## GENERAL SERVICING INFORMATION

The following information applies to all recorders in this volume, and should be followed before any adjustments are made or trouble diagnosis is attempted. Any exceptions or additions will be found in the detailed servicing procedures for each recorder.

### POWER SOURCES

Many recorders require full supply voltage for proper operation. Be sure the supply voltage is maintained at the rated value *under load* while making adjustments.

### CLEANING

All head faces should be cleaned with head cleaner to remove dust and accumulated oxide. (An applicator may be fashioned from absorbent cotton.) Do not use a screwdriver or any metallic object near the head faces.

*CAUTION: Avoid getting head cleaner on any plastic surface.*

Clean the capstan, pressure roller, pressure pads and all tape guides with alcohol using a soft lint-free cloth. Also use alcohol to remove oil and grease from drive belts, idler wheels, brake drums and shoes, and all other driving surfaces.

### LUBRICATING

Clean all surfaces before lubricating. Apply a few drops of #20 machine oil to all bearings and rotating bushings. Apply a thin film of light nonhardening grease to all sliding surfaces and detent rollers. Always wipe excess oil or grease from parts that have been lubricated.

*CAUTION: Oil and grease must be kept off all driving surfaces as well as any parts which may transfer oil or grease to them.*

### DEMAGNETIZING

Record-Play heads require demagnetizing at regular intervals to maintain high-frequency response, dynamic range, and low distortion. (Follow instructions included with the demagnetizing unit.) After demagnetizing the heads, keep all screwdrivers and other metallic objects away from the head faces. Tape guides may also require occasional demagnetizing.

*IMPORTANT: Be sure to demagnetize the heads after making resistance measurements in the head circuits.*

# CIRCUITRACE<sup>®</sup>

TRADE NAME : Aiwa Model TP-712  
 SUPPLIER : For Current Address, See Annual Index  
 TYPE SET : 2-Speed, 2-Track Monaural Recorder  
 POWER SUPPLY : 6 Volts DC or 110-120 Volts AC,  
 60 Cycles  
 RATING : 3 Watts, 53ma @ 117 VAC (With Motor)

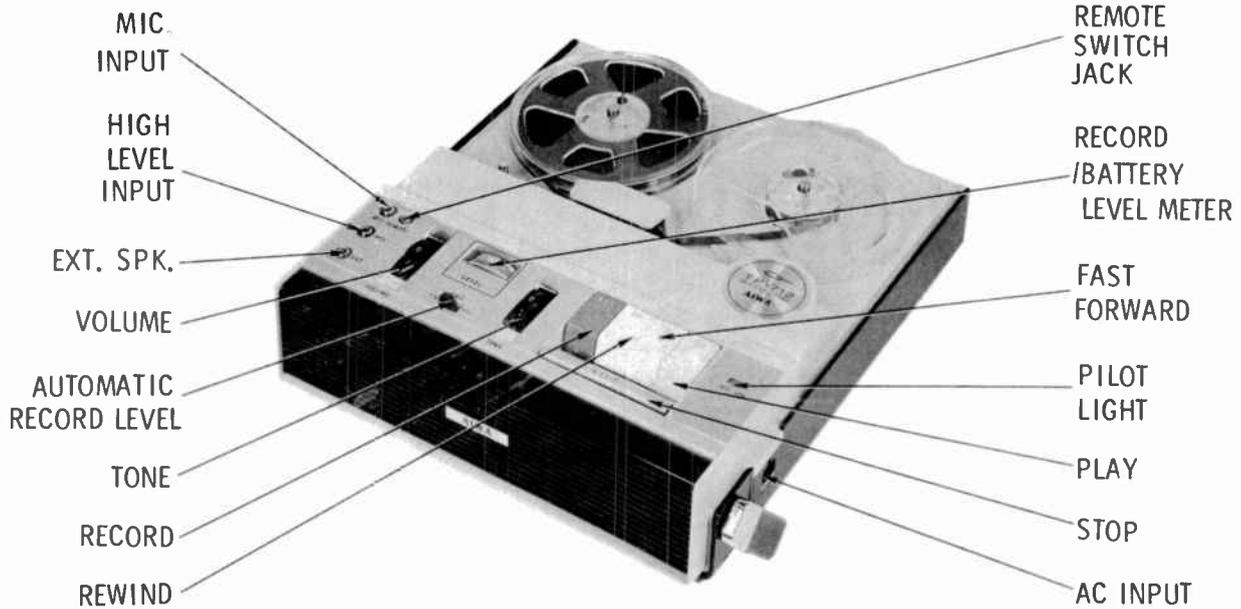

This unit is a two-track, monaural recorder having two speeds: 1 7/8 and 3 3/4 ips.

A record/battery level meter and an automatic recording level circuit is provided.

Jacks are provided for both low- and high-level inputs, remote control, and earphone/external speaker.

Power is supplied by six, 1 1/2-volt "D" cells or 110 - 120 volts AC, 60 cycles.

World Radio History

## OPERATING INSTRUCTIONS

### Record

1. Press Stop button, select the speed, thread the tape, and move the remote switch on microphone to the off position.
2. Connect a source, press Play and Record buttons simultaneously, and move the remote switch to the on position.
3. Move automatic Record Level switch to Off, and set the recording level with Volume control; or move Record Level switch to On and allow the

unit to automatically maintain the recording level.

### Play

1. Repeat step 1 of "Record", press Play button, move the remote switch to the on position, and adjust Volume and Tone controls as desired.

### Monitor

1. The recording source may be monitored by connecting an earphone to Ext. Speaker jack.

## DISASSEMBLY

1. Remove four Phillips screws from wells in feet and remove bottom cover.
2. Remove five Phillips screws shown as "X" on bottom photo and loosen one Phillips screw shown as "Y" on printed board.
3. Remove two Phillips screws holding control and meter bracket.
4. Remove one Phillips screw holding pilot-light terminal strip and four nuts holding jacks.
5. Remove chassis assembly.

AIWA MODEL TP-712

## SEQUENCE OF OPERATION

### Play

Pressing the Play button pivots Lever (47), locked by Plate (43), to pivot Plate (42), pushing Rod (36) to pivot Lever (5). Lever (5) pivots Levers (6) and (7) to move Shoes (14) and to cause Lever (7) to actuate Switch (S6).

Lever (47) also pivots Lever (10) to swing Lever (20), causing Arm (21) to press Roller (31) against Belt (2). The motor, through Pulley (35), Belt (4), Assembly (18), and Belt (2) drives Platform (15).

Lever (10) also releases Assembly (22), pulled by Spring (39), to move Roller (1) against Assembly (18). Assembly (22) also releases Assembly (26), pulled by Spring (38), to move Pad "B" (27) against Heads (M1) and (M2).

### Record

The Record sequence is the same as "Play" except the Record button is also depressed, pivoting Lever (44) to cause Lever (9) to pivot Lever (8) and to actuate Switch (S1).

### Fast Forward

Pressing the Fast Forward button pivots Lever (46), locked by Plate (43), to pivot Plate (42), pushing Rod (36) to pivot Lever (5). Lever (5) pivots Levers (6) and (7) to move Shoes (14) and to cause Lever (7) to actuate Switch (S6).

Lever (46) also slides Plate (49) to actuate Switch (S3). Simultaneously, Lever (46) pivots Lever (20) to cause Arm (21) to press Roller (31) against Belt (2). The motor, through Pulley (35), Belt (4), Assembly (18), and Belt (2), drives Platform (15).

### Rewind

Pressing the Rewind button pivots Lever (45), locked by Plate (43), to pivot Plate (42), pushing Rod (36) to pivot Lever (5). Lever (5) pivots Levers (6) and (7) to move Shoes (14) and to cause Lever (7) to actuate Switch (S6).

Lever (45) also pivots Lever (11) to actuate Switch (S4) and to pull Spring (40), pulling Lever (12). Lever (12) causes Pulley (34) to press Belt (3) against Assembly (18).

The motor, through Pulley (35), Belt (4), Assembly (18), and Belt (3), drives Platform (16).

### Stop

Pressing Stop Push-button Assembly (48) pivots Plate (43), releasing any other depressed push button. Springs (19), (25), and (41), plus (33) in Record, reverse the "Play" sequence. Springs (13), (19), and (25) reverse the "Fast Forward" sequence. Springs (19) and (40) reverse the "Rewind" Sequence.

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 3 3/4 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 3 3/4 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 1 ounce . Controlled by repositioning of Lever (29).
Fast Forward Take-up Torque	Nominal value 2 1/2 ounces. Controlled by repositioning Plate (37). (Move toward heads to reduce).
Rewind Torque	Nominal value 2 1/2 ounces. Controlled by tension of Spring (40).
Supply Reel Drag	Dependent on reel weight.
Take-up Reel Drag	Dependent on reel weight.
Pressure Roller Pressure	Nominal value 6 ounces. Controlled by tension of Spring (39).
Braking Torque	Measured in Stop. Nominal value 5 1/2 ounces counterclockwise on supply reel. Nominal value 3 1/2 ounces clockwise on take-up reel. Controlled by condition of Shoes (14) and tension of Springs (19).
Pressure Pad Pressure	Nominal value 3/4 ounce. Controlled by tension of Spring (38).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/ Play Head Height	No adjustment provided.
Record/ Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across output, adjust B1 and B2 equally in opposite directions for maximum.
Erase Current	Nominal value 5ma (3.5VDC). No adjustment provided.
Record Bias	Nominal value 31V rms (1.1ma). Controlled by setting of R3.
Bias Oscillator	Nominal frequency 34KC. Controlled by adjustment of L1 .
Record Level Indicator Calibration and ALC Operation.	Apply a 1000-cycle tone to mic input, slip a piece of paper under wiper of R3 to disable oscillator, and move Automatic Record Level switch to Off. Set Volume control to maximum and vary generator to give .95V rms across Head (M1). Normal maximum should be indicated on the level meter. Moving Automatic Record Level switch to On should drop voltage across head by .09V rms. No adjustment provided.

**CLEANING**

**LUBRICATING**

**HEAD DEMAGNETIZING**

Refer to "General Servicing Information" on page 4.

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Belt (2) dirty or worn.</li> <li>2. Take-up torque misadjusted.</li> <li>3. Platform (15) binding.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Fast Forward torque misadjusted.</li> <li>2. Platform (15) binding.</li> <li>3. Roller (31) binding.</li> <li>4. Belt (2) dirty, worn, or broken.</li> </ol>
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Excessive take-up torque.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Belt (3) dirty, worn, or broken.</li> <li>2. Platform (16) binding.</li> <li>3. Spring (40) supplying inadequate tension.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Shoes (14) dirty or worn.</li> <li>2. Springs (19) supplying inadequate tension.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (4) dirty, worn, or broken.</li> <li>2. Assembly (18) binding.</li> <li>3. Motor defective or not supplied with power.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Excessive take-up torque.</li> <li>2. Roller (1) dirty or worn.</li> <li>3. The capstan is bent.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Roller (1) dirty, worn, or binding.</li> <li>2. Excessive take-up torque.</li> <li>3. Motor defective.</li> <li>4. Assembly (18) binding.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misaligned, or defective.</li> <li>2. Amplifier circuit defective.</li> <li>3. Bias oscillator circuit defective.</li> <li>4. Erase head polarity improper.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty or defective.</li> <li>2. Head (M2) not being supplied with adequate current.</li> </ol>

(CONTINUED ON PAGE 16)

**NOTE: DEMAGNETIZE HEADS AFTER SERVICING RECORDER**

- ⊙ See parts list
- 1. Voltage measurements taken with vacuum tube voltmeter.
- 2. All controls set for normal operation, no signal applied.
- 3. Measured values are from socket pin or terminal to common ground.
- 4. All terminals viewed from bottom unless otherwise designated.
- 5. Numbers assigned to terminals may not be found on the unit.
- 6. Supply voltage maintained at rated value for voltage readings.
- 7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

\* Measured in "RECORD" position with an audio VTVM.

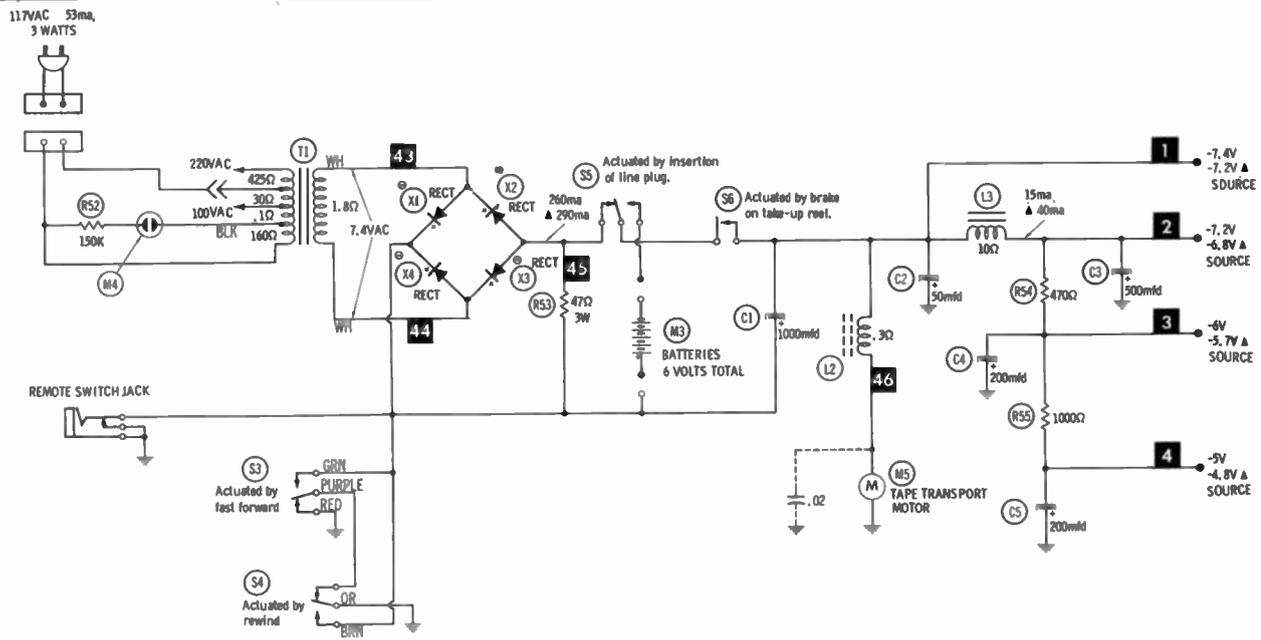

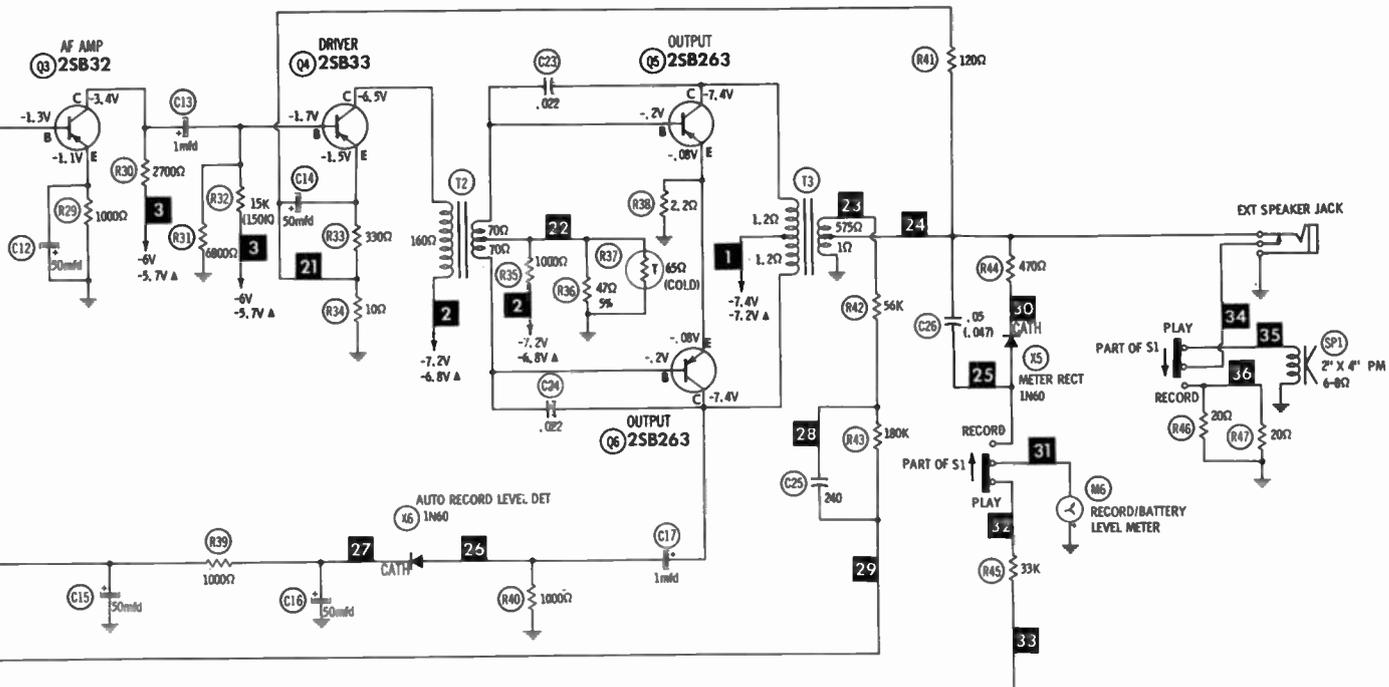

Resistors are 1/2 watt or less and rated 10% or 20% unless otherwise indicated.

Arrows at controls indicate clockwise rotation viewed from actuator end.

## WIRING DATA

General-use Unshielded Hook-up Wire .....	Use BELDEN No. 8530 (Solid) Available in 12 Colors 8524 (Stranded) Available in 12 Colors
Power Cord .....	Use BELDEN No. 17106 (Plastic) or 17126 (Rubber) - 8 Ft. 17109 (Plastic) or 17129 (Rubber) - 9 Ft.
Power Cord (Interlock Type) .....	Use BELDEN No. 8874 (Rubber) or 8895 (Plastic)
Low-Loss Shielded Lead (Interconnecting) .....	Use BELDEN No. 8401 or 8421
Phono Pick-up Arm Cable .....	Use BELDEN No. 8430 (Two Conductor-Unshielded) 8429 (Two Conductor-Shielded) 8419 (Three Conductor-Shielded)

AIWA MODEL TP-712

# PHOTOFACT<sup>®</sup> with

# CIRCUITRACE<sup>®</sup>

This unit is a two-track, monaural recorder having four speeds: 15/16, 1 7/8, 3 3/4, and 7 1/2 ips.

Jacks are provided for both low- and high-level inputs, auxiliary microphone input, remote operation, line output, and external speaker.

Power is supplied by six, 1 1/2-volt "D" cells or 110 - 120 volts AC, 60 cycles.

TRADE NAME : Concertone Model 700

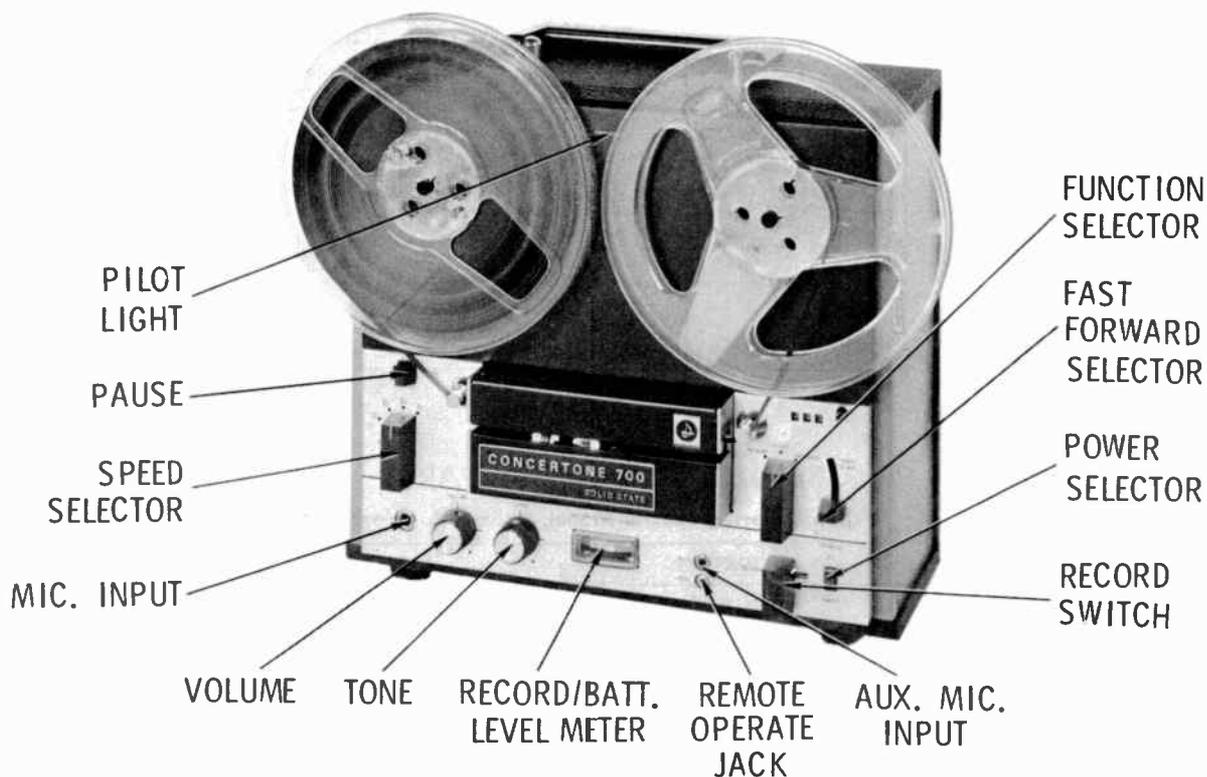

SUPPLIER : For Current Address, See Annual Index

TYPE SET : 4-Speed, 2-Track Monaural Recorder

POWER SUPPLY : 9 Volts DC or 110-120 Volts AC, 60 Cycles

RATING :  
6 Watts, 92ma @ 117VAC (Record with Motor)  
5 Watts, 82ma @ 117VAC (Play with Motor)

# OPERATING INSTRUCTIONS

## Record

1. Move Function Selector to Stop, select the power source, select the speed, and thread the tape.
2. Move Speaker switch to Off, connect a recording source to an input, hold Record switch to the right while moving Function Selector to Operate, and move Pause knob to the left.
3. Set the recording level with Volume control, move Pause knob to the right, and record.

## Play

1. Repeat step 1 of "Record", move Speaker Switch to On, and move Function Selector to Operate to play the previous recording.

## Monitor

1. To monitor the recording source, move Speaker switch to On while recording.

## DISASSEMBLY

1. Remove two push-on knobs and five knobs held with setscrews.
2. Remove four small Phillips screws from sides of deck cover and remove deck cover.
3. Remove two tape guides and four small screws from sides, and remove control cover.
4. Remove two screws holding upper head cover.
5. Remove four large Phillips screws from corners of transport assembly and remove assembly from cabinet.

## SEQUENCE OF OPERATION

### Play

Moving the Function Selector to Operate rotates Cam (50) to pivot Lever (51), pulling Link (15). Link (15) pivots Arm (42) to move the brake pad and to pull Link (14), pivoting Arm (24) to move the brake pad.

Simultaneously, Cam (50) pushes Link (13) to pivot Arm (23), moving Arm (22) to move Idler (3B) and pull Spring (60).

Cam (50) also pushes Link (12) to release Arm (11), allowing Arm (10), pulled by Spring (28), to press Idler (4) against Pulley (6) and Disc (7).

The motor, through Pulley (6), Idler (4), Disc (7), Felt (17), and Pulley (8), drives Rest (19).

Cam (50) also releases Lever (29), pulled by Spring (48), to press Roller (1) against the capstan and to release Lever (41), releasing Pads (53) and (54). Lever (29) also releases Lever (61), pulled by Spring (49), to lock the linkage to Switch (S1).

Lever (29) also releases Assembly (36), pulled by Springs (63) and (60), to press Idler (5) against Pulley (6) and Flywheel (33).

The motor, through Pulley (6) and Idler (5), drives Flywheel (33).

### Record

The Record sequence is the same as "Play" except Lever (61), released by Lever (29) and pulled by Spring (49), holds the linkage to Switch (S1).

### Fast Forward

Moving the Fast Forward Selector rotates Lever

(52) to tilt Lever (46), lowering Arm (11). Arm (11), allowed to move forward by Link (12), lowers Arm (10). Arm (10), pulled by Spring (28), presses Idler (4) against Pulley (6) and Pulley (8).

The motor, through Pulley (6), Idler (4), and Pulley (8), drives Rest (19).

Lever (52) also actuates Switch (S4) and pivots Lever (51), pulling Link (15). Link (15) pivots Arm (42) to move the brake pad and to pull Link (14), pivoting Arm (24) to move the brake pad.

### Rewind

Moving the Function Selector to Rewind rotates Cam (50) to pivot Lever (51), pulling Link (15). Link (15) pivots Arm (42) to move the brake pad and to pull Link (14), pivoting Arm (24) to move the brake pad.

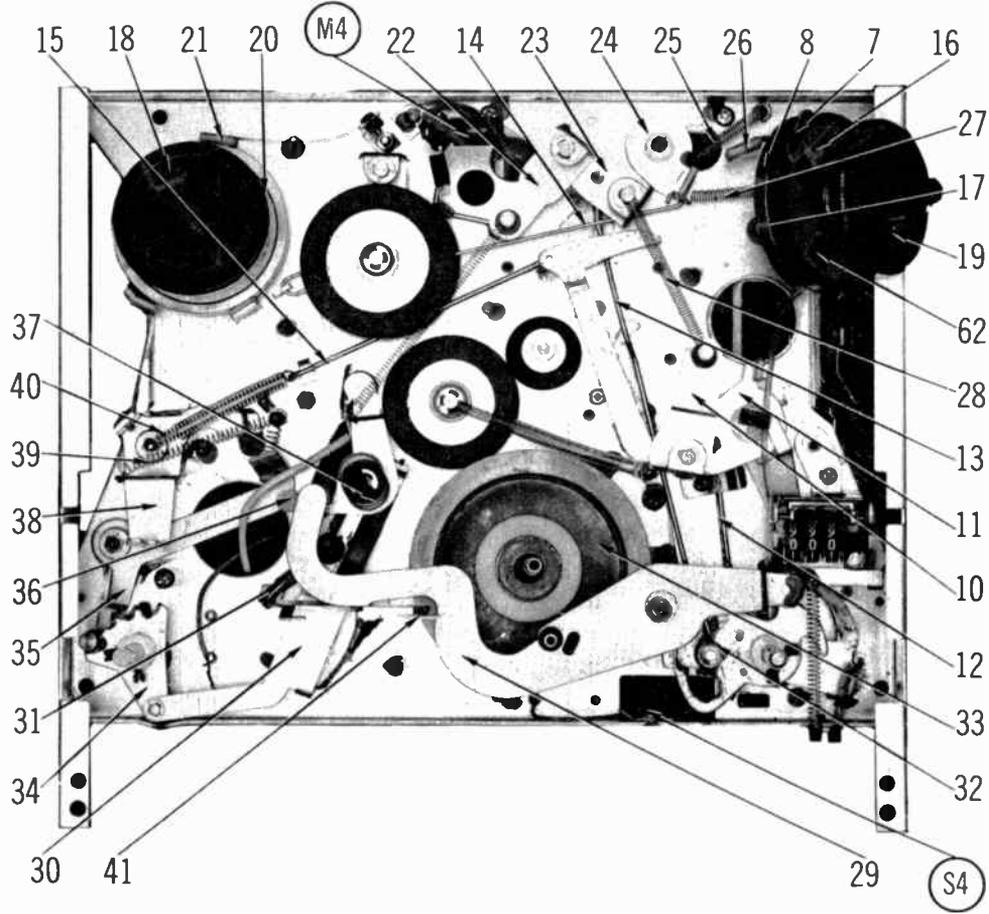

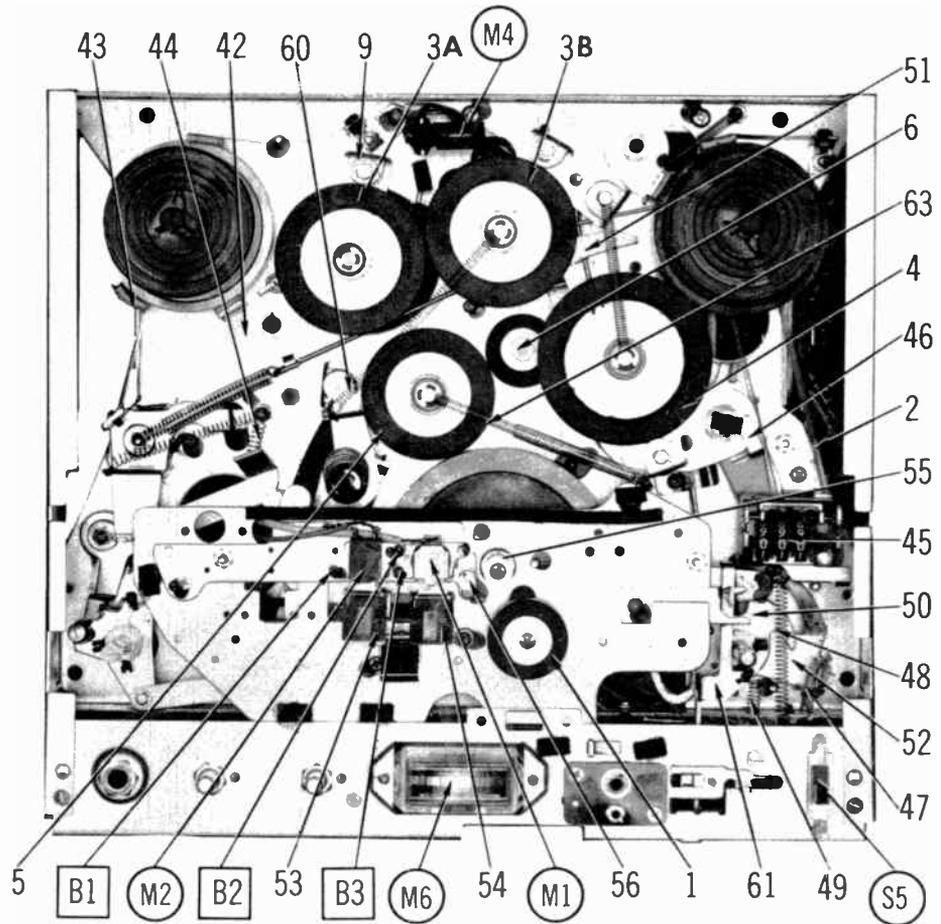

Cam (50) also pulls Link (12) to pivot Arm (11), pulling Arm (10) to move Idler (4) from Pulley (8).

Cam (50), at the same time, pulls Link (13) to pivot Arm (23), allowing Arm (22), pulled by Spring (60), to press Idler (3B) against Idler (3A) and pulley (6). Idler (3A), supported by Arm (9), contacts Pulley (20).

The motor, through Pulley (6), Idler (3B), Idler (3A), and Pulley (20), drives Rest (18).

### Stop

Moving the Function Selector to Stop allows Springs (25), (27), (40), and (60) to reverse the sequences of "Play" and "Record". Springs (25), (27), (47), (59), and (40) reverse the "Fast Forward" sequence. Springs (25), (27), (40), and (28) reverse the "Rewind" sequence.

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 7 1/2 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 7 1/2 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 3/4 ounce. Controlled by condition of Felt (17) and tension of Spring (62).
Fast Forward Take-up Torque	Nominal value 4 ounces. Controlled by condition of Idler (4).
Rewind Torque	Nominal value 2 1/2 ounces. Controlled by condition of Idlers (3A) and (3B).
Supply Reel Drag	Nominal value 1/4 ounce. Controlled by repositioning Assembly (21).
Take-up Reel Drag	Nominal value 1/8 ounce. Controlled by repositioning Assembly (26).
Pressure Roller Pressure	Nominal value 12 ounces. Controlled by tension of Spring (48).
Braking Torque	Measured in Stop. Nominal value 2 ounces counterclockwise on Supply reel. Nominal value 3 ounces clockwise on take-up reel. Controlled by condition of pads on Arms (24) and (42).
Pause Braking Torque	Measured counterclockwise on supply reel. Nominal value 1 1/4 ounces. Controlled by condition of pad on Assembly (43).
Pressure Pad Pressure	Nominal value 1/2 ounce. Controlled by repositioning Assemblies (53) and (54).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	Adjust B1 and B2 equally in opposite directions until pole piece is perpendicular to lateral tape motion.
Record/Play Head Height	No adjustment provided.
Record/Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across speaker and adjust B3 for maximum peak.
Erase Current	Nominal value 90ma (30V rms) in Head (M2). No adjustment provided.
Record Bias	Nominal value 19V rms (4.6ma) across Head (M1). Controlled by setting of R3.
Bias Oscillator	Nominal frequency 50KC. No adjustment provided.
Amplifier and Record Level Indicator Calibration	Place unit in the record function and turn Volume and Tone controls fully clockwise. Apply a 1000-cycle tone at .012V rms to the mic input. Adjust R5 for .03V rms across Line Output jack. Short secondary of L1 and adjust R4 for .23V rms across Head (M1). Remove short and adjust R6 for normal maximum peak on Record/Batt Level Meter.
RF Trap.	With unit in the record function, adjust L3 for MINIMUM RF at point $\diamond$ .
Battery Level Indicator Adjust	Connect a 7.5VDC power supply to battery terminals, place unit in the play function, and adjust R7 for a reading at the low side of the red section of the Record/Batt. Level Meter.

## TROUBLE CHART

**IMPORTANT :** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Felt (17) dirty or worn.</li> <li>2. Spring (62) weak.</li> <li>3. Idler (4) dirty, worn, or binding.</li> <li>4. Pulley (8) binding.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Idler (4) dirty or worn.</li> <li>2. Spring (28) stretched.</li> </ol>
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Excessive Play take-up Torque.</li> <li>3. Pressure Roller Pressure inadequate.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Idler (3A) and (3B) dirty, worn, or binding.</li> <li>2. Spring (60) stretched.</li> <li>3. Pulley (20) binding.</li> </ol>
Supply reel spills tape in forward positions.	<ol style="list-style-type: none"> <li>1. Assembly (21) supplying inadequate drag.</li> </ol>
Take-up reel spills tape in Rewind.	<ol style="list-style-type: none"> <li>1. Assembly (26) supplying inadequate drag.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Pads on Arms (24) and (42) dirty or worn.</li> <li>2. Springs (27) and (25) stretched.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Idler (5) dirty, worn, or binding.</li> <li>2. Bearing (55) binding.</li> <li>3. Motor defective or not supplied with power.</li> <li>4. Spring (63) stretched.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Capstan bent.</li> <li>3. Excessive Play Take-up Torque.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Roller (1) dirty, worn, or binding.</li> <li>2. Idler (5) dirty or worn.</li> <li>3. Flywheel (33) binding.</li> <li>4. Excessive Play Take-up Torque.</li> <li>5. Motor defective.</li> <li>6. Inadequate Pressure Roller Pressure.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misadjusted, or defective.</li> <li>2. Amplifier defective.</li> <li>3. Bias Oscillator defective.</li> <li>4. Pad on Assembly (54) matted or worn.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misadjusted, or defective.</li> <li>2. Pad on Assembly (53) matted or worn.</li> <li>3. Head (M1) supplied with insufficient current.</li> </ol>

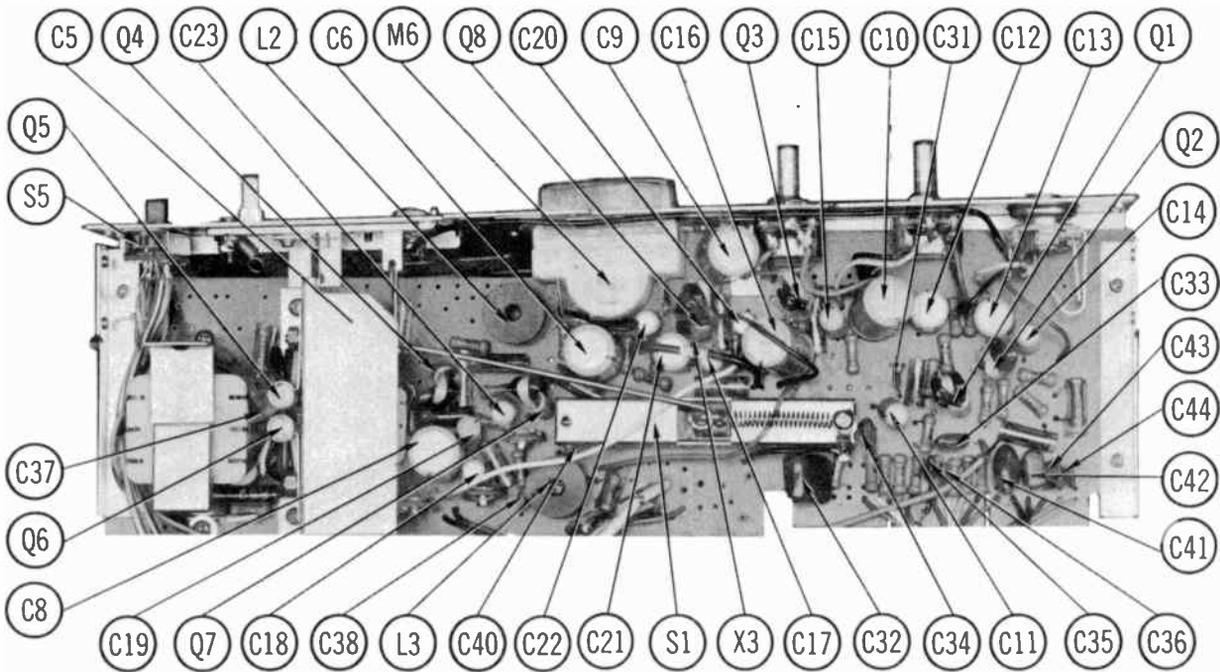

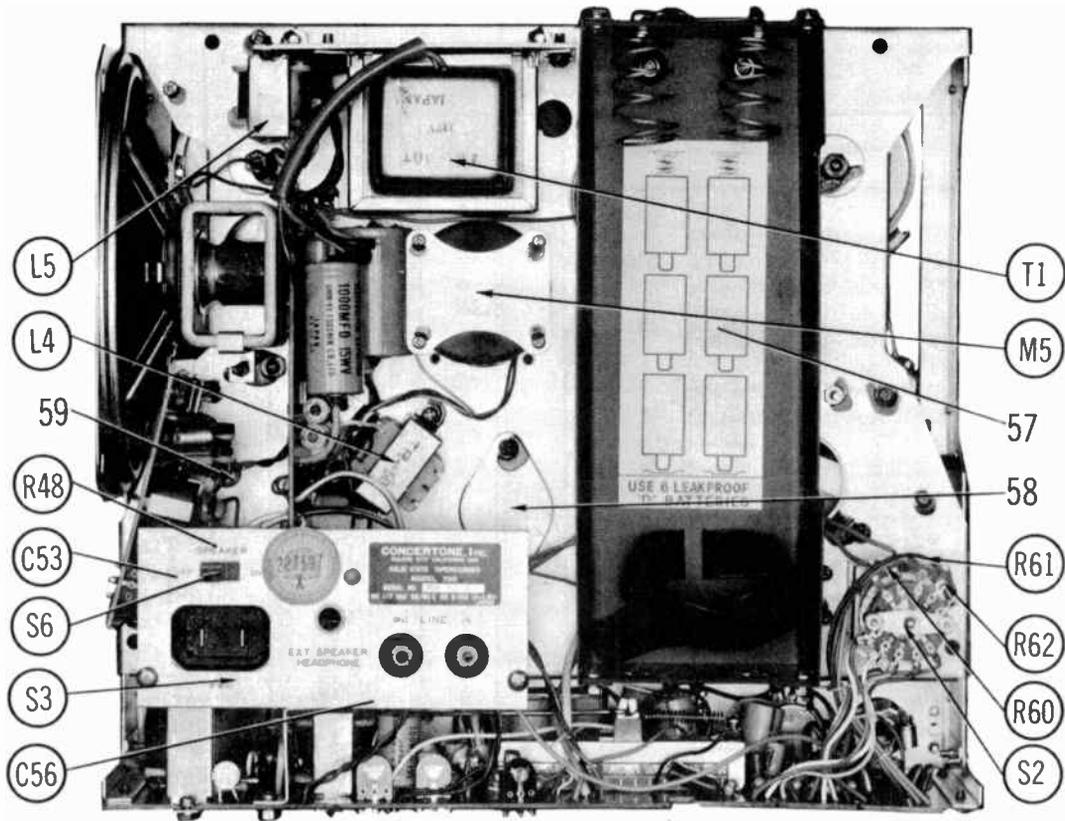

Refer to "General Servicing Information" on page 4.

TRADE NAME: General Electric Model M8040A  
 SUPPLIER: For Current Address, See Annual Index  
 TYPE SET: 2-Speed, 2-Track Monaural Recorder  
 POWER SUPPLY: 12 Volts DC or 110 - 120 Volts AC,  
 60 Cycles  
 RATING: 4 Watts, 45ma @ 117Volts AC (with Motor)

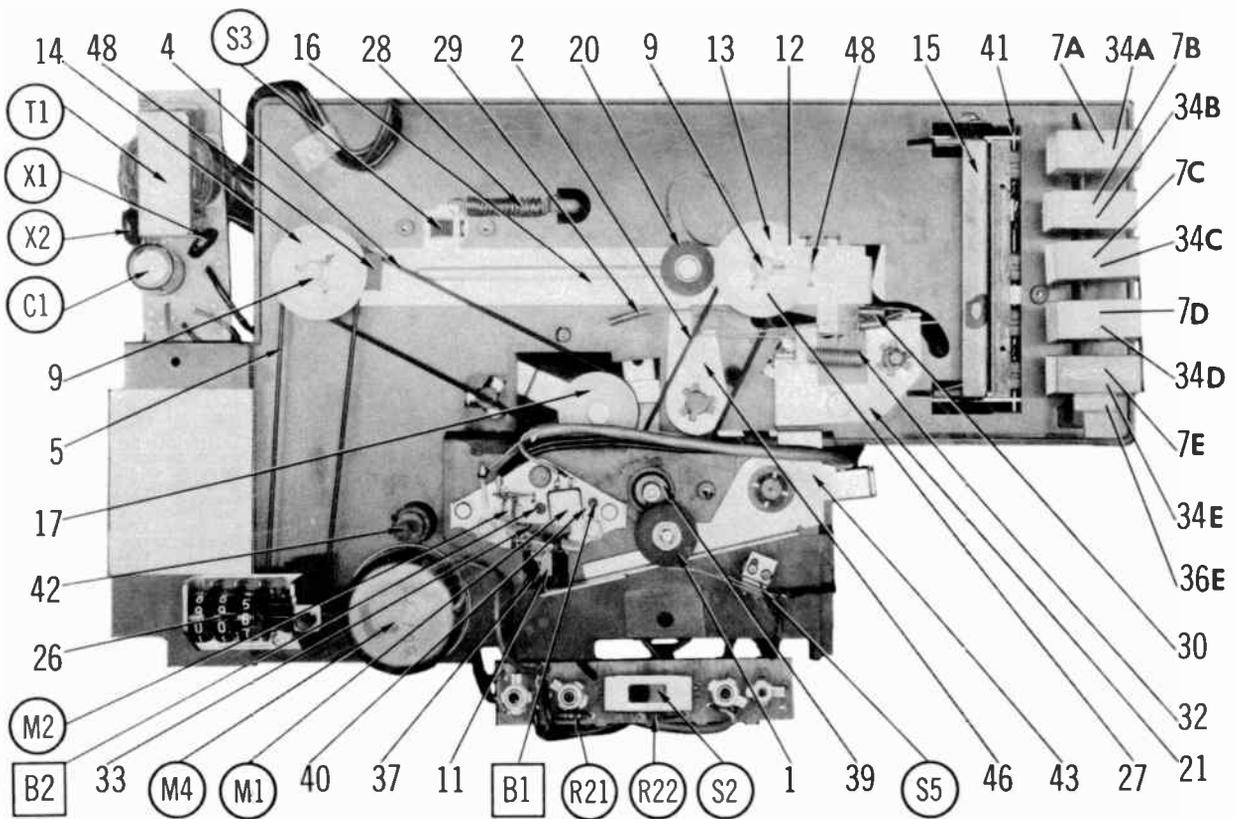

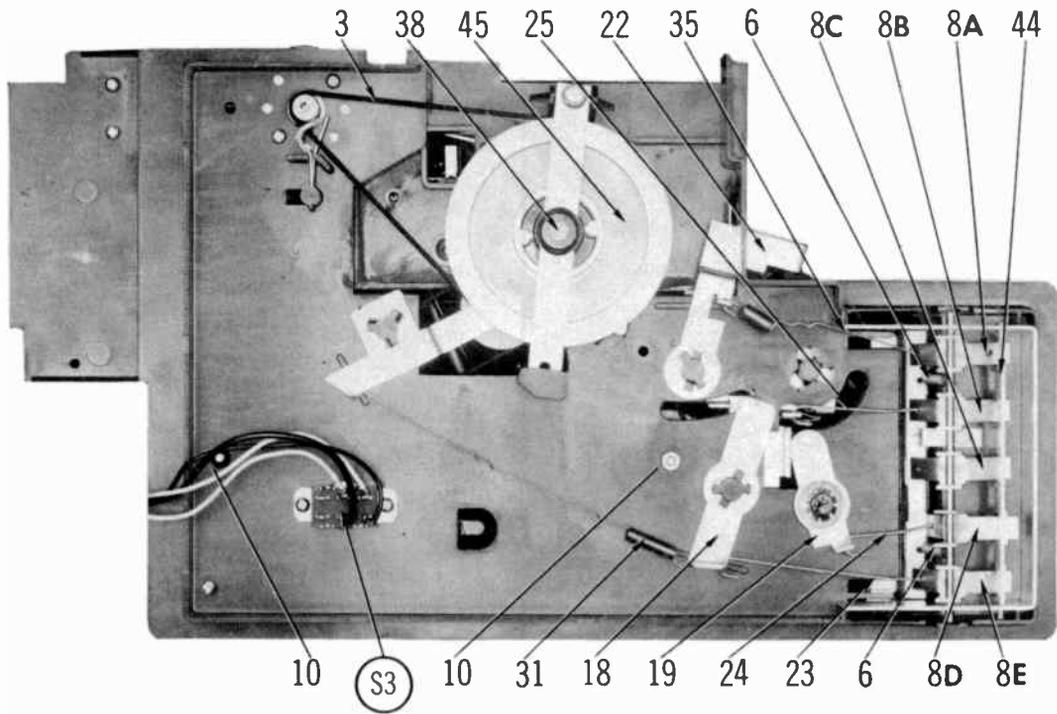

This unit is a two-track monaural recorder having two speeds: 1 7/8 and 3 3/4 ips.

Jacks are provided for microphone, remote operation, and earphone.

Power is supplied by eight, 1 1/2-volt "D" cells or 110 - 120 volts AC, 60 cycles.

GENERAL ELECTRIC MODEL M8040A

# OPERATING INSTRUCTIONS

## Record

1. Press Stop button, thread the tape, select the speed, and move Monitor switch to Off.
2. Connect the microphone, move the remote switch on microphone to the on position, press and hold Record Interlock, and press Record button.
3. Set the recording level with Volume control and record.

## Play

1. Repeat step 1 of "Record", press Play button, and adjust Volume and Tone controls as desired.

## Monitor

1. Move Monitor switch to On and separate the speaker and microphone to monitor the recording source.

## Remote Operation

1. If remote operation other than with switch on the microphone is desired, connect an S. P. S. T. switch and a suitable cable to Mic Remote Operation jack.

## DISASSEMBLY

1. Remove the top cover and speaker by spreading the top cover near the hinge points and removing two knobs.
2. Remove two Phillips screws from the rear of deck. (Not used in early production models.)
3. Insert a screwdriver between the deck cover and the cabinet bottom at each catch point along the sides and back, and pry laterally to release the catch tabs from the cabinet bottom.
4. Remove the nuts from four jacks and tilt the deck cover forward and remove deck cover.
5. Remove the Phillips screw near the take-up spindle and the retaining button from the fishpaper at the left of chassis.
6. Slide the AC jack from the retaining tabs, lift the mechanism slightly and slide the connector board from the retaining posts.
7. Remove the mechanism and chassis assembly.

## SEQUENCE OF OPERATION

### Play

Pressing the Play button causes Arm (7C) to pivot Lever (8C), raising Plate (15). Plate (15) locks Lever (8C) and releases Lever (8D) to release Link (24), releasing Lever (19). Lever (19) releases Plate (16), pulled by Spring (28), to move Pads (48).

Plate (16) also actuates Switch (S3) and releases Arm (43), pulled by Spring (32), to move Pinchwheel (1) against the capstan. Arm (43) also releases Link (37) to allow Bracket (11), pulled by Spring (33), to press the pads against Heads (M1) and (M2).

The motor, through Belt (3), drives Flywheel (45). Flywheel (45), through Belt (2), Hub (12), and Washer (27), drives Hub (13).

### Record

The Record sequence is the same as "Play" except Arm (7E) pivots Lever (8A) to raise Plate (15). Lever (8A) also pulls Link (35) to pivot Lever (22), actuating Switch (S1).

### Fast Forward

Pressing the Fast Forward button causes Arm (7D) to pivot Lever (8B), raising Plate (15). Plate (15) locks Lever (8B) and releases Lever (8D) to allow Link (24) to release Lever (19). Lever (19) allows

Plate (16), pulled by Spring (28), to move Pads (48) and to actuate Switch (S3).

Lever (8B) pulls Link (25) to pivot Lever (21), locking Arm (43) and pulling Spring (30). Spring (30) pivots Arm (46) to press Pulley (20) against Hubs (12) and (13).

The motor, through Belt (3), Flywheel (45), Belt (2), Hub (12), and Pulley (20), drives Hub (13).

### Rewind

Pressing the Rewind button causes Arm (7A) to pivot Lever (8E), raising Plate (15) to allow Lever (8D) to release Link (24). Link (24) allows Lever (19) to release Plate (16), moving Pads (48) and actuating Switch (S3).

Lever (7E) also pulls Link (23) to pivot Lever (18), pulling Spring (31) to pivot Lever (47). Lever (47) causes Pulley (17) to press Belt (4) against Flywheel (45).

The motor, through Belt (3), Flywheel (45), and Belt (4), drives Hub (14). Hub (14), through Belt (5), drives Counter (26).

### Stop

Pressing the Stop button reverses the sequence of any function.

## CLEANING

## LUBRICATING

## HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 3 3/4 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 3 3/4 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 1/2 ounce. Controlled by tension of Washer (27).
Fast Forward Take-up Torque	Nominal value 1 1/2 ounces. Controlled by tension of Spring (30).
Rewind Torque	Nominal value 3 1/4 ounces. Controlled by tension of Spring (31) and condition of Belt (4).
Supply Reel Drag	Nominal value 3/8 ounce. Controlled by drag of Belts (4) and (5).
Take-up Reel Drag	Nominal value 3/8 ounce. Controlled by Play Take-up Torque.
Pinchwheel Pressure	Nominal value 12 ounces. Controlled by tension of Spring (32).
Braking Torque	Measured in Stop. Nominal value 1 ounce measured counterclockwise on supply reel and clockwise on take-up reel. Controlled by condition of Pads (48) and angle of pad support tabs on Plate (16).
Pressure Pad Pressure	Nominal value 1 ounce. Controlled by tension of Spring (33).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/Play Head Height	No adjustment provided.
Record/Play Head Azimuth	Play an azimuth test tape, connect an Audio VTVM across output, and adjust B1 and B2 equally in opposite directions for maximum output.
Erase Current	Nominal value 3.5ma (2.35VDC). No adjustment provided.
Record Level Indicator Calibration	Apply a 1000-cycle tone to the mic input. Adjust Volume Control for .12V rms across Head (M1). Normal peak should be indicated. No adjustment provided.

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Insufficient tension being applied by Washer (27).</li> <li>2. Belt (2) dirty or worn.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Spring (30) applying inadequate tension.</li> <li>2. Pulley (20) binding, dirty, or worn.</li> </ol>

## TROUBLE CHART (Continued)

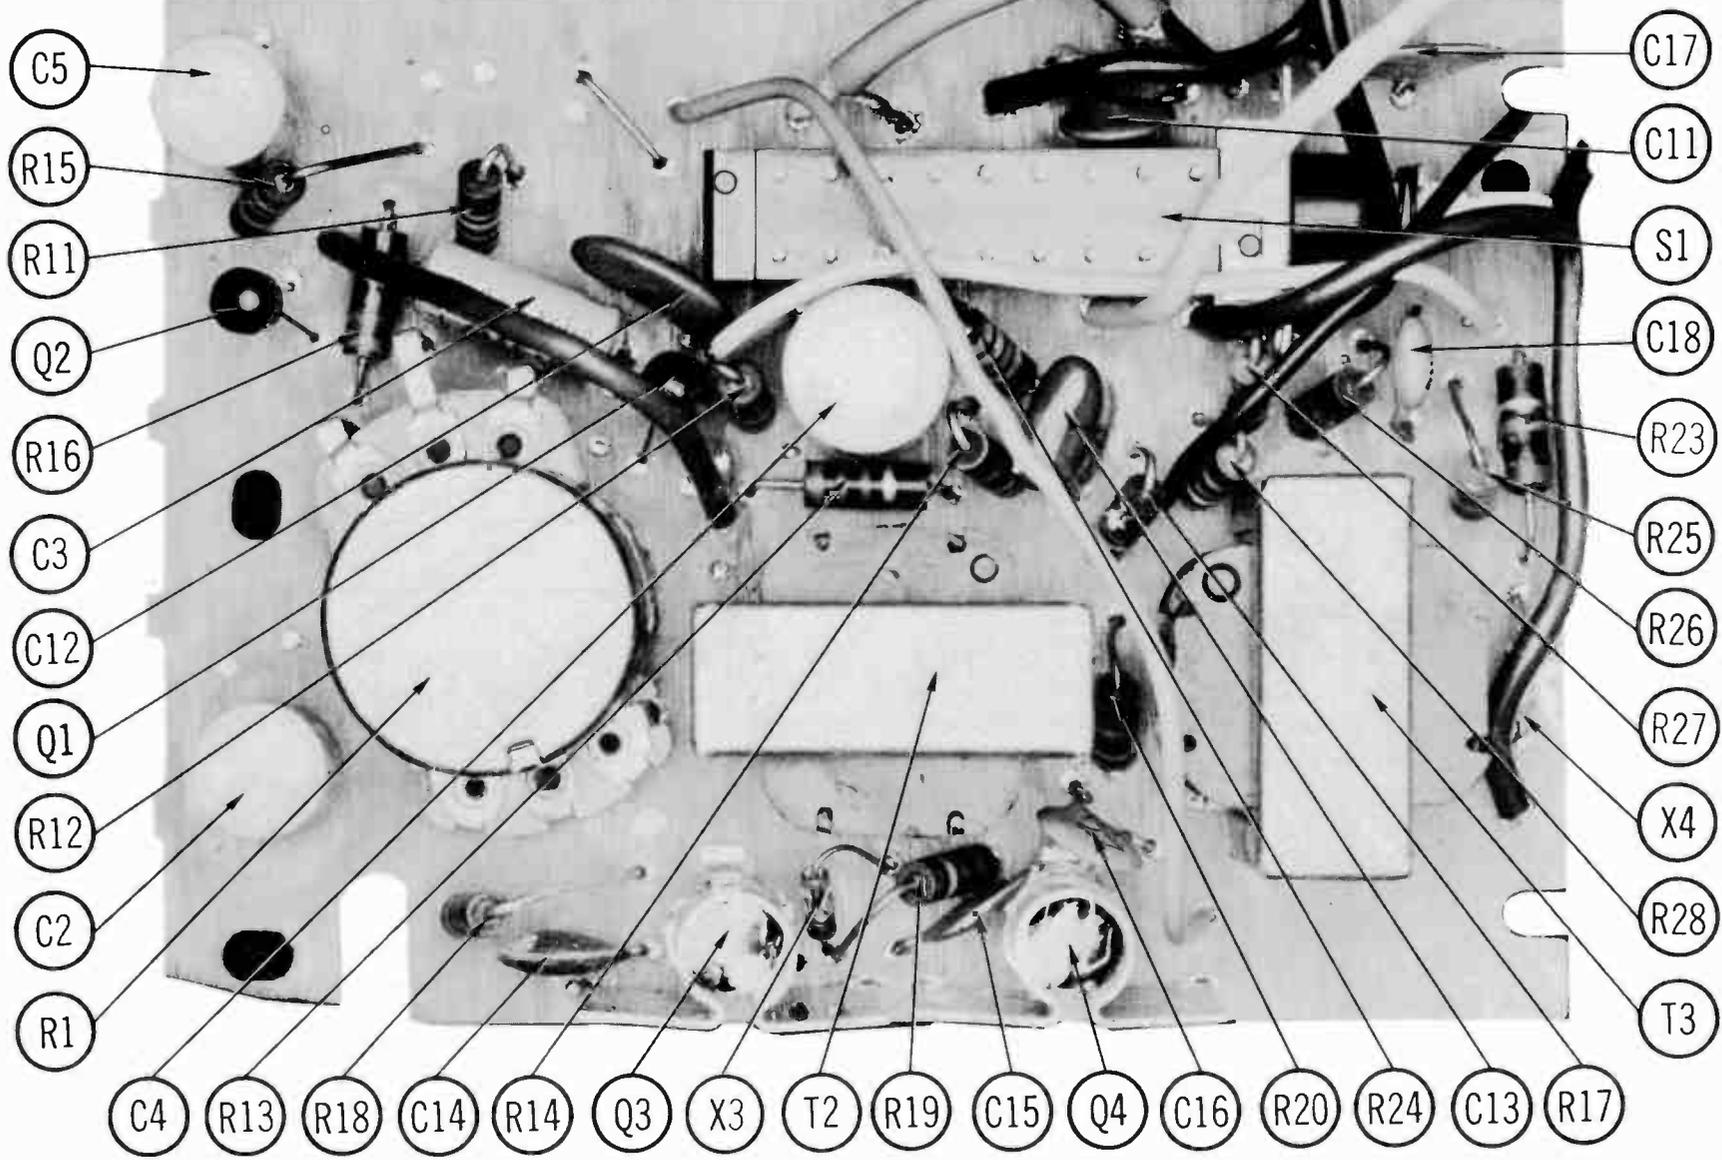

SYMPTOM	REMARKS
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Belt (4) dirty or worn.</li> <li>2. Spring (31) applying inadequate tension.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Brake Pads (48) worn, dirty, or misadjusted.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (3) worn, dirty, or broken.</li> <li>2. Motor defective or not being supplied with power.</li> <li>3. Bearings (38) and (39) binding.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Excessive take-up torque.</li> <li>2. Capstan bent.</li> <li>3. Pinchwheel (1) worn.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Belt (2) dirty or worn.</li> <li>2. Motor defective.</li> <li>3. Excessive take-up torque.</li> <li>4. Pinchwheel (1) dirty or worn.</li> <li>5. Pinchwheel pressure inadequate.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misaligned, or defective.</li> <li>2. Amplifier circuits defective.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty or defective.</li> <li>2. Head (M2) being supplied with inadequate bias.</li> </ol>

## CIRCUITRACE<sup>®</sup>

TRADE NAME : General Electric Models M8050A, M8060A  
 SUPPLIER : For Current Address, See Annual Index  
 TYPE SET : 2-Speed Recorders  
 POWER SUPPLY : 110-120 Volts AC, 60 Cycles  
 RATING : 25 Watts, .48 Amp @ 117 VAC (With Motor)

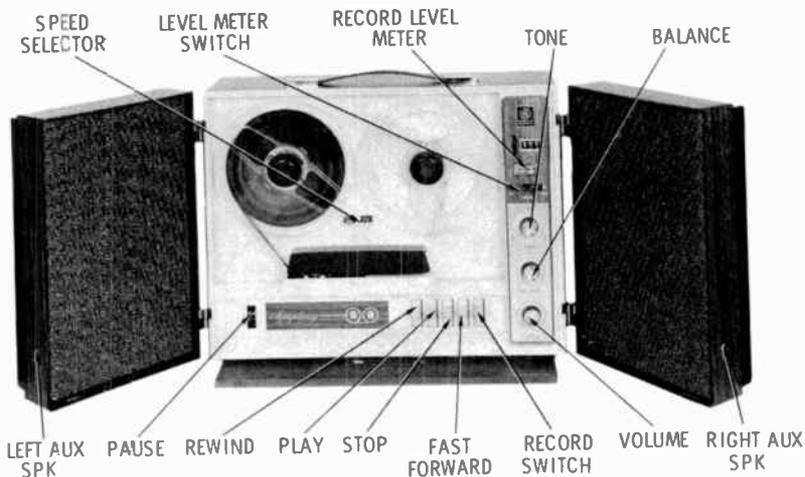

These units have two speeds: 3 3/4 and 7 1/2 ips. Model M8060A is a four-track, stereo recorder and Model M8050A is a two-track, monaural recorder.

Jacks are provided for microphone, external speaker, and earphone.

A power source of 110 - 120volts AC, 60 cycles is required.

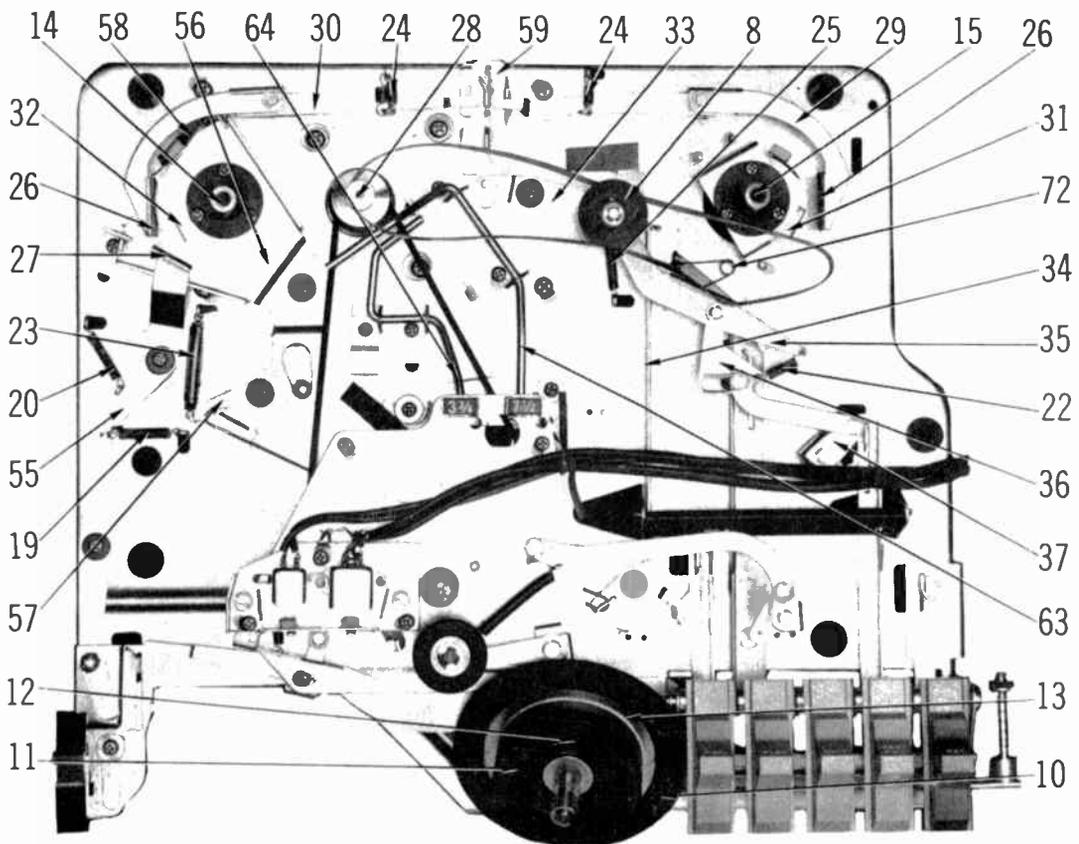

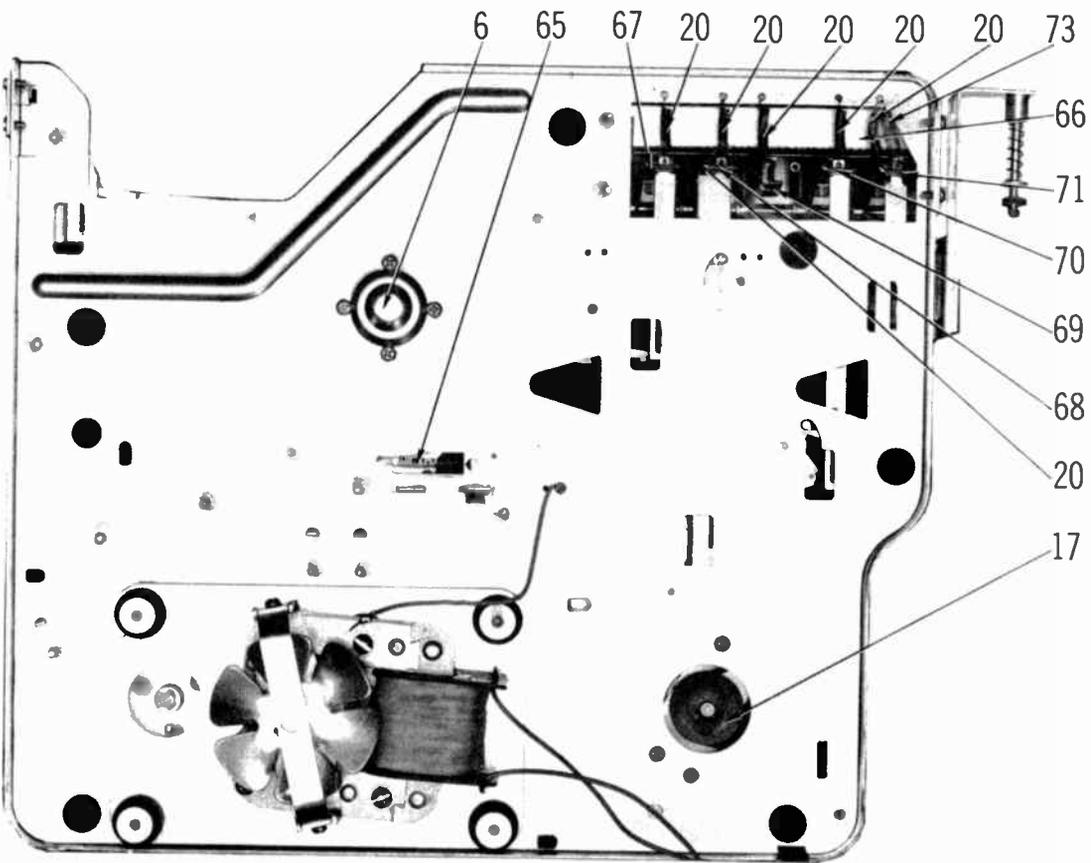

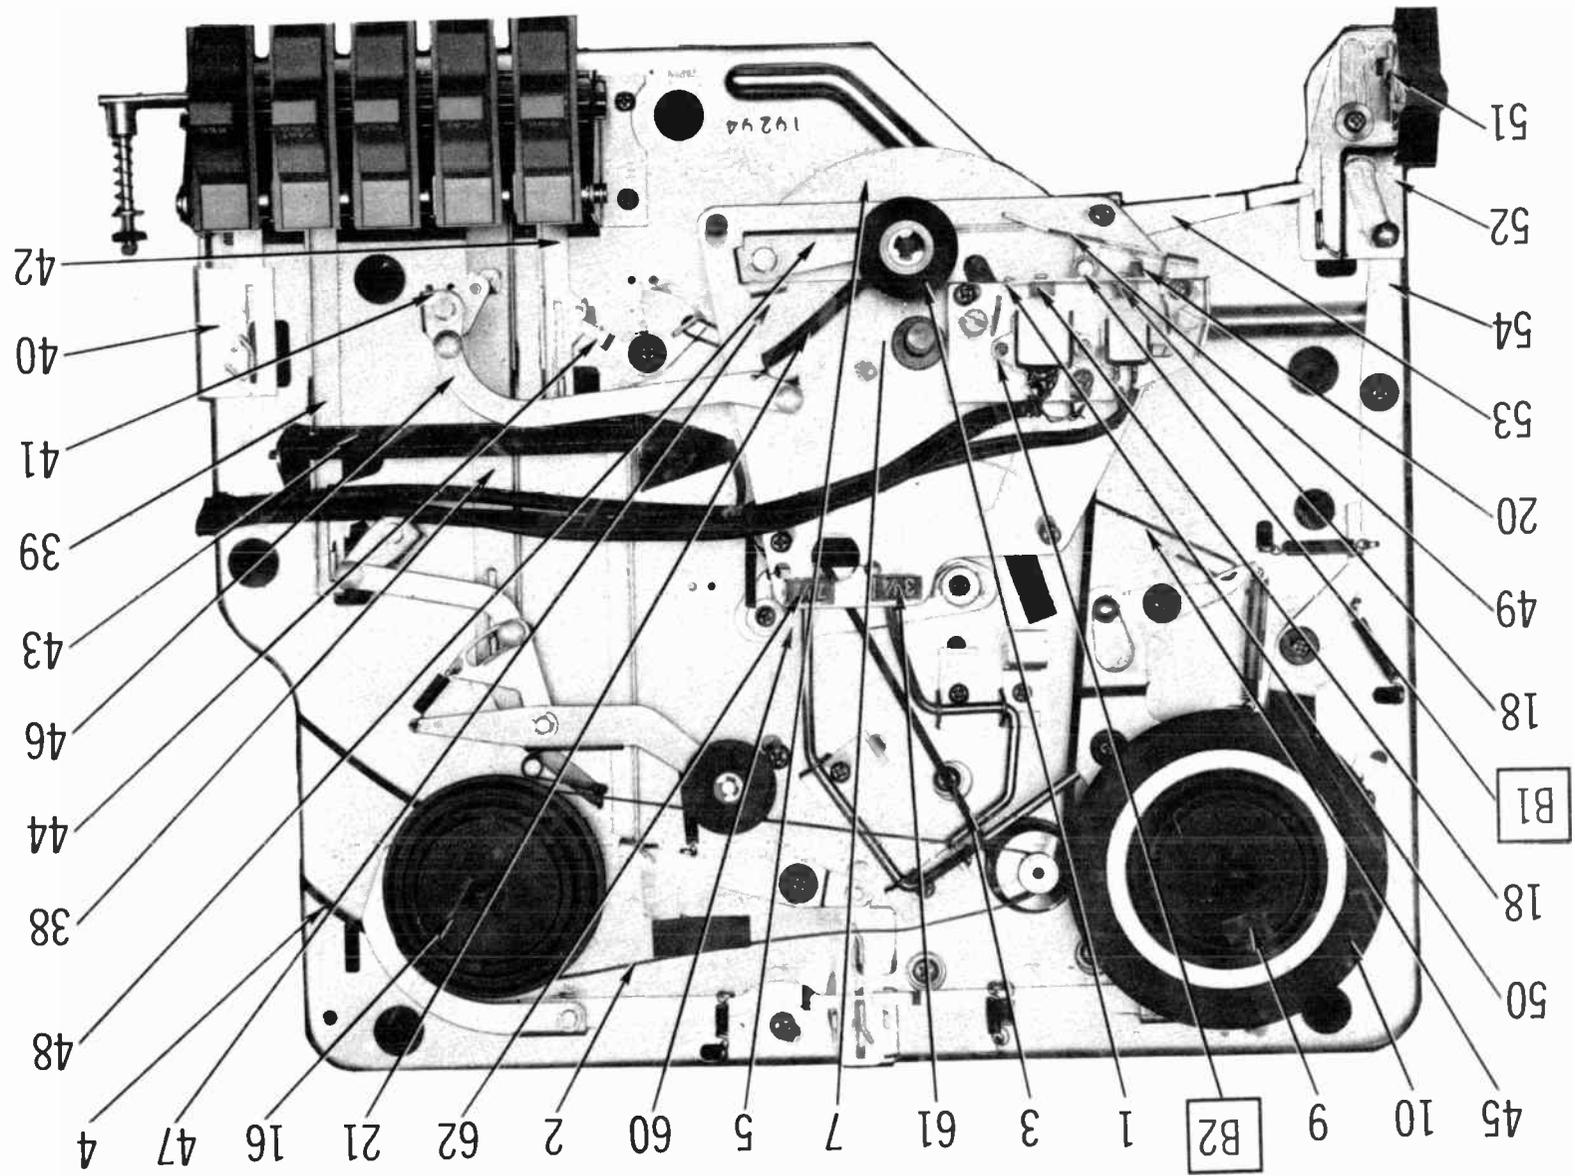

MODEL M8050A

MODEL M8060A

GENERAL ELECTRIC MODELS M8050A, M8060A

# OPERATING INSTRUCTIONS

## Record

1. Press Stop button, select the speed, thread the tape, and move Monitor Switch to Off.
2. (Model M8060A only) Press Pause button, connect two sources, press Play and Record buttons, move Meter Switch to Left to set left recording level with Volume control, and move Meter Switch to Right to set right recording level with Volume control. Compromise setting of Volume controls.
3. (Model M8050A only) Press Pause button, connect a source, press Play and Record buttons, and set recording level with Volume control.

4. Raise Pause button to record.

## Play

1. Repeat step 1 of "Record", press Play button, and adjust controls as desired.

## Monitor

1. Move Monitor Switch to On and separate microphone and speakers to monitor the source while recording.

## DISASSEMBLY

1. Remove knobs, remove four Phillips screws from wells in back of cabinet, lift deck cover to remove counter belt and disconnect meter, and remove deck cover.

(Model M8060A only) Remove screw holding Meter Switch.)

2. Remove four screws from power supply panel and remove power supply board and audio board.
3. Disconnect speakers and AC cord.
4. Remove five 1/4-inch screws from deck and remove mechanism and chassis assembly.

## SEQUENCE OF OPERATION

### Play

Pressing the Play button pivots Lever (68), locked by Plate (66), to move Slide (38), swinging Plate (43) to move Slide (34). Slide (34) pivots Lever (33) to pull Slide (59), pivoting Arms (29) and (30) to move Shoes (26) from Reel (16) and Drum (11).

Slide (38) also pulls Spring (72) to pivot Arm (35), pressing Roller (8) against Belt (2). The motor, through Pulley (28) and Belt (2), drives Reel (16), and also, through Pulley (28) and Belt (3), drives Flywheel (5).

Slide (38) also pivots Lever (41) to pull Link (46), pulling Link (47) to pull Spring (21). Spring (21) pulls Arm (48) to press Pinchwheel (1) against the capstan. Arm (48) releases Lever (49), pulled by Spring (20), causing Bracket (50) to move Pads (18) against Heads (M1) and (M2).

### Record

The Record sequence is the same as "Play" except the Record push button is also depressed to pivot Lever (71), moving Assembly (40) to actuate Switch (S1).

### Fast Forward

Pressing the Fast Forward button pivots Lever (70) to push Slide (39), swinging Plate (43) to move Slide (34). Slide (34) pivots Lever (33) to pull Slide (59), pivoting Arms (29) and (30) to move Shoes (26) from Reel (16) and Drum (11).

Slide (39) also causes Lever and Link (37) to pivot Lever (36), pulling Spring (22). Spring (22) pulls

Arm (35) to press Roller (8) against Belt (2). The motor, through Pulley (28) and Belt (2), drives Reel (16).

### Rewind

Pressing the Rewind button pivots Lever (67) to push Slide (42), swinging Plate (43) to move Slide (34). Slide (34) pivots Lever (33) to pull Slide (59), pivoting Arms (29) and (30) to move Shoes (26) from Reel (16) and Drum (11).

Slide (42) also pivots Lever (44) to pull Link (45), pivoting Arm (57). Arm (57) releases Plate (56), pulled by Spring (58), to press Idler (10) against Pulley (28).

The motor, through Pulley (28), Idler (10), Ring (13), and Drum (11), drives Hub (9).

### Stop

Pressing the Stop button allows Springs (20), (72), (24), (25), and (21), plus (73) in Record, to reverse the "Play" sequence. Springs (20), (22), (25), (72), and (24) reverse the "Fast Forward" sequence. Springs (20), (24), (25), and (23) reverse the "Rewind" sequence.

### Pause

Moving the Pause button down pivots Lever (51) to slide Plate (52), pivoting Lever (53) to move Arm (48).

Simultaneously, Plate (52) swings Lever (54) to allow Arm (55), pulled by Spring (20), to press Shoe (27) against Drum (11).

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 7 1/2 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 7 1/2 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 1 1/2 ounces. Controlled by tension of Spring (72) and condition of Belt (2).
Fast Forward Take-up Torque	Nominal value 8 ounces. Controlled by moving Spring (22) from hole to hole in Arm (35), and by condition of Belt (2).
Rewind Torque	Nominal value 8 ounces. Controlled by condition of Idler (10) and tension of Spring (58).
Supply Reel Drag	Nominal value 1/2 ounce. Controlled by tension of Plate (32).
Take-up Reel Drag	Nominal value 1/4 ounce. Controlled by tension of Plate (31).
Pressure Roller Pressure	Nominal value 1 3/4 pounds. Controlled by tension of Spring (21).
Braking Torque	Measured in Stop. Nominal value 12 ounces counterclockwise on supply reel. Nominal value 10 ounces clockwise on take-up reel. Controlled by tension of Springs (24) and condition of Shoes (26).
Pause Brake Torque	Measured in Play/Pause. Nominal value 12 ounces counterclockwise on supply reel. Controlled by condition of Shoe (27) and tension of Spring (20).
Pressure Pad Pressure	Nominal value 1 ounce measured at B1. Controlled by tension of Spring (20).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/ Play Head Height	No adjustment provided.
Record/ Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across output and adjust B2 for maximum.
Erase Current	Nominal values 3ma 2.3VDC (Model M8050A) and 3.5ma 2.5VDC (Model M8060A). No adjustment.
Record Bias	Nominal values 20Vrms 2.2ma (Model M8050A), and 12.5V rms .52ma (Model M8060A) across each section of Head (M1). Controlled by the setting of the slug in L1.
Bias Oscillator	Nominal values 30KC (Model M8050A) and 40KC (Model M8060A). Dependent on Record Bias voltage.
Record Level Indicator Calibration	Disable the bias oscillator by shorting the secondary of L1. Apply a 1000-cycle tone to a mic input. Adjust Volume control for .11V rms across the appropriate section of Head (M1). Normal peak should be indicated on the Record Level Meter. No adjustment.

GENERAL ELECTRIC MODELS M8050A, M8060A

## TROUBLE CHART

**IMPORTANT :** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Belt (2) dirty, worn, or broken.</li> <li>2. Reel (16) binding.</li> <li>3. Inadequate take-up torque.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Inadequate Fast Forward torque.</li> <li>2. Belt (2) dirty or worn.</li> </ol>
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Excessive take-up torque.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Idler (10) dirty or worn.</li> <li>2. Ring (13) dirty or worn.</li> </ol>
Supply reel spills tape in forward positions.	<ol style="list-style-type: none"> <li>1. Plate (32) supplying inadequate drag.</li> </ol>
Take-up reel spills tape in Rewind.	<ol style="list-style-type: none"> <li>1. Plate (31) supplying inadequate drag.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Shoes (26) dirty or worn.</li> <li>2. Springs (24) stretched.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (2) dirty, worn, or broken.</li> <li>2. Motor defective or not supplied with power.</li> <li>3. Flywheel (5) binding.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Excessive take-up torque.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Excessive take-up torque.</li> <li>2. Roller (1) dirty, worn, or binding.</li> <li>3. Motor defective.</li> <li>4. Bearing (7) binding.</li> <li>5. Hub (9) binding.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misaligned, or defective.</li> <li>2. Amplifiers defective.</li> <li>3. Pad (18) matted or worn.</li> <li>4. Bias oscillator defective.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty, defective, or not supplied with power.</li> <li>2. Pad (18) matted or worn.</li> </ol>

\* Refer to substitution chart

NOTE: Right channel not used in MODEL M 8050

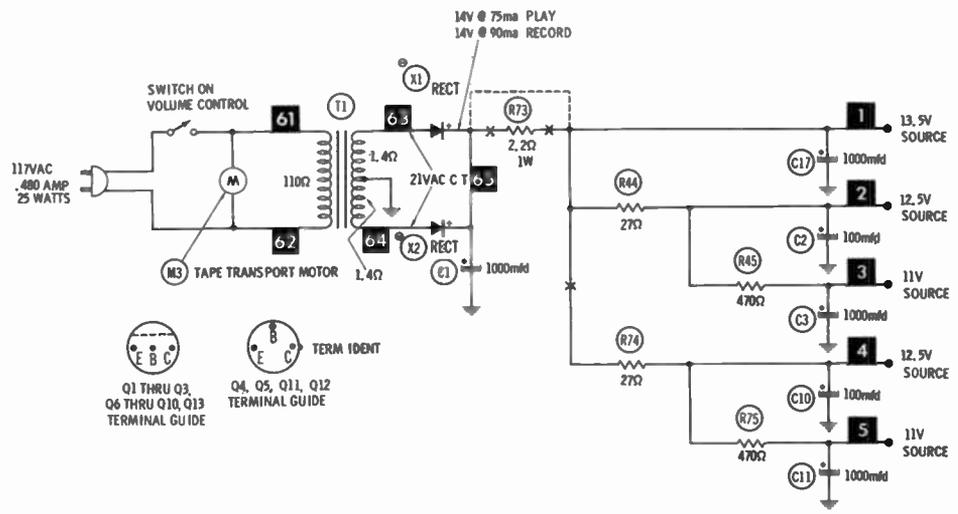

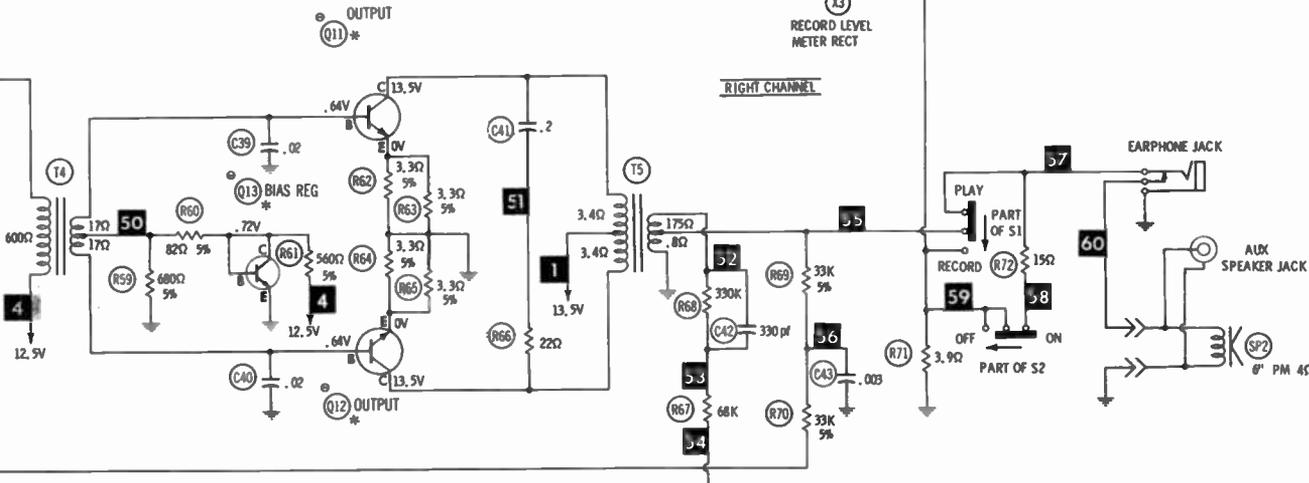

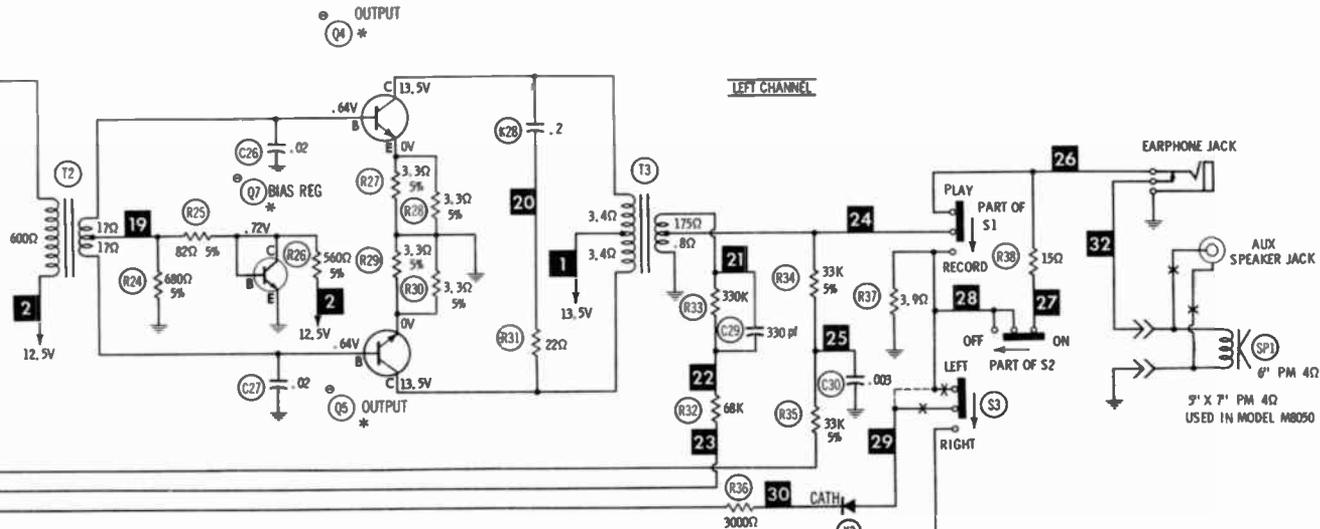

Resistors are 1/2 watt or less and rated 10% or 20% unless otherwise indicated.

- ① See parts list
- 1. Voltage measurements taken with vacuum tube voltmeter.
- 2. All controls set for normal operation, no signal applied.
- 3. Measured values are from socket pin or terminal to common on ground.
- 4. All terminals viewed from bottom unless otherwise designated.
- 5. Numbers assigned to terminals may not be found on the unit.
- 6. Supply voltage maintained at rated value for voltage readings.
- 7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

Arrows at controls indicate clockwise rotation viewed from actuator end.

\* Measured in "Record" with an audio VTVM

TRADE NAME : Lafayette Model RK-860 (99-1530WX)  
 SUPPLIER : For Current Address, See Annual Index  
 TYPE SET : 3-Speed, 4-Track Monaural Recorder  
 POWER SUPPLY : 110-120 Volts AC, 60 Cycles  
 RATING : 60 Watts, .67 Amp @ 117 VAC (Record with Motor)  
 56 Watts, .63 Amp @ 117 VAC (Play with Motor)

This unit is a four-track, monaural recorder having three speeds: 1 7/8, 3 3/4, and 7 1/2 ips.

Jacks are provided for both low- and high-level inputs, external amplifier, external speaker, and stereo headphones.

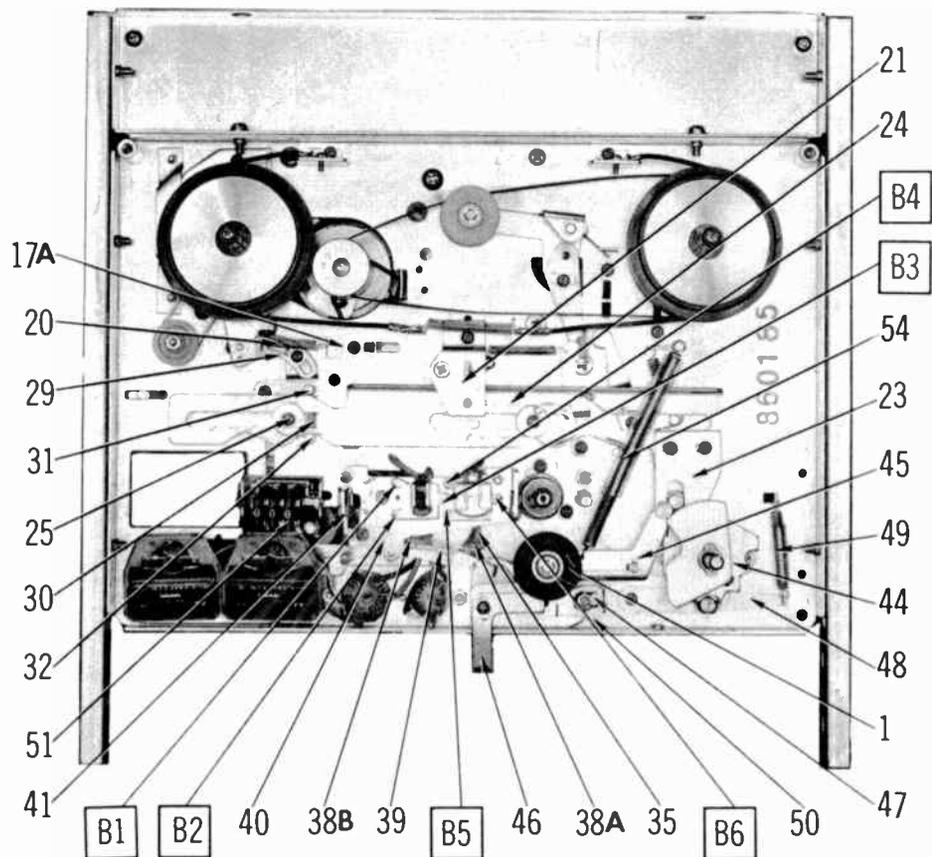

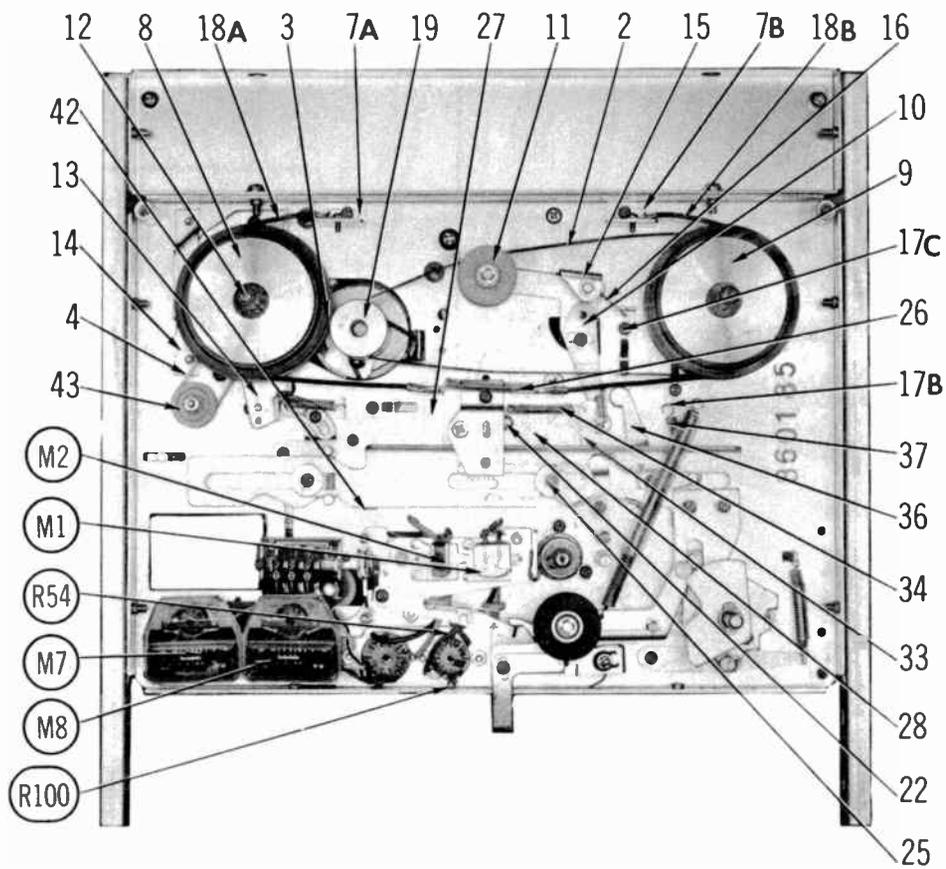

A power source of 110 - 120 volts AC, 60 cycles is required.

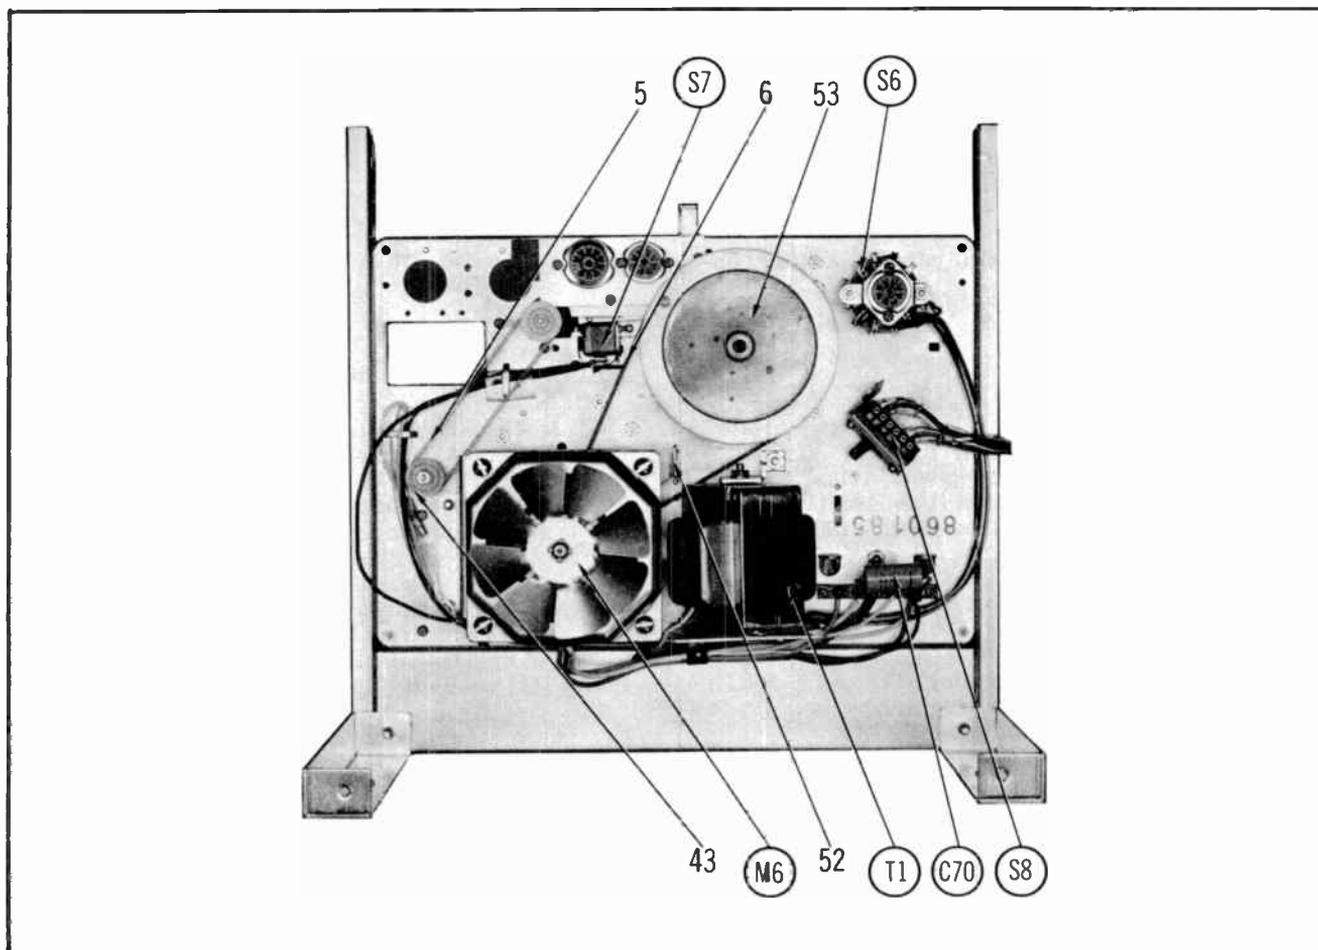

LAFAYETTE MODEL RK-860 (99-1530WX)

**HOWARD W. SAMS & CO., INC.** Indianapolis, Indiana 46206

## OPERATING INSTRUCTIONS

### Monaural Record

1. Move Function Selector to Stop, thread the tape, and select the speed.
2. Raise both of the speaker buttons, connect a source to a left input, and press and hold Left Record Switch button while moving Function Selector to Pause.
3. Set the recording level with Left Volume control and move Function Selector to Run.
4. To record the right-channel tracks, repeat steps 1 - 3 except connect the source to a right input, press Right Record Switch button, and use Right Volume control to set the record level.

### Monaural Play

1. Repeat step 1 of "Monaural Record" press Left Speaker On/Off button, move Function Selector to Run, and adjust Left Volume and Tone controls as desired.
2. To play right-channel tracks, repeat step 1 of "Monaural Record", press Right Speaker On/Off button, move Function Selector to Run, and adjust Right Volume and Tone controls as desired.

### Stereo Record

1. Repeat the procedure outlined under "Monaural

Record". However, press both Left and Right Record Switch Buttons, connect sources to Left and Right inputs, and set the recording level for each channel with the appropriate Volume control.

### Stereo Play

1. Repeat the procedure outlined under "Monaural Play". However, press both of the speaker buttons and adjust Left and Right Volume and Tone controls as desired.

### Input Selector

1. Raise the Input Selector to use a microphone in Left or Right inputs and to use the high-level inputs on the rear of unit.
2. Press the Input Selector when connecting a magnetic-phono cartridge directly to Left or Right Input jacks.

### Monitor

1. To monitor the recording source, press appropriate speaker On/Off button or connect stereo headphones to Stereo Headphone Output jack.

## DISASSEMBLY

1. Remove two Phillips screws from upper and lower front trim strips.
2. Remove two Phillips screws from top of cabinet, two from rear of cabinet, and four from bottom of cabinet.
3. Lay unit facedown, lift off cabinet, and disconnect the speakers.
4. For access to deck mechanism, remove Speed and Function Selector knobs held by setscrews, remove four push-on Volume and Tone knobs, and remove six Phillips screws holding deck plate.

## SEQUENCE OF OPERATION

### Play/Record (Run)

Moving the Function Selector to Run rotates Cam (44), locked by Plate (48), to slide Arm (24), pivoting Plate (32). Plate (32) pivots Arms (27) and (28) to release tension on Wires (18A) and (18B), and also allows Plate (42) to release Switch (S9).

Arm (24) also allows Arm (33), pulled by Spring (34), to release Plate (10) and Arm (15), pivoted by Spring (16), pressing Pulley (11) against Belt (2).

The motor, through Pulley (19) and Belt (2), drives Hub (9). Pulley (19) also drives Belt (6) to drive Flywheel (53).

Cam (44) also releases Arm (45), pulled by Spring (54), to press Roller (1) against the capstan and also to release Arms (46) and (47), pivoted by Spring (50). Arm (45) also releases Arm (40), pulled by Spring (35), to cause Plate (39) to press Pads (38A) and (38B) against Heads (M1) and (M2).

### Pause (From Play/Record)

Moving the Function Selector to Pause rotates Cam (44), locked by Plate (48), to slide Arm (24) pivoting Plate (32). Plate (32) causes Plate (42) to actuate Switch (S9) and also releases Arms (27) and (28) to allow Spring (26) to apply tension to Wires (18A) and (18B).

Arm (24) pivots Arm (33) to pivot Plate (10) and Arm (15), moving Pulley (11) from Belt (2).

Cam (44) also pivots Arm (45) to move Roller (1) from the capstan and also to pivot Arm (40) to cause Plate (39) to move Pads (38A) and (38B) from Heads (M1) and (M2).

### Fast Forward (From Pause)

Moving the Function Selector to Fast Forward rotates Cam (44), locked by Plate (48), to slide Arm (24), pivoting Plate (32). Plate (32) allows Plate (42) to release Switch (S9) and also pivots Arms (27) and (28) to release tension on Wires (18A) and (18B).

Arm (24) releases Arm (33), pulled by Spring (34), and also releases Arm (36), pulled by Spring (37). Arm (36) pivots Plate (10) and Arm (15) to press Pulley (11) against Belt (2). The motor, through Pulley (19) and Belt (2), drives Hub (9).

Cam (44) also pivots Arm (45) to move Roller (1), to pivot Arms (46) and (47), and to pivot Arm (40).

### Rewind

Moving the Function Selector to Rewind rotates Cam (44), locked by Plate (48), to slide Arm (24), pivoting Plate (32). Plate (32) allows Plate (42) to release Switch (S9) and also pivots Arms (27) and (28) to release the tension on Wires (18A) and (18B).

Cam (24) also releases Arm (31) and Plate (29), pulled by Spring (30), to release Plate (13), pulled by Spring (20). Plate (13) moves Hub (8) to press Belt (3) against Pulley (19). The motor through Pulley (19) and Belt (3) drives Hub (8). Hub (8), through Belt (4), Pulleys (43), and Belt (5), drives Counter (51).

### Stop

Moving the Function Selector to Stop reverses the Play/Record or Rewind Sequence.

## CLEANING

## LUBRICATING

## HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Belt (2) dirty, worn, or broken.</li> <li>2. Play Take-up Torque misadjusted.</li> <li>3. Wire (18B) not releasing completely.</li> <li>4. Hub (9) binding.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Fast Forward Take-up Torque misadjusted.</li> <li>2. Belt (2) dirty, worn, or broken.</li> </ol>

## TROUBLE CHART (Continued)

SYMPTOM	REMARKS
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Insufficient Pressure Roller Pressure.</li> <li>2. Excessive Play Take-up Torque.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Belt (3) dirty or worn.</li> <li>2. Rewind Torque misadjusted.</li> <li>3. Hub (8) binding.</li> <li>4. Pulley (19) dirty.</li> </ol>
Reels do not stop immediately when Function Selector is returned to Stop.	<ol style="list-style-type: none"> <li>1. Braking Torque misadjusted.</li> <li>2. Wires (18A) and (18B) dirty or worn.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (6) dirty, worn, or broken.</li> <li>2. Motor defective or not supplied with power.</li> <li>3. Flywheel (53) binding.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Roller (1) worn or dirty.</li> <li>2. Excessive Play Take-up Torque.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Excessive Play Take-up Torque.</li> <li>2. Roller (1) worn or binding.</li> <li>3. Flywheel (53) binding.</li> <li>4. Hub (8) binding.</li> <li>5. Motor defective.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misadjusted, or defective.</li> <li>2. Amplifiers defective.</li> <li>3. Bias oscillator defective.</li> <li>4. Pad (38A) matted or worn.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty, misadjusted, or defective.</li> <li>2. Head (M2) not supplied with current.</li> <li>3. Pad (38B) worn or matted.</li> </ol>

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 7 1/2 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 7 1/2 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 2 ounces. Controlled by repositioning Plate (17C).
Tension Arm Position	Position Plate (10) for 1/4-inch clearance from Arm (33) in Play.
Fast Forward Take-up Torque	Nominal value 7 ounces. Controlled by repositioning Plate (17B).
Supply Hub Clearance	Position Plate (29) for 1/16-inch clearance between Belt(3) and Pulley (19).
Rewind Torque	Nominal value 7 ounces. Controlled by repositioning Plate (17A).

LAFAYETTE MODEL RK-860 (99-1530WX)

## ADJUSTMENTS (Continued)

ADJUST	REMARKS
Supply Reel Drag	Dependent on reel weight.
Take-up Reel Drag	Dependent on reel weight.
Pressure Roller Pressure	Nominal value 1 pound 10 ounces. Controlled by tension of Spring (54).
Braking Torque	Measured in Stop, clockwise on take-up reel and counterclockwise on supply reel. Nominal value 3 1/2 ounces. Controlled by repositioning Plates (7A) and (7B).
Pressure Pad Pressure	Nominal value 1 1/2 ounces. Controlled by tension of Spring (35).
Erase Head Height	Adjust B1, B2, and B3 equally until top of upper pole piece is .002 inch above top of a properly threaded tape.
Erase Head Azimuth	Adjust B3 until pole piece is perpendicular to lateral tape motion.
Record/ Play Head Height	Adjust B4, B5, and B6 until top of upper pole piece is .002 inch below top of properly threaded tape.
Record/ Play Head Azimuth	Connect an AC VTVM across left output, play an azimuth test tape, and adjust B6 for maximum peak.
Erase Current	Nominal value 80ma (7.5V rms) in each section. No adjustment provided.
Record Bias	Nominal value 14V rms (1ma) across each section. Controlled by setting of C54 for the left channel and C68 for the right channel.
Bias Oscillator	Nominal frequency 90KC. Controlled by setting of slug in L3 .
RF Trap	Play unit in stereo record mode. Connect an AC VTVM to point $\diamond A$ and adjust L1 for MINIMUM RF. Move VTVM to Point $\diamond B$ and adjust L2 for MINIMUM RF.
Record Level Indicator Calibration	Disable bias oscillator by shorting secondary, apply a 1000-cycle tone to a mic input, and adjust appropriate Volume control for .7 V rms across appropriate section of Head (M1). Record/Playback Level Meters should indicate normal maximum recording level.
Noise Level	With unit in Play mode, without tape, and with the Volume and Tone controls set for maximum, connect an 8-ohm resistor across each Ext. Speaker jack. With an AC VTVM across each resistor, rotate power transformer for MINIMUM voltage on each channel. Compromise if necessary.

TRADE NAME : Masterwork Model M650  
SUPPLIER : For Current Address, See Annual Index  
TYPE SET : 2-Track Monaural Recorder  
POWER SUPPLY : 7.5 Volts DC or 110-120 Volts AC, 60 Cycles  
RATING : 2 Watts, 45ma @ 117VAC

This unit is a cartridge-type, two-track, monaural recorder having a speed of 1 7/8 ips. Automatic recording level is provided.

Jacks are provided for both low- and high-level inputs, external speaker, and remote operation.

Power is supplied by five, 1 1/2-volt "C" cells or 110 - 120 volts AC, 60 cycles.

# OPERATING INSTRUCTIONS

## Record

1. Press Stop button and insert the cassette (with an unbroken safety tab) closed side first.
2. Connect a recording source, move the remote switch on the microphone to Off, and press Play and Record buttons simultaneously.

3. Move the remote switch to the on position and record. The unit will maintain proper recording level automatically.

## Play

1. Repeat step 1 of "Record", press Play button, and adjust Volume control as desired.

## DISASSEMBLY

1. Remove one Phillips screw from cabinet back, one from AC cordwell, and one from battery compartment.
2. Remove cabinet back.

3. Remove Volume knob and remove two Phillips screws from carrying strap buttons.
4. Remove two Phillips screws from bottom corners of chassis assembly and remove chassis.

## SEQUENCE OF OPERATION

### Play

Pressing the Play button slides Lever (40C), locked by Locker (37), to press Lever (22), pushing Arm (23) to release Rests (5A) and (5B). Arm (23) also actuates Switch (S2).

Lever (40C) also pushes Lever (27) to slide Panel (11), releasing Arm (17), pivoted by Spring (21), to press Shaft (14) against Rest (5B).

The motor, through Belt (2), Pulley (16), Felt (18), Plate (15), and Shaft (14), drives Rest (5B).

Panel (11) also moves Heads (M1) and (M2) against the tape and presses Roller (1) against the capstan.

### Record

The Record sequence is the same as "Play" except an unbroken safety tab on the cassette pivots Lever (32) to pull Rod (36), pivoting Lever (34). Lever (34) allows Lever (41) to move, causing Lever (44) to actuate Switch (S1).

### Fast Forward

Pressing the Fast Forward button slides Lever (40B), locked by Locker (37), to push Lever (22), pushing Arm (23) to release Rests (5A) and (5B). Arm (23) also actuates Switch (S2).

Lever (40B) also pivots Lever (47) to pull Spring (25), pulling Arm (28) to press Idler (4) against Flywheel (6) and Idler (30) against Rest (5B).

The motor, through Belt (2), Flywheel (6), Idler (4), Shaft (48), and Idler (30), drives Rest (5B).

### Rewind

Pressing the Rewind button slides Lever (40A), locked by Locker (37), to push Lever (22), pushing Arm (23) to release Rests (5A) and (5B). Arm (23) also actuates Switch (S2).

Lever (40A) also pivots Lever (26) to pull Arm (28), pressing Idler (4) against Flywheel (6) and Idler (30) against Idler (3). Simultaneously, Lever (40A) releases Arm (8), pulled by Spring (45), to press Idler (3) against Rest (5A).

The motor, through Belt (2), Flywheel (6), Idler (4), Shaft (48), Idler (30), and Idler (3), drives Rest (5A).

### Stop

Pressing the Stop button lifts Locker (37), allowing Springs (42), (29), (31), and (24) to reverse the "Play" or "Record" sequence. Springs (42), (24), (25), and (31) reverse "Fast Forward". Springs (42), (24), and (31) reverse "Rewind".

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 1 7/8 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 1 7/8 ips with a spring scale applied to a point on an empty tape reel 1 inch from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 3/4 ounce. Controlled by condition of Felt (18).
Fast Forward Take-up Torque	Nominal value 3/4 ounce. Controlled by condition of Idler (4).
Rewind Torque	Nominal value 5/8 ounce. Controlled by condition of Belt (2).
Supply Reel Drag	Dependent on internal drag of cassette.
Take-up Reel Drag	Dependent on internal drag of cassette.
Pressure Roller Pressure	Nominal value 8 ounces. Controlled by tension of Spring (9).
Brake Torque	Measured in Stop, counterclockwise on supply spindle and clockwise on the take-up spindle. Nominal value 1 ounce. Controlled by tension of Spring (24).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/ Play Head Height	No adjustment provided.
Record/ Play Head Azimuth	Play an azimuth test cartridge, connect an AC VTVM across speaker and adjust B1 for maximum peak.
Erase Current	Nominal value 13ma (9V rms) in head. No adjustment provided.
Record Bias	Nominal value 2.9V rms (1.3ma). No adjustment provided.
Bias Oscillator	Nominal frequency 33KC. No adjustment provided.
Automatic Record Level/ Record Level Indicator Calibration	Record a 1000-cycle tone at .0015V rms applied to the mic input. Then record a second tone at .003V rms. Play back both tones with an AC VTVM across speaker. Playback level of both tones should not vary more than 2db. Record/Batt Level Indicator should indicate a recording level for both tones slightly below normal maximum.

### CLEANING

### LUBRICATING

### HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

## TROUBLE CHART

**IMPORTANT :** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Felt (18) dirty or worn.</li> <li>2. Rest (5B) dirty, worn, or binding.</li> <li>3. Shaft (14) dirty, worn, or binding.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Idler (30) dirty or worn.</li> <li>2. Idler (4) dirty or worn.</li> <li>3. Shaft (48) binding.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Rest (5A) worn, dirty, or binding.</li> <li>2. Idler (3) worn, dirty or binding.</li> </ol>
Tape is pulled from cassette.	<ol style="list-style-type: none"> <li>1. Capstan dirty.</li> <li>2. Cassette defective.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Arm (23) dirty.</li> <li>2. Spring (24) weak.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (2) dirty, worn, or broken.</li> <li>2. Motor defective or not supplied with power.</li> <li>3. Bearing (7) binding.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Capstan bent.</li> <li>3. Excessive take-up torque.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Motor defective.</li> <li>3. Flywheel (6) binding.</li> <li>4. Belt (2) worn or dirty.</li> <li>5. Cassette defective.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misaligned, or defective.</li> <li>2. Amplifier defective.</li> <li>3. Bias Oscillator defective.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty or defective.</li> <li>2. Head (M2) not being supplied with current.</li> </ol>

**NOTE: DEMAGNETIZE HEADS AFTER SERVICING RECORDER**

- See parts list
1. Voltage measurements taken with vacuum tube voltmeter.
  2. All controls set for normal operation, no signal applied.
  3. Measured values are from socket pin or terminal to common ground.
  4. All terminals viewed from bottom unless otherwise designated.
  5. Numbers assigned to terminals may not be found on the unit.
  6. Supply voltage minimal at rated value for voltage readings.
  7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

Resistors are 1/2 watt or less and rated 10% or 20% unless otherwise indicated.

A Measured in "RECORD"

★ Measured in "RECORD" position with audio VTVM

MASTERWORK MODEL M650

# PHOTOFACT<sup>®</sup> with

# CIRCUITRACE<sup>®</sup>

These units are four-track, monaural, cartridge-type tape recorders having two speeds: 1 7/8 and 3 3/4 ips.

Jacks are provided for microphone and auxiliary input/output. Earphone and remote control jacks are provided in Models YGB29A and YHB26A.

A power source of 110-120 volts AC, 60 cycles is required.

**TRADE NAME :** RCA Models YGB11T, YHB22T  
(Preamp. Ch. TCT-4, Amp. Ch. RS-217)  
YGB29A, YHB26A (Preamp. Ch. TCT-4,  
Amp. Ch. RS-217A)

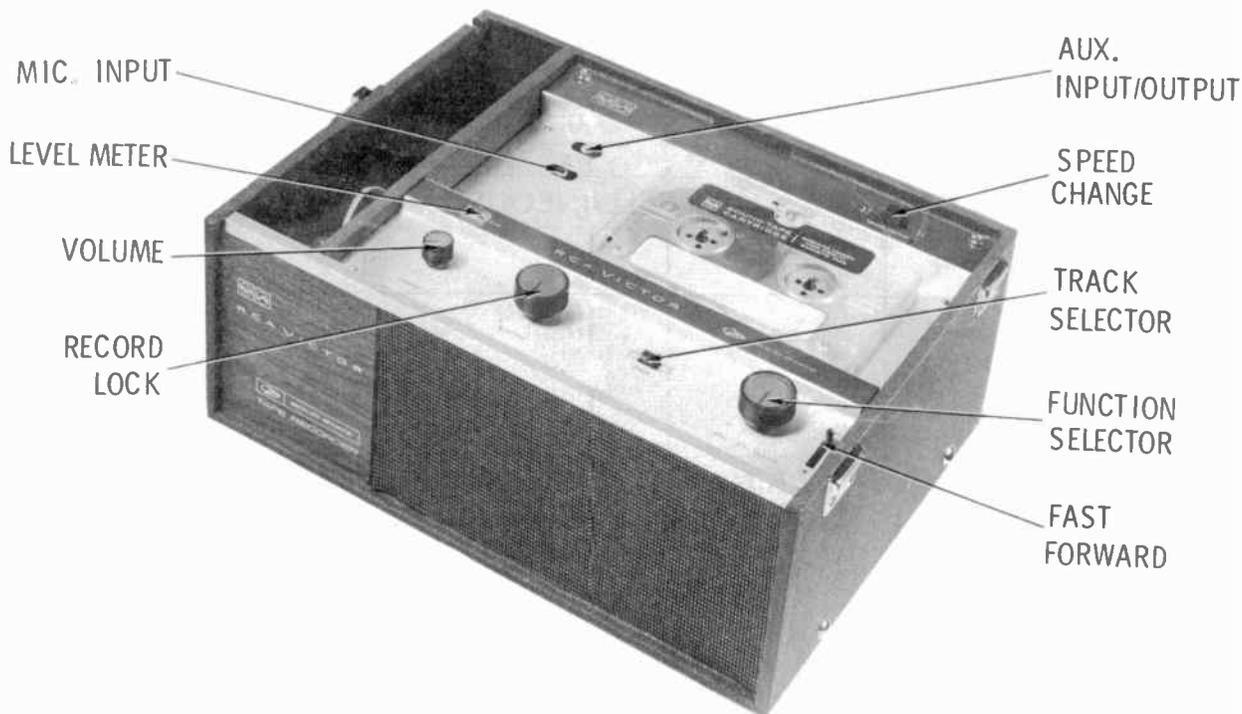

**SUPPLIER :** For Current Address, See Annual Index

**TYPE SET :** 2-Speed, 4-Track, Monaural Recorder

**POWER SUPPLY :** 110 - 120 Volts AC, 60 Cycles

**RATING :** 37 Watts, .48 Amp. @ 117 VAC  
(Play with Motor)  
32 Watts, .45 Amp. @ 117 VAC  
(Record with Motor)

# OPERATING INSTRUCTIONS

## Record

1. Insert the cartridge (rear first) with open side forward, select the speed, and move Track Selector to 1 ab.
2. Connect a source, hold Record knob clockwise while moving Function Selector to Play, set the recording level with the Volume control, and record.

3. Move Track Selector to 2 ab to record the second track on each side.

## Play

1. Insert cartridge, select the speed, select the track, and move Function Selector to Play.
2. Set Volume control to desired level.

## DISASSEMBLY

1. Remove four knobs.
2. Remove five large Phillips screws from the edges of the deck plate.
3. Remove four small Phillips screws from the cartridge well and remove the deck plate.
4. Remove four, 1/4-inch hex screws from the edges of the deck assembly.
5. Lift deck, front edge first, from the cabinet and disconnect the speakers.

## SEQUENCE OF OPERATION

### Play

Turning the Function Selector to Play moves Pivot (6), pulled by Spring (8), to move the toggle plate, pulled by spring (7), which presses Detent (14), pulled by Spring (21).

Detent (14) moves Lever (13), through Spring (12), to move Bracket (10) and Roller (1), centered by Spring (11).

Pivot (6) slides Link (18) to move Lever (29), pulled by Spring (43), actuating the Off/On switch and pulling Link (28) to pivot Lever (27). Link (18) releases Latch (48), pulled by Spring (49), to pivot Latch (50), through Latch (48).

Detent (14) releases Lever (15) to release Slide (16), pulled by Spring (17), applying the pressure pads.

The motor, through the motor pulley, Belt (3), Pulley (39), Disc (51), and Felt (52), turns Turntable (5). Belt (3) also turns Flywheel (35).

### Record

A cartridge tab or tape over the interlock notch on the cartridge moves Slide (53), pulled by Spring (49), to release Latch (47).

Turning the Record knob moves Latch (47) to be locked by Latch (50) as the Play sequence occurs and actuates the Play/Record switches.

### Fast Forward

Moving the Fast Forward Lever (24) pushes Link (25) to pivot Lever (31), pulled by Spring (32). Lever (31) presses Spring (40) and also pulls Cord (30) to pivot Lever (27). Lever (27) pushes Link (28) to pivot Lever (29), pulled by Spring (43).

The motor, through the motor pulley, Belt (3), Pulley (39), Disc (51), and Felt (52), turns Turntable (5).

### Rewind

Turning the Function Selector to Rewind moves Pivot (6), sliding Link (18) to move Lever (29), pulled by Spring (43), actuating the Off/On switch and pulling Link (28) to pivot Lever (27).

Pivot (6) pushes Link (19), moving Arm (37), pulled by Spring (38), to swing Roller (54), pressing Belt (3) to Pulley (41).

The motor, through the motor pulley, Belt (3), and Pulley (41), turns Turntable (4).

### Automatic Shutoff

The tape, tightening at the end of the cartridge in Rewind or Record/Play, moves Lever (29) to pull Link (18), pulling Pivot (6). Pivot (6) is then centered by Spring (9), reversing the sequence initiated by Pivot (6).

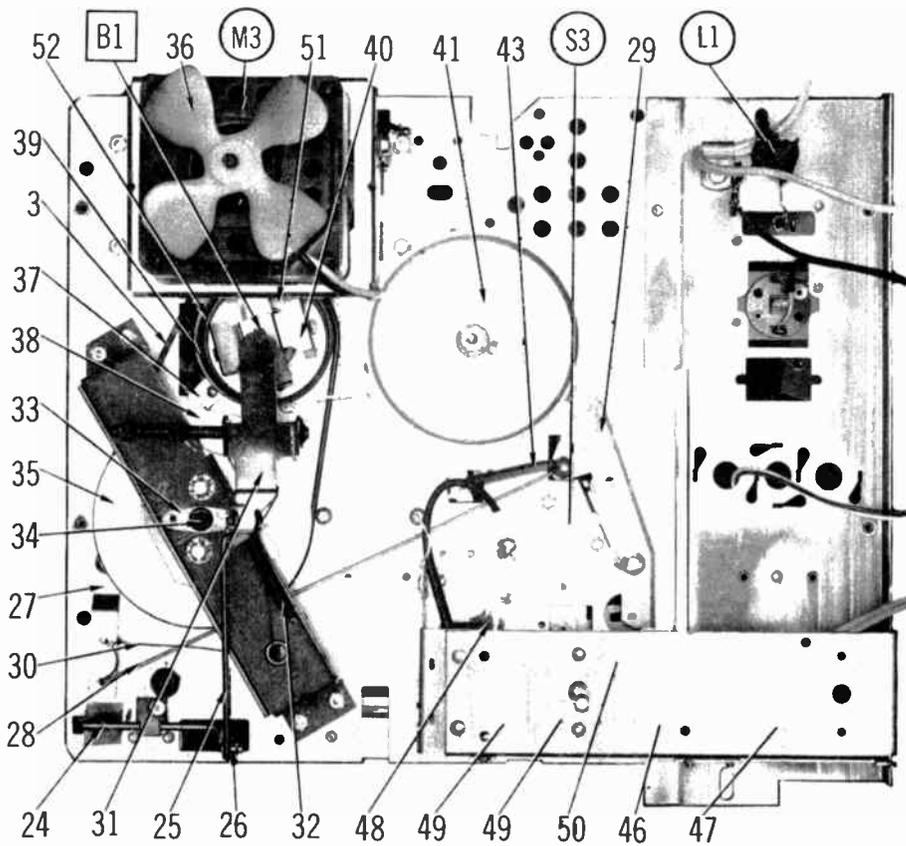

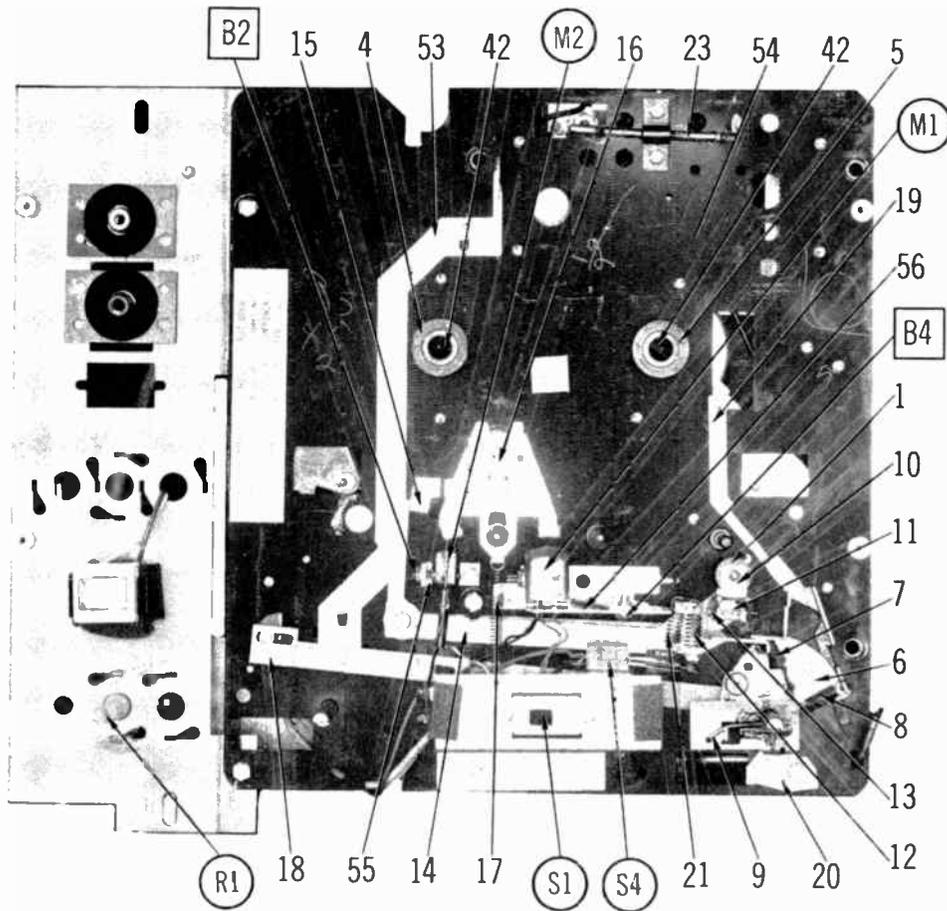

## CLEANING

## LUBRICATING

## HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

RCA MODELS YGB11T, YGB29A, YHB22T, YHB26A

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 3 3/4 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 3 3/4 ips with a spring scale applied to a point on an empty tape reel 1 inch from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 2 1/2 ounces. Controlled by B1.
Fast Forward Take-up Torque	Nominal value 6 ounces. Controlled by pressure applied to Lever (24).
Rewind Torque	Nominal value 14 ounces. Controlled by tension of Spring (38) and condition of Belt (3).
Supply Reel Drag	Dependent on cartridge drag.
Take-up Reel Drag	Dependent on cartridge drag.
Pressure Roller Pressure	Nominal value 3 pounds. Controlled by tension of Spring (12).
Braking Torque	Measured in Stop. Nominal value 2 1/2 ounces, measured counterclockwise on supply reel. Nominal value 2 1/2 ounces, measured clockwise on take-up reel. Controlled by tension of spring (43) and condition of Belt (3).
Pressure Pad Pressure	Nominal value 3 ounces. Controlled by tension of spring (17).
Erase Head Height	Bottom of lower pole piece should be 15/32 above deck plate. Loosen B2 to make adjustment. Check for complete erasure and readjust as necessary.
Erase Head Azimuth	Pole piece should be perpendicular to lateral tape motion. Controlled by angle of Bracket (55).
Record/Play Head Height	Play a standard test cartridge and adjust B3 following directions on test cartridge.
Record/Play Head Azimuth	Play a standard test cartridge and loosen B4 and tilt bracket (56) following directions on test cartridge.
Erase Current	Nominal current 17ma (23V rms) measured in each section of Erase Head (M2). No adjustment.
Record Bias	Nominal bias 16V rms (.19ma) across each section of Record/Play Head (M1). No adjustment.
Bias Oscillator	Nominal frequency 58KC. No adjustment.
Record Level Indicator Calibration	Disable bias oscillator by shorting emitter to base of oscillator transistor. Apply a 1000-cycle tone to mike input. Adjust record level for .028V rms across record head. Normal peak level should be indicated on level meter. No adjustment.

RCA MODELS YGB11T, YGB29A, YHB22T, YHB26A

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Tape moves erratically, or not at all in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (3) dirty or worn.</li> <li>2. Pads on Slide (16) dirty or worn.</li> <li>3. Felt (52) dirty or worn.</li> <li>4. Springs lifting pins through Turntables (4) and (5) worn or damaged.</li> </ol>
Tape does not move in Fast Forward.	<ol style="list-style-type: none"> <li>1. Spring (40) bent, touching the shaft of Turntable (5) when actuated.</li> <li>2. Cord ((30) loose or broken.</li> </ol>
Tape does not move in Rewind.	<ol style="list-style-type: none"> <li>1. Pulley (41) dirty or binding.</li> <li>2. Roller (54) binding or damaged.</li> <li>3. Motor pulley loose.</li> </ol>
Record will not engage.	<ol style="list-style-type: none"> <li>1. Cartridge lockout tab intact.</li> <li>2. Interlock Slide (53) damaged.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Flywheel (35) dirty or binding.</li> <li>2. Motor switch defective.</li> <li>3. Motor defective.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Turntable Bearings (42) binding.</li> <li>2. Roller (1) deformed, worn, or dirty.</li> <li>3. Capstan bent.</li> <li>4. Motor defective.</li> <li>5. Tape guides and pressure pads dirty or worn.</li> </ol>

\* "SNAPTROL"

① Part #116406 used in Models YGB11 & YGB29. ② Use original mounting bracket.

(CONTINUED ON PAGE 102)

RCA MODELS YGB11T, YGB29A, YHB22T, YHB26A

**NOTE: DEMAGNETIZE HEADS AFTER SERVICING RECORDER**

★ Measured in "RECORD" position with an audio VTVM.

Δ Voltage measured in "Record" position

Resistors are 1/2 watt or less and rated 10% or 20% unless otherwise indicated.

Arrows at controls indicate clockwise rotation viewed from actuator end.

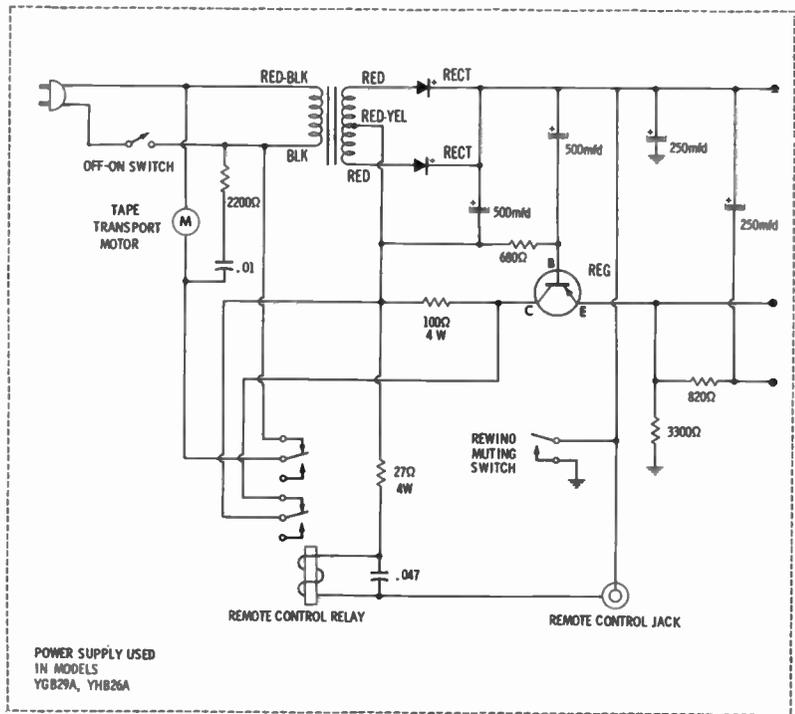

⊙ See parts list

1. Voltage measurements taken with vacuum tube voltmeter.
2. All controls set for normal operation, no signal applied.
3. Measured values are from socket pin or terminal to common ground.
4. All terminals viewed from bottom unless otherwise designated.
5. Numbers assigned to terminals may not be found on the unit.
6. Supply voltage maintained at rated value for voltage readings.
7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

TRADE NAME : RCA Models YJS13J, YJS15G  
SUPPLIER : For Current Address, See Annual Index  
TYPE SET : 2-Speed, 2-Track Monaural Recorder  
POWER SUPPLY : 6 Volts DC or 110-120 Volts AC, 60 Cycles  
RATING : 2 Watts, 54ma @ 117 VAC (With Motor)

These units are two-track, monaural recorders having two speeds: 1 7/8 and 3 3/4 ips.

Jacks are provided for both low- and high-level inputs, earphone/external speaker output, and remote. An external power jack is provided on Model YJS13J.

Power is supplied by four, 1 1/2-volt "D" cells or 110 - 120 volts AC, 60 cycles. Model YJS13J requires an AC adapter for AC operation.

RCA MODELS YJ513, YJ515G

# OPERATING INSTRUCTIONS

## Record

1. Thread the tape, select the power source, select the speed, and move the remote switch on microphone to Off.
2. Connect a source, press Play and Record buttons simultaneously, move the remote switch to the on position, and set the recording level with Volume control.

## Play

1. Repeat step 1 of "Record", press Play button, move the remote switch to the on position, and set Volume control as desired.

## Monitor

1. Connect an earphone to Earphone/Monitor Output jack to monitor the recording.

## DISASSEMBLY

1. Remove head cover and battery compartment cover.
2. Remove seven Phillips screws from bottom of case.
3. Separate case halves by pressing on front corners of bottom half to remove chassis.

## SEQUENCE OF OPERATION

### Play

Pressing the Play button pivots Lever (24C), locked by Lever (26), to actuate Switch (S5) and to pivot Lever (27). Lever (27) pushes Rod (22) to move Lever (21), moving Pad (23) from Turntable (14) and actuating Switch (S4).

Lever (24C) also moves Slide (43) to raise Spring (42), raising Pulley (16) to compress Clutch (45). The motor, through Pulley (30), Belt (2), Flywheel (7), Belt (4), Pulley (16), and Clutch (45), drives Turntable (14).

Slide (43) also pivots Lever (47) to release Lever (15), pulled by Spring (33), moving Roller (1) against the capstan. Lever (15) also releases Lever (12), pulled by Spring (32), to move Plate (13) and the pads against Heads (M1) and (M2).

### Record

The Record sequence is the same as "Play" except pressing the Record button pivots Lever (24D),

locked by Lever (26), to move Lever (28), pushing Slide (29) to actuate Switch (S1).

### Rewind

Pressing the Rewind button pivots Lever (24A), locked by Lever (26), pivoting Lever (27) to push Rod (22). Rod (22) swings Lever (21), moving Pad (23) from Turntable (14) and actuating Switch (S4).

Lever (24A) also pivots Lever (20) to actuate Switch (S3) and to pull Spring (39). Spring (39) pulls Lever (46) to cause Pulley (19) to press Belt (3) against Flywheel (7).

The motor, through Pulley (30), Belt (2), Flywheel (7), Belt (3), and Pulley (18), drives Turntable (17).

### Stop

Pressing the Stop button allows Springs (34), (31), and (36), plus (38) for Record, to reverse the "Play" sequence. Springs (35), (36), and (39) reverse the "Rewind" sequence.

## CLEANING

## LUBRICATING

## HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 3 3/4 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 3 3/4 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 1 1/4 ounces. Controlled by thickness of washers between Spring (42) and Pulley (16).
Rewind Torque	Nominal value 2 ounces. Controlled by condition of Belt (3) and tension of Spring (39).
Supply Reel Drag	Dependent on reel weight.
Take-up Reel Drag	Dependent on reel weight.
Pressure Roller Pressure	Nominal value 8 ounces. Controlled by tension of Spring (33).
Brake Torque	Measured in Stop. Nominal value 3 ounces clockwise on take-up reel. Controlled by condition of Pad (23).
Pressure Pad Pressure	Nominal value 3/4 ounce. Controlled by tension of Spring (32).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/ Play Head Height	Top of pole piece should be .002 inch below top of tape. Controlled by turning B1 and B2 equally in the same direction.
Record/ Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across speaker, and adjust B1 and B2 equally in opposite directions for peak output.
Erase Current	Nominal value 11.5ma (4.5VDC). No adjustment.
Record Bias	Nominal value 34V rms (1ma). Controlled by setting of R3.
Bias Oscillator	Nominal frequency 52KC. No adjustment.
Record Level Indicator Calibration	Disable bias oscillator by shorting secondary of L1. Apply a 1000-cycle tone to High-Level Input, and adjust Volume control for 1.1V rms across Head (M1). Adjust R2 for normal peak indication on Record/Batt. Level Meter.

RCA MODELS YJ513J, YJ515G

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Clutch (45) worn or dirty.</li> <li>2. Take-up torque misadjusted.</li> <li>3. Belt (4) worn or dirty.</li> </ol>

## TROUBLE CHART (Continued)

SYMPTOM	REMARKS
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Belt (3) dirty, worn, or broken.</li> <li>2. Spring (39) stretched.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Pad (23) worn or dirty.</li> <li>2. Spring (36) stretched.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Belt (2) dirty, worn, or broken.</li> <li>2. Flywheel (7) binding.</li> <li>3. Motor defective or not supplied with power.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Roller (1) worn.</li> <li>2. Excessive take-up torque.</li> <li>3. Capstan bent.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Belt (2) dirty or worn.</li> <li>2. Roller (1) dirty or worn.</li> <li>3. Motor defective.</li> <li>4. Bushing (41) binding.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) dirty, misaligned, or defective.</li> <li>2. Amplifier defective.</li> <li>3. Bias oscillator defective or misadjusted.</li> <li>4. Pads on Plate (13) worn.</li> </ol>
Erase weak or inoperative.	<ol style="list-style-type: none"> <li>1. Head (M2) dirty, defective, or not supplied with power.</li> <li>2. Pads on Plate (13) worn.</li> </ol>

RCA MODELS YJS13J, YJS15G

NOTE: DEMAGNETIZE HEADS AFTER SERVICING RECORDER

- ⊖ See parts list
- 1. Voltage measurements taken with vacuum tube voltmeter.
- 2. All controls set for normal operation, no signal applied.
- 3. Measured values are from socket pin or terminal to common ground.
- 4. All terminals viewed from bottom unless otherwise designated.
- 5. Numbers assigned to terminals may not be found on the unit.
- 6. Supply voltage maintained at rated value for voltage readings.
- 7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

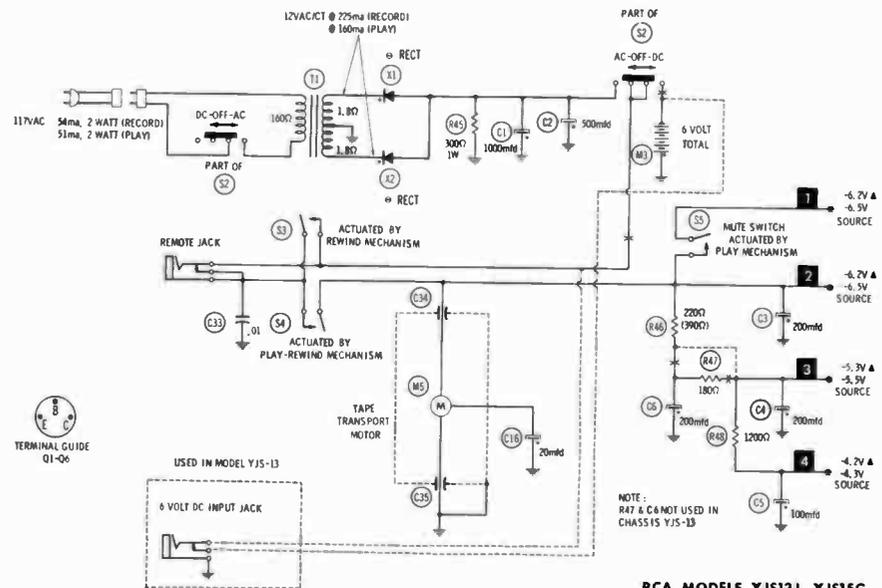

★ Measured in "Record" with an audio VTVM.  
▲ Measured in "Record"

Resistors are 1/2 watt or less and rated 10% or 20% unless otherwise indicated.

**TRADE NAME :** Uher Model 9000 (22/24 HI-FI Special)  
**SUPPLIER :** For Current Address, See Annual Index  
**TYPE SET :** 2-Speed, 4-Track Monaural/Stereo Recorders  
**POWER SUPPLY :** 110-120 Volts AC, 60 Cycles  
**RATING :** 37 Watts, .370A @ 117 VAC (Record with Motor)  
 34 Watts, .350A @ 117 VAC (Play with Motor)

These units are four-track monaural/stereo recorders having two speeds: 3 3/4 and 7 1/2 ips. Sound-On-Sound recordings can be made.

An external amplifier/speaker system is required for playback.

Jacks are provided for both low- and high-level inputs, high-level output, headphones, remote control, and stereo monitor.

A power source of 110/130/150/220/240/250 volts, 50-60 cycles is required.

## FUNCTION OF SPECIFIC CONTROLS, JACKS

### Left Microphone Input (Upper)

Used for left-channel microphone input in stereo and as sole microphone input in monaural (15mv maximum, 5 meg impedance, use 200Ω microphone).

### Right Microphone Input (Lower)

Used for right-channel microphone input in stereo (15mv maximum, 5 meg impedance, use 200Ω microphone).

### Stereo Microphone Input

Used for connecting left and right microphones sharing a common connector.

### Input/Output

For use with an amplifier/tuner having a corresponding input/output jack to record from, as playback through the amplifier (300mv maximum input, input impedance 47K, 1.5V maximum output).

### High-Level Input

For use as an input when output voltage of source exceeds 300mv.

### Remote Control Input

For connection of optional remote control accessories.

### Left Headphone Output (Upper)

Used for connection to left channel of stereo headphones or a monaural headset to monitor left-channel tracks.

### Right Headphone Output (Lower)

Used for connection to right channel of stereo headphones or a monaural headset to monitor right-channel tracks.

### Monitor Output

For connection to a power amp. to monitor in A-test or B-test as selected by monitor selector on power amplifier.

### Input Selector

Q High-Level Input  Input/Output  Microphone

## OPERATING INSTRUCTIONS

### Monaural Recording

1. Press Stop button, set Voltage Selector, turn on unit by selecting speed, move Mode Selector to Mono 1-4 (Mono 1 for Model 22), and thread tape.
2. Connect a recording source to an input jack, set Input Selector to the appropriate position, press Pause button, press Record Lock while pressing Start button, and set the recording level with Left Record Level control.
3. Press Pause button to start tape motion and record left-channel tracks.
4. To record right-channel tracks, repeat steps 1 through 3, except move Mode Selector to Mono 2-3 (Mono 2 for Model 22), and set the recording level with Right Record Level control.

### Monaural Play

1. Repeat step 1 of "Monaural Recording", connect Input/Output jack to a power amp, press Start button, and set power amplifier controls as desired to play left-channel tracks.
2. To play right-channel tracks, repeat step 1, except move Mode Selector to Mono 2-3 (Mono 2 for Model 22).

### Stereo Recording

1. Follow the procedure outlined under "Monaural Recording", except move Mode Selector to Stereo, connect stereo sources, and set the recording levels with the Left and Right Record Level controls.

### Stereo Play

1. Follow procedure outlined under "Monaural Play", except move Mode Selector to Stereo.

### Sound-On-Sound Recording

1. Make a recording on left-channel tracks, unwind tape, connect headphones to Right Headphone jack, move Mode Selector to Multiplay II, and connect new recording source.
2. Press Record Lock while pressing Start button, advance Monitor Volume control to hear original recording, advance Left Record Level control to set the level of the new recording, and advance Right Record Level control to set the level of the transferred information.
3. New information and the original information will be recorded together on the right-channel tracks.
4. To transfer information on right-channel tracks and add new information, set Mode Selector to Multiplay I and reverse the settings of Left and Right Record Level controls.

### Sound-On-Sound Play

1. Follow procedure outlined under "Monaural Play" to play the appropriate tracks for the combined recording.

### Monitor

1. Connect headphones to the appropriate headphone jacks and adjust Monitor Volume control to desired level for B-test monitor.

2. For A-test monitor, press Monitor Selector.

### Playback Equalization

### Playback Azimuth Correction

1. Set Equalization Selector to the position giving the most correct equalization (usually NAB).

1. Set Azimuth Adjustment for maximum high-frequency output during playback.

## DISASSEMBLY

1. Remove four feet and remove bottom cover.
2. Remove six knobs, tape cleaner, and Fast Forward/Rewind Bar.
3. Remove four screws and remove top cover.

## SEQUENCE OF OPERATION

### Play/Record (Start)

Pressing the Start button moves Lever (77), pivoting Arm (81), pulled by Spring (82), to pull Spring (80), swinging Bracket (76) and Roller (75).

Bracket (76) slides Lever (84) to pivot Arm (60), pressed by Spring (61), and to pivot Arm (62), pressed by Spring (63).

The Start button also slides Lever (9), pulled by Spring (10), to pull Spring (11), pivoting Arm (32).

The motor, through Pulley (24), Belt (3), Flywheel (51), Idler (57), Belt (1), Clutch (31), Idler (30), and Disc (27), drives Table (26).

The Start button slides Bracket (36), pulled by Spring (38), to lock Shaft (35). The Start button pivots Bracket (99), and then Bracket (99), pulled by Spring (98), latches the Start button.

The motor, through Idler (7), drives Flywheel (89).

### Fast Forward

Moving Bracket (97) to the right pivots Lever (45), moving Arm (56), pivoting Bracket (55) to slide Lever (84), pivoting Arm (60), pressed by Spring (61), and pivoting Arm (62), pressed by Spring (63).

Arm (56) pulls Lever (46) to pivot Arm (47), pressed by Spring (48). Bracket (54) on Arm (56) moves Spring (53) to pivot Arm (52), moving Flywheel (51) which pushes Idler (57), pivoting Arm (58) which is pulled by Spring (64).

The motor, through Pulley (24), Belt (3), Flywheel (51), Idler (57), and Disc (27), drives Table (26).

Bracket (97) pivots Bracket (99), and then Bracket (99), pulled by Springs (98), latches Bracket (97).

### Rewind

Moving Bracket (97) to the left produces the same sequence of operations as listed under "Fast Forward", except Arm (49) moves instead of Arm (47). Flywheel (51) releases Idler (57) to allow Spring (64) to pivot Arm (58). Flywheel (51) drives Disc (5) to rotate Reel Table (4).

### Pause

(Manual) Depressing the Pause button pivots Lever (83), pulling Lever (84) to release Arm (62), pressed by Spring (63). Lever (84) pushes Bracket (76) to move Roller (75).

(Remote) Solenoid (K1) pivots Lever (86), pulling Lever (84) to release Arm (62), pressed by Spring (63). Lever (84) pushes Bracket (76) to move Roller (75).

UHER MODEL 9000 (22/24 Hi-Fi Special)

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Idlers (30) and (57), Belts (1) and (3), and Flywheel (51) dirty or worn.</li> <li>2. Spring (11), (29), or (25) weak.</li> <li>3. Felt rings on Table (26) and/or Disc (27) dirty or worn.</li> </ol>
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Bracket (55) bent or free of Arm (56).</li> <li>2. Lever (84) bent.</li> <li>3. Arm (62) bent.</li> <li>4. Spring (53) weak or bent.</li> </ol>

## TROUBLE CHART (Continued)

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Screw in Bracket (76) loose.</li> <li>2. Bracket (72) bent or binding.</li> <li>3. Spring (80) weak or loosen.</li> <li>4. Roller (75) dirty or worn.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Felt ring on Table (4) dirty or worn,</li> <li>2. Spring (25) weak.</li> <li>3. Bracket (55) bent or free of Arm (56).</li> </ol>
Supply reel spills tape in forward positions.	<ol style="list-style-type: none"> <li>1. Pad on Arm (49) dirty or worn.</li> <li>2. Felt on Disc (5) dirty or worn.</li> <li>3. Spring (50) loose.</li> </ol>
Take-up reel spills tape in Rewind.	<ol style="list-style-type: none"> <li>1. Pad on Arm (47) dirty or worn.</li> <li>2. Felt on Disc (27) dirty or worn.</li> <li>3. Spring (48) loose.</li> </ol>
Reels do not stop immediately when Stop button is pressed.	<ol style="list-style-type: none"> <li>1. Lever (84) binding.</li> <li>2. Arm (60) and/or (62) binding or defective.</li> <li>3. Spring (61) and/or (63) loose.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Idler (7) dirty or worn.</li> <li>2. Spring (13) weak or loose.</li> <li>3. Speed Selector between speeds.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Pulley (24) dirty, loose, or damaged.</li> <li>2. Idler (7) dirty or worn.</li> <li>3. Flywheel (89) dirty or binding.</li> <li>4. Capstan dirty or bent.</li> <li>5. Motor defective.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Head (M1) or (M2) dirty or worn.</li> <li>2. Circuitry defective.</li> </ol>

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 7 1/2 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 7 1/2 ips with a spring scale applied to a point on an empty tape reel 2 inches from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

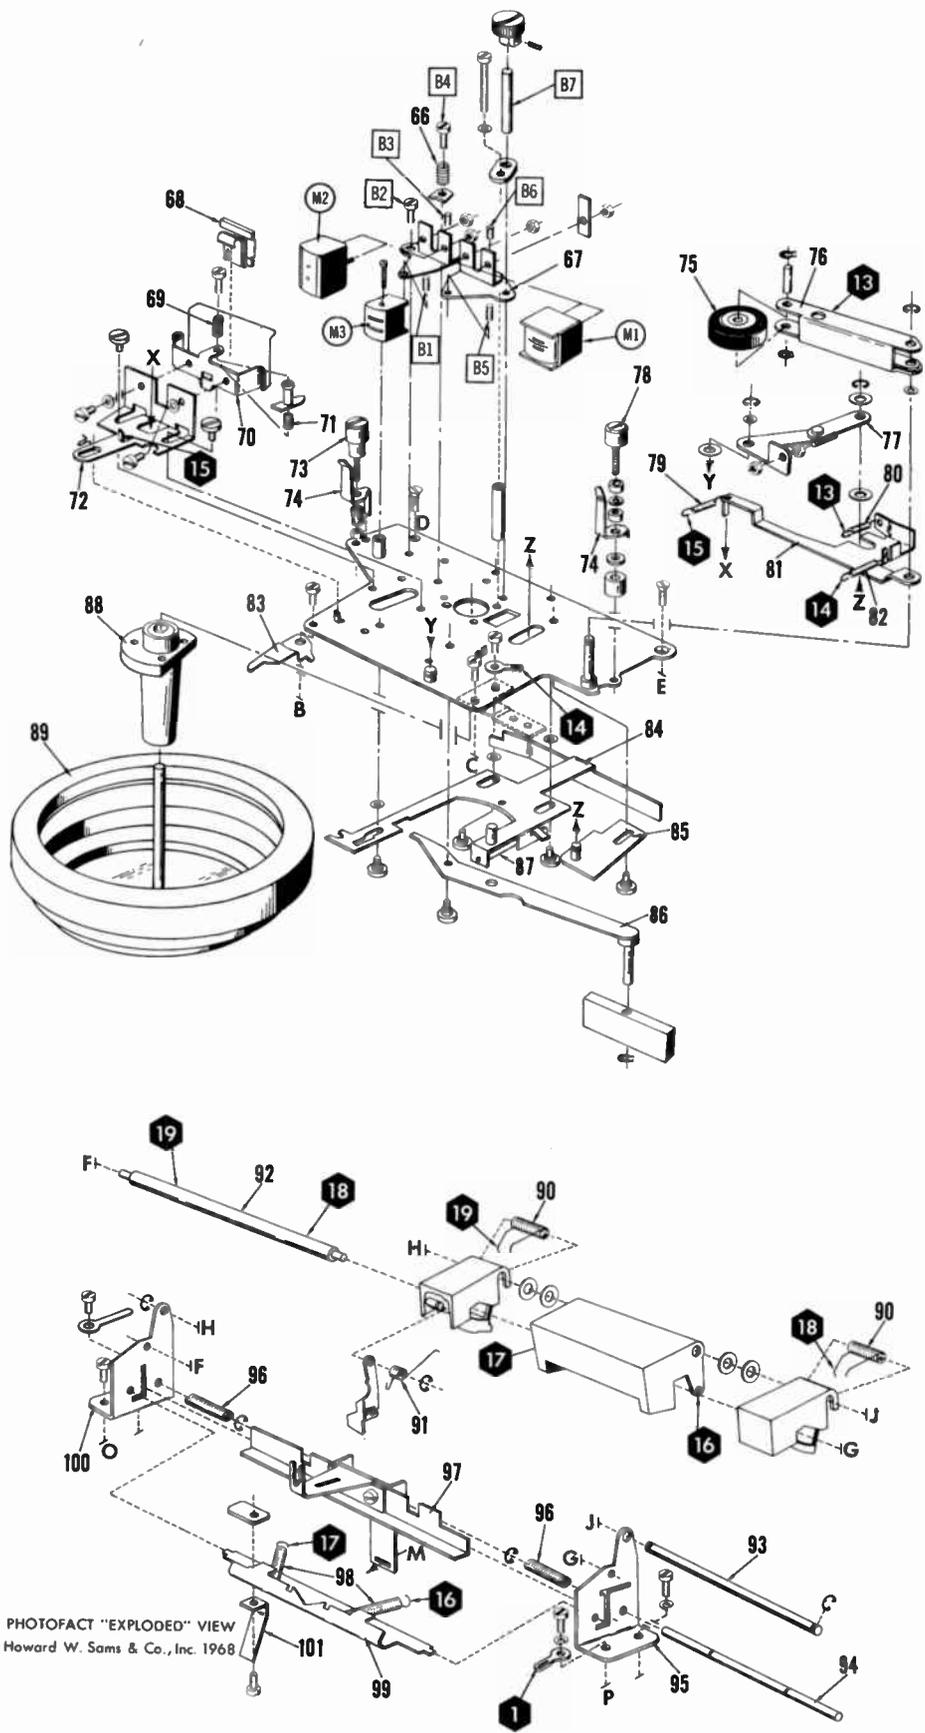

ADJUST	REMARKS
Play Take-up Torque	No adjustment provided. Nominal value 1 1/2 ounces, dependent on condition of Spring (11), Spring (29), and Idler (30).
Fast Forward/Rewind Torque	Flywheel (51) and Idler (57) should clear Discs (5) and (27) by equal amounts, adjusted by positioning Bracket (54). Fast Forward/Rewind torque 14 ounces, dependent on condition of Belt (3), Flywheel (51), Idler (57), Springs (25), and felt ring on Disc (5), Disc (27), Table (4), and Table (26). Rewind torque also dependent on Spring (64).

## ADJUSTMENTS (Continued)

ADJUST	REMARKS
Supply Reel Drag	No adjustment provided. Nominal value 1/2 ounce, dependent on condition of felt ring on Disc (5) and reel weight.
Take-up Reel Drag	No adjustment provided. Nominal value 3/4 ounce, dependent on condition of felt ring on Disc (27) and reel weight.
Pressure Roller Pressure	No adjustment provided. Nominal value 2 1/2 pounds, controlled by condition of Spring (80).
Brake Torque	No adjustments provided. Nominal values, supply measured counterclockwise 10 ounces, take-up measured clockwise 16 ounces. Dependent on condition of brake pads on Arms (62) and (60), Springs (25), and felt rings on Tables (4) and (26).
Remote Pause Adjust	Press Start button and energize Solenoid K1 (Pause). Loosen two screws on the frame of the energized solenoid and the screw accessible through the hole in Bracket (76). Adjust Solenoid K1 (Pause) to allow Lever (84) to just clear Arm (62). Adjust Roller (75) to clear the capstan by approximately 1/64 inch.
Automatic Stop Adjust	Arm (101) should have 1/16 inch travel remaining, measured at point of contact with the solenoid arm when the Start button is released. Controlled by bend in Arm (101).
Erase Head Height	No adjustment provided. Top edge of top pole piece 45/64 inch above mounting plate.
Erase Head Azimuth	No adjustment provided. Pole pieces should be perpendicular to the direction of tape travel.
Tape Travel Adjust	Loosen the locknut and adjust Guide (73) to guide the tape so the top edge of moving tape is just below (.002 in.) the top edge of the top pole piece on the erase head. Reel Tables (4) and (26) and Pivot Arm (39) heights are adjusted by loosening the screw holding Adjustment Brackets (8) and (43) and sliding the brackets so the tape clears the flanges of tape reels and rides in the middle of Guides (40) and (78).
Record Head Height	Adjust B1 and B3 equally until the top edge of the top pole piece is even with the top edge of a properly threaded tape.
Record Head Azimuth	Apply a 10KC signal to pins 3 and 5 of High Level Input/Output jack, record monaurally on Left Channel at "0" db, and connect an AC VTVM to pins 3 and 5 of Stereo Monitor Output jack. Allowing for the time lag between the record and play heads, adjust B2 for maximum.
Play Head Height	Adjust B5 and B6 equally until the top edge of the top pole piece is just below (.002 in.) the top edge of a properly threaded tape.
Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across pins 3 and 5 of Stereo Monitor Output jack, and remove Azimuth Adjustment knob. Turn Azimuth Adjustment shaft for maximum output and replace Azimuth knob with setscrew 180° from stop.
RF Trap Alignment	Prepare unit to record stereo, advance Monitor Volume control 25%, connect an AC VTVM across Left Headphone Output jack, and adjust L3 for MINIMUM RF. Connect VTVM across Right Headphone Output jack and adjust L4 for MINIMUM RF. Connect VTVM to point $\diamond$ with low side to ground and adjust L5 for MINIMUM RF. Connect VTVM to point $\ominus$ with low side to ground and adjust L6 for MINIMUM RF. Connect VTVM across Left Headphone jack, switch the unit to monaural recording on the left channel, and adjust L2 for MINIMUM RF. Switch unit to monaural record on right channel, connect VTVM across Right Headphone jack, and check for MINIMUM RF by rocking slug in L2. Compromise the adjustment of L2 to give equal MINIMUM RF on both channels.

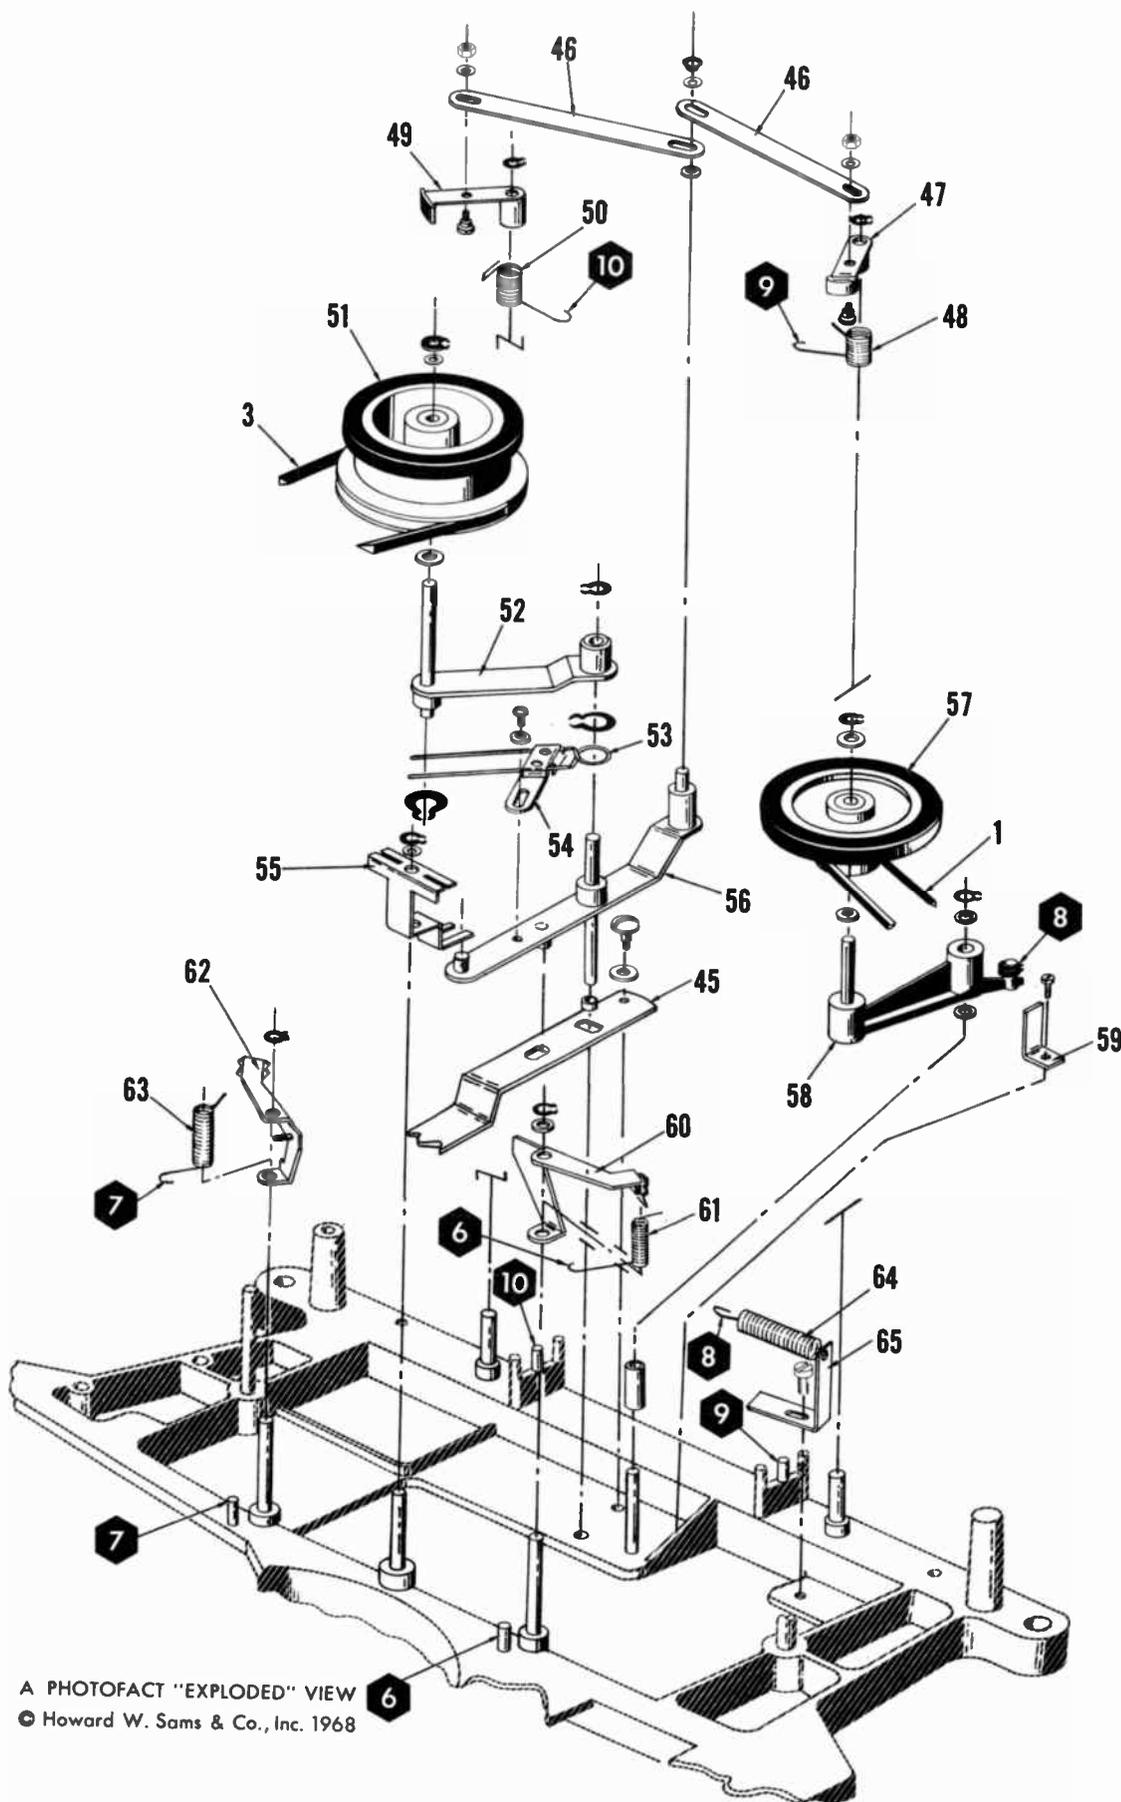

(CONTINUED ON PAGE 124)

## ADJUSTMENTS (Continued)

ADJUST	REMARKS
Recording Preamp. Adjust	Set the unit to record a 2.5mv 1000-cycle signal applied to pins 3 and 5 (1 and 5) of the High-Level Input/Output jack with the Left (Right) Record Level set to maximum level. Connect a meter to pins 1 and 2 (4 and 2) of the Stereo Monitor jack and adjust R5) (R6) for 3 volts.
Record Level Indicator Adjust	With the record preamps properly aligned, apply a 1000-cycle signal to pins 3 and 5 (1 and 5) of the High-Level Input/Output jack. Adjust Left (Right) Record Level for 3 volts across pins 1 and 2 (4 and 2) of the Stereo Monitor Output jack. Adjust R10 (R11) for "O" db. on the Left (Right) Record Meter.
Playback Preamp. Adjust	Apply a 1000-cycle tone to pins 3 and 5 (1 and 5) of High Level Input/Output jack, record on Left (Right) channel at "O" db. Connect an AC VTVM to pins 3 and 5 (1 and 5) of Stereo Monitor Output jack. Depress Monitor Selector and note the reading. Release the Monitor Selector and adjust R4 (R7) for the noted reading.
Bias Adjust	Connect an AC VTVM to pins 3 and 5 (5 and 1) of Stereo Monitor Output. Apply 1000-cycles to pins 3 and 5 (1 and 5) of High-Level Input/Output and record in Monaural Left (Right), (NAB Equalization), at -20db on the Record Meter  Note the VTVM reading. Record a 13KC signal at -20db on the Record Meter. Adjust R8 (R9) for the same reading as the 1000-cycle signal.

TRADE NAME : Wards Airline Model GEN-3638A  
(62-3638)  
 SUPPLIER : For Current Address, See Annual Index  
 TYPE SET : 2-Speed, 2-Track Monaural Recorder  
 POWER SUPPLY : 9 Volts DC or 110-120 Volts AC, 60 Cycles  
 RATING : 5 Watts, 65ma @ 117 VAC (Record with Motor)  
 4 Watts, 62ma @ 117 VAC (Play with Motor)

This unit is a two-track, monaural recorder having two speeds: 1 7/8 and 3 3/4 ips.

Jacks are provided for both low- and high-level inputs, external speaker, and remote switch.

An automatic level-control circuit is provided.

Power is supplied by six, 1 1/2-volt "D" cells or 110 - 120 volts AC, 60 cycles.

# OPERATING INSTRUCTIONS

## Recording

1. Move Function Selector to Stop, select a power source, thread the tape, and select the speed.
2. Connect a recording source and press and hold Record Switch button while moving Function Selector to Forward.
3. Move Automatic Level Control Switch to Off and set recording level with Volume control; or move Automatic Level Control Switch to On and allow unit to maintain the correct recording level automatically.

## Play

1. Repeat step 1 of "Record", move Function Selector to Forward, and set Volume and Tone controls as desired.

## Monitor

1. Connect an earphone to Ext. Speaker jack to monitor recording.

## DISASSEMBLY

1. Remove three Phillips screws holding bottom of case and remove three knobs.
2. Remove one Phillips screw under Function Selector knob.
3. Remove two Phillips screws from rear corners of deck.
4. Remove the Phillips screw on the deck near the Volume control and remove speaker clamp.
5. Gently rock speaker to loosen and to remove chassis.

## SEQUENCE OF OPERATION

### Play

Turning the Function Selector to Forward/Play turns Cam (34), pivoting Lever (13) to move Lever (14) and Lever (17). Lever (14) pivots Lever (15) to release Lever (8), pulled by Spring (9), to move Roller (7). Lever (14) also pivots Lever (20).

The motor, through Pulley (4) and Belt (3), turns Reel (6).

Cam (34) releases Lever (27), pulled by Spring (28), to release Bracket (22) to move Roller (1) and to release Lock (35), pulled by Spring (24).

### Fast Forward

The Fast Forward sequence is the same as "Play" except moving the Fast Forward knob to the fast-forward position pivots Lever (30). Lever (30)

moves Spring (29) to tighten Belt (3), through Rod (11), aligned by Spring (12), Lever (8), and Roller (7).

Lever (30) pivots Lever (27) to move Bracket (22) and Roller (1). Lock (46), moved by a strap spring on Chassis (47), moves to lock Lever (30).

### Rewind

Turning the Function Selector to Rewind turns Cam (34), pivoting Lever (13) to move Lever (14) and Lever (17). Lever (14) pivots Lever (20) to release Lever (40), pushed by Spring (21) to move Reel (5).

The motor through Pulley (4) drives Reel (5).

### Stop

Returning the Function Selector to Stop from any function reverses the action of that function.

## CLEANING

## LUBRICATING

## HEAD DEMAGNETIZING

Refer to "General Servicing Information" on page 4.

## TROUBLE CHART

**IMPORTANT:** Before consulting this chart be sure all servicing procedures listed on page 4 have been followed.

SYMPTOM	REMARKS
Take-up reel revolves erratically, or not at all in Play or Record	<ol style="list-style-type: none"> <li>1. Reel Drive Belt (3) dirty, worn, loose, or broken.</li> <li>2. Tension Roller Lever Spring (9) weak or loose.</li> <li>3. Tension Roller Lever (8) binding.</li> <li>4. Tension Roller (7) binding or damaged.</li> <li>5. Take-up Reel Assembly (6) binding.</li> <li>6. Motor Pulley (4) loose.</li> </ol>

**WARDS AIRLINE MODEL GEN-3638A (62-3638)**

## TROUBLE CHART (Continued)

SYMPTOM	REMARKS
Take-up reel does not revolve in Fast Forward.	<ol style="list-style-type: none"> <li>1. Reel Drive Belt (3) dirty, worn, loose, or broken.</li> <li>2. Tension Roller Lever Spring (9) weak or loose.</li> <li>3. Fast Forward Lever Spring (29) bent or loose.</li> <li>4. Tension Roller Lever (8) binding.</li> <li>5. Tension Roller (7) binding or damaged.</li> <li>6. Take-up Reel Assembly (6) binding.</li> <li>7. Motor Pulley (4) loose.</li> </ol>
Take-up reel revolves rapidly in Play or Record.	<ol style="list-style-type: none"> <li>1. Pinch Roller Lever Spring (28) weak or loose.</li> <li>2. Capstan Sleeve (26) loose.</li> <li>3. Pinch Roller (1) worn or dirty.</li> </ol>
Supply reel does not revolve in Rewind.	<ol style="list-style-type: none"> <li>1. Supply Reel Spindle Lever Spring (21) weak or loose.</li> <li>2. Motor Pulley (4) dirty, worn, or loose.</li> <li>3. Supply Reel Spindle Lever (40) binding.</li> </ol>
Supply reel spills tape in forward positions. Reels do not stop immediately when Function Selector is returned to Stop.	<ol style="list-style-type: none"> <li>1. Drag pad on Rewind Lever Assembly (20) worn.</li> <li>1. Brake Pads (18) worn.</li> <li>2. Brake Lever Spring (19) weak or loose.</li> </ol>
Capstan does not rotate in Play or Record.	<ol style="list-style-type: none"> <li>1. Capstan Belt (2) dirty or loose.</li> <li>2. Motor Pulley (4) loose.</li> <li>3. Flywheel (39) binding.</li> <li>4. Motor (M4) defective.</li> </ol>
Tape rides up and down between capstan and pressure roller.	<ol style="list-style-type: none"> <li>1. Capstan Sleeve (26) loose.</li> <li>2. Pinch Roller (1) dirty or worn.</li> <li>3. Pinch Roller (1) not parallel to capstan.</li> </ol>
Wow or Flutter.	<ol style="list-style-type: none"> <li>1. Pinch Roller (1) dirty or worn.</li> <li>2. Pinch Roller Lever Spring (28) weak.</li> <li>3. Capstan Belt (2) dirty or worn.</li> <li>4. Motor Pulley (4) loose.</li> <li>5. Motor (M4) defective.</li> <li>6. Supply Reel Assembly (5) binding.</li> </ol>
Sound is weak or distorted.	<ol style="list-style-type: none"> <li>1. Play/Record Head (M1) dirty, worn or misaligned.</li> <li>2. Hinge spring on Tape Pad Bracket Assembly (22) weak.</li> <li>3. Tape Pad Assembly (23) damaged or pads missing.</li> </ol>

## ADJUSTMENTS

**IMPORTANT:** Before making any adjustments, refer to "General Servicing Information" on page 4.

1. All voltage measurements are made at a tape speed of 3 3/4 ips with an audio VTVM having a flat response to 100KC.
2. All torque measurements are made at a tape speed of 3 3/4 ips with a spring scale applied to a point on an empty tape reel 1 inch from reel center.
3. All pressure measurements are made by using a spring scale to determine that point at which pressure is just removed.

ADJUST	REMARKS
Play Take-up Torque	Nominal value 1/2 ounce. Controlled by tension of Spring (9) and the condition of Belt (3).
Fast Forward Take-up Torque	Nominal value 4 ounces. Controlled by tension of Spring (29).
Rewind Torque	MINIMUM value 2 1/2 ounces. Controlled by tension of Spring (21) and the condition of Pulley (4).
Supply Reel Drag	Nominal value 1/4 ounce. Controlled by tension of pad arm on Lever (20).

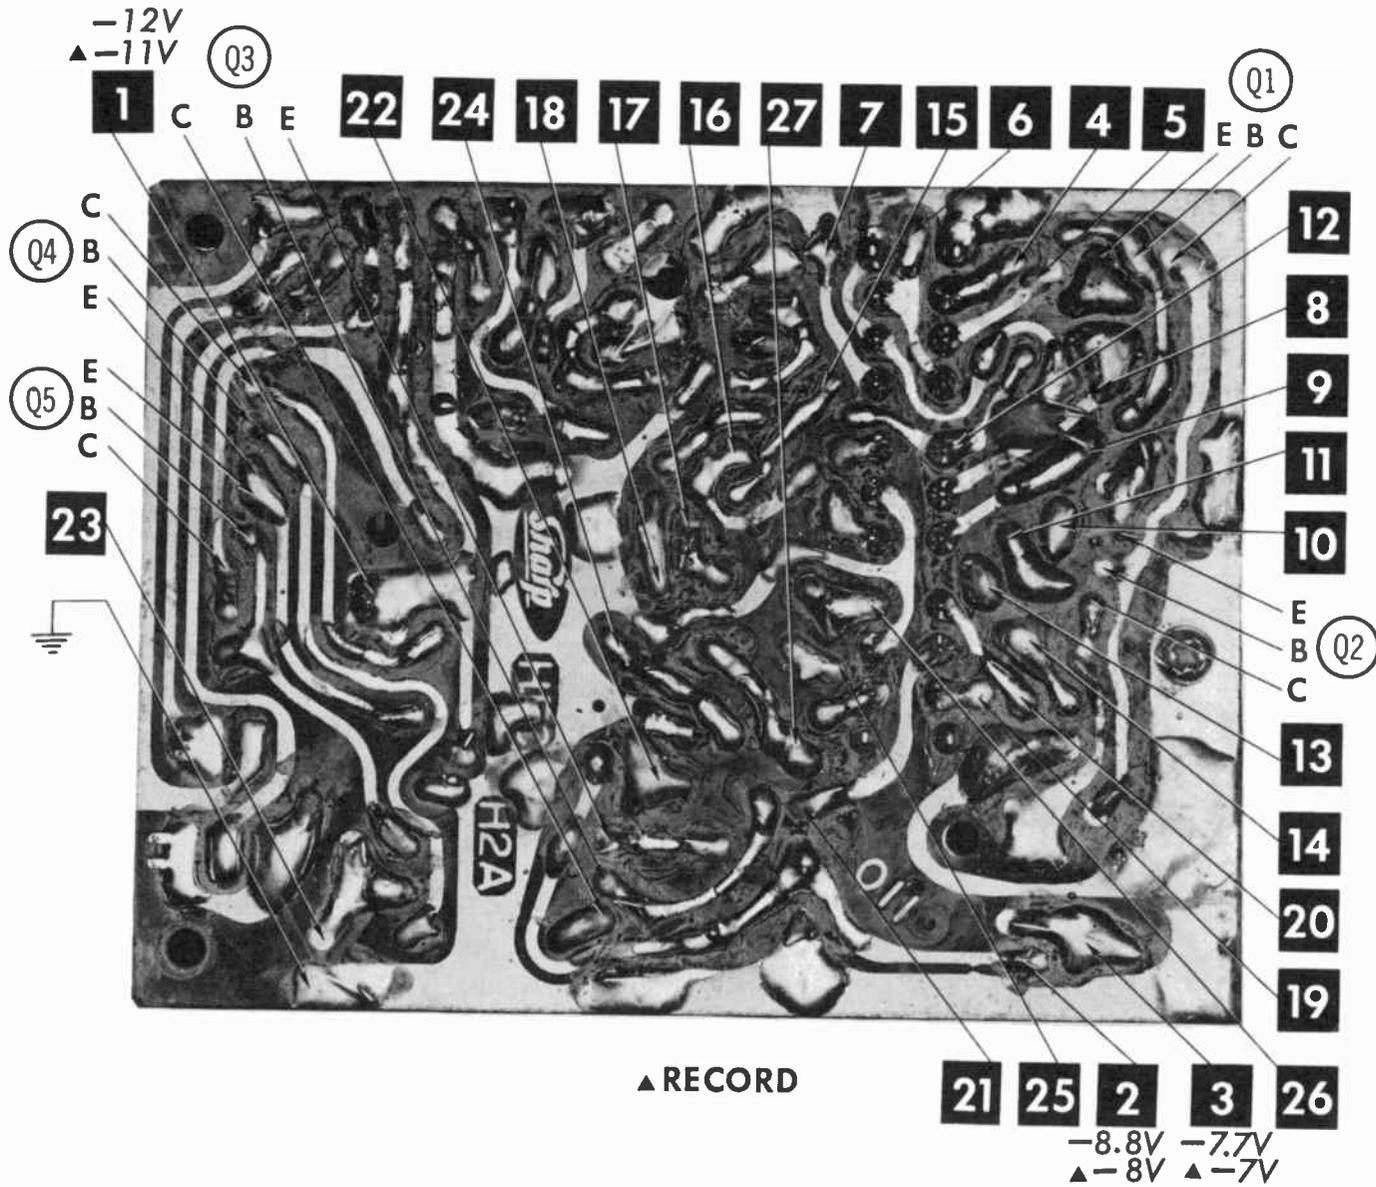

## ADJUSTMENTS (Continued)

ADJUST	REMARKS
Take-up Reel Drag	Dependent on reel weight.
Pressure Roller Pressure	Nominal value 10 ounces. Controlled by tension of Spring (28).
Brake Torque	Measured in Stop. Nominal value 4 ounces, measured counterclockwise on supply reel and clockwise on take-up reel. Controlled by tension of Spring (19) and condition of Pads (18).
Motor Azimuth	Adjust screws at B2 until Pulley (4) is perpendicular to chassis.
Pressure Pad Pressure	Nominal value 1 ounce. Controlled by loosening screws at B3 and sliding Bracket (22).
Erase Head Height	No adjustment provided.
Erase Head Azimuth	No adjustment provided.
Record/Play Head Height	No adjustment provided.
Record/Play Head Azimuth	Play an azimuth test tape, connect an AC VTVM across output, and adjust B1 for maximum.
Erase Current	Nominal value 3ma (4.75VDC) in Head (M2).
Record Bias	Nominal bias 26V rms (1ma) across head. Controlled by setting of slug in L1.
Bias Oscillator	Nominal value 32KC. Dependent on record bias.
Record Level Indicator Calibration	Disable bias oscillator by shorting secondary of L1. Apply a 1000-cycle tone to the Mic Input. Adjust volume for .017V rms across head. Normal peak should be indicated on meter. No adjustment provided.
Automatic Level Control Range	Set Volume control to maximum, move Automatic Level Control switch to Off, apply a 1000-cycle tone at .032V rms to Mic. Input jack. Connect an AC VTVM across 8Ω resistor, across Ext. Speaker jack, select record function, and note voltage measured. Turn on Automatic Level Control switch, increase generator output to 1V rms, and check voltage across 8Ω resistor again. The second voltage should be 1.8 times the first.

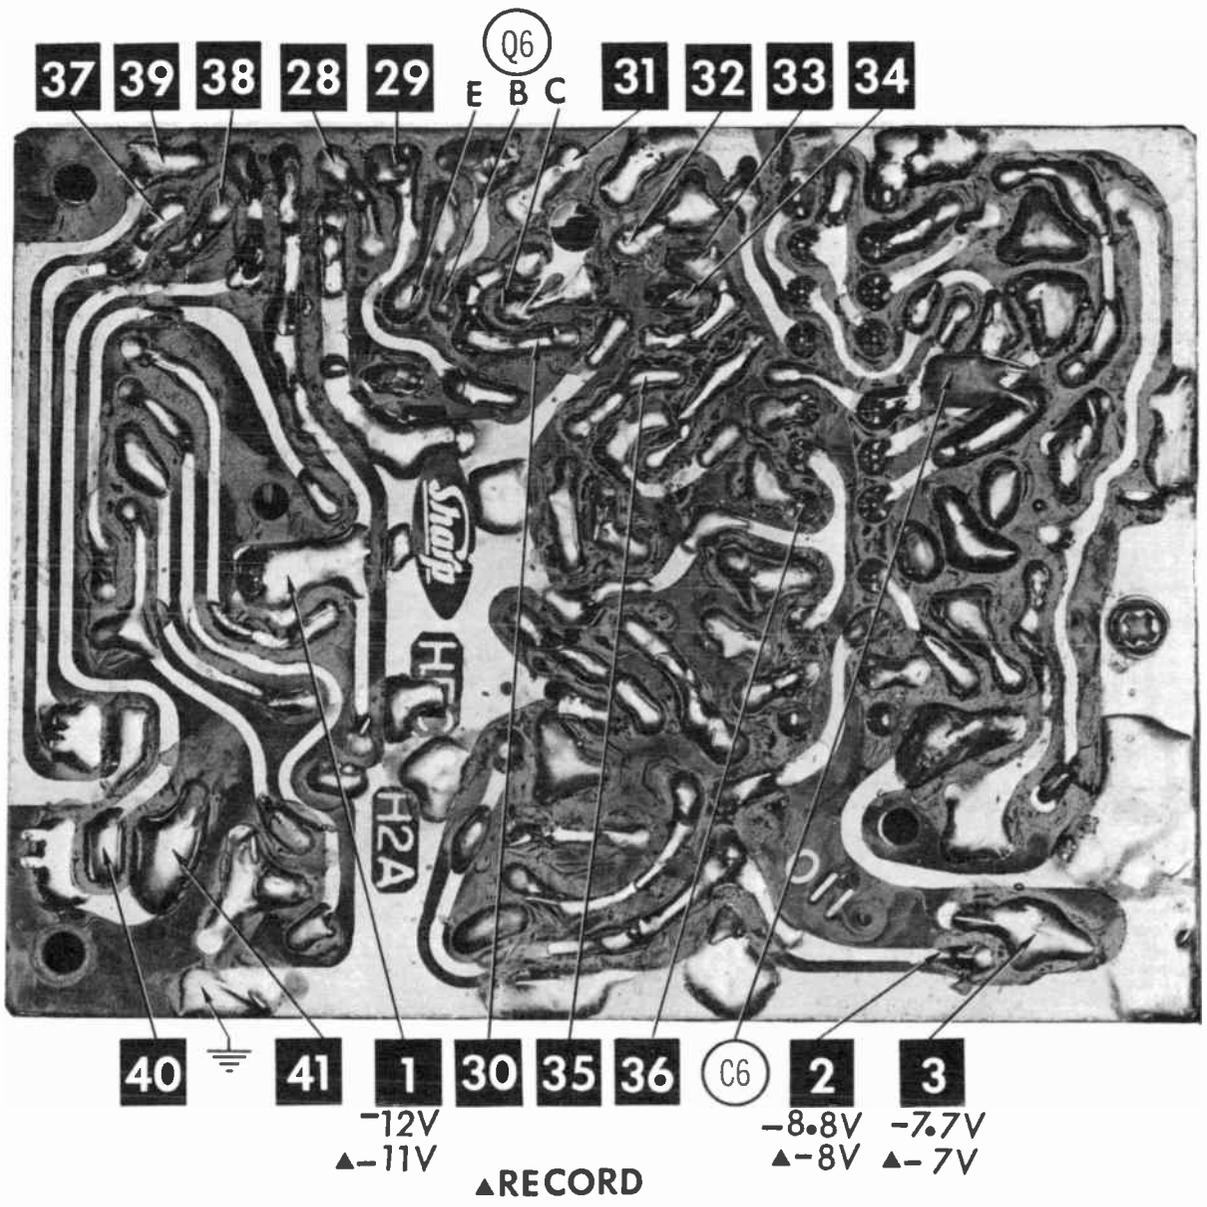

WARDS AIRLINE MODEL GEN-3638A (62-3638)

**NOTE: DEMAGNETIZE HEADS AFTER SERVICING RECORDER**

- ⊙ See parts list
- 1. Voltage measurements taken with vacuum tube voltmeter.
- 2. All controls set for normal operation, no signal applied.
- 3. Measured values are from socket pin or terminal to common ground.
- 4. All terminals viewed from bottom unless otherwise designated.
- 5. Numbers assigned to terminals may not be found on the unit.
- 6. Supply voltage maintained at rated value for voltage readings.
- 7. Resistance measurements not given because of the wide variation in internal resistance of transistor.

★ Measured in "RECORD" position with an audio VTVM.

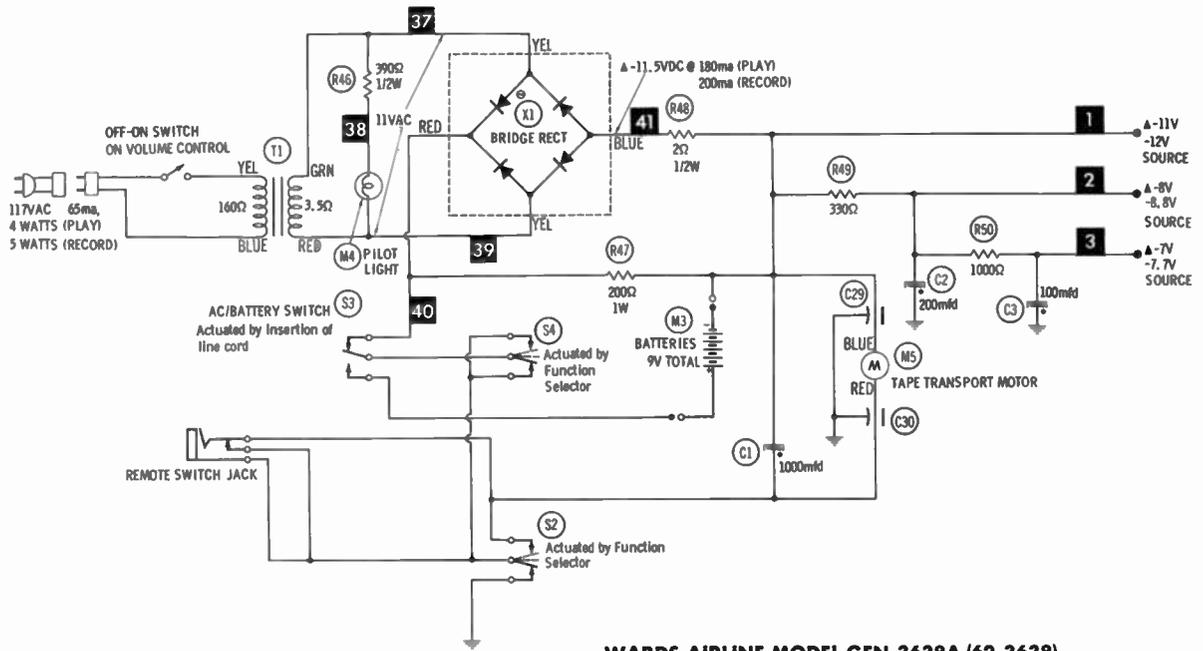

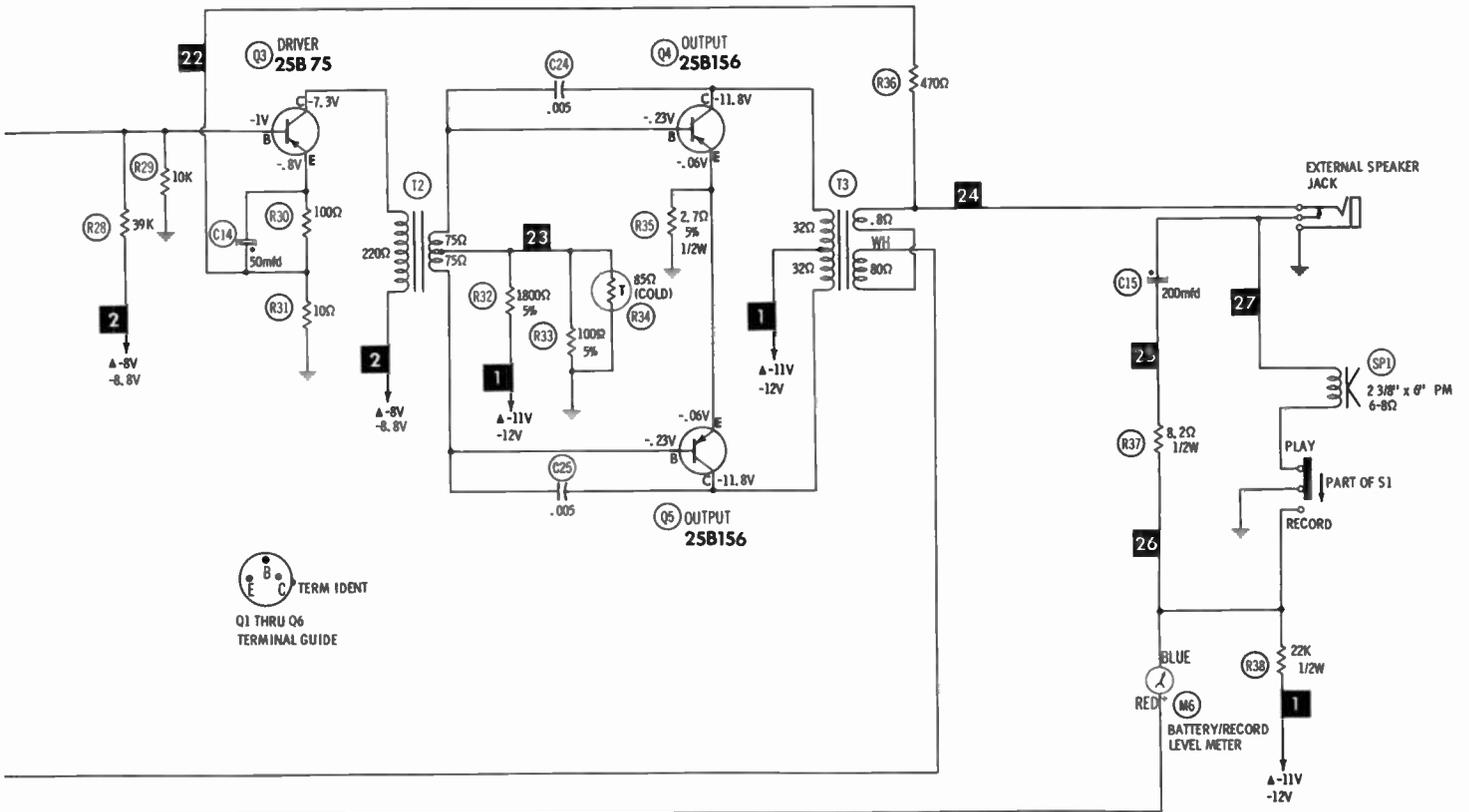

Resistors are 1/4 watt or less and rated 10% or 20% unless otherwise indicated.

Arrows at controls indicate clockwise rotation viewed from actuator end.
