Some stations purchased newscast film from newsreel companies. 16-millimeter film, while an excellent newsgathering medium, was costly and required at least three and a half hours to be processed, edited, and set up for the process of playing it back into a newscast. By the 1970s, as more and more viewers purchased color television sets, color film replaced black and white. Visual coverage of national news increased as the networks trusted their affiliates to cover important stories and send them to New York for the network newscasts. But until the 1980s, quality television news remained the near exclusive domain of the networks, and particularly of CBS. Local stations could not match the look or experience of the networks and rarely profited from news.

Between the mid-1970s and early 1980s came a local news explosion, attributable to a synergy of technology and economics. Sony introduced the 3/4" video cassette recorder, a portable machine capable of recording 20 minutes on each cassette. With it came simple and reliable editing equipment permitting the rapid assembly of stories from the field. Ikegami and RCA produced shoulder-borne television cameras to be used with the field recorders. Electronic News Gathering (ENG) was born, and by 1975, 65 percent of local stations in the United States were using ENG equipment, though many continued to use film into the 1980s. The earliest ENG equipment was expensive and was adopted slowly by all but the wealthiest stations. Field camera and recorder were later combined into the most popular newsgathering tool of the 1980s and 1990s, the Sony Betacam. Stations experimented with many new tape technologies in the 1990s, with many stations opting for smaller and cheaper formats like Sony's Hi-8 or, later, Panasonic's DV.

ENG made more pre-produced material and story "packages" possible, allowing for more news and greater advertising revenue. With the technological revolution came broader conceptions of local news.

News could be more visual, immediate, and exciting. The ability to produce more news—through the expansion of local resources and a plethora of national and international sources—led stations to add newscasts. Those with existing newscasts expanded their operations. With the rapid growth of cable television in the 1980s and 1990s, many cable operators established newscasts of their own, often in towns and cities not well served by broadcasters.

With, at the very least, an early- and late-evening newscast to be filled each day, news directors developed new strategies, and looser standards of journalism, to fill the time and attract viewers. By the 1990s, many stations added morning and midday programs, producing six hours or more of news daily. Newscasts increasingly presented crime or minor tragedy (the fires and accidents which are inexpensive to cover and never in short supply) as news, and made stories shorter and snappier, especially those that were not easily illustrated. Reports on City Hall or problems in the schools offered little visual excitement and so took a back seat to sensational but unimportant news. Local news watchdog Rocky Mountain Media Watch observed that between 1994 and 1999, "violent topics consistently comprise 40 to 50 percent of all the airtime devoted to news" despite the fact that U.S. crimes rates were dropping.

From the mid-1970s to the present, newscasts have been fierce battlegrounds for viewer loyalty. Stations earn a substantial portion of their revenue from their newscasts, and aggressively promote their news. Popular syndicated entertainment programming leading into newscasts is used to deliver viewers to a station's news product, and a popular newscast, in turn, boosts ratings for an entire evening's programming. Stations peddle newscasts and newscasters with billboards and other advertising. But when programming and promotional strategies fail, stations turn from the expertise of their own managers to high paid consultants with a track record of ratings increases and a supposedly scientific approach.

The best known consultants are Frank Magid and Al Primo, but there have been countless imitators. For tens of thousands of dollars their firms conduct viewer surveys and focus groups. The results—a vague indication of what a few viewers think they like—are used to rebuild newscasts from the ground up. Newscasts are made "marketable." The typical gimmicks offered by consultants or newly hired news directors included new or redesigned sets and changes in on-air "talent." Consultants maintain vast nationwide videotape files of news talent, and records of their respective ratings, to help clients find the perfect personalities.

Finally, a new format is usually adopted. The most
News in the United States, Local and Regional

grating of these, known as “happy talk” (usually under the “Eyewitness News” designation), in which dual anchors bantered with one another about innocuous matters, has mercifully died away in most markets. Other common formats, some still in evidence, include “Action News,” with quick young reporters and barely edited video of the day’s highly visual carnage, or “News Center,” emphasizing reporting and relevance to viewers. As stations acquired adequate technology to produce live news coverage in the late 1980s, “liveness” was invariably made the newscast’s raison d’être. This often puts reporters in ridiculous situations, filing live reports from dark, long-deserted locations, without the depth and quality a pre-produced report would provide.

Despite these variations in theme, local news in the U.S. has maintained an astounding consistency of format from its earliest days. Newscasts are divided into four or more segments, separated by commercials (which are, after all, the reason the newscast is there). Actual news, broadly defined, comes in the first two segments, often including a superficial recap of world and national events when local news is sparse. News is delivered by one or two anchors (usually an older Caucasian male and younger Caucasian female, with limited ethnic diversity in some urban markets), and contains a mix of readers (with an anchor delivering the story), voice-overs (with anchors narrating over videotape), packages (pre-produced stories by reporters), and live reports. One stylistic element has changed in fifty years of local TV news: the average length of soundbites—the time newsmakers are given to explain ideas to viewers—has dropped from an excess of twenty seconds down to seven seconds.

The third and fourth segments are usually sports and weather (with the one of greatest local interest coming first). In smaller cities, much is made of local school sports to lure the parents of schoolchildren to tune in (a sought-after demographic for advertisers). Hour-long news formats and 24-hour regional formats have more segments, but add little in variety apart from extra feature stories, and increasingly (aping CNN and its ilk) lengthy “news analysis” discussions between anchors and hired pundits.

Local television’s most urgent task is to persuade audiences of its own relevance to their lives. To ensure its very survival, it attempts to demonstrate that it provides something more or different than national newscasts and other TV fare. But localism alone is no guarantee of relevance, so local news often resorts to exaggeration. Routine storms are presented as threats to life and limb, errant teenagers as deadly gangs. Populist or consumer advocacy stories often pose as news. During the 1990s, some stations merged the content and aesthetics of tabloid newsmagazine shows with a colloquial reporting style in the hope of attracting a young audience, and desperate efforts to capture the youth market—traditionally the least interested in TV news—continue. Other stations copied the national cable news companies, offering several stories at the same time through the use of an irritating and uninformative “crawl” of words at the bottom of the screen.

But encouragingly, some stations took a new approach, eschewing crime and tragedy except where substantial numbers of viewers are affected, avoiding gimmicks, and focusing on explaining social and political issues. Some replicated the community-service focused “public journalism” model taking hold at many newspapers. Stations going this route—as did Chicago’s WBBM for a short time in 2000—remain rare, because those that have done so gained awards and praise, but few rating points.

Quality journalism is not entirely absent in television news, but rarely does it come before economic considerations. As shown by McManus (1994), active discovery of news, especially that which society’s powerful prefer hidden, is costly, giving rise to the common allegation that TV news legitimizes the status quo. Such journalism requires the allocation of station resources and personnel over long periods to produce a single story.

Excellence in television news does exist, and is recognized in annual awards by the Associated Press and numerous industry organizations. In rare, but remarkable, instances local television news goes on the air full time to report on local disasters or major events, or invests in investigations that bring about needed changes in public policy. When local TV journalists resist sensationalism and premature reporting such coverage can provide a vital public service beyond the means of other media.

Television news operations are fairly autonomous departments within broadcast or cable companies. The senior manager of the news department is the news director, and may be assisted by one or more executive producers. These individuals are responsible for controlling the general look and feel of their newscast while satisfying the demands of their corporate superiors. The successful construction of each newscast is the responsibility of a producer, who in the smallest markets may double as anchor or news director. The producer must ensure that every element of the production is ready at airtime, and deal with problems or changes while the newscast is on the air. In large news departments this involves the coordination of dozens of reporters, videographers, writers, feature producers, tape editors, graphic artists, and other specialized staff. They work with the on-air talent to develop the lineup
(story order) of the newscast and write portions of the show not provided by reporters or news writers. Control of day to day newsgathering operations is the domain of the assignment editor who has the unenviable task of ensuring that everything of importance is covered. As the center of incoming information and the dispatcher of a station’s news coverage resources, the assignment editor has considerable power to determine “the news.”

The technical production of a newscast is accomplished by a staff independent of the news department. Studio production is supervised by a studio director (or newscast director), who works closely with the producers and talent to ensure that each production is flawless. A well-directed newscast is one that calls no attention to its complex technical elements. In larger markets the studio director coordinates a large production team, but in some small markets may perform a remarkable solo ballet of switching, mixing audio, timing, and myriad other tasks. Even the largest news operations, though, are slashing their production staff through the installation of robotic studio cameras and other automation.

Local television news is highly dependent on new technologies, regional news even more so. But while some basic production equipment, like digital cameras and non-linear editing, provide higher quality at lower cost than ever before, other important technologies require massive investment beyond the reach of smaller news departments. The next major development after the field recorder was the rapid increase in the use of microwave systems to transmit live or taped stories from remote locations (also called ENG). Now, all but the smallest stations operate microwave-equipped vehicles.

By the late 1980s, most news departments were using computers to write and archive scripts, at the very least. Many had begun to use integrated news production software designed to simplify writing TV news scripts, arrange them for a newscast, and deliver them to teleprompters for the news anchors to read. Television journalists now make extensive use of computerized information retrieval services and databases, and many television stations have established their own expansive websites to provide updates of stories, special services like highly localized weather forecasts, and to encourage viewer feedback. Increasingly, station websites are being called upon to turn a profit as well, and so most feature extensive advertising and cross-promotion, but little news.

From the late 1980s, Satellite News Gathering (SNG) became the technology to most change the industry. It made regional television news possible, permitted local stations to cover national and international events, and dramatically extended the newsgathering reach of stations. Local TV news was thereby de-localized. An entrepreneur, Stanley Hubbard, is credited with beginning the SNG revolution. Domestic satellites launched in the early 1980s had the new capability of handling signals at a higher, more efficient, frequency band than before—the Ku band. Hubbard began Conus Communications to provide access to these satellites for a “cooperative” group of local stations. The stations would be able to reserve satellite time cheaply in five minute increments to “uplink” a story from the field to their studio and to the rest of the stations in the cooperative. Stations began to purchase sophisticated Satellite News Vehicles (SNV) to transmit localized reports from the scene of major stories anywhere. Not coincidentally, Hubbard also sold SNVs. The networks established plans to help affiliated stations with the cost of purchasing SNVs (at around $300,000 each) in order to create their own cooperatives of live sources and to ensure that they alone would receive any important story from a network-funded SNV. The latest news vehicles have both satellite and microwave transmission capabilities and, due to digital technology, are smaller, lighter, and cheaper.

Stations may receive stories from one or more satellite cooperatives they belong to, their own network (if an affiliate), a national cable news service like CNN or MSNBC, Reuters or Associated Press, other specialized services, public relations firms, and their own news gathering resources. Helicopter news coverage also became common in the 1990s.

The proliferation of sources and the ability to send and receive stories instantly and inexpensive within virtually unlimited geographic areas gave rise to regional news, which has emerged in several forms. An early example of regional television news was an agreement between seven SNG-equipped Florida stations to share resources and personnel, presenting an image of seamless statewide coverage to their audiences. In 1986, News 12 Long Island was started by Cablevision and other investors. Using a mix of ENG and SNG, the cable news channel presents 24-hour news coverage, often live, of the vast Long Island area, which had previously been underserved by the New York stations.

Many other local and regional 24-hour cable news operations have since been created, including some carried by different cable operators spread over a large area, such as New England Cable News and some large city cable operators, most notably Time Warner in New York, have also established twenty-four-hour news stations.

With the flurry of station sales and purchases taking place since the start of extensive broadcast deregula-
tion in the 1980s, station ownership by non-local investors became common. In a sharp contrast to the heavy investment in news of the 1970s, many news departments now run on shoestring budgets to maintain the illusion of community service at little cost to their corporate parents. In many small and medium markets, news departments operate with a staff of a dozen or fewer, and—as with many of the regional news operations—eager young reporters work as "one man bands," acting as videographer and reporter on the several stories they cover daily. Their salaries are among the lowest for college graduates. Owners unwilling to invest in news often close their news departments and more profitably counter the competition's newscasts with syndicated programs. Many news departments are experimenting with new ways to pay their own way. News or weather programs are provided to other stations in the same market that have no news staff of their own. Increasingly, revenue-generating commercials and cross-promotions are presented as news, as when one San Francisco station directed viewers to its website to purchase Who Wants To Be A Millionaire board games, as part of a feature news story.

Local television journalists often produce their product with little knowledge or concern about who is watching and why (though they do better in this regard than their national counterparts). When stations do research their audience, what they discover may tend to lead them to ignore the substance of their newscast for the superficialities. It is rarely determined how much viewers actually learn from TV news, but existing research suggests it is very little, and often not what producers intend. Distant ownership makes the lack of connection with audiences more acute. By some accounts, the pressure to sacrifice public-service journalism for corporate financial interests has reached crisis proportions in local TV. The firing of reporters Jane Akre and Steve Wilson by a Florida FOX affiliate in 1997 because their investigative reporting threatened bad publicity for key advertisers has gained the most notoriety, but a national survey in 2000 showed that pressure and intimidation in the newsroom is commonplace, with nearly 40 percent of local broadcast journalists admitting to avoiding stories which might threaten their company's financial interests (Pew).

Other research has shown that contrary to arguments made by the FCC as justification for deregulation, conglomerate-owned stations generally do a poorer job of public service than those owned by smaller companies (Napoli, Project for Excellence in Journalism). And local TV, like its network mentors, continues to ignore vast portions of the population—especially the poor and urban working classes—and present community issues almost exclusively through the eyes of local business owners (when not through the eyes of its corporate parent). While television news has come far, a reorientation toward genuine community service and away from entertainment and profit are desperately needed. As Walter Cronkite observed nearly four decades ago (Time, October 14, 1966), a half-hour newscast has fewer words than the first page alone of a decent newspaper, so anyone relying on TV for their news information will never be as well informed as they ought to be.

News in the United States, Network

As with most forms of television programming, the antecedents to network news in the United States reside in the radio era, beginning as early as 1928, when NBC mounted major coverage of the presidential election race. Yet for a variety of reasons, radio news was slow to develop. It was not until the impending prospect of war in Europe that news programming emerged as a major component of network radio. During the late 1930s, CBS's Edward R. Murrow assembled a team of correspondents scattered across Europe that provided both breaking news and analysis of major events and personalities. The "Murrow Boys"—including Eric Severeid, Howard K. Smith, and Charles Collingwood—earned renown for their war reporting. In the post-war period, they would come to play a major role in the development of television news as well.

Immediately after the war, few imagined that television news would supersed its radio counterpart. Indeed, most correspondents vied for plum radio postings, and NBC's initial TV news program was hosted not by a journalist but rather by announcer John Cameron Swayze, whose Camel News Caravan "hopped scotched" the globe, delivering a mere 15-minute sampling of headline stories. Sponsored by Camel cigarettes, the program nevertheless pioneered the use of remote film footage that was shot, processed, and edited under daily deadline conditions. CBS likewise launched Douglas Edwards with the News, and late in the 1950s, ABC floated its own nightly news round-up under the leadership of John Daly. Yet the transition from radio to television proved expensive, so all three networks allocated most of their resources to entertainment programming, allowing only occasional opportunities for experimentation in news and information programming.

The leading experimenter was Edward R. Murrow, who had been promoted to vice-president of CBS in recognition for his wartime service. Murrow used his corporate influence and celebrity status to launch television's first news documentary series, entitled See It Now, which ranged broadly in its coverage of both domestic and international issues. Produced by Fred Friendly, the program took on prominent social issues and painted vivid portraits of the struggles of everyday citizens. It was also renowned for thought-provoking interviews with such leading figures as Robert Oppenheimer, Jawaharlal Nehru, and Harry Truman. Interestingly, histories of 1950s television less commonly acknowledge Person to Person, a companion program developed by Murrow that drew much larger audiences with its interviews of leading show-business personalities in their homes. In television's first venture into infotainment programming, Murrow toured the homes of such stars as Marilyn Monroe and Eddy Fischer, while chatting about celebrity gossip and their personal lives. Both "high-brow" Murrow and "low-brow" Murrow helped to set the early standard for long-form television news.

In 1956, however, NBC began to bid for bragging rights in TV news when its new president, Robert Kintner, took charge. An avowed "news junkie," Kintner expanded the scope and resources of the news division, creating a truly international newsgathering organization during his reign at the network. Most immediately, Kintner parlayed Chet Huntley's and David Brinkley's adroit coverage of the 1956 Democratic and Republican conventions into the Huntley-Brinkley Report, a program that would dominate nightly news ratings until 1967. Kintner also nurtured NBC's documentary efforts, overseeing the launch of the distinguished NBC White Paper series in 1960. And he was furthermore an advocate of news specials, often breaking away from regularly scheduled entertainment shows in order to provide live coverage of important events, such as spacecraft launches, Congressional hearings, and the Cuban Missile Crisis. Yet Kintner's efforts were motivated by more than pro bono professionalism, as he was the first network chieftain to

Schiller, R., TV Newscast Processes and Procedures, Boston: Focal Press, 1992
stress the profit potential of news programming. Just as importantly, Kintner, who would later serve in the Johnson administration, understood the public relations value of his news division at a time when government regulators began to press for more news and information programming.

Such growing pressures culminated in the 1961 appointment of Newton Minow, who famously referred to network television as a “vast wasteland” in a speech he delivered shortly after taking office. Like other officials in the Kennedy administration, Minow explicitly put network officials on notice that he considered television a strategic weapon in the struggle against communism, and throughout his two-year term, he prodded and cajoled network officials to expand their news departments and increase their coverage of international issues. TV executives were generally sympathetic to this shift in government policy and news department staffers were especially enthusiastic to see their profession restored to the prominence it had enjoyed during World War II. Indeed, it’s important to note that the generation of journalists that filed stories from the battlefronts of WWII were, by the 1960s, in charge of the network news divisions and generally sympathetic to the government’s strategic and ideological struggle against communism.

Former war correspondent Walter Cronkite took charge of the *CBS Evening News* in 1962 and Howard K. Smith (one of the “Murrow Boys”) anchored ABC’s nightly newscast. Both networks furthermore launched prime-time documentary series, *CBS Reports* and *ABC CloseUp*, which shared a similar set of topics and treatments as *NBC White Paper*. Indeed, the early 1960s would prove to be the golden age of the prime-time documentary in the United States, with much of the programming shaped by Cold War concerns. All three networks furthermore competed to provide breaking news coverage of important events, and in 1963, CBS and NBC expanded their nightly news programs from 15 to 30 minutes. By this point, American network news divisions had established bureaus in dozens of cities around the world and had developed a sophisticated infrastructure for the processing, shipment, and editing of news footage, so that visual accounts of important events around the world would find their way to national television screens within 24 hours. In a few short years, news became an integral component of network television and on-camera news professionals became major television personalities, their popularity carefully tracked by audience research services and monitored by network executives.

The growing prominence of television news also encouraged politicians and public officials to play to the camera in an attempt to advance particular causes. Most capable in this regard was the President Kennedy himself, whose press conferences earned surprisingly strong ratings due in part to his telegenic appearance and his wry humor. Tragically, Kennedy’s assassination would also draw record audiences, followed by the capture and on-camera slaying of his assassin, and by live coverage of the visually stunning funeral service beamed from the nation’s capital. All three networks suspended commercial advertising and turned the airwaves over to their news divisions for several days, in what many would refer to as the coming of age of television. During those few days, the medium provided a common ground upon which citizens worked through the complex emotions engendered by that historic chain of events.

In the years that followed, however, the news divisions would find that the awesome power invested in them could also prove to be a liability. Although network news now had the authority to direct national attention at specific events and social concerns, it also stirred up controversy and counterattacks when it did so. News programs about the exploitation of migrant laborers angered farmers; criticisms of public education worried parents; and investigations into lung cancer stirred resentments among cigarette companies, then the leading advertisers on network television. Perhaps most significantly, news programs about civil rights elevated African Americans to a level of visibility they had never before enjoyed in the U.S. media. Sympathetic news portrayals of the plight of black citizens stirred both righteous indignation and racist antipathy. As the campaign for civil rights gained momentum in the 1960s, it sometimes skirted conventional politics, appealing directly to national television audiences through a series of carefully orchestrated non-violent protest demonstrations and through the charismatic appeals of black community leaders.

Likewise, as the war in Vietnam heated up, television news became a site of struggle between pro- and anti-war factions. During the early years of the war, Vietnam correspondents rarely challenged the U.S. government’s rationale for intervention or its progress reports on the war effort. Yet President Johnson’s decision to escalate troop commitments in 1965 greatly expanded the military draft, inciting resistance on American college campuses, within the government, and among military units in the field. Closely monitored by both sides, nightly news divisions juggled the competing claims of the administration and the anti-war movement, as opposing viewpoints began to work their way into regular news coverage. The growing protest movement discouraged Lyndon Johnson from seeking a second presidential term in 1968, and many critics—correctly or not—attributed his political
demise in part to television news coverage that was increasingly critical of the war and sympathetic to protesters.

Now widely perceived as a news oligopoly, the networks both influenced public perceptions of key public issues and found themselves called to account for skewing political deliberation. Presidents were especially sensitive to the perceived power of television news: during his time in office, Lyndon Johnson grew increasingly agitated by network reporting, and Richard Nixon was hostile to the three networks from the very moment he entered the Oval Office. Giving voice to the administration’s sentiments, Vice President Spiro Agnew publicly lambasted the “effete corps of impudent snobs” that ruled the news media, while officials within the Nixon administration began to advocate the development of cable technology, hoping to undermine the power of the three commercial networks.

Despite these tensions, television would continue to prevail as the public’s dominant news source throughout the 1970s, even though the complexion of news organizations would change considerably. At ABC, changes began with the retirement of Chet Huntley in 1970, a vacancy that would stir several years of intense competition to fill the anchor slot. At the same time, executives were reassessing the Kintner legacy that had pushed NBC to a leadership role in TV news. RCA, the parent corporation of NBC, had earlier accepted the costs of an extensive global news operation because it assumed that such programming helped to drive the sale of television sets, both at home and abroad. By the 1970s, however, the sale of sets in the U.S. began to taper off and RCA began to shift its emphasis to informative, aerospace, and military product lines. Given the importance of government contracts in such fields, and given changing government attitudes toward news, RCA no longer relished the expansive ambitions of the Kintner era. Consequently, NBC News began to trim budgets and close news bureaus. Its nightly news program then began to lag behind its CBS competitor until coverage of the Watergate hearings re-energized the division and catapulted Tom Brokaw to a position of visibility that would eventually earn him the anchor slot on the nightly news in 1976.

Watergate coverage also animated the fortunes of public broadcasting, as Robert McNeil and Jim Lehrer fashioned thoughtful interviews and commentary, providing some of the first regular coverage of national politics on PBS. In 1976, the duo launched the McNeil-Lehrer Report, a nightly half-hour program that quickly won a solid audience of opinion leaders and media critics. While earning both criticism and praise for its emphasis on “talking heads,” the program delivered precisely what was lacking in commercial network newscasts. It furthermore addressed two other criticisms often leveled at TV news when in 1983 the anchors bought the production company and expanded their program to an hour-long format, as the McNeil-Lehrer News Hour. Ironically, this gave PBS, the network with the most diminutive news resources, the most in-depth and independent nightly newscast.

The resurgent interest in television news could also be measured by the fortunes of the first prime-time newsmagazine, 60 Minutes. Premiering in 1968, many critics complained that the program represented a softening of the documentary news tradition by emphasizing investigative stories that focused on clearly defined villains, rather than broad-ranging reports on more abstract but pressing social issues. Yet despite the program’s calculated tilt toward a narrative style, it failed to attract large audiences and languished at the bottom of the ratings, threatened with cancellation. Ranked 101st among 106 network programs in 1975, 60 Minutes unexpectedly began a meteoric ascent to become the number 1 ratings draw in 1979. Some attributed its newfound success to a shift in scheduling that moved the program to early prime-time on Sundays, but just as importantly, the reversal of fortune seemed to reflect a growing popular interest in investigative reporting in the wake of Watergate.

ABC soon harnessed this same enthusiasm with the premiere of 20/20 in 1978, a magazine show that balanced tough investigative reports with lighter fare about fads, fashions, and celebrities. Both networks saw benefits to the new programs, since they seemed to fulfill public-service responsibilities while steering clear of government criticism by focusing their attention on unscrupulous crooks rather than hot-button political issues. Moreover, the newsmagazines proved to be money machines, costing only half as much as hour-long dramas, while delivering upscale demographics and premium advertising rates. Just as importantly, they helped to mitigate internal tensions within the news divisions, as they provided showcases for such high-powered talent as Mike Wallace, Barbara Walters, and Ed Bradley. Over the next two decades, both ABC and CBS sought to expand on their successful magazine offerings and NBC tried unsuccessfully to match its competition until finally, in 1992, it too scored a hit with Dateline.

For ABC, the growing emphasis on newsmagazines was only part of a larger set of transformations, as Roone Arledge, the architect of the network’s successful sports division, moved over to take charge of news in what critics perceived as a shocking triumph of showbusiness over journalistic professionalism.
Arledge, however, proved to be a prodigious booster of news, reformatting the nightly news show and launching 20/20 in 1978. The following year, with the hostage crisis in Iran, ABC was especially aggressive in its coverage, providing regular updates, including the sensational late-night show, Iran Crisis: America Held Hostage. The program nevertheless provided sober, in-depth features and interviews, elevating the network’s chief diplomatic correspondent, Ted Koppel, to a position of prominence and, after the release of the hostages, allowing him to transform the show into Nightline, a commercial counterpart to McNeil-Lehrer. In 1981, Arledge also carved out a new home for a disillusioned David Brinkley, who fled NBC to host This Week with David Brinkley, a show that would finally bring ABC to a leading position on the Sunday-morning talk circuit. Shortly thereafter, Arledge shrewdly tapped his leading Middle East correspondent, Peter Jennings, to anchor the ABC World News Tonight. Thus, in less than a decade, Arledge played a prominent role in transforming ABC into the leading U.S. network news operation with some of the most talented personnel in the profession.

Meanwhile, CBS greeted the 1980s with its own agenda for change. Walter Cronkite, who was often referred to as “the most trusted man in America,” retired in 1981 after two decades anchoring the CBS Evening News. Dan Rather won out in the struggle to succeed Cronkite, but the ratings of the network’s flagship news program began to falter. In response, CBS went through a string of executive producers, trying to restore the luster of the Cronkite years, but the network found itself in an increasingly tight ratings race with its competitors. CBS has other problems, as well. A 1982 documentary, The Uncounted Enemy: A Vietnam Deception, stirred up a major libel suit when it re-examined the calculation of combat casualties during the Vietnam War, claiming that military leaders manipulated weekly body counts in an effort to sustain support for the war effort. General William Westmoreland, the retired commander of U.S. forces in Southeast Asia, sued CBS, and the resulting legal settlement sent shock waves through the news department, as an internal investigation sought to rectify dubious journalistic practices, especially standards for editing on-camera interviews.

The biggest problem confronting television news, however, was the steady erosion of ratings, as cable television increasingly siphoned off network viewers throughout the 1980s. Younger audiences were most likely to gravitate to cable channels, and consequently the age demographic for nightly news programs began to drift upward. Cable also posed a direct challenge when in 1980 Ted Turner launched Cable News Network (CNN), a 24-hour news channel, and one year later added Headline News, a news update program that rotated on a half-hourly basis. Journalists at the major networks generally dismissed the new challenger, noting that Turner, whom they regarded as a volatile personality, had shown no prior commitment to news, and CNN seemed to be operating on a shoestring budget. Yet the cable network enjoyed certain cost advantages, such as a non-union workforce and a base of operations in Atlanta, where real-estate costs were considerably lower than Manhattan. Turner also enjoyed the counsel of Reese Schonfeld, a veteran news producer who was tapped to lead the news organization during its early years. Schonfeld understood that the key weakness of his competitors was the relatively high cost of maintaining a global news operation in order to produce a half-hour nightly newscast and a few weekly magazine shows. CNN by comparison spread the cost of its news infrastructure across two channels broadcasting around the clock—48 hours of programming per day. In 1985, the cable network went even further, establishing CNN International (CNN1) to manage a collection of distinctive satellite news services targeted at different regions of the globe.

By the mid-1980s, cable TV in the United States was a growing force in both news and entertainment, and Ted Turner’s channels emerged as leaders in both cable ratings and advertising. Though still diminutive by comparison to the major broadcast networks, the Atlanta-based upstart began to maneuver for financing that would allow it to mount a hostile takeover of the venerable CBS. Executives at CBS responded by bringing in friendly investors, most prominently Laurence Tisch, who would eventually take control of the network in 1986. Tisch, ironically, proved to be no less disruptive to network operations, and in one of his very first acts as chairman, he toured CBS News bureaus around the world, shuttering operations, laying off staff, and slashing costs. In the same year, Capital Cities Broadcasting took over ABC, and General Electric absorbed NBC. At all three networks, executives suddenly returned their attention to cost controls, seeking to make news operations more efficient and more attractive to advertisers. With only a limited number of programming hours, news divisions sought to develop new prime-time magazine programs and to prop up the sagging ratings of nightly newscasts with more feature-oriented material.

Turmoil within news organizations began to grow, however, as staffers tried to resist what they saw as a further softening of journalistic and public-service standards. Remarkably, they could count on little support from government regulators. Indeed, throughout the Reagan Presidency, the administration aggressively sought to undermine the independence of network
news divisions, and the FCC relentlessly rolled back government guidelines regarding the public-service commitments of broadcasters. Chairman Mark Fowler argued that the growing number of available TV channels diluted the government's rationale for regulating broadcasting in the public's interest. According to Fowler, television should enjoy the same First Amendment rights as newspapers and magazines, a position that has increasingly prevailed since the 1980s. Moreover, in its efforts to nurture a multiplication of services, the FCC made a number of rulings that allowed Australian media mogul Rupert Murdoch to launch a fourth commercial broadcast network in 1986, despite the fact that the FOX Network had no immediate plans for news or public-affairs programming. Instead, the channel resolutely focused on entertainment, and its sole forays into news consisted of tabloid-style magazines such as Inside Edition and Hard Copy. The emergence of FOX, when coupled with changes at the major networks and the increasingly sensational focus of local TV news, fueled criticisms about the growing impact of ratings and entertainment values on the news judgment of television professionals. The word "infotainment" gained widespread currency during the late 1980s, and battles erupted within news organizations over the future of network news. At one point, six of the leading journalists at CBS offered to buy the news division and run it as a separate entity in the hope of protecting it from what they saw as the cynical economic calculations of network executives.

Sobering events at Tiananmen Square, the Berlin Wall, and in the Persian Gulf helped to slow the eroding status of network news operations, however. The Gulf War especially exposed the challenge faced by the down-sized network news divisions, as they seemed to be bested at every turn by CNN, which offered round-the-clock coverage that proved influential not only in the U.S. but also in the Middle East and Europe. CNN furthermore earned kudos for its independent reporting from Baghdad throughout the war, a stark contrast to the pack journalism practiced by its competition. Yet with the luxury of CNN's many hours of programming, it also could swing from the most serious topical news to the most sensational tabloid stories, as it demonstrated with its capacious coverage of domestic stories such as the Menendez murder trial, Tonya Harding's assault on Nancy Kerrigan, and Marina Bobbit's castration of her wayward husband. The apogee of such coverage seemed to arrive with the surreal, slow-motion highway pursuit of O.J. Simpson and his subsequent murder trial, followed shortly thereafter by the Clinton-Lewinsky scandal.

The latter is remarkable on a number of accounts. First of all, the story was broken not by a network news organization, but rather by Matt Drudge, a gossip columnist on the Internet. Several news organizations were already aware of rumors of the President's romantic liaison with a White House intern, but despite intense competitive pressures, each had exercised restraint until Drudge published undocumented assertions on his web page, launching a frenzy of coverage that dominated national news for much of 1998, despite many other pressing social issues. Intense competition among broadcast, cable, and Internet news organizations paradoxically encouraged a growing diversity of electronic sources but also fostered a singular fixation on a story of little consequence in the realm of public policy. Since the networks no longer had a monopoly of airtime, talent, audiences, or advertising revenues they consequently found it difficult to resist the attraction of such a sensational news stories, even if it led to an imbalance in coverage.

Moreover, in a world of multiplying delivery channels, the news organizations that seemed most successful were those that could leverage their news output through as many channels and times of the day as possible, both at home and abroad. Such considerations led NBC to launch two global cable networks in 1995: MSNBC, a joint venture with Microsoft, and CNBC, a financial news channel. CNN took this philosophy to another level when it merged with Time Warner in 1995, hoping to realize synergies with such magazines as Time, Fortune, and Sports Illustrated. Soon after, News Corporation, the parent company of FOX and the owner of a growing collection of satellite TV services around the world, finally took a plunge into broadcast journalism with the 1996 premier of the FOX News Channel, a service that modeled itself on right-wing talk radio in the U.S., thereby distinguishing it from rivals and helping to push it ahead of CNN in U.S. cable ratings. Interestingly, this put ABC and CBS in a difficult position, since neither news organization enjoyed the same synergies as their competitors and yet both worried that it would be costly to launch yet another cable news service in an already crowded market. Consequently, ABC, now owned by Disney, began to search for strategic partnerships, entering into extended negotiations with CNN. As talks continued, the market value of the two organizations indicated a dramatic reversal of fortune, with CNN reporting profits in 2001 of $200 million on $1.6 billion in revenues and ABC News realizing only $15 million in profits derived from $600 million in revenues. Although at the millennium, the nightly newscasts of the major broadcast networks still drew the largest audiences, the proliferating services of cable television had dramatically redefined the meaning of network news.

Michael Curtin

News in the United States, Network
Nichols, Dandy (1907–1986)

British Actor

Dandy Nichols is remembered above all for one role only, that of the long-suffering Else, wife of the appalling Alf Garnett, in the long-running series *Till Death Us Do Part*, and the rather milder follow-up *In Sickness and in Health*, both written by Johnny Speight.

The role of Else Garnett (or Ramsey, as the family was called in the beginning) went first to Gretchen Franklin when a pilot episode of *Till Death Us Do Part* was made in 1965, but Nichols took over when the series got under way and she quickly proved the perfect foil to the bigoted and abusive Garnett, played by Warren Mitchell. The rapport between the two ensured the show’s immediate, if controversial, success, and the program was destined to attract top ratings for 10 years before a weary Nichols complained that she could no longer work with Warren Mitchell, and called it a day (in the series it was explained that she had left for Australia to visit her sister). She came back, however, as Else in the sequel, *In Sickness and in Health*, although she was by now confined to a wheelchair because of arthritis and with only months to live.

As Else, Alf Garnett’s dimwitted “silly old moo” of a wife, Nichols repeatedly demonstrated the command of technique and timing that she had learned from her long apprenticeship in the theater (she appeared, for instance, in the original Royal Court Theatre cast of David Storey’s *Home* in 1970 and acted in the West End with the likes of John Gielgud and Ralph Richardson). She also appeared in some 50-odd films, which ranged from *Carry on Doctor* and *Confessions of a Window Cleaner* to Nicholas Nickleby and *Scott of the Antarctic*. Film directors cast her initially as cockney maids and charwomen, but it was not long before her skills as a character actress were recognized and she was occasionally allowed to extend herself in more varied parts.

Born in Hammersmith, in western London, Nichols was nevertheless quite at home with the East End locale of the Garnett series, and she proved inimitable in the character with which she became most closely identified. Deadpan in the face of Garnett’s unforgivable verbal abuse, and resigned to her role as the target of much of her husband’s frustration and invective, she could be, by turns, hilarious and pathetic, and she quickly became a firm favorite of the British viewing public. Treasured memories of her performances included the carefully managed moments in which she would bring a career as Garnett to a sudden stop in mid-tirade with some artlessly innocent observation or other, apparently oblivious of the inevitable result that she would draw the full venom of her husband’s ire upon herself. Else was a type that many people recognized from real life, and she provided some necessary warmth and pathos to contrast with the monstrous Alf’s aggression and viciousness. Without Else, and in a changed climate under the Thatcher government, the later series faltered and failed to resonate with viewers as earlier episodes had done.

Success in the role of Else Garnett, though it came relatively late in her career, brought Nichols the opportunity to play both starring and supporting roles in many other classic television shows. In the sitcom *The Trouble with You, Lillian*, for instance, she was equally
effective as Madge, teamed up with the redoubtable Patricia Hayes. Among the other classic series in which she appeared to acclaim were Emergency-Ward 10, Dixon of Dock Green, No Hiding Place, Mrs. Thursday, and Bergerac. The critics also lavished praise on her performance in a television adaptation of the William Trevor play The General's Day, in which she starred opposite Alastair Sim.

Nick at Nite/TVLand

U.S. Cable Network

Debuting in 1985, Nick at Nite began as its parent company Nickelodeon’s beachhead in primetime, eventually becoming one of the most successful examples of “re-purposing” in the television industry. Looking to establish continuity between Nickelodeon’s daytime children’s programming and a primetime schedule that would accommodate both children and adults, Nick at Nite mined the extensive vaults at Viacom for “classic” situation comedies with dual appeal. Comprising the kind of sitcoms that had long been used by local programmers in the late afternoon to fill after-school slots for kids (until this timeslot became too lucrative to abandon to children), Nick at Nite also appealed to Baby-Boomer memories of their own favorite television shows from the 1950s, 1960s, and 1970s. The strategy proved so successful that Viacom, after a brief corporate skirmish with MCA, launched a second cable service, TVLand, in 1996. While Nick at Nite continued as an extension of Nickelodeon, TVLand honed a more ironic style, targeting adults and their love/hate relationship with the world of TV reruns. Series such as *I Love Lucy*, *The Brady Bunch*, *The Munsters*, *Dragnet*, and *The Dick Van Dyke Show* remain staples of both services. TVLand went on to update its schedule to include series of the 1970s and 1980s, such as *The A-Team*, *Charlie’s Angels*, and *Family Ties*, thus tapping into the campy nostalgia of post-Baby-Boomer generations.

Remarkably, both cable services have been extraordinarily successful at revitalizing television series that have long been in syndication and would thus seem to have exhausted their appeal. The key to this success has been a series of innovations in marketing and scheduling. For example, Nick at Nite has attracted a large viewership by packaging these series as “family television,” appealing to anxious parents with programs from a more “innocent” time. For parents concerned about the viewing habits of their young children, vintage sitcoms from the network era provide safe material insulated from the often more provocative programming of the post-network system. Appeals to Baby Boomer and Generation X nostalgia are also strong, a strategy epitomized in TV Land’s recycling of not only vintage television shows, but vintage commercials.

Along with this “family” appeal, however, Nick at Nite/TV Land has also quite successfully promoted their library of old shows as both “camp” and as a shared TV heritage. Each network surrounds its “timeless” and yet potentially repetitive catalogue of reruns with clever, complex, fast-paced, and ever-changing promotional campaigns, interstitial materials that serve continually to repackage old television for new audiences. Often, these campaigns play on and reward the viewer’s familiarity with the programming by parodying certain plot conventions, pointing out inconsistencies and continuity errors in individual episodes, and generally celebrating the naïve “unreality” of vintage television’s now increasingly distant and alien worldview. One campaign, for example, tallies the total number of times *Dragnet’s* Joe Friday can be seen *not* wearing his trademark gray suit and black tie. Another spot observes how every episode of *The Munsters* includes at least one sequence in “fast-motion,” and then considers the comic appeal of this familiar device. These promos have proven so popular and crucial to the networks’ profile that the TVLand website allows Internet users to relive their favorite promotional campaigns. The most successful marketing strategy, then, may well be each network’s ability to recast the lowly re-run into the collective cultural heritage of TVLand—*a* fantasy world where all of television history (or at least, that controlled by Viacom) coalesces into a mythic parallel universe to the real world.

Related to this, Nick at Nite and TVLand have also pioneered a number of innovative scheduling strategies. For example, each network has made extensive use of block programming, adapting it in ways not seen in the network system. In its various “Block Party” promotions, the networks will run ten or twelve episodes of the same series back to back (on at least one occasion, *The Donna Reed Show* ran 24 hours a day for an entire weekend). Such scheduling indulges the dedicated fan (who has an opportunity to tape the series in its original sequence) and creates an “event” around an otherwise shopworn show. Other scheduling schemes have included nights devoted to a common sitcom theme (across several series) and blocks devoted to showcasing a “minor” character on a famous series (such as a “Floyd Night” of *The Andy Griffith Show*).
Expanding on its appeal to the TV fan and connoisseur, TV Land in particular has in many ways become television's default historian. Although the network often treats its content as camp, there is also a prominent trend toward according these programs a certain archival and historical respect. Episode numbers and original broadcast dates are now often included in each telecast, as are brief “behind-the-scenes” information about individual episodes. Following a larger trend in cable, TVLand has also produced a series of original documentaries devoted to the development, history, and cultural significance of certain key television programs (including *I Love Lucy*, *The Dick Van Dyke Show*, and *All in the Family*). Game shows and travelling exhibits based on the mastery of television trivia have also proved central to their marketing agenda. The network’s most unusual promotion, however, may well be its plan to unveil bronze sculptures of prominent television characters in geographically relevant locations. A life-size statue of *The Honeymooner*s Ralph Kramden now stands at the Port Authority in Manhattan, with plans for a Mary Richards in Minneapolis and a Joe Friday in Los Angeles. At over $100,000 per sculpture, these TV statues present one of the most unusual examples of “convergence” in contemporary media, but one wholly appropriate to the network’s overall public identity as the custodian of television memory.

Nielsen, A.C. (1897–1980)

U.S. Media Market Researcher

Arthur Charles (A.C.) Nielsen established, and gave his name to, the world’s largest market-research organization and the principal U.S. television ratings system. After working as an engineer in the Chicago area, he used investments from former fraternity brothers to establish in 1923 a firm that reported surveys of the performance and production of industrial equipment. A decade later, during the Great Depression, the company was faced with a reduced level of manufacturing on which to study and report, so it launched the Nielsen Food and Drug Index. Begun in 1933 and 1934, these regular reports on the volume and price of packaged goods sales in a national sample of grocery stores and pharmacies became essential to the packaged goods industry. A.C. Nielsen Company became the preeminent U.S. market-research firm.

Because the Depression was also a period of rapid growth for radio, and radio advertising, Nielsen was encouraged to begin measuring radio audiences. In the spring of 1936, he attended a meeting of the Market Research Council in New York, at which the speaker was Robert Elder, an instructor from the Massachusetts Institute of Technology (MIT). Elder described the use of a mechanical recorder that could be attached to the tuning mechanism of a radio receiver, providing a continuous record of the stations to which the set was tuned. The device had been developed independently by Claude Robinson while a student at Columbia University and by Elder with Louis F. Woodruff at MIT. Nielsen quickly acquired the meters that had so far been produced, as well as patent rights and trademark registration for the Audimeter, as the device was
known. The Nielsen Radio Index (NRI), a series of regular audience surveys conducted with the Audimeter, began in December 1942. The Audimeter became the principal form for measuring radio ratings when in March 1950 Nielsen bought rival C.E. Hooper’s radio and television ratings services.

In 1939 the A.C. Nielsen Company Ltd. had been organized in London. The internationalization of the company increased, especially after 1957 when A.C. Nielsen, Jr., became company president.

In 1963 Congressional hearings studying ratings and their influence upon programming in television focused considerable criticism upon the ratings industry and on the reliability of audience-measurement surveys. In that same year Nielsen had discontinued radio Audimeter reports because the increased number of radio stations on the dial made it difficult for the device to distinguish between them. As a stop-gap measure, the company began a diary survey method for radio measurement (Audiologs). Weaknesses in this method attracted unfavorable attention during the hearings. Nielsen Jr. shut down the Audiolog operation, designed what he considered a reliable radio-audience measurement system and attempted to market it to the radio industry. Finding much resistance, he never brought this service into use.

By 1963 Nielsen was out of the radio ratings business, preferring to concentrate on the relatively young national and local television-audience measurement services—the National Television Index (NTI) and the Nielsen Station Index (NSI), respectively.

In June 1980 A.C. Nielsen, Sr., died in Chicago. In 1984 his company merged with information giant Dunn and Bradstreet. The company has since been split into two entities, Nielsen Media Research and the A.C. Nielsen Company; the first was acquired by the Dutch company VNU in 1999; VNU also acquired the second company in 2001.

Nixon, Agnes (1927– )
U.S. Writer, Producer

Often termed the “queen” of contemporary U.S. soap opera, Agnes Nixon is best known, and most honored, for introducing social issues into the soaps. Like William Bell (creator of The Young and the Restless and The Bold and the Beautiful), Nixon apprenticed in radio with Ima Phillips, the creator of the first TV soap operas (adapting the genre from radio), for whom Nixon wrote dialogue for Woman in White. In the early 1960s, in her first job as a head writer (on Guiding Light), Nixon had the heroine, Bert Bauer (played by Charita Bauer), develop uterine cancer. Typical of this storyteller, Nixon was personally motivated to write this plotline: a friend had died of cancer and Nixon hoped to encourage women to have regular Pap smears.

However, the presentation of social and political issues in television soap opera really began in 1968, with the first show Nixon created, One Life to Live (OLTL). Nixon developed this soap for ABC, and it reflected the changing social structures and attitudes in the United States of its era. In its early years, OLTL was rich in issue stories and characters. It featured leads who were Jewish, as well as up-from-poverty Irish-American and Polish-American characters. In addition, OLTL was the first soap to portray African Americans as lead characters (Carla Gray, played by Ellen Holly, and Ed Hall, played by Al Freeman, Jr.). The character of Carla developed from a woman who was “passing as white” to one who embodied black pride, and she had romantic relationships with both black and white men. Ironically, when Holly and Freeman brought Carla and Ed back to One Life in the mid 1980s, they seemed out of place in the by-then WASPish setting of Llanview, Pennsylvania. “Color” in this era was created not by race, but by style, in the persons of the nouveau riche, Dallas-style oil family, the Buchanans. By the mid 1990s, however, interracial and Hispanic families had become central characters on the program.

Nixon created One Life to Live for ABC in order to get the opportunity to write her “dream” story, All My Children (AMC). Launched in 1970, AMC placed more emphasis on personal angles than OLTL, but the newer soap did tackle social issues such as child abuse and the Vietnam War. In May 1971, AMC depicted a character going through the process of abortion—the first this had been done following the legalization of abortion. Assuming the audience would be shocked, AMC’s writers gave the character Erica Kane (Susan Lucci) a “bad” motive for seeking the procedure (she wanted a modeling job), and, following the abortion, Erica was afflicted with septicemia (this plot twist being promoted as serving educational ends as well as “poetic justice”).

Nixon wrote political nonconformity into scripts, a very rare trait in prime-time television but rarer still in daytime drama. When All My Children debuted in 1970, it featured Amy Tyler (Rosemary Prinz) as a peace activist. Nixon then had the young hero Phillip Brent drafted against his will; he was later missing in action in Vietnam. Political pages in U.S. newspapers took note of a speech against the war by the AMC character of Ruth Martin (Mary Fickett), who had raised Phillip as her son. Fickett won the first Emmy given to a daytime performer for her work during the 1972–73 season. In 1974 Nixon turned to humanizing the Vietnamese, showing Phillip, in one of the few war scenes on TV soap opera, being rescued by a young Vietnamese, played by a man who had been adopted by one of Nixon’s friends.

In the mid-1970s, All My Children’s focus on young adult characters included not only romance and sexuality, but also the characters’ growing pains. From its ear-
Nixon, Agnes

Agnes Nixon. Courtesy of the Everett Collection

liest days, the soap has revolved around Erica Kane. Initially presented as a willful but winningly vulnerable teenager, Erica has matured over the years, becoming a strong-minded but winningly vulnerable career woman and parent, the always triumphant survivor of rape, the loss of a parent, disastrous love affairs, failed marriages, drug addiction, and innumerable other tragedies.

In the early 1980s, AMC’s popularity soared as young people raced home (or to their dormitory lounges) at lunch time to watch the classic star-crossed romance of Jenny Gardner (Kim Delaney) and Greg Nelson (Lawrence Lau). The divisive issue was class: Jenny was from a troubled, lower-class family; Greg’s mother, Enid Nelson, was Pine Valley’s stereotypical snob. Equally popular were Angie Morgan (Debbi Morgan) and Jesse Hubbard (Darnell Williams), soap opera’s first African-American “super couple.”

The character of Tad Martin (Michael Knight) epitomized another Agnes Nixon gift to soap opera: humor. Tad’s biological parents were an evil father, Ray Gardner (dead since the 1980s), and a loving but ditzy mother, Opal (one of Nixon’s most famous comic creations). After Ray abandoned him in a park, Tad was raised by Joe Martin (Ray McConnell) and his wife Ruth. Joe and Ruth were the central father and mother of AMC, and in folk-myth terms, they were the good parents, as steadfast as Tad’s blood parents were unreliable and frightening.

Nixon’s other archetypal creations on AMC include “tent-pole” characters, usually older women such as Erica’s mother, Mona Tyler (Frances Heflin), and Myrtle Fargate (Eileen Heckart). Tent-pole characters, says Nixon, are “the Greek chorus, in a sense…telling the audience how to feel.”

In addition to folk myth, Nixon also drew on the religious and mystical. One of her favorite tales is from the third soap opera she created (with the late Douglas Marland), Loving (ABC, 1983; renamed The City in 1995). Archetypal good/bad twins Keith and Jonathan (both played by John Hurley) battled, and the evil Jonathan, after falling from Golden Gate Bridge, returned with supernatural powers. Nixon claimed Jonathan made a pact with the devil, citing Faust and C.S. Lewis’s Screwtape Letters as sources.

After semi-retiring from writing in 1997, Nixon returned to the job of head writer for All My Children in 1999, a position she had last held in 1992. Once back at the helm, she launched one more controversial, socially relevant, and precedent-setting storyline, in which the teenage daughter of Erica Kane came out as a lesbian. In 2000 Nixon announced her retirement from writing soap operas. Her involvement with ABC soaps did not end completely, however, as she took a new position as story consultant for all daytime dramas on the network.

North of 60

Canadian Drama Series

Born of the heightened consciousness of the First Nations in the late 1980s, this hour-long CBC series was one of the first in North America to focus almost exclusively on contemporary First Nations characters and situations. Created by Wayne Grigsby and Barbara Samuels, the series aired from 1992 to 1998. Aboriginal writers such as Jordan Wheeler (also a story editor) and novelist and film writer Thomas King provided some of the scripts. The program starred Tina Keeper as Michelle Kenidi, a constable in the Royal Canadian Mounted Police (RCMP). Tom Jackson played her brother, chief (later ex-chief) of the Lynx River community. George Tootoosis portrayed the bootlegger Albert Golo, subsequently chief of the community and the Kenidis’ constant antagonist. Dakota House was Teevee Tenia, the restless teenager, new father, and runner for the younger Golos. Other continuing characters included Elsie, Teevee’s very direct and widely respected grandmother; Joe, the self-exiled hunter who camped outside of the settlement; Rosie, who was determined to run her own store; her carpenter husband, Leon; Gerry, the exploitative owner of the store; and Harris, the band manager who changed sides but was genuinely in love with Teevee’s self-destructive mother, Lois.

In the first two seasons the cast was also headed by John Oliver as Sergeant Eric Olsen, a white, burnt-out RCMP drug cop from Vancouver, who had requested this posting as a change of pace. His (usually inadver-

North of 60
down with Albert, now the chief. Her non sequiturs, together with a generally more confident cast and group of writers, developed a thread of subtle, ironic, and unexpected humor.

The struggles of Michelle, her attempts to befriend her own people while policing them, and her conflicts with her teenage daughter Hannah, created situations any working parent could relate to. Hannah later drowned in a storyline that also introduced Michelle's new love interest, a counselor and bush pilot, Andrew One Sky. However, the series also created unexpected solutions to the usual domestic problems. For example, rather than simply relying on an unchanging, winning combination of characters, Thomas King's script gave Peter Kenidi, even with his master's degree, a reason for staying in Lynx River. An unplanned vision quest is derived from too little sleep, extensive work on the history of the local families and the stories told by the elders, and worry about the offer of a well-paying and influential job in Ottawa. Kenidi has visions of a small boy who eventually wounds him with the stone from a slingshot. As Kenidi comes to see, the "boy" is his younger self running away from residential school—but the cut on his forehead is "real." This larger sense of reality offers him a reason to become part of the Lynx River community and try to find his place in it.

These topics, and others like them, explore difficult cultural concerns. Like Cariboo Country in the 1960s and The Beachcombers in the 1970s and 1980s, the 90 episodes of North of 60 used sensitivity and humor to address such issues of cross-cultural contact and conflict, specifically that between mainstream and indigenous cultures. When the series ended, change in the form of oil exploration was on the way. A number of made-for-TV North of 60 movies have followed, with audiences still enjoying new insights into the characters and their culture.

Northern Exposure

U.S. Dramedy

Northern Exposure, perhaps the best example to date of a crossbred television "dramedy," began inauspiciously as a CBS replacement series in the summer of 1990 but quickly garnered critical acclaim as well as an audience sufficient to warrant its return for a short stint the following year. Its popularity grew, and for its first complete season, 1991–92, Exposure received ratings in the top 20, the Emmy for Best Television Drama, and an unusual two-year commitment from the network. During its fourth full year, 1994–95, the show’s future appeared questionable. The midseason departure of one of its key players, Rob Morrow, a move from its established Monday night time slot to Wednesday, and the network’s mushrooming concern about attracting youthful demographics all contributed to a decline in favor. The program was canceled by the network at the end of the season.

Set in the fictional hamlet of Cicely, Alaska, this unique, contemporary-set, hour-long series was created by Joshua Brand and John Falsey, whose earlier brainchild, St. Elsewhere, had also become a surprise hit. Location shooting in and around the towns of Roslyn and Redmond, Washington, offered scenic panoramas invoking cultural images of unspoiled American frontier. Into this haven comes the proverbial “fish out of water,” Joel Fleischman (Morrow), compelled to serve as town doctor in order to repay the State of Alaska for his medical school tuition. His initial disdain for Cicely’s outwardly unsophisticated inhabitants is exceeded only by his desire to return to his beloved Big Apple where his ambition, cosmopolitan tastes, and Jewishness might have free reign.

The frontier theme is extended and personified in many of the town’s multicultural, multigenerational denizens. Former astronaut and wealthy entrepreneur Maurice Minnifield (Barry Corbin) is forever devising ways to exploit Cicely’s natural wonders. No-nonsense septuagenarian Ruth-Anne Miller (Peg Phillips) operates Cicely’s General Store, where Native American Ed Chigfliak (Darren E. Burrows) helps out while aspiring to be a filmmaker and, eventually, a shaman. French-Canadian immigrant Holling Vinceur (played by Broadway star John Cullum) owns and manages Cicely’s watering hole, The Brick. He is assisted by girlfriend-turned-wife Shelly Tambo (Cynthia Geary), an ex-beauty queen some 40 years his junior. Joel’s receptionist, Marilyn Whirlwind (Elaine Miles), orients her “boss,” a man of science, to her Native American customs and spirituality while keeping him in line with the slightest grimace or glare. Chris Stevens (John Corbett), ex-con and disk jockey for Cicely’s KBHR (“Kaybear”) radio, peppers the narrative with eclectic musical selections, self-taught philosophy, and Greek chorus-like commentary. Finally, Maggie O’Connell (Janine Turner), a local bush pilot and Joel’s landlady, engages him in a tangled romance reminiscent of 1930s and 1940s screwball comedy. When Joel exited the scene during the 1994–95 season, Dr. Phillip Capra (Paul Provenza) and his journalist-spouse Michelle (Teri Polo) were introduced.

It was around intermittent characters that some of Exposure’s most groundbreaking episodes and themes emerged. Chris’s African-American half-brother Bernard (Richard Cummings, Jr.) and Marilyn’s healer cousin Leonard Quinhagak, played by noted film actor Graham Greene (Dances With Wolves), deepened and enhanced the show’s representation of many cultures. Gender and sexuality were explored through Ron (Doug Ballard) and Erick (Don R. McManus), propri-
Northern Exposure

etors of the local inn, whose gay wedding was a prime-time first. Ron and Erick’s arrival also helped to provide a larger context within which to recollect the town’s founding by a lesbian couple, Roslyn and Cicely, later featured in a flashback episode. Eccentric bush couple Adam (Adam Arkin) and Eve (Valerie Mahaffey) allude to the ongoing battle of the sexes rendered center stage by Joel and Maggie, and, with their exaggerated back-to-nature facade and conspicuously consumptive habits, Adam and Eve poke light-hearted fun at Exposure’s “yuppie” audience.

The “fish out of water” narrative exemplified by Joel’s gradual softening toward Cicely, Cicelians, and small-town life is replicated again and again in episodes about visitors who give of themselves in some fashion while becoming enriched by their interactions with worldly wise, innately intelligent, and accepting locals. Humanity’s place within the larger natural environment is another significant thematic thread running through the program’s extended text. Behavior and temperament are often seen to be influ-
enced by phenomena such as seasonal winds, Northern Lights, midnight sun, and ice breaking in springtime. The lesson is clear: nature tames human beings—not the other way around.

A cult favorite whose star rose along with that of the Internet, Northern Exposure inspired fan clubs, websites, and cyberspace bulletin boards—forums for spirited discussion by an international following. Although its network run was short-lived, the program lived on in syndication and clearly made its mark with innovative, postmodern storytelling, an eclectic musical soundtrack, and character-driven themes crystallizing new and ongoing debates about cultural values weighing heavily on a viewing public facing the uncertainty of a new millennium.

Norway

Television in Norway has always been a modest affair. The first television service was not formally opened until 1960, and it was not until the 1990s that the second national channel saw the light of day. The late start and low pace of developments in television can largely be explained with reference to distinct demographic and topographic characteristics. Norway has a small population (4.5 million) scattered over a large area (324,000 sq km or 125,000 sq mi), which works out to only 13 people per square kilometer. Nearly two-thirds of the country is mountainous (a traditional problem for TV transmissions) and uninhabitable. These features make it both expensive and difficult to achieve national distribution for broadcasting, but in Norway, with its strong ethos of social-democratic egalitarianism, the option to leave out non-profitable areas was never seriously considered. The high priority on achieving national distribution has had its price in terms of a more limited program output and large amounts of imported programming. Even today, viewing remains among the lowest in Western Europe, with an average of only two and a half hours per day (2001).

Despite its distinct characteristics, Norway’s television history follows a familiar European pattern. The Norwegian Broadcasting Corporation (NRK) was established in 1933 as a license-fee-funded and state-owned radio corporation. NRK had a monopoly on all broadcasting in Norway, and when television came along, the NRK took for granted that it would be responsible for developing the new medium. Like other public broadcasters in the monopoly era, the NRK occupied a singular position as a major component of the national culture. The early years of television was marked by a pervasive social democratic enlightenment ethos inherited from radio. The NRK had from the beginning perceived education as one of its main tasks, and in the 1970s, the policy of enlightenment took on a sharper and more radical edge. News and current affairs became more explicitly geared toward closing the gap between the “information-rich” and the “information-poor,” and a wide range of programs—in both the information and entertainment categories—were broadcast with the aim of combating “alienation,” “marginalization,” and “passive viewing.” These ideals were particularly apparent in programs for children and young people, where issues such as racism, third-world poverty, and the environment were central throughout the period. Although the NRK transmitted quite a lot of high culture in the form of classical music and drama, the dominant ideology in the monopoly era was marked more by social-democratic egalitarianism than high-culture elitism. However, the NRK also transmitted highly popular entertainments programs. Norwegian versions of pro-
Norway

grams such as Candid Camera and The $64,000 Question were broadcast, although the formats were made more serious and "academic" than in the U.S. originals.

The social-democratic ethos of the NRK was based on an ideology of serving the ordinary man and woman. Many ordinary people were not convinced, however, perceiving the NRK as a self-satisfied, paternalistic and bureaucratic institution. In the polarized social climate of the 1970s, the NRK also became a target of sharp political attacks. Conservatives claimed that the NRK monopoly was controlled by radicals, whereas left-wing and cultural-libertarian interests claimed that their views were not given adequate representation (albeit less strongly). By the end of the 1970s, support for the monopoly was waning, and in 1981, the first moves were made by a conservative government to break up the broadcasting structure. To begin with, a series of experiments were conducted whereby voluntary associations, religious and political groups, and newspapers were authorized to set up local radio and television stations. Permission was also granted to a few cable companies to retransmit programs from Satellite Television Ltd. (later Sky Channel). Once these moves were made there was no turning back, however, and within a few years the conditions for local and satellite broadcasting was permanently liberalized.

The deregulation of broadcasting took place despite substantial political opposition from social-democratic and left-wing interests. These groups remained opposed to the establishment of terrestrial commercial broadcasting services in competition with the NRK, but as satellite services proliferated, the opposition became difficult to sustain. By 1990, almost 40 percent of the population could watch satellite channels, among them two services directed specifically at the Norwegian public. This was the pan-Scandinavian TV3 and the Norwegian cable channel TVNorge (TVN). Both of these came on the air in 1988, and both turned out to be far more popular than the international satellite channels that had been available up to that point. In the end it was the loss of national advertising revenue to services transmitting to Norway from abroad that broke down what remained of the opposition against deregulation. In 1990 the decision was made to allow the establishment of a second "official" Norwegian television channel, a privately owned "public-service" institution licensed by the state.

TV2 began broadcasting in September 1992. The corporation is owned by two of Norway's largest media conglomerates, the Schibsted company and Aftenpressen, along with the Danish publishing company Egmont. From the beginning, TV2 was organized as a private company, but the political intention was that it should operate as a public-service corporation. There were restrictions on ownership, and there were also stricter regulations concerning advertising than those set out in the European television directive (which applies in Norway even though the country is not a member of the European Union). TV2 (and other commercial channels transmitting from Norway) are not allowed to put advertising breaks in news, current affairs programs, documentaries, and feature films (unless the break lasts 20 minutes or more). Advertising directed at children is also prohibited, and there is a ten-minute ban on advertising before and after children's programs.

Although more channels are now available, the NRK remains a central reference point in Norwegian television. After it lost its monopoly position, the NRK made an effort to build an identity more as an independent media corporation and less of a state enterprise. From the beginning, government and parliament exercised detailed control over organizational and financial matters, but through organizational reforms in 1988 and 1996, the NRK achieved greater autonomy from the state. NRK is now a limited company, and although the state holds all the shares, the reforms have granted the NRK the right to appoint its own Director General and establish new services without going through a lengthy political process. In 1996, the NRK opened a second television channel (NRK2), and in recent years the corporation has been granted the right to fund potential new services (teletext, Internet services, pay-TV, and so on) with advertising. Its basic radio and television services nevertheless remain without advertising, although some forms of sponsorship have been allowed.

In the competitive economic situation of the 1990s and 2000s, the NRK has fought, successfully, to retain its position as the leading television company. In 2001, NRK1 obtained an average market share of 38 percent in the national market, compared with 31 percent for TV2. Although TV2 and NRK both have a set of legally defined public-service obligations, there are important differences between them. TV2 broadcasts far more drama than the NRK, and solely within popular genres. NRK's output include some serious drama and substantially more culture, information, and children and youth programs. In its news service, TV2 has adopted a more tabloid, down-to-earth style than the NRK. Yet NRK continues to hold a strong position within news, entertainment, and sport. Both NRK and TV2 transmit around 50 percent imported programming, mostly from English-speaking countries. While
NRK’s main strategy has been to expand early-evening and prime-time programming, and to retain its strong position during evenings and weekends, TV2 is moving toward a 24-hour service. It transmits many more repeats, and its schedule also is more highly structured, with permanent slots for different types of programming and with extensive use of “stripping,” the placing of identical programs and series in horizontal strips across the weekly television schedule (that is, broadcasting them at the same time each day). The NRK schedule has traditionally been more loosely structured and resources have been allocated on the basis of “importance” or “relevance,” rather than ratings. With the impact of competition, the NRK has also introduced more competitive scheduling policies. Particularly during the weekends, new scheduling principles have been instrumental in retaining viewers.

Although NRK1 remains the biggest channel, it is gradually losing out to TV2 in the younger age groups. Other commercial-service channels broadcasting in Norwegian are also trying to attract young viewers. TVNorge, which commanded a 10 percent market share in 2001, has sustained its position due to successful adaptations of game shows and global reality programs such as Big Brother and Temptation Island. TVNorge is owned partly by TV2 and partly by Scandinavian Broadcasting Systems (SBS), and is overall a loss-making enterprise. The fourth service broadcasting in Norwegian is TV3-Norway, which is almost wholly owned by the Swedish industrial corporation Kinnevik. TV3 is part of a pan-Scandinavian multi-channel operation broadcasting from London, thereby evading Norwegian media law. TV3 operates under far more liberal advertising regulations than the Norwegian-based stations, a fact that has led to loud complaints about unfair competition. TV3 has hardly any factual programming at all and broadcasts mainly drama and “reality” shows. Its market share was 7 percent in 2001. The final national channel is NRK2, which was supposed to help the NRK win back younger viewers and sharpen its cultural profile. It has not been very successful, however, commanding a 3 percent market share in 2001.

As elsewhere, the television debate in Norway in recent years has been focused on the challenges of digitization and convergence. There are presently several digital satellite and cable services available, and there are plans to start building a terrestrial digital net in 2002. There is some doubt about the profitability of this enterprise, due to international experiences and the fact that two-thirds of the population already has access to satellite and cable. Fear that the Norwegian public service channels might lose out to global and commercial competitors has led the NRK and TV2 to join forces, and in January 2002 they announced the formation of a joint venture—Norges Televisjon—that aims to be the leader in terrestrial digital television within the next few years.

The state of Norwegian television in the early years of the new century is one of both stability and turbulence. Audiences for the national channels remain high, although both advertising revenue and the license fee shows signs of stagnation. The political legitimacy of the Norwegian duopoly also appears to be undoubted, as TV2 was awarded a new seven-year license without much public criticism in 2002, and the legitimacy and political support for the NRK has increased remarkably since the monopoly era. There is a broad consensus that the NRK should continue as a license-fee-funded broadcaster, with a broad range of programming. Current financial difficulties have led to claims that the NRK should cease competing against commercial companies for sport and entertainment programs and concentrate on “serious” programming, but this view has not gained support within the political parties nor within the state-appointed Public Service Council.

Regarding the digital future the situation is more uncertain. An important lesson so far in the competitive era is that those services that have limited themselves to low-quality, low-cost international formats have been less successful than those that have made an effort to reflect Norwegian culture and daily life. In Norway, factual programming such as news, documentaries and current affairs, and domestically produced family-entertainment programs still obtain considerably higher ratings than the cheaply made games shows and reality programs available on cable and satellite.

This fast-paced contemporary satire series launched many successful TV careers and bridged the gap between the surrealist comedy of the *Monty Python* generation and the anarchic new-wave comic revolution of the 1980s. In 1979 radio producer John Lloyd, frustrated that many of the radio shows he had worked on (such as sitcom *To the Manor Born*) had transferred to television without him, approached BBC-TV light entertainment heads and pitched for a TV series. John Howard Davies (head of comedy) and Jimmy Gilbert (head of light entertainment) offered Lloyd a six-show slot with no real brief, but with a stipulation that he collaborate with current affairs expert Sean Hardie, who had been recommended to the comedy department because of a quirky sense of humor that did not always sit comfortably within the confines of current-affairs programming. Lloyd and Hardie found they worked well together and quickly began developing formats. One possible program was called *Sacred Cows*, which each week would have humorously dissected a modern-day trend, such as feminism, similar to the way the *Frost Report* (BBC, 1966–67) had operated. However, they finally settled on a contemporary sketch show that would take a “scatter-gun” approach dealing with all sorts of targets.

A pilot show was produced in March 1979 with a team consisting of Rowan Atkinson, Chris Emmet, Christopher Godwin, John Gorman, Chris Langham, Willoughby Goddard and Jonathan Hyde. The pilot was never transmitted. A general election was imminent, and on viewing the program, the BBC was concerned about its overtly political nature. They sent Lloyd and Hardie back to the drawing board and gave them six extra months, which both agreed was a big advantage. Lloyd and Hardie embarked on forming a new team with only Atkinson and Langham surviving from the pilot. Lloyd in particular was keen to get a woman aboard, but finding a suitable player was proving difficult. They approached comedian Victoria Wood, who felt (rightly) that her future lay as a solo artist, and actresses Alison Steadman and Susan George, to no avail. Finally, John Lloyd met Australian actress Pamela Stephenson at a party and was convinced they had found their woman. Mel Smith was brought in to make up the team, and once they were all together, the shape of the show became clearer. As a bonus, Lloyd found that the cast was willing to become actively involved in molding the material, helping with the selection of sketches and occasionally writing or rewriting pieces.

The first series aired late in 1979 and attracted just enough of an audience overall to convince the BBC to go ahead with a second series the following year. At the end of the first series, it was agreed that Chris Langham did not quite fit in with the rest of the team, and he was replaced by Griff Rhys Jones, who had played some of the extra parts in the first series. Pamela Stephenson had discovered an unexpected talent for mimicry, and her impressions of the female newsreaders of the day proved to be a highlight of the show. Atkinson excelled at visual comedy and verbal gymnastics, and Mel Smith and Griff Rhys Jones brought a natural acting technique to the sketches. The second series firmly established the show, and one episode won the Silver Rose for innovation at the Montreux Festival. The third and fourth series consolidated their success. Some of the written material for the show came from a central team of regular writers, but the show also operated an open-door policy, which meant that virtually anyone could send sketches in and have them read. This policy provided a fertile training ground for new talent, and many budding writers had their first televed work via *Not the Nine O’clock News*. To the writers, the show may have seemed fairly flexible, but Lloyd and Hardie had some firm parameters. The show was contemporary rather than topical, although its recording schedule (taped Sunday evening for transmission the following day) meant that some last-minute material could be added to give an extra edge. Short sketches were preferred (in its entire run, only a handful were over a minute and a half). Although it returned to the idea of using punch lines (a tradition some critics thought had been eradicated for good by the *Monty Python* team), the show was markedly post-*Python* and unashamedly modern. If a sketch took place in a pub, it would be a modern-day pub with Space Invaders machines instead of dominoes; if a sketch took place in a hospital, it would be a
modern understaffed hospital with harassed doctors and nurses. This sensibility, combined with the show’s pace, its revoicing of bought-in footage, and its new-style filming and use of new visual equipment and techniques (such as Quantel), created a unique and recognizable look.

Memorable skits included a parody of the then-emerging pop-video industry (“Nice Video, Shame About the Song”); a satirical comment on the religious furor surrounding Monty Python’s Life of Brian, in which Pythonists accuse the Bible of blaspheming against the Flying Circus; a beauty contest sketch featuring an unusually candid contestant (Host: “And why do you want to be Miss World?” Contestant: “I want to screw famous people”); and an interview with an intelligent and urbane talking gorilla called Gerald (Trainer: “When we captured Gerald he was of course wild.” Gerald: “Wild? I was absolutely livid”).

In 1982 the team amicably decided to call it a day, feeling that they had gone as far as they could with the format (they had also produced audio recordings of the show which had proved highly popular, and spin-off books which sold in vast numbers). Although it only ran for 28 episodes, the intensity and density of each show, some containing as many as 30 sketches, meant they had used a lot of material and covered a lot of ground. The careers of many of the creative personnel from the show continued to flourish afterwards: Pamela Stephenson worked in Hollywood; Mel Smith and Griff Rhys Jones joined for a number of series of Alas Smith and Jones and independently proved very popular in a number of ventures (Smith has since directed movies in Hollywood). Rowan Atkinson became a household name on both sides of the Atlantic, scoring heavily in the sitcom Blackadder, in the irregular series of Mr. Bean comic films, and in feature films. Producer John Lloyd went on to initiate many hit series, perhaps the most notable being the satirical puppet caricature series Spitting Image. Many of the show’s writers went on to further successes, including David Renwick, who wrote the most popular British sitcom of the 1990s, One Foot in the Grave. Richard Curtis co-wrote the Blackadder series and scripted what became two of the most successful British films in history, Four Weddings and a Funeral (1994) and Notting Hill (1999). In 1979, although it had finished five years previously, Monty Python’s Flying Circus was still exerting a huge influence on British TV comedy; Not the Nine O’clock News was the first comedy sketch program to shine successfully in the large shadow that Python cast.

In 1995 the producers returned to the original shows and began the mammoth task of editing them for retransmission and eventual video release. A U.S. version of the series called Not Necessarily the News (Not the Network Co. Inc.) was syndicated in the 1980s.

Not Only...But Also... was among the most influential comedy programs seen on British television in the 1960s. Starring former Beyond the Fringe partners Peter Cook and Dudley Moore, this fondly remembered comedy-revue series had a considerable impact upon television comedy of the era, with its innovative and often eccentric brand of anarchic humor.

The series, first broadcast on BBC2 in 1965 and then repeated on BBC1, was conceived after Dudley Moore was asked to do a single comedy show for the BBC. Moore recruited Cook to help him write the sketches, and Cook responded with “Pete and Dud,” the characters who were destined to become the show’s greatest success, and another sketch in which a man explained his life’s mission to teach ravens to fly underwater. The resulting show persuaded the BBC to commission a whole series from the duo.

Moore and Cook set about developing sequences of lively comedy sketches linked by musical interludes and other set-piece events featuring themselves or guests. Among the most successful of these latter items was Poets Cornered, in which invited comedians were required to compose (without hesitation) instant rhyming poems, or risk being plunged into a vat of gunge—the first appearance of the so-called gunge tanks that became such a feature of zany quiz shows and children’s programs in the 1980s and 1990s. Among those to brave the gunge were Frank Muir, Spike Milligan, and Barry Humphries. Guests in sketches included John Lennon, who appeared in the uniform of a nightclub commissionaire, and Peter Sellers.

Other unique characteristics of the show included its opening sequence, for which the cameras were set up at some unexpected location, such as London’s Tower Bridge, to film Moore playing the signature tune on his piano, and the closing song “Goodbye” (which was successfully released as a single in 1965, reaching number 18 in the pop charts).

The highlights of the Not Only...But Also... shows were undoubtedly the appearances of Cook and Moore in the roles of “Pete and Dud”—two rather dimwitted characters in long raincoats and cloth caps who mulled over affairs of the day and the meaning of life itself as they sipped pints of beer or munched sandwiches. These hilarious routines were frequently enlivened by bursts of ad-libbing, particularly by Cook, and on several uproarious occasions both men collapsed in fits of giggles, to the delight of audience and viewers.

A second series of Not Only...But Also... was broadcast in 1966, and its effect was evident upon many subsequent comedy shows, notably in the head-to-head dialogues of Mel Smith and Griff Rhys Jones in Alas Smith and Jones some 20 years later, which harked back unmistakably to the classic “Pete and Dud” format.

NYPD Blue
U.S. Police Drama

Amid controversy about Steven Bochco’s intent to produce U.S. network television’s first “R-rated” series, NYPD Blue premiered on ABC in September 1993. This innovative police drama has survived an onslaught of protest to emerge as a popular, long-running, and critically acclaimed series. Blue (as it is sometimes promoted) has deliberately tested the boundaries of broadcast restrictions on partial nudity and adult language. Praise for the show’s finely crafted storytelling and engaging style soon overtook initial condemnations of its occasional flashes of skin and salty dialogue. After its first season, NYPD Blue revived Bochco’s reputation as a risk-taking producer of “quality television.” For a decade, the series has maintained solid viewership despite a constantly changing cast. Dennis Franz’s portrayal of Detective Andy Sipowicz has remained the anchor for a narrative that has added ongoing domestic melodrama to its cops-on-the-job stories.

As a gritty, downbeat cop drama filmed against a backdrop of urban decay, the program has been seen as a return to form for Bochco, who had cocreated the groundbreaking Hill Street Blues and L.A. Law. Attempts to repeat the success of his law-and-order shows faltered (Bay City Blues, Cop Rock, Civil Wars) until Hill Street writer-producer David Milch teamed with Bochco to revitalize the genre. Arguing that the networks had to compete with cable TV for the adult audience, the producers persuaded ABC to approve content previously forbidden. The pilot episode concludes with a dimly-lit lovemaking scene. While mild by motion-picture standards, its partial male and female nudity stirred controversy.

Three months before the debut of such “blue” material, ABC screened the pilot for affiliates and advertisers. Although Bochco agreed to trim 15 seconds from the sex scene, adverse reactions threatened the show’s broadcast run. Conservative watchdog Reverend Donald Wildmon and his American Family Association (AFA) led a national campaign against NYPD Blue, calling on affiliates not to air the program and on citizens to boycott products advertised during the show. A quarter of ABC’s 225 member stations preempted the first episode.

Despite the unprecedented number of defections, Blue scored well in the ratings. Most blackouts had been in small markets (representing only 10 to 15 percent of potential viewers); Wildmon’s campaign provided extra publicity in larger ones. Furthermore, NYPD Blue maintained its large audience, leading most advertisers and affiliates to cease their opposition. By the end of its first season, ABC’s new hit drama survived a second round of AFA attacks and won endorsements from Viewers for Quality Television, the Emmy Awards (27 nominations), and most reviewers.

After all the hype about sex, violence, and profanity, what viewers discovered was a compelling series that was “adult” in the best, rather than the worst, sense. NYPD Blue is mature and sophisticated, not libertine. Instead of inserting racy language and showy sex for the sake of sensation, this story of career cops features complicated human characters. Charges of excessive violence also proved unfounded. As a new round of protests against TV violence circulated in the U.S. in 1993, detractors tagged this latest bête noire of television as a prime offender. Yet, particularly for a realistic police show, NYPD Blue seldom depicts violent acts. When it does, it tends to dramatize the terrible consequences of such actions. (Eventually, ABC responded to public and congressional pressures by airing a content advisory warning with each episode, although that warning did not mention violence: “This police drama contains adult language and scenes with partial nudity. Viewer discretion is advised.”)

Again like Hill Street, NYPD Blue excelled with a potent combination of writing, acting, and directing. The look of the show is both realistic and stylized. New York City location shooting make the show’s feel for big-city street life palpable, while the jagged editing and nervous, hand-held camera movement (already a convention of the genre) heighten the dramatic tension of scenes in the precinct offices, the place where an ensemble of characters’ lives intertwined. Unlike the innovative police drama to which it is often compared—Homicide: Life in the Streets—NYPD Blue keeps its stylistic flourishes in check, letting actors control scenes. In fact, performers familiar from past
Bochco productions—Charles Haid, Eric Laneauville, Dennis Dugan, Jesus S. Treviño—have directed many episodes.

However, it was another set of alumni from the Bochco stock company who stood out above the ensemble cast. Franz emerged as the scenery-chewing mainstay of the show, reinventing his seedy, sharp-tongued Norman Buntz character from *Hill Street Blues* as Sipowicz. The lesser-known David Caruso quickly became a star and sex symbol playing Sipowicz’s partner, John Kelly, a throwback, red-headed Irish cop. Early in the show’s run, Caruso received more publicity than Franz, largely because Caruso was the first of the male leads to do a nude scene. However, he departed at the start of the second season. Three other detectives have since been partnered with Sipowicz. *L.A. Law* star Jimmy Smits played Bobby Simone, who wed fellow detective Dianne Russell (Kim Delaney) before dying of heart failure. Young, taciturn Danny Sorenson (played with surprising astuteness by former child star Rick Schroeder) took Simone’s place but became a murder victim, and was replaced by second-generation cop John Clark (portrayed by another former child actor, Mark-Paul Gosselaar). The series’ smooth transitions through major character changes testifies to the storytelling skills of Milch, Bochco, and their collaborators.

Individual episodes introduce new cases for the detectives of New York’s 15th Precinct and blend them with ongoing melodramatic storylines about personal relationships. Entanglements of professional and personal affairs are always imminent as every detective in the precinct has become romantically involved with a co-worker: Kelly with Officer Janice Licalsi; Gregory Medavoy with office secretary Donna Abandando; detectives James Martinez and Adrienne Lesniak with each other, Baldwin Jones with Assistant District Attorney Valerie Haywood. Sipowicz marries District Attorney Sylvia Costas, who is later murdered. After her death, Sipowicz becomes a devoted, sensitive father to their young son Theo, thus countering his own often ugly, violent, struggling alcoholic, on-the-job personality, and again engages in a workplace romance, this time with Detective Connie McDowell.

Even with so many couples, male characters dominate *NYPD Blue*. Their tough-guy machismo, however, is always tempered by a caring side. Rather than playing to good cop/bad cop stereotypes, Sipowicz, Kelly, Simone, and their fraternal colleagues exemplify that emerging archetype of 1990s television: the sensitive man. Like TV cops of the past, they are moral, yet hard enough to crack down on criminals. To this “guy” image, the men of *NYPD Blue* add a dimension of sensitivity. These are sentient cops. The replacement of the Cagneyesque John Kelly with empathetic widower Simone heightened this aspect. The *NYPD Blue* men are working men concerned with emotion. The boys in *Blue* have feelings and discuss them, with both their professional and romantic partners. Women’s roles, even nominally feminist ones, have tended only to support men’s and lacked depth in early seasons. However, the development of Delaney’s character enriched the series. Detective Russell, like Sipowicz, was a complex, edgy, melancholic, recovering alcoholic, who showed the stress of loyalty to “the job.” Delaney’s portrayal proved strong enough for Bochco to create the law series *Philly* (2001–02) as a star vehicle for her. ABC even moved *Blue* to an earlier hour to serve as a lead-in for the new show; however, *Philly* lasted only one season.

As with other Bochco productions, *NYPD Blue* leavens its mixture of police drama and soap opera with comic relief, often interjecting moments of irreverent, even scatological, humor. The show’s uses of nudity and profanity often play at this level. Naked bodies appear in awkward, comic scenes as well as erotic ones. Writers self-consciously invent colorful, funny curse words for Sipowicz to spew at criminals.

Whatever the length of its run, *NYPD Blue* made history with its breakthrough first season. While not a
model for commercial imitation, the series proved that risky, adult material could be successfully integrated into network television.

O’Connor, Carroll (1924–2001)

U.S. Actor

Best known for his portrayal of cantankerous Archie Bunker on the long-running CBS series *All in the Family*, Carroll O’Connor was one of television’s most recognized actors in the late 20th century. For his work on *All in the Family* and *In the Heat of the Night*, the actor received five Emmy Awards, eight Emmy nominations, a Golden Globe Award, and a Peabody Award.

O’Connor’s acting career began while he was a student in Ireland in the 1950s. Following experiences in American and European theater, he established himself as a versatile character actor in Hollywood during the 1960s. Between films he made guest appearances on television programs such as the *U.S. Steel Hour*, *Kraft Television Theatre*, the *Armstrong Circle Theatre*, and many of the filmed series hits of the 1960s. However, O’Connor became a television star with his portrayal of outspoken bigot Archie Bunker, the American archetype whose chair now sits in the Smithsonian Institution.

In 1968, ABC, which had the first rights to the series (which was based on the BBC sitcom *Till Death Us Do Part*), financed production of two pilot episodes of *All in the Family* (then under the title *Those Were the Days*), but the network worried about the program’s socially controversial content and rejected the show. Producer Norman Lear then sold the series to CBS, where *All in the Family* was broadcast for the first time on January 12, 1971, with O’Connor as Archie Bunker. By using humor to tackle racism and other sensitive subjects, *All in the Family* changed the style and tone of prime-time programming on television. It may also have opened the door for political and social satires such as *Saturday Night Live* and other controversial programs.

Through its 13 seasons, the show gained immense popularity (in its heyday, it was said to have reached an average of 50 million viewers weekly) and maintained a groundbreaking sense of social criticism. Archie Bunker’s regular stream of malapropisms and racial invective catalyzed strong reactions from critics. *All in the Family* was attacked by conservatives, who thought that the show made fun of their views, and by liberals, who charged that the show was too matter-of-fact about bigotry. The show’s successor, *Archie Bunker’s Place*, was broadcast on CBS from 1979 to 1983, and the earlier show also begat two successful spin-offs, *Maude* and *The Jeffersons*, the latter becoming one of television’s longest-running series about African Americans.

From 1988 to 1994, O’Connor starred in and served as executive producer and head writer for the hit prime-time drama *In the Heat of the Night*, based on the characters and scenario of the acclaimed 1967 film of the same title starring Sidney Poitier and Rod Steiger. Set in fictional Sparta, Mississippi, but shot on location in Covington, Georgia, *In the Heat of the Night* may be seen as continuing O’Connor’s association with television programs designed to function as social commentary by addressing issues of racism and bigotry. O’Connor played Bill Gillespie (the Steiger role), a...

Southern police chief whose top detective (Virgil Tibbs, played by Howard Rollins in the Poitier role) is African American. In its 1993 season, the show also featured the marriage of Chief Gillespie to an African-American city administrator. The series received two National Association for the Advancement of Colored People (NAACP) Image Awards for contributing positive portrayals of African Americans on television. When the series version of *In the Heat of the Night* ended, O’Connor produced several made-for-television movies using the same locations and characters.

In 1995 O’Connor’s son and costar on *In the Heat of the Night*, Hugh O’Connor, died of a drug overdose. O’Connor chose to speak out publicly about his grief and his views on the legalization of drugs, giving a number of well-publicized interviews on these topics on television and devoting much of his time to the social problems surrounding drug addiction. Throughout the 1990s he also occasionally appeared in films or as a guest star on such series as *Mad about You* and *Party of Five*. On June 21, 2001, he died of a heart attack in Culver City, California.

Odd Couple, The
U.S. Situation Comedy

Although often positioned in the shadow of such groundbreaking series as The Mary Tyler Moore Show and All in the Family, The Odd Couple is one of the early examples of sophisticated, well-written, character-driven sitcoms that came to dominate the U.S. network output in the 1970s. Like M*A*S*H, it is also one of the few successful TV sitcoms to be based on material from another medium, in this case a successful Broadway play and film. Although critically acclaimed, it did not receive popular recognition until syndication.

Originally conceived by Neil Simon, who based the play on his brother Danny's true-life experience, The Odd Couple concept is best described in the one-sentence treatment Simon submitted to Paramount, who financed the stage play sight-unseen: "Two men—one divorced and one estranged and neither quite sure why their marriages fell apart—move in together to save money for alimony and suddenly discover they're having the same conflicts and fights they had in their marriages."

The Odd Couple, in all forms, is truly a popular-culture phenomenon. Simon's wildly successful play ran from 1965 to 1967, has been revived on Broadway more than once, and, as Rip Stock notes in his book Odd Couple Mania, it is most likely being produced right now by any number of community theater groups across the country. In 1968 the play was made into a successful film starring Walter Matthau as unkempt sportswriter Oscar Madison and Jack Lemmon as anal-retentive commercial photographer Felix Unger. Naturally, Paramount wanted its TV division to cash in on this success; while Simon had signed away his TV rights, Paramount enlisted Dick Van Dyke Show alumni Gary Marshall and Jerry Belson to produce the series for television, which debuted on ABC in September 1970.

The sophisticated style and attention to character that Marshall and Belson had learned during their Dick Van Dyke days paid off, and The Odd Couple became one of TV's first relevant sitcoms, dealing in an adult fashion with such issues as the generation gap and sex. Of course, the primary focus was on the two main characters. Jack Klugman and Tony Randall made for a perfect Oscar and Felix, and, indeed, the TV actors have become more closely linked than their movie counterparts with these characters. While both actors won Emmy awards for their roles, the series failed to capture a wide audience. Third-placed network ABC had little to lose by airing a marginal show, of course, and remained committed to the sitcom for five seasons before giving it the ax. The series then blossomed in syndication, appearing in major domestic and foreign markets to this day.

The names of those connected with the series, both on and off screen, reads like a Who's Who of television. Producer Marshall used the respect he had gained from

Odd's Gary's claimed cancer, the series to create such less critically respected programs as Happy Days, Mork and Mindy, Laverne and Shirley, and Joanie Loves Chachi. Indeed, it was through his experience with The Odd Couple that Marshall learned a valuable lesson—in order to be a major hit, a show must have “kid appeal,” a formula Marshall soon had down to an art. While Marshall graduated to feature films, Jerry Belson remained in TV, eventually serving as consultant for Cybill, coproducer and cocreator of The Tracey Ullman Show, and writer for The Drew Carey Show.

Klugman, after his first of several bouts with throat cancer, returned to his dramatic roots by starring in NBC's Quincy. Randall moved over to MTM to star in The Tony Randall Show, as well as the critically acclaimed NBC series Love, Sidney. Penny Marshall, Gary's sister, launched her acting career as Oscar Madison's whining secretary Myrna Turner (a name that rhymed when she pronounced it in her heavy New York accent).

The Odd Couple has enjoyed a number of spin-offs, which included an animated version in 1975 featuring a tidy cat and a sloppy dog. In 1982 Jerry Belson revived the series for prime time, featuring African-American actors Ron Glass and Demond Wilson in the Felix and Oscar roles. Using many of the same plots from the original episodes, The New Odd Couple lasted only one season. In 1992 Klugman and Randall reprised their roles in a special two-hour reunion episode. Given the American public's captivation with the series, it is likely that further versions will continue to surface.

The Office. See Comedy, Workplace

Ohlmeyer, Don (1945– )
U.S. Media Executive

Donald W. Ohlmeyer was president of the National Broadcasting Company (NBC), West Coast, a position he held from 1993 until his retirement from the company in 1999. As president of the West Coast division, Ohlmeyer was responsible for the operations of NBC Entertainment and NBC Productions, both of which produce television programs for the network and other venues. American television network production of such internally developed programming has increased since the Federal Communications Commission relaxed its financial-syndication (fin-syn) regulations, which previously limited such self-production.

Ohlmeyer is a veteran television producer-director who won many Emmy Awards from the National Academy of Television Arts and Sciences. He started his career at ABC Sports in 1967, and moved up the career ladder, working on Wide World of Sports, a groundbreaking program in terms of technological broadcast innovation and breadth of coverage. At ABC, he directed three Olympic broadcasts in addition to producing Monday Night Football, an early ratings success and one of the first U.S. prime-time network sports programs (boxing notwithstanding).

Ohlmeyer moved to NBC in 1977 as Executive Producer of Sports and worked on network coverage of the World Series and the Super Bowl. Combining his careers at ABC and NBC, he has produced or directed television coverage of championships in every major sport in the United States.

While at NBC, Ohlmeyer branched out into feature-film production with The Golden Moment: An Olympic Love Story, an award-winning made-for-TV movie. He left NBC in 1982 to form his own production company, Ohlmeyer Communications, which produced made-for-TV films, award programs for MTV, and network series. In the latter category, Lifestories was an early reality-based series that garnered positive reviews from television critics for its story treatment, but failed to generate a large enough audience for renewal. Ohlmeyer won an Emmy as producer of Special Bulletin, a harrowing 1983 depiction of nuclear terrorism that utilized a television news approach for verisimilitude.

Don Ohlmeyer is a rarity among American television executives in that he moved into senior management from the production side of the business. As producer-executive Grant Tinker also demonstrated at NBC, this type of background can be valuable in as-

1683

man of a record company, and if he could whistle the tune after just one hearing, the song had passed "the old grey whistle test" and would therefore be released.

OGWT started modestly on September 21, 1971, introduced by Ian Whitcomb and featuring folk-rock band America and singer-songwriter Lesley Duncan as its live guests. The show had many presenters over the years but it was the period hosted by Bob Harris that is the most fondly remembered segment of the show's history. "Whispering" Bob Harris (so nicknamed because of his low key, almost hushed delivery) was a thoughtful DJ with a wide-eyed enthusiasm for many different sorts of music and artists. His genuine fascination with the subject clicked with the viewing audience, itself mostly formed of knowledgeable rock fans. Harris joined the show in 1972 and introduced the cream of

Old Grey Whistle Test, The

U.K. Music Show

For nearly 20 years, _The Old Grey Whistle Test (OGWT)_ was the British showcase for "grown-up" rock music. The BBC's _Top Of The Pops_ showcased hit singles from 1964, but _OGWT_ concentrated on albums and live performances. The roots of the series lay in the 1960s and a trendy arts magazine program, _Late Night Line-Up_ (1964–1972) one of the most successful offerings from the newly formed BBC 2, the second TV channel of the BBC. Its delvings into modern music proved to be one of the more popular sections of the show; this led to a spin-off program, _Disco 2_ (1970–71) which highlighted those artists grouped under the heading "Progressive Rock." The successor to _Disco 2_ was _The Old Grey Whistle Test_. The name was derived from a Tin Pan Alley legend that a rough cut of a new song would be played to the gray-haired door-

See also _Financial Interest and Syndication Rules; National Broadcasting Company; Olympics and Television; Sports and Television; Super Bowl; Tinker, Grant_
contemporary rock artists including David Bowie, Roxy Music, Todd Rundgren, Steppenwolf, Sparks, Edgar Winter, Crazy Horse, Average White Band, Jim Croce, Ritchie Havens, Captain Beefheart, Elton John, Supertramp, Janis Ian, Golden Earring, The Pretty Things, Dr. Feelgood, Van Morrison, Be Bop De Luxe, Lynyrd Skynyrd, Queen, Fleetwood Mac, Ry Cooder, Joni Mitchell, and Emmylou Harris. Artists were filmed in a bare studio, usually presenting two or three songs. Other acts appeared on film, and new album tracks were played regularly and accompanied by old films, usually silent movies or wild cartoons. There was also space for concert news, music updates, and short interviews. The whole mixture was heralded by the catchy bluegrass/rock theme tune "Stone Fox Chase" by Nashville sessionmen band Area Code 615.

When the punk and new-wave movements emerged around 1976 the show was slow to react at first (although uber-punks The New York Dolls had appeared in 1973), but by 1978 the show regularly featured artists that represented the new movements including The Motors, Talking Heads, The Ramones, Patti Smith, Tom Petty and the Heartbreakers, Magazine, The Police, The Only Ones, Bethnal, The Jam, Siouxsie and the Banshees, The Buzzcocks, Devo, Blondie, Ultravox, XTC, Squeeze, Iggy Pop, Lena Lovich, Tubeway Army, and The Damned. This gave the show a new lease of life and enabled it to outlive the many other music programs that were emerging at the time. The punk generation had been catered to by Granada’s So It Goes (1976–77) and ATV’s Revolver (1978), and later trends were covered by Channel 4’s The Tube (1982–87), a lively, irreverent, modern-day version of the classic 1960s pop show Ready Steady Go. The BBC had unveiled rivals including live showcase Rock Goes To College (1978–81), which was produced by OGWT producer Michael Appleton and ran when OGWT was off the air; and Something Else (1978–82). In 1983 the series dropped the “Old Grey” from its name, becoming just Whistle Test for its final years (1983–87), which included a series of live gigs recorded at various venues around the U.K., called Whistle Test–On The Road (1983–84).

By 1987 the program was struggling. Although it had changed to reflect the times, its reputation was still largely that of a progressive rock show. It may have dropped the “old” from its title, but it was considered “old hat” in some circles and consequently was put finally to rest. The great majority of the OGWT performances have survived, and some footage thought lost has since been returned to the archive by engineers and other program personnel who had kept private copies. The 30th anniversary in 2001 showed an upsurge of interest in the show, with celebratory programming recalling the highlights of the series transmitted on both BBC TV and radio, and the distribution of a fine OGWT DVD, featuring many memorable moments and outstanding performances from the show.

Olympics and Television in the United States

Ever since Walter Cronkite anchored the first U.S. Olympic broadcast in 1960, the games have enjoyed a mutually beneficial relationship with television. TV has popularized the event to the point that the global audience is now estimated to be in the billions. Broadcast sponsorship and revenues have taken the games from a precarious financial position to one of power and prominence in the global media landscape. Over the years, however, U.S. television networks have become mired in a high-stakes bidding war for broadcast rights. The stiff competition has kept rights fees inordinately expensive, so that they now account for some
40 percent of Olympic revenues, making the International Olympic Committee (IOC) increasingly dependent on them.

As a result, U.S. broadcasters contribute much more money than their counterparts in other countries to support the Olympics. For rights to the 1996 Summer games in Atlanta, Georgia, NBC paid $456 million, a figure that did not include the cost of the production itself (estimated at another $150 million). All of the western European nations combined paid $250 million in fees for the same games. Whereas Canada’s CBC paid $160 million to broadcast all of the Olympic games between 2000 and 2008, NBC paid $3.5 billion for those same rights, thereby serving as the IOC’s largest single financial underwriter.

Consequently, the U.S. networks hold a powerful position in the Olympic arena. Their financial support often allows them a measure of influence in scheduling, especially when determining the time slots for the most popular events. Traditionally, the Winter and Summer Olympics were held in the same year, once every four years, but in 1994 the IOC changed the timing of the games and adopted a two-year staggered schedule, in part to accommodate the U.S. media. Following the 1992 Summer and Winter games, therefore, the next Winter Olympics were held in 1994, in Lillehammer, Norway, followed by the 1996 Summer games in Atlanta, easing the strain on corporations that were beginning to find the price of quality Olympic advertising prohibitive. With 30-second spots selling for hundreds of thousands of dollars during Olympic broadcasts, and companies paying hundreds of millions of dollars for a sponsorship package, neither the IOC nor the networks could afford to lose these important clients. Spacing the Summer and Winter Olympics two years apart thus allowed sponsors to spread out their costs and also to invest in more high-profile packages. The revised schedule also granted the IOC more time to allocate the revenue effectively.

The Olympics first attracted a significant television audience during the 1968 Summer games in Mexico City, when Roone Arledge was at the helm of ABC Sports. Arledge was instrumental in establishing ABC as the dominant network in Olympic television—a legacy that endured for a quarter century, from the Winter games of 1964 in Innsbruck, Austria, through 1988 in Calgary, Alberta. The combination of Arledge’s in-depth, personalized approach to sports broadcasting (epitomized in ABC’s Wide World of Sports) and the technological advances in the field, such as satellite feeds and videotape, set the new standard for Olympic telecasts. Utilizing inventive graphics and personal profiles of the athletes, Arledge slotted 44 hours of coverage for the Mexico City games, three times as many hours as the Tokyo Summer games of 1964. He presented the coverage as a dramatic, exciting miniseries for the television audience, and successive producers have continued to expand on this model.

The 1972 Summer Olympics in Munich, West Germany, saw further growth in costs and coverage. However, the drama of the games was overshadowed by the grisly murder of 11 Israeli athletes at the hands of Palestinian terrorists. Viewers watched in horror as the events of the massacre of September 5–6 unfolded, and television turned into an international forum for the extremist politics of the Black September Organization. This event became the worst tragedy in the history of sports broadcasting.

The Olympics have also given television sports some of its most glorious moments and beloved heroes. Few in the United States will ever forget the U.S. ice hockey team’s thrilling victory over the Soviet team in 1980, Romanian gymnast Nadia Comaneci’s perfect performances, the U.S. women gymnasts winning their first team gold medal ever in 1996, or the dedication and perseverance of such athletes as Mark Spitz, Carl Lewis, or Dan Jansen. In many instances, the top U.S. athletes also become media celebrities, winning lucrative endorsement and commercial deals along with their medals. For the 2002 Olympics in Salt Lake City, Utah, there were advertising campaigns designed around gold medal hopefuls that aired months before the games even began.

Aside from catapulting athletes to media stardom, the Olympic games are usually a ratings boon for their host network. In the United States, that network customarily captures 50 percent of the television audience each night of the Olympic telecast.

The audience drawn to the Olympics often translates into increased ratings for the host network’s regularly scheduled programming as well. The tremendous till of advertising revenue and the potential springboard into a new season likely ensures that the Olympic U.S. broadcast rights will remain among the most coveted and expensive in all of television.

Bids for these rights are made knowing that traditionally, networks lose a great deal of money on the Olympics. Consequently, it has been argued that network coverage of the games has expanded to the point of excess in the attempt to recoup spiraling costs by selling more commercial time. However, the games have become such an emotionally charged part of a network’s inventory that profit is no longer the chief concern. Broadcasting the Olympics, much like broadcasting professional sports, is more about building a network’s reputation than about making business decisions driven solely by the bottom line. The long-range prestige and promotional value for the host network
have been deemed far more important than any immediate financial losses incurred by covering the games.

Nevertheless, the expense of televising the Olympics can be quite draining at times, as the 2000 Sydney “Internet Olympics” demonstrated. Faced with an unwieldy 15- to 18-hour time difference between Australia and North America, NBC decided to broadcast all 441.5 hours of the games on tape delay in the United States. The day-old offerings on U.S. television could not compete with the immediacy of results available via the Internet, and NBC’s investment of over $800 million in the broadcast resulted in a ratings disaster—the worst Nielsen audience ratings for the Olympics since 1968.

The gamble on Olympic broadcasting only gets riskier as rights fees continue to skyrocket. The Squaw Valley (California) Winter games in 1960 cost CBS only $50,000. Twenty years later, NBC bid an astonishing $87 million for the 1980 Summer games in Moscow. This price was almost four times the fee for the rights to the previous (1976) Summer games in Montreal. Unfortunately for NBC, the U.S. boycott of the Moscow games destroyed hopes of a windfall and sabotaged the scheduled 150 hours of planned coverage. Still, prices have continued to climb. The Summer broadcast rights almost tripled from 1980 to 1984 ($87 million to $225 million), and both Winter and Summer rights have gone for $300 million or more since 1988. In 1995 NBC made its unprecedented $3.5 billion deal for the 2000 through 2008 games, a deal that, despite its overwhelming numbers, was touted as a historic coup giving the network a virtual “monopoly” on the Olympic games.

In the past, these exploding costs have sent networks looking for alternative strategies to ease the financial burden. In 1992 NBC made an ill-fated attempt at utilizing pay-per-view subscriptions for the Summer games in Barcelona. The “Olympic Triplecast” was organized in conjunction with Cablevision and intended to sell packages of commercial-free, extensive programming. The plan was an enormous failure, owing to its complicated, confusing design and viewers’ resentment over having to pay for certain events when others were free of charge.

CBS had more success in reducing its outlay by joining forces in 1992 with TNT (Turner Network Television). The Winter Olympics that year (CBS’s first Olympic telecast in 32 years) began a collaboration between the two networks that gave TNT 50 hours, or about 25 percent of the total programming time, in exchange for $50 million toward rights fees. The arrangement was so successful that it was renewed in 1994 for the Lillehammer games. The sharing of broadcast duties and costs seemed to hold promise for both the quality and cost of future Olympic coverage, especially when ABC and NBC were negotiating a partnership deal to cover the 2000 Sydney games together. However, NBC instead secured the sole rights to cover the first five Olympics of the new millennium, adding the Olympic logo to their network “brand” for nearly a decade and hoping to strengthen their own image through this unique identification with the games.

**Omnibus**

**U.S. Cultural Series**

*Omnibus* was the most successful cultural magazine series in the history of U.S. commercial television and a prototype for the development of programming on educational television. Developed by the Television-Radio Workshop of the Ford Foundation, *Omnibus* generated both corporate sponsorship and a loyal, but limited, network audience for intellectual programming over nine years (1952–61) on all three networks.

*Omnibus* was the vision of Robert Saudek, a former ABC vice president of public affairs who became director of the Workshop in 1951. Commissioned to devise an innovative series for network television, Saudek created a variety show for the intellect, a compendium of the arts, literature, science, history, and even some pure entertainment. Saudek hired journalist Alistair Cooke to serve as master of ceremonies.
Milet "The Bad Men"; and the first images of X-ray movies, an inside look at the working human digestive system.

Saudek and his producers, among them Fred Rickey, William Spier, and Mary V. Ahern, deftly interwove the high and popular arts into a cultural smorgasbord. Their definition of "culture" was flexible enough to encompass Orson Welles's triumphant return from Europe to star in Peter Brook's production of King Lear; a production of William Inge's Glory in the Flower with Jessica Tandy, Hume Cronyn, and a still very green James Dean; S.J. Perelman's paean to burlesque with Bert Lahr; several appearances by Agnes DeMille, including the performance of her ballet Three Virgins and the Devil ("Virgins" becoming "Maidens" because of network censors); Jack Benny recreating his notorious role as an avenging angel in The Horn Blows at Midnight; and Peter Ustinov in his U.S. television debut as Dr. Samuel Johnson. Omnibus also gave air time to artists new to the mass media: William Faulkner gave a tour of Oxford, Mississippi; James Agee contributed a five-part docudrama on the life of Abraham Lincoln, now considered one of the first miniseries; Frank Lloyd Wright discussed architectural forms with Cooke; and painter Thomas Hart Benton gave a tour of his studio. In addition, individuals who would later become fixtures in prime time received a career boost on Omnibus, including Mike Nichols and Elaine May, who brought their sardonic humor to an edition entitled "Suburban Revue"; Les Ford and Mary Ford, who demonstrated multitrack recording with a madrigal-singing Cooke; and Jacques Cousteau, who screened his first underwater adventure on U.S. television.

Beginning with Leopold Stokowski conducting Benjamin Britten's Young Person's Guide to the Orchestra, Saudek linked pedagogy with showmanship to produce a series of visual lectures that became a model for educational television. The most stimulating and original of the electronic teachers was Leonard Bernstein, who single-handedly enlarged the possibilities of musical analysis and performance on television. Commencing with his dissection of Beethoven's Fifth Symphony in 1954, Bernstein brought an intellectual passion of excitement and discovery to his subject and later explored musical comedy, jazz, grand opera, and modern music with the same vigor. Gene Kelly in his video lecture compared the art and choreography of ballet dancers to the movements of professional athletes, exemplified by his tap dance with boxer Sugar Ray Robinson.

For most of its run, Omnibus, nearly always broadcast live, graced the "ghetto" of weekend programming, Sunday afternoon. As that day-part became more valuable, beginning on CBS with the success of professional football, Omnibus shifted to other networks. The series was seen on CBS from 1952 to 1956; on ABC from 1956 to 1957; and NBC from 1957 to 1961. During the final season, Omnibus appeared as a series of irregular specials, concluding with a look at the future of the western hemisphere. In all, Saudek and his team assembled 166 editions totaling more than 230 hours of entertaining enlightenment. The series was revived by producer Martin Starger as a series of specials on ABC in 1981. In 1999 PBS distributed the first-ever retrospective of Omnibus on television for its December pledge drive.

The artistic concerns and approaches to production of Omnibus provided a road map for public television. The Ford Foundation, citing Omnibus's struggle for ratings, questioned whether commercial broadcasters were dedicated to "the development of mature, wise, and responsible citizens," and began to fund educational television projects. Without the foundation's support, Saudek formed his own production company in 1955 to create and gain network sponsorship for the series. The Omnibus sensibility has been felt throughout the history of public television in the United States. During the National Educational Television years, NET Playhouse (1966–72) and NET Festival (1967–70) were direct descendants. Since the formation of the Public Broadcasting Service, Great Performances (1974–) has partaken of the Omnibus ethos to share a cultural mélange with a discriminating audience. And, of course, the ringmaster of Omnibus, Alistair Cooke, became a PBS icon for over 20 years as host of Masterpiece Theatre.

One Day at a Time
U.S. Domestic Comedy

Although the series was created by Whitney Blake (formerly an actor on TV’s *Hazel*), *One Day at a Time* showed the unmistakable imprint of Norman Lear, its powerhouse producer. The series, like other Lear comedies, strove to be topical, progressive, even controversial, and to mix serious issues with more comical elements. At times the mix was less than even, yet it proved to be very popular, and *One Day at a Time* was one of the most successful series of the 1970s and 1980s, outlasting many of Lear’s other, more highly praised series.

The program centered around Ann Romano, a television character who found herself struggling through many of the same experiences facing real American women. Married at 17, Romano was now divorced, raising two teenagers more or less on her own, and entering the job market for the first time since her marriage. Played by Bonnie Franklin, Romano was not TV’s first divorced woman or mother (Diana Rigg in *Diana* preceded her, as did Vivian Vance on *The Lucy Show*), but she was probably—to that time—the most realistic. Romano struggled with money, fighting for every penny of the child support that was supposed to come from her frequently deadbeat ex-husband. She struggled with finding a job. And she struggled to be both father and mother to her two children, Julie (Mackenzie Phillips) and Barbara (Valerie Bertinelli).

Just as the portrayal of Ann was without romanticism, so was the depiction of her two children. Throughout the series, Barbara and particularly Julie dealt with issues of birth control, sexuality, virginity, alcohol, and drugs with an honesty and forthrightness that Gidget and other previous TV teens never dreamed of.

Rounding out the cast was apartment-building superintendent Schneider (his first name was hardly ever used), who, over the course of the series, played an increasingly important role in both the program’s plots and the lives of the girls. In this role, actor Pat Harrington, Jr., also frequently supplied some much-needed comic relief in the midst of the ongoing exploration of serious topics.

*One Day at a Time* went through many cast changes during its run and developed various, almost convoluted, plot twists and turns. When the show began, Ann was working for an advertising agency, then later founded her own company. One season she became engaged, only to have her fiancé killed by a drunk driver. Then, for a time following his death, she became legal guardian to his teenage son. Daughter Julie married and had a baby, only later to abandon her new family. Ann’s mother (played by veteran actor Nanette Fabray) eventually became a series regular, appearing in almost every episode. Finally, daughter Barbara married (having remained a virgin until her wedding night) and the next season Ann married Barbara’s father-in-law. The series ended with Ann, now remarried, moving to London with her new husband to take an exciting new job.

1690
For all the problems that were played out in front of the cameras, just as many occurred behind the scenes. Phillips was fired from the series in 1980 because of her ongoing drug addiction. She would later return to the series, only to be written out again when she suffered other health problems.

In some ways, one of the first television shows in the “dramedy” genre (a hybrid of drama and comedy to be later embodied by series such as *The Days and Nights of Molly Dodd*), *One Day at a Time* made extensive use of multipart episodes (one three-parter dealt with Julie running away from home), focused on contemporary issues (one episode dealt with teen suicide), and incorporated political messages into its stories. Nothing was ever easy or dealt with offhandedly on *One Day at a Time*. The decision not to shy away from difficult themes in the series’ portrayal of contemporary life, especially of women’s lives and of female adolescence, set the program apart from others of its time. Thus, the series helped expand the dimensions and role of U.S. television comedy.

Less brash and politically explicit than Lear’s other feminist comedy heroine, Maude Finley, Ann Romano (who took back her maiden name after her divorce and preferred to be referred to as “Ms.”) was more “middle of the road” and therefore easier for audiences to accept as a realistic type of character. This wide appeal, along with the popularity of series’ stars Franklin, Harrington, and Bertinelli, allowed the show to endure for an eventful and trendsetting nine-year run.

**One Foot in the Grave**

**British Situation Comedy**

*One Foot in the Grave*, like so many of Britain’s most enduring and well-liked situation comedies, took three seasons to establish itself before suddenly becoming the most popular program on television, with 18 million viewers. Six series of the program, and numerous specials, were aired between 1990 and 2000.

The show was writer David Renwick’s first situation comedy after having spent a number of years writing sketches for the likes of the Two Ronnies and Alexei Sayle. Renwick created the lead character, Victor Meldrew, with Scottish actor Richard Wilson in mind, but Wilson initially turned down the role because he felt he was too young to play a 60-year-old man. Luckily, he reconsidered and a new hero for the 1990s made his debut on January 4, 1990.

The first episode, “Alive and Buried,” introduced Victor Meldrew just as he was about to be made redundant from his job as a security guard, and replaced by a computer chip. From then on Victor’s life is portrayed as a never-ending battle against the rest of the world. Everything conspires against him, from his neighbors, to shop assistants, to God. The series showed that elderly people did not have one foot in the grave, but wanted to lead lives actively like anybody else. However, Renwick cleverly created situations which would anger anyone but which, bizarrely, could only happen to Victor Meldrew. In “Valley of Sleep,” for example, Victor finds himself in hospital with suspected appendicitis. It is only when the male nurse who is shaving him begins discussing the price of property on the moon that we, along with Victor, gradually become aware that the nurse is, in fact, a mental patient. In “The Worst Horror of All” Victor is convinced that the skip (dumpster) he has hired will have an old mattress dumped in it in the morning. When he wakes, his familiar cry of “I don’t believe it” reveals that someone has in fact dumped a Citroen 2CV into the skip. Renwick skilfully returns to his original joke, however, for when Victor opens the car door, out falls the mattress which he had so feared he would find.

The program’s other constant character is Victor’s long-suffering wife Margaret, played by the often underrated Annette Crosbie. She has to bear the brunt of most of Victor’s grumpiness, and, although he sometimes irritates her immensely, we are never left in any doubt that she loves him dearly. It is to Renwick’s credit that he has occasionally been able to insert some moments of great pathos in which we learn a little more about Margaret and come to understand why she and Victor may be unable to live without each other. Although they are childless, we do learn in “Timeless Time” that they had a son who died as a baby, but we never learn how.

The series has not been without controversy. Some viewers objected when Margaret found a dead cat nesting among the fish-sticks in her freezer, and others when an old lady got trapped overnight in their loft. The program was censured for content in the “Hearts of Darkness” episode. In one scene, set in an old people’s home, a resident was abused and kicked, actions that offended a number of elderly viewers. The scene was cut slightly when the episode was repeated.

In addition to his two main characters, Renwick also created an idiosyncratic supporting cast: Margaret’s friend Mrs. Warboys (Doreen Mantle), to whom Victor can barely be civil; Nick Swainey, the social worker who lives next door and constantly refers to his (unseen) bedridden mother; and Patrick and Pippa, next-door neighbors, whose lives are made a misery from the moment they first meet the Meldrews.

Renwick has constantly tried to extend the boundaries of situation comedy, not only with the situations his characters have to face, but also within the confines of the 30-minute program. In “Timeless Time” the whole episode is devoted to a sleepless night, in which Victor and Margaret toss and turn, agonizing over life, and during which no other characters are involved and we never leave the bedroom. The first ten minutes of “Heart of Darkness” contain virtually no dialogue; the only sound is a musical accompaniment. “The Beast in the Cage” sees the Meldrews stuck in a traffic jam for the whole episode. This daring culminated in “Trial,” when Victor was given an entire episode to himself as he waited at home to be called for jury service. As many newspapers pointed out, this was the first time any actor had been given this comedy accolade since the great Tony Hancock.

Renwick finally decided to write one last series, and...
One Foot in the Grave

in November 2000, Victor was killed in a road accident—ironically by a new friend of his wife. It was a sad and tragic end for one of Britain’s greatest comic heroes, and even Meldrew himself would have railed against the injustice of his final moment being upstaged by ITV, which screened the first millionaire winner of Who Wants To Be A Millionaire as a spoiler on the same night. It was probably a fitting end, as Victor Meldrew was the comic hero of his time, and just as much a part of it as were Harold Steptoe and Basil Fawlty of theirs.

Only Fools and Horses

British Situation Comedy

Only Fools and Horses, a long-running situation comedy series concerning the misadventures of a cockney “wide boy” and his naive younger brother, was first screened by the BBC in 1981, and over the next decade became the most popular and acclaimed sitcom on British television. Reflecting the capitalist fervor of Thatcherite Britain in the 1980s, a time of contrasting economic fortunes, the series celebrated the proverbial optimism of the archetypal cockney street trader, with his dreams of a wealthy future and aspirations for a better life.

The program began as an idea by writer John Sullivan, who constructed the first scripts under the title Readies and finally persuaded the BBC to risk making a whole series based on the dubious dealings of a personable cockney “fly-pitcher,” who made a precarious living selling shoddy goods and—quite without malice—duping customers (including his own family and friends) at every opportunity. Retitled Only Fools and Horses after the time-honored proverb “only fools and horses work,” the first series failed to attract much attention, but the quality of the scripts and the excellence of the actors gradually won a huge and devoted audience, and by the mid-1980s, special festive episodes topped the BBC’s Christmas ratings.

The leading role of the brash, streetwise Derek “Del
Boy" Trotter, decked out with chunky gold jewelry and well versed in cockney rhyming slang, was developed to perfection by David Jason, who deftly realized the character's combination of sentimentality and scheming unscrupulousness. Determined to improve his place in the world in the face of every setback, his Del Boy—like Minder's Arthur Daly—became a byword for shady practices, although his endearing incompetence (embodied in the rusty, yellow three-wheeled van he drove) and his breezy vulgarity ensured that he always remained sympathetic. Time and again, Del Boy's ambitious plans had to be abandoned in order to extricate another of the Trotter clan (or himself) from trouble. Often he was his own worst enemy, even when his motives were at their most pure. When he felt moved to touch up his mother's monument in the churchyard, for instance, he used his own supply of suspiciously acquired paint, and when night fell found out to his horror that it was luminous.

Del Boy's foil was his younger brother Rodney Trotter, gauche and easily misled ("a right plonker" according to his sibling, who used, or rather misused him) and played with pained indignation by former child actor Nicholas Lyndhurst. The relationship between Del Boy and Rodney lay at the heart of the series' success, veering as it did from conflict and petty deceptions to pathos and genuine warmth and mutual reliance. The premise was that Rodney had never known his father and could not remember his mother, who had died when he was a baby, thus leaving him in the care of his scornful but devoted brother. The Trotter trio was completed by dotty old Grandad, played by Lennard Pearce, and, after Pearce's unexpected death from a heart attack in 1984, by Grandad's brother, Uncle Albert (played by Buster Merryfield).

The format changed little over the years, nor did the tasteless decor of the Trotter flat in high-rise Nelson Mandela House, Peckham, or the memorable clientele of the East End pub where the brothers congregated with such "business associates" as the shady but often fooled Boycie, nicknamed Jaffa (because he was sterile, thus like a Jaffa seedless orange), and the even more dimwitted road-sweeper Trigger (so named because he looked like a horse). There were, however, some changes in the Trotter household, notably Rodney's disaster-strewn romance and eventual marriage to city banker Cassandra and Del Boy's liaison with the actress Raquel, which led ultimately to the birth of the first of a future generation of Trotter entrepreneurs, the ominously named Damien.

After a glorious run of some ten years, with both Jason and Lyndhurst successfully involved in various other television projects, the series petered out with the exception of occasional specials, which effortlessly proved that the tried and tested formula still worked.

The achievement of the series was recognized by a BAFTA Best Comedy prize in 1989 (the year of Rodney's wedding to Cassandra). In a final, forgivably sentimental outing, Del Boy's dreams of riches were unexpectedly realized by winning the lottery, although the viewers' last sight of the Trotter trio was of the incorrigible Del Boy, Rodney, and Albert walking into the sunset discussing schemes to become even richer.

Open University

Britain's Open University is an innovative and highly successful distance-learning program that utilizes a variety of media, including television and online computer resources, to extend college and graduate-level education to nontraditional, non-local students. Founded in 1969 with financial support from the government and a commitment of airtime from the BBC, the Open University offered its first televised courses in January 1971. Targeted at working adults who had not continued on to higher education, it was an immediate success: more than 40,000 people applied for 24,000 places. With more than 200,000 students enrolled, it is Britain's largest university. It has served as the model for other distance-education programs in more than 30 countries worldwide, including the Netherlands, Spain, Germany, and Australia.

The Open University is "open" in several senses. First, it is open to applicants of any age or background. Unlike conventional universities in England, there are no entrance requirements of any kind. It has also been especially useful for traditionally underserved populations, such as people with disabilities. Second, it is open in the sense that it utilizes an array of educational methods, including television and radio broadcasts, video and audio tapes, mailed correspondence lessons, email and electronic conferencing, web-based courses, and multimedia CD-ROM materials, as well as locally based tutors, regional study centers, and on-campus summer-school sessions. Third, it is open in the sense of place. It has no campus of its own, and is equally accessible to students from even the most remote locations. (Administrative offices and production facilities are maintained in Milton Keynes, England.) Fourth, it is open in terms of time. Students can set their own schedule and progress at their own pace; there is also no time limit for completion of a degree.

Originally to be called "University of the Air," television played a key role in the Open University concept from the beginning. It was felt that television served as a crucial bridge to the "average" nonacademic person. It also provided a human dimension to the prevailing distance-education model then known as correspondence study; through television, students could "meet" their faculty. Lastly, and perhaps most importantly, television offered the most cost-effective means for delivering higher education content to a mass public.

Open University courses are developed by teams of academic, education, and media specialists. Television-based course materials generally consist of printed booklets that contain the lessons, supplementary readings, and specially designed broadcast notes and exercises to accompany the television programs. Tevised lessons are approximately 30 minutes in length, aired during non-peak viewing times on BBC 2, and usually repeated during the same week. Videocassette recorders enable many students to time-shift their viewing to more convenient times. The Open University contracts with the BBC for production of the programs. Initially, most were studio productions (in black and white), but location shooting was increasingly added as more experience was gained in the educational qualities of the medium. In addition, some courses utilize archive footage from the BBC. Because the Open University pays for production costs, the programs are produced solely for use in coursework and not for wider commercial appeal. Nevertheless, some programs are no doubt watched by incidental viewers, who may develop an interest and end up taking a course. In one year, 36,000 "study packs" were sold to people who wanted to audit an Open University course without enrolling.

Television brings a number of unique abilities to the teaching/learning experience: it can broadcast an interview with a leading authority in the field under study; illustrate abstract mathematical and economic concepts through animation; show demonstrations of scientific experiments, speeding them up or slowing them down; and provide tours of actual sites of sociological, anthropological, or historical interest.

Great care is taken in course planning and execution to attain quality standards equivalent to conventional universities. An Open University degree has become well respected, and credits received are transferable to regular universities. Indeed, many Open University students, perhaps as many as two-thirds, already have the academic credentials to attend regular universities but have chosen not to for a variety of personal or logistical reasons.

**Original Amateur Hour, The**

*Original Amateur Hour* was first heard on New York radio in 1934 as *Major Bowes' Original Amateur Hour*. The following year it was programmed on CBS Radio, where it remained until 1946 when Major Bowes, the program’s creator and host, died. Two years later, the program was revived on ABC Radio and on DuMont Television, hosted in both media by Ted Mack, a talent scout and director of the series under Bowes. The radio and television programs were originally sponsored by Old Gold Cigarettes, represented on television by the famous dancing cigarette box. During its first season, *Original Amateur Hour* was a ratings sensation, and although it never equaled its initial success, its longevity is testament to its ability to attract a consistently profitable audience share.

*Original Amateur Hour* lasted on radio until 1952 and on television until 1970. The television version was ultimately broadcast over all four major networks during its long run, eventually settling in as a Sunday afternoon CBS feature during its final decade of production.

The format of the program remained virtually unchanged from its premiere in early network radio. The show was essentially an amateur talent contest, the nonprofessional status of contestants thus distinguishing *Original Amateur Hour* from *Arthur Godfrey's Talent Scouts*, which also ran during the late 1940s and early 1950s. Contestants traveled to New York’s Radio City from all parts of the United States to sing, dance, play music, and participate in various forms of novelty entertainment. Those who passed an initial screening were invited to compete on the program. Winners were determined by viewers who voted via letters and phone calls, and winning contestants returned to compete against a crop of new talent on the next program. Between amateur acts, Mack conducted rambling interviews and shared corny jokes with contestants. Contestants who won three times earned cash prizes, scholarships, or parts in a traveling stage show associated with the program. In 1951 five such shows traveled about the United States.

While most contestants fell back into obscurity following their appearance on the program, others went on to successful professional careers. Stars who first appeared on television’s *Original Amateur Hour* include ventriloquist Paul Winchell and pop singers Teresa Brewer, Gladys Knight, and Pat Boone.

*Original Amateur Hour* offered a shot at fame and fortune to thousands of hopeful, would-be professional entertainers. As such, it represented a permeable boundary between everyday viewers and the national entertainment industry. The program’s general appeal, reliable ratings, simple format, and low production costs have inspired many imitators in television, including the *Gong Show* (which resurrected the notorious rejection gong, not heard since the Major Bowes’s radio broadcasts) and, more recently, *Star Search*.

Ouimet, Alphonse (1908–1988)
Canadian Broadcasting Executive

Alphonse Ouimet was one of a small, quixotic band of public broadcasters who dreamed that television could make a truly Canadian culture. He played a commanding role as engineer, manager, and eventually administrator in the formation and maintenance of a Canadian television system during the 1950s and 1960s. But his hopes were never realized, a lesson that demonstrates the limits of the cultural power of television.

Ouimet was first employed in 1932 by a Montreal firm then experimenting with television. He joined the engineering staff of Canada's public broadcaster, soon called the Canadian Broadcasting Corporation (CBC), in 1934. After World War II, he became the CBC’s television specialist. In 1946 he began work on an international report on the technology of television; three years later he was appointed both coordinator of television and chief engineer, and in January 1953 he became general manager. Thus, he was the chief operating officer of CBC-TV (which had commenced broadcasting in September 1952) during the years it spread across the country. In one forum after another, Ouimet, CBC chairman Davidson Dunton, and other managers sold the idea of public television, supported by both tax and advertising revenues, as a tool of cultural nationalism that could counter the sway of New York and Hollywood. In the next 6 years the initial 2 stations expanded to 36 (as of March 31, 1955), 8 owned and operated by the CBC and the rest private affiliates, reaching well over 80 percent of the population. On Dominion Day, July 1, 1958, the opening of a microwave relay system from Victoria, British Columbia, on the west coast to Halifax, Nova Scotia, on the east gave the CBC the longest television network in the world. It was a great triumph of engineering and a source of national pride—although the most popular English-language shows carried on the network were nearly always American in origin.

Ouimet became president of the CBC in 1958, which made him one of few high-ranked French Canadians in the service of the federal government at that time. Ironically, his first crisis involved Radio-Canada, as the French-language service of the CBC was (and
is) known. Early in 1959 a labor dispute involving French-language producers in Montreal and English-
language managers in Ottawa eliminated most of the 
popular local programming in Quebec for over two 
months. The partial shutdown excited nationalist pas-
sions in Quebec and left behind a legacy of bitterness 
that Ouimet could never dispel.

The crisis strengthened the presumption that 
Ouimet's sympathies were on the side of authority, not 
creativity. Before long, he was portrayed as a distant 
ruler, more interested in "housekeeping" than "pro-
gram content," to borrow the terminology of one 
government commission that severely criticized the CBC 
for waste, inefficiency, and bureaucracy. Finally, in 
1966 Ouimet ran afoul of the producers in Toronto, the 
center of English-language television. Ottawa manage-
ment had tried to impose its authority over the extraor-
dinarily successful public affairs show This Hour Has 
Seven Days (1964–66), whose bold opinion and sensa-
tional style had captured a mass audience. That upset 
Ouimet, who adhered to a creed of public broadcasting 
in which the CBC was neutral, educational, and never 
partisan. When the Seven Days crew declared war on 
management, they won the support of Toronto produc-
ers, many journalists, and much of the public. Eventu-
ally, after three months of agitation, including a 
parliamentary inquiry, the appointment of a federal 
mediator, even an attempt to secure a new president, 
Ouimet had his way: Seven Days disappeared from the 
airwaves. It was a pyrrhic victory, however, since pub-
lic affairs broadcasting in Canada would not recover a 
similar kind of significance until the appearance of The 
Journal in the 1980s.

Ultimately much more significant was what had 
happened to the television system in Canada. The 1958 
Broadcasting Act led to the end of the CBC's network 
monopoly and a partial privatization of the system.
The new independent stations, especially the affiliates 
of the Canadian Television Network (CTV) in English 
Canada, used cheap U.S. programs to win audience 
share. Ouimet and his managers believed they had to 
compete by offering their own imports in order to re-
tain viewers and boost advertising revenues. Indeed, 
these revenues were necessary to support the produc-
tion of less-popular Canadian content. The annual par-
lamentary grant of funds was never sufficient.

Late in 1967, Ouimet retired from the presidency, 
though he would continue in public service as head of 
Telesat Canada (1969–80), a crown corporation in the 
field of telecommunications. He left broadcasting just 
before the onset of a new act that further reduced the 
stature of the CBC. His legacy was decidedly mixed. 
Public television still won the attention of nearly half 
the Canadian audience for its mix of popular and de-
manding programming. But the English-language ser-
vice offered only a few Canadian examples of story-
telling, the great staple of popular television, and 
specialized much more in sports coverage, news and 
public affairs, and minority programming. The promise of a cultural renaissance had never material-
ized. Direct U.S. competition had secured nearly one-
quarter of the Canadian audience outside of Quebec by 
1967. Only in French Canada was the CBC able to cre-
ate a continuing series of local dramas, known as téléromans, that proved enormously popular with au-
diences. Television merely built upon the fact that in 
English Canada tastes were emphatically American, 
whereas in French Canada there was a strong tradition 
of homegrown entertainment.

Our Friends in the North

Our Friends in the North was British television’s most ambitious, and in many respects most important, drama production of the 1990s. It was BBC 2’s most expensive-ever production at £7.5 million, and one of its longest commissions in terms of running time. It also showed that television drama could engage both the brain and the heart at a time when it seemed that British television drama had sunk into a morass of formulaic police and doctor shows.

Our Friends in the North followed the lives of four friends from the industrial city of Newcastle-upon-Tyne, in the northeast of England, between 1964 and 1995. Each episode was set in a year during this period, mainly those in which there was a general election in the U.K. This emphasized the serial’s primary theme: the relationship between people and power.

The four friends followed very different paths leading away from their shared working-class backgrounds in the mid-1960s. Dominic “Nicky” Hutchinson was a political radical, desperate to change the world and impatient with the restrictions and corruption of the political process. Mary Soulsby believed that the solution to these problems could be found in improving the mainstream parties and the system. In contrast, Terry “Tosker” Cox became a self-made businessman with little time for concerns beyond profit and pleasure. George “Geordie” Peacock had no interest in politics, but his life was constantly affected by those in power as he turned to crime and alcoholism.

The series had a tortured history before it finally reached the television screen. The author, successful playwright Peter Flannery, originally devised it in the early 1980s but the BBC hesitated to air it, as political drama was no longer fashionable. The corporation was also wary of legal action, as some of the plots affecting the characters were obviously drawn from real-life events. In the mid-1960s, Nicky worked for city boss Austin Donohue, only to discover that he corruptly organized housing contracts for a builder, John Edwards, who was aided by the Home Secretary. This referred to the scandal of the time involving an architect, John Poulson, the leader of Newcastle City Council, T. Dan Smith, and the Conservative Home Secretary, Reginald Maudling. In the late 1960s, Geordie worked in London’s red-light district of Soho for a pornographer, and was involved with corrupt detectives. This was based on true events involving the Vice Squad, and the anti-corruption investigation, Operation Countryman, in the 1970s.

The characters also found themselves in the thick of other events drawn from contemporary British history. Nicky joined a terrorist organization similar to the urban guerrilla group The Angry Brigade of the early 1970s. Tosker made money from the credit boom of the 1980s, and many characters were involved in the miners’ strike of 1984–85. Even the minor hurricane that buffeted southeast England in 1987 made an appearance.

“Seize the power” was the phrase with which Geordie teased Nicky. The series explored whether it is possible to obtain any kind of power over one’s own life, and posed this concern not only in the encounters with the police, organized crime, the Labour Party, or the political establishment, but also in the interactions between the characters and their families. Mary married Tosker after she became pregnant by him, but her real love was Nicky, whom she married in the 1980s, only to see the marriage founder over his coldness. Nicky and Geordie both had troubled relationships with their fathers, respectively distant and cynical and violently alcoholic, only to become just like them. Mary had problems with her angry, unhappy policeman son, Anthony.

Fascinating though the political plots were, it was the personal dramas that really engaged the viewer, as the show refused to provide easy answers to complex problems. The characters, viewed over thirty years of their lives, exhibit numerous personality flaws, and illustrate the difficulty of resisting compromise with society’s rules and restrictions, or one’s own worst tendencies.

This all comes together in the marvellous final episode, which is marked by scenes of intense beauty and emotion. These included Nicky weeping in isolation at his mother’s funeral and his doomed attempts to earn his senile father’s respect; Anthony telling Mary that she was not a good mother because “she was never happy”; and Geordie’s attempts to stop a father who is abusing a son. However, some hope is offered as well. Tosker is much improved by the love of a good woman, Elaine, and finally gets to fulfill his dream of playing in a rock band. Nicky and Mary put disap-
pointment and bitterness behind them and resolve to be reconciled. Only Geordie, damaged by his years of drink and prison, cannot be wholly redeemed. The closing shot was of him walking past the camera over Newcastle’s famous Tyne Bridge, toward an uncertain future.

Our Friends in the North was both a critical and popular success for BBC2. The series was marked by strong acting from all four primary figures, as well as the actor Peter Vaughan who played Nicky’s father, Felix.

Our Miss Brooks

U.S. Situation Comedy

The heart and soul of the successful 1950s sitcom Our Miss Brooks was actor Eve Arden. A Hollywood film and New York stage veteran, Arden specialized in playing the wisecracking friend to the heroine. She often did it better than anyone else, achieving her greatest success with an Oscar nomination for Mildred Pierce (1945). However, Arden’s skill with the wicked one-liner and acid aside was beginning to lead to typecasting. To find a new image, she signed on for the radio comedy role of Connie Brooks, English teacher at fictional Madison High School, a smart and sharpwitted—but ever-likable—character. Unlike most of her film roles, radio offered her the lead.

Beginning on radio in 1948, Our Miss Brooks was successfully transferred to television beginning in 1952 (it ran on both media, with largely the same cast, for several months in 1952). Between gentle wisecracks, Miss Brooks doted on nerdish student Walter Denton and frequently locked horns with crusty, cranky principal Mr. Conklin. Many of the program’s episodes revolved around Miss Brooks’s unrequited desire for Philip Boynton, the school’s biology teacher. In this way Miss Brooks was the beginning of a long list of female TV characters of a certain type, like Sally Rogers (Rose Marie) on The Dick Van Dyke Show and Jane Hathaway (Nancy Kulp) on The Beverly Hillbillies.
In 1955 ratings for the program were beginning to wane, and the series was overhauled. Miss Brooks and Mr. Conklin were moved out of Madison High to Mrs. Nestor’s Private Elementary School. For a time, there was no Mr. Boynton for whom Miss Brooks would pine, but there was a muscle-bound teacher of physical education, Mr. Talbot, who longed for Miss Brooks. This was an important turn-about in the overall premise of the show: now Miss Brooks was the pursued rather than the pursuer. (Mr. Boynton did turn up again in early 1956, just as the series was about to be canceled; in a film version of the series released by Warner Brothers in 1956, Miss Brooks and Mr. Boynton finally did tie the knot and presumably lived happily ever after.)

Connie Brooks was one of TV’s noblest working women; she was the center of a highly successful show, toiling in a realistically portrayed and unglamorous career (Miss Brooks often made mention of how low her wages were), and rewarded and honored by real workers whom she represented. While she was not quite as “no nonsense,” nor as tough, as film’s prominent working women (such as the characters played by Rosalind Russell and Joan Crawford), Connie Brooks, with her tart tongue, brisk manner, sharply cut jackets, and slim skirts, was just about as savvy as women were allowed to be on TV in the 1950s. Despite Miss Brooks's desire to become “Mrs.” Something—and despite the fact that she was never promoted to school principal—Our Miss Brooks’s legacy in television history is that it dared to depict a funny, attractive, wise, competent woman, beyond the realms of the home, marriage, and children.

Our Miss Brooks enjoyed good ratings on radio and enlarged its audience when it moved to TV. While some professional educators criticized the series, others celebrated Miss Brooks and Arden’s work: she received teaching job offers, and fan letters from educators; she was made an honorary member of the National Education Association; in 1952 she was given an award from the Alumni Association of the Teachers College of Connecticut for “humanizing the American Teacher.” Said Arden of her on-screen alter ego: “I tried to play Miss Brooks as a loving person who cared about the kids and kept trying to keep them out of trouble, but kept getting herself in trouble.”

Obviously, Miss Brooks encountered enough trouble to sustain the series for more than 150 episodes, but unlike many other female comics on TV at that time, Miss Brooks’s forte was not the wild antics of Lucy or the lopsided logic of Gracie Allen. Instead, Miss Brooks’s humor was achieved by her own sharp, observing wit and by her centered presence in the midst of a group of eccentric supporting players, including dimwitted, squeaky-voiced student Walter and pompous Conklin. Miss Brooks was always the source of the jokes, not the butt of them.
Ovitz, Michael (1946– )

U.S. Media Executive

As leader of the Creative Artists Agency (CAA) from 1975 to 1995, Michael Ovitz succeeded in increasing the importance of talent agents in the film and television industries during a key period of technological change and economic expansion in Hollywood. After a brief period as president of the Walt Disney Company (1995–96), Ovitz has been involved in talent management, as well as television and film production.

According to a fellow agent, Ovitz “redefined what an agent was” while at CAA. Ovitz modeled CAA on the legendary Music Corporation of America (MCA) talent agency led by Jules Stein and Lew Wasserman. Emphasizing teamwork, professionalism, and aggressiveness, Ovitz reshaped CAA from a small television agency that packaged programs such as The Rich Little Show and The Jackson Five Show, into a major film agency that corralled top stars, directors, and writers, including Tom Cruise, Dustin Hoffman, Barbra Streisand, Michael Douglas, Steven Spielberg, Barry Levinson, and Sydney Pollack, among others. During the early 1980s, Ovitz and his teams of agents courted contacts with access to new scripts, such as literary agent Morton Janklow, whose clients included authors Jackie Collins and Danielle Steele. These efforts resulted in successful television miniseries packaged by CAA, including Rage of Angels, Princess Daisy, and Hollywood Wives. Having signed major screenwriters, such as Joe Eszterhas, CAA then attracted and signed top film talent with the promise that it would “package” script and talent into projects, shopping those projects around to studios for financing and production. This activist approach to securing work for clients resulted in films such as Rain Man (1988), Cliffhanger (1993), and Jurassic Park (1993), as well as flops such as Legal Eagles (1986). Although studio executives complained that CAA was superseding their producing prerogatives and raising the price for talent, the studios also benefited from CAA’s efficient packaging. In effect, CAA exploited the studios’ need for more product in the face of increasing demand due to the proliferation of multiplex theaters, home video recorders, and premium-movie cable services.

CAA’s film packaging tactic simply mirrored common agency practice in television. Since the 1950s, talent agencies have packaged program concepts, scripts, actors, and directors from their stables of clients and shopped these packages around to networks for financing and production, in return for fees representing percentages of the program’s production budget and syndication revenues. If the program is a hit, packaging fees are far more lucrative for the agency than single-client commissions because the fees are paid for the life of the program, on and off network. For example, the William Morris Agency earned at least $50 million for packaging The Cosby Show; a network and syndication hit.

Having successfully addressed the studios’ need for film and television projects, Ovitz began to focus on Hollywood’s increasing need for capital investment as well. Ovitz acted as broker between film studios and investors during several transactions that helped reshape Hollywood’s ownership structure, including Sony’s 1989 purchase of Columbia Pictures, the French bank Credit-Lyonnais’s rescue of MGM in 1993, Matsushita’s purchase of MCA/Universal in 1990, and its sale to Seagram in 1995. Seeking to ap-

Oritz, Michael

Oritz's expertise to other fields, Oritz also helped shape Coca-Cola's "Always Coca-Cola" advertising campaign in the early 1990s and consulted with the "Baby Bells" (telephone and telecommunications companies) on their unsuccessful video-on-demand service, Tele-TV. By the mid-1990s, Oritz was being hailed in the press as the "King of Hollywood" for his precedent-breaking involvement in its reshaping.

In 1995 Oritz rattled the power structure of Hollywood by accepting a position as president of the Walt Disney Company to work with his then-friend, CEO Michael Eisner. Having just acquired Capital Cities/ABC, Eisner announced that Oritz would help integrate the divisions of the rapidly growing entertainment conglomerate. After barely 14 months, however, Oritz's Disney presidency ended, and his reputation as a power broker was severely undercut.

Oritz returned to the talent business in 1998 by founding Artists Management Group (AMG), whose clients included Leonardo DiCaprio, Cameron Diaz, Martin Scorsese, Michael Crichton, and Tom Clancy. Talent managers, unlike talent agents, are allowed to own equity stakes in their clients' productions in addition to earning 10 percent commissions on clients' earnings. Managers are not allowed to procure work for clients, which is the agents' job, but only advise them as to which work to accept. In keeping with his strategy at CAA to generate work for his clients, Oritz also started sister film and television production companies, Artists Television Group (ATG) and Artists Production Group (APG). The plan was to use the star power of the management group to drive production projects in which the stars (as well as Oritz) would have ownership stakes despite having no distribution control.

ATG surprised the television industry by selling four of its programs to four different networks for the fall 2000 season: The Street (FOX), Grosse Pointe (WB), The Weber Show (NBC), and Madigan Men (ABC). Although most television programs are produced by integrated film and television companies (such as Warner, FOX, and Disney) with deep pockets to absorb losses caused by the high failure rate of network programs, Oritz decided to self-finance the independent ATG, and he signed numerous expensive pacts with talent to facilitate their participation. However, episode costs of $2 million each for the critical hit The Street were not covered fully by network license fees (under the deficit financing system, networks pay 80 percent of production costs for the right to broadcast a program twice). ATG soon ran up huge deficits, cushioned only by Oritz's personal investment of an estimated $100 million. ATG produced 23 television pilots in two years, in the hope that one would emerge as a hit and in syndication generate the profits necessary to offset the failures. Unfortunately, all seven ATG programs that made it on to network schedules were canceled. In August 2001, despite having promised to produce The Ellen Show for CBS and Lost in the USA for the WB network, ATG closed its doors and sold off its assets, having succumbed to the 95 percent failure rate for new network programs. In 2002, after losing the support of major investors, Oritz also sold control of the talent management company, AMG.

Oritz's efforts as a talent agent to leverage his clients' star power into greater control over film and television projects as well as larger shares of revenues were successful from the late 1980s until the mid-1990s. Oritz and CAA were able to take advantage of Hollywood's relatively decentralized production process, which—coupled with the rising demand for blockbuster, star-driven film and television vehicles in the 1980s and 1990s—allowed CAA's agents to operate as "de facto producers" for a time. By the 2000s, however, no single talent agency retained that kind of clout. Although Oritz subsequently followed the typical career path of former agents, working as a studio executive, talent manager, and film/television producer, his post-1995 efforts have been far less successful.

Ownership

U.S. Regulatory Policy

Private ownership of the airwaves is prohibited under U.S. law. Unlike in many countries that have maintained direct ownership of broadcasting frequencies by the sovereign government, the U.S. Congress has asserted that ownership of the radio spectrum resides with the people of the United States. Users are assigned portions of the spectrum through a licensing mechanism. Control of radio licensing was first assigned to the Secretary of Commerce and Labor under the Radio Act of 1912. Subsequently communication legislation transferred licensing authority first to the Federal Radio Commission and finally its successor, the Federal Communications Commission (FCC) in 1934. Today, although no person or entity can own part of the radio spectrum, control of broadcast licenses is an issue of increasing concern both within the industry and among the general viewing public.

The FCC licenses all non-governmental broadcasting stations in the United States. Broadcast licenses are assigned to specific locales or regions of the United States, related to allocation tables that show coverage areas and areas of potential interference. Applicants must make a license application after determining whether a frequency is available for the desired community. For many years, the Commission was obliged to determine the character of the applicant, ascertaining qualifications such as citizenship, character, civic involvement in the community of license, prior experience in broadcasting, and other related factors. During the 1990s, the FCC streamlined the licensing and renewal process. Today, while the FCC still needs to determine the suitability of the applicant, rules concerning licensing have been relaxed. When there are competing applications for the same frequency assignment the Commission resolves the difficulty by means of an auction process, as mandated in the Telecommunications Act of 1996.

Historically, the FCC asserted a "scarcity theory" rationale for limiting the number of licenses that any entity could own. For example, the FCC imposed national limits on television station ownership and promulgated various rules designed to limit media companies from co-owning a television license and other media property such as a cable company, a newspaper, or a telephone service in the same market. During the 1960s, the Commission placed limits on ownership and restricted group licenses to a maximum of 5 VHF stations; later rules were relaxed to include 7 stations, then increased to 12 stations or 25 percent of the national audience. The FCC also promulgated the "duopoly rule" that limited a single owner to one AM, one FM and one TV license in a single local market. When the Commission instituted this rule in 1964, the U.S. television marketplace consisted only of 649 television stations and a small number of cable systems, which retransmitted the signals of over-the-air broadcast stations. Numerical limits were coupled with cross-ownership restrictions as a means of ensuring that the viewing public would be exposed to the widest variety of viewpoints within the local community.

Since its earliest days, the FCC has acted on the belief that diversification of media ownership generally served the public interest. Originally, numerical restrictions limiting ownership were developed to ensure that no one entity gained control of too many broadcasting stations. Additionally, limiting the number of stations that a broadcast entity could own effectively limited the power of the three original networks (ABC, CBS, and NBC) to reach into the local community. In 1975, the Commission adopted regulations prohibiting cross-media ownership between television stations and co-located newspapers. Although the FCC permitted a number of markets to continue with a co-owned newspaper-television station combination under a grandfather clause, the Commission asserted a public interest in enforcing a policy of diversification of media ownership. Even though the number of commercial television stations doubled in the thirty year period between 1966 and 1996, restrictive ownership policies remained a basic tenet of FCC policy.

The Telecommunications Act of 1996 fundamentally changed U.S. communications policy by abolishing the numerical restrictions on ownership, although it placed a maximum on national audience penetration of 35 percent. Terms for licenses changed as well. Until 1981, broadcast licenses were granted for a period of three years. During the 1980s the FCC eased license restrictions somewhat, but the Act increased license
Ownership

terms to 8 years. Additionally, section 202 of the Act required the Commission to execute a biennial review of rules and regulations with the presumption favoring the repeal or modification of unnecessary rules.

Growth of the industry, coupled with Congress’s legislative mandate in the 1996 Act to ease national ownership restrictions, have changed the media landscape in the United States, particularly in the area of radio ownership and operation. As the new millennium began, the use of the “scarcity” argument, originally offered by the Commission as the rationale for licensing and limiting ownership, has come under increasing scrutiny, particularly as the growth of broadcast outlets, cable, and satellite outlets spawned an unprecedented growth of new video services during the late 1980s and 1990s. With the passage of the 1996 Act, the FCC eased some rules and restrictions regarding local television ownership and local management agreement rules. The industry petitioned the Commission to make sweeping reforms during the 1998 biennial review, but the FCC declined to make broad changes to the rules at that time.

In 2001, Chairman Michael Powell created the Media Ownership Working Group. The group undertook a number of studies that focused on determining whether various broadcast ownership rules needed to be changed or modified under section 202 of the 1996 Act. Also, two significant cases, FOX TV Stations v. FCC and Sinclair Broadcast Group v. FCC, left the Commission with the task of either defending the current rules with substantive evidence or modifying some or all of the various ownership rules.

During the later part of 2002 the Commission released 12 studies conducted by the Media Ownership Working Group on various aspects of the ownership rules. The various ownership rules under consideration included:

1. newspaper/broadcast cross-ownership prohibition
2. local radio ownership
3. national television ownership limits
4. local TV multiple ownership rules
5. radio/TV cross-ownership restrictions
6. dual television network restrictions

Public comment was invited and the Commission set early 2003 as the time for reply. During this period various outside groups, reflecting both industry and consumer viewpoints, filed a voluminous number of comments regarding the status of the FCC rules. In June, voting along partisan lines, Powell and two other Commissioners voted to increase the ownership cap from 35 percent to 45 percent and to relax cross-ownership restrictions for newspaper ownership in all but the smallest TV markets. The Commission also lifted local ownership rules, allowing dual and triple ownership of stations in medium and large-sized television markets.

Following the Commission’s announcement, a firestorm of protests moved Congress to form a bipartisan coalition aimed at repealing the ownership caps. In the autumn of 2003, a compromise raising the cap to 39 percent was announced in the Senate. However, as the rules were set to be implemented, a federal appeals court in Philadelphia suspended all the FCC-adopted ownership changes. As this publication went to press, it was unclear whether the courts would sustain the FCC rule changes.

Proponents of relaxing ownership rules point to the increasing competition from cable and the Internet as the reason changes are necessary, but the increasing convergence of media properties has many media critics worried that the number of diverse voices in the local marketplace is decreasing. Critics of the proposed rule changes have pointed to a sharp decrease in the number of independent newspaper and television owners over the last quarter century. Some claim that relaxation in ownership rules will allow large media conglomerates to fortify their market power, although television network owners say that changes are necessary to sustain current standards of programming. Due to economies of scale and the convergence of new digital media, consolidation of television ownership may be inevitable.

Paar, Jack (1918–2004)
U.S. Talk Show Host

Jack Paar was one of television's most intriguing and enigmatic talk show hosts. He served as the host of The Tonight Show from 1957 through 1962 and headed his own NBC variety series from 1962 to 1965. Both series were stamped with Paar's volatile and unpredictable personality and were often a haven for witty, literate conversation.

Although Paar is considered one of the key talents uniquely suited to the cool medium of television, he worked extensively in other areas of show business. Leaving school at 16, he first worked as a radio announcer and later as a humorous disc jockey. During World War II Paar entertained troops in the South Pacific with his wry impersonations of officers, sometimes in concert with his army colleague Jackie Cooper. After the war, he returned to radio, serving as a fill-in for Don MacNeill on the Breakfast Club and as a panelist on The $64 Question. In 1947 he was the summer replacement for Jack Benny, a comedian whose mannerisms Paar would later emulate. Paar was signed to a contract at Howard Hughes's RKO pictures and had his first significant role in Walk Softly, Stranger (1950) with Joseph Cotten. In 1951 he made Love Nest for Twentieth Century Fox, playing the sexy boyfriend opposite an emerging starlet, Marilyn Monroe.

Paar was first employed in television as a host of game shows, notably Up to Paar (1952) and Bank of Stars (1953). In November 1953 he hosted his own daytime variety series for CBS and assembled a cast of regulars, including Edith Adams, Richard Hayes, Jack Haskell, and pianist Jose Melis. In August 1954 he took over the Morning Show from Walter Cronkite and became a competitor of Dave Garroway and the Today show. During this morning experience, Paar developed his conversational skills and an appreciation for a relaxed program with no rigid guidelines. When CBS again changed formats, Paar was given another variety series, this time in the afternoon.

Because of several well-received guest appearances on NBC's Tonight, Paar ascended to the permanent host slot on July 29, 1957. For several months before, the late-night series had floundered when original host Steve Allen moved permanently to prime time. Paar was given free rein to restore the show's luster and assembled his own freewheeling staff, including writers Jack Douglas and Paul Keyes, to give the show an extemporaneous quality. The new creative team emphasized the importance of the opening monologue as a vehicle to transmit Paar's singular, often emotional view of the world. Unlike any other host of The Tonight Show, Paar had no talent for sketches, so his writers created a persona through his words, always leaving space for the host to improvise verbally.

Called a "bull in his own china shop," Paar gained notoriety by creating feuds with others in the show business community, including Ed Sullivan, Walter Winchell, William Paley, and most television critics. To salve his often bruised ego, he surrounded himself
with a salon of eccentrics whose ranks included pianist and professional hypochondriac Oscar Levant, the outspoken Elsa Maxwell, the irreverent Alexander King, and British raconteurs Robert Morley, Bea Lillie, and Peter Ustinov. He resurrected the careers of performers on the entertainment fringe, inviting back on a regular basis the folksy Cliff "Charley Weaver" Arquette, music-hall veteran Hermione Gingold, French chanteuse Genevieve, and acerbic Hans Conreid. More in keeping with The Tonight Show ethos, Paar also nurtured young comic talent, and among his discoveries were Bob Newhart, the Smothers Brothers, Dick Gregory, Godfrey Cambridge, and Bill Cosby.

Paar also moved the talk show out of the controlled studio and began to intermingle politics and entertainment. He and author Jim Bishop journeyed to Cuba and prepared a special report, "The Background of the Revolution." Paar's unexplained embrace of Castro was vehemently questioned by Batista supporters and even the U.S. House of Representatives. Paar also became friendly with the Kennedys and invited Robert Kennedy, then serving as chief counsel of the Senate Labor-Management Relations Committee, to discuss his investigation of organized crime in the unions. The head of the Teamsters, Jimmy Hoffa, responded with a $1 million lawsuit against Kennedy and Paar, which was eventually thrown out of court. Paar was also the first entertainer to originate a program from the Berlin Wall, which he did less than a month after its construction at the height of cold war tension.

Paar became the most successful presence in late night, expanding his affiliate base from the 46 stations with which he started out to 170. In 1957 his talk show's title was changed to The Jack Paar Tonight Show, and the next season the show was taped early in the evening instead of being broadcast live. Beginning in July 1959, Paar broadcast only four nights a week; Friday night became "The Best of Paar," inaugurating a tradition of Tonight Show reruns. At the height of his fame, he objected to NBC censoring a joke about a water closet (a British euphemism for a bathroom). Incensed, he walked out at the beginning of the following evening's show, leaving announcer Hugh Downs to finish the program. His walk-off and subsequent disappearance dominated news for five weeks until he returned after an extended stay in Hong Kong.

Paar's roller-coaster ride on The Tonight Show continued until March 30, 1962, when he retired from late night, having hosted more than 2,000 hours. In September 1962 Paar returned to the variety format and produced a weekly Friday night series, borrowing the most successful elements of his talk show. Each telecast was ignited by a monologue, and the core of each program was an in-depth conversation with some of Hollywood's most voluble personalities, including Judy Garland, Tallulah Bankhead, Richard Burton, and Jonathan Winters. Paar also spiced the series with home movies of his family trips, with his wife, Miriam, and daughter, Randy, also becoming celebrities.

Paar continued to make headlines with newsworthy segments. He ventured into Gabon, Africa, to interview Nobel Prize recipient Dr. Albert Schweitzer. Richard Nixon made his first public appearance after his defeat in the gubernatorial race in California and entertained Paar's audience with a piano solo. Paar also presented the first footage of the Beatles in prime time, a performance he openly derided as the downfall of British civilization.

Paar retired from the network grind in 1965 to manage a television station in Maine. In March 1973 he was persuaded to return to late night to compete against the inheritor of The Tonight Show mantle, Johnny Carson. This time he was reduced to one week every month, as part of ABC's Wide World of Entertainment. The format that he had fostered had changed considerably, and Paar retired five months later, this time for good. In 1997 Paar was the subject of an American Masters profile on public television, a program that achieved record audience numbers for the series.
Paik was an integral part of a new generation of television personalities. Unlike an older generation trained in vaudeville and Broadway, Paar and such 1950s contemporaries as Garry Moore, Arthur Godfrey, and Dave Garroway had no specific show-business talents. They could not act, sing, or dance. They were products of an intimate electronic technology that allowed for a personalized connection with the audience. As a talk show and variety host, Paar created a complex, unpredictable character, whose whims and tantrums created national tremors.

Paik, Nam June (1932– )

U.S. Video Artist

Nam June Paik—composer, performer, and video artist—played a pivotal role in introducing artists and audiences to the possibilities of using video for artistic expression. His works explore the ways in which performance, music, video images, and the sculptural form of objects can be used in various combinations to question our accepted notions of the nature of television.

Growing up in Korea, Nam June Paik studied piano and composition. When his family moved, first to Hong Kong and then to Japan, he continued his studies in music while completing a degree in aesthetics at the University of Tokyo. After graduating, Paik went to Germany to pursue graduate work in philosophy. There he became part of the Fluxus group of artists, who were challenging established notions of what constituted art. Their work often found expression in per-
formances and happenings that incorporated random events and found objects.

In 1959 Paik performed his composition *Hommage a John Cage*. This performance combined a prerecorded collage of music and sounds with "onstage" sounds created by people, a live hen, a motorcycle, and various objects. Random events marked this and other Paik compositions. Instruments were often altered or even destroyed during the performance. Most performances were as much a visual as a musical experience.

As broadcast television programming invaded the culture, Paik began to experiment with ways to alter the video image. In 1963 he included his first video sculptures in an exhibition, *Exposition of Music—Electronic Television*. Twelve television sets were scattered throughout the exhibit space. The electronic components of these sets were modified to create unexpected effects in the images being received. Other video sculptures followed. *Distorted TV* used manipulation of the sync pulse to alter the image. *Magnet TV* used a large magnet that could be moved on the outside of the television set to change the image and create abstract patterns of light. Paik began to incorporate television sets into a series of robots. The early robots were constructed largely of bits and pieces of wire and metal; later ones were built from vintage radio and television sets refitted with updated electronic components.

Some of Paik’s video installations involve a single monitor, others use a series of monitors. In *TV Buddha* a statue of Buddha sits facing its own image on a closed-circuit television screen. For *TV Clock* 24 monitors are lined up. The image on each is compressed into a single line with the lines on succeeding monitors rotated to suggest the hands of a clock representing each hour of the day. In *Positive Egg* the video camera is aimed at a white egg on a black cloth. In a series of larger and larger monitors, the image is magnified until the actual egg becomes an abstract shape on the screen.

In 1964 Paik moved to New York City and began a collaboration with classical cellist Charlotte Moorman to produce works combining video with performance. In *TV Bra for Living Sculpture*, small video monitors became part of the cellist's costume. With *TV Cello* television sets were stacked to suggest the shape of the cello. As Moorman drew the bow across the television sets, images of her playing, video collages of other cellists, and live images of the performance area combined.

When the first consumer-grade portable video cameras and recorders went on sale in New York in 1965, Paik purchased one. Held up in a traffic jam created by Pope Paul VI’s motorcade, Paik recorded the parade and later that evening showed it to friends at Café a Go-Go. With this development in technology, it was possible for the artist to create personal and experimental video programs.

Paik was invited to participate in several experimental workshops, including one at WGBH in Boston and another at WNET in New York City. *The Medium Is the Medium*, his first work broadcast by WGBH, was a video collage that raised questions about who is in control of the viewing experience. At one point in a voice-over, Paik instructed the viewers to follow his directions, to close or open their eyes, and finally to turn off the set. At WGBH Paik and electronics engineer Shuya Abe built the first model of Paik’s video synthesizer, which produced nonrepresentational images. Paik used the synthesizer to accompany a rock-and-roll sound track in *Video Commune* and to illustrate Beethoven’s Fourth Piano Concerto. At
WNCT Paik completed a series of short segments. The Selling of New York, which juxtaposed the marketing of New York and the reality of life in the city. Global Groove, produced with John Godfrey, opened with an explanation that it was a "glimpse of a video landscape of tomorrow when you will be able to switch to any TV station on the earth and TV guides will be as fat as the Manhattan telephone book." What followed was a rapid shift from rock-and-roll dance sequences to Allen Ginsberg, to Charlotte Moorman with the TV cello, to an oriental dancer, to John Cage, to a Navajo drummer, to a Living Theatre performance. Throughout, the video image was manipulated by layering images, reducing dancers to a white line outlining their form against a wash of brilliant color, creating evolving abstract forms. Rapid edits of words and movements, and seemingly random shifts in the backgrounds against which the dancers performed, created a dreamlike sense of time and space.

Paik continues to innovate. In 2000 the Guggenheim Museum in New York mounted an important retrospective of his work, entitled "The Worlds of Nam June Paik." In addition to displaying notable pieces from other decades in Paik's career and numerous videos of his collaborations with other artists, the exhibit featured two new installations: 3-D laser light sculptures (described as "postvideo" art on the exhibition's website) surrounded by 100 upturned television monitors showing a variety of images and emitting musical excerpts, as well as by video projections on the walls of the museum.

Nam June Paik pioneered the development of electronic techniques to transform the video image from a literal representation of objects and events into an expression of the artist's view of those objects and events. In doing so, he challenges our accepted notion of the reality of televised events. His work questions time and memory, the nature of music and art, even the essence of our sensory experiences. Most significantly, perhaps, that work questions our experience, our understanding, and our definitions of "television."

William S. Paley developed the CBS radio and television networks and ran them for more than a half-century. "A 20th-century visionary with the ambitions of a 19th-century robber baron," as the New York Times described him, Paley took over a tiny failing network with only 16 affiliate stations and developed it into a world-class communications empire. Delegating management details to others, he had a seemingly unfailing sense of popular taste and a resultant flair for programming.

Radio's commercial potential came to fascinate Paley early on. Using funds from his father's cigar company shares, Paley purchased working control of the struggling CBS network in September 1928. He was just turning 27. A year later, family purchase of additional shares gave him majority control.

Paley's insights helped to define commercial network operations. At the start of his CBS stewardship, he transformed the network's financial relationship with its affiliates so that the latter agreed to carry sustaining programs free, receiving network payments only for commercially supported programs. Paley enjoyed socializing and negotiating with broadcast stars. In the late 1940s, his "talent raids" hired top radio stars (chiefly away from NBC) by offering huge prices for rights to their programs and giving them, in return, lucrative capital gains tax options. The talent pool thus developed helped to boost CBS radio ratings just as network television was beginning. At the same time, he encouraged development of CBS News before and during World War II, as it developed a stable of journalistic stars soon headed by Edward R. Murrow.

During World War II he served as deputy chief of the psychological warfare branch of General Dwight Eisenhower's staff. Paley became chair of the CBS board in 1946, turning the network's presidency over to Frank Stanton, who held the post until his own retirement in 1973. The television network first showed a profit in 1953, and from 1955 through 1976, CBS television consistently led in prime-time network ratings. Network profits helped expand CBS into many other lines of entertainment and education—including the Broadway musical My Fair Lady in 1956—as Paley acquired other businesses.

There were technical opportunities as well. CBS Laboratories' Peter C. Goldmark developed a mechanical system of color television that was briefly (1950–53) the nation's first standard, before being pushed aside by a superior all-electronic RCA system. By then, CBS had traded a quarter of its stock to buy Hytron, a TV receiver manufacturer later sold for a huge loss. More successfully, Goldmark also pioneered the long-playing (LP) record, introduced in 1948, which revolutionized the recording industry and made CBS Records (sold in 1987 to Sony for $2 billion) the leading record company in the United States for both classical and popular records.

As he stayed beyond CBS's compulsory (for others) retirement age of 65, Paley sought to delay his inevitable passing of control to others. Paley worked through several short-lived potential heirs in the late 1970s; he stepped down as chief executive officer in 1977 but retained the powerful chairmanship. Finally he hired Pillsbury's Thomas H. Wyman to become president in 1980. Wyman succeeded Paley as the network's second chair in 1983. Concerned with some of Wyman's decisions in the aftermath of an unsuccessful attempt by Ted Turner to acquire CBS in 1985, Paley allied himself with Laurence Tisch (who was by then holding the largest single block of company shares) to oust Wyman and install Tisch as chief executive officer in 1986. Paley returned as a figurehead chair until his death in late 1990.

Paley is important for having assembled the brilliant team that built and expanded the CBS "Tiffany Network" image over several decades. For many years he had an innate programming touch, which helped keep the network on top in annual ratings wars. He blew hot and cold on network news, helping to found and develop it, but willing to cast much of that work aside to avoid controversy or to increase profits. Like many founders, however, he stayed too long and unwittingly helped weaken his company.

Paley was very active in New York art and social circles throughout his life. He was a key figure in the Museum of Modern Art from its founding in 1929. He prompted construction of the Eero Saarinen–designed "Black Rock" headquarters into which the network moved in 1965. His was the primary donation that helped to create in 1976 what is now the Museum of
Television and Radio in New York City. The middle "S" in his name stood for nothing—Paley added it in his early business years. He had no formal middle name.

Palin, Michael (1943– )

British Comedian, Actor

Michael Palin is best known for his performances as a member of the six-man British comedy troupe Monty Python. Although it is surely the case that some of Palin’s most memorable work was with Monty Python, both in the group’s TV series, Monty Python’s Flying Circus, and in its films and live performances, the versatile comedian-actor also has done much notable television work on his own, including Ripping Yarns and Around the World in 80 Days.

Palin’s comedy career began at Oxford University, where he wrote and performed comedic revues with classmate and future Python Terry Jones. After graduating with a history degree in 1965, Palin moved to London, where his first TV job was as host of Now!, a teenage pop music show broadcast by the now-defunct Television West Wales. In his spare time, he continued to write with Jones, who was working for the BBC. The team wrote scripts for The Ken Dodd Show, The Billy Cotton Bandshow, and other BBC shows.

Palin and Jones first worked with fellow Pythons Graham Chapman, John Cleese, and Eric Idle in 1966, writing for The Frost Report. Palin also worked with various future Pythons on Do Not Adjust Your Set (1968–69) and The Complete and Utter History of Britain (1969), a Jones and Palin production.

In 1969 Palin, Jones, Chapman, Cleese, Idle, and Terry Gilliam (the group’s lone American) created Monty Python’s Flying Circus, after rejecting other possible titles such as “Owl Stretching Time,” “Vaseline Parade,” and “Bunn, Wackett, Buzzard, Stubble, and Boot.” The show ran on the BBC for 45 episodes, from 1969 to 1974, and took on a life of its own, spawning five films, a series of stage shows, and numerous books, records, and videos.

Some of Palin’s most memorable performances on Monty Python’s Flying Circus include a man who believes he is qualified to be a lion tamer because he already has the hat; Arthur Pewtie, who suspects his wife is being unfaithful and goes for marriage counseling, only to watch the counselor make love to his wife; a lumberjack who, in his spare time, “puts on women’s clothing and hangs around in bars” (and sings about it, backed by a chorus of Mounties); a cheese-shop owner whose shop is “completely uncontaminated by cheese.”

With a kindly face and gentle demeanor, Palin is frequently cast as a sweet, unassuming man (such as the cheated-upon Arthur Pewtie, or the stuttering animal lover Ken in the film A Fish Called Wanda). But he is equally good in more outrageous characters (like the transvestite lumberjack, or, in another Python sketch, a high court judge who removes his robe, revealing that he’s wearing only ladies’ underwear beneath).

After the TV series Monty Python’s Flying Circus ended, Palin continued to perform with the group in films, stage shows, and a series of Secret Policeman’s Balls, benefit concerts for Amnesty International that featured several comedians and musicians. Palin also hosted four episodes of NBC’s Saturday Night Live from 1978 to 1984.

In 1976 the BBC began airing one of Palin’s most memorable efforts, Ripping Yarns. Conceived, written,
and performed with Jones, *Ripping Yarns* consisted of two series, one of six shows and one of three shows. Each show had its own plot, and the plots were not interrelated; the stories were based on English tales of the early 20th century.

For the next several years, Palin appeared mostly in films. He returned to television in 1989's *Around the World in 80 Days*, a six-hour documentary of his attempt to re-create Phileas Fogg's fictional journey, retracing Fogg's route using only transportation that would have been available in Fogg's day. Followed by a five-man BBC crew, Palin traveled on trains, hot-air balloons, dogsleds, and garbage barges through Greece, Africa, India, Asia, the United States, and back to England.

Palin has since starred in a number of similar travelogues. In *Pole to Pole* (1993), he and a BBC crew traveled from the North Pole to the South Pole, through Finland, Russia, and Africa. *Full Circle with Michael Palin* (1997) took Palin around the Pacific rim, whereas *Michael Palin's Hemingway Adventure* (1999) recorded his encounters in the places Ernest Hemingway described in his writings, from Spain to Africa to Cuba. Palin also appeared in a variety of roles in a 2001 series written and hosted by fellow Python Cleese, *The Human Face*, an entertaining exploration of beauty and human expression.

Palmer, Geoffrey (1927– )
British Actor

Geoffrey Palmer is one of British television’s most reliable supporting actors, appearing in several of the most popular situation comedies of the last 20 years or so, and on occasion taking the lead role himself.

With his bloodhound features and lugubrious voice and manner, Palmer is instantly familiar in whatever role he plays. Not only is his face at once recognizable from the situation comedies in which he has appeared, but his voice is doubly well known from his frequent employment as a voice-over artist for television commercials (notably for Audi cars). After serving his apprenticeship as an actor in the theater, Palmer emerged as an accomplished performer in television situation comedy through his casting as the absentminded eccentric Jimmy, brother-in-law to Leonard Rossiter’s Perrin in The Rise and Fall of Reginald Perrin. Forever apologizing for turning up at the Perrin household in search of a meal after yet another “cock-up on the catering front,” Palmer’s Jimmy was manifestly appealing, although divorced from reality and patheti-
Palmer, Geoffrey

Palmer’s performance as Truscott, this seemingly unpromising scenario fared reasonably well, with the dotty major proving surprisingly lovable in his futile attempts to muster a competent force, despite his reactionary views and rabidly bigoted attitude toward those of differing political opinions.

His subsequent series, Executive Stress and As Time Goes By, both saw Palmer back in more familiar sitcom territory, playing belligerently adorable partners in support of strong female stars—in the first instance, Penelope Keith (in the role of her husband, Donald Fairchild) and in the latter case, Judi Dench (in the role of her old flame, Lionel Hardcastle). Executive Stress proved a mixed success, although Palmer gave good value as always, but As Time Goes By settled in well as the plot traced the reunion of the two erstwhile lovers. Palmer played a returned colonial planning to write his memoirs, to be typed up by Dench’s secretarial agency. This led to the gradual rebirth of their romance, culminating in their marriage in the 1995 series.

Palmer has occasionally ventured out of the sitcom territory with which he is usually associated. Notable examples of experiments in other fields of comedy have included guest appearances in such acclaimed shows as Fawlty Towers and Blackadder Goes Forth, in which he played Field Marshall Haig.

Panorama
British Public-Affairs Program

The longest-running current affairs program anywhere in the world, Panorama has long been among the most influential of all British political commentaries. The first program was broadcast in 1953, but the format was quite different then, with a magazine-style approach. The original presenter was newspaper journalist Patrick Murphy, although he was soon replaced by Max Robertson. Alongside them were roving interviewer Malcolm Muggeridge, art critic Denis Mathews, book reviewer Nancy Spain, and theater critic Lionel Hale, who all made their varied contributions to the fortnightly program.

Everything changed in 1955, when the program was relaunched under the slogan “window on the world.” With the new look came a new anchorman, Richard Dimbleby, who over the next few years did much to establish Panorama’s reputation for determined investigation into important political and social matters on behalf of the viewing public. Politicians were suddenly obliged to take the program seriously, and senior members of the government soon learned that their standing in the polls could very easily depend on their performance on this show, the BBC’s current affairs flagship.

In 1961 Panorama achieved a notable first when Prince Philip agreed to be interviewed by Dimbleby, thus becoming the first member of the royal family to make such a television appearance. Dimbleby was impeccably courteous but nonetheless extracted from the royal guest the sort of things the viewing public wanted to hear.

The show has had its lighter moments, however. Perhaps the most memorable of these was the April Fool hoax perpetrated by Richard Dimbleby when he delivered a straight-faced report on the state of the Swiss spaghetti harvest, delivered while walking between trees festooned with strings of spaghetti. Many viewers were taken in and rang the program to ask how they may obtain their own spaghetti plants; the producer suggested that planting a tin of spaghetti in tomato sauce might do the trick.

The late 1950s and early 1960s are sometimes looked upon as the “golden era” for the program, but this view belittles Panorama’s continuing achievement, which has kept it at the forefront of investigative programs despite the burgeoning of often very competent rival programs on other networks. It remains the case that the headlines on the morning after the program often reflect what has been discussed on Panorama the night before, and prominent politicians freely admit that appearances on the program have played a key role in furthering or hindering their careers and even in deciding the results of both local and national elections over the years. In view of the influence wielded by the program, any political bias that has been perceived in its editorial approach has led to furious rows in Parliament, and to repeated affirmations by the BBC that this, perhaps still their best-known current affairs program, will remain resolutely nonaffiliated.

Among the most notable of Richard Dimbleby’s successors in the chair of Panorama have been his son David Dimbleby; Robin Day, who set a new standard in the hostile interviewing of such reluctant political guests as Alastair Burnet; Charles Wheeler; and Robert Kee.

The removal of the program to a Sunday-night slot in the 1990s was opposed by many who feared for the show’s future, but it remains a significant feature in the schedule.

Patrick Murphy
Max Robinson
Park, Nick (1958– )
British Animator, Animation Director

The name of Nick Park is synonymous with that of Aardman Animations, the Bristol-based company founded in the early 1970s by Peter Lord and David Sproxton that has been responsible for a highly successful series of 3-D stop-frame animation shorts made for British television. The most celebrated of these shorts have been the three films featuring the adventures of Wallace, a nondescript northerner with a flair for ramshackle invention, and his perspicacious but put-upon dog, Gromit. The first, A Grand Day Out, started out as Park’s graduation project at the National Film and Television School (NFTS), where he studied animation from 1980 to 1983, and was finally completed in 1989. The Wrong Trousers was screened on BBC 2 at Christmas 1993: the highest-rated program over the two-day holiday period, it went on to become one of BBC Worldwide’s most valuable properties both for video sales and merchandising. It also brought Park his second Academy Award for Best Animated Short, the first having been picked up for another Aardman film, Creature Comforts, in 1991. The third in the Wallace and Gromit trilogy, A Close Shave, also won an Oscar in 1996.

Park’s work with Aardman Animations is a popular manifestation of the wider, if less frequently reported, success enjoyed by British animation since the 1980s, much of which has been nurtured by Channel 4 and its commissioning editor for animation. Aardman’s highly successful work on commercials—particularly the captivating “Heat Electric” campaign, a stylistic and thematic development of Creature Comforts—has also allowed the company to spread its wings, a reminder of the importance of this area of television production as a source of funding and creative experiment in a country bereft of a subsidized film industry.

Park began making puppet animations in his parents’ attic at the age of 13, using the family’s Bell and Howell 8 mm camera. He was persuaded to show his work at school, and in 1975 his entry in the European Young Filmmaker of the Year Competition, Archie’s Concrete Nightmare, was shown on BBC Television. He completed a B.A. in Communication Arts at the Sheffield Arts School before going on to study animation at the NFTS. His work shows the signs of his early fascination with science fiction and monster films and the special effects of Ray Harryhausen, as well as his later admiration for the imaginative animated puppetry of Ladislaw Starewicz, Jiri Trnka, and Jan Svankmajer. However, it is the influence of a childhood filled with Heath Robinson inventions (his parents once fashioned a caravan from a box and set of wheels, fitting it out with makeshift furniture and decoration) that seems to permeate the world of Wallace and Gromit, a world of handmade objects, idiosyncratic domestic details, and, above all, enterprising mechanical contraptions.

Park’s stop-frame animation of plasticine models has developed into a distinctive and highly sophisticated technique and is often perceived as the Aardman house style, although the company has used a number of other processes—in the Peter Gabriel “Sledgehammer” pop promo, for example, on which Park collaborated with several independent animators, including the Brothers Quay. The method grew out of Aardman’s work in the 1970s on sequences for BBC Children’s Television featuring Morph, a plasticine character ca-

Parker, Everett C. (1913– )

U.S. Media Activist

Everett C. Parker played a leading role in the development of public interest of American television. He served as director of the Office of Communication of the United Church of Christ from 1954 until 1983. In that position, he was at the forefront of Protestant communications, overseeing the public media activities of one of the leading mainline Protestant religious groups. He is better known, however, for two other contributions: his leadership in the development of an influential media reform and citizen action movement in broadcasting; and his activism directed at improved broadcast employment prospects for women and mi-
orities. Near the end of his career, he was named one of the most influential men in broadcasting by the trade publication *Broadcasting Magazine*.

Parker had an early career in radio production. After a year at NBC in New York, he founded and became head of an interdenominational Protestant Church broadcasting organization, the Joint Religious Radio Committee (JRRC). The JRRC was formed to serve as a counterbalance to the dominance of the Federal Council of Churches in public-service religious broadcasting. Besides its impact on programming, the JRRC also addressed the impact of media on society and public-interest issues in broadcasting. The JRRC was an early vocal supporter of reserved FM frequency assignments for educational use, for example.

While a lecturer in communication at Yale Divinity School, from 1949 until 1954, he headed the Communication Research Project, the first major study of religious broadcasting. This project resulted in the definitive work on religious broadcasting for nearly two decades, *The Television-Radio Audience and Religion*, coauthored by Parker, David Barry, and Dallas Smythe.

In 1954 he founded the Office of Communication of the United Church of Christ, the first such agency to combine press, broadcasting, film, research, and educational functions in one unit. The office pioneered programs to improve the communication skills of ministers, to improve the communication activities of local churches, and to use television for education. It also participated in the production of some landmark television programs, including *Six American Families*, a nationally syndicated documentary series produced in collaboration with Westinghouse Broadcasting Company and the United Methodist Church.

The work of Parker and the office took an important turn in the 1960s, as the civil rights movement was gaining momentum. After reviewing the civil rights performance of television stations in the South, the office identified WLBT-TV in Jackson, Mississippi, as a frequent target of public complaints and Federal Communication Commission (FCC) reprimands regarding its public service. In 1963 the office filed a “petition to deny renewal” with the FCC, initiating a process that had far-reaching consequences in U.S. broadcasting. The FCC’s initial response to the petition was to rule that neither the United Church of Christ (UCC) nor local citizens had legal standing to participate in its renewal proceedings. The UCC appealed, and in 1966 Federal Appeals Court Judge Warren Burger granted such standing to the UCC and to citizens in general. After a hearing, the FCC renewed WLBT’s license, resulting in another appeal by the UCC. Burger declared the FCC’s record “beyond repair” and revoked WLBT’s license in 1969.

Based on this new right to participate in license proceedings, Parker’s office began to work with other reform and citizens’ groups to monitor broadcast performance on a number of issues, including employment discrimination and fairness. In 1967 the office’s petition to the FCC dealing with employment issues led to the commission’s adoption of Equal Employment Opportunity (EEO) rules for broadcasting. In 1968 it participated as a “friend of the court” in the landmark *Red Lion* case, which confirmed and expanded the Fairness Doctrine.

Parker and the office continued to play a central role in the developing media reform movement throughout the 1970s and 1980s, in cooperation with organizations such as Citizens’ Communication Center, the Media Access Project, the National Citizens’ Committee for Broadcasting, Ralph Nader’s Public Citizen organization, and a variety of other religious and civic groups. The attention of this movement broadened in subsequent years to include cable television and telecommunications and telephone policy. These organizations became active in the developing change in regulation and eventual breakup of AT&T during the period from 1978 to 1984.

In his later years, Parker devoted more attention to issues of employment in broadcasting and the communication industries. In 1974 he established Telecommunications Career Recruitment, a program for the recruitment and training of minority broadcasters, with the cooperation and support of the Westinghouse Broadcasting and Capital Cities Broadcasting companies.

Upon his retirement in 1983, *Broadcasting Magazine* somewhat grudgingly hailed him as “the founder of the citizen movement in broadcasting” who spent “some two decades irritating and worrying the broadcast establishment.” He went on to found the Donald McGannon Communication Research Center at Fordham University, where he teaches graduate courses in Communication Policies and Practices, Critical Issues in Electronic Communication, and Public-Service Communication.

Parkinson
U.K. Talk Show

The benchmark for British chat shows on television since its inception in 1971, Parkinson—under the no-nonsense, gruff Yorkshire control of host Michael Parkinson (born 1932)—successfully embraced almost every legendary colossus from Hollywood’s Golden Age. Michael Parkinson’s laudable obsession with the richness of 1930s and 1940s glamour gave these unforgettable encounters an affectionate and endearing aura of wide-eyed fan meeting unattainable hero.

Indeed, unlike his contemporaries and later wannabe successors to the throne, Parkinson’s original run of high-profile chat encounters relied not on the subject attempting to remorselessly plug his or her latest book, film, or marriage, but rather on a relaxed career overview in the guest’s autumn years. It was the 1970s, when vintage films were gradually being accepted as something more than cheap television time fillers on a Sunday afternoon. Parkinson reunited veteran gangster pals James Cagney and Pat O’Brien, showcased a laid-back singing set from Fred Astaire, chatted with awe with a typically ebullient Orson Welles, and sat back openmouthed as Bing Crosby, on his final trip to Europe, reflected on years in the limelight, and more. Only Frank Sinatra seemed to elude this one-stop London chat shop for visiting American entertainment gurus.

Parkinson also had—and has—a fondness and familiarity with comedians, both established and upcoming. Most famously, he was the first to champion and promote Billy Connolly south of the Scottish border, with Connolly delighting the presenter and eventually becoming the most oft-repeated and warmly greeted
guest. Reunions are always good television, and for admirers of anarchic British comedy none was more welcome than the special "Parkinson Meets the Goons" edition, so popular that the BBC released the sound track as a record. Manic architect of the Goonish movement, Spike Milligan, was ill in Australia and joined the show via television link, while Harry Secombe and Peter Sellers joined Parkinson in the studio. Parkinson also delighted in the unpredictable insanity of Tommy Cooper and the flamboyant camp of Kenneth Williams, who was once beautifully partnered by his friend Maggie Smith in a solemn and moving poetry reading.

It was often Parkinson's love of incongruous gatherings of interviewees that made even the most average or uninspiring guest list literally come alive with tension, admiration, or a mixture of both. The very first program presented the tennis ace Arthur Ashe on the same bill as comedian Terry-Thomas. Later in the run, Peter Cook, with his almost estranged cohort Dudley Moore, sat back and waited for the comic inroads as British boxer John Conti explained the need for sexual abstinence before a big fight. Beloved British comedians Eric Morecambe and Ernie Wise were pitted alongside a stunningly attractive, lowcut-gown-wearing Raquel Welch, who, initially straight-faced, described the time when her famous "equipment" (her shapely figure) arrived. Violin virtuoso Stefan Grappelli, from the jazz school, and Yehudi Menuhin, from the classical school, delivered a mesmerizing rendition of "Honeysuckle Rose."

However, in 1987 Parkinson the show and Parkinson the man were ousted from British television. Various suggestions—ranging from a lackluster attitude on the part of the BBC to Parkinson's own disinterested reactions to the so-called stars who joined him in the same studios that once hosted the now-departed Hollywood royalty he adored—could not fully explain why the program was pulled from the air. ITV tried to resurrect the format, first with Parkinson One-to-One and then with Parky in the late 1980s.

Then, in a climate of chat show slump and "personality" overload, a glut of classic Parkinson-hosted compilation repeats proved ratings winners. Therefore, after a successful and ongoing Sunday Supplement program for BBC Radio 2 (which allowed Parkinson to play his favorite music and, once a show, interview a famous guest), the BBC television show was resurrected for a new generation. Parkinson's hair may have become grayer, his suits slightly more trendy, and the format a bit more commercially minded, but very little else had changed in the decade-long hiatus. Whole programs were now devoted to the great and the good of show business, with the elusive John Cleese, the charmingly reticent Woody Allen, the beguiling Victoria Wood, and the omnipotent Sir Paul McCartney gracing the program, itself an almost sainted and revered part of the British national consciousness. Cocky rocker Robbie Williams summed it up when, with gleeful amazement, he turned to the camera, addressed his watching mother, and exclaimed, "Look, I'm on Parky!"

Comedy was still crucial to the mix. Paul Merton (lately of Have I Got News for You) was the first guest on the brand-new programs, while Connolly made a clutch of appearances with his world-weary and energetic observations on life very much intact. The guest mixtures were as effective as ever, with old alternative comedian chums Ben Elton (plugging his latest novel) and Robbie Coltrane (fresh from creating the role of Hagrid for the Harry Potter series) sharing the stage with Hollywood hard-hitter Samuel L. Jackson.

However, the overshadowing demons of Parkinson's own reluctance to continue were unintentionally but pointedly embraced with one particular edition of the show. Football (soccer) legend George Best and extravagant pop musician Sir Elton John were juxtaposed with new-millennium football hero David Beckham and his Spice Girl wife, Victoria. The contrast and unspoken contradiction was typically electric.

In the long interim between the show's runs, the replacements and pretenders to the Parkinson chat throne (from Terry Wogan to Jonathan Ross) all seemed to be bigger personalities than the guests they were trying to hype. In contrast, Parkinson did not try to justify his name as the star attraction of the program; he was more than happy to sit back and be entertained with familiar or unfamiliar anecdotes from the worlds of film, music, and sports.

Still, as an elder statesman with his hands still very much on the steering wheel, Parkinson has passed beyond criticism into that reassuringly and untouchable bracket of national treasure. Even the brilliant lampooning of Parkinson on Alistair McGowan's Big Impression, which superbly highlights Parkinson's often brusque, unrelenting, and incoherent interviewing style, cannot damage him. It may well be that arguably his greatest interview, with Muhammad Ali on October 17, 1971, will remain the chat benchmark, as Parkinson bristled and shone opposite the erudite fighter, who with menace sweetened with tenderness muttered, "You can't beat me mentally nor physically!" Parkinson, for all his faults and foibles, remains the best of the bunch for one simple reason—he lets his guests talk.

Parkinson, Michael (1935– )
British Television Personality, Host

Michael Parkinson was the most successful of the British chat show hosts who proliferated in the 1970s and earned a lasting reputation as a viewers' favorite. He subsequently exploited his role in a variety of other television series.

A Yorkshireman to the core, Michael Parkinson started out as a newspaper journalist but later moved to Granada Television, where he worked on current affairs programs, and then to the BBC, where he joined the 24 Hours team and also indulged his enduring love of sport, producing sports documentaries for London Weekend Television.

Priding himself on his Yorkshireman's "gift of the gab," he made his debut as a chat show host with his own Parkinson show in 1971. Broadcast every Saturday night for the next 11 years, the show became an institution and set the standard for all other television chat show hosts to meet. Relaxed, well groomed, and attentive to his guests' feelings, Parkinson nonetheless proved adept at getting the best out of the celebrities who were persuaded to come on the show, without causing offense. The questions he asked were often innocuous and served as invitations to the guest to assume the central role. The best interviews were with those who had a tale to tell and the confidence to tell it without much prodding from the host; Parkinson was sensible enough not to interrupt unless it was absolutely necessary. At the top of the list of dynamic guests Parkinson interviewed were Dr. Jacob Bronowski, Diana Rigg, Shirley MacLaine, the muppet Miss Piggy, Dame Edith Evans, the inimitable raconteur Peter Ustinov, comedian Billy Connolly, and boxer Mohammad Ali, who responded magnificently to the geniality and flattery that the devoted Parkinson lavished on him.

If Parkinson took a personal dislike to a guest, he tried not to let it show (though viewers were quick to detect any animosity). Among those he later confessed to finding most difficult were comedian Kenneth Williams, who appeared a total of eight times on the show and was quick to use Parkinson as a verbal punching bag, and Rod Hull's Emu, the ventriloquist-dummy bird who wrestled an unusually disheveled Parkinson to the floor to the delight of the audience and the barely concealed fury of the host himself.

After the long run of Parkinson came to an end in the early 1980s, after 361 shows and 1,050 guests, Parkinson worked for a time as a chat show host on Australian television, then busied himself with helping to set up the troubled TV-AM organization in the United Kingdom in 1983. After the collapse of TV-AM, he returned to the roles of sportswriter, radio presenter, and host of a range of popular television shows, ranging from quizzes to the antiques program Going for a Song. In 1998 he revised his role as host of Parkinson, attracting return visits by many of the guests he had last interviewed in the 1970s and 1980s. The show continues to air Saturday nights at 10:30 on BBC 1.

Parliament, Coverage by Television

At present almost 60 sovereign states provide some television coverage of parliamentary bodies. Among them are countries as diverse in political organization as Australia, Germany, and Japan, Hungary, Bulgaria, and Russia, China, Denmark, and Egypt. With varying allocations of control of the coverage between media entities and chamber officials, countries provide this form of televised information to citizens in response to three related perceptions on the part of governmental institutions: a lack of public familiarity with Parliament and its distinctness from the executive; a lack of public knowledge of citizenship; and the desire to form channels of communication between the public and politicians that can avoid the mediation of media owners and professionals.

In 1944 the British War Cabinet argued that "proceedings in Parliament were too technical to be understood by the ordinary listener who would be liable to get a quite false impression of the business transacted." It favored professional journalists as expert
mediators between public and politics. Winston Churchill regarded television as "a red conspiracy" because it had a robotic component that combined undifferentiated mass access with machinelike reproduction. But debates over televising proceedings in Britain were common from 1965, with 12 separate parliamentary proposals discussed between 1985 and 1988. Arguments for TV rested on the medium's capacity both to involve the public in making politicians accountable and to involve politicians in making the public interested. Arguments against coverage centered on the intrusiveness of broadcasting equipment, the trivialization through editing of the circumstance and pomp integral to British politics, the undue attention to the major parties and to adversarial division that TV would encourage, and the concern that established procedures and conduct would change to suit television. Channel 4 screened a program called Their Lordships' House from 1985. The Lower House rejected a proposal for coverage that year, but trial Commons telecasts commenced in late 1989, despite the then prime minister's opposition. The public had become an audience that must be made into a citizen. Consider the position enunciated by contemporary British Conservative politician Norman St. John-Stevas: "To televise parliament would, at a stroke, restore any loss it has suffered to the new mass media as the political education of the nation."

This was already a given elsewhere. In postwar Germany, televising the Bundestag was said to be critical for democratizing the public. Proceedings came to Netherlands television in 1962, via three types of coverage: live for topical issues, summaries of less important debates, and "flashes" on magazine programs. The first years of the system saw considerable public disaffection because Members of Parliament (MPs) tended toward dormancy, absence, novel-reading, and jargon on-camera. Over time, MPs came to attend at the same time as producers, viewer familiarity with procedural norms grew, and ratings increased on occasions of moment. In France, it was two years after President Pompidou resignedly intoned that "Whether one likes it or not, television is regarded as the Voice of France" that a clutch of broadcasting reforms required certain stations to cover the National Assembly. It is no surprise, similarly, that during the extraordinary events in Czechoslovakia at the end of 1989, the opposition Civic Forum made the televising of Parliament one of its principal demands.

Sometimes such moves have amounted to a defensive reaction, at others to a positive innovation. The European Parliament was directly elected from 1979. It has used TV coverage for the past decade in search of attention and legitimacy. Recordings and live material are available to broadcasters without cost, to encourage a stronger image for the new Europe. Second-order coverage of the Parliament had always been minimal, due to lack of media interest, but it increased markedly with live TV material. The rules on coverage are more liberal than elsewhere, even encouraging reaction shots and film of the public gallery. When Ian Paisley, a Northern Ireland member, pushed in front of Margaret Thatcher to display a poster in 1986, and interrupted the pope's speech in 1988, his demonstration was broadcast and made available on tape. One thinks here of the chariots that go into the Indian countryside with video recordings of political rallies and speeches to be shown on screens to five thousand at a sitting. Direct TV politics can be a special event. Uganda adopted color television to coincide with a meeting of the Organisation of African Unity, and the first live broadcast of the Soviet Union's new Congress of People's Deputies in 1989 attracted a record 200 million viewers across a dozen time zones, a 25 percent increase on the previous figure. A side effect was assisting in the formation of a new image overseas. For American journalists, televising parliamentary sessions helped to bring the USSR into the field of political normalcy.

In the United States, despite the introduction of a bill in 1922 providing for electronic media coverage of Congress, with a trial the following year, there were no regular radio broadcasts of proceedings until the signing of the Panama Canal Treaties of 1978. The opening of the Eightieth Congress in 1947 was carried on television, but this was mostly proscribed until 1971. The major drive for change stemmed from the results of public opinion polls from the early 1970s suggesting
that politicians were held in low esteem. Regular closed-circuit trials were instituted in 1977. Following successful coverage of the Connecticut and Florida State legislatures, the House of Representatives allowed routine broadcasts from 1979. After extensive tests, the Senate agreed to the same in 1986. The service is available via Cable-Satellite Public Affairs Network (C-SPAN and C-SPAN2), which also broadcasts House and Senate committees, Prime Minister's Question Time from the British House of Commons, and an array of public-policy talkfests.

The political process has also been modified by the use made of new communications technologies, designed to break down mediation between politicians and publics in the United States. Direct contact between congresspeople and their constituents has positioned them at the leading edge of applications of cable, satellite, videocassette recording, and computer-aided interaction. Alaska, for example, has a Legislative Teleconferencing Network that permits committees to receive audio and computer messages from citizens. Ross Perot linked six U.S. cities by satellite in 1992 to convene a "nationwide electronic rally," a metonym for the "electronic town hall," which was to administer the country should he become president; he would debate policies with Congress and have citizens respond through modem or telephone.

The most spectacular recent examples of U.S. parliamentary coverage are the Senate Judiciary Committee's Judge Thomas confirmation hearing of 1991 and the appearance of Oliver North before a congressional committee in the 1987 hearings into funding the Contras in Nicaragua. The evidence about Clarence Thomas and Anita Hill was so "popular" that its competition, Minnesota versus Toronto, drew the lowest ratings ever for a baseball play-off. North's evidence had five times as many viewers as General Hospital, its closest daytime soap opera competitor. Most commentators on that hearing clearly read it intertextually, referring to acting, entertainment, and stars in their analysis. CBS actually juxtaposed images of North with Rambo and Dirty Harry, emphasizing the lone warrior against an establishment state that would not live up to its responsibilities. North assisted this process in his promise "to tell the truth, the good, the bad and the ugly." Much media attention was given to Reagan's words of admiration to North: "This is going to make a great movie one day." The reaction of the public was similarly remarkable. Polls that showed that years of government propaganda still found 70 percent of Americans opposed to funding the Contras saw a 20 percent switch in opinion after the hearings. Once the policy issue became personalized by North, and opposition to him could be construed as the work of a repressive state, congressional television viewing became popular and influential.

Conversely, rules enunciated by the British Select Committee on Televising the Commons prohibit cutaway reaction shots, other than of those named in debate. Close-ups and shots of sleeping members are also proscribed. Disruptions lead to a cutaway to the Speaker. These restrictions persuaded Channel 4 to abandon plans for live telecasts, although the House decided to permit wide-angle shots in 1990 in order to increase the televisuality of the occasion. How should one read instructions that insist that: "Coverage should give an unvarnished account of the proceedings of the House, free of subjective commentary and editing techniques designed to produce entertainment rather than information"? Such a perspective contrasts starkly with the response to falling public interest in watching convention politics made by Roone Arledge, network news president of the American Broadcasting Company: "The two political parties should sit down on their own, or maybe with the networks, to come up with something more appealing to the American people."

For the most part, parliaments want to control coverage. Guidelines on the use of file footage of proceedings issued by Australia's Joint Committee on the Broadcasting of Parliamentary Proceedings, for example, are concerned about the unruly gazes of directors and publics. They insist on maintaining continuity, avoiding freeze frames, and receiving guarantees that material will not "be used for the purposes of satire or ridicule." After the first day of Question Time TV in Britain, a Conservative member stated that "some of the men—I happen to know—are carrying powderpuffs in their pockets to beautify their sallow complexions." And who can forget former U.S. House Speaker Tip O'Neill's sensational findings on TV coverage of Democratic and Republican Party conventions: "If a delegate was picking his nose, that's what you'd see.... No wonder so many of us were skittish"? Satire can never be kept far apart from pomposity.

Parliament, Coverage by Televisio
Partridge Family, The

U.S. Situation/Domestic Comedy

*The Partridge Family* was broadcast on ABC from 1970 to 1974. A modest ratings success, the show peaked at number 16 in the ratings for the 1971–72 season. Although *The Partridge Family* never attracted huge audiences, it was a major hit with younger viewers. The series was also distinguished for spawning highly successful, if short-lived, commercial tie-ins. Children's mystery books and comic books featured the Partridges; their musical albums were heavily promoted; and David Cassidy, one of the actors, became a teen idol.

The Partridges were a fatherless family of six who decided, in the premier episode, to form a rock band and tour the country in a psychedelicly painted school bus. Most episodes began at the family home in California. Under the leadership of 1970s supermom Shirley Partridge (Shirley Jones), the five Partridge kids survived various capers that almost always culminated in successful concerts. Mom covered lead vocals. Teenage son Keith (David Cassidy) helped keep the family in line. Keith sometimes clashed with sister Laurie (Susan Dey), and everyone clashed with ten-year-old brother Danny (Danny Bonaduce), the freckle-faced drummer who was always looking for the big score. Danny's special nemesis was band manager Reuben Kinkaid (David Madden), an irritable man with a knack for getting the family into trouble when the plot needed fresh complications. Two younger Partridges, Chris and Tracy, rounded out the cast, along with a next-door neighbor, Ricky, and Reuben's nephew Alan, who joined the show in 1973.

The show was not a sustained hit in syndication. During the 1990s, however, a retro vogue endowed *The Partridge Family* with minor cult status. With their shag hairdos, flair pants, and polyester outfits, the Partridges epitomized the early 1970s. MTV vee-jay Pagan Kennedy praised the show for having made rock 'n' roll culture seem both exciting and benign: "The Partridge Family took drug culture, made it square, and added kids. It was hipness for the under-10 crowd."

The dramatic formula of the show—something between *The Brady Bunch* and *Scooby Doo*—rarely receives scholarly attention. References occasionally note Shirley Partridge's status as a supermother in the Donna Reed mold. For the most part, the show is remembered for its successful commercial tie-ins. Several Partridge Family songs became genuine hits, including the theme, "Come On, Get Happy," and "I Think I Love You," which sold 4 million copies. On the Partridge Family albums, Jones and Cassidy sang their own parts, but studio artists supplied background vocals and music. The family never toured (since they did not play their own music), but Cassidy had a brief and wildly successful career as a pop singer. At the heights of his popularity, he could fill stadiums with prepubescent girls.

In 1973–74 *The Partridge Family* was switched from Friday nights to Saturday nights, opposite *All in the Family* and *Emergency*. The ratings quickly fell and the show was canceled before the next season. A
cartoon sequel, *Partridge Family: 2200 AD*, brought the Partridges back to life in space. The show played Saturday mornings for one season (1974–75), featuring voices from the prime-time cast.

Jane Pauley is best known as longtime morning broadcaster for NBC’s Today, an NBC news reporter, and, most recently, as a cohost for NBC’s popular news-magazine, Dateline. Her career began at the age of 21, when she was hired as daytime and weekend caster at WISH-TV in Indianapolis. Four years later she was appointed as the first woman to anchor the evening news at WMAQ, Chicago. Despite low ratings, Pauley was selected in 1976 to interview as a possible successor to Barbara Walters as Tom Brokaw’s cohost on NBC’s Today. Competing with well-known reporters Linda Ellerbee and Betty Rolin, Pauley was chosen for the position, shocking the industry and disappointing critics who found her too cheery, young, and pretty. Though fans embraced Pauley for these qualities, NBC News president Dick Wald defended Pauley’s hire based on her poise and control. Her honest address and family commitment, radically different from the more reserved Diane Sawyer, made Pauley popular with female baby boomers. Pauley spent the next 13 years cohosting Today. Her team ushered the program past ABC’s Good Morning America, to become the number one morning show in the United States.

When NBC hired Bryant Gumbel, a sportscaster with no news experience, to succeed Tom Brokaw as head anchor, a compliant Pauley remained in the coanchor seat. Her career seemed to flounder further when renowned Washington reporters Chris Wallace and Judy Woodruff joined the morning group, pushing Pauley to the periphery. Finally, in 1989, NBC brought 31-year-old Debra Norville to the Today team, to attract a youthful audience. Sensing she would soon be replaced, Pauley threatened to break her $1.2 million Today contract two years early, to which NBC responded with the offer of Pauley’s own prime-time magazine show. Despite the fact that she had prevailed in a long, hard-nosed battle and achieved a notable appointment, the media cast Pauley as a spurned wife, to the mistress Norville. Nevertheless, Pauley departed gracefully with a sincere, on-air good-bye to Norville, leaving the show’s ratings to tumble 22 percent during sweeps week, and ultimately losing its number one spot to Good Morning, America.

Following this media soap opera, Pauley herself became the news item of the day, appearing on talk shows, featured in magazines and on Life magazine’s cover, in December 1989, which proclaimed, “How Jane Pauley Got What She Wanted: Time for Her Kids, Prime Time for Herself.” Pauley became deputy anchor to Tom Brokaw on the NBC Nightly News, and in 1989, her magazine pilot, Changes, received the highest ratings in its prime-time slot. Her subsequent 1991 show, Real Life with Jane Pauley, featuring human interest reports for her traditional audience, aired five successful summer segments. In pursuit of a broader audience, the magazine was revamped in 1992 as...
Dateline NBC, adding investigative reporting, and reporter Stone Philips aboard as cohost. Dateline suffered a huge press attack on its ethics when it was discovered that producers staged the explosion of a General Motors truck for an auto safety report; viewers, however, stayed tuned, and by 1995 Dateline was a consistent ratings winner.

By calling NBC's bluff, Pauley was catapulted to the ranks of other women investigative TV reporters such as Maria Shriver, Connie Chung, and Diane Sawyer. Nevertheless, Jane Pauley continues to be framed by the mass media and NBC as the maternal, baby-boom, career heroine of television news fame.

Pauley is a trustee of the Radio and Television News Directors Foundation and a fellow with the Society for Professional Journalists (SPJ).

Paula Gardner

Jane Pauley. Born in Indianapolis, Indiana, October 31, 1950. Educated at Indiana University, B.A. in political science 1971. Married: Gary Trudeau (Doonesbury cartoonist); three children. Began career as TV reporter, WISH-TV, Indianapolis, 1972-75; various positions as reporter and anchor with NBC News programs, since 1975. Recipient of numerous awards, including the Edward R. Murrow Award; multiple Emmy Awards; the Radio and Television News Directors Foundation's Leonard Zeidenberg First Amendment Award; and the first national Matrix Award from the Association for Women in Communications. Inducted into the Broadcasting and Cable Hall of Fame, 1998. Honorary degrees: DePauw University, Indiana University, Notre Dame University, Providence College.

PAX Television

PAX Television (also known as PAX-Net) was launched in 1998 by West Palm Beach, Florida, media magnate Christian Lowell White "Bud" Paxson. PAX-TV is now considered to be the seventh network (joining ABC, CBS, NBC, FOX, UPN, and WB). Currently reaching 88 percent of Nielsen households, PAX is the largest owned and operated network of stations in the country. On basic cable PAX-TV reaches more homes than Lifetime, Turner Network Television, or USA Network. Previously the owner of cable television’s Christian Network, The Home Shopping Network, and multiple radio stations, Bud Paxson conceived of PAX-TV as an “antinetwork network” that would challenge existing broadcasters in two central ways: PAX-TV would invert the traditional model of network-affiliate business practices; and it would depart from the “mainstream” in its network branding, programming, and audience address. PAX-TV’s fairly rapid growth and gradually increasing ratings success was initially premised on these “antinetwork” practices. However, by 2004, commitment to this corporate strategy had led to contentious struggles with business partners and legislators that suggested PAX-Net would have to reinvent itself to remain a force after the U.S. television industry’s mandated transition to digital television in 2006.
The bulk of PAX stations are low-power, UHF outlets (only 4 of the network's 96 affiliates are VHF outlets). Each station has, typically, fewer than five personnel. No PAX station has a news division or produces its own local news. Essentially, each PAX station serves purely as a distribution site for national programming. The few staff members at each station are dedicated to local and regional advertising sales that form the majority of PAX-TV's revenue stream. In prime time, particularly, this emphasis raises the cost-per-point to an immensely profitable level that allows PAX to endure and prosper in spite of relatively low ratings compared with its competitors.

In terms of network identity and audience appeals, while most early press surrounding PAX-TV's emergence referred to it as a "Christian network," Paxson does not consider his stations to be explicitly Christian. Rather, Paxson, his executives, and network promotions and programming all posit PAX-Net as a national family network representing a non-denominational yet spiritually uplifting haven for viewers presumed to feel alienated by mainstream media. In this regard, the former chief executive officer, Jeff Sagansky, has described PAX-Net's brand as "upbeat, positive, family-friendly," characterized by "no sex, no violence, no profanity," and featuring "values-based spirituality" with "no cynicism."

In spite of its antinetwork focus, PAX-TV has succeeded largely due to strategic alliances with traditional networks that have allowed PAX to marshal capital, extend market penetration, and procure program product. PAX-TV started broadcasting in 1998 with programs that, while clearly fitting its professed brand ethic, were also almost exclusively former CBS program fare, particularly programming owned and distributed by CBS Films (a film production and distribution studio separate from though related to the CBS television network). Such programs included Touched by an Angel (which remains, in this writing, the most popular program on PAX network), Dr. Quinn, Medicine Woman, Diagnosis Murder, Christy, Dave's World, Life Goes On, and Promised Land. In its first year, PAX's entire weeknight prime-time schedule consisted of series that had aired or were concurrently airing on CBS (i.e., syndicated on PAX while in first run on CBS). Further, PAX-TV's day-to-day operations were overseen by former CBS Entertainment executive Jeff Sagansky (who resigned in August 2003 after five years at the helm). By the year 2000, PAX expanded its "PAX Originals" programming to include a range of original dramatic series and reality and game-show series. Examples include Doc (featuring country and western singer Billy Ray Cyrus as a country doctor transplanted to New York City), The Ponderosa (a prequel to Bonanza), Miracle Pets, Twice in a Lifetime, Supermarket Sweep, and Next Big Star. PAX currently features one or more original series six nights a week in prime time. The network also continues to program syndicated shows formerly on CBS, such as Diagnosis Murder and Touched by an Angel, as well as rebroadcast programming that originated on NBC, including the game show The Weakest Link and the drama Mysterious Ways.

In relation to the growing "family values" media niche, PAX remains distinct because it is arguably more accessible to interested viewers than family-oriented channels available only via cable or through a direct broadcast satellite dish. Unlike the family-oriented Hallmark Channel, or ABC Family and its sister network the Disney Channel, PAX stations remain available in most markets via traditional over-air broadcast delivery (though the quality of these signals is often compromised due to their origination on UHF).

PAX's institutional growth and development largely was staked on provisions of the Telecommunications Act of 1996. The Telecommunication Act's significance for PAX-Net was twofold: it upheld must-carry rules that require cable franchises to carry all local broadcast channels, including the low-power UHF stations that make up the 92 of the 96 stations in the PAX network chain. This provided PAX-TV with a much larger start-up audience than it might have otherwise been able to attract. The 1996 Act also relaxed restrictions that limited the number and types of local stations individual companies could own which enabled the development of duopolies in major television markets. In 1999 this enabled Paxson to sell 32 percent of his company to NBC at a cost of $415 million. The terms of the NBC-PAX partnership gave NBC the option to purchase PAX television stations as well as first-refusal rights on sales of PAX-TV stations located in the top-70 U.S. television markets. Paxson retained the option to buy out the cash value of NBC's ownership stake as of September 2004. The PAX-NBC partnership was originally designed to allow the networks
to share programming and to enable programs preempted by local NBC affiliates to be aired within that same market on PAX. In most markets, PAX affiliates also "repurpose" or rerun the local NBC affiliate's local late newscast, a half hour after its first airing on NBC. And yet recent FCC rules changes, proposed legislation regarding UHF spectrum auctions, and PAX-Net's professed "family values" orientation have led to uneasy relations with media industry critics, some legislators, and strained relations with NBC.

Initially, PAX-TV's start-up was marred by an uproar over its explicitly conservative promotions in major news and television industry trade papers condemning the major networks for "promoting "alternative lifestyles""—a phrase often invoked in the press to refer to gay and lesbian populations. Later, PAX battled NBC over its Memphis station's refusal to broadcast Will & Grace (a program that features two homosexual characters in its ensemble cast) because of PAX executives' perceptions that the highly rated NBC program conflicted with PAX's family-friendly programming mission. Because local Memphis affiliate WMC-TV was contractually obligated to carry a Memphis Grizzlies basketball game, Memphis's PAX affiliate, WPXX, was slated to air NBC's entire Thursday night lineup that night. WPXX agreed to air only the first and last hour of the prime-time bloc, thus excising Will & Grace and Just Shoot Me from the Memphis market area.

More recently, the PAX-NBC partnership has been jeopardized by NBC's purchase of the Spanish-language network Telemundo. While Bud Paxson entered into the NBC partnership with hopes that PAX-Net would one day be a full-fledged member of the NBC network "family," he has stated that NBC's acquisition of Telemundo suggested NBC's lack of commitment to PAX on three fronts: the potential purchase by NBC of PAX stations; NBC's commitment to strengthen PAX's business; and as regards the development of shared NBC-PAX programming. As ownership rules restrict operation of more than two stations in major markets, PAX-Net affiliates were now placed at risk in cities such as Los Angeles, New York, Chicago, and Miami, where NBC and Telemundo both have a strong presence. Finally, pending legislation proposed by the George W. Bush White House—in anticipation of U.S. TV's transition from analog to digital—would require clearing television broadcasters from channels 60 to 69 to be auctioned for wireless radio use. This would have a potentially devastating impact on PAX because over 17 percent of its network affiliates are located in the UHF spectrum at channel 60 or above. As of fall 2003, the PAX-Net station group was opening discussion with potential buyers in anticipation of the likely conclusion of its partnership with NBC, set for renegotiation in 2004 (at which point Paxson has the option to buy out NBC's large stake in his network).

Pay Cable

Pay or premium cable is a cable television service that supplements the basic cable service. Most cable system operators carry one or more pay-cable services (called "multipay") on their systems and make them available to customers for a monthly fee that is added to the basic fee. Cable customers who choose not to subscribe to pay cable receive a scrambled signal on the pay-cable channel or channels. The monthly pay-cable fee is subject to unit discounts whenever a customer subscribes to two or more pay-cable services.

Pay-per-view (PPV) and video-on-demand (VOD) are two additional forms of pay cable that require cable television customers to pay for individual programs rather than a program package. PPV customers order
movies, sports, or other event programs from their cable system and view the programming at a time determined either by the system operator or the event scheduler. VOD customers, via a more sophisticated digital delivery technology than is required for PPV, are able to order recorded programming for viewing at a time determined by the customers themselves. The cable customer's monthly bill reflects the total cost of each PPV and/or VOD program or event viewed during the preceding month.

Subscription video-on-demand (SVOD) is yet another kind of pay-cable service that several cable systems were providing customers by late 2001. SVOD could best be described as a hybrid of pay cable and VOD whereby a cable customer pays a monthly fee (about $10 in 2001 figures) to access selections from the SVOD program library for viewing at a time convenient to the customer. The same digital delivery technology required for VOD also is required for SVOD.

Since pay-cable services are supported by subscriber fees, they carry no commercials. Pay-cable programmers usually schedule programs that are unique and that may never be seen on basic cable or broadcast television. These include sports events; musical concerts; first-run, uncut movies; and program series produced by or for a particular pay-cable service. Some movies carried on pay cable are especially produced by the pay-cable service; others were released originally for theatrical viewing prior to their availability for a pay-cable audience.

Some 48 million U.S. households (accounting for nearly 72 percent of all cable television households in the United States) subscribed to a pay-cable service by early 2001. Pay-cable subscribers typically pay about $10 per month (in 2001 figures) above their basic cable service charge. Any cost figure above or below the average depends on the total number of pay-cable services in the subscriber's package and the package discount allowed by the subscriber's cable system operator. The operator keeps approximately 50 percent of the fees collected from pay-cable subscribers. The other 50 percent goes to the company or companies originating the pay-cable service.

Pay cable predates the cable industry by several years. The first known pay television or subscription television (STV) service in the United States was a short-lived experimental effort by Zenith Radio Corporation in 1951 called Phonevision. During its 90-day life span, Phonevision offered daily movies carried by a special telephone line to some 300 Chicago households. Two other experimental STV services, one in New York City and one in Los Angeles, followed the Phonevision lead in 1951 but met with a similar fate.

The Federal Communications Commission (FCC) enacted rules in 1957 that severely limited STV program acquisition. The rules prevented STV from "siphoning" movies and special events such as sports from "free" television to pay television. In 1969 FCC rules were revised to limit any STV service to a single channel, available only in communities already served by at least five commercial television stations. Such restrictions for STV and, by then, pay cable were eliminated by a 1977 U.S. Court of Appeals decision that declared that the FCC's pay television rules infringed on the cable television industry's First Amendment rights.

The court of appeals decision was especially important to the Home Box Office (HBO) pay-cable service. The idea behind HBO was conceived by Charles F. Dolan. Financial assistance from Time-Life Cable to launch HBO was followed by agreements with Madison Square Garden and Universal Pictures allowing HBO to carry live sports events and recent movies. HBO was launched on November 8, 1972, providing pay-cable programming (a professional hockey game and a movie) to 365 Service Electric Cable subscribers in Wilkes-Barre, Pennsylvania. In less than one year, HBO's service was carried by 14 cable television systems to more than 8,000 cable customers.

New ground was broken in pay-cable distribution in 1975, when HBO first carried its service via satellite to UA Columbia Cablevision subscribers in Fort Pierce and Vero Beach, Florida, and to American Television and Communications Corporation subscribers in Jackson, Mississippi. The first satellite distributed (via RCA's Satcom) pay-cable programming was the Muhammad Ali–Joe Frazier championship boxing match from Manila. A nationally distributed pay-cable network was in the making but would not be a reality until HBO managed to convince prospective cable system affiliates to spend nearly $100,000 to purchase the necessary satellite receiving dish and accompanying hardware.

By 2001, 30 companies had launched national pay-cable services in the United States. HBO remained the largest, with 33 million subscribers receiving the service from more than 9,300 cable systems. In 2001 other leading national pay-cable services (with subscribership numbers that exceeded 1 million) were Cinemax, Showtime, the Movie Channel, Encore, Starz, and the Sundance Channel. One regional pay-cable service, The New England Sports Network, was carried by 169 cable systems and reached some 1.5 million subscribers in 2001. Several national pay-cable services also had subdivided themselves by 2001 in order to serve a more specific group of viewers. For example, HBO provided programming via the HBO Family and HBO Latino channels.
Since their inception pay-cable services have struggled to satisfy subscribers, who frequently choose to disconnect from pay cable after a brief sampling period. According to surveys of subscribers, such “churn” occurs because low-quality movies are repeated too often, making pay cable a poor entertainment value.

The pay-cable industry is at a disadvantage in combating this criticism because of the preference (based on financial considerations) that the movie industry has for pay cable’s chief rival—home video. Production companies whose movies score particularly well at the box office generally follow the movies’ theatrical run by release to the home video market. The movies are then available for rental or purchase on videocassettes and DVDs and sometimes may be released to air on PPV cable services several weeks or months before they appear on pay cable. Pay-cable services that are best able to compete with home video in coming years may be those that have the financial resources to produce their own movies and original series.

Pay cable has therefore gained greater attention in recent years on airing original programming. HBO, in particular, has achieved critical success with such program series as The Sopranos and Sex and the City. Several pay-cable services have turned to boxing as the most popular choice for their sports-minded viewers. Also, many pay-cable services have begun airing a heavier schedule of programs during late evening hours aimed primarily at adult viewers.

Pay-per-view/Video-on-Demand

Pay-per-view (PPV) is a pay-cable offshoot that allows cable television subscribers to access movies and special one-time-only events and to pay a preannounced fee only for the single movie or event viewed. Most cable system operators offer two or more PPV channels to their customers. The signal on each PPV channel is scrambled until the cable subscriber chooses to view programming on one of the channels. At such time, the subscriber contacts the cable system headend, either by phone or with an interactive handheld remote control, to order the PPV programming. Following the initial order, a computer at the headend activates a device near the subscriber’s television set called an “addressable converter,” which unscrambles the ordered PPV program signal for the program’s duration. All PPV “buys” are totaled by computer and added to the cable subscriber’s monthly bill.

Video-on-demand (VOD) is a relatively new program-delivery service akin to PPV. VOD allows cable customers equipped with addressable converters to order recorded programming whose start time can be determined by the customers themselves. An array of program titles are digitally stored in a server located at the cable system headend and distributed to cable customers as ordered. Billing procedures for VOD buys is the same as that for PPV buys.

The history of PPV and pay cable shared a parallel course until 1974, when Coaxial Communication inaugurated the first true PPV service in Columbus, Ohio. The service, called Telecinema, provided movies priced at $2.50 per title. Telecinema shortly succumbed to pay cable’s better revenue stream. Warner Cable introduced Columbus to another short-lived PPV service via its interactive QUBE system in 1978.
Pay-per-View/Video-on-Demand

Not until late 1985 did two satellite-distributed national PPV services appear. Viewer’s Choice was launched on November 26, 1985, and Request Television was launched a day later. By 2001, 13 PPV networks were in operation in the United States. The In Demand network led its competitors in cable-system carriage as well as subscriber potential. More than 1,750 systems carried In Demand to over 24 million addressable subscriber households. By 2000, in the United States there were more than 52 million addressable cable households (75 percent of all cable households) capable of receiving PPV programming. VOD deployment was just beginning to gather steam at the beginning of the 21st century. By the end of 2001, some 36 VOD services were either operating or preparing for launch. In all, these services were meant to reach more than 6 million cable households.

PPV programming falls into two broad categories: movies and events. Movies occupy most PPV network schedules. However, following their initial theatrical run, most movies that perform well at the box office are released to home video before they are accessible through PPV. Only after videocassette or DVD versions of the movies have been available for rental or purchase for a period (called a “window”) ranging from 30 to 90 days are they then available for PPV. VOD programming also consists primarily of movies, with a growing number of customers—PPV and VOD alike—preferring adult (i.e., sexually explicit) movies and associated adult fare such as “call-in” programs.

The PPV event category may be subdivided primarily into sports and concerts. Sports, especially professional boxing and wrestling, occupies a commanding share of the category. Professional baseball, football, basketball, and hockey, as well as several college football teams, all make some of their games available to PPV subscribers.

Pricing PPV events is a matter of what the market will bear. In 2001 PPV prices for professional boxing matches ranged from $40 to $50. Rock concerts and other musical events during the same period ranged in price from $10 to $20. Movies generally cost between $3 and $4 per title. It is risky to predict what PPV subscribers will pay for an event and what the buy rate (the percentage of PPV subscribers who choose to buy a movie or event) might be. For instance, NBC bet that 5 million subscribers would pay between $95 and $170 apiece for access to daily live events of the 1992 Summer Olympics from Barcelona. The so-called Triplecast—for the three PPV channels that carried the events—proved a failure, however, and NBC eventually tallied its Triplecast loss at nearly $100 million.

Apart from such failures as the Triplecast, PPV revenues have continued to rise. PPV revenues for 2000 stood at more than $2 billion. Most of that revenue came from the purchase of movies, but roughly one-fifth was generated by sports and musical events and another one-fifth was generated by adult movies and associated programming. Wrestling events such as “Wrestlemania” led other sports events in total buy rates. Also, cable system operators were finding that in terms of adult PPV services, the more explicit the content, the higher the buy rate. Buy rates for VOD customers were highest (roughly 70 percent) in the hit movie category. About 20 percent of VOD buys were in the adult programming category. Program buying characteristics that were emerging in 2001 showed that fewer than 20 percent of PPV customers accounted for nearly 80 percent of all PPV buys, and the buy rate for VOD movies was nearly triple that of PPV movies.

The success of PPV cable has been and continues to be a function of promotion. One cable executive labeled PPV a “marketing-intensive business” that relies on an “impulse buy” strategy to attract subscribers. The PPV industry’s future appears firmly in place, however, with predictions that nearly one-quarter of the 500-channel cable system of tomorrow will be occupied by PPV program networks.
VOD was still a relatively new service at the beginning of the 21st century. Nonetheless, cable system operators were hoping that customer embrace of VOD would help build digital-cable penetration, which had reached nearly 14 million households (accounting for roughly 20 percent of all U.S. cable households) by the end of 2001. Cable operators also were counting on VOD to help stem the number of persons who were choosing direct broadcast satellite (DBS) services over cable. By the end of 2001, new DBS subscribers led new cable subscribers by a 3-to-1 ratio. Another delivery system that stood poised to compete with cable was computer-based streaming video. A service launched by Microsoft in late 2001 provided its high-speed Internet customers in selected markets with the opportunity to download VOD movies at a cost comparable to that charged for video rentals. However, any advantage that one delivery system might have over another eventually may depend less on technology than on the deals that VOD providers make with movie producers for their product.

RONALD GARAY

Pay Television

Advertiser support has been the foundation for American broadcast television since the industry’s beginnings. It is worth noting, however, that many experiments with direct viewer payment for television programs also have taken place throughout television history. The idea for pay television (also known variously as “toll” or “subscription” television) actually dates to television experiments of the 1920s and 1930s (at which point the method of financing a national television system had not yet been determined) and can be traced through various developmental stages leading up to modern satellite-carried pay-cable program services.

Many pay-TV systems have been proposed over the years. Some have been designed to transmit programming to subscribers’ homes over the air, typically on underutilized UHF frequencies. Other systems have been designed to transmit by wire, sometimes wires shared by community antenna or cable TV systems. Various methods have been tested for ordering pay-TV programming and unscrambling the electronic signals.

Until the proliferation of modern satellite-delivered pay program services (both pay-cable and direct satellite), only a small portion of the many planned pay-TV systems ever reached the experimentation stage. Fewer still were used commercially. Economics certainly have had an impact on the fortunes of pay-TV, as has the recurring hesitation of the Federal Communications Commission (FCC) to approve the systems. Even when the commission actually granted permission for testing, final approval for commercial use tended to take many years. Furthermore, no fewer than six major FCC rulings on pay-TV have been handed down over the years, only to be amended in subsequent decisions. Regulators have been aware of ongoing opposition to the various forms of pay-TV on the part of commercial broadcasters and networks, movie theater owners, citizens groups, and other constituencies.

In 1949 Zenith Radio Corporation petitioned the FCC for permission to test an over-the-air pay system called Phonevision. The test was run over a period of 90 days in 1951 with a group of 300 households in Chicago. Phonevision was a system of pay television that used telephone lines for both program ordering and decoding of its scrambled broadcast signal.

In 1953 Skiatron Electronics and Television Corporation tested a different over-the-air system, “Subscriber-Vision,” that used IBM punch cards for...

Stump, Mel, “Quietly, Cable VOD Efforts Head toward Critical Mass,” *Multichannel News* (November 5, 2001)
billing and unscrambling. The programming was transmitted on New York independent station WOR during off-hours.

Also in 1953 the International Telemeter Corporation, partly owned by Paramount Pictures, launched a combination community antenna/wired pay-TV operation in Palm Springs, California. Broadcast signals from Los Angeles were delivered without charge, and subscribers paid for additional programming through coin boxes attached to their television sets. This system lasted through 1955.

The Telemovies system was launched in 1957 in Bartlesville, Oklahoma, by Video Independent Theatres (VIT). Telemovies offered a first-run movie channel and a rerun movie channel. The movies originated from a downtown studio and, in the case of the first-run selections, were shown concurrently in VIT’s local movie theaters. Telemovies charged a flat monthly rate rather than a per-program fee. After undergoing several changes, including the addition of community antenna service, the system ceased operations in summer 1958.

In the late 1950s, in the wake of the much-publicized failure of the Bartlesville system, International Telemeter announced its latest coin-box system—designed to use either wires or broadcast signals to transmit programming. The site chosen for a test of a wired version of the system was Etobicoke, Ontario, a suburb of Toronto, under the auspices of Paramount’s Canadian movie theater subsidiary. Service began there on February 26, 1960, with 1,000 subscribers, and continued through 1965.

On June 29, 1962, two years after its petition for an experimental license had been filed with the FCC, a Phonevision system was launched in Hartford, Connecticut. By this point, Phonevision had become a joint venture between RKO and Zenith. Phonevision programming was broadcast on WHCT, a UHF station licensed specifically for the Phonevision trial. Although it never made a profit, the Hartford experiment ran through January 31, 1969, and the system won FCC approval for nationwide use in 1970.

Subscription Television Inc. (STV) was launched in July 1964 and continued through November of that year—a short-lived but nonetheless highly touted pay-TV system. STV was the heir (through a complicated series of stock transactions) to Skiatron’s over-the-air system. The two major figures behind STV were Skiatron’s Matthew Fox and former adman and NBC executive Sylvester L. (Pat) Weaver. STV had built wire networks in San Francisco and Los Angeles, and the company planned eventually to wire major cities as well as to incorporate existing CATV systems. Although STV’s three channels offered a mixture of sports, movies, children’s programs, and theatrical performances (typical of most pay-TV systems), it was baseball that provided the foundation for its programming.

Both wired and over-the-air pay-TV systems were launched in the 1970s. In 1977 over-the-air systems were started in Newark, New Jersey, by Wometco-Blonder-Tongue (over station WWHT) and in Corona (Los Angeles), California, by Chartwell Communications (over station KBSC). By 1980, 8 others were in operation, with an additional 16 stations authorized and ready to launch. These over-the-air systems were developing concurrently with satellite-delivered cable program services, however, and were not able to compete with the wired medium once it became available in major urban areas.

By the early 1970s cable had become the preferred vehicle for pay television, with most start-up pay ventures seeking to run their services on local cable systems. Since the early 1950s cable operators had been experimenting with channels of locally originated programming for their systems. While not directly a form of pay-TV, these experiments suggested the possibility that cable could offer more than simply retransmitted broadcast signals—a potential not lost on pay-TV entrepreneurs.

The most notable early pay-cable operation was Home Box Office, which launched in 1972 by providing cable systems with pay programming via microwave relays in the northeastern United States. When HBO took its program service to satellite in 1975, it gained the potential to reach virtually any cable system in the United States. Other pay-cable program services were to follow, including Showtime, the Movie Channel, and others.

During the 1990s cable began to face serious competition from direct broadcast satellite technology. As the new delivery technology began enticing consumers with multiple premium and pay-per-view services, traditional cable also began to make multiple versions of popular premium channels available—aided by the increased use of fiber optics and digital compression.

Pay-cable’s programming has developed as well. In the early 2000s, premium cable channels such as HBO and Showtime boast some of television’s most highly acclaimed programming. In addition to made-for-cable movies, this includes original series such as Oz, Sex and the City, and The Sopranos on HBO, and Queer As Folk on Showtime.

Peck, Bob (1945–1999)
British Actor

The British actor Bob Peck shot to television stardom in 1986 in the acclaimed BBC drama serial, Edge of Darkness. His performance as the dour Yorkshire policeman Ronald Craven, inexorably drawn by his daughter’s sudden and violent death into a passionate quest for the truth behind a series of incidents in a nuclear processing facility, won him Best Actor Awards from the Broadcasting Press Guild and the British Academy of Film and Television, as well as establishing an image of brooding diffidence that was to set the seal on a number of subsequent roles. His aquiline, yet disconcertingly ordinary, countenance was to become familiar to television audiences even if his name did not always spring to mind. Following the success of Edge of Darkness, and particularly toward the end of his life, Peck was much in demand for voice-overs and documentaries, to which his distinctive bass tones lent a potent mixture of assurance and mystery, as well as an association with the integrity of purpose that characterized his performance as Craven. Success in Edge of Darkness also brought him film roles, notably in the British productions The Kitchen Toto and On the Black Hill in 1987, then, most famously, as the doomed game warden Muldoon in Jurassic Park (1993).

Peck received no formal training as an actor but studied art and design at Leeds College of Art, where, in an amateur dramatic company, he was spotted by the writer-director Alan Ayckbourn, who recruited Peck to his new theater company in Scarborough. After stints in the West End and regional repertory, Peck joined the Royal Shakespeare Company, where he stayed for nine years, playing a wide range of parts in classical and contemporary work. One of his final appearances for the company was in the double role of John Browdie and Sir Mulberry Hawke in the epic dramatization of The Life and Adventures of Nicholas Nickleby, subsequently televised on Channel 4 in 1982. Along with Anthony Sher, Bernard Hill, and Richard Griffiths, Peck was one of a number of established stage actors in the early 1980s to be brought into television for roles in major new drama serials by BBC producer Michael Wearing.

Peck’s performance in Edge of Darkness embodied the paradox that is at the heart of the drama. Just as the labyrinthine plot remorselessly exposed the apocalyptic vision behind a veneer of English restraint, so Craven was depicted as a detached loner, whose mundane ordinariness hid long-repressed emotions and whose enigmatic composure exploded into bursts of grief, passion, and—in the closing moments—primal anguish. In this sense, Peck’s was also a performance that, like other work of this period (such as Hill’s Yosser Hughes in Boys from the Blackstuff), brought to the surface the expressionistic subcurrents of a new wave of British television drama realism. Peck was cast as Craven partly because an unknown actor was wanted for the role and because it was written for a Yorkshireman, yet there are mystic and mythic elements in the quest conducted by this seemingly ordinary character that ultimately assume epic proportions. The plot called for long sequences of physical activity and energy, but Peck’s real achievement was a granite-like impassivity that just managed to hold back the pain and possible madness behind the character’s stoic endurance. This tension was cleverly offset by the puckish outlandishness of Joe Don Baker’s performance as the CIA agent Jedburgh.

The figure of Craven was partly reprised in the serial Natural Lies (BBC, 1992), where Peck played an advertising executive, Andrew Fell, accidentally stumbling across a conspiracy to cover up a BSE-like scare in the British food industry. In Centrepoint (Channel 4, 1992), another dystopian drama, Peck played Armstrong, a surveillance expert, this time with far-right
security connections. In a serialization of Catherine Cookson's *The Black Velvet Gown* (Tyne Tees, 1991), Peck brought his brooding presence to the role of the reclusive former teacher Percival Miller. He also played a real-life police officer in the drama-documentary *Who Bombed Birmingham?* (1990); a member of the Securitate state police in a semifictional account of the Romanian revolution, *Shoot the Revolution* (1990); and the role of the detective sergeant in the psychological crime thriller *The Scold's Bridle* (1998).

Peck's range, however, was wider than the image of the tormented hard man might suggest. Perhaps his most highly acclaimed performance after *Edge of Darkness* was as the mild-mannered, accident-prone academic James Westgate, who falls victim to his childhood sweetheart's psychopathic desires, in Simon Gray's Prix Italia–winning television play *After Pilkington* (BBC, 1987). Like many actors of his generation, Peck also was able to bring his stage experience to bear on a variety of classical roles, from Gradrind in the BBC serialization of *Hard Times* (1994) and Shylock in a Channel 4 production of *The Merchant of Venice* (1996) to Nicias in *The War That Never Ends* (BBC, 1991)—a drama-documentary account of the Peloponnesian Wars written by former Royal Shakespeare Company director John Barton—and Dante in Peter Greenaway and Tom Phillips's *A TV Dante: The Inferno Cantos I-VIII* (Channel 4, 1989).

In the stage play *In Lambeth*, transposed to television in 1993, Peck played the role of Thomas Paine in an imaginary encounter with the poet William Blake, and, in the same year, he renewed his relationship with the work of Edward Bond in Bond's play for the *Crime and Punishment* season, *Tuesday* (1993). "It's nice to be able to sympathize with what you're having to say," Peck remarked when playing Paine. Much of his later voice-over work, from ecological series to documentaries on Britain's clandestine support for Francisco Franco during the Spanish Civil War or the sugar trade in the Dominican Republic, reflected that quiet social commitment. Peck's last work for television was in two British/Russian animated programs, as the voice of Chaucer in *The Canterbury Tales* and Joseph of Arimathea in *The Miracle Worker*.

Pee-wee's Playhouse

Pee-wee’s Playhouse, a half-hour CBS-TV Saturday morning live-action “children’s show,” aired from 1986 until 1991 and was enormously popular with both children and adults. The program won six Emmy Awards and a host of other accolades during its first season. Incorporating clips from vintage cartoons and old educational films, newly produced 3-D animation, hand puppets, marionettes, and a cast of endearingly eccentric characters led by a gray-suited and red-bow-tied Pee-wee Herman (Paul Reubens), Pee-wee’s Playhouse might best be described as a flamboyant takeoff on the genre of children’s educational TV—a sort of Mister Rogers’ Neighborhood meets MTV. Each week the childlike Pee-wee welcomed viewers into his Technicolor fantasyland and led them through a regimen of crafts and games, cartoon clips, “secret words,” and “educational” adventures via his Magic Screen. Yet, in stark contrast to the high moral seriousness of its predecessors, Pee-wee’s Playhouse was marked from its outset by a campy sensibility and frequent use of double entendre, allowing different types of viewers to enjoy the show in many different ways. As The Hollywood Reporter put it, Pee-wee’s Playhouse was “TV gone Dada... skillfully balanc[ing] the distinction between low-camp and high performance art.”

Pee-wee Herman was the brainchild of Reubens, an actor who developed the rather nasal-voiced and somewhat bratty character through routines and skits in comedy clubs. Reubens as Pee-wee (the ruse was to present Pee-wee as a “real” person and not just a character) appeared on comedy and talk shows and in a successful Los Angeles theater production, The Pee-wee Herman Show, which quickly developed a cult following after it was taped and aired on Home Box Office. In 1985 the character starred in Tim Burton’s debut feature film, Pee-wee’s Big Adventure, and the next year Pee-wee’s Playhouse premiered on CBS. Based on The Pee-wee Herman Show, the Saturday morning series was considerably less “adult” than the theater piece had been, although it incorporated many of the same supporting characters, including lusty sea-man Captain Carl (Phil Hartman in his pre-Saturday Night Live days) and the magical genie Jambi (co-writer John Paragon), the latter a disembodied head in a box who granted Pee-wee’s wishes. Other (human) characters appearing on the TV show included Reba the mail lady (S. Epatha Merkerson), the pretty girl-next-door Miss Yvonne (Lynne Stewart), the King of Cartoons (William Marshall and Gilbert Lewis), cowboy Curtis (Larry Fishburne), Tito the lifeguard (Roland Rodriguez), Ricardo the soccer player (Vic Trevino), and the obese Mrs. Steve (Shirley Stoler). Puppetry was employed to create the characters of bad-boy Randy, the Countess, Pteri the Pterodactyl, Conky the Robot, Globey the Globe, Chairy the Chair, and many others. Newly produced animated sequences focused on a young girl named Penny, a family of miniature dinosaurs who lived in the walls of the Playhouse, and a refrigerator full of anthropomorphized food. Music for the shows was provided by cutting-edge artists such as Mark Mothersbaugh, Todd Rundgren, Danny Elfman, and Van Dyke Parks. Dolls and toys of both Pee-wee and other Playhouse denizens were successfully marketed, and something of a Pee-wee craze spread through popular culture. Episodes of the series were aired in prime time in November of 1987, and another feature film, Big Top Pee-wee, was released in 1988. That same year Pee-wee’s Playhouse Christmas Special aired in prime time, featuring most of the regular characters plus a plethora of special guest stars, including k.d. lang, Zsa Zsa Gabor, Little Richard, the Del Rio Triplets, Cher, Grace Jones,
Dinah Shore, Joan Rivers, Annette Funicello, and Frankie Avalon.

From its debut, *Pee-wee's Playhouse* attracted the attention of media theorists and critics, many of whom championed the show as a postmodernist collage of queer characters and situations that seemed to fly in the face of dominant racist, sexist, and heterosexist presumptions. (Some accounts of the show were less celebratory and criticized the show's regular use of comic fat women as sexist.) The show was forthrightly multiracial in cast and situation: the "mailman" was an African-American mail lady; Latino soccer player Ricardo often spoke Spanish without translation; the white Miss Yvonne went on a date with African-American Cowboy Curtis; tough-as-nails cab driver Dixie (Johann Carlo) was a possible lesbian; and Jambi was played as a disheveled guy man. Pee-wee himself often poked fun at heterosexist conventions: he once "married" a bowl of fruit salad. The smirking irony, the campy double entendre ("Is that a wrench is your pocket?") and the use of icons from gay and lesbian culture (perhaps most infamously on the Christmas special, which, aside from its guest stars, featured two muscular and shirtless workmen building a "blue boy" wing to the playhouse out of fruitcakes) furthered this interpretation. This apparent outbreak of playful queerness during the politically reactionary Reagan-Bush/Moral Majority years was a key factor in many adults' enjoyment of the show. Yet that same queerness lurked in the realm of connotation, where it was just as easily ignored or dismissed by other, more mainstream critics. Some parents objected to the show's polymorphous and anarchic approach to childhood (encouraging children to "scream real loud" or jump around the house).

When Paul Reubens was arrested inside an adult movie theater in August 1991, the *Pee-wee* craze came to an abrupt end. The show was canceled, and in many toy stores *Pee-wee* merchandise was removed from the shelves. A few years later, Reubens as *Pee-wee* made an appearance at an MTV event, but it seemed as if his days as a television host of a "children's show" were over, despite the fact that his pre-(hetero)sexualized antics and progressive social attitude had captured the United States' imagination so strongly—for a few years, at least.

Pennies from Heaven
British Drama Series

_Pennies from Heaven_, a six-part drama series written by Dennis Potter, received great popular and critical acclaim, including the BAFTA Award for Outstanding Drama, when it was first transmitted on BBC TV in 1978. This was the first six-part drama by Potter after some 16 single television plays, and in its format and mixture of popular music and dance sequences, it anticipated such later works as _The Singing Detective_ (1986) and _Lipstick on your Collar_ (1993). Potter’s ironic handling of music and dance in the television serial was a landmark in British television and his own career. He uses these forms of expression to both disrupt the naturalism of the narrative and to show unconscious desires of individuals and of society (the MGM feature film version failed to capture the seamless flow from conscious to unconscious desires, treated the story as a conventional musical, and was a flop).

The play tells the story of Arthur Parker, a sheet-music salesman in 1930s Britain who is frustrated by his frigid wife, Joan, and by the deafness of the shopkeepers to the beauty of the songs he sells. Although, as Potter has recalled, Arthur is “an adulterer, and a liar and was weak and cowardly and dishonest… he really wanted the world to be like the songs” (see Potter, 1993). When he falls in love with a young schoolteacher named Eileen, Arthur connects the beauty of the songs with his sexual longings. When she becomes pregnant, she has to abandon her schoolteaching career and flee to London, where she takes up prostitution to earn a living. After making contact with Arthur once more, she abandons her pimp, Arthur abandons Joan, and they set off for the country for a brief experience of happiness. The rural idyll is breached by two murders: Arthur is wrongly pursued for the rape and murder of a blind girl; while seeking a hideaway from pursuers, Eileen murders a threatening farmer. The two return to London where Arthur is apprehended, charged, and hanged for the blind girl’s murder. Eileen, significantly, is not pursued.

The disturbing realities that punctuate the narrative (rape, murder, prostitution, the grinding poverty of the Depression era) are counterbalanced by the naive optimism of Arthur, expressed through the sentimental love songs of the period. Daydreams and reality are constantly juxtaposed, but Potter does not provide easy evaluations. It is possible to laugh at the simplicity of Arthur’s belief in the “truth” of the popular love songs he sells, but scorn the shallow cynicism of his salesmen companions. Arthur’s naïveté has to be balanced against his duplicity: although he loves Eileen and promises to help her, he scribbles down a wrong address and creates enormous complications for them. Yet, however sentimental the songs are, they point to a world of desire that, in some form, human beings need and that is otherwise unrecognized in popular discourse. Although Potter used popular music and Busby Berkeley–type choreography, _Pennies_ is not a conventional musical: the music is not contemporary and thus arrives with a freight of period nostalgia. Moreover, the music is dubbed and the actors lip-synch (on occasion across gender lines) so that the effect is comic or ironic as well as enticingly nostalgic.

If the songs and dance routines are used to express unconscious desires or those beyond the characters’ ability to articulate, another device that provides access to the unconscious and interferes with any naturalistic reading is the use of doubles. Although physically and in terms of class distinctly different, Arthur and the accordion man, and Joan and Eileen, are potential versions of the same identity. While the accordion man is presumed to have raped and killed a blind girl (significantly, not shown), Arthur’s barely suppressed wish to rape her shows his equivalence. Similarly, Joan and Eileen, though opposites in terms of sexual repression, share a similar shrewd awareness of social reality. The main difference is that Eileen is led to defy social conventions while Joan is content to work within them, recognizing their power. Arthur’s limited understanding is compensated for by his naive passion for music and love, which offers a truth about how the world might be.

_Pennies from Heaven_ can be seen as a development from the 1972 play _Follow the Yellow Brick Road_, in which the hero Jack Black, a television actor, shuns the real world in favor of the ideal world of television ads in which families are happy, the sun shines, and everybody is optimistic. The earlier play expresses a bleaker Manichean universe of good and evil, while the later work acknowledges the internal nature of good and
evil and suggests the possibility of redemption, if not accommodation, between our lower and higher impulses. At a further remove, *Pennies from Heaven* can be seen to pick up the themes of the life-affirming power of transgressive behavior, and the comic/musical presentation of them, found in John Gay's *Beggar's Opera* (1728).

Perry Mason
U.S. Legal Drama/Mystery

*Perry Mason* was the longest-running lawyer show in American television history. Its original run lasted nine years, and its success in both syndication and made-for-television movies confirm its impressive stamina. Mason’s fans include lawyers and judges who were influenced by this series to enter their profession. The Mason character was created by mystery writer Erle Stanley Gardner and delivered his first brief in the novel *The Case of the Velvet Claws* (1933). From 1934 to 1937, Warner produced six films featuring Mason. A radio series also based on Mason ran every weekday afternoon on CBS radio from 1944 to 1955 as a detective show/soap opera. When the CBS television series was developed as an evening drama, the radio series was changed from *Perry Mason* to *The Edge of Night*, and the cast renamed, so as not to compete against the television series.

The title character is a lawyer working out of Los Angeles. Mason, played on TV by Raymond Burr, is teamed with two talented and ever-faithful assistants: trusty and beautiful secretary Della Street, played by Barbara Hale, and the suave but boyish private detective Paul Drake, played by William Hopper. In each episode, this trio works to clear their innocent client of the charge of murder, opposing the formidable district attorney Hamilton Burger, played by William Talman. Most episodes follow this simple formula: the guest characters are introduced and their situation shows that at least one of them is capable of murder. When the murder happens, an innocent person (most often a woman) is accused, and Mason takes the case. As evidence mounts against his client, Mason pulls out a legal maneuver involving some courtroom “pyrotechnics.” This act not only proves his client innocent but identifies the real culprit. These scenes are easily the best and most memorable. It is not because they are realistic. On the contrary, they are hardly that. What is so engaging about them is the combination of Mason’s efforts to free his client, perhaps a surprise witness brought in by Drake in the closing courtroom scene, and a dramatic courtroom confession. The murderer being in the courtroom during the trial and not hiding out in the Bahamas provides the single most important image of each episode. The murderer forgoes the Fifth Amendment and admits his/her guilt in an often tearful outburst of “I did it! And I’m glad I did!” This pronouncement happens under the shocked, amazed eyes of district attorney Burger and the stoic, sure face of defense attorney Mason.

Although it is often identified with other lawyer dramas such as *L.A. Law* and *The Defenders, Perry Mason* was more of a detective series. Each episode was a carefully structured detective puzzle that both established and perpetuated a number of conventions associated with most television detective series. *Perry Mason* used the legal profession and the trial situation as a forum for detective work. Although strictly formulaic, each episode was guided by the elements of the variations that distinguish one episode from another. For example, since nearly every episode began with the guest characters rather than with the series regulars, these guest characters set the tone for the rest of the episode. If the show were going to be youth oriented, these characters were young. If it were going to be a contested will, the heirs were introduced.
The credit for the series’ success should be split equally between Burr, the Perry Mason production style, and the series’ creator Gardner. Burr provided the characterization of a cool, calculating attorney, while the production style built tension in plots at once solidly formulaic and cleverly surprising, and Gardner, as an uncredited executive story editor, made sure each episode carefully blended legal drama with clever detective work. In all, the series won three Emmys, two for Burr and one for Hale.

The series made a brief return in 1973, with the same production team as the original series but a new cast. Monte Markham replaced Burr. That this version did not survive 15 episodes reveals that one of the key draws of the original series was its casting. It is interesting to note, however, that Markham’s Mason was closer to the one featured in the original novels. Both were brash, elegant, and coolly businesslike in their dealings with clients, something Burr never was. But it was Burr’s coolness and control that became so identified with the character that, for the television audience, there was no other Mason than Burr.

Beginning with Perry Mason Returns, Burr returned to his role in 1985 for an almost 10-year run of made-for-television movies. Perry Mason Returns was followed by The Case of the Notorious Nun (1986). Burr was back as Mason, albeit a bit older, grayed, and bearded, with Barbara Hale as his executive secretary. Since William Hopper had died in 1970, William Katt (who is the real-life son of Barbara Hale) was featured in the first nine episodes as Paul Drake, Jr. In The Case of the Lethal Lesson (1989), Katt was replaced by a graduating law student, Ken Malansky, played by William R. Moses. Each plot developed over two hours instead of one, and the extra time was spent on extended chases and blind alleys. However, the basic formula stayed the same.

This newest version of Perry Mason took an interesting twist in the spring of 1994. After Burr’s death in the fall of 1993, executive producers Fred Silverman and Dean Hargrove followed the wishes of the estate of Erle Stanley Gardner and kept the character alive but off-screen. First to replace him as visiting attorney was Paul Sorvino as Anthony Caruso in The Case of the Wicked Wives (1993) and then Hal Holbrook starred as “Wild Bill” McKenzie in The Case of the Lethal Lifestyle (1994). In each movie, Mason was conveniently absent. But Street and Malansky were still available as assistants for the “visiting” attorney, and the series was still called A Perry Mason Mystery, so that, production after production, the character could live on. However, after the last appearance of Holbrook as the visiting attorney, the TV movie series was canceled.

Person to Person

U.S. Talk/Interview Program

*Person to Person* developed out of Edward R. Murrow's belief that human beings are innately curious. That curiosity was intense regarding the private lives of public people, or visiting the extraordinary in the most ordinary environment—the home. For his television program, then, Murrow, sitting comfortably in the studio, informally greeted two guests a week, who gave 15-minute interviews from their homes, talking about the everyday activities of their lives. The interviews avoided politics, detailed discussion of current events, and a line of questioning that delved deeper into one or two issues. The more general the question, and more frequent the change of topic, the more satisfying the process of revealing different facets of the private figure. On *Person to Person*, people conversed with Murrow and, starting in the fall of 1959, with Charles Collingwood, as host. Almost every year for nine years, informal chats positioned the show in the top-ten network programs. But the series increasingly became the battleground, inside and outside CBS, over the function of television news, the ethics of peering into private lives for profit, Murrow's journalistic integrity, and the organizational control of the network's image.

From 1953 through 1956, CBS News aired *Person to Person*, but it was independently owned and produced by John Aaron, Jesse Zousmer, and Murrow. Tensions inside CBS began when Fred Friendly, Murrow's producer of *See It Now*, accused Murrow of capitalizing on the remote, in-home, investigative news interviews done with political leaders, and pioneered by Friendly, on *See It Now*. Although the remote, in-home interview was not new, *Person to Person*’s approach differed substantially from other CBS projects. Murrow anticipated criticism of the series' lack of news-directed discussion. But that was not, in fact, its intended purpose.

Murrow wanted the series to "revive the art of conversation." But the image was as significant as the conversation. Employing from two to six cameras, a program opened up different parts of an individual's home. This was a historical step to building the cult of the personality in news programs. The personalities were divided into two camps, with the entertainment and sports figures in one; the second camp included all others, such as artists, writers, politicians, lawyers, scientists, and industrialists.

Given the period in which it was produced, the se-
ries' success was as much technological as human. Regardless of the series' news value, it took time and effort to reach people who were otherwise inaccessible. Murrow's "guests" lived in different locations marked by distinctive terrain. Thus, in a time of presatellite technology, a prerequisite to introducing them to Americans via television was a line-of-sight transmission from the guest home to a telephone microwave transmission tower. The production crew always conquered terrain barriers. Although the crew received notoriety for shearing off part of a hill to achieve line of sight, they most frequently broke records for building tall relay towers for onetime remotes, the first adjacent to the Kuther's Hotel in Monticello, New York, enabling interviews with boxers-in-training Rocky Marciano and Ezzard Charles.

The guests were maintained in constant visual and aural contact through advance placement of large video cameras in different rooms. It was also necessary to obtain FCC approval for a special high-frequency wireless microphone that could be attached to the guests. Each program periodically used a split-screen image, a new experience for many television viewers.

For the live program to proceed smoothly in real time, some rehearsal was required. From 1953, interviews and statements by Murrow made it common knowledge that cue questions were used before the show so that guests could be "talked through" the movements to be made from room to room. Thus, certain questions were prepared, but answers were spontaneous. The visit to Marlon Brando's home, for example, began outside at night, with a stunning view of Los Angeles. From there it moved to his living room, and finally, to a downstairs area where friends waited to play some music with Brando. A home's content was part of a guest's personality, so the camera frequently stopped to reveal a picture on the wall, vases, and other objects of interest. In the early days of the series, guests pointing out possessions of special value interrupted discussion, sometimes making the series more of a gallery of art objects. And many times a show's success depended on how comfortable both the guest and the host were with the arrangement. Inevitably, the spontaneous nature of the discussion or awkwardness of a situation generated embarrassing moments, such as Julie Harris folding diapers as she spoke, or Maria Callas throwing Murrow off guard by innocently noting she liked the quality of lingerie in the United States. Perhaps for these reasons, the producers valued those infrequent visits to "homes" that had more news value, such as the warden's home on Alcatraz Island, or an old lighthouse.

The series and Murrow received frequent criticism. Respected television critics, including Harriet Van Horne, Philip Mintoff, Gilbert Seldes, and John Lardner, pointed to Murrow's petty, aimless chatter, arguing that television demanded more substance and depth, especially from someone of Murrow's journalistic background. For Murrow's colleagues, the series diverted his valuable time and energy from other projects and added an unnecessary burden. When Collingwood took over as host, these critics quietly accepted the series for what it purported to be.

But Murrow steadfastly defended the series. When an author, such as Walter White, mentioned a new book, book sales increased. Thousands of viewers requested a one-sentence, 57-word Chinese proverb read by Mary Martin, which she had engraved in a rug. If two or three children committed themselves to piano lessons after seeing Van Cliburn, Murrow believed the criticism to be worth taking. Moreover, the range and variety of people interviewed was unprecedented for network television at the time. One three-week period in 1957 included interviews with the political cartoonist Herbert Block, media market researcher A.C. Nielsen, and Robert F. Kennedy, chief council of the Senate's Select Committee.

In 1956 CBS Television bought the series from Murrow, at that time its sole owner. However, because Person to Person with Murrow made a large profit for CBS, it continued to be the center of conflict between Murrow and management. Person to Person elevated its host to celebrity status with the public, and some at the network resented the fact that the series placed Murrow in a powerful position. Frank Stanton accused Person to Person's production practices of deceit and dishonesty, claiming guests were coached in questions. This charge, coming after the quiz show scandals and directly attacking Murrow's integrity, resulted in a public airing of personality conflicts that hurt CBS's image and further estranged Murrow from the executive branch at the network. A public respectful of Murrow as host, however, did not rush to condemn him for taking risks on other shows, such as his methodical criticism of Senator McCarthy. Fidel Castro's appearance on Person to Person had the potential to alienate viewers who considered him a communist dictator, and the program attracted government criticism of CBS, but Murrow survived the resulting criticism. Person to Person's success in the ratings translated to Collingwood as host, continuing to feed the public's appetite for the celebrity interview. When Collingwood began, the series added the attraction of overseas interviews, filmed or taped.

Person to Person first generated many of the arguments still lodged by critics of today's talk shows, arguments questioning the primacy of the individual in news and the role of a voyeuristic camera as a com-
pling approach to news. But before the series began, Murrow insisted on a thorough respect for the home of guests "invaded" by the camera. Unlike the series to follow, Murrow and the camera did not confront guests with questions constituting an inquiry. Both Murrow and Collingwood permitted their guests to direct the conversations, which accounted for a meandering pace. The hosts' respect for the public figure in a private setting and avoidance of emotional confrontations created a unique ambiance in this programming genre, and Person to Person stands as a vital example of television's potential for personal, individualized communication.

Pertwee, Jon (1919–1996)

British Actor

Jon Pertwee was a British comedy character actor credited with an extensive list of stage, screen, radio, and cabaret appearances. The onetime spouse of Upstairs, Downstairs star Jean Marsh, Pertwee is best known for his turn from 1970 to 1974 as the Doctor in the long-running BBC program, Doctor Who. A master of accents, voices, sounds, and comical walks, Pertwee perfected his multiple comedic personae on the radio series The Navy Lark and in supporting roles in various films, beginning with his appearance in 1937's Dinner at the Ritz.

Recruited by Doctor Who producer Peter Bryant in 1969 to take over as the Doctor from Patrick Troughton, Pertwee brought to the program a radically different interpretation of the title character. Aired initially in 1963, Doctor Who was produced by the drama department at the BBC and—contrary to many reports—was not intended primarily for children. The first Doctor, as portrayed by William Hartnell, was a renegade Time Lord from the planet of Gallifrey who exhibited a strong moral sense, an aggressive and curmudgeonly attitude, and impatience with his various earthly companions' comparative mental slowness. Hartnell was replaced in 1966 by Patrick Troughton,
Pertwee’s love of fast vehicles and gadgets prompted him to suggest that the Doctor travel from trouble spot to trouble spot in an Edwardian four-seat roadster eventually named “Bessie.” During most of Pertwee’s term, the Doctor was banished to Earth by the Time Lords of Gallifrey, thus necessitating a different mode of transportation than his predecessors enjoyed with the Tardis, the Doctor’s police-box-styled time machine. Thus, “Bessie” and (in 1974) the “Who-mobile,” a flying-saucer-shaped, custom three-wheel car built for Pertwee by Peter Faries, became the Doctor’s primary transportation during the four years Doctor Number 3 assisted UNIT (United Nations Intelligence Taskforce) and its indefatigable leader, Brigadier Lethbridge-Stewart (Nicholas Courtney), as they saved the Earth from a variety of monsters, aliens, megalomaniacs, and other menaces.

In early 1974 Pertwee announced he would step down from his stint as the Doctor following that season’s shooting, in order to resume his stage career in The Breadwinner. His final appearance came in “The Planet of the Spiders,” which dovetailed with the initial episode the following season, “Robot,” during which Tom Baker took over as the regenerated Time Lord. Pertwee returned in 1983 to share top billing with his fellow Doctors in “The Five Doctors,” a 20th-anniversary celebration and one of the stories best received by the series’ fans. The plot found all five incarnations of Doctor Who taking on their most memorable enemies, who attempted, but failed, to destroy the five Doctors for good.

Jon Pertwee returned briefly to British television in 1979 for the short-lived comedy series Worzel Gummidge. His post-Doctor years found him performing primarily onstage and in motion pictures. He continued his association with the Doctor Who character from time to time with appearances at Doctor Who conventions worldwide. While on vacation in the United States, Pertwee died unexpectedly at the age of 77 on May 20, 1996.

Robert Craig

See also Doctor Who

Jon Devon Roland Pertwee. Born in London, July 7, 1919. Attended Royal Academy of Dramatic Art (expelled). Married: 1) Jean Marsh, 1955 (divorced, 1960); 2) Ingeborg Rhosea, 1960; children: Dariel and Sean. Tourd with the Arts League of Service Travelling Theatre, prior to World War II; film debut, 1937; after service with the Royal Navy, worked in BBC radio comedy and also appeared in films; achieved fame as television performer as third actor to star in Doctor Who, 1970–74; also starred in Worzel Gummidge and

who played the part as a “cosmic hobo” in the tradition of Charlie Chaplin’s Little Tramp.

As Sean Hogben asserted in “Doctor Who: Adventure with Time to Spare” in TV Week, however, “Doctor Who won its reputation as a top science fiction series during Jon Pertwee’s time in the role.” Reacting to the popularity of the early James Bond films, and determined to move away from the clownish depiction Troughton gave the Doctor, Pertwee played the character as an action-based interplanetary crusader exhibiting the characteristics of a folk hero. Pertwee was thus able to draw on his considerable ability to perform his own stunts—resulting from his love of skin diving and waterskiing, along with his habit of driving fast vehicles—which gave a harder edge to his interpretation.

The Pertwee era began with the serialization of “Spearhead from Space,” which also introduced the program’s fans to the series’ first broadcasts in color, after 17 years of black-and-white shows. Pertwee’s adoption of his grandfather’s evening suits as the foundation of the Doctor’s garb allowed him to switch among different colored velvet smoking jackets to mark each passing season of episodes. With this change in the Doctor’s apparel, the producers began to publicize the series as providing “adventure in style,” alluding to Pertwee’s penchant for a similar type of life outside the studio while partly cashing in on the liberated “Swinging Sixties” ambiance still prevalent in Great Britain during the early 1970s. The fact that the program was attracting a considerable audience among upscale 17- to 19-year-olds also contributed to this change in character depiction and promotion.

Peter Gunn
U.S. Detective Program

Peter Gunn, a top-rated detective drama, ran on NBC from 1958 to 1960, and then on ABC in 1960 and 1961. The television series was distinguished for its stylish and sophisticated lead character, Peter Gunn, and is also remembered for the jazz-influenced music of Henry Mancini. Created and produced by then-neophyte filmmaker Blake Edwards, Peter Gunn was typical of the male private-eye genre of the late 1950s and early 1960s. The lead character was handsome, dashing, and consistently well dressed in tailored suits, which never seemed to wrinkle even after the usual scuffles with the bad guys. Edwards clearly modeled the character of Peter Gunn on Cary Grant, considered one of Hollywood's most debonair leading men. The actor chosen to play Gunn, Craig Stevens, even bore a close resemblance to Grant.

The series was set in Los Angeles and, more often than not, inside a jazz club called Mother's. The storyline essentially centered around Gunn solving his client's problems, which always involved his having to deal with an assortment of hit men, hoodlums, and assorted "hip" characters found on the jazz scene. He was often aided by his personal friend and confidant, police Lieutenant Jacoby (Herschel Bernardi). Although Gunn often had to endure many thrown fists, he himself did not advocate brutality, and violence was not a feature of the series. In the end, the crime was always solved, the criminals were behind bars, and Gunn was shown relaxing at Mother's, where his girlfriend, the vocalist Edie Hart (Lola Albright), was the main attraction.

The style of Peter Gunn has been described by some viewers as borderline parody. The dialogue was delivered in a hip, deadpan fashion, and at times the series seemed to be poking fun at more conventional private-eye series. Blake Edwards attributed the critical success of Peter Gunn to the series' tendency to be somewhat over the top. The success of the show spawned many similar private detective dramas in the late 1950s and early 1960s, such as Philip Marlowe and Richard Diamond.

An important ingredient in the show, one that pro-
Peter Gunn

provided its unique character, was the music of Henry Mancini. He provided a new score for each episode, and when released on the RCA label, the two albums *The Music of Peter Gunn* and *More Music from Peter Gunn* became best sellers. (The “Peter Gunn Theme” continues to be played on mainstream radio and has even been used as the vehicle for modern rock versions.) Mancini’s music was an integral part of the show’s action, and here too it set the precedent for shows that were to follow.

The show lasted for only three seasons, but by stressing style and sophistication *Peter Gunn* caught the attention of many viewers. The combination of the main character’s smooth, stoic demeanor, together with Henry Mancini’s outstanding jazz themes, worked to leave a lasting impression in the minds of fans.

**Peter Pan**

**U.S. Special Presentation**

First broadcast on NBC in March 1955 and repeated annually for many years thereafter, *Peter Pan* was a popular melding of American television and Broadway theater. It formed part of an ongoing series titled *Producers’ Showcase*, a loose rubric for high-quality dramatic presentations put together by producer Fred Coe for the network about once a month between 1954 and 1957.
The impetus for the telecast was the popular Broadway musical *Peter Pan*, starring Mary Martin in the title role and costarring Cyril Ritchard as Pan's nemesis Captain Hook. Based on the 1904 J.M. Barrie play of the same name, the Broadway production was staged by Jerome Robbins. When it ended its theatrical run, Coe arranged to run a version of it, modified for the small screen, on NBC on March 5, 1955.

The production fitted neatly into two of NBC's strategies for establishing its identity as a network. First, *Peter Pan* was what NBC vice president (and programming chief) Pat Weaver called a “spectacular”—a special, high-quality event that publicized the network and drew programming power away from individual sponsors, which generally could not afford to foot the entire bill for these expensive shows. Second, the show was hailed by the network and by critics as a splendid forum for the color television system the network and its parent company, RCA, were hawking.

The teleplay loosely followed the familiar original Barrie play, moving from the nursery of the Darling family in London to the island of Neverland, a magical and mythical place to which the eternally young Peter Pan lured the Darling children. He was especially interested in Wendy, whom he and the other "lost boys" wished to adopt as their mother. Before the play’s end, Peter had to defeat the dastardly Captain Hook, a humorously effeminate villain played with panache by Ritchard, and return Wendy and her brothers to their home.

The program's sets, particularly the Neverland set, were simple yet colorful, and audiences and critics enjoyed the close-up view of the Broadway play provided by the television production. Robbins's staging blended lively and tender moments, engaging the audience from the play's beginning. The production gained prestige not just from its famous stars but also from the addition of Lynn Fontaine as the program’s narrator.

*Peter Pan* proved an immediate and spectacular success, garnering an overnight rating of 48 and inspiring Jack Gould of the *New York Times* to speculate that the program had provided "perhaps television's happiest hour." The production was remounted, live, in January 1956 and was rebroadcast annually for years thereafter. It was singled out in the 1955 Emmys as the best single program of the year, and Martin was named best actress in a single performance.

It is easy to account for the teleplay's popularity. It presented a charming and imaginatively staged version of a classic children's tale, drawing in both adult and youthful viewers. It also gave Americans a fantasy-filled forum in which to debate gender in the postwar years.

The teleplay's message about adult manhood and womanhood, that they were states to be avoided at all costs (Peter did not want to grow up, and Wendy was unhappy when she did), played into a growing discomfort with preset gender roles. And both its hero and its villain were highly androgynous.

The message and the androgyny were, of course, present in the original Barrie play. They were enhanced, however, by script changes and by the intimacy of the medium on which the play was broadcast. *Peter Pan* on television resonated with the color and the confusion of its era—and encouraged audiences to fly to Neverland for years to come.

When it appeared on ABC, at that time still the third-ranked U.S. network, *Peyton Place*, a prime-time program based on the Grace Metalious novel, was an experiment for American television in both content and scheduling. Premiering in the fall of 1964, *Peyton Place* was offered in two serialized installments per week, Tuesday and Thursday nights, a first for American prime-time television. Initially drawing more attention for its moral tone than for its unique scheduling, the serial was launched amid an atmosphere of sensationalism borrowed from the novel's reputation. ABC president Leonard Goldenson defended the network's programming choice as a bread-and-butter decision for the struggling network, and the moral outcry settled down once the program established itself as implying far more sensation than it would deliver. This prototype of what came to be known in the 1980s as the prime-time soap opera initially met with great success: a month after *Peyton Place* premiered, ABC rose in the Nielsen ratings to number one for the first time. At one point, the program was so successful that a spin-off serial was considered. Both CBS and NBC announced similar prime-time serials under development.

Executive producer Paul Monash rejected the "soap opera" label for *Peyton Place*, considering it instead a "television novel." (His term is, in fact, the one applied in Latin America, *telenovela*, and Francophone Canada, *teleroman.*) Set in a small New England town, *Peyton Place* dealt with the secrets and scandals of two generations of the town's inhabitants. An unmarried woman, Constance MacKenzie, and her daughter, Allison, were placed at the dramatic center of the story. Constance (played by 1950s film melodrama star Dorothy Malone) eventually married Allison's father, Elliott Carson, when he was released from prison, though his rival Dr. Michael Rossi was never entirely out of the picture. Meanwhile, Allison (Mia Farrow) was caught up in a romantic triangle with wealthy Rodney Harrington (Ryan O'Neal) and Betty Anderson (Barbara Parkins), a girl from the wrong side of the tracks. Over the course of the series, Betty tricked Rodney, not telling him until after they were married that she had miscarried their child; Rodney fled and found love with Allison, but Allison disappeared; Betty was married briefly to lawyer Steven Cord but finally remarried Rodney. Other soap-operatic plotlines involved Rodney's younger brother, Norman Harrington, and his marriage to Rita Jacks.

The production schedule was closest to that of daytime soap opera, with no summer hiatus, no repeats, unlike any prime-time American series before or since. Within the first year, the pace was increased to three episodes per week rather than two, going back to two
episodes per week in the 1966–67 season as the craze for the show declined. Several of the show's plot twists were necessitated by cast changes. Most notably, Allison MacKenzie's disappearance occurred when Mia Farrow left the series in 1966 for her highly publicized marriage to Frank Sinatra. The program never fully recovered from Farrow's departure, though news of the distant Allison kept the character alive.

Some two years after Farrow left, a young woman appeared with a baby she claimed was Allison's, a development that timed with the release of Farrow's theatrical film, Rosemary's Baby.

In 1968 Peyton Place underwent a transformation. Some storylines were developed to accommodate more cast changes (Dorothy Malone left the show), but many of the changes in the final season seem to have been in response to Goldenson's call for more youthful, "relevant" programming. One of the youthful additions was the leader of a rock group. Most significant, however, an African-American family—Dr. Harry Miles (Percy Rodriguez), his wife, Alma (Ruby Dee), and their teenage son, Lew (Glynn Turman)—assumed a central position in the heretofore all-white Peyton Place. Cut back to one half-hour episode per week, the show also was scheduled a half hour earlier to appeal further to youthful audiences.

These drastic changes did nothing to revive ratings for the serial, which lasted through the spring of 1969. ABC brought it back for two years in the 1970s as a daytime serial, and in 1985 nine of the original cast members appeared in a made-for-TV movie, Peyton Place: The Next Generation.

Phil Silvers Show, The
U.S. Situation Comedy

The Phil Silvers Show, a half-hour comedy series, first ran on CBS from September 1955 to September 1959. The show's original title was You’ll Never Get Rich, but this name was dropped shortly after its debut. Since its inception the series has also been commonly referred to as "Sergeant Bilko."

The program’s 138 episodes trace the minor victories and misfortunes of the scheming, fast-talking Master Sergeant Ernie Bilko (Phil Silvers), head of the motor pool at the mythical U.S. Army station of Fort Baxter in Roseville, Kansas. In his relentless pursuit of personal gain and physical comfort, Bilko attempts to manipulate
those around him through the selective use of flattery, false naïveté, pulling rank, and a canny ability to identify and stimulate desires, weaknesses, and emotions in others. Although his reputation for masterful chicanery is well known around the base, the other characters in the show prove no match for Bilko’s complex mental designs and are ultimately unable to avoid following the course of action he desires. In his attempts to buck the system, Bilko is aided by members of his platoon: a motley collection of blue-collar, “ethnic” Americans whose own distaste for military discipline is displayed through their visible admiration for their brilliant leader.

Aside from money and favors won in poker games and elaborate rackets, however, Bilko never benefits at the expense of others. Faced with innocent victims, the sergeant’s conscience kicks in and he expends every mental resource to resolve the problem. Bilko’s one redeeming moral quality, therefore, is his heart of gold, which prevents him both from truly prospering or losing his humanity.

Frequently, unforeseen obstacles to Bilko’s strategies arise out of a misunderstanding between the principal characters. Much of the program’s humor derives from Bilko’s incomplete knowledge of a situation—the audience watches as he unwittingly makes matters worse for himself, before realizing his error and having to employ his quick thinking in order to make amends. Sharp dialogue and tightly woven plotlines (involving absurd, but believable, situations), combined with a heavy emphasis on visual comedy, made The Phil Silvers Show one of the most popular and critically acclaimed sitcoms of the 1950s.
The series developed as a collaboration between Silvers, a Brooklyn-born veteran of vaudeville, Broadway, and motion pictures, and Nat Hiken, the show's unassuming head writer, producer, and stage director. Hiken had already earned a reputation for superb radio and TV comedy writing for such celebrities as Fred Allen and Martha Raye. Silvers and Hiken were given tremendous creative license by CBS to devise and cast the show. The two creators experimented with numerous settings and narrative structures before deciding on a military location, a Bilko-centered narrative trajectory, and a colorful coterie of supporting characters. In the spring of 1955, filming began at the DuMont studios in New York. CBS confidence in the production was such that 20 episodes were produced prior to the show's broadcast debut in the fall. The network's magnanimity is understandable, given that "Bilko" neatly fit the successful formula upon which CBS had built its television reputation: a half-hour situation comedy series written as a vehicle for an established performer.

The Phil Silvers Show was initially recorded live on film, using a three-camera setup. Postproduction was minimal, giving the final program a spontaneous, no-frills appeal despite its celluloid status. As the series developed, the storylines often incorporated outside characters who were portrayed by guest celebrities. Mike Todd appeared in one 1958 episode, insisting that it be shot using a movie-style, one-camera production process. The more relaxed shooting schedule engendered by this approach appealed to cast and crew, and the show subsequently adopted this filming technique permanently. This meant that the scenes would be shot throughout the week and later edited together in order. Consequently, the studio audience disappeared, requiring the recording of a laugh track at a weekly screening of the final program.

Despite being scheduled against NBC's Tuesday-night powerhouse Milton Berle, The Phil Silvers Show quickly attracted viewers and passed Berle in the ratings within a few months. The show's popularity was matched by great critical acclaim. Along with a bevy of other awards, the series won five Emmys in its first season on the air, and more were to follow over the next couple of years. Nevertheless, the drain of weekly programming eventually began to take its toll. Hiken's total commitment to the show proved physically and creatively exhausting for him, and he left the series in 1957 to pursue less hectic projects. By the spring of 1959, when CBS announced its forthcoming cancellation of the series, Silvers too was complaining of fatigue induced by the show's grueling routine. Bending under the weight of the 22 cast members' salaries, CBS canceled the still-popular series in order to maximize its syndication price and potential.

Following the show, Hiken and Silvers collaborated on several hour-long musical specials for CBS at the end of the 1950s. While the actor then returned to the stage and big screen, Hiken achieved another TV comedy hit with Car 54, Where Are You? In 1963, attracted by a lucrative financial offer from CBS, Silvers attempted to recapture his earlier television success with The New Phil Silvers Show. This series transferred the Bilko scenario to a civilian setting: Silvers played Harry Grafton, a crafty, wheeling-dealing maintenance superintendent at an industrial plant. Grafton lacked Bilko's magical presence and any of his redeeming values; the series floundered in the ratings and was canceled in its first season. The Bilko formula was more successfully reinvoked in the early 1960s in the form of the ABC cartoon Top Cat. This prime-time animated series featured the voice of Maurice Gosfield—who had played the slothful audience favorite Duane Doberman in The Phil Silvers Show—as Benny the Ball.

Over the decades since its original broadcast, "Sergeant Bilko" has inspired a whole genre of male-dominated, uniformed, nondomestic sitcoms. Such series as McHale's Navy, Hennesey, M*A*S*H, and At Ease (a banal, short-lived 1980s imitation), to name only a few, have clearly attempted to emulate The Phil Silvers Show's successful blend of distinctive, engaging characters and first-class writing. A 1996 movie named Sergeant Bilko starred Steve Martin in the title role.

Philbin, Regis (1933– )

U.S. Television Personality

Regis Philbin is one of the most recognized individuals in American television. Finally, after more than 45 years in the business, he won two Emmys in 2001 as Best Game Show Host for ABC’s blockbuster Who Wants to Be a Millionaire? and Best Talk Show Host for syndicated, top-rated daytime talker Live with Regis & Kelly.

The eldest child of Frank and Florence Philbin, an Irish-Italian/Catholic couple, Philbin was named after his father’s alma mater, Regis High School, a Manhattan Jesuit boys’ school. Regis was raised in the South Bronx section of New York City and graduated from Cardinal Hayes High School in 1949. He earned his B.A. in Sociology at Notre Dame University in 1953. Philbin secretly wanted to major in broadcasting but could not find the courage to do it.

After two years in the navy, where he became a lieutenant, Philbin interviewed unsuccessfully in 1955 with L.A.’s KCOP-TV. He returned to New York and worked as an NBC page/usher for Steve Allen’s The Tonight Show. Three months later, KCOP-TV hired him as a stagehand and then writer, researcher, and producer. After substituting once on-air in sports, Philbin wanted to be on-air permanently and became frustrated with behind-the-scenes work. In 1957 he switched to radio news at San Diego’s KSON, where he developed unremarkable but quirky “Philibinese” stories. In 1960 San Diego’s KFMB-TV news hired him specifically to do “Philibinese” stories. Within a year, he was anchor at San Diego’s KOGO-TV and host of The Regis Philbin Show. The Saturday late-night show enabled Philbin to emulate Jack Paar and to develop the trademark “host chat” he still uses on Live.

In October 1964 Philbin replaced Steve Allen on Westinghouse’s nationally syndicated late-night talk show. Philbin, whose live ad-libbing about daily events was created out of necessity on KOGO-TV, could not function on That Regis Philbin Show in a highly structured, taped format shown on a two-week delay. Canceled after 26 weeks, Philbin resumed KOGO-TV’s The Regis Philbin Show in 1965 and commuted to L.A.’s KTTV for a weekday show.

Philbin ascended to network television as sidekick on ABC’s The Joey Bishop Show, launched April 17, 1967, to compete with NBC’s The Tonight Show Starring Johnny Carson. Philbin tried to suppress his ego but tired of Bishop’s jokes and insults. One night, Philbin walked out on-air, but he returned a week later. It remains unclear if it was a publicity stunt. He also recorded It’s Time For Regis!, an album for Mercury records rereleased on CD in 1998. He ventured into acting, appearing on NBC’s Get Smart on March 23, 1968.

Philbin held a variety of jobs until 1975. On L.A.’s KHJ-TV, he hosted Philbin’s People and Tempo, a three-hour news and information morning show. Once a month he commuted to St. Louis to do one live and three taped installments of Regis Philbin’s Saturday Night in St. Louis, a variety show on CBS affiliate KMOV. Philbin debuted on film in 1972’s Everything You Always Wanted to Know About Sex as a celebrity game show guest. In November 1974 L.A.’s KABC-TV hired him as movie reviewer. In 1975 he also co-hosted KABC’s A.M. Los Angeles with Sarah Purcell. Joy Senese, whom he married in 1970, frequently substituted for Purcell. Purcell joined NBC’s Real People in 1979, and Cyndy Garvey replaced her.

Philbin also hosted ABC’s daytime The Neighbors (1975–76), in which five neighbors gossiped about one another and were awarded prizes. In 1976 Philbin was on-field correspondent for ABC’s Almost Anything Goes, a one-hour game show shot on location with Freeman, Mickey, and Sholom Rubinstein, “But Sarge...Behind the Lines with Sgt. Bilko” Television Quarterly (1986) Freeman, Mickey, and Sholom Rubinstein, Bilko: Behind the Lines with Phil Silvers, London: Virgin Publishing, 2000 Silvers, Phil, with Robert Saffron, This Laugh Is on Me: The Phil Silvers Story, Englewood Cliffs, New Jersey: Prentice Hall, 1973

Further Reading

Drury, Michael, “Backstage with Phil Silvers,” Colliers (May 11, 1956)
American small towns competing against one another. He continued occasional TV and movie appearances.

In November 1981 NBC aired The Regis Philbin Show, a 30-minute daily national morning show co-hosted by Mary Hart. Just half of NBC's affiliates carried the taped show. It received an Emmy for Outstanding Daytime Variety Series but was canceled after four months. In 1982 Philbin created a magazine show for Cable Health Network (now Lifetime), called Regis Philbin's Celebrity Health Styles. It moved to prime time as Regis Philbin's Lifestyles, focusing on cooking, health, and fitness, and became Lifetime's highest-rated program ever, lasting until 1988.

In January 1983 New York's WABC-TV hired Philbin for The Morning Show. Until 1985 his cohost was again Cyndy Garvey, until Kathie Lee Gifford replaced her in June 1985. The chemistry between Philbin and Gifford sent ratings skyrocketing, and the show was nationally syndicated in September 1988 as Live with Regis & Kathie Lee. Live showcased the co-hosts' abilities to talk with guests and to each other about anything. Philbin and Gifford coauthored 1993's Cooking with Regis & Kathie Lee and 1994's Entertaining with Regis & Kathie Lee, hosted the Miss America pageant, and appeared together and separately in concert to sold-out crowds. Philbin's 1993 angioplasty led to his own exercise video: Regis, My Personal Workout. He has also written his autobiography, I'm Only One Man (1995), and Who Wants to Be Me? (2000).

In 1999 ABC's ratings were slumping. Philbin was hired to host a new game show, based on a British program, called Who Wants to Be a Millionaire? Originally slated for a two-week sweeps run, it became the highest-rated prime-time game show in history and was permanently placed in ABC's lineup, taking the network back to the top. In February 2000 ABC's corporate owner, Disney, signed Philbin to a salary of $20 million per year, a record for a game show host. He also introduced the popular catchphrase "Is that your final answer?" into national popular culture.

Gifford left Live in 2000 to pursue other interests. Proving Philbin's popularity, the ratings rose dramatically. After a much-publicized search for a new cohost, Philbin introduced soap opera star Kelly Ripa and renamed the show Live with Regis & Kelly in February 2001.

**Philco Television Playhouse**

**U.S. Anthology Drama**

*Philco Television Playhouse* was one of the most distinguished of the many “live” anthology dramas that aired during the so-called Golden Age of television. The first episode of the *Philco* program was broadcast over NBC on Sunday October 3, 1948, between 9:00 and 10:00 p.m. *Philco Television Playhouse* remained on the air for just over seven seasons, until 1955. At the beginning of its fourth season in 1951, *Philco Television Playhouse* acquired an alternating sponsor, the Goodyear Tire and Rubber Company. From 1951 until it went off the air, the program shared its Sunday night slot with *Goodyear Playhouse*.

Under the guidance of producer Fred Coe (who also served as one of the program’s several directors), *Philco Television Playhouse* became known for its high-quality adaptations of plays, short stories, and novels. It was also the first anthology drama to encourage the writing of original plays exclusively for television.
During its first season, Philco Television Playhouse emphasized adaptations. The first broadcast was a television version of Dinner at Eight, a play by George S. Kaufman and Edna Ferber. Directed by Coe, the production starred Peggy Wood, Dennis King, Judson Laire, Mary Boland, and Vicki Cummings.

Other adaptations from plays that first season included Counselor-at-Law with Paul Muni, The Old Lady Shows Her Medals, and a version of the Edmund Rostand play Cyrano de Bergerac starring Jose Ferrer. Among the novels adapted were Daphne du Maurier’s Rebecca, Alexandre Dumas’s Camille, and Jane Austen’s Pride and Prejudice. On December 19, 1948, Philco Television Playhouse broadcast an adaptation of the Charles Dickens’s story A Christmas Carol. The program included a filmed rendering of “Silent Night” sung by Bing Crosby.

Although it continued to produce adaptations of plays and novels, Philco Television Playhouse began to air original scripts toward the end of the first season. These became more important in subsequent seasons. A number of young writers, including Paddy Chayefsky, Horton Foote, Tad Mosel, Alan Arthur, Arnold Schulman, and Gore Vidal, began their careers writing teleplays for the program.

Chayefsky wrote several scripts for Philco/Goodyear. Among them were Holiday Song (Goodyear, September 14, 1952), The Bachelor Party (Philco, October 11, 1953), The Mother (Philco, April 4, 1954), Middle of the Night (Philco, September 19, 1954), and The Catered Affair (Goodyear, May 22, 1955). The Bachelor Party, Middle of the Night, and The Catered Affair were later made into feature films.

Chayefsky’s most famous Philco script was Marty, aired on May 24, 1953. Directed by Delbert Mann, the production starred Rod Steiger in the title role. It became the most renowned production from the Golden Age of television anthologies and marked a turning point for television drama because of the considerable amount of critical attention paid to it by the press.

According to Delbert Mann, Marty was inspired by the ballroom of the Abbey Hotel on the corner of Fifty-third Street and Seventh Avenue in New York City. A meeting place for single people during the evening hours, the ballroom was the site of Philco Television Playhouse rehearsals during the day. Chayefsky had originally planned to have the main character be a woman but then changed the role into that of the lonely butcher, Marty. The story is a simple one, focused on character and emotion rather than excessive dramatic action. After many unsuccessful attempts to find a girl, Marty visits the ballroom one evening and meets a homely young teacher. Against the objections of his mother and his bachelor friends, Marty finally stands up for himself and calls the young woman back for a date.

Mann believed that Rod Steiger gave the best performance of his life in the role of Marty, and Steiger became so moved by the story that he wept openly on the set. Mann’s last direction to Steiger before air was to “hold back the tears.” Mann also directed the 1956 film version of Marty, which won four Academy Awards—for Best Picture, Best Screenplay, Best Director, and Best Actor (given to Ernest Borgnine for his portrayal of Marty).

Other important productions broadcast on the Philco Television Playhouse were Gore Vidal’s Visit to a Small Planet (Goodyear, May 8, 1955), which later became a Broadway play and a feature film; Vidal’s The Death of Billy the Kid (Philco, July 24, 1955), which became the 1958 film The Left-Handed Gun; and Horton Foote’s A Trip to Bountiful, later staged on Broadway in the 1950s and reshot in the 1980s as a film, with actress Geraldine Paige winning an Academy Award for Best Actress for her performance in the film.
Fred Coe, a graduate of the Yale Drama School, was active as a director and producer for the Philco Television Playhouse for six years. Coe and other staff directors including Gordon Duff, Delbert Mann, Vincent Donehue, and Arthur Penn shared directing responsibilities on a rotating basis. Usually, they worked three weeks ahead with one show in preparation, one in rehearsal, and one on the studio floor ready for telecasting.

During its long tenure, the Philco Television Playhouse became a breeding ground for an entire generation of young directors, actors, and writers who later became famous in motion pictures and on Broadway. The program won a Peabody Award in 1954 for its "superior standards and achievements." Some of the best-known actors who appeared on the series were Joanne Woodward, Steve McQueen, Rod Steiger, Eva Marie Saint, Grace Kelly, Kim Stanley, Jack Klugman, and Walter Matthau.

Host
Bert Lytell (1948–49)

Phillips, Irna (1901–1973)
U.S. Writer

The universally recognized originator of one of television's most enduring—and profitable—television genres, Irna Phillips is responsible for the daytime drama as we know it today. Her contributions to one format are unprecedented in television history. Television comedy had many parents—Ernie Kovacs, Jackie Gleason—and TV drama was initially shaped by such figures as Paddy Chayefsky, Rod Serling, Reginald Rose, and others. The soap opera, however, had only one "mother," and Phillips was it. She founded an entire industry based on her techniques and beliefs, and the ongoing, interlocking stories that she dreamed.

Born in Chicago in 1901, the youngest of ten children, legend has it that Phillips endured her poverty-stricken, lonely childhood by reading and concocting elaborate lives for her dolls. When she started college, she dreamed of an acting career, but school administrators doubted that her looks would get her far so she turned to teaching. After graduation, she taught in Missouri and Ohio for several years before returning to Chicago.

There she fumbled her way into a job with radio station WGN as a voice-over artist and actress. Soon after, the station asked her to concoct a daily program "about a family." Phillips' program Painted Dreams premiered on October 20, 1930. Dreams is usually recognized as radio's first soap opera. It ran with Phillips both writing and acting in it until 1932, when she left WGN because of dispute between her and the owners about the future of the program. At WGN's competi-

Phillips, WMAQ, Phillips created Today's Children, which aired for seven years. Other highly successful dramas followed: The Guiding Light in 1937, The Road of Life in 1938, and The Right to Happiness in 1939. By this time, Phillips had given up acting to devote her time to writing. She had also sold the shows to national networks.

By 1943, just over ten years from her beginning, Phillips had five programs on the air. Her yearly income was in excess of $250,000 and her writing output was around 2 million words a year. It was at this phase that she developed the need for assistants to create dialogue for the stories she created. To keep her scripts accurate she also kept a lawyer and doctor on retainer.

Not one to put pen to paper, Phillips created her stories by acting them out as a secretary jotted down what she spoke. Her process of creating by assuming the identities of her characters was so successful it was later adopted by many of Phillips's protégés, including Bill Bell, who went on to create The Young and the Restless.

Phillips pioneered in radio many of the devices she would later put to successful (eventually clichéd) use in television. She was the first to use organ music to blend one scene into the next. She was the first to employ Dickensian cliff-hanger endings to keep audiences coming back and to develop the casual pace of these shows—she wanted the busy housewife to be able to run to the kitchen or see to the baby and not miss anything. She was the first to address social concerns in her storylines. She was also the first to shift the focus of serials from blue-collar to white-collar characters; under Phillips, doctors and lawyers became soap staples. In fact, hospital settings and stories about illness were vintage Phillips; a hypochondriac who visited doctors daily, Phillips brought her fascination with medicine to her work.

In other ways, the serials she created did not mirror Phillips's life. For example, although her shows were eventually all produced in New York, Phillips refused to leave Chicago; instead, she stayed involved in all aspects of her programs with frequent phone calls to the East. Also, Phillips, who based her stories on nuclear families, never married, although late in her life she adopted two children.

When Phillips brought her creations to television (somewhat reluctantly), she brought all her devices with her. The Guiding Light premiered on TV in 1952. The Brighter Day and The Road of Life came to the small screen in 1954.

In the early 1950s Phillips began a long association with Procter and Gamble, longtime sponsors of soap operas. All of Phillips's shows at that time, and all she would create in the future, would be under the umbrella of Procter and Gamble Productions.

On April 2, 1956, Phillips premiered what was to become her most successful (and some say favorite) show, As the World Turns. Until the 1980s phenomenon of General Hospital, it was the most successful soap in history. At its ratings peak in the 1960s, it was regularly viewed by 50 percent of the daytime audience. As the World Turns has broken much historical ground during its existence. It was daytime's first half-hour soap (previous shows lasted 15 minutes), and it was the first to introduce a scheming female character, Lisa Miller (played by Eileen Fulton), using feminine wiles to catch unavailable men and generate havoc. The show's popularity even inspired a prime-time spin-off, Our Private World, which aired for a few months in 1965.

In 1964 Phillips created daytime's Another World, TV's first hour-long soap and the first to broach the subject of abortion. (Phillips never shied away from controversy: when writing for the soap Love Is a Many-Splendored Thing, she attempted to introduce an interracial romance. When the network balked, Phillips quit the show.)

Also in 1964, Phillips began working as a consultant
on the prime-time soap *Peyton Place*. Phillips now had control over shows running on all three U.S. networks. In 1965 she created another long-lasting daytime drama, *Days of Our Lives*.

Despite Phillips’s legendary golden touch and her importance to the daytime drama, by the 1970s the times and the genre were leaving her behind. Soaps were important profit centers for networks, whose executives concluded that the serials needed to become more sensational in order to keep ratings. Phillips’s simpler stories were now out of fashion. She was fired by Procter and Gamble in 1973 and died in December of that year.

Today, daytime is populated with programs she created: *As the World Turns, Days of Our Lives,* and *Guiding Light.* The latter has now set the record as the longest-running series in broadcasting history. Many other soaps on the air were created by those who began their careers working for Phillips: Bill Bell and *All My Children* creator Agnes Nixon.

Phillips believed her success was based on her focus on character, rather than on overly complicated plots, and her exploration of universal themes: self-preservation, sex, and family. She said in 1965, “None of us is different, except in degree. None of us is a stranger to success and failure, life and death, the need to be loved, the struggle to communicate.”

**Pierce, Frederick S. (1933– )**

**U.S. Media Executive, Producer**

Frederick S. Pierce began working at ABC Television 13 years after the company’s birth. Starting as an analyst in television research in 1956, Pierce held over 14 positions until resigning as vice chairman of Capital Cities/ABC in January 1986. Pierce’s period of greatest accomplishment came from 1974 through 1979, when he served as president of ABC Television. However, he began formulating policies and strategies during the 1950s and 1960s as ABC defined its path in network broadcasting.
Marcus Welby, M.D. The network experimented with violent program content, such as Bus Stop, and stressed nontraditional sports, including rodeo and wrestling. Pierce’s singular characteristic of persevering within these boundaries made ABC an industry power. Reaching number one in prime time in 1976–77, and maintaining the position for two more seasons, Pierce captured the young, urban viewer with comedy and action, produced longer and more elaborate miniseries and special programs, offered glossy production values in sports programming, and even redirected afternoon soaps toward youth. As president of the Television Division, Pierce introduced three megahits, Happy Days, Taxi, and Mork and Mindy. The violence and tame sexual content of The Rookies, Baretta, S.W.A.T., and Charlie’s Angels that angered critics was a natural progression of ABC under Pierce’s leadership, the outcome of taking risks and looking—for more than a decade—for any different approach.

Pierce brought passion and dauntless optimism to the conception, development, and scheduling of ABC programming. The news programs Nightline, 20/20, and Good Morning, America were introduced under his leadership. The network’s strategy stemmed from innovation, experimentation, risk, and diversity—words Pierce frequently employed. He introduced the “living schedule,” the practice of testing five to eight new series in late winter and the spring, each for a month or more, in preparation for fall scheduling. Pierce also referred to this practice, to be adopted by the other networks, as “investment spending,” and he thought of it as a way of respecting and responding to audience feedback. When the “family-viewing hour” was instituted, Pierce scheduled comedies and other fare from 8:00 to 9:00 P.M. and followed with action-adventure programs, Monday through Friday. The strategy, called “clotheslining” or “ridgepiling,” succeeded in holding viewers.

Before and after ABC’s hold on first place, Pierce brought a new perspective. If an ABC program ranked third in its time slot, it was a failure by industry standards. In his view, though, and therefore the view of ABC, even a third-place program was a success if its rating with a specific target audience was large, for these numbers could translate into value to the advertiser. The other networks soon followed Pierce’s view of program assessment and focused attention and efforts on material developed with specific demographic groups in mind.

In the drive for success, Pierce programmed “events” that could draw critical attention and viewership. The miniseries was transformed into such a television event, at times lasting, as in the cases of Roots and The Winds of War, more than seven nights. Under
the supervision of Roone Arledge as president of ABC Sports, sports coverage became a central source of revenue for ABC. The quest for a hit sports event meant Pierce's approval of large outlays of money for programming such as the Olympics and championship boxing matches. When one event was a success, it justified Pierce's spending but kept the company in a precarious position for the long term.

The news division received the least amount of attention from Pierce until he convinced Goldenson to appoint Arledge president of ABC News in 1977. Pierce believed sports and news held a conceptual common ground. Arledge agreed and successfully applied engaging production techniques with commentators seeking celebrity status in American homes. Although Pierce believed Arledge could assist the news division, Pierce also made the dramatic move of hiring Barbara Walters as an additional safeguard.

Since Pierce was driven by a lifelong commitment to ABC, he expected the same loyalty in return. He stated publicly that he sought the presidency of ABC, but in January 1974 Goldenson first appointed him executive vice president in charge of ABC Television, with the added responsibilities of developing the company's cable, pay-per-view, and video projects, before naming him president of ABC Television in October of that year, responsible for five divisions: entertainment, finance and planning, the TV network, ABC-owned stations, and sports. However, Pierce had difficulty positioning ABC in the larger media puzzle with some of the projects he initiated. From 1978 through 1980, Pierce baffled the industry with his statements against cable, calling for the protection of free television and criticizing cable's unrestricted content. But other statements soon followed, describing cable as a tool for diverse programming. Pierce's credibility began to be questioned.

In the 1970s Pierce was surrounded at different times by such prominent figures as Arledge, Fred Silverman, Barry Diller, and Michael Eisner. He pursued Silverman for the position of president of ABC Entertainment, and they worked efficiently together. But upon Silverman's departure, Pierce became highly critical of Silverman's limitations, minimizing his contributions to ABC's turnaround. Pierce was self-consciously basking in the glory of establishing ABC as a powerful network. The situation began to change. Pierce all but abandoned action-adventure series by 1980, when they were partly responsible for securing young, urban male viewers. He did not recognize the changes developing in television's collaborative arrangements with Hollywood. He continued to depend on the "living schedule," with its rush to find a hit within four weeks, and in so doing alienated producers whose programs were removed from the schedule without time for the series to develop an audience. As president of ABC, Inc., he surrounded himself with allies, including Tony Thomopoulos, president of ABC Television, Pierce's most cherished area.

Pierce reached the top of ABC as numerous ventures stalled in development, when money was already committed to major events, and shareholders were demanding fiscal prudence. After ABC was purchased by Capital Cities, Pierce needed Tom Murphy, the new chair and chief executive officer, to position ABC for the future. Pierce, however, had no inclination of what the future held. CapCities' assessment of ABC and what needed to be done significantly excluded him. By the time of his resignation in 1986, he expressed amazement and disbelief at the turn of events, suggesting an inability to perceive the complex and unstable structure he helped build.

Since leaving ABC Pierce has continued to be active in the entertainment industry. With his two sons, Richard and Keith, he founded the Frederick S. Pierce Company, dedicated to quality films and television programs. The company's projects included the four-part 20,000 Leagues Under the Sea (ABC, 1997) and the Emmy-winning The Positively True Adventures of the Alleged Texas Cheerleader-Murdering Mom (HBO, 1993). Since 1998 Pierce has been an executive producer of the American Film Institute's centennial salute to American cinema, including the institute's 100 Years, 100 Passions in June 2002. Pierce comes to this yearly project after serving as chairman of the American Film Institute's Board of Trustees from 1992 to 1996.

Pilot Programs

During the first four months of the year, U.S. television studios and production companies (and, increasingly, similar organizations in other nations) immerse themselves in the annual rite of spring known as “pilot season.” The television pilot program is a sample episode of a proposed television show, which may be chosen by networks for the following fall’s schedule. Pilot season is a frenetic, competitive time in Hollywood; prominent producers, reputable writers, and experienced directors design and showcase their wares for network executives, with each “player” hoping for the next hit series.

Pilots are expensive to produce, and shows that are not purchased by a network have no value. Since the new season is planned using pilots, and the entire offering of a network is usually in place by mid-May, the careful selection of pilots is crucial for designing a competitive lineup of shows. Shows made as pilots during this period are frequently the culmination of long-term preparation, sometimes spanning years. A pilot concept deemed unacceptable by network executives in one year may later become suitable as tastes and mores change. Writers and producers may also design potential shows based on the popularity of programming from a previous season. For example, the final fall 1995–96 season contained several programs resembling the 1994–95 sleeper hit, Friends (NBC). Youth-oriented, nighttime soaps such as Melrose Place (FOX, 1992) and Central Park West (CBS, 1995) traced their lineage to the unexpected popularity of Beverly Hills, 90210 (FOX, 1990). Another source for pilot concepts comes from cycles of popular genres in motion pictures or television. In some cases, networks derive pilots by developing “spin-offs,” which use characters or guest stars from television shows or movies to establish a new program. In 2000 CBS considered a pilot starring talking Baby Bob, a character originally developed to pitch FreeInternet.com.

The process begins when a writer or producer “pitches” an idea to the networks. Pitches may occur year-round, but most occur in autumn, shortly after the fall season premieres. By then, network executives have already begun to consider the success or failure of new programming and have charted trends in topics, types of characters, and other information pertinent to development. If a pitched concept is given a “green light,” the network will commission a script, to be written by the series’ creator or by a well-known writer. After reading the completed script, the interested network offers extensive notes on changes as
Pilot Programs

well as positive elements. Few scripts are commissioned, and fewer still lead to the production of a pilot; estimates suggest that out of 300 pitches, approximately 50 scripts are commissioned, and of those, only 6 to 10 lead to the production of a pilot.

Because pilots may take months or years to develop, casting becomes a primary concern during the actual pilot-making process. The first quarter of the year is often the busiest, most lucrative time for actors, agents, producers, and casting directors. Networks like projects that come with a known star attached and are willing to pay a studio more if a potential program contains an actor with a following or name recognition. A pilot that is also a star vehicle generates more publicity: the press increases its commentary and gossip about the star or show; fans of the star already exist, thereby building a core audience for the show’s debut; and the presence of a star gives a show an advantage over competition in similar genres or opposing time slots.

Network executives are aware, however, that known stars often fail to carry shows and lesser-known performers can quickly build audiences. A 1990s trend involved the casting of stand-up comedians. Unknown to most viewers, but with solid track records in clubs or other venues, such actors cost less initially but have enhanced potential for becoming successes. Roseanne, Jerry Seinfeld, and Tim Allen illustrated the intelligence of this strategy.

The choice of leading players also influences later casting of supporting actors. Appealing, marketable pilots may sell based on the “chemistry” between the star and members of the supporting cast. In the case of situation comedies (sitcoms), such interplay is often a deciding factor in choosing one pilot over another.

Producers spend a disproportionate amount of money on pilots relative to series’ regular episodes. By the early 1990s, the average cost for a half-hour pilot ranged from $500,000 to $700,000, and hour-long pilot program costs have soared beyond $2 million, with James Cameron’s pilot for Dark Angel reportedly costing close to $10 million. If a show is not contracted (or “picked up”) by a network, then producers or studios are not reimbursed for costs.

A trend that began in the mid-1990s, designed to cut costs, is the production of shorter presentation tapes, called “demos.” Instead of making a standard-length, 22-minute sitcom using new sets, original music, and complete titles, producers create a partial episode, 15 minutes in length. The presentation tape provides a sample of the show’s premise, writing, and cast. Studios rely on preexisting sets, furniture, and props from other shows; titling and new music are limited. If a network buys the series, presentation tapes may be expanded to episode format by adding music, titles, and new footage. If not contracted, the presentation format helps offset costs. Comparable techniques are used in preparing hour-long presentation tapes.

Producers screen finished pilots for network representatives; if the show receives favorable opinions, it will be shown to a test audience, which comments on its qualities. Based on screenings and other criteria, a network decides whether to reject or purchase the series intact, or change cast, location, premise, or other elements, and rescreen. Another decision involves purchase and scheduling; executives must decide whether to contract for “one bite” or “two bites.” A one-bite show gets a tryout during the fall schedule; if a show is being contemplated for two bites, its producers know that it may be chosen in the fall, or also as midseason replacement programming, giving it two chances to be selected. Once decisions are made, networks place orders for a number of episodes. Traditionally, at least 13 to as many as 23 episodes were ordered for production; recent changes have led to as few as 7. For actors, “pickup” means a contractual commitment to the show for five to seven years; if the show is not renewed after three years of production, the actor is not paid for the remainder of the contract. Such contracts safeguard a producer’s interests: the actor is available for an extended run of the series, increasing the likelihood that at least 100 episodes will be made—the minimum number usually needed for domestic syndication. However, the networks often revise pilots after purchase, recasting stars or replacing producers.

The addition of new networks, cable stations, and premium channels is altering the process of pilot production and sales, by creating more outlets for programs—even those rejected by other networks. A record 42 new series appeared in U.S. prime time during the 1995 fall season, in part because of the previous year’s addition of the United Paramount Network (UPN) and the Warner Brothers (WB) Network. These joined relative newcomer FOX Broadcasting Company as a venue for new pilots and subsequent programming. During the pilot season for the 1998-99 schedule, the six major networks commissioned approximately 150 pilots for potential new shows but chose to purchase only 37.

Although pilots and presentation tapes remain essential in the process of program development, new regulations and strategies may eliminate the pilot-producing season. HBO has initiated new programs in June, and more channels are in development for series and movies all year long. It is clear that as the marketing and distribution strategies and capabilities of entertainment television continue to shift and change, so,
Pilot Programs

too, will the process by which programs come to be created and viewed.

Pittman, Robert W. (1953– )

Robert W. Pittman was listed in Advertising Age’s spring 1995 special issue on the 50th anniversary of television as one of “50 Who Made a Difference” in the history of television. Known as “the father of MTV,” at age 27 he created the Music Television cable network. MTV revitalized the music business and spawned the music video industry, which in turn influenced an entire new generation of television programming, production, and commercials that appealed to the so-called MTV generation of young viewers.

Pittman began his remarkable career at age 15 as a radio disc jockey in his hometown of Jackson, Mississippi. From there he went to Milwaukee, then Detroit, and at 18 got his first job in programming, as the program director for WPEZ-FM in Pittsburgh, Pennsylvania. He took the contemporary-music-format radio station to the top of the ratings in its younger target demographic area. He then moved to Chicago and, at the age of 20, programmed country music on NBC-owned WMAQ-AM, where the station shot up from 22nd to 3rd. WMAQ’s success is considered one of the major programming turnaround success stories in radio history.

Pittman duplicated the phenomenal success of WMAQ-AM when he was given the responsibility of programming WMAQ’s co-owned FM station, WKQX, late in 1975, when he was 22. In one rating book he beat the longtime album-oriented-rock (AOR) leader in the market and made a debut near the top of the target demographic ratings. In 1977 NBC sent Pittman to New York to program the floundering WNBC-AM. Once again the “Boy Wonder,” as he was known in radio circles, led the contemporary-music-and-personality-format station, WNBC, to the top of the ratings in its target groups. Many knowledgeable radio programmers and historians consider Pittman to have been the most successful radio program director ever, primarily because of his spectacular success in a variety of formats.

His unusual combination of creative and analytic brilliance made him a rare programmer. A research-oriented manager, he also understood and interacted well with the creative talents and egos of people in the music industry, disk jockeys, and personalities such as Don Imus (whom Pittman was instrumental in firing and then rehiring at WNBC-AM). Pittman’s varied talents led John Lack, the executive vice president of Warner Satellite Entertainment Company (WASEC), to hire Pittman as the programmer for the Movie Channel in 1979, giving him his first job in television. Although Lack had conceived of doing an all-music channel filled with related programs, it was Pittman who developed the concept of an all-video channel, where record company-produced videos would be programmed in the same fashion as records on a radio station.

As much as—and perhaps more—than the music, it was the image, attitude, and style that made MTV an instant hit with the antiestablishment, antiauthoritarian, under-30 audience it targeted. The network became a cultural icon, the first network expressly designed to target young audiences. From the beginning, Pittman’s genius was in positioning MTV to be different from the traditional networks (ABC, CBS, and NBC). He hired cutting-edge, avant-garde production houses to create logos that would be instanta-
neously recognizable because they were not network logos, not traditional graphics, symbols, or icons, and thus not connected with the traditional networks in any way. He made sure it would be impossible for any young person to click by MTV on a television set and mistake it for any other network or station; immediate recognition and a unique look were his goals.

Another facet of Pittman’s brilliance was his ability to conceptualize programming. He postulated a new theory to explain how young people who grew up with television consumed it differently from their parents. The older generation, he suggested, watched TV as they read books, in a linear way. The new television generation, he believed, processed TV in a nonlinear manner, processing visual information much faster than previous generations. Younger viewers processed television in a nonsequential and nonlinear manner, and they were not disoriented by brief, disjointed images. From this insight came the distinct style of MTV.

Pittman’s business savvy was also notable. MTV was the first basic cable network to become profitable. The record companies paid for the programming (the videos) just as they gave radio stations their records. MTV’s programming content was virtually free.

This combination of business acumen and programming astuteness led to Pittman’s being named CEO of the MTV networks in 1983. In this capacity, he oversaw the redesign and relaunch of Nickelodeon, the creation of VH1 and Nick at Nite, the expansion of MTV into global markets (Europe, Australia, and Japan), and the company’s 1984 initial public offering on the stock market.

In 1987 Pittman left MTV after an unsuccessful attempt to buy out the network, cofounding Quantum Media with MCA. Quantum Media produced The Morton Downey Jr. Show, a television talk show, and the innovative police documentary The Street. Quantum Media was sold to Time Warner in 1989, and Pittman became an executive assistant to Steve Ross. In 1990 he was named CEO of Time Warner Enterprises and took over the additional responsibilities of being chief executive of Six Flags amusement parks, majority-owned by Time Warner. As he did at radio stations and cable networks, he revitalized Six Flags and made the company extremely profitable. When Time Warner sold Six Flags in 1995, Pittman decided to take his payoff from the sale and look for new challenges. He joined Century 21 at the urging of his close friend and investor Henry Silverman and joined the board of directors of America Online.

In 1996 Steve Case, the CEO of America Online, hired Pittman to operate a company that was struggling with outsized growth and expenses. As he had with radio stations, television programs, and amusement parks, Pittman used his marketing acumen and operational expertise to turn around AOL, as he led a spectacular growth spurt in subscriber and advertising revenue. When Case engineered the largest merger in U.S. business history with Time Warner to create the world’s largest media company, Pittman became co-chief operating office along with Richard Parsons under CEO Gerald Levin. When the AOL Time Warner board forced Levin to retire, it named Parsons chief executive officer to replace Levin, and Pittman chief operating officer of the entire company. However, the dot.com bubble burst, which partially led to AOL Time Warner stock plummeting at the same time that America Online’s growth was slowing. Pittman agreed to take on the additional duties of being CEO of AOL in an attempt to help the struggling unit regain its early glory. However, he resigned in exhaustion in July 2002.

Playhouse 90
U.S. Anthology Drama

A relative latecomer to the group of live anthology dramas, Playhouse 90 was broadcast on CBS between the fall of 1956 and 1961. Its status as a “live” drama was short-lived in any case, since the difficulties in mounting a 90-minute production on a weekly basis required the adoption of the recently developed videotape technology, which was used to prerecord entire shows from 1957 onward. Both the pressures and the costs of this ambitious production eventually resulted in Playhouse 90 being cut back to alternate weeks, sharing its time slot with The Big Party between 1959 and 1960. The last eight shows were aired irregularly between February and May 1960, with repeats broadcast during the summer weeks of 1961.

Despite its late entry into the field of anthology dramas, many considered, and still consider, Playhouse 90 as the standard against which all other drama anthology programs are to be judged. Although its debut show, a Rod Serling adaptation of the novel Forbidden Area, failed to garner much critical interest, the following week’s presentation of an original teleplay by Serling, Requiem for a Heavyweight, was quite notable, with the story becoming an enormous success both in this initial television broadcast and later as a feature film. Requiem swept the 1956 Emmys, winning awards in all six categories in which it was nominated, including Best Direction, Best Teleplay, and Best Actor. Playhouse 90 established its reputation with this show and continued to maintain it throughout the remainder of its run.

The success of Playhouse 90 continued into the 1957–58 season with productions of The Miracle Worker, The Comedian, and The Helen Morgan Story. Although these shows, along with Requiem and Judgment at Nuremberg, were enough to ensure the historical importance of Playhouse 90, the program also stood out because of its emergence in the “film era” of television broadcasting evolution. By 1956 much of television production had moved from the East to the West Coast, and from live performances to filmed series. Most of the drama anthologies, a staple of the evening schedule to this point, fell victim to the newer types of programs being developed. Playhouse 90 stands in contrast to the prevailing trend, and its reputation benefited from both the growing nostalgia for the waning live period and a universal distaste for Hollywood on the part of New York television critics. It is also probable that since the use of videotape (not widespread at the time) preserved a “live” feel, discussion of the programs could be easily adapted to the standards introduced by the New York television critics.

It has been argued that Playhouse 90 in fact contributed to the demise of live television drama by making the genre too expensive to produce. The program’s lavish budget was undoubtedly a factor in the quality of its productions, but its cost was enormous when compared with that of filmed series, against which it could not compete in the newly introduced ratings system. Playhouse 90 stood out as an anomaly in its time, and its short run of less than four seasons suggested that a program of its kind could not survive in a changing production environment, regardless of its acclaim. Although Playhouse 90 was an outstanding program, and representative of the best that drama anthology programs could offer, it was also the last of its genre to be shown as part of a regular network schedule.

Poland

For much of its early existence, Polish television remained in radio’s shadow. Only in the 1960s did the postwar communist regime begin to take it seriously and recognize its usefulness as an instrument of propaganda. Despite developing in a totalitarian system, the medium was never completely politicized; since the fall of communism and subsequent deregulation of the media landscape, politicians have sought closely to control its development.

Preliminary experiments date back to the 1930s. Although limited in scope, and centered in Warsaw, they encouraged Polish Radio to plan a custom-built television studio (1940) and to inaugurate a regular service by 1941, but the German occupation set back progress by nearly a decade. It was 1947 before the State Telecommunications Institute resumed trials. In late 1951 the exhibition “Radio in the Struggle for Progress and Peace” demonstrated television’s capabilities to some 100,000 visitors. A half-hour test broadcast in October 1952 from the Ministry of Communications marked the official launching of Polish television (TVP) and regular transmissions of up to an hour’s duration, usually every Friday, soon followed (January 1953). The medium’s onerous working conditions, together with its limited range, militated against serious treatment by the party. Therefore, the criterion of political reliability played little part in appointments.

Rapid technological advances and the start of domestic set production (the Soviet-based Wiśła and Belweder models) in 1956 accelerated television’s expansion in the late 1950s. Prime Minister Józef Cyrankiewicz formally opened the Warsaw Television Centre in May 1956, but television would no longer remain the capital’s preserve. In line with the general tendency to decentralize cultural offerings, television centers quickly emerged in other cities. Simultaneously, the number of Polish license fee payers rose exponentially: from 5,000 in 1957 (when registration became compulsory) to 6.5 million by the mid-1970s. From 1957, television was on the air for several hours, five days a week; in February 1961 this increased to seven days. Indicative of television’s growing importance, the Committee for Radiophonic Affairs was renamed the Radio and TV Committee (December 1960).

Under Jerzy Pański (director of programming, 1957–63), TVP established a reputation for its cultural and entertainment schedule, which, unlike many other Eastern Bloc countries, also included nonsocialist films (Rashomon, Wages of Fear) and television serials (Dr. Kildare, Alfred Hitchcock Presents). Teatr Telewizji, one of its greatest achievements, began in 1958, and at the height of its popularity would be watched by almost half the available audience. TVP branched out into school programming (March 1961), and children’s bedtime television (1962), but its political and informational programs, particularly the main evening news (Dziennik TV, 1958–90), assumed increasing importance in the propagation of ideology. By the end of the decade fraternal socialist productions outnumbered Western imports. Traditionally hostile to communist ideology, Poles could enjoy popular domestic series with pro-Soviet messages (such as Stawka większa niż życie—A Stake Greater Than Life Itself, 1968) while ignoring their partisan overtones. Television steadfastly promoted the official government line during crises (although events in 1968 saw the dismissal of 150 employees) yet also immortalized historic moments, such as First Secretary Edward Gierek’s personal appeal to strikers on the Baltic Coast (1971) to return to work.

During the 1970s, when Gierek attempted a great economic leap forward (funded by Western credits that ultimately condemned Poland to chronic indebtedness), television played a crucial role in promoting his “propaganda of success.” Under his crony, Maciej Szczepański (Radio and TV Committee Chairman, 1972–80), television was subjected to much more rigorous controls; Szczepański himself oversaw production of Gierek’s speeches, and “live” interviews were prerecorded and thoroughly vetted, with presenters and guests learning their scripts by rote. It was the party leadership that took the major decisions—the Main Censorship Office (1945–90) played only an ancillary role. Television news, especially, presented an unswervingly positive image of contemporary life, in stark contrast to most Poles’ experience.

New technology and the industry’s expansion at the turn of the decade greatly facilitated this process. In 1969 massive studios opened in Warsaw, and the introduction of the Ampex system allowed prerecording. TVP2, designed to provide more high-brow programming, started in December 1970, while color broadcasts (like Soviet television, using the Secam system)
commenced in time for the VI Party Congress (December 1971). Television schedules offered a mélange of mindless entertainment, propaganda, foreign imports, and high culture. Bergman and Fellini films ran alongside Columbo and Koch, popular domestic soaps (Czerdziestolatek—Forty-Year-Old) and, with Poland’s growing international success in soccer (1974) and athletics, extensive sports coverage.

The massive turnout to greet Pope John Paul II’s first visit (June 1979) presented a major challenge, and the government permitted television to transmit only heavily manipulated reports. Not even TVP, however, resisted the emergence of Solidarity (the regional Interenterprise Strike Committee, August 1980). The party leadership tolerated programs such as Listy o gospodarce (Letters on the Economy, November 1980), where viewers wrote in to criticize the economic and political situation. From March 1981, officials appeared on Monitor Rządowy (Government Monitor), every Friday after the main evening news, to justify their activities. The declaration of martial law (December 13, 1981) ushered in a sharp, but brief, political freeze. TVP2 went off-air until February 1982, presenters appeared in military uniform to read out official announcements, and the secret police took over television’s upper echelons. Seventy employees were interned for pro-Solidarity sympathies. Television news displayed an extreme antiopposition bias. In protest, many actors mounted an effective boycott of television, lifting it only in the more liberal climate of the mid-1980s.

The last decade of communist rule initiated several key changes in TVP’s profile. The rise of Latin American soaps (Isaura the Slave-Girl), the introduction of erotic movies (the so-called pink series) and more chic news programs (such as Teleexpress [1986], and Panorama dnia [1987]), and commercials indicated a shift toward capitalism. The government, lacking credibility in society at large, realized it could not reform the economy without Solidarity’s assistance and brokering the Round Table talks of February to April 1989. Here, a special subcommittee dealt with media issues. Solidarity’s demands included access to TVP, the transformation of state television into a public broadcaster, and the reinstatement of journalists sacked during martial law. Prior to the first semifree elections of May 1989, it duly received television slots (Studio Solidarność) to promote its candidates. Its other demands would be met in the months that followed electoral “victory” (near total control of the newly established Senate, and all the seats available in the lower house). The creation of the first postcommunist government under the Catholic intellectual Tadeusz Mazowiecki (August 1989), followed by the dissolution of the party (January 1990), heralded the end of the party’s audiovisual monopoly.

The need to create democratic institutions often from scratch also had a profound impact on television. It played a key role in those changes by providing an important forum for political candidates in local, presidential (1990), then parliamentary elections (1991). In the chaos of transformation, politicians, reluctant to expose TVP to competition before it had the chance to transform, delayed much-needed new legislation. The December 1992 law established a nine-member National Radio and TV Council (KRRT) as the supreme body in audiovisual media affairs and transformed state television into a joint stock company as of January 1, 1994, its single shareholder being the Treasury. The KRRT was further charged with defining the criteria for license allocation over two rounds of bidding (1994, 1997). The law limited the share of foreign capital in Polish terrestrial broadcasters to one-third, but evoked most controversy for an ill-defined clause requiring programmers to respect “Christian values.”

Public television, meanwhile, implemented internal changes, creating a Biuro Reklamy (Advertising Bureau) (by 1994, advertising would provide 51 percent of TVP’s total income) and embarking on a massive expansion from 1992. Breakfast programming (Kawa czy herba—Coffee or Tea) extended the daily schedule while TVP’s autonomous regional centers (eventually 12 in number and known collectively as TVP3) commenced their own local production, a move that required enormous financial investment. TV Polonia, a satellite channel for Polish communities abroad, launched in 1993, and a dedicated digital music channel, Tylko Muzyka (April 1997–February 1998), broke more ground. As of January 1, 1995, TVP started using the PAL system, the Western European norm. The increasing share of revenue from advertising made public television highly sensitive to commercial competition and its resultant downmarket shift laid it open to charges of “dumbing down.” TVP successfully adopted Western formats: game shows (Blind Date, Wheel of Fortune), fly-on-the-wall documentaries, chat shows, and more relaxed news programming (a multipresenter Wiadomości replacing Dziennik). TVP2, traditionally more high-brow, also reflected these trends, showing American police high-speed pursuits alongside the minilectures of the philosopher Leszek Kolakowski. Despite such activity, TVP remains hamstrung by its comparatively low funds (amounting to only one-sixth of French public television’s) and shows a tendency—most evident in program quality—to spread those funds thinly. Attempts at restructuring have largely failed.

Piracy characterized private broadcasting in the
early 1990s, since the Ministry of Communications granted a license to only one new station (Echo, 1990). Small private stations mushroomed across Poland, many of which eventually joined Polonia 1, established by the Italian media magnate Nicolo Grauso in 1993. When he failed to win a franchise, Grauso withdrew from the scene, and Polonia 1 moved to Italy. TV Odra (1994) now serves as an umbrella for about a dozen stations broadcasting in the west and north of Poland. Somewhat surprisingly, given its lack of capital, the Franciscan Order's TV Niepokalanów (1995) received a nationwide license in 1994 on condition that advertising did not exceed 2 percent of its schedule. In 2001, it managed to raise this to 15 percent, paying a larger fee for its franchise; and TV Puls, which then started broadcasting on its frequencies, supplemented its largely religious programming with family entertainment (The Cosby Show, Little House on the Prairie).

The greatest challenge to TVP comes from two private stations—Zygmunt Solorz's Polsat (1992), the only totally commercial station with a nationwide franchise, and Mariusz Walter's TVN (1997), which began as a supraregional station but has since expanded. Solorz won a ten-year franchise in 1994, and, in addition to his major cable interests (Dami) and media investments in all three Baltic states, has developed his terrestrial holdings—adding TV4, formerly the debt-ridden Nasza Telewizja (Our Television, 1997)—and extended into satellite (Polsat 2, 1997), and digital (Polsat Cyfrowy, 2000). TVN became an exclusively Polish concern after the withdrawal of its American partner CME in 1998. Its original license gave access to northern Poland, Warsaw, and Łódź, but Walter bought TV Wisła (1994) in 1997, thereby extending TVN's coverage to the south. Its presence was further enhanced by inclusion in the pay-per-view digital platform Wizja TV. In September 2001 TVN started broadcasting the first news channel, TVN 24, loosely modeled on CNN.

Polsat has occasionally achieved higher ratings than TVP1 (up to 30 percent audience share in 1998), but like TVN is generally seen as being more downmarket. Both have gained notoriety for their reality shows: TVN launched Big Brother in Spring 2001, which the KRRT condemned as "socially harmful," but proved enormously popular with the audience (70 percent/8.4 million viewers watched the final episode). Its other key programs include Milionerzy (Who Wants to Be a Millionaire?, autumn 1999) and Fakty, its main evening news program, which is almost as popular as Wiadomości. The poaching of several TVP star presenters (including Tomasz Lis, Krzysztof Ibisz) boosted its profile. Polsat's soaps enjoy greater success; it owns the rights to the lucrative European Champions League and broadcast the 2002 World Cup. Together, TVP, TVN, and Polsat currently dominate television advertising (90 percent of all ad spend/US$1.45 billion in 2001).

Cable and digital television are growing in importance. Cable's origins lie in the early 1990s: key operators today are Polska Telewizja Kablowa (PTK; founded 1989, license 1995) with networks in most cities, and Aster City Cable (license 1997). Digital has been an arena of major struggle between American-backed operations—HBO (1996) and Wizja TV (launched 1998; taken over by the Dutch-owned United Pan-Europe Communications in 1999)—and the French Canal+ Cyfrowy (license 1997). The former broadcast from outside Poland (from Hungary and the United Kingdom, respectively) to circumvent restrictions on foreign capital, which caused Canal+ to complain about unfair competition. However, in December 2001, Wizja and Canal+ merged to form a single company, Telewizja Korporacja Partycypacyjna (25 and 75 percent shares, respectively). Further concentration of cable and digital television looks likely.

Controversy dogged both licensing rounds, with the Supreme Court challenging nearly every award on procedural grounds. In each case the KRRT has confirmed its original decision. Politicians often intervene in the workings of television: President Wałęsa, dissatisfied with the 1994 licensing round, sacked the KRRT head, Marek Markiewicz, although his authority to do so was doubtful. The political composition of the Council remains a contentious issue, with all parties seeking to advance their own agendas. These problems particularly affect TVP, one of whose most dynamic directors, Wiesław Walendziak, resigned in protest at political interference in February 1996. His successor, Ryszard Miazek, declared that TVP journalists should seek to inform viewers about, rather than comment on, politicians' statements, which seemed to presage a return to communist practices.

A new media bill, designed to bring Poland (a member of the European Broadcasting Union since 1992) into line with EU legislation, is creating a major furor. The bill lifts restrictions on foreign capital for European businesses and relaxes them for others, proposes strict limits on cross-media ownership (no nationwide newspaper can simultaneously own a national station), and greatly bolsters TVP's position by allowing it to launch unlimited channels. President Kwaśniewski has promised to exercise his veto. The Polish television industry nonetheless constitutes one of the great success stories of postcommunist Central and East European broadcasting.

Poldark

British Historical Drama

Poldark is one of the most successful British television dramas of all time. The popularity of the first series in 1975 was matched by enthusiastic reception of the 1993 video release. As a costume drama, scheduled for early evening family viewing, Poldark was not unusual, but its exterior sequences, cast, and immense popularity have made it ultimately memorable. The first episode, opening to Ross Poldark’s ride across the Cornish landscape on his return from the U.S. War of Independence, was seen by an audience of 5 million. As the series continued, this figure rose to an average of 15 million viewers. The two BBC Poldark series sold to more than 40 countries, and in 1996 a made-for-television movie sequel aired on ITV.

The Poldark series are all closely based on the novels of Winston Graham, well known for his thrillers and for the screen adaptations of his later nonhistorical books, the British film noir Fortune Is a Woman (1956) and Marnie (1964), directed by Alfred Hitchcock. In 1969 Associated British Picture bought an option on the Poldark best sellers and commissioned a four-hour Cornish equivalent to Gone With the Wind. However, the film project was dropped during the EMI takeover of the company. The option was taken over by London films, who eventually collaborated with the BBC.

The first BBC series dramatizes the original four novels Graham wrote at the end of World War II. Graham had initially planned a trilogy set in 18th-century Cornwall, which would explore the love triangle between the war hero Captain Poldark, his less-exiting cousin Francis Poldark, and the aristocratic Elizabeth Chynoweth. However, as the narrative developed, Graham became more interested in the social situation in Cornwall at that time and the dramatic contrast between the oppressed poor and the new landowning classes. Graham added the engaging urchin Demelza, who marries Ross out of her class, and a fourth book focused on the villain, the nouveau riche George Warleggan.

The first series established Ross Poldark as a character at war with his own class. After his return to Cornwall and his failure to win back Elizabeth, Ross attempts to restore Nampara, his father’s ruined estate. He shocks his neighbors by marrying Demelza, the daughter of a brutal miner, and interesting himself in the affairs of those who work for him. His legitimate business deals and mining company ventures bring him into direct competition with George Warleggan. Illegal activities, such as the false charge of incitement to riot and, later smuggling, also bring Poldark into conflict with the Warleggans. In this feud, Poldark is portrayed as the forward-looking, benevolent landowner and entrepreneur, whereas Warleggan is seen as a tyrannical arriviste, whose grand house is burnt to the ground by dispossessed miners and tenants.

The house-burning scene and climax to the first series was a radical departure from Graham’s novels. Although the author felt that the first series was marred by the use of a different writer for every episode, Graham wrote a further trilogy for adaptation and became closely involved with the second series made in 1977. This series follows the fortunes of four different marriages: that of the Poldarks; Elizabeth’s marriage to Warleggan; Caroline’s union with the progressive doctor Dwight Enys; and the marriage of Elizabeth’s un-
happy cousin Morwenna. All are affected by the intense rivalry between Poldark and Warleggan. Ross Poldark and George Warleggan continue their feud in London as well as Cornish society by becoming opposing members of Parliament.

The outdoor locations set the first series apart from other studio-based costume dramas. Scenes such as the dramatic rescue of Dr. Enys from a prisoner of war camp in revolutionary France; the wrecking of the Warleggan ship; and action set in mines, against seascapes, and on coastal paths all created a spectacular backdrop for the vicissitudes of Poldark’s marital and financial dilemmas. The contrast between the theatrical approach to studio production and the spontaneity engendered by location filming gave the historical drama a unique, fresh quality.

Not surprisingly, the BBC expressed an interest in making a third series, but at that time Graham did not feel that he could write the books required for the source material. However, Graham did come to write additional books dealing with a second generation of Poldarks, continuing the Warleggan feud and introducing the industrial revolution to Cornwall. The 1996 TV movie based on some of this material, and featuring new actors in the lead roles, was not as well received as the 1970s series.

Police Programs

Since its beginnings in the late 1940s the U.S. police procedural genre has continued to bring together a variety of social issues with physical action. It is unabashedly a genre of car chases and gun battles and fistfights, but it is also imbued with values critical to the fabric of a society: justice, social order, law. More than any other TV genre, the police program brings into sharp relief the conflicts between individual freedom and social responsibility in a democratic society. Although the police are closely related to the private detective in their pursuit of criminals, they are ultimately an employee of the state, not a private individual, and are sworn “to protect and to serve.” In theory, this means the police officer is expected to enforce society’s laws and maintain order (unlike the private eye, who can be more flexible in his/her obedience to the rule of law). In practice, though, policing figures can also be disruptive forces, violating the letter of the law in order to enforce a “higher” moral code. As times change and ideology shifts, so does the police drama.

Although 1949’s Stand by for Crime and Chicagoland Mystery Players provided television’s first police detectives, neither was as influential as their long-running successor, Dragnet, which had two separate TV incarnations, from 1952 to 1959 and then from 1967 to 1970. Dragnet defined the genre during the 1950s. Jack Webb produced and starred as Sergeant Joe Friday, who doggedly worked his way through official police procedures. Dragnet drew its stories from California court cases and prided itself on presenting “just the facts,” as Friday frequently reminded witnesses. Friday was an efficient bureaucrat with a gun and a badge, a proud maintainer of police procedure and society’s rules and regulations. Producer Webb had such success with this formula that he returned to the police procedural program in the 1970s with Adam 12.

The police procedural strain dominated the genre during the 1950s, but its dry presentational style and endorsement of the status quo came under attack in the 1960s. Webb’s programs seemed anachronistic and out of touch with many viewers’ reality during that turbulent decade. New issues, imagery, and character types revived the genre in programs such as Ironside and The Mod Squad.

Ironside, in contrast to the Webb programs, attempted to pour a liberal politics into the mold of the police drama. Ironside’s team of crime fighters cobbled together representatives of society’s disenfranchised groups (women, African Americans, and the young) under the guidance of a liberal patriarch, the wheelchair-bound Robert Ironside (Raymond Burr). Ironside was an outsider who understood the workings of police procedure but chose not to function within the system. Instead, he formed an alliance of sharply defined individuals outside the bounds of the police organization proper. Ironside did not challenge the status quo, but neither did it fully endorse it.

In The Mod Squad, the policing characters were drawn from Hollywood’s vision of 1960s countercul-
The genre was also fortified in the 1970s through other strategies: incorporating a medical discourse (Quincy, M.E.), setting policemen astride motorcycles (CHiPs—a term, incidentally, that was fabricated by the program and is not used by the California Highway Patrol), or casting younger, hipper actors (Starsky and Hutch).

By the 1980s the police drama was a well-established genre, possibly in danger of stagnation from the glut of programs broadcast during the previous decade. With remarkable resiliency, however, the genre continued to evolve through a series of programs that took its basic conventions and thoroughly reworked them. Hill Street Blues, Cagney and Lacey, and Miami Vice were very different programs, but each of them was seen as an iconoclastic, rule-breaking police program.

Police programs have always invoked realism and claimed authenticity, as was apparent in the genre's archetype, Dragnet. But there are different forms of realism, and Hill Street Blues altered the prevailing understanding of realism. Among its innovations were documentary-film techniques (such as the handheld camera), fragmented and disjointed narrative structure (actions kept happening without conventional motivation and/or explanation), and morally ambiguous characterizations (mischief good and evil in a single individual). Hill Street Blues also altered the usually all-white, usually all-male composition of the police force by including women and minorities as central figures—a trend that had begun in the 1970s.

Cagney and Lacey took the inclusion of women characters and women's concerns much further than Hill Street Blues or Ironside. Indeed, it challenged the genre's patriarchal underpinnings in fundamental, unprecedented ways. There had been women-centered police programs as early as 1974's Get Christie Love and Police Woman, but these programs were more concerned with exploiting Teresa Graves's or Angie Dickinson's sexual desirability than presenting a feminist agenda. Cagney and Lacey, in contrast, confronted women's issues that the genre had previously ignored: breast cancer, abortion, birth control, rape (particularly acquaintance rape), and spousal abuse.

That Cagney and Lacey disrupted the male-dominated genre is evidenced by the battles that had to be fought to keep it on the air. In the most notorious incident, the role of detective Christine Cagney was recast after the first, low-rated season because, according to an unnamed CBS executive quoted in TV Guide, "The American public doesn't respond to the bra burners, the fighters, the women who insist on calling manhole covers 'peephole covers'... We perceived them [actors Tyne Daley and Meg Foster] as dykes." Consequently, a more conventionally feminine actor (Sharon Gless) assumed the Cagney role. (Gless was actually

... "one white, one black, one blond," the advertising promised. Although actual members of the counterculture spurned the program as fake and inaccurate, The Mod Squad illustrated how policing figures can adopt an antisocial patina, how they can come to resemble the rebellious and anarchic forces they are supposed to contain.

The 1970s saw a flood of police programs (approximately 42 premiered during the decade) and their protagonists became increasingly individualistic and quirky. They came closer and closer to the alienated position of the private detective and moved farther and farther from the Dragnet-style police procedural. The title figures of McCloud, Columbo, and Kojak were police detectives marked as much by personal idiosyncrasies as by concerns with proper procedure or the effectiveness of law enforcement. McCloud (Dennis Weaver) was a deputy from New Mexico who brought western "justice" to the streets of Manhattan. Columbo (Peter Falk) dressed in a crumpled raincoat and feigned lethargy as he lured suspects into a false sense of confidence. And Kojak (Telly Savalas) was as well known for his bald head and constant lollipop sucking as for problem solving.

The 1970s inclination toward offbeat police officers peaked in detectives that spent so much time undercover (and masqueraded so effectively as criminals) that the distinction between police and criminals became less and less clear. Toma (a ratings success even though it lasted just one season) and Baretta led the way in this regard, drawing their inspiration from Serpico, a popular Peter Maas book that eventually evolved into a film and a low-rated TV series. These unorthodox cops bucked the police rulebook and lived unconventional lives, but, ultimately, they existed on a higher moral plane than the regular police officer.

Police Programs

the third actor to play the part; Loretta Swit played Cagney in the made-for-TV movie version.) Despite this ideological backpedaling, *Cagney and Lacey* went on to establish itself as one of the most progressively feminist programs on television.

The third 1980s police program to unsettle the conventions of the genre was *Miami Vice*. This immensely popular show featured undercover cops who were so far “under” that they were almost indistinguishable from the criminals: quite a far cry from Sergeant Friday. In *Miami Vice*, good and evil folded back over each other in impenetrable layers of disguise and duplicity. James “Sonny” Crockett (Don Johnson) and Ricardo “Rico” Tubbs (Philip Michael Thomas) usually found their way out of the urban jungle they patrolled, but not always. In one season, Crockett was stricken with amnesia and actually believed himself to be a hoodlum. The clearly demarcated moral universe of *Drag-net* had become hopelessly ambiguous.

However, moral ambiguity was not entirely new to the genre. This territory was frequently traveled by previous programs such as *Baretta*. What was truly innovative in *Miami Vice* was the style of its sound and image, rather than its themes. *Miami Vice* borrowed its imagery from *film noir*: high contrast, imbalanced lighting, disymmetrical compositions, extreme low and high camera angles, foreground obstructions, black-and-white set design, and so on. These images were often edited together into elusive, allusive, music-video-style segments incorporating music by Tina Turner, Glenn Frey, Suicidal Tendencies, and many others. This led some critics to nickname the show “MTV cops.”

*Hill Street Blues* and *Miami Vice* paved the way for further experimentation with the genre. Stephen Bochco, the producer of *Hill Street Blues*, began the 1990s with *Cop Rock*, a bold, but ultimately failed, effort to blend the police program with the musical. Unlike *Miami Vice*’s musical segments, which drew upon music video, *Cop Rock*’s episodes more resembled *West Side Story* or an operetta, as police officers, criminals, and attorneys sang about life on the streets. It only lasted three months, but it stands as one of the most unconventional programs within the genre.

Bochco fared better in more familiar surroundings when he developed *NYPD Blue*, a program about police detectives that resembles *Hill Street Blues* in its serialized, unstable narrative development and cinema verité visual style. Although the program raised some controversy in its use of partial nudity and more flavorful language than was common on television at the time, it actually has broken little new ground as far as the genre’s conventions were considered. More unconventional in its narrative structure is *Law and Order*, in which the program is strictly divided between the first and second halves. In the former, the police investigate a crime, and in the latter the district attorney’s office prosecute that crime. Like *NYPD Blue*, *Law and Order* is set in New York City and it presents its urban environment through conventions of “realism” that evolved from *Hill Street Blues*.

The legacy of *Miami Vice*’s visual stylization was most apparent in *Homicide: Life on the Street*, which may well have been the most stylized police drama of the 1990s. *Homicide* broke many of television’s most sacred rules of editing and narrative continuity. Jump cuts were numerous, as the program came to resemble a French New Wave film from the 1960s. Wild camera movements and unpredictable shifts in narrative development marked it as one of the most unconventional programs in the genre.

Another anomalous 1990s police program was David E. Kelley’s *Picket Fences*. Although many of the central characters were police officers (thus possibly qualifying it for the genre), *Picket Fences* did not adhere to the central police-program convention of an urban environment. Instead, the program was set in a small town, which consequently avoided the pressures of city life. Moreover, *Picket Fences* dealt with many topics previously unknown to the genre (such as spontaneous combustion of a human being). Perhaps because of its quirkiness, this program has not had much impact on the genre. It was, however, a significant antecedent to Kelley’s series about lawyers, *The Practice* and *Ally McBeal*, both of which continue his fascination with the idiosyncrasies of the U.S. legal system.

One program that has influenced the police genre is the documentary program *COPS*, produced by John Langley. *COPS* presents handheld, videotape footage of actual police officers apprehending criminal perpetrators. There is no host introducing this footage and the only explanation of what is happening is provided by the participants themselves (principally, the police men and women). In a sense, *COPS* is merely the logical extension of *Hill Street Blues*’ shooting style and disjointed narratives—and is much cheaper to produce. There have been a number of *COPS* parodies, including an episode of *The X-Files* shot in the *COPS* style and following the pursuit of a monster.

As the 1990s ended, the police drama waned slightly. Don Johnson of *Miami Vice* returned to the genre in *Nash Bridges*, which managed to last six seasons despite mediocre ratings. Innovative programs such as *Homicide*, *NYPD Blue*, and *Law and Order* were canceled (*Homicide*) or settled into conventional patterns (*NYPD Blue*). Even iconoclastic producer Bochco’s latest attempt at a police drama, *Brooklyn South*, seemed all too familiar and was soon taken off the air. There are signs, however, that the genre may...
reinvigorate itself. *Law and Order,* for example, has proven quite successful with audiences, who seem to enjoy the format in which each crime is solved in a single episode, and private lives of the principal characters remain unexplored. The original series has led to three spin-offs. *Law and Order SVU* (*Special Victims Unit*) focuses on crimes dealing with sexually related offenses. *Law and Order CI* (*Criminal Intent*) examines crimes by exploring the perspectives of the criminals involved. *Crime and Punishment,* the most recent production, presents itself as a "dramamentary" and follows real-life cases as they are prosecuted by the San Diego, California, district attorney's office.

Another innovative program, *C.S.I.: Crime Scene Investigation,* has recast the police detective as a forensic scientist. The series' high-tech gadgetry and stylized visuals have attracted a sizable audience and has also spun off a related program, *C.S.I. Miami.* These developments suggest that the genre can still find new ways to present issues of crime, justice, and the preservation of social order.

**Police Story**

U.S. Police Anthology

*Police Story* is a title shared by two unrelated police anthology programs. The first *Police Story* aired on CBS during 1952. The live, half-hour program dramatized actual crimes lifted from the files of law enforcement agencies across the United States. The series anticipated "reality" crime programs such as *Rescue 911* with its emphasis on casting actors who resembled the actual participants and use of the real names of police officers. Norman Rose narrated the series.

The better-known *Police Story* series ran from 1973 to 1977 on NBC. In 1988 four made-for-television movies based on the original's script aired on ABC. Los Angeles police officer and writer Joseph Wambaugh created the series after his first two police novels, *The Blue Knight* and *The New Centurions,* made the best-seller lists. (*The Blue Knight* was also adapted into a series for CBS.)

Airing during a network television era rife with
Police Story

crime dramas. Police Story distinguished itself from other programs in the genre through its anthology format and emphasis on a more realistic depiction of police officers. Set in 1970s Los Angeles, Police Story focused on officers from various divisions of the Los Angeles Police Department. While the series had its share of car chases and psycho killers, Wambaugh and series producer David Gerber primarily concentrated on making police officers more three-dimensional and human. The series presented the job of police officer as challenging, dangerous, and at times mundane. Undercover detectives spent their lives on stakeouts; rookie cops faced tough street educations; SWAT sharpshooters hit innocent bystanders. Problems such as corruption and racism on the police force and tensions between ethnic communities were frequently explored. The personal lives of the characters were also examined, most often in the context of the pressures police work put on all members of the cop's family.

Although the visual and aural style of Police Story episodes were on the whole indistinguishable from other crime dramas of the era, the series introduced and concluded episodes with simple recurring motifs that asserted the series' verisimilitude. Each episode opened with the brief Police Story title and then leapt into its story. Episodes ended with a blurry freeze frame of the last bit of action. The audio of the scene fell silent and was replaced by the chillingly efficient voice and static of police dispatchers making a radio call, "Eleven-Mary-six, call the station. Thirteen-zero-five, John-Frank-William, eight-nine-nine."

The result of these narrative and aesthetic conventions was an at times disturbing picture of police officers operating on the edge of society and their own personal sanity. While episodes consistently strengthened as they finished, the anthology format and the ever-present influence of documentary film conventions helped Police Story to stand out from other familiar cops-and-robbers fare. These stylistic factors suggest that the series was, in various ways, the predecessor of later police programs such as Hill Street Blues, NYPD Blue, and Homicide: Life on the Street. The series received wide critical praise and Emmy nominations for Outstanding Dramatic Series every year during its 1970s run.

Although most episodes in Police Story were unrelated, a few actors reprised their characters across several episodes. Don Meredith and Tony LoBianco appeared as partners or separately in six episodes from 1973 to 1975. Two Police Story episodes also served as spin-offs for the police dramas Police Woman and Joe Forrester. Gerber produced these series as well.

Political Processes and Television

Since its beginnings television in the United States has been intertwined with political processes of every type, covering major political events and institutions and affecting the direction of campaigns and elections. From its early position as a new medium for political coverage in the 1950s, television quickly supplanted
Radio and newspapers to become, by the early 1960s, the major source of public information about politics.

**Televised Coverage of Major Political Events**

Television’s influence grew quickly by providing audiences with the chance to experience major political events live or with little delay. For instance, observers have long discussed the fact that television coverage of the famous 1954 McArthur Day Parade in Chicago communicated more excitement and a greater sense of immediacy to television viewers than to those participating in the live event. The televised hearings in conjunction with Senator Joseph McCarthy’s search for communist sympathizers in the early 1950s also captured the attention of the public.

Probably no political event in the history of television coverage so mesmerized television audiences as the coverage of the assassination of President John F. Kennedy in 1963. Film of the actual tragedy in Dallas, Texas, was played and replayed, and Jack Ruby’s subsequent assassination of suspect Lee Harvey Oswald occurred on live television.

By the 1970s the live coverage of major political events had become almost commonplace, but television’s ability to lend drama and intimacy to political events continues to this day. Through television, Americans have been eyewitness to state funerals and foreign wars; a presidential resignation; hearings on scandals such as Watergate, Iran-Contra, and Whitewater; triumphs of presidential diplomacy and negotiation; and innumerable other political events.

**Television and Political Campaigns/Elections**

No aspect of the political process has been affected more by television than political campaigns and elections. The first presidential election to see extensive use of television was the 1952 race between Dwight D. Eisenhower and Adlai Stevenson. In that campaign, Richard M. Nixon, as Eisenhower’s vice presidential candidate, “took his case to the people” to defend himself on television against corruption charges in his famous “Checkers” speech. However, the most significant innovation related to the role of television in the 1952 campaign was undoubtedly Eisenhower’s use of short-spot commercials to enhance his television image. The Eisenhower campaign utilized the talent of successful advertising executive Rosser Reeves to devise a series of short spots that appeared, just like product ads, during commercial breaks in standard television programming slots. Not only did this strategy break new ground for political campaigning, but many observers have credited the spots with helping Eisenhower to craft a friendly, charming persona that contributed to his eventual electoral success.

Stevenson made it easier for the Eisenhower campaign by refusing to participate in this type of electronic campaigning. Although Stevenson did produce television commercials for the 1956 campaign, he was never able to overcome Eisenhower’s popularity.

This early use of television for political advertising was the beginning of a trend that has grown so dramatically that televised political advertising is now the major form of communication between candidates and voters in the American electoral system. Every presidential campaign since 1952 has relied heavily on political television spots. In the 2000 election, Al Gore and George W. Bush and their national parties spent over $200 million on the production and airing of television spots. Even below the presidential level, spots now dominate most major statewide (particularly gubernatorial and U.S. Senate) and congressional races in the United States, accounting for 50 to 75 percent of campaign budgets.

Several reasons account for the preeminence of television advertising in politics. First, television spots and their content are under the direct control of the candidate and his/her campaign. Second, the spots can reach a much wider audience than other standard forms of electoral communication. Third, the spots, because they occur in the middle of other programming fare, have been shown to overcome partisan selectivity (i.e., the spots are generally seen by all voters, not just those whose political party is the same as that of the candidate). Finally, research has shown that voters actually learn more (particularly about issues) from political spots than they do from television news or television debates.

The use of television advertising in political campaigns has often been criticized of lowering the level of political discourse. Observers bemoan that television fosters drama and visual imagery, leading to an emphasis on a candidate’s image or appearance, instead of policy issues. However, scholarly research has shown that television spots for campaigns at all levels are much more likely to concentrate on issues than on images.

Many observers also blame the rise of negative campaigning on the extensive reliance upon television for campaign communication. Scholars and journalists alike have noted that more and more political campaigns rely on negative television spots to attack opponents. Although even Eisenhower’s original spot campaign in 1952 contained a large number of critical or negative messages and Lyndon Johnson’s 1964 campaign spots attacking Barry Goldwater are considered classic negative ads (particularly the “Daisy Girl” spot), the news media labeled the 1980s as the heyday of negative spots. Over the history of political spot use,
about one-third of all spots for presidential campaigns have been negative spots.

One of the causes of increased negative spot use has been the growth in “independent expenditures” by political action committees (PACs) and other special-interest groups. Campaign finance regulations (the Federal Election Campaign Acts of 1971 and 1974 and amendments) and related Supreme Court decisions in the 1970s (Buckley v. Valeo [1976]) declared that, while limits on individual contributions to campaigns were legal, constitutional free-speech provisions prohibited limits on the amount individuals or groups could spend independently to advocate for or against a given candidate. Spending by independent individuals or groups on television spots has mushroomed since the 1980s, and often such television spending has been concentrated on negative attacks on candidates (usually incumbents).

Other than the federal election laws just noted, which created the Federal Election Commission to oversee campaign finance and expenditure reporting, there are very few regulations in the United States that affect television’s role in the political process. The Federal Communications Act of 1934 contained the Equal Time Rule, which obligates television and radio stations that give or sell time to one candidate to do the same for all legally qualified candidates for federal office. The Fairness Doctrine, which has been retained only with regard to political campaigns and related attacks, provides for a prescribed right of response to attacks contained in broadcast programming. However, because of free speech concerns, neither the Federal Election Commission nor the Federal Communications Commission imposes any restrictions on the content of political-message broadcasts, except to require sponsor identification.

Television News Coverage of Political Campaigns

Politics provide a great deal of natural content for television news programming. During political campaign periods, the national networks, as well as many local stations, devote substantial amounts of time to covering the candidates and their campaigns. So important has television news coverage of politics become that some observers suggest its growth has been accompanied by, and perhaps caused, the demise of political parties in U.S. politics. Media producer Tony Schwartz has commented that in the past, “political parties were the means of communication from the candidate to public. The political parties today are ABC, NBC, and CBS.”

Because more people get their campaign news from television than from any other news source, there has been great concern about how television actually covers a political campaign. Studies have shown that television’s predispositions to drama and visual imagery have resulted in television news coverage that concentrates more on candidate images, “horse-race” journalism (who is winning, who is losing, opinion poll results), and campaign strategy than on issue concerns.

Television news coverage of campaigns has also come to rely extensively on “sound bites,” snippets of candidate messages or commentary excerpts. By the late 1980s the average sound bite on national television news covering political campaigns was only about nine seconds. In addition to reliance on short sound bites, television news coverage of campaigns has been characterized by reliance on “spin doctors,” individual experts who interpret events for viewers by framing, directing, and focusing remarks to favor one side or the other.

Since television coverage is so important to campaigns and politicians, the question of potential bias in coverage has been raised repeatedly. Former Vice President Spiro Agnew is often credited with raising the salience of potential bias in his 1969 speeches accusing television of political, liberal-leaning bias. Early studies of political bias in television, focused initially on the 1972 presidential campaign, concluded that there was little evidence of such bias. Scholars suggested instead that differences among media in their attention to particular candidates and issues might be attributed to structural characteristics of the media (e.g., television needs visuals more than newspapers do, television has a predisposition to drama, etc.). However, more recent investigations have led to less complacency, suggesting that there may be unexplained differences in coverage of Republican and Democratic, and conservative and liberal, political candidates.

In addition to outright political bias, television news has also been criticized for placing too much emphasis on coverage of candidate personalities, particularly the personal lives of candidates. Examples often cited as evidence of extremes in this regard are the scrutiny of the prior treatment for mental illness of McGovern’s original vice presidential choice, Thomas Eagleton, and 1988 primary presidential candidate Gary Hart's extramarital affairs. Both were forced from the political arena by the surrounding media frenzy. This media fascination with personal issues reached new heights during the presidency of Bill Clinton, whose administration was plagued with a series of scandals investigated by an independent prosecutor and covered widely by the media. The media frenzy reached its greatest heights when Clinton’s sexual involvement with White House intern Monica Lewinsky was re-
vealed. The media focus was intense and comprehensive, culminating in live coverage of congressional debates in which Clinton was eventually impeached by the U.S. House of Representatives in late 1998. Although the U.S. Senate acquitted the president, these events and the memorable media attention defined Clinton's presidency.

Television news also plays a major role in the coverage of the presidential candidate selection process before the national party conventions. By covering and scrutinizing candidates in state primaries and caucuses, television coverage can help determine which candidates are perceived by the electorate as viable and which might be dismissed as unlikely to succeed. This ability to give and withhold attention has been seen by many as making television's role in the political process a decisive one, since a candidate who does not do well in early primaries faces not only an uphill battle in subsequent contests but may have difficulty raising funds to continue at all. Coverage of primaries has also provided opportunities for coverage of events that have continued to be influential on through the general election. For instance, George H.W. Bush's unprecedented, hostile encounter with Dan Rather on the CBS Evening News in January 1988 is often credited with erasing Bush's "wimp" image and giving him momentum for the contests ahead. Conversely, Edmund Muskie was forever diminished when television cameras caught tears in his eyes at a New Hampshire primary rally early in the 1972 campaign.

News media coverage to politics is not limited to simple reporting on candidates and campaign activities, however. Television news has also played a large role in other aspects of the political process. In 1952 television covered its first series of national party conventions. While it was originally believed that such attention would bring the party process into the open and help voters better understand the political selection process, parties quickly learned to "script" their conventions for television. National television networks no longer provide gavel-to-gavel coverage of national party conventions, furnishing only convention highlights to viewers.

Televised campaign debates provide other fodder for the television news operation. The first televised debates in the 1960 Kennedy-Nixon campaign were viewed as important, perhaps decisive, in Kennedy's victory. Kennedy's success has often been attributed to his impressive appearance on television in these debates. The next set of presidential debates did not occur until the 1976 contest between Gerald Ford and Jimmy Carter, but there has been some type of single or multiple debate encounter in every subsequent presidential election. All of these cases have been notewor-

thy for the attention television news has focused on the events. In some instances, such as the second 1976 Ford-Carter debate, researchers have shown that television's emphasis on Ford's famous misstatement about Soviet domination of Poland and the Eastern bloc changed the interpretation and significance of the event to many viewers.

Presidential campaigns are defining moments for media involvement in the political process, and the 2000 campaign gave every indication of following a similar path, with media attention focused on the candidates' campaigns, their ads, and a series of debates. However, even the media were taken by surprise when a contest that was labeled "too close to call" on election day could not be decided for several weeks. As the votes were counted on election night, the television networks first declared Gore the winner, then reversed to declare George W. Bush the president-elect, then eventually placed the race back in limbo. The uncertainty came down to Florida, where Bush held a slight lead that many speculated might disappear if various counties with possible voting irregularities were allowed to recount their ballots. As other states' voting totals were firmed up, the Florida votes remained in doubt. The media found new life for postcampaign coverage as they converged on Florida to watch and interpret for the public a series of legal challenges. When the U.S. Supreme Court eventually called a halt to the recount process on equal protection grounds in December, Florida's electoral votes went into the Bush column, making him the winner. However, for the first time in over a century, the presidential winner had won the contest on electoral votes, while losing the popular vote. The aftermath of the 2000 election experience led to a serious examination of the media's use of polling to project vote winners and its use of these data during election broadcasts.

Several innovations in television coverage of political campaigns were apparent in the last decades of the 20th century. One such innovation was the attention paid by the television news media to coverage of political television spots. News media personnel, in conjunction with their print journalist counterparts, decided that candidate-controlled spots should be scrutinized and critiqued by the news media. Beginning with the 1988 presidential contest, the television networks, as well as local stations, began to devote increased amounts of time to analyzing candidate spots in what came to be known as "ad watches." Television stations, particularly local ones, also began to take advantage of satellite technology and other remote-feed capabilities to provide more on-the-spot coverage of campaigns and candidates. Traditional television news formats, however, have found themselves challenged
by another innovation, the frequent appearance of political candidates on television talk shows and personality interview programs. These shows have provided candidates with new ways to pitch their messages, often with the benefit of direct voter call-in questions. The potential influence of such shows has been enhanced by the proliferation of cable channels offering multiple distribution systems. Another recent challenge to television's half-century-long dominance of the political process appears to be the increased use of the Internet for political information.

Television and the Rise of Political Professionals

The increased importance of television to political campaigning is also largely responsible for the growth of political or media "handlers." The need to perform well on television (in controlled paid advertising, in debates, on talk shows, in news interviews, and on pseudoevents planned for television news coverage) has created a great demand for professional campaign consultants. Joe McGinniss's 1969 book, The Selling of the President 1968, brought new public visibility to the process by which media consultants mold and manage candidates for television by chronicling the media strategies and packaging of Nixon in his 1968 presidential bid. Dan Nimmo's The Political Persuaders (1970) helped a whole generation of political students and scholars understand this new partnership between candidates and media specialists. By the 1980s it was possible to point to particular philosophies and schools of consulting thought and to identify the specific strategies used by consultants to manipulate candidate images for television.

Television and the Governing Process

While television's role in political campaigns and elections is difficult to overestimate, television's significance in the political process carries over to the governing of the nation. Television monitors government institutions and the governing process. Every branch of government is affected by this watchdog.

The president of the United States probably bears the greatest weight of this scrutiny. It is rare to see any national television newscast that does not contain one or more stories centered on the executive branch of government. In addition, presidents generally have the ability to receive free network television time for national addresses and for frequent press conferences. Their inaugural addresses and State of the Union addresses are covered live and in full. In Presidential Television (1973), Newton Minow, John Bartlow Martin, and Lee M. Mitchell first called attention to the tremendous advantage this coverage might yield for the president, suggesting that it gave the president the ability to command public attention and overpower the more divided and less-visible branches of the federal government, Congress and the Supreme Court. Certainly, the White House has been a plum assignment for television journalists, who have often been accused of being co-opted by the aura of power that surrounds the presidency. This unique situation has been characterized as leading, not to a traditional adversarial relationship between press and president, but to a symbiotic relationship in which journalist and politician need to use each other in order to prosper.

However, since the introduction of cameras into Congress in 1969 and the creation of the C-SPAN network to cover political affairs, there has been some leveling of the presidential advantage in television coverage. Although sometimes accused of "playing to the cameras" in their legislative work, congressional leaders believe this opening up of the governing process to the television audience has provided new understanding of and visibility for the legislative branch of government. The Supreme Court nonetheless continues to function outside the realm of day-to-day television coverage.

Television and International Political Processes

As television's role in the U.S. political system has developed, increasing attention has been focused on the interrelationship between television and politics in many international political environments. Although often characterized by parliamentary and multiparty systems and government-owned media, many other democracies have been influenced by American styles of television campaigning and coverage. This "Americanization" of the media and political process can be seen in the growth of American-style political advertising and journalistic coverage. Britain, France, Germany, Italy, Israel, many Latin American countries, and others have seen this trend, and newly developing democracies in East and Central Europe are also being affected. These countries have not only seen the growth of television advertising and American patterns of media coverage of politics, but a corollary lessening of emphasis on political parties in favor of candidate-centered politics.

Media faced a new challenge to both domestic and international coverage when terrorists struck the World Trade Center in New York City and the Pentagon in Washington, D.C., on September 11, 2001. The aftermath of these horrific events and the challenges of live
coverage brought the media into the center of serious world events. The U.S. "war on terrorism" offered new opportunities for the media to demonstrate their ability to help the public understand complex events, while seeking to ensure that freedom of information and rights of free expression are preserved.

Theories and Perspectives on Television and Politics

Early research into the effects of messages delivered through the mass media, particularly television, posited the so-called direct-effects theory: that television messages have direct effects on the behavior of recipients. However, the early research did not fully support this thesis, and scholars for a time tended to discount the notion that such messages directly affected the behavior of recipients such as voters. Recent studies of a more sophisticated design have tended to show that the media do affect behavior, although not necessarily in the most obvious ways initially anticipated.

Television has been proven to have sufficiently identifiable effects to justify a belief in some direct effect of the medium in the political process. While the foregoing discussion clearly implies some direct effects of television's participation in the political process, it is important to note that there are many different theories and interpretations about the role television and other media really play in affecting voter knowledge, opinions, and behavior. Dan Nimmo and Keith Sanders's classic treatment of political communication in The Handbook of Political Communication (1981) provides a good overview of the theories that have guided research in this area. Early theorists did assume a kind of direct effect from media exposure but were later cautioned to view the media as having a more limited role. Agenda-setting researchers were the first to break with the limited-effects model and to suggest that media coverage of particular issues in political campaigns affected the agenda of issues judged to be important by voters. Agenda-setting theory—the idea that the media does not tell us what to think, but what to think about—remains an important theory of media effects, and researchers have demonstrated that the agenda of issues and candidate characteristics stressed by television and other media may become the voters' agenda as well.

Researchers interested in the political effects of the television have also espoused a "uses and gratifications" theory suggesting that voters attend to various political media messages in order to use the information in various ways. Jay Blumler and his colleagues first proposed this theory as an explanation for why voters in Britain watch or avoid political party broadcasts.

Many other theories and perspectives on television’s possible effects on political processes have been advocated. Researchers have demonstrated, for instance, that television may play an important role in political socialization, helping both children and adults to acquire knowledge about the political system and how it operates; however, exposure to television may increase voter cynicism and feelings of inefficacy. Others have suggested that we can best understand television’s role in politics by viewing it as a medium through which fantasies "chain out" among the public, shaping views of events and political actors in a dramatist-like fashion. Critical and interpretive views also provide perspective on the interrelationship between governing philosophies, societal values, and television culture. All these approaches and orientations will be essential in the future, as television continues to play a central role in the political processes that touch the lives of citizens throughout the world.

Politically Incorrect with Bill Maher

Dubbed by some critics the "McLaughlin Group on Acid," Politically Incorrect with Bill Maher offered viewers of Comedy Central (1993–96) and later ABC (1997–2002) a unique twist on political talk on television. Hosted by comedian Bill Maher, the half-hour program featured four guests, selected in part for their status as "nonexperts on politics," who discussed political and social matters of the day. Designed to resemble a televised cocktail party, this hybrid political discussion/entertainment show featured a no-holds-barred approach to political talk designed to live up to the show's name.

The brainchild of stand-up comedian Maher, the show first appeared on Comedy Central in 1993. The cable channel was looking for original programming that would bring much-needed recognition and ratings to the young network, which had begun in 1991. Politically Incorrect (P.I.) was the first signature show for Comedy Central, helping define the channel as more than simply a site for stand-up comedy routines and stale B movies.

Owned and produced by Brillstein-Grey Entertainment and HBO Downtown Productions, the show began its first season with 24 episodes. Taped in Manhattan, the weekly program featured Maher and an eclectic array of comedians, actors, and actresses, but also public personalities such as authors, politicians, journalists, activists, and sports and music stars. With the group sitting in a semicircle discussing politics, the show's early production values resembled those of a local cable access show. Still, it offered a serious but entertaining reformulation of both the entertainment and pundit talk show genres. The novelty lay in the concept: famous people, few of whom were political experts, talking about something other than their latest project. This format was generally considered the show's primary attraction for both audiences and the guests who increasingly requested to be on the show.
The discussions and arguments could seem glib and ironic, yet they offered viewers honest and passionate exchanges—a very different approach to political talk on television.

After producing 45 episodes and winning a Cable Ace Award in its second season, the show added Maher's name to the title and began appearing nightly during the third season. This allowed Maher and producers to include more topical discussions based on issues of the day. The show also appeared in the 11 P.M. (EST) time slot, going head-to-head with late-night network programming. Each show began with Maher offering a brief stand-up routine before launching into the panel discussions. In January 1996 the show moved its production to Los Angeles amid talk of the program becoming a post-Nightline companion show for the ABC network. In its last season on Comedy Central, P.I. produced Indecision '96, a satirical take on the 1996 presidential elections that included sending its own "correspondents" to both major party conventions for reports and interviews with politicians and delegates.

After producing 411 shows for Comedy Central, Politically Incorrect moved to ABC in January 1997, one of the first successful migrations from cable to network television. Though ABC had not competed in the "late-night comedy entertainment wars" since 1991, network executives thought the show would work well as a topical companion to Nightline. The show also enabled the network to appeal to the 18–49 demographic so desired by advertisers. By moving to ABC, P.I. was able to reach ten times the audience it had on Comedy Central while offering essentially the same show in the same format with little to no interference from network censors.

Like other cable news and talk channels, P.I.'s ratings were best when breaking news or controversial issues were available for discussion. The Oklahoma City bombing and the O.J. Simpson murder trial were favorite discussion topics for many shows on Comedy Central, but it would be the presidential scandal of Bill Clinton's affair with White House intern Monica Lewinsky that would comprise the show's most frequent topic during its early years at ABC. Maher was a persistent and aggressive supporter of Clinton during the controversy and impeachment proceedings, and the subject's mixture of sex and politics proved perfect for entertaining late-night discussions. The deliberations on P.I. were distinctive, however, more closely resembling public opinion on the scandal than views expressed on most pundit-staffed political talk shows (Jones, 2001).

During slow news periods, P.I. offered numerous thematic gimmicks to increase viewership. From 1999–2000, the show began sporadically featuring a "Citizen Panelist." Maher and his staff visited affiliate stations in various cities across the nation, conducting tryouts for a local citizen to win a guest spot on the show, thus fulfilling a top request from viewers—for a "regular" citizen to appear on the panel. The stunt may also have been designed to improve affiliate relations and clearance issues in these cities as well as to garner publicity and ratings points. To attract more politicians as panelists, the show was occasionally taped in Washington, D.C. To attract more intellectuals, it would be taped in New York. The show also taped episodes in London, in a prison in Arizona, and with mobsters as panelists in New York (to capitalize on the popularity of HBO's The Sopranos).

The show's defining moment, perhaps, occurred due to discussions about the terrorist attacks on the World Trade Center in New York and the Pentagon in Washington, D.C., on September 11, 2001. Upon the show's return to the air after the attacks, Maher and panelist
Dinesh D'Souza began a discussion of whether the Bush administration's designation of the terrorists as "cowards" was an appropriate label. When D'Souza argued that the word was misplaced, Maher agreed saying, "We have been the cowards, lobbing cruise missiles from 2,000 miles away. That's cowardly. Staying in the airplane when it hits the building, say what you want about it, it's not cowardly." Maher was referring to American military conduct during the Clinton administration, but radio talk show hosts used the statement the following day to excoriate him as an unpatriotic traitor. Though the network supported the show and Maher attempted to clarify his statements in the days and weeks ahead, 17 affiliates eventually dropped the program—with 9 still refusing to show it six months later. Two major advertisers, Sear's & Roe-buck and Federal Express, dropped their advertising. The comment even elicited a rebuke from White House ress secretary Ari Fleischer, who said Americans "need to watch what they say." Maher and others have suggested that this event was the final step in the show's demise. In March 2002 Maher was honored along with George Carlin, Dick Gregory, and the Smothers Brothers at the U.S. Comedy Arts Festival with a Freedom of Speech Award. Maher's contract was not renewed, and the show went off the air in December 2002.

*Politically Incorrect* began with a cable channel's need for an identity in a competitive environment and as a comedian's jab at sanitized public discourse in an era of political correctness. But throughout its decade-long run, the show proved that political talk on television was no longer the exclusive domain of news agencies and broadcast networks, and that elite sources of political commentary did not necessarily speak for or to many audience members. The show radically challenged traditional boundaries and generic conceptions of entertainment programming on the one hand, and serious public-affairs programming on the other. Indeed, *P.I.* represents the television talk show as a truly combinatory form with its blend of politics and social issues, humor and serious discourse, comedic monologues and group discussions, celebrities and less well-known public personalities, and layperson versus elite discourse.

**Pool Coverage**

Pool coverage involves the combined resources of media outlets to report on a major news event. Such resources include funds, supplies, equipment, and human power. Members of the media pool often share news stories and photographic images of the event with other news outlets outside of the pool. Each news outlet may use the pool feed at its discretion.

In the United States, press pools often are associated with war efforts. Indeed, the free press always has been considered a little too free for the Pentagon. The Vietnam War represented the first instance when press coverage brought significant numbers of negative images of U.S. military action into American homes. Since this war the first example of military "guidance" of what the press could and could not cover occurred during the U.S. invasion of Grenada in October 1983. Outcries from the press against the military's virtual blackout of the media's information-gathering efforts in that action brought the establishment of the Department of Defense's National Media Pool.

The Pentagon chooses members of the National Media Pool by lottery. Members of the press take turns serving in the pool. Pool reporters write accounts of the activities they view and share their information with other members. To be included in the National Media Pool, news organizations must demonstrate a familiarity with U.S. military affairs and maintain a correspondent who regularly covers military affairs.
and Pentagon press conferences; maintain a Washington, D.C., staff; be able to participate in the pool on standby and be able to deploy a reporter within a minimum of four hours; agree to adhere to pool ground rules; and be U.S. owned and operated.

The National Media Pool is designed to represent all news organizations and to serve as the eyes and ears of Americans when the U.S. military is active. However, pool reports often have a uniform quality because all reporters are given access to the same information. Moreover, many journalists claim that military officials often make it hard to provide objective, firsthand coverage of events.

In 1992 representatives from the military and news organizations developed nine principles for pool coverage. As outlined by D. Gersh, these principles embrace open and independent reporting. Furthermore, pools should not be the standard means of coverage; pools may be necessary for specific events and should be disbanded when needed; journalists will be given credentials by the U.S. military and must abide by security rules; journalists will be provided access to all major military units, although special operation restrictions may limit some access; military officials will act as liaisons; field commanders will permit journalists to ride on military vehicles and aircraft when feasible; and materials will be provided to ensure timely, secure, and compatible transmission of pool material (see Gersh, 1992).

According to Mark Thompson (2002), the National Media Pool “came to life on July 19, 1987, when a ban of ten reporters took off from Andrews Air Force Base for its first real-world deployment” (to witness U.S. military operations in the Persian Gulf). In theory, such pool coverage would provide independent press coverage to journalists while maintaining the safety and security of the nation’s most sensitive military operations. However, Thompson contends that military resistance has prevented the National Media Pool from reaching this potential. In one notable example, although pool reporters were notified to stand by after the September 11, 2001, terrorist attacks on the World Trade Center and the Pentagon, the pool was not officially deployed during the U.S. attack in Afghanistan in the months that followed.

Media resources also have been pooled to reduce the unnecessary clutter of camera crews at the scene of an event. Pools have been implemented to cover the Republican and Democratic national conventions, presidential primaries, and high-profile elections. They also are utilized to provide coverage of individual political candidates. According to Dan Nimmo and James E. Combs, each day on the campaign trail, a couple of members of the pool reporters are in close contact with the candidate. These members may be “on the candidate’s private plane, at small enclaves, during motorcades, and so forth.” These reporters write accounts of the candidate’s activities, which are then made available to pool journalists who cannot be with the candidate. In presidential elections, pool members are elite press members. Nimmo and Combs explain that there is a pecking order for pool members: “At the top are national political reporters—experienced correspondents of prestigious newspapers, the wire services, national newsmagazines, and television networks. At the bottom are the representatives of smaller newspapers and organizations.” Regardless of status, pool coverage often is similar. Timothy Crouse (1974) writes, “After a while, they [pool journalists] began to believe in the same rumors, subscribe to the same theories, and write the same stories.”

Recently, pools have been enlisted to organize coverage of high-profile criminal trials. According to Gersh (1991), when serial killer Jeffrey Dahmer was tried for 17 murders allegedly involving cannibalism, more than 450 journalists flocked to Milwaukee, Wisconsin, from around the world to cover the bizarre story. Daniel Patrinos, media coordinator for the Wisconsin court, set up a pool system to handle coverage of the proceedings. In addition to utilizing advisories from Associated Press, United Press International, and Reuters wire services, Patrinos saw to it that local community papers (including black and gay newspapers) were well informed. The judge in this case allowed 23 pool journalists into the courtroom and allowed others to watch from a media center.

Likewise, reporters, photographers, and camera crews turned out in record numbers on January 23, 1995, for the opening statements of the trial of O.J. Simpson on double murder charges. Judge Lance Ito allowed only pool journalists into the courtroom, and a media room was set up for other journalists. In spite of these controls, the term most often used to describe the situation was “media circus.”

Whether pool coverage is used to report on military combat, to cover political races, or to control coverage in high-profile legal cases, the goal of pool coverage is the same. Pool coverage, while providing journalists access to events, offers those who employ it a way to manage media coverage.

Porridge

British Sitcom

Porridge was a prison-based sitcom in which sparkling dialogue and tight plots combined to create a funny, sometimes touching, show that became a huge hit with the viewing public. The setting was Slade Prison, a grim edifice, isolated on a moor in an unspecified area in northern England. In the pilot episode ("Prisoner and Escort") the viewer meets the "hero," Norman Stanley Fletcher, a serial offender being escorted by two guards to begin his latest incarceration for five years. Fletcher is a nonviolent petty criminal whose regular capture and conviction suggests he’s not as bright as he thinks he is. Nevertheless, Fletcher is quick-witted and spirited, and he refuses to let the system grind him down. Once at the prison Fletcher enters the daily routine of prison life determined to "keep his nose clean" and survive on the regular minor victories he enjoys over the prison wardens, or "screws." His cellmate is Lennie Godber, a first-time offender who is terrified of prison life. Fletcher has no wish to play nursemaid to the lad and puts on a front of being indifferent to Godber’s welfare. However, Fletcher is an essentially decent person and soon finds himself acting as a surrogate father to the newcomer, showing him the ropes and generally keeping him out of harm’s way. The two main wardens in Fletcher and Godber’s life are MacKay, a dour, militaristic Scotsman with a jaundiced view of his charges, and Barrowclough, a sensitive man with a soft spot for the inmates in general and Fletcher in particular. Barrowclough is as optimistic about the men being rehabilitated as MacKay is pessimistic. MacKay is a no-nonsense, by-the-book veteran of the prison service and he is not easy to fool. Barrowclough, on the other hand, is much kinder and fairer to the inmates, but human nature being what it is (and criminal nature being even worse) the prisoners are quick to take advantage of Barrowclough’s soft approach and simplistic naïveté.

Although these four are the main protagonists, several regular characters make up the mix, notably the effete prison governor, various inmates, and, most frighteningly, Harry Grout, who runs a criminal empire from within the prison and who has as much sway within the walls as the governor himself. It is the plots where Fletcher and Godber find themselves caught between the wardens and Harry Grout that feature the most rewarding twists and turns.

Porridge was the brainchild of veteran sitcom writers Dick Clement and Ian La Frenais, who had first shone in the genre with their 1960s comedy The Likely Lads (BBC 1964–66). In the 1970s they perfected their technique with two comedy classics, Whatever Happened to the Likely Lads (BBC 1973–74) and Porridge. The banter between Fletcher and Godber was vibrant, funny, and superbly constructed. It also helped that the scripts were played by two skilled actors doing their best work. Ronnie Barker, already a major TV comedy star with a string of sitcom successes and a popular sketch show (The Two Ronnies BBC 1971–97, with comedy partner Ronnie Corbett), played Fletcher. Richard Beckinsale, a likable young actor who had already made a splash playing a confused suitor in an earlier sitcom, The Lovers (Granada 1970–71), played Godber. The series was attracting huge audience figures shortly after its debut, regularly topping the ratings (during its repeat run in the 1980s, it placed even higher in the ratings).

Clement and La Frenais toyed with calling the series Bird (London East End rhyming slang for a prison sentence: Bird Lime-Time) before settling on Porridge, another slang word for doing time (from the ubiquitous
prison breakfast). Eventually, they penned 21 episodes of the series before Fletcher had done his time and left to join the outside world. But the story did not end there. The writers decided to see how Fletcher would fare “outside,” and his adventures were continued in Going Straight (BBC 1978), which also featured Lennie Godber, likewise released and now courting Fletcher’s daughter, Ingrid. The series failed to sparkle like its predecessor and only ran to one season of six episodes. The character, however, had one last bow, this time on the big screen in the 1979 movie spin-off Porridge, which featured the original cast in a caper wherein Fletcher and Godber are unwittingly involved in a jail break and, desperate not to ruin their chances of parole, strive to break back into the prison before their absence is noticed. Tragically, the young Richard Beckinsale died of a heart attack before the feature film was released.

There was a U.S. version of Porridge: On The Rocks (ABC 1975–76) with Jose Perez in the lead as Latino Hector Fuentes incarcerated in Alamesa Minimum Security Prison. It failed to duplicate the resonance of the U.K. version, however, and bowed out after a few months. It spawned a pilot, I’ll Never Forget What’s Her Name (ABC 1976), featuring Rita Moreno as Hector’s cousin Rosa, but this failed to graduate to a series. The British Porridge remains a mainstay of the schedules, and Norman Fletcher has taken his place in the British sitcom hall of fame alongside such characters as Alf Garnett, Basil Fawlty, Edmund Blackadder, and Victor Meldrew.

Post, Mike (1945– )
U.S. Composer

Mike Post, one of the most successful composers in television history, has written music for television since the 1970s. He has won five Grammy Awards and one Emmy for his theme songs and, by his own count, has scored more than 2,000 hours of film. Post has produced the signature melodies for programs such as Hill Street Blues, L.A. Law, and NYPD Blue. His distinct themes often have intense, industrial rock music cross-cut with smooth jazz sounds. These compositions are noted for their unique blending of styles as well as for the dramatic manner in which they complement a show’s narrative.

Post is regarded as the youngest musician to be appointed as musical director for a television program; he assumed that role in 1969, at age 24, on The Andy Williams Show. Prior to that appointment, Post worked
Post, Mike

primarily as a session musician for a number of major artists including Sammy Davis Jr., Dean Martin, and Sonny and Cher (he played guitar on the duo’s “I Got You Babe” in 1965). He was also a successful producer and arranger, winning a Grammy at age 22 for Best Instrumental Arrangement on Mason Williams’s “Classical Gas.”

Post began his career in Los Angeles with the country-rock band First Edition, featuring Kenny Rogers. In the late 1960s he joined forces with Pete Carpenter, trombonist, arranger, and veteran of television theme scoring, and began to write music for television. Post and Carpenter began working for producer Stephen J. Cannell and first wrote the theme for Cannell’s cop show Toma in 1973. The Rockford Files theme, however, was their breakthrough assignment. The whimsical synthesizer melodies seemed perfectly suited to the ironic character of James Garner’s Rockford. The score sealed their reputations and won Post his second Grammy Award for Best Instrumental Arrangement in 1975.

*Hill Street Blues* brought more accolades and continued success. The theme song, an elegant composition of simple, poignant piano music, struck a chord with audiences and soared onto the pop charts. It also impressed his peers and the critics and brought Post two more Grammys in 1981: one for Best Pop Instrumental Performance and one for Best Instrumental Composition.

*Hill Street Blues* also marked the beginning of Post’s long-running creative collaboration with Steven Bochco. One of the most prolific producers of successful dramatic series in the 1980s and 1990s, Bochco hired Post to write the *Hill Street Blues* theme and has worked closely with him ever since. The composer’s career was largely established by the music he composed for Bochco’s police or law dramas, and their enduring relationship has continued to push the boundaries of television music.

Post’s work is wholly devoted to compelling a program’s storyline and contributing to its overall tone. The slick, polished opening sounds of *L.A. Law* and the aggressive, chaotic drumbeats punctuating the segments of *NYPD Blue* episodes are examples of talent for melding images, emotions, and sounds. He is also exceptionally resourceful in orchestrating his award-winning melodies. To achieve the unique sound of the *NYPD Blue* theme, for example, he used, among other effects, 1,000 men jumping up and down on a wooden floor, a cheese grater, and a subway horn. All these ideas are largely inspired by the program’s script, and Post’s ability to encompass a show’s character in his music is what has landed him atop the elite class of Hollywood composers. Only Pat Williams, Henry Mancini, and Dave Grusin have attained comparable levels of success and respect in this field.

Ironically, some of his music has become so popular that the themes play on pop radio, a medium wholly disconnected from the visual drama he is committed to enhancing. One of his songs, “The Greatest American Hero,” is among the few TV themes ever to reach the number one spot on the pop singles charts. Others, such as the themes for *Hill Street Blues* and *The Rockford Files*, have reached the top ten.

His popular and unique compositions are not Mike Post’s only enduring legacy to television, however. He can also be credited with elevating television scoring to a fine art, and creating a new dimension of drama with his “ear for the visual.”

1797
Dennis Potter is arguably the most important creative figure in the history of British television. From 1965 until his death in 1994, he constructed a personal oeuvre of such remarkable character and consistency that it will probably never be equaled in the medium. The most prolific yet also most controversial of television playwrights, he remains the undisputed figurehead of that peculiarly British phenomenon of writers who expend much of their working lives and passions attempting to show that television can be just as powerful a vehicle for artistic expression as cinema or theater.

Potter was raised in what he later described as the “tight, enclosed, backward” world of the Forest of Dean; a remote rural idyll nesting between two rivers, the Severn and the Wye, on the aggressively English side of the border with Wales. The product of a remote, God-fearing community, he attended chapel at least twice every Sunday, and the vividness of that institution’s language and metaphors formed a powerful influence on his writing.

After an earlier career in journalism and politics, Potter came to prominence in 1965, when his first plays were all transmitted by the BBC within the space of a year, as part of The Wednesday Play’s ground-breaking policy of introducing radical new writers to television. The most successful of these productions were The Nigel Barton Plays—a pair of semi-autobiographical dramas that expertly dissected the effects of social class upon the psyche of its eponymous hero. The Barton plays won notable awards and helped to seal Potter’s reputation as a major new playwright of passion and ideas. However, as the 1960s wore on and Potter continued to write for The Wednesday Play and its successor Play for Today, it gradually became clear that underlying the broadly political attacks in his earlier work was an older chapel sensibility: Potter represented a personality molded by biblical teaching and imagery, yet now in desperate search of answers in the face of acute spiritual crisis.

In 1969 Son of Man was transmitted; it is a gospel play in which Potter audaciously created the messiah in his own image, as a human, suffering Christ, racked by doubts over his own mission and plagued by the fear that he has been forsaken by God. With this and other titles that followed—such as Angels Are So Few (1970), Where Adam Stood (1976), and, most controversially of all, Brimstone and Treacle (originally intended for transmission in 1976 but banned by the BBC for 11 years on account of a scene where the devil rapes a mentally handicapped girl)—it became clear that Potter had discovered his true vocation as a dramatist of religious or spiritual themes, albeit one highly unorthodox and sometimes offensive to the political and moral establishment.

Central to Potter’s quest for spiritual answers was his own personal affliction of psoriatic arthropathy: a painful combination of psoriasis enflaming the skin and arthritis crippling the joints, which he had suffered from since the age of 26 and which had necessitated his withdrawal from the public worlds of politics and current affairs into the more private realm of life as a television playwright. This inwardness was also manifested in Potter’s famous “nonnaturalistic” style: his determination to challenge the dominant British television drama tradition of “dreary” naturalism, through
an alternative emphasis on inner, psychological reality. He successfully customized a whole series of nonnaturalistic devices—including flashback and fantasy sequences; direct-to-camera address by characters; the use of adult actors to play children—all of which he believed represented more truthfully "what goes on inside people's heads."

In 1978 Potter showcased what became his most famous technique when Bob Hoskins burst into song, miming to an old 78 rpm recording in the BBC TV serial *Pennies from Heaven*. The international success of *Pennies* transformed Potter's career, leading to a lucrative spell as a Hollywood screenwriter, which included a disastrous movie remake of the serial in 1981. Throughout the 1980s and early 1990s, however, Potter continued to produce original work for television, although he now wrote serials rather than one-off plays. Among his most notable programs from this era is *The Singing Detective* (1986), in which his famous device of characters miming to popular song is used to punctuate a narrative as complex and layered as any work of serious literature; this program that will undoubtedly endure as Potter's monument to the creative possibilities of the medium.

The rapturous plaudits that greeted *The Singing Detective* in Britain and the United States may have elevated Potter to the rare status of a genuine TV auteur, but the period after 1986 was not an easy one for Potter. In 1989, after a falling out with his erstwhile producer Kenith Trodd, Potter decided to direct a television adaptation of his "feminist" novel *Blackeyes*. The result was a critical bloodbath in the United Kingdom, with the director accused of precisely the misogyny and sexual exploitation he claimed he had been trying to expose on-screen. Nor was *Lipstick on Your Collar* (1993), a six-part "drama with songs" set in the 1950s, the resounding popular success he had desired.

In February 1994 Potter was diagnosed with terminal cancer of the pancreas. He died four months later but not before giving an extraordinary television interview in which he talked movingly about his imminent death, revealing his plans to complete two final television serials to be uniquely coproduced by rival na-
tional channels BBC 1 and Channel 4. Defying the medical odds, he succeeded in completing the works, *Karaoke* and *Cold Lazarus*, and, in accordance with his wishes, these were transmitted posthumously by both channels in the spring of 1996. Although critical reaction to the programs was somewhat mixed in Britain, the very fact of the joint production seemed to confirm Potter's creative legacy as the practitioner who, above all others, aspired to raise television to an art form and whose pioneering nonnaturalism had indeed been successful in opening up the medium's drama to the landscape of the mind.

Powell, Dick (1904–1963)
U.S. Actor, Producer

Dick Powell may be best remembered as a movie star, a boyish crooner in dozens of Hollywood musicals of the 1930s, and later, a hard-boiled, film noir tough guy. Like many stars of the studio era, Powell turned his dramatic talents to television in the 1950s, but he did so as an adjunct to his most significant television role, as an independent telefilm producer. Between 1952 and his death in 1963, Powell served as the head of Four Star Television, which became, under his leadership, one of Hollywood’s leading suppliers of prime-time network programming.

As the star of numerous Warner Brothers musicals, Powell was one of Hollywood’s top box-office draws during the 1930s (and quickly became just as popular on radio). By mid-decade, the young singer was lobbying to break into more serious roles, but his efforts were rebuffed by Jack Warner. The parts became somewhat more varied after a 1940 move to Paramount, but the actor’s dramatic ambitions were blocked there as well. The turning point came in 1944, when Powell convinced RKO to cast him as private eye Philip Marlowe in Murder, My Sweet (regarded by many as the definitive rendition of Raymond Chandler’s fictional sleuth). Thereafter the singing roles stopped, and Powell began a new career as a hard-boiled antihero in such films as Cornered, Pitfall, Johnny O’Clock, and Cry Danger, in the process re-making his radio persona as well, with a stint as gumshoe Richard Rogue in Rogue’s Gallery; and three seasons as Richard Diamond, Private Detective.

Still eager to broaden his creative horizons, Powell set his sights on movie directing in the late 1940s, but he once again met with resistance from studio powers. Finally, in 1952 RKO studio head Howard Hughes gave Powell a chance to direct the thriller Split Second, and the success of that film led Hughes to offer Powell a producing job. Although there was some speculation in Hollywood that Powell would become head of production at RKO, he was able to complete only one feature, The Conqueror, before Hughes sold the company in 1955. Powell went on to helm three more features in as many years at other studios.
Although the leadership of RKO had eluded him, Powell had already begun his rise as a television mogul. On the heels of his first feature assignment, Powell had formed an independent telefilm production company with actors Charles Boyer and David Niven. Four Star Films derived its name from its first project, the half-hour anthology *Four Star Playhouse*, in which one of the three partners would rotate with a different weekly guest star. In its second season, the partners invited guest Ida Lupino to become the show's permanent “fourth star.” Although she did not become a stockholder in the firm, Lupino went on to direct many episodes of *Playhouse* and other Four Star series, in addition to her acting duties.

Boyer and Niven each owned a healthy share of Four Star, but Powell ran the company. A 1962 *Television* magazine profile of Powell called him the company’s “principal architect of policy as well as the most valuable performer and production executive” and noted that the firm’s fortunes moved in direct proportion to the time the boss devoted to it. A “workaholic” in today’s parlance, Powell was notoriously driven and closely involved with both the financial and creative aspects of Four Star. He not only managed operations but was active in developing story properties, oversaw script conferences, and, when needed, used his charm—and the weight of his celebrity—to close a program sale.

Four Star’s stock-in-trade early on was anthologies. Powell followed up *Four Star Playhouse* in 1954 with the short-lived *Stage 7*, and two years later Dick Powell’s *Zane Grey Theater*, hosted by, and occasionally starring, the Four Star chief executive officer himself. Powell and company also produced one season of *Alcoa Theatre* in 1958 and in subsequent years crafted anthologies around one of Powell’s partners (*The David Niven Theater*), and his wife (*The June Allyson Show*), both featuring the requisite array of Hollywood stars.

*Zane Grey Theater* ran for seven years, at once feeding and riding the crest of the phenomenal surge of western programs on television in the late 1950s. Four Star generated its share of the stampede, scoring its biggest hits in the genre with *The Rifleman*, *Wanted: Dead or Alive*, and *Trackdown*, as well as less-successful entries like *Johnny Ringo*, *Black Saddle*, *Law of the Plainsman*, *Stagecoach West*, and the highly regarded but extremely short-lived Sam Peckinpah project, *The Westerner*.

Four Star’s western output highlights the creative economy of program development under Powell. Anthologies were the perfect vehicles by which to generate new program pilots at a network or sponsor’s expense. Most of the Four Star westerns, for example, were born as installments of *Zane Grey Theater* (*Wanted: Dead or Alive* had its trial run as an episode of *Trackdown*). *Four Star Playhouse* spawned two crime series featuring gambler Willy Dante: eight *Four Star* installments starring Powell as Dante were repackaged as a 1956 summer replacement series (*The Best in Mystery*), and a new *Dante* series was hatched in 1960 with Howard Duff in the title role. Another spin-off of sorts came in 1957 when Powell revived his *Richard Diamond* radio vehicle for television, with young David Janssen as the suave P.I. Michael Shayne, *Private Detective* was a less-successful Four Star entry in the private-eye cycle of the late 1950s.

Four Star was one of the busiest telefilm suppliers in the business in 1959, when Powell hired Thomas McDermott away from the Benton and Bowles ad agency to be executive vice president of production. The following year the newly renamed Four Star Television marked its peak in prime time with a remarkable 12 series on the networks. Even after dropping to six shows in 1962, Four Star was producing more programming than any other Hollywood independent, surpassed only by MCA-Revue and Columbia-Screen Gems, leading *Broadcasting* magazine to dub the firm a “TV major.” More literally “independent” than most of his produc-
ing counterparts, Powell resisted the increasingly common practice of ceding control of off-network distribution to the networks themselves. Although Four Star often had to cut the broadcasters in on series profits, the firm retained syndication rights to all its shows, starting its own syndication division, rather belatedly, in 1962.

Powell was sensitive to the creative process as well as profits, no doubt due to his own experiences as a performer and later a director. “Four Star was a paradise for writers,” according to Powell biographer Tony Thomas, and many Four Star alumni have attested to their boss’s sensitivity and support. Powell personally fielded ideas from writers, interceded with sponsors to protect controversial scripts from censorship, and would support any story—even if it conflicted with his own political conservatism—if the writer were passionate enough about it. Powell mentored writer-producers such as Sam Peckinpah, Blake Edwards, Bruce Geller, and Aaron Spelling and signed young writers like Christopher Knopf, Richard Levinson and William Link, Leslie Stevens, and Robert Towne early in their careers. By all accounts, Powell was universally respected by his creative personnel.

With the western on the wane in the early 1960s, Four Star diversified its product, turning out situation comedies like The Tom Ewell Show, Peter Loves Mary, McKeever and the Colonel, The Gertrude Berg Show, and Ensign O’Toole, as well as a courtroom drama (The Law and Mr. Jones), an organized crime saga (Target: The Corrupters), and an unusual anthology, The Lloyd Bridges Show. Only The Detectives, starring Robert Taylor constituted even a modest success. In early 1961 Powell reduced his involvement in the overall operations at Four Star and focused his attentions on producing The Dick Powell Show, a star-studded anthology featuring Powell as host and frequent star. The new anthology presented even more pilots than Zane Grey—over a dozen in two years—yielding the newspaper series Saints and Sinners in 1962, and Burke’s Law the following year (among the unsold projects was Luxury Liner—produced by future Love Boat creator Aaron Spelling). One of television’s few remaining anthologies, the Powell show received an Emmy nomination for Outstanding Dramatic Achievement for both of its seasons on the air.

After Powell’s death in January 1963, Four Star continued operation under McDermott’s leadership, but Four Star’s reign as a “TV major” was over. With six series on the fall schedule for 1962, a year later Burke’s Law was the firm’s only prime-time entry. The change in Four Star’s fortunes probably had as much to do with ratings as anything else. The company had not had a major hit since The Rifleman, and its attempts to exploit the sitcom were unsuccessful. The firm’s continued resistance to network control of syndication may have cost it prime-time sales. Certainly the loss of Powell’s leadership, his formidable salesmanship powers, and indeed his reputation could not have helped matters. With declining network program sales, more flops (e.g., Honey West, The Rogues), and the disappointing performance of the company’s own (belated) syndication division, Four Star’s ledgers were awash in red ink by 1966. The Big Valley was the last series being produced under the Four Star banner when the firm was sold in 1967.

The bulk of Four Star’s output reflected Powell’s own history in motion pictures, turning out solid, unpretentious entertainment. If Powell and company did not assay social realism or topical drama with the same panache as, say, Stirling Silliphant or Reginald Rose, neither did they pursue the radical self-imitation characterized by Warner Brothers’ western and detective series. Rather, Four Star products reflected the relative diversity necessary to survive in an uncertain entertainment marketplace. Even Four Star’s genre-bound series exhibited the kind of conventional innovation, and occasional quirkiness, that defines American commercial television at its most fascinating, and Powell was pursuing anthologies long after the conventional wisdom had abandoned the form.

Of all the Four Star products from Powell’s tenure, only The Rifleman remains a syndication staple today, although Zane Grey Theater and Wanted: Dead or Alive survive on commercial video, and Burke’s Law was revived for the 1990s by its star (and co-owner) Gene Barry. Aficionados of Hollywood film can, on cable, video, or at the occasional retrospective screening, still enjoy Powell’s innocent grin and golden tones in Gold Diggers of 1933, and his stubbled smirk and grim wisecracks in Murder, My Sweet. His final dramatic roles, on Zane Grey and Dick Powell, are the purview of collectors of TV ephemera, until their resurrection on video. It remains for historians to cite Dick Powell the independent producer, the telefilm pioneer, the “TV major,” and to emphasize that by the early 1960s he was a more successful producer of motion pictures—for the small screen—than any of the old-line Hollywood studios. One wonders what Jack Warner must have thought.

Power without Glory
Australian Serial Drama

Power without Glory is probably among the two or three finest drama series to have been produced in Australia. The series was, in effect, a local equivalent to The Forsyte Saga and told the story of John West, and his wife and family, from the 1890s when he was an impoverished youth in the depression-stricken city of Melbourne to his death around 1950. By that time, he had become a millionaire, although he was tainted by shady political and business dealings. The series was based on the novel of the same name by Australian author Frank Hardy, which had been published in 1949. At the time, it was widely believed that Hardy had based the figure of John West on the real-life Australian businessman John Wren. The Wren family took legal action against Hardy, accusing him of libel. Hardy successfully defended the case, however, on the basis that his novel was fiction. Subsequently, the book sold extremely well, no doubt because the public believed that it was in fact based on the Wren story. Power without Glory should have been a natural adaptation for either radio or television in the 1950s or 1960s, but no broadcast producer was willing to take
Power without Glory

on the material for fear of further legal action from the Wren family. It was not until 1974 that such a project was undertaken.

That year Oscar Whitbread, veteran producer with the public-service television broadcaster, the Australian Broadcasting Corporation (ABC), decided that the novel should be brought to the television screen. After all, despite the timidity of ABC management, the court case had happened more than 20 years earlier and had, in any event, been lost by Wren. Moreover, under a federal Labour Party government, the ABC was expected to be progressive and innovative in its productions; its revenue, coming directly from the government, was, in real terms, at an all-time high. Whitbread judged that the time was right for such a massive undertaking, and he and script editor Howard Griffiths set to work on adapting the novel. The book was split into 26 hour-long episodes, and a series of ABC and former Crawford Production writers, including Tony Morphett, Sonia Borg, and Phil Freedman, were set to work to develop scripts. Writing and filming took place over the next 18 months, and the series began on-air nationally on the ABC in June 1976. *Power without Glory* starred Martin Vaughan as West and Rosalind Spiers as his wife. Other well-known Australian actors in the series included Terence Donovan, George Mallaby, and Michael Pate. Like many television miniseries, especially those with such a long screen-time, *Power* went well beyond the domestic drama of the couple and included the developing lives and careers of their children and acquaintances. These mostly private dramas were stitched onto a larger historical canvas that included political and national events such as the formation of the Australian Labour Party, the conscription debates of World War I, and the impact of the Great Depression and World War II.

The quality and integrity of the production—most especially its writing and the performance of the large cast—effectively sustained audience interest over the serial’s 26 hours. *Power* proved enormously popular and prestigious for the ABC. In 1977 it won a host of industry awards, including nine Sammys and four Penguins. The series was repeated in 1978, and in 1981 it was sold to Network Ten, where it was to receive two further screenings. *Power without Glory* was arguably the finest drama series ever made at the ABC. Its production and screening were watershed events, coinciding with the 20th anniversary of the first ABC television transmission, and also highlighting the fact that, with a change in federal government and a downturn in the Australian economy, the circumstances that had made such a production possible were now a thing of the past.

Practice, The. See Workplace Programs
In the United States the Democratic and Republican political parties, as well as numerous smaller parties, hold conventions every four years to nominate candidates for president and vice president and to adopt party platforms. For the two major parties, these conventions are four-day events held during the summer of each presidential election year. The first national political conventions emerged in the 1830s as a reform to the caucus system, which had been heavily controlled by party machines and party bosses. Although the key functions of the nominating conventions have not changed in the past 160 years, advances in communication technologies during the 20th century have had great influence on the nature of the meetings. The most dramatic of these alterations have come from television coverage.

The first experiments in televising the nominating conventions began in Philadelphia, Pennsylvania, in 1948; by 1952 both the Democratic and Republican conventions were broadcast nationwide on television. The impact of the medium, eventually networked into a truly national phenomenon, was immediate. After watching the first televised Republican convention in 1952, Democratic party officials made last-minute changes to their own convention in attempts to maintain the attention of viewers at home.

By 1956 both parties further amended their convention programs to fit better the demands of television coverage. Party officials condensed the length of the convention, created uniform campaign themes for each party, adorned convention halls with banners and patriotic decorations, placed television crews in positions with flattering views of the proceedings, dropped daytime sessions, limited welcoming speeches and parliamentary organization procedures, scheduled sessions to reach a maximum audience in prime time, and eliminated seconding speeches for vice presidential candidates. Additionally, the presence of television cameras encouraged parties to conceal intraparty battling and choose host cities amenable to their party.

Until the early 1950s conventions actually selected as well as nominated the party's candidates. Today the presidential nominees of the major parties are generally determined before the convention takes place. The prevalence of state political primaries, the increased power of television as a source of political news, the trend of early presidential campaigning, and the prominence of political polling almost ensure that each party's candidates are selected prior to the nominating convention. Indeed, since 1952 only two presidential nominees have not competed in the primary season (Aldai Stevenson in 1952 and Hubert Humphrey in 1968). And, in all but the Democratic convention of 1952, the Democratic and Republican nominees were chosen on the first ballot. Therefore, the conventions broadcast on television are no longer geared toward selecting nominees but staged to celebrate candidates and attract television coverage.

Television coverage of the convention has assigned new roles to political parties, candidates, and television news divisions in the presidential selection process. Today political parties must share the convention
stage with aspiring candidates and prominent journalists. Nominating conventions are no longer controlled by party bosses making decisions in smoke-filled rooms. Contemporary conventions are planned by professional convention managers and consultants who see the nominating convention as an unequaled opportunity for the party to obtain free, rehearsed exposure on television newscasts. Thus, parties use nominating conventions to project a desirable party image and inspire party loyalty.

For presidential candidates, the televised convention has brought freedom from the party establishment. Today it is not uncommon for presidential candidates to rise to prominence without party help. State political primaries and television news and advertising allow a greater number of candidates to seriously contest for their party’s nomination. Jimmy Carter’s nomination in 1976 provides an example of an outsider with little national political experience benefiting from television and the primary season. The candidacies of Democrat Jesse Jackson and Republican Pat Robertson also profited from political primaries and the televised convention. Television coverage does, of course, ensure that today’s conventions are well attended by prominent politicians. Many high-profile political leaders use the televised convention to launch their own future presidential bids, promote their current legislative efforts, or support other causes, groups, or programs.

To the television news divisions, the national conventions are the biggest extended political media events of the election year. The networks (ABC, CBS, FOX, and NBC), as well as the cable channels CNN and C-SPAN, allocate prime-time coverage and assign their top personnel to the conventions. Foote and Rimmer refer to convention coverage as the “‘Olympics of television journalism’ where the networks have a rare opportunity to go head-to-head on the same story.”

Waltzer contends presidential election years are unmatched showcases for the rival networks to exhibit their competing talents. Internetwork rivalry manifests itself in several ways: (1) the networks engage in extensive advertising to capture the eye of the viewer; (2) the conventions are used to introduce new items of television equipment; (3) the networks compete in marshaling political consultants and analysts to augment their coverage staffs; (4) the networks compete for superiority in content, completeness, and depth of coverage—it is a race for “exclusives,” “scoops,” and “firsts,” and for the unusual “features” of a convention; (5) the networks compete to make news with their coverage as well as to report the news of the conventions; (6) the networks seek to overcome the enormity and confusion of the convention and their coverage by personalizing coverage with anchor correspondents; and (7) the networks compete for audiences and audience ratings.

These factors indicate why television has made a commitment to broadcasting the convention over the years, and why the networks strive continually to create the “right” formats to attract audiences. From 1956 through 1976, for example, the networks covered conventions in their entirety. Although ABC cut back its broadcast in 1968, the other networks continued gavel-to-gavel coverage through 1976. Since 1980 all news outlets have cut back on their coverage. Future airtime is expected to depend on the “newsworthiness” of the convention, largely determined by the perceived competitiveness between the two party tickets as well as potential conflict or infighting within one party’s nominating process.

Parties much prefer to control the visual images broadcast to voters themselves, as the Republicans did in 1984. In that year, the Republicans aired Ronald Reagan’s campaign film, A New Beginning, a film that celebrated the Reagan presidency, transformed the art of political filmmaking, and, according to Joanne Morreale, established the televisial campaign film as a centerpiece of the presidential campaign.

At times, however, no one is able to control the conventions; political officials and network executives and technicians alike are caught up in events beyond their control. This was certainly the case in the 1968 Demo-
cratic convention, perhaps the most famous of all televised events of this sort. On that occasion, antiwar protesters demonstrated outside the Chicago Convention Center, drawing down the wrath of the Chicago police. Inside, the conflict was reflected in charges and countercharges, name-calling, and recrimination. Much of this activity was caught on camera, but the sense was that even the TV cameras were reacting rather than controlling. Few conventions since that time have been so dramatically bound to television, and most are tightly controlled events exhibiting small moments of spontaneity.

Viewership for nominating conventions has decreased over the years. According to the Harvard University's Shorenstein Center on the Press, Politics, and Public Policy, television networks aired 60 hours of each party convention in 1952, and 80 percent of the households in the United States watched about 10 to 13 hours of this coverage. Forty-four years later, network coverage of the 1996 conventions averaged eight hours, and just 10 percent of households reported tuning into the coverage. In 2000 roughly 20 percent of Americans tuned in to two hours or more of the conventions, according to the Annenberg Public Policy Center, Annenberg School for Communication, University of Pennsylvania.

At the close of the 20th century, strategies for increasing the audience for conventions took at least three forms. Parties attempted to plan the conventions with “star power,” scheduling political personalities at key moments to attract viewers. In 2000 cable channels (such as CNN, Fox News, CNBC) offered extensive in-depth coverage to attract viewers desiring extended or non-prime-time reporting, while Internet sites experimented with interactive activities to accompany or replace television viewing of the conventions, including alternative camera angles, gavel-to-gavel streaming video, web-exclusive commentary, 24-hour chat rooms and related message boards, up-to-the-minute polls and interactive quizzes, and opportunities to chat with delegates. While the hype surrounding such efforts was notable, actual traffic on these Internet sites was modest.

Advocates of the current system contend televised conventions inspire party loyalty and enthusiasm and allow the selection of a candidate who represents the political middle rather than the extremes. Critics allege today's nominating conventions are undemocratic spectacles and propose replacing them with a national presidential primary system. Despite these critiques and aforementioned efforts to increase viewership, substantial convention reform is unlikely. Today's streamlined conventions continue to attract an audience for television networks and cable channels, political parties, and presidential candidates alike. Although television coverage has brought cosmetic changes to the convention, it has not interfered with its basic functions. As in earlier days, contemporary conventions honor presidential nominees, create party enthusiasm, and present party platforms.

President Dwight D. Eisenhower held the first televised presidential press conference in January 1955. Although Eisenhower regularly used television as a means to address the American electorate, President John F. Kennedy was the first to utilize television as a direct means of communication with voters via the live press conference. As Richard Davis explains, “John Kennedy enjoyed press conferences because of his skill in bantering with reporters; his press conferences reinforced the image of a president in command of the issues.” Kennedy’s successors have been measured against his performance and have scheduled press conferences less frequently. They also have employed variations to the live press conference format. The administrations of Jimmy Carter, Ronald Reagan, and George H.W. Bush held mini press conferences. President George Bush Sr., relied on impromptu, daytime televised press conferences rather than formal, prime-time gatherings. President Clinton used a variation of the press conference: his televised “town meetings.” With these conferences, Clinton managed to sidestep the White House press corps and address questions asked by average citizens. One such meeting featured children and was moderated by PBS’s Fred Rogers of Mister Rogers’ Neighborhood.

President George W. Bush’s administration has held press conferences more frequently than his recent predecessors did. This administration also is known for joint press conferences with national political leaders and with foreign heads of state and government. In a press conference of February 22, 2001, Bush informed journalists, “One of my missions has been to change the tone here in the nation’s capital to encourage civil discourse.” Indeed, press conferences provide a forum for dialogue between the president and the public.

As a general category of media strategy, press conferences involve the communication of news about an individual or organization to the mass media and specialized media outlets. The objective is favorable news coverage of the sponsor’s actions and events. Since the mid-20th century, most press conferences have centered on the orchestrated use of television, although various print and broadcast media outlets usually are invited to attend. According to Jerry Hendrix, press conferences are classified as uncontrolled media. Thus, with press conferences, media decision makers become the target audience members. These gatekeepers then determine what information to communicate to the public.

Professionals generally agree that, as a public relations tool, press conferences should be used sparingly, reserved for circumstances that truly are newsworthy. Such occasions often call for a personal presentation by the organization’s chief executive officer, a celebrity, a dignitary, or similarly positioned person. In the general realm of business affairs, some organizations have used press conferences to announce the introduction of major corporate changes such as new product lines, takeovers, or mergers. Press conferences also have been used to organize and manage information in crisis situations or to respond to accusations of wrongdoing.

Although in the business sector press conferences are not viewed as a routine means of public relations, major government agencies employ them on a more regular basis. Indeed, press conferences are a principal component of political communications. Politicians rely on them as a way of providing important information to the public and shaping public opinion. For correspondents, they serve as a means of obtaining such information and examining the opinion-shaping process.

In the United States the press and politicians have traditionally enjoyed an adversarial relationship. Even as political press conferences are used to provide information to the public, the goal for the politician is persuasion or news management. Thus, the political figure wants to control the release of information. Conversely, the press relies on such conferences as a means for ensuring that the politician is held accountable for his or her policies and actions. Media outlets also rely on press conferences as a way of obtaining new information so it can be released as quickly as possible.

Even prior to television, press conferences were essential in the United States to communications between the executive branch of government and the public. According to Carolyn Smith, Theodore Roosevelt was one of the first U.S. presidents to use the press as a frequent means of communicating with the public. Although he did not hold formal press conferences in their contemporary sense, he realized that the media could be used to shape public opinion and established close relationships with journalists. Woodrow
Wilson was the first president to hold regular and formal press conferences. Not only did he view the press as a means of influencing public opinion, but he also believed that communication via the press was a chief duty of democratic leaders.

Although presidents are not bound by law to hold them, presidential press conferences have become somewhat institutionalized. As Smith contends, a sense of "public contract has evolved to such a degree that the general occasion of the press conference cannot be avoided with political impunity." Since the Wilson administration, all presidents have held formal press conferences. However, the decision to grant a press conference is always made by the White House, not by the media, and press conferences have varied in frequency and format with each administration.

Not surprisingly, presidents are most likely to hold press conferences when the conferences serve their best advantage. Ultimately, the president can control the time, place, and setting for a press conference. To some extent, they also control the participants. In the contemporary era, journalists at presidential press conferences have traditionally included representatives of ABC, CBS, and NBC, the wire services, national newsmagazines; and national newspapers such as the New York Times and the Washington Post. They also usually include a selection of reporters from other news organizations, such as regional newspapers or news syndicates, who may be more likely to pose questions the president will find favorable.

In general, press conferences often are criticized for their theatrical nature. However, for individuals, organizations, and government branches, press conferences serve an important public relations function. They are an effective means of organizing and disseminating newsworthy information to the public.

*British Crime Series*

In 1991 *Prime Suspect* was broadcast on British television to great critical and public acclaim. The production received numerous awards for its writer Lynda La Plante and star Helen Mirren, including a rather controversial BAFTA Award for Best Drama Serial. *Prime Suspect*'s importance to the development of the police drama series as a genre in Britain is great. By installing a woman as the head of a murder squad, *Prime Suspect* broke new ground in terms of both gender and the authenticity in the portrayal of the internal dynamics of the police as an organization.

Almost six years earlier, La Plante brought to the television audience the formidable Dolly Rawlins as the single-minded leader of a group of disparate but gutsy women criminals in her successful television crime drama *Widows*. With *Prime Suspect* and the creation of DCI Jane Tennison, La Plante continued to elaborate on her predilection for problematic heroines, but this time her central character is not a criminal but a woman both shaped and defined by her role as an officer of the law.

By being positioned as the head of a murder squad hunting for a sadistic serial killer, Tennison transcends many of the traditions of the British police series. It is interesting to note that La Plante did not put Tennison forward primarily as a woman police officer who does her job the feminine way. In terms of the British police series, Tennison's female predecessors such as Kate Longton (*Juliet Bravo*) and Maggie Forbes (*The Gentle Touch*) had been deliberately represented as bringing the nurturing and compassionate aspects associated with femininity to the role of senior police

officer. In fact, it would be true to say that central to programs such as Juliet Bravo, The Gentle Touch, and, indeed, the American police series Cagney and Lacey was the exploration of the contradictions inherent between the institutionalized masculinity of the police and the presence of femininity. The dramatic resolution, however, was usually to endorse the compassionate compromise made by the female characters between being a good police officer and being a "real" woman. The fascination of Tennison as a character was the powerful and compelling focus on the internal and external confrontations and contradictions faced by a leading female character who was in most circumstances a police officer first and a woman second.

It is, in fact, the Tennison character, and Mirren's performance, that unify and act as the reference for the programs in the series. And although La Plante has only written Prime Suspect I and II, her creation of Tennison, her exacting original script, and Mirren's own compelling performance have generated a successful and repeatable legacy and framework.

Symptomatically, the subtext for each individual drama in the series has some kind of social issue as its basis and could be read, in order, as sexism, racism,
homosexuality, young male prostitution, the results of physical abuse in childhood, class, and institutional conformity in the police. Equally symptomatically, it could be noticed that each drama contains a character who has a particular investment in the chosen subtext: for example, one of the officers is black; in the next drama, one is gay; in the next, one has suffered childhood abuse; and so on. In a rather obvious, sometimes crude manner, this device has been used to situate and contextualize the tensions of the internal police dynamics within those of the larger society. It is our fascination with Tennison that spawns a more integrated and sophisticated involvement with the drama. Because of Tennison’s place in the text, the issue of gender in the police force is never far away, as evidenced by the fact that masculinity and male relationships are also always under inspection.

Above all, no matter the focus of a case on a particular social problem, it is the institutionalized performance of masculinity and femininity within the police force that dictates the often considerable dramatic tension. In Tennison’s pursuit of serial killer George Marlowe in Prime Suspect I, for example, not only must she prove she is an exceptional detective and win the support of her male colleagues, but the narrative is shot through with her compulsive need to succeed in her job at any cost. Her obsession with her police career even becomes tinged with perversity when the interrogation sessions between Tennison and Marlowe are used to generate a fake, yet compelling, sexual tension. The fact that she will get out of bed at night to interview a serial killer but will not make time to see to the needs of the man in her life heightens the idea of perversity and obsession.

In a culture still guided by the binary divisions of active masculinity and passive femininity, the fact that Tennison is a woman means that her sexuality and sexual practices are subject to much more dramatic scrutiny than if she were a man. Tennison does not, however, stray much from the sexual conduct expected from the male officer in the television police genre. As Geoffrey Hurd explains, “the main characters... are either divorced, separated, widowed, or unmarried, a trail of broken and unmade relationships presented as a direct result of the pressures and demands of police work.”

The focus on sexuality, however, is dramatically changed by Tennison’s pregnancy in Prime Suspect III and her consequent abortion in Prime Suspect IV. This moment marks the watershed in her personal and career conflict, and it is interesting that the following programs (not written by La Plante) then seem to devote themselves to saving Tennison’s soul. No moral judgment is made about the abortion; in fact, it is not even discussed. The imperative is clearly to establish Tennison’s reputation and stature within the police (she is promoted to the rank of superintendent) and to reestablish her and contain what femininity remains within a heterosexual relationship with a professional equal, the psychologist played by Stuart Wilson.

In Prime Suspect V, an interesting intertextual exercise is carried out when the Marlowe case is reopened, with the investigation now centered on Tennison’s own police practices. Apart from one long-standing loyal male colleague, the male ranks are again seen to close in the face of this unsympathetic woman who remains insistent on her infallibility and methodical detection. Her ultimate triumph in the case casts her in a new but recognizable mold, that of maverick cop, where gender is even less of an issue. Prime Suspect VI: The Last Witness aired in November 2003.

Prime Time

Prime time is that portion of the evening when the U.S. audience levels for television viewing are at their highest. In the Eastern and Pacific time zones, prime time is 7:00 to 11:00 P.M.; in the Central and Mountain time zones, prime time is 6:00 to 10:00 P.M. The 9:00 P.M. hour (Eastern and Pacific) and the 8:00 P.M. hour (Central and Mountain) have the highest homes-using-television (HUT) level.

The commercial broadcast networks have always attracted the largest portion of the prime-time viewing audience. Through the 1960s, it was not unusual for the three networks (ABC, CBC, and NBC) to attract 85 to 90 percent of the available prime-time audience. The remaining 10 to 15 percent of the audience would be watching programming available on independent television stations or on public television stations.

Broadcast networks pay their affiliated stations in each local market to air the network offerings (this is called “network compensation”). In return, the networks retain the bulk of the commercial time for sale to national advertisers. This arrangement works well for both parties, as the networks attract audiences in each local market for their programming, which enables them to sell commercial time during such programs to advertisers wanting to reach a national audience. The local affiliated television stations receive high-quality programming, payment from the network, and the opportunity to sell the remaining commercial time (usually about one minute each hour) to local advertisers. However, with the increased costs involved in producing and securing prime-time programming and with smaller audience shares due to increased competition from cable, the networks have been reducing compensation payments to affiliates. In fact, some network programming is distributed sans compensation.

In the mid-1990s, the average 30-second prime-time network television advertising spot cost about $100,000. By the 2001–02 broadcast season, the average 30-second, prime-time network television advertising spot cost about $125,000. These same spots on a top-rated series average about $325,000, and such spots on low-rated network prime-time programs average about $50,000. Top-rated prime-time spots in local television markets cost as much as $20,000.

Because of network dominance in prime time, independent television stations (those not affiliated with a major broadcast network) have found it difficult to compete directly with network-affiliated television stations during these most desirable hours. In an attempt to allow independents to compete somewhat more fairly, during at least a portion of prime time, the Federal Communications Commission (FCC) enacted the Prime Time Access Rule (PTAR). The rule limits the amount of time a local affiliate can broadcast programming provided by the network. The most recent version of PTAR became effective in September 1975. It basically limited network-affiliated television stations in the 50 largest markets to no more than three hours of network (or off-network syndicated) programming during the four hours of prime time. The three-hour limit could be exceeded if the additional programming was public-affairs programming, children’s programming, or documentary programming, or if the additional pro-

Dugdale, John, “Intruder in a Man’s World,” New Statesman and Society (December 11, 1992)
programming was a network newscast that was adjacent to a full hour of local newscasts. Other exceptions to the three-hour limit included runover of live sporting events, and feature films on Saturday evenings. The FCC ended the PTAR in 1996; however, network offerings continue to be limited, now by convention, to three hours.

The growth of cable television in the 1980s resulted in a plethora of viewing options for the audience. Where audiences once had a choice of up to five, perhaps six options at any point in time, the new multi-channel environment provided viewers with more than 50 programming choices at once. Meanwhile, the development of the FOX network in the late 1980s, and on a slightly smaller scale, the Warner Brothers (WB) Network and the United Paramount Network (UPN) in the early 1990s, raised the prime-time status and visibility of independent stations. In addition, the advent of the videocassette recorder (VCR) also enabled viewers to rent prerecorded tapes, or to time-shift (watch programs that were recorded at an earlier time). The result of all this increased competition is that the networks’ share of the audience declined throughout the 1980s and 1990s. This was most evident in the prime-time hours. By the 2001–02 season, the networks’ share of the audience had dropped from previous heights of 80 to 90 percent to 50 to 60 percent. And as cable and VCR penetration levels (70 percent and 84 percent, respectively, in 2001) continue to grow, the fate of network television in prime time may decline still further.

Although prime-time programming has changed much during the history of television, three main trends continue: (1) the continued growth of the situation comedy; (2) the continued decline and perhaps death of the variety show; and (3) the consistent appeal of drama.

As new technologies, increased competition, and decreased regulation of television systems have developed throughout the world in recent decades, the notion of prime time has become more and more prevalent in systems outside the United States. Where television programming in other countries was once a special activity, often a limited number of hours roughly equivalent to American prime time, the move toward 24-hour programming has added new significance to the evening hours. Prime time is now a common marker in the days of citizens around the globe and this televiral “clock” has become part of everyday experience in almost every society.

Prime Time Access Rule

The Prime Time Access Rule (PTAR) was established by the U.S. Federal Communications Commission (FCC) to limit network domination of prime-time programming throughout the United States. Prime time is normally from 7:00 p.m. to 11:00 p.m. in the Eastern and Pacific time zones, and from 6:00 p.m. to 10:00 p.m. in the Central and Mountain time zones.

The “Big Three” networks, ABC, CBS, and NBC, dominated prime-time programming of their own network-affiliated stations nationally in the 1960s. Re-runs of old network shows also dominated the schedules of independent (non-network-affiliated) television stations. The FCC began an investigation of this virtual monopoly in 1965 and issued its initial PTAR in 1970. The rule was modified in 1973, rewritten in 1975, and finally rescinded in 1996. Paraphrasing the rule itself, the PTAR basically limited network-affiliated stations in the 50 largest television markets to airing only three hours of network entertainment programming during prime time. Exceptions were made for some program genres, such as news, public affairs, education, and children’s shows.

This rule meant that the Big Three networks regularly provided 22 hours of prime-time shows weekly, 4 hours on Sunday and 3 hours on the other six evenings each week. Sunday included an extra hour because feature films, newsmagazines, and family shows qualified as exceptions to the PTAR. Other exceptions included fast-breaking news events and the running over of live broadcasts of sporting events. In markets where local television stations scheduled the half-hour network newscast immediately following the local newscast, this was also considered an exception. In actual practice, the networks now provided only three hours of programming to all their affiliate stations in every market, not just the top 50, and established what became known as the “Access Hour” nationally.

The PTAR also prohibited top-50 market network-affiliated stations from airing off-network rerun programs during the access hour, while encouraging local independent stations to do so as well. This aspect of the rule gave independent stations the exclusive right to broadcast reruns of successful network situation comedies such as *I Love Lucy* during the first hour of prime time, while forcing the network-affiliated stations to provide alternative programming.

The FCC wanted to encourage community-oriented local programming by network stations, as well as provide small, independent programming producers expanded marketing opportunities. Prior to the PTAR, almost all network programming was produced by major studios or the networks themselves.

With respect to the development of community-oriented local programming, the PTAR was a dismal failure, as most local television stations opted to purchase inexpensive syndicated entertainment programming, such as game shows, to fill the access hour rather than developing their own public-affairs programs. The PTAR was a resounding success in providing independent producers with more than 200 local television markets and over 600 local stations as potential customers for their original programming. The result was a plethora of game shows and other programs in inexpensive-to-produce genres. Along with the Financial Interest and Syndication Rule (Fin-Syn), the PTAR prevented the Big Three networks from monopolizing the television production industry and limited them to distribution and exhibition of prime-time entertainment programming for 16 years.

The creation of FOX, the fourth major network, as well as the variety of other channels introduced as the cable and satellite industries developed, provided television audiences in the United States with many more viewing options. This shift eroded the Big Three networks’ share of the audience from over 90 percent in 1970 to less than 50 percent in the mid-1990s. It also gave independent program producers many more venues to which they could sell programming and basically eliminated a need for restrictions on network programming such as the PTAR. The FCC finally eliminated the rule in August 1996.

Since the PTAR’s demise there has been virtually no change in the number of hours of prime-time programming that networks provide their affiliates. Now, affiliate stations’ access hours are highly profitable time slots for selling local advertising spots at premium rates, and affiliate stations therefore have no desire to give up the access hour to the networks for programming. Even network newscasts typically no longer appear during the access hour.

**Primetime Live**

**U.S. Newsmagazine Show**

In 1989 the American Broadcasting Company (ABC) added a second newsmagazine, *Primetime Live*, to accompany *20/20* on its prime-time schedule. Straying from the lackluster tradition of network news, the look of *Primetime Live* was better characterized as glitzy and glamorous. ABC launched a huge promotional campaign and on August 3 the highly publicized *Primetime Live* debuted. The show featured numerous segments, from the secretary of state on American hostages in Lebanon to an interview with Roseanne Barr. It incorporated comments from a studio audience, as well as live location feeds that were frequently uninspiring. Booed by critics and parodied by *Saturday Night Live*, *Primetime Live*’s ratings continually declined. Industry journals were replete with accounts of difficulties plaguing the show, but none discussed cancellation.

A handful of factors contributed to the staying power of *Primetime Live*. Generally speaking, reality programming was recognized as a cost-effective alternative in comparison with the expense and risk of developing fictional series. But despite trailing its competition, *Primetime Live* was rated considerably higher than the traditional entertainment previously scheduled in its time slot. Furthermore, programming a newsmagazine improved the audience draw for network affiliates that followed the broadcasts with their local news.

More specifically, and perhaps most pivotal to the eventual success of the show, was ABC’s stated commitment to stand by the show for at least two years. This allowed executive producer Richard Kaplan to modify the program and reshape the still-emerging newsmagazine genre. First to disappear was the studio audience. Ironically, *Primetime Live* then phased out the “live” aspects of the program. Following its recognized coverage of the crash of Pan American Flight 103 and the fall of the Berlin Wall, the show’s producers reduced the number of segments for each episode and focused instead on more in-depth journalism. *Primetime Live* evolved into an award-winning newsmagazine with its own distinct signature. Central to establishing this distinctiveness was the use of undercover investigations and hidden cameras that documented everything from racial discrimination to political scandal and corporate corruption.

Although their formats and often their content can be similar, *Primetime Live* was distinguished as a news rather than a tabloid magazine show because it was produced under the umbrella of the ABC News division. But as a prime-time show the entertainment value of the program was at least as important as its information value, inspiring the critical label “infotainment.” Rather than reporting facts, newsmagazine journalists were expected to be on-air personalities or celebrities for audience members to identify with. They packaged segments of dramatic narrative, but also needed to communicate professional legitimacy. Therefore, coanchors Diane Sawyer and Sam Donaldson were vital to *Primetime Live*. Both were praised as talented and well-respected journalists when they joined the show. Donaldson, a White House correspondent, and Sawyer, lured to ABC following five years as a reporter for *60 Minutes*, lent an air of credibility to the fledgling newsmagazine.

For the 1998 season ABC merged *Primetime Live*
with the more preferred 20/20, which expanded to three (and eventually four) nights a week. The strategy was in keeping with the trend toward stripping one recognizable brand across the network's weekly schedule. The Wednesday, 10:00 P.M. broadcast was planned to maintain the flavor of Primetime Live. Sawyer remained as coanchor of 20/20 on Wednesday nights, along with Charles Gibson, who had replaced Donaldson. David Westin, president of ABC News, revealed this was part of his hope to expand 20/20 to run seven nights a week. Economic concerns motivated the increased pervasiveness of newsmagazine programming, which cost as much as 50 percent less to produce than an episode of scripted comedy or drama. Additionally, newsmagazine content, though rarely syndicated, could be repurposed for other ABC news programming and for media outlets aligned through corporate synergies.

Soon, however, network executives decided that stripping their newsmagazines as one franchise reduced audience anticipation. To generate more demand for a product perceived as uniform ABC separated the multiple broadcasts of 20/20 into inde-

pendently titled shows. For the 2000 season the Wednesday broadcast of 20/20 was moved to Thursday night, reincarnating Primetime Live as Primetime Thursday. Sawyer and Gibson remained coanchors of the program. The goal was to reassociate the show with its previous success.

ABC News’s metamorphosis over the years can be traced through the history of Primetime Thursday. The unsuccessful attempt to expand the 20/20 franchise has resulted instead in a deeper branding of ABC News when it becomes clear that it is the organizational franchise, rather than a program franchise, that has been most strengthened. In the process, the way network news is produced has also changed. Today, Primetime Thursday is able to draw on the resources of the entire ABC News organization. And as the show’s staffers, from producers to correspondents, are no longer to dedicated to one show, they now contribute to an array of the news division’s programming. Rather than following an entrenched formula, the spirit and legacy of Primetime Live endure precisely because the concept has been so adaptable to change.

The sudden death of Diana, Princess of Wales, following a car accident in Paris in the early hours of Sunday August 31, 1997, sparked a dramatic week of intense television coverage and high public emotion in the United Kingdom and sent shock waves through international media circles.

At the age of 36, the princess cut a figure of glamour and beauty and, despite the years of controversy and acrimonious dispute with the royal family, she still commanded much public popularity and international interest. In the week leading up to the accident, the tabloid press in Britain had been filled with pictures of her relaxing in the south of France with her new boyfriend, Dodi Al Fayed. Her death in a car crash, apparently while being chased by press photographers, seemed as shocking as it was unexpected.

That Sunday, British terrestrial television channels suspended their scheduled programming and ran live rolling news for all or most of the day. The news coverage was dramatic and emotive, combining news narratives associated with disaster and crisis with what TV critic Mark Lawson has described as “memorial broadcasting,” where praise is heaped upon the recently deceased. Tributes were relayed from eminent politicians and personages around the world, and cameras started to focus on members of the public, some angry and emotional, leaving flowers outside palaces in London. A bitter and scathing statement vilifying the press was read by Earl Spencer, the princess’s brother in South Africa, and television commentators and journalists distanced themselves from the print media and discussed the potential implications of the accident on press regulation.

The future of the royal family was also discussed, and over the afternoon the coverage was intercut with scenes of Prince Charles and Diana’s two sisters flying to Paris to collect her body. Scenes of their return, with the aircraft departing Paris, flying into the sunset and then landing at an air force base just outside London, were particularly poignant and moving.

Yet a disorientating air of unreality hung over the day’s coverage, especially when television broadcast...
images of the car wreckage alongside footage of the princess while still alive, attending gala functions, meeting the sick and poor, and accompanying her two sons on visits to a theme park.

In the following days, television news followed events as revelations emerged that the princess’s French chauffeur may have been driving drunk, preparations were made for the funeral, and cameras relayed extraordinary scenes of people lining up for hours to leave flowers and sign books of condolence in London. These images were read as evidence of public mourning and helped fuel criticism in the tabloid press, which was repeated on television, of the royal family’s apparent neglect of the princess when alive. The royal family was also accused of being out of touch, for not displaying a response in keeping with the wave of public sympathy after her death. So stinging was the criticism that the queen was effectively forced to make a live address to the nation across all the terrestrial channels in memorial of the princess on the Friday night before the funeral.

The princess’s funeral, on Saturday, September 6, was described by a Buckingham Palace press spokesman as “a unique event for a unique person.” It had been a focus of speculation throughout the week and was, in the end, a triumph of organization for both the authorities and the broadcasters. With very little time for preparation, permission from the princess’s family to film the funeral service live inside Westminster Abbey was only granted to the British Broadcasting Corporation (BBC) and Independent Television News (ITN) on Tuesday evening. Agreement was made with both the Spencer and royal families that there would be no television close-ups of any of the mourners in the Abbey.

The funeral was televised live across four out of five of the U.K. terrestrial channels, with both the BBC and ITN providing live relays to broadcasters around the world. It is estimated that a possible 2.5 billion people watched the funeral globally. Live coverage commenced at 9 A.M. in the U.K. as the funeral cortège, consisting of a horse-drawn gun-carriage bearing the princess’s coffin, and a small escort of guardsmen and mounted policemen, left Kensington Palace in London. The coverage followed the cortège every step of the way as it made its two-hour journey, on a sunny morning, through streets lined with people, past Buckingham Palace and Whitehall to Westminster Abbey. On the BBC, historical continuity was provided by the solemn commentary of David Dimbleby, son of the famous broadcaster Richard Dimbleby who had commented for television at the queen’s coronation in 1953 and the funeral of Winston Churchill in 1965.

The coverage continued through the hour-long service, which was marked by hymns, prayers, and readings and included an address by Earl Spencer and a live rendition of the song “Candle in the Wind” written for the occasion and sung by the pop star Elton John. After the service and a national minute of silence, the main broadcasters continued to follow events as the princess’s coffin was taken by hearse back through London streets, lined with crowds applauding and throwing flowers, and then onto the motorway to make its last journey to Althorp in Northamptonshire. There the coverage ended as the princess was finally buried, out of the public gaze, at a private family service in the late afternoon.

Undoubtedly a poignant event that gripped and moved a large British and international audience, the funeral was considered the kind of television event at which the British excel. The BBC’s then-director general, John Birt, was to describe the week as “one of the most demanding in the BBC’s history.”

A year later, television’s response to the first anniversary of the princess’s death was a more muted affair. Several reports and books began to be published that suggested that not everyone had been caught up in the wave of public emotion, and some were critical of the press and media for orchestrating the apparent public response, and for perpetuating what some came to refer to as “grief fascism.”

Prinze, Freddie (1954–1977)
U.S. Actor

Freddie Prinze is one of only a handful of Puerto Rican Americans to earn national prominence as a popular entertainer—in his case, as a stand-up comedian. Prinze was born in Washington Heights, a working-poor, multiethnic neighborhood on the Upper West Side of New York City. His father was a Hungarian immigrant who worked as a tool and die maker, his mother a Puerto Rican immigrant who worked in a factory. Playing on the name “Nuyorican,” as many New York Puerto Ricans identify themselves, Prinze called himself a “Hungarian.”

Prinze came from a diverse religious as well as ethnic background. His father was part Jewish, his mother Catholic, and they chose to send him to a Lutheran elementary school. On Sundays he attended Catholic Mass. “All was confusing,” he told Rolling Stone in 1975, “until I found I could crack up the priest doing Martin Luther.” Prinze was also overweight when he was a young boy, which further heightened his anxiety about his “mixed” identity. “I fitted in nowhere,” he continued. “I wasn’t true spic, true Jew, true anything. I was a miserable fat schmuck kid with glasses and asthma.” Like many comedians, Prinze used humor to cope with the traumas of his childhood. “I started doing half-hour routines in the boys’ room, just winging it. Guys cut class to catch the act. It was, ‘What time’s Freddie playing the toilet today?’” His comedic talents paid off, as he was selected to attend the prestigious High School of the Performing Arts in New York.

Prinze did not graduate from the High School of the Performing Arts, although after his later professional successes, school administrators awarded him a certificate. The young comedian skipped many of his morning classes, most commonly economics, because he often worked as late as 3:00 A.M. in comedy clubs perfecting his routine and style. Of his time spent in these clubs, Prinze would later say, “My heart doesn’t start till 1:00 P.M.” One of his favorite spots was the Improvisation on West Forty-fourth Street, a place where aspiring comics could try out their material on receptive audiences.

Prinze called himself an “observation comic,” and his routines often included impressions of ethnic minorities and film stars such as Marlon Brando. One of his most famous impressions was of his Puerto Rican apartment building superintendent who, when asked to fix a problem in the building, would say with a thick accent: “Eez not mai yob.” The line became a national catchphrase in the early 1970s. His comedy also had a political edge that was poignant and raw, perhaps best illustrated by his line about Christopher Columbus: “Queen Isabelle gives him all the money, three boats, and he’s wearing a red suit, a big hat, and a feather—that’s a pimp.” Prinze’s comic wit, based in the tradition of street humor pioneered by such comics as Lenny Bruce and Richard Pryor, landed him a number of television appearances, including The Tonight Show Starring Johnny Carson in 1973. His performance there was a major success and the start of his television career.

Indeed, James Komack, a television producer, liked what he saw in Prinze’s routine and cast him to play the part of Chico Rodriguez, a wisecracking Chicano, in a situation comedy called Chico and the Man. Komack told Time magazine that Prinze “was the best comic to come along in 20 years.” Chico and the Man also starred veteran actor Jack Albertson as “the Man,” a crusty old-timer, owner of a run-down garage in a Chicano barrio of East Los Angeles. Among the supporting cast were Scatman Crothers, who played Louie the garbageman, and Della Reese, who played Della the landlady. In the style of other situation comedies such as All in the Family and Sanford and Son, most of the plots involved ethnic conflicts between Chico, who worked in the garage, and the Man, the only Caucasian living in the mostly Latino neighborhood. “Latin music sounds like Mantovani getting mugged,” the Man says to Chico in one episode. Chico would often respond to the old-timer’s bigoted statements with the line, “Looking good,” which also became a national catchphrase. Premiering on NBC-TV in September 1974, Chico and the Man quickly rose to the top of the Nielsen ratings. Time reported that Prinze was “the hottest new property on prime-time TV,” and the comedian literally became an overnight star: the first and, to date, only Puerto Rican comedian to command a nationwide audience. He began working in Las Vegas for a reported $25,000 a night. He bought himself a new Corvette and his parents a home in the Hollywood hills. He was only 20 years old.
Chico and the Man faced criticism and protests from the Los Angeles Chicano community, who protested the use of Prinze, a New York Puerto Rican, to play a Los Angeles Chicano. Citing dialect and accent differences, and the fact that network television rarely employed Chicano actors, Chicano groups picketed NBC's Burbank studios and wrote protest letters. Prinze responded with his usual irreverent humor: "If I can't play a Chicano because I'm Puerto Rican, then God's really gonna be mad when he finds out Charlton Heston played Moses." Nonetheless, the network and producers of the show buckled under the pressure, changing the character to half-Puerto Rican and half-Chicano brought up in New York City. The shift in the character's ethnic identity apparently did not bother television audiences, for Chico and the Man never slipped below sixth place in the ratings when Prinze was its star.

Prinze, however, had a difficult time adjusting to the pressures of his overnight success and stardom, and during this period, he experienced many personal problems. His wife of 15 months, Katherine Elaine Cochran, filed for divorce and Prinze was now less able to see his adored 15-month-old son. Early in the show's run, Prinze was arrested for driving under the influence of prescription tranquilizers, fueling speculation of a drug problem. Indeed, friends reported that Prinze turned to drugs to cope with the pressures of fame and the breakup of his marriage. "Freddie was into a lot of drugs," comedian Jimmy Walker said to the New York Times, "not heroin, as far as I know, but coke and a lot of Ludes. The drug thing was a big part of Freddie's life. It completely messed him up."

On January 28, 1977, after a night of phone calls to his secretary, business manager, psychiatrist, mother, and estranged wife, Freddie Prinze shot himself in the head in front of his business manager. He was rushed to the hospital, where he was pronounced dead. He was 22 years old. A note found in his apartment read: "I can't take any more. It's all my fault. There is no one to blame but me." According to the New York Times, Prinze had previously threatened suicide in front of many of his friends and associates, often by holding a gun to his head and pulling the trigger while the safety was on. It is not known whether the young comedian actually intended to kill himself that night or merely suggest that he might, as he had done in the past, but it is clear that he was critically depressed.

The death of Freddie Prinze is an American success story turned tragedy. His streetwise insight and raw wit is surely missed, perhaps most by the Puerto Rican American community, who have yet to see another politically minded Puerto Rican comedian grab national attention.

**Prisoner**

*Australian Prison Melodrama*

*Prisoner*, which aired from 1979 to 1986 in Australia and was broadcast in other countries as *Cell Block H*, is a triumph of the Australian television industry, a classic of serial melodrama. *Prisoner* was conceived by the Grundy Organisation for Network Ten. Reg Watson, in the senior ranks of Grundy, had just returned from Britain, where he had been one of the originators of the long-running serial *Crossroads*. In 1978 Watson set out to devise a serial set in a women’s prison, in the context of considerable public attention being given in Australia to prison issues generally and to the position of female prisoners in particular. Women Behind Bars had been founded in 1975 and had successfully campaigned for the eventual release of Sandra Willson, Australia’s longest-serving female prisoner. The combination of an active women’s movement, prisoner action groups, and an atmosphere of public inquiry and media attention, stimulated by gaol riots and a royal commission, laid a basis for an interest in the lives of women in prison. Watson and his team at Grundy, in their extensive research for the new drama, interviewed women in prison as well as prison officers (the “screws,” as they are always called in *Prisoner*), and later some of the actors also visited women’s prisons. Notice was taken of prison reform groups, whose desire for a halfway house for women was incorporated into the program. The result was a very popular long-running serial, shown from 8:30 to 10:30 P.M., which only in its eighth year revealed signs of falling ratings.

*Prisoner* became as controversial as it was popular. In its frequent grimness, pathos, sadness, toughness of address, occasional violence, and atmosphere of threat, it appeared very decidedly to be adult drama, its “look” spare, hard, dynamic. Yet ethnographic research pointed to *Prisoner*’s consistent appeal to schoolchildren, not least schoolgirls, perhaps identifying the harsher screws with cordially disliked teachers. It was not the favorite text of school principals and was the subject of complaint by them.

With *Prisoner*, the audience is invited to sympathize and empathize with a particular group of prisoners, in particular, mother figure Bea Smith, aunt figure Judy Bryant, grandmother figure Bea Birdsworth, as well as some young prisoners, the acting daughters and granddaughters, Doreen and Maxie and Bobby. Often this group is shown at work in the prison laundry, where Bea rules as “top dog,” having the right to press the clothes. Here Bea and her “family” resist the oppression of a labor process the prison management forces on them by taking smokes, having fun, exercising cheek and wit, chatting, planning rituals such as birthday celebrations, or being involved in dramas of various kinds that distract them from the boredom of work.

Such “kinship” relationships, often remembered rather wistfully by ex-prisoners who are having a hard time of it alone on the outside, offer the possibility of close friendship, fierce loyalty, cooperation, genuine concern for each other: an image of *communitas*, inversionary since it is this community of “good” prisoners, not those in authority, whom the text continually invites us to sympathize and empathize with. Opposed to the powerful resourceful figure of Bea are various other women, also powerful personalities, such as Kate or Nola MacKenzie or Marie Winters, individualistic and ruthlessly selfish, manipulative and wily, who scheme and plot (sometimes with harsh screws like Joan Ferguson, known as the Freak, who is also corrupt, or Vera Bennett, known as Vinegar Tits) to topple Bea and destroy her authority and influence.

In *Prisoner*, however, relationships of all kinds are always complicated, shifting, and often uncertain. Not all screws are harsh; there is, for example, Meg, more a social worker, though still suspected by the women. The struggle between those who take a more permissive, helping approach, such as Meg, and the advocates of rigid discipline like Ferguson and Bennett and, to a lesser degree, Colleen Powell goes on and on and is never resolved, as each approach is alternately seen to result in further tension, restlessness, and disorder. As the women’s leader, Bea is particularly ambivalent. She possesses impressive wisdom about human relations, which she shrewdly uses for the benefit of the prisoners as a whole. She dislikes and tries to counter or sometimes punish actions that are self-seeking and competitive at the expense of what she perceives as a family group. But if Bea is a kind of moral center in *Prisoner*, she is an unusual and complex one, drawn as she is to exerting her control through violence or the
threat of it: after killing her, she brands “K” (for killer) on Nola MacKenzie’s chest with a soldering iron (Nola had tried to drive Bea insane over the memory of her dead daughter Debbie).

*Prisoner* relies very little on conventional definitions of masculinity and femininity, beyond the basic point that sympathy generated for the women rests on the perception that women are not usually violent or physically dangerous. Many of the women are very strong characters indeed, active and independent. Bea, Nola, Marie Winters, the Freak are most unusual in the gallery of characters of television drama. They are not substitute men, but active strong women. Strength and gentleness are not distributed in *Prisoner* on male-female lines. The binary image of the powerful man and the weak or decorative woman is simply not there. Nor are the women in *Prisoner* in the least glamorized. They are usually dressed in shabby prison uniforms, while those on remand usually appear in fairly ordinary clothes. Their faces suggest no makeup, and they range in bodily shape from skinny wizened old Lizzie (loving, concerned, and kind, yet also a mischievous old lag rather like a child, liable to get herself into trouble) to the big girls like Bea, Doreen, and Judy. Their faces, luminously featured as in so much serial melodrama, are shown as grainy and interesting, faces full of character, with signs of hardship and suffering, alternately soft and hard, happy and depressed, angry or bored. The women are not held up voyeuristically as sexual objects but present themselves as human, female, subjects.

Although *Prisoner* talks to very contemporary, historically specific concerns, it also draws on much wider, longer, older cultural histories. *Prisoner* can be located in a long female tradition of inversion and inversionary figures in popular culture, from the “unruly” or “disorderly” women of early modern Europe evoked by Natalie Zemon Davis as Women on Top to the rebellious Maid Marian’s important in Robin Hood ballads and associated festivities of the May-games, to the witches of 17th-century English stage comedy. In such “wise witch” figures, we perhaps approach the female equivalent of the male mythological tradition of Robin Hood, Dick Turpin, Rob Roy—outlaws and tricksters who, like Bea in *Prisoner*, inspire fear as well as admiration.

In addition to drawing from such carnivalesque traditions of world upside-down, misrule, and charivari, *Prisoner* speaks to and takes in new directions dramas of crime on television where private passions erupt into public knowledge, debate, contestation, judgment. As dramaturgy, *Prisoner* revels in the possibilities of the TV serial form, of cliff-hangers at the end of episodes, intensifying melodrama as (in Peter Brooks’s terms in *The Melodramatic Imagination*) an aesthetic of excess. *Prisoner* is already a classic of serial melodrama, yet, in world television, there is and has been nothing else quite like it.

The *Prisoner*, an existential British spy and science fiction series, was first aired in England in 1967. Actor Patrick McGoohan conceived of the idea for the series, wrote some of the scripts, and starred in the central role. McGoohan had become bored with his previous series, *The Secret Agent*, and wanted something very different. The new series comprised 17 "adventures," each self-contained, but each also carrying the story forward to its remarkable, highly ambiguous conclusion.

The series has attained cult status because it is so complex, so filled with symbolism, with dialogue and action working at several levels of meaning, that the entire story remains open to multiple interpretations. *The Prisoner* was shot in the Welsh village of Portmeiron, whose remarkable architecture contributes to the rich, mysterious atmosphere of the series. In many ways an allegory, the adventures within *The Prisoner* can be read as commentaries on contemporary British social and political institutions.

The hero of the series is an unnamed spy, who is first shown resigning his position. He leaves the bureaucratic office building housing his agency, goes to his apartment, starts packing—and is gassed—presumably by those for whom he used to work. He wakes up in "The Village," a resortlike community on what seems to be a remote island. The Village, however, is actually a high-tech prison, and the spy is a prisoner, along with others, men and women, who were, it is understood, spies. All have been sent to the Village to be removed from circulation in any circumstances where their secret knowledge might be discovered.

Every member of the Village is known only by a number. The McGoohan character becomes Number Six and finds himself engaged in constant intellectual, emotional, and sometimes physical struggles with Number Two. But each episode presents a different Number Two. With a few exceptions, each episode begins with a repetition of some of the opening sequence from the first episode—McGoohan resigns; his file is dropped by a mechanical device into a filing cabinet labeled "Resigned"; he is gassed; he wakes in the Village and confronts (the new) Number Two. This beginning is followed by a set piece of dialogue:

Prisoner: Where am I?
Number Two: In the Village.
Prisoner: What do you want?
Prisoner. The

Number Two: Information.
Prisoner: Which side are you on?
Number Two: That would be telling. We want information, information, information... .
Prisoner: You won't get it.
Number Two: By hook or by crook we will.
Prisoner: Who are you?
Number Two: The new Number Two.
Prisoner: Who is Number One?
Number Two: You are Number Six.
Prisoner: I am not a number. I am a free man.
Number Two: Ha, ha, ha, ha... .

Some fans of the series argue that there is a slight gap between the words "are" and "the "Number Two" in this exchange ("You are. Number Six"), which would mean that Number Six is also Number One, a character who remains unseen until the final episode. Number Two pushes the inquiry. He wants to know why Six resigned. Six says he will not tell him, then vows to escape from the Village and destroy it.

Each episode in the series consists of an attempt by a new Number Two and his or her associates to find out why Six resigned and of measures taken by Six to counter these attempts. Every possible method, from drugs to sex, from the invasion of his dreams to the use of supercomputers, is used to get Number Six to reveal why he resigned. In some episodes Six shifts his focus from escape attempts to schemes for bringing down the administration of the Village, though it is always understood that escape is his ultimate goal.

The concluding episode, written by McGoohan, was extremely chaotic, confusing, and very controversial. Number Six has defeated and killed Number Two in the previous episode. "Till Death Do Us Part." When Number Six finally gets to see Number One, he turns out to be a grinning ape. But when Number Six strips off the ape mask, we see what appears to be a crazed version of Number Six, suggesting that Number One was, somehow, a perverted element of Number Six's personality. Six, aided by several characters also deemed "revolutionaries" by the administration (including the Number Two of the previous episode, somehow brought back to life), does destroy the Village. He escapes with his associates in a truck driven by a midget, who may have been the servant of all previous Number Two figures. They blast through a tunnel just before the Village is destroyed and find themselves, surprisingly, on a highway near London.

The Prisoner is continually rebroadcast, usually presented as a science fiction program, though it is probably best described as a spy series filled with technological gadgetry. Each program and every aspect of the series has been subjected to scrutiny by its fans. Dealing with topics ranging from the nature of individual identity to the power of individuals to confront totalitarian institutions, The Prisoner remains one of the most enigmatic and fascinating series ever produced for television.

Producer in Television

Although the medium's technical complexity demands that any television program is a collective product involving many talents and decision makers, in American television it is the producer who frequently serves as the decisive figure in shaping a program. Producers assume direct responsibility for a show's overall quality and continued viability. Conventional wisdom in the industry consequently labels television "the producer's medium"—in contrast to film, where the director is frequently regarded as the key formative talent in the execution of a movie.

In fact, producers' roles vary dramatically from show to show or organization to organization. Some highly successful producers, such as Quinn Martin and Aaron Spelling, are primarily business executives presiding over several programs. They may take an active role in conceiving new programs and pitching (presenting them for sale) to networks, but once a show is accepted they are likely to concentrate on budgets, contracts, and troubleshooting, handing over day-to-day production to their staffs, and exercising control only in a final review of episodes. Other producers are more intimately involved in the details of each episode, participating actively in screenwriting, set designs, and casting and—like James Burrows—serving as a frequent director for their programs. Still others serve as enabling midmanagers who delegate crucial activities to directors, writers, and actors, but who choose such personnel carefully, and enforce critical standards, while working to insulate the creative staff from outside pressures. Many producers dispatch their duties within studio hierarchies, while others own independent companies, sometimes contracting space, equipment, and personnel from studios.

Some scholars consider the producer television's auteur, suggesting that shows should be considered above all extensions of the producer's individual, creative sensibility (Marc, 1989; Marc and Thompson, 1992). Rather than creators freely following a vision, however, producers typically function as orchestrators of television programs, applying the resources available within an organization to the problem of mounting a show each week. Those resources—and deeper cultural presumptions about television's social roles and limits—may shape the producer's ambitions as much as he shapes them (Gitlin, 1983).

Beginning in the mid-1970s, Hollywood embraced an auteurist theory of its own, when the success of well-written comedies produced by small, writer-centered independent companies led to the presumption that the literate writer-producer was the single most indispensable creative resource for generating new shows attractive to demographically desirable audiences. Both studios and networks began an escalating trend of signing promising writer-producers to long-term, concessionary contracts. The most notorious—and arguably the most successful—was ABC and Twentieth Century Fox's 1988 agreement with Steven Bochco to underwrite and air the next ten shows he conceived—a decision that offered Bochco room to experiment, sometimes disastrously, with shows like Cop Rock, an attempt to bring opera to prime time. The emphasis on the producer-as-author marked the culmination of a concerted shift from 1950s industry procedure, which regarded the networks' relationships with particular studios as the most decisive aspect in generating new programming. Arguably, the shift represented a move away from a factory system whose emphases were standardization and cost containment, and whose most desirable TV producer was an effective employee or bureaucrat, toward an arts and crafts model of TV whose emphasis was differentiation and variety, and whose most desirable producer was a talented visionary with a track record. (The shift manifests the transformation of filmmaking from studio-centered Hollywood to the talent packages of the New Hollywood.)

The expanding syndication market ensured that producers—who can negotiate part-ownership of their shows—could enjoy not only creative scope but considerable financial reward as well. By the 1990s observers within the industry noted that college graduates once eager to become network executives or studio employees now arrived hoping to become producers—a shift in the sociology of television production with potential import to the comparatively new medium.

Respect for producers' creativity, however, did not mitigate Hollywood's strong inclination to treat producers as specialists in specific genres. When, for example, the successful action-adventure producer Stephen Cannell tried to diversify into comedy in the
early 1980s, the networks were unreceptive, on the grounds that Cannell had no demonstrated skill in comedy. As with many commercial artists, then, the television producer's scope of innovation is generally delimited by convention and often amounts to a variation in formula rather than a dramatic break with practices or expectations held by the industry or the producer's audiences (Newcomb and Alley, 1983; Selnow and Gilbert, 1993).

One sign that the producer is not an individual auteur is the multiplication of producer credits seen on American shows since the mid-1980s. Programs may identify an "executive producer" (sometimes a financial underwriter, sometimes the conceiver of the show's premise), an associate producer, a supervising producer (who usually serves as head writer), or a line producer (who oversees day-to-day production), or they may list any combination of these titles (which hardly comprise an exhaustive list), all in addition to the regular "producer." Such credits may reflect a complex division of labor established by the organization or packagers producing a show. They can also reflect the growing negotiating power of participants in a highly successful show, who, no longer content simply to write or act, wish to have contractual control over the assembly of entire episodes, and perhaps, eventually, develop a measure of artistic and financial independence by forming their own production companies. In any case, the proliferating credits suggest that "producerly" authority is divisible and negotiable, not individual and singular—a construction emerging from institutional pressures and politics (though individual talents and preferences of course affect how a given person executes any institutionally defined role).

The first television producers were studio personnel in local stations across the country. They included advertising agency employees who put together shows in the years of sponsor-controlled programming. Somewhat later, the Hollywood executives assigned to the first television divisions of the studios were known as producers (Anderson, 1994). All, in turn, may have owed elements of their jobs to precursors in radio (Hilmes, 1990). But the TV producer's definition as a uniquely creative figure was probably initiated by Desi Arnaz and Lucille Ball, who, in 1950, formed Desilu expressly to produce I Love Lucy on their own terms. Their crucial innovation of shooting shows on film in front of a studio audience combined the excitement of live performance with the quality control of film and enabled reruns and syndication, thus transforming television economics, as well as the struggle for creative control (Schatz, 1990).

Desilu serves as an important example of the simultaneously artistic and commercial role of the producer. Given the series format of most television programming, the producers—much more than are film directors—ultimately are faced with operating an economically, logistically, and theatrically successful assembly line, and so their influence on a program stems from their entrepreneurial, as well as their formal, ingenuity. Like so much else about television, the producer's role combines traditionally conceived realsms of "artistic" and "managerial" decision making into a hybrid activity in which artistic criteria and commercial calculation impinge on each other.

Two examples from the late 1990s and into the 2000s illustrate these interactions in distinctive ways. David E. Kelley began his television career as a writer for Steven Bochco. A lawyer by education and early experience, Kelley wrote and later produced L.A. Law. He soon created his own program, Picket Fences, again drawing on legal experience. This quirky series established him as an outstanding, perhaps "auteurist" producer, and he exemplified this role with Ally McBeal, almost a cult favorite that grew into a legitimate "hit" on the FOX network. At one time Kelly had several shows on the air, on different networks, at the same time, and he was famous for writing "all" the episodes of his series by himself. He was permitted considerable freedom from many of television's famous industrial constraints. He brought characters from different shows together in "crossover" episodes. He experimented with "re-editing" Ally McBeal into a half-hour sitcom (a notable failure). But by 2003 the declining ratings for one of his series, The Practice, forced him to take a rather drastic step and fire many of the principal actors in order to cut costs and continue the series on ABC.

A contrasting success story is offered in the work of Dick Wolf, creator of the Law and Order "franchise." Like Kelley, Wolf also wrote on Bochco series, in his case Hill Street Blues. Law and Order, however, is the antithesis of the continuing narratives that distinguished Bochco's work. Each episode, following the commission of a crime, the capture of the criminal, and the subsequent trial of the criminal, is completed in one hour. Law and Order was largely unnoticed for many years but maintained a loyal audience. Finally recognized with awards and heavily programmed on cable television in reruns, Wolf created "different" versions of the series—Law and Order SVU (Special Victims Unit dealing with sex crimes), and Law and Order CI (Criminal Intent), presenting, in some ways, the crimes from the criminal's perspective. Other versions were less successful, but from a financial and programming perspective, these programs were enormous successes. Any "auteurist" efforts on Wolf's part came in the creation of a basic concept rather than in the stamp of a distinctive sensibility.
Significantly, changes in the television industries caused by expansion of distribution through cable, consolidation of ownership, and the increased use of personal video recorders has led to an interesting development in the role of the producer. By the early 2000s, “nonwriting producers” had returned to prominence in some parts of the industry. These individuals took on the business role of the producer in a manner not unlike producers in the early years of the medium. Their primary work is to make deals, not television programs, and their efforts in the latter arena extend to locating and hiring the best writer-producers they can attract to those deals. Combined with the increasing participation by advertisers and underwriters in the processes of creating television programs and the industry bears more and more features that would have been familiar to executives in the 1950s. In many ways, opportunities for the most “creative” producers were found in “premium” or “subscription” television venues such as HBO, or on the more innovative and risk-taking cable channels, such as the FX cable network.

Programming

The term programming refers both to television content and to strategies of content selection and presentation. Yet shifts in the medium over the past two decades have called into question the apparently obvious nature of both. Modern television, after all, goes beyond the broadcast-based mode of operation that shaped the medium for so many years. Today a television is not just a set for receiving entertainment, but also a device for viewing videotapes, playing computerized games, or going channel surfing. Increasingly, it is also a means of telecommunication, of accessing dedicated information services, or of transacting home shopping. These events leave a single obvious definition of television programming—whatever appears on a television set—unwieldy and highly mutable.

Another definition of television programming might turn on the formal aspects of content appearing on the tube. But in fact, many elements of television programming have never been limited exclusively to television. Historically, television programming has borrowed liberally from other media. In addition, Hollywood promotion, sponsor marketing, and the self-promotion of the television industry have long ensured that the imaginative worlds of television characters
Programming

and stories are also available through T-shirts, toys, or other products. Much television programming, in fact, serves as part of the staged release of products by horizontally integrated entertainment companies like Paramount, Time Warner, or Disney.

The essential point in these processes is that television programming rarely appears in discrete, isolable units or displays an innately "televisual" form. Instead programming is often part of a broader set of commercial or cultural trends that are being drawn upon, commented upon, or manipulated.

Moreover, these trends are continually being reconfigured by the appearance of new technologies and businesses that establish new potential forms and forums for programming. U.S. television programming may once have been defined by Hollywood studios and U.S. television networks, but increasingly it seems likely to be defined by AT&T, Microsoft, Netscape, or America Online—companies bringing different business agendas, technical expertise, and marketing strategies to newly reconceived "texts" and "audiences."

This tie to larger sequences of events is one of the major reasons that television programming provokes broader cultural analysis and evaluation by viewers, regulators, and critics. Certainly contemporary television programming—in whatever form—seems to be more socially significant, and more revelatory of general cultural dialogue, than, say, contemporary opera, or even contemporary written literature. The idea of programming, indeed, might be better served by abandoning narrow definitions based on content or form and focusing on a set of social processes organized under the rubric of television programming. From this view, ultimately, television programming is a historically developed, changing cultural system for circulating and transforming meaning and value—a system collectively shared and supported by television producers, distributors, and users, who subscribe to and bend its priorities through their participation.

Programming, then, is a process for imbuing public value that—advertisers, celebrities, government officials, cultural monitors, and program producers all hope—can be traded in later for cash or the political power to continue their specific forms of program production and distribution. Treating programming as a processual cultural system for the circulation of meaning and value is to focus on television programming as always organized but always changing. Any examination of television programming must ultimately analyze such a system institutionalized through an array of activities.

Programming as Industrialized Commodity

The variety of television formats—and the continuing fluidity of television genres within this social process—stem from programming's status as a malleable form that can be developed for profit in often divergent ways. They stem, in short, from programming's status as a commodity.

Yet television programming is a complex and expensive product, and profitability demands standardization and routinization as much as it requires entrepreneurial experimentation or market differentiation. Programming standards and routines—and the scope for innovation—depend intimately on the financial and political configuration of the medium at any moment. And so programming emerged as a fluid commodity form whose diversity, mode of address, and regularity are delimited, at any given time, by television's industrial underpinnings.

In the first five decades of television, for example, the difficulties of developing the new medium typically meant that television lay in the hands of institutions that could weather high start-up costs and that would benefit from crucial economies of scale in the medium's use. The result was early broadcasting's distinctive mode of address: wide audiences were typically exposed to a handful of channels centrally programmed by institutions seeking large audiences, institutions like national commercial networks in the United States, or the state in the Soviet systems, or to sets of certain cultural expectations, as in the Reithian version of the British Broadcasting Corporation (BBC). Programming had to conform respectively to the dramatic expectations and financial investments provided by advertisers, to the ideological goals and prescriptions of government bureaucracies, or to the standards of cultural guardians and tutors.

Over the decade of the 1990s, however, the nature of programming was profoundly renovated. New institutions put forward a different set of economic, technological, and organizational arrangements and sought to profit from television in ways that diverged from the centralized broadcasting model. The commodity of programming was accordingly complicated and differentiated.

These developments suggest how specifically early television programming focused on wide, simultaneous presentation of a limited number of information and entertainment formats. And they suggest that programming is not a static collection of texts or conventions, but rather a flexible notion, a locus of potential commodities whose capacity to convey meaning or particular kinds of social exchange can be redefined as the institutions profiting from them alter their strategies.

Though it is familiar enough to seem simple, then, television programming is a complicated cultural phenomenon establishing a shared speculative reality among wide audiences. The next section focuses on
the specific ways in which television programming developed as a commodity under the U.S. broadcast network model. The focus on the United States is limiting, but instructive, since U.S. television programming, like U.S. filmmaking, has enjoyed a disproportionate influence on television worldwide—an advantage not coincidentally related to U.S. television’s elaboration of effective means for attracting unprecedented investment, controlling risk, and developing efficiencies of production, distribution, and exhibition of its commodity texts. Despite the considerable strictures of its commodity form, however, U.S. television programming has also experienced considerable development and elaboration, as changing institutional relationships have altered the financial strategies behind programming.

**Historical Changes in U.S. Programming**

For the first three years, television programming was all live, since there existed no feasible means of recording the signal produced by television cameras. Shows were confined to studios or to on-location programs. In the United States, studios were located in network headquarters in New York—yet in the medium’s first five years, from 1948 to 1953, the networks did not produce much of their programming. Instead, sponsors hired advertising agencies to design, budget, and produce shows that fit their marketing needs. Sponsor-controlled production suited the new networks, which could not afford to produce the quantity of programming they had promised affiliates, particularly in such an experimental and trouble-prone medium. Sponsors were encouraged to purchase the time slot they wished and think of it as their franchise, to develop as they so desired. In the words of David Sarnoff, the president of RCA, NBC’s holding company, the network existed simply as a “pipeline” for sponsors.

After 1953, however, television became less certain, and networks began to suspect they could maximize profits by undertaking their own program production, centralizing control over the schedule, and extending the still-haphazard programming day to new time slots. Under president Sylvester Weaver, NBC ejected recalcitrant sponsors and advertising agencies and launched new network-produced live programs— *Today, Tonight, and Home*, a failed afternoon program—which made programming an ever-present commodity. Weaver also undertook a concerted effort to popularize television through expensive, attention-grabbing, variety show “spectaculars.” His expensive strategies were effective, so much so that by 1955 they were no longer needed, and he was succeeded, quickly, by a new generation of executives who boosted profitability through routinization.

In 1954 and 1955 the U.S. networks turned to a new program source that would become a central part of modern television worldwide: Hollywood. The first routinely filmed television show, *I Love Lucy*, had begun in 1951, but filming remained the exception rather than the rule. By 1955 Hollywood—as part of its long-term response to the Paramount Decree of 1948, an antitrust agreement that forced the studios to sell their highly lucrative theater chains—was ready to consider television a crucial new client and point of exhibition. The result of the partnership was a new standard of television programming, the telefilm mass-produced by newly formed divisions of the Hollywood studios.

The concerted move to products of the Hollywood factory system altered the look and production of programming. The plays that had composed much of earlier television programming drew frequently on writers and actors available from Manhattan theater, radio, and literary circles. Live television, moreover, had frequently depended on “anthology” programs that could vary considerably from week to week. The telefilm’s use of recurrent actors, sets, stock footage, and dramatic formulas, by contrast, helped establish the recurring series as the basis of television programming and emphasized programming’s standardization. The results prompted many critics to consider earlier live TV a “Golden Age” of television drama. Others have subsequently questioned the aesthetic superiority of live TV, granting its spontaneity and occasional dramatic ambitions, but pointing to the persistent incursion of ads within sponsor-produced shows, and questioning, ironically, the consistency of its achievements.

Programming in the 1960s reflected a stabilizing network oligopoly. Series had longer average runs than shows in later decades. The number of cancellations per season declined steadily. Even the networks’ relative position remained fixed: CBS continued building a remarkable (and given later events, a decidedly induplicable) 20 years as the number one network in television ratings. ABC, the smallest and youngest network, remained the perennial third; NBC in the middle. Throughout the decade, however, all three networks’ ratings converged. Their programming philosophy was summed up by NBC’s Paul Klein, who articulated a policy: Least Objectionable Programming. Viewers, the philosophy assumed, will watch anything unless they are offended into changing the channel. Many critics have consequently regarded 1960s programming—characterized by the most popular show in television history, *The Beverly Hillbillies*—as assembly line, escapist TV, though others are reexamining the presumed homogeneity of programming in the period. The perennial third-place network, ABC, was in some respects the most interesting, introducing shows that
titillated (Bracken’s World, Love American Style), sought out young audiences (The Flying Nun), or highlighted the spectacular (ABC’s Wide World of Sports).

A decisive break in programming came in 1970. That year, three milestone developments—the cigarette ad ban, the Prime Time Access Rule, and the Financial Interest and Syndication Rules—prompted the networks to address an inevitable question: how could continued network growth come from the finite amount of advertising time available on television, and the inevitable plateauing of demand by advertisers. The primary answer was to develop finer demographic targeting, a strategy that could make some shows more expensive than the prevailing norm. The consequence was a new emphasis on programming that would attract varying demographics. Differentiation rather than standardization, and active attraction rather than innocuousness, became the basis of network strategies. In 1969 CBS president Robert Wood canceled 13 shows appealing to older and rural audiences in favor of a more urban, higher-income audience. Among the replacements were the three innovative sitcoms that served as the basis for what later critics have called the “Television Renaissance”: The Mary Tyler Moore Show, All in the Family, and M*A*S*H. programs that ultimately found broad appeal, yet did so through ambitious character development, topical controversy, and innovative production styles. “Quality” television had emerged as a desirable, even necessary commodity for the networks to develop.

CBS’s move contradicts a common tenet that the last-place network in the oligopoly was the most likely to experiment with innovative programming in an effort to raise its standing. Third-place standing could be a powerful motive for some innovations, but it was probably only the perennial first-place network, CBS, that could have risked such an abrupt and wholesale change in programming philosophy.

Not only did television programming develop a more complex hierarchy of quality after 1970, it became less of an anonymous, industrial product. Some producers, like Norman Lear, Stephen Cannell, Aaron Spelling, and Steve Bocho, became household names and were credited with functioning as television authors. At the same time, the first generations of TV children were achieving adulthood and brought to their viewing a cumulative, retrospective acquaintance with the history of programming. Producers and viewers alike became more self-conscious about television programming’s variety, its capacities as an expressive medium, and its historical depth.

For producers, these developments marked a codification of unstated industry practices, into more self-consciously assumed production “styles,” “authorial” qualities, and, increasingly, “innovative” distribution and mode of exhibition. Independent producer Stephen Cannell, for example, began to develop an entire menu of programs—some for prime time, some for syndication, some exclusively for cable, each with different target appeals, and each observing different budgetary constraints according to expected income. Yet all bore the Cannell imprimitur—made explicit by a trailer following each show, in which Cannell flourishingly ripped a script from a typewriter. In one show designed for fringe-hour cable, Cannell appeared personally as host, using his name recognition to attract audiences to a highly tongue-in-cheek suspense anthology reminiscent of the old Alfred Hitchcock Presents. The show’s appeal—actively dwelling on its divergence from prime-time budgets, topics, and taste—presumed a much more complex sense of televisual position and quotation than would have been normal in 1960s programming.

By 1988 the networks, surrounded by new competition, were in the historically unique position of having to react to program trends, rather than working to select and cultivate them. The emergence of the FOX broadcast network in 1986—the Big Three’s first viable competition—was based in programming that parodied or transgressed the oligopoly’s genres. It used irreverence to target and imply a savvy, urban, youthful audience. When FOX did use more routine forms, it put in a twist by featuring black characters, assuring disproportionately large and loyal black audiences. Prime-time television on the Big Three—which, despite falling audiences, still constituted the industrial, financial, and aesthetic point of reference—began to reflect the influence of FOX, music videos, syndicated tabloid shows, and producers (often arriving from filmmaking) whose projects were conceived for multiple distribution. From 1988 to 1990, the networks actively experimented with new generic hybrids and outré programming with shows like Twin Peaks, Bagdad Cafe, and Northern Exposure.

Accompanying these changes was a profound shift in the cultural role of programming. Given the medium’s persistent popularity, the finite amount of programming available under the three-network oligopoly had served as a prominent and recognizable social touchstone, a set of social facts that most Americans acknowledged and shared as part of their national culture. In the days before videotape, such programming had also been ephemeral, assuming the aspect of an occasion or experience; and programming’s simultaneous broadcast nationwide made that ephemeral experience a uniquely collective one. Programming, then, possessed the attributes of a public ritual, through which viewers collectively attended to
experiences constituting a sense of social connection through the establishment of collective representations.

Just as pronounced was the sense of comparative propriety and circumspection in programming prevailing under the network oligopoly. Aware that their most unique commodity was widespread acceptance by audiences—and that the U.S. regulatory framework defined broadcasting as a public resource serving the public interest—networks used censors to enforce what they regarded as prevailing public mores of sexuality, violence, and sensationalism. Individual networks occasionally sought to boost ratings through titillation or scandal, but these attempts were measured departures from conventional TV standards that remained far more circumscribed than the license taken routinely in films or novels.

As television programming began to expand beyond the three-channel network system, its ritual aspects and its highly conventionalized moral circumspection began to dissolve. Shows were no longer singular, punctual experiences, once they could be recorded, viewed later the same day in syndication, or bought at a video store. Audiences were no longer collective and mass, but fragmented according to the particular time and venue they chose to engage a program. Moreover, viewers choosing from many, rather than just three, options were arguably less of a public, and more of a self-elected fractional interest group, likely to be watching programming that could diverge dramatically from “mainstream” interests or values. With the decline of the three networks, then, programming became less of a central social ritual attended by wide audiences, and more of a varied, highly differentiated medium circulating commodities that could be more casually engaged by viewers. Scholars of the 1970s had identified television programming as a public forum and a modern bard. By the 1990s television programming arguably constituted a variegated cultural “newsstand.”

This alteration has intensified throughout the 1990s and into the new century. One major contributing factor has been the growth of cable and satellite television systems, especially those enhanced with digital delivery capability. These systems regularly offer more than 100 channels, many of them highly specialized, targeted toward specific demographic groups (witness the growth in offerings for children) or particular interests—sports programming morphs into The Golf Channel and multiple channels for sports news and information; MTV spins off channels specializing in particular musical genres and faces competition from multiple channels focused on music; 24-hour news programming expands; and some channels offer specific appeals to audiences with particular political interests.

Many of the new channels were owned or co-owned by networks or studios producing television content for broadcast, and new strategies developed to make maximum financial use of programs. “Repurposing” described a procedure in which a program would appear in one venue only to be presented in another during the same week. Local broadcasters protested the use of network material on cable or satellite, arguing that the practice reduced the size of their audiences, thereby reducing potential advertising revenue. They were less concerned, however, when programming flowed in the other direction. When Bravo, the NBC-owned cable network, discovered a bona fide hit with Queer Eye for the Straight Guy, broadcasters profited from the migration of the show to the network.

Other new technologies intensified the capability of viewers to act as their own programmers. Digital video recorders such as TiVo and RePlay made recording television programs much simpler than videocassette recorders had allowed, even making it possible for viewers to collect an entire “season” of a single title, playing back episodes at will—and fast-forwarding through commercials. In a somewhat related development, some popular television shows began to be available for rental on VHS and DVD formats. Viewers without access to premium distribution channels such as HBO could rent The Sopranos or Sex and the City, or even earlier programs such as The Prisoner and view them on home video systems.

The profound alterations outlined here have been paralleled by an equally important set of institutional arrangements and developments designed to best control television programming at any given time.

Institutional Changes in Broadcast Programming

As a commodity, commercial programming is produced following familiar priorities of standardization (to control costs), differentiation (to penetrate markets), and innovation conceived largely as variation within repetition (to contain risk). Although some critics regard these attributes as evidence of programming’s lamentable role in manifesting the values of the marketplace, others see them as “enabling conditions” establishing some of television programming’s most unique and recognizable pleasures. Perhaps the strongest symptom of commercial programming’s commodity status is its common organization into recurrent daily or weekly series. U.S. television is not generally filled with unique, onetime programs. Such programming would frustrate not only
Programming

producers and networks, who are trying to extract reliably continuous income from television, but viewers too, who (many commentators would argue) are accustomed by consumer society to pleasure that is organized around a continual but measured introduction of novelty. Unlike a painting or a novel, a television show that appears once is unsatisfyingly ephemeral, while a show that is exactly reproduced is just a rerun. The series format, in which episodes invoke familiar settings and characters in slightly varied situations, satisfies ambitions both for more of the same and for something new. The series allows producers to develop long-term elaborations and complications of characters and situations that (most notoriously in the case of the soap opera) can make a program’s fictional world part of the viewer’s own. Such involvement also makes viewers’ loyalty to the show into a reliable commodity that networks can either sell to advertisers or use to secure reliable subscriber fees. At the same time, the series routinizes production schedules and standardizes the costs that producers and networks must expect to pay to produce a new week of programming.

The seasonal schedule long prevalent in the United States also served to routinize production, viewing, and advertising sales not just week to week, but on a yearly calendar, which concentrated the industry’s introduction of novelty in a single spectacular moment. The impending fall season could foment substantial bidding wars for the coming years’ commercial slots, by advertisers involved in active speculation over the popularity of future programs. Definite seasons were a strong fixture of the industry when it was dominated by the oligopoly of ABC, NBC, and CBS, but new developments such as overnight ratings systems, competition from cable and syndication, and the rise of new networks such as FOX have blurred the outlines of these markers.

Conventions like the length of a series and the integrity of the season alter, in fact, with changing pressures within the industry. In the 1960s, during the height of a stable three-way network monopoly, U.S. TV functioned on a reliable calendar inherited from radio, in which a 39-week season was interrupted by a 13-week summer rerun period (the lack of new summer production costs enhanced profits for networks). As competition for network growth became more intense after 1970, and as viewers began to abandon network television for cable and syndication after 1976, networks became more reluctant to make long-term mistakes and tried routinely to contract a minimum of episodes—as few as four at a time in 1990.

If series programming forms a major part of the schedule in order to regularize viewership and cultivate loyalty over the long term, shorter-run formats like the docudrama, miniseries, the sports special, and feature film introduce a sense of novelty and occasion, of divergence from one’s own routine and that of competitors. Often they represent attempts to capitalize on timely, singular events—a sports championship, a scandalous murder, political intrigue—which are likely to have sufficient recognition to ensure a large immediate audience. (Here entertainment blurs indissolubly into information.) Historically, the most persistent complement to standard series programming have been feature films licensed from Hollywood studios and run under titles such as the Wednesday Movie of the Week.

The commodity form of television programming is evident not just in the rhythm of seasons and the length of series, but in the specific distribution of shows among eight “dayparts.” Scheduling strategies and purchases of advertising time vary with dayparts, each of which fosters unique genres in an effort to attract the presumably distinctive audiences available at different times of the day. Many critics suggest that television’s dayparts ultimately represent the penetration of rationalized economic organization into the most mundane, casual, and intimate activities of domestic life; others suggest that they form the basis for familiar pleasures and ease of use. The composition of dayparts has changed historically, but since the mid-1980s typical dayparts for an ideal typical U.S. network affiliate station have remained relatively stable.

**Early Morning (7:00–10:00 A.M.)**
Audience: adults preparing for work; preschool children. Programming: news, talk; local or network

**Daytime (10:00 A.M.–6:00 P.M.)**

**Early Fringe (6:00–7:00 P.M.)**
Audience: elders and adults returning from work. Programming: news; local and network

**Prime Access (7:00–8:00 P.M.)**

**Prime Time (8:00–11:00 P.M.)**
Late Fringe (11:00–11:30 P.M.)
Audience: Adults. Programming: news; local.

Late Night (11:30 P.M.–12:30 A.M.)
Audience: Adults, “liminal adults” (maturing adolescents). Programming: talk shows, fiction; network, syndicated.

Overnight (12:30–7:00 A.M.)
Audience: Adults, liminal adults. Programming: syndicated talk, comedy, drama, and “old movies”; network, syndicated.

Though these conventionally labeled audiences reflect the hoped-for targets of advertisers, from the viewer’s perspective they constitute modes of address that do not necessarily conform with actual identities. Many teenagers, for example, probably indulge in late-night programming explicitly to feel more like liminal adults; while many single adults enjoy the warm and fuzzy feelings of early-evening shows “aimed” at children.

The highly familiar succession of genres and implied audiences associated with dayparts reflects the U.S. medium’s priority on maximizing available viewership at all times, in order to maximize the fees advertisers will pay. Important dayparts accrue an identifiable tone: early morning, a hale, nationwide conviviality that orients viewers to the day; early fringe, a local-community focus supported by the plethora of local ads sold by affiliates; prime access, the netherworld of syndicated tabloid and game shows. Prime time, of course, is the costliest, most watched period of television, featuring the most elaborately produced dramas, comedies, or films, and harboring the greatest sense of public event. Late night engages in moral license for off-color humor in the part of the day most distant from work and school, and having a presumably adult audience.

Systems with less stake in appealing to audiences often develop a less-differentiated programming day. Even within the United States, the tendency to target dayparts remains most pronounced on the major networks and their affiliates and is less consistent on cable and independent channels whose appeal may already lie in a particular audience segment, programming genre, or for that matter, in programming against the norm set by broadcast television.

In the United States between 1950 and 1984, the overwhelming majority of profitable stations were affiliates of one of the three major networks. New network shows were the most ambitious production on television, and their contractually secured prominence in favored dayparts made them the most familiar to audiences. All network programs, however, eventually lost enough of their popularity to be removed from network schedules. The most successful then entered into circulation in the piecemeal syndication market that sold programs for rebroadcast on U.S. stations during dayparts not filled by network feeds—or to international markets. Syndication was thus responsible for a distinctive kind of programming based on the reuse of proven commodities: the rerun.

Syndication of network programs was highly profitable, since it involved the recycling of commodities whose production costs had been almost entirely paid for by network fees. Originally, U.S. networks tried to secure syndication profits by demanding part ownership of a show as a condition for airing it, but this became illegal because of antitrust concerns in 1970. As product suppliers assumed control, syndication quickly became less of an appendage to network programming, and more of a competitor. When the number of television stations in the United States increased dramatically in 1984 (because of relaxed regulation of television licenses), a wholly alternative market for syndicated programming suddenly emerged. Demand for additional shows was sufficient to stimulate a boom in first-run syndication—programs produced exclusively for individual bidding stations and never intended for network release. The syndication market was a somewhat poorer one than the traditional network oligopoly, and so first-run syndication frequently constituted a kind of B-grade programming.

As networks audiences continued to decline throughout the 1980s, suppliers became less concerned with a long-standing convention governing reruns. Networks had typically preferred their programming to be exclusive and had discouraged early episodes of a current program from airing in syndication while the show still remained part of the network lineup. In the mid-1980s, offers from independent stations and cable channels for network-quality programming became too lucrative to ignore, and so it became common for viewers to be able to see a show on the same day from two radically different perspectives: as the wholly novel experience of a new network episode, and as a reencounter with syndicated episodes from the show’s past. This accentuated the series nature of programming and made retrospective evaluation of dramatic characters and situations a routine part of viewing. It also undermined the networks’ sense of exclusive venue by emphasizing the independence of shows from particular channels.

In sum, syndication—the attempt to increase profits through reuse of old programming or to develop cheaper alternatives to network programming—com-
Programming

complicated and enriched the body of television programming, introducing historical depth; a new "low end" of programming inviting self-conscious irony in viewing; multiple, simultaneous views of individual series; and a divorce of specific shows from previously inevitable network lineups. Changes that demanded that programming serve as a commodity in new ways also altered how programming would be used as a text. As indicated earlier, expansion of cable and satellite delivery systems, new digital recording systems, and the commercial sale and rental of television series directly to viewers modified all the conventions of television's first three decades. Seasons became more erratic. Dayparts continued to be targeted by demography, but even more so by age, as "aging down" to younger audiences affected categories and forms such as talk shows and soap operas. As audiences "fragmented" or "segmented" into smaller groups, the difficulty of creating a "hit" show that could last for many years became more and more difficult. Thus, while expanding delivery systems demanded more and more syndicated material, fewer and fewer programs achieved the longevity associated with the practice. More "first-run" syndication emerged as original programming, and cable networks, like the conventional broadcast networks, joined the search for creative talent capable of producing original programming.

Programming Strategies

Commercial television generally profits from advertising revenues, which increase with audience size. Both local stations and networks thus devote considerable effort to structuring their programming to hold the largest desirable audiences possible.

The premium on holding audiences leads to one of the most identifiable characteristics of commercial U.S. television: its continual interruption by commercials. The industry has long presumed that viewers are alienated by commercials and will only watch them if they are interspersed with other programming. The length, frequency, and grouping of ads is a constantly renegotiated aspect of the television ad market. Networks try to limit ads to keep prices high and viewers tuned in, while advertisers try to secure many commercials—short, cheap, and well separated from those of the competition. In the long term, advertisers' demands have steadily decreased the length, increased the frequency, and fragmented the grouping of ads, making commercial television seem increasingly like a cluttered "flow" of programming.

Programming strategies are not, of course, limited to the distribution of advertisements. Station and network programmers work concertedly not just to select attractive programming, but to sequence shows in a way that will hold audiences once they have tuned in. A number of tactics have been developed to build a profitable schedule.

"Block programming" involves scheduling a series of related shows that are likely to attract and hold a given audience for an entire daypart. U.S. stations and networks, for example, have traditionally filled Saturday mornings with cartoons aimed at children, and Sunday afternoons with (presumably) male-oriented sports. A block may be defined by particular demographics, but its definition can take other forms. From 1984 to 1987 NBC scheduled a famous Thursday evening lineup featuring five critically acclaimed series in a row: *Cosby, Family Ties, Cheers, Night Court,* and *Hill Street Blues.* The first four were sitcoms that attracted such inclusive audiences that they ended most years in the top 20. The last program was an innovative drama with a much smaller, but quite exclusive audience whose demographics made *Hill Street Blues* 's advertising rates the highest of the season. Despite their differences, all five programs were treated as an identifiable block of programming because they fostered NBC's strategy of offering a night of high-quality television.

Block programming has become increasingly overt, and now it is quite common for cable or broadcast networks to package particular nights of programming as blocks devoted to "Our Television Heritage," "Bette Davis Night," or "All Comedy Night." Such promotions potentially highlight aspects of shows that viewers may not have conceived alone: as in the case of reruns, programming's nature as a commodity that can be packaged can affect the public's appreciation of shows.

"Counterprogramming" involves running an attractive alternative to competitors' shows. CBS, for example, has tried several times to develop Monday night as a lineup of shows attractive to women, whom they presume are alienated by ABC's ratings-leading *Monday Night Football.*

"Hammocking" refers to scheduling a new or comparatively unpopular show between two established popular programs, on the theory that audiences are less likely to change channels for a single time slot. Hammocking has historically been a reliable strategy, raising the ratings of the middle show, if not always making it into a hit. The risk is that the weak show will diminish audiences that would have stayed if the two popular programs had formed a block. "Lead-ins" and "lead-outs," like hammocking, try to achieve success through association, lead-ins by placing a popular program right before a lower-rated one, lead-outs by placing the popular program immediately after the
less-successful show. Historically, lead-ins have proved more successful. "Bridging" stagers the start of a long-format program so that viewers would have to abandon it in the middle in order to tune in to the beginning of the competitor's show. "Ridgepoling" distributes the individual shows comprising a successful block across different nights of the week, where they can serve as lead-ins (or -outs) for additional programming.

New or ailing stations and networks have frequently reversed their fate by combining these strategies: after establishing a minimal block of two or three programs, they will extend the block by hammocking a new show. Then each of the shows in the block will be ridgepoled to establish a foothold on several nights of the week.

"Stunting" refers to a variety of exceptional tactics used to boost viewership during key weeks of the season, or when a network, station, or program is in special trouble. Frequent stunts involve programming a highly promoted miniseries or feature film to attract concentrated viewer attention; having one show's star appear on another program; or mounting highly promoted, end-of-season weddings, births, or cliffhangers. More dramatic stunts involve delaying the season debut of a highly popular program a few weeks in order to build suspense—and, hopefully, steal audiences decisively away from competitors' just-rolling season. In 1990 CBS pulled a stunt that experimented with long-held presumptions about the acceptable frequency and amount of repetition allowed on network prime time. Following the example of syndication and cable channels, it ran each episode of a new series (The Flash) in two different time slots each week. The idea was both to save money and to give the show twice the chance for its audience to discover it and build loyalty. The experiment failed. The seeming incongruity of such an attempt attests to how strongly the conventional season and schedule format organizes producers' and viewers' expectations for different varieties of television programming: what works for syndication did not work for network prime time.

**Programming in Other National Contexts**

This history of programming in the U.S. television system should serve to emphasize its differences from other national systems, which are grounded in different forms of financial support and different regulatory circumstances. In the public-service tradition, for example, most closely identified with the British Broadcasting Corporation, programmers are mandated to provide diversity. Free of the advertiser's necessary search for the largest audience or the audience with the most purchasing power, alternative forms of programming may be provided to minority audiences. More attention may be paid to children and elder groups. Linguistic distinctions can be more readily recognized and honored. Moreover, programming schedules need not be so regularized and routinized; "seasons" and "dayparts" need not be so rigidly applied. As a result, expectations of creative communities, industries, and audiences may all be different from those attached to the U.S. system.

In the Soviet model, also free from advertiser demands, programming took on yet other configurations, more closely aligned to state agendas and more overtly ideological goals. Here again, the routines and patterns were easily altered by fiat.

Throughout the world, mixtures of these systems have been developed, often forged in specific relationships to neighboring nations and almost always in some relation to the U.S. television industry, which often supplied supplemental programming, even in systems constructed along lines of the Soviet model. But as ideological, technological, economic, and regulatory shifts have spread, more and more the patterns of industrial and programming arrangements seem to converge. The "newsstand" model is now expanded by satellites to a global level, and it has become possible to acquire "information" and "entertainment" in many languages and forms or to observe changes within specific nations and regions that are the direct result of new technological configurations.

In India, for example, the publicly operated state broadcast channels long offered an "official" version of news. As household videotape machines became more common, however, alternative monthly video newsmagazines emerged, supported by subscribers. These video magazines offered fuller exposés into important events. Because they were directed at those wealthy enough to own videotape machines, they also served to constitute a self-conscious elite, newly defined by its well-informedness. Here programming is again tied to the shifting institutional arrangements that enable production, distribution, and exhibition, and the specific kind of commodity formed by programming delimits, not just its financial viability, but its historical aesthetic, social, and cultural import.

In this process the struggles of nations and regions to maintain forms of aesthetic, social, and cultural autonomy and distinction—to place their own items on the global newsstand or to construct a continuing local identity—are now carried out in relation to international media conglomerates. These organizations make use of new technologies that blur national boundaries as easily as they blur program genres and once again throw television programming into a process of signif-
icant redefinition. All the technological developments and industrial practices described are increasingly common throughout much of the world. Multiple channels, increasing commercialization, 24-hour schedules, new devices for recording and programming in the home—all these have altered the meanings and uses of television programming in some ways while maintaining received practices in others. Even when new developments appear radical or startling, the old patterns often lie just beneath the surface. Television programming has become a familiar feature of social experience and is likely to remain so for some time.

PROMAX

PROMAX International (formerly Broadcast Promotion and Marketing Executives, or BPME) is the trade organization for media promotion and marketing professionals. Founded in the United States in 1956 as the Broadcast Promotion Association (BPA), its name changes tellingly reflect the substantial changes experienced by the electronic media industries since the mid-20th century.

Initially, “broadcast promotion” was the term for media efforts conducted by television and radio stations to maximize the size of audiences and the numbers of advertisers. These efforts largely consisted of date/time program announcements on the station’s own air coupled with print advertisements in the local media (particularly TV Guide in the case of television promotion). More elaborate promotion campaigns were usually handled by the networks. Sweeping industry changes in the 1970s and 1980s—including the lessening of the dominance of the commercial networks, the growing importance of locally produced news, the rise of cable and pay-TV services, increases in program production costs, and the growth of syndicated programming—resulted in a significantly more complex media environment and led to the need for more-sophisticated promotion techniques. Consequently, in 1985 the organization changed its name to Broadcast Promotion and Marketing Executives to reflect the increasing importance of marketing principles such as the use of consumer research, competitive positioning, long-range planning, and audience segmen-
Pryor, Richard (1940–)

U.S. Comedian, Actor

Richard Pryor, comic, writer, and television and film star, was the first African-American stand-up comedian to speak candidly and successfully to integrated audiences using the language and jokes blacks previously only shared among themselves when they were most critical of the United States. His career really began as a high school student, when his teacher persuaded him to discontinue cutting and disrupting class by offering him the opportunity to perform his comic routine once a week for his classmates. Nevertheless, Pryor dropped out of high school, completed a tour of duty in the army, then began playing small clubs and bars, anywhere he could secure a venue. His keen and perceptive observation of people, especially his audiences, enabled him to develop into a gifted monologist, mimic, and mime.

The first phase of his career began in the 1960s, when as a clean-cut imitator of Bill Cosby, Pryor played New York clubs. His material, best suited for an integrated audience, did not contain the cutting-edge...
dialogue for which he later became most noted. By 1970, tired of the constant comparisons to Cosby and feeling disgusted with himself for the direction of his career, he walked off the Las Vegas Aladdin Hotel stage in the middle of a performance. After a two-year hiatus in Berkeley, California, where he spent time reading Malcolm X’s work, visiting bars, clubs, and street corners to observe people, and collaborating with a group of African-American writers later known as the “Black Pack,” Pryor returned to performing. A metamorphosis took place during those two years, and Pryor offered his audiences a new collection of characters, earthy metaphors, and the tough, rough profane language of the streets. No longer did he mimic Cosby, for he now spoke on behalf of the underclass, and his monologues and jokes reflected their despair and disillusionment with life in the United States.

His performances, enhanced by his use of body language, captured the personalities of the numerous black characters he created to ridicule and comment upon the circumstances under which African Americans lived. It was revolutionary humor. Pryor’s characters introduced to his audiences persons from black folklore as well as characters from the streets of Anytown, U.S.A. He integrated his personal style of comedy with commentary on the social condition. His popularity skyrocketed, and his career as a stand-up comedian expanded to that of a television and film star.

The Richard Pryor Show premiered on NBC in 1977 and rocked the censors until, after only five shows, the series was canceled. Television was not ready for his explosive talent, and Pryor was not ready to alter the content of his program. He portrayed the first African-American president of the United States and, in another skit, used costumes and visual distortion to appear nude. Simultaneously, his concert films—full of his impersonations, cockiness, and assertiveness and balanced by his perceptive vulnerability—achieved wide audience appeal and became legendary in their content. Richard Pryor: Live in Concert (1979), considered by critics to be one of his best concert films and his first concert released to theaters, showcased Pryor and his unique ability to capture ethnic humor and make it acceptable to a mainstream audience. Pryor appeared on numerous television programs and served as a co-writer for Blazing Saddles and as a writer for Sanford and Son, The Flip Wilson Show; and The Lily Tomlin Special, for which he won an Emmy in 1973.

Even though his early movie roles are forgettable, film served as another venue for Pryor’s dangerous and uncontrollable personality. Lady Sings the Blues was the turning point. As the Piano Man, Pryor proved he was capable of sustaining a supporting role in a dramatic film. He added life and vitality to the role and to the film. After Lady Sings the Blues, he starred or costarred in The Mack (1973), Hit (1973), Uptown Saturday Night (1974), Car Wash (1976), The Bingo Long Traveling All-Stars and Motor Kings (1976), and Silver Streak (1976). Costarring in Silver Streak served as another breakthrough for Pryor, and he soon received starring roles in Which Way Is Up? (1977) and Greased Lightning (1977), among others. His record albums, full of his special humor and street-wise characters, topped the charts: That Nigger’s Crazy (1974); Is It Something I Said? (1975); Bicentennial Nigger (1976); and Wanted, Richard Pryor Live and in Concert (1979).

In 1980 Pryor sustained third-degree burns over most of his body while, it was reported, he was free-basing cocaine. The response to this tragedy was overwhelming, and Pryor received attention from the media as well as from citizens throughout the United States. He returned to the large screen to complete Bustin’ Loose, then went on to receive rave reviews for his concert films Richard Pryor: Live on Sunset Strip

After his accident, Pryor's other starring roles in movies did not portray the comic as the dynamic, controversial storyteller he became after his exile in Berkeley. The roles in his latter films presented a meeker, more timid person; and, in The Toy (1982), he literally played the toy for a spoiled white child. This character and his dialogue were a far cry from the Pryor persona most admired by his audiences.

Stricken with multiple sclerosis in the 1990s, Pryor appeared on television talk shows and toured infrequently. He still played to sold-out audiences, but the old fire and cutting-edge rhetoric evident in his monologues of the 1970s were missing. Pryor in the 1970s would never allow a heckler to intrude on his story and ruin his timing. The Pryor of the 1990s, weak and deeply affected by his disease, did not give the quick, biting, and sarcastic comeback that would always silence a brave heckler from the audience. He did, however, guest star on the popular situation comedies Martin (1993) and Malcolm and Eddie (1996).

Richard Pryor and his comic style emancipated African-American humor, and his influence and ascendency crushed boundaries and opened frontiers in comedy unheard of until he appeared on the concert stage. A testament to his influence was evident in a September 1991 televised gala tribute to Pryor presented by comic stars. In 1998 he was selected as the first recipient of the Mark Twain Award for Humor, presented by the John F. Kennedy Center for the Performing Arts.

Public Access Television

Public access television has been one of the most interesting and controversial developments in the intersection between media and democracy within the past several decades. Beginning in the 1970s, cable systems began to offer access channels to the public, so that groups and individuals could make programs for other individuals in their own communities. Access systems began to proliferate, and access programming has been cablecast regularly in such places as New York, Los Angeles, Boston, Chicago, Atlanta, Madison, Urbana, Austin, and perhaps as many as 4,000 other towns or regions (Linder, 1999).

When cable television began to be widely introduced in the early 1970s, the Federal Communications Commission (FCC) mandated in 1972 that “beginning in 1972, new cable systems [and after 1977, all cable systems] in the 100 largest television markets be required to provide channels for government, for educational purposes, and most importantly, for public access.” This mandate suggested that cable systems should make available three public access channels to be used for state and local government, education, and community public access use, which collectively came to be referred as PEG access.

“Public access” was construed to mean that the cable company should make available equipment and airtime so that literally anybody could make noncommercial use of the access channel, and say and do anything they wished on a first-come, first-served basis, subject only to obscenity and libel laws. The result was an entirely different sort of programming, reflecting the interests of groups and individuals usually excluded from mainstream television.

The rationale for public access television was that, as mandated by the Federal Communications Act of 1934, the airwaves belong to the people, that in a democratic society it is useful to multiply public participation in political discussion, and that mainstream television severely limited the range of views and opinion. Public access television, then, would open television to the public; it would make possible community participation and thus would be in the public interest of strengthening democracy.

Creating an access system required, in many cases, setting up a local organization to manage the access channels, though in other systems the cable company itself managed the access center. In the beginning, however, few, if any, cable systems made as many as three channels available, but some systems began offering one or two access channels in the early to mid-1970s. The availability of access channels depended, for the most part, on the political clout of local governments and committed, and often unpaid, local groups to convince the cable companies, almost all privately owned, to make available an access channel. A 1979 Supreme Court decision, however, struck down the 1972 FCC ruling on the grounds that the FCC had no authority to mandate access, an authority that supposedly belongs to the U.S. Congress alone. Nonetheless, cable was expanding so rapidly and becoming such a high-growth competitive industry that by the 1980s city governments considering cable systems were besieged by companies making lucrative offers (20- to 80-channel cable systems) and were able to demand access channels and financial support for public access systems as part of their contract negotiations.

Consequently, public access grew significantly during the 1980s and 1990s and the Cable Communications Policy Act of 1984 and the Cable Television Consumer Protection and Competition Act of 1992 provided language that allowed local governments to require public access cable channels as part of their negotiated agreements (Linder, 1999).

Not surprisingly, public access television has been controversial from the beginning. Early disputes revolved around explicit sexuality and obscenity, particularly in New York City where public access schedules with programs like Ugly George and Midnight Blue drew attention and provoked criticism. Focus then turned to controversial political content when extremist groups such as the Ku Klux Klan and Aryan Nation began distributing programs nationally. Many groups like the American Atheists, labor groups, and a diverse number of political groups began producing programs for syndication, and debates emerged over whether access systems should show programming that was not actually produced in the community where it was originally cablecast.

Despite the controversy, public access television has thrived in many parts of the United States. A few systems charge money for use of facilities, or charge a fee for use of airtime, but due to competitive bidding among cable systems in the 1980s and 1990s for the most lucrative franchises, many cable systems offer...
free use of equipment, personnel, and airtime, and occasionally even provide free videotapes. In these situations, literally anyone can make use of public access facilities without technical expertise, television experience, or financial resources.

Many public access systems also offer a range of conceptual and technical training programs designed to instruct groups or individuals who wish to make their own programs from conception through final editing. As video equipment costs have rapidly declined it has even become possible for some groups to purchase their own equipment.

In the 1990s, following the trends of talk radio, many talk television access shows emerged. Individuals fielded calls from members of the community and discussed current political problems, or, in some cases, personal problems. In many ways, this "conversational" mode exemplified the community focus and personal orientation of access television, again moving away from mainstream TV designed to reach the largest possible audiences, while creating a host of highly idiosyncratic conversations.

But various actions moving toward greater media deregulation in the 1990s and into the new millennium threaten the continued survival of access, as do the Internet and other new communications technologies. In a highly competitive environment, cable systems may very well close down access systems if there is insufficient government pressure to keep them open, though competitive market pressures might promote the survival of popular access channels. And although the Internet and other emerging delivery systems could render obsolete the relatively low-tech access systems, these same forms of communication may even multiply access television, enabling literally any group or individual to make their own television programs and distribute them over the Internet. Whether a more democratic communications system emerges or dissolves is up to citizens who are interested in communicating with other citizens and nourishing instruments of democratic communication such as public access TV. Present trends toward concentration of media ownership, commercialization, and tabloidization of news and information threaten the integrity of the public sphere and the possibilities for democratic communication. If U.S. democracy is to survive and thrive, citizens need to use all instruments of democratic communication such as community radio, public access television, and now the Internet.

Public Interest, Convenience, and Necessity

U.S. Broadcasting Policy

Originally contained in U.S. public utility law, the "public interest, convenience, and necessity" provision was incorporated into the Radio Act of 1927 to become the operational standard for broadcast licensees. This act contained a regulatory framework that ensured broadcasters operated within their assigned frequencies and at the appropriate time periods. It not only specified technical requirements, but programming and licensing ones as well. The Communications Act of 1934 expanded on the Radio Act of 1927 to include the telephone and telegraph industries, and the 1934 law has in turn been amended to accommodate subsequent telecommunications technologies, such as television and cable.

The obligation to serve the public interest is integral to the "trusteeship" model of broadcasting, the philosophical foundation upon which broadcasters are expected to operate. The trusteeship paradigm is used to
justify government regulation of broadcasting. It maintains that the electromagnetic spectrum is a limited resource belonging to the public, and only those most capable of serving the public interest are to be entrusted with a broadcast license. The Federal Communications Commission (FCC) is the U.S. government body responsible for determining whether applicants for broadcast licenses meet the requirements to obtain them, and the FCC also further regulates those to whom licenses have been granted.

Interpretation of the “public interest, convenience, and necessity” clause has been a continuing source of controversy. Initially, the Federal Radio Commission (FRC) implemented a set of tests, criteria that would loosely define whether the broadcasting entity was fulfilling its obligation to the listening public. Specifications included program diversity, quality reception, and “character” evaluation of licensees. These initial demands set a precedent for future explications of the public interest.

The pretelevision “Blue Book,” as the set of criteria was popularly known, was developed by the FCC in 1946 to evaluate the discrepancy between the programming “promise” and “performance” of radio broadcasters. Since license renewal was dependent on serving the public interest, program content became a significant consideration in this procedure. The “Blue Book” required licensees to promote the discussion of public issues, serve minority interests, and eliminate superfluous advertising. Unpopular with commercial broadcasters, the “Blue Book” was rendered obsolete after five years because of the economic threat it posed.

In its “1960 Program Policy Statement,” the FCC echoed similar sentiments pertaining to television broadcasters. In response to assorted broadcasting scandals, the FCC issued this statement to “remind” broadcasters of how to serve the public interest. Although previous tenets of the “Blue Book” were rejected, this revised policy included the “license ascertainment” stipulation, requiring broadcasters to determine local programming needs through distribution and analysis of surveys. However, adherence to such programming policies has never been strictly enforced.

The deregulatory fervor of the 1980s seriously challenged the trusteeship model of broadcasting. Obviously, this same move toward deregulation subsequently challenged the means by which satisfaction of the “public interest, convenience, and necessity” should be determined. The rise of cable television undermined the “scarcity of the spectrum” argument because of the newer system’s potential for unlimited channel capacity. The trusteeship model was replaced with the “marketplace” model (which had always undergirded commercial broadcasting in the United States). It was now argued that the contemporary, commercially supported telecommunications environment could provide a multiplicity of voices, eradicating the previous justification for government regulation. Under this model, the public interest would be defined by “market forces.” A broadcaster’s commercial success would be indicative of the public’s satisfaction with that broadcaster.

Advocates of the marketplace argument reject the trusteeship model of broadcasting. It is no surprise that the Cable Act does not contain a “public interest, convenience, and necessity” stipulation. However, because cable also falls under the regulatory scrutiny of the FCC, serving the public interest is encouraged through the PEG (public, educational, and government) access requirement related to the granting of cable franchises.

Among the deregulatory policies implemented during the 1980s were the relaxation of ownership and licensing rules, eradication of assorted public-service requirements, and the elimination of regulations limiting the amount of commercial advertising in children’s programming. Perhaps most detrimental to the legal justification for the trusteeship model of broadcasting, however, was the abolition of the Fairness Doctrine. This action altered future interpretations of the “public interest, convenience, and necessity” clause.

In 1949 the FCC established the Fairness Doctrine as a policy that guaranteed (among other things) the presentation of both sides of a controversial issue. This concept is rooted in the early broadcast regulation of the Federal Radio Commission. In 1959 Congress declared the doctrine part of the Communications Act in order to safeguard the public interest and First Amendment freedoms. The U.S. Supreme Court upheld the constitutionality of the Fairness Doctrine in the case of Red Lion Broadcasting Co. v. FCC (1969). Although the Fairness Doctrine was enacted to promote pluralism, it eventually produced an opposite effect. Concerned that advertising time would be squandered by those who invoked the Fairness Doctrine, broadcasters challenged it constitutionality, claiming that it promoted censorship instead of diversity. Declared in violation of the First Amendment, the Fairness Doctrine was repealed, and in 1987 President Ronald Reagan vetoed attempts to provide constitutional protection for the doctrine.

The 1996 Telecommunication Act, the most sweeping revision of U.S. policies in history, confirmed the dominance of the “marketplace” model. Taking note of a wider range of communication technologies no longer reliant on the limited electromagnetic spectrum,
the act was presumably designed to encourage “competition” among media suppliers, thereby enhancing and increasing options available to the “public.” In practice, the act enabled a round of massive mergers, placing ownership of distribution devices as well as content production under control of fewer and fewer entities. By 2002 many of these large companies foundered, and the “marketplace” was in a precarious state.

The obligation to serve the “public interest, convenience, and necessity” is demonstrated through myriad broadcast policies. Licensing requirements, the equal-time and candidate access rules, the Fairness Doctrine, and the Public Broadcasting and Cable Acts are just some examples of U.S. regulations that were implemented to safeguard the public from the possible selfish motives of broadcasters. History has proven, however, that interpretation of the “public interest, convenience, and necessity” is subject to prevailing political forces. The development of new technologies continues to test the trusteeship model of broadcasting and what defines the public interest. Yet despite its ambiguity and the difficulties encountered in its application, this phrase remains the stated regulatory cor-

nerstone of telecommunications policy in the United States.

Public-Service Announcement

In the United States a public-service announcement (PSA) is defined by the Federal Communications Commission (FCC) in a formal and detailed manner. A PSA is any announcement (including network) for which no charge is made and which promotes programs, activities, or services of federal, state, or local governments (e.g., recruiting, sale of bonds, etc.) or the programs, activities, or services of nonprofit organizations (e.g., United Way, Red Cross blood donations, etc.) and other announcements regarded as serving community interests, excluding time signals, routine weather announcements, and promotional announcements. PSAs came into being with the entry of the United States into World War II. Radio broadcasters and advertising agencies offered their skills and facilities to aid the war effort and established the War Advertising Council, which became the official home front propaganda arm of the Office of War Information. Print media, outdoor advertising, and especially radio became the carriers of such messages as “Loose lips sink ships,” “Keep 'em Rolling,” and a variety of exhortations to buy war bonds.

By the end of the war, the practice of volunteering free airtime had become institutionalized, as had the renamed Advertising Council, which now served as a
Public-Service Announcement

facilitating agency and clearinghouse for nationwide campaigns that soon became a familiar part of daily life. “Smokey the Bear” was invented by the Ad Council to personify its “Only You Can Prevent Forest Fires” campaign; “A Mind Is a Terrible Thing to Waste” has raised millions of dollars for the United Negro College Fund; the American Cancer Society’s “Fight Cancer with a Checkup and a Check” raised public awareness as well as funds for research and patient services.

The ultimate demonstration of the effectiveness of PSAs came in 1969. Two years earlier, a federal court upheld the FCC’s application of the Fairness Doctrine to cigarette advertising on radio and television and ordered stations to set aside “a significant amount of time” for the broadcast of antismoking messages. This effectively meant one antismoking PSA would air for every three tobacco commercials. The PSAs proved so effective that smoking rates began to decline for the first time in history; the tobacco industry withdrew all cigarette advertising; and Congress made such advertising illegal after 1971. With the passage of that law, however, the bulk of the antismoking messages also disappeared and cigarette consumption rose again for a while. On balance, however, public health professionals credit the PSAs with having saved many millions of lives by initiating the decline in smoking by Americans.

During the 1960s and 1970s, as media access became an issue, the Advertising Council—and to some extent the very concept of PSAs—came under criticism as being too narrow in focus. As David Paletz points out in Politics in Public Service Advertising on Television, campaigns such as “Only you can stop pollution” were seen as distracting attention from the role of industry in creating demands for excessive energy and in creating dangerous waste products. Other campaigns struck critics as too eager to build consensus around seemingly inconsequential but carefully non-partisan concerns. The networks sought to distance themselves from the Ad Council, and to set their own agendas, by dealing directly with the organizations themselves. Local stations were under additional pressure from innumerable new community-based organizations seeking airtime; many stations created and produced announcements in an effort to meet local needs, especially once the FCC came to require that stations report how many PSAs they presented and at what hour.

In the 1980s a number of stations long held by their founders’ families went public or changed hands. The resulting debt load, mounting costs, as well as increased competition from the new media, all resulted in demands for greater profitability. Most unsold airtime was devoted to promoting the station or network. Moreover, deregulation saw government relinquishing the model of trusteeship of a scarce national resource in favor of a marketplace model.

Offsetting this trend to some extent were growing concerns about the illicit drug problem. The Advertising Media Partnership for a Drug-Free America (famous for the PSA intoning “This is your brain . . .” over a shot of an egg; “This is your brain on drugs. Any questions?” over a shot of an egg frying) was set up by a group of media and advertising agency executives, spearheaded by Capital Cities Broadcasting Company, then completing the takeover of ABC. Rallying unprecedented support, the organization mounted the largest public-service campaign ever. Indeed, at its height, with more than $365 million worth of print lineage and airtime annually, it rivaled the largest advertising campaigns. Consistent with contemporary thinking about the nature of social marketing, the campaign was solidly grounded in McGuire’s paradigm of behavioral change: awareness of a problem by a number of people will result in a smaller number who undergo a change of attitude toward the problem; an even smaller number from this second group will actually change their behavior. During the first years of the campaign, its research team documented considerable difference in attitudinal and behavioral change among young people. Later evidence led to less-optimistic conclusions about the antidrug campaign, as a number of societal factors changed and media time and space became less readily available.

Other recent developments include two distinctive strategies. The Entertainment Industries Council combined high-profile film, television, and recording stars doing network PSAs with depiction efforts—producers, writers, and directors incorporating seatbelt use, designated drivers, AIDS education, and antidrug ref-
erences in storylines. The other major development, championed and often carried out by consultants, was the appearance of the Total Station Project. Stations would adopt a public-service theme and, often after months of planning and preparation, coordinate PSAs with station editorials, heavily promoted public-affairs programs, and features in the local news broadcasts. Total Station Projects most frequently are aired during sweeps periods, the months when the station’s ratings determine the next year’s commercial time prices.

Public-Service Broadcasting

Public-service broadcasting is based on the principles of universality of service, diversity of programming, provision for minority audiences (including the disadvantaged), sustaining an informed electorate, and cultural and educational enrichment. The concept was conceived and fostered within an overarching ideal of cultural and intellectual enlightenment of society.

The roots of public-service broadcasting are generally traced to documents prepared in support of the establishment of the British Broadcasting Corporation (BBC) by Royal Charter on January 1, 1927. This corporation grew out of recommendations of the Crawford Committee appointed by the British postmaster general in August 1925. Included in those recommendations was the creation of a public corporation that would serve as a trustee for the national interest in broadcasting. It was expected that as public trustee, the corporation would emphasize serious, educational, and cultural programming that would elevate the level of intellectual and aesthetic tastes of the audience. The BBC was to be insulated from both political and commercial influence. Therefore, the corporation was a creation of the Crown rather than Parliament, and funding to support the venture was determined to be derived from license fees on radio (and later television) receivers rather than advertising. Under the skillful leadership of the BBC’s first director general, John Reith, this institution of public-service broadcasting embarked on an ethical mission of high moral responsibility to utilize the electromagnetic spectrum (a scarce public resource) to enhance the quality of life of all British citizens.

Within the governance of national authorities, public-service broadcasting was re-created in various forms in other democracies in Western Europe and beyond. At the core of each plan was a commitment to operating radio and television services in the public good. The principal paradigm adopted to accomplish this mission was the establishment of a state-owned broadcasting system that functioned either as a monopoly or at least as the dominant broadcasting institution. Funding came in the form of license fees, taxes, or similar noncommercial options. Examples of these organizations include the Netherlands Broadcasting Foundation, Danish Broadcasting Corporation, Radiodiffusion Television Française, Swedish Television Company, Radiotelevisione Italiana, Canadian Broadcasting Corporation, and Australian Broadcasting Corporation. The ideals on which these and other systems were based suggested services that were char-
Public-Service Broadcasting

categorized by universality and diversity; however, there were notable violations to these ideals, especially in Germany, France, and Italy. In some cases the state-owned broadcasting system became the political mouthpiece for whomever was in power. Such abuse of the broadcasting institutions' mandate made public-service broadcasting the subject of frequent political debates.

Contemporary accounts of public-service broadcasting worldwide often include the U.S. Public Broadcasting Service (PBS) and National Public Radio (NPR) as American examples. However, unlike the British model that was adopted across Europe, the U.S. system came into being as an alternative to the commercially financed and market-driven system that has dominated U.S. broadcasting from its inception. Whereas 1927 marked the beginning of public-service broadcasting in Britain, the United States Radio Act of 1927 created the communication-policy framework that has enabled advertiser-supported radio and television to flourish. Language contained within this act explicitly mandated broadcasting stations to operate "in the public interest, convenience, and necessity," but the public-service ideals of raising the educational and cultural standards of the citizenry were marginalized in favor of capitalistic incentives. When the Radio Act was replaced by the Communications Act of 1934, the Federal Communications Commission (FCC) recommended to Congress that "no fixed percentages of radio broadcast facilities be allocated by statute to particular types or kinds of non-profit radio programs or to persons identified with particular types or kinds of non-profit activities." It was not until 1945 that the FCC created a license for "noncommercial educational" radio stations. These stations were envisioned to be the United States' answer to the ideals of public-service broadcasting, but the government's failure to provide any funding mechanism for noncommercial educational stations for nearly 20 years resulted in a weak and undernourished broadcasting service. Educational radio in the United States was referred to as the "hidden medium."

Educational television was authorized by the FCC's Sixth Report and Order adopted on April 14, 1952, but the creation of a mechanism for funding educational radio and television in the United States had to wait for passage of the Public Broadcasting Act on November 7, 1967. Funding levels never approached the recommendations set forth by the Carnegie Commission on Educational Television in its report Public Television: A Program for Action, in which the term "public television" first appeared.

During the 1970s and 1980s public-service broadcasting worldwide came under attack, as the underlying principles on which it was based were called into question. The arrival of new modes of television delivery—cable television, satellites, videocassettes—had created new means of access to broadcast services and thus changed the public's perception about the importance and even legitimacy of a broadcasting service founded on the principle of spectrum scarcity. Ideological issues also came into play. Conservative critics raised questions about the very notion of a public culture, whereas some liberals charged that public-service broadcasting was a closed, elitist, inbred, white-male institution.

Furthermore, movement toward a global economy was having an ever-increasing impact on the way policymakers saw the products of radio and television. The free-market viability of educational and cultural programming as successful commercial commodities seemed to support the arguments of critics contending that public-service broadcasting was no longer justified. Deregulation of communication industries was a necessary prerequisite to the breakdown of international trade barriers, and the shift toward increased privatization brought new players into what had been a closed system. The growing appeal of economic directives derived from consumer preferences favored the substitution of the U.S. market-forces model for the long-standing public-trustee model that had been the backbone of public-service broadcasting. Adding to the appeal of the U.S. paradigm was the growing realization that program production and distribution costs would continue to mount within an economic climate of flat or decreasing public funding.

By the early 1990s, the groundswell of political and public dissatisfaction with the privileged position of public-service broadcasting entities had reached new heights. Studies were revealing bureaucratic bungling, cost overruns, and the misuse of funds. One commission after another was recommending at least the partial dismantling or reorganization of existing institutions. New measures of accountability demanded more than idealistic rhetoric, and telecommunication policymakers were turning a deaf ear to public-service broadcasting advocates.

Communication scholars, who for the most part had been reticent on these issues, began to mount an intellectual counterattack, based largely on the experiences of public broadcasting in the United States. Critics of U.S. communications policy underscored concerns about the evils of commercialization and the influence of the open marketplace. Studies pointed to the loss of minority voices and a steady decline in programs for segmented populations. Scholars also challenged the
illusion that new television delivery systems such as 500-channel cable networks and direct broadcast satellites would offer unlimited program choices. Content analyses revealed program duplication, not diversity, across the channels, and the question of just how far commercial broadcasters would venture away from the well-proven formulas and formats received public attention. A concerned electorate was beginning to ask whether the wide-scale transformation of telecommunications was not without considerable risk. Many worried that turning over the electronic sources of culture, education, and political discourse to the ever-shifting forces of the commercial marketplace might have profound negative consequences.

By the mid-1990s, telecommunications policy issues ranged from invasion of privacy to depictions of violence on television, the manufacturing of parent-controlled TV sets, revisions in technological standards, and finding new funding alternatives to sustain public-service broadcasting in some form. These issues were also firmly embedded in the public discourse. Communication corporations appeared and disappeared daily. The environment of electronic communications was in a state of flux as companies selling new technologies vied for a piece of a quickly expanding and constantly evolving marketplace. Public-service broadcasters reassessed their missions and began building new alliances with book publishers, computer software manufacturers, and commercial production houses. In the United States, public radio and television stations experimented with enhanced underwriting messages that looked and sounded more and more like conventional advertising.

In June 2000 a group of scholars assembled at the University of Maine to assess the merits of public-service broadcasting worldwide, and to develop plans for media reform within the United States. At this occasion the formation of a new organization, Citizens for Independent Public Broadcasting, was announced, with the association aiming to restore U.S. broadcasting to its original mission of public service. Despite all the fanfare and high hopes of those assembled in Maine, however, issues related to growing commercialization and the inability to get Congress to create an insulated trust fund to support public broadcasting remained unresolved in the early part of the 21st century. A ruling by the FCC that permitted public broadcasters to use a portion of their newly assigned space on the digital spectrum for commercial ventures seemed to signal that the trend toward an increased blurring of the line between commercial and noncommercial licenses would continue. Other U.S. efforts to create increased citizen access to the airwaves were largely thwarted when Congress minimized the potential impact of new low-power FM radio stations, an innovation that had been devised by the FCC as a way to deal with growing numbers of so-called pirate radio stations that were operating illegally.

In the early 2000s telecommunications policy worldwide seemed increasingly tied to the opportunities afforded by a new global economy shaped by market forces and privatization. Whether public-service broadcasting ideals could survive within this evolving political and economic environment remained a topic for robust debate.

Public Television

U.S. public television is a peculiar hybrid of broadcasting systems. Neither completely a public-service system in the European tradition, nor fully supported by commercial interests as in the dominant pattern in the United States, it has elements of both. Although the Public Broadcasting Service (PBS) is emerging as a national image for U.S. public TV, at its base, this system consists of an ad hoc assemblage of stations united only by the fluctuating patronage of the institutions that fund them, and in the relentless grooming of various constituencies. The future of public broadcasting in the United States may in fact be assured by the range of those constituencies and by public TV's malleable self-definition. As technologies to permit both storage and interaction with viewers expand, public TV may come to be as much an electronic public library as a broadcaster. It staked a claim to a unique role in an increasingly diversified televisual environment by its early-21st-century campaign to generate "social capital," identified as networks of mutually rewarding social relationships in a community.

Since it became a national service in 1967 public TV has had a significant cultural impact—an especially impressive achievement given its perpetually precarious arrangements. Through its programming choices, it has not only introduced figures such as Big Bird and Julia Child into national culture, and created a home for sober celebrities such as Bill Moyers and William Buckley, but it has also pioneered new televisual technologies. Early achievements included closed captioning and distance learning. More recently, public TV has pioneered original digital programming, particularly using high-definition technology, and led in the development of web-based extensions of television programs.

U.S. public TV programming evolved to fill niches that commercial broadcasters had either abandoned or not yet discovered. Children's educational programming (especially for preschoolers), "how-to" programs stressing the pragmatic (e.g., cooking, home repair, and painting and drawing), public-affairs news and documentaries, science programs, upscale drama, experimental art, educationally tilted reality and docuseries programming, and community-affairs programming all contribute to the tapestry of public TV. In the course of a week, half the television-viewing homes in the United States turn to a public TV program for at least 15 minutes, and, overall, the demographics describing viewers of public TV more or less match those of the nation as a whole. However, based on an annual average, public TV's prime-time rating hovers at 2 percent of the viewing audience, a rating on par with some popular cable services but far below network television ratings. Demographics for any particular program are narrowly defined; overall, they are weakest for young adults. Less heralded, but increasingly important in public TV's rationale, is its extensive instructional programming and information-networking, most of which is nonbroadcast.

In the critical design period of American broadcasting (1927-34), which resulted in the Communications Act of 1934, public-service broadcasting had been rejected out of hand by legislators and their corporate mentors. A small amount of spectrum space on the more poorly received ultra-high frequency (UHF) band was set aside for educational television in 1952. This decision was modeled after the 1938 set-aside for educational (not public or public-service) radio stations, a regulation that had been implanted in response to the rampant commercialization of radio. In TV, as in radio, much of that spectrum space went unused, and most programming was low cost and local (e.g., a lecture).

After World War II, "educational television" evolved into "public television," around the concerns of cold war politics and the corporate growth of the television industry. The Public Broadcasting Act of 1967 reflected, in part, the renewed emphasis placed on mass media by major foundations such as Carnegie and Ford, as well as the concern of liberal politicians and educators, and, in part, it demonstrated an interest in communications technology by the nation's military-industrial strategists. The historic 1965 Carnegie Commission on Educational Television, willed into being by President Lyndon Johnson in search of a televisual component to the Great Society program, claimed that a "Public Television" could "help us see America whole, in all its diversity," and "help us know what it is to be many in one, to have growing maturity in our sense of ourselves as a people." Many legislators and conservatives, however, openly feared the specter of a fourth network dominated by eastern liberals. Commercial broadcasters did not want real rivals, although they supported the no-
tion of a service that could complement theirs and relieve their public-interest burden.

The service was thus deliberately created as the "lemon socialism" of mass media, providing what commercial broadcasters did not want to offer. The only definition of "public" was "noncommercial." Token start-up funds were provided, and the system was not merely decentralized but balkanized. The current complex organization of public TV reflects its origins. The station, the basic unit of U.S. public TV, operates through a nonprofit entity, most commonly a nonprofit community organization, through the state's government (which provides mininetworks for all stations in a state), or through a university. Of the approximately 1,660 stations in the United States, there are about 350 public TV stations, although less than 200 independently program for their communities (the others mostly retransmit signals). Almost everyone in the United States can receive a public TV signal. About two-thirds of the public TV stations are UHF, still a significant limiting factor in reception. At the turn of the 21st century, about 40 stations also broadcast on digital channels, as a result of the requirement of the 1996 Telecommunications Act to use new spectrum given to each station for digital transmission.

Stations are fiercely independent, cultivating useful relationships with local elites, although the stations often form consortia for program production and delivery and to shape more general policy for public TV as a whole. A handful of wealthy, powerful producing stations contrasts with a great majority of small stations that produce no programming. In most major markets, there are several stations, with much duplication of PBS programming, but occasionally "overlap" stations establish some distinctive services catering to minorities and showcasing independent or experimental productions.

The 1967 Public Broadcasting Act also created the Corporation for Public Broadcasting (CPB) as a private entity, to provide support to the stations. The governing board of the CPB is politically appointed and balanced along partisan lines, and it is funded by tax dollars. The CPB was designed to assist stations with research, policy direction, grants to upgrade equipment and services, and, eventually, a small programming fund. However, the CPB was specifically banned from distributing programs. This was designed to inhibit the creation of a national network. Over the years, the corporation has acted as the lightning rod for congressional discontent, since the CPB is a funnel for federal tax dollars. Congress has usually removed the board's discretionary authority over funds rather than cut its budget. As a result, most of CPB's funds are now set up to flow directly to local stations.

Despite governmental intent to keep public broadcasting local, centralized programming services of several kinds quickly sprang up. Public-affairs services centered, just as political conservatives had feared, on the eastern seaboard. Resulting programs enraged President Richard Nixon, who tried to abolish the service and did succeed in weakening it.

Out of this conflict grew, by 1973, today's Public Broadcasting Service, the first and still premier national programming service for public TV. Shaped in part by station owners who, like Nixon, disliked eastern liberals, PBS is a membership organization of television stations. Member stations pay dues to receive up to three hours of prime-time programming at night, several hours of children's programming during the day, and other recommended programs. Since 1990 stations have accepted a programming schedule designed by a PBS executive. This policy replaced a previous system in which programs were selected through a system driven by majority vote. Stations were persuaded to cede power because overall ratings for public TV were declining. Although not obliged to honor the prime-time schedule, stations are urged to do so, and they are increasingly constrained by contract conditions to devote larger sections of their programming to a common national schedule. This version of a common schedule assists in enlarging the audience and enables stations to benefit from national advertising. Other programming services abound, both regionally and nationally, but none has the imprimatur of PBS.

CPB and PBS both provide funds for the development and purchase of programming, but they do not make most programs. Producing television stations, especially in New York, Boston, Los Angeles, and Washington, D.C., have historically produced the bulk of programming. Public TV also depends heavily on a few production houses, both commercial and noncommercial. Canadian production houses have risen in importance, with favorable exchange rates lowering production costs there, and smaller stations are increasingly producing individual programs and series, and working in producing consortia. Smaller television and film producers, historically frozen out of commercial broadcast television and typically constrained within formats on cable, chronically complain that public TV—their last resort and the only venue for authorial filmmaking—slights them. They argue that their work exemplifies the diversity of viewpoints and perspectives celebrated in the Constitution's First Amendment. Their complaints, coordinated over a decade, finally convinced Congress in 1988 to create the Independent Television Service, as a wing of the CPB, with the specific mission to fund innovative work for underserved audiences.
Public TV’s funds come from a variety of sources, each of which comes with its own set of strings. Funding sources include (for fiscal year 1999) the federal government (15 percent), state and local governments (17 percent), public and private universities (11 percent), and private funders: subscribers (26 percent) and corporations (15 percent). The federal appropriation brings controversy virtually on an annual basis. Even so, the CPB’s budget has, with few exceptions (notably, during the first Reagan presidency, and in 1995, when a new Republican congressional majority took office), been regularly increased to keep its total amount roughly steady with 1976 levels measured in 1972 dollars. The content of public-affairs programming has consistently been the target of Republican and conservative legislators’ ire, and such anger has caused public TV to be hypercautious about such programs. This may explain why public TV has not developed an institutional equivalent of National Public Radio’s around-the-clock news reporting.

About half the funds for public TV come from the private sector. Viewers are the single largest source of funding; their contributions come, effectively, without strings and so are especially valuable. These funds are often raised during “pledge drives” in which special, highly popular programming is presented in conjunction with heartfelt pleas for funds from station staff, prominent local supporters, and other celebrities. Programs aired during pledge drives (shows hosted by self-help celebrities, operas sung by stars such as Placido Domingo, a Harry Potter–themed program) reflect the genteel image of the service. Stations have also found some success with Internet pledging, another indication of the upscale tilt of public TV and its viewers. These pledge drives are supplemented, in many markets, with other fund-raising efforts, such as auctions or special performances. The 10 percent of all public TV viewers who become donors tend to be culturally and politically cautious, and the need to cultivate them skews public TV programming to what venerable broadcast historian Erik Barnouw called the “safely splendid.”

Business contributes about a sixth of the funding, but its contributions have disproportionate weight in shaping programming decisions, because business dollars are usually given in association with a particular program. Public broadcasters openly market their audience to corporations as an upscale demographic, one that businesses are eager to capture in what is known as “ambush marketing”: catching the attention of a listener or viewer who usually resists advertising. The hallmark PBS series Masterpiece Theatre was designed, from logo to host, by a Mobil Oil Corporation executive looking to create an image for Mobil as “the thinking man’s gasoline.” Conflict-of-interest issues ensue from corporate underwriting, as do questions about allowing corporations to set programming and production priorities. (If stations had not aired Doing Business in Asia, a series sponsored by Northwest Airlines, which has Asian routes, what else might they have been able to do with their time and money?)

These pressures have combined to make the service vulnerable to political attack from both the left and right as elitist. After Nixon accused the service of being dangerously liberal, many broadcasters scanted public affairs and presented “safe” cultural programming, only to be accused by the Reagan administration in 1981 of providing “entertainment for a select few.” Reagan’s attempt to cut funds also failed, although the administration succeeded in rescinding advance funding that had been designed as a political “heat shield” after Nixon’s attack. In 1992 Republican Senator Bob Dole of Kansas threatened to hold up funding for public broadcasting on charges that it was too liberal, and he succeeded in making broadcasters nervous and forcing CPB to spend $1 million on surveys and studies that changed nothing. In 1994, following on the Republican victory in Congress, both Dole and Speaker of the House Newt Gingrich of Georgia targeted the CPB for rescission; on grounds that it was both elitist and liberal.

At the same time, the variety of funding sources, along with the decentralized structure of public TV, militated against mission-focused planning, in the prolonged industry turmoil that marked the last years of the 20th century. Multichannel, satellite, and cable television successfully eroded much of public TV’s traditional niche, although public TV continued to hold as a unique audience the 30 percent of the population that does not receive pay television. Commercial investors, hungry for content, increasingly invested in public TV, and public TV entities have searched out commercial partners. New technologies posed hypothetical opportunities while requiring extensive experiment and innovation. Stations were forced to invest in digital technology without business plans or public subsidies for programming, as a result of a push largely by commercial broadcasters for expanded spectrum. In 2001 the Federal Communications Commission permitted stations to carry advertising on, and make money from, ancillary (nonbroadcast) services on digital channels, such as voice messaging and data transmission.

At the beginning of the 21st century, economic, political, and technological forces finally converged to refocus public TV’s role. PBS attained a clearer agenda-setting role within the diffuse bureaucracies involved in public TV, effectively controlling the na-
tional schedule and radically revising its prime-time lineup for the first time in two decades. It aggressively branded the public TV environment as "PBS" by such measures as creating websites for all programs but refusing to cite competing websites on air; carrying the PBS "bug" on channel feeds; outreach and educational campaigns and materials; and public relations with opinion makers. The ascension of Pat Mitchell, a veteran of commercial cable TV, as PBS president in 2000, brought crisper decision making and more direct competition for programs with commercial channels, as well as the "social capital" campaign. Producers within and for public TV more frequently entered into international coproductions, with both public-service and commercial partners, and worked harder to retain intellectual property rights. The challenge of developing and programming digital channels has created new financial pressures and new business plans. At the same time, stations have individually experimented with local partners, with extended educational services (including distance learning), and with becoming nodes of community networks.

The September 11, 2001, terrorist attacks on the United States proved a test of the role of public TV in national culture, and it demonstrated public TV's strengths and weaknesses. In the immediate aftermath, the service demonstrated its inability to cover news thoroughly, since few stations had any ability to cover events live. However, in the days that followed, public TV turned out to be the place to go for thoughtful, well-researched documentaries about topics related to the terrorism, with some of this programming being rerun to high ratings, after low-rated debuts. The teams that produced these documentaries demonstrated the value of deep investment in the subject matter and were able to draw on contacts and outtakes to produce more public affairs quickly. PBS created an information-rich website with a page for storytelling that expanded quickly and many links to local stations' websites, where users could contribute to charities and support organizations. Thus, the service's functions as high-quality programmer, educational resource, and community network node were showcased.

An improbable, many-headed creature, public TV is unlikely to disappear even under political assault. It is also unlikely suddenly to become a service that a plurality of Americans would expect to turn to on any given evening. It is likely to become more commercial in its broadcast services and more entrenched (and defensible as taxpayer-funded) in its infrastructure and instructional services.

**Further Reading**

The U.S. Federal Communications Commission (FCC) regulates television in Puerto Rico. Its jurisdiction over the Puerto Rican communication industry is identical to that over the United States and the other U.S. territories. It oversees most aspects pertaining to the television industry, including the assignment of frequencies, the granting of licenses and their renewal, the evaluation and approval of construction permits, and requests for changes in frequencies, potency, and ownership. Following passage of the Telecommunications Act of 1996, all facets of the telecommunication industry in Puerto Rico, like those throughout the United States, have been rapidly changing. Mergers and acquisitions, convergence of industries, and economic distress have affected many telecommunication sectors. Although actions of the FCC remained uncertain as of 2002, it was clear that Puerto Rican television would be altered in the near future.

History and Trends

Television could not develop in Puerto Rico as early as it did in other areas of the region, due to Puerto Rico's condition as a territory of the United States, which put the communication industry under the overriding control of the FCC. When the FCC implemented the television freeze and "ordered applications for new TV stations placed in the pending file" on September 29, 1948, Puerto Rico had no choice but to postpone its incursion into the new medium.

The agency renewed the process for the issuance of broadcasting licenses on April 12, 1952, and soon thereafter, on July 24, 1952, it granted the first permit for the construction of a commercial television station in a U.S. territory to El Mundo Broadcasting Company. WKAQ-TV, Telemundo, was founded by Angel Ramos, who also owned El Mundo newspaper and WKAQ radio (Radio el Mundo), the first radio station in Puerto Rico (established in 1922). Telemundo received its FCC license to transmit over Channel 2 in San Juan on February 12, 1954, and went on the air with regular programming on March 28, 1954. The second permit for the construction of a commercial television station was granted to Ramón Quiñónez, owner of WAPA Radio on August 12, 1952. WAPA-TV received its FCC license to transmit over Channel 4 in San Juan on March 15, 1954. It started regular transmission on May 1, 1954. Programming at both TV stations extended from 4:30 p.m. to 10:30 p.m. and included varied genres such as live comedy and drama, variety shows, women's programs (cooking shows), news programs, and films (mostly Mexican).

Competition has always been fierce among these two broadcasters, which have alternated in their success at being the first to offer videotape technology (1966), color television (1968), and satellite broadcasting (1968)—many times achieving these accomplishments within a week of each other. They have also alternated in obtaining the largest share of the audience and the top programs. Due to their early successes, these two stations attracted the attention of mainland corporations. A succession of sales took place and continues to this day; in fact, changes in ownership have accelerated since approval of the Telecommunications Act of 1996.

WKAQ-TV, Telemundo, was first sold to John Blair and Company, a diversified, publicly traded U.S. company on April 14, 1983. Blair and Company then sold the station in October 1987 to Reliance Inc., the owners of Telemundo, the Spanish-language television network in the United States. Thus, Telemundo of Puerto Rico became part of the large network of Hispanic TV stations on the mainland. In October 2001 NBC, a division of General Electric, acquired Telemundo Communications Group, which includes Telemundo of Puerto Rico, in a package deal worth $2.7 billion. Regulatory approval by the Federal Trade Commission (FTC) has been granted; FCC approval was expected shortly.

WAPA-TV, or Telecentro, has changed ownership several times since 1975. It was acquired first by Western Broadcasting in the United States; later sold to Screen Gems, a subsidiary of Columbia Pictures; and acquired in 1980 by Pegasus Inc., a subsidiary of General Electric. In December 1999 WAPA-TV was sold to LIN Television, a subsidiary of diversified media company Chancellor Media Corporation, which also owns and operates eight FM radio stations in Puerto Rico through Primedia Broadcast Group.

In the early 1950s the Department of Education, headed by Mariano Villalonga, lobbied for the establishment of public broadcasting. On June 25, 1954, the Puerto Rican Legislature approved Joint Resolution Number 94, which authorized and assigned the fund-
ing for the creation of the Public Radio and Television Service and the installation and operation of public TV and radio stations. After obtaining approval by the FCC to transmit over Channel 6, WIPR-TV went on the air on January 6, 1958, thus becoming the first educational TV station in Latin America. Offering educational and cultural fare unavailable in commercial broadcasting, it initially transmitted from 3:30 p.m. to 9:00 p.m. on weekdays and for only three hours on weekends. Its affiliation with the National Educational Television and Radio Association in 1961 increased its programming. Also in 1961, a second station, Mayagüez's WIPM-TV (an affiliate of WIPR-TV), retransmitted programs to the west coast over Channel 3.

Trailing the commercial stations, WIPR-TV first offered regular programming in color on May 12, 1971. By 1979 WIPR-TV and WIPM-TV joined the Public Broadcasting Service (PBS), further increasing their offerings and bringing English-language programs from the United States to Puerto Rican viewers. On January 21, 1987, radio and TV broadcasting was transferred from the Department of Education to a newly created state venture, named Corporación para la Difusión Pública (Corporation for Public Broadcasting). An increased budget has since allowed improvements in physical facilities, equipment, and programming, with airtime gradually extended to 24 hours a day. The public TV stations created a news department in November 1995, and two editions of its newscast are presented daily. Export of local productions to some U.S. markets has been intermittent.

WRIK-TV was established in Ponce, on the south coast of Puerto Rico, after receiving an FCC permit to go on the air on Channel 7 on February 2, 1958. Its owner was Alfredo Ramírez de Arellano, and, lacking its own programming, the station retransmitted Tele mundo's fare. By 1970 it was bought by United Artists, moved to San Juan, renamed Rikavisión, and started to produce its own programming without much success. In 1979 it was acquired by Puerto Rican producer Tommy Muñiz and became WLUZ-TV. Economic problems forced Muñiz to sell the station in 1985 to Malrite Communications Group. The station became WSTE-TV, and in 1991 it was sold to Jerry Hartman, a Florida entrepreneur. Known locally as SuperSiete, it is a limited outlet for independent producers, who buy time to present their programs during periods other than the 57 weekly hours contracted through a long-term marketing agreement to transmit Channel 11 programming.

In 1960 Rafael Pérez Perry received authorization to start WKBM-TV and transmit over Channel 11. At the time, he owned one of the most successful radio stations on the island (WKBM-AM). However, his success in radio did not extend to television. As has happened to Channel 7, Channel 11's competition with Channels 2 and 4 was never effective, and, after Perry's death, the station's economic problems worsened, leading it to declare bankruptcy, and close in 1981. In 1986 Lorimar Telepictures acquired the station from Bankruptcy Court and renamed it WSII-TV. It was subsequently sold to Malrite Communications Group in 1991. Called Teleonce, Channel 11 has achieved great success, and since 1995 it has been capable of truly competing with Channels 2 and 4, obtaining equal or better shares and ratings in several time periods. In 1998 it was sold to Montgomery, Alabama-based Raycom Media, only to be sold again in June 2001 to Univisión Communications, the leading Spanish-language media company in the United States. Through their subsidiary Univisión Radio, they also own and operate four radio stations acquired in 2003 in Puerto Rico's lucrative radio market.

During the 1980s and early 1990s, other commercial stations, all lesser players, struggled without much success. WPRV-TV, Channel 13; WSJU-TV, Channel 18 (the oldest of this group dating back to the mid-1960s); WSJN-TV, Channel 24; and WRWR-TV, Channel 30, were all unable to effectively compete with the older, more solidly established stations. Serious economic problems forced some into bankruptcy, and all went off the air. In recent years, all of these stations started to transmit again, albeit with changes in ownership, call letters, and programming.

WPRV-TV, Channel 13, was bought by the Catholic Church, Archdiocese of San Juan, in January 1995. Known locally as Teleoro, it is a commercial station built around social, religious, and cultural programming.

WSJU-TV, Channel 18, was acquired in December 1990 and belongs to International Broadcasting Corporation. This Puerto Rican enterprise catered to independent producers, had scarce programming, and mostly played Spanish-language music videos. Its call letters changed to WAVB-TV and most recently to WTCV-TV. In February 2001 Channel 18 entered into a local marketing agreement with the Home Shopping Network to carry the network's Spanish-language edition. WVEO-TV, Channel 44, and WIEC-TV, Channel 48, are affiliate stations retransmitting to the west and south, respectively.

WSJN-TV, Channel 24, was bought by S&E Network, a Puerto Rican venture that went on the air on November 1994 and produced some 50 hours a week of sports programs and studio-based talk shows. The station's call letters were changed to WJPX-TV, and in 1997 it was sold to Paxson Communications, a Florida-based TV and radio company, together with
Puerto Rico

two affiliate stations (WKPV-TV, Channel 20, and WJWN-TV, Channel 38). In July 2001 the network, known as Telenet, was acquired by LIN Television, which has put Channel 24 and its affiliate stations under the control of Televisicentro. This has increased the reach of WAPA-TV, Channel 4, to areas of weak signals.

With new call letters, WSJU-TV, Channel 30, was launched in March 2000, when its license was granted to the Puerto Rican firm Aerco Broadcasting Corporation. WSJU plays only Spanish-language music videos.

Other TV stations—educational, commercial, and religious—have emerged since the mid-1980s. WMTJ-TV, Channel 40, is an educational station belonging to the Ana G. Méndez Foundation, a private university. It was inaugurated in 1985 as a PBS affiliate, and, besides PBS programming, it also offers its own news, current affairs programs, and televised college courses. Its affiliate station, WQTO-TV in Ponce, retransmits to the southern coast over Channel 26. WZDE-TV, Channel 52, is an independent commercial station broadcasting music videos. It belongs to Puerto Rican firm R&F Broadcasting, Inc. and started transmission early in 2003 after a long battle with a cable television franchise over the mandated FCC must-carry rule. WELU-TV, Channel 32; WDWL-TV, Channel 36; WCCV-TV, Channel 54; WUJA-TV, Channel 58; and WECN-TV, Channel 64, all are religious stations belonging to diverse Protestant groups. Programming on these stations includes religious services, revivals, testimonials, interviews, fundraising, and news programs.

With the exception of a limited number of programs, all stations transmit in Spanish. Commercial television content mostly consists of Puerto Rican productions, particularly comedy, children’s programs, news, talk shows, and variety shows. Dubbed American TV series and movies, and Mexican, Colombian, and Venezuelan soap operas, comprise the rest of the offerings. Televion’s acquisition by Univision in 2001 initiated a move toward more canned programming from their stateside studios that was directed to the Hispanic-American population in the United States. This is now standard fare and is altering the offerings of Puerto Rico’s television. The amount of local programming is diminishing while imported programs are on the rise. The other commercial stations, following a global trend, have emulated this. Reality TV, both imported and locally produced, is also a new and rapidly increasing trend. There are very limited European or Canadian offerings, except for BBC or CBC specials carried over PBS stations WIPR-TV and WMTJ-TV. Interestingly, public television has increased the amount of local productions during this same time-frame but still command a minuscule number of the television audience.

An estimated 1,325,610 households exist in Puerto Rico, of which 1,313,223 have at least one television set, for a penetration of 99.1 percent (Mediafax, June 2003). A number of affiliate stations exist on the island, which means that TV signals of major stations reach all geographic areas. Channels 2, 4, and 11 consistently get the largest share of the audience, with all other channels trailing far behind. Television audience measurements are an important element for marketing and programming decisions, and, through the years, several companies have performed this function. The earliest measurements took place in September 1956, but it was not until the 1970s that companies like Clapp and Mayne and Stanford Klapper made inroads into a field that was rapidly developing and which determined where the advertising dollar would go. Mediafax is the only company offering television audience measurements, with television stations and local advertising agencies subscribing and paying a fee for these services. Kantar Media Research, a subsidiary of British global company WPP Group, acquired Mediafax in July 2001.

Cable Television

The cable television industry has transformed the landscape of television in Puerto Rico. Plagued by problems in the beginning, it is now an evolving alternative to local television and its programming strategies. Since 1996 the Junta Reglamentadora de Telecomunicaciones (Telecommunication Regulatory Board) has overseen operations of cable TV in Puerto Rico; it now authorizes franchises, a responsibility previously held by the Public Service Commission. In the mid-1960s, the availability of Puerto Rico Cablevision, a subsidiary of International Telephone and Telegraph, was limited to major San Juan hotels. The first franchise for residential service for the area of San Juan was granted in 1970 to the Cable Television Company of Puerto Rico. By 1976 the company was bankrupt, and Cable TV of Greater San Juan took over the franchise in March 1977. It was bought by Century Communications in 1986, and major investments in infrastructure took place. Other cable TV operators were granted franchises to offer cable service on the rest of the island.

In the early 21st century, four cable companies covered the ten franchise areas that serviced more than 90 percent of the island and reached an estimated 407,979 subscribers (Mediafax, June 2003). Current cable
companies are Adelphia Communications, which in October 1999 completed its acquisition of Century Communications and is now the parent company of Cable TV of Greater San Juan and Community Cablevision; Centennial Cable TV of Puerto Rico, which since September 2000 has bought Pegasus Communications of Puerto Rico (two franchise areas), Teleponte Cable, and Cable TV del Noroeste; Liberty Media, which acquired TCI Cablevision of Puerto Rico (three franchise areas) in February 2000; and Digital TV One (previously Telecable of Puerto Rico), the only remaining Puerto Rican company.

The expansion of the cable industry is indicated by the steady growth in the number of subscribers. In 1980 there were 35,000 subscribers, increasing to 127,400 by 1985, 218,900 in 1990, 352,000 in 2001, and 408,000 in 2003 (PR Cable Subscriber History, 1994; Mediafax, 2001; June 2003). A conservative estimate puts their yearly billing at over $300 million. Expansion is expected to continue, although not as fast as previously thought because of the inroads made by satellite television since 2001. Still, cable penetration is only about 31 percent compared to around 70 percent in the United States (Caribbean Business, September 14, 2000; Mediafax, June 2003). Additional consolidation and convergence of services is anticipated and will further transform the cable TV industry.

Cable TV systems carry all local stations and more than 150 North American channels via satellite. A move to digital cable is well advanced among all providers. Their fare is mostly in English and includes all major networks such as ABC, CBS, NBC, and FOX, as well as channels specializing in sports (ESPN, ESPN2), news (CNN), finance (CNBC), music (MTV, VH1), movies (American Movie Classics, HBO, HBO2, Showtime, Cinemax, The Movie Channel), cartoons (Cartoon Network), children's programs (Nickelodeon, The Disney Channel), science (The Discovery Channel, The Learning Channel), arts (A&E, Bravo!), public affairs (C-Span, C-Span2), comedy, (Comedy Central), religion (EWTN), shopping (HSC, HSN, QVC, QVC2), weather (The Weather Channel), and many other areas. There are also some 70 pay-per-view channels offering movies, sports, and adult fare as well as 45 satellite music channels. Channels featuring programming in Arabic, Chinese, Hindi, Italian, French, and Japanese, although limited, are available. Few Spanish-language channels are available through cable TV. Among these are TV Chile, Venevisión, TV3, and Spanish TVE.

The Telecommunications Act of 1996 allows cable companies to become integrated providers of the full spectrum of interactive broadband network services. This is rapidly changing the nature and reach of cable companies, as well as the services they offer. The convergence of services now permitted has allowed cable companies in Puerto Rico recently to start launching cable modem service, by which cable subscribers are able to access the Internet at very high speeds through the cable TV network. While not all cable systems offer this service yet, and those that do not have it available in all areas they control, this is a rapidly changing situation. Cable companies have most of the required infrastructure ready, and with the completion of the Americas II submarine fiber-optic cable, all will further diversify their offerings.

**Satellite Television**

Unregulated by local agencies, the operations of satellite television in Puerto Rico are overseen by the FCC. As with cable TV, satellite television had its share of problems in the beginning. Initially, small mom-and-pop operators sold and installed deep-dish antennas, from the late 1970s. These never operated any sort of large-scale enterprise and were mostly unreliable. The island's first taste of organized satellite TV came with the Alphastar service launched in 1997. Alphastar went dark, however, after falling into bankruptcy problems.

Direct-to-home satellite television was again made available through DirecTV Puerto Rico, which was established in mid-1999. It is a subsidiary of DirecTV Latin America (formerly Galaxy Latin America), a multinational company owned by Hughes Electronics Corporation and Darlene Investments, an affiliate of the Cisneros Group of Companies. DirecTV has grown rapidly and aggressively in Puerto Rico. It offers 130 video and audio channels, has 470 employees, and in late 2003 claimed to have 165,000 clients (DirecTV, January 2004). The other provider of satellite television is Dish Network, a subsidiary of EchoStar Communications Corporation, which predated DirecTV, operates only through dealerships, and has no offices locally. Independent information about this industry is still unavailable. Unverified data points to a conservative estimate of 300,000 subscribers to satellite television services at the end of 2003. If accurate, this would imply a penetration of about 23 percent for satellite services and a total penetration of close to 54 percent for both satellite and cable TV services combined. Since data available for satellite services is unverifiable and does not allow knowing whether the same households subscribe to both services or not, and if so, in which percentage they do, these last two statistics
Puerto Rico

are only notional. Mediafax has plans to include audience measurements of satellite television homes in the near future.

Conclusion

The trends seen in Puerto Rico’s television industry suggest that further expansion and acquisitions, mergers, and realignments will take place. Minor players unable to compete will either disappear or be taken over. The post-1996 era has proven Puerto Rico to be an important market of interest to global players. Already major U.S. media companies such as NBC, LIN Television, and Univisión have obtained control of the principal television networks, and everything points to a continuation of this trend. Educational broadcasters enjoy relative success in that their audience share, although small, is steady, and investment in infrastructure and programming is increasing. Insufficient data exists to speculate about the future of religious channels. As for cable and satellite television, undoubtedly growth will continue in a still-developing market that has consolidated amid acquisitions by major U.S. and global media companies.

Quatermass

British Science Fiction Series

Years before the English Sunday supplements ever discovered the “Angry Young Man,” jazz, science fiction, and other “marginal” art forms began to gather adherents among those who formerly might have quickly passed by them. Postwar British culture had entered a self-conscious period of transition, and science fiction suddenly seemed much more important both to pundits such as Kingsley Amis and to readers in general, who made John Wyndham’s novels (beginning with *The Day of the Triffids* [1951]) surprising best sellers.

The 1950s were also a period of adjustment for the BBC, which lost its television monopoly midway through the decade with the dreaded debut of the Independent Television Authority (ITA)—the invasion of commercial TV. Classical works and theatrical adaptations suddenly seemed insufficient to secure the BBC’s popular support. Perhaps not surprisingly, the corporation turned to science fiction; in 1953 the drama department put its development budget behind one writer, Nigel Kneale, who in exchange produced the script for the BBC’s first original, adult work of science fiction, a serial to be produced and directed by Rudolph Cartier and titled *The Quatermass Experiment*. The summer of that year, its six half-hour episodes aired, and with them began a British tradition of science fiction television that runs in various forms from *Quatermass* to *A Is for Andromeda* to *Blake’s Seven*, and from *Doctor Who* to *Red Dwarf*. Kneale himself went on to adapt George Orwell’s *Nineteen Eighty-Four* for Cartier’s controver-
sial 1954 telecast. Later in the decade, Kneale adapted John Osbourne’s *Look Back in Anger* and *The Entertain- tainer* for the screen.

Yet Kneale’s first major project was quite possibly his most elegant as well. The story of *The Quatermass Experiment* is fairly simple: a British scientist, Professor Bernard Quatermass, has launched a rocket and rushes to the site of its crash. There he discovers that only one crew member, Victor Carroon, has returned with the ship. Carroon survived only as a host for an amorphous alien life-form, which is not only painfully mutating Carroon’s body but also preparing to reproduce. Carroon escapes and wreaks havoc on London, until Quatermass finally tracks the now unrecognizably human mass to Westminster Abbey. There Quatermass makes one final appeal to Carroon’s humanity.

Years before, H.G. Wells had inaugurated contemporary science fiction with warnings in *War of the Worlds* about Britain’s failure to advance from its colonial self-satisfaction. *The Quatermass Experiment’s* depiction of an Englishman’s transformation into an alienated monster dramatized a new range of gendered fears about Britain’s postwar and postcolonial security. As a result, or perhaps simply because of Kneale and Cartier’s effective combination of science fiction and poignant melodrama, audiences were captivated.

With a larger budget and better effects, Kneale and Cartier continued the professor’s story with *Quatermass II* (1955), an effectively disturbing story of alien
possession and governmental conspiracies prefiguring *Invasion of the Body Snatchers* (1956). Perhaps fittingly, *Quatermass II* provided early counterprogramming to the BBC’s new commercial competition.

That same year, the small, struggling Hammer Films successfully released its film adaptation of *The Quatermass Experiment* in Britain. The next year the film (reitled *The Creeping Unknown*) performed unexpectedly well in the lucrative U.S. market, providing the foundation for the company’s subsequent series of Gothic horror films. Hammer released its film adaptation of the second serial (retilted *The Enemy Within* for the United States) in 1957.

Kneale and Cartier’s third serial in the series, *Quatermass and the Pit*, combined the poetic horror of the first serial and the paranoia of the second. In it, Quatermass learns that an archaeological discovery made during routine subway expansion means nothing less than humanity itself is not what we have believed it to be. The object discovered in that subway “pit” is an ancient Martian craft, and its contents indicate humans are their genetically engineered offspring. By the conclusion of the serial, London’s inhabitants have been inadvertently triggered into a programmed mode of rioting, and the city lies mostly in ruins. “We’re all Martians!” became Quatermass’s famous cry, and the serial’s ample references to escalating racial and class tensions give his words an ominous power.

It is this grim, elegant ending, filmed by Hammer in 1967 (and released in the United States as *Five Million Years to Earth*), that Greil Marcus used in his history of punk to describe the emotional experience of a Sex Pistols concert. If nothing else, Marcus’s reference in *Lipstick Traces* (1989) suggests that Quatermass, like those repressed Martian memories, may return at the most curious moments. Even in less-unexpected contexts than Marcus’s, the name Quatermass may still operate as a certain sort of cultural code word; for example, in his extensive science fiction history *Trillion Year Spree* (1986), Brian Aldiss uses “the Quatermass school” as if every reader should automatically understands its meaning.

By the late 1970s the BBC was no longer willing to commit itself to the budget necessary for Kneale’s fourth and final Quatermass serial, simply titled *Quatermass*. Commercial television was ready, however, and in 1979, at the conclusion of a 75-day ITV strike, the four-part *Quatermass* debuted with John Mills starring as the now elderly professor in his final adventure.

Only the serial’s opening sequence, involving Quatermass deriding a U.S.-USSR “Skylab 2,” displays the force of the earlier series: a moment after Quatermass blurs out his words in a live television interview, the studio monitors are filled with the image of Skylab 2 blowing to pieces. Subsequent episodes are less successfully provocative. Concerning a dystopic future Britain where hippielike youth are being swept up by aliens, the serial’s narrative was recognized as somewhat stale and unconvincing. Yet even in the late 1970s, despite the last serial’s lukewarm reviews, *Quatermass* remained a source of fan preoccupation reminiscent of the commitment of many to *Star Trek*.

Unlike the three earlier serials, *Quatermass* was not adapted for the screen. It was simply edited and repackaged as *The Quatermass Conclusion* for theatrical and video distribution abroad. Of the earlier serials, only *Quatermass and the Pit* has had a video release, although most of the first serial and all of the second have been preserved by the British Film Institute.

Quebecor Media Inc.

Quebecor Media is a leading global multimedia conglomerate based in Quebec, Canada, with large holdings in newspaper, magazine, and commercial publishing; television production, broadcasting, and distribution; and cable, Internet, and interactive television services. While the company has already captured a large part of the French-Canadian market, its corporate vision is global in scope. Quebecor has benefited from a relaxed regulatory environment in Canada, which has allowed the company to vastly expand its
Quebecor Media Inc.

holdings both within and across media and to pursue a strategy that emphasizes convergence and economies of scale as well as achieve vertical integration of its print and television services. Like other multimedia conglomerates such as Time Warner or Universal-Vivendi, Quebecor has largely acquired its holdings through corporate buyouts and mergers. Quebecor's television holdings have largely resulted from the company's purchase of Groupe Videotron Ltee. in October 2000, although its exploitation of the television medium dates back to the early 1950s.

Publishing magnate Pierre Peladeau founded Quebecor in 1965. Peladeau had begun his career in 1950 as a publisher of community newspapers in Montreal. In 1955 Peladeau launched Nouvelles et Points, the first of a series of weekly entertainment magazines, which focused heavily on the burgeoning Francophone television industry and its celebrities. Over the years, Peladeau's magazines and newspapers would carve out a niche in Quebec by devoting significant coverage to French-Canadian stars and TV series. In 1964 Peladeau started Le Journal de Montreal, which would become the largest French-language daily in North America. The newspaper emulated local television news by using an abundance of colorful and sensational photographs accompanied by short articles and by devoting a significant amount of space to local sports and culture.

Over the years, Quebecor's publishing empire grew, expanding beyond Quebec into the rest of Canada and the United States and eventually the world. Today, Quebecor is the world's largest commercial printer, operating 160 plants in 17 countries and employing 39,000 people worldwide. The corporation also owns Sun Media, the second-largest newspaper group in Canada with eight metropolitan dailies, eight community dailies, and 175 weekly newspapers, and it remains the largest magazine publisher in Quebec. Additionally, Quebecor owns Videotron, the largest cable TV provider in Quebec with an estimated 1.4 million subscribers as of 2003. Videotron is also one of the largest Internet service providers in Canada. Videotron subsidiary SuperClub Videotron is the leading video rental and sales chain in Quebec with over 170 locations. Finally, Quebecor also owns and operates TVA, the top general-interest network in Quebec, maintaining a market share of approximately 35 percent.

With the purchase of Videotron Ltee. in 2000, Quebecor not only expanded into the world of cable and Internet services but also acquired a major stake in the development of interactive television. Videotron operates the illico digital interactive television system, which currently has 114,000 subscribers. Illico allows subscribers to access e-mail and surf the Internet through their television set, as well as participate in specially designed chat rooms and newsgroups unique to the interactive service. It also provides easy access to home shopping, creating new synergies between television programs and ancillary markets for the products they feature. Viewers are alerted to the availability for purchase of particular fashions, furniture, and accessories shown on select programs. Quebecor has identified interactive television as key to its media convergence strategy. According to Quebecor's website, "[interactive television] will crystallize the synergies among the company's media properties, giving advertisers a multitude of cross-promotion opportunities and customers a host of innovations and value-added interactive services."

In September 2001 Quebecor added the TVA group to its conglomerate. In order to own the lucrative television channel, Quebecor was first required to sell off its holdings in TQS, which it had owned since 1997. Under Canadian law, companies cannot own more than one broadcast channel in the same market, though they can own multiple newspapers and operate various services within a single market. TVA is the largest private-sector producer and broadcaster of French-language programming in North America. Ten stations reaching the majority of French-speaking households in Quebec as well as the rest of Canada carry TVA's signal. The TVA network owns six of those ten stations. Additionally, TVA International was founded in 1997 when the TVA group bought Motion International, which has since become the leading distributor of Canadian programming in Canada. With the addition of TVA International, the company has achieved full vertical integration of its television holdings. Finally, TVA has a significant interest in specialty cable channels, launching Le Canal Nouvelles TVA, a 24-hour all-news station, in 1998, and partnering to create Canal Évasion, a French-language travel and tourism specialty channel, and Canal Indigo, a French-language pay-per-view channel. TVA also owns 50 percent of HSS Canada, a leading producer of infomercials, and has launched Club TVAchat, a French-language equivalent of the Home Shopping Network.

Avi Santo
Queer as Folk

British Drama Series (adapted in U.S.)

This British television drama, by Russell T. Davies, was first aired on public television from February to April 1999, causing equal measures of controversy and delight. The original eight-part series was followed by the two-part Queer as Folk 2: Same Men, New Tricks. In 2000 the program idea transferred to the U.S. cable channel Showtime as a 20-episode series. Writers Ron Cowen and Daniel Lipman relocated the action from Manchester to Pittsburgh, and it aired its fourth season in the autumn of 2003. Davies went on to irk some gay viewers by writing Bob and Rose (ITV 2001), a drama about a gay man who falls in love and sleeps with a woman, questioning the absolute nature of his homosexuality. He has been commissioned to write the relaunching of the camp BBC sci-fi TV series, Dr. Who, thereby regaining, in the eyes of some, his “gay-friendly” reputation. Queer as Folk was, and remains, controversial because it challenged accepted modes of screening homosexuality on television, and because Davies rejects the “gay writer” tag. Produced by Channel 4 TV in the United Kingdom, the program expressed the channel’s remit to screen challenging material, even though it was scheduled at a cautious 10:30 p.m. time slot.

The program’s title plays on the northern English aphorism that “there’s nowt [nothing] as queer as folk,” innocently meaning that there is no accounting for the behavioral surprises that people will spring on you. But it also suggests a politicized use of the word: the provocatively postgay slogan “Queer as Fuck” associated with radical activist groups that emerged in the late 1980s. “Queer” activists sought to reappropriate the abusive term queer for subversive uses: to counter prejudices against HIV, and to protest against the culture of arcane legislative iniquities in Britain (namely, but not solely, Section 28, which prohibits local authorities from the “promotion of homosexuality” and forbids presenting homosexuality in government-funded schools as an acceptable or appropriate aspect of family life). But more significantly, “queer politics” tried to forge a sexual politics beyond the simple binary of gay/straight, and to disrupt the liberal progressive identity politics associated with gay reform groups Stonewall or GLAAD (Gay and Lesbian Alliance Against Defamation). Davies wrote Queer as Folk as a counter to most mainstream TV portrayals of homosexual characters as incidental or associated with misery or villains. All the main characters in Queer as Folk are gay, but instead of attempting to create an imagined gay world that represented a politically correct diversity, Davies focused his setting on Manchester’s Canal Street gay scene. It was filmed on location in a colorful, vibrant style with an upbeat, partying theme and club music sound track.

The three main characters were hardly all likable. They had faults and behaved foolishly, selfishly, or naively. The most striking, Stuart (Aiden Gillen), a late-20s advertising executive, is a pill-popping sexually voracious “scene queen”; for most of the series, he is not “out” to his family. Vince (Craig Kelly), his long-suffering best friend and secret admirer, is the manager of a supermarket. Finally, Nathan (Charlie Hunnam), a 15-year-old boy, is seduced on his first time out in Canal Street by the predatory Stuart and proceeds to fall in love with him. The sequel, Queer as Folk 2, ended by whisking the boys off in their jeep in a magical, surrealistic finale, the audiovisual excess of which broke any links that the series had tentatively kept with the long tradition of British TV social realism.

The strength of Queer as Folk was that it created an entirely credible world for the characters, with their priorities and emotional landscape brilliantly captured in the dialogue and the scenarios depicted. Life in this gay scene was exhilarating, highly pleasurable, and marked by excessive alcohol consumption and drug-fueled sex. It was also misogynistic, exploitative, and deeply materialistic. It unashamedly showed the intimate lives of a few affluent gay men in the 1990s enjoying a consumer-led hedonism that captured the spirit of “scene gays,” and also of many young heterosexual adults living in Britain.

The worth of the series is signified both by its initial disruptive impact, its enduring “after-life” qualities, and its commercial abilities to travel well across the world. Banned from Australian public TV, it spawned the U.S. adaptation, another series, called Metrosexuality (Channel 4, 2001), that featured black gay characters, DVD and music collections, and academic writing and conferences devoted to it. Queer as Folk has become a media phenomenon, sustaining itself as a
product of the consumerism that it represented on-screen. The program was critically divisive within a majority, heterosexual society, some hating it, some loving it. Interestingly, it divided gay people and their community representatives in Britain.

Press releases, media commentary, and trailers ensured that viewers expected taboos to be broken: over 4 million of them were not disappointed. The opening ten minutes of the first episode showed 15-year-old Nathan (under the legal age for sex) and Stuart engaged in graphically depicted oral-anal and anal sex. This set a record number of complaints to the ITC, independent television’s regulatory body. These official complaints were not upheld, but the ITC did disapprove of the program’s “celebratory tone” and castigated it for its lack of a moral framework or posttransmission advice about safer sex. Angela Mason of Stonewall, the gay reform group, condemned the program and distanced her organization from the series because it propagated the idea that gay people were sexually promiscuous; Stonewall believed that the program would damage its campaign to lobby the new Labour government (1997) to push its equality and decriminalization laws through Parliament. The program’s sponsor (Beck’s beer) withdrew its support.

The U.S. version is a polished, well-acted, and credible transatlantic version that has worked very successfully for its own constituency, although its wider social impact is restricted since Showtime is a pay-to-view channel. Post-Ellen, it provides a much-needed antidote to the wisecracking and anodyne and inoffensive U.S. sitcom Will & Grace.

**Quentin Durgens, M.P.**

Canadian Drama Series

One of the first hour-long Canadian drama series produced by the CBC, *Quentin Durgens, M.P.*, began as six half-hour episodes entitled *Mr. Member of Parliament* in the summer of 1965 as part of The Serial, a common vehicle for Canadian dramas. The program starred a young Gordon Pinsent as a naive rookie member of Parliament who arrives in Ottawa and quickly learns that the realities behind public service can be alternately humorous, overwhelming, and frustrating.

Consciously designed to be an absolutely distinctive Canadian drama series, *Quentin Durgens, M.P.*, contrasted the private struggles and controversies faced by politicians with the more sedate, pompous image presented by Parliament. Many of its plots were inspired by real-life issues and situations. Pornography, violence in minor-league hockey, gender discrimination, and questions of religious tolerance were topics addressed among its episodes. In all of them, however, the inner workings of power, with its backroom deals and interpersonal struggles, remained the backbone of the series.

The regular series of *Quentin Durgens, M.P.*, began in December 1966 as a winter season replacement. It followed the popular series *Wojeck* in a Tuesday 9:00 p.m. time slot, and, like *Wojeck*, *Quentin Durgens* was hailed as an example of Canadian television, distinct and set apart from Hollywood drama. The show still carried its imprint as a serial with open narratives, unresolved psychological conflicts, and the freedom to construct stories around topical issues. Frequent allusions to actual social events and a great deal of subtext were interwoven in plots that juxtaposed rational and emotional behavior. The result made for what its director and producer David Gardner called an “ironic drama.” Documentary techniques grounded in the tradition of the National Film Board of Canada also added to the “behind-the-scene” feel of the series and reflected, according to Canadian television critic Morris Wolfe, a Canadian tradition of “telling it like it is.” Despite these claims, other Canadian television critics and historians such as Paul Rutherford have questioned the uniqueness of these “made-in-Canada” dramas, arguing instead that many of the characteristics attributed to Canadian drama series such as *Wojeck*, *Quentin Durgens, M.P.*, and *Cariboo Country* were already to be found in some U.S. and, especially, British dramas.

Although *Quentin Durgens, M.P.*, was part of a formidable lineup, it was never popular with Canadian viewers. With fewer funds and resources than *Wojeck*, the show had to be videotaped (on location and in the studio) for its initial two seasons. The flattened, taped images and sometimes awkward edits detracted from the documentary feel. Nor were its scripts consistently strong. Despite the increased support in its third season (after the end of *Wojeck*), when all 17 episodes were filmed and in color, *Quentin Durgens* failed to hold the large audiences *Wojeck* had won for the evening. Canadian viewers, it seemed, did not share the CBC’s and producers’ interest in developing a distinctive Canadian perspective. Parliamentary intrigues were not fascinating enough to attract a large following, and *Quentin Durgens, M.P.*, simply lacked the excitement of cop shows.

Quiz and Game Shows

Prior to the quiz show scandals in 1958, no differentiation existed between quiz shows and game shows. Programs that relied mainly on physical activity and had no significant quiz element to them, such as Truth or Consequences or People Are Funny, were called “quiz shows,” as was an offering like The $64,000 Question, which emphasized factual knowledge. The scandals mark an important turning point because in the years following, programs formerly known as “quiz shows” were renamed “game shows.” This change coincided with a shift in content, away from high culture and factual knowledge common to the big-money shows of the 1950s. However, the renaming of the genre also represents an attempt to distance the programs from the extremely negative connotations of the scandals, which had undermined the legitimacy of the high-cultural values that quiz shows (the term and the genre) embodied. Thus, the new name, “game shows,” removed the genre from certain cultural assumptions and instead creates associations with the less-sensitive concepts of play and leisure. Nevertheless, the historical and material causes for this renaming still fail to provide a sufficient basis for a definition of this genre as a whole.

In Television Culture, John Fiske suggests more satisfactory definitions and categories with which to distinguish among different types of shows. One of the main appeals of quiz shows is that they deal with issues such as competition, success, and knowledge—central concerns for American culture. It makes sense, then, to follow Fiske in defining this genre according to its relation to knowledge. He begins by suggesting a basic split between “factual” knowledge and “human” knowledge. Factual knowledge can be further divided into “academic” knowledge and “everyday” knowledge. Human knowledge consists of knowledge of “people in general” and of specific “individuals.” While Fiske does not clearly distinguish between the terms game show and quiz show, his categories reflect a significant difference in program type. All shows that deal with competitions between individuals or groups, and based primarily on the display of factual knowledge, may be considered quiz shows. Shows dealing with human knowledge (knowledge of people or of individuals), or that are based primarily on gambling or on physical performances, fall in the category of game shows. Thus, The Gong Show or Double Dare are not considered quiz shows, since they rely primarily or completely on physical talents, whereas Family Feud and The Newlywed Game, which rely entirely on knowledge of people or of individuals, would also be considered game shows. Jeopardy!, however, with its focus on academic, factual knowledge, is clearly a quiz show.

Many early television quiz shows of the 1940s were transferred or adapted from radio, the most prominent among them being Information Please, Winner Take All, and Quiz Kids. These shows also provided a professional entry point for influential quiz show producers such as Louis Cowan, Mark Goodson, and Jack Barry. Although a number of early radio and television quiz shows were produced locally and later picked up by networks, this trend ended in the early 1950s, when increasing production values and budgets led to the centralization of the production of quiz shows under the control of networks and sponsors. Nevertheless, the relatively low production costs, simple sets, small casts, and highly formalized production techniques have continually made quiz shows an extremely attractive television genre. Quiz shows are more profitable and faster to produce than virtually any other form of entertainment television.

In the late 1940s and early 1950s, most quiz shows were extremely simple in visual design and the structure of the games. Sets often consisted of painted flats and a desk for an expert panel and a host. The games themselves usually involved a simple question-and-answer format that displayed the expertise of the panel members. An important characteristic of early quiz shows was their foregrounding of the expert knowledge of official authorities. A standard format (used, e.g., on Americana or Information Please) relied on home viewers to submit questions to the expert panel. Viewers were rewarded with small prizes (money or consumer goods) for each question used, and with larger prizes if the panel failed to answer their question. Some programs relied on the audience to send in questions and challenge the intellectual authority of the expert panel. Information Please, for example, played with the appeal of reversing educational hierarchies and challenged its viewers to “stump the experts.” While the expert-panel format dominated the 1940s, it was slowly replaced by audience-centered quizzes in the early 1950s. In this period, “everyday
Quiz and Game Shows

people" from the studio audience became the subjects of the show. The host of the show, however, remained the center of attention and served as a main attraction for the program (e.g., Bert Parks and Bud Collyer in Break the Bank and James McClain in Doctor I.Q.).

At this point, the visual style of the shows was still fairly simple, often re-creating a simple theatrical proscenium or using an actual theater stage. The Mark Goodson–Bill Todman production Winner Take All was an interesting exception. Although it also used charismatic hosts, it introduced the concept of a returning contestant who faced a new challenger for every round. Thus, the attention was moved away from panels and hosts and toward the contestants in the quiz.

A 1954 U.S. Supreme Court ruling created the impetus for the development of a new type of program when it removed "jackpot" quizzes from the category of gambling and made it possible to use this form of entertainment on television. At CBS, producer Cowan, in cooperation with Revlon Cosmetics as sponsor, developed the idea for a new "jackpot" quiz show based on the radio program Take It or Leave It. The result—The $64,000 Question—raised prize money to a spectacular new level and also changed the visual style and format of quiz shows significantly. The $64,000 Question, its spin-off The $64,000 Challenge, and other imitations following between 1955 and 1958 (e.g., Twenty-One, The Big Surprise) all focused on high-culture and factual, often academic, knowledge. These programs were part of television's attempts in the 1950s to gain respectability and, simultaneously, a wider audience. They introduced a much more elaborate set design and visual style and generally created a serious and ceremonious atmosphere. The $64,000 Question introduced an IBM sorting machine, bank guards, an isolation booth, and neon signs, while other shows built on the same ingredients to create similar effects. In an effort to keep big-money quiz shows attractive, the prize money was constantly increased and, indeed, on a number of shows, became unlimited. Twenty-One and The $64,000 Challenge also created tense competitions between contestants, so that audience identification with one contestant could be even greater. Consequently, the most successful contestants became celebrities in their own right, perhaps the most prominent among them being Dr. Joyce Brothers and Charles Van Doren.

However, this reliance on popular returning contestants, on celebrities in contest, also created a motivation for program makers to manipulate the outcome of the quizzes. Quiz show sponsors in particular recognized that some contestants were more popular than others, a fact that could be used to increase audience size. These sponsors required or advocated the rigging of the programs to create a desired audience identification with these popular contestants.

When these practices were discovered and made public, the ensuing scandals undermined the popular appeal of big-money shows and, together with lower ratings, led to the cancellation of all of these programs in 1958–59. Entertainment Productions Inc. (EPI), a production company founded by Cowan, was particularly involved in and affected by the scandals. EPI had produced a majority of the big-money shows and was also most actively involved in the riggings. Following the scandals, the networks used the involvement of sponsors in the rigging practices as an argument for the complete elimination of sponsor-controlled programming in prime-time television.

Still, not all quiz shows of the late 1950s were canceled due to the scandals. A number of programs that did not rely on the huge prizes (e.g., The Price Is Right, Name That Tune) remained on the air and provided an example for later shows. Even these programs, however, were usually removed from prime time, their stakes significantly reduced, and the required knowledge made less demanding. In the early 1960s, very few new quiz shows were introduced, and most were game shows focusing less on high culture and more on gambling and physical games. Overall, the postscandal era was marked by a move away from expert knowledge to contestants with everyday knowledge. College Bowl and Alumni Fun still focused on "academic" knowledge without reviving the spectacular qualities of 1950s quiz shows, but Jeopardy!, introduced by Merv Griffin in 1964, is the only other significant new program developed in the decade following the scandals. It reintroduces "academic" knowledge, a serious atmosphere, elaborate sets, and returning contestants, but offers only moderate prizes. The late 1960s were marked by even more cancellations (CBS canceled all of its shows in 1967) and by increasing attempts of producers to find alternative distribution outlets for their products outside the network system. Their hopes were realized through the growth in first-run syndication.

In 1970 the Federal Communications Commission (FCC) introduced two new regulations, the Financial Interest and Syndication Rules (Fin-Syn) and the Prime Time Access Rule (PTAR), that had a considerable effect on quiz/game show producers and on the television industry in general. Fin-Syn limited network ownership of television programs beyond their network run and increased the control of independent producers over their shows. The producers' financial situation and their creative control were significantly improved. Additionally, PTAR gave control of the 7:00 to 7:30 p.m. time slot to local stations. The intention of
this change was to create locally based programming, but the time period was usually filled with syndicated programs, primarily inexpensive quiz shows and tabloid-news offerings. The overall situation of quiz/game show producers was substantially improved by the FCC rulings.

As a result, a number of new quiz shows began to appear in the mid-1970s. They were, of course, all in color and relied on extremely bright and flashy sets, strong primary colors, and a multitude of aural and visual elements. In addition to this transformation to the traditionally solemn atmosphere of quiz shows, the programs were thoroughly altered in terms of content. Many of the 1970s quiz shows introduced an element of gambling to their contests (e.g., The Joker's Wild, The Big Showdown) and moved them further from a clear "academic" and serious knowledge toward an everyday, ordinary knowledge. A number of shows, such as Card Sharks and Family Feud, not only emphasize the everyday character of their contestants but also ask players to guess the most popular responses to questions asked in small polls. Contestants are thus rewarded for understanding or representing "average" people.

Blatant consumerism began to play an important role in quiz shows such as The Price Is Right and Sale of the Century, as the distinctions between quiz and game shows became increasingly blurred in this period. As Graham points out in Come on Down!!!, quiz shows had to change in the 1970s, adapting to a new cultural environment that included flourishing pop culture and countercultures. On The Price Is Right, Goodson answered this challenge by creating a noisy, carnival atmosphere that challenged cultural norms and assumptions represented in previous generations of quiz shows.

The same type of show remained prevalent in the 1980s, although most examples now appeared primarily in syndication and, to a lesser extent, on cable channels. Both Wheel of Fortune and a new version of Jeopardy! were extremely successful as syndicated shows in the prime-time-access slot (7:00–8:00 P.M.) and remain popular in that time period even though the PTAR was rescinded in 1996.

In what may become a trend, Lifetime Television introduced two quiz shows combining everyday knowledge (of consumer products) with physical contests (shopping—and spending—as swiftly as possible). These shows, Supermarket Sweep and Shop 'Til You Drop, also challenge assumptions about cultural norms and the value of everyday knowledge. In particular they focus on "women's knowledge" and thus effectively address the predominantly female audience of this cable channel. In September 2000 these two highly consumerist programs moved to the PAX network, where they exemplify family-friendly programming that, according to PAX's mission, features strong values and positive role models. This shows the status of many quiz shows as wholesome entertainment and the ability of the genre to adapt to a wide variety of programming demands. One area of growth for quiz shows in the era of cable television, then, seems to be the creation of this type of "signature show," which appeals to the relatively narrowly defined target audience of specific cable channels.

The unexpected success of ABC's Who Wants to Be a Millionaire? in the summer of 1999 gave quiz shows a new presence on prime-time television and focused a significant degree of public attention on the genre. Adapted from a British program of the same name, Millionaire incorporated both traditional, educational knowledge and trivia and often emphasized the presumed mental prowess of its winners. Additionally, it provided several devices for contestants to receive assistance from the home or studio audience, thus creating a link between program and viewers that tended to encourage increased viewer identification. Several other prime-time game shows premiered in the following fall and spring season, including Greed on FOX and a new version of Twenty-One on NBC, both of which lasted less than a season. Although faced with a number of competing programs, Millionaire was the most successful of the quiz shows premiered from 1999 on. For a time, it dominated the ABC schedule, with episodes airing several nights a week and consistently ranking among the top-10 rated programs. However, perhaps because of overexposure, its rating plummeted in the 2001–02 season, and Millionaire was not renewed as a regular series for the 2002–03 season (though occasional specials were anticipated). The Millionaire concept continues to thrive in adaptations shown around the world. In 2004 Regis Philbin introduced "Who Wants to Be a Super Millionaire" on ABC.

Following the wave of new shows initiated by Millionaire, the premiere on CBS of Survivor in May 2000 introduced to the United States a new type of hybrid programs, often termed "reality shows," which quickly started to gain popularity. Survivor, Big Brother, Fear Factor, Boot Camp, Lost, and The Amazing Race all have structured their competition like an extended game show. Contestants have to perform a variety of physically and, less frequently, mentally challenging tasks; earn different types of rewards; and get eliminated one by one until the winner of the game is identified. What has changed from traditional game shows is mainly the use of a manipulated exterior or nonstudio ("real") space in which much of the ex-
tended competition takes place. Following the example of Millionaire, the level of prize money on these shows is extremely high, often ranging from $500,000 to $1 million. While the hybridization of game shows into reality shows has generated a significant amount of new programming, these shows also stand out for their excessive abuse of contestants and their inconsiderate use of the countries and landscapes in which they are set. One of the striking characteristics of many reality game shows is that they entice their contestants to do literally anything to win. On several shows, contestants ate insects, rotten food, or animal innards; were exposed to starvation and injury; and displayed various forms of antisocial behavior to stay ahead in the game. It seems that more than ever, game shows tend to legitimize greed and ruthless competitive behavior as the genre develops in new directions.

Quiz Show Scandals

No programming format mesmerized television viewers of the 1950s with more hypnotic intensity than the “big-money” quiz show, one of the most popular and ill-fated genres in U.S. television history. In the 1940s a popular radio program had awarded top prize money of $64. The new medium raised the stakes a thousandfold. From its premiere on CBS on June 7, 1955, The $64,000 Question was an immediate sensation, racking up some of the highest ratings in television history up to that time. Its success spawned a spin-off, The $64,000 Challenge, and a litter of like-minded shows: The Big Surprise, Dotto, Tic Tac Dough, and Twenty-One. When the Q-and-A sessions were exposed as elaborate frauds, columnist Art Buchwald captured the national sense of betrayal with a glib name for the producers and contestants who conspired to bamboozle a trusting audience: the Quizlings.

Broadcast live and in prime time, the big-money quiz show presented itself as a high-pressure test of knowledge under the heat of klieg lights and the scrutiny of 55 million participant-observers. Set design, lighting, and pure hokum enhanced the atmosphere of suspense. Contestants were put in glass isolation booths, with the air conditioning turned off to make them sweat. Tight close-ups framed faces against darkened backgrounds, and spotlights illuminated contestants in a ghostly aura. Armed police guarded “secret” envelopes and impressive-looking contraptions spat out precooked questions on IBM cards. The big winners—such as Columbia University student Elfrida Von Nardroff, who earned $226,500 on Twenty-One, or warehouse clerk Teddy Nadler, who earned $252,000 on The $64,000 Challenge—took home a fortune.

By the standards of the game shows of a later epoch, the intellectual content of the 1950s quiz shows was erudite. Almost all the questions involved some demonstration of cerebral aptitude: retrieving lines of poetry; identifying dates from history; or reeling off scientific classifications, the stuff of memorization and canonical culture. Since victors returned to the show until they lost, risking accumulated winnings on future stakes, individual contestants might develop a devoted following over a period of weeks. Matching an incongruous area of expertise to the right personality was a favorite hook, as in the cases of Richard McCutchen, the rugged marine captain who was an expert on French cooking, or Dr. Joyce Brothers (not then an

1874
icon of pop psychology), whose encyclopedic knowledge of boxing won her $132,000.

If the quiz shows made celebrities out of ordinary folk, they also sought to engage the services of celebrities. Orson Welles claimed to have been approached by a quiz show producer looking for a "genius type" and guaranteeing him $150,000 and a seven-week engagement. Welles refused, but bandleader Xavier Cugat won $16,000 as an expert on Tin Pan Alley songs in a rigged match against actress Lillian Roth on The $64,000 Challenge. "I considered I was giving a performance," he later explained guilelessly. Twelve-year-old Patty Duke won $32,000 against child actor Eddie Hodges, then the juvenile lead in The Music Man on Broadway. Teamed with a personable marine flyer named John Glenn, Hodges had earlier won the $25,000 grand prize on Name That Tune.

Far and away the most notorious Quizling was Charles Van Doren, a contestant on NBC's Twenty-One, a quiz show based on the game of blackjack. Scion of the prestigious literary family and a lecturer in English at Columbia University, Van Doren was an authentic pop phenomenon, whose video charisma earned him $129,000 in prize money, the cover of Time magazine, and a permanent spot on NBC's Today, where he discussed non-Euclidean geometry and recited 17th-century poetry.

From the moment Van Doren walked onto the set of Twenty-One, on November 28, 1956, for his first face-off against a high-IQ eccentric named Herbert Stempel, he proved himself a telegenic natural. In the isolation booth, Van Doren managed to engage the spectators' sympathy by sharing his mental concentration. Apparently muttering unself-consciously to himself, he let viewers see him think: eyes alert, hand on chin, then a sudden bolt ("Oh, I know!"). After which he delivered the answer. Asked to name the volumes of Winston Churchill's wartime memoirs, he muttered, "I've seen the ad for those books a thousand times!" Asked to come up with a biblical reference, he said self-deprecatingly, "My father would know that." Van Doren's was a remarkable and seductive performance. Twenty-One's convoluted rules decreed that, in the event of a tie, the money wagered for points doubled, from $500 a point to $1,000 (and so on). Thus, contestants needed to be coached not only on answers and acting but on the amount of points they selected in the gamble. A tie meant double financial stakes for each successive game with a consequent ratcheting up of the tension. By pregame arrangement, the first Van Doren-Stempel face-off ended with three ties; hence, the next week's game would be played for $2,000 a point, and publicized accordingly.

On Wednesday, December 5, 1956, at 10:30 p.m., an estimated 50 million Americans tuned in to Twenty-One for what host and coproducer Jack Barry called "the biggest game ever played in the program." The first category was boxing, and Van Doren fared poorly. Ahead 16 points to Van Doren's 0, Stempel was given the chance to stop the game. Supposedly, only the audience knew he was in the lead and, if he stopped the game, Van Doren would lose. At this point, on live television, Stempel could have reneged on the deal, vanquished his opponent, and won an extra $32,000. But he opted to play by the script and continue the match. The next category, movies, proved more Van Doren-friendly. Asked to name Brando's female costar in On the Waterfront, Van Doren teased briefly ("she was that lovely frail girl") before coming up with the correct answer (Eva Marie Saint). Stempel again had the chance to ad-lib his own lines, but he did not. Asked to name the 1955 Oscar Winner for Best Picture, he hesitated and answered On the Waterfront. The correct answer was Marty.

But another tie meant another round at $2,500 a point. The next round of questions was crucial. Van Doren was asked to give the names and the fates of the third, fourth, and fifth wives of Henry VIII. As Barry

Charles Van Doren. Photo courtesy of Wisconsin Center for Film and Theater Research.
led him through the litany. Van Doren took the audience with him every step of the way. ("I don’t think he beheaded her…. Yes, what happened to her?") Given the same question, Stempel successfully named the wives, and Barry asked them their fates. “Well, they all died,” he cracked to gales of laughter. Van Doren stopped the game and won the round.

In August and September 1958 disgruntled former contestants went public with accusations that the results were rigged and the contestants coached. First, a standby contestant on *Dotto* produced a page from a winner’s crib sheet. Then, the bitter Herbert Stempel told how he had taken a dive in his climactic encounter with Van Doren. An artist named James Snodgrass had taken the precaution of mailing registered letters to himself with the results of his appearances on *Twenty-One* predicted in advance. Most of the high-drama matchups, it turned out, were carefully choreographed. Contestants were drilled in Q-and-A before airtime and coached in the pantomime of nail-biting suspense (stroke chin, furrow brow, wipe sweat from forehead).

By October 1958, as a New York grand jury convened by prosecutor Joseph Stone investigated the charges and heard closed-door testimony, quiz show ratings had plummeted. For their part, the networks played damage control, denying knowledge of rigging, canceling the suspect shows, and tossing the producers overboard. Yet it was hard to credit the innocence of executives at NBC and CBS. A public relations flack for *Twenty-One* best described the implied contract: “It was sort of a situation where a husband suspects his wife but doesn’t want to know because he loves her.”

Despite the revelations and the grand jury investigation, the quiz show producers, Van Doren, and the other big-money winners steadfastly maintained their innocence. Solid citizens all, they feared the loss of professional standing and the loyalty of friends and family as much as the retribution of the district attorney’s office. Nearly 100 people committed perjury rather than own up to activities that, though embarrassing, were not illegal. Prosecutor Stone lamented that “nothing in my experience prepared me for the mass perjury that took place on the part of scores of well-educated people who had no trouble understanding what was at stake.”

When the judge presiding over the New York investigations ordered the grand jury report sealed, Washington smelled a cover-up and a political opportunity. Through October and November 1959 the House Subcommittee on Legislative Oversight, chaired by Oren Harris (Democrat, Arkansas), held standing-room-only hearings into the quiz show scandals. A renewed wave of publicity recorded the testimony of the now-repentant network bigwigs and star contestants whose minds, apparently, were concentrated powerfully by federal intervention. At one point, committee staffers came upon possible communist associations in the background of a few witnesses.

Meanwhile, as newspaper headlines screamed “Where’s Charlie?,” the star witness everyone wanted to hear from was motoring desperately through the back roads of New England, ducking a congressional subpoena. Finally, on November 2, 1959, with tension mounting in anticipation of Van Doren’s appearance to answer questions (the irony was lost on no one), the chastened former English professor confessed. “I was involved, deeply involved, in a deception,” he told the Harris Committee. “The fact that I too was very much deceived cannot keep me from being the principal victim of that deception, because I was its principal symbol.” In another irony, Washington’s made-for-TV spectacle never made it to the airwaves due to the opposition of House Speaker Sam Rayburn, who felt that the presence of television cameras would undermine the dignity of Congress.

The firestorm that resulted, claimed *Variety*, “injured broadcasting more than anything ever before in the public eye.” Even the sainted Edward R. Murrow was sullied when it was revealed that his celebrity interview show, CBS’s *Person to Person*, provided guests with questions in advance. Perhaps most significantly in terms of the future shape of commercial television, the quiz show scandals made the networks forever leery of “single sponsorship” programming. Henceforth, they parcelled out advertising time in 15-, 30-, or 60-second increments, wrenching control away from single sponsors and advertising agencies.

Racism, Ethnicity, and Television

Until the late 1980s, whiteness was consistently naturalized in U.S. television—social whiteness, that is, not the "pinko-grayishness" that British novelist E.M. Forster identified as the "standard" skin hue of Europeans. This whiteness has not been culturally monochrome. Irish, Italian, Jewish, Polish, British, French, German, and Russian people, whether as ethnic entities or national representatives, have dotted the landscape of TV drama, providing the safe spice of white life, entertaining trills and flourishes over the basso ostinato of social whiteness.

In other words, to pivot the debate on race and television purely on whether and how people of color have figured, on or behind the screen or in the audience, is already to miss the point. What was consistently projected, without public fanfare, but in teeming myriads of programs, news priorities, sportscasts, movies, and ads, was the naturalness and normalcy of social whiteness. Television visually accumulated the heritage of representation in mainstream U.S. science, religion, education, theater, art, literature, cinema, radio, and the press. According to television representation, the United States was a white nation, with some marginal "ethnic" accretions that were at their best when they could simply be ignored, like well-trained and deferential maids and doormen. This was even beyond being thought a good thing. It was axiomatic, and self-evident.

Thus, American television in its first two generations inherited and diffused, on an hourly and daily basis, a mythology of whiteness that framed and sustained a racist national self-understanding. U.S. television was not alone in this respect. Nations as different as Australia, Brazil, Britain, France, and Mexico shared in common a television representation of people of color that rather systematically excluded them or was content to stereotype them, and a set of news values that privileged whiteness as normal. Joel Zito Araújo has provided an absorbing account of the painful struggle to represent Afro-Brazilians (50 percent of the population) in Brazil's hugely popular telenovelas. Nonetheless, none of these television systems had anything like the global reach of American TV. The implications of American TV for helping cement racially prejudicial attitudes elsewhere in the world, for normalizing certain levels of white racism, would make a fitting topic for international communication research.

There is a second issue in American television, which has become increasingly significant at the beginning of the 21st century. Insofar as the televisual hegemony of social whiteness has been critiqued, either on television itself, or on video, or in print, it has most often tended to focus on African-American issues. Yet, in reviewing racism and ethnicity in U.S. television, we need not downplay four centuries of African-American experience and contribution in order to recognize as well the importance of Native American nations, Lati-
nos, and Asian Americans in all their variety. Thus, in this essay, attention will be paid, so far as research permits, to each one of these four groupings, although there will not be space to treat the important subgroupings (Haitians, Vietnamese, etc.) within each. The discussion will commence with representation, mainstream and alternative, and then move on to employment patterns in the TV industry, broadcast and cable. The conclusion will introduce the so far underresearched question of racism, ethnicity, and TV audiences. Before doing so, however, a more exact definition is needed of racism in the U.S. context.

First, racism is expressed along a connected spectrum, from the casual patronizing remark to the sadism of the prison guard, from avoidance of skin contact to the starving of public education in inner cities and reservations, or to death rates among infants of color higher than in some Third World countries. Racism does not have to take the form of lynching, extermination camps, or slavery to be systemic and virulent—yet simultaneously dismissed as of minor importance or even as irrelevant by the white majority.

Second, racism may stereotype groups differently. Class is often pivotal here. Claimed success among Asian Americans and Jews is attacked just as is the alleged inability to make good among Latinos and African Americans. Multiple Native American nations with greatly differing languages and cultures are lumped together in a generic “Indian” category. Gender plays a role too: white stomachs will contract at supposedly truculent and violence-prone men of color, but ethnic minority women get attributed with pliancy—even, for white males, to presuming their special eagerness for sexual dalliance.

Third, racism in the United States is binary. People of mixed descent are not permitted to confuse the issue but belong automatically to a minority group of color; witness the public debate around the appropriateness of a “multiple” category for racial/ethnic self-identification in the 2000 census. Ethnic minority individuals whose personal cultural style may be read as emblematic of the ethnic majority’s are quite often responded to as traitors, and thus they are either warmly regarded as the “good exception” by the white majority or derisively labeled as “self-hating” by the minority.

Lastly, as Robert Entman and Andrew Rojecki have argued, racist belief has changed to being more supple, and “modern” racism has shed its biological absolutism. In the “modern” version, the civil rights movement won, racial hatred is past, and talented individuals now make it. Therefore, continuing ethnic minority poverty is solely the minority’s overall cultural/attitudinal fault.

Mainstream Representation

In discussing mainstream representation, it is vital to note three issues. One is the importance of historical shifts in the representation of these issues, especially since the mid-1980s, but also at certain critical junctures before then. The second is the importance of taking into account the entire spectrum of what television provides, including ads (perhaps 20 percent of U.S. TV content), weathercasting, sitcoms, documentaries, sports, MTV, non-English-language programming, religious channels, old films, breaking news, reality programs, and talk shows. Too many studies have zeroed in on one or another format and then taken it as representative of the whole. Here we will try to engage with the spectrum, although space and available research will put most of the focus on whites and blacks in mainstream television news and entertainment. The third is the strong concentration of African Americans in comedy and crime scenarios. Quality of representation is as important as quantity.

Historically, as J. Fred MacDonald has shown, U.S. television perpetuated patterns established in U.S. cinema, radio, theater, and other forms of public communication and announced people of color overwhelmingly by their absence. It was not that these people were malevolently stereotyped or denounced. They simply did not appear to exist. If they surfaced, it was almost always as wraiths, silent black butlers smiling deferentially, Latino field hands laboring sweatily, or Indian braves whooping wildly against the march of history. Speaking parts were rare, heavily circumscribed, and typically an abusive distortion of actual modes of speech. But the essence of the problem was virtual nonexistence.

Thus, the TV industry collaborated to a marked degree with the segregation that has marked the U.S. nation, once legally and residentially, now residentially. Programs and advertisements that might have inflamed white opinion in the South were strenuously avoided, partly in accurate recognition of the militancy of some opinions that might lead to boycotts of advertisers, but partly yielding simply to inertia in defining that potential as a fact of life beyond useful reflection.

The programs shunned were rarely in the slightest degree confrontational, or even suggestive of interracial romance. The classic case was The Nat “King” Cole Show, which premiered on NBC in November 1956, and which was eventually taken off for good in December of the following year. A Who’s Who of distinguished black as well as white artists and performers virtually gave their services to the show, and NBC strove to keep it alive. But the program could not find a national sponsor, at one point having to rely on no less
than 30 sponsors in order to be seen nationwide. Cole himself explicitly blamed the advertising agencies' readiness to be intimidated by the White Citizens Councils, the spearhead of resistance to desegregation in southern states.

This was not the only occasion that African Americans were seen on the TV screen in that era. A number of shows, notably The Ed Sullivan Show, made a point of inviting black performers on to the screen. Yet entertainment was only one thin slice of the spectrum. Articulate black individuals, such as Paul Robeson, with a clear critique of the racialization of the United States, were systematically excluded from expressing their opinions on air (in his case, on the pretext he was a communist).

This generalized absence, and univocal whiteness, was first punctured by TV news coverage of the savage handling of civil rights demonstrators in the latter 1950s and early 1960s. Images of police dogs, fire hoses, and billy clubs being unleashed against unarmed black demonstrators in Montgomery, Alabama, and white parents—with their children standing by their side—spewing obscenities and hurling rocks at Martin Luther King, Jr.'s march through Cicero, Illinois, may still have portrayed African Americans as largely voiceless victims, but the coverage was nonetheless able to communicate the activists' dignity under fire, whereas their white persecutors communicated their own monstrous inhumanity. The same story repeated itself in the school desegregation riots in New Orleans in 1964 and Boston in 1974.

U.S. television since then has made sporadic attempts to address these particular white-black issues, with such shows as Roots, The Cosby Show, and Eyes on the Prize, and through a proliferation of black newscasters at the local level, but all the while cleaving steadfastly to three traditions. First, there is the continuing virtual invisibility of Latinos, Native Americans, and Asian Americans. Indeed, some studies indicate that for decades Latinos have hovered around 1 to 2 percent of characters in TV drama, very substantially less than their percentage of the population. Darrell Hamamoto similarly charges that, "By and large, TV Asians are inserted in programs chiefly as semantic markers that reflect upon and reveal telling aspects of the Euro-American characters." Second, the tradition of color-segregating entertainment has changed but little. Even though black shows began to multiply considerably from the latter 1980s, casts have generally been white or black (and never Latino, Native, or Asian). Third, the few minority roles in dramatic TV have frequently been of criminals and drug addicts. This pattern has intensively reinforced, and seemingly been reinforced by, the similar racial stereotyping common in "reality TV" police shows and local TV news programs. The standard alternative role for African Americans has been comic actor (or stand-up comic in comedy shows). Commenting upon the wider cinematic tradition of Latino portrayals, Charles Ramírez-Berg has identified the bandit/greaser, the mixed-race slut, the buffoon (male and female), the Latin lover, and the alluring Dark Lady, as five hackneyed and offensive tropes.

Roots (1977) and Roots: The Next Generations (1979) confounded the TV industry's prior expectations, with up to 140 million viewers for all or part of the first miniseries, and over 100 million for The Next Generations. For the first time on U.S. television, some of the realities of slavery—brutality, rape, enforced deculturation—were confronted over a protracted period, and through individual characters with whom, as they fought to escape or survive, the audience could identify. Against this historic first was the individualistic focus on screenwriter Alex Haley's determined family, presented as "immigrants-times-ten" fighting an exceptionally painftul way over its generations toward the American Dream myth of all U.S. immigrants. Against it, too, was the emphasis on the centuries and decades before the 1970s, which the ahistorical vector in U.S. culture easily cushions from application to the often devastating here and now. Nonetheless, it was a signal achievement.

The Cosby Show (1984–92) was the next milestone. Defeating industry expectations just as Roots had, the
series scored exceptionally high continuing ratings right across the nation. The show attracted a certain volume of hostile comment, some of it smugly supercilious. The fact it was popular with white audiences in the South, and in South Africa, was a favorite quick shot to try to debunk it. Some critics claimed it fed the mirage that racial injustice could be overcome through individual economic advance; others posited that it primly fostered Reaganite conservative family values. Both of the analyses were indeed easily possible readings of the show within contemporary U.S. culture.

Herman Gray, one of the few critics to acknowledge the role of the show in opening the gate to a large number of black television shows and to new professional experience and openings for many black media artists, is also correct in characterizing The Cosby Show as assimilationist. It hardly ever directly raised issues of social equity, except in interpersonal gender relations. Nonetheless, in the context of the nation’s and the industry’s history, the show could have been exquisitely correct—and never once have hit the screen.

Eyes on the Prize (1987; 1990) allows a much more straightforward discussion. A documentary series on the American civil rights movements from 1954 to 1985, it too marked a huge watershed in U.S. television history. Partly, its achievement was to bring together historical footage with movement participants, some very elderly, who could supply living oral history. Partly, too, its achievement was that producer-director Henry Hampton consistently included in the narrative the voices of segregationist foes of the movement, on the ground that the story was theirs, too. This gave the opportunity for self-reflection within the white audience, rather than easy self-distancing.

However, the series was on PBS and thus never drew the kind of audience Roots did. In the United States the public appetite for documentaries was also at something of a low toward the end of the century, as opposed to Europe and Russia, where the documentary form was much more popular. Eyes’ influence would be slower than Roots or Cosby achieved, though significant through video rentals and college courses. Its primary significance for present purposes is its demonstration of what could be done televisually, but what was never contemplated to be undertaken by the commercial TV companies.

In 1996, PBS screened a similar four-part series, Chicano!, by documentarist Héctor Galán on the Chicano social movements in the southwest, a story much less known even than the civil rights movements.

These then were turning points, not in the sense of an instantaneous switch, but in terms of setting a high-water mark that expanded the definition of the possible in U.S. TV. The other turning point was the proliferation, mostly locally, of black and other ethnic minority group individuals as newscasters. Although newscasters rarely had the clout to write their own bulletin scripts, let alone decide on news priorities for reporting or investigation, they had the cachet of a very public, trusted role. To that extent, this development did carry considerable symbolic prestige for the individuals concerned. As of 2001, the Radio-Television News Directors Association found 10 percent of general managers and 14 percent of TV news directors were people of color. This was a move in the right direction but still left minorities vastly underrepresented in these key authority positions.

Only as time went on and racial news values and priorities remained the same or similar despite the change in faces, did the limits of this development begin to become more apparent. At about the same time, most news bulletins, especially local ones, were deteriorating into “infotainment,” with lengthy weather and sports reports incorporated into the half hour. The latter trend continues in the early 2000s. With news audience, highly concentrated in the over-50 age group, programmers expend much effort to make news still more entertaining to younger audiences.

Alternative Representations

Alternative representation became somewhat more frequent after The Cosby Show’s success. In part, this change was also due to the steadily declining price of video cameras and editing equipment, to support from federal and state arts commissions, and to developments in cable TV, especially public access, which opened up more scope for independent video makers to develop their own work, some of which could be screened locally and even nationally.

From the mid-1990s, first FOX and then imitators WB and UPN sought to challenge the dominance of the “Big Three” networks (ABC, CBS, and NBC) by offering fresh programming, including a series of shows with African-American content. Kristal Brent Zook suggests that while this was a rare and exciting moment in a number of instances, the fundamental impetus was competitive rather than inclusive, and that once the new networks began to establish themselves with advertisers their innovative programming began to tail off, especially with regard to shows featuring African Americans. On cable, Nickelodeon and the expensive premium channels (HBO, Showtime) also offered some innovation, such as the children’s series The Brothers Garcia (Nickelodeon), the Latino-themed Resurrection Boulevard (Showtime), and some
strong documentaries and docudramas with African-American themes (HBO). Quite often too, HBO's casting and scripting met the "quality" test by having minority-ethnic characters in nonstereotypical roles, such as the Puerto Rican mortician and the gay black cop played by Freddy Rodriguez and Mathew St. Patrick, respectively, in Six Feet Under.

A further development was the emergence of black and Latino cable and UHF channels such as Black Entertainment Television (BET), Univision, and Telemundo, together with leased ethnic-group program slots in metropolitan areas. With respect to the latter, Hamid Naficy has explored the world of expatriate Iranian programming in Los Angeles and thereby opened up a whole new perspective on migration, ethnicity, and "American-ness" as they play out in television. These new developments were often contradictory. The often cheap-shot satirization of racial issues on In Living Color; the question Gray and others raise concerning BET programming as often simply a black reproduction of white televisual tropes; the role of black sitcoms and stand-up comics as a new version of an older tradition in which blackness is acceptable as farce—each of these highlights in some way the tensions in television's representations of race.

Another contradictory example is Univision, effectively dominated by Mexico's near-monopoly TV giant, Televisa. Its entertainment programs are mostly a secondary market for Televisa's products, and while they are certainly popular, they have had little direct echo of Chicano or other Latino life in the United States. At the same time, as América Rodríguez has shown, Univision's news program has cultivated, for commercial reasons of mass appeal, pan-ethnic Spanish that over time may arguably contribute to a pan-Latino U.S. cultural identity, rather than the Chicano, Caribbean, Central and South American fragments that constitute the Latino minority.

McDonald goes so far as to forecast cable TV's multiple channels as an almost automatic technical solution to the heritage of unequal access for African Americans. However, the "technological fix" he envisions would not of itself address the urgent national need for dialogue on race and whiteness in television's public forum, because a multichannel environment may resemble a Babel of voices mutually insulated from each other rather than engaged with each other. Nor does his proposal seem to bargain with the huge costs of generating mostly new product for even a single cable channel.

Scattered as they are over multiple tiny distributors or self-distributed, it is difficult to generalize about the profusion of single features and documentaries generated by video artists of color and/or on ethnic themes. Suffice it to say that distribution—cable channels notwithstanding—is the largest single problem that such work encounters. (Sources of information on these videos include Asian-American CineVision and the Black Filmmakers Foundation, both in New York City, and Facets Video in Chicago.)

In examining alternatives, finally, we need to take stock of some of the mainstream alternatives to segregated casts, such as one of the earliest, Hawaii Five-O, and the later Miami Vice and NYPD Blue. The first was definitely still within the "Tonto" tradition insofar as the ethnic minority cops were concerned ("Yes, boss" seemed to be the limit of their vocabulary). Miami Vice's tri-ethnic leads were less anchored in that tradition, although Edward James Olmos as the police captain often approximated Captain Dobey in Starsky and Hutch, apparently only nominally in charge. NYPD Blue carried over some of that tradition as regarded the African-American Lieutenant Fancy's role, but it actually starred Latinos in key police roles.

A central issue on NYPD Blue, however, raised once more the question of "modern" racism. A repetitive feature of the show was the skill of the police detectives in pressuring people they considered guilty to sign confessions and not to avail themselves of their legal rights. Two comments are in order here. One is that a police team is shown at work, undeflected by racial animosity, strenuously task-driven. It is a theme with its roots in many World War II movies, although in those films, ethnicity was generally the focus rather than race. The inference plainly to be drawn was that atavistic biases should be laid aside in the face of clear and present danger, with the contemporary "war" being against the constant tide of crime.

Second, it is a fact that the number of U.S. prisoners who are African Americans and Latinos is vastly disproportionate to the size of these subpopulations relative to the U.S. population as a whole. On NYPD Blue we see firm unity among white, black, and Latino police professionals in defining aggressive detection and charge practices as legitimate and essential, even though it is procedures like those that, along with racially differential sentencing and parole procedures, have often helped create that huge racial imbalance in U.S. prisons.

The Television Industry and Race Relations

Except for a clutch of public figures led by Bill Cosby, CNN's political analyst Bernard Shaw (who retired in 2001), talk show hosts Oprah Winfrey and Geraldo Rivera; moderately influential behind-the-camera indi-
individuals such as Susan Fales, Charles Floyd Johnson, Ralph Farquhar, Thomas Carter, and Suzanne de Passe; and local newscasters, the racial casting of television organizations has been distinctly leisurely in changing. Cable television has the strongest ratio of minority personnel, but this should be read in connection with its lower pay scales and its minimal original production schedules. Especially in positions of senior authority, television is still largely a white enterprise.

The Federal Communications Commission's (FCC) statistics are often less than helpful in determining the true picture and represent a classic instance of bureaucratic response to the demand to collect evidence by refusing to focus with any precision on the matter in hand. In the National Association of Minorities in Communication survey of cable TV, the same phenomenon was evident, with a number of multiple system operators (MSOs) including not only executives with direct influence over programming (e.g., marketing) in their minority/ethnic headcount but also human resources personnel. Given the undoubted intelligence of those who communicate these statistics, it is hard to see other than a pattern of deliberate obfuscation at work. The FCC's two top cable and broadcast employment categories, for example (Officials and Managers, and Professionals), are extremely broad and render completely foggy the degree of real authority entailed over the process. Drawing meaningful conclusions from minority/ethnic percentages within those categories is consequently impossible. Unless and until cable and broadcast organizations see fit to reveal clearly the holders of significant executive power and their ethnic status, it is logical to assume that television boardrooms are as white as U.S. corporate boardrooms in general, and yet those boardrooms are, to belabor the obvious, where the fundamental television decisions are made. Whether or not this exclusion of racial minorities from the corridors makes immediate market sense, the implications of the television industry's decision-making process for the immediate future of American life and culture are very disturbing ones.

Data from 2001 indicated 47 TV stations, 75 percent of which were UHF, had minority/ethnic owners. Eight of these stations were in California; seven in Puerto Rico; seven in Texas; two each in Connecticut, Illinois, Indiana, Mississippi, New Jersey, New York, and Wisconsin; and one each in Arizona, Colorado, Hawaii, Louisiana, Michigan, Vermont, Virginia, and Washington, D.C. This was a higher number than five years previously, but still a pathetic coda when 30 percent of the U.S. population is identified as minority/ethnic. As of early 2001, a Federal Appeals Court, responding to a case brought by three broadcast associations, actually struck down FCC rules promoting the hiring of people of color and women in the broadcast industry. A CBS spokeswoman announced that CBS's "commitment to diversity is as strong as ever," which was hardly reassuring.

The question then at issue is to what degree this absence of minorities from positions of TV authority determines the mainstream representation patterns surveyed above. One might argue that if no customary formats or tropes were changed, and if none of the legal, financial, and competitive vectors vanished, then a television executive stratum composed entirely of ethnic minority individuals would likely proceed to reproduce precisely the same patterns of representation.

However, this position is an abstract one and only helps to shed light on the pressures to conform faced by the few ethnic minority individuals scattered through the TV hierarchy. Sociologically, were the percentage of executive positions held by minorities to increase to within even hailing distance of their percentage of the national population, a much wider internal dialogue would be feasible concerning the very limits of the possible in television. We come back, in a sense, to *Cosby.*

At the time that program aired, the proportion of blacks and Latinos who watched TV was higher than the national average, and these two minority groups accounted in 1995 for at least $300 billion in consumer spending a year. Therefore, by the mid-1990s, the economic logic of advertising seemed to point toward increasing inclusiveness on TV. How this clash between economic logic and inherited culture would work out remained to be seen. The efforts of advocacy groups, such as the National Association for the Advancement of Colored People (NAACP), the National Council of La Raza, Children Now, and others, became more intensive from 1993 onward, and in 2000 many joined the Multi-Ethnic Coalition, monitoring and publicly critiquing failures of representation.

**Audience and Spectatorship**

The most complex issue centers on how viewers process televisual content related to race and ethnicity. It has already been argued that decades of daily programs have mostly underwritten the perception of the United States as, at its core, a white nation with a white culture, rather than a multicultural nation beset by entrenched problems of ethnic inequity. Television fare has obviously not been a lone voice in this regard, nor has it been anything resembling a steady opposition voice. This judgment clearly transcends interpretations of particular programs or even genres. It is sufficiently loose in formulation to leave its plausible practical
consequences open to extended discussion. However, given the ever greater dominance of television in U.S. culture, TV's basic vision of the world can hardly be dismissed as impotent.

Historically, it has been a vision likely to reassure the white majority that it has little to learn or benefit from people of color. Rather, TV coverage of immigration and crime has made it much easier to be afraid of ethnic and racial minorities. George H.W. Bush's manipulation of the Willie Horton case for a 1988 campaign commercial (with Horton representing the specter of the vicious black rapist aided and abetted by a liberal Democrat—Bush's opponent, Michael Dukakis) had even the nation's vice president (and president-to-be) drawing on, and thus endorsing, the standard tropes of local TV news. Particularly following the September 11, 2001, terrorist assaults on New York and Washington, D.C., but also for some 20 years before that, television coverage of Arabs and Muslims, while often maintaining an abstract theme of tolerance and civil rights, did much at the same time to encourage many members of the U.S. public to distrust as potential terrorists and enemies anyone who answered to (or appeared to answer to) those identities. The suspicious reaction and backlash was reminiscent of the anti-Chinese culture that formed the backdrop for hostility toward Japanese Americans following the Pearl Harbor attack 60 years previously.

Naturally, not all of the white majority have endorsed or believed that vision. However, it has been difficult to muster a coherent and forward-looking public debate about race, whiteness, and the nation's future, given TV's continuing refusal, in the main, to squarely face the issue. This medium was not the only institution with that responsibility, nor the unique forum available. But TV was and is crucial to any solution.

The detailed analysis of audience reception of particular shows or series is a delicate business, linking as it will into the many filaments of social and cultural life for white audiences and for audiences of color. It is, however, a sour comment on audience researchers that so little has been done to date to explore how TV has been appropriated by various ethnic minority audiences, or how majority audiences handle ethnic themes. Commercial research has been content simply to register viewer levels by ethnicity, whereas academic research, with a scattering of exceptions, has rarely troubled to explore ethnic diversity in processing TV, despite the outpouring of ethnomorphic audience studies in the 1980s and 1990s.

1883
Radio Corporation of America
U.S. Radio Company

In 1919, General Electric (GE) formed a privately owned corporation to acquire the assets of the wireless radio company American Marconi from British Marconi. The organization, known as the Radio Corporation of America (RCA), was formally incorporated on October 17 of that year. Shortly thereafter, American Telephone and Telegraph (AT&T) and Westinghouse acquired RCA assets and became joint owners of RCA. In 1926, RCA formed a new company, the National Broadcasting Company (NBC), to oversee operation of radio stations owned by RCA, General Electric, Westinghouse, and AT&T.

In the early 1930s, the Justice Department filed an antitrust suit against the company. In a 1932 consent decree, the organization's operations were separated, and GE, AT&T, and Westinghouse were forced to sell their interests in the company. RCA retained its patents and full ownership of NBC. Shortly after becoming an independent company, RCA moved into new headquarters in the Rockefeller Center complex in New York City, into what later became known as Radio City.

While other American companies were cutting back on research expenditures during the depression years, David Sarnoff, president of RCA since 1930, was a staunch advocate of technological innovation. He expanded RCA’s technology research division, devoting increased resources to television technology. Television pioneer Vladimir Zworykin was placed in charge of RCA’s television research division. RCA acquired competing and secondary patents related to television technology, and once the organization felt that the technology had attained an appropriate level of refinement, it pushed for commercialization of the new medium.

In 1938, RCA persuaded the Radio Manufacturers Association (RMA) to consider adoption of its television system for standardization. The RMA adopted the RCA version, a 441-line, 30-pictures-per-second system, and presented the new standard to the FCC on September 10, 1938. Upon the recommendation of the RMA, the Federal Communications Commission (FCC) scheduled formal hearings to address the adoption of standards. The hearings, however, did not take place until January 1940.

In the interim, RCA began production of receivers and initiated a limited schedule of television programming from the New York transmitters of NBC, basing their service upon the RMA-RCA standards. The service was inaugurated in conjunction with the opening of the New York World’s Fair on April 30, 1939, and continued throughout the year. At the commission’s hearing addressing standards on January 15, 1940, opposition to the proposed RMA standards emerged. The two strongest opponents of the standard were DuMont Laboratories and Philco Radio and Television. One of the criticisms voiced by both organizations was the assertion that the 441-line standard did not provide sufficient visual detail and definition. Given the lack of a clear industry consensus, the Commission did not act on the proposed RMA standards.

Despite the absence of official approval, RCA continued to employ the RCA standards and announced plans in early 1940 to increase production of television receivers, cut the price to consumers by one-third, and double its programming schedule. While some commentators saw this as a reasonable and progressive action, the Commission perceived it as a step toward prematurely freezing the standards in place and, as a consequence, scheduled another set of public hearings for April 8, 1940. At these hearings, opponents argued that the action taken by RCA was stifling research and...
development into other alternative standards. As a result of the hearings, the Commission eliminated commercial broadcasting until further development and refinement had transpired. Furthermore, the Commission asserted that commercialization of broadcasting would not be permitted until there was industry consensus and agreement on one common system. To marshal industry-wide support for a single standard, the RMA formed the National Television System Committee (NTSC). The NTSC standards, a 525-line, 60-fields-per-second system, were approved by the FCC in 1941.

Several years later, RCA also became a major participant in the establishment of color television standards. In 1949, the organization proposed to the FCC that its dot sequential color system, which was compatible with existing black and white receivers, be adopted as the new color standard. Citing shortcomings in the compatible systems offered by RCA and other organizations, the FCC opted to formally adopt an incompatible color system offered by the Columbia Broadcasting System as the color standard. RCA appealed this decision all the way to the Supreme Court, while simultaneously refining its color system. A second NTSC was formed to examine the color issue. In 1953, the FCC reversed itself and endorsed a modified version of the RCA dot sequential compatible color system offered by the NTSC.

In the 1950s, RCA continued the military and defense work in which it had been heavily engaged during World War II. In the late 1950s and early 1960s, the company became involved with both satellite technology and the space program. During the 1960s, RCA began to diversify as the company acquired such disparate entities as the publishing firm Random House and the car rental company Hertz. Throughout the 1970s and early 1980s, RCA began to divest itself of many of its acquired subsidiaries. In June 1986, RCA was acquired by General Electric, the organization that had originally established it as a subsidiary. GE retained the brand name RCA, established NBC as a relatively autonomous unit, and combined the remainder of RCA's businesses with GE operations.

Radio Television News Directors Association

U.S. Professional Organization

The Radio Television News Directors Association (RTNDA) is the trade organization representing broadcast news professionals in the United States. Founded in 1946, when radio was the dominant broadcast news medium, the association now serves all electronic media, with the bulk of its membership comprised of local television news professionals. Its primary focus is on the needs of broadcast news managers. While membership is open to all electronic journalists as well as students, educators, suppliers, and other interested parties, only members who exercise significant editorial supervision of news programming are allowed to vote.

Among the organization's services to members are a monthly magazine, RTNDA Communicator, and an annual convention held in the fall and featuring training sessions, notable speakers, technology demonstra-
Radio Television News Directors Association

tions, and an exhibit area for suppliers of news products and services. Augmenting its printed magazine is the RTNDA website (http://www.rtnda.org), which provides such member services as job listings, a talent bank for posting résumés, and a membership directory. Other ongoing member services include a resource catalog of related books and tapes, and industry research projects that examine pertinent issues such as salaries, staff size, and profitability.

The number and scope of RTNDA services reflect the dramatic changes experienced by the broadcast news industry in recent years. Among such developments have been the growing profitability and expansion of local television news; the emergence of new outlets such as Cable News Network, MSNBC, C-SPAN, and online information services; and advances in the technology of news gathering, particularly in live remote broadcast capabilities and satellite transmission. In addition, local TV news operations, unlike their newspaper counterparts, are generally locked in fierce three-way competition with other local news programs in the same market. The pressure to maximize ratings often puts the news manager in the precarious situation of having to decide between news values and entertainment values. The nature of a commercial medium such as television generally makes such conflict unavoidable.

Through its ongoing activities and services, RTNDA strives to set and promote professional standards for electronic journalists. The RTNDA Code of Ethics is published in each issue of the organization's monthly magazine. The code states that "the responsibility of radio and television journalists is to gather and report information of importance and interest to the public accurately, honestly, and impartially," and provides guidelines for fair, balanced reporting that respects the dignity and privacy of subjects and sources, avoiding deception, sensationalism, and conflicts of interest.

RTNDA honors professional excellence through its Edward R. Murrow Awards in the areas of spot news coverage, feature reporting, series, investigative reporting, and overall newscast (awarded separately for small- and large-market stations). The organization's top honor is the Paul White Award, given each year to an individual for lifetime achievement in the field of broadcast journalism. RTNDA also sponsors the Radio Television News Directors Foundation, a nonprofit organization that engages in research, education, and training activities related to such topics as journalistic ethics, the impact of technology on electronic news gathering, the role of electronic journalism in politics and public policy, environmental news coverage, and cultural diversity in the profession.

Randall, Tony (1920–2004)

U.S. Actor

Tony Randall, an Emmy Award-winning television and film actor, was most noted for his role as the anal-retentive Felix Unger in the ABC sitcom The Odd Couple. A popular guest on numerous variety and talk shows, Randall was connected with all three major broadcast networks, as well as with PBS.

Randall began his career in radio in the 1940s, appearing on such shows as the Henry Morgan Program and Opera Quiz. From 1950 to 1952, Randall played Mac on the melodramatic TV serial One Man's Family. He then went on to play Harvey Weskit, the brash, overconfident best friend of Robinson Peepers (Wally
©Stockline/Courtesy of the Everett Collection

Cox) in the live sitcom *Mr. Peepers* (1952–55). After finding a niche in films, including numerous roles in romantic comedies, Randall won the part of Felix Unger in the ABC television version of *The Odd Couple* (1970–75).

Randall played Unger in a Chicago stage version of *The Odd Couple*, but the Broadway and film versions of *The Odd Couple* became established hits with different stars in the role. Nevertheless, Randall lent numerous additions to the Felix character. Drawing upon his interest in opera, Randall had Felix become an opera lover. Randall also added the comedic honking noises that accompanied Felix’s ever-present sinus attacks. Much like television costar Jack Klugman’s close connection to the Oscar Madison role, Randall became synonymous with Unger.

Despite low ratings for the series, ABC, the third-place network, allowed *The Odd Couple* a five-season run. In 1975, Randall won an Emmy for Best Lead Actor for his role as Felix. A popular guest on numerous variety shows, Randall was present on two Emmy Award-winning variety show episodes, *The Flip Wilson Show* (1970) and *The Sonny and Cher Show* (1971). Randall’s frequent appearances as a guest on the *Tonight Show* won him a role playing himself in Martin Scorsese’s *King of Comedy* (1983).

Beginning in 1976, Randall starred in the CBS sitcom *The Tony Randall Show*. Randall played Walter Franklin, a judge who deliberated over his troubled family as much as he did over the cases presented to him in his mythical Philadelphia courtroom. In 1981, Randall returned to television playing Sidney Shorr in NBC’s *Love, Sidney*, a critically acclaimed yet commercially unsuccessful sitcom canceled in 1983. The series did attract some criticism from religious and culturally conservative communities. In *Sidney Shorr*, the made-for-television movie that preceded the series, Randall’s character was presented as homosexual. In the series, this aspect of the role was simply dropped.

Randall reprised his Felix Unger role in a 1993 TV-movie version of *The Odd Couple*. He has also hosted the PBS opera series *Live from the Met* and continued to appear frequently on such talk shows as *The Late Show with David Letterman*. However, from 1991, Randall focused his professional efforts primarily on the National Actors Theatre, a classical repertory company he founded and with which he frequently acted.

**Rather, Dan (1931–)**

U.S. Broadcast Journalist

In a career in journalism that is now in its fifth decade, Dan Rather has established himself as a crucial figure in broadcast news. Anchor of the *CBS Evening News* since 1981, Rather has enjoyed a long and sometimes colorful career in broadcasting. Rather has interviewed every U.S. president from Dwight D. Eisenhower to Bill Clinton, and international leaders from Nelson Mandela to Boris Yeltsin. In 1990, he was the first American journalist to interview Saddam Hussein after Iraq's invasion of Kuwait. Rather’s hard-hitting journalistic style has sometimes been as much discussed as the content of his reporting, particularly in the case of well-publicized contretemps with Richard Nixon and George Bush.

Rather began his career in journalism in 1950 as an Associated Press reporter in Huntsville, Texas. He subsequently worked as a reporter for United Press International, for KSAM Radio in Huntsville, for KTRH Radio in Houston, and at the *Houston Chronicle.* He became news director of KTRH in 1956 and a reporter for KTRH-TV in Houston in 1959. He was news director at KHOU-TV, the CBS affiliate in Houston, before joining CBS News in 1962 as chief of the southwest bureau in Dallas.
In 1963, Rather was appointed chief of CBS's southern bureau in New Orleans, responsible for coverage of news events in the South, Southwest, Mexico, and Central America. He reported extensively on southern racial strife, becoming well acquainted with Dr. Martin Luther King, Jr. On November 22, 1963, in Dallas, Rather broke the news of the death of President John F. Kennedy. A few weeks after the assassination, he became CBS's White House correspondent.

Rather attracted notice in 1974 for an exchange with Richard Nixon. At a National Association of Broadcasters convention in Houston, Rather was applauded when he stood to ask a question, drawing Nixon's query, "Are you running for something?" Many saw Rather's quick retort, "No, sir, Mr. President. Are you?" as an affront to presidential dignity.

A year later, Rather was selected to join the roster of journalists on CBS's 60 Minutes, and in 1981, after lengthy negotiations with the network, Rather became the successor to Walter Cronkite, anchoring the CBS Evening News. During Rather's tenure, he has sometimes been associated with striking, even bizarre, moments of news coverage. For one week in September 1986, Rather concluded his nightly broadcast with the solemn, ominous-sounding, single-word sign-off "Courage." The line, seen as an attempt to respond to or replace audience familiarity with Cronkite's "And that's the way it is," attracted widespread media coverage and more than a little satire. In October 1986, Rather was attacked outside the CBS building by thugs reportedly demanding "What's the frequency, Kenneth?" and he subsequently appeared on the air with a swollen and bruised face. In September 1987, Rather walked off the CBS Evening News set in protest over the network's decision to allow U.S. Open tennis coverage to cut into the broadcast. His action on this occasion left CBS with a blank screen for more than six minutes. This moment was recalled in an explosive live interview Rather conducted with Vice President George Bush in January 1988. When Rather pressed Bush about his contradictory claims regarding his involvement in the Iran-Contra scandal, the vice president responded by asking Rather if he would like to be judged by those minutes resulting from his decision to walk off the air.

Connie Chung joined Rather on the CBS Evening News in a dual anchor format in 1993 amid constant speculation that he did not approve of the appointment. When Chung left the Evening News spot in 1995, he did not seem displeased. Rather also continues to anchor and report for the CBS News broadcast 48 Hours (which premiered in 1988). He was the first network journalist to anchor an evening news broadcast and a prime-time news program at the same time, a practice which has since been adopted by other networks.

Rather's career reflects the passing of the era in which one anchor, Walter Cronkite, was unproblematically "the most trusted man in America." Along with Tom Brokaw and Peter Jennings, Rather is one of a triumvirate of middle-aged white male anchors who dominate the U.S. national nightly news. The three network news broadcasts continue to be locked in a tightly contested ratings race, and these highly paid anchors are decidedly valuable properties, the "stars" of television news. CBS, cognizant of this state of affairs, offered Rather a new three-year contract in 2002, which he signed.

Ratings

Ratings are a central component of the television industry, almost a household word. They are important in television because they indicate the size of an audience for specific programs. Networks and stations then set their advertising rates based on the number of viewers of their programs. Network revenue is thus directly related to the ratings. The word “ratings,” however, is actually rather confusing because it has both a specific and a general meaning. Specifically, a rating is the percentage of all the people (or households) in a particular location tuned to a particular program. In a general sense, the term is used to describe a process (also referred to as “audience measurement”) that endeavors to determine the number and types of viewers watching TV.

One common rating (in the specific sense) is the rating of a national television show. This calculation measures the number of households—out of all the households in the United States that have TV sets—watching a particular show. There are approximately 100 million households in the United States, and most of them have TV sets. If 20 million of those households are watching NBC at 8:00 p.m., then NBC’s rating for that time period is 20 (20 million / 100 million = 20). Another way to describe the process is to say that one rating point is worth 1 million households.

Ratings are also taken for areas smaller than the entire nation. For example, if a particular city (Your-town) has 100,000 households and 15,000 of them are watching the local news on station KAAA, that station would have a rating of 15. If Yourtown has a population of 300,000 and 30,000 people are watching KAAA, the station’s rating would be 10. And because television viewing is becoming less and less of a group activity with the entire family gathered around the living-room TV set, most ratings are expressed in terms of people rather than households.
Many calculations are related to the rating. Sometimes people, even professionals in the television business, confuse them. One of these calculations is the share. This figure reports the percentage of households (or people) watching a show out of all the households (or people) who have the TV set on. So if Yourtown has 100,000 households but only 50,000 of them have the TV set on and 15,000 of those are watching KAAA, the share is 30 \((15,000 / 50,000 = 30)\). Shares are always higher than ratings unless, of course, everyone in the country is watching television.

Another calculation is the cume, which reflects the number of different persons who tune in a particular station or network over a period of time. This number is used to show advertisers how many different people hear their message if it is aired at different times such as 7:00 P.M., 8:00 P.M., and 9:00 P.M. If the total number of people available is 100, five of them view at 7:00, those five still view at 8:00, but three new people watch, and then two people turn the TV off, but four new ones join the audience at 9:00, the cume would be 12 \((5 + 3 + 4 = 12)\). Cumes are particularly important to cable networks because their ratings are very low. Two networks with ratings of 1.2 and 1.3 cannot really be differentiated, but if the measurement is taken over a wider time span, a greater difference will probably surface.

**Average quarter hours (AQH)** are another measurement. This calculation is based on the average number of people viewing a particular station (network, program) for at least 5 minutes during a 15-minute period. For example, if, out of 100 people, 10 view for at least 5 minutes between 7:00 and 7:15, 7 view between 7:15 and 7:30, 11 view between 7:30 and 7:45, and 4 view between 7:45 and 8:00, the AQH rating would be 8 \((10 + 7 + 11 + 4 = 32; 32 / 4 = 8)\).

Many other calculations are possible. For example, if the proper data have been collected, it is easy to calculate the percentage of women between the ages of 18 and 34, or of men in urban areas, who watch particular programs. Networks and stations gather as much information as is economically possible. They then try to use the numbers that present their programming strategies in the best light.

The general ratings (audience measurement) process has varied greatly over the years. Audience measurement started in the early 1930s with radio. A group of advertising interests joined together as a nonprofit entity to support ratings known as "Crossleys," named after Archibald Crossley, the man who conducted them. Crossley used random numbers from telephone directories and called people in about 30 cities to ask them what radio programs they had listened to the day before his call. This method became known as the recall method, because people were remembering what they had listened to the previous day. Crossleys existed for about 15 years but ended in 1946 because several for-profit commercial companies began offering similar services that were considered better.

One of these, the Hooper ratings, was begun by C.E. Hooper. Hooper's methodology was similar to Crossley's, except that respondents were asked what programs they were listening to at the time of the call—a method known as the coincidental telephone technique. Another service, the Pulse, used face-to-face interviewing. Interviewees selected by random sampling were asked to name the radio stations they had listened to over the past 24 hours, the past week, and the past five midweek days. If they could not remember, they were shown a roster containing station call letters to aid their memory. This was referred to as the roster-recall method.

Today the main radio audience measurement company is Arbitron. The Arbitron method requires people to keep diaries in which they write down the stations they listen to at various times of the day. In these diaries, they also indicate demographic features—their age, sex, marital status, etc.—so that ratings can be broken down by subaudiences.

The main television audience measurement company is the A.C. Nielsen Company. For many years Nielsen used a combination of diaries and a meter device called the Audimeter. The Audimeter recorded the times when a set was on and the channel to which it was tuned. The diaries were used to collect demographic data and list which family members were watching each program. Nielsen research in some markets still uses diaries, but for most of its data collection, Nielsen now attaches Peoplemeters to TV sets in selected homes. Peoplemeters collect both demographic and channel information because they are equipped with remote control devices. These devices accommodate a number of buttons, one for each person in the household and one for guests. Each person watching TV presses his or her button, which has been programmed with demographic data, to indicate viewing choices and activities.

There are also companies that gather and supply specialized ratings. For example, one company specializes in data concerning news programs and another tracks Latino viewing.

All audience measurement is based on samples. At present, there is no economical way of finding out what every person in the entire country is watching. Diaries, meters, and phone calls are all expensive, so sometimes samples are small. In some cases, no more than .004 percent of the population is being surveyed. However, the rating companies try to make their sam-
Ratings

people as representative of the larger population as possible. They consider a wide variety of demographic features—size of family, gender and age of head of household, access to cable TV, income, education—and try to construct a sample comprising the same percentage of the various demographic traits as in the general population.

In order to select a representative sample, the companies attempt to locate every housing unit in the country (or city or viewing area), mainly by using readily available government census data. Once all the housing units are accounted for, a computer program is used to randomly select the sample group in such a way that each location has an equal chance of being selected. Company representatives then write or phone people in the households that have been selected, trying to secure their cooperation. About 50 percent of those selected agree to participate. People are slightly more likely to allow meters in their house and to answer questions over the phone than they are to keep diaries. Very little face-to-face interviewing is now conducted because people are reluctant to allow strangers into their houses. When people refuse to cooperate, the computer program selects more households until the number needed for the sample have agreed to volunteer.

Once sample members have agreed to participate, they are often contacted in person. In the case of a diary, someone may show them how to fill it out. In other cases, the diary and instructions may simply be sent in the mail. For a meter, a field representative goes to the home (apartment, dorm room, vacation home, etc.) and attaches the meter to the television set. This person must take into account the entire video configuration of the home—multiple TV sets, VCRs, satellite dishes, cable TV, and anything else that might be attached to the receiver set. The field representative also trains family members in the use of the meter.

People participating in audience measurement are usually paid, but only a small amount, such as five dollars. Ratings companies have found that paying people something makes them feel obligated, but paying them a large amount does not make them more reliable.

Ratings companies try to see that no one remains in the sample very long. Participants become weary of filling out diaries or pushing buttons and cease to take the activities seriously. Soliciting and changing sample members is expensive, however, so companies do keep an eye on the budget when determining how to update the sample.

Once the sample is in order, the data must be collected from the participants. For phone or face-to-face interviews, the interviewer fills in a questionnaire and the data are later entered into a computer. For meters, the data collected are sent over phone lines to a central computer. People keeping diaries mail them back to the company, and employees then enter the data into a computer. Usually, only about 50 percent of diaries are usable; the rest are never mailed back or are so incorrectly filled out that they cannot be used.

From the data collected and calculated by the computer, ratings companies publish reports. These vary according to what was surveyed. Nielsen covers commercial networks, cable networks, syndicated programming, public broadcasting, and local stations. Other companies cover more limited aspects of television. Reports on each night's prime-time national commercial network programming, based on Nielsen Peoplemeters, are usually ready about 12 hours after the data are collected. It takes considerably longer to generate a report based on diaries. The reports dealing with stations are published less frequently than those for prime-time network TV. Generally, station ratings are undertaken four times a year—November, February, May, and July—periods that are often referred to as "sweeps." The weeks of the sweeps are very important to local stations because the numbers produced then determine advertising rates for the following three months. Most reports give not only the total ratings and shares but also information broken down into various demographic categories—age, sex, education, income. The various reports are purchased by networks, stations, advertisers, and any other companies with a need to know audience statistics. The cost is lower for small entities, such as TV stations, than for larger entities, such as commercial networks. The latter usually pay several million dollars a year to receive a ratings service.

While current ratings methods may be the best yet devised for calculating audience size and characteristics, audience measurement is far from perfect. Many of the flaws of ratings should be recognized, particularly by those employed in the industry who make significant decisions based on ratings.

Sample size is one aspect of ratings that is frequently questioned in relation to rating accuracy. Statisticians know that the smaller the sample size the more chance there is for error. Ratings companies admit to this and do not claim that their figures are totally accurate. Most of them are only accurate to within 2 or 3 percent. This was of little concern during the times when ratings primarily centered around three networks, each of which was likely to have a rating of 20 or better. Even if CBS's 20 rating at 8:00 P.M. on Monday was really only 18, this was not likely to disturb the network balance. In all likelihood, CBS's 20 rating at 8:00 Tuesday evening was really a 22, so numbers evened out. Now that there are many sources of pro-
programming, however, and ratings for each are much lower, statistical inaccuracies are more significant. A cable network with a 2 rating might actually be a 4, an increase that might double its income.

Audience measurement companies are willing to increase sample size, but doing so would greatly increase their costs, and customers for ratings do not seem willing to pay. In fact, Arbitron, which had previously undertaken TV ratings, dropped them in 1994 because they were unprofitable.

As access to interactive communication increases, it may be easier to obtain larger samples. Wires from consumer homes back to cable systems could be used to send information about what each cable TV household is viewing. Many of these wires are already in place. Consumers wishing to order pay-per-view programming, for example, can push a button on the remote control that tells the cable system to unscramble the channel for that particular household. Using this technology to determine what is showing on the TV set at all times, however, smack of a “Big Brother” type of surveillance. Similarly, by the 1970s, a technology existed that enabled trucks to drive along streets and record what was showing on each TV set in the neighborhood. This practice, perceived as an invasion of privacy, was quickly ended.

Sample composition, as well as sample size, is also seen as a weakness in ratings procedures. When telephone numbers are used to draw a sample, households without telephones are excluded and households with more than one phone have a better chance of being included. For many of the rating samples, people who do not speak either English or Spanish are eliminated. Perhaps one of the greatest difficulties for ratings companies is caused by those who eliminate themselves from the sample by refusing to cooperate. Although rating services make every attempt to replace these people with others who are similar in demographic characteristics, the sample’s integrity is somewhat downgraded. Even if everyone originally selected agreed to serve, the sample cannot be totally representative of a larger population. No two people are alike, and even households with the same income and education level and the same number of children of the same ages do not watch exactly the same television shows. Moreover, people within the sample, aware that their viewing or listening habits are being monitored, may act differently than they ordinarily do.

Other problems rise from the fact that each rating technique has specific drawbacks. Households with Peoplemeters may suffer from “button pushing fatigue,” thereby artificially lowering ratings. Additionally, some groups of people are simply more likely to push buttons than others. When the Peoplemeter was first introduced, ratings for sports viewing soared while those for children’s program viewing decreased significantly. One explanation held that men, who were watching sports intently, were very reliable about the button pushing, perhaps, in some cases, out of fear that the TV would shut off if they didn’t push that button. Children, on the other hand, were confused or apathetic about the button, thereby underreporting the viewing of children’s programming. Another theory held that the women of the household had previously kept the diaries and although they were not always aware of what their husbands were actually viewing, they were quite conscious of what their children were watching. Under the diary system, in this explanation, sports programming was underrated.

But diaries have their own problems. The return rate is low, intensifying the problem of the number of noncooperative people in the sample. Even the diaries that are returned often have missing data. Many people do not fill out the diaries as they watch TV. They wait until the last minute and try to remember details—perhaps aided by a copy of TV Guide. Some people are simply not honest about what they watch. Perhaps they do not want to admit to watching a particular type of program.

With interviews, people can be influenced by the tone or attitude of the interviewer or, again, they can be less than truthful about what they watched out of embarrassment or in an attempt to project themselves in a favorable light. People are also hesitant to give information over the phone because they fear the person calling is really a salesperson.

Beyond sampling and methodological problems, ratings can be subject to technical problems: computers that go down, meters that function improperly, cable TV systems that shift the channel numbers of their program services without notice, station antennas struck by lightning.

Additionally, rating methodologies are often complicated and challenged by technological and sociological changes. Videocassette recorders, for example, have presented difficulties for the ratings companies. Generally, programs are counted as being watched if they are recorded. However, many programs that are recorded are never watched, and some are watched several times. In addition, people replaying tape often skip through commercials, destroying the whole purpose of ratings. And ratings companies have yet to decide what to do with sets that show four pictures at once.

Another major deterrent to the accuracy of ratings is the fact that electronic media programmers often try to manipulate the ratings system. Local television stations program their most sensational material during
Ratings

ratings periods. Networks preempt regular series and present star-loaded specials so that their affiliates will fare well in ratings and can therefore adjust their advertising rates upward. Cable networks show new programs as opposed to reruns. All of this, of course, negates the real purpose of determining which electronic media entities have the largest regular audience. It simply indicates which can design the best programming strategy for sweeps week.

Because of the possibility for all these sampling, methodological, technological, and sociological errors, ratings have been subjected to numerous tests and investigations. In fact, in 1963, the House of Representatives became so skeptical of ratings methodologies that it held hearings to investigate the procedures. Most of the skepticism had arisen because of a cease-and-desist order from the Federal Trade Commission (FTC) requiring several audience measurement companies to stop misrepresenting the accuracy and reliability of their reports. The FTC charged the rating companies with relying on hearsay information, making false claims about the nature of their sample populations, improperly combining and reporting data, failing to account for nonresponding sample members, and making arbitrary changes in the rating figures.

The main result of the hearings was that broadcasters themselves established the Electronic Media Rating Council (EMRC) to accredit rating companies. This group periodically checks rating companies to make sure their sample design and implementation meet preset standards that electronic media practitioners have agreed upon, to determine whether interviewers are properly trained, to oversee the procedures for handling diaries, and in other ways assure the ratings companies are compiling their reports as accurately as possible. All the major rating companies have EMRC accreditation.

The EMRC and other research institutions have continued various studies to determine the accuracy of ratings. These studies have shown that people who cooperate with rating services watch more TV, have larger families, and are younger and better educated than those who will not cooperate; telephone interviewing gets a 13 percent higher cooperation rate than diaries; Hispanics included in the ratings samples watch less TV and have smaller families than Hispanics in general.

Both electronic media practitioners and audience measurement companies want their ratings to be accurate, so both groups undertake testing to the extent they can afford it. In 1989, for example, broadcasters initiated a study to conduct a thorough review of the Peoplemeter. The result was a list of recommendations to Nielsen that included changing the amount of time people participate from two years to one year to eliminate button-pushing fatigue, metering all sets including those on boats and in vacation homes, and simplifying the procedures by which visitors log into the meter.

Still, the weakest link in the system, at present, seems to be how the ratings are used. Networks tout rating superiorities that show .1 percent differences, differences that certainly are not statistically significant. Programs are canceled because their ratings fall one point. Sweeps weeks tend to become more and more sensationalized. At stake, of course, are advertising fees that can translate into millions of dollars. Advertisers and their agencies need to remain vigilant so that they are not paying rates based on artificially simulated ratings that bear no resemblance to the programs in which the sponsor is actually investing.

At this time all parties in the system seem invested in some form of audience measurement. So long as the failures and inadequacies of these systems are accepted by these major participants, the numbers will remain a valid type of "currency" in the system of television.

Ready Steady Go!

*Ready Steady Go!* was a seminal 1960s pop show that featured the top music acts of the time. The British pop scene had begun to evolve with the solo teenage singing stars (Billy Fury, Tommy Steele, Marty Wilde, Adam Faith) giving way to female solo singers (Dusty Springfield, Lulu, Sandie Shaw) and groups, many from the Merseyside area around Liverpool (The Beatles, Gerry and the Pacemakers, Billy J. Kramer and the Dakotas, etc.). With the pop scene becoming ever bigger and the British sound in particular so globally successful, it was obvious that television producers had to invent new style shows to cover this phenomenon. *Ready Steady Go!* began in 1963 on the independent TV station Associated Rediffusion, and the BBC’s *Top of the Pops* debuted the following year. These two shows dominated the TV music coverage of the 1960s in the United Kingdom. Whereas *Top of the Pops* followed the simple (but highly durable) format of simply featuring artists performing their hits in the charts, *Ready Steady Go!* featured a mixture of live performances, interviews, dance instructions, and competitions.

*Ready Steady Go!* was first broadcast on August 9, 1963, and initially ran 30 minutes. Billy Fury was on the first show, but more representative of the upcoming guests were Brian Poole and the Tremoloes, who were currently popular thanks to their version of “Twist and Shout.” The following year the show expanded to a 50-minute slot and entered a golden period. Top acts were booked every week, and they performed to a studio audience of 200 or so teenagers. Initially located at the Kingsway Studios in London, it soon outgrew its home, and production moved to the airier Wembley Studios. The show’s main presenters were Keith Fordyce, an established TV face who came across like an affable uncle, and Cathy McGowan, a fashionable, pretty ingénue who quickly struck a chord with the viewing audience. The producers of *Ready Steady Go!* were determined to find a new face to front the show and advertised in the music press for potential presenters. McGowan’s sister sent in an application on her behalf and, despite the fact that she had no experience whatsoever in the field (she was a secretary at the time), she landed the job and enjoyed virtual overnight success. McGowan was understandably nervous on screen at first and a little overawed by her surroundings, but she quickly got a handle on the job. Fordyce may have been more professional, but McGowan was younger (roughly the same age as the fans) and far trendier. She was someone with whom the audience could identify. The fact that she was on screen talking to the likes of Mick Jagger and John Lennon resonated with the home viewers, who could almost imagine themselves doing the same job. Such was her impact that in 1964 she was named TV personality of the year by the Variety Club of Great Britain, a prestigious honor. Cathy McGowan’s presence in the show was one of the factors that made *Ready Steady Go!* such a success.

Of even more importance, though, were the ramshackle, fast-paced style of the show and the consistently good lineup of acts, chosen mainly because of the individual tastes of the creative crew rather than any chart position. A spin-off magazine was launched to cash in on the success of the program, which was also ideally situated to cover the emergence of “mods” and their music. This meant that, apart from local bands, the show also featured American artists (including many African-American artists). A Motown special in 1965 was hosted by show regular Dusty Springfield and featured all the leading Motown acts of the day (Stevie Wonder, Smokey Robinson, Marvin Gaye, The Supremes, Temptations, Martha Reeves and the Vandellas).

The last edition of the series (headlining The Who and subtitled *Ready Steady Gone!* ) aired December 23, 1966. The show had been groundbreaking and influential, and the surviving footage provides a priceless archive of some memorable moments and important performances. The rights to tapes of the series were acquired by pop artist-turned-entrepreneur Dave Clark in the 1980s.

Reagan, Ronald (1911–2004)
U.S. Actor, Politician

Ronald Reagan lived in the public eye for more than 50 years as an actor and politician. He appeared in 53 Hollywood movies, from Love Is in the Air (1937) to The Killers (1964). Never highly touted as an actor, his most acclaimed movie was Kings Row (1942), while his favorite role was as George Gipp in Knute Rockne—All American (1940). He served as president of the Screen Actors Guild from 1947 to 1952 and again in 1959, where he led the fight against communist infiltration in the film industry and brokered residual rights for actors.

Reagan made his debut on television on December 7, 1950, as a detective on the CBS Airflyte Theater adaptation of an Agatha Christie novel. After a dozen appearances over the next four years on various shows, Reagan’s big television break came when Taft Schreiber of MCA acquainted him with General Electric Theater. Reagan hosted this popular Sunday evening show from 1954 to 1962, starring in 34 episodes himself. Reagan was one of the first movie stars to see the potential of television, and, as host, he introduced such Hollywood notables as Joan Crawford, Alan Ladd, and Fred Astaire in their television debuts. He also became a goodwill ambassador for General Electric (GE), plugging GE products, meeting GE executives, and speaking to GE employees all over the United States. These activities proved fine training for his future political career as he honed his speaking skills, fashioned his viewpoints, and gained exposure to middle America.

In 1965, Reagan began a two-season stint as host of Death Valley Days, which he had to relinquish when he announced his candidacy for governor of California, in January 1966. During his terms as governor (1966–74), Reagan made frequent televised appearances on Report to the People.

The hinge between Reagan’s acting and political careers swung on a nationally televised speech, “A Time for Choosing,” on October 27, 1964. This speech for Barry Goldwater, which David Broder hailed as “the most successful political debut since William Jennings Bryan electrified the 1896 Democratic convention with his ‘Cross of Gold’ speech,” brought in over $1 million for the Republican candidate and marked the beginning of Reagan’s reign as the leading conservative for the next 25 years.

By 1980, the year Reagan was elected president for the first of his two terms, more people received their political information from television than from any other source. Reagan’s experience as an actor in film and on television gave him an enormous advantage as politics moved fully into its television era. His mastery of the television medium earned him the title “the great communicator.” He perfected the art of “going public,” appealing to the American public on television to put pressure on Congress to support his policies. The rhetoric of this “prime-time president” suited television perfectly. Whether delivering a State of the Union address, eulogizing the crew of the space shuttle Challenger, or speaking directly to the nation about his strategic defense initiative, he captured the audience’s attention by appealing to shared values, creating a vision of a better future, telling stories of heroes, evoking memories of a mythic past, exuding a spirit of can-do optimism, and converting complex issues into simple language that people could understand and enjoy.

Reagan understood that television is more like the oral tradition committed to narrative communication than like the literate tradition committed to linear, factual communication. As Robert E. Denton puts it, in video politics “how something is said is more important than what is said.” Reagan surmounted his numerous gaffes and factual inaccuracies until the Iran-Contra affair, when it became apparent that his style could not extricate him from the suspicion that he knew more than he was telling the American public.

Reagan’s administration also greatly expanded the Office of Communication to coordinate White House public relations, stage important announcements, control press conferences, and create visual productions such as That’s America, shown at the 1984 Republican convention. Image management and manipulation increased in importance because of television. Reagan’s aides perfected a new political art form, the visual press release, whereby Reagan could take credit for new housing starts while visiting a construction site in Fort Worth, Texas, or announce a new welfare initiative during a visit to a nursing home.

Ronald Reagan was an average television actor but a peerless television politician. Both Reagan and his
staff set the standard by which future administrations will be judged. As Robert Schmuhl argues in *Statecraft and Stagecraft*, Reagan represented not only the rhetorical presidency, but the theatrical presidency as well.

Real World, The
U.S. Reality Series

Beginning in the spring of 1992, The Real World tested the supposition of what would happen if seven strangers lived together for several months before video cameras and had most aspects of their lives taped for later editing and broadcast. The ultimate appeal for viewers, as the show suggests in its opening, is watching what happens "when people stop being polite, and start getting real." As is made clear at the beginning of the program, the format for The Real World consists of hand-selecting seven young adults (ages 18 to 28), plopping them in a plush, rent-free home for four to five months, and observing their interactions. While living in this fishbowl environment the "cast" is videotaped 24 hours a day, seven days a week. Finally, the videotape—over 2,000 hours of footage—is edited into 22 or 23 half-hour episodes.

Each season The Real World sets up in a new city, with a new cast of seven young adults, picked from thousands of applicants reflecting a diverse set of backgrounds, ideologies, and stereotypes. The Real World Chicago (season 11) is typical, and includes a biracial lesbian; a recovering alcoholic; a homosexual male; an all-American, football-playing Princeton student; a sexually fixated black male who is determined to sleep with the house lesbian; and a religious woman who is intimidated by blacks and believes homosexuality is a sin. As a result of the selective casting, drama between the roommates inevitably ensues, especially when placed in The Real World environment. For example, no televisions or radios are allowed in The Real World household. As a result of this and other devices, cast members must interact with each other instead of zoning out on music or television.

Episodes of The Real World cover the day-to-day activities of the cast. They are usually required to perform some volunteer work with a local organization. Snippets of the roommates’ activities are highlighted by "confessional," allowing cast members, in solitude, to directly address a video camera in a manner similar to a video diary. The "confessional" is a Real World invention that dozens of other reality shows, including Survivor, Boot Camp, Making of the Band, Big Brother, and The Real World’s sister show, Road Rules, have adopted. By allowing the audience to listen to a cast member explain his or her thoughts or give context to events they are witnessing, the viewer has an even closer look at the lives and individual thoughts of cast members.
In some ways, then, *The Real World* combines the soap opera format with elements of documentary film to create a distinctive reality television experience. The cast and their reactions to events are real. However, through the magic of editing, storylines and sensational moments are pulled from the material to build an ongoing saga. It is no surprise to learn that the creators of *The Real World*, Mary-Ellis Bunim and Jonathan Murray, previously worked with soap operas and documentary films, respectively.

Since its inception, *The Real World* has continued to garner impressive ratings in the highly coveted young adult market. In addition, the success of *The Real World* has launched a home-video market. These videos primarily feature content—nudity or other “adult-oriented” material—that could not be shown on basic cable television. *The Real World*’s spin-off, *Road Rules*, is similar to *The Real World*, but instead of living in a lavishly decorated house, the *Road Rules* cast lives on a huge, traveling bus and competes in challenges to win money and prizes. The producers of *The Real World* and *Road Rules* have tapped the combined drawing power of the shows to create television specials such as *The Road Rules/Real World Challenge*, which features cast members from the two shows competing against each other for prizes and cash. Other *Real World* specials include cast reunions, love specials (featuring cast members who engaged in romantic relationships), and fight specials (featuring the worst—or best—arguments). There are even specials devoted to examining the “rejects” of the show, splicing together in comical fashion clips of audition tapes from the thousands of *Real World* wannabes who did not make the cut.

*The Real World*’s commercialism and synergy extends beyond home-video sales and television specials. Fans of the show are prompted at the end of each episode to purchase a CD of the music featured on *The Real World*. Additionally, *Real World* enthusiasts can visit the show’s website, buy *Real World* merchandise, and even bid on items from the current *Real World* house that are auctioned off to the highest bidder. In this manner *The Real World* blends nicely with the basic programming format of the Music Television network (MTV), which is designed essentially to sell music and music-related merchandise through the advertising potential grounded in airing music videos and music-related programming.

*The Real World* served as an important foundation for other reality series to follow. It was instrumental in popularizing the voyeuristic, real-life soap-opera format and was the first to utilize the “confessional,” which has become a mainstay for many reality television programs. Its popularity has spread to the creation of hundreds of websites maintained by and engaging thousands of fans, to sales of videos and merchandise, and to the creation of *Real World* auctions, specials and spin-offs. As a result, *The Real World* can be viewed as the grandfather of the contemporary reality television genre.

Reality Television (U.S.)

“Reality television” is a label that encompasses a wide range of nonfiction formats, including gameds, makeover programs, talent contests, docusoaps, dating shows, court programs, tabloid newsmagazine shows, and reality-based sitcoms. Yet, the genre’s overarching characteristic is its claim to “the real,” which it works to underscore through its aesthetic strategies (use of cinema verité techniques, surveillance video, low-end production values, or “natural settings”), its relentless obsession with the intimate, and its tendency to focus on ordinary people in extraordinary circumstances. And it is these very traits that have helped make reality TV one of the most talked about, reviled, and popular genres on television.

The summer of 2000 is often considered the starting point of the reality television phenomenon in the United States, since it marked the initial appearance and unexpected popularity of Survivor and Big Brother. Yet, the roots of the genre stretch back to television’s early years with programs that delved into the personal lives of game contestants (Queen for a Day and Bride and Groom) or used hidden cameras to catch people in compromising or embarrassing situations (Candid Camera). Nevertheless, there have been distinct periods in television history wherein reality programs have swelled in numbers or developed in novel and significant ways.

During the 1980s, the networks’ financial and labor troubles contributed to a proliferation of reality-based programs. Already burdened by rising production costs, debts incurred by the mid-decade sale of three networks to new owners, and a loss of viewers to burgeoning cable channels, the broadcast industry faced a writers’ strike in 1988. In the midst of what would become a 22-week walk-off, networks came to depend on their existing lineup of reality programs (which did not depend on writers or other above-the-line talent) and produced new reality shows in order to fill the gap left by their fictional counterparts. From this, the networks learned reality programming was not only cheap, but also strike-proof, and they consequently added more of such programs to their prime-time line-ups. Some of the most successful of the shows that came out of this period were COPS, America’s Most Wanted, Unsolved Mysteries, America’s Funniest Home Videos and Rescue 911. But reality programs were not just confined to prime time. Syndicated talk shows such as Geraldo, Oprah, and Donahue began to take over the daytime programming slots, while tabloid magazine programs like Inside Edition, A Current Affair, and Entertainment Tonight were populating afternoon and early evening slots.

The fact that these programs tended to focus on the personal problems of both ordinary people and celebrities led many to decry them as exploitative and sensational and to eventually group them under the derogatory heading, “trash TV.” According to many critics, one producer in particular seemed to represent the very worst tendencies of this type of reality production. Mike Darnell, a former child star, produced a series of controversial specials for FOX during the mid-1990s—such as World’s Scariest Police Chases and When Good Pets Go Bad—which were amped-up collections of recycled home movie and news footage that were described by the New York Times as “gross-out shockumentaries and socially unredeeming freak shows.” In 1999, FOX’s decision to air Darnell’s Who Wants To Marry a Multi millionaire? (a combination beauty contest and dating show met with almost universal scorn) appeared to be the death knell for both Darnell’s career and, perhaps, reality programming in general. However, at that very moment, CBS execu-
tives and producer Mark Burnett were creating a new model of reality in the form of an expensively produced game show/documentary hybrid. That program, *Survivor*, would air the following summer and give rise to an unprecedented number of reality programs in prime-time television.

Like the wave of reality in the 1980s, the proliferation of reality in the early 2000s was driven, in part, by financial concerns and the threat of more strikes by writers and actors. However, this most recent surge was also pushed along by both the promise and threat posed by new technologies. The appearance of digital video recorders like TiVo and Replay, which allowed consumers to not only record up to 90 hours of their favorite shows, but to also skip over commercial spots during real-time broadcasts, threatened to upend the long-standing relationship between networks and advertisers. However, a re-envisioned version of reality programming, as exemplified by *Survivor*, allowed for sponsorship and product placement, enabling networks a way around the commercial-skipping feature.

Other technologies offered the potential for audience participation and worked well to increase viewer interest in the gamedoc format of many of these new reality programs. They also significantly increased the potential for profits. Phone numbers set up to take viewer votes to expel contestants often charged callers for the privilege. Websites were set up to provide extra footage or updates for a price, like the *Big Brother* site that charged $19.95 for access to 24-hour live streaming video of the contestants in the house. While not a popular strategy for American television, European versions of reality programs sold a service that would keep fans on top of program developments with regular text message updates sent to their cell phones. These technologies not only gave networks new financing opportunities, but also offered viewers rather unique ways to engage with a reality narrative that seemed to extend outside the boundaries of traditional textual installations.

But it was not only networks that were investing in reality TV. Basic and premium cable channels also found the genre to be a cheap and popular programming alternative that they could easily gear toward the interests of their target audiences. MTV, whose long-standing *Real World* program had prefigured many of the characteristics of the new wave of reality programming a decade before *Survivor* came on the air, developed reality shows that featured teenagers, sorority girls, and rock stars. *The Osbournes*, a reality sitcom that centered on the domestic life of Ozzy Osbourne and his wife, children, and innumerable pets, became the most successful (and expensive) of such shows of 2002. Premium channels Showtime and HBO also added more risqué or raw versions of reality to their schedules with series like *Freshman Diaries* and *America Undercover*. The Learning Channel found its reality niche with makeover and lifestyle shows that often were packaged with an “educational” or family bent. Expanding upon its success with *A Wedding Story/A Baby Story* series, it filled its daytime schedule with *A Makeover Story, A Personal Story, A Dating Story*, and added shows like *Maternity Ward* and *Resident Life* to its prime-time lineup. It also Americanized a number of British imports such as *Changing Rooms* (which it renamed *Trading Spaces*) and *What Not To Wear*.

Reality TV has become a decidedly global phenomenon that has involved a reversal of the usual flow of programming across international borders. Instead of the United States being the major television exporter, European companies were the originators of many of the formats that have become the most popular reality programs in the United States. The Dutch production company Endemol is one of the most successful producers of such formats, selling basic elements of shows like *Big Brother* and *Fear Factor* to not only the United States but also markets in Africa, Latin Amer-
Red Green Show, The

Canadian Comedy Program

*The Red Green Show* is a half-hour comedy series targeted to family audiences. *The Red Green Show* is the creation of Steve Smith (S & S Productions) and debuted on CHCH-TV in Hamilton, Ontario, Canada, in 1990 and featured on the Public Broadcasting System (PBS). The low-budget variety show is a spinoff of the *Smith & Smith* variety show that featured Smith and his wife, Morag, and served as a debut for the Green character. *The Red Green Show* features Smith as Red Green, a gentle, handy, outdoorsman with a laid-back sense of humor. *The Red Green Show* is set at the fictitious Possum Lodge, Chapter 13, known as the hangout of “the last real men on the planet.” The cast consists mostly of incompetent outdoorsmen in plaid shirts who unwittingly work right into Green’s bizarre sense of humor. *The Red Green Show* is intended as a spoof on male bonding in the outdoors and gives an intentionally hilarious insight into the dreams and obsessions of men. Regular segments include the “Handyman’s Corner” (where Red’s philosophy of “if women don’t find you handsome, they should at least find you handy” is played out with innovative, yet unseemly construction adaptations using duct tape, the “handyman’s secret weapon”); “The Experts” (featuring a panel of Possum Lodge, Chapter 13 members who answer viewer mail and find any way to respond without the words, “I don’t know”); and “Adventures with Bill” (a klutzy outdoors and nature segment hosted by Possum Lodge’s resident naturalist and narrated by Red and shot in black and white).

Other Lodge members and characters include nerdy nephew Harold Green (Pat McKenna); clumsy
Red Skelton Show, The

U.S. Comedy/Variety Program

The Red Skelton Show, which premiered on September 30, 1951, was not only one of the longest-running variety series on television but also one of the first variety shows to make the successful transition from radio to television. Despite his popularity as an entertainer in nightclubs, vaudeville, radio, and 26 feature films, Skelton was unsure of the new medium. Consequently, he continued his weekly radio broadcasts while simultaneously working on the first two seasons of his television show.

The series originally aired in a half-hour format on NBC. Despite an outstanding first year, in which his show was ranked fourth in the Nielsen's and won two Emmy Awards, the series' ratings toppled in its second season. When NBC canceled the show, it was immediately picked up by CBS, and The Red Skelton Show became a Tuesday night staple from 1954 to 1970, garnering a total of 16 Emmy nominations.

The format of the series was similar to Skelton's radio program. Each show began with Skelton performing a monologue based on topical material, followed by a musical interlude. Next would follow a series of blackout sketches featuring one or more of his characters. The sketches were a mixture of new material and old routines perfected over the years in vaudeville and in nightclubs (including his popular "Guzzler's Gin" sketch). At the end of the program, Skelton would turn serious, expressing his gratitude to his audience for their love and laughter. His signature closing line became "Good night, and may God bless."

The Red Skelton Show, unlike other variety series, did not rely on guest stars every week. Skelton had a strong group of support players, most of whom had worked with him on radio, including Benny Rubin, Hans Conried, Mel Blanc, and Verna Felton.

Most of Skelton's characters were first developed for radio and worked equally well on television. Among the best known were Junior the Mean Widdle Kid (who was famous for his expression, "I dood it"), country boy Clem Kadiddlehopper, Sheriff Deadeye, boxer Cauliflower McPugg, drunkard Willy Lump-Lump, and con man San Fernando Red. Skelton had a reputation for his extensive use of "headware"—each character had his own specific hat, which Skelton used as a means to find the center of each personality. The only television addition to his repertoire of characters was Freddie the Freeloader, a hobo who never spoke. A special "silent spot" featuring the hobo character was added to the program and provided Skelton the opportunity to demonstrate his talents as a pantomimist.

Skelton's forte was his use of slapstick. He appeared oblivious to physical punishment and often ended his vaudeville act by falling off the stage into the orchestra pit. One of his most popular pieces was created for his premiere show. At the end of his monologue, while
During the run of his variety series, Skelton was also able to demonstrate his dramatic abilities. He played punch-drunk fighter Buddy McCoy in Playhouse 90's *The Big Slide* (CBS, November 8, 1956), for which he was nominated for an Emmy Award as best actor. He died in Rancho Mirage, California, on September 17, 1997.

Chassler, S., "Helter Skelton," *Colliers* (March 29, 1952)
Phil Redmond is the most well-known drama producer in Britain, recognized as the creator of the long-running children’s school drama *Grange Hill* and the soap opera *Brookside*. Redmond rose from a council estate childhood in north Liverpool to become a media celebrity and owner of a large private production company. As for most working-class children, a career in the media lay outside his reach, and in 1968 he left his local comprehensive school to train as a quantity surveyor in the building trade. However, by 1972, he had abandoned this, having resolved instead to become a writer, and to take a university degree in social studies to help him in the task. The course had a profound effect on his career, and his writing and programs continually draw on forms of social observation.

The producer’s career in television began as a scriptwriter for comedy programs, but his major breakthrough came in 1978, when his proposals for a new children’s drama series were adopted by the BBC. What set *Grange Hill* apart from other high school dramas was the program’s realism and its interweaving of serious moral and social issues, such as truancy, teenage sex, heroin addiction, and racism, into the story lines. The program’s unsentimental approach to school and controversial subject matter has frequently provoked complaints from pressure groups. Despite the objections, however, the series has always been hugely popular with young people, and successive generations of school students have grown up with the program and enjoyed exposure to the problems of the “real” world.

Redmond wrote over 30 episodes for *Grange Hill* in its first four seasons, but his ambitions were driving him toward becoming a producer in his own right and following up the opportunities created by the advent of the fourth channel in Britain. He approached the head of Channel 4, Jeremy Isaacs, and its commissioning editor for fiction, David Rose, and succeeded in convincing them that they should adopt his proposals for *Brookside*, a twice-weekly soap opera focusing on social issues based around family life on a new private housing estate. Channel 4 brought a new style of television production to Britain by commissioning independent production companies to make programs. In 1981, Redmond secured a £4 million investment from Channel 4 to establish his own company, Mersey Television, and to begin work on *Brookside*. Much of the money was spent purchasing and fitting out the real Liverpool housing estate that was to serve both as the production and company base.

The development of Redmond’s soap opera is of considerable importance to the history of British television. For many years following its launch in 1982, *Brookside* provided Channel 4 with by far its most popular program and played a major role in establishing the viability of the channel. The setting up of Mersey Television in Liverpool to produce the program represented a considerable innovation, for it created not only the largest independent production company in Britain, with over 100 full-time jobs for the local workforce, but also significantly extended the opportunities for television production outside London.

Redmond has always contended that the audience of popular drama will respond positively to challenging subject matter. With *Brookside* he was to prove his point. After a slightly shaky start, the program’s realist aesthetics, pioneering single-camera video production on location, and focus on major social issues such as unemployment, rape, drug use, and gay rights has won over an up-market audience group not normally interested in soaps. The program helped to raise the stakes...
of production design, and has added a new seriousness to popular drama. A new generation of realist drama programs, including top shows such as EastEnders and Casualty, have followed Brookside's example and explored contemporary social problems.

Redmond's wider business activities provide a conspicuous example of the entrepreneurial spirit that has pervaded broadcasting in Britain following deregulation. In 1991, he was at the center of the £80 million consortium bid for the new ITV franchise in northwest England, which had been held by Granada since 1956. Though the bid was unsuccessful, the additional premises that had been acquired to substantiate it have strengthened the power base of Mersey Television and enabled it to extend its production. In 1990, the output of Brookside was increased to three episodes a week and its audience peaked at 8 million viewers in 1993. In 1995, Redmond successfully bid for a new youth soap opera, and Hollyoaks was introduced into Channel 4's early evening schedule.

Redmond and his company have ridden the recession in British commercial TV at the start of the new century with more limited success. The proliferation of new digital and terrestrial channels drew away large numbers of viewers from Channel 4, and by 2002 Brookside's audience had dropped to less than a million. Audience tastes, too, were changing, moving away from realist fictions to reality television and lifestyle shows. Brookside was closed down in November 2003. However, Hollyoaks has moved from strength to strength in its niche as an upbeat, lifestyle soap, and output has been increased to five episodes a week. At the same time, Redmond has also resumed executive control of Grange Hill. The move of the production from London to Mersey Television has taken up some of the company's spare capacity brought about by the loss of Brookside.

Redmond remains the chair of the largest independent drama production company in Britain, which over the years has launched the careers of some of the most well-known actors, writers, directors, and producers in British television. He continues to play an active role in television training.

Redstone, Sumner (1923–
)

U.S. Media Mogul

Sumner Redstone is one of the most powerful media moguls of the early 21st century. In his capacity as chairman and chief executive officer of Viacom, Redstone controls Hollywood’s Paramount Pictures television and motion picture factory; the CBS and UPN networks; a handful of cable TV networks, including MTV, the Movie Channel, Showtime, Black Entertainment Television, The Nashville Network, Comedy Central, Country Music Television, Nickelodeon, and VH-1; several radio and TV stations; and a TV production and syndication business that owns the lucrative syndication rights to Roseanne, A Different World, I Love Lucy, Perry Mason, The Twilight Zone, and The Cosby Show. Viacom has also produced such prime-time fare as Matlock and Jake and the Fatman.

Redstone’s father, Michael, first sold linoleum from the back of a truck, later became a liquor wholesaler, and finally purchased two nightclubs and set up one of the original drive-in movie operations in the United States. By the time Sumner Redstone graduated from Harvard University in 1943, his father was concentrating on the movie industry. One of a number of struggling owners in the fledgling drive-in business, he was unable to book first-run films because the vertically integrated Hollywood giants promoted their own movie theaters.

Sumner Redstone graduated first in his class from the prestigious Boston Latin School and then finished Harvard in less than three years. Upon graduation, he was recruited by Edwin Reischauer, a future U.S. ambassador to Japan, for an ace U.S. Army intelligence unit that would become famous for cracking Japan’s military codes. After three years of service, during which he received two Army commendations, Redstone entered Harvard Law School.

After graduating from Harvard Law in 1947, he began to practice law, first in Washington, D.C., and then in Boston, but he soon was lured into the family movie-theater business. Two decades later, Redstone became president and chief executive officer of the family firm, National Amusements, Inc. (NAI) and he took on the additional role of chairman of the NAI board in 1986. Indeed, even with his move to Viacom, Redstone has continued in the movie-exhibition business. At the end of the 20th century, National Amusements operated 1,350 screens across the United States, the United Kingdom, and Latin America.

Redstone is a physically tough individual. In 1979, he survived a Boston hotel fire by clinging to a third-floor window with one severely burned hand. Doctors never expected him to live through 60 hours of surgery, but he did. Medical experts told him he would never walk again, yet Redstone began to exercise daily on a treadmill and to play tennis regularly, wearing a leather strap that enabled him to grip his racquet. Those who know the Boston tycoon say that his recovery spurred his ambition to succeed in the motion-picture and later television business.

As he recovered from his burns, Redstone used his knowledge of the movie business to begin selectively acquiring stock in Hollywood studios. In a relatively short time, he made millions of dollars buying and selling stakes in Twentieth Century Fox, Columbia Pictures Entertainment, MGM/UA Entertainment, and Orion. At first, Viacom represented simply another stock market investment, but soon Redstone realized that the company needed new management, and, in 1987, he resolved to take over and run the operation.

Redstone’s acquisition proved difficult. The company had rebuffed an earlier takeover attempt by financier Carl Icahn, and Viacom executives had sought to buy and protect their own company. Redstone became embroiled in a bitter, six-month corporate raid that forced him to raise his offer three times. Upon final acquisition, rather than break up Viacom and sell off divisions to pay for the deal as his bankers advised, Redstone slowly and quietly built the company into one of the world’s top TV corporations.

Redstone hired former Home Box Office chief executive Frank Biondi to build on Viacom’s diversity. For example, by the mid-1990s, Viacom had expanded its MTV music network far beyond its original base in the United States to reach more than 200 million households in approximately 80 countries in Europe, Latin America, and Asia. Redstone felt that his networks needed a Hollywood studio to make new products, and in 1993 he decided to acquire Paramount. He soon
found himself in a battle with QVC Network, Inc., and in time he joined forces with video rental empire Blockbuster Entertainment to cement the deal.

Owning more than two-thirds of Viacom’s voting stock (as of 2002) means that Redstone controls a vast media empire second only to that of Rupert Murdoch. Through the 1990s and early 2000s, Forbes ranked Redstone among the richest persons in the United States, with a net worth in excess of $4 billion. Yet Redstone has never “gone Hollywood.” At the start of the 21st century, he continues to operate his collection of enterprises, not from Paramount’s sprawling studio on Melrose Avenue in Hollywood, but from his long-time NAI headquarters in Dedham, Massachusetts.

On September 7, 1999, Redstone announced the capstone deal of his life by taking over CBS Corporation for $37.3 billion. He was able to bend the Federal Communications Commission ownership rules, and the deal sailed past government regulators. Mel Karmazin of CBS became the chief operating officer of the whole company, but with Redstone owning controlling interest in the stock, it was clear who was the boss, the final decision maker. Thus, Redstone brought together the CBS and UPN television networks and Viacom’s cable channels under one roof, making Redstone one of the handful of the world’s most powerful media moguls. But as the advertising market soured at the commencement of the 21st century, the synergy of the merger did not increase profits. Overall, advertising sales were down, and it was uncertain whether Redstone, as he neared his 80th birthday, would spin off subsidiaries he deemed unnecessary for Viacom’s future.

Rees, Marian

U.S. Producer

After graduating with honors in sociology from the University of Iowa, Marian Rees moved to Los Angeles in 1952, where she began her television career as a receptionist-typist at NBC. By 1955, she had joined the Norman Lear-Bud Yorkin company, Tandem Productions, and in 1958, she served as an associate producer of the much-honored An Evening with Fred Astaire. She continued to advance in the organization, and by the early 1970s, she served as associate producer of the pilots of All in the Family and Sanford and Son. In 1972, however, she was told by Tandem that she would be happier elsewhere, and was given two weeks’ notice. It was a stunning blow, but as she told an interviewer in 1986, she used the firing to grow.

Rees assumed a new position at the independent production company Tomorrow Entertainment, where she broadened her knowledge of development, preproduction, and postproduction. At Tomorrow, Rees was associated with a variety of quality productions, including The Autobiography of Miss Jane Pittman. She then spent two years as vice president of the NRW Company, where she was the executive producer of The Marva Collins Story, a Hallmark Hall of Fame presentation starring Cicely Tyson. In 1982, Rees formed her own company, Marian Rees Associates. Anne Hopkins joined the company as a partner and has continued to work with Rees ever since.

In order to fund her first independent productions, Rees initially mortgaged her home and car, facing demands for financial qualification far more extensive than would have been required for a man. She pressed for months to gain network approval for her first production, Miss All-American Beauty, but resistance continued, and she finally learned that the male executive she had to convince simply did not want to trust a woman. Finally, with funds running extremely low, approval for the project came from CBS. Rees completed the production under budget, and her company at last found itself on solid footing.

In the succeeding years, Rees has garnered 11 Emmy Awards and 38 Emmy nominations. In 1992, just ten years after her company began, she saw her film for NBC, Miss Rose White, garner four Emmys out of ten nominations, a Golden Globe nomination, and the Humanitas Award. Ten of her productions have been aired as part of the Hallmark Hall of Fame series.

Rees has remained faithful to her vision of excellence, even in times of financial difficulty. She examines potential stories to ascertain whether they speak to her personally, and whether they will make her proud to be associated with the final product. These same concerns are reflected in the meticulous attention she and her partner give to each project once it is in production. While filming Miss Rose White in spring 1992...
Rees, Marian

Marian Rees. Photo courtesy of Marian Rees

in Richmond, Virginia, for example, both Rees and Hopkins supervised details at every stage and personally examined each location shot for authenticity. Such care has meant that their work is usually focused on a single film at a time. Rees and Hopkins form a remarkable team, taking considerable risks, and always delivering quality products, a task made more difficult in today's U.S. television industry.

In 1997, the partners joined with Stephen Kulczycki to form ALT Films, a nonprofit production company that in 1999 won a grant to produce five films based on American literary works for ExxonMobil Masterpiece Theatre's American Collection on PBS. The adapted works were Esmeralda Santiago's Almost a Woman, James Agee's A Death in the Family, Eudora Welty's The Ponder Heart, Willa Cather's The Song of the Lark, and Langston Hughes's Cora Unashamed. These five films aired from 2000 to 2002.

A champion for women's rights in the U.S. television industry throughout her career, Marian Rees served two terms as president of Women in Film. Her service to her profession also includes board membership at the American Film Institute and the Producer's Guild of America, where she has served as vice president. "Producer" may be an easy title to acquire in the modern television age. Few earn it, and certainly none deserve it more than Marian Rees.

Television Special
1958 An Evening with Fred Astaire
Reid, Tim (1944– )
U.S. Actor, Writer, Producer

Tim Reid is an accomplished television actor and producer whose critically acclaimed work has, unfortunately, often failed to meet with sustained audience acceptance. As an African American, Reid has tried to choose roles and projects that help effect a positive image for the black community. Through both his acting and writing, he has provided important insights regarding black-white relationships and bigotry.

Being a part of show business was one of Reid’s childhood dreams. Not content with simply being an actor, he hoped to play a vital role behind the scenes, as well. Like many young actors, he began his career as a stand-up comedian, working with Tom Dreese as part of the comedy duet “Tim and Tom.” It was during this experience that Reid began exploring the dynamics of black-white relationships. In 1978, after performing in various episodic series, he received the role of Venus Flytrap in Hugh Wilson’s WKRP in Cincinnati. From the beginning, Reid made it clear to Wilson that he was not interested in playing just another “jive-talking” black character. Wilson agreed, eventually giving Reid control over his character’s development, which culminated in a story that revealed a much deeper character than the Flytrap persona first presented.

It was during WKRP that Reid gained experience as a writer, contributing several scripts to the series. One episode, “A Family Affair,” dealt with the underlying tones of bigotry that plague even the best of friends. He also worked closely with Wilson on the script “Venus and the Man,” in which Venus helped a young black gang member decide to return to high school. Teacher’s organizations applauded the effort, and scenes from the show were reproduced, in comic book form, in Scholastic magazine.

After WKRP, Reid landed a recurring role in the detective drama Simon and Simon, for which he also wrote a number of scripts. In 1987, he again joined forces with Wilson to coproduce Frank’s Place, which starred Reid as a Boston professor who took over his deceased father’s bar in a predominately black section of New Orleans. While critics raved about the rich writing (Wilson won an Emmy for the Frank’s Place script “The Bridge”), acting, and photography, the series was canceled after its first season. Reid contends that this cancellation was due to the constant schedule changes that afflicted the series (a problem he and Wilson experienced previously with WKRP), as well as CBS’s overall dismal ratings at the time.

In 1989, Reid became executive producer of Snoops, a drama in which he starred with his wife, Daphne Maxwell Reid, as a sophisticated husband-and-wife detective team in the tradition of the Thin Man series. Just as with Moonlighting and Remington Steele, Snoops placed character development over mystery. Once again, despite quality scripts and performances, the show failed to find an audience. Reid’s best-known television role of the 1990s was the father on Sister, Sister (ABC then WB: 1994–99).

In 1997, Reid established New Millennium Studios in Petersburg, Virginia. The studio features a soundstage and postproduction facilities and has allowed him to produce his own work as well as contract with other producers in search of a location for television and film projects. Reid has personally used the studio as creator and producer of the 1998 series Line’s.

Reiner, Carl (1922– )

U.S. Comedian, Writer, Producer

Carl Reiner is one of the few true Renaissance persons of 20th-century mass media. Known primarily for his work as creator, writer, and producer of The Dick Van Dyke Show, Reiner has also made his mark as a comedian, actor, novelist, and film director. From Reiner’s “Golden Age” TV connection with Sid Caesar to his later film work with Steve Martin, the Emmy Award-winning Reiner has touched three generations of American comedy.

According to Vince Waldron’s Official “Dick Van Dyke Show” Book (1994), Reiner began his career as a sketch comedian in the Catskill Mountains. After serving in World War II, he landed the lead role in a national touring company production of Call Me Mister.
which he later reprised on Broadway. Reiner's big break came in 1950, when producer Max Leibman, whom he had met while working in the Catskills, cast Reiner as a comic actor in Sid Caesar's Your Show of Shows. Drawn to the creative genius of the show's writers, which included Mel Brooks and Neil Simon, Reiner ended up contributing ideas for many of the series' sketches. The experience undoubtedly provided Reiner with a good deal of fodder for his later Dick Van Dyke Show. While he never received credit for his writing efforts on Your Show of Shows, in 1955 and 1956 he received his first two of many Emmy Awards, these for his role as supporting actor. In 1957, Reiner conquered another medium when he adapted one of his short stories into Enter Laughing, a semi-autobiographical novel focusing on a struggling actor's desire to break into show business. In 1963, the book became a hit play.

By the summer of 1958, after Caesar's third and final series was canceled, Reiner spent the summer preparing for what many consider his greatest accomplishment—writing the first 13 episodes of "Head of the Family," a sitcom featuring the exploits of fictional New York comedy writer Rob Petrie. Originally intended as an acting vehicle for himself, Reiner's pilot failed to sell. However, Danny Thomas Productions' producer Sheldon Leonard liked the idea and said it had potential if it were recast—which was Leonard's nice way of saying, "Keep Reiner off camera." When Reiner's Rob Petrie was replaced with TV newcomer Dick Van Dyke (who had just enjoyed a successful Broadway run in Bye, Bye Birdie), The Dick Van Dyke Show was born.

As with Enter Laughing, Reiner's sitcom was autobiographical. Like Petrie, Reiner was a New York writer who lived in suburban New Rochelle. Like Petrie, Reiner spent part of his World War II days at Camp Crowder in Joplin, Missouri, a fact that was brought out in several flashback episodes. Even Petrie's 148 Bonny Meadow Road address was an allusion to Reiner's own 48 Bonny Meadow Road home.

Perhaps it was this realism that contributed to the series' timelessness, making it a precursor for such sophisticated and intelligent sitcoms as The Mary Tyler Moore Show and The Bob Newhart Show. Just as with these later works, Reiner's series placed character integrity over raw laughs. By being the first to combine both the home and work lives of the series' main character, Reiner also provided interesting insights regarding both sedate suburbia and urbane New York. The Dick Van Dyke Show also serves as an early example of the "coworkers as family" format, which has become a staple relationship in modern sitcoms.

Carl Reiner was one of the first "auteur producers," with his first 13 episodes becoming the "bible" upon which consequent episodes were based. He continued to write many of the series' best episodes, as well as portray recurring character Alan Brady, the egomaniacal star of the variety program for which Petrie and crew wrote. After a tough first season in 1961, Leonard was able to convince CBS executives, who had canceled the series, to give it a second chance. The series became a top hit in subsequent years, enjoying five seasons before voluntarily retiring. The reruns have never left the air, and it, along with I Love Lucy, comprises some of the most-watched programs in syndication history. Those series, along with The Mary Tyler Moore Show, also became the flagship programs of U.S. cable's classic-TV powerhouse Nick at Nite.

While many view The Dick Van Dyke Show as the high point of Reiner's career, his films cannot be ignored. After directing Enter Laughing in 1967, Reiner went on to do several critically acclaimed films such as The Comic (1969), a black comedy starring Dick Van Dyke as an aging silent-film comedian, and Where's Poppa? (1970). Reiner also directed the wildly successful George Burns vehicle Oh, God! (1977). Reiner is also significant for his role as straight man in "The 2,000 Year Old Man" recordings, which he began with Mel Brooks in 1960.

In the 1970s, Reiner and Van Dyke re-entered television with The New Dick Van Dyke Show. While Reiner had hoped to break new ground, he became frustrated with the network's family-standard provisions that hampered the series' sophistication. It was not until 1976 that Reiner returned to series television as actor and executive producer of the short-lived ABC sitcom Good Heavens.

Just as The Dick Van Dyke Show had represented a departure from the standard sitcom fare of the 1960s, Saturday Night Live and its famous guest host Steve Martin forged their own type of late-1970s humor. Once again on the cutting edge, Reiner joined forces with Martin as the "wild and crazy" comedian made the transition to film, with Reiner directing Martin in The Jerk (1979), The Man with Two Brains (1983), and All of Me (1984).

In a 1995 episode of the NBC comedy series Mad About You, Reiner reprised his role as Alan Brady and won an Emmy Award for outstanding guest appearance in a comedy series for this program. In the fictional world of the newer sitcom, The Dick Van Dyke Show is "real," as is the Brady character. Reiner's performance drew on the entire body of his work, from his days with Sid Caesar through his work as writer, director, and producer, and the portrait he presented in this new context echoed with references to the televi-
sion history he has lived and to which he has so fully contributed. He remains active as a writer and as an ac-
tor in both film and television—for example, writing
novels and short stories; reviving the 2,000-year-old
man character with Mel Brooks in 1997; lending his
voice to episodes of the animated TV series *King of the
Hill* (FOX, 1997) and *Disney's Hercules* (1998);
guest-starring on two episodes of the CBS legal drama
*Family Law* (1999 and 2000); and playing a featured
role in the film *Ocean's Eleven* (2001). For his career
achievements, he has been honored by the Kennedy
Center in Washington, D.C., and inducted into the
Academy of Television Arts and Sciences Hall of Fame.

Reith, John C.W. (1889–1971)

British Media Executive

John Reith, the founding director general of the British Broadcasting Corporation (BBC) from 1922 to 1938, was aptly designated by the New York Times as “the single most dominating influence on British broadcasting.” Reith developed strong ideas about the educational and cultural public-service responsibilities of a national radio service, ideas subsequently pursued by many broadcasting systems around the world.

Reith was born the fifth son of a Scottish minister and trained in Glasgow as an engineer. After service in World War I, where he was severely wounded (his face carried the scars), and a growing boredom with engineering, he answered a 1922 advertisement for a post at the new BBC, then a commercial operation. He knew nothing of radio or broadcasting and did not even own a receiver. He was hired and a year later was promoted to managing director.

Learning on the job, Reith soon defined public-service broadcasting as having four elements, which he described in his book Broadcast over Britain (1924). Such a system, he argued, operated on a public-service rather than commercial motive, offered national coverage, depended upon centralized control and operation rather than local outlets, and developed high-quality standards of programming. He held broadcasting to high moral—almost religious—standards and rather quickly identified the BBC (which became a public corporation early in 1927) with the political establishment, just as he also insisted on BBC operational independence from any political pressures.

Reith directed the expanding BBC operations from Broadcasting House, the downtown London headquarters he initiated, which opened in 1932 and remains a landmark. His primary interest was in radio, however, and the BBC was slow to cooperate with John Logie Baird and other TV experimenters. With the development of effective all-electronic television, Reith’s BBC inaugurated the world’s first regular public schedule of television broadcasts from November 1936 until Britain entered World War II in September 1939.

Reith felt increasingly underutilized at the BBC by the late 1930s; the system he had built and the key people he had selected were all doing their jobs well and the system hummed relatively smoothly. He was both revered and somewhat feared in the organization he had shaped. In a mid-1938 managerial coup, however, Reith was eased out as director general by the BBC’s Board of Governors (acting in consort with the government), which had grown weary with his self-righteous inflexibility within the organization as well as his political stance. He left the BBC after 16 years, with considerable bitterness that remained for the rest of his life.

Reith’s remaining three decades were a disappointment to him and others. After a brief period (1938–40) heading Imperial Airways as it became the British Overseas Airways Corporation (the government-owned predecessor of British Airways), he held a number of minor cabinet posts in wartime and postwar governments and served as chair of several companies. Reith’s strong views, conviction that he was nearly always right, and dour personality made it difficult for him to readily get along in the rapidly changing postwar British scene. He wrote an autobiography, Into the Wind (1949), and complained he had never been “fully stretched.” Indeed, he saw his entire life as one of failure. He argued strongly in the House of Lords against the inception of commercial television in 1954. He felt the BBC had long since given way to social pressures and lowered its standards. It was no longer his child.

Reith was an obsessive keeper of diaries all his life—excerpts published in 1975 showed him to be a man with strong convictions, powerful hatreds, considerable frustration, and an immense ego.

Religion on Television

American television has had a long, uneasy relationship with religion. Television has always broadcast programs with religious themes, but more often to fulfill regulatory obligations or sell undesirable air time than to attract viewers. Still, although American television tolerates religious faith more than embraces it, religious programs and commercial programs with religious themes have been constants on television.

Until the 1960s, religion on television followed the pattern devised earlier by radio broadcasters. Broadcasters provided time and production facilities free of charge for programs produced by mainline Protestants (the National Council of Churches and, in the South, the Southern Baptist Convention); Catholics (the United States Catholic Conference); and Jews (New York Board of Rabbis). This arrangement enabled broadcasters to satisfy their license requirement to donate time for “public interest” programs, while allowing them to choose religious programmers whose material would not motivate viewers to change the channel. The result was programming with ecumenical appeal, including the award-winning Lamp Unto My Feet (CBS) and Frontiers of Faith (NBC).

Fundamentalist and evangelical groups wishing to express their unique perspectives received neither time nor access to production facilities. They had to produce their own programs and buy air time, usually purchasing the little-viewed hours of Sunday morning. Nevertheless, the evangelical imperative and the persuasive power of television compelled pioneering televangelists forward. The Lutheran Hour and Youth on the March both debuted in 1949, and the first of Billy Graham’s prime-time crusades aired in 1957.

The cozy relationship between the networks and mainline Protestants, Catholics, and Jews began to erode in 1960, when the Federal Communications Commission (FCC) ruled that broadcasters need not give away time to earn public interest credit. Once paid, religious broadcasts counted as much as donated religious broadcasts in the FCC’s public interest accounting, broadcasters lost their incentive to give time away. When the mainline groups chose not to include expensive television productions in their budgets, the non-denominational, Christian evangelical direction of paid religious programming was set: American religious television would be dominated by personality-driven “television ministries” such as Oral Roberts and You, Jerry Falwell’s Old Time Gospel Hour, and Pat Robertson’s 700 Club. These three programs were so remunerative that their founders were able to create universities with their proceeds. Oral Roberts University began in 1963; Falwell established Liberty University in 1971; and Pat Robertson founded Regent University, originally CBN University, in 1977.

In the 1980s, critics worried that powerful televangelists were reducing church attendance and income and influencing national politics, but these fears subsided after academic studies showed that the audience
for televangelism was a small subset of churchgoers, news reports exposed the sexual misdeeds of Jim Bakker and Jimmy Swaggart, and a Republican primary ended Pat Robertson’s bid for president. The lesson many televangelists learned was to spend more time on ministry and less on politics and fund raising.

Televangelism continues to dominate religious programming today, whether in individual programs or in cable services like the Family Channel, which mixes G-rated network reruns and movies with straightforward evangelical programs. The leader is Trinity Broadcasting Network, a 24-hour, commercial-free service founded in 1973 that appears on thousands of television stations and cable systems as well as dozens of satellites around the world. TBN far overshadows its mainline Christian and Jewish counterpart, Faith & Values Media, whose programming appears on cable’s Hallmark Channel mostly on Sunday and early morning, or in some prime-time holiday specials.

But religion has not simply been relegated to fringe time and the odd televangelism cable channel; from the beginning of television, it has appeared in the popular hours of commercial prime time. Most notable in this regard is Bishop Fulton Sheen’s Life Is Worth Living (1952–57), the only explicitly religious program ever to be commercially viable. For most dramas and comedies, however, the principle of least objectionable material applied in the first few decades of television. In order not to offend any viewers, God was seldom mentioned, and even more seldom connected to any particular faith. Characters sometimes attended church or participated in weddings or funerals, but religious specifics were glossed over. A priest may have worn a collar and a nun a habit, but their clothing rarely communicated more than vague humanitarianism.

This blandness began to disappear in the 1980s, when the broadcast television networks began to compete with cable and then satellite channels. Programmers began to look for distinct characters and themes to set them apart from run-of-the-mill competition, and one underused source was religion. Characters sometimes attended church or participated in weddings or funerals, but religious specifics were glossed over. A priest may have worn a collar and a nun a habit, but their clothing rarely communicated more than vague humanitarianism.

family in which the father is a minister. Significantly, the series, which began in 1996, continues to be one of the most popular programs among teenagers, often attracting more teens than any other program airing at the same time. At the beginning of the autumn 2003 television season, Joan of Arcadia was among the very few new programs to attract a substantial audience. In this series God appears to Joan, a high school student, in the persona of “ordinary” people she encounters in everyday settings. Their exchanges, in conventional conversational manner, usually lead to the exploration of some generally “religious” aspect of personal or social engagement.

Network news sometimes addresses religious topics and issues. ABC World News Tonight hired Peggy Wehmeyer as a full-time religion news correspondent from 1994 until 2001. Religion & Ethics News Weekly; a weekly half-hour of news about religion and ethics, began on PBS in 1997. And in 2002, PBS’s Frontline broadcast the provocative Faith and Doubt at Ground Zero, in which a number of clergymen and -women ex-
Remote Control Device

The remote control device (RCD) is a central technological phenomenon of popular culture. Though many cartoons, anecdotal accounts, and even television commercials trivialize the RCD, they also reflect its ubiquity and importance in everyday life. For better or for worse, the RCD has permanently altered television viewing habits by allowing the user to exercise some of the functions once the exclusive province of program and advertising executives. The RCD has altered viewing styles by increasing activities such as “zapping” (changing channels during commercials and other program breaks), “zipping” (fast forwarding through pre-recorded programming and advertising), and “grazing” (the combining of disparate program elements into an individualized programming mix).

Although wired RCDs existed in the “Golden Age” of radio, their history is more directly tied to the television receiver manufacturing industry and, more recently, to the diffusion of videocassette recorders (VCRs) and cable television. Zenith Radio Corporation engineer Robert Adler developed the Space Command, the first practical wireless RCD in 1956. Although other manufacturers would offer both wired and wireless RCDs from the mid-1950s on, the combination of high cost (RCDs typically were available only on more expensive “high end” receivers), technological limitations, and, most critically, the limited number of channels available to most viewers made the RCD more a novelty than a near-standard feature of television receivers until the 1980s.

The rapid increase in the number of video distribution outlets in the 1980s was instrumental in the parallel mass diffusion of RCDs. The RCD, in essence, was the necessary tool for the use of cable, VCRs, and more complex television receivers. Without the RCD, the popularity and impact of these programming conduits would have been much less. In the 1990s, a converging television/telecommunications industry redefined the RCD as a navigational tool whose design is essential to the success of advanced and interactive consumer services such as DVDs, personal video recorders (PVRs), and Internet/television hybrids (e.g., Microsoft’s Ultimate TV; AOLTV). RCD manufacturers continue to introduce more advanced models to control the expanding number of media devices in U.S. homes.

While some industry figures see the RCD as a key to the success of future services, the same elements that allow viewers to find and use specific material from the many channels available also enables them to avoid content that they find undesirable. Both academic and industry studies have identified two types of gratification derived by viewers from RCD use that cause particular concern for the industry: advertising avoidance and “getting more out of television.” These rewards are evidence of a generation of “restless viewers” who challenge many of the conventional practices of the television industry.

The industry has coped with the RCD “empowered” viewer by implementing changes in programming and advertising. Examples include “seamless” scheduling, where one program immediately segues into the following program; the reduction or elimination of opening themes; shorter and more visually striking commercials; increasing advertising-program integration, and more emphasis on television brand promotion. Although not solely a result of RCD diffusion, the ongoing economic consolidation of the world televi-

WITH ZENITH SPACE COMMAND TV
I CAN CHANGE PROGRAMS FROM ACROSS THE ROOM'...

ONLY ZENITH HAS SPACE COMMAND, THE REMOTE CONTROL UNIT THAT TUNES TV BY "SILENT SOUND"...

JUST TOUCH A BUTTON TO...
- shut off the sound of long, annoying commercials while the picture remains on the screen
- turn TV on and off
- change channels (either direction)

No Wires. No Batteries. No Transmitters...

NOTHING BETWEEN YOU AND THE SET BUT SPACE!

Now tune TV from your lounge chair... anywhere in the room! At the touch of a button, the control unit in your hand emits a "Silent Sound" which only the electronic ear of your Space Command receiver can hear. Instantly your set responds! Automatically, each channel comes in sharper than ever before on Zenith's revolutionary new "Sunshine" Picture Tube.

The tone, too, is brilliantly superior because Zenith's four High Fidelity Speakers, mounted on the sides of your picture screen, fill the room with true "living" sound.

Select the perfect Space Command TV set for your room from Zenith's new Decorator Group in Traditional, Modern, and Provincial style cabinets. You'll have the finest in television plus the joy of Space Command Remote TV Control. Not an extra cost accessory it's built right into your set!

Reruns/Repeats

A television program that airs one or more times following its first broadcast is known as a rerun or a repeat. In order for a program to be rerun, it must have been recorded on film or videotape. Live telecasts, obviously, cannot be rerun. The use of reruns is central to the programming and economic strategies of television in the United States and, increasingly, throughout the world.

In the early days of U.S. television, most programming was live. This necessitated the continuous production of new programs, which, once aired, were gone. Certain program formats, such as variety, talk, public affairs, quiz, sports, and drama, dominated the airwaves. With the exception of variety and drama, each of these formats is relatively inexpensive to produce, so the creation of live weekly or daily episodes worked fairly well for broadcasters. Even the production costs for variety shows could be reduced over time with the repeated use of sets and costumes.

Production of dramatic programming, however, was more expensive. Most dramatic series were "anthologies": a different story was broadcast each week, with different characters and, often times, different talent. The costs involved in creating each of these plays was considerable and could rarely be reduced, as the cost of variety programs could be, by repeated use of the durable properties. Because of the expense, the number of dramatic programs decreased, and the number of other less-expensive types of programs increased, during the first decade of television.

During the early 1950s, several weekly prime-time series, most notably I Love Lucy, began filming episodes instead of airing live programs. This allowed producers to create fewer than 52 episodes a year, yet still present weekly episodes throughout the year. They could produce 39 new episodes and repeat 13 of those, usually during the summer months when viewership was lower. While some expenses, for additional payments to creative personnel, are involved in airing reruns, the cost is almost 75 percent less than that incurred in presenting a new first-run episode. The practice proved so successful that by the end of the 1950s there was very little live entertainment programming left on U.S. television, and the television industry, which had been well established in New York, had shifted its center to Hollywood, the center of U.S. film production.

By the 1970s, most network prime-time series were producing only 26 new episodes each year, repeating each episode once (the 26/26 model). By the 1980s, the standard prime-time model was 22/22, with specials or limited series occupying the remaining weeks.

The shift to film or videotape as the primary form of television production also turned out to have benefits far exceeding the reduction of production costs and modifications of the programming schedule. Reruns and repeats are not used merely to ease production schedules and cut costs. By contractual arrangement, episodes usually return to the control of the producer after two network showings. They may then be licensed for presentations by other television distributors. This strategy is financially viable only after several years of a successful network run, when enough episodes of a television program are accumulated to make the series valuable to other programmers. It does lead to the possibility, however, that reruns of a program can be in
syndication forever and almost anywhere. A common industry anecdote claims—and it may be true—that *I Love Lucy* is playing somewhere in the world at any given moment of the day.

The development of the rerun system, particularly as it supports syndication, has become the economic foundation on which the U.S. television industry does business. Because networks, the original distributors of television programs, rarely pay the full production costs for those programs, independent producers and/or studios must create programs at a deficit. That deficit can only be recouped if the program goes into syndication (not a foregone outcome). If the program is sold into syndication, the profits may be great—sufficient to pay off the cost of deficit financing for the original production and support both the development of other series and the programming of less-successful programs that may never be syndicated. This entire system is dependent on a sufficient market for rerun programs, a market traditionally composed of independent television stations and the international television systems, and on an economical means of reproduction.

Initially, film was more desirable than videotape as a means of storing programs because film production contracts called for lower residual payments (the payments made to performers in the series when episodes are repeated). Programs produced on film were under the jurisdiction of the Screen Actors Guild, which required lower residual payments than did the American Federation of Television and Radio Artists, which oversaw programs produced on videotape. By the mid-1970s, residual costs for film and taped performances evened out, and more and more programs are now produced on or transferred to videotape for syndication.

In addition to their use in prime time, reruns are scheduled by networks in all other time periods. Several unions have petitioned the Federal Communications Commission (FCC) in an attempt to restrict network use of reruns, claiming that the use of reruns results in a loss of jobs because it leads to less original production. All of these attempts have failed.

With the tremendous growth of television distribution outlets throughout the world in the 1980s—growth often founded on the expansion of cable television systems and the multichannel environment—additional markets for reruns of old network series were created. In the 1990s, cable networks, such as, Nickelodeon's TV Land and Nick at Nite, found success putting together entire schedules consisting of reruns of old network series. In addition, new partnerships between broadcast and cable networks were established to help defray initial production costs of a new series. Reruns of new episodes of prime-time series such as *Law & Order: Special Victims Unit* (NBC) and *Once and Again* (ABC) have aired on cable networks as soon as ten days after the initial network broadcast. So long as these venues continue to increase, the financial basis for U.S. television production will continue to be stable. And, as more and more countries establish large programming systems of their own, the amount of material available for second, third, and continuing airings will continue to grow.

“Brits Bank on Rerun Bonanza with U.S. Help.” *Variety* (September 28, 1992)

Reynolds, Gene (1925– )
U.S. Actor, Producer, Director

From a child movie actor in Boy's Town, Gene Reynolds grew into a respected producer-director identified with thoughtful television dramas reflecting complex human situations. The programs Reynolds is associated with often possess an undercurrent of humor to entertain, but without softening socially significant story lines.

As producer-director of Room 222 (1969–74), Reynolds found a supportive, kindred spirit in the series' creator James L. Brooks. Exploring life among high school teachers, administrators, and students, their program featured African-American actor Lloyd Haynes as a revered, approachable teacher. A lighter touch in dialogue and situations helped keep the stories attractive to casual viewers. Still, the central characters were involved each week in matters of personal and social import such as drugs, prejudice, self-worth, and dropping out of school.

Again aligning himself with a congenial, creative associate for a TV version of the novel and motion picture M*A*S*H, Reynolds sought out respected "comedy writer with a conscience" Larry Gelbart. Together they fleshed out a sensitive, probing, highly amusing, and wildly successful series about the foibles and aspirations of a military surgical team in the midst of warfare. Rav- cous, sometimes ribald comedy acted as counterpoint to poignant human dilemmas that are present when facing bureaucratic tangles amid willful annihilation. Though intended as comedy-drama commentary on the devastating absurdities of war in general, and the Vietnam conflict in particular, Reynolds and Gelbart pushed the time period of their show back to Korea in the 1950s in order to be acceptable to the network and stations, and to a deeply divided American public. Gelbart left the series early on, and Reynolds eventually became executive producer, turning the producer's role over to Burt Metcalf. The ensemble cast only grew stronger as new actors replaced departing ones through the decade. The acclaimed series earned awards from all sectors during its 11-year run (1972–83), including the Peabody Award in 1975, Emmy Awards for outstanding comedy series in 1974; many other Emmys for outstanding writing, acting, and direction; Emmys twice for best directing by Gene Reynolds (1975, 1976); and the Humanitas Prize.

The public voted, too; their sustained viewing kept the program among the top-ranked five or ten programs every year M*A*S*H aired. The concluding two-and-one-half-hour "farewell" episode (February 28, 1983) still stands as the single-most-watched program in American TV history, attracting almost two out of every three homes in America (60.3 rating). More than 50 million families tuned in that evening to watch the program.

Reynolds left M*A*S*H in 1977. He teamed up again with James L. Brooks and Allan Burns, all as executive producers of Lou Grant. This series explored the combative turf of a major metropolitan newspaper. It dealt with the constitutional and ethical issues found in pitting journalists against politicians, corporate executives, courts, and the general public. Reynolds's creative team avoided cliché-driven plots, focusing instead on complex, unresolved issues and depicting their impact on a mix of vulnerable personalities. The series (1977–82) received critical acclaim, including Peabody, Emmy, and Humanitas Awards, for exploring complicated challenges involving media and society.

Gene Reynolds's modus operandi for producing a television series is to thoroughly research the subject area by extended visits to sites—schools, battlefields (Vietnam to replicate Korean field hospitals), and newspaper offices. There he interviews at length those engaged in career positions. He and his creative partners regularly returned to those sites armed with audiotape recorders to dig for new story ideas, for points of view, for technical jargon and representative phrases, and even for scraps of dialogue that would add verisimilitude to the words of studio-stage actors recreating an incident. Reynolds and his associates always strive for accuracy, authenticity, and social significance. They present individual human beings caught up in the context of controversial events, but affected by personal interaction.

A thoughtful, serious-minded creator with a quiet sense of humor, Gene Reynolds's ability to work closely with colleagues earns the respect of both actors and production crews. He often directs episodes, regularly works with writers on revising scripts, and establishes a working climate on the set that invites suggestions from the actors for enhancing dialogue and action.

Reynolds directed pilots for potential TV series and movies for television, including People Like Us
Rich Man, Poor Man

U.S. Miniseries

One of the first American television miniseries, *Rich Man, Poor Man* aired on ABC from February 1 to March 15, 1976. Adapted from the best-selling 1970 Irwin Shaw novel, *Rich Man, Poor Man* was a limited 12-part dramatic series consisting of six two-hour prime-time made-for-television movies. The televised...
novel chronicles the lives of the first-generation immigrant Jordache family. The story focuses on the tumultuous relationship between brothers, Rudy (Peter Strauss) and Tom Jordache (Nick Nolte), as they suffer through 20 years (1945–65) of conflict, jealousy, and heartbreak.

The serial was enormously successful, leading the weekly ratings and ending as the second-highest-rated show for the 1976–77 television season. Along with its enormous audience popularity, it also garnered critical praise, reaping 20 Emmy nominations and winning four Emmy Awards—two for acting achievement, one for directing, and one for musical score.

The success of *Rich Man, Poor Man* hinged on its employment of several innovative techniques. The narrative struck a unique combination that contained the lavish film-style production values of prestigious special-event programming while at the same time relying upon the "habit viewing" characteristic of a weekly series. Also, by setting the plots in the historical context of such developments as McCarthyism, the Korean War, campus riots, and the Civil Rights Movement, *Rich Man, Poor Man* suggested larger circumstances than those usually found in a traditional soap opera. However, the limited series also liberally took on a range of risqué melodramatic topics, including adultery, power struggles, and alcoholism. Another inventive concept introduced by *Rich Man, Poor Man* was the use of multiple, revolving guest stars throughout the series. While the three principal cast members were relatively unknown at the time, shuffling better-known actors throughout the series was a way to maintain interest and achieve some form of ratings insurance on the $6 million venture.

By invigorating the concept of adapting novels into television miniseries, *Rich Man, Poor Man* began a rapid proliferation of similar prime-time programming, including a sequel. The continuation, *Rich Man, Poor Man: Book II*, was a 21-part weekly series that began airing in the fall of 1976. Although the sequel was not as successful as its predecessor, the idea of extended televised adaptations of popular novels quickly became a component of network schedules. In the season following the debut of *Rich Man, Poor Man*, each of the major networks scheduled at least one miniseries, including an adaptation of Harold Robbins's *The Pirates* and Alex Haley’s historical epic *Roots*.

Although eclipsed by the record-breaking 1977 miniseries *Roots* (aired January 1 through 30 on ABC), *Rich Man, Poor Man* nonetheless has staked a spot in television history. It helped to create a special niche for televised novels as an economically viable miniseries genre.

Rigg, Diana (1938– )

British Actor

After shooting her first 12 episodes in the role of Mrs. Emma Peel in The Avengers, Diana Rigg discovered that her weekly salary as the female lead in an already highly successful series was £30 less than what the show’s cameraman earned. Rigg had not even been the first choice to replace the popular Honor Blackman as secret agent John Steed’s accomplice; the first actress cast had been sacked after two weeks. The role then fell to Rigg, whose television résumé at the time consisted only of a guest appearance on The Sentimental Agent and a performance of Donald Churchill’s The Hothouse.

Rigg’s stage experience, however, was solid. After joining the Royal Shakespeare Company in 1959, the same year as Vanessa Redgrave, Rigg had steadily amassed a strong list of credits, including playing Cordelia to Paul Schofield’s Lear. Years later, Rigg described the rationale for her turn to television: “The trouble with staying with a classical company is that you get known as a ‘lady actress.’ No one ever thinks of you except for parts in long skirts and blank verse.”

Rigg’s salary complaints were quickly addressed, and American audiences, who had never been exposed to Blackman’s Avengers episodes (which did not air in the United States until the early 1990s), quickly embraced Rigg’s assertive, upper-class character. Peel’s name may have been simply a play upon the character’s hoped-for “man appeal,” but Rigg’s embodiment of the role suggested a much more utopian representation of women. Peel demonstrated that women can be intelligent, independent, and sexually confident. After three seasons and an Emmy nomination, Rigg left the series in 1968, claiming “Emma Peel is not fully emancipated.” Still, Rigg resisted publicly associating herself with feminism; to the contrary, she flippantly claimed to find “the whole feminist thing very boring.”

Following Blackman into James Bond films (in 1964 Blackman had been Goldfinger’s Pussy Galore), Rigg’s presence in On Her Majesty’s Secret Service (1969) as the tragic Mrs. James Bond added intertextual interest to the film. Paired with the unfamiliar George Lazenby as Bond, it was Rigg who carried the film’s spy genre credentials, even though her suicidal, spoiled character displayed few of Peel’s many abilities. However, the British spy genre had already begun to collapse, followed by the rest of the nation’s film industry, and Rigg’s career as a movie star never soared.

Rigg did not immediately return to series television. In fact, she publicly attributed her problems on film to having learned to act for television only too well; she had become too “facile” before film cameras, a trait necessitated by the grueling pace of series production.
Apparently, her stage skills remained unaffected, and Rigg went on to a wide range of both classical and contemporary roles as a member of the Royal Shakespeare Company and the National Theatre, and on Broadway. However, while Rigg has originated the lead roles in such stylish works as Tom Stoppard’s _Jumpers_ (1972), the stage work she performed for television broadcast tended to fit more snugly into familiar Anglophilic conventions. In the United States, her television appearances in the 1960s included _The Comedy of Errors_ (1967) and _Women Beware Women_ (1968) for NET Playhouse; in the 1980s, they included _Hedda Gabler, Witness for the Prosecution_, Lady Dedlock in a multipart adaptation of _Bleak House_ (1985), and Laurence Olivier’s _King Lear_ (1985).

During the decade between, however, NBC attempted to capitalize upon what Rigg jokingly called her “exploitable potential” following _The Avengers_. After one failed pilot, the network picked up _Diana_ (1973–74), a _Mary Tyler Moore Show_–inspired sitcom, and Rigg returned to series television as a British expatriate working in New York’s fashion industry. As if to acknowledge the sexual daring of her first series, Rigg’s character became American sitcom’s first divorcée (Moore’s character had been initially conceived as divorced, but that scenario was altered before _The Mary Tyler Moore Show_ aired). In _Diana_, Rigg’s comedic talents, which television critics had once praised as wry and deliberately understated, did not shine; instead, she appeared rather bland, and the series provided no Steed for verbal repartee. (Perhaps even more damning, _Diana_ showed few traces of _The Avengers’_ always dashing fashion sense.) NBC programmed _Diana_ during what had once been _The Avengers’_ time slot, but the sitcom shortly disappeared.

A year later, Rigg successfully played off both her previous roles and her sometimes bawdy public persona in a sober religious drama, _In This House of Brede_ (1975). Portraying a successful businesswoman entering a convent, Rigg’s combination of restraint and technique seemed quintessentially British and earned her a second Emmy nomination.

In 1989, Rigg succeeded Vincent Price in hosting the PBS series _Mystery!_, and in 1990 she impressed American audiences as the star of an Oedipal nightmare, _Mother Love_, a multipart British import presented on that program. In her role as the series’ host, Rigg has in a sense become that “lady actress” she had once entered television to avoid: ensconced in finely tailored suits and beaded gowns, her performance as host displays all the genteel, ambassadorial authority of a woman now entitled to be addressed as Dame Rigg (having been named Dame Commander, Order of the British Empire, in 1994).

In addition to her hosting duties on _Mystery!_, Rigg was busy in the 1990s playing a range of notable stage roles, including the leads in _Medea_ (for which she won a 1994 Tony Award), _Mother Courage_ (1995–96), and _Who’s Afraid of Virginia Woolf_ (1996–97). She also took on a number of character roles on television. These latter parts were frequently villainous to some degree, whether in bodice-rippers ( _A Hazard of Hearts_, 1987), light comedy ( _Mrs. ’arris Goes to Paris_, 1992), or edgy comedy such as the Holocaust farce _Genghis Cohn_ (1994). For her portrayal of Mrs. Danvers in the miniseries _Rebecca_ (shown in the United States in 1997 on ExxonMobil Masterpiece Theatre), she won an Emmy Award for outstanding supporting actress in a miniseries. Since 1998, she has also played the title role in _The Mrs. Bradley Mysteries_, a crime drama set in the 1920s, which debuted on the BBC and has since aired in the United States (on _Mystery!_ and the cable channel BBC America) and Australia (on ABC).

Riggs, Marlon (1957–1994)

U.S. Filmmaker

Before his death in 1994, African-American filmmaker, educator, and poet Marlon Riggs forged a position as one of the more controversial figures in the recent history of public television. He won a number of awards for his creative efforts as a writer and video producer. His theoretical-critical writings appeared in numerous scholarly and literary journals and professional and artistic periodicals. His video productions, which explored various aspects of African-American life and culture, earned him considerable recognition, including Emmy and Peabody Awards. Riggs will nonetheless be remembered mostly for the debate and contention that surrounded the airing of his highly charged video productions on public television stations during the late 1980s and early 1990s. Just as art photographer Robert Mapplethorpe’s provocative, erotic photographs of male nudes caused scrutiny of government agencies and their funding of art, Marlon Riggs’s video productions similarly plunged public television into an acrimonious debate, not only about funding but about censorship as well.

Riggs’s early works received little negative press. His production *Ethnic Notions* aired on public television stations throughout the United States. This program sought to explore the various shades of mythology surrounding the ethnic stereotyping of African Americans in various forms of popular culture. The program was well received and revolutionary in its fresh assessment of such phenomena as the mythology of the Old South and its corresponding caricatures of black life and culture.

The video *Color Adjustment*, which aired on public television stations in the early 1990s, was an interpretive look at the images of African Americans in 50 years of American television history. Using footage from such shows as *Amos 'n' Andy*, *Julia*, and *Good Times*, Riggs compared the grossly stereotyped caricatures of blacks contained in early television programming to those of more recent, and presumably more enlightened, decades.

By far the most polemical of Riggs’s work was his production *Tongues Untied*. This 55-minute video, which “became the center of a controversy over censorship” as reported *The Independent* in 1991, was aired as part of a series entitled *P.O.V.* (Point of View), which aired on public television stations and featured independently produced film and video documentaries on various subjects ranging from personal reflections on the Nazi Holocaust to urban street life in the contemporary United States. *Tongues Untied* is noteworthy on at least three accounts. First, Riggs chose as his subject urban, African-American gay men. Moving beyond the stereotypes of drag queens and comic-tragic stock caricatures, Riggs offered to mainstream America an insightful and provocative portrait of a distinct gay subculture—complete with sometimes explicit language and evocative imagery. Along with private donations, Riggs had financed the production with a $5,000 grant from the National Endowment for the Arts (NEA), a federal agency supporting visual, literary, and performing arts. News of the video’s airing touched off a tumult of debate about the government funding of artistic creations that to some were considered obscene. While artists argued the basic right of free speech, U.S. government policymakers, especially...
those of a conservative bent, engaged in a hotly contentious debate regarding the use of taxpayer money for the funding of such endeavors.

The second area of consternation brought on by the *Tongues United* video concerned the issue of funding for public broadcasting. The P.O.V. series also received funding from the NEA, in the amount of $250,000, for its production costs. Many leaders of conservative television watchdog organizations labeled the program as obscene (though many had not even seen it). Others ironically heralded the program's airing, in the hope that U.S. taxpayers would be able to watch in dismay how their tax dollars were being spent.

Lastly, the question of censorship loomed large throughout the debate over the airing of *Tongues United*. When a few frightened station executives decided not to air the program, the fact of their self-censorship was widely reported in the press. As mentioned, *Tongues United* was not the first P.O.V. production to be pulled. Arthur Kopp of People for the American Way noted in *The Independent*, "the most insidious censorship is self-censorship.... It's a frightening sign when television executives begin to second guess the far right and pull a long-planned program before it's even been attacked."

Riggs defended *Tongues United* by lambasting those who objected to the program's language and imagery, stating in a 1992 *Washington Post* interview, "People are far more sophisticated in their homophobia and racism now... they say 'We object to the language, we have to protect the community' ... those statements are a ruse."

*Tongues United* was awarded Best Documentary of the Berlin International Film Festival, Best Independent Experimental Work by the Los Angeles Film Critics, and Best Video by the New York Documentary Film Festival.

Before his death, Riggs began work on a production entitled *Black Is, Black Ain't*. In this video presentation, Riggs sought to explore what it meant to be black in the United States, from the period when "being black wasn't always so beautiful" to the 1992 Los Angeles riots. This visual reflection on gumbo, straightening combs, and Creole life in New Orleans was Riggs's own personal journey. It also unfortunately served as a memorial to Riggs. Much of the footage was shot from his hospital bed as he fought to survive the ravaging effects of AIDS. The video was finished posthumously and was aired on public television during the late 1990s.

Rintels, David W. (1939–)
U.S. Writer, Producer

Writer-producer David W. Rintels has worked in a variety of dramatic television forms, including series, made-for-television movies, and miniseries. He began his television career in the early 1960s, writing episodes for the critically acclaimed CBS courtroom drama series The Defenders. He continued his series involvement writing episodes for Slattery’s People (1964–65), a CBS political drama, and became head writer for the ABC science fiction series The Invaders (1967–68) before concentrating his energies on writing and producing made-for-television movies and miniseries. His work has been honored with two Emmy Awards for outstanding writing (Clarence Darrow, 1973, and Fear on Trial, 1975); Writers Guild of America Awards for outstanding scripts (“A Continual Roar of Musketry,” parts 1 and 2 of the series The Senator, 1970; Fear on Trial, 1975; and Gideon’s Trumpet, 1980); and a cable ACE Award for writing (Sakharov, 1984). Rintels’s achievements also include the sole story and joint screenplay credits for the feature film Scorpio (1972).

Rintels’s television work in the genres of fictional history (using novelistic invention to portray real historical figures and events) and historical fiction (placing fictional characters and events in a more or less authentic historical setting) has been praised by Los Angeles Times television critic Howard Rosenberg, who noted that Rintels’s “fine record for using TV to present history as serious entertainment is probably unmatched by any other present dramatist.” Some critics have argued, however, that while his faithfulness to historical detail and accuracy is commendable, Rintels’s use of lengthy expository sequences has, on occasion, diminished the stories’ dramatic power.

Following his involvement as an episode writer for The Defenders, the Emmy Award-winning drama series featuring a father and son legal team defending people’s constitutional rights, Rintels returned to the subject of the courts in Clarence Darrow (NBC, 1973) and Gideon’s Trumpet (CBS, 1980), the latter a Hallmark Hall of Fame production he both wrote and produced. Based on Anthony Lewis’s book, Gideon’s Trumpet was the real-life story of Clarence Earl Gideon (played by Henry Fonda), a drifter with little education, who was arrested in the early 1960s for “breaking and entering.” The U.S. Supreme Court held that Gideon was entitled to an attorney, although he could not afford to pay for one; this case established the constitutional right to legal representation, now guaranteed to all U.S. citizens.

Rintels has also frequently focused on the political sphere, and especially on idealistic individuals who become ensnared in the nefarious webs woven by those seeking power or influence. In “A Continual Roar of Musketry,” he developed the character of Hayes Stowe, an idealistic U.S. senator (played by Hal Holbrook).

In the 1975 CBS docudrama Fear on Trial, starring George C. Scott and William Devane, Rintels told the story of John Henry Faulk, a homespun radio personality who wrote a book about the blacklisting in television in the 1950s. Upon publication of this book, Faulk suddenly found his own name appearing in the AWARE bulletin, a blacklist sheet created by two communist-hunting businessmen who proclaimed themselves protectors of the entertainment industry.

Washington: Behind Closed Doors (1977), a 12-and-one-half-hour ABC miniseries co-written (with Eric Bercovici) and co-produced by Rintels, was a provocative examination of the Nixon administration, including a striking psychological portrait of Nixon, fictionalized as President Richard Monckton. Played to perfection by Jason Robards, Monckton is described by Michael Arlen as “nervous and disconnected... insecure, vengeful, riddled with envy, and sublimely humorless.” Although loosely based on The Company (the novel by Nixon administration insider John Erlichman) the Rintels and Bercovici script transcended Erlichman’s one-dimensional characterizations to bring to the small screen “an intelligent and well-paced scenario of texture and character.” Yet working in the genre of historical fiction was not without its pitfalls. In a foreshadowing of the heated debate surrounding Oliver Stone’s 1995 feature film Nixon, Arlen questioned the production’s mixing of fiction with fact:

There should be room in our historical narratives for such a marvelously evocative (though not precisely factual) interpretation as Robards’ depiction of Nixon-Monckton’s strange humorous humorlessness, where an actor’s art gave pleasure, brought out character, and took us closer to truth. At the same time, for major tele-
Rintels, David W.

vision producers...to be so spaced out by the present Entertainment Era as to more or less deliberately fool around with the actual life of an actual man, even of a discredited President...seems irresponsible and downright shabby.

Rintels turned his attention to political repression abroad in Sakharov (HBO, 1984), the moving story of the courageous Soviet scientist Andrei Dmitrievich Sakharov (played by Robards) and his second wife Yelena G. Bonner (Glenda Jackson). Sakharov chronicles the 1975 Nobel Peace Prize winner’s painful journey into dissent, and his outspoken advocacy of human rights. Because so much information about affairs in the Soviet Union was cloaked in secrecy, it would have been tempting to invent much of Sakharov’s tale. Rintels, however, was loath to do this. Rather, in order to present the personal side of Sakharov, Rintels compiled information from extensive interviews with Sakharov’s children and their spouses, who had emigrated to the United States, and with Yelena Bonner’s mother. Rintels also drew upon Sakharov’s own accounts and those of his friends, and on reports from journalists stationed in Moscow. As the story unfolded for Rintels, he decided to use, as a primary framing device, Sakharov’s “growing awareness—through his personal relationship with Yelena—of his moral duty.” Rintels was careful to avoid painting the Soviet bureaucrats and security police as “evil” in simplistic melodramatic terms in order to glorify Sakharov. The script attempted to explain why the Soviet officials perceived Sakharov as an internal threat and was circumspect regarding his motivations when the facts (or lack thereof) warranted.

In two other efforts, Day One (AT&T Presents/CBS, 1989) and Andersonville (TNT, 1996), Rintels examined the United States at war. Day One was a three-hour drama special detailing the history of the Manhattan Project to build an atomic bomb during World War II. Based on Peter Wyden’s book Day One: Before Hiroshima and After, the program was written and produced by Rintels and won an Emmy Award for outstanding drama special. The story began with the flight of top European scientists, who feared Nazi Germany was progressing toward developing an atomic bomb, to the United States. Near the program’s conclusion, a lengthy, balanced, and soul-searching debate transpires among scientists, military leaders, and top civilian government officials, including President Truman, regarding whether to drop the bomb on Japan without prior notice or to invite Japanese officials to a demonstration of the bomb in hopes that they would surrender upon seeing its destructive power. Throughout the piece, Rintels explores the symbiotic relationship that developed between the two key players in the Manhattan Project: the intellectual scientist and project leader, J. Robert Oppenheimer, and the military leader charged with overall coordination of the effort, General Leslie R. Groves.

Andersonville, a four-hour, two-part drama written and produced by Rintels, recounts the nightmare of the Civil War Confederate prison camp in southwest Georgia—a 26-acre open-air stockade designed for 8,000 men, which at peak operation contained 32,000 Union Army prisoners of war. Of the 45,000 Union soldiers imprisoned there between 1864 and 1865, nearly 13,000 died, mostly from malnutrition, disease, and exposure. Not only were the Confederate captors cruel; there also existed in the camp a ruthless gang of prisoners, the Raiders, who intimidated, beat, and even killed fellow prisoners for their scraps of food. The other prisoners eventually revolted against the Raiders, placing their six ring leaders on trial and hanging them with the Confederates’ blessing. Rintels places the blame for the squalid conditions in the camp both on the camp’s authoritarian German-Swiss commandant, Henry Wirz, the only person tried and executed for war crimes following the Civil War, and on larger forces that were the products of a devastating four-year war:
shortages of food, medicine, and supplies that plagued the entire Confederacy and forced it to choose between supplying its own armies or the Union prisoners. To Rintels, the Andersonville camp, unlike the Nazi concentration camps, seemed less the result of a conscious evil policy than the tragic result of a brutal war.

The Holocaust and the people responsible for it were the subject of Rintels’s miniseries Nuremberg (TNT, 2000), which earned the highest ratings to date for any miniseries aired on U.S. basic cable. Starring Alec Baldwin (who also coproduced the four-hour miniseries) as the lead U.S. prosecutor, Nuremberg chronicles the International Military Tribunal proceedings against Nazi officers after World War II, focusing not only on the horrible crimes committed but also on the challenges faced in this first effort to establish standards for the international prosecution of war crimes.

Rintels tackled a somewhat less weighty subject in his next for-cable project, a biography of Indiana University’s volatile head basketball coach, Bobby Knight. A Season on the Brink (2002) is notable for two reasons: it represents the first effort by the sports cable channel ESPN to air an original drama, and it was aired simultaneously on ESPN, with dialogue heavily peppered with profanity, and ESPN2, where the offending words were covered by “bleeps.”

In addition to his creative work, Rintels has also been active in the politics of television. As president of the Writers Guild of America (1975–77), he coordinated the successful campaign, led by the Guild and producer Norman Lear, to have the courts overturn the Federal Communications Commission’s 1975 “family-viewing” policy, which designated the first two hours of prime time (7:00–9:00 P.M.) for programs that would be suitable for viewing by all age groups. Rintels and Lear argued that the policy violated the First Amendment, forcing major script revisions of more adult-oriented programs appearing before 9:00 p.m., and the rescheduling of series such as All in the Family.

Since the early 1970s, Rintels has been a vocal critic of television networks’ timidity in their prime-time programming. In 1972, he condemned commercial television executives for rejecting scripts dealing with Vietnam draft evaders, the U.S. Army’s storing of deadly nerve gas near large cities, antitrust issues, and drug companies’ manufacture of drugs intended for the illegal drug market. In a 1977 interview, Rintels criticized the bulk of prime-time entertainment television: “That’s the television most of the people watch most of the time—75 to 80 million people a night. And it is for many people a source of information about the real world. But the message they are getting is, I think, not an honest message.”

Rising Damp

British Situation Comedy

*Rising Damp*, the Yorkshire Television situation comedy series set in a run-down northern boarding house, was originally screened on ITV between 1974 and 1978 and has continued to be revived on British television at regular intervals ever since, always attracting large audiences (many of whom were no doubt lodgers at one time or another in similarly seedy houses). Created by writer Ernie Chappell, the series depicted the comic misadventures and machinations of Rupert Rigsby, the embittered, down-at-heel landlord, who constantly spied on the usually very innocent private lives of an assortment of long-suffering tenants.

The success of *Rising Damp* depended largely upon the considerable comic talent of its star, Leonard Rossiter, who played the snooping and sneering Rigsby. Rossiter had first demonstrated his impeccable comic timing in the same role (though under the name Rooksbys) in the one-off stage play *Banana Box*, from which the television series was derived. Rossiter rapidly stamped his mark upon the money-grubbing, lecherous, manneristic landlord, making him at once repulsive, vulnerable, paranoid, irrepressible, ignorant, cunning, and above all hilarious. Sharing his inmost fears and suspicions with his cat Vienna, he skulked about the ill-kempt house, bursting in on tenants when he thought (almost always mistakenly) that he would catch them *in flagrante*, and impotently plotting how to seduce university administrator Miss Jones, the frustrated spinster who was the reluctant object of his desire.

Rigsby’s appalling disrespect for the privacy of his lodgers and his irrepressible inquisitiveness were the moving force behind the storylines, bringing together the various supporting characters who otherwise mostly cut lonely and inadequate, even tragic, figures. The supporting cast was in fact very strong, with Miss Jones played in highly individualistic style by the respected stage actress Frances de la Tour; the confused, naive medical student Alan played by an ingenious but appealing Richard Beckinsale; and Philip, the proud but smug son of an African tribal chief, played by Don Warrington. Only Beckinsale had not appeared in the original stage play. Other lodgers later in the series were Brenda (Gay Rose) and Spooner (Derek Newark).

The frustrations and petty humiliations constantly suffered by the various characters, coupled with their dingy surroundings, could easily have made the series a melancholy affair, but the deft humor of the scripts, married to the inventiveness and expertise of the performers, kept the tone light, if somewhat hysterical at times, and enabled the writers to explore Rigsby’s various prejudices (concerning sex, race, students, and anything unfamiliar) without causing offense. In this respect, the series was reminiscent of the techniques employed in *Septoe and Son*, and by Johnny Speight and Warren Mitchell in the “Alf Garnett” series, although here there was less emphasis on inventive and more on deliberately farcical comedy. One occasion on which the series did come unstuck was when fun was had at the expense of an apparently fictional election candidate named Pendry, who was described as crooked and homosexual. Unfortunately, there was a real Labour member of Parliament of the same name, and Yorkshire Television was obliged to pay substantial damages for defamation as a result.

The success of the television series led to a film version in 1980, but this met with mixed response, lacking the conciseness and sharpness of the television series and also lacking the presence of Beckinsale, who tragically died of a heart attack at the age of 31 the pre-
Rivera, Geraldo (1943– )
U.S. Journalist, Talk Show Host

The name of journalist and talk show host Geraldo Rivera has become synonymous with more sensational forms of talk television. His distinctive style, at once probing, aggressive, and intimate, has even led, at times, to parodies of him in a variety of print and broadcast media. He has seemed to contribute to this high-profile identification by playing himself (or a close approximation) in fictional settings, such as an episode of thirtysomething, a 1992 Perry Mason TV movie, the finale of Seinfeld, and the theatrical films The Bonfire of the Vanities (1990) and Primary Colors (1998). Yet, ironically, his fear of going too far with his public image led him to turn down an offer to play the role of an over-the-top tabloid reporter in Oliver Stone’s Natural Born Killers (1994). A master of self-promotion, Rivera’s drive has taken his career in directions he may not have predicted. Despite having won ten Emmys and numerous journalism awards (including the Peabody), Rivera is still primarily known for the more public nature of both his personal life and his talk show.

Rivera was discovered while working as a lawyer for the New York Puerto Rican activist group the Young Lords. During the group’s occupation of an East Harlem church in 1970, Rivera had been interviewed on WABC-TV local news and caught the eye of the station’s news director Al Primo, who was looking for a Latino reporter to fill out his news team. In 1972, Rivera gained national attention with his critically acclaimed and highly rated special on the horrific abuse of mentally retarded patients at New York’s Willowbrook School. He then went on to work for ABC national programs, first as a special correspondent for Good Morning, America, and then, in 1978, for the prime-time investigative show 20/20. However, his brashness led to controversies with the network, and in 1985 he was fired after publicly criticizing ABC for canceling his report on an alleged relationship between John F. Kennedy and Marilyn Monroe.

Rivera was undaunted by his altercation with the network, and he moved to boost his visibility with an hour-long special on the opening of Al Capone’s secret vault in April 1986. The payoff for the audience was virtually nil, since the vault contained only dirt, but the show achieved the highest ratings for a syndicated special in television history. Rivera wrote in his autobiography, “My career was not over. I knew, but had just begun. And all because of a silly, high-concept stunt that failed to deliver on its titillating promise.”

The same high-concept approach became the base for Rivera’s talk show Geraldo, which debuted in September 1987. The first guest was Marla Hanson, a model whose face had been slashed on the orders of a jilted lover. Many critics attacked the show, and Rivera, for his theatrics and “swashbuckling bravado,” but Geraldo garnered a respectable viewership. However, Rivera has pointed out that it was his 1987 show, “Men in Lace Panties and the Women Who Love
Them,” which turned the talk format in a more sensational direction. The following year, he broke talk show rating records with a highly publicized show on Nazi skinheads. During the show’s taping, a brawl had broken out between two of the guests—a 25-year-old leader of the White Aryan Resistance Youth and black activist Roy Innis. A thrown chair hit Rivera square in the face, breaking his nose. The show was news before it even aired. The press jumped on this opportunity to use Rivera as an example of television’s new extremes. A November 1988 cover of Newsweek carried a close-up of his hashed face next to a headline reading, “Trash TV: From the Lurid to the Loud, Anything Goes.”

Throughout the late 1980s and early 1990s, Geraldo (which was eventually renamed The Geraldo Rivera Show) continued to capitalize on the sensational aspects of Rivera’s reputation. He inserted himself into the talk show narrative, often using his own exploits and bodily desires to fill out the issue at hand. In a show on plastic surgery, Rivera had fat sucked from his buttocks and injected into his forehead in a procedure to reduce wrinkles. A few years later, in another procedure, he had his eyes tucked on the show. The publication of his autobiography, Exposing Myself, in the fall of 1991 caused a major stir due to Rivera’s revelations of his numerous affairs.

In a 1993 interview, Rivera offered an analysis of his own place in American life:

I’m so much a part of the popular culture now, I’m a punch line every night on one of the late-night shows... I’m used as a generic almost in all the editorials and commentaries and certainly all the books about whether the news media has gone too far. It’s just that, what is a review going to do to me? They either like me or don’t like me, but I’m always interesting to watch.

By mid-1994 Rivera had begun working to recoup his former role as a “serious” journalist. While still taping episodes of his daytime talk show, he began hosting his own legal affairs program, Rivera Live, on CNBC and became a regular contributor to the Today Show. Although many at NBC News were uncomfortable with Rivera’s tabloid image, Rivera Live became one of the cable network’s highest-rated programs and Rivera won critical praise for his coverage of the O.J. Simpson trial in 1997. In early 1998, Rivera signed a lucrative new six-year contract with NBC, and in May he taped the last original episode of The Geraldo Rivera Show. In the fall of that year, Rivera became host of a second CNBC show, Upfront Tonight.

Yet Rivera could not completely shake the controversy that seemed to follow him. In 2001, he left CNBC with two years left on his contract for a position as war correspondent at the cable channel FOX News; a few months later he was lambasted for one of his reports from the U.S.-led war against terrorism in Afghanistan. After the deaths of three American soldiers in Kandahar by “friendly fire” in early December 2001, Rivera (dressed in flak jacket and carrying a pistol) reported that he had “walked over the spot where the friendly fire took so many of our men... I said the Lord’s Prayer and really choked up.” Newspapers quickly pointed out that the “hallowed” ground of which he spoke was actually hundreds of miles away from where he was standing during his report. Rivera, admitting his mistake, blamed “the fog of war.” More criticism followed, as he acted as a swaggering patriot in many of his reports about events following the September 11, 2001, terrorist attacks on the United States. When Rivera promised that if he ever found Osama bin Laden, he would “kick his head in, then bring it home and bronze it,” many wondered if this “new” Geraldo Rivera was all that different from the old.

Road to Avonlea

Canadian Family Drama

Road to Avonlea, one of English Canada's most successful dramatic series, aired on CBC (the Canadian Broadcasting Corporation network) for seven seasons, from 1990 to 1996. In addition to this domestic success, the series has been among the most widely circulated Canadian programs in international markets; it was sold in more than 140 countries by the end of its domestic run. The series was both a popular and a critical success and is a singular example of the adaptation of "national" Canadian fiction for the generic constraints of both domestic and international televisual markets. This singularity is evident in both the production context of the series and in its narrative development across the seven seasons. The program was produced by Sullivan Entertainment in association with the Disney Channel in the United States and was supported with the participation of Telefilm Canada. Thus, from the beginning of its production run, the series was developed in relation to both domestic and international markets. In addition, the program was plotted in relation to the considerations of both a national broadcasting service and a specialty cable service.

The narrative was developed from the novels of Lucy Maud Montgomery, following the previous success of Sullivan Entertainment's miniseries adaptation of Montgomery's best-known novel, Anne of Green Gables. Set in the Atlantic province of Prince Edward Island (P.E.I.) in the first decades of the 20th century, Avonlea opens with the move of young Sara Stanley (Sara Polley) from Montreal to the small P.E.I. town of Avonlea to live with two aunts, Hetty King (Jackie Burroughs) and Olivia King (Mag Ruffman). Over the

seven seasons, the narrative traces the coming of age of Sara and the other children of the town as well as the adjustments of the adults in the community to the increasing changes that 20th-century modernization brings to rural island life. The series is situated simultaneously within the genres of period-costume drama and children’s, or family, drama—on the CBC, the series ran in the 7:00 p.m. family hour.

The dramatic formula for the series was relatively stable. Episode plots built upon the development of the children’s interrelationships and their increasing entrance into the “adult” world of family and community life. At the same time, the shape of the community was developed through the interactions of series regulars with “outsiders” who instigated disruptions into both family and kinship ties, and who served as indices of the invasive modernity encroaching on town life. The dramatic formula therefore intertwined the coming-of-age incidents and the character development of a traditional children’s series with an idealized and nostalgic accounting of rural forms of community life. The fact that the series’ narrative ends on the eve of World War I serves to reinforce this linking of childhood, family, and community in an earlier, more innocent period.

The episodic use of outsider characters also integrated well with the series development in relation to both domestic and foreign markets. Over the years the producers succeeded in recruiting for these roles a number of internationally known Canadian guest stars (for example, Kate Nelligan, Colleen Dewhurst) and international guest stars (Michael York, Stockard Channing), a production decision that greatly aided in the international marketing of the series. Road to Avonlea, therefore, is a prime example of the adaptation of a national popular culture narrative to the constraints of the international television culture of the 1990s. At the same time, it demonstrates one possible strategy for series finance within relatively “small” national television industries.

MARTIN ALLOR
Robertson, Pat (1930– )
U.S. Religious Broadcaster

Pat Robertson is the leading religious broadcaster in the United States. His success has made him not only a television celebrity but also a successful media owner, a well-known philanthropist, and a respected conservative spokesman. Robertson experienced a religious conversion while running his own electronics company in New York, and he became increasingly certain that God wanted him to buy a television station to spread the gospel. Robertson brought his family to Portsmouth, Virginia, in November 1959, with only $70 in his pocket, and a year later he bought a bankrupt UHF station in Portsmouth for a mere $37,000 (the station was valued at $500,000). The station he bought was given the call letters WYAH-TV, for “Yahweh,” the Hebrew word for “God,” and Robertson called his enterprise the Christian Broadcasting Network (CBN). CBN went on the air on October 1, 1961, with an evangelistic religious format.

In the fall of 1963, CBN held its first telethon asking 700 supporters to join the “700 Club” by pledging $10 a month to help meet the station’s monthly operational budget of $7,000. In 1966, after another successful telethon, Robertson started The 700 Club as a daily broadcast of prayer and ministry that encouraged a telephone response; toll-free 800 numbers were always displayed, and viewers could ring in for advice and prayer.

Robertson’s genius was to recognize early the importance of an Earth station that could uplink and downlink his programs to local cable operators; he made an application to the Federal Communications Commission (FCC) and then signed an agreement with Scientific Atlanta to purchase CBN’s satellite Earth station, and he also bought substantial air time on one of the U.S. domestic satellites. On April 29, 1977, CBN began 24-hour Christian and family programming; this was the beginning of the Family Channel. By December 1977, the CBN Satellite Network had become the largest syndicator of satellite programs in the United States. Two years later, in October 1979, CBN opened its new International Communications Center in Virginia Beach, Virginia. CBN has since expanded its broadcasts internationally, and in 2002 it broadcast to 180 nations in 71 languages.

CBN also affiliated with 33 U.S. Christian television stations to form the Home Entertainment Network in 1989. A year later CBN decided to sell its 24-hour Family Channel, whose most important function was to carry The 700 Club three times a day. The new company, called International Family Entertainment, was launched on the New York Stock Exchange and sold in 1997 to Fox Kids Worldwide for $1.8 billion, with CBN receiving $136.1 million from the sale. Under the terms of the sale, Fox carried The 700 Club twice a day, and the same conditions applied when in 2001 Fox Kids Worldwide was sold to Disney. The cable network is now called ABC Family, and it continues to carry The 700 Club daily.

Hubbell Robinson was active in American broadcasting as a writer, producer, and network programming executive for over 40 years. As the CBS executive who championed the 1950s anthology drama *Playhouse 90*, his efforts to develop high-quality programming that he described as "mass with class" contributed to CBS's long-lived reputation as the "Tiffany" network.

Robinson's broadcasting career began in 1930, when he became the first head of the new radio department at the advertising agency Young and Rubicam. In the era of early commercial broadcasting, when corporate clients sought new radio programs to sponsor, many advertising agencies helped develop program genres, such as the soap opera, that encouraged habitual listening. At Young and Rubicam, Robinson created and wrote scripts for General Foods' soap opera *The Second Mrs. Burton*. The program's success was based, according to Robinson, on "four cornerstones": simple characterizations, understandable predicaments, the centrality of the female characters, and the soap opera's philosophical relevance.

During the late 1930s and early 1940s, Young and Rubicam became an important radio program provider, simultaneously producing *The Jack Benny Show*, *Fred Allen's Town Hall Tonight*, and *The Kate Smith Hour*, among others. As did other radio executives at the agency, Robinson wrote many scripts and commercials, in addition to producing programs.

By the time Robinson joined CBS Television in 1947, his extensive background in radio programming had prepared him well for the new medium. Indeed, in his autobiography, *As It Happened*, then-CBS chairman William Paley referred to Robinson as "the all-around man in our programming department." As executive vice president in charge of television programming at CBS, Robinson championed and oversaw the development of such popular programs as *I Love Lucy*, *You'll Never Get Rich* (with Phil Silvers as Sergeant Bilko), and *Gunsmoke*.

However, according to Paley, "Culturally, [Robinson's] interests were levels above many of his colleagues... His special flair was for high-quality programming." Robinson organized and championed the 90-minute dramatic anthology series, *Playhouse 90*, which featured serious dramas written by Paddy Chayevsky, Reginald Rose, and Rod Serling, among others. During its run from 1956 to 1961, *Playhouse 90*'s plays included *Requiem for a Heavyweight*, *A Sound of Different Drummers*, *The Miracle Worker*, and *Judgment at Nuremberg*. Robinson was credited with bringing serious television drama to its peak with *Playhouse 90*.

For Paley and others at CBS, however, the anthology drama format was a drawback: its lack of continuity from week to week did not seem to encourage regular television viewing habits. But the networks' increasing reliance on filmed episodic programs was disparaged by many admirers of live anthology drama. Referring to critics' concerns that network programming quality was declining, Robinson openly criti-
alyzed the television industry's "willingness to settle for drama whose synonym is pap." Paley, on the other hand, expressed concern that, as a network executive, Robinson "may have lacked the common touch." Still, it was Robinson's stance that helped CBS deal with federal regulators when questions were raised about whether CBS programs served the (loosely defined) public interest.

Robinson returned to CBS briefly from 1962 to 1963 and later joined ABC as executive producer of the Stage 67 series and the on-location series Crisis! from 1966 to 1969. In the early 1960s, he was credited with helping erode stereotyping of African Americans on television by distributing a memorandum calling for producers to cast blacks in a greater variety of roles. Robinson's contributions as a producer and programmer spanned the crucial decades of radio's maturity and television's early growth. As the executive responsible for the programming of both popular and innovative television programs in the 1950s, he helped CBS establish and maintain its reputation as the network with the highest ratings and best programming, a reputation that endured for several decades.

Rockford Files, The

U.S. Detective Drama

The Rockford Files is generally regarded (along with Harry O) as one of the finest private eye series of the 1970s, and indeed of all time, consistently ranked at or near the top in polls of viewers, critics, and mystery writers. The series offered superbly plotted mysteries, with the requisite amounts of action, yet it was also something of a revisionist take on the hard-boiled detective genre, grounded more in character than crime, and infused with humor and realistic relationships. Driven by brilliant writing, an ensemble of winning characters, and the charm of its star, James Garner, the series went from prime-time Nielsen hit in the 1970s to a syndication staple with a loyal cult following in the 1980s, before spawning several made-for-TV movie sequels in the 1990s.

The show was created by producer Roy Huggins...
and writer Stephen J. Cannell. Huggins originally sketched the premise of a private eye who took on only closed cases (a conceit quickly abandoned in the series), at one point intending to introduce the character in an episode of the cop show Toma. Huggins assigned the script to Cannell—a professed aficionado of the hard-boiled detective tradition—who decided to have fun with the story by flouting the genre’s clichés and breaking its rules. After the Toma connection crumbled, James Garner signed on to the project, NBC agreed to finance the pilot, and The Rockford Files was born.

Cannell was largely responsible for the character and the concept that finally emerged in the pilot script and the series. Jim Rockford did indeed break the mold set by television’s earlier two-fisted chivalric P.I.s. His headquarters was a mobile home parked at the beach rather than a shabby office off Sunset Boulevard; in lieu of a gorgeous secretary, an answering machine took his messages; he preferred to talk, rather than slug, his way out of a tight spot; and he rarely carried a gun. (When one surprised client asked why, Rockford replied, “Because I don’t want to shoot anybody.”) No troubled loner, Jim Rockford spent much of his free time fishing or watching TV with his father, Joe Rockford (Noah Beery, Jr.), a retired trucker with a vocal antipathy to “Jimmy’s” chosen profession. Inspired by an episode of Mannix in which that tough-guy P.I. took on a child’s case for some loose change and a lollipop, Cannell decided to make his creation “the Jack Benny of private eyes.” Rockford always announced his rates up front: $200 a day, plus expenses (which he itemized with abandon). He was tenacious on the job, but business was business—and he had payments on the trailer.

For all of its ostensible rule-breaking, however, The Rockford Files hewed closely to the hard-boiled tradition in style and theme. The series’ depiction of Los Angeles’s sun-baked streets and seamy underbelly rivals the novels of Raymond Chandler and Ross Macdonald. Chandler, in his essay “The Simple Art of Murder,” could have been writing about Jim Rockford when he describes the hard-boiled detective as a poor man, acommon man, a man of honor, who talks with the rude wit of his age. Rockford’s propensity for wisecracks, his fractious relationship with the police, and his network of shady underworld connections, lead straight back to Dashiell Hammett by way of Chandler and Rex Stout. As for his aversion to fisticuffs, Rockford was not a coward, but a pragmatist, different only by degree (if at all) from Philip Marlowe; when violence was inevitable, Rockford was as tough as nails. Most tellingly of all, he shared the same code as his Los Angeles predecessors Marlowe and Lew Archer: an unwavering sense of morality, and an almost obsessive thirst for the truth. Thus, despite his ostensible concern for the bottom line, in practice Rockford ended up doing at least as much charity work as any fictional gumshoe (as in “The Reincarnation of Angie,” when the soft-hearted sleuth agrees to take on a distressed damsel’s case for his “special sucker rate” of $23.74).

Ultimately—perhaps inevitably—all of Cannell’s generic revisionism served to make his hero more human, and the stories that much more realistic. Jim Rockford could be the Jack Benny of private eyes precisely because he was the first TV private eye—perhaps the first literary one—to be created as a fully credible human being, rather than simply a dogged, alienated purveyor of justice. The Rockford Files was as much about character and relationships as it was about crime and detection. The presence of Rockford’s father was more than a revisionist or comic gimmick. Although “Rocky” and Jim’s wrangling was the source of much humor, that humor was credible and endearing; their relationship was the emotional core of the show, underlining Jim’s essential humanity—and subtly, implicitly, sketching in a history for the detective. By the same token, a tapestry of supporting and recur-
ring characters gave Rockford a life beyond the case at hand: Los Angeles Police Department Sergeant Dennis Becker (Joe Santos), Jim’s buddy on the force, served a stock genre function as a source of favors and threats, but their friendship, which played out apart from the precinct and the crime scene, added another dimension of character. Likewise, Jim’s attorney and sometimes girlfriend Beth Davenport (Gretchen Corbett) further fleshed out the details of his personal life, and served as an able foil for Becker and his more ill-tempered superiors (in the process imparting a dash of 1970s feminism to the show). Angel Martin (Stuart Margolin), Rockford’s San Quentin cellmate, the smallest of small-time grifters, the weasel’s weasel, at once hilarious and pathetic, evoked Rockford’s prison past, evinced his familiarity with Los Angeles’s seamier side and balanced Rocky’s hominess with an odious measure of sleaze. These regular members of the Rockford family, and a host of distinctive recurring characters—cops, clients, crooks, con men, ex-cons—helped create, over time, a web of relationships that grounded Rockford, investing it with a more intense and continuing appeal than would a strict episodic focus on crime and detection.

As the preceding might suggest, The Rockford Files was underlined with a warmth not usually associated with the private eye genre. Much of the show’s distinctiveness was its emphasis on humor, exploiting Garner’s comic gifts (and his patented persona of “reluctant hero”) and the humor of the protagonist’s often prickly relationships with his dad, Becker, Angel, and his clients. In later seasons the series occasionally veered into parody—especially in the episodes featuring dashing, wealthy, virtuous detective Lance White (Tom Selleck), and bumbling, pulp-fiction-addled, would-be private eye Freddie Beamer (James Whitmore, Jr.)—and even flirted with self-parody, as the show’s signature car chases became more and more elaborate and (sometimes) comical (as when Rockford is forced to give chase in a Volkswagen beetle with an enormous pizza adorning the top). Even so, the series was faithful to its hard-boiled heritage. Yet the series also brought a contemporary sensibility to the hard-boiled tradition’s anti-authority impulses, assailing political intrigue, official corruption, and bureaucratic absurdity with a distinctly post-Watergate cynicism.

Rockford’s most profound homage to the detective tradition was first-rate writing and a body of superbly realized mysteries. Cannell and Juanita Bartlett wrote the bulk, and most of the best, of the series’ scripts, with writer-producer David Chase (I’ll Fly Away, Northern Exposure, The Sopranos), also a frequent contributor of top-notch work. Mystery author Donald Westlake, quoted in The Best of Crime and Detective TV, captures the series’ central strengths in noting that “the complexity of the plots and the relationships between the characters were novelistic.” John D. MacDonald, critiquing video whodunits for TV Guide, proposed that in terms of “believability, dialogue, plausibility of character, plot coherence, The Rockford Files comes as close to meeting the standards of the written mystery as anything I found.” During its run, the series was nominated for the Writers Guild Award and the Mystery Writer’s of America “Edgar” Award, in addition to winning the Emmy for outstanding drama series in 1978.

The Rockford Files ran for five full seasons, coming to a premature end in the middle of the sixth, when Garner left the show due to a variety of physical ailments brought on by the strenuous demands of the production. Yet Rockford never really left the air; not only has the series remained steadily popular in syndication and on cable, eight made-for-television movies reuniting the original cast aired on CBS between 1994 and 1999. In addition, a loyal cult following continues to celebrate the series on various Rockford File websites. The show’s rather rapid canonization as a touchstone of the private eye genre is evinced by subsequent series, including Magnum, P.I., Detective in the House, and Charlie Grace, consciously imitating or directly quoting it.

The Rockford Files marked a significant step in the evolution of the television detective, honoring the traditional private eye tale with well-crafted mysteries, and enriching the form with what television does best: fully developed characters and richly drawn relationships. In musing on the hard-boiled detective whose tradition he helped shape, Raymond Chandler wrote, “I do not care much about his private life.” In Rockford, Cannell and company embraced and exploited their detective’s private life. Television encourages, even demands this intimacy. For all the gritty realism of Spade and Marlowe’s mean streets, they were, in their solitary asceticism, figures of romantic fantasy. Jim Rockford was no less honorable, no less resolute in his quests; he was, however, by virtue of his trailer, his dad, his gun in the cookie jar, just that much more real.

1944
Gene Roddenberry, who once commented, "No one in his right mind gets up in the morning and says, 'I think I'll create a phenomenon today.'" is best known as the creator and executive producer of Star Trek, one of the most popular and enduring television series of all time.

A decorated B-17 pilot during World War II, Roddenberry flew commercially for Pan American Airways after the war while taking college writing classes. Hoping to pursue a career writing for the burgeoning television industry, Roddenberry resigned from Pan Am in 1948 and moved his family to California. With few prospects, he followed in his father’s and brother’s footsteps and joined the Los Angeles Police Department (LAPD), where he served for eight years. During his career as a police officer, the LAPD was actively involved with Jack Webb's Dragnet series, giving technical advice on props, sets, and story ideas based on actual cases, many of which were submitted by police officers for $100 in compensation. Roddenberry submitted treatments based on stories from friends and colleagues.

Roddenberry’s first professional television work was as technical adviser to Frederick Ziv’s Mr. District Attorney (1954). The series also gave him his first professional writing work. In addition to creating episodes for Mr. District Attorney, Roddenberry also wrote the science fiction tale “The Secret Weapon of 117,” which was broadcast on the syndicated anthology series Chevron Hall of Stars (March 6, 1956). As he gained increasing success in his new career, he decided to resign from the LAPD in 1956 to pursue writing full time.

Roddenberry continued working on Ziv’s new series, The West Point Story (CBS, 1956–57; and ABC, 1957–58), and eventually became the show’s head writer. For the next few years, he turned out scripts for such series as Highway Patrol (syndicated), Have Gun—Will Travel (CBS), Jane Wyman Theater (NBC), Bat Masterson (NBC), Naked City (ABC), Dr. Kildare (NBC), and The Detectives (ABC and NBC). Even at this furious pace, Roddenberry continued to develop ideas for new series.
Gene Roddenberry, Star Trek, 1973–75.
Courtesy of the Everett Collection/CSU Archives

The first series created and produced by Roddenberry was The Lieutenant (NBC, 1963–64). Set at Camp Pendleton, The Lieutenant examined social questions of the day in a military setting. Coincidentally, the show featured guest performances by three actors who later played a large role in Star Trek: Nichelle Nichols, Leonard Nimoy, and Majel Barrett, whom he later married. Casting director Joe D’Agosta and writer Gene L. Coon would also work with Roddenberry on Star Trek.

A lifelong fan of science fiction, Roddenberry developed his idea for Star Trek in 1964. The series was pitched to the major studios and finally found support from Desilu Studios, the production company formed by Lucille Ball and Desi Arnaz. The original $500,000 pilot received minor support from NBC executives, who later commissioned an unprecedented second pilot. The series premiered on September 8, 1966.

Like The Lieutenant, Star Trek episodes comment on social and political questions in a military (albeit futuristic) setting. Roddenberry described Star Trek as a “Wagon Train to the stars” because, like that popular series, its stories focused on the “individuals who traveled to promote the expansion of our horizons.” Star Trek was the first science fiction series to depict a peaceful future, and Roddenberry often credited the enduring success of the series to the show’s positive message of hope for a better tomorrow. It was also the first series to have a multicultural cast. Star Trek received little notice during its three-year run and was canceled after the third season due to low ratings. However, it gained worldwide success in syndication.

In addition to producing the Star Trek feature films, Roddenberry continued to write and produce for television, but without the same degree of success. His pilot for Assignment: Earth (NBC) was incorporated as an episode of Star Trek (March 29, 1968). Later pilots included Genesis II (CBS, March 23, 1973), The Questor Tapes (NBC, January 23, 1974), Planet Earth (ABC, April 23, 1974), and Spectre (May 21, 1977). Roddenberry also served as executive consultant on an animated Star Trek series (NBC, 1974–75). A second Star Trek series, Star Trek: The Next Generation, premiered as a syndicated series in 1987 and had a successful seven-year run.

Star Trek: The Next Generation was the last series on which Roddenberry had an active role. Since his death in 1991, three new Star Trek series based on Roddenberry’s original concept have been created: Star Trek: Deep Space Nine (1993–99), Star Trek: Voyager (1995–2001), and Star Trek: Enterprise (2001–). Two other science fiction series based on Roddenberry’s earlier writings have also been televised: Earth: Final Conflict (1997–2002) and Andromeda (2000–).

Known affectionately to Star Trek fans as “the Great Bird of the Galaxy,” Roddenberry was the first television writer to be honored with his own star on the Hollywood Walk of Fame, on September 4, 1985. In 1992, with the permission of Roddenberry’s widow, Majel Barrett, the late producer’s ashes were carried aboard a flight of the space shuttle Columbia. In 1993, Roddenberry was posthumously awarded NASA’s Distinguished Public Service Medal for his “distinguished service to the nation and the human race in presenting the exploration of space as an exciting frontier and a hope for the future.”

Rogers, Fred McFeely (1928–2003)

U.S. Children’s Television Host, Producer

Fred McFeely Rogers, better known to millions of American children as Mr. Rogers, was the creator and executive producer of the long-running children’s program on public television, Mister Rogers’ Neighborhood. While commercial television most often offers children animated cartoons, and many educational programs employ the slick, fast-paced techniques of commercial television, Rogers’s approach was as unique as his content. He simply talks with his young viewers. Although his program provided a great deal of information, the focus was not upon teaching specific facts or skills, but upon acknowledging the
uniqueness of each child and affirming his or her importance.

Rogers did not originally plan to work in children’s television. Rather, he studied music composition at Rollins College in Florida, receiving a bachelor’s degree in 1951. He happened to see a children’s television program, and felt it was so abysmal that he wanted to offer something better. While he worked in television, however, he also pursued his dream of entering the ministry, continuing his education at Pittsburgh Theological Seminary. In 1962, Rogers received a bachelor of divinity degree, and was ordained by the United Presbyterian Church with the charge to work with children and their families through the mass media.

Rogers began his television career at NBC, but joined the founding staff of America’s first community-supported television station, WQED in Pittsburgh, as a program director in 1953. His priority was to schedule a children’s program; however, when no one came forward to produce it, Rogers assumed the task himself and, in April 1954, launched The Children’s Corner. He collaborated with on-screen hostess Josie Carey on both the scripts and music to produce a show that received immediate acclaim, winning the 1955 Sylvania Award for the best locally produced children’s program in the country. Rogers and Carey also created a separate show with similar material for NBC network distribution on Saturday mornings. With only a meager budget, their public television show was not a slick production, but Rogers did not view this as a detriment. He wanted children to think that they could make their own puppets, no matter how simple, and create their own fantasies. The important element was to create the friendly, warm atmosphere in the interactions of Josie and the puppets (many of whom remained a part of Mister Rogers’ Neighborhood), which became the hallmark of the program.

In 1963, the Canadian Broadcasting Corporation (CBC) in Toronto provided Rogers another opportunity to pursue his ministerial charge through a 15-minute daily program called Mister Rogers. This was his first opportunity to develop his on-camera style: gentle, affirming, and conversational. The style was grounded in Rogers’s view of himself as an adult who took time to give children his undivided attention, rather than as an entertainer.

Rogers returned to Pittsburgh in 1964, acquired the rights to the CBC programs, and lengthened them to 30 minutes for distribution by the Eastern Educational Network. When production funds ran out in 1967 and stations began announcing the cancellation of the show, an outpouring of public response spurred the search for new funding. As a result of support by the Sears, Roebuck Foundation and National Educational Television, a new series entitled Mister Rogers’ Neighborhood began production for national distribution. New episodes were taped from 1979 to 2001 and broadcast along with the original 460 episodes. Mister Rogers’ Neighborhood was unique because it provided a warmth and intimacy seldom found in mass media productions. The show was designed to approximate a visit between friends, and was meticulously planned in consultation with psychologists at the Arsenal Family and Children’s Center. The visit began with a model trolley that traveled through a make-believe town to Rogers’s home. He entered, singing ‘‘Won’t You Be My Neighbor?,” an invitation for the viewer to feel as close to him as to an actual neighbor. He also created a bond with his audience by speaking directly to the camera, always in an inclusive manner about things of interest to his viewers. As he spoke, he changed from his sport coat to his trademark cardigan sweater, and from street shoes to tennis shoes, to further create a relaxed, intimate atmosphere.

The pacing of the program also approximated that of an in-depth conversation between friends. Rogers spoke slowly, allowing time for children to think about what he said and to respond at home. Psychologists studying the show have verified that children do respond. He also took time to examine objects around him or to do simple chores such as feed his fish. Although he invited other “neighbors,” such as pianist
Van Cliburn, to share their knowledge, the warm rapport also allowed him to tackle personal subjects, such as fears of the dark or the arrival of a new baby.

Recognizing the importance of play as a creative means of working through childhood problems, he also invited children into the Neighborhood of Make Believe. Because Rogers wanted children to clearly separate fantasy from reality, this adjacent neighborhood could only be reached via a trolley through a tunnel. The Neighborhood of Make Believe was populated by a number of puppets who were kindly and respectful but not perfect. King Friday XIII, for example, was kind but also somewhat pompous and authoritarian.

Human characters also inhabited this neighborhood and engaged the puppets on an equal level. Since Rogers was the puppeteer and voice for most of the puppets, it was difficult for him to interact in this segment. This movement away from “center stage,” however, was a conscious choice. His lack of visible participation underscored the separation between the reality he created in his “home” and these moments of fantasy. The trolley then took the children back to Rogers’ home, and the visit ended as he changed back into his street clothes and left the house, inviting the children back at a later date.

In 1971, Rogers formed Family Communications, Inc., a nonprofit corporation of which he was president, to produce Mister Rogers’ Neighborhood and other audiovisual, educational materials. Many of these productions, such as the prime-time series Mister Rogers Talks with Parents (1983), and his books Mister Rogers Talks with Parents (1983) and How Families Grow (1988), are guides for parents. He also recorded six albums of children’s songs. However, these activities were viewed as educational endeavors rather than profit-generating enterprises, and most of the funding for his productions came from grants.

Fred Rogers succeeded in providing something different for children on television, and in acknowledgment of his accomplishments he received two Peabody Awards, a first for noncommercial television. Rather than loud, fast-paced animation or entertaining education, he presented a caring adult who visits with children, affirming their distinction and value, and understanding their hopes and fears. Fred Rogers passed away due to stomach cancer on February 27, 2003.

Rogers, Ted (1933– )  
Canadian Media Executive

The founder and chief executive officer of Rogers Communications, Inc., Ted Rogers has become Canada’s undisputed new-media mogul. A tireless worker, over the last 35 years Rogers has ceaselessly expanded his business undertakings by plunging headlong into each new communication technology. He has compared his corporate machinations to the likes of Rupert Murdoch’s News Corporation and Time-Warner, maintaining that only by building Canadian companies of comparable size and diversity can Canadians be assured of a distinctive voice at the forefront of the electronic highway.

Established in 1967, Rogers Communications has grown into one of Canada’s largest media conglomerates. Rogers Communications is the largest cable television business in Canada, with more than 30 percent of all Canadian cable subscribers. As a broadcaster and television content provider, Rogers Communications owns more than 40 radio stations, CFMT in Toronto (a multicultural television station), the cable channel Sportsnet, and the Canadian Home Shopping Channel. It also owns a chain of video stores. In telecommunications, Rogers Communications held a major stake in Unitel Communications, a long-distance telephone company, from 1989 to 1995, and has been in the wireless telephone business since 1985. As of 2002, Rogers Communications owned 51 percent of Rogers AT&T Wireless, a Canada-wide cellular phone service. As a result of its 1994 takeover of Maclean-Hunter Ltd., Rogers Communications became the majority shareholder of the Toronto Sun Publishing Corporation, publisher of newspapers across Canada, and is also the owner of dozens of periodicals in Canada, Britain, the United States, and Europe. In 1993, Rogers Communications generated revenues of $1.34 billion; the addition of the assets from Maclean-Hunter bring the annual revenues of Rogers Communications to more than double that figure.

Ted Rogers’s interest in broadcasting continues a family tradition. His father, Edward Samuel Rogers, Sr., was the first amateur radio operator in Canada to transmit successfully a signal across the Atlantic. In 1925, he invented the radio tube that made it possible to build “battery-less” alternating current receiving sets, and in the same decade he founded Rogers Majestic Corporation to build them. Until then, neither radio receivers nor transmitters could utilize existing household wiring or power lines, and the batteries that powered radio receivers were cumbersome, highly corrosive, and required frequent changing. Rogers’s radio greatly increased the popularity of broadcasting. The elder Rogers also established a commercial radio station, CFRB (with the call letters signifying Canada’s First Radio Batteryless), in Toronto, which grew to command Canada’s largest listening audience. In 1935, Rogers Sr. was granted the first Canadian license to broadcast experimental television. He died eight years later at the age of 38, when Ted Rogers was five. After Rogers Sr.’s death, the Rogers family lost control of CFRB.
In 1960, while still a student at Osgoode Hall Law School in Toronto, Ted Rogers bought all the shares in CHFI-FM, a small, 940-watt Toronto radio station that pioneered the use of frequency modulation (FM) at a time when only 5 percent of Toronto households had FM receivers. By 1965, Rogers was in the cable TV business. In 1979 and 1980, he bought out two competitors, Canadian Cablesystems and Premier Cablevision (both were larger than his own operation), and, by 1980, Rogers Communications had taken over UA-Columbia Cablevision in the United States, to become for a time the world's largest cable operator, with more than 1 million subscribers.

Rogers has since sold his stake in U.S. cable operations to concentrate on the Canadian market. His forays into long-distance and cellular telephone service, his ownership of cable services such as the Home Shopping Network and specialty channels such as Sportsnet, and the acquisition of Maclean-Hunter's publishing interests, with more than 60 magazine and trade periodicals, make Rogers a key player in virtually all of Canada's media markets.

Although the Canadian Radio-television and Telecommunication Commission has generally given its assent to Rogers's corporate maneuvers, there are many who believe that the commission has neither the regulatory tools nor the will to monitor or control adequately the activities of Rogers Communications and other large cable operators, especially with regard to pricing and open network access. While cable rates rose an average of 80 percent between 1983 and 1993, Rogers Communications was busy adding to its corporate empire and upgrading its technical infrastructure.

As some cable operators tremble at the prospect of competition from direct-to-home satellites and telephone companies, Ted Rogers has ensured that Rogers Communications is well positioned for life after the era of local cable monopolies. Taking his cue from corporate strategists south of the border, Rogers has added a sports property to his holding with his purchase of the Toronto Blue Jays, and his wireless venture now accounts for more operating revenue than his cable assets. From humble beginnings, Rogers has built a company that seems destined to travel in the fast lane.

Room 222

U.S. High School Drama

Room 222 was a half-hour comedy-drama that aired on ABC from 1969 to 1974. While seldom seen in syndication today, the show broke new narrative ground that would later be developed by the major sitcom factories of the 1970s, Grant Tinker's MTM Enterprises and Norman Lear's Tandem Productions. Mixing dramatic elements with traditional television comedy, Room 222 also prefigured the "dramedy" form by almost two decades.

The series was set at an integrated high school in contemporary Los Angeles. While the narrative centered on a dedicated and student-friendly African-American history teacher, Pete Dixon (Lloyd Haynes), it also depended upon an ensemble cast of students and other school employees. The optimistic idealism of Pete, guidance counselor Liz McIntyre (Denise Nicholas), and student-teacher Alice Johnson (Karen Valentine) was balanced by the experienced, somewhat jaded principal, Seymour Kaufman (Michael Constantine). These characters and a handful of other teachers would spend each episode arguing among themselves about the way in which to go about both educating their students and acting as surrogate parents.

A season and a half before Norman Lear made "relevant" programming a dominant genre with the introduction of such programs as All in the Family and Maude, Room 222 was using the form of the half-hour comedy to discuss serious contemporary issues. During its five seasons on the air, the show included episodes that dealt with such topics as racism, sexism, homophobia, dropping out of school, shoplifting, drug use among both teachers and students, illiteracy, cops in school, guns in school, Vietnam War veterans, venereal disease, and teenage pregnancy.

Most importantly, Room 222 served as a prototype of sorts for what would become the formula that MTM Enterprises would employ in a wide variety of comedies and dramas during the 1970s and 1980s. When Grant Tinker set up MTM, he hired Room 222's executive story editors James L. Brooks and Allan Burns to create and produce the company's first series, The Mary Tyler Moore Show. This series eschewed issue-oriented comedy, but it picked up on Room 222's contemporary and realistic style as well as its setting in a "workplace family." Treva Silverman, a writer for Room 222, also joined her bosses on the new show, and Gene Reynolds, another Room 222 producer, produced The Mary Tyler Moore Show spin-off Lou Grant several years later.

Room 222 was given a number of awards by community and educational groups for its positive portrayal of important social issues seldom discussed on television at the time. It won an Emmy Award for outstanding new series in 1969.

Roots

U.S. Miniseries

Roots remains one of television's landmark programs. The 12-hour miniseries aired on ABC from January 23 to January 30, 1977. For eight consecutive nights it riveted the United States. ABC executives initially feared that the historical saga about slavery would be a ratings disaster. Instead, Roots scored higher ratings than any previous entertainment program in history. It averaged a 44.9 rating and a 66 audience share for the length of its run. The seven episodes that followed the opener earned the top seven spots in the ratings for their week. The final night held the single-episode ratings record until 1983, when the finale of M*A*S*H aired on CBS.

The success of Roots has had lasting impact on the television industry. The show defied industry conventions about black-oriented programming: executives simply had not expected that a show with black heroes and white villains could attract such huge audiences. In the process, Roots almost single-handedly spawned a new television format—the consecutive-night miniseries. (Previous miniseries, such as the 1976 hit Rich Man, Poor Man, had run in weekly installments.) Roots also validated the docudrama approach of its executive producer, David Wolper. The Wolper style, blending fact and fiction in a soap opera package, influenced many subsequent miniseries. Finally, Roots was credited with having a positive impact on race relations and expanding the nation's sense of history.

Adapted for television by William Blinn and based on Alex Haley's best-selling novel about his African ancestors, Roots follows several generations in the lives of a slave family. The saga begins with Kunta Kinte (LeVar Burton), a West African youth captured by slave raiders and shipped to America in the 18th century. Kunta receives brutal treatment from his white masters and rebels continually. An older Kunta (John Amos) marries and his descendants carry the story after his death. Daughter Kizzy (Leslie Uggams) is raped by her master and bears a son, later named Chicken George (Ben Vereen). In the final episode, Kunta Kinte's great-grandson Tom (Georg Stanford Brown) joins the Union Army and gains emancipation. Over the course of the saga, viewers saw brutal whip-
phenomenal audiences. On average, 80 million people watched each of the last seven episodes. More than 100 million viewers, almost half the United States, saw the final episode, which still claims one of the highest Nielsen ratings ever recorded, a 51.1 with a 71 share. A stunning 85 percent of all U.S. television homes saw all or part of the miniseries. Roots also enjoyed unusual social acclaim for a television show. Vernon Jordan, former president of the Urban League, called it "the single most spectacular educational experience in race relations in America." Today, the show's social effects may appear more ephemeral, but at the time they seemed widespread. More than 250 colleges and universities planned courses on the saga, and during the broadcast, more than 30 cities declared Roots weeks.

The program drew generally rave reviews. Black and white critics alike praised Roots for presenting African-American characters who were not tailored to suit white audiences. The soap opera format drew some criticism for its emphasis on sex, violence, and romantic intrigue. A few critics also complained that the opening segment in Africa was too Americanized—it was difficult to accept such television regulars as O.J. Simpson as West African natives. On the whole, however, critical acclaim echoed the show's resounding popular success. Roots earned more than 30 Emmy Awards and numerous other distinctions.

The program spawned a 1979 sequel, Roots: The Next Generations. The sequel did not match the original's ratings but still performed extremely well, with a total audience of 110 million. Overall, Roots had a powerful and diverse impact, as a cultural phenomenon, an exploration of black history, and the crown jewel of historical miniseries.

Rose, Reginald (1920–2002)
U.S. Writer

Reginald Rose was one of the outstanding television playwrights to emerge from the “Golden Age” of television drama anthology series. Like his acclaimed contemporaries—Paddy Chayefsky, Tad Mosel, and Rod Serling, for example—Rose takes a place in history at the top of the craft of television writing. In addition to other accolades, Rose was nominated for six Emmy Awards during his career, and won three. Although most of Rose’s fame derived from his teleplays for the live drama anthologies, he also wrote a number of successful plays for screen and stage. Additionally, he created and wrote scripts for The Defenders at CBS, and he won recognition for the revived CBS Playhouse in the late 1960s.

Rose’s first teleplay to be broadcast was The Bus to Nowhere, which appeared on Studio One (CBS) in

Winship, Michael, Television, New York: Random House, 1988
1951. It was the 1954–55 season, however, that gave Rose his credentials as a top writer—that year has been referred to as “the Reginald Rose season” at Studio One. His contributions included the noted plays 12:32 A.M., An Almanac of Liberty, Crime in the Streets, as well as the play that opened the season and became perhaps Rose’s best-known work, Twelve Angry Men. In addition to winning numerous awards and undergoing transformation into a feature film, Twelve Angry Men undoubtedly established Rose’s reputation almost immediately as a major writer of drama for television.

What distinguished Rose’s teleplays from those of his colleagues, such as Chayefsky and Serling, was their direct preoccupation with social and political issues. Although the other writers were perhaps equally concerned with the larger social dimensions of their work, they concentrated on the conflicts that emerge in private life and the domestic sphere, and the problems of society as a whole remain implicit in their writing. Rose, in contrast, tackled controversial social issues head-on.

In one of his best-known and most contentious plays, Thunder on Sycamore Street (Studio One, 1953), Rose aimed to confront the problem of social conformity. In this story, an ex-convict moves to an upscale neighborhood in an attempt to make a new beginning. When the man’s past is discovered, one of his neighbors organizes a community march to drive the ex-convict out of his new home. Rose dealt directly with the issues of mob anger and difference from the norm, issues of general concern in a time when the pressures of conformity were overwhelming and the memory of fascism still prevalent. This play was controversial from the outset, since the central character
was originally written to be an African American. Rose was forced, under pressure from Studio One sponsors fearful of offending (and losing) audiences in the South, to change the character into an ex-convict. This controversy, perhaps more than anything, was indicative of his ability to touch on the most sensitive areas of American social life of that time.

Although Rose kept his sights directed at the scrutiny of social institutions and mechanisms, his characters were as finely drawn as those of writers who focused on domestic struggles. Exemplary in this regard is the tension created by exhausting deliberations within the confined closeness of the jury room in which Twelve Angry Men occurs. The remake of this powerful drama and Paddy Chayefsky’s teleplay Marty (Goodyear Playhouse, 1953) into successful feature films marked the breakthrough of the television drama aesthetic into Hollywood cinema. Rose was responsible in part for the creation of this new approach. This gritty realism that became known as the “slice of life” school of television drama was for a time the staple of the anthology shows and reshaped the look of both television and American cinema.

Roseanne

Roseanne (née Roseanne Barr, formerly Roseanne Arnold) is best known as the star of the situation comedy Roseanne, for several years the most highly rated program on American television and the centerpiece of ABC comedy programming. She was also one of the more controversial and outspoken television stars of the 1980s and 1990s. Her public statements, appearances on celebrity interview shows, and feature articles about her life in magazines and tabloid newspapers have often overshadowed her work as an actress and comedian.

When Roseanne created the lead character for the series Roseanne, it was based on her own comic persona, a brash, loud-mouthed, working-class mother and wife who jokes and mocks the unfairness of her situation and who is especially blunt about her views of men and sexism. First revealed to a national television audience in the mid-1980s in her stand-up routines on such late-night programs as The Tonight Show and in two HBO specials, Roseanne’s humor aggressively attacks whomever and whatever would denigrate fat, poor women: husbands, family and friends, the media, or government welfare policies. She has often stated that her life experiences were the basis for the TV character and her comedy. Critics have described the persona as a classic example of the “unruly” woman who challenges gender and class stereotypes in her performances.

Roseanne’s published self-disclosures, in her two autobiographies, provide a detailed public record of her life. She grew up in Salt Lake City, Utah, in a working-class Jewish family she has defined as “dysfunctional,” a description that includes her assertions of having been sexually molested by family members. A high-school dropout, she reports getting married while still in her teens in order to get away from her family. She worked as a waitress, and, according to People Weekly magazine, began her comedy by being rude to her customers. Her career as a stand-up comic began in Denver, Colorado, where her club appearances gained a following among the local feminist and gay communities. She toured nationally on the comedy club circuit and made well-received appearances on late-night talk shows before starring in her own comedy specials on HBO. In 1986, the Carsey-Werner Company approached her with a proposal for developing a situation comedy based on her stand-up routines. The show would be an antidote to the upper-middle-class wholesomeness of the previous Carsey-Werner hit, The Cosby Show. The popularity of her sitcom Roseanne, which aired from 1988 to 1997, broadened the audience for Roseanne as a public persona and greatly increased her power within show business (she has been compared to Lucille Ball in this regard).

There have been missteps, however. One highly publicized gaffe was Roseanne’s off-key performance of the national anthem at a professional baseball game, a performance that ended with a crude gesture. Still, the resulting flurry of outraged criticism from public officials and in the media did not diminish the popularity of the Roseanne show. In another exercise of industry clout, Roseanne threatened to move her sitcom to a different network when ABC decided to cancel the low-rated The Jackie Thomas Show, which starred her then-husband Tom Arnold. The threat created real jitters among network executives until it was discovered that Roseanne did not own the rights to the show (only Carsey-Werner could make such a decision). Roseanne also pushed boundaries by having her series take a number of risks by raising issues of gender, homosexuality, and family dysfunction. The forthrightness of these dramatic moments is rare in prime-time sitcoms. Despite such frankness, the series continued to appeal to a wide segment of the viewing audience during its nine-year run.

The show’s treatment of such charged issues was consistent with Roseanne’s stated political and social views. While she did not write the scripts (for a time, Arnold was heavily involved in writing), Roseanne retained a good deal of artistic control. Many of the plots drew on aspects of her life prior to her success or referred to contemporaneous events in her “real” life. Other episodes included entire dialogues proposed by Roseanne to address specific themes or issues. The show occasionally strayed from the sitcom formula of neatly tying up all the plotlines by the end of the episode. As Kathleen Rowe notes, one year saw Darlene (Sara Gilbert), the younger daughter character, going through an early adolescent depression that continued for the entire season.

1958
Although the program continued to be extremely popular as it grew older, with some critics arguing that later seasons improved over earlier ones, Roseanne herself faced greater media exposure for details of her personal life (cosmetic surgery, divorce, remarriage, pregnancy) than for her political views or her career as an actor. In almost every case, she seemed able to turn such public discussions into more authority and control within the media industries. After the sitcom concluded, however, Roseanne’s next major television venture, a talk show titled The Roseanne Show, suggested that there were limits to her power; afflicted with poor ratings and reviews, the syndicated series was canceled after less than two years on the air.

In 2003, Roseanne contributed to the reality television trend with The Real Roseanne Show, a “behind-the-scenes” look at another television show she was working on, a cooking and lifestyle series entitled Domestic Goddess. The Real Roseanne Show followed the development of Domestic Goddess in the studio, as well as Roseanne’s personal life during the production, with some segments filmed in her home. However, the premiere of Domestic Goddess was delayed when Roseanne had to undergo a hysterectomy. Under these circumstances, The Real Roseanne Show, already widely panned by critics and plagued with low ratings, was forced to suspend production after only two weeks on the air.

Roseanne
U.S. Domestic Comedy

Roseanne evolved from the stand-up comedy act and HBO special of its star and executive producer, Roseanne (formerly Roseanne Barr). In the act, Roseanne seemed herself a "domestic goddess" and dispensed mock cynical advice about child-rearing: "I figure by the time my husband comes home at night, if those kids are still alive, I've done my job." Roseanne, the program, built a working-class family around this matriarchal figure and became an instantaneous hit when it premiered in 1988 on ABC.

Roseanne's immediate success may well have been in reaction to the dominant 1980s domestic situation comedy, The Cosby Show. Like The Cosby Show, Roseanne starred an individual who began as a stand-up comic, but the families in the two programs were polar opposites. Where The Cosby Show portrayed a loving, prosperous family with a strong father figure, Roseanne's Conner family was discordant, adamantly working class, and mother-centered.

The Conner family included Roseanne, her husband Dan (John Goodman), sister Jackie (Laurie Metcalf), daughters Darlene (Sara Gilbert) and Becky (played alternately by Lecy Goranson [1988–92, 1995–96] and Sarah Chalke [1993–95, 1996–97]), and son D.J. (Michael Fishman). Over the years the household expanded to include Becky's boyfriend David (Johnny Galecki) and, in 1995, a new infant for Roseanne and Dan, Jerry Garcia Conner (Cole and Morgan Roberts).

The Conners are constantly facing money problems, as both Roseanne and Dan work in blue-collar jobs: in factories; hanging sheetrock; running a motorcycle shop; and eventually owning their own diner, where they serve "loose-meat" sandwiches. Their parenting style is often sarcastic, bordering on scornful. In one episode, when the kids leave for school, Roseanne comments, "Quick. They're gone. Change the locks." But caustic remarks such as these are always balanced by scenes of affection and support, so that the stability of the family is never truly in doubt. Much as in its working-class predecessor, All in the Family, the Conner family is not genuinely dysfunctional, despite all the rancor.

Roseanne often tested the boundaries of network standards and practices. One episode deals with the young son's masturbation. In others, Roseanne frankly discusses birth control with Becky and explains her (Roseanne's) choice to have breast reduction surgery. The program also featured gay and lesbian characters, which made ABC nervous, especially when a lesbian character kissed Roseanne. The network initially refused to air that episode until Roseanne, the producer, demanded they do so.

Roseanne became increasingly quirky as the years went by. The final season was filled with strange episodes in which Roseanne won the lottery and lived
Roseanne, Glenn Quinn, Sarah Chalke, Roseanne, Michael Fishman, John Goodman, 1993.
Courtesy of the Everett Collection
out numerous fantasies (including one in which she imagines herself as an action figure named Roseambo). Then, in the program's last episode, Roseanne spoke directly to the viewers as the program's producer and denied the reality of the entire season, explaining that Dan had died the season before, even though he had appeared to survive a heart attack. The final season had been the character Roseanne's reveries as she struggled to deal with his death. It was a controversial, and, for some critics, an unsatisfying, way to end the program's nine-year run.

Controversy attended the program off screen as well as on. During its first season, there were well-publicized squabbles among the producing team, which led to firings and Roseanne assuming principal control of the program. Subsequently, Roseanne battled ABC over its handling of her then-husband Tom Arnold's sitcom, The Jackie Thomas Show. Dwarving these professional controversies was the strife in Roseanne's publicly available personal life. Among the events that were chronicled in the tabloid press were her tumultuous marriage to and divorce from Arnold (amid accusations of spousal abuse), her reconciliation with the daughter she put up for adoption (an event that was forced by a tabloid newspaper's threat to reveal the story), her charges of being abused as a child, her struggles with addictions to food and other substances, and her misfired parody of the national anthem at a baseball game in 1990.

Rosenthal, Jack (1931– )

British Writer

As one of British television's most successful dramatists, Jack Rosenthal has received British Academy of Film and Television Arts Awards for *The Evacuees*, *Bar Mitzvah Boy*, *P'tang Yang Kipperbang*, and *Ready When You Are, Mr. McGill*, an Emmy Award for *The Evacuees*, and the Prix Italia for *Spend, Spend, Spend*, and *The Knowledge*. He has written for the big screen with *The Chain* and *The Knowledge*, and has also authored five plays for the live stage, notably *Smash!*

Rosenthal learned the craft of writing for the medium of television in the 1960s, at a time when television drama in Britain (particularly on the BBC) was still dominated by writers schooled in theatrical conventions and overly concerned with being taken seriously. This resulted in a preoccupation with adaptations of theatrical successes, revivals of classics (e.g., Shakespeare, Dickens), and writing that exploited literary rather than visual resources. Independent television in the late 1950s was looking to develop more popular forms of drama to attract wider audiences and brought in Sydney Newman from Canada, who fostered new dramatists and initiated new series. It was against this background that Rosenthal started work in Granada, where he served his apprenticeship by creating more than 150 scripts for the popular TV soap *Coronation Street*. The experience of writing for a popular genre prepared him for originating such comedy serials as *The Dustbinmen*, *The Lovers*, and *Sadie, It's Cold Outside*. His growing reputation in the 1970s as a reliable professional writer led to his being entrusted with the prestigious single play; a form that Rosenthal himself prefers because of the freedom it offers the artist to explore his own vision.

Rosenthal was born in Manchester to Jewish parents, and he drew on his experiences to write *Bar Mitzvah Boy* and *The Evacuees*. But his interest lies in observing the interactions of individuals in diverse social networks, and the Jewish community is merely one of the many institutions that he explores: schools (*P'tang Yang Kipperbang*), taxi drivers (*The Knowledge*), the army (*Bootsie and Snudge*), fire fighters (*London's Burning*), and TV drama (*Ready When You Are, Mr. McGill*). He is also interested in the common experiences that many face at particular moments in life: moving (*The Chain*), growing up (*Bar Mitzvah Boy, P'tang Yang Kipperbang*), falling in love (*The Lovers*), and forgetfulness and old age (*A Day to Remember*).

The strength of Rosenthal's comedy lies in its closeness to tragedy; from another perspective, the petty cruelties of the stepmother in *The Evacuees* could have blighted the lives of the children, but both plot and psychological insight combine to restore harmony and recognize the cruelty as misplaced possessiveness. So too,
in *A Day to Remember*, the terror and pain of short-term memory loss, attendant on a stroke in old age, are contained and balanced by the comic presentation of the gaps and imperfections that beset the middle-aged. If the comic vision is shown as perceptive about the frailties of the human condition, it is not sentimentalized. The insight that comes through comedy is one that is often painfully achieved. The schoolboy hero of *P’tang Yang Kipperbang* is only able to kiss his first love; he enters upon adult sexuality by recognizing the fantasy element of that anticipated delight. To fulfill his desire means abandoning private fantasy and entering the real world in which people are both less than we would wish and more diverse than we could expect. Similarly, when the aspirant cabby in *The Knowledge* finally achieves his ambition to be a London taxi driver, he discovers his girlfriend, the initial driving force behind his application, has fallen for somebody else. He neglected her to focus on the discipline of acquiring “the knowledge” (learning by heart the streets and landmarks of London by perpetually driving around them). Knowledge of chaps rather than maps turns out to be that which is most difficult to acquire.

Although the comedy of Jack Rosenthal is invariably rooted in a recognizable social setting that has been carefully researched, the characters are not deeply explored. The story is, instead, focused on the themes; in *Another Sunday and Sweet FA*, the frustrations of refereeing a football match provide the opportunity for a comic disquisition on the competing claims of power and justice; in *P’tang Yang Kipperbang*, imagination and reality struggle for an accommodation; in *The Chain*, the seven deadly sins provide the motivation for Fortuna’s wheel of house-hunting. If there is a thread that underlies most of Rosenthal’s work, it is that our desire as individuals to do good in order to be liked and admired is at variance with our role as social beings to impose order, our order, on others. Wisdom comes when we learn to accommodate these competing demands and accept responsibility for fulfilling our desires.

Route 66

U.S. Drama

Route 66 was one of the most unique American television dramas of the 1960s, an ostensibly adventure series that functioned, in practice, as an anthology of downbeat character studies and psychological dramas. Its 1960 premiere launched two young drifters in a Corvette on an existential odyssey in which they encountered a myriad of loners, dreamers, and outcasts in the small towns and big cities along U.S. Highway 66 and beyond. And the settings were real; the gritty social realism of the stories was enhanced by location shooting that moved beyond the Hollywood hills and studio back lots to encompass the vast face of the country itself. Route 66 took the anthology on the road, blending the dramaturgy and dramatic variety of the Studio One school of TV drama with the independent filmmaking practices of the New Hollywood.

Route 66 was the brainchild of producer Herbert B. Leonard and writer Stirling Silliphant, the same creative team responsible for Naked City. The two conceived the show as a vehicle for actor George Maharis, casting him as stormy Lower East Side orphan Buz Murdock, opposite Martin Milner as boyish, Yale-educated Tod Stiles. When Tod’s father dies, broke but for a Corvette, the two young men set out on the road looking for “a place to put down roots.” Amid a dispute with the show’s producers, Maharis left the show in 1963 and was replaced by Glenn Corbett as Linc Case, a troubled Vietnam vet also seeking meaning on the road.

Like Naked City, which producer Leonard had conceived as an anthology with a cop-show pretext, the picaresque premise of Route 66 provided the basis for a variety of weekly encounters from which the stories arose. Episodes emphasized the personal and psychological dramas of the various troubled souls encountered by the guys on their stops along the highway. Guest roles were filled by an array of Hollywood faces, from such fading stars as Joan Crawford and Buster Keaton to newcomers such as Suzanne Pleshette, Robert Duvall, and Robert Redford. The show’s distinct anthology-style dimension was symptomatic of a trend Variety dubbed “the semi-anthology,” a form pioneered by Wagon Train and refined by such shows as Bus Stop and Route 66. The series’ nomadic premise, and its virtual freedom from genre connections and constraints, opened it up to a potentially limitless variety of stories. While the wandering theme was hardly new in a television terrain overrun with westerns, for a contemporary drama the premise was quite innovative. Route 66 was consistent in tone to the rest of TV’s serious, social-realist dramas of the period, but it was unencumbered by any predetermined dramatic arena or generic template—setting it apart from the likes of The Defenders (courtroom drama), Dr. Kildare (medical drama), Saints and Sinners (newspaper drama), or Mr. Novak (blackboard drama). Indeed, the show’s creators met initial resistance from their partner/distributor Screen Gems for this lack of a familiar “franchise,” with studio executives arguing that no one would sponsor a show about two “bums.” Of course, Chevrolet proved them wrong.

Perhaps even more startling for the Hollywood-bound telefilm industry was the program’s radical location agenda. Buz and Tod’s cross-country search actually was shot across the country, in what Newsweek termed “the largest weekly mobile operation in TV history.” Remarkably, by the end of its four-season run, the Route 66 production caravan had traveled to 25 states—as far from Los Angeles as Maine and Florida—as well as Toronto. The show’s stark black-and-white photography and spectacular locations provided a powerful backdrop to its downbeat stories and yielded a photographic and geographical realism that has never been duplicated on American television.
The literate textures and disturbing tones of Route 66's dramas were as significant as its visual qualities. The wandering pretext provided both a thematic foundation and a narrative trajectory upon which a variety of psychological dramas, social-problem stories, and character studies could be played out. The nominal series "heroes" generally served as observers to the dramas of others: a tormented jazz musician, a heroin addict, a washed-up prizefighter, migrant farm workers, an aging RAF pilot (turned crop-duster), a runaway heiress, Cajun shrimpers, a weary hobo, an eccentric scientist, a small-time beauty contest promoter, drought-stricken ranchers, Cuban-Basque jai-alai players, a recent ex-con (female and framed), a grim Nazi-hunter, a blind dance instructor, a dying blues singer—each facing some personal crisis or secret pain.

The show's continuing thread of wandering probed the restlessness at the root of all picaresque sagas of contemporary American popular culture. The search that drove Route 66 was both a narrative process and a symbolic one. Like every search, it entailed optimism as well as discontent. The unrest at the core of the series echoed that of the Beats—especially Jack Kerouac's On the Road, of course—and anticipated the even more disaffected searchers of Easy Rider. The show's rejection of domesticity in favor of rootlessness formed a rather startling counterpoint to the dominant prime-time landscape of home and family in the 1960s, as did the majority of the characters encountered on the road. The more hopeful dimension of Route 66 coincided with the optimism of the New Frontier circa 1960, with these wandering Samiratans symbolic of the era's new spirit of activism. Premiering at the dawn of a new decade, Route 66 captured in a singular way the nation's passage from the disquiet of the 1950s to the turbulence of the 1960s, expressing a simultaneously troubled and hopeful vision of the United States.

Despite its uniqueness as a contemporary social drama, and its radical break from typical Hollywood telefilm factory practice, Route 66 has been largely forgotten amid the rhetoric of 1960s TV-as-wasteland. When the series is cited at all by television historians, it is as the target of CBS-TV president James Aubrey's attempts to inject more "broads, bosoms, and fun" into the series ("the Aubrey dictum"). Aubrey's admitted attempts to "lighten" the show, however, only serve to underscore its dominant tone of seriousness. What other American television series of the 1960s could have been described by its writer-creator as "a show about a statement of existence, closer to Sartre and Kafka than to anything else"? (see "The Fingers of God," Time). Silliphant's hyperbole is tempered by critic Philip Booth, who suggested in a Television Quarterly essay that the show's literacy was "sometimes spurious," and that it could "trip on its own pretensions" in five of every ten stories. Still, Booth wrote, of the remaining episodes, four "will produce a kind of adventure like nothing else on television, and one can be as movingly universal as Hemingway's 'A Clean, Well-Lighted Place.'"

How often Route 66 matched the power of Ernest Hemingway (or the existential insight of Jean-Paul Sartre) is debatable. That it was attempting something completely original in television drama is certain. Its footloose production was the antithesis of the claustrophobic stages of the New York anthologies of old, yet many of the program's dramatic and thematic concerns—even certain of its stories—echoed those of the intimate character dramas of the Philco Playhouse era. Indeed, one of Aubrey's CBS lieutenants, concerned with the show's "downbeat" approach to entertainment, protested to its producers that Route 66 should not be considered "a peripatetic Playhouse 90"—capturing, willingly or not, much of the show's tenor and effect. Route 66 was trying to achieve the right mix of familiarity and difference, action and angst, pathos and psychology, working innovative ele-
ments into a commercial package keyed to the demands of the industry context. Even with its gleaming roadster, jazzy theme song, obligatory fistfights, and occasional romantic entanglements, Route 66 was far removed indeed (both figuratively and geographically) from the likes of 77 Sunset Strip.

In 1993, the Corvette took to the highway once more in a nominal sequel, a summer series (on NBC) that put Buz’s illegitimate son at the wheel with a glib Generation-X partner in the passenger seat. Although the new Route 66 lasted only a few weeks, by reviving the roaming-anthology premise of the original, it evinced television’s continuing quest for narrative flexibility (and Hollywood’s inherent penchant for recycling). From The Fugitive to Run For Your Life to Highway to Heaven to Quantum Leap to Touched by an Angel, television has continued to exploit the tradition of the wandering Samaritan, to achieve the story variety of an anthology within a series format. Route 66 established the template in 1960, launching a singular effort at contemporary drama in a nonformulaic series format. That the series mounted its dramatic agenda in a Corvette, on the road, is to its creators’ everlasting credit.

Rowan and Martin’s Laugh-In
U.S. Comedy-Variety Program

Rowan and Martin’s Laugh-In was an NBC comedy-variety program that became an important training ground for a generation of comic talent. If The Smothers Brothers Comedy Hour captured the political earnestness and moral conscience of the 1960s counterculture, Laugh-In snared the decade’s flamboyance, its anarchic energy, and its pop aesthetic, combining the blackout comedy of the vaudeville tradition with a 1960s-style “happening.”

In an age of “sit-ins,” “love-ins” and “teach-ins,” NBC was proposing a “laugh-in” that somehow bridged generational gaps. Originally a one-shot special, Laugh-In was an immediate hit and quickly became the highest-rated series of the late 1960s. In a decade of shouted slogans, bumper stickers, and protest signs, Laugh-In translated its comedy into discrete one-liners hurled helter-skelter at the audience in hopes that some of them would prove funny. Many of
them became catchphrases: “Sock it to me,” “Here come de judge,” “You bet your sweet bippy,” and “Look that up in your Funk and Wagnalls.” In this frenetic and fragmented series, comic lines were run as announcements along the bottom of the screen, printed in lurid colors on the bodies of bikini-clad go-go girls, and shouted over the closing credits. The humor was sometimes topical, sometimes nonsensical, sometimes “right on” and sometimes right of center, but it largely escaped the censorship problems that besieged the Smothers Brothers. Its heller-skelter visual style stretched the capabilities of television and videotape production, striving for the equivalent of the cutting and optical effects Richard Lester brought to the Beatles movies.

Laugh-In broke down the traditional separation of comedy, musical performance, and dramatic interludes that had marked most earlier variety shows and decentered the celebrity hosts from their conventional position as mediator of the flow of entertainment. Dan Rowan and Dick Martin, successful Las Vegas entertainers, sought to orchestrate the proceedings but were constantly swamped by the flow of sight gags and eccentric performances that surrounded them. Similarly, guest stars played no privileged role here. For a time, everyone seemed to want to appear on Laugh-In, with guests on one memorable episode including Jack Lemmon, Zsa Zsa Gabor, Hugh Hefner, and presidential candidate Richard Nixon. But no guest appeared for more than a few seconds at a time, and none received the kind of screen time grabbed by the program’s ensemble of talented young clowns.

The comic regulars—Gary Owens’s overmodulated announcer, Ruth Buzzi’s perpetually frustrated spinster, Arte Johnson’s lecherous old man, Goldie Hawn’s dizzy blonde, Jo Anne Worley’s anti-Chicken-Joke militant, Henry Gibson’s soft-spokenly banal poet, Lily Tomlin’s snorting telephone operator, Pigmeat Markham’s all-powerful Judge, and countless others—dominated the program. Many of these comics moved almost overnight from total unknowns to household names, and many became important stars for the subsequent decades. Not until Saturday Night Live would another television variety show ensemble leave such a firm imprint on the evolution of American comedy. These recurring characters and their associated shtick gave an element of familiarity and predictability to a program that otherwise depended upon its sense of the unexpected.

While Laugh-In lacks the satirical bite of later series such as Saturday Night Live or In Living Color, or of That Was the Week That Was (to which it was often compared by contemporary critics), Laugh-In brought many minority and female performers to mainstream audiences, helping to broaden the composition of television comedy. Its dependence upon stock comic characters and catchphrases was clearly an influence on the development of Saturday Night Live, which by comparison, has a much more staid visual style and more predictable structure. Unfortunately, Laugh-In’s topicality, even its close fit with 1960s aesthetics, has meant that the program has not fared well in reruns, being perceived as dated almost from the moment it was aired. However, the ongoing success of Laugh-In alums such as Hawn, Tomlin, or even game show host Richard Dawson point to its continued influence.

Royal Canadian Air Farce, The

Canadian Satirical Review

On December 9, 1973, the first radio show by the Royal Canadian Air Farce comedy troupe was broadcast coast-to-coast on CBC Radio and CBC Stereo. After a ten-episode series in 1981 and several specials in the 1980s, The Royal Canadian Air Farce—a Canadian institution for political commentary, social satire, and general nonsense—became a weekly CBC television series in the fall of 1993. Like the radio show, the television Air Farce is topical, on the edge of controversy, and performed in front of a live audience. The group consists of Roger Abbot, Don Ferguson, and Luba Goy. John Morgan performed with the troupe until retiring in 2001, at the end of the series’ eighth television season. Dave Broadfoot was a member of the troupe for 15 years before moving on to a solo career; he has continued to make guest appearances since leaving the troupe. Two nonperforming writers, Rick Olsen and Gord Holtam, have been with the troupe since 1977.

In 1992, the group became the first Canadian inductees into the International Humour Hall of Fame. The editors of Maclean's (Canada’s national news magazine) chose the Air Farce for the 1991 Honour Roll of Canadians who make a difference. The group has won 15 ACTRA Awards (Association of Canadian Television and Radio Artists) for radio and television writing and performing, and a Juno Award (Canadian recording award) for best comedy album. In 1993, Abbott, Ferguson, and Goy were each awarded honorary doctor of law degrees by Brock University in St. Catharines.

The Air Farce keeps in touch with Canadians and ensures that the troupe’s humor remains relevant by performing and recording in all ten provinces and two territories. For several years the troupe worked on both radio and television. “We’re reluctant to give up radio,” Ferguson told Toronto Star journalist Phil Johnson. “Radio allows us to showcase new acts and characters.” However, after 24 years, the troupe broadcast its last radio program on May 25, 1997. They gen-
generally play in halls that hold 2,000 or 2,500 people, and did so even when taping for radio. This approach creates the need for more visual interest. "I did [former Prime Minister] Brian Mulroney for 20 years—the worst years of my life I might add," Ferguson told Globe and Mail columnist Liam Lacey. "On-stage, I'd have a long walk over to the microphone, so I'd start from the side of the stage with just the chin first, and then the stuck-out bum would follow. The audiences would be roaring before I reached the microphone. Then we'd edit all that out, and cut to the voice."

When the Air Farce first tried a television show in 1981, it was shot in advance and produced with canned laughter. The lack of live performance and topicality destroyed the spontaneity that is at the heart of the Farce, and the show failed. Then in 1993, a New Year's Eve special was made, raking in 2 million viewers, almost 10 percent of the entire Canadian population. Network executive Ivan Fecan approved a series. It became one of the top-20 Canadian shows and one of the CBC’s top five.

Rather than leaning toward a particular point of view, the Farce points fingers at all parties. Skewered politicians and media figures regularly show up in person to do sketches on the show. Individual performers do not even know how the other members of the group vote and would not dream of discussing it. As Liam Lacey wrote in noting that the Farce receives indirect governmental support (by virtue of its airing on the public network CBC), "One would be hard-pressed to imagine another country in the world where purveyors of official disrespect would be regarded with such widespread affection." Dave Broadfoot used to say, "Do you know what they'd call us in the Soviet Union? Inmates."

Royalty and Royals on Television

The relationship between television and the royalty of the United Kingdom and other states has always been uneasy, albeit generally mutually respectful, as the perceived dangers to both sides have been immense. With television audiences of grand royal occasions and major documentaries running into many millions around the globe, the impact of a mishandled interview could have serious political repercussions for any monarchy, as well as huge public relations problems for television networks anxious not to outrage public opinion.

The idea that members of the British royal family might allow themselves to be seen on television in any capacity other than at the end of a long-range lens in the course of a formal state occasion or fleetingly in newsreel footage was once considered unthinkable. In the early days, immediately after World War II, television was regarded by many in the establishment as too trivial to be taken seriously, and it was argued that it was inappropriate for heads of nations to appear on TV. In Britain Sir Winston Churchill was in the vanguard of those who considered television a vulgar plaything and beneath the dignity of the crown.

The crunch came in 1953, when it was suggested that television cameras be allowed to film the coronation of Elizabeth II. Churchill, the archbishop of Canterbury, the earl marshal, and various members of the British cabinet strongly opposed the idea, but, to their surprise, the 26-year-old Princess Elizabeth, in a decision subsequently hailed for its sagacity, insisted upon the rest of the nation being able to witness her en-
thronement via television, and the cameras were allowed in. The resulting broadcast, expertly narrated by the BBC’s anchorman Richard Dimbleby, was a triumph, bringing the monarchy into the television age and cementing the image of Elizabeth II as a “people’s monarch.”

Following the 1953 coronation experiment, it became accepted that the television cameras would be permitted to film grand royal occasions, including weddings, the state opening of Parliament, and the trooping of the color, as well as jubilee celebrations, visits by the royal family to local businesses, and so forth. Coverage of royal events, however, remained a sensitive area in broadcasting, and many rows erupted when it was felt cameras had intruded too far or, conversely, that too much deference had been shown. Certain presenters, including ITV’s Alistair Burnet and the BBC’s Raymond Baxter, specialized in coverage of royal stories or spectacles, but found they had to tread a very thin line between being accused of sycophancy or charged with gross insensitivity.

The British queen is sheltered from more intrusive interrogation on television by necessity: there is a constitutional imperative that the monarch should not comment personally on the policies of her government because of the implications this might have in terms of party politics, and because of this rule, Buckingham Palace, in concert with the government of the day, closely controls the style and content of all broadcasts in which she appears. In 1969, an attempt was made for the first time, in the joint BBC and ITV production Royal Family, to portray Queen Elizabeth as a private person rather than as a constitutional figurehead. The program attracted an audience of 40 million in the United Kingdom alone, and similarly large audiences have watched her celebrated annual Christmas broadcasts, which have over the years become more relaxed in tone, inspiring further occasional documentaries inviting the cameras “behind the scenes” (though, again, only under strict direction from the palace).

There is more leeway in television coverage of other members of the royal family; however, this has been exploited with increasing vigor since the 1980s, in response to changing public attitudes toward royalty. Prince Philip’s hectoring manner during rare appearances on chat shows did little to endear television audiences, and he was henceforth discouraged from taking part in such programs. Princess Anne developed a similarly tempestuous relationship with the media as a whole, though she was better received after her good works for charity won public recognition. Prince Andrew came over as bluff and hearty, and Prince Edward was considered affable enough—though there were adverse comments about loss of dignity in 1987 when the three youngest of the queen’s children attempted to sound a populist note by appearing in a special It’s a Knockout program for charity (royal guests stormed out of press meetings when the questioning became hostile, and the experiment was not repeated).

After years of carefully treading the line between deference and public interest, television’s relationship with the British royals was stretched to the limit in the 1990s during the furor surrounding the break-up of several royal marriages, notably that of the heir-apparent, Prince Charles (whose wedding to Lady Diana Spencer had been seen by 700 million people worldwide in 1981). A notorious interview with Princess Diana that was broadcast on Panorama, when it was becoming clear that the rift was irreparable (though many still hoped the marriage could be saved), provoked howls of protest from many quarters—not least from the palace itself. Charles was given his own program in which to tell his side of the story, but he only succeeded in drawing more fire upon himself and his family. For many viewers, both interviews were en-
thralling, though to others they were distasteful and reflected badly both on the individuals themselves and on the institution of the monarchy.

A severe test of the relationship between television and the British royal family came in 1997, when Diana, Princess of Wales, died in a car accident in Paris. The media’s coverage of the tragedy and of the national trauma that ensued provoked intense debate. The fact that, initially at least, press photographers pursuing the princess’s car were blamed for the crash heightened the feeling that all members of the media should behave more responsibly when covering the royal family. From the moment that the first shots of the tangled wreckage of the princess’s car were transmitted, it became clear that broadcasters would have to behave with the utmost sensitivity. As the extent of public sympathy for the dead princess emerged, it was quickly realized that Buckingham Palace’s wishes would have to take second place to national sentiment. The accident and its aftermath received blanket coverage on all channels, and the royal family itself was obliged, with evident reluctance, to obey the dictates of the cameras.

The failure of the queen to sanction any immediate public expression of grief over the disgraced princess’s death was a public relations mistake, although the parading of the princess’s sons before the cameras at their mother’s funeral did something to deflect hostility. The impression of most viewers was that the palace had mishandled things badly and needed to overhaul its public relations policy. With the funeral over and schedules back to normal, the verdict on how television covered events was that it had faced the challenge rather better than the royals, managing to avoid insensitive sensationalization of the tragedy while still reflecting the public mood.

In the wake of Diana’s death, there has been some reform of the relationship between the royal family and the media, but there is still tension. In 2001, with press attention to Diana’s son Prince William escalating, the royal family was caused particular embarrassment when a video company in which Prince Edward had an interest was accused of breaking an embargo on filming William while at university. The company was severely criticized and subsequently announced it would no longer undertake filming of the royal family.

Other monarchies have experienced not dissimilar difficulties in their relations with television and other organs of the media. For a number of years, the Rainiers of Monaco, for instance, seemed to live their lives in the constant glare of the cameras. Some, however, have protected themselves by insisting that the cameras remain at a discreet distance (as in Japan, where the emperor is only rarely filmed), despite the demands imposed by unflaging public interest.

Television’s fascination with royalty has expressed itself in other forms besides coverage of contemporary royals, notably in the field of drama. The BBC in particular won worldwide acclaim in the late 1960s and 1970s for lavish costume series dealing with Henry VIII, Elizabeth I, Edward VII, and, rather more controversially, Edward VIII. More recently, a documentary series in which Prince Edward delved into the lives of some of his royal ancestors was also well received.

Royle Family, The

British Sitcom

Just when critics in the United Kingdom were pronouncing that the British sitcom was dead, The Royle Family restored faith in the genre. Not only was it critically acclaimed, but ratings were high, with around ten million viewers at its peak. In its brief run between 1997 and 2000, the show managed to become part of the fabric of British culture, much like the best sitcoms of the past, such as Till Death Us Do Part and Whatever Happened to The Likely Lads? Part of the success of The Royle Family lay in its contradictions. It was that most traditional of TV staples, the family sitcom, but was it hugely innovative. It showed modern Britain, but remained strangely old-fashioned. It said something about the world, but hardly ever moved away from one living room in Manchester.

The series was created by Caroline Aherne and Craig Cash, who drew on their own backgrounds to forge a new kind of family sitcom. Aherne was already

1972
a big name in British comedy through her persona as Mrs. Merton, a deceptively sweet old lady who interviewed and frequently humiliated minor celebrities. Instead of the usual weary plots, she based the new series firmly on the characters and their interactions, saying “I knew that if you strip it bare and have funny characters and love in it, it would work.”

Nothing special happens in The Royle Family, and that is the point of the show. There are a few major life events, such as weddings or births, but mostly the Royles just sit round the television and talk. Dad Jim is coarse, miserly, and hypocritical, while the mother, Barbara, is kind, loyal, and slightly dim. Daughter Denise (played by creator Aherne) is idle, while the nice son Anthony, is put upon and long suffering. Son-in-law Dave lends a constant air of dull stupidity to the proceedings, as does Barbara’s whining mother Norma. Occasionally friends, like the Carrolls who live next door, visit. For the audience, the lack of action quickly ceases to be a problem because it becomes the expectation. The audience understands that the pleasures of the series are in magnifying humdrum reality.

Executives originally insisted on a studio audience, but a test episode proved disastrous, so it was dropped. Also out are harsh studio lighting and the theatrical performance conventions of television sitcom. The Royles’ sitting room, the center of all the episodes, is beautifully shot on film in a documentary style. The actors rely on laughs from the smallest facial expression or verbal quirk, which allows the complexities of the characters to be gradually revealed to the audience. Unlike many sitcoms, the quality of acting is as good in minor roles (such as Jessica Stevenson as Denise’s friend Cheryl) as it is in the leads. Perhaps as a result of the success of The Royle Family, these innovations are becoming the norm in U.K. TV comedy.

The Royle Family is also important in its understanding of the role the media plays in our lives. Previously TV programs existed in a parallel universe, where people never watched TV themselves nor were affected by it. Here the characters are not only watching television, they are also talking about it. The audience at home is watching a show about a family watching television. The mirror image is constantly there to challenge the viewer.

For all the formal innovation and self-reflection, however, the success of the series is also a result of its affirmation of traditional British sitcom virtues. There is an air of melancholy underlying the laughter. People are held back by their flaws, by bad luck, and by society, but they have the strength to endure.

In many ways The Royle Family echoes the classic 1960s program Till Death Us Do Part. Like Alf Garnett, Jim Royle captured the mood of the nation.

Ricky Tomlinson’s portrayal of an obnoxious but witty slob (“with more faces than the town hall clock”) was hugely popular. British audiences treasured him as a wry comment on what they suspected they had become.

The family became popular at a time when some claimed the English working class no longer existed, or had become reactionary. Aherne is affectionate but not uncritical about the reality of life in the north of England. Inevitably a few critics (invariably middle class themselves) accused her of being condescending, but she was speaking from her own experience. Only on very rare occasions (the baby’s middle name is Keanu) is there a false note.

The general critical consensus was that the program declined over the three series. The show could feel repetitive, but even so it still dared to challenge its audience. In the third series, for example, Denise’s neglect of her baby and Jim’s bullying of Anthony were
Royle Family, The

highlighted. Aherne was brave enough to give these actions a comic aspect, but there is also a deep sense of unease. Even so, at no time does she moralize or go for cheap laughs.

Eventually, and probably wisely, Caroline Aherne pulled the plug on the show. Tired of media intrusion into her private life, she announced her retirement from performing and moved to Australia.

The Royle Family imparted a much-needed freshness to the sitcom genre and proved it could be popular once more. It reminded us that sitcoms could be profound about the human condition and command the highest quality in writing, camera work, and performance. It also offered a shared pleasure at a time when the viewing public seemed irredeemably fragmented.

Rule, Elton (1916–1990)
U.S. Media Executive

Elton Rule took the ABC TV network from a struggling operation in 1968 to top of the television network world a decade later. Under Rule’s leadership, ABC-TV expanded its number of affiliates from 146 to 214 stations, and revenues increased from $600 million to $2.7 billion. The “alphabet network” began turning a profit in 1972; by 1976, it was the highest rated network in prime time; a year later Rule was presiding
moved sports producer Roone Arledge over to head a languishing network operation, approved hiring reporters from major newspapers, and expanded the locus of the network's foreign news bureaus. By the mid-1980s, ABC News was the leading broadcast journalism operation in the United States.

When Rule retired in January 1984, he was properly hailed as a corporate savior. Through the remainder of the 1980s, he bought and sold television stations, becoming a multimillionaire. He is remembered, and heralded, for creating a television network empire, an economic, political, social, and cultural force second to none in the history of television.

Rumpole of the Bailey

British Legal/Mystery Comedy

*Rumpole of the Bailey*, a mix of British courtroom comedy and drama, first aired on Thames Television in 1978. The program made a successful transatlantic voyage and has been popular in the United States as part of PBS's *Mystery!* anthology series.

All episodes feature the court cases of Horace Rumpole (Leo McKern), a short, round, perennially exasperating, shrewd, lovable defense barrister. His clients are often caught in contemporary social conflicts: a father accused of devil worshipping; the Gay News Ltd. sued for blasphemous libel; a forger of Victorian photographs who briefly fooled the National Portrait Gallery; a pornographic publisher. Rumpole’s deep commitment to justice leads him to defend wholeheartedly hopeless cases and the spirit of the law, as opposed to his fellow barristers who stubbornly defend the letter of the law. Rumpole is given to frequent oratorical outbursts from the *Oxford Book of English Verse* and manages to aim the elegant passages at upper-class hypocritical trumpeters, buffoons, and other barristers and at prosecution-inspiring justices. He comments on the phenomenon of “judgits [pomposity] which, like piles, is an occupational hazard on the bench.” His suggested cure is “banishment to the golf course.”

Rumpole is married to Hilda (played at various times by Joyce Heron, Peggy Thorpe-Bates, and Marion Mathie), to whom he refers as “She Who Must Be Obeyed.” Hilda—whose father was head of chambers—aspire for a more prestigious position for her husband and a bit more luxurious lifestyle for herself, but she continues to support her husband’s brand of justice rather than that sought by egotistical or social-climbing royal counsels. Rumpole revels in lampooning his fellow colleagues, whom he believes to be a group of twits. They include the dithyramb and pompous Claude Erskine-Brown (Julian Curry), the full-of-himself Samuel Ballard (Peter Blythe), and the variety of dour judges who preside in court—the bumbling Justice Guthrie Featherstone (Peter Bowles), the blustering “mad bull” Justice Bullingham (Bill Fraser), the serious and heartless Justice Graves (Robin Bailey), and the almost kindly Justice “Ollie” Oliphant (James Grout). Among Rumpole’s colleagues, he favors Claude’s wife, the savvy and stylish Phillida Neetrant Erskine-Brown (Patricia Hodge), a feminist voice for the series, and the endearing Uncle Tom (Richard Murdoch), an octogenarian waiting to have the good sense to retire, who, in the meantime, practices his putting in chambers.

The prolific writer John Mortimer is creator of the Rumpole stories and has exclusive rights in writing the television series, for which he continues to write new scripts. Mortimer draws upon both his 36 years of experiences as queen’s counsel and his life with his father, a blind divorce lawyer. Much like Rumpole, Mortimer adores good food, enjoys a bottle of claret before dinner, loves Dickens, and fights for liberal causes. He is much revered in England, and in 1988 the queen awarded him a knighthood.

In addition to the quick-witted dialogue among characters, Mortimer’s series is distinguished by its social commentary. Specifically, the program is a cleverly entertaining vehicle for tweaking the legal profession and the general state of British mores and manners. In chambers and during court cases, Rumpole provides viewers with grumbling commentaries and under-the-breath critiques of pomposity and the all-too-frequent soulless application of strict legalism. Yet, even though these comments on various social issues such as gay rights, censorship, and the treatment of children in court are quite serious, Mortimer never allows the issues to get in the way of the story. Meticulous attention to detail, well-written scripts, and top-notch actors contribute to have made *Rumpole* fine television without the formula-driven action/adventure genres typically associated with drama programming.

The program’s charm is particularly enhanced by the superb casting of Leo McKern, who was the very embodiment of the fictional Rumpole. Robert Goldberg, a television critic from the *Wall Street Journal*, compares this match to other strokes of casting genius: “Every once in a while a character and an actor fit together so precisely that is becomes hard to imagine one without the other (Sean Connery and James Bond, Jeremy Brett and Sherlock Holmes).” McKern’s jowls, bulbous nose, and erratic eyebrows were made to fit the eccentric, irrepressibly snide barrister who is, in Goldberg’s words, as “lovable as a grumpy old panda.”
Rumpole of the Bailey is a cherished series in the United States. According to Boston public television station WGBH's senior producer Steven Ashley, Rumpole has enjoyed solid ratings and can be regarded as one of the most popular titles in the Mystery! schedule, having attracted a healthy audience even when faced with stiff competition from commercial networks. Approximately 300 public television stations have carried the Rumpole series on an ongoing basis, representing 95 percent of all PBS stations. In the San Francisco Bay Area, some of the show's more active fans formed the "Rumpole Society" with over 450 members; they have featured principal actors or John Mortimer as guest speakers at their annual fete and have visited the Rumpole studios in London.

1977
A versatile cartoonist, broadcaster, author, and actor, William Rushton’s range of talent emerged early, while a student at Shrewsbury School. There he edited the school magazine, The Salopian, and regularly illustrated its issues. The public school friendships and joint contributions for The Salopian led to the idea of a satirical publication, The Private Eye, cofounded by Rushton and first published in 1962. With its comprehensive attack on the establishment, who were presented as running England in the manner of a private club, The Private Eye pioneered a style of satire that was to become fashionable in the early 1960s.

In 1962, Rushton moved on to television to take part in BBC’s satirical program, That Was the Week That Was (TW3). Under director Alasdair Milne and producer Ned Sherrin, the crew put together their best work to express doubts about the old order in Britain. In an even more practical step, The Private Eye team, upset by the possibility of Sir Alec Douglas Home’s further career in politics, posted Rushton to run against him in the Kinross by-election. Rushton’s failed candidacy and his Macmillan impersonation on TW3 made his name, but the irreverent show, anchored by David Frost, deeply divided the public, and the resulting controversy led to its removal from television screens.

In the 1964–65 season, Rushton cohosted the follow-up to TW3, called Not So Much a Programme, More a Way of Life. This show had less clear direction and was at its most successful when it approached the impertinence of TW3. Even this milder satirical program, however, faced political criticism that put an end to its existence.

The success of TW3 opened the way to the cinema for Rushton. Director Clive Donner incorporated three of the show’s presenters into Nothing but the Best (1964). The film featured a young opportunist and provided a brash criticism of affluent Britain through a mocking celebration of its values. Rushton also played a role in Those Magnificent Men in Their Flying Machines (1965), a humorous take on the early days of aviation.

The slightly overweight Rushton, who described his hobbies as “gaining weight, losing weight, and parking,” served as presenter for Don’t Just Sit There (1973), a BBC series on healthy living. He also took part in the television show Up Sunday (1975–78) and entertained the viewers in Celebrity Squares (1979–80), a popular game show based on the idea of the U.S. syndicated program Hollywood Squares. In addition, he did voice-overs for the BBC’s Jackanory and Asterix series. On radio he appeared in 27 series of the popular anarchic game show, I Am Sorry I Haven’t a Clue.

As a stage actor, Rushton made his debut in Spike Milligan’s The Bed-Sitting Room in Canterbury in 1961. After a number of smaller parts, he returned to stage in a full-length role in Eric Idle’s play Pass the Butler (1982). This witty black comedy, written by a member of the offbeat Monty Python team, played suc-

William Rushton.

cessfully in Britain. Later, he returned to stand-up comedy, presenting "Two Old Farts" with Barry Cryer on nationwide tours.

Rushton wrote and illustrated a number of books, including William Rushton's Dirty Book (1964), Superpig (1976), The Filth Amendment (1981), and Marylebone Versus the Rest of the World (1987). He also provided illustrations and cartoons for many others, including a number of children's books.

After his early success in the 1960s, Rushton continued to work for The Private Eye and drew cartoons for the Literary Review and the Daily Telegraph's "Way of the World" column until his death in December 1996. Known particularly for his humorous cartoons and funny personal presentations, he was a fine performer, a versatile and interesting artist for whom television provided a continuing opportunity for comic invention.

Russell, Ken (1927– )
British Filmmaker

Ken Russell is best known in the United States as director of such feature films as *Women in Love* (1969), *The Music Lovers* (1970), *Tommy* (1975), and *Altered States* (1980). Although his television work is less well known outside the United Kingdom, it has had a major impact on the development of the television genre of fictional history, described by historian C. Vann Woodward as the portrayal of “real historical figures and events, but with the license of the novelist to imagine and invent.” Russell’s special province in the genre (a psycho-biographical form he terms the “biopic”) has been music composers and other artists such as dancers and poets. His imaginative interpretations of the lives of artists have, on occasion, outraged both critics and the general public.

After a brief career as a ballet dancer, and later as a successful commercial photographer, Russell turned his attention to film directing. On the basis of a portfolio of three low-budget short films, he was hired by the British Broadcasting Corporation (BBC) in 1959, at the age of 32, to work as a director on its arts series *Monitor*. Most of the *Monitor* pieces (10- to 15-minute short subjects) focused on contemporary artists working in British music, dance, and literature. Russell noted that, at the time, there was no real experimental film school in Britain, except for *Monitor*. *Monitor* producer Huw Wheldon, who later became managing director of BBC-TV, encouraged experimentation (within limits), and Russell took full advantage of this.

The two most important productions from Russell’s *Monitor* period were *Elgar* (1962) and *The Debussy Film* (1965). *Elgar*, Russell’s attempt to counter British music critics’ negative assessments of the British composer Edward Elgar, was his first full-length *Monitor* film, lasting 50 minutes. It also marked the celebration of the 100th *Monitor* program. In *Elgar*, Russell advanced the idea of using actors to impersonate historical characters, which he had introduced the previous year on *Monitor* in the short film *Portrait of a Soviet Composer*, on the life of Sergei Prokofiev. Prior to this, the BBC had prohibited the use of actors in the portrayal of historical personages. In the Prokofiev film, Russell used an actor to show the composer’s hands, a so-called anonymous presence. In *Elgar*, Russell took the concept a step further, allowing Elgar to be seen (but still not heard). Five different actors, mostly amateurs, portrayed the composer at various stages of his life. Most of the scenes with the actors were shot in medium-shot. According to Russell, the viewer was “not aware of a personality; just a figure.” Russell skillfully combined silent footage of the actors, stock footage of English life at the turn of the century, and photographs of Elgar and his family, all of which were enhanced by Elgar’s compositions. Russell focused his interpretation on Elgar’s reverence for the English countryside—his “return to the strength of the hills” (a theme of great importance in Russell’s own life). That theme would reemerge in many subsequent Russell biopics. *Elgar* was extremely popular with the audience, in large measure because of Russell’s romantic use of Elgar’s music; the show was repeated at least three times. As John Baxter points out, this work launched Russell’s national reputation.

After an unsuccessful feature film, *French Dressing*, Russell returned to the BBC to direct *The Debussy Film: Impressions of the French Composer* (1965). Here, Russell broke through the BBC’s last remaining prohibition against using actors in speaking roles in historical drama. According to Russell, as quoted in Gene D. Phillips’s *Ken Russell*, Wheldon thought the film “a bit esoteric” and insisted on beginning the film “with a series of photographs of Debussy alongside a spoken statement assuring viewers they were about to see a film based on incidents in Debussy’s life and incorporating direct quotations from Debussy himself.” The BBC feared that viewers might believe they were watching newsreels of real people. To circumvent this potential problem, Russell created an intriguing “film-within-a-film,” in which the framing story depicts a French film director coming to England to shoot a film on Debussy. In the script, actors were clearly identified as actors playing the various historical figures. Russell, and writer Melvyn Bragg (who would collaborate with Russell on several films and later become the editor and presenter of *The South Bank Show*), conceived Debussy as “a mysterious, shadowy character”—an unpredictable and sensual dreamer. This is accentuated by Russell’s evocative use of macabre physical comedy.
Isadora Duncan: The Biggest Dancer in the World (1966) is the most celebrated and least factual of Russell’s BBC biopics. The film used a mix of classical music and popular tunes (from Beethoven to “Bye, Bye, Blackbird”) and featured a nude dance, suicide attempts, and wild parties to depict Duncan’s sensational life and her death wish. Excerpts from Leni Riefenstahl’s Olympia were intercut with original footage, Ken Hanke reports, to convey the “ideal of German perfection” Duncan sought to emulate. Duncan was at once “sublime” and “vulgar,” if not grotesque. Interestingly, some of Russell’s more hostile critics have accused the director of the same tendencies.

Song of Summer (BBC, 1968) chronicles the last years of the life of composer Frederick Delius, who, blind and crippled with syphilis, is living in a French village with his wife, Jelka, and his amanuensis, Eric Fenby. Fenby, who advised Russell on the film, is portrayed as a young man who sacrificed his own career out of love and respect for Delius. In the end, according to Russell, as quoted by Phillips, Fenby feels “robbed of his own artistic vision” (see Phillips). The ultimate irony, says Russell, is that much of Delius’s music is second-rate. In Song of Summer, Russell is able to express an understanding and even compassion for a composer whose basic personality and music he clearly dislikes. The theme, evident in Isadora, of what Hanke refers to as “the artist’s unfortunate need to debase himself and his art,” reemerges here. As in Elgar, Russell highlights the artist’s obsession with nature. According to Hanke, in Song of Summer, Russell exhibited his “ability to work in a restrained manner if the subject matter calls for it.”

The last film Russell would make for the BBC, the infamous The Dance of the Seven Veils: A Comic Strip in Seven Episodes on the Life of Richard Strauss (1970), exhibited no such restraint. The complete title reveals Russell’s intention to create a satirical political cartoon on the life of the German composer, whom Russell saw as a “self-advertising, vulgar, commercial man…[a] crypto-Nazi with the superman complex underneath the façade of the distinguished elderly composer.” Although, according to Russell, “95 percent of what Strauss says in the film he actually did say in his letters and other writings,” many critics and viewers found Russell’s treatment of the venerated composer itself to be vulgar. Hanke’s assessment is that in the film, Russell contends that Strauss “betrayed himself and his art through his lack of personal responsibility,” which included his currying favor with the Nazis during World War II. The most objectionable sequences in the film were Strauss conducting “Der Rosenkavalier,” and exhorting his musicians to play ever louder to drown out the screams of a Jew being tortured in the audience by SS men, who were carving a Star of David on the man’s chest with a knife; and the playing of Strauss’s “Domestic Symphony” over shots of Strauss and his wife making love, their climax being mirrored by the orchestra. The film concludes with Russell himself portraying a wild-haired orchestra conductor bowing and walking away from the camera as his director’s credit appears on the screen (perhaps signaling his own farewell to the BBC). The film aired once, leading to mass protests and questions raised in Parliament. As Russell put it, “all hell broke loose.” Huw Wheldon, head of BBC-TV, defended Russell. At the same time, the BBC tried to placate critics, including Strauss’s family and his publisher, by presenting a roundtable discussion in which music critics and conductors denounced both Russell and the film.

Russell would return to television, but not to the BBC. In 1978, Russell directed Clouds of Glory for British independent television’s Grenada-TV. This program was actually two one-hour episodes. The first, William and Dorothy, was a biopic on the love of William Wordsworth for his sister Dorothy. The second episode, The Rime of the Ancient Mariner, was a biopic on the life of Samuel Taylor Coleridge.

In the 1990s, Russell continued to make television films about composers and music: The Strange Affliction of Anton Bruckner (1990), The Secret Life of Sir Arnold Bax (1992), The Mystery of Doctor Martinu (1993), Classic Widows (1995), and In Search of the English Folk Song (1997). Other television projects by Russell in this decade included a historical drama about the Dreyfus case, Prisoners of Honor (1991); literary adaptations (the miniseries Lady Chatterley [1993] and Ken Russell’s Treasure Island [1995]), and a prison drama, Dogboys (1998). He also directed a television documentary on Russia and Russians entitled Alice in Russianland (1995), and in 2001 he offered a TV documentary on women soccer players, The Brighton Belles, which aired as part of the BBC 2 series Southern Eye. Russell also remains active as a feature filmmaker and director of operas.

Russia

Russia was the largest and the culturally predominant republic of the U.S.S.R., and the history of Russian television up to the disintegration of that country in 1991 is inseparable from that of Soviet television. Moreover, in spite of the changes that have taken place since then, Russian television remains the principal inheritor of the traditions (as well as the properties) of its Soviet predecessor.

Regular television broadcasting began in Moscow in 1939, although the service was interrupted for the duration of World War II (1941–45). Broadcasting was always given a high priority by the Soviet authorities, and television expanded rapidly in the postwar years, so that by the late 1970s there were two general channels that could be received over most of the country and two other channels (one local and one educational) in certain large cities. There were also television stations in the constituent republics and studios in most large cities. Apart from a gradual extension of the coverage of the two national channels until the first, at least, could be received in virtually the whole of the country, this situation remained little changed until 1991. Because of its size, the Soviet Union was a pioneer of satellite transmission: by the mid-1980s both national channels were broadcast in four time-shifted variants to eastern parts of the country, while the first channel was among the earliest television programs to be made available worldwide. Regular color transmissions began in 1967, using the SECAM system.

Administratively, television was the responsibility of the All-Union Committee for Television and Radio (generally known as Gosteleradio), the chairman of which was a member of the Council of Ministers and of the Central Committee of the Soviet Communist Party. Equivalent committees existed in the constituent republics, with the exception, owing to a quirk of the system, of Russia itself. Only in May 1991, after sustained pressure from the Russian Parliament, did a separate Russian organization start its own television transmissions; its programs, broadcast for six hours per day on the second channel, were in the summer of that year a focus of opposition to President Mikhail Gorbachev. Broadcasting was financed out of the state budget, the receiving license having been replaced in

1983
Russia

1962 by a notional addition to the retail price of television sets.

The social, political, and economic upheavals that accompanied the collapse of the Soviet system have led to major changes in Russian television. The period since 1991 has been characterized by a rapid growth of commercialization and a continuing debate concerning the roles of both the state and private businesses in owning, financing, and controlling the content of the electronic media. There has also been continuous disagreement between the executive and legislative branches of power over which of them should exercise control over broadcasting. Up to now, this question has invariably been resolved in favor of the former, and the entire structure of Russian television has in effect been put into place by a series of presidential decrees.

As in most of Europe, Russian television is provided by a combination of publicly and privately owned organizations. The All-Russian State Television and Radio Company (VGTRK), founded in 1991 and wholly owned by the state, operates two channels: RTR (general interest) and Kul'tura (more "highbrow"). A second state company, Ostankino, which was created out of the former Gosteleradio when the Soviet Union disintegrated, was abolished in 1995. Its functions were taken over by Obschestvennoe rossiiskoe televidenie (Russian Public Television, known as ORT), owned 51 percent by the state and 49 percent by private interests. ORT is largely a commissioning company. Publicly owned broadcasting organizations continue to exist in each of the regions of Russia; one of these, TV-Tsentr, mostly owned and financed by the Moscow city government, uses franchising arrangements to have its programs broadcast in other large cities. In the private sector, there is one national company, NTV, while another, TV-6, is available in many large cities, thanks to franchising agreements; both NTV and TV-6 commenced operations in 1993. There are also several hundred local stations, and cable television exists in many cities. Most national channels have international versions, aimed principally at Russian-speaking audiences in Israel.

The changes since 1991 have had an equally profound effect on programs and their content. In Soviet times, television was first and foremost an instrument of propaganda, serving the interests of party and state, and this purpose was reflected in all news bulletins and political programs. The main evening news program, Vremia (Time), was shown simultaneously on all channels and often ran far beyond its allotted 40 minutes (a cavalier attitude toward the published schedules has been a characteristic of both Soviet and Russian television). All programs were in effect, if not formally, subject to censorship, and caution usually prevailed: the popular student cabaret KVN was taken off the air in the 1971 for being too daring, and a high proportion of the nonpolitical programs consisted of high culture (opera, ballet, or classical drama), films made for the Soviet cinema, and sport, all of which could be guaranteed in advance to be inoffensive.

Because of television's importance as a means of propaganda, the effects of glasnost were felt more slowly in that medium than in the print media. By the late 1980s, however, a certain liberalization could be discerned: KVN returned to the screens, and previously taboo topics began to be discussed in programs such as Vzgliad (View) and Do i posle polunochi (Before and After Midnight). These were followed by a range of lively and innovative productions originated by the semi-independent production company ATV, as well as by attempts to liven up news presentation. However, as late as the 1990–91 season, all of these programs were liable to suffer cuts imposed by the censors or even to disappear altogether; the suspension of Vzgliad in January 1991 was a particular cause célèbre. Under the circumstances, it is not surprising that the removal of all restrictions after the collapse of the August 1991 putsch led to a brief flowering of creative talent (and the emergence of long-forbidden programs) that may prove to have been something of a "golden age" for Russian television.

The 1990s and 2000s have witnessed a gradual Westernization of Russian television with the appearance of genres hitherto eschewed. Among these are game shows, such as Pole chudes (Field of Miracles), which is based on Wheel of Fortune and which is one of Ostankino/ORT's most popular programs; more recently, the Russian version of Who Wants to Be a Millionaire has attracted many viewers. Other newly adopted genres include talk shows, such as Tema (Theme) and My (We), which likewise have clear ancestral links with their American counterparts, and soap operas. These are almost invariably imported from the United States or Latin America; home-grown versions have been few in number and short-lived. One genre to which Russian television has remained immune is situation comedy, although in the area of satire it is worth mentioning NTV's Kukly (Puppets), which uses the format of the British program Spitting Image and which has occasionally succeeded in annoying the authorities. Films made in the United States and other Western countries are now widely shown, although since the mid-1990s, presumably in response to complaints from viewers, there has been a marked increase in the number of Russian/Soviet films being broadcast. There is a limited amount of religious broadcasting, mostly in connection with festivals of the Russian Orthodox Church. Literature, classical
music, and serious drama, which at one time had almost totally disappeared from the screens, have regained a tenuous foothold on the Kul'tura channel.

This Westernization has by no means met with universal approval, although it is not only a reaction to Soviet isolationism but also a response to commercial pressures. The financing of Russian television is heavily opaque, but it may be assumed that the state makes a modest contribution to the running costs of VGTRK, though not to ORT. This means that all channels except Kul'tura are now heavily dependent on advertising, and with the relationship between audience ratings and the prices charged for advertising becoming as sophisticated as in the West, there is a requirement to show programs that will attract viewers. Advertising is lightly regulated and takes many forms, including spots between and during programs and sponsorship. It tends to be unpopular, partly because of the unfamiliar intrusiveness (the amount of advertising is much greater than in most European countries), but also because in the early days a high proportion of the ads were either for foreign goods not widely available or (especially from 1992 to 1994) for disreputable financial institutions that subsequently collapsed. Nevertheless, while some transnational companies have preferred to recycle advertisements previously used in their older markets, the best Russian-produced examples of the form will bear comparison to anything shown in the West. The rapid growth of advertising has led to widespread allegations of corruption, and the murkier side of Russian television received prominence in March 1995 with the still unsolved murder of Vladislav List’ev, originator and presenter of several popular programs and director-general-designate of ORT. In some cases additional financial support for television may come from owners or patrons. However, the costs of running the national channels have for some years exceeded income, and all the main channels, whether public or private, are heavily in debt. In 2001, the Duma approved a law banning foreign citizens or companies from owning more than 50 percent of a national television company; given the financial and political uncertainties, it is perhaps not surprising that there has been little or no foreign investment in Russian television.

Commercial pressures have not, however, entirely succeeded in supplanting political pressures, although until recently the latter have been incomparably more subtle than in Soviet times. The mass media under Boris Yeltsin were by historical standards surprisingly free and pluralistic, partly because the president was himself relaxed about criticism, but partly because the ramshackle nature of the state made effective control problematic. Nevertheless, in both areas the long-established Soviet practice of “telephone law” (whereby a person in power uses that instrument to convey his or her wishes/instructions) continued to prevail, and Ostankino and its successor ORT acquired a reputation for being “pro-presidential,” but this was principally because of the perceived slant of their news coverage. At the same time, however, certain programs produced for these channels by independent production companies were accused, somewhat contradictorily, of giving opponents of the president too much air time, and it is generally considered that the demagogic nationalist Vladimir Zhirinovskii largely owes his political career to television. In the 1996 presidential election, self-interest and political pressure ensured that all television channels supported the re-election of Yeltsin; NTV was rewarded for its support by significant improvements to the terms of its license, albeit at some cost to its reputation for independence and lack of bias.

The period after 1996 saw the growth of informal power networks involving politicians and businessmen and the appearance of “oligarchic television,” where channels were controlled by tycoons with political ambitions. In particular, ORT was controlled by Boris Berezovskii, its main financier, while NTV was run by Vladimir Gusinskii, alternately Berezovskii’s ally and rival. During the 1999/2000 elections, the two channels were on opposite sides: ORT supported Vladimir Putin and his allies; NTV displayed a demonstrative coolness toward the future president. Campaigning methods were remarkably robust, and this period saw the emergence of the phenomenon of the “telekiller,” presenters of news-analysis programs (notably NTV’s Sergei Dorenko), who indulged in vicious character assassinations of their patrons’ opponents.

With Putin safely elected, a reckoning followed, the results of which were not entirely predictable. If the series of legal and extralegal measures taken against NTV and Gusinskii had a certain obvious logic, the easing-out of Berezovskii was more surprising. The latter sold, or was made to sell his shares, in ORT, and in April 2001 NTV came under the effective control of Gazprom, the partly state-owned gas monopoly, which had previously been a minority shareholder in NTV. The ostensible reason for the takeover was the inability of NTV to repay its debts, but it seems clear that the incident was engineered by the presidential administration to reign in an increasingly recalcitrant broadcaster. The events of 2000–01 were carried out with a curious mixture of scrupulously observed legal procedures and naked blackmail. The result has not been a re-Sovietization of Russian television, but a certain success in resetting the boundaries of pluralism rather more narrowly than in Yeltsin’s time.
Russian television operates in a climate where the structures of a civil society have been only partially created and where politics in terms of being the determining factor both in interchannel rivalry and in viewer affections plays a role similar to that played by association football in western Europe. In the absence of a clear legal framework and of an agreed definition of “public service broadcasting,” commercial pressures may offer the best available guarantees of maintaining some degree of freedom of speech. With the problems and opportunities associated with digitization still destined to have a significant impact, the creation of a stable and financially secure structure of broadly based channels aimed at a national audience is likely to remain the main issue in Russian television in the near future.

St. Elsewhere
U.S. Serial Medical Drama

*St. Elsewhere* was one of the most acclaimed of the upscale serial dramas to appear in the 1980s. Along with shows such as *Hill Street Blues, L.A. Law,* and *thirtysomething,* *St. Elsewhere* was a result of the demographically conscious programming strategies that had gripped the networks during the years when cable TV was experiencing spectacular growth. Often earning comparatively low ratings, these shows were kept on the air because they delivered highly desirable audiences consisting of young, affluent viewers whom advertisers were anxious to reach. Despite its never earning a seasonal ranking above 49th place (out of about 100 shows), *St. Elsewhere* aired for six full seasons on the National Broadcasting Company (NBC) from 1982 to 1988. The series was nominated for 63 Emmy Awards and won 13.

Set in a decaying urban institution, *St. Elsewhere* was often and aptly compared to *Hill Street Blues,* which had debuted a season and a half earlier. Both shows were made by the independent production company MTM Enterprises, and both presented a large ensemble cast, a “realistic” visual style, a profusion of interlocking stories, and an aggressive tendency to break traditional generic rules. While earlier medical dramas such as *Dr. Kildare, Ben Casey,* and *Marcus Welby, M.D.* featured godlike doctors healing grateful patients, the staff of Boston’s St. Eligius Hospital exhibited a variety of personal problems, and their patients often failed to recover.

*St. Elsewhere*’s content could be both controversial and surprising. In 1983, for instance, it became the first prime-time series episode to feature an AIDS patient. Six years before *NYPD Blue* began introducing nudity to network television, *St. Elsewhere* had shown the naked backside of a doctor (Ed Flanders) who had dropped his trousers in front of his supervisor (Ronny Cox) before leaving the hospital and the show. It was also not uncommon for principal characters to die unexpectedly, which happened on no fewer than five occasions during the run of the series.

As a medical drama, *St. Elsewhere* dealt with serious issues of life and death, but every episode also included a substantial amount of comedy. The show was especially noted for its abundance of “in jokes” that made reference to the show’s own ancestry. In one episode, for example, an amnesia patient comes to believe that he is Mary Richards from *The Mary Tyler Moore Show,* MTM Enterprises’ first production. Throughout the episode, the patient makes oblique references to MTM’s entire program history. Later, in the series’ final episode, a scene from the last installment of *The Mary Tyler Moore Show* is restaged, and the cat that had appeared on the production logo at the end of every MTM show for 18 years dies as the final credits roll.

*St. Elsewhere* proved to be a fertile training ground for many of its participants. At the start of the 1992–93 season, creators John Falsey and Joshua Brand had a
critically acclaimed series on each of the three major networks: *Northern Exposure* (Columbia Broadcasting System [CBS]), *I'll Fly Away* (NBC), and *Going to Extremes* (American Broadcasting Company [ABC]). Writer-producer Tom Fontana became the executive producer of *Homicide: Life on the Street* with Baltimore-based film director Barry Levinson. Other *St. Elsewhere*, producers and writers went on to work on such respected series as *Moonlighting, China Beach, L.A. Law, Civil Wars, NYPD Blue, ER*, and *Chicago Hope*. Actor Denzel Washington, virtually unknown when he began his role as Dr. Phillip Chandler, had become a major star of feature films by the time *St. Elsewhere* ended its run.

*St. Elsewhere* also exerted a significant creative influence on *ER*, the hit medical series that debuted on NBC in 1994. While the pacing of *ER* is much faster, both the spirit of the show and many of its story ideas have been borrowed from *St. Elsewhere*.

Sagansky, Jeff (1952– )

U.S. Television Executive

From his humble beginnings as an entry-level intern for the National Broadcasting Company (NBC) in 1977, Jeff Sagansky quickly rose through the ranks of the entertainment industry to hold some of the most powerful executive positions in television and film during the latter part of the 20th century and into the 21st. From director of dramatic development at NBC to president of production at TriStar, from president of production at the Columbia Broadcasting System (CBS) to executive copresident of Sony Pictures Entertainment, he progressed from programming boy genius to well-established chief executive officer. As one reviews his professional history, it is clear that Sagansky has been a major player in the business of American popular culture.

Shunning the more conventional vocational paths of his fellow Harvard Business School alumnae, Sagansky began his career at NBC in 1977 and soon was working with industry veterans such as Stephen Cannell (who was producing The Rockford Files at the time). By 1978, he had been promoted to manager of film programs and in 1979 was named director of dramatic development. When Fred Silverman arrived at NBC in 1978, however, Sagansky became concerned about his role at the network, and he eventually left to become vice president of development for a television production firm, the David Gerber Company. After three years at this position, Sagansky returned to NBC after Silverman was fired and began to work closely with the very successful new NBC entertainment chief Grant Tinker. From 1982 to 1985 as senior vice president in charge of series programming, Sagansky was part of the team that developed tremendously popular programs such as Family Ties (1982–89), Cheers (1982–93), The Cosby Show (1984–92), Miami Vice (1984–89), and Highway to Heaven (1984–89), programs that propelled the network to the top of the ratings.

Despite his success at NBC, Sagansky was too ambitious to stay at the network for too long, and he left television for the motion picture business becoming the president of production at TriStar Pictures from 1985 to 1989. Working closely with longtime producer Ray Stark, Sagansky’s tenure at TriStar was inauspicious at best, and while there he oversaw the production of films such as About Last Night (1986), Peggy Sue Got Married (1986), Steel Magnolias (1989), Glory (1989), and Look Who’s Talking (1989). Although he was promoted to president of TriStar pictures in 1989, when the Sony Corporation purchased TriStar and Columbia Pictures and placed Jon Peters and Peter Guber at the helm, Sagansky may have sensed that his job was in jeopardy. Therefore, it was no surprise when he leapt at the opportunity to return to his television roots soon after this change in management.

In 1990, Sagansky became the president of CBS Entertainment and working together with broadcast president Howard Stringer, he oversaw a quick ratings turnaround at CBS as the network moved from third place to first place during the first 18 months of his tenure. With shows such as Northern Exposure (1990–95), Picket Fences (1992–96), The Nanny (1993–99), Dr. Quinn, Medicine Woman (1993–98), Touched by an Angel (1994–2003), and Chicago Hope (1994–2000), CBS gained audience share but continued to attract an older and therefore less attractive (to advertisers) demographic.

Continuing his pattern of relatively brief periods of employment at any one company, Sagansky left CBS in 1994 to return to the Sony Corporation of America as executive vice president, working there until 1998. While at Sony, he was deeply involved in the company’s purchase of the Spanish-language entertainment company Telemundo as well as the merger of Sony Theatres with Cineplex Odeon Theatres and the

1989
launch of the PlayStation video game platform. Once again, however, new opportunities beckoned, and in 1998 he took the position of president and chief executive officer of Paxson Communications and oversaw the launch of the family-friendly PAX channel in 1998. During his time with the company, the channel’s network distribution grew from 60 to 90 percent of American households, but PAX was never able to develop a genuine hit show. Sagansky’s position at Paxson Communications changed in 2002, when he was named vice chairman of the company’s board of directors and relinquished his role as president and chief executive officer. He stayed at Paxson for one more year before abruptly resigning from his position in August 2003. As of January 1, 2004, Sagansky was currently exploring other opportunities in the entertainment industry.  

ANDREW C. MILLER

Salant, Richard S. (1914–1993)  
U.S. Media Executive

Richard S. Salant started in television in 1952 as vice president of the Columbia Broadcasting System (CBS) and corporate officer to Frank Stanton, who was president of CBS. A Harvard-educated lawyer, Salant worked in government and private practice for 12 years before switching industries. His corporate experience was fueled by his lifetime commitment to such issues as freedom of the press, ethics in news production, and the relationship of government, corporate broadcast management, and news production. His longevity in the television industry stemmed from such intangible qualities as skillful conflict resolution that minimized public debate, the ability to isolate issues from complex events, and verbal clarity in articulating his position.

Salant served almost a decade as vice president and corporate officer, with no experience or training as a journalist, before Stanton appointed him president of the CBS News division in 1961. The appointment drew immediate and strong protest from Walter Cronkite, Charles Collingwood, and Eric Sevareid, who were distressed at the unprecedented appointment of a lawyer and feared constant legal scrutiny of news judgments. However, Stanton, reacting to CBS President William S. Paley’s impatience at the second-place standing of the news division, believed that the appointment would bring positive change. When that failed to materialize by 1964, Salant was moved back to his previous position, only to be reappointed by Stanton in 1966 after Fred Friendly’s sudden resignation as president of the news division. By the end of 1967, CBS News was in first place, remaining there for Salant’s tenure. The strength of his advocacy for the news division earned Salant the title “patron saint of broadcast journalism.”

Years before he rose to lead the news division, Salant used his legal knowledge, from 1953 through 1959, to represent CBS in Washington, D.C., in congressional hearings and forums pertaining to broadcast regulation and rights. He learned the structure of the industry for his speeches and testimony on issues such as subscription television, UHF (ultrahigh frequency)/VHF (very high frequency) allocations, monopoly rulings, coverage of House hearings by broadcasters, and the barriers constructed to free expression by section 315 (the “equal time rule”) of the Communications Act. He argued that Congress’s ban on the journalistic use of cameras and microphones in its chambers relegated broadcasters to second-class status, and he posited that section 315 prevented the free pursuit and airing of information. From his participation in the complex discussions of these legal is-

1990
sues, Salant slowly derived the position that news should be based on information the public needs to know to participate in a democratic system, not on what they would like to know. On that principle, Salant made the controversial decision to introduce the *CBS Morning News* with a serious, hard-news format, in opposition to the entertainment format of the morning shows of the American Broadcasting Company (ABC) and the National Broadcasting Company (NBC). Even when the *CBS* program lagged far behind its competition, Salant adamantly refused a change in program content.

Salant had a passion for the potential of television news, and starting in 1961 he brought a meticulous set of policies to the news division so that the ethics and credibility of news remained unscathed. These policies ranged from the sweeping change that separated sports and other entertainment projects from the news division to detailed guidelines for editing interviews. His directives banished music and sound effects from any news or documentary program. They stopped the involvement of news personnel in entertainment ventures. They terminated the news division’s practice of providing outtakes of news stories to the Central Intelligence Agency or any other government bureau. They both limited the use of and marked all occurrences of simulations. In 1976, these guidelines and policies were compiled in a handbook, *CBS News Standards*. Responding to changes in the world, on April 15, 1979, Salant added guidelines on covering terrorists and hostage situations. News division employees are required to read the handbook and sign an affidavit agreeing to comply with the guidelines.

In 16 years as president, Salant looked at small and large policies for their potential contribution toward building a credible public image for CBS News. He spoke out against the news division creating “personalities” to market programs. He was especially concerned for the potential harm of docudramas, which, if not consistently marked and explained as fictionalizations, might be taken as news products by the public. Most troubling to Salant was the network’s lack of supervision over news emanating from CBS-owned stations. Integrity and credibility came in a package under the *CBS* name, and the package extended, in his view, to the local level. Even when *CBS* affiliates vehemently objected to the *CBS Evening News*’ critical perspective on the Vietnam War and the government, Salant refused to alter journalistic judgments.

Throughout three critical periods in American history (the Vietnam War, the civil rights era, and Watergate), Salant’s continuous examination of broadcast ethics and news judgment set the pace for other networks and the industry. When Friendly resigned as president of *CBS* News in 1966 because network executives declined to preempt regular daytime programming in order to air the Senate Foreign Relations Committee Hearings on Vietnam, Salant reiterated the importance of news judgment under the criterion of selective coverage. Congress, Washington, and the president would not, he argued, control airwaves with a selective coverage policy. The networks were responsible for alternative ways of reporting, such as evening news specials, half-hour news summaries, and the provision of alternative voices.

Salant realized that his background in the *CBS* corporate arena would always cast doubt on his decisions. His record of wrestling more broadcasting time for news in prime time as well as daytime eventually changed that. In fact, Salant’s inside knowledge of *CBS* helped the news division to move from a 15-minute newscast to a 30-minute one, and he led the network to institute weekend editions of the *CBS Evening News*. Under his guidance, *CBS* started a full-time election unit; created additional regional news bureaus outside New York and Washington; launched *60 Minutes, Magazine, 30 Minutes, Calendar*, and the children’s series *In the News*; began a regular one-hour
Salant, Richard S.
documentary series called *CBS Reports*; produced many investigative and controversial documentaries; and covered the Watergate affair with more than 20 one-hour specials on the events. During Salant’s reign, the CBS News division jumped from 450 employees to 1,000, and the annual budget increased to $90 million in 1979, up $70 million since 1961.

These accomplishments were not Salant’s most difficult. He succeeded, with great pain, in insulating news division personnel from the wrath of corporate criticism and deflected movements against the division’s autonomy. In two documentaries where CBS business interests were criticized in a manner that could have potentially created serious repercussions, Salant deflected pressure from CBS executives. “The Trouble with Rock” (*CBS News Special, 1974*) accused Columbia Records of payola, drug use by executives, and paying organized crime figures to protect artists. “You and the Commercial” (*CBS Reports, 1973*), revealing the questionable persuasive strategies of advertisements aimed at children, angered executives at the highest levels of the network. When CBS President Paley vehemently objected to Cronkite’s *Evening News* report on Watergate, the first by a network, and demanded the story never appear again, Salant defied Paley, airing a second part although reducing the number of issues covered. Whereas this action is open to multiple interpretations, Salant’s decisions in 1973 are clearer. He supported CBS News journalists in a protest against Paley’s call for the elimination of instant specials after presidential speeches or news conferences.

Salant continually addressed the volatile connection between news and corporate management in a pragmatic manner. He did not see the relationship as strictly adversarial, nor did he see it as polarized between two opposing sides. Every conflict was a path toward new strategies to apply in the future. Salant’s brilliance as division president was grounded in the attitude and communication skills he brought to conflicts. He diverted escalating personal attacks and swung discussions back to issues.

Not everyone appreciated this strategy. When Friendly resigned, Salant referred to his action as a misunderstanding and explained CBS’s strategy on the congressional hearings. When local affiliates called for less Watergate coverage and when they demanded Dan Rather’s reassignment after talking back to the president at a news conference, Salant did denounce defiance and arrogance in any news division. But he turned the argument so that affiliates had to examine the central issue as a matter of news judgment: network news needed its independence, even if it was dependent on affiliates.

In one of the most widely discussed controversies of his tenure, the findings reported in the CBS documentary *The Selling of the Pentagon* (1971) put Salant in a difficult and complex position. The government called congressional hearings and subpoenaed CBS documents, accusing the news division of manipulative editing and false claims. Again, Salant simplified the matter, accusing the government of infringing on the freedom of speech. He argued that a network has the right to be wrong and, even when wrong, the right not to be judged by the government. To support this view, he pointed to an issue with ramifications for the entire television industry: the government had the power to jeopardize free speech by its power to intimidate affiliates that carried controversial programs. Even in the midst of his defense, however, Salant was not afraid to criticize CBS or network news, and his attitude provided credibility to his position. After the confrontation with Congress, when CBS did something questionable—such as paying H.R. Haldeman $50,000 for an interview on *60 Minutes*—an admission of wrongdoing was forthcoming.

On mandatory retirement from CBS, Salant immediately went to NBC, serving two uneventful years as a vice president and general adviser in the network. Only one Salant proposal for NBC received extensive coverage. He recommended development of a one-hour evening news program, from 8:00 to 9:00 p.m., freeing the earlier prime-time slot for local news and saving networks the expense of an hour of dramatic programming. Salant finished his career as president and chief executive officer of the National News Council. This independent body, recommended in 1973 by a Twentieth Century Fund panel on which Salant served, was created in 1983 to make nonbinding decisions on complaints brought against the press or by the press. Faced by a hostile industry that wanted no monitor looking at its work, the council disbanded after one year. This attitude on the part of the industry was discouraging to Salant, especially considering the increased government attacks on media credibility that also functioned to maintain government credibility. Potentially, the council could do what Salant did at CBS: protect news standards and press freedom. But the networks had changed radically. By the mid-1980s, news was a profit center, noted Salant, and these larger issues were irrelevant. Although Salant did not succeed in having the standards of broadcast journalism maintained, he set historical precedent with CBS News programming.

Sale of the Century
Australian Game Show

Sale of the Century is the most successful game show ever produced and shown on Australian television. The series began on the Nine Network early in 1980 and, apart from the short four-week summer break each year, has been transmitted in the same prime-time access slot of 7:00 P.M. five nights a week ever since. Apart from the historical ratings dominance of the Nine Network in the Australian television market place, the reasons for the success of Sale have much to do with the format of the program, its pace, and its prizes. The game consists of three rounds in which three contestants compete for the right to buy luxury prizes at low prices. The first to sound a buzzer gains the opportunity to answer a general knowledge ques-
The program succeeds because it is a blend of general knowledge, luck, and handsome prizes. The question-and-answer format, combined with the time factor, draws in the home viewer, while guesses at the panels and whether to buy items offered involve luck and risk. This combination gives Sale of the Century a pace and interest that make it a bright, attractive game show.

Sale of the Century originally ran on the National Broadcasting Company (NBC), the American television network, from 1969 to 1973. The Australian-based Grundy Organization had since 1961 been a very frequent licensee/producer of American game show formats, but it had decided in the early 1970s to develop or buy in formats of its own. Grundy bought the format for Sale of the Century in 1979 and later the same year sold the program to the Australian Nine Network. By this time, the Grundy Organization was the biggest program packager in Australian television and had decided that the only way to continue to expand was to internationalize its operation. However, because of differing licensing arrangements, Grundy was aware that many of the American game-show-format license rights were not available to the company in other territories—hence the decision to buy format copyrights on programs such as Sale. The outstanding rating success of Sale in the Australian television market made it easier to sell the format elsewhere. Thus, since 1982, the company has reversioned Sale of the Century in five other territories: Hong Kong (RTV, 1982), United States (NBC, 1982/1988), United Kingdom (Sky, 1989/1991), New Zealand (TVNZ, 1989/1993), and Germany (Telos/DSP, 1990/1993).

Some of the program’s hosts in different countries have included Tony Barber (Australia), Joe Garagiola (United States), Jack Kelly (United States), Steve Parr (New Zealand), Nicholas Parsons (United Kingdom), Jim Perry (United States), and Glen Ridge (Australia).

Sandford, Jeremy (1934–)

British Writer

Jeremy Sandford is the writer of Cathy Come Home and Edna the Inebriate Woman; his oeuvre may be one of the smallest yet most famous in the history of British television drama. Cathy Come Home is surely the most-talked-about television play ever, an iconic text in the radical canon of the 1960s Wednesday Play, which has become overshadowed by the association with its director, Ken Loach, and producer, Tony Garnett. Following Cathy Come Home, Sandford intended to write a trilogy on homelessness titled In the Time of Cathy, but Edna the Inebriate Woman was the only play completed. This story of an itinerant “down-and-out” moved the focus from the cruelty inflicted on families to the lives of the single homeless—the sort of person, Sandford suggested, that Cathy had become as she walked away from the railway station, stripped of her family.

After more or less disappearing from television, Sandford surfaced in 1980 with a play commissioned for the series Lady Killers and then in 1990, as the homeless population in Britain began once again to be a topic of public debate, with a documentary for the British Broadcasting Corporation (BBC), Cathy, Where Are You Now?

When Cathy Come Home was reshown in 1993 as part of a season commemorating the establishment of the housing charity Shelter, Sandford wrote to the Independent, taking issue with a claim that doubts had been raised over the accuracy of the homelessness and family-separation statistics given at the end of the play. “I work as a journalist as well as an author,” he wrote, “and it would be professional suicide to be inaccurate.” Sandford has never wholly identified himself as a television dramatist. At one time a poet and artist, he had nursed an early ambition to be a professional musician and played the clarinet in an Royal Air Force band during his national service. One of his first plays, Dreaming Bandsmen, broadcast by BBC Radio in 1956 and later staged in Coventry, seemed to confirm his early reputation as a surrealist, but at the same time he was recording radio documentaries about working-class life in the East End, and it was as a journalist and activist that he began writing about homelessness in the early 1960s. As he told an interviewer in 1990, he had always sought to play his role on the stage of life rather than simply reflecting it. Thus, he not only submerged himself in the netherworld of the down-and-out for his research on Edna but also went on to arm himself with his written work as part of an active crusade on behalf of the dispossessed. A special showing of Cathy Come Home was arranged for Parliament, and Sandford himself toured the country screening and talking about both plays at public meetings.

Homelessness, itinerancy, and housing policy have been particular obsessions of Sandford. His Anglo-Irish grandmother, Lady Mary Carbery, was a member of the Gypsy Lore Society, and he has campaigned on behalf of gypsies as well as editing their newspaper, Romano Drum. A play about gypsies, Till the End of the Plums, was to complete a trilogy about the homeless but was never produced.

Born of wealthy parents (his father owned a private printing press) and educated at Eton and Oxford, Sandford was brought up in a stately Herefordshire home. In the late 1980s, after a long association with the alternative communities of folk festivals and camps, he moved into a large country house and opened it up as a study center for New Age travelers.

A further play, Smiling David, about the case of a Nigerian drowned in a Leeds river and the agencies implicated in the events, was commissioned for radio and broadcast in 1972 but never made it to the television screen. Sandford’s often-noted status as a documentalist and social advocate rather than a natural television dramatist is emphasized by the fact that the scripts for Cathy and Edna are published in a series of political and social treatises. His polemical and factual writing, such as Down and Out in Britain, which accompanied Edna, far exceeds the amount he has written for television. However, the importance of his two major works in defining the cultural role of television drama in Britain as an intrinsic part rather than simply a mirror of sociopolitical actuality cannot be ignored. Cathy Come Home remains a landmark in this sense. “If any writer ever hoped that an idea of his would be accepted by the public as valid and taken to their hearts,” Sandford wrote in 1968, “then he would have hoped for the reaction that has followed my Cathy Come Home.” Sandford’s exchange with Paul Ableman in the pages of Theatre Quarterly over the ethics
of fictional form in *Edna the Inebriate Woman* set the agenda for a debate about the aesthetics and politics of drama-documentary that was to dominate television drama criticism through the 1970s and 1980s.

Sandford, Jeremy

Sandrich, Jay (1932– )

U.S. Director

The career of Jay Sandrich, a leading director of American situation comedies, covers much of the first few decades of the sitcom. His programs have been characterized by wit, a supportive working environment, and care for his actors.

The son of film director Mark Sandrich, Jay Sandrich began his television work in the mid-1950s as a second assistant director with Desilu Productions, learning to direct television on *I Love Lucy, Our Miss Brooks*, and *December Bride*. Later he worked on both *The Danny
Sandrich, Jay

Thomas Show and The Dick Van Dyke Show: In 1965, Sandrich put in his only stint as a producer, serving as associate producer for the first season of the innovative comedy Get Smart. He enjoyed the experience but vowed to stick to directing in future. He told Andy Meisler of Channels magazine, “I really didn’t like producing. I liked being on the stage. I found that, as a producer, I’d stay up until four in the morning worrying about everything. As a director, I slept at night.”

In 1971, he signed on as regular director for the relationship-oriented, subtly feminist Mary Tyler Moore Show, beginning a long-term partnership with the then-fledgling MTM Productions. Directing two-thirds of the episodes in the program’s first few seasons, he won his first Emmys and worked on the pilot for the program’s spin-off, Phyllis. In an interview for this encyclopedia, he spoke glowingly of the MTM experience: “[MTM chief] Grant [Tinker] created this wonderful atmosphere of being able to have a lot of fun at your work—plus you were working next door to people who were interesting and bright. And there was this feeling of sharing talent.”

Sandrich went on to work as a regular director on the satirical Soap and eventually created another niche for himself as the director of choice for The Cosby Show from 1985 to 1991. Meisler’s article paints an appealing portrait of the director’s relationship with the star and with other Cosby production personnel, quoting co-executive producer Tom Werner on the show’s dynamics: “Although we’re really all here to service Bill Cosby’s vision, the show is stronger because Jay challenges Bill and pushes him when appropriate.” Sandrich was proud of the program’s pioneering portrayal of an upper-class black family and of its civilized view of parent–child relations.

During and following Cosby’s run, Sandrich directed pilots and episodes for a number of successful programs, including The Golden Girls, Benson, Night Court, and Love and War.

Although he ventured briefly into the field of feature films, directing Seems Like Old Times in 1980, Sandrich decided quickly that he preferred to remain in television. “The pace is much more interesting,” he explained. “In features you sit around so much of the time while lighting is going on, and then you make the picture, and you sit around for another year developing projects. I like to work. I like the immediacy of television.” Asked whether there was a Jay Sandrich type of program, Sandrich mused, “I don’t know if there is, but I like more human-condition shows, not really wild and farcy, although Soap gave me really a bit of everything to do....Basically, I like men–women shows....I go more for shows that have more love than anger in them.” Certainly most of his programs have evinced this inclination.

For many of his colleagues, Sandrich has defined the successful situation-comedy director. “I think it was Jay who first made an art form of three-camera film,” said producer Allan Burns (quoted in Meisler), referring to the shooting technique most often used for sitcoms. Although he is modest about his own accomplishments and quick to note that good writing is the starting point for any television program, Sandrich has asserted that he cherishes his role as director in a medium often viewed as the domain of the producer. “If there’s a regular director every week,” he has stated, [television] should be a major collaboration between the director and the producer—if the director’s any good—because he is the one who sets the style and the tone of the show. He works with the actors. And a good director, whether he is rewriting or not, he is always making suggestions...and in many cases knows the script a little bit better than the producer because he’s been seeing each scene rehearsed and understands why certain things work and why they don’t....So when it’s a regular director on a series, I think it’s not a producer’s medium. It is the creative team that shapes a series.
In a 1998 interview in DGA Magazine, the veteran director expressed concern about the state of contemporary television production. “Years ago, television wasn’t determined by so many people’s opinions,” he explained. “You didn’t have to get the immediate ratings. Shows were given time to build.” Nevertheless, Sandrich still works frequently on projects he believes meet his high standards, although he denies that he is still the king of pilots for American comedies. “I think Jimmy Burrows is the king,” he has said of his former protégé. “He’s gotten so many shows on the air. No, I think I’m the dowager queen or something by now.”

Sanford and Son

U.S. Domestic Comedy

The 1972–76 National Broadcasting Company (NBC) program Sanford and Son chronicled the adventures of Fred G. Sanford, a cantankerous widower living with his grown son, Lamont, in the notorious Watts section of contemporary Los Angeles, California. Independent producers Norman Lear and Bud Yorkin licensed the format of a British program, Steptoe and Son, which featured the exploits of a Cockney junk dealer, and created Sanford and Son as an American version. Sanford and Son, The Jeffersons, and Good Times, all produced by Lear and Yorkin, featured mostly black casts—the first such programming to appear since the Amos 'n' Andy show was canceled in a hailstorm debate in 1953.

The starring role of Sanford and Son was portrayed by actor-comedian Redd Foxx. Born John Elroy San-
Sanford in St. Louis, Missouri, Foxx was no newcomer to the entertainment industry. He began a career in the late 1930s performing street acts, and during the 1950s he achieved a measure of success as a nightclub performer and recorder of bawdy joke albums, with his racy routines influencing generations of comics to the present time. By the 1960s, he was headlining in Las Vegas. In 1969, he earned a role as an aging junk dealer in the motion picture *Cotton Comes to Harlem*, a portrayal that brought him to the attention of Lear and Yorkin.

It was Foxx’s enormously funny portrayal of 65-year-old Fred G. Sanford that quickly earned *Sanford and Son* a place among the top-10 most-watched television programs to air on NBC television. He was supported by Lamont, his 30ish son, and a multiracial cast of regular and occasional characters who served as the butt of Sanford’s often bigoted jokes and insults. Fred’s nemesis, the “evil and ugly” Aunt Esther (portrayed by veteran actor LaWanda Page), often provided the funniest moments of episodes as she and Fred traded jibes and insults. The trademark routine of the series occurred when Fred feigned a heart attack by clapping his chest in mock pain. Staggering drunkenly, he would threaten to join his deceased wife Elizabeth, calling out “I’m coming to join you, Elizabeth!”

Although *Sanford and Son* was enormously successful, Foxx became dissatisfied with the show, its direction, and his treatment as star of the program. In a *Los Angeles Times* article, he stated, “Certain things should be yours to have when you work your way to the top.” At one point he walked off the show, complaining that the white producers and writers had little regard or appreciation of African-American life and culture. In newspaper interviews, he lambasted the total lack of black writers or directors. Moreover, Foxx believed that his efforts were not appreciated, and in 1977 he left NBC for his own variety show on the American Broadcasting Company (ABC). The program barely lasted one season.

*Sanford and Son* survived some five years on prime-time television. It earned its place in television history as the first successful, mostly black cast television sitcom to appear on a U.S. network in prime time since the cancellation of *Amos ‘n’ Andy*. It was an enormously funny program, sans obvious ethnic stereotyping. “I’m convinced that *Sanford and Son* shows middle-class America a lot of what they need to know,” Foxx said in a 1973 interview. “The show… doesn’t drive home a lesson, but it can open up people’s minds enough for them to see how stupid every kind of prejudice can be.” After Foxx left the show permanently, a pseudo-spin-off called *Sanford Arms* proved unsuccessful and lasted only one season.

Sarnoff, David (1891–1971)
U.S. Media Executive

A pioneer in radio and television, David Sarnoff was an immigrant who climbed the rungs of corporate America to head the Radio Corporation of America (RCA). Born on February 27, 1891, in Uzelian, in the Russian province of Minsk, Sarnoff’s early childhood years were spent studying to be a rabbi, but when he emigrated to the United States in 1900, he was forced to work to feed his mother, ailing father, and siblings.

Learning early the value of self-promotion and publicity, Sarnoff falsely advanced himself both as the sole hero who stayed by his telegraph key for three days to receive information on the Titanic’s survivors and as the prescient prophet of broadcasting who predicted the medium’s rise in 1915. While later described by others as the founder of both RCA and the National Broadcasting Company (NBC), Sarnoff was neither. These misconceptions were perpetuated because Sarnoff’s later accomplishments were so plentiful that any myth was believable. Indeed, his foresight and corporate savvy led to many communication developments, especially television.

Sarnoff began his career at age nine, selling Yiddish-language newspapers shortly after arriving in New York. To improve his English, he picked up discarded English-language newspapers. By the time he was ten, he had a fairly passable vocabulary. He also soon had his own newsstand. During the day he attended grade school, while at night he enrolled in classes at the Educational Alliance, an East Side settlement house. At age 15, with his father’s health deteriorating, Sarnoff was forced to seek a full-time job.

He became a messenger for the Commercial Cable Company, the American subsidiary of the British firm that controlled undersea cable communication. The telegraph key lured him to the American Marconi Company a few months later, where he was hired as an office boy. Once there, he began his corporate rise, including the job of being Marconi’s personal messenger when the inventor was in town. With Marconi’s endorsement, Sarnoff became a junior wireless telegraph operator, and at age 17 he volunteered for wireless duty at one of the company’s remote stations. There he studied the station’s technical library and took correspondence courses. Eighteen months later, he was appointed manager of the station in Sea Gate, New York. He was the youngest manager employed by Marconi. After volunteering as a wireless operator for an Arctic seal expedition, he became operator of the Marconi

wireless purchased by the John Wanamaker department stores. At night he continued his studies.

Then, on the evening of April 14, 1912, he heard the faint reports of the Titanic disaster. One of a number of wireless operators reporting the tragedy, Sarnoff would later claim he was the only one to remain on the air after President Taft ordered others to stay silent. Another controversial claim concerns Sarnoff's assertion that he wrote his famous "Radio Music Box Memo" in 1915. While the version often cited was actually written in 1920, Sarnoff did correspond in 1916 with his superior, E.J. Nally, about protecting American Marconi's interests from others investigating the potential of wireless technology, including "music box" uses.

As his career thrived, Sarnoff's personal life also grew. On July 4, 1917, he married Lizette Hermant, following a closely supervised courtship. Their 54-year marriage survived Sarnoff's occasional philandering and proved the bedrock of his life. They had three sons, Robert, Edward, and Thomas. Robert succeeded his father as RCA's president. In 1919, when British Marconi sold its American Marconi assets to General Electric (GE) to form RCA, Sarnoff came on board as commercial manager. Under the tutelage of RCA's chair, Owen D. Young, Sarnoff was soon in charge of broadcasting as general manager of RCA and was integral in formation of NBC in 1926. As Young's protégé, he also negotiated the secret contracts with American Telephone and Telegraph (AT&T) that led to NBC's development. With acquisition of AT&T's broadcasting assets, RCA had two networks, the Red and the Blue, and they debuted in a simulcast on November 15, 1926.

In 1927, Sarnoff was elected to RCA's board, and during the summer of 1928, he became RCA's acting president when the company's president, General James G. Harbord, took a leave of absence to campaign for Herbert Hoover. Sarnoff's eventual succession to that position was assured. At the end of the decade, Sarnoff negotiated successful contracts to form Radio-Keith-Orpheum (RKO) motion pictures, to introduce radios as a permanent fixture in automobiles, and to consolidate all radio manufacturing by the Victor company under RCA's banner. On January 3, 1930, the 39-year-old Sarnoff became RCA's president.

The next two years were pivotal in Sarnoff's life, as the U.S. Department of Justice sued GE and RCA for monopoly and restraint of trade. Sarnoff led industry efforts to combat the government's suits, which would have destroyed RCA. The result was a consent decree in 1932 calling for RCA's divestiture from GE and the licensing of RCA's patents to competitors. When GE freed RCA, Sarnoff was at the helm, and for nearly the next three decades, he would oversee numerous communications developments, including television.

Sarnoff's interest in television began in the 1910s, when he became aware of the theory of television. By 1923, he was convinced that television would be the next great step in mass communication. In 1929, Westinghouse engineer Vladimir Zworykin called on Sarnoff to outline his concept of an electronic camera. Within the year, Sarnoff undertook Zworykin's efforts, and Zworykin headed the team developing electronic television. As the Depression deepened, Sarnoff bought television patents from inventors Charles Jenkins and Lee De Forest, among others, but he could not acquire those patents held by Philo Farnsworth. These he had to license, and in 1936, RCA entered into a cross-licensing agreement with Farnsworth. This agreement solved the technological problems of television, and establishing television's standards became Sarnoff's goal.

The Federal Communications Commission (FCC) would set those standards, but within the industry, efforts to reach consensus failed. Other manufacturers, especially Philco, Dumont, and Zenith, fought adoption of RCA's standards as the industry norm. In 1936, the Radio Manufacturers Association (RMA) set up a technical committee to seek agreement on industry standards, an action blessed actively by Sarnoff and silently by the FCC. For more than five years, the committee would fight over standards. Sarnoff told the RMA that, standards or not, he would initiate television service at the opening of the New York World's Fair on April 20, 1939, and he did. Skirmishes continued for the next two years over standards, but in May 1941 the FCC's National Television System Committee (NTSC) finally set standards at 525 lines, interlaced, and 30 frames per second. Rapid television development stalled, however, as World War II intervened. Sarnoff's attention then turned to devices, including radar and sonar, that would help win the war.

During World War I, Sarnoff had applied for a commission in naval communications, only to be turned down, ostensibly because his wireless job was considered essential to the war effort. Sarnoff suspected anti-Semitism. Now as head of the world's largest communication's firm, Sarnoff was made a brigadier general and served as communication consultant to General Dwight Eisenhower. After the war, with the death of RCA chair of the board General J.G. Harbord in 1947, General Sarnoff, as he preferred to be called, was appointed chair, and he served in that capacity until his death in 1971.

After the war, RCA introduced monochrome television on a wide scale to the American population, and
the race for color television with the Columbia Broadcasting System (CBS) was on. CBS picked up its pre-war experiments with a mechanical system that Sarnoff did not see initially as a threat because it was incompatible with already approved black-and-white standards. When CBS received approval for its system in 1951, Sarnoff challenged the FCC’s decision in the courts on the grounds that it contravened the opinions of the industry’s technical leaders and threatened the $2 billion investment the public had already made in television sets. When the lower courts refused to block the FCC ruling, Sarnoff appealed to the U.S. Supreme Court, which affirmed the FCC action as a proper exercise of its regulatory power.

Sarnoff counterattacked through an FCC-granted authority for RCA to field-test color developments. Demonstrations were carefully set for maximum public exposure, and they were billed as “progress reports” on compatible color. By then, the Korean War intervened in the domestic battle over color television and blunted introduction of CBS’s sets on a large scale. Monochrome still reigned, and Sarnoff continued pressing the compatibility issue. In 1953, CBS abandoned its color efforts as “economically foolish” in light of the 25 million incompatible monochrome sets already in use. The FCC was forced to reconsider its earlier order, and on December 17, 1953, the commission voted to reverse itself and adopt standards along those proposed by RCA. During the 1950s and 1960s, Sarnoff’s interests included not only television but also satellites, rocketry, and computers.

At the same time he was battling CBS over color, Sarnoff’s feud with Edwin Howard Armstrong over FM radio’s development and patents continued. Sarnoff and Armstrong, once close friends, were hopelessly alienated by the end of World War II. Their deadly feud lasted for years, consumed numerous court challenges, and ended with Armstrong’s suicide in 1954.

Sarnoff died in his sleep on December 12, 1971, of cardiac arrest. At his funeral, he was eulogized as a visionary who had the capacity to see into tomorrow and make his visions work. His obituary, which began on page 1 and ran nearly one full page in the New York Times, aptly summed up his career in these words: “He was not an inventor, nor was he a scientist. But he was a man of astounding vision who was able to see with remarkable clarity the possibilities of harnessing the electron.”

Louise Benjamin
Sarnoff, Robert (1918–1997)
U.S. Media Executive

Robert Sarnoff, eldest son of broadcasting mogul David Sarnoff, followed in his father's professional footsteps through his career at the National Broadcasting Company (NBC) and the Radio Corporation of America (RCA). Contemporaries attributed the son's corporate promotions to nepotism and constantly drew comparisons between his executive performance and style and that of his father. During his years as company head, Robert Sarnoff practiced decision making by consensus, displayed an obsession with corporate efficiency, and constantly sought to implement modern management techniques. David Sarnoff's aggressive, imperial, dynamic manner of command often overshadowed his son's practical yet increasingly mercurial character.

After a short stint in the magazine business, Robert Sarnoff joined NBC as an accounts executive in 1948, at a time when David Sarnoff had recently assumed chairmanship of electronics giant RCA, the parent company of NBC. Robert Sarnoff served in a variety of positions over the next few years, working his way up the business ladder. As vice president of NBC's film unit, he oversaw the development of Project XX and Victory at Sea—the latter a pioneer in the documentary series format that traced the naval campaigns of World War II through compilation footage. Passing as educational programming, the series was well attuned to Cold War patriotism and earned Sarnoff a Distinguished Public Service Award from the U.S. Navy.

NBC Television programming strategies during the first half of the 1950s were determined largely by the flamboyant Pat Weaver. RCA funded Weaver's extravagant experiments in the medium since it wished to establish NBC's reputation as a "quality" network and was realizing a return on its investment through increased sales of television receivers. By mid-decade, however, RCA policy was modified: NBC was now expected to achieve economic self-sufficiency and advertising sales parity with the archrival Columbia Broadcasting System (CBS). Weaver was first promoted to the NBC chair in 1955 and then forced to resign from the company several months later. In turn, Robert Sarnoff ascended to fill that vacant position.

Sarnoff assumed leadership of the network's financial interests and general policy decisions. Robert Kintner, who had shown a propensity for budget-conscious scheduling at the American Broadcasting Company (ABC), took over as head of NBC-TV programming and was elevated to the rank of NBC president in 1958. Together, the "Bob and Bob Show" (as it was known in the industry) stabilized network operations and routinized programming. Sarnoff established a clear chain of command by streamlining NBC's staff, increasing middle-management positions, and delegating more operating responsibilities to department heads. In order to cut overhead expenses, in-house production was curtailed, and links with several dependable suppliers of filmed programming were created. Program development and series renewal became subject to ratings success and spot-advertising sales. Toward the end of the decade, westerns, action shows,
sitcoms, and quiz shows were regular prime-time features. Gone, for the most part, were the costly "spectaculars" and live dramas of the Weaver years. NBC profits improved steadily.

Sarnoff's most public phase came in the late 1950s and early 1960s, when he defended NBC programming policies against critics in the press and in Congress. He argued that the public interest was best served by popular programming, and although he espoused the benefits of a "well-rounded schedule," he clearly practiced a policy of programming to majority tastes. Sarnoff insisted that competition for advertisers, audiences, and affiliate clearance would ensure that the networks would remain receptive to the multiple demands of the market. Ratings were the economic lifeblood of the medium; "high-brow" interests would have to remain secondary to "mass-appeal" shows in the NBC schedule. Critics who lamented the disappearance of "cultural" programming were elitist, he claimed. Neither the Federal Communications Commission nor Congress should interfere in network operations or establish program guidelines, according to Sarnoff, since this government oversight would encourage political maneuvering and obstruct market forces. More effective industry self-regulation and self-promotion, spearheaded by the networks, would ensure that recent broadcasting transgressions (symbolized by the quiz show scandals and debates over violence on television) would not reoccur.

Sarnoff's agenda did not dismiss "public service" programming entirely. Kintner had turned NBC's news department into a commercially viable operation, most notably with The Huntley-Brinkley Report. During these years, NBC undertook various educational projects, including Continental Classroom (the first network program designed to provide classes for college credit) and several programs on art history (a particular passion of Sarnoff). Sarnoff extolled television's ability to enlighten through its capacity to channel and process the diverse fields of information, knowledge, and experience that characterized the modern age. He touted television's ability to generate greater viewer insight into the political process, and he is credited with bringing about the televised "Great Debates" between John Kennedy and Richard Nixon during the 1960 presidential campaign.

In general, NBC's public service record during the Sarnoff years was disappointing. NBC did, however, become a serious ratings and billings competitor to CBS. In marked contrast to the dismal results of the previous decade, NBC's color programming in the 1960s helped to dramatically boost color set sales and, consequently, RCA coffers.

On the first day of 1966, again thanks largely to his father's influence, Robert Sarnoff became president of RCA. Two years later, he assumed also the role of chief executive officer. David Sarnoff remained chairman of the board until 1970, when ill health forced him to relinquish that position to his son. At RCA, Robert Sarnoff inherited—and exacerbated—problematic developments that would result in his forced resignation in 1975. The younger Sarnoff continued to diversify the corporation, but with some ill-chosen investments that yielded poor returns. Most significantly, he overcommitted company resources in an abortive attempt to achieve competitiveness in the mainframe computer market. During Sarnoff's tumultuous time at RCA, he continued to oversee operations at NBC. There he found little solace, as the network lost ground to CBS and ABC in the early 1970s. NBC's weakened performance contributed to declining RCA stock prices—a state of affairs that resulted in Robert Sarnoff's displacement from the company that had been synonymous with the Sarnoff name over the previous half century.

“What Do You Want from TV?” Saturday Evening Post (July 1, 1961)
“A View from the Bridge of NBC,” Television Quarterly (Spring 1964)
Television could not exist in its contemporary form without satellites. Since July 1962, when technicians from the National Aeronautics and Space Administration (NASA) in Maine transmitted fuzzy images of themselves to engineers at a receiving station in England using the Telstar satellite, orbiting communications satellites have been routinely used to deliver television news and programming between companies and to broadcasters and cable operators. Since the mid-1980s, they have been increasingly used to broadcast programming directly to viewers, to distribute advertising, and to provide live news coverage. More recently, they have become the key tool of a handful of giant media conglomerates to reach a global audience. Increasingly, as with Robert Murdoch's News Corporation, the leading program makers also control both satellite and cable program distribution systems in almost every corner of the globe.

Arthur C. Clarke, the British engineer turned author, is credited with envisioning the key elements of satellite communications long before the technical skill or political will to implement his ideas existed. In 1945, he published a plan to put electronic relay stations—a radio receiver and retransmitter—into space at 23,000 miles above the Earth's equator. At this altitude, the satellite must complete a full rotation around the Earth every 24 hours in order to sustain orbit (countering the pull of the Earth's gravity). Given the rotation of the Earth itself, that keeps the satellite in the same relative position (or "parking space"). This "geosynchronous orbit" is where communications satellites sit today, providing telephone and data communications but mostly relaying television signals (television is the largest user of satellite bandwidth).

An "uplink" transmitter on Earth, using a "dish" antenna pointed toward the satellite, sends a signal to one of the satellite's "transponders." The transponder amplifies that signal and shifts it to another frequency (so as not to interfere with the incoming signal) to be transmitted back to Earth. A "downlink" antenna and receiver on Earth then captures that signal and sends it on its way. The essential advantage of the satellite is that the uplink and downlink may be 8,000 miles apart. In practice, satellite communications is more efficient over a shorter distances than that, but the advantages over terrestrial transmissions—cable, fiber optics, and microwave—are profound, particularly across oceans. As with direct broadcast satellites (DBSs), satellites can transmit to an unlimited number of ground receivers simultaneously, and costs do not increase with distance or number of receivers.

Each satellite has a distinct "footprint," or coverage area, that is meticulously shaped and plotted. In 1971, the first communications satellites carrying "spot beam" antennas were launched. A spot beam antenna can be steered to focus the satellite's reception and transmission capabilities on a small portion of the Earth, instead of the 40 percent of the Earth's surface a wider antenna beam could cover. Spot coverage is crucial in international broadcasting when neighboring

countries may object to signal "spillover" into their territory. South Korea, for example, has demanded limitations on satellite broadcasts into its territory from Japanese companies.

Communications satellites since the 1960s have received uplink signals in a range of frequencies (or "bandwidth") near 6 GHz (gigahertz, or a billion cycles per second) and downlinked signals near 4 GHz. This range of frequencies is known as "C-band." Each range of frequencies is subdivided into specific channels, which, in the case of C-band, are each from 36 to 72 MHz wide. In the past, a single analog television transmission would occupy enough bandwidth to fully utilize a single 36-MHz channel, though hundreds or thousands of voice or data signals requiring far less bandwidth would fit on the same channel. More recently, the use of digital compressed transmissions and higher frequencies has allowed far more television channels per satellite and cut the cost of satellite use.

For decades, many developed and developing countries have used satellite-delivered television to provide useful information to portions of their populations out of reach of terrestrial broadcasting. In 1975, an experimental satellite communications project called SITE (Satellite Instructional Television Experiment) was used to bring informational television programs to rural India. The project led to Indian development of its own satellite network. China has also embarked on a ambitious program of satellite use for development, claiming substantial success in rural education. Many countries, including India, China, Japan, Russia, and Mexico; the European and Asian satellite consortia; and at least two private companies now launch satellites. During the 1990s, satellite communications shifted from mostly public hands—dominated by the multilateral Intelsat organization—to mostly private hands, with governments auctioning off or giving away their valuable satellite orbital allocations to private companies.

In the late 1970s, with the satellite distribution of Home Box Office (intended only for cable television companies to receive and relay movies to paying customers), "television receive only" (TVRO) dishes became popular for people out of reach of cable television and anyone wishing to avoid the cost of a cable subscription. The large dishes of that era still litter the backyards of rural America. Later, DBS to small home dishes became possible through the use of higher frequencies. Since 1988, with the launch of British Sky Broadcasting, DBS has been heavily used in Europe and, around the same time, eastern Asia; it continues to gain popularity in the United States but still has less than one-quarter of the subscribers of cable television.

In the 1980s, satellites using bandwidths of 11 to 12 GHz (uplink) and 14 GHz (downlink) came into use. This "Ku-band" does not require as much power to be transmitted clearly, thereby permitting the use of small (and less expensive) Earth stations. With the introduction of the Ku-band, television entered the era of live news—satellite news gathering (SNG)—as Ku-band satellites made it easy to uplink television signals with a portable dish from the scene of a breaking news story. Overuse of the C and Ku bandwidths and the desire for even greater signal strength is leading to new satellites that use other areas of the radio spectrum. Television news has also made some use of another satellite technology, remote sensing, using pictures taken by satellites to illustrate or verify news stories. In the 2003 Iraq war, television networks often combined satellite imagery with elaborate animated graphics to illustrate the war, but the U.S. government purchased all the best commercially available satellite imagery to prevent the media from using it.

Encryption, or scrambling, of satellite television signals has become common to ensure that only customers who have bought or rented a decoder can receive transmissions. Even intercompany television feeds via satellite (traditionally known as "backhauls"), such as daily feeds to broadcasters from television news agencies, are encrypted to prevent unauthorized use. With increasing frequency, international television companies now shift production work from one part of the world to another using compressed video files transmitted via private satellite links. A news agency's Chinese bureau, for instance, might transmit masses of unedited video of a major story to London to be edited and sent out to global broadcasters, shifting the burden—and, potentially, control of the story—from local areas of expertise to a few global production centers.

Like other communications technologies, the satellite industry has also embraced digitization and signal compression as a means of maximizing the use of limited bandwidth, and DBS and intra-industry services are expanding rapidly as a result. By converting analog signals to digital signals, less bandwidth is required, and digital signals can be broken into smaller pieces for transmission through bits of available bandwidth and reassembled at the point of reception. Compression eliminates otherwise redundant portions of a television transmission, allowing for a signal to be sent using far less bandwidth and for the transmission of video as computer files moving from one computer or database anywhere in the world to another. Compression technology now permits hundreds of television channels on a single satellite. Telephony and television
use roughly equivalent portions of available satellite capacity, but the demand for DBS has led to a number of satellites dedicated to TV transmission. Currently, well over 200 commercial geostationary communications satellites are in use, but with constant new launches and removals from orbit of old satellites, the number changes frequently.

STAR-TV, controlled by media mogul Rupert Murdoch, transmits television programming over much of Asia and has forced governments worldwide to re-evaluate their stance on issues of national sovereignty and control of incoming information. STAR reaches over 50 countries and potentially half the world’s population—far more than any other satellite television service (though it is technically not DBS, still requiring larger dishes). A slew of contentious political and cultural issues have resulted. Murdoch dropped the British Broadcasting Corporation (BBC) World Service Television from his STAR-TV program lineup as a concession to the Chinese government. Other governments have complained about the unrestricted importation of news presented from an Anglo-American viewpoint, though their concerns about political consequences are often couched in terms of protecting local culture. Reports of disruptions to local cultures stemming from international satellite broadcasting are widespread. Also during the 1990s, Africa, the one continent long neglected by the satellite television industry, finally saw widespread availability of satellite television services, dominated by the South African company M-Net.

By 2004, over 20 million U.S. homes subscribed to one of two DBS services: DirectTV or EchoStar (most recently using the brand name “Dish Network”). In 1995, EchoStar launched its own satellite and by 2004 had eight satellites in orbit over the United States, broadcasting digital television, audio, and data channels. DirectTV is a division of Hughes Electronics, a manufacturer and (through PanAmSat) operator of satellites. After a long regulatory battle, at the end of 2003 Rupert Murdoch’s News Corporation was given permission to buy DirectTV and take a controlling interest in Hughes—positioning them to be the leading satellite TV provider on five continents (Australia, Asia, Europe, South America, and North America). A friendly Federal Communications Commission allowed Murdoch to avoid the long-standing requirement that DBS operators carry the local stations of their viewers, which is likely to hasten audience erosion at the local level. News Corporation’s ability to drive up the cost of cable TV through the pricing of its many channels (to bring customers to DirectTV) also poses a new threat to the U.S. cable industry. Before this merger, the top four commercial satellite operators ran nearly half the world’s satellites; this concentration of control will now increase.

In all these instances, satellite technology has called into question conventional notions of the nation-state. Geographic borders may be insufficient definitions of culture and nationality in an era of electronic information, beamed from multiple sources into the sky and down again into almost any location. International TV journalists, for example, no longer needed the permission of local authorities to transmit television news stories to the world—by 2003, briefcase-size satellite uplinks and laptop computer video editing had made such transmissions common from an embattled Iraq and from the remotest conflict zones in Africa. However, the rapid and unrelenting commercialization of space and nearly absolute control of satellites by a just a few large nations and corporations is increasingly perceived as a threat to the global majority, living in developing countries, to communicate freely and influence their own cultures.

Saturday Night Live

U.S. Comedy Variety Program

*Saturday Night Live* (*SNL*) first aired on October 11, 1975, on the National Broadcasting Company (NBC) and has continued since to hold that network’s late-night Saturday time slot despite major cast changes, turmoil in the production offices, and variable ratings. A comedy-variety show with an emphasis on satire and current issues, *SNL* has been a staple element of NBC’s dominance of late-night programming since the program’s inception.

*SNL* was developed by Dick Ebersol with producer Lorne Michaels in 1975 in response to NBC’s search for a show for its Saturday late-night slot. The network had long enjoyed dominance of the weekday late-night slot with *The Tonight Show* and sought to continue that success in the unused weekend time period. With the approval of Johnny Carson, whose influence at the network was strong, Ebersol and Michaels debuted their show, which was intended to attract 18- to 34-year-old viewers.

The regulars on the show have almost always been relative unknowns in the comedy field. The first cast (the Not Ready for Prime Time Players) included Chevy Chase, Dan Aykroyd, John Belushi, Jane Curtin, Gilda Radner, Laraine Newman, and Garrett Morris, all from the New York and Toronto comedy scenes. Featuring a different guest host each week (comedian George Carlin was the first) and a different musical guest as well, *SNL* reflected a nontraditional approach to television comedy from the start. The cast and writers combined the satirical with the silly and nonsensical, not unlike *Monty Python’s Flying Circus*, one of Michaels’s admitted influences.

The program is produced live from NBC’s studio 8-H for 90 minutes. This difficult schedule and pressure-filled production environment has resulted in some classic comedy sketches and some abysmally dull moments over the years. Creating comedy in such a situation is difficult at best, and the audience is always aware when the show is running dry (usually in the last half hour). However, this sense of the immedi-

---

ate and the unforeseen also can give the show its needed edge. By returning to TV's live roots, SNL gives its audiences an element of adventure with each program. It has acquainted the generations who never experienced live television programming in the 1950s with the sense of theater missing from prerecorded programming.

For the performers, crew, and writers, the show is a test of skill and dedication. The show has undergone several major changes since its beginning. The most obvious of these have been cast changes. SNL's first "star," Chevy Chase, left the show in the second season for Hollywood. Aykroyd and Belushi followed in 1979. The rest of the original cast, including Bill Murray, who replaced Chase, left when producer Michaels decided to leave the show after the 1979–80 season. Michaels's departure created widespread doubt about the viability of the show without him and his cast of favorites. Jean Doumanian was chosen as producer, but her tenure lasted less than a year. With the critics attacking the show's diminished satirical edge and the lackluster replacement performers, NBC enticed Ebersol to return as producer in the spring of 1981. Ebersol managed to attract some of the original staff for the 1981–82 season, particularly writer Michael O'Donoghue. With the addition of Eddie Murphy, the show began to regain some of its strength, always based in its focus on a young audience and the use of timely material.

Michaels rejoined the show as producer in 1985 and oversaw a second classic period of SNL. With talented performers such as Dana Carvey, Jon Lovitz, Jan Hooks, and Phil Hartman, the program regained much of its early edge and attitude. However, the nature of the program is that the people who make it funny (the performers and writers) are the ones who tend to move on after a few years of the grind of a weekly live show. The steady turnover of cast and writers continues to affect SNL's quality, for better and for worse. However, Michaels's presence as producer has established a continuity that reassures the network and provides some stability for the audience.

From its inception, SNL has provided U.S. television with some of its most popular characters and catchphrases. Radner's Roseanne Rosannadana ("It's always something") and Emily Litella ("Never mind"), Belushi's Samurai, Aykroyd's Jimmy Carter, Murphy's Mr. Robinson, Billy Crystal's Fernando ("You look mahvelous"), Martin Short's Ed Grimley, Lovitz's pathological liar, Carvey's Church Lady ("Isn't that special?") , Carvey and Kevin Nealon's Hans and Franz, and Mike Myers's "Wayne's World" and Dieter all left marks on popular culture of the late 20th century. In the 1990s and early 2000s, cast members continued to add new voices to the SNL pantheon. In particular, political humor has been among the greatest strengths of recent seasons, with Darrell Hammond's caricature of a leering Bill Clinton during the Monica Lewinsky scandal and Will Ferrell's imitation of a befuddled George W. Bush continuing a tradition of presidential satirization established by earlier SNL performers, such as Chase (as Gerald Ford), Phil Hartman (Ronald Reagan and Bill Clinton), and Carvey (most notably, George Bush, Sr.).

The program's regular news spot, Weekend Update, has been done by Chase, Curtin, Aykroyd, Nealon, Dennis Miller, Norm MacDonald, Hammond, Tina Fey, and Jimmy Fallon, among others, and, at its best, the mock newscast has provided sharp comic commentary on current events.

SNL has seen many of its cast members move on to other venues. Chase, Aykroyd, Murray, Murphy, Crystal, Myers, Chris Rock, and Adam Sandler have all enjoyed considerable success on the big screen, with many other former cast members also making films, including many based on SNL characters. Indeed, at times it has seemed that nearly every character from the SNL roster has been featured in a Hollywood feature. However, for every SNL-based box office (or home video release) winner, such as The Blues Brothers or Wayne's World, there have been several busts (The Coneheads, It's Pat, Stuart Saves His Family, Blues Brothers 2000, A Night at the Roxbury, and The Ladies Man).

Among the SNL alumni who have moved from latenight to prime-time sitcoms are Curtin (Kate and Allie and Third Rock from the Sun), Julia Louis-Dreyfus (Seinfeld and Watching Ellie), Hartman (News Radio), MacDonald (Norm), and Jim Belushi (According to Jim). Still others have, with varying degrees of success, tried their luck with other TV genres. Rock won critical acclaim and an Emmy for his Home Box Office (HBO) talk show The Chris Rock Show, whereas Carvey tried but failed to revive the prime-time variety show format, and Miller fared poorly both as late-night talk show host and as a commentator on Monday Night Football.

As a stage for satire, few other American programs match Saturday Night Live. As an outlet for current music, the show has featured acts from every popular musical genre and has hosted both established and new artists (from Paul Simon, the Rolling Stones, and George Harrison to R.E.M., Sinead O'Connor, Britney Spears, and Eminem). Because of its longevity, SNL has crossed generational lines and made the culture of a younger audience available to their elders (and the opposite is also true). Ultimately, Saturday Night Live must be considered one of the most distinc-

Saunders, Jennifer (1958–)
British Actor

Since the early 1980s, Jennifer Saunders has been a popular and influential figure in British television comedy. Her success stems from her involvement as both a performer in and a writer of several comedy shows that have been heralded as innovative by critics and received as hugely entertaining by audiences.

Saunders established her career as part of a double act with Dawn French on the live comedy circuit in the late 1970s. She and French, who have remained collaborators on many projects since, made their initial impact while on tour in 1981 with the Comic Strip, a group consisting of several young comedians performing an alternative, innovative form of comedy. The group were rapidly transferred to television, appropriately making their debut on Channel 4's opening night in November 1982. Throughout the 1980s, the original members appeared in The Comic Strip Presents..., in which they wrote, directed, and performed a series of narratives satirizing a variety of genre themes. The program set a precedent for the so-called alternative comedy of the 1980s, won critical approval, and was awarded a Golden Rose at the Montreux Festival.

Saunders and French's role within this group was particularly significant in that the two succeeded in providing much more complex and interesting female characters than had hitherto been offered by television comedy. They placed their characters in opposition to the traditional representations of women in British television comedy—such as the sexual accessories of The Benny Hill Show; the domesticated, subservient wife of The Good Life; and the nag of Fawlty Towers. Saunders and French's very presence in The Comic Strip Presents... was a timely intrusion into a realm of comedy that had previously been the exclusive domain of male performers, from Monty Python to the double

2014
acts of the 1970s: Morecombe and Wise and Little and Large.

The autonomy that women were gaining was confirmed in French and Saunders. This show, the first series of which was screened on the British Broadcasting Corporation (BBC) in 1987, presented the pair as partners combining stand-up and sketches. French and Saunders offered a uniquely feminine version of British comedy (unique, with the notable exception of Victoria Wood: As Seen on TV, first screened in 1985). Their writing and acting focused directly, and with hilarious results, on female experience. Many of the scenes worked to reinforce the centrality of women’s talk and to parody the position and representations of women in the media.

It was out of a French and Saunders sketch that Saunders conceived of and developed her most prolific work, Absolutely Fabulous. Saunders has written and starred in four six-part series of Absolutely Fabulous (BBC, 1992, 1994, 1995, 2001, with a fifth season commencing in 2003), which have achieved uniformly high viewing figures as well as critical acclaim. In some respects a domestic sitcom, Absolutely Fabulous satirizes the matriarchal household of fashion public relations executive Edina Monsoon (Saunders) and the women around her, including her unruly best friend, Patsy (Joanna Lumley), and long-suffering daughter, Saffron (Julia Sawalha). Because Absolutely Fabulous remains an unusual example of a peak-time situation comedy written by women, with a predominantly female cast and a specific address to a female audience, it provides rare viewing pleasures of self-recognition and humor to women. In addition to having feminist concerns at the core of its structure and themes, it stresses the artificiality surrounding “womanliness” and celebrates gender as a complex social and cultural construction.

In terms of her writing and performance, Saunders helped to raise the profile of female comedians in television, leading the way for others, such as Jo Brand and Dawn French, the latter in her solo series Murder Most Horrid. Saunders took on her first noncomedy role for a BBC drama, Heroes and Villains (1995), a period piece based on the true life of Lady Hester Stanhope, an eccentric 19th-century traveler. As well as revealing a further talent for dramatic acting, the show crystallized Saunders’s TV persona and arguably her role in British television as an independent and powerful woman.

Sawyer, Diane (1945– )
U.S. Broadcast Journalist

Diane Sawyer, cohost of ABC News’ Good Morning, America and co-anchor of PrimeTime Live, is one of broadcast journalism’s most prominent and successful female presences. Sawyer began her career as a weather reporter on a Louisville, Kentucky, television station. In 1970, she took a job at the White House on the staff of Presidential Press Secretary Ron Ziegler. She continued her career as a press aide during Richard Nixon’s administration until 1974 and then assisted the former president with the preparation of his memoirs. She made her transition to broadcast journalism in 1978, when she joined CBS News as a reporter in its Washington bureau. When Sawyer accepted the job of State Department correspondent for CBS News (1978–81), she began a career as a popular figure in television journalism; she was the co-anchor of CBS Morning News (from 1981), the co-anchor of CBS Early Morning News (1982–84), and the first woman on the network’s flagship public affairs program, 60 Minutes (1984–89), before signing in 1989 a multiyear contract to co-anchor with Sam Donaldson PrimeTime Live on the American Broadcasting Company (ABC). In 1999, she took on another job with ABC, in addition to her duties at PrimeTime: cohosting Good Morning, America with Charles Gibson, who also has joined Sawyer as an anchor for the Thursday edition of PrimeTime. Sawyer also has co-anchored 20/20 since 1998 and contributed to many other ABC News programs since joining the network.

In addition to her impressive résumé, Sawyer is known for a variety of individual characteristics. Her intelligent reporting and tenacious coverage of the Three Mile Island crisis assisted her in garnering heavy journalistic assignments that, at the time, were considered a challenge to male colleagues working in early morning news. At CBS Morning News, she earned a reputation for skilled reporting as well as her ability to help increase ratings. Her commanding delivery helped edge the network’s program closer to its rivals in the Nielsen ratings. Her presence and teamwork with Bill Kurtis gave the Columbia Broadcasting System (CBS) its first healthy ratings in this time slot in three decades. High-profile assignments as correspondent of 60 Minutes established her as a national figure; viewers admired her equally for her personality and her talents as an investigative reporter. Sawyer’s skill has contributed to PrimeTime Live’s success and its distinct style, and since joining Good Morning, America, she has continued to deliver increased ratings. Washington Post critic Tom Shales remarks that, even though Good Morning, America remains similar to other morning programming, “Sawyer has unquestionably brought…a grace and eloquence that elevate the entire program to a level above and beyond the competition.”

In the fall of 1994, Sawyer signed a contract granting her a $7 million annual salary, making her one of the highest-paid women in broadcast news. In 2001, her salary remained one of the highest paid to any journalist, an estimated $13 million per year. Although one critic characterized her as “the warm ice maiden,” such views may reflect forms of professional jealousy. Margo Howard, entertainment critic of People Weekly magazine, contends that Sawyer “got to the top with a formidable blend of smarts, drive, [warmth], and earnestness.” Another characterization of Sawyer as “a girl who is one of the boys” points to her authoritative, intelligent, enterprising manner.

Observers frequently refer to Sawyer’s willingness to move between two styles—that of a tabloid journal-

Prunella Scales is an established star of British situation comedy, although she has also won praise in a wide range of other productions, including drama for television and stage. Television viewers are most likely to associate her, however, with the classic John Cleese comedy *Fawlty Towers*, in which she played the unflappable Sybil to Cleese's appallingly inept hotelier Basil Fawlty.

As Sybil Fawlty, the archetypal gossipy and battle-hardened nagging wife who in her husband's eyes was more of a hindrance than a help (though in truth she spent much of her time smoothing, with carefully rounded vowels, the ruffled feathers of guests her husband had offended), Scales was deemed perfect. Employing all the skills she had acquired from her early experience in repertory theater and subsequently with the Royal Shakespeare Company and other leading troupes, she easily countered the manic ranting of her screen husband, ensuring that life—such as it was—could carry on at Fawlty Towers. When not seeing to her monstrous coiffure, Sybil took desultory pleasure in providing her husband with new irritations, usually guaranteed to send him into paroxysms of helpless rage. As a mark of the degree to which the performances of Scales and Cleese were essential to the success of the series—widely judged a classic of television comedy—an attempt to make a U.S. version under the title *Amanda's*, with a cast headed by Bea Arthur of *Golden Girls* fame, was a total failure (even though, in desperation, some episodes were duplicated word for word).

Scales had previously performed as bus conductress Eileen Hughes in *Coronation Street* and also as costar of the series *Marriage Lines*, a relatively conventional husband-and-wife situation comedy in which she was paired with Richard Briers. As Kate Starling in the latter production, she charted the ups and downs experienced by typical newlyweds in the 1960s, wrestling with a range of more or less mundane financial and domestic problems (later complicated by the arrival of their baby).

In the wake of the huge success of *Fawlty Towers*, Scales enjoyed further acclaim from critics and audiences alike in the role of the widowed Sarah in Simon Brett's *After Henry*, a compassionate and often hilari-
posed as a spy for communist Russia. On the stage, meanwhile, she added another monarch to her list of credits when she impersonated Queen Victoria in her own one-woman show.

Considered one of the most technically proficient actresses of stage and screen of her generation as well as an accomplished occasional director, Scales has continued to divide her time between television and the theater throughout her career, sometimes appearing in partnership with her real-life husband, actor Timothy West. In 1996, in recognition of her skills, she was invited to share some of her secrets concerning acting as part of a short series of master classes on the art of comedy performance.

Schaffner, Franklin (1920–1989)
U.S. Director

Franklin Schaffner, one of several prominent directors during U.S. television's "golden age," worked on such prestigious anthology series as Studio One (Columbia Broadcasting System [CBS]), The Kaiser Aluminum Hour (National Broadcasting Company [NBC]), Playhouse 90 (CBS), and The DuPont Show of the Week (NBC) as well as Edward R. Murrow's Person to Person (CBS) and the drama series The Defenders (CBS). Schaffner later became known as an "actor's director," but his television work is known primarily for his unique use of the camera.

Schaffner attended Franklin and Marshall College in Lancaster, Pennsylvania, where he majored in government and English. A prize-winning orator, Schaffner appeared in several university productions and also worked part time as an announcer at local radio station WGAL. His plans to attend Columbia Law School were interrupted when he enlisted in the U.S. Navy during World War II. During the war, he served with amphibious forces in Europe and North Africa and, later, with the Office for Strategic Services in the Far East.

After the war, Schaffner first sought work as an actor. He was eventually hired as a spokesperson and copywriter for the peace organization Americans United for World Government. During this period, Schaffner met ABC Radio vice president Robert Saudek and worked as a writer for Saudek's radio series World Security Workshop. For that series, Schaffner wrote "The Cave," which was the series' final broadcast (May 8, 1947), and his experience on the series encouraged him to pursue a career in broadcasting.

Schaffner was hired as an assistant director on the radio documentary series The March of Time for $35 per week. His work brought him to the attention of Robert Bendick, director of television news and special events for CBS. Bendick hired Schaffner in April 1948 as director of Brooklyn Dodgers baseball as well as other sporting events and public service programs. Schaffner's experience with the spontaneity and immediacy of live special events made him a logical choice as one of three directors for the 1948 Democratic and Republican political conventions held in Philadelphia.

By 1949, Schaffner was ready for the challenge of directing live dramatic programs. After directing Wesley (CBS, 1949), a live situation comedy produced by Worthington Miner, Schaffner alternated directing assignments with Paul Nickell on Miner's live anthology series Studio One. On that series Schaffner directed adaptations of classics as well as original productions, including the series' first color telecast, The Boy Who Changed the World (October 18, 1954). At a time when other directors used static cameras, Schaffner utilized a moving camera with long, graceful tracking shots. In addition to masking the limitations of the studio set, Schaffner's camera work drew audiences into the action of the play. In Twelve Angry Men (September 20, 1954), Schaffner designed a 360-degree shot.

Franklin Schaffner.
Photo courtesy of Wisconsin Center for Film and Theater Research
that required orchestrated moves of the set's walls during the shot. Schaffner won a 1954 Emmy for his directorial work on *Twelve Angry Men*.

While working on the *Studio One* series, Schaffner drew on his news and public affairs experience to serve as producer and studio director for Edward R. Murrow's interview program *Person to Person* (CBS, 1953–61). Although the initial episodes utilized static camera setups for the remote interviews, Schaffner later incorporated tracking cameras that moved with guests to show their home and activities. Schaffner worked on the series until 1957, when more of his work originated from Los Angeles.

Schaffner drew on his news experience once again for *A Tour of the White House with Mrs. John F. Kennedy* (NBC, February 14, 1962). Schaffner's moving camera and unique camera angles provided viewers with an intimate look at the White House renovation. He won a 1962 Directorial Achievement Award from the Directors Guild of America for his work on the program.

One of Schaffner's best-known works is the production of *The Caine Mutiny Court Martial* (*Ford Star Jubilee*, CBS, November 19, 1955), which was broadcast from the new, state-of-the-art CBS facilities at Television City in Los Angeles. The static action of the play is kept moving by Schaffner's mobile camera and dramatic crane shots. Schaffner was awarded two Emmys for his work on the teleplay: one for Best Director and another for Best Adaptation (with Paul Gregory). The show was originally broadcast in color, but only black-and-white kinescopes survive.

After years as a director of live television dramas, Schaffner directed various episodes of the dramatic series *The Defenders* (CBS, 1961–65), produced by Herbert Brodkin and written by Reginald Rose. The series originated as a two-part episode on *Studio One* in 1957, directed by Robert Mulligan. Schaffner used film editing to create montages of busy New York scenes and unusual camera angles to concentrate on the characters. Schaffner won his fourth Emmy for his work on the series.

Schaffner left television to direct and produce feature films. His film work includes *Planet of the Apes* (1968); *Patton* (1970), for which he received the Academy Award and Directors Guild Award for Best Director; *Nicholas and Alexandra* (1971); *Papillon* (1973); and *The Boys from Brazil* (1978). In 1977, Schaffner's alma mater, Franklin and Marshall College, established the Franklin J. Schaffner Film Library and presented the director with an honorary Doctor of Humane Letters. Schaffner died of cancer in Santa Monica, California, on July 2, 1989.

Schorr, Daniel (1916— )
U.S. Broadcast Journalist

Daniel Schorr is an American television newsman whose aggressive investigative style of reporting made him, at various times in his career, the bane of the KGB, U.S. presidents from Dwight D. Eisenhower to Gerald Ford, Central Intelligence Agency (CIA) chiefs, television executives, and his fellow TV newsmen and women. In 1976, he himself became “the story” when he published a previously suppressed congressional report on CIA assassinations.

Schorr was born and brought up in New York City and did his apprenticeship in print journalism on his high school and college newspapers. During his college years, he also worked on a number of small New York City papers, among them the New York Journal-American. Drafted in World War II, he served in Army intelligence. Following the war, he became a stringer for a number of U.S. newspapers and the Dutch news agency ANETA. His radio reports on floods in the Netherlands brought him to the attention of Edward R. Murrow, who hired him for CBS News in 1953.

In 1955, Schorr was assigned to open the first Columbia Broadcasting System (CBS) bureau in Moscow since 1947. His refusal to cooperate with Soviet censors soon earned him their disapproval, and when he returned home for a brief period at the end of 1957, the Soviets refused to permit him to return. For the next few years, Schorr was a roving diplomatic correspondent. In 1959, he provoked the first in a long series of incidents that aroused the ire of various presidents. Schorr’s report of the impending resignation of Secretary of State John Foster Dulles so irked President Eisenhower that he denied the report, only to have it confirmed by his press secretary a week later.

During the Kennedy administration, the president asked CBS to transfer Schorr, then the station’s correspondent in West Germany, because he felt that
Daniel Schorr's interpretations of U.S. policy were pro-German. During the 1964 election, Schorr's report that the Republican presidential nominee Senator Barry Goldwater had formed an alliance with certain right-wing German politicians and was thinking of spending some time at Adolf Hitler's famous Berchtesgaden retreat caused a furor, and Schorr was ordered to make a "clarification."

In 1966, Schorr returned to the United States without a formal assignment. He created his own beat, however, by investigating the promise and reality of the "Great Society" for the CBS Evening News. In this role, he turned in excellent reports on poverty, education, pollution, and health care. His interest in health care led to a provocative 1970 contribution to the documentary series, CBS Reports. That same year, the program "Don't Get Sick in America" appeared as a book from Aurora Publishers.

Schorr's muckraking reporting during the Nixon administration earned him a prominent place on Nixon's so-called enemies list. In addition, Schorr's subsequent reporting on the Watergate scandal garnered him Emmys for Outstanding Achievement within a Regularly Scheduled News Program in 1972, 1973, and 1974.

Following Nixon's resignation, Schorr was assigned to cover stories involving possible criminal CIA activities at home and abroad. He soon achieved a scoop based on a tip he received about an admission by President Ford regarding CIA assassination attempts. The comment had come in an off-the-record conversation with the editors of the New York Times. Schorr's report forced the Rockefeller Commission investigating the CIA to broaden its inquiry and prompted an exclamation from former CIA chief Richard Helms, referring to him as "Killer Schorr."

Commenting on his journalistic method, more akin to print journalism than conventional television journalism, Schorr has said,

My typical way of operating is not to stick a camera and a microphone in somebody's face and let him say whatever self-serving thing he wants to say, but to spend a certain amount of time getting the basic information, as though I was going to write a newspaper story... [I] may end up putting a mike in somebody's face, but it is usually for the final and hopefully embarrassing question.

Soon after making these remarks, Schorr found himself at the center of a huge controversy involving both journalistic ethics and constitutional issues. Schorr came into possession of the Pike Congressional Committee's report on illegal CIA and Federal Bureau of Investigation activities. Congress, however, had voted not to make the report public. In hopes of being able to publish the report, Schorr contacted Clay Felker of the Village Voice, who agreed to pay him for it and to publish it. To Schorr's surprise, instead of supporting him, many of his colleagues and editorialists around the country excoriated him for selling the document. Making matters worse was Schorr's initial reaction, which was to shift suspicion from himself as the person who leaked the documents to his CBS colleague Lesley Stahl.

Schorr managed to turn opinion around when, after being subpoenaed to appear before a House Ethics Committee, he eloquently defended himself on the grounds that he would not reveal a source. While this put off the congressional bloodhounds, it certainly did not satisfy some of the wolves at CBS, among whom was Chairman William S. Paley, who wanted Schorr fired. Schorr and CBS news executives resisted until the story of the internal disension over Schorr's conduct broke during an interview he did with Mike Wallace on 60 Minutes. As a result, Schorr resigned from CBS News in September 1976. A year later, he wrote about it in his autobiographical account Clearing the Air.

Subsequently, Schorr toured on the lecture circuit, taught journalism courses, and wrote a syndicated newspaper column. In 1979, hoping to give his new Cable News Network (CNN) instant journalistic credibility, Ted Turner hired Schorr as a commentator.
However, in 1985, CNN refused to renew his contract. Schorr commented at the time that he had been “forced out” because “they wanted to rid of what they considered a loose cannon.” Since 1985, Schorr has been a senior news analyst for National Public Radio. His reporting and commentary are heard on All Things Considered and Weekend Edition. In 2001, he wrote a second volume of autobiography, Staying Tuned: A Life in Journalism.

Schorr represents the traditions of investigative print journalism transferred to the world of TV reporting. His work, though it has sometimes overstepped boundaries, is in vivid contrast to the often image-conscious attitudes of contemporary TV news.

Schwartz, Sherwood (1916– )
U.S. Producer, Writer

Sherwood Schwartz began his professional writing career in radio in 1939, working for The Pepsodent Show Starring Bob Hope, where his older brother Al was also a writer. During World War II, Schwartz served with the Armed Forces Radio Service, writing for a variety of programs. Following the war, he returned to California and radio, writing for The Adventures of Ozzie and Harriet and The Beulah Show. During the 1950s, when many radio performers and programs migrated to television, Schwartz joined the
move, working on *I Married Joan* and *The Red Skelton Show*. His work on the latter was recognized annually by the Writer's Guild from 1955 to 1960 and included the only writing award ever given for pantomime, for "Freddie's Thanksgiving," in which not a single word was spoken. The guild again recognized his work in 1963–64 for the *Lucille Ball Comedy Hour*. Schwartz was also honored by the National Academy of Television Arts and Sciences. Nominated for Emmy Awards in 1961 and 1962 for Outstanding Writing Achievement in Comedy, he received the award in 1961.

In the early 1960s, in addition to writing for *Skelton*, Schwartz also worked on the first season of *My Favorite Martian*. It was during this time that he developed and pitched the concept for *Gilligan's Island*, his first foray as a series creator/producer. The Columbia Broadcasting System (CBS) was interested, and the series became a joint production of CBS, United Artists, and Phil Silvers's Gladsy Productions. The pilot was shot in Hawaii in November 1963 (and interrupted by the assassination of President Kennedy), but three different versions were rejected by CBS. Having disavowed himself from the original cut of the pilot, Schwartz persisted and received permission (but no funding) from United Artists to use the footage and recut the pilot yet a fourth time. This was the only version to include the opening theme, for which Schwartz wrote the lyrics. In 60 seconds, the song provided exposition—which Schwartz had argued all along was crucial to the program—to explain why the castaways remained on the island week after week. This version of the pilot was delivered to CBS the Friday before the network was to announce its fall 1964 schedule; CBS executives were sufficiently impressed with Schwartz's version to run audience tests over the weekend, and as a result of those tests, *Gilligan's Island* was added to the CBS schedule. In each of the next three seasons the program aired in a different time period and on a different night, but it always won its time slot and was often in the top ten of the national Nielsen ratings. Although renewed for a fourth season, *Gilligan's Island* was later dropped to make room for *Gunsmoke*, which had originally been cut from CBS's 1967–68 schedule. Since the end of its prime-time network run, *Gilligan's Island* has been one of the most successful programs in the history of television syndication. Constantly in reruns, it was first a staple on local broadcast stations as after-school fare for children and later on cable channels. The show spawned two animated series (*The New Adventures of Gilligan*, American Broadcasting Company [ABC], 1974–77 and *Gilligan's Planet*, ABC, 1982–83) and three television movies.

Schwartz's second major series contribution to television came two years after *Gilligan*. With an idea springing in part from an article he read in 1966, indicating that more than 20 percent of all marriages included children from a previous marriage, he created *The Brady Bunch*. Once again Schwartz wrote the theme song lyrics, this time for the story of "a lovely lady" and "a man named Brady" and their two sets of kids. He pitched the program to all three networks, and it was rejected. Following the box office success of the Henry Fonda/Lucille Ball film *Yours, Mine and Ours* in 1968, however, (a film developed after Schwartz created his TV concept), the show became part of ABC's 1969 fall schedule. The program was not a huge ratings success, generally falling in the 20 to 30 range in the national Nielsen ratings, but it did attract the young viewers ABC was seeking.

While Schwartz's programs were dismissed as typical lowbrow television, recent critical views have cast his work in a more favorable light. At a time when the family was the basis for the typical TV sitcom, *Gilligan's Island* offered a different sort of family (Schwartz called it a "social microcosm" in his pitch to CBS) years before the celebrated ensemble/workplace sitcoms of the 1970s, such as *M*A*S*H* and *The Mary Tyler Moore Show*. Schwartz also pioneered the sitcom reunion movie concept, used to great success with both *Gilligan's Island* (three movies) and *The Brady Bunch*. The characters/series concept of the latter proved to be very resilient, extended to a range of follow-ups on all four major networks, including a variety series (*The Brady Bunch Hour*, ABC, 1977), a "life after" series (*The Brady Brides*), a holiday special (*A Very Brady Christmas*), an hour-long dramatic series (*The Bradys*), and a made-for-TV movie (*The Brady Bunch in the White House*) as well as a stage adaptation (*The Real Live Brady Bunch*, 1990–94), and feature films (*The Brady Bunch Movie* and *A Very Brady Sequel*). Schwartz's *Big John, Little John* series was also notable for bringing the nonanimated/filmed sitcom to Saturday morning children's television well before *Pee-Wee's Playhouse* and *Saved by the Bell*.

Science Fiction Programs

Although not one of television's predominant genres in terms of overall programming hours, science fiction nonetheless spans the history of the medium, beginning in the late 1940s as low-budget programs aimed primarily at juvenile audiences and developing, by the turn of the 21st century, into a genre particularly important to syndication and cable markets. For many years, conventional industry wisdom considered science fiction to be a genre ill suited to television. Aside from attracting a very limited demographic group for advertisers, science fiction presented a problematic genre in that its futuristic worlds and speculative story-
lines often challenged both the budgets and the narrative constraints of the medium, limitations especially true in television’s first decades. Over the years, however, producers were to discover that science fiction could attract an older and more desirable audience and that such audiences, although often still limited, were in many cases incredibly devoted to their favorite programs. As a consequence, the 1980s and 1990s saw a tremendous increase in science fiction programming in the United States, especially in markets outside the traditional three broad networks (American Broadcasting Company [ABC], Columbia Broadcasting System [CBS], and National Broadcasting Company [NBC]).

As a children’s genre in the late 1940s and early 1950s, science fiction programming most often followed a serial format, appearing in the afternoon on Saturdays or at the beginning of prime time during the weeknight schedule. At times playing in several installments per week, these early examples of the genre featured the adventures of male protagonists working to maintain law and order in outer space. These early “space westerns” included Buck Rogers (ABC, 1950–51), Captain Video and His Video Rangers (Du- mont, 1949–54), Flash Gordon (syndicated, 1953), Space Patrol (ABC, 1951–52), and Tom Corbett, Space Cadet (CBS/ABC/NBC, 1950–52). Each series pitted its dynamic hero against a variety of intergalactic menaces, be they malevolent alien conquerors, evil mad scientists, or mysterious forces of the universe. All these programs were produced on shoestring budgets, but this did not stop each series from equipping its hero with a fantastic array of futuristic gadgetry, including radio helmets, ray guns, and Captain Video’s famous “decoder ring.” Viewers at home could follow along with their heroes on the quest for justice by ordering plastic replicas of these gadgets through popular premium campaigns. Of these first examples of televised science fiction, Captain Video was particularly popular, airing Monday through Friday in half-hour (and, later, 15-minute) installments. One of the first “hits” of television, the program served for many years as a financial lynchpin for the struggling Dumont network and left the air only when the network itself collapsed in 1954.

As was typical of much early programming for children, Captain Video concluded each episode with its hero delivering a lecture on moral values, good citizenship, or other uplifting qualities for his young audience to emulate. Such gestures, however, did not spare Captain Video and his space brethren from becoming the focus of the first of many major public controversies over children’s television. In a theme that would become familiar over the history of the medium, critics attacked these shows for their “addictive” nature, their perceived excesses of violence, and their ability to “overexcite” a childish imagination. In this respect, early science fiction on television became caught up in a larger anxiety over children’s culture in the 1950s, a debate that culminated with the 1954 publication of Dr. Fredric Wertham’s Seduction of the Innocent, an attack on the comic book industry that eventually led to a series of congressional hearings on the imagined links between popular culture and juvenile delinquency.

In early television, science fiction programming aimed at older audiences was rarer, confined almost entirely to dramatic anthology series such as Lights Out (NBC, 1949–52), Out There (CBS, 1951–52), and Tales of Tomorrow (ABC, 1951–53). As with other dramatic anthologies of the era, these programs depended heavily on adaptations of preexisting stories, borrowing from the work of such noted science fiction writers as Jules Verne, H.G. Wells, and Ray Bradbury. Tales of Tomorrow even attempted a half-hour adaptation of Mary Shelly’s Frankenstein. When not producing adaptations, these anthologies did provide space for original and at times innovative teleplays. Interestingly, however, as science fiction became an increas-

ingly important genre in Hollywood during the mid- to late 1950s, especially in capturing the burgeoning teenage market, its presence on American television declined sharply. One exception was *Science Fiction Theater* (1955–57), a syndicated series that presented speculative stories based on contemporary topics of scientific research.

Science fiction’s eventual return to network airwaves coincided with the rising domestic tensions and Cold War anxieties associated with the rhetoric of the Kennedy administration’s “New Frontier.” As a response to the Soviet launch of *Sputnik*, for example, CBS’s *Men into Space* (1959–60) participated in the larger cultural project of explicitly promoting interest in the emerging “space race” while also celebrating American technology and heroism that had been threatened by the Soviets’ success. Other series were more complex in their response to the social and technological conflicts of the New Frontier era. In particular, *The Twilight Zone* (CBS, 1959–64) and *The Outer Limits* (ABC, 1963–65), programs that would become two of the genre’s most celebrated series, frequently engaged in critical commentary on the three pillars of New Frontier ideology: space, suburbia, and the superpowers.

Hosted and for the most part scripted by Rod Serling, a highly acclaimed writer of live television drama in the 1950s, *The Twilight Zone* was an anthology series that, while not exclusively based in science fiction, frequently turned to the genre to frame allegorical tales of the human condition and the national character of the United States. Some of the most memorable episodes of the series used science fiction to defamiliarize and question the conformist values of postwar suburbia as well as the rising paranoia of Cold War confrontation. Of these, “The Monsters Are Due on Maple Street” was perhaps most emblematic of these critiques. In this episode, a “typical” American neighborhood is racked with suspicion and fear when a delusion spreads that the community has been invaded by aliens. Neighbor turns against neighbor to create panic until the end, in a “twist” ending that would become a trademark of the series, the viewer discovers that invading aliens have actually arrived on Earth. Their plan is to plant such rumors in every American town in order to tear these communities apart, thus laying the groundwork for a full-scale alien conquest.

More firmly grounded in science fiction was *The Outer Limits*, an hour-long anthology series known primarily for its menagerie of gruesome monsters. Much more sinister in tone than Serling’s *Twilight Zone*, *The Outer Limits* also engaged in allegories about space, science, and American society. However, in an era marked by the almost uniform celebration of American science and technology, this series stood out for its particularly bleak vision of technocracy and the future, using an anthology format to present a variety of dystopic parables and narratives of annihilation. Of the individual episodes, perhaps most celebrated was Harlan Ellison’s award-winning time-travel story “Demon with a Glass Hand,” an episode that remains one of the most narratively sophisticated and willfully obtuse hours of television ever produced.

While *The Twilight Zone* and *The Outer Limits* remain the most memorable examples of the genre in this era, science fiction television of the mid-1960s was dominated, in terms of total programming hours, by the work of producer Irwin Allen. Allen’s series, aimed primarily at juvenile audiences on ABC, included *Voyage to the Bottom of the Sea* (ABC, 1964–68), *Lost in Space* (CBS, 1965–68), *Time Tunnel* (ABC, 1966–67), and *Land of the Giants* (ABC, 1968–70). Each series used a science fiction premise to motivate familiar action-adventure stories. Of these, *Lost in Space* has been the most enduring in both syndication and national memory. Centering on young Will Robinson and his friend the Robot, the series adapted the Swiss Family Robinson story to outer space, chronicling a wandering family’s adventures as they tried to return to Earth.

Many other television series of the 1960s, while not explicitly science fiction, nevertheless incorporated elements of space and futuristic technology into their story worlds. Following the success of *The Flintstones*, a prime-time animated series about a prehistoric family, ABC premiered *The Jetsons* (1962–63), a cartoon about a futuristic family of the next century. The sitcom *My Favorite Martian* (CBS, 1963–66), meanwhile, paired an Earthling newspaper reporter with a Martian visitor, while *I Dream of Jeannie* (NBC, 1965–70) matched a NASA astronaut with a beautiful genie. The camp hit *Batman* (ABC, 1966–68) routinely featured all manner of innovative “bat” technologies that allowed its hero to outwit Gotham City’s criminals. Also prominent in this era was a cycle of spy and espionage series inspired by the success of the James Bond films, each incorporating a variety of secret advanced technologies. Of this cycle, the British-produced series *The Prisoner* (CBS, 1968–69) was the most firmly based in science fiction, telling the Orwellian story of a former secret agent stripped of his identity and trapped on an island community run as a futuristic police state.

By far the best-known and widely viewed science fiction series of the 1960s (and probably in all of television) was *Star Trek* (NBC, 1966–69), a series described by its creator, Gene Roddenberry, as “Wagon Train in space.” Although set in the 23rd century, the
world of Star Trek was firmly grounded in the concerns of 1960s America. Intermixing action-adventure with social commentary, the series addressed such issues as racism, war, sexism, and even the era's flourishing hippie movement. A moderately successful series during its three-year network run, Star Trek would become through syndication perhaps the most actively celebrated program in television history, inspiring a whole subculture of fans (known variously as "trekkies" or "trekkers"), whose devotion to the series led to fan conventions, book series, and eventually a commercial return of the Star Trek universe in the 1980s, 1990s, and 2000s through motion pictures and television spin-offs.

Like Star Trek, the British Broadcasting Corporation (BBC) serial Doctor Who also attracted a tremendous fan following. In production from 1963 to 1989, Doctor Who stands as the longest-running continuous science fiction series in all of television. A time-travel adventure story aimed primarily at children, the series proved popular enough in the United Kingdom to inspire two motion pictures pitting the Doctor against his most famous nemesis—the Daleks: Doctor Who and the Daleks (1965) and Daleks: Invasion Earth 2150 AD (1966). The series was later imported to the United States, where it aired primarily on Public Broadcasting Service (PBS) affiliates and quickly became an international cult favorite.

While most television science fiction in the 1950s and 1960s had followed the adventures of Earthlings in outer space, increasing popular interest in unidentified flying objects (UFOs) led to the production, in the late 1960s and into the 1970s, of a handful of programs based on the premise of secretive and potentially hostile aliens visiting Earth. The Invaders (ABC, 1967–68) chronicled one man's struggle to expose an alien invasion plot, while UFO (syndicated, 1972) told of a secret organization dedicated to repelling an imminent UFO attack. Veteran producer Jack Webb debuted Project UFO (NBC) in 1978, which investigated, in Webb's characteristically terse style, unexplained UFO cases taken from the files of the U.S. Air Force. Such series fed a growing interest in the early 1970s with all manner of paranormal and extraterrestrial phenomena, ranging from Erich von Daniken's incredibly popular speculations on ancient alien contact in Chariots of the Gods to accounts of the mysterious forces in the "Bermuda Triangle." Such topics from the fringes of science were the focus of the syndicated documentary series In Search Of (syndicated, 1976), hosted by Star Trek's Leonard Nimoy.

For the most part, however, science fiction once again went into decline during the 1970s as examples of the genre became more sporadic and short lived, many series running only a season or less. Series such as Planet of the Apes (CBS, 1974) and Logan's Run (CBS, 1977–78) attempted to adapt popular motion pictures to prime-time television but with little success. A much more prominent and expensive failure was the British series Space: 1999 (syndicated, 1975). Starring Martin Landau and Barbara Bain, the program followed a group of lunar colonists who are sent hurtling through space when a tremendous explosion drives the moon out of its orbit. The series was promoted in syndication as the most expensive program of its kind ever produced, but despite such publicity, the series went out of production after only 48 episodes.

Two of the more successful science fiction series of the era were The Six Million Dollar Man (ABC, 1975–77) and its spin-off The Bionic Woman (ABC/NBC, 1976–78). The "six million dollar man" was Lt. Steve Austin, a test pilot who was severely injured in a crash and then reconstructed with cybernetic limbs and powers that made him an almost superhuman "bionic man." Austin's girlfriend, also severely injured (in a separate incident) and rebuilt (by the same doctors), debuted her own show the following season (complete with a "bionic" dog). The moderate success of these two series sparked a cycle of programs targeted at children featuring superheroes with superpowers of one kind or another, including The Invisible Man (NBC, 1975–76), Gemini Man (NBC, 1976), Man from Atlantis (NBC, 1977–78), Wonder Woman (ABC/CBS, 1976–79), and The Incredible Hulk (CBS, 1978–82).

Also moderately successful in the late 1970s were a pair of series designed to capitalize on the extraordinary popularity of George Lucas's 1977 blockbuster film Star Wars. Both Battlestar Galactica (ABC, 1978–80), starring Bonanza's patriarch Lorne Greene, and Buck Rogers in the 25th Century (NBC, 1979–81) spent large amounts of money on the most complex special effects yet seen on television, all in an attempt to re-create the dazzling hardware, fast-paced space battles, and realistic aliens of Lucas's film. Less successful in riding Star Wars' coattails was the parodic sitcom Quark (NBC, 1978), the story of a garbage scow in outer space.

In England, the 1970s saw the debut of another BBC-produced series that would go on to acquire an international audience. Blake's Seven (BBC, 1978–81) was created by Terry Nation, the same man who introduced the Daleks to the world of Doctor Who in the early 1960s. Distinguished by a much darker tone than most television science fiction, Blake's Seven followed the adventures of a band of rebels in space struggling to overthrow an oppressive regime.
Science Fiction Programs

Alien invasion was once again the theme on American television in 1983, when NBC programmed a high-profile miniseries that pitted Earth against a race of lizard-like creatures who, though friendly at first, were actually intent on using Earth’s population for food. V (NBC, 1984–85) proved popular enough to return in a sequel miniseries the following year, which in turn led to its debut as a weekly series in the 1984–85 season. More provocative was ABC’s short-lived Max Headroom (1987), television’s only attempt at a sub-genre of science fiction prominent in the 1980s known as “cyberpunk.” “Max,” who through commercials and a talk show became a pop cult phenomenon in his own right, was the computerized consciousness of TV reporter Edison Carter. Evoking the same “tech noir” landscape and thematic concerns of such cinematic contemporaries as Blade Runner, RoboCop, and The Running Man, Max and Edison worked together to expose corporate corruption and injustice in the nation’s dark, cybernetic, and oppressively urbanized future.

Less weighty than Max but certainly more successful in their network runs were two series that, while not necessarily true “science fiction,” utilized fantastic premises and attracted devoted cult audiences. Beauty and the Beast (CBS, 1987–90) was a romantic fantasy about a woman in love with a lion-like creature who lived in a secret subterranean community beneath New York City, while Quantum Leap (NBC, 1989–93) followed Dr. Sam Beckett as he “leapt” in time from body to body, occupying different consciousnesses in different historical periods. The series was less concerned with the “science” of time travel, however, than with the moral lessons to be learned or taught by seeing the world through another person’s eyes.

By far the most pivotal series in rekindling science fiction as a viable television genre was Star Trek: The Next Generation (syndicated, 1987–94), produced by Paramount and supervised by the creator of the original Star Trek, Gene Roddenberry. Already benefiting from the tremendous built-in audience of Star Trek fans eager for a spin-off of the old series, Paramount was able to bypass the networks and take the show directly into first-run syndication, where it quickly became the highest-rated syndicated show ever. In many ways, Next Generation had more in common with other dramatic series of the 1980s and 1990s than it did with the original series. In this new incarnation, Star Trek became an ensemble drama structured much like Hill St. Blues or St. Elsewhere, featuring an expanded cast involved in both episodic and serial adventures. Broadcast in conjunction with a series of cinematic releases featuring the original Star Trek characters, Next Generation helped solidify Star Trek as a major economic and cultural institution in the 1980s and 1990s.

After a seven-year run, Paramount retired the series in 1994 to convert the Next Generation universe into a cinematic property, but not before the studio debuted a second spin-off, Star Trek: Deep Space Nine (syndicated, 1993–99), which proved to be a more claustrophobic and less popular reading of the Star Trek universe. A third spin-off, Star Trek: Voyager (United Paramount Network [UPN], 1995–2001), served as the anchor in Paramount’s bid to create its own television network in 1995.

The success of the Star Trek series in first-run syndication reflected the changing marketplace of television in the 1980s and 1990s. As the three major networks continued to lose their audience base to the competition of independents, cable, and new networks such as FOX, The WB, and UPN, the entire industry sought out new niche markets to target in order to maintain their audiences. The Star Trek franchise’s ability to deliver quality demographics and dedicated viewership inspired a number of producers to move into science fiction during this period. These series ranged from the literate serial drama Babylon 5 (syndicated, 1994–98) to the bizarre police burlesque of Space Precinct (syndicated, 1994). Also successful in syndication were “fantasy” series such as Highlander (syndicated, 1992–97) and Hercules: The Legendary Journeys (syndicated, 1995–99).

For the most part, the three major networks (ABC, CBS, and NBC) stayed away from science fiction in the 1990s, the exceptions being NBC’s Earth 2 (1994–95) and Seaquest DSV (1993), the latter produced by Steven Spielberg’s Amblin Entertainment. By far the most active broadcaster in developing science fiction in the 1990s was the FOX network, which used the genre to target even more precisely its characteristically younger demographics. FOX productions included Alien Nation (1989–91), M.A.N.T.I.S. (1994–95), Sliders (1995), VR.5 (1995), and Space: Above and Beyond (1995–96). FOX’s most successful foray into science fiction, however, was The X-Files (1993–2002). A surprise hit for the network, The X-Files combined horror, suspense, and intrigue in stories about two FBI agents assigned to unsolved cases involving seemingly paranormal phenomena. Although the series originally centered on a single “spook” of the week for each episode, it eventually developed a compelling serial narrative line concerning a massive government conspiracy to cover up evidence of extraterrestrial contact. Like so many other science fiction programs, the series quickly developed a large and organized fan community. After the departure in May 2001 of series colead David Duchovny and a failed attempted at a spin-off in The Lone Gunmen (FOX, 2001), The X-Files faltered into cancellation at
the end of the 2001–02 season. FOX, however, remains the only U.S. network to include science fiction as a significant component in its marketing strategy. Working with The Simpsons creator Matt Groening, the network has enjoyed success with the animated sci-fi comedy Futurama. FOX also tapped the futuristic talents of director James Cameron for the postapocalyptic action series Dark Angel (2000–02). The only other network with a continuing interest in science fiction has been UPN, courting younger viewers with the teen-centered Roswell (which debuted on The WB in 1999 before transferring to UPN for its third and final season, 2001–02) and a revamped version of the Star Trek franchise, Enterprise (2001–).

At the end of the 20th century, television science fiction had amassed a sizable enough program history and a large enough viewing audience to support a new cable network. A product of the entertainment industry’s overall move toward niche marketing, The Sci-Fi channel debuted in 1992. Although the network began with only a library of old movies and television reruns, it soon became a significant source of production for both cable series and made-for-cable movies. Balancing its schedule with original productions, “classics” such as Star Trek and The Twilight Zone, and series in the related genres of horror and the supernatural, the Sci-Fi channel has quite successfully transformed its ratings and demographics to become a major network in basic cable.

Science Programs

When most people consider the history and development of scientific television programming in the United States, they are quick to mention the popular 1950s show Watch Mr. Wizard, one of the first attempts to bring science to the general public through the medium of television. Forty-three years later, in 1994, Don Herbert, creator of the Mr. Wizard series, launched a new show titled Teacher to Teacher with Mr. Wizard. The enduring image of Herbert as “Mr. Wizard” is a testament to the presence of science-
Science Programs

oriented programming throughout the history of television.

Early growth in the area of scientific television programming closely paralleled increasing public awareness of science and technology in everyday life. In an era defined by both the Cold War and the growth of mass media, issues of science and public policy played out on the public airwaves. Eventually, television was seen as the perfect vehicle through which to promote widespread scientific knowledge among the public. Over the years, scientific television programming evolved to serve three primary goals—to entertain, to educate, and, ultimately, to bridge the gap between the general public and the scientific community. In order to achieve such goals, however, sustainable funding had to be secured.

In the United States, scientific television was a key element in early initiatives of the National Science Foundation (NSF) to promote a public understanding of science. Through station by station syndication, the NSF funded several short programs that aired on commercial television. In the 1970s, Closeups, produced by Herbert, introduced children to scientific concepts through everyday objects. During this same period, Herbert also developed How About, a syndicated scientific news report aimed at adults. More recently, syndication has facilitated the entry of independently funded and produced scientific programs into commercial formats.

In the realm of public television, the NSF invested in the series Nova. However, the controversial subject matter engaged in early Nova programs tested the NSF’s funding procedures. In an attempt to balance the interests of a free press and those of the scientific community, the NSF established a grant-approval system mediated by outside advisers, most often experts in the field addressed in the program. With “balanced, objective, and accurate” programming in mind, the outside adviser has become a standard feature of most scientific television production regardless of funding sources.

The success of Nova sparked an ongoing relationship between the NSF and public broadcasting, one that positioned public television at the forefront of scientific programming. This coalition was responsible for the development of several science based specials, such as The Mind, and a myriad of children's shows, including 3-2-1 Contact and Square One TV. In many ways, the Public Broadcasting Service (PBS) has forged its identity around science programs, and it shows every indication of continuing its commitment to scientific television in the future.

Alongside the ongoing efforts of the NSF, today's multifaceted television market has led to the development of scientific programming in unanticipated arenas, most notably cable. Cable networks have capitalized on the entertainment value of science and technology to become prolific purveyors of both episodic and news-oriented scientific television shows, such as Science and Technology Week (Cable News Network [CNN]) and Crocodile Hunter (Animal Planet). Recently, the profusion of cable channels has allowed for high degrees of specialization in programming. While the Discovery channel continues to provide a broad spectrum of science programming, its related channels—including Animal Planet, The Learning Channel, and Discovery Wings—are more narrowly focused in terms of content and format. Such specialization reveals how cable has directed its attention to professionals, offering focused “edutainment” that can cultivate audiences among scientists and non-scientists alike.

Current scientific television programs in the United States can be divided into three basic categories: commercial programming, children’s programming, and PBS programming. These categories often overlap. For example, many children’s science programs are produced by and aired on PBS. While such categories are useful in providing basic understanding of the focus of certain programs, they are by no means a definitive description of their content.

Most commercial science programming is developed by either network or syndicated sources. The majority of programs target adult audiences, and the topics of the episodes vary greatly. Most of the programs in this category are series, with each episode focusing on a specific topic, such as new technology, the universe, aeronautics, zoology, or genetic engineering. A few, such as the NASA Space Films (1990), are dedicated to one specific topic. Almost all entries in this category include a focus on “science and technology” in their program description. In addition to several already mentioned, programs in this category include Universe (1979), Introducing Biology (1980s), Omni: Visions of Tomorrow (1985), Eye on Science (Columbia Broadcasting System [CBS], 1981–85), The Science Show (1990–93), World of Discovery (American Broadcasting Company [ABC], 1990–94), A View of the World (1993), Quantum (1993), Sci-Tech TV (1994), Hard Wired (2001), and Science Daily (2001).

Although it has been outstripped by recent growth in adult programming, children’s scientific television programming continues to be a central focus of the public understanding movement. Since the implementation of the Children’s Television Act of 1990, U.S. programmers have been required to air a certain amount of educational material during daytime slots,

existing library
of
"real science"
and
Real Vets. PBS increasingly includes the
drama of "real science" in perennial favorites such as
Nova, Frontline, and Scientific American Frontiers. In
the United Kingdom, the British Broadcasting Corpo-
rating (BBC) has made an interesting contribution
with Rough Science. Additionally, many cable systems
now offer the Science Channel, which draws on a sub-
stantial existing library of science oriented docu-
tories and specials. Topics range from the usual
perennial favorites—more explorations of the
Titanic
or The Language of Dogs to original
programming such as Young Scientist Challenge: 2003 and
regular features such as Science This Week.
New technology will also undoubtedly play a role in
the future development of scientific television pro-
grams. Following a trend set by science museums, sci-
entific television will likely move toward interactive
programming. Many channels and programs now
maintain websites that provide viewers with links to
related programming, merchandise, educational mate-
rials, interactive games, online chat rooms, or fan web-
ites.
In the final analysis, the future of science television
resides with its audiences, particularly as the first gen-
erations of viewers raised on science-based children's
programming reach maturity and reach for the remote
control.

Scotland

Scotland is a small country located on the geographical
periphery of Europe. Its television service reflects
many of the key issues surrounding broadcasting in
minority cultures. Politically part of the multination
state of the United Kingdom along with the other
"Celtic" countries of Wales and Northern Ireland,
Scotland's legal, educational, and religious institutions
remain separate from those of England, the dominant

2033
Scotland

partner. Its broadcasting systems, like much of its cultural organization, display a mixture of autonomy and dependence, which reflects Scotland's somewhat anomalous position.

Scotland's current programming reflects the evolution of Britain's broadcasting ecology, offering viewers a choice of four channels and a mix of British networked television and Scottish national and local productions. A brief history of its development sets in context both the present state of television in Scotland and some of the prevailing debates about its nature.

The first television service in Scotland was introduced by the British Broadcasting Corporation (BBC) in 1952. To a large extent, the constitution and character of this new medium was determined by its existing radio system. John Reith, the architect of the BBC and himself a Scot, was determined that the BBC should provide an essentially British service. The consequent emphasis placed on the centralization of public service broadcasting led to a downgrading of other forms of more local production as well as to the BBC's oxymoronic categorization of Scotland as a "national region." This decision was not simply an organizational choice but, as McDowell suggests, reflected the dominant ideological belief in the superiority of "metropolitan culture." The BBC's early television broadcasts consisted of largely the same programs as those of London. What was produced in Scotland received considerable criticism in terms of its nature and quality; the Pilkington Report of 1962 noted that the few programs produced by BBC Scotland often "failed to reflect distinctive Scottish culture."

The arrival of independent, or commercial, television in Scotland offered a new source of programming. Like the BBC, the independent companies broadcast a mix of network provision and more local, opt-out, productions. Franchises were awarded to Scottish Television, covering central Scotland; Border Television, covering the Scottish and English borders; and Grampian Television, serving the north of Scotland. The enthusiasm of some for the new medium can be gauged by the notorious comment of Scottish's first proprietor, Canadian magnate Roy Thomson, that an independent franchise was "a license to print money."

In these early years, perhaps unsurprisingly, Scottish program schedules, too, were heavily criticized for their poor quality and parochial outlook. The 1970s and 1980s saw both the BBC and Scottish Television upping the level of their local programming, improving its quality and diversity, and beginning to form a stronger presence on the network through programs such as the long-running police drama Taggart and the popular soap Take the High Road.

The past 25 years have brought significant changes, diversifying the type and origins of programs produced in Scotland. The introduction of Channel 4 in 1982 and quotas for independent production in the 1990 Broadcasting Act have led to the emergence of numerous independent companies, as is the case across the United Kingdom as a whole. While they have undoubtedly broadened the production base and often pioneered innovative forms of programming, the vast majority of these companies are relatively small and powerless in their ability to affect broadcast policy.

In the 1990s, extensive lobbying has brought governmental support of £9.5 million for the production of television programs in Scotland's minority indigenous language, Gaelic. Unquestionably a welcome move, it nonetheless demonstrates (as does the support of Sianel Pedwar Cymru, the Welsh Channel 4) that it is easier to gain recognition for linguistic than for cultural differences.

These moves in television are indicative of wider cultural shifts. For some years, debate has been growing over Scotland's constitutional position in the United Kingdom, manifested in some quarters by demands for political change in the form of self-government or independence. More widespread, however, has been a transformation in cultural activity in Scotland over the past two decades—most notably in literature but also in theater, music, and film—which many see as a form of cultural nationalism.

This climate of cultural and political contention has led to a new attention to questions of representation and national identity. In Scotch Reels (1982), critics Colin McArthur and Cairns Craig exposed and deconstructed the dominant representations of Scottishness, identifying two central rhetorics that have informed representations of Scotland—the associated discourses of tartanry and kailyard. While tartanry harks back to a romantic celebration of lost Scottish nationhood and draws on the emblems of a vanished (and imagined) premodern Highland way of life, kailyard celebrates the virtues of small-town life through genial homilies. These discourses are seen to run through heterogeneous productions from Hollywood cinema and Brigadoon to indigenous programs such as Dr. Finlay's Casebook and The White Heather Club.

This deconstruction of what Murray Grigor terms "Scotch myths" has become widely circulated, and indeed parodying the clichés of Scottishness has become something of a trope in contemporary Scottish television productions (although it has yet to penetrate a Hollywood increasingly enamored of Highland heroes such as Braveheart and Rob Roy). Scottish television offers its audiences antiheroes such as Ian Pattison's comic creation Rab C. Nesbitt, a gloriously loud-
mouthed Glaswegian drunkard and member of the underclass who exaggerates to comic excess accepted notions of nationality and class. A more sophisticated and ambiguous demonstration of this parodic process is to be found in BBC Scotland's police series Hamish Macbeth. Set in a picturesque Highland village populated by bizarre characters, it simultaneously sends up the stereotypes of Highland life while embracing their more marketable forms.

Much of the debate about television in Scotland, in academic and popular circles, has concerned itself with analyzing and often attacking the dominant images of Scottishness that have been produced, while comparatively little attention has been paid to questions of production and policy. In Scotland, questions of cultural identity and diversity and of independence and control reverberate through television production at both a symbolic and a material level.

Scrambled Signals

The term "scrambled signals" refers to the encryption of programming data streams by television program providers to prevent the unauthorized reception, duplication, or use of their signals. Originally designed in the 1980s to prevent signal theft by home satellite dish owners, scrambling has become an important component of copyright protection from unauthorized use.

With the relaxation of satellite broadcast and reception regulations by the U.S. Federal Communications Commission in 1979 and the tremendous reduction in the cost of satellite receiving equipment due to advances in technology, a booming market developed for home satellite dish receivers in the early 1980s. These satellite dishes were known as television receive-only satellite Earth stations, or TVROs. Essentially, TVRO dish owners were able to intercept, free of charge, cable television programming distributed over C-band satellites. Although most early adopters of TVRO dishes were located in rural areas where cable television was unavailable, cable system operators were nevertheless concerned about the actual and potential loss of subscribers who opted to receive programming for "free." When Congress passed the Cable Communications Policy Act of 1984, which specified that it was indeed lawful to receive unencrypted satellite signals for private viewing, cable system operators convinced program suppliers to scramble their satellite uplink feeds. Although they sought to protect the system operators (their clients) by scrambling, program suppliers also realized the profit potential in selling programming directly to the TVRO owners.

By early 1985, therefore, most major cable program suppliers (led by Home Box Office [HBO] and Showtime) had begun scrambling. As a result, TVRO owners were required to purchase a signal descrambler (also called a converter box) and pay a monthly fee to receive scrambled programming. This move eventually led to the development of direct broadcast services (DBS)—such as DirecTV, Primestar (later purchased by DirecTV), and EchoStar—that supply programming direct to consumers' homes via satellite dishes. DBS has become the most significant competition to local cable companies for the supply of cable programming. By 2001, 16 million U.S. households subscribed to the leading DBS systems.

In the mid-1980s, many TVRO owners worried that they would have to deal with several different encryption systems. The industry, however, adopted as the standard for scrambling the Videocipher II (VC II), a product of M/A-Com (which was later purchased by General Instrument Corporation, itself later purchased by Motorola). The industry was confident that VC II would reduce satellite programming "theft," but the system was plagued with problems. A black market developed relatively quickly for altered descramblers. To receive free programming, dish owners could simply purchase a descrambler with one of the chips in the unit replaced, enabling the unit to descramble all pro-
Scrambled Signals

gramming. After six years of program scrambling, it was estimated that only 10 percent of the three million dish owners were paying subscribers.

To correct this flaw, General Instrument released an updated version of the descrambler called Videocipher II Plus (VC II) in late 1991. The new units replaced the multiple chips in the unit with a single chip. Any effort to copy or replace the chip would disable the unit entirely. Shortly thereafter, companies enhanced the system with a renewable encryption system (VCRS) through the use of a TVPassCard (similar to a credit card). Should a breach in security occur, the encryption information on the cards could be changed quickly and inexpensively. Major programmers switched to the upgraded system with due speed.

While the scrambling of signals was initially the concern of cable programmers and operators, the U.S. broadcast networks (Columbia Broadcasting System [CBS], National Broadcasting Company [NBC], and American Broadcasting Company [ABC]) also began to scramble the transmission of programs to their affiliates (in 1986, 1988, and 1991, respectively). In defending his network’s move to scramble such transmissions, one network executive contended that network feeds are “private property” and encouraged viewers instead to watch their local affiliates for local news, weather, and commercials. Although obviously directed at protecting the advertising revenues of its affiliates, such reasoning ignores the lack of local reception for many rural owners of satellite dishes.

With the arrival of digital technology, the industry now relies on the MPEG-2 compression format for digital video- and audio-signal distribution to cable headends. MPEG-2 (the digital compression standard developed by the Moving Pictures Experts Group) allows for more programming in the same amount of bandwidth, as multiple channels are multiplexed into a single data stream. The two industry standards for program transmission are DVB (Digital Video Broadcast) and DigiCipher II, Motorola’s MPEG-2-based distribution system, which is used by about 70 percent of cable channels in the United States and Canada.

The scrambling of program signals occurs when each MPEG-2 packet is encrypted during uplink to the satellite. The scrambled packets are processed through a conditional access module (CAM) in each decryption device, where the CAM then takes the decryption key from an inserted smart card and descrambles the signal. The encryption code is obviously secret, and various scrambling services exist around the world, including companies such as PowerVu CA, Nagravision, Cryptoworks, Videoguard, Mediacypher, and IRDETO.

With the continued convergence of digital technologies and telecommunications, the (perceived) threat of such technologies to the economic interests of television, movie, and record producers increases. Digital technologies may allow for improved delivery of multiple media products into the home (as MPEG-2 video compression does for interactive systems, such as high-speed Internet and video-on-demand), but they also allow users to capture, manipulate, duplicate, store, and disseminate digital media products with great ease (dissemination over the Internet being of particular concern to the media industries). What was once a somewhat simple issue of scrambling analog signals has become a much more complicated concern involving copy protection for a myriad of media products via the encryption of digital information.

“Unscrambling Pay TV’s New Descramblers,” Discover (May 1986)
Second City Television (SCTV) was a popular comedy television show originating from Canada that ran in the late 1970s and early 1980s in a variety of incarnations. Pulling much of its talent and ideas from the Chicago and Toronto Second City comedy clubs, the show became an important pipeline for comedians, especially Canadians, into the mainstream of the U.S. entertainment market. Popular performers who moved from SCTV into U.S. television and movies include John Candy, Martin Short, Dave Thomas, Catherine O'Hara, Andrea Martin, Rick Moranis, Harold Ramis, Robin Duke, Tony Rosato, Joe Flaherty, and Eugene Levy. Their training in live improvisational comedy allows them to appear in a variety of capacities, but they have worked primarily as writers and performers.

SCTV’s early opening-credit sequence set the tone for the show. As the announcer declared, “SCTV now begins its programming day,” a number of television sets were thrown out of an apartment building’s windows, smashing on the pavement below. Using impersonations of well-known celebrities and ongoing original characters, SCTV presented a parody of every aspect of television, including programs, advertising, news, and network executives. In effect, SCTV was a cross between a spoof of television and a loose satirical soap opera about the running of the fictional Melonville television station. The station’s personnel included the owner, Guy Caballero (Flaherty); the station manager; and Moe Green (Ramis), to be replaced by Edith Pricklely (Martin), whose sister, Edna Boil (also Martin), advertised her Organ Emporium with husband, Tex (Thomas), in a send-up of cheap late-night commercials. Other recurring figures were the bon vivant and itinerant host, Johnny LaRue (Candy), and the endearingly inept Ed Grimley (Short). Over the years, the SCTV programming lineup included the local news, read by Floyd Robertson (Flaherty) and Earl Camembert (Eugene Levy); “Sunrise Semester”; “Fishin’ Musician”; and “The Sammy Maudlin Show,” hosted by Maudlin (Flaherty) and his sidekick, William B. (Candy), with regular guest appearances from Bobby Bittman (Levy) and Lola Heatherton (O’Hara). Other spoofs included Yosh and Stan Shmenge’s polka show (Levy and Candy); Count Floyd’s “Monster Chiller Horror Theatre,” whose host was played by the news anchor Floyd Robertson (Flaherty); the ersatz children’s show “Captain Combat” (Thomas); “Farm Film Report” (Flaherty and Candy); and the improvised editorials of Bob and Doug Mackenzie’s “Great White North” (Moranis and Thomas).

SCTV’s trademark was the use of complex intertextual references to produce original hybrid comic sketches. A parody of Francis Ford Coppola’s 1972 film The Godfather became the story of the Mafia-like operations of television networks. “Play It Again, Bob” took Woody Allen’s Play It Again, Sam (1972) and paired Woody Allen (Moranis) with Bob Hope (Thomas). Brooke Shields (O’Hara) and Dustin Hoffman (Martin) were guests on the “Farm Film Report,” where they “blew up real good.” In the station owner’s attempt to capture a youth audience, the Melonville station tried to mimic Saturday Night Live, with guest host Earl Camembert, a ridiculously overenthusiastic studio audience, and setups based around humorless references to drug use. SCTV’s continual use of mise en abyme devices produced an intricate, layered text in addition to a knowing fan culture. Further, this program, with its markedly satirical view of television and North American culture in general, was an important contribution to the notion that Canadian humor is ironic and self-deprecatory.

The show’s history began in 1976, when Andrew Alexander, Len Stuart, and Bernie Sahlin produced the first half-hour episodes, called Second City TV, for Global Television Network in Toronto, where it ran for two seasons. Filmways Productions acquired the syndication rights for the U.S. market in 1977. A deal was struck in 1979 with the Canadian Broadcasting Corporation (CBC) and Allarcom Ltd in which the show would move to Edmonton, Alberta, for broadcast on the national CBC network. In 1981, the National Broadcasting Company (NBC) bought the program, shifted it to a 90-minute format, and moved the show back to Toronto. At NBC, SCTV became part of the “late-night comedy wars” between the renamed SCTV Network 90 on Fridays from 12:30 A.M. to 2:00 A.M., the American Broadcasting Company’s (ABC’s) Fridays on the same night from 12:30 A.M. to 1:30 A.M., and NBC’s Saturday Night Live. When NBC did not renew SCTV Network 90 in 1983, Cinemax took it.
Over. Over the years, SCTV produced 72 half-hour shows, 42 90-minute shows, and 18 45-minute shows as well as numerous spin-offs and specials. With 13 Emmy nominations, SCTV won two for best writing. The show has since been reedited and repackaged into a half-hour “best of” format for syndication. It is now a mainstay on comedy cable channels and a regular choice for late-night network programming.

Secondari, John H. (1919–1975)
U.S. Documentary Producer

John Secondari played a major role in the early growth of television news at the American Broadcasting Company (ABC) during the 1960s. As executive in charge of the network’s first regular documentary series, Secondari forged a coherent house style that featured a heavy emphasis on visualization and dramatic voice-over narration. He later carried these qualities over to a series of occasional historical documentaries that earned him wide recognition and numerous national broadcasting awards.

Born in Rome in 1920, Secondari was educated in the United States and served in the army during World War II. Afterward, he worked in Europe, first for the Columbia Broadcasting System (CBS) and then as the chief of information for the Marshall Plan in Italy. He quit in 1951 to devote himself to fiction writing on a full-time basis. Over the next six years, he authored four books, one of which was turned into the popular Hollywood feature film Three Coins in the Fountain. During this period, he also wrote scripts for television anthology dramas, such as The Alcoa Hour and Playhouse 90. Both his background as a fiction writer and his fondness for Italy would figure prominently in his documentary career at ABC.
Secondari joined the network’s Washington news bureau in 1957 and started producing documentaries toward the end of the decade. At the time, ABC’s news operation was tiny by comparison to its rivals, and its output was therefore quite limited. In the early 1960s, as television news expanded rapidly and as network news competition escalated, the smallest of the three major networks relied heavily on its documentary unit in order to sustain its stature as a bona fide news organization. ABC’s major contribution to prime-time information fare during this period was the weekly Bell and Howell Close-Up! series, which Secondari took charge of shortly after its launch in 1960.

Underfunded by comparison to his network rivals and lacking a seasoned staff of broadcast news workers, Secondari nevertheless mounted a creditable series and even made some significant contributions during documentary’s television heyday. He accomplished this in part by tapping freelance contributors such as producers Robert Drew and Nicholas Webster. Drew’s cinéma vérité style offered dramatic glimpses of Castro’s Cuba, the Kennedy White House, and the cockpit of an X-15. Similarly, Webster provided first-person accounts of racism in New York City, the school system in Moscow, and the revolving door in the U.S. penal system. In these and many other Close-Up! documentaries, the camera escorted the protagonist through the routines and challenges of everyday life. The style emphasized intimacy and visual dynamism, qualities explicitly requested by the series sponsor Bell and Howell, a major manufacturer of amateur motion picture equipment. The same qualities could be seen in the output of regular staff members in the ABC documentary unit. A critic for Variety once commented on the house style of each network’s flagship series, noting that CBS Reports could be described as the Harper’s of television documentary, NBC White Paper as the Atlantic, and Bell and Howell Close-Up! as the Redbook. Indeed, the emphasis on dramatic visualization at ABC was accompanied by a commitment to florid voice-over narration that sometimes seemed excessive. Several critics noted that at the end of “Comrade Student” (a profile of Soviet schools), Secondari’s commentary turned self-consciously propagandistic. Similarly, a documentary about the Italian Communist Party—on which he collaborated with his wife, Helen Jean Rogers—closes with a paean to the spirit of republican Rome that reputedly dwells in the souls of all Italians and serves as the last bulwark against leftist revolution.

This penchant for the dramatic continued to mark Secondari’s work as he moved to historical topics with a series titled the Saga of Western Man. Coproduced with Rogers, it began in 1963 with each episode focusing on a particular year, person, or incident that Secondari believed had significantly influenced the progress of Western civilization. Using the camera “as if it were the eyes of someone who had been present in the past,” Secondari transported the viewer to historical locations while voice-over narrators read authentic journal entries or letters from the period. For example, Secondari outfitted historical ships in Spain and put to sea with his camera crew in order to capture the sensations of Columbus’s transoceanic voyage. These historical reenactments were then edited together with close-up shots scanning the canvases of period paintings. Meanwhile, the audio track featured music and actor Frederick March’s dramatic readings from the navigation logs of Columbus. These techniques—which were also being developed by National Broadcasting Company (NBC) producers Lou Hazam and George Vicas—generated widespread critical acclaim and numerous awards for the series, thereby encouraging ABC to sign on for a second season. By year’s end, however, some critics began to complain that the method was wearing thin. The Saga of Western Man was scaled
back and continued on an occasional basis until the end of the 1960s, when Secondari and Rogers left ABC to form their own production company.

Secondari died in 1975 at the age of 55. In all, he garnered some 20 Emmy and three Peabody awards. Perhaps most important, however, was his contribution to the development of the historical television documentary. Secondari's style not only anticipated the later efforts of such producers as Ken Burns but also laid the groundwork for the emergence of the television docudrama in the 1970s.

See It Now
U.S. Documentary Series

See It Now (1951-58), one of television's earliest documentary series, remains the standard by which broadcast journalism is judged for its courage and commitment. The series brought radio's premier reporter, Edward R. Murrow, to television, and his worldly expertise and media savvy helped to define television's role in covering and, more important, analyzing the news.

The genesis of See It Now was a series of record albums that Murrow created during the late 1940s with Fred W. Friendly, a former radio producer at a Rhode Island station. The I Can Hear It Now records, which interwove historical events and speeches with Murrow narration, became such a commercial success that the partnership developed a radio series for the Columbia Broadcasting System (CBS) that also creatively used...
taped actualities. The weekly Hear It Now was modeled on a magazine format, with a variety of “sounds” of current events, such as artillery fire from Korea and an atom smasher at work, illuminated by Murrow and other expert columnists.

After his World War II experience, Murrow had assiduously avoided television, having been overheard stating, “I wish goddamned television had never been invented.” Friendly was eager to test the new technology, however, and in 1951 the team agreed to transfer the Now concept yet again, this time emphasizing the visual essence of the television medium and calling their effort See It Now. Murrow never desired to anchor the evening newscast, and he wanted See It Now to be not a passive recitation of current events but an active engagement with the issues of the day. To implement this vision, Murrow and Friendly radically transformed the fundamental nature of news gathering on television.

Unlike other news programs that used newsreel companies to record events, See It Now maintained its own camera crews to coordinate filming on location, using 35-millimeter cameras to record the most striking images. Murrow and Friendly also deviated from standard practice by mandating that all interviews would not be rehearsed and that there would be no background music to accompany the visuals. Although See It Now relied on CBS correspondents around the world, Murrow, serving as editor in chief, and Friendly, as managing editor, organized the first autonomous news unit, whose ranks included reporter-producers Joe Wershba and Ed Scott, director Don Hewitt, production manager Palmer Williams, and former newsreel cameramen Charlie Mack and Leo Rossi.

“This is an old team trying to learn a new trade,” intoned Murrow to inaugurate See It Now on November 18, 1951. Murrow, as in all the programs that followed,
was ensconced in Studio 41, exposing the tricks of the electronic trade—the monitors, the microphones, and the technicians were all in view. To underscore this new technological undertaking, Murrow summoned up a split screen of the Brooklyn Bridge in New York City and the Golden Gate Bridge in San Francisco, the first live coast-to-coast transmission.

See It Now was the first newsmagazine series on television, alternating live studio commentary with reports from such seasoned correspondents as Howard K. Smith and Eric Sevareid. The series was initially scheduled in the intellectual ghetto of Sunday afternoon. By its third outing, See It Now gained a commercial sponsor, Alcoa (the Aluminum Company of America), which sought prestige among opinion makers to offset antitrust troubles. As the half-hour series became the most influential news program on television, it moved into prime time, first on Sunday evenings and then for three years on Tuesday evenings at 10:30.

See It Now established its voice by covering the campaign rituals throughout the 1952 presidential year. Two early pieces were also emblematic of what Murrow and Friendly wanted to accomplish for the new venture: simulated coverage of a mock bomb attack on New York City (a segment that addressed the tensions of the nuclear age) and a one-hour report on the realities from the ground of the Korean War during the 1952 Christmas season. The latter special evoked the frustrations and confusions of everyday soldiers and was described by one critic as “the most graphic and yet sensitive picture of war we have ever seen.”

Despite the laudatory reviews and the respectability that See It Now brought to television news, a question plagued the partnership: how to cover the anti-Communist hysteria that was enveloping the nation. The team first searched for what Friendly called “the little picture,” an individual story that symbolized a national issue. In October 1953, Murrow and reporter Wershba produced “The Case of Milo Radulovich,” a study of an Air Force lieutenant who was deemed a security risk because his father, an elderly Serbian immigrant, and sister supposedly read subversive newspapers. Because of the report, for which Murrow and Friendly used their own money to advertise, the secretary of the Air Force reviewed the case and retained Radulovich in the service. In “Argument in Indianapolis,” broadcast one month later, See It Now investigated an American Legion chapter that refused to book its meeting hall to the American Civil Liberties Union. Again, Murrow and staff succeeded in documenting how McCarthyism, so called because of the demagogic tactics of Senator Joseph McCarthy, had penetrated the heartland.

Having reported discrete episodes on the Cold War, Murrow and Friendly decided to expose the architect of the paranoia, McCarthy himself. On March 9, 1954, See It Now employed audiotapes and newsreels to refute the outrageous half-truths and misstatements of the junior senator from Wisconsin. In his tailpiece before the signature “Good Night and Good Luck,” Murrow explicitly challenged his viewers to confront the nation’s palpable fears. A month later, McCarthy accepted an invitation to respond, and his bombastic rhetoric, calling Murrow “the leader and cleverest of the jackal pack,” coupled with the later failure of the senator’s televised investigation into the Army, left McCarthy’s career in a shambles. The McCarthy program also produced fissures in the relationship between Murrow and the network. Again, CBS did not assist in promoting the broadcast; but this time CBS executives suggested that Murrow had overstepped the boundaries of editorial objectivity. In the process, he had become controversial and, therefore, a possible liability to the company’s business opportunities.

Provocative programs, targeting the most pressing problems of the day, continued during the 1954–55 season. Murrow conducted an interview with J. Robert Oppenheimer, the physicist who was removed as adviser to the Atomic Energy Commission because he was accused of being a Soviet agent. See It Now documented the effects of the U.S. Supreme Court’s 1954 Brown v. Board of Education desegregation decision on two southern towns. Murrow, a heavy smoker, examined the link between cigarettes and lung cancer. By the end of the season, Alcoa, stung by See It Now’s investigation into a Texas land scandal where the company was expanding operations, ended its sponsorship. Because of the profitability of other entertainment shows, most notably the bonanza in game shows, CBS also decided that See It Now should yield its regular time slot and become a series of specials. Many insiders thought the series should be retitled See It Now and Then.

During the final three seasons of specials, the tone of See It Now became softer. Despite exclusive interviews with Chinese Premier Chou En-lai and Yugoslav strongman Marshal Josip Tito, the most memorable programs were almost hagiographic profiles of American artists, including Louis Armstrong, Marian Anderson, and Danny Kaye. Controversy for Murrow was now reserved for outside the studio; his 1958 speech to radio and news directors was an indictment of the degrading commercialism pervading network television. The final broadcast, “Watch on the Ruhr,” on July 7, 1958, surveyed the mood of postwar Germany. After See It Now’s demise, CBS News made sure to split the Murrow-Friendly team. Friendly was
named executive producer of Now's public affairs successor, CBS Reports. Murrow was a contributor to the series; his most significant investigation was Harvest of Shame.

Murrow and Friendly invented the magazine news format, which became the dominant documentary form on network television. The most esteemed inheritor of its legacy, 60 Minutes, was conceived by integral See It Now alumni: Don Hewitt (as 60 Minutes' executive producer), Palmer Williams (as managing editor), and Joe Wershba (as producer). See It Now was also a seminal force in establishing how most television documentaries convey a national issue: illuminating the individual story, immediately and directly, so that it resonates with deeper implications. If Murrow and Friendly created the model for the documentary for both form and content, they also tested the limits of editorial advocacy. Although the series of McCarthy programs have been lionized as one of television's defining moments, Murrow and Friendly exposed as well the inherent tension between the news and the network and sponsor. How to deal with controversy in a commercial medium has remained controversial ever since.

Seeing Things
Canadian Drama Series

Seeing Things was one of the most popular series in Canadian television history. Throughout its run, the series had the same coproducers, David Barlow and its star, Louie Del Grande, and the same director, George McGowran, which is unheard of and impossible in the Hollywood model of television production. The three worked easily and well together and shared the same basic vision of the show. Seeing Things is basically a comedy/mystery. Louie Ciccone is handicapped by fragmentary psychic visions that, along with his conscience and a nose for news, compel him to solve the murders he glimpses in his visions. The tone of an
episode often varied wildly. Yet no matter how improbable the plots, the consistent off-center vision that Barlow and Del Grande shared and McGowan’s willingness to adapt his direction to the stylistic demands of the show, together with appropriately imaginative designers, gave it coherence.

Dashes of slapstick and farce pepper Seeing Things, which had remarkably little violence for a show centered on murder. In one episode, scrambling around chair legs and under tables in a nightclub, Louis escaped by biting his pursuer in the leg. Another distinctive feature of the series was its steady stream of ad-libbed one-liners. The timing was crisp and the delivery always throwaway and spontaneous. Running gags were found in most episodes. Seeing Things was very Canadian, with its sharp eye for the brief obsessions of American popular culture. These were sometimes deliberately subverted and sometimes mocked. Many of the jokes are topical, political, or social in their thrust. The series satirized the military, aging hippies, psychic fairs, beauty pageants, and hockey. There were also occasional complex takes on ethical questions, touching moments between characters, and solid cameo performances. The series provided self-reflexive moments, such as when Marge (played by Martha Gibson, Del Grande’s wife), Louie’s wife and partner in his adventures, wondered aloud why a murderer holding a gun on her was unburdening herself with a detailed confession. Although there were several writers, every script was distinctly flavored with the quirky sensibility shared by Barlow and Del Grande.

In Seeing Things, the protagonist, Louie Ciccone, was a reporter for a Toronto newspaper, living with his parents in the back room of their bakery. He was a very unwilling clairvoyant. He had to find the murderers using his own intelligence and his estranged wife as driver, goad, confidante, and occasional rescuer to fill in the missing pieces. Louie’s klutzy, workaholic persona and domestic worries were threaded with allusive wit and literate one-liners, manic energy, and considerable acting skills.

Louie obsessed over finding the murderer glimpsed in his visions and on the possibility of getting back together with Marge. Often the two obsessions collided, so that his need to see murderers caught continually undercut his claim that Marge and his son, Jason, were more important to him than anything else. Nevertheless, eventually Marge and Louis did reunite in a gradual, psychologically credible narrative arc. His physical and social ineptitude was incurable, however, and an intrinsic and funny part of the character. He was also self-conscious, pushy, vain, indecisive, inventive, courageous, and compassionate, altogether a credible character rather than the formulaic hero of a typical police or mystery program.

Heather Redfern, the crown attorney, assisted Louie in many episodes. Blonde, single, and upper class, she was clearly intended to be a contrast to the Ciccones, creating moments of both sexual and class conflict in a series that had no recurring antagonist. Marge’s new job as a real estate agent also provided new narrative possibilities. The setting of Toronto provided a very specific sense of place, which also anchored the series. Another strength of the series was the fact that most of Canada’s best character actors appeared as guests on the show.

The series, like so many Canadian Broadcasting Corporation (CBC) series in the 1980s, subverted the message of authority. It offered ambiguity in the outcome of several episodes and presented irony with a wryness and whimsicality that connected it to another favorite series more than a decade later: Due South. The last season of Seeing Things, however, began to strain the format with ever more improbable plots, including the landing of a flying saucer. Although the main American networks were not interested in Seeing Things, which at 43 episodes over six seasons did not meet the necessary number of 60 episodes (for syndication) and which was made before specialty channels provided alternate outlets, the series did appear on the Public Broadcasting Service (PBS) and was very successfully sold in Europe, South Africa, and Australia.

Seinfeld
U.S. Situation Comedy

Jerry Seinfeld, American stand-up comedian and author of the best-selling book SeinLanguage (1993), is now best known as the eponymous hero of Seinfeld, a sitcom that was a great success for the National Broadcasting Company (NBC) during nine seasons in the 1990s. However, for the show’s fans in the United States and around the world, “hero” is not the right word to describe Jerry on Seinfeld. Nor would it describe the show’s other main characters, Elaine, George, and (Cosmo) Kramer, all 30-something and leading the single life in New York. The program’s distinctiveness lies in being a comedy made out of trivia and minutiae, a bricolage of casual incidents and situations of everyday metropolitan life, all of which belie any conventional notion of “heroism” or any notion, indeed, of distinction. Viewers saw Jerry in his apartment with bizarre neighbor Kramer constantly dropping in and Elaine and George visiting, in the café where they were all regular customers, or at Elaine’s office, where she worked as a publisher until she lost her job. (She subsequently worked in a series of situations, usually as the assistant to eccentric, bizarre individuals.)

Seinfeld himself, in an interview, suggested that Seinfeld was adding something new to television comedy, some new representation of the quotidian that might be influencing other TV and film culture. He cited some of the coffee-shop conversation between the John Travolta and Samuel Jackson characters in Quentin Tarantino’s Pulp Fiction, and Tarantino in turn has admitted to being a big fan of Seinfeld.

Seinfeld did not mix seemingly trivial conversation and incidents with sudden unnerving violence as did Pulp Fiction, whose main characters, gangsters, created a world of shattering absurdity. Jerry, Elaine, George, and Kramer instead led a life of quiet absurdity. They appeared always to be relentlessly superficial. Even to say they were friends would be too kind. If they did help each other, it was out of self-interest only. They created a comic world out of the banally cruel and amoral, of trivial lies, treachery, and betrayal. In their relations with each other, with anyone else they encountered, or with their families, they rarely found it in themselves to act out of altruism, kindness, generosity, support, courage, caring, sharing, concern, neighborliness, a sense of human community, or trust. Like comedy through the ages, they said the unsayable, did the undoable as they casually ignored sanctioned morality and established conventions. Watching someone being operated on, they passed callous remarks and accidentally popped a chocolate candy into the body.

George in particular was freely given to making trouble and then denying all responsibility; to boasting, deceiving, and lying. Viewers waited for him to do disgusting things, expecting, hoping, he would do them. He tried to get money out of a hospital when someone fell to his death from the hospital’s window onto George’s car. He made love on his parents’ bed and left behind a used condom. He sold his father’s beloved old clothes to a shop, saying his father had died and this was the deceased’s dearest wish. He hoped an artist would die so his paintings would go up in value.

Jerry and a girlfriend, who could not make love in his apartment because his parents were visiting, entwined themselves in the flickering darkness when they went to see Schindler’s List and consequently missed most of the film. Their behavior was reported to Jerry’s Jewish parents by another acquaintance, the treacherous Newman. Much of Seinfeld involved similar comic humiliation and so recalled and reprised a long Jewish tradition of humor that flourished in the 20th century in vaudeville, radio, film, and television through the figure of the shlemiel (think of Woody Allen), who makes comedy out of failure, ineptitude, defeat, or minor disaster.
In *Seinfeld*, disasters multiplied for each character, except for the mysterious Kramer, a trickster figure, who (like trickster figures through the ages) always got out of daily work, was a renowned sexual reptile, generally out-tricked every adversary, and ignored the havoc he insisted on causing. In *Seinfeld*, Kramer functioned as pure sign of folly and misrule, turning the world upside down at every chance.

Elaine was Jerry’s former girlfriend. With George she had a relationship of uneasiness, if not sharp mutual dislike. Elaine was sassy and spunky, but her spunkiness usually emerged as irritability and impatience (especially in restaurants or waiting to see a film). She picked arguments with almost everyone she encountered, including any boyfriend. In matters of romance, Elaine constantly self-destructed. So, too, did Jerry and George, usually quickly allowing a trivial difference or unfounded suspicion to end a relationship. Once Jerry insisted that he and Elaine make love again, but he could not perform, and here Elaine emerged as similar to the irrepressible female carnival figures of early modern Europe (as discussed by Natalie Zemon Davis in her famous essay “Women on Top"), overturning men’s power and self-image.

*Seinfeld* also recalled a long comic tradition of farce that has descended from Elizabethan drama. In those plays and in the jigs that followed them, the audience was presented with a contestation of ideals and perspectives. Whatever moral order was realized in the play was placed in tension with its parody in the closing jig. There, the clown dominated as a festive Lord of Misrule, creating, for audiences to ponder, not a definite conclusion but an anarchy of values, a play of play and counterplay. Similarly, *Seinfeld* continuously presented an absurd mirror image of other television programs that, like Shakespeare’s romances, hold out hope for relationships despite every obstacle that tries to rend lovers, friends, kin, or neighbors apart—obstacles that create amid the comedy sadness, pathos, and intensity.

The possible disadvantage of a genre such as absurdist farce is repetition and sameness, comic action turning into ritualized motion. Seinfeld himself commented that in *Seinfeld*, “you can’t change the basic situation or the basic characters.” Nevertheless, in the March 4, 1995, issue of *TV Week*, he rejected the suggestion that even the show’s devotees thought the characters were becoming increasingly obnoxious and the jokes forced. While some contemporary satirical comedy, such as *Married... With Children*, may have fatally succumbed to this danger, *Seinfeld* remained one of the most innovative and inventive comedies in the history of American television until the program voluntarily ended its run in May 1998, when its final episode garnered enormous ratings (a 41.3 Nielsen rating and a 58 share) and inspired a media furor, with mixed critical reactions. The four primary characters were put on trial for “criminal indifference,” forbidding by while a carjacking occurred, thus affording past victims of their cruel indifference the chance to come forth and state their grievances—and forcing the TV audience to come to terms with the essentially soulless and selfish nature of Jerry and his friends.

“Sein of the Times?” *TV Week* (March 4, 1995)

Sellers, Peter (1925–1980)
British Comedian, Actor

While the late actor Peter Sellers is known primarily for his roles in film comedies such as the Pink Panther series, he first became a British celebrity as a member of the cast of The Goon Show, a satirical British Broadcasting Corporation (BBC) radio series. Originally aired in 1951, the show teamed Sellers with fellow comedians Spike Milligan and Harry Secombe. The program was a shocking departure for listeners accustomed to urbane humor from the BBC—the Goons combined a zany blend of odd characters in sketches that poked fun at every aspect of English society. Sellers used mimicry skills honed as a stand-up comedian in London striptease bars to create a number of distinctive characters with equally memorable names: Grytpype Thynne, Bluebottle, William Cobblers, and Major Bloodnok. The show acquired a cult following with BBC audiences around the world and helped launch Sellers’s film career.

Goon Show influences can be traced to equally eccentric British television progeny, such as Monty Python’s Flying Circus and The Benny Hill Show. The Goons, led by Sellers, created a distinctive media genre that combined Kafkaesque humor with hilariously stereotypical English characters. This new genre paved the way for the Pythons and others to follow in the 1960s and 1970s.

In 1979, Peter Sellers appeared in Hal Ashby’s production of Being There, a film version of Jerzy Kosinski’s satirical novel on the cultural influence of television. In the film, Sellers played Chauncey Gardiner, a none-too-bright gardener who is forcibly thrust into the outside world after the death of his benefactor. Sheltered in his employer’s home, Chauncey’s worldview is entirely shaped by the television shows he watches on sets scattered throughout the house. After being cast from this TV-defined Eden, Chauncey and his childlike innocence are challenged at every turn by the harsh realities of the outside world. In one memorable scene, he is menaced by members of an inner-city street gang as he urgently presses a TV remote control to make them “go away.” In another scene, Sellers kisses a passionate female character played by Shirley MacLaine as he mimics a televised love scene that he is watching over her shoulder.

Being There reflected Kosinski’s jaundiced view of the influence of television on modern culture and the tendency to confuse actual events with their symbolic media representations. In Kosinski’s sardonic world, the innocent jabberings of a moronic child-man are mistaken as profound wisdom—at the end of the film Chauncey is feted as a presidential candidate.

This story resonated with Peter Sellers at first reading, and he pursued Kosinski for seven years for the film rights. During the making of the motion picture, Sellers became Chauncey Gardiner—so much so that friends were alarmed at his 24-hour-a-day transformation. The result was one of Sellers’s funniest and most poignant screen roles. He was an innocent man cast adrift in a world full of duplicitous people and contrived mediated images. The film, like Kosinski’s novel, is one of the most trenchant indictments of the role of television in society yet mounted in fictional form. The film was a fitting end to a career built on Sellers’s own unique mimicry skills. He contrived a number of quirky illusory personas—a diverse world that included such memorable characters as Grytpype Thynne, Jacques Clouseau, and Chauncey Gardiner.

The Selling of the Pentagon was an important documentary aired in prime time on the Columbia Broadcasting System (CBS) on February 23, 1971. The aim of this film, produced by Peter Davis, was to examine the increasing utilization and cost to the taxpayers of public relations activities by the military-industrial complex in order to shape public opinion in favor of the military. The subject was not new, having already been greatly discussed in the press and debated in Congress. The junior senator from Arkansas, J. William Fulbright, had first raised the subject in a series of four widely publicized speeches in the Senate in December 1969. In November 1970, Fulbright published his book The Pentagon Propaganda Machine, and this text formed the core around which the network constructed its version of the senator's ideas. While the controversial nature of the subject matter was clearly understood by the producers and a strong reaction was anticipated, the virulence and direction of this reaction could not have been foreseen. In the end, the furor surrounding The Selling of the Pentagon would serve as a significant benchmark in evaluating the First Amendment rights of the broadcast media.

The documentary, narrated by Roger Mudd, concentrated on three areas of Pentagon activity to illustrate the theme of public manipulation: direct contacts with the public, Defense Department films, and the Pentagon's use of the commercial media—the press and television. From the opening sequence of "firepower display" at Armed Forces Day in Fort Jackson, South Carolina (culminating in the last "mad minute" when all the weapons on display were fired simultaneously), through the middle section, which showed clips of the anti-Communist film Red Nightmare, to the closing section, which detailed how the media are "managed" by the Pentagon, the documentary unveiled a massive and costly public relations effort to improve the public perception of the military. However, these facts, while open to some subjective interpretation, were not the real cause of the dispute.

The real issues of contention centered around how the producers had "reconstructed" several key interviews and speeches shown in the documentary. The first controversial sequence involved a lecture by Army Colonel John A. McNeil that began with Mudd's voice-over noting that "The Army has a regulation stating 'Personnel should not speak on the foreign policy implication of U.S. involvement in Vietnam.'" McNeil was then shown delivering what appeared to be a six-sentence passage from his talk, which made him seem to be contravening official military regulations. In fact, the sequence was reconstructed from several different passages over a wide range of pages, taken out of context in places.

The second of the controversial interview sequences was with Assistant Secretary of Defense Daniel Henkin on the reasons for the public displays of military equipment at state fairs and shopping centers. Again, many of Henkin's answers were taken out of context and juxtaposed, making him appear, in television critic Martin Mayer's words, "a weasler and a fool." Henkin, in keeping with government policy, had made his own tape recording of the interview, and he was therefore able to demonstrate how skillful editing had distorted what he had actually said.

The complaints about the show began only 14 minutes after it went on the air with phone calls to the network. The outcry in subsequent days was centered around two main sources: Representative F. Edward Hebert, chair of the House Armed Services Committee, and Representative Harley O. Staggers, chair of the House Committee on Interstate and Foreign Commerce and its Special Subcommittee on Investigations. On March 23, 1971, CBS ran the documentary again, and this time followed it with 20 minutes of critical remarks by Vice President Spiro T. Agnew, Representative Hebert, and Secretary of Defense Melvin Laird and a rebuttal by CBS News president Richard Salant. This presentation did not satisfy the politicians, and on April 7, Representative Staggers had subpoenas issued to CBS, demanding the record of the production of the documentary.

The next move was up to CBS, and on the afternoon of April 20, the network responded to the first executive session of the Special Subcommittee on Investigations through its deputy general counsel, John D. Appel. CBS disputed Representative Staggers's comment that "the American public has a right to know and understand the techniques and procedures which go into the production and presentation of the television..."
Selling of the Pentagon, The

news documentaries upon which they must rely for their knowledge of the great issues and controversies of the day." The network had voluntarily submitted the film and complete script of *The Selling of the Pentagon*, but it refused to supply the outtakes, draft notes, payments to persons appearing, and other material that had been subpoenaed.

The Federal Communications Commission (FCC) refused to become involved in the case, and the subcommittee held a series of hearings that included testimony from Assistant Secretary Henkin and Colonel John A. McNeil (who had in the interim filed a $6 million lawsuit against the network). On June 24, at the subcommittee's third meeting, the star witness was Frank Stanton, the president of CBS. Stanton claimed that he had "a duty to uphold the freedom of the broadcast press against congressional abridgment," and he pointed out the differences between print and broadcast journalism. He noted that these issues would not arise with the print media, but "because broadcasters need government licenses while other media do not, the First Amendment permits such an intrusion into the freedom of broadcast journalism, although it admittedly forbids the identical intrusion into other press media." There was a provocative exchange between Representative Springer over the definition of "the press," with the congressman trying to prove, with the aid of a 1956 edition of Webster's *New Collegiate Dictionary*, that broadcasting was not part of "the press." Stanton testified for more than four hours, and in the end he refused to submit to the subcommittee's subpoena.

In the midst of the furor concerning *The Selling of the Pentagon*, an even more important First Amendment issue was thrust on the public scene. On June 13, the *New York Times* published the first installment of the series of what became known as "The Pentagon Papers." This case moved rapidly through the courts, and on June 30, the U.S. Supreme Court, by a vote of six to three, allowed the unrestrained publication of the documents.

It was against this background that on June 28 the subcommittee voted unanimously to refer the entire case to its parent Committee on Interstate and Foreign Commerce. On July 1, the full committee voted 25 to 13 to report the matter to the House, with a recommendation that the network and Stanton be cited for contempt. Stanton could not help but notice the contrast between the two decisions: "This action is in disappointing contrast to the Supreme Court's ringing reaffirmation yesterday of the function of journalism in a free society."

On July 8, Staggers made his bid for House support with a floor speech and a letter to members of Congress. On July 13, in a surprisingly heated debate, the issue came to a head. In the end, one of the committee members, Representative Hastings Keith, introduced a motion to recommit the resolution to the committee, which was asked to report back to the floor with legislation that would more adequately express the intent of Congress and give authority to the FCC to move in a constitutional way that would require the networks to be as responsible for the fairness and honesty of their documentaries as they were for quiz shows and other programs. After a roll call vote, the resolution was approved 226 to 181, effectively negating the contempt citations. Staggers commented, "The networks now control this Congress." Stanton, as was to be expected, was extremely pleased by what he felt was "the decisive House vote."

What was the final outcome? Was the vote really that decisive? On July 15, Representative Keith followed through on his promise and introduced legislation that would have prohibited broadcasters from staging an event, or "juxtaposing or rearranging by editing," without indicating to the public that this had occurred. The proposed legislation never made it to the floor. The final outcome was a victory of sorts for CBS specifically and broadcast journalism in general, for never in modern history had the House failed to sustain the vote of one of its committees to cite for contempt.

*The Selling of the Pentagon* was a milestone in the development of the television documentary, not so much for what it contained but because it represented a clear statement that the networks could not be made to bend to government control in the technological era.

Serling, Rod (1924–1975)

U.S. Writer, Producer

Rod Serling was perhaps the most prolific writer in American television. It is estimated that during his career from the late 1940s to 1975, more than 200 of his teleplays were produced. This staggering body of work for television has ensured Serling’s place in the history of the medium. His emphasis on character (psychology and motivation) and the expedient handling of incisive, direct, and forceful and painfully penetrating dialogue, alongside his moralizing subtext, placed him in a unique position to question humankind’s prejudices and intolerance as he saw it.

Following army service, Serling entered Antioch College in Ohio as a student under the GI Bill, where he began writing radio and television scripts, selling a number while still an undergraduate. On leaving college, he went to work as a continuity writer for a Cincinnati, Ohio, television station, WLWT-TV, and then began writing a regular weekly series of live dramas for the anthology show The Storm, produced by Robert Huber for WKRC-TV in Cincinnati. Turning freelance in 1952, Serling sold scripts to such network anthologies as Lux Video Theatre, Hallmark Hall of Fame, The Doctor, Studio One, and Kraft Television Theatre. It was for the latter show that Serling wrote “Patterns” (American Broadcasting Company [ABC], January 12, 1955), a powerful drama about corporate politics and big-business power games. It was an instant success with both the viewers and the critics, winning him his first of six Emmy Awards (for Best Original Teleplay Writing) as well as a Sylvania Award for Best Teleplay.

Serling followed this drama with, among others, an adaptation of Ring Lardner’s “The Champion” (for Climax, 1955), “The Rack.” (U.S. Steel Hour, 1955), “Incident in an Alley” (U.S. Steel Hour, 1955), “Noon on Doomsday” (U.S. Steel Hour, 1956), and “Forbidden Area” (Playhouse 90, 1956). “Forbidden Area” was his first script for Playhouse 90 (an adaptation of a Pat Frank story) and was also that show’s premiere episode. But it was Playhouse 90’s second presentation that brought him his greatest success: “Requiem for a Heavyweight” (Columbia Broadcasting System [CBS], October 11, 1956). This compelling yet overlong story of a boxer who knows that he is washed up but does not know anything else than the world of the ring projected Serling to the top ranks of the TV writing elite and brought him a gallery of awards, including another Emmy (for Best Teleplay Writing), a Harcourt-Brace Award, another Sylvania Award (for Best Teleplay Writing), a Television-Radio Writers’ Annual Award, a Writers Guild of America Award, and the first ever George Foster Peabody Award for writing. Playhouse 90 and CBS promptly signed him to a contract, and he became one of the show’s chief writers (among such distinguished names as Horton Foote and Reginald Rose). Serling’s next Playhouse 90, “The Comedian” (CBS, February 14, 1957), based on Ernest Lehman’s story about an egomaniacal enter-
tainer, gave him his third Emmy for Best Teleplay Writing.

But then, from 1958, his conflicts with networks and sponsors over censorship of his work became increasingly intense. "I can recall the blue-pencil of a script of mine called 'A Town Has Turned to Dust,'" he said in a 1962 TV Guide interview, "in which a reference to a 'mob of men in masks and sheets' was cut because of possible affront to Southern institutions." Eventually, these censorship battles led to Serling making a transition from live drama to filmed series television and his own The Twilight Zone.

Stemming from a Serling-scripted Westinghouse–Desilu Playhouse entry called "The Time Element" (November 1958), Serling created, executive-produced, hosted, and (for the most part) wrote the half-hour science-fantasy anthology The Twilight Zone, networked by CBS from 1959 to 1964. The series not only created a whole new programming genre for television but also offered Serling an opportunity to say things he could never get away with in more conventional dramatizations. The weekly tales remain memorable for allowing the viewer to enter "the middle ground between light and shadow, between science and superstition," which lay "between the pit of man's fears and the summit of his knowledge."

The Twilight Zone added two more Emmys (Outstanding Writing Achievement in Drama) to Serling's already impressive collection of tributes. His sixth and final Emmy came during Twilight Zone's run, for the 1963 Bob Hope Presents the Chrysler Theatre segment "It's Mental Work" (also for Outstanding Writing Achievement in Drama, Adaptation). But it was with The Twilight Zone that Serling reached the peak of his success, for most of what followed after this period would be below Serling's personal standard.

In the fall of 1965, CBS premiered Serling's The Loner, a half-hour, post–Civil War western about a wandering, introspective cowboy in search of life's meaning, starring Lloyd Bridges. The story behind The Loner went back almost five years to the time when Serling believed that his Twilight Zone would not be renewed by CBS, and as an alternative he came up with a one-hour pilot script about a character he called the Loner, heading west after the Civil War. CBS turned it down. However, around the same time, The Twilight Zone was given the go-ahead for another season, so The Loner script was shelved. When in early 1965 CBS was looking for a half-hour western for their Saturday night schedules, independent producer William Dozier, remembering Serling's The Loner proposal from his CBS days, sold the package (now consisting of Serling as writer, Bridges as star, and Dozier as producer) to the network. The series of 26 episodes (14 of them by Serling) opened to poor ratings and lukewarm reviews. When CBS demanded more "action" (meaning less character and less motivation and more "running gun battles"), Serling refused to comply, causing a rift between the writer and the network. The Loner left the schedules in April 1966.

For the next few years, Serling occupied himself with various projects and programs. He served a two-year term as president of the National Academy of Television Arts and Sciences, hosted TV entertainment shows (The Liar's Club, 1969; Rod Serling's Wonderful World of..., 1970), and turned, once again, to screenplay work with adaptations of novels for Planet of the Apes (1968; based on the novel by Pierre Boulle) and The Man (1972; from the novel by Irving Wallace, which had actually started out as a telefilm). Not unlike other 1950s TV writers, Serling had based his earliest screenplays on his own television work: Patterns (United Artists, 1956), The Rack (MGM, 1956), Incident in an Alley (United Artists, 1962), and Requiem for a Heavyweight (Columbia, 1962).

In 1969, he was approached by producer Aaron Spelling to write a pilot for a series called The New
People (ABC, 1969–70), featuring an assorted group of young Americans stranded on a South Pacific atoll. Serling delivered his script but later commented on the Lord of the Flies theme that "it may work, but not for me." NBC's horror-fantasy anthology Night Gallery (1970–73) was to occupy his time during the early 1970s, following the pilot TV movie (NBC, 1969), adapted from his short-story collection (The Season to Be Wary), published in 1967. Based on the three stories (one directed by the young Steven Spielberg), the Mystery Writers of America presented him with their special Edgar Award for the suitably suspenseful scripts. Also known as Rod Serling's Night Gallery (he acted as host and sometime contributor), the series failed to come anywhere close to his Twilight Zone sense of "seriousness," as Serling had hoped, and the show quickly deteriorated, according to Tim Brooks and Earle Marsh, into "the supernaturally equivalent of Love, American Style." There were, however, two Serling episodes that remain outstanding for their sense of compassion and morality: "They're Tearing Down Tim Riley's Bar" and "The Messiah on Mott Street"; both were nominated for Emmys. After Night Gallery was canceled in 1973, Serling retreated to Ithaca College, in upstate New York, and taught writing. Teaching the art of writing sustained him more than anything else during the last few years of his life. The Twilight Zone, in constant reruns, remains a cultural milestone to Serling's art, craft, and practice.

Sesame Street
Children's Educational Public Television Program

The brainchild of documentary film producer Joan Ganz Cooney, Sesame Street's mission was to help prepare children for school, especially underprivileged inner-city children. Cooney and Carnegie Corporation Vice President Lloyd Morrisett held what might then have been considered a radical belief: that the much-maligned medium of television could be used to address a widespread educational need. They hoped to diminish the disparity in opportunity created by poverty and make a difference in the lives of children.

Eight million dollars in grants from foundations and the federal government were allocated for the research, planning, and production of one season of one-hour shows. Cooney headed the show's production unit, founding the Children's Television Workshop (CTW) in 1968. To the delight of its creators and funders, the show was an overnight success when it first aired on November 10, 1969. Over half the nation's 12 million preschoolers saw it during its first six-month run.

Sesame Street was designed as an experimental research project—a collaboration between television producers, educators, researchers, psychologists, sociologists, child development experts, artists, writers, and musicians. From the beginning, it was a curriculum-driven program emphasizing cognitive, social, emotional, and physical development. Every segment or song was designed to educate young viewers about a specific lesson, and every year the curriculum, created by psychologists and educators, has changed to remain current with the latest findings and suggestions of preschool experts. Young viewers explore letters and numbers as well as subtle but significant messages about love, life, family, and friendship.

Maintaining an intricate balance between education and entertainment was a constant challenge during the show's development. As material was produced, it was tested on target audiences for appeal and comprehension. The creators initially wanted a show with no fantasy and thus created the urban street setting. When the show was pilot tested in Philadelphia, however, it was poorly received. Researchers discovered that kids lost interest during the street segments and concluded that combining fantasy with reality was necessary.

Jim Henson's Muppets, built especially for TV, were used to entertain while fulfilling curriculum needs. Initially, the Muppets were not intended to be included in the street scenes but were to appear only in taped inserts between street segments, animations, and films. Researchers found, however, that children paid attention only when animation and Muppets appeared and concluded that Muppets were integral to the success of the program. Since the first nationally aired episode, Muppets have interacted with the humans as well as among themselves in their own segments.

Big Bird and Oscar were, respectively, the first Muppets to appear. Big Bird, operated since the first episode by Carroll Spinney, represents a six-year-old and, like most of the Muppets, acts as a surrogate child, asking questions that kids might ask adults in real life.

Other original Muppets included Ernie and Bert, Grover, Kermit the Frog, Cookie Monster, and Oscar.
the Grouch, the trash-can resident whose role is to help kids understand that negative feelings such as anger and irritability are natural. Elmo, representative of a three-and-a-half-year-old, joined the Muppet cast in 1979. In 1999, “Elmo’s World” was added as a daily 15-minute segment that closes each hour. It broke new ground in electronic animation while helping children learn to explore their world.

Some of the early cast of human characters, including Bob (Bob McGrath) Susan (Loretta Long), Maria (Sonia Manzano), and Luis (Emilio Delgado), continue as cast members. Since 1971, Linda Bove has used sign language and provided a positive role model for hearing and nonhearing kids. Bove’s is the longest-running role of any physically challenged person in a TV series. Among child performers, the show has always featured children from local elementary schools, mostly from disadvantaged neighborhoods.

Over the years, Sesame Street increasingly confronted some of life’s serious problems. In 1982, the producers used the death of actor Will Lee (fix-it-shop proprietor Mr. Hooper) to address the questions that children inevitably ask when someone dies. In 2001, a series of episodes dealt with rebuilding after a disastrous hurricane. The show also acknowledged marriage, pregnancy, and parenthood with Maria and Luis, who married on the show.

Sesame Street has become the most widely watched TV series in the world. Taped at Kaufman Astoria Studios in Queens, New York, it appears several times daily on more than 300 Public Broadcasting Service (PBS) stations across the United States. It has been adapted into several international productions, reflecting local languages, customs, and educational needs, and is aired in more nearly 150 countries. Seventy percent of American preschool children watch Sesame Street at least once a week. Since the beginning, the show has also attracted an adult audience with its “Who’s Who” of singers and actors and parodies of grown-up entertainment (e.g., “Monsterpiece Theater”). The show has hosted more than 250 celebrity guests.

Sesame Street also sets the record for being the most researched show in television history with more than 1,000 studies on record affirming the show’s efficacy and impact. Several establish that educational television makes lasting, measurable contributions to learning. One study concluded that teens who watched Sesame Street when younger had better grades in school, read more books for pleasure, had higher levels of achievement motivation, and expressed less aggressive attitudes than those who watched TV rarely or not at all.

Sesame Street has won 76 Emmys, more than any show in history. It has also earned Grammys, Peabody Awards, Parent’s Choice Awards, the Prix Jeunesse International, a Clio Award, and Action for Children’s Television Special Achievement Awards. In its 33rd season in 2002, the show underwent format changes in order to compete with other shows that were aimed at two- to four-year-olds.

Lesser, Gerald, Children and Television: Lessons from Sesame Street, New York: Random House, 1974
Sesame Workshop is a nonprofit organization created in 1967, as the Children’s Television Workshop (CTW), for the purpose of producing the educational program Sesame Street. To emphasize that the organization’s mission has moved beyond television production only, the workshop’s name was changed to its present form in June 2000.

CTW was headed by Joan Ganz Cooney, a television producer who, with Lloyd Morrisett of the Markle Foundation, attracted funding from federal and private sources, including the U.S. Department of Health, Education, and Welfare; the National Institutes of Mental Health; the Carnegie and Ford foundations; and the Corporation for Public Broadcasting. Sesame Street, designed to promote the intellectual and cultural growth of preschoolers (particularly disadvantaged preschoolers), revolutionized children’s educational television when it premiered in 1969 and established the CTW model for program development and research regarding children and television.

The “CTW model” refers to the unique process of educational program development at the workshop. The paradigm evolved under the direction of Cooney; Edward L. Palmer, director of research; and Gerald S. Lesser, chair of the CTW Board of Advisors. Each of the workshop’s series begins with extensive initial planning sessions involving producers, researchers, content experts, and advisers. The concepts developed in these sessions are then translated into program segments and pretested with the target audience. Frequently, the testing extends for lengthy periods prior to actual production so that producers can see how the audience reacts to the educational messages embedded in the programs.

In preparing for Sesame Street, for example, the research and design focused on the demonstrable ability of the program’s elements to attract attention, appeal to the audience, and be comprehensible. Researchers assessed the attention-holding power of material by presenting content in competition with potential distractions. The tactics that elicited the most interactivity among viewers were explored further. The research concluded with tests to assess what appropriate audiences recalled about the programming. As a result of these procedures, Sesame Street went on air with very specific attention-holding tactics, such as fast movement, humor, slapstick, and animation. It was packaged in a magazine format and presented a carefully planned curriculum that focused on teaching letters and number skills.

Program development at the workshop does not stop when programs are broadcast. In addition to the unusual attention to formative research, the CTW model also includes a strong commitment to summative research; as part of its summative research plan, the Educational Testing Service (ETS), was commissioned to evaluate Sesame Street. In a series of studies published by ETS in 1970 and 1972, researchers Ball and Bogatz found that viewing the program had a significant impact on test subjects and offered evidence of the development of a positive attitude toward school among those subjects. In a 1976 study, Cook and Connor discovered that parental encouragement was vital to learning and that advantaged families were more likely to watch Sesame Street, thus ironically arguing that the gap between that group and the disadvantaged was not narrowed by the availability of the program.

Broadcast continuously in the United States since 1969, Sesame Street is clearly the workshop’s outstanding success. From its beginning as a weekday show designed to teach thinking skills and factual knowledge such as letters and number skills, Sesame Street’s curriculum has been broadened to include goals such as reasoning, bilingual skills, acceptance of special needs, ecology, and health. The program is viewed by almost half of all U.S. preschoolers on a weekly basis.

Versions of Sesame Street have been broadcast in more than 40 countries, with more than 20 showing the national editions of the program in 2002. The international productions share the U.S. programs’ commitment to teaching learning skills and values, such as tolerance and kindness, but are specially tailored for the children in the nation or region in which they are broadcast. For example, the Egyptian show emphasizes the educational needs of girls, and, in the 2002–03 season, the South African version included a Muppet child living with AIDS. The Israeli–Palestinian coproduction begun in 1998 portrayed friendship and tolerance between Israeli and Palestinian Muppets and presented
Sesame Workshop

segments in both Hebrew and Arabic. However, by 2002, the coproduction (which now included Jordan as well) had eliminated stories about Arabs and Israelis interacting and changed its name to *Sesame Stories*. The changes reflected the producers' conclusion that the heightened conflict between Israel and the Palestinian Authority made too unrealistic the notion of a street where the two groups would meet as peaceful neighbors.

Following the success of *Sesame Street*, CTW went on to produce a number of other major educational programs, including *The Electric Company*, which premiered in 1971 and was in production for a decade. *The Electric Company* emphasized symbol and sound analysis and meaning in a half-hour program designed to help slower readers catch up and good readers reinforce their skills. *The Electric Company* used the CTW model, a magazine format, and a variety of entertaining and attention-grabbing production techniques. Formative research for the program included innovative eye-movement and eye-contact measures of appeal and attention. ETS evaluation found that *The Electric Company* fostered significant positive effects, particularly for the youngest target viewers. *Feeling Good*, a 24-episode experimental series, was programmed in 1974, designed to examine health issues and targeted particularly for young parents and low-income families. Funding difficulties and low ratings forced the program to be produced in stages with considerable format changes. Low public awareness of the program seemed to contribute to lack of demonstrable effects.

*3-2-1 Contact*, a 65-program series for 8- to 12-year-old children, premiered in 1980 and focused on science and technology. The goals were to promote scientific thinking, participation in science activities, and awareness of science as a career, particularly for women and minority children. It used a magazine format with continuing features such as a mystery/adventure dramatic component. Research by Mielke and Chen in 1980 and 1983 found *3-2-1 Contact* attractive to children, who responded particularly positively to the drama format used in the "Bloodhound Gang" segments.

*Square One TV* premiered in 1987 with the goal of increasing problem-solving ability and a positive attitude toward mathematics among 8- to 12-year-old children. Format features included Mathnet, game show parodies, and commercials. The program covered mathematical concepts from estimation through graphics, probabilities, and geometry. CTW research showed that viewers in the target age-group enjoyed improved problem-solving ability and more positive attitudes toward mathematics.

*Ghostwriter*, a series focusing on writing skills, premiered in 1992. The series' appeal was built around a computer that provided "ghostlike" clues that enabled a group of young people to solve problems. Of these workshop programs, only *Sesame Street* is still in production, but because there is always a new audience of children available, most of the programs can still be seen. These are only a sampling of the workshop's major projects. The workshop continues to produce many other television programs, including the recent animated series *Dragon Tales* and *Sagwa*, both intended for preschool viewers.

By the 1980s, many of the funds for CTW were generated from *Sesame Street* product sales, the Sesame Place Amusement Park, and *Sesame Street Live*, a touring theatrical production. CTW became an unhappy participant in the struggles over Public Broadcasting Service (PBS) funding in the mid-1990s, when the financial success of *Sesame Street* was used as an example of why public funding was not needed to support educational children's programming. Despite such difficulties, the workshop—and *Sesame Street* in particular—remain a hallmark of children's programming in the United States. In the early 21st century, Sesame Workshop continues to expand its efforts to educate and entertain children. Among other ventures, it presents an expansive website replete with interactive games for children, suggestions for crafts and other forms of creative play, advice for parents, features about members of the *Sesame Street* family and characters from other series, as well as information about the workshop, its mission, and its products. The workshop has also partnered with Nickelodeon to create a commercial-free, educational cable channel. Between 6:00 A.M. and 6:00 P.M., the channel is called Noggin and offers programming for preschool children; during the other 12 hours of the day, the channel is called The N and shows programs for older children and teens. Featuring new and classic programs produced by the workshop and by Nickelodeon, Noggin/The N reached 22 million households in 2001. Like Sesame Workshop, both Noggin and The N complement their TV offerings with interactive Internet sites.

Eric Sevareid was one of the earliest of a group of intellectual, analytic, adventurous, and sometimes even controversial newspapermen handpicked by Edward R. Murrow as CBS Radio foreign correspondents. Later, Sevareid and others of this elite band of broadcast journalists, known as "Murrow's Boys," distinguished themselves in television. From 1964 until his retirement from the Columbia Broadcasting System (CBS) in 1977, Sevareid carried on the Murrow tradition of news analysis in his position as national correspondent for the CBS Evening News. There, his somber, eloquent commentaries were either praised as lucid and illuminating or criticized for sounding profound without ever reaching a conclusive point.

Sevareid’s image as a scholarly commentator on the CBS Evening News was belied by an early career in which he was something of a swashbuckler. Sevareid was working at the New York Herald Tribune’s Paris office when his writing abilities caught the eye of Murrow, who offered him a job. Sevareid would later say of those early years, “We were like a young band of brothers in those early radio days with Murrow.” In his final 1977 CBS Evening News commentary, Sevareid referred to Murrow as the man who “invented me.”

As one of “Murrow’s Boys” during World War II, Sevareid “scooped the world” with his broadcast of the news of the French surrender in 1940. He joined Murrow in covering the Battle of Britain, he was lost briefly after parachuting into the Burmese jungle when his plane developed engine trouble while covering the Burmese-China theater, he reported on Tito’s partisans, and he landed with the first wave of U.S. troops in southern France, accompanying them all the way to Germany.

In 1946, after reporting on the founding of the United Nations, Sevareid wrote Not So Wild a Dream, which appeared in 11 printings and became a primary source on the lives of the generation of Americans who had lived through the Depression and World War II. For the 1976 edition of the book, he wrote, “It was a lucky stroke of timing to have been born and lived as an American in this last generation. It was good fortune to be a journalist in Washington, now the single news headquarters in the world since

ancient Rome. But we are not Rome; the world is too big, too varied.”

Always considering himself a writer first, Sevareid felt uneasy behind a microphone and even less comfortable with television; nevertheless, he did such early Sunday “news-ghetto” programs as Capitol Cloakroom and The American Week and served as host and science reporter on the CBS series Conquest. As head of the CBS’s Washington bureau from 1946 to 1959, Sevareid was an early critic of McCarthyism, and, in one of the few even mildly critical comments he ever made about his mentor, he observed that Murrow came to the issue rather late.

Serving as CBS’s roving European correspondent from 1959 to 1961, Sevareid contributed stories to CBS Reports as well as serving as moderator of series such as Town Meeting of the World, The Great Challenge, Where We Stand, and Years of Crisis. In addition, he also contributed to the coverage of every presidential election from 1948 to 1976. However, one of Sevareid’s scoops of those years, his 1965 exclusive interview with Adlai Stevenson shortly before Stevenson’s death, for which Sevareid won a New York Newspaper Guild Page One Award, was not broadcast over CBS, appearing instead in Look magazine.

From 1963 until his retirement, Sevareid appeared on the CBS Evening News with Walter Cronkite. During that period, his Emmy and Peabody Award-winning two-minute commentaries, with their penchant to elucidate rather than advocate, inspired those who admired him to refer to him as the “Gray Eminence.” On the other hand, those who were irked by his tendency to overemphasize the complexity of every issue nicknamed him “Eric Severalisides.” Sevareid himself said that as he had grown older, his tendency was toward conservatism in foreign affairs and liberalism in domestic politics. Despite this perspective, he commented after a trip to South Vietnam in 1966 that prolonging the war was unwise and that a negotiated settlement was advisable. His commentary on the resignation speech of President Richard M. Nixon (“Few things in his presidency became him as much as his manner of leaving the presidency”) was hardly as perceptive.

In addition to sustaining the Murrow tradition of news commentary at CBS, Sevareid, in keeping with another Murrow tradition, interviewed noted individuals such as West German Chancellor Willy Brandt, novelist Leo Rosten, and many others on the series Conversations with Eric Sevareid. In something of a spoof of this tradition, he also had a conversation with King George III (played by Peter Ustinov) titled The Last King in America.

After his retirement, Sevareid continued to be active as a CBS consultant and narrator of shows such as Between the Wars (syndicated, 1978), a series on U.S. diplomacy between 1920 and 1941, Enterprise (Public Broadcasting Service [PBS], 1984), a series on American business, and Eric Sevareid’s Chronicle (syndicated, 1982). His final appearance before his death in 1992 was on the 1991 CBS program Remember Pearl Harbor. Needless to say, Sevareid’s presence at CBS was a link to the Murrow tradition, long after Murrow himself and many of his “Boys” left the network and after that tradition ceased to have significant practical relevance at CBS News.

Sex
Australian Lifestyle Show

Sex, also known as Sex with Sophie Lee, was a "lifestyle" show launched in Australia in 1992. Produced by Tim Clucas for the Nine Network, the show went to a second series in 1993 with a new presenter, the comedian Pamela Stevenson. Sex can be seen as the first show on Australian TV to try to modernize sexual attitudes and make sex a vital topic of mainstream public discussion in the HIV era, or it can be seen as an attempt by commercial television to consumerize sex itself, making sexual preference into a supermarket choice, and to use public education as an excuse for exploitative television.

The show was launched to phenomenally high ratings (a 32 share), largely on the lure of its presenter Sophie Lee's own reputation for sexiness. But the early episodes succeeded in mixing straightforward advice about common problems with some noteworthy firsts for prime-time television, especially by showing human reproductive organs, both male and female, on screen. Most notably, even though its own format comprised traditional magazine-style journalistic and "expert" segments, linked by a studio anchor in glamorous evening wear, Sex crossed one of television's most policed generic boundaries: characters (fiction) can have sex, while people (fact) can only talk about it. The presentation of ordinary people being sexual on screen and the screening of sexualized bodies (even if only in bizarre slow-motion "reconstruction" mode) was enough to give the show an unsettling, innovative feel and to ensure that Sex provoked widespread discussion in the press and popular magazines as well as rating highly. Not all reaction was positive; for instance, the president of General Motors Holden announced that the car company would not advertise during Sex because it wanted its products to be associated with "wholesome" topics.

Sophie Lee became progressively disenchanted with the lack of control she had over the items she was contracted to introduce, segments that began to interpret "sex" in terms of ratings potential rather than public utility. She left the show at the end of its first season, to be replaced by Pamela Stephenson, the Australian-born comedian best known for the 1970s British Broadcasting Corporation (BBC) series Not the Nine O'clock News. Stevenson recorded her links for Sex in a studio in Los Angeles, clearly regarding it as her brief to supply the "nudge, nudge, wink, wink" element. After the departure of Lee, without anyone on or behind the screen to argue for the show's importance in changing public attitudes to sex, the series slid from interesting experiment to unattractive exploitation and was canceled by the Nine Network after two seasons, to be replaced by safer lifestyle shows about money, home improvement, tourism, and gardening.

Sex and the City
U.S. Comedy Series

*Sex and the City* debuted on Home Box Office (HBO) in the summer of 1998. Its immediate success played a crucial role in the channel’s development of original series by providing female-centered programming in contrast to the masculinity that defined programs such as *Oz* and *The Sopranos*. Though the series first drew attention for its risqué depiction of sex and nudity, critics and viewers quickly recognized significant emotional depth and complexity, qualities that gave its stories unmatched resonance for some audiences. In some respects, *Sex and the City* continues the “new woman” comedy dating to early examples such as *That Girl* and *The Mary Tyler Moore Show*. But the series’ unprecedented frank examination of the sexual desires and emotional needs of four distinct female characters helped it achieve the status of “watercooler” conversation for the small but specific demographic that subscribes to HBO.

Executive producer and writer Darren Star (*Beverly Hills, 90210*, and *Melrose Place*) adapted the series from a book of the same title written by Candace Bushnell that was based on her *New York Observer* newspaper column. Bushnell serves as the model for the character of Carrie Bradshaw, the actual “sexual anthropologist” who writes stories about sex and socializing in New York. The series reduces a much larger collection inhabitants in Bushnell’s book to Carrie’s three female friends: Charlotte, Miranda, and Samantha. Despite an offer from the American Broadcasting Company (ABC), Star chose to produce the series for HBO, recognizing that the premium cable channel could provide the opportunity for “elite” qualities in writing and production as well as provide a budget ($900,000 per episode) with which he could employ independent directors and writers. HBO also allows considerable freedom regarding content, allowing the series to derive humor from the sexual adventures of the four characters rather than from the double entendres and veiled discussion about sex typical of broadcast network sitcoms. Airing on commercial-free HBO also freed the show from a narrative structure dictated by commercial breaks and restricted to 23-minute episodes.

As the title suggests, issues of sex and dating provide the primary plots in *Sex and the City*. The series’ quartet of main characters—all single, white women in their 30s—experience and discuss, quite explicitly, the singles’ dating scene in New York City. Although the women are similar in many ways, each brings a distinct perspective to the series. Carrie, a newspaper columnist who writes about sex and dating, serves as the series narrator. In early episodes, this narration occurred as Carrie directly addressed the camera. In later episodes, her narration is provided through voice-over. Her friends often become subjects of her “research,” and their dilemmas and situations inspire column topics. Samantha owns a public relations firm and is the most sexually carefree of the group. Often depicted as content to participate in endless one-night stands, she has no aspirations to marry or have children. Charlotte managed an art gallery until she married (then divorced, then remarried) and maintains a desire for a more conventional life of marriage and motherhood. Miranda, a corporate attorney, plays the realist and cynic to Samantha’s excessively sexual identity and Charlotte’s idealist fantasies. After an unexpected pregnancy, she embarks on single motherhood at the end of the series’ fourth season, only to marry her child’s father, Steve, in the sixth and final season.

With the exception of Carrie, the series rarely focuses on the characters’ careers. The primary action takes place in the bars, restaurants, and clubs where the

women meet for breakfast or lunch, have drinks, or spend their evenings. Although episodes often begin with the four meeting together, they commonly appear separately yet in stories with parallel themes, throughout the episode, with Carrie narrating transitions. The characters often walk and talk along the streets of Manhattan, enabling episodes to develop through dialogue more than action. The specific topics of Carrie’s columns usually structure the episode. Each begins with a question: Can you be friends with an ex-boyfriend? How do you know if you are good in bed? Have New Yorkers evolved past relationships? Can you change a man? Why is there tension between married and single people? Why do men like to date models? Throughout the episode, each woman “answers” the question according to her personality and characterization.

The four remain the primary characters throughout the series, although a few boyfriends make repeat appearances, particularly in the later seasons in which the women explore long-term relationships. Charlotte meets, marries, and separates from Trey MacDougal during the third season; they later rekindle their relationship but ultimately divorce the next season. She falls in love with her divorce attorney, Harry Goldenblatt—a man who deviates significantly from her ideal beau—and converts to Judaism before marrying him in the final season. Her desire to have a family led to the divorce from Trey, and reproductive problems continue to ail her after marrying Harry. Miranda’s balance of career and motherhood as a single parent becomes a primary storyline for her character as she and Steve Brady negotiate their relationship with each other and their roles as parents. Samantha eventually experiences a string of longer relationships, first with a woman, then with a male hotel tycoon, and finally with a much younger male model and actor. Throughout the relationships, she struggles with her desire to remain independent despite a simultaneous and contradictory desire for companionship. Carrie becomes engaged to Aidan Shaw, who briefly moves into her apartment. An affair with a recurring character, Mr. Big, leads to the end of the relationship with Aidan, but she and Big establish a friendship that survives his relocation to California. In the series’ final season, Carrie meets Aleksandr Petrovsky, a significantly older Russian artist.

The first season of Sex and the City consisted of only 12 episodes, followed by 18 in each of the subsequent seasons. Once established, the series regularly drew an audience of approximately 6.4 million households, a strong performance for a cable network but significantly smaller than broadcast networks at the time. The series garnered Emmy Award nominations for Outstanding Comedy Series, writing, acting, directing, casting, and costumes and won the award for Outstanding Comedy Series in 2001.

Sexual Orientation and Television

Once the freeze on television broadcast licenses was lifted by the Federal Communications Commission (FCC) in 1952, broadcast stations proliferated throughout the United States. Additionally, the FCC set the regulation standards for the mass production of television receivers, making them relatively inexpensive to produce and affordable for the middle-class American public. Having been a mostly East Coast, upper-class phenomenon before 1952, television broadcasting quickly became an economically profitable industry catering to perceived middle-class tastes.

Throughout the 1950s and 1960s, the television broadcast networks implicitly constructed the mainstream viewing public as replications of the idealized middle-class nuclear family, defined as monogamous, heterosexual couples with children. In response, the overwhelming trend was to provide programming targeted toward this consumer group. To a large degree, this construction stemmed from the larger context of American society, in which the ideals of heterosexuality and family dominated the overall hierarchy of sexual orientation.

However, this assumption was reinforced because the mode of distribution of programming and the measure of economic success were significantly different for television broadcasting than for most other forms of popular culture. For most other popular culture industries, consumers had to actively purchase a product (a movie ticket, a record, or a book). Economic success and popularity were determined by the number of sales of the cultural product. Within the American broadcasting context, however, the programming was distributed free of charge to anyone with a television receiver that could pick up the broadcast signal. The networks generated profits through advertising, selling the viewing audience as a potential target for commercial messages. In this mode of distribution, a network’s success was determined by the number of viewers it attracted, not the number of programs sold. This interaction among the networks, advertisers, and the viewing audience developed into a very complex economic relationship.

Until the early 1970s and the introduction of demographic measurements, the networks quantified a mass audience as an index of a program’s popularity to set commercial rates for advertisers. Since most television use by the American public has been and continues to be in a domestic environment, the networks and adver-
tisers easily assumed that the viewing audience in its values mirrored the idealized middle-class nuclear family of the 1950s. Given this institutional construction of the television viewer, the networks produced and broadcast a plethora of programs built around the values and concerns of the contemporary nuclear family. Series such as _I Love Lucy_, _Father Knows Best_, _Leave It to Beaver_, and _The Donna Reed Show_ developed scripts explicitly exploring gender and sexual roles in the context of the 1950s. For example, _Father Knows Best_ often defined appropriate and inappropriate gender behavior as Jim and Margaret Anderson negotiated their marital and implied (hetero)sexual relationship. Explicit discussion of sexual behavior was forbidden. In addition, the Anderson children were groomed for heterosexuality on a weekly basis as they entered into the adolescent dating arena. In the context of the series, same-sex romantic attraction was not offered as a viable or legitimate option for offspring Betty, Bud, and Kitten. Nor did episodes deal with many heterosexual options outside of conventional coupling, limited to traditional heterosexual norms.

Even series that were not located in the contemporary family milieu of the 1950s or 1960s reinforced a narrow range of heterosexual choices. In a series such as _Gunsmoke_, with its surrogate family, traditional heterosexual coupling was the status quo. What sexual tension existed in the series surfaced between Marshall Matt Dillon and saloon owner Miss Kitty, not between Matt and his deputy sidekick Chester. Even overt sexuality between Matt and Miss Kitty was seldom displayed in the series. After all, how was the wild expanse of the western prairie to be tamed if the product of sexuality was pleasure rather than population growth? Given the baby-boom mentality of the 1950s and 1960s, the sexual orientation of _Gunsmoke_'s characters and their sexuality replicated the dominant values of American society, at least as they were perceived by network programmers and advertisers.

This perception about sexuality began to shift slightly by the early 1970s as pleasure became more acceptable as the foundation for sexual activity. Even so, sexual orientation continued to be overwhelmingly defined as heterosexual, although an occasional gay or lesbian character began to make an appearance.

Several factors account for this cultural breakthrough. At this time, the Prime-Time Access Rule forced the networks out of the business of program production. As a result, the networks began to license programming from independent production companies, such as Norman Lear's Tandem Productions and MTM Enterprises. These independents were willing to address subject material, including explicit sexual pleasure and homosexuality, that had previously been ignored by the networks.

Additionally, the networks and advertisers began to shift their conception used to market the viewing audience. In the ratings competition between the National Broadcasting Company (NBC) and the Columbia Broadcasting System (CBS) during this same period, undifferentiated mass numbers as the target of advertising and the basis for determining commercial rates gave way to the first wave of demographic marketing toward a younger, urban rather than older, rural audience. In conjunction with the mixie of independent program producers, sexuality, including explicitly gay characters, began to surface in programs because these young, urban viewers, at least in the perception of the networks and advertisers, were less inclined to take offense with potentially controversial topics.

Images of gay men and lesbians began to appear in fictional programming during the early 1970s for another reason as well. Culturally, gay men and lesbians became more visible in American society after the Stonewall riots in June 1969, a date now celebrated as a watershed moment of the modern gay rights movement. As gays and lesbians entered the struggle for social acceptance and legitimization within mainstream discourse, the emergence of gay characters became part and parcel of this burgeoning social consciousness. In response to a newfound possibility of representation, gay activist groups such as the National Gay Task Force (NGTF), formed in 1973, attacked any outright negative mainstream media images of gay men and lesbians.

Initially, single-episode gay characters, at best self-destructive and at worst evil, were used as narrative plot devices to create conflict among the regular characters of a prime-time series. This was not an acceptable representation for most gay activists. The first major conflict between gay activists and the networks occurred over just such a depiction in "The Other Martin Loring," an episode of _Marcus Welby, M.D._ during the 1973 broadcast season. The confrontation focused on the dilemma of a closeted gay man worried about the effect of his homosexuality on his family life. Welby's advice and the resolution to the narrative conflict finally rested on the repression of sexual desire. As Kathryn Montgomery (1989) points out, this initial conflict had little effect on preventing the broadcast of the episode. However, it did open the door for continued discussion between gay activists and the networks concerning subsequent representations.

Indeed, the networks began to solicit advice about gay representation before programming went into actual production. By 1978, the NGTF provided the networks a list of positive and negative images that it
considered to be of greatest importance. From the negative perspective, the organization wanted to eliminate stereotypically effeminate gay men and butch lesbians as characters as well as inhibit the portrayals of gay characters as child molesters, mentally unbalanced, or promiscuous. In contrast, positive images would include gay characters within the mainstream of the television milieu. These images would reflect individuals performing their jobs well, who were personable and comfortable about their sexual orientation. Additionally, the NGTF asked to see more gay couples, more lesbian portrayals, and instances where gayness was incidental rather than the focus of a narrative controversy centered on sexual preference.

As one manner of achieving these positive goals, gay activists suggested that continuing regular gay or lesbian characters be used within a series format, expanding beyond the plot function of a "problem" that needed to be solved and eliminated. However, the inclusion of a recurring gay character created problems of its own. Story editors and scriptwriters had to maintain a delicate balance between creating gay characters who were too extreme in their behavior so as to be offensive to heterosexual mainstream viewers or were so innocuous that they become nearly indistinguishable in their gayness. Several series, beginning with *Soap* and *Dynasty* and more recently *Doctor, Doctor* and *Melrose Place*, have included regular gay characters as part of their narrative foundation, with varying degrees of success. Often within these series, the gay character is isolated from any connection to a larger gay community and lacks any presentation of overt sexuality. While it has certainly been acceptable for heterosexual individuals and couples to engage in displays of affection, it has been untenable, until recently, for gay characters to activate similar behavior.

Despite this glaring drawback, gay characters as series regulars have functioned differently in the narrative context than in a one-shot episodic appearance. For the most part, recurring gay characters have been comfortable with their sexual identity. The possible exception is Steven Carrington, oil heir apparent in *Dynasty*, who fluctuated in his sexual orientation from season to season. While a series regular’s gayness could still initiate some problems in a series, his or her sexuality was no longer an outside problem. Rather, the series regular could provide a narrative position whereby sexual "otherness" could be used to discuss and critique the dominant representation of both homosexuality and heterosexuality. Contextually, adaptation to rather than the elimination of homosexuality became the narrative strategy.

Despite *Dynasty’s* wavering on the subject of homosexuality, early installments of the series illustrate this narrative shift. The gay subplots of this prime-time soap opera often performed a pivotal role in exposing the contradictions of heterosexual patriarchy. An excellent example is when Blake Carrington, the series’ patriarchal figure, stood trial for the death of son Steven’s gay lover. The courtroom setting of this particular subplot created an ideological arena for Steven to critique his father’s homophobia, patriarchal dominance, and sense of socially constructed gender roles from an explicitly gay perspective. As can be seen by this example, a gay man or lesbian who appears as part of the regular constellation of a series’ cast naturalizes gayness within the domain of mainstream broadcast narratives, thus allowing that sexual otherness a cultural voice of its own. In some instances of this process of naturalization, these fictional gay characters face many of the same problems that their heterosexual counterparts encounter. This has not necessarily meant that their sexual orientation has been ignored but rather that it has been woven together with other concerns to create multidimensional, sometimes contradictory characters that reflect some of the experience of gay men and lesbians in American society.

Since 1973, the broadcast networks, program producers, and gay activists have maintained an ongoing working relationship with each other. The Alliance for Gay and Lesbian Artists in the Entertainment Industry, an internal industry activist organization, has provided an important connection with outside gay activists. Often, gay men or lesbians within production companies have alerted activists about potential problems with plotlines or characters. Many producers and scriptwriters now elicit opinions from gay and lesbian activists in the preproduction process, thereby circumventing costly confrontations once a production is under way. In addition, network broadcast standards and practices departments have internalized many of the activist’s concerns and criticisms, thus pressuring program producers to eliminate potential trouble spots from scripts. The activists have also learned to praise producers, directors, and scriptwriters creating appropriate gay-themed programming with positive reinforcement, such as yearly awards and congratulatory telegrams, letters, and e-mail messages. Because of this de facto system of checks and balances, antagonistic confrontations seldom arise between gay activists and the television broadcast industry.

The gay activists’ success in dealing with the networks and program producers has also activated a strong response from religious and political conservatives since the mid-1970s. As Gitlin (1983) argues, these conservative social forces have regarded the social inroads made by gay men and lesbians as a threat to their own social power and deeply embedded patri-
archal values, including traditional conceptions of the family, gender roles, and heterosexuality. Any positive representation of homosexuality (or even bisexuality) undermines the legitimacy of these traditional values. The conservative far right has been dominated by religious fundamentalists whites such as Jerry Falwell and Donald Wildmon as well as white antifeminists such as Phyllis Schlafly. Indeed, Wildmon heads the American Family Association (AFA), a formidable advocacy organization that monitors the television broadcasting industry's presentation of sexuality with a Bible-thumping fervor.

In contrast to the gay activists who have been more than willing to confront the networks and program producers directly about the representation of sexual orientation, the AFA has employed an indirect approach. Providing members with postcards pre-addressed to advertisers, the AFA has often threatened a boycott of consumer products manufactured by companies placing commercials within the broadcast of objectionable programming. While the direct, preemptive approach of the gay activists appears so far to have been more successful with the commercial networks than the postbroadcast method used by the AFA, the latter organization's efforts have produced some effect. For one thing, advertisers who have come under fire from the AFA have begun to consider placement of a commercial in potentially objectionable programming less lucrative than they might have previously.

As a response to advertisers' reluctance to place commercials in programs that include a positive discussion of homosexuality, the networks' broadcast standards and practices departments have codified some of the AFA's concerns about sexual orientation as a means to counter any negative criticism from conservative advocacy groups. For one thing, the positive portrayal of any physically romantic or sexual interaction between gay or lesbian characters has been exorcised, generally, from programming content. In addition, any gay-themed script must include at least one character who presents a critique of homosexuality to provide a balanced discussion of the subject. As a side note, the Gay and Lesbian Alliance Against Defamation (GLAAD), formed in the mid-1980s, has appropriated AFA's practice of sending out pre-addressed postcards. GLAAD has also urged individuals to send them to advertisers, praising their bravery in placing commercials in gay-themed programming.

At times, program producers and the networks have ended up at the center of a cultural tug-of-war between gay activists and conservative religious fundamentalists. Perhaps the best illustration of this predicament occurred in the summer of 1977. The American Broadcasting Company (ABC) had scheduled Soap for the fall lineup. The series was created by Susan Harris as a satire on both the nuclear family and the overdrawn angst of daytime drama. One of the regular characters was Jody Dallas, a gay man. In addition, the heterosexual characters engaged in a number of extramarital affairs, hardly reinforcing traditional monogamy. ABC previewed the initial episodes of the series for local affiliates and gay activists. Some disgruntled station owners alerted the National Council of Churches, the forerunner of the AFA, about the risqué content of the show. In addition, the conservatives felt that the inclusion of Jody Dallas condoned homosexuality. As a result of the conservative backlash, some affiliates refused to carry Soap. Conservative forces picketed stations that did air the satire. Under threat of a product boycott, several potential sponsors backed out of buying time in the series. Gay activists were not pleased with the premise of the Dallas character either. He was too much the gay stereotype. In addition, Dallas was not particularly satisfied with his sexual orientation as he planned a sex change operation.

In an attempt to appease both sides, Soap's producers adjusted the series after the first few episodes. Dallas's stereotypical elements were modified, nearly neutering the character in the process. In comparison to the other characters, his behavior became less explicitly sexual. Even so, he became more affirmative about his sexual orientation, dropping any desire to change his gender. Ironically, the more stable, less sexually outrageous Jody Dallas seemed to address conservative concerns about homosexuality as well. Without the overt presentation of Jody's sexual desire, apparently religious conservatives believed that the series did not condone homosexuality as strongly.

Throughout the 1980s and into the 1990s, opposing gay and conservative advocacy groups have continued to pressure the networks, program producers, and advertisers on the parameters of representation about sexual orientation. As in the case of Soap, gay and lesbian characters have usually appeared in a highly diluted form, nominally gay with perhaps a political stance but lacking sexuality. Only in a very few instances have these limits been successfully challenged, most notably in an episode of Roseanne, a domestic sitcom, and Serving in Silence: The Margarethe Cammermeyer Story, a made-for-television movie. In both instances, the cultural and economic clout of their respective production companies provided the impetus to include moments of intimacy and sexuality for lesbian characters. During the spring of 1994, Roseanne, as reigning prime-time diva and executive producer of her series, threatened to withhold an episode from ABC if it did not air with its lesbian kiss intact. The network initially balked but eventually broadcast the unedited episode rather than...
lose potential commercial profits from a top-ten series. The combined talents of Barbra Streisand, as executive producer, and Glenn Close, as additional executive producer and star, added production muscle to Serving in Silence. With their involvement, NBC gave the movie, dealing with both Cammermeyer’s fight to be reinstated into the military as an open lesbian and her blossoming romantic relationship with her lover Diane, a green light. With Streisand’s and Close’s involvement providing an aura of quality and legitimacy, this production opened the cultural space for moments of physical intimacy as integral narrative elements. Roseanne and Serving in Silence have been hallmarks in the presentation of gay and lesbian experience in American television broadcasting.

A watershed of sorts was reached in the 1996–97 broadcast season. On Ellen, a series based around stand-up comedienne Ellen DeGeneres, a number of early episodes dropped thinly veiled innuendoes regarding main character Ellen Morgan’s sexuality. For example, while shopping for a house, Morgan agrees with her real estate agent that a walk-in closet was as large as some apartments but that she would not want to live in it (which could be construed as a reference to being “in the closet,” that is, hiding one’s homosexuality). Writers peppered the series that season with double-entendre teasers, especially targeted for lesbian and gay viewers “in the know” about DeGeneres’s own sexual predilections. By March 1997, rumors became public knowledge as DeGeneres confirmed both her own status as a lesbian and the production plans to bring her sitcom character out of the television closet. Though initially reluctant to give the go-ahead for such an episode, ABC set the air date for “The Puppy Episode” for April 30, 1997.

Despite aggressive attempts by the AFA and other conservative social groups to promote a boycott of Disney and ABC, the broadcast of “The Puppy Episode” was extremely successful, garnering the highest ratings for Ellen or any other regularly scheduled series on ABC for the 1996–97 broadcast season. At this historical juncture, ABC’s promotional support, in conjunction with the overwhelming endorsement from other popular culture venues, did seem to promote the belief that “naming” oneself as gay was perfectly acceptable. “Behaving” gay became another issue altogether, as the conflicts between ABC and DeGeneres over program content and parental warnings in the fall of 1997 erupted into very public disagreements. When DeGeneres pushed for an on-screen romantic relationship that included a kiss, ABC balked. The very public conflict took its toll on comedienne DeGeneres as well as the overall tone of the series. By spring 1998, Ellen’s popularity had plummeted in the Nielsen ratings, the only measure of success that really mattered to the networks. The series was canceled in flurry of public accusations and recriminations.

With this programming incident freshly embedded in both the networks’ and the public’s consciousness, NBC’s inclusion of Will & Grace, another gay-centered sitcom, in its autumn 1998 Thursday night “must-see TV” lineup was somewhat surprising. Initially, Will & Grace’s narrative foundation was built on the enduring, and endearing, relationship between Will Truman, a gay man and successful lawyer, and Grace Adler, a heterosexual woman and his best friend since college. However, caustic secondary characters Jack McFarland, Will’s outrageous and self-centered gay friend, and Karen Walker, Grace’s wealthy, substance-using secretary, provide foils and broad contrasts to the title characters’ relatively more levelheaded (read “mainstream”) actions. Whether because of or in spite of the explicit “gayness” of the series, it has garnered audience favor, critical approval, and television industry esteem, with a number of Emmy wins. Indeed, that elusive on-screen gay kiss came to fruition during the series’ second season. When Will and Jack are disappointed when a heavily promoted kiss between two men on a fictional NBC series fails to materialize, the two march to network headquarters to protest. Though brushed off by a closeted public relations denizen, they enact their protest—a lengthy kiss—in front Al Roker, The Today Show weatherman, as he broadcasts live in front of Rockefeller Center.

Even so, broadcast television has yet to include a gay kiss that encompasses either a romantic or a sexual punch. However, given Will & Grace’s continued success, the potential for such a momentous event looms on the horizon in broadcast television. In contrast, the American version of the British series Queer as Folk has moved far beyond the passionate same-sex kiss to include presentations of relatively frank depictions of sexual interactions. However, those depictions tend to be less frankly graphic than those presented on the original U.K. series. In addition, the 15-year-old sexually active gay teenager in the U.K. series appears as a 17-year-old in the U.S. version.

While gay men and lesbians inside and outside the television industry have applauded these cultural steps forward, the gains are by no means secure, especially outside the commercial networks, where gay activists have less social and economic power. In the American social context of the 1990s, the struggle between gay rights activists and anti-gay rights advocates has reached a crescendo. Both sides have confronted each other over the legitimacy of sexual orientation in the political and legislative arenas, with neither side winning any clear legal victories. However, a conservative
shift has occurred in the political arena that could drastically impact gay and lesbian representation in non-commercial American public broadcasting. Because the federal government economically supports non-commercial broadcasting, funding for the Corporation for Public Broadcasting (CPB) can be reduced or eliminated altogether through the agendas of powerful political interests. Therefore, proactive intervention (techniques used by groups such as GLAAD with network representatives, program producers, and advertisers) has not worked as well in the noncommercial broadcast setting.

Once the bastion of liberal tolerance and a cultural podium for marginal social groups, the CPB has increasingly come under attack from conservative forces in Congress for precisely those reasons. Conservatives have threatened to eliminate funding and privatize CPB in response to the use of federal tax dollars to produce nontraditional programming, especially programming targeted to the gay community. Special programming such as Marlon Riggs’s Tongues Untied, an exploration of gay African-American men’s experiences with both homophobia and racism, and Masterpiece Theatre’s production of Armistead Maupin’s Tales of the City, a narrative set in the 1970s San Franciscan milieu of sexual experimentation, have been specific targets of conservatives. Both productions contained a fair amount of frank, adult language about sexuality and a modicum of nudity. Indeed, many Public Broadcasting Service (PBS) affiliates refused to air either program or, if they did broadcast the offerings, censored the material radically. Tales of the City generated enough controversy that conservative forces were able to pressure CPB to withdraw funding for the sequel, More Tales of the City.

As the social and political struggle over legitimization of gay rights accelerated in the mid-1990s, the inclusion and representation of gay men and lesbians in entertainment television programming continued to be a point of cultural conflict. Driven by the economic demands placed on network broadcasting as it competes with the relaxed standards on cable channels, programming broadened the parameters of acceptable content. Thus, the economic demands of commercial television may create an atmosphere for further presentation of alternatives to monogamous heterosexual orientation. In addition, the gay community has gained more interest from advertisers as a demographic social group with relatively more disposable income to spend. Indeed, some manufacturers of products, such as clothing, alcohol, and travel, have begun to produce print ads directly targeting gay men and lesbians. Similar advertising in television programming, specifically attracting a gay audience, is probably not far behind. In contrast, the strong shift to the conservative right in the political arena has already imposed government regulations on funding for the arts. The federal government has placed limits on the range of appropriate subject matter for grants from the National Endowment for the Arts, the National Endowment for the Humanities, and even the CPB. It is not outside the realm of possibility that conservative political forces will also attempt to regulate commercial television programming content.

With the proliferation of cable television distribution, however, such efforts might meet with limited success. The huge—and largely unexpected—2003 success of Bravo’s Queer Eye for the Straight Guy indicates not only that there is an audience within the gay communities for material related to gay experience but also that a considerably larger audience will attend to gay-themed programming. This program, in which five gay men (“the Fab Five”) engage in a “makeover” for a straight man, may have seemed a risky venture for the small network when it was acquired by NBC. Within weeks, however, word of mouth as well as mainstream press and electronic media publicity made the series sufficiently popular—and safe—for episodes to be presented on NBC’s main schedule. By January 2004, Bravo announced that Queer Eye would go “on the road to Texas” for additional episodes, and the five cast members had negotiated for substantial raises.

As was the case with Ellen and Will & Grace, responses both within and outside the gay communities were mixed. But it seemed clear that such programs would no longer be taboo from first proposal. Given the larger context, issues about sexual orientation are hardly going to disappear in the near future. If anything, despite the success of a small number of programs, the number of confrontations over sexual orientation and the intensity of those conflicts will only increase.

“Share” is an audience measurement term that identifies the percentage of television households with sets in use that are viewing a particular program during a given time period. If the total TV audience is represented by a pie, the audience for each program is a slice, or share, of that pie. The slices are not equal, however, since audience share varies widely according to the relative popularity of each program.

Share is a comparative tool. It allows station and network executives to determine how well their programs are doing when compared to competing programs on other broadcast or cable channels.

Share is closely associated with “rating,” another measurement term. Both terms are derived from the same estimates of audience size, but the percentage quotient is calculated differently. Share measures the percentage of active TV viewers who are watching a particular program, while the rating for a program calculates the percentage of all television households—both those using TV and those not using TV.

For example, station WXXX airs Jeopardy! at 7:00 p.m. Sample data estimate that 10,000 of the city’s 100,000 TV households (10 percent) are viewing that program. Some 40,000 households are viewing other programs, but another 50,000 are not using their TV sets. Since 10,000 of the 50,000 active viewers (20 percent) are watching Jeopardy!, that program has a share of 20, even though its rating (the percentage of TV households) is only 10.

Electronic media trade journals generally report both rating and share. Rating is expressed first and is given to the nearest tenth of a percent. Share follows and is rounded to the nearest whole percent. For example, an audience estimate for 60 Minutes may report a 13.0/28, that is, 13 percent of the total TV households (the rating) and 28 percent of the viewing audience (the share).

If every television household were using TV during a given time period, the share and the rating would be equal. But since this never happens, the share for any program is always greater than its rating because different divisors are used to calculate the two equations.

The gap between share and rating is greatest during periods of very light viewing. An early morning newscast with a share of 30 and a rating of only 3 is competing very well against other programs in the same time block, even though the total number of viewers for all programs is small.

Share is useful as a comparative tool during virtually any portion of the day, however. When a program gains share, it usually does so at the expense of competing programs since the total audience for television during any given daypart is relatively stable.

Share can also be used to illustrate programming trends. One network may average its share of successive programs to illustrate its dominance on a particular weekday night. A new broadcast or cable network may average its share across an entire season to illustrate its increasingly competitive position over a previous season.

Share can be used to demonstrate industry trends. For example, the combined share of the American Broadcasting Company (ABC), the Columbia Broadcasting System (CBS), and the National Broadcasting Company (NBC) for the 1980–81 programming year was 90. This meant that 90 percent of the viewing audience was watching one of these three networks. The remaining 10 percent of the audience was distributed among independent stations, public television, and the few cable networks then in operation. By 1993–94, combined network share had dropped to 60, primarily because the cable networks collectively had captured one-third of the network viewers.

This erosion has continued, and during the 2001–02 season, combined network share for the four major U.S. networks (ABC, CBS, NBC, and FOX) fell below 50 for the first time. While the combined share for these four was 49, additional share for The WB and the
United Paramount Network (UPN) raised the total share for "over-the-air" networks to 57.

Some industry observers predict that network share will continue to decline; others assert that network share has "bottomed out" but may begin to show a slight gain in years to come. A study of network share measures the competition between traditional broadcasters and their new technology competitors.

Unless otherwise specified, share refers to the total universe of television households. Share can be used in demographics breakouts, however. A morning talk show may have a 2.2/20 for women 18 to 34 years of age. That would be the rating and share for this particular demographic grouping.

**Shatner, William (1931– )**

U.S. Actor, Writer, Producer, Director

Dubbed the "theatrical wunderkind" in his native Canada for his performances in Shakespearean and classic dramas, William Shatner is perhaps best known for his roles in the popular series *Star Trek* and *T.J. Hooker*. But his body of work spans nearly 50 years in stage, film, and television and includes not only his work as an actor and company spokesperson but also that of writer, producer, and director.

In the 1950s, Shatner appeared in regional theatrical productions and toured with the Canadian National Repertory Theatre. In 1954, he was invited to join Tyrone Guthrie's Stratford Shakespeare Festival, where he played nearly 100 roles in 60 plays, including the title role of *Henry V* at age 22. Shatner traveled with the Stratford company when their production of *Tam-O'-Shanter the Great* opened on Broadway (1956), and although Shatner only had only a small role, he was noticed by a 20th Century-Fox studio representative. He rejected the offer of a lucrative seven-year contract in order to remain independent and retain the ability to choose his own roles. Shatner returned to Stratford for his third and final season.

A scholarship, plus a Tyrone Guthrie Award as the most promising actor, allowed him to return to New York. The myriad of anthology programs produced on the East Coast and Hollywood took advantage of the number of stage-trained actors available to them, and Shatner became one of the most sought-after performers in the live television productions. He found roles in anthologies such as *Good Year Playhouse, Studio One, Playhouse 90, Kaiser Aluminum Hour, Omnibus, U.S. Steel Hour*, and *Climax!* Shatner also worked in episodic television, including Rod Serling's *The Twilight Zone* (Columbia Broadcasting System [CBS]) and *The Man from U.N.C.L.E.* (National Broadcasting Company [NBC]) in an episode that also featured future *Star Trek* costar Leonard Nimoy. He had earlier turned down opportunities to star in television series for fear he would be typecast into a particular role. However, he overcame his apprehension to star in the short-lived *For the People* (CBS, 1965), playing determined New York Assistant District Attorney David Koster.

Shortly after the cancellation of that series, writer-producer Gene Roddenberry offered Shatner the opportunity to work in the second pilot for his fledgling science fiction series, replacing Jeffrey Hunter as captain of the USS Enterprise. *Star Trek* premiered on September 8, 1966, and William Shatner, as Captain James Tiberius Kirk, was on his way to becoming a cultural icon.

In an effort to avoid typecasting after *Star Trek* ended its three-year run, Shatner made numerous guest appearances on popular series, miniseries, and made-for-television films, including the critically acclaimed *The Andersonville Trial*. He returned to series televi-
sion in the short-lived *Barbary Coast* playing Jeff Cable, an undercover agent in 1870s San Francisco.

Shatner continued working in guest roles, films, and stage work. He also toured in his one-man show *An Evening with William Shatner*, which combined dramatic readings with question-and-answer sessions with his audiences. Excerpts from this stage show were recorded and released as *William Shatner Live!* (1977).

Shatner once again returned to series television in 1982 as the star of Aaron Spelling’s *T.J. Hooker*, playing a former Los Angeles detective who, after the shooting death of his partner, takes on the job of training new recruits at the LCPD police academy. The series was planned as an ensemble series with stories featuring the cadets. However, test audiences preferred Shatner’s character, and the show was transformed into more of an action-adventure series, but, like *Star Trek*, it remained a character-driven show concentrating on the relationship of the characters over car chases and shoot-outs. Shatner made his directorial debut on the third-season episode “Gang War” (May 5, 1984). When the American Broadcasting Company (ABC) dropped the series in 1985, it was quickly picked up by CBS and became the first series geared directly for late night.

Shatner later hosted the reality-based *Rescue 911* (CBS, 1989–96). During its six seasons, the series credits over 300 lives saved by people who learned lifesaving techniques from the show. The series consistently won its Wednesday night time slot and won the 1986 People’s Choice Award for Favorite New Dramatic Series.

An avid horseman, Shatner breeds horses on his Malibu ranch and each year hosts the Hollywood Charity Horse Show, which benefits *A*head with Horses, an organization that gives physically challenged children the experience of riding while boosting their confidence and self-esteem. He also raises and trains champion American saddlebreds on his Belle Réve farm in Versailles, Kentucky.

Shatner has always maintained a good-natured attitude toward the roles with which he has been associated for the past 30 years. He even spoofed both his Kirk and his Hooker characters when hosting *Saturday Night Live* in 1986. He continues to satirize his characters and his reputation in films such as *Miss Congeniality* (2000) and *Showtime* (2002). His guest appearance as “The Big Giant Head” on *Third Rock from the Sun* garnered him his first Emmy Award in 1999. Shatner received his star on the Hollywood Walk of Fame in 1983.

Shaw, Bernard (1940–)

U.S. Broadcast Journalist

As principal Washington anchor for the Cable News Network (CNN), Bernard Shaw built a reputation for asking difficult questions and upholding unflattering journalistic ethics. Shaw made a bold and courageous decision to join the all-news network at its beginning in 1980 despite wide skepticism that a 24-hour news network would attract viewer interest. Shaw was an important contributor to the network’s eventual prominence as an international news leader.

His style and professionalism enabled him to secure impressive, exclusive interviews with important world leaders. His most visible, sensational—and some would say impressive—moment as a journalist came in 1991. In Baghdad, Iraq, to complete a follow-up interview with Iraqi President Saddam Hussein, Shaw was one of three CNN reporters who worked during a major attack by the Allied forces. With his colleagues, Shaw brought unprecedented live coverage of the Al-
lied forces' bombing. On January 16, 1991, more than a billion homes watched Shaw and his colleagues deliver around-the-clock coverage of Operation Desert Storm.

Shaw's coverage of the war earned him numerous national and international journalism prizes, including the Eduard Rhein Foundation's Cultural Journalistic Award, a George Foster Peabody Award, and a cable ACE Award for best newscaster of the year. Shaw's receipt of the Rhein Foundation Award was the first time this honor had been bestowed on a non-German.

Live coverage was not new for Shaw; he also presented live broadcasts of the events surrounding the student revolt in China's Tiananmen Square until CNN was forced by the Chinese government to discontinue coverage. His coverage of the uprising earned him and CNN considerable recognition. His awards for coverage of Tiananmen Square include a cable ACE for best news anchor and an Emmy for anchoring the single most outstanding news event. CNN won a Golden ACE, an Alfred I. duPont Columbia University Silver Baton, and a Peabody for its coverage of China.

Shaw is best known for his political reporting at CNN. Through the 1990s, he was anchor of *The International Hour, The World Today*, and *Inside Politics*. He covered debates, primaries, conventions, and the hoopla of presidential campaigning.

In 1988, while moderating a presidential debate between George Bush and Michael Dukakis, Shaw asked Dukakis if he would change his mind about opposing the death penalty if his own wife were raped and killed. Political analysts credit Shaw’s question and Dukakis’s off-guard response with portraying Dukakis as unemotional. Dukakis’s campaign never recovered from the backlash of his reaction to Shaw’s question.

Refusing to call his departure from CNN a retirement, Shaw announced his “stepping back” from CNN during a live broadcast of *Inside Politics*. Shaw stepped back from the anchor chair on February 28, 2001, after dedicating 20 years to the network. Shaw also announced plans to work on an autobiography.

Shaw is a graduate of the University of Illinois, which established the Bernard Shaw Endowed Scholarship Fund to honor his career and assist promising young men and women who share his interests and integrity. Shaw is a major benefactor to that fund.

Sheen, Fulton J. (1895–1979)
U.S. Religious Broadcaster

Widely known by his Roman Catholic ecclesiastical title, Bishop Sheen established a very successful niche for religious programming in U.S. television's early days with his Life Is Worth Living program. Sheen's show originally aired on the Dumont network on Tuesday evenings in 1952 and then moved to the American Broadcasting Company (ABC), where it remained until Sheen withdrew it in 1957. The shows—really half-hour talks by Sheen—proved very popular and ultimately were carried on 123 ABC television stations and another 300 radio stations.

Life Is Worth Living followed a simple format. Sheen would choose a topic and, with only a blackboard for a prop and his church robes for costuming, would discuss the topic for his allotted 27 minutes. He spoke in a popular style, without notes but with a sprinkling of stories and jokes, having spent up to 30 hours preparing his presentation. Because the program was sponsored by the Admiral Corporation rather than the Catholic Church, Sheen avoided polemics and presented a kind of Christian humanism. In his autobiography, he noted that the show was not "a direct presentation of Christian doctrine but rather a reasoned approach to it beginning with something that was common to the audience." He covered topics as diverse as art, science, aviation, humor, Communism, and philosophy.

Like many others in television's early days, Sheen had moved into the medium from radio. As a professor at the Catholic University of America, he began commuting in 1928 from Washington, D.C., to broadcast on WLS in New York. Two years later, he became the first regular speaker on The Catholic Hour, a sustaining time program on National Broadcasting Company (NBC) radio, sponsored by the National Council of Catholic Men. In 1940, he made his television debut presiding at New York City's first televised religious service.

After several years off, Sheen attempted to come back to television a number of times but without the success that had greeted Life Is Worth Living. He hosted a series on the life of Christ in the 1950s; in 1964, he worked on Quo Vadis, America?; and he revived the format of Life Is Worth Living, now called The Bishop Sheen Program. Television had changed, and his lecture style no longer commanded audience loyalty. He ended his long career in broadcasting with numerous guest appearances on television talk shows during the 1960s and 1970s.

Broadcasting was never Sheen's full-time occupation. He left the Catholic University of America in 1950 to become the national director of the Society for the Propagation of the Faith, a fund-raising office for missionaries, a position he held until Pope Paul VI named him bishop of Rochester, New York, in 1966.

Sheen's importance for television lies in two areas. First, he pioneered a nonsectarian style of religious programming and found commercial sponsors for his message. By doing this, he both adapted to and helped shape commercial broadcasting's attitudes toward religious shows. The need to develop audiences meant that only those programs with the widest possible appeal would find a place in mainstream or network programming. Second, Sheen provided a role model (if not an ideal) for the next generation of ministers interested in television—the televangelists. Many of the later stars of cable religious television have acknowledged that the widespread acceptance of Sheen's Life...
*Is Worth Living* inspired their own forays into television. They too have hoped to escape the “Sunday morning ghetto” of religious programming for a place in the mainstream.

**Sherlock Holmes**

**Mystery (Various National Productions)**

Sherlock Holmes, the fictional character created by Sir Arthur Conan Doyle, may be the most popular literary character adapted to the performing arts. The adventures of Sherlock Holmes have been transformed for the dramatic stage (*Sherlock Holmes*, 1899; *The Crucifer of Blood*, 1978), the musical stage (*Baker Street*, 1965), ballet (*The Great Detective*, 1953), film, radio, and television. On television, the character has appeared in specials, series, parodies, animation, and made-for-television films and even in a recurring role-playing game by the android Data (Brent Spiner) on *Star Trek: The Next Generation*.

The actors who have undertaken the role for television include Ronald Howard (son of film actor Leslie Howard), Alan Napier, Peter Cushing, Christopher Lee, Frank Langella, Tom Baker (later the Doctor in *Doctor Who*), Edward Woodward, Charlton Heston, Roger Moore, Leonard Nimoy, Peter O’Toole (as the voice of the detective in the Australian animated *Sherlock Holmes and the Baskerville Case*), and Jeremy Brett. Even Basil Rathbone, who portrayed the character in 14 feature films and 8 years on the radio, played Holmes on the small screen. Comic actors such as Milton Berle, *Monty Python’s* John Cleese, Larry Hagman, and Peter Cook have all played the master sleuth in television parodies.

Sherlock Holmes was the first fictional character adapted for television. *The Three Garridebs*, a trial
teletext, was broadcast on November 27, 1937, from the stage of New York City's Radio City Music Hall by the American Radio Relay League. The live presentation was augmented with filmed footage to link scenes together. Louis Hector played the detective, and William Podmore played his associate, Dr. Watson.

Until 1951, Holmes's appearances on television were limited to a variety of special broadcasts, including the hour-long parody *Sherlock Holmes in the Mystery of the Sen Sen Murder*, on the April 5, 1949, episode of the National Broadcasting Company's (NBC's) *Texaco Star Theatre*. The satire featured Milton Berle and Victor Moore as Holmes and Watson and a guest appearance by Basil Rathbone as Rathbone of Scotland Yard.

The first television series of Sherlock Holmes adventures was produced in the United Kingdom. Vandyke Pictures intended for its half-hour adaptation of *The Man with the Twisted Lip* to be the first of a six-episode series. However, the pilot, starring John Longden as Holmes and Campbell Singer as Watson, did not impress executives, and only the one episode was broadcast (in March 1951). Three months later, the British Broadcasting Corporation (BBC) aired its own pilot, an adaptation of *The Mazarin Stone*, with Andrew Osborn as Holmes and Philip King as Watson. In late 1951, the BBC produced the first television series of Sherlock Holmes adventures, but with a new producer and new actors (Alan Wheatley as Holmes and Raymond Francis as Watson). Six of Conan Doyle's stories were adapted to the 35-minute format by C.A. Lejeune, a film critic for *The Observer*.

Basil Rathbone, who for many years gave what was considered the definitive portrayal of Holmes, reprised his role as the detective in a half-hour live presentation for the May 26, 1953, episode of the Columbia Broadcasting System's (CBS's) *Suspense*. The episode, *The Adventures of the Black Baronet*, was adapted by Michael Dyne from an original story by crime novelist John Dickson Carr and Adrian Conan Doyle, son of the character's creator. The episode was intended as a pilot for a U.S. series, but it was not selected for programming by any network.

The first and only U.S. television series of Sherlock Holmes adventures finally aired in syndication in the fall of 1954. The 39 half-hour original stories were produced by Sheldon Reynolds and filmed in France by Guild Films. Ronald Howard starred as Holmes, and Howard Marion Crawford starred as Watson. The series' associate producer, Nicole Milinaire, is considered to be the first woman to attain a senior production role in a television series.

Since 1954, American adaptations of the Holmes stories have been limited to various made-for-television films (*The Return of the World's Greatest Detective* with Larry Hagman as Holmes, *Sherlock Holmes in New York* with Roger Moore as Holmes, and *The Hound of The Baskervilles*) or televised stage plays (*Frank Langella's Sherlock Holmes and The Crucifer of Blood* with Charlton Heston).

In addition to producing made-for-television Holmes films in Britain, the BBC continued to produce other series of Holmes adventures. A 1965 series of 12 adaptations was produced by David Goddard and featured Douglas Wilmer, who, *The Times* noted, bore an "uncanny resemblance" to the sleuth in the original book illustrations by Sydney Paget. A 1968 series starring Peter Cushing dispensed with many of the conventions invented by other actors for the character, such as the meerschaum pipe, the deer-stalker cap, and the phrase, "Elementary, my dear Watson." The series aspired to be true to the character as written in the novels. In an attempt to capitalize on Cushing's popular work in 1950s and 1960s horror films, the BBC series
Shore, Dinah

U.S. Musical Performer, Talk Show Host

Dinah Shore ranks as one of the important on-air musical stars of the first two decades of television in the United States. Indeed, from 1956 through 1963, there were few TV personalities as well known as she was. More than any song she sang, Shore herself symbolized cheery optimism and southern charm, and she is most remembered for blowing a big kiss to viewers at the end of her 1950s variety show. As hostess, she sometimes danced and frequently participated in comedy skits, but she was best loved as a smooth vocalist reminiscent of a style associated with the 1940s.

Shore pioneered the prime-time color variety show when The Dinah Shore Chevy Show started in October 1956 on the National Broadcasting Company (NBC) and ran on Sunday nights until the end of the 1963 season. Sponsored by General Motors, then the largest corporation in the world, Shore helped make the low-priced Chevrolet automobile the most widely selling car up to that point in history.

Shore represented a rare woman able to achieve major success hosting a TV variety show. In the late 1950s, her enthusiasm and lack of pretension proved so popular that she was four times named to the list of the "most admired women in the world." Her desire to please showed in her singing style, which some purists dismissed as sentimental, but through her recording career she did earn nine gold records. Shore made listeners and later viewers feel good, and beginning with her first broadcasts on radio in the late 1930s and then on television, she was able to remain a constant presence in American broadcasting for more than 50 years.

When Fanny Rose Shore was old enough to go to school, in her hometown of Nashville, Tennessee, she found herself taunted for being Jewish in the decidedly
Dinah Shore. Courtesy of the Everett Collection

non-Jewish world of a segregated Deep South. Undeterred, Shore logged experience on Nashville radio while in college, on her hometown's WSM-AM, best known as the home of the Grand Ole Opry. But Shore was no hillbilly singer, no typical southern belle. She took a degree in sociology at Vanderbilt University, putting herself through college with her radio earnings. Her show's theme song was the Ethel Waters blues-inspired "Dinah," and Shore changed her name accordingly. The success of her local radio show, Our Little Cheerleader of Song, enabled Shore to move to New York City to try to make it in Tin Pan Alley, then the center of the world of pop music.

Shore, by her own admission, did not have the vocal equipment of Ella Fitzgerald or Billie Holiday, and she never chose to reveal as much of herself in music as did her other idol, Peggy Lee. However, she was persistent. During the late 1930s, having auditioned unsuccessfully for such band leaders as Benny Goodman and Tommy and Jimmy Dorsey, Shore finally hooked up with the Xavier Cugat band. Through the 1940s, she sold a million copies of "Yes, My Darling Daughter," and that recording success was followed quickly by such hits as "Blues in the Night," "Shoo Fly Pie," "Buttons and Bows," "Dear Hearts and Gentle People," and "It's So Nice to Have a Man Around the House." During World War II, Shore sang these songs for the troops in Normandy and for shows at other Allied bases in Europe.

In 1950, Shore made a guest appearance on Bob Hope's first NBC television special. A year later, NBC assigned her a regular TV series that ran until 1956 on Tuesday and Thursday nights from 7:30 to 7:45 p.m. Eastern time, following 15 minutes of network news. This led, in time, to her Sunday night series. Radio Corporation of America (RCA) and NBC corporate chief David Sarnoff loved Shore's conservative vocal choices and middlebrow sensibilities. In retrospect, Shore's famed signature theme song, the catchy Chevrolet jingle, "See the USA in your Chevrolet," accompanied by her sweeping smooch to the audience, was so theatrically commercial it made Ed Sullivan seem subversive and Pat Boone look like a rock star. Shore did best when she played the safe 1950s non-threatening "girl next door," with no blond (she was born a brunette) hair out of place, no joke offensive to anyone. The outcast of Nashville finally fit in.

The Dinah Shore Chevy Show rarely entered the top-20 ratings against the Columbia Broadcasting System's (CBS's) General Electric Theater, hosted by Ronald Reagan, which regularly won the time slot. Reagan had a better lead-in from Ed Sullivan. Still, Shore won Emmy Awards for Best Female Singer (1954–55), Best Female Personality (1956–57), and Best Actress in a Musical or Variety Series (1959).

After the Chevy Show, Shore went on to host three daytime television programs: the 90-minute talk show Dinah! (1970–74), Dinah's Place (1970–74), and Dinah and Friends (1979–84). Her TV career ended in 1991 on cable TV's Nashville Network with A Conversation with Dinah. By then, she was better known as Hollywood heartthrob Burt Reynolds's "older" girlfriend and as the sponsor of a major golf tournament for women.

**Showtime Network**

U.S. Cable Network

Showtime is a subscription-based network that broadcasts recently released and classic movies 24 hours per day via satellite without commercial interruption. In addition, it produces its own original programming and provides coverage of boxing events and occasionally live music. Next to the Home Box Office (HBO)/Cinemax cable block, Showtime is the second most popular subscription-based cable movie channel in the United States. Showtime was launched on July 1, 1976, by Viacom, Inc., in the wake of HBO's successful challenge of the Federal Communications Commission’s (FCC’s) satellite expansion rules. After making its start at a northern California cable company, Showtime went nationwide via satellite in 1978. In 1979, one of HBO’s chief distributors, the Teleprompter Corporation, bought 50 percent of Showtime and subsequently dropped HBO from 250,000 households. Thus was born the market share competition between these two similar cable networks, a rivalry that would define the programming structure of Showtime throughout the 1980s and 1990s.

By the late 1980s, Showtime had fewer subscriptions than HBO but still aired very similar programs. Since 1994, however, when the current Showtime Networks chief executive officer, Matthew C. Blank, selected Jerry Ofsay to take charge the network’s programming, the channel has aggressively pursued alternative original content and as a result has won awards for its daring and captured audiences that had fallen through the programming gaps of other cable channels. In 2003, Blank replaced Ofsay with a new chief of entertainment, Robert Greenblatt, previously the executive producer of HBO’s popular series *Six Feet Under* in a drive to further improve Showtime’s original programming and foster more contacts with Hollywood.

Touting its new “No Limits” logo, Showtime has recently sought to define itself as the edgier alternative to HBO. Although HBO has nearly twice the subscription rate and over twice Showtime’s programming budget, Showtime has compensated and remained competitive in several ways. First, it has lowered its production costs by shooting much of its original programming in Canada; in addition, it produces all its original series in bulk. It has also been successful at luring Hollywood actors and directors to the network to make low-budget Showtime movies by encouraging them to produce their own pet projects without corporate interference. Showtime has pushed the envelope for nonmainstream content in its original shows, most notably in *Queer as...* 

![Showtime Logo](https://via.placeholder.com/150)

Folk and The L Word, both of which have won acclaim for their candid representation of gay sexuality. The network makes a point of not censoring its writers. The result is a channel that has become a vital source of original cable programming in the early 2000s.

Following the multiplexing trend of other cable networks, Showtime has used its brand name to develop several specialized channels, such as Showtime Women, Showtime Family Zone, and Showtime Extreme, which are often prepackaged in cable and satellite subscriptions. In addition, the Showtime Network operates The Movie Channel and Flix; it also manages The Sundance Channel under the Showtime Network's corporate umbrella, although Robert Redford and Universal Studios are additional co-owners. Striving to be a technical pioneer, all the channels bearing the Showtime banner broadcast at least some of their daily content in high-definition format (HDTV) and broadcast all their programming in Dolby Digital 5.1 surround sound.

Showtime's parent company, Viacom, Inc., survived the media merger fervor of the 1980s and 1990s and has emerged as one of the most powerful conglomerates in the television industry. As a result, Showtime has been at least partially owned by several different companies in its history. In 1985, Viacom repurchased from Warner Amex the 50 percent of Showtime sold in 1979 to the Teleprompter Corporation. In June 1987, Sumner Redstone took over Viacom International, and soon afterward, in response to industry fears over the Time Warner merger in 1989, Viacom partially merged with TeleCommunications Inc., the largest cable operator in the country, which bought a 50 percent interest in Showtime. In 1992, Showtime announced the formation of the Showtime Entertainment Group, which was designed to make original motion pictures to premiere on Showtime, and then in 1994 the channel officially formed Showtime Networks, which included The Movie Channel and Flix. The Showtime Network added The Sundance Channel to its lineup in 1996.

Much of Showtime's programming history is entwined with HBO's, as the two have taken programming cues from one another. When Showtime and HBO first aired in the 1970s, both were used as uncensored outlets for recently released theatrical films before they premiered on the broadcast networks. However, as videocassette rentals claimed a growing portion of this second-run movie market, both channels began to create original content in the 1980s in an effort to retain their audiences. Utilizing the freedoms of cable TV, both simultaneously developed series that incorporated risqué content, such as nudity, sexuality, adult language, and drug use, making their programs unique to cable and removing any potential competition from the commercially funded broadcast channels. Two of Showtime's early series, Brothers and It's Garry Shandling's Show, were well received by cable audiences. Brothers, the first sitcom made specifically for cable TV, opened new social territory in 1984 because of its openly gay sexual content. It's Garry Shandling's Show was quickly purchased by the newly established FOX Network. Both shows unveiled a powerful American market for challenging prime-time content that could be accurately developed only outside the reign of the broadcast network censors. These viewing preferences were also reflected in the annual Academy of Television Arts and Sciences Awards (Emmys); by the late 1990s, both Showtime and HBO were receiving a substantial portion of the original programming nominations.

As Showtime and HBO continued to vie in the late 1990s for pay-TV market shares, the Showtime programmers took a different tack. They began to target specific underrepresented audiences. In 1999, they pursued African-American audiences with the drama series Soul Food, based on the popular movie of the same title. They also pursued the American Latino audience with Resurrection Blvd., the first and only English-speaking television series with a predominantly Latino cast to air in the early 2000s. In 1999, they struck programming gold by adapting an openly gay British television series, Queer as Folk, which went on to become one of the network's highest-rated shows. These types of niche-focused programming decisions have allowed Showtime to continue to grow and innovate regardless of its share of the pay-TV movie channel market.

Silliphant, Stirling (1918–1996)
U.S. Writer

Stirling Silliphant was one of the most important and prolific writers of television drama in the 1960s, remembered particularly for his work on Naked City and Route 66. Although he had early success in the 1950s with a spate of feature films and went on to even greater big-screen achievements in the late 1960s and 1970s, Silliphant maintained a constant presence in television throughout his writing career and in the 1980s focused most of his attention on television movies, historical miniseries, and novels.

Silliphant’s passage between big-screen and small-screen writing marked his work very early on. He began his association with the movies as a publicist, first for Disney and later 20th Century-Fox. Silliphant left that end of the business in 1953 to package an independent feature, The Joe Louis Story (honoring his rewrite on the script). In 1955, he transformed a rejected screenplay into the novel Maracaibo (which was adapted by another writer and filmed three years later) and within the next three years saw five feature scripts produced, including Jacques Tourneur’s Nightfall and Don Siegel’s The Lineup. During the same period, he aimed his typewriter at television, generating dozens of scripts for such anthologies as General Electric Theater, Alcoa-Goodyear Theatre, Suspicion, Schlitz Playhouse, and Alfred Hitchcock Presents as well as two episodes of Perry Mason.

Silliphant was completing his sixth feature script (Village of the Damned) when independent producer Herbert B. Leonard (Adventures of Rin Tin Tin and Circus Boy) hired him to write the pilot for Naked City, a half-hour series based on the 1948 “semidocumentary” feature The Naked City. With a résumé composed almost exclusively of anthologies and features, Silliphant’s proclivity for self-contained stories was consistent with Leonard’s vision of the series as a character-oriented dramatic anthology with a police backdrop as opposed to a police procedural in the Dragnet mold. Silliphant wrote 31 of Naked City’s first 39 episodes, remembered today as taut, noirish 30-minute thrillers offering both character drama and gameplay. Canceled after one season in its original form, the series was resurrected as an hour-long show in 1960.

In the interim, Silliphant remained busy with scripts for such crime series as Markham, Tightrope, and The Brothers Brannagan as well as an unsold private eye pilot, Brock Callahan. When Naked City was resurrected at a sponsor’s behest for the 1960 season in the longer form, Silliphant was already collaborating with Leonard on another series—anthology hybrid, Route 66. (A third Leonard–Silliphant project for 1960 called Three-Man Sub—a sort of underwater Mediterranean variation on Route 66—did not sell.) Although he did write the pilot script and served as “executive story consultant” for the new version of Naked City, Silliphant would provide fewer scripts for the show because of his intense involvement with Route 66; still, the writing remained first-rate. The all-New York production offered a fascinating mix of action and actor’s studio, yielding three seasons of compelling urban tragedy. The series was nominated for an Emmy in the Outstanding Drama category every year of its run.

Route 66 proved to be a critical and commercial hit despite early concerns from Screen Gems studio about its premiere: two young drifters searching for meaning on the highways of America. Filmed on location across the United States, the wide-ranging backdrops and visual realism of Route 66 and its mix of psychological drama, social commentary, romance, action, and big-name guest stars, all underlined by strong writing and supervision from Silliphant (and story editor Howard Rodman), paved the way for a four-year run. Spending much of this time writing and observing on the road, Silliphant would go on to write some three-fourths of Route 66’s 116 episodes. Silliphant calls those four years the most intense period of writing in his career and the site of some of his best work.

Naked City was canceled in 1963 and Route 66 a year later, but the “writing machine” (as one producer dubbed Silliphant in a Time magazine profile) did not pause. During the mid-1960s, Silliphant freelanced for Bob Hope Presents the Chrysler Theater, Mr. Novak, and Rawhide. In 1967, Silliphant made a triumphant return to features, winning an Academy Award for his adaptation In the Heat of the Night. Even with this big-screen success (followed up with such films as Marlowe, Charly, and The New Centurions), Silliphant did not abandon television. Despite a 1960 interview in which he eschewed the growing plague of “hyphenated billing”—alleging that the “miasma of memos and meetings” inevitably curtailed the insight and blunted the creativity of writer-
Silliphant, Stirling

producers—by 1971 Silliphant was one, serving as executive producer of the mystery series _Longstreet_. Notable as part of the 1970s-era cycle of "gimmick" detective series (_Cannon_, _Ironside_, and _McCloud_), _Longstreet_—the story of a blind insurance investigator—was otherwise unremarkable. A year later, the writer attempted to mount yet another picarene series titled _Movin' On_, this time concerning a pair of itinerant stock-car racers (not to be confused with the 1974 series about truckers); the pilot aired as a TV movie, but the series did not sell. _Longstreet_'s cancellation after one season effectively ended Silliphant's involvement in the continuing-series form but not his television career.

Although he did pen several TV movies and his first miniseries, _Pearl_ (based on his novel) during the 1970s, Silliphant concentrated most of his efforts in that decade on features. He produced _Shaft_ in 1971 (and wrote the 1973 sequel _Shaft in Africa_); in 1972, he helped launch the popular cycle of disaster movies by scripting _The Poseidon Adventure_, followed by _The Towering Inferno_ and _The Swarm_; and he turned out successful thrillers, such as _Telefon_ and _The Enforcer_ (Clint Eastwood's third "Dirty Harry" film). A few more features followed in the 1980s, but, for the most part, Silliphant settled back into television, scripting a succession of made-for-TV movies (and unsold pilots) and epic miniseries, such as _Mussolini: The Untold Story_ and _Space_. True to form, the fertile author also found time during the decade to publish three adventure novels featuring roving adventurer John Locke.

Silliphant's writing career is remarkable not only for its sheer volume of output, its duration, and its spanning of television and feature work but also for the very fact that he kept an active hand in television after achieving big-screen success and that he considered television to be the medium most conducive to the writer's vision. Silliphant has charged that his _In the Heat of the Night_ script was inferior to many of his _Naked City_ teleplays. "As a matter of fact," he declared to writer William Froug, "I can think of at least twenty different television scripts I've written which I think are monumental in comparison." Truth be told, the bulk of Silliphant's features—most of which are adaptations—tended toward formula, while the passion for character and ideas comes through most strongly in the television work.

Silliphant repeatedly pronounced _Naked City_ and _Route 66_ as the best of his writing. It is difficult to disagree. These two series are surely Silliphant's finest achievements and rank among the most original and well-written dramas ever created for the medium. A _Variety_ columnnist observed in a 1962 review of _Route 66_ that Silliphant "composes poetry which is often raw and tenuous, so it requires delicacy of treatment." As this suggests, Silliphant's "poetry" carried some risk. John Gregory Dunne cited Silliphant as a prime purveyor of television "pseudo-seriousness" in a 1965 article, and Silliphant himself admitted a proclivity for the overwrought phrase. But with the right director and actors, no writing for the screen has been more powerful. And if the intense demands of series writing—and writing on the road, at that—occasionally failed to limit a slight propensity for pretension that sometimes overwhelmed characterization or credibility, by and large Silliphant's scripts for _Naked City_ and _Route 66_ yielded moving renderings of troubled relationships and tortured psyches. Even his more purple moments speak to the ambitions he had for television as a dramatic form.

In 1968, _TV Guide_ critic Dick Hobson lamented the exodus of writing talent from the medium, musing, "What became of writer Stirling Silliphant, whose _Naked City_'s and _Route 66_’s were once a repertory theater of contemporary life and times?" Ironically, when these programs aired in the early 1960s, they were largely overlooked by critics and government watchdogs preoccupied with indicting the "vast wasteland" and eulogizing the live drama. Meanwhile, Stirling Silliphant was on the road, clacking away at his type-writer, his "poetry" standing as living (broadcast) proof of television's capacity for brilliant writing and provocative drama. More than 30 years later, at the time of his death in 1996, the writing machine was still writing.

Silverman, Fred (1937– )
U.S. Media Executive, Producer

Fred Silverman devoted his life to programming television. He is the only person to have held key programming positions at all of the three traditional networks in the United States, and today he owns the Fred Silverman Company, which produces programs for those networks. What makes Silverman unique in the history of American network television is that he raced through network jobs while still in his 30s and that his career mysteriously waned after having waxed so splendidly for so long.

Silverman graduated with a master’s degree from Ohio State University (his master’s thesis analyzed programming practices at the American Broadcasting Company (ABC)) and went to work for WGN-TV in Chicago to oversee children’s programs. Soon, however, he moved to the network level. He assumed responsibility for daytime programming at the Columbia Broadcasting System (CBS), where he later took charge of all of CBS Entertainment programming. During his tenure at CBS, Silverman remade the Saturday morning cartoon lineup and, in so doing, remade the ratings—from third to first. He also helped devise the programming strategy that brought All in the Family, The Mary Tyler Moore Show, and The Waltons to CBS. With the success of the CBS schedule assured, Silverman moved on. In 1975, he became head of ABC Entertainment.

From 1975 to 1978, Silverman took ABC from ratings parity with the other networks to ratings dominance over them. Among the shows and miniseries he was responsible for programming were Rich Man, Poor Man, Roots, Charlie’s Angels, and Starsky and Hutch. Silverman made the “third” network a ratings power and, as some of these program selections suggest, is credited with creating what critics called “jiggle TV,” the type of television that features beautiful, scantily clad, frolicking women. In short, he bore partial responsibility for programming both acclaimed and reviled. But he demonstrated at ABC the same touch he had at CBS—an almost unerring sense of what the public, in great numbers, would watch on television. In 1977, a Time magazine cover story referred to Silverman as the “man with the golden gut,” ostensibly referring to his unfailing programming instincts. At the height of his power at ABC, Silverman left to take on the presidency of the National Broadcasting Company (NBC).

It was there, however, that whatever abilities brought him fame at the other two networks seemed to abandon Silverman. Some of his program selections were disastrous (Supertrain and Hello, Larry, an ill-conceived effort starring McLean Stevenson, formerly of M*A*S*H). In addition, without the success he had enjoyed earlier, his mercurial behavior was less tolerable. After three difficult years, he was replaced at NBC by Grant Tinker. Silverman’s 18-year run with the networks was over.

Silverman left programming to make programs, but he did not enjoy immediate success. The first years for the Fred Silverman Company were difficult, particularly because the former program buyer was now

Fred Silverman.

forced to try to sell programming to many of the persons he had alienated at the networks. But in 1985, Silverman and partner Dean Hargrove produced the first *Perry Mason* movie with Raymond Burr. It was wildly successful and established the formula that would drive Silverman’s comeback in television. He took identifiable television stars from the recent past and recast them in formulaic dramas. Andy Griffith in *Matlock* and Carroll O’Connor in *In the Heat of the Night* are but two examples. Silverman also used his programming acumen to push for favorable time slots for his shows. Because Silverman has enjoyed great success with his production company, some industry observers have called him the Nixon of television.

Throughout his career in network television, Silverman was considered a hero in the industry because he could devise program schedules that delivered strong ratings. But during the latter stages of his network years, some industry observers saw a danger in so much television programming having the imprimatur of one individual. Moreover, his critics often looked beyond the bottom line and lamented the content of the programming used to build Silverman’s various ratings empires. His work at ABC has been particularly criticized because of messages regarding sex and violence in the programs. Television programming has been criticized for appealing to the lowest common denominator in its quest for raw numbers of viewers, and more than once Silverman has been targeted as the chief instrument of that appeal. Indeed, columnist Richard Reeves observed in 1978 that Silverman had probably done more to lower the standards of the viewing audience than any other individual.

Of Silverman’s comeback, much can be said—he returned to his roots. His productions, using familiar faces and formulas that have enjoyed prior television success, can be seen as part of a larger pattern. It has been suggested that one current programming trend is to look back to a time when network television was at its peak. In the face of a complex and mercurial telecommunications landscape, those involved in broadcasting seek comfort from a time more stable. Many of the programs meeting this need are revivals, retrospectives, or old faces in new attire. One need look no further than the “new” *Burke’s Law*, *Columbo*, or Dick Van Dyke in *Diagnosis Murder*. Silverman has capitalized on this tendency and has very probably become its leading practitioner. In a time when the term “auteur,” or author, is being applied to television producers, the career of Silverman suggests that an auteur could just as easily be the programmer as the program producer. For better or worse, few individuals have had as profound an impact on television programming for as long as Fred Silverman.

Silvers, Phil (1912–1985)
U.S. Actor, Comedian

Phil Silvers was one of the great stars for the Columbia Broadcasting System (CBS) during the late 1950s. Already a minor star on the vaudeville stage and in motion pictures, Silvers created, with writer-producer Nat Hiken, a pioneering television situation comedy, You’ll Never Get Rich. In this satirical look at life in the U.S. Army, Silvers played Sergeant Ernest Bilko, the con man with a heart of gold.

You’ll Never Get Rich premiered on CBS at the beginning of the 1955–56 TV season and soon became a hit. For three years, as CBS took command of the prime-time ratings race, You’ll Never Get Rich was a fixture in the 8:00 p.m. Tuesday time slot. Between 1955 and 1958, the show was highly rated, and its success spelled the end of Milton Berle’s Tuesday night reign on rival the National Broadcasting Company (NBC).

As played by Silvers, Bilko was an army lifer, a motor-pool master sergeant at isolated Fort Baxter, located near the fictional army small town of Roseville, Kansas. The show was a send-up of army life (or of any existence within any confined and rigid society) and loved by ex-GIs of World War II and the Korean conflict, a generation still close to its own military experiences and willing to laugh at them. With little to do in the U.S. Army of the Cold War era and stuck in the wide-open spaces of rural Kansas, Ernest “Ernie” Bilko spent most of his time planning and trying one elaborate scam after another. Always, predictably, they failed. Bilko was never able to make that one big score. But the comedy came in the trying.

His platoon, played by a cast of wonderful ex-burlesque comics and aspiring New York actors, reluctantly assisted him. His right-hand henchmen, the corporals Barbella and Henshaw, were ever by his side. The remainder of the group, following the pattern of numerous World War II films, seemed to have a man from every ethnic group: the brassy New Yorker, Private Fender; the Italian city boy, Private Paparelli; the high-strung country lad, Private Zimmerman; and the loveable slob, Private Doberman. Others who manned the platoon included black actors, making the program a rare, racially integrated TV situation comedy telecast in the 1950s.

If Silvers was the show’s star, Nat Hiken, one of television’s first writer-producers, was its creator-auteur. Hiken had first written for Fred Allen’s hit radio show, then moved to television to help pen Milton Berle’s Texaco Star Theater. His scripts provided a mine of comic gems for Bilko and company. Possibly the funniest is “The Case of Harry Speakup,” in which a Bilko scheme backfires and he is forced to help induct a chimpanzee into the army. Only Bilko could run such a recruit past army doctors and psychiatrists, have him pass an IQ test and receive a uniform, be formally sworn in as a private, and then moments later be honorably discharged. No bureaucracy has ever been spoofed better than was the Cold War U.S. Army in this 26-minute comic masterpiece.

Nat Hiken did more than write wonderfully funny scripts. As a producer, he had an eye for talent. Guests on You’ll Never Get Rich included a young Fred

Phil Silvers in the 1960s.

Gwynne in “The Eating Contest” (first telecast on November 15, 1955), a youthful Dick Van Dyke in “Bilko’s Cousin” (first telecast on January 28, 1958), and Alan Alda in his first significant TV role in “Bilko, the Art Lover” (first telecast on March 7, 1958).

You’ll Never Get Rich shot up in the ratings, and less than two months after the premiere, the program was renamed—not surprisingly—The Phil Silvers Show, with “You’ll Never Get Rich” thereafter relegated to the subtitle. So popular was this that show that in September 1957, as it started its second season, it inspired one of television’s first paperback collections of published scripts.

Yet, as would be the case for many television programs since the 1950s, the Bilko magic fell out of prime-time favor almost as swiftly as it had seized the public’s fascination. The end began in 1958, when CBS switched The Phil Silvers Show to Friday nights and moved Bilko and company to Camp Fremont in California. A year later, the show was off the schedule, although it has since functioned as a staple in syndication around the world. Phil Silvers had had his four-year run in television’s spotlight.

He would find that spotlight again, briefly, in the 1963–64 television season, when CBS tried The New Phil Silvers Show, a knockoff of the earlier program. Here, Silvers played Harry Grafton, a plant foreman, trying (unsuccessfully) to get rich. It lasted but a single season, and thereafter Silvers filled out his career doing occasional TV specials.

But Silvers and Nat Hiken should always be remembered for their pioneering work with You’ll Never Get Rich. This show hardly dates at all; its comic speed, invention, and ensemble performances rank it among television’s greatest comic masterworks.

Simpsons, The

U.S. Animated Situation Comedy

The Simpsons, the longest-running cartoon on American prime-time network television and one of the longest-running television sitcoms ever, chronicles the animated adventures of Homer Simpson and his family. Debuting on the FOX network in 1989, critically acclaimed, culturally cynical, and economically very successful, The Simpsons helped define the satirical edge of prime-time television in the early 1990s and was the single most influential program in establishing FOX as a legitimate broadcast television network.

The Simpson household consists of five family members. The father, Homer, is a none-too-bright safety inspector for the local nuclear power plant in the show’s fictional location, Springfield. A huge blue beehive hairdo characterizes his wife, Marge, often the moral center of the program. Their oldest child, Bart, a sassy ten-year-old and borderline delinquent, provided the early focus of the program. Lisa, the middle child, is a gifted, perceptive but sensitive saxophone player. Maggie is the voiceless toddler, observing all while constantly sucking on her pacifier. Besides the Simpson clan, other characters include Moe the bartender; Mr. Burns, the nasty owner of the Springfield Nuclear Power Plant; and Ned Flanders, the Simpsons’ incredibly pious neighbor. These characters and others, and the world they inhabit, have taken on a dense, rich sense of familiarity. Audiences now recognize relationships and specific character traits that can predict developments and complications in any new plot.

The Simpsons is the creation of Matt Groening, a comic strip writer/artist who, until the debut of the program, was known mostly for his syndicated newspaper strip Life in Hell. Attracting the attention of influential writer-producer and Gracie Films executive James L. Brooks, Groening developed the cartoon family as a series of short vignettes featured on the FOX variety program The Tracey Ullman Show beginning in 1987.

A Christmas special followed in December 1989, and then The Simpsons became a regular series.

Despite its family sitcom format, The Simpsons draws its animated inspiration more from Bullwinkle J. Moose than Fred Flintstone. Like The Bullwinkle Show, two of the most striking characteristics of The Simpsons are its social criticism and its references to other cultural forms. John O’Connor, television critic for the New York Times, has labeled the program “the most radical show on prime time,” and, indeed, The Simpsons often parodies the hypocrisy and contradictions found in social institutions such as the nuclear family (and nuclear power), the mass media, religion, and medicine. Homer tells his daughter Lisa that it is acceptable to steal things “from people you don’t like.” Reverend Lovejoy lies to Lisa about the contents of the Bible to win an argument. Krusty the Clown, the kid-vid program host, endorses dangerous products to make a quick buck. Homer comforts Marge about upcoming surgery with the observation that “America’s health care system is second only to Japan’s… Canada’s… Sweden’s… Great Britain’s… well, all of Europe.”

The critical nature of the program has been at times controversial, especially early in the show’s run. Many elementary schools banned Bart Simpson T-shirts, singling out those with the slogan, “Underachiever, and Proud of It.” U.S. President George Bush, Sr., and former U.S. Secretary of Education William Bennett publicly criticized the program for its subversive and antiauthority nature. After President Bush commented that families should be more like the Waltons and less like the Simpsons, Bart responded in one episode with, “Hey, we’re just like the Waltons. We’re praying for an end to the Depression, too.”

In addition to its ironic lampoons, The Simpsons is also one of the most culturally literate entertainment programs on prime time. Viewers may note references
to such cultural icons as The Bridges of Madison County, Ayn Rand, Susan Sontag, and the film Barton Fink in any given episode. These allusions extend far beyond explicit verbal notations. Cartoon technique allows free movement in The Simpsons, and manipulation of visual qualities—often mimicking comic strip perspectives and cinematic manipulation of space—creates an extraordinary sense of time, place, and movement. On occasion, The Simpsons has reproduced the actual camera movements of the films it models. At other times, the cartoonist’s freedom and ability to visualize internal psychological states such as memory and dream have produced some of the program’s most hilarious moments.

The unique nature of The Simpsons reveals much about the nature of the television industry. Specifically, the existence of the show illustrates the relationship of television’s industrial context to its degree of content innovation. It was a program that came along at the right place and time, and it appealed to the right demographic groups. Groening has said that no other network besides FOX would have aired The Simpsons, and in fact conventional television producers had previously turned down Groening’s programming ideas.

The degree of competition in network television in the late 1980s helped open the door, however. Network television overall found itself in a more competitive environment in this period because of cable television and VCRs. The FOX network, specifically, was in an even more precarious economic position than the “big three” (American Broadcasting Company [ABC], Columbia Broadcasting System [CBS], and National Broadcasting Company [NBC]). Because FOX was the new, unestablished network, attempting to build audiences and attract advertisers, the normally restrictive nature of network television gatekeeping may have been loosened to allow the program on the air. In addition, the championing of The Simpsons by Brooks, an established producer with a strong track record, helped the program through the industrialized television filters that might have watered down the program’s social criticism. Finally, the fact that the program draws young audiences especially attractive to advertisers also explains the network’s willingness to air such an unconventional and risky program. The “tween” demographic, those between the ages of 12 and 17, is an especially key viewing group for The Simpsons as well as a primary consumer group targeted by advertisers.

The Simpsons was a watershed program in the establishment of the FOX network. The cartoon has been the FOX program most consistently praised by television critics. In the 1990s, The Simpsons won five Emmys for Outstanding Animated Programming (one hour or less). In its December 31, 1999, “Person of the Century” issue, Time magazine chose The Simpsons as the best television program ever made. It was the first FOX program to reach the top ten in ratings despite the network’s smaller number of affiliates compared to the big three. When FOX moved The Simpsons to Thursday night in 1990, it directly challenged the number one program of the network establishment at the time, The Cosby Show. Eventually, The Simpsons bested this powerful competitor in key male demographic groups. The schedule change and the subsequent success signaled FOX’s staying power to the rest of the industry, and for viewers it was a powerful illustration of the innovative nature of FOX programming when compared to conventional television fare.

The Simpsons is also noteworthy for the enormous amount of merchandising it has sparked. Simpsons T-shirts, toys, buttons, golf balls, and other licensed materials were everywhere at the height of Simpsonsmania in the early 1990s. At one point, retailers were selling approximately 1 million Simpsons T-shirts per week. The Simpsons also inspired its own line of comic books, Bongo Comics.

The big three networks attempted to copy the success of the prime-time cartoon, but these efforts failed to duplicate The Simpsons’ innovative nature and general appeal. Programs such as Capital Critters, Fish Police, and Family Dog were all short lived on the webs. However, FOX and cable networks have been able to find ratings success with such prime-time animation programs as King of the Hill (FOX) and South Park (Comedy Central). Groening was also a creative force behind Futurama, another FOX prime-time animated program that debuted in 1999. Such programs are one legacy of The Simpsons. Another is that with a two-year renewal provided by FOX in 2003, The Simpsons is positioned to become one of television’s longest-running series in any genre, assuring its place in all future histories of the medium.

2093
"Simulcasting" is a term used to describe the simultaneous transmission of a television and/or radio signal over two or more networks or two or more stations. In the United States, the most obvious example would be a major address by the president that might be carried simultaneously by three television networks (American Broadcasting Company [ABC], Columbia Broadcasting System [CBS], and National Broadcasting Company [NBC]), one or more cable networks (Cable News Network [CNN] and CNBC), and several radio networks.

The term has taken a different meaning during various periods in broadcasting. Initially, the term was applied to the simultaneous transmission of important events over two or more radio outlets. Later, it referred to the simultaneous transmission of programs on radio and television. This occurred during the 1960s, when some of the most popular radio programs became television programs but the audio portion was still simulcast on radio. This practice was short lived, however, as the number of homes with TV sets increased and radio shifted increasingly to music-based programming.

The very slow growth in FM radio during the 1950s and 1960s was due, in part, to the simulcasting of radio programming over co-owned AM and FM stations. In 1964, the Federal Communications Commission (FCC) acted to force the independence of FM stations by severely restricting the number of hours that AM and FM stations could simulcast during any given broadcast day, although protests by radio station owners delayed implementation of the rule until January 1, 1967. (Ironically, the FCC removed the restrictions on
Singing Detective, The

British Serial Drama

The Singing Detective (1986) is a six-part serial by one of British television's great experimental dramatists, Dennis Potter. Produced for the British Broadcasting Corporation (BBC) by Kenith Trodd and directed by Jon Amiel, it revolves around the personal entanglements—real, remembered, and imagined—of the thriller author Philip Marlow (played by Michael Gambon), who is suffering from acute psoriasis and from the side effects associated with its treatment. The result is a complex, multilayered text that weaves together, in heightened, antirealist form, the varied interests and themes of the detective thriller, the hospital drama, the musical, and the autobiography.

A first level of narrative centers on Marlow in his hospital bed. Set in the present, this narrative includes his fantasies and hallucinations. The second narrative is played out in Marlow's mind as he mentally rewrites his story The Singing Detective, with himself as hero, set in 1945. The third narrative, also set in 1945, consists of memories from his childhood as a nine-year-old boy in the Forest of Dean and in London, told through a series of flashbacks. The fourth area of nar-

Currently, the term "simulcasting" is most relevant to the development and adaptation of digital television. Both broadcasters and regulators recognize that newer, more advanced forms of television transmission will have to be phased in gradually since viewers with standard television receivers are not willing to accept the immediate obsolescence of their current TV sets.

As of 2002, many television stations in larger markets are simulcasting on two separate signals. A standard (NTSC analog) signal is broadcast over the television station's basic channel, while a second ATSC digital signal is transmitted over a separate channel allocated to that station specifically for this purpose by the FCC.

Initially, the FCC suggested that this simulcasting would continue until 2006, at which time 85 percent of U.S. households would be able to receive a digital signal. Simulcasting would then be discontinued, and the analog channels would be returned to the FCC for alternative use. As of 2002, that time frame seems very much in doubt, and observers speculate that analog/digital simulcasting will continue long past the 2006 date.

In addition to the simulcasting of analog and digital signals, the traditional simulcasting of major events by one or more television and/or cable outlets is a well-established practice and one not likely to end in the near term.

NORMAN FELSENTHAL

Singing Detective, The
tative involves Marlow’s fantasy about a conspiracy between his wife, Nicola, and a supposed lover, set in the present.

There are obvious parallels between the story and Potter’s own personal history. Like Marlow, Potter was born and brought up in the Forest of Dean at about the same time that Marlow was a wartime evacuee, and like Marlow he stayed in Hammersmith with relations who had difficulty with his strong Gloucestershire accent. Two key incidents in The Singing Detective are based on real-life childhood incidents—Potter’s mother, a pub pianist, being kissed by a man, and Potter’s writing a four-letter word on the blackboard when his precocious facility as a young writer made him unpopular with other schoolchildren.

The serial is explicitly concerned with psychoanalysis: the spectator is constructed both as detective and as psychoanalyst in a drama that Potter described as “a detective story about how you find out about yourself.” The text is rich in Freudian imagery and symbolism, and it deals with psychoanalytical technique as Dr. Gibbons attempts to involve a linguistically skeptical Marlow in the talking cure. Marlow’s paranoia and paranoia are explicitly linked to his repression of painful childhood memories, notably his mother’s adultery, her eventual suicide, and the mental breakdown of a fellow pupil after a beating by a teacher. At this level, for Potter the story was about “one man’s paranoia and the ending of it.”

However, The Singing Detective does not offer a straightforward case of autobiographical drama—Potter claimed the serial was “one of the least autobiographical pieces of work I’ve ever attempted”—nor does it lead to conventional psychological or psychoanalytical resolution. Potter translates basic concerns, instead, to a more complex level where the narrative and generic dimensions of the text endlessly merge and overlap, fusing past and present, fantasy and “reality,” challenging the organic conventions of realist drama and mixing the stabilities of popular television with the textual instabilities of modernism and postmodernism.

The Singing Detective is thus not only the serial that the TV viewer is watching but also the fiction that Marlow is rewriting in his head. Although his name is not unfamiliar in the genre, Marlow is no conventional focus for identification: he is ostentatiously unlikable and contradictory, and his illness has been hideously disfiguring. More important, he is sometimes not the major “focaliser” of the narrative at all, being repeatedly displaced by other themes and discourses in the process of a drama in which “character” itself rapidly becomes an unstable entity. The same character, for example, can appear in different narratives, played by the same actor; characters from one narrative can appear in another; a character may lip-synch the lines of another character from a different narrative; or, in true Brechtian–Godardian style, characters may feel free to comment on their role or to speak directly to the camera.

Questions of time and its enigmas, past and present, are also rendered complex. In narrative 1, in the present, Marlow is reconstructing two pasts: the book he wrote a long time ago, which was itself set in the past, and a part of his childhood, also set in 1945. The main enigmas in his text are set in that year. In narrative 2, who killed the busker, Sonia, Amanda, Lili, and Mark Binney? And why? In narrative 3, who shot on the table? Why did Mrs. Marlow commit suicide? Although narratives 1 and 2 usually (but not always) follow story chronology, in narrative 3, it is not really clear what the actual chronology of the young Philip’s life might be. In terms of narrative frequency, The Singing Detective is further marked by a high degree of repetition—of words, events, and visual images—as the same event, or part of it, is retold, reworked, or recontextualized.

The final shoot-out in the hospital thus merges narratives 1 and 2 by uniting past (1945) with the present time of its reconstruction (1986), that is, its reconstruction in Marlow’s head rather than in his book itself. The “villain” who is killed is not just one of the characters but also the sick author himself, thus liberating the singing detective and ensuring an ending for narrative 2. Although it does not resolve any of the enigmas posed by this second narrative, the “dream” of the “sick” Marlow allows the Marlow who is “well” to get up and walk out of the hospital, concluding narrative 1. As he walks away down a long corridor on Nicola’s arm, bird sounds from the Forest of Dean (narrative 3) are heard; past and present are again combined, even if, typically, they are not reconciled.

The Singing Detective thus refuses any simple reading, and it even contests the traditional definition of television “reading” altogether. It is witty, comic, and salacious yet also savage, bleak, and nihilistic. It is blunt and populist yet arcane and abstruse. Its key themes are language and communication; memory and representation; sexual and familial betrayal and guilt; the transition from childhood to adulthood; the relationships between religion, knowledge, and belief; and the processes of illness and of dying. While its themes are resonant, its most enduring claim on critical attention lies in its thoroughgoing engagement with the textual politics of modernism. Its swirl of meanings and enigmas render it British prime-time television’s most sustained experiment with classic post-Brechtian strategies for antirealism, reflexivity, and textual de-
construction and for the encouragement of new reading practices on the part of the TV spectator.

Siskel and Ebert
U.S. Movie Review Program

Siskel and Ebert represented the first and most popular of the movie-review series genre that emerged on television in the mid-1970s. The lively series focused on the give-and-take interaction and opinions of its knowledgeable and often contentious cohosts. Gene Siskel, film critic of the Chicago Tribune, and Roger Ebert, film critic of the Chicago Sun-Times. Syndicated to approximately 200 markets across the United States, the spirited pair reached a potential 95 percent of the United States on a weekly basis.

Developed from an idea credited to producer Thea Flaum of Public Broadcasting Service (PBS) affiliate WTTW in Chicago, the original series, Opening Soon at a Theater Near You, was broadcast once a month to a local audience beginning in September 1975. Using brief clips of movies in current release, the rival critics debated the merits of the films, making simple “yes” or “no” decisions to signify positive and negative reviews. On those not-so-rare occasions when the two disagreed, sparks might fly, which delighted viewers. An additional element of interest featured Spot the Wonder Dog jumping onto a balcony seat and barking on cue to introduce the film designated “dog of the week.”

After two seasons, the successful series was retitled Sneak Previews and appeared biweekly on the PBS network. By its fourth season, the show became a once-a-week feature on 180 to 190 outlets and achieved status as the highest-rated weekly entertainment series in the history of public broadcasting.
Siskel and Ebert

Based on the program's success, in 1980 WTTW made plans to remove the show from PBS and sell it commercially as a WTTW production. The two stars indicated that they were offered a take-it-or-leave-it contract that they declined. They left the series in 1981 to launch *At the Movies* for commercial television under the banner of Tribune Entertainment, a syndication arm of the *Chicago Tribune*. Basically utilizing the same format as *Sneak Previews*, the new series made some minor adjustments, including the replacement of the black-and-white Wonder Dog with Aroma the skunk, which ultimately was removed to make room for commercials. At WTTW, *Sneak Previews* replaced Siskel and Ebert with New York–based critics Jeffrey Lyons and Neal Gabler. In time, the PBS offering would settle on Lyons and Michael Medved as its hosts, and the show remained on air through the 1995–96 season.

Citing contractual problems with Tribune Entertainment, in 1986 Siskel and Ebert departed *At the Movies* for Buena Vista Television, a subsidiary of the Walt Disney Company, and created a new series titled *Siskel and Ebert at the Movies*. The order of the names was decided by the flip of a coin, and the show title was eventually shortened to *Siskel and Ebert*. Ebert also suggested the Romanesque thumbs-up/thumbs-down rating system, which became a distinctive Siskel–Ebert trademark. Their former show, *At the Movies*, acquired Rex Reed and Bill Harris as hosts and added news of show business to the format. Harris left the series in 1988 and was replaced by Dixie Whately, former cohost on *Entertainment Tonight*, and the series continued into 1990.

Of all the different series and cohosts in this genre, the Siskel–Ebert partnership has remained the most celebrated. In 20 years of offering responsible commentary in an unedited spontaneous fashion, the two critics reviewed more than 4,000 films and compiled an impressive list of firsts and show milestones. In his defense of television film critics in the May/June 1990 issue of *Film Comment*, Ebert, the only film critic to have won a Pulitzer Prize for criticism, points out that *Siskel and Ebert* was the first national show to discuss the issue of film colorization, the benefits of letterbox video dubbing, and the technology of laser disks. *Siskel and Ebert* provided an outlet for the ongoing examination of minority and independent films, attacked the rating system of the Motion Picture Association of America as de facto censorship, and protested product placement (i.e., incidental advertising) within films. And in May 1989, extolling the virtues of black-and-white cinematography, they videotaped their show in monochrome—the first new syndicated program to do so in 25 years.

Siskel and Ebert’s influence with audiences was also notable. Their thumbs-up reviews are credited with turning films such as *My Dinner with Andre* (1981), *One False Move* (1992), and *Hoop Dreams* (1994) into respectable box office hits. Thumbs-down reviews had the opposite effect: although many filmmakers contend that ultimately it is up to the public to choose which films they see, many directors and producers also have noted the benefits that exposure on *Siskel and Ebert* could provide. Notwithstanding, there were occasional disgruntled feelings. As reported in the *Los Angeles Times* (December 10, 1995), screenwriter Richard LaGravanese used “Siskel” as the name for one of the “bad guys” in his film *The Ref* after a negative review of his previous work *The Fisher King*.

Both Siskel and Ebert agreed that their animated dialogue was crucial to the show’s success and more compelling than criticism from a solitary voice. They viewed their disagreements as those of two friends who had seen a movie and had a difference of opinion. But they had some intense moments, as evidenced in a pre-Oscar special broadcast in 1993 when an angry Ebert took exception to Siskel’s revelation of the significant plot twist that concludes the film *The Crying Game*.

Through the years, the television industry recognized Siskel and Ebert with six national Emmy nominations and one local Emmy (1979). In 1984, the pair were among the first broadcasters initiated into the National Association of Television Programming Executives (NATPE) Hall of Fame. They also received NATPE’s Iris Award for their achievement in nationally syndicated television. The Hollywood Radio and Television Society named them Men of the Year in 1993. As Richard Roeper wrote in the *Chicago Sun-Times* (October 15, 1995) on the occasion of their 20th anniversary, “Siskel and Ebert took serious film criticism and made it palatable to a mass audience—and in so doing, became celebrities themselves, as recognizable as most of the movie stars whose films they review.”

In May 1998, the show weathered a potential setback when Siskel underwent brain surgery to remove a growth. Remarkably, he returned to the show and stayed with it until early February 1999, when he took another leave of absence for further rehabilitation and recuperation. On February 20, 1999, he passed away. In July 2000, the previously mentioned *Chicago Sun-Times* columnist Richard Roeper, one of 24 reviewers who guest hosted with Ebert over a 17-month period, was named Ebert’s new permanent cohost. Roeper assumed Siskel’s vacant seat in the balcony two months later, and the program was renamed *Ebert and Roeper and the Movies*. The show also brought in ZDTV’s...

The Six Wives of Henry VIII

British Historical Drama Serial

The Six Wives of Henry VIII, first broadcast by the British Broadcasting Corporation (BBC) in 1970, became one of its most celebrated historical drama serials. The nine-hour, six-part series went on to be shown in some 70 countries and attracted no less than seven major awards, winning plaudits both for the quality of the performances and for its historical authenticity.

Towering over the series was the gargantuan figure of Henry himself, played by the hitherto unknown Australian actor Keith Michell, who earned an award for best television actor as a result of his efforts. Michell, who started out as an art teacher, owed the role to Laurence Olivier, who had been impressed by Michell while on tour in Australia and had brought him back to England in order to advance his career. The faith the BBC put in the young actor was more than amply rewarded; Michell went to extraordinary lengths to vitalize the larger-than-life character of the king.

The series was neatly split into six episodes, each one dealing with one of the six wives and tracing their varied experiences and sometimes bloody ends at the hands of one of England's most infamous rulers. The wives were played by Annette Crosbie, Dorothy Tutin, Anne Stallybrass, Elvi Hale, Angela Pleasance, and Rosalie Crutchley, all respected and proven stars of stage and screen. Annette Crosbie, playing Catherine of Aragon, collected an award for best actress for her performance.

Michell, though, was always the focus of attention. The task for the actor was to portray Henry at the different stages of his life, beginning with the athletic 18-year-old monarch and culminating in the oversize 56-year-old tyrant plagued by a variety of physical ailments. Playing the aging Henry in the later episodes proved the most demanding challenge. Michell, who boasted only half the girth of the real king, spent some four hours each day getting his makeup on and was then unable to take any sustenance except through a straw because of the padding tucked into his cheeks. The impersonation was entirely convincing, however, and critics hailed the attention to detail in costume and sets. No one, it seemed, twiggled that Henry's mink robes were really made of rabbit fur or that the fabulous jewels studding his hats and coats were humble washers and screws sprayed with paint.

The lavishness of the costumes and settings and the brilliance of Michell and his costars ensured the success of the series, although some viewers expressed reservations. In particular, it was felt by some critics that the underlying theme of the lonely and essentially
reasonable man beneath the outrageous outer persona was perhaps rather predictable and further that Michell—who admitted to admiring Henry's excesses—had a tendency to reduce Henry to caricature (a fault more clearly evident in the film Henry VIII and His Six Wives, which was spawned by the television series in 1972).

Whatever the criticisms, the success of The Six Wives of Henry VIII brought stardom to Michell and also did much to establish the BBC's cherished reputation for ambitious and historically authentic costume drama, consolidated a year later by the equally acclaimed series Elizabeth R, starring Glenda Jackson as Henry's daughter.

**Further Reading**

In 1967, Don Hewitt conceived of his new program, 60 Minutes, as a strategy for addressing issues given insufficient time for analysis in two minutes of the Evening News but not deemed significant enough to justify an hour-long documentary. 60 Minutes was born, then, in an environment of management tension and initial ambiguity regarding its form. Bill Leonard, vice president for news programming for the Columbia Broadcasting System (CBS), supported the new concept, but Richard Salant, president of the news division, argued that it countered that unit's commitment to the longer form and risked taking the hard edge off television journalism. In the end, Salant acquiesced.

Hewitt's direction remained flexible and uncertain, with design for the program possibly including any number of "pages" and "chapters," lasting 1 to 20 minutes and spanning breaking news, commentary, satire, interviews with politicians and celebrities, feature stories, and letters to the editor. CBS proclaimed the groundbreaking potential of this magazine form, announcing that no existing phrase could describe the series' configuration and that any attempt to gauge (or predict) the show's demographic appeal based on comparisons to traditional public affairs programming was a limited prospect. Yet by the time it had been on the air for a quarter of a century, the series' success was so established within the history of network programming that CBS and 60 Minutes had competition from roughly half a dozen other prime-time magazine programs.

From September 1966 through December 1975, network management shifted the scheduling position of 60 Minutes seven times. Its ratings were very low according to industry standards (although slightly higher than those of CBS Reports when aired in the same time slot), but critical response remained positive. In the 1970s, Hewitt, with a tone of self-aggrandizement, passionately publicized the methods that would make the series a success. Audiences must experience stories in the pit of their stomach, the narrative must take the viewer by the throat, and, noted Hewitt, when a segment is over, it is not significant what the audience has been told; what matters is "only what they remember of what you tell them." Hewitt predicted high ratings if 60 Minutes packaged stories, not news items, as attractively as "Hollywood packages fiction." Such stories require drama, a simplified structure, a narrative maximizing conflict, a quick editing pace, and issues filtered through personalities. By acknowledging this marketing approach, Hewitt generated controversy in the television industry.

Several of 60 Minutes' journalists had established their professional reputations before the series began, but with the program's growing success and significance, the correspondents reached international celebrity status, becoming crusaders, detectives, sensitive and introspective guides through social turmoil, and insightful investigators of the human psyche. A confrontational style of journalism, pioneered by Mike Wallace, grew and was embraced by a more confronta-
tional society. In the 1970s, certain correspondents seemed to speak for a public under siege by institutional greed and deceit.

Through it all, Hewitt remained sensitive to balancing the series through the use of varying casts. Wallace's role remained consistent as the crusading detective, played, as the series began, opposite Harry Reasoner's calm, analytical, and introspective persona. As correspondents were added (Morley Safer, Dan Rather, Ed Bradley, Diane Sawyer, Meredith Vieria, Steve Kroft, and Lesley Stahl), Hewitt developed complementary personas for each season's team. The correspondents became part of his "new form" of storytelling, allowing the audience to watch their intimate involvement in discovering information, tripping up an interviewee, or developing a narrative. As a result, the correspondents are often central to Hewitt's notion of stories as morality plays, the confrontation of vice and virtue.

The investigative segments of the series have made 60 Minutes the focus of consistent examination by the press concerning such issues as journalism ethics and integrity. 60 Minutes has been taken to task for having correspondents or representatives use false identities to generate stories, establishing sting operations for the camera, confronting the person under inquiry by surprise, and revealing new documents without prior notice to a cooperative interviewee in order to increase the shock value of the information. Despite widespread knowledge of these strong techniques, individuals still subject themselves to interviews, offering the audience an opportunity to anticipate who will win the battle. Indeed, companies frequently must weigh the benefits of voicing a corporate perspective on 60 Minutes against the risk encountered by company representatives when facing the penetrating (aggressive) questioning and fact-finding by the correspondent. By raising these issues, the series has focused attention on emerging techniques of broadcast journalism.

In the late 1990s, the power of 60 Minutes to confer unwarranted status on people appearing on the show crystallized with detrimental consequences to the series' credibility. Segments of the public vehemently objected to an hour-long interview with Timothy McVeigh, the individual convicted of bombing the federal building in Oklahoma City, and a repeat of the show with family members of the victims responding to McVeigh's statements. After Hewitt made the decision to air the assisted suicide performed by Jack Kevorkian (May 22, 1998), critics accused Hewitt of giving Kevorkian a vehicle to challenge the legal system and position himself as a martyr.

Critics, researchers, and the public continue to investigate the reasons behind the longevity of 60 Minutes as a popular culture phenomenon. The series' timeliness, its bold stand on topics, its access to powerful people, and its confrontations with institutions out of reach of the public all provide audiences with the pleasure of knowing that accountability does exist. For some, the program is compelling because of its crusades, such as its coverage of Lenell Geter, freed from life imprisonment after 60 Minutes explored and analyzed his case. For others, the most appealing stories involve a subject's vigorous self-defense, as when Senator Alfonso D'Amato (Republican, New York) poured out his wrath in a 30-minute response to claims that he misused state funds. The series' perennial "light" moment, "A Few Minutes with Andy Rooney," confirms the value of personal opinion on otherwise mundane matters.

60 Minutes generates news about itself and thus keeps the series attractive by humanizing its trials and tribulations. Producers, correspondents, and Hewitt have played out issues in public. The announcement by CBS of a new magazine program, West 57th, geared to a younger audience, met with a bombardment of criticism and sarcasm from 60 Minutes' personnel, creating well-publicized tension between both units working in the same building. Producer Marion Goldin twice quit 60 Minutes after accusing the unit of sexism. Hewitt charged Rooney with hypocrisy for criticizing CBS owner Lawrence Tisch on air instead of quitting. Wallace has been reprimanded for using hidden cameras to tape a reporter who agreed to help him with a story. However, Wallace made an unprecedented "denouncement" on the air, without repercussions, of CBS management after they prevented testimony by Wigand against his former employer in the tobacco industry. Even when the series dropped to number 13 in the 1993–94 Nielsen ratings (after being first for two years), the drop became a "story." Hewitt and others blamed CBS, Inc., for losing affiliates in urban areas and for allowing the FOX network to win the bid for Sunday afternoon football, 60 Minutes' long-time lead-in program.

When Dateline NBC, a similar newsmagazine, was programmed opposite 60 Minutes in the spring of 1996, the press covered the move as a battle for the hearts and minds of the audience. However, for several months before the direct competition, Hewitt began to revamp 60 Minutes, adding brief, hard news segments; announcing the production of new stories throughout the summer; adding a "commentary" section; and tracking down new and unfamiliar topics. Although the series has been criticized for sporadically following compelling stories broken by magazines such as The Nation instead of breaking news, the strategy meets Hewitt's mandate to impact a large audience. In
its fourth decade, 60 Minutes continues to shift strategy and change in form. With the arrival of 60 Minutes II in January 1999, Hewitt faced the challenge of keeping the original series distinctive and maintaining its prominence among magazine programs.

When Leslie Moonves, president and chief executive officer of CBS Television, conceived of 60 Minutes II, Hewitt and Wallace believed that he was motivated by profit making and trying to respond to the decisions of the American Broadcasting Company (ABC) and the National Broadcasting Company (NBC) to dedicate more programming time to other newsmagazines. For Hewitt, the new CBS program would lead to the “dumbing down” of the 60 Minutes brand in order to attract the 18- to 49-year-olds absorbed by the soft-news and celebrity-oriented stories of the competition on other networks. The strong resistance of Hewitt and Wallace to 60 Minutes II abated after Jeffrey Fager left his position as executive producer of the CBS Evening News to head the series, and Rather became a regular correspondent. Joining the series as correspondents were Bob Simon, Charlie Rose, and Vicki Mabrey, with Carol Marin as contributing correspondent, and Jeffrey Tingle, a Boston-based comic, as commentator. When Tingle’s brand of humor failed, Charles Grodin came aboard in October 2000. Scott Pelley joined as the fifth correspondent late in 1999.

Fearing that the potential failure of 60 Minutes II would permanently tarnish the original series, Hewitt and Fager took the further precaution of limiting the appearance on the new series of original 60 Minutes correspondents to “classic” segments, updates of memorable stories from the original series. Since mid-2000, 60 Minutes II has been the second-highest-rated newsmagazine behind 60 Minutes. Hewitt, confident that the new series was “committed to the values” of 60 Minutes as promised by CBS News President Andrew Heyward, permitted correspondents to contribute stories. Highlighting the tradition and strengths of 60 Minutes’ investigative reports, Bradley examined whether the massacre at Columbine High School could have been prevented, and Wallace revealed the practice of genetic discrimination.

In its first year, hoping to attract a younger audience, 60 Minutes II offered profiles of Elton John, Madonna, Bonnie Raitt, Jody Foster, Pat Summit, and Oscar de la Hoya that transgressed timid celebrity gazing and storytelling. The series also featured in-depth reporting on such subjects as new research into the nature of the brain; a growing anarchist movement based in Seattle, Washington; a cover-up of a 1921 race riot in Tulsa, Oklahoma; and a variety of national and international conditions that fit the meticulous investigative format established by the program’s predecessor. 60 Minutes II was not afraid to take risks in tracking down stories or to shy away from legal battles. Producers won a court challenge accusing them of infringing on patient confidentiality by airing footage from a microcamera attached to a hospital worker’s eyeglasses, capturing patient mistreatment in one hospital administered by a corporation responsible for 91 hospitals. The series demonstrated that it could be an agent of change when a story on child labor in India resulted in U.S. Customs stopping cigarettes rolled by children from entering the country.

After the September 11, 2001, terrorist attacks on the United States, 60 Minutes II secured a position as an invaluable and professional newsmagazine firmly anchored in the tradition and accomplishments of 60 Minutes. 60 Minutes has built an extensive archive of film from stories on smallpox, the Middle East, international terrorism, Pakistan, the Taliban, Afghanistan, U.S. counterterrorism units, and biochemical warfare. The foresight and courage of 60 Minutes to cover issues with minimal audience appeal and shunned by other newsmagazines was evident in the breadth and depth of its coverage of topics that gained fresh relevance in the United States’ new war on terrorism. 60 Minutes II employed the resources, film, and research reports of 60 Minutes to live up to Don Hewitt’s standard of broadcasting journalism.

$64,000 Question, The/The $64,000 Challenge

U.S. Quiz Shows

The premiere of The $64,000 Question as a summer replacement in 1955 marked the beginning of the big-money quiz shows. Following a U.S. Supreme Court ruling in 1954 that exempted "jackpot" quizzes from charges of illegal gambling, Louis G. Cowan, the creator and packager of the program; Revlon, its main sponsor; and the Columbia Broadcasting System (CBS) were able to bring this new type of quiz show on the air. Based on the popular 1940s radio quiz show Take It or Leave It with its famous $64 question, The $64,000 Question increased the prize money to an unprecedented, spectacular level. It also added public appeal with a security guard and a "trust officer" who monitored questions and prizes and its fairly elaborate set design, which included an "isolation booth" for the contestants. Intellectual "legitimacy" was further claimed through the employment of Professor Bergen Evans as "question supervisor." With its emphasis on high culture, academic knowledge, and its grave, ceremonious atmosphere, The $64,000 Question represented an attempt to gain more respectability for the relatively new and still despised television medium while at the same time appealing to a large audience.

Each contestant began his or her quest for fortune and fame by answering a question in an area of expertise for $64. Each subsequent correct answer doubled their prize money up to the $4,000 level. After this stage, contestants could advance only one level per week and were asked increasingly elaborate and difficult questions. They were allowed to quit the quiz at any level—and keep their winnings—but missing a question always eliminated the contestant. Nevertheless, contestants were guaranteed the $4,000 from the first round, and, if they missed a question after having reached the $8,000 level, they received an additional consolation prize—a new Cadillac. At this level, candidates were also moved from the studio floor to the "Revlon Isolation Booth," a shift designed to intensify the dramatic effects at the higher levels of the quiz.

Besides its use of such spectacular features, the appeal of The $64,000 Question was also strongly grounded in the audience's identification with returning contestants. Thus, many of the early competitors were transformed from "common people" into instant superstars. Policeman Redmond O'Hanlon, a Shakespeare expert, and shoemaker Gino Prato, an opera fan, are among the noted examples. The popularity of these and other contestants proved the viability of "the serialized contest," a concept that The $64,000 Question and many imitators (such as Twenty-One and The Big Surprise) followed.

Because of the immense success of The $64,000 Question (at one point in the 1955 season it had an 84.8 percent audience share), CBS and Cowan created a spin-off, The $64,000 Challenge. This program allowed those contestants from The $64,000 Question who had won at least $8,000 to continue their quiz show career. The format was changed into a more overt contest; two candidates competed against each other in a common area of expertise. As a minimum prize, contestants were guaranteed the amount at which they beat their opponents. Additionally, the $64,000 limit on winnings was removed, making the contests even longer and more spectacular.

The combination of these two shows allowed the most successful candidates to become virtual television regulars, as in the case of Teddy Nadler, who had accumulated $252,000 by the time The $64,000 Challenge was canceled. These programs held top rating spots until Twenty-One found a format and a contestant, Charles Van Doren, audiences found even more appealing.

The need for regular contestants to appear over long periods of time, one of the central factors in the popularity of the big-prize game shows, also proved to be a central factor in their downfall with the quiz show scandal of 1958. The sponsors of the programs implicitly expected and sometimes explicitly demanded that popular contestants be supplied with answers in advance, enabling them to defeat unpopular competitors and remain on the show for extended periods. Although no allegations against Entertainment Productions, Inc., and CBS were ever substantiated, Erik Barnouw (1970) points out that their production personnel claimed that Revlon had frequently tried to influence the outcome of the quizzes. Ultimately, both shows were canceled because of public indignation and waning ratings in the wake of the scandals.

One of the most significant results of the quiz show scandal and the involvement of sponsors in it was the
shift in the power to program television. The scandal was used as an argument by the networks to eliminate completely sponsor-controlled programming in prime-time broadcasting and to take control of program production themselves.

Skelton, Red (1913–1997)

U.S. Comedian

It was not until 1986, a full 15 years after his weekly television show had ended, that “one of America’s clowns” received his overdue critical praise. Only then did the critics realize what the public had long known. Regardless of his passion for corny gags and slapstick comedy, Red Skelton was a gifted comedian. He was one of the few performers to succeed in four entertainment genres—vaudeville, radio, film, and television. To honor his lifetime achievements, Skelton received the Academy of Television Arts and Sciences Governor’s Emmy Award in 1986 and the critical praise he deserved.

Skelton’s youth was characterized by poverty and a fascination for vaudeville. It was the influence of vaudeville great Ed Wynn that led Skelton to perfect his own comedy routines. The basics of Skelton’s vaudeville act consisted of pantomimes, pratfalls, funny voices, crossed eyes, and numerous sight gags that would serve to identify him throughout his entertainment career. It was also during this period that Skelton began developing various comedy characters.

His radio show, which ran from 1941 to 1953, provided the opportunity to present his comedy to a mass audience. The limitations of the sound medium also made it necessary for him to develop further the characters he would later bring to television: Freddie the Freeloader; Clem Kadiddlehopper, the country bumpkin; Willy Lump Lump, the drunk; Cauliflower McPugg, the boxer; The Mean Widdle Kid; and San Fernando Red, the con man.

In conjunction with his radio show, Skelton also enjoyed film success, most notably in Whistling in the Dark (1941), The Fuller Brush Man (1948), A Southern Yankee (1948), and The Yellow Cab Man (1950).
Regardless of his vaudeville, radio, and film success, it would be television that would bring him his greatest fame and endeavor to his largest audience.

*The Red Skelton Show* began in 1951 on the National Broadcasting Company (NBC) as a comedy-variety show. Skelton coproduced this initial show, which was a half-hour program on Sunday evenings. In its first year, the show finished fourth in the ratings and received the Emmy Award for Best Comedy Show. Unlike other radio comedians, Skelton's comedy act entailed more than his voice, and television provided the opportunity to display fully the showmanship talents he had begun to exhibit in vaudeville.

In 1953, the show moved to the Columbia Broadcasting System (CBS) on Tuesday nights, and in 1961 it received a second Emmy Award for Outstanding Writing Achievement in Comedy, expanding to an hour-long show the following year. In 1964, the show made the Nielsen Top 20, where it stayed until its end in 1970.

The show consisted of Skelton's opening monologue, performances by guest stars, and comedy sketches that included his various characters. Perhaps the most unique part of the show (and for all of television) was "The Silent Spot," a mime sketch that often featured Skelton's character Freddie the Freeloader. The only regulars on the show were Skelton and the David Rose Orchestra. *The Red Skelton Show* set the precedent for future comedy-variety shows, such as *The Carol Burnett Show*.

According to CBS, the show's 1970 cancellation was due to rising production costs and the network's desire to appeal to more upscale advertisers (the show finished seventh in its final season). The following year, Skelton returned to NBC with a half-hour comedy-variety show that included a cast of regulars. The show's premiere featured Vice President Spiro Agnew. This time, unfortunately, the uneven comedy failed to match Skelton's previous success. The show's cancellation marked the end of Skelton's television career, a run of 21 straight years that also included guest appearances on other television series and involvement with 13 television specials. The only television performer with a longer stay was Ed Sullivan (24 years as host of *The Ed Sullivan Show*).

Following his departure from television, Skelton maintained a low profile and performed at resorts, clubs, and casinos. In the early 1980s, a series of superb performances at Carnegie Hall received critical praise and briefly thrust him back into the public spotlight. The newfound interest in Skelton resulted in three comedy specials for Home Box Office (HBO).

Since his TV show was seldom rerun and is not syndicated, it is easy to forget Skelton's popularity. Based on longevity and audience size, *The Red Skelton Show* is the second-most popular show in TV history (Gunsmoke is first). As Groucho Marx once said, Red Skelton was "the most unacclaimed clown in show business." Marx noted that by using only a soft, battered hat as a prop, Skelton could entertain with a dozen characters. He died in 1997 at the age of 84.

**Skippy**

**Australian Children’s Program**

Before the international sales success in the late 1980s and 1990s of Australian soap operas such as *Neighbours* and *Home and Away*, *Skippy* was the most successful series ever made in Australia. It had sales in more than 100 overseas markets and was syndicated on U.S. television. In addition, in a lucrative deal the series’ central figure of Skippy, the bush kangaroo, was licensed to the U.S. breakfast food giant Kellogg’s.

*Skippy* was produced by Fauna Productions, a partnership formed by film producer-director Lee Robinson and former film actor John McCallum, with a Sydney lawyer as the third partner. Robinson had had an extensive background in Australian documentary filmmaking and had created the position of Australian and Pacific film correspondent for the *High Adventure* series on U.S. television, hosted by newsmen and explorer Lowell Thomas. Ever the internationalist, in the 1950s, Robinson had produced a series of feature films in Australia, in partnership with actor Chips Rafferty, that combined familiar Hollywood narrative structures. Drawing from such genres as the western, these films used exotic locations, flora, and fauna and were based in different parts of the Pacific.

McCallum, although born in Australia, had spent most of his professional life in Britain, where he had worked extensively on stage and in film. He returned to Australia to take a senior executive position with J.C. Williamson and Company, the largest theatrical group in Australia and New Zealand, where he became involved with the New Zealand comedy feature *They’re a Weird Mob*. McCallum and Robinson, both of whom had been production managers on the film, briefly considered producing a spin-off television series. However, they followed the advice of the international distributor Global about what would sell well in the world market and finally decided on *Skippy*.

The genre that they settled on for *Skippy* was a family/children’s series with a child and an animal at its center, in a familiar vein that stretched from *Lassie* to *Flipper*. The “difference” in the Australian series was the fact that it featured native flora and fauna. Skippy was a bush kangaroo (a universal symbol of Australia), and the series was set in a national park north of Sydney that featured bushland, waterways, and ocean shores. The series concerned ranger Matt Hammond (Ed Devereaux), his son Sonny (Garry Pankhurst), the latter’s pet kangaroo, his brother (Ken James), and two other junior rangers played by Tony Bonner and Liza Goddard. All together, three different kangaroos played Skippy.

Airing between 1968 and 1970, *Skippy* resulted in 91 half-hour episodes together with one feature film, *Skippy and the Intruders*. The series was produced on film and in color, even though Australian television had not yet moved to a color transmission system, and was sold to the Packer-owned Nine Network, where it first aired in February 1968. With high production values, the program was costly to produce and an initial
Smith, Howard K. (1914–2002)
U.S. Journalist

Howard K. Smith, an outspoken, often controversial television newsmen, developed a career that spanned the decades from his sober analytic foreign news reporting at the Columbia Broadcasting System (CBS) as one of “Murrow’s Boys” to years as co-anchor and commentator on ABC Evening News. Smith’s career also saw his transformation from CBS’s “resident radical” to his persona “Howard K. Agnew,” a sobriquet granted by critics for his support of conservative Republican Vice President Spiro T. Agnew’s bitter 1969 attack on TV news.

In 1940, Smith joined United Press as their correspondent in London and Copenhagen, and in 1941 he joined CBS news, where he replaced William L. Shirer as CBS’s Berlin correspondent. The last American correspondent to leave Berlin after war was declared, Smith reached safety in Switzerland with a manuscript describing conditions in Germany, which became the basis for his best-selling book Last Train from Berlin.

During the war, Smith accompanied the Allied sweep through Belgium and the Netherlands and into Germany. He was on hand when the Germans surrendered to the Russians under Marshal Zhukov in 1945 and then covered the Nuremberg trials. In 1946, he succeeded Murrow as CBS’s London correspondent and spent the next 11 years covering Europe and the Middle East.
In 1949, Smith published *The State of Europe*, advocating a planned economy and the welfare state for postwar Europe. Perhaps for this reason, and to some extent because of his radical past, he was named as a Communist supporter in *Red Channels*, a McCarthyite document purporting to uncover Communist conspiracy in the media industries. Smith hardly suffered from these accusations, however, since both Murrow and his overseas posting protected him. Indeed, in 1957, Smith returned to the United States and in 1960 was named chief of the CBS Washington Bureau, where he hosted programs such as *The Great Challenge, Face the Nation*, and the Emmy Award–winning *CBS Reports* documentary “The Population Explosion.” He also served as the moderator of the first Kennedy–Nixon presidential debate.

As a southerner, Smith was more and more drawn to the battle over civil rights, and in 1961 he narrated a *CBS Reports* special, “Who Speaks for Birmingham?” His final commentary included a quote from Edmund Burke: “All that is necessary for the triumph of evil is for good men to do nothing.” The quote was cut from the program. In a showdown with CBS Chairman William S. Paley, Smith resigned after Paley supported his executives over Smith and his alleged “editorializing.”

Shortly thereafter, Smith signed with ABC News and began doing a weekly news show, *Howard K. Smith—News and Comment*. Smith’s program made creative use of film, graphics, and animation and explored controversial topics such as illegitimacy, disar-
things, "conformist," for adhering to a liberal "party line," for "stupidity," and, at least in some cases, for lacking "the depth of a saucer."

In March 1969, Av Westin took over as head of ABC News and immediately installed Smith as the co-anchor of ABC Evening News, with Frank Reynolds. In 1971, Smith was teamed with the newly arrived former CBS newsmen Harry Reasoner and given additional duties as commentator. Smith’s support of the Vietnam War and Vice President Agnew’s attacks on TV news stood him in good stead with President Nixon, who granted him the unique privilege of an hour-long solo interview in 1971 titled White House Conversation: The President and Howard K. Smith. Despite this, when evidence grew of Nixon’s involvement in the Watergate scandal, Smith was the first major TV commentator to call for the president’s resignation.

In 1975, Smith relinquished his co-anchor role on the ABC Evening News but stayed on as commentator. Following the 1977 arrival of Roone Arledge as head of ABC News, Smith found himself being used less and less. In 1979, he resigned from ABC, denouncing Arledge’s evening newscast featuring Peter Jennings, Max Robinson, Frank Reynolds, and Barbara Walters as a “Punch and Judy Show.” Following his retirement, Smith was inactive in television and radio. In 1996, he wrote an autobiography titled Events Leading Up to My Death: The Life of a Twentieth-Century Reporter. Smith was one of the last of TV newsmen who saw their role as not merely reporting the news but analyzing and commenting on it passionately. He died on February 15, 2002.

Smothers Brothers Comedy Hour, The
U.S. Comedy-Variety Program

The Smothers Brothers Comedy Hour, starring the folk-singing comedy duo Tom and Dick Smothers, premiered on the Columbia Broadcasting System (CBS) in February 1967. A variety show scheduled opposite the top-rated National Broadcasting Company (NBC) program Bonanza, the Comedy Hour attracted a younger, hipper, and more politically engaged audience than most other video offerings of the 1960s. The show’s content featured irreverent digs at many dominant institutions, such as organized religion and the presidency. It also included sketches celebrating the hippie drug culture and material opposing the war in Vietnam. These elements made The Smothers Brothers Comedy Hour one of the most controversial television shows in the medium’s history. Questions of taste and the Smothers’s oppositional politics led to very public battles over censorship. As CBS attempted to dictate what was appropriate prime-time entertainment fare, the Smothers tried to push the boundaries of acceptable speech on the medium. The recurring skirmishes between the brothers and the network culminated on April 4, 1969, one week before the end of the season, when CBS summarily threw the show off the air. Network president Robert D. Wood charged that the Smotherses had not submitted a review tape of the upcoming show to the network in a timely manner. The Smotherses accused CBS of infringing on their First Amendment rights. It would be 20 years before the Smothers Brothers again appeared on CBS.

In their earliest days, however, the network and the brothers got along quite well. The Smotherses began their association with CBS in a failed situation comedy called The Smothers Brothers Show, which ran for one season in 1965-66. The show featured straight man Dick as a publishing executive and slow-witted, bumbling Tom as his deceased brother who had come back as an angel-in-training. The sitcom format did not prove to be appropriate for Tom and Dick’s stand-up brand of comedy. CBS, feeling that the brothers still had potential, decided to give them another try in a different program format.

Considering how contentious The Smothers Brothers Comedy Hour became, it is worth noting that, in form and style, the show was quite traditional, avoid-

The Smothers Brothers, Tom Smothers, Dick Smothers; c. 1965 around the time of their sitcom.

The show was noteworthy for some of the new, young talent it brought to the medium. Its corral of writers, many of whom were also performers, provided much of the energy and managed to offset some of the creakiness of the format and the older guest stars. Mason Williams, heading the writing staff, achieved fame not so much for his politically engaged writing but for his instant guitar classic "Classical Gas." Bob Einstein wrote for the show and also played the deadpan and very unamused cop, Officer Judy. He went on to greater fame as Super Dave. Finally, the then-unknown Steve Martin cut his comedic teeth as a staff writer for the show.

What also raised The Smothers Brothers Comedy Hour above the usual fare of comedy variety was the way the Smotherses and their writers dealt with some of their material. Dan Rowan of Laugh-In noted that while his show used politics as a platform for comedy, the Smotherses used comedy as a platform for politics. A recurring political sketch during the 1968 presidential year tracked regular cast member, the lugubrious Pat Paulsen, and his run for the nation's top office. Campaigners for Democratic contender Hubert Humphrey apparently worried that write-in votes for Paulsen would take needed votes away from their candidate.

Another Comedy Hour regular engaged in a different kind of subversive humor. Comedian Leigh French created the recurring hippie character Goldie O'Keefe, whose parody of afternoon advice shows for housewives, "Share a Little Tea with Goldie," was actually one long celebration of mind-altering drugs. "Tea" was a countercultural code word for marijuana, but the CBS censors seemed to be unaware of the connection. Goldie would open her sketches with salutations such as "Hi(gh)—and glad of it!"

While Goldie's comedy was occasionally censored for its prodrug messages, it never came in for the suppression focused on other material. One of the most famous instances was the censorship of folk singer Pete Seeger. Seeger had been invited to appear on the Smothers's second season premiere to sing his antiwar song "Waist Deep in the Big Muddy." The song—about a gung-ho military officer during World War II who attempts to force his men to ford a raging river only to be drowned in the muddy currents—was a thinly veiled metaphor for President Lyndon Johnson and his Vietnam policies. The censoring of Seeger created a public outcry, causing the network to relent and allow Seeger to reappear on the Comedy Hour later in the season to perform the song.

Other guests who wanted to perform material with an antiwar message also found themselves censored. Harry Belafonte was scheduled to do a calypso song called "Don't Stop the Carnival" with images from the riotous 1968 Chicago Democratic Convention chromakeyed behind him. Joan Baez wanted to dedicate a song to her draft-resisting husband, who was about to go to prison for his stance. In both cases, the network considered this material "political" and thus inappropriate for an "entertainment" format. Benjamin Spock, noted baby doctor and antiwar activist, was prevented from appearing as a guest of the show because, according to the network, he was a "convicted felon."

Other material that offended the network's notions of good taste also suffered the blue pencil. One regular guest performer, comedian David Steinberg, found his satirical sermonettes censored for being "sacrilegious." Even skits lampooning censorship, such as one in which Tom and guest Elaine May played motion picture censors trying to find a more palatable substitution for unacceptable dialogue, ended up being censored.

The significance of all this censorship and battles between the Smotherses and CBS is what Bert Spector has called a "clash of cultures." The political and taste values of two generations were colliding with each other over The Smothers Brothers Comedy Hour. The show, appearing at a pivotal moment of social and cultural change in the late 1960s, ended up embodying some of the turmoil and pitched conflict of the era. The Smotherses wanted to provide a space on prime-time television for the perspectives of a disaffected and rebellious youth movement deeply at odds with the dominant social order. CBS, with a viewership skewed to an older, more rural, more conservative demographic, could find the Smothers's embrace of antiestablishment politics and lifestyles only threatening.

In the aftermath of the show's cancellation, the Smotherses received a great deal of support in the popular press, including an editorial in the New York Times and a cover story in the slick magazine Look. Tom Smothers attempted to organize backing for a free-speech fight against the network among congressional and Federal Communications Commission members in Washington, D.C. While they were unsuccessful in forcing CBS to reinstate the show, the Smotherses did eventually win a suit against the network for breach of contract.

In the years following their banishment from CBS, the Smotherses attempted to re-create their variety show on the other two networks. In 1970, they did a summer show on the American Broadcasting Company (ABC) but were not picked up for the fall season. In 1975, they turned up on the National Broadcasting Company (NBC) with another variety show that disappeared at midterm. Then, finally, 20 years after being
shown the door at CBS, the brothers were welcomed back for an anniversary special in February 1988. The success of the special, which reintroduced stalwarts Goldie O’Keefe (now a yuppie) and Pat Paulsen, led to another short-lived and uncontroversial run of *The Smothers Brothers Comedy Hour* on CBS. Most recently, in 1992, the Smotherses reedited episodes of the original *Comedy Hour* and ran them on the E! cable channel, providing introductions and interviews with the show’s guests and writers to explain the show’s controversies.

**Soap**

**U.S. Serial Comedy**

*Soap* was conceived by Susan Harris as a satire of the daytime soap operas. The show combined the serialized narrative of that genre with aspects of another U.S. television staple, the situation comedy, and was programmed in weekly, half-hour episodes. Harris, Paul Witt, and Tony Thomas had formed the Witt/Thomas/Harris company in 1976, and *Soap* was their first successful pitch to a network. They received a good response from Marcy Carsey and Tom Werner at the American Broadcasting Company (ABC), and Fred Silverman placed an order for the series. Casting began in November 1976, at which point director Jay Sandrich became involved. The producers and director created an ensemble of actors, several of whom had had considerable success on Broadway. They produced a one-hour pilot by combining two half-hour
scripts and developed a “bible” for the show that outlined the continuing comical saga of two families, the Tates and the Campbells, through several potential years of their stories.

In the spring of 1977, Newsweek reviewed the new TV season and characterized Soap as a sex farce that would include, among other things, the seduction of a Catholic priest in a confessional. The writer of the piece had never seen the pilot, and his story was completely in error. However, that did not deter a massive protest by Roman Catholic and southern Baptist representatives condemning the show. Later, the National Council of Churches entered the campaign against Soap. Refusing to listen to reason, the religious lobby sought to generate a boycott of companies that sponsored Soap. In the summer, when the producers quite properly denied requests by church groups to have the pilot sent to them for viewing, the religious groups insisted they were denied opportunity to see an episode. That was simply not true. Soap was in production in late July in Hollywood, and each week any person walking through the lobby of the Sheraton-Universal Hotel could have secured tickets for the taping. The tapings were always open to the public, and any priest or preacher could have easily gone to the studio stage for that purpose.

This combination of irresponsible journalism and misguided moral outrage by persons of the cloth resulted in a dearth of sponsors. The campaign, led by ecclesiastical executives, sought to define and enforce a national morality by the use of prior censorship. It almost worked. Costs for advertising spots in the time slot for Soap were heavily discounted in order to achieve full sponsorship for the premiere on September 13, 1977. Only the commitment to the series by Silverman prevented its demise. Some ABC affiliates were picketed, and a few decided not to air the show. Other stations moved it from 9:30 p.m. to a late-night time slot. A United Press International story for September 14 reported a survey of persons who had watched the first episode of Soap, carried out by University of Richmond (Virginia) professors and their students. They discovered that 74 percent of viewers found Soap inoffensive, 26 percent were offended, and half of those offended said they were planning to watch it the next week. The day after the premiere, Sandrich, who had directed most of the Mary Tyler Moore Show episodes, stated, “If people will stay with us, they will find the show will grow.” Still, producer Witt believes the show never fully recovered from the witch-hunting mentality that claimed banner headlines across the United States.

Despite these difficulties, all three of the producers recall the “joy of doing it.” It was their first hit and arguably one of the most creative efforts by network television before or after. The scripts and acting were calculated to make audiences laugh—not snicker—at themselves. Indeed, in its own peculiar way, Soap addressed family values. In one of the more dramatic moments in the series, for example, Jessica Tate, with her entire family surrounding her, confronted the threat of evil, personified by an unseen demon, and commanded the menacing presence to be gone. She invoked the family as a solid unit of love and informed the demon, “You have come to the wrong house!”

Perhaps Soap was not quite the pace-setting show one might have hoped for since nothing quite like it has been seen since. In content, it had some characteristics of another pioneer effort, Norman Lear’s Mary Hartman, Mary Hartman. However, the differences between the two were greater than the similarities, and each set a tone for what might be done with television, given freedom, imagination, and talent.

Soap was a ratings success on ABC and a hit in England and Japan. Despite the concerted attacks, it was the 13th most popular network program for the 1977-78 season. Eight Is Enough was rated 12th. Soap ended, however, under suspicion that resistance from ad agencies may have caused ABC to cancel at that point. The series may still be seen in syndication in various communities, and it is available on home video.

Soap Opera

The term “soap opera” was coined by the American press in the 1930s to denote the extraordinarily popular genre of serialized domestic radio dramas, which by 1940 represented some 90 percent of all commercially sponsored daytime broadcast hours. The “soap” in soap opera alluded to their sponsorship by manufacturers of household cleaning products, while “opera” suggested an ironic incongruity between the domestic narrative concerns of the daytime serial and the most elevated of dramatic forms. In the United States, the term continues to be applied primarily to the approximately 50 hours each week of daytime serial television drama broadcast by the American Broadcasting Company (ABC), the National Broadcasting Company, (NBC), and the Columbia Broadcasting System (CBS), but the meanings of the term, both in the United States and elsewhere, exceed this generic designation.

The defining quality of the soap opera form is its seriality. A serial narrative is a story told through a series of individual, narratively linked installments. Unlike episodic television programs, in which there is no narrative linkage between episodes and each episode tells a more or less self-contained story, the viewer’s understanding of and pleasure in any given serial installment is predicated, to some degree, on his or her knowledge of what has happened in previous episodes. Furthermore, each serial episode always leaves narrative loose ends for the next episode to take up. The viewer’s relationship with serial characters is also different from those in episodic television. In the latter, characters cannot undergo changes that transcend any given episode, and they seldom reference events from previous episodes. Serial characters do change across episodes (they age and even die), and they possess both histories and memories. Serial television is not merely narratively segmented; rather, its episodes are designed to be parcelled out in regular installments so that both the telling of the serial story and its reception by viewers is institutionally regulated. (This generalization obviously does not anticipate the use of the videotape recorder “time shift” viewing).

Soap operas are of two basic narrative types: “open” soap operas, in which there is no end point toward which the action of the narrative moves, and “closed” soap operas, in which, no matter how attenuated the process, the narrative does eventually close. Examples of the open soap opera would include all U.S. daytime serials (General Hospital, All My Children, The Guiding Light, and so on); the wave of prime-time U.S. soaps in the 1980s (Dallas, Dynasty, and Falcon Crest); such British serials as Coronation Street, EastEnders, and Brookside; and most Australian serials (Neighbours, Home and Away, and A Country Prac-
The closed soap opera is more common in Latin America, where it dominates prime-time programming from Mexico to Chile. These *telenovelas* are broadcast nightly and may stretch over three or four months and hundreds of episodes. They are, however, designed eventually to end, and it is the anticipation of closure in both the design and the reception of the closed soap opera that makes it fundamentally different from the open form.

In the United States, at least, the term "soap opera" has never been value neutral. As noted previously, the term itself signals an aesthetic and cultural incongruity: the events of everyday life elevated to the subject matter of an operatic form. To call a film, novel, or play a "soap opera" is to label it as culturally and aesthetic inconsequential and unworthy. When in the early 1990s the fabric of domestic life among the British royal family began to unravel, the press around the world began to refer to the situation as a "royal soap opera," which immediately framed it as tawdry, sensational, and undignified.

Particularly in the United States, the connotation of "soap opera" as a degraded cultural and aesthetic form is inextricably bound to the gendered nature of its appeals and of its target audience. The soap opera always has been a "woman's" genre and, it has frequently been assumed (mainly by those who have never watched soap operas) of interest primarily or exclusively to uncultured working-class women with simple tastes and limited capacities. Thus, the soap opera has been the most easily parodied of all broadcasting genres and its presumed audience most easily stereotyped as the working-class "housewife" who allows the dishes to pile up and the children to run amok because of her "addiction" to soap operas. Despite the fact that the soap opera is demonstrably one of the most narratively complex genres of television drama whose enjoyment requires considerable knowledge by its viewers and despite the fact that its appeals for half a century have cut across social and demographic categories, the term continues to carry this sexist and classist baggage.

What most Americans have known as soap opera for more than half a century began as one of the hundreds of new programming forms tried out by commercial radio broadcasters in the late 1920s and early
1930s as both local stations and the newly formed networks attempted to marry the needs of advertisers with the listening interests of consumers. Specifically, broadcasters hoped to interest manufacturers of household cleaners, food products, and toiletries in the possibility of using daytime radio to reach their prime consumer market: women between the ages of 18 and 49.

In 1930, the manager of Chicago radio station WGN approached first a detergent company and then a margarine manufacturer with a proposal for a new type of program: a daily, 15-minute serialized drama set in the home of an Irish-American widow and her young unmarried daughter. Irna Phillips, who had recently left her job as a speech teacher to try her hand at radio, was assigned to write Painted Dreams, as the show was called, and play two of its three regular parts. The plots Phillips wrote revolved around morning conversations “Mother” Moynihan had with her daughter and their female boarder before the two young women went to their jobs at a hotel.

The antecedents of Painted Dreams and the dozens of other soap operas launched in the early 1930s are varied. The soap opera continued the tradition of women’s domestic fiction of the 19th century, which had also been sustained in magazine stories of the 1920s and 1930s. It also drew on the conventions of the “woman’s film” of the 1930s. The frequent homilies and admonitions offered by “Mother” Moynihan and her matriarchal counterparts on other early soap operas echoed those presented on the many advice programs commercial broadcasters presented in the early 1930s in response to the unprecedented social and economic dislocation experienced by American families as a result of the Great Depression. The serial narrative format of the early soap opera was almost certainly inspired by the prime-time success of Amos ‘n’ Andy, the comic radio serial about “black” life on the South Side of Chicago (the show was written and performed by two white men), which by 1930 was the most popular radio show to that time.

In the absence of systematic audience measurement, it took several years for broadcasters and advertisers to realize the potential of the new soap opera genre. By 1937, however, the soap opera dominated the daytime commercial radio schedule and had become a crucial network programming strategy for attracting such large corporate sponsors as Procter and Gamble, Pillsbury, American Home Products, and General Foods. Most network soap operas were produced by advertising agencies, and some were owned by the sponsoring client.

Irna Phillips created and wrote some of the most successful radio soap operas in the 1930s and 1940s, including Today’s Children (1932), The Guiding Light (1937), and Woman in White (1938). Her chief competition came from the husband–wife team of Frank and Anne Hummert, who were responsible for nearly half the soap operas introduced between 1932 and 1937, including Ma Perkins (1933) and The Romance of Helen Trent (1933).

On the eve of World War II, listeners could choose from among 64 daytime serials broadcast each week. During the war, so important had soap operas become in maintaining product recognition among consumers that Procter and Gamble continued to advertise Dreft detergent on its soap operas—despite the fact that the sale of it and other synthetic laundry detergents had been suspended for the duration. Soap operas continued to dominate daytime ratings and schedules in the immediate postwar period. In 1948, the ten highest-rated daytime programs were all soap operas, and of the top 30 daytime shows, all but five were soaps. The most popular nonserial daytime program, Arthur Godfrey, could manage only 12th place.

As television began to supplant radio as a national advertising medium in the late 1940s, the same companies that owned or sponsored radio soap operas looked to the new medium as a means of introducing new products and exploiting pent-up consumer demand. Procter and Gamble, which established its own radio soap opera production subsidiary in 1940, produced the first network television soap opera in 1950. The First Hundred Years ran for only two and demonstrated some of the problems of transplanting the radio genre to television. Everything that was left to the listener’s imagination in the radio soap had to be given visual form on television. Production costs were two to three times that of a radio serial. Actors had to act and
not merely read their lines. The complexity and uncertainty of producing 15 minutes of live television drama each weekday was vastly greater than was the case on radio. Furthermore, it was unclear in 1950 if the primary target audience for soap operas—women working in the home—could integrate the viewing of soaps into their daily routines. One could listen to a radio soap while doing other things, even in another room; television soaps required some degree of visual attention.

By the 1951-52 television season, broadcasters had demonstrated television’s ability to attract daytime audiences, principally through the variety-talk format. CBS led the way in adapting the radio serial to television, introducing four daytime serials. The success of three of them—Search for Tomorrow, Love of Life (both produced by Roy Winsor), and The Guiding Light—established the soap opera as a regular part of network television daytime programming and CBS as the early leader in the genre. The Guiding Light was the first radio soap opera to make the transition to television and one of only two to do so successfully (The other was The Brighter Day, which ran for eight years). Between its television debut in 1952 and 1956, The Guiding Light was broadcast on both radio and television.

By the early 1960s, the radio soap opera—along with most aspects of network radio more generally—was a thing of the past, and “soap opera” in the United States now meant “television soap opera.” The last network radio soap operas went off the air in November 1960. Still, television soap operas continued many of the conventions of their radio predecessors: live, week-daily episodes of 15 minutes; an unseen voice-over announcer to introduce and close each episode; organ music to provide a theme and punctuate the most dramatic moments; and each episode ending on an unresolved narrative moment with a “cliff-hanger” ending on Friday to draw the audience back on Monday.

The 30-minute soap opera was not introduced until 1956 with the debut of Irna Phillips’s new soap for Procter and Gamble and CBS, As the World Turns. With an equivalent running time of two feature films each week, As the World Turns expanded the community of characters, slowed the narrative pace, emphasized the exploration of character, utilized multiple cameras to better capture facial expressions and reactions, and built its appeal less on individual action than on exploring the network of relationships among members of two extended families: the Lowells and the Hugheses. Although it took some months to catch on with audiences, As the World Turns demonstrated that viewers would watch a week-daily half-hour soap. Its ratings success, plus the enormous cost savings of producing one half-hour program rather than two 15-minute ones, persuaded producers that the 30-minute soap opera was the format of the future. The 15-minute soap was phased out, and all new soap operas introduced after 1956 were at least 30 minutes in length.

CBS’s hegemony in soap operas was not challenged until 1963. None of the several half-hour soaps that NBC introduced in the wake of As the World Turns’ popularity made the slightest dent in CBS’s ratings. However, in April 1963, both NBC and ABC launched soaps with medical settings and themes: The Doctors and General Hospital, respectively. These were not the first medical television soaps, but they were the first to sustain audience interest over time and the first soaps produced by either network to achieve ratings even approaching those of the CBS serials. Their popularity also spawned the subgenre of the medical soap, in which the hospital replaces the home as the locus of action, plotlines center on the medical and emotional challenges patients present doctors and nurses, and the biological family is replaced or paralleled by the professional family as the structuring basis for the show’s community of characters.

The therapeutic orientation of medical soaps also provided an excellent rationale for introducing a host of contemporary, sometimes controversial social issues that Irna Phillips and a few other writers believed soap audiences in the mid-1960s were prepared to accept as a part of the soap opera’s moral universe. Days of Our Lives (co-created for NBC in 1965 by Irna Phillips and Ted Corday, the first director of As the World Turns) presented Dr. Tom Horton (played by
Soap Opera

film actor Macdonald Carey) and his colleagues at University Hospital with a host of medical, emotional, sexual, and psychiatric problems in the show’s first years, including incest, impotence, amnesia, illegitimacy, and murder as a result of temporary insanity. This strategy made Days of Our Lives a breakthrough hit for NBC, and it anchored its daytime lineup through the late 1960s.

Medical soaps are particularly well suited to meet the unique narrative demands of the “never-ending” stories American soap operas tell. Their hospital settings provide opportunities for the intersection of professional and personal dramas. They also allow for the limitless introduction of new characters as hospital patients and personnel. The constant admission of new patients to the medical soap’s hospitals facilitates the admission to the soap community of a succession of medical, personal, and social issues that can be attached to those patients. If audience response warrants, the patient can be “cured” and admitted to the central cohort of community members. If not, or if the social issue the patient represents proves to be too controversial, he or she can die or be discharged—both from the hospital and from the narrative. Such has been the appeal (to audiences and writers alike) of the medical soap that many nonmedical soaps have included doctors and nurses among their central characters and nurses’ stations among their standing sets. Among them have been As the World Turns, The Guiding Light, Search for Tomorrow, and Ryan’s Hope.

The latter half of the 1960s was a key period in the history of U.S. daytime soap operas. By 1965, both the popularity and the profitability of the television soap opera had been amply demonstrated. Soaps proved unrivaled in attracting female viewers aged between 18 and 49—the demographic group responsible for making most of the purchasing decisions for nondurable goods in the United States. Production costs were a fraction of those for prime-time drama, and once a new soap “found” its audience, broadcasters and advertisers knew that those viewers would be among television’s most loyal. For the first time, CBS faced competition for the available daytime audience. With the success of Another World (another Irna Phillips vehicle launched in 1964), Days of Our Lives, and The Doctors, by 1966 NBC had a creditable lineup across the key afternoon time slots.

This competition sparked a period of unprecedented experimentation with the genre, as all three networks assumed that audiences would seek out a soap opera “with a difference.” As the network with the most to gain (and the least to lose) by program innovation, ABC’s new soaps represented the most radical departures from the genre’s 35-year-old formula. Believing that daytime audiences would also watch soaps during prime time, in September 1964 ABC introduced Peyton Place, a twice-weekly half-hour prime-time serial based on the best-selling 1957 novel by Grace Metalious and its successful film adaptation. Shot on film and starring film actress Dorothy Malone, Peyton Place was one of ABC’s biggest prime-time hits of the 1964–65 television season and made stars of newcomers Mia Farrow and Ryan O’Neal. The show’s ratings dropped after its first two seasons, however, and in terms of daytime soap longevity, its run was relatively brief: five years.

In 1966, ABC launched the most unusual daytime soap ever presented on American television. Dark Shadows was an over-the-top gothic serial, replete with a spooky mansion setting, young governess (lifted directly from Henry James’s The Turn of the Screw), and a 200-year-old vampire. Broadcast in most markets in the late afternoon in order to catch high school students as well as adult women, Dark Shadows became something of a cult hit in its first season, and it did succeed in attracting to the soap opera form an audience of teenage viewers (male and female) and college students who were not addressed by more mainstream soaps. The show was too camp for most of those mainstream soap viewers, however, and it was canceled after five years.

ABC’s most durable innovations in the soap opera genre during this period, however, took the form of two new mainstream soap operas, both created by Irna Phillips’s protégé, Agnes Nixon. Nixon, who had apprenticed to Phillips for more than a decade as dialogue writer for most of her soaps and head writer of The Guiding Light, sold ABC on the idea of new soap that would foreground rather than suppress class and ethnic difference. One Life to Live, which debuted in 1968, centered initially on the family of wealthy WASP (white Anglo-Saxon Protestant) newspaper owner Victor Lord but established the Lords in relation to three working-class and ethnically “marked” families: the Irish-American Rileys, the Polish-American Woleks, and, after a year or two, the Jewish-American Siegels. Ethnic and class difference was played out primarily in terms of romantic entanglements.

Where most soap operas still avoided controversial social issues, Nixon exploited some of the social tensions then swirling through American society in the late 1960s. In 1969, One Life to Live introduced a black character who denied her racial identity (only to proudly proclaim it some months and dozens of episodes later). The following year when a teenage character is discovered to be a drug addict, she is sent to a “real-life” treatment center in New York, where the character interacts with actual patients.
Some of this sense of social “relevance” also found its way into Nixon’s next venture for ABC, *All My Children*, which debuted in 1970. It was the first soap opera to write the Vietnam War into its stories, with one character drafted and (presumably) killed in action. Despite an antiwar speech delivered by his grieving mother, the political force of the plotline was blunted by the discovery that he was not really killed at all.

Even before *One Life to Live* broke new ground in its representation of class, race, and ethnicity, CBS gestured (rather tentatively, as it turns out) in the direction of social realism in response to the growing ratings success of NBC’s and ABC’s soaps. *Love Is a Many Splendored Thing* had been a successful 1955 film, with William Holden playing an American journalist working in Asia who falls in love with a young Eurasian woman, played by Jennifer Jones. Ima Phillips wrote the soap opera as a sequel to the film, in which the couple’s daughter moves to San Francisco and falls in love with a local doctor. *Love Is a Many Splendored Thing* debuted on September 18, 1967, its inaugural story (indeed, its very premise) concerning the social implications of this interracial romance. After only a few months, CBS, fearing protests from sponsors and audience groups, demanded that Phillips write her Eurasian heroine out of the show. She refused to do so and angrily resigned. Rather than cancel the show, however, CBS hired new writers who refocused it on three young, white characters (played by Donna Mills, David Birney, and Leslie Charleson).

What the replacement writers of *Love Is a Many Splendored Thing* did in a desperate attempt to save a wounded show Agnes Nixon did in a very premeditated fashion some 30 months later in *All My Children*. As its name suggests, *All My Children* was, like many radio and TV soaps before it, structured around a matriarch, the wealthy Phoebe Tyler (Ruth Warwick), but
Soap Opera

to a greater degree than its predecessors, it emphasized the romantic relationships among its "children." Nixon realized that after nearly two decades of television soaps, many in the viewing audience were aging out of the prime demographic group most sought by soap's sponsors and owners: women under the age of 50. All My Children used young adult characters and a regular injection of social controversy to appeal to viewers at the other end of the demographic spectrum. It was a tactic very much in tune with ABC's overall programming strategy in the 1960s, which also resulted in The Flintstones and American Bandstand. All My Children was the first soap opera whose organizational structure addressed what was to become the form's perennial demographic dilemma: how to keep the existing audience while adding younger recruits to it.

The problem of the "aging out" of a given soap opera's audience was particularly acute for CBS, whose leading soaps were by the early 1970s entering their second or third decade (Search for Tomorrow, Love of Life, The Guiding Light, As the World Turns, Secret Storm, and The Edge of Night were all launched between 1951 and 1957). Consequently, a troubling proportion of CBS's soap audience was aging out of the "quality" demographic range.

Thus, for the first time CBS found itself in the position of having to respond to the other networks' soap opera innovations. As its name rather baldly announces, The Young and the Restless was based on the premise that a soap opera about the sexual intrigues of attractive characters in their 20s would attract an audience of women also in their 20s. Devised for CBS by another of Irna Phillips's students, William Bell, and launched in 1973, The Young and the Restless is what might be called the first "Hollywood" soap. Not only was it shot in Hollywood (as some other soaps already were), but it also borrowed something of the "look" of a Hollywood film (particularly in its use of elaborate sets and high-key lighting), peopled Genoa City with soap opera's most conspicuously attractive citizens, dressed them in fashion-magazine wardrobes, and kept its plots focused on sex and its attendant problems and complications. The formula was almost immediately successful, and The Young and the Restless has remained one of the most popular soap operas for more than 20 years. It is also the stylistic progenitor of more recent "slick" soaps, such as Santa Barbara and The Bold and the Beautiful.

The early 1970s saw intense competition among the three networks for soap opera viewers. By this time, ABC, CBS, and NBC all had full slates of afternoon soap operas (at one point in this period, the three networks were airing ten hours of soaps every weekday), and the aggregate daily audience for soap operas had reached 20 million. With a fourfold difference in ad rates between low-rated and high-rated soaps and the latter having the potential of attracting $500,000 in ad revenue each week, soap operas became driven by the Nielsen ratings like never before.

The way in which these ratings pressures affected the writing of soap opera narratives speaks to the genre's unique mode of production. Since the days of radio soap operas, effective power over the creation and maintenance of each soap opera narrative world has been vested in the show's head writer. She (and to a greater degree than in any other form of television programming, the head writers of soap operas have been female) charts the narrative course for the soap opera over a six-month period and in doing so determines the immediate (and sometimes permanent) fates of each character, the nature of each intersecting plotline, and the speed with which each plotline moves toward some (however tentative) resolution. She then supervises the segmentation of this overall plot outline into weekly and then daily portions, usually assigning the actual writing of each episode to one of a team of scriptwriters ("dialoguers" as they are called in the business). The scripts then go back to the head writer for her approval before becoming the basis for each episode's actual production.

The long-term narrative trajectory of a soap opera is subject to adjustment as feedback is received from viewers by way of fan letters, market research, and, of course, the weekly Nielsen ratings figures, which in the 1970s were based on a national sample of some 1,200 television households. Looking over the head writer's shoulder, of course, is the network, whose profitability depends on advertising revenues, and the show's sponsor, who frequently was (and, in the case of four soaps today, still is) the show's owner.

By the early 1970s, head writers were under enormous pressure to attain the highest ratings possible, "win" the ratings race against the competition in the show's time slot, target the show's plots at the demographic group of most value to advertisers, take into account the production-budget implications of any plot developments (new sets or exterior shooting, for example), and maintain audience interest every week without pauses for summer hiatus or reruns. These pressures—and the financial stakes producing them—made soap opera head writers among the highest-paid writers in broadcasting (and the most highly paid women in the industry), but they also meant that, like the manager of a baseball team, she became the scapegoat if her "team" did not win.

If the mid- and late 1960s were periods of experimentation with the soap opera form itself, the early 1970s launched the era of incessant adjustments within
the form—an era that has lasted to the present. Although individual soap operas attempted to establish defining differences from other soaps (in the early 1970s As the World Turns was centered on the extended Hughes family. The Young and the Restless was sexy and visually striking. The Edge of Night maintained elements of the police and courtroom drama, General Hospital foregrounded medical issues, and so on), to some degree all soap opera metanarratives over the past 25 years have drawn on common sets of tactical options, oscillating between opposed terms within each set: fantasy versus everyday life, a focus on individual character/actor “stars” versus the diffusion of interest across the larger soap opera community, social “relevance” versus more “traditional” soap opera narrative concerns of family and romance, an emphasis on one sensational plotline versus spreading the show’s narrative energy across several plotlines at different stages of resolution, or attempting to attract younger viewers by concentrating on younger characters versus attempting to maintain the more adult viewer’s interest through characters and plots presumably more to her liking.

At any given moment, the world of any given soap opera is in part the result of narrative decisions that have been made along all these parameters, mediated, of course, by the history of that particular soap opera’s “world” and the personalities of the characters who inhabit it. Any head writer brought in to improve the flagging ratings of an ongoing soap is constrained in her exercise of these options by the fact that many of the show’s viewers have a better sense of who the show’s characters are and what is plausible to happen to them than she does. And being among the most vocal and devoted of all television viewers, soap opera fans are quick to respond when they feel a new head writer has driven the soap’s narrative off course.

Despite the constant internal adjustments being made in any given soap opera, individual shows have demonstrated remarkable resilience, and, overall, soap operas exhibit infinitely greater stability than any prime-time genre. With the exception of several years in the late 1940s when Ima Phillips was in dispute with Procter and Gamble. The Guiding Light has been heard or seen every weekday since January 1937, making it the longest story ever told. Although long-running soap operas have been canceled (both Love of Life and Search for Tomorrow were canceled in the 1980s after 30-year runs) and others have come and gone, the incentive to keep an established soap going is considerable in light of the expense and risk of replacing it with a new soap opera, which can take a year or more to “find” its audience. Viewers who have invested years in watching a particular soap are not easily lured to a new one or, for that matter, to a competing soap on another network. In the mid-1970s, rather than replacing failing half-hour soaps with new ones, NBC began extending some of its existing soaps to a full hour (Days of our Lives and Another World were the first to be expanded in 1976).

In the 1980s, despite daytime soap operas’ struggles to maintain audience in the face of declining overall viewership, the soap opera became more “visible” in the United States as a programming genre and cultural phenomenon than at any point in its history. Soap operas had always been “visible” to its large and loyal audience. By the 1980s, some 50 million persons in the United States “followed” one or more soap operas, including two-thirds of all women living in homes with televisions. As a cultural phenomenon, however, for 30 years the watching of soap operas had for the most part occurred undetected on the radar screen of public notice and comment. Ironically, soap opera viewing became the basis for a public fan culture in the late 1970s and early 1980s in part because more and more of the soap opera audience was unavailable during the day to watch. As increasing numbers of soap opera viewing women entered the paid workforce in the 1970s, they obviously found it difficult to “keep up” with the plots of their favorite soaps. A new genre of mass-market magazine emerged in response to this need. By 1982, ten new magazines had been launched that addressed the soap opera fan. For the occasional viewer, they contained plot synopses of all current soaps. For them and for more regular viewers, they also featured profiles of soap opera actors, “behind-the-scenes” articles on soap opera production, and letters-to-the-editor columns in which readers could respond to particular soap characters and plot developments. Soap Opera Digest, which began in 1975, had a circulation of 850,000 by 1990 and claimed a readership of four million. Soap opera magazines became an important focus of soap fan culture in the 1980s—a culture that was recognized (and exploited) by soap producers through their sponsorship or encouragement of public appearances by soap opera actors and more recently of soap opera “conventions.”

Soaps and soap viewing also became more culturally “visible” in the 1980s as viewer demographics changed. By the beginning of the decade, fully 30 percent of the audience for soap operas was made up of groups outside the core demographic group of 18- to 49-year-old women, including substantial numbers of teenage boys and girls (up to 15 percent of the total audience for some soaps) and adult men (particularly those over 50). Underreported by the Nielsen ratings, soap opera viewing by some three million college students was confirmed by independent research in 1982.
Soap Opera

The 1980s also was the decade in which the serial narrative form of the daytime soap opera became an important feature of prime-time programming as well. The program that sparked the prime-time soap boom of the 1980s was *Dallas*. Debuting in April 1978, *Dallas* was for its first year a one-hour episodic series concerning a wealthy but rough-edged Texas oil family. It was the enormous popularity of the “Who Shot J.R.?” cliff-hanger episode at the end of the second season (March 21, 1980) and the first episode the following season (November 21, 1980—the largest audience for any American television series to that time) that persuaded producers to transform the show into a full-blown serial.

*Dallas* borrowed not only the serial form from daytime soaps but also the structuring device of the extended family (the Ewings), complete with patriarch, matriarch, good son, bad son, and in-laws—all of whom lived in the same Texas-size house. The kinship and romance plots that could be generated around these core family members were, it was believed by the show’s producers, the basis for attracting female viewers, while Ewing Oil’s boardroom intrigues would draw adult males, accustomed to finding “masculine” genres (westerns, crime, and legal dramas) during *Dallas’* Sunday 10:00 P.M. time slot. By 1982, *Dallas* was one of the most popular programs in television history. It spawned direct imitators (most notably *Dynasty* and *Falcon Crest*) and a spin-off (*Knot’s Landing*). Its success in adapting the daytime serial form to fit the requirements of the weekly one-hour format and the different demographics of the prime-time audience prompted the “serialization” of a host of prime-time dramas in the 1980s—the most successful among them *Hill Street Blues*, *St. Elsewhere*, and *L.A. Law*.

*Dallas* and *Dynasty* were also the first American serials (daytime or prime time) to be successfully marketed internationally. *Dallas* was broadcast in 57 countries, where it was seen by 300 million viewers. These two serials were particularly popular in western Europe, so much so that they provoked debates in a number of countries over American cultural imperialism and the appropriateness of state broadcasting systems spending public money to acquire American soap operas rather than to produce domestic drama. Producers in several European countries launched their own direct imitations of these slick American soaps, among them the German *Schwarzwaldklinik* and the French serial *Chateauballon*.

But even as soap opera viewing came out of the closet in the 1980s and critics spoke (usually derisively) of the “soapoperafication” of prime time, daytime soaps struggled to deal with the compound blows struck by continuing changes in occupational patterns among women, the transformation of television technology (with the advent of the videotape recorder, satellite distribution of programming, and cable television), and the rise of competing and less expensive program forms. Between the early 1930s and the beginning of the 1970s, broadcasters and advertisers could count on a stable (and, throughout much of this period, expanding) audience for soap operas among what industry trade papers always referred to as “housewives”: women working in the home, many of them caring for small children. But with the end of the postwar baby boom, American women joined the paid workforce in numbers unprecedented in peacetime. In 1977, the number of daytime households using television (“HUTs” in ratings terminology) began to decline and with it the aggregate audience for soap operas. Although daytime viewing figures have fluctuated somewhat since then, the trend over the past 20 years is clear: the audience for network programming in general and daytime programming specifically is shrinking.

In large measure, the overall drop in network viewing figures is attributable to changes in television technology, especially the extraordinarily rapid diffusion of the videotape recorder in the 1980s and, at the same time, an explosion in the number of viewing alternatives available on cable television. The penetration of the videotape recorder into the American household has had a paradoxical impact on the measurement of soap opera viewing. Although the soap opera is the genre most “time shifted” (recorded off the air for later viewing), soap opera viewing on videotape does not figure into audience ratings data, and even if it did, advertisers would discount such viewership, believing (accurately) that most viewers “zip” through commercials.

The wiring of most American cities for cable television in the 1970s and 1980s has meant the expansion of program alternatives in any given time period in many markets from three or four channels to more than 50. In the 1960s and 1970s, daytime television viewers were limited in the viewing choices in many time slots to two genres: the game show and the soap opera. By the 1990s, network soaps were competing not only against each other and against game shows but also against an array of cable alternatives, including one cable channel (Lifetime) targeted exclusively at the soap opera’s core audience: women between the ages of 18 and 49.

For the three commercial networks, dispersed viewership across an increasingly fragmented market has meant lower ratings, reduced total advertising revenue, reduced advertising rates, and reduced profit margins. Although soap operas actually gained viewership in some audience segments in the 1980s—men and ado-
lescents, in particular—these are not groups traditionally targeted by the companies whose advertising has sustained the genre for half a century. As they scrambled to staunch the outflow of audience to cable in the early 1990s, the networks and independent producers (who supply programming both to the networks and in syndication to local broadcasters) turned to daytime programming forms with minimal start-up costs and low production budgets, especially the talk show. In many markets, soap operas' strongest competition comes not from other soaps but from Montel Williams, Ricki Lake, Jerry Springer, or another of the dozens of talk shows that have been launched since 1990.

It is impossible here to set the history of serial drama in U.S. broadcasting in relation to the history of the form in the dozens of other countries where it has figured prominently—from China and India to Mexico and Brazil—except to say that the form has proven to be extraordinarily malleable and responsive to a wide variety of local institutional and social requirements. However, it may be instructive to contrast briefly the British experience with the serial drama with that surveyed here in the United States.

The tradition of broadcast serial drama in Britain goes back to 1940s radio and The Archers, a daily, 15-minute serial of country life broadcast by the British Broadcasting Corporation (BBC) initially as a means of educating farmers about better agricultural practices. The British television serial, on the other hand, grows out of the needs of commercial television in the late 1950s. Mandated to serve regional needs, the newly chartered "independent" (commercial) television services were eager to capture the growing audience of urban lower-middle-class and working-class television viewers. In December 1960, Manchester-based Granada Television introduced its viewers to Coronation Street, a serial set in a local working-class neighborhood. The following year, it was broadcast nationwide and has remained at or near the top of the prime-time television ratings nearly ever since.

Coronation Street's style, setting, and narrative concerns are informed by the gritty, urban, working-class plays, novels, and films of the 1950s—the so-called angry young man or kitchen sink movement. Where U.S. daytime serials were (and still are) usually disconnected from any particular locality, Coronation Street is unmistakably local. Where U.S. soaps usually downplay class as an axis of social division (except as a marker of wealth), Coronation Street began and has to some degree stayed a celebration of the institutions of working-class culture and community (especially the pub and the café)—even if that culture was by 1960 a historical memory and Coronation Street's representation of community a nostalgic fantasy.

In part because of the regionalism built into the commercial television system, all British soap operas since Coronation Street have been geographically and, to some degree, culturally specific in setting: Crossroads (1964–88) in the Midlands, Emmerdale (1972–) in the Yorkshire Dales, Brookside (1982–2004) in Liverpool, and the BBC's successful entry in the soap opera field EastEnders (1985–) in the East End of London. In addition, all these have been much more specific and explicit in their social and class settings than their American counterparts, and for this reason their fidelity to (and deviation from) some standard of social verisimilitude has been much more of an issue than has ever been the case with American soaps. Coronation Street has been criticized for its cozy, insulated, and outdated representation of the urban working-class community, which for decades seemed to have been bypassed by social change and strife.

Still, by American soap opera standards, British soaps are much more concerned with the material lives of their characters and the characters' positions within a larger social structure. EastEnders, when it was launched in 1985 the BBC's first venture into television serials in 20 years, was designed from the beginning to make contemporary material and social issues part of the fabric of its grubby East End community of pensioners, market traders, petty criminals, shopkeepers, the homeless, and the perennially unemployed.

Internationally, the most conspicuous and important development in the soap opera genre over the past 20 years has not involved the production, reception, or export of American soap operas (whether daytime or prime time) but rather the extraordinary popularity of domestic television serials in Latin America, India, Great Britain, Australia, and other countries and the international circulation of non-U.S. soaps to virtually every part of the world except the United States. With their telenovelas dominating prime-time schedules throughout the hemisphere, Latin American serial producers began seriously pursuing extraregional export possibilities in the mid-1970s. Brazil's TV Globo began exporting telenovelas to Europe in 1975. Within a decade, it was selling soap operas to nearly 100 countries around the world, its annual export revenues increasing fivefold between 1982 and 1987 alone. Mexico's Televisa exports serials to 59 countries, and its soap operas have topped the ratings in Korea, Russia, and Turkey. Venezuelan serials have attracted huge audiences in Spain, Italy, Greece, and Portugal. Latin American soap operas have penetrated the U.S. market but, thus far, only among its Spanish-speaking population: serials constitute a large share of the prime-time programming on Spanish-language cable and broadcast channels in the United States.
Soap Opera

Although Australian serials had been shown in Britain for some years, they became a major force in British broadcasting with the huge success of Reg Grundy Productions’ Neighbours in 1986. For most of the time since then, it has vied with either EastEnders or Coronation Street as Britain’s most-viewed television program. Neighbours has been seen in more than 25 countries and has been called Australia’s most successful cultural export.

The global circulation of non-U.S. serials since the 1970s is, in part, a function of the increased demand for television programming in general, caused by the growth of satellite and cable television around the world. It is also due, particularly in western and eastern Europe, to a shift in many countries away from a state-controlled public service television system to a “mixed” (public and commercial) or entirely commercial model. The low production cost of serials (in Latin America between $25,000 and $80,000 an episode) and their ability to recover these costs in their domestic markets mean that they can be offered on the international market at relatively low prices (as little as $3,000 per episode) in Europe. Given the large audiences they can attract and their low cost (particularly in relation to the cost of producing original drama), imported serials represent good value for satellite, cable, and broadcast services in many countries.

Ironically, American producers never seriously exploited the international market possibilities for daytime soap operas until the export success of Latin American serials in the 1980s and now find themselves following the lead of TV Globo and Venezuela’s Radio Caracas. NBC’s The Bold and the Beautiful, set in the fashion industry, is the first U.S. daytime soap to attract a substantial international following.

Derided by critics and disdained by social commentators from the 1930s to the 1990s, the soap opera is nevertheless the most effective and enduring broadcast advertising vehicle ever devised. It is also the most popular genre of television drama in the world today and probably in the history of world broadcasting: no other form of television fiction has attracted more viewers in more countries over a longer period of time.

Social Class and Television

Social class has been a neglected factor in research on American television programs and audiences. Few studies have focused on the representation of class in television programming, although it has been a secondary topic in some studies, and more studies published in the 1990s give attention to class. Class was not often been considered in audience research, either, until media researchers from the cultural studies tradition directed more attention to this topic.

Television Representations of Social Class

Since the 1950s, researchers have surveyed television programming and compiled frequency counts of char-
background characters, often without names, in detective and crime series.

Studies of individual programs, typically very popular ones, are another common form of analysis. This method allows the researchers to examine the quality of representation, such as whether classes are portrayed more or less positively. For example, some studies of the American Broadcasting Company (ABC) sitcom Roseanne note its in-your-face challenge of middle-class respectability and its legitimation of working-class tastes and values, stances that are rare on television. Studies of the National Broadcasting Company (NBC) sitcom The Cosby Show analyze the family's upper-middle-class status and the mixed message this program presented for and about African Americans.

Other researchers have extended this method to examine an entire genre instead of a single show. Some book-length studies range over the spectrum of programming forms, with chapters on different genres that address issues of class. Situation comedies, and particularly domestic sitcoms, have been studied in this way. Studies of domestic sitcoms found strikingly persistent representations over five decades of prime-time television from the late 1940s through the 1990s: working-class men are invariably portrayed as incompetent and ineffectual buffoons, well-intentioned but dumb, lovable but not respected. Ralph Kramden, Fred Flintstone, Archie Bunker, and Homer Simpson are just the most famous examples. Heightening the contrast are wives and children who are often more intelligent, rational, and sensible than their husbands and fathers. Middle-class domestic situation comedies, by contrast, traditionally depict competent and mature husbands and fathers. Even in today's more cynical era, a middle-class male buffoon is a rarity. The persis-
Social Class and Television

Even the changed landscape of the television industry in the 1990s and early 2000s maintained many familiar representations of working-class men. In sitcoms with working-class settings and characters, such as Dinosaurs, Roc, Grace Under Fire, King of Queens, and Grounded for Life, the husband/father continues to be depicted as not too bright and not very competent. Series about the middle class, although more varied than in earlier decades, still include plenty of warmhearted and emotionally engaged families. Perhaps the most prominent of these is 8 Simple Rules for Dating My Daughter. This series faced particular problems when star John Ritter, who portrayed a father who worked in his home as a sports writer, died unexpectedly. Rather than canceling the show, ABC wrote the father’s death into the story, altering what had been a rather broad comedy into something more serious.

Some melodramas, however, did explore the difficulties confronted by middle-class families in times of economic constraint. The police procedural N.Y.P.D. Blue often turned to the private lives of hardworking detectives and acknowledged that their relatively low-paying positions made life in New York an ongoing

Some melodramas, however, did explore the difficulties confronted by middle-class families in times of economic constraint. The police procedural N.Y.P.D. Blue often turned to the private lives of hardworking detectives and acknowledged that their relatively low-paying positions made life in New York an ongoing
struggle. This topic was particularly significant in the personal life of Andy Sipowicz, who for some time was presented as the single parent of a small child, then developed a relationship that led to marriage—to a colleague who was raising a niece and subsequently became pregnant with Sipowicz’s baby. Discussions of money, apartment size, and future expenses were common in this sequence.

And perhaps the most noted depiction of class came with Home Box Office’s (HBO’s) *The Sopranos*. In this ongoing series, “middle-management mafia” types exhibit the trappings both of the newly wealthy and of their working-class New Jersey backgrounds. Class conflicts were particularly evident in the 2003 season-ending episode in which Tony Soprano promised to purchase a shorefront home for his wife, only to have the current owner renege on the deal. Tony’s colleagues then bombard the snobbish resident with unceasing playback of Frank Sinatra recordings at ear-splitting levels.

These images are reinforced by the proliferation of talk shows that present real-life working-class people as exhibits in a “freak show,” deviants who lack self-respect, moral values, or sexual control. Some researchers, however, have argued that these programs also give “voice” to individuals, groups, and classes previously excluded from television. They see the “freakish” behavior as a direct challenge to the approved decorum of televisual discourse.

**Social Class and Television Audiences**

Rarely has class been considered a variable in research on the effects of television viewing. This research tradition has concentrated on generalizations about psychological processes rather than on group differences. The few studies that have considered class conclude that there are no class differences in children’s susceptibility to violence on television, in contrast to the usual stereotype of working-class children being more likely to be led into such behavior.

Studies of family television-use patterns have looked more broadly at how people interact with television sets. However, even in these studies, class is often peripheral. Books on television audiences seldom include social class as a topic in their indexes. One tradition of research has distinguished class differences in television use, contrasting working- and lower-class patterns of heavier and indiscriminate use (patterns that are widely disapproved of) with middle-class patterns of lighter, more selective use. More recent family communication research has continued to use these class distinctions.

Buried within the 1950s and 1960s sociological literature on working-class lifestyle are a few ethnographic observations on working-class uses of and responses to television. These have confirmed the tendency of working-class individuals to use the TV as filler and background to family interaction. They also reveal distinctive responses to program content: for example, working-class men prefer shows featuring characters sympathetic to working-class values, and these viewers identify with working-class types even when those types are written as peripheral characters or villains. Such findings contradict the notion of working-class viewers as passive and gullible.

Other studies have found significant differences in the orientations of working- and middle-class women to television shows. These latter studies draw on the British cultural studies tradition focusing on working-class viewers and their reactions to television. As with early U.S. community studies, British researchers found that working people construct their own alternative readings of television programs. In general, these studies find that, contrary to the stereotype offered in popular television criticism, working-class viewers are not the passive dupes with their eyes glued to the screen, nor are they the bumbling, ineffectual clowns often depicted in television comedies. Rather, working-class viewers use television to their advantage and interpret content to suit their own needs and interests.

Society for Motion Picture and Television Engineers

While the history of motion pictures and television is typically linked to the rise of commercial mass entertainment, the extent of industry growth cannot be adequately explained without acknowledging the extensive benefits that came from technical standardization. Incorporated in July 1916, the Society for Motion Picture Engineers (SMPE) sought to act as a professional forum for its members and to publish technical findings “deemed worthy of permanent record.” The impact of the society, however, extended far beyond the research reports published in SMPE’s *Journal and Transactions*. With film pioneer Francis Jenkins installed as its charter president, the society took as its first task the development of a 35-millimeter format—the standard on which the motion picture and telefilm industries were built. Subsequent SMPE interventions codified two-color cinematography (November 1918), three-color Technicolor (August 1935), and optical sound-recording technologies (October 1930, September 1938). Although the organization began as a professional association for technical specialists, its public actions worked as an antidote to the high-risk economic and methodological instabilities that accompanied the introduction of each new film/television technology.

Research interests in television pre-dated by decades the formal addition of “Television” to the society’s name in 1950 (SMPTE). Groundbreaking work
was published on alternative delivery systems (“Radio Photographs, Radio Movies and Radio Vision” by C.F. Jenkins, May 1923), on vacuum-tube imaging devices (“Iconoscopes and Kinescopes” by V.K. Zworykin, May 1937), and on the Radio Corporation of America’s (RCA’s) field test of a comprehensive broadcasting system in New York (R.R. Beal, August 1937).

While this prewar flurry of engineering interest in television may suggest that society had a proactive and determining influence on the development of television technology, subsequent events demonstrate just how provisional SMPTE’s recommendations were. For example, although the Journal published standards for the Columbia Broadcasting System’s (CBS’s) new high-resolution color-television system in April 1942, other parties used coercion and economic clout to convince the U.S. government to opt for an inferior system in 1947. Disregarding the 1942 standards, the Federal Communications Commission (FCC) favored the less developed alternative of RCA/National Broadcasting Company (NBC), thereby forcing engineers to impose color information onto the limited black-and-white bandwidth of NTSC—a system that had itself been hastily (and some would say prematurely) adopted in 1941. Similarly, despite the open-ended, forward-thinking proposals put forth by Jenkins for theatrical television, pay-per-view TV, and set-licensing subsidies in 1923, the harsh regulatory realities of the FCC licensing freeze from 1948 to 1952 effectively deferred development of alternative delivery technologies for decades. A three-network oligopoly would dominate for almost 30 years as a result of the freeze, enabled by economic and regulatory collusion rather than engineering wisdom.

Although such actions demonstrate the limited influence of the society’s recommendations on technology standards (SMPTE is not a government regulatory body like the FCC but an association of professionals representing a wide range of proprietary corporations), subsequent breakthroughs mark key points in the history of television technology. Standards for the eventual victor in the color-television race (NTSC) were finally published in April 1953. Engineers from Ampex disseminated information on the first commercially successful videotape recorder (VTR) in April 1957—an event that led to the precipitous death of the kinescope, initiated intense competition among VTR developers in the years that followed, and altered forever the way viewers see “liveness” (live-on-tape).

The international battle over high-definition television (HDTV) demonstrates the strategic role a standard-setting organization can take in the international arena. NHK in Japan had produced and begun marketing an HDTV system in the early 1980s, long before U.S. corporations entered the fray with working prototypes. Although the U.S. industry thus lagged behind foreign competitors in the race for viable “digital” video systems, SMPTE began to disseminate engineering standards for a spate of new digital television recording formats developed in Europe and Japan starting in December 1986. U.S. broadcasters initially resisted HDTV development because of the tremendous costs involved in changing over from current transmission systems. Eventually, however, the government intervened to dictate that the United States would ostensibly produce a single “consensus” digital HDTV system. The resulting “grand alliance” minimized the risk of losing an expensive research-and-development race, but foreign trade journalists complained that U.S. government muscle would lead unfairly to the privileging of U.S. HDTV standards in international markets despite the late entry of the United States into the high-definition arena. As this example shows, engineering standards can be political footballs used for economic leverage and technological nationalism.

What looked initially like an HDTV alliance, however, fell apart when competing interests (the computer, motion picture, and broadcast industries) took aim at the governmental regulators behind the initiative. Given the free-market ideology in play during the Clinton administration, the FCC proved unwilling to dictate a single technical standard for HDTV. The commission announced that it would allow “the market to decide” and then sanctioned 14 different technical standards (from 480p to 1080i) for what was now called “digital television” rather than HDTV. Four years of technical volatility and confusion followed despite FCC dictates that broadcasters had until 2003 to deliver new high-definition digital television. With ambivalent broadcasters mired in conflict with consumer electronics manufacturers and both at odds with the Hollywood establishment that has thrown its weight behind a competing system (24p), television’s transition to digital has been stunted.

The volatility in this kind of pseudo–market environment demonstrates why such standards and engineering organizations as SMPTE have proved central participants in change. With regulators now essentially silent and with massive conglomeration defining the industry, SMPTE helps provide much-needed forms of rationality (scientific method) and a set of ground rules (benchmarks for those 14 competing digital formats) that keeps change intelligible and manageable.

SMPTE’s future influence will depend on how well it comes to grips with several substantive changes. It must respond to the technological “convergence” blurring boundaries between film and electronic media, it
must continue to demonstrate the value of common technical ground within the proprietary world of multinational corporations, and it must engage a membership that increasingly lies outside the confines of traditional film and television engineering. As studios are reduced to computerized desktops and practitioners with technical backgrounds cross over into creative capacities (and vice versa), technological discourses will become no less important or problematic. Given the capital-intensive and market-driven nature of electronic media, issues of standardization and technological "order" will be more crucial to the future of television than ever.

**Some Mothers Do 'Ave 'Em**

*British Comedy Series*

*Some Mothers Do 'Ave 'Em* was a hugely popular British comedy series, broadcast by the British Broadcasting Corporation (BBC) in the 1970s. Initially considered unlikely to succeed, the series triumphed through the central performance of Michael Crawford as the hapless Frank Spencer and became one of the most popular comedy series of the decade, attracting a massive family audience.

Frank Spencer was the ultimate "loser," unemployable, unable to cope with even the simplest technology, and the victim of his surroundings. Every well-meaning attempt that he made to come to terms with the world ended in disaster, be it learning to drive, getting a job, or realizing some long-cherished dream. What saved him and kept the story comic was his innocence, his dogged persistence, and his outrage at the injustices he felt he had suffered.

The theme of the naive innocent comically struggling in an unforgiving world is an old one, but in this incarnation the most obvious antecedents for the slapstick Spencer character were such silent-movie clowns as Charlie Chaplin's tramp and, some three decades later, British cinema's Norman Wisdom. Writer Raymond Allen insisted, however, that he based the character on himself, quoting as his qualifications as the original Frank Spencer his outdated dress sense, complete lack of self-confidence, and overwhelming inability to do anything right. As proof of the character's origins, Allen recalled how he had bought himself a full-length raincoat to wear to the first rehearsals of the series in London—and was dismayed to see Crawford acquire one virtually the same as the perfect costume to play the role. The mac, together with the beret and the ill-fitting tanktop jumper, quickly became visual trademarks of the character.

It was Michael Crawford (really Michael Dumble Smith), complete with funny voice and bewildered expression, who turned Frank Spencer into a legend of British television comedy, employing the whole battery of his considerable comic skills. Disaster prone but defiant, the little man at odds with a society judging people solely by their competence and ability to fit in, he turned sets into battlefields as he fell foul of domestic appliances, motor vehicles, officials, in-laws, and just about anyone or anything else that had the misfortune to come into his vicinity.
Some Mothers Do 'Ave 'Em was essentially a one-joke escapade, with situations being set up chiefly to be exploited for the admittedly often inventive mayhem that could be contrived from them. What kept the series engaging, however, was the pathos that Crawford engendered in the character, making him human and, for all the silliness of many episodes, endearing. In this, Crawford was ably abetted by Michelle Dotrice, who played Frank Spencer's immensely long-suffering but steadfastly loyal (if occasionally despairing) girlfriend and, later, wife Betty.

In the tradition of the silent-movie stars, Crawford insisted on performing many of the hair-raising and life-threatening stunts himself, teetering in a car over lofty cliffs, dangling underneath a helicopter, and risking destruction under the wheels of a moving train in a way that would not have been tolerated by television companies and their insurers a few years later. The professionalism that he displayed in pulling off these stunts impressed even those who balked at the show's childish humor and overt sentimentalism. It is not so surprising that Crawford himself, after six years in the role, was able to escape the stereotype that threatened to obscure his talent and to establish himself as a leading West End and Broadway musical star.

Sony Corporation
International Media Conglomerate

An innovative Japanese consumer-electronics company founded by Masaru Ibuka and Akio Morita in 1946, Sony started out manufacturing heating pads, rice cookers, and other small appliances but soon switched to high technology, bringing out Japan's first reel-to-reel magnetic tape recorder in 1950 and then its first FM transistor radio in 1955. Sony's later innovations in consumer electronics included the Trinitron color-television picture tube (1968), the Betamax videocassette recorder (1975), the Walkman personal stereo (1979), the compact disc player (1982), the 8-millimeter video camera (1985), and the Video Walkman (1988).

Sony's success in marketing its products worldwide rested on distinctive styling and "global localization," a practice that retained product development in Japan, while disbursing manufacturing among plants in Europe, the United States, and Asia. To maintain quality control, Sony dispatched large numbers of Japanese managers and engineers to supervise these plants.

Under the leadership of Norio Ohga, who joined the company 1959 and ran Sony's design center, Sony pursued the course of marrying Japanese consumer electronics with American entertainment software. After purchasing CBS Records for $2 billion in 1987, Sony initiated the Japanese invasion of Hollywood by acquiring Columbia Pictures Entertainment (CPE) from Coca-Cola for $3.4 billion in 1989. The following year, Sony's Japanese rival Matsushita Electric Industrial Company, the largest consumer-electronics company in the world, purchased MCA for $6.9 billion. The two takeovers led to charges that the Japanese were about to dominate American popular culture, but the controversy soon died out when it became apparent that Sony and Matsushita would have to stay aloof from production decisions if their studios were to compete effectively.
In 1989, the year Sony acquired CPE, Sony generated over $16 billion in revenues from the following categories: (1) video equipment other than TV—$4.3 billion, (2) audio equipment—$4.2 billion, (3) TV sets—$2.6 billion, (4) records—$2.6 billion, and (5) other products—$2.5 billion. The CPE acquisition, which included two major studios—Columbia Pictures and TriStar Pictures—home-video distribution, a theater chain, and an extensive film library, brought in an additional $1.6 billion in revenues.

By becoming vertically integrated, Sony hoped to create “synergies” in its operations, or, stated another way, Sony wanted to stimulate the sales of hardware by controlling the production and distribution of software. The company may have been reacting to the so-called format wars of the 1970s when Sony’s Betamax lost out to Matsushita’s VHS videotape recorder. Industry observers believed that the greater availability of VHS software in video stores naturally led consumers to choose VHS machines over Betamaxes. Sony would not make the same mistake again and found a way to protect itself as it contemplated introducing the 8-millimeter video and high-definition television systems it had in development.

To strengthen CPE as a producer of software, Sony spent an added $1 billion and perhaps more to acquire and refurbish new studios and to hire film producers Peter Guber and Jon Peters to run the company, which it renamed Sony Entertainment. Sony performed reasonably well under the new regime until 1993, but afterward, Columbia and TriStar struggled to fill their distribution pipelines. Virtually all of Sony’s hits had been produced by independent producer affiliates, and when these deals lapsed, Sony lagged behind the other majors in motion picture production and market share. Some industry observers claimed Sony lacked “a clear strategy” for taking advantage of the rapid shifts in the entertainment business. After top production executives left Columbia and TriStar in 1994, Sony took a $3.2 billion loss on its motion picture business, reduced the book value of its studios by $2.7 billion, and announced that “it could never hope to recover its investment” in Hollywood.

Sopranos, The

U.S. Drama

A defining program of the cable era, The Sopranos debuted on Home Box Office (HBO) in January 1999. The story of a New Jersey mafia boss and his nuclear and criminal families, it was the first cable series to achieve larger audience ratings than its broadcast competition. The series also received unprecedented critical acclaim. Even intellectuals who had previously disdained television hailed the show as a groundbreaking work of art.

A measure of the program’s unique status as a cultural icon was the screening of the entire run of its first two seasons at the Museum of Modern Art in New York City, the featured item in a retrospective of gangster movies chosen by David Chase, The Sopranos’ creator and executive producer.

The popularity of The Sopranos was particularly demoralizing for the broadcast networks, in decline through the 1980s and 1990s because of competition from cable and satellite subscriber networks. The show’s success in the ratings against “free” network programs was decisive evidence that the mass audiences and consensus programming of the broadcast era were now historical artifacts. Although HBO’s subscribers were only one-third of the total TV audience, the series reached an estimated 14 million viewers, 7.3 million TV homes, during its third and fourth seasons,
by far the largest continuing audience ever assembled by cable television. As one media business reporter put it, “HBO now has the first television megahit ever to be unavailable to the majority of viewers.”

Probably the most complex narrative in the history of American television, The Sopranos marks a genuine watershed in popular culture. The series is a culmination—but also a deeply cynical and realistic revision—of the mythology of the gangster and the culture of the mafia as depicted in classic movies from the 1930s, in Mario Puzo’s novels, and in the films of Francis Ford Coppola and Martin Scorsese.

Something of the show’s revisionist, postheroic realism is captured in its brilliant title sequence. Quick images of the roof and wall tiles of the Lincoln Tunnel as photographed through the windshield of Tony Soprano’s speeding car yield to the tunnel’s exit ramp, the New York skyline briefly visible across the Hudson River through the passenger-side window (the twin towers of the World Trade Center were framed in a quick close shot of the car’s side mirror during the first two seasons, but this image was removed after the events of September 11, 2001). Now images of New Jersey’s ugliest industrial sprawl (noxious Secaucus, polluted waterways, and smokestacks) rush past, followed by shots of highway exit signs. Tony steering, and the grimy downtowns of the dwindled cities in which Tony grew up and in which much of the series’ action takes place. This quick tour of the terrain of The Sopranos concludes with shots of modest working-class, then middle-class, city homes and finally the forested road leading to the driveway of Tony’s pretentious suburban brick palace. The sequence is a social history of his life and work, distilling essential elements of the saga of Tony Soprano (James Gandolfini), his dual identity as a suburban husband and father and as angst-ridden godfather in meager streets than those of the mythic city across the river.

The movie gangsters are not merely implicit references in the series but also active presences. Tony’s mob crew is fond of quoting The Godfather and other shaping ancestors, and such allusions often create complex ironies, suggesting how eagerly these “real” gangsters embrace the aggrandizing images of the movie culture. We see Tony tearfully watching Public Enemy (1931) on the day of his mother’s funeral, and
Sopranos, The

the famous Cagney melodrama about a gangster killer whose mother's love never wavers implicitly judges Tony's reptilian mother (Nancy Marchand in her last, great role) who terrorized him as a child and colluded with his Uncle Junior (Dominic Chianese) to have him killed because she blamed him for moving her to a nursing home.

The Sopranos takes full advantage of its freedom from the constraints of broadcast television. Even its female characters speak with the profane candor of real people; mayhem and murder are dramatized with pitiless, shocking directness; and there is considerable (but not full frontal) nudity. But this license in what is seen and heard is never gratuitous or sensational, and the many eruptions of crippling or murderous violence have disturbing authority in part because they take place in such mundane realistic spaces and are committed or endured by unattractive, ordinary characters the audience has come to know. The series breaks with broadcast conventions in other ways as well, notably in its readiness to dramatize its characters' dreams and fantasies, some of which achieve a macabre, disorienting intensity.

But its sense of the ordinary, the quotidian, and the not-mythic is the real key to The Sopranos. Tony Soprano is a killer and mob boss, but he is also a middle-age father with a discontented spouse and a son and daughter no more deranged than most privileged teenagers in our high-tech, motorized, image-saturated suburbs. The juxtaposition—sometimes the intersection—of these alternate worlds generates complexities undreamt of in most movies or earlier forms of television. The program mobilizes a sustained, ongoing experience of moral ambiguity as Tony and some of his criminal cronies display a range of comic, sentimental, deeply ordinary traits in their dealings with aging parents, wives, children, and mistresses and then in other moments perform acts of sickening disloyalty, brutality, and murder.

This defining quality of the series emerged decisively in the fifth episode of the first season, in which Tony takes his daughter Meadow (Jamie-Lynn Sigler) on a tour of colleges in Maine and, in a stop at a gas station, recognizes an informer, once part of his crime family, now in hiding in the witness protection program. Scenes of intimate bonding between father and daughter are intercut with Tony's stalking of the informer, whom he ultimately attacks from behind and strangles with a wire. The murder is not quick, and the victim struggles hard before he dies. Moments before, this killer had been a doting father, commuting with his daughter in a common American parenting ritual.

As this episode implies, The Sopranos does not, as many commentators have claimed, repudiate or totally transcend traditional television. For all its cable-licensed profanity, sex, and violence, the series embraces and deeply exploits TV's unique hospitality to serial narrative as well as the central subject of television drama of the broadcast era, its ideological core: the American family.

The show has a specific ancestry in The Rockford Files (1974–80, National Broadcasting Company [NBC]), whose staff David Chase joined in 1976 as writer and producer. That private-eye series starring James Garner was also a hybrid of comedy, crime, and (sometimes) family drama, and it used the format of the weekly series to explore the ongoing, changing relations among its recurring characters. Several episodes of Rockford clearly anticipate The Sopranos. In one of these, a two-part story first broadcast in 1977, George Loros, who plays the mob capo Raymond Curto in the HBO series, portrays a mafia hit man undone by his city boy's ignorance in the wilds of nature. This episode hints at the bleak murderous comedy of the memorable installment from the third season of The Sopranos in which Tony's henchmen Paulie Walnuts (Tony Sirico) and young Christopher Moltisanti (Michael Imperioli) are trapped together without food or transport in the wintry Pine Barrens of southern New Jersey.

The series format—traditional television's essential feature—is The Sopranos' fundamental resource as well, permitting the program to dramatize the unsteady maturation of Tony's children, for example, the ebb and flow of his cankered intimacy with his wife Carmella and the murderous shifting alliances and hostilities within his own crime family and among rival mobsters. As the series unfolded during its first four seasons, its account of the primary characters deepened; aspects of Tony's past emerged in fitful, accreting detail; and the experiences and inner lives of many secondary characters were explored more fully. At the start of its fifth season (as Chase signed a contract to supervise a sixth and final year of the show), the 52-hour-long chapters of The Sopranos had achieved a density and texture unique in American movies or television. The damaged, unstable family order of the show could be read as a compelling metaphor or distillation of the larger social order. In its enlarging power to explore personality as it evolves over time and in its stringent, ramifying stories of crime, injustice, greed, and ambition, the series had become a 21st-century equivalent of the great English and European novels of the 19th century.

Soul Train
U.S. Music-Variety Show

Soul Train, the first black-oriented music variety show ever offered on American television, is one of the most successful weekly programs marketed in first-run syndication and one of the longest-running syndicated programs in American television history. The program first aired in syndication on October 2, 1971, and was an immediate success in a limited market of seven cities: Atlanta, Cleveland, Detroit, Houston, Los Angeles, Philadelphia, and San Francisco. Initially, syndicators had difficulty achieving their 25-city goal. However, Soul Train’s reputation as a “well produced” and “very entertaining” program gradually captured station directors’ attention. By May 1972, the show was aired in 25 markets, many of them major cities.

The show’s emergence and long-standing popularity marks a crucial moment in the history of African-American television production. Don Cornelius, the show’s creator, began his career in radio broadcasting in Chicago in November 1966. At a time when African Americans were systematically denied media careers, Cornelius left his $250-a-week job selling insurance for Golden State Mutual Life to work in the news department at WVON radio for $50 a week. It was a bold move and clearly marked his committed optimism. By seizing a small opportunity to work in radio broadcasting, Cornelius was able to study broadcasting firsthand. His career advancement in radio included employment as a substitute disc jockey and host of talk shows. Radio broadcasting techniques informed Cornelius’s vision of the television program Soul Train.

By February 1968, Cornelius was a sports anchorman on the black-oriented news program “A Black’s View of the News” on WCIU-TV, Channel 26, a Chicago TV station specializing in ethnic programming. Cornelius pitched his idea for a black-oriented dance show to the management of WCIU-TV the following year. The station agreed to Cornelius’s offer to produce the pilot at his own expense in exchange for studio space. The name Soul Train was taken from a local promotion Cornelius produced in 1969. To create publicity, he hired several Chicago entertainers to perform live shows at up to four high schools on the same day. The caravan performances from school to school reminded the producer of a train.

Cornelius screened his pilot to several sponsors. Initially, no advertising representatives were impressed by his idea for black-oriented television. The first support came from Sears, Roebuck and Company, which used Soul Train to advertise phonographs. This small agreement provided only a fraction of the actual cost of producing and airing the program. Yet, with this commitment, Cornelius persuaded WCIU-TV to allow the one-hour program to air five afternoons weekly on

Soul Train host Don Cornelius, circa mid 1970’s. Courtesy of the Everett Collection
Soul Train

a trial basis. The program premiered on WCIU-TV on August 17, 1970, and within a few days youth and young adult populations of Chicago were talking about this new local television breakthrough. The show also had the support of a plethora of Chicago-based entertainers. As an independent producer of the program, Cornelius acted as host, producer, and salesman five days a week. He worked without a salary until the local advertising community began to recognize the program as a legitimate advertising vehicle, and Soul Train began to pay for itself.

The Soul Train format includes guest musical performers, hosts, and performances by the Soul Train dancers. Set in a dance club environment, the show’s hosts are black entertainers from the music, television, and film industries. The dancers are young women and men, fashionably dressed, who dance to the most popular songs on the rhythm-and-blues, soul, and rap charts. The show includes a game called “The Soul Train Scramble,” in which the dancers compete for prizes. The program’s focus on individual performers, in contrast to the ensemble dancing more common in televised presentation, has been passed down to many music variety shows, such as American Bandstand, Club MTV, and Solid Gold.

The television show’s success can be linked to the increasing importance of black-oriented radio programs taking advantage of FM stereo sound technology. With that support, soul and funk music exploded in popularity across the nation. Black record sales soared because of the increased radio airplay, and the opportunity to view popular performances without leaving home became the appeal of Soul Train.

The popularity of the show in Chicago prompted Cornelius to pursue national syndication of the program. One of the nation’s largest black-owned companies, the Johnson Products Company, agreed to support the show in national syndication. Sears, Roebuck and Company increased its advertising support. In 1971, Cornelius moved the production of the Soul Train to Hollywood. The show continued to showcase musical talent and to shine the spotlight on stand-up comedians. The program’s presentation of vibrant black youth attracted viewers from different racial backgrounds and ethnicities to black entertainment. The show has been credited with bringing 1970s black popular culture into the American home.

In 1985, the Chicago-based Tribune Entertainment company became the exclusive distributor and syndicator of Soul Train. In 1987, the Tribune company helped launch the Soul Train Music Awards. This program is a live two-hour television special presented annually in prime-time syndication and reaches more than 90 percent of U.S. television households. The Soul Train Music Awards represent the ethos of the Soul Train program, which is to offer exposure for black recording artists on national television.

Don Cornelius stepped down as host in the late 1990s and was replaced by Mystro Clark, who, after three seasons, was replaced by Shemar Moore. Cornelius is now the executive producer for the show.

South Africa

The South African television service, launched in 1976, is among the youngest in Africa but by far the most advanced on the continent. Propped by the country’s large economy and high living standards among the minority populations, South Africa’s television industry developed rapidly to become one of the first satellite-based broadcasting systems on the continent, with the most widely received national service.

The industry is dominated by a state organization, the South African Broadcasting Corporation (SABC),
which was established in 1936 by an act of Parliament. The corporation, however, concentrated on radio broadcasting during its first 40 years of operation, as the racist National Party in power during most of this period opposed the introduction of television under the pretext of preserving cultural sovereignty. The launching of the communication satellite Intelsat IV in 1972 by Western countries ushered in new fears about the dangers of uncontrolled reception of international television via cheap satellite dishes. The South African government, fearing imperialism, swiftly resolved to introduce a national television service as an anti-imperial device.

Between 1976 and 1990, the SABC-TV service was state controlled and heavily censored and functioned as an arm of the government. SABC was banned from broadcasting pictures or voices of opposition figures, and its editorial policy was dictated through an institutional censoring structure. The blackout on politically dissenting voices was discontinued in 1990 as the corporation purged itself of racial bias and shifted its focus to public service broadcasting. Since then, SABC-TV has balanced its programs to reflect the country's cultural and political diversity and embraced a policy of affirmatory action in staff recruitment.

At inception, SABC-TV operated four national television channels: TV-1, TV-2, TV-3, and TV-4. This configuration was revised in a 1992 restructuring program; TV-1 retained its autonomy, and the rest were merged into a new multicultural channel called Contemporary Community Values Television (CCV-TV). The two national channels now compete for audiences and advertising with M-Net, a highly successful privately owned pay channel.

TV-1, the largest and most influential, was directed at the minority white population, with all programs broadcast in Afrikaans and English. Since mid-1986, the channel's 18-hour daily programming has been relayed through a transponder on an Intelsat satellite to 40 transmitting stations with an Effective Radiated Power (ERP) of 100 kilowatts and 42 stations with an ERP range of between 1 and 10 kilowatts. These transmissions are augmented by 63 gap fillers and an estimated 400 privately owned low-power transmitters, enabling the channel to be received by three-quarters of the country's population.

The CCTV channel broadcasts in nine local languages via 14 100-kilowatt terrestrial stations, nine 1- to 10-kilowatt stations, and 33 gap fillers. The channel's programming is received by 64 percent of the country's population.

SABC's domination of radio and television has enabled it to develop advanced products and services for its audience. The corporation offers simulcasting of dubbed material on television with the original soundtrack on radio Teledata, a teletext service initially established as a pilot project on spare TV-1 signal capacity, and has been expanded to a 24-hour service with over 180 pages of news, information, and educational material. Selected material from the Teledata database is also copied onto TV-1 outside program transmission to provide an auxiliary service that is available on all TV sets countrywide.

The Electronic Media Network, widely known by its acronym, M-Net, is South Africa's only private television channel. Founded by a consortium of newspaper publishers in October 1986 to counter the growing threat that the commercially driven SABC-TV posed to the newspaper industry, M-Net has grown into the most successful pay-TV station in the world outside the United States. Its nearly 850,000 subscribers (1995 estimate) received 120 hours a week of entertainment, documentaries, film, series, and miniseries. The large national audience is accessed through a number of leased or rented SABC terrestrial reception facilities.

The subscription service is offered on an internationally patented decoder originally developed from the American Oak Systems decoder technology. M-Net's subscriber management subsidiary, Multichoice Ltd, markets the programming services to individual subscribers across southern Africa. It also markets the Delta 9000 Plus decoders to pay-TV operations elsewhere; by 1994, it was marketing the technology to the Pellepiu pay-TV system in Italy. Another of its subsidiaries, M-Net International, has been actively seeking subscribers in tropical and northern Africa after successful operations in Namibia, Lesotho, and Swaziland. Through the use of two transponders on C-band satellites, the channel has a footprint covering the entire African continent and parts of the Middle East. During 1994, Multichoice Ltd signed an agreement with a private TV station in Tanzania to relay programming across the country via satellite. At the same time, M-Net International began broadcasting across Africa on a channel shared with British Broadcasting Corporation (BBC) World Service Television. Plans were also afoot to extend rebroadcast rights to sub-Saharan African countries and to expand satellite services and individual subscriptions.

Three small regional television stations are operated in the former homelands of Bophuthatswana, Transkei, and Ciskei. The Bophuthatswana television, Bop-TV, is a commercial operation that is aired via 18 small transmitters (all with ERP below 1 kilowatt) and relay stations in Johannesburg and Pretoria. The Transkei Broadcasting Corporation operates a television service that competes with the pay service of M-Net Transkei.
South Africa

M-Net Transkei is a scrambled service except between 3:00 P.M. and 5:00 P.M., when its signal is unscrambled. The Rhena Church of South Africa runs two private TV stations in Ciskei and Transkei that broadcast in English via two small stations. Plans were under way in 1994 to install two 1-kilowatt transponders.

Since the early 1980s, South Africa has been considering venturing into satellite communications. The first involvement in satellite-aided broadcasting came in mid-1986, when a transponder was fitted on an Intelsat satellite to relay TV-1 to terrestrial transmitting stations. In early 1992, the C-band satellite service was upgraded from a hemispherical beam to a zonal beam to enhance the establishment of cellular transmitters in remote areas of the country. At the same time, the transmission standards were upgraded from B-MAC to PAL System 1. Together with the introduction of transmissions in the Ku-band range, these modifications are expected to provide television coverage to the entire country. The Ku-band satellite service is also expected to be utilized in telecommunication applications.

With over 150 production houses, South Africa has the largest broadcasting production industry on the continent. Local productions, from SABC teams and independent production houses, account for about 50 percent of airtime of SABC-TV and between 10 and 30 percent on M-Net. Both organizations have laid heavy emphasis on Afrikaans-language productions. However, independent producers, brought together by the Film and Television Foundation (FTF), have in the past lobbied for higher local content quotas. However, such proposals have been contested by M-Net on the grounds that pay-TV service is customer driven. The FTF suggests that where a broadcaster is unable to offer local content quotas, a levy should be introduced on the turnover to finance local productions.

South Korea

In the past half century, television broadcasting has been introduced in the majority of Western nations. In the 1950s, when television broadcasting evolved into the dominant electronic medium in the West, some Asian countries established their own television services. Korea, the fourth adopter in Asia, began television broadcasting on May 12, 1956, with the opening of HLKZ-TV, a commercially operated television station. HLKZ-TV was established by the RCA Distribution Company (KORCAD) in Seoul with 186 to 192 megahertz, 100-watt output, and 525 scanning lines.

Korean television celebrated its 40th birthday in 1996, and a great deal has changed in the past four decades. In 1956, there were only 300 television sets in Korea, but that number has climbed to an estimated 6.27 million by 1980, and television viewing has become the favorite form of entertainment or amusement for the mass audience. As of 1993, Koreans owned nearly 11.2 million television sets, a penetration rate of nearly 100 percent.

The early 1960s saw a phenomenal growth in television broadcasting. On December 31, 1961, the first full-scale television station, KEWS-TV, was established and began operation under the Ministry of Culture and Public Information. The second commercial television system, MBC-TV, following the first commercial television, TBC-TV, made its debut in 1969. The advent of MBC-TV brought significant development to the television industry in Korea, and after 1969 the television industry was characterized by furious competition among the three networks.

The 1970s were highlighted by government intervention into the media system in Korea. In 1972, President Park’s government imposed censorship on media through the Martial Law Decree. The government revised the Broadcasting Law under the pretext of improving the quality of television programming. After
the revision of the law, the government expanded its control of media content by requiring all television and radio stations to review programming before and after transmission. Although the government argued that its action was taken as a result of growing public criticism of broadcasting media practices, many accused the government of wanting to establish a monopoly over television broadcasting.

The 1980s were the golden years for Korea’s television industry. Growth was phenomenal in every dimension: the number of programming hours per week rose from 56 in 1979 to nearly 88.5 in 1989, the number of television stations increased from 12 in 1979 to 78 by 1989, and the number of television sets grew from 4 million in 1979 to nearly 6 million in the same period. In 1981, another technological breakthrough happened: the introduction of color television. Color broadcasting, however, occasioned a renewal of strong competition among the networks.

As the decade progressed, more controversial entertainment programming appeared, prompting the government to establish a new broadcasting law. With the Broadcasting Law of 1987, the Korean Broadcasting Committee was established to oversee all broadcasting in the country. The most important feature of this law was that it guaranteed freedom of broadcasting. However, one of its main provisions required that television stations allocate at least 10 percent of their broadcasting hours to news programming, 40 percent to cultural/educational programming, and 20 percent to entertainment programming. At the time of the imposition of these new regulations, the three networks broke new ground by successfully broadcasting the 1988 Seoul Olympics. The coverage of the 24th Olympiad was the product of technological prowess and resourceful use of manpower by the Korean broadcasting industry.

Since the early 1980s, the structure of the Korean television industry has remained basically unchanged. The government ended the 27-year-long freeze on new commercial licenses by overpricing a license to SBS-TV in 1990. This breakthrough paved the way for competition between the public and the private networks.

Another technological breakthrough took place in the beginning of the 1990s with the introduction of cable television. In 1990, the government initiated an experimental multichannel and multipurpose cable television service. In addition, Korea launched its first broadcasting/communication satellite, Mugunghwa, to 36,000 kilometers above the equator in 1995. The development of an integrated broadband network is expected to take the form of B-ISDN immediately after the turn of the century.

### Regulation of Broadcasting

The aim of the latest Broadcasting Act, legislated on August 1, 1990, is to strive for the democratic formation of public opinion and improvement of national culture and to contribute to the promotion of broadcasting. The act consists of six chapters: (1) General Provisions, (2) Operations of the Broadcasting Stations and Broadcasting Corporations, (3) The Broadcasting Commission, (4) Payment and Collection of the Television Reception Fee, (5) Matters to Be Observed by the Broadcasting Stations, and (6) Remedy for Infringement.

In the article on the definition of terms, “broadcast” is defined as a transmission of wireless communication operated by a broadcast station for the purpose of propagating to the general public news, comments, and public opinion on politics, economy, society, culture, current events, education, music, entertainment, and so on. Accordingly, cable television is not subject to this act.

Article 3 of the act states that (1) the freedom of broadcast programming shall be guaranteed, and (2) no person shall regulate or interfere with the programming or operation of a broadcasting station without complying with the conditions as prescribed by this act or other acts.

Regarding the operation of broadcasting stations, it is prescribed that no person may hold stocks or quotas of the same broadcasting corporation, including stocks or quotas held by a person having a special relation, in excess of one-third of the total stocks or quotas.

No broadcasting corporation may concurrently operate any daily newspaper or communication enterprise under the control of the Registration of Periodicals. Inflow of foreign capital is also prohibited. That is, no broadcasting corporation shall receive any financial contribution on the pretext of donation, patronage, or other form of foreign government or organization, except a contribution from a foreign organization having an objective of education, physical training, religion, charity, or other international friendship that is approved by the Minister of Information.

Any person who has a television set in order to receive a television broadcast shall register the television set and pay the reception fee of 2,500 won (about U.S.$3) a month. Black-and-white television sets are not subject to the reception fee.

### An Overview of Television Programming in Korea

Currently, the four networks (KBS-1TV, KBS-2TV, MBC-TV, and SBS-TV) offer four hours of daytime
broadcasting beginning at 6:00 A.M., then resume broadcasting from 5:30 P.M. to midnight. There is no broadcasting between 10:00 A.M. and 5:30 P.M. on weekdays. However, the four networks operate an additional 7.5 hours on Saturday and Sunday.

A typical programming schedule for Korean television networks begins at 6:00 A.M. with either a “brief news report” or a “foreign-language lesson” (English or Japanese). Early morning programs offer daily news, information, and cultural/educational programs. Each network begins its evening schedule at 5:30 P.M. with an afternoon news brief, followed by a time slot reserved for network children’s programming. After this, another news brief at 7:00 P.M. introduces prime time. The four networks fill the next three hours with programs ostensibly suitable for family viewing, including dramas, game shows, soap operas, variety shows, newsmagazines, situation comedies, occasional sports, and specials. Traditionally, networks also broadcast 40 to 50 minutes of “Nine O’clock News” during prime time. This news broadcast attracts many viewers and produces extremely high ratings. Over the course of the evening, each network also provides brief reports and sports news. Late-evening hours are usually devoted to imported programs, dramas, movies, and talk shows. Weekend programming is similar to weekday programming except that it is designed to attract specific types of viewers who are demographically desirable to advertisers.

In its early years, Korean television networks depended heavily on foreign imports, most from the United States, for their programming. Overall, imported programs averaged approximately one-third of the total programming hours in 1969. In 1983, 16 percent of programming originated outside the country. By 1987, imported programming had decreased to 10 percent, though in March 1987 the networks did still broadcast programs such as Love Boat, Hawaii 5-0, Mission Impossible, “Weekend American Movies,” and cartoons.

In addition to watching imported television programs on Korean television networks, many Koreans also watch AFKN-TV, which is an affiliate of the American Forces Radio and Television Service, the second largest of five networks managed by the Army Broadcasting Service. AFKN has been broadcasting for 39 years as an information and entertainment medium for 60,000 U.S. military personnel, civilian employees, and dependents. AFKN-TV also plays a significant role for many young Koreans. No one is quite sure of the size of the Korean “shadow audience” for AFKN-TV. However, it is watched by so many ordinary people that all Korean newspapers and most television guides carry AFKN-TV along with Korean program schedules.

Research by Drs. Won-Yong Kim and Jong-keun Kang has mapped the “cultural outlook” of Korean television. Their sample includes all prime-time dramatic programming on three Korean television networks aired during 1990. It demonstrates that the world of Korean prime-time television significantly underrepresents children and adolescents. It grossly overrepresents adult groups, however—those who are between the ages of 20 and 39, who constitute one-third of the Korean population, make up 56.7 percent of the fictional population. In sum, age distribution in the world of Korean television is bell shaped as compared to the diagonal line of the Korean population.

Another significant difference between Korean prime-time drama and reality is that farmers and fishermen, who constitute 25 percent of the population, make up only 7.4 percent of television characters. Social class distribution among characters reveals that nearly half of all television characters appear in the “lower” part of a three-way classification.

With regard to violence, among 49 characters who are involved in violence, 44.9 percent commit violence, and 55.1 percent suffer it. Among them, mostly adult groups of both sexes are involved with violence. Children and adolescents of both sexes are never involved in violence, and young female adults are the most frequent victims in all age-groups.

Although these findings show somewhat different patterns between Korea and other countries, they are not strictly comparable with each other because of the differences among their media systems.

The Korean Television Audience

According to Media Service Korea, each household in Seoul has an average of 1.6 television sets. A poll conducted by KBS shows that Korean television viewers watch an average of a little over three hours on weekdays, 4.5 hours on Saturday, and about 5.5 hours on Sunday. When broken down by demographic information, men watch more television than women. On weekends, there were no differences in television viewing among age-groups.

In terms of ratings, the most popular time slot is between the hours of 9:00 P.M. and 10:00 P.M., and the highest-rated program is the 9:00 P.M. evening news. Approximately 70 percent of the adult audience watches the news program every night. The second-highest-rated time slot is between the hours of 7:00 A.M. and 8:00 A.M. The average ratings are 31 points on weekdays and 20 points on weekends.

Korean adults frequently watch news and comedy programs, while teenagers watch comedy programs more frequently, and people in the 30-to-50 age-
group watch the news more. Men tend to watch more sports, but women tend to watch soap operas and movies.

In terms of information provided by audiences with reference to their stated uses and gratifications, the motive for watching television is most often described as intentions: "to get information" and "to understand other opinions and ways of life," "to get education and knowledge," and "to relax." Another study done by the KBS Broadcasting Culture Center indicates that many viewers considered watching television as a news-providing function. Others thought of it as a "craving for refreshment," a "social relation function," or "identification." The motives for watching television news are cited variously as a way to "get information from around the world," a practice done "out of habit" or with the intent "to listen to expert opinions and commentary." For soap operas, the stated reasons for viewing include "because they are interesting," "to kill time," and for some "they seem useful." People watch comedy "to alleviate stress" and "to have fun."

Television ratings and audience viewing information is studied by most broadcasting companies as well as research firms, and in Korea ratings have been measured by diary and people meter. Currently, a people meter is generally used for gathering ratings, and Media Service Korea is engaged in the business of providing the people meter ratings.

South Park
U.S. Animated Program

Few television programs emerged from the margins of the television industry to mainstream impact as quickly and forcefully as South Park. From an animated college short film to cable's top-rated program and an award-winning feature film, Trey Parker and Matt Stone's aggressively vulgar and satirical cartoon helped establish Comedy Central's credibility and push the adult animation cycle of the 1990s forward. South Park took the critical tone of The Simpsons and Beavis and Butt-Head and made the satire more extreme, tackling issues from hate speech to euthanasia, as well as plumbing the depths of bad taste from anal probes to pornography, all in a cartoon about eight-year-olds in a "quiet little" Colorado town.

Parker and Stone met as film majors at the University of Colorado at Boulder, creating short films with a crude comedic sensibility. One of their shorts, "Jesus vs. Frosty," used rudimentary construction paper cutout animation techniques to introduce a quartet of eight-year-olds who profanely narrated a battle between holiday icons. Their films caught the eye of a FOX executive, Brian Graden, who paid the pair $2,000 to create a video Christmas card with a similar sensibility. "The Spirit of Xmas," which featured a boorish battle for holiday supremacy between Jesus and Santa, eventually arbitrated by skater Brian Boitano, became a Hollywood sensation in 1995, circulating widely among producers and stars and eventually becoming one of the first videos to gain wide distribution on the Internet. Comedy Central capitalized on the underground popularity, contracting Stone and Parker to create an animated series based on the kids featured in both short films.

South Park debuted on Comedy Central in the summer of 1997 to much notoriety, cultural disdain, and instant popularity among the channel's young male audience. The series focused on the lives of nervous everyboy Stan, skeptical Jew Kyle, episodically killed Kenny, and the overweight, rude comedic centerpiece Cartman, with an ever-expanding host of supporting characters constituting the community of South Park, Colorado. While following the basic structure of a family sitcom, complete with episode-ending moral messages about what was learned each week, the show...
offered topical explorations into current events and social issues. Parker and Stone used computer techniques to imitate their construction paper aesthetic, embracing the flexibility of the technology to alter their animated sequences hours before airing programs, referring to their process as "virtually live animation." Viewers quickly made South Park Comedy Central's flagship program and the top-rated cable program of the late 1990s, recognizing that between the lowbrow references to "talking poo" and Chef's "salty chocolate balls" resided some of the most clever and sophisticated satire of its era.

Certainly South Park could have never come to air without the dual predecessors of The Simpsons and Beavis and Butt-Head. Like these two forebearers, South Park's arrival provoked fears concerning its potential influences on children. Even though Comedy Central scheduled the show after 10:00 p.m. and prefaced every episode with a disclaimer stating, "The Following Program Contains Coarse Language and Due to Its Content It Should Not Be Viewed by Anyone," the assumption that all animation must be for kids led to condemnation from a host of critics. Additionally, the profane dialogue and cynicism coming out of the mouths of elementary schoolers struck many as the nadir of televisual bad taste. This critique was intensified by the successful merchandizing of the characters, with T-shirts and toys that many felt were catering to children. Comedy Central realized that the negative publicity was drawing audiences to its taboo-busting program, especially among its core niche of young men, and thus supported and even highlighted the profane content and satire to maintain viewership.

Parker and Stone responded to anti-South Park critiques within the program itself, creating their own taboo media sensation. The Terrance and Phillip Show. The boys' favorite television program is a never-ending succession of poorly animated fart jokes, paralleling some critics' perspective on South Park itself. Adults within South Park condemn Terrance and Phillip, protesting the show's negative effects and profane sensibility to the fictitious Cartoon Channel. They extended this reflexivity to the feature film hit South Park: Bigger, Longer and Uncut in 1999; the highly profane film focused on the corrupting influence of Terrance and Phillip's feature film, inspiring extreme vulgarity in the impressionable minds of South Park's youth, and resulting in a backlash that leads to U.S.
Southeast Asia

The precise geocultural borders of “Southeast” Asia may well be contestable. But in most accounts it includes the island-state of Singapore; the archipelagic nations of the Philippines and Indonesia; Brunei, which occupies a tiny corner of the island of Borneo (most of this island is part of Indonesia or Malaysia); and the mainland Asian countries of Burma (officially renamed Myanmar by its military rulers in 1989), Thailand, Malaysia, Laos, Cambodia, and Vietnam. Bordered by the India in the west and China in the northeast, this region was often portrayed by historians as a melting pot of Chinese and Indian cultural influences. Colonized by the British, the French, and the Spanish and later by Americans, the independent nations of Southeast Asia came into being through the middle of the 20th century.

In recent years, the Association of Southeast Asian Nations (which consists now of all the previously mentioned countries) has given a certain political currency to the idea of Southeast Asia. As with religion, and so with political and economic systems, Southeast Asia contains a great variety. Broadly speaking, the Philippines and Thailand could be described as unstable capitalist democracies. Singapore and Malaysia as authoritarian governments with open markets, Burma as a military dictatorship, Indonesia as beginning a transition to democracy after a long period of military rule, Laos and Vietnam as socialist states, and Cambodia as “democratizing” and Brunei, the smallest state in Southeast Asia, as a constitutional monarchy.

Television was established in the region with technology and, often, funding from the United Kingdom, the United States, and Japan but has been implicated in the discourse of national identity of most of these nations. Beyond that, like their political histories, there is a great deal of diversity in the television industries of these nation-states.

History

Thailand and the Philippines were the first nations in Southeast Asia to introduce television in the early 1950s. In Thailand, as in the rest of Southeast Asia, television was initially state owned and closely connected with the older state-owned public broadcast radio. Modeled on U.S. television and like the privately owned radio stations, television in the Philippines was established with private capital. Burma was the last of the Southeast Asian nations to get television. Its first station, government owned and Japanese funded, opened in 1980.

In the Philippines, Santo Tomas University started experimental television broadcasts in 1950. In 1953, DZAQ-TV, established by the brother of then President Elpidio Quirino, started daily four-hour broadcasts. By the early 1960s (when Malaysia, Singapore, and Indonesia were just beginning television broad-
cast), there were six television stations in Manila, five of them owned by powerful political families that also had substantial interests in radio and print media. By the mid-1960s, there were 16 television stations and an estimated peak audience of over 1 million in and around Manila. The first regional stations started in 1968, in Cebu, Bacolod, and Dagupan, owned by the Chronicle Broadcasting Network (CBN), which already owned a television station in Manila and several major radio stations and newspapers.

No other Southeast Asian nation had privately owned television stations at this stage. In contrast to this flourishing industry, public broadcasting in the Philippines has a sad history. The Department of Public Information established the Public Broadcasting Service in 1962, but it lasted for only a year before its facilities were handed over to a private operator.

In 1972, President Marcos declared martial law, and all media, including television, came under strict control of the government—thus, for the first time, bringing Philippines television in line with state-controlled television in the rest of the region. Marcos’s rivals, such as the Lopez family, which through CBN has huge interests in the broadcast media, were forced to divest their interests in the industry. Five television stations operated during the Marcos era (1972–86) and were owned by Marcos cronies—a pattern not dissimilar to privatized television in Suharto’s “New Order” regime in Indonesia in the late 1980s.

In Thailand, the establishment of television is even more directly caught up in the political conflict. Marshal Phibul Songkram became prime minister in 1948 after a military coup against the elected government. Both during his first period of rule (1938–44) and again in 1948–57, Phibul severely restricted the freedom of the press and used the radio quite deliberately to bolster his personal image. In the midst of political turbulence, the state-owned television was established in 1955 with the help of the United States. The Broadcast Law of 1955 authorized the state as the only lawful owner of radio and television broadcast facilities. The military started its own channel soon after and used it in part to destabilize the Phibul government. Both of these stations, though owned by sections of the government and deeply politicized in their content, were funded through advertising revenue.

By the end of the 1980s, there were five commercial channels whose ownership varied according to the role that the military was playing in politics at any particular time. After the military coup of 1991, all five were taken over by the military.

Television broadcast started in Indonesia in 1962 and in the following year in neighboring Malaysia and Singapore. In all three, television was fully government owned and controlled and remained so until the 1980s. Through most of that period, state television’s agenda was overtly that of nation building and supporting the authoritarian governments of these countries.

In Indonesia, Televisi Republik Indonesia (TVRI) started broadcasting somewhat hastily in August 1962 in order to coincide with the start of the Asian Games in the capital, Jakarta. In 1965, the “Guided Democracy” of President Sukarno was overthrown by General Suharto, whose “New Order” remained in government until 1997.

It was not until the 1970s that television started to grow rapidly in terms of quantity of programming and audience reach. TVRI began to establish regional stations around the country whose main function was relaying programs from the organization’s headquarters in Jakarta. In 1976, Indonesia became the first nation in Southeast Asia (and the fourth in the world) to launch its own satellite, Palapa, followed in 1983 by the much more powerful Palapa Generation B.

The television system that emerged in the shadow of the satellite was highly centralized, with very small amounts of regional programming in most areas. Even with the powerful satellite and with dozens of stations (some of these relay stations only), TVRI by its own estimates reached only about 35 percent of the far-flung archipelago and about 65 percent of the population. In 1986, in the hope of improving this reach, the government legalized the use of parabola antennae (whose spread it had in any case been unable to control). By the end of the 1980s, several foreign public and commercial broadcasters (including major global operators National Broadcasting Company [NBC], Star, and Cable News Network [CNN]) were also broadcasting via Palapa and therefore available through much of Indonesia via small and affordable parabola antennae. By some accounts, Indonesia had the fastest take-up of these antennae in Asia. By the mid-1980s, in Java and Sumatra, where the majority of the Indonesian population live, households connected to these (sometime several hundred households sharing one antenna) could pick up between 6 and 20 foreign broadcasts.

In 1963, while Malaysia and Singapore were still part of the Malaysian Federation, state-owned television was established, modeled in part on the British public service broadcaster. In neither case, however, would the national broadcaster gain the kind of autonomy from the government that the British Broadcasting Corporation (BBC) has had. In Indonesia, as in Malaysia and Singapore, television developed in the shadow of political turmoil (in Indonesia’s case, a military coup and the massacre of hundreds of thousands
of suspected Communists) and the anxiety of governments to protect themselves against opposition on the one hand and to protect the relatively new nation-states from fracturing along ethnic lines on the other.

In Malaysia, a second national network was started in 1969. In 1970, a satellite communication Earth Station was built, giving Malaysia vastly expanded capacity for live telecasts of international events. In Singapore, two channels were introduced at the same time, Channel 5 with Malay- and English-language programming and Channel 8 with Mandarin and Tamil programming.

While the Malaysian and Singapore broadcasts started about a year after the Indonesian one, television clearly grew much faster in these two countries than it did in Indonesia. However, through much of the 1970s, Indonesia was much less dependent on imported television programming than Malaysia or Singapore or indeed the much older television industries of the Philippines and Thailand. From around 1980, Singapore started producing more local programming, a trend that continued strongly into the 1990s.

While television in the countries discussed so far had varied degrees of state involvement, even state-owned television was from the very beginning dependent on advertising for its revenue, although Indonesia experimented briefly and unsuccessfully with fully state-funded television in the 1980s. Advertising revenue made state-monopoly television reasonably profitable in Indonesia, Malaysia, and especially Singapore, where television density quickly reached 100 percent of households. The economy grew rapidly, and every resident in the small island could be reached from a single station in the city-state.

The tiny nation-state of Brunei, between Malaysia and Indonesia, was the only nation in Southeast Asia that had television (1975) before it got independence from its colonial ruler, Great Britain, in 1984. The princely protectorate of Brunei started television with massive state funding in 1975. While one of the last nations in this part of Southeast Asia to have its own television, it used state-of-the-art color technology from the start, making it the first Southeast Asian national broadcaster to use full color. Set up with large-scale input from the BBC and generously funded by an oil-rich government, Brunei television has maintained its technological edge.

Citizens of Brunei had been tuning into Malaysian television since the late 1960s, and by 1973 there were already 3,000 television sets, a substantial number in a population of under half a million. It has been suggested that the reason for setting up national television was in part to counter what the government saw as the increasing influence of Malaysian television, particularly significant in a nation that had no daily newspaper and that depended on broadcast for its political communication. While Malaysian television continues to saturate Brunei and while Brunei television content has been and remains dominated by imports, it also plays a highly significant role in government campaigns of various kinds and in the national political life of the country more generally.

Of the formerly British colonized countries of Southeast Asia, Burma was the last to get television. Controlled by a military regime since 1962, the nation became increasingly isolationist through the following decades. In 1980, the Burmese government, with Japanese aid, started television broadcasting in the capital, Rangoon, and surrounding areas. The reach of the broadcaster was expanded rapidly through a network of relay stations. Unlike other latecomers to television in the region, Brunei some years earlier, and Laos in 1983, Burma did not opt for color transmission and continues to broadcast in black and white. A second station, controlled by the Ministry of Defense, started in the 1990s. Both stations are dedicated to promoting government policy, though both carry popular music and traditional Burmese drama.

In the much more politically volatile parts of Southeast Asia, what in the colonial period was called French Indochina, Cambodia was the first to have television, which was established in 1966. There are similarities in the coming of television to Cambodia and Indonesia in that in both countries its establishment had much to do with the egos of authoritarian rulers: President Sukarno, the first president of independent Indonesia, and Norodom Sihanouk, the first king of independent Cambodia, who refused allow free elections or be bound by restrictions of a constitutional monarchy. Sihanouk was overthrown by Marshall Lon Nol in 1970 and was then replaced in 1975 by the mass-murdering Khmer Rouge regime of Pol Pot.

Cambodian state television broadcast for about four hours a day in its early years, and during the Lon Nol years this was made up largely of newsreels and documentaries donated by foreign missions. Pol Pot used radio for propaganda purposes, but infrastructure and human resources related to television were completely destroyed along with the educational, technological, and cultural infrastructure more generally.

In 1979, a Vietnamese-backed regime replaced the Khmer Rouge. While the new Cambodian government was in control of capital Phnom Penh, a civil war continued that formally ended only in 1991. Radio-Television Cambodia (RTC) was reestablished in 1983 and revived television broadcasts of a few hours a day three days a week. The broadcast hours were increased over the next few years, and by 1986 Cambodians in
and around the capital could watch their national television every day, for about four to five hours. A few years later, Cambodia’s first provincial station was opened. Both stations operated with minimal funding and old, low-quality production and broadcast technology.

In Vietnam, the establishment of television was part of the war effort for both the Americans and the North Vietnamese. The U.S. government committed itself to expanding radio and television into every remote corner of Vietnam in the conviction that this would be a decisive factor in nation building in South Vietnam. In February 1966, two channels were created, broadcasting from Saigon, one assigned to the government of South Vietnam (referred to in some documents as THVN) and the other to the American armed forces (AFVN). Like the radio stations, the television facilities became targets of repeated attack by the North Vietnamese forces.

In contemporary Vietnamese official history, the birth of television in Vietnam is associated with an experimental black-and-white television program on September 7, 1970, in Hanoi. A decision to establish a Television Film Studio under the General Information Department had been taken in 1968. In 1971, the studio was annexed to the Television Department as the backbone and a nucleus for the eventual development of national television. On both sides of divided Vietnam, television was established for political purposes by governments and in unified Vietnam remained under strict state control.

Laos, with a modern history almost as traumatic as Cambodia’s, began its national television about the same time as RTC was being revived in the early 1980s. After decades of civil war, the U.S.-backed regime collapsed in 1975, and the Lao People’s Democratic Republic was established under the Lao People’s Revolutionary Party, committed to Socialism. In 1982, an earth satellite station was set up with Soviet aid for the purpose of receiving broadcasts from Moscow. The following year, again with the help of the Soviet bloc, Lao National Television started broadcasting from the capital, Vientiane. Like Brunei, Laos bypassed black-and-white television and went straight to color broadcasting. Unlike Brunei, however, Lao television was poorly resourced, and in a nation with mountainous terrain, high levels of poverty, and an undependable supply of electricity, it reached only a small section of the population in its early years and broadcast for only two or three hours a day.

**Satellites, Global Television, and Privatization**

As indicated previously, with the exception of the Philippines, television developed in much of Southeast Asia not only under the aegis of governments but also with a clear focus on nation building. By the mid-1980s, increasingly accessible new media technologies, particularly digitization and satellite broadcast, began to challenge the capacity of governments to police both the televusul national borders and individual citizens’ consumption of audiovisual material. Videocassettes since the early 1980s and, later, VC-Ds and DVDs, easily smuggled in, broke the monopoly of governments over audiovisual entertainment. By the mid-1980s, communication satellites were broadcasting Western television programs across the world. In Southeast Asian cities and towns, increasingly cheaply available parabola antennae began to change the television landscape of most nations. The 1980s to mid-1990s was also a period of rapid economic growth, with the consequent rise in the number of television households throughout the region. Most of these nations have a variety of legal and illegal pay television, mostly under private ownership. However, viewers of pay television still constitute a very small part of the total audience in the region.

While the majority of governments in the region still ban the use of parabola antennae for private households to get global broadcasts, these are legal in Indonesia, the Philippines, and Thailand. However, the job of policing these bans is very difficult, and most of the governments, apart from Burma, have sought other ways of simultaneously accommodating and competing with overseas programming by diversifying their own program offerings and in some cases increasing the amount of imported material in their own broadcasts.

A new move toward privatization of television in the region started with the establishment of TV3 in Malaysia in 1983. However, TV3, as well as two newer private channels that started in 1995 and 1997, respectively, are all owned by companies with close links to senior members of the government. Singapore has also made some gestures toward loosening the grip of the state on television. But by most accounts, the corporatization of the state broadcaster has not made the system any more democratic or open. More than in any other part of Southeast Asia, the audience in Malaysia and Singapore appears to be segmented along ethnic lines, with particular stations concentrating on broadcasts in particular languages.

The most dramatic transformation to occur in the national television scene has been in Indonesia since the late 1980s. The first Indonesian private channel started in 1987. Four more started in the next five years, all with the capacity to broadcast nationally via the Palapa satellite. Four of the five private stations were owned by relatives and cronies of President
Suharto. Since the fall of the Suharto government, five more stations have started broadcasting. The private stations have decimated the audience of TVRI in the cities. At the turn of the century, political transformation generally and shifts in ownership of private stations in part as a consequence of the political change have made Indonesia, along with the Philippines, the most diverse and free television system in Southeast Asia.

In Thailand, all six of the terrestrial free-to-air networks remain state owned, though five are funded on a commercial basis, and the two most popular stations have been run by private companies since the early 1990s.

In the rest of Southeast Asia, television remains under government control, though all nations now have additional services for capital cities, and most have some regional stations capable of production and broadcasting. Burma is the only nation that has persisted with black-and-white television. It also broadcasts fewer imported programs than any of the other broadcasters and appears to be the most successful in limiting illegal parabolic antennae.

Vietnam had the most dramatic growth in television in the region in the last decade of the 20th century. It has three national networks, five regional networks, and one local station, which broadcasts in the Khmer language. All are state owned. According to VTV's own figures, television ownership is at 1 set per 11 persons. However, some 20 percent of the population lives in areas not reached by any television signal. The government is therefore planning to move toward digital television and satellite and cable delivery in a bid to further expand coverage.

Conclusion
Brunei (with 575 sets per 1,000) has the highest per capita television ownership in Southeast Asia and indeed one of the highest in the world; Burma (with 7.5 per 1,000) has the lowest in the region. In the region as a whole, however, television is the most significant medium of entertainment. While print and, more recently, the Internet are more important as news media in a region where illiteracy is a problem in a number of countries, television is likely to remain politically significant for some time to come.

While many of the nations in the region are persisting with some form of government control (however modified), states have effectively lost the monopoly they had up until the 1980s over the audiovisual consumption of their citizens. On the other hand, the nationalist panic over global television's colonization of Asia (exemplified by Star TV's aggressive move into China and India) has not come to fruition. Given the simultaneously globalizing and localizing capacity of television and digital technologies coming into the market, it is difficult to predict the direction of television in the region. As with the history of television in the region, its future, despite globalization of the media, is likely to be nationally specific.

While the space program and the television industry contributed mightily to each other's growth, by the year 2000 their love affair had drawn to a close. In the 1960s, the first decade of space missions matched Hollywood productions for drama and suspense and pulled in some of the medium's largest audiences. America's first astronauts were among television's first celebrity heroes. Some television journalists, such as Walter Cronkite and the American Broadcasting Company's (ABC's) Jules Bergman (1930–87), became famous for chronicling the space program.

The Soviet Union's Sputnik satellite launch in 1957 was one of the earliest big stories for television news, then growing rapidly in popularity and influence. With the framing of the Sputnik story as an affront to American superiority and a military threat, the U.S. government justified a strong response: a program to beat the Soviets to space. Unfortunately, several of the earliest uncrewed U.S. test rockets crashed, further heightening the crisis atmosphere as each major attempt was anxiously reported on the 15-minute national evening newscasts.

Eventually, American satellites were launched successfully, and in 1959 seven military pilots were chosen for the astronaut corps. Television, egged on by the print press, elevated the astronauts to hero status, as celebrated as Hollywood's leading stars. Publicists from the National Aeronautics and Space Administration (NASA), the new civilian space agency, worked to fuel that perception. They schooled the seven in on-camera behavior and prohibited military uniforms, to the astronaut's discomfort but to the benefit of the program's all-civilian image.

Immediately after the flight of Alan Shepard in May 1961 (following the flight of Soviet cosmonaut Gagarin), Vice President Lyndon Johnson, with the heads of the NASA and the Defense Department, sent a report to President John F. Kennedy justifying the eventual $40 billion investment in a moon-landing program. From its inception, the crewed space program had at its core a propaganda objective: an American capture of the world's imagination. With Johnson's report as ammunition and the political goal of justifying massive government projects and fulfilling his vision of a "New Frontier," Kennedy went before Congress to challenge the nation to land a man on the moon before 1970.

The remaining five Mercury space flights (1961–63) and ten Gemini flights (1965–66) were covered virtually from launch to splashdown by adoring TV networks. Each mission promised new accomplishments, such as Ed White's first American spacewalk. For television news, it was a welcome reprieve from the 1960's morass of assassination, war, and inner-city unrest. However, by 1965 it was apparent to experts that the Soviets had no hope of putting someone on the moon, a fact that rarely entered the "space race" discourse, for this race was a boon to American industry.

The ideal marriage of space and television was not merely the result of political and ideological agendas or of technical and logistical circumstance but of more resonant connections between the program and American cultural mythology. The space program was a Puritan narrative, with its crew-cut NASA technocrats tirelessly striving toward the moon (ironically, many of these were recruits from defunct aerospace programs in Germany, Canada, and other nations), and a western narrative, with lone heroes conquering a formidable new frontier (from mostly western U.S. facilities). And as the parallel narrative to the Vietnam War, it offered an image of a reassuringly benign yet powerful government while simultaneously reinforcing Cold War fears in demonstrating the awesome power of rockets.

In 1967, three astronauts died in an early Apollo program test. The theme of astronaut as hero was tragically revived, and the public was reminded of the risks of conquering space. But the first of the Apollo flights (1968–72) were enormously successful, including the Christmas 1968 first lunar orbits by Apollo 8. The astronaut's reading from the Book of Genesis while in lunar orbit made for stirring television. In July 1969, the space-television narrative reached its climax, as the networks went on the air nearly full time to report the mission of Apollo II, the first lunar landing; 528 million people around the world (but not in the Soviet Union) marveled at Apollo II on television.

As with other Apollo missions providing TV coverage from the spacecraft, informal visits with the astronauts were highly scripted and made use of cue cards. Second moon walker Edwin Aldrin suggested that the United States Information Agency scripted Apollo 8's Bible reading and Neil Armstrong's first words from the lunar surface. Whether Armstrong said "That's one small step for man" or whether he said "a man," as he intended (with the article "a" lost to static), has never been resolved. The blurry black-and-white images of
Armstrong jumping onto the lunar surface and the short surface explorations by Armstrong and Aldrin are widely regarded as television's first and perhaps greatest example of unifying a massive worldwide audience in common wonder and hope.

After the Apollo 11 television spectacular, coverage of the following moon missions became increasingly brief and critical. Under considerable pressure to begin cutting back, NASA eliminated the last three planned Apollo missions, terminating the program with Apollo 17 in 1972. NASA actually paid the networks to cover the last Apollo mission (NASA official Chris Kraft, Jr., quoted in Hurt, p. 282). Coverage was spectacular nonetheless, from the nail-biting return of the explosion-crippled Apollo 13 spacecraft to the lengthy moonwalks and moon buggy rides of the last Apollos, covered live with color cameras. Such a part of American culture was NASA of the 1960s that it routinely provided technical assistance and advice to Hollywood, as with the many permutations of Star Trek, or provided entire series storylines, as with I Dream of Jeannie. Footage from NASA's massive film library appears in all manner of productions. British News company ITN (Independent Television News) operates the largest television news archive in the world and reports that Apollo 11 moonwalk footage is the company's most-requested item.

Television coverage of the long-duration Skylab missions (1973–74) provided entertaining images of astronaut antics in weightlessness but was overshadowed by the Watergate hearings. Watergate signaled an end of the trust of government and hero worship characterizing the 1960s space program. NASA could no longer sell its heroes and expensive programs to the public. The heroism of ex-astronauts was often dismantled by the same media that had constructed it, as astronauts were exposed for shady business deals or personal dysfunction, criticized for making commercials, or doubted in new corporate and political roles.

Interest in space exploration was occasionally revived in the 1970s by spectacular accomplishments. In 1976, Americans watched live pictures of the Martian surface during the Viking landing, a visual thrill rivaling coverage of Apollo 11. In subsequent years, the Voyager and Pioneer spacecraft had close encounters with the outer planets of the solar system, sending back dazzling images, but at the time of this writing, Voyager One is leaving the solar system amid little fanfare. Television coverage of space outside of regular newscasts has become minimal.

Between the last Skylab mission and the first space shuttle orbital mission in 1981, the only crewed American space flight was Apollo-Soyuz in 1975, a public relations stunt intended as a tangible demonstration of détente with the Soviet Union. The orbital linkage of three astronauts with two cosmonauts was entertaining if unimpressive by lunar mission. The mission was highly scripted and choreographed for a potential international television audience of a half billion. This was the first space mission broadcast live on television in the Soviet Union.

The first space shuttle test landings over California were covered live, with NASA providing remarkable pictures from chase planes as Enterprise (named after pressure from Star Trek fans) separated from its Boeing 747 mother plane and glided to Earth. Coverage of the long-delayed first shuttle space flight in 1981 was as abundant as in 1960s missions and occasionally reminiscent of 1960s coverage for its Cold War rhetoric—including the breathless reporting of a Soviet spy ship lurking off the coast as the shuttle Columbia returned from orbit.

Coverage of the space shuttle rapidly diminished, and live coverage of missions had ended long before the 25th shuttle mission on January 28, 1986. On that day, the shuttle Challenger, with a crew of seven including teacher and media darling Christine McAuliffe, exploded after liftoff. As President Ronald Reagan would speculate and the media would faithfully repeat, television became America's "electronic hearth," a common gathering place to seek understanding and solace. Television was unprepared for such a tragedy, with speechless anchors, an unfortunate tendency to repeat the videotape of the explosion constantly, and irresponsible speculation about the possibility of survivors. But as shared national tragedy, it was an event like none other.

Thanks in part to television, the history of the American space program and its role in American life has never been completely written. Television presented fleeting spectacles, devoid of analysis, perspective, and retrospective. Given that the United States has generally approached the space program as a television spectacle, there was initially little demand for a deeper analysis of space exploration. It has only been since the 1970s that writers and scholars have attempted to specify the place of the space program in American culture. While television may have obscured this issue, it presented such unforgettable images that few people who witnessed Apollo 11, Viking, or Challenger on television could forget it. In the new millennium, after over 100 shuttle mission and the full-time habitation of the International Space Station, the space program had become seemingly too ordinary for extensive television coverage.

In 2003, the second space shuttle tragedy proved as much. As the shuttle Columbia disintegrated over Texas, killing its crew of seven, initial television
news coverage was intense. It quickly dropped off, however, and coverage of the investigation and aftermath of the accident was slight, as a new generation of Americans expressed little shock or interest. NASA now finds itself the victim of its own early success. Ambitious plans developed in the 1970s at the height of NASA’s popularity have trapped it in expensive programs that now have little support from the scientific community or the public. In 2001, under the Bush administration, NASA developed plans to take tourists to space and sell advertising space on the sides of its rockets and spacecraft, as space exploration and exploitation increasingly shifts from the once invincible and highly visible NASA to the mostly secret efforts of the military and private industry.

Spain

Five national channels serve 80 percent of Spain’s 12 million TV households. Two of these, TVE-1 and TVE-2, are state owned, financed by subsidy and advertising. Antena-3 and Telecine are private channels financed by advertising. Canal+, a terrestrial analog service, is private and financed by subscription.

Two digital satellite services, Vía Digital and Canal Satélite Digital (CSD), both private and financed by subscription, serve 16 percent of Spanish viewers. Four percent subscribe to cable services, although nearly 25 percent of all homes are capable of receiving cable. All the main national channels were obliged by law to broadcast digital signals by April 2002 in preparation for the complete analog switch-off of Spanish TV in 2012. In 2001, only 10 percent of viewers owned digital receivers.

Eight regional channels also contribute to the Spanish television environment: TV-3 and Canal 33 (financed by advertising and subsidy of the Catalan government), Canal Sur (financed by advertising and subsidy of the Andalusian government), Telemadrid (property of the Madrid regional government, financed by advertising and bank loans), Canal 9 (financed by advertising and subsidy of the Valencian government), TVG (financed by advertising and subsidy of the Galician government), and ETB-1 and ETB-2 (financed by advertising and subsidy of the Basque government). Projects for cable television in 2000 speculated that 3 million TV households will be connected, with 1 million subscribers. Residents in all 50 provinces also have access to dozens of additional low-power, local TV channels (often joined to websites), many of which are owned by local governments and financed in part by advertising. In Barcelona, there are 53 local TV channels; in Madrid, 25; and in Valencia, 30.

In 1908, the Spanish government enacted a law that gave the central state the right to establish and exploit “all systems and apparatuses related to the so-called Hertzian telegraph, ethereal telegraph, radiotelegraph, and other similar procedures already invented or that will be invented in the future.” Scattered experiments in radio-wave communication evolved into regular radio broadcasts by 1921, with such events as Radio Castilla’s program of concerts from the Royal Theater of Madrid. In 1924, the first official license for radio was granted, and all experimental stations were ordered to cease broadcasting and request state authorization. The first “legal,” radio broadcast began in Barcelona, and, like most radio programs that preceded the Spanish Civil War (1936–39), it was launched by private investors to make a profit. The broadcasting law of 1934 defined radio as “an essential and exclusive function of the state,” and the statute was amended in 1935 to confirm that all “sounds and images already in use or to be invented in the future” would be established and exploited by the state.
The government of the Second Republic (1931–39) kept centralized control over spectrum allocation and the diffusion of costly high-power transmitters while it encouraged independent operators to install low-power transmitters for local radio. Radio spread with investments in urban zones, and only one significant private chain, the Union Radio, showed signs of economic concentration. The conditions of the Spanish Civil War halted the growth of independent radio, when broadcasters were transformed into voices of military propaganda on both sides of the conflict. The leader of the fascist insurgents, Francisco Franco, ordered the nationalization of all radio stations under the direction of the new state, and the existing collection of transmitters merged into a state-controlled network called Radio Nacional de España. Use of the distinct idioms of Basque, Catalan, and Galician was outlawed, and new laws aimed at the press gave the Ministry of the Interior full power to suppress communication that “directly, or indirectly, may tend to reduce the prestige of the Nation or Regime, to obstruct the work of the government of the new State, or sow pernicious ideas among the intellectually weak.”

The first public demonstration of television took place in Barcelona in 1948 as part of a promotion by the multinational communications firm Philips. Experiments continued until October 1956, when the first official TV broadcast appeared on an estimated 600 television sets in Madrid. The initial program consisted of a Mass conducted by Franco’s chaplain, a speech by the minister of information and tourism commemorating the 20-year regime, and a French-language documentary. Much of the early programming came from the U.S. Embassy, but there were also live transmissions of variety and children’s shows, and a news program was started in 1957. By 1958, there were approximately 30,000 TV sets in Madrid. From the beginning, Television Española (TVE) was supported by advertising, although it also received subsidies derived from a luxury tax on television receivers. In 1959, TVE reached Barcelona via terrestrial lines, and a second studio was soon installed in that city. At the end of the decade, there were 50,000 sets in use. Through Eurovision, Spanish viewers joined European viewers in an audience of some 50 million, and one of the first images they shared was the historic meeting in Madrid between Franco and U.S. President Dwight Eisenhower. By 1962, TVE claimed that its sole VHF (very high frequency) channel covered 65 percent of the Spanish territory and was viewed regularly by 1 percent of the population.

Television was a strictly urban phenomenon at this time, and there were only two production centers, one in Madrid and one in Barcelona. Transmissions originated from Madrid and were relayed in one direction to the rest of the territory. In 1964, a modern studio and office building were erected in Madrid to commemorate the 28th anniversary of the regime, and a year later, a second channel (TVE-2, UHF [ultrahigh frequency]), with production studios located in Madrid and Barcelona, began testing. In 1965, the luxury tax on television sets was eliminated, making advertising the major resource for TVE-1 and TVE-2. Estimates put yearly advertising investment in Spanish television at $1 million by the early 1960s, while airtime increased from 28 to 70 hours a week between 1958 and 1964, rising to 110 hours in 1972. Advertising income for TVE multiplied 100 times between 1961 and 1973, reaching estimated totals of over $100 million.

In the early 1970s, new regional centers were constructed in Bilbao, Oviedo (Asturias), Santiago de Compostela (Galicia), Valencia, and Seville (Andalusia). The entire system was finally united with radio in 1973 and was placed under the management of one state-owned corporation, Radio Televisión Española (RTVE). The regional circuit was wired into a highly centralized network in which all regional broadcasts were obliged to pass through Madrid. The only centers with the capacity to produce programs of any length were those in Barcelona and the Canary Islands. Although the records of RTVE management during the Franco dictatorship are unreliable, one study for 1976 reported that the Barcelona center contributed 3 percent of the total broadcast hours, followed by the center at Las Palmas in the Canary Islands at 2.9 percent. The rest transmitted a negligible amount of 1.8 to 1.85 percent of the total. The one-way flow of broadcasting from the center to the regions was an effect of the Franco regime’s centralism, which kept the regional centers (other than Barcelona and Las Palmas) from connecting with Madrid.

Television in Spain changed radically in the years following the death of Franco in 1975. In 1980, the government enacted a reform statute that established norms to ensure that a plurality of political parties would control RTVE. The law also stipulated that broadcasting should be treated as an essential public service and that it should defend open and free expression. The statute called for the upgrading of the regional circuit, with a view to this becoming the basis for a network of television stations operated by regional governments, whose recognition in the constitution of 1978 was part of the reorganization of Spain as a “state of the autonomous.” The parliaments of the newly formed autonomous governments of the Basque country and Catalonia founded their own television systems: the Basques in May 1982, the Catalans a year later. These actions resulted in the most decisive
change in the broadcast structure since radio was nationalized during the Spanish Civil War, as they contravened existing laws that gave the central state the right to control all technology using the electromagnetic spectrum. In response, the central government enacted the Third Channel Law in 1984 in order to regulate the establishment of any additional networks in the regions.

The Third Channel Law was designed to stabilize the process of decentralization of the television industry, and it was based in the principle of recognition for the cultures, languages, and communities within the Spanish territory, entities that had been suppressed during the 40-year Franco dictatorship. The law stipulated that regional networks remain under the state's control and within the RTVE infrastructure. Parliaments in Catalonia, the Basque country, and Galicia resisted control by the central state and set up technical structures that ran parallel to but separate from the national network. Despite ongoing legal battles between the central state and the regions over rights of access to regional airwaves and rights of ownership of the infrastructure, 11 autonomous broadcast companies have been founded, six of which were broadcasting regularly by 1995. In 1989, the directors of these systems agreed to merge into a national federation of autonomous broadcasters, known as the Federación de Organismos de Radio y Televisión Autónomicos (Federation of Autonomous Radio and Television Organizations [FORTA]).

Between 1975 and 1990, Spanish television emerged from a system of absolute state control to become a regulated system in which both privately and publicly owned channels compete for advertising sales within national and regional markets. This structure was completed with the development of the 1988 law and technical plan for private television. The law furnished three licenses for the bidding of private corporations, a three-phase framework for the extension of universal territorial coverage, and restrictions on legal ownership to promote multiple partnerships (rather than monopoly control) and to limit foreign ownership. The technical plan created an independent public company, Retevisión, to manage the network infrastructure, abolishing RTVE’s economic and political control over the airwaves. As of 2002, all broadcasters must pay an access fee to use the public infrastructure. Regular transmissions from the private companies began in 1990.

A 1995 Cable Telecommunications Law limited licensed operators in each market to two, expanded the minimum market size to exclude small operators, and gave licensing power to a central authority. This law was modified in 1996 to return licensing power to local and regional authorities and make it easier for smaller towns to get cable. This legislation forced many of the smaller videos comunitarios to close, although at the turn of the 21st century nearly 500 remained in operation illegally throughout southern and southeastern Spain. Eventually, several large cable companies emerged, with one being operated by the national telephone monopoly, Telefónica, and another run by the national electric utility monopoly, Endesa.

Despite opportunities for growth in cable, the largest corporations put greater effort in launching new digital satellite services. Sogecable already ran Canal+ and had numerous channels of pay TV in the analog format ready to broadcast over France’s Astra satellite. Telefónica’s controlling interest in the Spanish Hispasat satellite gave them low-cost access to the DTH satellite market. Telefónica’s satellite-TV service, Vía Digital, and Sogecable’s Canal Satélite Digital (CSD) both began service in 1997. Since 1998, the two have discussed merging, but European Union (EU) regulators had blocked the deal through at least 2001. However, the merger was conditionally cleared by the Spanish government in November 2002. The clearance depends on conditions relating primarily to the merged company’s acquisition and broadcasting rights to films and soccer matches. A third digital satellite system, Quiero, began operation in 2000. By 2002, CSD had 1.2 million subscribers, Vía Digital had 750,000, and a struggling Quiero had 220,000. Basic subscription packages include 35 to 42 channels, although more than 91 separate cable and satellite program channels are available.

On the regional scale, TV-3 and Canal 33 cover Catalonia with Catalan-language programs and have significant spillover into contiguous regions and parts of France, thereby reaching beyond their official audience of 5.8 million. Canal Sur covers the Andalusian audience of 6.7 million. Telemadrid, owned by the regional government of Madrid, reaches an official audience of 4.8 million. Valencia’s Canal 9’s 3.7 million viewers can watch programs in Valenciano, a language similar to Catalan. Signals of TVG in Galicia spill over into northern Portugal and parts of Asturias in Spain, bringing Galician-language programming to more than the region’s 2.6 million viewers. ETB-1 and ETB-2 cover the Basque country and parts of surrounding provinces to reach beyond the official audience of 2 million; notably, ETB-1 broadcasts in the Basque language (Euskera), while ETB-2 does so in Spanish.

As of 2002, Telefónica Media owns around 47 percent of Antena 3; other companies that own part of Antena 3 are the banking group Banco Santander Central Hispano (BSCH), which owns over 10 percent directly as well as another 13 percent through its subsidiary,
Mecame; Bank of New York (12 percent); and Recoletos Cartera de Inversiones (10 percent). Other shareholders control less than 8 percent. Telecinco is owned by the Kirch Group of Munich (25 percent), Silvio Berlusconi’s Mediaset of Italy (40 percent), and two Spanish firms, Grupo Planeta (10 percent) and the Grupo Correo de Comunicación (25 percent).

Via Digital is owned by Telefónica Media (approximately 49 percent); Strategic Management Company (19 percent); DTH Europa (10 percent); Galaxy Entertainment Latinamerica, a DirecTV subsidiary (7 percent); the Madrid-based publisher Grupo Recoletos, a subsidiary of the Pearson group, a British media conglomerate and publisher of The Financial Times (5 percent); Media Park (5 percent); and others (less than 6 percent). CSD is owned by Sogecable (approximately 83 percent), Warner Brothers (10 percent), Proarasa (4.5 percent), and the Telefónica subsidiary Antena 3 (2.5 percent). Sogecable’s business of program production and packaging is vertically integrated with a film production company (Sogecine, also known as Sogetel), a film buyer (StudioCanal Spain), TV and film distribution outfits (Sogepac and Warner Sogefilms), and venues for both theatrical film exhibition (Warner Lusomundo Cines de España) and pay TV (Canal+). Major owners of Sogecable are Canal Plus France, a Vivendi-Universal property (21 percent); PRISA (21 percent); and major Spanish banks (30 percent). PRISA owns the largest-circulation newspaper in Spain, El País, and the top commercial radio station, Ser. The Quiero satellite company is owned by Auna (49 percent), Media Park (15 percent), Sofiscalve (15 percent), Carlton Communications (7.5 percent), and smaller investors (13.5 percent).

Telefónica is the largest company in Spain, Europe’s second-largest publicly listed multimedia company behind Vivendi-Universal and the largest single foreign investor in Latin America. It controls the third-largest Internet service in the world (Terra Lycos) and is the third-largest entertainment company in the Spanish-speaking world (after Argentina’s Clarín and Mexico’s Televisa). Between 1996 and 2000, Telefónica’s market value grew fivefold to $135 billion, making it one of Fortune’s top-five global telecom firms. It operates the most extensive telephony network in Spain, with control over about 98 percent of the market. In 1997, while launching Via Digital, Telefónica purchased Antena 3, one of Spain’s commercial broadcasters; this acquisition, along with other acquisitions of Spanish film- and video-production companies, initiated a course of convergence to match those of AOL Time Warner and Vivendi-Universal. Telefónica also owns a leading European production house, Endemol, maker of such international hits as Big Brother. Telefónica’s Latin American media holdings include ATCO, a holding company that controls Televisión Federal, S.A.(Telefé), the leading commercial TV network in Argentina, which sells programming throughout Latin America, the United States, Europe, and Asia. ATCO also controls the AM and FM channels of Radio Continental, the third-largest radio system in Argentina. In addition, Telefónica Media owns Telearte, S.A (the third-ranked commercial TV channel, known as Canal Azul), as well as a radio network of 300 stations run by Telefónica’s Uniprex S.A. (Onda Cero) and Cadena Voz de Radiodifusión S.A.

TVE-1, Telecinco, and Antena-3 attract over 75 percent of the Spanish television audience. Both channels of TVE typically share a third of the viewers, while the private broadcasters draw 40 to 45 percent of the viewers on average. The regional broadcasters together might bring in 15 to 18 percent of all viewers. Domestically produced programs, especially sports, usually top the ratings, with telenovelas, imported from or co-produced with Latin American suppliers, remaining very popular. Recently, domestic remakes of popular Latin American telenovelas have earned as high as a 31 percent share of the viewers. Additional improvements in domestic production have resulted from the EU policy obligating private TV firms to invest 5 percent of their revenues in European TV and film production. The bulk of imported programs, on average 20 to 30 percent of all programming on the national channels, comes from the United States. This is a change from 1990 figures, when imports took up 40 percent of the program schedule on TVE-1, 33 percent on Andalusia’s Canal Sur, 34 percent on Catalonia’s TV-3, 35 percent on Galicia’s TVG, and 39 percent on the Basque ETB-1. In 1990, Telemadrid showed twice as many U.S. programs as it did Spanish ones, while a ratio of one to one could be seen on Valencia’s Canal 9, the Basque ETB-2, and the two private channels.

Newer services such as Via Digital and CSD initially depended on U.S. programs; together, Via Digital and CSD spent more than $3 billion on imports in their first year of operation. Since then, Sogecable has enjoyed exclusive deals with all the major Hollywood studios except MGM, including multiyear deals with Paramount, Disney Channels, Universal, and AOL Time Warner; with the latter company, Sogecable has an exclusive contract to develop a Spanish version of the Cable News Network (CNN). Sogecable also acquired rights to televise 20th Century-Fox’s recently released films in Spain, including exclusive pay-TV rights to the blockbuster Titanic. The company also benefited when Canal+’s parent firm, Vivendi, bought Universal. Via Digital has held exclusive rights to MGM films and its libraries as well as Playboy TV,
Spain

BBC World, BBC Prime, and Eurosport. The service also works with national distributor Media Park and draws on its 33 percent stake in Spain’s biggest film-production house, Lolafilms, for additional programming. Apart from movies, satellite TV programming consists mostly of sports and documentaries, staples of domestic production. Soccer dominates, but the celebrity-classic bullfight has also become an important new format, especially during festival seasons in Seville, Madrid, and Pamplona.

Language is a key characteristic of the Spanish TV culture. The regional firms in the Basque country, Galicia, Catalonia, and Valencia were founded with the objective of fomenting the regions’ languages and cultures. In Galicia, 99 percent of the people understand Gallego, but only 14 percent actually prefer to watch TV in Gallego. Estimates are that 95 percent of the people in Catalonia understand Catalan, but only a third of the Catalans watch programs exclusively in the idiom. Up to 90 percent of the people in Valencia understand Valenciano, but 12 percent prefer TV only in that language. In the Basque region, as many as half the people claim to understand Euskera, but only one-fifth of the Basques show strong preferences for their TV in this language. These figures are dwarfed by the scale of the national population, where practically 100 percent of the people understand Spanish. Despite the linguistic, territorial, and financial limitations affecting the regional networks, they manage to retain a stable audience of viewers because of the political and cultural history of centralism in Spanish communication. For both the managers and the audiences of these systems, the presence of the local idiom alongside Spanish recalls the multilingual identity of the regions and helps sustain a sense of place as Spain positions itself within the European Union and opens its borders to globalized audiovisual production.

Spanish International Network

The Spanish International Network (SIN) was the first Spanish-language television network in the United States. From its inception in 1961, SIN was the U.S. subsidiary of Televisa, the Mexican entertainment conglomerate, which today holds a virtual monopoly on Mexican television and is the world’s largest producer of Spanish-language television programming.

From the point of view of a U.S. entrepreneur in the early 1960s, the U.S. Spanish-speaking population was so small and so poor a community that it was not considered a viable advertising market. The 1960 Census counted 3.5 million U.S. residents with Spanish surnames. Mexican immigrants and Mexican Americans living in the United States constituted the vast majority of this population. (Large scale immigration from Puerto Rico, Cuba, and other Latin American countries had not yet begun.) Spanish-language advertising billed through the U.S. advertising industry amounted to $5 million annually, less than 0.1 percent of all advertising expenditures at that time. From the perspective of a Latin American entrepreneur, however, this U.S. Latino audience was one of the wealthiest Spanish-language markets in the world.

SIN was founded by Emilio Azcárraga, the “William Paley of Mexican broadcasting.” An entrepreneurial visionary and the owner of theaters and recording companies, Azcárraga built first a radio, then a television empire in Mexico, before expanding it north of the border. SIN began with two television stations, KMEX, Los Angeles, and KWEX, San Antonio (Texas), and from the beginning had national ambitions. In fulfilling these aims, SIN pioneered the use of five communications technologies: the UHF (ultrahigh frequency) band, cable television, microwave and satellite interconnections, and repeater stations. All these applications contributed to rapid growth in the 1960s and 1970s, and by 1982 SIN could claim it was reaching 90 percent of the Spanish-speaking house-
holds in the United States through 16 owned-and-operated UHF stations, 100 repeater stations, and 200 cable outlets.

In these first decades, virtually every broadcast hour of each SIN affiliate was Televisa programming produced in Mexico: telenovelas (soap operas), movies, variety shows, and sports programming. The vertical integration of Azcárraga's transnational entertainment conglomerate gave tremendous economic advantages to early U.S. Spanish-language television. The performers under contract to Azcárraga's theaters and recording companies also worked for his television network. In other words, SIN programming had covered costs and produced a profit in Mexico before it was marketed in the United States.

After 1981 and the start of satellite distribution of its programming, SIN began producing programs in the United States. The network created a nightly national newscast, Noticiero Univisión, as well as national public service programming, such as voter registration drives. It also provided coverage of U.S. national events such as the Tournament of Roses Parade and Fourth of July celebrations. The larger network-owned stations also began airing two hours a day of locally produced news and public affairs programming. This programming represented a limited recognition by SIN that U.S. and Mexican television audiences had different needs and interests. Moreover, it was an attempt to modify the SIN audience profile from that of a "foreign" or "ethnic" group interested only in Mexican programming to that of a more "American" community participating in the same national rituals as the mainstream consumer market. Perhaps SIN's most enduring contribution to U.S. culture was its leading institutional role in the creation of a commercially viable, panethnic, national Hispanic market.

The entrepreneurial financial and marketing acumen displayed by Emilio Azcárraga (and from 1972 by his son and heir Emilio Azcárraga Milmo) in the creation and development of SIN were matched by his legal skills in maneuvering around U.S. communications law. The U.S. Communications Act of 1934 simply and explicitly bars "any alien or representative of any alien...or any corporation directly or indirectly controlled by...aliens" from owning U.S. broadcast station licenses. For Azcárraga and his SIN associates, perhaps the most salient part of this law is what it does not address. It does not prohibit the importation or distribution of foreign broadcast signals or programming. In other words, U.S. law does not limit foreign ownership of broadcast networks; it does bar foreign ownership of the principal means of dissemination of the programming, the broadcast station. On paper and in files of the Federal Communications Commission (FCC), none of the SIN stations or affiliates was owned by Emilio Azcárraga or Televisa. Rather, the foreign-ownership prohibition was avoided by means of a time-honored business stratagem known, in Spanish, as the presta nombre, which translates literally to "lending a name" and can be rendered in colloquial English as a "front." SIN stations were owned by U.S. citizens with long-established professional and familial ties to Azcárraga and Televisa, with Azcárraga retaining a 25 percent interest (the limit permitted by law) in the SIN network.

Although long a subject of criticism by Latino community leaders and would-be U.S. Spanish-language television entrepreneurs, the foreign control of SIN was not successfully challenged until the mid-1980s, when a dissident shareholder filed a complaint with the FCC. In January 1986, the FCC ordered the sale of SIN. The FCC action was met with much excited anticipation by U.S. Latino groups who felt that for the first time since its creation 25 years earlier, there was a possibility that U.S. Spanish television would be controlled by U.S. Latino interests.

Several U.S. Latino investor groups were formed, but ultimately the bid (for $301.5 million) of Hallmark, Inc., of Kansas City, Missouri, the transnational greeting card company, received FCC approval. Hallmark changed the network's name to Univision, pledging to keep the network broadcasting in Spanish. Under the terms of the sale, Televisa was given, in addition to cash, a guaranteed U.S. customer (the new network, Univision, was given a right of first refusal for all Televisa programming), free advertising (for its records and tapes division) on Univision for two years, and 37.5 percent of the profits of its former stations for two years. After a quarter century, SIN ceased to exist as a corporate entity, leaving a significant cultural and economic legacy—a commercially viable U.S. Spanish-language television network and a new U.S. consumer group: the Hispanic market.

Special/Spectacular

The television special is, in many ways, as old as television itself. Television specials are (usually) one-time-only programs presented with great network fanfare and usually combining music, dance, and comedy routines (or "bits") presented in a variety format. When television was still new, specials were common, in part because weekly, ongoing shows were expensive to produce and were not yet proven as tools for securing long-term viewer loyalty. Hence, early television schedules did contain many one-time presentations, such as The Damon Runyon Memorial Fund (1950; TV's first telethon hosted by Milton Berle), the Miss Television USA Contest (1950; won by Edie Adams), Amahl and the Night Visitors (1951; the first Hallmark Hall of Fame program), and the Ford 50th Anniversary Show (1953; featuring duets between stage stars Mary Martin and Ethel Merman).

The TV special entered its greatest and most prolific phase in 1954, when genius programmer Sylvester "Pat" Weaver conceptualized what he called television "spectaculars." These one-of-a-kind, one-night broadcasts were Weaver's attempt to bring new and larger audiences and prestige to the television medium and to his network, the National Broadcasting Company (NBC). Breaking with the format of television at that time, the spectaculars regularly preempted the normal network program schedule of sponsored weekly shows. Weaver's move was a controversial gamble; in order to free up airtime for the presentation of his spectaculars (on every fourth Monday, Saturday, and Sunday), the network had to forgo sponsorship by single companies (basically money in the bank for the network) on the nights the sponsors' programs were preempted. Instead of relying on single sponsors, Weaver followed his trademark "magazine" formula for sponsorship, selling different segments of each spectacular to different sponsors and in the process laying the foundation for the future of multiple sponsorship and commercials on all of U.S. television.

In creating his spectaculars, Weaver drew on the talents of three producers: Fred Coe, Max Liebman, and Albert McCleery. Coe created his works for Producer's Showcase airing on Mondays, Liebman for his series Max Liebman Presents on Saturdays, and McCleery for Hallmark Hall of Fame on Sundays. Under Weaver and his team of producers, the spectacular could be a musical extravaganza (such as Peter Pan, with Mary Martin repeating her Broadway triumph), a play (such as Coe's Our Town with Paul Newman, Eva Marie Saint, and Frank Sinatra), or a dramatic film (such as Sir Laurence Olivier's Richard III).

In time, spectaculars became known by the less hyperbolic term "special," and generally they were shortened in length, with most lasting only one hour, as opposed to the 90 minutes to three hours sometimes taken by NBC. For the most part, specials took on a lighter tone, becoming variety oriented, with the emphasis on music, dance, and elaborate production numbers. This era of the special saw the presentation of such benchmark television offerings as Astaire Time, with Fred Astaire and Barrie Chase (1960); Julie and Carol at Carnegie Hall, with Julie Andrews and Carol Burnett (1962); My Name Is Barbra, starring Barbra Streisand (1964); and Frank Sinatra: A Man and His Music (1964).

These types of programs continued successfully into the late 1960s and 1970s, featuring such diverse talents as Carol Channing, Bill Cosby, Elvis Presley, Liza Minnelli, Lily Tomlin, Shirley MacLaine, Bette Midler, Ann-Margaret, Olivia Newton-John, Tom Jones, and Carol Burnett, who often paired herself with other performers, such as Beverly Sills, Dolly Parton, or Julie Andrews. Throughout this period, stars of contemporary television programs, such as Lynda Carter, Cheryl Ladd, and Ben Vereen, also headlined occasional hour-long specials, frequently with substantial ratings success.

As the weekly variety show all but disappeared from network television (The Carol Burnett Show, U.S. television's last successful variety show, ceased in 1978), the trend also signaled the beginning of the decline for the television music-dance special. As au-
iences began to select their musical entertainment from other media or in shorter forms, such as the music video, the hour-long, star-centered special began to appear dated. At the same time, the shows were proving too expensive to produce in relation to their ratings.

Currently, with the exception of such yearly traditions as award shows, Christmas specials, and pageants such as Miss USA, the television special/spectacular is now primarily the domain of channels other than the American Broadcasting Company (ABC), the Columbia Broadcasting System (CBS), FOX, or NBC. One still occasionally witnesses such programs. For example, on September 21, 2001, all four U.S. networks aired America: A Tribute to Heroes, a live two-hour special featuring musical performances and commentaries from celebrities to raise money for the relief effort aiding victims of the September 11 attacks on the World Trade Center and the Pentagon. However, such network specials are rare. In contrast, the Public Broadcasting Service (PBS) sometimes presents films of Broadway musicals, cable stations such as Home Box Office (HBO) air highly touted entertainment events, and pay-per-view has become an important purveyor of made-for-television extravaganzas. In a world of expanding numbers of television channels, it is difficult to know what future events might qualify as “special” and harder still to identify the truly “spectacular.”

Further Reading

Speight, Johnny (1920–1998)

British Writer, Producer

Johnny Speight was the creator of the British Broadcasting Corporation (BBC) series Till Death Us Do Part, on which the U.S. series All in the Family (Columbia Broadcasting System [CBS]) was based. As controversial in its time and place as was All in the Family, Speight’s creation spawned a generation of relevant, hard-hitting sitcoms in both the United States and England.

A former factory worker and jazz musician, Speight began writing for television in 1956. In 1966, after serving as head writer for the Arthur Haynes Show, Speight launched Till Death Us Do Part. The series revolved around the different values and beliefs held by blue-collar bigot Alf Garnett and his liberal son-in-law Mike. Originally committed to shows about the family itself, Speight maneuvered Till Death to more relevant social issues. Norman Lear, who was working in feature films at the time, saw the series and, with partner Bud Yorkin, optioned the series for their company Tandem Productions: The resulting hit was All in the Family, which debuted on CBS in 1971.

Speight’s more controversial episodes prompted the Conservative Central Office to ask for advance copies of the Till Death scripts. When Speight refused, the matter was soon dropped. In 1968, Speight produced a BBC movie version of the series, and in 1972 he penned a short-run revival of the series. During that run, the series reached 24 million viewers, making it the most popular show in Britain.

Speight wrote several plays, including If There Weren’t Any Blacks You’d Have to Invent Them, which has been produced in at least 17 countries. He also won numerous awards, including numerous Screenwriters Guild Awards, and a Lifetime Achievement Award from the British Comedy Awards in 1996. He died of cancer in July 1998.

Spelling, Aaron (1923—)
U.S. Producer

Aaron Spelling is one of television’s most prolific and successful producers of dramatic series and made-for-television films: by 2001, he had more than 182 television-production credits. Spelling began his career as a successful student playwright at Southern Methodist University, where he won the Eugene O’Neill Award for original one-act plays in 1947 and 1948. After graduating in 1950 and spending a few years directing plays in the Dallas, Texas, area, and then trying less than successfully to make his way on Broadway, Spelling moved to Hollywood. There he initially found work as an actor and later as a scriptwriter for such anthology and episodic series as Dick Powell’s Zane Grey Theater, Playhouse 90, Wagon Train, and The Jane Wyman Theater. Within a few years, Spelling had become a producer at Four Star Studio Productions, where he created The Lloyd Bridges Show (1962–63), Burke’s Law (1963–66), and

Spelling also ventured into new genres with his innovative, hour-long comedy, The Love Boat (1977–86) and the prime-time serial Dynasty (1981–89). Reminiscent of the 1960s anthology comedy, Love, American Style, each episode of Spelling’s The Love Boat turned the three separate comedy stories into three intertwined storylines. Intercutting three separate plots in short scenes that recapitulated and advanced each storyline plot was a brilliant strategy that enabled the series to appeal to different sets of viewers, each of whom might be attracted to a particular plotline, within a format that was admirably suited to the fragmented and distracted way that most people view television. Another Spelling innovation that first appeared in The Love Boat was the ritualized introductory sequence that formally presented the multiple plots in each week’s episode as well as the series’ main characters.

In 1980s television, Spelling was king. In 1984, Spelling’s seven series on the American Broadcasting Company (ABC) accounted for one-third of the network’s prime-time schedule, leading some critics to nickname ABC “Aaron’s Broadcasting Company.” Spelling’s 18-year exclusive production deal with ABC ended in 1988, but his ability to create hit series did not. In the 1990s, he introduced the hit prime-time series Beverly Hills 90210 (1990–2000) and Melrose Place (1992–99), for FOX, and his first daytime soap opera venture, Sunset Beach (1997–99), for the National Broadcasting Company (NBC).

Among the recurring thematic features that have characterized Spelling’s productions over the years are socially relevant issues, such as the disadvantaged youth of the 1960s; institutional discrimination against women, racism, and homophobia; altruistic capitalism; conspicuous consumption and valorization of the wealthy; the optimistic, moralistic maxims that people can be both economically and morally successful; good ultimately triumphs over evil; the grass often looks greener but rarely is; and the affirmation of both the “caring company” work family (e.g., in Hotel) and the traditional kinship family. Stylistically, his productions have included high-key lighting, gratuitous displays of women’s bodies, heavily orchestrated musical themes, lavish sets, and what Spelling himself thinks is the most important element in television: “style and attention to detail.” Two Spelling series that stand out as anomalous among this auteur’s prime-time and movie ventures are Family (ABC, 1976–80) and 7th Heaven (The WB, 1996– ). Spelling and Mike Nichols coproduced Family, a weekly hour-long drama, which many consider to be Spelling’s best work. During the four years that this serious portrayal of an upper-middle-class suburban family was in first run, it won four Emmy Awards for the lead performers and was twice nominated for Outstanding Drama Series, 7th Heaven, a wholesome drama about a Protestant minister, his wife, and their seven children living together in an American suburb, also has received numerous awards, including the Kids Choice Award, the Teen Choice Award, TV Guide Awards, the Entertainment Industry’s Prism Award, the Media Project’s Shine Award, and the Viewer’s Choice Award.

“Innovator,” “overachiever,” “spin doctor,” “angel,” “king of pap,” “ratings engineer,” “TV’s glitzmeister,” etc.
Spelling, Aaron

"winner of six National Association for the Advance-
ment of Colored People Image Awards": these are
some of the labels Spelling's critics and admirers have
used to describe this prolific, successful producer. One
title that certainly describes the undeniable impact
Spelling has left on four decades of television is that of
television auteur.

nasty; Melodrama; Starsky and Hutch

Aaron Spelling. Born in Dallas, Texas, April 22, 1923.
Educated at the Sorbonne, Paris, 1945–46; Southern
Methodist University, Dallas, Texas, B.A. 1950. Mar-
rried: 1) Carolyn Jones, 1953 (divorced, 1964); 2) Car-
ole Gene Marer, 1968; children: Tori and Randy.
Served in U.S. Air Force, 1942–45, decorated with
Bronze Star Medal, Purple Heart with oak leaf cluster.
Actor, from 1953, appearing in 50 television shows
and 12 films; began career as a writer after selling
script to Zane Grey Theater; worked in production,
Four Star, 1956–65; co-owner, with Danny Thomas,
Thomas-Spelling Productions, 1968–72; copresident,
Spelling-Goldberg Productions, 1972–77; president,
Aaron Spelling Productions, Los Angeles, 1977–86,
chair and chief executive officer, since 1986. Member:
board of directors, American Film Institute; Writers
Guild of America; Producers Guild of America; Ca-
cus of Producers, Writers and Directors; Hollywood
Radio and TV Society; Hollywood TV Academy of
Arts and Sciences; Academy of Motion Picture Arts
and Sciences. Recipient: Eugene O'Neill Awards,
1947 and 1948; six National Association for the Ad-
vancement of Colored People (NAACP) Image
Awards; named Man of the Year by the Publicists
Guild of America, 1971; named Man of the Year by
Beverly Hills chapter of B'Nai B'rith, 1972, 1985;
named Humanitarian of the Year, 1983; named Man of
the Year by the Scopus Organization, 1993.

Films (selected)
The spin-off is a television programming strategy that constructs new programs around characters appearing in programs already being broadcast or programs ending their current run. In some cases, the new venue is created for a familiar, regular character in the existing series (e.g., *Gomer Pyle, U.S.M.C.* from *The Andy Griffith Show*). In others, the existing series merely serves as an introduction to and promotion for a completely new program (*Mork and Mindy* from *Happy Days*).

Among the most famous examples of the spin-off are those from the work of producer Norman Lear and works by producers working at MTM Productions during the 1970s. A list of the originating programs with their spin-offs reads like a genealogy of popular television comedy. Thus, *All in the Family* begat *Maude*, which begat *Good Times*, and *The Jeffersons*, which begat *Checking In*. *All in the Family* also begat *Gloria*, which lasted only one season and begat nothing.

*The Mary Tyler Moore Show* begat *Phyllis*, *Rhoda*, and *Lou Grant*, and though none of these “offspring” engendered specific shows of their own, their producers went on to create numerous programs with the distinctive style of these earlier works.

Other prolific sources of spin-offs were *The Danny Thomas Show*, the source of *The Andy Griffith Show*, which led to *Gomer Pyle, U.S.M.C.* and *Mayberry, R.F.D.* From *Happy Days* the list includes *Laverne and Shirley, Joannie Loves Chachi, Mork and Mindy*, and *Out of the Blue*. As should be clear from these lists, a spin-off is no guarantee of success. For every *Wanted: Dead or Alive* (from *Trackdown*), there is a *Beverly Hill Buntz* (from *Hill Street Blues*).

The existence of spin-offs can lead to puzzling problems when one considers the relations among programs across the schedule. The long-running prime-time serial *Knots Landing*, for example, was a spin-off of *Dallas*, the most famous example of that genre. During the famous 1985–86 season of *Dallas*, the season that was “dreamt” by Pamela Ewing (Victoria Principal), various events on *Knots Landing* occurred in response to Bobby Ewing’s (Patrick Duffy) “death.” Yet no one on *Knots Landing* troubled to explain how the history of their own fictional world might be altered by the fact that a “year in the life of *Dallas*” never occurred.

In any instance, spin-offs attest to television’s constant demand for new, if not always different, material. This demand often leads to mindless repetition and the
Spin-Off

most meager attempts to cash in on previous success. While spin-offs may lead to new sources of creativity in their own right, the result of applying this strategy is often no more than a program that temporarily fills a time slot.

Indeed, it should be noted that spin-offs often result from producers' financial arrangements or from deals made with actors portraying popular characters within an ensemble. Successful producers or popular actors frequently contract for future commitments from studios or networks. New shows constructed around proven, popular characters offer obvious advantages in these arrangements. One of the most successful U.S. television series in recent history, Frasier, was developed for performer Kelsey Grammer. The WB television network capitalized on the success of Buffy the Vampire Slayer by creating Angel for David Boreanaz. And as the final season of Friends began, word came that the National Broadcasting Company (NBC) would develop a series for Matt LeBlanc who portrayed the popular character, Joey. The example is interesting because NBC executives acknowledged that the Joey character was not intended to be the most prominent character when the series began. Yet no other actors were offered series developed around their specific roles in Friends. In all these cases, the existence of a successful program offers the producer, the star, and the network a ready-made billboard for advertising new work.

A final version of the spin-off is related to variations on a program franchise or formula, variations that often cross national boundaries. It is important to remember that All in the Family and Sanford and Son, two of the most highly acclaimed shows produced by Norman Lear, were copies of British productions, Till Death Us Do Part and Steptoe and Son, respectively. Currently, the most prominent examples in the United States are the international versions of Wheel of Fortune. Licensed by the parent company Merv Griffin Productions to producers in other countries, some form of Wheel is popular from France to Taiwan, from Norway to Peru. In each country, small variations are created to express particular cultural expectations and attitudes. Because game shows are cheaply and easily produced, this type of the spin-off concept is likely to expand.

Similarly, producers and programmers take advantage of highly successful program "franchises," the to-
Spin-Off

tal style and format of a production that can be copied or slightly modified to create new programs. The best example in recent U.S. television history is the Law and Order franchise. Though not initially a “hit,” the first Law and Order series became staple viewing, a firmly “episodic” program in the midst of more serialized series. It satisfied viewers with its contained episodes, which also made it an outstanding and financially successful product for syndication. Producer Dick Wolf subsequently developed Law and Order: SVU (Special Victims Unit), which dealt with sex crimes, and Law and Order: CI (Criminal Intent), which presented stories exploring the criminals’ point of view. On occasion, characters from one or more of these series would “cross over” into action in another. These programs, like all other instances of spin-offs, attest to both television’s unceasing demand for new content and narrative structures able to generate new stories.

Horace Newcomb

Spitting Image

British Puppet/Satire Program

The premiere of Spitting Image opened with a puppet caricature of Israel’s prime minister Menachem Begin wearing a magician’s outfit. With a flourish, he produced a dove of peace from his top hat, then announced, “For my first trick...,” only to then wring the bird’s neck.

This was the first of many outrages perpetrated on the British public, who were either offended or delighted each week from 1984 to 1996. Spitting Image was roundly condemned for its lampooning of the royal family: the queen was portrayed as a harried housewife, beset by randy, dullard children and screaming grandkids. Britain’s most cherished figure, the queen mother, was portrayed as a pleasant, if somewhat boozy, great-grandmother figure.

The Conservative leadership was a constant target. Margaret Thatcher’s puppet was a needle-nosed Reagan groupie who consulted with Hitler on immigration policy and sold off England’s infrastructure to baying packs of yuppies; her eventual successor, John Major, was portrayed as a dull, totally gray man who ate nothing but peas. The opposition Labour leaders, including Neil Kinnock as “Kinnochio,” were pilloried for their inability to challenge decades of Tory rule.

In spite of its detractors, more than 12 million viewers (a quarter of England’s adult population) watched Spitting Image on Central Independent Television, a subsidiary of ITV. The program’s spin-off records, books, comics, and videos sold in the millions. It won an International Emmy for “Outstanding Popular Arts” program in the 1985–86 season, and a franchised edition appeared on Moscow television.

Spitting Image originated with Peter Fluck and Roger Law, who first met at Cambridge School of Art. They became involved in the liberal politics favored by art students, through which they met another stu-

dent, Peter Cook. In 1961, Cook fronted England’s flowering of political satire by starring with Dudley Moore in the revue “Beyond the Fringe,” which inspired the TV program *That Was the Week That Was*. Cook employed Law as an illustrator for his projects, such as the satire magazine *Private Eye* and a political comic strip in the *Observer* newspaper. Fluck and Law built separate careers in magazine illustration, and Law took two commissions in the music business that yielded classic album covers: the Jimi Hendrix Experience as Hindu deities for *Axes: Bold As Love* and *The Who Sell Out*, for which Roger Daltrey posed sitting in a bathtub filled with baked beans.

Fluck and Law each began working with sculpted caricatures, creating several images that appeared in London’s *Sunday Times Magazine*, where Law had become an artistic director and reporter. In 1975 they formed a partnership, named Luck and Flaw, to turn out their three-dimensional portraits for such outlets as the *New York Times Magazine*, Germany’s *Stern*, international editions of *Time*, and *National Lampoon*. The work proved barely profitable until 1981, when Martin Lambie-Nairn invited them to lunch.

Lambie-Nairn was a graphic designer at London Weekend Television. He thought that a political television program using puppets or animation might be a good investment, and he proposed to front Fluck and Law the capital for a pilot episode (thus the credit at the end of each episode, “From an original lunch by Martin Lambie-Nairn.”). The pilot took two years to complete.

The pair quickly decided that the show should use puppets, which, like Jim Henson’s Muppets, required two operators, for the face and one arm. (Henson, in fact, turned down an offer to collaborate on the puppet workshop.) The first puppet designs were bogged down by expensive, heavy electronics needed just to make their eyes move. After several months without any film being shot, Fluck cobbled together a simple mechanism using steel cable and air bulbs. The team also picked up Tony Hendra of *National Lampoon* (and later of *Spinal Tap*) as a writer and hired two producers: Jon Blair, a producer of current affairs programming, and John Lloyd of the *Not the Nine O’Clock News*.*Spitting Image*, the pilot’s title, exhausted the resources of several backers, including...

computer executive Clive Sinclair, before it was completed at a cost of £150,000, a record for a light-entertainment program.

In its first season, Spitting Image focused exclusively on politics and played to mediocre ratings. For the next round, Fluck and Law were obliged to caricature entertainment and sports figures as well, and the show's fortunes immediately improved. The partners worked out a schedule in which they spent the off-season stockpiling nontopical segments, such as music-video parodies (in one, Barry Manilow was all nose; another showed off Madonna’s singing belly button). Each episode had a window of six minutes for fresh political commentary, written and taped the night before its broadcast.

The Spitting Image parodies reached a status not unlike that of Mad magazine in the early 1960s, as many of those whom the show caricatured took their skewering as a sign that they had “made it.” While Thatcher has only commented, “I don’t ever watch that program,” members of the House of Commons had tapes of each show delivered to them the following Monday, and former Tory Defense Minister Michael Heseltine tried to purchase his puppet.

The commercial broadcaster Central Television gave Spitting Image few censorship problems. BBC radio, however, refused to play their first spin-off record, with a Prince Andrew imitator boasting, “I’m Just a Prince Who Can’t Say No.” “The Chicken Song,” however, a single that parodied the sing-along ditties that infest pub jukeboxes and vacation discotheques every summer, reached number one on the charts.

The influence of U.S. politics on the British scene was apparent in frequent lampoons of Ronald Reagan. American news outlets excerpted a video with Ron and Nancy as “Leaders of the Pack,” singing “Do Do Ron Ron.” The befuddled Reagan also appeared in a serial thriller, “The President’s Brain Is Missing,” and was featured prominently in the Spitting Image–produced video for Genesis’s song “Land of Confusion.” In September 1986, the National Broadcasting Company (NBC) aired a two-part original Spitting Image special in which the secret arbiters of fame, including Bill Cosby and Ed McMahon, hatch a clandestine plot to have an overmuscled Sylvester Stallone elected president.

Spitting Image projects continued to appear on both sides of the Atlantic throughout the 1990s, and in 2000 many puppets from the program were auctioned off for charity. Numerous videos and musical recordings are available in Britain, where repeats of the program are shown on cable. American VCRs can play a compilation of Spitting Image music videos, a puppet production of “Peter and the Wolf,” and a mock documentary, “Bumbledown: The Life and Times of Ronald Reagang” (a double feature with the musical, “The Sound of Maggie!”). The group also collaborated with U.S. cable channel Comedy Central to illustrate a book by Glenn Eichler, Bill and Hillary’s 12-Step Recovery Guide. The book was promoted through a series of commercial cutaways on the cable channel, featuring the puppet Clinton family.

Sponsor

Television in the United States is a profit-maximizing set of entities, an industry whose success is measured largely by its ability to deliver viewers to advertisers. The lure of television is its programs; commercial broadcasters seek shows of optimal value (be it in terms of ratings generated or demographics attracted) in order to maximize advertising revenue. The sponsor—the organization, corporation, institution, or other entity willing to pay the broadcaster revenue in exchange for the opportunity to advertise on television—stands at the center of program strategies. This situation requires recognition of the complex interrelationship between television networks and advertisers, two industries whose differing responsibilities and sometimes conflicting needs produce the programming that draws the audience to the advertisement. In U.S. television, the economic and industrial systems supporting these arrangements have their beginnings in radio broadcasting.

The emergence of radio in the early 1930s as an astonishingly effective means of delivering consumers to producers attracted an array of enthusiastic advertisers, and soon the radio schedule was dominated by shows named for their sponsors—the Chase and Sanborn Hour, the Cliquot Club Eskimos, and the Maxwell House Concert, for example. Produced for their clients by such advertising agencies as J. Walter Thompson and Young and Rubicam, the single-sponsored program was a staple of commercial broadcasting; it was an article of faith that if a listener identified a show with its sponsor, he or she was more likely to purchase the advertised product.

Although agency involvement in television was little more than tentative prior to 1948, advertisers soon embraced the new medium with great fervor; Pabst Blue Ribbon Bouts, Camel Newsreel, and the Chesterfield Supper Club were testimony to the steadfast belief in sponsor identification. However, as program costs soared in the early 1950s, it became increasingly difficult for agencies to assume the financial burdens of production, and even the concept of single sponsorship was subject to economic pressure.

By the 1952-53 season, television’s spiraling costs (an average 500 percent rise in live-programming budgets from 1949 to 1952) threatened to drive many advertisers completely out of the market. Many sponsors turned to a nonnetwork syndication strategy, cobbling together enough local station buys across the country to approximate the kind of national coverage a network usually provided. Television executives—most notably Sylvester L. “Pat” Weaver at the National Broadcasting Company (NBC)—countered sponsor complaints by championing the idea of participation advertising, or the “magazine concept.” Here, advertisers purchased discrete segments of shows (typically one- or two-minute blocks) rather than entire programs. Like magazines, which featured advertisements for a variety of products, the participation show might, depending on its length, carry commercials from up to four different sponsors. Similarly, just as a magazine’s editorial practice was presumably divorced from its advertising content, the presence of multiple sponsors meant that no one advertiser could control the program.

Even as agencies relinquished responsibility for production, they still maintained some semblance of control over the content of the programs in which their clients advertised, a censorship role euphemistically referred to as “constructive influence.” As one advertising executive noted, “If my client sells peanut butter and the script calls for a guy to be poisoned eating a peanut butter sandwich, you can bet we’re going to switch that poison to a martini.” Still, this type of input was mild compared to the actual melding of commer-
cial and editorial content, a practice all but abandoned by the vast majority of agencies by 1953.

Despite Madison Avenue's initially hostile reaction, participation advertising ultimately became television's dominant paradigm for two reasons. One was purely cost; purchasing 30- to 60-minute blocks of prime time was prohibitively expensive to all but a few advertisers. More important, participation ads were the ideal promotional vehicle for packaged-goods companies manufacturing a cornucopia of brand names. While it is true that the magazine concept opened up television to an array of low-budget advertisers and thus expanded the medium's revenue base, it was companies such as Procter and Gamble that catalyzed the trend (ironically, given that Procter and Gamble today has operational control over two soap operas, The Guiding Light and As the World Turns, the last vestiges of single-sponsored shows on television). Further, back-to-back recessions in the mid-1950s provided an impetus for the producers of recession-proof goods to scatter their spots throughout the schedule; their subsequent sales success solidified the advent of participation on the schedule. Without the economic rationale of single sponsorship, most advertisers chose to circulate their commercials through many different shows rather than rely on identification with a single program.

By 1960, sponsorship was no longer synonymous with control—it now merely meant the purchase of advertising time on somebody else's program. While sponsor identification remained important to such advertisers as Kraft and Revlon, most sponsors prized circulation over prestige; as a result, fewer agencies offered advertiser-licensed shows to the networks. The quiz scandals of 1958-59, often identified as the causative factor in network control of program procurement, were in actuality only a coda.

Ironically, it was the networks' assumption of programming control that resulted in a narrower and more
conservative conception of program content, with a greater reliance on established genres and avoidance of technical or narrative experimentation. In an effort to provide shows that would offend no sponsor, network television's attempts to be all things to all advertisers drained the medium of its youthful vigor, plunging it into a premature middle age. By appealing to target audiences—at least in the early 1950s—advertisers were in many ways more responsive and innovative than the networks.

While the vestiges of single sponsorship remain in, of all places, public television—ExxonMobil Masterpiece Theater, for example—advertisers still wield enormous, if indirect, influence on program content. For example, in 1995 Procter and Gamble, the largest television advertiser in the United States, announced that it would no longer sponsor daytime talk shows whose content the company considered too salacious. Today's marketers believe that they can influence programs through selective breeding, bankrolling the content they support and pulling dollars from topics they do not.

Sports and Television

The relationship between sports and television is now so firmly established that it is difficult to imagine their intersecting histories as anything other than a steady, synergistic march. While the sports–television nexus has developed substantially since the middle of the 20th century, this has been less a story of simple, linear progress than of difficult mutual accommodation and palpable tension. The widespread concern that television has taken over sports has, for the past two decades, been challenged by the proposition that it has become hostage to it. Closer integration of sports and television has been accompanied by wide swings in the degree of power held by each party. In the early 21st century, the pendulum seems to have swung back in favor of television, with the cost of sports broadcast rights falling in response to often disappointing commercial returns from their purchase. The end of the long economic boom in television sports, even if it is only a pause, provides an excellent opportunity to review the sports–television nexus over the past seven decades.

Sports are important to the development of television on many grounds. They have encouraged consumers to buy television sets and services in the first place; supply network, independent, satellite, and cable TV companies with vast quantities of content and loyal, sometimes spectacularly large audiences; and have helped place television at the center of contemporary society and culture. Correspondingly, television has been instrumental in the ascendancy of sports to its current position as one of the prime forms of popular culture, providing it with enormous audience outreach well beyond the field of play and vast injections of capital. Like many new technologies, television

Courtesy of ESPN
emerged first as a capability without a clear sense of purpose, and sports have helped provide television with a powerful justification for its existence.

The history of television sport is also characterized by competing ways of representing it. The two most influential of these can be described as the British and American modes of sports television that emerged within different national cultures and broadcast systems and as a result have provided contending reference points for debates about how sports are and should be displayed on television. Crudely, it might be argued that British sports television, through the publicly owned British Broadcasting Corporation (BBC), pioneered the sober representation of nation in and through sport, while in the United States, the first advances toward a commercial television sports market were made. These represent the anchor points for continuing debates about the quality of televised sporting events.

The Early Days of Sports on Television

When BBC Television was formed in 1936, sports was quickly placed on the program schedule. After successfully broadcasting radio sports in the 1920s, the BBC saw in great national sports events such as Wimbledon (tennis), the Derby (horseracing), and the FA Cup Final (soccer) ideal opportunities to meet its charter obligation of promoting national culture through “public service broadcasting.” When the BBC lost its television monopoly in the United Kingdom in 1955 with the introduction of the commercial ITV service, it was reluctantly forced to compete for sports broadcasts and against ITV’s livelier, more market-oriented, American-influenced way of representing sports. In this period, broadcast sports (along with great occasions of state, such as the 1953 coronation of Queen Elizabeth II) were an important factor in consumer decisions to purchase television sets (and to pay the compulsory TV license fee to support the BBC that exists to this day), with annual new TV set ownership increasing tenfold between 1946 and 1959.

In the United States, sports television commenced in 1939 with the broadcast of a baseball game between Columbia and Princeton universities, while in 1944 network sports broadcasting was inaugurated by the National Broadcasting Company’s (NBC’s) Gillette Cavalcade of Sports through its coverage of a boxing match. In the immediate post–World War II period, NBC offered sports fans the opportunity to watch, for the first time, broadcasts of baseball, football, and boxing in the comfort of their own homes. Just as subscription television in the late 20th century saw premium sports as a major “driver” for the take-up of cable and satellite services, television networks in the middle of that century saw sports as a major lure to purchase televisual technology. Sports, along with quiz shows and soap operas, played a major role in inducing the spectacular increase of over 700 percent in U.S. television ownership in the period 1948–50.

The Development of Sports

Sports, in the contemporary language of information technology, have emerged as a “killer application” for television. They have capitalized on the industrial development of sports whereby intermittent, chaotic game contests became organized into regular, rule-bound competitions in specialist venues with restricted access funded by paying customers. Sports can effortlessly discharge both news and entertainment functions. Their “nowness,” and the physical presence of often scores of thousands of passionate citizens, means that they are newsworthy, while their vivid spectacle and unfolding drama make for enjoyable, even compelling viewing, especially for men (and increasingly for women). The rudimentary camera technology of the early phase of sports television was simply required to capture the event, programming that was much cheaper (though much less easily controlled) than studio-based genres. Roone Arledge, the producer of American Broadcasting Company (ABC) programs such as Wide World of Sports and Monday Night Football, is credited both with many technical innovations, such as replays and slow motion, and with openly treating sports as a form of show business. As long as sports organizations could be persuaded that television was generating interest in sports rather than siphoning potential consumers from the stadium to the home, television received from sports inexpensive, sponsored popular programming. Sports, though, came to realize their competitive economic value and began to play television corporations against one another in the quest to expand broadcast rights revenue in return for “rediffusion.”

The position of sports in television schedules has varied considerably, sometimes heavily entrenched in prime time and at others confined mainly to less pivotal time slots. The amount of coverage of sports on television continued to expand into the late 1970s, its appeal to sponsors and advertisers undiminished. However, the cheapness of sports programming was eroded not so much by the rising cost of production (although multiple cameras and more sophisticated direction and commentary did increase broadcast budgets) as by the inflation of sports broadcast rights.
Both parties appreciated the elevated symbolic status of TV networks acquiring the rights to high-profile sports that, in turn, became even more conspicuous as a result of enhanced television coverage. Publicly funded broadcasters such as the BBC (which had first broadcast major sports events and sports magazine shows such as the long-running Grandstand) found themselves increasingly unable to compete with capital-rich commercial networks for sports broadcast rights, while, in the United States the coming of cable and, especially, dedicated sports channels such as the Entertainment and Sports Programming Network (ESPN) meant that sports television evolved into a seller's market in the 1970s and 1980s. For example, the ABC network paid U.S.$4.5 million to broadcast the 1968 Mexico City Olympics, while NBC paid U.S.$420 million for the 1992 Barcelona games. Such arrangements might have been sustainable as long as audience ratings and advertising revenues remained strong, but in the early 1980s audiences drifted away somewhat from sports television in response to greater provision of nonsports TV programming and of other, nonbroadcast leisure opportunities (ranging from videocassette recorders to video games).

The simultaneous erosion of the core sports TV audience (men ages 18–34) and of its appeal to advertisers (the “discovery” of female purchasing power) meant that advertisers were reluctant to pay television networks more money for smaller audiences to cover the cost of inflated broadcast rights. In the United States, the sports television market was artificially boosted in the 1990s by the inflationary tactics of the new FOX network, which outbid rival broadcasters of premium sports by a considerable measure in order to signal its arrival. For example, in 1994, its successful U.S.$350 million bid for the rights to football was three times that of the previous rights holder, the Columbia Broadcasting System (CBS).

Sports on television have developed a complex structural mix of public and commercial, free-to-air and pay broadcasting, and network and independent arrangements in regional, national, and global markets. In countries where national public broadcasters pioneered and dominated television, free-to-air commercial broadcasters such as ITV in the United Kingdom and Channel 9 in Australia have been successful in gaining much premium sports TV programming by exercising their economic power, only for both public and commercial free-to-air television to be challenged by “cashed-up” pay television operators. The most famous example of this development was the 1992 capture of the rights to English Premier League soccer by the Murdoch-led satellite broadcaster British Sky Broadcasting (BSkyB), a move that turned a loss-making company into a highly profitable one. This migration of sports to restricted, pay platforms has led to considerable dispute and, in many countries (including Australia and all the nations comprising the European Union), to the enactment of “antisiphoning” legislation to prevent the exclusive capture of major sports by pay television on the grounds that access to free-to-air broadcasts of sports events of major national significance is a right of “cultural citizenship.”

Megamedia sports events, such as the Olympic Games and soccer’s World Cup, have thus far resisted the temptation to award exclusivity to pay TV in return for vastly increased broadcast rights revenue on the grounds that such a move would restrict audience reach and the claims of such events to be global spectacles. Nonetheless, the 2002 KirchMedia debacle revealed that attempts by peak sports organizations to extract maximum revenues from free-to-air television can jeopardize even the greatest of media sports spectacles. In this case, the Fédération Internationale de Football Association (FIFA), soccer’s governing body, sold its broadcast rights to a consortium made up of the Swiss sports marketing group ISL and the German KirchMedia for an unprecedented 2.3 billion euros. The consortium sought to on-sell those rights at greatly increased prices in order to recoup its investment. When the buyers resisted, ISL folded, and KirchMedia purchased the worldwide rights in full. Faced with opposition from sports television–buying consortia such as the European Broadcasting Union (the previous rights holder), KirchMedia was forced to accept lower-than-anticipated broadcast rights fees and went into receivership, with some states (such as Germany, the host nation of the 2006 World Cup) required to underwrite televised coverage of the world’s largest single sports event and most popular sport.

In the early 21st century, sports on television have inherited the problem of inflated broadcast rights and the dependency of sports on those rights. In 2002, for example, the United Kingdom’s ITV Digital went into administration with debts of £178 million, leaving several soccer clubs without crucial, promised funds. ITV also paid an excessive amount (£183 million) for three-year, free-to-air Premier League soccer highlights, while in Italy the two foreign-owned pay-TV companies carrying premium soccer games, the French Telepiu and News Corporation’s Stream, merged after both lost vast sums when competing against each other. In Australia, C7, the pay-TV sport channel specializing in Australian football coverage, also passed into history when its lost the football rights
to a consortium led by Rupert Murdoch and Kerry Packer, thereby causing hardship for many clubs.

In 2002, annual reports, the value of American sports rights was written down by U.S.$3 billion, with the company most responsible for their inflation and for a third of the total write-down—Rupert Murdoch’s News Corporation—admitting that it had overbid for them. It has been predicted that total 2002–06 major U.S. TV network losses on sports will be U.S.$1.3 billion. One way of overcoming the problem of recession in the broadcast sports industry is to be on both sides of the negotiating table—that is, to be simultaneously a buyer and a seller by having common ownership of TV companies and sports teams. For example, Disney owns the ABC network, most of ESPN, and the Mighty Ducks of Anaheim hockey team; News Corporation owns the Los Angeles Dodgers and has stakes in the Leeds United, Manchester City, and Sunderland soccer clubs; Granada TV has stakes in the Liverpool and Arsenal soccer clubs; and Silvio Berlusconi (the Italian prime minister) owns several television stations and leading Italian soccer club AC Milan. However, sports clubs can be a major drain on profits, and many of these holdings are currently on the market.

There is also some official resistance to such cozy arrangements, with the British government in 1998 blocking the £623 million takeover bid by BSkyB for Manchester United, one of the world’s richest sport clubs, on the grounds that it was anticompetitive and against the public interest. Another coping strategy is the formation of new competitions, such as XFL, the disastrous 2001 American football tournament created by the World Wrestling Federation (WWF) and NBC that lost U.S.$70 million. In 2003, NBC, which had opted not to bid for the rights to the major sports leagues, adopted a more low-key strategy by televising, with modest success, the Arena Football League, a hybrid sport that provides a speedier television spectacle than that offered by the National Football League (NFL).

These problems and adjustments, however, do not prevent sports from continuing to be a key aspect of television programming. Sports can still be a highly marketable commodity and a compelling visual text. A 30-second advertisement during the Super Bowl broadcast currently costs U.S.$2.1 million, the cumulative audience of the 2002 Korea–Japan soccer World Cup was estimated to be 28.8 billion, and the International Olympic Committee (IOC) estimated that nine out of ten of people in the world with access to television watched at least some of the 2000 Sydney Olympic Games.

**The Audience and Industry Attraction of Television Sports**

Sports still retain considerable appeal for television companies and audiences alike. For television, sports consistently deliver large, loyal viewerships that are attractive to advertisers. While, as noted previously, there is a traditional bias toward young and middle-age men, sports has successfully sought female viewers (sometimes using the tactic of sexual objectification more frequently associated with the “male gaze” directed at females). Audiences for regular-season games (as opposed to playoff or championship matches) may be smaller than for many prime-time shows, but in production terms they are much cheaper to broadcast. Sports are especially good at filling the spaces in TV schedules. The live sports event is only one component of sports programming, with previews, postmatch appraisals, documentaries, retrospectives, quiz shows, replays, highlights, magazine programs, updates, and sports news reporting constituting a vast and flexible archive of sports content that is especially appealing to multichannel pay-television providers with extensive televsual space to fill. Pay-per-view sporting events, such as boxing matches, also represent one of few TV genres where customers are willing to pay for content on a one-off basis. Major sports television also has a highly valuable “spillover effect” whereby viewers are exposed to promotions for other shows in the hope that they will get into the habit of watching certain networks and channels. For “horizontally integrated” media and entertainment corporations with many different media functions, sports and sports merchandise can be easily cross-promoted across television channels, newspapers, magazines, radio, film, and the Internet. In countries such as Australia that impose regulatory quotas on local content and restrictions on material produced overseas, sports are also a readily available source of “indigenous” material.

The professional, industrial structure of sports is founded on the willingness of spectators to pay to watch, collectively, expert sportsmen and sportswomen in action. Television severs the physical, communal presence from spectatorship. In its live form, TV enables distant, dispersed, and domestic viewers to watch sports action in real time. At first, as noted previously, the technology was limited, with single, static black-and-white cameras offering a pleasing but much diminished version of the physical, in-stadium experience. However, the development of the technology and technique of sports television enhanced the viewing experience to such a degree that watching from home now rivals the pleasures of actually being at the site of the
Sports and Television

game. With the development of color television, multiple cameras inside and outside the stadium, close-ups, replays, slow motion, expert description and commentary, immediate postgame athlete interviews, and, by the end of the 20th century, interactive information services and even personalized program direction, televised sports have fashioned themselves into a strong sensory spectacle. So substantial have these developments in TV been that sports stadiums have been required to install large screens and to enable amplified athlete interviews in order to match elements of the home television viewing experience.

Spectators are drawn to sports by the aesthetic pleasure of gazing on athletic excellence, but most are also passionate supporters, identifying with athletes and teams on the basis of locality and nationality. Sports fans project onto athletes favorable and unfavorable qualities that, to a substantial degree, resemble the characterization of popular melodrama. Furthermore, sports contests (following Arledge) are fashioned by television into narratives, their "plots" unfolding under the gaze of commentators and viewers who interpret their significance through judgmental frameworks of virtue and dishonor. However, the sports script is never legally written in advance. The formal uncertainty of live sports contests (despite their frequently predictable outcomes) can create a strong sense that history is being made on screen. In the 2003 Rugby World Cup Final between England and Australia, for example, the final result was settled only by an England score 16 seconds from the end of a period of extra time before an estimated worldwide television audience of 300 million.

Just as modernity has produced societies that are increasingly fragmented and alienated, television both symbolically unites and splinters its audience by representing sports. In the early modern period of lesser social and spatial mobility, professional sportspeople tended to be embedded in the local communities in which they originated. Television then provided the capital to create a lucrative sports market that enabled elite sportspeople to travel far from home and so to become far more affluent than most of their fans. Paradoxically, therefore, at key sporting televisial moments, elite athletes are symbolically reintegrated into the communities that sports enabled them to leave behind. Modernity also heralded the rise of the dispersed, abstract entity of the nation-state, and there are few greater opportunities for a nation to feel unified than during major sports contests.

If sports television can be described as a genre, it has many variants arising from the different characteristics of specific sports in terms of their rhythms, tempos, rules, and spatial contexts. Individual contact sports, for example, have a gladiatorial quality. Boxing has long been a key form of televised sports. The small, square ring is easy to capture on the small screen, with two men (and now some women) "slugging it out" in near proximity to a noisy crowd. The rounds in boxing are of a fixed duration, easily enabling the insertion of advertisements between rounds. A boxing match may last no more than a few seconds or minutes (requiring a good deal of spontaneous expert discussion), but the prescribed number of rounds ensures that a bout cannot overflow the program schedule. The televised buildup to the fight itself can engender considerable anticipation for casual viewers and boxing fans alike. Indeed, in the case of the "pseudosport" of wrestling as presented by WWF, the contest itself is a relatively small aspect of the total broadcast.

Indoor individual and team sports, including basketball, netball, ice hockey, and indoor tennis, have the advantage of a controlled environment akin to that of the television studio but at the cost of the visual richness of the outdoor broadcast. Sports such as football (both the American and the Australian versions), soccer, rugby, field hockey, tennis, baseball, and cricket generally take place on large, open, rectangular or oval fields. The pace of different sports range from the frenetic to the stately, thereby delivering highly variable viewing experiences. In the case of nonstadium sports, such as golf and marathon running, the landscape of rural and urban courses provides television sports with an almost tourist-like quality.

Television does more than merely represent sports. Its cultural and economic power is such that it has shaped many sports contests. Some sports may be deemed more telegenic than others and so prosper on television in a manner that is self-reproducing. It is mainly because of television that the five-day game of international cricket, with its capacity to end in a draw, spawned also a one-day game with a virtually guaranteed victor and loser. The rhythm of sports contests is dictated to varying degrees by "time-outs" for commercial breaks, penalty shoot-outs in soccer, and tie breakers in tennis in the interests of advertisements and program schedules. The time-zone convenience demands of major TV markets can result in boxing matches at midnight, Olympic marathons in the heat of the day, and baseball games played on early winter nights. Women's sports such as tennis, golf, netball, basketball, hockey, and soccer, furthermore, have all come under pressure to improve their televisual "salability" through more overt modes of sexual address.

Nonetheless, television alone cannot guarantee the success of sports. As noted previously, made-for
television contests using all the advantages of the medium but unsupported by a substantial fan base are rarely more than temporarily diverting novelties. Indeed, one of the characteristics of sports television is that it requires in-stadium spectators to perform for the cameras and microphones in order to supply the necessary atmosphere to turn the broadcast into a compelling spectacle. Without the atmospherics of large crowds on-screen, sports can appear unengaging, trivial, or absurd. For this reason, sparse crowds are hidden by tighter camera shots, and boom microphones are turned up to maximum volume. Sometimes—as in the case of a soccer match at Arsenal’s Highbury stadium while under renovation—crowds have even been digitally faked for television.

Initially, it was believed that admitting television cameras into sporting events would lead to a reduced number of paying customers in the stadium. But television also made sports available to vastly greater numbers of viewers who could be “sold” to sponsors and advertisers than could possibly attend games, resulting not only in the astonishingly efficient promotion of sports but also in previously unimagined broadcast rights revenue. The cost to sports, of course, was a loss of autonomy. To return to the 2003 Rugby Union World Cup Final, the requirement of extra time disrupted the television schedule, resulting in medal presenters being instructed by television directors to speed things up. A dignified, symbolic moment of triumph thereby became an embarrassing, fast-forwarded farce. At such unfortunate moments, viewers can simultaneously apprehend both the pleasure and the pain of the submission of sports to the embrace of television.

**Sportscasters**

The history of sportscasting, like almost everything else on television, had its roots in radio. Radio’s first generation of great sportscasters—Graham McNamee, Ted Husing, and Grantland Rice, among others—transformed the airwaves into a “theater of the mind” in which hyperbole would become honored as an art. McNamee, a meat salesman before moving into sportscasting, is regarded as the first well-known play-by-play announcer, unapologetic about sacrificing accuracy for excitement. Perhaps unknowingly, McNamee was laying a foundation for the idea that the sportscaster could be a personality, someone recognized not only for professional abilities but also for the knack of keeping an audience entertained. His emphasis on enthusiasm lives on today in the performances of men such as Dick Vitale and John Madden; their excitement for their favorite sport appears to be both genuine and the most important factor in identifying their popularity.

It would be incorrect to suggest that every sportscaster who followed McNamee adopted his strategy. It is important to note that some sportscasters frowned on the notion of becoming too dramatic or
making themselves a part of the event they covered. They sought instead to "play it straight," to be less a fan and more a journalist. In doing so, they did not lose the respect of their peers or the public.

Unlike today, many of the early sportscasters regularly called the games not from the stadium but from a studio many miles away, where they read and "performed" details of the game as reported on a telegraph wire ticker. The announcers used sound effects and creative language to enhance the sense that they were present at the game. The system worked, provided that the ticker also worked. Perhaps the most notable "recreationist" landed his first job in the entertainment industry as a football announcer at an Iowa radio station. The year was 1932, and Ronald "Dutch" Reagan was paid $5 a game. Later, he would deliver similar recreated broadcasts of Chicago Cubs' games for another Iowa radio station (and much later, the so-called Great Communicator would be elected president of the United States).

Many of the next generation of distinguished radio sportscasters, such as Mel Allen, Red Barber, Lindsey Nelson, and Bill Stern, would later become prominent voices in television's first decades as a mass medium. Allen and Barber, famous for their play-by-play reporting for the Yankees and Dodgers, respectively, were the first broadcasters enshrined into the Baseball Hall of Fame. Barber eschewed the notion that a sportscaster should "root, root, root for the home team." Instead, he adopted an approach that might be called "objective" and let the action take center stage. Stern saw it differently. His fame developed partially from hosting a radio program filled with fictional stories about real athletes and people. Stern acknowledged that he developed a following because of these harmless diversions (as he called them). Indeed, he did. He was voted the nation's most popular sportscaster 13 times.

In the years immediately following World War II, television and sports used each other to expand their popularity with, and their ability to reach, a larger audience. Some scholars have suggested that during this period, sports teams and leagues had the advantage in the relationship because television networks desperately needed sports programming to fill the schedule. It was not uncommon for the networks to devote upward of 40 percent of their weeknight schedule to sports. Although roller derby and bowling played well on the small screen, boxing and professional wrestling were the sports best suited to the limitations of the first generation of television sets. Dennis James became the prototypical wrestling announcer. "I used to do whole wrestling matches in spontaneous poetry," he once said. His style showed that describing action in the ring with eloquent elocution was entirely appropriate, even for a sport in which the stars often appeared to be more like actors than athletes. The prominent role that advertisers would play in the presentation of sports also developed in this period. For example, the Gillette company sponsored Cavalcade of Sports, which heavily promoted boxing and stayed on the air for 14 years.

Sportscasting in the 1950s followed the radio pattern of announcer enthusiasm. Many sportscasters and their employers conceived of their role as something akin to being ambassadors and fans of the game. This style was perhaps perfected in the Midwest, where baseball announcers became synonymous with the teams they covered on a daily basis. Harry Caray was the voice of the St. Louis Cardinals for 16 years before he was replaced by Jack Buck, a member of the baseball, football, and radio halls of fame. Buck remained with the team until his death in 2002. Caray eventually landed with the Chicago Cubs, for whom he worked from 1981 through 1998. He was appreciated far more for his passion for baseball and the Cubs than he was for his ability to broadcast a game. In short, he was a personality.

During the 1960s—the decade of the marriage of television and football—one of the more important revolutions in television sports was introduced, specifically on December 31, 1963, during an Army–Navy football game. Instant replay would figure prominently in the phenomenal rise in popularity of televised football during the 1960s and beyond. Moreover, Pete Rozelle, the commissioner of the National Football League (NFL), envisioned how his sport could play well on television, that it could mean more than simply seeing the two teams play. The television networks agreed, and in 1964, the Columbia Broadcasting System (CBS) paid an unprecedented $28 million dollars for television rights for NFL games and instantly recouped its investment with two $14 million sponsorship contracts, with Ford Motor Company and Philip Morris.

Soon networks were competing for the same fans in what was supposedly the most important football game of the season. The Super Bowl debuted in January 1967, and Rozelle allowed both CBS and the National Broadcasting Company (NBC) to televise it. A Time magazine report suggested the dual network idea was deliberate, as it forced both networks to promote the game and entice viewers to watch. The game itself did not attract a large in-person audience, but both networks brought out their primary football announcing teams. In pregame promotions, both emphasized the excellence of their sportscasters. CBS offered Ray Scott, Jack Whitaker, Frank Gifford, and Pat Summerall, while NBC featured Curt Gowdy and Paul Christman.
The American Broadcasting Company (ABC) remained in the shadows of CBS and NBC throughout the 1950s. Roone Arledge, a producer (and eventual president) at ABC, however, viewed spectator sports as involving more than a passive audience and brought ABC into a new light. He created what was destined to become the longest-running sports program in television, *Wide World of Sports*, and hired a young Baltimore announcer named James K. McManus to host the new show. McManus soon changed his name to Jim McKay and would go down in broadcast history as the man who first informed the world about the tragic terrorist attack that took the lives of 11 Israeli athletes at the 1972 Olympics in Munich, West Germany.

Arledge believed that a television network was not doing its job if it merely brought the game to the fans. Instead, he wanted to bring the fans to the game. He challenged his ABC crews to use all available production techniques to heighten the experience of the game. He wanted both men and women to feel like they were part of the in-stadium audience, even though they were sitting in their living rooms, at a bar, or some other location. In short, he wanted show business and sports to be linked.

Soon after he was named president of the network’s sports division, Arledge brought professional football to ABC. *Monday Night Football* began in 1970. The three-man announcing team included Keith Jackson, Don Meredith, and Howard Cosell. Jackson lasted only one season and was replaced by Frank Gifford. The recipe for success had been created: the sexy Gifford, the easygoing Meredith, and the controversial Cosell remained together through 1973, when Meredith left. He returned in 1977, and the group (with Fran Tarkenton and O.J. Simpson intermittently joining the team) remained together through 1983.

Arledge was also guided by the notion that announcer-approval clauses, in which teams approved or disapproved announcers, were inappropriate. This policy made ABC the first network to allow—in fact, to welcome—critical commentary to accompany the play-by-play.

Cosell proved to be the beneficiary. He was not afraid to tackle issues he believed needed comment, and he developed a love-hate relationship with the audience. Cosell joined the elite ranks of Curt Gowdy, Chris Schenkel, McKay, Nelson, and Summerall when the National Academy of Television Arts and Sciences recognized his accomplishments with a Lifetime Achievement Award. He passed away one year later.

Cosell’s star was shining brightest at a time when ABC’s next superstar was beginning to make his mark. In 1980, Al Michaels was given what at the time seemed to be a rather mundane assignment: play-by-play announcer for the network’s hockey coverage during the Winter Olympics. But the stunning gold medal victory by the U.S. hockey team and Michaels’s cry of “Do you believe in miracles!” in the final seconds of the Americans’ victory over the Soviet Union remain unforgettable more than two decades later.

One area in which Arledge did not serve as a pioneer was in the introduction of women as sportscasters. Former Miss America Phyllis George is generally credited with breaking sportscasting’s gender barrier in 1975 when she joined *The NFL Today* on CBS, but at least one woman served as an analyst in the 1950s. Myrtle Power was signed by CBS after earning short-lived celebrity status as a baseball expert on the game show *The $64,000 Question*. While women have continued to make inroads into sportscasting (consider names such as Gayle Gardner and Lesley Visser), it has been a struggle. One of the lingering debates concerns whether female journalists should have access to male locker rooms. High-profile cases came to national prominence in the final decades of the 20th century. The most notable involved Lisa Olsen, a *Boston Herald* reporter who in 1990 accused several New England Patriot football players of exposing themselves and sexually harassing her while she interviewed other players.

The Entertainment and Sports Programming Network (ESPN) went on the air in 1979 and launched another new era of sportscasting. ESPN moved rapidly from covering quasi sports events such as tractor pulls to become a household phenomenon. It now reaches more than 80 million U.S. television households, making it the largest cable network. ESPN’s tremendous success allowed it to expand on cable (ESPN2, ESPN Classic, ESPN News), radio (ESPN Radio), and into print (*ESPN The Magazine*). Moreover, it provides substantial live coverage of all four major professional sports leagues in the United States. Although ESPN does not own broadcast rights to any of the “March Madness” games, the annual men’s college basketball tournament, it does have the analyst who perhaps can be called that sport’s greatest ambassador, Dick Vitale. The ever-present, ever-high-octane, ever-positive Vitale, the quintessential personality, attracts rowdy basketball fans wherever he goes.

Chris Berman has been with ESPN from its infancy and remains one of its most popular announcers. A six-time National Sportscaster of the Year honoree, Berman is best known for the nicknames he has given various athletes (e.g., Roberto “Remember the” Alomar). His style, which might be described as “hey, you need to listen to me,” not only fits well at ESPN but also is central in a period in which a sportscaster’s personality seems to be as important as the knowledge he or she brings to the event being covered.
ESPN also should be recognized for hiring the first African-American woman in sports television. Robin Roberts joined ESPN in 1990 and wore many hats for the network before being named in 2002 the morning news host on ABC's *Good Morning America*.

ABC's run of success with *Monday Night Football* began to wane after Cosell's departure. The program regularly earned ratings in the high teens and lower 20s during the Gifford, Meredith, and Cosell years, but since 1986 the show has continued to lose audience share. Moreover, this was a period in which there seemed to be an ever-revolving door in the broadcast booth. Following the 2001 season, in which the average rating was 11.5 (the lowest ever), ABC announced it had hired John Madden, the most popular football analyst of this generation, at a reported $5 million per year. This was not the first time Madden's popularity was rewarded. In 1993, after FOX outbid CBS for the rights to broadcast National Football Conference (NFC) games, Madden negotiated a contract with Rupert Murdoch that earned him a reported $30 million over four years. With that deal, Madden became the highest-paid sportscaster of all time.

Madden says his "passion for the game" is what makes him tick. Perhaps surprisingly, his hiring did not generate immediate returns: ABC's ratings were no better in 2002 than in the previous year but were showing an increase in 2003.

**Spriggs, Elizabeth (1929– )**

British Actor

Elizabeth Spriggs is among Britain's most established and well-loved character actors. An associate artiste with the Royal Shakespeare Company, her illustrious work in the theater has run parallel with her lengthy and successful career in television. Work in the two media converged with her characterization of Sonia in Wesker's *Love Letters on Blue Paper*, a role she originally created for television and then transferred to the stage, winning her the West End Managers Award for 1978.

Her versatility is revealed by both her skill at adapting her style for television, resisting the tendency of many actors with a theatrical background to "play to the gallery," and her work in a diverse set of television genres. Listed among her credits are the particularly noteworthy roles of the long-suffering and self-sacrificing wife and mother, Connie Fox, in the drama series *Fox*; Harvey Moon's no-nonsense and strong-willed mother in the situation comedy series *Shine on Harvey Moon*; the God-fearing gossip, May, in the critically acclaimed and highly popular drama *Oranges Are Not the Only Fruit*; and the wayward and wonderfully funny nurse, Sairey Gamp, in the much-praised British Broadcasting Corporation (BBC) adaptation of *Martin Chuzzlewit*.

While to a great extent subject to the standard typecasting of older actresses, Spriggs takes the crones, gossips, and suffering matriarchs and transforms them with her engagingly strong and rooted presence. In doing so, she imbues the usual fare with additional weight and dimension.

Although there has been interest, particularly within feminist television criticism, in analyzing the representations of older female characters and the contributions of actresses to these characterizations, most of the attention has been paid to the soap opera genre. The wider terrain remains largely unexplored and unvaluated within television studies.

### Stage (selection)

Although individual series have enjoyed enormous popularity and cult followings, the spy genre overall has never been as successful or as ubiquitous in American television as westerns, medical dramas, and detective programs. Nevertheless, espionage-themed programs can boast a number of firsts, most notably the first African-American lead character in a regular dramatic series (*I Spy*), the first female action lead character in an hour-long American dramatic series (*The Girl from U.N.C.L.E.*), and the first Russian lead character in an American dramatic series (*The Man from U.N.C.L.E.*), the latter appearing less than three years after the Cuban missile crisis.

Except during the so-called spy-craze period of the mid-1960s, when it seemed that every action/adventure show borrowed elements from James Bond, spies as television action heroes have been far outnumbered by the more traditional figures of policemen and private investigators. Even when they do appear, television spies (or “secret agents”) are often presented as international crime fighters rather than as true undercover operators, with the emphasis on justice and law enforcement rather than on clandestine activities. As a result, there are few “pure” spy programs and most of the long-running ones can be classed in other genre categories, including westerns (*The Wild, Wild West*),
situation comedy (*Get Smart*), and science fiction (*The Avengers* and *The Prisoner*).

The boundaries between the spy and other television genres is extremely fluid, and the elements of the typical spy program are variable and not easily defined. On television, spies and detectives have a great deal in common. Both are tough, sometimes world-weary individuals who live and work on the edges of normal society. Their antagonists are rich, powerful, clever, and often apparently "respectable." In both genres, because of the wealth and resources of the villain, the heroes must use extralegal means in order to triumph. Before they do, they must progress through various narrative situations, including the assignment of the case/mis-

ion; investigation of the crime; abduction by the villain; interrogation and/or torture; at least one long, complicated chase; and a final shoot-out or brawl.

The average secret agent tends to be more cerebral and sophisticated than the average detective and, if not wealthy himself, at least comfortable with the trappings of wealth. Money is not an important incentive, however. The secret agent’s motives are personal and philosophical, a dedication to certain moral or political ideals, or simply a taste for the game of espionage it-
series about a female detective similar to the later *Remington Steele*. Yet critics have always categorized it as a spy program simply because of its stylistic trappings, most notably, Honey West’s pet ocelot and the one-piece black jumpsuit worn by the star, Anne Francis, so reminiscent of the wardrobe of *The Avengers*’ Emma Peel (Diana Rigg). On the other hand, series such as *Tightrope* and the later *Wiseguy*, both of which feature lead characters working undercover, are not considered spy programs because the international reach of the enemy crime syndicates is not emphasized and because the heroes appear and function as police officers.

The primary reason why spy shows are so few and far between on television is that the genre does not adapt well to the production and aesthetic needs of the medium. In their book *The Spy Story* (1987), John G. Cawelti and Bruce A. Rosenberg delineate two subcategories of spy fiction, both of which can be applied to spy stories on television.

The first, originating with James Buchan (*The Thirty-Nine Steps*) and other “clubmen” writers and reinvented by Ian Fleming, consists of colorful, imaginative adventures with roving, honorable heroes, dastardly villains, and exotic settings. By comparison, the second subcategory, identified with Eric Ambler, Graham Green, and more recently John Le Carré, contains tales of espionage more realistically presented. Concerned with corruption, betrayal, and conspiracy, these stories feature a grayer mood, more circumscribed settings, and ordinary protagonists who seem, at first glance, not much different than the people they oppose. The plotting is complicated and subtle, and the endings are often downbeat, leaving the agent sadly disillusioned or dead. The chief difference between the two subcategories is the moral base of the narrative. In the first group, good and evil is rendered in stark black and white. In the second, the morality is ambiguous.

As with their literary equivalents, television spy stories may be similarly divided into the romantic and the realistic, although, as one might expect, there is considerable overlap. Both types present problems in adapting to the television medium.

The romantic spy adventure, while meeting the aesthetic needs of the medium for simplicity in storytelling, escapist interest, and fast-paced excitement, requires foreign locations, numerous props, expensive wardrobes, and other production details that can severely strain a limited television budget. On the other hand, although the realistic espionage story is likely to be less expensive to produce, the difficult themes, depressive mood, and often unattractive characters do not lend themselves to the medium, particularly to the demands of a weekly network series.

As a result, to be produced for television, both types of spy stories must be “domesticated,” both literally and figuratively. For the romantic spy program, elements of the so-called Bond formula of “sex, snobbery, and sadism” must be toned down to small-screen standards. The intensity of torture sequences may be tempered by the use of outlandishly humorous devices and Perils of Pauline–style narrow escapes. Weapons may fire sleep-inducing darts (*The Man from U.N.C.L.E.*), or the hero may not carry a gun at all (as in the espionage series *MacGyver*).

Location shoots must also be kept to a minimum. Both *The Man from U.N.C.L.E.* and *The Girl from U.N.C.L.E.*, filmed on the MGM backlot, used an ingenious swish-pan technique to get from one location to another. *I Spy* traveled overseas but filmed a number of episodes in each country it visited. *The Prisoner* was shot at an actual resort village at the Hotel Portmeiron in North Wales.

*Adderly* was fortunate enough to find Canadian locations that could mimic the landscape of the Soviet Union and other European countries. More recently, series such as *The Scarecrow and Mrs. King* confine themselves to U.S. settings, saving stories set in foreign locales for season finales and sweeps weeks.

Several realistic, even dyspeptic, espionage series, such as *Danger Man, Callan, and Sandbaggers*, enjoyed healthy runs in the United Kingdom, but only one of these, *Danger Man*, ever crossed the Atlantic to be seen in the States. To make the plotlines and characters of realistic spy programs more appealing to American audiences, television producers have employed a number of different strategies. For example, *Danger Man* was retitled *Secret Agent*, and a snazzy Johnny Rivers song was added to the opening and closing credits. Both *I Led Three Lives* in the 1950s and *The Equalizer* in the 1980s exploited anxieties that were close to home for the audience, mining Red Scare paranoia in the case of the earlier show and fears of urban crime in the latter.

Another strategy used by creators of realistic spy programs is to make the central character morally certain. Although he was often surrounded by double-crossing colleagues and double agents in *Secret Agent*, John Drake’s (Patrick McGoohan’s) own loyalty was never in question. In *The Equalizer*, Edward Woodward, who earlier played a lonely, cold-blooded assassin in *Callan*, returned as Robert McCall, a retired CIA operative. McCall clearly had a past career similar to Callan’s but now deeply regretted it. To expiate his past sins, McCall became the self-styled Equalizer of the title, dedicating his life and skills to protecting the weak and innocent free of charge. McCall was also given a family—an estranged son, a dead wife, and a
Spy Programs

daughter whose existence he discovered during the run of the series.

Surrounding the usually isolated secret agent with family, colleagues, and friends is yet another television strategy for domesticating both strains of the genre. Humor and a fraternity-boy camaraderie between Kelly Robinson (Robert Culp) and Alexander Scott (Bill Cosby) leavened I Spy's sometimes bleak Cold War ideology, while the developing romance between the two lead characters (Bruce Boxleitner and Kate Jackson) kept interest high between chases in The Scarecrow and Mrs. King. In Under Cover, an intensely realistic series that featured plotlines drawn directly from recent world events, the husband and wife agents (Anthony John Denison and Linda Purl) were forced to juggle the dangerous demands of their profession with the everyday problems of home and family life. Finally, those spy stories that, for whatever reason, could not be domesticated, such as adaptations of best-selling spy thrillers, generally ended up on cable or the Public Broadcasting Service (PBS) or on network television as TV movies and miniseries.

The history of the spy on television reflects this continuing tension between the genre and the medium and between romantic and realistic tendencies. Whenever public interest in foreign affairs is on the rise, spy programs of both types proliferate, with fictional villains reflecting the country's current political enemies.

The first regular spy series appeared on U.S. television in the early 1950s. A handful, including an early series also called I Spy (hosted by Raymond Massey) and Behind Closed Doors (hosted by Bruce Gordon), were anthologies. Others, such as Biff Baker (Alan Hale, Jr.) and Hunter (the first of four series called Hunter, this one starring Barry Nelson), featured gentlemen amateurs caught up in foreign intrigue through chance or patriotism. The rest, which usually had the word “danger” in their titles (Doorway to Danger, Dangerous Assignment, and Passport to Danger), were undistinguished half-hour series about professional agents battling Communists. These series lasted, with only three exceptions, a year or less.

Those exceptions were I Led Three Lives, Foreign Intrigue, and Five Fingers. I Led Three Lives was an enormously popular hit series based on the real-life story of FBI undercover agent Herbert Philbrick who infiltrated the American Communist Party. A favorite of J. Edgar Hoover (who considered it a public service), the show reportedly was taken so seriously by some viewers that they wrote the producers to report suspected Communists in their neighborhood. Foreign Intrigue, a syndicated series, boasted colorful European locations but replaceable stars (five in four years played four various wire-service correspondents and a hotel owner) who stumble across international criminals. Only the last, Five Fingers, starring David Hedison as double agent Victor Sebastian, even hinted at the cool, hip style that was to be the hallmark of spy shows in the 1960s.

An interesting oddity during this period was an adaptation of Ian Fleming's Casino Royale for the anthology series Climax, in which the British James Bond is transformed into an American agent, “Jimmy” Bond (Barry Nelson), confronting a French Communist villain named Le Sheef (originally Le Chiffre). After a tense game of baccarat, Le Sheef (played by a sleepwalking Peter Lorre) captures Bond, confines him in a hotel bathtub, and rather bizarrely tortures him by twisting his bare toes with pliers.

There is no doubt that the mid-1960s was the high-water mark for the spy genre. Spies were everywhere—in books, on records, and on the big and little screens—and their images were emblazoned on countless mass-produced articles from toys to toiletries. Most were hour-long color shows that featured pairs or teams of professional agents of various races, genders, and cultural backgrounds. The pace was fast and the style cool, with lots of outrageous villains, sexual innuendo, technical gadgetry, and tongue-in-cheek humor. A third subcategory of the genre, the spy “spoof,” developed during this time (Get Smart, created by Mel Brooks and Buck Henry, is the quintessential example), but there was so much humor in the “serious” shows that it was often difficult to distinguish spoofs from the real thing.

By 1968, the high spirits had soured, and the spy craze came to a fitting end with the unsettlingly paranoiac series The Prisoner, created and produced by its star, ex–secret agent Patrick McGoohan. Still, many of the shows of this period, including The Man from U.N.C.L.E., The Avengers, I Spy, The Wild, Wild West, Mission: Impossible, and even The Prisoner, have enjoyed continued life in periodic film and television revivals and in cult fan followings throughout the world.

The decade of the 1970s saw a few sporadic attempts to breathe new life into a moribund genre. All the spy series introduced during this period featured gimmicky characters who worked for organizations identified by acronyms. Among the gimmicks were an agent with a photographic memory (The Delphi Bureau), agents fitted with electronic devices connected to a computer (Search), an agent accompanied by a giant assistant with a steel hand filled with gadgets (A Man Called Sloane), and a superhuman cyborg (The Six Million Dollar Man). With the exception of the last, which appealed primarily to children, all were quickly canceled.
The beginning of the next decade saw several "re-turn" movies of 1960s favorites such as Get Smart, The Wild, Wild West, and The Man from U.N.C.L.E. as well as quality television adaptations of John Le Carré's Tinker, Tailor, Soldier, Spy and Smiley's People by the British Broadcasting Corporation (BBC; shown on PBS in the United States). This eventually led to a minirevival in spy programs in the mid-1980s that included serious, gritty series such as The Equalizer and adaptations of best-selling spy novels, including Le Carre's A Perfect Spy, Len Deighton's Game Set Match, Ken Follett's Key to Rebecca, and Robert Ludlum's The Bourne Identity. As with Amos Burke in the 1960s, action series such as The A-Team began to boost their ratings by injecting espionage elements into their formulas.

However, unlike their predecessors of 20 years previous, the spies of the 1980s were less fantastic and more pragmatic, with believable technology and a postmodern sensibility. Even romantic adventure series such as Airwolf and Scarecrow and Mrs. King were given a realistic edge. Indeed, this trend toward intense realism reached its culmination in Under Cover, a series so realistic that it was canceled by a nervous American Broadcasting Company (ABC) after less than a month on the air. In January 1991, a two-part episode of Under Cover, in which Iraq planned to fire a virus-carrying missile at Israel, was pulled from the schedule when the war in Kuwait broke out.

For the 1994–95 season, the fledgling FOX network offered two spy series, Fortune Hunter; a James Bond clone, and a revival of Get Smart starring an aging Don Adams and Barbara Feldon. Both series were canceled after extremely abbreviated runs.

Standards

Recorded video signals are rather complex and tightly structured. The standard unit of video is a frame. Similar to film, motion video is created by displaying progressive frames at a rate fast enough for the human eye and brain to perceive continuous motion. The basic means by which video images are recorded and displayed is a scanning process. When a video image is recorded by most cameras, a beam of electrons sweeps across the recording surface in a progressive series of lines. This basic technology is simple enough, widely understood, and, after a certain point, easily manufactured. The concept can be applied and the effect of a video image can be achieved, however, in various ways, with varying rates of electronic activity. Line frequencies and scanning rates are flexible, determined in part by a level of user (producer and viewer) satisfaction and in part by concerns of equipment manufacturers and broadcasters. Consequently, not all video or television systems are alike. The variations among them are defined in terms of "standards."

In the United States, industry-wide agreement on engineering standards for television did not come until 1941, when the Federal Communications Commission (FCC) decided to adopt a black-and-white standard (postponing the issue of color). The FCC accepted the National Television System Committee (also referred to as the National Television Standards Committee [NTSC]) recommendations and set line frequency at 525 per frame scanned at a rate of approximately 30 frames per second (29.97 to be exact). In 1953, corporate interests (the Columbia Broadcasting System [CBS] and the Radio Corporation of America [RCA]/National Broadcasting Company [NBC]) agreed to another proposal that allowed the NTSC to establish color television standards; these standards were compatible with those already set for black-and-white transmission.

These standards are not, however, uniformly accepted elsewhere. There are presently three world standards for transmitting a color video signal. The
Standards

NTSC recommendations accepted by the FCC as a national standard for the United States in 1953 are used in several other countries, including Canada, Chile, Costa Rica, Cuba, El Salvador, Guatemala, Honduras, Japan, Mexico, Panama, the Philippines, Puerto Rico, South Korea, and Taiwan.

PAL (phase alternating line) and SECAM (sequential couleur a memoire) are the two other major worldwide television standards. PAL is a modified form of NTSC and specifies a different means of encoding and transmitting color video designed to eliminate some NTSC problems, specifically a shift in chroma phase (hue). PAL uses 625 lines per frame (versus NTSC’s 525) scanned at a rate of 25 frames per second (versus NTSC’s 29.97) and operates at a 50-Hertz frequency (versus NTSC’s 60-Hertz frequency). The PAL system is standard in more countries than NTSC or SECAM, including Argentina, Australia, Belgium, Brazil, China, Denmark, Finland, Great Britain, India, Indonesia, Ireland, Italy, Norway, New Zealand, the Netherlands, Portugal, Spain, Sweden, Switzerland, and Turkey.

SECAM is a video color system developed by the French; though it differs from PAL, it too uses 625 lines per frame, scanned at a rate of 25 frames per second, and operates at a 50-Hertz frequency. SECAM is used in France as well as several other countries, including Egypt, Germany, Greece, Haiti, Iran, Iraq, North Korea, Poland, and parts of the former Soviet Union.

There are enough differences between these three standards so that a videotape recorded using PAL will not play on a VCR set up for NTSC or SECAM and vice versa. NTSC, PAL, and SECAM are thus incompatible with each other. Standards converters can convert video from one standard to another, but the resultant image is often poor. Digital standards converters can provide better-quality converted video. Productions intended to be broadcast or released in different video standards are often shot on film, which can be converted to any video standard with reasonably good quality.

Recent developments in high-definition television (HDTV) have closed the gap between the technical quality of broadcast television and motion pictures. HDTV doubles the current broadcast NTSC number of scanning lines per frame—from 525 to 1,050 or 1,125, depending on the specific system—with a fourfold improvement in resolution (and a change to a widescreen format).

Standards and Practices

“Standards and practices” is the term most American networks use for what many, especially in the creative community, refer to as the “network censors.” Standards and practices departments (known as program practices at the Columbia Broadcasting System [CBS]) are maintained at each of the broadcast and many of the cable networks. The concept came about as a direct outgrowth of the trusteeship model: broadcasters were said to have a responsibility to the public interest as a result of their having access to a scarce resource. Another factor was the fear of propaganda, deemed to have been so effective in World War I. The most important consideration, however, was the unprecedented reality that radio—and later television—content came into the home, unforeseen, often unbidden, and sometimes unwelcome. Historically, therefore, lest an offended audience demand government intervention, the charge of standards and practice has been to review all nonnews broadcast matter, including entertainment, sports, and commercials, for compliance with legal, policy, factual, and community standards.
The broadcasters' insistence on setting and maintaining their own standards goes back to 1921, when engineers were instructed to use an emergency switch in the event that a performer or guest used language or brought up topics that were held to be unsuitable. During radio's first decade, taboos included any mention of price or even the location of a sponsoring store. Later, the networks would have an organist at the ready in a standby studio. A noted incident is said to have occurred in 1932, when a major administration spokesman was reporting on the government's progress in dealing with the Great Depression. He allegedly used the word "damn," a light went on in the standby studio, and the nation heard organ arpeggios.

By the late 1930s, the networks had established so-called continuity acceptance procedures to ensure that their advertising policies and federal law were adhered to. Later, as the role of radio in American life became more clearly understood, a body of written policy was articulated, generally on a case-by-case basis, to guide not only advertisers and their agencies but also programmers and producers in entertainment and other programming.

More than 67 percent of all television stations subscribed to the National Association of Broadcasters (NAB) Code adopted in 1950 (a similar radio code had been in operation since 1935). In addition to provisions that addressed historic concerns respecting the "advancement of education and culture," responsibility toward children, community responsibility, and general program standards, the NAB Code also included advertising standards and time limits for non-program material defined as "billboards, commercials, promotional announcements and all credits in excess of 30 seconds per program." In 1982, in settlement of an antitrust suit brought by the U.S. Department of Justice, the NAB and the federal government entered into a consent decree abolishing the time standards and the industry-wide limitations on the number and length of commercials they provided. The Code program standards had been suspended in 1976 after a federal judge in Los Angeles ruled that the "family hour" violated the First Amendment. After the demise of the Code, the networks, which had already developed their own written standards, took over the entire burden.

Standards—and the broadcasters' efforts to implement them—come to the fore whenever an apparent breach of the implicit obligation to respect the public trust occurs. Notable examples of perceived abuse that resulted in expanding the duties and enlarging standards and practices operations include the celebrated 1938 broadcast by Orson Welles's Mercury Theater of "The War of the Worlds," which simulated a radio broadcast interrupted by news reports describing the landing of Martians; the quiz show scandals of the 1950s; congressional hearings into violence; and concern over the possible blurring of fact and fiction in early docudrama. By 1985, a traditional network's department had no fewer than 80 people on its staff. Each episode of every series was reviewed in script form and as it was recorded.

With the changes in ownership of the traditional networks, the emergence of the cable networks, and the deregulatory climate, there has been considerable relaxation of the process—not every episode is reviewed once a series is established—but the essential responsibilities of the editors remain the same. These include, in addition to compliance with the law, serving as surrogates for the network's affiliates who are licensed to be responsive to their local communities; reflecting the concerns of advertisers and ensuring that the programming is acceptable to the bulk of the mass audience. This involves serving as guardians of taste with respect to language, sexual, and other materials inappropriate for children and the suitability of advertising, especially of personal products.

Commercial clearance involves the close screening of more than 50,000 announcements a year, falling into about 70 different product categories. The Federal Trade Commission's statements in the early 1970s that not only permitted but virtually mandated comparative advertising resulted in the establishment of courtlike procedures to adjudicate between advertisers making conflicting claims. By the mid-1980s, at least 25 percent of all commercials contained comparisons to named competitor's products or services.

Critics contend, with some justification, that standards and practices is anachronistic paternalism at best and most often a form of censorship; the networks claim the publisher's right to exercise their judgment as to what is appropriate for broadcast to the American public. The affiliated stations sometimes complain but are generally, though not always, satisfied that the networks are sufficiently vigilant as their surrogates. Network and sales executives worry that the very process of vetting leads to pettifoggery and rigidity. Advertisers rail at the scrupulous insistence that all claims be substantiated, as the law requires. By far the most frequent complaints, however, are heard from the creative community, which argues that the networks are too accommodating of the most conservative members of the audience and that only by "pushing the envelope" with respect to sex, violence, or language can the medium advance.

By the beginning of the new millenium, these conflicts reached new intensity. Cable networks such as Home Box Office (HBO) used their status as "subscriber" services to support production of material far too "extreme" for broadcast television or basic cable.
services. Although HBO could make the claim that it was "not TV, it's HBO," the development of ongoing series such as OZ, The Sopranos, Sex and the City, and The Wire made the channel seem to some like television without standards and to others television with the freedom to create in a manner equal to that of literature or film. These series took full advantage of the opportunity to use strong language and to depict sexual activities and violence in ways unseen in the period of network television dominance. Showtime, another subscriber-supported cable service, adapted Queer as Folk, a British series, for American audiences. In this case, some aspects of the British version were " toned down," suggesting that a form of "standards and practices judgment" was still in place. The success of these and other original for-cable-television programs encouraged both the programmers and the creative community to use the opportunities for more and more "daring" content.

Recognizing the relative acceptance of these programs and the critical successes accompanying their presentation, other cable outlets began to offer more material that would have been rejected by conventional networks. FX offered The Shield, focused on the complicated character of a corrupt police officer, and Nip/Tuck an exploration of the moral quandaries of cosmetic surgeons. The former contained language, violence, and ethical positions that challenged standard notions of cultural acceptability, while the latter not only depicted sexual activity but also used graphic visual depictions of surgical procedures to define its "realism." Network television followed suit in some ways with relaxation of regulations on language and more daring depictions of sexual activity—often in programs containing "warnings" to viewers that some aspects of the program might be unacceptable. This practice, it seems, throws the decision to "censor" or approve of more "creative," "realistic," or "honest" depictions to the viewer rather than reserve the power of those choices at the industrial level.

The primary purpose of standards and practices has always been to maintain the networks' most precious asset, its audience-in-being—the delivery of a significant share of television households, hour after hour, to the advertising community. Secondary purposes, historically, have included protecting the networks' images as responsible and responsive institutions, as sources of reliable information and satisfying entertainment for the entire family, and even as precious national resources. In the final analysis, if the concern for not giving offense has contributed to blandness, it must also be credited for making a commercially supported national system possible. To the degree that this arrangement has changed, it is a mark of alterations in both society and the media industries.

Sensitive Theme Programming and the New American Mainstream, New York: Social Research Unit, Marketing and Research Services, ABC, n.d.

Frank Stanton is a distinguished broadcast executive known for the leadership he brought to the Columbia Broadcasting System (CBS), Inc., during his 25-year presidency (1946–71). His guidance gave CBS crucial stability during the company’s critical growth period. More than just a corporate president, however, Stanton acquired a reputation as the unofficial spokesperson for the broadcasting industry. His opinions were routinely sought, his speeches repeatedly quoted, and his testimony before Congress recognized as a major part of any debate in the broadcasting field.

Stanton was fascinated with radio from his days in graduate school at Ohio State University, chiefly by the question of why people reacted positively to certain radio shows but negatively to others. He used his doctoral research in the psychology department to answer this question, examining why and how people perceive various stimuli. He analyzed the audio and visual effectiveness of information transmission and established test procedures for making rough measurements of their effectiveness. His dissertation, “A Critique of Present Methods and a New Plan for Studying Radio Listening Behavior,” caught the attention of CBS and launched his career in the audience research department in 1935.

In 1937, Stanton began a collaboration with Dr. Paul Lazarsfeld of Columbia University. They devised a program analysis system nicknamed “Little Annie.” While Stanton tends to downplay the importance of the machine, others have credited it with being the first qualitative measurement device. “Little Annie” determines the probability of a program’s appeal by suggesting how large an audience that program would be likely to attract. The system was devised for radio but continues to be used for television, reporting an accuracy rate of 85 percent.

Stanton was promoted to vice president of CBS in 1942 and in 1946, at the age of 38, to the presidency. In this position, he guided CBS through a period of diversification and expansion. He reorganized the company in 1951, creating separate administrations for radio, TV, and CBS Laboratories, a plan that served as a model for other broadcast companies. He helped CBS expand its operations by decentralizing its administration and creating autonomous divisions with a range of new investments, including the purchase of the New York Yankees in 1964. CBS also bought the book publisher Holt, Rinehart and Winston and Creative Playthings, manufacturer of high-quality educational toys. Diversification paid off for CBS; the company earned $1 billion in annual sales in 1969.

As president of CBS, Stanton concentrated on organizational and policy questions, leaving the entertainment programming and the discovering and nurturing of talent to the chair, William S. Paley. Stanton was also responsible for the political issues growing out of the network’s news department. He was instrumental in bringing about the 1960 Kennedy–Nixon televised presidential debate and is known for his efforts to repeal section 315 of the Federal Communications Act, which requires networks to grant equal time to all po-

![Frank Stanton.](Photo courtesy of Frank Stanton)
Stanton, Frank

political candidates. A staunch proponent of broadcast journalism and defender of broadcasting's First Amendment rights, he led campaigns before Congress and in the courts on behalf of the broadcast industry for access and protection equal to that of the printed press.

Stanton's greatest battle with the government occurred in 1971 and focused on just this parallel to print-press rights. The controversy surrounded The Selling of the Pentagon, a CBS News documentary that exposed the huge expenditure of public funds, partly illegal, to promote militarism. The confrontation raised the issue of whether television news programming deserved protection under the First Amendment. Against threat of jail, Stanton refused the subpoena from the House Commerce Committee ordering him to provide copies of the outtakes and scripts from the documentary. He claimed that such materials are protected by the freedom of the press guaranteed by the First Amendment. Stanton observed that if such subpoena actions were allowed, there would be a "chilling effect" on broadcast journalism.

But long before this particular case and long before Watergate or Vietnam, CBS was the first broadcasting network to seriously examine the negative side of Washington politics on television. One of the earliest of these explorations occurred on the news program See It Now, in which host Edward R. Murrow confronted U.S. Senator Joseph McCarthy. The program was constructed using film clips of McCarthy's accusatory speeches and Murrow refuting his charges. McCarthy demanded, and was granted, time for a response, and in that blustery performance many observers see the downfall of McCarthyism. In retrospect, the two programs were among the most important in the history of television.

Documentaries, even of this immediate sort, however, had a more difficult time attracting sponsors than did entertainment programs, and for this reason See It Now was canceled following the 1958 season. Appalled by what the broadcasting industry had become, Murrow spoke before the Television News Directors Association and delivered what was to become known as one of the most famous public tongue lashings in media history, aimed directly at Stanton and Paley. The relationship between Stanton and Murrow soured into accusations and name-calling and was widely reported in the press.

Stanton received the title of vice chair in 1972, one year before the mandatory retirement age of 65. On retiring, Stanton still held $13 million worth of CBS stock, and he remained a director of CBS and consultant to the corporation under a contract that lasted until 1987. From 1976 to 1995, he was a director of Interpublic Group, which now owns Foote Cone & Belding/True North Communications and the MWW Group.

**Star, Darren**

**U.S. Writer-Producer**

As a young teen living in Potomac, Maryland, Darren Star used money given to him for his bar mitzvah to subscribe to the Hollywood trade publication *Variety*. Such an early interest in the entertainment industry served him well, as Star created his first series before he turned 30. Although Star's television career has been brief in comparison with other writers and producers, in just a decade he established a solid reputation for building successful series that tapped the pulse of the post-baby boom generation of viewers. Star's contributions span melodrama and comedy as well as a variety of network contexts, including FOX's upstart days and premium cable service Home Box Office (HBO).

Star's high-profile television career began by writing the pilot script for *Beverly Hills, 90210*, a series that paired him with iconic sexagenarian Aaron Spelling. The series, over which Star and Spelling shared creative control, became the FOX network's breakout hit drama. FOX nearly canceled it repeatedly during its first season, but a relaunch during the repeat-heavy summer time period established the series, its stars, and consequently the network. Star approached the series as a "thirtysomething for teens" and emphasized teen social issues such as drinking, pregnancy, and rape amidst the series' melodramatic personal relationships. FOX requested Star for the series pilot because a screenplay he sold at age 24, the story of a teenager who thinks he is an alien (*Doin' Time on Planet Earth*, 1988), indicated Star's talent for writing from a teen's point of view.

Star then moved to *Melrose Place*, a pseudo-spin-off from *Beverly Hills, 90210*, designed as a scheduling match for the series in terms of genre but with a focus on a group of characters a few years older than the *Beverly Hills* teens. *Melrose Place* provided further association with Spelling, but Star reportedly balked at the shift to campy, over-the-top play with the soap genre that began with addition of Heather Locklear to the cast, although the adjustments to the series likely account for much of its subsequent success.

While Star vacationed during the summer of 1994, his agent pitched a new series to the Columbia Broadcasting System (CBS), and the network returned with an offer for 13 episodes. CBS's exceptional offer to cover all production costs (rather than just the licensing fee that usually required producers to take a loss in the range of $300,000 to half a million dollars per episode) provided an opportunity Star could not turn down, but his departure from *Melrose Place* created some animosity with Spelling, who forced him out of a continuing consulting role. The new series returned Star to the East Coast for a serial drama about the personal and professional manipulations of those associated with a glossy New York magazine.

CBS positioned the new series, *Central Park West*, as the showpiece in its attempt to shift away from its audience base of older adults. The series sought to recreate the opulence and character antagonisms of *Dallas* and *Dynasty* but did not last long enough to establish characters or story. Despite heavy promotion and reliance on many of the narrative and visual features that had proven successful in *Beverly Hills, 90210* and *Melrose Place*, *Central Park West* failed to find an audience. The network ordered radical retooling and then cancellation. CBS reduced its attempted brand
shift after the sale of the network to Westinghouse and the departure of its top programming executive.

The following summer, Star met with HBO to propose a series inspired by Candace Bushnell’s New York Observer sex column. The lack of content restrictions afforded by the subscriber-based cable network allowed exceptionally frank examination of the sexual acts and emotional relationships of four single women living in Manhattan. Sex and the City reinvigorated the television comedy form with its film style, direct camera address, and sophisticated stories. Star left the show after its third season, returning to broadcast network series that were potentially more lucrative although also restricted by network control that Star likened to “being in an Eastern bloc country.” Sex and the City was a critical and popular success and appeared on HBO for a total of six seasons.

Star created two series in 2000: Grosse Pointe on The WB and The $Street for FOX. With Grosse Pointe, he parodied his start with the series’ show-within-a-show comedy about the production of a teen soap opera. Built on the premise that the drama behind the scenes of television series trumps what is on air, the series provided a funny and pointed critique of the industry, the melodrama genre, and its stars. Grosse Pointe required last-minute adjustments and garnered publicity after Spelling complained about a character who apparently referenced his daughter Tori, who played a central role in Beverly Hills, 90210. The series had difficulty finding an audience in part to because of The WB’s lack of an appropriate half-hour series with which to schedule it. The network shifted Grosse Pointe’s time slot throughout the season, but the series failed to find an audience and was not renewed.

The $Street sent Star back to New York for a short-lived look at the mostly male world of Wall Street and finance. A lavish cost of $2.3 million per episode led to the series’ exceptionally distinct promotions for the show and announced the entry of the also short-lived Artists Television Group (ATG) production studio onto the Hollywood production scene. Promotions, however, were all that most viewers saw of The $Street. FOX canceled the program after little more than a month on the air. The series had the misfortune of appearing just as the U.S. economy began sputtering and on the heels of Bull, a similar series with more complexly drawn characters, presented on Turner Network Television (TNT) on cable.

Explaining the failure of Grosse Pointe and The $Street in an interview with National Public Radio’s Terri Gross, Star reflected that none of his series had succeeded in their first season but found audiences and their distinction in their second year. Despite the lack of opportunity to refine Central Park West, Grosse Pointe, and The $Street, Star had already achieved rapid success in the Hollywood creative community, capitalizing on the culture and style of the second generation of television viewers. In 2003, Star acted as executive producer on a new series for the National Broadcasting Company (NBC), Miss Match, about a young divorce lawyer who moonlights as a matchmaker.

Star Trek

U.S. Science Fiction Program

With the premiere of *Star Trek* on the National Broadcasting Company (NBC) in September 1966, few could have imagined that this ambitious yet often uneven science fiction series would go on to become one of the most actively celebrated and financially lucrative narrative franchises in television history. Although the original series enjoyed only a modest run of three seasons and 79 episodes, the story world created by that series eventually led to a library of popular novelizations and comic books, a cycle of motion pictures, an international fan community, and a number of spin-off series that have made the *Star Trek* universe a bedrock property for Paramount Studios from the 1980s on.

*Star Trek* followed the adventures of the USS *Enterprise*, a flagship in a 23rd-century interplanetary alliance known as “the Federation.” The ship's five-year mission was “to seek out new life and new civilizations, to boldly go where no man has gone before,” a mandate that series creator and philosophical well-spring Gene Roddenberry described as “Wagon Train in space.” Each episode brought the crew of the *Enterprise* in contact with new alien races or baffling wonders of the universe. When not exploring the galaxy, the crew of the *Enterprise* often scrapped with the two main threats to the Federation's benevolent democratization of space, the Hun-like Klingons and the more cerebral yet equally menacing Romulans.

The program's main protagonists, Captain James T. Kirk (William Shatner), Mr. Spock (Leonard Nimoy), and Dr. Leonard McCoy (DeForest Kelly), remain three of the most familiar (and most parodied) characters in television memory. As commander of the *Enterprise*, the hypermasculine Kirk engaged in equal amounts of fisticuffs and intergalactic romance and was known for his nerves of steel in negotiating the difficulties and dangers presented by the ship's mission. McCoy was the ship's cantankerous chief medical officer who, when not saving patients, gave the other two leads frequent personal and professional advice. Perhaps most complex and popular of the characters was Spock. Half human and half Vulcan, Spock struggled to maintain the absolute emotional control demanded by his Vulcan heritage and yet occasionally fell prey to the foibles of a more human existence. In addition to the three leads, *Star Trek* featured a stable of secondary characters who also became central to the show's identity. These included the ship's chief engineer, Scotty (James Doohan), and an ethnically diverse supporting cast featuring Uhura (Nichelle Nichols), Chekov (Walter Koenig), Sulu (George Takei), Yeoman Rand (Grace Lee Whitney), and Nurse Chapel (Majel Barrett).

Scripts for the original series varied greatly in quality, ranging from the literate time-travel tragedy of Harlan Ellison's “City on the Edge of Forever” and the Sophoclean conflict of Theodore Sturgeon’s “Amok Time” to less inspired stock adventure plots, such as Kirk’s battle to the death with a giant lizard creature in “Arenas.” With varying degrees of success, many episodes addressed the social and political climate of late 1960s America, including the Vietnam allegory “A Private Little War,” a rather heavy-handed treatment of racism in “Let That Be Your Last Battlefield,” and even an encounter with space hippies in “The Way to Eden.”

NBC threatened to cancel *Star Trek* after its second season, but, persuaded to some degree by a large letter-writing campaign by fans to save the show, the network picked up the series for a third and final year. Canceled in 1969, *Star Trek* went on to a new life in syndication, where it found an even larger audience and quickly became a major phenomenon within popular culture. Beginning with a network of memorabilia collectors, fans of the show became increasingly organized, gathering at *Star Trek* conventions to trade merchandise, meet stars from the show, and watch old episodes. Such fans came to be known as “Trekkies” and were noted (and often ridiculed) for their extreme devotion to the show and their encyclopedic knowledge of every episode. Through this explosion of interest, many elements of the *Star Trek* universe made their way into the larger lexicon of popular culture, including the often-heard line, “Beam me up, Scotty” (a reference to the ship’s teleportation device) as well as Spock’s signature commentary on the “illogic” of human culture. Along with Spock’s distinctively pointed ears, other aspects of Vulcan culture also became widely popularized as televi-

2193
As Trekkie culture continued to grow around the show during the 1970s, a central topic of conversation among fans concerned rumors that the series might one day return to the airwaves. There was talk that the series might return with the original cast, with a new cast, or in a new sequel format. Such rumors were often fueled by a general sense among fans that the show had been unjustly canceled in the first place and thus deserved a second run. Initially, Paramount did not seem convinced of the commercial potential of resurrecting the story world in any form, but by the late 1970s the studio announced that a motion picture version of the series featuring the original cast was under development. Star Trek: The Motion Picture premiered in 1979, and though it was a very clumsy translation of the series into the language of big-budget, big-screen science fiction, it proved to be such a hit that Paramount developed a chain of sequels, including Star Trek II: The Wrath of Khan (1982), Star Trek III: The Search for Spock (1984), and Star Trek IV: The Voyage Home (1986).

By the mid-1980s, the Star Trek mythos had proven so commercially viable that Paramount announced plans for a new Star Trek series for television. Once again supervised by Roddenberry, Star Trek: The Next Generation debuted in first-run syndication in 1987 and went on to become one of the highest-rated syndicated shows in history. Set in the 24th century, this series followed the adventures of a new crew on a new Enterprise (earlier versions of the ship having been destroyed in the movie series). The series was extremely successful at establishing a new story world that still maintained a continuity with the premise, spirit, and history of the original series. On the new Enterprise, the command functions were divided between a more cultured captain, Jean-Luc Picard (Patrick Stewart), and his younger, more headstrong “Number One,” Commander William Riker (Jonathan Frakes). Spock’s character functions were distributed across a number of new crew members, including ship’s counselor and Betazoid telepath, Deanna Troi (Marina Sirtis); the highly advanced android, Lt. Commander Data (Brent Spiner), who provided the show with “logical” com-
mentary as ironic counterpoint to the peculiarities of human culture; and, finally, Lieutenant Worf (Michael Dorn), a Klingon raised by a human family who struggled to reconcile his warrior heritage with the demands of the Federation. Other important characters included Lt. Geordi La Forge (LeVar Burton), the ship's blind engineer whose "vision" was processed by a high-tech visor; Dr. Beverly Crusher (Gates McFadden), the ship's medical officer and implicit romantic foil for Picard; and Wesley Crusher (Wil Wheaton), the doctor's precocious son.

Running for 178 episodes, Star Trek: The Next Generation was able to develop its characters and storylines in much more detail than the original series. As with many other hour-long dramas of its era, the series abandoned a wholly episodic format in favor of more serialized narratives that better showcased the expanded ensemble cast. Continuing over the run of the series were recurring encounters with Q, a seemingly omnipotent yet extremely petulant entity; the Borg, a menacing race of mechanized beings; and Lor, Data's "evil" android brother. Other continuing stories included intrigue and civil war in the Klingon empire, Data's ongoing quest to become more fully human, and often-volatile political difficulties with the Romulans. This change in the narrative structure of the series from wholly episodic to a more serialized form can be attributed in some part to the activities of the original
series’ enormous fan following. A central part of fan culture in the 1970s and 1980s involved fans writing their own *Star Trek*-based stories, often filling in blanks left by the original series and elaborating incidents only briefly mentioned in a given episode. *Star Trek: The Next Generation* greatly expanded the potential for such creative elaboration by presenting a more complex story world, one that actively encouraged the audience to think of the series as a foundation for imagining a larger textual universe.

Despite the show’s continuing success, Paramount canceled *Star Trek: The Next Generation* after seven seasons to turn the series into a film property and make room for new television spin-offs, thus beginning a careful orchestration of the studio’s *Star Trek* interests in both film and television. The cast of the original series returned to the theater for *Star Trek 5* and *Star Trek 6*, leading finally to *Star Trek: Generations*, in which the original cast turned over the cinematic baton to the crew of *Next Generation*.

*Star Trek: Deep Space Nine* premiered in January 1993 as the eventual replacement for *Next Generation* on television. In contrast to the usually optimistic and highly mobile structure of the first two series, *Deep Space Nine* was a much more claustrophobic reading of the *Star Trek* universe. Set aboard an aging space station in orbit around a recently liberated planet, Bajor, the series generated its storylines from the aftermath of the war over Bajor and from a nearby “wormhole” that brought diverse travelers to the station from across the galaxy. The series ended with the 1997–98 season.

Hoping to compete with FOX and Warner Brothers in creating new broadcast networks, Paramount developed a fourth *Star Trek* series as the anchor for their United Paramount Network (UPN). *Star Trek: Voyager* inaugurated UPN in January 1995, serving as the network’s first broadcast. Responding perhaps to the stage-bound qualities and tepid reception of *Deep Space Nine*, *Voyager* opted for a premise that maximized the crew’s ability to travel and encounter new adventures. Stranded in a distant part of the galaxy after a freak plasma storm, the USS *Voyager* found itself 75 years away from Earth and faced with the arduous mission of returning home. Like all television programs, *Voyager* required some fine-tuning to help with the ratings. Most successful was the addition of Jeri Ryan as the sexy Borg crew member, 7 of 9.

Both *Deep Space Nine* and *Voyager* attracted the core fans of *Star Trek*, as expected, but neither series was as popular with the public at large as the programs they were designed to replace. With *Voyager’s* mission coming to an end in 2001, Paramount debated the future direction of the franchise. In particular, producers were concerned over the “aging” of the franchise (and its core audience). The result was *Enterprise*, premiering in the fall of 2001. In an attempt to attract a new generation of Trekkies, *Enterprise* moved the franchise from the 24th century to Earth’s more immediate future. A prequel to all other installments in the Trek universe, the series features former *Quantum Leap* star Scott Bakula as the captain of the very first *Enterprise* on its very first mission to interstellar space (under Vulcan supervision). Gone is creator Roddenberry’s signature utopian humanism, replaced by darker stories and a more sinister production design. The bid for a younger demographic even includes replacing the trademark bombast of the opening credit score with a more teen-friendly pop theme. Early ratings have indicated that the strategy is working, suggesting that Paramount has once again found a way to revitalize and extend its most famous and long-lived property.

Expected to run seven seasons, *Enterprise* will likely solidify *Star Trek’s* position as the most elaborately developed narrative world in the history of television.

**Starowicz, Mark (1946– )**

Canadian Broadcast Journalist, Producer

During his 30 years in radio and television with the Canadian Broadcasting Corporation (CBC), Mark Starowicz has produced a number of the more influential current affairs and documentary programs in Canadian broadcast history.

After beginning his career in newspaper journalism, Starowicz assumed the role of producer within the current affairs division of CBC Radio at the age of 24. During the 1970s, Starowicz produced a total of five CBC Radio programs, including *Radio Free Friday, Five Nights*, and *Commentary*. He received particular critical acclaim for his reworking of *As It Happens* (1973–76) and the creation of *Sunday Morning* (1976–80), a three-hour weekend review.

CBC News programming chief Peter Herrndorf provided Starowicz’s entry into television in 1979 by appointing him chair of a committee examining the corporation’s news programming strategies. This resulted in the controversial move of *The National* news broadcast to 10:00 p.m. from its 11:00 p.m. slot and the creation of *The Journal*, a current affairs and documentary program with Starowicz as executive producer. These decisions sought to take advantage of the larger audience numbers available at 10:00 (10 million viewers) than at 11:00 (4.5 million) and were part of the CBC’s strategy in the 1980s to invest its decreasing resources in its traditionally strong area of news and current affairs.

Despite Starowicz’s lack of experience in television journalism, *The Journal* was a great success, both critically and in terms of viewership, and served to establish him as Canadian television journalism’s new star. *The Journal* achieved an average 1.6 million viewers in its first year and comparable numbers during its ten-year run. Rather than decreasing the audience shares of its competitors, the hour-long combination of *The National* (22 minutes) and *The Journal* (38 minutes) actually increased the number of total viewers during the 10:00 p.m. time slot.

To deliver *The Journal*, Starowicz compiled a young staff, many of whom, like Starowicz, had previously worked only in radio. Hosts during the broadcast’s life included Barbara Frum (formerly of *As It*
often socially and politically charged issues. Although Starowicz's role as executive producer emphasizes his capacity to orchestrate talent, he also has produced and directed his own documentaries, including The Third Angel (1991) and Red Capitalism (1993). He sees his role at CBC Documentaries as an opportunity to continue the strong documentary tradition in Canada, started in the 1940s by John Grierson and the National Film Board. Significantly, Starowicz was able to get the CBC management to agree to the broadcasting of "point-of-view" documentaries, breaking free of the somewhat mythological pursuit of journalist "objectivity."
