $10 a month for the privilege of viewing these television shows is, of course, the repressed term in this equation.

Home Shopping

The concept of home shopping originated in 1977 by chance. An advertiser on WWQT, an AM radio station in Clearwater, Florida, could not pay his bill and, in lieu of cash, the station owner agreed to accept 112 electric can openers, which he auctioned off on the air. The can openers sold out quickly, and the station realized they were onto something. WWQT was owned by Lowell "Bud" Paxson, who created a regularly scheduled radio show that, in 1981, gave birth to a Tampa Bay-based cable access television show called the Home Shopping Channel. In 1982, the Home Shopping Channel held a permanent spot on the Tampa Bay television system. By 1986, the Home Shopping Channel evolved into the publicly traded Home Shopping Network and a multi-billion dollar industry.

The key to the success of the Home Shopping Network and its competitors, QVC and Value Vision, is that they are experts at selling materials to people, said Jack Kirby, president of HSNi (the interactive division of the Home Shopping Network). Josh Bernoff, a principal analyst at Forrester Research, says that the home shopping networks use hosts who are successful salespeople, appealing and effective screen layouts, reasonable and accurate pricing, and techniques that are very effective at turning viewers into buyers.

A particular challenge for the television retailer is to convince a viewer to buy. Doug Rose, vice president of brand merchandising and development for QVC, says the real task is to create trust between the viewer, the host, and the network. The customer needs to be confident they will like the item once they receive it at home. Rose stresses that home shopping networks need to be advocates for consumers. Quality assurance processes, fact-checking items and torture-testing items to make sure they will stand up to their warranties is absolutely vital to a home shopping industry. This means that creating a level of trust with the consumers can turn them into repeat customers. Of course, offering an interesting selection of goods and creative packaging is also important.

Home Shopping Network (HSN), QVC, and Value Vision are the three largest networks in home shopping. The sales figures for these three networks combined are approximately $5 billion, and they reach more than 250 million households worldwide.

HSN is a division of USA Networks Inc's Interactive Group. Barry Diller is USA Networks' Chairman and CEO. In 2001, HSN celebrated its 25th anniversary. Today, HSN is a multi-channel retailer with a thriving television, catalog, and web business (at www.hsn.com). The company's e-commerce website, launched in September 1999, became profitable within three months by giving consumers an incremental shopping platform to the already existing television and direct mail channels.

HSN has international networks in Spain, Germany, France, Italy, the Netherlands, and the United Kingdom.

HSN offers products in the following categories: home and entertainment, health and beauty, fashion and jewelry, and electronics. They have also formed

partnerships and strategic alliances to offer customers a greater variety of goods. The alliances include: sports (NFL, NBA, NASCAR, PGA); entertainment (Nickelodeon, Universal); technology (Intel, IBM, Sharp, Sony, Hewlett Packard); fashion (Marie Claire, Randolph Duke); and media services (Vica, MCI, Time, Inc).

The second home shopping network to appear on television was QVC, Inc. Joseph Segel, founder of the Franklin Mint, founded the company in 1986. QVC established a new record in American business history for first full year fiscal sales by a new public company, with revenues over $112 million. By 1993, QVC, based in West Chester, Pennsylvania, had become the number one televised shopping service in sales and profits in the United States by reaching over 80 percent of all U.S. cable homes and three million satellite dishes. By 2000, its turnover had reached more than $3.5 billion. QVC claims to be the world's largest electronic retailer.

QVC is a virtual shopping mall, where customers can and do shop at any hour, at the rate of two customers per second. Themed programs are broadcast live 24 hours a day, seven days a week to 77 million households in the United States. Related channels in the group also broadcast to some 8.2 million households in the United Kingdom and the Republic of Ireland, and more than 27 million households in Germany.

QVC employs more than 100 buyers source new products from around the world—at least 250 new products are introduced on air each week. The channels' categories include home and kitchen goods, consumer electronics, and jewelry—the latter category accounts for 32 percent of screen time, and has made QVC one of the largest retailers of gold and silver jewelry in the world.

QVC's current customer base spans all socioeconomic groups, linked only by the fact that they have a cable service subscription. Because the audience for each QVC program is driven by product, demographics vary significantly from one hour to the next. The total customer base is about 20 million people in four countries.
Value Vision is currently the third-largest home shopping network, and is based in Minneapolis. In 1999 it recorded sales of $274.8 million, reaching £470 million in 2001. In 1997, NBC bought a 36 percent stake in the company, becoming Value Vision's negotiator with cable operators. Since Value Vision's reach is less than half of QVC's, the company relies on affiliating with a local broadcaster to take advantage of the must-carry provision of the 1992 Cable Act. The must-carry rules require cable operators to carry all stations within their community that meet certain required criteria, which includes historic carriage of the station on the system, a station's local service to the cable community, carriage of other similar stations in the market, and evidence of viewership in the community.

Cable operators, which use analog systems with limited available space, argued that home shopping channels were not operating in the public interest. Because of this, they contended that these local broadcast stations, which for the most part had weak signals and small audiences, did not qualify for must-carry status. The FCC ruled that stations carrying home shopping channels—assuming they deliver the requisite signal strength and meet all the other requirements for must-carry—were operating in the public's interest and were eligible for carriage.

In June 2001, Value Vision was renamed SHOPNBC. NBC announced a deal with Wink Communications, Inc. that gives viewers the option to buy merchandise by clicking their remote control any time of the day or night, activating a purchase using a pre-authorized credit card. SHOPNBC pays Wink a fee for each transition. It is up to Wink to determine how it shares that cut with its direct-broadcast satellite or cable-operator affiliates. This interactive-television partnership is currently available in more than 3 million homes, the majority of which are DirecTV Inc. subscribers. DirecTV does not presently handle commerce purchases in real time, so SHOPNBC does not make all of its items available for purchase via remote.

The Enhanced Broadcast Technologies group at SHOPNBC has also produced interactive content for programs on the NBC broadcast network, including The Tonight Show and Will & Grace. NBC also produces blocks of programming for companies that want to sell products themselves, presumably going after existing NBC advertisers.

In 2002, SHOPNBC bought FanBuzz, which will move the network into sports-merchandise sales. FanBuzz operated the website www.teamstore.com and the CustomFan service, allowing online sales of sports clothing. About 90 percent of the business was in fulfillment sales for other clients, including ESPN, CNN, Sports Illustrated and the Los Angeles Times.

When the World Wide Web emerged in the mid-1990s, home shopping channels were fearful that the television retailing business would decrease. However, the networks found that the television growth rate accelerated as a result of Internet sales, and both modes of selling have become profitable. The core of the business, however, remains television.

The largest expenses for the home shopping networks are the payments to cable operators and marketing expenses. In 2001, these networks paid an average of $4.1 million to cable operators, which increased to $35.9 million in 2002.

In the early 1960s, major players in the U.S. electronics and entertainment industries began making plans to develop some form of home video system. All of these projects conceived of home video as a playback-only system, employing some kind of disc. The basic assumption was that consumers would purchase copies of programs on videodiscs just as they purchased phonograph records. In this way, the program producers could retain strict control over the duplication and sale of their copyrighted material. A machine that recorded could only mean one thing: piracy of valuable rights. To U.S. interests, videotape was strictly a professional medium.

Japanese corporations, however, sought to develop video recorders for consumer use. Sony was the leader in this effort, making brief attempts to open the home market with open-reel videotape recorders (VTRs) in the mid-1960s, and 3/4-inch U-Matic video cassette recorders (VCRs) in the early 1970s. These formats developed with home video in mind, and although they were either too crude, complex, cumbersome, or costly to catch on with consumers, both were successes in educational and industrial markets, allowing Sony to continue development work.

The U.S. video ventures tended to be over-promoted and under-engineered—more hype than substance. RCA began making grand pronouncements about its soon-to-be released videodisc in 1969, yet the device did not reach the market until 1981. One of the factors that plagued the development of videodisc systems was the chicken-and-egg nature of the relationship between software and hardware. Hardware producers were unwilling to invest major efforts if software was not available, and software producers were unwilling to commit production to an untried system.

Sony did not have this problem. Sony CEO Akio Morita had long contended that video's consumer potential lay in its ability to free viewers from the rigid time constraints of the broadcast schedule. "People do not have to read a book when it's delivered," he argued, "Why should they have to see a TV program when it's delivered?" In 1975 Sony introduced the Betamax VCR with an ad campaign positioning it as a product with a unique single purpose: time-shift viewing.

Sony did not suggest that viewers might then save the tapes, and begin building a library of programs. However, this prospect occurred almost immediately to MCA president Sidney Sheinberg when he saw the first Betamax ads. MCA, the parent company of Universal studios, was a major entertainment copyright holder—and was also seeking to develop its own videodisc system. MCA sued Sony, arguing that the Betamax encouraged copyright infringement, and seeking to have the VCRs withdrawn from the market.

The Betamax VCR system soon faced opposition in the market as well. Sony's more powerful Japanese competitors, Matsushita (the parent company of Panasonic) and Hitachi, developed their own video cassette recording devices, this time using the VHS system, a format that was developed by JVC and was incompatible with the Sony system.

Although early VCRs in any format were expensive luxury items restricted mainly to the relatively well-to-do, they sold well enough for the manufacturers to expand production, and worry the domestic videodisc forces. In 1978, inside buzz in the consumer electronics industry held that RCA was about to ship disc players with prices so cheap, and with so much software and marketing power behind them, that the Japanese upstarts would be sent packing, and VCRs would go the way of 8-track tape players. It did not happen. Instead, RCA, General Electric, Magnavox, and other domestic companies entered the video business by marketing VCRs manufactured by Matsushita and Hitachi. These companies were willing to slap U.S. brand names on their machines because they could garner significant sales without spending large sums on promotion or establishing new dealer networks.

The verdict in the original Betamax case was delivered in 1979. Sony won. MCA appealed, backed by the larger forces of the Motion Picture Association of America and a coalition of copyright holders in other media. In 1981 the U.S. Court of Appeals reversed the earlier decision, but it did not order the Betamax withdrawn, leaving the matter of penalty to be decided later. Although still not common household items, VCRs had by this time won enough favor with the public that it would have been politically unwise to prohibit them. No action was taken, pending Sony's appeal to the U.S. Supreme Court.

When RCA finally released its long-awaited videodisc player that same year, the cost was near that of a VCR, the picture was mediocre, and the discs be-
gan to wear out after a number of plays. The public re-
acted with a collective yawn. The RCA videodisc was
the only home video product created directly by a ma-
jor U.S. corporation ever to reach the market.

Although a number of bills dealing with VCR de-
velopment and use had been introduced in Congress, none
passed. In 1984 the Supreme Court reversed the Ap-
peals Court decision in the Betamax case, ruling in
Sony’s favor on the grounds that home video recording
fell under the “fair use” provisions of copyright law.
However, Sony’s legal triumph was tempered by set-
backs in the market. Almost all the U.S. companies
marketing VCRs had opted for the VHS format, and
Betamax machines had steadily lost market share.

VCR use continued to move away from mere time-
shifting, and in the format wars between the Beta and
VHS systems, software was the deciding factor. And
software in this case meant movies. When the Betax-
max appeared, the movie industry had little interest in
releasing old films on videocassette. After all, the stu-
dios and trade organizations were supporting the suit
to get rid of the Betamax, and still had visions of
television. “Mom and pop” video shops seemed to ap-
pear on every local corner.

Nevertheless, a Michigan entrepreneur named An-
dre Blay decided to start a pre-recorded videocassette
business. He began soliciting the studios, seeking to
purchase the rights to distribute films on tape. All but
one rejected him. Strapped for cash at the time, Twen-
tieth Century Fox signed on, and in late 1976 Blay be-
gan selling tapes through a video club arrangement
advertised in TV Guide. The promotion was an instant
success. Blay and Fox made more money than they
had imagined, and the other film companies slowly but
surely followed them to this new source of profit.

Because the first films on video were prepared for an
untested market, they were produced on a small scale
and were quite expensive. Like the first VCRs, they
seemed to be luxury items with a limited market. How-
ever, another entrepreneur struck on the idea of acquir-
ing a library of tapes and renting them out for a
reasonable fee. This seemed like a good idea to many
would-be small businesspeople, and video rental busi-
nesses quickly spread across the United States. “Mom
and pop” video shops seemed to appear on every local
corner.

For all the power of the large corporations that cre-
ated the hardware, this grassroots phenomenon of tape
rental was the key to the diffusion of the VCR. With
inexpensive software readily available for rent, VCR
ownership became more desirable. Rising VCR sales
drew more video titles into release and lowered rental
prices, which helped VCR sales grow again, and so on.

Unfortunately for Sony, the fact that a majority of
VCR sales were VHS units led video-shop owners to

stock more VHS titles, which led to even more VHS
sales. The Beta format was left on the wrong end of
the economic spiral. By 1986, with basic models priced
under $200 in discount stores, the VCR was no longer
a luxury, but a household staple, a piece of the com-
mon culture. As the decade turned, Sony quietly folded
Beta production and began manufacturing VHS ma-
achines.

Ironically, perhaps, most VCR owners in North
America rarely use the machines for time-shifting (and
their VCR clocks will do nothing but blink “12:00” on
into eternity). Instead, consumers there use VCRs pri-
marily for the purpose intended for the failed disc
players—that is, to play back pre-recorded material.

Another irony is that, despite all the entertainment in-
dustry’s fears of piracy, prerecorded videocassette
sales proved to a major source of revenue; the VCR
helped save the studios instead of helping destroy
them. The Japanese triumph in the video wars was the
last straw in the collapse of the U.S. consumer elec-
tronics industry and signaled the development of new
global relations in the entertainment business. A final
irony was that in the early 1990s Matsushita purchased
MCA (only to sell it in 1995, perhaps an indication that
the manufacturer is a stronger force in the creation of
hardware than software).

The cultural impact of home video is not as easy to
gauge as the economic. When the VCR first arrived,
some social thinkers enveloped it in utopian promise.
By putting technology in the hands of the people, their
argument went, humans finally had the mechanism to
enable true media diversity that would replace an im-
posed, top-down mass culture. Indeed, videotape dis-
tribution does not require the economies of scale
necessary for large-scale network or even local broad-
casting. Thus, theoretically, home video opens the tele-
vision medium to a host of small, noncorporate voices.
The utopian promise grew with the advent of portable
VCRs and video cameras, later refined into the low-
cost compact camcorder. With this technology almost
anyone could become a producer!

Yet home video did not lead to a great democratic
decentralization of television. In the early days of
the video business, a number of tapes from non-
mainstream producers became widely available, but
these were largely pornography and low-grade slasher
films. Even these disappeared as the mom and pop
video stores were displaced by the clean corporate
hegemony of Blockbuster Video and other chain dis-
tributors. The pre-recorded tapes most VCR users pop
into their machines are mainstream products of an in-
creasingly monopolized culture industry. What home
video has enabled is the phenomenon of “cocooning,”
the ability to participate in cultural consumption with-
Home Video

out going out in public. Even the camcorder remains a largely private phenomenon, restricted by most users to home movies of family events (with all cute-kid outtakes shipped off to America's Funniest Home Videos, of course).

In the late 1990s, new technology enabled consumers to enhance their home-video cocoons in several ways. DVD players began to achieve wide acceptance. The DVD format delivers much better video quality than VHS tapes, and DVD releases of feature films are generally offered "letter-boxed" in the original wide-screen aspect ratio, rather than the "pan-and-scan" maskings used in most VHS releases, which cut off the edges of the original image in order to fill the TV frame. The premise behind letter-boxing is that viewers will have large-screen sets, and, indeed, TV sets have gotten bigger. In the 1980s, 20" sets were most common, and a 27" set was considered large. At the turn of the 21st century, however, 27" sets are the norm and large TVs run 35" or more. DVDs also generally have soundtracks engineered for 5-speaker surround-sound. Surround-sound audio systems allow a film's sound to appear to come from all sides and even behind the viewer, and include a subwoofer for seat-rattling bass effects. The advent of bigger screens and sophisticated audio playback systems must be attributed more to desires stemming from home video use than from viewing broadcast television. Watching Star Wars at home is clearly a different matter than watching a situation comedy or talk show. High-tech "home theater" rooms go hand in hand with a mainstream cinema ever more dependent on spectacle and special effects.

Still, while home video has had no revolutionary effect on the cultural mainstream, it has enabled new activity at the margins. Independent, experimental, or alternative tapes of all sorts do get made and distributed. For example, Cathode Fuck and other scabrous works of culture-criticism-on-video circulate more freely and widely than the avant-garde films from which they descended. On another front, DVDs are allowing viewers a deeper engagement with the mainstream, in that DVD releases often contain "bonus features" such as behind-the-scenes documentaries, storyboards, and audio commentary tracks by the director. These materials can provide fascinating glimpses into both the "why" and "how" of filmmaking and offer new pleasures to movie fans and film scholars alike.

In all, the history of home video indicates that technology does not so much change society as better enable people to pursue their existing interests, be it the few who experiment with media alternatives, or the many who seek Hollywood thrills and romance from the comfort of their living room sofas.

Homicide
Australian Crime Series

Homicide was one of the first drama series produced in Australia, and one of its most historically significant and successful. First broadcast in 1964, Homicide ran for 509 episodes until production ceased in 1975, establishing the police drama as a staple of Australian-made TV in the 1960s and 1970s, and revealing an enthusiasm among Australian TV viewers for local programming, of which there had been very little prior to the success of Homicide.

Homicide was produced for the Seven Network by the Melbourne-based Crawfords Productions, whose founder Hector Crawford has been a pivotal figure in Australian radio and television. With Homicide, Crawfords pioneered long production runs for serialized
drama on modest budgets, and established the importance of the external production house as a source of local drama material for the commercial networks. Crawfords also pioneered outdoor location filming in Australia, which was an important part of Homicide’s popularity with Australian audiences, who for the first time saw drama taking place in familiar urban locations.

Homicide was an episodic crime drama, invariably involving a murder, with most episodes following closely a narrative structure in which the detective team investigates and, in the final segments, resolves the murder and arrest the perpetrators. The program was thus “realist” in both narrative and visual representation. Still, the team of male detectives was detached from their social environment. They were always presented as part of a stable hierarchy; they were bound by thorough professionalism, and no consideration was given to their private lives. These factors place Homicide in an older tradition of TV police drama. Here dichotomies between law and crime, the police and the society in which they operate, their professional work and private lives, and the relationship of hierarchical authority to individual initiative remain stable and largely uncontested. Homicide can be seen as a program that defined the generic conventions of police drama in Australia, drawing upon the codes and conventions established in police dramas such as Dragnet in the United States and Z Cars in Britain, with more emphasis upon the narrative of crime-solving than on the development of character and the generation of conflict.

The peak years of Homicide were also the peak years of police drama on Australian TV, with it and other similar programs consistently rating highly with local, particularly male audiences. When production of Homicide ceased in 1975, the police drama had already declined in significance in programming schedules and popularity, giving way to the rise of the serial drama and, later, the miniseries.

The significance of Homicide to Australian television perhaps lies less in its textual innovations than in certain institutional factors. It demonstrated a capacity to present familiar environments and character types to Australian audiences on TV for the first time. It created an environment more conducive to policy measures that promoted local drama production and restricted imported material. And it exemplified the innovations in program production necessitated by the need to produce an on-going drama series. In many ways, the program demonstrates that Australia’s international reputation as a country with a competitive advantage in low-budget strip programming has its origins in the production techniques developed at Crawfords in the 1960s.

Programming History
507 one-hour episodes
Airing on NBC from 1993–1999, *Homicide* emerged in the middle of the cycle of gritty, urban police dramas inaugurated by *Hill Street Blues*, and became one of the most acclaimed series in the history of the genre in the United States. Loosely based on the true-crime book, *Homicide: A Year on the Killing Streets* by David Simon (a former crime reporter for *The Baltimore Sun*), *Homicide* was an ensemble drama built around a group of detectives in the Baltimore police department's homicide unit and shot on location in Baltimore. Through a unique blend of documentary realism and the pseudo-avant-garde stylings of MTV, the series charted a heady and daring course, challenging the cop genre's narrative obsession with moral authority as well as its devotion to a narrow stylistic realism. *Homicide* also illuminates the ever-present tensions between creativity and commerce in the current media landscape, and demonstrates how the strategies for developing and maintaining series have changed at the networks over the past two decades.

*Homicide* was first introduced to the viewing public immediately following the 1993 Super Bowl—a strategy designed to announce the series as a significant television event. NBC's initial promotion of the series emphasized its cinematic pedigree: namely, the presence of Academy Award winning director (and Baltimore native) Barry Levinson as one of the executive producers, and director of the pilot episode. In addition, screenwriter Paul Attanasio (*Quiz Show, Donnie Brasco*), was commissioned to write the pilot episode and was credited as the series creator. The correlation between Hollywood and *Homicide* continued to be fruitful over the years, as an impressive number of feature film directors and actors appeared both behind and in front of the cameras. The series also boasted impressive television credentials, particularly in the person of Tom Fontana. Fontana, already a veteran writer and producer whose previous experience included NBC's critically acclaimed drama *St. Elsewhere*, was brought in to oversee the daily operations of production, and emerged as the major creative force behind the series as a whole.

Though the exigencies of network television precluded the series from attacking its subject matter with the same kind of daunting grit and detail found in David Simon's lengthy account, the series always strove to chart the same territory as that of the book: the cynical squad room digressions; the morbid corpse-side manner adopted as a defense mechanism, and the small personal and interpersonal battles waged by the detectives as they faced the brutal realities of life and death in the inner city. The series was shot entirely on location in Baltimore, and the city itself also played a crucial role in the narrative, lending it a richness and flavor not often found in studio back lots.

No real formula ever emerged over the course of the series. Like *Hill Street Blues*, each episode was a mixture of episodic plotlines and cumulative narratives. Individual cases provided the basic contours of each episode, but were always set against a range of ongoing personal and professional conflicts being faced by the detectives and their partners. The increasingly close partnership between detectives Tim Bayliss (Kyle Secor) and Frank Pembleton (Andre Braugher)
quickly became the centerpiece of the series—described by Tom Fontana, with some hyperbole, as the “greatest love story in the history of television.” Bayliss’s arrival on the squad marked the beginning of the series, and his growth, both professional and personal, comprised the primary arc of the serial narrative. Pemberton was perhaps the brightest and most enigmatic detective on the squad, known for the artistry of his interrogation technique, his philosophical approach to policing, and his strained Catholicism. Other pairs from the first season included Bolander and Munch (Ned Beatty and Richard Belzer), Felton and Howard (Daniel Baldwin and Melissa Leo), and Lewis and Crosetti (Clarke Johnson and Jon Polito). The squad was overseen by Lieutenant Al Giardello (Yaphet Kotto), described by Tod Hoffman as “sometimes moved to rage, often frustrated, but frequently just bemused.” In this sense, Giardello’s character was emblematic of the series as a whole.

But unlike most police series, Homicide was a show as much about its victims as its heroes. Quite often, the victims whose names hung in red and black on “the board” in the squad room were the dealers, thieves, and pushers that have bedeviled the genre from the beginning. But rather than revel in their untimely demise, the series worked to place their lives and deaths in the larger context of a society at odds. The process of investigation typically provided more questions than answers, and arrests rarely served as resolutions to the bigger problems at hand, especially when it came to issues of race. As Christopher Campbell has suggested, Homicide was frequently at its best when it placed race on the center stage and then refused to give easy answers, “leaving audiences to grapple with the subtleties and impact of contemporary racism.”

Audiences were also left to grapple with the style of Homicide, which took a complicated approach to the realist aesthetic so important to the police genre. The look of Homicide was a complex blend of stylistic and cultural references working together both to set the series apart in the crowded market of prime-time drama, and to sharpen its critical edge. As if springing forth from the unlikely union of Frederick Wiseman and MTV, the series used elements of montage (jump-cuts and rapid repeat cuts) along with a swooning handheld camera to both heighten the documentary feel of the series and to self-reflexively call attention to the highly constructed quality of all media images, especially those found on the evening news or on “reality” shows such as COPS.

Alongside its camerawork and editing, Homicide was also known for its use of popular music as a central narrative and stylistic tool. Like Miami Vice in the 1980s, Homicide frequently used popular music to supply a certain amount of stylistic energy. And in both series the music also underscored important points in the story, often complicating the narrative by offering a second level of commentary on the action. But the music in Homicide often acted as a critical reversal of the documentary aesthetic as well: an ironic counterpoint to the claims to realism presented by the vérité style.

Perhaps because of its flamboyant style, the series never achieved widespread popular appeal, never appearing in the top 20 shows during its seven seasons. But it did enjoy nearly universal praise from media critics. Most impressively, perhaps, the series received an unprecedented three Peabody Awards (1993, 1995, and 1997), making it the most decorated dramatic program in the history of that award. Despite the Peabody accolades, however, the industry itself was slightly less generous. Though the series, along with its cast and crew, were regularly nominated for Emmys, Homicide actually won only three Emmy Awards in any category over the course of its seven seasons.

While its daring stylistic and narrative approach may have puzzled viewers, the lack of high ratings for the series may also be attributed to network programming strategies. When Homicide first appeared, NBC was mired in third place behind CBS and ABC and approached the series in a somewhat guarded fashion. As a testament to NBC’s ongoing indecision and appre-
Homicide: Life on the Street

Henson regarding the series. Homicide's first two seasons consisted of a mere 13 episodes combined (nine in the first and four in the second). Additionally, the show was moved from Sunday to Wednesday and then to Thursday in this short span, and was simply difficult to locate or anticipate on the schedule until it finally settled on Fridays for its third season. The third season consisted of 20 episodes, but after it proved a ratings disappointment, the cast and crew were forced to wait until May to find out whether or not they would be back for a fourth the following fall.

Once the network's fortunes began to turn in the mid-1990s, the under-performing Homicide was placed under much less pressure to generate revenue. Even though the series continued to finish third in its time-slot, behind ABC's 20/20 and CBS's Picket Fences, the network responded with a full order of 22 episodes for the fourth season, and then granted the series a two-year lease for its fifth and sixth seasons (1996–97 and 1997–98). But while the series managed to survive the lean years, the network's generosity always came with a mandate to clean up the series look (including the cast) and to focus more expansive and dramatic stories built around "red balls"—cases and situations that demanded the attention and effort of the entire squad.

The end finally came for Homicide after the seventh season (1998–99). NBC held off making its final decision until after the production company had wrapped up shooting for the season and, consequently, the final episode was shot with two possible endings: a season finale and a series finale. The multiple endings seem fitting for a series perpetually threatened with cancellation, and for which the end was always in sight, but repeatedly deferred.

As a final testament to Homicide's troubled relationship to the increasingly unstable fortunes of the network, NBC brought Homicide back for a two-hour movie during March sweeps in 2000. The series that existed perpetually on the cancellation bubble, unable to attract a significant audience for advertisers, and continually finishing third in its time slot, was brought back to represent the network in the sweeps battle that helps determine advertising rates. On the one hand, bringing the series back for a 2-hour movie allowed the producers to wrap up some of the most important narrative arcs, something they were unable to do previously, given the cloud of uncertainty that haunted the final season. But, perhaps more significantly, NBC's actions regarding Homicide were a telling indication of the chaotic state of network programming at the turn of the century.

Honey West

U.S. Detective Program

*Honey West* is significant as the first American network television series in which a woman detective appears as the central character. While women had portrayed investigators, police reporters, FBI agents, and undercover operatives in crime drama formats from the earliest days of television, they typically shared billing as sidekick characters, worked at occupations more commonplace than detective, or were cast in secondary roles. Examples would include, among others, journalist Lorelei Kilbourne in the series *Big Town* (1950–56), international art gallery owner turned sleuth, Mme. Lui-Tsung, in *The Gallery of Mme. Lui-Tsung* (1951), and girl Friday Maggie Peters in *The Investigators* (1961). *Honey West* took this activity to another level. Her principal work was operating a detective agency and, unquestionably, she was the star of her show. Featuring actress Anne Francis in the title role, the ABC series was broadcast for one season (1965–66) and broke ground for other female detective/spy programs to follow, such as *The Girl from U.N.C.L.E.* (1966–67), *Get Christie Love* (1974–75), and *Police Woman* (1974–78).

The character of Honey West was created by husband-and-wife writing team Skip and Gloria Fickling (also known as G.G. Fickling) in a series of novels published in the late 1950s to early 1960s. On April 21, 1965, the character was introduced to television audiences in a *Burke’s Law* episode, “Who Killed the Jackpot?,” and, true to form, Honey outwitted the dapper detective played by Gene Barry. Producer Aaron Spelling spun the character off into a separate series of 30-minute episodes that premiered September 17, 1965.

Operating her late father’s detective agency, *Honey West* used many talents in her fight against crime. She was expert at judo and held a black belt in karate. Beautiful and shapely, her feminine wiles were accentuated by form-fitting black leather jumpsuits, a sexy mole on her right cheek, tiger coats, and “Jackie O” sunglasses. Like James Bond, she also owned an arsenal of weapons filled with “scientific” gadgets, including a specially modified lipstick tube and martini olives that camouflaged her radio transmitters.

For undercover work, Honey and her admiring partner, Sam Bolt (John Ericson), drove a specially equipped van labeled “H.W. Bolt and Co., TV Ser-

Homosexuality. *See Sexual Orientation and Television*
vice.” Her principal base of operation was her Los Angeles apartment, complete with secret office behind a fake living-room wall. Bruce, her pet ocelot, and Meg West (Irene Hervey), her sophisticated aunt, also lent assistance and comfort as necessary.

_Honey West_ premiered to reasonably good reviews. Citing the show’s sensual aspects, smooth production values, and Honey’s ability to bounce Muscle Beach types off the wall with predictable regularity, _Variety’s_ 1965 evaluation predicted some success “as a short-subject warm-up to _The Man from U.N.C.L.E._” Season-opening Nielsen ratings ranked the show in a tie for 19th place, but this level of viewership proved short-lived, as the show’s CBS competition, _Gomer Pyle_, knocked it quickly out of the top 40.

Contrasted with _Variety’s_ review, Jon Lewis and Penny Stempel note that while the “_Honey West_ concept was good and the character deserves credit for working in a man’s world, the series suffered from unimaginative plots and poor production quality.” In fact, say Lewis and Stempel, _Honey West_ is “mostly memorable for the fight scenes in which a man with a blonde wig was quite obviously wheeled in to do the stunts.”

Often compared to Emma Peel, the character played by Diana Rigg in the British series _The Avengers_ from 1965–67, Honey West simply did not have Miss Peel’s style or longevity and lasted a total of 30 episodes. Providing a notable change to the male-dominated detective genre so prevalent from the earliest days of network television, _Honey West_ broadcast its last original show on April 8, 1966.

The Honeymooners is one of U.S. network television’s most beloved and influential series. Although The Honeymooners ran for only one season as a half-hour situation comedy (during the 1955–56 season on CBS), Jackie Gleason presented the sketch numerous times during his various variety series. In fact, perhaps no premise has been seen in so many different guises in the history of U.S. television—aired live, on film, and on tape; in black-and-white and color; as sketch comedy, situation comedy, and musical. It has succeeded on network, syndicated, and cable television. Whatever the form, audiences have continued to embrace the loudmouthed bus driver Ralph Kramden, Gleason’s most resonant creation, as an American Everyman, a dreamer whose visions of upward mobility are constantly thwarted.

The Honeymooners stands in stark contrast to the prosperous suburban sitcoms of the 1950s. The battling Brooklynites, Kramden and his sarcastic wife Alice (Audrey Meadows, the best known of the several women who played the role), are trapped on the treadmill of lower-middle-class existence. Their spartan apartment is one of the most minimal and recognizable in television design. A functional table, a curtainless window, and an antiquated ice box signal their impoverishment. Most of the comedy revolves around Ralph’s schemes to get rich quick (such as his infomercial for the Handy Housewife Helper in “Better Living through TV”). The tempestuous Ralph is assisted by his friend and upstairs neighbor Ed Norton (agilely and always played by Art Carney), a dimwitted sewer worker. The Honeymooners quartet is rounded out by Trixie Norton (most notably played by Joyce Randolph), Ed’s loyal wife and Alice’s best friend. Unlike most couples in situation comedy, both the Kramdens and the Nortons were childless, and rarely talked about their situation in a baby-booming United States.

Gleason introduced “The Honeymooners” sketch on October 5, 1951, during his first variety series, Cavalcade of Stars, broadcast live on the DuMont network. Kramden directly reflects the frustrations and yearning of Gleason’s upbringing; the Kramdens’ address on Brooklyn’s Chauncey Street was the same as the star’s boyhood home. The Honeymooners began as a six-minute sketch of marital combat. The battered wife was realistically played by veteran character actress Pert Kelton. A cameo was provided by Art Carney as a policeman. Viewers immediately identified with Ralph and Alice’s arguments, and further sketches were written by Harry Crane and Joe Bigelow. Early on, they added the Nortons; Trixie was first played by Broadway actress Elaine Stritch. These early drafts were a starkly realistic insight into the compromises of marriage, a kind of kitchen-sink comedy of insult and recrimination.

In September 1952 Gleason and his staff were lured to CBS by William Paley to star in a big-time variety series, again on Saturday night. Audrey Meadows, who performed with Bob and Ray, replaced Kelton, who suffered from heart problems and political blacklisting. “The Honeymooners” sketches were mostly less than ten minutes during the first CBS season. During the next two years, the routines grew increasingly longer, many over 30 minutes. Most were marked with the familiar catchphrases—Ralph’s blustery threats (“One of these days, Pow! Right to the Kisser!”) and the assuring reconciliations with Alice at the end (“Baby, you’re the greatest”).

For the 1955–56 season, Gleason was given one of the largest contracts in show business history to produce The Honeymooners as a standard situation comedy. Gleason formed his own production company and experimented with the Electronicam technology, which enabled him to film and edit a live show with several cameras, a precursor of three-camera videotape recording. Gleason filmed two shows a week at the Adelphi Theater in New York, performing to more than 1,000 spectators. Gleason’s stable of writers felt hemmed in by the regular format, and Gleason noticed a lack of fresh ideas. When the ratings of The Honeymooners sitcom plummeted out of the top ten shows (in the previous season, The Jackie Gleason Show ranked number two), Gleason decided to return to the variety format. Gleason later sold these “classic” 39 films of The Honeymooners to CBS for $1.5 million, and they provided a bonanza for the network in syndication.
“The Honeymooners” remained a pivotal sketch during Gleason’s variety show the following season. The writers created a few new wrinkles, including a musical trip to Europe that covered ten one-hour installments. When Carney left the show in 1957, Gleason dropped the sketch entirely.

He resurrected his big-time variety show in 1962 and moved the production permanently to Miami Beach, Florida, in 1964. He sporadically revived “The Honeymooners” when Carney was available. Since Meadows and Randolph did not want to relocate, Sue Ann Langdon (Alice) and Patricia Wilson (Trixie) took over as the wives. Meadows returned for a one-time special reenactment of “The Adoption,” a 1955 sketch in which Ralph and Alice discuss their rarely heard feelings about parenthood. During the 1966–67 season, Gleason decided to remake the “Trip to Europe” musicals into color spectacles with 40 new numbers. Sheila MacRae and Jean Kean were recruited for the roles of Alice and Trixie.

Gleason’s variety show ended in 1970, but he was reunited with Carney and Meadows for four one-hour Honeymooners specials during the late 1970s. The specials, broadcast on ABC, revolved around such family celebrations as wedding anniversaries, Valentine’s Day, and Christmas. With Jean Kean as Trixie, The Honeymooners remained two childless couples, the most basic of family units on television.

The filmed episodes of The Honeymooners have been one of the great financial successes in syndication. A local station in New York played them every night for over two decades. The 39 programs, with their almost ritualistic themes and incantatory dialogue, have inspired cultic worship, most notably the formation of the club RALPH (Royal Association for the Longevity and Preservation of the Honeymooners). For years, the live sketches were considered lost. When the Museum of Broadcasting discovered four complete variety programs featuring the Kramdens and the Nortons, Gleason revealed that he had more
than 80 live versions in his Miami vault. He sold the rights of the "lost episodes" to Viacom and the live *Honeymooners* found an afterlife on cable television and the home video market. In 2001 museum screenings and network specials marked the 50th anniversary of the program.

*The Honeymooners* remain one of the touchstones of American television, enjoyable on many levels. Critics have compared the richness of Gleason's Ralph Kramden to such literary counterparts as Don Quixote, a character from Charles Dickens, or Death of a Salesman's Willy Loman. Although *The Honeymooners* did not tackle any social issues throughout its many incarnations, the comedy evokes something very essential to the national experience. The Kramdens and Nortons embody the yearnings and frustrations of the postwar, urban United States—the perpetual underdogs in search of a jackpot. When such producers as Norman Lear in *All in the Family* or Roseanne in her own series have sought to critique the flipside of the American Dream, *The Honeymooners* has been there as a source of inspiration.

**Hong Kong**

With the potential to articulate identities, to provide information, to serve as a foundation for political exchange, or to operate as an industry, television in Hong Kong appears more dominated by economic factors than its political, social, or cultural possibilities. At this juncture in Hong Kong's history, television maintains its position as a profitable commercial venture and as a dominant social force in a new era of People’s Republic of China (PRC) governance, just as it had during British colonial rule.

Television continues to be one of the most popular forms of leisure in Hong Kong. In the territory, almost all homes have at least one television, and on a typical evening, about one-third of the population watches prime-time programming. Dramas appear to be the most popular genre for Hong Kong viewers. Most television programming is produced in Hong Kong and broadcast in Cantonese, the dialect of Chinese spoken in Hong Kong and southern China. Local programming helps to perpetuate a sense of local Hong Kong identity, at times distinct from and at times integrated with a larger identification with a Chinese community. Most residents see this cultural identification with a Chinese community separately from their political identification with the PRC.

The pervasive influence of television in Hong Kong
was evident in the mediated political transition from the territory’s colonial status as a subject of the British empire to its current status as a Special Administrative Region (SAR) within the PRC. Most Hong Kong residents participated in this hand-over at midnight on July 1, 1997 through viewing the ceremonies on television. The ceremony itself, orchestrated carefully for media coverage, moved from Prince Charles, declaring Britain’s responsibilities to Hong Kong, to President Jiang Zemin, pronouncing Hong Kong’s need for a strong PRC government. Hong Kong itself was remarkably absent from this televised account. No representative from Hong Kong, as a third party, graced the stage with British and Chinese dignitaries, neatly divided as outgoing and incoming political administrations. No flag of Hong Kong flew separately, but instead only in tandem with British and Chinese flags. Moreover, not a word of Cantonese entered this official ritual. English and Mandarin, languages representing the former colonial and current political powers, dominated the ceremony. Hong Kong media coverage of the event hinted at the mixture of pride and concern felt by many viewers, who felt aligned with a cultural Chinese community but at odds with the particular political regimes purporting to represent them.

This political transition, on the surface a rather peaceful, televised event, structures the more formal political boundaries within which Hong Kong residents must work. According to policies established prior to this historical event, Hong Kong should be administered by the PRC’s “one country, two systems” policy, as stipulated in the 1984 Sino-British Joint Declaration. Prior to this transition, Hong Kong served as a British colony for more than 150 years. As a result of the Anglo-Chinese wars in the mid-19th century, Hong Kong Island and the southern tip of the Kowloon peninsula were ceded by China to Britain through the Treaty of Nanking in 1842 and the Convention of Peking in 1860; northern Kowloon was then leased to the British government for 99 years in 1898.

The television industries in Hong Kong have continued to prosper, despite economic difficulties experienced in the late 1990s. Although Hong Kong’s official governance system is contingent upon the PRC as its dominant political authority, Hong Kong’s economic status as an arena favoring private enterprise and free trade has not diminished. In keeping with the capitalist economic climate of the territory, all television stations continue to be run as commercial enterprises.

Subsequent to the transition to PRC rule, broadcasting regulation has actually become more laissez-faire, rather than less. Focusing on attracting investment, particularly in response to losing some international television providers to Singapore, current broadcasting ordinances have relaxed previous rules regarding nonresident and cross-media ownership. In addition, prior royalties on subscription and advertising profits are no longer being charged to television service providers. Many more applicants are being awarded pay-television licenses as well, thus creating the possibilities for many more pay-television services.

Free television in Hong Kong has remained in the hands of two terrestrial television stations, Asia Television Limited (ATV) and Television Broadcasts Limited (TVB). Each of the terrestrial stations transmits two channels. TVB broadcasts the Jade channel in Cantonese and the Pearl channel mostly in English, while ATV broadcasts the Home channel in Cantonese, and the World channel mostly in English. On the English-language stations, movies (on TVB Pearl) and documentaries (on ATV World) attract more viewers than other types of programming. Together, these stations produce 550 hours of television each week, reaching 6.5 million viewers. Controlled by a private corporation, the Lai Sun Group, ATV offers a service similar to that of its competitor, although its programming is not as popular, nor the station as wealthy, as TVB.

TVB is by far the dominant station within the Hong Kong community. During prime-time hours, it is estimated that TVB’s two stations, Jade and Pearl, command more than three-quarters of the market share of Hong Kong’s viewing public. Jade, producing most of its own programming in the local language, enjoys by far the greater part of this popularity. Initiating broadcasting in 1967, TVB was the first television station in the territory. In 1971 TVB produced its first local television program in color, a musical variety show known as Enjoy Yourself Tonight. Since then, the station has developed its technological capacity to improve the appeal of foreign programming to the Hong Kong audience. TVB operates its own Chinese character generator for subtitling and has employed a localized NICAM (Near Instantaneously Compounded Audio Multiplex) system since 1991, offering viewers with equipped television sets the choice of viewing designated programs in different languages (typically, Cantonese, Mandarin, or English).

TVB not only produces most of the programming for its Jade channel but also distributes Chinese-language programs globally. TVB claims to be the largest producer of Chinese-language television programming in the world, distributing its products to more than 30 countries. This company has also invested in satellite broadcasting systems (a joint venture with MEASAT Broadcast Systems), in Internet
ventures (TVB.com Limited), and in cable news services, particularly popular in Taiwan. TVB, like other television companies, is also looking toward mainland China as a future profitable market.

The government of Hong Kong does not have its own television station, but instead requires the two terrestrial stations, TVB and ATV, to carry programming and advertisements in the public interest (APIs) that its agency, Radio-Television Hong Kong (RTHK), produces. RTHK stipulates the blocks of time within which these public programs and APIs must be aired. RTHK attempts to maintain editorial independence in its programming. Its shows tend to be informative in nature, illustrated in programs such as Media Watch and The Week in Politics.

Although the free domestic television services have remained relatively constant, pay-television options have expanded a great deal. The Hong Kong Broadcasting Authority (BA) has granted licenses to five domestic pay-television services and six nondomestic pay-television services. Among the domestic services, Hong Kong Cable TV Limited carries 31 channels on fiber-optic service and another 16 on microwave service, including news, films, sports, and other channels. More than half a million households subscribe to this cable service. Nielsen ratings estimate about 1.4 million viewers of cable television during prime-time hours. Most cable programming is transmitted in Cantonese, or subtitled in Chinese if produced in another language.

Other domestic services include a video-on-demand channel (through PCCWW VOD); satellite television (Galaxy Satellite Broadcasting Limited) through TVB, including entertainment channels in both Cantonese and Mandarin; and two digital television services (Pacific Digital Media [HK] Corp Limited and Yes [HK] Television Limited). The Pacific Century Cyberworks (PCCW) illustrates a growing trend toward integrating different media services. Initiated by Richard Li, PCCW is attempting to create a satellite-based broadband Internet network with television services, beginning by broadcasting satellite television channels with web content.

Other licenses have been awarded to nondomestic pay-television service providers (such as Galaxy, APT Satellite Glory Ltd., Starbucks [HK] Ltd., Asia Plus Broadcasting Ltd., and MAT Limited), the most prominent being Star TV. Hutchinson Whampoa launched this commercial system in 1991, mostly as an English-language service to the Asian region. When Rupert Murdoch's News Corporation purchased this station in 1993, approximately one-fifth of the households in Hong Kong had the capability to receive these satellite television services. Star TV's popularity grew as more local programming was introduced. From its base in Hong Kong, Star TV reaches approximately 38 countries from Egypt to Japan, and from Indonesia to Siberia. In Hong Kong, approximately 700,000 viewers watch Star TV prime-time programming, according to recent Nielsen ratings. Star TV offers Chinese programming (from Hong Kong, Taiwan, the PRC, and Japan), sports, entertainment (mostly Western programs), and a music video channel. Originally, an Asian version of Music Television (MTV) was part of the Star TV package, but this was later replaced by a local Asian broadcast known as Channel V, which divided into a Mandarin-dominated music video service for northern Asia and a Hindi-dominated music video service for western Asia. In addition to broadcasting regional productions, Channel V broadcasts videos supplied by global corporations, such as Warner Music, EMI, PolyGram, Sony, and BMG.

Star TV had also offered the British Broadcasting Corporation (BBC) World News Service, but this channel was dropped subsequent to Murdoch's purchase, reflecting both Murdoch's bitter rivalry with the BBC in Britain and the objections raised by the PRC over a documentary the BBC had produced about the reign of Mao Zedong. Broadcast in Britain in 1993, this documentary addressed sufferings caused by Mao's failed economic policies, as well as his alleged relations with young girls. In response, the PRC government extended new restrictions on BBC operations within China. Moreover, this film was not broadcast on television in Hong Kong, despite being purchased by TVB and being approved by public censors representing the Hong Kong Film Censorship Ordinance (even though this very ordinance prohibits screening films that might damage relations with other countries). Instead, private organizations broadcast this documentary to community groups within the territory.

In addition to canceling the BBC news channel, Murdoch's News Corporation has made other overtures toward the PRC government. It invested in the PRC's central newspaper, the People's Daily, in 1995, and a few years later forced its subsidiary Harper-Collins to withdraw its contract to publish former Hong Kong governor Chris Patten's book, which was to include a critique of the PRC government. In addition, the Star TV service is carried through Asiasat, which serves as a source of income for the PRC government. With these political concessions News Corporation intends to ensure entry into a potentially profitable market.

Echoing Star TV's strategy toward appeasing the state in the interest of profit, TVB has advocated simi-
larly politically cautious approaches to its programming. In addition to choosing not to air the controversial BBC documentary on Mao it had purchased, TVB produced and broadcast a documentary chronicling Hong Kong’s history that was sympathetic to PRC interests. In contrast to more politically direct programming in Taiwan, TVB programming in Hong Kong tends to avoid controversial subject matter. These strategies may be designed to pacify the government with control over potential revenue. Although many local cable operators in southern China are able to receive and relay popular TVB broadcasts, they tend to substitute local advertisements to generate local revenue. TVB’s attempts to gain access to licensing and advertising fees from their broadcasts in southern China may be contingent upon a good working relationship with PRC government authorities.

It is important to note that not all stations are as uniformly receptive to perceived political interests. In 1994 ATV news staff resigned over a battle with their management concerning the screening of a Spanish documentary that included coverage of the 1989 Tiananmen Square massacre; this program was aired as scheduled following this well-publicized disagreement. This sort of political debate was particularly significant given the PRC’s demonstrated commitment to controlling content within mainland television’s industries. Regarding the mainland’s own local television, PRC government officials have warned that programs ought to promote patriotism, collectivism, and socialism, but not consumerism. Although many homes (some estimate almost two-thirds of households in the southern area of China’s Guangzhou province) have access to cable television services, satellite dishes are officially banned for personal use. The PRC attempts to control the influence of foreign culture by limiting the importation of foreign media; whether Hong Kong media are to be viewed as domestic or foreign is still uncertain in policy and in practice in mainland China.

While a significant proportion of Hong Kong television is produced locally, many programs are imported from other countries, dubbed into Cantonese or subtitled in Chinese characters. Aside from importing news, entertainment series, and films from the West, most animated programs are imported from Japan, and several popular fictional series are imported from Taiwan. Some of the more popular imported programming include movies, news, and the Discovery channel.

Although the primary objective within the Hong Kong television industry is profit, programming is monitored for “taste and decency” through the Hong Kong government’s Television and Entertainment Licensing Authority and Broadcasting Authority. The BA meets monthly to review complaints raised by the public. This agency issues warnings and imposes fines against violations of license conditions. Programming standards dictate content concerning social issues, such as crime, family life, and violence, as well as suitable presentations of cigarettes and alcohol. Regulations also define permissible commercial advertising and sponsorship of programs. Recent reprimands to television stations have addressed placing advertisements for alcohol in early viewing hours, presenting factual errors, and showing corporate logos within program content. In one recent instance, TVB was fined for airing an advertisement of a driver kicking his car angrily, as depicting violence without justification and thereby constructing vandalism as an acceptable practice.

A central feature of Hong Kong’s new regulatory environment addresses the convergence of media services. Current policies encourage, rather than prohibit, cross-media ownership and attempt to establish new digital standards for high-definition television. Consequently, television broadcasters are working more closely with telecommunications companies in creating new pay-television services, such as an interactive iTV multimedia service and DTV digital entertainment service through Star TV. Recent negotiations between government officials and industry representatives aim to support a shift toward digital service that would be compatible with similar shifts in mainland China.

While Hong Kong may be reunited with a larger “cultural China” through formal political ties, the island’s economic system functions quite separately from that of the mainland. In this instance, the state apparatus chooses to privilege television’s place in a market economy above its role as a political tool.

Hood, Stuart (1915– )

British Media Executive, Producer, Educator

Stuart Hood has had a considerable impact upon the development of television production, news broadcasts, program scheduling, and programming policy in the United Kingdom. He has also acted as an adviser and consultant to various countries, Israel being the most notable, as they established their national television broadcasting potential. He has also contributed significantly to the practice of higher education for the television profession and as an academic writer on broadcasting.

Hood’s life has been a mixture of involvement with broadcasting, the media, politics, education, and literature. The significance of his contribution to television has been a product of his scholarship, the range of his interests, and his creative drive, rather than any narrow dedication to the medium. He was born in the village of Edzell, Angus, Scotland, the son of a village schoolmaster. After graduating in English literature from Edinburgh University, he taught in secondary schools until World War II.

During the war, Hood served in Italian East Africa and the Middle East as an infantry officer, then as a staff officer on operational intelligence with the German Order of Battle. He was captured in North Africa and then spent time as a prisoner of war in Italy. He escaped at the time of the Italian Armistice in September 1943 and lived at first with the peasants. He then joined the partisans in Tuscany. His account of this period, *Pebbles from My Skull*, is a major piece of 20th-century war writing. He saw further military service in Holland, then at the Rhine crossing with the U.S. Ninth army. In the final years of the war, Hood did political intelligence work in Germany.

These biographical details are important for two reasons. The first is that the war took Hood and a whole generation of young, talented graduates and offered them, among other things, an apprenticeship in the farces, tragedies, and innovations of military administrative matters. The second is that the war has had a lasting impact on Hood’s literary output as well as providing him with a lasting contempt for cant and superficiality.

Fluent in German and Italian, Hood joined the BBC German Service at the end of the war. He went on to become head of the BBC Italian Service and then of the 24-hour English-language service for overseas. After a period as editor-in-chief of BBC Television News, he became controller of programs for BBC Television. Ten years working as a freelancer was followed, in 1974, by an invitation to become professor of film and television at the Royal College of Art in London. During the next four years, Hood was not always happy with his role as a senior educator. His approach to higher education was not always greeted with enthusiasm by his peers. He gave students the chance to be involved in the decision-making process in relation to both their own work and general staffing and administrative matters during his period at the Royal College of Art.

Hood has always been politically liberal. For several years he was vice president of ACCT, the film and television union in the United Kingdom. His politics might have placed him, as a senior manager, in something of a difficult position. He has never shirked responsibility, however, and has worked rather to make positive and productive use of his management positions. He was responsible, in large part, for the break between radio and television news, and was the first to employ a woman newsreader at the BBC. He worked under Carleton Greene at the BBC and was encouraged to seek to test the limits of viewer tolerance and interest. This resulted in series such as the now legendary satirical program *That Was the Week That Was*. In relation to television drama, Hood also did all he could to encourage the work of innovative writers such as David Mercer. Hood has publicly expressed his disgust at the fact that the BBC had denied for many years that MI5 routinely vetted BBC staff. On some things, he had to remain silent, and as a result of this he developed something of a reputation as an enigmatic character.

As a director and producer in his own right, Hood was responsible for such innovative programs as *The Trial of Daniel and Sinyavsky* (Soviet dissidents) and a program on the trial of Marshal Petain entitled *A Question of Honor*. Hood has made a unique contribution to broadcasting through the diversity of his interests and talents. He has demonstrated, through his literary output, that senior administrators in broad-
casting are not necessarily outside the world of direct productive activity. He has also made a significant contribution to writing about broadcasting, and his *On Television* is a classic in the field. Hood’s major contribution to television has been to demonstrate that both production and management can be enhanced and enriched by scholarship and astute political awareness.

ROBERT FERGUSON

Stuart Hood. Born in the Edzell, Angus, Scotland, 1915. Educated at Edinburgh University. Served as an intelligence officer in the British army during World War II; worked with Italian partisans, 1943–44. Briefly joined the Workers’ Revolutionary Party; writer, first achieving widespread recognition in the United Kingdom, 1960s; media career began at the BBC World Service; controller of programs, BBC-TV, 1962–64; independent filmmaker; involved with the Free Communications Group, from 1968; vice president, ACTT; continued writing, from mid-1980s; professor of film, Royal College of Art.

Hooks, Benjamin Lawson (1935– )

U.S. Media Regulator

Benjamin Lawson Hooks was nominated as a member of the Federal Communications Commission (FCC) by President Richard M. Nixon in 1972. Shortly thereafter the U.S. Senate confirmed the nomination, and Hooks became the first African American to be appointed to the commission. He served as a member of the FCC until July 27, 1977.

During his tenure on the commission, Hooks actively promoted the employment of African Americans and other minorities in the broadcast industry as well as at the FCC offices. He also encouraged minority ownership of broadcast properties. Hooks supported the Equal Time provision and the Fairness Doctrine, both of which he believed were among the few avenues available to minorities to gain access to the broadcast media.

Hooks received his undergraduate degree from LeMoyne College in his hometown of Memphis, Tennessee. However, because Tennessee at that time prohibited blacks from entering law school, he attended DePaul University in Chicago. He returned to Tennessee to serve as a public defender in Shelby County. From 1964 to 1968 he was a county criminal judge.

The nomination and confirmation of Hooks to the FCC represented the culmination of efforts by African-American organizations such as Black Efforts for Soul on Television (BEST), to have an African American appointed to one of the seven seats on the commission. Before Hooks’s appointment, there had been no minority representation on the commission and only two women, Frieda Hennock and Charlotte Reid, had been appointed up to that time.

Riding a wave created by the Report of the National Advisory Commission on Civil Disorders (1968), otherwise known as the Kerner Commission, which itself was a reaction to the civil unrest of the 1960s, African-American organizations such as BEST lobbied aggressively for an African-American appointment to the Federal Communications Commission. Under a section titled “The Negro in the Media,” the Kerner Com-
mission urged that African-Americans be integrated “into all aspects of televised presentations.” African-American organizations knew that in order to achieve such a goal, representation on the policy-making body that governed broadcasting was critical. However, when it was announced that Benjamin Hooks was one of three African Americans considered for a seat on the FCC, BEST expressed some strong reservations about his candidacy. Leaders of the organization did not believe that Hooks was qualified to serve on the commission and instead favored the appointment of Ted Ledbetter, a Washington, D.C., communications consultant. The third candidate considered for the position was Revius Ortique, an attorney from New Orleans. Although there are no set criteria for qualifying as a candidate for the FCC, it was believed by BEST that Hooks did not have the experience or expertise in broadcasting necessary to be an effective commissioner. However, while far from being an industry insider, Hooks was not entirely new to broadcasting.

In addition to being a lawyer and minister, Hooks had been a popular local television personality before being considered for the FCC post. He hosted a weekly half-hour program, Conversations in Black and White, on the station WMC-TV in Memphis. He had also appeared as a panelist on a broadcast of the program What Is Your Faith?, which aired on WREC-TV in Memphis. The presence of Hooks on the commission meant that organizations previously outside the policy-making process in broadcasting finally had access. The National Media Coalition, Citizens Communications Center, and the United Church of Christ all felt that their cases would at least get a fair hearing, because of Hooks.

Although he was a spokesman for the perspectives of blacks, women, and Latinos with respect to broadcasting policies, relations between Hooks and these groups were not always friendly. Two of his decisions while on the commission stand out as especially difficult for Hooks. The first was his vote to uphold the First Amendment and not censor a political candidate for the U.S. Senate in the Georgia primary. As part of his political campaign, senatorial candidate J.B. Stoner produced and aired television and radio spots that referred to African Americans as “niggers.” Understandably, African Americans and other groups wanted the spots banned by the FCC. Hooks, however, felt that supporting freedom of speech was more important than banning the spots. In a New York Times interview, he suggested that “even if it hurts sometimes, I’m a great believer in free speech and would never do anything to tamper with it.” He argued that in the long run, banning the spots would prove more detrimental to blacks and other groups than allowing them to air.

The second major decision that proved controversial during his stint on the FCC involved broadcasters and the rules related to Equal Employment Opportunities (EEO). Prior to 1976, stations with five or more employees were required to file a statistical report, including the number of employees by race and gender, with the commission. In 1976 the commission proposed to raise the number that would trigger this reporting requirement. It also proposed that such stations should have an EEO-approved strategy for increasing minority representation at the stations. Citizens’ groups felt the FCC was easing its restrictions regarding minority hiring practices on smaller stations. They asked Commissioner Hooks not to support the new policy. Hooks decided that the new rules would have an overall positive impact on the hiring of minorities and women, so he supported the new policies, except for the section no longer requiring stations with fewer than 50 employees to file EEO programs.

While Hooks served on the commission, broadcast ownership groups that included minorities were given preferential treatment by the FCC, an office of Equal Employment Opportunity was set up, and the employment of blacks by the Federal Communications Commission offices increased. After serving five years of his seven-year term, Hooks resigned from the FCC to become the head of the National Association for the Advancement of Colored People (NAACP). His plans...
were to establish a communications department in the NAACP in order “to see how we can make television more responsive to the people, black and white.”

The appointment of Hooks to the FCC must be seen as one part of a long history of demands for access to the broadcast media by African Americans. While African Americans had at times been included in the “television family,” their roles had too often been limited to stereotypical portrayals that were thought to contribute to distorted images of the black experience. Organizing and lobbying for an African-American appointment to the FCC was a continuation of a political and social process. The appointment of Benjamin Hooks symbolized a crystallization of those efforts, and while it would be incorrect to state that with his appointment all barriers to minority access were knocked down, it would be equally incorrect not to recognize that the appointment of Benjamin Hooks did lead to increased access for African Americans and other minorities in the field of broadcasting.

Hope, Bob (1903–2003)

U.S. Comedian

Bob Hope was one of television’s most renowned comedians and actors. He also worked in vaudeville, radio, and film, and, for the last eight decades of his long life, made audiences laugh at themselves, their contemporary culture and its foibles, their politics and politicians. For his efforts he received numerous awards and accolades. He was perhaps equally well known, and certainly equally applauded, for his efforts in entertaining U.S. soldiers overseas.

Hope began his career in 1914 when he won a Char-
lie Chaplin imitator contest. He then made his way into vaudeville in the 1920s and his Broadway acting and musical debut in 1933, when he appeared in Roberta. Hope moved to Hollywood in 1938 after appearing in several short films and on radio. He made his film acting debut in the full-length film The Big Broadcast of 1938, where he first sang his signature song, “Thanks for the Memory,” with Shirley Ross. In 1940 Hope made the first of seven “Road” films, The Road to Singapore, with Bing Crosby and Dorothy Lamour. He became a showbiz wizard by playing on his rapid-fire wisecracking technique in the “Road” films that followed. The best-known and probably most televised of these films, The Road to Utopia, was made in 1945. Hope regularly starred as a comic coward, caught in comic-adventurous situations, but he generally wound up winning the hand of the leading lady. In addition to the “Road” films, he also appeared in many other movies. He made his last “Road” film, The Road to Hong Kong, in 1962, and his film career virtually ended in the early 1960s.

Hope was one of the biggest names in show business when television began to develop. Unlike some of his fellow stars, he jumped into the new medium, making his debut on Easter Sunday in 1950. On a regular basis he was seen on two budget variety shows, Chesterfield Sound Off Time and The Colgate Comedy Hour. In 1953 NBC broadcast the first annual Bob Hope Christmas Special. These specials were usually filmed during his regular tour to entertain the troops overseas. He also began a series of comedy specials for NBC-TV, where he became known for his marvelous comic timing, his stunning array of guest stars, and his ease with both studio audiences and the camera. His guests regularly included top stars from film, stage, television, and the music industry. He was usually surrounded by Hollywood starlets and athletic figures. His humor poked gentle fun at the world of politics, usually leaning toward the conservative. He also made numerous guest appearances on various comedy shows such as I Love Lucy, The Danny Thomas Show, and The Jack Benny Show, where he was applauded for his wisecracking ability to throw new comic wrenches into already hilarious situations. In most cases, Hope simply played himself, and his appearance as a guest star was a guarantee of a larger audience. His ability to make both the audience and his costars feel at ease, eager for the wry comment that would put a new spin on any situation, was performance enough.

In commemoration of the 50th anniversary of end of World War II, NBC broadcast an hour-long Bob Hope special chronicling the comedian’s camp tours during the war. Hope, at the age of 92, narrated Memories of World War II. The special was crafted from a video and CD collection originally produced for retail sales. An additional 20 minutes shows Bob Hope and his wife Dolores talking with friends and coworkers, including Charlton Heston, Dorothy Lamour, and Ed McMahon, about special photos and remembrances about the war, the entertainment, and their efforts to build and maintain morale. Many scenes extol Hope’s comic abilities, patriotism, and human compassion. The recollections range from outrageously funny to heartfelt to harrowing. Still, some critics saw the special as self-congratulatory, inept, and awkward. Mike Hughes, a critic for the Gannett News Service, declared, “This doesn’t mean Hope isn’t a fine person. It doesn’t mean the war effort wasn’t worthy. It simply means that bad is bad, no matter the motivation.” By this point in his long career, Hope seemed at times anachronistic, a reminder of a different world, and a different sort of television.

In spite of such commentary, Bob Hope remained an American institution in the entertainment world, a quick-witted master of comic response, until his death on July 27, 2003, less than two months after his 100th birthday. He will be remembered as one of the founda-

Hopkins, John (1931–1998)
British Writer

John Hopkins was one of the great pioneers of British television drama whose considerable output as a writer includes the award-winning play quartet *Talking to a Stranger*, described by one critic as “the first authentic masterpiece written directly for television.” Hopkins’s career in television began first as a studio manager in the 1950s, but he was soon turning his attention to writing and putting his earlier experience to good use in his plays. Few other writers have exploited so effectively the potential of the multi-camera studio in their work. After serving an apprenticeship with single plays, Hopkins rapidly established himself as a key writer for the popular BBC crime series *Z Cars* and, between 1962 and 1964, he wrote 53 episodes for the program. He went on to write noted single plays, such as *Horror of Darkness* (1965) and *A Story to Frighten the Children* (1976), and also to adapt Dostoevsky’s *The Gambler* (1968), and John Le Carré’s *Smiley’s People* with the novelist (1982). The pinnacle of Hopkins’s achievement, however, is undoubtedly his 1966 series, *Talking to a Stranger*, directed by Christopher Morahan and shown on BBC 2.

The 1960s in Britain provided a golden age for writers of TV drama, with well over 300 hours a year available in the schedules for original work. The 1964 launch of BBC 2, in particular, opened up opportunities for serious TV drama and exploration of television as an art. Experimentation with form was being discussed openly by writers, and Troy Kennedy-Martin, the originator of the *Z Cars* series, produced a manifesto for a new TV drama free from the conventional spatial and temporal constraints of naturalist theater. *Talking to a Stranger*, especially in its free-floating use of time, sets up a similar experimental agenda, but in other respects this program remains rooted in a familiar naturalism and the close-up observation of ordinary people.

Nothing could be more mundane than the basic situation at the center of this family drama. A grown-up daughter and her brother go back home to visit their aging father and mother, but the emotional collisions that arise provoke unexpected tragedy—the suicide of the mother. Some of the same events are repeated from one play to the next, but the viewpoint changes as each play focuses on a different character. In this way, the series provides a sustained opportunity to explore subjective experience. The self-absorption of the characters is enhanced by the use of experimental devices that include extended monologues, overlapping dialogue, lingering reaction shots, and film flashbacks in time.

Hopkins’s vision of human loneliness and alienation may be an uncompromisingly bleak and pessimistic one, but it is made compelling through his artistic manipulation of the television medium. As a family drama, *Talking to a Stranger* bears comparison to Eugene O’Neill’s great stage play *A Long Day’s Journey into Night*. In relation to the development of the art of television, Hopkins’s successful pioneering of the short series for serious drama established an important precedent in Britain, and writers of the stature of Dennis Potter and Alan Bleasdale subsequently followed...
Hopkins, John

in his example to produce some of their most distinctive work.

Brandt, George, editor, British Television Drama, Cambridge: Cambridge University Press, 1980
Kennedy-Martin, Troy, “Nats Go Home: First Statement of a New Drama for Television,” Encore (March–April 1964)
Hour Glass was a seminal, if now largely forgotten, variety program airing on NBC-TV from May 1946 to February 1947. It is historically important because it exemplified the issues faced by networks, sponsors, and advertising agencies in television's formative years. The program was produced by the J. Walter Thompson agency on behalf of Standard Brands for their Chase and Sanborn and Tenderleaf Tea lines. The sponsor and agency took several months to decide on the show's format, eventually choosing variety for two reasons: it allowed for experimentation with other forms (comedy sketches, musical numbers, short playlets, and the like), plus Thompson and Standard Brands had previously collaborated on the successful radio show The Chase and Sanborn Hour.

The lines of responsibility were not completely defined in those early years, and the nine-month run of Hour Glass was punctuated by frequent squabbling among the principals. Each show was assembled by seven Thompson employees working in two teams, each putting together a show over two weeks in a frenzy of production. Using a format that was familiar to Chase and Sanborn Hour listeners, the program accentuated star power as the means of drawing the largest audience. Hour Glass featured different performers every week, including Peggy Lee and, in one of the first examples of a top radio star appearing on network television, Edgar Bergen and Charlie McCarthy, who appeared in November 1946. The show also showcased filmed segments produced by Thompson’s Motion Picture Department; these ranged from short travelogues to advertisements. Every episode also included a ten-minute drama, which proved one of the more popular portions of the show.

It must have been the curiosity factor that prompted some stars to appear on the show because they certainly were not paid much money. Hour Glass had a talent budget of only $350 a week, hardly more than enough to pay scale wages for a handful of performers. Still, Standard Brands put an estimated $200,000 into the program's nine-month run, by far the largest amount ever devoted to a sponsored show at that time. Although Thompson and Standard Brands representatives occasionally disagreed over the quality of individual episodes, their association was placid compared to the constant sniping that was the hallmark of the agency's relationship with NBC. It started with unhappiness over studio space, which Thompson regarded as woefully inadequate, and escalated when the network insisted that an NBC director manage the show from live rehearsals through actual broadcast. The network was similarly displeased that Thompson refused to clear their commercials with NBC before air time.

In February 1947 Standard Brands canceled Hour Glass. They were pleased with the show's performance in terms of beverage sales and its overall quality, but they were leery about continuing to pour money into a program that did not reach a large number of households (it is unclear if the show was broadcast anywhere other than NBC's interconnected stations in New York and Philadelphia). The strain between NBC and Thompson also played a role in the decision to cancel the program. Still, Hour Glass did provide Thompson with a valuable blueprint for the agency's celebrated and long-running production Kraft Television Theatre.

May 1946–March 1947 Thursday 8:00–9:00
**Howdy Doody Show, The**

**U.S. Children’s Program**

*The Howdy Doody Show* was one of the first and easily the most popular children’s television show of the 1950s in the United States, and a reflection of the wonder, technical fascination, and business realities associated with early television. While Howdy and his friends entertained American children, they also sold television sets to American parents and demonstrated the potential of the new medium to advertisers.

The idea for *Howdy Doody* began on the NBC New York radio affiliate WEAF in 1947, with a program called *The Triple B Ranch*. The three Bs stood for Big Brother Bob Smith, who developed the country-bumpkin voice of a ranch hand and greeted the radio audience with, “Oh, ho, ho, howdy doody.” Martin Stone, Smith’s agent, suggested putting Howdy on television and presented the idea to NBC Television programming head Warren Wade. With Stone and Roger Muir as producers, Smith launched *Puppet Playhouse* on December 17, 1947. Within a week the name of the program was changed to *The Howdy Doody Show*.

Children loved the Doodyville inhabitants, a skillfully created, diverse collection of American icons. The original Howdy marionette was designed by Frank Paris and, in keeping with Smith’s voice, was a country bumpkin; however, in a dispute over licensing rights, Paris left the show with the puppet. The new Howdy, who premiered in March 1948, was an all-American boy with red hair, 48 freckles (one for each state in the United States at that time), and a permanent smile. Howdy’s face symbolized the youthful energy of the new medium and appeared on the NBC color test pattern beginning in 1954.

Smith treated the marionettes as if they were real, and as a result, so did the children of America. Among the many unusual marionettes on the show was Phineas T. Bluster, Doodyville’s entrepreneurial mayor. Howdy’s grumpy nemesis, Bluster had eyebrows that shot straight up when he was surprised. Bluster’s naive, high-school-aged accomplice was Dilly Dally, who wiggled his ears when he was frustrated. Flub-a-Dub was a whimsical character who was a combination of eight different animals. In *Howdy and Me*, Smith notes, “Howdy, Mr. Bluster, Dilly, and the Flub-a-Dub gave the impression that they could cut their strings, saunter off the stage, and do as they pleased.”

Although the live characters, particularly the Native Americans Chief Thunderthud and Princess Summerfall Winterspring, were by modern standards stereotypical and often clownish, each had a rich heritage interwoven into the stories. These were prepared by Eddie Kean, who wrote the scripts and the songs until 1954, and Willie Gilbert and Jack Weinstock, who wrote scripts and song lyrics thereafter. For example, Smith (born in Buffalo, New York) was transformed into Buffalo Bob when he took his place in the story as the great white leader of the Sigafoose tribe. Chief Thunderthud (played by Bill LeCornec) of the mythical Ooragnak tribe (“Kangaroo” spelled backward) introduced the word “Kowabonga,” an expression of surprise and frustration, into the English language. One of the few female characters in the cast was the beloved Princess Summerfall Winterspring of the Tinka Tonka tribe, who was first introduced as a puppet, then transformed into a real, live princess, played by Judy Tyler.

*The Howdy Doody Show* also reflected Americans’ fascination with technology. Part of the fun and fantasy of Doodyville were crazy machines such as the Electromindomizer, which read minds, and the Honkadoodle, which translated Mother Goose’s honks into English. Television’s technical innovations were also incorporated into the show. On 23 June 1949 split-screen capabilities were used to join Howdy in Chicago with Buffalo Bob in New York, one of the first instances of a cross-country connection. Howdy also ushered in NBC’s daily color programming in 1955.

*The Howdy Doody Show* was immediately successful and was NBC’s first daily show to be extended to five days a week. In 1952 NBC launched a network radio program featuring Howdy, and in 1954 *Howdy Doody* became an international television hit with a Cuban and a Canadian show, using duplicate puppets and local talent, including Robert Goulet as the Canadian host Timber Tom.

As amazing as it may now seem, there were published concerns over violent content in *Howdy Doody*, but although the action in Doodyville often involved slapstick, parents generally supported the show. Much of the mayhem was perpetrated by a lovable, mis-
chievous clown named Clarabell Hornblow. Clarabell was played until 1953 by Bob Keeshan, who later became Captain Kangaroo. The clown's pratfalls were generally accidents, and the most lethal weapon on the show was his seltzer bottle. Moreover, educational material was consciously incorporated both into the songs and the stories; for example, young viewers received a lesson in government when Howdy ran for president of the kids of America in 1948. The educational features of the program made the Doodyville characters attractive personal promoters both for the show and for the sale of television sets.

In an era before the advent of the Nielsen ratings, Howdy Doody demonstrated its ability to draw an audience both for NBC and for possible advertisers. In 1948 children's shows were often provided as a public service either by the networks or the stations. When Howdy ran for president of all the kids, Muir suggested that the program offer free campaign buttons. It received 60,000 requests, representing one-third of American homes with television sets at that time. Within a week the program's advertising time was sold out to major advertisers, such as Colgate Palmolive Peet Company. Although the producers were careful about what they advertised, they were very aggressive about marketing products they selected, incorporating product messages into songs and skits.

The producers also recognized the potential for merchandising. In 1949 the first Howdy Doody comic book was published by Dell and the first Howdy Doody record was released, selling 30,000 copies in its first week. There were also Howdy Doody wind-up toys, a humming lariat, a beanie, and T-shirts, among other licensed products.

Although extremely popular, the demise of The Howdy Doody Show demonstrated the financial realities of the new medium. In 1956 the early-evening timeslot became more attractive to older consumers, and the show was moved to Saturday morning. Although it continued to receive high ratings, the expense of producing it was eventually its downfall, and The Howdy Doody Show was taken off the air on September 24, 1960, after 2,343 programs.

The most famous moment in the history of The Howdy Doody Show came during the closing seconds of the final show, when Clarabell, who had never before spoken but communicated through pantomime and honking his horns, surprised the audience by saying, “Good-bye, kids.” Today, the rich, live-action performances that filled early children's programming are considered too costly for modern, commercial television in the United States. The show was briefly brought back to television as The New Howdy Doody Show in August 1976, but it was canceled in January 1977, after only 130 episodes.

Howdy Doody Show, The
abled him to use his exaggerated facial expressions to good effect. He appeared a few more times in that period, but he was about to enter one of the quiet phases of his career.

Howerd made his feature film debut in 1954, a major role in The Runaway Bus, and he had a small but memorable part in The Ladykillers the following year; it was such film roles and occasional radio appearances that kept him occupied throughout the rest of the 1950s. His television career throughout this period was in the doldrums and, with each year bringing in less work than the year before, he seemed to be on a familiar path that led to obscurity. Then, in 1962, Howerd's career was suddenly and dramatically resurrected when he did a stand-up routine for Peter Cook's Establishment Club, an American-style comedy cabaret club specializing in satire. With a script by Johnny Speight, Howerd was a big hit. It seemed his style of innuendo and ad-libbed asides had a place in the new world of anti-establishment comedy. The following year, Howerd consolidated his revitalized reputation with an appearance on the BBC's controversial and ground-breaking satire series That Was the Week That Was. In the space of a year, he was reestablished as a major comedy star and became a familiar face on television as a guest star or leading artist in variety shows. He headlined his own show again, Frankie Howerd (1964–66), this time with scripts from Galton and Simpson, mixing an introductory stand-up routine with a long-form sketch that continued the same theme. Later, the series The Frankie Howerd Show (1969) was made by ATV for the ITV network, and Howerd also appeared in one-off entertainments such as The Howerd Hour (1968) made by ABC for the ITV network.

In 1970 Howerd had his biggest TV success with Up Pompeii! (BBC 1970), a period-piece sitcom set in ancient Pompeii and inspired by the American stage musical A Funny Thing Happened on the Way to the Forum, in which Howerd had appeared (as Prologus and Pseudolus) in its British stage production. In 1969 a pilot episode of Up Pompeii! raised enough interest for the series to continue the following year. Howerd played the slave Lurcio, who commented on and got involved in the various comings and goings in his mas-
ter’s household. His master was Ludricrus Sextus, and most of the main characters in the plots had punnish names, such as Ammonia, Erotica, Nausius, and Prodigus. The shows (scripted by Talbot Rothwell, one of the writers of the bawdy Carry On... film series) were peppered with innuendo and smutty references and also allowed Howerd free rein to talk directly to camera and deliver his typically weary asides about how awful the show was. This method of combining a pseudo-stand-up routine with plot—coupled with Howerd’s conspiratorial relationship with the viewing audience, which allowed him to step in and out of character—gave the series a unique, almost theatrical feel that lingered long in the public psyche despite the fact that only 13 episodes were made (14 including the pilot). Such was its popularity that an Easter special, Further Up Pompeii!, aired on the BBC in 1975 and a revival, also called Further Up Pompeii!, was made by the commercial London Weekend Television in 1991. It also spawned a feature film version in 1971 (followed by two others on similar themes, a medieval romp, Up the Chastity Belt, in 1971, and a World War I version, Up the Front, in 1973). On TV the format was reworked as Frankie Howerd in Whoops Baghdad (BBC, 1973), which ran for six episodes and featured Howerd as Ali Oopla, bondservant to the Wazir of Baghdad.

Howerd actually improved with age. His face, lined and wrinkled with doleful bags under his eyes, became even more expressive, allowing him to suggest any number of things with a raise of the eyebrow, his impossibly deep frown, or his wide-eyed aghast look. The face was perfectly fitted to his camp delivery, and his confidential asides and world-weary looks were given added authenticity. In 1975 Howerd appeared in an abortive pilot A Touch of the Casanovas for Thames TV, and he made the series The Howerd Confessions for the same company the following year. But British tastes were changing. The anarchic comedy wave that emerged in the wake of the punk rock phenomenon began to be taken seriously by television companies in the early 1980s, and there was a backlash against Howerd’s sexual-innuendo style of humor in favor of full-frontal comedy attacks on taboo subjects. After his Yorkshire TV series Frankie Howerd Strikes Again (1981), Howerd once again found it harder to come by work. His 1982 sitcom Then Churchill Said to Me was made but shelved by the BBC; in 1985 he was chosen as front-man in an ill-fated and ill-timed attempt to make The Gong Show (Gambit productions for C4), a British version of the successful U.S. show.

However, some of the younger audiences began to rediscover and reassess the old comedians, and Howerd once again found himself back in favor—achieving success appearing before rapturous college students comparable to that which he had earlier enjoyed at the Establishment Club. Indeed, evidence of Howerd’s regained popularity can be found from his appearance in 1987 on LWT’s live new-wave comedy showcase Saturday Live; it meant that the producers considered Howerd “hip” enough for their audience. Although this appearance did not have the sort of impact his previous comeback (on TW3) had had, it nonetheless heralded another revival, and he again was a regular face on TV as he appeared in the young people’s sitcom All Change (Yorkshire TV, 1989). A series of his concerts were filmed for television, the most revealing of which was Live Frankie Howerd on Campus (LWT, 1990). Howerd, back in demand, was as busy as ever.

Two revealing TV documentaries contain much of the essence of Howerd’s style and craft: 1990’s Ooh Er, Missus—The Frankie Howerd Story from Arena (the BBC’s art documentary series) and Thames Television’s Heroes of Comedy—Frankie Howerd (1995).

Huggins, Roy (1914–2002)
U.S. Writer, Producer

Roy Huggins was a prolific and influential producer who created several of the most enduring dramatic series in the history of U.S. television, including Maverick (1957–62), 77 Sunset Strip (1958–64), The Fugitive (1963–67), and The Rockford Files (1974–80). Huggins spent much of his career in television as a producer for two large studios, Warner Brothers and Universal. Working within these studios, Huggins served as producer or executive producer on made-for-television movies, miniseries, and more than 20 dramatic series. While Huggins supervised a wide range of projects, many of which were simply studio assignments, he was one of the first writer-producers to emerge once television production shifted to Hollywood in the 1950s. Many of his series bear the distinctive stamp of his irreverent, self-deprecating wit and his fondness for characters who operate on the margins of society.

As a civilian employee of the U.S. government during the war, Huggins spent his spare time writing hard-boiled crime fiction, inspired by the work of Raymond Chandler. In 1946 his first novel, The Double Take, was published. Huggins sold several serialized mysteries to The Saturday Evening Post and soon published two more novels, Too Late for Tears and Lovely Lady, Pity Me. When Columbia Pictures purchased the rights to The Double Take in 1949, Huggins recognized an opportunity for more steady employment, and signed on to adapt the script. From here he entered the movie industry, working as a contract writer at Columbia and RKO. In 1952 he wrote and directed the feature film Hangman's Knot, a Randolph Scott western produced by independent producer Harry Joe Brown for Columbia. Afterwards, he signed a contract with Columbia, where he worked as a staff writer until 1955.

Huggins made the transition to television in April 1955, when Warner Brothers hired him as a producer for its inaugural television series, Warner Brothers Presents, an omnibus series that featured three alternating dramas, King's Row, Casablanca, and Cheyenne. Huggins agreed to produce King's Row, but after creating the series he was reassigned to Cheyenne in order to salvage the faltering series, which faced withering reviews from both critics and sponsors. Huggins rescued Cheyenne by recycling scripts from Warner Brothers movies such as Treasure of the Sierra Madre (1948), often simply inserting the character of Cheyenne Bodie (Clint Walker) into familiar stories from the studio vaults. These changes brought the series a measure of respect as an "adult" western and made it the studio's first full-fledged hit.

Huggins immediately moved from Cheyenne to Conflict (1956–57), a short-lived anthology series that
alternated with the western. During the production of Conflict, Huggins met James Garner, an actor who perfectly embodied his wry sense of humor. When Warner Brothers asked Huggins to create a new series, he thought immediately of Garner and tailored Maverick as a star vehicle for him. In a crowded field of TV westerns, Maverick quickly moved into the top ten and won an Emmy for Best Western in 1958.

Maverick was a refreshing antidote to the strained seriousness of so many westerns, including Cheyenne, but it was also ground-breaking because it redefined the heroic protagonist and brought a sly self-mockery to television drama. For the first time, Huggins built a series around a flawed central character, a reluctant hero who lives on the fringes of society. Huggins wanted Bret Maverick to have none of the “irritating perfection” of TV’s typical western heroes. Instead, Maverick is a much more complicated character than those found at the center of most dramatic series up to that time. Although obviously charming, he is an unrepentant rascal whose moral code is molded by expediency, greed, and the need for self-preservation. As Garner and costar Jack Kelly, who played brother Bart Maverick, proved adept at balancing a subtle blend of adventure and comedy, Huggins guided the series in the direction of comedy. While generally sending up the entire western genre, Maverick soon began to neddle its more serious competitors, offering razor-sharp parodies of Gunsmoke and Bonanza. The touch of irony that Huggins brought to the western genre in Maverick—an irreverent blend of drama and comedy—has become one of the defining characteristics of dramatic series in the subsequent years.

During the second season of Maverick, Huggins created the detective series 77 Sunset Strip, which was based loosely on his novel Lovely Lady, Pity Me. It was 77 Sunset Strip that revived the crime drama on U.S. television, much as Maverick had revived the western, by injecting a healthy dose of humor into a genre trapped in grim rites of law and order. In place of the stolid cops who governed most crime series, 77 Sunset Strip brought the hard-boiled private detective into the endless summer of Los Angeles circa 1958. Starring Efrem Zimbalist, Jr., and Roger Smith as private detectives Stuart Bailey and Jeff Spenser, the series defined Sunset Boulevard as the epicenter of hipness on television, a sun-drenched world of cocktails, cool jazz, and convertibles.

77 Sunset Strip lacked the satirical edge of Maverick, because after producing the pilot episode Huggins had no responsibility for the series. Nor did he have anything to do with the clones generated by the Warner Brothers management: Hawaiian Eye (1959–63), Bourbon Street Beat (1959–60), and Surfside 6 (1960–62). Huggins also stopped producing Maverick after the second season, wearied by the pace of production at Warner Brothers and by the studio’s tight-fisted finances. As a matter of policy, Warner Brothers refused to share profits with its television personnel—including Huggins, its most gifted and indispensable producer. Huggins was directly responsible for the studio’s three most successful series, but he was not even given credit for having created Maverick and 77 Sunset Strip, which studio executives claimed had been based on properties already owned by the studio.

Huggins left Warner Brothers and in October 1960 became the vice president in charge of television production at 20th Century–FOX. This proved to be a strange interlude in his career, because while he was only able to place one series in prime time, that series stirred up an inordinate amount of controversy. Bus Stop (1961–62), adapted from the play by William Inge, was set in a small town in Colorado, a way-station on an otherwise endless highway. The central location served as the premise for an anthology series featuring the stories of wandering, disenfranchised characters who passed through the bus stop. The program gained national notoriety when an episode titled “A Lion Walks among Us” starred pop icon Fabian as a charismatic psychopath who commits several cold-blooded murders. In the climate of criticism that was
soon crystallized in a speech by Newton Minow, the chair of the Federal Communications Commission (his “Vast Wasteland” speech), the episode became a target of television critics and politicians, who seized upon it in order to decry television’s degrading influence on American culture.

Stung by the criticism of the series, 20th Century-FOX placed Huggins in a kind of administrative limbo by refusing to allow him to develop other series and essentially waiting for his contract to expire. Huggins used the unexpected free time to write a stinging rebuttal of Minow that appeared in Television Quarterly. In writing the article, Huggins became one of the few members of Hollywood’s creative community to defend the artistic merit of commercial, popular culture and to question Minow’s essentially elitist criticism of television. He criticized Minow and other cultural elitists for allowing their contempt for kitsch (“their dread of being caught in a profane mood”) to cloud their judgment. Huggins’s essay amounted to a sophisticated and subtle defense of popular culture in an era when television producers did not make artistic claims for their work. “The public arts,” he wrote, “are created for a mass audience and for a profit; that is their essential nature. But they can at times achieve truth and beauty, and given freedom they will achieve it more and more often.”

After the debacle at FOX, Huggins returned to graduate school at University of California, Los Angeles, determined to get his Ph.D. and to leave television behind. He needed a bankroll and came up with the idea of creating a series that he could sell to another producer, then sit back and watch the residuals roll in. This series was The Fugitive, which he sold to independent producer Quinn Martin after overcoming ABC’s initial resistance to a series with an escaped convict as its central character. The story of Dr. Richard Kimble (David Janssen), suspected of murder and given freedom they will achieve it more and more often.

In 1963 Huggins gave up his plans of graduate school and accepted a job as a vice president in the television division at Universal, where he spent the next 18 years. During this period, Universal became the predominant creator of dramatic series, often accounting for much of the NBC schedule throughout the 1960s. Huggins adapted to the programming formats that evolved over the years at Universal, producing series, made-for-TV movies, and miniseries. He began by producing The Virginian (1962–71) and Kraft Suspense Theater (1963–65). He created and produced Run for Your Life (1965–68), a variation on The Fugitive in which attorney Paul Bryan (Ben Gazzara) sets off on an adventurous journey after discovering that he has a mysterious fatal illness and only two years to live.

In 1969 Huggins set up an independent production company, Public Arts, at Universal and began a series of coproductions with the studio. He created the segment “The Lawyers” of the omnibus series The Bold Ones (1969–73) and produced several other series, including Alias Smith and Jones (1971–73), Toma (1973–74), and Baretta (1975–78). The crown jewel of Huggins’s period at Universal is certainly The Rockford Files, which he cocreated with Stephen J. Cannell. Huggins produced The Rockford Files for only two seasons, but his influence is unmistakable in the self-deprecating, slightly disreputable private eye played by James Garner.

In the late 1970s Huggins turned to producing mini-series, including Captains and Kings (1976) and Arthur Halley’s Wheels (1978). His association with Universal ended in 1980, when he left to concentrate on writing. In 1985 he returned to television at the request of his former protégé Stephen J. Cannell to produce Hunter (1984–91), and he served as co-executive producer for a new television version of The Fugitive (2000–01). That series did not fare well, but feature-film versions of The Fugitive (1993) and Maverick (1994) were successes at the box office. Their success is a tribute to Huggins’s lasting importance as one of television’s great storytellers. Huggins died on April 3, 2002.

Hungary

During the socialist era, Hungarian television boasted more channel diversity and more openness to foreign broadcasts, including Western channels, than any other Eastern bloc nation. Yet ironically, commercial television arrived in Hungary only in late 1997, much later than in other Central European nations. The explanation for this irony lies in uncertainties about commercial broadcasting and disagreements about the proper role of television in the newly democratic nation.

Today, Hungarian television includes three state-run channels, two national commercial broadcasters, several commercial cable and satellite channels, and a number of local and regional non-profit broadcasters. Magyar Televízió (MTV), the premier state broadcaster, enjoys a nationwide reach, while a second public channel, MTV2, is carried on satellite and cable. State-funded Duna Televízió operates a second satellite channel that targets the more than three million Hungar-
ian speakers who live in neighboring countries. Hungarian public broadcasting is a mixed system, funded by a combination of license fees and advertising.

The two national commercial channels are RTL-Klub, which broadcasts on the channel formerly occupied by MTV2, and TV2, which took over the former Soviet channel. Both RTL-Klub and TV2 are run by a media consortium headed by Western investors. RTL-Klub is owned by Luxembourg-based CLT-Ufa (49 percent), the Hungarian telephone monopoly MATÁV (25 percent), the British media group Pearson (20 percent), and the Austrian bank group Raiffeisen (6 percent), while TV2 is owned by Scandinavian-based SBS (49 percent), Hungarian production company MTM Kommunikációs Rt. (38.5 percent), and German production company Tele-München Fernseh (12.5 percent).

Cable penetration in Hungary is high, and DTH services are growing. Estimates project that in 2002, 52 percent of Hungary's 3.8 million television homes subscribed to cable, while DTH penetration was 20 percent. Cable and satellite broadcasters include both niche and general entertainment channels. Among the most popular of these channels are HBO Hungary, the American movie channel's first international venture (begun in 1991), and the general entertainment channel ViaSat, owned by the Swedish media group Modern Times. TV3, a general entertainment cable channel owned by U.S.-based Central European Media Enterprises (CME), a media powerhouse in the region, went bankrupt in 2000, after three years on the air.

Hungary boasts one of the fastest-growing advertising industries in the region, with revenues climbing more than 500 percent between 1997 and 2002, and projected to nearly double again in the next five years. For the first four months of 2002, RTL-Klub was the top-ranked broadcaster, averaging a 33 rating in all demographics, followed closely by TV2 with an overall 30 rating. MTV, meanwhile, attracted 12.7 percent of overall viewers during the same period. While imported programming from the United States and Western Europe, particularly Germany, make up a significant portion of the Hungarian television landscape, local production is growing. ViaSat scored good ratings with its local version of the reality series Bár (The Bar), especially among 18- to 49-year-olds, while RTL-Klub has had success with the homegrown melodrama Barátköz (Among Friends). In addition, Latin American telenovelas have proved quite popular, leading to the formation of the Romantica cable channel devoted exclusively to the genre.

Television broadcasting in Hungary began on May 1, 1957, with a live broadcast of May Day ceremonies from Hero's Square. The Rome Olympics in 1960 greatly helped accelerate adoption rates of the new medium, nearly doubling the number of sets to 100,000 by the end of the year. In order to understand the character of Hungarian television during socialism, it is necessary to examine briefly the political conditions surrounding broadcasting. In 1956, Hungarian reformers overthrew the socialist government, and were suppressed only through Soviet military intervention. Thereafter the new party secretary, János Kádár, implemented a series of political and economic reforms—often referred to as "goulash communism"—designed to redress or placate many of the reformers' concerns. Openness to the West, including unrestricted travel for Hungarians, was an important part of these reforms, and this openness extended to imported Western programming and television channels. Sparks and Reading (1992) report that nearly 70 percent of MTV's programming in 1986 was imported from Western nations, in particular the UK and West Germany. Viewers were also given a degree of choice in entertainment and current affairs programming with the introduction of MTV2 in the mid-1970s. One of the most popular and enduring programs of this period was the amateur talent-variety show Klub, which launched in 1962, which launched the careers of several musicians, actors, and entertainers.

In 1984, Hungary became the first Eastern bloc nation to introduce community cable television, reaching upwards of 200,000 homes by 1988. Run by the Hungarian Post Office, these cable systems carried public television broadcasts from West Germany and France. Also under the 1984 media laws, the legality of private television productions, the reception of satellite and terrestrial broadcasts from abroad, and the purchase of VCRs and videotapes were affirmed. The relative openness of television during this period kept the media from losing popular confidence, which also helped insulate them from radical changes when the socialist regime collapsed in 1989.

Although the transition in Hungary from the socialist regime to a democratic form of government occurred peacefully, the same cannot be said for the transition from socialist state broadcasting to the current public-private system. From the collapse of the ruling socialist party in 1989 until the passage of the new media law in late 1995, the various factions of the Hungarian political scene carried out a highly publicized "media war" over the future of broadcasting. In the 1990 elections, a conservative coalition led by the nationalist Hungarian Democratic Forum (MDF) came to power, with the opposition led by the liberal Alliance of Free Democrats (SZDSZ) and the re-christened Hungarian Socialist Party (MSZP). The media wars stemmed from different political philosophies regarding broadcasting. Sensitive to criticism, the MDF tried to install its own members
in positions of power at MTV under the guise of purging the broadcaster of leftovers from the socialist period. The opposition, meanwhile, hoped to place the state broadcaster beyond governmental control in order to keep MTV from falling under the majority’s influence.

Because neither side could muster the two-thirds majority required to pass broadcasting legislation, they agreed to appoint a compromise candidate, Elemér Hankiss, to head Hungarian television until the details of the new law could be hammered out. Hankiss drew the ire of the MDF when he removed its appointees from positions of power in an effort to make television news more objective, and the MDF fought back by invoking a 1974 decree that gave the prime minister the authority to dismiss media presidents. The decree was sent to the president, opposition leader Árpád Göncz, for his signature, but Göncz refused to sign, sending the matter to the Constitutional Court. The Court held in favor of the president’s right to refuse to sign legislation that he deemed undemocratic, and also required parliament to pass new legislation by the end of 1992.

The 1992 deadline came and went with various drafts of the new laws stalled in parliament. Weary of battling the MDF, Hankiss formally resigned, along with his counterpart at Hungarian Radio. The MDF quickly took control of MTV and turned it into a party mouthpiece, firing or reassigning numerous journalists and launching a concentrated attack against the MSZP, which was then leading in election polling. Their efforts, however, proved unsuccessful, as the MSZP emerged victorious and formed a majority coalition with the SZDSZ. Most importantly for its impact on broadcasting, the MSZP-SZDSZ coalition held 72 percent of parliamentary seats, more than the two-thirds required to pass a media law. In spite of the change in government, cronyism continued at MTV and political wrangling delayed the new media law until late 1995.

The ruling coalition appointed a new president of MTV, who subsequently fired conservative personnel appointed by the MDF and replaced them with liberals and socialists, leaving many to wonder whether anything had changed with the new government. The liberal-socialist coalition also squabbled internally about how best to design a public-private broadcasting industry. As issue was the fate of the public channel MTV2, which the socialists wanted to keep in public possession, and the liberals wanted to privatize to help pay off foreign debts. Ultimately, a compromise was reached that privatized the second channel and placed MTV2 on satellite.

The 1996 Radio and Television Services Act established an oversight commission for public broadcast-

Huntley, Chet (1911–1974)

U.S. Broadcast Journalist

Chet Huntley is most famous for his role as co-anchor of the critically acclaimed and highly rated Huntley-Brinkley Report. This evening newscast, which first appeared in October 1956 on NBC, ushered in the modern era for television evening news. The Huntley-Brinkley Report introduced an innovative broadcast style, cutting between Huntley in New York and David Brinkley in Washington, D.C. The energy, pace, and style of the program was clearly a step beyond the more conventional work of the "news readers" who had preceded the new format.

Huntley’s rise to broadcast stardom began during his senior year at the University of Washington, when he landed his first broadcasting job, at Seattle’s KPCB radio. His roles for the station ranged from writer and announcer to salesman, and his salary was a mere $10 a month. These modest beginnings led to several short stints at radio stations in the northwest, but by 1937 Huntley settled in Los Angeles. He worked first at KFI Los Angeles, and then at CBS News in the west. He stayed with CBS for 12 years until he was lured to ABC in 1951. His tour of the networks was complete when NBC enticed him to New York in 1955 with talk of a major TV news program.

Huntley first worked with Brinkley in 1956 while co-anchoring the Republican and Democratic national conventions of that year. The NBC duo successfully garnered the largest share of the convention television audience, and as a result, the Huntley-Brinkley team was born. The Huntley-Brinkley Report’s audience was estimated at 20 million, and in 1965, a consumer research company found that, as a result of their hugely successful news program, both Huntley and Brinkley were more recognizable to American adults than such famous stars as Cary Grant, James Stewart, or the Beatles.

Throughout his impressive career, however, Huntley developed a reputation for airing his personal opinions on-air, and he was once accused of editorializing with his eyebrows. In the 1950s, he candidly criticized Senator Joseph McCarthy’s outrageous allegations of Communist sympathy among government officials and members of Hollywood’s film industry.

As a cattle owner in his native Montana, Huntley’s endorsements for the beef industry during the 1960s again brought criticism from other professionals. His only apparent disagreement with his partner came during 1967, when Huntley crossed an American Federation of Television and Radio Artists’ picket line, claiming that news anchors did not belong in the same union as “actors, singers, and dancers.”

Despite his critics, Huntley received an estimated...
Huntley, Chet

$200,000 salary from NBC during the height of The Huntley-Brinkley Report's time on the air. He also earned several prestigious news industry awards. He was named the International Radio and Television Society's "Broadcaster of the Year" in 1970.

The Huntley-Brinkley Report's ceremonial closing ("Good night, David," "Good night, Chet") would have been heard for the last time on August 1, 1970, when Huntley retired from broadcasting, but Brinkley altered his words to "Good-bye, Chet." As he signed off, Huntley left his audience with one final plea: "Be patient and have courage—there will be better and happier news some day, if we work at it."

Huntley retired to his native Montana, where he worked to develop the Big Sky resort. His love for the state and its people is evident in his memoir, The Generous Years: Remembrances of a Frontier Boyhood.

I, Claudius

British Historical Serial

I, Claudius, a 13-episode serial produced by BBC/London Film Productions and first aired on BBC 2 in 1976, made its U.S. debut on the Public Broadcasting Service (PBS) in November 1977 as an installment of Masterpiece Theatre, sponsored by Mobil Corporation. The production was based on two novels by poet and essayist Robert Graves, I, Claudius: From the Autobiography of Tiberius Claudius, Born B.C. X, Murdered and Deified A.D. LIV (1934), and Claudius the God and His Wife Messalina (1935). Adapted for television by Jack Pulman, I, Claudius chronicles the slide of Roman civilization in the 1st century A.D. into unrelenting depravity during the reigns of the four emperors who succeeded Julius Caesar: Augustus, Tiberius, Caligula, and Claudius. The program’s representations of decadence (which included brutal assassinations, sadistic gladiatorial contests, incest, forced prostitution, adultery, nymphomania, and homosexuality) and its scenes of nudity and orgiastic violence, including a gruesome abortion, while toned down somewhat from the BBC original, nevertheless pushed the limits of moral acceptability on American television at the time.

Anchored firmly in the genre of fictional history, I, Claudius portrayed real historical figures and events, but, according to C. Vann Woodward, "with the license of the novelist to imagine and invent." While Graves drew extensively from Claudius's biographer Suetonius, among others, for the historical material in the novels, he framed the story by using Claudius himself as the autobiographical narrator of his 13-year reign as emperor and the reigns of his three predecessors. At the outset of the TV drama, Claudius is seen as a lonely old man perusing various incriminating documents from which he is constructing his "history." His project was prophesied by the Cumaen sibyl many years earlier when Claudius visited her and was told to write the work, seal and bury it where no one will find it. Then, according to the sibyl, "1,900 years from now and not before, Claudius shall speak." The remainder of the serial is back-story, recounting the unbridled ambition, domestic intrigue, bloodlust and sexual dysfunction of Rome’s ruling elite.

Claudius is among the most fascinating dramatis personae of Roman history. A weak and sickly youth, repressed by a stern tutor as a child, physically deformed and suffering from a severe stammer, he was an outsider in the royal family, considered an idiot and, as Otto Kiefer puts it, "utterly unsuited for all the duties expected of him as a young prince." As an adult, he was never taken seriously as a future ruler of Rome. Ironically, however, Claudius was ostensibly the most intelligent of the lot. A shy man of considerable culture and inclined toward a life of quiet scholarship, he knew Greek well and wrote several works on history (now lost), including two on the Etruscans and the Carthaginians. In the imperial Rome of his day, however, which was obsessed with the exercise of power
through treachery and brute force, such preoccupations of the mind were considered little more than idle pastimes.

While Claudius was wise in matters of history, he was apparently far less so in matters requiring discernment of human character. His repression as a child led to his weak reliance on other people as an adult, especially the ruthless women in the imperial family. Nevertheless, Claudius was not the “complete idiot.” He was consul under Caligula; and when chosen by the soldiers to be emperor, following Caligula’s murder, he demonstrated many excellent administrative qualities. He annexed Mauretania, and in 43 he landed in Britain, which he made a Roman province. During his reign the kingdoms of Judea and Thrace were re-absorbed into the empire.

The character of Claudius (played with great intelligence and wit by Derek Jacobi) is clearly the linchpin that provides dramaturgical continuity throughout the serial, serving as both historical actor and observer/commentator. If one were to assume for a moment that I, Claudius is history (which it is not), a professional historian would question Claudius’s motivation for presenting his “history” as he has done here. Self-interest might be a driving force for Claudius’s portraying himself in the best possible light, given the less-than-savory historical epoch in which he played a major role.

In fact, I, Claudius does present its main character in a positive manner. Claudius is the much misunderstood and frequently mocked “good guy” (the “holy fool”) amid a rogue’s gallery of psychopaths, most notably Livia (played to fiendish perfection by Siân Phillips), the scheming wife of Augustus, and Claudius’s grandmother, who methodically poisons all possible candidates who might assume upon Augustus’ death the emperor’s throne instead of her weak son Tiberius; and the ghoulish and crazed Caligula (played by John Hurt, whose memorably hyperbolic performance might be classified as a caricature if the subject were anyone but Caligula). Set against the likes of such characters, Claudius comes off looking like a saint. But was he in reality?

While reviewers generally accepted the presentation as accurate, the actual biography seems quite different. Suetonius’s treatment of Claudius, while questioned by some modern scholars as likely exaggerated in some details, is nevertheless accepted in large measure as an accurate reflection of the man. According to Suetonius, Claudius “overstepped the legal penalty for serious frauds by sentencing such criminals to fight with wild beasts.” He “directed that examination by torture and executions for high treason should take place in full before his eyes.... At every gladiatorial game given by himself or another, he ordered even those fighters who had fallen by accident... to have their throats cut so that he could watch their faces as they died.” This sadistic streak in Claudius, which Suetonius also notes in other passages, is absent from the BBC serial, and for good reason, for it would make the character far less sympathetic and thereby subvert the melodramatic “good vs. evil” contrast established throughout.

In another area, that of sexuality, the historical record again comes into conflict with the fictional treatment. According to Suetonius, Claudius’s “passion for women was immoderate.” In the television version, Claudius is clearly portrayed more as a hapless victim of duplicitous women (and a staunch protector of virtuous women) than as a lecher.

The historical record does, however, include the positive side of Claudius’s character so much in evidence in the BBC presentation. He often appears as “a gentle and amiable man,” as when he published a decree that sick and abandoned slaves should have their freedom and that the killing of such a slave should count as murder.

Claudius was a man grounded in his cultural milieu. His sadism, though tempered by erudition and amiability, should nonetheless be acknowledged. At the same time, his behavior can properly be contextualized by noting that not only in imperial Rome but also in the
I, Claudius

republic preceding it (which Claudius held in high regard), criminals, when condemned to death, were routinely taken to the amphitheater to be torn to pieces by wild beasts as a public show.

The historical character Claudius was a complex man full of contradictions, and, one could reasonably argue, dramatically more resonant than the sanitized emperor offered readers of Graves's novels and viewers of I, Claudius. The BBC production is, nevertheless, excellent entertainment featuring superb ensemble acting and Herbert Wise's expert direction. Its treatment of deviant behavior is sensitive, seeking to avoid the titillation evidenced in so much of today's violent Hollywood fare. Its scenes of debauchery and carnage seem safely distanced (by 2,000 years) from our present milieu and may even allow us to feel good that the contemporary world seems less debased by comparison—if we bracket out such collective barbarity as Nazi and Khmer Rouge genocide. However, the nagging issue of historical veracity remains.

While the BBC production is simply a dramatization of Graves's novels (in which the naturally self-promoting stance taken by Claudius as the first-person narrator is made plain), and not an independent attempt to present a historically verifiable picture, a potential problem is that viewers of the TV version, perhaps not familiar with the conventions within which Graves worked, might be inclined to view it as having a more documentary basis. As Woodward points out, it is from the popular media that the broad public "mainly receives whatever conceptions, impressions, fantasies, and delusions it may entertain about the past." As a consequence, the general populace may not only internalize a distorted picture of historical persons and events but also be deprived of the invaluable opportunity to better understand its collective past and apply that knowledge critically and constructively to the present. People today, in the thrall of the media popularizers of history, are less likely than their forebears to read the work of professional historians, whose scholarly ethics require them to "disappoint" those among the laity or designing politicians who would "improve, sanitize, gentrify, idealize, or sanctify the past; or, on the other hand...discredit, denigrate, or even blot out portions of it." Thus, the door is left open to the demagoguery of self-interested revisionist history.

Predictably, discussion of I, Claudius in the popular press prior to its U.S. television debut focused not on such questions of historical veracity, but rather on how American audiences might react to its presentation of sex and violence. As Les Brown noted, the serial "is a chancy venture for American public television and one that got on the national service...on sheer merit." Mobil Corporation, the Masterpiece Theatre sponsor, was informed by WGBH-TV, the Boston public station that puts together the Masterpiece Theatre package, that some scenes might cause audience discomfort. Mobil spokespeople responded that they had no reservations about the program and understood I, Claudius to be television of "extraordinary quality." Nonetheless, WGBH did make selective edits for the U.S. version without prompting by Mobil. These included shortening a scene featuring bare-breasted dancers, and eliminating what might be considered a blasphemous comment by a Roman soldier on the Virgin birth, some gory footage of an infant being stabbed to death, and bedroom shots featuring naked bodies making love. WGBH defended these and other excisions by arguing that viewers in some parts of the United States would be disturbed by their inclusion.

I, Claudius became one of the more critically acclaimed Masterpiece Theatre offerings and attracted a loyal following, which today can revisit the fictionalized life and times of Emperor Tiberius Claudius Drusus Nero Germanicus, a.k.a. Claudius I, on video, DVD, and occasional cable repeats.

### I Love Lucy

**U.S. Situation Comedy**

*I Love Lucy* debuted on CBS in October 1951 and was an immediate sensation. It spent four of its six prime-time seasons as the highest-rated series on U.S. television and never finished lower than third place. Dwight Eisenhower’s presidential inauguration in January 1953 drew 29 million viewers; when Lucy gave birth to Little Ricky in an episode broadcast the next day, 44 million viewers (72 percent of all U.S. homes with TV) tuned in to *I Love Lucy*. When it ceased production as a weekly series in 1957, *I Love Lucy* was still the number-one series in the country. And its remarkable popularity has barely waned in the subsequent decades. Since passing into the electronic museum of reruns, *I Love Lucy* has become the *Mona Lisa* of television, a work of art whose fame transcends its origins and its medium.

Television in the 1950s was an insistently domestic medium, abundant with images of marriage and family. The story of *I Love Lucy*’s humble origins suited the medium perfectly, because it told of how a television program rescued a rocky marriage, bringing forth an emotionally renewed and financially triumphant family. After a relatively successful career in Hollywood, Lucille Ball had spent three years with actor
Conflicts inevitably arise when Lucy’s fervent desire to be more than a housewife run up against Ricky’s equally passionate belief that such ambitions in a woman are unseemly. This dynamic is established in the pilot episode—when Lucy disguises herself as a clown in order to sneak into Ricky’s nightclub act—and continues throughout the entire series. In episode after episode Lucy rebels against the confines of domestic life for women, the dull routines of cooking and housework, the petty humiliation of a wife’s financial dependence, the straightjacket of demure femininity. Her acts of rebellion, whether taking a job, performing at the club, concocting a money-making scheme, or simply plotting to fool Ricky, are meant to expose the absurd restrictions placed on women in a male-dominated society. Yet her rebellion is forever thwarted. By entering the public sphere she inevitably makes a spectacular mess of things and is almost inevitably forced to retreat, to return to the status quo of domestic life that will begin the next episode.

It is possible to see I Love Lucy as a conservative comedy in which each episode teaches Lucy not to question the social order. In a series that corresponded roughly to their real lives, it is notable that Desi played a character very much like himself, while Lucy had to sublimate her professional identity as a performer and pretend to be a mere housewife. The casting decision seems to mirror the dynamic of the series; both Lucy Ricardo and Lucille Ball are domesticated, shoehorned into an inappropriate and confining role. But this apparent act of suppression actually gives the series its manic and liberating energy. In being asked to play a proper housewife, Ball was a tornado in a bottle, an irreplaceable force of nature, a rattling, whirling blast of energy just waiting to explode. The true force of each episode lies not in the indifferent resolution, the half-hearted return to the status quo, but in Lucy’s burst of rebellious energy that sends each episode spinning into chaos. Lucy Ricardo’s attempts at rebellion are usually sabotaged by her own incompetence, but Ball’s virtuosity as a performer pervasively undermines the narrative’s explicit message, creating a tension that cannot be resolved. Viewed from this perspective, the tranquil status quo that begins and ends each episode is less an act of submission than a sly joke; the chaos in between reveals the folly of ever trying to contain Lucy.

Although I Love Lucy displayed an almost ritualistic devotion to its central premise, it also changed with each passing season. The first season presented the Ricardos as a young couple adjusting to married life and to Lucy’s thwarted ambitions. The second and third seasons brought the birth of Little Ricky and focused more often on the couple’s adjustment to being parents—particularly the question of how motherhood...
would affect Lucy's ambition. The fourth season saw Ricky courted by a Hollywood studio. The Ricardos and Mertzes took a cross-country automobile tour and eventually landed in Hollywood, where Lucy wreaked havoc in several hilarious encounters with celebrity guest stars. During the fifth season the Ricardos returned to New York but then soon left for a European tour—a sitcom variation of *Innocents Abroad*. The sixth and final season found the Ricardos climbing the social ladder as the series shifted toward family issues. Ricky bought the Tropicana nightclub, renaming it Club Babalu. Plots began to revolve around five-year-old Little Ricky (Richard Keith). Finally, the Ricardos joined the exodus to the suburbs, abandoning New York for a country home in Connecticut, where they were joined by the Mertzes and by new neighbors Betty and Ralph Ramsey (Mary Jane Croft and Frank Nelson).

The creative team behind *I Love Lucy* was remarkably consistent over the years. Writers Jess Oppenheimer, Madelyn Pugh, and Bob Carroll, Jr., had written *My Favorite Husband* on radio, and they accompanied Ball to television. Oppenheimer served as the series producer, while Pugh and Carroll were the writers. Together the three would sketch out episode ideas—many of which were based on scripts from the radio series. Pugh and Carroll would write the script, and Oppenheimer would edit it before production. This pattern continued, regular as clockwork, for four entire seasons in which the trio wrote each and every episode—an incredible achievement, considering the pace of television production. In the fifth and sixth seasons, Bob Schiller and Bob Weiskopf joined as a second writing team. Oppenheimer left to take a job at NBC after the fifth season, and Desi Arnaz, who had served as executive producer since the beginning, stepped in to replace him as producer. While in production as a weekly series, *I Love Lucy* had only three directors: Marc Daniels (1951–52), William Asher (1952–55, 1956–57), and James V. Kern (1955–56). Much of the quality of the series is a result of this unusually stable production team.

The production process was unusual for filmed television at that time. Recognizing the economic importance of the work they produced, Arnaz and Ball still faced the difficulty that shooting the series on film generally meant shooting with one camera on a closed soundstage. But they also wanted to capture the spontaneity of Ball's comic performances, her interaction with other performers and her rapport with a live audience. Arnaz recruited famed cinematographer Karl Freund to help solve the problem. Freund was a respected Hollywood craftsman who had begun his career in Germany working with directors Robert Weine and Fritz Lang. In the United States he had a long career at MGM, where he shot several films with Greta Garbo and won an Academy Award in 1937 for *The Good Earth*. Freund adapted the live-TV aesthetic of shooting with multiple cameras to the context of film production—a technique already used with limited success by others in the telefilm industry. Freund developed a system for lighting the set from above, since it would not be possible to change the lighting during a live performance. With three cameras running simultaneously in front of a studio audience, *I Love Lucy* was able to combine the vitality of live performances with the visual quality of film. Although the technique was not generally used outside of Desilu until the 1970s, it is now widely used throughout the television industry.

During the network run of *I Love Lucy*, Desilu became the fastest-rising production company in television by capitalizing on the success of *I Love Lucy*, which earned over $1 million a year in reruns by the mid-1950s. From this foundation, Desilu branched out into several types of production, a process of expansion that began with an investment of $5,000 in 1951 and saw the staff grow from 12 to 800 in just 6 years. Desilu produced series for the networks and for syndication (*December Bride, The Texan*) and contracted to shoot series for other producers (*The Danny Thomas Show*). In October 1956 Desilu sold the rights to *I Love Lucy* to CBS for $4.3 million. With the help of this windfall profit, Desilu purchased RKO studios (the studio at which Ball and Arnaz had once been under contract) for $6.15 million in January 1958. The success of *I Love Lucy* created one of the most prolific and influential television production companies of the 1950s.

By 1957 Arnaz, Ball, and the entire production team had grown weary of the grinding pace of series production. Desilu ceased production of the weekly series after completing 179 episodes. The familiar characters stayed alive for three more seasons through thirteen one-hour episodes, many of which appeared as installments of the *Westinghouse-Desilu Playhouse* (1958–60).

I Spy
U.S. Adventure/Espionage Program

I Spy, which ran on NBC from 1965 to 1968, was a Sheldon Leonard Production chronicling the exploits of fictional characters Kelly Robinson (Robert Culp) and Alexander Scott (Bill Cosby). Robinson and Scott, who posed as a professional tennis player and his personal trainer, were in reality spies for the United States. I Spy was a whimsical adventure show with a hip wit characteristic of the espionage genre in the 1960s. But rather than being drawn in the cartoonish James Bond-like style, Robinson and Scott were fully realized characters who displayed a range of feelings and concerns uncharacteristic of television spy heroes. They bled, got headaches, and often doubted themselves and their role in global affairs.

The Cold War has often been considered a generative force for television espionage programs. The genre of spy fiction, which arguably began its 1960s cinematic history with Dr. No, made its way to television in 1964 with The Man from U.N.C.L.E. Many imitators followed, but I Spy was a departure from the style established in earlier shows. In this series, Robinson and Scott did not battle against shadowy organizations of global evil, such as THRUSH from The Man from U.N.C.L.E. or SPECTRE from the James Bond films. Rather, the show recognized the political tensions of the day. I Spy unashamedly acknowledged the role of the United States in the arena of world espionage.

Virtually the entire first season was filmed on location in Hong Kong and other Asian locales. Leonard, as well as producers David Friedkin and Morton Fine, had no qualms about spending money to avoid a "back-lot" look to the show. Associate producer Ron Jacobs and location manager Fuad Said worked with both their own "Cinemobile" and film crews from NBC News Asian bureaus to get much of the location footage used in that first season. The second season was filmed almost exclusively in Greece, Spain, and other Mediterranean locations, using similar techniques.

However, the series did not depend exclusively on exotic location and "realism" for its narratives. It also looked at the personal side of espionage and the toll it could take on those who practiced it. The characters...
would often admit and lament the fact that they had to fight the forces of evil on their opponents' level. Unlike many shows of the genre, *I Spy* dealt with agents dying cruel deaths, burning out on the spy game, and often even doubting the nature of orders from superiors. This questioning of authority was more typically found in programming based on the "counterculture" and pitched toward the youth of the times. Cosby and Culp, however, more often than not straddled the fence between rebellion and allegiance, despite the fact that after the premiere of *I Spy*, *New York Times* television critic Jack Gould called it a show "looking for a style and attitude."

*I Spy* was one of the first dramatic shows to feature an African-American male as a leading character. Producer Leonard was certain of Cosby's talents, but the network had grave doubts about casting an untested stand-up comedian in a dramatic lead. The network's concerns were quickly dispelled by Cosby's deft and multifaceted talent—a talent that garnered him three consecutive Emmys as Best Male Actor in a Dramatic Television Series between 1965 and 1968. Originally, the role of Alexander Scott was to have been that of a bodyguard for Kelly Robinson. Both Cosby and Culp conferred with the three producers (Leonard, Friedkin, and Fine), and the decision was made to portray Robinson and Scott as equals. Cosby also stated that racial issues would not be dealt with on *I Spy*. This "color-blind" approach freed the show from having to impart a message each week and instead allowed it to succeed by emulating the conventions of the genre of espionage adventure. *I Spy* also showcased the talents of other African-American actors of the time, including Godfrey Cambridge, Ivan Dixon, and Eartha Kitt. As a result of its ostensible neutrality on race relations, African Americans could be portrayed as heroes or villains with a minimum of political overtones.

Though never a top-20 show, *I Spy* enjoyed three successful years on NBC. Cosby in particular enjoyed very high Q ratings (audience-appreciation ratings) for the run of the show. In 1994 an *I Spy* reunion movie was broadcast.

Iceland

Iceland, a country comprising a small population on a large mountainous island, situated between North America and Western Europe in the middle of the Atlantic Ocean, belongs culturally and historically to the Nordic countries, having been settled almost exclusively by emigrants from Scandinavia since the island’s first discovery in the 9th century. Iceland has very small population of approximately 280,000 people, about half of whom reside in the capital city, Reykjavik. Following the example of the Scandinavian countries, Iceland maintained a state-run public service television monopoly until the mid-1980s, when deregulation introduced private commercial television services. In recent years increased competition has been rapidly transforming the landscape of Icelandic broadcasting. Today, Iceland has acquired all the main characteristics of any other television market in Europe and has national, regional and local television channels.

The Icelandic National Broadcasting Service, RUV, was established in 1930. Public service radio broadcasting was launched with a programming policy characterized by cultural conservatism and a strong emphasis on cultural heritage. The radio monopoly was broken in 1951 when the American NATO forces stationed at the Keflavik military base started a radio service, mainly offering popular music. In 1955 a television broadcast was added to their service. Although the broadcast was intended for the service members and their families, Keflavik is situated close to the capital city and the signal could also be enjoyed by a considerable number of the Icelandic population outside the NATO base. Thus, Icelanders were introduced to the new medium of television by the American military and the programming consisted largely of popular American entertainment and children’s programs. The existence of an American television station in Keflavik became a significant political issue and added to a debate focused both on the military presence in the country and the preservation and future of an independent national culture.

Because of their geographical isolation and strong literary tradition, Icelanders have managed to preserve their language intact, and any threat to the purity of the language by a foreign mass media has been met with resistance, and an accompanying idealization of the national culture. By the mid-1960s, however, Icelanders had already been buying television sets for a decade, and the American broadcasts had become popular with a proportion of the public, who enjoyed watching shows such as I Love Lucy. Therefore, the decision to establish an Icelandic television service was prompted by a fierce debate about foreign cultural influences, and the Icelandic Broadcasting Company Service (RUV) began television broadcasting in 1966, partly as a response to what was considered a cultural invasion. In the beginning, RUV broadcast for a few hours a day, three days a week, but soon it increased its programming to six days a week. However, until 1983 the month of July was without television, and until 1987 there was no television on Thursdays. The television-free day was meant to protect the traditional social and cultural life of the nation.

RUV is a national public broadcasting service formally owned by the Icelandic state, but it is a financially independent organization. It is required to provide universal penetration and sees its role first and foremost as a public service television station. From the beginning RUV’s sources of income have been license fees, as was the case in most other Northern and Western European countries. Some additional funds came from advertising revenue because license fees from such a small population base provide a limited financial foundation, but all incoming revenue may only be used for broadcasting. Since it is owned by the Icelandic state, decisions on policy and strategy are partly made in the political arena and RUV is subject to control by the Broadcasting Council appointed by Parliament. The Council's role is to make policy decisions on programming within the framework of RUV’s budget.

RUV is required by law to preserve and further Icelandic culture and the Icelandic language, as well as to promote awareness of Icelandic history and cultural heritage. It is also required to observe basic democratic rules and to uphold human rights and freedom of speech and opinion, to provide a general news service and act as a forum for diverse points of view, and to broadcast diverse entertainment suitable for individuals of all ages with particular emphasis placed on the needs of children. Further, RUV must offer a variety of material in the field of art, literature, science, history, and music as well as providing general education material. RUV has traditionally presented high-brow culture, but as a response to the current commercial market influences has also imported popular shows,
Iceland

such as (among the U.S. titles) *The West Wing, The Sopranos, Sex and the City, Alias, Frasier,* and *ER.*

Until 1986, RUV held exclusive rights to both radio and television broadcasting in the country. The monopoly was ended in that year by a deregulation of the Broadcasting Act. A Broadcasting Committee elected by Parliament now regulates the private broadcasting sector and issues broadcasting licenses. The Icelandic broadcasting market is considered among the most deregulated in Europe, with almost no restrictions on ownership, and little regulation on programming in the private sector. Nevertheless, according to the Broadcasting Act, both private and public television are intended to play an important cultural role. All television stations in Iceland are required to uphold basic fundamental democratic principles and should ensure that diverging opinions and views of controversial matters are aired. They should strive to strengthen the Icelandic language, promote general cultural advancement, and make an effort to broadcast Icelandic and European material. Foreign language programs should in general be subtitled or dubbed with Icelandic dialogue.

After the demise of RUV’s monopoly, and despite a lack of a financial foundation for commercial television, Stod 2 (Channel 2) was launched in 1986 and has become a well-established major television channel with a full-fledged programming schedule, offering traditional commercial programming with a limited production of national news, current affairs and entertainment. The main part of the programming consists of Anglo-American series, films, sitcoms, and dramas, and the channel has remained popular for airing shows such as *60 Minutes, Friends, Seinfeld,* and *Oprah.* Stod 2 is owned by the Icelandic Broadcasting Company Ltd., a subsidiary of the multi-media company Northern Lights Corporation Ltd. Stod 2 derives its income from a subscription fee, advertising revenue and sponsorship of individual shows. Since the mid-1990s, Stod 2 has had almost universal penetration and the number of subscribers has remained fairly stable, creating to a certain extent a duopoly between RUV and Stod 2. In 1990 the Northern Lights Corporation bought the rights to another television channel, Syn (Vision), the sole purpose of the transaction seeming to have been the elimination of competition. Syn is also funded by subscriptions and advertising revenue but the programming is limited to sports and American films.

In 1993, amendments were made to the Broadcasting Act allowing the programs of foreign television channels to be aired without having to translate the text into Icelandic, thus paving the way for redistribution of international satellite channels. In 1994 the Northern Lights Corporation added a redistribution service of international satellite channels and now offers a package of 14 channels that are predominantly in English. In 1998 they added yet another television channel to their service, Biorasin (The Movie Channel), which offers feature films 24 hours a day. Subscription to all these services is offered as a part of a package deal including the Icelandic channels Stod 2 and Syn. Also, in 1998 Icelandic Telecom Ltd. Began to distribute, via fiber optic broadband network, international satellite channels offered in subscription package deals. However, international television channels play an insignificant role on the Icelandic television market and have never been met with real enthusiasm from the Icelandic public. Other minor private television channels also exist but are not significant in Icelandic broadcasting. In 2003 ten television stations were on the air, most of them aiming toward local or niche markets, such as a religious channel and a music video channel.

In 1999 a new independent commercial television station, owned by the Icelandic Television Corporation, was launched under the name of Skjar 1 (Screen 1). It is the first Icelandic channel to be entirely financed from advertising revenue and became a real financial challenger to Stod 2 and RUV, who all compete for the same small market of advertisers. Today the signal reaches close to 90 percent of the population. Skjar 1 is heavily entertainment oriented prime-time television aimed at the younger audience. The programming consists of, on the one hand, popular American series, sitcoms, and reality-shows such as *Will & Grace, Malcolm in the Middle, The Practice, Jay Leno, Survivor,* and *The Bachelor,* and on the other hand, domestic in-house production of talk shows, lifestyle programs, a dating show, and current affairs analysis. The original agenda of Skjar 1 was to increase the production of national programming and create Icelandic television for Icelanders; however, Skjar 1 has had to lessen the emphasis on original programming due to costs. In 2003 the owners of Skjar 1 launched a new subscription channel, Skjar 2 (Screen 2), delivered through broadband. The programming is limited to American films and entertainment.

A characteristic feature of Icelandic television is the remarkably small proportion of Icelandic programming. Iceland has the lowest proportion of nationally produced programs in Europe. The reason is simply due to the low population and the small size of the market, which financially hinders original Icelandic programming. RUV has consistently devoted approximately one third of the schedule to Icelandic material, but had gradually increased the proportion to 50 percent of its programming by 2002. RUV is ambitious about national production and offers diverse material including Icelandic documentaries, movies, dramas, plays, and talk...
shows on various subjects. Stod 2 offers 10–20 percent national programming but has found it important to build a serious news service and also provides an extensive supply of children’s programs dubbed with Icelandic voices. National production make up about 30 percent of Skjar 1 programming, mainly consisting of low budget in-house productions. The imported programs on the channels are almost entirely of British and American origin. The exception is RUV, which offers approximately one third of their programming from other language areas, mostly European.

The Icelandic television market is highly concentrated, and largely dominated by RUV and Stod 2, although in a short time Skjar 1 has carved out an impressive share of the market. In 2003, RUV was the obvious market leader with 46 percent share of ratings, while Stod 2 holds a strong position of 32 percent share and Skjar 1 has won over 13 percent of the market. The introduction of Skjar 1 in 1999 has intensified the competition on the tiny market and has subjected Stod 2 to a loss of subscribers and advertising revenue, while RUV has been able to hold on to its role as the primary television service in the country. In this small society any attempt at setting up a broadcasting service is burdened with financial difficulties. Even considering RUV’s license fees and Stod 2’s subscription fees and the added income of commercials it is difficult to maintain three fully fledged television services in such a small market.

Penetration of television sets is universal and the supply of television channels and hours broadcast seems already to outweigh the demand of the Icelandic audience. As a response to increased competition RUV has more than doubled the transmission of hours since 1986 and broadcasts approximately 9 hours a day. Stod 2 provides 19 hours of programming daily, and Skjar 1 broadcasts 9 hours of programming daily, and non-stop music videos at other hours. Viewing habits have remained relatively consistent in recent years despite the increase in supply of television broadcasting. Television viewing in Iceland is a daily activity and the reach is among the highest in Europe, but when television consumption is considered in terms of viewing time per person, Iceland ranks among the lowest in Europe. Viewers usually tune into prime time, and the evening news remains the most popular programming with the highest ratings. In terms of financial turnover, the broadcasting industry is the second most important media and cultural industry in the country, next to newspapers and the printing press, which holds its top position owing to the strong literary tradition.

The television environment has become increasingly commercialized, and at the political level there is an ongoing discussion regarding RUV’s public service role and the future of public broadcasting. However, RUV takes its role as a national institution seriously and strives to offer diverse programming. How the turmoil on the present Icelandic television market will play out remains to be seen and will depend upon technical, political, and economic factors.

Iger, Robert A. (1951– )

U.S. Television Executive

In January 2000, Robert Iger was named president and chief operating officer of ABC’s corporate parent, the Walt Disney Company, making him second-in-command to Disney chairman Michael Eisner. The promotion capped a remarkably steady 25-year ascent of the corporate ladder at ABC, where Iger had thrived even as ABC was absorbed twice by outside firms—first by Capital Cities Communications in 1985 and then by Disney in 1995. In both cases—and particularly after the Disney purchase—Iger was given a large
measure of responsibility for merging the operations of ABC with those of a new parent company, which required not only a talent for soothing the collision of corporate cultures, but also the discipline and tact needed to carry out sweeping change.

Iger is widely recognized as a steady, patient leader with the diplomatic skills for managing egos in a supremely competitive environment. However, given that ABC has struggled mightily in the decade following the Disney merger, his legacy remains unclear. Iger’s ascendance may say less about his leadership than about his skills as a master politician whose greatest accomplishment may be his own survival, particularly when considering how many colleagues have exited through the revolving door of Disney’s executive suite while Iger has persevered. Although Iger has risen to become second-in-command to Michael Eisner, one should be careful not to assume that he is Eisner’s successor; indeed, it is difficult to predict where he will be in the years to come.

Robert Iger was born in 1951 and raised in a middle-class household on Long Island. He attended Ithaca College in upstate New York, where he graduated with a degree in communications. His career at ABC began in 1974 when he moved to New York City and became a studio supervisor for soap operas and game shows.

In 1976 he joined ABC Sports, where he received six promotions over the next twelve years and advanced through a series of increasingly significant positions. For several years he managed program planning for ABC’s flagship sports program, Wide World of Sports. In 1985 he became vice president of programming for ABC Sports, where, among other duties, he helped to coordinate Olympic coverage and was responsible for setting the schedule of events at the 1988 Calgary Winter Olympics. Iger’s grace under fire during the Calgary Olympics brought him to the attention of Capital Cities president Dan Burke. Warm weather in Calgary, followed by melting snow and ice at the Olympic sites, played havoc with ABC’s schedule. With millions of dollars in advertising revenue on the line and others panicking, Iger kept his cool and juggled the schedule. An impressed Burke anointed Iger as a future leader of ABC and placed him on the corporate fast track.

Iger was made executive vice-president of the ABC television network group in 1988, where he learned the intricacies of network business affairs, negotiated contracts for prime-time programming, and resolved scheduling conflicts arising between the entertainment, sports, and news divisions at ABC. Iger had held this position for only seven months when Burke and Capital Cities chairman Tom Murphy made him the surprise choice to succeed Brandon Stoddard as the president of ABC entertainment in March 1989.

Iger made a strong impression by making series commitments to two of the most radical dramas in television history, both developed by Brandon Stoddard: Twin Peaks, produced by David Lynch and Mark Frost, and the musical police drama Cop Rock, produced by Steven Bochco. In championing Twin Peaks (which lost viewers and was cancelled after its second season) and Cop Rock (which was cancelled after only a few episodes, resulting in huge financial losses for ABC), Iger sent a message to the Hollywood creative community that ABC was prepared to take risks and grant creative freedom—without the smothering network oversight so typical of television production. For the first time ever, Emmy-winning writers and producers and Hollywood filmmakers came to ABC with ambitious projects. Producer James L. Brooks, who had a hand in the creation of The Mary Tyler Moore Show, Taxi, and The Simpsons, signed a lucrative development deal with ABC. In this supportive environment, Stephen Bochco bounced back from the disappointment of Cop Rock to deliver two successful series, Doogie Howser, M.D., and the critically acclaimed NYPD Blue.

Iger’s four years at the head of ABC Entertainment kicked off the network’s last great period of ratings dominance. Iger inherited thirtysomething and Roseanne from the regime of Brandon Stoddard and added several other series that became long-running hits: Family Matters, Full House, America’s Funniest Home Videos, and Home Improvement. In the target market of 18- to 49-year-old adults, ABC won the prime-time ratings race three times during Iger’s tenure. This period of success for ABC continued as Iger was elevated up the corporate ladder: first as president of the ABC Network Group in 1993, then as president and chief operating officer of the parent company, Capital Cities/ABC in 1994. ABC moved into first place in the network ratings for the 1994–95 season and saw tremendous growth in other areas as well, including far-sighted investments in cable networks, A&E, The History Channel, Lifetime, and ESPN.

When Disney acquired Capital Cities/ABC in August 1995, Iger had been six months away from succeeding Tom Murphy as the CEO. Michael Eisner asked Iger to stay on board as president and chief operating officer of ABC, giving him responsibility for all of the Capital Cities operations as well as Disney’s syndication and cable businesses. Iger was essentially the point man for the merger, charged with actually creating the vaunted synergy that justified Disney’s acquisition of a television network in the first place. At first glance, the integration of Disney and ABC, following the FCC’s early 1990s decision to allow television networks to produce their own prime-time
programs once again, made Disney the model of the fully integrated media company of the future.

But shortly after Disney's takeover, the ratings for ABC began a downhill slide with no end in sight. In just two seasons after the Disney merger, ABC fell from first to third in the ratings, losing 23 percent of its target 18- to 49-year-old adult viewers, 35 percent of teens, and 45 percent of children aged 2–11. Unable to deliver its promised ratings, ABC has been forced to compensate advertisers with extra airtime, which cuts deeply into network profits. Operating income dropped from $400 million to $100 million in the first two years, and the network has seen its first losses continue in subsequent years. Except for the one season of 1999–2000, when the surprise hit Who Wants To Be a Millionaire? (scheduled as many as four times a week) carried the network into first place, ABC's prime-time ratings have not yet recovered their form of the early 1990s—in part because the network has failed to use opportunities such as the fluke success of Millionaire to develop new hits. As ABC has dropped into fourth place in the ratings, industry commentators have begun talking about a two-network universe, in which only NBC and CBS are capable of actually winning the ratings race.

Management strategies dictated by Eisner and carried out by Iger are largely responsible for ABC's steep decline. The demand for synergy, which was introduced by Disney, has skewed network practices, distorting the most fundamental goals of identifying talented writers, producers, and performers in order to develop programs that are attractive to viewers. The goal of supplying ABC with Disney productions, for instance, has been an unmitigated disaster. The network has suffered in attempting to stock its schedule with Disney-produced programs; no Disney series has survived long enough to make it into syndication since Home Improvement, which debuted well before the takeover. In 1999 Iger supervised the formation of the ABC Entertainment Television Group, which formally united Disney's television production—Touchstone, Walt Disney Television Studios, and Buena Vista Television Productions—with ABC's prime-time division and gave ABC responsibility for television production. The goal was to save money while achieving the goals of a fully integrated media company, but the operation has not yet proven capable of solving the riddle of synergy.

ABC's management of prime time has been equally disastrous, characterized by confusion and an almost ritualistic semi-annual of scheduling of programming chiefs. The chaos began when Iger hired Jamie Tarses as head of programming after he helped to develop comedies such as Friends at NBC. Tarses alienated some of ABC's most loyal producers, who left the network for production deals elsewhere; Eisner tried to replace Tarses by recruiting Marcy Carsey, the producer of Roseanne and The Cosby Show; Iger made an expensive, two-year commitment to Lois and Clark just before its ratings collapsed; Eisner vetoed development deals negotiated by Iger.

In spite of these apparent failures, Iger was promoted in February 1999 to a new position as chairman of the ABC Group and President of Walt Disney International, where he was expected to work toward establishing the Disney brand on a worldwide basis and to coordinate the leadership of Disney's international operations. While no one doubted Disney's commitment to international expansion, some industry observers wondered whether Iger had been given an impressive-sounding demotion that removed him from the day-to-day operations at ABC. Otherwise, why would Eisner reward Iger for failing to turn ABC around? The answer could be that, while prime time floundered, the larger ABC organization had achieved some notable successes under Iger's leadership. ESPN became the world's most valuable network, generating more than $500 million per year and establishing a brand name that has led to the creation of additional ESPN cable channels, ESPN magazine, and ESPN Zone restaurants. Several of ABC's other cable networks, including the Disney Channel, A&E, and Lifetime (often the most watched cable network in prime time) have seen steady growth in revenues and profits. Synergy has worked in children's programming, at least, where Disney series fill ABC's Saturday morning schedule and promote the entire range of Disney products.

In January 2000 Iger was named president and chief operating officer, positions vacant since the resignation of Michael Ovitz in the mid-1990s, and was asked to join the board of directors and executive management committee of the Walt Disney Company. With Disney and Eisner seemingly always targets for criticism, Iger also has emerged as Disney's chief diplomat in controversial situations—testifying before Congress about violence in the media, negotiating a dispute with the Echostar cable system over its initial refusal to carry the Disney Family Channel, dealing with the fallout of a dispute with Time Warner over the transmission of Disney channels on its cable systems, and smoothing ruffled feathers at ABC's news division when word leaked that the network had attempted to lure David Letterman to replace Nightline.

Although Iger has an enormous portfolio as Disney president, it would appear that his future will involve reviving the flagging fortunes of the ABC network—or at least redefining the long-term value of a broadcast network in a digital environment. In the short term, he
has taken a much more active role in prime time since appointing Susan Lyne as president of ABC Entertainment in 2002. But, more importantly, he is involved in the strategic decisions about how ABC should compete in the world of digital television. Iger believes that there is a synergistic value in having a broadcast network that outweighs its cost to a diversified media conglomerate. Only time will tell whether Disney remains in the network television business or whether Iger remains at Disney.

Independent Production Companies

The beginning of the 21st century marks a pivotal moment in the history of independent television production. Once the leading source for most prime-time network programming in many countries, independent production companies now compete for access to these coveted spots with program production arms owned by the networks themselves. Under these conditions, the very meaning of independent production has been transformed.

Traditionally, “independent” referred to companies producing programming independent of network ownership or control. By this standard, the autumn 2003 network primetime schedule in the United States included only one new program (Dinotopia) produced entirely independently of a network or its parent company. Of the nine new shows in ABC’s 2003 season lineup, seven programs were produced by Touchstone movie studios, owned by the network’s parent company, Disney.

But some of the very strongest independent voices of television’s past in the United States have joined a broad-based movement to ensure a future for independent production companies. Norman Lear, Grant Tinker, David W. Rintels, John Gay, Greg Strangis, Allan Burns, Diane English, and others responsible for some of the most pioneering programs in U.S. television history are leading figures in opposing the most recent Federal Communications Commission (FCC) push to lift caps on media ownership even higher. Five horizontally and vertically integrated media conglomerates (Time Warner, Disney, Viacom, General Electric, and News Corporation) now own nearly 90 percent of American media outlets. Independent producers widely agree that getting a show on the air requires aligning with the networks in ways that undermine their independence. Networks now enjoy greater financial interest and greater ownership stake in independently produced programs, through perpetual license terms, repurposing rights, and backend profits. In the process, they have gained an unprecedented say in everything from programming creation to casting. In this context of consolidation, the amount of programming supplied by independent production companies has diminished to roughly 15–20 percent of all network programming, compared to 85 percent just over a decade ago. To offset the consequences of consolidation, Lear,
Tinker, and the rest are calling upon the FCC to require the four major networks to purchase at least 50 percent of their prime-time programming from independent producers that are “not wholly or partially owned by a company affiliated with the producing or distributing company.”

This call by independent producers is part of a larger public protest against a controversial June 2003 ruling by the FCC which raises the limits on how much media companies can own. The new rules would allow a company in major markets (the size of New York or Los Angeles) to own up to three local television stations. Across the country, the rule would permit a single company to own stations that reach 45 percent of TV households—a ten percent increase on the previous ownership cap. A brief historical overview of media ownership deregulation and its consequences for television programming will help explain what is currently at stake for independent production companies in the United States, and why they are joining the effort to oppose this FCC ruling.

The diminishing presence of independently produced television programming in U.S. prime time is rooted in a series of successive deregulatory moves during the last decades of the 20th century. In 1993, the financial interest and syndication rules (fin-syn) expired. These rules, established by the FCC in the 1970s when ABC, CBS, and NBC commanded 95 percent of viewing households, barred the major networks from producing, owning, or syndicating their own prime-time programs. What followed were two decades in which a thriving independent production industry provided the bulk of programming for the networks. When fin-syn expired in 1993, the FCC determined that the rise of cable and the emergence of a fourth network (FOX) made such safeguards against network monopoly unnecessary. At the time, the FCC was also considering lifting regulatory obstacles to mergers among media corporations that promised to secure dominance of U.S.-based media in an emerging global media market. Even before the fin-syn rules were repealed, the deal that resulted in the acquisition of ABC by Disney was already taking shape.

While the networks maintained that their entry into production would inspire more, not less, programming diversity, critics of the repeal were quick to warn of an ensuing consolidation among media companies that would shore up network control over the airwaves and squeeze out independent producers. For the first time, it became possible for a single parent company to own broadcast programming, created by its own movie studio, which could then be directly repurposed for one of its cable networks just days after its prime-time premiere. As the networks’ increasingly preferred prime-time programming in which they held a direct financial interest, independent production companies faced new and formidable obstacles to prime-time access. With few exceptions, a spot in the network prime-time schedule has come to require independents to concede to the networks not only greater revenues, but rights to syndication as well.

While the repeal of fin-syn in 1993 undermined independent television production companies, political and economic conditions did even more damage. The Telecommunications Act of 1996, signed into law by President Clinton, lifted important restrictions on ownership and control of media and opened the gates to further industry concentration. As once-discrete media operations were consolidated under a single corporate umbrella at a feverish pace, independent production companies faced new uncertainties.

The Telecommunications Act of 1996 is widely considered the most significant piece of media ownership legislation in the recent history of American telecommunications. The 1996 act fundamentally overhauled laws governing media ownership. Until the passage of this act, no single corporation could own more than 12 television broadcast stations with a combined reach of 25 percent of the nation’s television households. Passage of the Telecommunications Act raised the limit to 35 percent, clearing the way for some of the biggest media mergers in history. Before passage of the act, negotiations between CBS and Westinghouse were already underway, as was a deal between Gannett and Multimedia. Its passage ushered in nothing less than a tidal wave of more than $10 billion in TV station transactions. Leading the way was Disney, with its acquisition of Capital Cities/ABC, and FOX TV with its purchase of the New World TV group. Lifting the cap on station ownership has favored the formation of many group-owned stations. This has not been beneficial to independent writers and producers, for whom consolidation means fewer outlets in which to sell their programs.

The concerns of independent production companies have taken on new urgency since the 1996 Telecommunications Act, which directed the FCC to conduct a biennial review of media ownership rules. When the FCC began this review process in September 2002, media conglomerates Viacom (owner of CBS and UPN), General Electric (owner of NBC), and News Corporation’s FOX Entertainment Group were quick to file a request that the Commission use the review process as an opportunity to abolish the remaining media ownership rules. According to the conglomerates, in the age of the Internet, with so many new channels of communication, concerns about concentration of ownership are baseless.
While the FCC did not entirely eliminate ownership caps, it did vote to raise the limit from 35 percent to 45 percent of the national television household audience. The aftermath of this decision has been marked by one of the greatest public outcries against the corporate consolidation of media in the United States. The future of independent television production is bound up in its (as yet) undetermined outcome. If the FCC decision holds, independent television production companies will have even fewer stations willing to buy their programming. However, many cling to the possibility that the federal government will overturn the new ownership rules and create conditions favorable to a revitalized arena for independent production.

Fallout over the FCC decision has provided an opportunity for clarification of what constitutes an independent company. A brief filed with the FCC by a coalition of writers and producers defines an independent company as “one not owned or controlled by or affiliated with the same entity owning or controlling the national program service.” It was much less complicated, in the early decades of television, to identify an independent production company. Today very few companies fit this definition of a “pure” independent. Many of the one-time giants who helped define the independent production company—MTM, Cannell Studios, Reeves, Rysher, New World, Lorimar, SEE, Witt-Thomas, Miller-Boyett, Orion, Republic, ITC—have either closed down or are struggling to stay afloat. Others have been acquired by the networks.

Independent production companies emerged during the mid-1950s out of the struggles for control over programming between networks and sponsors. At that time, sponsors both owned and produced the majority of programs, as well as the network time slots in which their shows played. Networks found their situation improving as television slowly won over more advertisers to the medium. The possibility of multiple sponsorships curtailed the control that any one sponsor could wield over a program, and the result was increased profits and power for networks. At the same time, networks were reassessing their reliance on costly live programming (the standard fare) and began adopting new cost-saving practices of broadcasting previously filmed shows, or telefilms. The independent production companies were the primary source of telefilms. Thus, networks enjoyed new freedom from the financial outlays for live programming and the independents enjoyed access to a promising new market for their programming beyond the movie theaters.

Scholars have noted, however, that independence should not be confused with autonomy. As long as independent producers relied on funding from sponsors, programs remained subject to the imprint of the sponsor’s interests. Few companies have had the benefit of operating entirely independently of the networks. For the capital required to develop their pilot episodes, independents commonly bargained away some rights and financial interest to the networks in exchange for production dollars. The first independent producer to develop a show along these lines was Hal Roach, Jr., in 1953. In the 1950s, programming was also shaped by Frederick W. Ziv, whose experiences over the course of the decade help illustrate the tensions between independence and network control. Ziv left his mark in the first-run syndication market, without the help of the major networks or national sponsors, opting instead for local and regional sponsors who positioned his series on local stations, mostly in non-prime-time slots. This approach proved successful for several of Ziv’s series, including The Cisco Kid (1949–56), Highway Patrol (1955–59), and Sea Hunt (1957–61).

But by mid-decade, Ziv found the market for first-run syndication contracting as networks began to sell their own prime-time programs that had already proven successful for syndication to local markets. These deeply discounted reruns sharply undercut independents’ bids for first-run syndication, as local stations favored the less-expensive programs that already had established audiences. Between 1956 and 1964, the number of first-run syndicated programs on air wavered from 29 to just one. As his opportunities in first-run syndication dwindled, Ziv reversed tack and began making programs to sell to networks, including West Point (1956–57) for CBS. Although he had several successful network series, Ziv sold off his company to United Artists in 1960, citing the incursions of the networks into both the creative process and the profits: “I didn’t care to become an employee of the networks.”

The sentiment expressed by Ziv is echoed today by independent producers and writers in their current struggle to oppose the FCC’s new ownership rules. Letters from award-winning writers and producers of independent programming are among the hundreds of thousands of letters send to the Senate Commerce, Science, and Transportation Committee to protest the FCC’s decision. When Norman Lear, one of the protesting voices, brought All in the Family, The Jeffersons, and Good Times to television, he did so under what he calls “the watchful eye of an FCC that was committed to keeping the playing field even, protecting against vertical integration of the major broadcasting networks that would, if they had been allowed, have forced independent companies...to take a minority interest in the very shows we had created, giving majority ownership to the network in order to get on the air.”

The letters from Lear and others who did so much to build the independent production industry in the last
decades of the 20th century speak of the “near extinction,” “peril,” and “jeopardy” of these companies. As Emmy Award-winning producer David Rintels describes it, independent writers and producers “now live and work in a business where a few enormously powerful companies control virtually every aspect of the work—not just who gets to write and produce the programs, but the subjects and treatment, and who can direct and who can act, who can photograph and who can write the music.” Rintels is known for television dramas that engage controversial issues of politics (Washington: Behind Closed Doors, 1977), law (Fear on Trial, 1975), and war (Day One, 1989), and a longtime critic of network television for avoiding programs that deal with controversy.

Independent television producers are deeply familiar with the issues of ownership and control that are at the core of the FCC controversy. In her letter addressed to the senators, Diane English, the creator of Murphy Brown, recounts her struggles with CBS over everything from character to casting to comedic content. Murphy Brown reached prime time only after English battled relentlessly to retain creative authority over the program. Had the network prevailed, Murphy Brown would have been an entirely different program; the character of Murphy would have been at least twenty years younger, and played by Heather Locklear rather than Candice Bergen. CBS also suggested cutting from the script the show’s defining political satire, because the humor would be lost on viewers who did not follow current events, or alternatively, might offend audiences. Of her ultimate success to preserve her creative control over Murphy, English states that “in 1988 CBS let me do it my way because I could take the show across the street if I wasn’t happy…. In 2003, forget it. They own it and you’re stuck.”

The pending rule changes are seen by many as potentially the decisive blow to the “true” independent producer, already “disappearing from the marketplace.” In comments filed by the president of the Writers’ Guild of America west, Victoria Riskin called upon the FCC “to establish a safety net for the small entrepreneur producer and independent producers and writer-creators who brought American audiences such classics as The Mary Tyler Moore Show, All In The Family, and The Cosby Show.” Specifically, the Guild calls upon the FCC to redress a dramatic shift that has occurred since the elimination of fin-syn rules in 1993. According to Guild data, in that decisive year, only 15 percent of new prime-time series, and 25 percent of new and returning prime-time series, were produced by the major networks in-house. Ten years later, 77 percent of new prime-time series, and 69 percent of all new and returning prime-time series were produced by the networks’ own studios. To reverse the trend that has made prime-time more inaccessible to independents than ever before, the Guild entreats the FCC to direct national program services to “purchase at least 50 percent of their prime-time programming from independent producers that are not wholly or partially owned by a company affiliated with the producing or distributing company.”

No such mandate will come from the FCC alone. But independent production companies are hopeful for an outcome that favors their survival. In a historic move, just one month after the FCC decision, the House of Representatives voted 400-21 to prevent the Commission from raising ownership limits to 45 percent by freezing the funding necessary for such a move. Although the House reversal brought a threat of veto from President Bush, a number of other legal moves have effectively thwarted the enactment of the new cap. In September 2003, in another move that portends well for independent production companies, the Senate invoked a rarely used Congressional Review Act veto to reject the FCC’s decision.

A growing public awareness of the consequences of media consolidation has brought positive attention to the meaning and value of independent television production companies. Independent producers and writers, who have long fought to secure a space for their programming on the airwaves, are joined by a vast coalition of interests hoping to help shape the outcome of this debate.

In 1988 the U.S. Congress amended the Public Broadcasting Act by creating a separate fund for independent productions called the Independent Television Service (ITVS). ITVS was merely the latest attempt to implement some of public broadcasting's earliest goals: that public television would be independent of commercial interests and would become, in the words of the Carnegie Commission in 1967, "the clearest expression of American diversity, and of excellence through diversity." By 1988, however, many had come to view the Public Broadcasting Service (PBS) as neither independent nor diverse.

The very organizing logic of network television in the United States—that it act for Americans in the public interest, operate under government regulation, and define itself economically by the "mainstream"—has meant that television encouraged a consensual cultural "inside" and a marginalized "outside." By delegating to television the authority to provide a balanced view of the world and to serve the mass audience, many individual and cultural voices have been underrepresented. While intellectual and artistic cultures, in postures of voluntary cultural exclusion, have demeaned television's mass mentality from the medium's start, it was the civil rights crisis in the 1960s, by contrast, that highlighted television's involuntary forms of ethnic, racial, and gender bias. Even as underground filmmakers, newsreel activists, and video artists at the time forged the notion of "independent" media as an alternative to the networks, a more public crisis over television's exclusionary practices challenged the government to recast its relationship to broadcasting. The formation of National Educational Television (NET); its successor, the Public Broadcasting Service; and the funding arm, the Corporation for Public Broadcasting (CPB) were all attempts to correct the narrow interests that democratically minded critics saw at the foundation of network television. Public television's mandate was to open up and diversify television in both an aesthetic and a social sense. Different types of stories and perspectives on American culture were to emerge, even as the very notion of an independent perspective would be part of the PBS niche that followed.

Yet, by the late 1980s, many liberal critics complained that PBS had failed in its mission to diversify television and to give voice to those without one. The presence of advertising spots in major PBS affiliate stations, Fortune 500 corporate sponsorship of programs, and the generic monotony that came from a limited diet of nature documentaries, high-culture performing, and British imports proved to such critics that, far from fulfilling its function, PBS represented rigid class interests of the most limited type—that this was in fact corporate, rather than independent, television. A direct result of this organized critique was the formation of ITVS.

With advocacy from the Association of Independent Video and Filmmakers and its publication The Independent, a coalition of independent producers from major cities across the United States publicly criticized contradictions at the root of public broadcasting's "failure": administrative overheads at PBS and CPB consumed the lion's share of public subsidies from the government; panels that awarded program development and production funds were ingrown networks; and PBS affiliate stations, along with a select group of insider companies, now fulfilled the role of "independents." Apart from token programming ghettos (such as the TV "labs" and new artists "workshops" at WNET and WGBH, segment-producing spots on Frontline, and half-hour anthologies of experimental work on affiliates WTTW, WNED, and KQED), independent work that engaged radical political, racial, or sexual politics was essentially absent from public television. PBS seemed unresponsive to such issues, and ITVS organizers took their critique directly to the source of PBS subsidies: Congress.

The resulting federal mandate required that CPB negotiate directly with the National Coalition of Independent Public Broadcasting Producers (NCIPBP) to develop programs through ITVS. ITVS's $6 million yearly budget was to be allocated without oversight or interference by any existing funding entity, including CPB and PBS. However, the independence guaranteed by direct-to-producer subsidies also brought with it a lasting complication for ITVS: freed of PBS/CPB intrusions into program development, ITVS also lost any guarantee of final broadcast on PBS stations. While public broadcasters protested that federal funds would now go to programs that had little chance of carriage on the stations that they controlled, ITVS countered that up-front development money, not carriage, had always been the historic problem for independents.

By May 1990, complications arose on both sides. Spun as an "overhead-versus-production funding"
India

The Indian television system is one of the most extensive in the world. Terrestrial broadcasting, which has until recently been the sole preserve of the government, provides television coverage to over 90 percent of India’s population, which stood at 1.027 billion in March 2001. By the end of 2003, nearly 80 million households had television sets. International satellite broadcasting, introduced in 1991, has swept across the country because of the rapid proliferation of small-scale cable systems. By the end of 2003, Indians could view around 60 foreign and local channels, and the competition for audiences and advertising revenues is...
India

one of the hottest in the world. In 1995, the Indian Supreme Court held that the government’s monopoly over broadcasting was unconstitutional, setting the stage for India to develop into one of the world’s largest and most competitive television environments.

Broadcasting began in India with the formation of a private radio service in Madras in 1924. In the same year, the British colonial government granted a license to a private company, the Indian Broadcasting Company, to open radio stations in Bombay and Calcutta. The company went bankrupt in 1930, but the colonial government took over the two transmitters, and the Department of Labour and Industries started operating them as the Indian State Broadcasting Corporation. In 1936, the corporation was renamed All India Radio (AIR) and placed under the Department of Communications. When India became independent in 1947, AIR was made a separate department under the Ministry of Information and Broadcasting.

The early history of radio broadcasting in independent India is important because it set the parameters for the subsequent role of television in the country. At independence, the Congress government under Jawaharlal Nehru planned to achieve political integration, economic development, and social modernization. Broadcasting was expected to play an important role in all three areas. The most important challenge the government faced at independence was that of forging a nation out of the diverse political, religious, geographic, and linguistic entities that composed independent India. In addition to the territories ruled directly by the British, over 500 “independent” princely states had joined the new nation, some quite reluctantly. The country immediately found itself at war with Pakistan over one of those states, Kashmir. The trauma of the partition of the country into India and Pakistan, and the violence between Hindus and Muslims, had further weakened the political stability of the country. Broadcasting was harnessed for the task of political nation building. National integration and the development of a “national consciousness” were among the early objectives of All India Radio.

Broadcasting was organized as the sole preserve of the chief architect of this process of political integration—the state. The task of broadcasting was to help in overcoming the immediate crisis of political instability that followed independence, and to foster the long-term process of political modernization and nation-building that was the dominant ideology of the newly formed state. Broadcasting was also charged with the task of aiding in the process of economic development. The Indian Constitution, adopted in 1950, mandated a strong role for the Indian state in the economic development of the country. The use of broadcasting to further the development process was a natural corollary to this state-led developmental philosophy. Broadcasting was especially expected to contribute to the process of social modernization, which was considered an important pre-requisite of economic development. The dominant development philosophy of the time identified the problems of development as being primarily internal to developing countries. These endogenous causes, to which communications solutions were thought to exist, included traditional value systems, lack of innovation, lack of an entrepreneurial culture, and lack of a national consciousness. In short, the problem was one of old ideas hindering the process of social change and modernization and the role of broadcasting was to provide an inlet for the flow of modern ideas.

It was in the context of this dominant thinking about the role of broadcasting in India that television was introduced in 1959. The government had been reluctant to invest in television until then because the general consensus was that a poor country like India could not afford the medium. Television had to prove its role in the development process before it could gain a foothold in the country. Television broadcasts started from Delhi in September 1959 as part of All India Radio’s services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizens’ duties and rights, and traffic and road sense. In 1961 the broadcasts were expanded to include a school educational television project. In time, Indian films and programs consisting of compilations of musical numbers from Indian films joined the program lineup as the first entertainment programs. A limited number of old U.S. and British shows were also telecast sporadically.

The first major expansion of television in India began in 1972, when a second television station was opened in Bombay (now Mumbai). This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras (now Chennai), and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations. In 1975, the government carried out the first test of the possibilities of satellite-based television through the SITE program. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite-based television services could play a role in socioeconomic development. Using a U.S. ATS-6 satellite and up-link centers at Ahmedabad and Delhi, television programs were beamed down for about 4 hours a day to about 2,400 villages in 6 states. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning, and national integration. The experiment was fairly successful in demonstrating the
effectiveness of satellite-based television in India, and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT, launched in 1982.

In these early years, television, like radio, was considered a facilitator of the development process, and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country.

By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 29,000 square miles (75,000 square kilometers). Faced with the difficulty of administering such an extensive television system as part of All India Radio, the government constituted Doordarshan, the national television network, as an attached office under the Ministry of Information and Broadcasting—a half-way house between a public corporation and a government department. In practice, however, Doordarshan, whose director general was appointed by the ministry, operated much like a government department, at least as far as critical issues of policy, planning and financial decision-making were concerned.

Television went through major changes under what has been called, in the official language, The Special Expansion Plan for TV, an important state initiative in (re)organizing television during the 1980s. In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. INSAT-1A, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the "National Programme," which was fed from Delhi to the other stations. In November 1982, the country hosted the Asian Games and the government introduced color broadcasts for the coverage of the games. To increase television's reach, the government launched a crash program to set up low- and high-power transmitters that would pick up the satellite-distributed signals and re-transmit them to surrounding areas. In 1983 television signals were available to just 28 percent of the population; this had doubled by the end of 1985, and by 1990 over 90 percent of the population had access to television signals.

In 1976 a significant event in the history of Indian television occurred: the advent of advertising on Doordarshan. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially). Advertising began in a very small way with less than 1 percent of Doordarshan's budget coming from advertising revenues in the 1976-77 season. But the possibility of reaching a nationwide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, dramas, musical programs, quiz shows, and the like. By 1990, Doordarshan's revenues from advertising were about $300 million, accounting for about 70 percent of its annual expenditure.

By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take center stage in the organization's programming strategies, and advertising had come to be Doordarshan's main source of funding. However, television in India was still a modest enterprise, with most parts of the country receiving just one channel, and the major cities receiving two. But 1991 saw the beginnings of international satellite broadcasting in India, and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.

International satellite television was introduced in India by CNN, through its coverage of the First Gulf War in 1991. Three months later, Hong Kong-based Star-TV (now owned by Rupert Murdoch's News Corporation) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving StarTV telecasts. A year later the figure was close to 2 million, and by the end of 1994, an estimated 12 million households (a little less than one-fourth of all television households) were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small-scale cable system operators who mushroomed across the country. These systems redistributed the satellite channels to their customers at rates as low as $5 a month. Taking advantage of the growth of the satellite television audience, a number of Indian satellite-based television services were launched between 1991 and 1994, prominent among them ZeeTV, the first Hindi satellite channel. By the end of 1994 there were 12 satellite-based channels available in India, all of them using a handful of different satellites.
By the end of 2003, Indian viewers were exposed to more than 50 satellite-based channels, with a number of Indian programmers and international media companies such as Turner Broadcasting, Time-Warner, ESPN, CANAL 5, and Pearsons seriously considering the introduction of new satellite television services for India. The steep rise in channel availability has led to a major increase in software and program production from both local Indian and multinational corporations.

The proliferation of channels has put great pressure on the Indian television programming industry. Already the largest producer of motion pictures, India is poised to become a sizeable producer of television programs as well. With Indian audiences clearly preferring locally produced programs over foreign ones, the new television services are spending heavily on the development of indigenous programs. The number of hours of television programming produced in India has increased 800 percent between 1991 and 2003, and is expected to grow at an ever-faster rate in the future.

Despite the rapid growth in the number of television channels, television programming continues to be dominated by the Indian film industry. Hindi films are the staple of most national channels, and regional channels rely heavily on an mix of Hindi and regional-language films to attract audiences. Almost all Indian commercial films are musicals, and this allows for the development of inexpensive, derivative programs. One of Doordarshan's most popular programs, Chitrahaar, is a compilation of old film songs, and all the private channels, including ZeeTV and music video channels such as MTV India and Channel V, show some variation of Chitrahaar. A number of game shows are also based on movie themes. Other genres, such as soap operas, talk shows, and situation comedies are also gaining in popularity, but the production of these programs has been unable to keep up with demand, hence the continuing reliance on film-based programming.

International satellite programming has opened up competition in news and public affairs programming, with BBC and CNN International challenging Doordarshan's long-standing monopoly. Most of the other foreign broadcasters, for example, ESPN and the Discovery Channel, are focusing on special-interest programming. Only Star-TV's STAR Plus channel offers broad-based English-language entertainment programs. Most of its programs are syndicated U.S. shows, including soap operas such as The Bold and the Beautiful and Santa Barbara and talk shows such as Donahue and Oprah. However, STAR Plus has a very small share of the audience in India and even this is threatened by the launch of new channels.

Since 1996 the televisual “map” of India has undergone considerable shifts in structural terms and program production. The contemporary television system includes transnational satellite networks and channels, the state-run national network, several privately owned regional satellite channels, and numerous small and large-scale cable operators involved in creation and transmission of consumerist popular culture. An interesting feature has been the formation of a range of regional television networks like Gemini, Eenadu, Asianet, Sun, Udaya, Surya, Vijay that exist alongside the transnational networks like StarTV, Zee, Sony, MTV India, Channel V, CNN India, and the state-run television.

A peculiar development in television programming in India has been the use of hybrid English-Hindi program formats, popularly called “Hinglish” formats, which offer programs in Hindi and English on the same channel and even have programs, including news shows, that use both languages within a single telecast. This takes advantage of the audience for television (especially the audience for satellite television) which is largely composed of middle-class Indians who have some knowledge of English along with Hindi, and who colloquially speak a language that is primarily Hindi intermixed with words, phrases, and whole sentences in English. There are several other regional languages in which programs are produced that also mix English with various regional languages. This kind of hybrid program format and language-use has led to interesting phenomena that provides an ostensible cosmopolitan context to the programs.

Commercial competition has transformed Doordarshan as well, and it is scrambling to cope with the changed competitive environment. Satellite broadcasting has threatened Doordarshan's audiences, and self-preservation has spawned a new ideology in the network, which is in the process of reinventing itself, co-opting private programmers to recapture viewers and advertising rupees lost to ZeeTV and StarTV. In 1994, the government ordered Doordarshan to raise its own revenues for future expansion. This new commercial mandate has gradually begun to change Doordarshan's perception of who its primary constituents are, from politicians to advertisers.

But this change has been slow in coming. The government's monopoly over television over the years has resulted in Doordarshan being tightly controlled by successive governments. In principle, Doordarshan is answerable only to Parliament. Parliament lays down the guidelines that Doordarshan is expected to adhere to in its programming and Doordarshan's budget is de-
The Supreme Court's decision ordering the government to establish an independent broadcasting authority to regulate television in the public interest holds the promise of allowing Indian television to escape both the stifling political control of the state and the commercial pressures of the market. There are a number of other constituencies, such as state governments, educational institutions, non-governmental organizations, and social-service agencies who can participate in a liberalized broadcast system, in addition to private corporations. A number of technological factors, such as media convergence, broadband internet delivery, and Direct-to-Home (DTH) satellite transmissions will also be instrumental in the shaping of the future of India's television system. More importantly, the co-existence of state, domestic private, and multinational corporations—and the rapid rise of consumerist-oriented entertainment, religious-based programming, talk shows, game shows, news, and current affairs—indicates that the discourses of nationalism, globalization, and localization all remain powerful vectors for the televisual system and its audiences both within and outside the borders of the postcolonial Indian nation-state.

Mehta, D.S., Mass Communication and Journalism in India, New Delhi: Allied, 1992
This lushly produced and melancholy series was made by Zenith for Central Independent Television, to critical and popular acclaim, between 1987 and 1993, with five occasional specials following between 1995 and 2000. In Britain, the series gained audiences of up to 15 million, and it has been widely exported, contributing internationally to the image of an England of dreaming spires, verdant countryside, and serious acting. Inspector Morse was also one of the first programs on British television to be commercially sponsored, in this case by the narratively appropriate “Beamish Stout,” whose logo appeared on the later series. Originally based on detective novels by Colin Dexter featuring Chief Inspector Morse and Detective Sergeant Lewis, the series was developed to include Dexter’s characters in new scripts by, among others, Julian Mitchell, Alma Cullen, Daniel Boyle, and Peter Buckingham. Of the 28 films broadcast in the 1987 to 1993 run, nine are based on Dexter stories, as were some of the “return by popular demand” Morse “specials” (which followed the same format as the episodes in the original series) aired between 1995 and 2000.

Shot on film, in Oxford, the individual stories were broadcast in two-hour prime-time slots on British networked commercial television, contributing significantly to the reputation for quality garnered for independent television by series such as Brideshead Revisited and The Jewel in the Crown (both made by Granada). This reputation was enhanced by the increasing willingness of theatrical actors such as Janet Suzman, Sheila Gish, and Sir John Gielgud to guest in the series. However, the series also staked its claim to be “quality television” through continual high-cultural references, particularly the use of literary clues, musical settings, and Barrington Pheloung’s theme music. Thus, the very first Morse, “The Dead of Jericho” (January 6, 1987), investigates the murder of a woman with whom Morse (no forename given until the 1997 special Death Is Now My Neighbour) has become romantically involved through their shared membership of an amateur choir. The opening titles intercut shots of Oxford colleges to a soundtrack of the choir singing, while Morse plays a competing baroque work loudly on his car stereo. Morse spends some large part of the film trying to convince the skeptical Lewis that “Sophocles did it,” after finding that the murdered woman has a copy of Oedipus Rex at her bedside and her putative son has damaged his eyes. Morse is, characteristically, wrong—but right in the end.

Almost symmetrically, but with the rather more splendid setting of an Oxford ceremony for the conferring of honorary degrees testifying to the success of the series, the final episode in the series, “Twilight of the Gods,” not only uses a Wagnarian title but also weaves the opera through the investigation of an apparent assassination attempt on a Welsh diva. The significance of music in the series for both mise-en-scène and character (it is repeatedly shown to be Morse’s most reliable pleasure, apart from good beer) can be seen at its most potent in the regular use of orchestral and choral works as the soundtrack to a very characteristic Morse shot, the narratively redundant crane or pan over Oxford college buildings. This juxtaposition, like Morse’s old and loved Jaguar, insists that although the program may be about murder, it is murder of the highest quality. The plots, which frequently involve the very wealthy—and their lovely houses—tend to be driven by personal, rather than social factors. Morse’s Oxford is full of familial and professional jealousies and passions rather than urban deprivation, unemployment, or criminal subcultures.

Inspector Morse, despite the skillful and repeated insertion of contemporary references, somehow seems to be set in the past, and is therefore cognate with The Adventures of Sherlock Holmes and Agatha Christie’s Hercule Poirot and Miss Marple stories—in a genre we might call “retro-expo” crime—rather than with Between the Lines or The Bill. Within these relatively reliable and familiar parameters of a certain kind of Englishness, it is the casting of John Thaw as Morse that most significantly shapes the series. This has two main aspects, apart from the continuing pleasures of Thaw’s grumpy, economical, and—in contrast to some of his guest costars—profoundly televisual performance. First, Thaw, despite a long television history, is best known in Britain as the foul-mouthed, insubordinate, unorthodox Inspector Regan of The Sweeney, a police show first broadcast in the 1970s and regarded as excessively violent and particularly significant in eroding the representational divide between law enforcers.
and law breakers (an erosion in which, for example, Don Siegel’s film with Clint Eastwood, Dirty Harry, was seen as particularly significant). That it should be Thaw who once again appears as “a good detective, but a bad policeman,” but this time in a series that eschews instinct and action for intuition and deduction, offers a rich contrast for viewers familiar with The Sweeney. However, it is the partnership between Thaw and Kevin Whately (originally a member of the radical 7.84 theater group, and subsequently a lead in his own right as Dr. Jack Keruish of Peak Practice) that drives the continuity of the series and offers pleasures to viewers who may not be at ease with Morse’s high-cultural world. For if Morse, the former Oxford student and doer of crosswords, is the brilliant loner who is vulnerable to the charms of women of a certain age, it is Lewis, happily married with children, who, like Dr. Watson, does much of the legwork and deduction, while also nurturing his brilliant chief. However, it is also Lewis, a happy man who often fails to understand the cultural references (“So do we have an address for this Sophocles?”), who, in the most literal sense, brings Morse down to earth—to popular television.

Sparks, Richard, “Inspector Morse: The Last Enemy (Peter Buckman),” in British Television Drama in the 1980s, edited by George Brandt, Cambridge: Cambridge University Press, 1993
Television is typically perceived as a passive medium, its content and information flowing only in one direction, from provider to viewer. Almost since the beginning of the television age, however, there have been those—both providers and viewers—who have wanted more from television. In 1953, in one of the first instances of viewers actually interacting with television, *Winky Dink and You* allowed children to place a plastic sheet over the television screen and draw on it to complete puzzles and games shown on the screen. Today, the term “interactive television” represents several recent advances in new television technologies. The term is commonly used to refer to all of these technologies, but distinctions can in fact be made among personal television, enhanced television, and interactive television.

Personal television refers to technology that allows the viewer to manipulate live television content sent by the provider (over the air, cable, or satellite). One of the most popular of these technologies is known as the personal video recorder (PVR) or digital video recorder (DVR). The PVR acts much like a video cassette recorder in that it can record live shows to be watched at a later time (time-shifting). The difference lies in the fact that PVRs record the content to a hard disk instead of a cassette. PVRs also constantly record the stream of content the viewer is currently watching, providing the capability to pause, rewind and repeat, and even slow-motion-repeat live television. If viewers intentionally choose to begin viewing a program after the program has begun, they have the capability to rewind and start at the beginning of the show. This also affords the ability to fast forward until the recorded content “catches up” to the live stream. This process allows viewers to skip commercials, a capability that has started a vigorous debate among advertisers worried about the loss of attention to commercials. Most PVRs come assembled as a stand-alone device, or are bundled with devices such as a digital cable or satellite receiver already providing content, commonly referred to as set-top boxes. TiVo, ReplayTV, and Microsoft were among the first companies to introduce PVRs as stand-alone devices. Now many service providers, such as cable and satellite companies, are combining PVR functionality with their digital receivers. For this reason, many scholars believe this technology will spread rapidly.

One key aspect of the PVR, and central to most new television technologies, is the electronic program guide (EPG). This is a built-in television guide that downloads the television schedule for several days into the future. This allows viewers an easier means of searching for a program and commanding the PVR to record particular programs. The EPG also acts much like a database, able to catalog search terms such as actors, directors, plotlines, and titles, making it easier for viewers to find preferred content.

Enhanced television allows viewers not only to receive television programming, but also to receive additional information (enhancements) pertinent to the content being viewed. While watching a baseball game, for example, an icon appears on the television screen that can be selected and accessed via the remote control. Doing so may give the viewer individual player statistics, current wind conditions at the ballpark, or other information relevant to the game. Such enhancements could include actor biographies, director’s comments, or a full list of program credits. Wink is a current company that provides this type of content and technology to service providers.

Many of these enhancements work via the Vertical Blanking Interval (VBI) contained in the transmission of data to a viewer’s set-top box. The VBI is an extremely brief time interval occurring between different frames being scanned onto the television screen—comparable to the blank space between frames on film stock. The potential of VBI was understood more fully after engineers realized that closed captioning content could be sent through this VBI. The same concept works for Enhanced Television, but the VBI can carry content, including enhancements, other than video and audio. As an alternative to the VBI, some content providers also use telephone lines, which can be connected to the back of the set-top box, to send the enhancements.

A truer definition of interactive television takes the concept of enhanced television one step further. In fully interactive television, information between content provider and viewer flows both ways. There are two primary ways this takes place: either through the television setup itself, or through another device such as a computer. The route by which information is sent back to the content provider is called a back channel. The back channel can theoretically operate through the
The ability to send as well as receive information also means that business can be conducted over television, a practice already known as television commerce (t-commerce). In Europe, viewers can order a pizza from Domino’s over their television service—during a commercial, the viewer uses the remote control to both order and pay for the pizza to be delivered. This is made possible by accessing what is known as a Walled Garden—viewers are allowed to go online, but only to sites sponsoring the programming or able to make money from the programming. The prospect is that the same t-commerce concept could be successful in the United States, which has much more advertiser-supported programming than Europe. Product placement in television shows could allow viewers to order that product through their remote controls.

In some ways, all these versions of interactive television are fundamental alterations of conventionally understood “passive” uses of the medium. It is unlikely, however, that they will completely supplant other practices, such as typical viewing of information and entertainment. They do make clear, however, that the ways in which television has been experienced for more than half a century are not determined by its technological features, which far exceed the uses that have become most familiar to most viewers.

International Telecommunication Union

The instantaneous transmission of news and information across the globe was made possible in the 1830s by the invention of the telegraph, the invention that gave rise to the word “telecommunications.” The electric telegraph machine was created through efforts of Samuel Morse, Sir Charles Wheatstone, and Sir William Cooke, and telegraphy began in England in 1837. Today, pagers, mobile phones, remote control toys, faxes, aircraft and maritime navigation systems, satellite communications, e-mail, radio, television, wireless Internet, and many more daily communication tools function in the modern global communication network thanks in part to the work of the International Telecommunication Union (ITU).

In the early days of cross-national communication, messages were encoded on a telegraph machine and sent to the bordering country for transcription, usually by a national post office, and then sent to their destina-
The first International Radiotelegraph Conference, held in October 1849, led to the establishment of the International Telegraph Union in 1865. The advent of radio communications at the end of the 19th century led to the establishment of regional unions, leading to the creation of the International Telecommunication Union. The success of this first union gave rise to additional international unions, leading to the creation of the International Telecommunication Union in 1865. The advent of radio communications at the end of the 19th century led to the first International Radiotelegraph Conference, held in Berlin in 1906, at which the International Radiotelegraph Convention was agreed in order to establish regulations and technical standards for cross-border wireless communication. In 1934, the International Telegraph Union expanded its remit to take in the 1906 convention, changing its name to the International Telecommunication Union. Today, the ITU is the sole regulating institution with power to regulate the transfer of data throughout the world.

In 1947 the ITU became an agency in the United Nations. According to a 1982 ITU Convention report, the purposes of the ITU as follows: (1) to maintain and foster rational use of telecommunications and to offer technical assistance; (2) to promote and improve efficient use of technical equipment and operations; and (3) to coordinate and promote a positive world environment for the achievement of the above goals.

As the speed of telecommunications inventions increases, so does the importance of the ITU. The evolution of telecommunications technology during the 20th century is so great that telecommunications affects almost every aspect of life, and the role of the ITU continues to extend into new areas of concern. The three major areas of jurisdiction for the ITU are: (1) distribution of radio and satellite services and assignments; (2) establishment of international telecommunications standards; and (3) regulation of international information exchange such as telephony, telegraphy, and computer data. The ITU also plays a vital role in telecommunications assistance for developing countries. The ITU is divided into three major sectors—Radiocommunication (ITU-R), Telecommunication Standardization (ITU-T), and Telecommunication Development (ITU-D)—aimed at facilitating global discussion of the wide range of radio and telecommunications issues.

Some 160 countries within the United Nations (UN) have representatives in the ITU. Each of these countries gets one vote on ITU decisions. The general meeting of the ITU is held once every few years and is called the Plenipotentiary Conference. The chief objective of this conference is to review and revise the ITU Convention, which is the governing document of the union. The one-country, one-vote format often leads to voting blocks based on country alliances, and creates the political nature of the ITU.

The antagonisms between these voting blocks, in the light of the ever-increasing quantity of information being sent and received internationally, at times threaten the existence of the ITU. Many developing countries want to break the dominant flow of information from Northern industrialized countries to Southern developing countries. Broadly speaking, the North wants to continue the “free flow” of information while the South would like to be able to regulate the flow to enable them to maintain greater control of their own socio-cultural development.

A second factor that threatens the existence of the ITU is the fact that the speed at which technological changes now occur is greater than the ITU’s international standards process can accommodate. Thus, several other standards organizations have developed, such as the Telecommunication Carrier Standards Association in the United States, the Telecommunications Technology Committee (TTC) in Japan, and the European Telecommunications Standards Institute (ETSI). These regional standards organizations (RSOs) offer a more homogeneous membership than the ITU, which makes the standardization process quicker.

In response to the RSOs, the ITU has streamlined its standards process and restructured its voting rules so that decisions can be made by ballot between Plenipotentiary Conferences. In 1996, the ITU convened the first World Telecommunication Policy Forum (WTPF) in an effort to promote discussion and harmony regarding telecommunication regulatory policies. For example, one of the more recent ITU debates focused on satellite and orbital space allocation for ITU members. Globally accepted standards are necessary for cross-national telecommunication and safety. The telecommunications industry is at the core of many global health, education, and food manufacturing and distribution services such as tele-medicine and distance learning. The ITU will most likely continue to play an important regulatory role in global communications, economics, and politics.

International Television Program Markets

Television has always been traded, exchanged, bought, and sold. It would be fair to say, however, that for a good part of the history of this medium, commerce in television traveled along what Kaarle Nordenstreng and Tapio Varis called, in 1974, “a one-way street” from the United States (and, to a lesser extent, Great Britain) to the rest of the world (see Nordenstreng and Varis). Now, however, this situation is changing. The pressures of globalization, the spread of post-Fordist models of production, and the emerging dynamism of many alternative centers of production make the idea of “world television” less fanciful. A more appropriate metaphor for depicting international television might now be Michael Tracey’s notion of a “patchwork quilt” (see Tracey, 1988). This image implies interconnectedness in a world system. One cause of this newer pattern of world television is the very practical need for cofinancing arrangements when it is impossible to fund high-end product domestically. A second factor in the newer arrangements is the continuing dependency of most programming services on some degree of imported television.

Today, then, there is a world market for television. The main players in this market are producers, distributors, and broadcasters. The subsidiary players are government agencies, financiers, packagers, and sales agents. The stages on which the players appear are the markets held several times a year in the United States, Europe, and more recently, Asia. The most well-observed markets are MIP-TV (held in April in Cannes, France), MIPCOM (held in October in Cannes), the American Film Market, or AFM (held in Santa Monica, California, in February), the Monte Carlo Television market, and the National Association of Television Programming Executives, NATPE (held in Los Vegas, Nevada, in January). Other markets of note are the Reed-Midem organized MILIA market for interactive television, held in Cannes in February; the Cannes Market (MIF); and the International Animated Film Market (MIFA), held in Annecy, France. However, the glut of such markets in Europe has led to a downturn in attendance in recent years. A recent addition to the international schedule, and one that is gaining momentum, is the DISCOP format market, first held in Lisbon in 2002. The nature of the DISCOP market is to generate sales of format ideas and establish relationships between format licensors, creators, producers, and investors. This is a significant development given that a number of major media organizations now see formats as integral to their internationalization strategies.

Some of the sales conventions are well established. The MIDEM organization, which runs the MIP events, started in the 1950s and is now owned by Reed International, the publishing company. The dominance of European and North American markets has in recent years been challenged by new events in the Asian region. MIP Asia was first held in December 1994 in Hong Kong. The market achieved mixed success in comparison with its European-based namesakes and was wound down af-
ter the 1999 MIP Asia, held in Singapore, being replaced by the Asia Television Forum, which is now held in early December and is organized by Reed Exhibitions and Television Asia. This market is organized by the Hong Kong Trade and Development Council, and is held in June. Also gathering momentum is the Shanghai International Film and TV Program Market, which follows the now-merged Shanghai TV and Shanghai Film festivals. It is also held in early June.

MIP- TV, the longest-running of the markets, attracted 1,205 exhibitors and 10,217 participants from 92 countries in 2002. MIPCOM (International Market for Television, Video, Cable and Satellite Films and Programs), which began life in the early 1980s as an “obscure sibling” to the long running MIP-TV in spring, is held in the northern fall, also in Cannes. It grew fast to become, by the late 1980s, the second-biggest event after MIP-TV, and it is now a huge meeting of the world’s television buyers and sellers, with the established players dominant. The 2001 MIPCOM attracted 5,185 exhibitors and nearly 10,000 participants from dozens of countries. Xavier Roy, chief executive of the Reed-Midem organization, believes the event can accommodate expansion to 12–15,000 participants.

In these big markets, programming is often bought or rejected sight-unseen, in job lots, based on company reputation or distributor clout. Very broad, rough-and-ready genre expectations are in play. Decisions to purchase programs not central to the schedule are frequently made on such grounds, even though the choices seem arbitrary. Conversely, there is a tradition among some European public broadcasters of scrutinizing possible foreign acquisitions extremely closely. In this atmosphere, it is difficult for the new company, the off-beat product, or the unusual concept to be discovered. (For its first foray as a seller into MIPCOM in 1993, the U.S. documentary cable channel Discovery “tarted up” its profile by dressing its stall as a movie set. Actors were employed to create live action scenarios around a World War II theme to coincide with Discovery’s use of Normandy-landing documentaries as its flagship programs.)

These markets are the places where buyers can view the programs on sale from various producers, distributors, and sales agents. Just as crucially, markets are the places where the players can circle each other at screenings and parties in the attempt to set up or consolidate partnerships that can help to finance the next project. If there is one thing true about “world” television, it is that it works on a basis of personal contact. Experienced distributor Bruce Gordon, head of Paramount International, has described the international television market as a club. However, not all players in this club are equal. The most powerful are the U.S. networks; the representatives of the Hollywood studios; the major broadcasters, both commercial and public service, from the richest regions elsewhere (Japan and Europe); the emerging new pay services like Star TV, British Sky Broadcasting (BSkyB), and Canal Plus; and perhaps some of the biggest television distributors, such as Germany’s Kirsch Group, whose large holdings of library material gave it considerable economic clout until the company was declared insolvent in 2002. Given the multiplication of television distribution channels throughout the world, it is likely that the international markets will continue to grow in importance. New participants will need to find ways to place themselves within the structures of power and exchange already controlled by these more established institutions and individuals.

Tracey, Michael, “Popular Culture and the Economics of Global Television,” Intermedia (March 1988)

Ireland

The island of Ireland is made up of two nation-states. Northern Ireland consists of six counties of the province of Ulster and is part of the United Kingdom. The terrestrial television service provided in its broadcast area is that of the BBC, Channel 4, Channel 5 and ITV. BBC Northern Ireland transmits many BBC pro-
grams originating in Britain, produces a significant number of its own programs, broadcasting its own versions of BBC 1 and BBC 2 as well as the Corporation's new digital TV channels BBC 3, BBC 4, and two channels of children's programs. Meanwhile, Ulster Television is the regional member of the ITV network. It acts both as a broadcaster of the ITV service and produces programs for inclusion in the local schedule.

To the south, Ireland is an independent republic and consists of the remaining 26 counties of the country. Hence, "Irish television" usually refers to the set-up that is viewed in the republic, although, as will become clear, the spillover service (now including BBC1, BBC2, UTV, Channel 4, Sky News, Sky Sports, Eurosport, the Movie Channel, Sky One, UK Gold, Cartoon Network and Discovery) has a strong determining role in that system.

Through the 19th and 20th centuries, the Irish state (whether operating from London or Dublin) has been characterized by a high degree of authoritarian control, both coercive and ideological. In 1926, shortly after the founding of the Irish Free State in 1922, the state itself assumed control of all broadcasting in the 26 counties. This was motivated by a desire to head off any attempt by the British Marconi Company to establish itself in the region. Ironically, to help in the ideological task of establishing a nationalist identity, the government decided to implement a British-style system of broadcasting monopoly. Until 1960, the state, through the agency of the Department of Posts and Telegraph (Radio Éireann) provided a broadcast service through a single radio network. Then as now, this public service was financed by a combination of license fee and advertising. Highly conservative in programming, Radio Éireann was only tolerated by most of its listeners. In fact, the service did not have an audience monopoly. Households on the east coast and near the northern border could also receive the BBC and Radio Luxembourg.

It was this proximity to British broadcasting in the 1950s that forced the Irish government's hand so far as the inauguration of television was concerned. BBC Northern Ireland had begun TV transmission in 1953 and had been joined by UTV in 1959. Hence, the Irish Broadcasting Act of 1960 legislated the establishment of a television service, which began the following year. Again, following the public-service monopoly model, the facility, consisting of a single national channel, was put under the control of Radio Telefís Éireann (RTE). A revamped version of the radio provider, RTE was an independent public authority. This was a significant move toward liberalization, in line with the government's own moves to "modernize" Ireland to make it attractive to transnational capital investment.

However, this has not lessened attempts by the state to keep a tight control on the nature of political debate on Irish television. In general, this has led to poor relations between RTE and most Irish politicians. For example, in 1969, following political unrest in Northern Ireland, the Irish government imposed direct censorship over RTE news and current affairs. When, in 1972, RTE interviewed a spokesperson for the Provisional Irish Republican Army (IRA), a paramilitary group defending Catholics in Northern Ireland, the government dismissed the RTE board and appointed its own members.

Meanwhile, aware of the necessity of a second RTE channel but hoping to save revenue, in 1978 the government considered allowing the BBC to broadcast across the nation. Instead, it bowed to public opinion and allowed RTE to begin a second television network. The broadcaster, however, was not allowed to increase license fees or advertising rates, so that its overall finances, and therefore its capacity to produce local programs, was significantly weakened.

Technological and ideological pressures have also been persistent, such that RTE's monopoly has now ended. Since 1970, the authority had operated its own cable network, RTE Relay, which was renamed Cablelink in 1986. Cablelink was at one point the largest cable operator in Europe and provided about two-thirds of television households in the Irish Republic with all the terrestrial channels broadcast in Britain, later complemented by the European services Superchannel and Sky. By the early 1990s, Cablelink was beginning to carry advertising, thereby diminishing RTE's potential revenue. In addition, there was also the possibility that Cablelink might be sold to a private operator, thereby providing direct competition to RTE's broadcast service. This came to pass when Cablelink was sold to NTL in 2000. New channels (such as National Geographic) continue to be added to NTL's roster, and old ones (such as Superchannel) are discontinued, with the overall number of channels available continuing an upward trend.

Generally, the government was also interested in weakening RTE's power. It saw further opportunity to do so with moves throughout Europe to open up broadcast television to other interests. The 1988 Broadcast and Wireless Telegraphy Act formally broke the television broadcast monopoly. A new broadcast body, the Independent Radio and Television Commission, was established to oversee the introduction of privately owned radio and television stations. Several commercial radio stations have since gone on the air. At the same time, a private commercial television station, TV3, was announced in 1990, although it did not go on the air until 1998. The delay was partially caused by the need for strong financial backing, which was finally secured by entering a partnership with CanWest Global Communications, a Canadian-based interna-
Ireland

tional broadcaster. Meanwhile, in 1996, an Irish language broadcaster, Telefís na Gaeilge (TG4), was established under the statutory umbrella of RTE, although under the 2001 Broadcasting Act it is moving toward full statutory authority. Dedicated to the maintenance and development of the Irish language, programming is mostly in Gaelic. However, despite these legislative developments, RTE continues to have to supply TG4 with 365 hours of programming annually, at no cost to the newcomer.

Increased commercial competition, involvement in three public service networks, and the low revenue generated through the license fee has affected RTE's capacity to produce local content. In 1965, Irish programs constituted approximately 60 percent of material transmitted. This figure had fallen to around 36 percent by 1990 and is still falling. In a schedule dominated by imported programs, RTE's own programs, particularly those with mass appeal, are especially important as "flagship" programs in the schedule. In the past, these have included Glenroe, Fair City, and Pat Kenny's The Late Show, among others. Glenroe and Fair City are popular soap operas in a "public-service" tradition, while Pat Kenny's The Late Show is a talk show with a strong sense of community, and marked by a refusal to shy away from controversial issues.

However, given the external spillover and the internal commercial rivalry, RTE exists in an environment where it is no match for its opposition. To attempt to maintain its general ratings both for its imported programs and its local programs, RTE is forced to engage in a scheduling strategy of parallel programming with British television, especially the channel ITV. It buys some of the latter's most popular programs, such as Coronation Street, which it then schedules against the same program on ITV. Like other public broadcasters, RTE finds itself in an increasingly grim situation. The Irish state has charged RTE with the task of fostering an Irish cultural identity yet has, over the past 30 years, become ever more prone to withhold the resources that would enable RTE to carry out this mission more effectively. Cross-national transmission has always posed a fundamental threat to the service and recent developments in technology, ideology, and financial arrangements have made that task even more difficult.

Isaacs, Jeremy (1932–)

British Producer and Executive

Jeremy Isaacs had one of the most distinguished careers in the history of British television, from producer to channel controller, yet the top job which many anticipated he would earn—the Director-Generalship of the BBC—ultimately eluded him.

From a humble background in Glasgow's Jewish community, he attended Merton College, Oxford, where he became President of the Oxford Union. Specializing in factual programming, his first television work was with Manchester-based Granada Television from 1958 to 1963, where he produced the long-running stalwarts What the Papers Say and All Our Yesterdays, the latter beginning the association with archive-based history programs which was to become such an important feature of his career.

In 1963 he moved to the London ITV franchise holder, Associated-Rediffusion, where he was a producer and editor on the flagship ITV current affairs program This Week for three years, covering major foreign and domestic issues of the time, from Vietnam and the assassination of President Kennedy to the reform of homosexuality and divorce legislation, and Beatlemania.

In 1965, he moved to the BBC as editor of the Corporation's current affairs flagship, Panorama, a position he held for the next two years, before returning to Associated-Rediffusion in 1967 as Controller of Features. In 1968, the company was succeeded by Thames Television as the ITV London weekday franchise holder, and Isaacs continued in the same role for the new company until 1974. Isaacs made Thames's factual output among the most admired in the British television landscape. He also continued to make programs himself, as producer and executive producer, and it was a project which became something of a personal crusade that was to become the undoubted highlight of his program-making career.
As series producer of *The World At War*, Isaacs oversaw an immensely talented group of writers, historians, and producers. The finished product, an extremely ambitious, 26-part history of World War II, set the standards that still apply today for the combined use of archive film and eye-witness testimony to tell the story of the past. Endlessly repeated down the years since its first appearance in 1973, *The World At War* remains a television classic. In a poll of TV industry professionals conducted by the British Film Institute in 2000, it was voted by a long margin the best factual program in British television history. It also remains a testament to the commitment to quality broadcasting that Isaacs instilled in the commercial company Thames Television.

Isaacs strengthened Thames's reputation as its Director of Programs from 1974 to 1978. One production in particular serves to illustrate his achievement: the drama *The Naked Civil Servant* (1975), directed by Jack Gold and starring John Hurt as Quentin Crisp, which not only stands as a milestone of British TV drama, but also helped to influence changing public attitudes to homosexuality.

In 1979, Isaacs was invited to give the prestigious James McTaggart Memorial Lecture, which opens the annual Edinburgh International Television Festival. The biggest debate in the television industry at the time surrounded the new Conservative government's plans for Britain's fourth television channel. Isaacs used the platform he was given to set out his own ideas about how the channel should be created and run. Channel 4 was eventually set up largely along the outlines he promoted: it which would be funded by the ITV companies, who would sell its advertising space and cross-promote it, an ingenious formula which allowed it to be given a strong public-service remit with a particular duty to be innovative and cater for minorities otherwise underserved by television. It was also to act as a publisher, rather than maker of programs, commissioning its output from independent companies. Isaacs was duly given the job of Channel 4's first Chief Executive, with the channel set to start transmission in 1982. In the meantime, he acted as consultant on another large, archive-based series, *Hollywood*, transmitted by Thames in 1980, and as series producer of *Ireland: A Television History*, made for the BBC in the same year. He then embarked on the adventure of creating a completely new television channel.

Channel 4 began broadcasting in November 1982 and immediately ran into a variety of troubles. It also changed the face of British television. The independent productions often had a raw edge not previously seen on the mainstream channels, the professional conventions of which were overdue for reconsideration. Programs for minorities included not only women and ethnic groups, but trade unionists. Youth programming such as *Whatever You Want* and *The Tube* caused a stir for its sometimes unrestrained energy.

The controversies centered usually on matters of taste and language—with the channel's soap opera *Brookside* to the fore—or on the perceived ratings crisis. Isaacs knew what he was doing, however, and the channel certainly bore witness to his commitment to innovation and quality. The first night's programming included the filmed drama *Walter*, starring Ian McKellen as a mentally retarded man, which kicked off Channel 4's film-making strand *Film on Four*, later to be credited with reviving the British film industry, giving work to major talents like Mike Leigh and Peter Greenaway. Another early and emblematic triumph was the television version of the Royal Shakespeare Company's *The Life and Adventures of Nicholas Nickleby*. Probably the greatest success was the hour-long *Channel 4 News*, which combined a serious approach to news and in-depth analysis in a way that revolutionized the coverage of news on British television.

Channel 4 became a vital part of the British television landscape. The then comparatively staid BBC 2 (seen as its natural competitor, as BBC 1 was for ITV) was forced to respond, and the result was a rise in the quality of output unprecedented in British television history. Many see the 1980s as an era of great energy and renewal in British television, which can be attributed, for the most part, to Isaacs. When he handed the task of running the channel over to the populist Michael Grade in 1987, it was with a strong warning not to allow the quality of output to suffer in the search for ratings.

By then Isaacs had tried, and failed, to get the job he most coveted and which most industry professionals wanted him to have: Director-General of the BBC. British television was entering an era in which profits (or in the BBC's case, ratings), rather than quality, would be the prime moving force, and Isaacs was the first casualty of that sea change.

Isaacs turned away from television and took a job that reflected another of his passions, becoming General Director of the Royal Opera House, Covent Garden, from 1988 to 1997. Controversies followed him there also, no more so than when in 1996 he invited a television documentary crew to make a series on the opera house for the BBC, which produced a highly unflattering portrait of an institution in crisis.

He never completely severed his television links. From 1989 to 1998 he acted as the unseen interviewer in a revival of the classic *Face to Face* interview series, talking to the likes of Sir Peter Hall, Maya Angelou, Salman Rushdie, Norman Mailer, Stephen Sondheim, and Anthony Hopkins. Then, at the end of
the 1990s, he returned once more to the large-scale archive history format as executive producer on the 24-part The Cold War for Turner Enterprises. Consciously modeled on The World at War (it was narrated by the classical actor Kenneth Branagh, for instance, as the earlier series had been narrated by Laurence Olivier), it included testimony from most of the major political figures of the second half of the twentieth century, and was first shown in 1999.

Israel

Television did not arrive in Israel until 1968. Establishment opposition to television during the two preceding decades since the founding of the state had been strong enough to thwart earlier pro-television initiatives. It was feared that reading would decline; that newly developed Israeli culture and the Hebrew language, still in need of nurturing, would be overwhelmed by imported, mostly U.S. programs; that national integration would be weakened by entertainment; and that politics would become less ideological—that is, less oriented to issues, and more to charismatic personalities (Katz), should television become widely available.

All these considerations were overcome when, following the 1967 Six Day War, Israel found itself in charge of two million Palestinians in Gaza and the West Bank. The establishment of television was originally conceived by the government as a bridge to the Arab population in the occupied territories, which had previously been exposed only to broadcasts from Arab nations.

Until the introduction of television, radio was the central medium of national integration, serving as a Hebrew teacher to the masses of new immigrants, and providing a focus for the development of a shared Israeli culture, and for the celebration of holidays. Radio also played a crucial role in surveillance of the Arab-Israeli conflict. Kol Yisrael (“Voice of Israel”) started transmitting illegally during the last years of British Mandatory Rule as a means of mobilizing for the national struggle. In 1965, however, Israel Radio became a public authority, modeled on the BBC, administered by a largely independent board, and financed by a user’s license fee.

A decision to incorporate television into the existing authority for Public Broadcasting had a significant impact on its development. Television staff were recruited from radio, and moved into television with their already tenured positions. This caused a lack of mobility, and made it almost impossible to recruit new talent. Moreover, cultural conflicts added to these industrial problems. Israel Television’s first challenge in this arena, brought by the National Religious Party over the violations of the Sabbath, was in the very fact of broadcasting on Friday nights and Saturdays. The controversy was overcome (in favor of broadcasting) in an appeal to the Supreme Court.

For the next 25 years Israel had only one television channel. During the day, it showed educational programs and public broadcasting initiatives, starting transmissions in the late afternoon, and ending with the national anthem at midnight. As with the radio service, television in Israel was modeled on the BBC, but number of significant deviations from the British model made it more politicized, and more dependent on Parliamentary control. In the U.K., the Queen, on the advice of the government, appoints the Board of Governors, who appoint the director general. In Israel, the government appoints the director general directly, on the recommendation of the Board of Governors.
Moreover, the Board of Governors in Israel consists of representatives of the various parties, and does not follow the British precedent according to which its members should represent “the great and the good.” In Israel, the Ministry of Finance retains indirect control of the license fee (as it is in charge of approving Public Broadcasting’s annual budget), decides on the amount of the license-fee increase (to keep up with inflation), and finances the budgetary deficits. Television’s income also suffers from the tendency of Israelis (the number varies in different periods) to escape paying the license fee. Revenues from corporate-based “sponsoring” slowly crept into the system, but then decreased to almost nothing with the establishment of a second commercial channel.

The second television channel started its official existence only in 1991. Again following the British example, it was also public, but financed by advertising rather than by a license fee. Broadcasting on the second channel is divided among three companies, each of which broadcasts two days a week in rotation, and a news company, financed jointly by the three other companies.

Channel 2 functioned as a purely commercial channel, signaling the beginning of a new media era characterized by an explosion in the number of cable and satellite channels. Increased sales of video cassette recorders, the establishment of video rental libraries, the installment of roof satellite dishes to receive broadcasts from Europe and the U.S., and the infiltration of pirate cable channels, all offered easy alternatives to national television for segmented audiences. It also sped up the legislation of cable television, first established in 1990. By 2001, 90 percent of Israeli households were connected to cable television. Segmentation was further increased with the introduction of satellite television in 2000. The new technology facilitated interactive forms of consumable television (such as video games and “movies on demand”). A third nationwide commercial channel, Channel 10, was established in 2002, and presented as an alternative to the more mainstream offerings on the other channels (Channel 10 was modeled on the British Channel 4). However, it turned out to be little more than a pale copy of the commercial Channel 2, and has fared poorly in the ratings race.

By 2002, more than 90 percent of Israeli households were connected to multi-channel (cable or satellite) television services, offering altogether more than 50 channels. This positions Israel (with a population of 6 million) as second only to the U.S. (with its nearly 300 million) in the number of channels available to the majority of the population (Adoni and Nossek).

The numerous television and radio channels address various target audiences, dividing Israelis according to age, gender, culture/ethnicity, and nationality, and according to self-selective community categories. Thus, public broadcasting is viewed by older Israelis, the telenovela channel is viewed mostly by women, Russians view Russian-speaking channels, and so on. Channels for children, family, sports, films, science, and shopping are assembled by the local companies, who also provide Hebrew subtitles, announcements, promos, and originally produced programs. Local productions consist of sports, children’s programs, documentaries, reality programs, soap operas, and drama series, and time is allocated for public access programs.

Channel 2, originally defined as public, has gradually distanced itself from this categorization and behaves like a commercial channel. In order to increase advertising profits, it started a ratings war with Channel 1 in which the latter, by its adherence to its aims as a public service, by inferior financing, and by increasing political control, was bound to be the loser.

By 2002, according to the data gathered by the Israel Audience Research Board, the multiplicity of channels resulted in the three nationwide channels together having only a 29 percent share of viewers: 17 percent went to Channel 2, 10 percent to Channel 1, and 2 percent to Channel 10. (The Russian-speaking Israel Plus channel, going on air in 2001, managed better than Channel 10, with a 2.2 percent share.)

A major consequence of the increased number of channels is the marginalization of television news. Until the establishment of the second channel, an evening news program was broadcast at 9:00 P.M., serving as the sole focus for prime-time viewing and providing a common agenda for public debate. Over 60 percent of Israelis watched regularly, and in consequence, the medium of television was regarded as supplying more information than entertainment (Katz, Haas, and Gurevitch). One side-effect of the focus on news production was that locally produced entertainment shows remained underfunded, and local drama was virtually nonexistent. This made the news even more central.

During the first 25 years of Israel Television, drama series consisted mainly of American, but also British, imports. Usually, only one such series was aired on prime time. Kojak, Starsky and Hutch, Dallas, and Dynasty, and the British dramatic serial Upstairs, Downstairs, were popular. Dallas exceeded all others in popularity (Liebes and Katz). British comedies (Yes, Minister; Are You Being Served?) and detective series (Inspector Morse) were popular, but imports of more highbrow series were stopped, following the failure in Israel of the prestigious Brideshead Revisited, based on the Evelyn Waugh novel. Programs such as Hill Street Blues, The Cosby Show, and Northern Exposure,
representing a plurality of American television genres, were successfully shown. *Cheers* is the only program in the public channel's history which was rejected by the Israeli audience to the extent that it was taken off the screen.

American programs have gained more popularity than their British counterparts, as the abundance of American shows has increasingly socialized viewers to American conventions and styles of production. With the impoverishment of the public channel, new U.S. series (and new films) are now bought by the second channel and cable networks. Israel Television produced high-quality current-affairs programs (*Ma'bat Shen*ni) often based on investigative reporting, and a few sitcoms (such as *Krovim krovim*), which were popular. Highlights in the history of Israel Television include the documentary series on the history of Zionist settlement in Israel, *Amud Haesh*; an inventive series of political satire, *Nikuy Rosh*, which drew heavy attack from the political establishment and launched the careers of a number of Israeli comedy stars; and made-for-television films, which touched on central controversies in Israeli society, notably by prize-winning television director Ram Levi (whose film *Hirbat Hiza*, showing Israeli soldiers evacuating an Arab village during the 1948 war, was broadcast only years after its production).

Beyond creating an integrative focus for daily life, Israel Television also took an active part in the shaping of holidays, creating secular alternatives to traditional rituals (for example, by showing a classic movie); complementing the traditional content (such as by dramatizing the Passover Seder); taking the viewers to the event (the public reading of the book of Esther on Purim, or the Holocaust observance ceremony); or by creating the event itself (such as the annual Bible Quiz, invented for the Day of Independence).

The ten most popular prime-time series broadcasting on the three nationwide channels in 2003 were all Israeli-made productions in a variety of genres: telenovelas, reality television, investigative reporting, soft-satire, and public folk-singing. The winner in a Channel 2 competition for the most popular program of the decade was *A Star is Born*, a series in which amateur singers competed for fame and recognition. Political or quasi-political talk shows, the most popular genre of the 1990s, had almost disappeared.

Throughout Israel's history, in moments of crisis, broadcasting has taken over the function of surveillance and social integration. Radio is still listened to in cars and public buses (in total silence at moments of crisis). It is used by the army (now as an adjunct to television) for fast mobilization of its reserve forces, and stands in for the outdated alarm system, announcing when it is time to go to the air-raid shelters (the "sealed rooms" of the Gulf War).

While television took over as the ceremonial medium of integration, radio adapted itself by switching to open-ended programming, always interruptible by the latest news of any conflict, perhaps relaying regards from soldiers away from home to their families, perhaps instructing the people in Northern Kiriat Shmona to spend the night in shelters, perhaps summoning soldiers to their reserve units by reading out the appropriate code phrases for rehearsing an emergency mobilization, or for enacting a real one.

In critical moments, however, television also interrupts its schedule, switching to "open" live broadcasting, and becomes the focus for sharing national trauma, and for reflecting on its meaning. Thus, during the week following the assassination of Prime Minister Yitzhak Rabin, in November 1995, Israelis could not disconnect themselves from the television set. Television acted as a locus for sharing grief, pointed out the various "sacred" arenas for people who wanted to go out and mourn in public, and provided a forum for debating the ideological rift in which the assassination was rooted.

Television has also been a central factor in historic events which became landmarks in the collective memory of Israelis. The live broadcasting of Egyptian President Sadat's visit to Jerusalem in 1977 is the best example for illustrating the crucial part played by television in influencing public opinion (Liebes, 1997). The various stages of development toward achieving a lasting peace with Jordan and the Palestinians, from 1993 to 1995, were celebrated by media events which endowed them with (various degrees of) public legitimacy, reuniting the segmented television audience. By 2003, the dominant genre of live television was the "Disaster Marathon," in which the television schedule was interrupted following the latest terrorist attack (Liebes, 2002). Whereas at the time of the Oslo process these were the moments in which political debates flourished, and opposition voices were given the stage, in the early 21st century there was only the mourning with the victims, and the momentary creation of a personalized, apolitical, national unity.

Katz, E., H. Haas, and M. Gurevitch, "Twenty Years of Television in Israel: Are There Long-Run Effects on Values, Social
In the bars of Italy in the 1950s, television became popular when crowds of people, women as well as men, left their homes to meet after supper and watch the first huge success of Italian public television. The attraction was Lascia o raddoppia (Double Your Money), a quiz-show format imported from the United States by a young showman, Mike Bongiorno (who continued to host shows through the 1990s).

In August 1996, the board of administrations of RAI, the public radio and television company, made decisions concerning the directors and vice directors of all the news and programs departments in RAI—the third such change of executives in four years. For three days, all Italian newspapers dedicated their leading articles to the subject, and continued with two or three inside pages filled with comments, backgrounds, and feature stories. As on previous occasions, the nominations of RAI department directors were an important conversation topic. This level of attention in the press, and the concern for public opinion by RAI, would be seen as quite unusual in most countries; even in Italy, there is no similar interest with regard to other kinds of companies. Television is not only a conversation topic in terms of the content and programs it presents to audiences, but for itself.

Beginnings and Developments

The official history of Italian television began on January 3, 1954, at which time Radiotelevisione Italiana (RAI) was the only television network, transmitting news and prime-time programs. RAI had begun as a state-owned radio broadcasting entity in 1924, when it was called Unione Radiofonica Italiana (URI), and was heavily controlled by the national government, at that point a fascist regime. For years, and despite transformations in government, the same company remained a monopoly, simply changing its name—in 1924 URI, in 1927 Ente Italiano Audizioni Radiofoniche (EIAR), and in 1944 RAI (which originally stood for Radio Audizioni Italia; when TV broadcasts began ten years later its named changed, but retained the same acronym). From 1954 to 1976, the history of Italian television is the history of RAI, for the monopoly was extended to television, with the same concentration established during the radio era.

In 1954, the postwar reconstruction period ended and a new phase of industrialization began, with huge transformation of the country. Until the end of the 1960s millions of Italians relocated inside the country, from south to north, from small villages to large cities, from agriculture to industry. This was a period of great transformation. Television, contrary to the expectations of intellectuals and politicians, was an immediate success. At first, for most people, television viewing was public viewing: in the bars, the cinemas, the houses of the richest families. When a second channel began broadcasting on November 4, 1961, television reached a nationwide audience and family viewing at home began to be more common. In a country still characterized by a high level of illiteracy, television became the most widespread media, in contrast to the traditional low circulation of the daily press (among the lowest in the world) and the irregularity of school attendance (especially in the south).

The unexpected success of television, coincident with the unexpected great transformation of the country and the rapid growth of national income, explains why the medium became an important political issue. While private entrepreneurial groups tried to create alternatives to the state monopoly of radio and television, the Corte Costituzionale (the high court that oversees the Constitution), ruled on July 13, 1960, that the television monopoly was legal. Just a few years after the beginning of regular programming, then, “television” and RAI (as the only broadcaster and
producer), became the makers of two different kinds of histories. One was the history of a new medium, which concerned technological evolution, the quantity and quality of programs produced and broadcast, and the audience reactions. The other was the history of the power struggles among political parties and businesses for the control both of legislation and the resources related to RAI—from the control of news and electoral campaigns, to the control of advertising, to the production of fiction, variety shows, and other forms of popular culture.

The Struggles for Television Power

Italian television has not only been a public-service institution, in the European tradition. It has also historically been a central means of power controlled by the Christian Democratic Party (until its dissolution in 1994) and the Catholic Church. It does not work as a self-supporting industry. Rather, it receives financial resources from both advertising and from fees paid by subscribers. Advertising is sold to firms at low prices and in a very discriminating way, depending on the political power of the organizations and institutions involved. Automobile advertising, for example, was forbidden because FIAT, the Italian automobile company, did not want other cars to be seen on the screen.

During the 1970s this situation began to change. On April 14, 1975, governmental reforms gave RAI a new regulatory structure. The main powers (nomination of the board of administration, and control over policies) were transferred from the government to parliament. Even more significantly, on July 28, 1976, the Corte Costituzionale issued a new ruling that allowed the transmission of radio and television programs at local level. With that decision the era of competition had begun and the media system entered a period of change that continued through the 1990s.

RAI no longer holds monopolies for radio or television: half of its radio audience has gone. Even within RAI itself, the organization is no longer monolithic. Radio and television channels have their own news departments, budgets, and political and cultural outlook. They compete among themselves and with private broadcasters for audience. Influence, power, resources, and audiences are broadly divided across three segments: the major portion goes to the Catholic sector, the second to the Socialists, the third part to the Communists. Meanwhile, in the private sector the greatest competition has come from the media empire created by Silvio Berlusconi.

Under the new legal structure permitting local broadcasting, Berlusconi was able to build a network of three channels: Canale 5, Italia 1, and Rete 4. These local and regional broadcasting systems were unified by a common management and strategy within Mediaset, which in turn was controlled by Fininvest, the holding company created to oversee Berlusconi’s media operations. They were financially supported by Pubitalia, a firm specializing in the collection of advertising revenues. The extraordinary and very rapid success of private television in Italy was due mainly to one factor: a large number of new companies which had flourished in the roaring 1960s and 1970s had no way to reach Italian markets with their advertising, because of the restrictions described above. Yet after years of hard work, and of social and political unrest, consumers were ready to accept new styles of living and to enter the era of mass consumption. Berlusconi and his management understood this need and provided an answer—a private television system which for the first time in the European scene offered a scheduling and programming policy shaped by marketing philosophy.

The three channels were intended to be strong competitors with the public channels. Canale 5 was created as a general channel for mass audience, while Italia 1 was aimed at a younger audience, and Rete 4 at women. Successful programs included American films and American series and serials (such as Dallas and Dynasty), game shows, Latin American telenovelas, new formats of Italian variety shows, and Japanese cartoons for children. By the end of the 1980s, the competition between the private and public networks was at its height and the audience more or less divided in two equal parts. The financial resources coming from advertising grew seven-fold in about 12 years, and, although the greatest part went to the private network, the overall media system—RAI and daily press included—increased their revenues as well. While at the end of the 1970s advertising expenditure as a percentage of gross national product was the lowest among industrial countries, at the end of 1980s it reached 6 percent.

On August 6, 1990, after years of discussion and struggle among the main political parties, a new law was passed by parliament recognizing that a new television system had emerged from the rough competition between RAI and Fininvest. With the new law, private television systems, at both national and local levels, are obliged to transmit a news program in order to maintain their license. In the 1990s, then, competition began in the news arena. Twelve national channels were recognized by the 1990 law. But the six channels owned by the two main networks, RAI and Fininvest, shared 90 percent of the audience.
Television as a New Enemy

In the 1990s television became, even more than before, the centre of the Italian political scene. Silvio Berlusconi, the owner of Fininvest, made the decision to enter into the political arena, creating a new political movement called Forza Italia (Forward Italy). The coalition of leftist parties that had replaced the Old Socialist and Communist parties, led by the Partita Democratica della Sinistra (PDS, Democratic Party of the Left), was furious. The two television networks were heavily engaged in the 1994 election campaign: RAI effectively on the side of the left coalition and Fininvest on the side of right coalition. To the surprise of most observers, the right coalition of Silvio Berlusconi won the elections of March 27, 1994 and Berlusconi became the head of the national government.

From the day of the Berlusconi victory, a war began. It was not only a war against Berlusconi but against television itself—the new enemy. Politicians, intellectuals, teachers, newspapers, began to organize public meetings and conventions against television. Some called to a national referendum against private television. Berlusconi became, for half of the country, the incarnation of evil, and was unable to resist the attacks—he resigned after only seven months. A temporary, technocratic government passed a law, which was not approved by parliament, dictating severe restrictions on the use of television in electoral campaigns (practically forbidding the use of television as a propaganda device). In the meantime, advertising revenues decreased rapidly and the entire media system entered a period of recession. Both RAI and Fininvest faced large debts and drastically reduced their investments in drama production, the most expensive segment of the television industry.

In spite of these views, a June 1995 national referendum on a number of questions to do with television—such as the quantity and placement of advertising, and whether one person should be allowed to own more than one private TV channel—ended in a low-turnout victory for Berlusconi, who had used his three channels to campaign vigorously for a “no-change” vote (such as by implying that favorite soap operas and telenovelas would no longer be available if the vote went against him), while the three RAI channels, by then headed by Berlusconi’s own appointees from his 1994 stint as prime minister, remained neutral. The campaign against Berlusconi’s domination of private television continued (and he was obliged to reduce his holding in Mediaset to below 50 percent), but began to resemble campaigns of the same kind occurring in other countries, focusing on the amount of violence and sex in programming, or on ways to protect children from television.

Scheduling: Programs and Audiences

Italian television is created from an original and changing mixture of five different kinds of content: American drama, Italian drama, Italian soccer and other sports, Italian songs and shows, Italian news and politics. Each one is bound to strong patterns of Italian culture.

The style of presentation has two main approaches. One is melodramatic, in the 19th-century tradition of melodrama and opera. The other is light and ironic, in the tradition of the commedia dell’arte and of the avanspettacolo, a form of popular theater variety show featuring comedians and girls.

The relationship of Italian television to American drama has specific characteristics. Even prior to television, American mass culture has been the model for Italian entertainment, mainly through films. Throughout the 1950s most American movies were imported into Italy, dubbed in Italian, and shown throughout the country in more than 11,000 cinemas. The first audiences for television, then, looked at television as a different form of movie, and indeed, American films have, for years, been the prime-time family viewing on Mondays. American films, and subsequently, American series and serials have provided a considerable part of the offering of Italian television channels. Among European channels, Italian television has dedicated more air time to American drama programs and to foreign films dubbed in Italian than any other.

Another important element of Italian television has been the production of a form of original drama series that has no real counterpart abroad. This is the telespettacolo (television romance) or sceneggiato (adaptation of novels). The stories are presented in six or eight episodes of two hours each, taken from the masterpieces of international literature. They are shot and played in a realistic setting in a mixed style between theater and film. One of their models is to be found in an Italian postwar invention, the fotoromanzo or novel with photographs—long-running series that sold weekly as magazines (and are still produced). Action is slow and all the stories are located in the past, mainly in the 19th century. Prime-time Sunday was for years dedicated to the family viewing of teleromanzi. Since the 1980s, however, this kind of drama production has no longer been produced in the same way. Since then, Italian drama has tried to adopt more standard formats, with stories now located in contemporary Italy. The most successful of these stories was La Piovra (The Octopus), a story about the Mafia. Begun in 1984 and still continuing, it is a kind of Italian-style serial comprising seven miniseries to date.
New Developments

The trend that began in the 1990s has been toward tighter television regulation. Antitrust rules, limits on advertising, establishment of national authorities and regional control bodies, regulation of access to media during election campaigns (introduced immediately following the fall of the first Berlusconi government), and programming and production quotas within the framework of the European directive "Television Without Frontiers": all these and other steps have been approved by Italian legislators after the establishment of the RAI-Mediaset duopoly. Law 122, passed in the spring of 1998 by the PDS-led government that succeeded Berlusconi's first period in office, established for the first time a quota of net revenues to be reinvested in national and European TV drama and movie production. Some 20 percent of the license fee from state television, and 10 percent of television advertising revenue from private television, went to this purpose. The intention was to help bring about a renaissance in the television industry, setting aside a figure estimated at around 400 million per annum.

This policy of production fund quotas, related to the much-debated issue of the "defence of national identity" against the risks of Americanization, has had an immediately visible impact: the crisis that followed the massive import of foreign productions has been succeeded by a remarkable recovery, and the schedules of both private and public television have since been filled with domestic drama, much appreciated by the viewer for its cultural proximity.

However, American series maintain a cadre of faithful fans. Normally shown outside prime time, they are generally able to guarantee audiences in accordance with the average share of the channels on which they appear. Only a tiny slice of American imports now have access to prime time on the Italian channels, which are dominated by domestic drama, and these imported offerings are mostly TV movies or a small number of series suitable for a family audience or young adults. The remaining American programming is spread over the daytime schedule, or, in the case of harder or more edgy products, late at night.

Satellite television arrived in Italy—where the cable infrastructure has never been highly developed—in the second half of the 1990s. It heralded the advent of a multi-channel environment that is still expanding thanks to digital technology and, even more significantly, to international operators who were allowed to enter the national market. Telepiù and Stream, the two satellite platforms operating in Italy, have been largely controlled by foreign capital from the beginning. Some 90 percent of Telepiù was owned by Vivendi Universal (Canal Plus), and Stream was owned jointly by Murdoch's News Corporation and the former Italian monopolist Telecom. In 2002 the two platforms merged into Sky, under Murdoch's total control. This development resulted from two factors. One was a consequence of the global alliance between Vivendi and News Corporation. The other was related to the fact that the Italian market proved too limited for two different satellite-based entities, both of which went through a critical period, as did other European pay-television systems.

In spite of the "pull" of soccer, the penetration of satellite pay-TV is quite slow. Interestingly enough, the "television of the future" seems to have prompted Italians to rediscover the social and collective mode of television viewing, which in the past accompanied the beginnings of terrestrial TV when only a minority of households had a television set. Bars, sports clubs, and groups of friends and neighbors now take out a single subscription, from which tens of them can benefit at a much lower individual cost.

If the arrival of the multi-channel environment has not (or not yet) affected television audiences' habits and preferences, it has had an immediate impact on the programming structure of terrestrial television, draining off quite large portions of premium content, particularly sport and cinema, which have consequently resulted in a downsizing in the supply afforded to traditional television. On the RAI channels, for example, sports programs fell from 2,280 hours in 1998 to 1,426 in 2001, while in the same period showings of movies fell from 3,074 to 2,344 hours.

In recent years, RAI and Mediaset managed to obtain and maintain more or less equal positions in the Italian market, and their six channels (three each) hold a steady 90 percent. This balance is the result of two opposite trajectories: descending in the case of public and ascending in the case of private television, which year after year gains a small fraction of the market. From 1998 to 2003 the commercial networks share increased from 41 to 44 percent while that of the public networks decreased from 48 to 45 percent.

After 2000, these opposing trajectories accelerated. Mediaset got the advantage by exploiting the reality and game-show format (such as Big Brother and Who Wants To Be A Millionaire?) and its gain was further galvanized by the victory of the political coalition led by Berlusconi in 2001. RAI went through one of its periodic phases of instability, due to changes in top management and the redistribution of posts according to the spoils system of the new centre-right majority. In spite of this, public television has maintained a slight superiority, even though this was more difficult to achieve than in the past.
It's Garry Shandling’s Show/The Larry Sanders Show

U.S. Situation Comedies

Garry Shandling put aside a successful career as a stand-up comedian to venture into irreverent forms of fictional television with film producers and talent managers Bernie Brillstein (Ghostbusters) and Brad Grey. The trio created comedies in 1986 and 1992: the whimsical and warm It’s Garry Shandling’s Show and the darker Larry Sanders Show.

The first program began on the Showtime cable network in 1986. After a year, it reached critical success, and Shandling relinquished his role as one of Johnny
It's Garry Shandling's Show/The Larry Sanders Show

Carson's regular guest hosts on NBC's *The Tonight Show*, leaving Jay Leno as the primary alternate behind the desk. Shandling and Leno had replaced Joan Rivers as Carson's principal replacements in 1986 when Rivers began her own talk show—the initial program on the fledgling FOX Broadcasting Company network.

While still in first run on Showtime, *It's Garry Shandling's Show* was licensed by the new FOX Broadcasting Company as part of its second-season Sunday evening lineup. Although plagued by low ratings and hence unable to satisfy FOX's expectations, critics praised Shandling's tongue-in-cheek style. FOX reran the Showtime episodes and then contracted with "Our Production Company" for new installments until 1990.

The program, set in Shandling's condominium in Sherman Oaks, California, featured comic schtick. Shandling played a single man looking for the right woman. He spent his free time with his platonic friend Nancy (Molly Cheek), his best friend's family (Stanley Tucci and Bernadette Birkett), and his single mother. Much of the show mimicked Shandling's own life, including his actual home in Sherman Oaks and his romances (a girlfriend moved in with Shandling's "character" when his personal domestic life changed).

The program began with a monologue, introducing the show. Next came a silly theme song, performed by Randy Newman, including the lyrics "Garry called me up and asked if I could write it" and a whistling segment. The "dramatic action" in each episode was simple, built on such premises as Garry's bad dates, or his discovery of a nude photo of his mother from the 1960s. Each situation was resolved with warmth and whimsy, sometimes with the help of audience members.

Shandling's antics included "breaking the fourth wall"—acknowledgement and direct address of the audience, both in the studio and at home—as part of the show. In one episode, Garry told the audience to feel free to use his "apartment" (the set) while he was at a baseball game. Several people from the audience (perhaps extras) left their seats to read prop books and play billiards in front of the cameras as the program segued into its next scene.

*It's Garry Shandling's Show* often included guest stars. In the pilot, just after Garry's character moved into the condo, he was robbed. That night he dreamed of Vanna White (appearing on the show) giving away his good underwear and other personal belongings as prizes on *Wheel of Fortune*—for less value than he hoped. His most frequent visitor was his "next-door neighbor," rock musician Tom Petty. In one episode,

Petty, who usually appeared with disheveled long hair, wearing loose shirts and tight pants, became part of a neighborhood quartet. He made his entrance walking in line with three middle-aged singers, all four wearing ugly matching plaid wool vests.

Shandling sometimes used other sight jokes, but most often he exploited running verbal gags. These included the unseen ceiling mirror inscribed with the typed motto, "Things may be larger than they appear." Another continuing joke involved Larry's ongoing consideration of what to do during the 41 seconds when theme music interrupted the action.

Some episodes, however, were more serious. One of these featured Gilda Radner near the end of her unsuccessful battle with cancer. This show also presented a Vietnam antiwar theme, detailing how one friend's conduct caused a man to become a prisoner of war. Although the program ended jovially, the action included a darkly lit battle sequence in which uniformed soldiers shot at each other and put holes into Radner's living room set.

Although each episode of the show was scripted, Shandling was known to improvise his lines. If a scene
needed three takes, he often performed differently in each iteration, as though challenging himself to make each retake funnier than the prior one.

The Larry Sanders Show, which played its first-run episodes on HBO from 1992 until 1998, was the “Mr. Hyde” of Shandling's pair of comedies. The program, which mocked behind-the-scenes activities of post-prime-time talk shows, painted a more disturbing view of television as a status-bestowing medium. The technique included intertwining fictional characters with guest stars appearing as themselves. By 1995 the show had received Emmy nominations and Cable Ace Awards, but the audience was not large, both because the sophisticated content of the program was not universally attractive and because the program appeared on a premium cable channel with a limited viewership.

Shandling starred as Larry Sanders, a talk-show host competing with the larger networks' late-night programs. Although Larry is not the biggest fish in the chat pond, it is difficult to realize this from his interactions. He uses his power and position as a celebrity to control his office staff, show crew, and, at times, the general public as portrayed in this fictional world. Larry exposes his deep insecurities only to his executive producer, Artie (veteran character actor Rip Torn) and to his assistant, Beverly (Penny Johnson).

On screen, Larry is smooth and controlled, but behind the scenes, he is manipulative and disturbed, descending frequently into paranoia and temper tantrums. His interactions with his office employees feature a peculiar style of communication. Each staff member or guest has a clear position in an invisible hierarchy. This situation is accepted because the strong office culture is dominated by constant job insecurity. People with greater clout are allowed to act abusively to those with less status. In one show, it seems clear that a staff member will be fired, but Larry cannot decide which person. Facing the tension mounting within the office, one writer breaks down with anxiety, creates several ugly scenes and—predictably—is chosen to lose his job.

Office relations are not the only storyline. Plots derived from typical talk show circumstances include contract renegotiations, strange sponsors needing odd on-air celebrity endorsements, marriages and relationships, problems with guests, and difficulty managing public images. During the program's run, Larry is married (to Megan Gallagher), divorced, and involved in a live-in arrangement with another ex-wife (Kathryn Harrold). These relationships exhibit little tenderness; instead, the unions are portrayed as fitting Larry's profession and lifestyle. If love blocks his career in any way, love ends.

Many of the show's elements focus on Larry's relationship with his sidekick, Hank Kingsley, played to perfection by Jeffrey Tambor. Hank is presented as an essentially talentless individual who has made an incredibly successful career by translating his position as hanger-on into hugely recognizable celebrity status. He makes additional money by endorsing cheap products; he gets dates because of his proximity to Larry; and he uses his status to bully other members of the show's staff. Larry tolerates Hank because he is, at once, confidante and pitch-man, as responsible for Larry's success as are Sanders's own skills.

In the final seasons of The Larry Sanders Show, questions about sexual preferences shaped absorbing storylines. “Everybody Loves Larry” hints that the X-Files star David Duchovny may be sexually attracted to Sanders. In the final episode, “Flip” (May 1988), this storyline plays out in a hotel room where Duchovny crosses and uncrosses his legs in homage to Sharon Stone's infamous scene in the film Basic Instinct. Duchovny declares that his feelings for Sanders are the same as his feelings for a woman, “It’s definitely a heterosexual feeling, but it's directed at you.” When Ellen DeGeneres announced she was gay, ABC used the incident to hype her sitcom, Ellen. The Larry Sanders Show parodied the fuss with “Ellen, or Isn’t She?” In that episode, Sanders asks DeGeneres to come out on his program. The acting and writing in these episodes garnered accolades from television critics and earned an American Comedy Award for Duchovny.

While the program was in production, Shandling was twice involved in courtroom battles with persons linked to the show. In 1994, series regular Linda Doucett ended her seven-year personal relationship with Shandling and was subsequently fired from the program. In a lawsuit she charged him with sexual discrimination and harassment; the case eventually was resolved without litigation. When executive producer Brad Grey (who was also Shandling's manager) dropped Shandling as a client after 18 years, Shandling litigated, claiming conflict of interest for prior business arrangements. Grey countersued. Just before their scheduled court date, Grey and Shandling settled.

In addition to the subplot with Duchovny, the final episode of The Larry Sanders Show lampoons the legal activity in Shandling's own life, while ending several ongoing storylines on fictional Stage 11. The episode chronicles the end of Sanders's relationship with his talent agent, Stevie Grant—a smarmy, cocaine-snorting yuppie, and Shandling's ex-girlfriend Doucett appears briefly. A long list of Hollywood's top talents, including Carol Burnett, Jim Carrey, and Jerry Seinfeld, guest star, with country
music star Clint Black singing a tribute reminiscent of Bette Midler's farewell on Johnny Carson's final episode of The Tonight Show.

Signing off the air as Sanders, Shandling gave a soliloquy about TV comedy. "Television is a risky business. You want to entertain. You want to try to do something new every night. You want to say something fresh. Nine times out of ten, you end up with The Ropers [a short-lived spin-off of the sitcom Three's Company]. Hopefully, occasionally, there are nights when we are not one of those nine."

The consistent quality of Shandling's two series translated into critical acclaim, and numerous wards and nominations. It's Garry Shandling's Show won Cable Ace honors for Best Comedy Program, Actor, and Writing. The Larry Sanders Show's Rip Torn received the 1996 Emmy for Best Supporting Actor in a Comedy. The Academy of Television Arts and Sciences also recognized the series' final season with a writing award for Shandling and Peter Tolan, and honored Todd Holland for directing. In 1999 the program won the George Foster Peabody Award for outstanding achievement in broadcasting and cable.

Shandling used It's Garry Shandling's Show to push television to its whimsical extreme. With The Larry Sanders Show, he presented the funny side of television at its worst. In each case, he explored the medium intelligently and inventively, creating an arena to consider what television can be, rather than continuing the hackneyed stereotypes and norms.

Many radio and television game shows have their origin in parlor games, and it is no surprise to realize that I've Got a Secret was based on the game of "Secret, secret, who's got the secret." The format of the television program was simple but very durable. Sitting together on one side of a plain, unadorned set, each of four panelists took a 30-second turn questioning and then guessing a contestant's secret. The contestants were a mixture of ordinary people and celebrities, and the panelists were invariably celebrities. Each episode used four contestants and, in the American original, one contestant in each episode was a celebrity. Ordinary contestants received a small money prize if they stumped the panel. In the case of the celebrity contestant, the secret was very often related to some element of their fame. Thus, the first episode of Secret in 1952 featured the actor Boris Karloff's revelation was that he was afraid of mice.

The U.S. version of the program was among the longest-running and most popular game shows in the history of the genre. It began in June 1952 and ran on the CBS network until 1967. However, it was not quite an overnight success. The premiere episode used a courtroom as the set. Host Garry Moore was presented as a judge, the contestants as witnesses under cross-examination, and the panelists as the questioning lawyers. CBS canceled the program after its first season but almost immediately changed its mind, and the program resumed after its summer break. Secret became enormously popular and ran for 15 years on network television. By the late 1950s it was consistently in the top ten of U.S. television programs; it survived the quiz scandals of 1958–59; its popularity remained intact through the first part of the 1960s. The program was revived for syndication in 1972–73 and also played a short summer stint on CBS in 1976.

I've Got a Secret had three hosts in its time on U.S. television: Moore, Steve Allen, and Bill Cullen. Cullen, a long-time panelist, was made famous by the program, but many other panelists were already well known. Among them were Laraine Day, Orson Bean, Henry Morgan, Jayne Meadows, Faye Emerson, and Betsy Palmer. Secret featured several producers, including Allan Sherman, who was to have his own career in the early 1960s as a comic singer-cum-satirist.

The program was originated and produced by the inimitable Mark Goodson and Bill Todman. Their partnership in developing successful game-show formats had begun in radio in 1946, and I've Got a Secret was one of their earliest programs in television.

Jackson, Gordon (1923–1990)
Scottish Actor

Gordon Jackson was one of the stalwarts of British television in the 1970s, although he also had extensive stage and screen experience going back to the 1940s. A Scot, he began his career playing small parts in a series of war films made by the Ealing Studios and others. Initially typecast as a weakling, Jackson gradually won recognition as a useful character actor, specializing in stern, well-mannered gents of the “stiff upper lip” variety, often lacking in a sense of humor. His rich Scottish accent, however, balanced this with a certain charm; it was this combination of sternness and warmth that characterized most of his roles on stage and screen.

During the 1950s, Jackson continued to develop his film career and was also busy in repertory theatre, making his debut on the London stage in the farce Seagulls over Sorrento in 1951. Other acclaimed roles on the stage included an award-winning Horatio in Tony Richardson’s production of Hamlet in 1969, Tescman in Ibsen’s Hedda Gabler, and Malvolio in Twelfth Night. In the cinema he gradually moved from young soldiers and juvenile leads in the likes of Millions Like Us (1943), Whisky Galore (1949), Tunes of Glory (1960) to major supporting parts in such films as The Ipcress File (1965), starring Michael Caine, and The Prime of Miss Jean Brodie (1969), which was adapted from the novel by Muriel Spark. By the 1960s, it was apparently automatic for Jackson’s name to crop up whenever a genial, but crusty Scotsman was required, whether the production under discussion was a wartime epic or something more homely.

As a television star, Jackson really came into his own in 1971, when he made his first appearances in the role of Hudson, the endearingly pompous butler in the classic period-drama series Upstairs, Downstairs. Over the next five years, Jackson, as one of the central characters in this hugely popular series about Edwardian life, became a household name—a status formally acknowledged in 1975 when he won the Royal Television Society’s Best Actor Award (followed later by his being made an Officer of the British Empire). As Hudson, a character the actor himself professed to dislike, Jackson was in turn supportive and dependable and dour and infuriating, not least through his old-fashioned attitudes to the other servants and any inclination they showed to forget their station.

Not altogether dissimilar in this regard was Jackson’s other most famous television role, the outwardly contrasting part of George “The Cow” Cowley in the action adventure series The Professionals, which was first seen in 1977. As Cowley, a former MI5 agent and now head of the specialist anti-terrorist unit CI5, Jackson combined a hard-bitten determination and impatience with his wayward operatives Bodie and Doyle (Lewis Collins and Martin Shaw) with genuine (if grudging) concern for their well-being when their lives were in danger. This show became favorite viewing for peak-time audiences in the 1970s, as much through the
chemistry of the three main performers as through the somewhat formulaic car chases and action sequences that were included. The series did have its critics—many people protested at the violence of many episodes (leading the producers to limit explosions to two per story), and others refused to accept that Jackson, still firmly associated in their minds with the stuffy Mr. Hudson, could ever be convincing as a tough anti-terrorist chief, notwithstanding his early experience in the Ealing war films.

Also worthy of note were Jackson’s always reliable appearances in other classic television programs, which ranged from Doctor Finlay’s Casebook to the Australian-made A Town Like Alice and Stars on Sunday (as host).

Jackson, Michael (1958– )
British Television Executive

Michael Jackson, currently chair of Universal Television, was the first graduate of a media studies degree course to reach executive levels in British television. He was the BBC’s youngest department head of all time, and shares with Michael Grade the distinction of having been in charge of both BBC Television and Channel 4.

He graduated in 1979 with the intention of becoming an independent producer. His dissertation on purchased programs enabled him to make contacts in the television industry, and he became the organizer of the Channel 4 Group, a campaign aimed at ensuring the planned fourth channel would provide extensive opportunities for independent production. When Channel 4 was established, a series on the 1960s developed and produced by Jackson was one of its first commissioned programs. The series Open The Box, coproduced by Jackson’s company, Beat, and the British Film Institute, and his long-running magazine program The Media Show illustrated his interest in the culture industries. When he joined the BBC in 1988 he pursued this interest by establishing a long-running nightly arts review, The Late Show, producing Rock Family Trees, based on the book of elaborate charts of rock history by Pete Frame, and commissioning the media-based series Naked Hollywood, and TV Hell. With The Late Show, Jackson designed a program format that was self-consciously elusive, breaking television convention by dispensing with fixed theme tune and title sequence, and attempting to ensure that the program could remain fresh and surprising. Its disappearance from the screen has left a gap yet to be filled.

Projects generated by and programs commissioned by Michael Jackson typically had a distinctive approach characterized by a marked degree of postmodern self-referentiality. Successes at the BBC included Fantasy Football League, The Mrs. Merton Show, Changing Rooms, and This Life. Changing Rooms was the first and most successful of a new genre of style transformation shows. After he moved to Channel 4, successes included Da Ali G Show, Smack The Polo, The Valley, 1900 House, Staying Lost, Tina Goes Shopping, and So Graham Norton. Several careers benefitted from the success of these programs, which helped to establish the personalities of Frank Skinner and David Baddiel, Caroline Aherne, Graham Norton, and Ali G. Queer As Folk broke new ground in being a drama series based around gay relationships.

As chief executive, Michael Jackson steered Channel 4 in a more entrepreneurial direction, raising turnover 30 percent over four years, and establishing new channels Film Four and E4. Programming initiatives included the innovative coverage of Test Cricket, the re-launched seven-day Channel 4 News, and the British version of Big Brother. Big Brother attracted extensive attention from the audience and the media. The Internet site has attracted over 119 million hits and
up to seven million votes were cast in the regular eviction contests. Channel 4 has been able to compete well in its niche, capitalizing on its ability to attract young affluent viewers and hence advertising revenue. Some critics have expressed concern that the repositioning engineered by Jackson has taken the channel away from its brief to be alternative and innovative. It would be fair to say that it has a metropolitan trendiness when compared to its closest competitor channel, BBC 2, and that the range of voices, a feature of the channel's early years, now seems narrower.

Throughout his career, a genuine concern with the quality of television, across program genres, has been evident. Jackson believes the scarcest commodity in television is good ideas, and his commissioning is based on a search for innovation in form as well as content. The frequent change of post and ceaseless quest for innovation might suggest a restless process of refocusing, but Jackson is also known to have dogged persistence, working with projects like Rock Family Trees and the drama Our Friends in the North for many years before they reached the screen. Michael Jackson has never been slow to take on a new challenge, and having held top jobs at two channels in the United Kingdom, is now working to make a mark in the United States. Many media observers expect him to return home eventually to become director general of the BBC. Typically, Jackson himself does not proclaim a desire for the post, but neither does he deny its potential appeal.

Jaffrey, Madhur (1933– )

British Actor, Television Personality, Cookery Host

Madhur Jaffrey, born in India, has had a remarkably varied career encompassing acting, directing, and writing. In Britain she is most highly renowned and respected for her role as a presenter of television cookery programs.

Professionally, Jaffrey has worked largely in cinema, with prominent roles in films such as the Merchant Ivory Production Shakespeare Wallah (1965), for which she was awarded a prize at Venice, The Assam Garden (1985), and Chutney Popcorn (1999). Her most prolific role as an actor in recent British television has been the drama series Firm Friends (ITV, 1992 and 1994). Jaffrey played Jayshree Kapor, a cleaning lady turned business partner to white, middle-class Rose (Billie Whitelaw), in a show that was unusual in representing a racially mixed society without treating this as an issue. While many of the productions in which Jaffrey has performed draw on her cultural background, Firm Friends also unashamedly drew on her culinary image—the business Jayshree initiates is selling cooked foods.

Jaffrey as an actor has not surpassed her popularity as a food presenter. Jaffrey's route into presenting BBC food shows was less than orthodox. While a
While her shows have been educational from a culinary perspective, they have also proved influential within television culture, as Jaffrey seeks to contextualize the cookery by presenting it in the appropriate geographical location. In liberating cookery from the studio-bound format, these shows not only offer the viewing pleasures of a travel show but also work to redefine popular perceptions of Eastern cultures. Jaffrey focuses on the recipes and their ingredients by presenting a variety of people (mainly cooks, professional and otherwise) and by exploring a wealth of marketplaces, local lifestyles, and regional religions.

The gastronomic travelogue format may no longer be considered revolutionary, as it has developed into a television standard, but Jaffrey remains a guru of British culinary television. Her series are particularly noteworthy for their stylish and sophisticated production values and their attention to detail; for example, Madhur dresses to reflect the cultural background of specific recipes. The greatest appeal of her cookery shows lies in her vibrant approach and personality, with which she has spiced up British television. Jaffrey has argued that she sees no conflict in her professional double life, as she treats the presentation of food as a performance equal to any acting role.

Jaffrey, Saeed (1929– )
Indian Actor

Saeed Jaffrey is one of Britain’s best-known and most experienced actors, playing a wide variety of roles in comedy and drama with equal enthusiasm. He started his performing career in India, setting up his own English theater company in Delhi after completing his postgraduate degree in history. His early theatrical work included roles in productions of Tennessee Williams, Fry, Priestly, Wilde, and Shakespeare. Having completed his studies at the Royal Academy of Dramatic Art in London, he went to the United States on a Fulbright scholarship and took a second postgraduate degree in drama from the Catholic University in Washington, D.C. From these firm foundations, Jaffrey set out as the first Indian actor to tour Shakespeare, taking his company across the United States and subsequently joining the Actor’s Studio in New York, where he played the lead in off-Broadway productions of Lorca’s Blood Wedding, as well as Rashomon and Twelfth Night. Jaffrey is an accomplished stage actor and has appeared on Broadway and at London’s West End in a diverse range of characterizations.

His work in television has been just as varied. He appeared as Jimmy Sharma in Channel 4’s first “Asian” comedy, Tandoori Nights and as the elegiac Nawah in Granada Television’s adaptation of The Jewel in the Crown. It was arguably his performance as the smooth Rafiq in the BBC cult-classic Gangsters that brought him to national recognition, even though he had been acting in both theater and television for several years previously.

In some ways, Jaffrey’s character types have been broadly similar and, like Clint Eastwood, he always plays himself playing a character. Jaffrey’s impeccable English accent, his dapper style, and his catchphrases (“My dear boy”) are part of his acting persona. His smooth charm is used to good effect whether he plays the archetypal oily, corrupt businessman or the kindly, knowing father figure. In 1994 he costarred with Norman Beaton in Michael Abbensett’s new TV series, Little Napoleons, for Channel 4, playing once again a successful lawyer who wants political as well as economic power.

Jaffrey’s career has spanned several decades, and it is still unfortunately the case that he is one of only a handful of Indian actors who is regularly employed, be it for radio, television, or the stage. Although this is good news for him, his prodigious success and his ability to talk the right language means that he is a hard

Sid James established himself as a nationally recognized figure in British broadcasting in a groundbreaking radio comedy, *Hancock’s Half Hour* in the mid-1950s. But James was a ubiquitous supporting role actor. Appearing in more than 150 features during his career, he was best known as a regular character in some of the *Carry On* comedy films (1958–80). He acted in numerous stage comedies and starred in several television series. With the situation comedy, *Bless This House* (ITV, 1971–76), James secured his status as one of the most enduring figures of postwar British popular culture. Clever exploitation of a naturally heavily lined face to produce a variety of put-upon expressions endeared him to *Carry On* and television audiences alike. His “dirty” cackle of a laugh embodied a vein of “kiss-me-quick” bawdiness that runs deep in English humor.

Christened Sidney Joel Cohen, Sid James was a South African-born Jew whose parents worked in the music hall business. James joined a South African regiment of the British Army in 1939 and soon became a producer in its entertainment unit. As such, he was typical of a generation of British performers and writers who learned their trade while in the armed forces. After the service, James arrived in London on Christmas day 1946, looking to make a start in acting. He landed his first film role nine days later. His grizzled face led to typecasting as minor gangsters in his early film appearances. His career success came when he transformed himself into a quintessential Londoner, an ordinary “bloke,” who drew sympathy from his audience despite playing a rascal in many of his roles.

His television credits include some dozen plays (including some drama) and several series. He made his television debut in 1948 in a two-part BBC drama, *Kid Flanagan*, as Sharkey Morrison and played the lead role of Billy Johnson in *The Front Page* (BBC) later the same year. In 1949 he played an American film director in a 30-minute play called *Family Affairs* (BBC). After significant supporting roles in films such as *The Lavender Hill Mob* (1951) and *The Titchfield Thunderbolt* (1952), his repertoire began to develop from gangsters into characters who lived just this side of the law in the austere conditions of 1950s Britain. Although he was best known for his comic roles, James rarely turned down dramatic work. His next television appearance was in *Another Part of the Forest* (BBC, 1954), one of an acclaimed 20th-Century Theatre series.

Spotted by two scriptwriters, Ray Galton and Alan Simpson, James was cast as Tony Hancock’s housemate in the BBC radio comedy *Hancock’s Half Hour*. His ability as an actor to play off a lead was recognized by Hancock. When the show switched to television, Hancock insisted that all his supporting actors from the radio version be dropped except James. The 30-minute television show (1956–60) represented a defining moment in British situation comedy. The show developed huge audiences; BBC audience research estimates that 28 percent of the population watched at its peak. During this four-year period, James appeared as a pirate (Shanty Jack) in *The Buccaneers* (BBC, 1957) and played a character from the shadier side of London’s Jewish community in a six-part series for ITV called...
James’s dependency on the Hancock connection was broken at the start of the 1960s, when he began to appear in a highly successful series of Carry On films (Carry On Constable was his first in 1960). These quickly made film farces provided regular, almost annual income for its troupe of actors. James became one of the best-loved stars, appearing in almost 20 films, usually playing a hen-pecked husband desperate for extramarital sex with younger women.

James never worked with Hancock again, but he was immediately contracted by the BBC to star in a Galton and Simpson-scripted series called Citizen James (1960–62). In a series called It’s a Deal (BBC, 1961), he played a working-class property dealer whose business partner was a Mayfair playboy (Dennis Price). Mismatched in class, the two characters were essentially similar rogues underneath, who found themselves reluctantly dependent on one another.

Throughout the 1960s, James’s television work was based on characters and plots that employed variations on this theme. In Taxi! (BBC, 1963–64), he played a London cabby who gets involved in the day-to-day problems of his fares and his fellow drivers. The 12 50-minute episodes were an uneven mix of drama and comedy that did not prove successful in the audience ratings. In George and the Dragon (ITV, 1966–68), James played a chauffeur (George) to John Le Mesurier (Colonel Maynard). Both men are dominated by the overbearing housekeeper character (the Dragon), played by Peggy Mount. The comedy came from James’s challenge to her control of their social superior and employer. In Two in Clover (ITV, 1969–70) James played alongside Victor Spinetti in a series whose comic situation derived from transplanting a mismatched pair from the city to the country.

With Bless This House, James secured his position as a television sitcom actor of national acclaim. It also signaled a change in emphasis from his early film and Carry On types to one that suited his maturing years. He played Sid Abbott, a long-suffering father-husband to his wife Jean (Diana Coupland) and their two children, Mike and Kate. The key to his success was his ability to deliver lines for comic effect and react to those around him. His lined face testified to a lot of laughter. While his characters typically gave in to their fate, his distinctive dirty cackle erased any lingering pathos. James died suddenly in 1976, on stage in a comedy called The Mating Game after the prerecorded Bless This House series had just completed its run.

Japan

In Japan today, there are six televisions for every ten people and a diffusion rate of 100 percent. TV is viewed by virtually every Japanese every day: 95 percent of the population according to a 2002 study (see Kamimura and Ida). This far exceeds other popular forms of information processing: newspapers (86 percent), cell phones (73 percent), and the Internet (27 percent). The average amount of personal viewing per day approaches 225 minutes and has constantly topped three hours since 1960. A recent European survey places the number in excess of four hours, ranking Japan third in the world. The figures are astounding and capture the centrality of television in Japanese society.

Political Dimensions

Japan was at the forefront of the technical development of television, conducting its first experimental broadcast in 1939. However, the Pacific war curtailed research and development and infrastructure expansion. Once renewed, television bore the imprimatur of SCAP, the American occupational army. Seeking to ensure that television could not so easily become a tool for government (as both radio and early TV had before and during the Pacific war), Article 3 of the 1952 broadcasting law specified that programming by domestic broadcasters must: (1) uphold public security, morals, and good behavior, (2) pursue political impar-
Economic Dimensions

In the 1950s, television remained a luxury item, beyond the means of most citizens. That changed, however, with the “economic miracle” that sent domestic production booming and incomes soaring. In a two-year span in the late 1950s, television production quadrupled, and within the last half of that decade TV ownership increased 41-fold: from 165,666 to 6,860,472 sets. Content, however, was still heavily dependent on external sources. Reflective of political history and economic realities, content remained heavily dependent on American imports: in 1958, for instance, five of the nation’s top ten programs were either made in the United States or were Japanese-made clones of popular U.S. programs. The following year, Rawhide was the number one show. Its immense success led to the importation of Laramie two years later. In the 1960s, however, Japan’s networks began weaving themselves away from American programming, developing their own programming. By the 1980s, with a vital domestic economy, virtual economic independence, and a fully developed popular culture, import-dependence had all but dissipated. Like other large states such as the United States, China, India, and the Soviet Union, Japan filled less than 10 percent of its program time with imported material—albeit 90 percent of which still came from the United States.

Without doubt, the major factor sustaining Japanese television is the vibrant commercial culture that contains, infuses, characterizes, colors, and depends on it. Advertising outlays for TV (at 34.1 percent) outdistance all other media sources, with the closest alternative conduit being newspapers (19.9 percent). Japan’s advertising market is the second largest worldwide, amounting to more than $223 million just for television, dedicated to 957,447 ads, consuming 6,016 broadcasting hours per year. As one might infer, advertising serves not only as a major motor for Japanese television; it also works as one of the major conduits of cultural communication. Through ads, television plays a powerful socializing and ideological function, narrowly and repetitiously reproducing images of gender, cultural values, history, nationalism, and political, social, and personal identity (among others).

Cultural Dimensions

Three of the top five leisure goods listed as “essential” are television-related: a TV, itself (ranked second behind “music system”), VCR (third) and video software (fifth). VCRs are now owned by 79.6 percent of the population. In terms of leisure activities engaged in, television viewing is not listed—likely because it is viewed as an endemic, if not essential, part of everyday life; video-viewing ranks 12th, drawing 36.5 percent of the population, and is the fourth-most subsidized activity. As an industry, video sale and rental are big business: rentals for the first half of 2003 topped $550 million, with sales in excess of $1 billion. In short, TV-centered leisure is not only a core way of life in contemporary Japan; it is a core economic enterprise.

Befitting a leisure lifestyle, television has long been held to be an entertainment medium. This is reflected in the fact that so much programming today—whether game shows, talk shows, and even news—is best characterized as “infotainment.” Form, as well as content, is primed to mix information with pleasant packaging. Learning is coupled with stimulation and pleasure. Thus, it is not unusual to have a segment on the post-“golden hour” news featuring “person in the street” interviews critical of the faltering economy or the latest political scandal, followed up by an in-studio guest such as Sting performing an anti-war song or the popular Japanese singing duo Chage and Aska. So, too, is it common to have a quiz show in which entertainers test their acumen concerning places, peoples, and customs from around the world, or else view segments on an array of topics—domestic and foreign; political, moral, or cultural—and then weigh in with their opinions.

In this way, Japanese television is a medium for the reproduction of nation and the nurturing of nationalism. It is certainly a “globalizer” in terms of assi sting the transcultural flow of exogenous practices and beliefs; yet, in the main, it is a heavy defender of indigenous cultural content. Numerous programs—from the
annual New Year’s “red-white” singing contest, to food shows (which are pervasive) to regular sporting events (baseball, golf, volleyball, and boxing) to (golden-hour and late-night) music shows to daily quiz shows—make Japan the unspoken referent. While foreigners or foreign countries often appear, it is the juxtaposition of oppositional elements that enables Japan to emerge as a unique, privileged place. This tendency is reinforced by the now decades-long practice of foreigners appearing on variety, quiz, and food shows. Although the emphasis might once have been on “the strange foreigner,” this discursive trope has for more than a decade taken a back seat to the foreigner who “fits in”—the “half” or Western transplant who is fluent with Japanese language and customs.

No less important in the reproduction of nation has been Nippon Hoso Kyokai, or NHK, the publicly funded, viewer-subscribed network. It features two terrestrial stations (Sogo, which broadcasts news, cultural, and entertainment programs, and Kyoiku, which chiefly broadcasts educational programs), as well as three satellite-based stations. NHK is justly famous for the quality of its programming, although much of it adopts historical or culturally reproductive themes such as postwar reconstruction, samurai and period pieces, national baseball tournaments, and documentaries about daily contemporary life. NHK’s dramas—which have been produced for over 50 years—can be immensely popular. Oshin, the 1983 serialized tale of a poor woman struggling to survive in the immediate postwar era, garnered viewer rates in excess of 60 percent and was exported for international consumption to countries as far-flung as Australia, China, Egypt, Iran, Poland, and Mexico. This drama was among the first, but far from the last, case of Japanese television products assisting the global transmission of culture.

**Technological Dimensions**

Sociocultural events have long been regarded as influencing institutional ecology. For instance, the Crown Prince’s wedding in 1959 is often cited as providing a spur to domestic TV sales. So, too, did it precipitate the creation of complicated nationwide commercial networks. What emerged after a number of years were five key networks featuring a “key TV station”: Nippon News Network (NTV), Japanese News Network (TBS), Fuji News Network (Fuji TV), All Nippon News Network (TV Asahi) and TX Network (TV Tokyo)—all based in Tokyo, with 30, 28, 28, 26, and 6 network members, respectively. Each network, privately owned and heavily commercial, is closely connected with a national newspaper.

Television diffusion was greatly influenced by the staging of the 1964 Tokyo Olympics. Just as significant, though, was this event’s role in prompting technical innovation; for, like its predecessor, the canceled 1940 Olympiad, domestic engineers were inspired to solve transmission and delivery problems for audiences both local and international. For instance, NHK created an image pickup tube and equipment for satellite relay broadcasting, enabling one of the first satellite broadcasts in history. In addition, these games were the first to broadcast in color (albeit only eight events). Given the medium’s central role, these games were dubbed “the TV Olympics.”

Television tropes—no less than technical advances—have been shaped by external events. For instance, it was the Crown Prince’s departure by ship to attend Queen Elizabeth’s coronation in 1952 that led to the practice of remote broadcasts—a practice widely followed today on morning wake-up programs. It might even be suggested that the root trope of visuality (inherent in the technology itself) is spurred by the imperative of culture. Japanese written language, based on ideograms is but one indicator. Throughout Japanese society, the image reigns supreme. This trivial finds expression in the increasingly common practice on TV today of writing dialogue out as subtitles, even in cases where the speakers are Japanese. This has the effect of binding audiences, filling in gaps, providing more information, and potentially engendering greater intimacy.

A final technological advance has been cable, which, although making inroads over the past decade, has been relatively slow to take hold. Indeed, Japanese television is still heavily broadcast-network centered. According to data published in 2001, the five commercial networks along with NHK receive more than 51.6 percent of all Japanese broadcasting and cable market revenue (which breaks down into 18.9 percent for NHK, 9.1 percent for Fuji TV, 8.3 percent for Nippon TV, 7.0 percent for TBS, 5.5 percent for TV Asahi, and 2.6 percent for TV Tokyo). For cable, the diffusion rate doubled in the latter half of the 1990s—from 11.0 percent in 1995 to 21.8 percent in 2000. As of 2002, premium cable in the form of “SkyPerfect TV” (a merged entity of former rival services) features sports, movies, and adult entertainment stations. It is far from heavily subscribed (with but 3 million households). Regular cable is faring better with almost 19 million households.

In terms of cable content, it may be of limited utility to speak about specific content (since the ebb and flow of global media products can easily render stations and content obsolete). Still, for the foreseeable future, it would be safe to identify the staples of current
Japanese cable as NHK’s three stations: BS satellite 1 (which is world news-oriented), and 2 (which is entertainment- and events-oriented), and Hi-vision (which emphasizes programming that places the spotlight on this advanced visual technology). Other standbys include CNN, MTV, a (generally) Hollywood-centered movie channel, and a couple of 24-hour sports channels).

Social Dimensions

For many theorists Japan is viewed as a society in which the duality inside (uchi) and outside (soto) serves as a key organizing principle. In everyday life this has produced a complex set of social orientations, governing individual psychology and interpersonal behavior. The management of emotions under such terms is essential—separating interior, private faces from the external, public one. TV programming appears to understand that. Not only do television shows try to invite the (outside) viewer into the group inside the box, they strive to create what A.A. Painter calls “quasi-intimacy”: programs “emphasiz(ing) themes related to unity (national, local, cultural, or racial) and unanimity (consensus, common sense, identity) in order to create an intimate and friendly atmosphere” (Painter, p. 198).

In this way, television is exceptional at defining groups, often by juxtaposition (and implicit comparison): Japanese versus (foreign or ethnic) “others,” women versus men, young versus old, economically developed versus underdeveloped, beautiful versus ugly.

This can take forms both positive and negative. In terms of the latter, Japanese television is highly gendered—and ideologically so. For instance, studies continue to show that women are outnumbered by men on screen by a ratio of two to one, and when on screen, they tend to be depicted in “traditional” roles such as housekeeping, shopping, or family nurturing. Their age range is also narrower than that of men. Other research indicates that women are generally evaluated in ways distinct from men, in particular as objects, subordinate, with low ability, and ensconced in the home.

Reflecting a long-standing cultural thread, Japanese television is surveillance oriented—in the last few years increasingly so. It has been said that “Japan was years ahead of the U.S. and Europe in pioneering ‘reality TV’, in which ordinary people are placed in extraordinary situations” (“Country Profile: Japan,” BBC News). Now such shows are staple fare, featuring hidden cameras, “sting operations,” and behind-the-scenes peeks at how everyday people live. A current favorite is “London Hearts,” which features segments in which duplicitous women try to shake money out of prospective suitors, and cadsm are baited into cheating on their lovers. The commentary by hosts and guests in a private booth is raucous and aims at besmirching the character of those spotlighted.

No less discomfiting are “boot camp”-like shows in which adults, buffeted by an increasingly severe economy, are forced to endure humiliations for possible jcb opportunities or monetary rewards. Their trials—laughed at and commented on by celebrity guests—are all in the name of “viewer entertainment.” Add to this the recent wave of legal shows in which simulated cases (with a variety of alternately filmed conditions) draw celebrity and expert commentary and one can apprehend that, in the hands of television, contemporary Japan appears to be a conflictual, confrontation, controversy-riven society.

The Future

For a society that has historically been image-based, village-organized, information-centered, consumption-oriented, and technology-driven, what is the role of television in the years to come? While prognoses in the 1990s were often pessimistic, the same cannot be said of the new millennium. Those earlier concerns were based on the conservative nature of Japanese society, the internecine struggles between rival ministries over regulation and control of new media, and the slow diffusion of cable. But viewing societal changes, as well as the way image-based, television-like technologies have proliferated and become integrated into the fabric of everyday life, such dire projections are now difficult to maintain.

As indicated earlier, video rentals have become a staple of Japan’s high-consumption, leisure lifestyle, providing uses for owners of VCRs and stoking electronic innovations such as digital video discs (DVDs). The explosion of cell phone use has exerted pressures on technology developers to churn out newer, better features. As of this writing, most of this competition is being played visually, with camera- and Internet-enabled phones that are able to send, receive, and play images—both stationary and animated. So, too, are TV-equipped cars becoming standard in Japan. These TV units are often part of an integrated satellite-assisted map (or “navi”). One can imagine such units enabling on-the-road Internet searches, which will result in downloadable video clips introducing hotel rooms, restaurants, and tourist attractions in various cities along one’s route. Currently, desktop computers serve as hubs for TV viewing, recording, video editing, and photo production. In this way, the television-based technologies of the immediate future may encourage the Japanese to be less passive, assisting
them in moving from mere reception toward personal expression.

Jason, David (1940- )

British Actor

David Jason’s career can be viewed in many respects as that of the archetypal modern television actor in Britain. Although he made forays into the theater in the 1970s and 1980s, and made occasional appearances on film, these fade into relative insignificance when compared to the steady stream of eye-catching and increasingly high-profile roles he created for television. As a result, his acting persona is circumscribed by the televisual medium. Nevertheless, such exposure, while making him a British “household name,” did not make him into a celebrity, for Jason has largely eschewed the paraphernalia of television fame.

Jason’s histrionic instincts are basically comic, and the majority of his roles have been in the situation comedy format. His earliest major television role was an elderly professor doing battle against the evil Mrs. Black and her gadgets in the surreal Do Not Adjust Your Set (1967), a comedy show whose ideas and personnel later fed into Monty Python’s Flying Circus. But Jason first achieved note through his association with comic actor-writer Ronnie Barker, by supporting performances in the prison comedy Porridge and corner-shop comedy Open All Hours, both starring Barker. In the former, Jason played the dour wife-murderer Blanco; in the latter, and to great effect, he acted the boyish, downtrodden deliveryman and assistant to Barker’s parsimonious storekeeper. Open All Hours cast Jason as a kind of embryonic hero-in-waiting, constantly dreaming of ways of escaping the provincial narrowness and boredom of his north-country life. The role provided the actor with an opportunity to develop his acting trademark—a scrupulous and detailed portrayal of protean ordinariness, sometimes straining against a desire to be something else.

A later series, The Top Secret Life of Edgar Briggs, toyed with this sense of ordinariness by having Jason as a Secret Service agent ineptly trying to combine his covert profession with suburban home life. But Jason’s greatest success has been with several series of the comedy Only Fools and Horses, in which he played Del Trotter, the small-time, tax-evading “entrepreneur” salesman, living and working in the working-class council estates and street markets of inner-city London. Deftly written by John Sullivan—the series is regarded by some as a model for this kind of sitcom writing—the series cast Jason in a domestic...
situation in which he is quasi-head of an all-male family, responsible for both his younger brother and an elderly uncle. In the role, Jason cleverly trod a path between pathos and the quick-wittedness necessary to someone operating on the borderlines of legality. The character was, in many respects, a parody of the Thatcherite working-class self-motivator, complete with many of the tacky and vulgar accoutrements and aspirations of the (not-quite-yet) nouveau-riche. At the local pub, while others order pints of beer, Del seeks to distinguish himself from his milieu by drinking elaborately and luridly colored cocktails. The undertone, though, is salt-of-the-earth humanity and selflessness, called out in his paternal role to his younger brother, who eventually leaves the communal flat to pursue a life of marriage and a proper career. Jason’s character is hemmed in by both the essential poverty of his situation but also by a deep-rooted sense of responsibility: though the plots of the individual episodes invariably revolve around one or either of Del’s minor get-rich-quick or get-something-for-nothing schemes, the failure of these ventures often owes much to the character’s inability to be sufficiently ruthless. Jason’s skill was to interweave the opposing forces of selfishness and selfishness, working-class background and pseudo-middle-class tastes, brotherly condescension and “paternal” devotion into a successful balance. The character Del, exuding a deeper humanity as expressed in his ability to imbue the everyday with a well-judged emotional resonance and believability, ultimately embodied a rejection of aggressive materialism. The ultimate financial success of Del (he becomes a millionaire, ironically by accident rather than through one of his schemes) gave viewers a satisfying payoff. This comedy series has achieved a unique level of popularity in British television—one probably unrepeatable in the now-fragmented digital age—making Jason one of the most sought-after television actors.

Since Only Fools and Horses, Jason made moves away from overtly comic vehicles, pursuing variations on this rootedness in the everyday. In the adaptation of the satirical novel on Cambridge University life by Tom Sharpe, Porterhouse Blue, he played the sternly traditional porter Skullion, the acutely status-conscious servant of the college, dismayed by the liberalizing tendencies of the new master, and making determined efforts to turn back time. In The Darling Buds of May, his other great ratings success, he took the role of Pa (“Pop”) Larkin, in these adaptations of the rural short stories of H.E. Bates. Such roles allowed him to develop the range and craftsmanship of his character performances.

In 1992 Jason ventured out of comedy altogether into the crime genre, as the eponymous Inspector Frost in A Touch of Frost. In this series, Jason’s Frost is a disgruntled, middle-aged, loner detective, whose fractioned, down-to-earth nature has not entirely endeared him to his superiors and therefore—we infer—has hindered his career prospects. In such respects the series is in the mold of the immensely successful adaptations of Colin Dexter’s Inspector Morse novels. But whereas Morse’s cantankerousness, as played by John Thaw, was epitomized by a certain snobbishness—his love of classical music, his vintage car, his instinctive aloofness—in the Oxford environment of Dreaming Spies, Frost’s gradually unfolding history reveals a lower middle-class resentment of those with money, fortune, pretensions, and easily gained happiness. His own life has—as we find out gradually—rendered him increasingly a victim of misfortune (his wife has died, his house has burned down). While Morse, in effect, creates a world of evil-doing amid soft-toned college greens, country pubs, and semi-rural Englishness, the Frost series is nearer to the subgenre of the detective soaps, its principal character a distinctly unglamorous malcontent, whose ideas and experience are entirely provincial and suburban. The series, now achieving very large audiences, has witnessed an increasing sense of touch in respect by Jason. As the actor matures, it could well be that he is becoming one of those to make the successful transition from comic-oriented younger work to a memorable body of serious roles. Inspector Frost, along with his moving portrayal of a doomed World War I officer in All the King’s Men, suggests he has the capacity to do just that.

Jeffersons, The
U.S. Domestic Comedy

*The Jeffersons*, which appeared on CBS television from 1975 to 1985, focused on the lives of a nouveau riche African-American couple, George and Louise Jefferson. George Jefferson was a successful businessman, millionaire, and owner of seven dry cleaning stores. He lived with his wife in a ritzy penthouse apartment on Manhattan’s fashionable and moneyed East Side. “We’re movin’ on up!” intoned the musical theme of the show opener, which featured George, Louise, and a moving van in front of the entrance to “their de-luxe apartment in the sky.”

The program was conceived by independent producers Norman Lear and Bud Yorkin. This team’s creation of highly successful and often controversial sitcoms during the 1970s and early 1980s helped to change television history. Programs such as *Maude, Sanford and Son,* and *Good Times* were frequently ranked among the top-ten most watched programs.

*The Jeffersons* was a spin-off of one of 1970s television’s most notable television sitcoms, *All in the Family.* In 1973 Lear cast Sherman Hemsley in the role of George Jefferson, Archie Bunker’s irascible and upwardly mobile black neighbor. This character was such a hit with viewers that Hemsley was soon cast in the spin-off series *The Jeffersons.*

George and Louise Jefferson led lives that reflected the trappings of money and success. Their home was filled with expensive furnishings; art lined the walls. They even had their own black housekeeper, a wise-cracking maid named Florence. The supporting cast comprised a number of unique characters, including neighbor Harry Bentley, an eccentric Englishman who...
The Jeffersons, 1975–85, Berlinda Tolbert, Sherman Hemsley, Isabel Sanford, Franklin Cover, Roxie Roker, Marla Gibbs. Courtesy of the Everett Collection

often made a mess of things; the Willises, a mixed-race couple with two adult children—one black, one white; and the ever-obsequious Ralph the Doorman, who knew no shame when it came to earning a tip. Occasional characters included George’s mother, the elderly and quietly cantankerous “Mother Jefferson” (the actress, Zara Cully, died in 1978); and George and Louise’s college-aged son, Lionel (who was portrayed during various periods by two different actors).

The George Jefferson character was conceptualized as an Archie Bunker in blackface. George was intolerant, rude, and stubborn; he referred to white people as “honkies.” He was a short, mean, bigoted popinjay who balked at manners. Louise, his long-suffering wife, spent most of her time apologizing for her husband’s behavior. Florence, the maid, contributed a great deal of comic relief, with her continuous put-downs of George. She was not afraid of his of angry outbursts and in fact had little regard for him or his tirades. She referred to him as “Shorty” and never missed a chance to put him in his place.

The program was enormously popular and remained on prime-time television for ten years. There are a number of factors that position this program as an important facet of television history. First, The Jeffersons was one of three programs of the period to feature African Americans in leading roles—the first such programming since the cancellation of the infamous Amos ’n’ Andy show in 1953. The Jeffersons was the first television program to feature an interracial married couple, and it offered an uncommon, albeit comic, portrayal of a successful African-American family. Lastly, The Jeffersons is one of several programs of the period to rely heavily on confrontational humor. Along with All in the Family, and Sanford and Son, the show was also one of many to repopularize old-style ethnic humor.

It also serves to examine some of the controversy that surrounded The Jeffersons. Throughout its ten-year run on prime-time television, the show did not go without its share of criticism. The range of complaints, which emanated from media scholars, television critics, and everyday black viewers, ranged from the show’s occasional lapses into the negative stereotyping to its sometimes lack of ethnic realism. To some, the early Louise Jefferson character was nothing more than an Old-South Mammy stereotype. And George, though a millionaire businessman, was generally positioned as nothing more than a buffoon or the butt of someone’s joke. Even his own maid had no respect for him. Some blacks questioned, “Are we laughing with George as he balks at convention, or at George as he continuously makes a fool of himself?”

Ironically, as the show continued into the conservatism of the Reagan years, the tone of the program shifted. Louise Jefferson’s afro hairstyle disappeared and so did her poor English. There was no mention of her former life as a housekeeper. George’s racism was toned down, and the sketches were rendered more palatable in order to appeal to a wider audience. As with Amos ’n’ Andy some 20 years prior, America’s black community remained divided in its assessment of The Jeffersons.

This period of television history was a shifting one for television programmers seeking to create a show featuring African Americans. Obvious stereotypes could no longer be sold, yet the pabulum of shows like Julia was equally as unacceptable. The Jeffersons joined other Lear-Yorkin programs in setting a new tone for prime-time television, exploring issues that TV had scarcely touched before; furthermore, the series proved that programs with blacks in leading roles could indeed be successful commodities.

Jenkins, Charles Francis (1867–1934)
U.S. Inventor

Charles Francis Jenkins was a leading inventor and promoter of mechanical scanning television and was largely responsible for strong and passionate interest in television in the 1920s and early 1930s in the United States. His work in mechanical television paralleled the work of John Logie Baird in England. Jenkins also provided the first public television demonstration in the United States on June 13, 1925, less than three months after a somewhat similar demonstration by Baird in England. Jenkins’s demonstration, using mechanical scanning at both the transmitting and receiving ends, consisted of crude silhouette moving images called “shadowgraphs.” This early work in mechanical scanning television helped lay the foundation for later all-electronic television.

Jenkins was the archetype of the independent inventor. Without major corporate financial backing, he never received the recognition, success, or wealth that other-
Jenkins, Charles Francis

wise might have come to him. His numerous contributions and inventions covered a broad range of areas and uses. He co-invented and publicly demonstrated the first practical motion picture projector in the United States (1894), developed an automobile with the engine in the front instead of under the seat (1898), designed an early sight-seeing bus (1901), created an early automobile self-starter (1911), and developed significant improvements to the internal combustion engine (1912). He was granted more than 400 U.S. patents for inventions as diverse as an altimeter, an airplane brake, a conical paper drinking cup, and even a bean-shelling machine. In the area of communication and media technology, he developed the “prismatic ring” (circa 1915), designed to eliminate the need for film shutters in motion picture projectors by using a glass disk scanning apparatus. He later experimented with a variation of this concept for one of his mechanical television scanning systems. His work in facsimile in the early 1920s led to successful wirephoto transmissions by January of 1922 and radio-photos in May of that year. He was also involved in early wireless teletype transmission.

In 1916 Jenkins helped found the Society of Motion Picture Engineers, later renamed the Society of Motion Picture and Television Engineers (SMPTE), and was elected as the organization’s first president. The idea of visual transmission interested Jenkins many years before his first demonstrations of facsimile and television. In the July 1894 issue of Electrical Engineer, he proposed a method for electrically transmitting pictures. In the September 1913 issue of Motion Picture News, he proposed a mechanism for television.

Jenkins’s initial target market for television was radio amateurs and experimenters. He expected this market to quickly grow as a larger public became interested in television. The Federal Radio Commission (FRC) issued the first experimental television station license in the United States to Jenkins in 1927, and this station, W3XK, began transmitting on July 2, 1928, with regular broadcasts of “radiomovies,” television images of motion pictures, from Jenkins’s facility near Washington, D.C. In addition, his company provided information and instructions on how to build television receivers. In December 1928, the Jenkins Television Corporation was founded in New Jersey to sell Jenkins television equipment and operate television stations in order to promote the sale of receivers to the public and equipment for experimenters and other experimental stations. By mid-1929, the Jenkins Television Corporation was marketing receivers, named Radiovisors, to pick up signals from its transmitters in Washington, D.C., and New Jersey. The receivers were designed for easy use by people in their homes. The devices initially utilized a compact spinning-drum scanning mechanism that conserved space, energy, and weight. Unfortunately, picture quality was extremely limited, making the reception of television little more than a “quickly tiresome novelty.” By 1931 the Jenkins Television Corporation was offering both factory-built Radiovisors and do-it-yourself kits. Because of the high cost of Radiovisors during the Depression, the lessening interest in the limited program offerings, mediocre image quality, and the pending introduction of all-electronic television, sales dropped precipitously by the end of the year. To make matters worse, the FRC had disallowed the broadcast of on-air advertisements promoting Jenkins receivers and receiver kits.

In October 1929, DeForest Radio acquired a majority interest in Jenkins Television. In March 1932, Jenkins Television was liquidated and its assets sold to DeForest Radio. Within months, DeForest Radio went into receivership and sold its assets, including its Jenkins holdings, to RCA, which then discontinued the Jenkins television operation owing to a notable lack of interest in, and support for, mechanical television. The limitations inherent in mechanical television’s picture quality kept it from being able to compete with electronic scanning television systems, and it was therefore deemed a failure and doomed to quick obsolescence in the United States. The Jenkins Laboratories in Washington, D.C., continued television research but closed in 1934 with the death of Jenkins.

Perhaps Jenkins was shortsighted for concentrating on mechanical television and not moving ahead into electronic television. Perhaps he simply did not have the financial backing to move in this direction. Today, he has been almost forgotten by all but a few television historians. However, in the United States he was responsible for the advent of television and was the first pioneer to make television a reality. He was responsible for creating a great interest in television and its future among experimenters, amateur radio enthusiasts, the public, and business. He paved the way for television’s future success, helping provide the incentive for support of television experimentation by “big business” such as RCA’s support of Vladimir K. Zworykin; Crocker and later Philco’s support of Philo T. Farnsworth; and General Electric’s support of Ernst F.W. Alexanderson.

Jennings, Peter (1938– )

U.S. Broadcast Journalist

Very few names in broadcast journalism are as recognizable as that of Peter Jennings. His father, Charles, was the most prominent radio announcer for the Canadian Broadcasting Corporation (CBC). Thus, it seems perhaps predictable that Peter Jennings would have his own successful career in the news industry.

Jennings was ten years old when he received his first anchor job for Peter’s Program, a Saturday morning radio show which showcased young talent. As a student, he exhibited little interest in formal education. However, his interests and talent in the area of news would demonstrate his capacity and willingness to learn. He began his professional career as a disc jockey and news reporter for a small radio station in Brockton, Ontario. Like many reporters who achieve major success, Jennings’s opportunity to make a name for himself came with breaking news. In this case it was the story of a train wreck he covered for the CBC that brought attention. But the story got him a job with CTV. Canada’s first private TV network, rather than with the public broadcaster. Elmer Lower, who identified Jennings’s good looks and charm as elements that would sell to the American public, recruited Jennings from CTV to ABC News. Shortly after, in 1964, Jennings joined ABC as an anchor for a 15-minute evening news segment.

A year later, in an unprecedented rise to the top, Jennings, at 27, became the youngest ABC Evening News anchor. His competition at the time—Walter Cronkite on CBS, and the team of Chet Huntley and David Brinkley on NBC—stood as the most credible anchors of their time. In this competitive environment, Jennings was unable to break through and establish a strong share for ABC News. In 1968 he left the anchor desk and was sent to Rome to become a foreign correspondent and sharpen his reporting skills. Jennings was credited with establishing the first American television news bureau in the Middle East and served for seven years as ABC News Bureau Chief in Beirut, Lebanon. After building a strong reputation for world-class reporting, Jennings was put back in an anchor position for A.M. America, the predecessor for Good Morning America, where he delivered five-minute newscasts from Washington, D.C.

The experience and contacts in the Middle East paid off for Jennings. He established a reputation as Anwar
Although Jennings's political reports have won him the most praise at World News Tonight, they do not stand alone. Jennings also anchors Peter Jennings Reporting. These one-hour, prime-time specials address important issues facing the nation and the world. He has explored issues ranging from abortion, gun control, AIDS, and rape to funding for the arts and Ross Perot's presidential campaign. Jennings's accomplishments also include a series of news reports for children. In 1994, he served as moderator of a special question-and-answer broadcast from the White House in which American children questioned President Clinton about issues important to their lives.

For his work, Jennings has won several Emmy and Overseas Press Club Awards and the prestigious Alfred I. duPont-Columbia University Award for Journalism. In 1989, a Times-Mirror poll found Jennings to be the most believable source of news. Jennings was also named Best Anchor by the Washington Journalism Review in 1988, 1989, 1990, and 1992.

Jennings teamed with Todd Brewster to develop three best-selling books and corresponding television series. The Century and The Century for Young People present a comprehensive, colorful, and impressive chronicle of 20th-century history. In Search of America, although conceptualized before September 11, 2001, gathers stories both inspiring and poignant, and focuses on diverse American issues and individuals.

Jeopardy!
U.S. Game Show

Premiering in 1964 in a daytime slot on NBC, Jeopardy! was one of the first quiz shows to reintroduce factual knowledge, including knowledge of sports and entertainment trivia as well as the arts, literature, and science, as the main source of questions. Seemingly reversing the logic of the big money quiz shows of the 1950s (e.g., The $64,000 Question, Twenty-One), producer Merv Griffin introduced a format in which the answers for questions are revealed and the contestants must phrase their response in the form of a question. Jeopardy! also made the competitions more challenging for contestants by deducting money for each incorrect answer from their winnings, making it possible to have negative scores.

Jeopardy! is played in three rounds: the “Jeopardy” round, the “Double Jeopardy” round, and the “Final Jeopardy” round. In the Jeopardy round, 30 “answers” in six categories are revealed on a large, upright game board, with the values in each category increasing according to their difficulty level. A “Daily Double” hidden behind one of the questions forces contestants to wager all or part of their winnings on the answer. The same pattern of play is repeated in the Double Jeopardy round, with the value of questions now doubled and two Daily Doubles hidden on the game board. The game ends after all answers have been revealed or when time runs out. In the Final Jeopardy round contestants again wager some or all of their winnings on one common question that has to be answered in 30 seconds. The contestant with the highest score at the end of Final Jeopardy becomes the champion and is allowed to return for a maximum of five appearances. All five-time champions and some of the highest scoring winners return for the “Tournament of Champi-
ons," which is held once a year. Jeopardy! also regularly conducts other competitions, such as junior Jeopardy!, college tournaments, and celebrity shows.

The original version of Jeopardy!, hosted by Art Fleming, ran from 1964 to 1975. Prizes for individual answers ranged from $10 to $50 in the Jeopardy round and from $20 to $100 in the Double Jeopardy round. In this version, all contestants kept their winnings, and the overall champion returned for another show. A 1978 remake of the show entitled All New Jeopardy! returned with Art Fleming as the host. In this version, the lowest-scoring contestant was eliminated after the Jeopardy round, and only the top winner after the Double Jeopardy round went on to play the Super Jeopardy bonus round. This version of Jeopardy! was less popular than the original and was canceled after only five months. From 1974 to 1975, Jeopardy! also ran parallel to the NBC network version in syndication.

A new syndicated version of Jeopardy! premiered in September 1984 with Alex Trebek as host and has proved to be the most successful version of the program so far. While the rules of the game stayed essentially the same, the value of the questions in the Jeopardy round range from $100 to $500 and from $1,000 to $2,000 in the Double Jeopardy round. Only the winning contestant is allowed to keep the amount accumulated in the three rounds of competition. The two other contestants only receive consolation prizes. To add visual interest, Jeopardy! also added videotaped clues and celebrities reading answers.

The most recent spin-off from Jeopardy! is Rock 'n' Roll Jeopardy, broadcast on the cable music channel VH-1. The distinctive feature in this version is the focus on rock and pop music in the questions. Instead of the actual amount won during the three rounds of competition, the champion on Rock 'n' Roll Jeopardy wins $5,000, while the other contestants receive consolation prizes. Numerous rock musicians have appeared in celebrity editions of this show, playing for their favorite charity rather than personal gain. Jeff Probst, who went on to host Survivor, was the original host of Rock 'n' Roll Jeopardy!

Unlike most other game shows from the 1960s to the mid-1990s, which focused on gambling, guessing, and consumption, Jeopardy! produced an appearance of serious competition and regard for education. The
dramatically lit set and the dominance of blue in the color scheme add an impression of austerity on the show, serving to underline the pressure that the program attempts to create for the contestants. *Jeopardy!* avoids foregrounding consumerism and merchandise, as contestants generally only win cash prizes. At the same time, however, the large sums of cash that can be won on the program (up to $100,000 for one contestant) still reinforce a sense of materialism. Host Alex Trebek regularly emphasizes the intellectual abilities of the contestants, and popular magazines highlight the difficulty level of the questions on the show. However, the structure of the questions usually incorporates multiple clues to the correct answer and most questions do not require in-depth knowledge of a subject. Contestants can succeed on the program based on their ability to correctly identify clues within the question, so that only a surface familiarity with a given subject is necessary. The cultural competence required on *Jeopardy!* is closely aligned with "classical knowledge" and excludes marginal cultural groups and forms. As Michael Berthold points out, for example, literary authors used in questions are very likely canonized white male authors from the 19th and 20th centuries. Female and non-white authors rarely make an appearance. In other words, the game structure of *Jeopardy!* provides powerful financial incentives for being educated and accepting of the hierarchies of dominant culture.

---

The Jewel in the Crown is a 14-part serial produced by Granada Studios and first broadcast on British independent television in January 1984. A lavish prestige production, *The Jewel in the Crown* received immediate critical acclaim, going on to win several national and international awards and in the process confirming Britain's excellence in the field of television drama. In addition to receiving critical attention, the serial also proved popular with British audiences. The first run averaged eight million viewers a week, a significant figure for a "quality" drama on British television.

Based on Paul Scott's *Raj Quartet*, four novels published between 1966 and 1975, the serial focuses on the final years of the British in India. Set against the backdrop of World War II and using the rape of an English woman as its dramatic center, *The Jewel in the Crown* charts a moment of crisis and change in British national history.

The serial should be seen in the context of a cycle of film and television productions that emerged during the first half of the 1980s and that seemed to indicate Britain's growing preoccupation with India, the Empire, and a particular aspect of British cultural history. Notable examples from this cycle would include the films *A Passage to India* (1984) and *Heat and Dust* (1982), and the television drama *The Far Pavilions* (1984). These fictions were produced during, and indeed reflected, a moment of crisis and change in British life: mass unemployment and the arrival of new social and class configurations tied to emerging political and economic trends all conspired to destabilize and recast notions of national and cultural identity in the early 1980s. While often critical of Britain's past, these fictions nevertheless permitted a nostalgic gaze back to a golden age, presenting a vision of the Empire as something great and glorious. These fictions seemed to offer reassurance to the British public; as cultural fetish objects, they helped negotiate and manage a moment of social and political upheaval.

If these fictions were ultimately reassuring for certain sections of the British public, then *The Jewel in the Crown* has been seen by at least one commentator,
Tana Wollen, to be the least nostalgic and most troubled text in the cycle. However, this “trouble” may have less to do with the serial’s overt politics and more to do with its form and style. Paul Scott’s *Raj Quartet* are fairly unconventional novels and were not wholly suited to the demands of serial form. Their use of multiple points of view and their elliptical, collage-like narratives were not easily adapted to a form based around linear progression, continuity of action and character, and the promise of eventual narrative resolution.

The television adaptation was necessarily a more conventional rendering of the story, the narrative now flattened out and the events subjected to a more chronological ordering. Nevertheless, *The Jewel in the Crown* managed to hold on to some of the formal complexity of the novels by employing voice-overs, flashbacks, and newsreel inserts—techniques that tend to arrest narrative development, giving the serial a heavy, ponderous quality. The adaptation, and Scott’s novels, lacked the kind of character development and continuity that we have come to expect from the television serial. By the third episode, the serial’s central character Daphne Manners is killed off and only one character spans all 14 episodes. This is the evil Ronald Merrick, who dies in episode 13 and appears in the final part only through flashback. However, *The Jewel in the Crown* managed to maintain continuity through a series of echoes and motifs: images of fire, the repetition of certain actions and events, and the passing down of the lace christening gown all helped to provide the serial with a formal cohesion that seemed to be lacking at the level of character and plot development. All in all, *The Jewel in the Crown* proved to be a challenging text and demanded from its audience an unusually high degree of commitment and perseverance.

Although *The Jewel in the Crown* was broadcast in 1984, with a repeat screening the following year, by the late 1980s the serial still had a high public profile as it became embroiled in debates about television, quality, and the future of British broadcasting. This debate followed legislation calling for the deregulation of the British airwaves, which in turn kindled anxieties concerning the fate of public service and quality television. In this debate, as Charlotte Brunsdon has pointed out, *The Jewel in the Crown*, along with *Brideshead Revisited*, came to represent the “acme of British quality.” Elsewhere, *The Jewel in the Crown* was being held up as the epitome of excellence. In 1990 the serial was screened at the National Film Theatre as part of a season called “Good-by to All This.” Here *The Jewel in the Crown* was described as the “title everyone reaches for when asked for a definition of ‘quality television.’” *The Jewel in the Crown* came to represent what was at stake in the deregulation of the British airwaves. It articulated fears over what could be lost in the transition from a regulated, public-service tradition in broadcasting to a more commercial, market-led system. Increasingly, *The Jewel in the Crown* was coming to represent the golden days prior to the deregulation of quality television.

This serial, then, had originally emerged as part of a cycle of texts dealing with anxieties over national identity. At a moment of radical change in British life, these texts may have offered viewers a nostalgic vision of a glorious past. By the late 1980s, the serial was referring to a more immediate past and a cultural identity bound to a broadcasting tradition of public service and quality drama. In both cases *The Jewel in the Crown* articulated and represented the anxieties and the sense of loss felt by sections of the British public who were faced with the decline of a particular idea of national and cultural identity.

*Peter McCluskey*

Johnson, Lamont (1922—)

U.S. Director

Lamont Johnson is an actors' director who is also a director's director. Acclaimed, respected, and superbly consistent, he is television's answer to William Wyler. Between his 1964 Emmy nomination and Directors Guild of America (DGA) Award for a Profiles in Courage episode (“The Oscar Underwood Story”) and his 1992 Emmy nomination for the real-life disaster film Crash Landing, Johnson amassed 11 Emmy nominations (winning in 1985 for Wallenberg: A Hero’s Story and in 1988 for Gore Vidal’s Lincoln) and eight DGA nominations (winning four, plus a special award as the Most Outstanding TV Director of 1972). Although he has racked up admirable big-screen credits, too, such as The Last American Hero (a 1973 movie based on Tom Wolfe’s profile of a stock-car racing champion, “The Last American Hero Is Junior Johnson. Yes!”), television is the medium that has allowed Johnson the most room to flex his creative muscles. His video credits list contains character portraits, period epics, theater pieces, and docudramas.

Employing what he learned in theater, radio, live TV, and feature films, Johnson imbues his TV movies with dramatic briskness and invention, vital sound, and visual dimension. His distinctive humane touch derives from his feeling for performers, who in some way become his true subject. Almost every year brings new additions to his gallery of unforgettable figures, from John Ritter's agonizingly frustrated Vietnam vet in the Agent Orange expose Unnatural Causes (1986) to Annette O'Toole's Rose Fitzgerald—part stoic heroine, part religious mania—in The Kennedys of Massachusetts (1988). The vibrant characters who populate his TV films would fill a small city—Johnsonville, USA—except his art encompasses the world. One of his most impressive accomplishments is Wallenberg: A Hero's Story, starring Richard Chamberlain, in which the Scarlet Pimpernel-like heroism of Raoul Wallenberg (the Swedish diplomat who saved tens of thousands of Hungarian Jews) puts the horror of the Holocaust in stark relief.

Gifted with a “roaring bass voice,” Johnson turned pro as a radio actor at age 16 and financed his college education by working as a broadcast performer, newscaster, and disc jockey. After student theater experience (such as directing a production of Lilitom in a women's gym), he moved from Los Angeles to New York with the aim of acting on the stage. He became a mainstay of radio soap operas and a Broadway understudy; on a USO tour through Europe, he befriended Gertrude Stein, who gave him rights to her play, Yes Is for a Very Young Man. His first professional directing job was to mount it, in 1948, at off-Broadway's Cherry Lane Theater, with a cast that boasted Anthony Fran-
Although he swore off directing after that—he could not bear the role of referee—Johnson came under its spell for good while acting for such broadcast luminaries as John Frankenheimer, Sidney Lumet, and Jack Smight. In 1955 Johnson made his TV directorial debut guiding Richard Boone through an adaptation of Wuthering Heights for the hour-long live drama series, Matinee Theater. (Johnson ended up doing 28 of those shows in two years.) In 1958 Boone gave Johnson the opportunity to break into filmed TV when the star insisted that Johnson be hired for six episodes of the second season of his hit western, Have Gun—Will Travel. In the late 1950s and early 1960s, Johnson went on to direct popular and innovative dramatic series such as Peter Gunn, Naked City, and The Defenders. He did a fistful of episodes for The Twilight Zone, including “Kick the Can” (which Steven Spielberg remade in his The Twilight Zone: The Movie). Four decades later, when Felicity creator J.J. Abrams decided to shake up his lethargic collegiate characters by dropping them in a latter-day Twilight Zone, he turned for direction to Johnson, who ended up reworking an episode he had directed in 1961: “Five Characters in Search of an Exit.” More than a replica, the result was a unique hybrid that transformed the youthful self-absorption of the Felicity characters into something both eerie and hilarious.

It was a trio of collaborations with the producing-writing team of Richard Levinson and William Link that cemented Johnson’s place in broadcast history. Levinson and Link smartly emphasized the plight of individuals while blazing trails in TV movies’ depictions of race relations (My Sweet Charlie, 1970), homosexuality (That Certain Summer, 1972), and American military conduct (The Execution of Private Slovik, 1974). Coming fully into his own as a director, Johnson shaped performances with an emotional combustion to match the script’s social conflagrations. Working on location whenever possible, he brewed alive and unpredictable atmospheres. It is rare to remember character bits and mood points from what are usually called “message movies,” but what springs to mind from My Sweet Charlie is the edgy sheenishness of the fugitive northern black lawyer (played by Al Freeman Jr.) as he tries to persuade the pregnant southern runaway (Patty Duke) that he can impersonate a down-home black man. From That Certain Summer one recalls the uncomfortable-looking figures of the gay hero (Hal Holbrook) and his teenage son (Scott Jacoby) as the father struggles to explain his lifestyle on a three-minute downhill walk. Picture The Execution of Private Slovik—the first docudrama TV movie—and a different trek pops into memory: the penetratingly sad, snow-blown death march for the only U.S. soldier to be executed for desertion after World War II. Though the writers received the lion’s share of attention, and the scripts were solid and sensitive, Johnson’s direction was the most artistic aspect of these ambitious projects, lending them delicacy as well as poignancy. In the capper to this spate of TV productivity, his 1975 Fear on Trial (based on a David W. Rintels script), Johnson’s evocation of a frigid 1950s New York City winter overpowered the screenplay’s conventional, simplistic anti-blacklisting theatrics; it looked as if the Cold War itself had set the city’s temperature.

Johnson did astonishing work while constantly shuttling among media from the mid-1970s to the mid-1980s. In 1980 two of his favorite TV productions premiered. The first, Paul’s Case, a 52-minute-long drama for the PBS American Short Story series (shot in ten days on a $180,000 budget), is a powerful, peculiar American tragedy about the downfall of a fragile escapist. Following Willa Cather’s original story to the letter, Johnson led Eric Roberts to his best performance—he is splendidly off-kilter as a high school...
boy in 1905 Pittsburgh who is too far into his dream world of glamour and theatricality to come out alive. Johnson's TV-movie Off the Minnesota Strip, which aired just three months later, is a revelation of a contemporary adolescent limbo, with Mare Winningham as a teenage hooker, brilliantly conveying the interlocking social and sexual pressures that trap teenagers into self-destructive fantasies of "making it." Around the same time as these TV milestones, Johnson completed one of his finest feature films, Cattle Annie and Little Britches (not released until 1981), an offbeat western that explored Americans' need for pop mythology and turned the adventures of its young pulp heroines (stunningly played by Diane Lane and Amanda Plummer) into coming-of-age action poetry.

Pulling off three wildly different projects in a year would be admirable for the resident director of a repertory company or an anthology series; to do it by leapfrogging the worlds of network TV, PBS, and independent filmmaking would seem a feat. But not for Johnson. He has nurtured a robust, sane creativity by approaching the theatrical arts as a continuum—and creating an emotional spectrum that retains its intensity whether projected on a movie screen or transmitted via satellite and cable.

Jones, Quincy (1933– )  
U.S. Musician, Producer

Quincy Jones’s long career as a music composer lends insight into popular music’s influence on the television and film media. In 1951 a teenaged Jones began working as a trumpet player and arranger for Lionel Hampton. During his early career, he played with some of the best-known names in black bebop and jazz, performers such as Count Basie, Clark Terry, Ray Charles, Billy Eckstine, Dizzy Gillespie, and Sarah Vaughan. He toured Europe, the Middle East, and South Africa during the 1950s. In 1957 he studied in Paris with Nadia Boulanger. During this period he also became a major publisher of music.

However, failed business ventures in 1959 forced him to sell his music publishing catalogue. Jones overcame this major financial setback by working as an executive at A and M Records and by working as an arranger for Dinah Washington in New York City. He became vice president of Mercury Records in 1964, the first African-American executive at a major record label.

In 1961, Jet magazine, a weekly entertainment periodical directed to an African-American readership, awarded Jones the title of best arranger and composer. But despite honors from his African-American community and excellent critical reviews, he recognized that jazz music was not earning high record sales. He decided then to produce more commercial songs. In 1963, he branched out to develop the talent of a white teenage singer, Lesley Gore, with whom he recorded the pop hit “It’s My Party.” Jones continued to work with talented white artists such as Frank Sinatra, for whom he conducted and arranged Sinatra: Live in Las Vegas at the Sands with Count Basie (1966). By adapting to technological changes that gave more control to engineers and producers, Jones achieved commercial success in the music recording industry during the 1960s. Yet, he still desired to compose scores for motion pictures, and his success allowed him to pursue the small openings in media industries previously closed to African-American artists.

After Jones scored his first film, The Boy in the Tree (1960), he scored The Pawnbroker (1965) for director Sidney Lumet. Jones’s first major Hollywood contract was with Universal Pictures. He became an African-American pioneer in film and television industries during the late 1960s, and he had few black colleagues. At
this time, television news reports were increasingly presenting images of the United States facing racial conflict. Amid the struggle for civil rights, Jones worked in Hollywood to help destroy the negative stereotypes of African Americans. In 1965 he was hired to score the film Mirage, starring Gregory Peck, and he scored In the Heat of the Night (1967), starring a top box-office star of the era, Sidney Poitier.

In 1967 Jones scored the pilot and eight episodes of the dramatic television series Ironside. In creating the Ironside theme, he was the first composer to utilize a synthesizer in the arrangement of a television score. During the same year, he composed the theme to the television movie Split Second to an Epitaph. Jones also wrote the theme song for Bill Cosby’s first situation comedy, The Bill Cosby Show (NBC; 1970) and went on to score 56 episodes.

In a brief two-week period between film and television scores, Jones returned to record making with the jazz album Walking. The album won a Grammy for Best Jazz Performance by a Large Group in 1969.

In 1972 Jones wrote the theme to the NBC Mystery Movie series, and his momentum in the television industry continued to grow. During the same year, he scored 26 episodes of The Bill Cosby Variety Series, and in 1973 he composed the theme to the comedy program Sanford and Son, starring comedian Redd Fox.

In 1974, soon after his Body Heat album reached the top of the music charts, Jones suffered from health problems. A brain aneurysm required two surgical procedures and he had to stop playing the trumpet.

After a four-year hiatus, during which he concentrated on his own music productions, Jones returned to television in 1977 to score the ABC miniseries Roots, one of the highest-rated programs in television history. His score accentuated the exploration of African chants and rhythms as indigenous to American culture and garnered Jones an Emmy Award. Coinciding with this success in television, he scored The Wiz (1978), a Universal Pictures all-black version of The Wizard of Oz, starring Diana Ross and Michael Jackson.

Between 1963, when he entered the Hollywood film industry as a film composer, and 1990, Jones earned 38 film credits. Most notably, he coproduced the critically acclaimed film The Color Purple (1985) with director Steven Spielberg. In 1994 Jones was honored with an Academy Award for his achievements in the film industry.

Despite his success in television and film, Jones has never lost interest in spotting talent in black music. During the 1970s, he continued to cultivate new performers in this arena. He created technically advanced, funk-influenced albums for the Brothers Johnson, Chaka Kahn, and Rufus. In 1977 he produced Michael Jackson’s Off the Wall album, which sold seven million albums (in the pre-MTV era). His production of Michael Jackson’s record-breaking pop album Thriller (1984) became a musical landmark.

In 1981 Jones left A and M and formed his own Qwest label at Warner Brothers. The Qwest label produced hits for Patty Austin and James Ingram and captured Lena Horne’s performance on Broadway; these recording projects earned Grammy Awards for Jones. In 1985 he produced the all-star recording of “We Are the World,” to help performer Harry Belafonte’s charity drive to raise world awareness of famine. From the song’s popular music video, Jones became a recognizable face to the general public. He raised money for Jesse Jackson’s historic run for the Democratic party’s presidential nomination in 1988 and produced The Jesse Jackson Show in 1990, granting a forum to a high-profile black figure in U.S. politics.

Jones discovered a larger television audience by producing situation comedies. In 1990 Fresh Prince of Bel-Air premiered, starring a popular rap artist, Will Smith, and the series became a highly rated program on NBC. Also in 1990, Jones formed the multimedia entertainment organization Quincy Jones Entertainment Company and Quincy Jones Broadcasting, to ac-
quire television and radio properties. Three years later he joined with David Saltzman to create the production company QDE, which has produced the sitcom *In the House* (NBC and UPN, 1995–99) and the sketch comedy/variety series *Mad TV* (FOX, 1995– ).

In 1994 Jones cofounded Qwest Broadcasting, a minority-owned company that would purchase television stations in Atlanta, Georgia, and New Orleans, Louisiana; five years later, Jones and his partners sold this company for around $270 million. In 1996 Jones was executive producer for the Academy Awards program. In 1998 he established the production company Quincy Jones Media Group, Inc., with the aim of producing projects for both film and television.

While overcoming racial barriers and redefining several genres in music composition, Jones's creative persistence in the music business helped to maneuver black music across the color line of the musical mainstream and into every form of media expression. Jones's body of work spans over half a century and has opened the door for the growth of successful black entrepreneurs in television, film, and music. Since Miles Davis's death, many critics cite Quincy Jones as the only remaining figure from the bebop era who has stayed contemporary and whose work continues to have an impact on these three closely integrated media industries.

**Films**

Julia, a half-hour comedy premiering on NBC in September 1968, was an example of American network television’s attempt to address race issues during a period of heightened activism and turmoil over the position of African Americans in U.S. society. The series was the first to star a black performer in the leading role since Beulah, Amos ‘n’ Andy, and The Nat “King” Cole Show all left the air in the early and mid-1950s. By the mid-1960s, a number of prime-time series began featuring blacks in supporting roles, but industry fears of mostly southern racial sensibilities discouraged any bold action by the networks to represent more fully African Americans in entertainment television. Series creator Hal Kanter, a Hollywood liberal and broadcasting veteran whose credits included writing for the Beulah radio show in the 1940s, initiated Julia’s challenge to what remained of television’s color bar. Kanter had attended a luncheon organized by the National Association for the Advancement of Colored People (NAACP) and been inspired enough to propose the project to NBC. The network agreed to run the show, but programmers did not expect it to do well since it was scheduled opposite the hugely popular Red Skelton Show. Julia proved to be a surprise hit, however, jumping into the top-ten list of most-watched programs during its first year, and continuing to be moderately successful during its remaining two seasons on the air.

The series revolves around the lives of Julia Baker (Diahann Carroll), a widowed black nurse, and her young son, Corey (Marc Copage). Julia’s husband has been killed in a helicopter crash in Vietnam, and the series begins with the now fatherless Baker family moving into an integrated apartment building in Los Angeles while Julia secures employment at the medical offices of Astrospace Industries. She works with a gruff but lovable elderly white physician, Dr. Chegley (Lloyd Nolan), and a homely but spirited white nurse, Hannah Yarby (Lurene Tuttle). Julia’s closest friends are her white neighbors, the Waggedorns—Marie, a scatterbrained housewife; Len, a police officer; and Earl J. Waggedorn, their son and Corey’s pal. While Julia lives in an almost exclusively white environment, she manages to find a series of impeccably refined African-American boyfriends. Paul Winfield played one of her more long-standing romantic partners. Performed with elegance and dignity by Carroll, Julia represented a completely assimilated—and thoroughly nonstereotyped—African-American image to prime-time viewers.

Julia

U.S. Domestic Comedy
Julia’s unthreatening respectability served as the basis for a great deal of heated debate during the series’ initial run. In the midst of growing political militancy among many African Americans, some critics accused the show of presenting Julia as a “white Negro.” Nothing in the Bakers’ lives indicated that they were in any way connected to the rich tradition of black culture and history. Neither Julia nor Corey was ever the victim of racism. However, Hal Kanter emphasized that the show did attempt to stress the more “humorous aspects” of prejudice and discrimination, while focusing on how the black characters attempted “to enjoy the American dream.” Humorous situations dealing with race tended to work to defuse anxieties about racial difference. For instance, in her initial telephone interview with Dr. Chegley in the series’ pilot, Julia mentions that she is black. Chegley deadpans: “Have you always been black—or are you just being fashionable?” When little Earl J. Waggedorn sees Corey’s mother for the first time, he points out, “Hey, your mother’s colored.” Corey replies, matter-of-factly, “Yeah, so am I.” To which Earl responds: “You are?!?”

The show was also criticized for presenting no male head of the family. While the Bakers were emphatically middle-class, living in a beautifully appointed apartment rather lavish for a nurse’s salary, the fact that an unattached black mother ran the family appeared to perpetuate stereotypes about a “black matriarchy” in which black men had no place. A recurring problem in the Baker household was who would care for Corey while Julia was at work. Several episodes dealt with Julia’s dilemma in securing a mother’s helper. Unwittingly and quite unself-reflexively, the show was echoing a painful aspect of the history of black women, many of whom had to leave their children unattended while they went off to care for white children and work as domestics in white establishments.

While these depictions of race relations generated objections, they also elicited praise from critics and viewers. Ebony, a mass-circulation magazine targeted at a middle-class black readership, lauded the series for giving viewers an alternative to the steady diet of ghetto riot images of blacks so pervasive on news programming. The show was also commended for representing black characters who were not thoroughly and exclusively defined by race.

*Julia* was an important moment in American broadcasting history as television programmers struggled to find a way to introduce African Americans into entertainment formats without relying on objectionable old stereotypes, but also without creating images that might challenge or discomfort white audiences.

Julien, Isaac (1960– )
British Filmmaker

Isaac Julien is one of Britain’s most innovative and provocative filmmakers. Born in 1960, he comes from a black, working-class, East London background. Julien studied painting and film at St. Martin’s School of Art in London. He was both writer and director for Who Killed Colin Roach?, a 1983 documentary about the controversial death of a young black man while in police custody. This was followed by Territories in 1984, an experimental video that examined policing at London’s Notting Hill Carnival.

A cofounder of Sankofa Film and Video Collective, a pioneering group of young black British filmmakers, Julien has collaborated with them on several ground-breaking, radical dramas for film and television since the mid-1980s. With Sankofa, Julien co-wrote and codirected The Passion of Remembrance (1986), an ambitious feature-film drama that offered a fresh and revealing look at black feminism and black gay politics. This was followed by the award-winning short film Looking for Langston, in 1988. Set in Harlem in the 1920s, this homoerotic, hauntingly beautiful study of the black gay American poet Langston Hughes cleverly blended his words with those of the contemporary black gay poet Essex Hemphill. Looking for Langston received the Golden Teddy Bear for Best Gay Film at the Berlin Film Festival and was shown in Channel 4’s innovative lesbian and gay television series Out on Tuesday in 1989.

In 1991 Julien directed Young Soul Rebels, a seductive, engaging, and challenging feature-film drama set in 1977, the year of Queen Elizabeth II’s Silver Jubilee. Once again, Julien explored sexual and racial identities in a provocative way and walked off with the Cannes Film Festival’s Critics’ Week Prize.

In 1991 Julien was interviewed with other young black gay filmmakers in Some of My Best Friends, one of the programs featured in BBC Television’s Saturday Night Out, an evening of programs devoted to lesbian and gay viewers. The following year, he directed Black and White in Colour, a two-part documentary for BBC Television that traced the history of black people in British television from the 1930s to the 1990s. Using archival footage and interviews with such black participants as Elisabeth Welch, Norman Beaton, Carmen Munroe, and Lenny Henry, Black and White in Colour was well received by the critics. It was also nominated for the British Film Institute’s Archival Achievement Award, and the Commission for Racial Equality’s Race in the Media Award.

Since making Black and White in Colour, Julien has directed a short film, The Attendant, and The Dark Side of Black (1994), an edition of BBC Television’s Arena series. This compelling documentary examines the social, cultural, and political influences of rap and reggae music, with particular emphasis on its growing homophobic content. He also directed Frantz Fanon: Black Skin, White Mask (1995), a documentary about the noted theorist of anticolonial resistance, and has created several video-installation pieces, such as Three (1999), The Long Road to Mazatlan (1999), and Vagabondia (2000), which have been displayed in art galleries and museums worldwide. In August 2002, the Independent Film Channel (IFC), a U.S. cable channel, debuted his documentary, Baadassss Cinema, on the history of “blaxploitation” films. Julien told the New York Times that this work was inspired by research he
conducted to teach a course at Harvard University on the genre.

Juneau, Pierre (1922– )

Canadian Media Executive

Pierre Juneau has held virtually every important position in the Canadian broadcasting hierarchy. His long career has been characterized by a sustained commitment to the principles of public broadcasting and ownership.

In 1949 Juneau joined the National Film Board of Canada (NFBC) as the Montreal district representative. In the 1950s, he became the Quebec assistant regional supervisor, then the chief of international distribution, the assistant head of the European office, and the NFBC secretary. In 1964 he took on the position of director of French-language production. He also pursued film interests only secondarily related to his official position. In 1959 Juneau cofounded the Montreal International Film Festival and served as its president until 1968.

In 1966 Juneau left the NFBC to become vice chair of the Board of Broadcast Governors (BBG), the federal broadcast regulatory agency. In 1968 Parliament enacted a new Broadcasting Act, which replaced the BBG with the Canadian Radio-television and Telecommunications Commission (CRTC) and Juneau was named its first chair, a position he held until 1975. As CRTC chair, Juneau is best remembered for promoting Canadian-content regulations in both radio and television, as well as in the growing medium of cable. The regulations, soon called “Cancon,” helped create a permanent domestic market for Canadian music and television. They stipulate percentages of overall air time and specific time slots that must be devoted to material produced or performed by Canadians. These regulations met with widespread public support, and their principle remains essentially unchanged to the present day. Indeed, in 1971 the Canadian Academy of Recording Arts and Sciences (CARAS) named its annual ceremony the “Juno Awards” as a gesture toward both the CRTC chair and the Roman goddess.

In 1975 Liberal Prime Minister Pierre Trudeau appointed Juneau minister of communication, but he was defeated in the by-election of that year and resigned from the post. In 1978, still under Trudeau, Juneau became undersecretary of state and in 1980 deputy minister of communication. Trudeau appointed Juneau to a seven-year term as president of the Canadian Broadcasting Corporation (CBC) in 1982. These proved to be turbulent times, however, as the Trudeau government was defeated by the Conservative Party of Prime Minister Brian Mulroney. Although the CBC president enjoys an “arm’s length” relationship with the government, relations between Juneau, who was closely iden-
tified with the Trudeau Liberals, and the new government became strained as increasingly severe budget cuts were imposed upon the CBC. In 1988 the Mulroney government also revised the Broadcasting Act. It foresaw that Juneau’s position would be split between a part-time president and a full-time chair, a move Juneau opposed. Simultaneously, throughout the 1980s, new television services were launched, and the CBC’s audience share declined. Juneau defended both the ideal and the practical reality of public broadcasting and stated his intention to raise to 95 percent the amount of Canadian content on the CBC. Furthermore, in 1988 and 1989, he oversaw the launch of the CBC’s all-news cable channel, Newsworld, on which he appeared as the first speaker on the last day of his mandate.

Like CBC presidents before him, Juneau campaigned for operating budgets, controlled by Parliament, covering five-year rather than one-year periods and refused to relinquish advertising revenue so long as Parliament declined to cover all expenses. Under Juneau, the CBC consolidated its reputation for news and public affairs on both its French- and English-language networks, increased its Canadian content, brought in a new head of English-language programming, Ivan Fecan, and shifted toward independently produced dramatic content. In the 1980s, the CBC also scored some of its highest ratings successes ever. However, its dependence upon advertising revenue became more acute and its audience share fell. In 1995 Juneau was appointed to head the Mandate Review Committee of the CBC, NFB, and Telefilm Canada. Since that time, he has also become president of the World Radio and Television Council and of the Canadian Centre for International Studies and Cooperation, both based in Montreal.

Kate and Allie, which ran on CBS from March 19, 1984, to May 22, 1989, was the brainchild of Sherry Coben, who came up with the idea for the series while attending a high school reunion. There she noticed that a couple of divorcees, who seemed unhappy and dissatisfied, found comfort in sharing with each other. Coben worked with this germinal notion and successfully pitched the resulting script, originally entitled, "Two Mommies," to Michael Ogiens, then head of New York program development at CBS. Ogiens liked the script because it contained fresh material that dealt with a real issue of the day: single parenthood.

The next step in the series' genesis was the location of actresses for the central roles. Susan St. James was, at the time, under contract to CBS. Although she was best known for romantic comedy, she liked the script and the part of Kate McArdle but stipulated her demands: production before a live audience and a New York shooting location. St. James's close friend Jane Curtin was soon convinced to accept the part of Allie Lowell. Producer-director-writer Bill Persky agreed to produce and direct six episodes, without committing to an entire series. He also insisted that Bob Randall be brought on board as producer-writer and supervisor. Reeves Communications, with executive producers Mort Lachman and Merrill Grant, undertook production of Kate and Allie, and the series debuted with a script by Coben setting the series' premise: two divorced women who have known one another since childhood decide to move in together and raise their three children as a family unit.

Kate and Allie was an instant success, ranking fourth the week it debuted, garnering consistently high ratings thereafter, and earning Jane Curtin two consecutive Emmys and Bill Persky, one. The characters and the issues addressed on the program obviously appealed to its audience.

St. James's character, Kate, is a woman recently divorced from her unstable and somewhat flighty part-time actor husband, Max. She has one daughter, 14-year-old Emma (Ari Meyers). Curtin's Allie is also recently divorced from her successful, but unfaithful doctor husband, Charles. She has a 14-year-old daughter Jennie (Allison Smith) and a 7-year-old son, Chp (Frederick Koehler). Neither Kate nor Allie have ruled out remarriage, but view their new situation as a provisional reprieve, a time for both women to come to know and appreciate themselves. On one level the series dealt with practical problems faced by divorced women with children: adjusting to a new lifestyle and to living closely with new people, dealing with children's issues, beginning to date again, securing financial stability.

On another level, however, the series addressed the larger issue of gender identity at a time when gender roles were in transition. Allie Lowell submerged her own identity into that of her husband, and most of the series' trajectory tracks her journey toward autonomy.
Kate McArdle, on the other hand, has a stronger sense of her own identity, but she must constantly struggle for equality at work and for the assurance that her goals will be respected in any love relationship.

Key to the series' notion of women's development is same-sex friendship, and each episode is narratively structured to highlight the long-term, supportive friendship between the two main characters. Episodes begin with a conversation between Kate and Allie designed to enhance the audience's understanding of both women or to provide background information. Similarly, each episode ends with Kate and Allie discussing and bringing closure to the events just depicted. Their verbal intimacy both reflects and heightens their sustaining friendship. As the series evolved, the same kind of supportive friendship developed between the two daughters, who initially disliked being forced together.

After directing 100 episodes and having Allie accept the wedding proposal of likable character Bob Barsky, Bill Persky left the series, feeling that Kate and Allie had now fulfilled its premise. The needed respite had worked for Allie, who was now able to enter a meaningful heterosexual relationship as a fully autonomous individual, sure of herself and of her own goals. While Kate still had not met a man whose life goals matched her own, she and Allie owned a successful business, and the audience was sure that she would not succumb to a marriage that downplayed her personal desires.

Despite these developments, the series continued. Linda Day became the director, with Anne Flett and Chuck Ranberg as producers, but the new team did not meet with the same success as had the first. The decline of Kate and Allie illustrates an interesting aspect of television's capabilities in combining sociocultural issues with particular narrative strategies. With the series' premise fulfilled, plots lacked the same objective and lost the relevance and vitality of earlier episodes. In part to address this situation, early in the new season, the writers created a device to bring the two women together again: Kate moved out of the old apartment and in with Allie and Bob, who accepted a sportscasting job that would take him away on weekends. By this time, however, Emma was out of the series, ostensibly at college, and while Jennie remained an active and visible character, she too had moved out of the household to live in a university dorm. The friendship between Kate and Allie lost its earlier dynamism now that Allie was married. Kate appeared as an intrusion into the household, rather than a necessary part of it. Even though the series had not "solved" the social problems it addressed, its creators and performers had moved the main characters into a narrative situation that no longer seemed a workable fiction. After its sixth season, the series was not renewed.

Bob Keeshan was the actor and producer responsible for the success of the long-running children's program, Captain Kangaroo. As the easy-going captain with his big pockets and his bushy mustache, Keeshan lured children into close engagement with literature, science, and especially music, adopting an approach that mixed pleasure and pedagogy. Children learned most easily, he argued, when information and knowledge became a source of delight. Keeshan's approach represented a rejection of pressures toward the increased commercialization of children's programming as well as a toning-down of the high volume, slapstick style associated with earlier kid show hosts, such as Pinky Lee, Soupy Sales, and Howdy Doody's Buffalo Bob.

Keeshan was working as a receptionist at NBC-Radio's Manhattan office when Bob Smith started offering him small acting parts on his NBC-TV show, Triple B Ranch, and then, subsequently, hired him as a special assistant for The Howdy Doody Show. Although Keeshan's initial responsibilities involved supervising props and talking to the children who were to be program guests, he was soon pulled on camera, bringing out prizes. After appearing in clown garb on one episode to immense response, he took on the regular role of Clarabell, the mute clown who communicated by honking a horn. Leaving the series in 1952, he played a succession of other clown characters, such as Corny, the host of WABC-TV's Time For Fun, a noon-time cartoon program, where he exerted pressure to remove from airplay cartoons he felt were too violent or perpetuated racial stereotyping. While at WABC-TV, he played an Alpine toymaker on Tinker's Workshop, an early morning program, which served as the prototype for Captain Kangaroo.

The CBS network was searching for innovative new approaches to children's programming and approved the Kangaroo series submitted by Keeshan and longtime friend Jack Miller. The series first aired in October 1955 and continued until 1985, making it the longest running children's series in network history. Keeshan not only vividly embodied the captain, the friendly host of the Treasure House, but also played a central creative role on the daily series, supervising the program's conformity to his conceptions of appropriate children's entertainment. Through encounters with Mr. Green Jeans and his menagerie of domestic animals, with the poetry-creating Grandfather Clock, the greedy Bunny Rabbit, the punning trickster Mr. Moose, and the musically inclined Dancing Bear, the captain opened several generations of children to the pleasures of learning. Unlike many other children's programs, Captain Kangaroo was not filmed before a studio audience and did not include children in its cast. Keeshan wanted nothing that would come between him and the children in his television audience and spoke directly to the camera. He also personally supervised which commercials could air on the program and promoted products, such as Play-Dough and Etch-a-Sketch, which he saw as facilitating creative play, while avoiding those he felt purely exploitative.
As his program’s popularity grew, Keeshan took on an increasingly public role as an advocate for children, writing a regular column about children and television for *McCall’s* and occasional articles for *Good Housekeeping*, *Parade*, and other publications. Keeshan wrote original children’s books (as well as those tied to the Kangaroo program) and recorded a series of records designed to introduce children to classical and jazz music. He appeared at “tiny tot” concerts given by symphony orchestras in more than 50 cities, offering playful introductions to the musical instruments and the pleasure of good listening.

After his retirement, Keeshan became an active lobbyist on behalf of children’s issues and in favor of tighter controls over the tobacco industry. A sharp critic of contemporary children’s television, Keeshan long campaigned to participate in a new version of *Captain Kangaroo*. When a syndicated revival of the program began airing in 1997, Keeshan was not chosen to portray the Captain.

Kellner, Jamie
U.S. Television Executive

Jamie Kellner is one of a select number of individuals responsible for dictating the terms by which television made its transition from broadcasting to narrowcasting. By helping to create both the FOX Broadcasting Network as well as the WB, Kellner played a crucial role in redefining how the networks do business. And by leading in the restructuring of the Turner Broadcasting System's entertainment properties, Kellner also improved the relationship between broadcast networks and cable channels. Although he is most often identified for his contributions to television sales, marketing, and distribution, Kellner has been equally central in shaping television programming for the last three decades.

Kellner began his career in the entertainment industry in the CBS executive training program in 1969. After working in a number of different departments at the company, he found a permanent position in the syndication division. When, in 1972, CBS was forced to dispose of this division due to antitrust considerations, Kellner remained with the spun-off group, which was renamed Viacom. He quickly moved up the ranks of Viacom's syndication and sales department to become vice president of first-run programming, development, and sales.

In 1978 Kellner moved from Viacom to the film and television producer-distributor, Filmways, where he shepherded a number of shows into syndication, including Saturday Night Live. When Orion Pictures took over the firm in 1982, Kellner was one of a handful of Filmways employees to stay on with the company. At Orion, Kellner was responsible for supervising and operating the company's programming, home video, pay television, and syndication operations. He oversaw the network and syndicated launch of Cagney and Lacey as well as the introduction of a new version of Hollywood Squares.

As a result of the profit participation earnings from Filmways and Orion shows, Kellner was financially secure by the mid-1980s. This enabled him to make the leap into the risky venture being undertaken by News Corp. chairman Rupert Murdoch and FOX, Inc. chair-
man Barry Diller in 1986: the development of a fourth network, the FOX Broadcasting Company.

Kellner was the first executive hired by Diller. At FOX, he built and then maintained the new network’s affiliate base, sold programming to advertisers, and established relationships with program producers. He also formed alliances with cable operators—necessary because of FOX’s inability to secure broadcast affiliates in some markets.

In his position as the head of the first new network to be created in over 30 years—a network emerging at a time of dramatic technological and industrial transformation—Kellner was on uncertain terrain. Yet he made a number of moves that appear prescient in retrospect. Among the most significant was the attempt to carve out a clear “brand identity” for FOX by targeting 18-to-49-year-olds with more explicit, graphic, and cutting-edge material than could be found on ABC, CBS, or NBC. Shows such as Cops, Married…With Children, Beverly Hills, 90210, The Simpsons, and America’s Most Wanted were developed under his supervision.

Kellner recognized that a younger audience was important not only to FOX’s growth in prime time, but also crucial to the network’s expansion in daytime programming. Operating under the assumption that if children know about a channel, then the rest of the audience would follow, Kellner encouraged the development of the FOX Kids Network, which targeted children ages 2 to 11 with programming such as X-Men, Beetlejuice, and Batman: The Animated Series. The FOX Kids Network, which began airing shows on weekdays and Saturday mornings in the fall of 1990, operated as a joint effort between FOX and its affiliates, with profits split between the two entities.

Although the FOX Kids Network would be Kellner’s first large-scale venture into children’s programming and distribution, it would not be his last. He applied the lessons learned from his experiences with FOX to the strategies he employed in developing children’s programming at America’s fifth network, the WB. After departing from FOX in early 1993 and taking a brief break, Kellner returned to television in August of the same year to become the WB’s CEO. In his move to the WB, Kellner brought with him many of the same executives who helped him develop FOX, including Garth Ancier and Susanne Daniels.

While at the WB, Kellner continued to be involved in both the business and the creative aspects of running a network, precisely as he had done at FOX. From a business perspective, he sought to make the WB even more youth-oriented than FOX by pursuing a 12-to-34 demographic in prime time. Teenagers, especially girls and young women, were particularly important to the nascent network and were targeted with such shows as Buffy the Vampire Slayer, Charmed, and Dawson’s Creek.

Kellner’s performance with the WB was viewed as such a success by parent company AOL Time Warner that the company elevated him to chairman and CEO of the Turner Broadcasting System in March 2001. While he continued to oversee the WB, he now supervised all of the Turner properties both domestically and internationally. These included CNN, TNT, TBS, The Cartoon Network, Turner Classic Movies, the Atlanta Braves, and the Atlanta Hawks. Among his most pressing tasks were revitalizing the sagging CNN divisions (e.g., Headline News, CNNfn) and reviving the TBS and TNT brands by making them appeal to more affluent audiences.

In February 2003, however, Kellner opted for a change of pace, leaving Atlanta and his position at Turner to return to Los Angeles and his former role as chairman and chief executive officer of the WB. With this move, he intended to direct the leadership transition for the network—a transition culminating with Kellner’s retirement in summer 2004.

Alisa Perren
Kendal, Felicity (1946– )
British Actor

Felicity Kendal first emerged as a favorite actor in British situation comedy in the 1970s and went on to vary her repertoire with television dramas, films, and stage plays with considerable success. She spent her childhood in India and had an early introduction to the theater on tour with the Shakespearean company run by her parents, both established theatrical performers. She made her debut on the London stage in 1967 and subsequently confirmed her reputation as a popular stage star with appearances in such plays as Alan Ayckbourn’s *The Norman Conquests* (1974), Michael Frayn’s *Clouds* (1978), Peter Shaffer’s *Amadeus* (1979), Tom Stoppard’s *Hapgood* (1988), and Chekhov’s *Ivanov* (1989), for which she won the London Evening Standard Best Actress Award.

Kendal’s theatrical links secured for her a first television role in *The Mayfly and the Frog*, which starred John Gielgud, and she made a good impression in supporting roles in such subsequent productions as *Man in a Suitcase*, *The Woodlanders*, *The Persuaders*, *Edward VII*, and *Home and Beauty*, among others. Producers liked her girlish good looks and bubbly confidence and audiences also quickly warmed to her.

Kendal’s whimsical, puckish charm and endearingly good-humored outlook made her ideal for the role that was destined to establish her as a television star—that of Barbara Good in the BBC’s *The Good Life*, in which she partnered with Richard Briers as a suburban couple determined to lead a life of independent self-sufficiency. Loyal to the point of lunacy, and ever-fetching even in mud-stained jeans and knotted headscarf, she won universal praise as the pert and long-suffering young wife of Briers, striving to understand the frustrations of her wayward cereal designer-turned-smallholder husband as he painfully sought to put some meaning back into his life by turning their...
Surbiton house and garden into a small-scale farm. The accessibility of the central characters, perfectly played by Briers and Kendal, with Paul Eddington and Penelope Keith as their neighbors the Leadbeatters, ensured stardom for all four of them and a lasting place in public affections. As a direct result of the program's success, the number of smallholdings in Britain shot up to a record 51,000 by 1980.

After four seasons of The Good Life, the way was open for the four performers to develop their own solo careers. Kendal herself was showcased in two further sitcoms that centered around her alone. In Carla Lane's Solo, she returned to the theme of self-sufficiency, playing Gemma Palmer, a vulnerable but resolutely independent 30-year-old woman who throws out her faithless boyfriend and goes up in an attempt to reassert control of her life. In The Mistress, a rather more controversial sitcom also written by Lane, she was florist Maxine, trying to cope with the guilt and confusions involved in carrying on an affair with the married Luke Mansel (played by Jack Galloway). Some viewers disliked this last series, objecting to the girlish and rather innocent Felicity Kendal they remembered from The Good Life wrestling with such a dubious issue as adultery as she awaited her lover in her cozy pink flat, in the company of her pet rabbits, and pondered how to keep the affair secret from Luke's suspicious wife (played by Jane Asher).

Always an intelligent and sensitive actor, Kendal has been by no means confined to sitcoms, however. By way of contrast, in 1978 she played Dorothy Wordsworth in Ken Russell's biopic Clouds of Glory and later on she appeared with success in the miniseries The Camomile Lawn. In Honey for Tea, she was back in more familiar sitcom territory, playing American widow Nancy Belasco. In recent years she has concentrated on theater work.

Kennedy, Graham (1934– )
Australian Comedian, Host

In 1956, just in time for the Melbourne Olympics, Australian television began on Network Nine, destined to be the nation's most successful popular network. A year later, also on Network Nine, the long-running variety show *In Melbourne Tonight* also began and soon became immensely popular. So too did the host of the show, Graham Kennedy, who became that classic icon, a household word. He was the king of comedy, the recognized successor to Australia's previous comic king and lord of misrule, Roy Rene (Mo), whose stage had been vaudeville and radio from the 1920s to the late 1940s. With *In Melbourne Tonight*, Kennedy adapted for television Australia's rich history of very risqué music hall, vaudeville, and variety. *In Melbourne Tonight* included musical acts, game segments, burlesques of ads, and sketches, including "The Wilsons." In this segment, perhaps reminiscent of *The Honeymooners* skits on early 1950s American television, Graham played a dirty old man, married to his Joyce, carnivalizing marriage as comic disaster.

After some 15 years of *In Melbourne Tonight*, Kennedy's TV shows and appearances became more occasional. In the mid-1970s, he was host of *Blankety Blanks*, a variety quiz show that parodied other quiz shows. On *Blankety Blanks*, contestants would be asked to provide a reply that matched the responses offered by a panel of celebrities; there was no "true" answer, only answers that matched, as Kennedy would occasionally remind viewers amid the mayhem and clowning. The program tended to go sideways into nonsense and fooling, rather than go straight ahead as in a quiz "race." In the late 1980s, Kennedy was host of *Graham Kennedy Coast to Coast*, an innovative late-night program (10:30 to 11:30 p.m.) that mixed news, accompanied by its conventions of seriousness and frequent urgency, with comic traditions drawn from centuries of carnival and vaudeville, a hybridizing of genres usually considered incompatible.

Kennedy's humor was saturated with self-reflexivity. On *Blankety Blanks* he insulted the producer, chided the crew, complained about the format of the show, and chaffed with the audience. He made jokes about the props he had to use, or the young lad called Peter behind the set whose task was to pull something. The youth was addressed by Kennedy as Peter the Phantom Puller, and was frequently instructed to, "Pull it, Peter." On *Graham Kennedy Coast to Coast*, Kennedy continued to make comedy out of self-reflexivity. At various times, he showed how he could beep out words with a device on the desk in front of him. He demonstrated the cue system and revealed the cue words themselves. He discussed his smoking problem, announcing that he was a chain smoker, and, although he was not supposed to puff on it in front of viewers, he held a lit cigarette just below his desk. He presented ads, making fun of the product, revealing how much the station received for them. He showed a tiny new camera, and what it could do, and invited the audience to ring in with suggestions for how he should use it. Every night he read out telephone calls resulting from the previous night's show, some registering their disgust with his extremely "crude" jokes.

Everything served as grist for Kennedy's comedy mill: the studio, the situation of sitting in front of cameras and dealing with a producer, the off-screen personalities of his straight men (Ken Sutcliffe, a sports compere, and John Mangos, back from the United States where he had been an overseas reporter for Network Nine).

As with professional clowns from early modern Europe through pantomime, music hall, vaudeville, to Hollywood, Kennedy presented his face and body as grotesque, highlighting his protruding eyes, open gaping mouth, and long wandering tongue. His comedy was indeed risqué, calling on every aspect of the body to bring down solemnity or pomposity or pretension; his references to any and every orifice and protuberance were often such that one laughed and cried out at home, "that's disgusting." His relationship with his audience was—again as with clowns of old—competitive and interactive, particularly in the segments in which he read out and responded to phone calls. To one viewer, who must have been demanding them, Kennedy commented, "There are no limits, love, there are no limits." It is the credo of the clown through the ages, the uttering of what others only think, the saying of what cannot be said.
When Queen Elizabeth was shown in a news item visiting Hong Kong in 1989, Kennedy remarked that for a woman her age she did not have bad breasts—a purposely outrageously sexist comment, directed at a figure traditionally revered by Anglo-Australians. The night following the San Francisco earthquake, Kennedy and John Mangos staged a mock earthquake in the studio, with the ceiling apparently falling in on them. This piece of comic by-play was discussed in the press for some days. “Quality” papers such as the Sydney Morning Herald debated how distasteful it was. Kennedy was calling on an aspect of carnivalesque, uncrowning death with laughter. Such comedy usually remains verbal and underground, but Kennedy brought it to television.

Coast to Coast always highlighted and played with gender identity and confusion. Kennedy created his TV persona as bisexual. He might make jokes of heterosexual provenance, as in expressing his desire to make love to Jana Wendt, Australian TV’s highest-rating current-affairs and news-magazine host. Alternatively, he would play up being gay. One night Sutcliffe suddenly said to Graham, “Would you like to take your hand off my knee?” Jokes flowed, and Kennedy later included the performance in his final retrospective 1989 Coast to Coast program. Graham and Mangos were also very affectionate to each other. In his last appearance on the show, Graham kissed Mangos’s hand, and said of Ken and John that “he loved them both.”

Kennedy also highlighted ethnicity on Coast to Coast, particularly with Greek-Australian Mangos. With George Donikian, an Armenian Australian reading out headlines every half hour, and with an American Australian listing stock exchange reports, Graham set about exploring contemporary cultural and ethnic identities in Australia. His ethnic jokes probed, provoked, teased, challenged. The jokes were uncertain, revealing his own uncertainty.

The popularity of Graham Kennedy from 1957 onward, a popularity almost coterminous with Australian television itself, was extremely important and influential for contemporary entertainment. This comedy king gave license to many princes and lesser courts. He enabled them to explore comic self-reflexivity and direct address, the grotesque body, parody, and self-parody. For if Kennedy mocked others, he just as continuously mocked himself, creating for Australian television a feature of long carnivalesque signature, comedy that destabilizes every settled category and claim to truth, including its own. Such self-parody also drew on what has been remarked as a feature of (white) Australian cultural history in the last two centuries, perhaps directly influenced by aboriginal traditions of mocking mimicry: a laconic self-ironic humor, unsettling pomposity, pretension, and authority. Kennedy does not belong only to cultural history in Australia; his quickness of wit in verbal play, double-entendre, sexual suggestion, inverted meanings, and festive abuse join him to a long line of great comedians across the world. What he adds to stage traditions of comedy is a mastery of the television medium itself.

Kennedy, John F.: Assassination and Funeral

The network coverage of the assassination and funeral of President John F. Kennedy warrants its reputation as the most moving and historic passage in broadcasting history. On Friday November 22, 1963, news bulletins reporting rifle shots during the president’s motorcade in Dallas, Texas, broke into normal programming. Soon the three networks preempted their regular schedules and all commercial advertising for a wrenching marathon that would conclude only after the president’s burial at Arlington National Cemetery on Monday, November 25. As a purely technical challenge, the continuous live coverage over four days of a single, unbidden event remains the signature achievement of broadcast journalism in the era of three-network hegemony. But perhaps the true measure of the television coverage of the events surrounding the death of President Kennedy is that it marked how intimately the medium and the nation are interwoven in times of crisis.

The first word came over the television airwaves at 1:40 P.M. Eastern Standard Time, when CBS News anchorman Walter Cronkite broke into As the World Turns with an audio announcement over a bulletin slide: “In Dallas, Texas, three shots were fired at President Kennedy’s motorcade in downtown Dallas. The first reports say that President Kennedy has been seriously wounded by this shooting.” Minutes later, Cronkite appeared on screen from CBS’s New York newsroom to field live reports from Dallas and read news bulletins from Associated Press and CBS Radio. Eddie Barker, news director for CBS’s Dallas affiliate KRLD-TV, reported live from the Trade Mart, where the president was to have attended a luncheon. As a stationary camera panned the ballroom, closing in on a black waiter who wiped tears from his face, Barker related rumors “that the president is dead.” Back in New York, a voice off-camera told Cronkite the same news, which, the anchor stressed, was “totally unconfirmed.” Switching back to Dallas, Barker again reported “the word we have is that the president is dead.” Though he cautioned “this we do not know for a fact,” the visual image at the Trade Mart was ominous: workman could be seen removing the presidential seal from a podium on the dais.

Behind the scenes, at KRLD’s newsroom, CBS’s Dallas bureau chief Dan Rather scrambled for information. He learned from two sources at Parkland Hospital that the president had died, a report that went out prematurely over CBS Radio. Citing Rather, Cronkite reported the president’s death but noted the lack of any official confirmation. At 2:37 P.M. CBS news editor Ed Bliss Jr., handed Cronkite an Associated Press wire report. Cronkite took a long second to read it to himself before intoning: “From Dallas, Texas, the flash, apparently official. President Kennedy died at 1:00 P.M. Central Standard Time, two o’clock Eastern Standard Time.” He paused and looked at the studio clock. “Some 38 minutes ago.” Momentarily losing his composure, Cronkite winced, removed his eyeglasses, and cleared his throat before resuming with the observation that Vice President Lyndon Johnson would presumably take the oath of office to become the 36th president of the United States.

To appreciate the enormity of the task faced by the networks over the next four days, it is necessary to recall that in 1963, before the days of high-tech, globally linked, and sleekly mobile news-gathering units, the technical limitations of broadcast journalism militated against the coverage of live and fast-breaking events in multiple locations. TV cameras required two hours of equipment warm-up to become “hot” enough for operation. Video signals were transmitted cross-country via “hard wire” coaxial cable or microwave relay. “Spot coverage” of unfolding news in the field demanded speed and mobility, and since television cameras had to be tethered to enormous wires and electrical systems, 16mm film crews still dominated location coverage, with the consequent delay in transportation, processing, and editing of footage. The challenges of juggling live broadcasts from across the nation with overseas audio transmissions, of compiling instant documentaries and special reports, and of acquiring...
The funeral of John F. Kennedy

Photo courtesy of the John F. Kennedy Library
and putting out raw film footage over the air was an off-the-cuff experiment in what NBC correspondent Bill Ryan called “controlled panic.”

The resultant technical glitches served to heighten a national atmosphere of crisis and imbalance. NBC’s coverage during that first hour showed correspondents Frank McGee, Chet Huntley, and Bill Ryan fumbling for a simple telephone link to Dallas, where reporter Robert McNeil was on the scene at Parkland Hospital. Manning the telephone and babbling a malfunctioning speaker attachment, McGee had to repeat McNeil’s words for the home audience because NBC technicians could not establish a direct audio feed. As McNeil reported White House aide Mac Kilduff’s official announcement of the president’s death, the phone link suddenly kicked in. Creating an eerie echo of the death notice, McGee, unaware, continued to repeat McNeil’s now audible words. “After being shot at,” said McNeil. “After being shot,” repeated McGee needlessly. “By an unknown assailant…” “By an unknown assailant…”

Throughout Friday afternoon, information rushed in about the condition of Texas governor John Connolly, also wounded in the assassination; about the whereabouts and security of Vice President Lyndon Johnson, whom broadcasters made a determined effort to call “President Johnson”; and, in the later afternoon, about the capture of a suspected assassin, identified as Lee Harvey Oswald, a former Marine associated with left-wing causes.

So urgent was the craving for news and imagery that unedited film footage, still blotched and wet from fresh development, was put out over the air: of shocked pedestrians along the motorcade route and tearful Dallas residents outside Parkland Hospital, of the president and first lady, vital and smiling, from earlier in the day. The simultaneity of live video reports of a dead president intercut with recently developed film footage of a lively president delivering a good-humored breakfast speech that morning in Fort Worth, Texas, made for a jarring by-play of mixed visual messages. Correspondents on all three networks were apt reflections of spectator reaction: disbelief, shock, confusion, and grief. Grasping for points of comparison, many recalled the death of Franklin Delano Roosevelt on April 12, 1945. NBC’s Frank McGee rightly predicted, “that this afternoon, wherever you were and whatever you might have been doing when you received the word of the death of President Kennedy, that is a moment that will be emblazoned in your memory and you will never forget it…as long as you live.”

At 5:59 P.M. on Friday, the president’s body was returned to Andrews Air Force Base, where television caught an obscure, dark, and ghostly vessel taxiing in on the runaway. When the casket was lowered from the plane, glimpses of Jacqueline Kennedy appeared on screen, her dress and stockings still visibly bloodstained. With the new first lady, Lady Bird Johnson, by his side, President Johnson made a brief statement before the cameras. “We have suffered a loss that cannot be weighed,” he intoned flatly. “I will do my best. That is all I can do. I ask for your help—and God’s.” Speculations about the funeral arrangements and updates on the accused assassin in Dallas rounded out the evening’s coverage. NBC concluded its broadcasting day with a symphonic tribute from the NBC Studio Orchestra.

On Saturday the trauma was eased somewhat by religious ritual and constitutional tradition. Close friends, members of the president’s family, government officials, and the diplomatic community arrived to pay their respects at the White House, where the president’s body was lying in state. Former presidents Harry Truman and Dwight Eisenhower spoke for the cameras, offering condolences to the Kennedy family and expressions of faith in democratic institutions. Instant documentary tributes to the late president appeared on all three networks: quick, makeshift compilations of home movies of Hyannisport frolics, press conference witticisms, and formal addresses to the nation. Meanwhile, more information dribbled in about Oswald, the accused assassin, whom the Dallas police paraded through the halls of the city jail. That evening CBS presented a memorial concert by the Philadelphia Orchestra with Eugene Normandy conducting.

On Sunday an unprecedented televised event blasted the story of the assassination of John F. Kennedy out of the realm of tragedy and into surrealism: the on-camera murder of Lee Harvey Oswald, telecast live. At 12:21 P.M. Eastern Standard Time, as preparations were being made for the solemn procession of the caisson bearing the president’s casket from the White House to the Capitol rotunda, the accused assassin was about to be transferred from the Dallas City Jail to the Dallas County Jail. Alone of the three networks, NBC elected to switch over from coverage of the preparations in Washington, D.C., to the transfer of the prisoner in Dallas. CBS was also receiving a live feed from Dallas in its New York control room but opted to stay with the D.C. feed. Thus, only NBC carried the murder of Lee Harvey Oswald live. “He’s been shot! He’s been shot! Lee Oswald has been shot!” shouted NBC correspondent Tom Petit. “There is absolute panic. Pandemonium has broken out.” Within minutes, CBS broadcast its own live feed from Dallas. For the rest of the day, all three networks deployed their Ampex videotape technology to rewind and re-
play the scene again and again. Almost every American in proximity to a television watched transfixed.

Amid the scuffle after the shooting, a journalist’s voice could be heard gasping, “This is unbelievable.” The next day New York Times television critic Jack Gould called the on-air shooting of Oswald “easily the most extraordinary moments of TV that a set-owner ever watched.” In truth, as much as the Kennedy assassination itself, the on-air murder of the president’s alleged assassin created an almost vertiginous imbalance in television viewers, a sense of American life out of control and let loose from traditional moorings.

Later that same afternoon, in stark counterpoint to the ongoing chaos in Dallas, thousands of mourners lined up to file past the president’s flag-draped coffin in the Capitol rotunda. Senator Mike Mansfield intoned a mournful, poetic eulogy. Holding daughter Caroline’s hand, the president’s widow knelt by the casket and kissed the flag, the little girl looking up to her mother for guidance. “For many,” recalled broadcasting historian Erik Barnouw, “it was the most unbearable moment in four days, the most unforgettable.”

Throughout Sunday, tributes to the late president and scenes of mourners at the Capitol intertwined with news of the assassin and the assassin of the assassin, a Dallas strip-club owner named Jack Ruby. Remote coverage of church services around the nation and solemn musical interludes were intercut and dissolved into the endless stream of mourners in Washington. That evening, at 8:00 P.M. Eastern Standard Time, ABC telecast A Tribute to John F. Kennedy from the Arts, a somber variety show featuring classical music and dramatic readings from the Bible and Shakespeare. Host Fredric March recited the Gettysburg Address, Charlton Heston read from the Psalms and the poetry of Robert Frost, and Marian Anderson sang Negro spirituals.

The next day—Monday, November 25, a national day of mourning—bore witness to an extraordinary political-religious spectacle: the ceremonial transfer of the president’s coffin by caisson from the Capitol rotunda to St. Matthew’s Cathedral, where the funeral mass was to be celebrated by Richard Cardinal Cushing, and on across the Potomac River for burial at Arlington National Cemetery. Television coverage began at 7:00 A.M. Eastern Standard Time, with scenes from Washington, where all evening mourners had been filing past the coffin in the Capitol rotunda. At 10:38 A.M., the coffin was placed on the caisson for the procession to St. Matthew’s Cathedral. Television imprinted a series of memorable snapshot images. During the mass, as the phrase from the president’s first inaugural address came through loudspeakers (“Ask not what your country can do for you. Ask what you can do for your country”), cameras dissolved to a shot of the flag-draped coffin. No sooner did commentators remind viewers that this day marked the president’s son’s third birthday, than outside the church, as the caisson passed by, little John F. Kennedy Jr. saluted. The spirited stallion Black Jack, a riderless steed with boots pointed backward in the stirrup, kicked up defiantly. Awed by the regal solemnity, network commentators were quiet and restrained, allowing the medium of the moving image to record a series of eloquent sounds: drums and bagpipes, hoofbeats, the cadenced steps of the honor guard, and, at the burial at Arlington, the final sour note of a bugle playing “Taps.”

The quiet power of the spectacle was a masterpiece of televisual choreography. Besides maintaining their own cameras and crews, each of the networks contributed cameras for pool coverage. CBS’s Arthur Kane was assigned the task of directing the coverage of the procession and funeral, coordinating more than 60 cameras stationed strategically along the route. NBC took charge of feeding the signal via relay communications satellite to 23 countries around the globe. Even the Soviet Union, in a broadcasting first, used a five-minute news report sent via Telestar. CBS estimated 50 engineers worked on the project and NBC 60, while ABC put its total staff at 138. Unlike the fast-breaking news from Dallas on Friday and Sunday, the coverage of a stationary, scheduled event built on the acquired expertise of network journalism.

The colossal achievement came with a hefty price tag. Trade figures estimated the total cost to the networks at $40 million, with some $22 million lost in programming and commercial revenue over the four days. Ironically, on one of the few occasions when none of the networks cared about ratings, the television audience was massive. Though multicity Nielsen ratings for prime-time hours during the Black Weekend were calculated modestly (NBC at 24, CBS at 16, and ABC at 10), during intervals of peak viewership—as when the news of Oswald’s murder struck—Nielsen estimated that fully 93 percent of televisions in the nation were tuned to the coverage. As if hypnotized, many Americans watched for hours at a stretch, in an unprecedented immersion in deep-involvement spectatorship.

Not incidentally, the Zapruder film, the famous super 8mm record of the assassination shot by Abraham Zapruder, was not a part of the original televisual experience. Despite the best efforts of CBS’s Dan Rather, exclusive rights to the most historically significant piece of amateur filmmaking in the 20th century were obtained by Life magazine. The Zapruder film was not shown on television until March 1975, when it aired on ABC’s Goodnight America. Almost certainly, how-
ever, in 1963 it would have been deemed too gruesome and disrespectful of the feelings of the Kennedy family to have been broadcast on network television.

The saturation coverage of the assassination and burial of John F. Kennedy, and the startling murder of his alleged assassin Lee Harvey Oswald on live television, yielded a shared media experience of astonishing unanimity and unmatched impact, an imbedded cultural memory that as years passed seemed to comprise a collective consciousness for a generation. In time, it would seem appropriate that the telegenic president was memorialized by the medium that helped make him. For its part, television—so long sneered at as a "boob tube" presided over by avaricious lords of kitsch—emerged from its four days in November as the only American institution accorded unconditional praise. Variety's George Rosen spoke the consensus: "In a totally unforeseen and awesome crisis, TV immediately, almost automatically, was transformed into a participating organ of American life whose value, whose indispensability, no Nielsen audimeters could measure or statistics reveal." The medium Kennedy's Federal Communications Commission commissioner Newton Minow condemned as a "vast wasteland" had served, in extremis, as a national lifeline.

Kennedy, Robert F.: Assassination

Shortly after midnight on June 5, 1968, Senator Robert F. Kennedy (D-New York) was assassinated by Sirhan B. Sirhan in the ballroom of the Ambassador Hotel in Los Angeles, California. All three television networks (ABC, CBS, and NBC) began coverage at the scene just minutes after the shooting. The first broadcast included footage of a large crowd of supporters gathered in the ballroom, awaiting Kennedy's address following his California presidential primary victory. Muffled sounds emerged from the direction of the podium, the crowd became disorderly, and although the reason for the disruption was still unclear, Steven Smith, Kennedy's brother-in-law, asked everyone to clear the room. A still photograph of Kennedy sprawled on the floor was televised as reporters noted in voice-over that he had been shot repeatedly but was conscious and had "good color." A physician at the scene remarked that the extent of his injuries was unknown. Later reports were provided by Kennedy's press secretary, Frank Mankiewicz, who stood on a car outside Good Samaritan Hospital to relay more technical information supplied by surgeons. At last he announced Kennedy's death some 26 hours after the shooting.

The whereabouts, identity, and motives of the assassin were vague in early accounts. Two hours after the shooting, reporters noted that a "young man had been caught" but were uncertain whether he was still in the hotel or had been taken into police custody. Described as "dark-skinned" and "curly-haired," and variously as Filipino, Mexican, Jamaican, or Cuban, Palestinian Sirhan B. Sirhan was identified nearly ten hours later by his brother Adel after a still photograph of him was shown on television. Although he made no statements to police, eyewitnesses claimed that at the time of the shooting Sirhan said, "I did it for my country." In response to the crowd's angry chant of "kill him, lynch him," anchorman Walter Cronkite reiterated that Sirhan was "presumed innocent until proven guilty."

1254
Questions concerning Sirhan’s motives and whether he was part of a conspiracy are mired in controversy to this day.

A description of the weapon was similarly indeterminate. In the earliest reports, a policeman stated that celebrity Roosevelt “Rosie” Grier had first grabbed the weapon but that he currently had no idea where or what type the weapon was. Within one hour of the shooting, controversy had begun to emerge in terms of conspiracy: some eyewitnesses reported that the assassin had used a six-shot revolver; others said that more than six shots had been fired. One reporter suggested that there might have been more than one gun, and more than one gunman. Two hours later, however, the weapon was identified as an Iver Johnson .22-caliber pistol, a weapon capable of eight shots. Los Angeles Police Chief Thomas Reddin stated several hours after this that the pistol had been traced to a missing gun report, though the gunman himself had not yet been identified. He was uncertain at this point whether the man in custody was actually the assailant. Special reports on the pistol’s history of ownership began to air nine hours after the shooting; 18 hours after the shooting, detailed special reports related the histories of the pistol and the assassin, who by this time had been identified as Sirhan.

The issue of violence played a crucial role in many of the shooting reports. One reporter noted that the United States would, with its rash of assassinations in the 1960s, appear to outsiders to be “some sort of violent society.” The Reverend Ralph Abernathy, speaker for the Southern Christian Leadership Conference, aimed his criticism more pointedly in the direction of President Lyndon Johnson and the Vietnam War by saying that Kennedy had worked against “the violence, the hatred, and the war mentality” that had been “poisoning” the United States. Kennedy’s opponent in the Democratic primary, Senator Eugene McCarthy, echoed this sentiment in his condemnation of violence at home and abroad. Some 12 hours after the shooting, Johnson responded to criticism in a special address in which he denounced violence “in the hearts of men everywhere” and suggested the establishment of a commission to investigate the causes of violence in society. The commission would be jointly directed by the president and Congress and would be composed of academic, political, and religious leaders.

More immediate measures were also proposed to deal with the security of political candidates. Following an early report that police had planned no special security for Kennedy, President Johnson declared that full Secret Service protection would be provided for all leading announced candidates for national positions, rather than for the position-holders alone. In the meantime, reporters announced that Senator McCarthy, New York Governor Nelson Rockefeller, and Republican candidate Richard Nixon had called off all appearances.

Others at the Ambassador Hotel rally were also injured. Shortly after the shooting, it was reported that Jesse Unruh, Kennedy’s campaign manager, had been hit, along with Paul Shrade, head of the United Automobile Workers union. Four hours later, added to the list were William Weisel, an ABC unit manager; Ira Goldstein, a California news service reporter; Elizabeth Evans, a political supporter; and Irwin Stroll, a teenage bystander.

Coverage of the shooting and its aftermath continued to be broadcast until the early evening of June 5, when networks began switching back to programs “already in progress.” ABC opted not to broadcast a professional baseball game and instead had a special report on “The Shooting of RFK.” Other networks informed viewers that regular programming would be interrupted occasionally to provide updated reports of Kennedy’s condition. Early on the morning of June 6, a news conference was held to announce Kennedy’s death. His funeral was televised on June 7, and highlights were televised on June 8.

Kennedy Martin, Troy (1932– )
British Writer

Troy Kennedy Martin began his career as a television screenwriter in 1958 and quickly emerged as a leading member of a group of writers, directors, and producers at the BBC who were pushing the limits of British television drama. In addition to writing episodes of crime series, literary adaptations, and original miniseries, Kennedy Martin became an outspoken proponent of a new approach to television drama that would exploit what he saw as the properties of the medium.

He first received widespread acclaim for his approach with the BBC police series *Z Cars*, which proved enormously popular and ran from 1962 to 1978. The series was acclaimed for the fast pace and gritty realism with which it depicted a Lancashire police force coping with the problems of a modern housing estate. Its view of the police offered a sharp contrast to the homespun philosophy of PC Dixon in the BBC's *Dixon of Dock Green*, which had been extremely popular with family audiences since its debut in 1955. Kennedy Martin wrote the first eight episodes of the first season of *Z Cars*, plus the final episode in 1978.

In 1964 he published an article in the theater magazine *Encore* in which he argued forcefully for a “new television drama.” Through its attack on “naturalism,” this article set the terms for a lively, if sometimes confusing, debate on realism in television drama that persists into the present. Kennedy Martin advocated using the camera to do more than just show talking heads, by freeing the dramatic structure from the limits of real time and creating more complex relations between sound and image. In particular, he wanted to exploit what he called “the total objectivity of the television camera,” which gave the medium a built-in Brechtian critical dimension that worked against subjective identification with characters.

From Kennedy Martin’s point of view, the value of *Z Cars* lay in its respect for reality: its refusal to idealize the police and its attempt to reveal the underlying social causes that led to crime. Yet, because the style remained “naturalistic,” Kennedy Martin felt that it was soon compromised by the generic and institutional constraints that encourage identification with the police and the demonization of the criminal.

Despite his disappointment with *Z Cars*, Kennedy Martin continued to write within popular crime and action genres, notably for Thames Television’s police series *The Sweeney* (1975–78), for which he wrote six episodes. He also wrote screenplays for several action films, with the same sense of frustration that his critical intentions were subverted in the production process. *The Italian Job* (1969), directed by Peter Collinson, was Kennedy Martin’s most successful film screenplay.

Some of the formal innovations that Kennedy Martin called for in his manifesto were incorporated into *Diary of a Young Man*, a six-part serial broadcast by the BBC in 1964, written by Kennedy Martin and John McGrath and directed by Ken Loach. Other writers, notably David Mercer and Dennis Potter, also explored the possibilities of a non-naturalistic television drama. Yet it was not until the 1980s that Kennedy Martin was able to produce work that fulfilled both his critical and formalist goals. First came a fairly free adaptation of Angus Wilson’s *The Old Men at the Zoo* as a five-part serial, broadcast by the BBC in 1983, a powerful and disturbing science fiction parable about a political order whose logic leads to the destruction of Britain in a nuclear war.

Fears of nuclear power and government bureaucracy also drove Kennedy Martin’s major achievement, *Edge of Darkness*, a political thriller broadcast in six parts on BBC 2 in late 1985 and promptly repeated in three parts on consecutive nights on BBC 1. This serial combined the “naturalistic” tradition of British television drama on social issues with a popular thriller format and elements of fantasy and myth. A police inspector, investigating the murder of his daughter, discovers that she belonged to an anti-nuclear organization that had uncovered an illegal nuclear experiment backed by the government. The break with naturalism occurs when the murdered woman simply appears beside her father and starts a conversation with him, linking his investigation to the fusion of myth and science in the ecological movement to which she had belonged.

The popularity of political thrillers on British television after 1985 confirmed the significance of *Edge of Darkness* as a key work of the decade. Although Kennedy Martin advocated the development of short dramatic forms, not unlike the music videos that emerged in the 1980s, he has made a major contribu-
tion to British television drama in the developments of the long forms of series and serials.

Kennedy-Nixon Presidential Debates, 1960

On September 26, 1960, 70 million U.S. viewers tuned in to watch Senator John Kennedy of New York and Vice President Richard Nixon in the first-ever televised presidential debate. It was the first of four televised “Great Debates” between Kennedy and Nixon. The first debate centered on domestic issues. The high point of the second debate, on October 7, was disagreement over U.S. involvement in two small islands off the coast of China, and on October 13, Nixon and Kennedy continued this dispute. On October 21, the final debate, the candidates focused on U.S. relations with Cuba.

The Great Debates marked television’s grand entrance into presidential politics. They afforded the first real opportunity for voters to see their candidates in competition, and the visual contrast between Kennedy and Nixon was dramatic. In August, Nixon had seriously injured his knee and spent two weeks in the hospital. By the time of the first debate, he was still 20 pounds underweight, his complexion still pale. He arrived at the debate in an ill-fitting shirt and refused makeup to improve his color and lighten his perpetual “five o’clock shadow.” Kennedy, by contrast, had spent early September campaigning in California. He was tan and confident and well rested. “I had never seen him looking so fit,” Nixon later wrote.

In substance, the candidates were much more evenly matched. Indeed, those who heard the first debate on the radio pronounced Nixon the winner. But the 70 million who watched television saw a candidate still sickly and obviously discomforted by Kennedy’s smooth delivery and charisma. Those television viewers focused on what they saw, not what they heard. Studies of the audience indicated that, among television viewers, Kennedy was perceived the winner of the first debate by a very large margin.
Kennedy-Nixon Presidential Debates, 1960

The televised Great Debates had a notable impact on voters in 1960, on national elections since, and, indeed, on our concerns for democracy itself. The debates' effect on the election of 1960 was significant, albeit subtle. Commentators broadly agree that the first debate accelerated Democratic support for Kennedy. In hindsight, however, it seems the debates were not, as once thought, the turning point in the election. Rather than encouraging viewers to change their vote, the debates appear to have simply solidified prior allegiances. In short, many would argue that Kennedy would have won the election with or without the Great Debates.

Yet voters in 1960 did vote with the Great Debates in mind. At election time, over half of all voters reported that the Great Debates had influenced their opinion; 6 percent reported that their vote was the result of the debates alone. Thus, regardless of whether the debates changed the election result, voters pointed to the debates as a significant reason for electing Kennedy.

The Great Debates had consequences beyond the election of 1960, as well. They served as precedent around the world: Soon after the debates, Germany, Sweden, Finland, Italy, and Japan established debates between contenders for national office. Moreover, the Great Debates created a precedent in U.S. presidential politics. Federal laws requiring that all candidates receive equal air time stymied debates for the next three elections, as did Nixon's refusal to debate in 1968 and 1972. Yet by 1976, the law and the candidates had both changed, and ever since, presidential debates, in one form or another, have been a fixture of U.S. presidential races.

Perhaps most important, the Great Debates forced citizens to rethink how democracy would work in a television era. To what extent does television change debate, indeed, change campaigning altogether? What is the difference between a debate that "just happens" to be broadcast and one specifically crafted for television? What is lost in the latter? Do televised debates really help us to evaluate the relative competencies of the candidates, to assess policy options, to increase voter participation and intellectual engagement, to strengthen national unity? For some observers, such events lead to worries that television emphasizes the visual, when visual attributes seem neither the best nor most reliable indicators of a great leader. However, other analysts express confidence that televised presidential debates remain one of the most effective means to operate a direct democracy. The issue then becomes one of improved form rather than changed forum. The Nixon-Kennedy debates of 1960 brought these questions to the floor, forcing us to ponder the role of television in democratic life.

Kenya

Kenyan television is a classic example of an industry whose good chances for development have been consistently frustrated by government sensitivity and political interference. The medium's history in Kenya is marked by stunted growth due to excessive government regulation and extensive abuse by the dominant political forces.

In 1959 the Kenya Broadcasting Corporation (KBC) was established by the British colonial administration, with the objective of providing radio and television broadcasting. The proposal for the formation of a public corporation had been submitted by a commission appointed earlier in the year to report on the advantages and disadvantages of a television service for
Kenya, and the impact of such a service on radio broadcasting. The 1959 Proud Commission rejected earlier findings by another commission in 1954 that television was “economically impracticable in Kenya” and concluded that the new medium was likely to be financially self-reliant if it were set up as a full-fledged commercial outfit.

Between 1959 and 1961, and in keeping with the Proud Commission’s recommendations, the colonial administration contracted a consortium of eight companies to build and operate a television service. The eight firms, seven of which were from Europe and North America, formed Television Network Ltd., which was charged with the responsibility of setting up the national television broadcasting system. The consortium, cognizant of the irreversible developments toward Kenya’s political independence, created the Kenya Broadcasting Corporation as an autonomous public organization. The idea was to have the corporation wield as much independence as the British Broadcasting Corporation (BBC). By the end of 1962, a transmission station and recording studio had been set up in Kenya, and television was officially launched the following year.

The corporation created by the consortium bore a striking resemblance to the BBC. It drew its revenue from advertising, annual license fees on receiver sets, and government subventions. The vision of financially self-sustaining television service was, however, misplaced, especially since the new medium failed to attract as much advertising as the older and more popular radio broadcasting service. Within the first full financial year of television broadcasting (July 1963 to June 1964), the corporation posted a loss of nearly $1 million and had to resort to government loans and supplementary appropriations to remain afloat. Coincidentally, Kenya had gained independence, and the new government, worried about the threat to national sovereignty posed by the foreign ownership of the broadcasting apparatus, decided to nationalize the corporation in June 1964. After the takeover, the corporation was renamed Voice of Kenya (VoK) and was converted to a department under the Ministry of Information, Broadcasting, and Tourism (later renamed Ministry of Information and Broadcasting). VoK’s new role, as the government mouthpiece, was to provide information, education, and entertainment. While the government adopted a capitalist approach to economic development, which embraced private-sector participation in all areas of the economy and even welcomed participation in a number of electronic broadcasting activities, private ownership of broadcasting concerns was disallowed.

Between 1964 and 1990, television and radio were owned and controlled by the state, and the two media exercised great caution in reporting politically sensitive news. During this period, several attempts were made to move away from the established broadcasting system. The Ministry of Information and Broadcasting replaced annual license fees with a one-time permit fee, and the drive for commercial self-sustenance was replaced by a politically inspired initiative for increased local content and a sharper nationalistic outlook. The objective was elusive, however, as the VoK television was only able to achieve a 40 percent local-programming content by the mid-1980s, well below the target of 70 percent local content. Television also failed to become an authoritative national medium; studies in 1985 showed that only 17 percent of the electronic media audience regarded television as the best source of information, compared to 86 percent who rated radio as their prime news source.

Several reasons have been advanced for poor performance of television in Kenya. Besides being a preserve of the educated minority in the country, the spread of ownership of television sets has been severely curtailed by the poor penetration of the national electrical power grid. Even worse is the poor transmission the country received from the 55 small transmission and booster stations, whose weak signals generally cover small areas or are constrained by the country’s rugged topography. As such, household audiences have been growing mainly within the major urban areas, or near large rural centers served by electricity and near a booster station.

In 1989 the VoK was renamed Kenya Broadcasting Corporation and accorded semi-autonomous status founded on the premise that it would adopt a more commercially oriented stance. Although the corporation unveiled grandiose plans to expand news coverage and improve local programming content, it was unable to chart out an independent editorial position, and it is still widely seen as a part of the government propaganda machinery. However, some progress has been made in increased weekly on-air periods, and enhancement of color transmission. Until the early 1990s, the corporation relied on cheap but time-consuming air-mail services for the supply of foreign news footage, even though the country was serviced by Intelsat. Since 1994, the corporation has been retransmitting large chunks of the BBC World Service Television several nights per week. A second KBC channel launched in 1995 is a joint venture between the KBC and MultiChoice South Africa; this channel mainly transmits movies and international sports.
Liberalization has been slow and inconsistent. In March 1990, a second television station, the Kenya Television Network (KTN), commenced operations, offering a mixture of relayed retransmission of CNN programming and light entertainment. KTN was initiated as a joint venture between Kenya's ruling party, Kanu, and the London-based Maxwell Communications, but the British media group withdrew after the death of its founder, Robert Maxwell. Baraza Ltd.—owners of the East African Standard and Capital FM radio station—acquired KTN in the late 1990s. Even though it is privately owned, KTN has been unable to provide independent news coverage because of excessive political interference with its editorial direction, a problem that forced its management to scrap the transmission of local news for more than a year, between 1993 and 1994. About 95 percent of the station's programs are foreign, mainly because most of its 24-hour service is a retransmission of the CNN signal.

A second private station, Cable Television Network (CTN), launched in March 1994, has also failed to inspire major changes in Kenya's television industry. CTN unsuccessfully tried to build a subscriber base in Nairobi via overhead cables passed along existing electrical power pylons. Its intermittent transmissions have so far comprised Indian drama and films. A third private station, Stellavision TV, was licensed in the early 1990s and went on air in 1999 with primarily foreign films and entertainment.

The enactment of the Kenya Communications Act in 1998 signaled the beginning of deregulation of the airwaves in earnest. The law created the Communications Commission of Kenya (CCK) as an independent regulatory authority for broadcasting, telecommunications, and postal services. CCK is responsible for licensing, broadcast-frequency allocations, ownership and control regulation, and enforcement of fair practices. The act also provides for the transformation of KBC into a national public service broadcaster in both radio and television.

The latest entrants into the television market are Citizen TV and Nation TV. Citizen TV, owned by Royal Media, was licensed in 1997 and began transmission in 1999. Problems with government saw its license temporarily withdrawn in 2001. African Broadcasting Ltd., a subsidiary of the Nation Media Group, owns Nation TV. The station was licensed in 1998 and went on air in December 1999. Five other TV licenses have been given out since 1999, two of which are for religious broadcasting. As of 2002, these channels had not yet gone on air. The licensing of private stations, however, says little about Kenya's commitment to liberalizing the airwaves. The government has previously refused to license operators on the grounds that broadcasting frequencies are inadequate, and for fear of losing control over the information-dissemination process.

Owing to the centralized nature of Kenyan television, only a handful of small production houses have been set up in the country. Most local productions are from the KBC teams and the government camera crew located in provincial headquarters. Virtually all programs are in either English or Swahili; English is the programming language used during two-thirds of all airtime. Most of the small production houses concentrate on commercials and documentary filming. Lately, however, a few production houses have been formed that target programming opportunities as the region liberalizes its airwaves.

Kids in the Hall

Canadian Sketch Comedy Program

*Kids in the Hall* (KITH) was a sketch comedy program produced by Lorne Michaels's Broadway Video and co-financed by the Canadian Broadcasting Corporation (CBC) and the U.S. cable network, Home Box Office (HBO). KITH aired in Canada on the CBC and in the United States on HBO, CBS, and another cable network, Comedy Central. The members of the KITH performance group are Dave Foley, Bruce McCulloch, Kevin McDonald, Mark McKinney, and Scott Thompson. The name derives from U.S. comedian Jack Benny's habit of attributing some of his material to aspiring comedians whom he called "the kids in the hall."

KITH was formed in 1984 when McCulloch and McKinney, who had worked together in Calgary as part of a group named the Audience, teamed up with Foley and McDonald's Toronto-based group, KITH. Thompson officially joined in January 1985. That same year, McCulloch and McKinney were hired as writers for NBC's *Saturday Night Live* (SNL) after a talent scout saw KITH in performance. Significantly, SNL had also been created by Michaels, himself an expatriate Canadian living and producing in New York. Also in 1985, Foley appeared in the film *High Stakes*, and Thompson and McDonald toured with Second City. In 1986 KITH were reunited in Toronto and Michaels finally saw them perform. He immediately envisaged a television project around them. In 1987, he moved KITH to New York and, paying each member $150 per week, had them perform in comedy clubs, write new material, and rehearse sketches. In 1988, Michaels produced their HBO special. The regular series followed.

KITH immediately attracted a cult following and broke new ground by combining shock humor with a finely developed sense of performance and a generosity of spirit, which invited audiences to question their presuppositions rather than simply to mock the targets of the humor. Characteristic of KITH's style are well-rounded personifications of both men and women, homosexuals, business executives, prostitutes, and drug users, and such creations as the half-human/half-fowl Chicken Lady, gay barfly Buddy Cole, the angry "head crusher," the annoying child Gavin, and the teenager drawn to older women. These personifications consistently draw upon the inner resources of the characters themselves, showing their encounters with society rather than society's judgment upon them.

KITH also occupies an interesting place within Canadian television. First, although a Canadian show filmed in Toronto, it was produced by a New York-based company best known for turning comedians such as Steve Martin and John Belushi into major stars. KITH could therefore serve as Canadian content while gaining access to the much larger and more lucrative U.S. market. Second, although a CBC program, KITH attracted a youthful cult audience unfamiliar to the CBC and inconsistent with its core demographic. Third, KITH cracked the U.S. market by targeting an audience understood not in terms of its membership in a Canadian national cultural community but a North American audience understood in terms of its relative youth and sophistication with comedy. Fourth, the success of KITH coincided with the moment when the
CBC attempted to change its corporate culture by adopting some of the practices of other North American networks and embracing urbanity unreservedly.

However, KITH also extended certain existing aspects of Canadian television. KITH adopted the sketch rather than the situation comedy format. Canadian broadcasting has attempted situation comedy only sparingly and unevenly, whereas its sketch comedy record reaches back at least to the 1940s with radio’s *The Happy Gang*. On television, sketch comedy appeared in the early 1950s with Wayne and Shuster and has come to include *Nightcap, SCTV, The Frantics, S and M Comic Book, Codco, The Vacant Lot, Three Dead Trolls in a Baggie, This Hour Has 22 Minutes*, and others.

Within the North American context, KITH also exemplified the relative openness of Canadian broadcasting. For example, many of KITH’s themes and situations were initially deemed inappropriate for U.S. network TV and it therefore debuted on HBO. When CBS did pick it up, KITH underwent certain deletions. Canadian television, however, because of the traditional preponderance of public broadcasting, is more experimental and less censorious, and has long been open to a much broader range of social, political, and cultural attitudes than would be possible on U.S. television. This created a space for KITH’s shock humor and extended the CBC’s commitment to more challenging material.

KITH repeated the tradition of exporting Canadian comedy to U.S. television through such notables as Lorne Michaels himself, Dan Aykroyd, Dave Thomas, Martin Short, Jim Carrey, John Candy, Catherine O’Hara, Rick Moranis, Mike Meyers, and others.

KITH was terminated by the principals themselves, who have pursued careers in the entertainment industry that highlight their skills as actors and writers, mainly in situation comedies and films. In 1996, KITH starred in the film *Brain Candy*, a comedy about a pharmaceutical company’s attempt to market a new drug. In 2000, KITH undertook a North American reunion tour. In 2001, the live tour documentary *Kids in the Hall: Same Guys, New Dresses* was released. KITH enjoys a devoted fan following and has spawned websites, merchandise, and fanzines.

The first and most primitive method of recording a television program, production, or news story, a kinescope is a film made of a live television broadcast. Kinescopes are usually created by placing a motion picture camera in front of a television monitor and recording the image off the monitor's screen while the program is being aired. This recording method came into wide use around 1947. Before videotape, this process was the standard industry method of creating a permanent document, for rebroadcast and for archival purposes. The term "kinescope" comes from the combination of two words: the Greek "kinetic," meaning of or related to motion, and "scope," as in an observational instrument such as a microscope.

Actually, kinescope is the name for the cathode-ray tube in a television receiver that translates electrical signals into a picture on a lighted screen. The use of the word "kinescope" to describe a filmed recording of a television broadcast was derived from this piece of equipment. Originally, such recordings were called "kinescope recordings," but, due to repeated usage in spoken language, the term was usually shortened to just "kinescope," and then often shortened again to just "kine" or "kinnie." The picture quality created by kinescopes was admittedly and understandably poor—they appeared grainy, fuzzy, even distorted—but they were the only method for documentation available to stations and producers at that time. Although the poor picture quality of kinescopes generally prohibited any extensive reuse, many programs were rebroadcast from kinescope in order to save money, to allow broadcast at a different time or, more frequently, to expose the programs to a wider audience. Cities and locales outside of an antenna's reach and without wire or cable connection had no way of seeing programming produced in and broadcast from New York City, programming that constituted the majority of television at the time. In order for a program to be seen in outlying areas (either beyond the city limits or elsewhere across the country), kinescope films were shipped from station to station in a practice known as "bicycling."

For many stations, the airing of kinescopes (despite the very poor picture quality) was a necessary way to fill the programming day. This was especially true in the early days of educational television, which had high goals but little money with which to achieve them. Although kinescope programs could never be very timely, they could be educational and, in this case, they were the best way to fill a void. The National Educational Television and Radio Center (later NET) in Ann Arbor, Michigan, was the country's largest clearinghouse for kinescope distribution until the late 1950s.

Because kinescopes were considered so unsatisfactory, many companies attempted to find more efficient, less costly, and more aesthetically pleasing methods of recording programs. Seeking a more convenient way of producing his television specials without having to perform them live, singer Bing Crosby had his company, Bing Crosby Enterprises, create and demonstrate the first magnetic videotape recordings in 1951. The RCA and Ampex companies would also display electronic videotape recording methods before the end of the decade, with the Ampex standard eventually adopted by the television industry.

However, the true demise of the kinescope (at least as far as entertainment programming is concerned), like most things in television, was ultimately driven by economic concerns and can be attributed to I Love Lucy and its stars and producers, Desi Arnaz and Lucille Ball. When beginning their landmark show, the couple insisted on producing in California, their home of many years. Philip Morris, the cigar and cigarette manufacturer, already signed on as the show's sponsor, wanted the program produced in New York because more potential smokers lived east of the Mississippi, but Philip Morris would not settle for inferior kinescopes playing on the east coast. In response, Arnaz and cinematographer Karl Freund devised a method of recording performances on film. Their system used three cameras to record the live action while a director switched among them to obtain the best shot or angle. The show was later edited into the best performance in a manner much like a feature film. The result not only was a superior recording good for repeated airing throughout the country, it also presaged the move of the TV industry from New York to the west coast, where fully equipped film studios eagerly entered television production and recouped some of the losses they had encountered with the rise of the newer medium. Moreover, the new filmed product created, almost accidentally, TV's most profitable byproduct, the rerun.

The kinescope, the one and perhaps only method of television recording technology to be completely obsolete in the industry today, is now of use only in
archives and museums, where the fuzzy, grainy texture often adds to the recordings' charm as artifacts and antiques. For those who would understand and present the history of television programming, that charm is fortunately matched by the historical value of even this partial record of an era all but lost.

King, Larry (1933– )
U.S. Talk Show Host

Larry King, television and radio talk show host, claims to have interviewed more than 30,000 people during his career. In 1989 *The Guinness Book of World Records* credited him as having logged more hours on national radio than any other talk show personality in history.

His nationwide popularity began with his first national radio talk show, premiering over the Mutual Network in 1978. In 1985 the Cable News Network (CNN) scheduled a nightly, one-hour cable-television version of King’s radio program. *Larry King Live* has become one of CNN’s highest-rated shows and positioned King as the first American talk-show host to have a worldwide audience. Currently, the program reaches more than 200 countries, with a potential audience of 150 million.

Called cable television’s preeminent pop-journalist, King is characterized as an interviewer, not a journalist. He is an ad-lib interviewer, who claims not to overprepare for his guest. “My lack of preparation really forces me to learn, and to listen,” he says. His guests are given a wide range of latitude while responding to questions that any person on the street might ask. Rather than acting as an investigative reporter, King prides himself in asking “human questions,” not “press-conference questions.” He sees himself as non-threatening, nonjudgmental, and concerned with feelings.

King’s radio broadcast career began with a 1957 move to Miami, Florida, where he worked for station WAHR as a disc jockey and sports talk show host. He changed his name from the less euphonious Larry Zeiger when the general manager noted that his name was “too German, too Jewish. It’s not show-business enough.”

After a year, he joined WKAT, a station that gave DJs a great deal of freedom to develop their personalities. King took advantage of the opportunity by inventing a character called “Captain Wainright of the Miami State Police.” Sounding like Broderick Crawford, Wainright interrupted traffic reports with crazy suggestions, such as telling listeners to save a trip to the racetrack by flagging down police officers and placing their bets with them. The Wainright character became so popular that bumper stickers appeared bearing the slogan “Don’t Stop Me. I Know Capt. Wainright.”

In 1958 King’s celebrity status led to his first major break as host of an on-location interview program from Miami’s Pumpernik Restaurant. He interviewed whoever happened to be there at the time. Never knowing who his guest would be and unable to plan in advance, he began to perfect his interviewing style, listening carefully to what his guest said and then formulating questions as the conversation progressed.

Impressed with King’s Pumpernik show, WIOD employed him in 1962 to do a similar radio program originating from a houseboat formerly used for the ABC television series *Surfside Six*. Because of the show’s on-the-beach location and because of the publicity it offered the television series, *Surfside Six* became an enormous success. WIOD gave King further exposure as the color commentator for broadcasts of Miami Dolphin football games. While riding a tide of popularity during 1963, he did double duty as a Sunday late-night talk show host over WLBB-TV. In 1964 he left WLBB-TV for a weekend talk show on WTVJ-TV. He added newspaper writing to his agenda with columns for *The Miami Herald, The Miami News*, and *The Miami Beach Sun-Reporter*.

1264
Of this period, King said he was "flying high." Unfortunately, his life flew out of control. He ran up outrageous bills and fell $352,000 into debt. Still worse, he was charged with grand larceny and accused of stealing $5,000 from a business partner. On March 10, 1972, the charges were dropped, but the scandal nearly destroyed his career. It would take four years before he worked regularly in broadcasting again. King candidly presented this period of his life to the public in his book, Larry King.

From 1972 to 1975, King struggled to get back on his feet. In the spring of 1974, he took a public relations job with a horse racing track in Shreveport, Louisiana. In the fall, he became the color commentator for the short-lived Shreveport Steamers of the World Football League.

In 1975, after returning to Miami, he was rehired by a new general manager at WIOD for an evening interview show similar to his previous program. Over the next several years, he gradually recovered as a TV interviewer, a columnist for The Miami News, and a radio commentator for the Dolphins. Still deep in debt, he claimed bankruptcy in 1978.

In the same year, the Mutual Broadcasting Network persuaded him to do a late-night radio talk show, which debuted on January 30, 1978, in 28 cities as the Larry King Show. It was first aired from WIOD, but beginning in April 1978, it originated from Mutual's Arlington, Virginia, studios, which overlook the capital. Originally, the show's time slot was from midnight to 5:30 A.M. and divided into three distinct segments, a guest interview, guest responses to callers, and "Open Phone America." King greeted callers by identifying their location: "Memphis, hello."

In February 1993, King's radio talk show on Mutual (now Westwood One) moved from late night to an afternoon drive time reaching 410 affiliates. By June 1994, Westwood also began simulcasting King's CNN live show, the first ever daily "TV/radio talk show." As part of the agreement, King dropped his syndicated radio show, a move that ended his regular radio broadcasting activities.

Larry King's CNN program received a huge boost in 1992 by attracting the presidential candidates. On February 20, his interview with H. Ross Perot facilitated Perot's nomination. Viewers of Larry King Live learned of Perot's candidacy even before his wife did. Because of King's call-in format, Perot was approachable as he responded to questions from viewers. The interview initiated a new trend in campaigning as other candidates followed suit by sidestepping traditional news conferences with trained reporters in favor of live, call-in talk shows. The new boom in "talk show democracy" invited voters back into the political arena formerly reserved for politicians and journalists, and marked a new stage in television's influence on the U.S. political process.

In addition to his work in radio and television as a talk show host, King has made appearances (usually playing himself) in many movies, including Ghostbusters (1984), Primary Colors (1998), and America's Sweethearts (2001), and he has guest-starred (again playing himself) on a number of sitcoms such as Murphy Brown, The Simpsons, The Larry Sanders Show, Frasier, and Spin City. From the 1980s until November 2001, he published a weekly column for the national newspaper USA Today. In 2002 King signed a four-year contract with CNN.

King, Dr. Martin Luther, Jr.: Assassination

Dr. Martin Luther King Jr., leader of the American civil rights movement, was assassinated on April 4, 1968, in Memphis, Tennessee, while lending support to a sanitation workers' strike. He was shot by James Earl Ray at approximately 7:05 P.M. Ray's bullet struck King as he was standing on his balcony at the Lorraine Motel; King died approximately one hour later. Although no television cameras were in the vicinity at the time of the assassination, television coverage of the event quickly followed.

News reports of King's wounding appeared first, but reporters remained consistent with the traditional news format, making early reports of the shooting seem both impersonal and inaccurate. The assassination occurred at the same time as the evening news, and several anchors received the information during their live
broadcasts; because details of the shooting were not yet clear, inaccurate information was offered in several cases. Julian Barber of WTTG in Washington, D.C., for example, mistakenly reported that King had been shot while in his car. Following this presentation of incorrect details, Barber then proceeded to introduce the station's weatherman. The rest of the newscast followed a standard format, with only minor interruptions providing information about King's condition.

Similarly, Stanislav Kondrashov recalls that Walter Cronkite had almost finished delivering his report on the CBS Evening News when he received word of King's wounding. Visibly shaken, he announced the shooting. Moments after the announcement, however, the news program faded into commercial advertising.

With little information available, the networks continued with their regularly scheduled programming and only later interrupted the programs with their station logos. At that point, an anonymous voice announced that King was dead.

Having received word of King's death, all three U.S. networks interrupted programming with news coverage.Awaiting President Lyndon Johnson's statement, all three featured anchormen discussing King's life and his contributions to the civil rights movement. The networks then broadcast Johnson's statement, in which he called for Americans to "reject the blind violence" that had killed the "apostle of nonviolence." In addition, the networks also covered Senator Hubert Humphrey's response and presented footage of King's
prophetic speech from April 3, in which he acknowledged the precarious state of his life. Although the networks had reporters positioned in Memphis, there were no television reporters on the scene because an official curfew had been imposed on the city in an attempt to prevent violence.

According to G.D. McKnight, the immediacy of the television coverage prompted riots in more than 60 U.S. cities, including Chicago, Denver, and Baltimore. Television coverage of King's death and the riots sparked continued for the next five days. King's life was featured on morning shows (e.g., NBC's Today Show), evening news programs, and special programs. The riots themselves commanded extensive television coverage (e.g., CBS's News Nite special on the riots). G.L. Carter suggests that the riots following King's assassination represent a significant shift from previous riotous activities, from responses dealing primarily with local issues to the national focus emerging in the wake of the King riots. National television coverage of the circumstances surrounding the King assassination may have contributed to this shift.

King of Kensington

The five seasons of King of Kensington provided some of the most popular television in the more than 50-year history of television in Canada. Veteran actor Al Waxman was remembered as the "King" for the rest of his life, as was the catchy tune that opened every episode under the credits. The lyrics define King as the "people's champion," a "king without a buck...his wife says helping people brings him luck/His mother tells a slightly different story" over shots of King going down the crowded sidewalks greeting everyone with a broad smile. The song ends with a little send-up: a deep male voice drawling, "What a guy!" The series is set in the multi-ethnic open market of Kensington Street in downtown Toronto. Taped in front of a live audience, originally the series emphasized topical humor based on recent events, but given a twist by the ethnicity of the various characters. King is Jewish, Cathy his wife is a WASP, Tony the cabbie is Italian, and Nestor the postman is from the Caribbean. A Ukrainian alderman and a Francophone gambler also appeared in early episodes of this domestic comedy.

King of Kensington also focuses on the clash of cultures between Cathy and Gladys, King's rather stereotypical Jewish mother, and between Cathy's needs and Larry's willingness to help anybody. The topical references provided the show with some edginess, as did the working-class realism of the sets, costumes, and dialogue. Larry came from a well-known Toronto high school, yet was willing to try foods like curry just then coming into popularity in the city. The fact that King was easygoing, a little overweight, and an average guy made him a very appealing protagonist.

In the second season, the topical political references disappeared, largely as a result of CBC audience research that signaled that they were not very popular. That meant, among other things, that the next four seasons would be more easily syndicated. On the other hand, the ethnic stereotypes were gradually taking on more rounded characteristics. However, despite the fact that Nestor was one of the few visible minorities in Canadian television drama and Tony was one of the few Italians, they were written out in the third season.
A bigger problem for the writers was that Fiona Reid (who played Cathy) wanted to return to the theater. She told interviewers she was reproached even years later by people she passed on the street for leaving King. The third season episode “Cathy's Last Stand,” in which she left, is one of the best in the series—touching, a little funny, and a reprise of her history on the show, as she talks about her various unsuccessful efforts to define herself separately from King's huge persona. In a nice twist, it is established that she is leaving him, not because she does not love him any more, but because he gives so much of himself to everyone else he leaves little time for her. That characteristic is, of course, the basis for many of the show's comic situations, an intrinsic part of Larry King.

In the fourth season, Gladys marries her friend Jack who takes over the store, and King becomes the athletic director of the Kensington Community Centre. King finds a girlfriend in Tina, and life goes on. There are mediocre episodes (the Christmas episode in which everyone is snowbound in a restaurant and a pregnant woman gives birth) and better, more innovative ones (the episode in which King finds out that the tough school teacher he dreaded is both fair and a good teacher). Episodes center on topics and individuals such as night classes for immigrants, the pride of an old man struggling with impotence, a nude model in a life drawing class, a controversy about a dance for gay people, and an alderman who, in a 1979 episode, thinks the center is controlled by “a deviant ethnic conspiracy.” In the decade of M*A*S*H and All in the Family, and in the context of the CBC's own tradition of topical dramas, the series did not abandon its sense of Toronto as a rapidly changing cultural, racial, ethnic, and sexually diverse mix nor its wry ways of addressing relevant social issues.

The series ended with a poor young couple, the Cortinas, wanting to buy the store, but denied credit. Gladys leaves, at King's urging, to a retirement haven in Florida with Jack. King's father, a self-made success, is referred to when King obtains a second mortgage for the Cortinas and decides to continue to live in the apartment, paying them much-needed rent and not really leaving Kensington at all. Viewers who loved the series found this an appropriate conclusion with a hint of an open ending. No more episodes, no spin-offs, no movies of the week or reunions ever revived King of Kensington. But it remains one of the most fondly remembered series in Canadian television history.

Kinnear, Roy (1934–1988)
British Actor

A portly and popular comic character actor, Roy Kinnear proved to be a reliable guest star on many television programs and a dependable lead in his own right. He was born in Wigan, Lancashire, and educated in Edinburgh. When he was 17, he enrolled in the Royal Academy of Dramatic Arts, but his studies there were interrupted when National Service conscription took him to war. He later returned to the theatrical world and appeared on stage in repertory theater in the 1950s. In 1959 he joined Joan Littlewood’s famous Theatre Workshop in the East End of London and appeared in some of their biggest successes.

Television made Roy Kinnear a household name; his big break was the controversial and highly popular satire series That Was the Week That Was. The team consisted of a group of irreverent, bright young things hell-bent on attacking the hypocrisies of the establishment. One criticism often made of the show was that the protagonists came across as smug, but Kinnear was spared from that accusation because his role in the group was that of the common man. In sketches he would usually be cast as a normal, working-class chap baffled by the complexities and machinations of the government and the media. Viewers could identify with the character and were endeared to him. Indeed, Kinnear’s very ordinariness and likeability assured him a long career in the medium.

He was a regular guest star on long-running series such as The Avengers, often costarred in TV plays and was a semi-regular on Minder (as Whaley), and George and Mildred (as Jerry). He was not averse to appearing as a straight man (albeit a very funny one) to comedian Dick Emery in various Dick Emery shows, and his familiar face was put to use in various TV commercials. Kinnear starred in his own sitcoms, shaped around his persona: as daydreamer Stanley Blake in A World of His Own (BBC, 1965); as compulsive worrier George Webley in Inside George Webley (Yorkshire Television, 1968 and 1970); as greengrocer and ladies’ hairdresser Alf Butler in No Appointment Necessary (BBC, 1977); as building-firm manager Joe Jones in Cowboys (Thames Television, 1980–81); as Sidney Pratt, manager of struggling escapologist Ernest Tanner (Brian Murphy) in The Incredible Mr. Tanner (London Weekend Television, 1981); as Arnold Bristow, used-car dealer and psychic in The Clairvoyant (BBC, 1986); and in his last sitcom, as the tipsy headmaster, R.G. Wickham, in the short-lived Hardwicke House (Central, 1987), which was pulled off air halfway through its run following accusations of bad taste.

Kinnear worked regularly for more than 25 years on television. Much of his success was due to the warmth that the public felt toward him and the esteem in which he was held by his fellow professionals. Throughout this period, Kinnear still made appearances in the theater and acted in support roles in more than 50 movies. While on location for The Return of the Musketeers (1989), he suffered a fatal fall from his horse.

Kinoy, Ernest (1925– )
U.S. Writer

Ernest Kinoy is one of U.S. television’s most prolific and acclaimed writers. His career spans five decades, from the live anthology dramas of the 1950s to the made-for-television movies of the 1990s. His best-known works, such as scripts for The Defenders and Roots, have dramatized social and historical issues. Outside of television, Kinoy is less well known than some of his contemporaries from the “Golden Age” of television, such as Mel Brooks and Paddy Chayefsky. Within the industry, however, Kinoy has always been recognized for his well-crafted television dramas. He has also written successfully for radio, film, and the stage.
Kinoy wrote for many shows in the 1950s, including The Imogene Coca Show and The Marriage, a series featuring Hume Cronyn and Jessica Tandy. He was best known for contributing to such live anthology dramas as The DuPont Show of the Week, Studio One, and Playhouse 90. When the Federal Communications Commission held an inquiry into the decline of the live dramas, Kinoy and other writers offered damaging testimony about network unwillingness to broadcast "serious" drama. CBS, under scrutiny, resurrected a weighty dramatic series that would soon showcase Kinoy's talents—The Defenders. Kinoy won two Emmy Awards writing for the series, which was created by his colleague Reginald Rose. The show followed two idealistic lawyers, a father and son, who confronted controversial issues and moral paradoxes on a weekly basis. In "Blacklist," one of Kinoy's most celebrated episodes, Jack Klugman played a blacklisted actor who finally received a serious part after ten years, only to be harassed by vehement anticommunists. In another well-known Kinoy episode, "The Non-Violent," James Earl Jones played a black minister thrown in jail with a wealthy, white civil rights activist. Like Dr. Kildare, another series that Kinoy wrote for, The Defenders was sometimes described as a New Frontier character drama for its exploration of social ethics. During this same period, Kinoy also wrote for the series The Nurses and Route 66.

In the 1970s, Kinoy shifted to made-for-television movies and feature films. He often had two or more scripts produced in a year. Notable accomplishments included Crawlspace (1972), a CBS movie about a family adopting a homeless man, and Buck and the Preacher (1972), an action-packed black western directed by Sidney Poitier for the big screen. Kinoy's television career took a new turn in 1976 when he wrote two docudramas for producer David L. Wolper: Victory at Entebbe, about the Israeli rescue operation in Uganda, and Collision Course, based on Harry Truman's struggles with Douglas MacArthur. Kinoy subsequently worked on Wolper's blockbuster docudrama Roots (1977), winning an Emmy for an episode he co-wrote with William Blinn. Kinoy served as Wolper's head writer on Roots: The Next Generation (1979). In 1981 he received an Emmy nomination and Writers Guild of America Award for another of his television docudramas, Skokie, about street demonstrations attempted by neo-Nazis in the Jewish neighborhoods of Skokie, Illinois.

In the 1980s and 1990s, Kinoy's made-for-television movies continued to receive praise. His scripts included Murrow (1985), about the famous broadcaster, and TNT's Chernobyl: The Final Warning (1990). Kinoy is a rare presence in contemporary television. A writer known for quality drama, he has enjoyed success during each of television's five decades.

U.S. Media Executive

Robert E. Kintner was a television executive who, as network president, influenced the development of two major networks (ABC and NBC) during the tumultuous decade of the 1950s. This former journalist fused his passion for journalistic excellence and his zeal for high entertainment ratings into a successful formula that shaped network programming trends for several decades. Kintner was lauded within the industry and the press for applying the “doctrine of common sense to many a ticklish problem” and for his refreshing “cold realism.” He defended the embattled television industry during the quiz show scandals of the late 1950s, and he spearheaded the move to make television a respectable journalistic medium by dedicating unprecedented network resources and air time to news and documentary programming.

Beginning his career as a reporter, Kintner established a national reputation in the late 1930s with a syndicated political column co-written with Joseph Wright Alsop, with whom he also collaborated on a number of best-selling books on U.S. politics. Kintner’s entry into broadcasting came when he was hired by ABC owner and chair Edward J. Noble in 1944 as a vice president of public relations and radio news. Six years later, Kintner was named president of the ABC network, which was just beginning to provide television service and was the clear underdog in competition with NBC and CBS.

With a keen understanding of television’s potential as a journalistic medium, Kintner’s major coup at ABC was the network’s full coverage of the Army-McCarthy hearings, which brought Senator Joseph McCarthy’s tactics to public light and established ABC as a major source for public affairs coverage. On the entertainment front, under Kintner’s leadership the production-weak ABC struck ground-breaking deals with Walt Disney and Warner Brothers studios for the production of weekly television series. The success of such filmed television programming as Disneyland (and its offshoots) and the hit western Cheyenne influenced the programming trends at all three networks; by the late 1950s, Hollywood studio-produced westerns dominated the Nielsen ratings.

Kintner left the ABC presidency in 1956, in a period of great network growth, and joined NBC in early 1957, where he was named president in July 1958.
Kintner, Robert E.

the first journalist to head a network, Kintner took pride in the informational potential of broadcasting, and he believed that TV could fulfill its mission to society through news programming. Known affectionately as the “managing editor” of the NBC news division because of his hands-on approach, Kintner was directly responsible for the development of a strong news component at NBC. By increasing budget allocations and air time for the news division and hiring top news executives and journalists (often from CBS, with whom NBC was in fierce competition), Kintner had by the end of the decade built a high-prestige, unequaled news division at NBC that reigned throughout the early 1960s.

The major components of Kintner’s three-pronged public affairs initiative were the nightly network newscasts, the development of strong prime-time documentary series, and the preemption of regular programs to provide live coverage of breaking news events. The anchor team of Chet Huntley and David Brinkley dominated news programming during this period, and in late 1963 both NBC and CBS lengthened their evening newscasts from 15 to 30 minutes, a move that many critics credited as making television a serious information medium comparable to newspapers.

Kintner’s vision of the medium as a way to educate and inform citizens about social issues was enabled by public and government pressures—especially in the wake of the quiz show scandals—to increase the prestige of the industry by increasing prime-time public affairs programming by the networks. Kintner revitalized NBC’s network documentary units, which had focused mainly on cultural programming, to begin to take on serious social and political issues in series such as NBC White Paper. By 1962 Kintner claimed that the networks were “proving what’s right with television,” bringing space flights, civil rights activism, election coverage, and swiftly breaking events into U.S. living rooms. Although often gently criticized for micro-managing the NBC news division, Kintner hosted the transformation of news and informational programming from a peripheral aspect of television programming to the position of prestige in broadcasting.

This “golden age” of television journalism was directly related to the historical moment, especially the years of President John F. Kennedy’s “New Frontier” initiative, marked by the charismatic charm of a made-for-media president, the dramatic struggles of the civil rights movement, the patriotic cold war-era fervor of the United States’ race into space, and the coming of age of American news broadcasting with the live coverage of the aftermath of the Kennedy assassination. Kennedy’s image-oriented New Frontier forged an alliance with television, an alliance described by Mary Ann Watson in The Expanding Vista as a “symbiotic bond” between Kennedy and the television medium, which would forever alter the relationship between the public and the president. Similarly, the centrality of television in the political process increased dramatically under Kintner’s reign at NBC, with the coverage of the 1960 campaigns, the “Great Debates” between Kennedy and Nixon, paid political advertisements, and especially the election coverage (Watson reports that over 90 percent of American homes were tuned in).

Kintner was an active player in the public controversies surrounding the quiz show scandals of 1959, and he used this opportunity to redefine the mission and the structure of commercial television. Testifying before the House Subcommittee on Legislative Oversight in 1959, Kintner claimed that the networks, as well as the public, were victims of deception by those who rigged quiz shows. Although the networks were criticized by the subcommittee for “lack of diligence” in taking action, Kintner strongly defended his network, claiming that NBC was taking active steps to “investigate and safeguard the integrity of the shows” and had taken direct production control over the quiz shows away from the sponsors.
Under intense public criticism about the entertainment programming standards, as well as mounting pressure from the Federal Communications Commission and from civic and religious groups in the wake of the quiz show scandals, Kintner recognized this period as a crossroads for the TV industry, and he advocated that the industry take actions to recover public confidence. In the face of concerns about sex and violence in television shows, Kintner also defended the network in 1961 before the Senate Subcommittee on Juvenile Delinquency (the Dodd Committee), which charged the TV industry with violating moral codes, lacking imagination, and shirking its responsibilities in the drive for higher ratings.

Believed to watch more television than any of his contemporaries in the industry, Kintner's addiction to "the box" was frequently noted. He was perceived as a paradox by some critics, such as Jack Gould of the New York Times, who wrote about Kintner in 1965: "He can rationalize the pap of the medium with a relaxed opportunism that stands in strange contrast to his initiative in news and public affairs.... He embodies [both] the promise and problem of mass communication—how to keep up the quarterly dividend while offering both folk rock and the oratorio."

In early 1966, Kintner left NBC and was appointed as a special assistant and cabinet secretary to President Lyndon B. Johnson. In a parting interview upon leaving NBC, Kintner advocated greater experimentation in TV programming, calling for programs dealing with more controversial social, economic, and political subjects in both news and entertainment programming.

Harvey Kirck, news anchor for the privately owned Canadian Television Network (CTV) from 1963 to 1984, has been called Canada’s version of Walter Cronkite. In his autobiography he even noted how his retirement after 20 years was planned to ensure that he broke Cronkite’s record. In fact, Kirck never exercised a similar power over the news or over the public mind, but he did become a celebrity, a recognized “Face and Voice of the News” in English-speaking Canada.

Beginning in 1948, Kirck served a long apprenticeship in private radio as an announcer who hosted programs; narrated commercials; and wrote, delivered, and occasionally reported the news. In 1960 he became a news anchor for a television station where, he claimed later, he learned the importance of being a performer: “You have to develop a bullet-proof persona, and send him out to face the damnable, merciless camera.” Three years later, he joined the CTV news service, then stationed in Ottawa, as one of four men (another was Peter Jennings) who served in two pairs of co-anchors on the model of NBC’s The Huntley-Brinkley Report. The fledgling network, only two years old, was determined to challenge the dominance of the established The National on the Canadian Broadcasting Corporation (CBC) (then CBC Television News). The peculiar arrangement of alternating pairs of co-anchors soon devolved into a more normal structure, and Kirck took over the responsibility as chief anchor as well as news editor.

After a change in the ownership structure of the network, CTV News was moved in 1966 to Toronto, the media hub of English Canada. It was a mixed blessing for Kirck: he lost his position as news editor while concentrating on the task of presenting the news (although he also continued to participate in the writing of the newscast). Even though CTV’s resources were slight—much of the material came from U.S. sources or the private affiliates—it hoped to produce a bright and lively newscast at 11:00 p.m., with a distinctly American flavor that would contrast with the supposedly stodgy, and British, approach of the CBC. From 1971 to 1972, CTV News drew roughly even with CBC’s The National, with 950,000 viewers a night in the common area covered by both networks (CTV did not then cover the country). A 1972 CBC survey discovered that CTV News scored higher as “more complete, lively, aggressive, fresh, friendly, interesting and in-touch.”

That success owed something to Kirck’s persona. He was a tall, eventually heavy-set man with a craggy and weathered face that signaled experience. His voice was deep and resonant, authoritative rather than casual. He might seem a bit gruff, but he was eminently believable: a survey carried out in 1977 found that people had confidence that he fully understood what he presented.

That persona, however, was not enough to overcome the deficiencies in the quality of CTV News. Dur-
Klein, Paul L. (1929–1998)

U.S. Television Executive

In the 1960s, as the head of research at NBC, Paul Klein developed a theory of Least Objectionable Programming (or L.O.P., as it was generally known) to explain the behavior of audiences in the days when three behemoth networks ruled the television landscape. In a world of limited choice, viewers do not watch particular programs, he insisted; they simply watch television. Every day at the same time the number of television sets turned on is remarkably constant—regardless of what is on the air. Viewers do not select favorite programs, but settle for those they dislike the least in order to sustain the general experience of television. Under these conditions, network programmers worry less about creating exceptional programs to attract viewers than about supplying the least objectionable program on the air at any given moment. As a
Klein, Paul L.

unifying theory of television in the age of program scarcity, Klein's became the most widely quoted statement to emerge from within the television industry when the networks were at the height of their influence. A remarkable number of books and articles written about American television in the 1970s and 1980s felt it necessary to contend with Klein's theory—seeing it as either refreshingly honest or profoundly cynical.

Contrary to what some of Klein's critics believed, his theory of Least Objectionable Programming was not a call for more programs aimed at the lowest common denominator of mass taste, but an attempt to convince advertisers and his own supervisors at NBC that the time was ripe to overturn the old viewing patterns. The Nielsen ratings system, with its emphasis on bulk ratings—the sheer number of viewers watching a program—ignored demographic distinctions in the viewing audience, and this was a mistake. Nielsen based its ratings on the number of households viewing a given program, but it is individuals, not households, who buy products. As the industry's most vocal advocate of demographic ratings, Klein conducted a nonstop campaign in the 1960s and 1970s, and eventually saw his ideas adopted throughout the television industry.

That so much is known about Klein's opinions in the 1960s, when he was but a mid-level executive in charge of research at NBC, says much about his character. Seldom does an executive of Klein's rank achieve such wide recognition, particularly outside the industry. In the button-down world of the 1960s television business, he cultivated an unconventional image, spurning suits and ties for baggy sweaters, tempering the can-do spirit of the junior executive class with his own perpetually melancholy demeanor. Klein was arrogant and dismissive of those with whom he disagreed, willing to criticize colleagues and competitors at other networks or to send taunting letters when he had won a particular victory. In spite of such intemperate behavior, uncharacteristic of a network executive, he possessed what one reporter at the time described as "the best brain in broadcasting," and for this reason his superiors at NBC valued his advice on crucial programming decisions during the 1960s—including the network's decision to shift its entire schedule to color and, later, to present the ground-breaking situation comedy *Julia*, with its African-American star, Diahann Carroll.

Klein graduated from Brooklyn College in 1953 with a degree in mathematics and philosophy and immediately joined a Madison Avenue advertising agency, where he was responsible for research on the Philip Morris cigarette account when Morris was the chief advertiser on television's highest-rated program, *I Love Lucy*. He experienced his first epiphany about the failure of bulk ratings when his research revealed that the program, despite its enormous ratings, appealed primarily to children and older women—not the target market for cigarettes. Klein sharpened his convictions about audience demographics in his next job, as the head of research at the Doyle Dane Bernbach advertising agency for six years, before finding a platform for his ideas when he took charge of the research department at NBC in 1960. When media theorist and critic Marshall McLuhan came to prominence in the 1960s, Klein not only read his books, but openly declared himself a "McLuhan thinker." From McLuhan, Klein absorbed the idea that a communications medium has a social meaning of its own, independent of any particular content—an idea that found expression in Klein's theory of Least Objectionable Programming.

By 1970 Klein was growing restless at NBC, where he had held the same job for a decade, and his career had essentially stalled. He left NBC in 1970 to pursue his own independent interests. He volunteered his audience research skills for the newly created Children's Television Workshop and, for NBC's Saturday morning children's schedule, produced a series of one-minute educational spots, called Pop-Ups, designed to teach reading to preschoolers. His larger interest was in event programming, selectively targeted viewers, and new technologies—the future of television, as he envisioned it. He founded Computer Cinema, Inc., a visionary company that foresaw the convergence of television and the computer long before anyone had even heard of the Internet. The company pioneered the development of pay-per-view programming in hotels, initially called "Hotelevision," by offering commercial-free, uncut feature films before they had appeared on the broadcast networks, distributed to hotels via satellite master antennas.

In 1976 Klein was invited to return to NBC and take charge of programming. Regular weekly series had been the staple of network broadcasting since the days of radio, but Klein believed that audiences had grown bored with series, that humdrum programming was eroding the value of the network franchise, driving away discriminating viewers. Klein was an evangelist of special-event programming, which he saw as a way to lure the economically desirable young adult viewers to NBC. Brought in at the last minute to plug holes in NBC's fall 1976 season, Klein created the "Big Event"—a 90-minute block on Sunday nights—in which he placed movies, variety shows, and miniseries. For the 1977 season, he blocked out four entire evenings of the network's schedule for special events, movies, and miniseries. Klein's critics complained that
he was not paying enough attention to series development, but he believed that event programming would bond the younger, economically desirable viewers to NBC. He avidly committed NBC to the miniseries format, often scheduling installments on consecutive nights. Under his leadership, NBC developed dozens of these expensive, limited-run series. Many were banal and excessive: bloated melodramas and historical pageants like *Captains and Kings*, *Wheels*, *79 Park Avenue*, and *Centennial*, but others were among the most ambitious television productions of the decade: *Studs Lonigan*, *King*, *Shogun*, and *Holocaust* (which set a record as NBC’s highest-rated entertainment program of all time, with 120 million viewers).

However, Klein’s strategy was an utter failure. NBC’s ratings plunged steadily downward, reaching a ten-year low in the 1978–79 season. Meanwhile, ABC surged to first place on the strength of exactly the sort of programming that Klein eschewed: familiar, comfortable weekly series. Klein publicly criticized ABC programming chief Fred Silverman. This made for especially cruel irony when in June 1978 NBC named Fred Silverman as its new network president. Although Klein remained in charge of programming, his days at NBC were numbered from the moment Silverman signed the contract. It is an even more unfortunate irony that Klein is remembered not only for leading NBC to its ratings nadir, but also for developing the series, *Supertrain*, an expensive, ill-conceived answer to ABC’s *The Love Boat* that became virtually synonymous with network folly when it was canceled due to disastrous ratings after just four episodes. In January 1979—less than three years after returning to NBC and only six months after Silverman’s arrival—Klein resigned from NBC for the second time.

After leaving NBC, Klein returned to cable and satellite television. He spent the next decade developing adult-oriented and X-rated program services. He was a founder of the Playboy Channel in 1982 and served as president until 1984, when he left to create Hi-Life, a programming service designed to go beyond Playboy by offering sexually explicit X-rated films. When cable operators refused to carry the service, he criticized them and shifted his attention to an alternative form of distribution: satellites. In 1987 he founded Home Dish Only Satellite Networks, which supplied “sophisticated adult programming” aimed at hotels and the owners of backyard satellite dishes via such channels as the American Exxxtasy Channel and the Tuxxxedo Network.

One might ask how a man once considered the “best brain in broadcasting” would find himself a purveyor of pornography, but this was not really such an odd departure for Klein. Unlike most television executives who came of age in the 1950s and 1960s, he disagreed that television was solely a mass medium, obliged to provide something for everyone. He imagined a different model in which particular viewers would be drawn to programs that appealed to their tastes. In this he clearly anticipated the changes that would restructure the television landscape in the 1990s—including the vast (and largely unnoticed) profits earned by adult-oriented premium and pay-per-view channels in hotels and on direct broadcast satellite and digital cable services.

From his position outside the networks, Klein was an astute observer of the broadcast networks’ declining ratings in the 1980s and 1990s. Along with his entrepreneurial ventures in cable and satellite, Klein developed movies for the networks during the 1980s and 1990s, including *The People vs. Jean Harris* (1981). In the years prior to his death in 1998, he had turned his attention to the globalization of television, lending his knowledge and experience as a consultant to emerging television markets in Eastern Europe and the countries of the former Soviet Union.

John Kluge ranks as one of the least-known but most powerful moguls in the history of the modern television industry in the United States. The major television networks and their affiliates deservedly draw the most attention, but Kluge proved that a group of independent TV stations could make millions of dollars. His Metromedia, Inc., pioneered independent stations operations through the 1960s and 1970s. In the mid-1980s, Rupert Murdoch offered Kluge nearly $2 billion for the Metromedia stations, which then served as the basis for Murdoch's FOX television network. This deal made Kluge one of the richest people in the United States.

It was the food business that led Kluge to television. In 1951 he invested in a Baltimore, Maryland, food brokerage enterprise, increased sales dramatically, sold his majority stake in the mid-1950s, and began to look for another industry that was growing. He found television. In 1956 Kluge was too late to enter network television, but he saw possibilities with independent TV stations. He assembled an investment group and purchased the former DuMont stations. He ran Metromedia on a tight budget, saving rent, for example, by headquartering the company across the Hudson River from New York City, in Secaucus, New Jersey. He seized upon the programming strategy of simply re-running old network situation comedies and low-budget movies. And Metromedia made millions with relatively small audiences, because costs of operation were so low.

Under his stewardship, Metromedia grew into the largest independent television business in the United States. Afterward, Kluge purchased assorted businesses to add to his Metromedia empire. Over the years he acquired the Ice Capades, the Harlem Globetrotters, music publishing companies holding such titles as Fiddler on the Roof, Zorba the Greek, and Cabaret, television production and syndication units, Playbill magazine, and a highly profitable direct-mail advertising division. But he did make mistakes. One disastrous misstep was Kluge’s 1960s purchase of the niche magazine Diplomat; another came with his proposal for a fourth TV network. Neither project succeeded, and the failures cost Metromedia millions of dollars.

Kluge reached his greatest successes in television by buying the syndication rights to M*A*S*H. With this asset, he finally gave rival network affiliates a contest for ratings in the early fringe time period. Not one to sit still, during the early 1980s Kluge cooked up a deal to take Metromedia private. In 1984, by structuring a $1.3 billion leveraged buyout on unusually favorable terms, Kluge ended up owning three-quarters of the new company and pocketing $115 million in cash in the process. With Metromedia now private and under his full control, Kluge did not hesitate when Rupert Murdoch approached him with $2 billion to buy Metromedia's television stations.

Out of TV, Kluge attended to his other businesses. Under the Metromedia name, he began to manufacture paging devices and mobile telephones. In managing these telecommunication ventures, Kluge retraced the steps he took in his television career: buy a license in a major market at an affordable price, then wait as the market evolves, and finally cash in.

In 1995 the Actava Group, Inc., Orion Pictures Corp., MCEG Sterling, Inc., and Metromedia Interna-
tional Telecommunications, Inc., signed an agreement to form a global communications entity to be named Metromedia International Group, Inc. Kluge already owned a major stake in Hollywood’s Orion Pictures. The new four-part alliance merged wireless cable and Hollywood production skills to sell all forms of mass communication to citizens in Eastern Europe and the former Soviet Republics.

Investing and selling has benefited Kluge enormously. His wealth, which Forbes estimated at $5 billion as of the mid-1990s, vaulted him onto the list of the richest people in the United States. By the beginning of the 21st century, Metromedia International was mired in the same economic downturn that pulled down numerous telecommunications enterprises. Following an unprofitable cycle and the bankruptcy of Metromedia Fiber in May 2002, several top managers left the company in the wake of shareholder criticism. In July 2002, Kluge, at 87, resigned as chairman of the board, though he retained control of Metromedia Fiber.

In 2003 Metromedia Fiber Network Inc. was eased of some of its bankruptcy burden when the telecommunications executive Craig McCaw bought some of its debt in exchange for an agreement that he would own a significant stake in the company when it comes out of bankruptcy. Kluge agreed to back the $25 million that remains after McCaw bought suppliers’ claims against the company and agreed to back half of a $50 million stock offering. In 2003 Metromedia Fiber planned to change its name to AboveNet Inc.

The Metromedia Story, 1974
Knowledge Network
Canadian (British Columbia) Public Educational Broadcaster

The Knowledge Network is the public educational television broadcaster of the Canadian province of British Columbia, a part of the province's larger effort to extend education to all parts of the province using various delivery systems. In 1978, the province established the Open Learning Institute (OLI), to develop and deliver educational programming using distance-education methods. These methods have included correspondence courses, audio, film, teleconferencing, videodiscs, and, increasingly, digital media products for reaching outside the conventional classroom. In 1980, in order to further the goals of distance education, the province created the Knowledge Network as part of OLI. The network went to air on January 12, 1981. The Knowledge Network today reaches 100 percent of all households in British Columbia. Its mandate, however, has led it to pursue two different types of audience. On the one hand, the Knowledge Network was mandated to provide general public education programs, which might interest casual viewers. These typically involve nature documentaries, British series, international drama, and children's programming. On the other hand, the Knowledge Network was also directed to collaborate with the province's educational institutions to deliver formal instruction, which would only interest registered students. This double focus has led to a progressive diversification in the types of programs offered.

In 1988, however, OLI was substantially reorganized. Renamed the Open Learning Agency (OLA), it was reshaped into three constituents: (1) the Open School, aimed at K–12 (kindergarten through 12th grade) students and teachers and administrators; (2) the Open College, responsible for adult basic education; and (3) the Open University offering accredited university-level degree courses.

The Knowledge Network's pursuit of two different types of audience (general and specialized) is typical of virtually all educational networks in Canada. As organizations concerned with education, educational networks naturally attempt to extend and give shape to the larger projects of their respective ministries of education. Consequently, they are involved in the delivery of course material, collaborate with educational institutions, and reflect various curricula in their scheduling. As television networks, however, they also find themselves confronted with a much broader constituency (in terms of age, background, ability, education, etc.) than would be likely in any classroom. Furthermore, they reach this constituency under conditions not conducive to learning. Hence, like all other educational networks, the Knowledge Network has construed education in a broad sense. It means not only formal education, or the content of lectures and courses, but also the attempt to create a generally literate, lively, and well-educated citizenry.

The result is clear in the Knowledge Network's schedule. The Knowledge Network devotes roughly half of its 6,000 annual broadcast hours to traditional educational material (credit and noncredit courses, col-
Koppel, Ted

U.S. Broadcast Journalist

When Ted Koppel addressed Catholic University's graduating class in 1994, he proclaimed, "We have reconstructed the Tower of Babel, and it is a television antenna." In Koppel's words, "We now communicate with everyone and say absolutely nothing." This may be Koppel's opinion of television in general, but few observers would accept it as a description of Koppel or his late-night ABC news and public affairs program, Nightline (1980– ), for which he has served many functions, including managing editor, anchor, interviewer, and principal on-air reporter. Koppel and Nightline have repeatedly won awards and consistently attracted large audiences, even battling against such successful network stars as Johnny Carson, Jay Leno, and David Letterman. In the eyes of many TV viewers, Koppel is a celebrity, a respected, gutsy commentator, one of the best interviewers on TV, and a superb reporter. Newsweek once called him the "smartest man in television." Clearly, Koppel does not "say absolutely nothing."

After first working in radio news at WMCA in New York, Koppel joined ABC News in 1963 as one of the youngest news reporters to ever work for a network, and he quickly rose through the ranks of the organization. He covered Vietnam and became the bureau chief for Miami, Florida, and then Hong Kong, before being named chief diplomatic correspondent in 1971. In this capacity, he established himself as one of television's best reporters. Then on November 4, 1979, Iranians seized the U.S. embassy in Iran, taking Americans hostage, and television news took another step toward becoming the most reliable source of news. Four days later, ABC News aired at 11:30 P.M. (Eastern Standard Time) a program called The Iran Crisis: America Held Hostage, anchored by Frank Reynolds. Roone Arledge, ABC News president, decided this program would continue until the hostage crisis was over; the show would eventually become a regular late-night newscast. After about five months, The Iran Crisis became Nightline, and Koppel, who had anchored The Iran Crisis several times, became the permanent anchor for the new program. Since 1980, it has been difficult to separate Koppel from Nightline.

Koppel has won nine Overseas Press Club Awards, six George Foster Peabodys, ten duPont-Columbia Awards, two George Polk Awards, two Sigma Delta Chi Awards, and 37 Emmys, as well as countless other honors. In 1994 the Republic of France named him a Chevalier de l'Ordre des Arts et des Lettres. He went to South Africa for a week-long series in 1985 to analyze apartheid and subsequently won a Gold Baton duPont-Columbia prize for the series. Koppel also interviewed the scandal-plagued televangelists Jim and Tammy Faye Baker on Nightline, attracting 42 percent...
of network viewers. He brought George H.W. Bush and Michael Dukakis to TV in the last days of the 1988 presidential election when neither was giving interviews. Also, in 1988, Koppel went to the Middle East to report on Arab-Israeli problems and held a town meeting attended by hundreds of Israeli and Arab citizens. He has probably brought Henry Kissinger (who once tried to hire Koppel as his press spokesman at the U.S. State Department) to TV more than any other interviewer. Among many other accomplishments, Koppel achieved a journalistic coup by being the first Western journalist to reach Baghdad after Iraq's Sadam Hussein invaded Kuwait in 1990. Koppel eventually began his own production company so he could produce his own programs, such as The Koppel Reports.

Koppel's success has been earned under the scrutiny of millions of viewers, and he has had his share of critics. While dealing with enormous programming, technological, and economic changes in the business of electronic journalism (not to mention enormous egos), Koppel has persisted and has usually come out on top. However, the style of Nightline was established early as one of “us-versus-them” during the Iran hostage crisis. Critics such as Michael Massing have said Koppel and Nightline are not impartial; some contend that, especially with Kissinger's influence, the show (and therefore Koppel) serves as a “transmission belt for official U.S. views.” Fairness and Accuracy in Reporting (a watchdog organization also known by its acronym, FAIR) has charged Koppel's Nightline as being overly influenced by white, male, corporate guests. In other words, the audience frequently only gets one side of an issue.

However, Koppel wants to be seen as impartial, and he wants Nightline to be a program where “people of varying stripes and political persuasions can feel comfortable.” Koppel recognizes the possibility, raised by critics, that his work can actually influence news events, but he says that all the journalist can hope for is to “bring events to the attention of people in government,” and of course to the public. In his book on ABC News, Marc Gunther describes Koppel's Nightline as the most significant addition to television news since 60 Minutes was created in the 1960s. If this is so, then Ted Koppel may be one of the most significant journalists working in the medium.

In 2002 Koppel and Nightline became the center of a controversy that grabbed a great deal of media attention. The show's parent companies, Disney and ABC, insulted Koppel and his team by considering replacing Nightline with other programming, such as a comedy/talk program (for a time, ABC sought to lure David Letterman to bring his program to the time period in which Nightline aired, but Letterman eventually re-signed with CBS). The network hoped to attract a younger audience (and the higher ad revenues that programs pitched to that demographic could earn). On the other hand, many other TV news operations (e.g., CNN, PBS) began courting Koppel to join their news lineups, while many television critics as well as on-air journalists warned that ABC's treatment of Koppel epitomized the misguided priorities of networks at the beginning of the 21st century. However, Koppel and Nightline remained on the air with ABC.

Kovacs, Ernie (1919–1962)
U.S. Comedian

Ernie Kovacs, a creative and iconoclastic comedian, pioneered the use of special effects photography in television comedy. On the 50th anniversary of the beginning of television in 1989, People Weekly recognized him as one of television’s top-25 stars of all time. During the 1950s, Kovacs’s brilliant use of video comedy demonstrated the unique possibilities of television, decades before similar techniques became popular on Rowan and Martin’s Laugh-In and the various David Letterman shows. His live shows were characterized by ad-libbed routines, enormous flexibility with the TV camera, experimentation with video effects, complete informality while on camera, and a permissiveness that expanded studio boundaries by allowing viewers to see activity beyond the set.

His routines frequently parodied other programs and introduced imaginative Kovacsian characters such as the magician Natzoh Hepplewhite, Professor Bernie Cosnowski, and Mr. Question Man, whose traits would later be echoed in Johnny Carson’s Carnac the Magnificent. The best-known of his creations was the Nairobi Trio, three ape instrumentalists playing “Solfeggio” in a deadpan manner like mechanical monkeys. The high point came when the percussionist turned jerkily to the conductor and bopped him on the head with a xylophone hammer.

Following a career in radio, Kovacs’s transition to television came in 1950, when he simultaneously hosted several programs on NBC’s WPTZ in Philadelphia, Pennsylvania. His first show, Deadline for Dinner, consisted of cooking tips from guest chefs. When a guest did not show, Kovacs did his own recipe for “Eggs Scavok” (“Scavok” being his name spelled backward). In August 1950, he hosted a quiz and fashion program titled Pick Your Ideal, basically a 15-minute promotional for the Ideal Manufacturing Company. In November of that year, he pioneered one of TV’s first morning wake-up programs. The unstructured format required improvisational abilities Kovacs had mastered on radio. The daily 90-minute slot was titled 3 To Get Ready. (The number 3 referred to channel 3, or WPTZ).

Kovacs’s off-the-wall style was extremely unorthodox in early television. He approached the medium as something totally new. While his contemporaries were treating TV as an extension of vaudeville stages, Kovacs was expanding the visible confines of the studio. His skits incorporated areas previously considered
taboo, including dialogue with the camera crew, the audience, and forays into the studio corridor.

Impressed with his abilities, NBC network executives scheduled his first network show, *It's Time for Ernie*, in May 1951. The daily 15-minute broadcast aired from WPTZ, featuring Kovacs and music from a local combo known as the Tony deSimone Trio. In July he received his first prime-time slot as a summer replacement for *Kukla, Fran, and Ollie*. *Ernie in Kovacsland* opened with the music “Oriental Blues” and title cards with cartoon drawings of Ernie. A voice-over announced: “Ernie in Kovacsland! A short program—it just seems long.”

Early in 1952, Kovacs reappeared on daytime TV as host for *Kovacs on the Corner*, the last of his shows to originate from Philadelphia. Similar to radio’s *Allen’s Alley*, Kovacs strolled along a cartoon-like set and talked to such neighborhood characters as Luigi the Barber, Pete the Cop, Al the Dog, and Little Johnny Merkin, a midget. One program segment allowed a selected audience member to say hello to folks back home. A closed window filled the screen. On the window shade was printed the phrase “Yoo-Hoo Time.” When the shade was raised, the excited audience member waved, saying “Yoo-hoo!”

In April 1952, Kovacs moved to WCBS in New York as host of a local daytime comedy-variety show named *Kovacs Unlimited*. Known for its parodies of other programs, *Kovacs Unlimited* can be compared to *Saturday Night Live*, which resembles it. It was Kovacs’s longest-running series out of New York, lasting 21 months.

In December, CBS aired a new, national *Ernie Kovacs Show* opposite NBC’s *Texaco Star Theater* with Milton Berle. Kovacs produced and wrote the show himself, and, as with his earlier broadcasts, much of the program was improvised. Unlike other TV comedies, there was no studio audience, nor was canned laughter used. In Kovacs’s view, the usefulness of an audience was diminished because they could not see the special effects. Described as his “hallucinatory world,” the program featured many ingenious video effects, as though illusion and reality were confused. In his skits, paintings came to life, flames from candles remained suspended in midair, and library books spoke.

Kovacs reappeared periodically in shows over various networks. In April 1954, the DuMont network’s flagship station, WABD in New York, scheduled him as a late-night rival to Steve Allen. NBC aired his show as a daytime comedy premiering in December 1955 and in prime time a year later. Kovacs’s final appearances were in a monthly series over ABC during 1961 and 1962. He received an Emmy for the 1961 series sponsored by Dutch-Masters Cigars. Regulars on many of Kovacs’s early shows were Edie Adams, who became his second wife; straight-men Trigger Lund and Andy McKay; and the Eddie Hatrak Orchestra.

The most extraordinary episode in Kovacs’s career was the half-hour NBC broadcast, without dialogue, known as the “Silent Show.” Seen on January 19, 1957, it was the first prime-time program done entirely in pantomime. Accompanied by only sound effects and music, Kovacs starred as the mute, Chaplinesque “Eugene,” a character he earlier developed during the fall of 1956 when hosting *The Tonight Show*. In 1961 Kovacs and codirector Joe Behar received the Directors Guild of America Award for a second version of the program aired over ABC.

Kovacs was an avant-garde experimenter in a television era governed by norms from earlier entertainment media. In his routines, he pioneered the use of blackouts, teaser openings, improvisations with everyday objects, matting techniques, synchronization of music and sound with images, and various camera effects including superimpositions, reverse polarity (a switch making positive seem negative), and reverse scanning (flipping images upside down). Several TV documentaries have celebrated his work. These include WNJT’s *Cards and Cigars: The Trenton in Ernie Kovacs*
Kraft Television Theatre

U.S. Anthology Series

*Kraft Television Theatre* proved to be one of the most durable and honored programs of what is sometimes referred to as the “Golden Age” of American dramatic television, airing on NBC from 1947 to 1958. Produced by the J. Walter Thompson advertising agency, this live anthology drama was designed to mesh with Kraft’s overall marketing strategy, which stressed the concept of “gracious living,” an appeal to middle-class, suburban, family values. *Kraft Television Theatre* featured quietly paced, intimate dramas; as one Kraft representative put it, the show was a “respectful guest in America’s living rooms.”

Although *Kraft Television Theatre* quickly established itself as a critical favorite after its premiere in May 1947, in Kraft’s estimation the show was only useful as its ability to move product. In this it succeeded beyond fondest expectations. The first indication of the magnitude of the program’s sales prowess came from Thompson’s sales department, which reported in June that McLaren’s Imperial Cheese, a new Kraft product advertised only on television, was flying off grocers’ shelves.

The decision to feature food preparation over hard-sell personality or price appeals was not made lightly.
Kraft's advertising personnel were concerned that using a model or a recognized spokesman would detract from the product, so Thompson designed live commercials that used a single-focus technique. Each program had, on average, a pair of two-minute breaks, at which time cameras focused on a pair of feminine hands as they demonstrated the preparation of various dishes while announcer Ed Herlihy relayed the recipe to the viewer. This careful approach paid off for Kraft; sales of advertised products rose dramatically in television cities, and, even more importantly, a poll conducted by Television magazine in November 1947 showed that Kraft Television Theatre had the highest sponsor-identification of any show on television.

Kraft and Thompson prided themselves on keeping costs at a minimum in the early years. The dramatic emphasis was on warm and engaging family fare ("realism with a modest moral," as one executive said) solicited from young playwrights in New York; all performers were selected by Thompson's casting department. Although the show was almost entirely an agency product, NBC took a great interest in the program's operation—too much, at times, for the agency's liking.

Still, Kraft Television Theatre remained Thompson's defining program, and through its long run (the show never went on hiatus during its 11 years on the air), it featured such outstanding plays as Rod Serling's "Patterns"; "A Night to Remember," in which the Titanic disaster was memorably reproduced; and a version of Senator John F. Kennedy's book Profiles in Courage. Several noted directors, including George Roy Hill, Fielder Cook, and Sidney Lumet, served their apprenticeships on the program.

In October 1954, a second Kraft Television Theatre debuted, this time on ABC. The addition of another series surprised many industry observers, who expected Kraft, if anything, to pare its television activities. The original Kraft Television Theatre was never a ratings success, but Kraft apparently never expected it to be, consistently claiming that they measured the show's popularity by the number of recipe requests it drew, not by its Nielsen ratings. The ABC version was conceived with the intent of creating another advertising vehicle for Kraft's burgeoning product line, such as the new Cheez Whiz. However, sales figures from products advertised on the ABC program did not justify the additional $2 million in costs, so Kraft pulled the show in January 1955.

By 1958 the anthology drama had yielded to serial narratives with their recurring characters and situations, and in April 1958, after a sustained period of ratings lassitude, Kraft decided to sell the rights to the program to Talent Associates, a production company headed by David Susskind. The movement from agency to package production relieved much of Kraft's financial obligation to the show, as the company could now split production costs with Susskind. Kraft Television Theatre remained on the air only a few more months before it was completely reconfigured by Talent Associates as Kraft Mystery Theatre, which lasted until September 1958.

Kukla, Fran and Ollie was the first children's show to be equally popular with children and adults. The show's immense popularity stemmed from its simplicity, gentle fun and frolic, and adult wit. Burr Tillstrom's Kuklapolitan Players differed from typical puppets in that the humor derived from satire and sophisticated wit rather than slapstick comedy. At the height of the show's popularity, the cast received 15,000 letters a day and the program's ratings were comparable to shows featuring Milton Berle and Ed Sullivan.

The basic format of the show was simple: Fran Allison stood in front of a small stage and interacted with the characters. The format was derived from the puppet act Tillstrom performed for the RCA Victor exhibit at the 1939 New York World's Fair. Acting as an entr'acte for the RCA Victor Puppet Opera at the fair, Kukla and Ollie would comment on the activities, sometimes heckle the announcer, and coax the actresses and models acting as exhibit spokespersons to come up onto the stage and talk with them. Never working from a written script, Tillstrom improvised more than 2,000 performances at the World's Fair, each one different because of his personal dislike of routine. During World War II, Tillstrom and his Kuklapolitan Players performed in United Service Organization (USO) shows, at army hospitals, and for bond drives, where he met radio personality Fran Allison.

In 1947 the majority of television sets were located in taverns and saloons. Network executives were looking for a television show that could be watched at home and decided the Kuklapolitans would be the perfect "family fare." The group was contracted for 13 weeks on daytime TV and stayed for the next ten years.

The first episodes were aired daily from 4:00 to 5:00 P.M. on local Chicago television station WBKB, which was later acquired by NBC. When the network completed its New York-Chicago transmission lines in 1948, Kukla, Fran and Ollie began to air nationwide. By its second season, the growing adult audience prompted the network to move the show to a 7:00 P.M. half-hour time slot. By its third season, the show had 5 million viewers. In 1951 NBC cut the half-hour format to 15 minutes, which, ironically, caused the ratings to soar even higher because audiences craved more of their favorite characters, and NBC was deluged with letters of outrage from fans. After several seasons, the daily program was shifted to a weekly program on Sunday afternoons. When the series switched from NBC to ABC in 1954, it returned to a daily broadcast. Before being canceled in 1957, the series had been one of the longest-running programs on television, second only to Kraft Television Theatre.

With few exceptions (e.g., elaborately staged versions of The Mikado and an original operetta of St. George and the Dragon, which aired in 1953), all of the shows were improvised. Pre-show preparation consisted of a meeting of Tillstrom, Allison, director Lewis Gomavitz, musical director Jack Fascinato, costume designer Joe Lockwood, and producer Beulah Zachary to discuss the basic premise for that day's program.

The immense popularity of the show stemmed from...
Kukla, Fran and Ollie

how it created its own unique world of make-believe. The characters were not caricatures, but rather fully developed, three-dimensional individuals with distinct histories, personalities, eccentricities, and foibles. In the show's initial episodes, the Kuklapolitans were strong characters, but not individuals. Through the simple banter between Allison and one of the "kids" (as Tillstrom, Allison, and others referred to the puppets), audiences learned more of each characters' individual history: where they went to school; their relatives; how an ancestor of Ollie's once swam the Hellespont (Dardanelle Strait) and took in too much water, thereby drowning the family's fire-breathing ability; and the time Buelah Witch was arrested by Interpol for flying too low over the United Nations building.

The leader of the troupe was Kukla, a sweet-natured and gentle clown who was something of a worrywart. Oliver J. Dragon (Ollie), atypical of traditional puppet show dragons, was a mischievous, one-toothed dragon with a penchant for getting into trouble. Other members of the Kuklapolitans included grand dame Madame Ophelia Oglepuss, Stage Manager Cecil Bill (who spoke a language comprehensible only to the other Kuklapolitans), debonair Southern gentleman Colonel R.H. Crackie, floppy-eared Fletcher Rabbit, Buelah Witch (named for producer Beulah Zachary—with the intentional misspelling), Ollie's mother Olivia Dragon, his niece Dolores (whom audiences saw grow from a noisy infant into a typical teenage dragonette), and many others. The human qualities of these characters endeared them to their audience.

It could be said that Allison acted as "straight man" to this cast of characters, but her role was much greater. A quick wit in her own right who could maintain the pace set by Tillstrom, Allison served simultaneously, according to Tillstrom, as "big sister, favorite teacher, babysitter, girlfriend, and mother." Allison was equally responsible for adding to the characters' histories. She was the first to mention Ollie's mother, inspiring Tillstrom to create the character for a future show.

The Kuklapolitans returned briefly for one season in 1961 for a daily five-minute show without Fran Allison. Kukla, Fran and Ollie was revived for two seasons (1969–71) for PBS, and from 1971 to 1979, the Kuklapolitans with Allison served as hosts for the Saturday afternoon CBS Children's Film Festival. The characters continued to appear in syndicated specials throughout the early 1980s. In all of these series and formats, the essential elements of the original series remained the same.

During its run on television, Kukla, Fran and Ollie received a total of nine Emmy nominations for Best Children's Program but won only once, in 1954. It was awarded a George Foster Peabody Award as the Outstanding Children's Program of 1949. In a tribute to creator Burr Tillstrom, co-worker Donald Corren stated in 1986, "The acceptance of television puppetry as a form of entertainment and communication exists because Kukla, Fran and Ollie was as much a part of the original television vocabulary as were 'station identification,' 'the six-o’clock news,' or the chimes that identified NBC." Because the Kuklapolitans were such vibrant characters, Tillstrom requested in his will that they never be put on display inertly unless they are moving and speaking as he intended them to be seen.

Charles Kuralt is best known for his critically acclaimed series “On the Road,” television “essays” on the United States, and for his 15-year tenure as host of the equally acclaimed CBS Sunday Morning series. Through a CBS network career spanning four decades, this award-winning journalist and author brought the life and vitality of back-roads America to an eager audience while providing a television home for the arts, the environment, and the offbeat.

Kuralt began his career as a reporter-columnist in 1955 for the Charlotte News. His penchant for unusual human interest stories found a home in the News’ daily “People” column, which in turn earned him the 1956 Ernie Pyle Memorial Award. A year later he was recruited by CBS. His first network job was to rewrite wires and cables from overseas correspondents for radio newscasts, but he quickly advanced to the position of writer for CBS Evening News. In 1958 he moved to the CBS television news assignment desk, where he also covered fast-breaking stories. A year later, he became a full-fledged correspondent—the youngest person ever to win that position. In 1960 his star continued to rise, as he was chosen over Walter Cronkite to host a new CBS public affairs series, Eyewitness to History. However, within four months he was replaced by Cronkite and was moved back to general assignment reporting. He was named chief of CBS’s newly established Latin American bureau during the Kennedy administration, then chief West Coast correspondent in 1963. He also reported from various global hot spots in Africa, Europe, and Southeast Asia, including four tours of duty in Vietnam.

Contributing special reports to the documentary series CBS Reports and anchoring several public affairs specials in addition to his regular reporting duties, Kuralt began to tire of the grind and rivalry inherent in daily reporting. To remedy this, he devised his plan for “On the Road.” After an initial negative reaction, he managed to win minimal support from network executives who granted him a three-month trial.

Kuralt’s three-month trial began in October 1967, and turned into a 25-year odyssey. With cameraman Izzy Bleckman and soundman Larry Giannessi, he logged more than 1 million miles in six motor homes while producing approximately 500 “On the Road” segments. Staying off the interstates and with no set itinerary, he drew upon viewer letters, a state-by-state clipping file, and occasional references from public relations firms and local chambers of commerce to find unusual stories and unsung heroes. He had total freedom to discover the United States.

In the early 1970s, CBS considered reassigning Kuralt, but he was ever reluctant to leave the road. He did serve as cohost with Sylvia Chase on the short-lived CBS News Adventure in 1970, and in May 1974, on Magazine, an afternoon news and features program. He also contributed pieces to another short-lived prime-time magazine show, Who’s Who (1977). With Dan Rather and Barbara Howar concentrating on more famous, high-profile newsmakers, he brought, in typical Kuralt fashion, the Who’s Who viewing audience such unlikely characters as the inventor of the shopping cart, champion boomerang throwers, and an 89-year-old kite flyer.

With network assurance that he could continue “On the Road,” on January 28, 1979, Kuralt assumed the anchor position on the new CBS News Sunday Morning. Leisurely paced and low-key, in keeping with its...
early Sunday morning time slot, the 90-minute show examined major headlines and provided a weekly in-depth cover story and a series of special reports on law, science, the environment, music, the arts, education, and world affairs. In essence, with its eclectic view of the United States, Sunday Morning became a natural extension of “On the Road,” providing an outlet for topics not regularly covered on other newscasts. Commented Milton Rhodes, president of the American Council for the Arts, in the June 1987 issue of Horizon: “Nowhere else on television does a journalist of Kuralt’s reputation discuss the arts as regularly, as fully, and as intelligently as he.”

For 18 months, Kuralt combined his Sunday Morning activities with his ongoing “On the Road” reports, but in October 1980 he left the road to become anchor for the daily morning network news offering. Morning with Charles Kuralt would be criticized for being too slow-paced for the time period, and, in mid-March 1982 Kuralt was replaced as anchor and sent back out on the road. Within two years, his new “On the Road” reports became the centerpiece of yet another short-lived prime-time series, The American Parade.

Openly opposed to the fast-paced, minimal information format of many news broadcasts, through the years Kuralt chastised television executives for “hiring hair instead of brains.” Quoted in TV Guide on April 2, 1994, Kuralt said, “I am ashamed that so many [anchorpersons] haven’t any basis on which to make a news judgment, can’t edit, can’t write, and can’t cover a story.” As TV Guide’s Neil Hickey reported, these are all things Kuralt could do and for which he was honored with 11 Emmy Awards and three Peabody Awards.

Into the 1990s, Kuralt continued his Sunday Morning efforts and for an approximate five-month period beginning in October 1990, cohosted the nightly news summary, America Tonight, four nights a week, with Lesley Stahl. Then on April 3, 1994, at the age of 59, he retired from CBS with a poetic good-bye to his audience at the conclusion of his Sunday Morning broadcast. In 1997 he came out of his short-lived retirement to host two new television offerings, An American Moment, a syndicated series of 90-second vignettes on American life, and I Remember, a weekly one-hour broadcast examining major news stories from the past 30 years. However, his health deteriorated, and in June 1997 he was diagnosed with lupus. Kuralt died of heart failure and complications from lupus on July 4, 1997, and he was buried on the campus of his alma mater, the University of North Carolina.

Described by Newsweek on July 4, 1983, as “our beloved visiting uncle” and a “de Tocqueville in a motor home,” Kuralt worked to awaken the United States to the beauty of its landscape, the depth, and character of its people, and the qualities of excellence possible in television journalism. On the occasion of his death, Kuralt’s long-time CBS associate Dan Rather echoed those sentiments in the New York Times: “Charles’s essays were miniature movies, carefully scripted, filmed, and edited,” said Rather. “They told of our life and times. They had breadth, depth, and sweep to engage the eye, ear and mind.”

Kureishi, Hanif (1954– )

British Writer, Director

Hanif Kureishi, an Anglo-Pakistani writer, is best known to international audiences as the screenwriter of My Beautiful Launderette, one of the greatest international successes of British television’s Channel 4.

Born in London of an English mother and a Pakistani father, Kureishi documents the population of London’s margins: an underclass of disenfranchised youth, immigrants from former British colonies, leftist intellectuals, sexual outlaws (gays, lesbians, and heterosexuals refusing serial monogamy), and those individuals who cross class, ethnic, and sexual boundaries. His stories are often set in the Notting Hill district, a neighborhood once at the center of the country’s most violent racial unrest.

Notting Hill is also the home of film and television director, Stephen Frears, with whom Kureishi collaborated on two projects for Channel 4’s Film on Four, My Beautiful Launderette and Sammy and Rosie Get Laid. Frears is one of many British directors who have worked both on films produced exclusively for televi-
In *Sammy and Rosie Get Laid*, Rafi, a Pakistani official and wealthy factory owner, returns to London to rekindle relationships with his son Sammy; his leftist English daughter-in-law, Rosie; and his former mistress Alice. The film condemns Rafi's association with a government that used torture on its citizens, but Kureishi endows the character with lively hedonistic impulses that underscore his affinity with his non-monogamous son and daughter-in-law, whose leftist beliefs are more in sync with the writer’s.

Critics usually point to Kureishi's masterful use of irony in these two films whose characters embody Margaret Thatcher's meritocrats and entrepreneurs, but who still find their identity in some of the sensual excesses of the 1960s—most notably sexual experimentation and/or drugs—that were decried by the Thatcher regime. In 1993 the writer adapted his own novel, *Buddha of Suburbia*, as a four-hour miniseries for BBC 2. This program explores the social climate of 1970s Britain leading to the rise of the conservative government of the 1980s and 1990s. Avowedly autobiographical, the narrative follows Karim, a young Anglo-Pakistani, through the experiments of the 1960s that mutated into a “series of scary, delirious little moments of cocksure revolt” in the 1970s. Because of its heavy use of obscene language and explicit sexual situations, the BBC moved the time for airing the series a half-hour later than originally scheduled, and it was never picked up for U.S. television distribution (although it was screened in its entirety at the 1994 San Francisco Film Festival). Kureishi has written in his “Film Diary,” that “openness and choice in sexual behavior is liberating,” while “ambition and competitiveness are stifling narrowers of personality.” By that prescription, his major characters—ambitious, competitive, but risk-takers in sensuality—are complex studies in the contradictions of Britain from the 1970s through the 1990s.

“Interview with Hanif Kureishi,” Interview (April 1990)
L.A. Law, created by Steven Bochco and Terry Louise Fisher, premiered September 15, 1986, on NBC. During that television season, Bochco's groundbreaking Hill Street Blues wound to a close and L.A. Law inherited the key Thursday night anchor spot. NBC affiliates complained about Hill Street Blues' declining audience, and Bochco's new show delivered larger Nielsen ratings for the network's prime-time lineup and larger numbers to NBC affiliates' late-night local news.

The program ran for eight seasons, from 1986 until 1994, was nominated for more than 90 Emmy awards, and won 15 honors from the Academy of Television Arts and Sciences. These accolades included four years as best drama series, five acting awards, three writing honors, and one prize each for direction, art direction, and single camera editing. Frequently, L.A. Law's creative staff dominated a category. In 1989 three categories had three nominees from the program. In 1988 L.A. Law produced four of the six nominees for outstanding directing in a drama series: Kim H. Friedman, Gregory Hoblit, Sam Weisman, and Win Phelps. In the program's first season, L.A. Law received the George Foster Peabody Award for excellence, richness, and diversity of television content.

The fictional law firm of McKenzie, Brackman, Chaney & Kuzak brought a romantic ambience to the legal, moral, and ethical battles fought inside the courtroom, in the court hallways, and behind the closed doors of attorneys' offices. The action combined several social classes: the firm's partners, associates who were employed soon after graduation, clerical workers, clients, and county employees. Critics felt the law partners' lifestyles epitomized the financial and social excesses of 1980s wealthy yuppies, characterized by the show's signature license plate affixed to a Jaguar sports car.

The characters ranged from steadfast and cautious senior partner Leland MacKenzie (played by Richard Dysart, who won the outstanding supporting actor Emmy in 1992), to arrogant Arnie Becker (Corbin Bernsen). Becker's antithesis was Benny Stulwicz (Larry Drake, who won two Emmy awards as outstanding supporting actor in 1988 and 1989), a mentally retarded office assistant who wanted to successfully maintain life's simplest essentials: a job, an apartment, a commute to work, and a marriage. In the show, Stulwicz was hired by the firm after his dying mother, a long-time client, expressed concern over her son's future. Melman and Becker subsequently watched over Stulwicz, much like surrogate parents.

Many of L.A. Law's ensemble cast members can best be described in pairs, as most characters had steady romantic partnerships with other characters portrayed in the series. Alan Rachins played Douglas Brackman Jr., as a frustrated, balding managing partner. His attempts to lead the firm were frequently thwarted by his partners. Rachins played opposite his real life spouse, Joanna Frank (Steven Bochco's sister) as his wife and then ex-wife, Sheila Brackman.
Michael Kuzak (Harry Hamlin) often served as the focal point of the program. Kuzak was sensitive, intelligent, passionate, and sexual; his dynamic courtroom maneuvers often combined logic with pleas for compassion. Opposite Kuzak was Grace Van Owen (Susan Dey), the district attorney with an icy exterior, an empathetic side, and a libido that matched Kuzak’s.

The best-remembered couple linked tall, waspy Ann Kelsey (Jill Eikenberry) and short, Jewish, tax attorney Stuart Markowitz (Bochco’s college friend Michael Tucker). Those two, married in real life before their characters wed on L.A. Law, had onscreen romantic interludes that were discussed beside office water coolers nationwide.

The strangest romantic pairing may have been that between senior partner McKenzie and Rosalind Shays (played by Diana Muldaur during the fourth and fifth season). Shays’s introduction as a vicious attorney hired to boost revenues by bringing her large client list to McKenzie Brackman came in the 1989 season episode, “One Rat; One Ranger.” During her short stay, Shays and the recently widowed McKenzie began dating, much to the surprise of the other characters. A power struggle arose. Shays lost the battle and was removed from the law firm, then sued her former partners for sexual discrimination. The character dramatically exited the program when she stepped into a carriage-less elevator shaft and plummeted to her death in the March 21, 1991, episode, “Good to the Last Drop.”

Taking the lead from Bochco’s previous NBC hit Hill Street Blues, L.A. Law cast ethnic actors in roles as attorneys. These characterizations included Alfre Woodard, who guest-starred and won an acting Emmy award for the pilot episode, Blair Underwood as Jonathan Rollins, and Jimmy Smits as the fiery but self-involved Victor Sifuentes (Smits won the 1990 supporting actor Emmy, competing against colleagues Drake and Dysart). After Smits left the show, A. Martinez joined the cast as Daniel Morales.

Other notable characters included Michele Greene as recent law school graduate and single mother Abby Perkins, Vincent Gardenia as Roxanne Melman’s father Murray, Sheila Kelly as clerical worker and law student Gwen Taylor, Conchata Ferrell as entertainment attorney Susan Bloom, and Kathleen Wilhoite as...
Benny’s childlike and slow-learning love interest Rosalie.

For *L.A. Law*, Bochco brought many storytelling devices that worked well for *Hill Street Blues*. Instead of *Hill Street’s* daily roll call that introduced each episode’s plot lines and framed each potential conflict, *L.A. Law* used the weekly partner’s meeting for the same narrative functions. However, the shows differed greatly in one respect. *Hill Street Blues* had strong female characters, but men outnumbered them as the central focus of the series. With *L.A. Law*, women partners, associates, and secretaries often took the forefront.

The storylines ranged from outrageous humor to thoughtful debate of social issues. Trials portrayed a gay man prosecuted for killing his lover by infecting him with AIDS, dental malpractice, a female news anchor terminated by a TV station, date rape, polluted water poisoning a trailer park’s residents, age discrimination, athletes on steroids, drive-by killings, and racial profiling. On the humorous side, topics included a man prosecuted for clubbing a swan to death on a golf course, ownership of a pig eaten by a python at a music video filming, male senior citizens who wreak havoc at a home when they become test subjects for a testosterone patch, and a man who communicates solely through a rude ventriloquist’s dummy.

The creative successes of the program’s writers and producers engendered frequent behind-the-scenes changes, and that instability contributed to real-life drama. When Bochco contemplated leaving the series to begin a long-term development deal at ABC, he replaced Fisher with writer David E. Kelley as the program’s supervising producer. In 1989 a disappointed Fisher left the show as Bochco banned her from the set. The next year, Bochco left *L.A. Law* and Kelley became executive producer. Kelley revitalized the fading program by adding fresh, quirky characters to his intriguing and clever dialogue and plot lines, sometimes teaming with writer/director William Finkelstein. The show remained strong until Kelley left in 1992.

During the final season, the program’s creative edge disappeared, as did the large audiences of its best years. For season five, Amanda Donohoe as C.J. Lamb, John Spencer as Tommy Mullaney, and Cecil Hoffman as Mullaney’s ex-wife Zoey Clemmons added color to the program.

For network “sweeps” on May 12, 2002, and as part of NBC’s 75th anniversary celebration, NBC brought the cast of *L.A. Law* together for a reunion movie and an episode of the network’s quiz show, *The Weakest Link*. Finkelstein wrote the reunion, *L.A. Law: The Movie*, which fared poorly with both audiences and critics.

Joan Stuller Giglione
La Femme Nikita

U.S. Drama

La Femme Nikita (also known as Nikita) was one of the earliest and best programs in the cycle of "strong woman" or "tough girl" TV series that came to prominence beginning in the mid 1990s. This group also included Xena: Warrior Princess, Buffy the Vampire Slayer, Dark Angel, Witchblade, and Alias, among others. The TV version of the Nikita story was an adaptation of Luc Besson's film Nikita (France/Italy, 1990, also known as La Femme Nikita), which had already spawned two film adaptations, Black Cat (Hong Kong, 1991) and Point of No Return (United States, 1993, also known as The Assassin). In turn, the underlying Nikita formula is an updated and somewhat perverse retelling of the Pygmalion story (see Grindstaff and Hayward).

In the film version of Nikita, a young, drug-addicted street criminal named Nikita commits murder and is spared from a life sentence by being recruited, upon threat of death, into a clandestine crime-fighting organization. She is taught to be a polished and proper lady, as in Shaw's Pygmalion, but also a professional assassin and spy. Her employer requires complete commitment, and she is unable to have a normal personal life outside of her work.

The TV series follows this plot, but with a crucial difference. The TV series does begin with Nikita's arrest for murder, but in this case she is not guilty (and not a drug addict). As we learn in a much later episode, she has been framed by her soon-to-be employer, a top-secret espionage agency called Section One. This device provides the TV program with a moral problematic not present in the film, but exploited with great skill by the producers through the entire run of the series.

Nikita (Australian actress Peta Wilson) begins the TV series as a troubled young adult, but she is not a murderer. Section One forces her to become one. Her colleagues in the organization are antiheroes fighting an endless supply of terrorist villains, ostensibly the true forces of evil in the world. However, Section One itself operates entirely outside the conventional limits imposed by law. One of the cruxes of the series is that the heroes often commit worse atrocities than the villains. Nikita's struggle to retain a sense of right and wrong inside the amoral octopus that is Section One provides the basis for powerful and thought-provoking episodes.

Section One is headed by a character known as Operations (American actor Eugene Robert Glazer), who serves as a surrogate, unforgiving father of sorts for Nikita. (In a much later episode, we learn that his real name is Paul.) The "mother" in this scenario is Madeleine (Canadian actress Alberta Watson), an expert at prisoner interrogation and mind games. The heir apparent to Operations is Michael, the most deadly Section One field agent, played with minimalist intensity by French Canadian Roy Dupuis. All are damaged people with traumatized personal histories revealed in particular episodes. Together they constitute a dysfunctional pseudo-family, stuck with each other's treacheries in a world largely of their own making.

Nikita and Michael (her recruiter and principal trainer) fall in and out of love throughout the series. Sometimes he corrupts her; other times she redeems him (and potentially Section One as a whole). At the end of the series, in a development long foreshadowed, Nikita ascends to the command of Section One, but it is unclear whether she has by now become totally cor-
rupt herself or has enough residual goodness to save Section One from its depravity.

Thus *Nikita* is a story of heroic but perhaps futile individual resistance within a totalitarian collective. In this respect, the show is reminiscent of *The Prisoner*, and indeed Nikita spends much of the series plotting her escape, turning the tables on her captor-bosses, and trying to discover the true identity and purpose of Section One. Nikita updates *The Prisoner*'s comment on East-West moral equivalence in the cold war era to a similar meditation on the ethics of antiterrorism vis-à-vis terrorism itself.

Like *The Prisoner*'s Number Six, Nikita is, in effect, kidnapped. Unlike Number Six, she is an innocent, civilian female. The series takes double advantage of Peta Wilson as spectacle, drawing upon both her sexual allure and her displays of violence. At the same time, she maintains a stereotypically female vulnerability. In the midst of a stunningly warped realpolitik, Nikita never entirely loses her innocence, even though she must often keep it hidden. She is a complex character in a complicated situation, as well as a female in the traditionally male genre realm of the spy and action hero. Similarly, her liaison with Michael combines the pleasures of a steamy romance and frequent rescue scenarios with the ever-present possibility of a double-cross by either party (although, curiously, it is Michael who is most often in the “femme fatale” position).

Physically, Section One headquarters is labyrinthine and apparently underground, a sort of high-tech dungeon and panopticon for the mostly dronelike apparatus who work there. It is antiseptically black, brown, and gray, yet somehow dazzling to the viewer’s eye: a self-contained, menacing fantasy backdrop for startling intrigue. In the occasionally glimpsed bowels of the place lie torture chambers, supercomputers, combat training areas, and laboratories for genetic engineering and other horrors. Nikita’s struggle to learn the truth about Section One seems all the more challenging because of the program’s claustrophobic workplace setting, in which evil becomes banal in a way not usually encountered in television drama.

The show attracted a cult following, especially among female viewers. It also served as a high-profile example of quality programming for the often-marginal USA Network. When the series was prematurely canceled in 2000, the audience rallied and persuaded USA to bring the show back for an abbreviated fifth season in 2001 to wrap up loose ends.

**Further Reading**

Ian La Frenais ranks among British television’s most accomplished comedy writers. Most of his greatest successes were collaborations with BBC writer-producer Dick Clement; with Clement he contributed several of the most enduringly popular comedy series of the late 20th century.

La Frenais’s early experience as an insurance salesman in his native Newcastle-upon-Tyne was to prove invaluable when he came to write the first of the classic comedy series that he created in partnership with Clement. He happened to meet Clement while on holiday, and they devised a sketch about two cocky northern lads for Clement’s director’s exams. The BBC was much impressed by the scenario, and their sketch was developed into the massive hit *The Likely Lads*, which was one of the fledgling BBC 2’s first big successes. The series revolved around the squabbles and contrasting aspirations of two friends, Bob Ferris (Rodney Bewes) and Terry Collier (James Bolam). La Frenais’s writing showed facility with characterization and an easy grasp of northern traits and humor, as well as a certain acuteness in exposing the absurdities of the British class system in a rapidly changing world. Sequels all too often turn out to lack the flair and uniqueness of originals. In this case, however, the series was revived some years later as *Whatever Happened to the Likely Lads?*, with Bob now engaged to be married and an even more vituperative Terry newly released from the army, the critics were unanimous in finding the humor even sharper and more effective. There was no critical dissent when the program was voted Best Situation Comedy of the Year in 1973.

Clement and La Frenais returned to the humor of northeast England at regular intervals over the years, notably in the extraordinarily successful series *Auf Wiedersehen, Pet*, about a gang of Geordie building laborers obliged to pursue their trade in Germany, and in *Spender*, which starred former *Auf Wiedersehen* bricklayer Jimmy Nail. However, the pair proved that they were by no means restricted to purely regional comedy drama, and in the mid-1970s they scored another huge hit with the classic prison comedy *Porridge*, starring the multifaceted comedian Ronnie Barker.

Barker’s cockney Norman Stanley Fletcher, a habitual criminal obliged by his innate good nature to guide his young cellmate Godber (Richard Beckinsale) through the vicissitudes and dangers of life behind bars, was hailed as a masterpiece of comic invention, and the program became a favorite of prison audiences throughout the country. A sequel, *Going Straight*, which followed Fletcher’s life after his release was less successful, lacking the dramatic tension that came with the confines of the original setting. In some respects, Clement and La Frenais had already had a dry run for *Porridge* in their series *Thick As Thieves*, in which two crooks (Bob Hoskins and John Thaw) competed for the love of the same woman. This series ended after just eight episodes, when Thaw began work on *The Sweeney* police series. The original plan had been to return the two central characters to prison, where their relationship would have to adjust to new circumstances.

Collaborative efforts on situation comedies in the 1990s—including the disappointing *Full Stretch*, about a luxury car-hire business—have proved less notable. With Clement, however, La Frenais enjoyed significant success as a screenwriter with his script for the cult film *The Commitments* (a triumph that prompted the pair to attempt a television version under the title *Over the Rainbow*). In the 1990s, La Frenais’s solo contributions as writer were more successful, with the popular *Lovejoy* series, adaptations for television of the Jonathan Gash novels about an antiques dealer with an eye for the main chance (and for the ladies). As before, La Frenais’s easy humor and skillful characterization were deemed essential to the show’s success.

Ian La Frenais. Born in Newcastle-upon-Tyne, England, January 7, 1937. Attended Dame Allan’s School, Northumberland. Married: Doris Vartan, 1984; one stepson. Worked as insurance salesman before establishing reputation as a screenwriter and producer; formed comedy writing partnership with BBC producer Dick Clement; partner, with Clement and Allan McKeown, in Witzend Productions. Recipient: British Academy of Film and Television Arts Awards; Broadcasting Guild Awards; *Evening News* Award; Pye Television Award; Screen Writers Guild Award; Society of Television Critics Award; Writers Guild of America.
La Plante, Lynda (1946– )

British Writer, Producer

Considered one of the most important contemporary British television dramatists, Lynda La Plante is energetic and prolific and has achieved success in several diverse media fields. Originally an actor, La Plante is also a best-selling novelist and currently runs her own production company, La Plante Productions, as well as...
having gained both popular and critical recognition for her serious and intelligent television dramas. Apart from her series *Lifeboat* (1994), which was centered on the intrigues of a coastal community (almost in the fashion of a soap opera), La Plante's dramas have been generally constructed round the imperatives of crime, punishment, and underworld intrigue.

As an actor, La Plante appeared on British television in several well-known crime series of the late 1970s and early 1980s, including *The Sweeney* and *The Gentle Touch*. Usually typecast as either a prostitute or a gangster's moll, La Plante's experience as a television actor ensured that she was grounded in the narrative dynamics of the British crime series, while also making her only too aware of the subordinate role generally assigned to female characters in the genre. Having written for her own pleasure since her childhood, La Plante began to write and submit scripts for various current police series, scripts that attempted to create roles for women that were much more intelligible, independent, and less subordinate to men. As fate would have it, one of her scripts, titled "The Women," ended up on the desk of producer Verity Lambert at Euston Films at a time when Lambert and her colleague Linda Agran were consciously looking for television dramas that would feature women at the center of both the events and the action. "The Women" became the series *Widows*, which was broadcast to great public acclaim in 1983 and which was to transform La Plante's career from actor to television dramatist.

Despite the centrality of women in her writing career—whether as characters such as Dolly Rawlins (*Widows* and *She's Out*) and Jane Tennison (*Prime Suspect*), or as producers such as Lambert—La Plante has eschewed any identification with feminism or feminist agendas. Although undeniably aware of the questions raised and changes brought about by "second-wave" feminism, she has included women's issues (such as Tennison's abortion in the *Prime Suspect* series) in incidental rather than pivotal positions in her dramas.

La Plante's female protagonists are neither saintly nor unproblematic. Dolly Rawlins murdered her husband, and Jane Tennison finds it necessary to repress her own emotional needs to the extent that she not only obscures much of her own femininity (qualities traditionally accepted as feminine such as care and compassion) but, at times, also seemingly manages to lose sight of her humanity.

Despite the problematic nature of her protagonists, some critics accuse La Plante of producing works that actively espouse ideas of the "politically correct," and which succeed in portraying all men as bastards and oppressors of women. To the contrary, La Plante has, in fact, provided some of the most disturbingly frank yet sympathetic male characters to appear on British television in recent times. In programs such as *Civvies* (but also in *Comics* and *Prime Suspect*), La Plante has uniquely explored the bonds of love between heterosexual men. Although poorly received by the public and critics (because of its brutality and lack of sentiment), *Civvies* undoubtedly portrays extraordinary love between men.

Male violence is often at the heart of La Plante's work. She does not excuse it, nor does she shy away from its reality and implications. In many ways, she is eager to get to the heart of this violence and depict it in a matter-of-fact manner. This ambition can be seen in a formalized way in *Seconds Out, Prime Suspect*, and, to a lesser extent, in *Framed*, where La Plante explores some of the dynamics of boxing. She displays obvious fascination with the ways in which dimensions of male physicality and brutality are enacted and performed in boxing competitions, training sessions, and sparring bouts.

La Plante's dramas, on the whole, do not champion either gender but try to discuss both inequalities and power relations as they exist within society. For the most part, her protagonists (both male and female) stand for reason, the ability to think intelligently, and expertise. In her dramas, La Plante is not interested in small-scale petty crime; she is preoccupied by both exceptional crimes and feats of exceptional detection. La Plante's crime dramas often focus on the minutiae of planning (*Widows, Prime Suspect, Framed, She's Out*) and the exhibition of particular skills and expertise, such as Gloria's demonstration of weapons in *She's Out*.

A concern for realism and accuracy of procedure (whether in a police station, a pathology lab, or a prison) has become one of the hallmarks of La Plante's work. Her dramas are based on her own detailed and painstaking research, and her elaborate and detailed scripts demand absolute accuracy of mise-en-scene, performance, and procedure.

The formation of her own production company, La Plante Productions, in 1994 can be interpreted as an attempt to integrate her own creative input at each stage of production. Her subsequent output has been prolific but has also taken two distinct directions. In the United Kingdom, with dramas such as *Supply and Demand, Trial and Retribution*, and *Killer Net*, La Plante has synthesized many of her earlier narrative traits and preoccupations but also has strived for a vivid engagement with televisuality by straying into the seedier aspects of cyberspace and employing graphic imagery such as the use of parallel narratives on split screens to produce an overall look of flashy finesse. In the United States, her recent productions (*The Warden, Framed*, and *Widows*) have been less innovative but have in-
volved an American reworking of some of her greatest British hits (*The Governor*, *Framed*, and *Widows*).

**Lamb, Brian (1941– )**

U.S. Media Executive, Founder of C-SPAN

To most casual observers, Brian Lamb is the Cable Satellite Public Affairs Network (C-SPAN). In his mind, however, nothing could be farther from the truth. Lamb always attributes the existence of the network and its continued success to others. The others are the cable industry, leaders within it, members of the House of Representatives and the Senate who made it possible for the network to carry the signal they controlled, C-SPAN staffers at all levels, and the public itself. Despite his protestations, Lamb made C-SPAN happen. Now chairman and CEO of the network, he was the matchmaker who brought Congress and the cable industry together.

A native of Lafayette Indiana, Lamb attended Pur-
Lamb, Brian

Brian Lamb. Photo courtesy of C-SPAN

due University in his hometown. There he majored in speech because the school did not offer a degree in broadcasting. After completing his degree Lamb spent three days in law school by his account and then entered the navy. During the Johnson presidency he was assigned to duty in the nation's capital where he reported to the Assistant Secretary of Defense for Public Affairs. There he witnessed both network broadcasters and Pentagon officials at work shaping the news. His duty in Washington also took him to the White House as social aide.

After leaving the service he worked briefly as a freelancer for UPI Audio. He later served as a press secretary for Senator Peter Dominick (R-Colorado). An appointment as a staffer in the office of the Director of Telecommunications Policy during the Nixon administration followed. Lamb's Washington experiences taught him to be wary of what constituted news on the three broadcast networks. To him they made the nation seem like a three-newspaper town.

In the mid-1970s, Lamb moved from the world of pragmatic politics to trade journalism. While serving as Washington bureau chief for Cablevision magazine, opportunity met an idea. In 1977 he took a 50 percent salary cut going half time with Cablevision in order to start "Cable Video." It brought 15-minute interviews with members of Congress to over a dozen cable outlets. Lamb wanted to broaden access to the political process. The cable industry needed to enhance its reputation and had a delivery system suited to his goals. The House of Representatives had been exploring the possibility of telecasting floor sessions but was wary of sound bite journalism. Lamb's willingness to carry the signal of House-directed television cameras full time, the industry's access to the satellite, and his drive made C-SPAN happen.

C-SPAN took to the air in 1979. From the outset key industry leaders made funding possible. Especially during the pivotal developmental years they kept cable system owners from abandoning a non-money making enterprise in favor of profit-producing channels. In 1986 C-SPAN 2 came on line, providing viewers with access to Senate proceedings. A third channel devoted to public affairs was launched on a 24-hour basis in 2001. It brought C-SPAN into the digital world. Some argue that what C-SPAN does is not journalism, claiming it only supplies raw material for journalists, despite the fact that the National Press Club honored Lamb for his lifelong contributions to American journalism in 2002. Whether it is called journalism or not does not matter. Public access to governmental affairs does. Legislation like the must-carry rules, the rapid changes in technology, and the vagaries of the political world matter to Lamb too.

Traces of Brian Lamb's influence can be found in all of C-SPAN's on-air formats. Gavel-to-gavel coverage came first, but it was quickly followed by programming designed to give citizens direct access to elected officials, other decision makers and journalists. Within a year of the start of the network, Lamb introduced viewers to call-in programming C-SPAN style. He hosted most of the early shows in this format. There the model of what became the network's approach to audience interaction programs developed. There Lamb perfected his interviewing style. As he saw it, the task involved promoting informed discussion between the guest and viewers and then staying out of the way of the ensuing dialogue. His would be a different kind of journalism. The style would be conversational not confrontational. No "gotcha" questions would be heard on C-SPAN. Lamb can still be seen at least once a week on The Washington Journal, C-SPAN's daily call-in program, where his demeanor on air led one viewer to address him as "O Great Poker Face." Committed to the style Lamb developed, the network regularly conducts in-house meetings to make sure that hosts stay out of the way of the conversations and that camera operators support that approach.
No other programming format reveals Lamb's persona better than Booknotes. The network experimented with the idea of book-related programs in fall of 1988, when Lamb interviewed Neil Sheehan, the author of Bright Shining Lie. Within a year, Booknotes became part of C-SPAN's regular programming. Lamb set the ground rules for the program. He would choose serious nonfiction books that might help viewers better understand U.S. history or contemporary politics. Not afraid to ask the most simple or most esoteric question, every interview makes it clear that Lamb has read the book. In the book world, the program has had a great effect. At C-SPAN it led to the development of "a network within a network," Book TV. As a result of the series, Lamb edited a number of books based on the interviews.

Modest about his accomplishments, Lamb has brought together a loyal group of executives, most of whom joined C-SPAN early in their careers. Like Lamb they stay out of the public eye and several appear on air. He constantly gives them credit for the network's success. Brian Lamb believes that C-SPAN is more than one person. For many observers, however, he is C-SPAN.

Lambert, Verity (1935–)

British Producer

By the early 1980s, Verity Lambert's influence as a television producer and executive had made her not only one of Britain's leading businesswomen, but possibly the most powerful member of the nation's entertainment industry. With a résumé that lists many of the most noteworthy successes from the past 30 years, Lambert has served as a symbol of women's advancement in the media. By the early 1990s, however, Lambert's name had also become associated with one of the more spectacular disasters in the history of the British Broadcasting Corporation (BBC).

Lambert's career did not quite suggest such dra-
matic highs or lows when the BBC first hired her in the early 1960s. She had already worked on British ABC’s Armchair Theatre, a prestigious commercial television series, and she had worked in American television with David Susskind. After 18 months, however, she returned to ABC, only to quit over its refusal to hire women directors. But when the BBC hired Sydney Newman away from ABC in 1963, the BBC’s new head of drama in turn brought along Lambert, who, at age 27, became the corporation’s youngest producer.

Lambert’s BBC assignment, producing a new children’s program, may be her most internationally known achievement; for its first three seasons (1963–65), Lambert guided the development and production of Doctor Who. Although those three seasons might easily be overlooked in the 25-plus-year history of the series, Doctor Who fans have repeatedly stressed Lambert’s importance. During her tenure she both oversaw the creation of the original Doctor as a willful, often irresponsible pacifist, and presided over the phenomenal explosion of popular interest in writer Terry Nation’s cyborg villains, the ever-hardy Daleks.

As Tulloch and Alvarado argue in Doctor Who: The Unfolding Text (1983), Lambert herself represents the convergence of discourses that helped to make Doctor Who so original and enduring. Over the course of the 1970s, the BBC had sought to meet the challenge of ITV by broadening its own definition of high culture beyond the realm of classical literature and its adaptation. Coming from the upstart world of commercial television, Lambert’s association with the production of original dramas, heavy in social realism, became part of the BBC’s continuing efforts to maintain its audiences. Moreover, Lambert and Doctor Who were not based in the children’s department, and Lambert’s inexperience with and even indifference to the established conventions of children’s programming helped to lay the ground for the cross-generational audiences that made the series a groundbreaking success. Perhaps it was simply assumed that, “as a woman,” Lambert was somehow automatically qualified for the job. Indeed, interviewers have often emphasized Lambert’s decision not to have children of her own. Lambert has just as often refused to supply the sometimes expected displays of remorse: in the early 1980s, she cheerfully claimed, “But I can’t stand babies—no, I love babies as long as their parents take them away.”

Lambert’s career subsequent to Doctor Who continued to display similar mixtures of social awareness and slick commercial savvy. After producing an award-winning series of Somerset Maugham’s short stories and other projects, Lambert left the BBC in 1970 for London Weekend Television. She returned to cocreate Shoulder to Shoulder (1974), a multipart history of the suffragette movement. The next year Lambert joined Thames Television as controller of the drama department, becoming the company’s director from 1982 to 1985. During that time Lambert was responsible for a number of highly successful productions with high exposure abroad, including Rumpole of the Bailey, the American Emmy-winning Edward and Mrs. Simpson, and Quentin Crisp’s landmark biography, The Naked Civil Servant.

In 1976 Lambert had also joined the Thames subsidiary Euston Films, and from 1979 to 1982 she served as its chief executive. At Euston Films she developed Danger UXB, as well as the gangster drama, Out. She was also responsible for the 1979 Quatermass sequel, The Flame Trees of Thika, and Reilly: Ace of Spies, as well as Minder (1979–82), the popular working-class crime series, with which she is most often associated in Britain. Series such as Out, Reilly, and Minder helped to solidify her reputation as a woman who could produce tough, male-oriented programming, a reputation she has both acknowledged and decried as sexist.

Lambert’s move into feature films came when she was named head of production for Thorn–EMI, replac-
Lambert, Verity

ing the man responsible for the disastrous, big budget flops Can't Stop the Music and Honky Tonk Freeway. During what she calls this "terrible, horrible time" (1982-85), Lambert did persuade the company to join with Rank Film Distribution and Channel 4 in backing a new British Screen Finance Consortium, a step that helped further blur the distinctions in Britain between film and television production.

After leaving Thorn-EMI, her production company, Cinema Verity, produced the Meryl Streep film A Cry in the Dark (1988). Lambert's most public project, however, has been an elaborate, high-budget soap opera, Eldorado (1992-93). Like Doctor Who, Eldorado was an attempt by the BBC to prove itself competitive in a rapidly evolving market. This time, however, Lambert was not so lucky. A disaster of fully publicized dimensions, Eldorado was only Lambert's second experience with the genre (the first was in the 1960s, The Newcomers). Critics quickly turned on Lambert's "tough" Minder reputation and blamed her for Eldorado's departures from the familiar British conventions for soap opera. The "greatest of all British television drama producers" had dared to set a soap opera in Spain, and filled it with a multilingual array of British expatriates and foreigners far removed from the milieus of either Coronation Street or the BBC's own "quality" soap, EastEnders.

Lambert defended Eldorado to the end and continued to produce a range of programming, from sitcoms to the gritty thriller Comics (1993), written by Prime Suspect's Lynda La Plante.

Further Reading
Michael Landon disregarded Hollywood’s traditional ways of doing business. He abhorred TV violence, preferring positive, hopeful family-oriented messages, wrote numerous scripts for physically and emotionally handicapped performers, and refused to be beholden to Hollywood or the press. He worked fast and under budget, split the savings with his crew, allowed them more family time, and earned their loyalties in the process. He also possessed a quick wit and enjoyed being sarcastic.

Landon was born Eugene Maurice “Ugey” Orowitz on October 31, 1936, in Forest Hills, New York. He was the second child of Jewish father Eli Orowitz, an RKO Radio Pictures publicist, and Catholic mother Peggy O’Neill, a Broadway showgirl. When older sister Evelyn and Eugene were children, the family moved to Collingswood, New Jersey, where he felt ostracized for being Jewish and his home life suffered due to his parents’ tumultuous marriage.

Eugene’s prowess throwing the javelin earned him a University of Southern California scholarship in 1954. When Eugene began college his parents also moved to Los Angeles, where his father sought publicity work. Regrettably, Hollywood shunned Eli and he resorted to movie house management. He never recovered from Hollywood’s rejection, and his devastation led to divorce. As an actor, Eugene said he could cry easily by remembering how his father was treated.

After an arm injury cost him his scholarship, Eugene accompanied a friend to a Warner Brothers audition. Both were unsuccessful, but Eugene, hoping to be discovered, took a gas station job near Warner Brothers and soon was invited to the studio’s acting program. He chose “Michael Landon” from a phone book and with the new name appeared in B movies, dozens of TV series, and TV dramas such as Playhouse 90 and Studio One. He dabbled in music, recording Gimme a Little Kiss, Will Ya, Huh? in 1957 and touring with Jerry Lee Lewis, but B movies launched him into TV stardom. Landon landed the lead in 1957’s I Was a Teenage Werewolf, an instant hit and cult classic. During the shooting of 1958’s The Legend of Tom Dooley, he was injured using a knife and he learned his father died, but Tom Dooley was his big break. The film was panned, but his performance was lauded, and producer David Dortort was sufficiently impressed to create the Little Joe Cartwright character for Landon in his NBC western series Bonanza (1959–73).

As the youngest of three Cartwright brothers, Little Joe was funny, caring, hotheaded, and handsome. Lorne Greene was father Ben Cartwright. Pernell Roberts (Adam) and Dan Blocker (Hoss) played his elder brothers. In appearance the brothers seemed totally unrelated, and in the series narrative it was explained that each had a different deceased mother. Off camera, as well, Greene became Landon’s father figure, and Blocker was like a real brother. Roberts, however, rarely spoke to Landon. Believing Bonanza beneath his dignity, Roberts quit after six years.

Although Bonanza gave Landon the opportunity to write and direct, his star status took a personal toll. In 1956, against his mother’s wishes, he married Dodie Levy, a widow several years older. Endless weekend commitments following Bonanza’s rigorous weekend shooting schedule led Landon to alcohol and substance abuse, physical and mental collapse, and ultimately divorce. Landon adopted Dodie’s son and two other boys, but returned the youngest to the adoption agency. The decision attracted little notice at the time, but when Landon lay dying 30 years later, tabloids exploited the story.

Landon met divorcée model Lynn Noe, 26, an extra on Bonanza, whom he married in 1962. He adopted her daughter Cheryl and together they had four children. Landon modified his drinking and overcame his drug addiction. A 1973 automobile accident killed three friends and left Cheryl in a three-day coma and hospitalized for months. During his bedside vigil, Landon promised God he would make the world better if she lived, and his subsequent work became filled with themes of hope, courage, forgiveness, friendship, and love.

After Bonanza, Landon coproduced, wrote, directed, and starred on NBC’s Little House on the Prairie (1974–82), a series designed to compete with CBS’s The Waltons. Coproducer Ed Friendly acquired the rights to and based the program on Laura Ingalls Wilder’s Little House books. The pilot movie was telecast on March 30, 1974. Little House on the Prairie debuted in September 1974 and was instantly successful.
NBC gave Landon total control of the series, which bore little resemblance to Ingalls's stories. As farmer Charles "Pa" Ingalls, Landon played a pioneer father in 1880s Walnut Grove, Minnesota. His family included wife Caroline (Karen Grassle) and daughters Laura (Melissa Gilbert), Mary (Melissa Sue Anderson), Carrie (twins Lindsay and Sidney Greenbush—alternating), and Grace (Wendi and Brenda Turnbeaugh—alternating), who was added in 1977. The Ingalls later adopted other children. The stories were told through the narrative voice of daughter Laura.

Landon's friend Victor French played neighbor Isaiah Edwards until leaving for ABC's Carter Country. Landon considered the departure a breach in their friendship, but after Carter Country's cancellation, the two reconciled and French returned to Little House. Landon ceased regular appearances in the ninth season, when the series became Little House: A New Beginning (1982–83). In the narrative, Charles and Caroline moved to Iowa, leaving Walnut Grove to other family members.

Landon's spousal relations starkly contrasted with his TV views on family. In 1981 his affair with Cindy Clerico, a Little House extra, led to a nasty divorce from Lynn, made worse by the tabloids. Landon and Clerico married in 1983 and had two children. He then created, produced, wrote, directed, and starred as Jonathan Smith, an angel. Executive producer of NBC's Father Murphy (1981–82) and Little House: A New Beginning (1982–83). Had completed Us, a pilot for a proposed series on CBS, at the time of his death from cancer on July 1, 1991.

Lane, Carla
British Writer

Carla Lane is one of the most successful British sitcom writers—she has conceived of and written numerous shows that have proved tremendously popular, and she has contributed to many others. Lane carries particular significance within British television, as she is one of few British counterparts to the women writers, directors, and producers of American prime-time sitcoms.

Lane broke into television when she and Myra Taylor created The Liver Birds, a BBC sitcom based on two young women sharing a Liverpool bedsit and their mainly amorous adventures. Having moved to London from her native Liverpool at a time when, Lane reports, being from Liverpool was not something people were interested in, she succeeded in demonstrating her writing skills precisely by flaunting Liverpool culture. Over the following ten years and 100 episodes, a highly recognizable style developed in Lane’s writing of The Liver Birds. The characteristics of her work include themes on sexual and personal relationships, contemporary characters, and narratives more realistic than British television comedy had hitherto allowed. Lane’s comedy has always been distinctive for its lack of jokes and can be best defined as comedy-drama. She describes herself as writing dialogue not jokes, with humor emerging through characters and speech rather than action.

Butterflies (1978–82), Lane’s next popular success, marked an increasing seriousness and melancholic tone in her sitcoms. This long-running BBC show presented an intimate and studied portrait of a middle-aged, suburban housewife, Ria (Wendy Craig), as she became attuned to the shortcomings of her life. Initially, the BBC argued with Lane that comedy was not ready for a married woman to be attracted to another man, but Lane persevered and Ria embarked on an adulterous affair. Although not championing women’s issues, Lane writes from a woman’s experience and point of view, which is clearly evident in the relationships defined in Butterflies. Her shows are, consequently, favorites with women viewers.
Lane furthered many of her earlier themes in ensuing sitcoms for the BBC, including Solo and The Mistress (both starring Felicity Kendal), Leaving, and I Woke Up One Morning. In addition to creating portraits of life up and down the social scale, these and other shows written by Lane took social issues as a backdrop for character development, focusing on such topics as adultery, divorce, and alcoholism. Focusing on the theme of unemployment, Lane’s next major show, Bread (BBC, 1986–91), was once again informed and inspired by Liverpool; this program revolved around the Boswells, a working-class family consisting of a matriarch and her unemployed children. Bread was in no sense an instant success—it took a while for viewers to warm to the indulgent, staunchly Catholic mother and her family of unashamed scroungers—but within two years the sitcom had gained almost soap status and came close to overtaking top soap EastEnders in the ratings.

Lane has received official recognition for her contributions to British television in the form of an O.B.E., but her work has not always received critical approval. Some have expressed aversion to her subtle, anecdotal, and often poignant approach to programs that have been labeled as comedy. However, ratings confirm the popular appeal of her work for the BBC. Lane’s success has stemmed from her insight into character construction and her skill at allowing humor to flourish in situations that are not conventionally considered for such potential, yet which exist as everyday realities.

Language and Television

Despite the centrality of the visual image in television, this medium combines visuality with both oral and written varieties of language. Television is thus distinguished from print media by its predominantly aural-oral mode of language use, while visuality separates it from the exclusively aural medium of radio.

Orality is generally viewed as the “normal” or “natural” mode of communication through language. Being face-to-face, interactive, immediate, and non-mediated (e.g., through writing, print, or electronic media), oral communication and the oral tradition are considered by some theorists, such as Harold Innis, to be indispensable to a free and democratic life. Unlike oral communication, which is usually dialogic and participatory, written language separates the writer and the reader in space and time and relies on other senses. According to this perspective, audiovisual media, especially television, restore the preprint condition of harmony of senses by using the ear and the eye and calling into play the remaining senses of touch, smell, and taste. This view is rejected by those who argue that the “mechanized” orality of radio and television provides a one-way communication flow from the broadcaster to the hearer or viewer, thus eliminating a fundamental feature of the spoken language: its dialogue and interactivity. Television, like writing, the
Language and Television

overcomes the barriers of space, reaches millions of viewers, and may contribute to the centralization of power and knowledge.

Many viewers see television as an oral medium, a perception constantly reinforced by announcers, anchors, and reporters who try to engage in an informal, conversational style of speaking. Among their techniques are the use of direct forms of address, (e.g., conversational style of speaking. Among their techniques are the use of direct forms of address, (e.g., “Good evening,” “Thank you for watching,” or “Please stay with us”), the maintenance of eye contact with viewers while reading the script from TelePrompTers or printed copy, and the attempt to be, or at least appear, spontaneous.

This on-the-air conversationality is, however, different from everyday talk in significant ways. For instance, television talk aims at avoiding what is natural in face-to-face conversation—errors such as false starts or pauses, and repetitions, hesitations, and silence. A manual of script writing advises the beginner: “Structure your scripts like a conversation, but avoid the elements of conversations that make them verbose, redundant, imprecise, rambling, and incomplete” (Mayeux, 1994). Furthermore, the broadcaster is required to have a good or “polished” voice and is advised “to articulate, enunciate, breathe from the diaphragm, sound authoritative, stay calm under fire, and, all the while, be conversational!” (see Friedman).

Viewers, by contrast, engage in an aural or auditory communication with the medium. Even on call-in shows, the majority of viewers are not able to speak. The few who go on the air via telephone are selected through a gatekeeping process, and are often instructed to be brief and to the point. Language, then, much like studio setup and camera position, is used to create a sense of intimate involvement, a sharing of time and space. Phil Donahue, for example, uses words such as “we,” “us,” “you,” and “here” in order to create a sense of communion between the host and the studio and home audiences—stating, for example, “You’ll forgive us, Mr. X, if we are just a little skeptical of your claim that all we need to do….” Similarly, another linguistic code, the frequent use of the present tense, is used to create a sense of audience involvement and apparently allows the host, the guest, and the home audience to share the same moment of broadcast time, even though most shows in the United States were, by the early 1990s, either pre-recorded or packaged as syndication reruns.

Despite the presence of seeming spontaneity in talk genres, they are usually semiscripted, and involve a preparation process including research, writing, editing, and presentation. As Bernard Timberg points out, over 100 professionals can be involved in producing and airing a “spontaneous” talk show like *The Tonight Show* each evening, for example, and as much as 80 percent of the interview with guests on David Letterman’s talk show may be worked out in advance. Non-scripted, ad-lib, and unprepared talk shows do, however, appear both on mainstream networks (e.g., *Larry King Live*), and on low-budget or semiprofessional programs of local, community, or alternative television.

While some theorists, such as Walter Ong, admit the written bases of television’s spoken language and conceptualize that language as “secondary orality,” there is a tendency to explain the popularity of television by, among other things, equating its orality with that of the face-to-face speech. Some researchers see in popular talk shows (such as *The Oprah Winfrey Show* or *Kilroy*) a forum or a public sphere where audiences, in the studio and in front of the screen, engage in oppositional dialogue. Others find the talk shows essentially conformist, contributing to the maintenance of the status quo.

Romanticizing the orality of television is as problematic as denouncing it as an impoverished form of speech. Language changes continually, and television, as a social institution and powerful technology, creates new discourses, new modes of language use, new forms of translation, and new forms of communication between communities with different linguistic abilities. “Natural” and TV languages coexist in constant interaction, influencing each other and contributing to the dynamism of verbal communication. Language consists of numerous varieties rooted in socioeconomic differentiation (e.g., working-class language, legal language), gender (male and female languages), age (e.g., children’s language), race (e.g., black English), geography (e.g., Texan English), ethnicity, and other formations. Each variety may include diverse styles with distinct phonological, lexical, semantic, and even syntactic features. Television genres provide a panorama of these language varieties and styles, a presentation of amazing language diversity that the viewer will rarely if ever encounter in daily face-to-face communication.

Television fosters an appreciation of the way writing and speaking merge, not only in the production of speech (the oral text), but also on the screen (in print), in genres ranging from weather and stock-market reports to commercials and game shows. Even live interviews carry captions identifying the interviewees, their status, location, or affiliation. Moreover, “writing for television” has emerged as a new art, which aims not at a literate readership but rather an aural-visual audience. It has developed, for instance, “aural writing styles” or “writing for the ear,” allowing the incorporation of music and sound; “visual writing styles” for en-
visioning images; and "broadcast punctuation" codes for indicating the nuances of on-the-air speech. Training in this new realm of writing is provided in courses offered by academic and professional institutions and in dozens of textbooks and manuals with titles such as Max Wylie's Writing for Television and Richard Blum's Television Writing. On a different level, some popular programs in the United States have generated extensive fan writing, published and exchanged through the Internet. The fandom of the science fiction series Star Trek, for example, has produced no less than 120 fanzines (fan magazines), and some novels written by fans are commercially published.

Unlike radio and print media, then, which create meaning primarily through language, television engages in signification through the unity and conflict of verbal, visual, and sound codes. The dynamics of this type of signification has not been studied adequately. Viewers and media professionals often claim that the visuality of television is a sufficient form of communication, as evidenced in the popular belief that "seeing is believing" and "the camera never lies." Much like verbal language, however, the visual and sound components of the television program are polysemic (that is, they convey multiple meanings) and lend themselves to different, sometimes conflicting, interpretations. Moreover, the verbal text, far from being a mere appendage to the visual, has the power, as Masterman suggests, to "turn images on their heads." Marshall McLuhan's well-known aphorism "the medium is the message" implies that all these meanings are, to a large extent, determined by the technology of television, its audiovisuality. However, this view has been rejected by, among others, producers and script writers who are rather self-conscious about their independence and claim freedom from the dictates of the medium.

Despite this multiplicity of meanings, language in television, as in all its other manifestations, written or spoken, does not serve everyone equitably or effectively. Far from being neutral, language is always intertwined with the distribution and exercise of power in society. Dichotomies such as standard/dialect or language/vernacular point to some aspects of the unequal distribution of linguistic power. In its phonetic, morphological, and semantic systems, language is marked by differences of class, gender, ethnicity, age, race, and so on; similarly, the speakers/hearers are also divided by their idiosyncratic knowledge of language, and often communicate in "idiolects" (personal dialects).

Television attempts to control these differences and overcome the cleavages in order to reach sizable audiences. Thus, for example, the program standards department of CBS requires broadcast language to "be appropriate to a public medium and generally considered to be acceptable by a mass audience." This implies, among other things, that "potentially offensive language" must be generally avoided and "blasphemy and obscenity" are not acceptable. In conforming to standards such as these, many television genres, especially news and other information programs, have developed a language style characterized by simple, clear, and short sentences, read or spoken in an appropriate voice.

Born into this unequal linguistic environment, television followed radio in adopting the standard, national, or official language, which is the main communication medium of the nation-state. While the schools and the print media established the written standard long before the advent of broadcasting, radio and television assumed, more authoritatively than the "pronouncing" dictionaries, the role of codifying and promoting the spoken standard. In Britain, for example, broadcasters were required until the 1960s to be fluent in the British standard known as Received Pronunciation. Despite increasing tolerance for dialectalisms in many Western countries, news and other information programming on the public and private national networks continue to act as custodians of the standard language.

Thus, much like the language academy and the dictionary, television actively intervenes in the language environment and creates its own discourses, styles, and varieties. In the deregulated television market of the United States, genres known as "tabloid" or "trashy" TV usually feel free to engage in potentially offensive language. Also, citing an economic imperative to compete with less-restrictive programming on cable television, dramas such as Steven Bochco's NYPD Blue, use language once prohibited on network television.

Television and radio have also actively participated in the exercise of gender power through language. In the United States, female voice, especially its higher pitch, was once marginalized for "lacking in the authority needed for a convincing newscast," whereas male lower-pitched voices were treated as "overly polished, ultra sophisticated." Thus, in the 1950s, Lyle Barnhart points out, about 90 percent of commercial copy in the United States was "specifically written for the male voice and personality." According to a British announcer's handbook, women were not usually "considered suitable for the sterner duties of newscasting, commentary work, or, say, political interviewing" because of their "voice, appearance, and temperament." By the 1970s, however, television responded to the social movements of the previous decade and gradually adopted a more egalitarian policy. Women now appear as newscasters, although male anchors still dominate North American network news. The 1979 edition of an
American announcer’s manual added a chapter on “the new language,” which recommended the use of an inclusive language that respects racial, ethnic, and gender differences.

Despite this kind of professional awareness, television’s role in the much larger configuration of worldwide language use remains far more constricting. The languages of the world, estimated to number between 5,000 and 6,000, have evolved as a “global language order,” a system characterized by increasing contact and a hierarchy of power relations. About 20 percent of the 5,000 existing languages are used by at least 10,000 speakers each; languages with only a few thousand speakers are too small to survive. Only about 200 languages are spoken by more than 1 million individuals. About 60 are spoken by 10 million or more individuals, comprising 90 percent of the world’s population. Twelve languages are spoken by 100 million or more, accounting for 60 percent of the world’s population. Although Chinese is spoken by 1 billion people, it is dwarfed by English (which has 500 million speakers) in terms of cultural power. Most of the world’s languages remain unwritten, while half of them are, according to linguists, in danger of extinction. If state policy was once responsible for language death, the electronic media, including satellite television, are now seen as the main destructive force.

Before the age of broadcasting, contact between languages was primarily through either face-to-face or written communication. Overcoming spatial barriers and the limitations of literacy, radio and television have brought on-the-air languages within the reach of those who can afford the receiving equipment. However, contrary to a common belief that access to broadcasting is easier than to print media, small and minority languages have often been excluded by both radio and television. Being multilingual and multietnic, the great majority of contemporary states seek national unity in part through a national or official language. As a result, the states and their public television systems either ignore linguistic diversity or actively eliminate it. Private television is equally exclusionist when minority audiences are not large enough to be profitably delivered to advertisers, or if state policy proscribes multilingual minority broadcasting (as is the case in Turkey). Even in Western Europe, indigenous minority languages such as Welsh in the United Kingdom had to go through a difficult struggle in order to access television. Both the centralizing states and minorities realize that television confers credibility and legitimacy on language. The use of a threatened language at home, even at school, no longer ensures its survival; language vitality depends increasingly on broadcasting.

Although broadcasting in the native tongue is increasingly viewed as a communication right of every citizen, the majority of languages, especially in developing countries, have not yet been televised. In Turkey, where Turkish is the only official language, some 12 million Kurds are constitutionally deprived of the right to broadcast in their native tongue, Kurdish. Even listening to or watching transborder programs in this language is considered an action against the territorial integrity of the state. In countries where linguistic and communication rights are respected, economic obstacles often prevent multilingual broadcasting. In Ghana, for example, there are over 60 languages or dialects, but in 1992 only six out of 55 hours of weekly television air-time were devoted to “local” languages; the rest was in English, the official language. Television production could not satisfy local tastes and demands. While the rural population could not afford the cost of a TV set, the urban elite tuned to CNN.

New technologies such as satellites, computers, cable, and video and digital recording have radically changed the process of televisural production, transmission, delivery, and reception. One major change is the globalization of the medium, which for the first time in history has created audiences of 1 billion viewers for certain programs. Satellite television easily violates international borders, but it is less successful in crossing linguistic boundaries. This has led to the flourishing of translation or “language transfer” in the forms of dubbing, subtitling, and voice-over. Although the linguistic fragmentation of the global audience is phenomenal, English-language programs, mostly produced in the United States and England, are popular throughout the world. Television has accelerated the spread of English as a global lingua franca. For instance, in Sweden, where subtitling allows viewers to listen to the original language, television has helped the further spread of English. Also, since the United States is the most powerful producer of entertainment and information, American English is spreading at the expense of other standards of the language such as Australian, British, Canadian, or Indian.

While some observers see in the new technologies the demise of minority languages and cultures, others believe these technologies empower minorities to resist and survive. Cable television, for instance, has offered opportunities for access to small and scattered minorities. In 1995, satellites empowered the refugee and immigrant Kurdish community in Europe to launch a daily program in their native tongue (Med-TV, later renamed Medya TV). Thus, unable to enjoy self-rule in their homeland, the Kurds gained linguistic and cultural sovereignty in the sky, beaming their programs to Kurdistan where the language suffers from
Turkey’s harsh policy of linguistic suicide. While this is a dramatic achievement, other experiences, such as the broadcasting of aboriginal languages in Western countries, have had mixed success.

Truly empowering is television’s potential to open a new door on the prelingually deaf community. The World Federation of the Deaf in Helsinki demands the official recognition of the sign language(s) used by the deaf as one of each country’s indigenous language. Television is the main medium for promoting these languages and providing translated information from print and broadcast media.

While it is possible to launch channels in sign language, it is important to note that television technology can also be used by the more powerful states to promote their linguistic and political presence among the less powerful. Thus, the Islamic Republic of Iran’s state-run television was made available via satellite to the sizeable Iranian refugee and immigrant populations in Europe and North America in the early 2000s.

It is a remarkable achievement of the small screen to allow a home audience of diverse linguistic abilities to watch the same program communally. This is made possible in some instances by simultaneous broadcasting in spoken language, closed captioning, and sign language through an interpreter in an insert on the screen. In another strategy, many programs broadcast in the United States allow viewers to choose between English and Spanish versions. Television has even popularized an artificial tongue, Klingonese, the “spoken and written language” of the fictional Klingons, a powerful “humanoid warrior race” who built an empire in Star Trek’s universe. Fans are speaking and studying the language, which is taught in a Klingon Language Institute, with learning materials such as The Klingon Dictionary; an audiotape, Conversational Klingon; and a quarterly linguistics journal.

Television itself, then, is not a monolithic medium. Moreover, there is no great divide separating the language of television from that of other media. Throughout the world, television airs old and new films and theatrical performances, while in North America some popular TV programs such as Roseanne and Star Trek are simulcast (broadcast simultaneously) on radio. Linguistic variation is found even within a single genre in mainstream, alternative, local, or ethnic televisions. Whereas a cross-media study of each genre, such as the news, would reveal medium-specific features of language use, the diversity of genres does not allow us to identify a single, homogeneous language of television. Despite this rich variety of voices, however, it remains to be seen whether a combination of official policies and market forces reduces the overall range and heterogeneity of languages and their uses throughout the world.

Lansbury, Angela (1925–)
U.S. Actor

After years of winning awards and critical praise for her work on Broadway and in Hollywood, Angela Lansbury finally became a household name in a television role. Lansbury portrayed Jessica Fletcher in CBS's *Murder, She Wrote* for 12 years beginning in 1984, serving as the program's executive producer for its last four. The program, television's longest-running detective show, was canceled in 1996 amid vocal protests from its loyal fans. Since then, Jessica Fletcher has lived on in syndication and in occasional made-for-television *Murder, She Wrote* movies that Lansbury and her husband Peter Shaw have produced, and her son Anthony has directed. Other members of her family have been involved in her career, as well: her brother Bruce served as supervising producer on *Murder, She Wrote*, her son Anthony and her stepson David have served as executive producers, and her husband, to whom she credits much of her success, helped to run their production company, Corymore Productions. For her work in television, Lansbury has received 16 Emmy nominations (12 for *Murder, She Wrote*). She received her first Academy Award nomination at age 17 for her performance in *Gaslight*, and went on to receive two more Academy nominations and four Tony awards.

As a mystery writer who relied on her extraordinary powers of intuition, Lansbury's Jessica Fletcher entered prime time as a sincere if somewhat dowdy widow who, over time, transformed into a sophisticated, appealing, and successful older businesswoman. Jessica's balance of smart professional action and strong commitments to traditionally feminine practices and beliefs, along with the program's strong slate of guest performers, allowed the series to appeal to women across a range of backgrounds. By its second season, the program ranked among the top ten according to Nielsen audience ratings, and would remain in this position for most of its years on the air, attracting such big-name advertisers as the Ford Motor Company.

*Murder, She Wrote* has spawned three made-for-television film successors: *Murder, She Wrote: South by Southwest* (1997), *Murder, She Wrote: A Story to Die For* (2000), and *Murder, She Wrote: The Last Free Man* (2001). Lansbury has starred in a number of other made-for-television movies as well, including *The Unexpected Mrs. Pollifax* and *Mrs. Santa Claus*. Most recently, she has hosted ABC television's reintroduction of *The Wonderful World of Disney* and the Disney Channel's airing of its family programming. Today, thanks to syndication and numerous airings of quality feature films on cable film channels, hardly a week goes by when viewers cannot find the much-loved Angela Lansbury somewhere on television.

Lassie

U.S. Family Drama

Lassie was a popular long-running U.S. television series about a collie dog and her various owners. Over her more than 50-year history, Lassie stories have moved across books, film, television, comic books, and other forms of popular culture. The American Dog Museum credits her with increasing the popularity of collies.

British writer Eric Knight created Lassie for a Saturday Evening Post short story in 1938, a story released in book form as Lassie Come Home in 1940. Knight set the story in his native Yorkshire and focused it around the concerns of a family struggling to survive as a unit during the depression. Lassie’s original owner Joe Carraclough is forced to sell his dog so that his family can cope with its desperate economic situation, and the story becomes a lesson about the importance of interdependence during hard times. The story met with immediate popularity in the United States and in Great Britain and was made into an MGM feature film in 1943, spanning six sequels between 1945 and 1953. Most of the feature films were still set in the British Isles, and several of them dealt directly with the English experience of World War II. Lassie increasingly became a mythic embodiment of ideals such as courage, faithfulness, and determination in front of hardship, themes that found resonance in wartime with both the British and their American counterparts. Along the way, Lassie’s mythic function moved from being the force uniting a family toward a force unifying a nation. The ever-maternal dog became a social facilitator, bringing together romantic couples or helping the lot of widows and orphans.

In 1954 Lassie made its television debut in a series that removed the dog from Britain and placed her on
Courtesy of the Everett Collection

the American family farm, where once again she was asked to help hold a struggling family together. For the next decade, the Lassie series became primarily the story of a boy and his dog, helping to shape our understanding of American boyhood during that period. The series’ rural setting offered a nostalgic conception of national culture at a time when most Americans had left the farm for the city or suburbia. Lassie’s ownership shifted from the original Jeff Miller to the orphaned Timmy Martin, but the central themes of the intense relationship between boys and their pets continued. Lassie became a staple of Sunday night television, associated with “wholesome family values,” though, periodically, she was also the subject of controversy with parents’ groups monitoring television content. Lassie’s characteristic dependence on cliff-hanger plots in which children were placed in jeopardy was seen as too intense for many smaller children; at the same time, Timmy’s actions were said to encourage children to disobey their parents and to wander off on their own. Despite such worries, Lassie helped to demonstrate the potential development of ancillary products associated with television programs, appearing in everything from comic books and Big Little Books to Viewmaster slides, watches, and Halloween costumes.

By the mid-1960s, actor Jon Provost proved too old to continue to play Timmy and so Lassie shifted into the hands of a series of park rangers, the focus of the programming coming to fall almost exclusively upon Lassie and her broader civic service as a rescue dog in wilderness areas. Here, the show played an important role in increasing awareness of environmental issues, but the popularity of the series started to decline. Amid increasing questions about the relevance of such a traditional program in the midst of dramatic social change, the series left network television in the early 1970s, though it would continue three more years in syndication and would be transformed into a Saturday morning cartoon series. Following the limited success of the 1979 feature film The Magic of Lassie, yet another attempt was made in the 1980s, without much impact on the marketplace, to revive the Lassie story as a syndicated television series. The 1994 feature film Lassie suggests, however, the continued association of the series with “family entertainment.”

Many animal series, such as Flipper, saw their non-human protagonists as playful, mischievous, and childlike, leading their owners into scrapes, then helping them get out again. Lassie, however, was consistently portrayed as highly responsible, caring, and nurturing. Insofar as she created problems for her owners, they were problems caused by her eagerness to help others, a commitment to a community larger than the family, and her role was more often to rescue those in peril and to set right wrongs that had been committed. She was the perfect “mother” as defined within 1950s and 1960s American ideology. Ironically, the dogs who have played Lassie through the years have all been male.

Late Show with David Letterman
(Late Night with David Letterman)

U.S. Talk/Comedy/Variety Show

Fans of late night television have delighted in the antics of host David Letterman in one form or another since the beginnings of his show on NBC in 1981. For 11 years, *Late Night with David Letterman* enjoyed the weeknight time slot following *The Tonight Show with Johnny Carson* (later *Tonight Show with Jay Leno*). But after being passed over as the replacement for the retiring Johnny Carson on *Tonight*, Letterman accepted CBS’s multimillion-dollar offer to hop networks. The move brought Letterman and his band leader/sidekick Paul Shaffer to CBS, moved them up an hour in the schedule to run opposite *Tonight Show with Jay Leno*, and prompted renovation of the historic Ed Sullivan Theatre in New York to be the exclusive location for Letterman’s new show. *The Late Show with David Letterman*, featuring Paul Shaffer and the CBS Orchestra, premiered on August 30, 1993, and within weeks had overtaken the Leno show in the ratings race.

It would be too simplistic to classify David Letterman as a talk show host, or his programs as fitting neatly into the talk show genre. Still, the format for both *Late Night* and *Late Show* resembles the familiar late night scenario. An opening monologue by the host usually plays off the day’s news or current events. The monologue is followed by two or three guests who appear individually and chat with the host for five to ten minutes. Before and between the guest appearances, the host might indulge in some comedic skit or specialty bit. Despite their similarity to this basic format, however, Letterman’s shows differ from others in the areas of program content, delivery, and rapport with guests.

The content of both *Late Night* and *Late Show* has remained remarkably steady over the years. Standard installments included “Viewer Mail,” which became “The CBS Mailbag” after the move. During this segment, Letterman reads actual viewer letters and often
responds to requests or inquiries with humorous, scripted video segments featuring Shaffer and himself. Another long-time Letterman bit is "Stupid Pet Tricks," in which ordinary people travel to the program and showcase pets with unusual talent. In one sequence Letterman hosted a dog that would lap milk out of its owner's mouth, and from that bit sprang "Stupid Human Tricks." In this segment people present unusual talents such as tongue distortion and spinning basketballs; one man vertically balanced a canoe on his chin. One of the most popular elements in Letterman's repertoire is the "Top Ten List." Announced nightly by Letterman, this list—"express from the home office in Sioux City Iowa"—features an absurdly comic perspective on current events and public controversies.

Other specialty bits have included sketches such as "Small Town News," during which Letterman reads goofy or ironic headlines from actual small town newspapers, and "Would You Like To Use the Phone?" in which Letterman invites a member of the studio audience to his desk and offers to place a phone call to someone he or she knows. Letterman sent his mother, known to fans as "Letterman's Mom," to the 1994 Winter Olympics in Lillehammer, Norway, where she interviewed First Lady Hillary Clinton and skater Nancy Kerrigan for the Late Show. Letterman frequently visits local businesses near his Broadway theatre: the copy shop, a local café, and a gift shop run by "Mujibar and Sirijul," two brothers who have become quite famous because of their visits to the show and their performances in skits on the program.

Letterman's style melds with the content of his program, both often unpredictable and out of control. His delivery is highly informal, and like the content, the personal performance is extremely changeable, given to sudden outbursts and frequent buffoonery. This style builds on the carefully constructed persona of "a regular guy," and Letterman often "wonders" with the audience just how a guy like him managed to become the host of one of the most popular late night shows in America. He has referred to himself as "the gap-toothed monkey boy" and frequently calls himself a "dweeb" (which his band leader Shaffer usually acknowledges as true). This "regular guy" excels at impromptu delivery and the ability to work with his audience. He often hands out "gifts and prizes" such as light bulbs, motor oil, and most notably, his trademark brand "Big Ass Ham." He has been known to send his stand-by audience to Broadway shows when they were not admitted to his taping. Letterman's relationship with his studio and viewing audiences does not always translate to his treatment of his guests, however.

Over the years of Late Night and Late Show, Letterman has hosted first ladies, vice presidents, film and television stars, national heroes, sports figures, zoo keepers, wood choppers, six-year-old champion spellers, and the girl next door. His relaxed attitude can make guests feel at home, and he can be a very gracious host if he so chooses. But there have been times when he has offended guests (Shirley MacLaine nearly hit him) and been offended by guests (Madonna offended the nation with her obscene language and demeanor on one of her visits with Letterman).

Perhaps the most significant moment in Letterman's career to date occurred in the aftermath of the September 11 attacks on the World Trade Center and the Pentagon. In what was viewed by some as an attempt to return to "normalcy," Letterman returned to his late night spot on Monday following the attacks. Somber; at times apparently stalled with emotion, he cited Mayor Rudolph Giuliani's admonition for New Yorkers to return to work and hosted guests Dan Rather and Regis Philbin. Rather twice broke into tears during their conversation, and Philbin revealed that his son had been at work in the Pentagon, though on the opposite side of the plane crash, on the 11th. Late Night with David Letterman was, on this occasion, something of a significant cultural marker for many viewers, an indication that late night television comedy could be the locus for powerfully shared moments of cultural significance.
Late Show with David Letterman (Late Night with David Letterman)

Early in 2002, as Letterman’s contract with CBS was set to expire, rumors circulated that the show would move to ABC, as a replacement for the news program Nightline, hosted by Ted Koppel. Letterman was reportedly unhappy with CBS, particularly with the local-news lead-ins it used. However, in March of 2002, Letterman did indeed renew his contract with CBS.

Laverne and Shirley

U.S. Situation Comedy

Originally introduced as characters on Happy Days, Laverne De Fazio (Penny Marshall) and Shirley Feeney (Cindy Williams) “schlemiel-schlamazed” their way into the Tuesday night ABC prime-time lineup and into the hearts of television viewers in 1976. The show, set in the late 1950s, centered on the two title characters and was rated the number-one program in its second year of airing. In the earliest years of the long-running sitcom, the two 20-something women shared an apartment in Milwaukee, Wisconsin, and worked at Shotz Brewery, the local beer-bottling plant. Many of the episodes focused on the humorous complications involving the women or their friends.

From ditching blind dates to goofing up on the conveyor belt at the bottling plant, Laverne and Shirley “did it their way” in Milwaukee until 1980, when ABC decided to change the setting of Laverne and Shirley to Burbank, California, for a new twist. Aside from a change of climate and employment, now in Bradburn’s Department Store, the central characters and structure of the program remained the same until Williams left the program in 1982. Following her departure, the program continued for one year under the original title, but with Laverne alone as the central character.

“There is nothing we won’t try / Never heard the word impossible / This time, there’s no stopping us /
“We’re gonna do it!” These lines from the theme song of the sitcom describe the state of mind of the program’s two main characters. With the advantage of two decades of hindsight, Laverne and Shirley painted a picture of the 1950s from the single, independent woman’s point of view. The plots of the episodes reflect concerns about holding a factory job, making it as an independent woman, and dealing with friends and relatives in the process of developing a life of one’s own. Many plots revolve around the girls dating this man or that, or pondering the ideal men they would like to meet: sensitive, handsome doctors. If on the surface the characters appear to be longing to fulfill the stereotypical 1950s role of woman, their true actions and attitudes cast them as two of television’s first liberated women. They think for themselves and make things happen in their social circles. Together they fight for causes, from workers’ rights at the bottling plant to animal rights at the pound. They help each other and they help their friends, who add much texture and comic effect to the program.

Laverne and Shirley’s two male neighbors, Lenny and Squiggy, provide much of the humor in the program with their greasy-1950s appearance and their ironic knack of entering at just the wrong time. If someone said, “Can you imagine anything more slimy and filthy than that?” in would charge Lenny and Squiggy with their famous, distorted “Hello!” Despite the fun poked at the two men, they are still portrayed as friends and thus are often caught up in the “Lucy-esque” escapades of Laverne and Shirley. Another prominent character, Carmine Ragusa or “The Big Ragu,” is an energetic Italian singer. Friend to both women, Carmine is after Shirley’s heart.

Laverne and Shirley gave its lead characters room to explore boundaries and break some stereotypes common in television portrayals of women prior to the 1970s. Shirley is portrayed as interested in marriage, yet she is not sure that Carmine is “the one”; instead of settling, she keeps her independence and her friendship with Carmine.

Among the loudest characters on the program is Frank De Fazio, Laverne’s widowed father who owns the local Pizza-Bowl where everyone congregates. In his eyes Laverne is still a little girl, and he frequently checks up on her, evaluates her dates, and attempts to invalidate her decisions. Edna, Frank’s girlfriend, acts as a buffer between father and daughter and becomes an even more motherly figure to Laverne after she marries Frank midway through the series’ run. Although Frank expresses his overly protective and chauvinistic views, Edna’s buffering reason and Laverne’s stubbornness always win out. Laverne and Shirley was an early prime-time proponent of women’s rights and placed much value in the viewpoints and experiences of 1950’s women, suggesting that even that decade women could be independent.

Since Laverne and Shirley was a spin-off of Happy Days, and because the programs aired back to back, it was easy to cross over characters from one show to another. Laverne and Shirley are often visited by Arthur Fonzarelli (better known as The Fonz), or run into Richie Cunningham or Ralph Malph (all from Happy Days) camping in the woods. Viewers were able to carry knowledge from one show (Happy Days) to the next (Laverne and Shirley) as characters shared experiences with each other outside the context of their own programs. The programs were thus able to layer meanings or overlap realities between previously mutually exclusive television families.

While visits to or from Happy Days characters were always extra fun, Laverne and Shirley provided sea-
Laverne and Shirley

sons of hilarious antics and left behind many memorable images uniquely their own: Laverne’s clothing, always decorated with a large, cursive “L”; the milk and Pepsi concoction that is her favorite beverage; the giant posters of Fabian; and Shirley’s Boo-Boo Kitty, a two-foot stuffed cat that is the true ruler of her heart. Laverne and Shirley may be a female “odd couple,” Shirley fanatically neat and Laverne hopelessly sloppy, but they balance each other and provide a system of mutual support, demonstrating that women can compete in the world of work as well as in the world of ideas. From a 1950s perspective, for two young women that indeed was “making our dreams come true.”

Law & Order
U.S. Crime Drama

“In the criminal justice system, the people are represented by two separate yet equally important groups: the police who investigate crime, and the district attorneys who prosecute the offenders. These are their stories.” This narrative voice-over begins each episode of Law & Order, currently network television’s longest running drama series, comprising over 275 episodes by the end of its 12th season in 2002. Created by ex-Miami Vice executive producer Dick Wolf as a never-aired pilot for CBS in 1988, the series was launched at a time when law and crime hourly dramas were far less popular than half-hour sitcoms in the prime-time network schedule. NBC had canceled its critically acclaimed Hill Street Blues in 1987, and the limited success of its replacement in the Thursday night schedule, L.A. Law, was already waning by 1990. With its plots often based upon contemporary headline stories, Law & Order has helped to revitalize the crime drama not only by hybridizing police investigation and legal prosecution, but also by reworking the narrative strategies of its genre predecessors.

The elegant and distinctive format has changed little since the show’s inception. Unlike the multi-arc structure of Steven Bochco dramas such as Hill Street
Blues, L.A. Law, and NYPD Blue, each episode of Law & Order focuses upon the criminal and legal processes of a single homicide case, beginning as bystanders accidentally discover a murder victim, and ending after the disclosure of the jury’s trial decision. Episodes are devised as discrete units, with closure and without season cliff-hangers. Although Law & Order shares with the Bochco crime dramas an extensive use of the handheld camera, the series emphasizes stability and direction over distraction: signposts guide the viewer through the intricacies of the investigation, including the intertitles that punctuate the narrative to identify location changes on the Manhattan streets comprising the show’s setting (several early episodes also included closing taglines documenting the fate of the criminals). The scales of justice featured in the opening credit sequence resonate as a metaphor of the tightly balanced episodic structure. Half of each episode’s segments comprise a criminal investigation conducted by two police detectives guided by their lieutenant. Upon identification of a suspect and the gathering of sufficient evidence, the case is handed over to two assistant district attorneys who regularly enlist the assistance of their DA boss. After the case is prepared, the final segments of the episode feature highlights of the trial. So plot-focused is the narrative that the police and attorneys exist as a rule only in their professional capacities; the viewer’s knowledge is structured to maximize identification with the point-of-view of the police and attorneys, at least one of whom remains present in every scene after the murder discovery.

The stability of narrative structure has overridden the numerous cast changes among the six principal roles, none of which are currently played by original cast members. George Dzundza left the series after the first season due to conflicts over the quality of the writing. His replacement Paul Sorvino departed after the start of the third season, complaining that the outdoor street shooting was compromising the vocal chords he wanted to preserve for opera singing. Michael Moriarity resigned in 1994 after heated network conflicts concerning his publicized disagreement with Attorney General Janet Reno on television censorship issues. In NBC’s effort to introduce female characters, S. Epatha Merkerson and Jill Hennessy were hired to replace Dann Florek and Richard Brooks after the end of the third season. Three female assistant district attorneys have succeeded Hennessy since her departure in 1996. The involuntary contract termination of Chris Noth in 1995 remains a mystery to viewers (as well as the actor).

In the tightly structured, case-focused narrative of the series, intimacies between principals emerge through a number of strategies. Backstory is occasion-ally introduced to motivate the departure of a major character, as with the increasingly frequent references to Detective Reynaldo Curtis’s wife’s multiple sclerosis in the ninth season, and ADA Jamie Ross’s custody battles in season eight. As the police officers and attorneys debate suspects’ guilt and innocence, intimacies arise when case issues strike personal chords. On religious grounds, Sgt. Max Greevey asks to be removed from a case involving sadomasochism; past trauma inflects the perspectives of Detective Mike Logan and ADA Abby Carmichael in cases of child abuse and rape (respectively); the liberal-minded Detective Lennie Briscoe and Lieutenant Anita Van Buren clash with the conservative Curtis on child discipline and abortion cases; Briscoe’s alcoholism renders him empathetic with suspects and criminals who share the affliction. Less frequently, reactions to a difficult case elicit vulnerabilities that demonstrate the tenuous “order” of these professionals’ personal lives. Such crises are taken to an extreme in the sixth season finale episode “Aftershock,” unique in its reworking of the established episodic structure as it begins with a murderer’s execution and develops by tracing its effects upon the police and lawyers, who are driven to infidelity, drunken stupor, and tragic, accidental death. The fact that such instances occur only rarely in the series makes the intrusion of character backstory all the more resonant.

Law & Order has experienced a steady gain in popularity since the mid-1990s, surpassing NYPD Blue in the Nielsen ratings since the 1999–2000 season, and ranked in the top ten since 2000. It received the Emmy Award for Outstanding Drama Series in 1997 and has been nominated ten times in this category. The series is in syndication on the Arts & Entertainment Channel and the TNT network. Dick Wolf also produced the made-for-TV Exiled: A Law & Order Movie in 1998 and two series spinoffs, Law & Order: Special Victims Unit (1999– ) and Law & Order: Criminal Intent (2001– ), both of which focus more intently upon criminal investigation than prosecution. In its opening segments, the latter of these spin-offs alters the format of the original series by revealing information to which the investigators are not privy. Special Victims Unit, which treats the most “heinous” of criminal homicides, reintroduces Dann Florek in his role of Captain Donald Cragen. NBC has renewed Law & Order through May of 2005.

Lawrence Welk Show, The
U.S. Musical Show

One of television's most enduring musical series, The Lawrence Welk Show, was first seen on network TV as a summer replacement program in 1955. Although the critics were not impressed, Welk's show went on to last an astonishing 27 years. His format was simple: easy-listening music (what he referred to as “champagne music”) and a “family” of wholesome musicians, singers, and dancers.

The show first ran on ABC for 16 years and was known in the early years as The Dodge Dancing Party. ABC canceled the show in 1971, not because of lack of popularity, but because it was “too old” to please advertisers. ABC's cancellation did little to stop Welk, who lined up more than 200 independent stations for a successful syndicated network of his own.

Part of Welk's success can be attributed to his relationship with viewers. He meticulously compiled a “fever chart,” which tallied positive and negative comments from viewers' letters. Performers with favorable comments became more visible on the show. In this way, viewers also played an important role in Welk's “family” of regulars.
There were many show favorites throughout the years, including the Lennon Sisters, who were brought to Welk's attention by his son Lawrence Jr., who was dating Dianne Lennon in 1955. Other favorites included the Champagne Ladies (Alice Lon and Norma Zimmer); accordionist Myron Floren, who was also the assistant conductor; singer-pianist Larry Hooper; singers Joe Feeney and Guy Hovis; violinist Aladdin; dancers Bobby Burgess and Barbara Boylan; and Welk's daughter-in-law, Tanya Falan Welk.

Most of the regulars stayed with the show for years, but a few moved on—or were told to leave by Welk. In 1959, for example, Welk fired Champagne Lady Alice Lon for "showing too much knee" on camera. After receiving thousands of protest letters for his actions, he attempted to get Lon to return, but she refused.

Welk himself was the target of endless jokes. Born on a North Dakota farm in 1903 of Alsatian immigrant parents, he dropped out of school in the fourth grade. He was 21 years old before he spoke English. His thick
accent and stiff stage presence were often parodied. But viewers were delighted when he played the accordion or danced with one of the women in the audience. Fans also bought millions of his albums, which contributed to the personal fortune he amassed, a fortune including a music-recording and publishing empire and the Lawrence Welk Country Club Village.

The final episode of The Lawrence Welk Show was produced in February 1982. After that time, however, followers of his show were still able to enjoy the programs, which were repackaged with new introductions by Welk under the title of Memories with Lawrence Welk. Loyal fans thirsty for more champagne music were pleased. The programs continue to be aired in syndication on many channels throughout the United States, including many public broadcasting channels.

Laybourne, Geraldine (1947-)
U.S. Media Executive

Geraldine Laybourne is chairwoman and chief executive officer of Oxygen Media, a cable television/online network launched on February 2, 2000. She developed Oxygen after a two-year tenure in which she was in charge of Disney/ABC Television’s cable operations. However, Laybourne gained her greatest renown for her work at Nickelodeon, a cable network targeted to children, where she was president until 1996. Laybourne was largely responsible for the overwhelming success the network achieved in the 1980s and 1990s, a time when Nickelodeon garnered a larger audience of child viewers than ABC, CBS, NBC, and FOX, combined.

Laybourne began her tenure at Nickelodeon in 1980. Her prior background featured stints in both education and children’s television programming, experiences that would serve her well at Nickelodeon. She then joined her husband, Kit (a professional animator), as an independent producer of children’s television programming. From this position she began, in 1979, to work with the new cable network Nickelodeon in the production of pilot programs. A year later she was named the company’s program manager.

During Nickelodeon’s early years, Laybourne was instrumental in several key decisions that ultimately led to the network’s long-term success. Nickelodeon came into being as a noncommercial program source created largely to serve as a goodwill tool through which cable system operators could win both franchise rights and subscribers. The company began to accept corporate underwriting in 1983 and became advertiser-supported a year later. Although it continued to devote fewer minutes per hour to advertising than most cable or broadcast commercial program sources, the initial decision to accept advertising was extremely controversial. The end result of the decision, however, was that Nickelodeon became an extremely profitable operation.

In 1985 Laybourne initiated the launch of the complementary evening service Nick at Nite, which breathed new life into old television series such as The Dick Van Dyke Show, The Mary Tyler Moore Show, Get Smart, and Dragnet. Nick at Nite took series that had been syndicated for years and presented them in an original, tongue-in-cheek environment designed to create a unique program flow and to appeal to an affluent “baby boomer” audience. Nick thus expanded Nickelodeon’s programming hours, widened the network’s appeal to new audience segments, and ultimately led to the launch of another 24-hour program service from Nickelodeon called TV Land.

With a number of accomplishments under her belt, Laybourne was named president of Nickelodeon in 1989, and in 1992 she became vice chair of corporate parent MTV Networks (owned by Viacom). In these positions, Laybourne continued her efforts to build the brand equity of the Nickelodeon name. To this end, Nickelodeon opened its own production studio at Universal’s Orlando, Florida, theme park; it licensed con-
Laybourne, Geraldine

sumer products to companies such as toy manufacturers Mattel and Hasbro; and it produced a magazine aimed at children, which regularly included a question-and-answer section with "The Boss Lady," as Laybourne came to be known by Nickelodeon's young viewers.

Nickelodeon has also produced programs aired on outlets other than the cable network itself. For instance, its youth-oriented game show Double Dare was syndicated to broadcast stations, and its 1991 sitcom Hi Honey, I'm Home represented a cable landmark in that its episodes aired within the same week on both the cable network Nickelodeon and the broadcast network ABC. Such synergistic strategies became even more prevalent after Paramount Communication's takeover of Viacom in 1994. For example, Nickelodeon played a central role in the cross-media promotional strategies Paramount employed leading up to the successful 1995 theatrical release of The Brady Bunch Movie, and Nickelodeon's popular Rugrats series became a Paramount feature film in 1998, with a sequel released in 2000.

Under Laybourne's leadership, Nickelodeon grew from a fledgling, noncommercial programmer that existed largely to serve the cable industry's public image purposes, to a profitable and acclaimed program source that has become a core service in the channel lineups of virtually every U.S. cable system. In so doing, Laybourne became one of the foremost figures among cable television programmers, as well as one of the most influential women in the television industry. Her launch of Oxygen—with partners that include Oprah Winfrey, Microsoft cofounder and cable television magnate Paul Allen, and the Hollywood production team of Marcy Carsey, Tom Werner, and Caryn Mandabach—represented an ambitious step to create a multimedia content provider targeted to women. Although Oxygen initially struggled, it nevertheless promised to present Laybourne with many opportunities to exercise her unique and prescient vision of television's role in contemporary society.

Le Mesurier, John (1912–1983)
British Actor

As the gentle, genteel, and serenely gallant Sergeant Frank Wilson in Dad's Army, John Le Mesurier remains one of the best-loved actors in the history of the British situation comedy. With its provocative use of wartime sing-a-long tunes, perfectly and previously pitched scripts, and an ensemble acting team who instinctively fed off each other's momentum, the series ran from 1968 until 1977. During that time, a stage version, a radio series, and a feature film spin-off opened new doors for the home guard
homage. The show is still repeated to huge audience figures.

Like the majority of the cast, Le Mesurier's major television fame came late and after a lengthy, enjoyable "apprenticeship" on the stage and in film. A jobbing actor for 20 years before finally being recognized as a supporting comic face to be reckoned with, he had made his television debut as early as 1938 and his first film appearance some ten years later. Typically, he was inauspicious and incognito, miles down the cast list and turning in a competent, albeit workmanlike, performance. However, in 1949 he embraced big-screen comedy, when he turned in a majestic contribution as a frustrated and flustered headwaiter in Old Mother Riley's New Venture. With an unsmiling, bottled-up tension, furtive eyes, a worried look of impending disaster, and "head-in-hands" dismay at the mayhem all around him, the "type" would hold the actor in good stead for the next 30 years or more. Importantly, much more than the theater, Le Mesurier saw television and film as his natural medium, where every subtle nuance could be captured by the camera and magnified tenfold. His early, major television assignment also allowed him to exercise his great versatility. He played the doctor in the Dorothea Brooke-produced BBC production of The Railway Children, and featured as the ill-fated and foppish Eduardo Lucas in Sherlock Holmes: The Second Stain, with Alan Wheatley as the great detective (both 1951). He was cast in The Granville Melodramas, a 1955 epic for Rediffusion for director/producer Cyril Butcher. More importantly, that same year, he found his perfect niche in British cinema. Under the wing of the Boulting Brothers, Le Mesurier scored a success in the army satire Private's Progress opposite Terry-Thomas, and kick-started a glittering run of uneasy, tense, bombastic, and petulant character studies. He clocked up an amazing score of appearances well into the 1970s, effortlessly complementing the world's funniest comedians, from Norman Wisdom to Peter Sellers.

Displaying a clear skill for comedy acting and reacting, television didn't take long to grab Le Mesurier for a never-ending supply of judges, doctors, military men, and crusty colonels opposite the cream of British comedy talent. Writers Ray Galton and Alan Simpson, having ushered their hit radio series Hancock's Half Hour onto television, turned to an array of "proper" actors to fully complement the hapless flights of fancy of star comedian Tony Hancock. Le Mesurier proved both a long-standing member of the Hancock repertory company and one of the star's closest friends in the business, appearing in all of his subsequent ill-fated attempts to make it big in feature films. Le Mesurier's contributions to Hancock stand alone: the plastic surgeon in The New Nose, the officious RAF officer in The Lift, the National Trust trustee in Lord Byron Lived Here, the hypochondriac doctor in The Cold. All were basically the same figure of stern, befuddled authority, but played with real dramatic conviction. Not surprisingly, Le Mesurier would stooge for television comedians for much of the rest of his television career, working alongside Dick Emery, Harry Worth, Morecambe and Wise, and, in the 1960s, on the Galton and Simpson scripted series, Frankie Howerd. It was like Hancock with added innuendo. The actor also found himself featured in celebrity-based American television drama (Douglas Fairbanks Presents and Errol Flynn Theatre) and ATV action serials (Dangerman: Affair of State, in November 1960) and a starring role in Armchair Theatre: Three on the Old Tar Fiddle with Norman Rossington and Raymond Huntley. Produced by Charles Jarrot, it was broadcast on January 17, 1961. An ever-reliable general-purpose actor was how Le Mesurier liked to see himself, chalking up appearances in The Avengers (Mandrake, January 1964) and Play of the Week (Bachelors, November 1964). His film roles, while almost entirely swamped by comedy fare, throw up excellent opportunity for compelling character studies, notably as the bereaved father in Val Guest's superior crime thriller Jigsaw in 1962. Television, sporadically, employed him in equally dramatic presentations, including Sunday Night Theatre: The Trial of Mary LeFarge, with Yvonne Mitchell, and Harold Pinter's Tea Party, the second specially commissioned play for the European Broadcasting Union broadcast on March 25, 1965, and produced by Sydney Newman.

Le Mesurier himself was less than happy with moving away from his fast-growing reputation for comedy. He was content to "stay in his own backyard" and feverishly work away at developing his standard, scene-stealing persona of officious bureaucracy. His first major television series, the ITV situation comedy George and the Dragon, came at the end of 1966. Although most certainly playing "third fiddle" to the central comic pairing of Sid James and Peggy Mount, Le Mesurier grabbed his featured role of the kindly, tolerant, and deceptively bemused Colonel for whom the leading characters work.

The scripts, by Vince Powell and Harry Driver, were never really taxing, but the series, thanks in no small part to the inspired casting, proved extremely popular, running to four series. However, the show's untimely demise was rather timely for Le Mesurier. That same year, 1968, saw the launch of the program that would make him one of Britain's best-loved actors, Dad's...
Le Mesurier, John

Army. His effete, charming, and magnetic style gave him a touch of the Jack Buchanans and proved the perfect contrast with Arthur Lowe's bluff, bombastic Captain Mainwaring. Le Mesurier's Wilson was the lesser man in rank only. Eventually the character became the man and the man became the character. A gentle, trusting, and endearingly vague soul in real life, Le Mesurier seemingly liked to indulge in alcohol, certain substances, traditional jazz, and dreamy days in blissful ignorance. However, his acting career continued to be diverse and diverting during the run of his most popular television series. Although his film output was slightly less prolific than before, the small screen delighted in offering him guest roles in everything from Jason King (1971) to Orson Welles' Great Mysteries (1975). He featured in the Richard Burton and Sophia Loren NBC's Hallmark of Fame remake of Brief Encounter for director Alan Bridges and enhanced a Crown Court case, Murder Most Foul. Dabbling with anarchic comedy, Le Mesurier played a mild-mannered but mildly-mad scientific farmer in a one-off guest appearance in The Goodies, played a health farm obsessive in a John Cleese-scripted Doctor At Large episode ("Mr. Moon") and even joined forces with his ex-wife, comedy actress Hattie Jacques, in a 1972 episode of Sykes. Stricken with ill health while rehearsing a play, The Miser, in Perth, Australia, he was rushed to hospital and enforced to adopt an alcohol-free lifestyle, which led to his haggard appearance in the last series of Dad's Army. After a year, Le Mesurier returned to moderate drinking and to his old dashing self. A high-profile appearance in Brideshead Revisited, a role in Val Guest's Ealing community styled TV movie The Shillingbury Blowers and a brilliantly emblematic appearance in the final Ripping Yarns: "Roger of the Raj," with Michael Palin, followed. Le Mesurier made appearances alongside Jon Pertwee in Worzel Gummidge, narrated the children's favorite Bod, and provided voice-overs for a long-running advertising campaign for Homepride Baking Flour. He also accepted another assignment for David Croft and Jimmy Perry with a single appearance in their "latest" BBC comedy success, Hi-De-Hi, as well as recreating his Dad's Army creation for radio. It was a fitting closure to a career that simply tried and succeeded in spreading as much happiness as possible. He died in 1983 at the age of 71. His dying words, just before slipping into a final coma, were "it's all been rather lovely."

Stage (selected)
Norman Lear had one of the most powerful and influential careers in the history of U.S. television. He first teamed with Ed Simmons to write comedy (Lear tells numerous stories relating how he persisted in seeking the attention of comedians like Danny Thomas, trying to convince them he could write their kind of material). After a time it worked, and Thomas bought a routine from Lear and Simmons. David Susskind, too, noticed their work and signed them to write for *Ford Star Revue*, a musical comedy-variety series that lasted only one season, 1950-51, on NBC. Lear and Simmons then moved to *The Colgate Comedy Hour*, a high-budget NBC challenge to Ed Sullivan on Sunday evenings. It was a success, lasting five years. The partners wrote all the Jerry Lewis and Dean Martin material for the famous comedy team's rotating regular appearances on the show.

After the Colgate years, Lear began writing on his own, and in 1959 he teamed with Bud Yorkin to create Tandem Productions. Tandem produced several feature films, and Lear selectively took on the tasks of executive producer, writer, and, on the film *Cold Turkey*, director.

In 1970 Lear and Yorkin moved into television. While in England Lear had seen a comedy, *Till Death Us Do Part*, which became an inspiration for *All in the Family*. ABC was interested in the idea and commissioned a pilot, but after it was produced the network rejected it, leaving Lear with a paid-for, free-standing pilot. He took it to CBS, which had recently brought in a new president of the network, Robert Wood. The timing was fortuitous. Anxious to change the bucolic image cast by shows like *The Beverly Hillbillies*, Wood reacted positively to Lear's approach and gave Tandem a green light.

*All in the Family* first aired on January 12, 1971. Wood commented in a 1979 interview that CBS had added several extra phone operators to handle an expected flood of reactions to the contentious nature of the program and especially the bigoted lead character Archie Bunker. The calls never came.

The series did, however, attract its share of protests and strong reactions. Over its early life, there was a continuous flow of letters that objected to language and themes and challenged Lear for his "liberal" views. Later, in 1979, Lear remarked that he responded to such criticism by stating, "I'm not trying to say anything, I am entertaining the viewers. Is it funny? That was the question." Later, when attacks on the show asked how he dared to express his views, he altered his response: "Why wouldn't I have ideas and thoughts and why wouldn't my work reflect those ideas?" And, of course, his programs did.

Lear's pioneering television work brought an even more controversial series, *Maude*, to CBS in 1972. Lear once described the acerbic and openly liberal *Maude* as the flip side of Archie Bunker. Perhaps that was true in the beginning, but, unlike Archie, Maude's positions on issues were not presumed to be ridiculous.
and her approaches to social issues were almost always presented sympathetically. The most famous episodes of *Maude* dealt with her decision to have an abortion. Reflecting the U.S. Supreme Court’s 1973 decision legalizing abortion, Maude and husband Walter worked out their response to her midlife pregnancy with dignity and compassion. That show sparked a storm of protest from Roman Catholics. If some viewers accepted Archie as the bigot he was, some of the religious community took Maude equally seriously.

Lear and Yorkin also moved black families to network prime time with *Good Times* and *The Jeffersons*. Lear’s satiric bent was also evident in *Mary Hartman, Mary Hartman*, a pioneering show he wanted to air in the daytime as part of the soap-opera scene. When that attempt failed, he syndicated the series and found it frequently relegated to late-night fringe time schedules. Still, Lear saw the show as depicting “the worst of what was going on in society.” At the other end of the spectrum, Lear collaborated with Alex Haley and brought a classy drama, *Palmerstown, U.S.A.*, to the air in 1980.

Always present at story conferences of every series, even when he had as many as six on the air at one time, Lear’s influence could be seen in every show. During most of the 1970s, he even performed as the “warm up” entertainer for the audiences assembled to watch weekly tapings of his shows, a production schedule that ran from late summer to early spring. He was fond of describing various episodes as sensitive, requiring his constant attention for just the right touch. He and executive assistant Virginia Carter spent several hours one Sunday evening discussing a single dramatic development—how to treat Walter Findley’s alcoholism and Maude’s response.

When Lear left active involvement in television production in 1978, he left a company without a creative rudder. Few projects reached the small screen and those that did were poorly received. Much of Lear’s own attention turned to the development of various media-related industries, cable television, motion picture theaters, and film production companies.

By 1980 Lear was alarmed by the radical religious fanaticism of Christian fundamentalists. At first he thought he would use a television series to respond. He developed a series concept, “Good Evening, He Lied,” in which the costar of the show would be a woman newswriter in her 30s, very professional, trying to do her job as a writer for an egotistical, airhead male news anchor. A moralist at heart, Lear also proposed to have the woman be a devout, mainstream Protestant Christian, openly practicing her faith. It was a fine idea and demonstrated anew Lear’s genuine respect for sincere religious convictions. NBC approved the idea, but Lear did not pursue the production. He became convinced that another approach would be more effective for him, and he founded People for the American Way to speak out for Bill of Rights guarantees and monitor violations of constitutional freedoms. By the mid-1990s, the organization had become one of the most influential and effective voices for freedom.

In the 1990s, Lear returned to television with several efforts. Neither *Sunday Dinner* addressing what Lear calls “spirituality,” nor *704 Hauser*, involving a black family moving into Archie Bunker’s old house, found an audience. Lear’s voice is still heard through public appearances. He has not abandoned television, but he is less frequently involved directly with the medium. It is possible, however, no single individual has had more influence through the medium of television than Norman Lear.

**Leave It to Beaver**

U.S. Situation Comedy

*Leave It to Beaver*, a series both praised for its family-bolstering innocence and panned for its homogenized sappiness, served as a bridge between the waning radio comedy and the blossoming of the television “sitcom.” The show was created by Joe Connelly and Bob Mosher, two writers who first worked together at the J. Walter Thompson advertising agency in New York. Leaving the agency in 1942 to devote their talents to radio comedy writing, the duo worked on shows starring Edgar Bergen, Frank Morgan, and Phil Harris before securing jobs on the wildly popular *Amos 'n' Andy* program. Over a period of 12 years, they earned writers' credits on more than 1,500 radio and television scripts for that series; continuing to create material for the show's radio version right up to *Beaver's* third year. Although *Amos ’n' Andy* now is viewed as a distorted repository of racial stereotyping and segregated casting, Connelly and Mosher's experience on that program helped them refine a flair for extracting humor from uncomplicated yet likable characters immersed in unremarkable situations with which the audience could easily identify.

Connelly and Mosher's first solo television effort was a short-lived anthology series for actor Ray Milland. This uncharacteristic failure, they revealed in a *New York Times* interview with Oscar Golbout, taught
Leave It to Beaver

them to restrict themselves to writing “things we know about.” They followed up on this resolution by taking a situation Connelly had observed while driving his son to parochial school and crafting it into *The Private War of Major Benson*, a theatrical feature starring Charlton Heston that won the pair an Academy Award nomination in 1956. It was from such real-life simplicity that *Leave It to Beaver* was born. In 1957 Connelly and Mosher developed a concept for an adult-appealing show about children. Unlike such predecessors (and competitors) as *The Life of Riley, The Adventures of Ozzie and Harriet, and Father Knows Best*, it would not be the parents who served as Beaver’s focal point but rather, their offspring. The stories would be told from the kids’ point of view as Connelly and Mosher recalled it and observed it in their own children. Mosher was the father of two children and Connelly the parent of six. While all of these offspring served as sources for the show’s dialogue and plot lines, Connelly’s eight-year-old son Ricky was the inspiration for Beaver, his 14-year-old son Jay the model for Beaver’s older brother Wally.

Remington Rand picked up the project that became a co-owned vehicle in which Connelly and Mosher had 50 percent and comedian George Goebel’s Gomalcon Production controlled the other half. The creative and casting aspects of the show were put together by dominant talent agency MCA (then known as the Music Corporation of America).

From its inception, *Beaver* was fashioned as a traditional family unit with two sons. Beaver Cleaver was near eight when the show began, and his brother Wally was 12. Although Beaver’s real name was Theodore, the nickname was emphasized to suggest a toothy, perky youngster who was “all boy.” Early in the series, Beaver explains that he acquired the moniker as a baby when toddler Wally could only pronounce Theodore as “Tweeter.” Parents Ward and June modified the sound to the slightly more dignified “Beaver,” which would be the show’s namesake. The pilot script was, in fact, titled *Wally and Beaver* to emphasize the project’s child’s-eye viewpoint. Sponsor Remington Rand felt this might suggest a nature program, however, so the series became *Leave It to Beaver*.

*Beaver* ran on network television from October 1957 to September 1963, the first season on CBS and the following five on ABC. Paralleling the network shift, the show’s production relocated from Republic Studio to Universal Studios after the second year—and the on-screen Cleavers moved from a modest, picket-fenced house at 485 Maple Drive to a larger abode at 211 Pine Street—both in the small and vaguely Midwestern town of Mayfield. A library of 234 episodes was produced, in which the characters were allowed to naturally age with their actors. Beaver went from a dirt-loving little boy to a gawky teen about to enter high school. Wally matured from a preteen just beginning to take an interest in girls to a poised young man ready to leave for college. In the show’s first seasons, when actor Jerry Mathers was at his cutest, his Beaver character was the program’s centerpiece. As he became a more gangling preadolescent, more plot attention was directed toward Wally, whose portrayer Tony Dow was developing into a handsome teenager. Through it all, father Ward (played by Hugh Beaumont, a Methodist lay preacher and religious film actor) and mother June (grade-B film and TV drama veteran Barbara Billingsley) observed and nurtured their children with quiet selflessness and obvious love.

Despite its six-year-run as a prime-time network offering, *Beaver* never made the coveted top-25 list. Nevertheless, its down-to-earth writing, low-key acting, and uncontrived storylines served as a memorable and well-crafted icon for the positive if unremarkable joys of middle-class family life in general and suburban kid-dom in particular. If *Beaver*’s ignoring of significant social issues was a common flaw of the programs of its time, its unpretentious advocacy of personal responsibility and self-respect was an uncommon virtue. Admittedly, as critic Robert Lewis Shayon observed, Ward and June Cleaver were “Mr. and Mrs. Average-American living in their typical *Good Housekeeping* home.” But what happened in and around that home was a consistent and continuous celebration of all those minor but precious family victories that could be won even when the children themselves were required to be the decision makers.

Less than three months after *Beaver* left the air, the assassination of President John F. Kennedy changed the nation’s view of itself and its times. Connelly and Mosher went off to write *The Munsters*, and a country preoccupied with civil rights strife, Vietnam, Woodstock, and Watergate would find little relevance in *Beaver*’s radio-derived simplicity. But by the late 1970s, the show’s uncomplicated and nonabrasive observations reacquired appeal. On superstation WTBS and scores of other outlets, *Beaver* reruns enjoyed significant ratings success. Beaver and Wally appeared on packages of Kellogg’s Corn Flakes in 1983, and the show’s cast members have since been featured in a variety of retrospective projects. A striking example of the wistful admiration for all the series still represents was uncovered in a 1994 *Parenting* magazine poll. Predictably, 40 percent of respondents said the contemporary super-hit *Roseanne* reflected their family life—but a full 28 percent picked *Beaver* instead. What Wally once observed about his brother may be true of the program as a whole: “He’s got that little kid ex-
Leave It to Beaver

pression on his face all the time, but he’s not really as goofy as he looks.” After almost half a century, Beaver continues its on-air exposure with frequent airings on such nostalgia-oriented cable networks as TV Land.

Leno, Jay (1950–)

U.S. Talk Show Host, Comedian

With his sanitized comedy appealing to middle-class sensibility and ordinary, nice-guy demeanor, Jay Leno rose from comedy hall fame to win the coveted host seat of NBC’s Tonight Show in 1992. In so doing, Leno followed in the footsteps of the great past hosts, Johnny Carson, Jack Paar, and Steve Allen.

Leno began his stand-up career in Boston and New York comedy clubs and strip bars. During the 1970s, he became a popular warm-up act for such divergent performers as crooner Johnny Mathis and country singer John Denver, and he wrote scripts for the sitcom Good Times, starring Jimmy Walker. He obtained similar work for David Letterman, who, after he began hosting Late Night with David Letterman, granted Leno more than 40 appearances on that program. Leno became a popular guest on the Merv Griffin and Mike Douglas shows and on The Tonight Show, and by 1986 he was named one of several guest hosts for the latter program. An uniring success-seeker, Leno still spent 300 days a year on the road.

As a popular stage and television stand-up comic, Leno strives not to offend, offering nonracist, nonsexist, anti-drug humor. Like forerunners George Carlin and Robert Klein and contemporary Jerry Seinfeld, Leno is not capricious. His focus is on ridiculing the mundane, the idiocies of social life. His feel-good approach avoids cynicism and promotes patriotism. In 1991, for example, he performed for U.S. military personnel stationed in the Middle East. Despite his penchant for politically liberal jokes, Leno insists that his
humor is nonideological and thus apolitical. Hence, he appeals to a conventional and politically diverse—that is, broad—American public.

Although he was the exclusive guest host for The Tonight Show since 1987, Leno’s selection as Carson’s successor caused surprise and controversy in the industry. Letterman—whose popular late, late show had followed Tonight for years and created expensive advertising slots—had been slated for the job. However, NBC was attracted to the more cooperative Leno, matching his wit to the older Tonight Show audience. Moreover, an aggressive Leno promoted himself, working the affiliate-station personnel, who in turn boosted his popularity ratings. Ultimately, Leno was simply more affordable than Letterman, allowing The Tonight Show to maintain its $75 million to $100 million profit base.

Seeking Letterman’s fans, Leno’s Tonight Show featured a renovated stage; young, popular guests; and the music of popular jazz musician Branford Marsalis. Controversy came to the set early on, when NBC fired Leno’s long-time, tumultuous manager Helen Kushnick, and later when Marsalis, in a wrangle over artistic control, quit and was replaced by Kevin Eubanks. Thereafter, Leno fared decently in the ratings, but he failed to impress reviewers as had Carson and Paar. Accustomed to practicing his routines many times before a show, Leno suffered agitation with his new, full-week schedule. Moreover, a year into the show, Leno was faced with a rating war against CBS’s new Late Show, hosted by highly paid competitor Letterman.

During the Late Show’s first three years, it regularly bested the Tonight Show in the ratings, particularly with the younger audiences. This was particularly damaging as Tonight had the advantage of airing a full hour earlier than Late Show across 30 percent of the nation. Leno, in comparison to Letterman, was an unseasoned monologist, and a sometimes distracted interviewer, lacking ad-libbing skills. To boost ratings, Leno agreed to hire new Tonight writers and hawk advertiser’s goods—Hondas and Doritos—on air. In early 1995, Tonight revamped the show from a talk to a variety format, creating a comfortable, comedy club-type studio for Leno. A more responsive and fluid Leno raised Tonight’s ratings to competitive levels, and by 1996 the program had intermittently regained its status, held since 1954, as the most popular late night show in the United States. By 2002 The Tonight Show with Jay Leno was consistently winning over its competitors, The Late Show with David Letterman and ABC’s news program Nightline.

Leno was frustrated by his make-or-break Tonight Show role, but he was not broken by it. Rather, he responded predictably to this midcareer trauma with more strenuous effort on the set and increased appearances at Las Vegas clubs and college campuses. A popular comic, Leno has been named Best Political Humorist by Washingtonian Magazine and one of the Best-Loved Stars in Hollywood by TV Guide.

Leonard, Herbert B. (1922– )  
U.S. Producer

Herbert B. Leonard was one of many Hollywood veterans to try his hand as a telefilm producer in the early 1950s, but few were as successful, and none made the transition with such outstanding results. Like other alumni of the studio system, Leonard started his television career by turning out formulaic fare in the B-movie vein, but by 1960 he was producing two of the most literate and visually arresting series of the sixties, or any decade: Naked City and Route 66.

Leonard started in the movie business as a production manager for producer Sam Katzman at Columbia in 1946. During this apprenticeship, overseeing the logistics of low-budget potboilers, westerns, and swashbucklers—and the Jungle Jim series for which Katzman is perhaps most famous—Leonard developed a knack for efficient production, and an affinity for location shooting that would mark his later television work.

After nearly eight years with Katzman, Leonard struck out on his own as an independent television producer. For his first effort Leonard secured the rights to the old Rin-Tin-Rin feature film property and turned the concept into a juvenile-oriented western series, The Adventures of Rin Tin Tin, which joined the heroic German shepherd with a young orphan boy at a frontier cavalry fort in the 1880s. This project launched Leonard as an “in-house” independent with Screen Gems, Columbia’s television subsidiary, whereby the studio provided pilot financing and production facilities in return for distribution rights and a cut of the profits. With Rin Tin Tin a hit on ABC, Leonard mounted two more half-hour series, Tales of the 77th Bengal Lancers and Circus Boy. Circus Boy was a variation on Rin Tin Tin, centering on the adventures of an orphan and an elephant with a traveling circus in the 1890s, and 77th Bengal Lancers followed the exploits of a British cavalry troop in 19th-century colonial India—all the elements of a TV western in a more exotic setting. Both series were sold to NBC for fall 1956, and by early 1958 Leonard was in pre-production on two more half-hour entries, Rescue 8 and Naked City. The former was a syndicated adventure series about the Los Angeles Fire Department Rescue Squad, notable for its unprecedented location shooting in and around L.A., with spectacular rescues staged in real locations.

For Naked City, Leonard not only left the studio, but the state. The producer became intrigued by Naked City’s potential as a series after seeing the 1948 feature The Naked City when Columbia acquired it for television release in 1957. Although Screen Gems sales execs were lukewarm to the idea, Leonard purchased the rights to the film property, and hired Stirling Silliphant to write the pilot. Leonard described the show to Vari-
ety as “a human interest series about New York,” a vehicle for anthology-type stories as seen through the eyes of two detectives. He also announced that he would be shooting the ABC series entirely on location in New York, on both counts (“entirely on location” and “in New York”) a major departure from the standard telefilm practice of the time. Naked City made an impact on critics with its gritty style and authentic look, but its stories were constrained by the 30-minute format, and its downbeat dramatics could not dent the ratings of the established Red Skelton Show; it was not renewed for autumn 1959.

By then Leonard was already planning his next series. Brainstorming for a vehicle for a young actor named George Maharis (who had caught Leonard’s eye in a couple of supporting roles on Naked City), Leonard and Silliphant came up with the idea for Route 66: two restless young men roaming the highways of the United States in a Corvette, searching for meaning. Screen Gems was even less enthusiastic about this concept than it had been about Naked City, and flatly refused to finance the pilot, so Leonard put up his own money and assembled a crew in Kentucky to shoot the pilot in February 1960. A few weeks later, with a rough cut in hand, the studio sales force changed its tune and sold the show to CBS.

Meanwhile, Naked City had not been forgotten. In the autumn of 1959, an advertising executive approached Leonard with the idea of mounting Naked City for the following season, again on ABC, this time a 60-minute program. The network also agreed to finance the pilot. After some initial hesitation due to his Route 66 demands, Leonard agreed, turning to Silliphant for the pilot script, and by February of 1960 pilot shooting had been completed. With Silliphant heavily involved in Route 66, Leonard hired Howard Rodman as story editor and frequent scripter on the revised Naked City. Yet another hour-long Leonard-Silliphant project, Three-Man Sub (a peripatetic adventure whose premise is explained by the title), made it to the pilot stage in late 1959—shot on location around the Mediterranean—but did not sell. In March 1960, Variety trumpeted Leonard as the “Man of the Hours,” the only independent producer to have two one-hour series in production that season.

Although supervising two successful network series, Leonard found the time to launch yet another project far from Hollywood in 1961, Tallahassee 7000. The syndicated half-hour entry featured Walter Matthau (with a southern accent) as an investigator for the Florida Sheriff’s Bureau, and was shot on location all over Florida. The series was cast in the hard-boiled mold, with Matthau providing first-person voice-over narration à la Mike Hammer.

Route 66 marked the end of Leonard’s relationship with Screen Gems. He went on to produce a handful of feature films and made-for-TV movies in the 1960s and 1970s and set up a production equipment rental house as a sideline, using all the gear he had accumulated in his years on the road. In the late 1980s, Leonard revived his first TV project in a Canadian-produced series, Rin Tin Tin K-9 Cop, with the modern “Rinty” now in the public service as a police dog.

Route 66 and Naked City remain high watermarks of American television drama, and set Herbert B. Leonard apart as one of the industry’s most innovative producers of any era.

Alvey, Mark, “Wanderlust and Wire Wheels: The Existential Search of Route 66,” in The Road Movie Book, edited by
Leonard, Sheldon (1907–1997)
U.S. Actor, Director, Producer

For nearly two decades, from the early 1950s through the late 1960s, Sheldon Leonard was one of Hollywood’s most successful hyphenates, producing—and often directing and writing—a distinctive array of situation comedies, of which three justly can be considered classics (The Danny Thomas Show, The Andy Griffith Show, and The Dick Van Dyke Show). Although he assayed the hour-long espionage form with conspicuous success as well, the sitcoms remain the Leonard hallmark. Long before Taxi, Cheers, and MTM Productions, Leonard was overseeing the creation of literate, character-driven ensemble comedies that blended the domestic arena with the extended families of the modern workplace.

Like many independent producers in television’s formative years (Bing Crosby, Desi Arnaz, Jack Webb, Dick Powell), Leonard began his show business career in front of the cameras. After six years acting on Broadway (during which time he also took his first stab at directing, for road companies and summer theater), in 1939 Leonard made the move to Hollywood, where he would go on to appear in 57 features over the next 14 years. It was not long before the actor was equally busy in radio, with regular roles on several programs (The Jack Benny Show, The Lineup, and Duffy’s Tavern, to name only a few), and guest parts on dozens of others. Although Leonard played a variety of characters in both media, the Brooklyn-toned actor—described as “Runyonesque” in most biographical sketches—is best remembered for his incarnations of quietly menacing gangsters.

As the 1940s wore on, Leonard decided to take up writing for radio, selling scripts to such anthology shows as Broadway Is My Beat. Already demonstrating the business savvy befitting a future producer, Leonard retained the ownership of his radio scripts after production, thus building a library of salable properties. It was not long before Leonard turned his writing talents to the new medium of television, writing teleplays (some adapted from his radio scripts) for the filmed anthologies. Next Leonard tried his hand at directing some installments, an experience that signaled a new chapter in his show business career.

His apprenticeship behind him, Leonard signed on as director of the Danny Thomas series Make Room for Daddy in 1953. He was promoted to producer in the show’s third year, remaining its resident producer-director for six more seasons. Between 1954 and 1957 the energetic director also found time to produce and direct the pilot and early episodes of Lassie and The Real McCoys (which was produced by Thomas’s company), write and direct installments of (fittingly enough) Damon Runyon Theatre, as well as act in a 1954 summer replacement series, The Duke. In 1961 Leonard became executive producer of the Thomas series (renamed The Danny Thomas Show), at which time he and the comedian teamed up to form their own production firm.

T and L Productions would go on to make a lasting mark on television comedy. At its peak in 1963, T and L had four situation comedies in prime time, with Leonard serving as executive producer on all four: The Danny Thomas Show, The Dick Van Dyke Show, The Andy Griffith Show, and The Bill Dana Show. Through their own separate companies, Leonard and Thomas also owned an interest in a fifth sitcom, The Joey Bishop Show, although Leonard had no creative role in the series after directing the pilot. To complete the T
Leonard's influence on television comedy is bound up in the T and L hits, but it also transcends them. He can be credited with spotting the potential of bucolic raconteur Andy Griffith and (with writer Artie Stande:) transforming him into wise and gentle Andy Taylor, sheriff of a fictional town called Mayberry. It was Leonard who recognized the story and character quality in a failed pilot written by and starring Carl Reiner and resurrected it by casting Dick Van Dyke in the lead role—retaining Reiner's writing talents. The excellence of the T and L programs is surely due in no small part to Leonard's commitment to the quality of the scripts, exemplified by his cultivation of writing talent, his promotion of writers to producers, and the extremely collaborative nature of the writing process on all the shows. Indeed, Leonard had an equally profound impact on the medium through the writers he mentored, notably Danny Arnold (Barney Miller), and the teams of Garry Marshall and Jerry Belson (The Odd Couple, Happy Days), and Bill Persky and Sam Denoff (That Girl, Kate and Allie).

Leonard's impact on television is attested to by the long-standing popularity of the Griffith and Van Dyke programs in syndication. Just as significant in terms of industry practice, Leonard pioneered the strategy of launching new series via spin-offs, thereby avoiding the expense of pilots. Both the Andy Griffith and Joey Bishop shows began with "backdoor pilots" (directed by Leonard) aired as episodes of The Danny Thomas Show; similarly, Bill Dana's José Jimenez character began as a recurring character on the Thomas show before setting out on his own series. While the Dana and Bishop vehicles were flops, Leonard scored a long-running success with another spin-off in 1964, when he and The Andy Griffith Show producer Aaron Ruben sent a popular resident of Mayberry off into six years of military misadventures on Gomer Pyle, U.S.M.C.

Leonard's impact on television comedy, unique to the T and L sitcoms during the 1960s, it underlines their emphasis on characters, relationships, and emotion over situation and slapstick. One need look no further for proof of this than The Andy Griffith Show character Deputy Barney Fife, who, in even the most outrageously broad moments, is underlined with a humanity that keeps him believable.

Leonard's influence on television comedy is bound up in the T and L hits, but it also transcends them. He can be credited with spotting the potential of bucolic raconteur Andy Griffith and (with writer Artie Stande:) transforming him into wise and gentle Andy Taylor, sheriff of a fictional town called Mayberry. It was Leonard who recognized the story and character quality in a failed pilot written by and starring Carl Reiner and resurrected it by casting Dick Van Dyke in the lead role—retaining Reiner's writing talents. The excellence of the T and L programs is surely due in no small part to Leonard's commitment to the quality of the scripts, exemplified by his cultivation of writing talent, his promotion of writers to producers, and the extremely collaborative nature of the writing process on all the shows. Indeed, Leonard had an equally profound impact on the medium through the writers he mentored, notably Danny Arnold (Barney Miller), and the teams of Garry Marshall and Jerry Belson (The Odd Couple, Happy Days), and Bill Persky and Sam Denoff (That Girl, Kate and Allie).

Leonard's impact on television is attested to by the long-standing popularity of the Griffith and Van Dyke programs in syndication. Just as significant in terms of industry practice, Leonard pioneered the strategy of launching new series via spin-offs, thereby avoiding the expense of pilots. Both the Andy Griffith and Joey Bishop shows began with "backdoor pilots" (directed by Leonard) aired as episodes of The Danny Thomas Show; similarly, Bill Dana's José Jimenez character began as a recurring character on the Thomas show before setting out on his own series. While the Dana and Bishop vehicles were flops, Leonard scored a long-running success with another spin-off in 1964, when he and The Andy Griffith Show producer Aaron Ruben sent a popular resident of Mayberry off into six years of military misadventures on Gomer Pyle, U.S.M.C.

Leonard and Thomas parted company in 1965, and Leonard shifted generic gears, mounting the globe-trotting espionage series I Spy. Among a spate of spy shows popular in the mid-1960s, I Spy distinguished itself for its mix of humor and suspense, and its exotic locales (Leonard and company spent several months each season shooting exteriors around the world in such faraway places as Hong Kong, England, France, Morocco, and Greece). But the most significant aspect of the series was Leonard's decision to cast African-

![Sheldon Leonard, 1966. Courtesy of the Everett Collection](image-url)
American comedian Bill Cosby opposite Robert Culp as the series' two leads. If the move seems less than startling in retrospect, one need only look back at the *Variety* headline announcing the Cosby hire, dubbing the actor "Television's Jackie Robinson." Thanks to sharp writing and the chemistry of its leads, *I Spy* was hip without being campy, as witty as it was exciting. The series was nominated for the Outstanding Dramatic Series Emmy every year of its three-year run and earned Leonard an Emmy nomination for directing in 1965.

Leonard returned to the sitcom form in 1967 with the short-lived *Good Morning, World* (written and produced by Persky and Denoff), another reflective, quasi-show-biz format in *The Dick Van Dyke Show* vein, concerning a team of radio deejays, which also anticipated the ensemble comedy style of the MTM shows of the 1970s. The producer shifted genres again in the spring of 1969 with the lighthearted mystery *My Friend Tony*, but the program was not renewed after its trial run. Leonard's most innovative comedy project came along in the fall of that year, *My World and Welcome to It*, a whimsical comedy based on the stories of James Thurber and interspersed with animated versions of Thurber's cartoons. Despite critical acclaim and an Emmy for Outstanding Comedy Series for 1969, the series was not a ratings success and was canceled after one season. Leonard's final forays into situation comedy were less prestigious: *Shirley's World*, a Shirley MacLaine vehicle in *The Mary Tyler Moore Show* mold, and *The Don Rickles Show*, an ill-fated attempt to package the master of insult comedy in a domestic sitcom.

Throughout the 1950s and 1960s, Leonard had continued to take on the occasional acting job, re-creating his radio role as the racetrack tout on *The Jack Benny Show*, appearing as Danny Williams's agent on *The Danny Thomas Show*, and doing a gangster turn in an episode of *The Dick Van Dyke Show*. Still typecast after almost 40 years, Leonard acted the tough guy yet again in 1975 as the star of the short-lived series *Big Eddie* (as a gambler-turned-sports promoter), and once more in 1978 in the made-for-TV movie *The Islander* (as a mobster). That same year Leonard discharged executive producer duties and acted in the TV movie *Top Secret*, a tale of international espionage starring and coproduced by Bill Cosby. Later, Cosby recruited Leonard to fill the executive producer slot on *I Spy Returns*, a 1993 TV-movie sequel that reunited Culp and Cosby as the swinging (and now seasoned) secret agents.

Few individuals have had the longevity in the television business that Sheldon Leonard had, and even fewer have had long-run success comparable to his string of hits spanning nearly two decades. Fewer still have had the remarkable impact on the medium, both creatively and institutionally. It might be an exaggeration to say that without Sheldon Leonard there would have been no spin-offs, and no Cosby, but it is certain that both phenomena hit the screens of the United States when they did through Leonard's efforts. Certainly, without him neither Rob and Laura Petrie nor Mayberry would exist as we know them. At the end of his 1995 autobiography, Leonard vowed a return to do battle with the networks on the field of television creativity. Although that engagement was cut short by Leonard's death in 1997, his contribution to the literature that is American television comedy continues to play out in syndication, and may well do so forever.

Leslie Uggams Show, The

U.S. Music/Variety Show

The Leslie Uggams Show, which premiered in September 1969, was the first network variety show to feature an African-American host since the mid-1950s Nat "King" Cole Show. Uggams's show took over the CBS Sunday night slot vacated by The Smothers Brothers Comedy Hour, the controversial variety show CBS had censored and then forcibly removed from the airwaves the previous April. Produced by Ilson and Chambers, the same team who put together the beleaguered Smothers program, Uggams’s show was given very little opportunity to prove itself and find an audience against the popular Bonanza on NBC. CBS pulled the plug in midseason, replacing the show with Glen Campbell’s Goodtime Hour in December 1969.
Leslie Uggams had achieved a modest amount of success both on Broadway and in television. As a teenager she was a regular player on the *Sing Along with Mitch* musical variety show broadcast on NBC in the early 1960s. However, many critics argued that she was too much of a novice to deal successfully with the performance rigors of a variety show. Questions were raised about why Uggams was chosen to replace the politically contentious Smothers program. Industry observers noted that CBS, suffering from a public relations problem due to its censorious activity, needed to rehabilitate its reactionary image. A black-hosted variety show that included a certain amount of social commentary on race issues might repair some of the damage.

*The Leslie Uggams Show* was noteworthy for the number of African Americans who participated in the show's production, including technical personnel. Regular cast members included actors Johnny Brown and Lillian Hayman. Resident dancers, singers, and orchestra were racially integrated, and the show boasted a black choreographer, conductor, and writer.

A major feature of the show was a continuing segment called "Sugar Hill" about a working-class black family. Uggams played the wife of a construction worker in the sketch. They lived together with Uggams's mother (Lillian Hayman), unemployed brother (Johnny Brown), and a "hippie" sister, in an unintegrated apartment that resembled *The Honeymooners*' home far more than the lavish and much commented upon integrated apartment building of television's other African-American family, the Bakers of *Julia*.

The show's quick demise generated protest and concern among black organizations from the Harlem Cultural Council, the Southern Christian Leadership Conference, the National Association for the Advancement of Colored People, and the Urban League. Whitney Young Jr., head of the Urban League, publicly expressed his concern over what he considered an overhasty cancellation. He argued the show was not given any time to prove itself or institute necessary changes. He also pointed out that CBS's action diminished opportunities for black performers and technicians. Twenty-eight African Americans were put out of work by the cancellation, according to Young. CBS countered that the show's demise had not generated much protest from viewers. While the canning of the Smothers Brothers had resulted in thousands of letters of complaint, the Uggams decision led to about 600 letters of disapproval.

While Leslie Uggams did not prove successful in a variety format, she did manage more notable achievements in dramatic acting. She went on to play major roles in the 1970s black-oriented miniseries, *Roots* and *Backstairs at the White House*. The first African American to really succeed in a variety show would be Flip Wilson in the season following the demise of the Uggams show.

Letterman, David (1947– )

U.S. Talk Show Host, Comedian

David Letterman has cultivated a national following of ardent fans with his offbeat humor and sophisticated smart-aleck comic style. That style was honed on his nighttime talk show on NBC, *Late Night with David Letterman*, which debuted in 1982 in the hour following *The Tonight Show Starring Johnny Carson*. Roughly a decade later, in 1993, Letterman changed time periods and networks, as *The Late Show with David Letterman* began broadcasting on CBS at 11:30 P.M., a more accessible and lucrative time slot.

Letterman rose to fame as talk show host and celebrity during a period in television history when late-night talk, a unique TV genre, began to stretch beyond the confines of the solid, long-standing appeal of NBC’s *Tonight Show*. His influence and appeal increased steadily until, by 1995, he was the most-watched and highest-paid late-night television talk show host in the United States. In 1996, however, NBC’s *The Tonight Show with Jay Leno* began occasionally overtaking Letterman’s programs in the ratings, and by the early 21st century, Leno’s show was regularly attracting a larger audience than Letterman’s. Although he has slipped a bit in the ratings, Letterman’s audience remains considerable (and represents a demographic that advertisers greatly desire), and he remains a favorite of critics, many of whom prefer his more pointed and acerbic style of comedy to the milder, “nice guy” humor of his *Tonight Show* rival.

Letterman began his career in broadcasting in his native Indianapolis, Indiana, where he worked in both television (as an announcer and weekend weatherman) and radio (as a talk show host). In 1975 he moved to Los Angeles, where he wrote comedy, submitted scripts for television sitcoms, and even appeared on various sitcoms and game shows. He performed stand-up routines at the Comedy Store, where he met Leno, by then a seasoned comedian, and Merrill Markoe, with whom he would later have a long-time professional and personal relationship. In 1978 Letterman made his first appearance as a stand-up comic on *The Tonight Show Starring Johnny Carson*. Shortly thereafter he was hired by NBC to host a morning television talk show, which was broadcast from New York. Although the program lasted only a short time, it was the comic forerunner to his late-night NBC hit.

*Late Night with David Letterman*, programmed to follow the familiar Carson formula, was a different kind of talk show, a format in which the comedy usually outshone the interviews. Letterman’s fascination with humor of the mundane, his quirky antics (Stupid Pet Tricks, Elevator Races, the Top Ten List), and his overall irreverence came on the heels of a new, hip style of comedy exemplified by NBC’s late-night comedy sketch program, *Saturday Night Live* (SNL). His style was attractive to a younger television audience that had been loyal supporters of *SNL* since the mid-1970s. However, Letterman retained *The Tonight Show* comedy/intererview format. Letterman was neither as emotionally nor as politically involved in his interviews as Paar had been. More like Carson, he exhibited a cool detachment from, and more middle-American stance toward, the political and social events of the day.

During his tenure at NBC, Letterman occasionally served as guest host on *The Tonight Show* in Carson’s absence. He shared that job with several others, mcst notably Joan Rivers and Leno. Letterman’s interview style on both *The Tonight Show* and *Late Night* was sometimes easygoing, sometimes mocking. Indeed, a number of guests found him to be a mean-spirited interviewer, and some celebrities claimed he was adolescent at best, highly offensive at worst. Nevertheless, he had a loyal following of late-night watchers, and he inspired a large number of discussions, references, and imitations among fans, in the media, and throughout popular culture.

By the early 1990s, speculation centered on which of the two most successful young comedians, Leno or Letterman, would be Carson’s successor upon his retirement. After intense network negotiations with both potential *Tonight Show* hosts—and considerable public attention—Leno succeeded Carson. At that point, Letterman accepted a generous offer from CBS to host his own show, and the two men became direct competitors at 11:30 P.M. on weeknights. On CBS, Letterman’s popularity grew. He maintained much the same approach to comedy he had at NBC, but he suffered some of his angry edge and irreverence. Some commentators attributed the changes to a desire, on both his part and the network’s, to broaden his audience in the earlier time slot.

1349
In the late 1990s and early 2000s, *The Late Show* was regularly visited by political figures eager to reach Letterman's large and diverse audience, including viewers who might not watch more traditional news programming. During his tenure as New York City mayor, Rudolph Giuliani made a number of appearances, not just for interviews but also as a reader of Top Ten lists and participant in comedy sketches. Other notable politicians to appear with Letterman have included President Bill Clinton, presidential candidates Al Gore and George W. Bush, Hillary Clinton (when she was running to become senator for New York), and U.S. Attorney General John Ashcroft (who played piano with *The Late Show* band). The ability of such political leaders to stand up to the jibes of Letterman and to make the audiences laugh has increasingly been seen as a kind of test of their suitability for office. Similarly, news anchors such as Tom Brokaw, Dan Rather, and even Ted Koppel (whose *Nightline* program directly competed with *The Late Show*) have frequently sat for interviews with Letterman, who gives them exposure to viewers outside of the aging demographic group most likely to watch network news.

In 2000 Letterman underwent heart bypass surgery after doctors discovered he had potentially life-threatening arterial blockages. When he returned to his program several weeks after his surgery, the *Late Show* host allowed himself a rare display of emotion, bringing his doctors and nurses onstage to thank them publicly for their care. More generally, this health scare helped focus popular and critical attention on Letterman's maturation and his evolving status as a late-night fixture of considerable influence.

Over the next couple of years, two other notable events would throw even more light on the power wielded by *The Late Show* and its host in the television medium and American popular culture more broadly construed. On September 17, 2001, Letterman was the first comedic talk show host to return to the airwaves after the terrorist attacks on the United States of September 11. When the show opened, he appeared at his desk (foregoing the usual fanfare, music, and introductory humorous monologue) and spoke without a script for several minutes about his own sorrow, anger, and horror at the losses that had occurred. Admitting to the audience that he was unsure if he should be on the air, he told them, "We're going to try and feel our way through this, and we'll just see how it goes." Letterman then followed his commentary with interviews: a serious discussion with CBS anchorman Dan Rather about the event that had occurred and a conversation with favorite *Late Show* guest Regis Philbin (who had also been on the last program before Letterman had surgery and the first after he returned to health). The approach taken by Letterman that night (including his tentative return to humor in a moment or two of gently mocking Philbin) was widely praised in the press, and other late-night comedians clearly took their cue from him as they too opened their first post-attack shows with personal, joke-free reflections on the event.

In April 2002, several months after *The Late Show* had settled back into its familiar comedy-talk format, Letterman again grabbed headlines, this time when it was revealed that ABC was making a bid to lure him away from CBS. If Letterman were to sign with ABC, it was announced, his show would replace *Nightline*, the venerable late-night news program that aired opposite *The Late Show* and *The Tonight Show*. To many observers, ABC's willingness to sacrifice news analysis for Letterman's more advertiser-friendly—and therefore potentially more lucrative—comedic fare signaled the degree to which U.S. networks had come to privilege profits over the public interest. Ultimately, Letterman decided to re-sign with CBS for several more years.

Prior to weekday taping sessions, sidewalks outside the Ed Sullivan Theater in New York City, venue for *The Late Show*, are typically the site of long stand-by lines of those hoping for seats inside the already packed house. Letterman clearly remains a celebrity whose voice resonates in contemporary American culture.

Gerald M. Levin was chairman and chief executive officer of AOL Time Warner/Time Warner for almost a decade (1993–2002) and retired in May 2002. He served in this role during an era of significant change for one of the largest media companies in the world and presided over the sale in 2000 of Time Warner to Internet service provider AOL.

He joined Time Inc. in 1972 after a brief career as an attorney and international investment banker. At Time Inc. he worked in the fledgling Home Box Office (HBO) pay-cable television subsidiary, starting out as a programming executive and eventually becoming chairman of the division. In 1975, during his tenure at HBO, Levin pioneered the use of telecommunications satellites for pay-cable television program distribution. At the time, HBO was using microwave technology to distribute programming to cable systems in Pennsylvania and New Jersey. Levin proposed that all national program distribution be accomplished by satellite transmission, a concept that transformed the U.S. premium-cable industry and led to a dramatic increase in the number of satellite-delivered cable networks. HBO experienced rapid growth after it became available via satellite and became a standard pay-cable offering during the late 1970s and 1980s. By 1979 Levin was a group vice president supervising all cable television operations, and eventually moved into the vice chairman's position in 1988. His ascension within the Time corporate hierarchy marked a transition from print-oriented managers to others, such as Levin, who were involved with electronic media.

Time Inc. merged with Warner Communications in 1990, and, as Time's chief strategist, Levin had an influential role in negotiating the complicated merger between two dissimilar corporate cultures. At the time, Time Warner published books and magazines, distributed recorded music, made motion pictures, and operated cable television production and distribution companies. From 1992 to 1995, Levin and Time
Levin, Gerald

Warner were the focus of a public furor over recorded music lyrics that some critics claimed were anti-social. Levin defended the constitutional First Amendment rights of the recording artists and film directors who created works for the company, but Time Warner finally dodged the controversy by divesting the music division that produced the most controversial recordings.

Levin also played a central role in the 1996 acquisition of Turner Broadcasting. The Turner purchase brought all of that company's cable programming assets to Time Warner, including the worldwide operations of CNN. The grand strategy was to create a vertically integrated media behemoth that would control not only the means of production in entertainment, news, and publishing, but also multiple channels of distribution for this content.

Levin was an ardent champion of Time Warner's Full Service Network (FSN), a 100-plus-channel cable television system that was first introduced in Orlando, Florida. The Full Service Network used large computer servers to provide digitized programming, such as feature films, on viewer demand. The FSN project was canceled after several years of operation, but the company learned a great deal about digital interactive services in the process.

The desire to have a major media presence on the Internet led to the purchase of Time Warner by America Online (AOL) in 2000. The deal was initiated by AOL CEO Steve Case in a series of meetings with Gerald Levin. The strategy was that the sale would facilitate the distribution of Time Warner programming by using the Internet to reach the large installed base of AOL subscribers. While Levin again worked hard to merge two dissimilar corporate cultures, the sale was initially not a good one for AOL Time Warner shareholders. Internal struggles at the company led to Ted Turner's "demotion" to board member and later to Levin's departure. Though announced as a voluntary retirement, some accounts indicated the exit was forced by influential members of the board, including Turner. AOL struggled to maintain its base of subscribers after the merger, and its poor performance provided a somber note for Gerald Levin's retirement.

Levin's ascension within Time Inc. (and later in Time Warner) reflects the increasing centrality of electronic communication in mass media companies. He was a champion of electronic media services, and his early ability to foresee the role of technology in media distribution was an important element of his tenure as the chief executive of one of the world's largest media organizations.

Since his retirement Gerald Levin has dedicated his time and energy to several charitable programs, in particular the creation of the Holistic Mental Health Institute in Los Angeles, California.

Levinson, Richard (1934–1987)
U.S. Writer

Richard Levinson teamed with William Link to write and produce some of the most memorable hours of U.S. network television in the history of the medium. Moving easily from series to made-for-television movies, the partners created, wrote, and produced at a level that led many of their peers to describe them as the Rolls and Royce of the industry. They received two Emmys, two Golden Globe Awards, three Edgar Allan Poe Awards from the Mystery Writers of America, the Writers Guild of America Award, and the Peabody Award.

As high school classmates, Levinson and Link made early use of wire recordings as an aid to developing their dramatic writing skills, then continued their collaboration through university studies at the University of Pennsylvania. Following graduation and military service, the two moved to New York to pursue a career in television, only to discover that the production end of the business had largely moved west. In 1959, their drama about army life, "Chain of Command," was produced as an installment of Desilu Playhouse, then chosen by TV Guide as one of the best programs of the
season. With that success, the team, known fondly by many of their associates as “the boys,” moved to Los Angeles, where in 1960 they were the first writers placed under contract by Four Star Productions.

For the first ten years of their work in Hollywood, Levinson and Link wrote episodes for various television series. In 1967 they created one of their own: Mannix. However, that series was taken in a direction opposite to their original intention by head writer Bruce Geller. In 1969 the partners first grappled with contemporary problems in a pilot for the lawyers segment of The Bold Ones. Their work on this series presaged their use of television to explore serious social and cultural themes in the made-for-television-movie format. They wrote and produced nine “social issue” films as well as launched one of the most popular of all television detectives, Lt. Columbo.

Frustrated by Hollywood production routines, Levinson and Link had returned briefly to New York earlier in the decade to write a stage play titled Prescription: Murder. That play introduced the Columbo character and became the foundation for the Columbo series, starring Peter Falk, which began on television in 1971 as part of The NBC Mystery Movie. As Levinson noted in an interview, “Columbo was a conscious reaction against the impetuous force of Joe Mannix.” Columbo was, at one point, the most popular television show in the world. Translated into numerous languages, the show still retains enormous popularity.

In November 1983, Link and Levinson went to Toronto to film an HBO movie, The Guardian, examining urban violence, fear, and responses to those realities. After a long and frustrating effort to cast the film on a very tight budget, Link and Levinson chose Louis Gossett Jr. to play the title character, John Mack, and Martin Sheen to play the protagonist, Mr. Hyatt. In the movie, Hyatt and his fellow tenants in a New York apartment feel so threatened by the growing violence in the neighborhood that they hire a professional “guardian,” only to discover that this man quickly establishes his own authority over them, one by one. In the course of the story, Mack successfully intimidates all the tenants even as he physically subdues and ultimately kills one intruder. One after another, the tenants trade freedom for security. Hyatt resists until he is threatened by a street gang and Mack saves his life.

As always, Levinson worried about the climax of the piece, left intentionally ambiguous. The final scene in The Guardian is an exchange of glances between Mack and Hyatt as the latter leaves the building for work the morning following his rescue. Sheen noted in an interview on the set that he played the expression to convey a sense of “What have I done?” Levinson, however, saw in the final frame on Hyatt a “spark of hope.” In either interpretation, the underlying question of the drama is made clear: does security demand denial of freedom? Sheen saw it as a parable and related the story to his own concerns regarding U.S. military-political issues and the belief that the only way to get security is to give up more and more freedom. For the writers, the television movie was “only” posing questions. But they saw the implications of what they were doing. In the end, the decent character was not a hero, and the frozen stare could signal either hope or despair.

Long and intense conversations between the writers on such issues regularly led to that same conclusion: “We don’t have to have the answers, we just raise the questions.” For Levinson, however, the posing of such questions set his personal direction as a dramatist. One sees this in the Crisis at Central High (1981), where Joanne Woodward portrayed assistant principal Eliza-beth Huckaby in a drama about racial integration set in Little Rock, Arkansas, in 1958. Although evenhanded, the moral high ground in the movie belongs to Huckaby and integration. Levinson’s moral questions are equally evident in the sympathetic treatment of Private Eddie Slovik in the story of the only U.S. soldier exe-
cuted for desertion in World War II, The Execution of Private Slovik (1974), and they inform the search for responsibility and judgment in The Storyteller (1977), an exploration of the role of television in instigating social violence.

In the summer of 1986, just a few months prior to his premature death, Levinson explored the problems inherent in another high-profile social issue—terrorism—in his last script, “United States vs. Salam Ajami.” The television movie was finally aired in early 1988 as Hostile Witness. In the film, he sought to provide a valid defense for a Lebanese terrorist charged in a U.S. court for a crime committed in Spain against an American tour group. In the story, the terrorist is kidnapped and brought to justice in a federal court in Virginia. Striving to achieve an objective portrayal of the motives for the terrorist and introduce to the audience some comprehension of such an individual’s rationale, Levinson was determined to raise philosophical questions, but he wanted no weaknesses in the case against the terrorist.

In 1987 Levinson died at the age of 52. When Link accepted their joint election into the Television Hall of Fame in November 1995, his words were almost all devoted to Levinson, who would, he said, be pleased with the recognition.

Liberace Show, The

U.S. Musical Program

Certainly among the most popular early television celebrities and performers, both Liberace the individual and his television program were among the most persistently derided. Oddly folksy and campy at the same time, Liberace and his show defined a certain strata of showmanship in the post-World War II era.

Born Wladziu (Walter) Valentino Liberace in suburban Milwaukee, Wisconsin, Liberace was interested in music from the age of four and won a scholarship to the Wisconsin College of Music at the age of seven, studying there for 17 years. Reputedly at the advice of family friend and renowned pianist Paderewski, the youngster decided that he too would someday be known by just one name. Although he was classically trained, he began to perform pop hits in local clubs as a teen. By the early 1940s, he was establishing himself in New York night spots; ads offered a phonetic guide for his fans (“Libber-ah-chee”). Playing cocktail lounges and intermissions for big bands, he received a rave Variety notice in 1945 while appearing at the Persian Room, which led to strings of dates across the United States. He won a small role in the film South Seas Sinner (1950).

In 1950 Don Fedderson, the general manager of Los Angeles station KLAC-TV, saw Liberace perform before a small audience at the Hotel del Coronado in San Diego, California, and immediately offered him a chance to appear on the new medium of television. The resultant series was so popular that it drew network attention, and when Liberace appeared on NBC as a summer replacement for Dinah Shore in 1952 (15-minute shows twice a week in prime time), he began to create a sensation. For a subsequent series, he wisely accepted what was at the time an unorthodox format of filming programs for syndication. As a result, when Liberace became a television fixture throughout the country by the mid-1950s, he also became very rich. The program was one of several shows featuring KLAC talent produced by Fedderson and syndicated by Guild Films. (Betty White was in another KLAC production, starring in Life with Elizabeth from 1951 to 1955.) Fedderson would go on to produce many successful television series, often for CBS, including My Three Sons and Family Affair.

Liberace's TV shows were famous for offering a range of popular and classical standards, and featured tributes to composers, musicians, and genres of music—everything from "The Beer Barrel Polka" to "September Song" to "Clair de Lune." Visually, they showed Liberace in direct address to the audience and in flamboyant performance, always smiling and often winking. No one in early television worked harder to create a star persona. Ever-present candelabras, piano-shaped objects large and small, and especially his outrageous and glamorous costumes defined Liberace's celebrity. Sentimental but ostentatious, the program also featured his elder brother George as violin accompanist and orchestral arranger, plus regular
and affectionate mentions of their mother, Frances. The show was immediately successful, appearing on 100 stations by October 1953 (more than any network program) and nearly 200 stations a year later. Liberace quickly sold out the Hollywood Bowl, Carnegie Hall, and other venues for live performances. A series of hit albums and a brief resumption of his movie career followed.

Liberace soon experienced the effects of overexposure: some local stations, desperate for programming, played his shows twice a day, five days a week. His career suffered a considerable slump after only a few years. In response, a short-lived daytime series in the late 1950s tried and failed to feature a scaled-down, tempered Liberace. A change of management and a return to extravagance in a series of Las Vegas venues restored his notoriety, and he made many guest appearances on TV variety and talk shows through the 1960s and 1970s. In a memorable film cameo, he played a quite earnest casket salesman in the black comedy The Loved One (1965). In the late 1960s, one last TV series was briefly produced in London.

Liberace’s popularity was typically met in the press with equal parts disbelief and disdain. The arrangements of his classical pieces were noted as simplifications, and his mix of classical and popular styles raised hackles about an encroaching middle-brow aesthetic. His personal eccentricities were detailed at length. More tellingly, the size and devotion of his following was seen to be problematic. That his audience was largely female, and often middle-aged, wrought clichéd anxieties about insubstantial and wayward popular culture; it even was suggested that he was not providing quality performances but rather represented for his fans an object to be mothered. In response to his critics, he uttered a still-famous retort: “I cried all the way to the bank.” In two instances, however, he responded with successful lawsuits—one against London Daily Mirror columnist “Cassandra” (William Neil Connor), and another against the infamous scandal magazine Confidential. Each had discussed his behavior or his appeal in terms that inferred homosexuality.

In retrospect, Liberace’s career seems due for reconsideration as a kind of “queer” open secret. The concern that his audience was mostly female, the regular speculation about his love life (When would he marry?), and the criticism of his attention to his mother all can be seen as touchstones for social anxieties of the time about appropriate gender roles and definitions. Indeed, if Liberace’s appeal was grounded in a decidedly unthreatening masculinity, marked by good manners and simplistic pieties, it also inspired a range of critical attention that often revealed a tendency to sexualize him. The libelous incidents were the culmination of this tendency and perhaps revealed more than they intended about “normative” attitudes about postwar male behavior. To be sure, there was nothing about Liberace that corresponded to “queer” underground culture or the avant-garde of the 1950s—no one appeared to be more mainstream. However, the contradictions within his very successful career and persona raise further questions about postwar society and culture. Liberace died of AIDS-related complications on February 4, 1987.

License

U.S. Broadcasting Policy

Under the Communications Act of 1934, the U.S. Federal Communications Commission (FCC) is responsible for the “fair, efficient, and equitable distribution” of television broadcast airwaves for use by the American public. As a result, any person or other entity (other than the federal government) wishing to operate a television broadcast facility must apply for and receive a government-issued license in order to reserve a transmission frequency for its television signal. These broadcast licenses are subject to review and renewal by the FCC every seven years for radio and every five years for television, unless the FCC determines a shorter period to be in the public interest.

In the United States, private individuals and companies are permitted to own and operate television stations for commercial and noncommercial use. However, because of their limited availability on the broadcast spectrum, the airwaves themselves are considered a finite public resource that is “owned” and regulated by the federal government on behalf of the American people. During the first half of the 1920s, when commercial broadcasting was in its infancy, pioneers in the industry had unfettered and virtually unlimited access to what was then an abundance of electromagnetic frequencies. By 1926, when the number of broadcast stations increased from 536 to 732, Congress became concerned that the rapid proliferation of broadcasters would quickly deplete available airwaves. In addition, advances in transmission technology enabled powerful, city-based operators to boost their signal range, effectively drowning out smaller, rural facilities. The chaos and cacophony of broadcasting in the mid-1920s ultimately led Congress to pass regulatory legislation in 1927, and again in 1934, requiring all station owners to apply for a broadcast license and meet specific criteria for eligibility before a license is issued or renewed.

Until the 1990s, the essential aspects of broadcast license grants largely stayed the same. In 1991, Congress amended the Communications Act to permit the FCC to choose new licensees by lottery, in an effort to streamline what had become a costly and burdensome hearing process. Following the Supreme Court’s decision in Adarand Contractors, Inc. v. Pena (1995), which placed all federal affirmative-action programs under strict scrutiny, the FCC introduced a gender- and race-neutral bidding system that gave preferential credit to small-business applicants.

In 1998, seeking to recognize the revenue potential of license grants, Congress enacted Section 309(j) of the act, which mandated an auction process for new licensees. Once the highest bidder is selected, opposing parties have ten days in which to file a petition to deny. If there is no objection, or if the FCC does not act on the petition to deny, the successful bidder pays the amount of the bid and is issued a construction permit. In order to assure diversity among licensees, the FCC granted a 25 percent “bidding credit” to minority-owned and women-owned applicants.

In determining who will or will not get a broadcast license, the FCC considers a wide range of factors that can vary or be waived under different circumstances. A successful applicant must be a U.S. citizen or an entity controlled by U.S. citizens, must be in good financial health, and cannot broadcast to more than 35 percent of the total national audience. While the FCC still enforces some restrictions designed to limit the dominance of a licensee in local markets, the period following the Telecommunications Act of 1996 has been marked by a movement away from licensing and ownership regulation. By the year 2001, the FCC had eased regulations that had been enforced for decades, including the duopoly rules,

License Fee

The term “license fee” has two meanings when applied to television. The first indicates a means of supporting an entire television industry. The second indicates support for the production of specific programs. When applied in the first sense a license fee is a form of tax used by many countries to support indigenous broadcasting industries. The fee is levied on the television receiver set and paid at regular intervals.

In the United States, a receiving-set license fee for the support of broadcasting was considered and rejected very early in radio’s infancy. At this time the new medium was considered a public resource, and the idea of support from advertisers was thought inappropriate. The license fee was one of several funding proposals, including municipal or state funding and listener contributions, offered by various sources in the 1920s. The license fee idea took two distinct forms. The first was modeled on the British scheme of taxing receivers in viewers’ homes. At that time, the British levy was 10 shillings per receiving set. The second approach, proposed by RCA’s David Sarnoff, called for a tax (2 percent) on the sale price of receivers. The success of toll broadcasting (broadcasting paid for by advertisers) near the midpoint of that decade squelched further discussion on the issue.

In the early days of U.S. television, the idea of a receiving-set license fee was briefly raised again by those who pointed to the failures and inadequacies of radio’s commercial nature. Because most early television stations were owned by broadcasters with long experience in AM radio, however, it was almost inevitable that advertising would provide the primary economic support for the new medium.

This was not the case in Great Britain. The license fee was in place from the earliest days of the British broadcasting service, having been mandated by the 1904 Wireless Telegraphy Act (and reaffirmed for radio and television in the Wireless Telegraphy Act of 1949). The level of the fee is set by Parliament through its Treasury Department. The BBC is allowed to make its recommendation, and, once set, the fee is collected by the Post Office, which is also responsible for identifying and tracking down those who attempt to avoid paying the fee (approximately 6 percent of the audience). The resulting income supports the broadcasting authority (the BBC) and its programming. As a public
The license fee system involves each member of the viewing public... in the feeling that he is entitled to a direct say in what he gets for his money. At the same time, the license fee system puts the broadcasters in a more direct relationship with the public than any other system of financing would. It reinforces a frame of mind in the BBC which impels us constantly to ask ourselves the question: "What ought we to be doing to serve the public better?"

Such a system for supporting a nation's broadcasting can be considered valuable in three respects. First, it assigns the costs for broadcasting directly to its consumers. Second, this tends to create a mutual and reciprocal sense of responsibility between the broadcasters and the audience members, which—third—frees the broadcasters from control and influence by governments (as might be the case where direct government support exists) or advertisers (as might be the case in commercial systems). Against these benefits is the problem of complacency. An increasing number of nations with license fees also allow limited commercial broadcasting, in part to overcome this tendency.

Many countries other than Great Britain, including Israel, Malta, France, the Netherlands, and Jordan, have some form of license fees. Some base their fee on color television only (like Great Britain) and some on color television and radio (for example, Denmark). Two-thirds of the countries in Europe, one-half in Africa and Asia, and 10 percent of those in the Americas and Caribbean rely, at least in part, on a license fee to support their television systems. Common among them is a philosophy of broadcasting that sees it as a "public good." A great many countries, however, if not all those reliant on a license-fee structure for funding

are now facing a new form of competition. Cable and satellite television have become common throughout the world, requiring subscription or payment fees in addition to the television license. These newer forms of distribution have also provided viewers with more programming options and, as audiences for state-supported systems decline in number, governments press the managers of state-supported broadcasting systems more severely to explain why the license fee should remain in place or be raised. In efforts to sustain or increase viewership, these circumstances have led to greater attention to numbers of viewers, to the creation of ratings systems to measure them, and to altered programming designed to attract larger audiences. In some views, these conditions have led to a severe erosion of the very notion of "public service broadcasting."

The second definition of license fee is applied most often in U.S. television, though its use is growing throughout television production communities elsewhere. It refers to funding that supports independent television production for broadcast networks or other television distributors such as cable companies. In this context, the license fee is the amount paid by the distributor to support production of commissioned programs and series. In exchange for the license fee, the distributor receives rights to a set number of broadcasts of commissioned programs. Following those broadcasts, the rights to the program revert to the producer. This form of production financing is central to the economic system of commercial television because the distributor's license fee rarely funds the full cost of program production. Producers or studios often finance part of their production costs and hope to recoup that amount when a program returns to their control and can be sold into syndication to other distribution venues. Nevertheless, the initial funds, in the form of a license fee, generally enable production to begin.

The Life of Riley, an early U.S. television sitcom filmed in Hollywood, was broadcast on NBC from 1949 to 1950 and from 1953 to 1958. Although the program had a loyal audience from its years on network radio (1943-51), its first season on television, in which Jackie Gleason was cast in the title role, failed to generate high ratings. William Bendix portrayed Riley in the second version, and the series was much more successful, among the top 25 most watched programs from 1953 to 1955. Syndicated in 1977, the series has been telecast on many cable systems.

The Life of Riley was one of several blue-collar, ethnic sitcoms popular in the 1950s. Chester A. Riley was the breadwinner of an Irish-American nuclear family living in suburban Los Angeles. Although most of the program took place within the Riley household, his job as an airplane riveter sometimes figured prominently in weekly episodes. Riley's fixed place in the socio-economic structure also allowed for occasional barbs directed at the frustrations of factory employment and at the pretensions of the upper classes. After The Life of Riley was canceled, blue-collar protagonists like Riley would not reappear until All in the Family premiered in the 1970s.

A pilot for The Life of Riley starred Herb Vigran and was broadcast on NBC in 1948. Six months later, the series appeared on NBC with Riley played by Gleason; however, Riley's malapropisms and oafish behavior were poorly suited to Gleason's wisecracking nightclub style. Bendix, who had played Riley on radio and in a movie version, was originally unable to play the part on television due to film obligations. When he did assume the role, however, he became synonymous with the character.

Bendix played Riley in a manner that resembled many of his supporting roles in Hollywood films of the 1940s: as a heavy-handed, obstinate, yet ultimately sensitive lummox. Each week Riley first became flustered, then overwhelmed by seemingly minor problems concerning his job, his family, or his neighbors. These small matters escalated to the verge of disaster once Riley became involved. Riley's catch phrase—"What a revoltin' development this is!"—expressed his frustration and became part of the national idiom. His patient wife, Peg (originally played by Rosemary DeCamp, then by Marjorie Reynolds), managed to keep the family in order despite her husband's calamitous blunders.

Other central characters included Riley's studious and attractive daughter, "Babs" (Gloria Winters, Eugene Sanders), and his younger, respectful son, "Junior" (Lanny Rees, Wesley Morgan). Riley also had several neighbors, friends, and coworkers. The most significant of these was Jim Gillis (Sid Tomack, Tom D'Andrea), Riley's smart-aleck neighbor whose schemes often instigated trouble.

The narrative structure of the series was much like that of any half-hour sitcom: Each week, stasis within the Riley household would be disrupted by a misunderstanding on Riley's part or by Riley's bungled efforts to improve his or his family's status. Catastrophe was ultimately averted by a simple solution, usually the clarification of a fact by Peg or another character besides Riley. Order was thus restored by the end of the episode.

The postwar suburban lifestyle conditioned much of the program's content. Mirroring trends established during the postwar economic boom, the Riley family lived comfortably, though not lavishly, aided—and sometimes baffled—by many of the latest household consumer gadgets. Gender roles typical of the era were also represented with Chester earning the family's single paycheck while Peg maintained the household. Similarly, Babs's problems typically concerned dating, while Junior's were related to school. Most of the problems in the Riley household occurred when the private and public realms merged, usually when Riley interfered with Peg's responsibilities.

Like many sitcoms of the 1950s, The Life of Riley reinforced the promise of suburban gratifications open to hard-working, white Americans. Even so, Riley's incompetence set him apart from his television counterparts. More so than Ozzie of Ozzie and Harriet, Riley's iniquity called into question the role of the American father and therefore of the entire family structure, thus preceding some 1960s sitcoms such as Green Acres and Bewitched that carried that theme even further.

Life on Earth
British Natural History Series

The genesis of Life on Earth came from several sources. The BBC had, during the 1970s, gained a reputation for producing landmark 13-part documentary series in which a noted expert in a particular field presented a definitive filmed account of that subject, using spectacular photography on diverse locations. These series had included Civilisation (1969) on the history of Western art, The Ascent of Man (1973) on the history of science, and Alistair Cooke’s America (1976) on the history of the United States. What better to continue the line than the story of life on Earth?

David Attenborough had gained his reputation as a program maker at the BBC in the field of natural history: writing, presenting, and producing programs on the subject for both children and adults. As is the way in the BBC, this led to promotion to executive status and eventually channel and program controllership and, though Attenborough was successful at this (indeed it was he who, as controller of BBC 2, had commissioned Civilisation and started the line of landmark documentary series), he grew dissatisfied and longed to return to his roots as a program maker.
By the late 1970s, the natural history program had evolved to the point at which constantly improving photographic techniques, allied to a seemingly inexhaustible supply of subject matter, meant that returning series like *The World About Us* (BBC) and *Survival* (Anglia), as well as the output of National Geographic, filled television screens with a constant stream of outstanding programming. Yet no overall survey of the subject had been attempted. The stage was set for *Life on Earth*, and it was to prove a turning point in the coverage of its subject.

*Life on Earth* took as its subject the evolution of species, which it traced through the development of all the major forms of life, from the single cell to *homo sapiens*. The 13 hour-long episodes were as follows:

1. “The Infinite Variety,” explaining the Darwinian theories of evolution and natural selection and how they produced such an enormous variety of life forms;
2. “Building Bodies,” on the origins of life and how single cells developed into primitive creatures in the seas;
4. “The Swarming Hordes,” exploring the diversity of insect life and how it depends on plant life;
5. “Conquest of the Waters,” on the variety of species of fish;
6. “Invasion of the Land,” considering the crucial stage of evolution when fish took to the land and developed into amphibians;
7. “Victors of the Dry Land,” on reptiles, including dinosaurs;
8. “Lords of the Air,” considering the theory that birds may have evolved from dinosaurs and exploring the spectacular variety of species;
10. “Themes and Variations,” considering how the wide variety of mammal life evolved from a common ancestor;

Although it told a coherent story, much of the success of *Life on Earth* was due to the succession of spectacularly photographed sequences on particular species, such as birds of paradise or big cats hunting on the African plain, and, despite the plethora of natural history programs available, *Life on Earth* represented a step forward in the presentation of the subject on television. It took three years to make, with a number of photographic units at work all over the world. Their work was linked by Attenborough’s authoritative script and narration and his pieces to camera filmed in all the relevant locations. Of these, the one that made the greatest impact, and has become a definitive moment in British television history, was his close encounter with a family of mountain gorillas in episode 11.

*Life on Earth* became a worldwide success and sparked an even greater demand for natural history programming, leading eventually to the emergence of a number of specialist channels devoted to the subject. For Attenborough himself, its success meant more of the same. He went on to present two very similar series, exploiting the vast array of potential subject matter, but arranging the latest spectacular wildlife sequences in different contexts. Thus *The Living Planet* (BBC, 1984) presented life on Earth from the perspective of habitat, while *The Trials of Life* (BBC, 1990) compared the approach of different species to the same problems. After that, he expanded several of the individual parts of *Life on Earth* into full-length series with *The Private Life of Plants*, (BBC, 1995), *The Life of Birds* (BBC, 1998) and *The Blue Planet* (BBC, 2001) on life in the seas.

Lifetime Television ranks among the oldest U.S. cable networks, and made substantial gains in audience size in the early 21st century. Throughout its nearly 20 years of existence, Lifetime has focused on serving the needs of female audience members, although it has varied its emphasis and strategy in seeking audiences of both sexes. As “Television for Women” (its slogan claims), Lifetime enacted one of the earliest narrowcast experiments, and yielded noteworthy success because of the degree to which women both are and are not a niche audience.

Lifetime Television was born from the merger of two cable networks in 1984. Daytime, a joint venture of Hearst and ABC, and the Viacom-owned Cable Health Network, had both launched in 1982, but struggled in this early era of limited cable distribution as neither network reached a large enough audience to command sizable advertising revenue. The newly created Lifetime retained programming from the original networks, with a heavy reliance on advertiser-created series and specials, many which featured pharmaceuticals and other health products, such as hormone supplements and diet aids. By the late 1980s, Lifetime began establishing its identity by acquiring off-net syndication rights to Cagney & Lacey, and by continuing original production of a series canceled by NBC, The Days and Nights of Molly Dodd.

The network experimented with other original dramatic series without success but began developing “World Premier Movies” produced originally for Lifetime in 1990, the form that most defined the network’s reputation. These made-for-Lifetime films have shifted narrative focus slightly but formulaically rely on a plot centered on a female character (often played by an established, but fading television actress) facing a challenging personal and/or professional situation, but surmounting the obstacles by the film’s conclusion. Most of the films are fictional, but some notable successes have been based on the lives of real women or news.

Although its films and series implicitly named the network’s focus for some time, Lifetime launched its signature “Television for Women” slogan in 1995, and continued to establish itself with films about female protagonists who struggle through crises to succeed in the end. Viacom sold its share of Lifetime to partners Hearst and Cap Cities/ABC in 1994, shortly before Cap Cities/ABC merged with the Walt Disney Company in 1995.

Lifetime spent nearly $8 million developing four pilots in 1998, three of which aired during the 1998–99 television season. The investment paid off when the two-hour time slot in which the network scheduled the three series (Any Day Now, Maggie, and Oh Baby) increased the number of female 18-to-49-year-old viewers by nearly 200,000 viewers per week (46 percent). Lifetime’s development of comedy series has been unsuccessful, with Maggie failing in the first year and Oh Baby in the second. Any Day Now developed a core following and drew critical attention for its stories about ethnic difference and racism in American culture. Lifetime has since emphasized dramatic series, debuting Strong Medicine, a medical series featuring two female doctors working in a women’s health clinic in 2000, and The Division, a detective procedural set in a predominately female squad in 2001. Throughout the 1990s, Lifetime attempted to appeal to a general female audience without emphasizing the fragmented and diversified nature of this group, yet provided some of the only non-white, non-upper-middle-class female characters on U.S. television.

In the midst of experimenting with original programming, Lifetime entered another transitional phase. Despite six relatively successful years, Lifetime did not renew the contract of CEO Douglas McCormick, who had held the position since 1993, and named Carole Black the new Lifetime CEO in March 1999. Thus, Lifetime employed its first female CEO, recruiting Black from KNBC in Los Angeles, where she served as the station’s general manager and was...
credited with bringing more women viewers to its newscasts. Black expanded the Lifetime programming budget to $236 million, a 20 percent increase over 1998.

Positive critical reception and some audience gains by the original series that Lifetime schedules in a block on Sunday nights contributed to the rising status and viewership of the network, although its made-for-Lifetime movies continue to reach the largest audience. This success led the network to create a second network, Lifetime Movie Network (LMN), in September 1998. Programming for LMN consists of movies, miniseries, and theatrical films from the Lifetime library, as well as some purchased from second-run distributors. Although early market surveys reported a ready audience for the network, with 93 percent of women who watched Lifetime aware of its films, the network had a slow start. Stymied mainly by lack of distribution, a year after its launch LMN reached only five million households. LMN increased its reach to over 15 million by mid-2001, the same year it launched another network, Lifetime Real Women. This network features reality programming such as Unsolved Mysteries, Intimate Portraits (Lifetime's self-produced biography series), and films based on true stories, but receives limited distribution. Branching out with subnetworks has allowed the "mother" network to focus on narrative series.

Black inherited a solid network and expanded its gains. In 2001 Lifetime ranked 17th in projected revenue among all U.S. networks with $715 million. Lifetime also possesses a large potential audience base, reaching 83.8 million cable and satellite homes, approximately 90 percent of those available. Nielsen Media Research ranked Lifetime the second most watched cable network with an average of 992,000 viewers per day (behind Nickelodeon), and, more significantly, Lifetime drew an average of 1.58 million viewers in prime time, which earned it the distinction of the most watched cable network in 2001. Despite the current viability of the network, Black faces pressure to continue its growth and to prevent new competitors from eroding its grip on the female cable audience. Lifetime now faces direct competition in the niche women's market with Oxygen Media launching in 2000 as an integrated cable and Web media company, and the rebranding of Romance Classics Network as the Women's Entertainment Network (WE) in 2001.

Likely Lads, The

British Comedy

When the BBC's second television channel began in 1964, it was generally intended to provide the sort of minority-interest, factual, and cultural programming that was being marginalized by the BBC's struggle for popularity against the commercial channel ITV. It was also intended to advance the technology of television by transmitting on the new 625-line standard, which would pave the way for the introduction of color. To receive it, viewers needed to buy a new television set—and to sell the new sets in large enough numbers, the new channel needed some popular programming.
In the field of comedy, *The Likely Lads* provided the perfect vehicle, being both innovative and within the tradition of popular entertainment. It launched the comedy career of the writing team of Dick Clement and Ian La Frenais and proved one of the infant channel's most enduring successes.

The protagonists are two young friends, Terry Collier and Bob Ferris, recently out of school and starting out in their first jobs. Their interests are predictable—girls, drinks, football, and fun. However, they are a new breed of working-class heroes. They have some money in their pockets and the Swinging Sixties are getting underway. The first scene of the first episode, "Entente Cordiale," sees them coming home from a holiday in Spain—the sort of thing that had been unavailable to their kind in earlier years but that had come to be taken for granted by their generation.

The setting, the northeast of England, was also fairly new—to television, anyway. In many ways, *The Likely Lads* was television's response to the portrayal of north country youth in such films of the early 1960s as *A Kind of Loving* and *Billy Liar*. Indeed, the two young actors chosen for the lead roles—James Bolam as Terry and Rodney Bewes as Bob—had begun their careers in minor roles in these films.

As the series progressed, the two characters emerged, and their differences were to form the basis for the comedy and the development of the show. Both the lads have a sharp intelligence but use it differently, and they reach different conclusions about what they want out of life. Terry is a cynic. He knows his class and his place in society, and his sole aim is to get what he can, when he can. Bob has ambitions. He thinks he can make a better life for himself but lacks confidence. Terry's crazy schemes scare him, but it is usually his friend who comes off worse.

There were three series of *The Likely Lads* between 1964 and 1966, a total of 20 episodes. In the final episode, "Good-bye to All That," Bob decides to join the army. Missing his friend, Terry signs up too, only to find that Bob has been discharged for having flat feet and that he, Terry, is committed for five years.

So, the likely lads went their own ways and the actors into different projects with varying success. But, with the spread of color television in the early 1970s, the BBC instituted a policy of reviving its biggest comedy successes of the 1960s. Following *Steptoe and Son* and *Till Death Us Do Part*, the decision was made to bring back *The Likely Lads*. However, unlike the other two sitcoms, *The Likely Lads* was not the same as it had been. The new title, *Whatever Happened to the Likely Lads?* reflected the fact that seven years had passed since they last appeared. The actors were older, and the characters had aged with them. Terry had seen the world (Germany and Cyprus) with the army. Bob had been successful at work, and, as the series opened in 1973, he is buying a new house and is about to marry his childhood sweetheart, Thelma (Bridgit Forsyth), and settle down to a respectable middle-class life.

Terry's return, and his withering contempt for what he sees as Bob's betrayal of his working-class roots, threatens to spoil Bob's plans and ruin his marriage, which takes place as the series progresses. At the same time, the shifting economic circumstances of the Northeast are reflected in Terry's feeble attempts to find employment or any sort of a role in a place that has changed so much in his absence.

*Whatever Happened to the Likely Lads?* provided, among all the laughs, a social commentary equal to anything found in the serious drama of the time. Two series were made in 1973 and 1974, a total of 26 shows. The actors, particularly James Bolam, tried subsequently to shake off their roles, but there are still many in Britain who wonder what Terry and Bob are up to now.

William Link and Richard Levinson formed one of the most notable writing and producing teams in the history of U.S. television. Working in both series and made-for-television movie forms, they moved easily from what they considered light entertainment to the exploration of serious and immensely complicated social problems. Their collaboration was of much longer standing than even their television careers suggest, for they had begun to work together in the early years of high school in Philadelphia, Pennsylvania. Even at that time the two wrote plays together, inspired by radio dramas, which they frequently wire recorded. After graduating from the University of Pennsylvania and completing service in the U.S. Army, they quickly formed an adult partnership that was to last until Levinson’s death in 1987. Intent upon building a career in television, they followed the migration of talent to California in 1960 and were quickly identified for their talents.

After almost ten years of working with series television, the “boys,” as they were identified by Martin Sheen, who often starred in their movies, began to explore “social issues.” It may have begun with their questions regarding the violence of television shows such as Mannix, their own creation. As Link put it in an interview, “Dick and I did not know whether television violence had an effect or not, but we just decided we were not going to do that kind of writing anymore.” Columbo was the natural answer. In Link’s words, “It portrayed a bloodless murder followed by a cat-and-mouse game. Columbo was a meat-and-potatoes cop who brought low the rich and famous.”

The partners made these social concerns explicit in the character of Ira Davidson, central figure in their made-for-television movie The Storyteller (1977). In that piece, Davidson, a television writer, engages his producer in a debate about TV violence. The producer questions the writer’s deletion of violent scenes from his original treatment. Davidson replies that he could tell the story just as well without vehicular mayhem. The producer then accuses him of acquiring a conscience just when nonviolence was fashionable and insists he does not want the Parent Teachers Association or anyone else telling him what kind of television to make. He wants to use violence when it works for the plot without interference from the network. Ira responds, “Agreed.” Surprised, the producer says, “Agreed? But I thought...” Ira ends the discussion by stating, “I was telling you what I am going to do. What you do is your business.”

Discussing those social dramas, Link commented, “The best things come to you—they fall into your hand or you see a human life situation like That Certain Summer—and you say that would make a good drama. It’s hard to begin by saying, ‘Let’s do a social drama.’ These things just occur to you.” Link’s philosophy of filmmaking is summed up in remarks he made in the early 1980s:

In the films where we have serious intentions, we tend to understate. This comes from a feeling that if you’re going to deal with subjects such as homosexuality, or race relations, or gun control, you should show some aesthetic restraint and not wallow in these materials like a kid who’s permitted to write dirty words on a wall. Our approach is that if you’re going to use these controversial subjects—play against them. Don’t be so excited by your freedom that you go for the obvious. The danger, of course, is that sometimes you get so muted that you boil out the drama. In The Storyteller we were so concerned with being fair and with balance that we lost energy and dramatic impact.

When Link spoke movingly about Levinson upon their induction into the Television Hall of Fame in 1995, the extremely difficult task of admitting to himself that there was no longer “Link and Levinson” was completed. Even as he oversaw the final production of the made-for-television movie United States v. Salaan Ajami (aired as Hostile Witness, 1988), that fact perhaps led to reviving a story idea Levinson had rejected.

Link wrote and produced The Boys (1991), dealing with a writing partnership in which one man smokes, while the other informs his colleague that he has contracted cancer from secondhand cigarette smoke. Herz was a social drama on two levels. While not strictly autobiographical, the drama was surely related to individual experience. Levinson smoked heavily during most of his adult years, and the practice most probably shortened his life. The Boys, then, was personal, but it also dealt with a real social issue.

After Levinson’s death, Link remained active as a
We produce for two reasons. One is to protect the material. And the second is that we've discovered that producing is an extension of writing. The day before they're going to shoot it, you walk on a set designed for a character you've written. You say to the art director, "The man we've written would not have these paintings. He would not have that dreadful objet d'art sitting there. It's much too cluttered for a guy of his sensibilities. So clean out the set...." We created that person as a character. We're also interested in how it's extended.

In the late 1980s, Link served as supervising executive producer of The ABC Mystery Movie. Leaving Universal in 1991, he became executive producer and writer for The Cosby Mysteries on NBC. He also became an actor in the series when Bill Cosby insisted on casting him as a saxophone instructor for Cosby's character. Appearing infrequently, Link was a natural for the part.

William Link has a lively sense of humor and frequently employs it to assail what he perceives as the current decay of the industry he loves. He is an avid reader of mysteries, extremely knowledgeable concerning music and cinema, and an active collector of Latin American art. He and his wife, Margery Link, live surrounded by the collection.

After *Bonanza* ended its successful run (1959–73) on NBC, the popular Michael Landon, who had played Little Joe Cartwright, was offered numerous TV opportunities. In addition to his acting duties, *Bonanza* had given Landon the chance to write and direct. He wanted to create a new series, yet he was unsure of what sort of project he wanted to pursue.

Ed Friendly, a former network vice president and coproducer of *Rowan & Martin’s Laugh-In*, was a savvy television veteran. Like Landon, he was looking for a new television series. To that end, he had acquired the dramatic rights for Laura Ingalls Wilder’s nostalgic nine-volume *Little House on the Prairie* book series from her family estate. Until Landon entered the picture, Friendly was unable to generate any interest in producing a television series based on the books. Networks were unimpressed with the no frills, values-oriented approach such a series would require. As luck would have it, Friendly proposed *Little House* to Landon at a time when his daughter, Leslie, was immersed in the *Little House* book series.

NBC had witnessed the success of CBS’s *The Waltons* and commissioned *Little House on the Prairie* as direct competition for the program. That was perfect for Landon, who differed from many of his Hollywood peers. He opposed TV violence, eschewed traditional Hollywood business models, and used *Little House on the Prairie* to convey positive family values. Landon wanted a show that families could watch together and he wanted to feature themes that would be important to a modern generation. Landon wrote, directed, and starred in the series from 1974 to 1982. Initially, he co-produced *Little House on the Prairie* with Friendly, but everyone knew from the outset that Landon was in charge. Friendly wanted the series to remain true to Laura Ingalls Wilder’s *Little House* book series, but Landon had other ideas.

Those viewers who tuned in to *Little House on the Prairie* expecting to see a *Bonanza* clone may have been disappointed. Both series were one-hour dramas and both were period pieces from the late 1800s, but the similarities ended there. There were no fights, shootings, or other instances of violence as there had been on *Bonanza*. Rather than the massive, sprawling Ponderosa ranch of the Cartwright clan, there was the humble Ingalls family log cabin. Instead of the eligible bachelor named Little Joe Cartwright, Michael Landon had a new alter ego in the settled, frontier family man named Charles “Pa” Ingalls. Landon’s on-screen character may have been different, but his creative work delighted audiences.

Although Landon considered the *Little House* books to be depressing, he knew the setting would work for a program that would be uplifting. From the beginning, Landon let Friendly know the direction the series would take; there was little relationship between the books and TV series. Landon blamed much of the inconsistency on the physical location for shooting the series. For example, Landon refused to have his character wear a beard as the real Charles Ingalls had done. Simi Valley, California, where the program was filmed, could reach temperatures of up to 110 degrees—something that would certainly not be commonplace in Minnesota, where the Ingalls family lived. Landon refused to let the child actors go shoeless like the children of the book. He was careful not to let them step on the thorns, glass, or snakes that were frequently discovered on the California set. And there was the fact that the main character in the book was Laura Ingalls—not her father. Since Landon was to play the father, he wanted that character to be the centerpiece of the production.

Friendly wanted the series to be like the books, but during production of the pilot commissioned by NBC, Landon’s intentions became obvious to Friendly. Friendly knew the cards were stacked against him, because NBC was in Landon’s corner. The two-hour *Little House on the Prairie* pilot aired on March 30, 1974, garnering a 26.2 rating and a 45 share. As a result, NBC picked up the series. It debuted on September 11, 1974, on NBC and was instantly successful with viewers. Friendly did all he could to wrestle control from Landon, but he knew there would be no series without Landon. Friendly gave up his fight before the series aired, but he may have found some solace in that numerous television critics panned the series. Many compared it unfavorably with *The Waltons*.

As farmer Charles “Pa” Ingalls, Landon played a pioneer father in the 1870s. Ingalls had built a farm near the border of Kansas and Oklahoma in the 1870s,
but he was forced to move when the federal government set aside the land for a Native American reservation. Ingalls, his wife Caroline (Karen Grassle), and their three daughters moved hundreds of miles to Walnut Grove, Minnesota. In Walnut Grove, the real-life Ingalls family lived in squalor. Charles situated the house on the banks of Plum Creek, where he literally made it from sod and mud. As the family crops paid off, Ingalls built a modest wooden house that had glass windows. Although the frontier was a difficult place to make a home or living, Landon did not want the TV family of _Little House on the Prairie_ to live in such a primitive home. The TV series was uplifting to many viewers, but it was equally depressing to others, with its weekly disasters ranging from swarming locusts, to blindness, illness, and prejudice.

The daughters were Mary (Melissa Sue Anderson), who was the eldest, Laura (Melissa Gilbert), who narrated the stories, Carrie (twins Lindsay and Sidney Greenbush—alternating), and Grace (Wendi and Brenda Turnbeaugh—alternating) who was added in 1977. The Ingalls characters later adopted other children.

When the series began, Landon believed the show was good for a four-year run. Its popularity kept it going for eight years, when Landon discontinued his regular appearances. He continued to produce the program for a ninth season when the show transformed into _Little House: A New Beginning_ (1982–83). Charles and Caroline moved to Iowa, leaving Walnut Grove to other family members. After the series ended, Landon produced three _Little House_ TV movies for NBC: _Look Back to Yesterday_ (1983), _Bless All the Dear Children_ (1984), and the appropriately named _The Last Farewell_ (1984). During its nine-year run, _Little House on the Prairie_ finished the year in the top 20 programs six times and was in the top ten two times (1977–78, 1980–81). Its highest annual rating was a tie for sixth in 1977–78. It has remained popular in syndication.

Littlefield, Warren (1952–)
U.S. Media Executive

Warren Littlefield was an executive at NBC from 1979 to 1998, and currently produces prime-time programming for several networks through his production outfit, the Littlefield Company, which he cofounded in 1999. Littlefield served as president of the entertainment division of NBC from 1991 to 1998, during which time he was responsible for the development of prime-time, late-night, and Saturday-morning entertainment programming. Under Littlefield's guidance, NBC rose from last place in almost every Nielsen rating category to become the top-ranked network for 11 of Littlefield's last 16 years at NBC, setting a record for consecutive years at number one. Littlefield contributed to the development of many of the series that defined "quality programming" in the 1980s and 1990s. NBC's entertainment programming received 168 Emmy Awards under his leadership.

Littlefield began his career in the mid-1970s as a gofer at a small media production company in New York City. By 1977 Littlefield was a vice president at Westfall Productions, where he developed and produced prime-time specials and movies, most notably the CBS movie The Last Giraffe, shot exclusively on location in Kenya. After a brief stint at Warner Brothers, Littlefield was hired by NBC's Brandon Tartikoff in December 1979 as manager of comedy development. He quickly worked his way up the executive ladder from vice president for comedy development in 1981 to senior vice president for prime time in 1987. Throughout the 1980s, Littlefield oversaw the development of several critically acclaimed and financially successful situation comedies, including Cheers, Family Ties, The Cosby Show, and The Golden Girls. He is also credited with casting Will Smith in NBC's successful Fresh Prince of Bel Air.

In 1990 Littlefield was appointed president of NBC Entertainment, making him second only to Tartikoff among NBC's program executives. When Tartikoff left NBC for Paramount in 1991, Littlefield replaced him at the helm. During the 1990s, Littlefield developed the NBC dramas and situation comedies Seinfeld, ER, Friends, Frasier, Mad About You, Just Shoot Me, 3rd Rock from the Sun, NewsRadio, Law & Order, and Homicide: Life on the Street. Shortly before leaving NBC, he was also involved with the development of Will and Grace, Providence, and The West Wing (owned by NBC Studios). In addition to these comedic and dramatic series, Littlefield acquired the film classic It's a Wonderful Life and presented the initial network broadcast of Schindler's List without commercials (underwritten by Firestone) to over 60 million Americans.

Littlefield is also widely regarded as the NBC executive who hired and supported Jay Leno over David Letterman as the host of The Tonight Show following Johnny Carson's retirement. Littlefield also oversaw the hiring of Conan O'Brien to replace David Letterman in NBC's 12:30 spot, when Letterman moved to CBS in 1993.
In interviews, Littlefield takes credit for branding NBC as the network that, in his words, offered “quality” programming to the “upscale” or “key” demographic of “college-educated, urban-based young adults earning over $75,000 a year.” Delivering that audience to advertisers was largely responsible for NBC’s renaissance, which, according to Littlefield, “distinguished NBC from the other networks, and I made advertisers pay a tremendous premium for that.” Indeed, Littlefield points out that during his last three years at NBC, upfront ad sales totaled $2 billion more than its nearest competitor.

As NBC’s ratings began to fade in the late 1990s, Littlefield was replaced by Scott Sassa. Littlefield entered into a nonexclusive production venture with the network through his newly formed Littlefield Company. In 2001 Littlefield (and the Littlefield Company) entered into a multiyear agreement with the network television division of Paramount, and has since produced the sitcom Do Over for the WB network and the dramedy Keen Eddie for FOX. Although both programs received some critical praise and loyal followings when they debuted in 2003, including fan communities on the Web, both programs were canceled before finishing their first seasons. In 2003 the Bravo cable network, which is owned by NBC’s parent company General Electric, purchased the rights to Keen Eddie and is scheduled to run all 13 episodes in 2004. With NBC’s marketing and promotions behind it and the scheduled release of the series on DVD, Keen Eddie is expected to recoup its initial losses.

Littlefield’s “multi-ethnic situation comedy” Like Family, which also premiered on the WB in 2003 finished near the bottom of the Nielsen ratings but scored well enough in the key demographic categories of women aged 12-34, teens, and female teens to merit being picked up for an additional nine episodes for the 2004 season. Although the program does not explicitly address racism in the tradition of the politically charged All in the Family, it is a rare example of a racially diverse family situation comedy. (In the pilot, a white single mother and her 16-year-old son move in with a middle-class African-American family.) In January 2004, Littlefield was also producing the drama Repo Man for NBC with Keen Eddie writer Joel Wyman, and developing a new dramedy for ABC entitled Joe Green and Eugene with Keen Eddie star Mark Valley.

Littlefield’s career is thus illustrative of the shifting landscape of television over the past 25 years from broadcasting to narrowcasting. Indeed, while one could argue that Littlefield has experienced a relative lack of success in recent years as a producer when compared with his years as an NBC executive, in an age of increased channels and fragmented audiences—combined with increased media conglomeration and product integration—Littlefield’s projects have remained consistently profitable through niche marketing and cross-promotion.

Ken Loach is Britain’s most renowned and controversial director of socially conscious television drama. He is also an internationally acclaimed director of feature films whose radical political messages consistently provoke strong responses in audiences and politicians alike. In 1965 he received the British Television Guild’s TV Director of the Year Award, while the 1990s brought prizes and nominations at the Cannes Film Festival. His considerable body of work, documenting British society since the 1960s, is an acknowledged source of inspiration to his contemporaries.

Loach worked for a brief spell as a repertory actor before joining the BBC in 1963 as a trainee television director. Significantly, this was during the progressive director-generalship of Sir Hugh Greene and coincided with Sydney Newman’s influential appointment as head of BBC drama. Loach’s earliest directorial contribution was on episodes of the ground-breaking police series Z Cars, but he first attracted serious attention with Up the Junction, a starkly realistic portrayal of working-class life in south London, which in 1965 was one of the earliest productions in the BBC’s innovative Wednesday Play slot. This success marked the beginning of a long and fertile creative collaboration with story editor and producer Tony Garnett, which led to the recognition of their particular mode of documentary drama as the “Loach-Garnett” style. It also positioned Loach as an exponent of television’s foray into the “social realist” British New Wave, popular in film, theater, and novels.

Loach collaborated with Garnett on a number of other celebrated Wednesday Play productions, including David Mercer’s famous play about schizophrenia, In Two Minds (1967), which Loach later made into a feature film, Family Life (1971), and two significant industrial drama-documentaries written by ex-coal miner Jim Allen: The Big Flame (1969) and The Rank and File (1971). These productions demonstrated Loach’s passionate concern to ignore theatrical artificiality in favor of authentic dramas on topical, important issues—dramas that give a voice to politically marginalized sections of society. By far the most powerful work from this period of Loach’s career, however, is Cathy Come Home (1966), a study of the effects of homelessness and bureaucracy on family life. This remains one of the most seminal program events in the history of British television.

Cathy Come Home, written by former journalist Jeremy Sandford, exploded with tremendous force upon the complacent, affluent, post-Beatles culture of the Swinging Sixties. Drawing attention to disturbing levels of social deprivation far in excess of those claimed by government, the play led to a public outcry, questions in Parliament, the establishment of the housing charity Shelter, and a relaxation of policy on the dissolution of homeless families. Reflecting years afterward on this succès de scandale, Loach explained that, though he may have believed at the time in the potential of television drama for effecting social change, he had subsequently come to realize it could do nothing more than provide a social critique, promoting awareness of problems capable of resolution only through political action.

It was not only the subject matter of Cathy, and of Loach’s television work generally, that struck contemporary audiences and critics as innovative; his chosen form and style were distinctive and provocative too. Above all, he was concerned to capture a sense of the real, extending a range of practiced cinema-vérité techniques to produce a sense of immediacy and plausibility that would in turn produce recognition in the
Loach, Ken

spectator and inspire collective action. Lightweight, handheld camera; grainy 16mm film stock; a black-and-white aesthetic; location shooting; natural lighting; direct, asynchronous sound; blending of experienced and nonprofessional performers; authentic regional accents and dialects; overlapping dialogue; improvised acting; expressive editing; incorporation of statistical information: all these strategies combined in varying degrees to create a compelling and original documentary effect markedly at odds with the look of traditional "acted" television drama.

In 1975 the distinctive Loach-Gamett style was employed in a notable exploration, nearly 400 minutes in length, of British labor history, which functioned as a poignant commentary on the parlous state of contemporary industrial relations. This was the four-part BBC serial *Days of Hope*, scripted by Jim Allen, which follows a northern British working-class family through the turbulent years of struggle from the end of World War I to the general strike of 1926. Loach, already subject to criticism for preferring the docudrama form (deemed reprehensible in some quarters for its potential confusion of fact and fiction), now found himself embroiled in an academic debate about the extent to which radical television drama, using the conventions of bourgeois realism, could be truly "progressive." Loach insisted that his priority was populist political discourse rather than a rarefied, aesthetic debate of interest only to a critical elite. In other words, *Days of Hope* and the other strike dramas that preceded it were intended to open the eyes of ordinary people to the emancipatory potential of free collective bargaining within any capitalist culture.

Loach made his first feature film, *Poor Cow*, at the height of his television fame in 1967. He became a major founding partner, with Tony Garnett, of the independent production company, Kestrel Films, for which he made half a dozen low-budget films between 1969 and 1986. His first project at Kestrel Films was *Kes*, a moving story of a young boy and his pet kestrel set against a bleak northern industrial landscape. Some of the Kestrel Films projects were intended for television screening as well as limited theatrical release.

The Thatcher years put Loach increasingly in conflict with those who took exception to the left-wing thrust of his work and wanted to censor it or lessen its impact. Finding it difficult to ensure transmission of the kind of television drama he considered important, he turned for a while almost exclusively to straight documentary, convinced that the nonfiction form could more speedily and directly address the key social and political questions of the day. If anything, however, this route led Loach into even greater problems with censorship, culminating in the controversial withdrawals of the four-part series *Questions of Leadership* (1983) and *Which Side Are You On?* (1984), a polemical documentary about the socially disruptive miners strike. It was probably this unsavory experience, and the greater freedom afforded by cinema, that drove Loach away from television at the end of the 1980s.

The 1990s and beyond brought Ken Loach renewed success and established him as one of Britain's foremost film directors, albeit not of mainstream commercial films. Beginning with his political thriller about a military cover-up in Ulster, *Hidden Agenda*, which was reviled and praised in roughly equal measure on its first screening at Cannes, Loach has gone on to make roughly one feature film each year, usually with an early television showing in mind. These are, without exception, films of integrity that continue their director's lifelong principle of bringing issues of oppression, inhumanity, and hypocrisy to the public's attention. The political content is, if anything, more foregrounded than in the earlier television work; the uncompromising focus on the disadvantaged or voiceless sections of society remains the same. Though he made brief returns to the television drama-documentary genre in 1997 with *The Flickering Flame* (about a strike by Liverpool dock workers) and in 2001 with *The Navigators* (about the chaotic aftermath of rail privatization in Britain), Loach continues to reserve his creative energies chiefly for cinema. After a lifetime of eschewing filming in the United States, he relented in 2000 with *Bread and Roses*, a typical Loach vehicle about a strike by non-unionized janitors in Los Angeles.

Local Television

Even though television networks and syndicators have garnered the lion’s share of historical and critical attention in the United States, these entities could not have existed without local television. In the early struggles surrounding the establishment of television, crucial decisions were made with regard to the structure of the new industry. Central to many of those decisions were those of the Federal Communications Commission (FCC). The commission grounded the organization, financing, and regulation of the television industry for the existing radio model of broadcasting, which had ensured nationwide service. Thus local TV stations came to serve as the infrastructure of the industry. Local stations negotiated the role TV would play in their communities, coordinating the new medium to local rhythms, interests, sentiments, and ideologies. They have contributed immeasurably to the growth, allure, and impact of television in the United States. The considerable history—or rather, series of histories—of local television are still being written.

All of the earliest television stations were necessarily local stations. Most began in an “experimental” status, noncommercial and sporadically scheduled. Applications for early broadcasting stations had come from a range of potential participants, but many of the first to become truly operational were owned by radio networks or broadcast equipment manufacturers with strong financial reserves; costs for construction and research-and-development were high, and revenues were low or nonexistent for many years. Much of the television industry was developed by those who could withstand continuing financial losses. Stations independent of corporate ties were started by newspapers, automobile dealers, and other local entrepreneurs in major cities across the country. These groups and individuals had also often owned radio stations or were otherwise experienced in radio.

The advantages of multiple station ownership were clear to some of these early investors, but they were faced with regulatory restrictions. Companies that hoped to attain a network-like reach were allowed to own only a handful of stations—up to five in the early years—each in a different market. As the technology for linking stations emerged, station affiliations grew. A few cities featured stations owned and operated by the existing national broadcasting networks, but most had stations affiliated with more than one network, and some areas had so few stations that each could feature multiple affiliations, often for many years. And some cities did maintain additional, fully independent channels.

But in every city and market, local stations worked to invent, adapt, and expand what television had to offer to their specific audiences. Each station produced a great deal of its own programming, increasingly so as the television schedule expanded to include more daytime and weekend hours. Viewers had a different relationship to the performers and personalities on local stations, a sense of accessibility and proximity that was inflected by all things regional—from speech patterns to weather systems to fashion tastes. Station personnel tended to perform in different capacities and roles throughout the programming day—news reader at one point, talk-show host at another, children’s show performer in still another—all lending them a familiarity and informality that often proved welcome by the audience. Local television could even seem quasi-interactive, and many programs included responses to viewer mail or even phone calls to viewers. For most local programs, budget constraints translated to a lack of production spectacle, but the same financial restriction led to a yen for ingenuity. In some cases this could afford marvelous and bizarre performers and programming formats, often outside the boundaries of what networks—already seeking a “national” audience—would deem suitable.

Certain programming similarities existed among stations, of course, especially regarding TV’s emerging relationship to the rhythms of everyday life, a relationship that presumed a family work-week and school-day, conventional gender roles, and regularized daily patterns of behavior and involvement. Kids’ shows quickly became a late afternoon staple. Cooking and homemaking shows were popular around midday. Movies and sports programs could dominate evening and weekend hours. Most of the conventions of television news were also developed at the local level, typically out of necessity rather than conscious design or analysis.

Word quickly spread when a programming innovation proved successful at a local station, often ensuring imitations at other stations and in other markets. Many stations featured disc jockeys who played favorite records, cartoon show emcees in the guise of friendly...
Local Television

authorities. In Chicago, for example, pioneer telecasters developed a casual but intelligent style of programming that became known as the “Chicago School.” Many of these programs, featuring the likes of Garroway; Kukla, Fran and Ollie; and even Studs Terkel; appeared on NBC affiliate WNBQ. But when Chicago became networked to the East Coast in 1949, many of the most popular shows were retooled according to standards in the New York offices or were dropped entirely, and the regional style quickly evaporated.

Los Angeles was in a slightly different situation, for the network lines did not arrive until late 1951, and only one or two national “feeds” were possible for some time thereafter. Partially due to this, Los Angeles was a strongly independent early TV market: it had a full complement of seven stations by January 1949, yet the network affiliates were the last on the air. Network stars such as Milton Berle were enormously popular, of course, even via kinescope, but for many years local programs dominated the ratings. The leading station until the mid-1950s was KTLA, owned by Paramount Pictures, Inc., and run by German émigré Klaus Landsberg, who had helped to telecast the 1936 Olympics before coming to this country later in the decade. Often utilizing “remote” coverage, programming in Los Angeles was surprisingly diverse, reflecting local tastes in a variety of musical shows and featuring any number of sporting events. The 1951 network link-up was complemented by a shift in TV production from New York to Los Angeles, especially after NBC and CBS opened elaborate new facilities there in 1952. The independent stations, which had dominated, were no longer able to compete with network practices, with the stars and spectacle that national advertising rates could afford.

The same pattern prevailed at almost every local station. Nationally syndicated shows blossomed on local stations through the 1950s, followed in turn by reruns of network programs, which began to be syndicated in the early 1960s. Of course there have been exceptions to the hierarchies of the network-dominated system, and the boom in UHF stations in the 1960s ensured a fair amount of locally produced programming. Some stations have even been able to produce work syndicated outside their own markets, sometimes via regional networks. But as more network programs became available for syndication, the demand for them generally meant fewer opportunities for programming tailored to local tastes. Nearly all of television began to reflect past or present nationally distributed fare. Even the Prime Time Access Rule, designed to promote local programming by blocking out network shows for an hour each weeknight, resulted in a boom for the syndication industry. Measured against the costs of original production and the possibility of lower return in advertising dollars, the expense of acquiring syndicated offerings still seemed a clear economic advantage. Game shows such as Jeopardy! and Wheel of Fortune and slick “infotainment” programming such as Entertainment Tonight became television institutions.

The new technologies of the modern television era have complicated these dynamics. Cable television systems brought a range of new national competitors to existing local broadcast stations, but they also created local access channels. Public access television has in many cases featured informative and alternative programming (often syndicated among stations), as well as a range of often peculiar and amusing fare. But hopes that these channels might produce an enhanced televisual public sphere seem all but exhausted. Many of the politically oriented and activist users of access television are likely to turn to the Internet as a site for communicating with interest groups that share concerns and extend beyond the local arena.

Satellite technology has similarly both enhanced and threatened local television. The availability of international newsfeeds enabled even local newscasts to compete with what was available from cable networks and raised opportunities for examining the local ramifications of nonlocal incidents. But satellites have also made available a ready stream of sensationalistic footage and feature stories of little consequence. Conversely, a few local stations have come to enjoy national distribution via cable and satellite: the so-called “superstations,” such as TBS, WOR, WGN, and KTLA. But many other local stations have faced being eclipsed by these same delivery systems, especially since satellite programming packages typically include network affiliates from other parts of the country, but none of the local broadcast stations from the audience’s “home” area.

As a result of these shifts in technology and programming strategy, the future of local television seems uncertain. Certainly the dollar value of local stations has only escalated, especially in light of the competi-
tion for affiliates, which resulted from the rise of FOX and other fledgling networks. The extent to which these stations will continue to provide truly local service—whether by audience demand or by regulatory edict—remains to be seen. But whatever the changes in technology, industrial organization, or commercial exigency, it will continue to be important to study the consumption and effects of local television—the medium's role in helping define the very concept of the local.

Lone Ranger, The

U.S. Western

The Lone Ranger originated on WXYZ radio in Detroit, Michigan, in 1933. Created by George W. Trendle and written by Fran Striker, the show became so popular it was one of the reasons why several stations linked together to share programming on what became the Mutual Broadcasting System. Aimed primarily at the children's audience, The Lone Ranger made a successful transition to ABC television in 1949. Several characteristics were unique and central to the premise of this western, and the initial episode that explained the legend was occasionally repeated so young viewers would understand how the hero gained his name and why he wore a mask. The Lone Ranger is one of six Texas Rangers who are ambushed while chasing a gang of outlaws led by Butch Cavendish. After the battle, one "lone ranger" survives and is discovered by Tonto, a Native American who recognizes the survivor as John Reid, the man who had saved his life earlier. Tonto thereafter refers to the ranger as kemo sabe, which is translated as "trusty scout." After Tonto helps him regain his strength, the ranger vows to hide his identity from Cavendish and to dedicate his life to "making the West a decent place to live." He and Tonto dig an extra grave to fool Cavendish into believing all six rangers had died, and the ranger dons a mask to protect his identity as the single surviving ranger. Only Tonto knows who he is...the Lone Ranger. After he and Tonto save a silver-white stallion from being gored by a buffalo, they nurse the horse back to health and set him free. The horse follows them and the Lone Ranger decides to adopt him and give him the name Silver. Shortly thereafter, the Lone Ranger and Tonto encounter a man who, it turns out, had been set up to take the blame for murders committed by Cavendish. They establish him as caretaker in an abandoned silver mine, where he produces silver bullets for the Lone Ranger. Even after the Cavendish gang is captured, the Lone Ranger decides to keep his identity a secret. Near the end of this and many future episodes, someone asks about the identity of the masked man. The typical response: "I don't rightly know his real name, but I've heard him called...the Lone Ranger."

The Lone Ranger exemplifies upstanding character and righteous purpose. He engages in plenty of action, but his silver bullets are symbols of "justice by law," and were never used to kill. For the children's audience, he represented clean living and noble effort in the cause of fighting crime. His values and style, including his polished manners and speech, were intended to provide a positive role model. The show's standard musical theme was Rossini's "William Tell Overture," accompanied by the Lone Ranger voicing a hearty "Hi-Ho, Silver, away" as he rode off in a cloud of dust.

Clayton Moore is most closely associated with the TV role, but John Hart played the Lone Ranger for two seasons. The part of Tonto was played by Jay Silverheels. After the original run of the program from 1949 to 1957, it was regularly shown in reruns until 1961, and later in animated form. The Lone Ranger has also been the subject of comic books and movies. Both the original and animated versions of the program have been syndicated.

Perhaps no fictional action hero has become as established in our culture through as many media forms as the Lone Ranger. Clayton Moore made personal appearances in costume as the Lone Ranger for many years, until a corporation that had made a feature length film with another actor in the role obtained a court injunction to halt his wearing the mask in public. Moore continued his appearances wearing oversized...
sunglasses. He later regained the right to appear as the Lone Ranger, mask and all.

Loretta Young Show, The
U.S. Drama Anthology

The Loretta Young Show, airing on NBC from 1953 to 1961, was the first and longest-running prime-time dramatic anthology series to feature a female star as host, actor, and producer. Film star Loretta Young played a variety of characters in well over half of the episodes, but her glamorous, fashion-show entrances as host became one of the most memorable features of this prime-time series.

Premiering under the title Letter to Loretta, the series was renamed The Loretta Young Show during the first season. Originally, the series was framed as the dramatization of viewers' letters. Each teleplay dramatized a different letter/story/message. Even after the letter device was dropped, Young still introduced and closed each story. At the beginning of each episode, she entered a living room set (supposedly her living room) through a door. Turning around to close the door and swirling her designer fashions as she walked up to the camera, Young was consciously putting on a mini-fashion show, and the spectacular entrance became Young's, and the series', trademark. Glamour and fashion had been important elements of her film star image, and she considered them central to her television image and appeal. (As an indication of how strongly Young felt about this aspect of the series, she later won a suit against NBC for allowing her then-dated fashion openings to be seen in syndication.)

The successful format and style of The Loretta Young Show spurred other similar shows. Jane Wyman Theater (1955–58), The DuPont Show with June Allyson (1959–61), and The Barbara Stanwyck Show (1960–61) were prime-time network series that attempted to capitalize on Young's success. Similar syndicated series included Ethel Barrymore Theater (1953), Crown Theater with Gloria Swanson (1954), and Ida Lupino Theater (1956).

When original sponsor Procter and Gamble snapped up the proposed Loretta Young series, Young and her husband, Thomas Lewis, hired Desilu (credited on-
screen as DPI) to do the actual filming for the first season's episodes. At a time when television was often broadcast live from New York, the series was filmed in Hollywood, where Desilu was already a major force in telefilm production. The first five seasons of the show were produced by Lewislor Enterprises, a company created by Young and Lewis to produce the series. They were co-executive producers the first three seasons, but when Lewis and Young split personally and professionally by the end of the third season, Young became sole executive producer (though she chose not to identify herself in the credits). When Lewislor's five-year contract with NBC was up, Young formed Toreto Enterprises, which produced the series' last three seasons.

Young played a variety of characters, but stories most often centered around her as mother, daughter, wife, or single woman (often a professional) finding romance. (Another unique aspect of the series was that Young acted in every episode the first two seasons and ultimately in well over half of all the episodes.) Presenting both melodramas and light romantic comedies, the series was designed as and considered to be women's programming. (In fact, NBC reran episodes on its daytime schedule, which was targeted to women.) Young chose stories for their messages, lessons to be learned by characters and audiences. Her introductory remarks always framed the stories in specifically didactic terms, and she closed each episode with words of wisdom quoted from the Bible, Shakespeare, or another authoritative source.

Stories affirmed postwar, middle-class ideas about the home, families, and gender roles. Single working women found love and were transformed. Mothers learned how to be better mothers. Women found true happiness within the domestic/heterosexual sphere of the middle-class home. Yet characters sometimes had to stand up for their convictions, putting them at odds with the men in their lives. Women demonstrated strength, intelligence, and desire. This was a series that put women front stage and center, especially when Young portrayed the characters. Even when she did not act, themes of women's fiction, such as the play of emotions and the focus on character relationships, were present in the stories. Occasionally, the show explicitly addressed social issues of the day, such as U.S. aid to war-ravaged Korea, the plight of East European refugees, and alcoholism. It stands out as a rare primetime network drama series where a woman tells her stories.

Unlike many of the live anthology dramas, big-name guest stars were not a regular feature of The Loretta Young Show. The biggest stars appeared as guest hosts during Young's illness in the fall of 1955.

Barbara Stanwyck, Joseph Cotten, Claudette Colbert, and several other film stars hosted the show in Young's absence. Marking the importance of her swirling entrances, none of the guest hosts came through the door to open the show. Over the years, guest actors included Hume Cronyn, Merle Oberon, Hugh O'Brian, and Teresa Wright.

The Loretta Young Show won various industry awards, including three Emmys for Young as best actress. It also was honored by numerous educational, religious, and civic groups. The series and its star were praised by these groups for promoting family- and community-based ideals in the rapidly changing postwar United States.

The Loretta Young Show represents a type of television programming that no longer exists. The various anthology dramas of the 1950s disappeared as programs with continuing characters came to exemplify series television in the 1960s. TV series that worked through the image of the glamorous Hollywood star would forever remain a phenomenon of 1950s television, the period in which the Hollywood studio system that had created larger-than-life stars came to a close. The 1950s space for strong female stars als
Closed because television now had a permanent place in American homes. The industry no longer felt the need to attract specifically female audiences in prime time as a strategy to secure domestic approval for the medium.

Lou Grant

U.S. Drama

Created by executive producers Gene Reynolds with James L. Brooks and Allan Burns, Lou Grant drew on the comedy character of the executive producer of TV news in the long-running Mary Tyler Moore Show. But the new series transformed that comic persona into a serious, reflective, committed newsman at a major metropolitan newspaper.

As he developed the concept for the series, Reynolds drew on his experience researching the TV series M*A*S*H. He haunted Toronto newspaper offices to learn firsthand how they operate, how principals interact, procedures for processing news stories, what issues trouble professional news-gatherers, how they thrash out the daily agenda to be distributed to the mass public. From tape-recorded interviews came the seeds of storylines and snatches of dialogue to capture the flavor and cadences of newspeople in action.

The series sought weekly to explore a knotty issue facing media people in contemporary society, focusing on how investigating and reporting those issues affect the layers of personalities populating a complex newspaper publishing company. The program served as a vehicle for dramatic reflection, analyzing sometimes bold and sometimes tangential conflicts in business practices, government, media, and the professions. Topics treated dramatically included gun control, invasion of privacy, confidential sources, child abuse, Vietnamese refugees, and news reporting versus publishing economics. Mingled with each episode’s issue was interplay of personalities, often lighthearted, among featured characters.

Reynolds risked undercutting issue-oriented themes by importing Lou Grant (Ed Asner) from the long-running comedy about a flaky TV newsroom to act as city editor of a daily newspaper. Asner not only effectively adapted the original comedic character to the serious role of Lou Grant; off-screen the actor spoke out increasingly about social and political issues, possibly causing some audience disaffection in its final years.

The series (1977–82) received critical acclaim for exploring complicated challenges involving media and
Lou Gran:

Lou Grant, Ed Asner, 1977–82.
Courtesy of the Everett Collection

society. It received a Peabody Award in 1978, Emmy Awards in 1979 and 1980 for outstanding drama series, plus other Emmys for writing and acting during its five years on the air. Yet it never ended any season among the top 20 most popular prime-time programs. First scheduled the last hour of Tuesday evenings (10:00 P.M.), in the second and following seasons it was aired on Mondays at that time. It enjoyed strong lead-in shows M*A*S*H and One Day at a Time, but competing networks scheduled Monday night football (ABC) and theatrical movies (NBC), both at midpoint when Lou Grant came on. Scheduling was thus probably a “wash” as a factor; audiences were perhaps deterred more by the substantive issues explored, which called for attentive involvement, unlike more passive TV entertainment.

Lou Grant is also significant in the history of MTM Productions as the “bridge” program between comedies such as The Mary Tyler Moore Show and later, more complex dramas such as Hill Street Blues. Few independent production companies have had such visible success in crossing lines among television genres. The transformation of Asner’s character, then, and the focus on serious social issues pointed new directions for the company and, ultimately, for the history of American television.

1383
Low Power Television

Television translators are broadcast devices that receive a distant station’s signal from over the air, automatically convert the frequency, and re-transmit the signal locally on a separate channel. Until 1980, the operators of these devices were required solely to re-broadcast the program service of a licensed full-service TV station and were banned from originating all but 60 seconds per hour for fundraising inserts. In 1980 the Federal Communications Commission (FCC) announced that it would accept applications to waive the 60-second cap, so that translators could broadcast original programs—to an unlimited extent—from any suitable source. This liberalization was made permanent in 1982, with the creation of a new broadcast service, low power television, called LPTV.

The name derives from the fact that LPTV stations, like the TV translators that continue to operate, cannot employ transmitter powers in excess of 1,000 watts. This imposes a practical ceiling on the effective radiated power, using a high-gain antenna, of 20 kilowatts or so under ideal conditions. It contrasts with regular, full-service TV operations, which are permitted up to 100 kilowatts of effective power (channels 2 to 6), 316 kilowatts (channels 7 to 13), or 5,000 kilowatts in the UHF bands (channels 14 to 69). As of the end of 1994, the FCC had licensed 1,787 LPTV stations, with 1,224 operating at UHF, the remainder at VHF. The total number of LPTVs exceeds the number of licensed full-service TV stations in the United States—some 1,180 commercial and 363 noncommercial stations, or 1,543 total.

Prior to the official launch of LPTV services, the FCC had granted waivers to permit origination of programs in several instances, notably for rural educational programming in upstate New York, and for the satellite-fed bush stations in Alaska, where there was no practical alternative for delivering television programming to isolated villages. The first low power television station was constructed in 1981 by John W. Boler in Bemidji, Minnesota. Boler had been a pioneer broadcaster in Fargo, North Dakota, and built the Bemidji facility as a smaller version of a traditional independent TV station, with regular evening news, studios, a sales force, and even a mobile van.

LPTV service expanded just as the equipment manufacturers were introducing significant cost and feature improvements for all broadcast components. It became possible for a crew of one to record programs with a camcorder on inexpensive S-VHS cassette and use them to offer a watchable broadcast picture. Satellite services also expanded, giving LPTV operators a choice of program fare from new networks.

Mark J. Banks, a professor at Slippery Rock University in Pennsylvania, performed mail and telephone surveys of low power television stations in 1988, 1990, and 1994. In the most recent survey, his sample of 456 stations yielded completed interviews with only 129, but the results are somewhat informative. Seventy-one percent of the LPTV stations were commercial, 17 percent public or educational, 10 percent religious, and 2 percent operated on a scrambled, subscription basis. A plurality, 40 percent, were in rural areas, but almost as many, 37 percent, were urban, with the remainder suburban or a mixture. The largest “group owners” are Alaska Public Broadcasting and Trinity Broadcasting Network. LPTV was designed to favor minority ownership, but only 8 percent described themselves as minority controlled.

The surveys over time indicated reduced dependency on satellite-fed program services, in favor of increased local programming. Stations reporting use of satellite services dropped from 87 percent in 1988 to 55 percent in 1994. Conversely, the amount of station time devoted to local programming has grown. The 63 percent reporting local programming said their most popular categories were, in order, sports, news, talk, community events, public affairs, and children’s programs. Locally originating stations derive their greatest revenue by far from the sale of local advertising, and total revenue is up, to an average of $240,000 per station per year.

Low power television has achieved a solid niche, providing new services to rural areas that cannot support full-service TV and to ethnic and religious groups in large urban areas. The full-service TV broadcasters, commercial and noncommercial, opposed LPTV from its inception, and sooner or later may succeed in eradicating it. The FCC no longer assigns any priority to assuring program delivery to underserved audiences and, as of the end of 1995, the agency had made no provision for LPTV in the future to change over to some form of advanced, digitized TV system.

MICHAEL COUZENS
Lumet, Sidney (1924– )
U.S. Director, Producer, Writer

When Sidney Lumet brought his powerful television influence to the Hollywood cinema of the late 1950s, it was in the company of four other notable American directors who also had emerged from the Golden Age of live television: Arthur Penn, John Frankenheimer, Franklin J. Schaffner, and Robert Mulligan. Their urgent, realist approach—a sharp combination of television drama adaptations reflecting social realism and technically tight production experience—was instrumental in reshaping the face of cinema for the next decade. Like his Golden Age contemporaries, Lumet's training ground had been on-the-spot television.

Following military service during World War II, Lumet returned to New York stage work. In 1947, exasperated by the pompous practice of the newly-formed Actor's Studio, he formed his own Actor's Workshop. When the group realized that they did not have a director, Lumet found himself drifting into the role.

In 1950 he was invited to join CBS Television as an assistant director by his old friend Yul Brynner, then a staff director at the network. When Brynner left to do *The King and I* on Broadway, Lumet took over the mystery anthology series *Danger* from him and was promoted to staff director. It was the beginning of what would be some 500 television productions as director; his on-the-spot training ground where he began to develop his clarity of storytelling, his skill for handling actors, and his artistry in coordinating tightly structured drama production.

For *Danger*, a McCarthy-era series produced by Martin Ritt and with scripts often supplied by blacklisted writers (Abraham Polonsky, Walter Bernstein, and others) under “front” names, Lumet directed around 150 half-hour episodes between 1951 and 1953. During this period he also directed episodes of the family comedy *Mama* (also known as *I Remember Mama*) and the newspaper adventure *Crime Photographer* series before moving on to the drama-documentary *You Are There*. (Lumet's replacement on *Danger* was John Frankenheimer.)

With the team of Charles Russell producing and Lumet directing, *You Are There* was unique in television for its multidimensional approach to history, presenting reenactments of major events in history in a current affairs news style. From the multiple episodes he directed between 1953 and 1955, Lumet singles out as personally satisfying works "The First Salem Witch Trial" (“because we did it the same week that Ed Murrow did his McCarthy show [on *See It Now*], so we like to think we were slight contributors to the general attack on him,” he explained to writer Frank R. Cunningham) and “The Death of Socrates” (which featured an astonishing line-up of on-screen talent: Paul Newman, Barry Jones, John Cassavetes, Robert Culp, Richard Kiley, E.G. Marshall, Sheppard Strudwick).

When Lumet began directing original plays for television in 1956, his first critical success came with Reginald Rose's tension-charged drama on mob violence "Tragedy in a Temporary Town" for *The Alcoa Hour*. Lumet's cameras gave the production a crisp, chilling authority and drew some fine performances from the cast, especially Lloyd Bridges' poignant portrayal as the man facing the mob and denouncing it into shamefaced dispersal.

It was at this time that the success of the feature adaptation of Paddy Chayefsky's *Marty* for United

Artists had prompted Hollywood to look to television for new talent and material. For the film version of Rose’s Twelve Angry Men, star and coproducer Henry Fonda selected Lumet as his director (marking Lumet’s feature debut). The play had been directed on television (Studio One) in 1954 by Franklin Schaffner. Twelve Angry Men won wide critical approval, opening the door to television-cinema traffic, and appeared to cement Lumet’s career as a big-screen director.

During April and May of 1958, he directed three notable and much-praised productions for Kraft Television Theatre: “Three Plays by Tennessee Williams” (a color telecast from New York, incorporating “Moony’s Kid Don’t Cry,” “The Last of My Solid Gold Watches,” and “This Property is Condemned,” all introduced by Williams), an adaptation of Hemingway’s “Fifty Grand,” and Robert Penn Warren’s Pulitzer Prize novel “All the King’s Men” (the latter broadcast in two parts).

After three less-than-successful feature ventures (Stage Struck, That Kind of Woman, The Fugitive Kind), Lumet returned to television in 1960 and shone again. The two-part presentation (on tape) of Reginald Rose’s drama-documentary The Sacco-Vanzetti Story (NBC) was a gripping account of the notorious judicial transgression of 1920, when two alleged Italian anarchists were found guilty of murder and robbery, and were eventually executed following a lengthy and highly controversial trial. Once again, Lumet showed a fine, sure hand in his grasp of the lengthy production (with a cast of 175) and the sharply edged portrayals, notably by the two principals (Martin Balsam as Nicola Sacco and Steven Hill as Bartolomeo Vanzetti).

Lumet’s television triumph of 1960, however, was his four-hour rendition of Eugene O’Neill’s play about assorted barflies in a 1912 saloon, “The Iceman Cometh.” Produced for the PBS O’Neill’s play about assorted barflies in a 1912 saloon, “The Iceman Cometh.” Produced for the PBS Play of the Week strand, the mammoth drama was shown in two parts and scheduled at 10:30–12:30 due to the “mature nature” of the play. The Variety (November 16, 1960) review was ecstatic: “Television drama soared to triumphant, poetic dimensions...[and] was a landmark for the video medium, a reference point for greatness in television drama.” Leading the large cast were Jason Robards Jr. as Hickey and Myron McCormack as Larry Slade, with James Broderick, Roland Winters, and Robert Redford among this modern-day Greek chorus. Considered the high mark of that season’s Play of the Week showcase, “the sure, talented, creative hands of director Sidney Lumet seemed everywhere in evidence.”

From 1962 onward, beginning with A View from the Bridge, Lumet was active on the big screen, enjoying the greatest commercial success of his career in 1976 with Network (a forceful indictment of television as a profit machine).

In January 2001, Lumet returned to television as writer, director, and executive producer on the cops-and-courtrooms drama series 100 Centre Street (the address of the court building in lower Manhattan). In a nod to old acquaintances, Arthur Penn was invited to direct an episode during the series’ second season. Although its themes and characters are more in keeping with Lumet’s NYPD (Serpico, Prince of the City) and legal (The Verdict, Guilty as Sin) films than with the live dramas of his early days, 100 Centre Street nevertheless displayed all the hallmarks familiar to the director’s favorite subject matter.

Lumley, Joanna (1946– )
British Actor

Joanna Lumley’s lengthy career in television has been marked chiefly by two components—her image as glamorous and refined, and the characters she has played in three popular series, which span three decades. Her work over the years has been varied, encompassing theater, film, and several major advertising
campaigns, as well as television drama, comedy, and regular celebrity appearances. Equally, her work has been of widely varying standards, ranging from the flimsy and trite to award-winning performances.

A former model in the Swinging Sixties, Lumley landed her first major television role in The New Avengers (1976–77), in which she played special agent Purdey, alongside Gareth Hunt (Gambit) and Patrick Macnee (Steed). The show evidently seemed to be more concerned to promote Lumley’s legs than her character’s crime-fighting skills—not only did her costume consist of a skin-tight trouser suit and kinky high boots, but Purdey’s prime weapon was her immobilizing karate kick. In spite of this fetishistic fixation, Lumley became most synonymous with the pudding-bowl haircut named after her character, Purdey, and widely imitated by women and girls alike.

Shortly after The New Avengers came Sapphire and Steel (1979–82), an offbeat science fiction series in which Lumley costarred with David McCallum. The two played mysterious agents who traveled through time and space, whilst the ethereal Sapphire (Lumley) costumed in a long, floaty dress communed with psychic forces. Although this and the previous show were popular with both children and adults, Lumley claimed she was becoming frustrated with the parts she was playing, primarily as they did not mimic real women.

For the remainder of the 1980s, Lumley was involved in less memorable productions, although she remained in the public eye, as the face for several advertisements, as a regular guest on TV chat shows, and with certain notable film appearances, particularly as head girl-turned-prostitute in Shirley Valentine (1989). However, it was her performance with Ruby Wax (on The Full Wax) as a washed-up, drugged-out actress that initiated the revival of her career. This performance instantly transformed her from an idealized myth of feminine perfection to a more complex and humorous persona. Shortly after revealing her talent for comedy and self-parody, through a stroke of pertinent casting, Lumley became Patsy Stone, the aging, neurotic “Fash-Mag-Slag,” conceived of by Jennifer Saunders for Absolutely Fabulous (1992–96). This casting was central to the success of Absolutely Fabulous and to the renaissance of Lumley’s career. Lumley gives an immensely entertaining performance, but also, because of her on- and off-screen persona, she creates in Patsy a hilarious and hideous satire around the expectations of glamour and refinement assigned to her. As a character, Patsy has several functions that covered new ground in television culture: she overturned ageist assumptions by opening up a space in television for the representation of women of all ages as humorous; as an “unruly woman” she violated, in a highly entertaining way, the unspoken feminine sanction against making a spectacle of herself; and she confronted and redefined the values of beauty, consumerism, and decorum inferred upon women, particularly of a certain age and social class.

Since playing what must surely be her ideal role, and achieving high critical acclaim with several awards, including BAFTAs and an Emmy, Lumley’s subsequent work was not nearly so demanding on her talents. She played a down-at-heel aristocrat in the mediocre A Class Act and in a documentary-drama, Girl Friday, she had to fend for herself on an inhospitable desert island, with emphasis on how she copes without couture clothes, haute cuisine, and cosmetics. Both of these shows revolve around Lumley’s conventional image, but neither seeks to recognize the contradictions apparent since Absolutely Fabulous in Lumley’s persona as the epitome of high class. While there may generally be a lack of recognition of Lumley’s specific capabilities as an actor, all her major roles share a common interest in casting her as an independent woman—she is nobody’s wife or side-kick. However, it seems ironic that Absolutely Fabulous, while giving Lumley a new lease of life and promoting her to an international audience, has remained an almost unique forum for her talent as a comedy actor.

Lupino, Ida (1918–1995)
U.S. Actor, Director

Ida Lupino's career in television plays much like a rerun of her career in the cinema. Originally charting her course in each medium primarily as an actor, she apparently fell into directing as a matter of circumstance. Making her debut on CBS television's Four Star Playhouse in December 1953 as a performer, it was not until three years later that Lupino was commissioned to direct an episode for Screen Directors Playhouse, "No. 5 Checked Out," for which she also wrote the script. Eventually, after more frequent invitations to helm episodes from a variety of series, Lupino would, over the course of the next 15 years, establish a reputation as the most active woman director working behind the cameras during this formative period in television's history.

Economic necessity, it would seem, played as much a part as creative opportunities in Lupino’s decision to work almost exclusively within television for the remainder of her career as director. By the mid-1950s, Lupino had been offered fewer leading roles, and her activities as a film director had gradually diminished. Although she would continue to act in even more television episodes than she would direct (over 50), her unique position in the fledgling industry rested more upon her reputation as a filmmaker than as a leading lady, in particular upon the critical and commercial...
success of her most widely seen cinematic work, *The Hitch-Hiker*.

In fact, after 1960, Lupino earned the nickname "the female Hitch" (as in Hitchcock) for her specialty work in action-oriented television genres that employed her talent at creating suspense. For example, Richard Boone, the star of the popular *Have Gun—Will Travel* series, of which Lupino eventually directed four episodes, had admired her hard-boiled style and offered her a script by Harry Julian Fink, famed for his graphic descriptions of physical violence. From that point on, although she would direct many sitcoms (e.g., *The Donna Reed Show, The Ghost and Mrs. Muir*) and various dramatic programs (e.g., *Mr. Novak, Dr. Kildare*), Lupino would be commissioned primarily for westerns (*The Rifleman, The Virginian, Dundee and the Culhane, Daniel Boone, Tate, Dick Powell's Zane Grey Theater*), crime dramas (*The Untouchables, The Fugitive, 77 Sunset Strip*), and mysteries (*The Twilight Zone, Kraft Suspense Theatre, Alfred Hitchcock Presents*). Perhaps the only series that Lupino genuinely shaped as director is *Thriller*, a mystery anthology hosted by Boris Karloff, for which she directed at least ten episodes in its first two seasons. At times lamenting publicly that she had become so typecast as an action director that she was overlooked for love stories, Lupino otherwise exploited her anomalous stature as a woman specializing in shoot-outs and car chases, at one point turning down Hitchcock’s offer of a lead role in one episode of his series in order to replace him as its director.

This figure of Lupino as a “female Hitch,” whose nomenclature suggests the freedom to call her own shots and her status as auteur, is rather misleading within the context of the U.S. television industry, whose creative efforts are shaped and controlled almost exclusively by producers rather than by directors. Thus, although she directed episodes of *The Untouchables* and *The Fugitive*, whose intricate weekly subplots and relatively large guest casts required her creative input, her influence on formulaic series such as *Gilligan’s Island* or *Bewitched* was minimal. For this reason, in contrast to her body of cinematic works (most of which she also co-wrote or coproduced), Lupino’s scattered work in television resists an auteurist approach because of the very nature of the industry. More of a freelance substitute than a series regular, Lupino never pursued long-term contracts with any particular producer or network. Such job security generally was reserved for her male colleagues. On the other hand, Lupino’s continued interest in acting may have been equally responsible for her irregular directing schedule; it undoubtedly strengthened her reputation as a director who worked well with fellow actors. Although praised for her abilities to link scenes smoothly, to cooperate with the crew, and to come in on time and under budget, Lupino’s most sought-after capacities were her skill at handling players of both sexes and her sensitivity to the problems and needs of her cast, qualities derived from her own training and experience as an actress.

Although Lupino was one of the first woman directors during the early years of American television production, it is odd that she is rarely referenced as a “groundbreaker” for other women entering the industry. Unlike Lucille Ball, Loretta Young, Joan Davis, and other women who were involved as producers in early television programming, Lupino had little creative control over the programs she directed. To contextualize Lupino’s role as a director in relation to other women working contemporaneously as producers is not meant to suggest, however, that a critical analysis of Lupino’s work is irrelevant to television history and feminist inquiry. What remains significant about Lupino as a “woman director” was her unique ability to succeed in an occupation that was (and still is) dominantly coded as “masculine.” Constructed as an outsider and an anomaly, Lupino as a TV director...
was more often than not represented merely as a woman, her directorial skill either de-emphasized or ignored altogether in the popular press.

After a decade of professional activity spanning all three networks, a variety of genres, and an irregular schedule, Lupino’s commitment to directing, like acting, could not have been said to be total. Working at a period in her life in which her desire for a career chafed at her equally strong desire to raise and care for her family, Lupino suffered the dilemma of the average woman of the time. She was forced to negotiate a notion of “work” dictating that her choices should threaten neither the spheres over which patriarchy dominated, such as the television industry, nor her identity as a wife and mother, whose “natural” place belonged in the home rather than in the studio. It should come as no surprise, therefore, that the nickname bestowed upon Lupino by her production crews—“Mother”—worked to contain her in the dominant role for women at the time.

Lyndhurst, Nicholas (1961– )
British Actor

Nicholas Lyndhurst emerged as a prominent star among a new generation of British situation comedy performers in the early 1980s, although he had by then already amassed a considerable number of years' television experience, having started out as a child actor.

Lyndhurst made the transition from child performer to adult star in stages, beginning as an actor in a string of children's dramas and adventures such as The Tomorrow People, Heidi, and The Prince and the Pauper (in which he played the dual leading role). He also tried his hand as a presenter for children's television, cohosting for a time the series Our Show on Saturday mornings (with Susan Tully and others). In 1978 his selection for the part of Ronnie Barker's son in Going Straight, the sequel to the classic prison comedy Porridge, marked the start of his emergence as an adult performer, a process that continued with his casting as Wendy Craig's teenage son Adam in the long-running situation comedy Butterflies.

The final stage in the transition to a mature performer came in the hugely successful comedy series Only Fools and Horses, in which Lyndhurst was entrusted with the role of Rodney, the hapless and much put-upon younger brother of David Jason's immortal "Del Boy" Trotter. As Rodney, a part he played for some ten years, Lyndhurst was endearingly naive, sensitive, and idealistic—the perfect foil to Jason's streetwise would-be millionaire. Frequently rendered speechless at his brother's tricks and deceptions and all too often living up to the "plonker" tag that his exasperated sibling bestowed upon him, Rodney was widely praised as a beautifully realized comic creation.

Toward the end of the long run of Only Fools and Horses, Rodney was allowed to get married (to the long-suffering trainee banker Cassandra), and much humor was devised from the inevitable difficulties he experienced as a new husband. Subsequent situation comedies that were constructed around Lyndhurst further developed the theme of not dissimilar Rodney-style characters, bemused and indignant though not necessarily quite as dimwitted as Rodney, trying to cope with the demands of wives or girlfriends. In The Two of Us, for instance, Lyndhurst's character, computer programmer Ashley, wrestled with independent girlfriend Elaine's reluctance to get married, despite his entreaties, and with her contrasting views on just about any subject he cared to raise. In Goodnight Sweetheart, meanwhile, his character Gary Sparrow agonized over whether he should stay true to his brash and pushy wife in their modern London flat or whether he should desert her for the barmaid with whom he had formed a relationship while exploring wartime London after finding a way to travel some 50 years back through time.
Memories of the highly successful *Only Fools and Horses* series, kept fresh through regular repeats of old episodes, have perhaps dominated perceptions of the sort of roles Lyndhurst is capable of playing. Typecast though he may have been, he remains, however, unsurpassed in his portrayal of the hen-pecked husband or lover, well-meaning but frequently nonplused by the tricks that fate plays on him. In 1999 he finally had a chance to demonstrate his skills in a different type of role when he was cast, with great success, as the unpleasant Uriah Heep in the Dickens classic *David Copperfield*.

The Magic Roundabout was a long-running animation for preschool children that became a cult classic. The five-minute program was first broadcast in the 1960s, shown at the end of the British Broadcasting Corporation’s (BBC’s) weekday children’s programs. *The Magic Roundabout* offered an assortment of colorful, toylike characters for children and a dry and witty script for adults. A revival on Channel 4 in the 1990s brought *The Magic Roundabout* to a new generation of fans.

Despite being considered a national institution in the United Kingdom, *The Magic Roundabout* was discovered in France by Doreen Stephens, the head of the BBC’s Family Programs. French animator Serge Danot’s *Le Manège Enchanté* had been running on French television for a couple of years. Danot built the sets and shot the puppets one frame at a time to create a three-dimensional animation. Eric Thompson, father of actress Emma and a presenter on the BBC preschool program *Playschool*, was chosen as writer and narrator for the English version. Rather than translating Danot’s script, Thompson chose to rename the characters and write new scripts. First appearing on the BBC in 1965, *The Magic Roundabout* was shown just before the 5:55 P.M. main early-evening news bulletin on BBC 1, which meant that many adults caught the program while waiting for the news. At the start of a new series in October 1967, *Radio Times* (the BBC listings magazine) described the series as a “favorite with children from two to ninety-two.”

The first few programs introduced the basic storyline. Mr. Rusty is unhappy because his roundabout (fairground carousel with horses) has fallen into disrepair, and the children no longer visit. A magical jack-in-the-box, called Zebedee, appears one day and, using his magic, repairs the roundabout. On the sound of the music from Mr. Rusty’s barrel organ, the roundabout turns, and the children return to play. Zebedee offers one of the children a special gift: a visit to a magic garden. The rest of the series follows this child, a young girl named Florence, and her encounters with the odd assortment of characters that inhabit the magic garden. The remaining episodes were short interactions between the characters, the program starting with the roundabout and often ending with Zebedee bounding into the frame, announcing, “Time for bed!”

In addition to Florence, the main characters were Dougal, a long-haired orange dog with a fondness for lumps of sugar; Brian, a yellow snail; Ermintrude, a pink cow with red spots who wore a hat; and Dylan, a floppy-eared rabbit who wore clothes, carried a guitar, and spent most of the time sleeping propped against a tree. There were also two elderly characters, Mr. McHenry, the gardener who rode a tricycle, and the previously mentioned Mr. Rusty. The garden was home to two-dimensional trees and flowers that spun like pinwheels. Aired in black and white, it was not until 1970 that the bright colors of Danot’s designs could be seen in their true splendor on British television.
If the bright designs of the characters and scenery appealed to its younger viewers, then it was Thompson’s commentary, with frequent references to topical issues and personalities, that appealed to the older viewers. One of the most often quoted pieces of dialogue from the series was Dougal’s manifesto when standing before Parliament: “I’m in favor of the four-day week, the 47-minute hour and the 30-second minute. This gives a lot of time for lying about in the sun and eating” (a comment on the British government’s introduction of the three-day week).

As is the case with many cult programs, rumors abounded about subliminal messages in the program. Most of the rumors that surrounded The Magic Roundabout centered on drugs; the psychedelic garden was an acid trip, Dougal’s favorite sugar lumps were LSD, and Dylan was in fact named after Bob Dylan. All these ideas were officially dismissed but added to the cult status of the program. The BBC was inundated with complaints in October 1966, when the network moved The Magic Roundabout to the earlier time of 4:55, which meant that fewer working adults would be able to view it. The BBC bowed to public pressure and moved it back to the later slot several weeks later. Even though Danot had stopped production of the series in 1972, The Magic Roundabout remained on the BBC, with reruns, until 1977. (Danot resumed production of the series in 1980 with 55 new episodes.)

Eric Thompson died in 1982, so when Channel 4 purchased rights to the new episodes in 1992, the actor Nigel Planer (best known in the United Kingdom for his role as Neil the hippy in The Young Ones) took over the role of narrator, writing the new scripts along with his brother Roger. Shown as one of Channel 4’s early-morning children’s programs, Planer’s version remained faithful to the earlier version (even carrying the credit line “with grateful acknowledgement to Eric Thompson”). The programs continued to refer to current affairs, personalities, and topics well beyond the comprehension of its preschool audience. The series ran on Channel 4 until 1994, with reruns still being shown to the present day.

Danot made a feature length version of the program, Pollix et Le Chat Bleu (Pollux was the original French name for Dougal). Eric Thompson narrated an English version, Dougal and the Blue Cat, which was released in Britain in 1972. A stage production of the program toured the United Kingdom in 1993.

Magnum, P.I.
U.S. Detective Program

A permutation of the hard-boiled detective genre, *Magnum, P.I.* aired on the Columbia Broadcasting System (CBS) from 1980 through 1988. Initially, the network had the series developed to make use of the extensive production facilities built during the 1970s in Hawaii for the successful police procedural *Hawaii Five-O* and intended the program to reflect a style and character suited to Hawaiian glamour. For the first five years the series was broadcast, it ranked in the top 20 shows for each year.

The series was set in the contemporary milieu of 1980s Hawaii, a melting pot of ethnic and social groups. Thomas Magnum, played by Tom Selleck, is a former naval intelligence officer making his way as a private investigator in the civilian crossroads between Eastern and Western cultures. In charge of the security for the estate of the never-seen author Robin Masters, Magnum lives a relatively carefree life on the property. A friendly antagonism and respect exists between Magnum and Jonathan Higgins III (John Hillerman), Masters's overseer of the estate. Though both men come from military backgrounds, Magnum's free-wheeling style often clashes with Higgins's more mannered British discipline. In addition, two of Magnum's former military buddies round out the regular cast. T.C., or Theodore Calvin (Roger Mosely), operates and owns a helicopter charter company, a service that comes in handy for many of Magnum's cases. Rick Wright (Larry Manetti), a shady nightclub owner, often provides Magnum with important information through his links to the criminal element lurking below the vibrant tropical colors of the Hawaiian paradise.

Though originally dominated by an episodic narrative structure, *Magnum, P.I.* moved far beyond the simple demands of stock characters solving the crime of the week. Without using the open-ended strategy developed by the prime-time soap opera in the 1980s, the series nevertheless created complex characterizations by building a cumulative text. Discussion of events from previous episodes would continually pop up, constructing memory as an integral element of the series franchise. While past actions might not have an immediate impact on any individual weekly narrative, the overall effect was to expand the range of traits that characters might invoke in any given situation. For the regular viewer of the series, the cumulative strategy offered a richness of narrative, moving beyond the simpler whodunit of the hard-boiled detective series that populated American television in the 1960s and 1970s.

Part of the success of *Magnum, P.I.* stemmed from the combination of familiar hard-boiled action and exotic locale. Just as important perhaps, the series was one of the first to regularly explore the impact of the Vietnam War on the American cultural psyche. Many of the most memorable episodes deal with contemporary incidents triggered by memories and relationships growing out of Magnum's past war experiences. In-

![Image of Tom Selleck from Magnum, P.I.](https://example.com/magnum-p-i-tom-selleck-1980-88-courtesy-of-the-everett-collection)
deed, the private investigator's abhorrence of discipline and cynical attitude toward authority seem to stem from the general mistrust of government and military bureaucracies that came to permeate American society in the early 1970s.

On one level, Magnum became the personification of an American society that had yet to deal effectively with the fallout from the Vietnam War. By the end of the 1980s, the struggle to deal with the unresolved issues of the war erupted full force into American popular culture. Before Magnum began to deal with his psychological scars in the context of the 1980s, network programmers apparently believed that any discussion of the war in a series would prompt viewers to tune it out. With the exception of Norman Lear's *All in the Family* in the early 1970s, entertainment network programming acted, for the most part, as if the war had never occurred. However, *Magnum, P.I.*'s success proved programmers wrong. Certainly, the series' success opened the door for other dramatic series that were able to examine the Vietnam War in its historical setting. Series such as *Tour of Duty* and *China Beach*, though not as popular, did point out that room existed in mainstream broadcasting for discussions of the emotional and political wounds that had yet to heal. As Thomas Magnum began to deal with his past, so too did the American public.

Critics of the show often point out, however, that in dealing with this past, the series recuperated and reconstituted the involvement of the United States in Vietnam. While some aspects of the show seem harshly critical of that entanglement, many episodes justify and rationalize the conflict and the U.S. role. As a result, *Magnum, P.I.* is shot through with conflicting and often contradictory perspectives, and any "final" interpretation must take the entire series into account rather than concentrate on single events or episodes. The construction of this long-running narrative, riddled as it is with continuously developing characterizations, ideological instability, and multi-layered generic resonance, illustrates many aspects of commercial U.S. television's capacity for narrative complexity as well as some of its most vexing problems and questions. Perhaps it is *Magnum, P.I.*'s narrative and ideological complexity that has ensured the series' ongoing success as a syndicated programming staple.

Malone, John C. (1941–)
U.S. Telecommunications Executive

John C. Malone is the chairman of Liberty Media Corporation. Prior to its acquisition by AT&T in 1999, he was the chief executive officer of Telecommunications, Inc. (TCI), until that time the largest operator of cable systems in the United States. Malone oversaw TCI's phenomenal growth from the time of his arrival at the company in 1973 and in the process came to be regarded as one of the most powerful people in the television industry. He has been praised by many for his outstanding business acumen and his technological foresight, but at the same time he has also acquired a less flattering reputation for his hardball style of business practice. Among those who have been openly critical of Malone in this latter vein is Albert Gore Jr., who once dubbed Malone the "Darth Vader" of the cable industry.

Malone began his career at AT&T Bell Labs in the mid-1960s before moving on to become a management consultant for McKinsey and Company in 1968. He received his Ph.D. in industrial engineering from Johns Hopkins University in 1969 and soon joined the General Instrument Corporation, where he became president of its Jerrold cable equipment division. It was here that he first established ties to many of the cable industry's pioneers. In 1972 he turned down an offer from Steve Ross of Warner Communications to head its fledgling cable division, opting instead to leave the East Coast to accept an offer from TCI founder Bob Magness to run the small cable company from its Denver, Colorado, headquarters.

Malone joined TCI just before it fell into very difficult times. Malone's first major success at TCI was in negotiating a restructuring of the company's heavy debt load. Once freed from the burden of this debt, Malone embarked on a conservative growth strategy for TCI. Rather than attempting to expand its holdings by building large urban cable systems at great expense, as many other cable companies did in the late 1970s, Malone focused TCI's growth efforts on gaining franchise rights in smaller communities, where the costs to build the systems would be far less onerous. The wisdom of Malone's strategy soon became evident. TCI was able to grow without encountering the exceedingly high costs associated with building capital-intensive urban cable systems, and in the early 1980s it was able to purchase several existing large-market systems, such as those in Pittsburgh, Pennsylvania, and St. Louis, Missouri, at bargain prices from companies that had financially overextended themselves in the construction process.

As TCI grew throughout the 1980s, so did its power within the television industry. The company invested heavily in programming services and eventually came to hold stakes in more than 25 different cable networks under the arm of its Liberty Media subsidiary. However, TCI's success was sometimes overshadowed by the public's perception of it as a heavy-handed com-

John C. Malone. Photo courtesy of John Malone
pany that occasionally would resort to bullying tactics to achieve its desired ends. For instance, in TCI's earlier days, some of its systems were known to replace entire channels of programming for days at a time, leaving these channels blank except for the names and home telephone numbers of local franchising officials. The strategy aimed to gain leverage in franchise negotiations. Fairly or not, Malone came to personify TCI and its negative public image.

Despite the company's poor public relations record, few would deny that Malone and TCI were among the most powerful forces shaping the television industry in the late 20th century. Like William S. Paley of the Columbia Broadcasting System (CBS) and David Sarnoff of the Radio Corporation of America (RCA) an earlier era, Malone exercised great control over what American television viewers would or would not see. At TCI's peak, nearly one in four cable subscribers in the United States was served by a TCI system, and these viewers were directly affected by the decisions Malone made. Even those who were not TCI subscribers felt Malone's influence because access to the critical mass of viewers represented by TCI's cable systems was crucial to any programmer's success. Programmers needed carriage on TCI systems in order to gather the audience numbers that provide solid financial status. Malone assumed the position of a gatekeeper, wielding enormous influence over the entire television marketplace, which explains another nickname that was sometimes applied to him: "The Godfather" of cable television.

Malone first hinted at his ultimate ambitions for TCI when he attempted to merge the company with the regional telephone operator Bell Atlantic in 1993. Although the deal was scuttled only four months after it was announced, it foreshadowed Malone's eventual plans for TCI's place in the future television marketplace. In 1999 Malone was able to successfully negotiate the purchase of TCI and its programming arm, Liberty Media, by AT&T for a staggering $54 billion. The acquisition allowed AT&T to assume a central position within the cable television industry, while Malone was able to command top dollar for TCI shareholders in exchange for what were, in many instances, older cable systems with infrastructures that were technologically inferior to those of many other cable services. In the meantime, Malone stayed on after the acquisition as Liberty Media's chairman.

AT&T struggled in the cable operations business, and the relationship between Malone and AT&T Chairman Michael Armstrong grew increasingly rocky until 2001, when AT&T divested its stake in Liberty Media and agreed to sell its cable systems to Comcast Corp. With its newly found freedom from AT&T, Malone led Liberty Media into a new round of asset acquisition, most notably by reentering the cable operations business by buying stakes in European cable systems. In so doing, Malone gave every indication of his intention to be as dominant a force in shaping the 21st century's global telecommunications marketplace as he was in influencing the direction of U.S. television in the last quarter of the 20th century.

Mama

U.S. Domestic Comedy/Drama

*Mama*, which aired from 1949 to 1957 on the Columbia Broadcasting System (CBS), proves that television was capable of complex characterizations in the series format even early in its history. A weekly family comedy-drama based on Kathryn Forbes's *Mama's Bank Account* as well as its play and film adaptations *I Remember Mama*, *Mama* would best be described today as “dramedy.” Unfortunately, except for its last half season, when it was filmed, the program aired live, with kinescope recordings prepared for West Coast broadcasts. Consequently, it is unavailable in the repetitive reruns that have made other domestic situation comedies from the 1950s (including many, such as *Father Knows Best*, that it influenced) familiar to several generations of viewers.

Each episode dramatized, with warmth and humor, the Hansen family’s adventures and everyday travails in turn-of-the-20th-century San Francisco. The working-class Norwegian family included Mama, Papa (a carpenter), and children Katrin, Nels, and Dagmar. Mama’s sisters and an uncle were semiregular characters. Although earlier incarnations of the Forbes material had focused on the relationship between Mama and Katrin, the television series centered episodes on all the characters, a technique made available and almost demanded by the production of a continuing series.

The stories might revolve around Dagmar’s braces, Nels starting a business, or the children buying presents for Mama’s birthday. The entire family would contribute to the drama’s resolution, however, and images of them sitting down to a cup of Maxwell House coffee—the show’s longtime sponsor—would frame each episode of the show. As George Lipsitz points out, it was common for the dramatic solutions to in-

Mama

volve some kind of commodity purchase, not surprising given the commercial basis of American network television and the consumer culture of the postwar United States. What is surprising is how often the show foregrounded the contradictions of this consumer culture in which everyone does not have access to the desired goods. Dramatic tension often resulted from the realization that Mama’s endeavors provided the foundation for the achievements of individual family members. It was not uncommon for Papa and the Hansen children to have to come to terms with the value of Mama’s work.

The program’s complex treatment of cultural tensions resulted not only from Forbes’s original material but also from the contributions of head writer Frank Gabrielson, director-producer Ralph Nelson (a Hollywood liberal of Norwegian descent who went on to direct the film Lilies of the Field), and a distinguished cast. Peggy Wood, who incarnated Mama, was a versatile stage and film actress who had starred in operetta and Shakespeare and is probably best known to today’s audiences for her Oscar-nominated role as Mother Superior in The Sound of Music. (Mady Christians, who starred in the role of Mama on Broadway, was not considered for the television role because she was blacklist.) Dick Van Patten played Nels and would later star in television’s Eight Is Enough in the 1970s. Robin Morgan, who played Dagmar from 1950 to 1956, became a well-known feminist activist and writer. Not surprisingly, she attributes to Mama many of her early lessons in feminine power.

Man Alive

Canadian Religious/Information Program

A critically acclaimed, nondenominational program that the show’s executive producer, Louise Lore, describes as “a religious program for a post-Christian age,” Man Alive is one of Canada’s longest-running information programs. Begun in 1967 amid a renewed sense of theological activism inspired by the reforms of Vatican II, Man Alive takes its name and inspiration from a St. Irenaeus quote: “the glory of God is man fully alive.” From a format that concentrated on theological issues, the show’s focus has broadened considerably in its 30 seasons.

Man Alive has profiled and interviewed many of the world’s most important religious figures, from Mother Teresa to the Dalai Lama and Archbishop Desmond Tutu. An October 8, 1986, interview with the Aga Khan was this religious leader’s first formal North
American interview. He had declined previous requests from such well-known shows as the Columbia Broadcasting System's (CBS's) 60 Minutes in favor of Man Alive because of the show's reputation for balance and the relaxed, soft-spoken interviewing style of the show's host, Roy Bonisteel. Many Man Alive interviews were marked by their candidness and honesty, as in the case of Archbishop Tutu, who met the challenges presented by his Down syndrome to star in a television drama, or the story of the Rubineks, Holocaust survivors, and their moving return to Poland after 40 years. Despite the changing nature of television audiences and serious budgetary constraints, Man Alive continues the tradition of providing an informative and well-balanced examination of relevant social issues and contemporary ethical questions.

Throughout its history, the show has consistently provided programming that appeals to a broad audience, and this has been one of the keys to its success. It has delved into a variety of topics, from UFOs to the threat of nuclear war, from father-son relationships to life in a maximum-security hospital for the criminally insane. Nor has it avoided controversial and unpopular subjects, such as the Vatican bank scandal, sexual abuse in the church, or aid to El Salvador. Some of the show's most critically acclaimed episodes have been those that have chronicled very personal human dramas, such as the story of David McFarlane, who met the challenges presented by his Down syndrome to star in a television drama, or the story of the Rubineks, Holocaust survivors, and their moving return to Poland after 40 years. Despite the changing nature of television audiences and serious budgetary constraints, Man Alive continues the tradition of providing an informative and well-balanced examination of relevant social issues and contemporary ethical questions.

The Man from U.N.C.L.E./The Girl from U.N.C.L.E.

U.S. Spy Parody

*The Man from U.N.C.L.E.*, which aired on the National Broadcasting Company (NBC) from September 1964 to January 1968, has often been described as television's version of James Bond, but it was much more than that. It was, quite simply, a pop culture phenomenon. Although its ratings were initially poor early in the first season, a change in time period and cross-country promotional appearances by its stars, Robert Vaughn and David McCallum, helped the show build a large and enthusiastic audience.

At the peak of its popularity, *The Man from U.N.C.L.E.* was telecast in 60 countries and consistently ranked in the top ten programs on U.S. television. Eight feature-length films were made from two-part episodes and profitably released in the United States and Europe. *TV Guide* called it "the cult of millions." The show received 10,000 fan letters per week, and Vaughn and McCallum were mobbed by crowds of teenagers as if they were rock stars. *U.N.C.L.E.* was also a huge merchandising success, with images of the series' stars and its distinctive logo (a man standing beside a skeletal globe) appearing on hundreds of items, from bubble gum cards to a line of adult clothing.

The show had a little something for everyone. Children took it seriously as an exciting action adventure. Teenagers enjoyed its hip, cool style, identifying with and idolizing its heroes. More mature viewers appreciated the tongue-in-cheek humor and the roman à clef references to such real-life political figures as Mahatma Gandhi and Eva Peron, interpreting it as a metaphor for the struggle common to all nations against the forces of greed, cruelty, and aggression.

*The Man from U.N.C.L.E.* redefined the television spy program, introducing into the genre a number of fresh innovations. Notably, the show broke with espionage tradition and looked beyond the cold war politics of the time to envision a new world order. The fictional United Network Command for Law Enforcement was multinational in makeup and international in scope, protecting and defending nations regardless of size or political persuasion. For example, a third-season episode, "The Jingle Bells Affair," showed a Soviet premier visiting New York during Christmastime, touring department stores and delivering a speech on peaceful coexistence at the United Nations, 22 years before Mikhail Gorbachev actually made a similar trip.

The show also broke new ground in reconceptualizing the action adventure hero. Prompted by a woman at the British Broadcasting Corporation (BBC) he once met who complained that the leads in U.S. series were all big, tall, muscular, and, well, American, producer Norman Felton (*Eleventh Hour* and *Dr. Kildare*) de-
The Man from U.N.C.L.E./The Girl from U.N.C.L.E.

cided to vary the formula. His series, developed with Sam Rolfe (co-creator of Have Gun—Will Travel) teamed a U.S. agent, Napoleon Solo (Vaughn), with a Soviet one, Illya Kuryakin (McCallum). Each week they were sent off on their missions (called “affairs”) by their boss, Alexander Waverly, a garrulous, craggy, pipe-smoking spymaster played by Leo G. Carroll.

Neither the suave Solo nor the enigmatic Kuryakin were physically impressive. They were instead intelligent, sophisticated, witty, charming, always polite, and impeccably well tailored. Sometimes they made mistakes, and often they lost the battle before they won the war.

What made U.N.C.L.E. truly appealing was the way it walked a fine line between the real and the fanciful, juxtaposing elements that were both surprisingly fantastic and humorously mundane. For example, as they battled bizarre threats to world peace, such as trained killer bees, radar-defeating bats, hiccup gas, suspended-animation devices, and earthquake machines, the agents also worried about expense accounts, insurance policies, health plans, and interdepartmental gossip.

While the series showed that heroic people had ordinary concerns, it also demonstrated that ordinary people could be heroic. During the course of each week’s affair, at least one civilian or “innocent” was inevitably caught up in the action. These innocents were average, everyday people—housewives, stewardesses, secretaries, librarians, schoolteachers, college students, tourists, even some children—people very much like those sitting in U.N.C.L.E.’s viewing audience. At the start of the story, they often complained of their boring, unexciting lives—lives to which, after all the terror and mayhem was over, they were only too happy to return.

By contrast, U.N.C.L.E.’s villains were fabulously exotic and larger than life. In addition to the usual international crime syndicates, Nazi war criminals, and power hungry dictators, U.N.C.L.E. also battled THRUSH, a secret society of mad scientists, megalomaniac industrialists, and corrupt government officials who held the Nietzschean belief that because of their superior intelligence, wealth, ambition, and position, they were entitled to rule the world. A number of prominent actors and actresses guest starred each week as either villains or innocents, including Joan Crawford, George Sanders, Kurt Russell, William Shatner and Leonard Nimoy (who appeared together pre-Star Trek in “The Project Strigas Affair”), and Sonny and Cher.

The U.N.C.L.E. formula was so successful that it spawned a host of imitators, including a spin-off of its own, The Girl from U.N.C.L.E., in 1966. Starring Stefanie Powers as female agent April Dancer and Noel Harrison (son of Rex) as her British sidekick, Mark Slate, The Girl from U.N.C.L.E. took its cue from the wild campiness of the then-popular Batman rather than from its parent show. Although it featured many of the same elements of Man, including a specially designed gun and other advanced weaponry and the supersecret headquarters hidden behind an innocent tailor shop, Girl’s plots were either absurdly implausible or downright silly, and the series lasted only a year.

By its third season, The Man from U.N.C.L.E. had also become infected by the trend toward camp, and though the tone was readjusted to be more serious in the fourth season, viewers deserted the show in droves. Once in the top ten, the series dropped to 64th in the ratings and was canceled midseason, to be replaced by Rowan and Martin’s Laugh-In.

This was not the end of U.N.C.L.E., however. Because of concerns about violence voiced by parent–teacher groups, the series was not widely syndicated, and reruns did not appear until cable networks began to air them in the 1980s. Nevertheless, The Man from U.N.C.L.E. was not forgotten. Nearly every spy program that appeared during the ensuing decades bor-
rowed from its various motifs (naming spy organizations with an acronym has become a genre cliché). For example, *Scarecrow and Mrs. King* expanded the premise of *U.N.C.L.E.*'s original pilot episode into an entire series. Even nonespionage programs as diverse as *thirtysomething*, *Star Trek: Deep Space Nine*, and *Seinfeld* continued to make references to it.

In 1983 Vaughn and McCallum reunited to play Solo and Kuryakin in a made-for-TV movie *Return of the Man from U.N.C.L.E.: The Fifteen Years Later Affair*. Three years later, the stars again reunited for an homage episode of *The A-Team* titled "The Say U.N.C.L.E. Affair."

In the early 1990s, Felton and Rolfe negotiated with Turner Broadcasting (TNT) to make a series of made-for-cable *U.N.C.L.E.* movies, but the project stalled when Rolfe died in 1993. Subsequently, John Davis Productions optioned the property in order to produce a feature-length film for theatrical release. Development, however, has not moved beyond the scripting stage. In 1996, there were plans for Vaughn and McCallum to play villains on a spy-spoof series, *Mr. and Mrs. Smith*, but the short-lived series was canceled before such an episode could be filmed. Eventually, only McCallum appeared as a villain in an episode that aired in the United Kingdom.

---

**Mann, Abby (1927– )**

**U.S. Writer**

Abby Mann's television and film writing career has spanned six decades and earned him widespread critical acclaim and numerous prestigious industry awards in the United States and abroad. He has received an Academy Award and New York Film Critics Award for his screenplay for *Judgment at Nuremberg* (1961) and Emmys for *The Marcus-Nelson Murders* (1973, the *Kojak* pilot), *Murderers Among Us: The Simon Wiesenthal Story* (1989), and *Indictment: The McMartin Trial* (1995).

Mann's made-for-television movies (a television genre in which he is widely acknowledged as a leading practitioner) have covered a breadth of subjects. His most daring (and controversial) scripts have offered viewers a withering critique of the functioning of the U.S. criminal justice system. Although some critics
have argued that Mann has, on occasion, selectively marshaled facts and taken “polemical” positions in his portrayal of his subjects, almost all have expressed admiration for his exhaustive investigative research and his rich dramatic portrayal of character. Most important, few have questioned the factual basis for his arguments.

Mann, the son of a Russian-Jewish immigrant jeweler, grew up in the 1930s in East Pittsburgh, Pennsylvania, a predominantly Catholic, working-class neighborhood he describes as a “tough steel area.” As a Jewish youth in these surroundings, Mann felt himself an outsider. Perhaps this in part explains the persistent preoccupation, in his scripts, with the working poor and racial minorities: outsiders who are trapped in a social system in which prejudice, often institutionalized in the police and judicial apparatus, is used to deprive them of their rights.

This recurrent overarching theme is developed in stories focusing on the forced signing of criminal confessions; inadequate police and district attorney investigation of murder cases involving victims who are minorities, poor, or both; judicial and police officials who protect their reputations and careers, when confronted with evidence of possible miscarriage of justice, by refusing to reopen cases in which innocent persons, often minorities, have been convicted; the possibility that law enforcement officials conspired in the assassination of Martin Luther King Jr.; the failure of union leaders to fight adequately for the rights of their workers; the greed and questionable ethics of some members of the legal, medical, and mental health professions; and the sensationalized coverage of murder cases by the media, who tend to prejudge cases according to their perception of general public sentiment.

Mann began his professional writing career in the early 1950s, writing for the National Broadcasting Company’s (NBC’s) Cameo Theater and for the noted anthology series Studio One, Robert Montgomery Presents, and Playhouse 90. His script for the celebrated film drama Judgment at Nuremberg (1961), recounting the Nazi war crimes trials, was originally produced for Playhouse 90. Mann moved to Hollywood as production on the feature film version began. Other successful film scripts quickly followed, including A Child Is Waiting (1963), directed by John Cassavetes, which offered one of the first sympathetic film portrayals of the care and treatment of mentally challenged children, and a screen adaptation of Katherine Anne Porter’s novel Ship of Fools (1965), the story of the interlocking lives of passengers sailing from Mexico to pre-Hitler Germany, directed by Stanley Kramer (who had directed Judgment at Nuremberg).

Mann returned to television writing in 1973 with the script for The Marcus-Nelson Murders, which launched Universal Television’s popular Kojak series. Universal approached Mann about doing a story based on the 1963 brutal rape and murder of Janice Wylie and Emily Hoffert, two young, white professional women living in midtown Manhattan. George Whitmore, a young black man who had previously been arrested in Brooklyn for the murder of a black woman, signed a detailed confession for the Wylie and Hoffert murders. Whitmore later recanted his confession, claiming that he was beaten into signing it. Mann visited Whitmore in jail in New York before agreeing to write the screenplay, and he became convinced not only that Whitmore was innocent but also that some top officials in the Manhattan and Brooklyn district attorneys’ offices had ignored Whitmore’s alibi that he was in Seacliff, New Jersey (50 miles from New York City), at the moment of the murders. After the airing of The Marcus-Nelson Murders, for which Mann won an Emmy and a Writers Guild Award, Whitmore was released from prison.

Although he was not involved in the production of Kojak, Mann was unhappy with the treatment of the series by its producer, Universal Television, which, he argued, reframed the police melodrama as a formulaic...
cops-and-robbers potboiler, whereas in *The Marcus-Nelson Murders* he had sought to show that law enforcement officials should be monitored.

In his next television project, Mann cast his critical gaze on one of the most sacrosanct institutions in the United States: the medical profession. *Medical Story*, an anthology series produced by Columbia, premiered on NBC in 1975 and had a brief four-month run. Mann was the series creator and also served as co-executive producer.

Mann made his directorial debut with *King*, a six-hour docudrama on the life of civil rights leader Martin Luther King Jr. He had wanted to do a feature film on King while King was still alive but was unable to raise the necessary financing. Ironically, unforeseen circumstances brought the project to fruition in 1978, ten years after King’s death. The central figure in *The Marcus-Nelson Murders*, George Whitmore, had claimed that he was watching King’s “I Have A Dream” speech on television when the murders were committed. Mann asked King’s widow, Coretta Scott King, for the rights to use the film clip of King’s speech in *The Marcus-Nelson Murders*, which she granted. She then asked Mann if he were still interested in the piece on King’s life. Encouraged by Mrs. King’s continued interest, Mann pursued the project. In doing research on the script, Mann uncovered information that led him to believe that a conspiracy involving the Memphis, Tennessee, police and fire departments may have been responsible for King’s death. The conspiracy theory focused on the reassignment, just prior to the assassination, of a black police officer and two black firefighters who had been stationed in a firehouse overlooking the motel where King was shot despite numerous threats of assassination while King was in Memphis.

Reporter Mark Lane assisted Mann in his investigation of the circumstances surrounding the King assassination. The research resulted in an official House of Representatives inquiry into whether a conspiracy had indeed been involved in the assassinations. As a result, Mann was publicly maligned by the Memphis police and fire chiefs.

For *Skag*, his next television project, which aired on NBC in 1980, Mann returned to the steel mills of the suburbs surrounding Pittsburgh. He developed the concept and wrote the script for the three-hour pilot and was given “complete freedom” by NBC President Fred Silverman. Starring Karl Malden as Pete “Skag” Skag, *Skag* was an unflinching, realistic portrait of a middle-aged steelworker who had worked hard all his life but, when afflicted by a stroke, found himself suddenly “expendable” because he was no longer able to provide food for the table or perform sexually with his wife. *Skag* also dealt with the larger social issues of steelworkers’ unhealthy working conditions and the failure of their unions to fight for their rights. Steelworkers’ unions bitterly attacked *Skag*, calling Mann “anti-union.” With this series, however, Mann was attempting to draw attention to a class of Americans who until the 1980s were grossly underrepresented in prime-time television drama, a fictional world populated largely by white, white-collar, middle-aged male protagonists.

While the premiere episode won critical praise and high ratings, viewership for *Skag* rapidly declined, and the series ended its run after six weeks on the air. Mann, who was involved in the first two regular series episodes, attributed the series’ failure to uneven directing of some of the subsequent episodes and artistic interference from the show’s star, Malden.

Mann’s direct involvement with *Medical Story* and *Skag* convinced him that the process involved in producing series television inevitably led to too many compromises, both ideological, as politically controversial themes became “muddled,” and creative, as strong pilots were followed by aesthetically weak regular series episodes. For these reasons, he decided in the 1980s to focus his artistic energy exclusively on made-for-television movies over which he had greater artistic control.

*The Atlanta Child Murders* aired on the Columbia Broadcasting System (CBS) in 1985. The notorious Atlanta, Georgia, case involving multiple murders of black children focused on Wayne Williams, a black who was accused of recruiting young boys for his homosexual father, using them sexually along with his father, and then murdering them. Mann was urged by prominent black leaders in Atlanta not to take on the project because, they argued, the additional publicity generated by a television movie focusing on an accused black mass murderer would, in the end, only further damage the black community. Mann initially withdrew from the proposed project, but he attended the Williams trial and was disturbed by the courtroom proceedings, which revealed to him the inadequate investigation into the murders of victims who belonged to poor minority families, the introduction of potentially unreliable evidence, and the sensationalized media coverage of the trial.

Mann, the only writer able to speak to Wayne Williams in prison after his conviction, raised doubts about the case, arguing that the judicial system itself was on trial, as was a society that neither had compassion for the victims during their lives nor did justice for them after their deaths. Critics praised the dramaturgy of *The Atlanta Child Murders*, but some questioned Mann’s doubts about both the propriety of the
Mann, Abby

courtroom proceedings and Williams's guilt, arguing that, after all, the Georgia supreme court had upheld Williams's conviction. After seeing the television movie, prominent defense attorneys Alan Dershowitz, William Kunstler, and Bobby Lee Cook agreed to join in a pro bono defense of Williams, but, according to Mann, once the publicity died down, they did not pursue the appeal to reopen the case.

Mann's more recent made-for-television movies premiered on Home Box Office (HBO), which he found to be much more supportive of his often-contentious stands on controversial social issues than were the commercial broadcast networks, who felt they must avoid the inherent commercial risks of alienating significant sectors of their mass audience. Most recent among these HBO films was Indictment: The McMartin Trial, created by Mann and his wife Myra. The film won an Emmy and a Golden Globe in 1995. Once again, Mann questioned the workings of the judicial system. This case involved the McMartin preschool in Manhattan Beach, California, at which it was alleged that seven preschool teachers had molested 347 children over the course of a decade. Most people in Los Angeles were convinced of the veracity of the charges, which were supported by the accounts of hundreds of children who attended the school. Mann became intrigued by the case when charges against five of the defendants were dropped. The two remaining defendants, Peggy Buckey, the school superintendent, and her son, Ray, were still under arrest. Buckey's daughter argued on The Larry King Show that the Los Angeles district attorney was continuing with the prosecution of her mother and brother because they had been kept in jail so long that the district attorney could not admit his error without losing face. As Mann investigated the case, he once again confronted the seamy side of the justice system: informers who supposedly heard confessions saying so only because they had made financial deals to their own advantage, greedy parents who were suing to get damages, and prosecutors who withheld crucial evidence and selectively ignored facts to advance their own careers by obtaining a conviction. Mann was also intent on exploring the important psychological question regarding the ease with which children can be led by manipulative adults into admitting events that never occurred.

Ultimately, despite two trials, no one was convicted in the McMartin case. Indictment produced very strong reactions among viewers. According to Mann, "People seem...obsessed by it. I suppose they realize that they have watched and believed stories that were as incredible as the Salem witch hunt." Reaction to the television film had a direct impact on the Manns as well. On the day production on Indictment began, their house was burned to the ground. Undeterred, Mann has continued to write. In 2001 Judgment at Nuremberg was adapted for the stage and appeared on Broadway.

Mann, Delbert (1920– )

U.S. Director, Producer

Like many directors of television’s “golden age,” Delbert Mann came from a theatrical background. While studying political science at Vanderbilt University, Mann became involved with a Nashville, Tennessee, community theater group where he worked with Fred Coe, who went on to produce the alternating anthology program Philco-Goodyear Television Playhouse. Mann received a masters of fine arts degree in directing from Yale School of Drama and then worked as a director/producer at the Town Theatre (Columbia, South Carolina) and as a stage manager at the Wellesley Summer Theater. When he first went to New York, Mann worked as a floor manager and assistant director for the National Broadcasting Company (NBC).

In 1949 Mann began directing dramas for Philco-Goodyear Television Playhouse, where he was one of a stable of directors that included Vincent Donahue, Arthur Penn, and Gordon Duff. During the 1950s, Mann also directed productions for Producers’ Showcase, Omnibus, Playwrights ’56, Ford Star Jubilee, and Ford Startime. Although he worked almost exclusively on anthology series, Mann also directed live episodes of Mary Kay and Johnny, one of the first domestic sitcoms.

Mann is perhaps most often identified with the Philco-Goodyear Television Playhouse (and subsequent film) production of Paddy Chayefsky’s Marty, which has been praised by critics as one of the most outstanding original dramas produced by Fred Coe and the Philco-Goodyear Television Playhouse. Although the production did not receive outstanding reviews when it first aired on May 24, 1953, it was one of the first television plays to receive any major press coverage and more than one line in a reviewer’s column. When Mann directed the film version of Marty two years later, he was awarded the Academy Award for Best Director, and the film won the Palm d’Or at the Cannes Film Festival and Academy Awards for Best Picture, Actor, and Screenplay and earned four other Oscar nominations for Best Supporting Actor, Supporting Actress, Cinematography, and Art Direction.

Many of Mann’s works tackled social issues, such as the plight of the elderly in Ernie Barger Is Fifty, which aired on August 9, 1953, as part of The Goodyear The-
In an interview with Delbert Mann, he reflects on his work, stating, "I believe that a director's work is not about big themes, but about the little things in life. The smallest gestures can have the biggest impact on an audience." Mann's perspective on his craft is rooted in his belief that every decision, no matter how small, has a purpose and can affect the overall narrative. He emphasizes the importance of connecting with the audience through the characters and their actions, rather than relying on grand gestures or sweeping themes.

Mann's response to a question about the role of the director in shaping the story is insightful. He believes that the director's role is not just about guiding the actors, but also about creating a world that is believable and authentic. By focusing on the small details and the emotional truth of the moment, Mann's approach enables audiences to connect with the story on a deeper level.

The quote from Mann's interview serves as a reminder for filmmakers and theater artists alike to pay close attention to the subtle moments that can make or break a performance. It highlights the importance of considering every aspect of the production, from the lighting and set design to the actors' movements and expressions, as integral components of the storytelling process. This dedication to the craft and the commitment to honing the skills of telling a story with honesty and integrity are what make Mann's work so enduring and impactful.

Mansbridge, Peter (1948– )
Canadian Broadcast Journalist

Peter Mansbridge serves as anchor for The National, the flagship nightly newscast of the Canadian Broadcasting Corporation (CBC), and all CBC news specials. He is also host of Mansbridge: One-on-One, on CBC's 24-hour news network, Newsworld. His lengthy career with the CBC has made him one of Canadian media's most familiar figures, synonymous with "the corporation." The prominence to which Mansbridge has risen, however, began in a somewhat unorthodox fashion.

1412
In what is now Canadian news media folklore, a local CBC radio producer “discovered” Mansbridge in 1968 as he was making a public address announcement in an airport while working as a freight manager for a small airline in Churchill, Manitoba. Mansbridge turned the resulting position as a disc jockey into one as a newscaster, simultaneously transforming himself into a journalist despite his lack of formal training or apprenticeship. From this unlikely beginning, Mansbridge moved quickly through the ranks of CBC television news, beginning with a one-year stint in 1972 with the CBC Winnipeg station as a local reporter, followed by another one-year position as the Saskatchewan-based reporter for the CBC national newscast. From 1976 to 1980, Mansbridge held a spot on the prestigious parliamentary bureau in the nation’s capital. Anchor status commenced with the Quarterly Report (co-anchored by Barbara Frum), a series of special reports concerning issues of an urgent, national nature that aired four times a year. Beginning in 1985, Mansbridge anchored the newly formed national weekly Sunday Report.

Mansbridge’s nationwide prominence was secured in 1988, when he accepted the enviable position of chief correspondent and anchor of the flagship CBC broadcast The National, a weekday 10:00 P.M. newscast (22 minutes long) that was followed by the highly respected current affairs and documentary broadcast The Journal. The status attributed to this anchor position was reflected in the public interest created by the events that preceded Mansbridge’s assumption of the job. Amid much press speculation, Mansbridge was offered in 1987 a co-anchor position in the United States, opposite Kathleen Sullivan on CBS This Morning, for a salary reputed to be five to six times his earnings with the CBC. It was expected that Mansbridge would follow the familiar exodus of Canadian broadcast journalists to the United States, where the level of national and international experience of many Canadian journalists is highly valued. This emigration has included journalists such as Don Miller, Don McNeil, Robert MacNeil, Morley Safer, and Peter Jennings. In a last-minute, much-publicized effort to stop Mansbridge from leaving Canada, the current chief anchor of The National, Knowlton Nash, stepped down early to offer his position to Mansbridge. Nash and Mansbridge were subsequently heralded as patriots and, moreover, managed to promote the turnover of anchors.

Despite the respectable audience numbers drawn under Mansbridge’s leadership, The National was moved in 1992 to CBC’s all-news network, Newsworld. Mansbridge assumed the role of anchor (originally co-anchored by Pamela Wallin) on CBC’s Prime Time News. This new broadcast was part of a controversial decision to move the national evening news from the 10:00 P.M. to the 9:00 P.M. time slot. In 1995, network executives decided to reverse their previous scheduling move and return the news/current affairs hour to 10:00, with the entire hour now titled The National and with Mansbridge continuing his role as newscast anchor. The revamped program currently airs on both the CBC and Newsworld.

During his tenure as CBC’s star anchor, Mansbridge has covered many of the key events that have attracted public attention in Canada, including federal elections and leadership campaigns, the Gulf War, the Charlottetown Referendum, and the events of Tiananmen Square. Coverage of these and other stories has garnered Mansbridge eight Gemini Awards (Academy of Canadian Cinema and Television). Mansbridge’s style of presentation is understated and sober but sufficiently amiable to attract viewers in the increasingly entertainment-oriented news media. His understated delivery, in combination with his appearance (once described as “bland good looks”), makes Mansbridge’s presentation and persona consistent with the standard among Canadian broadcast journalists.
Although the CBC has historically placed a great deal of emphasis on news and current affairs programming, this was particularly evident during the years of Mansbridge’s rise within the corporation in the 1980s. The reduced resources made available to the broadcaster, in addition to the challenges of broadcasting in the increasingly multichannel media system, demanded a renewed focus by the CBC on this area in which it was traditionally strong. The CBC’s subsequent commitment to news has been evident in the continuing production of quality news programming and has assisted Mansbridge in developing a particularly strong profile within the industry.

**Marchant, Tony (1959– )**

British Writer

Tony Marchant is one of British television’s most distinctive dramatic writers. Just one of his screenplays (the comedy of transsexual love, *Different for Girls*), has had a theatrical release; otherwise, throughout his career, he has maintained a commitment to television drama as both the equal of cinema and the “true writer’s medium.” He has also fought against the market-led ideology of drama commissioning in the 1990s and the drive to deliver audiences by means of standardized generic formulae. In 1999, the year that he received the British Academy of Film and Television Arts (BAFTA) Dennis Potter Award for Television Drama, he spoke up for what he called “the singular and eccentric voice” of the writer. Two dramas broadcast in that year perhaps embody the range encompassed by that voice. In *Kid in the Corner*, he drew on his own experience as the parent of a boy with learning difficulties to deliver a deeply intimate account of a couple’s relationship with a son suffering from attention deficit hyperactivity disorder (ADHD), while in *Bad Blood* he traced the moral disintegration of a surgeon, desperate to adopt a Romanian boy, through the increasingly surreal metaphor of vampirism.

Marchant began his career in the fringe theater at the start of the 1980s, when, inspired by the “do it yourself” directness of punk music, he produced a string of plays for the Theatre Royal in London’s East End. Although rooted in his East End working-class experience, however, his was not the stereotypical voice of disaffected youth. *Welcome Home*, about soldiers returning from the Falklands conflict to attend a friend’s funeral, carefully juggled opposing ideological views, while *Raspberry* explored two women’s differing experiences on a hospital gynecological ward. While at Stratford East, Marchant first worked with Adrian Shergold, the director who was to become one of his principal collaborators on television and whose filming would bring to his work a potent rhythmic and visual style.

It was with a screen version of *Raspberry*, produced by the British Broadcasting Corporation (BBC) in 1984, that Marchant moved into writing for television. The play was well received, and he followed it over the next five years with a string of single dramas on socially resonant topics ranging from money dealing in the London foreign exchange (*The Moneymen*) to the
struggle by a mother to bring to justice the people responsible for her son’s death from a drug overdose (Death of a Son). In 1989 the BBC broadcast his first serial, the three-part Take Me Home. It is the story of a passionate and ultimately doomed affair between a middle-aged man, forced into redundancy and now working as a minicab driver, and the young wife of a successful computer programmer. Set against the high-tech sterility of a British “new town,” the story provided a potent metaphor of social and spiritual isolation in a culture imbued with the apparent virtues of success and prosperity. This was followed by two further three-part dramas, Goodbye Cruel World, about a woman suffering from an unspecified and incurable form of motor neuron disease and her husband’s campaign to set a charity on her behalf, and Into the Fire, in which a hitherto upstanding businessman’s involvement in insurance fraud to save his company leads to the death of a young employee and a relationship with the boy’s mother. In each work, one can begin to recognize Marchant’s characteristic preoccupation with motives and principles and his engagement with serial drama as a means of following through the complex ethical ramifications of impulsive but socially induced actions.

It is this concern, amplified into a sweeping narrative of epic proportions, that permeates what could be considered Marchant’s masterpiece. The eight-episode serial Holding On was inspired by sources as diverse as Charles Dickens’s Our Mutual Friend and Robert Altman’s multistranded film Short Cuts and was commissioned by the BBC on the back of the success enjoyed by Peter Flannery’s Our Friends in the North. Its setting is London and its subject the city and the connections that lie, dark and unrecognized, between the disparate lives of its inhabitants. The violent death of a young woman at the hands of a schizophrenic provides the catalyst for a dark journey through cause and effect, culpability and guilt, involving a range of characters who either were linked to the victim and the perpetrator or witnessed the event. Marchant’s vision of corrupted social responsibility is embodied in the central story of a tax inspector lured into bribery by the millionaire whom he is investigating for fraud, while the London Underground replaces Dickens’s River Thames as the metaphoric thoroughfare ominously linking the lives of the characters.

Marchant was subsequently commissioned to dramatize Dickens’s Great Expectations, to which he brought a contemporary sense of the preoccupation with social class, and Dostoyevsky’s Crime and Punishment, another tale of unraveling guilt. For the BBC’s series of modern adaptations of The Canterbury Tales, his version of The Knight’s Tale transposed Chaucer’s story of courtly love into a gripping account of the rivalry between two prisoner friends for the love of a continuing-education language tutor, revealing poetic passion, tenderness, and honor in a seemingly brutalized world. A similar reversal of expectation permeates Never, Never, a story of the relationship between a loan shark debt collector and a young woman living on an inner-London estate. Here, as in Swallow, where a woman addicted to antidepressants battles with a pharmaceutical company, and Passer-By, which follows the terrible consequences of a man’s decision to ignore the appeal of a woman in distress, Marchant creates a modern social fable that has not only a wider political resonance but, at its core, a deeply intimate story of goodness and hope. His characters are on journeys, the ends of which are never predictable but that invariably entail an encounter with moral and social responsibility. “I’m sure it has something to do with the fact that I was brought up a Catholic,” he admits in an interview article by Louise Bishop, published in Television in May 1998. “I have to admit that a lot of the stuff I write is to do with redemption and guilt.”

Marcus Welby, M.D.

U.S. Medical Drama

Marcus Welby, M.D., which aired on the American Broadcasting Company (ABC) from late September 1969 through mid-May 1976, was one of the most popular doctor shows in U.S. television history. During the 1970 television year, it even ranked number one among all TV series, according to the Nielsen Television Index. As such, it was the first ABC program to take the top program slot for an entire season. The Nielsen data suggested that Marcus Welby, M.D. was viewed regularly in about one of every four U.S. homes that year.

The program was created by David Victor, who had been a producer on the hit Dr. Kildare television series during the 1960s. Victor took a centerpiece of the basic doctor-show formula (the older physician-mentor tutoring the young man) and transferred it from the standard hospital setting to the suburban office of a general practitioner. The sicknesses that Marcus Welby and his young colleague Steven Kiley dealt with—everything from drug addiction to rape, from tumors to autism—ran the same wide gamut that hospital-based medical shows had covered. In fact, many of the patients ended up in the hospital, and Welby even moved his practice to a hospital toward the end of the show’s run. Nevertheless, Marcus Welby, M.D. was different from other shows of its era, such as Medical Center and The Bold Ones. Those shows stressed short-term illnesses that paralleled or ignited certain unrelated personal problems. Welby, on the other hand, dealt consistently with long-term medical problems that were tied directly to the patient’s psyche and interpersonal behavior. Acute episodes of the difficulty often sparked movement toward a cure, but only after Welby or Kiley uncovered the root causes of the behavioral problems.

In one case, for example, Dr. Welby and Dr. Kiley became concerned about Enid Cooper, a counselor in an orphanage, when they learn that she is addicted to pills. The doctors are unable to persuade the young woman to give them up. Then, under the influence of pills, Enid is responsible for a car accident in which one of her charges is hurt. That allows Welby to move her toward conquering her addiction.

This emphasis on the psyche and medicine was celebrated by Robert Young, who played Marcus Welby. Young suffered from chemical imbalances in his body that led him toward depression and alcoholism. To fight those difficulties, he had developed an approach to life that mirrored the holistic health philosophy that he now acted out as a TV doctor. People who worked with him on the set said that it was often hard to tell where Young stopped and Welby began, so closely did the actor identify with his role. Viewers seemed to have that difficulty, too. Young received thousands of letters asking for advice on life’s problems.

In choosing topics to deal with in the program itself, Welby’s producers and writers benefited from a softening in the U.S. television networks’ rules regarding what was acceptable on TV in the early 1970s. The relaxation came about partly because of increased network competition for viewers in their 20s and 30s and partly as a result of new demands for openness and the questioning of authority that the social protests of the
late 1960s brought. It allowed David Victor to initiate stories, such as one on venereal disease, that he could not get approved for Dr. Kildare.

The show did ignite public controversies. One episode called “The Outrage” centered on the rape of a teenage boy by a male teacher. It ignited one of the first organized protests against a TV show by gay activists. More general were complaints by the rising women’s rights movement that Marcus Welby’s control over the lives of his patients (many of whom were women) represented the worst aspects of male physicians’ paternalistic attitudes.

While scathing, such opposition made up a rather small portion of the public discussion of the series over its seven-year prime-time life. More consistent was the controversy over Welby’s impact on physicians’ images. With previous doctor shows, the concern of physicians was to cultivate as favorable an image as possible. Now some physicians worried that Welby’s incredibly solicitous and loyal bedside manner was leading their patients to question why they did not act toward them as Welby would. Was it true, as writer-physician Michael Halberstam contended in the New York Times Magazine, that the series could not help “but make things better for American doctors and their patients”? Or was it the case, as others claimed, that Welby was among the factors contributing to the rise of malpractice actions against physicians?

The debate marked the first time that the physicians’ establishment got involved in a large-scale argument over whether fictional images that were positive actually had negative effects on their status. The argument would continue about other doctor shows in the coming years. But to Robert Young, Marcus Welby incarnate, it was a nonissue. According to an article in McCall’s magazine, a doctor said to Young at a convention of family physicians, “You’re getting us all into hot water. Our patients tell us we’re not as nice to them as Doctor Welby is to his patients.” Young did not mince words. “Maybe you’re not,” he replied.

Broadcasting is inherently a medium of fixed location, and because of its dependence on direct-wave radiation, television broadcasting is particularly so. In the United States, because of the dominance of advertising, these fixed locations have come to be called “markets.” Additionally, the term “market” may refer to a group of people of interest to broadcasters and/or advertisers for business reasons. Indeed, the term is increasingly used in this manner throughout the world, as more and more television systems become supported by advertising revenue or other commercial underwriters.

The broadcast television signal operates by direct-wave radiation; the signal waves must travel in a straight line from the transmitting to the receiving antenna. Even if transmitters could operate with unlimited power, television broadcasting operates in a geography fixed by the horizon of the Earth’s surface. As the signal radiates outward from a transmitting antenna, it produces a more or less round geographical coverage pattern, with a radius of about 60 miles for VHF (very high frequency) stations and about 35 miles for UHF (ultrahigh frequency) stations. The coverage contour can be distorted by hills and mountains that block the signal, increased by antenna height, or added to by translators that rebroadcast the signal at another frequency in another location or by retransmission on cable television systems.

Reflecting the inherent “locatedness” of television broadcasting, the Federal Communications Commission (FCC) allocates channels and assigns licenses to facilities in communities. The word “market” has come to be the designator of those communities, reflecting the degree to which advertising dominates television in the United States. Anyone doing any type of business in an area may of course refer to that area or the people living in it as a market, placing the boundaries wherever sensible for the business in question. This practice includes the operators of commercial television. The operators of noncommercial television facilities have less reason to use the word “market,” although it is increasingly applied in this arena.) In the business of television, these geographically outlined markets are formally defined by the ratings companies, among which Nielsen Media Research dominates.

Markets are defined by Nielsen as designated market areas (DMAs) in a manner essentially the same that the Arbitron company, which is no longer in the business of providing television ratings, once defined areas of dominant influence (ADIs). Both acronyms are still commonly used and designate essentially the same thing.

DMAs are defined by county or, in some cases, parts of counties (for convenience, counties will suffice in this discussion). Every county in the United States is assigned to one and only one DMA. Each DMA is named after the city that defines its center, such as the Chicago DMA or the Des Moines (Iowa) DMA. Each county is assigned to that DMA for which the most-watched television stations are broadcast. So, for example, Los Angeles County is assigned to the Los Angeles DMA because the television stations that the people in Los Angeles County watch most often are located in Los Angeles County. Orange County is also assigned to the Los Angeles DMA because the most frequently watched television stations by viewers in Orange County are also located in Los Angeles County.

Such a system of categories, in which every county in the United States is assigned to one and only one DMA, is considered mutually exclusive and exhaustive. Such systems have formal advantages. The key benefit here is the simple arithmetic for manipulating numbers associated with the categories. Since none of the markets overlap, numbers associated with any of them can be added together to describe a market that would be defined as the aggregate of the smaller markets. Since no area is left out of the system of market definitions, the sum of all of them defines the national market. This eases the calculation of ratings and other data for local, regional, or national markets and for syndicated, cable, and network television shows available in different areas.

In addition to these formal uses of the term “market,” as Nielsen’s DMA or regional or national aggregates of DMAs, there are various other uses for the term in the television business. One of the most common is in phrases such as “the African-American market,” “the Hispanic market,” “the youth market,” or “an upscale market.” These are extensions of the use of demographics to define types of people of interest to advertisers and other businesspeople. In either usage, the term remains a clear marker of the commercial aspects of the U.S. television industry, in which buying and selling—of both programs and audiences—is a central component.

Marketplace

Canadian Consumer Affairs Program

Marketplace, which went on the air in 1972, is a weekly half-hour, prime-time consumer news show on the Canadian Broadcasting Corporation (CBC). It has won many national and international awards, including the Gemini in 1994 as Canada’s best information program. The format, which has changed little over its history, involves a pair of hosts introducing segments on product testing, service evaluation, fraudulent practices, and trends in consumer advocacy. The show’s audience has held up well for more than four decades—it remains one of the CBC’s most highly rated shows—and it is regarded by many in the CBC as the benchmark by which other public affairs programs should be judged.

The first producer, Dodi Robb, with consumer reporter Joan Watson (from CBC Radio) and broadcaster George Finstad as hosts, had a mandate to inform consumers about questionable sales practices and inferior products. From the beginning, the show treated consumer information as hard news, but it gradually expanded its mandate to include investigative reports with particular attention to public health and safety. According to Globe and Mail television writer John Haslett Cuff, the program is “a veritable gadfly in the hard-sell marketplace of consumer television.” It is “routinely monitored . . . by manufacturers and government regulatory agencies and frequently copied by American newsmagazine programs such as 60 Minutes and 20/20.” Although it does put defenders of commercial practices and products on the “hot seat,” Marketplace has an earnest quality that distinguishes it from the “ambush journalism” sometimes practiced by U.S. public affairs producers.

The program not only gets headlines; as one reviewer put it, it also gets results. Laws have been amended, new regulations adopted, and consumer guidelines imposed as a result of Marketplace reports. Its major contributions include the banning of urea formaldehyde foam insulation (UFFI) and lawn darts, warnings on soda pop bottles that sometimes explode on store shelves, prosecution of retailers for false advertising (leading in one case to a fine of $1 million), new standards for bottled drinking water and drinking fountains, new regulations for children’s nightwear (to make the clothing less flammable), and new designs for children’s cribs. From tests for bacteria content in supermarket hamburger (an early report) to checks on the safety of furnaces and long-haul tractor-trailers, the program has

Marketplace.

Marketplace
used its small staff—relying on independent laboratories for tests—to considerable effect. More recent investigations include the safety of rebuilt air bags, lead in children’s jewelry, and toxic waste. It has examined both specific consumer and larger issues of public health and safety. Despite lawsuits and threats of suits (and other pressures), the show has retained its probing quality. The longest-serving hosts, Joan Watson and Bill Paul, became leading consumer advocates.

Reviewers have commented that the tough-minded consumer advocacy practiced by Marketplace is the kind of programming that public broadcasters, somewhat insulated from commercial considerations, should be providing. It is unlikely that the show would have had the same effectiveness and longevity in private-sector television. Its producers attribute consistent good ratings to its focus on the personal concerns of its audience, which derives in part from careful attention to the thousands of letters it receives from viewers each year, many of which have led to Marketplace investigations. Freedom from commercial pressures may also be significant. Recently, Marketplace has made its reports available on its website (http://www.cbc.ca/consumers/market).

Married... with Children
U.S. Situation Comedy

Married... with Children (MWC), created by Michael Moye and Ron Leavitt, premiered as one of the new FOX Broadcasting Company’s Sunday series in 1987. Moye and Leavitt had previously produced The Jeffersons, a long-running comedy about a black entrepreneur who becomes wealthy and moves his family to an almost all-white New York City neighborhood. Set in Chicago, their new show was a parody of American television’s tendency to create comedies dealing with relentlessly perfect families. Their program was immediately termed “antifamily.”

At the time of MWC’s appearance, the top-rated U.S. television series was The Cosby Show. In the Cosby version of family, an African-American doctor and his attorney-wife raise their college-bound offspring in an upper-middle-class environment. Instead of such faultless people, Moye and Leavitt presented “patriarch” Al Bundy (Ed O’Neill), whose family credo is, “when one of us is embarrassed, the others feel better about ourselves.” In MWC, almost every character is amusingly tasteless and satirically vulgar.

Bundy is a luckless women’s shoe salesman who hates fat women, tries to relive his days as a high school football hero, and does almost anything to avoid having sex with his stay-at-home, bon-bon-eating spouse, Peggy (Katey Sagal). Peg loves to shop, and her ability to buy always exceeds Al’s capacity to earn. She refuses to cook, and the Bundys must take desperate measures to stay fed, frequently searching beneath the sofa cushions for crumbs of food. After one family funeral, the Bundys steal the deceased man’s filled refrigerator. Peggy’s clothes are too tight, her hair is too big, her makeup is too thick, and her heels are too high. She wants sex as much as Al avoids it.
The Bundy’s stereotypically beautiful, dumb-blonde daughter, Kelly (Christina Applegate), is a frequent target of their naive con artist son, Bud (David Faustino). Moye and Leavitt created Kelly in the guise of Sheridan’s Mrs. Malaprop; she can never manage to find the right word, and her verbal confusions are felicitous. According to Bud, Kelly will have sex with any available male. In one episode, Kelly acquires backstage passes to a rock concert and announces she is just one paternity suit away from a Caribbean home. The Bundys think Bud has no chance of ever attracting a date; running jokes mention his collection of inflatable rubber women. All characters have a common failing: none exercises good judgment.

In MWC, Moye and Leavitt not only lampooned Cosby but also parodied its creator, Marcy Carsey. The other continuing characters in the series were the Bundy’s upscale next-door neighbors. In the initial seasons, the neighbors were Marcy (Amanda Bearse) and Steve Rhoades (David Garrison). Garrison was a series regular from 1987 to 1990 and made frequent guest appearances after Steve and Marcy split. Then, in the 1991 season, Marcy remarried, to a man named Jefferson D’Arcy—giving her the moniker Marcy D’Arcy. Marcy and her husbands serve as a device to entice and challenge the Bundy clan, then put them down. Marcy is a banker and activist for almost any cause that will defeat Al’s current get-rich-quick scheme. She marries Jefferson (Ted McGinley) while drunk and discovers him in her bed the next morning. He has no career, although he has claimed to be a clever criminal, now living in the witness protection program.

The show had a small, loyal following until February 1989, and the producers had a history of arguments over taste and language with FOX’s lone, part-time network censor. One episode, “A Period Piece,” in which the Bundy and Rhoades families go camping, was delayed one month in the broadcast schedule because it focused on the women’s menstrual cycles. Two months later, the episode scheduled for February 19, 1989, “I’ll See You in Court,” was pulled from the schedule and never aired on the FOX network. The episode involves sexual videotapes of Marcy and Steve that Al and Peggy view when they rent a sleazy motel room. When both couples realize their activity at the motel was broadcast to other rooms, they sue. The jury chooses to compensate the couples for their performance quality, with Al and Peggy getting no money.

That same winter, two weeks after “A Period Piece,” an episode titled “Her Cups Runneth Over” led to a social stir. The segment features Peggy’s need for a new
brassiere, coinciding with her birthday. Al and Steve travel to a lingerie shop in Wisconsin, where an older male receptionist wears nothing below his waist but panties, a garter belt, stockings, and spike-heeled shoes. Steve fingers leather-fringed falsies panties, a brassiere, coinciding with the partial nudity unacceptable for a program airing during a time when children made up a large portion of the audience. Rakolta acted by writing to advertisers and asking them to question the association of their products with MWC's content. She also brought her case to national television news shows.

In March 1989, Rakolta said on Nightline, "I picked on Married...with Children because they are so consistently offensive. They exploit women. They stereotype poor people, they're anti-family. And every week that I've watched them, they're worse and worse. I think this is really outrageous. It's sending the wrong messages to the American family."

Rakolta had mixed success. Some advertisers, including major movie studios and many retail stores, refused to buy commercials on the new FOX network (prime-time telecasts had started less than two years earlier). Media brokers cited a bad connotation with FOX programming. Newsweek magazine featured a front-page story on "Trash TV," questioning the standards of taste in prime-time television. Both MWC and tabloid news shows such as A Current Affair were primary examples.

However, the greater effect of Rakolta's campaign was strongly positive for FOX. Among the fledgling network's greatest problems at the time of the controversy was limited viewer awareness. Many viewers simply did not know that a fourth network existed. Related to this was the fact that a small, mostly homogeneous viewing group comprised FOX's entire audience. Moreover, many FOX stations had weak UHF (ultrahigh frequency) signals that were difficult to receive. Rakolta's complaints garnered substantial national publicity, and this seemed to assist the network in solving many of its difficulties. After Nightline, Good Morning America, The Today Show, and most other national and local news shows featured the controversy over MWC, viewer awareness rose dramatically. People purposely sought out their local FOX affiliates, and MWC became a success.

By April 1989, MWC had reached a 10 rating, according to Nielsen's national measurements, the highest rating of any FOX show to that date. FOX began charging the same amount for commercials in MWC that the Columbia Broadcasting System (CBS) asked for 60 Minutes. The comedy began intermittently winning its time slot.

By 1995 the show had become the longest-running situation comedy currently programmed on network television, on the air as long as the classic comedy Cheers. In its final years, MWC no longer pushed new boundaries of good taste, and the jokes became routine and expected, even when still funny.

The show did, however, have an extremely lucrative afterlife in daily syndication, running strongly for years in many markets. In Los Angeles, FOX's station KTTV ran the program twice each weekday in the prime-time access hour. Daily viewership for the show continues to be strong, and with 11 seasons of episodes to add variety to off-network reruns, MWC is likely to consistently remain one of the most successful properties in the history of television syndication. At the end of its run on June 9, 1997, the program's off-network earnings were estimated to be more than $400 million.

During its long run, the show won no awards, but the actors were recognized for their performances. The Hollywood Foreign Press nominated the show for seven Golden Globe Awards: one for the program as Best TV-Series—Comedy/Musical, four for Katey Sagal's acting, and two for Ed O'Neill. American Comedy Award nominations also went to Sagal (three) and O'Neill (one).

American Broadcasting Company, “Steamy TV” (transcript), Nightline (March 2, 1989)

Marshall, Garry (1934– )
U.S. Producer, Writer, Actor

Garry Marshall was the executive producer of a string of sitcoms that helped the American Broadcasting Company (ABC) win the ratings race for the first time in the network’s history in the late 1970s. While Norman Lear’s Tandem Productions and Grant Tinker’s MTM Enterprises had put the Columbia Broadcasting System (CBS) on top in the early part of the decade, by the end of the 1978–79 season, four of the five highest-rated shows of the year were Marshall’s.

Marshall became a comedy writer during the last years of television’s “golden age.” He started out as an itinerant joke writer for an assortment of TV comedies and eventually secured a staff writing position on The Joey Bishop Show. There he met Jerry Belson, with whom he would go on to write two feature films, a Broadway play, and episodes for a variety of TV series, including The Dick Van Dyke Show, The Lucy Show, and I Spy. The last project Marshall and Belson did together was the most successful of their partnership, The Odd Couple, a series they adapted from the Neil Simon play in 1970, would run for five seasons and have a major impact on Marshall’s comic style.

Rather than forming his own independent production company, which had become standard procedure for producers at the time, Marshall remained at Paramount to make a succession of hit situation comedies for ABC. Happy Days debuted as a series in January 1974, and by the 1976–77 season, it was the most popular show on TV. Set in Milwaukee, Wisconsin, in the 1950s and centered around a teenager (Ron Howard), his family, and his friends, Happy Days generated three spin-offs, all of which Marshall supervised. Laverne and Shirley featured two working-class women (Penny Marshall and Cindy Williams), whose antics schemes were reminiscent of those portrayed on I Love Lucy. Viewers were introduced to the frenetic young comic Robin Williams in Mork and Mindy, a series about an alien (Williams) who comes to Earth to study human behavior by moving in with an all-American young woman (Pam Dawber). Joanie Loves Chachi followed two of the younger characters from Happy Days as they struggled to make it as rock-and-roll musicians.

While Norman Lear had used such shows as All in the Family and Maude to explore contemporary social issues such as racism, the women’s movement, and the war in Vietnam, Marshall’s shows were usually more concerned with less timely, personal issues, such as blind dates, making out, and breaking up. Lear, Tinker, and others had attracted young audiences with “relevant” programming earlier in the decade; Marshall attracted even younger ones with lighter, more escapist fare, most of it set in the supposedly simpler historic past. In an interview reprinted in American Television Genres (1985), Marshall recalled that, after producing the adult-oriented Odd Couple, he had been anxious to make shows “that both kids and their parents could watch.” When he gave a speech on accepting the Lifetime Achievement Prize given at the American Comedy Awards in 1990, Marshall said, “If television is the education of the American people, then I am recess.” Not surprisingly, four of Marshall’s sitcoms were adapted into Saturday morning cartoons.

Marshall continued to borrow from The Odd Couple throughout his career. Over and over again, he employed the comic device of coupling two distinctly different characters: the hip and the square on Happy Days, the earthling and the Orkan on Mork and Mindy,
the rich and the poor on *Angie*, and, later, the businessman and the prostitute in the movie *Pretty Woman*. In 1982 he brought a short-lived remake of *The Odd Couple* to ABC, this time with African Americans Ron Glass and Demond Wilson playing the parts of Felix and Oscar.

Marshall’s television tradition was carried on by Thomas L. Miller and Robert L. Boyett, two alumni of Marshall’s production staff. Their youth-oriented series, such as *Perfect Strangers, Full House*, and *Family Matters*, became staples of ABC’s lineup in the later 1980s and early 1990s.

Quinn Martin, among the most prolific and consistent television producers, helped to create and control some of television’s most successful and popular series from the 1950s through the 1970s. At various times in the 1960s and 1970s, Martin simultaneously had as many as four series on various networks.

Martin’s early television career consisted of writing and producing for many shows at Ziv Television and at Desilu Productions. He produced the Desilu Playhouse two-hour television movie “The Untouchables,” which served as the basis for the series. Under Martin, The Untouchables became a huge hit for the American Broadcasting Company (ABC). Martin left after the first two seasons to form his own production company, QM Productions. The first series from QM, The New Breed, was unusual for Martin in that it was unsuccessful. During the years at Desilu and the first years of QM, Martin surrounded himself with a cadre of writers, directors, and producers who would later ably serve him when he was juggling the production schedules of several series. Alan Armer, George Eckstein, Walter Grauman, and John Conwell are but a few of the names to appear again and again in the credits of QM productions.

QM and Martin entered into an era of considerable success in the 1960s. Among the shows to come from QM during this period were The Fugitive, Twelve O’clock High, The FBI, and The Invaders, all broadcast on ABC. Indeed, the relationship between QM and ABC was enormously beneficial to both despite repeated charges that they rode to their mutual successes on a wave of violent programming that began with The Untouchables and continued as a central stylistic feature in QM programs.

It was also during this period that two aspects of Martin’s approach to television production emerged. First was the QM segmented-program format: a teaser; an expository introduction that often employed the convention of a narrator; a body broken into acts I, II, III, and IV; and an epilogue, using an off-screen narrator to explain or offer insight into the preceding action. So recognizable did this convention become that it was
parodied in the 1982 sitcom Police Squad. Second, Martin compartmentalized his productions. This was done not only out of necessity, resulting from the volume of television being produced by the company, but also because of the trusted individuals with whom Martin populated QM. At QM, the writers, producers, and postproduction supervisors had very well defined tasks and would rarely stray beyond the parameters established by Martin. John Conwell, casting director and assistant to Martin for years, often referred to Martin as “Big Daddy” because of his paternalistic approach to production.

Additionally, as John Cooper reports, Alan Armer credited Martin with changing the face of the telefilm by moving from the soundstage to the outdoors and by ensuring authenticity by employing night-for-night shooting, as described in The Fugitive (see Cooper). Too often producers would save a few dollars by simply darkening film footage shot during the day to simulate nighttime. Not Quinn Martin. He made money, and he spent money. In 1965 Television Magazine quoted Martin as saying that the 10 percent he would have paid an agent (if he had retained one) was simply rolled back into production.

The successes of QM and Martin continued well into the 1970s. Preeminent and longest running among the QM shows of this era were The Streets of San Francisco, Cannon, and Barnaby Jones, itself a spinoff of Cannon. Martin had at least a half dozen other series in prime time during the 1970s. During this period, virtually every QM show dealt with law enforcement and crime.

Since the first days of The Untouchables, Martin had been criticized for using excessive violence in his productions. A new criticism was now mounted against Martin’s work because of the subject matter. Critics claimed that Martin’s shows enforced the dominant ideology of the inherent value of law and order. They suggested that the bulk of Martin’s work legitimized a right-wing, conservative agenda. As Horace Newcomb and Robert Alley indicate in The Producer’s Medium, Martin openly acknowledged his fondness for authority and his positive presentation of institutions of police powers—individual, state, and federal (see Newcomb and Alley).

Martin sold QM Productions to Taft Broadcasting around 1978. Part of the agreement required Martin to leave television production for five years and not to compete with Taft. Martin became an adjunct professor at Warren College of the University of California, San Diego. In the late 1980s, Martin became president of QM Communications, which developed motion pictures for Warner Brothers. He died in 1987, leaving a production legacy of 17 network series, 20 made-for-television movies, and a feature film, The Mephisto Waltz. No one has yet surpassed his streak of 21 years with a show in prime time.

Marx, Groucho (1890–1977)

U.S. Comedian

Although often remembered as the quipping leader of the team of brothers who starred in anarchic film comedies of the 1930s and 1940s, Groucho Marx reached a far larger audience through his solo television career. As the comic quizmaster of the long-running You Bet Your Life, Marx became an icon of 1950s television, maintaining a weekly presence in the Nielsen top ten for most of the decade.

The familiar Groucho persona served as a comedic anchor for the popular quiz-show format when the 60-year-old Marx made the transition to television in 1950. Groucho replaced his trademark greasepaint mustache with a real one, but his attributes were otherwise unchanged. The show simply let Groucho be Groucho. He unleashed his freewheeling verbal wit in repartee with contestants, scattered good-natured insults at his willing participants, and lived up to his billing as “TV's King Leer” by greeting female guests with his characteristic raised eyebrows and waggling cigar. Groucho's personality and gift for gab drove the program, with the quiz playing only a minor role. So immediate was his success in the medium that Groucho received an Emmy as Outstanding Television Personality of 1950 and was on the cover of Time a year later.
Groucho Marx.  
_Courtesy of the Everett Collection_

Groucho’s move to TV was not surprising, but the magnitude of his success was. Like many of early television’s “vaudeo” stars, he was a show business veteran with roots in vaudeville and an established presence on national radio. However, his radio career had been erratic. He lacked a successful show of his own until program packager John Guedel brought _You Bet Your Life_ to ABC Radio in 1947. Guedel modeled the show on his other popular series, _People Are Funny_ and _House Party_, which featured host Art Linkletter interacting with audiences. The format showcased Groucho’s talents well. He gained a large listenership and moved to the more powerful Columbia Broadcasting System (CBS) after two seasons. Like other radio hits, _You Bet Your Life_ moved into television.

A pilot was made at CBS with Groucho simply filmed performing one of his radio episodes. A bidding war for Groucho’s services ensued (the star later wrote that he chose the National Broadcasting Company [NBC] over CBS because CBS’s William Paley displeased him by trying to appeal to their Jewish solidarity). _You Bet Your Life_ remained a staple of NBC’s Thursday night TV lineup for 11 seasons and played on the network’s radio stations each Wednesday until 1957. Television episodes were different editions of performances aired on radio the previous evening.

The show’s idiosyncratic production methods had as much to do with the nature of Groucho’s performance style as they did with the logistics of working in two media simultaneously. Both the radio and the television version of _The Groucho Show_ (as it was retitled in its final season) were somewhat pioneering in that they were recorded and edited for later broadcast. Visually, the TV edition was quite static, using a single set: Groucho sitting on a stool chatting with contestants. A multicamera system used two cameras to film the interviews from each of four angles, including a slave camera on Groucho. The look was simple, but the setup allowed the producers to edit and sharpen Groucho’s performances. He could venture into risqué bant
ter, knowing that anything too blue for broadcast could be cut. Dull bits of his unrehersed, hour-long interviews were deleted, leaving only the comic highlights for the 30-minute telecasts.

Putting the program on film (and paying a star’s salary) gave _You Bet Your Life_ a higher production cost than other game shows. The investment was returned, however, by both high ratings and the ability to repeat episodes. During the 13-week summer hiatus, NBC aired _The Best of Groucho_, helping to innovate the programming convention of the rerun. When production ceased in 1961, _The Best of telefilms_ also went straight into daily syndication for several years.

Throughout its run, _You Bet Your Life_’s formula remained unchanged. Announcer and straight man George Fenneman began, “Here he is: the one, the only...” prompting the studio audience to shout “Groucho!” The quizmaster previewed the week’s “secret word,” and a wooden duck (in Groucho guise) descended with $100 whenever the word was spoken. Male and female contestants were paired up to talk with Groucho, who often played matchmaker. The show recruited entertaining, oddball contestants as well as celebrities. Many performed vaudeville-style numbers, making _You Bet Your Life_ as much a variety show as a talk or quiz program. After each interview, Groucho posed trivia questions. Winners received modest amounts of money, while losers received a consolation prize for answering a variation of Groucho’s famous query, “Who’s buried in Grant’s Tomb?”

The routine thrived because of Groucho’s rapport with guests. He was a living encyclopedia of showbiz patter, gags, and lyrics and possessed a genuine gift for witty ad libs. Yet his material was more scripted than it appeared. A staff of writers provided teleprompted jokes. Working off these, Groucho maintained a palpable spontaneity, never meeting with the screened contestants before the show.

While _You Bet Your Life_ was Groucho’s greatest contribution to television, he was a popular TV raconteur until the latter years of his life. After a short-lived
series revival on CBS (Tell It to Groucho) and appearances on British TV in the early 1960s, he hosted variety programs, did cameos, and sat in on panel shows. However, he found his most comfortable niche as a talk show personality with an intellectual edge. His acerbic manner fit well with fringe late-night programming, such as Les Crane’s controversial talk show (on its 1964 premiere Groucho served as a metacritic to political dialogue among William F. Buckley, John Lindsay, and Max Lerner). Of more lasting importance, Groucho served as an interim host for The Tonight Show when Jack Paar stepped down, and he introduced Johnny Carson when he debuted as host. Groucho also developed a famous friendship with Tonight Show writers Dick Cavett and Woody Allen, thereby influencing a new generation of TV and film comedians.

In the 1970s, Groucho’s celebrity was revived by a surprisingly successful resyndication of You Bet Your Life (though later imitations of it by Buddy Hackett and Bill Cosby flopped). Books, films, and records by and about Groucho also sold well. His popularity extended to both those nostalgic for a past era and those who made his anti-authority comedy style part of the younger counterculture.

This contradiction was appropriate for the performer who was simultaneously an insightful intellectual critic and a pop icon. Groucho is attributed with a memorable put-down of television: “I find television very educational. The minute somebody turns it on, I go into the library and read a good book.” Yet, in true contrarian fashion, when promoting his own show’s premiere, he added a seldom-quoted rejoinder: “Now that I’m a part of television, or ‘TV’ as we say out here on the Coast, I don’t mean a word of it.”

Mary Tyler Moore Show, The

U.S. Situation Comedy

The Mary Tyler Moore Show premiered on the Columbia Broadcasting System (CBS) in September 1970 and during its seven-year run became one of the most-acclaimed television programs ever produced. The program represented a significant change in the situation comedy, quickly distinguishing itself from typical plot-driven storylines filled with narrative predictability and unchanging characters. As created by the team of James Brooks and Allan Burns, The Mary Tyler Moore Show presented the audience with fully realized characters who evolved and became more complex throughout their life on the show. Storylines were character based, and the ensemble cast used this approach to develop relationships that changed over time.

The program starred Mary Tyler Moore, who had previously achieved success as Laura Petrie on The Dick Van Dyke Show. As Mary Richards, a single woman in her 30s, Moore presented a character different from other single TV women of the time. She was not widowed or divorced or seeking a man to support her. Rather, the character had just emerged from a live-in situation with a man whom she had helped through medical school. He left her on receiving his degree, and she relocated to Minneapolis, Minnesota, determined to “make it on her own.” This new common concept was rarely depicted on television in the early 1970s despite some visible successes of the women’s movement.

Mary Richards found a job in the newsroom of fictional television station WJM, the lowest-rated station in its market, and there she began her life as an independent woman. She found a “family” among her coworkers and her neighbors. Among her at-work friends were Lou Grant (Ed Asner), the crusty news director; Murray Slaughter (Gavin MacLeod), the cynical news writer; Ted Baxter (Ted Knight), the supercilious anchorman; and, later, Sue Ann Nivens (Betty White), the man-hungry “Happy Homemaker.” Sharing her apartment house were Rhoda Morgenstern (Valerie Harper), Mary’s best friend, and Phyllis Lindstrom (Cloris Leachman), their shallow landlady. This ensemble pushed the situation comedy genre in new directions and provided the show with a fresh feel and look.

The “workplace family,” while not new to television sitcoms (Our Miss Brooks and The Gale Storm Show were among earlier incarnations of this subgenre), was redefined in The Mary Tyler Moore Show. Here were characters easily defined by traditional familial qualities—Lou as the father figure, Ted as the problem child, Rhoda as the family confidante, and Mary as the mother/daughter around whom the entire situation revolved. But the special nature of these relationships gave the show its depth and humor. Never static, each character changed in ways previously unseen in the genre. One of the best examples occurred when Lou divorced his wife of many years. His adjustment to the transition from married to divorced middle-aged man provided rich comic moments but also allowed viewers to see new depths in the character, glimpse behind the gruff facade into Lou’s vulnerability, and grow closer to him. This type of evolution occurred with all the cast members, providing writers with constantly shifting perspective on the characters. From those perspectives, new storylines could be developed, and these fresh approaches helped renew a genre grown weary with repetition and familiar techniques.

Similarly, the program set the standard for a new subgenre of situation comedy: the working-woman sitcom. Beginning as a determined but uncertain independent woman, Mary Richards came to represent what has since become a convention in this type of comedy. Unattached and not reliant on a man, Mary never rejected men as romantic objects or denied her hopes to one day be married. Unlike Rhoda, however, Mary did not define her life through her search for “Mr. Right.” Rather, she dated several men and even spent the night with a few of them (another new development in TV sitcoms). Working-woman sitcoms since, including Kate and Allie and Murphy Brown, owe a debt to Mary Richards.

The program became an anchor of CBS’s Saturday night schedule and, along with All in the Family, M*A*S*H, The Bob Newhart Show, and The Carol Burnett Show, was part of one of the strongest nights of programming ever presented by a network. From September 1970 until its final airing in September 1977, The Mary Tyler Moore Show was usually among the top 20 shows. It garnered three Emmy Awards as
Outstanding Comedy Series (in 1975, 1976, and 1977). Moore, Asner, Harper, Knight, and White all won Emmys for their performances, and the show’s writing and directing were similarly honored several times.

The show was the first from MTM Productions, the company formed by Moore and her then husband, Grant Tinker. MTM went on to produce an impressive list of landmark situation comedies and dramas, including *The Bob Newhart Show*, *Newhart*, *The White Shadow*, *Hill Street Blues*, *St. Elsewhere*, and *L.A. Law*. The characters from *The Mary Tyler Moore Show* provided the focus for several successful spin-offs in the 1970s: *Rhoda*, *Phyllis*, and *Lou Grant*. The latter was significant in that it represented the successful continuation and transformation of a character across genre lines. In the new show, Asner played Grant as a newspaper editor in a serious, hour-long, issue-oriented drama. MTM Productions developed a reputation, begun in *The Mary Tyler Moore Show*, for creating what became known as “quality television,” television readily identifiable by its textured, humane, and contemporary themes and characters.

Traits of *The Mary Tyler Moore Show* have become standard elements of many situation comedies since its airing. Because numerous writers and directors worked at MTM (and on *The Mary Tyler Moore Show* in particular) and then moved on to develop their own productions, the program’s influence is notable in sitcoms such as *Taxi*, *Cheers*, and *Night Court*.

*The Mary Tyler Moore Show* was also one of the first sitcoms to bring closure to its story. In its last episode in 1977, the entire WJM news staff, with the exception of the very expendable Ted Baxter, was
fired. Mary’s neighbors Rhoda and Phyllis had departed previously for their own programs. Now the rest of her “family” was being broken up. Ironically, television brought them together, and now the vagaries of television were separating them—in the “real” world as well as in their own fictional context. In the final moments, Mary, Lou, Murray, Ted, Ted’s wife Georgette, and Sue Ann mass together in a teary group hug and exit. Then Mary turns out the lights in the newsroom for the last time. It was a fitting conclusion to a program that had become very comfortable and very real in ways few other programs ever had.

M*A*S*H

U.S. Comedy

M*A*S*H, based on the 1970 movie of the same name directed by Robert Altman, aired on the Columbia Broadcasting System (CBS) from 1972 to 1983 and has become one of the most-celebrated television series in the history of the television medium. During its initial season, however, M*A*S*H was in danger of being canceled because of low ratings. The show reached the top-ten program list the following year and never fell out of the top-20 rated programs during the remainder of its run. The final episode of M*A*S*H was a two-and-a-half-hour special that attracted the largest audience to ever view a single television program episode.

In many ways, the series set the standard for some of the best programming to appear later. The show used multiple plotlines in half-hour episodes, usually
M*A*S*H was set in South Korea, near Seoul, during the Korean War. The series focused on the group of doctors and nurses whose job was to heal the wounded who arrived at this "Mobile Army Surgical Hospital" by helicopter, ambulance, or bus. The hospital compound was isolated from the rest of the world. One road ran through the camp; a mountain blocked one perimeter and a minefield the other. Here the wounded were patched up and sent home—or back to the front. Here, too, the loyal audience came to know and respond to an exceptional ensemble cast of characters.

The original cast assumed roles created in Altman’s movie. The protagonists were Dr. Benjamin Franklin "Hawkeye" Pierce (Alan Alda) and Dr. "Trapper" John McIntyre (Wayne Rogers). Pierce and McIntyre were excellent surgeons who preferred to chase female nurses and drink homemade gin to drinking and who had little, if any, use for military discipline or authority. As a result, they often ran afoul of two other medical officers, staunch military types, Dr. Frank Burns (Larry Linville) and senior nurse Lieutenant Margaret "Hot Lips" Houlihan (Loretta Swit). The camp commander, Lieutenant Colonel Henry Blake (McLean Stevenson), was a genial bumbler whose energies were often directed toward preventing Burns and Houlihan from court-martialed Pierce and McIntyre. The camp was actually run by Corporal Walter “Radar” O’Reilly (Gary Burghoff), the company clerk who could spontaneously finish Blake’s sentences and hear incoming helicopters before they were audible to other human ears. Other regulars were Corporal Max Klinger (Jamie Farr), who, in the early seasons, usually dressed in women’s clothing in an ongoing attempt to secure a medical (mental) discharge, and Father Francis Mulcahy (William Christopher), the kindly camp priest who looked out for an orphanage.

In the course of its 11 years, the series experienced many cast changes. Trapper John McIntyre was “discharged” after the 1974–75 season because of a contract dispute between the producers and Rogers. He was replaced by Dr. B.J. Hunnicutt (Mike Farrell), a clean-cut family man quite different from McIntyre’s lecherous doctor. Frank Burns was given a psychiatric discharge in the beginning of the 1977–78 season and was replaced by Dr. Charles Emerson Winchester (David Ogden Stiers), a Boston blueblood who disdained the condition of the camp and tent mates Pierce and Hunnicutt. O’Reilly’s departure at the beginning of the 1979–80 season was explained by the death of his fictional uncle, and Klinger took over the company clerk position.

Perhaps the most significant change for the group occurred with the leave-taking of Henry Blake. His exit was written into the series in tragic fashion. As his plane was flying home over the Sea of Japan, it was shot down and the character killed. Despite the "realism" of this narrative development, public sentiment toward the event was so negative that the producers promised never to have another character depart the same way. Colonel Sherman Potter (Harry Morgan), a doctor with a regular-army experience in the cavalry, replaced Blake as camp commander and became both more complex and more involved with the other characters than Blake had been.

Although set in Korea, both the movie and the series M*A*S*H were initially developed as critiques of the Vietnam War. As that war dragged toward conclusion, however, the series focused more on characters than situations—a major development for situation comedy. Characters were given room to learn from their mistakes, to adapt, and change. Houlihan became less the rigid military nurse and more a friend to both her superordinates and the doctors. Hawkeye changed from a gin-guzzling skirt chaser to a more "enlightened" male who cared about women and their issues, a reflection of Alda himself. Radar outgrew his youthful inno-
cession, and Klinger gave up his skirts and wedding dresses to assume more authority. This focus on character rather than character type set M*A*S*H apart from other comedies of the day, and the style of the show departed from the norm in many other ways as well in terms of both its style and its mode of production.

While most other contemporary sitcoms took place indoors and were produced largely on videotape in front of a live audience, M*A*S*H was shot entirely on film on location in southern California. Outdoor shooting at times presented problems. While shooting the final episode, for example, forest fires destroyed the set, causing a delay in filming. The series also made innovative uses of the laugh track. In early seasons, the laugh track was employed during the entire episode. As the series developed, the laugh track was removed from scenes set in the operating room. In a few episodes, the laugh track was removed entirely, another departure from sitcom conventions.

The most striking technical aspect of the series is found in its aggressively cinematic visual style. Instead of relying on straight cuts and short takes, episodes often used long shots, with people and vehicles moving between the characters and the camera. Tracking shots moved with action and changed direction when the story was "handed off" from one group of characters to another. These and other camera movements, wedded to complex editing techniques, enabled the series to explore character psychology in powerful ways and to assert the preeminence of the ensemble over any single individual. In this way, M*A*S*H seemed to be asserting the central fact of war, that individual human beings are caught in the tangled mesh of other lives and must struggle to retain some sense of humanity and compassion. This approach was grounded in Altman's film style and enabled M*A*S*H to manipulate its multiple storylines and its mixture of comedy and drama with techniques that matched the complex, absurd tragedy of war itself.

M*A*S*H was one of the most innovative sitcoms of the 1970s and 1980s. Its stylistic flair and narrative mix drew critical acclaim, while the solid writing and vitally drawn characters helped the series maintain high ratings. The show also made stars of its performers—none more so than Alda, who went on to a successful career in film. The popularity of M*A*S*H was quite evident in the 1978-79 season. CBS aired new episodes during prime time on Monday and programmed reruns of the series in the daytime and on Thursday late night, giving the show a remarkable seven appearances on a single network in a five-day period. The series produced one unsuccessful spin-off, After M*A*S*H, which aired from 1983 to 1984. The true popularity of M*A*S*H can still be seen, for the series is one of the most widely syndicated series throughout the world. Despite the historical setting, the characters and issues in this series remain fresh, funny, and compelling in ways that continue to stand as excellent television.

Mass Communication

The term “mass communication” is used in a variety of ways that, despite the potential for confusion, are usually clear from the context. These include (1) reference to the activities of the mass media as a group, (2) the use of criteria of “massiveness” to distinguish among media and their activities, and (3) the construction of questions about communication as applied to the activities of the mass media. Significantly, only the third of these uses does not take the actual process of communication for granted.

“Mass communication” is often used loosely to refer to the distribution of entertainment, arts, information, and messages by television, radio, newspapers, magazines, movies, recorded music, the Internet, and associated media. This general application is appropriate only as designating the most common features of such otherwise disparate phenomena as broadcast television, cable, video playback, theater projection, recorded song, radio talk, advertising, and the front page, editorial page, sports section, and comics page of

Mass Communication

the newspaper. In this usage, "mass communication" refers to the activities of the media as a whole and fails to distinguish among specific media, modes of communication, genres of text or artifact, production or reception situations, or any questions concerning actual communication. The only analytic purpose served is to distinguish mass communication from interpersonal, small-group, and other face-to-face communication situations.

Various criteria of massiveness can also be brought to bear in analyses of media and mass communication situations. These criteria may include size and differentiation of audience, anonymity, simultaneity, and the nature of influences among audience members and between the audience and the media.

Live television spectaculars of recent decades may be the epitome of mass communication. These include such serious events as the funerals of John Fitzgerald Kennedy, Martin Luther King Jr., or Princess Diana and entertainment spectaculars such as the Olympic Games, the Super Bowl, and the Academy Awards. These transmissions are distributed simultaneously and regardless of individual or group differences to audiences numbering in several tens or even a few hundreds of millions. Outside their own local groups, members of these audiences know nothing of each other. They have no real opportunities to influence the television representation of the events or the interpretation of those representations by other audience members.

By contrast, the audience for most cable television channels is much smaller and more differentiated from other audience groups. The audience for newspapers, magazines, and movies is less simultaneous, as well as smaller and more differentiated, and holds out the potential for a flow of local influences as people talk about articles and recommend movies. The audience for Internet web pages and downloadable files may be so thoroughly distributed in time and space that there is never more than one audience member at a time. Yet the audience members for streaming files of Internet radio or TV may be having experiences very similar to broadcast radio or TV audiences, even if there are fewer of them, more widely dispersed. When television shows prompt viewers to check their web pages, these programs are trying to steer the audience in a way that would reduce its unpredictability and hence one aspect of its massiveness. Compared to a letter, phone call, conversation, group discussion, or public lecture, all these media produce communication immensely more massive on every criteria.

All the criteria used in defining mass communication are potentially confused when one is engaged in a specific research project or critical examination. The most confounding problem is encountered when determining the level of analysis. Should the concern be with a single communication event or with multiple events but a single communication channel? Should the focus be on multiple channels but a single medium? Does the central question concern a moment in time or an era, a community, a nation, or the world?

Radio provides an excellent example of the importance of these choices. Before television, network radio was the epitome of mass communication; it was national, live, and available and listened to everywhere. Today it is difficult to think of radio this way because the industry no longer works in the same manner. Commercial radio stations depend on local and regional sources of advertising income. Essentially, all radio stations are programmed to attract a special segment of a local or regional audience, and even when programming national entertainment materials, such as popular songs, stations emphasize local events, personalities, weather, news, and traffic in their broadcast talk. Radio is an industry characterized by specialized channels, each attracting relatively small, relatively differentiated audiences. However, the average home in the United States has five and half radios, more than twice the number of televisions. Cumulatively, the U.S. audience for radio is just as big, undifferentiated, and anonymous as that for television, and because radio is normally live and television is not, the reception of radio communication is more simultaneous than that of television. Is radio today, then, a purveyor of mass communication? It depends on whether the concern is with the industry as a whole or with the programming and audience of a particular station.

Most uses of the term "mass communication" fall into one of these first two categories, either to refer to the activities of the mass media as a whole or to refer to the massiveness of certain kinds of communication. Both uses have in common that they take issues of communication for granted and instead place emphasis on size, on the massiveness of the distribution system and the audience. Attention is given to what are called the "mass media" because they are the institutional and technological systems capable of producing mass audiences for mass-distributed "communications." Communication, then, ends up implicitly defined as merely a kind of object (message, text, artifact) that is reproduced and transported by these media. For some purposes, this may be exactly the right definition. However, it diminishes our ability to treat communication as a social accomplishment, as something people do, rather than as an object that gets moved from one location to another. If communication is something people do, then it may or may not be successful, may or may not be healthy and happy. If communication
Mass Communication

means "to share," for example, rather than "to transmit," then what, if anything, of importance is shared when people watch a television show?

Scholars of mass communication are often more interested in communication as a social accomplishment than they are in the media as mass-distribution systems. This interest is based on an intellectual independence from existing habits of terminology and, most important, independence from media institutions as they exist. The term "mass," however it may be defined, is then treated as a qualification on the term "communication," however it may be defined. Such intellectual exercises, of course, can work out in a great variety of ways, but a few examples will suffice.

At one extreme, if "communication" is defined so that interaction between parties is a necessary criterion, as in "communication is symbolic interaction," and "mass" is defined as an aggregate of noninteracting entities, then "mass communication" is an oxymoron and an impossibility. At the opposite extreme, if the term "mass communication" is defined as involving any symbolic behavior addressed "to whom it may concern," then choices of clothing, furniture, and appliance styles, body posture, gestures, and any other publicly observable activity may well count as mass communication. Both of these extremes may seem like mere intellectual games, but they are important precisely because their intellectuality frees them of the practical constraints under which we operate in other realms. The contribution of such intellectual games is precisely to stimulate new thinking. Perhaps pausing to consider the idea that mass communication may be an impossibility could help us understand some of the paradoxes and incoherencies of contemporary American culture.

Consider a third example in which we use a model of communication to evaluate industry practices. Definitions of "mass communication" that take communication for granted and focus simply on the massiveness of the medium are always in danger of implicitly adopting, or certainly failing to question, the assumed criteria of evaluation already used in industries. In commercial television, as in any of the other commercial media, what is assumed is that television is a business. The conventions of the industry are to evaluate things solely in business terms. Is this television show good for business? Would increasing network news to an hour be a good business decision? Would noncommercial, educational programming for children be a successful business venture? In such an environment, it is an important intervention to point out that these industries are communicators as well as businesses. As such, they can and should be held to communicative standards. The public has a right to ask whether a television show is good for communication, whether an hour of network news would be a successful form of communication, and whether there is a communication need for noncommercial, educational children's programming. As the terms of the questions shift, so, of course, may the answers. Becoming aware of such possibilities begins with being sensitive to the definitions of such terms as "mass communication."

Rosengren, Karl Erik, editor, Media Effects and Beyond: Culture, Socialization and Lifestyles, London and New York: Routledge, 1994
Mastermind, a long-running quiz show of an unusually challenging academic character, was first screened by the British Broadcasting Corporation (BBC) in 1972 and defied all expectations to become staple peak-time viewing over the next 25 years. Made for next to nothing and generally filmed on location in a university setting, no one guessed at the outset that the program would break out of the cult niche to which it seemed fated (give its initial late-night viewing time) and, in short order, overtake even the long-established rival University Challenge.

The structure of the quiz was relatively straightforward, with four “contenders” (rather than “contestants”) being given two minutes to answer as many questions as they could about a topic of their own choosing. These specialist subjects varied from the relatively conventional (“British moths,” “English cathedrals” or “the works of Dorothy L. Sayers”) to the more esoteric (such as “old time music hall” or “the Buddhist sage Niciren”). The general rule was that any subject was admissible as long as it was of a broadly academic nature and wide enough to provide scope for a torrent of exacting questions. After the specialist rounds, each of the four contenders were tested for a further two minutes in a similar fast-paced round of general knowledge questions, which seemed to get more difficult as the round wore on. The series as a whole was run on a knockout system, with highest scorers (and highest-scoring losers) progressing to later stages of the tournament. Winners were required to choose different specialist subjects when reappearing but were allowed to return to an earlier topic if they managed to get as far as the grand final. The eventual winner of the competition was presented with a special cut-glass bowl to take home.

The challenge facing the contenders was vastly intensified by the intimidating atmosphere that characterized the program. As well as having to maintain concentration in such daunting surroundings, participants were required to sit in an isolated pool of light in an intimidating black leather chair at the total mercy of the quizmaster. Audiences maintained complete silence as each contender faced a barrage of questions designed to reveal the depth (or lack thereof) of their knowledge. Even the opening title music, a piece by Neil Richardson titled “Approaching Menace,” was suitably threatening. The forbidding atmosphere of the program, with its spotlighted victim seated in a darkened room and exposed to intellectual torture, owed much to its creator, BBC producer Bill Wright. Wright had been a prisoner of war during World War II, and his idea for the program came out of his experience of interrogation by the German Gestapo, who had accused him of being a spy.

The presenter throughout the entire duration of the program was the Icelandic-born Scottish journalist Magnus Magnusson, who was already well known as a broadcaster on a variety of cultural topics. His politely sympathetic manner offered contenders some crumbs of reassurance, but once the stopwatch started, there was nowhere to retreat from his relentless inquisition. On occasion, it all proved too much, and some participants caved in completely, barely registering a score in the face of such pressure—acutely embarrassing, but certainly making for memorable television. One luckless participant in 1990 ended up with a record-low score of just 12 points. Magnusson’s catchphrases “I’ve started, so I’ll finish” (a mantra recited whenever the buzzer ending the round sounded in the middle of a question) and the formulaic reply “Pass” mouthed by participants when they did not know the answer were readily absorbed into everyday language.

Though initially considered to be too high-brow for peak-time audiences, the program escaped its late-night slot through a happy accident. When a Galton and Simpson comedy series called Casanova ’73 was removed from the schedule at short notice after BBC 1 Controller Bill Cotton Jr. and Director of Programs Alasdair Milne found opening episodes of the latter too offensive to be shown, Mastermind was put on in its peak-time slot as a short-term emergency replacement. The response was immediate, and the program’s right to a permanent place in the peak-time schedule was recognized. By 1974 Mastermind was topping the ratings alongside The Generation Game. By 1978 it was attracting audiences of 20 million.

Thus established, the program was henceforth run on an annual basis (with the single exception of 1982, when no contest was held). Despite the lack of big cash prizes and the fearsome grilling they stood to face, hundreds of people auditioned for the show each season. They came from a wide range of backgrounds,
by no means all academic. Winners over the years ranged from Sir David Hunt (1977), who was a former ambassador to Brazil, to London taxi driver Fred Housego (1980), who capitalized on his newfound fame to appear in further quizzes and other programs, and train driver Christopher Hughes (1983). All winners automatically became members of the Mastermind Club, which staged annual reunions and a quiz of quizzes chaired by Magnusson himself. One exceptional Christmas show featured Magnusson himself in the chair, going through the ordeal he had presided over for so many years. Afterward, he freely admitted how demanding it was to be a contender and how much he admired those who had been through it before him.

The series was finally deemed to have run out of steam in 1997, after 25 years, and ended after a final contest filmed at St. Magnus Cathedral in Orkney. As well as all the usual spin-offs in the form of board games, books, and so forth, the program’s legacy may be detected in many subsequent shows, notably those in which contenders are asked seriously challenging questions in tense, hushed surroundings.

In November 2001, the black leather chair was dusted off once more for a revived version of the show to be screened on Discovery Channel, with Clive Anderson inheriting the post of quizmaster.

In June 2003, Mastermind was brought back on the air, showing on BBC 2 and hosted by John Humphrys.

Maude

U.S. Situation Comedy

Maude, the socially controversial, sometimes radical sitcom featuring a strong female lead character played by Bea Arthur, ran on the Columbia Broadcasting System (CBS) from 1972 to 1978. Like its predecessor All in the Family, Maude was created by Norman Lear’s Tandem Productions. Maude Findlay was first introduced as Edith’s liberal, outspoken cousin from suburban Tucahoe, New York, on an episode of All in the Family in 1972 before spinning off later that year to her own series set in upper-middle-class Tucahoe, where she lived with her fourth husband, Walter Findlay, her divorced daughter Carol, and Carol’s young son Phillip. The Findlays also went through three housekeepers during the run of the series, the first of whom, Florida Evans, left in 1974 to her own spin-off, Good Times. These three shows, among others, comprised a cadre of 1970s Norman Lear urban sitcoms that raised social and political issues and dealt with them in a manner as yet unexplored in television sitcoms. Maude enjoyed a spot in the top-ten Nielsen ratings during its first four seasons despite being subjected to day and/or time changes in the CBS schedule that continued throughout the entire run of the program.

Like many of Lear’s productions, Maude was a character-centered sitcom. Maude Findlay was opinionated like Archie Bunker, but her politics and class position were completely different. Strong willed, intelligent, and articulate, the liberal progressive Maude spoke out on issues raised less openly on Lear’s highly successful All in the Family. While questions of race, class, and gender politics reverberated throughout both series, certain specific issues, such as menopause, birth control, and abortion, were more openly confronted on
Maude. In a two-part episode that ran early in the series, the 47-year-old Maude finds out that she is pregnant and decides, with her husband Walter, that she would have an abortion, which had just been made legal in New York State. Part 2 of the double episode also deals with men and birth control, as Walter considers getting a vasectomy. Thousands of viewers wrote letters in protest of the episode because of the abortion issue. In other episodes, Maude gets a facelift; Walter’s business goes bankrupt, and he deals with the resulting bout with depression; in yet another program, Walter confronts his own alcoholism. The realism of Maude, though conforming to the constraints of the genre, made it one of the first sitcoms to create a televisual space where highly charged, topical issues and sometimes tragic contemporary situations could be discussed.

Maude represented a change in television sitcoms during the early 1970s. Many 1960s sitcoms reflected the context and values of white middle America, where gender and family roles were fixed and problems encountered in the program rarely reached beyond the confines of nuclear family relationships. Despite variations on that theme in terms of alternative families (Family Affair and My Three Sons) and an added supernatural element (Bewitched and I Dream of Jeannie), the context was middle to upper middle class, mostly suburban, and white. However, cultural upheaval in the 1960s, the political climate of the early 1970s, shifting viewer demographics, and the maturation of television itself were responsible for a departure from the usual fare. By the early 1970s, a growing portion of the viewing audience, baby boomers, were open to new kinds of television, having come of age during the era of the civil rights movement, Vietnam protests, and various forms of consciousness raising. However, the changing tastes of the audience and the social climate of the early 1970s cannot by themselves account for the rise of socially conscious television during this period. The sitcom had also matured, and producers such as Norman Lear, familiar generally with American humor and specifically with the rules of television sitcom, decided to make television comedy that was more socially aware. Like All in the Family, Maude set out to explode the dominant values of the white middle-class domestic sitcom, with its traditional gender roles and nonwhite stereotypes, by openly engaging in debates where various political points of view were embodied in the sitcom characters.

Such debates were the staple of Maude throughout its six-year run. In an early episode, Maude hires Florida Evans, a black woman, to be housekeeper. Maude goes out of her way to prove her progressive attitude to Florida by insisting the housekeeper act as if she is one of the family. Florida, along with Walter and Carol, points out to Maude the foolishness of her extreme behavior. In the end, Maude recognizes her underlying condescension toward Florida, who, as witty and outspoken as Maude, retains her dignity and decides to remain as the Findlay housekeeper on her own terms. The interaction between Maude and Florida in this episode was a comment on the issues and attitudes about race that stemmed from the civil rights efforts of the 1960s. Maude’s attitudes and behavior were indicative of white liberal politics during a time when race relations in the United States were being reconfigured.

Another reconfiguration was taking place within the arena of women’s rights. In one of the final episodes of the show, Maude is given the opportunity to run for the New York state senate, but Walter refuses to consider the possibility. He offers Maude an ultimatum, and after mulling over her decision, she decides to let Walter leave. This episode, like many others, reflected a feminist sensibility emerging within the country and can be viewed as a platform for discussions about the changing roles of women and the difficulties they encountered as they were faced with new challenges and more choices. Maude’s character agonized over the conflict between tradition and her own career aspirations.
The show's ratings began to fall after its fourth season, and by 1978, Bea Arthur announced that she would leave the show. The end of *Maude* marked another shift in the domestic sitcom, away from open political debate and toward a renewal of the safer, more traditional family-centered sitcoms of an earlier period in television history.

**Maverick**

**U.S. Western**

A subversive western with a dark sense of humor, *Maverick* soared to sixth place in the Nielsen ratings during its second season with a 30.4 share, and it won an Emmy Award for Best Western Series in 1959. Produced by Warner Brothers (WB) and starring the then relatively unknown James Garner as footloose frontier gambler Bret Maverick, soon to be joined by Jack Kelly as Bret’s brother Bart, this hour-long series followed the duplicitous adventures and, more often, misadventures of the Mavericks in their pursuit of money and the easy life.

Starting out as a straight western drama (the first three episodes, “The War of the Silver Kings,” “Point Blank,” and “According to Hoyle,” were directed by feature western auteur Budd Boetticher), the series soon developed a comedy streak after writer Marion Hargrove decided to liven up his script-writing work by inserting the simple stage direction: “Maverick
looked at him with his beady little eyes.” Other scriptwriters then followed suit. Garner, in particular, and Kelly joined in with the less-than-sincere spirit of the stories, and Maverick took a unique turn away from the other, more formal and traditional WB-produced westerns then on the air (Lawman, Colt .45, Cheyenne, and Sugarfoot).

The series was created by producer Roy Huggins and developed out of a story (co-written with Howard Browne) in which Huggins tried to see how many TV western rules he could get away with breaking; the script, ironically, was filmed as an episode of the “adult” Cheyenne series (“The Dark Rider”) and featured guest star Diane Brewster as a swindler and practiced cheat, a role she was later to take up as a recurring character, gambler Samantha Crawford, during the 1958–59 season of Maverick. “Maverick is Cheyenne, a conventional western, turned inside out,” said Huggins. “But with Maverick there was nothing coincidental about the inversion.” The Maverick brothers were not heroes in the traditional western sense. They were devious, cowardly cardsharps who exploited easy situations and quickly vanished when faced with potentially violent ones. A popular part of their repertoire for evading difficult moments was the collection of “Pappyisms” that corrupted their speech. When all else failed, for example, they were likely to quote their mentor’s excuse: “My old Pappy used to say, ‘If you can’t fight ’em, and they won’t let you join ’em, best get out of the county.’”

Following the success of Cheyenne on the American Broadcasting Company (ABC) from its premiere in 1955, the network asked WB’s TV division to give them another hour-long western program for their Sunday evening slot. Maverick premiered on September 22, 1957, and pretty soon won over the viewers from the powerful opposition of the Columbia Broadcasting System’s (CBS’s) The Ed Sullivan Show and the National Broadcasting Company’s (NBC’s) The Steve Allen Show; two programs that had been Sunday night favorites from the mid-1950s. With Garner alone starring in early episodes, WB found that it was taking eight days to film a weekly show. They decided to introduce another character, Bret’s brother, in order to keep the production on schedule. The strategy resulted in a weekly costarring series when Jack Kelly’s Bart was introduced in the “Hostage” episode (November 10, 1957). With separate production units now working simultaneously, WB managed to supply a steady stream of episodes featuring either Bret or Bart on alternate weeks. Occasionally, both Maverick brothers were seen in the same episode, usually when they teamed up to help each other out of some difficult situation or to outwit even more treacherous characters than themselves.

The series also reveled in colorful characters as well as presenting wild parodies of other TV programs of the period. During the early seasons, recurring guest characters popped in and out of the plots to foil or assist the brothers: Dandy Jim Buckley (played by Efrem Zimbalist, Jr.), Gentleman Jack Darby (Richard Long), Big Mike McComb (Leo Gordon), and Bret’s regular antagonist, the artful conwoman Samantha Crawford (Brewster). Among the more amusing episodes were “Gun-Shy” (second season), a send-up of Gunsmoke featuring a hick character called Mort Dooley; “A Cure for Johnny Rain” (third season), spoofing Jack Webb’s Dragnet with Garner doing a deadpan Joe Friday voice-over; “Hadley’s Hunters” (fourth season), which had Bart enlist the help of Ty Hardin (Bronco), Will Hutchins (Sugarfoot), Clint Walker (Cheyenne), and John Russell and Peter Brown (Lawman)—all playing their respective characters from the WB stable of western TV series (and with Edd “Kookie” Byrnes from WB’s 77 Sunset Strip as a blacksmith); and “Three Queens Full” (fifth season), a wicked parody of Bonanza in which the Subrosa Ranch was run by Joe Wheelwright and his three sons, Moose, Henry, and
Small Paul. In addition, two other episodes ("The Wrecker" and "A State of Siege") were loose adaptations of Robert Louis Stevenson stories, albeit translated into the *Maverick* vein.

In 1960 actor James Garner and his WB studio bosses clashed when Garner took out a lawsuit against the studio for breach of contract arising out of his suspension during the January–June writers' strike of that year. To justify its suspension of Garner, WB tried to invoke the force majeure clause in Garner’s contract; this clause dictated that if forces beyond the control of the studio (i.e., the writers' strike) prevented it from making films, the studio did not have to continue paying actors' salaries. It had been no secret at the time that Garner had wanted to be released from his contract ("Contracts are completely one-sided affairs. If you click, [the studio] owns you," he stated). Finally, in December 1960, the judge decided in favor of Garner. During the course of the testimony, it was revealed that during the strike WB had obtained—under the table—something in the number of 100 TV scripts and that at one time the studio had as many as 14 writers working under the pseudonym of "W. Hermanos" (Spanish for "brothers").

Garner then went on to a successful feature film career but returned to series television in the 1970s with *Nichols* (1971-72) and the popular *The Rockford Files* (1974–80). He appeared as a guest star along with Jack Kelly in the 1978 TV movie/pilot *The New Maverick*, which produced the short-lived *Young Maverick* (1979–80) series, minus Garner; he also starred in the title role of *Bret Maverick* (1981–82), which he coproduced with WB. A theatrical film version, *Maverick*, was produced in 1994 with Mel Gibson starring as Bret Maverick and Garner appearing as Bret's father; Richard Donner directed the WB release.

As a replacement for Garner in the fourth season of the original series, WB brought on board Roger Moore, as cousin Beauregard, a Texas expatriate who had lived in England (a WB contract player, Moore had been transferred from another WB western series, *The Alaskans*, which had run only one season from 1959). When Moore departed after just one season, another Maverick brother, Robert Colbert's Brent Maverick, a slight Garner/Bret look-alike, was introduced in the spring of 1961 to alternate adventures with Bart. Colbert stayed only until the end of that season, leaving the final (and longest-remaining) Maverick, Jack Kelly, to ride out the last *Maverick* season (1961–62) alone, except for some rerun episodes from early seasons.

The series came to an end after 124 episodes, and with it a small-screen western legend came to a close. Perhaps the ultimate credit for *Maverick* should go to creator-producer Roy Huggins for the originality to steer the series clear of the trite and the ordinary and for not only trying something different but also executing it with a comic flair.

Max Headroom

U.S. Science Fiction Program

Max Headroom was one of the most innovative science fiction series ever produced for American television, an ambitious attempt to build on the cyberpunk movement in science fiction literature. The character of Max Headroom, the series' unlikely cybernetic protagonist, was originally introduced in a 1984 British television movie, produced by Peter Wagg and starring Canadian actor Matt Frewer. The American Broadcasting Company (ABC) brought the series to U.S. television in March 1987, reftiming the original movie as a pilot but recasting most of the secondary roles. The ABC series attracted critical acclaim and a cult following but lasted for only 14 episodes. The anarchic and irreverent Max went on to become an advertising spokesman for Coca-Cola and to host his own talk show on the Cinemax cable network.

The original British telefilm appeared just one year after the publication of William Gibson's *Neuromancer*, the novel that brought public attention to the cyberpunk movement and introduced the term "cyberspace" into the English language. Influenced by films such as *The Road Warrior* and *Bladerunner*, the cyberpunks adopted a taut, intense, and pulpy writing style based on brisk yet detailed representations of a near future populated by multinational corporations, colorful youth gangs, and computer-hacker protagonists. Their most important theme was the total fusion of human and machine intelligences. Writers such as Gibson, Bruce Sterling, Rudy Rucker, and Pat Cadigan developed a shared set of themes and images that were freely adopted by *Max Headroom*.

Set "20 minutes in the future," *Max Headroom* depicts a society of harsh class inequalities, where predators roam the streets looking for unsuspecting citizens who can be sold for parts to black-market "body banks." Max inhabits a world ruled by Zic-Zac and other powerful corporations locked in a ruthless competition for consumer dollars and television rating points. In the opening episode, Network 22 dominates the airwaves through its use of blipverts, which compress 30 seconds of commercial information into three seconds. Blipverts can cause neural overstimulation and (more rarely) spontaneous combustion in more sedate viewers. Other episodes center around the high crime of zipping (interrupting a network signal) and neurostim (a cheap burger pack giveaway that hypnotizes people into irrational acts of consumption). We encounter blanks, a subversive underground of have-nots who have somehow dodged incorporation into the massive data banks kept on individual citizens.

At the core of this dizzying and colorful world is Edison Carter, an idealistic Network 24 reporter who takes his portable minicam into the streets and the boardrooms to expose corruption and consumer exploitation, which, in most episodes, lead him back to the front offices of his own network. Edison's path is guided by Theora Jones, his computer operator, whose hacker skills allow him to stay one step ahead of the security systems—at least most of the time—and Bryce Lynch, the amoral boy wonder and computer wizard. Edison is aided in his adventures by Blank Reg, the punked-out head of a pirate television operation, Big Time Television. Edison's alter ego, Max Headroom, is a cybernetic imprint of the reporter's memories and personality who comes to "life" within computers, television programs, and other electronic environments. There he becomes noted for his sputtering speech style, his disrespect for authority, and his penchant for profound non sequiturs.

Critics admired the series' self-reflexivity, its willingness to pose questions about television networks and their often unethical and cynical exploitation of the ratings game, and its parody of game shows, polit-

---

ical advertising, televangelism, news coverage, and commercials. Influenced by Music Television (MTV), the series’ quick-paced editing and intense visual style were also viewed as innovative, creating a televisual equivalent of the vivid and intense cyberpunk writing style. This series’ self-conscious parody of television conventions and its conception of a “society of spectacle” was considered emblematic of the “postmodern condition,” making it a favorite of academic writers as well. Their interest was only intensified by Max’s move from science fiction to advertising and to talk television, where this nonhuman celebrity (commodity) traded barbed comments with other talk show–made celebrities, such as Doctor Ruth, Robin Leach, Don King, and Paul Shaffer. Subsequent series, such as Oliver Stone’s *Wild Palms* or *VR*, have sought to bring aspects of cyberpunk to television, but none have done it with Max Headroom’s verve, imagination, and faithfulness to core cyberpunk themes.

**McDonald, Trevor (1939– )**

British Broadcast Journalist

Trevor McDonald is the comforting face of nighttime news. As Big Ben chimes ten o’clock, McDonald looks up from his news desk and, with considerable gravitas, reads out the news headlines for Independent Television News (ITN). Although this act is undertaken in newsrooms across Britain, he occupies a very particular position in the media firmament. McDonald not only is one of the most respected elder statesmen of news broadcasting, regardless of race, but also has been an abidingly positive role model for countless young black Britons growing up in a society where skin color still matters. He was born in Trinidad and came to Britain in 1969 to work for the British Broadcasting Corporation (BBC) World Service, joining ITN a few years later as its first black reporter. McDonald has quietly got on with doing his job, courting neither controversy nor fame but a settled life doing what he does best. Because of his extreme visibility as, still, one of a few black media professionals who are regularly on television, he has been criticized for not using his privileged position more overtly to combat racism and discrimination. However, as he argued in the *Ra-
McDonald, Trevor

dio Times, although he is aware of “racial undercurrents in this country...I have been very lucky and found none at all.”

His most important contribution to television is probably his exemplary professionalism as a black newscaster and journalist who manifests a positive role to younger generations, in counterpoint to many of the more stereotyped media portraits of black communities in Western societies. He also offers a professional image to those who know nothing of black people other than their vicarious experiences of television. As evidence to his illustrious career, he was awarded TRIC’s “Newscaster of the Year” and, in 1993, Order of the British Empire. He was knighted in 1999. Although he will probably retire in 2005, Sir Trevor’s enduring appeal among ITV’s news watchers has enabled him to sign a new contract that once again makes him the face of ITN’s revived News at Ten bulletin.

McGovern, Jimmy (1949– )
British Writer

As the creator of Cracker, the writer Jimmy McGovern made one of the most influential contributions to British television drama in the 1990s, fundamentally shifting the locus of the crime series from action and consequence toward psychology and motivation. Elsewhere, his work has encompassed a broad generic range while retaining a powerful and distinctive voice, exploring themes of guilt, loss, and working-class identity. Underlying these concerns is a disconcerting sense of moral ambiguity and a readiness to challenge an audience’s liberal assumptions on such taboos as racism, sexism, and homophobia. McGovern uses television, he admits, as “a kind of confessional” (Butler, p. 22).

Born into a working-class Catholic family in Liverpool, the fifth of eight children, and educated at a Jesuit-run grammar school, McGovern moved through a succession of jobs before deciding in his early 20s to train as schoolteacher. His brief teaching career (at Quarry Bank Comprehensive, the school earlier attended by John Lennon) would later provide the basis for the serial Hearts and Minds, about an idealistic probationary teacher struggling to inspire his pupils while battling professional demoralization and cynicism. It was while teaching that he began to submit plays to local theaters and radio and, through this, met the producer Phil Redmond, who was setting up Brookside, the house soap opera for the new Channel 4. Over the next seven years, he wrote approximately 80 scripts for the series and, on leaving, had a small stock of stories that he had been unable to introduce but that he now began to develop. The idea for a story about a Catholic priest surfaced in his early single drama, Traitors, an account of the Gunpowder Plot of 1605 focusing on the dilemma of a priest who opposes the plan but, because he has heard of it through a con-
profession, is powerless to act on his concerns. McGovern returned to this event in 2004 with Gunpowder, Treason and Plot, a sweeping historical account, backed by a large budget and a cast led by Robert Carlyle (whose early career is closely linked to McGovern’s work) as King James I. The moral dilemma of Traitors was also at the center of Priest, originally written as a serial but produced by the British Broadcasting Corporation (BBC) as a single film and given a limited theatrical release in which an inner-city priest struggled with his own homosexuality and with the knowledge, again gleaned through confession, that one of his parishioners is being abused by her father.

A further story idea from Brookside was to produce one of the most compelling threads in McGovern’s later work. In 1989, 94 soccer fans, supporters of the Liverpool Football Club, were crushed to death and a further 170 seriously injured on an overcrowded terrace at the Sheffield Wednesday ground at Hillsborough. For McGovern, the significance underlying this tragedy lay not only in the culpability of the police and the conduct of the subsequent enquiry but also in the contempt displayed toward the Liverpool crowd by the tabloid press and in particular the Sun newspaper. McGovern’s storyline involving a commemorative burning of the Sun was ruled out of Brookside, but his anger over the event and his reflection on the class prejudices that it revealed would form the basis of one of the most powerful episodes of Cracker, in which a working-class young man began a campaign of murders to avenge the Hillsborough victims, transforming himself into the image of a shaven-headed delinquent as a response to the institutional stereotyping of his class. Having met some of the bereaved families during the making of this episode, McGovern went on to confront the impact of the event and its aftermath in the drama documentary Hillsborough. As well as exploring the political question of institutional responsibility (and contributing to the campaign for a public inquiry into the event), the play found its dramatic core in the lives of three families and in the emotional fallout of grief, pain, and self-reproach that follows sudden and violent bereavement.

Although McGovern claimed to have felt restricted by the overriding concern for factual accuracy in writing drama documentary, he twice returned to the form. Dockers was an account of a lengthy but largely unpublicized strike in 1995 by Liverpool dockworkers against deteriorating working conditions that had resulted in hundreds of men being fired and replaced. In concentrating on the effect of the political upheaval on family relationships and friendships, it drew much of its insight from McGovern’s co-authorship with a writing workshop made up of men and women involved in the original dispute. Sunday commemorated the 30th anniversary of the “Bloody Sunday” shooting of demonstrators in Northern Ireland in 1972. McGovern’s deeply emotional account, told through the lives of a small group of young men and women and again highlighting themes of family, friendship, and loss, contrasted tellingly with the spare, documentary style of Paul Greengrass’s Bloody Sunday, which was released in the same week.

The chain of grief and recrimination that follows a sudden death runs through The Lakes. As McGovern himself had once done, a young Liverpudlian, Danny, arrives to work in a seemingly peaceful rural community and, when the community is torn apart by the drowning of three young girls, becomes the scapegoat for the guilt and feuding that lurks beneath the surface. At one level, the serial opens up to examination a particular aspect of class conflict in British society; another, it is concerned with one of McGovern’s most personal themes, the guilt and emotional wreckage produced by addiction. He had written about drug addiction in the early play Needle, but in The Lakes, as in Cracker, the compulsion is gambling, a habit from which McGovern suffered in his early adulthood and which here feeds Danny’s sense of implication in the guilt felt at the loss of the girls and threatens his redemptive relationship with a young woman from the community.

McGovern writes from the depths of his own emotional experience. In the character of Fitz from Cracker, the brilliant but deeply flawed forensic psychologist, he has created one of the most resonant figures of British television drama. Fitz’s intellectual acuity and mordant wit, his obsessiveness, and his instinctive ability to winkle a confession out of his suspect are rooted not only in the ability to identify with the criminal mind but also in a knowledge of his own guilt as gambler, drinker, chauvinist, and liar. Yet there is a political dimension to this lapsed figure, embodied in the idea of what McGovern has described as “post-Hillsborough man” (Day-Lewis, p. 67), a haunting sense of intellectual cynicism born out of the erosion of moral certainty in Britain during the ideologically evacuated period of the 1980s.

McGrath, John (1935– )
British Writer, Director

John McGrath’s career was marked by an absolute commitment to working-class politics in theater, film, and television. McGrath’s theatrical career spans London’s Royal Court and the Liverpool Everyman to his own 7:84 Theatre Company (“7% of the population own 84% of the wealth”), while his film credits extend from Russell’s Billion Dollar Brain to rewrites on FOX’s Adventures of Robin Hood. His TV career opened with Kenneth Tynan’s formative arts program Tempo, while his 1963 Granada documentary The Entertainers won critical plaudits. With Troy Kennedy Martin and John Hopkins, McGrath shaped the British Broadcasting Corporation’s (BBC’s) Z Cars into the breakthrough cop drama of the 1960s, fired by moral uncertainty and Royal Court grittiness. McGrath hallmarked the series with a profound compassion for his protagonists, instituting a concern for real lives among the social problems that were already, however comfortably, addressed by earlier genre offerings. The use of 16-millimeter film allowed for actual locations, and the shift from received pronunciation to the vernacular of his native Merseyside opened the way, notably in Stratford John’s performance as Inspector Barlow, for subsequent generations of tough cop stories. McGrath took the combination of entertainment formula and social concern that distinguished much of the best of the BBC’s output in the 1960s to his work as producer and director for BBC 2 experimental dramas by, among
others, Johnny Speight, Edna O’Brien, and his own adaptation, with Ken Russell, of The Diary of a Nobody in the style of a silent comedy. Continuing to work in theater, he eventually amassed over 40 scripts, one of which became a successful movie, The Bofors Gun, directed by Jack Gold, a chilling account of class war and military service.

Appalled by bureaucracy and mismanagement in the arts, he resigned from the 7:84 Theatre Company, which he had founded, in 1981. In 1984, he started Freeway Films, dedicated to producing programs and features for his adopted homeland in Scotland. Characteristically committed to social causes, to political entertainment, and to the immediacy of performance (whose demise, with the rise of videocassette, he has not ceased to mourn), Freeway began to produce, largely for Channel 4, a series of programs, including Poets and People, in which leading poets read their work to audiences with whom they felt particular affinities in housing estates and clubs. Sweetwater Memories, based on McGrath’s military service in Suez, opened a more personal vein in his writing, expanded on in the 1986 three-part series Blood Red Roses, coproduced with Lorimar and subsequently cut for theatrical release. Roses follows the life of Bessie MacGuigan from life in the rural hinterlands with her disabled father, through unsuccessful marriage to a Communist Party activist, to trades unionism among the women workers of East Kilbride.

The remarkable trilogy on Scottish history and English colonialism—There Is a Happy Land, Border Warfare, and John Brown’s Body—is a record of the epic productions performed at Glasgow’s Tramway Theatre. In 1992 McGrath provided an election broadcast for the Labour Party, some of whose themes are picked up in 1993’s The Long Roads, a picaresque romance that anchors a dissection of contemporary mores in the reviving romance of an elderly couple visiting their children, scattered through Thatcher’s Britain.

Despite major illness, McGrath completed the feature Mairi Mhor in 1994 and remained fiercely active in theater and film as well as television. Unlike some of his more famous theatrical contemporaries, he retained a commitment to regionalism (and to nationalism in the case of Scotland), turning to television as the most effective way of bringing the power of drama to the widest audience. McGrath died in January 2002.

McKay, Jim (1921– )
U.S. Sportscaster

There are few commentators with accolades to match those of Jim McKay or whose career is marked by an equally impressive list of broadcasting “firsts.” In 1947 McKay was the first on-air television broadcaster seen and heard on the airwaves of Baltimore, Maryland. Twenty-one years later, in 1968, McKay earned distinction as the first sports commentator honored with an Emmy Award. McKay built on his reputation of excellence and went on to receive a total of 13 Emmy Awards and further distinguished himself as the first and only broadcaster to win Emmy Awards for both sports and news broadcasting, as well as for writing.

McKay’s first reporting job was with the Baltimore Evening Sun. In 1947 the Sun’s leadership invested in Baltimore’s first TV station, WMAR-TV, and McKay was chosen as that station’s first on-camera personality. McKay did everything but run WMAR-TV—functioning as the station’s producer, director, writer, and news and sports reporter. His reputation as a hardworking and skillful journalist earned him an opportunity to host a New York City–based Columbia Broadcasting System (CBS) variety show, and McKay became a strong presence in the largest media market in the world. Although CBS gave McKay his broadcasting break, it was ABC Sports, under the leadership
of Roone Arledge, that provided McKay the opportunity to flourish. During the 1950s, McKay covered events ranging from international golf and horse-racing events to college football. McKay and American Broadcasting Company (ABC) colleague Howard Cosell, gave ABC the most comprehensive sports programming available on television.

In fact, McKay’s assignment as an Olympic commentator would make McKay one of the most recognizable sports personalities throughout the world. His most memorable Olympic Games were those at Munich, where his experience as a seasoned reporter was put to the test. While preparing to take a swim on his first day off at the games, McKay received word that gunshots were fired in the Olympic Village. He ran to the ABC studio, threw clothes on over his swimsuit, and for the next 16 hours delivered to the world award-winning coverage of the Black September terrorists’ attack on Israeli athletes in Munich’s Olympic Village.

McKay received two Emmy Awards for his work during the 1972 games, one for his coverage of the games and the other for his reporting on the terrorism. He was also the 1972 recipient of the George Polk Memorial Award, given annually to the one journalist whose work represents the most significant and finest reporting of the year. The Munich coverage was also recognized with his receipt of the Officer’s Cross Order of Merit, bestowed by the former West German Federal Republic.

Although ABC lost the Olympics contract following the 1988 games, the National Broadcasting Company (NBC) invited McKay to cross network lines and join its 2002 Olympic coverage as a special correspondent. This historic crossover marked McKay’s 12th time to report on the Olympic Games. It is no wonder why McKay is known as “Mr. Olympics” throughout the television industry.

McKay is perhaps best known for his role as host for *ABC’s Wide World of Sports*, which began with McKay as its host in 1961. Now, some 35 years later, *ABC’s Wide World* is the most successful and longest-running sports program in the history of television. Through his work with *ABC’s Wide World*, McKay became the first American television sports reporter to enter the People’s Republic of China during China’s policy of isolationism.

McKay’s pioneering work in the field has not gone unrecognized. His multiple Emmy Awards are a tribute not only to his excellence but also to his versatility. In fact, among his most impressive Emmy is one from 1988, given for his opening commentary scripts of *ABC Sports’* coverage of the 1987 Indianapolis 500, the British Open, and the Kentucky Derby; a 1990 Award, another first, for Lifetime Achievement in Sports; and a 1992 Emmy for his sports special *Athletes and Addiction: It’s Not a Game*.

In addition to his role on *Wide World*, McKay anchors most major horse-racing events, such as the Kentucky Derby, the Preakness Stakes, and the Belmont Stakes. In 1987, McKay was chosen as a member of the Jockey Club, horse racing’s governing body. McKay and his wife, Margaret, are steadfast supporters of Maryland’s horse-racing industry and culture. He is founder of the Maryland Million, a million-dollar horse-racing spectacular for Maryland thoroughbreds. They are also part owners of the Baltimore Orioles baseball team.

McKern, Leo (1920–2002)
Australian Actor

Trained and critically acclaimed in theater, a successful character actor in movies, Australian performer Leo McKern made his most indelible mark in television. In the mind of many audiences, he became irrevocably intertwined with the title character of *Rumpole of the Bailey*, the irascible British barrister created by author John Mortimer. Starring as the wily, overweight, jaded but dedicated defense attorney for seven seasons, McKern brought an intelligent, acerbic style to the character that was applause by critics, audiences, and creator Mortimer. The actor’s performance thus ascribed qualities to the character just as the character was inscribed on McKern’s acting persona. More than once McKern vowed he would not return to the series because of the inevitable typecasting. Yet he was always persuaded otherwise by Mortimer, who himself vowed that no one but McKern would play the role of Horace Rumpole.

The program, which began in 1978 in the United Kingdom and was soon exported to the United States via the Public Broadcasting Service’s (PBS’s) *Mystery!* series, featured McKern as an attorney who profoundly believed in a presumption of innocence, the validity of the jury system, and the importance of a thorough defense. It was a position unabashedly in support of civil liberties. In the course of each show, Rumpole typically dissected the stodgy and inefficient machinations of fellow barristers, judges, and the legal system in Britain. His resourcefulness and unorthodoxy matched that of the title character in U.S. television’s *Perry Mason*, but with his askew bow tie and white wig, his sidelong looks and interior monologues, Rumpole was more colorful and complicated.

As the program was shown around the world through 1996, McKern could not escape what he called the “insatiable monster” of television, which blotted out memories of earlier performances. However, that did not stop the Australian periodical *The Bulletin* from naming McKern one of Australia’s top 55 “human assets” in 1990. And, in fact, television did offer McKern another distinctive, if more transitory, role much earlier than Rumpole. In *The Prisoner*, a British drama aired in the United Kingdom and the United States in the late 1960s, McKern was one of the first authority figures to repress the series’ hero.

The Prisoner, still a cult classic dissected on many websites and Internet chat groups, was created by the then enormously popular actor Patrick McGoohan and was intended as an indictment of authoritarian subjugation of the individual. In the title role, McGoohan was kept prisoner in a mysterious village by the state, represented most forcefully by the person in charge of the village, who was called Number 2. Engaging in a battle of wits and wits with Number 6 (McGoohan), Number 2 typically died at episode's end, to be replaced by a new Number 2 in the next show. McKern played Number 2 in the series' second program, "The Chimes of Big Ben," and helped set the tone of serious banter and political conflict. His character, killed at the end of the episode, was resurrected the next season at the end of the series in two episodes, "Once upon a Time" and "Fallout," to demonstrate a change of position in favor of the hero and opposed to the state. Not completely unlike Rumpole, McKern's Number 2 was a system insider who understood principles better than the rest of the establishment (if only belatedly).

With its use of fantastic technology to keep Number 6 from escaping, The Prisoner was ostensibly a science fiction program. The science fiction motif also in-

formed a TV guest appearance McKern made some years later in the U.S. program Space: 1999, which aired in 1975. In that episode, "The Infernal Machine," McKern was again part of a larger entity, this time not the "state" but a living spacecraft. As the companion of "Gwent," McKern mediated with human beings (notably Martin Landau and Barbara Bain, recent Mission: Impossible veterans) on a lunar station. His character was slightly cynical, critical, bantering, and attached to the entity he served, like the later Rumpole. Among McKern's decades of television experience, these roles were notable on three levels: their connection to general recurring themes; their development of a recognizable, familiar character function; and their demonstration of the actor's particular talents. For instance, the "Companion" episode on Space 1999 evoked both the "Companion" episode on the original 1967 Star Trek, in which Glenn Corbet's character was kept alive by fusion with an alien presence, and the Trill character of "a symbiotic fusion of two species" on Star Trek: Deep Space Nine. In addition, the threatening power of the state and of technology of The Prisoner prefurred a reliable theme of the popular 1990s program The X-Files.

The Rumpole role is the one most connected with a number of recurring character functions on television. The deep commitment covered by a veneer of cynicism is a staple of police officers and other investigators throughout U.S. television history. The belief in the civil liberties of the individual is the core of lawyer programs such as Perry Mason of the 1960s and Matlock of the 1990s. The rumpled insider, "only by virtue of superior competence," was the essence of Columbo of the 1970s. The British Rumpole is a rather more complex example of a U.S. television perennial.

However well written it might be, the Rumpole role would not have the cachet it has among fans if not for the actor. Critics cited McKern's intelligence, energy, and remarkably flexible baritone as the heart of the character. McKern's varied, multimedia career—from movies such as the lightweight Beatles' Help! to the epic Lawrence of Arabia to plays such as Othello—not may not be remembered by most fans, but the depth of talent required for such diversity is critically acknowledged in reviews of Rumpole of the Bailey.

Canadian Media Theorist

Marshall McLuhan was perhaps one of the best-known media theorists and critics of this era. A literary scholar from Canada, McLuhan became entrenched in American popular culture when he decided that this was the only way to understand his students at the University of Wisconsin. Until the publication of his best-known and most popular works, The Gutenberg Galaxy: The Making of Typographic Man (1962) and Understanding Media: The Extensions of Man (1964), McLuhan led a very ordinary academic life. His polemic prose (a style frequently compared to that of James Joyce) irritated many and inspired some. However cryptic, McLuhan's outspoken and often outrageous philosophies of the "electric media" roused a popular discourse about the mass media, society, and culture. The pop culture motto "The medium is the message (and the massage)" and the term "global village" are pieces of what is known affectionately (and otherwise) as "McLuhanism."
McLuhan was a technological determinist who credited the electronic media with the ability to exact profound social, cultural, and political influences. Instead of offering a thoughtful discourse regarding the positive or negative consequences of electric media, McLuhan preferred instead to pontificate about its inevitable impact, which was neither good nor bad but simply was. McLuhan was primarily concerned that people acknowledge and prepare for the technological transformation. He argued that people subscribe to a "rear-view mirror" understanding of their environment, a mode of thinking in which they do not foresee the arrival of a new social milieu until it is already in place. In McLuhan's view, instead of "looking ahead," society has tended to cling to the past. He wrote, "We are always one step behind in our view of the world," and we do not recognize the technology that is responsible for the shift.

McLuhan first began to grapple with the relationship between technology and culture in The Mechanical Bride: Folklore of Industrial Man (1951). However, he did not elaborate on their historical origins until the publication of The Gutenberg Galaxy, which traces the social evolution of modern humanity from tribal society. In his theory, this process encompasses four stages.

McLuhan defines tribal society as dependent on the harmonious balance of all senses. Tribal society was an oral culture; members used speech (an emotionally laden medium) to communicate. As a result, nonliterate societies were passionate, involved, interdependent, and unified. The "acoustic space" that enveloped tribal society was eroded by the invention of the phonetic alphabet. McLuhan credits phonetic literacy for the dissolution of tribal society and the creation of "Western Man."

Literacy inspired a more detached, linear perspective; the eye replaced the ear as the dominant sensory organ. Western Man evolved into "Gutenberg Man" with the arrival of the printing press in the 16th century. According to McLuhan, the printing press was responsible for such phenomena as the industrial revolution, nationalism, and perspectivity in art. The printing press eventually informed a "Mechanical Culture."

The linearity and individualization characteristic of Mechanical Culture has been usurped by electric media. This process began with the invention of the telegraph. McLuhan considers the electric media as extensions of the entire nervous system. Television is perhaps the most significant of the electric media because of its ability to invoke multiple senses. Television, as well as future technologies, have the ability to "retribalize," that is, to re-create the sensory unification characteristic of tribal society.

In perhaps his most popular work, Understanding Media: The Extensions of Man, McLuhan elaborates on the sensory manipulation of the electric media. Like most of his writing, Understanding Media has been criticized for its indigestible content and often paradoxical ideas. Ironically, it was this work that first captured the minds of the American public and triggered McLuhan's metamorphosis from literary scholar into pop culture guru.

Understanding Media contains the quintessential McLuhanism, "The medium is the message." McLuhan explains that the content of all electric media is insignificant; it is instead the medium itself that has the greatest impact on the sociocultural environment. This perspective has been contested by representatives of various schools in mass communication—in particular, empirical researchers have rejected McLuhan's grand theorizing, whereas critical cultural theorists have argued that McLuhan undermines their agenda by discounting the power relationships inherent in and perpetuated by media content.

However, many judge McLuhan's thesis to have certain merit. His focus on the "televisual experience"
McLuhan, Marshall

and the role of the medium within contemporary life has inspired much popular culture research. Within this same framework, some theorists ponder the impact of newer technologies, such as the Internet and high-definition television.

In *Understanding Media*, McLuhan proposes a controversial frame for judging media: “hot” and “cool.” These categorizations are puzzling, and contemporary technology may render them obsolete. In simplest terms, “hot” is exclusive, and “cool” is inclusive. Hot media are highly defined; there is little information to be filled in by the user. Radio is a hot medium; it requires minimal participation. Cool media, by contrast, are less defined and thus highly participatory because the user must “fill in the blanks.” Television is the ultimate “cool” medium because it is highly participatory. This categorization is extremely problematic to those who consider television viewing a passive activity.

To illustrate this concept, McLuhan analyzed the Kennedy–Nixon debates of 1960. Those who watched the debates on television typically judged Kennedy the winner; according to McLuhan, this televised victory was due to the fact that Kennedy exuded an objective, disinterested, “cool” persona. However, Nixon, better suited for the “hot” medium of radio, was considered victorious by those who had listened to the debates on radio.

The McLuhanism with the loudest echo in contemporary popular culture is the concept of the “global village.” It is a metaphor most invoked by the telecommunications industry to suggest the ability of new technologies to link the world electronically. McLuhan’s once-outrageous vision of a postliterate society, one in which global consciousness was shaped by technology instead of verbalization, has been partially realized by the Internet. For McLuhan, television begins the process of retrialization through its ability to transcend time and space, enabling the person in New York, for example, to “experience” a foreign culture across the globe.

McLuhan contemplated the profound impact of electronic technology on society. Loved or loathed, his opinions penetrated academic, popular, and corporate spheres. Within the context of popular culture theorizing, McLuhan’s commentaries will remain part of history. Mass communication researchers continue to explore the relationship between media and society. In doing so, they delineate the significance of television in global culture and amplify the ideas McLuhan contributed to this discourse.

McQueen, Trina (1943—)
Canadian Broadcast Journalist, News Executive

In her 27 years with the Canadian Broadcasting Corporation (CBC), Trina McQueen's singularly successful career has constituted a series of "firsts" for women. In 1991 she became vice president of English television news and current affairs and of CBC Newsworld (the all-news cable channel), the first and only woman to hold such a high-ranking position at the Canadian network.

The following year, McQueen was made vice president of regional broadcasting operations, which included equity in portrayals across all broadcast services and foreign bureaus. This move was widely regarded as a demotion as well as a backward step for the future of high-level female broadcast executives. The network, however, denied that charge, and McQueen remained uncomplaining even after her depart-
McQueen, Trina

ture. The only other female vice president, however, Donna Logan, who was head of English-language CBC Radio, was also demoted, leaving the executive suite all male. McQueen had been opposed to the changes being initiated by the head office to move the successful flagship nightly 10:00 news The National to the all-news cable channel Newsworld. The switch also involved canceling the acclaimed in-depth nightly documentary news series that followed, The Journal, and launching Prime Time News at 9:00 p.m. CBC brass brought in news head Tim Kotcheff from rival network CTV to implement the changes, which proved to be disastrous.

McQueen’s quiet, soft-spoken, and tactful negotiating manner combines with a toughness attested to by longtime colleagues. She has been called “something of a Patton in Pollyanna’s clothing.” It was reported that McQueen lost a power struggle for the position of senior vice president of TV services to fast-rising wonderkind Ivan Fecan in a management arrangement in which their duties, previously carried out by vice president Denis Harvey, were split into two vice president jobs. McQueen oversaw a thousand people and more than 200 hours of information programming per week in her position.

McQueen began in journalism at the entry level, parlaying student jobs on newspapers to a stint with the Journal (Ottawa). From there, she became the first female reporter for CTV’s local Toronto station, CFTO, and cohost for CTV’s current affairs magazine show, W5. When CTV execs indicated that a woman would not be hired as a national reporter, McQueen quit and joined the public network, CBC, in 1967. There she became the first female on-camera reporter for The National news. After nine years as reporter, producer, and assignment editor, she became the first female executive producer of The National in 1976 when she was 33.

Having grown up watching The National in Belleville, Ontario, she has said that it was a glorious dream job for her. She presided over a virtual revolution of the news, replacing the old guard with the then-new faces of Hike Duffy, Peter Mansbridge, and Knowlton Nash. She guided the new management through the 1980 Quebec referendum and two federal elections in addition to daily news stories. She also stood up to the chauvinists’ stereotypes of women in news and won respect and success.

McQueen returned to news, after nine years in CBC administration, as director of news and current affairs. It was a time of huge budget cuts that decimated jobs, regional CBC stations, and employee morale. Then as vice president, she also became manager of the CBC broadcast center, the new downtown facility that gathered together the disparate TV and radio production entities that had inhabited various spaces throughout Toronto. In addition, she was head of English network finances and human resources.

In 1993, when the federal government handed down more budget cuts for CBC, as it had every year since 1985, McQueen decamped for a job in the private sector. She became vice president and general manager of the newly created Discovery Channel, Canada, largely owned by Labatt Communications, Inc., the entertainment arm of the giant beer conglomerate, which produces shows on science, technology, nature, the environment, and world cultures. In 1999, however, McQueen returned to CTV in the role of vice president. She was eventually promoted to president and then chief operating officer. In this capacity, she was responsible for overseeing the CTV network of 27 local stations, seven cable channels, and three production companies. McQueen retired in 2002, although she continues to work and perform volunteer activities through her company, Hutton-Belleville Inc. She is chair of the board of the Governor-General’s Performing Arts Awards. McQueen is also a professor at Carleton University. In 2003, McQueen was chosen to lead the International Jury at the 24th Banff Television Festival.

Media Conglomerates

The conglomeration of the media has greatly affected the structure of the television industry worldwide, but especially in the United States. The U.S. television industry is now largely contained within large, diversified, transnational media conglomerates that own interests ranging from Internet services, outdoor advertising, magazines, and book publishing to video games, theme parks, film, and music as well as television interests such as programming, broadcast stations, broadcast networks, cable networks, and cable operators. In the past, from the late 1950s until the early 1980s, three broadcast networks dominated U.S. television (the National Broadcasting Company [NBC], the Columbia Broadcasting System [CBS], and the American Broadcasting Company [ABC]). In the 2000s, however, there are four major broadcast networks in the United States, including FOX, three minor broadcast networks (The WB, United Paramount Network [UPN], and PAX), and over 100 cable and satellite networks (or programming services). However, most of these networks are subsidiaries of a few large media conglomerates. NBC is a subsidiary of General Electric, CBS is owned by Viacom, the Walt Disney Company owns ABC, and FOX is part of the News Corporation. These conglomerates also own cable and/or satellite television programming services. For example, Disney also owns the Entertainment and Sports Network (ESPN) and Disney as well as interests in the Lifetime, E!, A&E, and the History Channel cable networks; Viacom owns cable programmers Music Television (MTV), Video Hits 1 (VH1), The Nashville Network (TNN), Nickelodeon, and Showtime; and News Corporation holdings include FX, FOX News, and FOX Sports as well as satellite services British Sky Broadcasting (BSkyB) and StarTV. Thus, although programming outlets have greatly diversified, ownership has consolidated, creating a new form of postnetwork-era television oligopoly. Instead of three major networks gathering a 90 percent share of prime-time audiences as in the network era, today a handful of media conglomerates utilize their affiliated broadcast and cable programming services to aggregate over 80 percent of prime-time audiences. How and why have media conglomerates become so dominant in the television and entertainment industries? What follows is a brief overview of the broad trends that have contributed to conglomeration, some specific rationales for media and entertainment conglomeration, and summary descriptions of key major media conglomerates.

Beginning in the mid-1980s, a spate of major mergers have reshaped the structure of the media and entertainment industries: News Corporation acquired 20th Century-Fox (1985); Sony bought CBS Records (1987) and Columbia Pictures (1989); Time merged with Warner (1989); Universal was acquired first by Matsushita (1990), then by Seagram (1996), then by Vivendi (2000), then by General Electric (2003); Viacom acquired Paramount (1994); Westinghouse bought CBS (1995), which was later acquired by Viacom (2000); Disney bought CapCities/ABC (1995); and America Online (AOL) merged with Time Warner (2001). Three broad trends contributed to this surge of media conglomeration. First, increasing economic globalization expanded foreign markets for entertainment products as well as attracting capital investment in U.S. entertainment firms from investors in Japan, Australia, Canada, France, and Germany. Second, in order to stimulate increased investment and technological innovation within the media and communications industries, policymakers in the United States and Europe have dismantled many of the regulatory standards that had governed the media industries for the previous half century. The Telecommunications Act of 1996, for example, relaxed many rules concerning cross-ownership of media and dropped limits on single-firm ownership of multiple media outlets (ownership caps). Policymakers expected that the subsequent wave of consolidations and mergers among telephony, cable, broadcasting, and film companies would stimulate increased investment in new technologies and lower prices for consumers. Underlying these policy changes were expectations concerning the direction and rate of technological change, the third broad trend affecting conglomeration. New delivery technologies, including VCRs, cable, satellite, and the networking potential of the Internet, have opened new markets for entertainment products. Digitization, the conversion of data into computer code, has expanded as computing power has increased and computing costs have decreased. However, digitization is a two-edged sword for the entertainment industries. Digitization provides cost efficiencies because copying and transferring data is easier and more accurate, yet it is precisely that ease
and accuracy that threatens to undermine the entertainment industries’ control over intellectual property rights. Consequently, while technological change promises to open new markets for entertainment, it also threatens already existing markets. Thus, firms that own interests in both “new” and “old” media technologies expect to reap the advantages of diversification through conglomerations or, at the least, survive the forthcoming upheavals wrought by technological change.

However, in addition to the overall economic, political, and technological factors affecting the media’s industrial structure, the entertainment industry is itself a risky business, subject to high product failure rates and shifting audience tastes. Success rates in the entertainment industries are extremely low: only about 20 to 30 percent of films, roughly 10 percent of music recordings, and approximately 5 percent of television pilots return a net profit. The high profit rates of a small number of entertainment products (the “hits”) must subsidize the costs incurred in the production of the majority of unprofitable entertainment products. Thus, entertainment firms engage in a number of risk management strategies to survive these long odds, including overproduction and high marketing expenditures. A key risk management strategy is for a firm to grow through mergers and acquisitions, the fastest way to gain market share and market power. Market power through mergers can increase a firm’s ability to negotiate favorable terms with competitors, set prices, and reduce competition, all of which improve a firm’s ability to weather the high product failure rates of entertainment.

Mergers may be characterized as either horizontal, vertical, or conglomerate. Horizontal integration is when a firm acquires or merges with firms in the same business, for example, when local television stations merge into a station group. Vertical integration occurs when a firm merges with its suppliers or buyers, or up and down the product chain of production, distribution, and exhibition. For example, in the 1960s, the networks (program distributors) vertically integrated upstream into program production (program suppliers) and downstream into program syndication (program resales), thus controlling programming at each stage of its product life. Conglomerate mergers occur when a firm acquires a company that is neither in the same business nor a direct supplier or buyer, as, for example, when the major newspaper publisher News Corporation acquired the 20th Century-Fox film studio. The horizontal, vertical, and conglomerate merger strategies are all intended to create greater efficiencies of scale and scope by consolidating overhead and administrative costs, cutting out intermediaries, and guaranteeing smoother production chains.

Some conglomerates may be characterized as loosely conglomerated because their subsidiaries are in unrelated fields. For example, General Electric, the conglomerate that owns NBC and the entity formerly known as Universal or Vivendi/Universal, also owns companies that make aircraft engines, medical systems, power plants, and plastics as well as financial services companies, none of which are directly involved in the television business. However, most media conglomerates are not loose but what Thomas Schatz calls “tightly diversified”: they have a tight focus on media and entertainment yet are diversified across fields such as film, television, music, book publishing, theme parks, and online services as well as being vertically integrated into production, distribution, and exhibition. Tightly diversified conglomerates can cross-collateralize losses from one business with gains in another, cross-promote entertainment products across different media, and sell products on multiple distribution platforms (film, video, broadcast, and cable).

Most tightly diversified media conglomerates are formed with at least one of the three following rationales. One rationale is to create “content synergies,” that is, to build entertainment “franchises” that can be repurposed into multiple products including films, television programs, videos, DVDs, books, comics, toys, video games, theme park rides, music soundtracks, and so on. The Star Trek franchise, for example, based on a television series, expanded to include additional television series (Next Generation and Enterprise), films, books, games, and merchandise. Star Trek’s conglomerate owner, Viacom, produces, distributes, and promotes these through its various holdings (Paramount, UPN, and Simon and Schuster). Other television programs converted into franchises include Mission Impossible, The Flintstones, and The Brady Bunch, which have been resold on home video, pay-per-view cable, premium cable, and broadcast television. Owning and controlling a variety of content producers and distributors enables a conglomerate to capture the majority of the revenues from these multiple product extensions.

A second major rationale for tight diversification is to ensure distribution for a production company or to ensure a supply of content for a distribution outlet. For example, after losing key scheduling slots for its children’s programming on the FOX network, Disney ensured that its programming would continue to be distributed on network television by acquiring CapitalCities/ABC. Likewise, Viacom acquired Paramount in part to guarantee a steady supply of films for its cable network Showtime and then launched the broadcast network UPN in 1995 to ensure a distribution outlet for its Paramount-produced program Star Trek. This
type of vertical integration between film studios and television distributors cut across previously existing ownership boundaries between film and television companies.

A third major rationale for tight diversification is to secure content for new distribution technologies or to acquire software for hardware. For example, Sony acquired Columbia Pictures and CBS Records in part to gain control of films, programs, and music for distribution on the consumer electronics technologies it manufactures. In the early 1980s, Sony’s Betamax home video technology had lost the market to the competing VHS technology in part because Hollywood film studios refused to license the rights to major films to Sony for use on Betamax video. Acquiring Columbia Pictures and CBS Records, now both renamed Sony, protects Sony’s hardware products from failing solely because they lack the rights to film, television, and music content. Each of these rationales for conglomerations is intended to strengthen a firm’s performance in high-risk environments; however, none can guarantee the ultimate outcome.

Time Warner

Time Warner, at the time of this writing the largest media conglomerate, was created in 2001 when the online services provider AOL parlayed its highly valued stock into a friendly takeover of the “old media” company Time Warner. Time Warner controls major television interests, including one of the largest U.S. cable operators, Time Warner Cable. Warner Bros. Television and its fellow subsidiaries produce programming shown on a variety of broadcast and cable networks, including Friends, ER, Gilmore Girls, The West Wing, Everybody Loves Raymond, The Drew Carey Show, Six Feet Under, and Smallville. Although Time Warner created the WB broadcast network in a joint venture with Tribune Broadcasting in order to gain a broadcast network foothold, it is more dominant in cable networks. Home Box Office (HBO), originally a Time company, pioneered programming distribution by satellite, becoming one of the first and most successful nationally distributed pay cable programmers. In 1995 Time Warner acquired the Turner networks (Turner Network Television, Turner Broadcasting System, Turner Classic Movies, and Cable News Network) to become the conglomerate dominant in both cable networks and cable systems. The Turner, Cable News Network (CNN), and HBO networks are also distributed in Asia and Europe. Time Warner’s other cable networks include Cinemax and the Cartoon Network.

Time Warner is also dominant in film (Warner Bros. and New Line), music (Warner Music Group), and publishing (Time/Life). However, a key element in its conglomerate strategy was to meld Time Warner’s cable operating systems (then second largest in the United States) with AOL’s top brand name in online services. By aggregating the more than 100 million subscribers to AOL Time Warner’s Internet services, cable systems, premium cable networks, and the Time magazine group (including People, Sports Illustrated, In Style, and Entertainment Weekly), the merger was expected to create a base for launching new entertainment technology services, such as video-on-demand, interactive television, and broadband Internet. However, by 2003, as Time Warner’s stock price suffered severe declines, the merger was heavily criticized by investors for pursuing the aim of media convergence at the cost of its core businesses. In that year, “AOL” was dropped from the corporate name.

Viacom

CBS spun off Viacom in 1971 when the Federal Communications Commission (FCC) required the major networks to divest their vertically integrated program production and syndication subsidiaries. As Viacom expanded, acquiring cable networks MTV, Nickelodeon, and VH1 from Warner in the mid-1980s, it was then absorbed by Sumner Redstone’s holding company, National Amusements, in 1987. Redstone led Viacom’s battle for control over Paramount Communications, which succeeded, bringing Paramount Studios and Simon and Schuster publishers into the Viacom conglomerate. Paramount has produced numerous television programs, including every Star Trek series, JAG, Frasier, and That’s Life; other subsidiaries, Viacom Productions and Spelling Productions, have produced Sabrina, Charmed, 7th Heaven, and Beverly Hills 90210. In 1995 Viacom launched the minor broadcast network UPN in part to guarantee broadcast exposure for its expensive Star Trek series. Viacom also controls premium cable networks Showtime and The Movie Channel and basic cable networks Black Entertainment Television, Comedy Central, and Spike as well as owning an interest in the Sundance Channel. However, despite these strengths in cable programming, Viacom divested its cable operating systems in 1995 because the maintenance and upgrading of cable systems were too capital intensive. Instead, in 2000, Viacom surprised observers by acquiring a major stake in the “old media” of broadcasting by buying its former parent company CBS and its subsidiaries, including Infinity Broadcasting (one of the largest radio station groups) and CBS Radio. With 34 owned-and-operated television stations, one major and one minor broadcast network, and major cable networks that are top rated in their demographic categories, Viacom is one of the most dominant conglomerates in the television indus-
try. Viacom's holdings also include theater chains in Canada and Europe, Famous Music publishing, the Viacom Outdoor advertising group, theme parks (Great America and Star Trek: The Experience), and the video retailer Blockbuster.

The Walt Disney Co.

Founder Walt Disney had diversified his animation production company into merchandising, theme parks (Disneyland), and television production (The Wonderful World of Disney) by the 1950s in part to survive the competition with the major Hollywood studios. This tightly diversified firm was almost broken apart and sold in the early 1980s, until an investor installed Michael Eisner as chief executive officer to revive the Disney brand. Disney has remained focused on film (Disney, Touchstone, Hollywood Pictures, Miramax, Buena Vista, and Dimension), television production (Walt Disney Television, Buena Vista Television, and Network Television Production), and theme parks (Disney World and Paris and Tokyo Disneylands). By acquiring CapCities/ABC, Disney became a major television distributor as well, gaining a national network plus ten owned-and-operated stations. Disney has also invested in cable networks, including Disney, Toon Disney, Family Channel, and SoapNet as well as having interests in the ESPN networks, Lifetime, E!, A&E, and the History Channel. Walt Disney TV International includes channels in Europe and Asia. Disney also owns the ABC Radio Network, Radio Disney, and ESPN Radio. Disney has interests in music (Buena Vista Music Group), book publishing (Disney and Hyperion), and sports teams (Anaheim Angels and Anaheim Mighty Ducks) as well as numerous Internet investments (Walt Disney Internet Group).

News Corporation

Originating as an Australian newspaper group, News Corporation, under the leadership of Rupert Murdoch, has diversified aggressively. Having acquired the film and television studio 20th Century-Fox in 1985, News Corporation launched the fourth major broadcast network, FOX, in 1986. As the first conglomerate to integrate a film studio and broadcast network, its FOX network exploited those synergies, airing 20th Century-Fox Television productions such as The Simpsons and The X-Files. For competing networks, 20th Century-Fox produced programs such as Buffy the Vampire Slayer, Dharma and Greg, Judging Amy, and Roswell. News Corporation, like Viacom, pushed the regulatory limits on ownership caps of local television stations by acquiring several station groups and helped precipitate a debate on the appropriateness of ownership caps in an era of cable and satellite television. Although News Corporation does not own any U.S. cable operators and only a few cable networks (FX and FOX News), it is an international presence in satellite television, which is more prevalent than cable in Europe and Asia. News Corporation controls the majority interest in the satellite services BSkyB (Europe), StarTV (Asia), SkyPerfecTV (Japan), Sky Latin America, and Sky Brazil and at this writing is planning to merge with the largest U.S. direct broadcast service, DirecTV. News Corporation has also invested in sports (Los Angeles Dodgers), Internet services (FOX Interactive), music (FOX Music), and one of the world's largest publishing companies (HarperCollins) as well as hundreds of magazines and newspapers in the United States, the United Kingdom, and Australia (New York Post, The Times, The Sun, TV Guide, and The Weekly Standard).

Sony

Headquartered in Japan, Sony is barred from owning any U.S. broadcast stations or networks; however, its Columbia Tri Star Television subsidiary is a major producer of network and syndicated programs, including Bewitched, Seinfeld, Dawson's Creek, The King of Queens, Family Law, Ricki Lake, and soap operas Days of Our Lives and The Young and the Restless. Sony's other media interests include its film studio (Sony, formerly Columbia Pictures), theater chains, Japan Sky Broadcasting, Sony Online Entertainment, and its major music group, Sony Music Entertainment, which includes the former CBS Records. Only a small proportion of Sony's revenues derive from its media holdings. Sony is primarily an electronics manufacturing company (Trinitron, Walkman, and PlayStation). Sony's game box, PlayStation, was designed as a multimedia entertainment appliance for games, DVDs, CDs, and Internet access in order to present a possible alternative to interactive television or PC appliances. The principal purpose of Sony's investments in media production and distribution is to support its consumer electronics manufacturing interests.

NBC-Universal

Vivendi Universal was a French-based conglomerate that was originally in the water, construction, waste management, and real estate business. Under the leadership of Jean-Marie Messier, it expanded into European telephony (Cegetel and SFR) and cable and film interests (Canal Plus) and by 2000 had acquired the Universal holdings then owned by Seagram, a Cana-
Media Events

In contrast to the routine array of genres that characterizes everyday television, media events have a disruptive quality. They have the power of interrupting social life by canceling all other programs. But while always characterized by live broadcasting, the term “media events” evokes at least three different realities. In some cases, the notion is used in connection with major news events (televised wars and assassinations). In other cases, the notion is used in reference to what Victor Turner would call “social dramas”: protracted crises whose escalation progressively monopolizes public attention. Thus, the O.J. Simpson trial or
the Anita Hill–Clarence Thomas controversy are television equivalents of a genre whose most famous example—the Dreyfus affair—had immense consequences for the nature of the French public sphere. Finally, one may speak of media events concerning expressive events: television ceremonies that typically last a few hours or, at most, a few days. This essay focuses on media events of the third sort, events that are consciously integrative and deliberately constructed with a view of orchestrating a consensus. They are public rituals, emotional occasions. The broadcast does not include the assassinations but the ensuing funerals, not social dramas but their ritualized outcomes.
Forming a relatively coherent television “genre,” these ceremonial events share semantic features. They celebrate consensus, “history in the making,” acts of will, and charismatic leaders. Formally, they disrupt television syntax. They cancel the rule of “schedules,” interrupt the flows of programming, and monopolize many (if not all) channels while they themselves are broadcast “live” from remote locations. In terms of their pragmatics, they are viewed by festive communities. Audiences prepare themselves for the event, gather, dress up, and display their emotions.

Like all “genres” but more explicitly than most, media events can be considered contracts. Thus, each particular event results from negotiations among three major partners. First, organizers propose that a given situation be given ceremonial treatment. Second, broadcasters will transmit but also restructure the event. Third, audiences will validate the event’s ceremonial ambition or denounce it as a joke. In order for a media event to trigger a collective experience, each of these partners must actively endorse it. No broadcasting organization can unilaterally decide to mount a ceremonial event. This decision is generally that of national, supranational, or religious institutions. The authority invested in such institutions is what turns events that are essentially gestures into more than gesticulations. It is what makes them media events and not, as Daniel Boorstin would put it, “pseudoevents.”

Yet television is not utterly subservient to these institutions. In the ceremonial politics of modern democracies, it stands as a powerful partner whose mediation is necessary, given the scale of audiences. Television is also a partner whose performance is controlled by professional standards. As opposed to earlier “information ceremonies,” media events can hardly dispense with the presence of journalists. They cannot be confined to what Jürgen Habermas calls a “public sphere of representation.” Thus, negotiations on the pertinence of an event, discussions on the nature of the script, and the option of mocking or ignoring it all distinguish democratic ceremonies from those of regimes where organizers control broadcasters and audiences.

Beyond the generic features they all share, media events vary in terms of (1) the institutionalization or improvisation of the ceremonial event, (2) the temporal orientation of the ceremony, and (3) the nature of the chosen script. This last point is essential, given the organizational complexity of media events and the multiplicity of simultaneous performance involved. Coordination is facilitated by the existence of major dramaturgical models or scripts. Three such scripts can be identified: coronations, contests, and conquests.

The script of coronations is by no means exclusive to monarchical contexts. It characterizes all the rites of passage of the great: inaugurations, funerals, and acceptance (or resignation) speeches. Coronations are celebrations of norms, reiterations of founding myths. They invite ceremonial audiences to manifest their loyalty to these norms and to the institutions that uphold them.

Contests stress the turning points of the democratic curriculum. They celebrate the very existence of a forum open to public debate. Whether they are regularly scheduled (e.g., presidential debates) or mounted in response to political crises, contests are characterized by their dialogic structure, by their focus on argumentation, and by their insistence on procedure. They point to the necessity of interpreting and debating the norms. They are celebrations of pluralism, of the diversity of legitimate positions. Contests call for reflexivity. They invite their audiences to an attitude of deliberation.

Conquests are probably the most consequential of media events. They are also the rarest. They take the form of political or diplomatic initiatives aiming at a swift change in public opinion on a given subject. Rendered possible by the very stature of their protagonists—Egypt’s Anwar Sadat going to Jerusalem or Pope John Paul II visiting Poland—conquests reactivate forgotten aspirations. They are attempts at rephrasing a society’s history, at redefining the identity of its members. They call on their audiences to be “conquered” by the paradigm change that the ceremonial actor is trying to implement, to suspend skepticism. Conquests celebrate the redefinition of norms.

All three major ceremonial scripts address the question of authority and of its legitimating principle. In the case of coronations, this principle is “traditional.” In the case of contests, it belongs to the “rational-legal” order. As for conquests, they stress “charismatic” authority. This helps us understand the political distribution of media events. Coronations are to be found everywhere, for there are no societies without traditions. Unless they are faked (and they often are), contests can emerge only in pluralistic societies. The charismatic dynamics of conquests is always subversive, making them hardly affordable to those societies that are afraid of change.

Compared to the types of public events that were prevalent before the emergence of media events, the latter introduce at least two major transformations. These transformations affect both the nature of the events and that of ceremonial participation.

Televised ceremonies are examples of events that exist but do not need to “take place.” These events have been remodeled in order not to need a territorial inscription any longer. The scenography of former public events was characterized by the actual encounter, on a specifiable site, of ceremonial actors and
their audiences. That scenography has been replaced by a new mode of "publicness" inspired by cinema and based on the potential separation (1) between actors (2) of actors and audiences.

A second transformation affects ceremonial participation. This transformation turns the effervescent crowds of mass ceremonies into domestic audiences. Instead of mobilizing expressive publics, the media event is celebrated by small groups. A monumental but distant celebration triggers a multitude of microcelebrations. Leading to a typically "diasporic ceremoniality," the immensity of television audiences translates collective events into intimate occasions.

Television ceremonies or media events are necessary inasmuch as they are among the few means available to individuals that assist and enable them to imagine the societies in which they live. Dismissing them as "political spectacles" would lead to two errors: on the one hand, that of presupposing that the mediation they offer is superfluous; on the other, that of believing that the absence of political spectacle is an ideal and a distinctive sign of modern democracies.

Democracies are distinct from authoritarian or totalitarian regimes but not in terms of the presence or absence of a political ceremoniality. Democracies differ from other regimes by the nature—not the existence—of the ceremonies staged in their midst. Democratic media events should therefore be differentiated from other television events that are undoubtedly endowed with a ceremonial dimension but are neither consensual nor contractually derived. For example, the events of terrorism are expressive events, enacted statements, and forms of discourse. Their reception by some of their audiences often involves celebration. However, these forms of discourse now receive no validation from the institutions of the center or from those of civil society. They differ from other ceremonial statements by not being submitted to a process of legitimation that transforms them into full-size events. Violence is what distinguishes terrorist events from milder exercises in public relations, from other types of "pseudoevents." In a word, there are many repertoires of media events, and the study of consensual, democratically inspired, negotiated media events must be set in the context of other, rougher media events that are dissonant, imposed, and deliberately antagonistic.

Medic

U.S. Medical Drama

Medic, U.S. television’s first doctor drama to center on the skills and technology of medicine, aired at 9:00 p.m. on the National Broadcasting Company (NBC) from mid-September 1954 through mid-November 1956. The half-hour drama became known for an emphasis on medical realism that its creator and principal writer, James Moser, brought to the episodes. Advertisements for the series asserted that it “made no compromise with truth,” and journalistic articles about the show repeated that theme. A Look magazine article in 1954 discussed Moser’s “well-documented scripts” and emphasized that “details are checked, then double-checked.” TV Guide called the program “a new kind of TV shocker” and added that it was “telling the story of the medical profession without pulling any punches.”

Medic was not the first television series about medicine or physicians. Both The Doctor and City Hospital had aired, on NBC and the Columbia Broadcasting System (CBS), respectively, during the 1952–53 television season. Medic is important because, much more than those two, it helped shape the approach that producers and networks took to doctor shows for the next few decades. The program was in large part an anthology of medical cases. They were introduced by Dr. Konrad Styner, played by Richard Boone, who narrated the case and often participated in it.

James Moser had picked up his interest in the details of professions as a writer on Jack Webb’s hit Dragnet radio series, which prided itself on straightforwardly presenting the facts of police cases. Moser’s interest in a TV series about medicine had been stirred through a stint writing the Doctor Kildare radio show, through his creation of an NBC radio pilot about medicine with Jack Webb that did not go to series, and through watching his best friend, an intern at Los Angeles County Hospital, make rounds on a wide array of complex problems. Moser was aware of the strong popularity that medical dramas such as Dr. Kildare and Doctor Christian had enjoyed in the movies and on radio during the 1940s. He felt, however, that those and other previous stories about medicine had not gone deeply enough into the actual ways modern medicine healed.

Consequently, the emphasis in Medic was on portraying physicians’ approaches to their patients accurately; subplots and nuances of characterization were minimal. Because Moser wanted accuracy and because the program’s first sponsor, Dow Chemical, gave the show a relatively small budget that precluded fancy sets, he sought permission from the Los Angeles Country Medical Association (LACMA) to film in actual hospitals and clinics. In return for their commitment to open doors for the show, LACMA physicians required that Moser and his executive producer sign a contract that gave the association control over the medical accuracy of every script.

As it turned out, Moser’s positive attitude toward modern medicine meant that LACMA did not have to

worry about Medic’s treatment of health care’s basic setting, characters, and patterns of action. Nevertheless, at a time of growing anxiety about physicians’ power in the larger society, the LACMA committee members insisted that the physician’s image in the show fit organized medicine’s ideal image. They even considered what a doctor drove and how he spoke (the physician was almost always a man). Cars that were too expensive and language with slang or contractions were ruled out. This close involvement by organized medicine in the creation of doctor shows was the beginning of a relationship between organized medicine and doctor-show producers that lasted with few exceptions through the 1960s.

Medic’s first episode revolved around a difficult birth in which the mother died and the child lived; an actual birth was filmed and televised. Other stories dealt with such subjects as manic depression and corneal transplants. Critics generally received the programs enthusiastically, but the series got mediocre ratings against the hit I Love Lucy. Two controversies in the second year, along with those mediocre ratings, seem to have persuaded NBC executives to cancel the series. The first controversy revolved around an episode that showed a cesarean birth, incision and all. Learning about the episode before it was broadcast, Cardinal Spellman of the New York Archdiocese argued that such subjects were not for exposure on television. He persuaded NBC to delete the operation, much to Moser’s public anger.

The second controversy did not become public but further soured the relationship between Moser and network officials. It centered on a Medic episode about a black doctor choosing between staying in the big city where he trained or going home to practice in a small southern town. In an era still steaming with antiblack prejudice and crackling with tension over a recent U.S. Supreme Court decision that mandated integration in schools and other places, executives from southern affiliates considered the Medic episode a firebrand. They told the network that they would not air the episode, and NBC decided to shelve it.

Such flare-ups notwithstanding, Medic impressed many television producers and network officials of its day for its innovative blending of documentary and dramatic traditions. Its legacy would be the stress on clinical realism that medical series following it adopted. In the 1960s, doctor shows melded that emphasis on realism with a greater concern than Medic showed regarding the personality of the physicians, the predicaments of their patients, and even some social issues. James Moser’s next show after Medic, Ben Casey, contributed strongly to this evolution in television’s dramatic portrayal of medicine.

Medical Video

Television has been used in medicine since early in the medium’s history. In 1937, well before more common uses of television were in place, an operation performed at Johns Hopkins University Hospital was shown over closed-circuit television. From that time, use of television and video has grown to become an integral part of the medical profession and health care industries. Most hospitals have a video division, and advances in technology are regularly incorporated into medical video. In some instances, as with the practice of endoscopy, video equipment first developed for medicine later finds additional use in the television industry. The use of video in health care falls into four general categories: medical training, telemedicine, patient care and education, and public information.
The first regular instructional use of television in medicine came in 1949, when television equipment was installed at the University of Kansas Medical Center to teach surgery. Using a mirror and a camera mounted above the patient, the incision area could be viewed in detail by many more students than could otherwise be accommodated and without affecting the sterile environment. With the introduction of videotape recording, procedures could be recorded and reviewed later. This innovation allowed for notable or exceptional cases to be archived and no longer restricted observation to physical presence at the time of surgery. Television is especially important for training in situations where the field of operation is small, such as in dentistry or microsurgery. In these instances, television provides a view otherwise visible only to the doctor.

Beyond formal training in schools, television is also important in the continuing education of health care providers. By the early 1960s, broadcast stations (sometimes with the signal scrambled) were being used along with closed-circuit networks to distribute programs to physicians in broad geographic areas. This application has continued to take advantage of available technologies, and medical programs are provided to health care providers through videotapes or a variety of wired and wireless networks. The opportunities presented by the introduction of cable television and satellite receivers led to many attempts to offer programming aimed at physicians, often sponsored by pharmaceutical advertisers. However, such ventures as the Hospital Satellite Network, Lifetime Medical Television, American Medical Television, and Medical News Network all failed to attract a large enough target audience (although those services available over cable television often attracted a number of lay viewers), and all had ceased operations by the mid-1990s.

“Telemedicine” (or “telehealth”) refers to the use of telecommunication systems to practice medicine and provide health care when geographic distance separates doctor and patient. The first documented use of this method came in 1959 as part of a demonstration project where closed-circuit, two-way interactive television was used to provide mental health consultations between the Nebraska state mental hospital and the Nebraska Psychiatric Institute more than 100 miles away in Omaha. In telemedicine, a nurse, nurse practitioner, or physician assistant is typically present with the patient to assist, while the physician is in another location. For example, examination rooms specially equipped with television cameras and monitors allow for remote diagnostics and consultations between physicians.

During the 1970s, several U.S. programs made use of the National Aeronautics and Space Administration’s Applied Technology Satellites to improve health care availability in Alaska, the Appalachian region, and the Rocky Mountain states, where access to physicians and health care facilities was extremely limited. These and similar strategies have been developed further with the use of satellites, fiber-optic and coaxial cables, and microwave technologies, which can connect medical facilities across towns or even around the world. Such networks have important implications for developing nations, offering the possibility of access to higher-quality health care, often at a reduced cost. As technology improves, new uses for television continue to be developed. In 2001, using a high-speed video cable connection and robotics, surgeons in New York City successfully removed the gallbladder of a 68-year-old woman in Strasbourg, France. Although the video signal traveled a round-trip distance of more than 14,000 kilometers, the speed of the connection was such that the surgeon’s movements appeared on his video screen within 155 milliseconds. With the development and growth of the Internet, telemedicine is increasingly adjusting to take advantage of the opportunities, although television continues to play an important role in “telehealthcare.” An added benefit of telemedicine is that once the video networks are established, they can also be used for administrative aspects of medicine, such as for teleconferences or other meetings.

Although hardly as dramatic as long-distance surgery, patient care and education can also be greatly improved through the use of television. For example, educational videos can explain such matters as surgical procedures before they are performed and proper posthospital home care. Television is also used in pa-
Medical Video

tient surveillance—for example, in intensive care units—so that several areas can be monitored from a central nurses' station. Video can also contribute to psychiatric examinations by allowing behavior to be observed without intruding or introducing outside stimuli.

Public information applications of television have enabled hospitals and other health care providers to aim programs at broader communities. The same equipment used for education and training can also be used in preparing materials for public outreach. Not only do hospitals produce video news releases that are provided to local television outlets, but some also syndicate their own "health segments" to national or regional broadcast stations. There are even examples of hospitals that produce their own telethons to raise research funds, often for diseases that afflict children.

As it has in so many other arenas, the convergence of video and computers is having an impact in medicine in areas such as picture archival and communication systems (PACS). Many medical technologies, such as magnetic resonance and ultrasound imagers, filmless radiology, and CT scanners, generate digital images, and PACS then integrate the images with other clinical information so that all relevant patient data are available through the computer network. The Veterans Administration Medical Centers in the United States have 22 Veterans Integrated Service Network Telemedicine Networks that enable images and other data to be shared in such areas as radiology, pathology, cardiology, dermatology, dentistry, and nuclear medicine, among others. The use of video, then, in conjunction with computers and as a technology in its own right will continue to be an important part of the health care field.

Meet the Press

U.S. Public Affairs/Interview

Meet the Press, the longest-running television series in the United States, consistently generates headlines from its interviews with world-renowned guests including national political leaders, foreign heads of state or government, and Nobel Prize winners.

Meet the Press premiered on television on the National Broadcasting Company (NBC) on November 6, 1947. This exceptionally successful program was the first to bring Washington politics into American living rooms. It also was a pioneer in color TV. In 1954 it aired in color as a "test" program. Since NBC was ahead in the development of color technology, that test was likely the first color telecast by any network; six years later, Meet the Press became the first NBC program to air regularly in color.

Lawrence E. Spivak first debuted Meet the Press as a 1947 radio program to promote his magazine American Mercury. After Meet the Press moved to television, Spivak continued to serve as producer, regular panelist, and later moderator. He retired from the series in November 1975.

Meet the Press originally aired in a 30-minute, live press conference format, with a panel of newspaper journalists interviewing a political news maker. On September 20, 1992, Meet the Press expanded to a one-hour interview program. According to Kathleen
Hall Jamieson, interview programs are successful because neither the follow-up by the reporter nor the length of the candidates' answers is artificially constrained. Meet the Press's contemporary format consists of two or three interview segments with guests of national and international importance followed by a roundtable discussion. Interviews are conducted in the studio, on location, or via satellite. (In fact, on September 19, 1965, Meet the Press became the first network television to broadcast a live satellite interview.) In the present-day version, two or three journalists join host Tim Russert during the initial questioning periods and the roundtable discussion.

Russert joined Meet the Press as moderator on December 8, 1991. He came to the program with a thorough understanding of Capitol Hill politics, having previously served as counsel to New York Governor Mario Cuomo and as special counsel and chief of staff to U.S. Senator Daniel Patrick Moynihan. He also is well aware of how journalists cover politics. He has served as senior vice president and Washington, D.C., bureau chief for NBC since December 1988. He also serves as a contributing anchor for MSNBC and as a political analyst for the NBC Nightly News with Tom Brokaw and for the Today show.

According to a former NBC producer, "Tim has an enormous amount of power right now to make and influence [government] policy on Meet the Press." On Meet the Press, questions are asked of political personalities in hopes of moving the political process forward or, at least, moving it along. Russert has interviewed almost every major political figure of the 1990s and the early 21st century. As of 2002, Bob Dole had been the most frequent guest on Meet the Press, with 56 appearances over his career as a congressman, senator, Republican National Committee chair, vice presidential candidate, and presidential nominee. Although a topic of frequent discussion on the program, Senator Hillary Rodham Clinton has never appeared on or accepted an interview for Meet the Press.

Meet the Press emerged early on as a leading program for providing political accountability. In fact, President John F. Kennedy was fond of calling it the "51st state." Meet the Press has become the most quoted news program in the world. When the show premiered, it aired on Wednesday nights after 10 p.m. Later, it was moved to Monday, then to Saturday. In the mid-1960s, Meet the Press found its niche as a daytime Sunday program. In 2002 it aired via network feed on Sundays from 9 to 10 A.M. The national audience has grown more than 40 percent, making it the most-watched Sunday morning interview program in 2002.

The 2002 executive producer of Meet the Press is Nancy Nathan, with Betsy Fischer serving as the show's senior producer. The program originates from Washington, D.C., but the show travels when world events become major news. Sites have included the Republican and Democratic national conventions, the 1993 Bill Clinton–Boris Yeltsin summit in Vancouver, the 1990 Helsinki summit, the 1989 United States–Soviet summit on the island of Malta, and the 1989 economic summit of industrialized nations in Paris.

Whether in Washington, D.C., or on location at an event of political importance, the discussions aired on Meet the Press often generate headlines in other media outlets. Today, Meet the Press continues to engage viewers in the political process.

Melodrama

One of television’s most diverse program types, the melodramatic genre encompasses an extensive variety of aesthetic formats, settings, and character types. Melodramatic formats include the series, consisting of self-contained episodes, each with a classic dramatic structure of conflict/complication/resolution in which central and supporting characters return week after week; the serial, which features a continuing storyline, carried forward from program to program (this is typical of soap opera, both daytime and prime time); the anthology, a nonepisodic program series constituting an omnibus of different self-contained programs, related only by subgenre, and featuring different actors and characters each week (important examples include The Twilight Zone, a science fiction anthology, and Alfred Hitchcock Presents, a mystery anthology); and repertory, a nonepisodic series consisting of different programs featuring a group of actors who appear each week but in different roles (very rare on television, the repertory is best represented by The Richard Boone Show). Settings include the hostile western frontier of Gunsmoke and Have Gun, Will Travel and its urban analog—the mean streets of East Side/West Side and, more recently, Hill Street Blues; the gleaming corporate office towers of Dallas and L.A. Law; the quiet suburban enclaves in which Marcus Welby, M.D. made house calls in the 1970s; the ostentatious exurban chateaus of Falcon Crest and the numerous wealthy criminals outsmarted by the proletarian cop Columbo; and the high-pressure, teeming workplace peopled by dedicated professionals such as the newspaper reporters in Lou Grant. The seemingly endless variety of “heroic” and “villainous” character types in television melodrama, whose weekly travails and romantic interests ground the dramaturgy, are drawn from the rich store of historical legend, the front pages of today’s broadsheets and tabloids, and the future projections of science fiction and science fantasy: cowboys, sheriffs, bounty hunters, outlaws, pioneers/settlers, police, mobsters, sleuths, science fiction adventurers and other epic wanderers, spies, corrupt entrepreneurs, doctors, lawyers, and intrepid journalists.

Television melodrama has its direct roots in the early 19th-century stage play in which romantic, sensational plots and incidents were mixed with songs and orchestral music. The word “melodrama” evolved from the Greek “melos,” meaning song or music, and “drama,” a deed, action, or play, especially tragedy. In tragedy, the hero is isolated from society so that he or she may better understand his or her own and the society’s moral weakness; but once enlightened, the hero cannot stave off the disaster embedded in the social structure beyond the hero’s control. In contrast, the melodramatic hero is a normative character representing incorporation into society. Northrop Frye, in Anatomy of Criticism (1957), described a central theme in melodrama as “the triumph of moral virtue over villainy, and the consequent idealizing of the moral views assumed to be held by the audience.” Since melodrama exists within a mass-cultural framework, it could, according to Frye, easily become “advance propaganda for the police state” if it were taken seriously. Frye sidesteps this fear by positing that the audience does not take such work seriously.

Peter Brooks, in The Melodramatic Imagination (1976), finds melodrama acting powerfully in society, reflecting the socialization of the deeply personal. Brooks sees in the melodramatic aesthetic unremitting conflict; possibly disabling, excessive enactment; and ultimately clarification and cure. It is, according to Brooks, akin to our experience of nightmare, where virtue is seemingly helpless in the face of menace. “The end of the nightmare is an awakening brought about by confrontation and expulsion of the villain, the person in whom evil is seen to be concentrated, and a reaffirmation of the society of ‘decent people.’”

Melodrama demands strong justice, while tragedy, in contrast, often includes the ambivalence of mercy in its code. Melodrama provides us with models of clear resolution for highly personalized, intensely enacted conflict. Television melodrama may be considered a contemporary substitute for traditional forms of social control—the rituals of organized religion and, before that, of “primitive mythologies”—that provided easily understandable models of “primal, intense, polarized forces.” It is thus a powerfully conservative social artifact—a public ceremonial ritual, repositioned in politics and economics, drawing us into both the prescriptions and the proscriptions of mainstream cultural values.

The hero is central to melodrama. In classical Greek dramaturgy, the term applied to an individual of superhuman strength, courage, or ability who was favored by the gods. In antiquity, the hero was regarded as an immortal intermediary between the gods and ordinary
people—a demigod who was the offspring of a god or goddess and a human being. Later, the heroic class came to include mortals of renown who were deified because of great and noble deeds or for firmness or greatness of soul in any course of action they undertook. The hero was distinguished by extraordinary bravery and martial achievement. Many heroes were boldly experimental or resourceful in their actions. Punishment of those who violated social codes was harsh.

The world in which the classic hero operated was a world of heightened emotional intensity—a harsh world in which the norm included unending tests of both physical and moral strength and the constant threat of death. The hero represented a carefully defined value system in which good triumphed over evil in the end and in which the actions of the hero, with the assistance of the gods, produced order and stability out of chaos.

Heroes are “social types.” As Orrin Klapp notes in Heroes, Villains, and Fools: The Changing American Character (1962), heroes offer “roles which, though informal, have become rather well conceptualized and in which there is a comparatively high degree of consensus.” Drawn from a cultural stock of images and symbols, heroes provide models people try to approximate. As such, Klapp argues, heroes represent “basic dimensions of social control in any society.”

Reflecting the increasingly technocratic nature of contemporary American society, many “workplace” melodramas on television have featured what Gary Edgerton (1980) has termed the “corporate hero”—a team of specialists which acts as a unit. The corporate hero derives his or her identity from the group. He or she is more a distinct “talent” than a distinct personality. Heroism by committee emphasizes the individual’s need to belong to a group and to interact. The composite corporate hero tends to reinforce the importance of social institutions in maintaining social order. When violence is employed to this end, as in police or spy melodrama, it is corporatized, becoming less a personal expression for the corporate hero than for the traditional individual hero. Major examples of the corporate hero in television melodrama include Mission: Impossible, Charlie’s Angels, Hill Street Blues, and L.A. Law.

Heroes could not exist on the melodramatic stage without their dramaturgical counterparts—villains and fools. While heroes exceed societal norms, villains, in contrast, are negative models of evil to be feared, hated, and ultimately eradicated or reformed by the actions of the hero; villains threaten societal norms. Fools, on the other hand, are models of absurdity, to be ridiculed; they fall far short of societal norms.

Within the television melodrama, these social types operate as images or signs, constructed according to our society’s dominant values, reinforcing commonly held beliefs regarding the proper ordering of social relations.

The aesthetic structure of television melodrama, as a form of popular storytelling, is clearly linked to its dramaturgical predecessors. It employs rhythmic patterns in its scene and act progression analogous to the metrical positions in the poetic line of the mnemonically composed classical Greek epic poetry. As in the grand opera of the 19th century, television melodrama is organized into a series of distinct acts, each generally signifying a change in either time or place, and linked by orchestral transitions. Superfluous exposition is eliminated. The spectator is offered a series of intense highlights of the lives of the protagonists and antagonists. Orchestral music introduces actions, provides a background for plot movement, and reinforces moments of heightened dramatic intensity. Television melodrama, like grand opera, is generally constructed to formula. Plot dominates, initiating excitement and suspense by raising for its protagonists explicit questions of self-preservation and implicit questions of preservation of the existing social order.

In 19th- and 20th-century literature, melodrama came to signify “democratic drama.” Critics condemned the form as sensational, sentimental entertainment for the masses. Rural-type melodrama—with its beautiful, virtuous, impoverished heroine; its pure hero; its despicable villain who ties the heroine to the railroad tracks; and the rustic clown who aids the hero (wonderfully satirized in the television cartoon “Dudley Do-Right of the Royal Canadian Mounties,” originally a segment of The Bullwinkle Show)—gave way to city melodrama focusing on the seamy underworld and to suspenseful crime dramas, such as those of Agatha Christie.

Television melodrama has drawn freely from all these precursors both structurally and conceptually. Highly segmented plots developed in four 12-minute acts, each with a climax, and a happy ending usually encompassed in an epilogue in which moral lessons are conveyed to the audience (a function assumed by the “chorus” in classical Greek drama), carried along by background music and stress peaks of action and emotional involvement. Suspense and excitement are heightened by a sense of realism created through sophisticated if formulaic visualizations (car chases being obvious examples). Characterizations are generally unidimensional, employing eccentric protagonists and antagonists made credible by good acting. Ideologically, the plot elements reinforce conventional morality.
Melodrama

The rhythm of the commercial television melodrama depends on a predictable structure motivated by the flow of the sequence of program segment, music, and commercial. As suspense builds and the plot thickens, viewers are carried forward at various crucial junctures by a combination of rapid visual cutting and an intense buildup of the orchestral background music and ambient sound that create a smooth transition to the often frenetic, high-pitched commercials. This rhythm produces a flow that the audience implicitly understands and accepts as a genre convention in the context of the pecuniary mechanisms that define the regime of commercial television.

Raymond Williams, in *Television: Technology and Cultural Form*, refers to melodramatic structuration as commodified "planned flow." By cutting down on exposition or establishing sequences that tend toward lengthy and deliberate characterizations, the purveyors of melodrama are able to break their tales into shortened, fast-paced, and often unconnected simple sequences that make the commercial breaks feel natural to viewers.

The production imperatives of television-series melodrama reinforce Williams’s concept of the commodification of flow. Noted producer/writers Richard Levinson and William Link (Columbo, Mannix, and Murder, She Wrote) and made-for-television movies *The Execution of Private Slovik, The Storyteller, and That Certain Summer* described these production procedures in *Stay Tuned* (1983). The network commits itself to a new television series in mid-April. The series premieres in early September, leaving four and a half months’ lead time for producers to hire staff (including writers and directors), prepare scripts, and begin shooting and editing. It takes four weeks, under the best conditions, to complete an episode of a melodrama; with luck, four shows will be "in the can" by the season’s premiere, with others in varying stages of development (at any time during the process, many series episodes will be in development simultaneously, one being edited, another shot, and another scripted). By October, the initial four episodes will have been aired, and the fifth will be nearly ready. If the show is renewed at midseason, the producer will need as many as 22 episodes for the entire season. By December, there will be but a matter of days between the final edit and the airing of an episode, as inevitable delays shorten the turnaround time. In addition to normal time problems, there are problems with staff. Levinson and Link cite the frequent problem of having a good freelance writer in demand who agrees to write for one producer’s shows as well as those of other producers. The writer with a track record will be juggling an outline for one show, a first draft for another, and a “notion” for a third.

In the frenzied world of the daytime soap opera, actors get their scripts the night before the taping, begin run-through rehearsals at 7:30 the next morning, do three rehearsals before taping, and tape between 3:30 and 6:00 that afternoon. This hectic ritual is repeated five days a week.

The prime-time melodrama production process is driven by shortcuts, scattered attention, and occasional network interference in content, created by the fear of viewer response to potentially controversial material that may range from questionable street language, however dramatically appropriate, to sexual taboos (proscriptions change over time as standards of appropriateness change in the wider culture). Simplicity, predictability, and safety become the norms that frame the creation and production of television melodrama. Planned flow, the melodrama’s highly symbolic heroic ideal, its formal conventions, and its reinforcement of the society’s dominant values at any given cultural moment render the genre highly significant as a centrist cultural mechanism stressing order and stasis.

Perhaps because it is such a staple—and stable—form of television, melodrama has become a central feature of almost any other program formations in the medium, leading to “blurred” genres modified by melodramatic conventions. Thus, police procedural shows such as *NYPD Blue* or *Third Watch* focus as often on the private tribulations of characters as on their professional activities, though the two types of event frequently intertwine and influence each other. One of the more notable examples of this genre blending and bending was *Buffy the Vampire Slayer*, which modified a comic-adventure theatrical release into a compelling exploration of the lives of teens and young adults, providing powerful and poignant moments, such as in the episode in which Buffy’s mother dies.

The use of melodrama as a modifying factor even altered the concept of planned flow when cable channels began to produce serialized programming based on familiar genres. Home Box Office’s (HBO’s) *The Sopranos, OZ*, and *The Wire* have been cited as among the most complex offerings in television history, each of them trading on viewer knowledge of “mafia stories,” “prison stories,” or “police procedurals,” richly embroidered with melodramatic overtones. Indeed, it is likely that the sense of these basic story forms has now been altered by these uninterrupted, randomly available narratives, “rewritten” in melodramatic form.

**Mercer, David (1928–1980)**

British Writer

David Mercer, an innovative and controversial writer for television, stage, and film, was a key figure in the development of television drama in Britain during the 1960s and 1970s. Although he often said he got into television by accident, his television plays first established his reputation and offered a powerful and personal exploration of the possibilities of the medium. Published soon after transmission, Mercer's screenplays sparked lively critical and political debates.

Mercer came from a northern working-class family, but his interest in the arts and politics began after World War II, when he was able to take advantage of the extension of new educational opportunities. This experience was central to his first television play, *Where the Difference Begins* (1961), originally written for the stage but accepted for broadcast by the British Broadcasting Corporation (BBC). The "difference" in the title referred to the younger generation's break with traditional socialist values. Mercer followed up with two more plays, *A Climate of Fear* (1962) and *The Birth of a Private Man* (1963), which dealt with characters struggling to sustain a left-wing political vision in the new "affluent" society.

Although Mercer's early work showed the influence of the "kitchen sink" realism that had swept through British theater, literature, and cinema in the late 1950s, he soon joined other BBC writers and producers to challenge what Troy Kennedy-Martin called the prevailing "naturalism" of television drama. In Mercer's case, the result was a new verbal and visual freedom: instead of talking heads and colloquial speech patterns, the plays used condensed, witty, articulate dialogue with striking, often subjective or allegorical images. An example of such imagery occurs at the end of *The Birth of a Private Man*, when Colin Waring, whose private life had disintegrated in the face of his political uncertainties, dies at the Berlin Wall in a hail of bullets from both sides.

This antinaturalist style was recognized as an imaginative use of the medium but disturbed critics of all political persuasions. Conservatives objected to Mercer's self-proclaimed Marxist position, liberals found the plays too explicit and lacking in subtlety, while orthodox left-wing critics questioned the emphasis on the problems of Socialism—the compromises of the British postwar Labour governments, the revelations about Stalin's atrocities, and the failures of Communism in Eastern Europe. The plays may be Marxist in their stress on the need for a political revolution, but the revolutionary impulse is usually blocked and becomes internalized as psychological breakdown. However, the impulse also emerges in Mercer's pleasure in breaking the rules of television drama, as he did emphatically in *A Suitable Case for Treatment* (1962), a

---

Oglesbee, Frank W., "Doctor Who: Televised Science Fiction as Contemporary Melodrama," *Extrapolation* (Summer 1989)
broad farce in which the main character indulges in “mad” visions of a retreat to the jungle away from the complexities of his political and personal life. Mercer later wrote the screenplay for the successful film version of this play, Morgan: A Suitable Case for Treatment (1966), directed by Karel Reisz.

The motif of “madness” in Mercer’s plays has much in common with the antipsychiatry philosophy of R.D. Laing, who claimed that schizophrenia is an essentially sane response to a mad society. Laing was extremely influential in the 1960s, and he expressed great interest in Mercer’s work, acting as consultant on one of his most powerful television plays, In Two Minds (1967), a documentary-style drama that traces the causes of a young woman’s schizophrenia to her oppressive family life. The play was directed by Ken Loach, who also directed the 1971 film version Family Life (Wednesday’s Child in the United States), based on Mercer’s screenplay.

Mercer himself likened his plays to rituals exploring the tensions and contradictions of fragmented personalities and ambiguous truths. They explore the relationships of the political and the personal in a society that encourages conformity, inhibiting individual expression. He felt that television gave him greater freedom of expression than was possible in the commercial theater or cinema, but he did continue to work in other media. His influence can be seen in the work of a younger generation of writers, such as Trevor Griffiths, David Hare, and Stephen Poliakoff, who have also drawn on the resources of television, theater, and film to produce a powerful body of work dealing with the intersection of personal and political pressures in contemporary Britain.

Mercer, Rick (1969– )
Canadian Actor, Writer, Political Satirist

Rick Mercer is one of Canada’s most respected television writers and performers, and his career has successfully melded the quintessentially Canadian traditions of sketch comedy and political satire. But his contribution to the social and cultural landscape of Canada goes far beyond his considerable ability to entertain. Whether directed toward the perceived social and political arrogance of mainland Canada toward his home province of Newfoundland or contained within a wicked send-up of the network television production industry, Mercer’s satire not only is informed by social and political issues but also unmercifully dismantles them, revealing the underlying pretensions, contradictions, and absurdities. In 2000, for example, while still appearing as a regular on the Canadian Broadcasting Corporation’s (CBC’s) news satire This Hour Has 22 Minutes, Mercer called for a national referendum to decide the issue of whether ultraconservative prime-
Ministerial candidate Stockwell Day should be forced to change his first name to Doris. Mercer justified the position by citing Day’s own platform, which included support for staging a national referendum whenever as few as 3 percent of Canadians called for one.

The roots of Mercer’s irreverent and antiestablishment comedy lay in Newfoundland, both Mercer’s birthplace and home to the legendary CODCO comedy troupe. His early stage work found him in the same local theaters as several of CODCO’s founding members, including Mary Walsh and Cathy Jones, with whom Mercer would later work on the long-running CBC production This Hour Has 22 Minutes. Mercer broke onto the national scene in the early 1990s, writing and performing several critically acclaimed one-man plays that established the foundations for his career as a “professional raconteur.”

Mercer’s eight years on This Hour Has 22 Minutes (named for the legendary Canadian public affairs program This Hour Has Seven Days), built his reputation as Canada’s most indignant and incisive comic actor. But if its 1960s predecessor was often considered controversial for topics and approaches to stories that explored the boundaries of journalistic autonomy, This Hour Has 22 Minutes pushed the envelope even further by pointedly subverting some of Canada’s most entrenched public institutions, including broadcast journalism itself. Mercer’s contributions were among the show’s most subversive and the most popular. One of the Mercer trademarks was “Streeters,” two-minute tirades shot in grainy black-and-white film on the Halifax, Nova Scotia, waterfront, which featured an outraged Mercer venting the collective spleen of every Canadian who had ever been angered by the duplicity of federal politicians or the petty tyranny of bank tellers.

“Talking to Americans” would take Mercer’s angry-young-man act on the road. As a regular segment on This Hour Has 22 Minutes, “Talking to Americans” had Mercer traveling to major U.S. cities and recruiting unsuspecting victims to participate in seemingly benign “man on the street” interviews that collected American opinions on Canada’s geography, politics, and culture. Topics ranged from whether Canada should be forced to outlaw the polar bear slaughter in Toronto (though no polar bears live in this cosmopolitan urban center of some 2.5 million people) to whether Americans should embark on a bombing campaign against Bouchard (not a place but a person: Lucien Bouchard, the former leader of the Bloc Quebecois, the party advocating separation from Canada for French-speaking Quebec). The dismal failure of even American politicians to grasp fundamental facts about Canada emerged in the now infamous “Jean Poutine” episode. At a press event held by then—presidential candidate George W. Bush, Mercer asked the Texas Republican to comment on the support for his presidential run pledged by Canada’s prime minister, Jean Poutine. Bush’s unfortunate public failure to recall that the Canadian leader’s real name is Jean Chretien was compounded only by the fact that “poutine” is actually a fast-food item, popular in Quebec, consisting of french fries covered in gravy and melted cheese curds. This Hour Has 22 Minutes’ cameras captured the entire episode, much to the delight of the perpetually marginalized Canadian television audience.

An hour-long “Talking to Americans” compilation special gained the highest ratings in Canadian broadcasting history for a comedy show, while a text-based version of Streeters was published in 1998. Mercer’s eight years on This Hour would also net him 12 Gemini Awards for writing and performing as well as several Canadian Comedy Awards. He has also won regional awards in Canada for journalism and for contributions to the arts in Atlantic Canada.

While Mercer has proven his mettle as a stage actor, political satirist, news commentator, and news maker, in 1998 he turned his talents to writing and starring in a situation comedy, Made in Canada gleefully lampoons the Canadian private television production industry. Richard Strong, Mercer’s character, is head of production (a position earned by drugging and framing his brother-in-law and boss) at “Pyramid/Prodigy Productions,” where unbridled office politics and sleazy corporate competition provide the backdrop for Mercer’s character’s quest to destroy his enemies while churning out lamentably bad Canadian television for American syndication. Mercer has called the role a modern-day Richard III and characteristically subverts television convention by engaging the viewer in playful side commentary made directly into the camera. During the 2001–02 season, Made in Canada boasted cameos from a virtual “Who’s Who” of Canadian film and television actors, journalists, and media industry executives, all of whom seemed only too happy to be in on the joke that the series makes of the Canadian private TV industry.

But if Mercer’s career sometimes appears as a quixotic campaign to use television and journalism to expose the many flaws and ironies in Canadian political, social, and cultural life, it is also redolent with a seemingly sincere fondness and curiosity about the nation’s cultural heritage and institutions. As the host of It Seems Like Yesterday for Canada’s History Television Network, Mercer narrates half-hour retrospectives looking at newsworthy weeks in 20th-century history, emphasizing events and matters of particular impor-
Mergers and Acquisitions

Mergers and acquisitions have been a constant theme in the U.S. television business since its commercial beginnings. The vast majority of the dominant companies have been built by taking over other enterprises. For example, all four of the original television networks developed as products of mergers. No better example can be found than the complex formation of the American Broadcasting Company (ABC). During World War II, when the federal government forced the National Broadcasting Company (NBC) to divest itself of one of its two radio networks, Edward Nobel's Life-savers company acquired the NBC Blue network and renamed it ABC. For nearly a decade, ABC struggled and would probably have not made a major impact in television had it not been acquired by another company, United Paramount Theaters, in 1952. Leonard...
Mergers and Acquisitions

Goldenson, then head of United Paramount, took control of the merged units and sold movie theaters to finance the creation of ABC Television.

During this same early period, another television company, Dumont, was able to mount a TV network largely because it had been acquired by Hollywood’s Paramount Pictures, and even the NBC and Columbia Broadcasting System (CBS) television networks, usually thought of as secure corporate entities, relied on mergers to increase their stable of owned-and-operated television stations. As the three-network oligopoly of ABC, CBS, and NBC solidified its position in the American news and entertainment contexts and in the wake of specific Federal Communications Commission (FCC) rulings on the allocation of spectrum space, the television industry appeared to be established and unchanging. Through the 1960s and 1970s, the “Big Three” TV networks acquired few TV properties, and the only big news in the late 1960s was an “almost merger” as ITT tried and failed to take control of ABC. The FCC carefully investigated that proposed deal, and the delay caused the parties to abandon the merger. CBS and NBC were satisfied to acquire ancillary entertainment units, from baseball teams to book publishers.

The stability of the three major TV network empires was shattered in the mid-1980s, a time when the television business was changing rapidly. Cable and home video made major inroads into the landscape dominated by terrestrially based broadcasters. Longtime owners, such as William Paley of CBS, began to ponder retirement, and perhaps most significantly, the FCC lowered the level of its threatened opposition to proposed deals.

In 1986 General Electric (GE) purchased the Radio Corporation of America (RCA) at a price in excess of $6 billion and thus acquired NBC. GE, one of the biggest corporations in the world, immediately sold off the NBC Radio network and stations as well as RCA manufacturing. GE’s stripped-down NBC then began to expand into cable television, a move most strongly exemplified by its acquisition of shares of the CNBC, Bravo, American Movie Classics (AMC), and A&E cable television networks.

Also in 1986, Laurence Tisch and his Loews investment company took over CBS. Earlier, as Ted Turner attempted a hostile bid for CBS, longtime CBS chief Paley looked for a “white knight” to save his beloved company and in October 1985 asked Tisch to join the CBS board of directors to thwart the Atlanta-based broadcaster. The following year, Tisch took full control and, to no one’s surprise, systematically began to sell everything CBS owned in order to concentrate on television. First to go was CBS Educational and Professional Publishing, which included Holt, Rinehart and Winston, one of the country’s leading publishers of textbooks, and W.B. Saunders, a major publisher of medical books. Next Tisch picked up $2 billion from the Sony Corporation of Japan for CBS’s Music Group, one of the world’s dominant sellers of popular music.

ABC was the third of the Big Three to be merged into another company. By the early 1980s, Leonard Goldenson had transformed ABC into the top TV network, but he had passed his 80th birthday and wanted out of the day-to-day grind of running a billion-dollar corporation. In 1986 Capital Cities, backed by Warren Buffett’s Berkshire Hathaway investment group, bought ABC for $3.5 billion. Capital Cities had long ranked as a top group-owner of television stations, and through the late 1980s and into the 1990s, the new “CapCities,” led by chief executive officer Thomas Murphy, moved ABC into cable television, most notably by taking control of the cable sports network ESPN (Entertainment and Sports Network).

At this same time, the cable television industry was also in the process of consolidating. Giant companies were created through acquisitions and mergers based on the core of the cable television operation: the local franchise. To take advantage of economies of operation, corporations merged cable franchises under single corporate umbrellas, creating “multiple system operators.” No two corporations did this better than Time Warner and TeleCommunications, Inc. (TCI).

Time Warner was formed by the merger of two communications giants in 1989; its assets approached $20 billion, and yearly revenues topped $10 billion. While the colossus covered all phases of the mass media, its heart was a vast nationwide collection of cable franchises. However, this merger to end all mergers also included Warner Brothers (one of Hollywood’s major studios, a leading home video distributor, and one of the world’s top six major music labels) and Time’s vast array of publishing interests, from magazines as well known as Time, Fortune, and Sports Illustrated to Time-Life Books. In 1995 Time Warner acquired Turner Broadcasting (which had itself acquired other film libraries, production companies, and cable entities), making an already vast empire ever larger.

From the outside, to challenge the Big Three networks and these vast cable corporations, came Rupert Murdoch and his News Corporation Ltd. From a confederation of independent stations around the United States, Murdoch fashioned the FOX television network. He began by taking over the Hollywood studio 20th Century-Fox and thus obtaining a steady source of programming. Next he acquired the most powerful nonnetwork collection of television stations, Metrome-
Mergers and Acquisitions

dia, for well in excess of $1 billion. These six over-the-air television stations, plus a score more in smaller markets that Murdoch would later acquire as legal ownership maximums increased, could reach nearly one-third of homes in the United States. As a capstone, Murdoch spent well in excess of $1 billion for TV Guide, the magazine that was best able to promote his new television empire.

In 1990, with the Time Warner merger settled, Rupert Murdoch on scene as a new player, and the new owners for each of the Big Three TV networks, it seemed it would be well into the next century before the television industry in the United States would experience another important wave of mergers. Instead, a frenzy of acquisition came in 1995, far sooner than anyone expected. That summer, Disney acquired Capital Cities/ABC, adding not only a famous TV network but also a score of FM and AM radio stations and two dozen newspapers to the entertainment and theme park company. Within a month, Tisch sold CBS to Westinghouse. At the time, Westinghouse stood as a major manufacturer of industrial equipment in the United States with but a single division owning and operating television and radio stations. (Later in 1995 came the previously mentioned acquisition of Turner Broadcasting by Time Warner.)

A cornerstone event in the history of mergers and acquisitions in the television business had taken place. Critics stood up and asserted that this takeover wave had created a very real threat: a few corporations controlling television, the most important communications medium of the late 20th century. Before 1995, analysts had associated TV networks with one part of the business (distribution run from New York) and Hollywood with another (production of prime-time entertainment). The 1995 merger movement changed all that, consolidating all economic functions into single corporations. Indeed, critics argued that the television industry seemed on the verge of domination by one unit: "The ABC-CBS-NBC-FOX-Disney-Westinghouse-News Corp Entertainment and Appliance Group."

A primary concern for critics of such alliances is the reduction in forms of social and cultural expression. They cite various forms of vertical integration—including the unification of production, distribution, and presentation of mediated material—as serious threats to experimentation, variation, and diversity among social and cultural groups. Profit margins, rather than the needs and aspirations of groups and individuals, determine what is produced and exhibited. Moreover, because most of the major participants in the giant, newly merged media corporations also have international interests, critics point to the possibility of a reduction in cultural diversity, forms of expression, and dissemination of information on a global scale. Indeed, the model of consolidation and merger outlined here in the context of the United States is equally significant among a shrinking handful of European and Asian media conglomerates. Control of communication- and media-based corporations throughout the world, then, is scrutinized as a form of extraordinary political, economic, social, and cultural power.

The wave of mergers continued through the end of the 20th century and the early 2000s. The biggest came in January 2000, when America Online (AOL) merged with Time Warner. This deal lasted only three years, as AOL could never provide a synergistic thrust to the benefit of Time Warner. In August 2003, "AOL" was dropped from the company name.

The second-largest deal came in September 2003, when NBC took control of Hollywood's Universal studios. Therefore, at that point in time, all four major networks (NBC, CBS, ABC, and FOX) were vertically integrated with movie and television studios in a merger worth an estimated $42 billion.

Mergers and acquisitions will continue in the future as corporate players try to anticipate what it means to operate in the new world of 500 channels and the Internet. Future media mergers will most likely take one of three forms.

First, corporations and companies not directly involved in the television industry will wish to enter into mergers with television companies or acquire them. This was exemplified by the Westinghouse takeover of CBS, continuing a trend that started in the mid-1980s with GE taking over NBC. More often than not (and surely in the case with Westinghouse), the outside corporate entity acquires the television company because it is struggling and seeking to reinvent itself.

Second, there will be an increase in vertical integration. Disney, a "software producer," acquired ABC, a top distributor of video, in part to enable Disney to gain a guaranteed market for its future products.

The third merger strategy will be corporate diversification. Corporate chief executive officers will seek to spread risk over as many media enterprises as possible in order to hedge bets in an ever-changing media marketplace. With divisions devoted to all forms of the mass media, the diversified corporation can survive through future recessions and ride the technological wave of the future, whatever direction it may take.

It is likely that mergers and acquisitions will always be a central activity in the television business as companies maneuver to become the dominant player in one media segment. Television, whether defined by networks (distributors) or Hollywood studios (producers), has long been comprised of small, exclusive clubs. As long as television remains a major industry, outsiders...
Mergers and Acquisitions

will attempt to buy in, current players will struggle to protect what they have, and all will strive to minimize risk. Simply put, it is cheaper to merge with and acquire other companies than to start new companies from scratch, a fact as true in the days of Sarnoff, Paley, and Goldenson as it is today.

Messer, Don (1910–1973)

Canadian Musician, Television Performer

Don Messer was the star of his own music variety program, Don Messer’s Jubilee, which ran on the Canadian Broadcasting Corporation (CBC), Canada’s public broadcaster, from 1958 to 1969. The program featured the “Down-East” fiddling style of Messer and his band as well as a medley of old-time favorite folk songs sung by the show’s two lead singers, Marge Osborne and Charlie Chamberlain. During its run, it was one of the most popular television programs in Canada, and in the mid-1960s it ranked second only to Hockey Night in Canada in national ratings.

Don Messer’s Jubilee, like many early television programs, had its roots in radio. In 1934, Messer formed a band, the Lumberjacks, in his native province of New Brunswick; along with lead singer Charlie Chamberlain, he developed the musical format and style that he would later translate to television. In 1939, he moved to Prince Edward Island, where the band was joined by Marge Osborne. They changed the band’s name to the Islanders. His television career began locally in the Maritimes in 1957. One year later, Don Messer’s Jubilee was broadcast nationally as a summer replacement for the country-and-western music show Country Hoedown. Jubilee was an instant success and remained consistently in the top ten throughout its run. The show’s popularity was so strong that its Canadian ratings in 1961 were even higher than the formidable Ed Sullivan Show.

1482
The show's success, according to Messer himself, lay in its sincerity and simplicity. The show's style contrasted sharply with the more "showbiz" variety programs that were being made in Canada's larger urban centers, which more often than not emulated the more appealing U.S. programs. Jubilee offered its Canadian viewers a "made-in-Canada" variety show. It reflected what one commentator called "an echo of our country and people as they used to be in simpler days."

Don Messer was shy and retiring and rarely spoke in front of the cameras, preferring to let the show's announcer introduce the songs. The two lead singers appeared more ordinary and down-home than glamorous and glitzy. The show's set, format, and staging were simple, straightforward, and inexpensive to produce. Settings were often fixed, and a "book" (two flats hinged together) was often used to provide variety. Jubilee's appeal was largely among Canada's far-flung rural population, reaching nearly one-half of Canadian farm homes, and its greatest appeal was among the fishing population of the Maritimes.

The decision to cancel the show in 1969 in favor of a "younger look" brought such a storm of protest that the CBC board of directors decreed that in the future such popular shows were not to be canceled without justifiable reasons. Attempts were quickly made to revive the show on Hamilton's local television station CHCH, but without its national time slot, Jubilee quickly lost its magic. Don Messer passed away three years later on March 26, 1973.

The appeal of Don Messer's Jubilee has survived to this day. Since the 1970s, it has come to symbolize the "made-in-Canada" music variety show. Many artists have had successful television careers using the formula and sincere style that Messer pioneered. Shows such as The Tommy Hunter Show, a country-western music program; The Irish Rover, featuring Irish folk music; and Rita MacNeill and Friends, starring another Maritime musician, have carved out successful programs based on Messer's own conviction that musicians wish to be judged only on their ability to make music rather than the glitz and glamour of their programming. In the mid-1980s, John Gray, composer and songwriter of the stage play Billy Bishop Goes to War, revived a stage play based on the television show as a celebration of a Canadian cultural treasure.

Manon Lamontagne

Don Messer. Born in Tweedside, New Brunswick, Canada, 1910. Fiddler since age of seven; formed group, the New Brunswick Lumberjacks, with Charlie Chamberlain, and made first radio appearance, 1934; regular radio and television appearances on CBC; host, maritime regional musical variety program. Died March 26, 1973.

Mexico

The first experimental television transmission in Mexico—from Cuernavaca to Mexico City—was arranged by Francisco Javier Stavoli in 1931. Stavoli purchased a Nipkow system from Western Television in Chicago with funding from the ruling party, the Mexican Revolutionary Party, which became the current Institutional Revolutionary Party. In 1934 Guillermo Gonzalez Camarena built his own monochromatic camera; by 1939 Gonzalez Camarena had developed a trichromatic system, and in 1940 he obtained the first patent for color television in the world. In 1942, after Lee de Forest traveled to meet with him in order to buy the rights, he secured the U.S. patent under description of the Chromoscopic Adaptors for Television Equipment. In 1946 Gonzalez Camarena also created XE1GGC-Channel 5, Mexico's first experimental television station, and started weekly transmissions to a couple of receivers, built by Gonzalez Camarena himself, installed at the radio stations XEW and XEQ and at the Mexican League of Radio Experimentors. The first on-air presenter was Luis M. Farias, and the group of actors and actresses performing in those transmissions were Rita Rey, Emma Telmo, Amparo Guerra Margain, and Carlos Ortiz Sanchez. Gonzalez Camarena also built the
Mexico

studio Gon-Cam in 1948, which was considered the best television system in the world in a survey done by Columbia College of Chicago.

In 1949, another broadcasting pioneer, Romulo O'Farrill, obtained the concession for XHTV-Channel 4, the first commercial station in Mexico, which was equipped with an RCA system. XHTV made the first remote-control transmission in July 1950 from the Auditorium of the National Lottery—a program televising a raffle for the subscribers of O'Farrill's newspaper, Noticias. The first televised sports event, a bullfight, was transmitted the following day. In September 1950, with the firm Omega and the automobile-tire manufacturer Goodrich Euzkadi as the first advertisers, XHTV made the first commercial broadcast, the State of the Union Address of President Miguel Aleman Valdes.

By the late 1980s, the entire telecommunications infrastructure in Mexico consisted of 10,000 miles of microwaves with 224 retransmitting stations and 110 terminal stations, the Morelos Satellite System with two satellites and 232 terrestrial links, 665 AM radio stations and 200 FM radio stations, 192 television stations, and 72 cable systems.

From the time of the earliest experiments, the television system in Mexico has been regulated by article 42 of the Mexican Constitution, which stipulates state ownership of electromagnetic waves transmitted over Mexican territory. This law is supplemented by article 7 of the 1857 Constitution, which deals with freedom of the press, a perspective that became more restrictive as article 20 of the 1917 Constitution. In 1926 the Calles administration produced the Law of Electrical Communications. And the first document that specifically addresses the television industry, the "decree which sets the norms for the installation and operation of television broadcasting stations," was drafted by the Aleman administration in 1950. The current Federal Law of Radio and Television was originally formulated in 1960 during the Lopez Mateos administration, introducing limits to advertising. This law was drastically altered in 2002 by the Fox administration, complying with the proposals of private broadcasters. Even within the structure of these regulations, television in Mexico has been dominated by a handful of powerful individuals and family groups. The most significant of these is the Azcarraga family. Television station XEW began operations in 1951 under the direction of Emilio Azcarraga Vidaurreta, who already owned the radio station with the same call letters, one of 13 radio stations under his ownership in the northern part of the country. Azcarraga had strong links with the U.S. conglomerate Radio Corporation of America (RCA) and had been the founding president of the Chamber of the Radiobroadcast Industry in 1941. He was also influential in the creation of the Interamerican Radiobroadcasting Association and, with Goar Mestre of Cuba, was considered one of the two most powerful media barons in Latin America. XHGC was founded in 1952 by Gonzalez Camarena, who was considered a protégé of Azcarraga and had worked as a studio engineer in his radio stations. Telesistema Mexicano was born in 1954 with the integration of XEW-TV, XHGC-TV, and, a year later, XHTV.

Although these stations and systems operated under the laws requiring state ownership of the airwaves, in 1950 Mexico adopted a commercial model of financial support. This decision came two years after, and despite the conclusions of, the report issued by the Television Committee of the National Fine Arts Institute. The report criticized the commercial model of the American television industry, favoring instead the public television system of the United Kingdom. The Television Committee had been formed at the request of President Aleman and was chaired by Salvador Novo, who was assisted by Gonzalez Camarena. In the judgment of the committee, commercial programming was the "simple packaging of commodities with no other aspiration." Later, Novo would characterize Mexican radio as "spiritual tequila" and television as the "monstrous daughter of the hidden intercourse between radio and cinema."

In 1973, 23 years after having committed to this model of commercial support, Television Via Satellite, S.A. (Televisa), was created as a result of the fusion of Telesistema Mexicano and Television Independiente de Mexico (TIM). TIM was the media outlet of the Monterrey Group, the most powerful industrial group in the country, and consisted of XHTM-TV (which started in 1968), two more stations in the interior, and the additional 15 television stations of Telecadena Mexicana, S.A. This network was founded by film producer Manuel Barbachano Ponce in 1965 and was purchased by TIM in 1970. The fusion of Telesistema and TIM was preceded by strong criticisms of programming and advertising by several public officials, including President Luis Echeverria, in 1972.

Emilio Azcarraga Jean became the president of Televisa after the death of Emilio Azcarraga Milmo in 1997, its founding and only president, except for a short period in 1986 and 1987, when Miguel Aleman Velasco—son of the president who opted for the commercial model—replaced him. In addition to its dominant role in the television industry, Televisa has operations in sectors as diverse as the recording industry, soccer teams (America, the winningest team in the country's history; Necaxa; and Real San Luis), a sports stadium with a capacity for 114,000 spectators, a pub-
lishing house, newspapers, billboard advertising companies, Cablevision, a cable television system, film studios, video stores, and direct broadcast satellite, among others. Moreover, the Televisa empire extends beyond the boundaries of Mexico. Televisa’s board has a new look after the exit of the Aleman, O’Farrill, Diez Barroso, and Canedo families and the entrance of new names, such as Asuncion Aramburuzabala, cice chairwoman; Alfonso De Angoitia, chief financial officer; Raul Rodriguez, chief executive officer of radio; and Pablo Vazquez, chief executive officer of Innova. Besides the strategic alliance with Carlos Slim, the wealthiest businessperson in Mexico, the list of foreign stockholders now includes Bill Gates, who holds a 7 percent share.

The first experience of Televisa outside its home country was the creation of what is known today as Univision, a system of Spanish-language television operations in the United States. The move of Azcarraga to the United States coincided with a new strategy to grow internationally while diversifying in the national market. The original operation started in 1960 as Spanish International Network Sales (SIN) with stations in San Antonio and Los Angeles and three more besides the affiliates. The link between Televisa and SIN/SICC was in a hiatus for some time after a lawsuit focused on Azcarraga’s potential violation of U.S. regulations preventing foreign citizens from holding controlling interests in U.S. media industries. Within a matter of years, however, Televisa not only recovered Univision but also added Panamsat in 1985 and made substantial investments in Chile, Peru, Spain, and Venezuela. Tele Futura was recently added to the cable channel Galavisión as U.S. outlets linked to Univision.

After being dominated by Televisa for 23 years, a duopoly emerged with TV Azteca as the competitor. The quasi monopoly of Televisa in the Mexican television industry was broken in 1994, when the Salinas administration privatized a media package that included Channels 7 and 13 as well as a chain of film theaters. The winning bid was presented by Ricardo Salinas Pliego, president of the electronics manufacturer Elektra and the furniture chain Salinas y Rocha. Salinas Pliego won the bid despite having no experience in the broadcast industry, a qualification required by rules issued by the federal government. Among those who lost the bid were families with a long history in the broadcast industry, such as the Sernas and the Vargas families. Some of these irregularities were coupled with the revelation by Raul Salinas de Gortari—brother of Carlos Salinas de Gortari and the main suspect in the assassination of Jose Francisco Ruiz Massieu—that he had engaged in financial transactions with Salinas Pliego shortly before and after the privatization. The revelation of this information by Televisa (quoting U.S. newspapers and newscasts) caused a war of accusations between Televisa and the Salinas Pliego group, a war that calmed down after the intervention of the secretary of the interior and President Ernesto Zedillo himself.

Televisa had experienced a similar conflict in 1995 with Multivision, the wireless cable firm owned by the Vargas family. Multivision asked for the nullification of several dozens of new concessions of stations given to Televisa at the end of the Salinas administration. Televisa counterattacked by accusing Multivision of receiving concessions for wireless cable and other services without following correct procedures. After initiating mutual lawsuits, Televisa and Multivision reached a truce with the mediation of the secretary of the interior. The most spectacular conflict, however, occurred between TV Azteca and CNI-Channel 40 when the former took over the transmission facilities of Mount Ciquihuite of the latter with an armed commando in December 2002 because of some disagreements about the interpretation of a programming contract. The Fox administration waited ten days before reacting. A judge gave the facilities back to CNI and imprisoned eight employees of TV Azteca after the federal authorities appeared to be afraid of acting forcefully against TV Azteca.

In addition to these private, commercially supported television systems, a smaller, public system is also in place. The first public television station was Channel 11, started in 1958 by the Instituto Politecnico Nacional (National Polytechnical Institute). In 1972 the Echeverria administration created Television Rural del Gobierno Federal, which later became Televisión de la República Mexicana, and purchased 72 percent of the stock of XHDF-Channel 13 through SOMEX. It later added Channels 7 and 22 and became Instituto Mexicano de Televisión (Iimevision). Although Iimevision was owned and operated by the government, it emulated the programming of Televisa. The Salinas administration privatized Iimevision, which became TV Azteca, and handed XEIMT-Channel 22 to a group of scholars, artists, and intellectuals.

Although there were some cable television operations in the northern state of Sonora by the late 1950s, the industry has been dominated by Televisa through Cablevision since its creation in 1970. This operation has had its main competitor from direct broadcast satellite delivery, primarily from Multivision, owned by the Vargas family. Multivision has greater market penetration and offers more channels than its counterparts in countries such as the United States. In 1996 Televisa created a joint venture with News Corporation, Rede Globo (Brazil), and TeleCommunications,
Inc. (TCI), to create a direct broadcast satellite service for Latin America. Multivision became part of the rival operation DirecTV, along with the Cisneros Organization (Venezuela) and Television Abril (Brazil). There have been talks to merge both satellite services in the near future.

Much of Televisa's dominance in Mexican television comes from its role as a production and distribution company. It provides over 12,000 hours of television programming each year, of which only 13 percent are imports. Media scholar Florence Toussaint says that the soul of Televisa resides in its programming. She points out that the organization offers an apparent diversity through the four channels (Channels 2, 4, 5, and 9 in Mexico City), with 118 titles in 455 hours each week. Toussaint argues, however, that among and within all these programs, a singular discourse is being elaborated, one that propagates a determinate view of the world. Plurality, she suggests, is not its goal, and all the different shows in the various genres are, in fact, similar. This is especially true of the soap operas (telenovelas), the main programming form of Mexican television. (The production and distribution of melodramatic telenovelas places Televisa among the top five exporters of television programming in the world; the programs are exported not only to the Americas but also to countries that include China and Russia.) This particular genre can be seen to prescribe the gender roles and the aspirations that the social classes should have. Bourgeois values and symbols are the ideal, the goal, and the measure of failure or success.

Different critical perspectives move away from this analysis, which assumes a passive audience. The alternative points of view, influenced by British and American cultural studies and the works of Jesus Martin-Barbero, Nestor Garcia Canclini, Jorge Gonzalez, Guillermo Orozco, and Rossana Reguillo, point out specificities of Latin American popular culture found in the form. Telenovelas, for example, were modeled after radionovelas, the primary example of which, El Derecho de Nacer (The Right to Be Born), was broadcast at the beginning of the television era in the 1950s. Although the first telenovela in its current format was Senda Prohibida (Forbidden Road), other forms of television drama appeared as early as 1951, starting with the detective program Un muerto en su tumba (A Dead Man in His Tomb). The first serial drama was Los Angeles de la Calle (Street Angels), which ran from 1952 to 1955.

Telenovelas expanded to prime time and included male viewers as part of the target audience in 1981 with Colorina. Besides the melodrama, there are other subgenres in the telenovela—the historical, the educational, and the political—all of which, despite the explicit differences, have a melodramatic subtext. The first antecedent to this strategy of subgenres was Maximiliano y Carlota (1956) and was fully initiated with La Tormenta (The Storm) in 1967. Educational telenovelas began in 1956 with a story focused on adult education, Ven conmigo (Come with Me). For the new television network, TV Azteca, one of the most successful programs among audiences and critics has been the political telenovela Nada Personal (Nothing Personal) produced by Argos. TV Azteca suffered a big blow when Argos signed an agreement with Televisa's Cablevisión to launch Channel 46-Zoom TV.

Before the privatization of TV Azteca, Channel 2, with a programming based around telenovelas, had the highest ratings in prime time at 26.8 (a 47 percent audience share), followed by Channels 5 and 4, with a younger target audience, with 17.3 (30.3 percent share) and 8.7 rating (15.2 percent share), respectively. TV Azteca, then Imevision, had a rating of 2.5 (4.3 percent share) and 1.8 (3.1 percent share) for Channels 13 and 7, respectively. By the summer of 2003, Televisa prime-time audience share amounted to 69.6 percent, airing 85 of the 100 most popular programs. In 2002, Televisa won the ratings war in every single genre and continued in 2003 to lead the reality show Big Brother II. Even after the departure of Jacobo Zabludovsky after a quarter of a century of being the most widely recognized journalist and media personality, Televisa's newscast, now led by Joaquin Lopez Doriga, doubles the ratings of TV Azteca.

These historical developments and the complex structures of the Mexican television system have been the subject of considerable critical analysis. Most examinations of the Mexican television industry adopt a liberal pluralist approach. They claim that the relation between the authorities and the television monopoly has been fruitful for both parties, especially for the latter. They also stress that in this relation, the interests of the masses have been overlooked. Few critics have taken the simple view that the government and broadcasting have identical objectives, but most do argue that the different administrations have been tolerant and weak, allowing the monopoly greater benefits than its contributions to Mexican society. These analyses focus on several central themes. They cite ownership of media industries and management of news and information, criticizing the historical quasi-monopoly and the progovernment bias of Televisa's newscasts. TV Azteca proved to be even more biased than its competitor with the coverage of the 2000 presidential campaign. Both networks did it again the following year, when they failed to cover the Zapatista "Tour" and spectacular entrance to Mexico City. The two
firms became strange bedfellows by organizing a "peace concert" a few days before the Zapatista arrival.

The Mexican system of broadcasting has developed out of the shifting balance between the state, private investors, and outside interests, originating in the postrevolutionary period (1920–40) when foreign capital and entrepreneurs alike were looking for new investment opportunities. Whether the situation remains the same—whether the same groups remain in control of media industries in Mexico in the face of new technological developments—remains to be seen.

Miami Vice

U.S. Police Drama

Miami Vice earned its nickname of "MTV cops" through its liberal use of popular rock songs and a pulsating, synthesized music track created by Jan Hammer. Segments of the program closely resembled music videos, as quickly edited images, without dialogue, were often accompanied by contemporary hits such as Tina Turner's "What's Love Got to Do with It?" As with music-oriented films such as Flashdance (1983) and Footloose (1984), Miami Vice was a program that could not have existed before Music Television (MTV) began popularizing the music video in 1981.

Originally aired from 1984 to 1989, Miami Vice incorporated both current music and musicians (e.g., Phil Collins, Ted Nugent, Glenn Frey, and Sheena Easton), dressed its undercover police officers in stylish fashions, and imbued every frame with an aura of moral decay. It succeeded in making previous police programs, such as Dragnet, look stodgy and old-fashioned.

In Miami Vice, the city of Miami, Florida, was virtually a character in its own right. Each week's episode began with a catalog of Miami iconography: sunbaked beach houses, Cuban-American festivals, women in bikinis, and postmodern, pastel-colored cityscapes. Executive producer Michael Mann insisted that significant portions of the program be shot in Miami, which helped give Miami Vice its distinctive look. In this tropical environment, two detectives in the vice department combated drug traffickers, broke up prostitution and gambling rings, solved vice-related murders, and cruised the city's underground in expensive automobiles.

Don Johnson and Philip Michael Thomas played the program's protagonists, James "Sonny" Crockett and Ricardo "Rico" Tubbs, respectively. They were supported by Edward James Olmos as their tough, taciturn lieutenant and Michael Talbott, John Diehl, Saundra Santiago, and Olivia Brown as their colleagues on the squad. The program's narratives circulated among these characters, but Crockett was at its center, and Johnson received the lion's share of the press about Miami Vice.

Miami Vice was less about the solving of mysteries then it was a contemporary morality play. Indeed, Crockett and Tubbs were often inept detectives—mistakenly arresting the wrong person for a crime. Instead of Columbo-like problem solving, the program stresses the detectives' ethical dilemmas. Each week, these temptable men were situated in a world of temptations. They were conversant in the language of the underworld, skilled in its practices, and prepared to use both for their own ends. It would not take much for them to cross the thin line between their actions and those of the drug lords and gangsters. One such ethical dilemma frequently posed on the show was the issue of
vigilante justice. Were the detectives pursuing the evil-doers out of commitment to law and order or to exact personal revenge? Often it was very hard to distinguish the lawbreakers from the law enforcers. Indeed, one Miami Vice season ended with Crockett actually becoming a bona fide gangster—his ties to law enforcement neatly severed by a case of amnesia.

The Miami Vice world’s moral ambiguity linked it to the hard-boiled detective stories of Raymond Chandler and Dashiell Hammett and characters such as Sam Spade and Philip Marlowe as well as the film noir genre of the theatrical cinema. Television, with its demand for a repeatable narrative format, could not match the arch fatalism of these antecedents (a protagonist could not die at the end of a episode, as they often do in hard-boiled fiction), but Miami Vice adapted the cynical tone and world-weary attitude of hard-boiled fiction to 1980s television. Moreover, one of the most striking aspects of Miami Vice was its visual style, which borrowed heavily from the film noir.

As Film Comment critic Richard T. Jameson has commented, “It’s hard to forbear saying, every five minutes or so, ‘I can’t believe this was shot for television!’” Miami Vice was one of the most visually stylized programs of the 1980s, and it drew its stylistic inspiration from the cinema’s film noir. It incorporated unconventional camera angles, high-contrast lighting, stark black-and-white sets, and striking deep focus to generate unusually dynamic, imbalanced, noir compositions that could have been lifted from Double Indemnity (1944) or Touch of Evil (1958). Miami Vice looked quite unlike anything else on television at the time.

Miami Vice (along with Hill Street Blues and Cagney and Lacey) was one of the groundbreaking police programs of the 1980s. Its influence can be tracked in the moral ambiguity of NYPD Blue, the visual experimentation of Homicide: Life on the Street, and the flawed police inspector Don Johnson plays in Nash Bridges. Moreover, Miami Vice’s incorporation of music video components has become a standard component of youth-oriented television and cinema.

Microwave

Microwave technology has been used extensively by the broadcast and cable television industries as well as in other telecommunications applications since the early 1950s. Today, microwaves are employed by telecommunications industries in the form of both terrestrial relays and satellite communications.

Microwaves are a form of electromagnetic radiation, with frequencies ranging from several hundred megahertz to several hundred gigahertz and wavelengths ranging from approximately 1 to 20 centimeters. Because of their high frequencies, microwaves have the advantage of being able to carry more information than ordinary radio waves and are capable of being beamed directly from one point to another. In addition to their telecommunications applications (which include telephony and computer networking as well as television), microwaves are used in cooking, police radar, and certain military applications.

Microwave is a “line-of-sight” technology (i.e., because a microwave transmission cannot penetrate the Earth’s surface, it will not extend beyond the horizon); therefore, long-distance terrestrial transmission of messages is accomplished via a series of relay points known as “hops.” Each hop consists of a tower (often atop a mountain) with one antenna (typically a parabolic antenna) for receiving and another for retransmitting. Hops typically are spaced at 25-mile intervals.

Prior to the widespread use of communications satellites in television industries, terrestrial microwave relays frequently were used to deliver programming from broadcast networks to their affiliates or to deliver special-event programming, such as sports, to local stations. Beginning in the 1950s, terrestrial microwave relays were employed to supplement expensive telephone land lines for long-distance transmission of programming. Microwave mobile units (vans with microwave transmitters attached) have also been used in television news reporting since the late 1950s.

Microwave technology was critical to the development of the community antenna television (CATV) industry. Before microwave technology became available in the early 1950s, local CATV systems were limited in channel selection to those stations that could be received over the air via tall “master” antennas. In such situations, a CATV system could flourish only within 100 to 150 miles of the nearest broadcast television markets. Microwave relays, however, made it possible for CATV systems to operate many hundreds of miles from television stations. The new technology thus was a boon to remote communities, especially in the western United States, which could not have had television otherwise.

Microwave also introduced the possibility for CATV operators to select which broadcast signals they would carry, sometimes allowing them to bypass closer signals in order to provide their customers with more desirable programming—perhaps from well-funded stations in large cities. For this reason, it was microwave technology above all that prompted the earliest efforts by the Federal Communications Commission (FCC) to regulate CATV. By the late 1950s, some concern had been voiced by broadcasters as to the legality of the retransmission—and, in effect, sale—of their signals by CATV systems and CATV-serving microwave outfits. The most notable of these complaints resulted in the U.S. Supreme Court case Carter Mountain Transmission Co. v. FCC (1962). In 1965 and 1966, respectively, the FCC issued two bodies of regulation to govern the rapidly growing CATV industry. Both of these focused primarily on the legalities of microwave-delivered CATV programming.
The rules did very little, however, to curtail the growth of CATV (more widely known as "cable television" by the late 1960s), and microwave continued to play a key role. Throughout the United States, the signals of several independent television stations, some of which have become cable "superstations," were delivered to cable systems by microwave. In addition, in late 1972 and early 1973, Home Box Office (HBO) began serving customers in the Northeast via two existing microwave relay networks.

Historically, then, terrestrial microwave technology accomplished many of the television programming tasks for which communication satellites are used today. Terrestrial relays still exist and serve many important functions for television. In recent years, they have also been enlisted for nontelevision applications, such as computer networking and the relaying of long-distance telephone messages. Some companies that began as terrestrial microwave outfits have also diversified into satellite program delivery.

Midwest Video Case

In the 1979 case of FCC v. Midwest Video Corp., the U.S. Supreme Court held that the Federal Communications Commission (FCC) did not have the statutory authority to regulate public access to cable television. The legal decision, known more simply as the Midwest Video Case, marks the first time the Supreme Court refused to extend the FCC's regulatory power to the cable industry. In May 1976, the FCC used its rule-making authority to regulate the public's access to cable television "air" time and production facilities. Under the rules, cable television systems with 3,500 or more subscribers were required to upgrade to at least 20 channels by 1986 and set aside up to four of those channels exclusively for low-cost access by community, educational, local governmental, and leased-access users. Cable operators would have had to make channel time and studios available on a first-come, first-served basis to virtually anyone who applied and without discretion or control over programming content.

At a FCC hearing and, later, before the District of Columbia Court of Appeals, Midwest Video and other cable systems objected to the FCC's regulatory intervention into their operations, arguing, among other claims, that the commission's cable access rules were beyond the scope of the agency's jurisdiction as set forth in the Communications Act of 1934. Citing more than a decade of favorable legal precedent, the FCC rejected the cable industry's position as an overly narrow interpretation of the commission's jurisdiction.

Although the Communications Act did not explicitly grant cable television jurisdiction to the FCC, the Supreme Court had previously held in 1968 that FCC regulations that are "reasonably ancillary to the effective performance of the Commission's various responsibilities for the regulation of television broadcasting" fell within the commission's mandate. In that case, United States v. Southwestern Cable Co., the Court upheld FCC rules that required cable systems to retransmit the signals of local broadcast stations and seek prior FCC approval before making certain programming decisions. Similarly, in a 1972 case known as United States v. Midwest Video Corp., the nation's highest court upheld FCC rules that required cable systems with 3,500 or more subscribers to create original programming and provide studio facilities for the production and dissemination of local cable programs.

Arguing specifically that the intent of the 1976 public access rules was no different than the programming rules at issue in the 1972 Midwest Video Case, the FCC maintained that controlling public access to cable was just a logical extension of its broadcasting authority. The Supreme Court, however, disagreed. Although the Court suggested that the public access rules might violate cable operators' First Amendment rights to free speech and Fifth Amendment protections against the "taking" of property without due process of law, the justices declined to make a broad constitutional ruling. Instead, the Court distinguished the public access rules from the FCC's previous cable rules by declaring the
public access rules to be in violation of section 3(h) of the Communications Act of 1934, which limits the FCC's authority to regulate "common carriers."

Unlike broadcasters, common carriers are communication systems that permit indiscriminate and unlimited public access. Although the FCC has authority to regulate common carriers such as telephone networks and citizens band (CB) radio, it is expressly prohibited from subjecting broadcasters to common-carrier rules under section 3(h). Because the Court ruled that public control of local cable access would have, in effect, turned cable systems into common carriers, Midwest Video and the cable industry prevailed, at least as a matter of federal law. In the wake of the Midwest Video Case's narrow ruling, state and local authorities were still free to pass ordinances mandating set-asides for public access channels as a precondition for the granting or renewal of a cable franchise in a specific community.

Miller, J.P. (James Pinckney) (1919–2001)
U.S. Television Writer

J.P. Miller began writing for television during that time in the 1950s when a playwright fortunate enough to see his work performed on a live network drama literally could become an overnight sensation. For Miller, that night was October 2, 1958, when the Columbia Broadcasting System (CBS) broadcast a live production of his play "The Days of Wine and Roses" during its prestigious drama series Playhouse 90. By the following morning, the newspapers already had heralded his ascension to the elite ranks of television playwrights, ensuring that his name would be forever linked with those of Paddy Chayefsky, Reginald Rose, Rod Serling, Horton Foote, Gore Vidal, and Tad Mosel. An Emmy nomination followed, along with a lucrative offer from Hollywood for the film rights and an opportunity to write the film adaptation, which eventually became a 1962 movie directed by Blake Edwards and starring Jack Lemmon and Lee Remick.

If J.P. Miller's name is not recalled as quickly as that of other television playwrights of his era, it is because he was never as prolific as his colleagues or as eager to carve out a place in the television and movie industries. He was ambivalent about the business, unwilling to compromise, perhaps even spoiled by his early taste of freedom under the guidance of producer Fred Coe. After his initial burst of success on television and an inevitable courtship by the movie industry, he returned to New Jersey, where he spent 40 years working out of his home. Satisfied to write intermittently for movies, television, and the stage while devoting much of his energy to his own novels. Unlike most writers able to sustain long careers in television, Miller never wrote for episodic television series or aspired to become a producer. He was a playwright who wrote individual television plays—not series episodes—and this craft, honed in the live dramas of the 1950s, did not translate easily to the conditions of the television industry after 1960. Still, Miller returned repeatedly to television, where he earned three more Emmy nominations and received the Emmy Award in 1969 for his CBS Playhouse teleplay "The People Next Door." From the beginning of his career to the end, Miller specialized in scripts that were stark and somber, melancholy reminders that America is often a land of opportunities lost. It is a unique and unlikely vision for a writer who survived nearly four decades in television.
After World War II (during which he served as a lieutenant, earning a Purple Heart), Miller enrolled in the Yale drama school, which he attended for only a year before moving back to Houston. While in Houston, Miller divorced his first wife and then remarried, failed as a salesman of furnaces and real estate, and never strayed far from his dream of a career as a writer. Soon he moved his young family back to New York, where they lived in a small apartment in Queens. By day, Miller sold refrigeration for air conditioners; by night, he wrote plays that no one would read. Around this time, however, a friend who was a television repairman brought Miller a used television set that was missing its cabinet.

Miller discovered the quality of writing on Philco-Goodyear Television Playhouse, which was an expression of the taste of its producer, Fred Coe, who also had studied at the Yale drama school. By commissioning original plays from writers such as Chayefsky, Mosel, and Foote, Coe nurtured a dramatic form influenced by the breakthrough work of Arthur Miller and Tennessee Williams but suited to the scale of early television: intimate family dramas set in ethnic urban neighborhoods or forgotten communities in the rural South in which traditional cultures collide with the forces of modernity. Miller watched and made notes for his first television play.

"A Game of Hide and Seek," Miller's first television play, told of two southern sisters who had grown apart since the day years earlier when the younger sister had married an apparently wealthy stranger and moved away. When the prodigal sister returns home, abandoned and penniless, she hides her misfortune from the older sister, who is blind, until the older sister touches her suitcase and discovers that it is held together by rope. Miller delivered the script to Yale classmate Bob Costello, who had become one of Coe's assistant producers. Coe immediately purchased the script, assigning it to his star director, Arthur Penn, and casting the stage actress Mildred Dunnock.

Miller's first notable success came with the play "The Rabbit Trap," the story of a long-suffering engineer at a construction firm who stands up to his bullying boss and quits the job in order to spend more time with his son. This austere critique of corporate America caught the attention of the movie studios, which were on the lookout for New York talent, and Miller was brought to Hollywood to write the adaptation, an experience that he soon came to regret when he discovered how powerless he was to affect the outcome of the film. Writers in the movie industry enjoyed neither the autonomy nor the influence they were accorded under Fred Coe's benevolent patronage.

While Miller toiled as a screenwriter in Hollywood, fortunes faded for the live television drama. Westerns and private-detective series filmed in Hollywood climbed the ratings, and retailers for companies such as Goodyear and Philco began to pressure the corporate headquarters to sponsor programs more cheerful than the bleak dramas that had become Fred Coe's trademark. With ratings slipping, Philco pulled its sponsorship from Television Playhouse in 1955, and Fred Coe eventually left the National Broadcasting Company (NBC) and landed at CBS, where he became one of the producers for Playhouse 90, the last remaining prestige drama on television. It was in this capacity that Coe lured Miller back to television, and the result was "The Days of Wine and Roses," a pinnacle of live television drama and very nearly the swan song for the genre.

With prime-time television utterly dominated by filmed series and the live television drama all but forgotten by 1960, Miller turned to screenwriting once again, writing The Young Savages (1961) for director John Frankenheimer, adapting his own The Days of Wine and Roses (1962), and working with director Fred Zinneman on Behold a Pale Horse (1964). From this Hollywood sojourn, Miller saved enough money to purchase a measure of independence. He married for the third time (to the woman with whom he would live for the rest of his life), bought a farmhouse in New Jersey, and began work on his first novel, The Race for Home (1968), a Depression-era tale that takes place in a thinly disguised version of the Gulf coast town where he was raised. He returned to television in the late 1960s, when CBS asked Fred Coe to resurrect the anthology drama format in CBS Playhouse, an ambitious, short-lived series of plays written for television.
Miller wrote “The People Next Door” as an unacknowledged companion piece to The Days of Wine and Roses. In this version, a suburban couple (Lloyd Bridges and Kim Hunter) struggle to understand their drug-addicted teenage daughter (Deborah Winters). Miller received an Emmy Award for Outstanding Writing Achievement in Drama and later wrote the feature film adaptation.

Throughout the 1970s and 1980s, Miller charted his own course, alternating between writing novels and movies and miniseries for television. As he channeled his energies into fiction (eventually writing three more novels), he stopped writing original material for television and became a specialist in “true-life” movies and miniseries, including an Emmy-nominated script for The Lindbergh Kidnapping Case (1976) and Helter Skelter (1976), an adaptation of Vincent Bugliosi’s book about the Charles Manson case (which was the top-rated miniseries of the season). His final work for television, the Emmy-nominated 1989 miniseries I Know My First Name Is Steven, written with Cynthia Whitcomb, was based on the real-life abduction of a young boy who spent seven years living with his captor before finally escaping and being reunited with his family.

Milton Berle Show, The
U.S. Comedy-Variety Show

During his multifaceted rise as a performer, Milton Berle first appeared on television in a 1929 experimental broadcast in Chicago when he emceed a closed-circuit telecast before 129 people. In the commercial-TV era, he appeared in 1947 on DuMont station WABD (in Wanamaker's New York City department store) as an auctioneer to raise money for the Heart Fund. In the following year, he would come to television in a far more prominent manner and through the new medium rise to the status of a national icon. He would become known as "Mr. Television," the first star the medium could call its own. Skyrocketing to national prominence in the late 1940s, he was also the first TV personality to suffer overexposure and burnout.

Berle began his professional career at age five, working in motion pictures at Biograph Studios in Fort Lee, New Jersey. He appeared as the child on Marie Dressler's lap in Charlie Chaplin's Tillie's Punctured Romance (1914), was tossed from a train by Pearl White in The Perils of Pauline (1914), and appeared in some 50 films with stars such as Douglas Fairbanks, Mabel Normand, and Marion Davies. Berle's first stage role was in 1920, in Shubert's Atlantic City, New Jersey, revival of Floradora, which eventually moved to Broadway. Soon after, a vaudeville sketch with Jack Duffy launched Berle's career as a comedian. Signed as a replacement for Jack Haley at the Palace, Berle was a smash hit and was held over ten weeks. He then headlined in top nightclubs and theaters across the country, returning to Broadway in 1932 to star in Earl Carroll's Vanities, the first of several musical shows in which he appeared.

Berle's reputation for stealing material from other comedians was already part of his persona by this time, engineered in part as a publicity ploy; Walter Winchell labeled him "The Thief of Bad Gags." Berle debuted on radio in 1934, and during the 1940s he hosted several shows, including the comedy-variety

Further Reading
show *Texaco Star Theater*. He remained on radio (including the radio version of *Texaco*) until the 1948–49 season, and he was also very successful as a writer of *Tin Pan Alley* fare. His many songs include “Sam, You Made the Pants Too Long.”

On June 8, 1948, Berle reprised his role from radio, serving as host for the premiere episode of the TV version of *The Texaco Star Theater*. However, the show as yet had no set format and rotated several emcees during the summer of 1948. Originally signed to a four-week contract, Berle was finally named permanent host for the season premiere that fall. He and the show were an immediate smash, with ratings as high as 80 the first season. Ad-libbing at the end of a 1949 episode, Berle called himself “Uncle Miltie,” endearing himself to kids and creating a permanent moniker. The show received a 1949 Emmy for Best Kinescope Show (the Television Academy was then a West Coast entity in the era before coast-to-coast linkup), and Berle won as Most Outstanding Kinescoped Personality. For the next eight years, the nation seemingly shut down on Tuesday evenings during Berle’s time slot. The name of the program changed in 1953 to the *Buick-Berle Show*, becoming known from 1954 as *The Milton Berle Show*.

These shows were pitched at an aggressive, anything-for-a-laugh level, which perfectly suited Berle’s comic style and profile. This approach also tended to make his programs very visual. Slapstick routines, outrageous costumes (Berle often appeared in drag), and various ludicrous skits became trademarks of his television humor. Audiences across the United States wanted to see what Berle would do next, and he quite obviously thrived on this anticipation. From his malaprop greetings (e.g., “Hello, ladies and germs”) to the frenetic, relentless pacing of his jokes and rejoinders and even in his reputation for stealing and recycling material, Berle presented himself as one part buffoon and one part consummate, professional entertainer, a kind of veteran of the Borscht Belt trenches. However, even within his shows’ sanctioned exhibitionism, some of Berle’s behavior could cross the line from affability to effrontery. At its worst, the underlying tone of the Berle programs could appear to be one of contempt should the audience not respond approvingly. In some cases, the program exhibited a surprising degree of self-consciousness about TV itself; *Texaco’s* original commercial spokesman, Sid Stone, would sometimes hawk his products until driven from the stage by a cop. However, the uneven balance of excess and decorum proved wildly successful.

Featuring such broad and noisy comedy but also multiple guest stars and (for the time) lavish variety-show production values, Berle’s shows are credited with spurring the sale of TV sets in the United States, especially to working-class homes. When he first went on the air, less than 500,000 sets had been sold nationwide; when he left *The Milton Berle Show* in 1956, after nearly 500 live shows, that number had increased to nearly 30 million. Berle was signed to an unprecedented $6 million, 30-year exclusive contract with the National Broadcasting Company (NBC) in 1951, guaranteed $200,000 per year in addition to the salaries from his sponsors. Renegotiated in 1966, his annual payments were reduced to $120,000, but Berle could work on other networks.

After his Tuesday night run ended in 1956, Berle hosted three subsequent series and made many appearances on other comedy and variety shows. He received numerous tributes as a television pioneer. In dramatic roles, he received an Emmy nomination for “Doyle Against the House,” an episode of *The Dick Powell Show* (1961), and was notable in his role as a blind survivor of an airplane crash in the first American Broadcasting Company (ABC) movie of the week, *Seven in Darkness* (1969). He guest starred on many television series, including *The Big Valley*, and when he was 87 years old, he was nominated for an Emmy Award for his guest role as a former vaudeville star afflicted with Alzheimer’s disease on the FOX drama *Beverly Hills 90210*. Doyen of the famous comedians’ fraternity, the Friars Club, Berle also sporadically appeared on stage through the 1990s. However, it is the early Berle shows that remain the expression of Mr. Television, the expression of a medium that had not yet set its boundaries in such rigid fashion. In those earlier moments, huge numbers of Americans could settle themselves before the screen, welcome their outrageous “Uncle” into the living room, leave him behind for a week, and know that he would return once again when asked.

Minder

British Crime Comedy/Drama

A long-running and perennially popular comedy-drama series focusing on the exploits of a wheeler-dealer and his long-suffering bodyguard and right-hand man, Minder was the brainchild of veteran TV scriptwriter Leon Griffiths. Griffiths, who had been active in television since the 1950s, also wrote for the cinema, including the screenplays for the hard-hitting crime dramas The Grissom Gang and The Squeeze. It was one of his film scripts, also called Minder, that gave rise to the series. Griffiths’s screenplay was a humorless and tough gangland story that his agent felt would be difficult to sell in Britain, so Griffiths shelved the project.

Later, however, that same agent suggested that two of the characters from the script—a wily, small-time London crook and his uneducated but streetwise “minder” (East London slang for “bodyguard”)—would work well for a television series. Griffiths wrote a treatment for a series featuring the two characters and took the idea to Euston Films (a division of Thames Television), a group he knew was looking for a follow-up to their successful, tough, London-based police series The Sweeney. (“Sweeney” was also London slang, actually cockney rhyming slang, “Sweeney Todd: Flying Squad,” a special quick-response unit of the Metropolitan Police.) At Euston, script consultant Linda Agran and producers Verity Lambert, Lloyd Shirley, and George Taylor quickly decided that the series had all the ingredients they were looking for—and there was a general consensus that Sweeney star Dennis Waterman would be right for the character of the minder, Terry McCann.

Waterman, however, had his reservations and was worried about immediately following The Sweeney with another London-based crime series, but after reading the treatment and the initial scripts, he was persuaded by the difference and the humor of the piece. The true potential of the project was fully realized, however, only with the casting of George Cole as Terry McCann’s employer, Arthur Daley. Cole had been active in film and television for many years and...
in his early days had specialized in playing “spivs” (shady characters specializing in black marketeering and other illegal activities). He had become a respected actor over the years, with a wide repertoire, but the character of Arthur Daley was like one of his earlier spiv incarnations grown up.

Although the production may have initially been perceived as a vehicle for Waterman, the casting of Cole and the rapport between them ensured that the series became more balanced. Cole fitted the roguish persona perfectly, and, as the series progressed, with generous support from Waterman, he turned Arthur Daley into a TV icon.

Originally, the series was to have been located in the East End of London, but it was found to be more convenient to shoot in South London. The location changed, but the patois remained that of the cockney-influenced East End. Arthur was always known as “Arfur” because of the cockney habit of pronouncing “th” as “f,” and much of the flavor of the series came from the colorful slang, some traditional and some invented. Although some cockney rhyming slang was widely known throughout Britain, Minder (along with other shows set in the area, such as the British Broadcasting Corporation’s [BBC’s] Only Fools and Horses) introduced many lesser-known examples to the population as a whole. Soon every Minder aficionado knew that “getting a Ruby down your Gregory” meant going out for an Indian meal (popular 1950s singing star Ruby Murray providing a rhyme for “curry”; “Gregory Peck” rhyming with “neck”) and that “trouble on the dog” meant your spouse was calling (“trouble and strife”: “wife”; “dog and bone”: “phone”). As the series went from strength to strength and the character of Arthur Daley captured the imagination of a generation, East London slang became trendy, and cod cockneys (or mockneys) could be found throughout the country.

The early episodes of Minder have the emphasis firmly on drama, although there is humor in the dialogue and from the character of Arthur Daley, who seems to haunt the fringes of the plot while Terry McCann gets involved at the sharp end. Daley is devious, cowardly, and exploitative, as opposed to McCann’s straightforwardness, courage, and loyalty. Most plots hinge round a problem, created by Daley’s greed, that is solved by McCann. But McCann almost always suffers in some way: losing a girlfriend, being involved in a fight, or not getting paid. Daley usually thrives, managing somehow to emerge from the scrape with body unscathed and bank account intact or, more often than not, somewhat inflated. Brushes with the law are commonplace, as are confrontations with “nastier” villains. The local police are endlessly trying to “feel Arfur’s collar” (arrest him), but Terry is the only one who actually goes to prison.

Later in the show’s run, reacting to the positive feedback from the public, the show shifted slightly but noticeably more toward humor. Scripts tapped the comedic potential of Arthur Daley, and his schemes became wilder and more outrageous, while the regular policemen who dogged him became more caricatured and less threatening. Recurring characters in the series included Patrick Malahide as the long-suffering Detective Sergeant Chisholm and Glynn Edwards as Dave the barman at Arthur’s private drinking club, the Winchester.

Finally, in 1991, Dennis Waterman had had enough of Minder and left to head a new series. He was replaced by Gary Webster as Arthur’s nephew Ray. Ray was a different character from Terry, well educated and well dressed. But he could handle himself well in a fight and was perfectly suited to the role of assistant and bodyguard to his uncle. Initially, he was in awe of Arthur, and Daley took full advantage of this. Soon Ray saw the light and became much more difficult to manipulate. Arthur, however, rose to the challenge and still seemed to get his own way. Webster’s involvement gave the series a new lease of life, and the scripts for his episodes seemed as sharp and as witty as when the program had first begun.

Through the run of the series, jokey episode titles were used, usually a pun on a film or other TV series (“The Beer Hunter,” “On the Autofront,” and “Guess Who’s Coming to Pinner,” an area to the north of London).

Minder was yet another example of a television program bringing forth a character that seemed bigger than the show. The name “Arthur Daley” is used in Britain as an example of a wheeler-dealer in the same way that Archie Bunker’s name came to be synonymous with bigotry in the United States. Daley may be a villain, but he is very much perceived as a hero, someone getting away with foiling the system. In the show’s rare satirical moments, Daley would align himself with Margaret Thatcher, seeing himself as the prime example of the help-yourself society that Thatcher advocated, a man of the 1980s.

Miner, Worthington (1900–1982)
U.S. Producer, Director

Worthington Miner had an outstanding career in both the theater and television; he also worked for a brief period as a producer of feature films. At the age of 39, Miner abandoned his successful career as a theater director to enter the fledgling television industry, becoming general director of television at the Columbia Broadcasting System (CBS) on August 28, 1939. His work in television has been recognized by his contemporaries and followers as crucial in creating the foundations of modern television.

The Federal Communications Commission (FCC) allowed limited commercial-television broadcasting to begin in July 1941 despite the outbreak of war and legal battles over technical issues that had delayed the introduction of television in the United States. For the first ten weeks, Miner produced and directed the entire 15-hour weekly schedule at CBS and eight to ten hours a week thereafter until the war forced live television off the air in late 1942.

It was not until the regular television schedule returned in 1948 that Miner developed his first major success, The Toast of the Town, emceed by Ed Sullivan. This program, later under the title The Ed Sullivan Show, went on to run for 23 seasons. It was followed closely by the much-acclaimed Studio One, which Miner produced and often wrote and directed as well. He also produced The Goldbergs and the award-winning children's program Mr. I. Magination, both well-known examples from the "Golden Age" of television.

It has been said by insiders that the real "Mr. Television" was not Milton Berle (as he was called in the 1950s) but Miner. This judgment stems primarily from Miner's development of the basic techniques used in television. In addition to being a major creative force as a writer, producer, and director, Miner is credited with establishing many crew positions and assigning production responsibilities to those positions, which
are still in use today. Working in an untried medium and drawing on his technical and operational experience in the theater, Miner developed new staging practices and created camera techniques that exploited the limited technical and financial resources available to television during its earliest stages of growth.

In contrast to his famed counterpart, producer Fred Coe at the National Broadcasting Company (NBC), who developed a stable of television writers, Miner concentrated on the technical and aesthetic problems of mounting and broadcasting a production, particularly from a directorial point of view. In the process, he discovered what became known as “Miner's Laws,” which were adopted by directors throughout the television industry. He fostered the directing talents of such luminaries as Franklin Schaffner, George Roy Hill, Sidney Lumet, and Arthur Penn, all of whom went on to fame in television and other media.

In 1952, as a result of a contract dispute, Miner left CBS for NBC. His hopes for achievements there were dashed with the firing of creative head Pat Weaver; Miner languished under NBC’s employ. Despite producing two series, *Medic* and *Frontier*, and a few stunning successes with the drama anthology *Play of the Week* (most notably Eugene O’Neill’s *The Iceman Cometh*), Miner left television in 1959. He was disappointed with the direction the medium had taken.

Miner's achievements in television cannot be overestimated. He did not change the face of television; he created it. No one in his time had an equal grasp of both the creative and the technical dimensions of the television medium. Many, if not all, of his ideas remain in use today, warranting the statement that Miner was a true television pioneer.

**Miniseries**

A miniseries is a narrative drama designed to be broadcast in a limited number of episodes. If the distinction is maintained between “series” (describing a group of self-contained episodes) and “serial” (a group of interconnected episodes), the term “miniseries” is an acknowledged misnomer, for the majority of broadcast material presented in the genre is in fact produced in serial form. There are, of course, exceptions. *Boys from the Blackstuff* (1982), for example, consisted of five narratively independent but interlocking episodes that culminate in a final resolution. The miniseries may also be seen as an extended telefilm divided into
episodes. David Shipman provides a useful analysis of this approach and its central question, “When is a movie not a movie?” in his discussion of *The Far Pavilions*.

Whatever the overall approach, the miniseries, at its best, offers a unique televisual experience, often dealing with harrowing and difficult material structured into an often transformative narrative. The time lapse between episodes allows occasion for the audience to assimilate, discuss, and come to terms with the difficulties of the narrative. The extended narrative time offered by serialization makes possible the in-depth exploration of characters, their motivations and development, and the analysis of situations and events. However, the conclusive narrative resolution of the series also allows for evaluation and reflection.

The actual number of episodes differentiating a miniseries from a “regular” series or serial is a matter of dispute. Leslie Halliwell and Philip Purser argue in *Halliwell’s Television Companion* that miniseries tend to appear in four to six episodes of various lengths. In contrast, Stuart Cunningham defines the miniseries as “a limited-run program of more than two [installments] and less than the thirteen-part season or half-season block associated with serial or series programming.” From a British perspective, the majority of home-produced drama would, in the postdelegation era, now fit into Cunningham’s definition. Very few drama productions, apart from continuous serials (soap operas), extend beyond seven episodes.

The term “miniseries” covers a broad generic range of subjects and styles of narration that seem to differ from one national broadcast culture to another. Australia produces a large number of historical miniseries—for example, *Bodyline* (1984) and *Cowra Breakout* (1985)—that dramatically document aspects of Australian history. The United States has produced both historical miniseries, such as *Holocaust* (1978), and serializations of “blockbuster” novels, such as *The Thorn Birds* (1983). Britain tends toward literary classics (*Pride and Prejudice* [1995]) and serializations of “blockbusters” (*The Dwelling Place* [1994]).

Francis Wheen suggests that the form developed in the United States in response to the success of the imported *The Forsyte Saga* (1967), which was an expensive adaptation of John Galsworthy’s historical epic novel. The success of this serialization demonstrated that finite stories were popular and that they could provide a boost to weekly viewing figures while imparting on the network/channel a reputation for exciting programming. The potential of the miniseries was significantly promoted, Wheen suggests, by *Roots*, which built up an exclusive culture over its eight consecutive nights on the American Broadcasting Company (ABC) in January 1977. Americans who did not watch the program felt excluded from the dominant topic of conversation and from one of the major cultural interventions of the era.

It is significant that miniseries are generally part of late-evening, prime-time viewing, the space made available for the privileged viewing of “irregular” material, whether it be contemporary feature films, miniseries, or other forms. This scheduling is important because the high production costs of miniseries can be recovered only through exposure to the largest, most lucrative, and most attentive audiences and because the material dealt with is often either of difficult and potentially upsetting or of a sexually explicit nature not deemed suitable for children.

Miniseries are usually high capital investment ventures. It is interesting to note here that in the United States, the ABC network’s introduction of the miniseries in 1976 coincided with the arrival of programmer Fred Silverman from the Columbia Broadcasting System (CBS) and was part of his strategy to revive ailing audience figures. Similarly, in the United Kingdom, Granada’s investment in *Prime Suspect* coincided with the franchise bids in British commercial broadcasting.

The miniseries is almost invariably based on the work of an established writer, whether this is a classic literary source (the British Broadcasting Corporation’s [BBC’s] 1995 adaptation of Jane Austen’s *Pride and Prejudice*), a popular blockbuster, (Shirley Conran’s *Lace* [1985]), or the work of a renowned television writer (Lynda La Plante’s *Prime Suspect* [1991]). Institutionally, the author’s name is seen as a valuable investment that is often sought in an attempt to guarantee a prestige audience in the “desirable social categories.” For the audience, the author’s name provides a set of expectations of potential pleasures and an indication of production quality. The writer’s name, then, is an important part of the packaging of the series. Given the condensed period of broadcasting associated with the miniseries format, it is important to attract viewers at the first opportunity, for, unlike a continuous serial or seasonal series, the miniseries cannot accrue an audience over an extended period. Authorial identity thus distinguishes the miniseries from the unattributed flow of soap operas, crime series, and situation comedies.

Charlotte Brunsdon, discussing the literary sources of television fictions, argues that “British culture having a predominantly literary bias, middlebrow literature legitimates the ‘vulgar’ medium of television (whereas high literature might offend as being too good for TV). Adaptations gain prestige for their literariness.” Although one should recognize that producers and broadcasting institutions do intentionally exploit the prestige lent by literary sources, it is diffi-
cult to support the term “middlebrow,” which is central to Brunsdon’s statement, in relation to the miniseries. The authors of miniseries range from the Whitbread Prize winner Jeanette Winterson (Oranges Are Not the Only Fruit, 1990) to Jackie Collins (Hollywood Wives, 1985), neither of which seem to fit the “middlebrow” category.

One clear link between these two adaptations, however, is their implied autobiographical character. Indeed, the representation of actual lives and experiences is central to a range of miniseries. The approach taken may be autobiographical, as in Dennis Potter’s The Singing Detective (1986). It may be biographical, as in Jane Campion’s An Angel at My Table (1991), depicting the early life experiences of Janet Frame, or in Central Television’s Kennedy (1983), focusing on the life and impact of the U.S. president on the 20th anniversary of his death. Or the approach may present dramatizations enacting significant moments in history, as in the Australian miniseries Vietnam (1987), depicting the resettlement of Vietnamese refugees from the Vietnamese and Australian perspectives, or in Alan Bleasdale’s Boys from the Blackstuff (1982), exploring the experience of working-class life in recession-hit Liverpool.

This relation to “real life” seemed to be one of the strengths and appeals of the miniseries until the 1990s, when the format became increasingly used for the crime genre. In Britain, this shift in representation is evident in Prime Suspect. The first miniseries (1991) was written by La Plante and based on the experiences of a senior woman police officer (DCI Jackie Malton of the London Metropolitan Police Force). However, the following Prime Suspect miniseries developed as generic sequels rather than dramatizations of actual events. Subsequently, miniseries have been publicized in terms of the popular actors who play the lead roles, the crimes portrayed, and the originality of the content of their stories. In Deep (BBC, 2002) features undercover police officers played by Nick Berry and Stephen Tomkinson. Outside the Rules focused on the work of a psychiatrist in a high-security hospital, played by Daniela Nardini.

Since 1976, when the U.S. television network ABC broadcast a 12-hour serialized adaptation of Irwin Shaw’s Rich Man, Poor Man, miniseries have constituted some of the most popular programs in television history. ABC’s broadcast of Alex Haley’s Roots drew an audience of 80 million Americans for the final episode. However, miniseries have also provided some of the most derided programming, as evidenced in Richard Corliss’s commentary on Princess Daisy (1983): “Not even trash can guarantee the happy ending, and, alas, it happened to Jane Doe: Princess Daisy proved a small-screen bust.” Conversely, miniseries have often been among the most critically acclaimed of television offerings. The Singing Detective “was inspiring,” according to Joost Hunniger, “because it showed us the dynamic possibilities of television drama.”

Newton Minow is one of the most controversial figures ever to chair the Federal Communications Commission (FCC). Appointed in 1961 by President John F. Kennedy, Minow served only two years, but during that time he stimulated more public debate over television programming than any other chair in the history of the commission.

Trained at Northwestern University Law School, Minow's public career began with his involvement in the administration of Illinois Governor Adlai Stevenson during the 1950s. At a very young age, Minow became a leading figure both on the governor's staff and in his presidential campaigns of 1952 and 1956. Through the latter efforts, Minow became acquainted with members of the Kennedy circle and in 1960 worked for the Kennedy presidential bid, becoming close friends with the president's brother, Robert Kennedy. Reportedly, the two men frequently talked at length about the increasing importance of television in the lives of their children. It therefore came as little surprise that after the election, Minow eagerly pursued the position of FCC chair. Some observers nevertheless considered the appointment unusual, given his lack of experience with the media industry and with communication law.

Appointed chair at the age of 34, Minow lost little time mapping out his agenda for television reform. In his first public speech at a national convention of broadcasting executives, Minow challenged industry leaders to "sit down in front of your television set when your station goes on the air and stay there without a book, magazine, newspaper, profit-and-loss sheet, or rating book to distract you—and keep your eyes glued to that set until the station signs off. I can assure you that you will observe a vast wasteland." Sharply critical of excessive violence, frivolity, and commercialism, Minow's remarks sparked a national debate over the future of television. Although similar criticisms about television and popular culture had circulated widely during the late 1950s, Minow became the first chair of the FCC to specifically challenge the content of television programming and to urge significant reform. His characterization of the medium as a "vast wasteland" quickly became ubiquitous, especially in newsprint headlines and cartoons. During his two years in office, it was estimated that, other than the president, Minow generated more column inches of news coverage than any other federal official.

In part, Minow's criticisms of television were linked to broader anxieties about consumerism, child rearing, and suburban living. Many social critics during this period worried that middle-class Americans had "gone soft" and lost their connection to public life. In an inaugural address that focused exclusively on foreign policy, President Kennedy implored Americans to revive their commitment to the urgent struggle for freedom around the globe. Shortly thereafter, Minow framed his critique of television along similar lines, arguing that the medium had become a form of escapism...
that threatened the nation's ability to meet the challenge of global Communism. Moreover, he worried about the increasing export of Hollywood programming overseas and the impact it would have on perceptions of the United States among citizens of other countries. In the months following the speech, Minow advocated the diversification of programming with particular emphasis on educational and informational fare. Confronted by powerful opposition among industry executives, he nevertheless continued to chide network programmers in speeches, interviews, and public appearances.

Although the Minow FCC never drafted specific programming guidelines, some argued that Minow employed a form of "regulation by raised eyebrow" that helped stimulate the production of programs favored by the FCC. Indeed, during the early 1960s, network news grew from adolescence to maturity, and many credit Minow for helping foster its growth. He especially was seen as a champion network documentary, a genre of programming that placed particular emphasis on educating the public about cold war issues. Many critics nevertheless contend that, beyond news, little changed in prime-time television during the Minow years, and some have suggested that, overall, the Minow FCC enjoyed few tangible policy accomplishments.

While that may have been true in the short run, the FCC chair played a leading role in the passage of two pieces of legislation that would have important long-term effects. The first was the All Channel Receiver Act of 1962, which required that all television sets sold in the United States be capable of picking up UHF (ultrahigh frequency) stations in addition to the VHF (very high frequency) stations that then dominated the medium. By the end of the 1960s, this law significantly increased the number of television stations and allowed the American Broadcasting Company (ABC) network to achieve national coverage, making it truly competitive with the National Broadcasting Company (NBC) and the Columbia Broadcasting System (CBS).

Second, Minow crafted the passage of legislation that ushered in the era of satellite communications. Under his leadership, various factions within the electronics and communications industries agreed to a pie-sharing arrangement that resulted in the organization of the Communications Satellite Corporation (Comsat) and ultimately the International Telecommunications Satellite Consortium (INTELSAT). Created with an eye toward attaining a strategic advantage over the Soviet Union, these U.S.-controlled organizations dominated the arena of satellite communications throughout the 1960s and much of the 1970s.

Shortly after the passage of these key pieces of legislation, Minow resigned from the FCC and returned to a lucrative private law practice, later becoming a partner in one of the most powerful communications law firms in the United States, Sidley and Austin. He remains an influential figure both in the media industry and in policy circles, and in 2001 he helped launch a campaign to get the federal government to fund the digitization of collections possessed by public and nonprofit institutions, making those resources available for free to the public via the Internet.

**Mirren, Helen (1945– )**

**British Actor**

Helen Mirren is probably best known to American television audiences as Detective Chief Inspector Jane Tennison, the complicated and obsessive homicide and vice detective of *Prime Suspect*. However, Mirren, who began her acting career playing Cleopatra and Lady Macbeth in Royal Shakespeare Company productions of the 1960s and 1970s, has appeared in more than 30 productions for British, Australian, and American television. These have included film or taped versions of Royal Shakespeare productions, original television plays, and dramatic adaptations of literary classics (e.g., the British Broadcasting Corporation’s [BBC’s] serialization of Balzac’s *Cousin Bette*, which eventually appeared in the United States on the Public Broadcasting Service’s [PBS’s] *Masterpiece Theater* produced by Granada, Thames, and other companies for the BBC, ITV, and Channel 4 in Britain and such American television series as *Twilight Zone* (the 1980s version) and *The Hidden Room* (Lifetime cable production).

The stage training that Mirren received in her teens and 20s encouraged her to embrace diverse roles and risky projects on stage, television, and screen (including a couple of notorious X-rated European art films).

As with many such classically trained British actors, her breathtaking acting range and frequent appearances in every dramatic media made stardom elusive. *Prime Suspect*, first aired on British television in 1991, finally made this 25-year acting veteran an important international star. When it was broadcast on the American PBS series *Mystery!* in 1992, it became that show’s highest-rated program, won an Emmy, and made Mirren, according to some television journalists and executives, PBS’s “pin-up woman” of the decade. Four *Prime Suspect* series have followed.

Critical consensus attributes the success of the television series to the collaboration of Mirren and writer Lynda La Plante, who created Jane Tennison as a composite of several female police detectives she interviewed. La Plante did not want to compromise their integrity by making Tennison’s character too “soft,” so she considered casting critical to the success of her vision of the character and these professional women. La Plante found that Mirren had the kind of presence and “great weight” the writer believed crucial to the character: “[Mirren’s] not physically heavy, but she has a strength inside her that is unusual…. There’s a stillness to her, a great tension and intelligence in her face.”

---

How Vast the Wasteland Now, 1991

*Abandoned in the Wasteland: Children, Television, and the First Amendment*, with Craig L. LaMay, 1995

Further Reading

Mirren has claimed that she likes Tennison because she is "unlikable." The complexity of Mirren’s performance resides in how she conveys this unlikability while still making us sympathetic to Tennison’s ideals and vulnerability. The character is clearly discriminated against because of her gender, and she knows it, but her own behavior, especially in personal relationships, is not beyond reproach. The tension that La Plante admires in Mirren’s face also permeates the stiff posture Mirren adopts for the character, the quick pace of her walk, the intense drags she takes on a cigarette, and the determination of her gum chewing. Tennison, that unlikable yet sympathetic character, is given life in Mirren’s world-weary eyes, which do not betray emotion to her colleagues, except when she lashes out in often justifiable anger. In private, however, the eyes express the losses suffered by a successful woman in a masculine public sphere.

Throughout the 1990s, Mirren continued to play strong, even eccentric characters on British and American television. Losing Chase (1996) is the story of a woman whose nervous breakdown becomes a way to opt out of a life as wife and mother. She learns to respond to others again when she falls in love with another woman. In the British miniseries The Painted Lady (later aired in the United States on PBS’s Masterpiece Theater), Mirren played a faded rock star turned sleuth. The decade ended with her Emmy Award–winning performance as cult novelist and radical individualist Ayn Rand in Showtime’s Passion of Ayn Rand (1999). Yet Mirren continues to be identified with Jane Tennison of Prime Suspect. For a time, Universal was working with Britain’s Granada Productions on a theatrical feature, but Paramount had rights to the property in 1999, when it allowed them to lapse back to

author Lynda La Plante. Mirren had responded strongly to rumors that she was not being considered for the film role because she was “too old” to attract a wide audience (Meryl Streep allegedly refused the role because Mirren was so closely associated with it), but it is unclear to what extent the casting controversy had to do with the feature film industry’s decision to withdraw from the project. This much is clear: although American and British television made strides in the 1980s and 1990s in depicting strong, complex women in law enforcement, for many viewers and critics Mirren’s performance finally enabled “a real contemporary woman [to break] through the skin of television’s complacency.”

Miss Marple
British Mystery Program

Miss Marple, the spinster detective who is one of the most famous characters created by English crime writer Agatha Christie, has been portrayed by a number of actresses in films and on television. In the cinema, Margaret Rutherford portrayed a rumbustious Miss Marple in the 1960s, and Angela Lansbury contributed a performance in The Mirror Crack'd before moving on to a similar role in the U.S. television series Murder, She Wrote. In Britain, however, certainly the most famous Miss Marple has been Joan Hickson, who starred in a dozen television mysteries over the course of a decade.

Between 1984 ("The Body in the Library") and 1992 ("The Mirror Crack'd"), the British Broadcasting Corporation (BBC), in association with the U.S. A&E network and Australia's Seven network, produced an irregular series of 12 Miss Marple mysteries. The elderly, deceptively delicate Joan Hickson starred in each of these as the amateur detective from the bucolic village of St. Mary Mead.

By conventional critical judgment, Agatha Christie's stories are often flawed. The plots can hinge on contrived and dated gimmicks: in "A Murder Is Announced," it is supposedly a shock that a character called Pip, for whom everyone is searching, is a woman, Philippa. The stories often end with an abruptly descending deus ex machina, as the heroine makes huge intuitive leaps, based on no clues ("4:50 from Paddington") or on clues that only she knows and that have been kept from the audience (the characters' marriages in "The Body in the Library"). Despite this, the television programs have attractive
elements that kept them popular over the years of their production.

The BBC's Miss Marple is a good example of a “heritage” production, with all the pleasures that implies. The term “heritage television” sums up a certain attitude toward the past that developed in Britain during the 1980s, when a mixture of a new Victorianism in moral standards and an increasingly frenetic late-capitalistic commodification led to two tendencies. The first was an attraction to a particularly sanitized version of England's past. The second capitalized on the first with various moves toward rendering that past easily consumable—in television programs, films, bedsheets, jams and preserves, and so on. The BBC's Miss Marple stories are prime examples of “heritage” production. They are set mostly in a rural past. English architecture is featured, and country mansion houses proliferate. As is typical for BBC programs, the “production values” are impeccable, and the programs look beautiful—costumes, houses and decor, cars, hairstyles, and makeup could all be described as “sumptuous.”

As a celebration of English culture, “heritage” also demands that the program be as faithful as possible to their source material. Thus, the BBC’s Miss Marple does not chase the villains herself as Margaret Rutherford does in her films, nor are the titles of the books altered to make them more sensational, as has occurred in other productions (the novel After the Funeral had been made into the 1963 film Murder at the Gallop, for example).

Another “heritage” aspect of the program is the morality that structures and underlies the mysteries. Miss Marple is the model of decorum, not only just and good but also polite and correct. And although Miss Marple herself claims that “in English villages... You turn over a stone, you have no idea what will crawl out,” there is in fact very little of a sordid underside in these narratives. There may be murders, but the motives are rarely squalid: mostly greed, sometimes true love. There are dance hostesses but no prostitutes; there is blackmail, but it is never about anything really shameful. Indeed, these murders are themselves peculiarly decorous, always meticulously planned, and rarely messy.

In addition to these “heritage” aspects, Hickson’s performance is another of the particularly attractive aspects of the series. Her frail physical appearance contrasts both with her intensely blue eyes and with the way she dominates the scenes in which she appears. Her apparent scattiness, staring absentmindedly over people’s shoulders as they talk to her, is delightful. It is believable both that people would ignore her, thinking her to be just “a little old lady,” and simultaneously that she is very much in control of the situation.

Miss Marple offers a female-oriented version of detective mythology. Not only does the program present a range of roles for older women (unusual enough in television drama), but it also celebrates a nontraditional approach to investigation. In several of the stories, the traditional strong-arm techniques of police investigation advance the plot only very slightly. Miss Marple takes over; her investigative methods involve no violence, threats, or intimidation. Rather, gossip forms the most powerful of her tools. The very term “gossip” is a way of denigrating forms of speech that have typically been taken up by women. In these stories, gossip moves the narrative forward. In “4:50 from Paddington,” for example, Miss Marple knows that the family needs a housekeeper; she says, “They’re always needing a housekeeper. The father is particularly difficult to get on with.” This enables Miss Marple to send her own agent into the household. It is gossip that unfailingly allows her to solve the mysteries. The character’s standard technique is to equate the circumstances of the mystery with repre-
sentative archetypes she has encountered in the course of her village life. Such a comparison of types provides her with an infallible guide to people’s characters, actions, and intentions.

In another departure from more typical detective narratives, at the denouements, Miss Marple is never involved in any physical chase or fight. Although she solves the mystery (through observation, a few polite questions, and a bit of knitting), Miss Marple has very little physical impact on the progress of the narrative. She is often peripheral rather than central. In some stories, female aides act as her physical stand-ins: but at the denouement of the stories, when television narrative convention demands some crisis and excitement, Miss Marple herself is little involved. Although she may engineer a denouement, as in “4:50 from Paddington,” she is not involved in the chase that follows. Rather, it is policemen and good male characters who become involved in car chases and leap through glass windows.

The particular pleasures of this very British television production ensures its appeal even when new programs are no longer being produced, and its wide circulation, through syndication on several continents, attests to its continuing popularity.

Mission: Impossible
U.S. Espionage/Adventure Series

Bob Johnson’s taped words commissioning the Impossible Mission Force (IMF) with another assignment became synonymous with the techno-sophistry of Mission: Impossible, “This tape will self-destruct in five seconds.” They were as often cited as the title itself and the opening visual and aural motifs: a match striking into flame and Lalo Schifrin’s dynamic theme music.

The program ran for 168 episodes between 1966 and 1973 on the Columbia Broadcasting System (CBS), returning for another 35 episodes on the American Broadcasting Company (ABC) between 1988 and 1990 (shot in Australia for financial and location reasons). Movie versions starring Tom Cruise were released in 1996 and 2000. The original executive producer for the TV series, Bruce Geller, wanted to deploy “the Everyman-superman” in a “homage to team work and good old Yankee ingenuity.” The leader of the force was expected to choose a team to deal with each given task, usually comprised of a technical expert, a strongman, a female model, and a man of disguise. Major actors at different moments in the series included Peter Graves (head of the IMF after the first season and through the revived series), Barbara Bain (model), Greg Morris (technical expert), Peter Lupus (muscle bound), and Martin Landau (disguise artist).
By the time the program first began, TV producers were under intense pressure to include black characters in positive roles. *Mission* was held up in the *TV Guide* of the 1960s as a paragon of virtue for its representation of African Americans, with the character of Barney Collier hailed as one of television’s “New Negro figures.” However, *Mission: Impossible* did not avoid criticism for making its token African American a “backdoor” technical expert, one-dimensional and emotionless.

The instructions to writers of the first series read:

The tape message contains the problem. An enemy or criminal plot is in existence; the IMF must counter it. The situation must be of enough importance and difficulty that only the IMF could do it. The villains (as here and later portrayed) are so black, and so clever that the intricate means used to defeat them are necessary. Very commonly, but not inevitably, the mission is to retrieve a valuable item or man, and/or to discredit (eliminate) the villain or villains... avoid names of actual countries as well as mythical Balkan kingdoms by being vague. This is not a concern at early stages of writing; use real names if it’s easier.

The force would accept its assignment and devise a means to carry out the task in an extremely complex way. Some aspect of the plan would go awry, but the team would improvise and survive.

The IMF was a U.S. espionage group, private sector but public spirited, that “assisted” Third World countries, opposed domestic organized crime, and acted as a spy for the government. Because its enemies were great and powerful, the force required intricacy and secrecy (“covertness”). At the very time that the famous words were being intoned in each disembodied, taped assignment (“Should you... be caught or killed, the secretary will disavow any knowledge of your actions”), real-life U.S. Assistant Secretary of Defense Arthur Sylvester was supporting covert operations. The program’s considerable overseas sales (69 countries and 15 dubbed versions by its third season) were said to have given many viewers around the world an exaggerated impression of the abilities of the Central Intelligence Agency (CIA).

David Buxton describes *Mission* as an exemplar of the 1960s British/American “pop series.” These paens to the fun of the commodity—to the modernity of design, fashion, and knowingsness—leavened the performance of quite serious service to the nation. They had an ideological minimalism, open to a range of interpretations anchored only in the need to preserve everyday “Americanness,” in the most general sense of the term. The opening tape’s “promise” of official disavowal in the event of failure established entrepreneurial initiative as a basis for action and gave an alibi for minimizing additional references to politics. Instead, episodes could be devoted to a scientifically managed, technical private sphere. The IMF represented an efficient allocation of resources because of its anonymously weightless and depersonalized division of labor and an effective tool of covert activity as a consequence of its distance from the official civilities of diplomacy. This effect was achieved stylistically through a visual quality normally associated with the cinema: numerous changes in diegetic space, lighting that could either trope film noir or action-adventure, rapid cutting, and few lengthy reaction shots.

The first *Mission* was valorized by many critics for its plots. It was unusual for American television drama to have episodes with overlapping and complex storylines at the expense of characterization. Following each program’s twists became a talisman for the cognoscenti. The inversion of heroism, whereby treachery, theft, kidnapping, and destruction were qualities of “good” characters, made the series seem both intellectually and politically subversive. Once
new people were introduced in a segment, they immediately underwent bewildering transformations that problematized previous information about their psyches, politics, and conduct. Geller's fantasy was that performers be just that: figures performing humanness, infinitely plastic, and ready to be redispersed in a moment. The series lasted much longer than its many spy-theme counterparts on network television through the 1960s, perhaps as a consequence of this decentralized, subjectless approach.

Each episode of the original Mission cost $225,000, for which CBS paid $170,000. Geller was shooting nearly 50,000 feet of film per screen hour, more than twice the average, and spent 30 percent longer than the norm doing so. Special-effects and writing costs also went far beyond studio policy, in part to make for the feature film look that was a key factor in the program's success. Geller instilled a knowing self-reflexivity into the series. He became renowned for the remark that "nothing is new except in how it's done."

A 150-day strike in 1988 by members of the Writers Guild of America over creative and residual rights payments cast Hollywood's attention toward remakes and toward Australia, where the $5,000 (Australian) cost of a TV script compared favorably to the U.S. figure of $21,000 (Australian). Paramount decided to proceed with plans to bring back Mission, a reprise that it had attempted intermittently over almost a decade. Four old scripts were recycled, and new ones were written after the industrial action had concluded. Mission offered a built-in "baby-boomer" audience and the opportunity to avoid California unions. This attitude produced a very formulaic remake.

Consider the IMF's efforts to smuggle dissidents out of Eastern Europe ("The Wall"). Posing as a Texan impresario keen to hire a chess player and a magician, Graves is accused by a KGB officer of making "capitalist offers." He replies good naturedly that, "business is business the world over." And so it is, when his team is able to grant U.S. citizenship as it pleases while supposedly remaining independent of affiliation to any particular state. The IMF (ironically sharing an acronym with a key tool of First World economic power, the International Monetary Fund) establishes a sphere of the "other" that is harsh and repressive compared to the IMF's own goodness and light. These spheres represent state socialism and capitalism, respectively, as captured by a close-up of the East German Colonel Barty's highly polished boot grinding a little girl's lost doll into the mud as he arrests her defecting family. The shooting script calls for Graves to have a "broad American smile" to contrast him with a "slow, unfriendly" East German. The cut from unpleasantness at the Berlin Wall to Jim playing golf fully achieves the establishment of a lifestyle and polity distinctiveness, illustrating the IMF's efforts to assist elements "behind the Wall" that favor a new political and economic openness. In his remark to a ravaged Ilse Bruck in act 3, Graves's patriarchal condescension is as much geopolitical as gendered: "You're a very brave girl, Ilse. But we're still in East Berlin and you'll have to call on all your reserves to help us get back to the West." Indeed she would.

Monkees, The

U.S. Musical Situation Comedy

The Monkees, a situation comedy about a struggling rock-and-roll band of the same name, originally aired on the National Broadcasting Company (NBC) from 1966 to 1968. During its 58-episode run, the program was awarded an Emmy for Outstanding Comedy Program in 1967. The show’s popularity has continued, with reruns being broadcast on the Columbia Broadcasting System (CBS) from 1969 to 1973 and on Music Television (MTV), Nick at Nite, and other cable and syndicated venues since the 1980s.

Inspired by the success of the two Beatles films directed by Richard Lester, the show was aimed at 1960s American youth culture. Considerable controversy surrounded the show because the band, four young

The actors did not play their own musical instruments—on the recordings or in the series. The controversy rising from this "revelation" was further exacerbated when the actors embarked on a concert tour. Despite these issues, the Monkees became teen idols, sold millions of records, and were heavily merchandised.

The show was innovative in both form and content, violating the conventions of realist television. Episodes were characterized by self-reflexive techniques such as distorted focus, direct address of the camera, the incorporation of outtakes and screen tests, fast and slow-motion effects, and continuity errors. In all, however, the television version of "psychedelic" cinema was tamed for the domestic medium, and the boys generally engaged in wholesome, if quirky, fun.

"Monkee Mania" experienced a renewal in the 1980s, when the program was rerun on MTV. The popularity of the show with contemporary youth audiences has led to reissue of recordings; fan conventions, magazines, and websites; and several concert tours by three of the original members (Dolenz, Jones, and Tork).

Monkhouse, Bob (1928–2003)

British Comedian

Bob Monkhouse was one of British television's most prolific performers, indelibly etched on the minds of the public as the smooth, wise-cracking host of countless game shows. Initially a stand-up comic, Monkhouse's early years were spent writing gags for himself and other performers. He made a number of guest appearances on TV shows before he and then writing partner Denis Goodwin finally landed their own television series in 1953 with Fast and Loose, a comedy sketch show. With the arrival of Britain's commercial channel in 1955, Monkhouse was able to diversify. He and coproducer Jonathan Routh fooled members of the public with various scams in the British version of Candid Camera.

Always a fan of the great silent comedians, Monkhouse paid tribute to some of the men who had inspired him in 1966 with Mad Movies. He also continued a punishing schedule of nightclub appearances, before becoming a host of ATV's Sunday night variety show, The London Palladium Show, in 1967.

However, it was not until late 1967 that Monkhouse became associated with ATV's The Golden Shot, the series that made him a truly household name. Initially presented by Canadian Jackie Rae, this game show featured members of the audience who, to win prizes, guided, via the telephone, a blindfolded marksman to fire a crossbow into a target. In later stages of the game, the audience members were firing the crossbows themselves. From the start, Monkhouse was determined that he should be the presenter, and he even went to the expense of having a telerecording made of the episode in which he made a guest appearance so that Lew Grade, head of ATV, could see how Monkhouse could rescue what was then a fading show. Monkhouse also instigated the show's catchphrase, used when asking the studio hand to load the bolt: "Bernie, the bolt."

Monkhouse did indeed rescue the program, not only enlivening it with his wise-cracking comedy but also changing the format, simplifying it, and making it more visually appealing and exciting. Thus began a career as a host of game and quiz shows. In 1975 ATV adapted the American program Hollywood Squares, which was hosted by Monkhouse as Celebrity Squares. Once again, he was the fast-talking, ad-libbing host par excellence. He hosted numerous game shows, including Family Fortunes, $64,000 Question, Bob's Full House, Bob Says Opportunity Knocks, and Wipe Out. However, while thoroughly professional and able to put contestants at their ease, Monkhouse had a reputation for being smarmy and often played on this aspect of his persona.

In 1993 Monkhouse diversified into straight drama with a role in Yorkshire Television's All or Nothing at All, which also starred comedian Hugh Laurie. It was a proficient performance. In 2000 he lent his voice to the lead character in the animated series Aaagh! It's the Mr. Hell Show. A darkly comic cartoon, this program...
Monkhouse, Bob

has aired in the United States and Canada as well as in the United Kingdom.

Throughout his television career, Monkhouse continued his stand-up comedy act in nightclubs across England, and in recent years he had something of a renaissance and made a comeback as a TV comic, having been "rediscovered" by a younger generation of comics along with the likes of Ken Dodd and the late Frankie Howerd. He is probably deserving of "cult" status. The culmination of his return to comic form was the 1995–96 series Bob Monkhouse on the Spot, scheduled late Saturday evening on the mainstream British Broadcasting Corporation network BBC 1 and billed as a version of his cabaret act. This was a raunchier and racier Monkhouse than the TV public was used to seeing, and because the programs were recorded close to transmission, they were filled with topical gags.

Monkhouse's television career spanned half a century, and he generally received top billing in his TV ventures. Monkhouse passed away on December 29, 2003.

Monty Python’s Flying Circus

British Sketch Comedy/Farce/Parody/Satire Series

*Monty Python’s Flying Circus* first appeared on the British Broadcasting Corporation’s BBC 1 on October 5, 1969. It was a new type of program for the national channel, and its appearance at the end of the decade seemed fitting. The show was created by six young men (Graham Chapman, John Cleese, Terry Gilliam, Eric Idle, Terry Jones, and Michael Palin) whose ideas of comedy and television were clearly nontraditional. *Monty Python’s* style—free form, nonlinear, deeply sarcastic, satirical, and anarchic—seemed somehow to reflect the times. It mocked all conventions that proceeded it, particularly the conventions of television.

The last episode aired on the BBC on December 5, 1974, after the production of 45 installments. The first 39 were titled *Monty Python’s Flying Circus*. The final six episodes, all created without Cleese, who had tired of the show, were called *Monty Python*. In addition, the team produced two shows for German television, each running 50 minutes. The second of these two shows, which consisted mostly of new material, was shown in England on BBC 2 in 1973. The Pythons expanded into other media as the result of their TV success. They created four Python movies (*And Now for Something Completely Different*, *Monty Python and the Holy Grail*, *Monty Python’s Life of Brian*, and *Monty Python’s Meaning of Life*), several audio recordings, and several books relating to the programs and films. In England and North America, the group also performed several live stage shows comprised of various sketches and songs from the television program.

Of the cast, all but Gilliam were Englishmen who developed their interest in comedy while students at university (Palin and Jones at Oxford; Chapman, Cleese, and Idle at Cambridge). Gilliam was an American from California via Minnesota. Although he did appear on camera occasionally, Gilliam’s primary contribution to the TV shows was his eclectic animation, which usually served, in various ways, to link the sketches.

Each of the British members of the troupe had previous television and stage experience as writers and performers. Their pre-Python credits included the satirical *That Was the Week That Was*, *The Frost Report* (with David Frost, a regular target of the group’s arrows), *Do Not Adjust Your Set*, and *The Complete and Utter History of Britain*. The cross-pollination of talent during these years eventually brought the future Pythons together. They approached the BBC with a program idea, and it was accepted, not without some trepidation by the network. When Gilliam was brought into the group to provide animation, Monty Python was formed.

The programs reflect the influence of several British radio programs from the 1950s—most notably *The Goon Show*, which featured, among others, Peter Sellers. The energy and disregard for rules that hallmark *The Goon Show* are clearly evident in the *Python* TV show. In turn, *Monty Python’s Flying Circus* has exercised its own influence on such television programs as *Saturday Night Live*, *CCTV: Kids in the Hall*, and *The Young Ones*. The essential disrespect for authority that links each of these programs can ultimately be traced through the Pythons back to *The Goon Show*.

The content of *Monty Python’s Flying Circus* was designed to be disconcerting to viewers who expected to see typical television fare. This was obvious from the very first episode. The opening “discussion” featured a farmer who believes his sheep are birds and that they nest in trees. This bit was followed by a conversation between two Frenchmen who consider the commercial potential of flying sheep. Just as viewers thought they were beginning to understand the flow of the show, it cut to a shot of a man behind a news desk announcing, “And now for something completely different,” and the scene shifted to a totally unrelated topic. The thread might return to a previous sketch, but more often there was no closure, only more fragmented scenes. Interspersed throughout were Gilliam’s animations, often stop-action collages in which skulls opened to reveal dancing women or various body parts were severed. The macabre and disorienting were basic elements of the show.

Opening title sequences were not always found at the beginning of the program, frequently appearing instead midway through the show or even later. In one installment, there were no opening titles. Another element of the opening sequence was the “It’s” man, a scruffy old sort who would be seen running, eventually reaching the camera. As he breathlessly croaks, “It’s...,” the scene would shift dramatically. The theme music (Sousa’s “Liberty Bell March”) was chosen because, among other reasons, it was free from copyright fees.
Several of the sketches from the series became favorites of fans but not necessarily of the performers. "The Ministry of Silly Walks" virtually became Cleese's signature, much to his displeasure, and "The Dead Parrot Sketch" had to be repeated any time Cleese and Palin appeared together. The group's portrayal of middle-aged women (known as Pepperpots among the group) was a popular recurring theme as well. "Mr. Nudge," "The Spanish Inquisition," "The Upper-Class Twit of the Year," "The Lumberjack Song," and "Scott of the Antarctic" are among the bits that have remained fan favorites.

Monty Python's Flying Circus began appearing in the United States on Public Broadcasting Service (PBS) stations in 1974. Its popularity grew, and it quickly became a cult favorite. Several commercial stations, having noticed it on the public stations, also began to air the program. The American Broadcasting Company (ABC) purchased the rights to the six-episode fourth year of Monty Python, but when the show was aired, the episodes had been censored and edited to fit the restrictions of American commercial TV. The group went to court to prevent further cuts, but ABC was able to air the second show with only a minor disclaimer. As a result of the case, the Pythons gained ownership of the copyright outside Great Britain.

Individual members of the group have gone on to acclaim in film and television. As writers, producers, directors, and performers, all carry with them residual elements of Monty Python. Graham Chapman died in 1989.

Moonlighting

U.S. Detective Comedy/Drama

Moonlighting, an hour-long episodic series that aired on the American Broadcasting Company (ABC) from 1985 to 1989, signaled the emergence of "dramedy" as a television genre. After the series finished its first season in a ratings tie for 20th place, it rose to 9th place in 1986–87 and tied for 12th place the following season (in which only 14 new episodes were made). The innovative qualities of the program were noted by its nomination, for the first time in the 50-year history of the Directors Guild of America, for both Best Drama and Best Comedy.

Produced by Glen Gordon Caron, Moonlighting featured high-fashion model Maddie Hayes (played by real-life former high-fashion model Cybill Shepherd) and fast-talking private eye David Addison (played by then-unknown Bruce Willis). The series' story began after Maddie's business manager embezzled most of her fortune, leaving her with her house and the Blue Moon Detective Agency, designed by the wily accountant as nothing more than a tax write-off and consisting of detective David Addison and secretary Agnes Dipesto (played by Allyce Beasley). The romantic tension between David, a smart, slovenly, party animal and womanizer, and the beautiful, haute couture-attired, snobbish Maddie lasted for two seasons. After this point, complications on and off the set led to a plotline in which Maddie juggled relationships with David and another suitor, briefly married a third man, had the marriage annulled, and suffered a miscarriage.

The series' importance lies not so much in its convoluted plots as in its unique and sustained fusion of elements characteristically associated with two distinct genres into the emergent genre of dramedy. On the one hand, Moonlighting clearly exhibits the semantic features of television drama: serious subject matter dealing with incidents of sufficient magnitude that it arouses pity and fear; rounded, complex central characters who are neither thoroughly admirable nor despicable; textured lighting—both the hard "tele-noir" and diffused lighting accompanied by soft camera focus; multiple exterior and interior settings; and single-camera shooting on film. On the other hand, the series combines the "serious" elements with the syntactic features of television comedy. These comedic features include a four-part narrative structure (consisting of the situation, complication, confusion, and resolution); the metatextual practices of verbal self-reflexivity, musical self-reflexivity, and intertextuality; repetition

Moonlighting

(i.e., the doubling, tripling, and compounding of the same action or incident until the repetition itself becomes humorous); witty repartee; hyperbolic coincidence; and a governing benevolent moral principle within which the violent, confused, often ironic dramas of good and evil and seriousness and silliness were played out.

A full appreciation of the sophistication of Moonlighting involves a level of cultural literacy (both popular and classic) rarely required by prime-time television series, which was one reason the series drew accolades from critics early on. Titles of Moonlighting episodes intertextually referenced the narrative premises as well as titles, authors, and even visual techniques of films, novels, dramas, poems, and plays from the 16th century through the present (e.g., "It's a Wonderful Job," "The Dream Sequence Always Rings Twice," "Atlas Belched," "Brother, Can You Spare a Blonde," "Twas the Episode Before Christmas," and "The Lady in the Iron Mask"). Another episode titled "Atomic Shakespeare" provided a feminist version of "The Taming of the Shrew," performed, except for the bookend scenes, entirely in iambic pentameter. Additionally, in many episodes, protagonists Maddie and David break the theatrical "fourth wall" convention with self-reflexive references to themselves as actors in a television program or to the commercial nature of the television medium. Such metatextual practices are techniques of defamiliarization that, according to certain formalist critical theories, epitomize the experience and purpose of art; they jar viewers out of the complacent, narcotic-like pleasure of familiar forms and invite them to question and appreciate the artistic possibilities and limitations of generic forms. Moonlighting's use of these metatextual practices signifies its recognition of the traditions that have shaped it as well as its self-conscious comments on its departure from those traditions; thus, the series displays characteristics typically attributed to works regarded as highly artistic.

The series' artistry in fusing the genre features of drama and comedy in such a way that it was both popular and critically acclaimed paved the way for such other innovative "dramedic" ventures as Frank's Place, Northern Exposure, Sports Night, and Ally McBeal. Moonlighting also led a number of critics to declare that, with Moonlighting, American television had finally come of age as an art form.

Moonves, Leslie R. (1949– )
U.S. Media Executive, President and CEO of CBS Television

Leslie R. Moonves, as president and chief executive officer of Viacom’s CBS entertainment division, changed programming for U.S. network television during the 1990s. Moonves found that alternative television shows, when mixed into a traditional schedule of situation comedies and dramas, could succeed against the emergence of burgeoning competing media.

Moonves has made a career of creating successful programming for broadcast television. Often, network executives in the 1990s ascended to their leadership positions after climbing a ladder of successive jobs inside one company. For many of Moonves’s contemporaries, such as Robert Iger of the American Broadcasting Company (ABC), the path to upper management included earlier jobs at one network in program development, show scheduling, daytime programming, or production administration. Moonves, however, worked at studios that produced series for network airing. The Columbia Broadcasting System (CBS) recruited him to become its entertainment president when Moonves presided over Warner Brothers television division. At the time, Warner Brothers was a chief supplier for ABC, CBS, and the National Broadcasting Company (NBC), with more than 20 programs on prime-time schedules.

Moonves began his tenure at CBS at a time when new media technologies had caused the erosion of broadcasters’ audience shares. After Congress passed the Cable Communications Act of 1984 and videocassette recorders became standard household appliances, marketplace competition forced television programmers to accept smaller audiences. To lead CBS, Moonves had to create a new identity, find a younger audience, and yet still entertain a mass audience that would seek out CBS for news, sports, entertainment, and children’s programming.

Moonves’s reinvention of CBS blended unscripted reality programs such as Survivor and The Amazing Race into a nightly prime-time lineup dominated by stalwarts such as Everybody Loves Raymond, Touched by an Angel, and 60 Minutes. This mix has kept CBS ahead in the ratings race in the face of challenges by ABC’s fad game show Who Wants to Be a Millionaire, FOX’s younger focus, and NBC’s aging lineup of quality programming. Where other broadcast programmers attempted to deal with lost audiences and advertising dollars by finding fast fixes or by staying loyal to old programming concepts, Moonves succeeded by trailblazing with new show concepts, pretesting most show episodes with audience focus groups before those episodes aired, and closely managing staff, including personally evaluating contestants before casting completed for CBS’s unscripted adventure programs.

Moonves had initially chosen acting as a career path. He attended Bucknell University. As a senior, he became interested in acting. In 1971, after graduating with a degree in Spanish, he moved to New York City and studied with Sanford Meisner at New York’s Neighborhood Playhouse School of the Theatre. When Moonves’s acting career was not immediately successful, he moved to Los Angeles, where he won roles in television programs such as Gemini Man, Cannon, and The Six Million Dollar Man.

Eventually, he became a development executive with Gregory Harrison’s Catalina Productions. The company operated the Coast Playhouse and later produced movies for television. In 1981 Moonves and Catalina produced a stage version of “The Hasty Heart.” The production moved to the Los Angeles Music Center’s Ahmanson Theatre. That year, the play won several Los Angeles Drama Critic Circle Awards, including Best Production of the Year. Showtime filmed and cablecast the play.

Through his friendship with Warren Littlefield, Moonves changed his emphasis to television production and became a development executive at Saul Ielson.

Moonves, Leslie R.

Productions. Moonves served as vice president for development before moving to 20th Century-Fox Television as vice president of movies and miniseries. Next, Moonves joined Lorimar as executive vice president for creative affairs and was promoted to president of television production. In 1988 Lorimar merged with Warner Brothers Studios. While at Lorimar, Moonves was responsible for the development and production of the shows, overseeing Dallas and Knots Landing while developing dramas such as the critically acclaimed but viewer-ignored I'll Fly Away and Max Headroom and the sitcom Full House.

Moonves left the presidency at Warner Brothers Television for the entertainment president position at CBS in July 1995. He was promoted to his current post in April 1998.

While keeping his network ahead, Moonves has found time to devote to television's future. In November 1999, the National Association for the Advancement of Colored People (NAACP) reported that television characters do not emulate national racial and ethnic diversity. Moonves represented CBS at those hearings and testified that he recognized the problem and would work to correct it. In February 2000, Moonves signed a contract with the NAACP, promising to create a greater numbers of realistic roles for African Americans and to expand the roles of African Americans at CBS. That year, CBS went forward with the medical drama City of Angels, with a predominantly African-American cast and production team. CBS aired 23 episodes of the hospital series before its cancellation.

President Clinton appointed Moonves cochair of the Advisory Committee on the Public Interest Obligations of Digital Television Broadcasters (also known as the Public Interest Council). The committee was designed to study and make recommendations on the public interest responsibilities accompanying broadcasters' receipt of digital television licenses. The committee completed its recommendations in 1998 and advised broadcasters to meet digital public interest obligations by voluntarily airing nightly, five-minute candidate discourses beginning a month prior to every election.

When Viacom merged with CBS, Moonves’s influence grew, as he was promoted to chief executive officer. Next, Viacom merged its Paramount Studios television production unit with CBS, placing it under Moonves’s command. In December 2001, Viacom placed a second television network under Moonves’s control. After the Federal Communications Commission changed its dual ownership rules in April 2001, the company had the right to operate Paramount’s TV network, the United Paramount Network (UPN), alongside CBS. Moonves now oversees UPN as well.

Moonves serves on the board of directors of Viacom, Americans for the Arts National Policy Board, the Los Angeles Free Clinic, and the board of governors of the annual Banff Television Festival. He is a member of President Clinton’s Advisory Committee on the Arts, the board of directors of the Los Angeles Free Clinic, and both the executive committee and board of governors of the Academy of Television Arts and Sciences. He serves on the board of trustees of the Entertainment Industries Council, the Motion Picture Association of America’s Executive Committee on Television Violence, and the board of governors of the UCLA Center for Communications Policy. He is a trustee of the National Council for Families and Television and is past president of the Hollywood Radio and Television Society.

Moore, Garry (1915–1993)
U.S. Television Personality

Garry Moore, genial host of numerous successful network television programs throughout the 1950s and 1960s, played a major role in making the medium acceptable to American viewers during its early decades. During his long broadcast career, Moore appeared regularly during prime-time hours as well as other time periods; like Arthur Godfrey, he hosted prominent daytime and weekly evening shows, which contributed to his immense popularity. His programs were frequently among the top-ten prime-time programs. As a comedian, Moore combined genial humor with a pleasant personality and a relaxed style that made him a favorite with audiences.

Moore originally worked as a network radio comedian and writer known by his real name, Thomas Garrison Morfit. Because Morfit was difficult to pronounce, an on-air contest to select a stage name was conducted. Beginning in 1940, he became known to the listening audience as Garry Moore.

In 1949 CBS Radio originated The Garry Moore Show, a daily one-hour variety program produced in Hollywood. Network programmers recognized a successful radio personality in Moore, and given the need for programming talent on its young television network, the Columbia Broadcasting System (CBS) provided the opportunity for Moore to host a variety television show in New York. When The Garry Moore Show was introduced on CBS Television in 1950, Moore established a distinctive on-air identity with his crew-cut hair and bow tie–wearing image. His physical appearance enhanced his casual demeanor and easygoing conversational style, which became familiar to home viewers.

Moore’s initial telecasts followed a somewhat checkerboard scheduling pattern. Beginning as a 30-minute evening series, live Monday through Friday, The Garry Moore Show made its television debut in June 1950. By August, the program changed to one night per week and expanded to an hour in length. For its fall 1950 lineup, CBS scheduled Moore weekday afternoons, a move that lasted eight years. By 1951 The Garry Moore Show reportedly was the second-largest revenue source for CBS, and for a time the network could not accommodate all the potential sponsors awaiting the opportunity to advertise on the program.

Moore’s daytime program format was flexible but generally included humorous skits, singing, monologues, and studio-audience interaction. Regular performers were featured along with special guests. Supporting Moore with the various program segments were singers Denise Lor and Ken Carson and announcer and sidekick Durward Kirby. Comedians Don Adams, George Gobel, Don Knotts, and Jonathan Winters made their earliest television appearances on Moore’s show, contributing to the entertaining tone and boosting their individual careers. The Garry Moore Show remained on the air until mid-1958, when Moore voluntarily relinquished his hosting duties owing to the exhausting work schedule. By the 1958 fall season, Moore returned to CBS, hosting a weekly evening program, again called The Garry Moore Show.
Moore, Garry

The hour-long evening series followed a format similar to Moore's daytime variety program. During its six-year run, The Garry Moore Show introduced comedian Carol Burnett, who later starred in her own successful CBS show during the 1960s and 1970s. Other comedic and musical talents regularly appearing on the Moore nighttime variety show included Durward Kirby, Marion Lorne, and Dorothy Loudon. Allen Funt's "Candid Camera" became a regular segment on the program. Another popular weekly feature was a lengthy nostalgia segment known as "That Wonderful Year." Given the grueling work required to produce the show, Moore decided to discontinue the program in 1964. He reappeared in 1966 as host of yet another weekly Garry Moore Show variety series, but after five months of competition with Bonanza, CBS canceled the show because of poor ratings.

In addition to hosting several variety shows, Garry Moore moderated two television panel quiz programs, I've Got a Secret and To Tell the Truth. He began a 12-year reign as moderator of Goodson-Todman Productions' I've Got a Secret in 1952. This popular CBS prime-time program featured celebrity panelists who tried to guess the secret of ordinary and celebrity contestants. Panel members appearing through the years included Bill Cullen, Jayne Meadows, Henry Morgan, Faye Emerson, and Betsy Palmer. I've Got a Secret was among the A.C. Nielsen top-20 television programs for seven years. It remained one of the most popular panel programs ever on television. Goodson-Todman sold I've Got a Secret to CBS and Moore in 1959, and he continued to moderate the show until 1964.

To Tell the Truth, also from Goodson-Todman, was moderated for a decade by Bud Collyer before it was taken over by Moore when the program went into syndication in 1969. Another half-hour celebrity panel show, the object of To Tell the Truth was to determine which of three contestants was telling the truth. Regular panelists included Orson Bean, Bill Cullen, Kitty Carlisle, and Peggy Cass. Moore left the program and television for good in 1977, when he developed throat cancer. The wit, charm, and personality, so much a part of Moore, influenced numerous television hosts both during and following his long career. He died from emphysema in 1993 at age 78.

Moore, Mary Tyler (1936– )
U.S. Actor

Mary Tyler Moore’s most enduring contributions to television are in two classic sitcoms, *The Dick Van Dyke Show* (1961–66) and *The Mary Tyler Moore Show* (1970–77), although she has appeared in the medium in a variety of roles both before and after these series. Her first on-camera television work was as a dancer, and it was as “Happy Hotpoint,” a singing and dancing fairy, that she first caught the public eye. Her first regular series role as Sam, the receptionist on *Richard Diamond, Private Detective*, was notable primarily because it featured only her dancer’s legs and voice.

As Laura Petrie, the beautiful, talented, and not-so-typical suburban housewife married to comedy writer Rob (Dick Van Dyke) on *The Dick Van Dyke Show*, Moore earned critical praise (and Emmy Awards) as she laid the foundation for the wholesome but spunky identity that would mark her television career. Though she lacked their experience in television comedy, Moore was no mere “straight woman” to comedians Van Dyke, Carl Reiner, Morey Amsterdam, and Rose Marie: she managed to stake out her own comic identity as a lovely and competent housewife who was frequently thrown a curve by her husband’s unusual friends and career. Thanks to the show’s explorations of the Petries’ courtship (they met while he was in the military and she a USO dancer), Moore was able to display on the show her talents as both dancer and singer as well as comedic actor. While *The Dick Van Dyke Show* stopped production in 1966, it appeared in reruns on the Columbia Broadcasting System’s (CBS’s) daytime lineup until 1969, keeping Moore’s perky persona in the public eye as she sought film roles and stage work for the remainder of the decade.

On the basis of Moore’s popularity in *The Dick Van Dyke Show*, CBS offered her a 13-episode contract to develop her own series starting in 1970. Moore and her then-husband Grant Tinker, a production executive at 20th Century-Fox at the time, used the opportunity to set up their own production company, MTM Enterprises, to produce the show. Following the success of *The Mary Tyler Moore Show*, MTM went on to produce a number of the most successful and critically praised series of the 1970s and 1980s, with Moore’s contributions limited mainly to input on her own show(s) and the use of her initials.
all-male work environment is counterbalanced by a primarily female home life, where again her character contrasts with her ditzy landlady Phyllis Lindstrom (Cloris Leachman) and her New York–born neighbor and best friend, Rhoda Morgenstern (Valerie Harper). Both the show and Moore were lauded for their realistic portrayal of “new” women in the 1970s whose lives centered on work rather than family and for whom men were colleagues rather than just potential mates. While Mary Richards’s apologetic manner may have undermined some of the messages of the women’s movement, she also put a friendly face on the potentially threatening tenets of feminism, naturalizing some of the decade’s changes in the way women were perceived both at home and at work.

After The Mary Tyler Moore Show ended its seven-year, award-winning run, Moore appeared in several short-running series, including her attempt to revive the musical variety show Mary (1978), which is best remembered for a supporting cast that included the then-unknown David Letterman, Michael Keaton, and Swoosie Kurtz. Moore’s later stage, feature film, and made-for-television movie efforts have represented successful efforts to break with the perky Laura Petrie/Mary Richards persona. In the Academy Award–winning Ordinary People (1980), for example, Moore’s performance contrasts the publicly lovable suburban housewife—a Laura Petrie–type facade—with her character’s private inability to love and nurture her grief-stricken family; in Flirting with Disaster (1996), she steals scenes as Ben Stiller’s vain adoptive mother. Moore won a special Tony Award for her performance as a quadriplegic who wanted to end her existence in Whose Life Is It, Anyway? And on television, she has played everyday from a breast cancer survivor in First, You Cry to the troubled Mary Todd Lincoln in Gore Vidal’s Lincoln to a villainous orphanage director in Stolen Babies. Still, Mary Richards continues to define Moore. In 2001 she and Valerie Harper renewed their on-screen friendship in Mary and Rhoda, a made-for-television movie featuring their Mary Tyler Moore Show characters. Originally pitched as a new series, Moore, Harper, and the American Broadcasting Company (ABC) opted out of a long-term commitment despite the show’s high ratings. Another sign of Mary Richards’s enduring appeal came in 2001, when the city of Minneapolis and the cable network TV Land unveiled a bronze statue of “Richards” tossing her famous beret into the air, as Moore did on the opening credits of The Mary Tyler Moore Show. In recent years, Moore has devoted much of her attention to work for the Juvenile Diabetes Research Foundation, the American Diabetes Association, and various animal rights organizations.

Moore, Roger (1927– )
British Actor

Roger Moore settled into acting by 1948, appearing in small roles on British television, radio, and repertory theater. In 1953 Moore went to Hollywood, where he secured an MGM contract, appearing in minor roles in four features over the next two years. He moved to Warner Brothers and appeared in several features, including *Ivanhoe*, a coproduction between Screen Gems of America and Sydney Box. The series was part of a historical cycle in British television in the late 1950s, and the *Ivanhoe* series was an admirable effort in the genre. The series was loosely based on the chivalric exploits of Ivanhoe during the time of Prince John with the hero drawn from the novel by Sir Walter Scott. As the figure of the title, Moore was suitably dashing, an energetic defender of the weak and the poor and a nobleman to boot.

Back in Hollywood with Warners in 1959, Moore was given a starring role in the television series *The Alaskans*. Moore played Silky Harris, an adventurer, and already the suave sophistication that became a later trademark was in evidence. The series was a variation on the one-hour western series that Warners had been successfully churning out for several years, but *The Alaskans* lasted only one season.

Moore was then cast in the western series *Maverick* (1960). Cousin Beau, played by Moore, was sophisticated and upper class but, unfortunately, lacked the comic touch of the original star, James Garner, who had left the series. After one season on *Maverick*, Moore left the series, which folded a year later.

Moore returned to feature films. He made three more features for Warners, including a western, *Gold for Seven Sinners* (1961), a western vehicle for Clint Walker, the former star of *Cheyenne*, which was partly shot in Italy. Moore stayed two years in Italy, where he made two Italian films.

After nearly ten years in film and television, Moore was cast in the role of the Saint in the eponymous television series in 1961. The role perfectly fit his persona of a sophisticated Englishman with more than a modicum of intelligence, cunning, and toughness. While

Roger Moore.
*Courtesy of the Everett Collection*
some appearances in earlier U.S. television anthology drama series, such as Alfred Hitchcock Presents, had Moore playing such a figure, nothing in his previous starring roles had capitalized on this side of Moore's screen personality. The Saint expanded considerably on the type over seven years, through 114 filmed hours as well as two telefeatures. The series was produced in Britain by ITC/ATV and was based on the novels by Leslie Charteris. The Saint was a kind of modern Robin Hood who used wealth, cunning, and sophistication to help bring to justice criminals that the law had been unable to catch. The Saint taught Moore his trade and made him a large income. He became owner of a textile mill, a director of the Faberge perfume operation, and co-owner of a film production company, Barmoore, which produced later episodes of The Saint. The series also gave him a chance to try his hand at directing. All together, he directed eight hour-long episodes of The Saint and two hour-long episodes of his next television series, The Persuaders.

This latter series was a kind of spin-off to The Saint as far as Moore's role was concerned. However, he no longer played solo, being teamed with fading screen idol Tony Curtis. The Persuaders was produced by a company of Sir Lew Grade and ran for 24 hour-long episodes in the 1971–72 season. The attempt to enlist audience loyalties on both sides of the Atlantic was obvious enough; nevertheless, the series had sufficient action and adventure, usually in exotic locales, to keep audiences happy and make the series popular. But it did little to advance Moore's career after the achievement of The Saint. The real break came in 1973, when Moore was cast as the second James Bond. Chosen over actor Michael Caine, Moore's casting as Bond was in line with the screen persona that had been elaborated over 15 years in television. Moreover, the work in television had given Moore a fame and popularity beyond anything Caine could muster from his film work in the previous ten years.

The Bond role meant that Moore was now an international star who no longer needed to play in television, but the general pattern of his career is a familiar and instructive one regarding the younger medium. Moore decided on an acting career just as television was displacing feature films as the most popular form of screen entertainment. Television taught him his trade as an actor, allowing him the opportunity over several series to elaborate a screen personality that would later stand him in good stead. After a long television apprenticeship, he finally graduated to big-budget feature films, where he has worked ever since. The other significant feature of his career is the paradox that this British star was in fact a product of the international television and film industries, if not the American industry.

Morecambe and Wise

British Comedy Act

Morecambe and Wise, a comic duo who developed their act in variety shows in provincial theaters, became the popular stars of a long-running series that had a major influence on the development of British television comedy. Born Eric Bartholomew and Ernest Wiseman, they adopted their stage names when they first teamed up in 1941, making their debut as a double act at the Liverpool Empire. They were both 15 and had already gained experience working separately on the music-hall circuit. Eric took his new name from the Lancashire seaside town where he was born, and, since Ernie came from Yorkshire, their northern working-class origins remained a clear but unobtrusive part of their appeal.

After a break for national service, the act was reconstituted in 1947 and went through a number of changes before developing the format that made them stars. They started out by imitating comic routines from the films of Bud Abbott and Lou Costello, with fake American accents and Eric in the role of the straight man. It was not until they reversed their roles that their ability to create characters out of the traditional roles of comedian and straight man began to bring them recognition.

A few radio engagements preceded their first attempt to break into the emerging television field. Their first television series, called Running Wild, was broadcast by the British Broadcasting Corporation (BBC) in 1954 but was a short-lived failure. The Morecambe and Wise Show first appeared on ATV in 1961 and transferred to BBC 2 in 1968. Scripts were written by Sid Green and Dick Hills, who often appeared in small parts in the sketches. The series was briefly interrupted when Eric suffered a heart attack in 1969 but returned to renewed acclaim, with Eddie Braben as the new scriptwriter.

Their success led to several invitations to appear at Royal Command Performances, and they also made a number of guest appearances in the United States on The Ed Sullivan Show. Their three feature films, The Intelligence Men (1965), That Riviera Touch (1966), and The Magnificent Two (1967), were often funny but failed to achieve either the inspiration or the popular success of the television series.

The originality of their show stemmed ironically from its refusal to deny its theatrical origins. The two stars appeared on stage, introduced their guests (who often appeared with them in short comic sketches), ended the show with a song-and-dance number, and then returned for a curtain call. The jokes were usually old or dependent on excruciating puns and double entendres. Their impact came from the contrast between the apparent weakness of the material and the valiant efforts of the comedians to make it funny. The show provided the pleasures of familiarity amid the rapid social and cultural changes of the 1960s and 1970s; however, the familiar was always somehow skewed because of the performers' evident desire to succeed in the contemporary world.

The comic personae of Morecambe and Wise also reflected this tension between the familiar and the modern. Their appearance was mined for recurring
Morecambe and Wise

jokes about Eric’s horn-rimmed spectacles and Ernie’s alleged wig and “short fat hairy legs.” Gestures and catchphrases were also repeated, as when Eric expressed aggression by placing the flat of his hand under Ernie’s chin and challenging him to “get out of that.” Yet their relationship offered an unfamiliar twist on the conventional double act. Predictably, Ernie was the one with aspirations, in his case a desire to become a serious writer, while Eric was slow on the uptake, constantly exasperating his partner through his failure to understand or his refusal to take things seriously. However, Eric was also quite cunning and clearly had the ultimate authority, slyly deflating all pretensions.

Although there had been many double acts in the British music-hall tradition, they have been a rarity in British television, with only Peter Cook and Dudley Moore achieving a success at all comparable to Morecambe and Wise in a show, Not Only but Also..., clearly indebted to their predecessors. The blend of stand-up comedy and sketches in The Morecambe and Wise Show was probably influenced by the American Burns and Allen Show, which relied more heavily on situation comedy and may have in turn influenced the zanier and more fragmented comedy of Rowan and Martin’s Laugh-In.

Eric died in 1984 and Ernie in 1999, but the pair continue to be fondly remembered. A tribute show, The

Morning Television Programs

Morning shows are informal and relaxed, some complete with living room sets, sofas, and coffee tables. Regular hosts are present in most shows as the familiar, foundational, conversational link to the audience. But the programs also sometimes include guest news anchors and sports and weatherpersons from affiliate stations, making that link to the audience even more intimate. Whatever the combination of hosts (usually three), they interact with light and cheerful banter. Within the past decade, the hosts of morning shows have remained fairly consistent with a balance of male and female anchors. Good Morning America is hosted at present by Charles Gibson and Diane Sawyer; The Early Show by Harry Smith, Hannah Storm, Julie Chen, and Rene Syler, and Today by Katie Couric and Matt Lauer. The FOX Network does not seem to be a major competitor in this field. Most cable networks are unaffected by the morning time slot and run a variety of shows ranging from cartoons to religion. The only exception to this type of programming is the Cable News Network (CNN), which hosts a news show titled Live at Daybreak. It probably can be regarded as a major competitor, as it provides abbreviated national and world news segments.

News stories from the previous day are often followed the next morning with related but less formal stories and celebrity interviews and discussion. When national disasters occur—hurricanes, earthquakes, plane crashes—the whole show may be dominated by news coverage of those events. Sometimes the morning anchors and crew go on location in order to feature a particular city or event. On such occasions, organizers, political leaders, dignitaries, and VIPs are interviewed on site. National weather reports are interspersed with sponsored announcements, birthday wishes, and other less formal moments, and the pro-
Morning Television Programs

Programs are formatted in such a way that local station breaks can be accommodated with ease. These breaks are important because they allow affiliates to provide local news, sports, and weather and to insert local commercials.

Morning shows are constructed in a style best termed as "modular programming": short, unconnected segments are presented with no relationship between them. Modules rarely exceed four minutes, and most are shorter. This program design is based on programmer and producer perceptions of viewer activities—preoccupied with preparations for the day and unable to devote much time or attention to any one segment of the program.

In recent years, morning shows have returned to one of their earliest strategies and have begun to include live audiences in their format. Two approaches to audience participation have been introduced. The first enables people in the street to look into the studio from the outside. At times, these spectators can be distracting, raising signs and waving arms, presumably to attract attention from viewers "back home." But they can be shut out by means of a mechanized cyclorama. This "fish bowl concept" was an aspect of the early years of Today, when Dave Garroway and the chimpanzee J. Fred Muggs were featured. On occasion, the hosts move outside to where people are standing on the sidewalk, interviewing a few selected visitors. The second approach to audience involvement includes a captive audience within the studio, similar to conventional talk shows. Inside the studio, the audience can be controlled much more easily, and consequently their behavior is more predictable and subdued.

The first network "early day" shows followed the patterns of successful radio programming and were not in the morning at all. In 1948 the National Broadcasting Company (NBC) scheduled Tex and Jinx, one of the popular morning radio talking couples, at the network's then-earliest hour of 1:00 P.M., and the Columbia Broadcasting System (CBS) showed, half an hour later, Missus Goes A-Shopping, a game show with popular radio host John Reed King. In the fall of 1948, Dumont, the weakest network, actually dared, before noon, a miscellany of variety and informational shows.
that survived until 1950 and were then forgotten. These earliest shows, however, also provided a chance for technical experiment. In August 1951, CBS offered at 10:30 A.M., an hour when hardly anyone would be watching, their own married couple, Mike Wallace and Buff Cobb, in Two Sleepy People, the first regularly scheduled network color show (the video portion of the signal could not be received by conventional black-and-white sets).

In 1952 the efforts to produce a successful morning show finally began to work. On January 7, Arthur Godfrey began simulcasting his popular radio show Arthur Godfrey Time, which proved just as popular on television, where it lasted until 1959. A week later (and also a week later), the greatest morning experiment began. Today began producing three hours a day (only two were broadcast in each time zone). When writer-producer Larry Gelbart attempted in an interview to define what "real television" was, he said "real television might have been the early Today show, with Dave Garroway standing in a window doing a show that no one had ever seen before, something that wasn’t borrowed from radio or the stage or motion pictures or newspapers."

Today was one of the creations of NBC executive Sylvester "Pat" Weaver, who had carefully considered the needs of various special audiences and devised the responses that became Your Show of Shows, the prime-time variety show; Tonight, for the "sophisticated" late-night viewer; and Today, to address a range of viewers from those preparing to leave for work to the "homemaker" readying children for school and her own daily activities. In March 1954, Home with Arlene Francis began broadcasting—Weaver’s more specialized solution for the late-morning audience. Although influential on the design of succeeding daytime magazine shows, Home itself lasted only until 1957. In later decades, however, suggesting that Weaver’s strategies
were appropriate, shows similar to Home abounded in late-morning times. They were often surrounded by popular game shows such as Strike It Rich, The Price Is Right, Concentration, and the early years of Jeopardy! In the 1960s and 1970s, reruns of evening shows were popular in late morning, and in recent decades, syndicated confrontation shows, such as those hosted by Jerry Springer and Geraldo Rivera, have flourished. The occasional variety show, such as David Letterman’s 1980 program, or even the rare soap opera, such as The Guiding Light, have also been programmed as morning offerings.

But it is the history of Today and the responses to it by other networks that has anchored the history of the morning genre. During its first year, Today had neither great audience nor critical success, although it achieved frequent mention in the news because of its window onto Rockefeller Center and its efforts to interview former President Harry Truman on his early morning New York walks. In its second year, the chimpanzee J. Fred Muggs joined the cast, and viewership, especially among families and children, began to increase.

In 1954 the American Broadcasting Company (ABC) entered the morning competition for a short time with a simulcast of its long-term popular radio show, Don McNeill’s Breakfast Club, which failed on TV after a year. In direct competition with Today, CBS began a remarkable morning variety show, The Morning Show, as it was called, had as its successive hosts for the three years it was on the air: Walter Cronkite, Jack Paar, Johnny Carson for a time as guest host, John Henry Faulk (until he was blacklisted), Dick Van Dyke, and Will Rogers Jr. Illustrating the wide range of viewers it sought to attract, the show’s regulars included Charles Collingwood, the Baird puppets, singers Merv Griffin and Edie Adams, and, as a writer, Barbara Walters. The show challenged Today with every strategy applicable to the variety-talk formulas—then finally gave up. In 1955 CBS substituted Captain Kangaroo for the second hour of The Morning Show. For over 25 years, the Captain remained in place, appealing to younger audiences but using many of Today’s segmented structure by programming regular visits by guests such as Dr. Joyce Brothers and Bill Cosby.

By the 1960s, it had become apparent that competition for the broadest possible morning audience would have to use a mix very similar to that created by Weaver for Today. Beginning in 1963 with a 25-minute show hosted by Mike Wallace, the CBS news division attempted to experiment with a response that was “not quite the same as” Today. In 1987 the CBS entertainment division briefly intruded on this process with the failed Morning Program, but CBS News returned in November 1987 with its final and continuing response to date: a full two-hour CBS This Morning. ABC did not begin its first serious challenge to Today until 1975, first with the short-lived A.M. America and then the still-continuing Good Morning, America, which became identified with its host, David Hartman, from 1976 to 1985 and has since had a succession of hosts.

Over the past four and a half decades, then, there have been continuous attempts and strategies for “balancing” the early morning newsmagazine formula. Garroway delivered entertainment, John Chancellor presented serious news, and Hugh Downs and Barbara Walters became a chatting couple. CBS focused on the newsgroup, while ABC, with David Hartman, moved toward the living room. But many of the forms stayed constant: for example, the five-minute break for local news, the cheery weatherperson, and the occasional visit to other locales. There was also a gradual expansion of the format into the 6:00 A.M. to 7:00 A.M. hour.

In the 1990s, as the number of available channels vastly increased, an expanding variety of specialized choices in the morning made NBC’s Today, ABC’s Good Morning, America, and CBS This Morning appear to be venerable institutions that have withstood the test of time. However, cable television news and talk shows, which take advantage of low production costs and flexibility, may become even stronger competitors for the network morning programs in the future. If this is the case, the attempts will most likely follow patterns established by continuous trials in the network arena, trials that have resulted in some of the most familiar and regularized moments “brought to us” by television.

In the early 2000s, a variety of morning shows competed with the traditional programs. Three major competitors were American Morning on CNN, with Soledad O’Brien and Bill Hemmer; Fox and Friends, with anchors E.D. Hill and Brian Kilmeade; and MSNBC’s Imus in the Morning. Of these three new offerings, Fox and Friends is by far the most popular, based on audience shares. It is estimated that Fox and Friends has 1.2 million viewers, American Morning 753,000, and Imus in the Morning 364,000.

Competition from cable and the Internet and shrinking evening revenues have led the major networks to value the morning program slot more highly than ever. The morning is regarded as an extremely lucrative time slot (Today cleared $100 million in profits last year). Many of the morning television program studios have received expensive face-lifts, complete with giant Astrovision screens, bright lights, and custom-made windows offering excellent background views.

Motion Picture Association of America

Based in Washington, D.C., the Motion Picture Association of America (MPAA) has long served as the formal political representative for the major Hollywood studios. These studios (including Time Warner’s Warner Brothers, Viacom’s Paramount, Rupert Murdoch’s 20th Century-Fox, Sony’s Columbia, Seagram’s Universal, and the Disney conglomerate) create and market the majority of television’s fictional fare, from comedies and dramas in prime time to the talk and game shows that fill rest of the day. In the MPAA, they join together to work on common concerns. To the public, this objective is most clearly manifest in the MPAA’s movie ratings; for the television business, the MPAA grapples with thousands of proposed and actual regulations by foreign and domestic governments.

Headed since 1966 by former White House staff member Jack Valenti, the MPAA lobbies the Federal Communications Commission and the U.S. Congress. Through the U.S. Department of State and the Office of the U.S. Trade Representative, the association argues for free trade of television programs around the world.

The MPAA was formed by major Hollywood companies in 1922 as the Motion Picture Producers and Distributors Association (MPPDA). Both before and after the name change to the Motion Picture Association of America, the main activity of the association has been political, and the companies have always hired well-connected Washington insiders to represent their interests in the capital.

The first head was President Warren G. Harding’s brilliant campaign manager, Will H. Hays. In his day, Hays became famous for the MPPDA production code, a set of moralistic restrictions governing the content of motion pictures. Hays retired in 1945 and never had to deal with issues concerning television.

Hays’s successor was a former head of the U.S. Chamber of Commerce, Eric Johnston. It was Johnston who, beginning in the 1950s, first had to grapple with television, opposing the minimalist trade restrictions then being proposed by nations worldwide, restrictions that would work against his Hollywood corporate clients. Johnston preached free-trade policies that would enable Hollywood to move its filmed and video products into every country around the globe. In so doing, he became a leading advocate for the establishment of the European Common Market, which would create a single body of trade officials to deal with rather than a different set in each country.

Johnston died in August 1963. Ralph Hetzel served as interim head until 1966, when the moguls of the Hollywood studios persuaded White House assistant and Texan Jack Valenti to take the job. Since then, Valenti has had to deal with the coming of cable television and the rise of home video. He has had to adjust to Japanese purchases of the Columbia and Universal studios and to the opening of the former Soviet Union, eastern Europe, and China as vast new television and movie markets. Despite all these changes and many others, his Hollywood employers have grown ever more powerful and the MPAA ever more influential in the television industry.

From his Washington, D.C., office a couple of blocks from the White House, Valenti exercises this power most visibly by inviting Washington power brokers to his lush headquarters. There, stars greet sena-
tors, members of Congress, foreign dignitaries, and government regulators. Glitter in workaholic Washington has been always in short supply, and the MPAA has always been its leading provider in the nation's capital. Valenti asks nothing on these occasions; they serve to keep open the lines of communication on Capitol Hill, into the White House, and through embassies based in Washington.

Valenti has long functioned as the capital's highest-paid and most effective lobbyist. Throughout the 1980s, for example, he consistently beat back moves to overturn regulations giving the Hollywood production community complete control over the rerun market for former hit network television shows. These “Financial Interest and Syndication” (Fin-Syn) rules had been put in place by President Richard M. Nixon as his revenge against the television networks. Under the Fin-Syn rules, networks could share only minimally in profits from television’s secondary markets. Valenti made sure the rules were retained and enforced far longer than anyone expected and therefore created millions of dollars in additional profits for his Hollywood studio clients.

If necessary, Valenti took his case directly to the president of the United States. When officials working in the administration of President Ronald Reagan proposed the elimination of the Fin-Syn rules, Valenti asked Universal Studio’s head Lew Wasserman to pay a visit to the president. Before becoming head of Universal, Wasserman had been Reagan’s Hollywood talent agent. Valenti and Wasserman convinced the president, who long railed against unnecessary governmental regulations, to retain the Fin-Syn rules and to reverse orders issued by his underlings.

Valenti and the MPAA have also long battled against any rules that restricted Hollywood’s TV exports. The protracted international negotiations that led to a new General Agreement on Trade and Tariffs (GATT) treaty, for example, were held up so that Valenti could remove television from the negotiating table and block a French proposal for quotas restricting television imports. It was Valenti who stood beside U.S. Trade Representative Mickey Kantor at a February 1995 news conference when a new U.S.-China trade accord was announced. This historic agreement protected television shows from rampant piracy in China, then the largest remaining potential market for television in the world.

In September 2001, Valenti turned 80 years old. During the previous decade, his energy never diminished as he dealt successfully with various issues. He directed the commission that developed parental guidance ratings for television and oversaw legislation requiring the V-chip (which allows users to block access to programming on the basis of its rating) to be placed in all new television sets sold in the United States. The accomplishment of such crucial tasks relied on Valenti’s proven success as a negotiator and were undertaken to satisfy—or appease—various critics of television, including powerful congressional figures. He continued to press for opening markets for television around the world and was particularly successful in China.

The Hollywood-based corporate members of the MPAA under Hays, Johnston, and Valenti have long enjoyed considerable political power at home and abroad, as the MPAA has effectively leveraged the prestige of the film and television business to extract favors and win influence. Following in this hallowed tradition will present a sizable challenge for Valenti’s eventual successor.

The Movie Network

Canadian Pay-TV Channel

The Movie Network (TMN) is eastern Canada's English-language pay-TV motion picture channel. Part of Astral Media, TMN is supported entirely through subscriber fees, as collected by local cable operators. It operates 24 hours a day and specializes in unedited and uninterrupted movies. Home Box Office (HBO) and Cinemax are the principal models for TMN, though, as with all Canadian broadcasting services, TMN must comply with Canadian Radio-television and Telecommunications Commission (CRTC)—imposed licensing criteria, which include Canadian-content quotas.

TMN first received its license in 1982 after considerable public and governmental debate. Similar services in the United States had been successful, but the CRTC and others expressed concern about the impact pay-movie channels would have on Canadian culture. Was the market substantial enough for the proposed services to survive? Or would they become yet another vehicle for the importation of inexpensive U.S. film and made-for-cable products? Despite the recent rapid expansion of specialty channels and the parallel rise of multiple feature film services through cable and satellite delivery, both concerns were initially borne out.

In 1982 the CRTC awarded licenses to a number of pay-TV channels. C Channel, the service devoted to Canadian culture, lasted only five months and collapsed with insufficient viewer support to cover its costs. Star Channel, serving the Atlantic region, went bankrupt shortly thereafter. When the smoke had cleared, only First Choice (to be renamed The Movie Network in 1993), SuperChannel, and Super Ecran (which served the French-language market) were left. TMN operates east of the Manitoba/Ontario border, while SuperChannel operates in the west, thus giving them de facto regional monopolies.

As expected, the remaining movie channels began to ask for reduced Canadian-content requirements, arguing that programming "control" was necessary to their survival. The CRTC complied, and starting in 1986, the channels were required only to show 20 percent Canadian programming overall; their expenditures on Canadian content were reduced from 45 to 20 percent of subscriber revenue. TMN's financial support for Canadian production was almost $7.5 million (Canadian) in 1988–89 and just under $10 million in 1992–93. This amount dropped dramatically to $1.4 million by 2000–01. In 1993 TMN was showing 30 percent Canadian content in prime time and 25 percent otherwise. While TMN remains primarily a carrier of popular U.S. films, it has become a key source of sales for Canadian film and television producers. TMN's Foundation to Underwrite New Drama for Pay-TV
(FUND) competition awards interest-free loans for scripts at various stages of development.

In 1992 TMN became the first network in North America to offer "multiplexing." Through digital video compression technology, TMN subscribers receive an additional three channels (TMN2, TMN3, and TMN4) at no extra cost. These channels show what is essentially a reorganized broadcast schedule based on that of the main TMN. Multiplexing intends to provide additional choice and convenience to the subscribing customer by multiplying the number of showings of a film and the number of start times.

Through their common parent company, Astral Media, TMN operates in conjunction with Viewer's Choice Canada Pay Per View and Movipix, which specializes in films from decades past. Astral sees the common ownership of these pay-TV channels as a way to ensure that they complement one another in the relatively small Canadian market. Critics, however, see this as a concentration of media venues that has contributed to the creation of a tiny powerful media elite in Canada.

Movie Professionals and Television

A 1944 editorial in the industry magazine Televiser questioned whether a motion picture director could approach a new medium such as television without "cynicism." The article warned that film people have been overly critical of television production without any appreciation of the technique and aesthetics of the small screen. The tension between film and television has been a constant for more than 50 years, but both art forms have been enriched by the often-contentious dialogue.

In the early years of television's history, motion picture executives were acutely aware of the economic threat posed by an entertainment medium in the home and drew up strategies to challenge this incursion by the broadcast industry. Paramount first considered owning a chain of television stations and then tested a system of pay television, 20th Century-Fox and Warner Brothers collaborated on plans to develop theater television in the early 1950s, and in 1949 Columbia, under the leadership of Ralph Cohn, a former B-movie producer, organized Screen Gems to produce television commercials. Moguls tried to make moviegoing a spectacular experience, exploiting widescreen and stereophonic technologies. But it was the "eager and imaginative minds" of television who would create a dramatic form and then have a major impact on the motion pictures.

Television first defined its identity with the production of live dramas on such anthology series as Studio One (1948–58), Kraft Television Theatre (1947–58), and Playhouse 90 (1956–61). Critics contended that the immediacy of television brought forth a special relationship between the spectator and the play. The productions were orchestrated by a generation of young directors with some training in theater and film who wedded the character studies of writers such as Paddy Chayefsky and Rod Serling to the inward method-trained acting styles of Paul Newman, Kim Hunter, James Dean, and many other disciples of Konstantin Stanislavski. When Mary received the Academy Award in 1955, it was the first time a script that originated on television (Goodyear Playhouse, 1953) was adapted by the large screen; in both instances, the partnership of Chayefsky and director Delbert Mann brought the material to life. Television talent was now welcome with open arms in Hollywood, and such TV-originated productions as The Miracle Worker and Days of Wine and Roses became award-winning films. The most prominent of the television directors journeyed to film, bringing the same psychological realism to the large screen. Among the key directors (with their signature movies in parentheses) whose work defined the new maturity of 1960s Hollywood were John Frankenheimer (The Manchurian Candidate [1962] and Seven Days in May [1964]), George Roy Hill (The World of Henry Orient [1964] and Butch Cassidy and the Sundance Kid [1969]), Sidney Lumet (Long Day's Journey into Night [1962] and The Pawnbroker [1964]), Robert Mulligan (To Kill a Mockingbird [1962] and Baby, the Rain Must Fall [1965]), Arthur
Penn (*The Miracle Worker* [1962], which he also directed on television, *Bonnie and Clyde* [1967]), and Franklin Schaffner (*The Best Man* [1964] and *Patton* [1970]). These directors, once again melding text and performance as they had on television but with a larger budget, constituted the first wave of new talent that rejuvenated American cinema after the studio system had broken down.

As live television received critical legitimacy on the East Coast, independent companies on the West Coast, including Jerry Fairbanks Productions, the Hal Roach Studios, and Ziv Television Programs, produced films for television, reels that could be cycled from one local station to another in the earliest version of "syndicated" TV. These budget-conscious producers often employed forgotten Hollywood veterans to give luster to their equivalent of the B movie. Jerry Fairbanks, a freelance cameraman and producer of an Academy Award-winning short, hired an established Hollywood name, Edmund Lowe (the suave silent film star of *What Price Glory*), for his Dumont series *Front Page Detective* (1951–53). Hal Roach Jr., a former Laurel and Hardy director, asked Charles Barton, the Universal director of Abbott and Costello comedies, to oversee the translation of the radio program *Amos 'n' Andy* to a visual medium (1951–53). For television's biggest hit of the 1950s, *I Love Lucy* (1951–61), producers Desi Arnaz and Jess Oppenheimer requested Fritz Lang's cinematographer, Karl Freund, to devise a technique for filming with three cameras before a live audience.

Film studios and guilds took immediate notice of the employment possibilities of television. Members of the Directors Guild of America received their name in the title for the 1955 series *Screen Directors Playhouse*. Many Hollywood legends, including John Ford, Leo McCarey, and George Stevens, made half-hour dramas for the *Playhouse*. The newly appointed president of the American Broadcasting Company (ABC), Leonard Goldenson (formerly head of the United Paramount Theaters), and executives at Warner Brothers determined how to financially recycle popular film genres each week on television and employed unsung directors to oversee production. Richard Bare, who had directed such forgettable movies as *Smart Flax Martin* (1949) and *Girls Don't Talk* (1958), was in part responsible for the resurgence of the western on television with the success of his *Cheyenne* (1955–63). By the mid-1950s, more than 40 percent of Hollywood's directors, actors, editors, and cameramen worked on television projects. Even cult directors, such as Ida Lupino, Phil Karlson, and Jacques Tourneur, brought their offbeat sensibilities to television.

Television became genuinely respectable for the film industry when the most recognizable director of all time, Alfred Hitchcock, hosted an anthology series for ten years, beginning in 1955. Hitchcock's agent, Lew Wasserman, who would later run Universal, masterminded *Alfred Hitchcock Presents*, which featured the droll introduction by the "Master of Suspense" and then a macabre tale, evocative of the director's dark spirit. Hitchcock directed 18 episodes for *Presents* and two programs for other series. Working three days with an efficient supporting team, Hitchcock was able to explore his familiar themes of duplicity and murder, and he employed most of his TV crew to produce his cinema masterpiece, *Psycho* (1960).

Dramatic series, produced by Hollywood studios, afforded young talent the means to helm their own productions and, occasionally, develop personal themes. Robert Altman directed a variety of genres for television, including westerns (*Bonanza*), detective stories (*Hawaiian Eye*), and war stories (*Combat*). Later, in the 1970s, he would subvert the formulaic rules he learned in those three genres in the films *McCabe and Mrs. Miller* (1971), *The Long Goodbye* (1973), and *M*A*S*H* (1970), respectively. Other well-known directors also learned generic conventions that would come in handy in their film careers. Sam Peckinpah di-
rected episodes of Route 66, Have Gun—Will Travel, Gunsmoke, and The Westerner, which he also created. Blake Edwards created the pilots for Richard Diamond and Peter Gunn, which he later brought to the large screen. Michael Ritchie's quirky adventures for Run for Your Life and The Outsider laid a groundwork for the films The Candidate (1972) and Smile (1975).

In the mid-1960s, the studios worked with the networks to develop movies made especially for television. The first proposed television movie, The Killers, was directed by Don Siegel and starred Ronald Reagan and Angie Dickinson, but it was deemed too violent for television and was released theatrically in 1964. Two network executives, Barry Diller and Michael Eisner, refined the scope and concerns of the television movie and later became two of the most powerful moguls in Hollywood. Directors were able to impart a distinctive vision on the TV movie, which often yielded assignments to the large screen. Steven Spielberg, who had directed episodes of Columbo and Owen Marshall, received acclaim for the visual audacity of his made-for-television movie Duel (1971). Michael Mann, after stints as a writer on Police Story and Vega$, first attracted notice as writer and director of the TV prison drama The Jericho Mile (1979), which led to his 1983 feature Thief. Many directors have shuttled back and forth between movies and television and have delivered their most personal work on the small screen, including Buzz Kulik (Brian's Song [1971]), John Korty (The Autobiography of Miss Jane Pitman [1974]), Joseph Sargent (Amber Waves [1980]), and especially Lamont Johnson (That Certain Summer [1972], The Execution of Private Slovik [1974], and Off the Minnesota Strip [1980]).

The man most responsible for adult comedy on television, Norman Lear, had left television in the late 1950s to become a film director. His film work—including Come Blow Your Horn (1963), The Night They Raided Minsky's (1968), and Cold Turkey (1971)—never matched his satirical temperament, which found its perfect outlet in the situation comedy All in the Family (1971–83). Lear did not return to film, but two influential comedy producers, James Brooks and Garry Marshall, have found creative success in both media. The same mixture of drama and comedy that Brooks brought to The Mary Tyler Moore Show (1970–77) was evident in his films Starting Over (1979), Terms of Endearment (1983), Broadcast News (1987), and As Good As It Gets (1997). Marshall's fondness for mismatched pairs, exemplified by Felix and Oscar in The Odd Couple (1970–75) and Ritchie and the Fonz in Happy Days (1974–84), has also been apparent in such films of his as Nothing in Common (1986) and Pretty Woman (1990). Lear and Marshall also mentored other directorial careers. Their comic rhythms have also been brought to the screen by their leading actors, Rob Reiner of All in the Family, Ron Howard of Happy Days, and Penny Marshall of Laverne and Shirley.

Feature film directors have had a presence in other TV genres. Several of television's most exemplary musical programs were crafted by directors who afterward rarely ventured into that genre again. Jack Smight, known for his mystery films Harper (1966) and No Way to Treat a Lady (1968), directed two of the definitive jazz programs, the smoky The Sound of Jazz with Billie Holiday and the very cool The Sound of Miles Davis. Norman Jewison, who began his career in British and Canadian television, directed Judy Garland's only duet with Barbra Streisand, Fred De Cordova, who earlier had directed Bedtime for Bonzo (1951) with Ronald Reagan and then TV series for George Burns and Jack Benny, produced for 20 years the most popular talk show of all time, The Tonight Show Starring Johnny Carson.

As live television affected Hollywood in the 1950s, so too did Music Television (MTV) in the 1980s. The music video disrupted the linear narrative and put a primacy on the visual, making the video creator a new hero in Hollywood. British director Julien Temple
journeyed from videos for Culture Club and the Rolling Stones to his first feature, *Absolute Beginners* (1986). David Fincher used Fritz Lang's film *Metropolis* as the source of inspiration for his Madonna's video “Express Yourself” and later reworked the noir genre in his textured *Seven* (1995). Videos have borne the established director's imprint as well, including John Landis and Martin Scorsese's extended narratives for Michael Jackson's “Thriller” and “Bad”; John Sayles and Brian De Palma's different deconstructions of the Bruce Springsteen phenomenon, as working-class hero and lumbering icon, respectively; and Spike Lee’s energetic “Hip Hop Hooray” video for Naughty by Nature. Spike Jonze transferred the offbeat, surreal sensibility of his videos for Weezer and Fatboy Slim to his feature film directorial debut, *Being John Malkovich* (1999). Quick cuts and eye-grabbing visuals have also been the domain of the TV commercials, and three graduates of British advertising—Ridley Scott, Alan Parker, and Adrian Lyne—have invigorated the look of popular film.

In 1984 Michael Mann returned to television and brought the MTV synthesis of image and music to series television in his stylishly innovative *Miami Vice*. During the rest of the 1980s, a niche was reserved for “designer television,” usually series originated by film auteurs. Spielberg produced his own series, *Amazing Stories* (1985–87), and enlisted Scorsese, Robert Zemeckis, and Paul Bartel to contribute supernatural tales. Altman also returned, this time to cable television, and satirized American politics with Garry Trudeau in *Tanner '88* (1988), a project that was conceived in video to match the look of network news. Network executives also went to cult directors for ideas to entice a mainstream audience beginning to turn to cable. Sayles, a leader in the independent film movement, created *Shannon's Deal* (1990–91), a series focusing on an imperfect lawyer who dropped out of corporate practice. The avant-garde David Lynch of *Blue Velvet* (1986) fame unleashed some of the most surreal and unsettling images ever seen on network television in his video noir *Twin Peaks* (1990–91); a decade later, Lynch reconfigured one of his rejected television pilots into an award-winning film, the dreamscape *Mulholland Drive* (2001). Some of the traveling went the other way, as quality TV producers sought to make it among cineastes. Edward Zwick, who brought suburban angst to prime time with *thirtysomething* (1987–91), *My So-Called Life* (1994–95), and *Once and Again* (1999–2002), directed several epic adventures for the big screen—including *Glory* (1989), *Legends of the Fall* (1994), and *Courage Under Fire* (1996). Gregory Hoblit, who was the directorial eye behind many Steven Bochco productions, was successful with his 1996 urban thriller *Primal Fear*, no doubt leading the way for other directors of such visually compelling series as *E.R.* and *NYPD Blue* to try their hand at film directing. In a career of generic surprises, Quentin Tarantino—who auditioned *Pulp Fiction* star John Travolta by playing with him the board game of Travolta's sitcom *Welcome Back, Kotter*—directed the 1994 season finale of the mainstream medical melodrama *E.R.*

Many foreign directors have used television to explore alternative forms of storytelling. Ingmar Bergman of Sweden has been interested in television's ability to weave a narrative over time, and in one of his most celebrated works, *Scenes from a Marriage* (1974), he chronicles the emotional upheavals of an ostensibly perfect union over six episodes. Rainer Werner Fassbinder created two works that also utilized television's expansive narrative: a Marxist soap opera, *Eight Hours Are Not a Day* (1972), and his 15-hour epic of the Weimar years, *Berlin Alexanderplatz* (1980), based on Alfred Doblin's novel. One of the fathers of the new wave, Jean Luc-Godard, has created a series of meditative essays on the history of cinema for
French television. Roberto Rossellini, one of the pioneers of Italian neorealism, used television to create a series of stylized historical portraits from Socrates to Louis XIV. Ken Russell produced a series of wildly expressionistic dramatized biographies on such artists as Elgar, Isadora Duncan, and Delius for the British Broadcasting Corporation that served as a template for his even more flamboyant films, including The Music Lovers (1970) and Lisztomania (1975). Before becoming an internationally recognized director, Krysztof Kieslowski received his training in Polish television; in the late 1980s, he returned to his mentoring medium to explore dramatically the contemporary relevance of the Ten Commandments in a multipart series, Decalogue (1988), now considered one of his masterworks.

Many screenwriters have found the more permissive atmosphere of television since the 1990s conducive for character development and narrative complexity. After his gimmicky idea of a “Valley girl” superhero received only a lukewarm reception in the film version of Buffy the Vampire Slayer (1992), Joss Whedon adapted the story to become an exploration of evil and female empowerment in a television series with the same name (1997–2003). Aaron Sorkin forsook his career as a screenwriter of such quality films as A Few Good Men (1992) and The American President (1995) to produce weekly television, most notably his study of the intricacies of the U.S. presidency in the iconic series The West Wing (1999–). Having received an Academy Award for his screenplay of American Beauty (1999), Alan Ball decided to continue his dissection of middle-class dysfunction as creator and executive producer of the HBO drama Six Feet Under (2001–).

For more than two decades, the lines between television and film have been blurred structurally and aesthetically. Most film studios now own some type of television network, and talent flows freely between the two media. Barry Levinson extended the tapestry of his cinematic Baltimore, Maryland, trilogy (Diner [1982], Tin Men [1987], and Avalon [1990]) to television with the equally visual Homicide: Life on the Street (1993–99), also set in Baltimore. No longer is film the arena for spectacle and television the home of the close-up. In fact, films screens have been shrinking in the multiplexes, and the television monitor dominates a home’s entertainment room. Such films as Thomas Vinterberg’s The Celebration (1998) and Spike Lee’s Bamboozled (2000) were shot on digital video and transferred to film for theatrical projection. Director John Frankenheimer, who mastered live television in the 1950s and feature film during the 1960s through the 1980s, triumphed again through the 1990s and the first years of the 21st century, this time as creator of successful made-for-cable movies, including Against the Wall (1994), Andersonville (1996), and dramatic portraits of George Wallace (George Wallace [1997]) and Lyndon Johnson (Path to War [2002]). His career proved that both film and television, whatever the reigning technology, offer unique opportunities for creative expression.

Movies on Television

The most popular programming form in U.S. television has been the presentation of motion pictures. During the latter third of the 20th century, most people viewed films not in theaters but on television, whether on broadcast television, cable television, or home video. Beginning with The Late Show in the mid-1950s and Saturday Night at the Movies during the early 1960s, the screening of feature films gradually became one of television’s dominant programming forms.

Movie presentation on broadcast TV actually began in the late 1940s, when British companies rented films to new TV stations. Minor Hollywood studios (in particular Monogram and Republic) joined in this process, delivering approximately 4,000 titles to television stations before the end of 1950. Most of the films were genre works such as westerns or B-grade fare. The repeated showings of these low-budget offerings served to remind movie fans of the extraordinary number of treasures resting comfortably in the vaults of the major Hollywood studios: MGM, RKO, Paramount, 20th Century-Fox, and Warner Brothers.

The dominant Hollywood studios finally agreed to tender their vast libraries of film titles to television because eccentric millionaire Howard Hughes, owner of RKO, had run his studio into the ground. By late in 1953, it was clear Hughes had to do something to salvage RKO, and so few industry observers were surprised in 1954 when he agreed to sell RKO’s older films to the General Tire and Rubber Company to be presented on its independent New York television station. By 1955 the popularity of Million Dollar Movie made it clear that film fans would abandon theaters to curl up and watch a reshowing of their past cinematic favorites.

Thereafter, throughout the mid-1950s, all the major Hollywood companies released their pre-1948 titles to television. For the first time in the 60-year history of film, a national audience was able to watch, at their leisure, a broad cross section of the best and worst of Hollywood “talkies.” Silent films were only occasionally presented, usually in the form of compilations of the comedies of Charlie Chaplin or Buster Keaton.

By the mid-1960s, innumerable “Early Shows,” “Late Shows,” and “Late, Late Shows” dotted TV schedules. For example, by one count, more than 100 classic black-and-white films aired each week on New York City television stations, with fewer movies being broadcast in less populous cities. But with color television becoming a more dominant presence, the three TV networks wished to book newer, Technicolor Hollywood feature films. The network with the most invested in color, the National Broadcasting Company (NBC), thus premiered, at the beginning of the 1961–62 TV season, the first prime-time series of recent films as Saturday Night at the Movies. Ratings were high, and the other two major networks, the Columbia Broadcasting System (CBS) and the American Broadcasting Company (ABC), seeing how poorly their shows fared against Saturday Night at the Movies, quickly moved to set up their own “Nights at the Movies.” Early in 1962, ABC, then a distant third in the ratings, moved to first with a midseason replacement, Sunday Night at the Movies. CBS, the longtime ratings leader in network television, did not join in the trend until September 1965.

Soon thereafter, television screenings of recent Hollywood movies became standard practice. In 1968 nearly 40 percent of all television sets in use at the time tuned in to Alfred Hitchcock’s The Birds (theatrical release date, 1963). Recent feature films regularly attracted blockbuster television ratings, and when Gone with the Wind was shown in two parts in early November 1976, half the nation’s television-owning homes tuned in.

By the early 1970s, American viewers could choose from ten separate “movie night” programs each week. It soon became clear that there was an imbalance between the many scheduled movies showings on network television and the relatively small amount of new product being aired. Hollywood knew this, and the studios began to charge higher and higher prices for TV screenings. For the widely viewed September 1966 telecast of The Bridge over the River Kwai, the Ford Motor Company paid nearly $2 million to be the sole sponsor.

Network executives found a solution: make movies aimed for a television premiere. The networks began making made-for-television movies in October 1964, when NBC aired See How They Run, starring John Forsythe. However, the historical turn came in 1966, when NBC contracted with MCA’s Universal studios to create a regular series of “world premiere” movies made for television. The initial entry of this continuing effort was Fame Is the Name of the Game, inauspiciously presented on a Saturday night in November 1966.
By the early 1970s, made-for-television motion pictures had become a mainstay of network programming. Profits proved substantial. A typical movie made for television cost $750,000, far less than what Hollywood was demanding for rental of its recent blockbusters. The ratings were phenomenal. Few expected that millions would tune in for Brian's Song (1971), Women in Chains (1972), The Waltons' Thanksgiving Story (1973), or A Case of Rape (1974), but such fare regularly outdrew what were considered the biggest films of the era: West Side Story (1961; 1972 premiere on network television), Goldfinger (1964; 1972 premiere on network television), and The Graduate (1967; 1973 premiere on network television).

ABC led the way in made-for-television movies. The ABC Movie of the Week had premiered in the fall of 1969, placed on the schedule by the young executive Barry Diller, then head of prime-time programming at ABC, later a founder of the FOX television network. During the 1971–72 television season, the series was composed entirely of movies made for television and finished as the fifth-highest series of the year. TV movies also began to earn praise for the upstart ABC; for Brian's Song, the network earned five Emmys, a prestigious George Foster Peabody Award, and citations from the National Association for the Advancement of Colored People (NAACP) and the American Cancer Society.

Made-for-television movies made it possible to deal with topical or controversial material not deemed appropriate for regularly scheduled network series. Celebrated actors and actresses who did not wish to work in series television would agree to be featured in miniseries. Running over several nights, miniseries such as Holocaust (1978), Shogun (1980), The Thorn Birds (1983), Fresno (1986), and Lonesome Dove (1989) drew large audiences during key rating-measurement periods. In 1983 ABC presented Winds of War on six successive February evenings for a total of 18 hours at a cost of production of nearly $40 million. This miniseries required more than 200 days to shoot from a script of nearly 1,000 pages. Winds of War, starring
Robert Mitchum and Ali McGraw, more than returned its sizable investment in this key sweeps month by capturing half the total viewing audience and selling out all its advertising spots at $300,000 per minute.

Six years earlier, ABC’s miniseries *Roots* had aired for eight consecutive nights in January 1977. An estimated 130 million households tuned in to at least one episode, with approximately 80 million Americans watching the final episode of this docudrama, breaking the TV ratings record set just a year earlier by *Gone with the Wind*. Thus, *Roots* created for network television an event that was the equal of any blockbuster theatrical film.

However, even as *Roots* was setting records, the TV marketplace was changing. In the late 1970s and early 1980s, pay TV, particularly in the form of Time’s Home Box Office (HBO), drew millions to its uncut screenings of films, free of advertisement breaks. Later in the 1980s, home video spread to the vast majority of homes in the United States, allowing film fans to watch their favorites—uncut, uninterrupted, and whenever they liked. Theatrical features began to have so much exposure on pay TV and home video that they ceased to be as valuable on network evening showcases, and made-for-television films came to fill more and more of the time reserved for network “Nights at the Movies.”

There was change on the local level as well. The number of independent television stations doubled in the 1980s, and all used movies to help fill their schedules. Independents developed movie libraries by contracting with Hollywood studios for five-year rentals and aired acquired titles as many times as possible during that period. Researchers told executives of independent stations that movies tended to draw a larger-than-average share of valued female watchers, in particular those from the 18- to 34-year-old and 18- to 49-year-old age-groups so prized by advertisers.

By the 1990s, in an average week, a film fan could choose among hundreds of titles scheduled on TV. Reliance on television for the presentation of motion pictures extracted a high price in terms of viewing conditions. The dimensions of a standard television image are constructed on a four-by-three ratio, while the standard image for motion pictures made after 1953 is much wider. To accommodate the larger image on TV, the wide-screen film is cut off at the sides. Panning-and-scanning companies reedit the wide-screen film so that the action shifts to the center of the frame, but the fan misses any subtlety at the edges.

Of course, films need not be panned and scanned. One could reduce the image for television until all of it fits; in practice, this technique of letterboxing fills the empty space above and below with a black matte. During the 1980s, there was a great deal of lip service paid to letterboxing, but movie watchers en masse in the United States did not seem to care for it. Fans seemed to prefer that the TV frame be filled, with the primary action in the center of the screen. In the early 2000s, the increasingly pervasive adoption of wide-screen television technology and the popularity of wide-screen TVs addressed this problem.

However, the biggest complaint from the average television viewer of motion pictures has long concerned the interruption of the movie by advertisements. To fit the formulaic slots of television, a station or network shows but 90 minutes of film for a two-hour slot. Stories of how television companies cut films to fit the program length are legendary. It is said that Fred Silverman, when he was a lowly film editor at WGN-TV in Chicago, solved the problem of fitting in the 96-minute * Jailhouse Rock*, in a 90-minute slot by cutting all of Elvis Presley’s musical numbers. Indeed, the key attraction of pay TV and then home video was the elimination of interruptions for advertising.

Just when experts declared that, in an age of pay TV and home video, blockbuster movies shown on network television could not draw an audience, NBC offered *Jurassic Park*. The box office hit, widely
available on home video for less than $15, was shown on Sunday, May 7, 1995, at the beginning of a key sweeps month. Advertisers paid $650,000 for each 30-second advertising slot, and more than one in four television households in the United States tuned in.

In the early 2000s, broadcast networks and cable channels continued to present feature films and made-for-television movies. Indeed, the latter represented a common strategy for cable channels in their moves to create original programming that could replace material previously aired on network television or produced for other venues. The music channel Video Hits 1 (VH1) produced feature-length films based on performer biographies, whereas the sports channel Entertainment and Sports Network (ESPN) made movies about athletes and coaches. The Court Channel produced dramatic representations of legal battles. A&E produced mysteries based on Nero Wolfe novels. Turner Network Television (TNT) produced westerns and thrillers. At the same time, HBO, Showtime, and Cinemax continued to produce original movies as regular additions to their schedules of previously run theatrical features.

Meanwhile, a new technology for watching films on TV, the digital video disc (DVD), grew in popularity, with one in four U.S. households owning a DVD player in 2001 and various distributors phasing out their VHS stocks altogether. While it is too early to tell whether VHS-format videocassettes and DVD will exist side by side in most households or whether DVD will replace VHS as the preferred means to play movies on television, the popularity and ease of home movie viewing will surely remain a common aspect of the uses of television.

Moyers, Bill

U.S. Broadcast Journalist

For more than 30 years, Bill Moyers has established a brand of excellence in broadcast journalism. Moyers is one of the chief inheritors of the Edward R. Murrow tradition of "deep-think" journalism. He worked alternately on the Columbia Broadcasting System (CBS) and the Public Broadcasting Service (PBS) in the 1970s and early 1980s and has since appeared almost exclusively on PBS, and throughout this career his achievements have been principally in the areas of investigative documentary and long-form conversations with some of the world's leading thinkers. Moyers, who had been a print journalist, an ordained Baptist minister, a press secretary to President Lyndon Johnson, and a newspaper publisher before coming to television in 1970, gained public and private-foundation support to produce some of television's most incisive investigative documentaries. Each was delivered in the elegantly written and deceptively soft-spoken narrations that came, Moyers has said, out of the storytelling traditions of his east Texas upbringing. Whereas Murrow had taken on Joseph McCarthy on See It Now and the agribusiness industry in his famous Harvest of Shame documentary, Moyers examined the failings of constitutional democracy in his 1974 Essay on Watergate and exposed governmental illegality and cover-up during the Iran Contra scandal. He has looked at issues of race, class and gender; analyzed the power that media images hold for a nation of "consumers," not citizens; and explored virtually every aspect of American political, economic, and social life in his documentaries.
Equally influential were Moyers's *World of Ideas* series. Again, Murrow had paved the way in his transatlantic conversations with political leaders, thinkers, and artists on his *Small World* program in the late 1950s, but Moyers used his own gentle, probing style to talk to a remarkable range of articulate intellectuals on his two foundation-supported interview series on PBS. In discussions that ranged from an hour to, in the case of mythology scholar Joseph Campbell, six hours on the air, Moyers brought to television what he called the "conversation of democracy." He spoke with such social critics as Noam Chomsky and Cornel West; writers such as Nigerian novelist Chinua Achebe, Mexican poet and novelist Carlos Fuentes, and American novelist Toni Morrison; and social analysts including philosopher Mortimer Adler and University of Chicago sociologist William Julius Wilson. Moyers engaged voices and ideas that had been seldom if ever heard on television, and, in many instances, the transcribed versions of his series became best-selling books as well (*The Power of Myth*, 1988; *The Secret Government*, 1988; *A World of Ideas*, 1989; *A World of Ideas II*, 1990, *Healing and the Mind*, 1992). Joseph Campbell's *The Power of Myth* was on the New York Times best-seller list for more than a year and sold 750,000 copies within the first four years of its publication.

Moyers's television work has been as prolific as his publishing record. In all, he produced more than 600 hours of programming (filmed and videotaped conversations and documentaries) between 1971 and 1989, which comes out to 33 hours of programming a year, or the equivalent of more than half an hour of programming a week for 18 years. Moyers broadcast another 125 programs between 1989 and 1992, working with a series of producers—27 of them on the first two *World of Ideas* series alone. He formed his own company, Public Affairs Television, in 1986 and began to distribute his own shows.

By the early 1990s, Moyers had established himself as a significant figure of television talk, his power and influence providing him access to corridors of power and policy. In January 1992, he was invited for a rare overnight visit with president-elect Bill Clinton to discuss the nation's problems before the Clinton inaugural. A survey of the video holdings of a single large state university at the end of the 1990s showed almost 100 holdings bearing Moyers's name. By this time, he had also received 67 prizes and awards in recognition of his work.

Working closely with his wife, Judith Davidson, as creative collaborator and president of the Public Affairs Television production company, Moyers has continued his prolific output into the 21st century. In January 2002, he began hosting a new weekly PBS series, *Now with Bill Moyers*, which covers stories from angles and with the kind of perspectives and depth that viewers have come to expect from this veteran writer, publisher, and broadcast journalist.

Over his long career, Moyers has become one of the few broadcast journalists who might be said to approach the stature of Murrow. If Murrow founded broadcast journalism, then Moyers has significantly extended its traditions.

MSNBC

Cable News Service

MSNBC is a 24-hour, advertising-supported cable and online news service. Envisioned as a fully integrated cable television and Internet-based interactive product, MSNBC is a joint venture between Microsoft and the National Broadcasting Company (NBC). While the slower-than-expected convergence of television and computing has made MSNBC’s promise of a unified service difficult to fulfill, MSNBC’s entry helped invigorate the 24-hour cable news category and advanced the development of interactive news. MSNBC.com has become the number one news and information website in the United States. The MSNBC cable network has been described as “confused” because of an unsettling churn of program offerings and is an also-ran in its competition for viewers with Cable News Network (CNN) and the FOX News Channel (FNC).

Announced with much fanfare in December 1995, the partnership’s financial arrangement called for Microsoft to pay $220 million for 50 percent of NBC’s America’s Talking cable network that was converted to MSNBC, plus $250 million for the network’s annual costs. Well funded and armed with NBC’s news-gathering and Microsoft’s technology resources, MSNBC launched on July 15, 1996.
MSNBC

MSNBC online’s challenges included attracting Internet users to the site and initiating untested interactive video technology to a mass audience. The website’s rollout, supported by cross promotion on Microsoft’s websites and NBC’s television outlets, has been highly successful. MSNBC.com was named the number one general news site on the Web by Internet ratings service PC Meter just eight months after its introduction. It has held that distinction in Jupiter Media Metrix’s Internet ratings for many months since, including all of 1999 and 2000.

MSNBC.com’s leadership position is built on technological and content advantages. The site began with text, graphics, and audio programming. A relaunch in August 1997 improved navigability and added technical capabilities that enabled streaming video news, which has grown in importance as work and more recently home environments have upgraded to broadband Internet access. Alliances with the websites of dozens of local television and print media, plus respected national outlets such as Newsweek and the Washington Post, have increased the depth and breadth of the site’s content. Highly successful at attracting an audience, MSNBC.com’s financial future is less clear amid the severe post–September 11, 2001, downturn in the online advertising market.

MSNBC cable launched in a respectable 22.5 million cable television homes with support from outdoor and print advertising, plus cross-platform promotion on the NBC broadcast network and Microsoft websites. MSNBC’s acceptance by cable system operators was an early concern, but carriage of the fledgling network grew steadily as agreements were sealed with major cable system operators such as TeleCommunications, Inc. (now AT&T Broadband) and Time Warner Cable.

Programming the network with content cable news viewers find compelling has proved to be more difficult. Hoping to attract younger, Generation X viewers, the network’s initial strategy was to feature well-known NBC News talent on a hip, Starbucks-style set, complete with brick wall and open metalwork. Daytime news coverage was anchored by John Gibson, Jodi Applegate, and John Seigenthaler. Prime-time programming centered on three shows, The News with Brian Williams; The Site, a youth-oriented new media and technology program; and InterNight, a talk show alternatively hosted by Katie Couric, Bob Costas, Tom Brokaw, and others. This schedule was supplemented by repeats of current shows and repurposed content from NBC News.

To fill out its schedule in its first year, a deal was made to simulcast Don Imus’s syndicated radio show weekday mornings. The network began recycling NBC’s Dateline shows, and Time and Again, hosted by Jane Pauley, was created around repackaged NBC programming and old news footage. In addition, John Hockenberry joined MSNBC from the American Broadcasting Company (ABC) to host Edgewise on weekends.

By August 1997, MSNBC was reaching 38 million cable households, and viewership was growing, in part because of the death on August 31 of Diana, Princess of Wales. Nielsen Media Research reported that third-quarter 1997 prime-time ratings for MSNBC averaged 99,000 households compared with 24,000 and 766,000 for FNC and CNN, respectively.

Under growing pressure to build its audience, MSNBC continued molding its program lineup in its second year by pulling the critically acclaimed show The Site and recruiting Keith Olbermann of the Entertainment and Sports Network’s (ESPN’s) Sports Center and Charles Grodin to host their own shows. The network also went “tabloid” with extended coverage and discussion of sensational stories such as the death of JonBenet Ramsey and the sexual activities of broadcaster Marv Albert.

Cable system carriage continued apace, and after two years MSNBC was reaching 42 million households. Competition for viewers among the cable news networks was intensifying, and by January 1999, amid the Monica Lewinsky scandal and President Clinton’s impeachment trial, rival FNC’s prime-time household viewership surpassed MSNBC’s. MSNBC was already reworking its schedule to offset FNC’s fast-growing audience. Keith Olbermann’s Big Show was canceled. John McLaughlin of The McLaughlin Group and Oliver North were recruited to host McLaughlin Special Report and Equal Time, respectively.

In April 1999, MSNBC turned to Mullen Advertising, based in Wenham, Massachusetts, for aid in attracting 25- to 44-year-old viewers. Nevertheless, at its three-year anniversary, MSNBC’s viewership remained a concern to be addressed by yet more programming changes. A prime-time magazine-type tabloid series, Special Edition, debuted with a segment profiling serial killers. Headlines & Legends with Matt Lauer, a biography show, was introduced in an attempt to build prime-time appointment viewing.

By January 2000, 52 million cable households could watch MSNBC, and, as hoped, the network was attracting youthful viewers with an average age of 50 years old compared with 58 for CNN and 56 for FNC. Apparently, attracting a younger audience did little to address MSNBC’s audience shortfall. October 2000’s audience ratings showed that MSNBC still trailed its competitors in prime-time and total day average audience.
The 2000 presidential election and its aftermath benefited all three cable news networks. Viewership was up, and advertising was easier to sell, even with the weakening U.S. economy. MSNBC turned profitable late in 2000, but its second-quarter 2001 prime-time viewership averaged just 247,000 homes. FNC averaged 436,000 households and CNN 483,000.

The September 11, 2001, terrorist attacks on the Pentagon and World Trade Center fixated the nation and drove viewership higher. News of anthrax scares and the search for Osama bin Laden in Afghanistan helped retain viewers, but to keep them without a constant stream of breaking news, the cable news services turned to established personalities. CNN lured Paula Zahn from FNC to anchor news. Geraldo Rivera joined FNC as a war correspondent. MSNBC's entry in this competition was relative unknown Ashleigh Banfield, who attracted notice while covering the 2000 presidential election and earned recognition for her September 11 coverage when she kept reporting at the north tower of the World Trade Center as it collapsed. Unseasoned, irreverent, and fashionable, Banfield was given her own prime-time show, *A Region in Conflict*, that has taken her to Afghanistan and the Middle East.

For all of 2001, MSNBC reached on average a mere 382,000 prime-time homes versus CNN's 816,000 and FNC's 675,000. FNC's ability to attract viewers further surprised its competitors when it beat CNN in total day and prime-time ratings for January 2002. Ever in search of a programming solution to its viewership quandary, MSNBC hired Alan Keyes, former conservative presidential candidate and author, to host *Alan Keyes Is Making Sense*. On the other end of the political spectrum, in April 2002, MSNBC signed a contract with former talk show mainstay Phil Donahue to host a prime-time current events program. *Donahue* had its debut in July 2002, but it was canceled after six months on the air, having consistently placed low in the ratings.

Now available in over 74 million households, MSNBC's average prime-time audience is less than half of FNC's and CNN's. MSNBC also trails distantly in viewership within the coveted 25-to-54 age-group. FNC has distinguished itself as a commentator-driven, viewpoint network, while CNN has long been a reporter-driven news-gathering service. Despite years of programming adjustments, MSNBC continues to struggle with no clear editorial direction.

**MTV**

**U.S. Cable Network**

MTV (Music Television) is the oldest and most influential U.S. cable network specializing in music-related programming. It was launched on August 1, 1981, with the words "Ladies and gentlemen, rock and roll," spoken by John Lack, one of the creators of MTV. This introduction was immediately followed by a music video for the song "Video Killed the Radio Star," by the Buggles. The song title proved somewhat prophetic, as MTV greatly transformed the nature of music-industry stardom over the next several years. At the same time, MTV became a major presence in the cable-TV industry and the American cultural landscape.

One of the earliest and greatest cable success stories, MTV was established by Warner Amex Satellite Entertainment Company (WASEC) after extensive marketing research. The key to MTV's viability, at least initially, was the availability of low-cost programming in the form of music videos. Originally, these were provided free by record companies, which thought of them as advertising for their records and performers.
MTV presented one video after another in a constant “flow” that contrasted with the discrete individual programs found on other television networks. Clips were repeated from time to time according to a light, medium, or heavy “rotation” schedule. In this respect, MTV was like top-40 radio (it even had video jockeys, or VJs, similar to radio disk jockeys). Moreover, it soon became apparent that MTV could “break” a recording act, just as radio had done for decades.

The visual portion of a video usually consists of live concert footage or, more commonly, lip synching and pantomimed instrument playing by the recording artist(s). Dancing is also very common. In many cases, there is also a dramatic or narrative concept, sometimes grounded in the song lyrics. The “acting” in a concept video is usually done by the musician(s), although in some cases (e.g., “Crazy” and “Cryin’” by Aerosmith), the video cuts away from the band to actors who act out a drama inspired by the lyrics. The combination of elliptical storylines, record-aside soundtrack, lip synching, and direct address to the camera seemed so novel in the early 1980s that music video was often referred to as a new art form. The content of the new art was sometimes bold (and controversial) in its treatment of sex, violence, and other sensitive topics.

Many of the earliest MTV videos came from Great Britain, where the tradition of making promo clips was fairly well developed. One of the earliest indications of MTV’s commercial importance was the success of the British band Duran Duran in the U.S. market. This band had great visual appeal and made interesting videos but was not receiving radio airplay in the United States as of 1981. In markets where MTV was available, the network’s airing of Duran Duran’s videos made the band immediately popular. Ultimately, MTV proved to be immensely important to the careers of numerous artists, including Madonna, Michael Jackson, Prince, Peter Gabriel, U2, N’Sync, and Britney Spears as well as Duran Duran.

Andrew Goodwin identifies three phases in the history of MTV. The real ascendance of the network began in 1983 with phase 2, the so-called second launch, when MTV became available in Manhattan and Los Angeles. Phase 3 began in 1986, following Viacom’s purchase of MTV from Warner Amex and the departure of Robert Pittman as the network’s president and chief executive officer. Pittman had been largely responsible for leading MTV down the programming path of flow and narrowcasting. By 1986, however, MTV’s ratings were in decline as a result of a too-narrow musical palette.

Throughout its so-called third phase, MTV diversified its musical offerings, most notably into rap, dance music, and heavy metal. To some extent, these genres were segregated into their own program slots (Yo! MTV Raps, Club MTV, and Headbangers’ Ball, respectively). At the same time, the move toward discrete programs increasingly became a move away from music video. In the process, MTV became more like a full-service network, offering news, sports, sitcoms, documentaries, cartoons, game shows, and other traditional TV fare. Often these programs were also musical in some sense (Beavis and Butt-Head), but sometimes they were not (reruns of Speed Racer).

We might now identify a fourth phase in MTV’s history, dating from the late 1990s, when MTV itself became a sort of “flagship” network among a stable of branded subsidiaries. Even before this, much of the musical content displaced from MTV, especially soft rock and other “adult” music, had landed on Video Hits 1 (VH1), a second video channel owned by parent company MTV Networks (which, in turn, is a subsidiary of Viacom). Launched in 1985, VH1 quickly acquired a reputation as “video valium” for yuppies. For several years, the channel had an indistinct image and languished in the shadow of MTV, but makeovers in 1989 and (especially) 1994 raised the younger network’s profile. By 1994, VH1 was playing slightly harder music and “breaking” recording artists, such as Melissa Etheridge. Meanwhile, MTV continued to play innovative videos on programs such as Amp and 120 Minutes, but these programs aired at odd hours. Nonmusical programs such as The Real World, which debuted in 1992 and gave birth to the “reality” genre, sometimes seemed to threaten MTV’s identity as a music network.

By about 1998, MTV was again emphasizing music, but its most popular program, Total Request Live, or TRL, treated videos as raw material to be talked over and covered up by all manner of graphics and inserts. By this time, sister network VH1 was also relying more on traditionally packaged programs, such as Behind the Music and Pop Up Video (which, along with Beavis and Butt-Head, paved the way for TRL-style “vandalizing” of video clips). Flow and format, the original ideas behind MTV (and VH1), had by now become secondary components, at best, in the programming philosophy of both networks. These changes were perhaps best exemplified on MTV in the surprise 2002 hit The Osbournes, a program that seemed to meld multiple aspects of the channel’s history. Focused on the “family life” of notorious rocker Ozzy Osbourne, his wife, and two of their children, the series combined a fascination with music and musicians, the “inside views” developed with The Real World, and the (perhaps unintended) blankness of Beavis and Butt-Head. Following an initial run and tough negotiations with
the family, the series was renewed for two more seasons and by then had led to copycat programming on other networks.

With home satellite reception and digital cable on the rise, MTV launched M2 (also called MTV2) in 1996. The new channel was very similar to what MTV had originally been. It played music videos in a continuous flow, with only occasional interruptions for video jockey patter, promos, and the like. In the early 2000s, MTV Networks exploited the original flow idea even further by launching VH1 Classic Rock (which specialized in 1980s videos) and MTVX (which played mostly hard rock videos). Despite their forays into nonmusical programming, MTV and VH1 are by far the most important outlets for music-video programming in the United States. They have achieved almost a monopoly status, one that has caught the attention of scholars (especially Jack Banks), record companies, and the government. Many competing music-video programs and networks have fallen by the wayside or have been absorbed by Viacom. Most recently, Viacom bought its last remaining major U.S. competitors in music-video programming: Country Music Television (CMT) and The Nashville Network (TNN, subsequently renamed The National Network) in 1997 and Black Entertainment Television (BET) in 2000.

Music video and MTV are major ingredients of television programming internationally. MTV Europe, launched in 1987, was followed by an Asian service in 1991 and MTV Latino in 1993. VH1 established a European service in 1994. In 2001 an international satellite directory listed more than 20 MTV channels worldwide, along with 7 VH1 services and 3 MTV2 channels.

Both economically and aesthetically, MTV has wrought major changes in the entertainment industries. By combining music with television in a new way, MTV has charted a path for both industries (and movies as well) into a future of postmodern synergy.

MuchMusic

Canadian Music Television Programming Service

MuchMusic, a 24-hour Canadian music television station and satellite-to-cable programming service, was launched nationally in September 1984. In a satellite-to-cable structure that relied for its success on the massive penetration of cable coverage of urban Canada, MuchMusic was part of the Canadian Radio-television and Telecommunications Commission (CRTC)—regulated introduction of specialty services on cable two years after the introduction of pay television to Canada. Similar to its U.S. counterpart Music Television (MTV), MuchMusic was instrumental in setting the national agenda of Canadian popular music tastes. The predominant format of the station was and continues to be video clips of artists or music videos received from record companies free of charge. A French sister station, MusiquePlus, was established in 1986, primarily for the Quebec market.

Stylistically, MuchMusic bears the marks of its creative origin. The station's managing team was connected to the syndicated New Music program (1978— ) developed and sold by Citytv of Toronto. The executive producer of the New Music program and the original owner and manager of Citytv in Toronto was Moses Znaimer. Along with John Martin, Znaimer designed the "live" emphasis of the set of MuchMusic that has made MuchMusic so distinctively different

1549
from both MTV and most of the rest of Canadian television. The set of MuchMusic is the actual video paraphernalia of a television station and is inherently "studioless." Between their introductions of new videos, the video jockeys, or VJs, negotiate themselves around the various machines, lights, and screens to chat with the technicians and producers. Indeed, because of this exposure, technicians have even moved into before-the-camera roles. The intention behind this design is to structure an environment that resonates with the youthfulness and exuberance of popular music itself. The set, which often moves with portable cameras to exterior locations, produces a sense of immediacy and spontaneity that, through its weekly reach, has captured the sought-after demographic of youths and young adults in Canada.

MuchMusic is owned and operated by CHUM Limited of Toronto, and the name itself is a play on the corporate name. CHUM operates the only private radio network in Canada and has successfully owned and operated a number of music-oriented radio stations. CHUM also is the owner of Citytv (purchased in 1981 from Znaimer), a Toronto based free-to-air UHF (ultra-high frequency) station that has been distributed by cable to most of southern Ontario, the most heavily populated region of Canada. Its background in music broadcasting allowed CHUM to successfully win the license of the first and only English-language music television station in Canada. The facilities of Citytv in Toronto served as the first home for MuchMusic.

Self-titled "the nation's music station," MuchMusic gradually moved to a format that allowed it to target and promote itself like other television services. Originally a flow service that resembled radio in its seamless quality, MuchMusic relied on its mixed rotation of video clips and the personalities of the VJs to maintain the audience. Later, however, the station began making identifiable programs that would at least allow it to garner the free publicity of listings in TV program guides and to sell portions of time for specific advertisers. It still maintains eight hours of programming, which is taped and repeated three times to fill the 24-hour schedule. In the 1980s, these programming blocks included the Pepsi Powerhour and the singly sponsored Coca-Cola Countdown. The "spotlight" feature also transformed the mix of rotations of current music into a half-hour retrospective on an individual artist's or group's career. To coordinate with a slightly different demographic of daytime listeners, MuchMusic programmed a show called MushMusic, which showcased softer and more romantic ballads. Other programs also coordinated with and competed with the rest of television. A late-night weekend program called City Limits attempted to showcase the more avant-garde, alternative visuals and music. In a more prime-time evening slot, a shorter segment, Combat du Clip, was programmed; here a returning favorite video clip faced a challenger clip.

MuchMusic's license requirements have posed questions about what kinds of programming are included under the definition of music. In the mid-1980s, MuchMusic was not allowed to show movies, even those with a musical theme or premise. It was likewise questionable whether television programs such as The Partridge Family or The Monkees could be shown on the station. In recent years, there has been a relaxation of what constitutes music programming, and this shift has allowed MuchMusic a freer hand in organizing a schedule that maintains its key marketing demographics of youth and young adult. Regulatory requirements have demanded, however, that a greater range of musical material be part of the national music television station. Hence, MuchMusic programmed the country music half-hour Outlaws and Heroes. The CRTC has likewise continued to maintain that the station must stick close to its license mandate: its top-rated program of 1993, the cartoon series Ren and Stimpy, did not meet a minimum musical-content rule and was ordered removed. With the advent of new digital channels, these regulations have been in constant flux, and MuchMusic continues to expand its presence through multichanneling its content.

From its inception, MuchMusic has also provided a percentage of its revenues (currently 5 percent of its gross revenues) for the production of Canadian independent music videos. The production company Videofact Foundation produces clips for emerging popular music groups in both English and French and spent $6 million to produce 820 videos in its first ten years. The production of Canadian sources allows MuchMusic easily to surpass its 10 percent Canadian-content quota established in consultation with the CRTC. This connection to a national popular culture is differently constructed than that produced by public broadcasters such as the Canadian Broadcasting Corporation (CBC). MuchMusic's stance is thus more outward than inward looking. It has actively sought out other markets for its program package. Currently, it is available to more than 4 million cable subscribers through various services in the United States. It has a reach that includes both the United Kingdom and parts of Latin America. The station has been negotiating for inclusion on direct broadcast satellite services for greater coverage of a complete North America. The station format/concept has been sold to New Zealand, and MuchMusic has showcased well in Europe, often outdrawing its more established rival, MTV.
MuchMusic has continued to brand its success with its national youth audience, and it has exported that strategy internationally with equal financial rewards. Contained under the Much brand are specialty and digital channels that cater to specific musical tastes. Thus, relatively new stations, such as MuchmoreMusic, and digital channels, such MuchLoud and MuchVibe, continue to extend the MuchMusic niche of television focused on music and youth across Canada.

Munroe, Carmen

British Actor

Carmen Munroe is one of Britain’s leading black actresses. Born in Guyana (then British Guiana), she went to Britain in 1951 and gained early acting experience with the West Indian Students’ Drama Group. Munroe made her professional stage debut in 1962 and later played major roles in London’s West End theater, including Jean Genet’s The Blacks (1970). When she played Orinthia, the king’s mistress, in George Bernard Shaw’s The Apple Cart (1970), she said it was the first time she had been cast in a leading role not written for a black actress. Since the 1970s, Munroe has played an important part in the development of black theater in Britain, scoring a personal triumph in 1987 as the overzealous pastor of a Harlem “storefront” church in James Baldwin’s The Amen Corner. In 1993, she won a best actress award from Time Out magazine for Alice Childress’s Trouble in Mind.

In 1965 Munroe made an early television appearance in Fable. In this controversial British Broadcasting Corporation (BBC) drama, writer John Hopkins reversed apartheid and located it in Britain so that black people ran the country and whites were subjected to enforced population-movement and pass laws. However, this innovative and highly charged play did not have the reception anticipated from audiences. Viewers were put off, while critics thought the play heavy-handed and moralistic.

In 1967 Munroe was featured in an episode of Rainbow City, one of the first British television series to include a black actor in a leading role. Since that time, she has demonstrated her acting range in numerous other appearances, with roles in a mixture of populist dramas and situation comedies, as well as impressive single dramas. They include Doctor Who (1967), In the Beautiful Caribbean (1972), Ted (1972), Shakespeare’s Country (1973), General Hospital (1974), The Fosters (1976), A Black Christmas (1977) with Norman Beaton, Mixed Blessings (1978), A Hole in Babylon (1979), Rumpole of the Bailey (1983), and The Hope and the Glory (1984).

In 1989 Munroe was in Desmond’s, one of Channel 4’s most successful situation comedy programs. Costarring Norman Beaton as the proprietor of a barbershop in south London, Desmond’s has been one of the few British television series to feature an almost entirely black cast. For five years, this appealing series won critical acclaim and awards for its humorous exploration of the conflict between the views of young British-born blacks and the values of the older generation who grew up in the Caribbean.

In between her appearances in Desmond’s, Munroe took part in Ebony People (1989), sharing her experiences of the acting world with a studio audience, and Black and White in Colour (1992), a documentary tracing the history of black people in British television. In 1992, Munroe gave an outstanding performance as Essie Robeson in a BBC play called A Song at Twilight. This emotional drama, shown in the anthology series Encounters, explored an imaginary meeting in 1958 between British socialist radical Aneurin Bevan and
Munroe, Carmen

and the black American singer and militant activist Paul Robeson. Another recent role for Munroe was in the two-part drama *The Final Passage* (1996), a story of blacks emigrating from the Caribbean to Britain in the late 1950s.

### Muppet Show, The

**U.S. Syndicated Comedy/Variety Program**

From its first broadcast in 1976 to its 1981 finale, *The Muppet Show* was groundbreaking television. A syndicated variety show starring a troupe of puppets, it became more popular than anyone but its creator, Jim Henson, could have imagined. During its five seasons of inspired insanity, it was broadcast in more than 100 countries.

The wonderful children’s show *Sesame Street*, also starring Henson’s Muppets, had been broadcast since late 1969. For Henson, its success was a mixed blessing, as network executives began to see the Muppets strictly as children’s entertainment. *The Muppet Show* proved that Henson’s innovative puppets could appeal equally to children and adults. Its setting, Muppet Theater, allowed onstage sketches and songs as well as backstage antics. Except for Kermit the Frog, a Sesame Street favorite, *The Muppet Show* featured an entirely new cast of Muppets: Fozzie Bear, the lovably inept comic and Kermit’s second banana; Miss Piggy, a glamorous, Rubenesque starlet and Kermit’s would-be love interest; Gonzo the Great, a buzzardlike creature with a chicken fetish; Rowlf, the imperturbable piano-playing dog; Statler and Waldorf, two geriatric hecklers; The Electric Mayhem, the ultracool house...
The Muppet Show. Gonzo, Kermit the Frog, Scooter, Fozzie Bear, Miss Piggy, Camilla, Animal, Dr. Teeth, Rowlff, Dr. Bunsen, Statler & Waldorf, Beaker. 1976–81.

Courtesy of the Everett Collection
band; and Scooter, hired as Kermit’s gofer because his uncle owned the theater. The show also featured countless other Muppets, from a 12-inch rat named Rizzo to a seven-foot monster named Sweetums.

But Kermit was undeniably the glue that held these lunatics together. As producer/host of Muppet Theater, Kermit had the considerable task of keeping guests and Muppets happy, fending off Miss Piggy’s advances, bolstering Fozzie’s confidence after another joke fell flat, and tolerating Gonzo’s bizarre stunts. As performed by Henson, Kermit was the lone sane creature in the asylum, the viewers’ bridge to world of The Muppet Show, a small, green Everyman (Everyfrog) just trying to do his job in the midst of gleeful craziness.

The partnership between Henson and Frank Oz produced such puppet pairs as Miss Piggy and Kermit, Sesame Street’s Ernie and Bert, and Kermit and Fozzie Bear. The two also teamed up for the Swedish Chef, a Muppet with Henson’s voice and Oz’s hands, with hilarious results. Oz’s nasal boom was a perfect counterpoint to Henson’s gentle voice, and the two performers complemented each other well. Other Muppet Show puppets included Richard Hunt (Sweetums, Scooter, Statler, and Beaker), Dave Goelz (Gonzo and Dr. Bunsen Honeydew), Jerry Nelson (Floyd Pepper and Lew Zealand), and Steve Whitmire (Rizzo the Rat).

Both backstage and onstage, lunacy ruled at Muppet Theater. Memorable sketches included pig Vikings pillaging towns while singing the Village People’s “In the Navy,” one creature devouring another while singing “I’ve Got You Under My Skin,” and the great ballet dancer Rudolf Nureyev in a pas de deux with a human-size lady pig.

Often, the guest stars were the perfect catalyst for Muppet nuttiness. The frequently starstruck Miss Piggy swooned at guest Christopher Reeve’s every move; in another episode, she locked Kermit in a trunk because guest Linda Ronstadt showed too much interest in the little green host. Guest Gene Kelly thought he had been invited just to watch the show; he stayed backstage chatting with the rats until Kermit finally convinced him to perform “Singing in the Rain” on a near-perfect replica of the film’s street set. Victor Borge and Rowlf the Dog played a piano duet. Diva Beverly Sills gave Gonzo a lesson in the fine art of balancing a spoon on one’s nose.

During the first season, writes Christopher Finch in his book Jim Henson: The Works, guest stars were mostly personal friends of Henson or his manager, Bernie Brillstein. But by the third season, popular performers were practically lining up to appear with the beloved puppets. The Muppet Show’s guest roster reads like a “Who’s Who” of late 1970s performers, most notably Roger Moore, John Cleese, Harry Belafonte, Dizzy Gillespie, Lynn Redgrave, Diana Ross, Alice Cooper, Julie Andrews, George Burns, Joel Grey, Steve Martin, Ruth Buzzi, and both Candice and Edgar Bergen.

The Muppets’ TV history starts long before Sesame Street. From 1955 to 1961, Henson’s Sam and Friends, a five-minute live show, aired twice nightly on WRC-TV in Washington, D.C. Sam and Friends afforded Kermit’s debut; it also featured several Muppets that did not make the cut for The Muppet Show. In 1961, the Muppets began making regular guest appearances on the National Broadcasting Company’s (NBC’s) Today. The following year, Rowlf made his debut in a Purina dog food commercial; in 1963, the affable canine began regular appearances on The Jimmy Dean Show. The Muppets also made regular appearances on The Ed Sullivan Show from 1966 to 1971. In 1975, the year Henson formed an agreement with Lord Lew Grade to produce 24 episodes of The Muppet Show, Henson also created an entirely new set of Muppets that were featured on Saturday Night Live in its first season.

During The Muppet Show’s heyday in 1979, The Muppet Movie was released in the United States, beginning the Muppets’ transition from TV to film. Several movies featured The Muppet Show cast, including The Great Muppet Caper, The Muppets Take Manhattan, The Muppets’ Christmas Carol, and The Muppets’ Treasure Island. Henson also produced several other TV shows featuring the Muppets after The Muppet Show ended: Fraggle Rock, focusing on an underground community of fun-loving Fraggles, hardworking Doozers, and odious Gorgs; The Storyteller, which aired only in England; Muppet Babies, a children’s cartoon featuring baby versions of The Muppet Show’s cast; and several other short-lived productions.

On May 16, 1990, Jim Henson died suddenly after a short illness. He was 54 years old. The Jim Henson Company continues to produce Muppet-related projects for film, television, and the stage. Frank Oz has enjoyed a notable career as a film director, while Kermit, Miss Piggy, and other Muppet characters regularly appear on talk shows and other television programs as well as in films.

Murder, She Wrote
U.S. Mystery

Murder, She Wrote, starring Angela Lansbury as amateur sleuth and mystery writer Jessica Fletcher, has been the only significant dramatic series on American television to feature an older woman in the sole leading role. Lansbury, who has received Oscar nominations and Tony Awards over her long film and stage career, started the series at age 58 and is now probably most widely recognized for her television character.

Creators Richard Levinson, William Link, and Peter S. Fischer brought with them a combined résumé from Columbo, Mannix, Alfred Hitchcock Presents, and Ellery Queen. In Murder, She Wrote, they created a classical mystery program set in the fictional seaside village of Cabot Cove, Maine. The program quickly became one of the Columbia Broadcasting System’s (CBS’s) most successful offerings and among the most expensive for it to produce. It frequently placed first among the network’s lineup in the Nielsen ratings and was a champion in its time slot, 8:00 p.m. Sundays. It finished in the Nielsen top ten during most of its run. The series’ final episode, “Death by Demographics,” served as an oblique comment on the network’s decision to shift the program from its comfortable time slot to Thursday evenings, when it was forced to do battle against the runaway “must-see” TV hit, Friends.

The series narrative remained fairly stable. Widowed Jessica Fletcher, a retired high school English teacher, became a best-selling mystery author after her nephew, Grady, sent a manuscript to a book publisher. She quickly became world famous and affluent, but she maintains the rambling, old house that she and her longtime husband, Frank, shared in Cabot Cove. Jes-
sica remains close to old friends in the village, including Dr. Seth Haslett, played by character actor William Windom. A few cast changes occurred; most significantly, Tom Bosley, who portrayed bumbling Sheriff Amos Tupper, left after four seasons to pursue his own mystery series. Familiar former television stars and unknown character actors appeared as guests on the program.

In the earlier seasons, a matronly Jessica frequently bicycled across town, boiled lobsters, planned fishing trips on a friend’s trawler, or dropped in at the beauty parlor. She wore conservative pantsuits and spoke with an occasional New England influence. Her signature was her ancient manual typewriter, and the opening credits showed her tapping merrily away on one of her mystery novels. Gradually, the character evolved. The manual typewriter eventually shared time in the opening sequence with Jessica’s personal computer (which, itself, was involved in two mysteries). Jessica added a second residence, a Manhattan apartment, and the character became more glamorous in appearance, coinciding with Lansbury’s own personal makeover in the 1988–89 season.

_Murder, She Wrote_’s formula is true mystery: Jessica encounters several people displaying animosity toward a mean person. An innocent person, often a friend or relative of Jessica’s, publicly threatens or criticizes the bully. The audience sees the bully murdered, but the killer’s identity is hidden. The authorities accuse Jessica’s ally, based on circumstantial evidence. Jessica notices—and the camera lingers on—details that seem inconsequential but later prove central to the solution. She investigates, uncovering various means, motives, and opportunities and eliminating suspects. A few minutes before the program ends, she suddenly realizes the last piece of the puzzle and announces that she knows who the killer is. She confronts the killer privately, in a group, or with authorities observing off camera. Almost always, the killer confesses, and Jessica presents the person to the police. A final scene often shows Jessica sharing a good-natured exchange with someone, often the wrongly accused friend.

Coincidences abound. Nephew Grady (Michael Horton) is arrested for murder on several occasions, and Jessica always proves him innocent. In fact, each of the many times Jessica’s family members or old, “dear friends” is introduced, one becomes involved in a murder. Tiny Cabot Cove is the site of about 50 of the more than 250 murders Jessica solves. Rarely is a suspect been shown in touch with a lawyer; Jessica always happens to be on the scene when a murder has just taken place and makes time in her schedule to solve the crime. She usually happens upon the body herself. The police never get it right. Her friend is almost always innocent. Jessica is always present when crucial evidence comes to light.

Despite the formulaic nature of the program, the notion that violent death can invade even the quiet world of Jessica Fletcher connects it to old meanings of the mystery genre. The world, as the profession of the mystery writer demonstrates, is not a safe place. The wisdom and acute mental capacity of this older woman are weapons in an ongoing struggle for order.

On the professional rather than the fictional level, Lansbury’s involvement with the series changed over time. In the 1989–90 season, CBS persuaded her to stay with the show after she announced plans to leave. The network cut demands on her time, and Lansbury made only brief appearances in several episodes. She addressed the viewer directly to introduce the evening’s mystery, involving, for example, her sleuthing “friends,” Harry McGraw or Dennis Stanton. And she often returned at the end of the hour, explaining how the mystery was solved. In the following 1992 season, however, Lansbury was back in force assuming the role of executive producer. Her sons and brother were also involved in the production.
However, *Murder, She Wrote* skewed toward older audiences, especially older women, and advertisers will pay much more to attract younger viewers. In the 1994–95 season, the show charged lower advertising rates than competitors, such as *Lois and Clark*, appearing in the same time slot on the rival American Broadcasting Company (ABC). *Lois and Clark* attracted fewer viewers but was watched by more young viewers, hence the higher advertising rate.

At a time when less traditional programs, such as the quirky, more serial *Northern Exposure* and the offbeat *Seinfeld*, were attracting favorable critical notices, *Murder, She Wrote* did not. It attracted instead large numbers of viewers with its combination of a highly ritualistic formula and its progressive treatment of a 60-plus heroine played by a popular star. Jessica Fletcher is, significantly, an *amateur*, unlike James Rockford or Thomas Magnum. However, although unfailingly well behaved, she displays a worldliness about modern life, and she has a career that contributes to her vitality. These elements distinguish her from Agatha Christie's Miss Marple character, to whom she has often been compared.

Since her involvement in *Murder, She Wrote*, Lansbury, the actor, has spoken out on occasion against the tendency for network television to propagate a "masculine mystique" and unfairly favor programs oriented toward younger audiences. (In its Sunday time slots, *Murder, She Wrote* followed another long-running successful program on CBS, *60 Minutes*, which has also collected large numbers of older viewers.) Because portrayals of older people on American television have traditionally infrequent and unflattering (in such silly roles as Fred Sanford of *Sanford and Son*, *Designing Women*'s dotty Bernice, and some of the women of *The Golden Girls*), Lansbury's Jessica Fletcher is especially significant. She has demonstrated that competent, glamorous older women can draw large prime-time audiences. As a result, *Murder, She Wrote* was one of CBS's most valued programs.

Allman, Kevin, "Auntie Angela" (interview), *The Advocate* (September 22, 1992)

Rupert K. Murdoch is the controlling shareholder and chief executive of News Corporation, Ltd. (News Corp), one of the largest and most powerful media companies in the world. In this position, Murdoch has become perhaps the world’s leading media mogul. His bold style, unconventional and visionary approach, and willingness to aggressively assume great risks have made him a figure both admired and disdained throughout the world. His company owns properties on four continents that produce and distribute products in television; films; book, newspaper, and magazine publishing; and online data services.

Murdoch began his rise to the status of media baron in a relatively modest way. He inherited his father’s newspaper holdings in 1952, after estate taxes, consisted of two small Australian papers, the Adelaide News and Sunday Mail. Murdoch was quickly able to reverse the unprofitable states of these newspapers, and he used the new profits to acquire other media properties, thereby exhibiting the fundamental growth strategy that would come to characterize his career. By the late 1960s, Murdoch expanded his newspaper and magazine empire to include British newspaper holdings, first acquiring London’s The News of the World in 1968 and soon thereafter The Sun. It was the transformation of The Sun into a sensationalized tabloid (which, most notoriously, included a regular “Page Three” feature of photos of topless women) that sealed Murdoch’s reputation as a media owner who was willing to pander to his audience’s worst instincts in exchange for commercial acceptance, a label that has dogged Murdoch throughout his career. However, it must be noted that such fears have sometimes proven to be unfounded, as was the case following Murdoch’s 1981 purchase of the revered London Times, which largely retained the stoic editorial character for which it was well known.

In the 1970s, Murdoch entered the U.S. media market by purchasing newspapers and magazines, and he also started the supermarket tabloid The Star. However, it was not until the mid-1980s that Murdoch began to make his mark on American television. His purchase of Metromedia’s independent television stations from John Kluge in 1985 came on the heels of his acquisition of the 20th Century-Fox studio. Murdoch saw the situation as a rare opportunity to purchase a group of choice television stations in the largest U.S. markets, thereby ensuring a distribution vehicle for his new studio’s programs. The combined moves allowed Murdoch to initiate the most serious effort to establish a fourth broadcast television network since the demise of Dumont in the mid-1950s and culminated in the establishment of the FOX Broadcasting Company.

Despite his career’s many successes, Murdoch’s empire nearly collapsed in 1990. Unfavorable conditions in the financial markets, combined with deep losses by some of News Corp’s start-up operations, such as British Sky Broadcasting (BSkyB), and the company’s extremely heavy short-term debt load (the result of many costly acquisitions, such as TV Guide, which News Corp purchased in 1988 from Walter Annenberg’s Triangle Publications) brought the company to the brink of financial ruin. While Murdoch was able to renegotiate the terms of his agreements, which avoided the disaster, News Corp’s financial problems

temporarily placed Murdoch in the unusual position of being unable to aggressively expand his holdings. In fact, he was forced to shed some nonessential assets, including most of his U.S. magazine titles. It was only a relatively short time, however, before the company’s financial picture improved significantly and Murdoch was able to once again resume his familiar patterns of acquisition, as he did when he purchased a controlling interest in Asia’s Star-TV direct broadcast satellite service in 1993.

As perhaps befits a man with such a great level of power and influence, Murdoch has often found himself at the center of political firestorms. He became widely scorned by labor organizations and pro-labor politicians around the world because of his hard-line tactics in battling the British newspaper workers’ unions in the mid-1980s. His 1985 purchase of the Metromedia television stations required him to become an American citizen to comply with Federal Communications Commission (FCC) restrictions on foreign ownership of U.S. television stations; many felt he received inordinately preferential treatment by the Reagan administration in expediting the citizenship process. His FOX television network was able to avoid complying with the FCC’s “Financial Interest and Syndication” (Fin-Syn) rules—first by airing fewer hours of programming than were stipulated in the legal definition of a “network” and later by receiving a temporary FCC waiver of the rules—an action the other three broadcast networks vigorously opposed. In addition, Murdoch was the specific target of a 1988 effort by Senator Edward Kennedy (at the time a frequent target of Murdoch’s Boston Herald newspaper) to revoke another FCC ruling, one that waived cross-ownership restrictions that would have prevented Murdoch from owning both newspapers and television stations in New York and Boston. The end result of Kennedy’s efforts was that Murdoch eventually sold the New York Post (he later would receive a new waiver that allowed him to reacquire the struggling paper in 1993) and put Boston’s WFXT-TV into an independent trust.

A mid-1990s political storm held the potential to be the most costly that had ever surrounded Murdoch. Nearly ten years after he had become a U.S. citizen and after many millions of dollars had been invested in the FOX network and its owned-and-operated stations, questions arose related to Murdoch’s avoidance of the FCC’s restrictions on foreign ownership of television stations. The National Association for the Advancement of Colored People (NAACP), which was seeking to block the purchase of a Philadelphia, Pennsylvania, television station by FOX, asked the FCC to investigate whether it was Murdoch who owned the FOX stations, as he and News Corp claimed, or whether Australian-based News Corp was the legal owner, which would be in violation of the rules. The National Broadcasting Company (NBC) joined the NAACP in asking the FCC to pursue the investigation but eventually withdrew from the complaint after gaining access for their programming on Murdoch’s Star-TV service in Asia. However, the NAACP continued to pursue the issue.

Murdoch’s media empire continued to grow and flourish as the new century approached. News Corp expanded its holdings of sports-related properties, most notably adding the Los Angeles Dodgers Major League Baseball franchise (along with its valuable real estate holdings) in 1998, and it also obtained full control over Liberty Media’s regional cable sports channels in 1999, which added to FOX Sports’ dominant presence in the sports television field. Murdoch also positioned his company for the future by merging TV Guide with Gemstar International Group in 2000, which effectively put News Corp at the very center of the burgeoning field of interactive television services. With the purchase of a major share of the Italian pay-cable service Telepiu from beleaguered French conglomerate Vivendi in the summer of 2002, Murdoch expanded his European holdings as well as his stake in pay-television services that could carry FOX productions. A rare failed effort occurred earlier that year when Murdoch attempted to merge his satellite operations with direct-to-home provider DirecTV. He lost out to rival Charles Ergen, owner of the other major satellite provider, EchoStar.

Murdoch also spent these years preparing for the ultimate succession of his children to News Corp leadership posts. His sons, Lachlan and James, were groomed for high-level positions within the organization, as was his daughter, Elisabeth, who left News Corp in 2000 to start her own independent production company. Younger son James has been in charge of News Corp’s new media efforts and, at the time of this writing, is chief executive at Star TV, the group’s Asian satellite broadcaster. Lachlan, who is most often considered to be his father’s heir apparent, has led the company’s print and publishing operations in Australia and New York and was named deputy chief operating officer of News Corporation, Ltd, in 2000.

Rupert Murdoch has been one of the most successful international entrepreneurs of his time and a lightning rod for controversy in many parts of the world. While other global media companies, such as AOL Time Warner and Bertelsmann AG, possess power and influence comparable to that of News Corp, Murdoch often appears to stand alone among the ranks of modern media moguls. This is because, unlike those other companies, News Corp is clearly identified as a corpo-
rate arm that is strongly controlled by a single individual. It is therefore fair to say that his absolute control over News Corp, with its holdings of some of the world’s most pervasive and influential media properties, makes Murdoch perhaps the single most powerful media magnate ever.

Murphy Brown

U.S. Situation Comedy

Since its premier in 1988, Murphy Brown appeared in the same 9:00–9:30 p.m. slot on the Columbia Broadcasting System’s (CBS’s) Monday night schedule, serving as something of an anchor in that network’s perennial battle against the male-oriented Monday Night Football on the American Broadcasting Company (ABC). The show focused on life behind the scenes at the fictional television series FYI (For Your Information). FYI was represented as a tough, talk-oriented investigative news program, perhaps a little like another CBS mainstay, 60 Minutes. From its beginnings, Murphy Brown established itself as one of

1560
television's premier ensemble comedies, exploring life among the reporters, producers, staff, and friends of *FYI*. However, there is no question that, as the title implies, this ensemble was built around its central character.

As played by Candice Bergen, Murphy Brown was one of the most original, distinctive female characters on television. Smart, determined, and difficult, she did not suffer fools gladly. Her ambition and stubbornness frequently got her into trouble, and she often acted a little foolishly herself.

But what set Murphy apart from so many other female sitcom characters was that when she got into a ridiculous mess, it was not because she was a woman. It was because she was Murphy. She was a crack reporter yet managed to get herself banned from the White House during both the George H.W. Bush and the Bill Clinton administrations. When a corrupt judge fell silent during an interview, Murphy finished grilling him—even though he was dead.

Although Murphy acted tough, Bergen showed the character's vulnerable side as well. Wracked with guilt after the judge's death, Murphy toned down her interviewing style (for a while). And she was genuinely hurt when she did not get an invitation to George H.W. Bush's inaugural ball. All these character developments and revelations built on the fact that the show's pilot introduced Murphy as she returned to the *FYI* set after drying out at the Betty Ford Clinic. The central character, the star of *FYI*, was presented from the very beginning as a recovering alcoholic, vulnerable and flawed. All her foibles and eccentricities were presented in this context, adding richness and depth to the portrayal.

Indeed, throughout the show's run, all the characters and their relationships developed beyond what is typical for a sitcom. The original ensemble included Corky Sherwood (Faith Ford), a Louisiana girl and former Miss America who took a few journalism classes in college but was hired mainly for her looks; Frank Fontana (Joe Regalbuto), ace investigative reporter and irrepresible skirt chaser with a mortal fear of commitment; Jim Dial (Charles Kimbrough), the rigid, serious, eminently competent anchorman; Miles Silverberg (Grant Shaud), a new Harvard graduate, producing *FYI* was his first "real" job; Eldin Berney (Robert Pastorelli), a house painter who worked continually on Murphy's townhouse until her son, Avery, was born, at which time he became Avery's nanny; and Phil (Pat Corley), the all-knowing owner of Phil's Bar, hangout for the *FYI* team.

As a running gag, Murphy also had a parade of secretaries, most of whom were inept and lasted only one episode. A few examples: a young African-American man who spoke only in hip-hop slang, a crash-test dummy, a bickering married couple, and a mental patient. Naturally, whenever Murphy found a good secretary, he or she left by the end of the episode.

Initially, some characters were two-dimensional. Miles existed only to run around acting tense and to annoy Murphy, a 40-year-old woman with a 25-year-old boss. In the pilot, Murphy tells him, "I just can't help thinking about the fact that while I was getting maced at the Democratic Convention in 1968, you were wondering if you'd ever meet Adam West." Corky was a stereotypical southern beauty queen, more interested in appearances than in reporting.

However, as the series progressed, Miles became a competent producer and manager. He grew to be fully capable of holding his own against Murphy, who still tended to underestimate him. And Corky, too, became more a friend than an annoyance to Murphy. A failed marriage tarnished the southern belle's fairy-tale life, making Corky more human and giving her more in common with Murphy. Murphy's feminism and ambition also began to rub off on the younger woman.

Beneath the facade of the serious anchorman, Jim Dial was a warm, caring person, more liberal than he seemed. In a first-season flashback, we see Murphy's
1977 FYI audition; she is dressed like “Annie Hall” and sports a wildly curly mane. Network executives want to hire a more “professional” woman, but Jim convinces them to hire Murphy. Frank, the skirt chaser, never chased Murphy or Corky. Frank and Murphy were a TV rarity: a man and a woman who are close friends, with no sexual tension. Murphy Brown’s plots often parodied actual news events. In the second-season episode “The Memo That Got Away,” a high school journalist hacks into FYI’s computer system and finds an uncomplimentary memo Murphy has written about her co-workers. A similar, real-life incident occurred when a memo written by Today anchor Bryant Gumbel was leaked. In a seventh-season episode, Murphy Brown lampoons the O.J. Simpson trial circus with a story about an astronaut accused of murdering his brother.

Real-life events came head to head with Murphy Brown in the summer of 1992, when Vice President Dan Quayle criticized unwed mothers as violating “family values.” To support his argument, he pointed to the entertainment industry as site of flawed morals. As a specific example, he singled out the fictitious Murphy, who had given birth to son Avery, out of wedlock, in the 1991–92 season finale. Producer Diane English responded to Quayle with her own analysis of the social and cultural conditions, and the exchanges escalated into a national event, a topic for much discussion in the news and on the late-night television talk shows.

In the 1992 season, the series presented an episode devoted to the controversy. In “I Say Potatoe, You Say Potato” (a reference to the vice president’s much-publicized misspelling), Murphy takes Quayle to task, introducing several hardworking, one-parent families on FYI.

In 1993 the character of Peter Hunt was added to the cast, appearing in occasional episodes. Hunt was played by Scott Bakula and became Murphy’s new love interest. In the seventh season, two additional characters were added: Miller Redfield (Christopher Rich), an idiot anchorman on another network show, and McGovern (Paula Korologos), a former Music Television (MTV) personality hired to bring “youth appeal” to FYI. Miller was stereotypically handsome and stupid and was often played against Peter Hunt’s “real” journalistic style. McGovern had more potential; the writers resisted the “slacker” stereotype usually pinned on her generation and instead made her a miniature Murphy, with one exception—she was politically conservative. This fact never failed to annoy Murphy who, in one episode, cut McGovern’s report to less than a minute because she (Murphy) did not like its political slant. McGovern complained to Corky, who offered this advice:

Corky: When I want Murphy to leave me alone, I just let her think she’s getting her way.
Corky: Right. But I don’t care, as long as she leaves me alone!

In the 1994 season, veteran comedian Garry Marshall joined the cast as Stan Lansing, head of the network. The following year Paul Reubens (aka Pee-wee Herman) appeared as Lansing’s fawning (and scheming) nephew. Lily Tomlin became a regular on the series in the ninth season, playing FYI’s new executive producer. The presence of new cast members added a fresh energy to the other characters and the stories, helping to ensure that Murphy Brown would continue to have its way with comedy and social commentary. Other characters (Miles, Eldin, and Phil), however, departed the program before its tenth and final season in 1997–98. That season focused on Murphy’s struggle with breast cancer and concluded with her recovery and the FYI cast deciding to leave the air.

Thomas S. Murphy was chair and chief executive officer of Capital Cities/ABC until 1996, when Disney bought the company and Murphy retired. Murphy built Capital Cities/ABC into a multi-billion-dollar international media conglomerate. In addition to leading Capital Cities from its days as a small television holding company to its position as a media empire, Murphy distinguished himself as a responsible corporate citizen by emphasizing public service.

After service in the U.S. Navy, a Harvard M.B.A., and five years at Kenyon and Eckhardt and at Lever Brothers, Murphy began his broadcasting career with a little help from his father’s friends. The legendary broadcaster Lowell Thomas, Thomas’s business manager Frank Smith, and a few other investors started Hudson Valley Broadcasting. They needed a station manager and turned to their friend’s ambitious son. In 1954, at the age of 29, Murphy assumed duties as the first employee and station manager at WROW-TV in Albany, New York. This station and its sister radio station, WROW-AM, were the Hudson Valley Broadcasting Company. After nearly three years of red ink, the station saw a profit. As the company evolved into Capital Cities and eventually into Capital Cities/ABC, it consistently made money. One share of the company in 1957 cost $5.75; in 1996, that investment would be worth more than $12,000.

In 1960 chair Frank Smith moved Murphy to New York City as executive vice president of Capital Cities. In 1964 Murphy was named president. With Smith’s death in 1966, Murphy became chair and chief executive officer. Three cornerstones of Murphy’s management philosophy were fiscal responsibility, decentralized local responsibility, and social responsibility. Additionally, he always tried to hire people smarter than himself. Murphy attributed much of his success to what he learned from Smith.

For the next two decades, Murphy led Capital Cities during a time of fantastic growth. In 1985 Capital Cities became the minnow that swallowed the whale when it announced that it was merging with the highly visible American Broadcasting Company (ABC). This was the largest merger to date of media companies. Capital Cities/ABC reclaimed this record about ten years later when it merged with the Disney Company.

Murphy will be remembered not only for his business acumen and ability to expand Capital Cities but...
also for his firm belief in the importance of public service. In 1961 the company received national attention and a Peabody Award for its nonprofit, exclusive television coverage of Israel’s trial of the Nazi war criminal Adolf Eichmann. Murphy continued that level of dedication to public service throughout the early years of the company and into the era of Capital Cities/ABC. The company played a significant role in public service campaigns for “Stop Sexual Harassment,” PLUS Literacy, the Partnership for a Drug-Free America, and others. The company also practiced significant internal and external public service with its own Substance Abuse Assistance Program, Corporate Diversity in Management skills bank, Management Initiatives Program to expand minority representation in editorial management, Broadcast Management Training Program for women and minorities, the Advanced Management Training Program for Women, the Women’s Advisory Committee, the Capital Cities/ABC Foundation, and the Volunteer Initiatives Program, serving as a clearinghouse for volunteerism. In retirement, Murphy has pursued his public service interests as a trustee of the Inner-City Scholarship Fund, the Lymphoma Research Foundation of America, New York University, and the Madison Square Boys and Girls Club and as a member of the Board of Overseers of Harvard College. In 1998 he was elected board chair of Save the Children.

Murrow, Edward R.
U.S. Broadcast Journalist

Edward R. Murrow is the most distinguished and renowned figure in the history of American broadcast journalism. He was a seminal force in the creation and development of electronic news gathering as both a craft and a profession. Murrow’s career began at the Columbia Broadcasting System (CBS) in 1935 and spanned the infancy of news and public affairs programming on radio through the ascendance of television in the 1950s, as it eventually became the nation’s most popular news medium. In 1961 Murrow left CBS to become director of the U.S. Information Agency for the new Kennedy administration. By that time, his peers were already referring to a “Murrow legend and tradition” of courage, integrity, social responsibility, and journalistic excellence, emblematic of the highest ideals of both broadcast news and the television industry in general.

David Halberstam has observed in The Powers That Be that Murrow was “one of those rare legendary figures who was as good as his myth.” Murrow was apparently driven by the democratic precepts of modern liberalism and the more embracing Weltanschauung of the American Protestant tradition. In Alexander Kendrick’s Prime-Time: The Life of Edward R. Murrow, for example, Murrow’s brother, Dewey, describes the intense religious and moral tutelage of his mother.
Edward R. Murrow.
 Courtesy of the Everett Collection

and father: "they branded us with their own consciences." Murrow's imagination and the long-term effects of his early home life impelled him to integrate his parents' ethical guidelines into his own personality to such an extensive degree that Murrow became the virtual fulfillment of his industry's public service aspirations.

Murrow's rich, full, and expressive voice first came to the attention of the U.S. listening public in his many rooftop radio broadcasts during the Battle of Britain in 1939. In words evocative of the original founding fathers of the United States, Murrow frequently used the airwaves to revivify and popularize many democratic ideals—such as free speech, citizen participation, the pursuit of truth, and the sanctification of individual liberties and rights—that resulted from a broader liberal discourse in England, France, and the United States. Resurrecting these values and virtues for a mass audience of true believers during the London Blitz was high drama—the opposing threat of totalitarianism, made real by Nazi bombs, was ever present in the background. Murrow's persona was thus established, embodying the political traditions of the Western democracies and offering the public a heroic model on which to focus their energies.

Murrow, of course, was only one of many heroes to emerge from World War II, but he became the eminent symbol for broadcasting. The creation of the Murrow legacy and tradition speaks both to the sterling talent of the man himself and to the enormous growth and power of radio during the war years. Murrow hired a generation of electronic journalists at CBS, such as Eric Severeid, Charles Collingwood, and Howard K. Smith, among many others, for whom he set the example as their charismatic leader. As late as 1977, more than a decade after Murrow's death, Dan Rather wrote in his autobiography The Camera Never Blinks that "it was astonishing how often his [Murrow] name and work came up. To somebody outside CBS it is probably hard to believe. Time and again I heard someone say, 'Ed wouldn't have done it that way.'"

Murrow's initial foray into television was as the on-camera host of the seminal news and public affairs program See It Now (1951–57). This series was an adaptation of radio's popular Hear It Now; which was also coproduced by Murrow and Fred W. Friendly. See It Now premiered in a half-hour format on November 18, 1951, opening with Murrow's characteristic restraint and directness: "This is an old team trying to learn a new trade." By April 20, 1952, See It Now had been moved to prime time, where it stayed until July 1955, typically averaging around 3 million viewers. After that point, See It Now was expanded to an hour but telecast more irregularly on a special-events basis.

Through the course of its run, See It Now was awarded four Emmys for Best News or Public Service Program. Many of its broadcasts were duly considered breakthroughs for the medium. For example, "This is Korea...Christmas 1952" was produced on location "to try to portray the face of the war and the faces of the men who are fighting it." Murrow's most-celebrated piece was his March 9, 1954, telecast, in which he engaged Senator Joseph R. McCarthy in a program "told mainly in [McCarthy's] own words and pictures." In the aftermath of this episode, the descriptions of Edward R. Murrow and his tradition quickly began to transcend the more secular cast that appeared in response to his championing of democratic action and principles in Britain during World War II. In his review of the now legendary McCarthy program, for instance, New York Times TV critic Jack Gould reflected an ongoing canonization process when he wrote that "last week may be remembered as the week that broadcasting recaptured its soul."
Murrow also produced lighter, less controversial fare for television. His most popular success was his hosting of *Person to Person*, from 1953 to 1961, where he chatted informally with a wide array of celebrities every Friday during prime time. Murrow remained with this program through the 1958–59 season, "visiting" in their homes such people as Harry Truman, Marilyn Monroe, and John Steinbeck. Murrow, in fact, won an Emmy for the Most Outstanding Personality in all of television after *Person to Person's* inaugural season. He received four other individual Emmys for Best News Commentator or Analyst as well, with the last coming in 1958, the year he excoriated the broadcasting industry in a speech before the Radio and Television News Directors Association (RTNDA) for being "fat, comfortable, and complacent" and television for "being used to detract, delude, amuse, and insulate us."

The tragedy of Murrow's rapid elevation at CBS after this latest tumult was implicit in his apparent need to ascribe higher motives to his own profession. Murrow had long reviled in his role as broadcasting's Jeremiah. His urgent and inspirational style of presentation fit the life-and-death psychological milieu of a world war, as it was later appropriate for the McCarthy crisis. By 1958, however, the viewing public and the television industry were less inclined to accept yet another of his ethical lambastes, especially since his RTNDA speech was directed at them and their shortcomings. As the business of TV grew astronomically during the 1950s, Murrow's priorities fell progressively out of step. His vision of television as "the world's greatest classroom" increasingly appeared more and more like a quaint vestige of a bygone era, especially to his bosses and a younger generation at the network.

There is still a small plaque in the lobby of CBS headquarters in New York City that bears the image of Murrow and the inscription, "He set standards of excellence that remain unsurpassed." During his 25-year career, Murrow made more than 5,000 broadcasts; and more than anyone else, he invented the traditions of television news. Murrow and his team essentially created the prototype of the TV documentary with *See It Now* and later extended the technological reach of electronic news gathering in *Small World* (1958–59), which employed simultaneous hookups around the globe to facilitate unrehearsed discussion among several international opinion leaders. Most of Murrow's *See It Now* associates were reassembled to produce *CBS Reports* in 1961, although Murrow was only an infrequent participant in this new series. Over the years, he had simply provoked too many trying situations for CBS, and the network's hierarchy made a conscious decision to reduce his profile. There is an apparent irony between Edward R. Murrow's life and the way that he is subsequently remembered today: the industry that finally had no place for him now holds Murrow up as their model citizen, the "patron saint of American broadcasting."

Music Licensing

Music licensing is the process through which television outlets and producers acquire permission to use copyrighted music in their programming and productions. A music copyright actually consists of a bundle of ownership rights. The four principal parts of this bundle are (1) the publication right, authority to copy or publish the musical work; (2) the mechanical (recording) right, authority to make audio copies of the work; (3) the synchronization right, authority to synchronize recordings of the work with film or video; and (4) the performance right, authority to perform the work publicly. Two additional facets of music copyright are (5) grand dramatic rights, which involve the use of the composition in a dramatic performance such as a stage play, an opera, or a video representation of the "story" of a song, and (6) the master-use license (dubbing right), which pertains to the re-recording of a particular artist's rendition of the music. The first five of these rights emanate from the original composer and publisher of the work. The master-use license is held by the record company that released the particular artist's interpretation of the composition.

While all six of these elements may come into play in the production of a film or video project, it is the performance right that is of overwhelming importance in the public transmission of television programming. In the United States (and elsewhere through agreements with reciprocal agencies), three licensing organizations administer performance rights for virtually all musical compositions still under copyright. These three organizations are the American Society of Composers, Authors and Publishers (ASCAP), Broadcast Music Incorporated (BMI), and the much smaller SESAC (formerly, the Society of European Stage Authors and Composers).

ASCAP, the oldest of the three, was born of a 1913 restaurant meeting of composer Victor Herbert and eight publisher and composer associates who sought some mechanism to ensure that they would be paid for the public performance of their work. ASCAP began licensing broadcast stations to play the music of its member composers and publishers in 1923, when it signed a one-year $500 license with AT&T's WEAF (New York). Perceiving themselves to be at ASCAP's mercy when it came to the use of music in their programming, broadcasters formed the National Association of Broadcasters (NAB) to negotiate with ASCAP on behalf of the entire radio industry. (The NAB sub-

sequently became U.S. commercial broadcasting’s major trade association and lobbying agency.)

BMI was created by the broadcast industry in 1940 in reaction to what stations perceived to be a large and unjustified increase in ASCAP’s licensing rates. Until BMI could build its own catalog, many stations that had refused to renew their ASCAP licenses could play nothing but tunes by Stephen Foster and other vintage music no longer under copyright. BMI soon signed affiliation agreements with Latin American, country, western, “race music” (black), and later rock-and-roll composers—musical genres that ASCAP had largely ignored.

SESAC was founded in 1931 by music publishing executive Paul Heinecke, with a catalog consisting primarily of European concert and operatic music. SESAC later dropped its full name in favor of the acronym and expanded its scope to encompass concert band, gospel, religious, and country music, opening a major office in Nashville, Tennessee, in 1964. SESAC is the only one of the three performance-rights organizations also to administer the mechanical and synchronization rights on behalf of its member composers and publishers.

Virtually from its inception, radio performance-rights licensing was accommodated via a “blanket license.” Stations paid the rights agency an annual fee based on either gross receipts (ASCAP and BMI) or market size, power, and hours of operation (SESAC). This license allowed the stations to play as much of the licensing organization’s music as they wished. This same business arrangement subsequently was extended to the new medium of television. As in radio, television-station rate negotiations with ASCAP and BMI are handled by an all-industry committee supported by voluntary station contributions. Because far less SESAC music is played on television, the dollars that organization receives are much lower, and stations deal with it separately.

Since 1950, the broadcast television networks have secured their own blanket licenses for the music in the programming and commercials they distribute to their affiliates. Even if they are network affiliates, stations still have needed their own blanket licenses to cover the music included in the syndicated series, local programs, and nonnetwork commercials they air. Since 1970, broadcasters have fought a number of legal battles in an attempt to reduce overlapping license coverage and bring greater flexibility and economy to the performance-rights clearance process. In 1970 the Columbia Broadcasting System (CBS) initiated an antitrust suit against ASCAP and BMI in order to secure the option of a “per-use” alternative to the blanket license. However, in 1981, the U.S. Supreme Court reaffirmed the dismissal of the case. Four years later, television stations lost a similar skirmish over “per program” rates that tended to make this option far more costly than the blanket license.

Nevertheless, new licensing alternatives began to emerge. Following a series of legal maneuvers, ASCAP/BMI and television broadcasters began, in 1987, to negotiate a more economically realistic per-program license option. Six years and several judicial proceedings later, the parties had substantially agreed to a feasible per-program license structure. This paved the way for stations more actively to purchase or lease their own music libraries for use in local productions and commercials—thus greatly shortening the list of programs for which they would have to pay an ASCAP or BMI fee. At the same time, major program syndicators such as King World began selling stations the rights to the music contained in their series for a small additional fee. Such “source cleared” deals are expected to become more and more common as stations seek to further reduce their ASCAP and BMI per-program payments. Meanwhile, in a 1992 cable television decision, the Supreme Court affirmed the right of cable networks to obtain the same blanket “through the viewer” license that had been available to the broadcast networks since 1950. This greatly lessened the performance-rights liability of cable system operators. As a result of negotiations between the National Cable Television Association Music License Committee and the three performance-rights holders, local cable systems can now obtain blanket licenses to cover music used on local-origination channels as well as in locally inserted commercials and promotional announcements.

Local broadcast station blanket rates for ASCAP are determined through negotiations with the broadcasters’ Television Music License Committee. An
industry-wide flat fee is set in these negotiations. This fee is divided among all defined television markets according to market size. The market fee, in turn, is spread among stations in that market on the basis of the household ratings achieved by each. Annual adjustments are made on the basis of changes in the consumer price index and number of stations in each area. BMI and SESAC fees follow a similar pattern and, essentially, are indexed to the ASCAP-negotiated figure.

An additional simmering controversy involves musicians and some recording companies. These interests sporadically have lobbied Congress to enact legislation that would require an additional performance rights fee to be paid to the performers of a piece of music. The television industry counters that performers already have been compensated through existing rights mechanisms and have handsomely profited from the exposure with which television has provided them. Music on Television

The antecedents for music's presence in television may be found in film and radio. Most television music (like film music) is nondiegetic: it is heard by viewers and listeners but not on-screen performers. This ubiquitous "background" music is added after shooting has been completed and is used to create moods, fill spaces, provide rhythm, and link the production to other cultural texts. Television music also draws on the tradition of radio, which initially presented in featured performances and variety shows, then later through disc jockey selections and chart shows. Musicians who appear on television sometimes play live but more often mime performance (or "lip-synch") to their sound recordings either in the studio or on music videos. Therefore, music on or in television encompasses a wide range of practices. Though television has become increasingly music driven on a global basis, the particular distribution of styles, techniques, and discourses about music and television has depended on the institutional histories and cultural contexts of both television and music in different localities.

In the United States, variety shows based in the vaudeville tradition dominated the first two decades of television because of their broad appeal and low production costs. Yet music frequently was considered an afterthought during television's early years. In 1948 only 17 stations were on the air. Programming was produced largely on a local basis, and talent and material were in short supply. Labor unions also played a significant role in determining how music was used on television in the late 1940s. Under the leadership of James Petrillo, the American Federation of Musicians (AFM) instigated freezes on all music recording in 1942 and 1948, and the AFM banned "live" music on television until the spring of 1948. The union also ordered that all programs with featured or background music must be broadcast "live" before they were syndicated via kinescopes, and these kinescopes were banned from airing on any station not affiliated with the originating station. This arrangement favored networks over independent stations and allowed the powerful AFM to strengthen its control of the music industry. The union also prohibited its members from recording for television films until 1950, when the AFM negotiated a system of royalty payments from television producers to musicians (although no such royalty system existed in the film industry). Television music also was hampered by disagreements between program producers and music publishers. Producers sought a broadened general li-
Music on Television

license fee for music use rather than a special license, while the major music publishing concern, the American Society of Composers, Authors and Publishers (ASCAP), demanded three times the rate it received for film music.

The networks were concerned with "cultural uplift" during the late 1940s and early 1950s, and they viewed "high culture" as a way to add cultural legitimacy to the new medium. The National Broadcasting Company (NBC) had telecast a Metropolitan Opera presentation of "Pagliacci" on March 10, 1940, and all three networks featured classical music and opera on a semiregular basis. NBC aired three telecasts of the NBC Orchestra in 1948, and the American Broadcasting Company (ABC) telecast an adaptation of "Othello" on November 29 of that year. The NBC Opera Theater began regular telecasts in 1950 with four programs and continued to air opera specials through 1950s and early 1960s. The network also aired an experimental color broadcast of "Carmen" on October 31, 1953. Producers faced a number of problems with adapting opera to television. The NBC presentations were sung in English and frequently condensed into one-hour programs, arousing the ire of some critics. Early televised operas also were criticized for incessant camera panning and close-ups. A reviewer for Musical America described a December 1952 closed-circuit telecast of "Carmen" by New York's Metropolitan Opera to 27 cities: "The relentlessness of the camera in exposing corpulence and other less attractive physical features of some of the performers aroused hilarity among the more unsophisticated viewers, of whom there were, perfroze, very many."

The networks also showcased classical music in specials and limited-run series throughout the early 1950s. In 1951 ABC's Chicago affiliate (WENR-TV) became the first station to regularly televise an orchestra, and NBC aired Meet the Masters, a classical music series, that spring. The network continued to air occasional telecasts of the NBC Symphony Orchestra, and the Columbia Broadcasting System (CBS) countered with specials featuring the Philadelphia Orchestra. The classical music series "Voice of Firestone" had originated in 1928 on radio; in June 1954, it jumped to television on ABC. Other network programs presented a grab bag of "high culture." CBS's Omnibus debuted in 1952 with support from the Ford Foundation. Although it won numerous awards, the program moved to ABC and NBC because of poor ratings. Omnibus was canceled in 1959, and the Ford Foundation's experience with the program led them to provide the seed money for American public television. Classical music and opera performers also made occasional appearances on network variety shows, particularly CBS's Toast of the Town. NBC musical specials in 1951 showcased the works of Richard Rogers and Irving Berlin, and NBC continued to air lavish musical presentations throughout the decade.

Music was an integral part of amateur talent shows, which ran on all three networks through the 1950s. The most successful of these, Ted Mack's Original Amateur Hour, was adapted from radio's Major Bowes' Original Amateur Hour. Dumont began telecasting the series in 1948, and it aired on various networks until 1970. Music also was featured in the context of game shows. Celebrities rated records on KNXT's Juke Box Jury, which was carried by ABC in 1953 and later syndicated. Other musical game shows included ABC's So You Want to Lead a Band and NBC's Musical Chairs, which aired in 1954 and 1955, respectively, as well as Name That Tune, which ran on NBC and later CBS from 1953 to 1959 and was briefly revived in syndication in the mid-1970s.

Singers often hosted summer replacement shows in the early 1950s. In 1950 Kate Smith and Sammy Kaye hosted replacement shows on NBC while CBS countered with several summer series hosted by Perry Como, Vaughn Monroe, and Frank Sinatra. ABC configured much of its prime-time schedule around music, particularly after Lawrence Welk joined the network in July 1955. Welk, who began telecasting his performances in June 1949, remains perhaps the most popular musical performer in television history. By featuring performers such as Welk, Guy Lombardo, Paul Whiteman, Fred Waring, and Perry Como, networks targeted older audiences (at the time, "teenagers" as a demographic group were of little use to network advertisers).

Television producers in the late 1940s and early 1950s relied on older popular songs, or "standards," and avoided songs without proven audience appeal. In addition, ASCAP's outright hostility to television led producers to use songs licensed by Broadcast Music Association (BMI), many of which were older and in the public domain. Exposing new music largely was relegated to independent stations. This pattern paralleled postwar developments in the recording industry in which small, independent labels distributed new genres, such as rhythm and blues and country music. Independent television stations were particularly strong on the West Coast because weak network links, and remote-band broadcasts provided inexpensive filler for broadcast schedules. KTLA-TV in Los Angeles featured five orchestra shows each week in the early 1950s, including Spade Cooley's hugely popular western program, while KLAC-TV countered with the Hometown Jamboree hillbilly program. KLAC also
challenged the color barrier by presenting a black singer, Hadda Brooks, regularly in 1949.

"Video deejay" programming provided another economical means of filling airtime. Al Jarvis had created the radio deejay program at Los Angeles's KWAB-AM in the early 1930s, and in the winter of 1950 Jarvis began daily broadcasts of records, interviews, horse-racing results, and "daily religious periods" at KLAC. NBC began airing Wayne Howell's deejay show nationally on Saturday afternoons, and by the end of 1950 video deejays were firmly established in New York, Chicago, and Los Angeles as well as secondary markets such as San Francisco, Miami, Louisville, Philadelphia, Detroit, and Cleveland (where pioneering rock-and-roll deejay Alan Freed held forth late at night on WXEZ-TV). Video deejay programs combined lip-synch performances, dancers, games, sketches, stunts, and film shorts. Between 1941 and 1947, the Mills Novelty Company produced more than 2,000 promotional jazz and ballad films, or "soundies," for coin-operated machines, and many of these shorts resurfaced on video deejay shows. "Soundies" also were frequently screened between programs to fill airtime, as were the 754 "visual records" that Louis Snader produced in his Hollywood studios between 1950 and 1952. Screen Gems and United Artists produced similar films with a unique twist: silent films were paired with phonograph records, which allowed the clips to be recycled with different songs.

By 1956 local video deejay programs were telecast regularly in nearly 50 markets. These programs were the only significant television programming produced for teenagers and, along with "Top 40" radio, were instrumental in the rising success of rock and roll. The most notable video deejay program debuted on Philadelphia's WFIL-TV as Bandstand in September 1952. Dick Clark replaced Bob Horn as host in July 1956, and the following year American Bandstand was picked up for national distribution by ABC. The program aired from 3:00 to 4:30 P.M. Monday through Friday afternoons, and Dick Clark had begun to parlay American Bandstand's success into a television empire. More than 100 local imitators of Bandstand were on the air by March 1958, and TV had become second only to radio as a means of promoting music. In 1950 standards outnumbered popular tunes on television by four to one, and popular songs on television were already well established on records and radio. Four years later, the ratio of hits to standards was 50/50. "Let Me Go, Lover" was recorded by several artists after its initial success on CBS's Studio One, and the "Ballad of Davy Crockett" from Walt Disney's ABC-TV series established TV's importance in making hits.

NBC was the most adventurous network in music programming through the 1950s, particularly through Steve Allen's efforts to present pop, jazz, and classical artists on The Tonight Show. Allen also hosted an NBC special, All-Star Jazz, in December 1957. Like Allen, Ed Sullivan featured a number of black acts on his Talk of the Town variety show in the 1950s. Although most acts were comics and dancers, musical performers included W.C. Handy, Billy Eckstine, Lena Horne, and T-Bone Walker. On April 1, 1949, ABC affiliate WENER in Chicago began airing Happy Pappy, a jazz-oriented revue that featured an all-black cast, and three years later an ABC special with Billy Daniels was the first network television program to feature a black entertainer as star. Nat "King" Cole became the first black to host a regular network series (on NBC from 1956 to 1957). The program failed to attract a national sponsor and was boycotted by several stations in the North and South. As a result, blacks were relegated largely to guest shots on variety shows. No black performer would host a network variety series until Sammy Davis Jr. in 1966.

Rhythm and blues and rock and roll originally were objects of ridicule on TV, as exemplified by Sid Caesar's "Three Haircuts" parody skit on Your Show of Shows, but programmers began paying closer attention to the burgeoning teenage market in 1956. Ed Sullivan presented a rhythm-and-blues special in November 1955 that featured LaVern Baker, Bo Diddley, and the Five Keys and hosted by radio deejay "Dr. Jive." Attempts at providing a regular network showcase for rhythm and blues failed because of resistance from southern affiliates as well as pressure from ASCAP, which refused to license rhythm-and-blues titles for blatantly racist reasons.

Programmers embraced country music more readily. "Hillbilly," as it was more commonly known, gained its initial video exposure with shows hosted by regional performers in the Midwest, including Earnie Lee at WLW in Cincinnati (1947), Pee Wee King at WAVE in Louisville (1948), and Lulu Belle at WNBQ in Chicago (1949). By 1956, almost 100 live local country-western shows aired on more than 80 stations in 30 states. Eddy Arnold, the "Tennessee Plowboy," was tapped as a summer replacement for Perry Como in 1952, and his program was syndicated through the 1950s. Other network efforts included Red Foley's Ozark Jubilee (ABC, 1955–61) and the Tennessee Ernie Ford Show (NBC, ABC, 1955–65), and CBS ran a country music program hosted by Jimmy Dean against Today. Nevertheless, these programs were largely pop oriented in terms of song selection and guest stars.

Singing personalities increasingly replaced comedians as program hosts in the waning years of the 1950s.
Music on Television

By the fall of 1957, recording stars headlined more than 20 TV shows. Perry Como and Dinah Shore hosted popular series for NBC, and ABC aired efforts by Frank Sinatra, Guy Mitchell, Pat Boone, and Julius La Rosa. Many of these shows suffered poor ratings and were supplanted by westerns in 1958, but the success of Rodgers and Hammerstein’s *Cinderella* special on CBS triggered a spate of musical fairy tales on networks in the waning years of the decade. Yet television was decried for unimaginative audio throughout the 1950s. Many productions employed dated music libraries, and dramatic shows often paid little attention to musical scoring (one exception was Richard Rodgers’s acclaimed score for the documentary series *Victory at Sea*, which NBC aired in late 1952 and early 1953). Another noted production was the *Rodgers and Hammerstein Cavalcade* sponsored by General Foods, which aired simultaneously on all four networks on March 28, 1954.

On January 26, 1956, Elvis Presley made his national television debut on the Dorsey Brothers’ CBS *Stage Show* and quickly followed with appearances on the Milton Berle, Steve Allen, and Ed Sullivan shows. The squeals that Presley elicited from teenagers were matched by loathing from parents and critics. Reviewing a September 1956 performance on *The Ed Sullivan Show*, a critic for the *New York Times* noted disapprovingly that Presley “injected movements of the tongue and indulged in wordless singing that were singularly distasteful.” Nevertheless, rock and roll would remain a fixture on local and national television, and ABC’s *Rock ’n’ Roll Show* was the first prime-time network special devoted to rock music. The program aired May 4 and 11, 1957, and was hosted by Alan Freed. In addition to specials and variety shows, rock became integrated into situation comedies. *Ozzie and Harriet* provided a showcase for young Ricky Nelson, who racked up several hits beginning in 1957. The fate of *Your Hit Parade* symbolized Tin Pan Alley’s eclipse by rock and roll. The program originated as the *Lucky Strike Hit Parade* on radio in 1935 and retained its popularity after moving to television. As rock and roll began to dominate popular music, *Your Hit Parade* moved from NBC to CBS in 1958 and went off the air on April 24, 1959. An attempt to revive the program in the early 1970s was unsuccessful.

The late 1950s also were marked by a decline in “high culture” musical programming. A 1957 arrangement between Ed Sullivan and Metropolitan Opera led to a brief series of capsule opera performances on Sullivan’s variety show. Met impresario Rudolf Bing scotched the deal when Sullivan proposed to divide the opera presentations into two smaller sections, with a ventriloquist act sandwiched in between, to reduce tuning out by viewers. The CBS series *The Seven Lively Arts*, a short-lived series of plays and music, was canceled in 1958, and *The Voice of Firestone* was dropped as a regularly scheduled program in 1959 (it continued as a series of specials until 1962). More successful were CBS’s *Young People’s Concerts*, which began airing infrequently in the late 1950s and continued until the early 1970s. Leonard Bernstein hosted the concerts, and each telecast was devoted to a single theme; two such concerts were “The Sound of the Hall” in 1962 and “What Is a Melody” the following year. The CBS *Camera Three* arts series ran Sunday mornings from 1956 to 1979, and NBC’s *Bell Telephone Hour* presented music “for all tastes” on a semiregular basis from 1959 to 1968.

Jazz enjoyed greater exposure during the waning years of the 1950s. CBS aired Stan Kenton’s *Music ’55* as a summer replacement series, and the success of the NBC special *All-Star Jazz* in December 1957 led to a jazz boomlet the following year. NBC ran a 13-part series hosted by Gilbert Seldes, *The Subject Is Jazz*, ABC aired *Stars of Jazz* as a summer replacement, and CBS telecast four-hour-long excerpts from Newport Jazz Festival in July 1958. Still, most jazz programming consisted of standards, swing, and Dixieland. One exception was the widely acclaimed *Jazz Scene USA* (1962), produced by Steve Allen and syndicated by New York’s WOR-TV. Television shows increasingly featured jazz background music, particularly tough-guy detective and adventure series such as *Peter Gunn* and *Ellery Queen* (NBC), *77 Sunset Strip* (ABC), and *Perry Mason* and *Route 66* (CBS). Although several of these themes charted on the “Billboard Hot-100,” much of the music for establishing moods and providing bridges was imported from Europe. However, musicians and producers began to soften their adversarial stances in 1963 following James Petrillo’s dethroning as head of the American Federation of Musicians. In October 1963, all network producers (with the inexplicable exception of the *Mr. Ed* production team) agreed to use live music in telefilms.

The early 1960s continued to see a shift away from musical variety shows. By 1961, only Perry Como, Ed Sullivan, Gary Moore, and Dinah Shore remained on network schedules, and both classical and pop music were relegated largely to specials. One notable exception to this rule was *Sing Along with Mitch*, in which viewers were invited to participate by reading lyrics off the screen. Mitch Miller, record company executive and archenemy of rock and roll, hosted the program, which aired on NBC from 1961 to 1964. Country music continued to figure prominently on television throughout the 1960s. Jimmy Dean hosted a weekly variety show on ABC from 1963 to 1966, and by 1963
more than 130 stations carried local or syndicated country music programs. Among the most popular were Porter Wagoner (whose eye-popping sequined suits rivaled any Liberace creation for sartorial excess), the Wilburn Brothers, and the bluegrass team of Flatt and Scruggs. The latter duo had been performing on television since 1953 but broke out nationally through exposure on The Beverly Hillbillies and the subsequent success of their single “The Ballad of Jed Clampett.” These programs were joined in 1965 by syndicated efforts from Ernest Tubb and Wanda Jackson. In what surely must have been a surreal viewing experience, Richard Nixon performed a piano duet with Arthur “Guitar Boogie” Smith on the latter’s Charlotte, North Carolina–based show. By 1970 almost three-quarters of the stations in the United States featured some form of rural music.

The folk music boom of the early 1960s was represented by ABC’s Hootenanny (1963), the first regularly scheduled folk music program on network television. Featuring well-scrubbed folk music in the style of the Kingston Trio and Peter, Paul, and Mary, the series was embroiled in controversy from the outset when Pete Seeger and the Weavers were banned from the show for refusing to sign a government loyalty oath. Hootenanny was dropped from ABC’s schedule in the fall of 1964. American Bandstand had switched from daily to weekend-only broadcasts a year earlier, part because of fallout from the payola scandal. Dick Clark had come under congressional investigation during the payola hearings in the late 1950s and early 1960s. Although Clark was never indicted, ABC insisted that Clark divest himself of music publishing and record distribution interests. Local Bandstand imitators were down significantly from their peak in 1958, and the music’s lack of presence on television reflected a general malaise in rock and roll.

This changed on February 9, 1964, when the Beatles were featured on The Ed Sullivan Show. In what arguably is the most influential musical performance ever presented on television, the Beatles were seen in an estimated 73 million homes. The British Invasion was not universally welcomed, however; when the Rolling Stones appeared on Hollywood Palace, host Dean Martin openly disparaged their performance and snarled that they “oughta get haircuts.” ABC’s Shindig premiered in September 1964 with the Rolling Stones, the Byrds and the Kinks, and subsequent programs featured a host of English and American “beat groups” surrounded by a cast of writhing dancers. NBC answered with Hullabaloo from January 1965 to August 1966.

Until it folded in January 1966, Shindig also helped black such as Sam Cooke cross over to white audiences. In one particularly memorable broadcast, the headlining Rolling Stones paid homage to their influences by sitting at the feet of the great bluesman Howling Wolf as he performed “Little Red Rooster.” The extent of the racial crossover in music was indicated by the fact that Billboard dropped its rhythm-and-blues chart in 1964. Efforts at integration were slower in other areas, however: the Chicago branch of the AFM remained segregated until January 1966. Television finally caught up with the civil rights movement in the mid-1960s. By 1968 a growing number of black performers were showcased in network programs, such as an NBC special featuring the Supremes and the Four Tops.

Teen dance shows enjoyed a resurgence in 1965. Some of the most notable syndicated efforts were hosted by Lloyd Thaxton, Casey Kasem (Shebang, which originated from KTLA in Los Angeles), Sam Riddle (Hollywood A Go Go), Gene Weed (Shivaree), and Jerry “The Geater with the Heater” Blavat’s The Discophonic Scene. The ubiquitous Dick Clark also started a weekday teen show, Where the Action Is, on ABC. In addition to records and dancing, these shows often featured filmed performances as well as short “conceit” musical films triggered by the success of the Beatles’ A Hard Day’s Night. Mainstream pop music remained the province of variety shows and specials throughout the 1960s. Barbra Streisand and Frank Sinatra aired acclaimed specials in the mid-1960s, and ABC presented an adventurous special, Anatomy of Pop, in February 1966, which featured artists as varied as Duke Ellington, Bill Monroe, and the Temptations. Another ABC special, 1967’s Songmakers, followed the creative process from composition to recording with artists such as the songwriting team of Burt Bacharach and Hal David and the Paul Butterfield Blues Band. The big three networks virtually abandoned classical music to the fledgling NET public network by the late 1960s, although CBS aired a special on Igor Stravinsky in 1966.

Perhaps the greatest rock special in television history, the T.A.M.I. Show, was produced by Steve Binder (who later produced Elvis’s comeback special and Pee-wee’s Playhouse) for ABC in late 1964. Shot on video and later transferred to film for theatrical release, the T.A.M.I. Show featured Chuck Berry, Bo Diddley, the Rolling Stones, the Beach Boys, the Supremes, and an electrifying performance by James Brown. The program also captured an interracial musical mix conspicuously absent from later rock documentaries, such as Monterey Pop and Woodstock. Other noteworthy rock specials included a 1965 performance by the Beatles at New York’s Shea Stadium (aired by ABC in January 1967) and Elvis Presley’s legendary comeback perfor-
formance on NBC in December 1968. The globalization of television was marked by the June 25, 1967, live telecast of Our World. Transmitted by satellite to 34 countries and aired in the United States on NET, the program included a performance by classical pianist Van Cliburn and climaxed with the Beatles warbling “All You Need Is Love.”

Television also entered the kid-vid rock market when Beatle cartoons premiered on ABC in September 1965. The most successful cartoon group were the Archies (an assemblage of anonymous studio musicians), who scored a massive hit with “Sugar Sugar” in 1969 and cloned a dozen copies in the late 1960s and early 1970s, such as Josie and the Pussycats, the Bugaloos, the Groovey Goolies (described by critic Lester Bangs as “Munsters dipped in monosodium glutamate”), the Cattanooga Cats, and the Banana Splits. Equally contrived, though in human form, were the Monkees. Former Brill Building pop impresario Don Kirshner recruited four actors to star in a series modeled on “A Hard Day’s Night,” and The Monkees premiered on NBC in September 1966. The “band” racked up several hits of carefully groomed material but shocked their followers in Teenland the following year when they admitted they did not play their own instruments. The series was canceled in 1968. ABC’s The Music Scene ran for 17 episodes beginning in October 1969 and featured comic sketches interspersed with performances by artists ranging from James Brown to Buck Owens.

The Smothers Brothers also presented some of the more daring “underground” acts of the late 1960s. (The Who’s Pete Townshend was nearly deafened by an exploding drum set during one memorable appearance, and the Jefferson Airplane’s Grace Slick made a controversial appearance in black face.) Other variety shows hosted by Ed Sullivan and Jonathan Winters presented a variety of alternative acts, each more hirsute and glowing than its predecessors. Sullivan did draw the line at lyrics, however. In a 1967 appearance, with much on-screen eye rolling from Mick Jagger, the Rolling Stones changed the lyrics of their latest hit to “Let’s Spend Some Time Together.” Other performers were less accommodating. After surveying the set before taping an appearance on The Tom Jones Show, Janis Joplin stormed offstage, complaining, “My public don’t want to see me in front of no fucking plastic rain drops.” Late-night talk shows such as The Tonight Show and The Dick Cavett Show also featured some rock stars (Joplin was a particular favorite on the latter). The syndicated Playboy After Dark also presented a variety of “alternative” artists; in a 1969 taping, the Grateful Dead dosed the unwitting production staff with LSD. Despite (and, in part, because of) the increasingly outré nature of rock music acts on television, country music’s video popularity continued unabated in the late 1960s. Johnny Cash was featured in an ABC summer replacement program in 1969, and his guests included the reclusive Bob Dylan. A more enduring success was CBS’s Hee Haw, which presented a hick version of Rowan and Martin’s Laugh-In beginning in June 1969. After CBS cleaned its house of “older-oriented” shows, the program continued in syndication until the late 1980s.

The 1970s began with the New Seekers foreshadowing the increasing melding of music, television, advertising, and the global imaginaries of Live Aid and Music Television (MTV) with “I’d Like to Teach the World to Sing.” The song was a worldwide hit after airing as a Coca-Cola commercial. Looking backward, ABC introduced The Partridge Family with veteran stage and Hollywood musical star Shirley Jones and her son David Cassidy. The half-hour comedy grafted the wacky Monkees formula onto the story of the real-life Cowsills to successfully target the teen market. Jones played the single mom of a large musical family with a lovable but inept manager placed in various quirky situations. Musical numbers were performed in rehearsal and in a wrap-up concert setting as the dénouement of each episode. The series launched Cassidy, the oldest of the Partridge progeny, as a teen idol. The most traditional outlet for music on the networks in the early 1970s was a host of variety shows: The Johnny Cash Show, Glen Campbell’s Goodtime Hour, This Is Tom Jones, and The Carol Burnett Show featured musical guests lip-synching to their latest hits and sometimes engaging in banal patter with the host. However, reflecting the increasing dominance of market segmentation, ratings for most musical variety shows were plummeting by the mid-1970s. Even so,

The Music Scene, James Brown, 1969–70. Courtesy of the Everett Collection
In a different musical vein, the Great Performances series debuted on the Public Broadcasting Service (PBS) in 1974. Produced at WNET in New York, this paved the way for the broadcast of classical music concerts and opera on the Bravo cable network since 1980. Country music found a live showcase in Austin City Limits, first broadcast through Austin’s PBS station KLRN TV in 1976. The show reflected a return to the roots of country music, away from the saccharine Nashville sound of the period. In its earlier days, musical acts such as the Outlaws—Willie Nelson, Waylon Jennings, and Kris Kristofferson—performed on a stage in front of a small and intimate studio audience. The format remains essentially the same today. Live music has also had a highly visible spot on NBC’s Saturday Night Live since 1975. A guest star performed one or two live numbers between the program’s many skits, and musical choices were often a little more left field than was customary on the networks. On one particular occasion in 1977, Elvis Costello and the Attractions, who had replaced the Sex Pistols at the last minute, launched into their antifascist classic “Less than Zero,” then abruptly stopped. Elvis told the band that he had changed his mind, and they then tore into “Radio Radio,” running over time and giving producer Lorne Michaels a few nervous palpitations (shades of Jimi Hendrix’s legendary appearance on Lulu’s British Broadcasting Corporation [BBC] variety show nine years earlier). Sinead O’Connor’s appearance on the show in 1994, when she ripped up a photograph of Pope John Paul II after a rendition of Bob Marley’s “War,” had a similar effect in this prime television showcase for musicians.

Black musical acts found a space for lip-synced performances of soul, funk, and disco hits on Soul Train. The creation of Don Cornelius, the show was started in Chicago in 1970 but moved to Hollywood and national syndication in 1971. Soul Train featured performers such as Ike and Tina Turner and Al Green, but the real stars were the creative and innovative dancers, who were mainly African-American teens. In many ways, Soul Train was a return to the old formula of the teen dance show, except for one major difference: it was black. The show was vital in the popularization of funk and disco music. By 1975 the disco boom was well established, and everyone was trying to get on the bandwagon. Syndicated shows such as Disco America, Disco Mania, and Disco 76 came and went as fast as the latest disco hit. Even James Brown deserted funk for disco with the short-lived syndicated program Future Shock. Some journalists and critics feared the end of that discotheque culture was killing live music. But if anything, the real challenge to live performance on television came from music video.
Music on Television

The late 1970s and 1980s saw the video boom that has changed the face of music on television. By 1975 many artists had made promotional film clips for their single releases. Queen’s “Bohemian Rhapsody,” Rod Stewart’s “Hot Legs,” and several promotional clips by Swedish quartet Abba had helped their songs become hits in the Euro-American market. In 1975 Manhattan cable TV began showing video clips on a program titled Nightclubbing. Rock performers were experimenting with the visual form. New Wave group Devo released The Men Who Make the Music in 1979. This anthology was the first long-form video released in the United States. By 1979 America’s Top Ten played video clips. The Boomtown Rats’ “I Don’t Like Mondays” was one of the first to make a mark, remembered for the accompanying visuals as much as for its sound recording. The more traditional chart show, Solid Gold, debuted in syndication in 1980 and combined a professional cast of dancers with lip-synched performances by various chart-topping pop artists.

The rise of music video is inextricably tied to the ascent of cable television. In 1980 the USA network debuted Night Flight, which ran both videos and old movies. The emphasis was on New Wave videos since at this time these artists were more innovative with the nascent form. Another cable network, Home Box Office (HBO), began simulcasting rock concerts, while Showtime and the Playboy channel allotted some time for music videos. Also in 1980, ex-Monkee and Liquid Paper tycoon Mike Nesmith’s Pacific Arts Company packaged clips into a half-hour show called Popcips, which was sold to Warner Cable and shown on Nickelodeon. The Nashville Network (TNN) and Country Music Television Network, from 1983, also aired music videos. The former maintained some shows that fit the variety format of older country programming.

But during the 1980s and 1990s, the musical stage on television was defined by MTV. Owned by Warner-Amex, MTV began broadcasting in August 1981, prophetically with the Buggles hit, “Video Killed the Radio Star.” Robert Pittman, vice president of programming, remarked, “We’re now seeing the TV become a component of the stereo system. It’s ridiculous to think that you have two forms of entertainment—your stereo and your TV—which have nothing to do with one another. What we’re doing is marrying those two forms so that they can work together in unison. We’re the first channel on cable to pioneer this.” MTV provided a 24-hour service of videos introduced by quirky “veejays.” It was a kind of radio for the eyes, mixing different kinds of musical genres in a continuous flow. Many of the early videos were by British “new pop” groups, such as Duran Duran, ABC, Culture Club, and the Human League, who formed what critics called the “second British invasion;” these performers already had videos ready to air, unlike many U.S. bands, which accounted for MTV’s early Anglophilia. By 1982 record companies confidently claimed that MTV increased sales of their top artists by 20 percent.

As MTV became available through cable providers through the country, the music it aired also changed, and programming began to reflect the tastes of a largely white national audience demographic. Heavy metal became the dominant music on the channel. Other cable networks incorporated some of the same strategies as MTV. In June 1983, NBC debuted Friday Night Videos in the old Midnight Special slot. WTBS began broadcasting the similar Night Tracks in June 1983, and Ted Turner launched the ultimately unsuccessful Cable Music Channel in 1984. MTV weathered an antitrust suit from the competing Discovery Network. In 1984 it signed exclusive deals with six major record labels for the broadcast of their artists’ videos.

The first American Video Awards took place in 1984, testifying to the emergence of a new cultural form. Meanwhile, more traditional musical fare was on offer in NBC’s Fame, which began in 1982 and was based on Alan Parker’s 1980 film. The program was set in a school of performing arts in New York, with a multiracial cast of talented musicians and dancers who would energetically perform numbers in rehearsal, in class, and at school concerts. The show celebrated traditional showbiz values in a familiar format. It was essentially The Partridge Family with angst, Shirley Jones replaced by choreographer and teacher Debbie Allen as guiding hand and maternal motivator.

MTV’s impact on network television and the place of music in television could be more directly seen in the NBC police/crime series Miami Vice (1984–87), which

Courtesy of the Everett Collection
had the working title of *MTV Cops*. The show’s creator, Michael Mann, later claimed that “the intention of *Miami Vice* was to achieve the organic interaction of music and content.” Sometimes an entire episode would be written around a song, such as Glen Frey’s “Smuggler’s Blues.” Frey and other rock musicians would often make cameo appearances as characters in the show. Record companies were obliging with copyrighted material after the success of the pilot and its use of Phil Collins’s hit “In the Air Tonight” as the detective partnership of Crockett and Tubbs drove to a climactic shoot-out through the rain-sodden Miami streets.

The visual style of the show owed a great deal to MTV. Film and television narratives incorporated music with the camera angles, lighting, rapid cutting, and polished production values of music videos. Television advertising also became increasingly sensitive to music video aesthetics. In 1984 Michael Jackson appeared in a Pepsi-Cola commercial shot like a music video for one of his songs. Madonna’s brief—and eventually banned—Pepsi commercial in 1989 used her song “Like a Prayer.”

In the mid- and late 1980s, MTV became less idiosyncratic in its juxtapositions of different kinds of music, moving toward block programming and the development of shows that fit certain musical genres. MTV’s programming began to look more like a traditional television schedule. In January 1985, parent company Warner-Amex introduced Video Hits 1 (VH1), whose programming aimed for the pocketbook of older baby boomers. VH1 began with a video of Marvin Gaye singing that old chestnut, “The Star Spangled Banner.” In 1986 MTV also indicated its move toward a more traditional television strategy as it began showing old episodes of *The Monkees*.

These developments reflected the segmentation of marketing and targeting of very specific groups of consumers through different channels and shows. This also coincided with Warner-Amex selling its controlling interest in MTV Networks to Viacom International in August 1985. The change in leadership initially brought a more conservative music policy. With criticism of the representation of sex and violence in music videos, there was a brief move away from heavy metal as the central genre. However, the strength of metal in middle America led to its return shortly thereafter.

The biggest triumph of the mid-1980s for MTV and the music industry in general was the broadcast of the Live Aid concerts in Philadelphia and London in July 1985. The event, designed to raise money for Ethiopian famine relief, proved popular music’s sociopolitical value and, like the Beatles’ worldwide broadcast of “All You Need Is Love,” projected a global imaginary (and market) for popular music culture. In 1987 MTV started MTV-Europe, and the network’s rapid movement into further areas of global market continued apace. Live Aid was followed by the 1988 worldwide transmission of an antiapartheid concert in London to celebrate the birthday of Nelson Mandela. However, in the United States, this mammoth rock spectacle did not meet the success of Live Aid, with charges that FOX had delayed the broadcast signal and censored “political” comments made during the event.

Since the early 1980s, critics charged MTV with racism because of its dearth of black music videos. In its early days, the network featured African-American VJ J.J. Johnson and later black British VJ “Downtown” Julie Brown. However, apart from some big names, such as Michael Jackson and Prince, few black acts were found on the video playlist. This changed somewhat in 1989 with the introduction of *Yo! MTV Raps*, a show hosted by hip-hop pioneer Fab Five Freddy. *Yo! MTV Raps* joined other specialist music programs, such as *Headbanger’s Ball* (heavy metal) and *120 Minutes* (“alternative” rock), on the network’s schedule. Also in 1989, MTV introduced Remote Control, a game show that tested viewers’ knowledge of television trivia. In the 1990s, the breadth of shows on the network reveals that MTV is now concerned more with the integrated elements of contemporary youth popular culture presented in a more traditional television format than with music videos per se. A fashion show (*House of Style*), a vérité-style documentary cum soap opera (and harbinger of “reality TV”) (*The Real World*), and even a dating game were staples of the network’s programming. The *Choose or Lose* and *Rock the Vote* programs contributed to higher voter registration among young citizens during the 1992
Music on Television

Though it looks increasingly like other television stations in its programming structure, MTV gives everything from fashion to politics to family crises a musical bent. In this respect, it has "musicalized" television to an unforeseeable extent. Its stylistic repercussions can be found in everything from news programming and station promos to religious broadcasting and drama series, such as Ally McBeal. MTV also blurred the distinction between music, programming, and advertising. Alongside such regional and transnational music television networks such as Channel [V], in the 1990s MTV has helped to develop "youth" markets in Europe, Latin America, and Asia for goods other than music. Arguments continue to rage as to whether such globalization under the wing of music television results in Americanization or "globalization."

With media industries increasingly integrated through technology and business strategies, television music provides cross-marketing opportunities for a variety of sectors. This "convergence" has had aesthetic as well as industrial consequences. Video games are now an important part of music marketing, and feature film directors often gain their training in music video. The sounds of certain music genres, such as hip-hop and techno, incorporate a channel-surfing television aesthetic as they cite and directly sample television texts in a variety of ways. Television arguably now shapes popular music culture as much as the sound recordings themselves.

presidential election campaign. In all these television formats, music is important as an extra level of commentary (often ironic) on the visual and documentary/news material.

With the exception of Total Request Live, music videos are now largely relegated to MTV2 (which is carried by far fewer cable systems), while MTV continues to focus on "reality" series such as The Osbournes and game shows. MTV's sister channel, VH1, continues to feature videos, but when its ratings began to founder, VH1 began airing leering "specials," such as one focusing on pornography in rock music, as well as Behind the Music, which presented lurid tales of rock star excess in a suitably tabloid fashion. A more family-friendly approach to music was featured in a resurgence of amateur shows such as American Idol, whose contestants provided fodder for the star-making machinery as they sought to outdo each other with melismatic vocal contortions.
Must-Carry Rules
U.S. Cable Regulation

Must-carry rules, which mandate that cable companies carry various local and public television stations within a cable provider’s service area, have a long and dramatic history since their inception in 1972. Designed originally to ensure that local television stations did not lose market share with increased competition from cable networks competing for a limited number of cable channels, must-carry rules have, over time, been ruled unconstitutional and gone through numerous changes.

When first passed in 1972, the must-carry rules required that cable companies provide channels for all local broadcasters within a 60-mile radius of the cable company’s service area. In the mid-1980s, various cable companies, including superstation WTBS owner Turner Broadcasting, brought suit against the Federal Communications Commission (FCC), claiming that the rules were unconstitutional. In 1985 and 1987, the U.S. Court of Appeals found that must-carry rules did, indeed, violate the First Amendment. From then until 1992, stations were only required to carry public television signals and provide subscribers with an option for an A/B switch to allow access to local broadcast signals. This change bode particularly ill for small UHF (ultrahigh frequency) stations, whose cable carriers could replace them with stronger, more desirable superstations.

The 1992 Communications Act, while still requiring carriage of local commercial and public stations, allowed cable companies to drop redundant carriage of signals, where stations within the service area duplicated programming (e.g., two stations within a 50-mile radius carrying the same network or two college public broadcasting stations both carrying the Public Broadcasting Service [PBS]). More confusion resulted when, in October 1994, the FCC gave stations a choice of being carried under the must-carry rules or under a new regulation requiring cable companies to obtain retransmission consent before carrying a broadcast signal. The retransmission consent ruling gave desirable local stations increased power to negotiate the terms of carriage the cable company would provide, including channel preference.

Must-carry rules were still in effect on passage of the 1996 Telecommunications Act—and still being challenged by cable companies. None of the must-carry rules affects cable retransmission of FM radio signals.

My Little Margie
U.S. Situation Comedy

The wacky women who dominated 1950s television comedy did not begin with Lucille Ball (Gracie Allen and Imogene Coca pre-dated her TV debut), but the phenomenal success of Ball in I Love Lucy surely inspired a grand assortment of imitations on the small screen. Soon after Lucy’s TV debut, such programs as I Married Joan with Joan Davis, Life with Elizabeth with Betty White, and My Friend Irma with Marie
Wilson premiered, all centered around the doings of various “wacky wives” with staid, even dull, husbands. Drawing on similar conventions was one of the most successful sitcoms of the 1950s, My Little Margie.

My Little Margie presented 21-year-old Margie Albright, who lived with her widowed father, Vernon, in a New York City penthouse. Mr. Albright worked as an executive for the investment counseling firm Honeywell and Todd and was perpetually in fear of losing “the big account” because of Margie’s meddling. Rounding out the cast were Freddie, Margie’s “boyfriend”; elderly neighbor Mrs. Odetts; Roberta Townsend, Vern’s lady friend; George Honeywell, president of Honeywell and Todd; and Charlie, the black elevator operator (depicted as a sad African-American stereotype, typical of TV at that time).

The program starred Gale Storm (31 years old when she began in the role), a former film actress noted for her roles in westerns playing opposite Roy Rogers. Vernon was played by Charles Farrell, formerly a highly successful leading man in silent films. The program premiered in 1952 as a last-minute summer replacement for I Love Lucy, but it proved to be so popular, landing consistently in the top five, that it was renewed for fall and ran for three seasons.

The title My Little Margie can certainly be taken in such a way as to be demeaning to women: “my” indicating the possession of someone as if she were a thing, and “little,” a somewhat inaccurate and condescending term for a 21-year-old woman. Nevertheless, it has been noted that the premise of My Little Margie was in other ways rather progressive. First, Margie was a single woman at a time when most women on television were conventionally married. Second, the Albrights were slightly different from the “normal” nuclear families then being depicted on TV. The widowed father and his daughter were frequently involved in stories designed around the two taking on and exploring roles not their own, duties and responsibilities that conventionally would have been handled by the now absent mother. Additionally, Margie, though “of marrying age,” was seldom depicted as eager to walk down the aisle. Although she had a steady boyfriend in neighbor Freddie Wilson, few sparks ever flew between them. Margie was always too busy for her own romance, usually preoccupied with launching schemes to keep gold diggers away from her single dad. Margie’s self-chosen single status and irrepressible individuality made her, in some respects, one of TV’s prefeminism feminists. Week after week, despite what her father and other men around her wanted or expected her to do, Margie did her own thing, engaging in outrageous acts and everyday rebellions, as Gloria Steinem would later refer to them.

Yet despite the presence of such advanced notions, in practice Margie rarely chose to develop them. Produced by the Hal Roach Studios, the series had access to all the studio’s haunted-house sets and breakaway props and frequently fell back on the Roach’s stock trade—slapstick. The program got most of its mileage from Storm’s enchanting charm, her wardrobe (provided by Junior House of Milwaukee, almost always with a fetching, matching hat), and her frequently performed trademark “Margie gurgle,” a rolling of the throat it seemed only Storm could produce.

My Little Margie had absolutely no critical support. From its premier, every newspaper dismissed the show as silly. Yet it had enough fan devotion to secure a highly rated run, making it one of the first shows to survive on audience support alone. Moreover, it was the only television program to reverse the usual media history and make the jump from the small screen to the audio airwaves; an original radio version (also starring Storm and Farrell) aired for two years. The TV series’ popularity is also attested to by the fact that Margie was one of the most widely syndicated programs of the
1950s and 1960s. It even proved popular enough to air on Saturday mornings, perhaps acquainting a new and loyal audience of children with Margie’s near-cartoonish antics.

**My Three Sons**

U.S. Domestic Comedy

Created by Don Fedderson and *Leave It to Beaver* alumnus George Tibbles, *My Three Sons* was one of television’s longest-running and most influential domestic comedies. The program was conceived originally as a television vehicle for Fred MacMurray (who owned 50 percent of the program) when Fedderson was approached by Chevrolet to develop a program that was “representative of America.” During its 12-year run, the program averaged a respectable but not spectacular 22.2 rating and a 35 percent share and underwent enormous narrative and character changes. The show is most significant for its development of a star-friendly shooting schedule and for its redefinition of the composition of the television family.

Before he agreed to his contract, Fred MacMurray queried veteran television performer Robert Young about Young’s workload. On Young’s complaint about television’s time-consuming schedule, MacMurray insisted on a unique shooting plan that was to be copied by other top actors and christened “the MacMurray method.” This so-called writer’s nightmare stipulated that all of MacMurray’s scenes were to be shot in 65 nonconsecutive days. All other actors had to complete their fill-in shots while MacMurray was on vacation. Practically speaking, this meant that the series had to stockpile at least half a season’s scripts before the season ever began so that MacMurray’s role could be shot during his limited workdays. The repercussions of this schedule were enormous. Guest stars often had to return nine months later to finish filming an episode, MacMurray’s costars had their hair cut weekly so as to avoid any continuity discrepancies (MacMurray wore a toupee), and any unforeseen event (a sudden growth spurt or a guest star’s death) could cause catastrophe. Oftentimes, the producers were forced to film MacMurray in scriptless episodes and then construct a script around his very generalized monologues. Frequently, to avoid complication, the writers simply placed his character “out of town,” so that there are an inordinate number of episodes in which Steve Douglas communicates to his family only by telephone. Despite the hardship on writers, directors, and costars, the MacMurray method was adapted by a number of film stars (such as Jimmy Stewart and Henry Fonda) as a conditional requirement for their work in a television series.

The program’s narrative concept has proven equally influential. Until 1960, most family comedies were centered on strictly nuclear groupings—mom, dad, and biological children. While an occasional program

Courtesy of the Everett Collection

1582
such as *Bachelor Father* or *The Bob Cummings Show* might focus on the comedic exploits of an unmarried adult raising a niece or nephew, most programs, from *I Love Lucy* to *Father Knows Best*, depicted the humorous tribulations of two-parent households and their biological offspring.

*My Three Sons* initiated what was to become a popular trend in television—that of the widowed parent raising a family. While initial director Peter Tewksbury called the premise a truly depressing one, producers Tibbles and Fedderson chose to ignore the potential for pathos and flung themselves wholeheartedly into the comedic consequences of a male-only household. Ironically (some might even say with more than a touch of misogyny), the bulk of the program’s first five years did not focus on the stereotypical male ineptitude for all household chores but instead continually reinforced the notion that males were, in fact, far domestically superior to the “hysterical” female guest stars.

During the course of its 12-year run, *My Three Sons* functioned, in essence, as three successive programs with different casts, writers, and directors. For its first five seasons, the program was shot in black and white and aired on the American Broadcasting Company (ABC). These episodes focus on Steve Douglas (MacMurray), aerospace consultant, who, along with his father-in-law, Bob O’Casey (William Frawley), has struggled to raise Steve’s three motherless sons: 18-year-old Mike, 14-year-old Robbie, and seven-year-old Chip. The show was directed and produced by *Father Knows Best* alumnus Peter Tewksbury. The first year of the program is by far the series’ darkest, dealing explicitly with how a family survives and even thrives in the event of maternal loss. In its second season, George Tibbles took over, moving the program more toward situation comedy and inserting multiple slapstick-type episodes into the mix. From the third season onward, Ed Hartmann’s role as producer redirected the program yet again, this time to a heavily moralistic but lighthearted look at generational and gender conflicts. In addition, Hartmann’s long-standing friendship with members of the Asian community contributed to an unusual number of episodes dealing with the Chinese and Japanese friends of the Douglas family, granting television visibility and respect to a previously neglected minority group.

When ABC refused to finance the series’ switch to color production, the program moved to the Columbia Broadcasting System (CBS), losing two cast members in an unrelated series of events. First, in the midst of the 1964–65 season, terminally ill William Frawley’s $300,000 insurance policy was canceled, and Don Fedderson was forced to replace the character of Bub O’Casey with Uncle Charley, a role played by William Demarest for the program’s remaining seven years. Next, an argument with Don Fedderson over Tim Considine’s desire to direct resulted in the actor’s departure from the program. As eldest son Mike was written out of the series with a fictionalized “move to California,” the producers chose a new third son, Ernie, as a replacement. With no regard for narrative plausibility, the producers created a three-part episode in which Chip’s best friend Ernie loses his parents in a car crash, suddenly becomes two years younger, and is adopted by Steve as the youngest member of the Douglas family.

Two years later, the program experienced its third incarnation when the Douglas family moved from the fictional Bryant Park to southern California. Here, Robbie was to romance and wed Katie, and Steve was to end his long-term widowhood by marrying Barbara and adopting her small daughter. For the program’s remaining years, the narrative focused on blended families, Chip’s romantic escapades and eventual elopement, and Robbie’s triplets, where the premise of three sons promised to continue indefinitely.

The series’ influence was demonstrated by the quick succession of single-parent households that were to dominate television’s comedy schedule for the next decade. *Family Affair, The Courtship of Eddie’s Father, Flipper, and Nanny and the Professor* all featured eligible bachelors burdened with raising their own (or a relative’s offspring) with the help of an adept elderly man or desirable young woman. All these series worked to erase the necessity of the maternal, as the family operated in an emotionally secure and supremely healthy environment without benefit of the long since dead mother. While there were occasional widow-with-children programs (*The Ghost and Mrs. Muir* and *Julia*), these women were not granted the same versatility of their male counterparts and were forced to turn to strong male figures (dead ship captains and doctors, respectively) for continual guidance.

While the 1980s witnessed a regeneration of television’s nuclear family, the legacy of *My Three Sons* dominated, and for every *Cosby* there was a *Full House, My Two Dads, or Brothers*. By the 1990s, one would be hard pressed to find any family show that was not about a single-parent family, a family with adopted children, or a blended arrangement of two distinct families—all configurations that owe their genesis in some way to *My Three Sons*.

Naked City, which had two incarnations between 1958 and 1963, was one of American television's most innovative police shows, and one of its most important and influential drama series. More character anthology than police procedural, the series blended the urban *policier* a la *Dragnet* with the urban pathos of the *Studio One* school of television drama, offering a mix of action-adventure and Actors' Studio, car chases and character studies, shoot-outs and sociology, all filmed with arresting starkness on the streets of New York.

The series was inspired by the 1948 "semidocumentary" feature *The Naked City* (which borrowed its title from the photographic collection by urban documentary/crime photographer Weegee). Independent producer Herbert Leonard (The Adventures of Rin-Tin-Tin, Tales of the 77th Bengal Lancers, Circus Boy) developed the idea as a half-hour series for Screen Gems, hiring writer Stirling Silliphant for the pilot script. Leonard outlined his plan for the series to *Variety* in 1958 as an attempt to tell anthology-style stories within the framework of a continuing-character show. It was to be "a human interest series about New York," the producer declared, "told through the eyes of two law enforcement officers." Leonard's agenda for the series' setting was equally unique: it would be shot completely on location in New York, duplicating the trendsetting realism of its feature-film progenitor. This was an ambitious, if not radical, move at that moment in television history, for although New York still retained a significant presence as the site of variety shows, a few live anthologies, and the quiz programs, no other telefilm dramas were being produced there at the time.

*Naked City*'s first season on ABC presented 39 taut, noirish half-hours (31 scripted by Silliphant) that mixed character drama, suspense, and action. The characters for the series' two regular detectives were carried over from the feature film: Lt. Dan Muldoon (John McIntire), the seasoned veteran, and his idealistic young subordinate, Detective Jim Halloran (James Franciscus). When creative differences arose between McIntire and Leonard at midseason, Muldoon was written out of the series via a fiery car crash and replaced as the 65th Precinct's father-figure by crusty Lt. Mike Parker (Horace MacMahon). The show's signature was its narrator, who introduced each episode with the assurance that the series was not filmed in a studio, but "in the streets and buildings of New York itself," and returned 30 minutes later to intone the series' famous tag-line (also borrowed from the feature): "There are 8 million stories in the Naked City. This has been one of them."

Despite an Emmy nomination for Best Drama, *Naked City*'s downbeat dramatics did not generate adequate ratings, and it was canceled. Unlike other failed shows, however, *Naked City* was not forgotten. In the fall of 1959, one of the show's former sponsors urged producer Leonard to mount *Naked City* for the follow-

ing season in hour-long form. The sponsor’s interest led ABC to finance the pilot, and in fall 1960 Leonard was at the helm of two hour-long prime-time drama series (the other being Route 66 at CBS).

New York itself remained the show’s most distinctive star, and extensive location shooting remained its trademark. Horace McMahon returned as Lt. Parker, but with a different compassionate young colleague, Detective Adam Flint (Paul Burke), who was partnered with good-natured Sgt. Frank Arcaro (Harry Bellaver) and engaged to aspiring actress Libby Kingston (Nancy Malone). Silliphant wrote the pilot and stayed on as executive story consultant, but he wrote fewer scripts due to his heavy involvement with Route 66. Leonard brought in anthology veteran Howard Rodman as story editor and frequent scriptwriter and was able to attract other writers with a penchant for social drama, including anthology alumni such as Ernest Kinoy and Mel Goldberg. Hollywood blacklistees such as Arnold Manoff (writing as “Joel Carpenter”), Ben Maddow, and Abram Ginnes—and such budding TV auteurs as Gene Roddenberry.

With a company of serious writers and more time for story and character development, Naked City’s anthology flavor became even more pronounced. Stories became more character-driven, with a more central focus on transient characters (that is, “guest stars”), and more extended psychological exploration. This dimension of the show was informed by a distinctive roster of guest stars, from well-known Hollywood performers such as Claude Rains and Lee J. Cobb, and character players like Eli Wallach, Maureen Stapleton, and Walter Matthau, to such up-and-coming talents as Diannah Carroll and Dustin Hoffman. A 1962 Time profile called the series’ array of stars “the best evidence that Naked City is not just another cop show.” Its stories provided even stronger evidence. Naked City’s structure placed less emphasis on investigation and police work than did police-procedurals in the Dragnet mold—and less emphasis on the detectives themselves. As Todd Gitlin has put it, on Naked City “the regular cops faded into the background while the foreground belonged to each week’s new character in the grip of the city.”

With its stories generally emphasizing the points-of-view of the criminals, victims, or persons-in-crisis, Naked City exhibited a more complicated and ambiguous vision of morality and justice than traditional policiers, where good and bad were clear-cut. Most of the characters encountered by Flint and Arcaro were simply people with problems, who stumbled up against the law by accident or ill fortune; when the occasional hit man, bank robber, or jewel thief was encountered, they too were humanized, their motives and psyches probed. However, sociopaths and career crooks were far outnumbered by more mundane denizens of the naked city, thrust into crisis by circumstance: an innocent ex-con accused of murder; a disfigured youth living in the shadows of the tenements; a Puerto Rican immigrant worn down by poverty and unemployment; a lonely city bureaucrat overcome by suicidal despair; a junior executive who kills over a parking space; a sightless boy on an odyssey through the streets of Manhattan. Eight million stories—or at least 138 as dramatized in this series—rooted in the sociology and psychology of human pain.

Naked City revised the traditional cop-show commitment to crime and punishment. Unlike their prime-time counterparts Joe Friday and Eliot Ness, Detectives Flint and Arcaro did not toil in the grim pursuit of “facts” with which to solve cases and incarcerate criminals. Rather, they pondered human puzzles, bore witness to suffering, and meditated on the absurdities of urban existence. With compassion more typical of TV doctors than TV detectives, they brought justice to the innocent, helped lost souls fit back into society, and agonized over broken lives they could not fix. Indeed, as critic David Boroff put it in an essay on “TV’s Problem Play,” the detectives of Naked City were “as much social workers as cops.”

Whereas every episode of Dragnet ended with the record of a trial (and usually a conviction), Naked City was seldom able to resolve its stories quite so easily.
The series offered narrative closure, but no easy answers; it did not pretend to solve social problems, nor did it mute, defuse, or mask them. Although some episodes ended with guarded hope, straightforward happy endings were rare; resolutions were just as likely to be framed in melancholy bemusement or utter despair. *Naked City*’s “solution” was to admit that there are no solutions—at least none that could be articulated in the context of its own dramatic agenda. “One of its strengths,” wrote Boroff in 1966, “was that it said nothing which is neatly paraphrasable. It was, in truth, Chekhovian in its rueful gaze at people in the clutch of disaster. *Naked City* was, in essence, a compassionate—not a savage—eye. ‘This I have seen,’ it said.”

*Naked City* was one of ABC’s most prestigious shows during the early 1960s, nominated for the “Outstanding Achievement in Drama” Emmy award every season it was on the air, and winning several Emmys for editing and cinematography. The series was canceled at the end of the 1962–63 season, but its influence was already clear. In its day, it paved the way for the serious, urban dramas that followed, such as *The Defenders*, and *East Side, West Side*, and it sparked a modest renaissance in New York telefilm production in the early 1960s. At a larger level, it experimented with the formal definition of the series, demonstrated that complex drama could be done within the series format, and expanded the aesthetic horizons of the police show. Echoing Weegee’s photographic studies, which captured the faces of New York in the glare of a camera flash, television’s *Naked City* offered narrative portraits, exposed through the equally revealing light of the writer’s imagination. Ultimately, both versions of *Naked City* are less about society or a city than people, which is why the portraits are often disturbing, and always fascinating.

The Naked Civil Servant, adapted from the autobiography of the same title, was a British television biopic of the life and times of the English homosexual Quentin Crisp. Transmitted for the first time on December 17, 1975, it broke new ground in its candid and defiant depiction of homosexuality on British television and shot Crisp himself to overnight notoriety and celebrity. Not merely of interest for its positive treatment of what was then a controversial subject, The Naked Civil Servant was compelling television, funny, warm, and moving, and earned John Hurt, as Crisp, a much-deserved BAFTA award for Best Actor.

Central to The Naked Civil Servant's critical success and enduring popularity (though perhaps cult appeal is the irreverent wit, flamboyant charm, and touch-mind individualism of Crisp himself. Born Dennis Pratt on Christmas Day 1908 to very ordinary, middle-class parents living in a suburb of London, Crisp went on to cut a larger-than-life figure who openly flaunted society’s rules in his everyday behavior and demeanor. In hair dyed with henna, and in lipstick and mascara, he risked assault on the streets of London daily to openly flaunt his effeminacy. At times he experienced violence, and though taken before the courts for soliciting, he was never convicted.

Associating with London’s more Bohemian set, he passed from job to job, including designing book covers and teaching tap-dancing (even though he was still learning himself). He was also a prostitute for six months, but claimed he did this because he was looking for love rather than for the money. Exempted from military service during World War II due to his homosexuality, he took a job at an art-school as a nude model, becoming a “naked civil servant.”

As a model he could simply be himself, and it was being himself that characterized both his homosexuality and his life more generally. He never openly campaigned for gay rights, and was later to be much criticized by activists for his individualistic stance, as well as for perpetuating a homosexual stereotype of campness, rather than showing solidarity with a wider gay movement. In his own view, he just wanted to be accepted for the individual that he was.

His defiance in the face of establishment and social prejudice was marked by mock incredulity, gritty passiveness, and perhaps even pacifism. As an individual, raconteur, aphorist, and wit, and with nobleness and gentility of manner, Crisp was the quintessential eccentric English gentleman. As such, he lived in a room in London’s Chelsea which had, notoriously, never been cleaned. In the autobiography he was commissioned to write in 1968 he stated that “after the first four years the dirt doesn’t get any worse.”

After the book’s publication and modest sales, Crisp attracted some attention and held a one-man stage show. Around the same time, the dramatist Philip Mackie began to try unsuccessfully to interest producers in making a film based on Crisp’s book; he would continue to be unsuccessful for four years. Also turned down by the British Broadcasting Corporation (BBC), the project was finally given the go-ahead by Thames Television, one of the franchised program companies that made up part of the Independent Television (ITV) Network in Britain.

Under the direction of Jack Gold, with Mackie’s screenplay, the television production of The Naked Civil Servant took an idiosyncratic approach to its unconventional subject matter. Despite the gloom of Edwardian England into which Crisp was born and the austerity of the post-war years, and despite the perpetual menace of violence, the tone of the production is upbeat. Boasting a jaunty score by Carl Davis, and interspersed with ironic intertitles, the episodic narrative is propelled by an all-knowing and wry voice-over by John Hurt playing Crisp. In one memorable scene, a gang of working-class “roughs” run amok after a young Crisp calls their leader a closet “queer” to his face. The subsequent intertitle and epiphanic voice-over notes in mock surprise: “Some roughs are really queer, and some queers are really rough.”

Yet despite the humor, the episodic quality of the narrative also provides it with a degree of pathos. Time passes in great leaps, but Crisp remains central in his staunch yet lonely defiance against life’s vicissitudes. It is this quality that seems to give Crisp’s quest for self-determination a heroic edge. Although cautioned in some quarters against the dangers of playing a gay role—still considered risky to a career at that time—John Hurt, a leading British actor, stated that it was the sense that Crisp was a hero that helped him decide to take the role.

Interestingly, it may have been a combination of hu-
mor, individualism and heroism that made The Naked Civil Servant, and its potentially controversial subject matter, more palatable to a mainstream television audience. The Independent Broadcasting Authority—at that time Britain’s commercial television industry regulator, which awarded television franchises—was so concerned about a possible public backlash against the program that it commissioned a special survey among a representative sample of the national audience on the morning after its first transmission. Ratings indicated that The Naked Civil Servant was viewed in about 3.5 million homes, and from its survey sample surmised that 85 percent of the audience did not find the material shocking, while almost half felt they understood and sympathized with Crisp’s difficulties.

What viewers may have responded to positively is perhaps not the program’s depiction of homosexuality per se. It is an often-cited cliché that the British always like to support the “underdog.” In this sense, viewer empathy might lie with Crisp both as an entertaining English eccentric, on the one hand, and on the other, as an “everyman” figure who faces up to life’s trials and tribulations with a certain British stoicism, “stiff-upper-lip” determination, and a self-deprecating sense of humor.

Crisp introduced the first transmission of The Naked Civil Servant in person, and was subsequently propelled further into the limelight in Britain and abroad; he was essentially famous for being infamous. He moved to New York in 1980 and wrote various books and articles, and appeared in numerous television programs and documentaries. Crisp died on November 21, 1999, on the eve of a sold-out British tour of his one-man show, and he was remembered with much affection in obituaries.

Name of the Game, The
U.S. Adventure/Mystery Series

The Name of the Game occupies a unique place in the history of prime-time television in the United States. Notable for the ambitious scope and social relevance of its stories, and for its innovative 90-minute anthology format, the series was perhaps most influential in its lavish production values, which aimed to recreate the audiovisual complexity of the movies. In 1969, TV Guide reported that the show’s budget of $400,000 per episode made The Name of the Game the most expensive television program in history. The series also functioned as a kind of apprentice field for writers and directors who later achieved great success, including Steven Bochco, Marvin Chomsky, Leo Penn, and Steven Spielberg.

The two-hour pilot film for the series, Fame Is the Name of the Game, was broadcast in 1966 as the first World Premiere Movie, a weekly series of made-for-television films produced by Universal Studios for NBC. The series itself, which premiered in 1968, retained the fluid, quick-cutting visual texture of the pilot and added a pulsating jazz theme by Dave Grusin. Tony Franciosa, star of the pilot film, returned to the series as Jeff Dillon, ace reporter for People Magazine, in a rotation every third week with Gene Barry and
Robert Stack. Barry played a Henry Luce-type media mogul, Glenn Howard, chief executive officer of Howard Publications, while Stack—in a role intended to recall his performance as Eliot Ness, the crime-fighting hero of The Untouchables—played Dan Farrell, a retired FBI agent, now a writer and editor for Crime Magazine. Providing continuity, Susan St. James appeared in every episode as Peggy Maxwell, who remained a research assistant and aide-de-camp to the male stars through the run of the series despite her Ph.D. in archaeology and her knowledge of five languages.

Because each episode was essentially a self-contained film, the series offered a rich venue for performers and served as something of a refuge for movie actors drawn to television by the breakdown of the Hollywood studios and the disappearance of the B-movie. Movie actors who appeared in the series included Dana Andrews, Anne Baxter, Charles Boyer, Joseph Cotten, Broderick Crawford, Yvonne DeCarlo, Jose Ferrer, Farley Granger, John Ireland, Van Johnson, Janet Leigh, Ida Lupino, Kevin McCarthy, Ray Milland, Gene Raymond, Mickey Rooney, and Barry Sullivan.

One of the first television programs to deal directly with the increasing social and political turbulence of the late 1960s, The Name of the Game regularly confronted such topics as the counterculture, racial conflict, the sexual revolution, political corruption, and environmental pollution. Its ideology was a muddled if revealing strain of Hollywood liberalism, and its rotating heroes, especially Gene Barry’s elegant corporate aristocrat, were enlightened professionals who used the power of their media conglomerate to right injustice and defend the powerless. If many episodes ended on a reformist note of muted affirmation for an America shown to be flawed but resilient and ultimately fixable, individual scenes and performances often dramatized social evils, injustice, and moral and political corruption with a vividness and truthfulness rare in television during this period.

As it continued, the series became more imaginative and unpredictable, experimenting at times with unusual and challenging formats. “Little Bear Died Running” (first broadcast November 6, 1970), written by Edward J. Lakso, uses a complex strategy of multiple flashbacks to reconstruct the murder of a Native American by a “legal” posse, in the process powerfully exposing the racist attitudes of an apparently enlightened white culture. “Appointment in Palermo” (February 26, 1971), directed by Ben Gazzara, is a zany, affectionate parody of the godfather genre, its comedy notably sharpened by a clever use of actors familiar to us from straight gangster films: Gabriel Dell, Harry Guardino, John Marley and Joe De Santis. In “Los Angeles 2017” (January 15, 1971), Glenn Howard falls into a nightmare of ecological disaster, in which a vestigial American population survives beneath the polluted surface of the Earth in USA, Inc., a regimented society run by a corporate elite. This notable episode was directed by Steven Spielberg from a thoughtful screenplay by Philip Wylie.

Even in its less imaginative and intellectually ambitious episodes, The Name of the Game held to consistently high standards of production and acting. Both in its formal excellence and in the intermittent but genuine seriousness of its subject matter, the show brought a new maturity to U.S. television and deserves recognition as an enabling precursor of the strongest prime-time programming of the 1970s and 1980s.

In the earlier days of American television, the three major networks (NBC, CBS, and ABC) dominated programming, and each sought to obtain the widest audience possible. They avoided programming content that might appeal only to a small segment of the mass population and succeeded in their goal by between them reaching nearly 90 percent of the television-viewing audience on a regular basis. The networks maintained their stronghold until competition emerged through the addition of many independent stations, the proliferation of cable channels, and the popularity of videocassettes. These competitors provided television audiences with many more viewing options. Consequently, the large numbers previously achieved through mass-oriented programming dwindled, and "narrowcasting" took hold.

With narrowcasting the programmer or producer assumes that only a limited number of people or a specific demographic group will be interested in the subject matter of a program. In many ways, this is the essence of cable television's programming strategy. Following the format or characteristics of specialized magazines, a cable television program or channel may emphasize one subject or a few closely related subjects. For example, among U.S. cable channels, popular music television is presented on MTV (Music Television), VH1 (Video Hits One), and TNN (The Nashville Network); CNN (Cable News Network) offers 24-hour news coverage; ESPN (Entertainment Sports Network) boasts an all-sports format; and C-SPAN covers the U.S. Congress. Other cable channels feature programming such as shopping, comedy, science-fiction, or programs aimed at specific ethnic or gender groups highly prized by specific advertisers.

For the most part, the major networks continue to gear their programming to the general mass audience. But increasingly, they, too, are engaged in forms of narrowcasting by segmenting similar programs that appeal to specific groups into adjacent time slots. For example, a network might target young viewers by programming back-to-back futuristic space programs on one night, while on a different night, feature an ensemble of programs oriented toward ethnic minorities. This strategy allows the networks to reach the overall mass audience cumulatively rather than simultaneously.

In the United States, then, narrowcasting is driven by economic necessity and competition. In public service systems around the world, where broadcasting is supported by license fee, by tax, or by direct government support, there has never been the same need for each program to reach the largest possible audience. As a consequence, programming for special groups—e.g., children, the elderly, ethnic or religious groups—has been standard practice. Ironically, the same technologies that bring competition to commercial broadcasters in the United States cause similar difficulties for public service broadcasters. In those systems new, commercially supported programming delivered by satellite and cable often draws audiences away from public-service offerings. Government officials and elected officers become reluctant to provide scarce public funds to broadcasters whose audiences are becoming smaller, forcing public service programmers to reach for larger audiences with different types of program content. While multiple program sources—cable, home video—make it unlikely that these systems will move toward "mass audience programming" on the U.S. model, it is the case that the face of broadcasting is changing in these contexts.

Kimberly B. Massey
Nash, Knowlton (1927– )
Canadian Broadcast Journalist

One of the most recognizable personalities in Canadian television, Knowlton Nash inhabits a truly unique space in news and public affairs broadcasting. Nash began his career in journalism at an early age, working in the late 1940s as a copy editor for the wire service British United Press. In three short years, Nash worked in Toronto, Halifax, and later Vancouver, where he assumed the position of writer and bureau chief for the wire service. Soon thereafter, Nash and his young family moved to Washington, D.C. where, after a few years working for the International Federation of Agricultural Producers, he began writing regular copy for the Windsor Star, Financial Post, and Vancouver Sun.

By 1958 Nash had become a regular correspondent for the Washington bureau of the Canadian Broadcasting Corporation (CBC), where in years to come he would interview key heads of state, including a succession of U.S. presidents. For Canadians, Nash became a familiar face abroad during the heady days of the Cuban missile crisis, the war in Vietnam, and the assassinations of John and Robert Kennedy. Nash’s international reports in many respects symbolized the growth and reach of the CBC’s news departments around the globe.

In the early 1970s Nash accepted an appointment by the CBC to be head of news and information programming. For many Canadians, Nash is best recognized and most respected for his work as anchor for the CBC’s evening news program The National. In 1978 Nash played a pivotal role in transforming The National into a ratings success for Canada’s public broadcaster. Four years later, Nash and The National solidified its place in the nation’s daily routine when—it moved to the 10:00 P.M. time slot and added an additional half-hour news analysis segment entitled The Journal.

In April 1988, after ten years as anchor, Nash retired from The National. Benefiting from his unmatched wealth of experience in Canadian television journalism, Nash has taken on a number of projects since his so-called retirement. He has periodically anchored the Friday and Saturday broadcasts of The National, as well as the Sunday evening news program Sunday Report. Furthermore, Nash anchors both the CBC educational series News in Review and the highly acclaimed weekly documentary series Witness. On top of his duties in the field of electronic broadcasting and journalism, Nash has written a number of books, some quite controversial, on the history of both private and public-sector broadcasting in Canada.

Nat "King" Cole Show, The

U.S. Musical Variety

The Nat "King" Cole Show premiered on NBC as a 15-minute weekly musical variety show in November 1956. Cole, an international star as a jazz pianist and uniquely gifted vocalist, became the first major black performer to host a network variety series. It was a bruising experience for him, however, and an episode in television history that illuminates the state of race relations in the United States at the dawn of the modern civil rights movement.

Cole's first hit record, "Straighten Up and Fly Right," was recorded with his Nat "King" Cole Trio in 1944. By the mid-1950s he was a solo act—a top nightclub performer with several million-selling records, including "Nature Boy," "Mona Lisa," and "Too Young." A frequent guest on variety programs such as those hosted by Perry Como, Milton Berle, Ed Sullivan, Dinah Shore, Jackie Gleason, and Red Skelton, Cole was in the mainstream of American show business. His performances delighted audiences, and he seemed to be a natural for his own TV show, which he very much wanted.

Although he had experienced virulent racism in his

life and career, Cole was reluctant to take on the role of a crusader. He was criticized by some for regularly performing in segregated-audience venues in the South, for instance. His bid for a TV show, however, brought with it a sense of mission. "It could be a turning point," he realized, "so that Negroes may be featured regularly on television." Yet, Cole understood, "If I try to make a big thing out of being the first and stir up a lot of talk, it might work adversely."

Cole originally signed a contract with CBS in 1956, but the promise of his own program never materialized on that network. Later in the year, NBC reached an agreement with Cole's manager and agency, which packaged The Nat "King" Cole Show. The first broadcast, on November 5, 1956, aired without commercial sponsorship. NBC agreed to foot the bill for the program with the hope that advertisers would soon be attracted to the series. Cole felt confident a national sponsor would emerge, but his optimism was misplaced.

Advertising agencies were unable to convince national clients to buy time on The Nat "King" Cole Show. Advertisers were fearful that white Southern audiences would boycott their products. A representative of Max Factor cosmetics, a logical sponsor for the program, claimed that a "Negro" couldn't sell lipstick for them. Cole was angered by the comment. "What do they think we use?" he asked. "Chalk? Congo paint?" "And what about a corporation like the telephone company?" Cole wondered. "A man sees a Negro on a television show. What's he going to do—call up the telephone company and tell them to take out the phone?" Occasionally, the show was purchased by Ard-Rid deodorant and Rise shaving cream, but it was most often sustained by NBC without sponsorship.

Despite the musical excellence of the program, which featured orchestra leader Nelson Riddle when the show was broadcast from Hollywood and Gordon Jenkins on weeks it originated from New York, The Nat "King" Cole Show suffered from anemic Nielsen ratings. Nonetheless, NBC decided to experiment. The network revamped the show in the summer of 1957 by expanding it to 30 minutes and increasing the production budget. Cole's many friends and admirers in the music industry joined him in a determined effort to keep the series alive. Performers who could command enormous fees—including Ella Fitzgerald, Peggy Lee, Mel Torme, Pearl Bailey, Mahalia Jackson, Sammy Davis, Jr., Tony Bennett, and Harry Belafonte—appeared on The Nat "King" Cole Show for the minimum wage allowed by the union.

Ratings improved, but still no sponsors were interested in a permanent relationship with the series. Some advertisers purchased airtime in particular markets. For instance, in San Francisco, Italian Swiss Colony wine was an underwriter. In New York the sponsor was Rheingold beer; in Los Angeles, Gallo wine and Colgate toothpaste; and in Houston, Coca-Cola.

This arrangement, however, was not as lucrative to the network as single national sponsorship. So, when the Singer Sewing Machine Company wanted to underwrite an adult western called The Californians, NBC turned over the time slot held by The Nat "King" Cole Show. The network offered to move Cole's program to a less-expensive and less-desirable place in the schedule, Saturdays at 7:00 p.m., but Cole declined the downgrade.

In the inevitable postmortem on the show, Cole praised NBC for its efforts. "The network supported this show from the beginning," he said. "From Mr. Sarnoff on down, they tried to sell it to agencies. They could have dropped it after the first 13 weeks." The star placed the blame squarely on the advertising industry. "Madison Avenue," Cole said, "is afraid of the dark."

In an Ebony magazine article entitled "Why I Quit My TV Show," Cole expressed his frustration:

For 13 months I was the Jackie Robinson of television. I was the pioneer, the test case, the Negro first.... On my
show rode the hopes and tears and dreams of millions of people. ... Once a week for 64 consecutive weeks I went to bat for these people, I sacrificed and drove myself. I plowed part of my salary back into the show. I turned down $500,000 in dates in order to be on the scene. I did everything I could to make the show a success. And what happened? After a trailblazing year that shattered all the old bugaboos about Negroes on TV, I found myself standing there with the bat on my shoulder. The men who dictate what Americans see and hear didn’t want to play ball.

Singer and actress Eartha Kitt, one of the program’s guest stars, reflected many years later on the puzzling lack of success of *The Nat “King” Cole Show*. “At that time I think it was dangerous,” she said, referring to Cole’s sophisticated image in an era when the only blacks appearing on television regularly were those on *Amos ’n’ Andy* and *Beulah* and Jack Benny’s manservant, Rochester. Nat “King” Cole’s elegance and interaction with white performers as equals stood in stark contrast. “I think it was too early,” Kitt said, “to show ourselves off as intelligent people.”

---

**Nation, Terry (1930–1997)**

British Writer

Terry Nation was one of the most consistent writers of British genre television, having had a lasting impact on the development of science fiction and action-adventure programs. Nation’s contributions to such series as *The Saint, Doctor Who, Blake’s Seven, The Avengers*, and *MacGyver* built him an international fan following. Although most of his television credits were for hour-long dramas, Nation got his start in comedy. At the age of 25, he made his debut as a stage comedian, receiving a poor response. If his performance skills were found lacking, his original material won an admirer in comedian Spike Milligan, who commissioned him to write scripts for the zany British comedy series *The Goon Show*. Nation soon was developing material for Peter Sellers, Frankie Howerd, Tony Hancock, and an array of other comic stars. In all, he wrote more than 200 radio comedy scripts before trying his hand on television in the early 1960s.

Some of his first work was for ITV’s *Out of This World*, a science fiction anthology series in 1962. The following year Nation was asked to write one of the first storylines for *Doctor Who*, then making its debut at the BBC. Nation’s most important contribution to *Doctor Who* were the Daleks, the most popular (and heavily merchandized) villains in the series’ history. Citing a childhood spent (in Wales) during World War II, Nation remarked that he modeled the impersonal and unstoppable Daleks after the Nazis, seeing them...
as embodying “the unhearing, unthinking, blanked-out face of authority that will destroy you because it wants to destroy you.” Nation continued to influence the development of the Daleks across a succession of storylines and through two feature-film spin-offs of the series, writing many of the Dalek scripts himself while serving as technical adviser on the others. He was subsequently responsible for the introduction of Davros, the wheelchair-bound mad scientist who created the Daleks to serve his schemes for intergalactic domination.

Building on his success at Doctor Who, Terry Nation created two original science fiction series: The Survivors, a post-nuclear apocalypse story, and Blake’s Seven, a popular series about a group of freedom fighters struggling against a totalitarian multi-planetary regime. Blake’s Seven, which he initially proposed as a science fiction version of The Dirty Dozen, remains a cult favorite to the present day, popular for its focus on character conflicts within the Liberator crew, its bleak vision of the future and of the prospects of overcoming political repression, its strongly defined female characters, and the intelligence of its dialogue. The series sought an adult following that contrasted sharply with the Doctor Who audience, which the BBC persisted in seeing as primarily composed of children. Nation wrote all 13 of the first season episodes of Blake’s Seven and continued to contribute regularly throughout its second season, before being displaced as story editor by Chris Boucher, who pushed the series in an even darker and more pessimistic direction.

Nation’s contributions to the detective genre are almost as significant as his influence on British science fiction. For a while, it seemed that Nation wrote for or was responsible for many of ITV’s most popular adventure series. He wrote more than a dozen episodes of The Saint, the series starring Roger Moore as globe-trotting master thief/detective Simon Templar. The Saint enjoyed international success and was one of the few British imports to snag a prime-time slot on U.S. television. Nation served as script editor and writer for The Baron, another ITV series about a jewel thief that built on The Saint’s success. He was script editor for the final season of The Avengers, shaping the controversial transition from popular Emma Peel (Diana Rigg) to the less-beloved Tara King (Linda Thorson). He was script editor and associate producer for The Persuaders, another successful action-adventure series about two daredevil playboys who become “instruments of justice” under duress. He also contributed regularly to ITV’s superhero series Champions.

Near the end of his career, Nation shifted his focus onto American television, where he was a producer and writer for the first two seasons of MacGyver, an original and imaginative series dealing with a former special forces agent who solves crimes and battles evil through the use of resourceful engineering and tinkering tricks. MacGyver seemed to fit comfortably within the tradition of British action-adventure protagonists whom Nation helped to shape and develop. Nation died of emphysema in March 1997.

Most of the best-known writers of British television are recognized for their original dramas and social realism, but Nation’s reputation came from his intelligent contributions to genre entertainment.

National, The/The Journal

Canadian News Broadcasts

Since the 1950s the titles The National News and The National have been used by the Canadian Broadcast-
ing Corporation (CBC) for its English-language na-
tional newscasts. In 1982 CBC management made a bold decision to create a new, hour-long 10:00 P.M. na-
tional news and current-affairs bloc. A new program, The Journal, provided a nightly current affairs com-
ponent to the regular news report. By the 1980s, well over 80 percent of Canadian television households were cabled, and through their cable systems Can-
dian viewers had direct access to simultaneous trans-
mission of the prime-time schedules of the U.S. networks. The CBC’s decision to move The National
newscast from 11:00 P.M. to 10:00 P.M., along with the creation of The Journal, was controversial in that it was seen as both an unnecessary disruption of decades-old Canadian viewing habits, and a risky counterprogramming strategy in the face of the success of U.S. prime-time dramatic series in the Anglo-
Canadian market.

Nevertheless, the new bloc was introduced in January 1982, with veteran CBC journalist Knowlton
Nash as newsreader for the 22-minute The National, followed by The Journal, cohosted by Barbara Frum and Mary Lou Finlay. Within a very short time, how-
ever, the new bloc received positive critical attention and the counterprogramming strategy seemed success-
ful. The programs saw a substantial improvement in ratings over the old 11:00 P.M. newscast.

While The National continued to be produced by the same staff within CBC news, The Journal was de-
veloped by a new unit with CBC Current Affairs, un-
der the direction of Executive Producer Mark Starowicz. Formally, The Journal innovated within
Canadian current affairs television in its mixing of short- and long-form documentaries and double-ender
interviews with politicians, experts, and commenta-
tors. It quickly became the key outlet for political and social debate in the Anglo-Canadian media. The specific format varied from night to night, sometimes fo-
cusing on several stories and issues, sometimes providing in-depth coverage of single issues, or serv-
ing as the site of national policy debates between the major federal political parties.

While the 10:00 P.M. news and current affairs bloc remained successful throughout the 1980s, there were recurrent tensions within the CBC over questions of news judgment and resource allocation between the two separate production teams responsible for the programs. In 1992 Ivan Fecan, the CBC program-
ing executive, introduced a new prime-time sche-
dule to the network, re-creating The National and The Journal as the Prime-Time News, anchored by Peter
Mansbridge. He also moved the news and current af-
fairs hour to 9:00 P.M. as part of a reprogramming of
CBC prime time into a 7:00–9:00 P.M. “family” bloc and 10:00–12:00 P.M. “adult” bloc. The production of
the new Prime-Time News was reorganized into a sin-
gle production unit, both to overcome previous organ-
izational antagonisms, and to address budget constraints in a period of increasing austerity at the
CBC. The move to 9:00 P.M. proved much less suc-
cessful in ratings, and the initial reformatting of news and current affairs within one program proved more difficult than had been anticipated. By 1995 the
scheduling of CBC prime time into “family” and “adult” blocs was abandoned, and the news and cur-
rent affairs hour was returned to 10:00 P.M. and re-
named The National, including the current affairs
coverage under the title of The National Magazine.

1597
The return to 10:00 P.M. once again proved successful as a counterprogramming strategy for prime-time competition from U.S. networks.

The National Academy of Television Arts and Sciences (NATAS) is a New York-based organization with 19 regional chapters or affiliates in many of the larger television markets. The organization is best known for its Emmy awards, which are bestowed on both programs and individuals in a variety of categories. The "Emmy" is a variation of "Immy," a nickname for the light-sensitive Image Orthicon tube that was the heart of television cameras during the 1950s and 1960s. The award is a statuette of a winged woman holding an electron in her outstretched hands.

NATAS was organized in 1957 as an outgrowth of rivalry between two separate television academies that had been established several years earlier. One was based in Los Angeles, the other in New York. The move to unite the two academies into a single "national" television academy was led by TV variety-show host Ed Sullivan, who was elected its first president. The rival New York and Hollywood academies became "founding chapters" of NATAS and additional chapters were later established in other cities.

The first nationally televised Emmy Awards originated from both New York and Los Angeles in 1955, actually predating the merger of the two academies. These bi-coastal presentations continued through 1971 and mirrored the glamour of the rapidly expanding television industry to the point where the Emmy ceremonies were second only to the Motion Picture Academy Awards in terms of audience interest and recognition. After 1971, separate award ceremonies for prime-time entertainment programs originated from Los Angeles, while New York remained home for the news and documentary awards.

During the 1970s, relations between the Hollywood and New York chapters remained tense. Los Angeles producers of prime-time programs expressed resentment that their programs were being judged by members in New York and the smaller market chapters since they did not consider these individuals to be their peers. They also resented their minority status on a Board of Trustees dominated by the New York and smaller market chapters. After John Cannon of New York defeated Robert Lewine of Hollywood for the presidency of the organization in 1976, the Hollywood chapter left NATAS and created a separate organization: the Academy of Television Arts and Sciences, or ATAS.

ATAS sued for exclusive rights to bestow the Emmy on the grounds that the Los Angeles group had actually given the award several years before NATAS was formed. Litigation by both organizations ended with a compromise: ATAS would retain the Emmy rights for prime-time entertainment programming; NATAS would continue to award Emmys for news and documentary, sports, daytime, and public-service programming, and also for achievements in television engineering.

Initially, NATAS was weakened by the departure of the Los Angeles group. But during the following two decades, NATAS has been strengthened by growing interest in daytime programs (talk shows and soap operas). Each spring, the organization presents a "Daytime at Nighttime" awards ceremony, broadcast during prime time, and showcasing TV's soap-opera stars. The presentation is staged at Radio City Music Hall, Madison Square Garden, or a similar New York location. Separate ceremonies for each of the categories of sports, news, public service, and technology are scheduled on different dates, and sometimes telecast over cable channels.

NATAS has also been strengthened by growth in both the number and size of regional chapters located in many of the major television markets. The nineteen chapters are: Atlanta, Boston, Chicago, Cleveland, Columbus-Dayton-Cincinnati (Ohio Valley), Denver, Detroit, Nashville, New York, Philadelphia, Phoenix, San Diego, San Francisco, Seattle, South Florida, St. Louis, Texas, and Washington, D.C. (A local Los Angeles-area chapter is affiliated with ATAS.)

Each chapter is chartered by the national organization but operates independently in terms of its programs and finances. All 19 chapters conduct Emmy awards presentations to honor television professionals in their respective markets and in adjacent markets that do not have their own chapters. For example, Philadelphia is officially called the Mid Atlantic Chapter and includes Pittsburgh, Scranton, Harrisburg, and several
National Academy of Television Arts and Sciences

other markets in Pennsylvania. Texas, the newest chapter at this writing, includes Houston, Dallas–Fort Worth, San Antonio, and sixteen smaller markets. It was organized with the assumption that two or more separate chapters might eventually emerge from what is now called the Lone Star Chapter.

At both the national and local levels, considerable emphasis is placed on the peer judging of all entries. The national awards are evaluated by judging panels of individuals working within the respective categories. At the local level, chapters exchange tapes to ensure that judging is performed by qualified professionals in other markets. The local Emmy statuette is a smaller replica of the national Emmy statuettes awarded by NATAS and ATAS for national programming.

Governance of the national organization is the responsibility of a Board of Trustees with individual trustees selected by the chapters. Chapter representation is proportional, with one trustee allocated for every 300 members. Each chapter, in turn, is governed by a Board of Governors elected by the membership.

John Cannon led NATAS for 25 years, until his death in 2001. After a national search, Peter O. Price, a former newspaper publisher and cable television executive, was named president by the Board of Trustees in 2002.

Under Price, the organization adapted a shorter name, National Television Academy or NTA, which it uses in many of its activities. A redesigned Emmy has also been introduced on letterhead and in many public relations and promotional announcements. However, the full legal name remains the National Academy of Television Arts and Sciences, and the original Emmy statuette remains intact.

Relationships between the two academies (NATAS and ATAS) remain cool, for the most part. Not surprisingly, most of the controversy relates to the awarding of Emmys. For example, ATAS wanted to award an Emmy for the best commercial; NATAS did not. Conversely, NATAS has proposed a separate Emmys awards ceremony for Spanish-language programming, which ATAS opposes.

In addition to the Emmy awards, NATAS publishes Television Quarterly, a scholarly journal dealing with the historical development and critical analysis of television programs and the television industry. Three major scholarships, currently $40,000 each, are awarded by the national organization to high school seniors who intend to major in communications in college and pursue a career in television. Also, each of the 19 chapters has its own scholarship program. In 2002, NATAS began National Student Television, a program created to recognize excellence and award special student Emmys to television programs produced by high schools throughout the United States.

NATAS maintains a national office at 70 West 57th Street, New York, NY 10019 and a website at www.emmyonline.org. Each of the 19 chapters has offices in their respective cities and all chapters are linked to the national website. The organization and its chapters have 13,000 individual members.

National Asian American Telecommunications Association

U.S. Industry Professional Association

According to the organization's website, the mission of the National Asian American Telecommunications Association (NAATA) is "to present stories that convey the richness and diversity of the Asian Pacific American experience to the broadest audience possible." Since its founding in 1980, the NAATA, based in San Francisco and considered the preeminent Asian-American media arts organizations in the United States, has been bringing award-winning programs by and about Asian Pacific Americans to the public through such venues as national and local television broadcasting, film and video screenings, and educational distribution services.

Through its programming, exhibition, and distribution of works by Asian Pacific Americans, as well as its advocacy and coalition-building efforts, the
NAATA actively serves as both a resource and a promoter for minority communities. Essentially, it coordinates many different realms related to contemporary visual culture—the production of films, videos, and new media works; critical writing and scholarship; distribution and television broadcasting; community and educational outreach; and even legislation and lobbying. In short, it serves as a center of information and human resources.

The NAATA was founded as a conscious and concerted effort on the part of filmmakers and producers in the San Francisco area to address the problem of a lack of equal access to public television and radio. With the guidance and commitment of two older organizations, Visual Communications in Los Angeles and Asian CineVision in New York, both of which emerged out of the movements toward racial and social justice in the 1960s, the NAATA was born out of a three-day conference.

The Association works primarily in three programming areas: television broadcast, exhibition (namely, the annual San Francisco International Asian American Film Festival), and nonbroadcast distribution (more specifically, through their NAATA Distribution Catalog). Through this effort, the organization seeks to support and nurture Asian Pacific American media artists in order to proffer a more accurate representation of their communities to the public. Typically, representations of Asian Americans in American television and film, supporters of the group contend, have led to many false perceptions of this population.

In the 1995 catalog for the San Francisco International Asian American Film Festival, Stephen Gong (film-history scholar and manager of the Pacific Film Archive) argues that the struggles in the career of Susue Hayakawa (1889–1973, a star of many silent films but perhaps best-known for his role as Colonel Saito in The Bridge on the River Kwai, 1957) remain emblematic of the price Asian-American actors pay in order to get some screen time. Referring to the stereotypes of Asian Americans, Gong asks: "Do the commercial constraints that have apparently governed mass media from its earliest days still make it a given that public expectations must be fulfilled before artistic vision can be exercised?" The NAATA attempts to respond to this question by presenting—and more importantly, integrating—alternative and self-proclaimed representations by "marginal" peoples into the mainstream media culture.

The San Francisco International Asian American Film Festival is the NAATA's most dramatic effort to provide the public with self-determined images and stories about Asian and Asian-American experiences. Soliciting new and innovative work from within the United States as well as from Canada and other nations, this festival is a collection of vastly diverse film and video programs as well as installations and panel discussions. For too long, many "cultures, faces, and stories have remained 'in the closet' or simply invisible," as the 1995 festival catalog states. Therefore, the purpose of the festival is to acknowledge the worldwide industry of film and video, which includes and represents many works from the Asian diaspora. "Films submitted to the Asian American film festival reflect the heterogeneous and hybrid cultures of Asian American experience," writes Nerissa S. Balce in her analysis of the 2001 festival. These works "speak to the collective experience of 'Asian/Americans': as people of color, as immigrants, as youth, as queers, as suburbanites, as rural or urban folk, as undocumented workers, as professionals or the working class" (see Balce).

The NAATA's film, video, and audio distribution service has amalgamated a collection of film and video by and about Asian Pacific Americans that serve to challenge the construction and meaning of "Asian American." The intent is to challenge and hopefully change mainstream perceptions of Asian Pacific American identities. Moreover, this service strives not only to foster awareness but also to facilitate discussion, sensitivity, and understanding of cultures that are not one's own. The uses of such a collection include corporate diversity training, high school and university education, and social and political activism. Through the association's website (www.naatanet.org), individuals and institutions can order from more than 200 Asian Pacific American films and videos. The online catalog is skillfully organized by topics including media; land/environment; labor; personal stories; health, mental health, and AIDS; sexuality; multiracial/ethnic heritage; youth; art and performance; and U.S. colonialism. The collection is also indexed by title and by ethnicity, and there is a separate index of titles for school-age audiences. In the NAATA's effort to share the work of Asian Pacific Americans and open up discussion on various issues, the distribution service is a helpful and much-needed resource.

The NAATA offers members monthly electronic news bulletins that announce events such as screenings and festivals, and it publishes on its website extensive information about the NAATA's Media Fund, which since 1990 has used funds from the Corporation for Public Broadcasting to sponsor more than 150 Asian Pacific American film and video projects, many of which have aired locally or nationally on public broadcasting stations. The website also keeps readers updated on past, current, and upcoming Asian Pacific American programming on television; presents infor-
National Association of Broadcasters  
U.S. Industry Trade Association

For nearly eight decades, the National Association of Broadcasters (NAB) has represented the interests of most American radio and television stations and networks to Washington policymakers and the public at large. Fiercely protective of broadcasters’ First Amendment rights, the NAB has waxed and waned over the years in its political effectiveness, becoming by the early 21st century one of the most important trade associations and lobbying groups in the nation’s capital.

Origins

Perhaps fittingly for a commercial business association, the NAB developed as the result of a financial dispute. The American Society of Composers, Authors and Publishers (ASCAP) threatened in mid-1922 to sue radio stations using ASCAP music (virtually all were) if they did not pay royalties. The stations argued they received no income (true at the time) with which to pay such royalties. A half a dozen of them met in a Chicago hotel room to map out a strategy of what to do, and from that came the April 1923 organizational meeting of what became the NAB. Those present agreed to hire a director and create a New York office.

The NAB’s initial goals were to overcome the ASCAP demands for royalties while at the same time seeking basic legislation that most radio station operators realized was needed to expand business. Despite early lobbying efforts, the radio broadcasters lost initial battles and agreed to a schedule of payments to ASCAP, in part because so many other issues were impinging on the stations. Facing continuing pressure for ever-higher ASCAP music royalties, the NAB finally decided to found its own music license agency and created Broadcast Music Incorporated (BMI) in 1939–40.

While Congress finally passed a new radio law in 1927 (the NAB had strongly urged such action), attempts to limit commercial time, to control program content, to reserve some channels for educational use, and other issues continually cropped up, requiring an industry-wide response, for which the NAB naturally took up the coordinating role. As public demand for information on the industry increased, so too did NAB publicity and publication efforts—especially in 1933, when colleges and university teams across the country debated whether the U.S. should adopt the features of the British system of public-service broadcasting, a notion the NAB opposed. The association lobbied hard and successfully to resist major policy

changes when the Communications Act of 1934 was considered and passed.

Expansion and New Services

As the radio industry grew, so did the NAB. The association’s relationship with key government regulators deteriorated for many years in the 1940s and 1950s. Driven in part by strong personalities on both sides, this was unfortunate, as the FCC was developing policies for the new FM radio and television services, and a more cooperative relationship might have eased the entry of both. Initially cool to FM radio, for example, the NAB later supported the service in a variety of ways. NAB was strongly behind the expansion of commercial television from the medium’s inception, although it fought a losing battle against educational channel reservations.

From 1951 to 1957, the association took the somewhat clumsy name the National Association of Radio and Television Broadcasters (NARTB) to make clearer the importance of the newer medium. Over the years, the NAB has often absorbed more specialized organizations, including several that have focused on FM radio. At the same time, it has also spawned many more specific organizations, including the Radio Advertising Bureau (RAB), Television Bureau of Advertising (TvB), and the Television Information Office (TIO).

The NAB’s annual convention was regularly held each spring in Chicago (Washington, D.C., in presidential inauguration years), attracting hundreds, and later several thousand, broadcasters. Keynote speakers often made news. As new FCC Chairman Newton Minow did in 1961 with his speech describing television programming as a “vast wasteland.” The ever-larger technical exhibit helped to showcase expanding technological options such as the introduction of color television technology in the mid-1950s, the arrival of videotape (the star of the 1956 convention), and satellite delivery and reception equipment in the 1970s and 1980s. By the early 1970s, the convention shifted to Dallas, Atlanta, and finally Las Vegas to obtain sufficient exhibit and hotel space.

The NAB produced its first “Code of Ethics” in 1929, in an attempt to preempt the imposition of government program or advertising guidelines. A decade later, again attempting to avoid federal regulation, the NAB issued a more focused “Radio Code” offering programming guidelines and suggested limits on commercial time. NAB added a parallel code of television good practice in 1952, and continued to mod-
and will readily call congressmen to press their views. TAR PAC, the industry's political action committee, is operated by the NAB, as is the NAB Educational Foundation, which is designed to foster research into the benefits of broadcasting.

The annual four-day NAB convention and technical exhibit was, by the early 2000s, attracting more than 115,000 attendees to Las Vegas each spring. The industry gathering, increasingly international in tone in recent years, devotes considerable exhibition space to path-breaking technologies such as digital or high-definition television in the early 1990s, and multimedia and Internet technology in the late 1990s and early 2000s. In between conventions, the NAB plays an active role in technical standard setting, such as the long process of developing digital high-definition television and digital audio broadcasting.

The NAB faces growing problems, however, in trying to maintain its role as "the broadcaster's voice before Congress, federal agencies and the Courts," and as an umbrella organization representing the viewpoints of all broadcasters. It has often taken no position on an issue when its members have been divided on the matter at hand. The problem became especially clear when, in 1999–2000, CBS, Fox and NBC withdrew their network and owned-and-operated stations from membership in disagreement over the NAB's position, due to the Association's opposition to a lessening of regulations concerning multiple ownership of television stations (which those networks supported). Of all the national broadcast networks, only ABC remained by mid-2002, which presented a setback to the NAB's usual united-front approach to industry concerns. Increasingly, the concerns and interests of radio and television broadcasters, as well as those of smaller stations and large group owners, are diverging, making common agreement within one lobbying organization problematic. At the same time, the NAB is criticized for being short-sighted in its lobbying efforts. The association has to fight the conception of many in government that NAB is on the defensive, protecting single-channel broadcasters in a world increasingly dominated by multi-channel competitors.

National Association of Television Program Executives

U.S.-based Industry Trade Association

The National Association of Television Program Executives (NATPE) began in May 1963 as an organization designed to increase the amount of local programming on television stations, and to help program directors improve their positions within their respective stations. Since then, NATPE has developed the largest domestic syndication trade show in the United States, and one of the top three international trade shows. Originally dubbed the National Association of Program Directors, the organization later changed its name to NATPE, and
finally NATPE International. NATPE’s primary function in the television business stems from its annual convention, held in late January, which continues the association’s founding missions: providing a space to buy and sell syndicated programming, and educating programmers about the industry.

Social, regulatory, and industry changes led to the formation of NATPE, and more recent changes in those areas threaten the future of the organization. The various broadcast reform movements of the 1960s resulted in broadcasters’ increased accountability to their local constituents. Programming executives were typically charged with producing or acquiring programming to fit these local needs, and NATPE provided a venue where syndicators and programmers could trade such programming. Nevertheless, founding member Lew Klein remembers that program directors had little influence in most television stations at the time, and so

a secondary role of NATPE was to educate program directors about the industry, and advocate for their professional development. The FCC’s 1970 Prime-Time Access Rule contributed significantly to NATPE’s growth, as it spurred the creation of a variety of popular, first-run syndicated series. About the same time, the National Association of Broadcasters (NAB) convention, which had served as the main venue for syndication trade, moved program suppliers far away from the main convention floor, prompting many of them to abandon the NAB for the more syndicator-friendly NATPE convention.

In the 1970s, NATPE’s membership grew tremendously, from 306 participants in 1970 to 1,891 in 1976. Today, membership includes more than 4,000 media companies. Beginning in 1985, the conference moved to a semi-permanent home in New Orleans, but began in 2001 to alternate between New Orleans and Las Vegas for the convenience of the growing number of syndicators and buyers based on the West Coast. In addition, NATPE has expanded its membership in two key growth areas: new media and international sales. New media first became an important sector for NATPE in 2000, when Internet companies sought out content for their websites and traditional broadcasters and distributors looked for ways to expand their businesses into on-line media. Meanwhile, international sales have been an important part of NATPE’s strategy since the late 1980s. In 1993, the association appointed as its president and CEO Bruce Johansen, a well-known international executive with a mandate to increase NATPE’s presence as an international trade show. Today, NATPE is one of three premier international television conferences, along with MIP-TV and MIPCOMM.

While the international and new media sectors of NATPE have been growing, the domestic contingent seems to find the convention increasingly unnecessary due to consolidation in television station ownership and the syndication business. Historically, NATPE was the primary site where representatives from hundreds of television stations around the country went to purchase programming from the dozens of syndication companies that attended. With the removal of most broadcasting ownership regulations in the Telecommunications Act of 1996, however, group owners have bought up more and more local stations and consolidated program buying in a single corporate office, which can take advantage of bulk-pricing discounts. Concurrently, the syndication industry has shrunk to less than a dozen large companies, some of which are now part of larger conglomerates that also own television stations. Since the mid-1990s, the major Hollywood studios have threatened to abandon NATPE, claiming they make few significant sales there.

The tensions that currently face NATPE were starkly apparent at the 2002 convention. Due to the economic fallout from the September 11, 2001, terrorist attacks, and the subsequent fall in the advertising market, many of the major distributors abandoned rental of their usual booths on the sales floor for much cheaper hospitality suites at nearby hotels, where a pared-down number of sales representatives met with a handful of important clients. However, the international wings of these same distribution companies were out on the sales floor in force. Their presence reflected the continued relevance of NATPE for international distribution, which continues to expand due to the growth in international distribution outlets and increased competition among distributors selling to international buyers.

The future of NATPE today is uncertain. While the convention will continue for the foreseeable future to have relevance for international syndication, a number of changes have been proposed to try and make the convention more relevant for domestic syndication. One possible future direction is to split the convention into three: one convention, in early April, would include distributors and advertisers; a second, held in November, would include television stations and distributors; while a third, held in January, would cater to international syndication. Whatever the future direction of the organization, NATPE owes its existence to an industry and regulatory era that has now passed, and its continuation depends upon its ability to become relevant to the present era of consolidation and globalization.

National Broadcasting Company (NBC)
U.S. Network

When General Electric (GE) purchased the National Broadcasting Company (NBC) in 1985, many observers of the media industries were dubious. General Electric was a vast conglomerate based in Fairfield, Connecticut, a manufacturer of medical equipment, power turbines, airplane engines, and appliances that had diversified into such businesses as the financing of commercial and consumer loans. Little in GE’s recent history foretold success in programming a television network. NBC’s newly appointed chairman, Robert Wright, had risen through the ranks at GE, learning the ropes in the plastics division and, later, in the GE Credit Corporation. He had spent a short time in the cable industry, but had come of age in the corporate culture of GE, famed for its disciplined management and ruthless devotion to the bottom line of corporate earnings. Insiders at NBC questioned whether this outsider, a quintessential corporate manager, had any idea how to run a television network—particularly one that was already at the top of the business, having just swept the prime-time ratings race—or whether this company could make the transition from light bulbs to light comedy.

By the early 21st century, much has changed in the television business, but Robert Wright is still chairman, and NBC has been the dominant network in the United States for much of the past two decades, a model of stability in an otherwise turbulent business. NBC has consistently led all networks in attracting the 18- to 49-year-old adults most coveted by advertisers—winning this demographic in seven of the eight years from 1995 to 2003—and has helped to reorient the entire broadcasting industry toward the pursuit of this segment of the audience. Led by a Thursday night lineup that has launched such hits as The Cosby Show, Cheers, and L.A. Law in the 1980s, and Seinfeld, Friends, and E.R. in the 1990s, NBC has the highest advertising rates of any broadcast network and has long been the most profitable, generating profits of $700–800 million from its prime-time schedule in the 2002–03 season. NBC’s dominance extends to virtually every part of the schedule, where its self-produced entertainment and news programs have led the ratings during much of the past decade: The Today Show and Meet The Press in the mornings, NBC Nightly News among evening newscasts, and The Tonight Show with Jay Leno, Late Night with Conan O’Brien, and Saturday Night Live in the late-night slot. Over the same period, NBC has been responsible for many of television’s most acclaimed series, easily overshadowing the other broadcast networks with a mounting pile of Emmy nominations for E.R., The West Wing, Law and Order, Homicide: Life on the Streets, Frasier, Seinfeld, and Will & Grace.

Due to the strength of its network programming, NBC’s fourteen owned-and-operated television stations contribute another $1 billion in annual advertising revenue. Still, the audience for over-the-air broadcasting continues to shrink in the United States as audiences are dispersed among cable channels and competing forms of home entertainment. Like other media companies, NBC has diversified well beyond its original base in broadcasting in order to reach these elusive viewers. NBC now controls several cable channels, including CNBC, a business news network available in 175 million households worldwide; MSNBC, a 24-hour news network owned jointly with Microsoft; and Bravo, a network targeted at upscale viewers. In order to reach the growing Latino audience in the U.S., NBC purchased Telemundo, the second-
Cable operations generate annual revenues of $7.1 billion (still only five percent of GE's annual sales) and operating profits of $1.7 billion.

In September 2003, GE announced its most ambitious expansion for NBC, a plan to acquire Vivendi Universal Entertainment in a deal valued at $14 billion. The purchase would give GE control of Universal movie studio, the USA Network and other cable channels, a television production unit responsible for the network's lucrative Law and Order franchise, and Vivendi's interest in the Universal Studios theme parks. By integrating additional cable networks and a major studio with its broadcast network, NBC Universal (as the new company will be known) will compete with the other fully integrated media conglomerates owning broadcast networks: Viacom (CBS and UPN), The Walt Disney Co. (ABC), News Corporation (Fox), and Time Warner (WB).

Throughout its history, the fortunes of the National Broadcasting Company have been closely tied to those of a parent company. Unlike CBS and ABC, which began as independent programming enterprises, NBC came into existence as the subsidiary of an electronics manufacturer, Radio Corporation of America (RCA), which saw programming as a form of marketing, an enticement for consumers to purchase radio and television receivers for the home. The power and influence of a national network aided RCA as it lobbied to see its technology adopted as the industry standard, particularly during the early years of television and in the battle over color television.

RCA, which had begun as a mere sales agent for the other companies in the combine, emerged in the 1930s as a radio manufacturer with two networks (NBC-Red and NBC-Blue), a powerful lineup of clear channel stations, and a roster of stars unequalled in the radio industry. From this position of power, RCA research labs, under the direction of Vladimir Zworykin, set the standard for research into the nascent technology of television. NBC began experimental broadcasts from New York's Empire State building as early as 1932. By 1935, the company was spending millions of dollars annually to fund television research. Profits from the lucrative NBC radio networks were routinely channeled into television research. In 1939, NBC became the first network in the United States to introduce regular television broadcasts with its inaugural telecast of the opening-day ceremonies at the New York World's Fair.

RCA's dominance of the U.S. broadcasting industry led to government scrutiny in the late 1930s when the FCC began to investigate the legitimacy of networks that linked together hundreds of local stations, or "chain broadcasting" as it was then called. The result was the 1941 publication of the FCC's Report on Chain Broadcasting, which assailed the network's control of a majority of high-powered stations and called for the divestiture of NBC's two networks. RCA challenged the decision in court, but failed to overturn the FCC's findings. In 1943 RCA sold its Blue network to Edward J. Noble, and this network eventually became ABC.

After World War II, RCA moved quickly to consolidate its influence over the television industry. While CBS tried to stall efforts to establish technological standards in order to promote its own color-TV technology, RCA pressed for the development of television according to the existing National Television Standards Committee technical standards established in 1941. The FCC agreed with RCA, though the two networks continued to battle over standards for color television until the RCA system was finally selected in 1953. Throughout this period, network television played a secondary role at RCA. In the early 1950s NBC accounted for only one-quarter of RCA's corporate profits. NBC's most important role for its parent was in helping to extend the general appeal of television as the market for television sets boomed.

Throughout the 1950s and 1960s, NBC generally finished in second place in the ratings behind CBS. NBC's prime-time schedule relied heavily on two genres: drama, including several of the most acclaimed anthology drama series of the 1950s (such as Philco-Goodyear Playhouse, Kraft Television Theater), and comedy/variety, featuring such stars as Milton Berle, Jimmy Durante, Sid Caesar and Imogene Coca, Dean Martin and Jerry Lewis, Bob Hope, and

NATIONAL BROADCASTING COMPANY (NBC)
Perry Como. In spite of its dependence on these familiar genres, NBC was also responsible for several programming innovations.

Several key innovations are credited to Sylvester "Pat" Weaver, who served as the network's chief programmer from 1949 to 1953 and as president from 1953 to 1955. Weaver is credited with introducing the "magazine concept" of television advertising, in which advertisers no longer sponsored an entire series, but paid to have their ads placed within a program, as ads appear in a magazine. Previously, networks had functioned as conduits for programs produced by sponsors; Weaver's move shifted the balance of power toward the networks, which were able to exert more control over their programming and schedules. Weaver expanded the network schedule into the "fringe" time periods of early morning and late night by introducing Today and Tonight. He also championed "event" programming that broke the routines of regularly scheduled series with expensive, one-shot broadcasts, which he called "spectaculars." Broadcast live, the Broadway production of Peter Pan drew a record audience of 65 million viewers in 1955.

Former ABC president Robert Kintner took over programming at NBC in 1956 and served as network president from 1958 to 1965. Kintner supervised the expansion of NBC news, the shift to color broadcasting (completed in 1965), and the network's diversification beyond television programming. Programming under Kintner followed the network's traditional reliance on dramas and comedy/variety. NBC formed a strong alliance with the production company MCA-Universal, whose drama series came to dominate the network's schedule well into the 1970s.

During the late 1970s, after decades spent battling CBS in the ratings, NBC watched as ABC, with a sitcom-laden schedule, took command of the ratings race, leaving NBC in a distant third place. To halt its steep decline, NBC recruited Fred Silverman, the man who had engineered ABC's rapid rise. Silverman's tenure as president of NBC lasted from 1978 to 1981 and is probably the lowest point in the history of the network. Instead of turning around NBC's fortunes, Silverman presided over an era of ratings that declined still further, desertsions by the network's affiliate stations, and programs that were often mediocre (BJ and the Bear) and occasionally disastrous (Supertrain).

Mired in third place at the depths of its fortunes in 1981, NBC recruited Grant Tinker to become NBC chairman. A cofounder of MTM Enterprises, Tinker had presided over the spectacular rise of the independent production company that had produced The Mary Tyler Moore Show, Lou Grant, and Hill Street Blues. Tinker led NBC on a three-year journey back to respectability by continuing the commitment to quality programming that had marked his tenure at MTM. He and programming chief Brandon Tartikoff patiently nurtured such acclaimed series as Hill Street Blues, Cheers, St. Elsewhere, Family Ties, and Miami Vice. The turning point for NBC came in 1984, when Tartikoff convinced comedian Bill Cosby to return to series television with The Cosby Show. Network profits under Tinker and Tartikoff climbed from $48 million in 1981 to $333 million in 1985.

By the mid-1980s, NBC generated 43 percent of RCA's $570 million in annual earnings—a hugely disproportionate share of the profits for a single division of a conglomerate. In the merger-mania that swept the corporate world in the 1980s, RCA became a ripe target for takeover, particularly given the potential value of the company when broken into its various components. General Electric purchased RCA, and with it NBC, in 1985 for $6.3 billion. When Tinker stepped down in 1986, GE chairman Jack Welch named Robert E. Wright as network chairman. NBC dominated the ratings until the late 1980s, when its ratings suddenly collapsed, as viewers deserted aging hits like The Golden Girls and L.A. Law. Just one show, Cheers, remained in the Nielsen top ten by 1991, and NBC fell into third place for the first time in over a decade. Network profits plunged from $603 million in 1989 to $204 million in 1992.

The network suffered one public relations debacle after another during this period. The CNBC cable channel, which NBC had launched as a joint venture with cable operator Cablevision, lost $60 million in its first two years, forcing Cablevision to withdraw from the partnership. Wright's appointment of newspaper executive Michael Gartner to head NBC News ended in a highly publicized scandal over a fraudulent news report on the prime-time news magazine, Dateline. Attempts to name a successor to the retiring Johnny Carson as host of The Tonight Show turned into a public brouhaha as network executives wavered between Jay Leno and David Letterman. Leno eventually ended up in Carson's seat, while Letterman fled to CBS.

Nevertheless, GE held onto NBC, and Robert Wright remained in charge, gradually bringing stability to the network and returning it to prominence starting in 1993. Wright hired Republican public relations guru Roger Ailes to turn around CNBC, and his success was almost immediate; CNBC reported an operating profit of $50 million in 1995. Wright placed Andrew Lack in charge of NBC News, and Lack led The Nightly News with Tom Brokaw and The Today Show (overhauled by producer Jeff Zucker) into first place. Expanded to three hours, The Today Show became an NBC cash cow, generating advertising rev-
venue of $450 million a year. Wright convinced veteran producer Don Ohlmeyer to join the entertainment division, where he and entertainment president Warren Littlefield returned NBC to the top of the prime-time ratings by 1995, with solid hits in Seinfeld, E.R., Frasier, Friends, and Law and Order. Littlefield passed the torch to Scott Sassa in 1998, and NBC added The West Wing and Will & Grace to its roster of critical and popular success.

Robert Wright and GE management have adapted to some of the conventions of the television industry, but NBC's accomplishment over the past 10 years is also due to the application of GE's rigorous management strategies to television, where NBC executives dissect audience demographics and measure the advertising potential of each show developed for the network schedule. This has led to NBC's intense focus on the 18- to 49-year-old adult demographic, which rarely wavers across its prime-time schedule. It is the rare NBC series, for instance, that centers on families with children—the sorts of series that appear regularly on CBS and ABC, attracting viewers too young or too old for NBC's desired demographic. This also has led NBC to squeeze every dime out of its Thursday night "Must-See TV" schedule, which has become the most profitable night of television as the movie studios spend heavily on TV advertising for the Friday launch of their blockbusters.

These management strategies also have led NBC to question the economic value of certain types of programming, such as major-league sports, that were considered a network staple just a few years ago. In an initially surprising move, NBC eliminated costly, money-losing sports properties that once defined the power and prestige of a national network, choosing not to renew its contracts with the National Football League, Major League Baseball, and the National Basketball Association.

The competition in prime time has increased over the past several years, as the audience has continued to shrink, the advertising market has flattened, programming costs have risen, new program formats have been introduced, and new networks compete for viewers. There are now six broadcast networks and dozens of cable channels competing for the attention of viewers. Under these conditions it is increasingly difficult to launch a new series, and NBC has not had a breakout hit since Will & Grace debuted in 1998. With the exception of Fear Factor, NBC has not matched the success of other networks in developing non-scripted series. Therefore, its programmers have been forced to squeeze every ratings point out of the existing hits.

Under Scott Sassa, NBC introduced two spin-offs of Law and Order, an enduring hit that debuted in 1990 (Law and Order: SVU and Law and Order: Criminal Intent) and there is talk of a fourth version to follow. Since former Today Show producer Jeff Zucker became entertainment president in 2001, he has not launched a hit series, but has kept NBC on top with programming gimmicks, such as "super-sized" episodes of NBC's Thursday night sitcoms, which add extra minutes in order to keep viewers from turning to a competitor's program. He also plans to include short films during the commercial breaks in order to keep viewers, particularly TiVo-empowered viewers, watching the commercials.

The cost of holding together a prime-time schedule has increased dramatically over the past several years, and NBC has been forced to spend lavishly in order to keep in place its most successful series. As it is more difficult than ever to turn a scripted series into a hit, producers of existing series find themselves with considerable bargaining leverage. When E.R. came up for renewal in 2000, NBC paid Warner Brothers Television a record $13 million per episode. In order to lure Friends back for a final season in 2003-04, NBC paid Warner Brothers $10 million per episode and reduced its order to just eighteen episodes. In spite of sagging ratings, the Emmy-winning The West Wing was renewed for $6 million per episode.

While broadcast networks have only a single revenue source—advertising sales—cable networks earn money from advertising and from charging transmission fees to cable and satellite delivery systems, which are passed along to viewers as higher service rates. For the most successful networks, such as Disney's ESPN, these transmission fees can be raised by as much as 20 percent annually. By combining broadcast and cable networks, a company like NBC increases its bargaining leverage over cable and satellite systems when negotiating transmission fees and over advertisers when negotiating advertising rates across a range of networks that can provide access to different sorts of viewers. In addition, a diversified portfolio of broadcast and cable networks allows a company like NBC to reconstitute much of the audience lost by the traditional broadcast networks over the past two decades. Although the audience for the broadcast networks continues to shrink, the five companies that control the broadcast networks still reach more than 80 percent of viewers in prime time, when counting the ratings for their combined broadcast and cable networks. This explains why half of the top 50 cable networks have changed hands since 1990 and why most are now controlled by the five companies that already own broadcast networks.

Cable networks also allow companies to spread operating costs and extend their global reach. NBC has
achieved greater efficiency and reach for CNBC by expanding CNBC Europe and CNBC Asia Pacific (both of which are jointly owned with Dow Jones, the publisher of the Wall Street Journal) through a range of localized services using the resources of partners in Japan, Australia, Singapore, Hong Kong, Sweden, and several other countries. The 24-hour news network MSNBC uses the resources of NBC News to provide programming for both cable and Internet. Cable networks also lend themselves to the establishment of brand identities and to cross-promotional opportunities, as networks like ESPN, MTV, and Nickelodeon have proven for NBC’s competitors. After taking complete ownership of the Bravo cable network in December 2002 by purchasing Cablevision’s 50 percent stake for $1.25 billion, NBC spent one-quarter of Bravo’s annual marketing budget to launch a signature program, Queer Eye for the Straight Guy. With its splashy summer 2003 debut, Queer Eye pointed the way toward a future of corporate synergy at NBC. It is relatively inexpensive to produce and loaded with product placements that cannot be ignored by viewers with TiVo. NBC promoted it heavily throughout the network schedule—its cast appeared on the Today and Tonight shows—and has aired episodes in prime time on NBC. Regular episodes on Bravo have drawn as many as 3 million viewers—small by network standards, but the largest in Bravo’s 22-year history. In this intensive marketing campaign, one can glimpse the future of corporate synergy and the strategy for transforming a program and a cable network into a marketable brand.

NBC’s acquisition of Vivendi’s Universal properties follows as a logical step in the network’s expansion and should be viewed as a response to two trends: the rising cost of programming, and the value of cable networks. With the support of new GE chairman Jeff Immelt, Robert Wright pursued the Universal assets when they became available after Vivendi CEO Jean-Marie Messier drove the company to the brink of bankruptcy. The movie studio and theme parks may not play a significant role in NBC’s long-term plans (and there is speculation that NBC will sell the theme parks in the near future), but they are the cost of acquiring Vivendi’s other assets: the television production operation, a library consisting of over 5,000 movies and 34,000 hours of television, and the cable channels USA, Sci-Fi, and Trio. NBC wants its own studio in order to avoid being held hostage in negotiations with producers—or at least to share in the syndication profits of series that achieve success on the network. NBC now owns the Law and Order franchise, which reduces many of the headaches involved in negotiating its renewal (though it creates new concerns about potential conflicts of interest) and cuts the network in on its syndication revenues. The real value of the deal for NBC lies in the expansion of its cable holdings through Vivendi’s three established cable networks. Over the last half-decade it has often seemed like an episode of Law and Order was always on the air, with originals and repeats on NBC or syndicated reruns on A&E, TNT, and USA at virtually any hour of the day. With NBC’s newly acquired library of Law and Order episodes, and a growing portfolio of cable channels, it is not sheer fantasy to imagine that we have moved one step closer to the day when there will be a cable network that consists of nothing but Law and Order, all day, every day.

The National Cable and Telecommunications Association (NCTA) is the major trade organization for the U.S. cable television industry, mediating the professional activities of cable system operators, program services (networks), and equipment manufacturers. From its inception, the NCTA has served the dual function of promoting the growth of the cable industry and dealing with the regulatory challenges that have kept that growth in check. The organization’s publications and regular meetings have kept members apprised of new technologies and programming innovations, and its legal staff has played a key role in the many executive, legislative, and judicial decisions affecting the cable industry over the years.

The NCTA first was organized as the National Community Television Council on September 18, 1951, when a small group of community antenna television (CATV) operators met at a hotel in Pottsville, Pennsylvania. They gathered in response to concern over the Internal Revenue Service’s attempts to impose an 8 percent excise tax on their operations. These businessmen quickly became aware of other common interests, leading to a series of organizational meetings during September and October 1951 and January 1952. On January 28, 1952, the organization’s name officially was changed to National Community Television Association.

The NCTA’s growth kept pace with the rapidly expanding CATV industry. Within its first year, close to 40 CATV systems joined the organization. Membership then grew into the hundreds by the end of the 1950s and the thousands by the end of the 1960s. In 1968 the term “community antenna television” gave way to the term “cable,” reflecting the industry’s expanded categories of service, including local news, weather information, and channels of pay television. Accordingly, the NCTA changed its official name to National Cable Television Association. It subsequently changed its name again, in May 2001, to National Cable and Telecommunications Association in order, according to an April 30, 2001, press release, to reflect “cable’s transformation from a one-way video provider to a competitive supplier of advanced, two-way services.”

Today, the NCTA is headquartered in Washington, D.C. It represents cable systems serving over 80 percent of U.S. cable subscribers, as well as cable program services (networks), hardware suppliers, and other services related to the industry. The organization is divided into departments including: Administration and Finance; Association Affairs; Government Relations; Industry Affairs; Legal; Programming and Marketing; Public Affairs; Research and Policy Analysis; and Science and Technology.

The NCTA hosts an annual industry-wide trade show and produces a number of reports and periodicals. It also maintains an extensive website featuring up-to-date cable statistics, addresses, and listings (www.ncta.com). From 1979 until 1997 the NCTA recognized outstanding programming for cable television through the National Academy of Cable Programming, which presented the Cable Ace Awards. After that date the Academy of Television Arts and Sciences began to recognize cable programming within the Emmy competition. The NCTA currently presents the Vanguard Awards for personal achievement in a number of categories, including Distinguished Vanguard Awards for
National Cable and Telecommunications Association

The Association also sponsors Cable in the Classroom, a free service that provides copyright cleared material to schoolrooms. According the NCTA website, the service reaches 81,000 public and private schools, providing materials to 78 percent of K–12 students in the United States.

Throughout the late 1990s and early 2000s, the NCTA has been involved with numerous decisions and controversies surrounding the 1996 Telecommunications Act. More generally, the growing presence of the Internet and other broadband technologies have confronted the cable industry with increasing competition from Direct Broadcast Satellite, and the association has focused efforts on defense of cable modem delivery of high-speed Internet service.

National Educational Television Center

The National Educational Television (NET) Center played the dominant role in building the structure on which the U.S. Public Broadcasting Service (PBS) rests. Funded primarily by Ford Foundation grants, NET was established in 1952 to assist in the creation and maintenance of an educational television service complementary to the entertainment-centered services available through commercial stations. NET initially was designed to function simply as an “exchange center,” most of whose programming would be produced at the grassroots level by member stations. This strategy failed to attract a substantial audience because programming produced by the affiliates tended to be overly academic and of poor quality.

By 1958, NET’s programming had acquired a well-deserved reputation as dull, plodding, and pedantic. NET officials recognized that if it were to survive and move beyond its “university of the air” status, NET needed strong leadership and a new program philosophy. They hired the station manager of WQED-Pittsburgh, John F. White, to take over the presidency of NET. An extremely ambitious proponent of the educational television movement, White believed that the system would grow and thrive only if NET provided strong national leadership. Consequently, White saw his task as that of transforming NET into a centralized network comparable to the three commercial networks. First, he moved NET headquarters from Ann Arbor, Michigan, to New York City, where it could be associated more closely with its commercial counterparts. Next, he declared his organization to be the “Fourth Network,” and attempted to develop program strategies aimed at making this claim a reality. No longer relying primarily on material produced by affiliated stations, NET officials now sought high-quality programming obtained from a variety of sources, including the British Broadcasting Corporation (BBC) and other international television organizations.

In 1964 the Ford Foundation decided to substantially increase their support of NET through a $6 million yearly grant. They believed that only a well-financed, centralized program service would bring national attention to noncommercial television and expand audiences for each local station. The terms of the grant allowed NET to produce and distribute a five-hour, weekly package divided into the broad categories of cultural and public affairs programming. The freedom provided by this funding generated a period of creative risk-taking between 1964 and 1968. Their cultural programming included adult drama such as NET Playhouse as well as children’s shows like Mister Rogers’ Neighborhood. But it was through public affairs programming that NET hoped to emphasize its unique status as the “alternative network.” Cognizant
that the intense ratings war between the three commercial networks had led to a decline in public affairs programming, NET strove to gain a reputation for filling the vacuum left in this area after 1963. NET producers and directors including Alvin Perlmutter, Jack Willis, and Morton Silverstein began to film hard-hitting documentaries rarely found on commercial television. Offered under the series title NET Journal, such programs as The Poor Pay More; Black Like Me; Appalachia: Rich Land, Poor People; and Inside North Vietnam explored controversial issues and often took editorial stands. Although NET Journal received positive responses from media critics, many of NET’s affiliates, particularly those in the South, grew to resent what they perceived as its “East Coast liberalism.”

Despite the fact that John White and his staff believed that NET had been making progress in increasing the national audience for noncommercial television, the Ford Foundation did not share this conviction and began to reevaluate their level of commitment. Between 1953 and 1966, the foundation had invested over $130 million in NET, its affiliated stations, and related endeavors. In spite of this substantial contribution, there was a constant need for additional funding. As Ford looked for ways to withdraw its support, educational broadcasters began to look to the government for financial assistance. Government involvement in this issue led to the passage of the Public Broadcasting Act of 1967, the subsequent creation of the Corporation for Public Broadcasting (CPB), and the eventual demise of NET.

Having been at the center of the educational television movement for 15 years, NET believed it would continue as the distributor of the national network schedule. The CPB initially supported NET’s role by allowing NET to serve as the “public television network” between 1967 and 1969. But in 1969 the CPB announced its decision to create an entirely new entity, the Public Broadcasting Service, to take over network operations. The CPB’s decision lay not only in its awareness that NET had alienated a majority of the affiliated stations, but also in the corporation’s belief that a hopeless conflict of interest would have resulted if NET continued to serve as a principal production center while at the same time exercising control over program distribution. With the creation of PBS in 1969, NET’s position became tenuous. NET continued to produce and schedule programming, now aired on PBS, including the well-received BBC productions, The Forsyte Saga and Civilization. But NET’s refusal to end its commitment to the production of hard-hitting controversial documentaries such as Who Invited US? and Banks and the Poor led to public clashes between NET and PBS over program content. PBS wanted to curb NET’s controversial role in the system and create a new image for public television, particularly since NET documentaries inflamed the Nixon administration and imperiled funding. In order to neutralize NET, the CPB and the Ford Foundation threatened to cut NET’s program grants unless NET merged with New York’s public television outlet, WNDT. Lacking allies, NET acquiesced to the proposed alliance in late 1970 and its role as a network was lost. The final result was WNET-Channel 13.

The legacy that NET left behind included the development of a national system of public television stations and a history of innovative programming. As a testament to this legacy, two children’s shows that made their debut on NET, Sesame Street and Mister Rogers’ Neighborhood, continue to air as PBS icons (the production of original episodes of Mister Rogers’ Neighborhood ceased in 2001 with the retirement of Fred Rogers, but reruns of the program are still broadcast on PBS; Sesame Street is still making new shows).

National Telecommunications and Information Administration

U.S. Policy Office

The National Telecommunication and Information Administration (NTIA), an agency within the U.S. Department of Commerce, was established in 1978. In the years preceding the NTIA's inception, the executive branch had established an Office of Telecommunication Policy (headed by Clay T. Whitehead) in order to spearhead administration communication policy in certain areas, notably cable television. The NTIA succeeded this unit and combined the responsibilities and mission of the president's Office of Telecommunication Policy (OTP) and the Department of Commerce's Office of Telecommunications. Its main responsibilities include managing the federal portion of the electromagnetic spectrum and advising and coordinating various agencies within the executive branch on telecommunications and information policy matters. It is the principal adviser to the president on communication policy and also operates a research and engineering Institute for Telecommunication Sciences in Colorado.

An organization like the NTIA seemed necessary to some policy makers in the late 1970s insofar as the Federal Communications Commission (FCC) was (and remains) increasingly burdened by the day-to-day matters of spectrum management and regulating the telephone, other common carrier, television, and cable industries. The commission was hindered by these routine tasks from developing long-range policies that could effectively plan for the increasing range of communication technologies. Moreover, at the same time, the Nixon and Ford administrations were highly critical of the media and desired a more powerful, direct hand in their regulation. The Office of Telecommunications Policy was created in 1970 to satisfy President Richard Nixon's concern in this regard, and under Whitehead the OTP quickly took on duties formerly assumed to be the FCC's jurisdiction. For example, the FCC's 1972 cable rules were largely worked out by Whitehead's office through a consensus agreement crafted among the broadcasting, cable, and program production industry representatives. Under President Jimmy Carter, the OTP's functions were transferred to the NTIA.

Conceived as a planning and policy-generating body within the Department of Commerce, the NTIA maintains its advisory agency status, even though it is capable of mustering strong political support for its positions. Its approximately 250 employees investigate core issue areas that include structuring telecommunications services within a competitive framework, encouraging innovation, and identifying policy adjustments necessary to move efficiently toward a digital era. Some of its reports and position statements have addressed topics such as using spectrum efficiently, smoothing the transition to Third Generation (3G) advanced mobile phone services, promoting e-commerce, advocating public interest considerations in broadcasting's transition to digital signals, and identifying Internet standards.

The NTIA's reports and investigations have yielded information and positions important to some congressional action and to some administration policies regarding communication industries. In the 1990s, for example, the NTIA took a lead role in gathering data and publishing four analyses of the status of the "digital divide" in the United States. The "digital divide" refers to numerous forms of unequal access to a range of Internet service. The most simple "divide" is the gap between those who have computers and those who do not. Even those who have computers, however, do not always have access to Internet service providers. And even among those who have both, a more sophisticated version of the "digital divide" concept refers to user skills, educational opportunities, and class differences. These reports focused a great deal of attention on the role of computers and the Internet in American society. The NTIA has maintained a Public Telecommunications Facilities Program, which helps public broadcasting services cover capital costs associated with endeavors such as upgrading to digital broadcasting. In the 1990s the NTIA also initiated a Technology Opportunities Program (formerly called the Telecommunications and Information Infrastructure Assistance Program, or TIIAP), to assist community-based programs that sought to use advanced telecommunications capabilities for local education and development.

Nature Programs. See Wildlife and Nature Programs

Nature of Things, The

One of the longest-running television shows in Canadian history, The Nature of Things has aired continuously since November 6, 1960. An hour-long general science program, the show began as a half-hour series—an attempt, as the first press release phrased it, “to put weekly science shows back on North American television schedules.” It billed itself as “unique on this continent. On every other television network, the scientist will have stepped aside for the comedian, the gunfighter, or the private-eye.” The multi-award-winning show has been broadcast in more than 80 countries, including the United States, where it has aired on the Discovery Channel and PBS.

The first producer of the show was Norman Caton, and the first hosts were Patterson Ivey and his colleague Donald Hume of the University of Toronto. Ivey had cohosted a series in 1959 called Two for Physics, and CBC hoped that the time was ripe for a new science series. The series produced shows on the causes of schizophrenia, a review of space technology, a study on how the brain works, and a study of the controlled isolation of human beings. In keeping with the then-lofty aspirations of the CBC, the show was named after a poem by the Roman philosopher Lucretius, "De Rerum Natura" (The Nature of Things).

Since 1979, David Suzuki has been the host of The...
Nature of Things. As a biologist and geneticist, he has been very conscious of the nature of evolution and growth. An ardent and vocal environmental conservationist, Suzuki is a social activist for environmental causes. In the beginning, he appeared an awkward and stilted host, but over the years his manner has relaxed and his delivery improved to the point that the show is practically synonymous with the former fruit-fly geneticist. In fact, its official title is now The Nature of Things with David Suzuki, and the host is recognized throughout Canada.

Some of the topics that the show has explored over the years are the disintegration of books in libraries, the logging of old-growth forests, euthanasia, drugs in sports, chaos theory, the history of rubber, the Penan tribe of Malaysia, farmers’ use of pesticides, the use of animals in research, forensic science, air crashes, the James Bay hydro-electric project, endangered species, lasers, global warming, children’s toys, the pharmaceutical industry, and the reintroduction of Peregrine falcons to the wild. Many individual shows have been produced under the subject headings of endangered species, dimensions of the mind, aspects and diseases of the human body, the global economy, and international issues. The Nature of Things repeatedly investigates controversial topics long before they become popular in the general press: in 1972 it did a show on acupuncture and in 1969 one on the dangers of pollution. One show was accused of bias by the forest industry and the Canadian Imperial Bank of Commerce.
pulled its commercials from the CBC. Another on the global economy and its effect on the environment was also criticized by some groups as being unbalanced. *The Nature of Things*, however, has never been charged with shirking the tough issues.

On the occasion of the 30th anniversary of *The Nature of Things* in 1990, Suzuki wrote in *The Toronto Star* that in the gimmicky world of television-land, where only the new is exciting, "the longevity of a TV series is just like the persistence of a plant or animal species—it reflects the survival of the fittest." In its first 30 years, the program had only three executive producers—John Livingston, James (Jim) Murray, and Nancy Archibald. As of 2002, the executive producer was Michael Adler.

In 1971 Suzuki hosted *Suzuki on Science*, another CBC science show. Suzuki has also been heard for many years on CBC Radio, serving as host of *Quirks and Quarks* from 1974 to 1979 and hosting or contributing to many other programs. In 1979 *Science Magazine*, which Suzuki had hosted since 1974, and *The Nature of Things* were combined into a one-hour show, with Murray again acting as executive producer. Suzuki was an assistant professor at the University of Alberta (Edmonton) and a full professor at the University of British Columbia (Vancouver) before retiring from academia in 2001. In 1977 he was named to the Order of Canada, the country’s highest honor.

Ratings for *The Nature of Things* dropped somewhat in 1990, but CBC retained the show. The show has changed with the times, often being the first to explore new subject areas, but the fact that it has been so successful can also be attributed to the ability of its makers to make science understandable, interesting, and entertaining for audiences who vary widely in age, class, race, and cultural background.

**NBC Mystery Movie, The**

**U.S. Police/Detective Drama**

*The NBC Mystery Movie* aired on the network from 1971 until 1977 and consisted of several recurring programs. Its use of a rotation of different shows under an umbrella title was an NBC innovation during this era. *Mystery Movie* followed on the heels of the network’s 1968 umbrella series, *The Name of the Game* (which ran each of its different segments under the same title). In 1969 NBC launched *The Bold Ones* (which included *The New Doctors, The Lawyers, The Protectors*, and, in 1970, *The Senator*), and in 1970 the
network presented the *Four in One* collection of *Night Gallery*, *San Francisco International Airport*, *The Psychiatrist*, and *McCloud*. But the idea behind *Mystery Movie* and similar “wheel format” series had much deeper roots than these NBC versions and can be traced back at least to ABC’s *Warner Brothers Presents*, which debuted in 1955.

The original incarnation of *The NBC Mystery Movie* consisted of three rotating series, *McCloud*, starring Dennis Weaver as a modern-day western marshal transplanted from New Mexico to the streets of New York City, was a holdover from NBC’s earlier *Four in One* lineup. *McMillan and Wife* starred Rock Hudson and Susan St. James as San Francisco Police Commissioner Stewart McMillan and his wife, Sally. And the most successful *Mystery Movie* segment of all, *Columbo*, featured Peter Falk reprising his role from the highly rated 1968 NBC made-for-television movie, *Prescription: Murder*, as a seemingly slow-witted yet keenly perceptive and doggedly tenacious Los Angeles Police Department (LAPD) homicide lieutenant.

The new Wednesday night series was an immediate success for NBC, finishing at number 14 in the Nielsen ratings for the 1971–72 season. In addition, *Columbo* was nominated for eight Emmy Awards (including all three nominations for dramatic series writing), winning in four categories. For the next season, NBC attempted to parlay the *Mystery Movie*’s success in two ways. First, it moved the original *Mystery Movie* lineup of *Columbo*, *McCloud*, and *McMillan and Wife* to the highly competitive Sunday night schedule and, as a fourth installment to this rotation, added *Hec Ramsey*, starring Richard Boone as a turn-of-the-century western crime fighter. Also, NBC initiated a completely new slate of similar shows and moved these into the Wednesday time period formerly occupied by the original *Mystery Movie* lineup. Thus, NBC’s 1972 fall schedule contained the original *Mystery Movie* shows, now called *The NBC Sunday Mystery Movie*, plus a completely new set of programs, titled *The NBC Wednesday Mystery Movie*.

NBC continued to achieve commercial and critical success with its *Sunday Mystery Movie* series. The umbrella program finished tied as the fifth-highest-rated series of the 1972–73 season, and *Columbo* garnered four more Emmy nominations to go along with acting nominations for *McMillan and Wife*’s Susan St. James and Nancy Walker. But the *Wednesday Mystery Movie* lineup never was able to realize a similar degree of success. The new Wednesday series included *Banacek*, starring George Peppard as a sleuth who made his living by collecting insurance company rewards for solving crimes and insurance scams (*Banacek’s* Polish-American heritage was also a featured element of the program); *Cool Million*, a segment that featured James Farentino as a high-priced private investigator and former CIA agent; and *Madigan*, starring Richard Widmark as a New York police detective. While the shows’ concepts may have sounded similar to those of the original *Mystery Movie* segments, they lacked the novelty and unique characterizations of the originals, and NBC’s attempt to clone its *Mystery Movie* format in such a way that it could fill a second block in its primetime schedule was ultimately unsuccessful. The “knock-off” Wednesday lineup was retooled several times over its two seasons on the air. *Madigan* and *Banacek* were retained for the 1973 fall season, joined in the rotation by *Tenafl*, which featured African-American actor James McEachin as a Los Angeles P.I. (the series title was suspiciously similar to the 1972 “blaxploitation” hit film, *Superfly*). *The Snoop Sisters*, which brought Helen Hayes to prime-time television as half of a mystery-writing/crime-solving team of elderly
sisters, and *Faraday and Company*, starring veteran film and television actor Dan Dailey. But after seeing no better results in its second year, the *NBC Wednesday Mystery Movie* was dropped for the 1974 fall season.

NBC was not the only network unable to clone the *Mystery Movie* formula successfully. Both ABC, with its 1972 *The Men* series, and CBS, with its 1973 *Tuesday Night CBS Movie* (which rotated made-for-TV movies with the series *Shaft*, featuring Richard Roundtree reprising the title role from the film of the same name, and *Hawkins*, starring the legendary Jimmy Stewart as a small-town attorney), failed in similar short-lived attempts. But while its imitators struggled, the three original *Mystery Movie* entries remained strong into the mid-1970s. Over these years, NBC continued to try to find a fourth element that could be added to the *Columbo/McCloud/McMillan and Wife* mix, trying out such shows as *Amy Prentiss*, *McCoy*, and *Lanigan’s Rabbi*. Finally, in the fall of 1976, *Quincy, M.E.*, starring Jack Klugman as a Los Angeles medical examiner, joined the rotation. In early 1977 it was spun off as a regular weekly series and would go on to have a successful seven-year run on the network.

By the end of the 1976–77 season, *The Sunday Mystery Movie* had reached the end of its run and was replaced on the NBC schedule by *The Big Event*. But *The NBC Mystery Movie* had left a legacy that would not soon be forgotten, and the series served as an inspiration for a future television trend: the recurring made-for-television movie, featuring regular characters and routine plotlines, which would appear only a limited number of times each season. Ironically, one of the most popular of such recurring programs would be *Mystery Movie*’s own *Columbo*, which was revived in the late 1980s by ABC and would go on to garner once again high ratings and still more Emmy Awards for its new network.

Although not as renowned as *ABC CloseUp*, *CBS Reports*, or *NBC White Paper*, *NBC Reports* offered in-depth investigations in the prestige documentary tradition for nearly two decades and is extensively woven into the history of documentaries and newsmagazines on American network television. Introduced in 1972 as a regularly scheduled series, this collection of investigative reports was designed to probe and expose issues of the day. The series is notable as much for its personnel as for its occasionally controversial content. *NBC Reports* was also instrumental in the shift by network news divisions from a long-form documentary commitment to "infotainment" news hours, and eventually the stream of stylish network newsmagazines that proliferated in the 1990s.

*NBC Reports* initially shared a time slot with the newsmagazine *First Tuesday* and an acclaimed historical documentary series *America*, which was produced by the BBC and Time-Life Films. (*America* moved to PBS for the 1974–75 season.) This scheduling technique became common after 1968 when the networks began experimenting with newsmagazines. News divisions wanted a program format that expanded coverage of the day's headlines but did not warrant the in-depth analysis of a documentary. The newsmagazines were intended to complement the documentary and the evening newscasts. Network executives were also searching for ways to fill programming hours and looked to their news divisions as a source. One solution was to allocate a time slot to the news division, which would fill the period with a combination of newsmagazine and documentary programs, such as *NBC Reports*.

The series arrived after an era of protest against the media that accompanied network television's coverage of the 1968 Democratic National Convention in Chicago and the anti-media sentiment that emanated from the administration of President Nixon. In this hostile climate, the very first documentary offered by *NBC Reports* provoked strong reactions. *Pensions: The Broken Promise*, which aired September 12, 1972, exposed inadequacies in national pension funds that resulted in severe losses for veteran workers. The report won a Peabody Award and praise from the American Bar Association. But it was also investigated by the Nixon-administration Federal Communications Commission, in response to a complaint from the conservative media watchdog group Accuracy in Media that the report was one-sided and thus violated the Fairness Doctrine. The Supreme Court refused to hear the case and in 1976 let stand a lower court ruling in favor of NBC that the program had achieved reasonable balance.

A number of distinguished producers worked on *NBC Reports*, among them Pam Hill, who did her final work on the series before moving to ABC to produce *ABC CloseUp*; the prolific Robert (Shad) Northshield, who went to CBS News in 1977 and developed the peerless *CBS Sunday Morning*; Lucy Jarvis, who produced NBC documentaries on international and domestic affairs, then left the network in 1976 to become an independent producer; Fred Freed, one of television's outstanding documentarians; and Robert Rogers, Rogers, an award-winning news writer, was a protégé of the documentarian Ted Yates, who was killed in Jerusalem in 1967 while covering the Six-Day War. Rogers continued to produce documentaries and newsmagazines and later became manager of the *NBC White Paper* series.

*NBC Reports* was later called *NBC Report on America*, an irregularly scheduled documentary series that focused on lifestyle and domestic social issues. In 1987 the series aired two sensationalistic documentaries anchored by correspondent Connie Chung: *Life in the Fat Lane*, a program on overeating and weight control, and *Scared Sexless*, which examined American social mores after the occurrence of AIDS and the decline of the sexual revolution of the 1960s.

These programs, produced by Sid Feders, featured stylish treatments, including computer graphics, popular music, quick pacing, and a minimum of information. They also showcased a celebrity news anchor, Connie Chung, and popular entertainers, such as Alan Alda, Marcus Allen, Nell Carter, Dom Deluise, Jane Fonda, Goldie Hawn, Tommy Lasorda, Danny Sullivan, and Oprah Winfrey.

Although these programs shared characteristics with traditional documentaries—in that they incrementally developed a thesis on a pressing social issue—the decision to team celebrity news reporters with entertain-
ment idols and to evoke an aesthetic look that resembled prime-time entertainment fare was highly successful in attracting large audiences and widespread publicity. Other networks also experimented with this documentary technique, but these NBC Report on America broadcasts led the field in 1987 and demonstrated to network management that news divisions could produce profitable programs. By the 1990s the formula evolved into a rush of prime-time newsmagazines that showcased glamorous correspondents and popular topics on all the major commercial networks.

NBC White Paper

U.S. News Documentary

Beginning with its premiere in 1960, the long-form documentary series NBC White Paper won praise for using the television medium to foster journalistic excellence and an understanding of world affairs. By the 1980s, the program’s approach was criticized by some who felt these comprehensive reports chased away viewers and stifled newer documentary forms. This acclaimed series, though, is remembered as one of the prestigious symbols of network news that helped fuel a fierce rivalry between CBS and NBC in the 1960s.

NBC White Paper was spawned, in part, by the need of the networks to heal the damage inflicted by the quiz show scandal. CBS initiated CBS Reports to showcase quality nonfiction reporting. Irv Gitlin, a prominent producer for CBS, hoped to head the new series but lost out to Fred Friendly. At NBC, President Robert Kintner sought to bolster the reputation of NBC News and face CBS head-on. Kintner recruited Gitlin to develop a prestige series, and NBC White Paper debuted on November 29, 1960.

Network competition invigorated documentaries. Within a two-week period in 1960, NBC aired The U-2 Affair; about government deception regarding a spy mission over the Soviet Union; CBS broadcast the legendary Harvest of Shame, which depicted the squalid lives of American migrant workers; and ABC offered Yanki, No!, which depicted anti-American sentiment in Central America and Cuba.

Unlike CBS Reports in its early years, NBC White Paper never had a regular time slot and appeared only a few times each year. Many of its reports, however, were powerful treatments, beginning with the original broadcast. The U-2 Affair chronicled the flight and downing of a secret U.S. spy plane over the Soviet
Union, along with denials and subsequent admissions by U.S. officials that such espionage took place. The pilot, Francis Gary Powers, survived the crash. The Soviets distributed film of Powers and the remains of his airplane and forced President Eisenhower to admit the deception.

Chet Huntley, NBC's answer to Edward R. Murrow, was the correspondent for many of the White Paper reports. Al Wasserman, formerly of CBS, assisted Gitlin as producer-director. The team was often joined by Fred Freed, Edwin Newman, Frank McGee, Robert Northshield, and others.

Although rival CBS enjoyed a more prominent reputation in the documentary field, the White Paper series kept pace in both foreign and domestic affairs coverage and demonstrated an equal willingness to probe controversies. Erik Barnouw recounts how Sit-In made NBC filmmaker Robert Young a hero in the black community and led to another report from northern Angola in West Africa. Angola was a colony of Portugal, which was attempting to quell a native uprising. Foreign newsmen were barred from observing the rebellion, but Young persuaded NBC to allow him to go with black camera man Charles Dorkins to the Congo. Armed with letters of reference from prominent African Americans, Young and Dorkins trekked through 300 miles of jungle and shot footage for the 1961 documentary Angola: Journey to a War.

The reporters also retrieved fragments of a napalm bomb and shot film of English-language instructions inscribed on the shrapnel. To prevent Soviet use of the report against U.S. interests, Gitlin excised the bomb segment from the final program. The report succeeded, however, in balancing the Portuguese version of events with graphic depictions of native suffering.

With The Battle of Newburgh, White Paper employed powerful interview techniques to push the envelope of the editorial function within the documentary form, on a par with CBS's Harvest of Shame. A welfare-reform plan by the city manager of Newburgh, New York, intensified debate between liberals who supported children and the underprivileged, and conservatives who decried taxation for "social purposes." An extensive White Paper investigation discredited Newburgh's claims about welfare fraud. Although the report illustrated both sides of the argument, a dramatic interview with one needy family had a devastating effect. In a conclusion that straddled editorializing and reportage, narrator Huntley rebuked the charge that Newburgh was riddled with cheats.

Irv Gitlin died in 1967, a year in which there were no White Paper reports. Fred Freed assumed the role of executive producer and focused the series on domestic issues, as with the three-part Ordeal of the American City, which aired in the 1968–69 season.

In 1980, White Paper broadcast If Japan Can... Why Can't We?, which explored how that country recovered from World War II to achieve world-class industrial status. NBC was inundated with requests for transcripts and copies of the program, which was studied by major corporations and universities. However, interest began to wane in the White Paper approach. In a Los Angeles Times interview in 1991, David Fanning, executive producer for the PBS documentary series Frontline said, "One of the reasons the documentary declined is that the networks didn't allow the form to grow and be innovative. They didn't sense that people might want something beyond the traditional 'White Paper' approach of throwing a net over an important subject and telling us about our troubles."

Neighbours

Australian Soap Opera

“Get back to Ramsay Street” was the 1995 promotional line used by the Ten Network, home of Neighbours since late 1985. The marketing strategy sought to reorient both the program itself and the audiences who have followed it through uncertain beginnings, extraordinary local and international success, and continuing quiet domestic popularity. The message was clear and reflected a key element in the program’s enduring popularity: a decade after it began, after attracting millions of viewers around the world, Neighbours is home.

Neighbours is almost without doubt the Australian program with the highest international profile since the 1980s. Well over 2,000 episodes into production, it still commands worldwide audiences of more than 50 million and has helped transform its production company, the Grundy Organisation, into one of the world’s most successful television production groups.

The program’s success, both in Australia and overseas, has always been attributable to a mix of textual and industry factors. This success lies both in its qualities as a well-developed and well-executed Australian soap opera and in the ways it has been scheduled both in Australia and in the United Kingdom. The premise for the show is the daily interactions of the people living in a middle-class street in a suburb of Melbourne. It is simple in design, yet allows for any number of narrative possibilities. Significantly, it is the limiting of these possibilities to the realms of the ordinary, the unexceptional, and non-melodramatic that has ensured Neighbours’ success for so long.

Stephen Crofts’s detailed analysis of program form and content identifies several key aspects that support these general speculations. These include Neighbours’ focus on the everyday, the domestic, and the suburban; its portrayal of women as doers; its reliance on teen sex appeal and unrepellent youth; its “feel-good” characters and wholesome neighborliness. Social tension and values conflicts are always resolved, dissolved, or repressed, and the overall ideological tone is of depoliticized middle-class citizenship.

Ramsay Street and its suburb of Erinsborough have provided a pool of characters drawn from the ranks of home owners and small-business people, school kids, and pensioners. Textually, the program firmly roots itself in the domestic—in the family and the home, friends and acquaintances, and the immediate social contexts in which they are located. The mundane nature of the domestic storylines extends to the geographical reach of the show. Erinsborough is a fictional suburb, which constructs the family homes as its hub and the local shops, hotel, surgery, and school as the domain of its characters. While it has been known to send its characters overseas, Neighbours has also become notorious for sending its popular players off into the far reaches of Brisbane or the Gold Coast (indeed, it seems that “overseas” is a place from which it is easier to retrieve its characters than from the depths of Queensland). In keeping with the show’s philosophy of “the everyday,” it is the impact that the characters’ interactions with such places produces on other characters that is important to the narrative.

Initially based around three families, the Robinsons, the Ramsays, and the Clarkes, with other local residents thrown in for romance and a touch of conflict, the narrative structures of the program were sufficiently loose to allow for a considerable turnover of characters. In this respect, while the idea of the series is simple, the specifics of the houses in Ramsay Street and the families that inhabit them necessarily change and adapt. The element of continuity lies in the central institutions of the house and home and supporting institutions like small business and public education, and in the performance of small-scale romance and tragedy.

Perhaps one of the most interesting aspects of the show is its foundations in the “neighborliness” of (albeit select segments of) the local community. This means that the households and the living and working arrangements of the residents of Ramsay Street take precedence over the establishment of any strict boundaries that mark out the “family” and the roles of family members. Intergenerational conflict abounds and, while resolution is almost unfailingly the order of the day, the show provides an interesting mix of the nuclear and the non-nuclear family. In its current form, there is not one complete nuclear family unit—a significant reflection on the boundaries for the exploration of the “social” within the program’s narrative framework.
These characteristics intertwine with the TV-industry features of the program’s success. When the Seven Network axed the show in the second half of 1985—one of the monumental mistakes of Australian network programming—Grundy’s managing director, Ian Holmes, offered it to the Ten Network. Ten was able to revive the show with new, sexier characters, and shining, enviable domestic sets. The focus on family and community life continued, this time with a little more glamour and in a later time slot—shifting the program from 5:30 P.M. to 7:00 P.M., Monday to Friday. When the show again ran into trouble in 1986, the new network embarked on a massive selling campaign aimed at reviving flagging Sydney ratings. It worked: ratings in Australia soared along with the developing relationship of its stars, Kylie Minogue and Jason Donovan. This in turn led the program into the period of its phenomenal success in the United Kingdom.

Clearly, the amiable middle-class “struggles” of the Ramsay Street residents make for a markedly different narrative to those of the EastEnders or the residents of Coronation Street. Neighbours was the first television program in Britain to be screened twice daily and across all five weekdays by the BBC, which had been commanded into greater economic accountability by the Thatcher government of the 1980s. This strategy, followed soon after by another Australian soap opera export, Home and Away, was to transform the nature of the program as its cast became international stars: in Australia the already popular Minogue and Donovan, as well as Craig McLachlan and Guy Pierce, were constructed as cultural exports, with the pop-music careers
of the first two building a star status unknown by Aus-
terian television actors. Morally unproblematic, the
program fit well into a conservative U.K. govern-
ment agenda that sought a new degree of competitiveness
from the BBC at the same time that it valorized con-
servative themes. The BBC found that this product
provided a counterpoint to other television drama such as
*EastEnders* and *Coronation Street*—and it did so at
far less expense. A week’s worth of *Neighbours* could
be acquired for around £27,000, compared to £40,000
per half-hour episode of *EastEnders*.

While *Neighbours* was winning U.K. audiences of
20 million by the end of 1988 and consistently chal-
genging the two home-grown soaps for the position of
highest-rating drama on British television, it was also
criticized for its bland representation of life in a sunny,
relatively trouble-free, seemingly egalitarian Aus-
terian suburb. *EastEnders*, particularly, was attracting
condemnation for the range of its social and ethnic
representation, and, while *Neighbours* had always had
its share of strong female characters, it casually over-
looked multiculturalism (a phenomenon fundamental
to both Australian and British society), as well as other
important social subjects such as unemployment. With
the U.K.’s growing list of Australian film and tele-
vision imports, Australian television became the target
of arguments addressing issues of British cultural
maintenance. And while some of these criticisms may
be well-deserved, *Neighbours*, along with *Home and
Away*, was in turn important to an Australian film and
television industry that was itself accustomed to being
seen as an import culture dominated by American and
British products. *Neighbours* was the leader in a new
wave of audiovisual export successes from the 1980s
onward that has invigorated and redirected the local in-
dustry.

Finally, the program remains a popular domestic
soap opera. *Neighbours* fits well with the Ten Network
broadcasting ethos based around the appeal of a global
“youth culture.” Ten has worked at building a sizeable
teen demographic based strictly on ratings, and its suc-
cess in this respect has contributed to a turn-around in
the network’s profits—Ten’s level of returns to expend-
diture exceeds that of its long-term rival, the Seven
Network. With another cast of sexier young stars, in-
cluding Blair McDonough (the runner-up in the Ten
Network’s version of *Big Brother*), and well-chosen
older, more experienced actors, *Neighbours* continues
as Australia’s longest-running soap and one of its most
successful television exports.

During a period that was to last 20 years, the Nelson family—Ozzie, his wife Harriet Hilliard, and their two sons, David and Ricky—were regarded as the preeminent icon of the ideal nuclear family. From his band-leading days of the mid-1930s through his reign, a generation later, as the bumbling patriarch of television’s best-known family, Ozzie Nelson was able to conflate, reduce, and transform the professional activities of his family’s personal reality into a fictional domestic banality.

Best known for their long-running television series, The Adventures of Ozzie and Harriet, the Nelson family began their successful togetherness with the marriage of saxophone-playing Ozzie to his “girl-singer” Harriet in the 1930s. Ozzie’s deliberate hesitancy and self-deprecating humor were the perfect foil for the sweet and sassy Harriet, who interrupted her songs with sarcastic banter. During the 1940s, Ozzie, Harriet, and their band were regulars on Red Skelton’s radio show, and in 1944 when Red was drafted into the army, they took over his time slot. For Skelton, the Nelsons stuck to their big-band routines with occasional married-couple skits providing nonmusical breaks, but when Ozzie conceived the pilot for his own program he decided to venture more into the realm of domestic comedy, writing a script based on his own family life.

The radio program initially revolved around the trials and tribulations of bandleader Ozzie and his family. There were many references to Ozzie’s rehearsals, road tours, and other musical endeavors, and the comedy sketches were balanced with full-length musical numbers. By 1946, however, these musical interludes were eliminated in favor of a more representational narrative. Until 1949 the roles of their two sons were played by child actors, but a guest appearance by Bing Crosby and his sons convinced Ozzie that he should allow the 13-year-old David and 9-year-old Ricky to play themselves. The boys, especially “the irrepressible Ricky,” were an enormous success and lent further potency to the verisimilitude of the purely fictional narratives.

Nelson’s business skills were unparalleled (he had attended law school at Rutgers University), and he negotiated with ABC for the first “noncancelable ten-year contract,” which guaranteed a basic salary for ten years whether the Nelsons worked or not. The family was thus virtually immune from sponsor or network interference (one of the reasons, certainly, that Ozzie and Harriet would be the only television couple allowed a double bed until 1969’s The Brady Bunch).

While in the middle of this contractual period, ABC expressed interest in a television program. As a test, they had the family star in a movie titled Here Come the Nelsons for Universal Studios. The film, costarring Rock Hudson and featuring Ozzie as an advertising executive, was a huge success, and in 1952 the television program began filming at General Service Studios. Interestingly, for the next two years, the radio and television programs continued concurrently, with Nelson insisting on completely different scripts for the television show.

Produced under the banner “Stage Five Productions,” which included Ozzie, his brother Don, Bill Davenport, and Ben Gershman, The Adventures of Ozzie and Harriet was the result of the uncompromising standards and efforts of perfectionist Ozzie Nelson. He was involved in every one of the program’s 435 episodes as head writer, script supervisor, producer, and editor. And, if he did not direct an episode, his son David did. Story meetings were weekly, all-night affairs (with an 11:00 p.m. break for ice cream) and took place at the Nelson home in the Hollywood Hills, with the production staff and auxiliary writers Jay Sommers, Dick Bensfield, and Perry Grant attending.

A stickler for quality, Ozzie was adamant that his program look different from the inferior kinescope products dominating the television schedule, and he hired Academy Award winner William C. Mellor to shoot the program in the finest 35 mm film stock. With preliminary editing complete, Nelson would then rent a Los Angeles theater and screen two or three episodes back-to-back for audiences in order to gauge the placement and intensity of the laugh-track cues.
One of the reasons for the program’s tremendous following was that audiences actually believed that the Nelsons were truly playing themselves, a myth the Nelson family helped perpetuate. The exterior of the television house was modeled on the real-life Nelson home, and Ozzie incorporated many real-life events, neighbors, family members, and hobbies into the program. Thus, when David took up motorcycles, or when the boys were interested in the trapeze, these would become the focus for a weekly episode. David’s marriage to June Blair and Ricky’s to Kris Harmon occurred off-screen, but the new season joyfully “introduced” the “newest members of the Nelson family,” to the television viewer.

The most significant example of this blending of fact and fiction resulted from Ricky’s interest in rock and roll music. Spurred on by a girlfriend’s crush on Elvis Presley, Ricky bragged that he too was about to cut a record, and then quickly enlisted his father to make this boast a reality. In April 1957, the 16-year-old Ricky released a cover version of Fats Domino’s big hit “I’m Walkin.” As was his habit, Ozzie integrated this latest preoccupation of his son into a television episode, and “Ricky the Drummer” aired concurrently with the record’s release. One million records sold in the first week, and for the next six years, Ricky Nelson was to dominate the pop charts with such hits as “Hello, Mary Lou,” “Travelin’ Man,” and “Fools Rush In,” all of which benefited from weekly exposure on the television series. With simultaneous promotion in music-trade papers, a new song would “debut” at the end of a completely unrelated episode, tacked on as a pseudo-concert with Ricky singing to a mob of squealing, head-bopping extras. Ricky’s impact on the rock world was crucial, and his eventual induction into the Rock and Roll Hall of Fame legitimized his talented contributions. More important than his actual music, perhaps, was the fact that in giving their blessing to Ricky’s career, Ozzie and Harriet demonstrated to millions of timid, middle-class Americans that rock and roll was not a satanic threat, but a viable musical alternative. In an unprecedented response to the thousands of irate letters he had received, Ozzie scripted 1956’s “Ozzie the Treasurer,” in which Harriet extols the tension-releasing benefits of “rhythm and blues music.”

Both Nelson boys attempted film careers and found moderate success in some big-budget 1950s films—David in Peyton Place, and Ricky in Rio Bravo. By the time of the program’s end in 1966, however, the Nelson sons were hard-pressed to find a large popular following. Ricky ventured into country music where he had sporadic success until his 1985 death in a plane crash, and David moved into production, working mainly in commercials and low-budget features. Their parents, too, seemed unable to capture the magic of the earlier years. A boarding-house sitcom, Ozzie’s Girls, was canceled during its first season, and the couple semiretired, making the talk show circuit and living together in Laguna Beach until Ozzie’s death in 1975.

From the outset, The Adventures of Ozzie and Harriet had a nostalgic feel, resembling Ozzie’s 1920s youth in New Jersey more than 1950s Los Angeles. The picket-fenced neighborhoods and the corner drugstore and malt shop that were featured weekly in this slow-paced half-hour infiltrated American culture at a time of social unease and quietest distress. In reality, most 1950s fathers were working ten-hour days and commuting long distances to isolated suburbs. For the Nelsons, however, Ozzie was always home, neighbors still chatted over the back fence, and downtown was a brisk walk away. The Nelsons presented an America that never was, but always wished for, and through their confusion of reality and fantasy worked to concoct an image of American life that is, to this day, mistakenly claimed not only as ideal, but as authentic.

At first glance, the historical evolution of the broadcasting system in the Netherlands—from a public service broadcasting monopoly to a liberalized dual system of public service and commercial broadcasting—seems in keeping with general developments in Western European broadcasting. However, its embeddedness in Dutch society has equally shaped its specific evolution and contemporary look.

It is impossible to explain the unique structure of Dutch audiovisual media without the concept of “pillarization.” This sociocultural phenomenon describes how, from the end of the 19th century on, different religious and ideological groups in Dutch society (Roman Catholics, protestants, socialists, conservatives, liberals) divided society as a whole in segregated microcosms or “pillars.” Their networks of organizations encompassed political parties, trade unions, education, and leisure activities. It comes as no surprise, then, that these “pillars” were highly interested in the emerging mass media. This resulted in a system of “pillarized pluralism” whereby the public service broadcasting is not in the hands of the state, but overseen by non-profit associations controlled by religious and ideological currents in society. Although a process of cultural “depillarization” has been ongoing since the 1960s, with a weakening of the societal importance of religious and ideological beliefs, it took much longer for the broadcasting structures to adapt to this change, and even today part of their power remains intact. The irony is that television, although initially confirming pillarization (van der Haak and van Snippenburg), actually contributed to this development since everybody watched everything available, and not only the program of the relevant “pillar” (De Goede).

Dutch television is commonly associated with Hilversum, a city near Amsterdam and since radio days the country’s media center. It is in Hilversum that the various radio broadcasting associations were established in the 1920s: the protestant “Dutch Christian Radio Association” (NVRV), the Roman Catholic “Catholic Radio Association” (KRO), the socialist “Association of Workers Radio Enthusiasts” (VARA), the progressive protestant “Modern Protestant Radio” (VPRO) and the neutral “General Association of Radio Broadcasting” (AVRO).

The Dutch electronics manufacturer Philips (today a multinational concern) received permission in 1948 to start with experimental television broadcasts for a few hundred viewers in the surroundings of the Philips headquarters in Eindhoven. From the start, government opted for a public-service approach to broadcasting. This is why in 1951, the existing broadcasting associations were granted TV broadcasting licenses under the authority of an umbrella organization, the National Television Foundation (NTS). But the population was slow to adopt television in the 1950s because of the high price of television sets in relation to average incomes at that time, the restricted reach and airtime of the broadcasts, and the strong religious views suggesting television was harmful (van der Haak and van Snippenburg).

In 1964 a commercial “pirate” station, Radio/TV North Sea (REM), began broadcasting from an offshore oil rig in international waters, but was quickly shut down by the government. That same year a second television channel, Nederland 2, was launched. The political pressure to open up the broadcasting system to commercial interests and new public license holders increased in 1965, causing the fall of a Christian-democrat and liberal coalition. The succeeding government soon came up with a white paper on the transformation of the broadcasting system into an “open system.”

These plans resulted in the 1967 Broadcasting Act, the first specific broadcasting legislation in the Netherlands since radio’s emergence, and a compromise between commercial and public interests. The Act confirmed the existing structure and the ban on commercial television, but accepted the introduction of new players and advertising. Airtime quota and funds were allocated according to the status (A, B, or C) of the broadcasting association. The five existing associations immediately received A-status (with 450,000 members or more), subscribers to the program guide of each association also counting as members. The Netherlands Broadcasting Corporation (NOS) was established to play a coordinating role, provide studios and technical facilities, and produce a joint program of news, weather, and sports. The Foundation for Broadcasting Advertising (STER) was to divide most of the advertising profits among the associations. The existing license fee was thus complemented with advertising revenues. The Television and Radio Broadcasting Corporation (TROS)—in fact a renewed REM—
joined the system that same year. The protestant fundamentalist “Evangelical Broadcasting Corporation” (EO) followed in 1970, as did Veronica Broadcasting Corporation (VOO or Veronica), a former offshore pirate radio station, in 1975.

The new “open system” stimulated competition among associations, thus giving television broadcasting a pseudo-commercial character (De Goede). With two new players, TROS and Veronica, lacking clear identification with a social or cultural group, the associations all promoted themselves in a quest for larger audiences. In combination with a significant schedule enlargement, many felt that the competition was lowering production and programming standards, a phenomenon labeled “Trossification” for the TROS channel, which was the first to introduce this light entertainment strategy. More and more talk shows, sitcoms and other foreign—especially American—series brought a change of diet for an audience used to a public broadcasting mix of “information, education and entertainment” (Manschot, 1993).

The public system came under growing outside threat from foreign cable stations and other developments in the 1980s. A 1983 Christian right-wing coalition white paper on the future of the mass media developed into the 1988 Media Act, a second milestone in Dutch broadcasting policy. Commercial broadcasting remained forbidden. The supervision of compliance with the Media Act was delegated to a Media Authority. And the NOS split off its facilities into the private Dutch Broadcast Production Company (NOB). Broadcasting associations no longer were forced to use NOB facilities, which stimulated the growth of an independent audiovisual production sector. To broaden the airtime, a third channel, Nederland 3, was launched in April 1988.

The overall intentions of the Media Act (keeping the system of pluralism in place, keeping commercial broadcasting out) was clearly out of step with European developments (van der Haak and van Snippenburg). The paradigm shift from public service broadcasting monopolies to a deregulated commercial broadcasting environment swept across Western Europe in the 1980s. But in the Netherlands, policy was again behind actual developments. In October 1989, RTL Veronica began broadcasting via Astra satellites from its base in Luxembourg using a “U-turn strategy.” Although presenting programs in Dutch produced in the Netherlands and clearly aimed at a Dutch audience, it was recognized as a foreign station because it was partly owned by the Luxembourg-based CLT (as well as by the Dutch station Veronica), and therefore admitted on Dutch cable. Veronica was severely punished for this commercial escapade, had to withdraw from the partnership, and RTL changed into RTL4. The station quickly attracted about a quarter of the Dutch television audience, becoming market leader within a year. The 1980s boom in programming hours created a need for cheap material with a huge popular appeal, which was largely filled with U.S. soaps and other series. Dallas and Falcon Crest, for instance, were broadcast with great popular success (and the cultural protest of intellectuals). Only in the 1990s would the production of immensely popular domestic soap operas reverse the U.S. dominance.

The last decade of the century was undoubtedly the most dynamic era in terms of new stations, mergers, and policy reforms. As a result, a new Media Act has been permanently “under construction” (van Reenen). At the same time, the development of European Union media regulations gradually reduced the scope of domestic policy to an “exercise in modesty” (De Goede, 1999). The 1990s started with the government commissioning a report from consulting firm, McKinsey & Co., on measures designed to assist public broadcasting to counter commercial television. This 1990 report was to become the basis for several years of television policy. Broadcasting associations were given a fixed space on one of the channels in order to make the three channels equally attractive to audiences and advertisers. The NOS retained its task of broadcasting news, sports, and national events. But the newly founded Netherlands Program Corporation (NPS) became responsible for cultural issues, and minorities and young people’s programs. A cabinet of social democrats and liberals continued the move to liberalization in 1994. This led to a new organizational structure for the public system with an independent board of directors in charge. Since then the broadcasting organizations have been represented on a supervisory board charged with the main policy lines. And after more than 20 years, a new broadcasting association, Bart’s News Network (BNN) aimed at young people, entered the public system in 1998.

It was in the arena of commercial broadcasting, however, that most thorough changes took place. RTL launched a second station, RTL 5, in 1992, heavily relying on American series. Veronica left the public system in 1995 to form the Holland Media Group (HMG) with RTL. In 2000 Veronica left HMG and in 2003 is seeking a re-entry in the television market with other partners. HMG has approximately a 40 percent market share. The Arcade Group, a Dutch record company, entered commercial television in 1995 with The Music Factory (TMF) a very popular Dutch version of MTV (and since 2000 owned by MTV), and TV10. TV10
changed its name with consecutive ownership changes, to Fox 8 (FOX), and to V8 (SBS) in 2001. A new channel, SBS6, began in 1995, part of the Swedish-American Scandinavian Broadcasting System (SBS) Group together with De Telegraaf, Netherlands largest newspaper. This channel mainly broadcast reality TV, eroticism, and feature films. They launched a second channel, Net5, in 1999, directed at viewers from public broadcasting. Finally, pay-TV, existing since 1984 as Filmnet and Canal Plus, currently owned by Vivendi, has not seemed to catch on. This is not surprisingly considering the huge array of television choices already available.

Since the arrival of the commercial broadcasting companies, the public broadcasting organizations have seen their market share shrink by half, to stabilize at around 40 per cent in 1997. But the market of independent production companies has flourished, the most famous case being Endemol. The 1993 merger of Joop van den Ende and John de Mol Productions, both producing game shows, soaps, talk shows, reality TV, and drama, formed one of the largest audiovisual companies in Europe. Van den Ende’s soap format Goede Tijden, Slechte Tijden (GTST) (Good Times, Bad Times) was one of the first domestically produced daily soaps in Europe in 1990. It soon became a key program of RTL4, and remains very popular. Endemol has diversified its output with highly successful and internationally distributed “emotion-TV” formats such as All You Need is Love and the by now legendary Big Brother. The final episode of Big Brother broke all the Dutch ratings records, with 3.5 million viewers (in a population of about 16 million). Endemol, a transnational producer with subsidiaries in more than 15 European countries, turned the Netherlands into a prominent television format exporter. Telefónica, the Spanish telecom giant, acquired Endemol in 2000.

The public sector replied to the commercial competition with yet another reform in 2000, focusing on channel branding, creating diverse and clear channel profiles. Ned 1 is to be the in-depth channel inspired by family values, Ned 2 the most accessible channel, most likely to pinch viewers from commercial channels, and Ned 3 also an in-depth channel, but guided by culturally progressive values and tastes. The NOS became the only licensee, with the associations reduced to participants in the license. The license fee was replaced by a small income-tax rise.

Today, viewers in the Netherlands have a wide range of about 30 television stations, both public and commercial, domestic, foreign, and international, through one of the densest cable networks in Europe. Soccer and other sports programs have become by far the most popular program category, recently joined by reality TV shows.

In the 50 years of its existence, the Dutch broadcasting system has seen its boundaries between government, business, and non-profit associations shifted considerably, the two former gaining in influence, the latter losing power (De Goede, 1999). This resulted in a highly diversified dual landscape of public and commercial broadcasters, with a clear shift toward commercialization, internationalization, and concentration, although the government strongly supports the public broadcasting system.

The coming years of Dutch broadcasting will see digitization and Internet applications, currently in an experimental phase. The introduction of thematic TV channels such as a news channel and a children’s channel are under consideration. Looking to future developments in technology, several public and private organizations have joined forces in the consortium Digittenne, with a view to providing digital terrestrial television services.

Networks: United States

Networks are organizations that produce or acquire the rights to programs, distribute these on systems of interconnection, and secure uniform scheduled broadcasts on a dispersed group of local outlets. In commercial broadcasting, "networking" was recognized at an early date as the clearest path to profitability, because the costs of program production were—and are—fixed, and revenue turned on securing the maximum degree of efficient distribution and exposure to mass audiences.

In the United States, the number of broadcast networks existing at a particular time, and the prospects for entry by new networks, have always been the combined result of the current state of technology, in tension with an extensive role for government regulation. Television broadcasting, tentatively begun prior to the American entry to World War II in 1941, was suspended for the duration of the war, and did not resume until the first wave of station activations in 1946 through 1948. By then, the dynamics of technology and regulation established for radio broadcasting already had shaped the possibilities for television networks.

Beginning in 1920, radio entrepreneurs in the United States had developed an array of informational and entertainment fare, originated in live performances at local stations, and increasingly at network studios in New York City, from which feeds to stations could be disseminated in real time over telephone lines. Commercials, like other copy, were read and performed live. Strong local stations prospered in this system, but the highest return was enjoyed by two major networks, Columbia Broadcasting System (CBS), and the National Broadcasting Company (NBC) unit of a premier radio equipment manufacturer, Radio Corporation of America (RCA). RCA operated dual networks, the Red and Blue. In radio, as was to be the case in television, industry leadership was exercised by a charismatic executive and founder, Robert Sarnoff at NBC, William S. Paley at CBS, Allen B. DuMont, and a few others.

The first comprehensive U.S. radio law, the Radio Act of 1927, did not confer on government any express power to regulate networks directly, but empowered it to regulate stations engaged in "chain broadcasting." This served to consolidate industry control by the network organizations already under-way. The law mandated that radio broadcasting stations be allotted in a manner that equitably served the various states and localities, but withheld actual station ownership of broadcast channels, in favor of renewable licenses for limited periods. It also prohibited the licensing of a person or entity that had been convicted of unfair competition or monopolization. These precepts carried over with the Communications Act of 1934, and shaped the relationship among stations, networks and the government throughout the emergence of television.

At the eve of American entry into World War II, the Federal Communications Commission (FCC), acting under its powers to investigate and regulate stations, concluded a probe of "chain broadcasting" and announced a series of prohibited practices in radio. These included contracts that permitted networks to command and resell advertising time for their own account, or to option time. The rulings also prohibited the specific ownership of dual networks by a single entity, NBC being the singular example. The Supreme Court's decision upholding these actions in 1943 prompted the divestiture of NBC Blue, acquired that year by Lifesaver magnate Edward J. Noble, and became part of the group American Broadcasting Companies, Inc. (National Broadcasting Co. v. U.S., 319 U.S. 190, 1943).

After 1945, as Americans turned to peace-time pursuits, including the development of television, commercial radio already was settled into a pattern, with program fare dominated by two or, generously, perhaps three networks, each of them fortified against hard times by the ownership of a handful of highly-profitable local stations in the largest trading areas. The critical determinant of the number of networks that could be supported was—as it is today—the number of local outlets that could be assured for network audience, by ownership or by contract.

By 1945 the FCC preliminarily had allotted some 19 VHF Channels, numbered 1 through 19, for television broadcasting. Almost immediately Channels 14 through 19 were reallocated to the military, and Channel 1 was put aside for two-way radio. By the end of 1946, seven stations were broadcasting (all on Channels 2 through 6), and approximately 5,000 household receivers were in use. From that point, and even in the absence of detailed technical standards to guard
Against mutual interference, applications for new stations poured in. The FCC imposed a freeze on new applications on September 30, 1948. Virtually all pre-freeze filers actually built broadcasting facilities, so that by the time the freeze was lifted on 13 April 1952, some 107 VHF stations had been activated in 63 markets, and receivers in use had grown to 15.5 million. Denver led the list of many important markets that had no television at all. During the freeze, NBC moved aggressively to apply for and activate stations in the top markets. CBS got a late start, and proceeded to acquire its first stations by purchase. ABC and a fourth network, DuMont Laboratories, participated actively in the FCC proceedings, but were unable or unwilling to initiate major station investment, pending resolution of the knotty regulatory issues.

The framework adopted by the FCC in 1952 allotted television channels to specific communities throughout the United States, roughly in proportion to market size. VHF Channels 2 through 13 and UHF channels 14 to 83 were utilized, but as of 1952, virtually all TV sets were capable of VHF reception only. The first UHF set-top converter was introduced in March 1952. The decision also sacrificed efficiency, and reduced the potential number of stations, by grandfathering the existing 107 outlets, helter-skelter wherever they had started. Practically speaking, the FCC’s allocations provided only enough VHF outlets to provide two-channel service to about 90 percent of the population, and third-channel service to substantially less. NBC and CBS, each emerging with five powerful owned-and-operated stations, and program offerings spun off from their popular radio fare, quickly expanded affiliations.

The Emmy Awards, first presented on January 25, 1949, were an accurate barometer of network emergence. A local station, KTLA in Los Angeles, dominated the awards for year 1948, with the most popular program (Pantomime Quiz Time), most outstanding personality (Shirley Dinsdale and her puppet, Judy Splinters), and the station award. By the second year, with KTLA still prominent, NBC cracked the line-up, jointly with its New York flagship KNBH, winning best kinescope show (Texaco Star Theater) and personality (Milton Berle). A network spot for Lucky Strike cigarettes won best commercial. In the third presentation, for 1950, Alan Young and Gertrude Berg were best actor and actress, for CBS jointly with Los Angeles independent KTTV, and their co-produced Alan Young Show was recognized for best variety show. Outstanding personality was NBC/KNBH’s Groucho Marx. By the end of the FCC’s freeze these networks had unqualified leadership of program origination.

In the complex fight over regulation DuMont Laboratories had advocated a plan with a minimum of four VHF frequencies allotted to each of the 140 largest trading areas. Rebuffed at the FCC, DuMont never achieved more than 10 primary or full schedule network affiliates. As the few UHF operators incurred mounting losses, DuMont folded its network in 1955. These by-products of the freeze and subsequent FCC decision to grandfather incumbent stations and intermix VHF and UHF channels have led to harsh criticism of the FCC’s decisions.

Throughout this period, ABC was barely operating, and Noble stated that he had never declared a dividend nor taken a salary through 1952. In 1953, however, ABC received FCC approval to merge with United Paramount Theaters. The chain had been spun off from Paramount Pictures Corporation, under court decree that followed the Supreme Court’s antitrust decision of 1948, upholding divestment of theatrical production from exhibition. The significance of government involvement could not be more clear, with ABC’s very existence jeopardized by one government action, and resolved favorably by another. ABC used its Hollywood connections adroitly, teaming with a studio to co-venture a break-through program, to that date the most expensively produced in history: Disneyland.

Collectively the networks could have only as many affiliates as there were stations on the air. Commercial VHF stations grew from 233 in 1954 to 458 in 1962. Commercial UHF stations stood at 121 in 1954, and struggled against the lack of UHF receivers. Many UHFs went dark and returned their licenses for cancellation, and by 1962 their numbers had shrunk to 83. In total, the commercial station universe as it grew roughly from 350 to 550 was adequate to support approximately two-and-a-half national networks. Local stations, in the enviable position of having multiple suitors, frequently left ABC with no local outlet. Congress enacted a law in 1962 mandating that all receivers be capable of UHF tuning, but it was only by the mid-1970s that local stations were plentiful enough for ABC to achieve full comparability.

As the networks consolidated their control of station time during the 1950s, a broad shift occurred in their relationship with the sponsor, enhancing their control even further. In the early part of the decade, shows typically were produced by the sponsor live, or contracted for by the sponsor and delivered to the network on expensive film or kinescope. Production was centered in New York. With the introduction by Ampex of quadriplex videotape recording in 1956, it became possible for programs to be produced and recorded anywhere, and the new orders for entertainment fare shifted to the concentration of expertise in Hollywood studios. In-
increasingly, the network replaced the sponsor in development, acquisition, and revision to final programming form. From the 1950s can be charted the realization of core concepts in prime-time programming, including the ensemble situation comedy, cop shows, westerns, and regularly scheduled newcasts. This period often is referred to as the Golden Age of television in the United States, perhaps precisely because of its experimental flavor. But while major market stations achieved immediate and impressive profitability, networking was still a gamble, the program performance remained uneven.

This period often is referred to as the Golden Age of television in the United States, perhaps precisely because of its experimental flavor. But while major market stations achieved immediate and impressive profitability, networking was still a gamble, the program performance remained uneven, and in 1961 critic-for-a-day Newton N. Minow described the totality as a "vast wasteland."

The true golden age of three-network hegemony probably dates from 1963, when each network inaugurated a half-hour prime-time newscast, and network television drew the entire nation together in grief after the assassination of President Kennedy. From 1963 until the late 1970s, the networks created a refraction version, shared by all, of the significant events of the day. This cohesion intensified with expanding use of color transmissions and color set sales during the 1960s. One nation resonated with the networks' triune voice, in a manner unparalleled in the past, and likely never again to be seen in the future. ABC, gradually shoring up its group of strong affiliates, and hiring a visionary programmer in Fred Silverman, finally used coverage of the Summer Olympics as the basis for its first full-season ratings victory in 1976-77. The "third network's" potential had been clear for years, but several attempts to acquire ABC during the 1960s were rebuffed, and an attempted buyout by IT&T founded in 1968, after criticisms were vetted during two years of FCC proceedings.

The membership quota for this elite club of three networks, however, was eventually dismantled by a technology developing quietly during these same years—cable television. The FCC's original framework of 1952 did not assure three-network or any network service, to all households, and was particularly deficient where terrain obstacles degraded reception over the air. Community antenna television (CATV) was a local self-help response, tying hilltop repeaters to wires into the home. Because cablers did not utilize the broadcast spectrum, the government was uncertain of its jurisdiction until a Supreme Court decision came down in favor of a broad authority to regulate, U.S. v Southwestern Cable Co., 392 U.S. 157 (1968). Thereafter broadcasters, well aware of the potential competition, leaned on the FCC to retard cable, specifically by forbidding the importation of distant signals that were not available in the local market. By 1970, a regime of anti-cable regulation was firmly in place and for ten years it served to retard competition and preserve the networks' position. A newer technological device again led to significant change in this arrangement.

Domestic communications satellites were authorized in 1972, and by 1975 RCA and Western Union had space satellites launched and working. In 1975 RCA sold time on its Satcom I for Home Box Office, the first program service designed to bypass conventional delivery channels, and offer a unified program lineup directly to cable systems and thus to the home—in the true sense, a network. The following year, uncertainties surrounding the re-sale of broadcast programs to cable were resolved, with passage of a new Copyright Act requiring broadcasters to license to cablers under certain conditions, at below-market rates to be established through a bureaucratic process.

The opportunity presented by the resolution of the two knottiest issues—distribution and rights—was first recognized by Ted Turner, not a cabler but a broadcaster, operator of WTGC in Atlanta (later, WTBS), an independent UHF on Channel 17. By 1978, the FCC had been having second thoughts about the heavy hand it had placed on cable development. Turner approached the agency with a plan to offer Channel 17 to a common carrier he created for the purpose, Southern Satellite Systems. In turn, Southern would deliver the station by satellite to cable headends, charging five cents per household per month. Because embedded in FCC common carrier regulation was the idea of nondiscriminatory rates, for large and small customers (or cable systems) alike, Southern needed a waiver to charge by the number of local subscribers. Astonishingly, the FCC said yes. The debut of Channel 17 as the first "super station" in 1980 assured, year by year, that the three-network share of the program universe would continue to shrivel inexorably. By 1981 the FCC also was in process of a cable "deregulation," abandoning its 10-year folly of attempting to re-bottle the genie of cable program origination. The networks, barred by FCC rules from owning cable systems, began to invest in new cable program services side-by-side with cable companies, Turner, and others.

With President Ronald Reagan taking office in 1981, the deregulatory thrust continued. The former actor, when he thought about such matters, was willing to favor Hollywood studios in their primordial battles with the television networks, and to endorse the expansion of channels for program delivery. A cable television bill, passed in 1984, preempted local rate regulation, and so gave the cable industry working
capital to continue its strides as program creator and distributor.

These strides were being matched with the opening of a wholly new channel into the home. Sony had introduced a practical, consumer videotape player-recorder, the Beta VCR, in 1976, at a suggested retail price of $1,295. Recording time per tape was one hour. Sony's Japanese rival, Matsushita, which markets under the name Panasonic, followed shortly with an incompatible format that eventually became standard, called VHS. Hollywood studios, led by Universal Pictures and Disney, promptly brought a challenge in Federal Court, claiming that the device inherently was useful only for stealing copyrighted material. The issue oscillated in court until 1984, when the U.S. Supreme Court ruled that home taping for home use was not an infringement of copyright (Sony Corp. v. Universal City Studios, Inc., 464 U.S. 417 [1984], called the "Betamax case"). From that date, sales of home recorders and the rental of tapes exploded. The studios have come to enjoy greater revenue from cassette sales and rentals than from theatrical exhibition, and must look back in wonder at their temporary insanity when the player-recorders first were sighted in North America. But for the networks, this technology presents long-term problems. The rating services have assumed so far that programs can be credited as viewed if they are recorded, but it may become apparent in time that the facts of actual audience behavior are otherwise. In the United States (unlike some other countries, such as Britain), VCRs in their most typical use occupy the household's attention for non-network fare such as movies, just coming off their initial theatrical run.

As cable and cassettes continued to splinter the market, Reagan's FCC abolished many of the rules and policies that had stood in the background of television broadcasting also. In 1984, the rule restricting each television network to the ownership of a maximum five VHF stations, and seven VHF plus UHF, was replaced with a quota of up to twelve VHF so long as the station grouping did not exceed 25 percent of all TV households. While this liberalization was still at the discussion stage at the FCC, Thomas S. Murphy, chairman of the Capital Cities station group, approached ABC about a merger. Once the rule was finalized, Capital Cities in 1986 announced the acquisition of the much larger network, for $3.5 billion, with financing from Warren E. Buffett and Berkshire Hathaway, Inc.

By 1986, RCA was a diminished echo of the industrial giant of the post-war years. Its equipment markets had been overtaken by Japanese manufacturers. Its television network remained competitive and highly successful, but in no position to refurbish from working capital for the intensified program battles ahead. RCA and its NBC network were sold to General Electric in 1985 for $6.3 billion. General Electric had been instrumental in creating RCA in the 1920s before David Sarnoff's tenure in charge, and now closed the circle in an era more receptive to combinations.

CBS entered this period smarting from a lengthy battle with General William C. Westmoreland over the CBS Reports documentary, The Uncounted Enemy: A Vietnam Deception. The advocacy group, Accuracy in Media, Senator Jesse Helms, and Ted Turner were each, in 1985, separately talking up plans to acquire the network. CBS beat back these efforts with a $1 billion stock repurchase, but was left with more debt, little working capital, and a reduced stock valuation. The board and the aging founder, Paley, passed effective control of the stock to Loews Corporation and its proprietor, Laurence Tisch. Soon the news division, successors of Edward R. Murrow, was pruned by 230 people. In 1987 CBS dropped to third place in the season ratings for the first time.

Ever since the sputtering start for UHF in the first two decades of television, FCC commissioners had spoken longingly of the desire, first to assure three-network service, and next to realize somehow the dream of a fourth network. By the time the fourth network arrived, family viewing had fractured into discrete-person viewing, multi-set households were common, and broadcast networks had to contend with cable networks, premium cable, home video, even computer games.

Nevertheless, the fabled fourth network did come in 1990, when Rupert Murdoch, an Australian publisher, naturalized as a U.S. citizen to make him eligible for the deal, acquired the strong major-market grouping of Metro Media stations, and placed them under the same roof with the 20th Century-FOX studio. Murdoch eschewed ABC's original 1950s approach—programming mostly cannon fodder against its rivals on a full seven nights—instead making a staged entry with two nights, then three and four. The FOX network finally attained a full-time run, and in less than five years from launch, FOX could first be seen actually winning a prime-time slot here and there. In 1994 FOX purchased rights to the National Football Conference (NFC), building from sports, and luring affiliates in NFC territories, moves taken from the ancient game plan on which ABC's strategy had previously been built.

The rise of FOX placed new pressure on FCC rules intended to adjust the playing field between program suppliers and the networks. These rules imposed a
quota on network self-produced fare, by forbidding the networks to own rights for secondary distribution of the programs they originated (called the Fin-Syn Rules), and by keeping an hour of prime time out of the hands of networks, reserved for local stations to program, usually by purchase from syndicators (the Prime-Time Access Rule). Because Fox combined a network with a studio, it sought and obtained waivers, and soon the rules were repealed for all networks.

By 1994, the liberalization of ground rules emboldened three more Hollywood studios to try their hand at networking directly. Warner Brothers launched a network in its own name, and Universal, which had grown to eminence as a prime source for NBC, teamed with Paramount, proud source of the inexhaustible Star Trek franchise, to form UPN (United Paramount Network).

In 1995, Capital Cities/ABC agreed to be acquired by Walt Disney Studios for $19 billion in cash and stock. The Disney combination with Capital Cities was the opening round of a new level of consolidation among few great communications trusts equipped to provide multiple channels of information, entertainment, and merchandizing in coordinated fashion throughout the world.

In 1999 Viacom and CBS (acquired earlier by a strong group owner, Westinghouse) merged, in the largest such conglomeration at that time, valued at $50 billion. From the Viacom side, the merged entity included Paramount, Blockbuster Video, television stations, publishing, and other media. Westinghouse/CBS brought to the table its television group, but also from Infinity a major radio group and outdoor advertising. This combination was possible only because the new Telecommunications Act of 1996 abolished the numerical limit on television stations in common ownership, and provided a liberalized cap of 35 percent of national audience for any one station owner. The Viacom/CBS merger also came in the immediate aftermath of an FCC action repealing the “dual network” ban that had divested NBC Blue in 1941. Bill Clinton’s arrival in 1993 gradually shifted the partisan stripping of the FCC Commissioners. But the bedrock principles in Washington, D.C., did not change much: receptivity to market forces and competition in theory, and receptivity to large media players getting their wish lists in practice.

That power was drifting away from the “club” of three—now four—was evident in the rise of Time Warner, or AOL Time Warner, as it was dubbed at the $183 billion merger in 2000. Without ownership of any one of the “major” networks, Time Warner, with all the growing pains accompanying the initial years, was and remains the most highly capitalized media organization in the world. It has a pervasive impact on television through the WB network, HBO, Turner Classic Movies and TNT, CNN and CNN Headline News, Warner Brothers Television, and other program originators, and major footprints in online services, books and magazines, to mention only the highlights.

Since the advent of U.S. television in 1941, there never has been a regulatory change—permitting combinations not previously allowed—that did not trigger moves by the affected parties to the full, lawful outer limits. In 2003 the FCC voted to liberalize most of its remaining restrictions on media ownership, including the phase out of “cross-ownership” restrictions in more than one category of mass media, and an increase in the maximum audience that could be served by network-owned stations, from 35 percent to 45 percent, or higher if the stations broadcast in UHF. But this time the implications appeared obvious to a broad cross-section of the public, from the National Rifle Association to Fairness and Accuracy in Reporting. The proposals created a negative reaction in public comment and meetings when proposed, and then a storm of objections when adopted 3–2 by a sharply divided FCC. Both houses of Congress appeared poised to roll back some or all, unless dissuaded by the Bush administration.

If the latest regulations go into effect they will prompt a new wave of consolidations. For all the heat they have generated, they are but the capstone of a 20-year bi-partisan trend. Another FCC action at the end of 2003 may turn out to have even greater significance. News Corporation, the owner of FOX, was permitted to acquire the ownership of DirecTV, which had a direct satellite feed to eleven million homes, and was the second largest pay-TV provider (after cable TV giant Comcast). No “vertical” combination of program and distribution assets quite like this has been seen at any time since the motion picture combinations were broken up in the 1950s. In blessing this merger, the FCC noted that the new company planned by the end of 2004 to put local TV stations on the satellite—known as local-into-local, for the 100 largest markets.

By 2002, 67 percent of households had cable television, providing at least potential competition for satellites. Eighty-five percent of homes subscribed to a multi-channel video service, so that as few as 15 percent of homes were served by over-the-air broadcast only. The slow emergence of digital television will increase options—eventually—by enabling multicasting of several feeds on a station’s video channel. Internet streaming gradually will become more practical, in step with broadband deployment.

Unbound from terrestrial broadcasting, and even from the idea of a single channel, what will a network look like? The answer is already seen on satellite and
cable today. The CNN franchise, a Ted Turner legacy acquired by Time Warner, now is seen on cable as CNN, CNN International, CNN en Español, CNN Headline News, CNN fn, and CNN Interactive. CNN Radio is a cable service. All of these can supply news briefs to other channels in the corporate family and can be re-purposed in books, magazines, and elsewhere.

The logical basis for networking in mass media will endure. Production costs are fixed, so the advantage is with those who can achieve the greatest exposure. Exorbitant capital costs in satellite, cable, and high-end digital origination are unlikely to vanish. But the new demand for customization and niche programming points in a very different direction. The large network organizations may have no inherent advantage in reaching a local, specialist, or individualized audience. That provides a possible opening for nimble, adaptive, and small services to endure and even thrive, embracing new technologies as they emerge. In the absence of any governmental brake on consolidation, that would have to be the hope, at least, for any society that depends for its survival on the free flow of information to its citizens.

Government Studies

1639
New Zealand

As observers have noted, there is considerable irony in the fact that New Zealand, the first nation to legislate for state control of radio waves with the Wireless Telegraphy Act of 1903, should have created what the reforming Minister of Broadcasting, Richard Prebble, claimed was "the most open communications market in the world" 86 years later. The development of television has been at the centre of this movement from strong state direction to a competitive marketplace.

In 1935, the first Labour administration set up the National Broadcasting Service as a government department to bring the emerging medium under public control. The following year, 22 private radio stations were nationalized to create a state monopoly.

A government inquiry into the prospects for television was appointed in the 1940s but did not report until 1957. It advocated a public monopoly, and a full service was eventually launched in 1960. Its take-off coincided with a major change in the overall organization of broadcasting when, in 1961, the old National Broadcasting System became the New Zealand Broadcasting Corporation (NZBC), an institution closer to the BBC model.

Because of the country's relatively small population, it was clear that the license fee would not generate sufficient income to cover the costs of the new service, and so advertising was allowed from the outset as a supplementary source of income. Consequently, although the NZBC looked to the BBC as a model, it never enjoyed the same relative independence from commercial pressures, or from political overlordship, as its British counterpart.

As a national monopoly it was expected to reflect and foster national culture and national identity. However, its ability to do this was severely limited by financial constraints. The start-up costs of the new television service were substantial. Constructing a transmitter system across a huge, topographically difficult land area was particularly expensive. Comparatively little funding was therefore available for original program production, and scheduling relied heavily on imported material, particularly from Britain. By the late 1960s, NZBC was the largest purchaser of BBC programs in the world.

In 1972, the organization successfully fought off a bid to introduce a competitive commercial service, and itself launched a second channel. Having more hours of broadcasting time to fill made imported programs even more attractive to cost-conscious executives. They were ten to twenty times cheaper than domestic productions, filling the screen for two days for the price of one hour of home-produced material. By the mid-1980s, imports were providing the majority of programs but taking only 4 percent of the television division's total expenditure. When a UNESCO study calculated local content on television in 1983, Great Britain logged 85 percent, Australia 50 percent, and New Zealand 25 percent—including sports, game shows, news, and current affairs—strong evidence that in a market of only three million people, financial logic worked powerfully against public television's ability to reflect the full diversity of national life.

Despite the rebuff to the private sector lobby in 1972, a limited form of competition was introduced in 1974 when NZBC's two channels became separate operating companies and entered into vigorous competition for viewers and advertising. This pushed programming toward a more populist, entertainment-oriented style. Television viewing increased appreciably.

This fueled renewed pressure from private companies wishing to enter the increasingly lucrative market for television advertising. In 1976, the newly elected (conservative) National Government responded positively with a Broadcasting Act that set up a quasi-judicial Broadcasting Tribunal, with the power to license new stations by issuing broadcasting warrants. However, it took rather longer to break the public monopoly than many early enthusiasts had anticipated. The private consortium that later became the country's first terrestrial commercial service, TV3, lodged an application for a warrant in 1984. It obtained a favorable decision in August 1987 but a judicial review in their favor was not handed down until September 1988. The channel finally went on air in November 1989. It entered a depressed economy encumbered with debts accrued from the protracted tribunal process and went into receivership after only six months. It had also underestimated the public channels' ability to fight their corner.

In addition to establishing the tribunal, the 1976 Act had also replaced the old Broadcasting Service with the Broadcasting Corporation of New Zealand (BCNZ), a publicly owned institution with two major operating divisions: radio, and Television New Zealand.
Zealand (TVNZ). The two television channels were brought back under unified control and run as complementary services. The government also addressed the organization's mounting deficit produced by the costs of launching the second channel and converting from black-and-white transmissions to color. In 1977, they agreed to retire the debt on the condition that future developments were funded from revenues. To underline the point the license fee was frozen. By 1993 it stood at NZ$110, by which point, if it had been index-linked to inflation since 1975, it would have been NZ$280. Faced with a capped income from the license fee, TVNZ set out to attract more advertising revenue, successfully increasing its overall share of the advertising market from 21 percent to 30 percent in the ten years from 1977. By 1987 advertising accounted for 80 percent of its total revenues, helping it to record a return on equity of close to 20 percent.

This more commercially minded attitude ran counter to the recommendations of the Royal Commission on Broadcasting that had sat between 1984 and 1985. It had advocated a strong public-service system with limits on advertising levels and a local program quota. But even as it reported, it sounded like an echo from the past.

As a division within a public corporation, TVNZ was free to retain any earnings and reinvest them. The treasury, however, favored returning them to the public purse for general use. Its 1984 briefing to the incoming government floated the idea of converting commercially viable public operations into state-owned trading enterprises (SOEs), which would function as private-sector businesses and return a dividend to the government. The process began in 1986. Nine new SOEs in various sectors, including telecommunications, were established, and at the end of 1988 the principle was extended to radio and television broadcasting.

However, TVNZ's capacity to increase its revenues was affected by a radical shift in the terms of competition in the television marketplace initiated by two key pieces of legislation passed in 1989. In response to widespread concern about the costs and delays of the tribunal process for granting new licenses, the government introduced the Radio Communications Act. This allocated radio frequencies by tender, the winning bidder becoming the frequency "manager" for a 20-year term with freedom to pass the license on to another party. The first auction of national and regional UHF frequencies in 1990 opened the market to several new services. They included Sky Network, the country's first pay-TV service, rebroadcasting satellite sports, news, and film services; a regional service based in Canterbury in the South Island; and a racing channel, Action TV.

TVNZ, which had become a separate operating company in December 1988 in preparation for increased competition, responded aggressively in an effort to cut costs and increase revenues. Staffing numbers were cut and employees moved to limited-term individual contracts. Much of the programming formerly made in-house was contracted out to independent producers. Internal subsidiaries looked for outside clients. And the organization moved to spread its interests beyond its traditional business of mass-market national broadcasting. It acquired a 35 percent stake in Sky, formed a partnership with Clear Communications, the second force in the emerging telecommunications market, and entered the burgeoning overseas broadcasting market with a 29.5 percent stake in Asia Business News.

It also retained its dominant position in the national television market. By October 1990, TVNZ's two channels still commanded an 80 percent share of the television audience, as against TV3's 17.3 percent and Sky's 1.5 percent. Its share of television advertising however showed a steeper decline, dropping from 100 percent in 1984, before the advent of competition, to 70 percent ten years later. At the same time, TVNZ lost its monopoly control over the license income.

The 1989 Broadcasting Act transferred responsibility for collecting and distributing the public broadcasting fee to a new body, the Broadcasting Commission, with a particular responsibility for funding local production. It later adopted the title New Zealand on Air (NZOA). Although anyone could bid for funds, TVNZ held on to its dominant position with 76 percent of NZOA's 1992 production budget going to programs made by or for its two channels. A substantial portion of this figure was spent on the medical soap opera Shortland Street, NZOA's major prime-time vehicle for representing a changing national culture.

Although the introduction of competition has significantly increased the number of television services available within New Zealand, there is heated debate as to whether it has extended the range of programming on offer.

Critics of the reforms point to the cultural costs of the minimal restrictions on commercial operators, the intensified competition for ratings points, and the shift toward transnational ownership with the removal of all restrictions on foreign holdings in television in 1991. They point to the absence of any quota to protect local programming, to NZOA's inability to compel stations to show the programs it has funded in favorable slots, and to the marked increase in advertising time, which gives more space to commercial speech and less to other voices. Although the figures are contested, one government report suggested that between 1988 and 1991, advertising on the two TVNZ channels in-
creased from an average of 9–10 minutes per hour to 15 minutes.

This eclipse of public-service ideals by commercial imperatives is, critics argue, part of a pattern of change that has produced plurality without diversity. Whether this pattern will be broken or reinforced by current moves towards multimedia convergence and interactivity remains a central question.

**Newhart, Bob (1929– )**

U.S. Comedian, Actor

Bob Newhart is one of a few television performers to have starred in two highly successful series. His subtle, ironic humor and deadpan delivery served him well as the star of *The Bob Newhart Show* in the 1970s and *Newhart* in the 1980s. In both programs he had the opportunity to display his greatest strength as an actor: his ability to be a great reactor. While the characters he portrayed were a bit quirky, those surrounding him were so much more bizarre that Newhart seemed an island of sanity as he responded to their zaniness. This calm, controlled style also allowed him to take on some risky subjects (death, for instance) without offending his audience. As Newhart once told an interviewer, this style “has allowed me to say outrageous things with the facade of someone who didn’t look like they would be saying outrageous things.”

Newhart became a television star in a rather roundabout fashion. In the late 1950s, following college, army service, and a few short-term jobs, he appeared to have settled into an accounting career, but his hobby was performing comedy routines on radio. Some of his demonstration tapes so impressed Warner Brothers’ recording division that Warner signed him to record a comedy album, even though he had never performed on the concert stage. His first album, *The Button-Down Mind of Bob Newhart*, was a major hit in 1960. His humor was intelligent and original; some of his now-classic routines involved an inexperienced security guard reporting King Kong’s climb up the Empire State Building, Abraham Lincoln’s publicist coaching him on the Gettysburg address, and Sir Walter Raleigh’s boss hearing about the discovery of tobacco (“You stick it between your lips...you set fire to it?”). Many of these routines were played out as telephone conversations, of which the audience heard only Newhart’s side; often he ended the conversation with an indignant “Same to you, fella!”

Newhart was one of several cerebral comedians who found favor in the early 1960s, but he always seemed more accessible than the others, like the kind of guy people would invite into their living rooms. Soon, that is where he was. On the strength of his first album, he was invited to perform on the Emmy Awards telecast in 1960. His appearance went over so well that NBC gave him his first TV series, a comedy/variety program called, like his 1970s sitcom, *The Bob Newhart Show*. It was critically acclaimed and won him an Emmy as Best Comedy Series of the 1961–62 season, but it was canceled after that season due to low ratings. (Newhart’s subsequent hit series were occasionally nominated for Emmys, but they never won. Newhart himself was twice nominated for Best Actor in a Comedy Series, for *Newhart*, but lost both years to Michael J. Fox in *Family Ties*.)

Throughout the 1960s, Newhart performed with great success in nightclubs and on records, and with less success in films, but he remained familiar to tele-
vision audiences through frequent guest appearances on The Tonight Show, The Ed Sullivan Show, and other variety programs. When Newhart returned to series television in 1972, he won both critical and popular acclaim as Chicago psychologist Dr. Bob Hartley in The Bob Newhart Show. The show was one of the best of the ensemble comedies, many of them produced by the MTM company, that became so popular in the 1970s. Its humor was sophisticated, but with a twist: it could laugh at Bob's fixation on death after he nearly fell down an elevator shaft, and it dealt sympathetically with controversial subjects, such as the homosexuality of one of Bob's patients. Unlike programs produced by the Norman Lear organizations, however, The Bob Newhart Show was not primarily concerned with social issues, but with human foibles. It was exceptionally well written and had well-drawn supporting characters played by talented actors. Each cast member had an opportunity to shine, but Newhart was the calm center of it all, reacting dryly to strange characters and events, and patiently trying to explain various situations to people who were not interested in his explanations. The program also incorporated some of Newhart's most successful stand-up gimmicks, such as his one-sided telephone conversations.

After six seasons, The Bob Newhart Show went off the air voluntarily. Four years later, its star was back with a new series, Newhart, in which he played Dick Loudon, a New York writer of "how-to" books who decides to open an inn in Vermont. The premise, in some ways, was not all that different than that of the earlier series. Bob Hartley had to be understanding of all his patients, no matter how difficult they were; Dick Loudon had to be nice to all his guests, despite any pains they caused him. The show had excellent writing and a strong supporting cast, and again Newhart's deadpan, ironic presence was at the center of a universe of eccentric, in some cases truly weird, people.

In the 1990s Newhart again performed primarily in clubs and concerts, but he gave series television two more tries. In 1992 he starred in Bob, playing cartoonist Bob McKay. The show had a brief run, was revamped, and had another brief run. Newhart, however, needed stronger supporting characters than this series provided. In 1997 he was teamed with a formidable costar, Judd Hirsch (Taxi), in a sitcom titled George and Leo. Newhart played George, a staid, mild-mannered bookstore owner on Martha's Vineyard whose life is thrown into chaos when Leo, the father of his son's fiancée and a petty crook from Las Vegas, moves in with him. Although few people realized it, Newhart continued in this series the tradition of using part of his name in the title of the series, because George is his given first name. The leads in George and Leo were certainly proven talents and the producers, Rob Long and Dan Staley of Cheers, had impressive pedigrees, but the show never took hold with audiences and lasted less than one season. In 2003, Bob Newhart had a guest-star role on three episodes of ER, as an architect who is going blind due to macular degeneration, and commits suicide. It is one of the few dramatic roles Newhart has played in his career.

**Newman, Sydney (1917–1997)**

**British Programming Executive and Producer**

Sydney Newman has been seen as the most significant agent in the development of British television drama. He presided over the transformation of television drama from a dependence on theatrical material and forms to a significant art form in its own right. However, this achievement does not belong to Newman alone; his skill could be located in a successful ability to exploit the best of already favorable circumstances with an incorrigible enthusiasm and clarity of vision.

Born in Toronto in 1917, Newman trained initially as a commercial artist, before joining the National Film Board of Canada as film editor, director, and executive producer. While with the board, he made award-winning documentary films and worked with John Grierson. He subsequently spent a year as a working observer for NBC Television in New York, before becoming supervisor of Drama at the Canadian Broadcasting Corporation (CBC). It was there, working on *General Motors Theatre*, that he developed the policy of working with contemporary dramatists who attempted to confront current issues in their work.

In 1958 he moved to Britain to work for ABC Television Ltd., one of the commercial companies that made up the ITV network. In 1955, commercial television broke the broadcasting monopoly held by the BBC, and ABC was a regional company given the franchise for supplying weekend programming in the North and Midlands. Even before Newman’s arrival as head of Drama at ABC, the company had acquired a reputation for some of the best ITV drama. Its *Armchair Theatre* anthology was transmitted every Sunday evening, inheriting a large audience from the highly popular variety show *Sunday Night at The London Palladium*, which preceded it in the schedule.

Newman took over from Dennis Vance as drama head in April 1958. Like Rudolph Cartier at the BBC, Newman arrived in Britain unimpressed with the state of television drama. He also arrived during a sea change in ITV’s fortunes; after two years of loss, the new commercial ITV network companies were just beginning to make substantial profits, and by 1958 television audiences for their programs reached over 70 percent. At the same time, the renaissance of British theater was well underway. As Newman admitted to the *Daily Express* on January 5, 1963:

> I came to Britain at a crucial time in 1958 when the seeds of *Look Back in Anger* were beginning to flower. I am proud that I played some part in the recognition that the working man was a fit subject for drama, and not just a comic foil in middle-class manners.
Inspired by his experience in drama at the CBC, and unimpressed by the BBC’s continuing policy of “mopping up” old theater scripts (according to Newman), he immediately set about organizing a policy of producing plays written for the medium, plays that would reflect and project the experience and concerns of a new working-class audience. As Newman put it in a 1979 interview, “I said we should have an original play policy with plays that were going to be about the very people who owned TV sets—which is really a working-class audience.”

This explicitly populist “theater of the people” quickly became characterized by the press as “kitchen sink” drama—an unfair appraisal considering the wide variety of plays and genres that Newman’s Armchair Theatre produced. What the programs did have in common was their ambition to capture contemporary trends and popular experience, and reflect these back to the television audience. To this end, Newman discovered and nurtured new writers, some of whom were to become the best of their generation, including Clive Exton, Alun Owen, and Harold Pinter.

Newman encouraged the transformation of the television landscape not only in terms of subject matter but also in terms of style. If the content of British television drama consisted of bourgeois theater and its limited concerns, then—according to Newman—the shooting style was also limited, constrained by a static respect for theatrical performance conventions. Newman collected a group of young directors from North America, such as Philip Saville, Ted Kotcheff, and Charles Jarrott, as well as poaching directors from the BBC. With these directors—in particular, Saville and Kotcheff—he encouraged stylistic as well as thematic changes, insisting on a new, self-conscious, mobile camera style for the drama productions. As Kotcheff recalled: “We wanted to push against the limitations of the medium, the way it was presently covered—to approach the freedom of film, and not to enslave it to the theatrical tradition in which we found it when we arrived here.”

The combination of fresh contemporary material and the freedom Newman gave to his directors (and set designers) to innovate with that material opened up the potential of television drama for all to see. Newman was never far behind them, often photographed on the studio set writing notes, his white-suited swagger suggesting a blazing showbiz evangelist. Contrast the early dramas of Reith’s BBC and their “photographed stage plays,” respectfully static and distant, with Newman’s Armchair Theatre drama productions: such plays as “Afternoon of a Nymph” (1961) have an ingenious mobility, with multiple cameras performing a frantic ballet, prodding their lenses into the action, spiring in and between the sets and actors, until their movement itself becomes the significant performance. This new spectrum of theme and style can be seen in other plays such as “The Trouble with Our Ivy” (1961), “A Night Out” (Harold Pinter, 1959), and “No Trams to Lime Street” (Alun Owen, 1958).

Newman’s real insight—and the real difference between his work and that of the BBC of the late 1950s—was his estimation of the television audience as discerning, intelligent, and capable of handling new and innovative subject matter. As a producer, he saw himself as a “creative midwife” bringing together the best technical and creative skill.

In fact, Newman’s organizational abilities were to find a home at the BBC. In another well-timed move, Newman began work as the head of the BBC Drama Group in January 1963. At this point, the BBC under director-general Hugh Greene was beginning a period of modernization and liberalization. Newman, in a less hands-on, more executive capacity, reorganized the drama department and oversaw the production of the controversial Wednesday Play drama anthology. Here Newman was able to draw upon a creative team of writers including Dennis Potter, John Hopkins, Neil Dunn, and David Mercer, and directors such as Don Taylor, Ken Loach, and Gareth Davies. He left the BBC in 1967 and returned to Canada, where he worked again for the National Film Board and the National Film Finance Corporation.

In retrospect, Newman’s conscious characterization of BBC drama output as static and middlebrow is unfair. His counterpart at the BBC during the late 1950s, Michael Barry, also attracted new young original writers (including Paul Scott and John Mortimer) and hired young directors such as John Jacobs and Don Taylor. However, it was the newness and innovation that Newman encouraged in his drama output that is most significant: his concentration on the potential of television as television, for a mass, not a middle-brow, audience.

News Corporation, Ltd.

News Corporation, Ltd. (News Corp), is one of the world’s largest media companies. It holds interests in broadcast, satellite, and cable television, film, newspapers, magazines, book publishers, and online services, across four continents. News Corp is headed by its primary shareholder, Rupert K. Murdoch, who built the company from an initial base of two small Australian newspapers in the early 1950s into a global media conglomerate.

News Corp’s television properties in the United States include the FOX television network, 20th Century-FOX production studios, numerous owned-and-operated FOX television stations, national cable networks including FX and FOX News Channel, and a
string of regional FOX Sports Channels. In addition, News Corp owns a controlling interest in the United Kingdom's direct broadcast satellite television service, British Sky Broadcasting (BSkyB); Europe's Sky Channel television programming service; and Asia's direct broadcast satellite (DBS) service, Star Television.

However, it is impossible to isolate any one form of media as News Corp's core business, because its growth has been fueled by the idea of creating synergies among the company's different components. The resulting economies of scale make the value of the company's whole greater than that of the sum of its parts. A good example of this strategy in action was the combination of News Corp's purchases in the mid-1980s of the 20th Century-FOX studios and Metromedia's large-market U.S. television stations. The combination of production facilities and distribution outlets led directly to the creation of the FOX television network.

The FOX network remains News Corp's most prominent presence in American television. It launched in October 1986, with the premiere of The Late Show Starring Joan Rivers, and began its regular schedule of prime-time programming in early 1987. While some of its first shows, such as Rivers's, were critical and commercial disappointments, FOX was slowly able to gain audience share and expand its program schedule. FOX ultimately carved out a solid niche as the fourth broadcast network by targeting the 18- to 34-year-old audience and attracting these viewers through programs that were often offbeat and sometimes audacious. The Simpsons, Married... With Children, and COPS were among FOX's most prominent early hits and exemplify the unconventional nature of FOX network programming. Indeed, FOX's COPS and America's Most Wanted were largely responsible for the wide proliferation of a new television genre known as "reality television." Programming on the channel continued to evolve, to produce and respond to new audiences. Beverly Hills 90210 and Melrose Place, "teen" and "young adult" programming from producer Aaron Spelling, found a substantial group of loyal viewers, and major hit The X-Files became one of television's most popular and widely discussed programs.

In addition to its regular programs, FOX also made its presence felt in the U.S. television market through a series of bold strategic maneuvers aimed at acquiring special programming and new affiliate stations. As early as 1987, FOX paid a record license fee to telesact the Emmy Awards (the television industry's awards program), which previously had rotated among the "Big Three" networks (ABC, CBS, and NBC). The network also attempted to obtain the rights to the National Football League (NFL) Monday Night Football television package. Although unsuccessful in the latter effort, FOX was later successful with its record-setting bid for the NFL's National Conference games, wrestling the package from longtime holder CBS prior to the 1994 NFL season. FOX used the opportunity created by its acquisition of this NFL package to woo new affiliates to the network, which led to the most dramatic realignment of network affiliates in U.S. television history. FOX's agreement with New World Communications, announced in May 1994, represented the largest single affiliate switch ever, but it was considered controversial because many saw the agreement—in which FOX paid New World $500 million and 12 New World stations changed their affiliations to the FOX network—as a vehicle by which FOX was able to circumvent Federal Communications Commission (FCC) limitations on the number of stations a single company is permitted to own.

Another News Corp property that exemplified the company's strategic approach to collecting assets was TV Guide, the best-selling weekly magazine in the United States. News Corp purchased TV Guide, along with Seventeen magazine and The Daily Racing Form, in 1988 from Walter Annenberg for a reported price of more than $3 billion. It was News Corp's largest single purchase to that time and represented another instance of the company's willingness to pay a premium price for a unique media property that fits into a synergistic global scheme. While many questioned why News Corp would pay such a price for a mature asset that had seen its circulation decline by about a third since its peak in the late 1970s, TV Guide's merger in 2000 with the Gemstar family of interactive video products placed News Corp at the forefront of the emerging interactive program guide (IPG) market, which promises to exploit fully and build upon TV Guide's tangible assets, as well as its unparalleled brand equity in the television-program-listings marketplace.

News Corp's involvement with DBS service in Europe put the company at great financial risk, but it appears to have been a wise long-term investment. News Corp initially launched a DBS service called Sky Television in 1989, which competed in the United Kingdom with another DBS service, British Satellite Broadcasting (BSB). In 1990 BSB became bankrupt, and Britain's Conservative government, who regarded Rupert Murdoch as a crucial ally, allowed Sky to override concerns about the creation of a satellite broadcasting monopoly and buy BSB's assets; the two satellite broadcasters merged to become the News Corp entity BSkyB. The start-up costs associated with this venture put great strain on News Corp's financial stability, and the losses it encountered in BSkyB's early days, combined with the overwhelming short-
term debt load News Corp had accumulated from its years of aggressive acquisitions, nearly forced the company into financial ruin in 1990. However, News Corp was able to negotiate with its creditors for more favorable debt terms and thereby averted disaster. The emergence of BSkyB in the early 1990s as an extremely profitable venture (built, like FOX, on the acquisition of rights to televise sporting events), along with the growing success of FOX in the United States, helped News Corp back to financial health in a relatively short time.

In the latter half of the 1990s, News Corp expanded on its strategy of producing its own content for its distribution channels by aggressively pursuing the acquisition of selected landmark professional sports properties. Its takeover bid for the Manchester United soccer franchise was ultimately blocked by the British government, which cited the unfair advantage that News Corp’s BSkyB would have in negotiating for the television rights to the team’s games; however, News Corp did successfully purchase the Los Angeles Dodgers Major League Baseball team in 1998. The Dodgers’ purchase clearly exemplified News Corp’s strategy of owning sports franchises whose popularity extends beyond national borders to other areas of the world where News Corp also owns satellite television distribution services, such as Star TV in Asia and Sky Latin America.

Today, News Corp stands among the foremost media companies in the world and continues to be aggressive in its pursuit of new media and communications properties. Its wide range of media holdings in many countries of the world puts News Corp in a central position among a handful of corporate behemoths that could dominate the global media landscape for many years to come.

**News in the United States, Local and Regional**

Local television news in the United States struggles to maintain credibility even as it is increasingly used as a revenue center and promotional tool by an ever-shrinking group of media owners. For broadcasters and cable companies, local and regional newscasts remain the site for occasional fulfilling the oft-forgotten obligation of public service, earning, to some degree, accolades and audience loyalty. But as the site of intense local competition and substantial advertising revenue, journalism and public service often take second place to ratings-grabbing gimmickry and corporate cross-promotion. Despite taking knocks for its formulaic approach and irresponsible antics, local and regional TV news has grown steadily since the 1950s, and has, with the national cable news networks, contributed to a sharp decline in network news audiences. This entry focuses on news in the United States, though many countries have similarly complementary local and national systems of TV news. Most larger British cities, for example, have both a commercial and public local newscast, though these are far smaller operations than their U.S. counterparts. In Germany, the dominant TV news providers are regional. Intensive promotion of local television journalism and local
news celebrities seems to be a purely U.S. phenomenon, however.

Although the earliest experiments with television in the 1930s included simple newscasts, and the first stations licensed provided local news, most local VHF television stations began creating their own newscasts as soon as they went on the air in the 1950s or 1960s. Doing so provided evidence of community involvement and an identity amid otherwise indistinguishable fare. UHF stations neither had the budgets nor the audience ratings to do so. Early local newscasts were brief and non-visual, for videotape technology, debuting in 1956, was too cumbersome to leave the studio and live remotes were all but impossible for their cost and complexity.
