AUTOTRANSFORMER TYPE 30 & 40 WATTS 110-125 VOLTS

Single-Lamp Type—60 Cycles

The 15 and 20-watt, 110-125-volt, 60-cycle; the 30 and 40-watt, 220-250-volt, 60-cycle; and 199-216-volt, 60-cycle single-lamp ballasts consist of simple series reactors compounded into drawn steel cases. The rounded ends and top and shorter overall length permit mounting in a smaller space. The 30 and 40-watt, 110-125-volt, 60-cycle single-lamp ballasts are high reactance autotransformers contained in oval steel cases.

See FL capacitors recommended for correcting power-factor.

Wakefield Fluorescent Domino Unit Lighting Fixtures

110 Volts, 60 Cycles, A.C.

Nos. D236 and D436

Nos. D218 and D418

This unit provides both useful and decorative lighting and is a complete fixture applicable to wall or ceiling surfaces. Combines the advantages and appearance of a planned, custom-built lighting unit designed to conform with a particular architectural treatment.

Can be used singly or inter-connected in rows, combining decoration with illumination. By varying the number of units used and the wattage of the lamps, any desired degree of illumination can be obtained.

This semi-cylinder of flashed opal glass is set off by end caps finished in polished chromium and illuminated by a louver effect.

Accommodates either 15 or 30-watt fluorescent lamps. Either 2 or 4-lamp sizes in both wattages are available. Lamps are mounted on a curved reflector, behind which is located the necessary auxiliary equipment. High power-factor ballasts as well as separate starter switches are used.

Width, 10 inches.

Package quantity, 1.

Wakefield Fluorescent Lumilier Channel Unit Lighting Fixtures

Where luminous patterns with fluorescent lamps are desired, a few of the variety of patterns are suggested above. The units shown will provide suggestions to the lighting engineer, who can readily produce any level of illumination by combining units into utilitarian and decorative patterns.

By applying directly to the ceiling, any conceivable pattern can be worked out, using standard units complete with connectors.

The above patterns were made from standard No. 1124 fluorescent units and are designed to show only some of the many possibilities which are available. Each unit has, self-enclosed, the necessary parts to complete such patterns.

The Cross, illustrated above, is made up of four No. 1124 units using the standard 90° connector (No. 1090). The Bank, also shown above, makes use of five standard No. 1124 units. Width, 4¼ inches.

Package quantity, 4.

NOTE.—Prices shown are for Lumilier Channels only, less starters and ballasts.

Day-Brite 1-Light Wired Units

For 18, 24, 36, and 48-Inch Fluorescent Lamps

Asymmetric Type—Series 8950 and 8960

Symmetric Type—Series 8955 and 8965

Day-Brite 2-Light Wired Units

For 18, 24, 36, and 48-Inch Fluorescent Lamps

Asymmetric Type—Series 4990 and 4975

Symmetric Type—Series 4995 and 4985

Complete units furnished wired with lamp starters, ballasts, sockets and three-foot wire lead. Levolver pull switch or toggle switch and cord and plug can be furnished at additional price. Units are complete with end caps, channel covers, cast ornamental end plates, and either specular Alzak or porcelain enamel reflectors as listed below. Channel, end caps, channel covers and cast ornamental end plates, baked aluminum enamel.

Standard package, 1 fixture.

Complete units furnished wired with lamp starters, Tu-lamp ballasts, starting compensators, sockets and three-foot wirelead. Levolver pull switch or toggle switch and cord and plug can be furnished at additional price. These units consist of channel, end caps, channel covers, cast ornamental end plates and either specular Alzak or porcelain enamel reflectors as listed below. Channel, end caps, channel covers and cast ornamental end plates, baked aluminum enamel.

Standard package, 1 fixture.

Day-Brite Fluorescent Light Strips, Reflectors, and Fittings

For 18, 24, 36, and 48-Inch Fluorescent Lamps
1-Lamp Light Strips

A complete strip lighting system with snap-on channel covers and reflectors for 18, 24, 36, and 48-inch fluorescent lamps. May be used to make up one-lamp fixtures or fixtures for any number of lamps required in a continuous line, with lamps end to end or spaced as desired.

Channel is designed to accommodate all ballasts and auxiliaries with the exception of the new Tulamp 30 and 40-watt type.

No. 8800X Channels for Snap-On Channel Covers

Has 1/2-inch knockout on 12-inch centers and screw holes in back.

Made of steel, galvanized finish.

Furnished in 12-foot lengths.

No. 8800X, Channel Only per foot \$.30

Lamp Lengths of Channel for Snap-On Channel Covers

Same width and depth as No. 8800X channel and will take either snap-on channel covers or blank covers. Each length has punched screw hole, 1/2-inch knockout and two 3/8-inch knockouts in back.

Made of steel, galvanized finish.

Day-Brite Fluorescent Light Strips, Reflectors, and Fittings
For 18, 24, 36, and 48-Inch Fluorescent Lamps

Tulamp Light Strips

A complete strip lighting system with snap-on channel covers for 18, 24, 36, and 48-inch fluorescent lamps. This system affords higher intensities for coves, niches, panels, etc. Also for exposed mounting on ceiling for general illumination.

Fixtures are equipped for two lamps parallel and additional lamps may be secured for continuous installations.

Channel is designed to accommodate the new Tulamp ballasts.

No. 4800 Channels for Snap-On Channel Covers

Will accommodate new Tulamp ballasts. Has 1/2-inch knockout on 12-inch centers with screw holes in back.

Made of steel, galvanized finish.

Furnished in 12-foot lengths.

No. 4800.....per foot \$.46

Channels for Snap-On Channel Covers

Same width and depth as No. 4800 channel and will take either snap-on channel covers or blank covers.

Each length has a punched screw hole, a 1/2-inch knockout and two 3/8-inch knockouts in back.

Made of steel, galvanized finish.

Day-Brite Show Window Reflectors

For 18, 24, 36, and 48-Inch Fluorescent Lamps

This fixture is designed for lighting all types of show windows, and is available for two, three, and four lamps.

Fixture with symmetric reflector is designed for shallow and high windows.

Fixture with asymmetric reflector is designed for medium and deep windows.

Made in unit lengths and can be butted and bolted together to make a continuous fixture to fill out window length.

Reflecting surface is specular Alzak.

Fixture dimensions are as follows: 2-light, 6x14 inches; 3-light, 6x20 inches; and 4-light, 6½x26 inches.

Fixture is complete with sockets, ballasts, lamp starters and wire lead. Completely wired, ready to install.

Knockouts for electrical connections are located in top, ends and back.

Body is made of steel; standard finish is aluminum lacquer.

Standard package, 1.

Day-Brite Two-Forty Fixtures

For Two 48-Inch 40-Watt Fluorescent Lamps

A one-piece lighting fixture.

Reflecting surface is porcelain enamel having a reflection factor of from 78 to 82 per cent. Outside of reflector is light gray porcelain enamel. Hood of fixture is finished in light gray baked wrinkle enamel, and is hinged so that it can be swung open for easy accessibility for servicing or for making wire connections. This fixture is arranged for either chain or pipe suspension.

Completely wired with sockets, lamp starters, starting compensator, 6-foot heavy duty 3-wire rubber covered cord, plug and high power-factor Tulamp ballast. Lamps are not included. Approximate power-factor, 95-100 per cent.

Height, 7¾ inches; width, 13½ inches; length, 52 inches. Shipping weight, 31 pounds.

Additional fixture length for continuous installations—for blank housing between lamps without provision for lamps, add 20 cents per inch.

Curtis SkyLux Fluorescent Luminaires

Listed by Underwriters' Laboratories, Inc.

SkyLux is the answer to the many problems of general fluorescent lighting in stores and offices. It is modern in styling and efficient in light control. SkyLux Fluorescent Luminaire is available in two finishes: satin silvertone finish and satin brass and aluminum finish. In both finishes, the mouldings and lamp shields form an interesting contrast with the snow-white Fluracite reflector.

The numbers below cover assembled units unwired and less wire, control equipment, lamps and starters, but include lamp sockets and starter sockets. Units will be supplied completely wired with control equipment at extra cost if specified.

Single SkyLux

Single SkyLux Luminaires are for mounting along the right angle juncture of the wall and ceiling or horizontally on the wall.

Single SkyLux is for one 40-watt lamp per section. Basic units are complete with two end plates and are 48 $\frac{7}{8}$ inches long overall. Extension sections are for coupling to basic units to make up continuous fixtures. Each extension section used adds 48 $\frac{1}{16}$ inches to the length of the complete fixture.

Satin Silvertone Finish No. 891

Basic single SkyLux, moldings and lamp shield finished satin silvertone. End plates with decorative die castings are aluminum lacquer.

No. 891.....per basic unit \$17.05

No. 892

Extension section—moldings and lamp shield finished satin silvertone.

No. 892.....per section \$16.10

Satin Brass and Aluminum Finish No. 893

Basic single SkyLux, moldings and lamp shield finished satin brass. End plates are aluminum lacquer and decorative die casting is bronze lacquer.

No. 893.....per basic unit \$17.05

No. 894

Extension section—moldings and lamp shield finished satin brass.

No. 894.....per section \$16.10

Twin SkyLux

Twin SkyLux Luminaires are for mounting on ceiling or for suspension on hangers.

Twin SkyLux is for two 40-watt lamps per section. Basic units are complete with two end plates and are 48 $\frac{7}{8}$ inches long overall. Extension sections are for coupling to basic units to make up continuous fixtures. Each extension section used adds 48 $\frac{1}{16}$ inches to the length of the complete fixture.

Satin Silvertone Finish No. 895

Basic twin SkyLux, moldings and lamp shields finished satin silvertone. End plates with decorative die castings are aluminum lacquer.

No. 895.....per basic unit \$26.80

No. 896

Extension section—moldings and lamp shields finished satin silvertone.

No. 896.....per section \$25.35

Satin Brass and Aluminum Finish No. 897

Basic twin SkyLux, moldings and lamp shields finished satin brass. End plates are aluminum lacquer and decorative die castings are bronze lacquer.

No. 897.....per basic unit \$26.80

No. 898

Extension section—moldings and lamp shields finished satin brass.

No. 898.....per section \$25.35

Curtis SkyLux Accessories

No. 623 Standard Two-Stem Hangers

This hanger is composed of two aluminum stems containing $\frac{1}{4}$ -inch iron pipe. A decorative ceiling canopy adds style to the hanger.

All one, two, and three section luminaires will require one hanger for each section. Luminaires of more than three sections must have hangers spaced never more than 6 feet apart.

Finished in aluminum and golden brass.

No. 624 Standard Single-Stem Hangers

For high narrow rooms or uneven ceilings, it is recommended that hangers be used to suspend SkyLux at a desirable height.

This hanger is composed of a steel stem with a satin silvertone finish and a canopy made of aluminum. Both blend well with the finishes of the SkyLux units.

Two single stem hangers are needed to support a 48-inch section of Nos. 895 or 897 SkyLux. One hanger is required to support each 48-inch section of SkyLux when two or more sections are joined together.

No. 12402 Louver Fins For Single or Twin SkyLux

Louver fins are used to shield the lamp from being viewed lengthwise. Unit includes louvers and bar frame with clips for attaching to lamp shield.

One unit is required per lamp.

Parts for Fluorescent CurtiStrip

Fluorescent fixtures can be made up from the parts listed below. It is desirable to do this for lengths longer than 10 feet, or if unfinished parts may be used, in installations where equipment will be concealed, and in certain industrial applications.

Standard CurtiStrip Channel

Channel and cover are made of 20-gage cold rolled steel, rust-resisting finish.
Size, 2½ inches wide and 1½ inches deep.

No. 129 Reflector Connectors

This connector consists of a soft metal strap, finished to match the reflectors. It fits over two adjoining sockets and is bent over the reflectors making a neat joining and preventing light leakage. One kind of strap serves for all types of reflector. Extra length, if any, is snipped off with tin shears before the edges of the strap are bent into place.

Standard package, 20.

No. 129.....each \$.20

Fluorescent CurtiStrip Semi-Concentrating Reflector Fixtures

Semi-concentrating reflector fixtures have deep symmetrical Alzak reflectors. They are intended for general or localized direct lighting over counters, cases and work tables.

UNWIRED, UNASSEMBLED UNITS NOT INCLUDING AUXILIARY EQUIPMENT. Complete with lamp holders and lamp starter sockets. No lamps, ballasts, lamp starters, or wire included.

WIRED, ASSEMBLED UNITS INCLUDING BALLASTS. All unwired units listed in the tables below can be furnished wired

and assembled with or without power factor correction.*

Wired units for two or more lamps may be ordered from the tables below by adding the word "wired" to the unwired unit number, and giving the voltage and power factor requirements. Prices on request.

WIRED, ASSEMBLED UNITS FOR ONE LAMP (PACKAGED). These units include ballast, lamp holders, and lamp starter—complete except for lamp. All units are wired for 60 cycles a.c.

Decorative Type

The decorative type is for exposed-to-view mounting. The simple lines, well designed end caps, reflector end plates, and the satin silvertone finish combined to give this type of Fluorescent CurtiStrip Fixture a modern appearance.

No. 12403 Louver Assembly for 48-Inch Lamps

CROSS SECTION OF LOUVER ASSEMBLY INSTALLED IN REFLECTOR

This louver assembly adds a decorative touch and reduces brightness. It is for No. 105 symmetrical reflector—48 inches deep, and has ten fins mounted at intervals of 4¾ inches. The assembly is supported in the No. 106 Alzak reflector by steel arms at the

end of the assembly which rest on the lips of the reflector. This louver assembly is made of steel with aluminum lacquer finish.

Standard package, 2 assemblies.

No. 12403.....each \$3.30

LOUVERS PLACED AT 4¾" INTERVALS

**Fluorescent CurtiStrip
Distributing Reflector Fixtures**

Distributing reflector fixtures have shallow symmetrical Alzak reflectors which spread the light over a wide area. They are for general direct lighting, local lighting when mounted below eye level, and for indirect lighting.

and assembled with or without power factor correction.* Wired units for two or more lamps may be ordered from the tables below by adding the word "wired" to the unwired unit number, and giving the voltage and power factor requirements. Prices on request.

UNWIRED, UNASSEMBLED UNITS NOT INCLUDING AUXILIARY EQUIPMENT. Complete with lamp holders and lamp starter sockets. No lamps, ballasts, lamp starters, or wire included.

WIRED, ASSEMBLED UNITS FOR ONE LAMP (PACKAGED). These units include ballast, lamp holders, and lamp starter—complete except for lamp. All units are wired for 60 cycles a.c.

WIRED, ASSEMBLED UNITS INCLUDING BALLASTS. All unwired units listed in the tables below can be furnished wired

Decorative Type

The decorative type is for exposed-to-view mounting. The simple lines, well designed end caps, reflector end plates, and the satin silvertone finish combine to give this type of Fluorescent CurtiStrip Fixture a modern appearance.

Economy Type

The economy type is for concealed installation and use where a fine finish is not important. Fixture has a rust-resisting plated finish, plain channel end caps (two No. 46 extended end caps for making conduit connection), and open reflector ends. If reflector end plates are desired, they may be ordered separately.

*90 per cent or higher. High power factor is recommended. Use low power factor units where central power factor correction is employed.

Fluorescent CurtiStrip Hangers and Supports

Self-Aligning Pendant Type

No. 613

No. 614

No. 613. For mounting to outlet box in ceiling for direct lighting only. Use two supports for each section of Fluorescent CurtiStrip up to 10 feet. Lower end of hanger bolts to back of channel.

Standard suspension is 40 inches to top of CurtiStrip. May be cut to any shorter length without threading. If longer suspension is desired, it can be supplied at slight additional cost.

No. 614, with Angle Fitting. For mounting to outlet box in ceiling for direct or indirect lighting. Suspension, 21 inches to top of CurtiStrip.

Curved Arm Pedestal Type

No. 617

No. 620

Mounting height above table is adjustable to a maximum of 18 inches to top of CurtiStrip. Uprights should be spaced not more than 6 feet apart.

No. 617. For mounting to top edges of table, case, or counter. Connects to side of CurtiStrip. Includes 3/8-inch iron pipe connector, flexible conduit connector, and bushing for cord connection. Two or three brackets are suggested for each fixture up to 10 feet.

Same as No. 617 except that it connects to No. 501 CurtiStrip End Casting.

No. 620, with Angle Fitting.

Fluorescent CurtiStrip Directional Reflector Fixtures

Directional reflector fixtures have asymmetrical light distribution. They are for lighting sloping and vertical surfaces and for show window and cove applications.

UNWIRED, UNASSEMBLED UNITS NOT INCLUDING AUXILIARY EQUIPMENT. Complete with lamp holders and lamp starter sockets. No lamps, ballasts, lamp starters, or wire included.

WIRED, ASSEMBLED UNITS INCLUDING BALLASTS. All unwired units listed in the tables below can be furnished wired

Decorative Type

The decorative type is for exposed-to-view mounting. The simple lines, well designed end caps, reflector end plates, and the satin silvertone finish combine to give this type of Fluorescent CurtiStrip Fixture a modern appearance.

Fluorescent CurtiStrip Hangers and Supports Horizontal or Pedestal Type

Finished pipe included in these supports has a standard length of 18 inches. In horizontal position, supports permit use of Fluorescent CurtiStrip for direct or indirect lighting. Brackets should be spaced not more than 6 feet apart.

No. 618. For mounting on walls, wall cases or other vertical surfaces. Connects to side of CurtiStrip channel. Includes ⅜-inch iron pipe connector, flexible conduit connector, and bushing for cord connection. One mounting bracket is suggested for each 18 or 24-inch section; two for longer sections.

No. 621. Similar to No. 618 except for mounting on top surface of wall case or other horizontal surfaces. Extension is adjustable.

and assembled with or without power factor correction.* Wired units for two or more lamps may be ordered from the tables below by adding the word "wired" to the unwired unit number, and giving the voltage and power factor requirements. Prices on request.

WIRED, ASSEMBLED UNITS FOR ONE LAMP (PACKAGED). These units include ballast, lamp holders, and lamp starter—complete except for lamp. All units are wired for 60 cycles a.c.

How to Order Continuous Runs

Joining Two Sections of CurtiStrip without Drilling

Extension sections for Fluorescent CurtiStrip permit making up continuous runs with any number of lamps. Basic units come in lengths up to 10 feet. When a section more than 10 feet long is desired, the run is made up with one basic unit and one or more extension sections. The required extension sections should be selected first and the basic unit used to complete the run.

For example, to make up a run 20 feet long with 48-inch lamps, order two 8-foot extension sections (this is the only length extension section available for the 48-inch lamp) and order one 4-foot basic unit to complete the run.

Extension sections are similar to the corresponding basic units except that in place of the end pieces, a connector assembly is provided. With decorative type units, two No. 181 holder straps are provided so that the joint can be made without screw heads showing.

Fluorescent CurtiStrip

Winged-Back Reflector Fixtures

Decorative Type

Winged-back reflector fixtures have a streamlined, decorative appearance. They are for strip lighting and other decorative lighting. One-lamp units have a wide application in halls and corridors. Usually mounted directly on flat surface with bolts or screws through back of Curti-Strip or with No. 9 strap. Satin silvertone finish.

UNWIRED, UNASSEMBLED UNITS NOT INCLUDING AUXILIARY EQUIPMENT. Complete with lamp holders and lamp starter sockets. No lamps, ballasts, lamp starters or wire included.

WIRED, ASSEMBLED UNITS INCLUDING BALLASTS. All unwired units listed in the tables below can be furnished wired and assembled with or without power factor correction.* Wired units for two or more lamps may be ordered from the tables below by adding the word "wired" to the unwired unit number, and giving voltage and power factor requirements. Prices on request.

WIRED, ASSEMBLED UNITS FOR ONE LAMP (PACKAGED). These units include ballast, lamp holders, and lamp starter—complete except for lamp. All units are wired for 60 cycles a.c.

One-Lamp Industrial Units (Packaged)

For Conduit Suspension

Units are wired and complete with ballast and lamp starter in channel for use with one lamp—lamp not included. Fixtures for 24, 36 or 48-inch lamps are available with any of the three reflector shapes.

Each end of the channel is closed by a plain end cap with a knockout. Units are supplied with a fitting for supporting from ½-inch conduit—conduit not included. This fitting can also be used for splice box.

With Deep Symmetrical Reflector

*90 per cent or higher. High power factor is recommended. Use low power factor units where central power factor correction is employed.

†Assembled.
‡With high power factor two-lamp ballast. Complete with wire and auxiliary equipment, but less lamps.

Curtis Fluorescent CaseStrip

Listed by Underwriters' Laboratories, Inc.

So that CaseStrip will fit the special requirements of each individual showcase, the mounting brackets are designed to permit angling the reflector. After fastening in place, the channel can be raised, lowered, or moved slightly forward or backward to make a snug fit in the showcase.

The pop-out lamp ejector (see small illustration) eliminates usual awkwardness associated with cleaning and relamping showcase equipment. By pressing the ejector lever back on the socket, the lamp automatically pops out into the hand.

CaseStrip has a special fluorescent reflecting surface: Fluracite, a heat-treated, per-

manent finish. Fluorescent lamps and Fluracite reflecting surfaces produce daylight quality to reveal buying appeal. Because the fluorescent lamp is a mercury-arc type, a ballast and starter are necessary with each lamp. These may be ordered separately, or as an alternative, they are included when CaseStrip is ordered wired complete.

Detail of a typical metal-frame showcase. Reveals the end support brackets bent to conform to the angled molding on which equipment is mounted.

Supporting screws go into vertical edge of wood-frame showcase; obtainable for horizontal mounting as well. Also available for all-glass showcase installation.

Two small, sturdy support brackets are supplied with each CaseStrip fixture (intermediary supports are included with long runs). These support brackets are so constructed that they can be bent (on the job) to any practical angle for mounting on case frame. Further, a screw slot in the arm of the end support bracket allows the reflector to be tilted for proper angle of light distribution before it is locked in place. Installation of CaseStrip in all typical showcases—whether wood frame, metal frame, or all glass—may be neatly and easily accomplished. CaseStrip fits snugly along the top edge of the showcase.

Wired and Assembled Reflector-Channel Units

Group I, with Starter and Ballast in Reflector-Channel—Entrance Tubing and Lamps Not Included

These units are complete with wire, sockets, starter and ballast, but less tubing and entrance fittings. Give inside dimensions of case. Units will be shortened on order to fit any case between the minimum and maximum shown in the table.

To provide space for entrance fittings and installing clearance, the dimensions given are 3/4 inches more than the overall length of reflector channel and end caps. Inside length of showcase must be mentioned on the order.

All units are wired for 60 cycles a.c.

*Number of wires shown is the total from the ballast housing to the reflector and is based on the use of a separate ballast for each lamp.

†Number of wires shown is based on the use of a two-lamp ballast to care for both lamps.

‡Reflector-channel includes housing for starting compensator (starting compensator not included). One starting compensator necessary when using a 30-watt two-lamp ballast.

To provide space for entrance fittings and installing clearance, the dimensions given are 3¹/₄ inches more than the overall length of the CaseStrip reflector-channel and end caps.

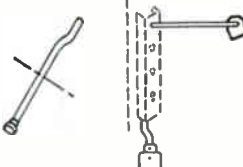

For cases longer than the above maximums, use entrance equipment including part E.

Explanation of Key Letters

- a. For low power factor on any a.c. voltage use No. 238. For high power factor on any a.c. voltage, use No. 239.
- b. For low power factor on any a.c. voltage or high power factor on 220-250 volts, 60 cycles, use No. 156. For high power factor on any 110-125 or 220-250 voltage, 50 cycles, use No. 157.
- c. For low power factor on 110-125 volts a.c., use No. 157.

- For high power factor on 110-125 volts a.c., use No. 158.
- d. For low power factor on any voltage, 60 cycles a.c., use No. 157. For high power factor on 110-125 or 220-250 volts, 60 cycles a.c., use No. 158.
- e. For high or low power factor.
- f. For high power factor two-lamp ballast on 110-125 or 220-250 volts, 60 cycles a.c.

No. 159 Housing for Two-Lamp Ballast

This two-lamp ballast housing is for 2-30 watt lamps. The ballast is not included.

Length, 10 3/4 inches; width, 2 1/2 inches; height, 4 inches.

Benjamin Stream-Liter Fluorescent Lamp Units

Listed by Underwriters' Laboratories

RLM Twin Lamp

Triple Lamp

This Benjamin Stream-Liter Fluorescent Unit provides economic and efficient lighting for general and local illumination of industrial and commercial interiors, where the coolness, color qualities and high lumen per watt output advantages of fluorescent lamps are desired. Used for local lighting of inspection tables, inspection benches, individual machines, production lines, drafting rooms, etc.

Available in two arrangements to take either two or three 48-inch, 40-watt fluorescent lamps. Twin lamp unit is made in accordance with RLM standard specifications and carries the RLM label. Triple lamp unit provides approximately 45 per cent more light than the twin lamp type.

In general lighting installations, these units provide uniform, glareless illumination of daylight quality over horizontal surfaces, while providing adequate illumination for most purposes on vertical surfaces. In general lighting installations from 20 to 70 footcandles are obtainable on the working surfaces, depending upon room conditions, mounting height, spacing distance between units, the number of lamps per unit and whether white or daylight lamps are utilized. The maximum spacing distance between units should never exceed 1½ times the mounting height above its working plane.

The low angle of cut-off and the closed-end reflector construction shield the lamp from view at most normal angles of vision. Cool lighting; no annoyance from heat radiation and a minimum of interference with the objectives of air conditioning.

The porcelain enameled reflecting surface is easy to clean and can be restored to its original efficiency by washing with soap and water.

All parts are easily accessible.

The single reflector, which accommodates two or three lamps, is made of 20 gage porcelain enameling iron, covered completely with a ground coat of fused porcelain enamel. Over this is applied one coat of separately fired porcelain enamel on the outer surfaces and two on the inner reflecting surfaces. The reflection factor is 79 per cent or more.

On twin lamp units when a point from the center of the lamp is connected with a straight line to the lower edge on the opposite side of the reflector, it forms an angle of 72½° from the vertical. On triple lamp units the angle of cut-off is 72½° on the two outer lamps and 70° on the center lamp. Reflector ends are closed to provide shielding of the lamp.

The design of the reflector, high reflection factor of the porcelain enamel, proper positioning of the lamps and other factors combine to give an efficiency of 78 per cent or more of the output of the lamps for twin lamp units and 76.5 per cent for triple lamp units.

Lamp holders are located at each end of the reflector. On twin lamp units they are mounted at an angle of 24° from the vertical with a distance of 5 inches between lamp centers. On triple lamp units the two outer lamps are spaced exactly as described for twin lamp units with the third lamp centered between and slightly below them, with its lamp holders in the vertical position.

Twin lamp units with lamps and control equipment use approximately 100 watts; triple lamp units, 150 watts.

The ballast supplied with twin lamp units is designed so that the two lamps operate out of phase approximately 90°; minimizing flicker. On triple lamp units where this twin lamp ballast is used in combination with a single lamp

ballast of 90 per cent power factor, all lamps are out of phase with each, reducing flicker. A starting compensator is provided with every twin lamp ballast.

Single or double chain supports can be attached to each end of the housing by means of two detachable angle mounting brackets supplied with the unit. The lead-in wires can be brought into the top of the hood through BX cable or flexible conduit, using one of two ½-inch conduit knock-outs provided. Where chain supports are used only welded or lock link chain should be employed to assure a strong support.

Where a rigid suspension is desired, the two conduit knock-outs in the top of the hood, spaced on 36-inch centers, can be utilized for the attachment of two rigid stems.

Units are also provided with a knock-out for ½-inch conduit in each end and switch knock-out in side of housing.

Overall dimensions: length, 52½ inches; depth, 7 inches; and width, 13 inches.

Compensator, ballasts, reflector and housing are connected metal to metal, for grounding through the metal suspension to the conduit system.

Removable starters are installed in special receptacles attached to one of each pair of lamp holders.

Units are supplied wired with 6-inch leads or can be furnished unwired. Wire is included with unwired units. When specified, wired units can be supplied with 6 feet of 3-wire rubber covered cord and a plug cap at \$1.20 advance in list price.

Units can be supplied with pull switches for individual control at the following additions to list price: 110-volt, single pole pull switch, \$1.00; 220-volt double pole pull switch, \$1.85. To order, suffix regular number with PUL.

When specified, units may be supplied with adapter for attachment to either ⅜ or ½-inch fixture studs, or with plate to fit ears of standard ¾ or 4-inch round or octagonal outlet boxes, at 30 cents advance in list.

Units can be supplied without ballasts, starting compensator and lamp starters: twin lamp unit, No. 48602, \$18.35; triple lamp unit, No. 48603, \$23.15.

Light gray porcelain enameled reflector; housing is steel, finished in silver aluminum.

Packed 1 in a standard package.

For Two 48-Inch, T-12 (40-Watt) Fluorescent Lamps

*60 Cycles

Ballast, one twin lamp of 95 per cent power factor.

Shipping weight, 33 pounds.

Lamps are not supplied.

Supplied on special order with 199-216-volt ballasts at same list price as 220-250-volt ballasts.

Benjamin Stream-Liter Fluorescent Lamp Units

Lighting Data for Twin and Triple

Tables below show average illumination obtained with twin and triple lamp Stream-Liter units, using 48-inch, 40-watt, white Mazda fluorescent lamps; for daylight lamps, 1800 lumens, multiply values by .85. Values based on minimum installation of 4 units and maintenance factor of .75. Mounting heights are distance above floor; footcandle values are on working plane, 30 inches above floor.

*Minimum heights shown are for spacing ratio of 1½ to 1. The greater heights are for 1 to 1 spacing.

†Use Favorable, for broad rooms where width is 4 times mounting height above floor. Use Average, where room width is 2 times mounting height above floor. Use Unfavorable, where width is equal to mounting height above floor.

‡Impractical; recommended that interior room conditions be improved or provision made for more frequent maintenance.

Benjamin Glass Covers

For Stream-Liter Fluorescent Lamp Units

Cover Opened for Servicing Unit

These hinged type glass covers can be attached to any regular Benjamin Stream-Liter Fluorescent Unit. They protect lamps and reflecting surfaces from dust and dirt so that efficiency is maintained and cleaning costs reduced. Either clear or opal glass is available.

When equipped with an opal glass cover, the unit becomes a diffusing light source of low brightness for lighting drafting tables and locations where unusual diffusion is desired or where inspection and manufacturing operations must be performed on polished, plated or shiny surfaces. The opal glass cover aids in reducing this brightness.

The average brightness of the opal cover glass with various lamp arrangements is as follows: with two white lamps, 875 foot-lamberts; with two daylight lamps, 740 foot-lamberts; with three white lamps, 1300 foot-lamberts; with three daylight lamps, 1100 foot-lamberts.

Naturally there is some light absorption by the opal glass cover.

Cover consists of a steel frame; one side of which has a series of spring bronze hinges, and a clamping arrangement, while the other has a series of spring bronze clamps. The frame supports the cover glass which is attached to it by bronze wire clips. The grooved felt gasket is cemented to the glass and to the cover frame.

To attach, release a screw near each end of the hinged section of the frame which frees one end of each of two locking levers allowing them to be swung down into the open position.

The hinged side of the cover frame is then hooked over the flange of the reflector and the cover is swung into closed position where it is held by closing cover clamps on the opposite side. The two locking levers, attached to the hinged section of the frame, are then swung into position between the cover frame and the reflector flange and the locking screw in each lever is tightened to securely clamp the hinged section of the cover assembly to the reflector flange.

Frame is finished in baked aluminum enamel, applied over electro-plating; clamps and hinges are nickel plated.

Packed 1 in a standard package.

No.	Each	Description	Length Inches	Width Inches
48695	\$13.25	Complete Clear Glass Assembly	52½	*13¾
48691	16.75	Complete Opal Glass Assembly	52½	*13¾
48680	5.75	Clear Glass Only, with Gasket.	51⅜	12¾
48681	9.25	Opal Glass Only, with Gasket..	51⅜	12¾

*Includes cover clamps and hinges; width between outside edges of band, 13 inches.

Stream-Liter Units are not included.

Benjamin Sealed-Flo Fluorescent Lamp Units

Listed as Vapor Proof by Underwriters' Laboratories

A durable, one-piece, dust-tight and vaporproof unit, available in arrangements for either two or three 48-inch, fluorescent lamps. Can be used for both general and local illumination of industrial and commercial interiors; where steam, dampness, non-combustible dust and vapors are present.

When equipped with an opal glass cover, this unit becomes a diffusing light source of low brightness for lighting drafting tables, etc.

When supplied with heat and impact-resisting tempered plate glass covers, units are suitable for locations where equipment is exposed to flying fragments or rough handling.

The bottom of the one-piece housing is sealed by a gasket equipped glass, mounted in a metal frame. One side of this frame is hinged to the housing while the opposite side has a series of hand operated cover clamps, which hold the assembly in positive engagement with the inner flange of the housing. Suspension flanges are gasketed to the housing.

Easy to service and install. When opened the cover hangs straight down, supported by the hinges.

Overall dimensions: length, 52½ inches; depth, 7¾ inches; and width, 13 inches.

For mounting, unit is provided with two cast iron suspension flanges, spaced on 36-inch centers, tapped ½ inch standard; ¾ inch if specified. One of these flanges is for a dummy conduit stem and the other provides for wire entrance; flange for wire entrance has a conduit stop arrangement. Provision is made for grounding units.

Outside finish is light gray porcelain enamel; suspension flanges and cover frame are baked aluminum enamel; hinges and clamps are nickel plated.

Packed 1 in a standard package.

For Two 48-Inch, T-12 (40-Watt) Fluorescent Lamps

†Heat and impact-resisting, tempered-plate, clear glass covers supplied, when specified; prices upon request. To order, substitute suffix TP for CL after number.

Lamps are not supplied.

Supplied on special order with 199-216-volt ballasts at same list price as 220-250-volt ballasts.

Benjamin Twin-Flo and Triple-Flo Fluorescent Lamp Units

Listed by Underwriters' Laboratories

Twin-Flo

Designed to utilize the high lumen per watt output of 48-inch fluorescent lamps. Can be used for general illumination of industrial and commercial locations where uniform, cool, daylight fluorescent lighting must be provided.

The twin lamp and triple lamp units are identical in every respect, including size, except for the necessary changes in ballast and lamp holder equipment in the triple lamp unit to accommodate a third lamp. In light output, the triple lamp unit provides approximately 45 per cent more light than the twin lamp style. Like other units having this type of distribution, the maximum spacing distance between units should not exceed 1½ times the mounting height.

Ballasts are in accordance with Mazda Lamp Manufacturers' specifications for Fluorescent Lamp Auxiliaries.

A starting compensator is provided with twin lamp ballasts. Starters are installed in receptacles attached to one of each pair of lamp holders.

Single or double welded or lock chain supports can be attached to each end of the housing, using two detachable angle mounting brackets provided. The lead-in wires can be brought into the top of the hood through BX cable or flexible conduit, using one of two ½-inch conduit size knock-outs.

For stem suspension, the two conduit knock-outs in the top of the hood, spaced on 36-inch centers, can be used.

Units have a knock-out for ½-inch conduit in each end and a switch knock-out in the side.

When specified, units can be supplied with adapter for attachment to either ¾ or ½-inch fixture studs, or with plate to fit ears of standard 3¼ or 4-inch round or octagonal outlet boxes, at 30 cents advance in list.

Overall dimensions: length, 52½ inches; depth, 7 inches; and width, 13 inches.

Units are supplied wired or unwired, as desired. When specified, wired units can be furnished with 6 feet of 3-wire rubber covered cord and a plug cap, in place of standard 6-inch leads, at \$1.20 advance in list. To specify, suffix number of regular wired unit with P.

Porcelain enameled steel reflector has light gray finish; silvered aluminum steel housing.

Packed 1 in a standard package.

*Minimum heights shown are for spacing ratio of 1½ to 1. The greater heights are for 1 to 1 spacing.

†Use Favorable, for broad rooms where width is 4 times mounting height above floor. Use Average, where room width is 2 times mounting height above floor. Use Unfavorable, where width is equal to mounting height above floor.

‡Impractical; recommended that interior room conditions be improved or provision made for more frequent maintenance.

Benjamin Flur-O-Liter Fluorescent Lamp Units

Listed by Underwriters' Laboratories

Utilizes the high lumen per watt output of fluorescent lamps in producing high intensity, cool, glareless, daylight quality illumination for industrial and commercial locations. Provided with two individual, efficient semi-concentrating reflectors of polished Alzak aluminum mounted and supported in a single housing.

The distribution of the Flur-O-Liter unit lends itself to high intensity localized lighting of assembly benches, inspection tables, production lines, drafting tables and similar local areas. Also makes these units suitable for general illumination where it is desired to confine the lighting to restricted areas, with a minimum of light loss on the side walls.

A welded steel housing, encloses reflector assembly and provides space for control equipment; gray finish.

Ballast is made in accordance with Mazda Lamp Manufacturers' specifications for Fluorescent Lamp auxiliaries.

The overall power factor of lamps and auxiliary equipment is 95 per cent.

Units are provided with a compensator, mounted in the housing adjacent to the ballast unit.

The 48-inch lamp units are supplied with two detachable angle brackets so single or double chain supports can be attached at each end of the housing. The lead-in wires can then be brought into the top of the housing through BX cable or flexible conduit, using one of the two ½-inch conduit knock-outs provided. For a rigid suspension, the two conduit knockouts in the top of the housing, spaced on 36-inch centers, can be used.

The 36-inch lamp units have a single flange in the center of the unit, tapped ½-inch conduit size standard, ¾-inch if specified.

For ceiling mounting, units can be supplied with adapter angle brackets to either ⅜ or ½-inch fixture studs, or with plate to fit ears of standard ¾ or 4-inch round or octagonal outlet boxes, at 30 cents advance in list.

Supplied wired with 6-inch leads, or can be furnished unwired. Wire is included with unwired units. Wired units can be supplied with 6 feet of 3-wire rubber covered cord and a plug cap at \$1.20 advance in list.

Packed 1 in a standard package.

Benjamin Flur-O-Line Fluorescent Lamp Units

Listed by Underwriters' Laboratories

48-Inch (40-Watt) Lamp Unit with Twin-Lamp Ballast

Chain Hook

Unit Line, Consisting of Three 36-Inch (30-Watt) Basic Lamp Sections, Plus the Necessary Flur-O-Line Fittings for End-to-End Attachment

Typical Curves

Scientifically designed to secure best lighting results from highly efficient Mazda fluorescent lamps. Each section is a self-contained unit which can be used individually or connected end to end to form a line of any desired length.

The specially designed trough shaped, semi-concentrating, Alzak aluminum reflector has a high reflection factor and utilizes the high lumen per watt output of fluorescent lamps in providing maximum illumination on the surfaces to be lighted.

In the case of 24 and 36-inch lamp size units, all single and multiple units of the same lamp size are built from a common basic section, which is a complete single section without suspension flange. For individual installation the suspension flange is added; for unit lines the proper number of basic lamp sections, without flanges, are used in combination with the required Flur-O-Line fittings.

In the case of sections for 48-inch lamps, the sections listed can be installed individually or used in unit lines, but Flur-O-Line fittings must be added to complete unit lines.

Sections are provided with a sheet metal wiring channel. At each end of the channel is a removable cap with a 1/2-inch size knock-out. No. 5146 special end cap, with 1/2-inch threaded bushing, 45 cents extra. Channel also has a 1/2-inch conduit size switch knock-out.

Sections are not wired, but are furnished with two lengths of heat-resisting wire for use in making connections between lamp holders and controls.

Ample space is provided inside the channels to accommodate ballasts for use with a replaceable starter, which is installed in a receptacle attached to one of the lamp holders.

The exterior of the reflector section is baked glossy aluminum, applied over Alzak; the wiring channel is finished in baked aluminum enamel. Suspension fitting is baked aluminum over electro-plating.

Packed 1 in a standard package.

For 48-Inch, T-12 (40-Watt) Fluorescent Lamps

With Single Lamp Ballast

Sections listed are for individual installation or can be joined end-to-end in line. Sections with twin lamp ballasts have a larger wiring channel and are used where it is desired to operate two adjacent lamp sections from a common ballast. In such cases, one No. N48001 section should be provided for every twin lamp ballast section. Starters for No. N48001, must be specified separately.

A chain hook is attached to each end of the channel and two 1/2-inch conduit size knock-outs, spaced on 36-inch centers, are provided in the top.

Power consumption of a lamp section, with a single lamp ballast and lamp, is approximately 53 watts.

Overall dimensions: length 48 1/2 inches; depth, 6 3/4 inches; and width, 7 inches.

Wheeler Day-Flo Fluorescent Lighting Units

Listed by Underwriters' Laboratories

Developed for general illumination purposes in industrial locations. Unusually efficient and can be used to advantage in lighting production areas when general illumination of daylight quality is necessary or desirable.

Unit incorporates the use of two, 40-watt, 48-inch Fluorescent daylight lamps in a porcelain-enameled steel reflector.

Furnished complete with sockets, high power factor tulamp ballast equipment and a compensator which facilitates starting and ensures satisfactory lamp performance. Fixture is supplied wired, with pigtailed left for connecting to branch circuit.

Reflectors are porcelain-enameled, green outside, white inside. Canopy and hanger are finished in aluminum.

The Day-Flo can be supplied for the two following methods of suspension. For chain suspension: All units are supplied with loops in the cast ends for chain suspension. Chain is not furnished. A removable metal cover plate, having a K. O. for 1/2-inch iron pipe fittings in its center, fits over an opening in the wiring channel of the unit, thus giving a readily accessible splicing chamber to which any form of acceptable connection can be made. When fixtures are ordered with a factory-installed cord and plug, the removable metal cover plate is supplied complete with a composition cord bushing.

For two stem suspension: Unit is supplied with a new hinged suspension canopy and with a hinged hanger, both of which are located 11 inches from the ends of the fixture. The distance from center to center of these suspension fittings is 30 inches. Canopy swings open upon release of a single screw, exposing pigtailed for quick and easy splicing. Complete unit can be separated from upper portion of the canopy by removing two pivot screws. Hinged hanger also swings open and can be separated by the removal of a single screw. Canopy and hanger are tapped for 1/2-inch pipe but pipe is not supplied.

Unit wired complete with ballast and starter switches.

Prices do not include lamps.

Packed 1 in a standard package.

Chain suspension units can be furnished with 3-conductor cord 6 feet long with two-prong plug having ground wire extending through the side, \$1.20.

For unit less two starter switches, deduct 65 cents each or \$1.30 for both.

Units can be supplied unwired at a reduction of 75 cents

Wheeler Day-Flo Diffuser Fluorescent Lighting Units

Listed by Underwriters' Laboratories

Used where efficient daylight illumination is required. Provides color-corrected light, is extremely efficient, cooler in operation, ideal for color matching, easily installed and easily serviced. Designed especially for general illumination of industrial areas.

Apertures in the top permit some light to escape and reflect against the room ceiling, lessening the usual sharp contrast between ceiling and working plane.

Incorporates the use of two, 40-watt, 48-inch fluorescent lamps in a porcelain-enameled steel reflector.

Furnished complete with sockets, high power factor tulamp ballast equipment, starter switches and a compensator which facilitates starting and insures satisfactory lamp performance. Fixture is supplied wired, with pigtailed left for connecting to branch circuit.

Reflectors are porcelain-enameled white, inside and outside. Canopy and hanger are finished in aluminum.

Can be supplied for the two following methods of suspension.

For chain suspension: All units are supplied with loops in the cast ends for chain suspension. Chain is not furnished. A removable metal cover plate, having a K.O. for 1/2-inch iron pipe fittings in its center, fits over an opening in the wiring channel of the unit, thus giving a readily accessible splicing chamber to which any form of acceptable connection can be made. When fixtures are ordered with a factory-installed cord and plug, the removable metal cover plate is supplied complete with a composition cord bushing.

Wheeler RLM Fluorescent Lighting Units

Listed by Underwriters' Laboratories

Conforms with specifications of the RLM Standards Institute for a type of fluorescent unit which will provide uniform general illumination and color correction in industrial and commercial areas.

Furnished complete with lamp sockets and starter switch sockets mounted in the ends of the unit in such a manner to provide the desired lamp shielding angle of $17\frac{1}{2}^\circ$ below the horizontal.

High power factor tulamp ballast equipment, with removable and renewable separate starter switches located in the sockets, and a compensator which facilitates starting and insures satisfactory lamp performance, complete the unit. Fixture is wired, with pigtailed left for connecting to branch circuit. Can be furnished unwired.

Supplied with a hinged arrangement which will permit the reflector to be detached from the reflector hood.

When ordered unwired, the hood can be installed while wiring of the reflector body is completed at a bench or on the floor. Wired reflector assembly can then be quickly and firmly attached to hood through means of the new hinged arrangement. When wired, hood can be installed and reflector hung from the hinged hooks on the hood until wiring connections are made. After wiring is completed, reflector can be swung into contact with the hood and attached by means of the hinges.

Two $\frac{1}{2}$ -inch knockouts which can be used for pipe suspension are incorporated in the hood. If desired, unit can be supplied complete with two flat backed flanges for $\frac{1}{2}$ -inch pipe.

Gives 78% light output and lamp is so positioned as to provide for a $72\frac{1}{2}^\circ$ angle of cut-off.

Intended primarily for low bay mounting, it will provide maximum efficiency at mounting heights up to 12 feet above the floor. Spacing between units should not exceed mounting height of unit above floor.

Reflectors are porcelain enameled, gray outside, white inside. Cast ends, canopy and hanger finished in aluminum. Prices do not include lamps.

Packed 1 in a standard package.

Wheeler Vapor-Proof Fluorescent Lighting Units

Made for use in food plants, foundries, and similar locations where it is necessary to protect lamps, sockets and reflecting surfaces from moisture, dust, smoke and vapors.

The entire outer body of the reflector, including its closed ends, is enameled in one piece. All sockets and lamp operating equipment are mounted on a wiring channel which is installed through the mouth of the reflector.

The mouth of the reflector has a recessed flange to receive the hinged glass cover which seats against cushioning gaskets to form a moisture and dustproof seal.

Hinged dusttight glass cover is readily opened for access to lamps or starter switches by releasing toggle latches. Three types of glass are available: $\frac{1}{8}$ -inch double thick plain clear glass; $\frac{1}{4}$ -inch water white plate glass; and $\frac{1}{4}$ -inch tempered, clear safety plate glass.

All units are supplied complete with the latest type of high power factor ballast equipment employing separate and renewable starter switches.

Two lamp fixtures are supplied with high power factor tulamp ballasts resulting in an overall power factor above 95% and greatly minimizing any stroboscopic effect. A starting compensator is included in all two lamp units.

Fixtures are furnished wired, with pigtailed left for connecting to branch circuit.

All 20-watt units are supplied with a new hinged suspension canopy which swings open upon release of a single screw, exposing pigtailed for quick and easy splicing. Complete unit can be separated from upper portion of the canopy by removing two pivot screws. Canopy is tapped for $\frac{1}{2}$ -inch pipe.

All 40-watt units are supplied with hinged suspension canopy described above and with a hinged hanger which also swings open upon release of a single screw.

Distance from center to center of these suspension fittings, 30 inches. Canopy and hanger are tapped for $\frac{1}{2}$ -inch pipe. Pipe is not supplied.

Reflectors are porcelain enameled, gray outside, white inside. Canopy and hanger are finished in aluminum.

Prices do not include lamps.

40	2	220-250	53	14 $\frac{3}{4}$	9 $\frac{1}{8}$

Units for 199-216-volt operation can be supplied at same prices as 220-250-volt units.

For unit less starter switches, deduct 65 cents per switch.

Van Dyke Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

This lamp provides ideal illumination for office, work desk, stenographer, draftsman, laboratory work, factory work bench, artist,

color-matching, student, and merchandise display.

Special construction permits the shade to be turned in every direction. Shade makes one complete revolution, thereby preventing the twisting of wires. Flexible joint enables the lamp to be placed in any desired position and adapts it to a wide variety of uses. Arm is adjustable to any height desired.

Height, 24 inches. Extension, 15 inches. Can be supplied with 24-inch arm extension at \$1.00 extra.

Finished in baked-on Morocco brown with color-tone reflector.

Wired complete but less fluorescent tube.

Emeralite Daylite and Fluorescent Portable Lamps

Emeralite Lift-Off Shade and Two Bulbs

Over a million Emeralite lamps have been sold since these well-known lamps appeared on the market. Hardly a business, industry, government office, profession or home is without at least some model of Emeralite lamps. This outstanding record of service results from high standards of manufacture and constant improvement of product. In line with this policy, Emeralite fluorescent lamps are made, as well as the well-known standard Emeralite type using standard Mazda bulbs.

Emeralite fluorescent lamps are a tested product. Cumber- some design of shade has been avoided.

Daylite Screen That Produces Daylight

Dazor Floating Lamps

Reduces Eye-Strain Accidents and Increases Efficiency

Floating action, flexible, and easy to operate. It is floated through the air to any desired position and light is directed to any angle with the tips of the fingers. The weight of the reflector and bulb is balanced by a compensating spring, as in many scales, and not by friction or tight joints. The arm has a horizontal or vertical extension of 34 inches and rotates 360° at base. All fluorescent lamps also obtainable with 24-inch reach.

All lamps have 9 feet of all rubber cord, plug, and socket, approved by Underwriters'.

Incandescent Portable Clamp Types

No. R1

Illustration shows the all-purpose screw clamp base, No. 1007, which clamps to any horizontal or vertical surface up to 2 inches thick, and No. R2 reflector, with 6½-inch diameter. No. R1 reflector, shown in the insert, with 5½-inch diameter, is optional and recommended in most cases for shop use because of its steel construction and handy size.

Five clamp styles are available and optional and should be ordered by number: No. 1016 wall clamp, attaches to vertical surface by screw; No. 1014 drawing board clamp, screws to underside of board leaving edges free; No. 1007 screw clamp, also ideal for drawing board use; No. 1017 desk clamp, clamps to any flat horizontal surface from ¾ to 2½ inches thick; and No. 1020 bench clamp, screws to flat horizontal surface only.

Standard finish is statuary bronze, electro-plated.

Complete with any clamp and either reflector, less bulb. Each \$10.00

Fluorescent Portable Clamp Types

Illustration shows No. 3007 screw clamp base for No. T8 fifteen-watt fluorescent tube. All lamps have the same clamps as the incandescent models and should be ordered by numbers: No. 3016 wall clamp; No. 3014 drawing board clamp; No. 3017 desk clamp; and No. 3020 bench clamp.

In ordering specify style clamp by number and also electric current to be used, either 50 or 60-cycle a.c.

If used on current other than 50 or 60-cycle a.c., the proper resistor must be ordered additionally and plugged in on the line or severe damage will result.

All lamps and reflectors are statuary bronze finished.

Furnished complete with choice of clamps, less tube.

Each \$16.00
 No. 9424-C Resistor, for 110 Volts, D.C. each 1.50
 No. 7730-C Resistor, for 220 Volts, 50 or 60 Cycles, each 1.90
 No. 7930-C Resistor, for 220 Volts, D.C. each 1.90

No. 1015 Incandescent Portable Floor Types

Heavy 12-inch cast iron base.

Vertical standard of 1½-inch cold rolled steel tubing. Arm standard pivots to lamp standard.

Lamp height from floor to arm connection, 45 inches.

Vertical adjustment, 9 to 69 inches above floor.

Standard finishes are statuary bronze, electro-plated or white enameled base, tube, and reflector with bright zin-o-lyte finished arms.

No. 1015 each \$16.00

Clamps

Wall

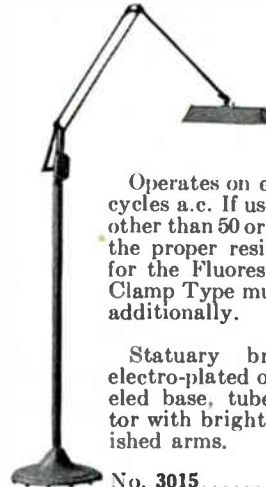

Desk

Bench

Screw

Drawing Board

No. 3015 Fluorescent Portable Floor Types

Same design as No. 1015, but uses a No. T8 15-watt fluorescent tube.

Operates on either 50 or 60 cycles a.c. If used on current other than 50 or 60 cycles a.c., the proper resistor as listed for the Fluorescent Portable Clamp Type must be ordered additionally.

Statuary bronze finish, electro-plated or white enameled base, tube, and reflector with bright zin-o-lyte finished arms.

No. 3015 ea. \$22.00

THESE LAMPS furnish the need for a truly flexible lamp that will stay put. Used in every factory, shop, store, office, bank, school, university, hospital, institution, and home. Industrial application is extensive, as it is employed by draftsmen, inspectors, mechanics, jewelers, typewriter repairmen, etc.; and used on lathes, millers, shapers, presses, grinders, etc.; also by doctors, dentists, chiropractors, and other professionals.

Wherever concentrated local lighting is needed at the point of work, this lamp furnishes such light adjustable at finger tip control.

No. 236C, with Clamp	each 21.00

Graybar Silvray Fixtures

Indirect Luminaires for Use with Silvered Bowl Mazda Lamps

Graybar Silvray Indirect Luminaires are designed specifically for use with the Silvered Bowl Mazda lamp. This results in the employment of the "sealed beam" principle which insures high efficiency, accurate light control and low maintenance cost. The Silvered Bowl lamp in these luminaires eliminates the need for separate reflectors and consequently does away with the factor of reflector cleaning maintenance. An inherent advantage of the Silvered Bowl lamp is its wide distribution characteristic. As a result, uniform ceiling brightness is obtained without spottiness or high brightness directly above the fixture.

The design of this line is modern and graceful due to the narrow cross-section of all luminaires. This advantage of design is possible because the bowl of the lamp protrudes through the center of the fixture and is made part of the fixture design.

Relamping is simple. There is no need for taking the fixture apart, lowering the bowl or handling fixture parts when relamping. High lighting efficiency is inherent. Light output as high as 90 per cent is available. Maintenance of efficiency

is assured because dust and accumulations in the fixture have no effect on the output of light from the Silvered Bowl Mazda lamp.

A feature of Silvray luminaires is the fact that several sizes of Silvered Bowl lamps may be used in the same fixture without changing the fixture itself. This is accomplished through the use of conversion rings. Provision has also been made to enable hanger lengths to be shortened on the job with a minimum of labor.

All fixtures are constructed of heavy gage metal or of metal-and-plastic combinations and are triple plated over a base copper coat to guarantee the permanence of the finish. Specially prepared heat-resisting enamels are used on units other than those with metallic finishes. Correctly designed baffles are used to provide complete shielding of the lamp neck.

The Silvray line contains units for both commercial and home lighting. The commercial lighting lines are covered by the Challenger and Standard lines. The home lighting line is known as the Sight Saver line. Separate catalogs are available on both lines.

Graybar Silvray Fixtures—Commercial Line

No. 207PL—Liteking

Modern lighting practice favors the use of translucent plastic because it combines the best features of glass and metal. This unit furnishes totally indirect illumination but avoids the "blind spot" of opaque metal units.

High in efficiency. Has an output of 89.5 per cent (E.T.L.). The bowl is protected against warping or deterioration by a series of chrome-and-aluminum concentric rings which separate it from the lamp.

Deep canopy accommodates a pull switch.

Suspension finished in triple-plated cadmium.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
207PL	\$18.50	300 or 500	26	18

No. 1500—ConEd

A late and modern development in indirect lighting design. For natural coffer ceilings, department store basements, areas over and under mezzanines and similar hard-to-light spaces.

This unit is of steel construction, spot-welded for rigidity. The body and canopy are finished in flat white enamel. The husk is finished in aluminum. The vertical planes of the rings prevent both the trapping of light and accumulation of dust. The lamp is completely shielded from view.

A mogul to medium socket reducer must be inserted when a 200-watt lamp is used.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
1500	\$18.50	200 or 300	14	19

No. 230—Gauntlet

This all-metal unit is constructed of heavy gage, triple-plated copperized steel, and finished in French grey heat resistant enamel. Has wide chrome bands on both upper and lower louver. A luminous appearance is achieved by permitting a small portion of the light to be directed to the under-surface of the upper louver.

Self-aligning swivel joint in suspension assures straight hanging.

Deep canopy with knockout is standard.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
203	\$18.50	300 or 500	26	20
203	\$2.00	750 or 1000	36	26

Graybar Silvray Fixtures
Commercial Line

No. 207—Pinnacle

An efficient indirect luminaire. Solidly constructed of triple-plated heavy gage copperized steel. The shallow contour enables this unit also to be furnished in a very narrow diameter to accommodate high wattage lamps. Available in two standard finishes: French grey enamel with black beaded edge and chrome bulb ring, or plated satin cadmium.

No.	Enamel Eastern List Price Each	Cadmium Eastern List Price Each	Silvered Bowl Wattage	Suspension Lgth. Inches	Diameter In.

207-20	20.00	21.50	750 or 1000	36	20

No. 5050—Dover

Constructed of heavy gage copperized steel. The inside of the dome is finished in aluminum. The exterior is finished in glossy oyster white enamel. Two concentric metal bands and a chrome and oyster white bulb ring separate the lamp from the dome. Special construction of the suspension permits shortening of hanger lengths. Three-way rod support holds bowl to suspension. Aluminum baffle shields the neck of the lamp.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Length Inches	Diameter Inches
5050	\$19.00	300 or 500	36	19

No. 208—Crusader

An all-metal indirect unit of high efficiency. The rolled-edge treatment of the triple-plated solid steel bowl is designed to create an appearance of dense glass.

Standard finish is oyster white enamel. Also available in metallic plated chrome or cadmium.

Chrome-plated bulb ring and deep canopy are standard.

Suspension is cadmium plated.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Lgth. Inches	Diam. In.

208	20.00	750 or 1000	36	20

No. 300—Puritan

Used in department stores and in offices. A combination metal-and-glass unit. Features a luminous metal louver which blends with a flashed opal glass insert set into the lower ring. Self-aligning ball swivel joint in suspension assures straight hanging, and the Silvray bayonet adjustment in husk makes assembly easy.

Constructed of heavy gage copperized steel, triple plated. Standard finish, two-tone aluminum and cadmium pewter.

No.	Eastern List Price Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. In.

300	52.50	750 or 1000	36	28

No. 350—Windsor

A late development in recess lighting. This unit furnishes high-intensity downlight. Special reflector contour and Silvered Bowl lamp combine to eliminate the need for both expensive heavy glass diffusing plates and reflector maintenance. Wide chrome ceiling band supports glass insert decorated with etched concentric rings. Chrome bulb ring separates glass from lamp.

Furnished with a 4-inch outlet box which holds a cylindrical shank attached to the reflector.

For use close-mounted to ceiling, unit is furnished with special canopy to cover shank.

Graybar Silvray Domestic Fixtures

Sight Saver Line for Home Light Conditioning

The use of Silvered Bowl lamp lighting in offices, schools, stores, banks and public buildings has created a demand for this same eye-sight conserving quality of light for home use. As a result, Silvray has created for domestic use a complete line of ornamental units which embody many of the best features of the commercial luminaires.

There are styles for every room, inviting complete modernization of the entire home.

Among the types available are some that clip on to the bowl of the lamp. Others are designed for screw-base installation. For permanent installation there are the completely wired units here illustrated.

Graybar Direct Lighting Globes

For use with standard fixtures. Made in standard sizes to accommodate the various sized lamps generally used in commercial lighting. Available in both plain and decorated styles.

Globes are of a uniform quality and weight. They are shaped to give the maximum lighting results that can be obtained with modern diffusing glass. They have a high efficiency and, with low brightness, the light is evenly and correctly distributed without shadows or bright spots. The glass is of a uniform quality, free of streaks, blisters, checks or other imperfections.

The standard line, series No. 66, 88, and 99, is available in either homogeneous opal diffusing glass or in a three-layer cased glass.

The homogeneous opal diffusing glass is a single layer white glass of selected density and uniformity.

In the cased globe, inner and outer layers are crystal glass and the diffusing middle layer is white glass. This type of globe is strong, with high light output, excellent diffusion, and no glare. Due to the smooth surface of this glass, dust and dirt do not settle on the surfaces as they do on a rough surfaced glass.

Series No. 77

No. 7730, Plain

Made of cased glass of dual opacity with light density top for diffusion and heavy density bottom for reflection. One-piece construction with two-layer diffusing alabaster top and three-layer alabaster reflecting bottom. Thus approximately two-thirds of the light is directed upward and softly diffused, without ceiling shadows, over a wide area. The remaining one-third downward transmitted light is of low brightness, free from glare.

Furnished in plain or in D-452 decorative styles; specify when ordering.

Also furnished with ground neck (neckless) for use with G type fixture only. When ordering, specify $\frac{1}{2}$ after number—i.e., 7730 $\frac{1}{2}$.

Graybar Miscellaneous Glassware

These shades are designed for use with some of the wall brackets and ceiling fixtures. They also can be used as replacements with fixtures of other makes that have standard fittings.

Made of a single layer homogeneous opal white glass of density carefully selected for diffusing qualities. This glass is light in weight and warm in color providing a more refined appearance than ordinary white commercial glass.

Graybar M-Type (Shelcrest) Fixtures

No. M6H-9920

This fixture is made of genuine molded bakelite which offers additional insulating properties not found in metal fixtures. It is particularly suitable for use in any location where exposed metal fixtures are subject to corrosion.

The globe holder for both hanging and ceiling models is a saddle type shaped to accurately seat the globe from the inside and under the neck. To remove globe, tilt to a 30° angle and slip off the holder. Either the 4 or the 6-inch fitter can be used with the standard holder.

The hanging type is really a chain suspension encased in a rigid stem. This stem is in three 6-inch sections (3/4-inch diameter) which permits shipping in a knockdown form, and also makes this fixture adaptable for varying mounting heights. It is easy to install. The extra strong supporting chain attaches to a brass slotted hickey, adaptable to all outlet conditions. The canopy is a shallow slip type with knockout. It drops the full length of the chain.

The ceiling type has the standard shallow canopy with knockout molded in one piece with the socket cover. The mounting is accomplished by a slotted strap.

Fixtures are already wired with No. 14 stranded asbestos covered wire: Ground leg, white; live leg, brown.

Japanese bronze finish. Also obtainable in ivory. The finish is practical and resistant to wear as the color permeates the entire material and surface scratches do not show.

Globes recommended for use with this fixture: 99, 66, 33, and 88.

No. M4C-6620

Packed twelve in a standard package. Fixture parts are numbered and packed in individual cartons, 8x8x6 inches.

Graybar X-Type (Chase) Fixtures

No. X6H4-9920

This economical safety type fixture was designed to take the place of the low-price screw type fixture.

The safety type holder has three rigid arms projecting from the socket cover which slip under the neck of the globe on the inside.

A snug fitting ring drops over the globe opening concealing the assembly.

The ceiling type is mounted by means of a steel strap and barrel nuts. The tube suspension type (3/4-inch heavy gage brass tubing) has a swivel joint which is concealed when the fixture is in place.

The hanging type is mounted by a hickey.

Steel chain is standard on the chain pendant type (which is otherwise made of brass), except when brass chain is ordered. Six-inch slip stem is provided.

Made of 22-gage brass.

Standard finish is plated Statuary bronze. Finishes such as English bronze or satin chromium can be obtained.

Fixtures regularly wired with No. 16 cotton covered slow burning asbestos wire.

Globes recommended for use with this fixture: 66, 88, 99, 33, and 77 up to 300-watt capacity.

Graybar Lighting Catalog Which Lists a Complete Line of Fixtures, Glassware, and Accessories Can Be Furnished. Any Graybar Office Will Also Give Recommendations Regarding the Lighting Equipment Suitable to Meet Your Specific Needs.

Graybar G-Type (Chase) Fixtures

This fixture is designed particularly to be used with the neckless type enclosing globe of either direct or semi-indirect design.

The lines are exceptionally graceful for so sturdily a constructed fixture, which is appropriate for use in luxurious interiors or the most businesslike office.

The holder is designed to give the maximum safety. It has two wide ledges. The globe is tipped and slides over these ledges until it rests in place. Then, a covering ring drops down and screws on to the holder. The globe cannot be removed until the ring has been raised.

The small shallow canopy is flanged sufficiently to accommodate a canopy switch, and a concealed patented swivel joint insures plumb hanging.

Fixtures are already wired with No. 16 Deltabeston.

Constructed of 22-gage brass with a satin chromium finish.

In the hanging type, the simplicity of design makes it easy to install.

Globes recommended for use with this fixture: 77½ and 88½ (Neckless).

Packed 10 in a standard package.

No. 42 Line Inland Hangers, Holders and Globes

Graybar Economy Lighting Fixtures
External Cushion Type Safety Holder

With Telescopic Hanger for All Modern Lighting Requirements

With Ceiling Holder for Low Ceiling Mountings

The No. 42 Line is used in stores, offices, schools and all types of public buildings. The contour evenly distributes light over the working plane, and results in lighting effects well in keeping with "Better Light—Better Sight" theories.

Telescopic Hangers

With this hanger, there is no need to cut stems and thread pipe for special ceiling heights. Being easy to adjust and simple to assemble, quick installation is assured.

The adjustable feature is made possible by an ornamental clutch and telescoping tubes which permit a maximum overall length of 46 inches and a minimum of 29 inches; fully equipped with 54 inches of No. 16 wire (unassembled).

A medium base socket with an adjustable feature of 6 inches plus or minus permits proper lamp placement. Hanger is constructed of No. 18 gage spun aluminum with a brushed permanized finish.

Specify kind of socket when ordering.

No. 1160 Strap Canopy Chain Pendant

No. 1260, Ceiling Collar

A safe, simple and foolproof method for holding enclosing glassware. Designed to form a cushion around the neck of the glassware, allowing for expansion and contraction and eliminating the possibility of globe breakage. Permits ease and speed in installation.

Nos. 66, 88, 99, 92, 33, and 77 globes are recommended for use with these fixtures.

Fixtures are made of copper-plated steel; 22-gage brass can be had at additional charge.

Made in ceiling and hanging types. Hanging types are available with either swivel stem or chain. Canopy is 6 inches in diameter with knockout.

Wired with Underwriters' approved asbestos wire and sockets; No. 16 wire for medium base sockets; No. 14 wire for mogul base sockets.

Holders aluminized inside. Standard finish, statuary bronze; pewter finish, optional.

Graybar Midas Line (Chase) Semi-Indirect Fixtures

With Plastic Bowl

Plastic bowl is a recent development in the lighting field. It now has a definite place in the lighting industry, and has become recognized as a standard for a reflecting medium.

This new Chase semi-indirect fixture is the result of years of careful scientific study, and the problems of making plastics satisfactory and suitable for commercial use have been overcome. Chase Brass & Copper engineers, in cooperation with the laboratory of the American Cyanamid Company who produce the beetle powder from which this bowl is made, began this development of plastics for lighting, which has continued up to the present time. Much progress has been made in three years—the overall efficiency has been raised from 82% to 87%.

Some of the outstanding features of plastic are: The exceedingly light weight—75% lighter than glass; the fact that it is practically unbreakable; it blends into the ceiling and has no black areas, no bright spots and no dark rings—gives a soft pleasant sunny light, and, if properly hung, will distribute light evenly.

Available in ceiling or hanging type and comes complete with plastic bowl, holder, stem and canopy.

Has Underwriters' Labels.

The hanging type has a concealed swivel in stem for self-aligning. Stem construction is such that fixture can be shortened on the job.

Fixtures come wired as follows: 200-300 medium base, No. 16 slow burning Deltabeston; 300-500 Mogul base, No. 16 asbestos covered Deltabeston; 750-1000 Mogul base, No. 14 asbestos covered Deltabeston.

Light output, not less than 86%. Surface brightness of bowl, less than 2 footcandles per square inch.

Metal parts are brass, 22 gage or more.

Furnished in satin chromium finish. Special finishes on order.

No. 1878 Visor Type

The visor type night light is designed to furnish direct or indirect light over the bed or table in hospital sick rooms. The visor swings up or down and is designed to remain in any position in which it is placed.

Box is made of 14-gage steel painted aluminum bronze inside and outside. Dimensions of box: 6 inches long, 3 inches wide, and 3¼ inches deep. Face plate is made of cast aluminum and is equipped with a clear glass panel over which the visor swings. Face 6¾x3¾ inches. Face plate and visor are finished in baked white enamel.

Lamp watts, 25-40.

Can be furnished with toggle switch at an additional cost.

No. 1878.....each \$7.00

Wheeler Hospital Night Lights

No. 1877 Louver Type

The louver type night light is designed for hospital sick room lighting. These units are usually mounted on the wall 18 inches or 2 feet above the floor. The louvers in the face plate obstruct the light from shining into the patients' eyes, but do not prevent the light from illuminating the floor of the room.

The box is made of 14-gage steel and is finished aluminum bronze inside and outside. Dimensions of box: 6 inches long, 3 inches wide, and 3¼ inches deep. The face plate is made of cast aluminum and is finished in baked white enamel. Face, 6¾x3¾ inches. A clear glass panel is provided behind the louvers to prevent dust from collecting in the box.

Lamp watts, 25-40.

No. 1877.....each \$5.00

No. 1879 Lens-In-Door Type

The lens-in-door type is a corridor night light designed to set flush with the finished wall.

The box is made of 16-gage steel with welded joints and is finished aluminum bronze inside and outside. Dimensions of box: 8½ inches long, 8½ inches wide, and 3¼ inches deep. The front consists of door and trim made of 12-gage steel and finished in baked white enamel. Trim, 9¾x9¾ inches. The lens is a Spredlite diffusing type.

Lamp watts, 25-100.

No. 1879.....each \$15.00

Curtis Eye-Comfort Luminaires

Edge-Ray

Elegance and refinement distinguish Edge-Ray luminaires among indirect lighting fixtures. The method of self-illumination of the bowl exterior, an exclusive Edge-Ray feature, is accomplished so that the bowl appears to be composed of concentric circles of light.

Made of Alzak aluminum. Lustrous aluminum finish with polished highlights.

No. 1200

For use with 200-watt medium screw base lamp. Bowl diameter, 17 inches; depth, 6 inches; suspension, 30 inches.

No. 1200.....each \$20.80

No. 1250

For use with 500 or 300-watt Mogul screw base lamp. Bowl diameter,

21 $\frac{3}{8}$ inches; depth, 8 inches; suspension, 36 in.
No. 1250.....each \$26.90

No. 1270

For use with 750 to 1500-watt Mogul screw base lamp. Bowl diameter, 27 $\frac{1}{2}$ inches; depth, 11 inches; suspension, 48 inches.

No. 1270.....each \$40.80

Winner

Efficiency marks this tailored design as outstanding. The Winner bowl contains a silver mirror X-Ray reflector which provides the even distribution and high light output constituting the best quality indirect illumination. The straightforward appearance of Winner harmonizes with modern office and school interiors.

Made of Alzak aluminum. Bronzed aluminum reflecting surface with silver mirror X-Ray reflector.

Bowl diameter, 19 $\frac{1}{2}$ inches; depth, 7 inches; suspension from top of bowl to ceiling, 36 inches.

No. 5090

For use with 500 or 300-watt Mogul screw base inside frosted lamp.
No. 5090.....each \$20.80

No. 5091

For use with 750 to 1000-watt Bipost lamp. A 500-watt Bipost lamp can be used by lowering Bipost socket 1 $\frac{1}{2}$ inches within socket cover; spacer supplied.

No. 5091.....each \$24.70

Curtis Economy Line Luminaires

No. 5505, Halo

Halo adds warmth or coolness to lighting effects with no impairment to lighting performance. A small portion of light is diffused through the colored bowl while the Lunax reflector cup directs most of it upward for indirect lighting.

For use with 500 or 300-watt lamp.

Made of Lunax aluminum. Polished aluminum hanger and metal cup. Orange or empire yellow opal glass bowl. Color is specially fired on glass bowls, and is permanent and true.

Bowl diameter, 17 $\frac{3}{4}$ inches; depth, 6 inches; suspension, 36 inches.

No. 5505..each \$25.70

No. 1025, Quoit

Quoit has a distinctive, smooth beauty. This shallow design is sturdily constructed. A single conical lamp neck shield forms part of the fixture, and completely conceals the lamp neck from view under normal installation conditions. A second shield will be provided for low ceiling installations (no charge) when specified on order.

For use with the 500 or 300-watt Mogul base p.s. inside frosted lamp.

Made of Alzak aluminum. Satin aluminum finish with polished bands.

Bowl diameter, 20 inches; depth, 4 $\frac{1}{2}$ inches; suspension from top edge of bowl to ceiling, 36 inches.

No. 1025.....each \$15.60

Alabax Porcelain Lighting Fixtures

Alabax Porcelain Lighting Fixtures will not tarnish, rust, stain or change their color. They are easy to clean—soap and water restore their original luster.

These fixtures are approved by the National Board of Fire Underwriters' Laboratories. An unusual degree of protection is afforded because the porcelain is a complete insulator.

All Alabax Fixtures with pull control are protected against damage by a snub, which takes the strain of unusual or unnecessary pulling or abuse. The chain or cord can be broken without damage to the pull mechanism.

Alabax Fixtures are supplied in several attractive glazes: white, jet black, ivory and light green. The colors in these glazes cannot change—they are permanently fired in at a temperature of approximately 2300°F. The glaze becomes an integral part of the fixture, and is not subject to peeling or change in color.

Curtis X-Ray Show Window Reflectors

Planning Show Window Lighting

Show windows are usually classified according to their size. For good general lighting, deep windows require distributing reflectors; shallow windows, semi-concentrating types; very shallow windows, concentrating types.

The number of reflectors to use for lighting a window is influenced by the brightness of neighboring windows, the intensity of street illumination, goods displayed, color of background, as well as the merchant's realization of the advertising and selling value of bright, well-lighted windows. In general, the following center-to-center spacing is suggested:

- Large Cities, Business District 12 Inches
- Large Cities, Suburban District 12 to 18 Inches
- Small Cities 12 to 18 Inches
- Towns 15 to 24 Inches

Selecting the Correct Reflector

It is easy to determine the proper reflector to use from the table above. First, locate in the left column, "Height," the height above the floor at which the reflectors will be mounted. Next, in the second column, find the depth from back to front of window. Then move along this line to the column under "Height of Background or Display" corresponding to that of the window. The reflector designated in this space is the one to use. Example: for a show window 9 feet high, 5 feet deep, and with background 5 feet high, No. 510 Reflector should be used.

Attraction-Zone Lighting

In many shallow windows, it is desirable to place more light on the lower portion of the display than in the rest of the window. This kind of illumination is known as Attraction-Zone Lighting, for when this area is brightly lighted, it attracts the average passer-by to the entire display. Attraction-Zone X-Ray Reflectors concentrate 35 to 50 per cent more light on this vital selling zone than do ordinary semi-concentrating type reflectors.

For show windows in which Attraction-Zone Lighting is desired, use Nos. 420 and 530 instead of Nos. 410 and 510 as indicated in the above table.

No. 310 Curtis Favorite X-Ray Show Window Reflectors

Semi-Concentrating Type—For Shallow Windows
For 100-Watt Lamp

Diameter, 7 inches; height without holder, 5 5/8 inches. Standard package, 20. Weight, 26 pounds.

No. 310 each \$2.95

ACCESSORIES: No. 12100 holder (Form 0, 2 1/4 inches), screw engaging, for CurtiStrip or X-Ray sockets; No. 14310 finishing flange; and plaster ring, available on special order.

No. 844 Curtis Comet X-Ray Show Window Reflectors

Concentrating Type—For Very Shallow Windows
For 150 or 100-Watt Lamp

Diameter, 8 5/8 in.; height without holder, 4 3/8 inches. Standard package, 12. Weight, 19 pounds.

No. 844 each \$3.25

ACCESSORIES: Nos. 10300, 10400 or 10500 holder (Form A, 3 1/4 inches), for 100-watt lamp—No. 10300 holder with No. 10012 extension ring for 150-watt lamp; No. 10517 finishing flange; No. 104027 plaster ring; and No. 12844 louver (control-ring type) for use only in combination with No. 10517 flange.

Curtis X-Ray Show Window Reflectors

Distributing Type—For Deep Windows

No. 400

Furnished with No. 10668 adjustable holder (Form B, 3 3/4 inches). Fits standard porcelain, CurtiStrip or X-Ray sockets with shade holder groove.

No. 400 Jack

For 150 or 100-Watt Lamp
Width, 8 1/2 inches; depth, front to back, 8 inches; height with holder, 8 3/4 in. Standard package, 10. Weight, 21 pounds.

No. 400 each \$4.00

ACCESSORIES: No. 11400 finishing flange; No. 12400-N louver; and No. 440 color-ray.

No. 500 King

For 300, 200 or 150-Watt Medium Base Lamp
Width, 10 inches; depth, front to back, 10 1/2 inches; height with holder, 10 inches. Standard package, 10.

No. 500, Weight of Std. Pkg., 30 pounds each \$4.50

ACCESSORIES: No. 11500 finishing flange; No. 12500-N louver; and No. 55 color-ray.

Semi-Concentrating Type—For Shallow Windows

Furnished with No. 10668 adjustable holder (Form B, 3 3/4 inches). Fits standard porcelain, CurtiStrip or X-Ray sockets with shade holder groove.

No. 410 Jill

For 150 or 100-Watt Lamp
Width, 9 3/8 inches; depth, front to back, 9 1/2 inches; height with holder, 8 1/2 inches.

Standard package, 10. Weight, 25 pounds.

No. 410 each \$4.00

ACCESSORIES: No. 11410 finishing flange; No. 14006 plaster ring; Nos. 12410-N and 12410-P louvers; and No. 441 color-ray.

No. 510 Queen

For 300, 200 or 150-Watt Medium Base Lamp
Width, 10 1/2 inches; depth, front to back, 10 3/4 inches; height with holder, 10 1/4 inches. Standard package, 10.

No. 510, Weight of Std. Pkg., 38 Pounds each \$4.50

ACCESSORIES: No. 11510 finishing flange; No. 14007 plaster ring; Nos. 12510-N and 12510-P louvers; and No. 55 color-ray.

No. 900 Curtis Giant X-Ray Show Window Reflectors

Distributing Type—For Deep Windows
For 500 or 300-Watt Lamp

Furnished with No. 10413 holder (5-inch X-Ray); fits X-Ray mogul sockets only. No. 8300-B socket (1/2-inch back outlet) is also included; with 3/8-inch reducer.

Width, 13 inches; depth, front to back, 13 inches; height with holder and socket, 13 3/4 inches.

Standard package, 4.

Weight, 26 pounds.

No. 900..... each \$9.75
ACCESSORIES: No. 10432 finishing flange; No. 14008 plaster ring; No. 12900-N louver; and No. 99 color-ray.

No. 804 Curtis Aladdin X-Ray Show Window Reflectors

Concentrating Type—For Very Shallow Windows
For 200-Watt Lamp

Diam. 10 1/2 in.; height without holder, 6 1/2 in. Standard package, 12. Weight, 23 pounds.

No. 804..... each \$4.75

ACCESSORIES: No. 10667 holder (Form X, 3 3/4 inches)—fits standard porcelain, X-Ray or CurtiStrip sockets with shade holder groove;

No. 10417 finishing flange; No. 14035 plaster ring; No. 13351 louver (control-ring type); and No. 10556 color-ray.

No. 1010 Curtis Blimp X-Ray Show Window Reflectors

Semi-Concentrating—For Attraction-Zone Lighting
For 500 or 300-Watt Lamp

Furnished with No. 10010 holder (3 3/4-inch X-Ray); fits X-Ray mogul sockets only. No. 8300-B socket (1/2-inch back outlet) is also included; with 3/8-inch reducer.

Diameter, 13 inches; height with holder and socket, 12 3/8 inches.

Standard package, 4.

Weight, 26 lbs.

No. 1010..... each \$9.25

ACCESSORIES: No. 14110 finishing flange; No. 14111 plaster ring; No. 12110 louver (U type); No. 10870 color-ray.

Curtis X-Ray Show Window Reflectors

Semi-Concentrating—For Attraction-Zone Lighting

Furnished with No. 10668 adjustable holder (Form B, 3 3/4 inches). Fits standard porcelain, CurtiStrip or X-Ray sockets with shade holder groove.

No. 420 Master

For 150 or 100-Watt Lamp

Diameter, 8 5/8 inches; height with holder, 7 1/8 inches.

Standard package, 10.

Weight, 20 pounds.

No. 420..... each \$3.59

ACCESSORIES: No. 10517 finishing flange; No. 14027 plaster ring; and No. 12420 louver (U type).

No. 530 Monarch

For 300, 200 or 150-Watt Medium Base Lamp

Diameter, 9 3/4 inches. Height with holder, 9 1/8 inches.

No. 530, Std. Pkg., 10; Weight, 28 Pounds..... each \$4.00

ACCESSORIES: No. 14026 finishing flange; No. 14028 plaster ring; and No. 12531 louver (U type).

Curtis Accessories for X-Ray Show Window Reflectors

Finishing flanges and plaster rings are used in recessing X-Ray reflectors above the show window ceiling. On wood or board ceilings, flanges only are used to finish off the opening and to support the reflector properly. When recessing is done in plaster ceilings, it is necessary to use a plaster ring as a ground to plaster up to and also as a base for mounting finishing flange.

Finishing Flanges

Substantially made of heavy gage metal, supplied unfinished. May be painted on the job to match window ceiling.

Color-Ray

Each color-ray consists of metal frame with four sheets of colored gelatin: red, blue, green and amber.

Complete information and prices furnished on request.

Model B Curtis Light Hoods

Light Hood produces high intensity, shadowless, indirect lighting for industry. The Light Hood is a self-contained indirect lighting unit which can be used independently of structural conditions. It includes its own ceiling and wire-way. The specially treated white under-surface of the hood acts as a light reflecting ceiling and spreads the light evenly over the working area below.

This Light Hood is designed to form a continuous source of light, and may be assembled to any desired length.

A few suitable locations for Light Hood are:

Mass, or assembly line production in fine manufacture—radio, jewelry, instruments, tools, metal products, etc.

Work centers in the printing trade—over imposing stones, presses, proofreaders' tables, type cases, make-ready frames.

Inspection work in food industry—over sorting, grading, packing tables.

Operations in the textile and garment industry—over weaving, spinning, and knitting machines. Errors are rapidly checked in these fine operations. Over cutting and sewing tables.

Laboratory and undertaking work—in hospitals, research clinics, chemistry and physics laboratories; in embalming and autopsy rooms.

Engineering and arts—over drafting, designing, and tracing tables.

For Use with Silvered Bowl Lamps

No.	Each	Length Feet	No. of Lamps Required	Shipping Weight Pounds
1700	\$57.50	10	4	165
1775	45.65	7 1/2	3	125
1705	30.70	5	2	100

For Use with Regular (I.F.) Lamps

No.	Each	Length Feet	No. of Lamps Required	Shipping Weight Pounds
1710	\$68.95	10	4	165
1785	54.20	7 1/2	3	125
1715	36.65	5	2	100

Specifications shown in the illustration above apply to Model B when used with Regular (I.F.) Lamps except that individual Alzak Reflectors must be used with each lamp. No. 1777 Alzak Reflector, with supporting strap, should be used with each lamp. These may be ordered separately if it is desired to convert silvered bowl light hoods, which are already installed, for use with Regular (I.F.) Lamps. Specify quantity of reflectors needed.

CurtiStrip Wiring Channel

CurtiStrip is a large capacity (30 No. 14 rubber covered wires) wiring channel and raceway that offers unusual flexibility and a wide range of uses with its standardized fittings. Channel and cover are made of 20-gage cold rolled steel, cadmium plated. The patented snap-in flat cover permits outlets to be installed on any spacing. The cover, placed between sockets and fittings, is cut to length required with tinner's shears and snaps into the lips of the channel. Channel can be cut to any length with a hacksaw.

Channel and cover are regularly supplied in 10-foot lengths. Sections longer than 10 feet may be coupled together to form a continuous channel.

Size, 2 1/2 inches wide and 1 5/8 inches deep.

No.	Per Foot	Description	Std. Pkg. Feet

Benjamin Turnlox Glassteel Diffusers

Complete with Hood, Reflector, and Globe

Listed by Underwriters' Laboratories

Provides soft, even light over a wide range of intensities. Direct and reflected glare is eliminated. Openings at the top of the reflector give ample light on the ceiling to relieve contrasts between the unit and its background.

Composed of 2 separable elements—a hood with a wiring terminal base and a complete assembly of reflector globe and lamp, which can be taken down as 1 piece for easy cleaning. A slight upward pressure against the reflector rim, less than a quarter turn to the left and reflector assembly is released from hood; to put up simply turn right and reflector is secured.

The terminal base in the hood is extremely simple to wire. Both wiring leads are brought in through the single center hole in the hood and terminal base.

A single lever on the side of the reflector controls the clamping or release of the globe in the unit.

Reflector is porcelain enameled steel with Benjamin Turnlox bayonet-lock coupling. Reflectors have lamp holders and bayonet plate.

Terminal base, Underwriters' listed, simple to wire. One type of terminal base is standard in outlet box, ceiling, and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Outlet box, angle, and pendant type hoods are provided. Outlet type has 1 hole slotted for easy attachment.

Reflectors are white porcelain enameled inside and out with blue-black bead. Spring clamp globe holder, hood, and bayonet plate are electro-plated.

Pendant Hood Type with Keyless Lamp Holder

Cast iron; tapped 1/2 inch standard; 3/4 inch when specified.

Extra Reflectors for Easy Maintenance of System

Units complete, except for hood, are available for easy maintenance of system. When ordering, specify Catalog No. of complete unit with explanation "Less Hood" and deduct 80 cents from price.

*When using 150-watt lamp, socket extension No. 91 must be used to correctly position lamp in reflector.

Lamp Holders

Shock-absorbing lamp holders furnished in place of regular rigid lamp holder at an advance of 10 cents in price. When ordering, suffix regular reflector number with "SHB."

Benjamin Turnlox RLM Dome Reflectors

Porcelain Enameled Steel

Listed by Underwriters' Laboratories

Typical Curve

Construction permits reflector, together with lamp, to be taken down with one simple movement.

Unit consists of two separable elements; hood with wiring terminal base, and reflector to which is assembled lamp holding element. Contact is made at any point where reflector heel may be entered in hood. Polarization is by circular design of contacts.

One type of terminal base is standard in ceiling, angle, and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders. Three types of hoods are provided, ceiling type outlet box, pendant and angle,

Bayonet Type Coupling Permits Taking Down Reflector and Lamp as a Complete Unit

side entrance type; outlet type has holes slotted for attachment.

Reflector is seamless porcelain enameled steel, green outside and white inside, with bayonet-lock coupling and porcelain lamp holder. Angle of cutoff, 12 1/2°. Hood and bayonet plate, electro-plated.

Pendant Type Hood with Reflector and Keyless Rigid Lamp Holder

Cast iron; tapped 1/2 inch standard, 3/4 inch if specified.

Benjamin Turnlox Shallow Dome Reflectors

Porcelain Enameled Steel

Listed by Underwriters' Laboratories

Characteristic Distribution Curve

The reflector is seamless porcelain enameled steel with Benjamin Turnlox bayonet-lock coupling. The reflector includes Underwriters' listed standard porcelain lamp holder and a 3-point bayonet plate.

One type of terminal base is standard in ceiling, angle and pendent type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendent, and angle side entrance. Outlet type hood has one hole slotted for easy attachment.

Reflectors are porcelain enameled steel; green outside, white inside. Hood and bayonet plate are electro-plated to prevent corrosion.

Pendent Hood and Reflector with Keyless Rigid Lamp Holder

Pendent hoods are cast iron, tapped 1/2 inch standard; 3/4 inch if specified.

†Provides three reflector positions, 120° apart. Use fixtures with No. 3 hoods where reflector must face directly towards the conduit support; No. 3R, where reflector must face directly away from the conduit support. No. 3 hood regularly supplied.

Prices do not include wires or lamps.

Extra Reflectors

Fixtures, complete except for hoods, are available for maintenance of the system. When ordering, specify catalog number of complete fixture with the explanation, Less Hood, and deduct 80 cents from price.

Lamp Holders

SELF-LOCKING: for medium base fixtures at 50 cents advance list over fixtures with rigid holders. To order, suffix catalog number of rigid holder fixture with LOK. Key No. 1399, to release lamp, \$1.00.

PULL CHAIN: with 6-foot cord extension. For medium base fixtures, at 80 cents list over fixtures with rigid holders. To order, suffix catalog number of rigid holder fixture with PUL.

Benjamin Keyless Rigid Lamp Holder Assemblies

No. 2760

Listed by Underwriters' Laboratories
Medium Base—660 Watts, 600 Volts
Mogul Base—1500 Watts, 600 Volts

Standard for Turnlox and Floor-Service reflectors using holder of this type. Consists of a porcelain lamp holder and a Turnlox bayonet attaching plate with composition gasket and attaching screws.

Medium holders with lamp-grip shells to retard loosening of lamps; mogul holders with finger type lamp grip.

	Medium Base	Mogul Base

Benjamin Hoods

For Medium and Mogul Base Reflectors

Listed by Underwriters' Laboratories

1500-Watts, 600-Volts

No. 7 Turnlox Pendent Type Hoods

Standard for Turnlox pendent fixtures. Complete with universal type of wiring terminal base.

Hood body is cast iron, electro-plated; porcelain terminal base.

Tapped 1/2-inch standard; 3/4-inch, when specified.

Packed 10 in a standard package.

Weight per standard package, 14 pounds.

No. 7.....each \$.80

No. 9 Turnlox Ceiling Type Hoods

Hood body is cast iron, electro-plated. Fits 3 1/4 or 4-inch standard octagonal or round boxes 1 1/2 inches or more deep; also plaster covers with screw holes spaced on 2 3/4-inch centers. One hole is slotted for easy attachment.

Complete with terminal base.

Packed 10 in a standard package.

Weight per standard package, 17 pounds.

No. 9.....each \$.80

Turnlox Angle Type Hoods

Hood body is cast iron, electro-plated. Complete with terminal base.

Side outlet tapped 1/2-inch standard; 3/4-inch, when specified.

Provides three reflector positions, 120° apart. Use No. 3 hood where reflector must face directly towards the conduit support; No. 3R, where reflector must face directly away from the conduit support.

Packed 10 in a standard package.

Weight per standard package, 16 pounds.

No. 3.....3 3R
Each.....\$.80 .80

No. 47 Floor-Service Turnlox Pendent Type Hoods

Standard for all Floor-Service Turnlox pendent fixtures. Complete with universal type wiring terminal base.

Hood body is cast iron, electro-plated; porcelain terminal base.

Tapped 1/2-inch standard; 3/4-inch, when specified.

Packed 10 in a standard package.

Weight per standard package, 21 pounds.

No. 47.....each \$1.20

No. 49 Floor-Service Turnlox Ceiling Type Hoods

Hood body is cast iron, electro-plated. Complete with terminal base.

Fits 3 1/4 or 4-inch standard octagonal or round boxes 1 1/2 inches or more deep; also plaster covers with screw holes spaced on 2 3/4-inch centers. One hole is slotted for easy attachment.

Packed 10 in a standard package.

Weight per standard package, 24 pounds.

No. 49.....each \$1.20

No. 750 Terminal Base

For use with all the hoods listed above. Made of porcelain.

Packed 10 in a standard package.

Weight per standard package, 3 1/2 pounds.

No. 750.....each \$.25

Benjamin Threaded-Hood Glassteel Diffusers

Listed by Underwriters' Laboratories

No. 26300

Opal Curve

Provides soft, evenly diffused illumination through a wide range of intensities, and over both upright and flat surfaces, by the combined lighting characteristics of the glass diffusing globe and the porcelain enameled steel reflector. Of the light output, 11 per cent reaches the ceiling and 89 per cent below horizontal.

Reflector has apertures in top; white porcelain enameled inside and out with blue-black head.

Type RR porcelain enameled threaded hood with easy-to-wire porcelain socket; white porcelain enamel finish.

Globe holder is electro-plated to resist corrosion.

Bayonet lock construction permits the easy removal of reflector and globe as a unit. Globe is quickly and easily removed by releasing locking clamp. No set screws.

Prices do not include wires or lamps.

Pendent Type Hood with Socket, Reflector and Glass Globe

Hood with X-type fitting tapped 1/2 inch and keyless medium base, rigid socket, No. 263; with X-fitting tapped 1/2 inch and mogul base rigid socket, No. 264. Tapped 3/4 inch when specified.

Benjamin Socket-Reflectors

Porcelain Enameled Steel

Listed by Underwriters' Laboratories

Weatherproof, one-piece units, for indoor or outdoor use where interchangeability of reflectors and easy removal for cleaning are not considerations.

Complete unit includes reflector, socket and X-type fitting; an auxiliary aluminum oxide inner reflector which fits around lamp neck is supplied with all reflector sizes where it is of advantage.

The porcelain enameled steel reflector is green outside, reflecting white inside. The finish offers effective resistance to the deteriorating effects of fumes, moisture and grime and is easily cleaned.

Tapped 1/2 inch standard; when specified, tapped 3/4 inches, or supplied with 1/2 inch I.P. size insulating drop cord bushing, No. 1265. Strain relief cord grip at additional charge.

Elliptical angle reflector; medium base units tapped 1/2 inch standard, 3/4 inch, when specified; mogul units tapped 3/4 inch standard. For coupling in either 3/4 to 1 inch size (No. 1267) or 3/4 to 1 1/4 inch size (No. 1269).

Symmetrical angle reflector tapped 1/2 inch standard, 3/4 inch, when specified.

Socket adapter straps, for changing lamp position, furnished at no extra charge.

SELF-LOCKING SOCKETS: prevent unauthorized lamp removal; furnished, when specified, on medium-base socket-reflectors. For rigid locking socket, add 50 cents to list price of fixture with regular rigid socket and suffix number of same with LOK. For shock-absorbing locking socket add 60 cents to list price of fixture with regular rigid socket and suffix number of same with ASL. Key No. 1399, for releasing lamps in both types, \$1.00.

Prices do not include wires or lamps.

SHOCK-ABSORBING SOCKET; for medium and mogul base fixtures at 10 cents advance in list price. To order, suffix number with SHB.

Benjamin Luminous Top Silvered Lamp Diffusers

Listed by Underwriters' Laboratories

No. 7249

Typical Curve

Designed for use with silvered bowl lamps to provide high quality illumination. Furnished in Socket-Reflector, Turnlox and Floor-Service Turnlox constructions.

Closed-bead construction prevents corrosion.

Opal glass section extends 2 5/8 inches above the dome section of reflector, surrounds the skeleton neck of the unit and permits approximately five per cent of the light from the unit to reach the ceiling.

The skeleton neck, the section of the fixture neck covered by the opal glass cylinder, is formed in a special welded-truss construction which rigidly joins the reflector to the spun metal neck-cap carrying the socket or lamp holder.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit. Supplied with Turnlox hoods and rigid, keyless, lamp holder assemblies; No. 2760, mogul base; No. 2745, medium base. Pendant and angle hoods tapped 1/2 inch standard, 3/4 inch when specified. Ceiling hoods fit 3 1/4 or 4-inch standard octagonal or round outlet boxes, 1 1/2 inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fittings and keyless, rigid sockets, No. 4657 mogul base, No. 4645 medium base. Fitting tapped 1/2 inch standard, 3/4 inch when specified.

Reflectors are white inside and out. Neck-cap, white porcelain; skeleton construction, electro-plated. Caps on X-fittings are cast aluminum. Turnlox hoods, electro-plated.

Packed 4 in a standard package.

Benjamin RLM Silvered Bowl Diffusers

For 300-500-Watt Silvered Bowl Lamps

Porcelain Enameled Steel

Listed by Underwriters' Laboratories

No. 7253

Typical Curve

Porcelain reflector has special deep-dome shape with deep skirt section to insure adequate shielding of filament images from view in the section of the lamp bulb above bowl. Three welded stirrups provide for attaching Alzak aluminum inner reflector. Blue-black, closed bead construction prevents corrosion.

Inner reflector is Alzak aluminum with etched, semi-spherical reflecting surface. Attached to porcelain reflector by three screws.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit. Supplied with Turnlox hoods and rigid, keyless, lamp holder assemblies, No. 2760 mogul base. Pendant and angle hoods tapped 1/2 inch standard, 3/4 inch when specified. Ceiling hoods fit 3 1/4 or 4-inch standard octagonal or round outlet boxes, 1 1/2 inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fittings and keyless, rigid sockets, No. 4657 mogul base. Fitting tapped 1/2 inch standard, 3/4 inch when specified.

Reflectors are white inside and out. Caps on X-type fittings are cast aluminum. Turnlox hoods, electro-plated.

Packed 4 in a standard package.

SHOCK-ABSORBING SOCKETS; available at 10 cents advance in list price over fixture with rigid socket or lamp holder. To order, suffix number with SHB.

Type RR Benjamin Threaded Hood Fixtures

Listed by Underwriters' Laboratories

Suitable for use around railroad yards, steel mills and other industrial plants where conditions require the most rugged and sturdy equipment.

Allows easy removal of reflectors for cleaning and interchangeability among the various types and sizes of reflectors. Supplied in pendent cast, pendent steel, ceiling cast, ceiling steel and junction box cast hoods and are threaded to accommodate Type RR threaded neck reflectors.

Pendent hoods tapped 1/2-inch standard; 3/4-inch, if specified, at same price. Ceiling hoods fit 4-inch standard, octagonal or round outlet boxes. Junction box hoods are regularly supplied untapped; but where specified can be tapped for 1/2, 3/4 or 1-inch conduit, one, two, three, or four ways, at charge of 10 cents for each outlet.

Cast hoods are electro plated and sprayed with green lacquer; and steel hoods are finished in green enamel.

The following sockets are available for all hoods, except junction box hoods:

SHOCK-ABSORBING SOCKETS; cushion filament against jars and shocks, supplied at 10 cents advance in list price. To order, suffix fixture number with SHB.

PULL CHAIN SOCKETS; with 6-foot cord extension, medium base only, supplied at 80 cents advance in list price. To order, suffix fixture number with PUL.

SELF-LOCKING SOCKETS; prevents unauthorized lamp removals, medium base only, supplied at 50 cents advance in list price. To order, suffix fixture number with LOK.

SHOCK-ABSORBING LOCKING SOCKETS, add 60 cents to list price. To order, suffix fixture number with ASL.

Key for releasing lamps, both locking sockets, No. 1399.

Prices do not include wires or lamps.

Benjamin Keyless Rigid Mogul Base Sockets

For Reflector Equipment

Listed by Underwriters' Laboratories
1500-Watts, 600-Volts

For Socket-Reflectors, Former Sturdox Hoods and Glassteel Pendent Steel Hoods

Socket is of two-piece porcelain construction. Supplied with finger type lamp grip.

No. 4657 is standard equipment for the following mogul base equipment: all Socket-Reflector fixtures; No. 26035 RR pendent steel hoods; No. 9215 Sturdox pendent steel hoods. No. 4657 is also standard equipment for No. 264 mogul base pendent porcelain enameled steel hood supplied with threaded hood Glassteel diffusers. No. 4666 tapped 3/4-inch on Nos. 5537 and 5538 reflectors; optional for any hood or fixture using No. 4657.

No. 4657

No. 698, the socket only of the above assemblies, is standard equipment for the following mogul base Sturdox hoods: No. 9205 pendent, cast; No. 9225 outlet box, cast; No. 9235 outlet box, steel.

Packed 5 in a standard package.

No.	Each	Description	Tapped In.	Ship. Wt., Lb. Std. Pkg.

No. 44 for Heavy Duty Vapor Proof and Shall-O-Hood Lighting Units

Socket is one-piece porcelain construction with accessible side terminals.

Standard on Heavy Duty Vapor Proof fixtures and Shall-O-Hood fixtures, supplied with rigid medium base sockets; on medium base Gymnasium Lighting fixtures and Column-Lite.

Packed 10 in a standard package.

Weight per standard package, 8 pounds.

No. 44.....each \$.60

No. 244 for Heavy Duty Vaporproof and Shall-O-Hood Lighting Units

Socket is of one-piece porcelain construction. Supplied with finger type lamp grip and accessible side terminals.

Standard on Heavy Duty Vaporproof fixtures and Shall-O-Hood lighting fixtures, supplied with mogul base rigid sockets; also standard on mogul base Gymnasium lighting fixtures and Column-Lite.

Packed 5 in a standard package.

Weight per standard package, 6 1/2 pounds.

No. 244.....each \$1.05

Benjamin Shock-Absorbing Medium Base Sockets

For Reflector Equipment

Listed by Underwriters' Laboratories
660-Watts, 600-Volts

This shock-absorbing socket, which lengthens lamp life by counteracting vibration is furnished as standard or can be substituted in place of the rigid type socket on most reflector equipment.

A special bronze spring between the socket and fitting is the basis of the construction.

The spring floats the socket body and absorbs jars and shocks.

For Socket-Reflectors, RR Cast and Hoods and RR and Glassteel Ceiling Steel Hoods

No. 4676

Nos. 4676, 4678 and 4677 are for socket-reflectors.

No. 4675 is for RR pendent and ceiling, cast hoods, and RR and threaded hood Glassteel ceiling, steel hoods.

Packed 10 in a standard package.

No. 2671 For Heavy Duty Vaporproof, Vapor-Seal and Shall-O-Hood Lighting Units

For use on the following mogul base fixtures: Heavy Duty Vaporproof, Vapor-Seal and Shall-O-Hood.

Has one-piece porcelain body. Furnished with finger type lamp grip. Packed 5 in a standard package.

Shipping weight per standard package, 5 pounds.

No. 2671.....each \$1.15

3-Light Lamp Sockets

For Socket-Reflectors, Former Sturdox Hoods and RR and Glassteel Pendent Steel Hoods

No. 2592

For use in Benjamin reflector equipment ordinarily taking No. 4657 and 4666 assemblies, to allow the use of three-light lamps. The socket only, No. 2590, can be used on any equipment regularly taking No. 698 socket.

Two sizes of three-light lamps are available: the smaller has a 150 and 200-watt filament, each of which may be burned separately or together; the larger has a 200 and 300-watt filament for use in same manner.

Has two center contacts, and three plainly marked wiring terminal screws.

Furnished with finger type lamp grip. Attaching screws are in slotted openings and can be varied from 1 1/2 to 1 3/4-inch centers.

Packed 5 in a standard package.

No.	Each	Description	Tapped In.	Shp. Wt., Lb. Std.	Pkg.

**Benjamin Accessories
For Reflector Equipment**

X-Type Fittings

For use with Benjamin medium and mogul base sockets.

No. 4653

Consists of a malleable iron lower flange, a cast aluminum threaded cap and two gaskets, one for either side of the reflector top.

Packed 10 in a standard package.

Weight per standard package, 4 pounds.

No.	4653	4652	4668
Each	\$.45	.45	.45
Tapped	1/2 inches	3/8	3/4

No. 1261 Strain Relief Cord Grips

A simple type of fitting which serves both as a strain relief and a cord bushing.

Easily attached to any socket tapped 1/2-inch, and accommodates any cord from 3/8 to 1/2-inch diameter, inclusive.

Consists of an electro-plated malleable iron bushing with 1/2-inch iron pipe thread, to which two steel straps, forming the cord grip, are attached by machine screws.

When properly installed, this fitting will relieve the wiring terminals of all strain, transferring it to the body of the socket.

Packed 50 in a standard package.

Weight per standard package, 10 pounds.

No. 1261.....each \$ 10

**No. 1263 Strain Relief Watertight
Cord Grips**

Serves as a strain relief cord grip and as a watertight cord bushing for outdoor installations.

Attaches to any reflector fitting tapped 1/2-inch and accommodates any cord from 3/8 to 1/2-inch inclusive.

Consists of brass bushing, nut and washer, and a rubber stuffing gland.

Packed 10 in a standard package.

Weight per standard package, 1 pound.

No. 1263.....each \$.45

No. 1265 Insulating Bushings

A composition bushing for drop cord suspension of fixtures tapped 1/2-inch; 1 1/8-inch center hole.

Packed 200 in a standard package.

Weight per standard package, 3 1/2 pounds.

No. 1265.....each \$.05

Reducers Couplings with Close Nipples

No. 1267

For attaching fittings tapped 3/4-inch to either 1 or 1 1/4-inch iron pipe size conduit.

Cast iron coupling with short iron pipe nipple; electro-plated.

Packed 25 in a standard package.

No.	1267	1269
Each	\$.20	.20
Nipple I.P.S.	3/4 inches	3/4
Coupling I.P.S.	1 inches	1 1/4
Ship. Wt., Std. Pkg.	14 pounds	16

**Series 1800 Benjamin Removable Reflectors
Porcelain Enameled Steel**

Listed by Underwriters' Laboratories

A complete fixture consists of a combination of the hood and socket unit and a reflector. To obtain price of complete fixture, add price of hood and socket to price of reflector selected.

Hoods are designed to take all reflectors interchangeably and to accommodate either medium or mogul base sockets. Hoods are cast iron, cadmium plated; reflectors are porcelain enameled, white inside, green outside. Keyless, one-piece, porcelain sockets are standard.

PULL CHAIN, medium base only, can be furnished when specified at an advance of 80 cents in list price. When ordering, add suffix PUL to number of fixture.

Series 1800 Benjamin Sockets

Listed by Underwriters' Laboratories

No. 2101 Keyless Rigid Medium Base Sockets

Standard equipment for medium base Series 1800 Benjamin equipment. One-piece, easy-to-wire; fits any Series 1800 Benjamin hood shown below.

Packed 10 in a standard package. Shipping weight per standard package, 5 pounds.
No. 2101.....each \$.60

No. 2110 Keyless Rigid Mogul Base Sockets

Standard equipment for mogul base Series 1800 Benjamin equipment. One-piece, easy-to-wire; fits any Series 1800 Benjamin hood shown below.

Packed 5 in a standard package. Shipping weight per standard package, 4 pounds.

No. 2110.....each \$ 1.10

No. 2102 Pull Chain Medium Base Sockets

For use in any medium base Series 1800 Benjamin fixture. Reliable mechanism, controlled by bead chain.

Supplied with a 6-foot pull cord extension.

Socket fits any Series 1800 Benjamin hood shown below.

Packed 10 in a standard package. Shipping weight per standard package, 7 pounds.

No. 2102.....each \$ 1.40

Series 1800 Benjamin Hood Fixtures

Listed by Underwriters' Laboratories

No. E-18 Pendant Cast Hoods

Standard for any Series 1800 Benjamin reflector. Takes interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, standard. Cast iron; electro-plated.

Packed 10 in a standard package.

Shipping weight per standard package, 8 pounds.

No. E-18.....each \$.50

No. L-18 Angle Cast Hoods

Standard for any Series 1800 Benjamin reflector, where it is desired to have the conduit entrance at right angles to the reflector. Takes interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, standard. Cast iron; electro-plated.

Packed 10 in a standard package.

Shipping weight per standard package, 8 pounds.

No. L-18.....each \$.50

No. T-18 Feed Through Cast Hoods

Standard for any Series 1800 Benjamin reflector, where it is desired to have the conduit feed through the hood at right angles to the reflector. Takes interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, both sides, standard. Cast iron; electro-plated.

Packed 10 in a standard package.

Shipping weight per standard package, 9 pounds.

No. T-18.....each \$.65

No. C-18 Ceiling Cast Hoods

Standard for any Series 1800 Benjamin reflector. Takes interchangeably any medium or mogul base socket shown above. Fits any standard 4-inch outlet box. One screw hole in hood is slotted for easy attachment.

Cast iron; electro-plated.

Packed 10 in a standard package.

Shipping weight per standard package, 10 pounds.

Benjamin Master Sign Reflectors

Light Distribution Curves

Recommended for use on standard poster panels, standard city or suburban bulletins, 3-sheet poster panels, standard store bulletins and other types of signs; also standard highway bulletins, railroad metropolitan or highway bulletins.

Elliptical shaped reflector is porcelain enameled steel with side outlet. Regularly finished green outside, reflecting white inside; can be furnished white outside at no extra charge.

Has angle X-type weatherproof separable fitting with set screw. Tapped $\frac{1}{2}$ inch, standard; $\frac{3}{4}$ inch, if specified. Has one-piece porcelain, medium base rigid keyless socket with lamp grip to retard loosening of lamps under vibration.

Packed 9 in a standard package.

SELF-LOCKING SOCKET prevents unauthorized lamp removal. Supplied in place of rigid socket at 50 cents advance in list. To order, suffix reflector number with LOK.

SHOCK-ABSORBING SOCKET lengthens lamp life by protecting the filament from vibration. Supplied in place of rigid socket at 10 cents advance to reflector list. To order, suffix reflector number with SHB.

SHOCK-ABSORBING SELF-LOCKING SOCKET is supplied in place of rigid socket at 60 cents advance in reflector list. To order, suffix reflector number with ASL.

Benjamin Angle-Hood Master Sign Reflectors

Light Distribution Curves

Designed to provide uniform illumination of display boards. Arranged for base-up burning position of the lamp making it possible to service these reflectors from the ground by use of any standard lamp changer. This is accomplished by use of an angle-type cast hood.

Elliptical shaped reflector is porcelain enameled steel. Regularly finished green outside, reflecting white inside; can be furnished white outside at no extra charge.

Cast iron hood is tapped $\frac{1}{2}$ inch standard, $\frac{3}{4}$ inch when specified. Has one-piece porcelain, medium base, rigid socket. Front of reflector to back of hood, 6 $\frac{1}{4}$ inches.

Packed 9 in a standard package.

SELF-LOCKING SOCKET prevents unauthorized lamp removal. Supplied in place of rigid socket at 50 cents advance in list. To order, suffix reflector number with LOK.

SHOCK-ABSORBING SOCKET lengthens lamp life by protecting the filament from vibration. Supplied in place of rigid socket at 10 cents advance to reflector list. To order, suffix reflector number with SHB.

Benjamin Rexide Sign Reflectors

For Uniform Lighting of Rectangular and Square Signs

Listed by Underwriters' Laboratories

Side View

Front View

Typical Curve

Designed for uniform lighting of square and rectangular signs, where a reflector shape is desired which closely parallels the contour of the sign in general appearance.

The side outlet hood eliminates conduit bendings; prevents shifting or displacement in position of reflectors with reference to the sign. Reflector and hood are separate units, joined by a locking arrangement controlled by two screws on the outside of the

hood. With the reflector removed, the socket is easily accessible. Reflector heel may be rotated and locked in the hood at any point.

Electro-plated cast iron hood is tapped 1/2 inch standard, 3/4 inch if specified. One-piece porcelain socket, No. 2101. Porcelain enameled steel reflector with closed bead which eliminates starting points for corrosion.

Reflector is green outside, white inside; available red outside, when specified, at no extra charge.

Packed 10 in a standard package.

No.	Each	Size Lamp Watts	Diam. In.	Ht. In.	Width In.	Ship. Wt., Lb. Std. Pkg.
5705	\$2.50	60, 75, 100	7 7/8 x 6 5/8	9 3/4	5 7/8	28 1/2
5706	3.60	150	9 3/8 x 8 1/8	10 3/4	7 1/4	37 1/2

Prices do not include wires or lamps.

Mounting Data

Square signs of the approximate dimensions shown in table are lighted suitably with one reflector on each side. Best results are obtained by centering the reflector in relation to the sign with the top edge of the reflector level with top of sign.

On rectangular signs requiring more than one reflector on each side, the spacing distance between reflectors should not exceed twice the distance from the sign.

Height of Sign Feet	Distance from Sign Feet	SIZE LAMP, WATTS *FOR LOCATIONS

*For dark colored signs, or where higher intensities are desired, follow lamp recommendations for next brighter location.

Benjamin Emblem Sign Reflectors

Listed by Underwriters' Laboratories

For lighting circular emblem signs of the type used around automobile service and gasoline filling stations and other similar small signs.

When installed as recommended, this reflector is neat and inconspicuous and does not interfere with the readability of the sign, day or night.

Conduit is led straight into side outlet of reflector hood. Hood, with reflector, is screwed to conduit, and drilled for attaching guy wires. Cast iron hood is electroplated; side outlet tapped for 1/2 inch standard, 3/4 inch when specified.

Has one-piece porcelain sockets, with easily accessible terminal screws. Symmetrical reflector, is porcelain enameled steel, green outside and white inside.

Packed 10 in a standard package.

Benjamin Steelite Armor-Clad Lighting Units

Listed by Underwriters' Laboratories

Designed to stand up under severe mechanical strain and unfavorable atmospheric conditions.

Consists of a highly efficient Alzak aluminum reflector, enclosed in a protective steel housing to guard against damage caused by rough handling or from flying metal particles. The bottom of this housing is sealed against dust, moisture, and corrosive fumes by

a hinged cover, equipped with heat and impact-resisting glass which offers resistance to sudden impacts and is impervious to temperature changes.

Diameter of reflector, 18 inches. Overall diameter, 20 1/2 inches.

Concentrating units. Recommended for lighting relatively small areas to a high intensity or for use where units must be mounted a considerable distance from the lighted surface. Equipped with an Alzak reflector having a satinized polished reflecting surface.

Medium spread units. Recommended for lighting high narrow bays. Equipped with an Alzak reflector, with inner surfaces of etched aluminum, which concentrates light directly below the unit with most favorable illumination on horizontal surfaces.

Wide spread units. For general industrial lighting; have an Alzak reflector with inner surfaces of etched aluminum. Provides a relatively broad distribution of light and gives uniform illumination on both horizontal and vertical surfaces.

Provided with X-type separable fitting tapped 1/2 inch standard, 3/4 inch if specified. Sockets are keyless, rigid, mogul base type with finger type lamp grip.

Packed 1 in a standard package.

Listed by Underwriters' Laboratories

No. T-1876

For the lighting of stock-room bins and shelves, tool crib bins and shelves, stock-room carton stacks, file rooms, library book stacks and warehouse aisles.

Special deep-trough shaped reflector is porcelain enameled steel, white inside and out. Has apertures in each end to assist in building up illumination at points farthest away. Interchangeable in any of the hoods shown. Can be turned in hoods to any desired position and locked in place by

tightening two screws on sides of hoods. Width of reflector, 7 $\frac{1}{8}$ inches. Reflector should be mounted level with the top of the highest bin of shelf and the spacing distance between reflectors should never exceed 8 feet. A V-shaped deflector bar, 11 $\frac{1}{8}$ inches long, is suspended below reflector to direct a portion of the light upward above the cutoff.

Cast iron hoods, electro-plated, are available in pendent, angle, feed-through and outlet box. Pendent and angle hoods tapped $\frac{1}{2}$ inch standard, $\frac{3}{4}$ inch when specified (angle also 1 inch), without extra charge. Feed-through hood tapped $\frac{1}{2}$ inch only. Ceiling hood fits 4-inch standard outlet boxes.

One-piece porcelain, rigid, keyless sockets are standard.

Complete unit consists of hood with reflector and socket.

Packed 10 in a standard package.

Pull Chain Sockets can be supplied, when specified, at 80 cents advance in list price. When ordering, add suffix PUL to number of fixture.

Benjamin Pit and Tunnel Lighting Units

For Multiple Circuits

Listed by Underwriters' Laboratories

Proper lighting of pit interiors and vehicles over the pits, lessens the danger of accidents to workers and increases their speed and effectiveness.

The tough-shaped porcelain enameled steel reflector assures maximum light output, while the refracting glass cover concentrates the major portion of the light on the underside of the object over the pit.

Suitable for built-in or surface installation in locations like automobile service and greasing pits, railway and traction line repair pits, viaducts, tunnels and similar locations. In some types of locations, such as viaducts, tunnels and subways, where lighting requirements are of a general nature, the pit light with a plain glass cover will be found more satisfactory than the refracting.

Fixture consists of a cover and a cast iron box which are held together by four bolts. Cover includes a cast iron frame, a heat-resisting glass cover, a double rubber gasket, which seals cover frame to box and glass to cover frame, and a brass wire guard.

Cast iron box includes a porcelain enameled steel trough-shaped reflector and a keyless socket. Body is tapped $\frac{1}{2}$ -inch iron pipe size at both ends. When specified on order, body will be tapped either $\frac{3}{4}$, 1 or $1\frac{1}{4}$ -inch iron pipe size, at no advance in list price.

Packed 1 in a standard package.

Benjamin Concentrating Type Alzak Aluminum Reflectors

For Lighting High Narrow Bays
Listed by Underwriters' Laboratories

Benjamin Spread Type Alzak Aluminum Reflectors

For General Lighting Installation
Listed by Underwriters' Laboratories

No. 4166 Socket-Reflector with No. N-6416 Dust-Tight Cover

No. 9168, Turnlox Ceiling Construction

No. 4178, Socket-Reflector Construction

No. 7174, Turnlox Pendant Construction

Typical Curve

Recommended for lighting high, narrow rooms, requiring not more than three rows of units, as these reflectors concentrate light on the working plane directly below the units with the most favorable illumination on horizontal surfaces. Suitable for installation where the mounting height of the reflector is equal to or greater than the width of the area to be lighted.

Also satisfactory for use as medium-range open type floodlights.

The spacing distance between units should never exceed the mounting height.

Typical Curve

Suitable for general lighting installations where a relatively broad distribution of light and uniform illumination is desired.

Also used as an open type floodlight, where it is desired to cover a relatively large area at close range.

Spacing distance between units should never exceed one and one-half times the mounting height.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit, for cleaning or storage. Supplied with Turnlox hoods and No. 2760 rigid, keyless, mogul base lamp holder. Pendant and angle hoods tapped $\frac{1}{2}$ inch standard, $\frac{3}{4}$ inch when specified. Ceiling hoods fit $3\frac{1}{4}$ or 4-inch standard octagonal or round outlet boxes, $1\frac{1}{2}$ inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fittings and No. 4657 keyless, rigid, mogul base sockets. Fitting tapped $\frac{1}{2}$ inch standard, $\frac{3}{4}$ inch when specified.

Reflectors are Alzak oxidized etched aluminum inside, aluminum outside. Caps on X-type fittings are cast aluminum. Turnlox hoods, electro-plated.

Packed 4 in a standard package.

Thompson Lamp Lowering Hangers

A Typical High Bay Installation, Partially Lowered

The Thompson Hanger is essentially an overhead disconnecting switch supporting a lighting fixture. By manipulation of a light chain or cable from the ground or floor, the fixture may be disconnected electrically and mechanically from the circuit and lowered to the desired working level. When servicing is completed, the fixture may be pulled up and latched in operating position.

It is adapted for use with practically any type of lighting unit. A variety of adapter connections, all interchangeable, are available for this purpose. When equipped with the radial adjustment adapter, the hanger may be used with bail or yoke suspended floodlights.

Rated at 15 amperes, 600 volts and approved by Underwriters', this hanger is applicable to all usual lighting circuits except high tension series.

Thompson Hangers are furnished in three finishes: black Japan, cadmium plated, and hot-dip galvanized. Black Japan is considered standard finish except with Nos. 1137 and 1177, and the unit packages which are hot-dip galvanized only. Black Japan will be furnished unless another finish is specified.

For cadmium plate finish, add the letters SA, and for hot-dip galvanized finish, add the letters SB to the hanger number; for either finish, add \$1.00 to the standard price. For two-piece deep canopy hangers add \$1.20.

Standard finish now includes the lock beam stem making all types of adapters interchangeable and making the hangers adaptable to angle type and directed-ray reflectors and to fluorescent tube or mercury vapor units. Axle bolts, nuts, rivets and washers, and all contact screws, nuts and washers are Everdur or Olympia metal.

Unit packages are available with complete equipment for pipe bracket mountings from pole or wall, indoors or out, single or group mountings.

Indoor Models for Open Wiring

No. L112

No. L112 has a medium depth canopy adapted to indoor use. Provided with an open type sheave housing, it may be used on sloping or arched structures as well as flat construction. Two porcelain bushings in the canopy and porcelain insulator knobs on the sheave housing adapt it to open wiring installations.

The same hanger, but without the porcelain insulator knobs is No. L111.

Other models are provided by the substitution of the semi-enclosed and seal type sheave housings.

No.	Black Japanned, Each	Insulator Knobs	Type of Sheave Housing
L111	\$10.20	Without	Open Face
L112	10.40	With	Open Face
L113	10.60	Without	Semi-enclosed

L115	11.00	Without	Seal type

Thompson Lamp Lowering Hangers

No. L121

No.	Black Japanned, Each
L121	\$10.00
L123	10.40
L125	10.80

Indoor Models for Conduit Wiring

These models all provide for 1/2-inch conduit wiring connection to the face of the canopy.

They may have the open type sheave housing as shown, necessary with sloping or arched construction, or the semi-enclosed or seal type sheave housing with flat construction for maximum protection.

Insulator Knobs	Type of Sheave Housing
Without	Open Face
Without	Semi-enclosed
Without	Sealtype

Ball Suspended Floodlight—Unit Package 1177, 1 1/4 or 1 1/2 inches

No. L125

Sealtype Models

Sealtype hangers have fully enclosed sheave wheels and a threaded connection for 3/4-inch conduit to enclose the chain or cable.

They provide the maximum protection against dirt and corrosion and conceal the chain or cable.

At the same time, they provide maximum accessibility.

Sealtype hangers can only be used where chain or cable leaves the hanger in a horizontal plane.

Outdoor Models

No. L155

These models are all provided with the deep skirted canopy to afford maximum weather protection for outdoor use. They are made in the open wiring types with porcelain bushings and with or without porcelain insulator knobs, and in the conduit connected types.

They are available with any of the three types of sheave housings, open face, semi-enclosed, or sealtype. The sealtype should be used if possible to avoid water following the chain or cable into the hanger and freezing.

No.	Black Japanned, Each	Open Wire Types	
		Insulator Knobs	Type of Sheave Housing

L161	\$11.00	Without	Open Face
L163	11.40	Without	Semi-enclosed
L165	11.80	Without	Sealtype

Thompson Lamp Lowering Hangers

Indoor and Outdoor Models

No. L177

These two hangers, No. L137 with medium canopy for indoor use and No. L177 with deep skirted canopy for outdoor use, are most versatile. The sheave housings are of the sealtype, and combine a threaded connection for 1/2-inch wiring conduit directly into an enclosed passage with protected entrance into the top of the canopy. They are applicable to mounting on flat surfaces adjacent to a standard outlet box with direct nipple connection, to the new recessed and concealed mounting, to pipe bracket or catenary suspension, and to sloping or curved surfaces by means of Thompson gravity suspension fittings. The V-notch in the centers of the bolting lugs center the hangers on pipe

or suspension wire when so mounted.

When used with the slip fit elbow and bracket end, they provide fully enclosed wiring for pipe bracket mounting from wall, column, or pole. They may be equipped with radial adjustment adapters, and used with bail or yoke suspended floodlights.

1177	Special Lower Member, Lock-Beam Stem and Radial Adapter.....			18.00

No. 2123

Duplex Hangers

Where the hanger anchorage is high above the lighting fixture, the duplex construction is desirable to eliminate the necessity of lowering and raising long drop stems.

Any length of 3/4-inch conduit stem may be used between the canopy and the sheave housing.

This construction may be applied to any hanger models except Nos. L137 and L177.

Duplex construction is indicated by adding 2000 to the standard hanger number, and adding \$1.00 for Japan finish and \$1.20 for cadmium-plated finish.

Two-Piece Canopy Models

All hanger models, except Nos. L137 and L177, can be supplied with two-piece canopies which permit ready access to the interior of the hanger for installation, inspection and cleaning.

Model numbers are the same as for one-piece canopies except that they are in the L200 series instead of L100.

Add 60 cents to the price of the corresponding one-piece model.

Thompson Shock Absorbers

X-Ray View

These shock absorbers may be used either with Thompson Hangers or separately. Designed primarily to protect lighting fixtures from shock and vibration, they are also adaptable to many other uses.

Simple and rugged in construction, easy to install and without a bolt, screw or nut to work loose, they afford maximum protection with long trouble-free life.

There are two sizes and three types, and a range of springs to cover suspended weights from 1 1/2 to 65 pounds.

Finish: junior size, cadmium plated; heavy duty size, hot dip galvanized. Bottom fixture connection on all models is 1/2-inch male pipe thread.

Thompson Accessories

A full line of accessory fittings is available, including pulleys of various types, beam clamps, suspension fittings, screw plates, pole and wall plates, U-bolts, pipe and span wire clamps, swing loops, lock boxes, grip cleats, flare ends, bracket ends, etc. These parts are suitable for every conceivable type of installation.

Complete information and prices furnished on request.

Benjamin Radial Wave Outdoor Reflectors Porcelain Enameled Steel

No. 1206

Reflector is 18 inches in diameter, of porcelain enameled steel; green outside, reflecting white inside.

Supplied with porcelain rigid, keyless socket and separable X-type fittings, tapped 1/2 or 3/4 inch.

Fittings, goosenecks and brackets, electro-plated.

Packed 5 in a standard package.

With Gooseneck Supports

Has socket fitting assembly, No. 4665 medium base and No. 4666 mogul base; No. 5037, 40x3/4-inch gooseneck. Nos. 1204 and 1205 include No. 5031 wall fitting; Nos. 1206 and 1207 have No. 5027 wall fitting and No. 6203 cross arm. Tapped 3/4 inch.

Benjamin Unit Package Fixtures

Listed by Underwriters' Laboratories

Unit consists of a durable porcelain enameled steel reflector, a detachable cast iron hood, No. 2101 medium base receptacle (does not apply to Nos. 1912, 1914 and 1916 reflectors), a section of 1/2-inch conduit with wall or outlet box fitting and two 24-inch lengths of No. 14 gage rubber covered solid copper single conductor wire. The conduit entrance in both hood and fitting have set screw to prevent accidental loosening of assembly.

Reflector is green outside, white inside. Hood, conduit section and mounting fitting is sprayed aluminum over electro-plating.

Prices do not include lamps.

Dome Reflectors with Brackets

For lighting entranceways, drives, gardens, roads and camps. Supplied with a 17 1/2 inch length of 1/2 inch conduit and fitting.

Packed 1 in a standard package.

Benjamin Universal Joint 45° Aligners

Outlet Box Cover Type

Listed by Underwriters' Laboratories

Consists of a steel pipe bushing, tapped 1/2 or 3/4 inch, which swings forward or back on two pivot studs joining it to a steel cup. In turn, this cup is hinged to the steel cover of the aligner to allow movement in a plane at right angles to the first, thus providing free movement through 45° in any direction. Sprayed aluminum finish over electro-plating.

Packed 10 in a standard package; weight, 5 1/2 pounds.

No.	Each	Description	Tap. In.
N-3380	\$.30	*For 3 1/4 and 4-Inch Rd. & Oct. Outlet Box	1/2
N-3381	.30	*For 3 1/4 and 4-Inch Rd. & Oct. Outlet Box	3/4
N-3385	.45	For 4-Inch Square Outlet Box	1/2
N-3386	.45	For 4-Inch Square Outlet Box	3/4

*Also fits plaster cover with ears spaced on 2 3/4-inch centers.

Benjamin Porcelain Enamelled Stem Suspensions

With 45° Canopy Type Ball Aligners

Listed by Underwriters' Laboratories

No. 8906

For use with standard 3 1/4 and 4-inch outlet boxes. Allows lighting units to hang plumb from outlet boxes mounted on ceilings having as much as a 45° slope. Also provides a flexible mounting support which will swing under the blows of ladders, poles and similar objects.

Porcelain enameled steel cover with either a white porcelain enameled cast iron or chromium plated die-cast ball, which swivels between two steel plates inside the cover. Steel mounting strap provides for attachment to the outlet box or stud.

Aligners having white porcelain enamel, cast iron balls are provided with flexible grounding wire and two terminal grounding screws. On aligners with chromium plated die-

cast balls, the metal-to-metal contact between the ball and supporting plates provides automatic grounding. Pipe stems are of 1/2-inch iron pipe, threaded at both ends.

Aligners attach to round or octagonal boxes using the ears of the box or a 3/8-inch fixture stud. Can also be used with 4-inch square outlet boxes by using a 3/8-inch fixture stud. On all types of boxes 1 1/2 inches deep or more, where a fixture stud is used, the 3/8-inch stud must be lengthened by a short pipe extension. Slotted attaching holes in mounting strap are spaced on 2 3/4 to 3 1/2-inch centers.

Canopy is white porcelain enameled steel; ball is white porcelain enamel or chromium plate. Pipe stems are white porcelain enamel. Cap nuts are chromium plated.

Packed 5 in a standard package.

***With Canopy Ball Aligners and 12-Inch Stems**

Benjamin Flexible Suspension Fittings

Most industrial or manufacturing buildings are subject to vibrations induced by moving machinery. Under these conditions, the shock absorbing feature in Benjamin Fixture Aligners protects the lamp filament and tends to prolong lamp life.

Packed 10 in a standard package.

Aligners with Shock Absorbers

Furnished with medium or heavy shock absorber to accommodate various weights of fixtures. Medium springs are for fixtures weighing from 3 to 8 pounds, heavy for 8 to 16 pounds. Specify spring desired, otherwise medium weight will be supplied. Tapped, 1/2 inch

Outlet Box Cover Type

Has flexible joint, permitting fixture to hang plumb. Mounting screw holes are elongated.

Sprayed aluminum finish applied over electro-plating.

No. 3366

Benjamin Mercury Lamp Units

In industrial locations where color discrimination is not a consideration, installations may consist entirely of mercury lamps in suitable reflectors. In other industrial locations where a certain amount of color discrimination is a consideration, combination installations of Mercury and Incandescent Lamp Units or Combination Units, which utilize both types of lamps in the same reflector, may be employed.

Combination Mercury and Incandescent lamp installations are also advantageous in locations where voltage variations or current interruptions might temporarily affect the operation of the mercury lamp.

The high efficiency of Mercury lamps makes them advantageous for replacing inadequate lighting installations where present wiring is already loaded to capacity. Illumination in such instances can often be increased one and one-half to two times, without rewiring.

Most of the light produced by these lamps is radiated in the yellow-green and green portions of the visible spectrum near the eye's peak of sensitivity.

Mercury units will not operate on ordinary lighting circuits unless a special transformer or reactor equipment is provided; prices and complete information upon request.

Benjamin Dome Type Mercury Lamp Units

**Porcelain Enameled Steel Reflectors
For 400-Watt Lamps**

Listed by Underwriters' Laboratories

No. 4480

Typical Curve

For general interior illumination.

Dome-shaped reflector provides uniform illumination on both horizontal and vertical surfaces and its 72½° angle of cut-off minimizes glare; no louver is required. When specified can be supplied with an opal glass cylinder for lower end of lamp.

Diameter of reflector, 20 inches.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit for cleaning. Supplied with Turnlox hoods and No. 2760 rigid, keyless mogul base lamp. Pendant and angle hoods tapped ½ inch standard, ¾ inch when specified. Ceiling hood fits ¾ or 4-inch octagonal or round boxes, 1½ inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fitting and No. 4657 rigid, keyless mogul base socket. Fitting tapped ½ inch standard, ¾ inch when specified.

Reflectors porcelain enameled steel; green outside, special diffusing surface white inside. Turnlox hoods are electroplated. Caps on X-type fittings are aluminum.

Packed 4 in a standard package.

No. N-6330, with Stippled Glass Disc	each	6.70

Prices do not include lamp, transformer or reactor.

Benjamin Concentrating Mercury Lamp Units

**Oxidized Alzak Aluminum Reflectors
For 400-Watt Lamps**

Listed by Underwriters' Laboratories

No. 7470 Turnlox Pendant and No. N-6418 Dust Tight Cover

Typical Curve

For use with the standard 400-watt mercury lamp in high narrow rooms where the light must be concentrated uniformly upon the working plane, with minimum loss high on the side walls.

Spacing distance between reflectors should never exceed the mounting height. Closer spacings result in improved uniformity and higher intensities.

Diameter of reflector, 18 inches.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector and lamp from hood. Supplied with Turnlox hood and No. 2760 rigid, keyless mogul base lamp holder. Pendant and angle hoods tapped ½ inch standard, ¾ inch when specified. Ceiling hood fits ¾ or 4-inch octagonal or round boxes, 1½ inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fittings and No. 4657 rigid, keyless mogul base socket. Fitting tapped ½ inch standard, ¾ inch when specified.

Reflectors Alzak oxidized etched aluminum finish, aluminum outside. Turnlox hoods are electroplated. Caps on X-type fittings are aluminum.

Benjamin Mercury Lamp Glassteel Diffusers

Porcelain Enameled Steel Reflectors

Listed by Underwriters' Laboratories

No. 5203

Typical Curve

For general illumination. The combined diffusing characteristics of the opal glass globe and porcelain enameled steel reflector materially reduce both direct and reflected glare and minimize harsh shadows. Approximately 11 per cent of the light is directed through apertures in the top of the reflector onto the ceiling to relieve contrast.

Reflectors are reflecting white porcelain enamel inside and out. Turnlox hoods are electro-plated. Caps on X-type fittings are aluminum.

Prices do not include lamp, transformer or reactor.

For 400-Watt Lamps

Diameter of reflector, 24½ inches.

TURNLOX; weatherproof bayonet mechanism permits removal of reflector, lamp and globe from hood. Supplied with Turnlox hood and No. 2760 rigid, keyless mogul base lamp holder. Pendant and angle hoods tapped ½ inch standard, ¾ inch when specified. Ceiling hood fits 3¼ or 4-inch octagonal or round boxes, 1½ inches or more deep.

SOCKET-REFLECTOR; standard Socket-Reflector, separable X-type fitting and No. 4657 rigid, keyless mogul base socket. Fitting tapped ½ inch standard, ¾ inch when specified.

Packed 2 in a standard package.

Benjamin Explosion-Proof Pendant Lighting Units

Exterior Reflector Type

Listed by Underwriters' Laboratories
Class I, Groups C and D, Hazardous Locations

Less Reflector

A line of enclosing-globe type explosion-proof units to which can be attached any of four standard porcelain enamel steel reflector shapes. Units completely satisfy all Underwriters' requirements for installation in Class I, Groups C and D, hazardous locations—atmospheres having vapors of gasoline, naphtha, petroleum, alcohol, acetone, lacquer solvents, and natural gas.

The pendant hood is cast iron, finished in sprayed aluminum applied over electroplating; tapped ½ and ¾ inch. Removable inspection plug in side of hood gives access to socket terminal screws.

Socket is one-piece porcelain, with wiring terminals conveniently located on side. Socket base has permanently formed-on metal gasket.

Packed 1 in a standard package.

With Dome Reflector

With Shallow Dome Reflector

Benjamin Explosion-Proof Ceiling Lighting Units

Exterior Reflector Type
Listed by Underwriters' Laboratories
Class I, Groups C and D, Hazardous Locations

Less Reflector

Units completely satisfy all Underwriters' requirements for installation in Class I, Groups C and D, hazardous locations—atmospheres having vapors of gasoline, naphtha, petroleum, alcohol, acetone, lacquer solvents and natural gas. Any of four standard porcelain enamel steel reflector shapes can be attached to these units.

The two-piece ceiling hood is cast iron. Consists of an explosion-proof outlet box to which is attached the main body of the hood containing the socket. Hood body is fastened to the box by four screws; has a removable inspection plug and is threaded

to take the fixture body. Sprayed aluminum finish, applied over electro-plating.

Boxes have four 3/8-inch diameter mounting holes and four tapped hubs, with conduit stops; three having plugs.

Packed 1 in a standard package.

Benjamin Explosion-Proof Junction Boxes

With Hubbed Covers

For Installing Explosion-Proof, Pendent Type Units

Listed by Underwriters' Laboratories for Class I, Groups C and D

Class II Group G and Classes III and IV, Hazardous Locations

No. 7350X

Designed for the suspension of pendent type explosion-proof and dust-tight lighting units in hazardous atmosphere locations.

Hubbed cover is attached by four screws, lock washer equipped, which thread into blind tapped holes.

Boxes are supplied with four 3/8-inch diameter mounting holes, equally spaced on a 5 1/2-inch circle.

A single style and size of box, equipped with four tapping hubs equally spaced on a circle, is the basis of all tapping combinations.

Hubs on boxes and covers are provided with built-in conduit stops.

Boxes and covers are cast iron; sprayed aluminum finish, applied over electro-plating.

Cover attaching screws are electro-plated.

Packed 5 in a standard package.

Type II-G Benjamin Dust-Tight Lighting Units

Listed by Underwriters' Laboratories for Class II, Group G and Classes III and IV Hazardous Locations

For locations requiring dust or vapor-proof lighting equipment. Weather and moisture-proof, and due to the protection of the lamp afforded by the glass screw globe, this unit is valuable in food industries where there is a danger of spoilage from breakage of uncovered lamps.

Cast aluminum hoods with removable cast-aluminum cap; sprayed aluminum finish. Acid-resisting porcelain enameled reflector; green outside, reflecting white inside. Medium base, one-piece porcelain socket with side terminals.

Packed 10 in a standard package.

Type II-G Benjamin Dust-Tight and Moisture-Proof Units

Listed by Underwriters' Laboratories for Class II, Group G, Class III and Class IV, Hazardous Locations

No. 665

No. 657

For installation in Class II, Group G, hazardous locations, where combustible organic dusts are in suspension in the atmosphere and are likely to collect on lighting fixtures in sufficient quantities to cause overheating or explosions; and in Classes III and IV locations, where ignitable fibers and materials producing combustible flyings are manufactured, handled or stored.

Has one-piece, weatherproof copper casing; tapped for 1/2-inch conduit. Fitted with removable, one-piece, medium base porcelain socket, which has lamp grip to retard loosening of lamp, and is held in place by a retaining ring that threads into the casing.

A glass globe threads into the copper casing and seats against an impregnated, asbestos gasket. Natural copper finish.

Guard-type units have removable wire guard which threads onto outside of copper casing. Guards are heavy steel wire, welded and finished bright tin.

Packed 10 in standard package.

*Heat-resisting clear globe.
†Opal glass enclosing globe.

Benjamin Heavy Duty Vaporproof Lighting Units

Suitable for use in locations exposed to moisture or non-combustible dust.

The lamp is enclosed in a heavy glass screw globe. A single asbestos gasket between the hood and globe seals the lamp and assures a tight enclosure. A stuffing gland in the hood top seals the wire entrance.

The hood is an aluminum casting designed to accommodate the threaded, copper neck of the heavy gage steel reflector. Reflector rim is tightly closed to assure a smooth unbroken surface for the acid-resisting porcelain enamel. A formed copper gasket provides a cushion between the bottom edges of the hood and the porcelain surfaces of the reflector.

Hood is finished in sprayed aluminum; reflector is green outside, reflecting white inside.

Regularly supplied with plain clear or opal diffusing globes. Can be furnished with heat-resisting globe at an advance over the plain clear globe unit list, \$1.50 for medium and \$2.00 for mogul base units. To order, use suffix number of plain clear globe unit with HR.

Keyless rigid medium or mogul base sockets supplied. When specified, at 10 cents advance in list, shock-absorbing socket can be furnished. To order, suffix fixture number with SHB.

Benjamin Heavy Duty Vaporproof Pendant Lighting Units

*Heights are for clear globe units; for opal or heat-resisting deduct 3/8 inch from medium and 3/4 inch from mogul unit heights.

†Heights taken from top of hood to lower rim of reflector.

‡Clear globe diameter; opal or heat-resisting globe diameter is 6 9/8 inches.

§Clear globe diameter; opal or heat-resisting globe diameter is 8 3/8 inches.

Benjamin Industrial Lighting Vapolets

Listed by Underwriters' Laboratories

Ceiling Type

For use in indoor and outdoor locations where equipment is subjected to rough handling and corrosive fumes, vapors, etc.

Cast iron alloy junction box body; sprayed aluminum finish. One-piece composition receptacle. Plain clear glass globe supplied; for opal, heat-resisting and colored globes, prices on request.

Aluminum alloy guard, sprayed aluminum finish.

When specified, brass guards and bodies can be furnished at a slight additional charge.

When desired without guard, deduct price of guard only from price of complete Vapolet, and specify Less Guard after Vapolet number.

Pendant Type

Benjamin Porcelain Enamelled Steel Reflectors For Vapolets

No. 145

No. 153

With cast aluminum ring for attachment to outside threading on lighting Vapolet bodies.

Seamless, acid-resisting reflector; green outside, reflecting white inside.

Threaded cast aluminum rings for 50-60 and 75-100-watt reflectors fit 50-100-watt Vapolet bodies; rings for 150, 150-200 and 200-watt reflectors, fit 100-200-watt Vapolet bodies.

Packed 10 in a standard package.

For apron, include letter A and add \$1.00 per foot to list price.

Wired on 3, 4, or 6-inch centers at additional cost.

Kliegl Stage Type Light Strips

No. 650

Used at entrances, back of transparencies, behind ground rows, and general service.

Portable trough reflector with series of screw-base receptacles for 40-150-watt lamps, wired on one 2-wire circuit, terminating in suitable splice box.

- No. 640, 2-Light Strip, 1½ Feet Long..... each \$7.80
- No. 650, 4-Light Strip, 3 Feet Long..... each 10.80
- No. 651, 6-Light Strip, 5 Feet Long..... each 13.80
- No. 652, 10-Light Strip, 8 Feet Long..... each 18.80

Kliegl Aisle, Step, and Corridor Lights

Casts subdued light downward on steps and aiseways, or diffused light in corridors.

No. 2780 Midget

For mounting on side of end seats adjoining aisle. For 6-watt, 115-volt candelabra screw-base lamp.

- Length, 4½ inches; height, 1¼ inches; and depth, 1½ inches.
- No. 2780..... each \$2.60

No. 675 Aisle Spot Lights

For mounting on side of end seats adjoining aisleway. Cast aluminum housing with control lens and receptacle for 10-watt, S14 lamp.

- Width, 3 inches; height, 6 inches; and depth, 2¼ inches.
- No. 675..... each \$4.50

No. 2677 Step Lights

For stairways, mounted flush in riser. Louvered openings direct light to tread. Removable cast aluminum front.

- For 40-watt, medium screw-base lamp.
- Width, 8 inches; height, 4¼ inches; and depth, 3½ inches.
- No. 2677..... each \$5.00

No. 676 Aisle Lights

For flush wall mounting. Louvered front directs light to floor. Front is removable.

- For 40-watt, medium screw-base lamp.
- Width, 4¾ inches; height, 8¼ inches; and depth, 3½ inches.
- No. 676..... each \$5.00

No. 678 Corridor Lights

For flush wall mounting. Cast bronze, removable front, wire-glass face. For 40-watt, medium screw-base lamp.

- Width, 5 inches; height, 8½ inches; and depth, 3½ inches.
- No. 678..... each \$8.00

Kliegl Spotlights

Fresnel Lens Types

Accommodates standard concentrated filament incandescent lamps. Equipped with refracting prismatic Fresnel type lens, producing a soft edge high intensity light beam.

Adjustable lamp carriage for focusing. Alzak aluminum reflectors. Slide grooves for color frames. Furnished with suspension mounting, wall bracket, table base, or floor stand.

- Nos. 43N3 and 43N6 are normally supplied with wall brackets, but may be had with pipe clamp, or table base at same price. Or No. 43N6 on floor stand at \$3.00 additional cost.
- No. 43N3, 100 Watts, 3-Inch Lens..... each \$10.00
- No. 43N6, 500 Watts, 6-Inch Lens..... each 17.00

Nos. 43N8, 43N12 and 43N16 are supplied mounted on telescopic floor stand with rubber tired casters. Can also be supplied mounted on counter-balanced mobile studio stand, or for suspension mounting when required.

- No. 43N8, 1000 Watts, 8-Inch Lens..... each \$75.00
- No. 43N12, 2000 Watts, 12-Inch Lens..... each 115.00
- No. 43N16, 5000 Watts, 16-Inch Lens..... each 150.00

No. 43N6

No. 43N16

Kliegl Cove Light Strips

Incandescent Types

Continuous row screw-base lamp receptacles in raceway. Completely wired. Any length.

No. 734

Channel strip without reflector. Medium screw receptacles, 25-150 watts, 4 inches on centers.

- No. 734..... per foot \$2.40

No. 1741

Continuous Alzak reflector strip. Medium screw receptacles, 25-150 watts, 8 inches on centers.

- No. 1741..... per foot \$3.50

Individual Reflector Strips

Medium screw receptacles, each with spun aluminum Alzak reflector and glass roundel.

No. 739-4

Reflectors, 4 inches, 25-75 watts, 4 inches on centers.

- No. 739-4..... per foot \$9.15

No. 739-6

Reflectors, 6 inches, 40-150 watts, 6 inches on centers.

- No. 739-6..... per foot \$7.90

No. 739-8

Reflectors, 8 inches, 100-200 watts, 8 inches on centers.

- No. 739-8..... per foot \$8.40

No. 739-12

Reflectors, 12 inches, 300-500 watts, 12 inches on centers.

- No. 739-12..... per foot \$10.50

Add suffix letter W for wide, M for medium, N for narrow beam; also wattage, example: No. 739-6W-150 watts. Above prices are for W and M types.

Fluorescent Types

For continuous line tubular fluorescent lamps. Completely wired with lamp holders and inbuilt auxiliaries. Any length.

No. 1750

Skeleton strip without reflector, for 40-watt, 48-inch lamps.

- No. 1750..... per foot \$3.30

No. 1753

Reflector strip for 40-watt, 48-inch lamps.

- No. 1753..... per foot \$3.90

Other designs and lamp sizes also available.

Kliegl Klieglights

High intensity light beam projectors with ellipsoidal reflectors, lens system, and coordinated shutter arrangement which permits direct regulation of size and shape of beam in every conceivable manner, so as to confine the light within any desired area. Accommodates standard bipost base up burning concentrated filament lamps.

Mounted Types

For permanent installation with square shutters only.

Supplied with wall brackets, pipe clamps, or table base.

No. 1163

- No. 1163, Drop-In Shutter Arrangement, 250-500 Watts, 5-Inch Lens..... each \$28.00

- No. 1164, Drop-In Shutter Arrangement, 1000 Watts, 6-Inch Lens..... each 55.00

- No. 1165, Built-In Shutter Arrangement, 250-500 Watts, 6-Inch Lens..... each 48.00

- No. 1366, Built-In Shutter Arrangement, 1000-2000 Watts, 6-Inch Lens..... each 90.00

- No. 1368, Built-In Shutter Arrangement, 1000-2000 Watts, 8-Inch Lens..... each 98.00

For Iris shutters, add \$15.00 to above prices. Can be supplied on floor stands at additional cost.

Portable Types

No. 1168-CR

Mobile units. Mounted on telescopic floor stands with rubber tired casters, and additionally equipped with built-in Iris shutter, as well as framing shutter. Also, controls are conveniently located and arranged for quick and easy manipulation, such as required for service intended.

- No. 1166-CR, 1000-2000 Watts, 6-Inch Lens..... each \$150.00

- No. 1168-CR, 1000-2000 Watts, 8-Inch Lens..... each 168.00

Kliegl Disappearing Type Footlights

When not in use, this type is closed down flush with stage floor. Wired for three colors. Automatic mercury on and off circuit switches. Solid kiln-dried oak flooring. Malleable iron cross brackets, positive latches. Terminal blocks for feeder connections.

Furnished in standard five-foot lengths. Completely assembled.

No. 829 Open Trough Style

For use with colored lamps. With continuous reflector, sprayed white. Single row receptacles, continuous flooring, 5-foot sections, 15 outlets, 60-100 watts.

No. 829.....each \$50.00

No. 830 Individual Reflector Style

For use with clear or inside frosted lamps. With individual Alzak aluminum reflectors and glass color roundels. Single row individual reflectors, continuous flooring, 5-foot section, 12 outlets, 100 watts.

No. 830.....each \$85.00

Kliegl Permanent Type Footlights

Fixed in position. Hood extends minimum above stage floor. Wired as specified for three or more colors. Receptacles spaced as indicated.

Any length or curvature required.

No. 622

Single row receptacles, open trough continuous reflector sprayed white, 60-100-watt outlets, spaced 4 inches on centers.

*No. 622.....per foot \$4.70

No. 620A

Single row receptacles, individual Alzak aluminum reflectors, glass color roundels, 100-watt outlets, spaced 6 inches on centers.

*No. 620A.....per foot \$12.00

*For straight lengths. Curved lengths \$1.50 per foot additional.

Kliegl Borderlights

Wired as specified, for three or more colors. Furnished with splice box, scenery guards, and chain hangers. Any continuous length, or in sections.

No. 600 Open Trough Type

For colored lamps. Continuous reflector sprayed white, 60-100-watt outlets, spaced 4 inches on centers.

No. 600.....per foot \$4.20

No. 610 Individual Reflector and Roundel Type

For clear or inside frosted lamps. Alzak aluminum individual reflectors. Heat-resisting glass color roundels, hinged-ring roundel holders. Porcelain screw-base receptacles, 100 or 150-watt outlets as specified, 6 inches on centers.

No. 610.....per foot \$12.00

Kliegl Illuminated Exit Signs

Flush Wall Types

Recessed in wall flush with surface. Wall box and front frame furnished as separable parts.

No. 697

Screw-On Style Front

Sheet metal frame, sprayed gold bronze finish. Ruby glass face plate. Plain white letters. Box depth, 3 1/2 inches.

No.	6945	6946	6948
Each.....	\$6.00	7.00	8.50
Size Letters.....inches	5	6	8
Front Frame.....inches	12 1/2 x 8	15 x 9	17 x 11 1/2

Pigtail wired socket installed, \$1.00 each additional.

Hinged Style Front

Cast bronze frame with hinged panel, statuary bronze finish. Ruby glass face plate. Fancy white letters. Box depth, 5 inches.

No.	696	697	699	698	*697W
Each.....	\$12.00	14.00	17.00	20.00	17.00

Front Frame.....inches	14 1/4 x 7	15 3/4 x 9	17 1/4 x 10 3/8	18 x 12	15 3/4 x 9

*With wire guard.
Pigtail wired socket installed, \$1.00 each additional.

Surface Types

No. 685

Mounted on surface of wall, or semi-recessed, allowing 1/2-inch projection for removal of glass panel. Glass slides in from side. Single face signs with gold finish metal box. Ruby glass face plate, white letters. Depth, 3 1/2 inches.

Double face signs are also available.

No.	680	685	686	687	690
Each.....	\$3.50	4.00	4.50	4.50	4.75
Size Letters.....inches	3	5	6	8	8
Size Box.....inches	10 x 5	11 1/2 x 6 3/4	14 x 8	12 x 10	15 3/4 x 10

Pigtail wired socket installed, \$1.00 each additional.

No. 711 Outlet-Box Types

Made for attachment to standard octagonal four-inch outlet box in wall. Includes base plate, medium screw receptacle, red lens with opaque letters, and hinged retaining ring. Finished in brushed brass, statuary bronze, or polished chrome. Has 5-inch diameter; with 2-inch letters on front.

No. 711.....each \$5.00

Globe Types

For attachment to 3 1/4-inch lamp shade holders.

Red Glass Round Globes

Has 6-inch diameter; with 3-inch white letters; right and left.

No. 726, for Suspension Mounting, Opening on Top...each \$5.50
No. 726A, for Wall Mounting, Opening on Side...each 5.50

No. 728 Opal Glass Flat Round Globes

For suspension mounting, opening on top. Has 8-inch diameter; with 3-inch red letters; right and left.

No. 728.....each \$6.50

Kliegl Musicians' Lights

Music and leader stands, with the proper illumination. Substantially stabilized.

No. 744 Demountable Types

Without light fixture; easily demantled. Wooden frame, hinged rest, iron tripod base.

No. 744.....each \$4.50

No. 766 All-Metal Types

With light fixture and light guards; set angle adjustable height. Music rest is dull black, gold finish otherwise.

No. 766.....each \$18.00

No. 750 Lyre Types

Made of mahogany, with light fixture. Incline and height adjustable. Twin lamp socket with light diffuser.

No. 750.....each \$28.00

No. 766

No. 748 Detachable Light Fixture

For music stands. Clamps on to iron or wood rack. Wired with 8-foot all rubber covered flexible cord, \$1.25 additional.

No. 748.....each \$3.75

Kliegl Lighting Fixtures

Prices given below do not include lamps
Recessed Fresnel-Lens Ceiling Units

Flush inbuilt type which provides high intensity direct illumination. Accommodates standard screw-base general service incandescent filament lamps. Furnished complete with back box, mounting arrangements, wired porcelain receptacle, Alzak aluminum reflector, Fresnel lens with painted risers, and hinged front frame.

Circular Lens Types

Fitted with circular Fresnel lens of listed diameter. Circular front frame. Cylindrical back box. Plaster rings.

No. 22F12

- No. 22F06, 100 Watts, 6-Inch Diam. Lens. . . . each \$16.00
- No. 22F08, 150 Watts, 8-Inch Diam. Lens. . . . each 20.00
- No. 22F12, 200-300 Watts, 12-Inch Diam. Lens. each 26.00
- No. 22F14, 300-500 Watts, 14-Inch Diam. Lens. each 30.00
- No. 22F16, 500-750 Watts, 16-Inch Diam. Lens. each 46.00

Square Lens Types

Fitted with square shaped Fresnel lens of indicated size. Square hinged front frame. Rectilinear back box.

No. 24F12

- No. 24F06, 100 Watts, 6-Inch Square Lens. . . . each \$16.00
- No. 24F08, 150 Watts, 8-Inch Square Lens. . . . each 20.00
- No. 24F12, 200-300 Watts, 12-Inch Square Lens each 26.00

Downlights—Concealed Ceiling Units

Provides high intensity direct illumination from invisible fixtures concealed above ceiling. Light beam projected through small hole in ceiling. Coverage defined. Equipped with focusable lens system, adjustable framing shutters, and reflector. Shape and cutoff of light beam precisely controlled. Concentrated filament type lamps should be used.

Straight Down Projection—Relamped from Below

Removable aperture plate.

No. 2145

- *No. 2145, 100 Watts, 115 Volts, Spherical Reflector. each \$32.00
- No. 2146, same as above, for angular projection, approximately 45° with horizontal each \$32.00

*Frequently used as pin hole-spot for lighting dining room tables, fountains, etc. Can also be supplied with automatically operated color wheels, automatically operated shutters, special lens systems, etc. Prices on application.

Straight Down Projection—Relamped from Above

Plaster cone; ellipsoidal reflector.

No. 2164

- No. 2164, 250-500 Watts. each \$36.00
- No. 2166, 1000 Watts. each 60.00
- No. 2168, 1500-2000 Watts. each 75.00

Angular Projection—Relamped from Above

Angular projection, approximating 45° with horizontal plane.

No. 2165

- No. 2165, 250-500 Watts. . . . each \$42.00
- No. 2167, 1000 Watts. each 66.00
- No. 2169, 1500-2000 Watts. . . each 80.00

Kliegl Projector Type Picture Lights

No. 276AA

Fitted with objective lens system and adjustable framing shutters, permitting confinement of light within picture area.

- No. 276, For 75 or 100-Watt G16½ D.C. Bayonet Base Lamp. each \$22.00
- No. 276AA, For 100-Watt P2500, 250-400-Watt G30 Medium Screw-Base Lamp. each 28.00

Kliegl Separable Pin Plug Connectors

No. 955

No. 955AC

No. 955AA

No. 3950

No. 4950

Made in two sections. Male end fitted with brass split pins; female end, with brass sleeve. All live parts insulated with solid fiber. Listed by Underwriters' Laboratories.

Two-pole connectors are for connecting duplex to duplex. For connecting duplex to pair single conductor, add suffix AC to number. For connecting two pair single conductor, add suffix AA to number. Prices are same as for duplex to duplex.

Connectors with any number of pins from 1 to 30 are available; also branch-off, multiple circuit, and flush types.

Amperes	2-Pole		3-Pole		4-Pole	
	No.	Each	No.	Each	No.	Each

No. 1695 Long Range

Hand feed all-duty high powered long range arc spotlight fully equipped with boomerang for rapid color changes. Built-in adjustable iris and curtain shutters for framing light beam. Mounted on tubular-steel side-bracket on heavy cast iron base. With asbestos covered leads and line switch. Five color frames in color box on front.

Working range, 100 to 150 feet, 100 amperes, 8-inch condensing lens.

No. 1695. each \$460.00

No. 1701 Long Range

All-duty, automatic and hand feed arc spotlight with built-in iris and curtain shutters and six removable color frames in boomerang on front of spot, keyed color levers on side. Movable arc carriage with focusing control hand wheel and position indicator. Motor-driven mechanism for automatic arc regulation interconnected with hand controls. Balanced and supported in yoke on massive base. Furnished with leads and booster switch.

Working range 100 to 200 feet, 140 amperes, 10-inch condensing lens.

No. 1701. each \$675.00

NOTE. Resistance for connection in series with all-duty arc spots not included in prices listed. When ordered, they are supplied as separate units, without cable, for mounting at some out-of-the-way location.

Kliegl Floodlights

Stage Units

Used from side wings or from overhead on the stage. Provided with slide grooves on front for color frames with gelatine mediums. For P. S. lamps.

No. 1N Standing Types

Open-box reflector sprayed white; grooves for color frame. Pedestal floor stand, 25-foot cable. For 500-1500 watts.
No. 1N..... each \$24.00

No. 2N Standing Types

Parabolic boxed Alzak aluminum reflector; grooves for color frame. Pedestal floor stand, 25-foot cable. For 500-1500 watts.
No. 2N..... each \$40.00

No. 540 Hanging Types

Open-box reflector sprayed white; chain hangers; grooves for color frame. For 500 watts.
No. 540..... each \$11.50

No. 546 Hanging Types

Parabolic boxed Alzak aluminum reflector; grooves for color frames; pipe clamp hanger. For 500 watts.
No. 546..... each \$20.00

Studio Units

For photographic work, giving maximum efficiency, light control and flexibility. Applicable for general illumination and high lighting.

No. 1152 Incandescent Types

Deep corrugated polished Alzak aluminum reflector, for 1000-2000-watt P.S. lamps. Grooves for diffusing screen. Swivel yoke. Telescopic stand. Rubber tired roller base.
No. 1152..... each \$74.00

No. 1157 Incandescent Types

Parabolic matte Alzak aluminum reflector, for 1500-watt lamps. Self-diffusing. No slide grooves. Adjustably mounted. Telescopic roller base, floor stand.
No. 1157..... each \$48.00

No. 11F51 Fluorescent Types

Fully equipped with lamp auxiliaries and accessible type starter switches. Bank of twelve 30-watt 36-inch fluorescent daylight lamps. Alzak aluminum reflector, swivel yoke and telescopic pedestal roller base.
No. 11F51..... each \$170.00

Kliegl Overhead Boom Spotlights

For photographic work. Spot-flood lights on mobile stands with counterbalanced adjustable boom arm. Fresnel lens type spotlights for concentrated filament lamps. Universal mounting provides for all positional requirements, and adjustable beam spread facilitates soft edge spotlighting or general floodlighting.

With regular standard, 6½ feet high.

Special Standard, 8½ Feet High add \$40.00 additional.

Lamps not included.

Burton Fresnel Spotlights

No. 1200, Desk Model

The Burton Fresnel Spotlight is a small powerful spotlight for all commercial purposes. Especially adapted for use as a merchandise spotlight for window displays, counter displays, etc. An ideal spotlight for use in theater lobbies, or for high-lighting pictures, murals, statues, models, etc. Wherever a powerful intense spot is required and where the lighting source may be exposed, the Burton Fresnel Spotlight is recommended because of the high degree of efficiency and the beauty and eye appeal of the lighting unit itself. With an ordinary Mazda 100-watt projection bulb (T-8) it produces over 500 foot-candles of light at 36 inches from the spotlight. At 12 inches, it produces over 4,500 foot-candles of light.

The size of the field may be easily adjusted by means of a projector type lens mount that moves in and out of the lamp housing, thereby increasing and decreasing the intensity of the spot of light, as well as the size of the spot.

This spotlight receives its name from the lens used. The Fresnel lens is a special type of lens that is used in lighthouses because of the high intensity such lenses make possible. The emitting light is a beam of parallel rays and may be compared to the beam of light from a locomotive headlight.

Built of bakelite; stands less than 6½ inches in height from the bottom of the base to the top of the lamp housing. A bakelite handle on the back of the housing allows for easy tipping of the lamp housing to procure almost any angle of beam projection. By loosening this screw handle, the lamp housing can be easily removed to change lamps. A handy switch on the front of the unit provides for instantaneous "on and off" action of the bulb. On the front of the lens tube is a spring clip, behind which filters can be placed for producing light of any color or diffusion.

The base is a well finished casting to provide weight and balance, with four rubber knob feet, and the lamp housing tips on the base because of a specially constructed swivel block. Under the base is a thumb screw, allowing for quick removal of the base, should it be desired to mount the lamp housing on a stand, or otherwise attach it to another fixture.

No. 1200, Desk Model	each \$9.00
No. 1201, Floor Stand Model	each 14.00

The following lamps can be used in the Burton Fresnel Spotlight:

T-8 100-Watt Projection Bulb, 115 Volts, 50-Hour Life	each \$.85
T-8 50-Watt Projection Bulb, 115 Volts, 50-Hour Life	each .85
*T-8 100-Watt Projection Bulb, 130 Volts, 155-Hour Life on 115-Volt Line	each .85

*The intensity of this 130-volt lamp is only about 25 to 30 per cent less than the regular 115-volt lamp when burned on 115 volts—yet the life is increased 350 per cent.

Crouse-Hinds Floodlight Projectors

Long Range

Schedule F

Type ADE-12

200 to 250 Watts

Furnished with two types of reflectors, a narrow beam and a wide beam.

A clear, plain lens is furnished unless otherwise specified. A clear, diffusing lens and two types of spread lens, 50° and 100°, can be furnished without additional charge, if specified on the order.

Color screens can be furnished at \$6.00 list, each or the regular lens can be furnished in heat-resisting colored glass at \$3.00 list, additional.

Aluminum finish.

Shipping weight, 30 pounds.

Type ADE-12

With Portable Mounting

*Silvered glass reflectors are available and will be furnished without extra charge, if specified on order.

†G-bulb lamps can be operated only from base down to horizontal; therefore, floodlights using these lamps should not

be tipped below the horizontal. Special floodlights, which can be tipped below the horizontal with these lamps, can be furnished if specified on order.

Prices do not include incandescent lamps.

Crouse-Hinds Floodlight Projectors

Medium and Long Range

Schedule F

Type LCE-1120

1500 Watts

Used for the illumination of large areas.

The unit can be arranged with plain, spread or diffusing lens.

The 750, 1000, or 1500-watt, PS-52 bulb lamp; or the 1000 or 1500-watt, G-bulb lamp, may be used as required.

When used with the G-bulb lamp, the housing is tipped over so that the lamp operates in a base-down position.

Finish: case, natural aluminum; base and trunnion, galvanized.

Shipping weight, 115 pounds.

Type LCE-24

2000 Watts

Designed to utilize the maximum amount of the light of the lamp and to allow large areas to be lighted with a smaller number of projectors.

Unless otherwise specified, the projector is equipped with a clear, plain lens.

However, a clear, spread lens which produces an elliptical beam of light, or a clear, diffusing lens can be furnished without additional charge, if specified on the order.

Finish: case, natural aluminum; base and trunnion, galvanized.

Shipping weight, 148 pounds.

Prices do not include incandescent lamps.

Type RCDE-8 Crouse-Hinds Explosion-Proof Floodlights

200 Watts

Schedule F

With Suspension Mounting

With Trunnion Mounting

Portable Unit

Designed to meet the requirements of an explosion-proof floodlight. Recommended for use around oil refineries, chemical plants, and for lighting spray booths from the outside.

For short range lighting, the wide beam etched Alzak reflector should be used; for longer range or for spotlight applications, the polished Alzak reflector provides a narrower beam.

As a portable unit, the aluminum door and housing are usually preferable on account of weight. Aluminum should be used where the unit will be subjected to hydrogen sulphide fumes.

Finish: cast Feraloy is cadmium-plated; cast aluminum or cast brass, natural finish.

The narrow beam reflector can be arranged for use with 150-watt, P-25 bulb lamp without extra charge, if specified on the order.

If grid is not desired, deduct \$1.50 from the list prices.

With Trunnion Mounting

For permanent installation.

Prices do not include incandescent lamps.

Type MUA Crouse-Hinds Floodlights

Schedule F

Designed for lighting gasoline service stations, tennis courts, playgrounds, swimming pools, parking spaces, football fields, baseball and softball fields.

The MUA line of light duty floodlights consists of three different types of reflectors, each of which can be furnished in several combinations. All of the reflectors are interchangeable on either of the two heads, and each reflector has different lighting characteristics.

Slip fitter, cross arm base, pole bracket, and pendent mountings can be supplied.

Furnished with 750, 1000, or 1500-watt, PS-52 bulb lamp. Floodlights will be furnished arranged for standard 500-watt lamp, if specified. Porcelain mogul screw base receptacle.

Finish: porcelain enameled reflectors, white inside and blue outside; aluminum reflectors, non-tarnishing Alzak; and support head, aluminum.

Alumalux Aluminum Reflectors

Model I Head

Medium beam reflector is designed for a beam spread of approximately 90°. It is very effective for medium range projection.

Narrow beam reflector has a beam spread of 30°. It is very effective for spotting small areas.

Can be furnished with hinged door and heat-resisting lens to keep the reflector clean and protect the lamp. Standard lens is clear; a stippled lens will be furnished if desired.

Prices Do Not Include Incandescent Lamps

Model II Head

The adjustable head and support arm is recommended for athletic field installations. Can be tipped completely over for convenience when relamping and cleaning and when it is swung back against the adjustable relamping stop, it is in its exact original position.

Mounting provides both horizontal and vertical degree scales for accurate setting of the floodlight during installation.

Special cross arm bracket for steel tower mounting, using two bolts, can be furnished without additional charge if specified.

Furnished wired complete with two single conductors of rubber-covered service wire, 4-feet long, or 4 feet of 2-conductor cable. Either open style or with enclosing lens. Hinged door and lens recommended for keeping the reflecting surface free from dirt and dust, and preventing lamp breakages. Standard lens is clear; a stippled lens will be furnished if desired.

Crouse-Hinds Floodlights

Schedule F

Types MDB-8 and MDB-10

8-Inch, 100 Watts

10-Inch, 200 Watts

With Standard Mounting

Lightweight, weather-proof units, ideally suited to such installations as the lighting of residential yards and driveways, gardens, etc.

Round flange base can be bolted to any flat horizontal or vertical surface. Holes are spaced to fit holes in a 4-inch outlet box. Steel stake provided for temporary mounting on the ground. Suspension mounting furnished without additional charge.

When furnished with polished Alzak reflector, these units become spotlights.

Aluminum finish.

Shipping weight: Type MDB-8, 7½ pounds; Type MDB-10, 9 pounds.

Types MDB-14 and MDB-16

14-Inch, 500 Watts

16-Inch, 1000 Watts

With Standard Base

Lightweight, weather-proof floodlights. Furnished with heat-resisting clear lenses.

Cast aluminum socket housing and support. Reflectors are for narrow, medium, and wide beam; attached to housing by four screws and keyhole slots.

When installing the floodlights, the housing and mounting can be installed and wired complete before the reflector is attached.

Aluminum finish.

Type RCD-8 Crouse-Hinds Lighting Units

Schedule R

Designed for mounting in concrete. Made in two styles: one for floor mounting and the other for wall mounting.

This unit provides perfect lighting for pits, underpasses, tunnels and washracks.

Form F for Floor Mounting: Watertight, with a door that overlaps the case; projecting above the concrete about 3/8 inch. Door has rough pebbled surface, which prevents it from becoming slippery.

Has flat lens which is heavy enough to allow it to be stepped on or driven over and offers great resistance to tools or other articles that might be dropped on it. Can also be furnished with glass lens which has been heat treated to increase its resistance both to impact and to a static load; available only in the plain type.

Form F

Form W for Wall Mounting: Similar to Form F, except it is provided with a hinged and flush door, so that it can be set absolutely flush with concrete wall. Can also be mounted on a ceiling or wall by using brackets. The refracting lenses can be set to refract light up or down.

Black enamel finish.

Shipping weight, 30 pounds.

Type FS Crouse-Hinds Lighting Units

Schedule F

25-Watt

6-Watt

Small lighting units made to mount flush in concrete, stone, or plastered walls; to light steps, walks, floors and gardens. Also used in hospitals, mounted low in the wall for lighting the floor without disturbing patients.

Cover is equipped with refracting glass, which is normally set to refract light downward. Two styles are shown; a 25-watt and 6-watt unit, with two hub combinations each, through feed and bottom hubs.

Cast Feraloy housings, cadmium galvanized. Cast aluminum or cast brass housings can be furnished.

Standard hubs have an integral bushing and tapered thread. Can be furnished with threadless hubs or thick or thin wall conduit; prices upon request.

Intermediate screw base receptacle, for 25-watt units; candelabra screw base, for 6-watt units.

Clear, one-way, refracting, ribbed glass lens.

Cast aluminum cover, natural finish or cast brass, chromium-plate polished finish. A gasket is furnished to make a watertight joint with the housing.

The receptacles complete with mounting brackets, can be attached to the standard FS Series condulets, single and 4-gang with the screws which are furnished with them.

Type MDS Crouse-Hinds High Bay Lighting Units

Alzak Aluminum—with Type C Pendant Head

Schedule R

With Tennis Court or Wide Angle Reflector

With Concentrating Distribution Reflector

Designed for the interior lighting of buildings having high ceilings such as industrial buildings, armories, gymnasiums, etc. Particularly adapted to light shops with overhead craneways. Light weight and high efficiency makes it an ideal unit for lighting boxing and wrestling rings.

Cast aluminum receptacle housing. Receptacle cap has outside thread for hex nut and inside tap for ½-inch conduit. Can be furnished tapped for ¾-inch conduit without additional charge if specified. Two gaskets make the socket assembly weatherproof.

The 1000 or 1500-watt reflector, is furnished in three types: wide angle reflector suitable for tennis court lighting and for medium mounting heights; flood distribution reflector for wide spread distribution; and concentrating reflector for high mounting and narrow areas.

The 500-watt reflector is furnished in the flood distribution and concentrating distribution types.

A span wire hanger can be furnished, consisting of a conduit with a ¼-inch hub attached to the socket housing by a close nipple and a porcelain two-wire hole cover. Porcelain insulators are provided for carrying the overhead wires. The hangers can be furnished for two or three-wire service. The span wire clamp will clamp wires from ¼ to ¾ inch in diameter.

Aluminum finish.

Type DCB-36 Crouse-Hinds Rotating Beacons

36-Inch Diameter

A rotating beacon of high efficiency which projects beams of light in two directions, 180° apart.

The optical system consists of a lens combination in each end of the housing, with a single lamp in the center.

Each combination consists of an 18-inch inner doublet lens and a 36-inch outer lens. The outer lens is made of a one-piece, bull's-eye lens, 20 inches in diameter, surrounded by twelve 30° sectors of an annular ring.

When color is required in either or both ends of the beacon, the inner doublet lens is furnished in red or green.

Aluminum finish.
Shipping weight, 825 pounds.

No. 41281—Standard

Meets the specifications of the Civil Aeronautics Authority for airport beacons, when equipped with one end clear and one end green, and rotated at 6 rpm.

No. 41304—Advertising

Beacons which are not located at airports and are installed for advertising purposes must be approved by the Civil Aeronautics Authority before installation. The speed of rotation required is 1 rpm. and both beams of the beacon must be red in color.

In addition to the rotating beacon, it is necessary to install a 24-inch fixed directional searchlight with automatic lamp-changer, with the white beam pointing towards the nearest airport.

Prices upon request.

Crouse-Hinds Rotating Beacons 24-Inch Diameter

Designed to Civil Aeronautics Authority specifications for use on airlines. Base is identical on both beacons and designed for accessibility. The cast aluminum pan, which encloses the rotating mechanism, is easily lowered and removed.

Furnished with a rotating type lamp-changer, which is provided with separate spherical auxiliary reflectors for the operating and spare lamps.

Aluminum finish.

Type DCB-24D—Dome Type

Encloses the optical system under a heat-resisting Pyrex glass dome. This prevents any possibility of the beacon becoming stalled due to an accumulation of ice in northern climates.

Has greater visibility as the lamp itself is visible to planes flying above the main beam. Lamp also provides a low candlepower flash through an angle of 50° both preceding and following the main flash.

Dome is hinged for access to the lamps and reflectors.

No. 43354 is a 12-rpm., 500-watt beacon.

Shipping weight, 450 pounds.

Type DCB-24R—Drum Type

Has drum rigidly mounted on the rotating shaft. The beam can be raised and lowered by raising and lowering the lamp table on the lamp-changer. The lamp-changer shaft is calibrated in degrees. Normal factory setting is with the beam 1.5° above horizontal.

No. 43355 is a 12-rpm., white beam, 500-watt beacon.

No. 43356 is a 6-rpm., red beam, 1000-watt beacon; for marking hazardous areas.

No. 43357 is a 2-rpm., red beam, 1000-watt beacon; for advertising purposes.

Shipping weight, 400 pounds.

Prices upon request.

Crouse-Hinds Incandescent Searchlights

16-Inch Diameter—Long Range

Continuous Service, 1000 Watts
Intermittent Service, 1500 Watts
Schedule F

Designed for long range spotlight or searchlight use. The accurate reflector used confines the light to a narrow beam of high candlepower.

Type lamp to be used must be specified when ordering. Prices do include incandescent lamps.

These searchlights can also be furnished in 14, 18, 24, and 36-inch sizes.

Type DCE-16—Trunnion Mounting

For use as a fixed searchlight for spotting small areas from a distance. It can be used as a hand controlled searchlight, but Type DCY-16 is recommended where the searchlight must be redirected frequently.

Shipping weight, 90 pounds.

No. 41354, Mogul Prefocus Base each \$200.00

No. 41983, Mogul Bipost Base each 200.00

Type DCY-16—Pedestal Mounting

A hand-controlled searchlight for use on boats, watch towers, etc., where it is convenient to direct the searchlight by the handle mounted on the back of the housing. The horizontal adjustment is provided with ball bearings.

Shipping weight, 140 pounds.

No. 42848, Mogul Prefocus Base each \$225.00

No. 42849, Mogul Bipost Base each 225.00

Type DCX-16—Pilot House Control

Designed to be mounted on the roof of a pilot house or watch tower and to be controlled from below by means of levers.

The horizontal adjustment is provided with ball bearings. Length of standard control stem below base is 3 inches; longer control stems up to 18 inches can be furnished without additional charge. Control stems longer than 18 inches.

\$3.00 list per foot additional.

Type DCE-16

The lever controlling the vertical adjustment locks itself when released.

Shipping weight, 155 pounds.

No. 42850, Mogul Prefocus Base each \$265.00

No. 42851, Mogul Bipost Base each 265.00

Type DCXR-16—Remote Control

Similar to Type DCX-16, except it is arranged for remote control with wire rope and pulleys. Two pulleys are provided on the control stem and two on the remote control wheel assembly. The wire rope or cable connecting them is not supplied.

For use on ships where the searchlight is only used intermittently, or where the lamp life of 100 hours is satisfactory, the 420-watt, 12-volt lamp is recommended. The highly concentrated filament produces a much narrower beam than can be obtained with any higher voltage lamp.

Most ships use 115 volts, d. c. for lighting, but it is a simple matter to install; a small standard rotary converter can be installed to change 115 volts, d.c. to 110 volts, a.c., and a transformer to reduce the 110 volts, a.c. to 12 volts.

Can be furnished of entirely non-magnetic construction; prices upon request.

Shipping weight, 175 pounds.

No. 42852, Mogul Prefocus Base each \$265.00

No. 42853, Mogul Bipost Base each 265.00

Type DCE-24 Crouse-Hinds Airport Floodlights

1500 or 3000 Watts

Designed for the illumination of large landing fields. Can be used in banks of from three to fourteen units with the beams overlapped for the illumination of level fields, or in groups of two at each end of each runway for runway floodlighting.

For 1500-watt lamps—No. 42938B, with 10° spread lens; No. 42939B, with 30° spread lens; and No. 42940B, with 80° spread lens.

For 3000-watt lamps—No. 42482B, with 10° spread lens; No. 40775B, with 30° spread lens; and No. 40783B, with 80° spread lens.

International orange enamel finish with white stripes. Shipping weight, 187 pounds. Prices and complete information upon request.

Crouse-Hinds Beacons and Switches For Flashing Code and Marking Obstructions

200 or 500 Watts

Type FCB-12 Beacons

Designed for use as an auxiliary code flashing beacon at airports, and as a marker light for major obstructions to air navigation.

When used at airports, it is usually equipped with green color screens and two 500-watt lamps, and flashes a Morse code signal, designating the airport. Code signal consists of from one to three letters, and must be approved by the Civil Aeronautics Authority. Should be mounted high enough to allow its beam to clear surrounding obstacles.

When used to mark major obstructions, such as radio towers, bridge towers, etc., it should be equipped

with 200 or 500-watt lamps as required by Civil Aeronautics Authority Regulations, and red color screens. Beacons used on radio towers must be flashed. Most other obstruction marking beacons are not flashed.

When used to mark hazardous flying areas, such as oil fields, or highly-explosive danger areas, beacon should be equipped with 500-watt lamps and red color screens; and should be flashed.

A complete summary of Civil Aeronautics Authority Requirements for marking obstructions will be furnished on request.

For 200-watt lamps—No. 42196C is clear, no color screen; No. 42197C has red color screen; and No. 42198C has green color screen.

For 500-watt lamps—No. 41252C is clear, no color screen; No. 41257C has red color screen; and No. 41258C has green color screen.

Aluminum finish. Shipping weight, 95 pounds.

Type TSS-18 Switches

110-Volt, 60-Cycle

A code flashing switch consists of an induction-disk motor driving a cam shaft through a train of spur gearing. The cam, which is made to order for the code required, operates the large diameter, wide break, non-corrosive metal contacts.

This flasher can be furnished for operating any two-letter code and some combinations of more than two letters. The contacts have a capacity of 10 amperes.

A radio interference suppressor is furnished as standard equipment.

No. 46396 is a standard flasher.

No. 46397 is a code flasher.

Shipping weight, 30 pounds.

Prices upon request.

Crouse-Hinds Ceiling Projectors and Ceiling Height Indicators

Type DCE-16, with Slip Fitter

No. 43375 Ceiling Height Indicator

Every airport should be equipped with a ceiling projector and a ceiling height indicator, by means of which the ceiling or height of the clouds above the ground may be accurately measured. Ceiling projector is a powerful searchlight, the beam of which is pointed upward to the clouds; the ceiling height indicator, a quadrant, graduated directly in feet.

A suitable switch may be mounted near the ceiling height indicator and an underground cable run to the ceiling projector which is 500 feet away. Beam of the ceiling projector should be elevated at an angle of 63° 26'.

Type DCE-16 Ceiling Projectors

No. 42099 with transformer and slip fitter.

No. 42100 without transformer.

No. 43096 ornamental base only, with transformer.

Shipping weight: with transformer, 120 pounds; without transformer, 100 pounds.

No. 43375 Ceiling Height Indicators

With 2½-inch screw fitter.

Shipping weight, 20 pounds. Prices upon request.

Crouse-Hinds Airport Lights Boundary, Obstruction, and Range Lighting

Boundary Light

Obstruction Light

Relay Box

A complete line of boundary, obstruction, contact, and range lights of all types are manufactured.

Equipped with prismatic globes; meet the regulations of the Civil Aeronautics Authority. Boundary lights with plain globes to match existing installations of that type can be furnished.

Prismatic globes provide higher candlepower within the useful angle, and permit the use of smaller lamps.

Series type relay is designed to complete the circuit to the spare lamp upon failure of the operating lamp. It is recommended that an indicating light be installed at some convenient point to indicate when operating lamp has failed. The relay listed will operate with either a 60 or 100-watt lamp; relays for other lamps can be furnished.

Description	For Series Circuits No.	For Multiple Circuits No.

Relay Box		HL5556

Prices upon request.

Benjamin Duo-Service Floodlights

For 750, 1000 and 1500-Watt Lamps

No. 5763

Used for lighting gasoline service stations, super-service stations, roadside inns, etc.

Porcelain enameled steel reflector, regularly supplied green outside, special diffusing surface white inside. When specified, choice of red or white outside, without extra charge.

Has No. 2772 one-piece, mogul base receptacle, with improved finger type lamp grip.

All fittings not aluminum are electro-plated to resist corrosion.

CLOSED WIRING, SLIP FITTER mounting bracket has wires completely enclosed and protected from receptacle through to pole. Bracket slips over the end of a 1½ inch iron pipe mast; also available for 2 inch pipe. Horizontal and vertical adjustments have degree marking graduations.

OPEN WIRING, CROSS ARM mounting bracket has separable hood with weatherproof wire entrance bushing which can be replaced with standard BX connector. Fits standard 4¼ inch arms and any flat surface. Horizontal and vertical adjustments have degree marking graduations.

With Concentrating Beam Inner Projector

Has efficient, highly polished aluminum reflecting surface producing a narrow, concentrated, high intensity floodlight beam.

No.	Description	Ship. Wt., Lb. Each	Each	Inner Projector Each
5763	Fits 1½-Inch Iron Pipe Mast.	35	\$36.00	\$6.00

For Bi-Post Lamps

Floodlight can be supplied with holder for 1000-watt, medium Bi-post, hard-glass lamp. To order, prefix number with BP and add \$2.00; for Saflox add \$2.50 list.

*Furnished with Saflox attachment.

Benjamin Ellipto-Lite Play-Area Floodlights

No. 5777

A wide angle, open type diffusing reflector particularly suited for floodlighting recreational areas, playgrounds, parking lots, etc. It is weatherproof throughout.

The hood is made in four types: pendent for attaching directly to a threaded pipe; with cross arm bracket for fastening to flat surfaces; with cross arm and pipe clamp for attaching to 1 to 2-inch pipe; or with slip fitter to slip over 1½ or 2-inch pipe.

A wide range of adjustment vertically is provided by the cross arm bracket hood and slip fitter bracket hood, while all hoods provide complete adjustability of the reflector horizontally.

The porcelain enameled steel reflector is finished green outside, white inside. Inner auxiliary reflector has special Alzak oxidized aluminum finish.

The cross arm unit is supplied with a 26-inch length of No. 14 2-conductor AFS rubber covered cable; slip-fitter unit (except Saflox) has two 31-inch lengths of No. 14 solid AF wire.

Fittings not aluminum, are electro-plated.

With Pendent Hoods

Hood tapped ¾ inches standard; 1 inch, if specified.

Floodlight can be supplied with holder for 1000-watt, medium Bi-post, hard-glass lamp. To order, prefix number with BP and add \$2.00 list (with Saflox add \$2.50). A length of No. 12AF nickel fixture wire is included (except Saflox).

*Slips on 2-inch iron pipe mast.

Benjamin Play-Area Floodlights

For 750, 1000, and 1500-Watt Lamps

No. 5752

An open type, wide angle, diffusing floodlight designed for lighting outdoor recreational areas such as football and athletic fields, race tracks, etc. Provides uniform, strong illumination on the ground area to the front and sides and improves upper area illumination.

Available in 3 types of mounting brackets: Open-wiring cross arm bracket for attaching to wood cross arms and other flat surfaces; cross arm with pipe clamp for clamping around 1 to 2-inch iron pipe; closed-wiring slip fitter bracket for fitting over end of 1½-inch iron pipe mast; also available to fit over 2-inch pipe. Reflector is 28½ inches long, and 17½ inches wide.

Porcelain enameled reflector, green outside, white inside; inner reflector is non-corrosive Alzak oxidized aluminum; all metal parts are cast aluminum or electro-plated.

Saflox lowering attachment allows unit to be lowered for servicing on ground.

Open-Wiring—Cross Arm Bracket Type

- No. 5751, with Cross Arm Bracket..... each \$29.00
- No. 5754, with Cross Arm Bracket and Pipe Clamp..... each 30.00

Closed-Wiring—With Slip Fitter Bracket

- No. 5752A, for 2-Inch Pipe..... each 31.00

With Saflox Lowering Attachment

- No. 25752, to Fit 1½-Inch Pipe..... each \$40.00
- No. 25752A, to Fit 2-Inch Pipe..... each 40.00

Benjamin Column-Lite Fixtures

No. 5681

One-piece, seamless, porcelain enameled steel reflector. Regularly supplied green or red outside, special diffusing white inside to reduce glare from specular reflection. When specified, on special order, fixtures can be supplied in white, blue, yellow, gray, or cream; prices on request.

Shock-absorbing socket to protect lamp filament against shocks and vibration. A shock-absorbing spring, permanently attached to

socket supporting strap, floats the one-piece porcelain, listed by Underwriters' standard socket which has easy-to-wire, side terminal screws.

Slip fitter bracket of cast iron is first electro-plated and then finished in sprayed aluminum. Slip fitter fits over end of unthreaded 2-inch iron pipe mast and is locked in place by 2 large, rugged set screws. Spring cartridge in bracket yoke holds shielding ring when supplied securely against lamp.

Supplied with or without shielding ring.

*For 150-watt lamps, use socket extension No. 91 to correctly position lamp in reflector. Sockets for replacement, No. 44, medium, No. 244, mogul.

Benjamin Variety-Lites

For use about the home and business establishment. Indoors, it is ideal for lighting furnace rooms, laundries, stairways, store-rooms and attics. Outdoors, for porches, garage approaches, gardens and play-areas.

The porcelain enameled steel reflector is not affected by heat or dampness and is easily cleaned. Reflecting white inside, gray outside, with black bead. Has snap-in type, etched aluminum inner reflector.

Cast iron reflector cap and steel bracket; finished in blue lacquer over galvanizing. Steel bracket band is electro-plated.

Unit can be quickly attached to any flat surface by first installing the two No. 10 round headed wood screws furnished and then slipping the key hole slots of the bracket over them.

Supplied wired, with 6 feet of rubber service cord and rubber plug.

Packed 1 in a standard package.

Benjamin Service-Lites

A handy, telescoping and portable work light that can be easily moved from place to place and quickly adjusted to any desired height from 9 to 72 inches above the floor. At any point in this adjustment, the reflector can be tilted up or down through a wide angle to direct the light where it is needed.

The lower section of the telescoping shaft is iron pipe, upper section steel tubing. Ornament, cord hook, shafts and clamps are electro-plated.

Cast iron base with 18-inch diameter, and four ½-inch diameter holes equally spaced in rim for screws or casters. Galvanized; finished red.

Fixtures are wired with 25 feet of rubber covered service cable. Two-wire cables have soft rubber plug; three-wire cables, less plug, have wires skinned and tinned.

Interiors sealed against dust and moisture by heat-resisting cover glasses and gaskets. Wire guard, welded to the cover band, protects glass. Guard and band heavily tinned. Clear cover glass in 75-100 watts; stippled in 150-200 watts.

Porcelain enameled reflector, white inside and green outside. Symmetrical shape gives wide, even light.

Aluminum reflector has efficient, polished reflecting surface. Beam spread, 25° minimum to 60° maximum.

Benjamin Alzo-Lite Long-Range Floodlights For 750-1500-Watt Lamps

No. N 6192

A narrow-beam, open-type unit primarily designed for football field floodlighting from behind the stands when located 55 to 150 feet back from the sideline.

Reflector has bi-focal, compound, three-element projector of Alzak aluminum. Section behind the lamp is polished, while section in front is etched. Outside is baked aluminum enamel over Alzak.

Etched Alzak aluminum deflector, positioned above and in front of lamp filament to direct a portion of the light downward.

Skeleton type receptacle, with mogul base.

Diameter, 18 1/4 inches; height, 23 3/8 inches; and width, 12 1/2 inches.

Cross arm units supplied with a 26-inch length of No. 14 two-conductor AFS rubber covered cable; slip-fitter units have two 31-inch lengths of No. 14 solid AF wire.

Fittings, not aluminum are electro-plated.

With Cross Arm Brackets

Fits 4 1/4-inch standard arms and all flat surfaces.

Floodlights can be supplied with shoulder for 750 and 1000-watt, medium Bi-post, hard-glass lamps. To order, prefix number with BP and add \$2.00 list (with Saflox, add \$2.50).

Benjamin Floodlighting Projectors

Model RD14

Meets major requirements of modern floodlighting practice. Weatherproof projector; one-piece all aluminum housing; heat resisting cover glass.

May be rotated and turned on supporting staff. Reflecting surface is silvered glass protected by a coating of copper. Supplied with horizontal and vertical stops.

Special color plates, visors, and lower rings are available at an advance in price.

Benjamin Alzo-Lite Medium-Spread Floodlights

For 750-1500-Watt Lamps

No. N 6146

A medium-spread reflector approximating a 90° beam designed for floodlighting baseball, softball, and football fields, etc.

Reflector has bi-focal, compound, three-element projector of etched Alzak aluminum. Exterior is baked enamel over Alzak.

Waterproof cover hinged to top of reflector and attached by spring clamps around the rim. Disc is clear, heat-resisting glass, specially gasketed and cemented and secured in cover frame by an internal expanding band.

Skeleton type receptacle, with mogul screw base.

Separable hood construction makes possible removal of reflector for cleaning or easier installation. Neck has watertight joint at reflector with concealed attaching screws.

Diameter, 18 1/4 inches; height, 23 3/2 inches; width, 12 1/2 inches.

Cross arm bracket units supplied with 26-inch length of No. 14 two-conductor AFS rubber covered cable; slip-fitter units have two 31-inch lengths of No. 14 solid AF single conductor wire.

Fittings, not aluminum are electro-plated.

With Cross Arm Brackets

Fits 4 1/4-inch cross arms and all flat surfaces.

Benjamin Utility Floodlights

150-200 Watts

No. 6011

For general purpose and decorative floodlighting jobs.

The interior surface of the sheet aluminum housing forms a highly efficient reflector. Concentrating units have durable, highly polished Alzak aluminum reflecting surfaces while spread type units have reflecting surfaces of etched, aluminum oxide. Diameter, 10 1/8 inches. Beam focusing mechanism is controlled by a single thumb screw on the barrel of the housing.

Units can be tilted up or down or turned in a circle.

Reflecting surfaces are sealed against dust and moisture by the heat-resisting cover

glass which seats against an impregnated asbestos gasket, held in place by a removable aluminum channel band.

Three styles of mounting provided by the two types of brackets. Pedestal base is cast iron and includes a removable steel spike for turf mounting. Also has slotted screw holes for surface attachment. Pipe bracket is cast iron, tapped 1/2 inch, with a weatherproof wire entrance bushing in the removable wiring plate.

Pedestal base and spike has a 4-foot rubber covered cord and plug cap; pipe bracket types have 20 1/2-inch pigtail for lead-in to bracket.

Benjamin Utility Floodlights

300-500 Watts

No. S6023B

Weatherproof, durable, attractive appearing units of high lighting efficiency.

The interior of the sheet aluminum housing forms a highly efficient reflector. Concentrating type reflectors have highly polished Alzak aluminum reflecting surfaces while spread type reflectors have reflecting surfaces of etched Alzak aluminum. Diameter, 14 1/8 inches.

Projectors are of durable, weatherproof and dust-tight construction. Housings are of sheet aluminum, with both exterior and reflecting surfaces of durable Alzak aluminum. Wire entrance into the housing is weatherproof. Glass cover held in place by an aluminum channel band.

Colored lighting effects are obtainable through the use of glass color plates. These plates do not supplant the standard cover glass as they are set behind the regular cover.

Floodlights are wired and include 3-foot leads of No. 14 AFS rubber sheathed portable cord with tinned ends. Skeleton type receptacle, with mogul screw base.

Type B swivel and stand, is for attachment to any flat surface. Type D pipe clamp, attaches to 1 to 2-inch size iron pipe or 1 1/4 to 2 1/8-inch tubing. Type E wall bracket is for wall attachment. Type H slip fitter is for mounting over the end of a 1 1/2-inch iron pipe. Type K pipe bracket is to thread units to 1/2-inch pipe standards, but can be furnished to fit 3/4-inch standards, when specified. Type M cross arm is for attachment to standard 1/4-inch cross arms.

Has streamlined switch, seamless brass tube, wear resistant rolled black finish, attractive chromium decoration.

Complete with 2 No. 950 Eveready Dated Batteries, No. 1404 Mazda lamp.

Size, 6 $\frac{7}{8}$ x1 $\frac{1}{2}$ inches.

No. 2251, Less Batteries.....each \$.80

No. 2671 Eveready Flashlights

400-Foot Range

A 2-cell focusing flashlight, equipped with octagonal lens ring, lens retaining ring, safety-lock switch and ring

hanger. Finish, black and chromium. Size, 7x1 $\frac{1}{2}$ in. Use two No. 950 unit cells; lamp No. 1161. Unit package, 1.

No. 2671, Without Batteries.....each \$.78

No. 9250 Eveready Flashlights

A two-cell type flashlight with bull's eye lens, matte finish reflector and copper lock switch.

Used with two No. 950 batteries and No. 1161 Mazda lamp. Polished and lacquered copper fittings, lithographed finish tube. Packed 6 in a box.

No. 9250, without Batteries..... each \$.55

Eveready Safety Automatic Flashlights

No. 1259

Approved by Bureau of Mines and Underwriters Laboratories for use in explosive gaseous atmospheres. When bulb breaks electrical circuit opens automatically.

Prefocused lamp. Die cast reflector. Semi-hard rubber case reinforced internally with brass parts.

Lamp shock absorber. Heavy duty hand replaceable switch. Ring hanger.

No.....	1259	1359
Each, Less Batteries.....	\$3.05	3.70
Mazda Lamp No.....	PR-6	PR-7
Flashlight Battery No.....	2-950	3-950

No. 2619 Eveready Miners' Flashlights

Seamless brass tube. Durable black baked finish. Chromium fittings. Ring hanger. Bulls-eye lens.

Size 9 $\frac{1}{8}$ x1 $\frac{1}{2}$ inches.

Uses 3 No. 950 Eveready Batteries and No. 1162 Eveready Mazda Lamp.

Unit package, 1.

No. 2619, without Batteries.....each \$1.19

No. 2633 Eveready Non-Focusing Flashlights

A 3-cell non-focusing floodlight.

Has seamless brass tube, all chromium plated. With luminous-dotted black band, ring hanger, octagonal lens ring, and bulls-eye lens.

Size, 9 $\frac{1}{2}$ x1 $\frac{1}{2}$ inches.

Uses three No. 950 Eveready batteries. Uses No. 1127 Eveready Mazda lamp.

Unit package, 1.

No. 2633, without Batteries..... each \$1.20

No. 8257 Official Boy Scout Flashlights

A two cell automatic spotlight. Prefocused lamp. Die cast reflector. Seamless brass tube and die cast head

with durable baked khaki finish. Chromium fittings. Belt clip. Ring hanger. Uses two No. 950 batteries and No. PR-2 Mazda lamp. Packed 6 in an attractive display carton.

Each, Less Batteries..... \$1.15

No. 2642 Eveready Focusing Flashlights

800-Foot Range

A 3-cell flashlight equipped with focusing device and parabolic silvered reflector, non-rolling lens ring. Black metal case with chromium fittings. Size, 9½x1½ inches. Use unit cell No. 950. Use lamp No. 1162. Unit package, 1.

No. 2642, without Batteries.....each \$1.65

No. 2645 Eveready Flashlights

5-Cell, Focusing

Used wherever exceptional power and range must be combined with portability. A few turns of end cap make light suitable for close up work, beam changing from a narrow penetrating shaft of light to a diffused and widespread ray. Has beveled plate-glass lens, octagonal non-rolling lens ring, safety-lock switch, black and chromium case and new ring hanger. Made in chromium finish only. Size 14½x1½ inches. Use 5 No. 950 unit cells; No. 1125 bulb.

No. 2645, without Batteries.....each \$2.25

No. 3258 Eveready Flexible Extension Flashlights

2-Cell

For engineers, mechanics, and others who require light in inaccessible places. Flexible section permits angular adjustment of light from protected lamp at end of extension.

Casing is of semi-hard rubber; with heavy duty hand replaceable switch and ring hanger. Lamp is protected against breakage.

Size, 19¾x1¼ inches. Extension, 13 inches.

Uses 2 No. 950 batteries; Mazda lamp No. 1161.

Packed 1 in a package.

No. 3258, without Batteries.....each \$3.40

No. 210 Eveready Penlights

Using the new bulls-eye lens lamp, the penlight throws a brilliant beam of concentrated light when the hood is in place. When the hood is removed, side rays give a broader distribution of illumination.

A sliding movement of the clip controls the electrical circuit providing on and off positions. It has been so designed that when inserted in a pocket in the on position, the clip is automatically slid back into off position.

Size, 5½x½ inches, finished in chromium. Uses 2 Eveready

No. 915 Batteries. Eveready Mazda Lamp No. 1152.

No. 210, without Batteries.....each \$.49

Eveready Headlight Lanterns

A focusing searchlight. Cord and headband concealed inside case.

Heavy gage steel battery case.

Combination black and chromium finish.

No. 3801

Packed 1 in a package.

No. 3801

*For use in trainmen's hand lantern.

†Single contact miniature flanged base.

No. 51W Justrite Electric Lanterns
All-Purpose Safety Type

Approved by the U.S. Bureau of Mines, Approval No. 1017, and by Underwriters' Laboratories, Inc. for Class 1, Group D locations.

For use in all places where fire risk is great, for gas filled areas and explosive atmospheres.

Lantern gives direct light to all sides through a range of about 200°, and at the same time a powerful forward beam. An emergency bulb can be immediately moved into the place and position of the burned-out bulb simply by throwing the switch.

Equipped with a globe of fire-polished glass or with globe of clear shatterproof Lucite.

Globe is sealed in place by means of wire seals. A burned out bulb can be instantly replaced without removing the globe or seals. The lighted bulb is always

in the center of the chrome plated reflector.

Movable guard base may be turned completely around lantern and allows the lantern to be set down with the light pointing in any direction desired. Large, tubular aluminum handle is also completely adjustable. Lantern can be slipped over arm with light pointing in any direction. Has kick-out bulb sockets that immediately break contact of bulb that becomes broken.

Uses two bulbs, Mazda Nos. 502 or 27 and one standard 6-volt lantern battery. Lantern width at handle, 6½ inches; height with handle and base extended, 11 inches.

Furnished with globe and seals but without bulbs and battery. Bulbs, as selected, extra.

Packed in individual shipping carton; weight, 2½ pounds. No. 51W.....each \$5.50

No. 43 Justrite Electric Lanterns
Railroad Type

Trainmen's lantern. For signalling on freight and passenger trains and in terminal yards for switching.

Twin-bulb principle allows batteries to be used for a longer time, because in addition to the direct rays from the bulb, the lantern throws a beam of light. Lighted bulb is always in the center of the reflector. From the side the light is directly visible through a range of 200°.

An emergency bulb can be immediately moved into the place and position of the burned-out bulb simply by throwing the switch.

Aluminum tubing handle can be turned completely around the lantern. It can be set to any position desired and locked in place by means of the thumb screw located on lantern side.

Can be equipped with white or red glass globe and can also be used with red bulb if a colored light is desired from one of the bulbs. Uses two bulbs, Mazda No. 502.

One standard 6-volt lantern battery is used. Made of steel, cadmium plated. Chromium plated brass reflector.

Lantern width at handle, 6½ inches; height with handle and base extended, 11 inches.

Furnished without bulbs and without battery.

Packed in individual shipping carton, weight, 2½ pounds. No. 43.....each \$3.95

No. 49W Justrite Electric Lanterns
Industrial and Marine Safety Type

Approved by Underwriters' Laboratories, Inc. Use in Class 1, Group D Location

For chemical plants, refineries, boats, docks, and marine warehouses.

Lantern gives a direct light through a range of about 200° with a powerful beam concentrated in the center. The lighted bulb is always in the center of the reflector. The emergency bulb is immediately moved into the position of the regular bulb by throwing the switch. Lantern has kick-out type bulb sockets that immediately break the contact to a bulb that becomes broken.

Handle and guard base are both completely adjustable and may be moved completely around the lantern body. Lantern can be carried over arm or set on ground with the light pointing in any direction desired.

Made of steel, cadmium plated. Chromium plated brass reflector. Handle is aluminum tubing.

Uses two bulbs, Mazda Nos. 502 or 27. One standard 6-volt lantern battery is used.

Lantern width at handle, 6½ inches; height with handle and base extended, 11 inches.

Furnished with a globe of clear white fire-polished glass, bulbs and battery extra.

Packed in individual shipping carton, weight, 2½ pounds.

No. 49W.....each \$4.90

Justrite Electric Lanterns
Industrial and Marine Type

For watchmen, truckers, railway car inspectors and for general use. May be used with or without globe.

Lantern has movable base and tubular aluminum handle that may be turned to any position around the lantern body. Lantern may be set on ground or carried over the arm with the light pointing in any direction desired.

An emergency bulb can be immediately moved into the place and position of the burned-out bulb simply by throwing the switch.

Handle is large enough to slip over the arm for carrying and readily accommodates heavy winter gloves.

Lantern has screw type bulb sockets that prevent bulbs jarring loose and permit focusing the forward beam.

May be equipped with a beam diffuser to spread the forward beam from the bulb over a wider area. Colored beam diffusers may be used to color the forward beam in order to provide a signal or warning light.

Uses two bulbs, Mazda Nos. 502 or 27. One standard 6-volt lantern battery is used.

Made of steel, cadmium plated. Chromium plated brass reflector.

Lantern width at handle, 6½ inches; height with handle and base extended, 11 inches.

Furnished without bulbs and without battery.

Packed in individual shipping carton, weight, 2½ pounds.

No. 45, without Globe.....each \$4.00
No. 45W, with Globe.....each 4.55

Model 3 Sangamo Off and On and Alternate Flashers

No. 3-61A2

A sturdy flasher for average or small installations. Constructed with an adjustable speed motor, pivot type oilless bearings, and silver contacts.

Speed of flash, 15 to 30 per minute. Standard cams are set for 50-50 operation.

Size 5 $\frac{5}{8}$ x4 $\frac{3}{8}$ x2 $\frac{1}{4}$ inches.

For 50 or 60 cycles.

Underwriters' Laboratories E-10550.

Model 2 Sangamo High Speed Border Chaser Flashers

No. 2-6144

A heavy duty flasher for large installations, or extra long life on smaller ones. Constructed with an adjustable speed motor; permanently lubricated ball bearings; and large, pure silver contacts.

Speed adjustment, 150 to 250 flashes per minute.

Flasher size, 4 circuits, 4 $\frac{1}{4}$ x7 $\frac{1}{2}$ x4 $\frac{1}{2}$ inches.

Cabinet size, 6x9 $\frac{1}{2}$ x5 inches.

For 50 or 60 cycles.

Underwriters' Laboratories E-10550.

Poles, 5½-Foot Sections, Aluminum or Steel.....	each \$4.50					

Matthews Holdfast Lamp Changers

Removes and replaces lamps in high places, such as ceilings, side walls, electric signs, etc. Like a human hand on the end of a curtain or any ¾-inch wooden pole. Saves time and prevents ladder accidents.

To remove or replace lamps from side walls or at an angle, pull cord attached to the swivelled ring, this bends the wristlike coil spring so that the changer will work just as well at a right angle to the rotating pole as in vertical position.

Shipping weight each, 1 pound.

No. 2
For 50-Watt Rough Service, 15 to 100-Watt Mazda, and Other Lamps up to 3 Inches in Diameter
No. 2..... each \$5.00

No. 3
For 60 to 500-Watt Mazda Lamps and Other Large and Odd Shapes up to 5 Inches in Diameter
No. 3..... each \$5.50

Specially treated wood handles can be furnished in 6-foot sections at \$3.50 per section, including couplings.

McGill Protector O Lamp Guards

This guard gives full protection to lamp bulbs; the removable trap at bottom prevents pilfering. Yet the trap can be attached and removed quickly and easily for lamp replacement and cleaning—simply press inward on the guard rim where the trap hooks on it and snap the trap on or off.

Made of No. 14 steel wire, heavily tinned, and finished with plain steel screws for attaching to sockets. Made for 25 to 75-watt lamps and for brass and weatherproof sockets with bottom bead measuring from 1⅞ to 1¾ inches in extreme diameter.

Matthews Holdfast Lamp Guards

For Brass Sockets

The rigid construction of these guards; the fact that they are permanently clamped to the socket; and the spiral spring cushion in the center make it a protection against breakage of incandescent lamps. The trap which is clamped across bottom opening prevents unauthorized removal of lamps. Guard is locked to socket by bending set screw.

For Weatherproof Sockets

The hot lamp cannot get closer than one inch to any inflammable material and the guard does not have to be removed from the socket to replace the lamp.

Approved by all insurance companies and underwriters. Guaranteed 10 years. Collars of guards for brass shell sockets are 1 1/4 inches, for weatherproof sockets, 1 1/2 inches.

For 50-Watt Rough Service, 25 and 40-Watt Mazda Lamps and Other Lamps Not Exceeding 4 1/4 In. in Length and 2 3/8 In. in Diameter

McGill Portable Lamp Guards

No. 7000 Series—With Rubber Handles

No. 7000-SR

These guards are made in a wide range of sizes for every need in industrial plants, garages, railroads, power plants, etc.

The handle is of high quality black molded rubber, formed to provide a solid rubber edge to support a tough fibre disk. Cord wires are run through holes in the disk and knotted, taking all strain off the cord and socket connection.

Cage is composed of ten extra heavy Bessemer steel wires, electrically welded and double cadmium alloy plated. Cage does not roll when laid down.

*These guards can be supplied with grounding attachment. For guards so equipped, add 20 cents each to the price.

†Rough service lamp.

The letter "R" indicates a reflector guard.

The letter "S" denotes switch or lever.

Guards can be supplied with thumbnut instead of screw at base of cage at no additional charge.

Cages also supplied for regular weather-proof sockets.

Rubber coated cages available at slight extra cost.

For special Loxon attachment, add 20 cents each.

No. 7100 Series McGill Portable Lamp Guards

With Rubber Handles

No. 7100

No. 7100 Series incorporates two features: a wire collar instead of a flat steel collar, and a clamp arrangement instead of screws to hold the cage to the handle. This clamp arrangement allows for variation in the size of the handle and makes lamp changing easier and faster because it requires no tools.

No. 650 Series McGill Portable Lamp Guards

With Rubber Hook Handles

No. 651-MSR

Widely used in airports, machine shops, railroad yards and repair shops.

Socket portion of handle is made of pliable molded rubber; hook is made of hard molded rubber with a

steel cord. The socket rubber and hook rubber are thoroughly vulcanized together into a single unit. The rubber hook handle insures against shock while guard is hanging from any angle or place. Cord wires are run through a tough fibre disk and knotted, taking all strain off cord and socket connection.

Cage is made of ten extra heavy Bessemer steel wires, electrically welded, and cadmium-alloy plated. Fiber washers prevent cage screws from dropping out when lamp is changed. Cage does not roll when laid down.

**McGill Safety Vaporproof Portable Lamp Guards
With Tight-Sealing Globes**

Wherever inflammable gases, vapor or materials are present, these safety guards should be used.

**No. 3000—With Hardwood Handles
For 50-Watt Rough Service Lamps**

No. 3000

Hardwood handle has a black, rubberized enamel finish. Cage consists of eight 5/8-inch steel side wires riveted to heavy steel rings and embedded in the handle.

**No. 3005—With Insurok Handles
For 100-Watt Lamps**

Insurok handle can be supplied finished in brown or black. Brass or black oxidized cage is made of 5/8-inch solid brass wire reinforced with three solid brass rings.

Protex Double Outlet Portable Lamps

Any of the above numbers can be furnished with plug-in type side outlet which permits a tool to be plugged into the handle of the portable lamp as illustrated.

For Parallel Type Plug. When ordering add letter (K) to above number and add 75 cents to list price.

For Polarity Type Plug. When ordering add letter (Z) to above number and add 85 cents to list price.

For Three Wire Type Side Outlet. When ordering add letter (K3) to above number and add 90 cents to list price.

Protex Portable Lamp Guards

Rubber Insulated Guards

For safe use around switchboards, in electric sub-stations and on electric locomotives. For chemical and oil conditions.

Guard is thoroughly insulated with an even coating of tough rubber to prevent electrical shorts.

For rubber covered type guard on any of the above numbers add letter (I) to above number and add \$2.00 to list price.

With Fiber Guards

Consists of rubber handle, keyless socket and screwless type of closed end fiber guard with hook and reflector. Guard is made of the

strongest fiber obtainable and is waterproof.

Standard package 30, weight 37 pounds.

Safeway Lo-Volt Portable Lamps

75-Watts, 60-Cycles

This portable lamp assures a much higher factor of safety, reducing the possibility of shock and burns when used in boilers, tanks, etc., on steel, cement or damp wood floors and other hazardous places.

Composed of a 75-watt, 125, 32 or 6-volt a.c. transformer, molded into a high quality, heat and oil resisting rubber jacket. Primary lead is a 10-foot, No. 16 all rubber cord, to which is attached a Safeway plug with cord grip. Secondary lead is a 20-foot, No. 14 all rubber cord, and may be equipped with either a Protex or Vaprotex unit.

Packed 1 in a standard package.

King Ferronite Cast Iron Lighting Standards

Designs available in groups of similar designs to meet all requirements in one locality.

Construction

Made from aluminum patterns in iron flasks.

Ferronite is a special composition of greater strength than ordinary cast iron.

Ferronite insures all delicate details of design to be smooth, clean cut, deep and perfect.

The inside of standards is as smooth as the outside which prevents damage to cable insulation.

Wall thickness of standards is uniform and weight is distributed uniformly which increases strength of standards.

Standards are given a shop priming coat of special hard skin paint. Final finish is to be put on by customer after installation.

Door in base of standard permits ready access for anchoring, making electrical connections, installing transformers, testing and inspecting.

Safety Spiders

Used to prevent and limit the fall of standard on violent impact.

Recommended on heavily traveled thoroughfares.

Provided at increased cost on special order only, where not listed.

Pipe reinforcement furnished on some designs.

Safety spider available to permit use of transformers in base of standard.

G-E Novalux Ornamental Luminaires

Form 8 G-E Luminaire,
No. 3 Casing,
No. 123-1123 Glassware

Form 8 G-E Luminaire,
F Casing,
No. 127-1127 Glassware

Form 9 G-E Luminaire,
E Casing,
No. 107-1107 Glassware

Form 12 G-E Luminaire,
M Casing,
No. 124-1124 Glassware

The General Electric Novalux Ornamental Luminaire consists of a cast iron casing with series or multiple socket, rippled glass globe, and a canopy and canopy holder. It may also be furnished with a refractor, ornamental ribs and bands, or in the lantern type unit.

Casing

All casings are made of best grade gray cast iron, green paint, except Form 33 which is furnished in aluminum as standard. The casings are designed to harmonize with architectural treatment of the lighting standards. The globe seat or ring is integral with the casting on Forms 8, 9, 13, 16, and 21 and separate on Form 12. The Form 33 consists of only a globe ring. Drain holes are drilled in all globe rings. Auto transformers may be mounted in the Forms 8, 12, and 16 casings, on the under side of a porcelain insulation plate. Each casing has cast lugs for supporting a porcelain receptacle or supports for multiple sockets. The variety of casings make it possible to mount the luminaire on various types of poles. The accompanying table shows forms of casings which are adaptable to the various poles.

Glassware

Globes serve a two-fold purpose; first, they act as secondary light source to diffuse evenly all light given off by the lamp so that there will be no disturbing glare and second, to protect the lamp from breakage. Rippled General Electric glassware has high mechanical strength, efficiency of light transmission, and immunity from the effect of abrupt changes in temperature. It gives an incandescent light source the appearance of sparkling light. The small irregular vertical ridges give excellent diffusion which appears to sparkle. The ripples are so

arranged that there are no horizontal flat surfaces to collect dirt and the rain will course over the entire globe due to the construction of the ripples. There globes are available in a variety of shapes and sizes which are shown in outline on other pages.

Canopy Holders

Most internal canopy holders fasten to the upper lip of the globe by set screws and are provided with a swinging arm to hold the canopy while cleaning or relamping. Canopies used with Nos. 103, 123, and 124 globes are held by an internal support which fastens to the casing, unless external ribs are supplied.

When ornamental ribs are furnished the canopy is held by four spring clips fastened to the ornamental band.

Ornaments

Ornamental ribs, bands, and pinnacles can be obtained to add to the appearance of the luminaire. These ornaments are designed for added beauty without interference with the light distribution. When the ornamental ribs and bands are used, the canopy holder is omitted and canopy is held in place by spring clips mounted on the ornamental band.

Lantern Types

The lantern type Novalux luminaire is basically the same as the other ornamental luminaires, except that it is designed to fit into the various architectural designs so as to give the best appearance with a minimum sacrifice of efficiency.

*Have both ornamental bands and ribs.
†Have only ornamental bands.

‡Casings include mounting screws and globe-holding screws.
All series luminaires use series socket, Fig. 12, No. 4815866G1.

Prices upon Application

G-E Holophane Refractors

These refractors conserve the light in the upper hemisphere and redirect it to the street where it is more useful.

Refractors added to luminaires result in 50 to 80% higher utilization of light on the road and also distribute light more uniformly.

Band and Dome Refractors

Band Refractor

Dome Refractor

Dome Refractor

Band Refractors are used where a totally enclosed unit is not desired. They direct upward light downward, but have no effect on light emitted downward from the lamp.

Dome Refractors are for use in an enclosing globe, either suspension or upright ornamental types. In addition to the Sym-Etric refractor which distributes light uniformly in a horizontal plane, A-Sym-Etric and B-Sym-Etric types are also available. These direct house side light onto the street. They may be added to existing systems to modernize them and provide more light on the street using the same lamp.

Shields are available for attaching to all types of Dome Refractors. These shields reduce the light on the house side.

Bowl Refractors

Effective Lumens of Roadway of Form 52 Luminaire with 11-Inch C-Way Bowl Refractor and Alzak Reflector

Light Distribution for 11-Inch C-Way Bowl Refractor

Bowl Refractor

Sym-Etric Bowl Refractors are designed for units mounted either over the center of the street or at the side. They direct most of the upward light into the lower hemisphere and concentrate the maximum candlepower at an angle of from 10 to 20° below the horizontal.

Available with outer section either ruby or amber, to be used as signal indications for fire alarm or police.

B-Sym-Etric and C-Way Bowl Refractors are designed for units mounted at the side of the roadway. The 11-inch refractors accommodate a 10,000-lumen lamp and are used on wide highways and boulevards where a distribution is desired that will direct light across a wide roadway.

Curves show light distribution and utilization from a Form 52 Novalux pendent luminaire with the new C-Way bowl refractor.

Form 45-H4 Novalux Suspension Luminaires

With Wet-Process Porcelain Insulator for Use on All Series Circuits

With Dome Shading Reflector

With No. 166 Globe

Dimensions

Form 45-L G-E Novalux Suspension Luminaires

For Multiple or Low Voltage Series Circuits

Internally Wired Luminaires

With Radial-Wave Reflectors—Galvanized Hoods

With Dome Reflector

Dimensions

These luminaires are designed for use on all multiple circuits and on series circuits up to 5000 volts. The cast hoods can be furnished either internally wired or externally wired. Externally wired luminaires will be furnished upon request. On all multiple luminaires the socket is mounted on an adjustable support so that the light center can easily be set to give the best distribution for various sizes of lamps. The Form 45-L is most suitable for series circuits using Type 11, transformers. For maximum safety on circuits over 1500 volts, an insulator type of luminaire such as the Form 72 or Form 45-H4 is recommended.

Form 45-L may be obtained with cast reflectors and a variety of globes and refractors. The globe or refractor holder is of die-cast aluminum with large gaskets of best quality felt. The fact that the cast holder will not warp or sag insures a good seal against the entrance of dust. A spring latch and rigid hinge are provided to facilitate relamping. This construction allows relamping from the street with the aid of a lamp remover. The hinge construction allows the globe and holder to be lifted from the reflector without removing hinge or cotter pins. For cleaning or globe replacement, this feature will save much time. The green paint finish hoods are available at the same price as galvanized hoods.

Form 45-H4 is a wet-process porcelain insulator luminaire, applicable to utilitarian lighting. The insulator, supported by a small cast iron hood, is equipped with porcelain tie lugs to take the strain off lead-in wires before they enter the porcelain and fasten to the binding post. It is standard for external wiring. This luminaire may be used with standard radial wave reflectors, with cast iron reflectors and various dome or bowl reflectors, or with the Alzak shallow bowl reflector similar to that used on the Form 79 luminaire.

Based on A. I. E. E. standard wet test, static leakage starts at 16 KV with flashover at 32 KV. This provides protection on high voltage circuits and restricts radio and telephone interference. All parts are gaged and finished accurately so the replacement parts will fit readily. All screws are Everdur, all current carrying parts are nickel plated. The most modern type of reflector to use with this luminaire is the Alzak shallow bowl reflector with a "spun-sealed" C-Sym-Etric refractor. The general characteristics of this luminaire are given in the description of the Form 79 luminaire.

Form 54 G-E Novalux Outdoor Substation Luminaires

For Use on Multiple Circuit

With No. 166 Light Alabaster Rippled Globe

Globe holder will not freeze, thereby permitting relamping during emergency in any weather.

Excellent external appearance, which blends well with substation structures.

Lamps rated as high as 500 watts may be used in this unit.

High utilization of light due to special design Alzak finished aluminum reflector.

Symmetrical distribution for locations in center of area. Asymmetrical distribution for location at sides of area.

Alabaster rippled globe creates large secondary light source, thereby reducing glare, particularly to workmen on substation structure.

Symmetrical Distribution

Form 72 G-E Novalux Suspension Luminaires

For Use on All Series Circuits

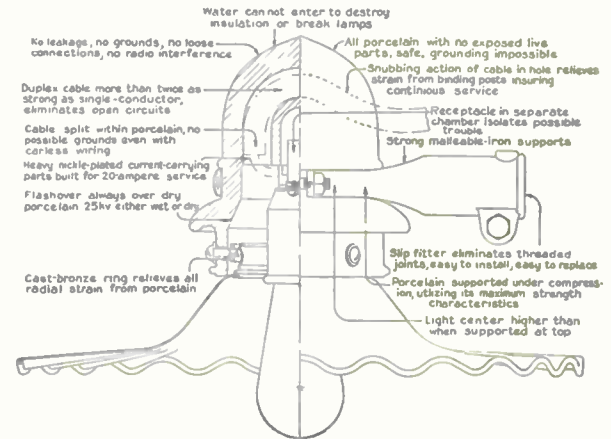

With Dome Shading Radial-Wave Reflector

With Shallow Bowl Alzak and No. 205 Globe or Refractor

The Form 72 Novalux Suspension Luminaire differs from the conventional insulator in that it is supported under compression by a clamp around the middle of the insulator. Porcelain, being weak in tension but very strong in compression, will by this method of support better resist breakage. Short circuits and grounds are avoided on the Form 72 because of the strong 2-conductor cable, the large radius of bend, and the snubbing action of the cable in its channel which relieves strain on the binding post. The cable enters a long porcelain channel and is split well within so there is no chance of grounding against the metal hoods or pipes through careless installation.

In addition to all types of radial wave reflectors, this will support cast reflectors and Alzak shallow-bowl reflectors with "spun-sealed" globe or refractor of Form 79 type. Form 79-R is recommended for most installations.

Form 79 G-E Novalux Suspension Luminaires

Series Type

Form 79 Novalux Suspension Luminaire is General Electric's most modern and highly efficient luminaire for street and highway lighting and is also an excellent luminaire for general road and yard lighting within industrial plants. Light source is shielded from view so that glare is greatly reduced and accurately formed Alzak deflector directs upward light downward on roadway with high efficiency.

For applications requiring a symmetrical distribution of light from the luminaire, the Form 79-S is recommended. For other applications where more light is required on the street side than on the house side, A-symmetrical type of distribution is necessary and may be provided by either Form 79-D or Form 79-R. The latter uses a highly efficient refractor and is most effective in increasing the utilization of light on the road surface as shown in illustration showing Effective Lumens on Road Surface. Form 79-D uses a polished Alzak deflector in order to obtain the A-symmetrical distribution.

One of the most unusual construction features of the Form 79 is the "spun-sealed" globe holder. The globe is held to the reflector by simply spinning the sheet aluminum reflector over beads around outer surface of globe. This insures a permanent dust-tight fit between the reflector and globe, eliminating gasketing troubles, and also results in a great reduction of glassware, the average replacement being only 15% as great as with ordinary detachable glassware.

The new stepped reflector relieves a serious lamp stem heating problem. When smooth reflectors are used with lamps larger than 300 watts or 6000 lumens, they frequently fail prematurely because of the concentration of radiant energy and absorption of heat in the lamp stem. Form 79 reflector has 48 vertical steps which direct this radiant energy slightly to one side of the lamp stem and eliminate this troublesome localized heating problem.

Reflector and hood may be obtained either with natural aluminum finish or with glossy Glyptal enamel finish. Hoods may be obtained with gland bushings for 2-conductor

cable externally wired, or with a slip-fitter mounting for straight pipe brackets. Form 79 may also be obtained with an adapter for standard radial-wave reflectors.

If a large globe is desired for more ornamental appearance, it can be furnished at no extra cost. All globes for the Form 79 have a rippled outer surface which gives the luminaire more life and a better appearance both during the day and at night. All globes are now made of pressed glass rather than blown glass. These are heavier, exactly uniform, and have a smooth, resisting rim which results in longer globe life.

When a Form 79 globe has been broken, the reflector is returned and exchanged for a newly reconditioned reflector with globe attached. This method of handling not only protects the globe but provides the luminaire with the equivalent of a new reflector which in many cases has been improved over the reflector originally furnished. Experience has shown that when globes become broken the reflector may also be damaged. In many cases it is possible to exchange this for a reconditioned one when otherwise it would have been necessary to discard it.

Two types of hinged globe holders are also available for the Form 79. The roller-latch type may be relamped from the ground with a lamp remover, while the C-clamp type is serviced from the pole. Both types use cast globe holders to insure tightness and long life.

Effective Lumens on Road Surface

Shallow Hood

Slip-Fitter Hood

Slip-Fitter Hood with Gland Bushing

Standard Hood with No. 207 Globe

Slip-Fitter Hood with Gland Bushing and Clamp Collar

**Form 79 Novalux Suspension Luminaires
With Spun-Sealed Globes**

For Operation on Multiple or Series Circuits up to 5000 Volts

Standard finish is dark green. Luminaires with natural aluminum finish available at same price.

Ornaments for any Form 79 luminaires can be furnished, add \$10.50 list.

Luminaires with detachable globe holders are available with slip-fitter hood, external wiring (gland bushing), and high-voltage receptacle. For roller-latch-type globe holder, add \$2.00 list.

No. 207 globe is available on either Form 79S or Form 79D luminaires at no increase in price. Specify No. 207 globe with number.

Light alabaster rippled globes available but not recommended. Order by specifying L.A.R. globe with no., add \$1.00 each list.

Form 79 with 2-inch pipe tap available at no extra charge.

All globes are furnished clear rippled.

Nos. and prices do not include Mazda lamps.

*Equipped with Mogul multiple sockets. Series type recommended for Type IL transformer operation.

†Gland type bushing for externally wired two-conductor or two single-conductor cable. Specify size of wire and outside diameter when ordering.

††High-voltage series-type furnished complete with No. 5556568G2 wet-process porcelain receptacle. Rated 25 kv. flashover when properly wired.

**Reconditioned reflector and new globe or refractor can be purchased at the price shown, after receipt transportation prepaid, in the nearest G-E warehouse of a reflector, or reflector and deflectors, in usable condition, on which the globe or refractor has been broken. Usable condition will be interpreted as any reflector which is not smashed out of shape and which does not have a hole through it.

Forms 81-S and 81-D G-E Novalux Suspension Luminaires

Form 81-S luminaire embodies the well-known efficient light characteristics of the Form 79-S in an ornate design applicable to lighting better streets.

Form 81-D incorporates the Form 81-S reflector with the addition of accurately designed die-formed deflectors to redirect a large portion of the house side light onto the

roadway. An examination of the curve of utilization efficiency will show the high utilization obtained from the Form 81-D. It is recommended for all applications except at isolated intersections or special applications requiring a symmetrical distribution.

Form 81-S has symmetrical type of distribution; Form 81-D, asymmetrical type of distribution.

For addition of flexible suspension, add \$5.00 list. Order No. 4865747G1.

For autotransformer type order similar multiple ornate-hood type except with autotransformer. Add \$4.00 list to multiple price for insulator plus part price of transformer. The 15,000-lumen autotransformer luminaire has an extended casing $2\frac{1}{2}$ inches longer than standard.

Type M-2 G-E Novalux Sodium Luminaires

Straight Series Luminaire with Form 72 Insulator for Externally Wired Bracket

This luminaire is used for lighting the highways, urban and rural traffic arteries, bridges, intersections, traffic circles, grade crossings, underpasses and industrial yards. It operates from either standard a.c. multiple or constant-current series circuit.

The reflectors are polished Alzak finished aluminum with a dichromate finish and methacrylate lacquer seal to give them longer life and maintain initial efficiency.

Auxiliary equipment for operating the luminaire is self-contained and includes a complete radio-interference suppressor. Lamp and vacuum flask are held securely but can be removed easily. Flask breakage is negligible because the lamp can be replaced without moving the flask.

Catalog numbers do not include lamps or vacuum flasks.

Use Type NA-9 10,000-lumen lamp and No. 71G flask.

Series IL luminaires include transformer. Specify either pole base or aerial type.

Multiple and transformer series luminaires for externally wired brackets will require cable inlet No. 4830380P1. Furnished at extra charge.

For locations involving severe traffic vibration, order similar to standard except with spring suspension hanger. Hanger is similar to No. 37X716. Furnished at extra charge.

Straight series luminaires are for 6.6-ampere circuits only, conforming to lamp current rating.

G-E Novalux Sodium Luminaires

Forms 81-S and 81-D

With No. 193 Clear Rippled Globe

Ornamental suspension sodium luminaires are used where amber sodium lights promote safety and where an enclosing globe is more important than is maximum utilization of light as obtained by the Form M-2. The housing, globe holder, and plain hood are made of die-cast aluminum, dark green enameled finish. The ornate hood type is similar except that the larger hood is made of cast iron. All auxiliary equipment for the operation of the lamp is mounted as a compact unit in the hood.

The Form 81-S has a symmetrical distribution of light; Form 81-D uses deflectors to obtain an a-symmetrical distribution. By using an extended casing on the ornate hood type, a multiple transformer may be self-contained within the luminaire hood. For other multiple and IL luminaires, a separate transformer is required; either aerial type or pole base type should be specified.

G-E Novalux Mercury-Incandescent Luminaires

For Street Lighting

Form 12 Luminaire with No. 124 Globe, No. 1124 Canopy, External Ornamental Ribs

Arrangement of Lamps in Form 12 Luminaire

Form 79 Mercury Luminaire

Arrangement of Lamps in Mercury Incandescent Form 81-D Plain-Hood Type Luminaire

Type ILH High-Power-Factor Ballast Unit, Aerial Type

For large luminaires the Type H-1 400-watt lamp is recommended. It may be used alone or with incandescent lamps. The more incandescent light used, the more nearly natural the combined color becomes. Luminaires which are equipped with an incandescent lamp wattage ranging from one-half to equal the mercury lamp wattage are considered to have good color correction. Lamps are arranged so that the light is thoroughly blended and the output is a homogeneous color, rather than two dissimilar colors. The entire globe is filled with a uniformity of light and the lamps themselves are not visible.

Incandescent lamps dissipate heat which aids in starting the mercury lamp in cold weather. Incandescent lamps light immediately following a power outage and provide light for safety while the mercury lamp is cooling off and relighting.

For lighting primary business streets, several hundred Form 12 luminaires have recently been used. This luminaire is well suited for mercury-incandescent lighting, although other upright ornamental luminaires may be so arranged.

The new pendent mercury-incandescent luminaire can also be used on primary business streets, and it has a much higher efficiency of utilization than the upright type of luminaire. Form 81-D is equipped with deflectors which make possible an asymmetrical distribution of mercury light. This results in more economical mercury-incandescent lighting for distinctive traffic thoroughfares.

Form 79-R mercury luminaire incorporates several new departures in mercury lighting. In the past it has been difficult to take full advantage of the high efficiency of light generation which mercury lamps offer, because of the difficulties in distributing the light with high efficiency. The new Type H-4 100-watt lamp is used with a refractor and a stepped reflector which results in an exceptionally high utilization of light. The small light source of the H-4

lamp is ideally suited for use with refractors, but when the old smooth type of reflector is used, highest efficiency is not possible. This is because light is reflected into the mercury arc and absorbed. The new stepped reflector directs the light slightly to one side of the light source, without absorption. Utilization is higher than with an incandescent lamp. This luminaire is excellent for low-level illumination of secondary streets where ordinary 2500-lumen lamps are now used.

Current in a mercury lamp tends to increase as voltage decreases. A suitable ballast is required with such lamps to prevent them from "running away." In the past this ballast has been supplied by means of specially designed reactors or transformers. They have not proved entirely satisfactory on larger lamps because fluctuations of more than 10% in line voltage extinguish the lamp. Such outages lasted for about 15 minutes before the lamp cooled sufficiently to restart. Unless corrected, the power-factor of such ballast was quite low.

A new high-power-factor ballast removes all the objections which previous ballasting methods had, and in addition has many new operating advantages. Momentary dips of 30% in primary voltage do not extinguish the arc. It has a power-factor of .91. Normal power-factor transformers or reactors had a power-factor of .67. Starting current when using this ballast is less than operating current. Ordinary high-power-factor reactors take twice as much, and normal-power-factor types three times as much starting current as this new ballast. High inrush current frequently blows fuses unnecessarily, causing delays and costly maintenance which cannot occur with the new Type ILH high-power-factor ballast. The Type ILH ballast is smaller, lighter in weight, has one-third less electrical losses, and operates over a wide range of voltages without taps.

Type H-4, 100 Watts 3500 Lumens

Type H-2, 250 Watts 7500 Lumens

Type H-1, 400 Watts 16,000 Lumens

G-E Pole Type RO Novalux Constant-Current Transformers

For 6.6-Ampere Series Lighting Loads
2400 Volts (with 2150-Volt Tap)—60 Cycles

The Type RO is a constant current transformer which operates automatically. It can be mounted on poles in remote districts or where subdivided downtown lighting circuits are desired. It can be controlled by Novalux controllers and time switch, or photoelectric relay.

Built in sizes ranging from 1 to 30 kw., to operate at any commercial primary voltage and frequency or secondary current, but the standard transformer is for 60 cycles, 2400 volts on the primary and 6.6 amperes on the secondary. The 2400-volt transformer will operate satisfactorily on from 2300 to 2500 volts and a tap is provided on the primary for operation at 2150 volts without reduction of output.

These features are combined with the same current regulation through as wide a range as offered by the best station-type-constant-current transformer. This feature alone practically guarantees the normal life of the Mazda lamps operating on a circuit controlled by such a transformer. The efficiency is almost the same as for the station-type transformer and the primary power-factor is 75% at maximum load.

The high internal reactance of the transformer serves to protect the lamps at starting and acts instantaneously to check surges on the line which would otherwise tend to shorten the life of the lamps.

The moving secondary coil with its high repulsion gives almost perfect regulation from full load to dead short circuit. This feature not only protects the lamps from changes in current, because of changes in secondary load, but also protects the lamps from fluctuations in primary voltage.

Prices include oil.

Lightning arresters must be used on transformers on both primary and secondary for protection.

G-E Subway Type RO Novalux Constant-Current Transformers

For A.C. 6.6-Ampere Series Lighting Circuits
Single-Circuit Secondaries

A constant-current transformer designed to operate automatically and be mounted in subways or manholes. It can be controlled by Novalux controllers or by any of the present methods of remote control.

Since poles carrying circuits overhead are being removed from many of the city streets, it was found desirable to use some type of transformer which could be mounted underground and thereby connected directly to the underground feeder circuits and to the underground street lighting circuits. This requirement resulted in the development of a subway Type RO transformer.

This transformer is almost identical with the pole type, except that it is enclosed in a specially designed cast iron waterproof tank. It is necessary on the 25 and 30-kw. size subway transformer to construct it in a double-deck type, because of the necessity for the transformers to be narrow enough to be lowered and installed in a manhole, the cover of which is only 32 inches in diameter, maximum. The four leads are each brought out at a separate terminal. Single deck 25 and 30-kw. transformers are also available.

Subway transformers are equipped with oil indicating plugs installed in the tanks to indicate the oil level without requiring the removal of the cover. The tanks should be filled with the top oil plug open until the oil runs out and then the plug should be closed. To test for oil level at any time the lower indicating plug should be opened. In case the oil does not flow out, this plug should be closed again and the top plug opened, additional oil being poured in until it flows therefrom. The plug should then be closed again.

If the primary circuit leads into the subway from overhead, pole-type cutouts can be used. If, however, the primary circuit is entirely underground, the D and W subway fuse cutouts must be used.

Prices include oil and hanger hooks.

Lightning arresters must be used on all transformers for protection, if supply and load circuits are not entirely underground.

G-E Automatic Station Type RF Novalux Constant-Current Transformers

For Operating A.C. 6.6-Ampere Series Lighting Loads

‡2400 Volts (No. Taps)—60 Cycles

Type RF with Band-Iron Casing

Designed for use in an unattended substation. Can be used for any indoor installation.

Built in practically any capacity and for any commercial voltage, frequency and secondary current, but it is recommended that, on account of the high secondary voltage, capacities not exceeding 20 kw. be operated with single-circuit secondary. Sizes from 40 kw. are furnished with multi-circuit secondary, and can be operated either single circuit or multicircuit.

Can be started up automatically with coil together and with only one lamp on circuit, regardless of capacity of transformer. Current surge not sufficient to destroy lamp.

Transformers are not provided with any taps, either for voltage or for partial load operation. Because constant voltage is maintained in the stations, no primary voltage tap is necessary. Because of high inherent reactance of transformers, if a partial load tap is furnished, operating characteristic will be impaired.

Equipped with protective low-loss band-iron casing. Balancing mechanism supported on ball bearings.

*Built with multi-circuit secondary. Can be operated either single or multi-circuit.

†All of these transformers will operate from 2300 to 2500 volts. No primary voltage tap or partial load tap provided. No addition to list price for 80% load tap.

G-E Novalux Protectors

Pole Type for Multiple-Control Circuit

Open circuits in series street lighting systems are unavoidable especially on aerial circuits, and it is desirable from the standpoint of safety first, that when an open circuit does occur, the primary of the main transformer be de-energized. This Novalux protector has been developed to operate in conjunction with a CR-7841 Novalux controller, or similar control switch, and its function is to open up the switch in the controller as soon as an open circuit takes place.

The mechanism of the Novalux protector consists of two small transformers, a thermal switch, relay, set of disconnecting contacts, and a timing resistor. One of the two small transformers is energized by the control circuit and the other by the load circuit to be protected. Under normal operating conditions, the disconnecting contacts are closed on the multiple control type and on the series control type they are open.

When an open circuit occurs in the load circuit, the relay becomes de-energized, closes and completes a circuit so that the thermal switch will operate and open the disconnecting contacts on the multiple type (close on the series type) to de-energize the controller operating coil. This allows the controller contacts to open and de-energize the primary of the constant current transformer.

After the open circuit in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a reset lever conveniently located in the bottom of the casing.

This protector operates entirely in air and is housed in an attractive drawn steel case. It is isothermic in function.

‡Can be furnished for operation on other voltages, currents, or frequency, prices upon application.

G-E Pellet Lightning Arresters

For Types RO and ROC Constant-Current Transformers

Pole and Subway Type—Outdoor Service Only

Recommended for protection of both the primary and secondary sides of constant-current transformers.

Pellet arresters are single-pole, for outdoor use on both the constant potential side and the load side of constant-current transformers. Each design has a minimum and maximum voltage rating and under no circumstances should it be applied to a circuit the voltage of which can exceed the arrester's maximum rating as shown in the table. Where selection of arresters for the protection of the load side of the transformer is to be made, the arresters should never be applied to a transformer of a larger kilowatt rating than shown in the table.

*Only for installations at altitudes below 6000 feet. For altitudes above 6000 feet, obtain special recommendations.

†Where transformer is connected between an outside wire and neutral, use one pellet arrester on outside wire. Use also on neutral wire a neutral arrester, No. 9LA11A1 (\$5.50 each; shipping weight, 4 pounds, standard package, 12), or No. 146187 (\$3.50 each; shipping weight, 1.3 pounds; standard package, 24) if voltage to ground is not over 300 volts; if, because of unbalancing, voltage is between 300 and 1000 volts, use No. 9LA10A1 (\$12.00 each; shipping weight, 8 pounds; standard package, 12). Use two arresters at an installation made between outside wires.

G-E Form F-100-B Novalux Pothead Cutouts
For Ornamental Street-Lighting Units

Cat. No. 3732073G1

For use with ornamental series street-lighting circuits for mounting in the base of the smaller lighting standards.

Consists of two sections, the box and plug, both made of special process porcelain. Plug is equipped with flat contact strips, insulated from each other. Provision is made at top part of plug so that insulating compound can be poured in round the leads. Box contains four flat phosphor-bronze springs. Contacts are assembled within an air expulsion chamber.

If it is desired to use cutout for disconnecting several lamps, this chamber may be filled with G-E No. 21 Oil.

At the top of box, a hole is provided through which insulating compound can be poured. Two holes are provided in bottom of contact of cutout for parkway cable.

Cutout with Spade Bracket and Cable Clamp, Cat. No. 3732073G2

Cutout with Strap for IL Transformer Mounting, Cat. Nos. 3732073G5 or 3732073G6 Mounted on Side

G-E Type CR7505-H104-G2 Novalux Photoelectric Relays For Controlling Light with Light 120 Volts—60 Cycles, A.C.

For street and highway lighting control. Can be used with relays for operating entire lighting system from central station, or it can be installed to operate economically an isolated section of the lighting system. Well suited for controlling floodlighting, signs, etc.

Single control knob regulates the turn-on and turn-off points of the controller.

Contacts are provided for normally open or normally closed operation. Contacts are electrically independent of the rest of the circuit. A reliable heavy duty type relay is used to open and close contacts.

Rating: 120 volts a.c. For controller or relay coil: Make 25 amp.; break, 25 amp.; carry, 8 amp. For incandescent lamp load: Make, 25 amp.; break, 2.5 amp.; carry, 2.5 amp.

Price includes tubes, specify tubes required.

GO-51.....		CR7500-H6
Phototube Used.....	*PJ23	RCA921
Approx. Ship. Weight pounds	10	9

*Also uses three standard metal vacuum radio-type tubes, Nos. GE6J5 and GE6B8. The PJ23 is not used if separate phototube holder is used.

†Both type and no.

For other ratings refer to general office.

Wiring diagram, L-2839891.

G-E Type CR7841 Novalux Remote-Control Apparatus

No. CR 7841—FG Pole Type

Designed to control Type ROpoleorsubway transformers by means of an adjacent series circuit or a multiple pilot-wire control circuit. With either series

operating coil rated from 4 to 20 amperes at any frequency or with shunt operating coil at 120, 240, 480 volts, 50 or 60 cycles or 120, 240 volts, 25 cycles; in three types—normally open, normally closed, latched-in. Also furnished for subway mounting when necessary. Switch is for use on any voltage up to and including 7500 volts, 15 amperes, and the most popular voltages with current ratings are as follows: At 7500 volts switch will break 15 amperes; 6600 volts, 25 amperes, 4500 volts, 35 amperes, 2300 volts, 50 amperes or 220 volts, 100 amperes. Carrying capacity 60 amperes at any voltage above 500. Operates at any frequency.

The wattage of operation coil is such that enough heat is generated to overcome any congealing effect and switch may be used in almost any weather condition which will be encountered in the northern hemisphere, without sluggish operation. The high-potential test on this controller is 25000 volts from power to control from power to ground, or from control to ground.

Pole type switch is mounted in pressed metal casing with sheet steel cover which is not connected to switch mechanism.

Three moving parts—two readily replaceable contact tips and solenoid, together with necessary levers.

Subway design switch is same as pole type in respect to electrical characteristics. Tank is heavy copper-bearing steel. Wet-process bushings have clamp-type terminals.

All-Night Latch Type

Identical with the CR7841-C rated 7500 volts, 15 amperes interrupting capacity except that it is equipped with a special latch with following operation: When control circuit, either series or multiple, is first turned on, controller will engage and lock in. If control circuit fails or is disconnected, controller still remains engaged. If control circuit is again energized, controller still remains engaged but will be unlatched. When control circuit is again de-energized, controller will drop out. This is designated as the all-night latch type, CR7841-C32 (with series operating coil) and CR7841-C33 (with shunt operating coil).

The hand lever may be used to close the controller manually, and the controller may be disconnected by operating the control coil with the hand lever.

No. CR 7841-C Subway Type

G-E Type SL Novalux Series Transformers
Subway and Aerial Types

For 60-Cycle, 6.6-Ampere Constant-Current Circuits,
6.6 Secondaries

Pole Type, Oil-Filled 4 to 10 Kva

Core and Coils for 4 Kva

Insulating transformer, the primary winding of which is energized from a long series circuit and the secondary of which is used for supplying current to a small number of lamps connected in series and located where the high potential of the ordinary current series circuit would be objectionable. For 6.6 amperes primary and secondary.

Certain classes of lighting require a lower potential than is found on long series lighting circuits, and yet as they function similarly, it is desirable to control them simultaneously with the street lights.

Affords an ideal method for this control as the low-voltage series circuit is turned on and off with the closing or opening of the main constant current transformer circuit. Fixtures with series sockets and film cut-outs must be used on these transformers.

The 0.25 to 3-kw. sizes are compound filled and are air-cooled. The 4, 5, 7.5, and 10-kw. sizes are oil-filled.

Suspension hooks furnished with all capacities over 4 kw. For cross-arm suspension, specify hanger brackets.

Protective devices included in prices.

*Aerial type only.

†Includes oil.

‡Protective device is assembled in cap of transformer.

For 7.5, 15, and 20-ampere primary and secondary, use 6.6-ampere prices.

For double rating: 6.6/7.5-ampere primary only and 15/20-ampere secondary only, add 25%.

Write for other special ratings and frequencies.

G-E Type 1L Novalux Series Transformers

For Use on 60-Cycle, 6.6-Ampere Constant-Current Circuits

Allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required; each lamp is independent of the others in circuit. In case of an accident to one or more, remainder of lamps on circuit burn without interruption.

For use with pendent units, transformers can be mounted on the cross arms of poles.

When lamp wattage varies between 8% above and 20% below normal, secondary current will not vary more than 1.0% with normal primary current and frequency.

Single Light

For operating one 6.6, 15, or 20-ampere series lamps from 6.6-ampere constant-current circuit.

Special transformers can be furnished for any commercial current, frequency, or lumen lamps. *Can be furnished in vault type.

†1000/2500-lumen transformers are 1:1 ratio and secondary leads supply 6.6 amperes for both 1000 and 2500-lumen lamps. 2500/4000-lumen transformers have secondary leads supplying 6.6 amperes for 2500-lumen lamps and 15 amperes for 4000-lumen lamps. 4000/6000-lumen sizes also have leads which furnish 15 amperes for 4000-lumen lamps and 20 amperes for 6000-lumen lamps. 6000/10000, 10000/15000 and 15000/25000-lumen sizes have one set of secondary leads only supplying 20 amperes since the current required on all the leads is the same.

‡Maximum voltage obtained by means of a voltmeter.

§Series sockets with film cutouts must be used with these transformers.

G-E Novalux Cutouts

For Type SL Transformers and Loop Sectionalizing Application

Disconnecting switch for Type SL transformers rated up to 10 kw., 6.6 to 20 amperes primary; 7.5 kw., 5 amperes primary.

For loops not exceeding 1000 volts (load voltage) 4 to 20 amperes.

Surge voltage by-pass when new Thyrite by-pass is included.

Open circuit shunt, short circuiting transformer or loop in case of sustained open circuit (as from broken line or burnt-out transformer).

Use on any series constant-current circuit up to 10000 volts (operating voltage) to ground, up to 20 amperes normal current.

Thyrite by-pass must be used in all cases. Where connected load consists of Type SL transformer do not use SL protective device.

Standard package, 2; shipping weight, 27 pounds.

No. and price do not include Thyrite by-pass.

No. 2991604G11, Cutout with Cross-Arm Hanger each \$23.00

No. 2991604G12, Cutout with Channel Hanger each 23.00

Cutout with Thyrite By-Pass

Thyrite By-Pass

Consists of small Thyrite cylinder, two metal end-caps with electrodes forming enclosed spark gap, and one fusible washer pressed on gap electrode.

Thyrite has a negative resistance characteristic, the resistance decreasing as applied voltage is increased.

The Thyrite cylinder is designed so that the rated maximum normal operating voltage produces negligible loss—in the order of 1 watt. A high voltage surge traveling on the line finds in it a low resistance path across the transformer or loop, however, and is therefore by-passed.

Extra heavy surges are over the spark gaps without damage to cutout or connected apparatus. Power current flows only until end of first half cycle.

Sustained overvoltage due to open circuit in load greatly increases heating in Thyrite cylinder, melting fusible washer, mechanically completing circuit between end caps, short circuiting load.

G-E Type CR-7843-A 30-Ampere Remote Control Multiple Switches

Multiple Switch

Internal Mechanism Normally Open Type

This remote control switch is a single pole, single throw magnetic switch for operating one or more lamps on one low-voltage multiple circuit. Its application is for remote control by pilot wire or cascade connection for indoor or outdoor mounting, on a pole or in the base of an ornamental standard. The capacity of this multiple switch is 30 amperes normal lamp current at 125 volts or any frequency normally open or normally closed with an inrush capacity up to 15 times normal current. The operating coil consumes about 2 watts at 125 volts a.c., 60 cycles.

Switch is supplied with or without the following optional equipment: 30-ampere load circuit fuse; 2-ampere coil circuit fuse; carbon-block lightning arrester or coil circuit; Thyrite arrester on coil circuit, alternative with carbon-block arrester for surge voltage protection.

Switch is also available with a 6.6-ampere operating coil for operation from series lighting circuits with Type IL transformer.

Another variation of this switch is furnished with 10-ampere contacts at a slight reduction in price.

Approximate shipping weight, 10 pounds.

G-E Plug Switch Panels

For Non-Automatic Station Type RV-2 Novalux
Constant-Current Transformers
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

The panels and subbase are asbestos-ebony, 1½ inches thick with ¼-inch bevel, and are mounted on a self-supporting framework of 1¼-inch pipe 64 inches high. Blue Vermont marble may be substituted for asbestos-ebony at a slight increase in price.

Instruments and meters have the G-E Company's standard dull-black finish, while the supporting framework is black japanned.

Lightning arresters are recommended for each lamp circuit. They are not included with these panels and must be ordered separately.

Each panel Cat. No. includes one panel with framework, a 5-ampere Type AD ammeter with 10-ampere scale, current transformer, fused primary plug switches, secondary plug switches, necessary plugs, plug racks, card holders and nameplate.

Each watt-hour meter Cat. No. includes one subbase with pipe fittings, 110-volt, 5-ampere Type IS-8 single-phase watt-hour meter, current transformer, and potential transformer with fuses and supports.

G-E FK-41 Oil Circuit Breaker Panels

For Non-Automatic Station Type RV-2 Novalux
Constant Current Transformers
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

For 2 Transformers with 1 Lamp Circuit per Transformer

Designed for the control of one single-circuit secondary or multi-circuit secondary constant current transformer and either one or two lamp circuits per transformer. Lamp circuits may be either arc or incandescent. Panels are for separate installation near the transformers they are to control and are not suitable for assembly in a switchboard.

Each panel Cat. No. includes panel with framework, 5-amp. Type AD ammeter with 10-amp. scale, current transformer, necessary oil circuit breakers mounted on back of panel, enclosed primary fuses, card holders and name plate.

Each watt-hour meter Cat. No. includes 110-volt, 5-amp. Type IS-4 single-phase watt-hour meter, current transformer and potential transformer with fuses and supports. Watt-hour meter is mounted on front of main panel and instrument transformers and fuses on the back.

Hubbard Street Hood Brackets

Hot Galvanized

Luminaires and mounting bolts are not included and must be ordered separately.

Bent Arm Type

No. 4934

By interchanging scrolls, pole plates, pipes, and clips, practically any form of bent arm type bracket desired may be assembled.

Made of 1 1/4-inch pipe. Pipe thread attachment, 1 1/4 inches. Extension from pole, 48 inches.

Assembly No.	Each	Pole Plate No.	Pipe No.	Scroll No.	Scroll Clip No.	End Fitting No.	Ship. Wt. per 100

4934	1015.00	4757	23568	4558	3691	2275

Straight Arm Type

No. 3714

Made up in the same combinations as the bent arm type, except that the straight arm type bracket has a right-angled fitting at the outer end instead of a bend in the pipe.

Made of 1 1/4-inch pipe. Pipe thread attachment, 1 1/4 inches. Extension from pole, 48 inches.

Hubbard Street Hood Brackets

Hot Galvanized

No. 3790—Double Bend Type

Standard 1 1/4-inch pipe formed to a double curve supported by an attractive scroll. Attached to pole by certified malleable iron pole plate No. 4759, threaded to receive pipe. Mounting holes are for a 5/8-inch through bolt at top and

1/2-inch lag screws at sides. A porcelain insulator bushing is provided for internal wiring. The scroll support is attached to pole by means of a 1/2-inch lag screw and to pipe by positive clamping arrangement.

Extension, 48 inches. Vertical pole space, 34 inches. No. 3790, Weight 32 Pounds.....each \$11.65

Gooseneck Type

No. 3764

Used at points where a lightweight bracket is desirable. The radius of the curve in the pipe is large enough so that wiring may be pushed through without difficulty.

If combinations are desired other than listed in the table they may be ordered by specifying parts separately.

Made of 3/4-inch pipe. Pipe thread attachment, 3/4 inch.

Hubbard Presteel Trolley Mast Arms

Type 28—Chain Operated—Patented

Hot Galvanized

Carriage on arm is operated by a continuous bronze chain which is protected by a 12-gage steel arm housing. All movable parts equipped with brass bushings. Tension on chain is provided for by rod and thumb screw at pole end. Sprocket mechanism, consisting of crankshaft and sprocket in movable frame, operates freely under varying conditions.

A non-ferrous sprocket wheel is constructed with teeth specially formed to follow the chain. Locking device holds mechanism against any movement from undesirable sources.

Chain is pre-stretched to 175 pounds. Chain rides in guides which have been placed at top of carriage.

Front spreader No. 3444 and rear spreader No. 3439 have 1-inch spring threads. Tie rod has eye at one end with 5/16-inch hole for pole mounting and 6 inches of thread at other end to permit leveling the arm. Pole mounting bolts are not included.

Pipe thread attachment, 3/4 inch.

Hubbard Presteel Trolley Mast Arms

Type 29—Rod Operated—Patented

Hot Galvanized

The main difference between Type 29 and Type 28 arms is that the chain mechanism is replaced by a rod. To pull lamp toward pole, rod is lifted out of gravity lock by its handle and drawn out of arm housing. This operation reversed moves lamp forward again, locking it in place. Pole mounting bolts are not included.

Hubbard Pole Plates

Hot Galvanized
One-Piece Presteel Type

No. 3907

Designed for 1 1/4-inch pipe street hood brackets. Made of 7-gage steel, one-piece construction. The 9/16-inch horizontal pole bearing surface is especially effective in eliminating side sway.

No. 3907 is similar to No. 3901 except that it is equipped with No. 3751 porcelain bushing for internal wiring.

No.	3901	3907
Per 100	\$250.00	280.00
Shipping Weight per 100	480	550

Malleable Iron Clamp Type

Made with a special gripping arrangement for pipe.

Clamp bolt passes through plate at a point which would prevent insertion of standard round pipe. Pipe used with plate must be forged to meet this re-

quirement. This arrangement prevents pipe from turning and locks it in place.

No.	4752	4755
Per 100	\$300.00	360.00

Hubbard Lamp Lead Brackets

Hot Galvanized

No. 1660 With Lag Screw

No. 157 With U-Bolt

No. 174 With Plate

This bracket is constructed in such a way that it opens up for the insertion of lamp leads. Porcelain halves of insulator are held in place when open by lugs loosely fitted to allow for contraction and expansion.

Brackets with solid insulators are similarly constructed except that they require cable to be threaded through wire hole.

Nos. 157 and 175 are also furnished with 5/8x3/4 and 1/2x2 1/2-inch machine bolt studs for use on Hubbard Adjustable Pole Bands and for mounting on mast arms.

G-E Novalux Traffic Signals**Optical Units**

General Electric traffic signals all use the same interchangeable high efficiency optical unit. This standardized assembly will easily and correctly fit any traffic signal General Electric has ever built either of the fixed or the adjustable type.

All of the parts of the optical unit are assembled on the door frame.

The reflector is of high quality silvered glass protected with a coating of electrolytically deposited copper. The design is phantom-proof, thus eliminating the illusion that the signal is lighted which sometimes occurs when the sun is shining directly into a traffic signal.

Eight-inch lens is made by the Holophane Company according to General Electric specifications. The convex outer surface is smooth to prevent accumulation of dirt or snow, while prisms, designed to distribute the light outward and downward into the field of vision, are on the concave inner surface sealed from dust and dirt.

Channel shaped extruded rubber lens gasket keeps the entire assembly permanently dust-tight.

Fixed focus lamp socket insures the signal always being in correct focus. All traffic signal lamps today have the same accurate light center position eliminating the need for adjustable sockets.

G-E Novalux Traffic Signals**Adjustable Type****Fixed Type****Adjustable Type**

Die-cast aluminum housing is used to mount the optical unit and provide a weatherproof assembly. It is light, strong, and smooth in appearance. The signal section thus formed is readily adaptable to building up signals of a truly sectional design. Without the need of tie rods, the sections are joined together, by specially designed clamping plates and pipe bracket assemblies to give any desired combination of post top, span wire, mast arm, or vertical bracket signal.

Fixed Type

For mounting all signal faces in a single unit such as is used above the center of an intersection, a skeleton framework is used to assemble the optical units. Standard mountings are available for installing the signal from a span wire, mast arm, post top, pedestal or vertical bracket.

G-E Type D Novalux Traffic Controllers

Has the following features:

- Aluminum visor shields lens.
- Spring wire bail holds reflector firmly against gasket.
- Scientifically designed reflector eliminates internal sun phantom.
- Die cast aluminum housing and door for long life.
- Single latch screw provides adequate gasket pressure and easy accessibility.
- Dark green baked enamel finish resists atmospheric conditions.

New wicking type door gasket keeps unit weatherproof.
Fixed focus socket insures renewal lamps being correctly focused.

Combined socket and reflector holder assures optical system is always in proper adjustment.

Channel shaped lens gasket keeps dust and moisture from collecting on reflector surface.

Used for isolated intersections or for interconnected systems in downtown areas where traffic problems are more complex. Equipped with weatherproof housing for pole mounting, as shown in above illustration.

Has automatic stop and go timer, with flasher; timing dial for color interval percentages; motor switch for progressive timing adjustment; manual to automatic transfer switch; signal shutdown switch; flashing amber switch; signal wiring terminals; and power supply terminals with fuses.

G-E Novalux Non-Interconnected Traffic Controllers

Basic controller consists essentially of a driving motor, timing dial, drum advance, and contact assembly.

Motor is of synchronous design making it possible to keep adjacent intersections in step for a progressive flow of traffic without the use of interconnecting cable.

Total time cycle can be varied from 30 to 120 seconds by changing only the one gear which is used to drive timing dial. Gears available in 5-second increments for 30 to 90 seconds and in 10-second increments from 90 to 120 seconds.

All color intervals are adjustable in steps of 1% of the total time cycle by changing the position of the timing keys on the calibrated timing dial.

Drum advance is accomplished by closing a pair of contacts with the timing keys. This actuates the solenoid which advances the drum assembly.

Any color sequence desired is quickly arranged by breaking out segments on slotted textolite cams which operate contacts.

Flasher

Separate heavy duty flasher contacts rated for 10 amperes continuous service are operated by a cam which is mounted directly on the motor shaft. This flasher provides for a caution signal, used in place of regular stop and go sequence during periods of light traffic.

Caution signal can be either amber-main, amber-cross, or amber-main, red-cross by making a simple change of connections in controller.

A time switch can be furnished in the controller for automatic control of flashing caution signal or signal shutdown.

Interior of 6-Circuit Timer

Constant speed synchronous driving motor. Built-in enclosed speed reduction gears have lifetime oil supply.

Swinging motor bracket facilitates gear changes. Motor brake coil is used in connection with automatic reset. This economical motor driving coil uses only 6 watts input. Additional cycle timing gears easily installed in a few seconds with simple tools. Gears are available for total cycle lengths from 30 to 120 seconds.

Ample room for additional signal contacts. Signal circuit contacts easily removed or replaced without tools. Made of fine silver, good for full 10-ampere a.c. lamp loads.

First contact interlocks drum with timing dial. Simple positive control of contacts opening and closing and any desired sequence provided by slotted Textolite drum cams.

Simple ratchet mechanism accurately regulates drum motion. Quick make and break contact action is given by this powerful drum advance solenoid. Timing dial contacts and automatic reset contacts assembled on Textolite block. Rotating timing dial for adjusting time percentage of each color interval. Cycle timing gear determines dial speed.

Lubrication required at only seven points, twice a year.

G-E Novalux Interconnected Traffic Controllers

By the addition of simple attachments, relays, etc., to the standard Type D controller, it may be used for operating an interconnected system. It is thus possible to control the entire network of controllers from a central point. By using one basic controller throughout, in both non-interconnected and interconnected locations, maintenance men need learn the operation of only one type of control and renewal parts are kept to an absolute minimum. All of the features considered essential to modern traffic control are provided.

Flash and Shutdown Relay

REMOTE CONTROL OF FLASH, either amber-main, amber-cross, or amber-main red-cross can be provided by means of one or more relays in each intersection controller, depending on the number of circuits to be flashed. Each relay is double pole capable of transferring two circuits to flashing.

REMOTE CONTROL OF ALL-RED SIGNALS, either steady or flashing, for emergency or fire apparatus indication is accomplished by relays in the same manner as remote control of flash. Each relay will transfer two red circuits. Remote shutdown of signal requires one relay.

AUTOMATIC SINGLE RESET requires a simple addition to each controller consisting of an extra set of contacts, reset key, and a brake coil for the motor. This device automatically lines up all controllers so as to give a predetermined plan. Each controller is automatically checked each cycle. If one controller should get out of step for any reason, it is stopped for a part of the following cycle until it is again in step. This feature eliminates the necessity of setting controllers for progressive flow with a stop watch.

TRIPLE RESET is an expansion of the single reset providing three optional plans of progressive flow in the timer instead of only one. The particular progression desired at a given time is selected from a central point, either manually or by time switches. For example, the system can progressively give the green light to automobiles approaching the business district during the morning rush hour, give an average condition with no preference in either direction during most of the day, and then progressively give the green light during the evening rush hour to traffic going from business to residential area.

REMOTE CYCLE CHANGE is an attachment used to uniformly slow down the entire system. By increasing the cycle length it is possible to handle a larger volume of traffic and still keep cars moving in the progressive flow.

INTERCONNECTING CABLE must have one common conductor plus an additional conductor for each remotely controlled feature, except triple reset for which three additional conductors are necessary.

A SEPARATE MASTER is required when using remote cycle change. If remote cycle change is not used, one of the intersection controllers can be used to operate as both a combined master and intersection controller for all of the remotely controlled features.

G-E Novalux Traffic Controllers

Prices

No.	Each	Type of Controller
2TC22E37	\$186.00	Non-Interconnected
2TC22E213	207.00	Future-Interconnected
2TC22E221	225.00	Interconnected with Single Reset
2TC22R11	245.00	Interconnected with Single Reset and Remote Cycle Change
2TC22G40	235.00	Combined Master and Intersection with Single Reset
*2TC22G43	224.00	Remote Cycle Change Master

*Remote Cycle Change Master will not operate signals directly but is used for the purpose of supervising interconnected intersection controllers of the remote cycle-change type.

The following information applies to all other controllers:

Controllers listed above have six signal circuits and six intervals. Similar controllers available with as many as 15 signal circuits and 16 intervals. Standard equipment includes five gears, flasher, manual shutdown switch, manual motor switch, and manual-to-automatic transfer switch.

Non-interconnected and future interconnected have manual flash switch, others have remote flash relays.

Interconnected controllers have remote shutdown relay; future interconnected has jacks only for shutdown relay; both types have single automatic reset.

Ordering Directions

Specify model number and color sequence desired (for example, green-amber-non-overlap).

Specify whether pole plates or clamps are required. Give diameter.

G-E Novalux Traffic Control Accessories

For installation on any controller whether interconnected or non-interconnected.

Radio Interference Suppressors

Can be placed across the flasher contacts to reduce radio noise.

Manual Switches and Cord

Manual switch and cord may be used by a traffic officer or other person with authority, to control the length of each color period. It consists of a simple grip switch enclosed in vulcanized soft rubber with sufficient cord to enable the officer to move about freely and take positions where he can see traffic to best advantage. The sequence of colors is the same as that obtained with automatic timing, the changes being made by simply squeezing the handle. This is very useful for school zones, etc.

Any color sequence desired requiring not over 15 circuits and 16 intervals can be set up on the Type D. This provides ample circuits for walk lights, arrows, and special circuits.

Type D controller is extremely flexible, making it easily adaptable to special control problems.

Further information is available upon application.

G-E Novalux Traffic Beacons

Novalux Beacons are used as a visual warning of danger points to motorists and pedestrians. Brilliant flashes of light from these beacons capture the attention, warning the motorist that caution is necessary. They use the same high efficiency optical unit as the Novalux traffic signals.

Adjustable Type Beacons

Adjustable Beacon uses one or more of the standard signal section units. These are held by bracket assemblies that can be arranged for turning the separate units in whatever directions are required. Can be supplied for mounting from a span wire, mast arm or post top.

Fixed Type Beacons

Fixed Type Beacon uses a rigid frame mounting giving a warning indication in two, three, or four directions as may be desired.

Can be supplied for mounting from a span wire, mast arm or post top.

Red or amber lenses may be used.

Weatherproof Flasher Mechanisms

Complete in enclosing case.

Can be mounted on the pole from which the beacon is suspended. This arrangement gives best accessibility for servicing of the flasher. A synchronous motor drive is used to operate the same heavy duty flashing contacts used in Type D controller.

Fuse protection and a key operated switch which can be turned without opening the housing are included.

Special Flasher Mechanisms

Will fit in the fixed type beacon only. May be used to make an installation complete in one unit.

Radio interference suppressors are included in both flashers.

G-E Novalux Traffic Signal Poles

Traffic Signal Poles are available in a variety of designs constructed of steel, cast iron, or concrete. One may be chosen which matches or harmonizes with local lighting standards. These poles can be furnished with 4½-inch diameter tenon top to accommodate a slip fitter type of signal or with a pipe nipple mounting.

G-E Novalux Traffic Signal Poles

Traffic Signal Poles are available in a variety of designs constructed of steel, cast iron, or concrete. One may be chosen which matches or harmonizes with local lighting standards. These poles can be furnished with 4½-inch diameter tenon top to accommodate a slip fitter type of signal or with a pipe nipple mounting.

Horni Vehitrol Control Systems

Open View Fully Actuated Vehitrol

Regulation and control of vehicle and pedestrian movement by means of themselves, vehicle actuated control, is accomplished by Vehitrol in conjunction with the Horni magnetic detectors and detector relays. Vehitrol form of control will efficiently handle intersections of every type and under all conditions of traffic flow.

Using Vehitrol, the "go" signal rests on the intersection from which the last call originated. Movement of traffic is self-controlled by means of detection units installed in the highways. A vehicle passing the detection point will actuate the control mechanism to assure that vehicle of a "go" period as soon as consistent with the demand from opposing streets. Each signal cycle will vary in overall length, and will have varying individual sections of the cycle in accordance with the traffic demand. This is subject to the limitation that a predetermined adjustable minimum period and maximum period (in the presence of opposing actuations) are set for each direction.

Push buttons can be installed to create similar response by the controller to pedestrian actuation as to vehicular actuation.

The standard Vehitrol is for two-movement fully actuated operation. A Vehitrol can also be furnished:

1. For any number of movements.
2. Equipped for manual operation, when required.
3. With a separate period to control pedestrian traffic.
4. To provide progressive vehicular travel without the use of interconnecting wires.
5. With a Horni motor flasher mechanism for use during "off" signal hours.
6. To take care of left turns.

Vehitrol can be connected to and will operate existing signals or any make of signal light. It can be used as a prefixed controller or semi-actuated controller at will.

Standard assembly is mounted in an aluminum alloy cast housing arranged for terminal housing, pedestal, wall or pole mounting. Space is provided for detector relays.

Prices and bulletin furnished upon application.

Horni Vehi-Cycle Control Systems

Vehi-Cycle form of control will be found desirable and efficient at any intersection where cross traffic occurs intermittently. It is also applied to pedestrian crossings adjacent to industrial plants, schools, institutions, etc., or vehicle exits or entrances to industrial yards, bridges, etc.

Using Vehi-Cycle, signal lights are normally out in all directions. Movement of cross traffic is controlled by detection units placed in the cross road.

A vehicle passing through the detection point will immediately cause the signal light circuits to become energized and indicate their signals in a predetermined sequence. After this sequence, the signal circuit will become dormant until such time as another actuation is registered. The sequences will continue just as long as cross traffic registers through the detection point.

Vehi-Cycle may be equipped with a manual control switch permitting manual control of the signals.

Control units can be arranged to give required color sequences.

The complete Vehi-Cycle control is mounted in a cast aluminum alloy weatherproof housing. The door is equipped with a spring bolt lock. Key is provided. Bottom of housing arranged for wiring entrance.

Housing can be furnished arranged for terminal housing, pedestal, post or wall mounting.

Prices and bulletin furnished upon application.

Horni Manual Control Switches

At certain intersections, bridge approaches, railway crossings or other locations, it is often desirable to control traffic signals by means of manual instead of automatic controls. The switch is designed for ease of operation and long service under the most severe conditions. The heavy rotary blades make an even, firm, wiping contact between pairs of self-aligning fingers which float on a spring pressure assembly. The blades are firmly held in each indexed circuit position by means of a spring ball detent.

Can be arranged for color sequences as required.
Prices furnished upon application.

Horni Weatherproof Push Buttons

Designed for pedestrian notification for right-of-way in a traffic signal controller. Recommended for use under the most severe climatic conditions. It is not affected by salt water.

The housing is of aluminum alloy cast in two pieces and arranged for flat surface or pole mounting. An adjustable bronze adapter is provided.

Dimensions, $3\frac{1}{4} \times 4\frac{3}{4}$ inches.

Standard aluminum finish. Special finish extra.

Can be furnished without lettering and equipped with instruction plate holder, or without the indication plate.

Weight, 2 pounds.

Prices furnished upon application.

Horni Vehicle Detection Equipment

Type MDW Detector Relay

Magnetic vehicle detection equipment consists basically of two devices; the detector unit and the detector relay. This equipment forms part of a complete Vehitrol and Vehi-Cycle traffic control installation. In addition to their application in the detection and control of traffic movement over public thoroughfares, the magnetic detector and detector relay combination has a wide range of use in the detection and safe movements of vehicular traffic through industrial, institutional, and private driveways. This combination will detect traffic and provide means whereby a secondary circuit may be used to operate devices for controlling warning signals, opening and closing doors, etc.

Detector-detector relay combinations of exceptionally high sensitivity may be used for signalling the encroachment of vehicles or other ferrous bodies upon property boundaries, etc.

The vehicle detector units are installed just beneath the highway. Their effectiveness is not interfered with by proximity of roadway reinforcements, parked cars, etc. Operation is not interfered with by ice or snow. Ageing of the units does not affect their sensitivity. Units may be installed without disturbing the highway surface by boring a hole or installing a duct beneath the road-bed from the edge of the road and placing the unit in position, or if desired they may be installed by placing units directly in the road-bed.

Units are enclosed in a substantial brass shell, properly sealed in place and do not require maintenance after installation. Sealed-in leads are provided.

One unit is required for non-directional detection. Two units installed approximately three feet apart, parallel to each other, are required for directional detection.

Type MDW Detector Relays

This directional detector relay contains an extremely sensitive moving coil relay of highest grade instrument construction for primary response to impulses from the magnetic detector. The moving coil relay in turn controls a secondary relay which closes a pair of contacts upon each actuation. Power consumption is negligible. Single and duplex relays for use with non-directional detectors are available in the same size case and will mount interchangeably with the MDW directional relay.

Type VD-1 Electronic Detector Relays

A vacuum tube type relay designed for low power consumption. It is adjustable over a wide range of sensitivity. Other types are available for use with non-directional detectors. In addition to the relays described above, a Horni battery-powered detector relay can be supplied for special applications where alternating current is not readily available.

Quotations will be furnished on modified units for special applications.

Prices and bulletin furnished upon application.

Horni Sectional Traffic Signals

Adjustable and Non-Adjustable

The Horni Traffic Signal units are of artistic design. Careful consideration has been given to efficiency and durability. All units are weather and dustproof. Particular care has been given the optical system to produce an unsurpassed strength of signal indication.

The optical system is a compact gasketed unit, which, when in position, is the door. The complete optical unit is interchangeable between the adjustable and non-adjustable sections. The construction provides convenient and easy means for opening the complete unit for inspection and lamp replacement.

The lamp receptacle is adjustable and includes a grip to prevent lamp loosening due to vibration. When shipped, the receptacle is correctly positioned for the standard 60-watt traffic signal lamp.

The 8 $\frac{3}{8}$ -inch prismatic diffusing lenses are selected for purity of color, high transmission and efficient distribution of light slightly downward and to the sides.

The adjustable unit consists of a die-cast aluminum alloy housing into which is fitted a complete optical unit and terminal block. The housing is a complete case of exceptional strength and light weight. One complete unit is required for each indication. This unit may be used as a one-color one-way signal. Two or more units can readily be assembled for a multi-indication signal. By means of combination bracket supports, such signals can be grouped for multi-directional indication. The units are secured to each other by means of lock nuts which permit the individual sections being adjusted to any direction. The top and bottom of each unit is so arranged that fittings for the various mountings are conveniently received. This type of unit will fit any traffic situation and can easily be adjusted to meet changing conditions.

The non-adjustable unit consists of an aluminum alloy cast cubical skeleton frame in which is mounted the required optical units. The top and bottom castings are secured to

the skeleton by means of large machine screws. Top and bottom castings are provided to suit the mounting arrangement.

One unit can be used for one, two, three or four-way indication. Two or more units can readily be assembled for a multi-indication signal. The units are secured to each other by means of four bolts. This type of signal is used where two streets cross at a 90° angle, and main arteries where conditions of visibility permit. It is especially suitable in less congested areas where special treatment is not required.

The detachable visor is made of heavy rolled aluminum, 7 inches long. It is designed with a slight downward tilt to overcome sun glare and to limit indication to the stream of traffic it controls. Visors can be furnished for extraordinary conditions.

Non-adjustable signals using one or two-way indication can be equipped with a motor-driven lamp-changing mechanism. This arrangement has four reflector units mounted on a common four-way optical assembly independent of the door and lenses. When a lamp fails, the motor automatically turns the complete assembly and places another reflector and lamp in the proper position. Automatic replacement will be made three times in a one-way light and once in a two-way light.

The signals can be furnished arranged for span wire suspension, mast arm suspension, post, vertical or horizontal bracket and pedestal mounting.

Each signal unit or multi-unit arrangement is wired ready for installation. Terminals are marked to facilitate field work.

All units are finished with two coats of baked enamel, thus affording additional protection from weather. Standard finish is aluminum or green, as ordered. Special finish to order.

Horn Insignia Signals

With 8 1/4-Inch Amber Unlettered Lenses, without Lamps

No. MA-41

No. MFR-41

No. BFR-41-UG

Standard traffic signal units are recommended for use wherever a single optical unit is required for direction of traffic. They may be used for steady or flashing lights. Any flashing or steady combination can be furnished. A-44 Flasher, \$25.00 extra. A-46 Filter, \$8.00 extra.

The adjustable unit is particularly advantageous at irregular intersections, as the individual units may be directed and set as required.

The non-adjustable units are used at all except irregular intersections. Standard finish is black.

Prices do not include appended insignia plates, flasher or foundation form.

For each lettered or arrow lens, add \$1.00. Red or green unlettered lenses can be furnished when ordered without additional cost.

Square foundation form for pedestal \$51.00 extra; round foundation, \$40.00 extra.

Horn standard insignia plates \$5.00 per face extra.

Horni Non-Adjustable Direction Signals

With 5½-Inch Unlettered Optical Lenses

No. BFM-41

No. BFM-41
Without Hoods

No. SFM-41

No. B-1039 Horni Pedestal Beacons

Designed for use on safety islands or where it is advantageous to mount a beacon in the center of an intersection on a substantial concrete foundation forming a pivot around which vehicular traffic must turn.

Arranged for underground feed.

The globe and glass insignia plates are mounted on an ornamental metal post. The globe is illuminated by a single lamp, with separate illumination for the insignia plates.

Standard finish is aluminum.

Price does not include flasher, foundation form or lamps. Round foundation form \$40.00 extra.

Weight, 75 pounds.

No. B-1039.....each \$160.00

No. GFM-41

A single lamp is used to illuminate the signal and appended insignia plate.

Standard finish is black.

When ordering, specify type of circuit, direction of indication and whether red, green or amber lenses are required.

Code numbers refer to 1-way indications only. For additional indication, substitute number required for first numeral "1" of code number and add \$5.00 for each addition. Prices for multiple circuit: add \$10.00 for street series.

Horni standard insignia plates can be furnished at \$5.00 per face extra.

Horni Danger Light Standards

For use at locations adjacent to vehicles subways, or underpass that is liable to flood, or other hazards that may cause a temporary detour. Also used at school and industrial crossings. The signal may be normally out or normally flashing with insignia plate normally out. A remote float switch or other control can be furnished to automatically or manually start or stop the complete signaling indication.

Designed for mounting on a concrete foundation.

The housing and door are aluminum alloy cast 19 inches wide and 24 inches high. The sheet steel shaft is 32½ inches high and 5 inches in diameter. The base is 7¼ inches high and 12 inches in diameter at the bottom. The base is provided with hand-hole.

Standard finish is green.

An 8¾-inch unlettered amber lens is provided. Red or green unlettered lens can be furnished without additional charge.

Insignia plate is red glass with field opaqued. Other lettering with or without arrow can be furnished.

Flashing mechanism, control and lamp are not included.
Each..... \$200.00

Horni Siren-Lights

A combined visual and audible warning signal for use in front of fire apparatus stations. The combination may be controlled by means of a manually operated switch or may be manually or automatically started and automatically stopped by means of a Horni automatic switch.

Can be furnished with a built-in flasher control by means of which the light indication is adjustable from 24 to 72 flashes per minutes, and the siren sounding from 12 to 36 times per minute.

Standard finish is black.

Price does not include flasher, switch or lamps.

Each	\$126.00
Weight.....	pounds 72

Code numbers refer to 4-way indications only. For 1-way, 2-way or 3-way indication, change the numeral "4" accordingly. Deduct \$7.00 from the list price for each direction of indication not required.

Lettered lenses can be furnished at an advance of \$1.00 per lens. Amber or green lenses can be furnished without additional cost.

Horni standard insignia plates can be furnished at \$5.00 per face extra.

Horni Lenses

Horni traffic signals, warning and directional lights using similar housings, include 3 3/8-inch unlettered prismatic diffusing lenses as standard equipment.

Cross hatch diffusing lenses are provided when lettering is required unless otherwise specified. Clear lenses are provided for appended sign illumination and floodlight purposes.

The 5 3/8-inch lenses are of the optical type.

If lettering is required, specify whether lettering or field shall be opaqued.

Black enamel used for opaquing is baked, thus assuring permanency.

Horni Police Call Stations

Horni police signal boxes can be furnished with a variety of code wheel arrangements and telephone facilities for emergency signaling and routine reports to meet the requirements of any system.

Police recall lights arranged for post or suspension mounting, with Fresnel or prismatic lenses, can be furnished to order.

Equipment for police headquarters and stations can be furnished in accordance with requirements.

Prices furnished upon application.

Horni Rigid Traffic Signal Brackets

Type No. 2125

Type No. 2123-S

Type No. 2123

Type No. 2122

Type No. 2121

Type No. 2125-A

Hollow aluminum alloy cast of exceptional strength and light weight specially designed for rigid grouping of traffic signals for span wire, mast arm, post and bracket mounting.

End outlets threaded for 1½-inch fittings and equipped with nipples for securing signal section to bracket. Top center threaded and equipped with 1½-inch coupling and set screw.

No. 2125 bracket designed for three-in-row signal arrangement or where a wider spread is desired between two signal groups.

No. 2125-A bracket is designed to include provision for additional signal sections where pedestrian lights or special designations are required.

No. 2123-S and 2125-S have 4½-inch slip fitter.

Standard finish, aluminum or green.

10	10¾	9.00	9.00

Horni Type U Pole Clamps

Designed to provide outlet space for wire and cable. Bolt holes permit limited spread of U-bolts.

Malleable iron threaded for 1½-inch pipe complete with ½-inch U-bolt and two nuts.

Standard finish is green. Aluminum or black finish without extra charge.

O. D. Pole.....inches	3½ to 4½	5½ to 6½	7½ to 8½
Each.....	\$3.20	4.40	5.80

Horni Type B Ornamental Pole Clamps

For 4, 5, 6, 7 and 8-inch poles. When ordering, specify whether for round or hexagonal poles.

Cast bronze 4-section designed for one, two, three or four-way signal bracket mounting. Individual sections drilled and threaded for 1½-inch bracket arm.

Complete with eight bolts.

Cast bronze threaded plugs can be furnished.

Standard finish is green. Can be furnished with aluminum or black finish.

Prices furnished upon application.

Horni Mast Arms

For 3 to 9-inch tubular steel poles and all wood poles.

Mast arms are made from 8 to 20 feet in length. With mast arms up to 15 feet in length, two top guy-rod are furnished. With mast arms from 16 feet in length and up, three guy-rod are furnished.

Length.....feet	8	13	18
Each.....	\$28.00	40.00	52.00
Brace Complete.....each		\$7.50	

For intermediate lengths, add to the list price \$1.00 per foot up to 12 feet and \$2.00 per foot for lengths greater than 13 feet.

Horni Hanger-Entrance Fittings

Cast metal specially designed for span wire and mast arm suspension. Equipped with two-hole, two-knockout, bakelite insulator at entrance. Lower end threaded for 1½-inch coupling and equipped with lock screw. Drilled for ½-inch coupling pin. One pair of pin holes centered and one pair off-center to assure perpendicular suspension.

Standard finish is black. Aluminum or green finish can be furnished without additional charge.

Without hanger, coupling and pin.

Each \$4.60

No. TA-2213 Horni Suspension Couplings

Cast metal specially designed for coupling between hanger-entrance fitting and mast arm or suspension hanger. Provides flexibility and prevents undue strain.

Pin holes, ¾ and ⅝ inch.

Standard finish is black. Aluminum or green finish can be furnished without additional charge.

Without coupling pins.

No. TA-2213.....each \$3.30

No. 2209 Horni Span Wire Hangers

Approximately 6⅞ inches long. Pin hole, ⅝ inch.

Complete with 5⅜-inch clamp bar, two ⅜-inch J-bolts, two lock washers and hexagon nuts.

Standard finish is black. Aluminum or green finish can be furnished without additional charge.

Without coupling and pin.

No. 2209.....each \$4.00

No. FB-2213-4 Horni Entrance Fittings

Unusual design permits removal of entire top for wiring convenience. May be used for wiring entrance on traffic signals and pedestals.

Aluminum alloy cast, threaded at bottom and equipped with 2-inch coupling. Equipped with two-hole, two-knockout, bakelite insulator at entrance.

Standard finish is black.

No. FB-2213-4.....each \$5.40

No. 10667 Horni Junction Boxes

A rugged cast brass junction box specially designed for housing the junction of the magnetic detector leads and the cabling to the traffic signal controller. Recommended for use wherever readily accessible junctions or outlets are required throughout industrial plants and yards.

The junction box is dust and moistureproof. It may be installed in any exposed location for housing plugs from which power may be obtained for portable motor-driven tools or extension lights. For flush mounting in roads or sidewalks.

Can be furnished tapped and threaded for one or two 1-inch entrances. Cover held in position by means of four brass screws. Provided with 1¼-inch opening in bottom.

Weight, 12 pounds.

Prices furnished upon application.

Horni Metal Road Markers

Used as center line markers dividing directions or lanes of traffic, stop street lines and pedestrian lanes. Made in two types.

Nickel alloy cast, designed with center or dome of marker tapering slightly upward from the edges. Vacuum grip prevents creepage, assuring permanent alignment and visibility. Waved bolt welded to inside of dome provides for secure anchorage.

Malleable iron and fitted with six clear crystal reflectors so arranged that three are visible from either direction of travel. Can be furnished with green or red crystals, or in any combination.

Prices furnished upon application.

A wide range of standard lettered traffic signs can be furnished in aluminum alloy cast, steel embossed and vitreous enamel.

Special design and lettering can be furnished as required. Standard finish is yellow with black lettering. Can be furnished in any two-color combination.

Prices and bulletin furnished upon application.

Horni Everlasting Street and Direction Signs

Aluminum alloy cast with embossed edge and lettering or designation as required. Lettering or other designation on one side. Post mounted in pairs for two-way observation. Lettering or other indication can be furnished cast on both sides of sign.

Street sign, 4 3/8 inches wide with 2 3/4-inch letters.

Arrow sign, 30 inches long, 7 1/4 inches wide.

Finished in any two-color combination as ordered.

Prices and bulletin furnished upon application.

Horni Threadless Pedestals

Cast iron in two sizes and three weights complete with wrought iron pipe and wedges. For mounting traffic signs or other use where a sturdy portable support is required.

1. Split, positive grip. No thread. Lock wedge.
2. Wedge grip at four points.
3. Plain end pipe insuring maximum strength.
4. Upper end of wedge raised to increase gripping strength.
5. Head of galvanized bolt, firmly set in wedge.
6. Nut of bolt for drawing.
7. Old way, broken at threads.
8. New way, giving full strength to pipe.
9. Wedges in place, with pipe inserted. Wedges malleable iron.
10. Wedges removed showing tapered wall where wedges are drawn down.
11. Raised part of base so that further protection is provided for pipe stand.
12. Old style flat top base.
13. Positive grip. Sign made of aluminum.
14. Lantern extension supports.
15. Guide hole for fire rope.
16. Ball for easy means for rolling sign.
17. Tapering bead insures greater strength.
18. The uniform raised cast letters make positive readable signs.
19. Raised buttons to give point suspension.

Standard finish is black. Can be furnished with aluminum or green finish without additional cost.

When ordering, specify dimension of sign.

Sign is not included in list price.

Horni Central Station Fire Alarm Equipment

Installation at Cincinnati, Ohio

Installation at Greenville, North Carolina

Horni central station fire alarm signaling systems set a high standard in engineering and design which is progressively maintained in all their products. Extreme simplicity, ruggedness and precision instrument manufacture are characteristic and obviate needless testing and maintenance. Flexibility is provided in the design of all instruments and in their incorporation in the system.

Horni systems fully meet the latest requirements economically and provide the highest standard of dependability in signal transmission.

Graybar engineers, specialists in the particular field of signaling, will gladly cooperate with architects, engineers, superintendents, etc., in charge of operation, to lay out systems or make recommendations, whether new installations or extensions to or modification of existing systems.

Installation at Millburn, New Jersey

Installation at Albany, New York

Horni Type C Compositrol Central Station Fire Alarm Units

The transmitter compartment is recessed above shelf and accessible from front through double sliding plate glass doors. This compartment also provides space for forty code wheels. The glass doors may be replaced with a panel for mounting other types of transmitters.

Ample space is provided for the No. BT-3-A Horni fire alarm storage battery cells and special telephone batteries.

The lower section of the rear compartment contains the Horni dry disc battery charger, trouble bell panel, terminal board, protective equipment, and space is provided for the telephone central station anti-sidetone equipment, all of which is readily accessible.

Smaller communities having an organized fire department which do not require Class A systems may use an unattended central station in conjunction with an outside audible alarm.

The Horni Compositrol is a self-contained factory-wired unit and, with the exception of the fire alarm boxes and outside alarms, contains the power supply, control, supervision and recording equipment for the dependable operation of a complete fire alarm system.

The arrangement and assembly of the Compositrol permits the extension of similar units containing facilities for additional circuits to extend the fire alarm box capacity. The extension will include repeating facilities.

The Compositrol unit contains equipment for a single box circuit and is made in two basic types: straight metallic and ground systems.

The straight metallic system has facilities for dividing the circuit in two loops so that the disablement of any loop will not involve the entire system.

The ground system is designed to receive signals under such adverse conditions as an open or grounded circuit.

The equipment is contained in a welded steel cabinet 64 inches high, 44 inches wide and 18 inches deep. A shelf 10 inches wide is located across the front, 30 inches above the floor.

The cabinet consists of three main compartments with full height lift-out rear doors and louvred hinged doors in front. Interior surfaces have two coats of solid color enamel paint over a rustproof primer. Exterior surfaces have a prime coat and a final baked coat of black crystal paint.

Telephone facilities can be provided for communication over the box circuits, and with separate telephone wires connecting alarm boxes or other call boxes those facilities may be extended for police reporting.

The upper section of the rear compartment houses the rear of panel mounted equipment.

The exposed surfaces of apparatus on front of panel, with the exception of the Weston meters, are grained finish satin chromium.

The Compositrol may be used in systems employing any standard fire alarm boxes and with horns operated by electricity, steam or air.

Prices and bulletin furnished upon application.

Horni Local Fire Alarm Systems

Horni local and municipal connected fire alarm systems are designed and built to meet the individual requirements of industrial plants, institutions, hospitals, schools, public buildings, etc.

The systems may be arranged for coded or continuous audible or visual alarms throughout the premises. The power supply may be A.C. or D.C. with or without storage batteries.

These systems are also made for direct connection to the municipal fire alarm system by means of a master fire alarm box connected with the street box circuit. This arrangement permits the single operation of a local system box to instantaneously sound the local warnings and operate a trip in the master box starting the mechanism and notification to the municipal system.

Provision is made for tests and local fire drills. In the municipal connected system, the tests and drills are made without disturbing the master box or municipal department.

Equipment is provided to maintain systems under constant electrical test. Circuit trouble or power failure will be indicated by audible signal.

Control panels are mounted in cabinets for flush or surface wall mounting and may be floor mounted for larger systems.

Our engineering department will promptly advise and cooperate with architects, engineers, superintendents in charge of operation, or anyone contemplating the installation or use of fire alarm apparatus.

Prices and bulletin furnished upon application.

Horni Pena-Tone Air Horns

Designed particularly for use as an outside audible alarm in coded or non-coded fire alarm systems or industrial installations. Clear and distinct blasts make the Pena-Tone desirable for coded alarm and Morse signaling.

The horn is of cast bronze with non-corrosive alloy

diaphragm. Without moving parts; not affected by climatic conditions.

Beginning and end of each blast is sharply defined. Made in four sizes, providing a wide range of audibility. Will operate with full efficiency with a pressure reduction of 30 per cent.

Horns may be mounted singly or in groups set in various directions, for which purpose a special bronze manifold can be furnished.

Compressed air signals require an air compressor with an electric motor controlled by a pressure regulating device. Minimum requirements and conditions to be met in the installation and use of air operated alarms are defined in the National Board of Underwriters' Pamphlet No. 73.

No.	P-5	P-8	P-12	P-17
Diaphragm.....	inches 5	8	12	17
Length.....	inches 19½	25	38	46

Prices furnished upon application.

Horni Fire Alarm Boxes Positive Non-Interfering Succession

The box will fit standard mountings and will function in standard fire alarm systems with other fire alarm boxes.

The housing and door are die-cast aluminum alloy. The Raise Cover—Pull Lever type of door is accessible, simple to operate, and easily opened under severe climatic conditions. The cover is fitted with a glass easily broken by persons accustomed to "Break Glass" types of doors. The box may be fitted with the Break Glass—Pull Handle, Open Door—Pull Handle, or Spade Handle—Pull types of doors. This last type includes a local mechanical alarm.

The location of the porcelain terminal block above the inner shell protects the operator of the telegraph key. Provision is made for attaching Neon tube lightning arrester clips.

The inner shell is of aluminum alloy. A two-section door makes it unnecessary to expose the entire interior when using telegraph key or making tests. Interior of the inner shell is exposed by opening both sections of the door. Inner shells are interchangeable.

The movement is mounted on the back of the inner door and is permanently grounded. A molded glass cover is furnished. Adjustable weight is provided for the regulation of the armature. Non-interference coils are designed so that, should either coil open, the signal will still be coded, and without impairing the effectiveness of non-interference. Reset lever is provided for the purpose of facilitating a mechanical test of the movement.

The steel main spring is of sufficient length to provide 10 full alarms of four rounds each, with one winding. The spring may be wound at any time without distorting a signal that may be in process of transmission.

The code wheel can have as many digits as five nines—99999. It is impossible to put the code wheel on the movement in other than the proper position. A thumb nut securely locks the code wheel in place.

The balance weights are situated so that the movement may be timed without taking the movement from the box. The speed of the movement is adjustable from one code

wheel revolution in 3 seconds to one revolution in 60 seconds.

The contacts are of coin silver of one ampere capacity. The signaling contacts are readily adjustable by means of an eccentric screw.

A molded bakelite test panel and test plug are provided. A silent test resistor is incorporated. A telephone jack is provided. Communication may be established without interfering with the transmission of an alarm. A telegraph key and tap bell are provided. The box will transmit telegraph signals and second alarms although the tap bell coil may be open.

The movement is of the standard succession type, which makes an effort to take control of the line every four rounds. If unable to gain control because of a disabled or busy line, the movement will mechanically lock itself out of operation at the end of the 24th round. This leaves, in a fully wound box, at least 16 rounds available for further services.

Special primer and finishing coats of fire alarm red are baked on. Raised instruction lettering is finished in white enamel.

Standard spring bolt locks and two keys are provided. When ordering, specify box number, timing and whether other than "Raise Cover" type of door is required.

Prices and bulletin furnished upon application.

Horni Compositrol Fire Alarm Boxes

Compositrol fire alarm boxes are intended for protection against loss of alarms due to abnormal line conditions.

The mechanism is specially designed to include the Compositrol feature as an integral part. Otherwise the general description, dimensions, door types and timing are similar to the Horni positive non-interfering succession fire alarm box.

The box may be installed in any standard fire alarm circuit with other standard fire alarm boxes, and under normal circuit conditions, it will function as a standard positive non-interfering succession fire alarm box.

Under abnormal circuit conditions, the Compositrol movement automatically sets up a ground connection and will transmit the signals to the central station over either side of a broken circuit or through ground, provided the central station is equipped to receive ground return signals. After transmission of signals under abnormal conditions, the Compositrol movement automatically removes the ground

connection which it has established.

The Compositrol will code under any of the following conditions:

1. Over normal metallic circuit with one non-interference coil open.
2. Over normal metallic circuit and over ground circuit with both non-interference coils open.
3. Circuit open or grounded.
4. Box short circuited.
5. Circuit shorted out.
6. Circuit open and short circuited box.
7. Circuit open and entire circuit shorted out.
8. Circuit open and grounded.
9. Defective non-interference magnets.
10. Low line circuits.

When ordering, specify box number, timing and whether other than "Raise Cover" type of door is required.

Prices and bulletin furnished upon application.

Horni Master Fire Alarm Boxes

Positive Non-Interfering Succession

For use in protecting, by cooperation through municipal fire alarm systems, industrial plants or institutions which have their own fire alarm or other fire protection system. This box may be installed in any standard fire alarm system with any other standard fire alarm boxes.

Signals may originate normally through auxiliary boxes or other signal stations, various thermostatic devices, including sprinkler or heat expansion systems, and other methods of fire detection and signaling.

The mechanism is specially designed to include a trip latch, necessitating a slightly larger inner shell and molded glass cover. Otherwise, the general description, code wheel

and timing arrangements are the same as the Horni positive non-interfering succession fire alarm box. The trip latch cannot be released except by actual electrical impulse.

The master box can be furnished with a plain door or with any one of the manual operating types of doors.

Standard finish is fire alarm red with raised instruction lettering finished in white enamel.

A standard spring bolt lock and two keys are provided.

When ordering, specify whether D. C. or A. C. operated auxiliary system or shunt loop. Also specify box number, timing and whether other than "Raise Cover" type of door is required.

Prices and bulletin furnished upon application.

Horni Oval Fire Alarm Boxes

The oval fire alarm housing is an aluminum alloy casting designed for interior use. It may be arranged for surface or flush mounting.

The Horni Positive Non-Interfering Succession, Compositrol or Master mechanism is mounted on a hinged inner door and is protected by a dust and moistureproof molded glass cover. The Sector movement is mounted on the back of the outer door, and is protected by a similar glass cover.

A standard spring bolt lock and two keys are provided.

The tap bell, telegraph key and test panel are not provided as part of the standard equipment but can be furnished on special order.

A flange can be furnished if required for flush mounting.

Standard finish is fire alarm red with instruction lettering finished in white enamel. Special finish to order.

Prices and bulletin furnished upon application.

Horni Sector Fire Alarm Boxes

Non-Interfering

The Sector fire alarm box is of the normally unwound type in which the operation of the starting lever winds the driving spring to provide four complete rounds of the code wheel. The movement is of the succession type within the limits of the movement winding. The movement cannot be interfered with after the operation of the lever and during the four rounds of the code wheel.

The mechanism is protected with a molded glass dust and moistureproof cover. The code wheel and timing arrangement is the same as in the Horni positive non-interfering succession fire alarm box.

The Lift Cover—Pull Lever type has the movement mounted on the back of the door. The Open Door—Pull Handle type has the movement mounted in a cast inner shell.

A bakelite terminal panel is provided equipped with wire terminals, testing and grounding facilities, telegraph key and telephone jacks.

Standard finish is fire alarm red with raised instruction lettering finished in white enamel.

When ordering, specify type of operating door, box number and timing.

Prices and bulletin furnished upon application.

Horni Local Coded Fire Alarm Boxes

Non-Interfering

Intended for use throughout industrial plants, institutions, hospitals, public buildings and other properties having their own fire alarm systems.

The movement is of the normally unwound type in which the operation of the starting lever winds the driving spring to provide four complete rounds of the code wheel. The movement cannot be interfered with after operation of the lever and during the four rounds of the code wheel. If two or more boxes in a circuit are pulled at approximately the same time, one will take control of the circuit. The other boxes cannot interfere and will not code during those four rounds.

The entire mechanism is assembled on a metal plate mounted on the back of the door. A gasketed glass cover is provided.

The operating lever is protected by a metal cover and glass. A hammer is provided for breaking the glass. Breaking glass will release the cover, properly exposing the operating lever. The cover and door may be opened for inspection by means of a key provided with each box.

The housing is of cast metal and can be furnished for surface or flush mounting. The top and bottom of housing are tapped and threaded for 3/4-inch conduit. One threaded plug is provided. The housing may be installed during alteration or construction of building and the door with mechanism attached later.

Standard finish is fire alarm red with raised instruction lettering in white enamel. Special finish to order.

Prices and bulletin furnished upon application.

Horni Auxiliary Fire Alarm Boxes

Lift Cover Pull Lever

Break Glass Pull Lever

Lift Cover Pull Lever Small Glass

Non-coded manually operated auxiliary fire alarm boxes are generally used to extend municipal fire alarm protection into and throughout industrial plants, institutions, hospitals, schools, public buildings and other properties under the constant supervision of employees and watchmen.

The single operation of the pull-down lever opens or closes a circuit operating a trip in a municipal system connected master fire alarm box. After operation, the lever in the auxiliary box is locked in the down position until released by a separate key.

Spring assembly, terminals and lever are mounted on the back of the gasketed front plate. This permits installation of the conduit and housing during the alteration or construction of the building. Spring contacts can be furnished for circuits controlling local alarms.

The housing is aluminum alloy cast with threaded top and bottom outlets for 1/2-inch conduit. One threaded plug provided.

Housing given a baked primer and a baked standard red finish with white lettering.

When ordering, specify type of operating cover and contact spring arrangement. Mercury contacts can be furnished.

Flange can be furnished for flush mounting. Prices and bulletin furnished upon application.

Horni Fire Alarm Repeaters

Non-Interfering

Automatic and semi-automatic repeaters are used in fire alarm systems where there are two or more box circuits.

Automatic repeaters are used in systems where the normal straight metallic box circuits also control the alarm apparatus. When a box is operated, its number is repeated over all box and alarm circuits. Should a second box be operated on another circuit at the same time, the repeater prevents interference to the extent of the non-interference of the boxes. If the boxes are of the non-interfering succession type, the repeater will receive and transmit the

signal from the second box after the first box has completed its signal.

Semi-automatic repeaters are used in systems where all alarm apparatus is independent of the box circuits. In this system, the first signal transmitted from any circuit will take the repeater and transmit the alarm over the alarm circuits, not interfering in any way with receiving alarms from any or all other box circuits. These other signals are recorded on registers and retransmitted manually after the first box has completed its signal.

All types of repeaters will give one blow on the alarm apparatus when any circuit opens. If the circuit remains open longer than for a predetermined time, the repeater is automatically reset and again is ready for operation. After the disabled circuit has been repaired, even if a signal has control of the repeater, the circuit automatically will be restored to service without interfering with the signal.

Repeaters can be furnished to operate under certain abnormal line conditions.

Can be arranged for pedestal or panel mounting with plate glass covers.

Prices and bulletin furnished upon application.

Horni Automatic Light Switches

Used in fire apparatus stations for automatically switching the house lights on and, after a predetermined interval, shutting the lights off. The switch will operate on the first impulse in the alarm circuit. The interval the lights remain on is adjustable from 3 seconds to 60 minutes.

A push button switch is provided for manually operating the control when still alarms or telephone alarms are received.

The equipment is mounted in a steel cabinet approximately 10½ inches wide, 6 inches deep, and 15 inches high.

Standard finish is black.

Weight, 20 pounds.

Prices furnished upon application.

Horni Fire Alarm Transmitters

Style A

The manually wound non-interfering succession transmitter is used in the smaller fire alarm systems. It may be used in the fire alarm circuit in series with the street box circuit.

The main spring will provide forty rounds or ten full alarms of four rounds each with one winding.

Adjustable over a speed range of one round of the code wheel in 3 seconds to one code wheel revolution in 60 seconds. Code

wheel permits as many digits as five nines—99999. Transmitter may be mounted in an oak or metal cabinet with glass paneled doors.

Prices furnished upon application.

Style B

With Oak Cabinet

The positive non-interfering accelerated type transmitter is used in Type B and small fire alarm systems. It may be used in the fire alarm circuit in series with the street box circuit.

Pulling the handle down both winds the drive spring and starts the mechanism. Transmitter may be set for one, two, three or four rounds.

Adjustable over a speed range of one code wheel revolution in 3 seconds to one code wheel revolution in 60 seconds.

Code wheel permits as many digits as five nines—99999. Transmitter may be mounted in an oak or metal cabinet with glass paneled doors.

Prices furnished upon application.

Style C

The disc or dial type transmitter is used in the alarm circuit of Type B and small fire alarm systems.

The transmitter is set for the coded alarm by means of self-locking discs. Operation of the lever winds the driving spring and starts the mechanism.

The mechanism is enclosed in a cast metal dustproof cover. Discs, arms and lever are black finish. Mounting rim is grained satin chromium finish.

Capacity of transmitter, four digits. Rounds adjustable from one to four. Speed range adjustable from two blows per second to one blow every 3 seconds.

Transmitter may be mounted in an oak or metal cabinet with glass paneled doors.

Prices furnished upon application.

Style D

The key or push button transmitter is suitable for use in Class A or Class B systems.

The transmitter is set by depressing keys corresponding to the signal number. The mechanism is started by depressing a button. A small pilot light indicates when mechanism is in operation. Operating power, 24 volts D.C.

Any signal up to 10-10-10 may be transmitted. Speed is

adjustable over a range commonly used in municipal fire systems. The number of rounds is adjustable from one to four.

Case is black crystal finish.

Prices furnished upon application.

Horni Dry Disc Battery Chargers

Dry disc battery chargers are used as a source of direct current in fire alarm and police signaling systems or where it is desired to obtain direct current from an alternating current supply for charging batteries and for a secondary source of power.

Types HLM and HMB equipped with switch and milliammeter for direct reading of charging and line current. All types equipped with rheostats on the secondary side of transformer.

Operated from 110-volt, 60-cycle a.c.

Special rectifiers may be furnished as required.

Can be furnished for panel mounting or in metal cabinets.

Prices furnished upon application.

Type L Low Rate

With Cabinet and Meter

Panel dimensions, $5\frac{1}{4} \times 10$ inches. Ma., 150.

Code No.....	L-1230	L-3060	L-6090	L-90120	L-120150
Voltage.....	12-30	30-60	60-90	90-120	120-150

Type HMB High Rate

Panel dimensions, $9 \times 18\frac{3}{4}$ inches. Ma., 500.

Code No.....	HMB-1230	HMB-3060	HMB-6090	HMB-90120	HMB-120150

Type HLM High-Low Rate

Panel dimensions, 9×20 inches. Ma., 150-150.

Code No.....	HLM-1230	HLM-3060	HLM-6090	HLM-90120	HLM-120150
Voltage.....	12-30	30-60	60-90	90-120	120-150

Horni Storage Batteries

Specially designed for use in fire alarm and police signal systems.

Grooved bottom glass jar with hard rubber cover sealed especially deep to prevent creepage of electrolyte. Non-spray vent plug permits adding water without removal.

Ample space is provided for sediment deposit during life of battery. Extra height of acid above plates requires less frequent filling.

Capacity, 18 ampere-hours at 100 ma. Dimensions of cell, $8\frac{3}{16}$ inches high, $4\frac{1}{16}$ inches long and $2\frac{1}{2}$ inches wide.

Pilot cells with built-in ball indicators are recommended for end cells.

Shipped filled and charged. Weight per cell, approximately 6 pounds.

Prices furnished upon application.

Horni Battery Racks

Sectional design and of rugged construction manufactured to specification as regards floor space, height of ceiling and cell capacity.

Shelf cross members are supported by clamps of special design and exceptional strength. Horizontal supports are of heavy channel iron equipped with glass shelves, soft rubber cushions and ebony asbestos strips. Specially designed outlet boxes provide convenient, easy means of wiring.

Finished with special acid-resisting paint.

Prices furnished upon application.

Horni Multiple-Circuit Registers

The puncturing register is primarily a spring-driven impulse recorder specially designed for fire alarm central station or police signal use.

Intended for service on four, five and six circuits operating at a signaling speed of 10 blows per second or slower.

The ratchet-wound drive-spring is of sufficient capacity to propel approximately 125 feet of paper tape with one complete winding.

The paper tape is automatically fed beneath the puncturing blades at a uniform rate of speed. Adjustable automatic stopping mechanism prevents unnecessary travel of tape between signals.

Mechanism is enclosed in a dustproof housing composed of heavy bronze side plates with top and ends of beveled plate glass sections. Side plates are bronze grained satin finish.

The housing is mounted on a black crystal finished hollow cast iron base arranged for standard drilled locations. Base arranged for spring contact and wiring to terminal block.

Dimensions of base, $11\frac{1}{8} \times 5\frac{29}{32}$ inches.

Arranged for $1\frac{5}{16}$ -inch paper tape.

Special finish to order.

Equipped with adjustable time stamp contacts when specified.

Can be furnished to operate under special circuit conditions.

Prices furnished upon application.

Horni Recording Sets

Recording set is for use in fire apparatus stations, small fire alarm central offices, police headquarters, and police stations.

Transfer equipment may be included for connecting the register to any one of several fire alarm circuits. Recording sets may be arranged to include a wide variety of auxiliary equipment such as automatic light controls, audible signals or time stamp.

Glass paneled dust cover can be furnished.

Prices and bulletin furnished upon application.

Horni Single-Circuit Registers

"Superior"

Adaptable for many purposes. Specially designed for municipal fire alarm and police signal service.

Intended for service on a circuit operating at a signaling speed of 10 blows per second or slower.

Paper tape is automatically fed beneath the adjustable puncturing blade at a uniform rate of speed. Adjustable automatic stopping mechanism prevents unnecessary

travel of tape between signals. Key-wound heavy duty drive-spring, when fully wound, has an approximate capacity of 800 blows. Winding key is provided.

Housing with mechanism is mounted on a hollow cast iron baked black crystal finish base which houses coils and terminal block arranged for wiring and spring contact connection.

"Superior" register has a bronze dustproof housing with grained finish. Ends and top of beveled plate glass.

"Marvel" register has a bronze dustproof housing with a durable matte finish.

Dimensions of base, $10\frac{1}{8} \times 5\frac{3}{8}$ inches.

Unless otherwise specified, register will be supplied arranged for $1\frac{5}{16}$ -inch paper tape.

Special finish to order.

Can be furnished with automatic time stamp contacts and also arranged to operate under special circuit conditions or for A.C. operation.

Portable register with cord and plug can be furnished.

Prices furnished upon application.

Horni Monitor Take-Up Reels

Designed to wind up used paper tape as fed from the register and to hold tape under proper tension.

Reel is driven by a machined gear train operated by a key-wound spring and is mounted on a rugged bushed bearing shaft projecting from the side of the housing. Reel and regulating arm are bronze with grain satin finish.

Mechanism entirely enclosed in a cast metal black crystal finished dustproof housing.

Regulating device assures that tape will be steadily taken from the register under uniform tension. If the tape should break, the regulating device will automatically stop the reel.

Previously wound tape may be inspected by drawing the tape backwards. Reel will again wind up tape after inspection. Reel for $1\frac{5}{16}$ -inch tape standard. Reels for other standard paper widths can be supplied.

Mounting holes will fit existing standard drilled location. Dimensions of base, $6 \times 2\frac{5}{16}$ inches.

Take-up reel can be furnished arranged to permit winding of spring without interfering with the normal operation.

Special finish to order.

Prices furnished upon application.

Horni Electro-Mechanical Gongs

The electro-mechanical gong is for use in normally closed alarm circuits serving fire alarm stations, newspaper or public utility offices and wherever audible coded signals are desired.

Designed for mounting without removing the cover. The gong is of special cast metal. A hollowed nut holds the gong in position and provides entrance for the winding key. The winding key is provided.

Built-in mechanism can be furnished to operate a remote audible or visual alarm circuit or mechanical "tell-tale" in base of gong when drive-spring reaches a predetermined unwound condition. Mechanism will restore instantly only when spring is wound to proper tension.

The 6-inch gong is similar to the 10-inch gong except that it does not include a dust cover and cannot be furnished with the "tell-tale" mechanism.

Standard finish polished gong and black crystal base. Special finish to order.

Gongs can be furnished to operate under special circuit conditions.

Prices and bulletin furnished upon application.

Horni Wall Type Tap Bells

Direct acting tap bell designed for use in normally closed circuit and intended to provide an audible alarm from the fire alarm circuit. Intended for fire stations, public utility or newspaper offices and wherever coded signals of moderate volume are required.

Adjustable armatures mounted on aluminum alloy cast frame and enclosed in a black crystal finished aluminum alloy cast dustproof housing. Gong is of pressed steel with polished brass finish.

Dimensions of base, 6½ inches wide and 5¾ inches long.

Can be furnished with 6 or 8-inch gong.

Special finish to order.

Gongs can be furnished to operate under special circuit conditions.

Prices and bulletin furnished upon application.

Horni Superior Desk Type Tap Bells

An umbrella type direct acting tap bell intended to provide an audible signal in any fire alarm circuit. Ornamental in design and finish. Suitable for mounting in office or home.

The magnets are made from high grade electrical iron, specially treated to minimize residual magnetism. Coils are protected with brass sleeving finished with black lacquer.

The 4½-inch diameter gong is of cast bell metal supported by a bronze stem. All exposed metal surfaces are grained finish.

The unit is mounted on a polished hardwood base. Slate or ebony asbestos base can be furnished.

Special finish to order.

Prices and bulletin furnished upon application.

Horni Marvel Desk Type Tap Bells

An umbrella type direct acting tap bell for use in fire alarm central stations and fire engine houses.

The coil are mounted within an aluminum alloy cast frame. The frame, finished in baked black crystal, provides anchorage and convenient armature adjustment.

The polished 4-inch cast bell metal gong is supported by a cast stud riveted to the frame.

The unit is mounted on an ebony asbestos base 5 inches wide and 7 inches long. Height overall, 6½ inches.

Hardwood or slate base can be furnished.

Special finish to order.

Prices and bulletin furnished upon application.

Horni Panel Type Telegraph Keys

A telegraph key of precision manufacture, used on fire alarm control panels for signaling over normally closed or normally open circuits.

Arranged for panel mounting with all connections in rear of panel. Equipped with indicating safety lock to prevent accidental operation.

Standard finish is polished

chromium. Special finish to order.

Base can be engraved for circuit identification.

Prices furnished upon application.

Horni D.C. Fire Alarm Auxiliary Relays

Specially designed for auxiliary circuit operation in fire alarm central station and other types of signal system switchboards.

Coil wound of enameled copper wire on a bakelite spool. Armature and frame black crystallized finish. Phosphor bronze springs with coin silver contacts.

Can be furnished with spring combinations and for operating current as required.

Prices upon application.

Horni D.C. Fire Alarm Line Relays

Designed for central station service in box and alarm circuits or other circuits requiring precision instrument efficiency.

The coil is wound on special soft iron core with cellulose acetate insulation and is mounted in a special soft iron cover. Armature mounted on a movable carrier which permits precision adjustment.

Can be furnished with spring combinations and for operating currents or voltages as required.

Prices furnished upon application.

Horni D.C. Time Delay Relays

Primarily designed for fire alarm central office use to delay operation of a secondary circuit for a predetermined time interval.

The time interval delaying operation of the secondary contacts is adjustable from 1/2 second to 15 seconds.

The timing mechanism is spring-driven, and is automatically wound each time the armature restores to normal.

Coil consists of enameled copper wire on a special iron core with cellulose insulation and covered with fabric. The coil is mounted within a special iron black crystallized finish cover.

Dimensions, 4 3/4 inches long, 2 inches wide and 3 1/2 inches high.

Arranged for panel mounting.

Prices furnished upon application.

Horni D.C. Uniform Time Relays

Primarily designed for use in fire alarm systems to open or close a secondary circuit for a predetermined time interval. Time limit adjustable from 1/4 second to 7 seconds.

The secondary circuit may be used to operate air horns, bells or visual signals for time intervals between impulses as received from a coded fire alarm box or transmitter.

The spring-driven mechanism will give 320 blows when fully wound. Entire mechanism mounted on a cast metal base and provided with a glass dustproof cover.

Can be furnished for panel mounting or factory mounted in a cast metal housing, as illustrated.

Prices furnished upon application.

Horni Shur-Control Switches

Rotary Type

Plug Type

For heavy duty use in fire alarm systems or wherever a switch is required to make or break a multiplicity of circuit combinations by a single operation. Designed for continuous operation up to 2000 volts. Will safely carry and break 5 amperes at 110 volts A.C.

The rotary switch is arranged for rear of panel mounting with index plate and insulated pointer knob provided for front of panel. It can be furnished with from 2 to 14 contacts in various sequence combinations as required.

The plug operated switch can be furnished for rear or side panel mounting with push-pull, plunger, restoring or rotary plug. The single operation of a number of individual switches is obtainable either in gang or group mounting. Springs can be arranged for various circuit combinations as required.

Prices and bulletin furnished upon application.

Horni Code Wheels

Horni code or character wheels can be furnished for all standard fire alarm boxes and transmitters. Specially designed for ease and accuracy of placement.

Made of bronze.

In a signaling system employing variable timed movements, the intervals between blows, between digits and between rounds are the same for all boxes.

In a signaling system employing uniform timed movements, the time required for a single round of the code wheel is the same for all boxes in the system.

When ordering, specify the box number and whether variable or uniform movement timing.

Box number plates can be furnished.

Prices furnished upon application.

Horni Shur-Support Brackets

Aluminum alloy casting of great tensile strength and ductility designed for permanent attachment to either wood or metal poles or walls for mounting metal boxes.

The upper and lower bearing surfaces may be adjusted to fit the contour of any pole 5 inches or greater in diameter.

Drilled to mount any standard fire alarm or police signal box. Can be furnished with other drillings as required.

Standard finish, is aluminum. Special finish to order.

Code No.....	223	223-P
Length.....inches	14 5/16	19 7/8
Width.....inches	8	10 1/4

Other sizes can be furnished.

Prices furnished upon application.

Horni Cast Metal Weatherproof Housings

No. HS-4448

No. HS-2937

No. PD-1115-HS

No. HSNYC

Equipped with standard spring lock and key. Special locks can be furnished to order.
Housings are given a baked primer and two baked finishing coats. Standard finish special aluminum, green or black as ordered. Special finish to order.

The complete pedestal, of unit manufacture, is of neat appearance, rugged construction and designed to accept all standard fire alarm and police signal boxes.

The terminal housing is of heavy cast iron with a gasketed aluminum alloy cast door fitted to exclude dust and moisture. The housing is equipped with an 11 1/2 x 32-inch back-board for mounting protectors, meters, terminals, etc. Ample space is provided for base entrance of cables and wiring convenience. Outside mounting surface machined to eliminate the necessity of gaskets for assembly. The anchor bolts are provided. Top provided with 2 1/4-inch opening and four 5/8-inch holes on a 4-inch diameter circle.

The upper pedestal or harp is aluminum alloy cast in nine types. All types have a hollow base, four of which include an entrance for local terminal wiring. All are drilled for mounting on terminal housings by means of four brass cap screws which are provided. The outside mounting surface machined to eliminate gaskets for assembly. The top is arranged for mounting the post or fittings as illustrated.

The post or ornamental octagonal column is of aluminum alloy hollow cast. Provided with screws for mounting on

the upper pedestal or harp. The post provides a completed appearance to the pedestal, and a raised support for the fittings as illustrated.

The hemisphere cap is used to seal the top opening when the terminal housing is used without an upper unit.

The adapter is provided with a 1 1/2-inch threaded entrance and may be used when a traffic controller or other type of housing is to be mounted on the meter box.

All exposed surfaces of the units are given a baked primer and two baked finishing coats. Standard finish red, green or special aluminum as ordered.

All doors are equipped with stainless hinge pins, standard lock and one key. Special locks can be furnished to order.

When ordering, specify color of Fresnel or ball globes. The globes are not provided unless ordered.

No. FA-2226 Post

Duff-Norton Automatic and Electrically Time-Controlled Pistol and Rifle Targets

Duff-Norton Automatic Target Unit

Used and endorsed by the leading pistol and rifle tournaments throughout the country, the Duff-Norton Automatic Target is the only complete system that accurately times the firing period and completely eliminates the human element and the stop watch in match firing.

It replaces the stationary target, the home-made target turned with ropes and pulleys; eliminates stop watch timing and provides perfect accuracy and absolute fairness to each and every competitor.

The electrically operated target is readily adaptable to indoor and outdoor firing ranges, either as a single unit or in any number of target units desired. It finds wide application among police and government agencies, bank guards, immigration border patrols, government revenue officers, and numerous rifle and pistol clubs throughout the country.

Available in two principal types as follows: The elevating type which provides automatic raising and lowering into a pit or behind a barricade, as well as timing and turning of targets. The non-elevating type (for indoor or outdoor) where no pit is used, incorporating automatic timing and turning features only.

Construction—Extreme simplicity of construction and operation is a feature of this target. The supporting structure of each target unit consists of a structural steel

frame. The target frame is made of white pine wood and the target supporting board of pressed wood. No metal part of the target is exposed above the pit or to the line of fire at any time, preventing the possibility of the ricocheting of bullets.

The target base is provided with convenient holes in the flanged portion through which the unit may be securely fastened to a wooden plank.

All movements of the targets are mechanically operated by a compact motor driven power unit mounted on the wooden plank base on which the target units are mounted. This power unit is operated by remote control through the Duff-Norton Electric Timer located near the firing point.

Portable Timer and Remote Control Unit

The Duff-Norton Electric Timer is conveniently portable for plugging in at any firing point or may be used for central control by the range officer covering all firing points. Equipped with a synchronous motor, this timer is absolutely accurate, providing shooting periods of any number of seconds up to 5 minutes by simply setting the timer knob.

Typical Pit View of Battery of Duff-Norton Interconnected Automatic Targets Operated by Single Motor

The standard timer furnished for pistol targets is marked for 3 seconds—a bobbing 3-second period when the target faces the shooter for 3 seconds, turns away 3 seconds and repeats this operation 5 times covering the required 5 shots. It is also marked for the 10, 15 and 20-second period and the 5-minute period—the latter being for slow fire at 50 yards. Any other marking desired can be also placed on this timer if different periods of firing are used.

Operation—At beginning of shooting match, range officer first sets timer for desired firing period. At the command, ready, to the contestants, he throws toggle switch on timer which automatically sets targets in motion. Targets immediately turn edgewise for a period of 3 seconds, then automatically return for actual firing period. At the expiration of the allotted firing period, the targets again automatically turn away from the shooters for a period of 3 seconds or less if desired. The targets then reappear and are lowered into the pit by operator from timer control. When lowered into pit, targets are in a convenient position for mounting or removing the target sheets, entirely out of danger from firing line.

One Man Control—Timer control also makes possible one-man control by any shooter desiring to use range by himself for practice, under identical conditions which he finds at a match. He simply sets timer, throws switch, all following operations being entirely automatic. Simple means have also been provided for disconnecting one or any multiple of targets when full complement of targets is not needed.

Shipped Complete Ready for Installation—Includes all interior wiring, masonite backboard, frames and supporting standard. Also, a 1/4-hp. a.c. motor capable of operating as many as ten target units. Any number of target units can be used. For example, if 24 targets are desired, 3 batteries of 8 targets each are recommended. All 3 batteries can be synchronized so that 24 targets operate as a single unit. Targets are spaced at 4-foot centers and interconnecting shafts are flexibly coupled.

The only material provided by customer is the power line (110-volt, 60-cycle) to control box at targets and cable from targets to several firing points. For elevating type, a 4-conductor No. 14 Parkway lead or conduit to firing points is required. For non-elevating targets, a 3-conductor No. 14 Parkway lead or conduit is recommended.

Pitless Installation.

—For installation on ground surface non-elevating type is used. Targets are operated from firing point by electric timer and go through same

sequence of operation as regulation unit, except that they do not go up and down.

Karpark Automatic Penny-Nickel Parking Meters

Manufactured and Sold under Patents of Vehicular Parking, Limited

This parking meter measures a legal parking period (and 10 minutes overtime) for a nickel. It also accurately measures successive, fractional parking periods on the insertion of one-cent coins.

In all, there are 24 possible coin combination settings for variable time limits of 12 minutes to 2 hours.

The success of the parking meter system depends on enforcement, and the meter makes it easier to enforce parking limits. Its use does away with special parking privileges. It also increases curb parking turnover and results in an increase of shoppers entering the business district.

The Karpark Automatic Parking Meter offers municipalities highest quality materials plus highly skilled engineering and workmanship, resulting in an accurate and extra long life meter. It is built in compliance with rigid specifications prepared by the United States Bureau of Standards.

The meter will run more than 10 hours a day for 10 consecutive days without rewinding. There is provision for rewinding by an official.

The appearance of the Karpark Meter is the finest example of parking meter design.

Internally, the mechanism is completely rustproof. It is built of heavy gage solid brass and stainless, rustproof steel. Every gear and pinion is machine cut. Mainspring is of the highest grade of Swedish spring steel which has greater tensile strength and longer life than any other.

The Karpark Automatic Parking Meter is the only meter that has a timing mechanism using a pendulum escapement. The pendulum control is simple; there are only two moving parts; it will run longer on one winding; cannot be harmed by over-winding; and, is more accurate.

An internal expansion clamp holds the meter housing on the hollow supporting post and prevents its being turned. The meter has only one coin slot, and a theft-proof housing. Operation starts automatically the instant the coin is inserted.

A separate timing dial and signal indicates the allotted parking period and the overtime period.

The meter will operate accurately from 50° below zero to 150° above zero.

Industrial Fire Alarm Systems

Industrial fire alarm systems are particularly designed and suitable for factories, schools, colleges, public institutions, hotels, theatres, office buildings, department stores, warehouses, apartment houses, etc. in fact for every class of building where life and property should be protected from fire hazard, but with full consideration that such a fire alarm system must be dependable, yet simple and economical, both as to initial cost and maintenance.

Industrial fire alarm systems may be classified in 2 general types:

Electrically-Supervised Closed-Circuit Code and Non-Code Ringing for local drill alarm purpose and for connection to municipal fire alarm systems.

Non-Supervised Open-Circuit Code and Non-Code Ringing Systems.

Closed-Circuit Systems

Under the closed-circuit systems the following may be furnished:

PLAIN CODE SYSTEMS in which the operation of a station lever causes all audible devices such as gongs, horns, etc. to sound a pre-determined code indicating the point of origin of the alarm.

PRE-SIGNAL CODE SYSTEMS in which the first operation of a station lever causes a code to be sounded on certain audible signals, known as pilots. The second operation of the station by means of a special key will cause the code to be sounded on all audible devices, both pilots and general.

POSITIVE NON-INTERFERING CODE SYSTEM features may be included in either the plain or pre-signal code systems mentioned above. These features prevent the jumbling of the code signal in the event of more than one station being operated at or about the same time.

MASTER CODE SYSTEMS in which one standard code is used this code indicating "Fire" but where the exact location of fire is not required.

INSTITUTIONAL AUXILIARY SYSTEMS in which the operation of a station lever by a person, equipped with the proper key, causes a code to be sounded on all audible signals within the building for drill purposes. In the event of an actual fire the operation of the station lever will cause an alarm to be sounded on all audible devices within the building, and at the same time will transmit a signal over the municipal fire alarm circuits indicating the building on fire.

GROUP-TYPE SYSTEMS are for use where several buildings are to be protected by one system. On such systems the operation of any station lever causes the code-number of that particular station to be sounded 4 times on all local fire alarm signaling devices in that particular building only and also on all pilot signals in that building or any other building in the group. If specified, a general alarm feature arranged to sound all local signals in all buildings can be furnished. Where required, these systems can also be arranged to auxiliariize the Municipal Fire Alarm Systems, through a selective relay, so that, in addition to the signals indicated above, the system will also provide for simultaneously and automatically summoning the Municipal Fire Department.

THERMOSTATIC TYPE SYSTEMS in which stations of the thermostatic-type, which operate automatically in case of fire or excessive heat, are used. Such stations normally provide for continuous signal only on all sounding devices until the fire is extinguished, or cause of excessive heat removed, but, when combined with code-ringing boxes of electric-trip type they will, upon operation, trip the code-ringing box-mechanism, thereby causing the predetermined code of that box to be sounded on audible signal devices on the system. Such thermostatic systems or circuits, can be combined with any of the systems outlined in the foregoing paragraphs.

GENERAL ALARM NON-CODE SYSTEMS on which the breaking of glass in the station operates all signals continuously until glass is replaced or circuit switch is opened.

Open-Circuit Systems

Under the open-circuit systems the following may be furnished:

PLAIN CODE SYSTEMS in which the operation of a station lever causes all audible devices to sound a pre-determined code indicating point of origin of the alarm.

MASTER CODE SYSTEMS in which one standard code is used, this code indicating "Fire" but where the exact location of fire is not required.

GENERAL ALARM NON-CODE SYSTEMS in which the breaking of glass in station operates all audible signals continuously until glass is replaced or circuit switch is opened.

ANNUNCIATOR ALARM SYSTEMS in which the breaking of glass in station operates a corresponding drop on an annunciator indicating point of origin of alarm and also operating audible signals.

Fire Alarm Boxes

Fire alarm boxes for industrial fire alarm systems are manufactured in 9 types, to meet all conditions of fire alarm service as follows:

Positive Non-Interfering Type Code-Ringing Closed-Circuit.

Plain Type Code-Ringing Closed Circuit.

Pre-Signal Type Code-Ringing Closed Circuit.

Double-Code-Ringing Type Closed-Circuit.

Shunt-Type Non-Interfering Code Ringing Closed-Circuit.

Code-Ringing, Electric Trip, Closed-Circuit, Pre-wound Type.

Code-Ringing Electric Trip, Closed-Circuit, Self-Propelling Type.

Closed-Circuit Type, Non-Code Ringing.

Thermostatic Type, Open or Closed Circuit, Non-Code-Ringing.

Open-Circuit Type Non-Code-Ringing.

Code ringing closed-circuit fire alarm boxes are subdivided into the following groups:

Enclosed Pull-Lever Surface and Semi-Flush.

Break-Glass Pull-Lever Surface and Semi-Flush.

Weatherproof Pull-Lever Surface.

Weatherproof Break-Glass Pull-Lever Surface.

Sounding Devices

Sounding devices for fire alarm systems are designed with the utmost care to afford the maximum of protection through dependable operation. Dependability is the more important as fire alarm sounding devices may remain idle for long periods of time and yet must be so constructed that, when the need arises, they function instantly and satisfactorily.

Sounding devices are divided into 2 general classes, viz.:

Electrical Sounding Devices.

Mechanical Sounding Devices.

Electrical sounding devices are predominant for use in fire alarm systems and comprise:

Straight Electric Signal Gongs—Single Stroke and Vibrating.

Electro-Mechanical Signal Gongs.

Small Electric Sirens.

Motor-Driven Horns and

Vibrating Horns.

Mechanical sounding devices consist of compressed air horns.

Fire Alarm Control Cabinets

For regular, pre-signal or dual-operated and double code fire alarm systems.

Fire alarm control cabinets are designed for the control and supervision of Fire Alarm Circuits. They consist of ebony asbestos or slate panels having mounted thereon necessary controller-relays. Trouble-relays, time-limit-cut-outs, meters, terminals, fuses, etc., all being enclosed in heavy pressed steel fireproof cabinets with Yale locked doors. Glass windows are provided in doors to permit ready reading of meters without opening the doors.

Fire Alarm Apparatus

Fire alarm apparatus is steadily being improved in quality and design from year to year and is guaranteed to be electrically and mechanically perfect. Particular attention, however, is called to the necessity of proper installation and maintenance if every day in the year satisfactory service is to be obtained. Installation suggestions are furnished with each system.

Engineering Advice

Our engineering department will promptly advise and cordially co-operate with anyone contemplating the installation or use of fire alarm apparatus.

Edwards Fire Alarm Stations
Schedule D

Nos. 1275-2, 1275-2-DO, 1275-2-M Nos. 1276, 1276-DO, 1276-M

Closed Circuit Code Ringing Stations
For Systems SS, 110-120 V. D.C.; SSA, 110-120 V. A.C.; EMB, Battery
Open Door Pull Lever Type

Open door and pull down lever to sound alarm. Lever automatically disengages from mechanism, and subsequent pulling has no effect on proper operation of system. May be run for test without operating system by use of a test key. Finish is red enamel with raised aluminum letters.

No. 1275.—Surface type for surface conduit. Overall dimensions, 7 $\frac{1}{8}$ inches high, 5 $\frac{7}{8}$ inches wide, 5 inches deep. Approximate weight, 8 $\frac{3}{16}$ pounds.

No. 1275...... each \$40.00

No. 1276.—Semi-flush for concealed conduit. Overall dimensions, 8 $\frac{1}{2}$ inches high, 7 $\frac{3}{16}$ inches wide; including wall box, 7 $\frac{3}{4}$ inches high, 5 $\frac{3}{4}$ inches wide, 3 $\frac{3}{8}$ inches deep. Approximate weight, 9 $\frac{1}{16}$ pounds.

No. 1276...... each \$40.00

Approximate weight wall box only, 3 $\frac{3}{16}$ pounds.

Break Glass Pull Lever Type

Breaking glass unlatches door, which springs open and remains so. Pulling down lever causes sounding of alarm. Door may be opened for test without breaking the glass by use of special key, otherwise station is same as Nos. 1275 and 1276.

No. 1275-2.—Break-glass surface type for surface conduit. Overall dimensions same as No. 1275. Approximate weight, 8 $\frac{3}{16}$ pounds.

No. 1275-2...... each \$46.00

No. 1276-2.—Break-glass semi-flush type for concealed conduit. Overall dimensions same as No. 1276. Approximate weight, 9 $\frac{1}{16}$ pounds.

No. 1276-2...... each \$46.00

Approximate weight wall box only, 3 $\frac{3}{16}$ pounds.

Closed Circuit Pre-Signal Code Ringing Stations
For Systems PSS, 110-120 V. D.C.; PSSA, 110-120 V. A.C.;
PEMB, Battery

Designed and constructed the same as stations described above, except that the pre-signal alarm is sounded four times at pre-determined places only. If upon investigation it is found desirable to sound a general alarm to clear the building, this may be done by inserting a special key in any box and pulling lever.

No. 1275-DO, Same as No. 1275..... each \$46.00

No. 1276-DO, Same as No. 1276..... each 46.00

No. 1275-2-DO, Same as No. 1275-2..... each 52.00

No. 1276-2-DO, Same as No. 1276-2..... each 52.00

For City Connected Systems

For Systems SSM, 110-120 V. D.C.; SSAM, 110-120 V. A.C.

Designed so pulling lever sounds general alarm within building and through control panel relay operates a city fire alarm station. For fire drills a key is used at any station before pulling lever to prevent city station from operating.

No. 1275-M, Surface Type, Same as No. 1275... each \$46.00

No. 1276-M, Flush Type, Same as No. 1276.... each 46.00

No. 1275-2-M, Surface Type, Same as No. 1275-2 each 52.00

No. 1276-2-M, Flush Type, Same as No. 1276-2 each 52.00

Special Features for Code Stations

220-240 volts operation, when specified, no extra charge. Two sets of contacts, 1 code wheel, add, \$2.00. Two sets of contacts, 2 code wheels, add, \$4.00. Shunt type arrangement, add, \$7.15. Hammer and chain for any station, \$1.38 each. Glass for any station, \$.28 each. No. 1290 weather-proof case, drilled for $\frac{1}{2}$ or $\frac{3}{4}$ -inch conduit, add, \$35.00. When used with No. 1275 station, the cover of the latter is omitted, for which an allowance of \$2.90 is made from price of No. 1275.

Edwards Hammerless Break-Glass Non-Code Fire and Emergency Stations

6-125 Volts
Schedule D

First pull of lever breaks glass, allowing plunger to come into alarm position. Lever falls down, displaying arrow danger signal and words, "Replace Glass" on reverse side—immediately indicating which station has been operated and a constant warning to reset it.

Eliminates lost or stolen hammers, marred walls, etc. With hammer type stations, person may not completely break glass. In this station, glass must break completely with first easy pull. Hitting or leaning against lever will not break glass and accidental or mischievous operation is minimized.

Hinged front, unlocked with key, for test or fire drill. Size, 3 $\frac{1}{8}$ x4 $\frac{1}{8}$ inches. Standard finish, red with raised aluminum letters. Word "Emergency" can be substituted for "Fire."

Open circuit non-code stations are Underwriters' approved. Laboratories will not grant approval for non-code closed circuit stations.

No. 227, Flush-Open Circuit, Fits Std. Switch Box, Etc., Wt., 1 $\frac{1}{4}$ Lb..... each \$10.00

No. 227C, Flush-Closed Circuit, Fits Std. Switch Box, Etc., Wt. 1 $\frac{1}{4}$ Lb..... each 10.00

No. 228, Surface-Open Circuit, Cast Fitting for $\frac{1}{2}$ -Inch Pipe, Wt. 3 $\frac{1}{2}$ Lb..... each 12.00

No. 228C, Surface-Closed Circuit, Cast Fitting for $\frac{1}{2}$ -Inch Pipe, Wt. 3 $\frac{1}{2}$ Lb..... each 12.00

For all bronze finish with polished letters, add .25%.

No. 2024 Faraday Flush Type Fire Alarm Boxes

Open or Closed-Circuit

Schedule D

A break-glass box, finished in glossy English vermilion.

Fits a standard outlet box for conduit. Height, 4 $\frac{3}{8}$ inches; width 3 $\frac{1}{8}$ inches.

For fire alarm systems where it is not required that location of box be indicated.

Can be furnished hinged hammer type in place of chained hammer type at same price.

No. 2024..... each \$10.00
Extra glasses, 44 cents; chain and hammer, 60 cents.

No. 2077 Faraday Surface Type Fire Alarm Boxes

Open-Circuit, Non-Code-Ringing

Schedule D

A break-glass box, English vermilion finish; non-conduit installations.

Height, 4 $\frac{3}{4}$ inches; width, 3 inches; thickness, $\frac{3}{4}$ inch.

For systems where it is not required that location of box from which signal originates be indicated by automatic code-ringing of gong and where failure of operative current or derangement of circuits or apparatus is not required to be automatically indicated.

No. 2077..... each \$2.90
Extra glasses, 44 cents; chain and hammer, 60 cents.

Faraday Fire Alarm Apparatus

Listed as Standard by Underwriters' Laboratories
Schedule D

Fire Alarm System F

For 110-125 Volt A.C. Circuits

Faraday Fire Alarm System F is an electrically supervised, code-ringing, closed-circuit system using single-stroke a.c. gongs. It is for use only where there is a dependable source of 100-125 volt, 60-cycle (25-30 volt and 40-cycle to order) a.c. current.

Recommended for factories, warehouses, lofts, schools, etc. May also be used for small hotels, apartment-houses, small hospitals and similar institutions.

The pulling of any box causes a general alarm to be sounded. This alarm is coded showing the location of the box pulled.

No. 2022

Code-Ringing Fire Alarm Boxes for System

No.	Description	Each
2022	Surface Type, Pull Lever.....	\$40.00
2023	Semi-Flush, Pull Lever.....	40.00

Not more than 20 boxes or 10 gongs, wired in series, should be placed on any one circuit.

Federal Fire Alarm Boxes

Any number of these fire alarm boxes may be used and located throughout the territory to be protected.

Pulling down the lever of the box operates the siren up and down the scale automatically for a predetermined length of time and then automatically shuts it off. Only two wires are needed to connect this box to the remote control. For use with any siren.

Fire Alarm Box.....	each \$35.00
Fire Alarm Box (Weatherproof).....	each 50.00

Perfection Teletypewriter Tape

A sensitized coated paper that copies from pressure without carbon.

It is ideal for duplication; gives more yardage and assures clear, distinct and positive copies.

8 1/16-Inch Teletypewriter

Gummed or Ungummed

Furnished for single copies, 2, 3, or 4 copies, thin carbon, and 2, 3 or 4 copies blue carbonless.

Shipped in rolls of 320 feet, 4 1/2 inches in diameter, weighing 4 pounds, and packed 9 rolls to carton.

1 1/16-Inch Oiled Perforator Tape

Shipped in rolls of 1040 feet, 8 inches in diameter, weighing 1 1/2 pounds, and packed 50 rolls to carton.

3/8-Inch Teletype Tape

Gummed or Ungummed

Shipped in rolls of 1050 feet, 8 inches in diameter and packed 50 rolls to carton.

Gummed rolls weigh 7.65 pounds, and un gummed rolls weigh 0.54 pounds.

Fire Alarm Tape

Width, 1/2 inch, 4 1/2 to 5 inches diameter, weighs 4 to 5 ounces per roll, 36 rolls to package, 288 rolls to carton.

Width, one inch, 4 1/2 to 5 inches diameter, weighs 8 to 10 ounces per roll, 18 rolls to package, 144 rolls to carton.

Police Register Tape

Width, 1 5/16 inches; 6 inches diameter, weighs 1 1/2 pounds per roll.

Wrapped 10 or 12 rolls to package, 40 or 48 rolls to carton.

We are also in a position to furnish rolls for any type automatic machines.

Pyrene Fire Extinguishers

For use on all electrical fires and fires from oil, paint, or highly inflammable materials. Liquid is a non-conductor of electricity. Will not freeze at 50° F. below zero.

Size 1 pint and 1 quart, 12 in package; 1½-quart, 6 in package. When ordering enamel finish, specify color.

Pyrene 2-Quart Pressure Type Fire Extinguishers

This vaporizing liquid type fire extinguisher is operated by air pressure. It is recommended for incipient fires in all classes of material, and especially for inflammable liquids and electrical fires.

It is ruggedly constructed throughout of copper and brass. It has a special combination nozzle which produces a solid stream when opened wide, a fan-shaped spray when opened partially and is closed when in normal position.

The fan-shaped spray instantly vaporizes the liquid, thereby displacing oxygen and smothering the fire, and is especially valuable for extinguishing fires in well-filled containers.

Operated by air pressure, it is easy to use in congested places and to direct the stream where it is most needed.

The air pressure is renewable at any air line producing 100 pounds pressure.

Height 18 inches. Diameter 5 inches.

Sold completely charged and with wall bracket, screws, and recharge date tag. For mounting on vehicles subjected to vibration, a special clamping type bracket is available, which may be mounted on running board, instrument board, side of cab, or deck and in any position.

Weight charged, 16½ pounds; shipping weight 18 pounds.

No. C103, Copper, Wall Bracket.....	each	\$40.00
No. C102, Nickel, Wall Bracket.....	each	43.00
No. C104, Chromium, Wall Bracket.....	each	44.00

No. CR10, 2 Quart Pyrene Liquid.....	each	3.00

Pyrene Fire Extinguishers

Pressure Type

Capacity 1 Gallon

Adapted especially for use by large industries, public utilities, railroads and oil companies, for protection of busses, motor trucks, motor boats, filling stations and all electrical equipment, and wherever greater fire fighting capacity is needed. Discharges completely in 55 seconds.

This extinguisher is inspected and labeled by the Underwriters' Laboratories and approved by the Associated Factory Mutual Laboratories.

No. C43 Polished Copper.....	each	\$70.00
No. C42 Copper, Buffed Nickel.....	each	73.00
No. C44 Copper, Chromium-Plated.....	each	74.00

Hydrogarde Fire Extinguishers

This water type extinguisher discharges a 40 to 50-ft. stream of plain water without pumping or chemicals, by means of pressure from a carbon dioxide gas cartridge. For fires in wood, paper, textiles, etc. Filled with distilled water, it may be used on telephone switchboard fires. Operated by turning upside down and striking plunger on floor to release gas pressure. Safety valve relieves excessive pressure in case of over-filling with water. Annual recharging is not required; refill with water and insert new cartridge. Inspected and labeled by Underwriters' Laboratories. Cap., 2½ gallons.

No. H13, Polished Copper.....	each	\$22.50
No. H12, Copper, N.P.....	each	24.50
No. H14, Copper, C.P.....	each	25.50
No. H15, Copper, Enamel Fin.....	each	22.50

No. HC1 extra cartridge complete and recharging cartridges prices on request.

Kidde Water Type Fire Extinguishers

Capacity, 2½ Gallons

Meets all insurance requirements for the protection of buildings, factories, dwellings, mills and other occupancies where wood, rubbish, paper or textile fires may occur.

This extinguisher utilizes water as the extinguishing medium. The water is discharged by the pressure released from a cartridge of carbon dioxide gas. Since the gas does not deteriorate with age, there is no necessity for annual recharging the extinguisher.

The water stream attains instant full range which is not diminished as the level of the water in the extinguisher is lowered. This equipment contains no acid and no soda; therefore, it is not subject to interior corrosion.

To operate the extinguisher it is turned bottom up and struck on the ground. This action releases the carbon dioxide gas from its small cartridge. The gas is then discharged through a tubular metering cutter so that the application of pressure is constant until the extinguisher is completely empty.

The entire carbon dioxide cartridge assembly is hermetically sealed and the cartridge is enclosed in a nickel-plated copper jacket to prevent corrosion.

The interior of the shell of the extinguisher is lead coated with a standard red lacquer finish on the outside.

Approved by the Underwriters' and Factory Mutual Laboratories, and U.S. Bureau of Marine Inspection and Navigation.

Prices upon application.

Klaxon Industrial Horns

5 to 255 Volts, D.C.
10 to 460 Volts, A.C.

Electric motor-driven signal sounding devices, designed for operation on higher voltages; for time signals, code calls, telephone calls, etc. May be used with safety as fire or special hazard alarms or as warnings on cranes, derricks, etc.

With weatherproof housings and fitted with brackets for wall mounting; tapped for conduit.

Fire red lacquer finish.

When ordering specify type desired; give voltage or current supply and if a.c. or d.c., advise cycle frequency if current is a.c.

Type WL

With a long projector. Has a deep, penetrating note and is recommended where long distances are to be covered or where it is desired to direct the note toward a given point.

In open country, where there are not other unusual sounds, this horn can be heard a distance of 1 mile.

Length, 14¼ inches; height, 13 inches.

Shipping weight, 29 pounds.

Type WL.....each \$35.00

Type WS

Has a short projector, producing a harsh, piercing note which scatters in all directions.

Especially suited for indoor use under severe noise conditions.

Length, 7½ inches; height, 11¾ inches.

Shipping weight, 24 pounds.

Type WS.....each \$35.00

Type W

Furnished with a ram's horn projector which directs its deep tone downward. Ideal for overhead or outdoor use.

Length, 12¼ inches; height, 11¾ inches.

Shipping weight, 29 pounds.

Type W.....each \$35.00

Nos. 1542-A and 1543-A

A small vibrator type horn for inside or protected outdoor use. Can be heard over large areas above the din of factory or other noises. No oiling necessary.

Length, 5⅝ inches; height, 6½ inches, including mounting bracket.

Shipping weight, 5 pounds.

No. 1542-A, for Operation on 110 Volts, 60 Cycles. ea. \$5.00
No. 1543-A, for Operation on 110 Volts, D.C....each 5.00

Edwards Industrial Horns

Schedule T

No. 311

No. 312

A backplate mounts directly on wall for non-conduit wiring, or on 4-inch square box, standard switch box, any outlet box with single gang cover, any single gang conduit or wiremold type fitting. An envelope containing all the necessary mounting screws is supplied with each horn. For open wiring, washers are supplied to raise back plate from wall enough for wires to pass underneath it. Wires are brought through entrance holes in plate and connections made to binding posts in front of plate where there is plenty of room to work. The horn is then hung on two strong lugs and pressed home, where it snaps solidly into place and is held securely. To prevent tampering, a few turns on a set screw at bottom of each device locks it in place.

Indoor Types

No. 311.—Powerful signal for all indoor uses. Grille front affords pleasing appearance which recommends it for schools and better buildings. Easily installed flush. Size of horn, 5½ inches diameter, 3¾ inches deep.

No. 310.—Equipped with megaphone projector to allow greater volume than grille type. Adaptable for indoor use where machinery noises must be overcome. Size, 6 inches high, 6 inches deep, 10¾ inches long.

No. 314.—Indoor 2 direction type. Size, 6 inches high, 7½ inches deep, 18 inches long.

Weatherproof—Outdoor Types

Thoroughly weatherproofed. Equipped with cast iron back box.

No. 312.—Powerful signal, for average outdoor uses. Single megaphone. Size, 5½ inches high, 5½ inches deep, 10¾ inches long.

No. 313.—Two direction megaphone. Size, 5½ inches high, 9 inches deep, 17½ inches long.

No.	12-30 V. A.C.		120 V. A.C.		220 V. A.C.		Approx. Weight Pounds
	60 Cy. Each		60 Cy. Each		60 Cy. Each		
310	\$12.50		\$12.50		\$15.00		6
311	11.25		11.25		13.75		5
312	15.00		15.00		17.50		8
313	20.00		20.00		22.50		10
314	17.50		17.50		20.00		8

Standard frequency 60 cycles. 25 cycles supplied at no extra charge if specified.

For d.c. voltages add \$2.50 to prices shown. Add letter D to number. Specify exact voltage.

Series Operation: Divide full available voltage by number of horns per circuit to find voltage per horn for pricing. Give full details when ordering. D.c. horns cannot be operated in series.

No. 309 Edwards Flush Horns

12-30, 120, 220 Volts A.C., 60 Cycles
Schedule T

For flush installations particularly in new buildings such as schools and other public institutions.

Tone adjustment may be made after horn is installed in wall.

Standard face is steel, finished black.

Size of face plate, 6½x6½ inches. Wall cut size, 5⅝x5⅝x2½ inches deep.

No. 309, 12-30 V. or 120 V. A.C.....each \$20.00
No. 309, 220 V. A.C.....each 22.50

Price includes steel wall box with combination ½ and ¾-inch knockouts on 4 sides. Sprayed bronze or prime white no extra charge, if specified. Bronze plate add \$2.50.

25 to 40 cycles can be supplied at same price when specified. For d.c. specify No. 309D, add \$2.50 and specify voltage.

Federal Sirens
Type A

Takes the place of bells, gongs, whistles, etc., wherever electricity is available. No gears or vibrating parts. Totally enclosed high speed ball-bearing universal motor 6 to 250 volts, a.c. or d.c., 1/2 hp., carries on the motor shaft the sound producing fan rotating in an aluminum stator, the whole assembly enclosed in a weatherproof housing with swivel bracket

to permit any mounting. Length overall, 17 inches. Diameter horn, 10 inches.

Shipping weight, 15 pounds.

Type A, Standard each \$40.00
Type A (For Short, Sharp Code Signals)..... each 75.00

Type D—Standard

Similar to Type A, but is equipped with 1/2-hp. motor and has a deeper tone. Length overall, 19 inches. Diameter horn, 9 1/2 inches. Finished in red lacquer.

Shipping weight, 17 pounds.

Type D..... each \$45.00

Federal Standard Vibratory Horns

Ideal for use in mills, mines, yards, warehouses, public buildings, and in any location where a distinct code signal or long warning blast is desired. Whether for interior or exterior use, this horn is weatherproof and watertight. Constructed throughout of non-corrodible materials.

The housing is tapped at top and bottom for 1/2-inch conduit.

Die cast from special non-corrodible alloy.

Projectors on Models 30, 40, 50 and 51 can be rotated.

Aluminum finish. Packed 1 to a carton.

Model.....	Grill		Single Projection		Double Projection	
	30A	40A	30	40	50	51
Each.....	\$7.50	9.50	10.00	12.00	13.50	15.50

Cycle.....	60		60		60	
Ship. Wt....lb.	4 1/4	4 1/4	6 1/2	6 1/2	7	7

Available for concealed conduit mounting, if specified, at no additional charge. Horn can be furnished for flush mounting for \$6.00 additional. All models available in any specified voltage from 6 to 250 with no increase in price for 25 cycle.

Federal High Power Vibratory Horns

Similar in all details to the standard model, but provides almost double the sound volume. Where maximum volume is required, it has an advantage over motor driven units because it can be coded much more rapidly. This horn which is also weatherproof, watertight, and non-corrodible fills a definite need in applications where an ordinary horn is not satisfactory.

Die cast from special non-corrodible alloy.

Projector on Models 32, 42, 33 and 43 can be rotated.

Aluminum finish. Packed 1 to a carton.

Model.....	Grill		Single Projection		Double Projection

Ship. Wt....lb.	4 1/2	4 1/2	6 1/2	6 1/2	9 1/2	9 1/2

Available for concealed conduit mounting at no additional charge and for flush mounting at \$6.00 additional. Also available in any specified voltage from 6 to 250 with no increase in price for 25 cycle.

Federal Vertical Electric Sirens

Vertical general alarm and code sirens provide effective signals for industries and municipalities. The vertical design distributes the sound equally in all directions over a radius of from 1/4 to 3 miles. Grease sealed ball bearings and heavy duty construction assure maximum durability and performance. The heavy galvanized sheet metal housing makes the siren completely weatherproof but does not muffle tone.

Large sirens should be operated through a remote control to which any number of push buttons, or pull lever boxes may be connected.

Federal Vehicle Sirens

A complete line of powerful sirens, with or without flashing lights for fire apparatus, ambulances, police cars, and other emergency vehicles, ranging in price from \$15 to \$100.

Write for complete literature.

Federal Resonating Horns

A powerful electric horn with pleasant but penetrating trumpet tone. Overcomes unusual noise levels.

Body is of special non-corrodible alloy.

Horn is of sheet metal. Weatherproof and watertight. Specify definite voltage and cycle desired.

Packed 1 to a carton. Shipping weight, 11 pounds.

Federal Compressed Air Horns

Available for Any Pressure From 15 to 150 Pounds

Federal Compressed Air Horns operating on a principle of diaphragm vibration are characterized by greater power and minimum air consumption.

Horns are of cast bell bronze, accurately machined and tuned to match diaphragm tone.

Each successively larger unit is more powerful and lower pitched. A tone frequency of 725 cycles per second is a shrill piercing note. A tone frequency of 105 cycles per second has the depth and timbre of a steamship whistle.

Hand or electric valves are also available.

When ordering, specify air pressure for horns, and pressure and current requirements in ordering valves.

Prefix number indicates diaphragm size.

No. 135 Schwarze Kodaire A.C. Industrial Signals

For A.C. Light and Power Circuits, 50 Cycles and Higher
Schedule S

Kodaire is an all-electric air blast coding signal that actually masters industrial noises. It produces a non-synchronous trumpet blast that will penetrate noises where the conventional signals cannot be heard. The Kodaire is designed primarily for coding and paging purposes.

Widely used in industrial plants, machine shops, foundries, mills, railroad and ship yards, construction projects, quarries, power plants, lumber camps, mines, oil fields and similar places where considerable noise or distance is involved. For series or parallel operation.

Adapted to all types of installations because the entire mechanism is completely enclosed in a cast iron weatherproof housing. Concealed terminals are provided in a readily accessible compartment equipped with three tapped ½-inch conduit entrances. Equipped with a convenient bracket for solidly mounting on a column, beam or similar structure. The horn projector may be pointed and locked in any desired direction.

Height, 15 inches; length, 23 inches; width, 6 inches.

Finish: regular duty, black crackle enamel; fire duty, red enamel.

Approximate shipping weight, 30 pounds.

For 110 Volts A.C. each **\$37.50**
For 220 Volts A.C. each **40.50**

Benjamin Motor Driven Signals

Listed by Underwriters' Laboratories

No. 8175

A weatherproof signal of unusual tone and penetration. Used indoors or out where service requirements are exacting. For use in steel mills, railroad shops, foundries, and all locations where noise is excessive.

Pitch of signal is correct for cutting through conflicting noise. Suited for coding as there is no lag or coasting of motor to blur the coded signal.

Signal has heavy cast body, weatherproof rubber gaskets, drop-forged, heat-treated alloy steel ratchet and diaphragm anvil, phosphor bronze armature bearings, and automatic wick-feed lubrication. Motor is series wound for starting power, and has correct r.p.m. to produce penetrating tone. A set screw at rear of housing controls volume and pitch.

Standard voltage: 110 and 220 volts, 60 cycles a.c. or 110 and 250 volts, d.c. Power consumption, 55 watts.

The double projector type motor-driven signal is used where sound is to be projected in opposing directions from a central location.

Conduit connection, ½ inch.

Finished in battleship gray enamel. Red enamel furnished at an advance of \$1.25.

Weight, 24 pounds.

With 8½-Inch Single Bell Type Projector

*A. C.			†D. C.		
No.	Each	Volts	No.	Each	Volts

8180-220V	47.50	220	8181-250V	50.00	250

*Also operates on 50, 40 or 30 cycles.

†Also operates on 25 cycles, a.c.

Benjamin Weatherproof Fire Alarm Howlers

Listed by Underwriters' Laboratories

For use on fire alarm systems operating under stringent regulations.

The threaded ring separable construction, and plug-in type of wiring connection assures quick, simple installation.

D.c. howler has interrupter with coin silver contacts protected by condensers against arcing. A.c. howler has no contact; vibrations follow cycles of a.c.

The horn assembly consists of a 7½-inch seamless bell type steel projector permanently attached to a pressed steel cover on which is mounted the horn mechanism.

Baked red enamel finish.

Shipping weight, 6¾ pounds.

Benjamin Heavy-Duty Weatherproof Howlers

Listed by Underwriters' Laboratories

Ideal for effective calling or warning in industrial and commercial locations.

The threaded ring separable construction and plug-in type of wiring connection assures quick, simple installation. Operates on either series or multiple circuits.

Identical outlet box housings and union attaching rings are supplied on all signals, assuring complete interchangeability of projectors.

The outlet box housing is a heavy metal casting to which the projector assembly is attached by the cast aluminum threaded union ring. The joint between these two assemblies is sealed by a rubber gasket.

Housings are regularly tapped on one side only for 1/2-inch conduit entrance but can be tapped for 3/4-inch conduit, when specified. Housings can also be tapped straight through for either 1/2 or 3/4-inch conduit at an advance of 5 cents in list price.

D.c. howler has interrupters with coin silver contacts protected by condensers against arcing. A.c. howler has no contacts; vibrations follow cycles of a.c.

Baked battleship gray enamel finish; red enamel finish, when specified.

When ordering, specify voltage and frequency.

Benjamin Factory Non-Weatherproof Howlers

Listed by Underwriters' Laboratories

Suitable for use in all locations where signals of weatherproof construction are not required.

The signal housing is of heavy gage pressed steel, while projectors and grilles are durably constructed. Clamping band is of electro-plated copper; rubber gasket seals the joint between the housing and horn assembly.

Operates on either series or multiple circuits. D.c. howler has interrupters with coin silver contacts protected by condensers against arcing. A.c. howler has no contacts; vibrations follow cycles of a.c.

Housing has one 1/2-inch size conduit knockout at the back and one at the side and two sets of mounting holes, spaced on 2 3/4 and 3 1/2-inch centers. Double projector type is used with No. 8731 adapter plate.

Baked battleship gray enamel finish; red enamel finish, when specified.

Benjamin Industrial Buzzers

Listed by Underwriters' Laboratories

Recommended for use on calling and warning systems where the volume of competitive noise is not excessive.

The buzzer mechanism is attached directly to the removable metal cover of the case and it is the armature striking this metal cover which produces the sound.

Heavy Duty Mine Type Buzzer—Tapped 1/2 Inch

For use in tunnels, subways and etc.

Separable construction, with heavy cast metal housing and a steel cover, held in place by a metal threaded union ring.

Housings regularly tapped 1/2-inch, one side only.

Baked battleship gray enamel finish.

Benjamin Single Stroke Bells and Chimes

For Series or Multiple Operation

Listed by Underwriters' Laboratories

Bell

Simple in design and positive in operation. Mechanism is of the solenoid type with only one moving part, the plunger, which responds instantly when coil is energized.

Tone volume is adjustable. Soft, medium or loud tones may be obtained by turning set screw at bottom of casing, which regulates plunger stroke.

Installation is simplified by special mounting plate which provides a means of direct attachment to Gem Type Outlet Boxes or to any switch or outlet box cover having mounting holes spaced on 3 1/2-inch centers.

In installing, mounting plate is first attached to outlet box or cover by two screws. Wires are then brought through large center hole in plate, and looped around binding screws. After wiring, device is attached by two screws threading into special mounting plate.

Chime

Plunger is of magnetic iron, with a bakelite striker and moves freely in a bakelite tube. Magnet coil is layer wound, impregnated and not affected by moisture. The chimes are identical in construction to the bells except that a metal chime bar with a metal resonating chamber is provided in place of a gong.

Bell housings are cast iron. Bells are nickel plated; housings, battleship gray finish.

Chime housings are cast iron, crackle lacquer finish. Chime bar and resonating chamber, chromium plated.

‡Signal transformer required to operate.

Benjamin Telecode Relays

Listed by Underwriters' Laboratories

For telephone ringing extension and closed circuit alarm systems in factories, mines, etc., where great volumes of noise make it difficult to hear a telephone bell.

Supplied with contacts arranged for open circuits, contacts open until coil is energized; with contacts arranged for closed circuits, contacts closed until the relay is actuated by current flowing through the coils; and with locking armatures, special winding on coils locks the contacts when the relay is operated, giving continuous operation to signals until circuit is broken by a release switch. Contacts are of tungsten steel; coils are form wound with moisture-proof coverings.

Rated .8 ampere at 110 volts. Standard coil windings, 1000 ohms for operation on 110-v., 60-cy., a.c. or 18 volt d.c. circuits.

Battleship gray enamel finish.

When ordering, specify resistance of telephone bell ringer coils, or voltage and frequency of ringing circuit.

For Panel Mounting

Less Condenser

For direct panel mounting; also used as the basis of all combinations listed below.

Has a bakelite base, 4½ inches in diameter, with two mounting screw holes spaced on 3½-inch centers.

Shipping weight, 2½ pounds.

No.	Description	Each
8313-P	Open Circuit.....	\$12.00

Benjamin Heavy Duty High Voltage Push Buttons

5 Amperes, 125 Volts

Listed by Underwriters' Laboratories

For use with industrial signals. Has quick, make-and-break mechanism, positive acting, mounted on base of high heat molded insulating material for use with circuits carrying inductive loads. All joints are water tight.

Dead black finish.

Non-Locking, Non-Water Tight Type

No. 8465

Open circuit type. Has brass casing with two mounting lugs, and boss tapped for ½-inch conduit one way, side or rear entrance as indicated. Side entrance casing will be tapped ½ or ¾-inch, one way or two way, if specified.

Brass cover threaded for connection to casing.

No.	Each	Description	Wt., Lb.
8465	\$3.00	Side Entrance.....	2
8413	3.00	Rear Entrance.....	2

Non-Locking Type, Water Tight

Suitable for most any kind of electrical signaling. Plunger is normally below the surface of the cap so the button cannot be accidentally operated. Waterproof rawhide gasket seals the plunger opening.

Unmarked name plate furnished.

Single Button

No. 8493

Has brass casing, with two mounting lugs, and one end boss tapped ½ inch.

Casing will be tapped for ½ or ¾-inch pipe one way or two way if specified, without extra charge.

Edwards Flushcall Signaling Devices

Flushcall Device Buzacall Togelpush

Signaling and calling devices for residence, apartment, or any place old-fashioned bells, buzzers, and transformers were heretofore used. Each device fits standard gang boxes and takes standard switch or receptacle plates. Can be ganged together with 110-volt receptacles, etc., in standard box and finished with standard plate.

Each device is designed and built for a.c. operation only on 8 to 12 volts—with absolutely no adjustment before, during, or even after installation. The uncertainty as to proper resistance, voltage, etc., for various uses has been eliminated. Each device has a specific number for its use.

CONSTRUCTION DETAILS: Large, accessible binding posts, frame and louvre front plate combine to completely surround and protect gong and mechanism from wires in box. Inclined construction of frame and shallow design leaves ample room for lock nuts and wires. Elliptical hole permits a plumb adjustment. Mechanism completely insulated from frame. Rust-proof metals or finish throughout.

No.	Each	Schedule	Volts	Cycles	Std. Pkg.	Approx. Wt. Lb.

Underwriters' approved. Fits any standard box or outlet box with cover, 2³/₈ inches deep if placed in second gang of any combination, taking 110 volts from same line as receptacle, switch, etc., in first gang. Binding posts for easy installation.

666	\$.90	E	†110-130	60-140	20	23
667	1.50	E	††110-130	60-140	20	23

†Primary; 8-volts secondary. ††Primary, 14-volts secondary. For 220 volts 60 cycles primary, add to 110 volts 60 cycles, 15%.

Push, Bell, Buzzer Combination

For walk-up apartments, a two-gang box is used with the Tucall for front door and rear door or dumbwaiter signals, and the Togelpush for door opener operation, using a standard two-gang toggle plate. For narrow spaces, however, several different combinations for this type installation can be furnished to fit a single gang box. A special plate is included.

Standard package, 20.

Approximate weight per standard package, 13 pounds.

Complete engineering data on application.

No. 506 Edwards Bus Pull Cord Switches

Schedule T

Designed to operate bus signal bells or buzzers. Its small neat appearance and polished nickel finish will harmonize with other interior bus hardware.

Constructed of heavy gage material, and completely enclosed to prevent dust and dirt from collecting in the mechanism.

Easily wired, and once installed never needs adjustment.

Operates on battery voltage.

Approximate weight, 6 ounces.

No. 506.....each \$4.50

No. 504 Edwards Bus Door Step Light Switches

Schedule T

A ruggedly constructed door switch for operating step lights.

Built to stand up under the constant operation found in bus service.

Face plate is of heavy gage brass with polished nickel finish. Head of plunger is stainless steel.

Contacts are enclosed in bakelite base.

Operates on battery voltage.

Bumper plate and mounting screws supplied with each switch.

Approximate weight, 8 ounces.

No. 504.....each \$2.75

No. 504 Switch and Bumper Plate

No. 156 Edwards Monitor Bells

Schedule T

An entirely self-contained bell that presents a neat appearance.

The hammer rod moves on a straight line and strikes the inside of the gong. This allows the bell to be made bug and dust proof.

The springs are phosphor bronze, the contacts pure hard-drawn silver. Has a 3-inch gong.
Cadmium finish with black base.
Standard package, 1 ; approximate weight, 1 3/8 pounds.
Standard 8-10 V. A.C., 6-8 V. D.C.....each \$1.80
For Special Voltage or Resistance up to 48 Volts (Specify When Ordering).....each 3.10

Edwards Vibrating or Single Stroke Adaptabels

For All A.C. and D.C. Voltages
Schedule T

This is a compact bell of the Underdome, Turtle or Monitor type.

As the electrical connections are made to the mounting plate only, the whole electrical installation can be made, tested and completed before painting and finishing.

The maintenance problem in hard service work, like traffic signals, railroads, etc. is simplified with a few spare Adaptabels. The Adaptabel is easily detached and a new one attached—instead of repairing on the job or installing a new bell.

The movement is completely enclosed in a cast aluminum housing. Protected against dirt, bugs, etc. When weatherproof is specified, it is protected with gaskets.

The a.c. vibrating mechanism is the polarized, no contact type. The d.c. vibrating mechanism is also of the straight line plunger type. Gongs are hot pressed steel, Parkerized to prevent rust.

All 6 to 12-inch Adaptabels mount directly on wall, 4-inch square box, standard switch box or any outlet box with single gang conduit or Wiremold type fitting.

All 3 or 4-inch Adaptabels have separable plate for mounting same as above and will also fit 3 1/4-inch octagon boxes.

In ordering, specify voltage desired.

*Standard bells unless otherwise specified are for 12-18 volt operation. There is no extra charge for bells to operate on 8 volts or 30 volts—but the exact voltage must be specified.

Edwards Single Stroke Bells

For Approved Coded Fire Alarm Systems

No. 23 for D.C., No. 24 for A.C.

Schedule D

Solenoid construction approved by State, Insurance and Underwriters' Boards for closed circuit fire alarm systems. Mounts on wall or 4-inch square box, or standard switch box, or any outlet box with single gang switch cover, or on any single gang conduit or wire-mold type fitting. Prices for series operation on 110 volts from control panel.

Size.....in.	4	6	8	10	12
Each.....	\$18.00	24.00	27.00	32.00	36.00
Approx. Wt.lb.	1 3/4	4 1/8	5 1/8	8	9 1/8

Prices include 4-inch square box, but any desired box or fittings can be secured quickly, in which case specify without boxes and deduct 50 cents from price.

No. 551 Edwards Plunger Type Bells and Buzzers

For All A.C. Voltages

Schedule T

A no-contact, polarized bell. For traffic signals, mines, warehouses and all standard signaling purposes.

Binding posts and all parts are completely covered; as hammer rod operates in a straight line, the hole in the cover is but little larger than the rod itself, which makes the bell bug and dust proof. Rustproof gongs are standard equipment, and with the addition of a gasket the bell is weather-proof. Adaptor plate equipped.

There are no contacts to wear, stick or replace. No pivots, coil springs or points of friction.

Novel adjusting device automatically prevents stalling or chattering on the neutral point of the a.c. cycle. This is a common fault with a.c. bells of other design.

No adjustment. The only wearing part is where the hammer strikes the gong and the mechanism automatically adjusts itself to this.

Approved by the National Board of Fire Underwriters.

No. 510 Edwards Clapper Type Bells and Buzzers

For Transformer and 110-130 Volt A.C. Lighting Circuits

Schedule T

Designed to give lastingly efficient service on a.c. voltages where a bell with contacts is desired. Has superior type laminated magnets and specially constructed armature.

The vibrating unit is designed to allow full operation of the armature spring with a mechanical breaking of the circuit, independent of the spring action, which gives much more power, and longer life than the old pivoted armature and coil spring type mechanisms.

Has silver contacts with large area and excellent current carrying capacity. The binding posts and all parts are completely covered, making the bell practically bug and dust proof. Locking adjustment. Phosphor bronze springs.

No. 510Y Yard Type

Furnished complete with weatherproof hood for \$25.00 additional, to bell desired.

No. 100 Edwards Plunger Type Recti Bells and Buzzers

For All D.C. Voltages
Schedule T

Recommended for hard service. Plunger type movement of this bell gives a far more powerful signal with less strain on springs and armature. The springs are of phosphor-bronze. The magnets are oversize and correctly proportioned for unusual power. Contacts are of pure hard-drawn silver with large area. Locking adjustment is made without removing cover. Gongs are hot pressed steel, Parkerized to prevent rust. The hammer-rod operates through a hole in the case only slightly larger than the rod and the bell is completely bug and dust proof.

Standard Bell

Size Gong.....inches 6 8 10 12
Each..... \$8.00 9.00 10.00 12.00

For yard-type protective hoods, add \$25.00 each.

Adapter plates are supplied with 110-250-volt bells, permitting mounting of any bell on standard 4-inch square, standard switchbox or any outlet box with single-gang switchbox cover, on 3/4-inch octagon box, or on any single-gang Condulet or Wiremold-type fitting.

Transformer type bells, 12-30 volts, furnished if so specified with adapter plates, \$1.25 extra.

Rectangular or cow-gongs can be furnished as follows: Add \$5.00 to price of ATN-6 for 3 1/8x5-inch gong and specify No. ATN-35; add \$10.00 to price of ATN-8 for 4 1/4x6-inch gong, and specify No. ATN-46.

Faraday Skeleton and Covered Bells

For Transformer or Battery Circuits
Vibrating Clapper—Non-Weatherproof
Schedule E

Model O Faraday Skeleton Bells

For Battery Circuits Only

Designed to meet the requirements of good signal gongs with exposed mechanisms; high power patented pivoted armatures. Breakage of tension springs cannot disable gongs.

Contacts regularly Platinoid; platinum contacts, at an extra price. Bakelite insulation.

Wound to any special resistance at standard list additions.

For yard-type protected hoods, add \$25.00 each.

Standard package, 5 assorted.

No. and Size Gong	O-4	O-5	O-6	O-8	O-10
Each.....	\$7.10	9.35	10.55	16.00	24.85
Resistance Ohms.....	3	4	4	5	5

Model EA Faraday-Ekia Covered Bells

For Transformer or Battery Circuits

Reed-type armatures with back tension adjustments and adjustable side contacts. Heavy pressed steel frames and covers. Extra large double-magnets. Bakelite insulation.

Standard package, 5 assorted.

No. and Size Gong	EA-3	EA-4	EA-6	EA-8	EA-10
Model EA.....each	\$5.55	6.60	7.80	11.40	15.00

For yard-type protected hoods, add \$25.00 each.

Faraday A.C. Signal Gongs and Buzzer

Listed as Standard by Underwriters' Laboratories
For Transformer and A.C. Light and Power Circuits
Vibrating—Polarized Plunger Type—No Contact—Non-Sparking—Dustproof—Non-Guarded Gongs

Schedule T

High-grade, Polarized mechanisms which will stand up under the most severe a.c. service; bakelite insulation throughout.

Model ATL Neck Pattern—Weatherproof

No. and Size Gong	12-30-Volt A.C. Transformer Each	110-125 Volts A.C. Each	220-250 Volts A.C. Each	Cast Bell Metal Gongs Extra, Each	Grids Extra Each

ATLB Buzzer	10.00	13.00	15.50

For yard-type protective hoods, add \$25.00 each.

Model MTL Monitor Pattern—Weatherproof Coils

Non-Guarded

Yard Type with Protective Hood Weatherproof

Ideal for severe continuous a.c. service. Furnished in three types: non-guarded non-weatherproof, half or full-grid guarded weatherproof, and full screen guarded weatherproof. Mechanism protected from weather by strong cast iron casing. Having no contacts, transformer voltage of 30 volts or 110 or 220 is most satisfactory. Operates equally well on 25-60-cycle circuits. Specify voltage desired.

Though this model has weatherproof coils, for outdoor use it requires half or full grids to protect mechanism from rain and weather.

*Made in No. 2000-N Neck Pattern only.

When specified, all gongs listed above can be furnished with 2-signal mechanisms having three terminals which, when connected to a 3-wire circuit, will give a powerful vibrating signal and a clearcut single stroke signal; add \$20.00.

Adapter plates are furnished regularly with 110-250-volt bells at no extra charge. They permit mounting any bell on standard 4-inch square box, standard switchbox, any outlet box with single-gang switchbox cover, on 3 1/4-inch octagon box or any single-gang Conduit or Wiremold fitting.

Transformer type bells, 12-18-volt, furnished if so specified with adapter plate, \$1.25 extra.

Schwarze Monocoil Bells and Buzzers

For 6-8 Volts A.C. and 2-5 Volts D.C.
Special Coil Silver Contacts
Schedule SB

No. 31

No. 32

These bells and buzzers are used as tell-tale signals and call signals in residences, apartments, garages, service stations, offices, or anywhere a small, low voltage signal is required.

Powered with the special Schwarze Single Coil Mechanism. These signals operate on two or more dry cells equally as well as on a bell ringing transformer. The contact springs are of high quality spring temper phosphor bronze. The mechanism is grounded to the frame. All electrical connections are soldered to insure trouble-free service.

The frames and covers are made of heavy gage pressed steel. In the No. 32 Bell, the gong hammer is concealed.

Finish: frame, gray; gong, nickel plate.

No. 200, D.C.

No. 220, A.C.

Monitor Pattern—Surface Mounting Type

Solenoid Plunger Type—No Contact—Non-Weatherproof

Schedule R

These bells are made in one frame and mechanism size. They are for paging systems, announcement or door bell, servants' call, elevator signals, etc. Bells are widely used in residences, offices, hospitals, dormitories, hotels, theaters, etc. Specially adaptable for inbuilt use in elevator signal fixtures to operate in series or parallel with light signal. Rated for continuous duty.

Insulated from stamped frame. Terminals are concealed under gong. Made with cast bell metal gongs only.

Mounting holes are on 3 3/4-inch centers. Depth with 3-inch round gong, 2 inches; with 3-inch dome gong, 2 5/8 inches.

Schwarze D.C. Single Gong Bells

For Battery and D.C. Light and Power Circuits
Vibrating—Plunger Type—Special Tungsten Contacts

Schedule R

Frame finishes: regular duty, black enamel; fire duty, red enamel. Gong finishes: special hard steel—Parkerized rust-proof black, nickel plated, or Udylited (cadmium plated); cast bell metal—polished and lacquered.

In ordering, specify number, rated voltage and frequency, ohms coil resistance, gong size, and gong and frame finish.

Hanger plates, permitting mounting of bells on 4-inch square or 4-inch octagon outlet boxes, will be furnished at no extra charge when specified on order.

No. 163 is powered with a mechanism that operates on the solenoid principle, thereby eliminating the use of an armature and pivot pins.

Special contacts are used; protected by a condenser to suppress arcing.

Equipped with external adjustment screw which permits adjustment to produce a loud or subdued tone, as desired.

Schwarze Standard Single Stroke Bells

For A.C. or D.C. Light and Power Circuits
Nos. 201 and 202, D.C. Nos. 221 and 222, A.C.

Conduit Type
Solenoid Plunger Type—No Contact
Schedule R

Nos. 201 and 221

Nos. 202 and 222

These bells are standard, all-purpose, heavy duty, single stroke bells which are made in two frame and mechanism sizes, and which are similar in general appearance, mounting features and operating principle.

They are for paging systems, fire and general emergency alarm code signals, elevator signals, dispatching, etc. Bells are widely used in schools, public buildings, institutions, hotels, industrial plants, mines, stores, fire and police stations, ships, etc.

Nos. 201 and 221 are made non-weatherproof only. Nos. 202 and 222 are made in weatherproof and non-weatherproof. These bells respond instantaneously, code sharply and distinctly, and can be operated on either parallel or series circuits.

Frames are designed for mounting with gongs up. The mechanisms are completely insulated from cast iron frames. Plunger tube openings on Nos. 202 and 222 are protected by splash and dustproof cap. They are tapped for 1/2-inch conduit with knockouts for back wire entrance and recesses for outlet box, conduit, or surface mounting.

In ordering, specify number, rated voltage and frequency, ohms coil resistance, gong size, and gong and frame finish.

With Special Hard Steel Gongs

Schwarze A.C. Synchronous Double Gong Bells

For Transformer and Light and Power Circuits
Polarized Type—No Contact
Schedule R

No. 235, Non-Conduit

No. 236, Conduit

These bells are standard, all purpose, heavy duty, double gong bells which are made in two frame and mechanism sizes, and which are similar in general appearance, mounting features and operating principle. All mechanisms are completely insulated from the cast iron frames and covers; may be operated on parallel or series circuits. Where the distinctive tone characteristic of double gong bells is desired, Nos. 235, 236 and 237 are recommended.

They are for code paging and signaling, program clock, fire, burglar and general emergency alarms, start and dismissal, dispatching, etc. Bells are widely used in schools, institutions, public and office buildings, industrial plants, mines, stores, railroad and bus stations, etc.

Nos. 235 and 237 have exposed terminals, and are for surface mounting only. No. 236 has concealed terminals; frames are tapped for 1/2-inch conduit and are for surface or conduit mounting.

Frame finishes: regular duty, black enamel; fire duty, red enamel. Gong finishes: special hard steel—Parkerized rust-proof black, nickel plated, or Udylyted (cadmium-plated); cast bell metal—polished and lacquered.

In ordering, specify number, rated voltage, ohms coil resistance, gong size, and gong and frame finish.

No. 161 Schwarze Universal Bells

For 6-8 Volts A.C. and 3-6 Volts D.C.
Vibrating—Special Coil Silver Contacts
Schedule SB

No. 161 is an ideal bell for interior light duty signaling service—program clocks; burglar alarms; production and process control; tank level, pressure and general tell-tale alarms; and start and dismissal signals. Widely used in garages, public institutions, residences, office buildings, etc.

Non-weatherproof; for surface mounting only. Mechanism is grounded to the frame. Frame and cover are of heavy gage, pressed steel. Equipped with substantial exposed terminals.

Schwarze D.C. Double Gong Bells

For Battery and D.C. Light and Power Circuits
Special Tungsten Contacts
Schedule R

Nos. 251 and 252

Nos. 253 and 254

These bells are standard, heavy duty, double gong bells which are made in two frame and mechanism sizes, and which are similar in general appearance, mounting features and operating principle. Where the distinctive tone characteristic of double gong bells is desired, Nos. 251, 252, 253 and 254 are recommended.

They are for code paging and signaling, program clock, fire, burglar and general emergency alarm, start and dismissal, dispatching, etc. Bells are widely used in schools, institutions, public and office buildings, industrial plants, mines, stores, railroad and bus stations, etc.

No. 251 has a grounded mechanism. Nos. 252, 253 and 254 are completely insulated from frame. Because of their unique construction, which eliminates practically all contact arcing, they have the unusual advantage of being suitable for series or parallel operation.

Nos. 251 and 252 have cast frames and are tapped for 1/2-inch conduit with knockouts for rear wire entrance and recesses for outlet box mounting.

No. 253 has exposed terminals and is for surface mounting only. No. 254 has concealed terminals and is for surface or conduit mounting.

Frame finishes: regular duty, black enamel; fire duty, red enamel. Gong finishes: special hard steel—Parkerized rust-proof black, or Udylyted (cadmium plated); cast bell metal—polished and lacquered.

In ordering, specify number, rated voltage, ohms coil resistance, gong size, and gong and frame finish.

*No. 251—With Grounded Mechanism

†For conduit type, add \$2.50 and specify No. 254.

Nos. 251 and 252 may be mounted on 4-inch square or 4-inch octagon outlet boxes by the use of a hanger plate. Hanger plate will be furnished at no extra charge when specified on order.

Schwarze Adjustable Tone Buzzers

For A.C. or D.C. Light and Power Circuits
No. 284, A.C. No. 285, D.C.

Conduit Type
Schedule R

These standard, all purpose, heavy duty buzzers are made in two mechanisms: No. 284 for a.c. series or parallel operation, and No. 294 for d.c. parallel operation. Buzzers are for code paging and signaling, program clock, supervisory signals for alarm systems, inter-office communication, etc. Used in schools, public and private institutions, offices, office buildings, industrial plants, hotels, railroad and bus stations, etc.

Both buzzers are identical in appearance and mounting features. Mechanisms are completely insulated from the cast iron frames. They are of the solenoid type so that hinged armature and pivot pins are eliminated. Both buzzers are equipped with an external adjustment screw.

No. 284 is of the non-contact synchronous type, producing a tone having a frequency twice the alternating current frequency. The No. 294 is equipped with special contact points protected by a condenser to suppress arcing.

Both buzzers have concealed terminals and the cast iron frames are tapped for 1/2-inch conduit with knockout for rear wire entrance and recesses for outlet box, conduit or surface mounting. Available weatherproof or non-weatherproof.

Height, 4 5/8 inches; width, 4 1/16 inches; depth, 2 3/8 inches; mounting hole centers, 4 1/16 inches.

In ordering, specify number, rated voltage and frequency, ohms coil resistance, and finish.

No.	A.C. Transformer Each	4-9 Volts D.C. Each	10-48 Volts D.C. Each	110 Volts A.C. or D.C. Each	220 Volts A.C. or D.C. Each	Approx. Ship. Wt. Lb. Each

Federal Chimes

Case is dull light ivory finish with brass colonial eagle and star on blue ground center. Polished brass tubes.
No. 580, 2-Entrance Type. each \$8.00
No. 581, 1-Entrance Type. each 7.00

Cape Cod Chimes

Dull black with bright brass clipper ship insert in center panel. Polished brass tubes.

No. 522, 2-Entrance Type. each \$8.00
No. 523, 1-Entrance Type. each 7.00

Moderne Chimes

Case is dull white with blue glass mirror and chrome star. Tubes are polished chrome.

For black shield with chrome star and ground, specify No. 528 for 2-entrance, or No. 529 for 1-entrance type.

No. 582, 2-Entrance Type. each \$10.00
No. 583, 1-Entrance Type. each 9.00

Georgian Chimes

Sprayed wreath and arrow casting is mounted on dull light ivory case. Tubes are polished brass. Ideal complement for fine Sheraton furniture.

No. 536, 2-Entrance Type. each \$9.00
No. 537, 1-Entrance Type. each 8.00

Edwards Tubular Chimes

The complete line of Edwards Styled Electric Door Chimes offers a selection for every architectural and decorative need. Each chime is available in two and one entrance types.

The two entrance model has two harmony sequence notes and an added single note. The single entrance model has the harmony notes only.

Height, 43 $\frac{3}{4}$ inches. Width, 8 $\frac{1}{4}$ inches. Depth, 2 $\frac{1}{8}$ inches.

Special transformer furnished with each model except when noted.

Regency Chimes

Case is dull light ivory and cast laurel ornament on a dull brass ground. Tubes are polished brass. Available also in dull black case.

No. 544, 2-Entrance Type. each \$9.00
No. 545, 1-Entrance Type. each 8.00

Duncan Phyfe Chimes

Case has red mahogany grained finish. Cast lyre ornament, sprayed brass. Polished brass tubes.

No. 524, 2-Entrance Type. each \$9.00
No. 525, 1-Entrance Type. each 8.00

Early American Chimes

Case has a pure maple finish with gay black silhouette of town crier. Polished brass tubes.

No. 520, 2-Entrance Type. each \$9.00
No. 521, 1-Entrance Type. each 8.00

Classic Chimes

Longer, larger diameter tubes give deeper, richer notes. Shield is a casting with relief motif in polished bronze against an old bronze ground.

No. 570, 2-Entrance Type. each \$15.00
No. 572, 1-Entrance Type. each 14.00

Empire Chimes

Case has an old mahogany finish with black and gold fruit basket decoration. Polished brass tube.

No. 526, 2-Entrance Type. each \$9.00
No. 527, 1-Entrance Type. each 8.00

Edwards Cathedral Chimes

A beautifully designed plastic shield having a rich translucent marblelike finish in contrasting ivory shades. Night light is provided with both models. The translucent shield affords a soft tone to the light, making it ideal for night hallway illumination.

Light switch is provided on base. The four-tube Westminster model plays the popular eight-note melody of that name. Provision is made for a two-note harmony sequence and an added single note.

The three-tube Milan is similar to the Westminster except that a different seven-note melody is played instead of the eight-note melody.

Polished brass tubes are standard. Oversized tubes are used to provide deeper and more resonant notes.

No.	3-Tube Milan	4-Tube Westminster
No.	573	574
Each	\$25.00	29.50
Overall Height...in.	46 $\frac{1}{4}$	55 $\frac{1}{2}$
Overall Width...in.	10 $\frac{1}{2}$	10 $\frac{1}{2}$
Overall Depth...in.	4 $\frac{3}{8}$	4 $\frac{3}{8}$

Also available with opaque marble-like shield so light is thrown downward only, through tubes. Add letter B to number.

Edwards Junior Chimes

Junior chimes operate on any good doorbell transformer. No transformers furnished.

No.	Description	Each
590	Ivory, 2-Entrance Type...	\$3.95
591	Ivory, 1-Entrance Type...	2.95
558	Bronze, 2-Entrance Type..	3.95
559	Bronze, 1-Entrance Type..	2.95
555	Black, 2-Entrance Type..	3.95
556	Black, 1-Entrance Type..	2.95

Edwards Xylochimes

Utilizes bars instead of tubes with resonators to amplify sound. Louder than junior chimes but not as loud as tubular types.

Transformer furnished with chime.

No.	Description	Each
588	Ivory with Brushed Brass, 2-Entrance Type.....	\$7.00
589	Ivory with Brushed Brass, 1-Entrance Type.....	6.25

Edwards Leader, Tubular Chimes

Ivory finished case with gold ornament. Neat, attractive for installations where economy dictates.

No.	Description	Each
568	2-Tube, 2-Entrance....	\$4.95
568-3	3-Tube, with Silent Ctr. Tube, 2-Entrance....	5.95

Price does not include transformer.

Edwards Clock-Chime

A beautiful wall clock that strikes the hours and half hours just like a grandfather's clock plus the singing eight-note Westminster chime melody for front door call and a two-note melody for the rear door call.

Overall height, 69 inches. Width, 10 $\frac{3}{4}$ inches. Depth, 6 inches. Top of chime should measure 76 inches from floor when installed.

The Edwards Clock-Chime has genuine, selected grain mahogany case; self starting electric movement; all on low voltage from the special transformer included in package; as easy to install as any ordinary door chime.

No. 564.....each \$59.50

Edwards Flush Annunciettes

8-12 Volts A.C.

Schedule T

No. 672 Manual Reset Type

Drops and reset mechanism are thoroughly reliable and will stand up indefinitely under most severe service. Mounts easily in wall box allowing plumb adjustment. Front connectors in full view allow complete installation, test, and operation before face plate is fastened.

Buzz audible signal with marked connectors for adding extension signals if desired. Envelope included with 100 separate name and number cards for drops allowing definite, correct indications in residence, bank, office or any installation.

No. 682 Electromanual Reset Type

Same as No. 672, but designed for remote resetting or for multiple operation where resetting an annunciette at one location must automatically reset an annunciette at another location. Connectors provided so the resetting of one or more annunciettes may be controlled from a remote point if desired. Resets all drops at once. Individual reset of drops not possible. While reset mechanism is actuated electrically, No. 682 has a mechanical reset on case.

..	*4.00

*Larger sizes add per drop.

Depth, 3 inches for all sizes. Add 3/8 inch all around for overall size of trim.

Standard: White enamel finish and for 8-12 volts a.c. operation. Any solid spray finish, add 5%.

For up to 24 volts a.c. or d.c., no extra charge.

Special finishes, features, etc., installation data on application.

Wall Boxes Only for Nos. 672 and 682

For easy, most satisfactory installation wall boxes should be used.

- No. 671A, For 2-8 Drop Annunciettes.....each \$1.00
- No. 671B, For 10-12 Drop Annunciettes.....each 1.00
- No. 671C, For 14-18 Drop Annunciettes.....each 5.00
- No. 671X, For Larger Sizes (Specify Size).....each 5.00

When wall box has been shipped previously and annunciette without wall box is desired, specify No. 670 instead of No. 672 or No. 680 instead of No. 682.

Illuminated Annunciettes

All Edwards Flush Annunciettes in both manual and electromanual types are now available with indirect illumination. It permits the indicating drop to be readable at great distances in dark areas. Resetting the annunciette automatically extinguishes the illumination.

Prices on application.

Edwards Surface Annunciettes

8-12 Volts A.C.

Schedule T

No. 82 Manual Reset Type

Drops and reset mechanism are thoroughly reliable, and will stand up indefinitely under most severe service. Buzz audible signal with marked connectors for adding extension signals if desired.

Envelope included with 100 separate name and number cards for drops allowing definite, correct indications in residence, bank, office or any installation.

No. 482 Electromanual Reset Type

Same as No. 82, but designed for remote resetting or for multiple operation where resetting an annunciette at one location must automatically reset an annunciette at another location. Connectors provided so the resetting of one or more annunciettes may be controlled from a remote point if desired. Resets all drops at once. Individual reset of drops not possible. White reset mechanism is actuated electrically, manual, mechanical reset; a mechanical reset is supplied on case.

12	124.00	4	3	7 ³ / ₄	10 ⁵ / ₈	3 ¹ / ₄	14

Larger sizes, add \$12.00 per drop. For 220 volts, add \$2.00 per drop.

For flush type, add 20%.

No. 403 Edwards Electric Reset Surface Annunciators

16 Volts A.C. or 8 Volts D.C.
Schedule T

All metal case. No. 4 drop uses less current for indicating and resetting and gives a far better indication. The audible signal is a double adjustment buzzer. One reset button regularly furnished on case for every 20 drops. Connectors also provided for remote resetting as standard. All drops reset at once.

Standard finishes are black, mahogany, oak or walnut. Special finishes, features, etc., complete installation data on application.

Edwards Annunciator Drops

Schedule T

No. 8 Manual Reset Drop

An efficient drop used in all annunciates. Its compact design gives just as clear an indication but allows smaller, neater annunciators.
Positive Locking.

No. 8

No. 8.....each \$4.00

No. 80 Manual Reset Drop

The older design used in all hand reset annunciators except the new annunciates.

No. 80

Positive locking.

No. 80.....each \$4.00

No. 4 Electric Reset Drop

Used in all electric reset annunciators. Uses much less current for both indicating and resetting. The indication is a white arrow which points directly at the name card. When reset, the arrow drops out of sight behind the name card.

No. 4

The front is of plain glass and as the arrow is between the glass and a dull black background, it can be seen from any angle. Cannot shake or jar

out of adjustment. Locked in normal position and cannot indicate until current is passed through magnets.

No. 4.....each \$6.00

Edwards Lamp Annunciators

Standard for up to 32 Volts A.C. or D.C.

Schedule D

Unless locking or small toggle pushes are used, locking relays are necessary to keep the signals lighted reset by a push button, which is usually located on the annunciator. Relays can be furnished in the annunciator case, but this increases its size, and detracts from its appearance. It is better practice to have the relays in a separate cabinet, which can be placed out of view, under a desk, on the base-board, etc.

When ordering specify voltage, cycles, etc.; with or without relays, relays in annunciator or in separate cabinet; white, red or green bull's eyes, 7/8 or 1 3/4-inch numerals in opaque glass type; finish; buzzer in annunciator or relay cabinet; reset button or annunciator, relay cabinet, or remote point.

Complete installation data on application.

Bull's Eye Type

No. 421, For Surface Wall Mounting

No. 422, For Flush Wall Mounting

No. 423, For Desk

No. 422

Unless otherwise specified 3/8-inch milk-white bull's eyes are supplied with card racks underneath. All metal fronts finished as specified (except chromium, price on application). Flush type furnished complete with wall box. Larger sizes have hinged front for easy installation. Standard for operation on up to 32 volts a.c. or d.c. as specified. For 120-volt operation 1 1/8-inch bull's eyes are necessary. Buzzer audible signal.

Opaque Type

No. 424, For Surface Wall Mounting

No. 425, For Flush Wall Mounting

No. 425

Edwards Return Call Annunciates Electromanual Reset

No. 412 Flush Type with Metal Face Plate and Wall Box
No. 410 Surface Type with Metal Case
8-12 Volts A.C. or 6-8 Volts D.C.

Schedule T

Ideal for return call systems where it is desirable to reset the annunciator from a remote point. Resets all drops at once. Individual reset of drops not possible. While reset mechanism is actuated electrically, manual, mechanical reset remains in case of emergency.

System is arranged so that the rooms may be called from the office or central station, or vice versa, and the call may be acknowledged.

Provides a most efficient system with much less possibility of trouble, fewer wires, only one transformer, and lower installation cost.

Standard black finish. Special finishes, features, etc., complete installation data upon application.

For overall of trim, add one inch to height and width.

Mahogany, walnut or oak finish, no extra charge.

For up to 24 volts a.c. or d.c. no extra charge.

Larger sizes, prices upon application.

Illuminated Annunciates

All Edwards Flush Annunciates in both manual and electromanual types are now available with indirect illumination. It permits the indicating drop to be readable at great distances in dark areas. Resetting the annunciator automatically extinguishes the illumination.

Prices on application.

Faraday Midget Annunciators

Manual or Electro-Manual Reset—Gravity Drop

Surface Type, Closed

Surface Type, Open

Faraday Midget Annunciators are made in two standard models: manual reset and electro-manual reset. The electro-manual reset type provides for remote reset, and automatic reset, with connections for use of an extension signal with either features. The above features are available by varying easily made connections when installing.

It is recommended that a 16-volt, 50-watt, output transformer be used on models having up to 15 drops. On models having 15 drops or more, we recommend the use of a 24-volt, 50-watt output transformer.

For easy accessibility, Faraday annunciators are equipped with a hinged cover—only one screw on the top of the case needs to be loosened to drop the cover and expose the entire mechanism.

Packed with each annunciator is a perforated card, numbered from one to fifty; a complete alphabet; and eighty other markings such as are commonly used for annunciator indications. There are also a number of blanks, to provide for special indicator markings. All markings imprinted on this set of indications are white symbols on a black background.

Standard finishes; black velvet enamel or white enamel. Special finishes, prices on application.

Faraday Annunciators

Hand Reset—Gravity Drop—All Metal Cases

*For 8 to 12 Volts A.C. or 6 Volts D.C.

Schedule T

Hand-reset, gravity-drop annunciators are satisfactory for use where service conditions are not too severe. They will cover most residence, apartment house, office, and bank installations. These annunciators are made in two types: regular size and small size. Unless otherwise specified, the regular size will be furnished.

Each annunciator is furnished with 85 different markings—black on white background. For special markings, add 30 cents per drop.

Flush Type

No. 16-GM

Nos. 15-GM Regular and 15-GS Small Annunciators have a standard finish of black velvet enamel; Nos. 16-GM Regular and 16-GS Small Annunciators, white enamel finish.

Regularly furnished with backboxes.

No. of Drops	Nos. 15-GM Regular, and 15-GS Small Each	Nos. 16-GM Regular, and 16-GS Small Each	No. of Drops	Nos. 15-GM Regular, and 15-GS Small Each	Nos. 16-GM Regular, and 16-GS Small Each

Faraday Return-Call Annunciators

All Metal Cases

Schedule T

Return-Call Annunciators are regularly furnished to operate on: two common and one direct wire between each station and annunciator. One set of batteries or one transformer is required. This method of wiring is far more economical than the old style, out-of-date method of using one common and two direct. However, the old style of wiring can be furnished at the same price if specified when ordering. For wiring diagram, send for blueprint.

Standard finishes: black velvet enamel, mahogany, or golden oak on steel.

Hand Reset—Gravity Drop—Regular Size

*For 12 to 18 Volts A.C. or 6 Volts D.C.

No. 8-GM, Surface Type

No. of Drops	No. 8-GM Surface Type Each	No. 8-GMF Flush Type Each

90	619.00	632.00
100	676.00	689.00

For larger sizes, add \$7.00 per drop.

*Will be wound up to 24 volts a.c. or d.c. at no additional charge.

Kirkland Bulls-I-Units

No. 600 Indicating Lamps

Extensively used as an indicating lamp and in the building of lamp annunciators.

For single hole panel mounting. Can be mounted on a single convenience outlet plate.

Lamp is removed from the front.

Molded bakelite socket with screw terminals. Chromium plated, brass or bronze, 10% extra.

Uses either 3 or 6-watt, S6, 120-volt tungsten lamp, with resistor on 220-440 volts.

Furnished with either jewel or frosted lens, 1 1/8 inches in diameter.

No. 600 Unit.....each \$1.50

Add 10% for unit with numbered or lettered lens for annunciator uses, etc.

Switchplate Lamps

Perfect for over-door light or elevator signal, etc. For applications where a modest light output is adequate and low current consumption is a favorable factor.

Uses either 3 or 6-watt, S6, 120-volt tungsten lamp.

Lens: diameter, 2 inches; colors, red, green, and white.

Furnished in brass or chromium 10% extra.

No. 180SP, without Switchplate for Single Hole Panel Mounting, for Indicating Light Purposes.....each \$1.80

No. 170P, with Flat Lens for Numbering or Lettering, for Annunciator Purposes.....each 2.00

Neon Lamp Exit Lights

No. S14-S

Transforms the appearance of the lamp to that of a convex lens and reduces lamp theft and breakage to a minimum.

The optical illusion produced by streamlining the receptacle to the lamp enhances the beauty of the unit.

Used with neon glow lamps, rated at 3000 hours' life and consuming extremely low current from 1/2 to 3 watts, the combination makes an ideal exit light or indication lamp.

Standard finish is brass; chromium 10% extra.

Overall depth behind front of plate: No. S14, 2 1/2 inches; Nos. G10 and G11, 1 1/4 inches.

Also available without switchplate for single hole panel mounting; use letter P to denote panel unit and S for switchplate unit.

Furnished on round or multiple-gang plates. Use a mat to install on shallow box, wiremold No. 5751.

No. G10S, Uses Neon Lamps: 1 Watt on 120 V., 1 Watt on 220 V., 1/2 Watt on 120 V.....each \$1.65

Edward Screwless Pushes

Schedule Q

No. 630

No. 631

No. 632

No. 633

Hole can be drilled, wires connected and the flat sub-plate can be fastened to the surface with screws. Finished plate snaps firmly to subplate with no screws to mar the appearance.

Fully insulated; the contact is pure phosphor bronze, self cleaning in operation. The finished plate is heavy brass, not sprayed, but brushed and lacquered.

No. 630 makes an attractive feature for all colonial type doorways. No. 631 is decorative but conservative. It is ideal for plaster walls as well as front entrances. No. 632 is smart and conservative and particularly adapted to narrow spaces. No. 633 is for dentists offices, etc.

Edwards All-Metal Desk Pushes

Schedule T

A fine desk push for neat appearance and convenient usage.

Heavy gaged steel body, Bonderized. A smaller and neater unit, taking less space on the desk. Molded centers. Completely insulated. One row of buttons for up to 12 buttons, double rows.

Names are almost flush with top plate thus preventing dust ridden crevices and allowing easily readable names.

One complete directory card which is easier to handle than individual cards.

Transparent celluloid keeps names clean.

Black finish is standard with brushed nickel top plate.

Specify exact number of buttons when ordering.

For Non-Carpeted Floors or Rugs

Schedule E

A compact attachment plug for use where No. 290 floor tread is used beneath floor covering and can be reached to change its position.

Receptacle mortises into floor. Rubber capped plug is inserted flush into receptacle leaving no bulge.

Plug will not fit standard lighting receptacles, thus preventing the possibility of shorting the line.

Satin brass finish with brown rubber cap.

- Furnished without cord and push.
- Weight, 2 ounces.
- Standard package, 10.

- No. 235..... each \$.95

No. 237 Edwards Floor Pushes

For Uncarpeted Floors

Schedule E

Provides a means of closing a signaling circuit at a fixed location on the floor. Receptacle mortises into floor and allows pin only to extend above floor line. Slight pressure on pin causes contact.

Weight, 2 ounces. Standard package, 10.

- No. 237 Floor Push with Pin..... each \$.75
- Pin Only for No. 237..... each .15

No. 290 Edwards Dixie Floor Tread

Schedule E

Recommended as a dining room push for calling servant during meals. Contact easily made by pressure at any point. Rubber covered base prevents push from sliding. The connectors are firm and reliable and whole device is designed for quick, easy installation. Cord enters through brass strap which holds it securely. Standard finish is satin brass.

Standard package, 10.

- No. 290, Approx. Wt., 5 Oz. Each each \$1.20

No. 235-290 Edwards Complete Floor Tread Combination

Schedule E

Consists of No. 235 receptaplug completely wired with five feet of brown rubber covered cord to No. 290 floor tread.

- Weight, 9 ounces. Standard package, 5.
- No. 235-290 Combination..... each \$2.70

Edwards Answercalls
For Return Call Push Button Stations
8-12 Volts A.C. Standard
Schedule T

It fits any standard single gang switch box 2 3/8 inches deep and takes any standard push button switch plate.

No. 139 has buzz audible signal with no contacts or pivots and requires no adjustment. May be varied after installation, from loud low tone to a soft high tone through hole in sub-plate. Marked binding posts easily accessible.

No. 140 has annunciator type drop, which leaves a visual signal. Operation of push button, when call is answered, automatically resets drop. Recommended for use in Y.M.C.A. buildings, dormitories, and other places where it is desirable to leave an indication that a call has been made to the room during the occupant's absence.

No. 139, Flush Non-Indicating, Wt., 8 Oz. each \$4.80
No. 140, Flush Indicating, Wt., 9 Oz. each 9.30
Up to 24 volts a.c. no extra charge. Price does not include plate.

No. 136 Edwards Surface Type Return Call Push Button Stations

D.C. or A.C.
Schedule T

Designed particularly for installation in existing buildings.

Provides a neat appearing plate mounted on a shallow cast box, which provides entrance for conduit or open wires as desired.

The audible signal is an Edwards Double Adjustment Lungen Buzzer, and station is completely wired for installation with Edwards Return Call Push.

The cast box is rubberoid black, the plate brushed brass or nickel.

Standard package, 1; approximate weight, 1 1/2 pounds.
No. 136, With Metal Plate each \$6.00
No. 136, With Bakelite Plate, If Specified..... each 6.25

No. 137 Edwards Flush Type Return Call Push Button Stations

D.C. or A.C.
Schedule T

A flush plate for mounting on a standard single gang switch box.

The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with Edwards Return Call Push.

Standard finish, brushed brass or nickel.
Standard package, one.
Approximate weight per standard package, 1/2 pound.

No. 137, With Metal Plate each \$5.00
No. 137, With Bakelite Plate, If Specified..... each 5.25

No. 138 Edwards Flush Indicating Type Return Call Push Button Stations

D.C. or A.C.
Schedule T

For use in college dormitories and other places where it is desirable to leave an indication that a call has been made to the room during the occupant's absence.

Fits any standard two-gang switch box. The audible signal is an Edwards Double Adjustment Lungen Buzzer. The visible signal is a white arrow, which is sharply outlined through a small round glass window. One push button is for the return call, the other to reset the indicating arrow.

Standard package, one.
Approximate weight per standard package, one pound.
No. 138, With Metal Plate each \$12.00

Faraday Perfection Midget Push Buttons

Fully insulated. With self-cleaning wiping contacts of phosphor-bronze and terminal lugs. Shells of buttons carry no current, permitting mounting in metal.

Buttons have 4 spring clips, guaranteeing firm locking in proper size holes—either 5/8 or 3/4 inch.

Flat-Top Pattern, 5/8-Inch Standard

Standard finishes, polished nickel or satin-brass, as specified.

Cat. No.	Each	Description	Std. Pkg.	Sched.
5-A	\$.38	Pearl Centers	50	E
5-B	.50	Black Centers	20	E

Raised-Center Pattern, 5/8-Inch Standard

Extreme height of center above level of edge is 1/8 inch, and from that, sloping off to level of rim.

7-A	\$.75	Pearl Centers	20	E
7-B	.87	Black Centers	20	E

3/4-Inch Size, with Bakelite Body, Extra Heavy Contacts

With solid molded bakelite bodies in which metal inserts are securely anchored.

Cat. No.	Each	Description	Std. Pkg.	Sched.
16-A	\$ 1.40	Black Centers	1	T
16-B	1.40	White Centers	1	T
16-C	2.05	Black Centers, Closed-Circuit	1	T

3/4-Inch Size, Special Purpose, with Bakelite Body, Extra Heavy Contacts

No. 11-A buttons will close 3 circuits at once; useful where bells, annunciators, and other devices are to be operated at same time, but where it is not desired to operate them in multiple. By strapping the contacts it is often used on single circuits to obtain the additional current carrying capacity of multiple contacts.

No. 15-A buttons are made so that they open one circuit and close another. For return-call systems using 2 common wires and 1 return they are invaluable.

With black centers. Standard package, 1.

Cat. No.	Each	Description	Sched.

Faraday Pear-Shape Pushbuttons

Pendant Type

Schedule E

No. BP-5

Pushbuttons are made of bakelite.

Packed in individual cartons; standard package, 10.

No. BP-5, Black or Mahogany Finish as Specified each **\$.60**
 No. BP-6, White Enamel Fin. each **.75**

For raised rounded-center pushes, add 30 cents. For protruding black center pushes, add 30 cents (Schedule T; standard package, 1).

Faraday Combination Floor-Pushes and Plugs

Schedule E

Nos. CFP-2 and CFP-3 are the same, except that No. CFP-3 has plates that are extra large in diameter, and have mounting holes to fit all standard makes of floor outlet boxes. Widely used on installations where circuits are run in conduit or armored conductor.

Floor box is not included. When ordering, the make of floorbox should be specified.

Standard finish: satin brass.

Packed in individual cartons; standard package, 10.

No. CFP-2..... each **\$.95**
 No. CFP-3..... each **1.50**

No. FT-1 Faraday Floor Treads

Schedule E

Standard finish: satin brass.
 Packed in individual cartons; standard package, 10.
 No. FT-1, without Cord... each **\$1.50**
 For 6-Foot Flexible Cord
 Attached..... add **.54**

No. 968 Faraday Flush Disc Floor Connectors

Schedule E

Flush Disc Floor Connector consists of a fiber disc 2 inches in diameter for convenient insertion in dining room floor so as to be flush with its surface.

The battery and bell connections are made to the binding posts on the under side of the disc. The floor tread or pushbutton connections are attached to the two screws near the outer edge on top.

Packed in individual cartons; standard package, 10.

No. 968..... each **\$1.50**

No. 940 Faraday Pull-Cord Bell Switches

Schedule T

Pull-cord switches are designed to allow the use of silk bell ropes or tapestry ribbons rather than push buttons, for bell and annunciator systems in fine residences and apartments following Old Colonial, Italian or English style of interior. They are mounted in the wall near the ceiling. Fit standard switch boxes.

Pull-cord is attached to ring on connection arm. Pulling cord raises arm to make connection; when cord is released spring restores arm and breaks connection.

No face plate is furnished, permitting the use of any standard single-gang toggle switch plate of brass, glass, bakelite, etc.

Standard finish: satin brass.

Standard package, 1.

No. 940, without Plate..... each **\$7.50**

Faraday High Voltage Quick-Break Pushbuttons

National Code Standard Schedule T

Quick-Break Pushbuttons are essential for momentarily opening or closing electrical circuits where the amperage is more than the ordinary pattern of slow-break pushbuttons can handle without destructive arcing at contacts.

Recommended for use on circuits up to 250 volts within non-inductive load ratings specified below. Invaluable for controlling signal gongs, horns, sirens, X-Ray, medical and therapeutical devices; also for cutting-in voltmeters and ammeters. Will be found necessary for many low-voltage circuits where the number of devices on the lines draw more than ordinary pushbutton mechanisms can break without destructive arcing. Two buttons can be mounted in a single-gang plate, or four on a double-gang at an additional price.

Type C Gas-Filled Lamps have an instantaneous heavy current surge. If pushbuttons are to be used to control Type C Gas-Filled Lamps, send full data on number of lamps, wattage, and voltage to be used.

It is recommended that these pushbuttons be installed in standard switch or outlet boxes (for which the plates are designed) as National Electric Code requires this character of installation.

Insulation is bakelite throughout. Pushbutton-centers on the Watertight models are covered by waterproof pigskin diaphragms making it impossible for water or fumes to penetrate the mechanisms.

No. 885 Round Pushbuttons—Midget Pattern

Round, quick-break pushbuttons are furnished with flexible wire-leads complete with locknuts for mounting. They require a 1 3/8-inch hole for mounting on a plate—thickness of plate may be up to 3/4 inch.

Mechanisms are bakelite insulated throughout, and are entirely enclosed by one-piece, metal casings with insulated linings.

Standard finish: nickel. Satin brass will be furnished at no additional charge if so specified.

Maximum carrying capacity, 6 amperes at 120 volts.

Diameter of flange, 1 1/16 inches.

No. 885, with Locknuts for Mounting..... each **\$2.65**

Rectangular Pushbuttons—Flush Pattern

No. 133

Can be mounted on standard switch box. Furnished with metal plate.

Standard finish: statuary bronze. For polished chromium, add \$1.00.

Maximum carrying capacity, 15 amperes at 10-12 volts; 6 amperes at 125 volts; and 3 amperes at 250 volts.

Size plate, 2 3/4 x 4 1/2 inches.

No. 132, Open Circuit, Non-Watertight, 10 to 125 V. each **\$3.00**

No. 133, Open Circuit, Watertight, 10 to 125 Volts.... each **5.60**

Faraday Pushbutton Panels
Flush Type
Schedule D

No. PBP-1

Faraday Pushbutton Plates are for use in schools and other institutions where bells are to be rung individually or all at the same time. Cannot be made for program method of ringing. Buttons are mounted on brass plates.

Can be furnished with any desired number of buttons, for individual ringing of bells, and with or without an "All" push which is used to ring all bells simultaneously. "All" push is charged the same as individual pushes.

Furnished complete with backbox.

Standard finish: sprayed satin brass or nickel.

No. PBP-1, with Cardholders and "All" Push	per button	\$4.35
No. PBP-2, with Cardholders, but without "All" Push	per button	4.10
No. PBP-3, with Engraving under Each Push, and "All" Push	per button	4.35
No. PBP-4, with Engraving under Each Push, but without "All" Push	per button	4.10

Faraday Watertight Push Buttons
Surface and Flush Types
Schedule T

No. WP-25

No. WP-30

No. WP-35

No. WP-40

These push buttons are of the diaphragm pattern having a waterproofed pigskin diaphragm over the center making it impossible for water or fumes to penetrate to the mechanism which is 100 per cent bakelite insulated.

Dependable for outside of buildings and places where dampness and water are a menace.

Nos. WP-25, WP-30, WP-40 and WP-55 furnished with rubber gaskets for mounting.

Standard finish, statuary bronze. For polished chromium, add \$1.00 to list. Other special finishes, on application. Standard package, 1.

Faraday Electric Door Openers

*For Maximum of 10 Volts A.C. or 6 Volts D.C. at Terminals

No. 621, Mortise Type

No. 623, Rim Type

Faraday Electric Door Openers have extra heavy frames, and are of the most rugged construction.

Mortise type door opener is recommended for use in apartment houses, offices, etc. Face plate is 5 1/16 inches long, 1 1/4 inches wide, and 1/8 inch thick. Case is 3 1/16 inches high, 2 inches wide, and 1 5/16 inch thick. Latch opening, 1 1/4 inches.

Rim type door opener is designed for surface locks, through locks, through doors, gates, etc. Both casings and face plates are solid bronze. Overall dimensions: height, 4 3/4 inches; width, 2 9/16 inches; thickness, 1 1/4 inches. Latch opening, 1 1/4 inches.

No. and Type	621, Mortise	623, Rim
Each	\$3.00	5.00
Schedule	E	T
Standard Package	24	1

*Higher voltages are recommended on long circuits.

No. 9 Edwards Door Openers

Economy, Mortise Type

Schedule E

4½-6 Volts D.C. or 8-12 Volts A.C.

Face plate and nosing made of solid brass. Used extensively for low cost apartment jobs.

Fits same size mortise as same shape openers of other manufacturers. Height, 3¾ inches; depth, 2½ inches; thickness, 1 inch; nosing opening, 1¼ inches; face plate, 5½x1¼ inches.

May be used on either right or left hand doors.

Standard package, 24.

Approximate weight, one pound.

No. 9.....each \$2.00

No. 154 Edwards Door Openers

Mortise Type, Roller Nose

Schedule T

4½ Volts D.C. or 8-12 Volts A.C.

Height, 3¾ inches; depth, 2¾ inches; thickness, 1¼ inches. Nosing opening, 1¼ inches. Face plate, 1¼x3¾ inches. Brass finish.

May be used on either right or left hand doors.

Approximate weight, 14 ounces.

No. 154.....each \$5.65

Can be supplied with a release check permitting the use of door opener where air checks are employed; add to price, \$8.00.

Special voltage up to 12 volts add to list \$1.00; up to 24 volts add \$1.50; up to 32 volts add \$2.50; up to 48 volts add \$4.00.

No. 152 Edwards Door Openers

Commercial, Rim Type, Solid Nose

Schedule T

4½-6 Volts D.C. or 12-16 Volts A.C.

For surface locks, thin frames, etc. Frame is cast iron with brass finish face plate and solid brass nosing.

Height, 2 inches; depth, 3 inches; thickness, 1½ inches; nosing opening, 1¼ inches.

Approximate weight 13 ounces.

No. 152.....each \$5.00

Special voltage up to 12 volts add to list \$1.00; up to 24 volts add \$1.50; up to 32 volts add \$2.50; up to 48 volts add \$4.00.

No. 1541 Edwards Door Openers

Mortise Type—With Dead Bolt Opening

4½-6 V. D.C. or 12-16 V. A.C.

Schedule T

Has roller nose. Face plate is extended to provide space for mortise for dead bolt.

When ordering, a sketch or template must be furnished to show exact location of dead bolt and screw holes. There cannot be less than ⅝ inch space between nosing and dead bolt openings. If no sketch is sent, standard door opener, as illustrated, will be furnished.

Height, 2 inches; depth, 2¾ inches; thickness, 1½ inches. Nosing opening, 1¼ inches; face plate, 1½x6¼ inches.

Finish, brass.

Standard package, 1. Weight, 1½ pounds.

No. 1541.....each \$13.00

No. 1540 Edwards Door Openers

Mortise Type, Roller Nose

Schedule T

4½-6 Volts D.C. or 12-16 Volts A.C.

Height, 3¾ inches; depth, 2¾ inches; thickness, 1½ inches. Nosing opening, 1¼ inches. Face plate, 1½x3¾ inches. Brass finish.

Has extended lip to cover ragged edges where wood is mortised for opener. May be used on either right or left hand doors.

No. 1540, Wt., 14 oz.....each \$17.00

Can be supplied with a release check permitting the use of door opener where air checks are employed; add to price, \$4.00.

Special voltage up to 12 volts add to list \$1.00; up to 24 volts add \$1.50; up to 32 volts add \$2.50; up to 48 volts add \$4.00.

No. 1543 Edwards Door Openers

Mortise Type, Roller Nose

Schedule T

4½-6 Volts D.C. or 12-16 Volts A.C.

For locks having automatic dead-locking bolt. Face plate is so machined that the auxiliary latch on the lock is not pressed in when closing the door until the main latch has engaged the nosing of the door opener.

Closing the door completely causes the auxiliary bolt to ride up on the face plate, thereby dead-locking the latch bolt.

Has extended lip to cover ragged edges where wood is mortised for opener.

No. 1543, Wt., 14 oz.....each \$20.00

No. 1542 Edwards Door Openers

Mortise Type, Roller Nose, with Dead Bolt Opening

Schedule T

4½-6 Volts D.C. or 12-16 Volts A.C.

Face plate is extended to provide space for mortise for dead bolt. Extended lip covers mortised woodwork to permit a neat installation.

Height, 2 inches; depth, 2¾ inches; thickness, 1½ inches. Nosing opening, 1¼ inches; face plate, 1½x6¼ inches. Brass finish.

Approximate weight, 1½ pounds.

No. 1542.....each \$18.00

When ordering, a sketch or template must be furnished to show exact location of dead bolt and screw holes. There cannot be less than ⅝ inch space between nosing and dead bolt openings. If no sketch is sent, standard door opener, as illustrated, will be furnished.

No. 175 Edwards Door Releases

Schedule T

For use in offices, banks, etc. where it is desired to be able to close a door from a remote location. Used in conjunction with a door check, this release keeps the door open until energized from a remote push button. Cast housing. Drilled for floor or wall mounting.

Weight, 5½ lb.

No. 175.....each \$56.00

Edwards Burglar Alarm Springs

Schedule E

No. 28 or 30 Window Spring

No. 34 Door Spring

No. 32 or 32-C Transom Spring

No. 38 Make and Break

No. 236 Door Trip

Window springs should be placed in the frame several inches above the lower end of the upper sash—and the same distance below the upper end of the lower sash. Each sash should be mortised so that the nosing of the spring will be set in the recess

when the window is closed. The mortise should be continued (beyond the necessary point) to permit the opening of the window for ventilation. It is advisable that this system of installation be followed. Without the mortise any one trying to enter the house and knowing of the window springs can easily open the window gradually, and hold the spring depressed with the finger.

The Edwards Springs when used properly as described are classified as follows:

Open circuit window springs—nosing depressed contact is closed.

Closed circuit window springs—nosing depressed contact is open.

Open circuit door springs—plunger depressed contact is open.

Closed circuit door springs—plunger depressed contact is closed.

Assortment of 50, all styles to make standard package.

Edwards Constant Ringing Drops

Schedule T

Especially designed for use in burglar alarm systems. With momentary closing of protective circuit this device causes bells to ring continuously, irrespective of subsequent opening of protective circuit. Plunger resets mechanism.

Recommended for battery systems where alarm may ring for several hours. Cuts own magnet out of circuit. Standard up to 16 V. a.c. or 12 V. d.c. Standard package, 1.

No. 26-B.....each \$2.70

Edwards Burglar Alarm Relays

Schedule T

No. 1238 Open Type For D.C. Only

Adjustable for open or closed circuit operation. Pure hard drawn silver contacts. Contacts 1 ampere; 250 ohms recommended for closed circuit systems.

Standard package, 1.

20 Ohms.....	each \$6.00
250 Ohms.....	each 7.00
251 to 600 Ohms.....	each 8.00

No. 1239 Enclosed Type

For A.C. or D.C.

A small, compact, open or closed type as specified. Contacts 3 amperes 110 volts a.c., 6 amperes up to 48 volts a.c. Contacts 1 ampere, 110 volts d.c., 2 amperes up to 48 volts d.c.

Standard package, 1.

8-24 Volts.....	each \$6.00
25-48 Volts.....	each 6.75
110 Volts.....	each 8.00

Edwards Burglar Alarm Lock Switches

Schedule T

No. 95-B

Lock switch to be mounted outside the door so persons having key may enter without giving alarm. Polished brass finish.

No. 95, Comp. with Mounting Plate and Wood Screws, *Wt. 3/8 Lb.....	each \$6.50
No. 95-A, 2 Locks, On Entering Alarm is Turned Off and after Entering Turned on Inside, *Wt. 3/4 Lb. each	13.00
No. 95-B, Same as No. 95, with Rod to Go through Door, Fastened by Nuts Inside, *Wt. 1/2 Lb.	each 7.95
Extra Keys.....	each .80

*Weight is approximate per standard package of one.

Exide Storage Batteries

Exide sealed-glass jar batteries are furnished in types and capacities to meet virtually every requirement. In all types listed the covers have spray-proof vents and are shipped filled and charged for simplified installation and trouble-free life.

The Exide-Chloride type, with its famous Manchester positive and Box negative plates, has proved by many years of actual experience to be the outstanding battery for those installations where absolute dependability and long life are paramount, and where freedom from care and attention are vital factors.

The Exide-Ironclad type has positive plates of the well known Ironclad construction, which differ from all other plates in that the active material is contained in a series of rubber tubes with slots which permit access of the electrolyte, but are too fine to permit the escape of active material.

The Exide Pasted Plate type is offered for those installations where first cost is an important consideration and where space is limited.

Exide-Chloride

Type CTMH

The BTMH, CTMH, PTMH and ETMH units are assembled in crates, filled and charged, and are equipped with the necessary bolt connectors and inter-cell connectors, ready for service. The cells are arranged in one or two rows and are available in sizes from 2 to 12 cells.

Type EM

DMGO, EM and FM cells are assembled in individual blown glass jars, filled and charged, complete with terminals and bolt connectors, ready for service. When two or more cells are ordered, necessary connectors and lugs are included in the cell prices. Strap cell lifters are recommended for FM cells.

With an order of 10 or more FM cells, a strap cell lifter is included in the price. Rubber pads for use beneath the cells are furnished with all FM cells.

Types BTMH, CTMH, PTMH, and ETMH are furnished in painted wooden crates, all but the first two types being equipped with carrying handles.

Cells of greater capacity than listed below are available in sealed glass jar assembly up to 1155 ampere-hours at the 8-hour discharge rate.

Battery is shipped charged and filled with electrolyte.

Exide-Ironclad

Type BI

These Exide-Ironclad batteries are assembled in two cell units in moulded glass containers, complete with necessary connectors. They are furnished filled and charged, ready for service.

If desired, a rubber bucket to hold the two cell unit may be ordered separately. These batteries are very popular for telephone PBX service and have earned an established reputation for economy in this application.

Exide-Tytex

The Exide-Tytex battery, known as the clamped element type, consists of a new method of assembly, heavy, sturdy flat plates and double separation. This battery will prove more economical in the long run than the usual Flat Plate Types.

Exide Flat Plate

These batteries are furnished in multi-compartment moulded glass containers, filled and charged, ready for service. The elements are flat plates assembled with both wood and rubber separators. Each container is equipped with pilot balls to give approximate indication of the state of charge. The terminal cells of these units are equipped with the necessary bolt connectors.

Type LXGH 3-Cell Unit

Made in a wide variety of sizes and types to meet requirements of various kinds of power applications. Used where a reliable source of direct current at steady voltage is required either constantly, intermittently, or to tide over occasional interruptions in the normal power supply.

*Based on 8-hour discharge rate to 1.75 final volts average.

Prices include necessary connectors and lugs. A strap cell lifter is furnished with ten or more cells of Type FO. Rubber pads, No. 22198, are included with shipments of FO cells.

BTMH-2, CTMH-2, and PTMH-2 are assembled in one row. ETMH-2 is assembled in two rows.

Step-type racks are available for mounting the cells listed. Full information is obtainable on request.

Details and prices for all repair parts including thermometers, hydrometers, electrolyte, inter-row and inter-tier connectors, as well as other miscellaneous parts, are available upon request.

Edison Primary Batteries

For either direct operation or as standby batteries where continuous d.c. power supply is extremely important. Standard types adequately and economically meet the low voltage power requirements for: Police, fire and burglar alarms; annunciator systems; elevator signals; stationary engine ignition; industrial, school and scientific laboratory services; marine beacons on fixed structures; program and time clock systems; mine signaling and communication; commercial and railroad telephone services (talking and ringing circuits, operators' transmitters on magneto switchboards, interrupters); telegraph

main line and local sounder circuits.

Edison Primary Batteries are applicable anywhere; require no battery charging facilities; deliver rated ampere-hour capacities continuously or intermittently at satisfactory voltage; do not lose capacity on open circuit even over long periods; have very low and constant internal resistance; give accurate visual indications of approaching and complete exhaustion; do not freeze; require no attention or maintenance excepting occasional visual inspections between renewals; are easily installed and renewed without expert help.

A.C. or D.C. Primary Battery System. For low voltage lighting, control and other d.c. circuits normally fed from commercial power sources and requiring standby batteries to insure uninterrupted operation in emergencies. If normal supply fails, a relay instantly transfers the entire load to an independent and extremely reliable primary battery reserve until normal service is restored. Emergency operation can be maintained indefinitely from the standby battery. Visual indications show reserve capacity available. No current or apparatus needed for battery charging. Visual inspection is only battery maintenance required. This system is the ultimate in dependability, simplicity and economy.

Description. Edison Primary Batteries are zinc, copper-oxide, alkaline electrolyte type. A complete cell consists of: Factory-assembled element of positive and negative plates, can of caustic soda for mixing electrolyte, heat-resisting glass or enameled steel jar, porcelain cover, bottle of battery oil, terminal nuts and washers. The 500 amp-hr. cells with steel jars include gasket and three clamps. They are splash-proof.

Renewing active materials restores an exhausted cell to full capacity. This simple operation requires only a new element, can of soda and bottle of oil which constitute a renewal. Other parts are permanent. Panels in zinc plates accurately indicate stage of exhaustion. All cells have liberal safety factor. Operating voltage averages 0.6 to 0.65 depending upon discharge rate. Use chart to select proper cells for load requirements.

No. 16 Eveready Dry Cell Batteries

A 6-inch cell battery for general utility. Available with screw terminals and round jacket only.

Overall diameter, 2 5/8 inches.

Overall height, 6 5/8 inches.

Volts, 1 1/2.

Standard package contains 12 batteries.

Approximate weight per standard package, 26 pounds.

No. 16.....each \$.25

No. 6 Eveready Ignitor Dry Cells With Screw Connections

Special high grade cell designed for all heavy service. Particularly adapted for motor ignition. Set of ignitors will keep engine running smoothly until every bit of current is exhausted.

Equally satisfactory for motor boats, gas engines, and in fact, any service where a reliable, long life battery is needed.

Carefully packed from fresh stock and guaranteed to reach destination in perfect condition.

Voltage 1 1/2.

Width 2 5/8 inches.

Height 6 5/8 inches.

Packed 12 to standard package.

Weight of standard package 27 pounds.

No. 6.....each \$.40

Eveready Columbia Telephone Cells

Gray Label Long Life Vertical Type, 1 1/2 Volts

Especially designed for telephone service. Long life on light drain service.

Round jackets only.

Fahnestock spring terminals are furnished, unless screw connections are specified.

Overall diameter, 2 5/8 inches.

Overall height, 6 5/8 inches.

Packed 25 in a standard package.

Weight per standard package, 57 pounds.

Each.....\$.40

Eveready Columbia Gray Label Telephone Dry Cells

This battery is especially designed for telephone work and light-drain service.

Fahnestock spring terminals are furnished unless screw connections are specified.

Voltage, 1 1/2.

Diameter, 2 5/8 inches.

Height, 6 5/8 inches.

Quantity in standard package, 25.

Approximate weight of standard package, 57 pounds.

Each.....\$.40

Eveready Special Railroad and Industrial Cells

Combines high amperage, heavy service life and light service life. Designed for railroad and industrial use where a wide range of service conditions from extremely heavy to extremely light are encountered.

Round jackets only. Screw connections unless Fahnestock Spring Terminals are specified.

Voltage, 1 1/2; overall diameter, 2 5/8 inches; overall height, 6 5/8 inches.

Packed 25 in a standard package.

Approximate weight of standard package, 61 pounds.

Each.....\$.40

No. 141 Eveready Hot Shot Batteries

A 4-cell battery for general utility. Available with screw terminals and steel case only. Length, 10 5/8 inches. Width, 2 3/4 inches. Height, 7 1/4 inches. Volts, 6.

Standard package, 6 batteries.

Weight per package, 38 pounds.

No. 141.....each \$1.60

Eveready Hot Shot Batteries

Cells are connected by soldered copper strips and encased in a single metal container. The advantages of this new type covering are the ability to withstand rough usage, water-proof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying.

No. 7111 Eveready Dry Cell Radio A Batteries

Vertical Type, 1½ Volts

A single 6-inch dry cell battery having two screw knurls and put up in an attractive round paper jacket.

Connected in various combinations to meet the requirements of WD-11, UV-199 and all other dry cell tubes.

Furnished in round jackets and with screw knurls.

Width, 2½ inches; and height, 6⅝ inches.

Packed 12 in a standard package.

Weight per standard package, 27 pounds.

No. 7111.....each \$.45

No. 746 Eveready A Batteries

For 1.4 volt portable receivers.

For use with Eveready Mini-Max B battery.

A compact power supply unit for portable receivers.

Contains 3 Radio A cells.

Has 2-prong, 4½ volt socket.

Length, 3⅜ inches; width, 1⅝ inches.

Length, 3⅜ inches; width, 1⅝ inches; height, 4⅞ inches.

Packed 2 in a carton.

Weight per carton, 2½ pounds.

No. 746.....each \$.45

Eveready Air Cell Radio A Batteries

A-2300

A-2600

A-1300

A battery originally developed for owners of radios not on a power line. Has low ampere-hour cost, long service life, no recharging, constant voltage, and no shelf depreciation.

The Nos. A-2300 and A-2600 are for receivers drawing no more than 0.66 (660 milliamperes). No. A-1300 for receivers drawing no more than 0.2 (200 milliamperes).

Uses a liquid electrolyte but is shipped dry. In the dry state it undergoes no shelf depreciation.

No.	A-1300	A-2300	A-2600

Eveready Air Cell Batteries

No. T-1600

No. T-2600

For railroad, telephone and industrial use. The low ampere hour cost, long life and sustained voltage make these batteries desirable for telephone and signal work.

Available in two conservatively rated capacities—300 ampere hours and 600 ampere-hours.

Made in single cell units, also in batteries consisting of two cells in series. The average voltage per cell is 1.25 volts, falling to 1.0 volts per cell at the end of their capacity. Uses a liquid electrolyte.

Shipped dry. In the dry state it undergoes no shelf depreciation.

No.	T-1300	T-2300	T-1600	T-2600
Each	\$2.45	4.25	4.50	6.70

No. 768 Eveready C Batteries

Horizontal Type, 22 1/2 Volts

Suitable for portable sets where light weight and small size are essential, and for self-contained sets having battery compartments too small to permit the installation of a larger B battery.

Plug-in type terminals. It has plus, minus 3, minus 4 1/2, minus 16 1/2, minus 22 1/2 terminal markings.

Length, 4 1/8 inches; width, 2 1/2 inches; and height, 2 1/2 inches.

Packed 1 in a standard package.

Weight per standard package, 2 pounds.

No. 768.....each \$.98

No. 771 Eveready Radio C Batteries

Vertical Type, 4 1/2 Volts

A 4 1/2-volt unit, containing 3 cells provided with plug-in type terminals.

May be used in either the filament or A circuit, the plate or B circuit or the grid or C circuit.

A 4 1/2-volt C battery is sufficient with most tubes when B battery voltages of not over 80 or 90 volts are used, and the signal is ordinarily

loud. For B battery voltages up to 120 volts, from 6 to 9 volts of C battery gives better results.

Length, 4 1/2 inches; width, 1 3/32 inches; and height, 3 1/2 inches.

Packed 5 in a standard package.

Weight per standard package, 2 1/2 pounds.

No. 771.....each \$.35

No. KS-8089 Dry Battery Gauges

A well made instrument for quickly testing battery life. It is compact, easy to carry and use and is reliable.

Designed by Bell Telephone Laboratories for use in testing No. 6 dry batteries used in telephone sets. It is manufactured to the specifications of and inspected by Western Electric Company. Has scale markings to show 0, 5, and 50% life remaining in dry batteries with separate scales for 2-cell and 3-cell batteries. Not arranged for testing single cells.

Pocket type, with cloth carrying bag with snap fasteners and equipped with Western Electric W2BM cord. Moving element has jeweled adjustable bearings and also has adjustable stops.

It will be necessary to allow a time interval of at least three minutes between consecutive readings in order to permit the winding to return to approximate room temperature. This instrument will be capable of withstanding a breakdown potential of 110 volts, a.c. applied between the cord clips and the case.

No. KS-8089.....each \$4.25

No. 24 Sterling Pocket Ammeters

This pocket ammeter is universally used for testing dry cells. It has 0-35 ampere scale, 1-ampere divisions.

This is a durable instrument, having correct scale calibration and a clearly marked dial.

Full nickel finish.

Packed in individual boxes and supplied in a standard package containing 10 boxes. Shipping weight, 3 pounds.

No. 24.....each \$1.25

Sterling Pocket Voltammeters

Packed 1 in a box, 10 boxes in standard package. Shipping weight, 3 pounds.

No. 44

Tests amperage of dry cell A batteries and voltage of both dry cell and storage A batteries; 0-35 amp. scale, 1-amp. divisions; 0-10 volt scale, 1/5-volt divisions.

No. 44.....each \$1.75

No. 45

Tests amperage of dry cell A batteries and voltage of either dry or storage B batteries up to 50 volts; 0-35 ampere scale, 1-ampere divisions; 0-50 volt scale, 1-volt divisions.

No. 45.....each \$3.00

No. 38A Sterling Voltmeters For Portable Radio Batteries

For testing 90-volt B batteries and 1.5-volt A batteries.

The flexible terminals, designed to fit any type of socket hole, prevent shorts and permit inclining of meter for convenient reading.

Scale, 0-100 volts, 5-volt divisions. Scale, 0-2 volts, 1/10 volt divisions.

Tests 45-volt and 90-volt B batteries and 1 1/2-volt A batteries.

No. 38A.....each \$2.75

No. 42A Sterling Graphic General Testers

For Portable Radio Batteries

Designed for servicemen and dealers for testing all portable A and B batteries with a single tester.

Red and green color chart for all standard batteries including 45-volt and 90-volt B batteries and 1.5-volt, 4.5-volt, 6-volt and 7.5-volt A batteries.

Flexible terminals for battery protection and convenient reading.

Scale, 0-100 volts for special sizes of B batteries, 5 volt divisions.

No. 42A.....each \$6.00

No. 86 Edwards Doorbell Transformers

Primary 115 Volts, 60-140 or 25-50 Cycles; 230 Volts, 60-140 Cycles
Secondary 10 Volts, 5 Watts

Schedule E

Has mounting feet so transformers may be used without outlet box in districts where such box is not required. May be inserted in either round or square plates and mounted on outlet boxes.

Underwriters' Listed.
Black finish.

No.....	86	86X	86Y

*Ratings apply to the 24 volt tap; 110 volt primaries may be used on up to 130 volts. 220 volt primaries add 15% to list. For 25-cycle transformers, and 60% to list.

Prices on other special primary voltages on request.

Jefferson Wizard Bell Ringing Transformers

For residences or small flat buildings. Will operate door bells, buzzers, annunciators, and door openers. For 115 volts; 5 watts. Secondary, 10 volts. Size, 2x2x2½ in. Weight, 1 lb. No. 230-101, 50-60 Cycles.....each \$1.25 No. 230-102, 25-40 Cycles.....each 1.50

Jefferson Nucode Bell Ringing Transformers

With Round or Square Cover

Mounted on an outlet box cover. Round cover fits 3¼ and 4-inch octagon boxes; square cover fits 3¼ and 4-inch octagon and 4-inch square boxes.

Knockout in cover permits hanging a drop cord from same outlet box. Transformer wires do not interfere with lighting wires. Grounded to prevent shocks or possibility of fires.

No. 230-111

Depth, 2¼ inches; width, 2⅝ inches; height, 2¼ inches.

Jefferson Standard Signaling Transformers

115 Volts, A.C.

Designed to operate all types of a.c. bells, horns, and other signaling systems including relays, lamps, annunciators, etc. Core and windings are hermetically sealed in a heavy metal case for protection against

moisture. Wiring compartments are provided for both primary and secondary connections.

All transformers have 4, 8, 12, 16, 20 and 24 volt secondary voltages.

Listed as standard by Underwriters' Laboratories, Inc.

For 230-volt transformers, add 15 per cent to above prices.

Transformers with primary circuit breaker; prices upon application.

No. 230-131 Jefferson Porcelain-Klad Transformers

115 Volts, 50-60 Cycles

Operates door bells, buzzers, annunciators and door openers in the average residence or small apartment building.

Porcelain covered transformer with a metal base for easy installation without the danger of breaking or chipping the case. Impervious to moisture or chemical fumes.

Size case, 3½x3½x1⅞ inches.

Secondary, 10 volts. Capacity, 5 watts.

Listed as standard by Underwriters' Laboratories, Inc.

Not made for 230-volt or 25-40 cycles.

Weight, 1¾ pounds.

No. 230-131.....each \$1.50

Jefferson Low Voltage Transformers

115 Volts, 50-133 Cycles, A.C.

Designed for service wherever low voltage a.c. current is necessary, such as the operation of electrically controlled valves, thermostats, magnetic relays, etc.

Approved by the Underwriters' Laboratories, Inc.

Jefferson Universal Toy Transformers

115 Volts, 50-60 Cycles, A.C.

No. 535-161

For electrical toy requirements.

The average change in voltage through the Jefferson dial control is approximately .15 volts. This fine regulation of voltage provides a steady flow of power, and while the current is being increased or decreased, this voltage does not drop back to zero to cause unsteady operation of the train or other electric device.

Equipped with an extension cord, separable attachment plug of non-breakable rubber and speedometer type name plate with arrow indicator dials.

Nos. 535-171, 535-181 and 535-191 have separate 9-volt taps for operating train whistles and accessories.

Approved by Underwriters' Laboratories, Inc.

*535-191	9.50	150	6 to 30	6-9 and 12	5 ¹ / ₂	5 ¹ / ₂	4	7 ¹ / ₄

*Equipped with thermal type circuit breaker which automatically interrupts the power to the track circuit when shorts or overloads occur.

All models except No. 535-191 can be furnished for 25-40 cycle primary. Prices furnished upon application.

Jefferson Auto Type Power Circuit Transformers

115 Volts, 60 Cycles, A.C.

Also known as single wound transformers, compensators or balance coils.

Application for making voltage transformations is limited.

May be installed in compliance with the National Electrical Code for purposes and under conditions as follows:

1. For derived lighting systems where the system supplied contains an identified ground wire which is solidly connected to a similar identified ground wire of the supply system.
2. For use in motor starters.
3. For supplying circuits wholly within apparatus which also contains the auto transformer.
4. For fixed voltage adjustment on existing unidentified power circuit.

Installations in which auto transformers are used as balance coils for derived lighting systems do not conform to the National Electrical Code.

Jefferson Double Wound Power Circuit Transformers

50-60 Cycles

This type of air cooled transformer has been very commonly used in railway service for lighting and signaling purposes. In addition it is required for signaling systems of schools, factories, mines, etc., for remote control switching, for lighting purposes, to operate low-voltage equipment from power lines, for insulating circuits from power and lighting supply lines, for emergency lighting systems, etc.

Illustration shows the standard type of double wound transformer which is equipped with wiring compartment for housing primary and secondary splices.

Knock-outs are provided for making connections with rigid or flexible steel conduit or for inserting porcelain bushings where open wiring is employed.

Complies with the A.I.E.E. specifications. Transformers complying with the A.R.A. specifications can be furnished on special order.

Jefferson Mercury Lamp Transformers

60 Cycles

For H-1, 400-Watt and H-2, 250-Watt Lamps

Indoor Wall Type

A complete assortment—core and coil, standard indoor, weatherproof wall mounted and weatherproof pole mounted—for single (250 or 400-watt) or two-lamp (400-watt only) installations.

The two-lamp units are high power factor type, available in two styles indoor and weatherproof pole mounting equipped with threaded hubs for three fixture supports. Single lamp types can be supplied for either low or high power factor.

All types equipped with convenient wiring compartments, screw terminals, and simple primary tap changing arrangement for full voltage range—100-107-115 and 123 for 115-volt installations and 200-215-230 and 245 for 230-volt installations.

Tested and approved by Electrical Testing Laboratories; listed by Underwriters' Laboratories, Inc. Carriers the Underwriters' Re-Examination Service Label.

*Diameter.

Transformers for operation on 400-watt 50-cycle source available in full range of types.

Transformers for 440-volt 60-cycle source supplied to special order.

Transformers for operation on 250-watt 50-cycle source available in full range of types.

Jefferson Ferro-Tube Mercury Contacts

Showing Mounting Arrangement, Minimum Degree of Travel from "Off" to "On" Positions, and Method of Arranging Leads

Jefferson Ferro-Tube Mercury Contacts widen the field of application for mercury switches because of their sturdy construction and their ability to withstand severe mechanical operating conditions. Made of metal. The barrel of each contact is made of specially processed pure metal to prevent amalgamation with the mercury. Shock resisting ceramic insulators are used, so constructed as to insure mercury to mercury contact. Each tube is vacuumized to a high degree and charged with an inert gas under great pressure to quench any arc within the tube, and to promote cool operation under all conditions.

Jefferson Luminous Tube Sign Transformers

Designed for use in all types of portable or fixed, indoor or outdoor neon signs. The complete assortment of models provides a transformer to meet the most exacting requirements, both as to electrical and mechanical details.

Mid-point grounded, balanced design patented construction and many other improvements insure perfect secondary current regulation regardless of length of tubing operated, high efficiency permitting long

Nos. 721-111 and 721-121

tube lengths, cool operation, quietness, long life, neat appearance, and lightness in weight.

The case in which transformer is assembled is made of extra heavy rust-resisting steel, flanged construction and with substantial brackets, insuring rugged construction. Binding posts and nuts are cadmium-plated to guard against corrosion, while the case is black enameled, baked thoroughly to present a tough and durable finish.

Jefferson Indoor Luminous Tube Sign Transformers

115 Volts, 60 Cycles

Type 726 with Hanging Bracket

Designed to meet the requirements of the National Electric Code and Underwriters' Laboratories, Inc. The compactness of the streamlined case and the convenient end compartments make this line adaptable to every type of indoor luminous sign.

Two groups of transformers are available—Series No. 728 having secondary spring contact electrode housings, and Series No. 726 with secondary cables. Transformers in either series are furnished with or without 3-conductor cord and 2-prong plug with means for grounding, and primary pull switch.

There are no exposed live metal parts in the high tension secondary circuit. Primary connections are screw terminals, panel-mounted, inside the end compartment. No soldering is required. Removal of end caps exposes the wiring compartments for easy and quick wiring. A combination knock-out and bushing in top of case provides for primary current entry through cord and plug, or through flexible or rigid conduit.

Hanging brackets, which prevent swinging movement of transformer and tubing, are furnished as standard equipment. Mounting supports for Series No. 728 are also available when it is desired to use the transformer and tubing in standing position.

Furnished in gray finish, hammered metal in appearance.

Jefferson Oil Burner Ignition Transformers

115 Volts, 60 Cycles, A.C.

Nos. 638-171, 638-251, 638-261 and 638-271

No. 638-281

The introduction of various types of burners has required the development of different types of transformers. This is a transformer for every specific application—5000, 10000, 12000 and 15000-volt ratings; for intermittent and continuous service; grounded, mid-point grounded, balanced mid-point grounded, and insulated secondaries; and in core and shell type designs.

The cool operation is accomplished by exacting requirements, liberal design throughout, plus the use of quality materials of adequate size which results in long transformer life.

Equipped with built-in radio barrier to eliminate the possibility of objectionable radio interference.

Nos. 638-251, 638-261, 638-271 and 638-171 are assembled in the new streamlined case. This case is of heavy drawn steel of exceptional durability, treated to resist rust and finished in a high lustre long-wearing black enamel. All other types are assembled in similarly rugged and attractive cases of standard design. Universal mounting brackets of sturdy design are provided.

A junction box of liberal proportions is built into the top of the case. Knockouts are provided in two sides and in the end of the case for convenient entrance. Quick and easy splicing results and there is ample space for additional wiring which any installation may require. Primary leads 24 inches long are standard on all types.

Jefferson Railway Transformers

Indoor Type

For Signal, Lighting and Rectifier Service

Designed to conform to the testing and constructional specifications of the American Railway Association. Intended for use in the operation of electrical equipment incidental to railway signal systems such as signal lights, battery rectifiers, relays and associated requirements.

This is an air cooled unit designed for wall or shelf mounting.

Windings developing or carrying 115 volts or less are brought out to standard A.R.A. terminals mounted on an attractive bakelite panel. Windings carrying in excess of 115 volts are brought out

of the housing in the form of flexible leads which are terminated in connecting lugs.

Generally, compensating taps are supplied on the primaries, although for some services, special auto transformer taps are furnished. When compensating taps are furnished, they are full of capacity rating.

Primary windings of 115 volts or less and all secondary windings are insulated to withstand a dielectric strength test of 3000 volts. Primary windings in excess of 115 volts are designed to withstand a dielectric strength test of 10000 volts.

Name plates and winding diagrams are furnished with each transformer which give the complete information required by the A.R.A. standards.

The following table outlines a number of the more popular types of transformers furnished for these services. These transformers fulfill practically all signalling system requirements, although in many cases transformers of special specifications are supplied.

G-E Tungar Battery Chargers

Form A—Autotransformer—Garage Type
A.C., Volts: Normal, 115—Limits, 105/125

Nos. 6RB33B1 and 6RB33B2—Half Wave
60 Cycles

No. 6RB33B1

Recommended for the use of repair shops, car dealers, garages, service stations, and tire dealers.

Single dial switch control turns on a.c. and regulates charging rate. Silver-plated a.c. switch contacts for long life and trouble-free service. Fuse protection for battery and Tungar bulb.

Overall dimensions: height, 10 $\frac{1}{2}$ inches; depth, 7 $\frac{5}{8}$ inches; width, 18 $\frac{1}{2}$ inches.

Finished in red and white acid-resisting finish.

Shipping weight, 36 pounds.

Cat. No.	6RB33B1	6RB33B2
Each	*\$29.50	†\$36.00
Capacity No. of Batteries	6	12

*Includes one No. 189048 Tungar bulb.
†Includes one No. 189049 Tungar bulb.

No. 6RB6B1—6-12—Full Wave

50/60 Cycles

Recommended for the use of garages, service stations and repair shops.

This tungar charges six 6-volt batteries at 12 amperes or twelve 6-volt batteries at 6 amperes or the equivalent.

New, easy-to-read meters. Two plug-in control panels regulate the charging rate to permit charging at a fast or slow rate or a combination of both.

Overall dimensions: height, 20 $\frac{7}{8}$ inches; depth, 9 $\frac{5}{8}$ inches; width, 11 $\frac{1}{2}$ inches.

Finished with red lacquered case and ivory enameled panel.

Shipping weight, 63 pounds.
Price includes two No. 189048 Tungar bulbs.

No. 6RB6B1.....each \$66.00

No. 6RB6B5—12-24—Full Wave

50/60 Cycles

Recommended for the use of large garages, fleet owners and super service stations.

This tungar charges twenty-four 6-volt batteries at 6 amperes or twelve at 12 amperes or the equivalent. Provides fast, one-day charging service.

New, easy-to-read meters. Charges at a fast rate, slow rate, or a combination of both.

Overall dimensions: height, 20 $\frac{7}{8}$ inches; depth, 9 $\frac{5}{8}$ inches; width, 11 $\frac{1}{2}$ inches.

Finished with red lacquered case and ivory enameled panel.

Shipping weight, 88 pounds.
Price includes two No. 189049 Tungar bulbs.

No. 6RB6B5.....each \$79.50

Similar outfits for other voltage and frequencies are available.

G-E Half Wave Tungars

For Charging Clock, Signal, Control Batteries, Etc.

Form B—Insulated Transformer
60 Cycles, 115 Volts, A.C.

No. 204170—24-30-Volt, 0.5-2.5-Ampere

Nos. 204170 and 199717

A simple, compact, half-wave outfit designed to charge from 9 to 12 cells at an adjustable rate 0.5 to 2.5 amperes. Adjustment is obtained by means of two secondary taps used in conjunction with a 6-ohm resistance.

Supplied in a neat casing arranged for wall, panel, or bench mounting. A hinged cover allows easy access to bulb, resistance and transformer. No instruments are provided, since

they are not generally required on applications where this outfit is used.

Full-load efficiency, 55%. Power-factor, 50%.

Approximate dimensions: height, 9 $\frac{1}{8}$ inches; width, 6 $\frac{3}{8}$ inches; depth, 8 $\frac{3}{4}$ inches.

Uses one No. 195528 bulb.

Approximate shipping weight, 25 pounds.

No. 204170.....each \$36.00

No. 199717—40-50-60-Volt, 0.5-2.5-Ampere

This tungar is similar in construction to No. 204170, except it has a wider d.c. voltage range. Three taps on the secondary, in conjunction with an adjustable resistance, provide full adjustment of charging rate from 0.5 to 2.5 amperes at 40, 50, or 60-battery volts. Very liberally designed throughout. Will charge up to 75 volts at 1.5 amperes.

Full-load efficiency, 60%. Power-factor, 50%.

Approximate dimensions: height, 9 $\frac{1}{8}$ inches; width, 6 $\frac{3}{8}$ inches; depth, 8 $\frac{3}{4}$ inches.

Uses one No. 189049 bulb.

Approximate shipping weight, 29 pounds.

No. 199717.....each \$41.00

G-E Copper Oxide Rectifiers

For Telephone Service

Designed to deliver a noiseless d.c. of 6 volts, 0.350 amperes. There is a multitude of applications that come within this rating. A few of them are as follows:

New apartment house interphone systems; replace batteries (dry cell or storage batteries) on existing apartment house interphone systems; school interphone systems that come within rated output of this outfit; to supply power for way station telephones on railroad telephone lines; to supply power for local sounders on railroad telegraph lines—the smooth, humless d.c. obtained from this outfit (oscillograph shows no ripple) is praised by Morse code operators—any general application where d.c. not in excess of the rated output is desired.

This rectifier consists of a copper oxide rectifying unit, transformer and necessary specially constructed filter (condenser and choke coil) all mounted on a steel base plate and enclosed in a rugged casing. Casing has an attractive crystallized green finish, which will not chip or mar.

Terminals are provided to supply a small amount of a.c. at 6, 12 or 18 volts for bell ringing.

Rating: 115 volts a.c.; 60 cycles; 6 volts d.c., 0.350 ampered.c.

Approximate shipping weight, 21 pounds.

No. 6RC61D4.....each \$33.00

G-E Full-Wave Tungars

For Charging Telephone Batteries

Form B—Insulated Transformer—Noiseless Type
50/60 Cycles, 115 Volts, A.C.

No. 6RB6B17—6-65-Volt, 2-12-Ampere

With External Filter Reactance

This tungar when used in conjunction with No. 3126680 external filter reactance makes an excellent combination for float charging telephone batteries. The wide range of charging obtainable with this combination has made it popular for small, medium, and large size telephone exchanges.

In small and medium size exchanges where motor-generator sets are now in service, this combination tungar and reactance

is often used to supplement the motor-generator set especially during low load periods. This combination is particularly desirable for this purpose during week ends in those exchanges where a charging rate of 12 amperes or less is sufficient. This enables shutting down the motor-generator set and operating during this period at the much higher efficiency obtained from the tungar.

Employs the plug type control which simplifies balancing both sides of the outfit, as a visual indication of the settings on each side is given. An ammeter is provided on each side which further simplifies operation of the outfit.

Two or more outfits are often connected in parallel to obtain charging rates above 12 amperes. The full load efficiency is approximately 74% when used in conjunction with No. 3126680 reactance.

Approximate dimensions: height, 19 $\frac{7}{8}$ inches; width, 11 $\frac{1}{2}$ inches; depth, 11 $\frac{3}{8}$ inches.

Uses two standard 6-ampere tungar bulbs, No. 189049.

Approximate shipping weight, 103 pounds.

No. 6RB6B17.....each \$110.00

No. 3126680 External Filter Reactance for Use with 12-Ampere Full-Wave Tungars

Used with 12-ampere full-wave tungars.

Height, 10 $\frac{1}{2}$ inches; width, 6 $\frac{1}{2}$ inches; depth, 7 $\frac{3}{4}$ inches.

Shipping weight, 73 pounds.

No. 3126680.....each \$33.00

No. 6RB6B14—6-36-Volt, 2-12-Ampere

No. 6RB6B14.....each \$81.00

This tungar is similar to No. 6RB6B17, the only difference being in the rated output voltage. When used in combination with No. 3126680 reactance it is adaptable to charging telephone batteries of 3 to 16 cells at an adjustable rate of 2 to 12 amperes. The plug type of control is used and two ammeters are provided. Incorporates all the features of the No. 6RB6B17 outfit.

Approximate dimensions: height, 19 $\frac{7}{8}$ inches; width, 11 $\frac{1}{2}$ inches; depth, 9 $\frac{5}{8}$ inches.

Uses two No. 189048 bulbs.

Approximate shipping weight, 69 pounds.

G-E Full-Wave Tungars

For Charging Telephone Batteries

Form B—Insulated Transformer—Noiseless Type
60 Cycles, 115 Volts, A.C.

No. 244708—30-Volt, 0.3-0.5-Ampere

A small compact charger designed primarily for continuous trickle charging in a small PBX. A filter reactance is incorporated to eliminate objectionable hum from the telephone circuit.

Designed to charge 11 or 12 cells and a variable resistance permits adjusting the charging rate from 0.3 to 0.5 amperes. Full load efficiency, 28%. Power-factor, 78%.

Approximate dimensions: height, 9 $\frac{1}{16}$ inches; width, 6 $\frac{3}{16}$ inches; depth, 8 $\frac{3}{4}$ inches.

Uses one No. 199698 bulb.

Approximate shipping weight, 20 pounds.

No. 244708.....each \$40.00

No. 3049455—19-52-Volt, 1-3-Ampere

This Tungar was designed primarily to meet the requirements of intercommunicating systems and PBX's. Extreme flexibility is a feature of this outfit. It can be used wherever a full-wave filtered output is required up to 3 amperes from 19 to 52 battery volts. Six sets of secondary taps brought to a terminal board located just inside the left-hand door, in conjunction with a rheostat controlled from the front panel permit a simple and easy method of adjusting the output over the entire range.

A high grade D'Arsonval ammeter, mounted on the front panel, gives accurate indication of the charging rate. A suitable filter reactance is incorporated in the design, to give quiet operation on telephone batteries.

Will give full 3.0-ampere charging rate at 52 battery volts, and taper to 1.75 amperes at 65 battery volts. Full load efficiency, 48%. Power-factor, 92%.

Approximate dimensions: height, 17 $\frac{1}{2}$ inches; width, 12 $\frac{1}{8}$ inches; depth, 14 $\frac{3}{8}$ inches.

Uses 2 No. 12X825 bulbs.

Approximate shipping weight, 78 pounds.

No. 3049455.....each \$96.00

G-E Mercury Tungars

For 60-Cell Batteries

60 Cycles, 115 Volts, A.C.

These instruments are designed specially for float charging 60-cell control batteries in central stations, sub-stations, industrial plants, etc.

Designed to meet the exacting requirements of central station engineers, making it possible to replace present charging equipment for control batteries with highly efficient, quiet operating chargers.

No. 6RB22Y2

This Tungar incorporates micrometer adjustment of the charging rate, which is easily controlled from front panel.

The maximum charging rate of 2.0 amperes may be obtained at 120 or 150-battery volts, and tapers off slightly at 175-battery volts. A charging rate as low as 0.4 amperes at 120-battery volts can be obtained.

Battery volts, 120/150/175. Charging amperes, 2.0/2.0/0.75. Overall dimensions: height, 14 inches; width, 10 $\frac{7}{8}$ inches; depth, 11 $\frac{7}{8}$ inches.

Renewal tungar bulb: No. 16X897.

Cat. No. 6RB22Y2.....each \$125.00
Renewal Tungar Bulb, Cat. No. 16X897.....each 8.00

No. 6RB14Y1

This tungar is used primarily for trickle charging where there is a very small load or no load on the battery. It is arranged for wall, panel, or bench mounting.

Where this charger is to be used, the charging rate is usually predetermined; and once the charging rate has been set, no further adjustments are necessary, consequently, the outfit is supplied without instruments. It is designed to deliver a tapering charge which tapers from 0.8 amperes at 120-battery volts to 0.4 amperes at 175-battery volts. A cover on the top gives easy access to the bulb.

Battery volts, 120/150/175. Charging amperes, 0.8/0.6/0.4. Overall dimensions: height, 9 $\frac{1}{16}$ inches; width, 6 $\frac{3}{16}$ inches; depth, 7 $\frac{3}{16}$ inches.

Renewal tungar bulb: No. 16X897.

Cat. No. 6RB14Y1.....each \$42.00
Renewal Tungar Bulb, Cat. No. 16X897.....each 8.00

No. 6RB10Y3

This tungar is of simple, sturdy construction and provides an outfit for applications, which do not require extra refinements or capacity.

It is usually used where there is a voltmeter available on the switchboard for indicating the battery voltage, and consequently is supplied without a voltmeter.

Although there is some adjustment of the charging rate provided, this is primarily a tapering charger. The charging rate starts at 6 amperes at

120-battery volts and tapers to 1.75 amperes at 175-battery volts.

Battery volts, 120/150/175. Charging amperes, 6.0/3.0/1.75. Overall dimensions: height, 17 $\frac{1}{2}$ inches; width, 12 $\frac{1}{8}$ inches; depth, 14 $\frac{3}{8}$ inches.

Renewal tungar bulb: No. 45X674.

Cat. No. 6RB10Y3.....each \$120.00
Renewal Tungar Bulb, Cat. No. 45X674.....each 15.00

Similar outfits for other voltages and frequencies are available.

G-E Full-Wave Mercury Tungars

For Charging Telephone Batteries

Form B—Insulated Transformer—Noiseless Type
50/60 Cycles, 115 Volts, A.C.

No. 6RB23C1—19/52-Volt, 2.0-Ampere

This mercury tungar has slightly lower ampere capacity. It will give full 2.0-ampere charging rate up to 52 battery volts, and tapers to 0.9 amperes at 65 battery volts. Adjustment of the charging rate is obtained by secondary taps brought to a terminal board, in conjunction with a rheostat. A high grade D'Arsonval ammeter is provided to indicate the charging rate. A filter reactance is incorporated as an inherent part of the outfit.

Full-load efficiency, 53%. Power-factor, 86%.

Approximate dimensions: height, 16¹¹/₁₆ inches; width, 9⁹/₁₆ inches; and depth, 10³/₈ inches.

Uses one No. 16X897 bulb.

Approximate shipping weight, 45 pounds.

No. 6RB23C1.....each \$75.00

No. 6RB10C5—19/52-Volt, 6 Ampere

This outfit is similar to No. 6RB23C1 except for higher current output. It will give full-rated output of 6 amperes from 19 to 52 battery volts. Adjustment of charging rate is by means of secondary taps brought to a terminal board, used in conjunction with a rheostat. An ammeter is provided to indicate charging rate. A smoothing filter reactance is incorporated.

Particularly desirable for small and medium sized exchanges and PBX's which are too large for two or three-ampere outfits and too small for twelve-ampere outfits. It is sometimes recommended for installations where a three-ampere continuous float charge is required, because of the extra capacity that a six-ampere rate allows for boost charging.

Approximate dimensions: height, 17¹/₂ inches; width, 12¹/₈ inches; depth, 14¹/₄ inches.

Uses one No. 45X674 bulb.

Approximate shipping weight, 90 pounds.

No. 6RB10C5.....each \$110.00

G-E Constant Potential Full Wave Mercury Tungars

Form B—Insulated Transformer

No. 6RB3E4, 115-Volt, 2.0-Ampere and

No. 6RB3E8, 230-Volt, 2.0 Ampere

60 Cycles, 115 Volts, A.C.

No. 6RB3E4

This mercury Tungar is a constant potential device, designed specifically for operating electro-magnetic devices, such as solenoids, magnetic clutches, magnetic brakes, magnetic chucks, etc. It is also used extensively to operate small d.c. motors, card punching machines and innumerable other d.c. devices where power requirements are 2 amperes or less at 115 volts, d.c.

Furnished in a neat, strong, welded steel casing with two hinged doors allowing easy access to bulb and transformer. A double-pole tumbler switch mounted on the front panel breaks both sides of the a.c. line. Outfit is arranged for wall or panel mounting.

Approximate dimensions: height, 11 inches; width, 9³/₁₆ inches.

Uses one No. 16X897 bulb.

Approximate shipping weight, 60 pounds.

Cat. No.	6RB3E4	6RB3E8
Each.....	\$50.00	65.00

No. 6RB10E1, 115-Volt, 6-Ampere and

No. 6RB10E3, 230-Volt, 6-Ampere

50/60 Cycles, 115 Volts, A.C.

No. 6RB10E1

This outfit is similar to the above outfit, except that it has a capacity up to 6 amperes. The applications are about the same. The output voltage regulation is well within the usual commercial allowance of 10% from no load to full load.

Approximate dimensions: height, 17¹/₂ inches; width, 12¹/₈ inches; depth, 14¹/₈ inches.

Uses one No. 45X674 bulb.

Approximate shipping weight, 95 pounds.

Cat. No.	6RB10E1	6RB10E3
Each.....	\$90.00	150.00

G-E No. 6RC88Y2 Copper Oxide Rectifiers

For General Purpose Applications

3-Phase, 60 Cycles, 230 Volts, A.C.

This type rectifier has been used successfully for several years in motion picture projection service.

Conservatively rated 1 kw. continuous output at 110 to 115 volts, d.c. For intermittent duty, where the duty cycle does not exceed 20 minutes per hour, it may be safely rated 1.5 kw. at 110 to 115 volts, d.c.

Line taps are provided for a range of line voltage from 190 to 250. May be operated in parallel where the load conditions exceed the rating of a single unit.

Rated d.c. output: 110-115 volts, 10 amperes.

Dimensions: height, 33 $\frac{3}{8}$ inches; width, 21 $\frac{1}{2}$ inches; depth, 16 inches.

No. 6RC88Y2.....each \$250.00

G-E No. 6RB10Y5 Mercury Barium Tungars

For 55/66-Cell Batteries

60 Cycles, 115 Volts, A.C.

Recommended for charging 5 $\frac{5}{6}$ -cell control batteries in central stations, sub-stations, etc.

The charging rate is adjustable from 3 to 6 amperes at 120-battery volts; 1.5 to 6 amperes at 150-battery volts; and tapers to 3 amperes at 175-battery volts.

May be mounted on switchboard, above or behind it, or in any out-of-the-way corner.

The full-wave Mercury Barium Tungar bulb requires only a short period of time for heating the filament and then it starts

rectifying as soon as the load is placed on the outfit.

Can be depended on to operate 24 hours a day with practically no attention. There are no moving parts to wear, which minimizes maintenance costs. The battery cannot discharge through the bulb in the event of power failure; and these outfits will automatically start charging again when a.c. power returns.

Battery volts, 120/150/175. Charging amperes, 6/6/3. Overall dimensions: height, 17 $\frac{1}{2}$ inches, width, 12 $\frac{1}{8}$ inches; depth, 14 $\frac{1}{8}$ inches.

Renewal tungar bulb: No. 45X674.

No. 6RB10Y5.....each \$140.00
Renewal Tungar Bulb, No. 45X674.....each 15.00

Similar outfits for other voltages and frequencies are available.

G-E Copper Oxide Battery Chargers

For Fire Alarm Systems

60 Cycles, 115 Volts, A.C.

No. 6RC42D7

This charger was developed to meet a demand for dependable trickle chargers for fire alarm batteries. The full capacity of the battery is always in reserve in case of a.c. line failure.

Dry type. No moving parts, nothing to wear out. Full fuse protection. No standby batteries required. Can be mounted in any convenient out-of-the-way location.

A relay with circuit-closing contacts may be added at slight additional cost. Since the relay mechanism is actuated by the current, the contacts may be connected to an alarm circuit to indicate when batteries are not being charged, a desirable feature that insures proper maintenance of batteries.

G-E Full Wave Tungars

For Charging Clock, Signal, Control Batteries, Etc.

Form B—Insulated Transformer
60 Cycles, 115 Volts, A.C.

No. 6RB19Y2—12-Volt, 6 or 12-Ampere

A charger used for charging 6-cell (12-volt) batteries, or it may be used to charge two 3-cell batteries. A snap of the tumbler switch changes the charging rate from 6 to 12 amperes. No other adjustment of the charging rate is provided, since it is generally not required on applications where this outfit is used. Two of these outfits are often connected in parallel to obtain a charging rate of 24 amperes at 12 volts.

Highly recommended for use in fire stations for fire apparatus batteries. Also used with No. 3126680 reactance to float charge telephone batteries.

Approximate dimensions: height, 11 inches; width, 9 $\frac{1}{8}$ inches; depth, 11 $\frac{1}{4}$ inches.

Uses two No. 189048 bulbs.

Approximate shipping weight, 40 pounds.

No. 6RB19Y2each \$50.00

**G-E Copper Oxide Battery Chargers
For Telephone Service**

This copper oxide rectifier for telephone service obtains output adjustment over an extremely wide range in very small steps. A new type of variable transformer replaces the conventional transformer taps and resistance commonly used for adjusting. The dial mounted on the front of the cabinet gives perfectly uniform adjustment from zero to full load.

The rectifying unit is a copper oxide assembly, a permanent rectifying device of proven reliability and safety. After the charging rate is adjusted, no other attention is required.

The life of this copper oxide rectifier is practically unlimited. There are no parts to replace. A large number of units have been running on test continuously since 1925.

The efficiency of the rectifier is high since all the adjustment is made with a transformer. This eliminates the losses which occur when a resistance is used to obtain output adjustment.

An internal filter gives quiet operation. The filter choke coil and the transformer are vacuum-impregnated with Glyptal. The properties of Glyptal provide maximum mechanical and electrical durability. The rectifier is equipped with a D'Arsonval instrument which gives an accurate indication of the output current.

An attractive black wrinkle-finish casing is designed for maximum practicability and lasting beauty. Because the lower section is perforated it allows free air circulation to cool the unit.

Several different ratings have been standardized so that it is possible to provide a trickle charge for large batteries or a full charge for small batteries.

Edwards Telephone Rectifiers

No. 902

Permanent battery replacement unit offering a most efficient means of obtaining uniform and constant direct current from an alternating current source.

Consists of the highest quality transformer, full wave copper oxide rectifier, filter condensers, chokes and fuses, completely assembled in a compact metal cabinet where all connections are plainly marked.

For installations where very rare or brief interruptions of service cannot be tolerated, unit can be equipped with a variable charging resistor, and where it is necessary, an auxiliary relay to automatically transfer from rectifier to an emergency d.c. source during an interruption.

The illustration on the right shows numerals on the open cabinet: 1, a specially designed transformer with double secondary to allow for a reduced a.c. supply for accessory uses; 2, two ampere cartridge fuse; 3, long life copper oxide rectifying stacks; 4, dry electrolytic condensers of the highest type; 5, choke coil; 6, bakelite insulated terminal strip; 7, one ampere cartridge fuse for a.c.; and 8, steel stamped case of heavy gage steel, reinforced.

Voltage required is obtained by multiplying number of cells in battery by the following figures: Dry cell, 1.5 volts per cell in series; ordinary storage battery, lead acid type, 2 volts per cell; and Edison storage battery, alkali type, 1.1 volts per cell.

In order to designate proper rectifier, the following definitions apply to tables listed below: Heavy traffic means that during peak periods more than 50% of cord pairs are in use simultaneously; average traffic means that during peak periods less than 50% of cord pairs are in use simultaneously.

Raytheon Voltage Stabilizers

Input, 95-130 Volts, 60 Cycles, Single Phase;
Output, 115 Volts, Plus or Minus 1/4%

Cased

Uncased

Constant a.c. voltage is essential for effective operation of many electrical devices. When voltage stabilizer is built into products as original equipment, its simplicity and unique freedom from adjustments eliminate manual voltage adjustments in completed assembly.

Well suited for laboratory use. Its ability to eliminate the variables introduced by changing line voltage makes it a vital necessity in well-equipped laboratories.

All branches of the electrical communications industry use the voltage stabilizer extensively. Amplifiers used in talking motion pictures, radio transmitters, sound recording equipment, and telephone apparatus operate most effectively with a constant voltage input.

May be made for any output voltage or for several different output voltages, all stabilized, either single or 3-phase. Also made for operating devices where inherent limitations of standard type may not be suitable.

Wherever correct operation of synchronous electric clocks is obtained, the voltage stabilizer will meet its specifications. If frequency varies, so that correct operation of synchronous electric clocks is not obtained, write for recommendations giving the change in frequency expected. Standard stabilizer is adjusted to operate with a unity power factor load. If load is materially less than unity, adjustment can be made at factory to suit.

*Output 6.0 or 7.5 volts, plus or minus 1/2%.

†Add a \$7.50 set-up charge for any quantity each time ordered.

Also made to order in other sizes up to 25 KVA.

Raytheon RectiFilter

(Battery Eliminators for Telephone Service)

An economical way of obtaining telephone direct current power direct from an alternating current source.

The Raytheon RectiFilter improves telephone service by providing full direct current power for the best operation of the telephones.

A satisfactory way of supplying direct current power to PBX and PAX boards.

Features

1. Outlasts many sets of batteries.
2. Eliminates the trouble and expense of routine service for battery inspection.
3. Releases wires carrying charging current from the central office to subscribers' PBX boards for revenue producing service.
4. Minimizes power cost because of high efficiency in converting a.c. to d.c.

Steady D.C. Voltage

The PBX and PAX boards require a stabilized d.c. voltage to insure proper operation under the conditions of changing load normally encountered.

No. 1044-E RectiFilter and larger sizes include an exclusive d.c. stabilizing circuit which operates magnetically and, therefore, requires neither adjustment nor maintenance.

Continuous D.C. Power During an A.C. Interruption

The usual a.c. source is generally dependable. Consequently, a continuous d.c. supply is normally assured from the RectiFilter. However, for applications where even a rare interruption of service cannot be countenanced a RectiFilter is equipped to furnish d.c. during an a.c. interruption. For such applications recommendations will be furnished upon receipt of full particulars including d.c. voltage, maximum d.c., and length of time the auxiliary d.c. power is required.

Ratings

The established RectiFilter current ratings are conservative and the user will not find it necessary to de-rate any of them by adding a safety factor. Each RectiFilter will operate a telephone system for 24 hours a day as long as the maximum current demand does not exceed the rating.

However, it should be remembered that RectiFilter ratings are based on two assumptions: first, on their being installed in live air; second, on being placed where the maximum ambient temperature does not exceed 95° F. If ambient conditions exist which differ from the above, write for suggestions before selecting RectiFilter.

*Operates one or two magneto telephone operators' headset transmitters. Change of source relay included.

RectiFilter made to order for other wanted a.c. inputs and d.c. outputs.

Change of source relays can be supplied on all models at an extra cost of \$15.00. When not listed, order by adding suffix R to catalogue number.

MG-125 Holtzer-Cabot Magneto Ringing Sets For Telephone Exchanges

A quiet operating ringing set which causes no interference with radio reception, and has close voltage regulation.

Consists of a two-bearing frame with stationary windings for both motor and generator. This design eliminates the use of slip rings, brushes, circuit closing devices, and relays.

Floor space, 11 $\frac{1}{2}$ x7 $\frac{1}{2}$ inches.

Approximate shipping weight, 62 pounds.

Item No.	1	2	3	4
Motor.....volts	110	220	110	220
.....cycles	60	60	50	50
.....rpm.	1140	1140	1400	1400
Generator.....watts	15	15	15	15

.....cycles	19	19	23	23

Holtzer-Cabot Equipment

We have available complete information on Holtzer-Cabot Ringing Dynamotors or Rotary Converters, Ringing Magneto Motor Generators, and Frequency Ringing Motor Generator Sets.

Write your nearest Graybar Service Warehouse.

Model S Lorain Sub-Cycles

The Sub-Cycle ringing machine is a static type of frequency converter which operates without moving parts to produce 20-cycle ringing current from 105-125 volts, 60-cycle a.c. supply, or 16 $\frac{2}{3}$ -cycles when the input is 50 cycles. For offices up to 1600 stations.

Output, approximately 20 watts at 90 volts.

Cabinet finished in black wrinkle lacquer.

Size, 8x11 $\frac{1}{2}$ x5 inches.

Shipping weight, 30 pounds.

Model S.....each \$45.00

Other models for larger capacity are available.

Model H Telering Ringing Machines

For A.C.

Used by telephone companies, industrial plants, railroads, and cities in the police and fire signaling service.

This machine is free from radio interference. Operating cost is nominal.

Reed and contact screw are mounted on a stamping as one unit. Reeds are baked in an electric oven to relieve stresses set up in manufacturing operations; will remain constant structurally.

Assembly is given a 24-hour running test after adjustment to insure proper operation. Contacts are located in compartment behind plate on face of cabinet.

Contact point in screw has slightly radius face. Contact point in reed has larger face diameter and has a flat face.

A standard receptacle is located in bottom of cabinet. Fuses are standard 3-ampere tubular glass fuses. They are in a standard fuse block on back of cabinet.

The 50-watt vibration-proof lamp lights up in case of a short or heavy load on machine. This is reflected from red pilot light in face of cabinet. This is located directly in front of this lamp.

Cabinet is an aluminum casting sprayed in a gray-green baked lacquer crackle finish. Ribs are natural aluminum with clear lacquer. Plate covering compartment for contacts in face of cabinet, is also crackle finish with edges natural aluminum.

A removable plate covers back of cabinet.

Supplied with cord 36 inches long.

Standard machine operates on 60-cycle input, giving 20-cycle output. Also built for use with 50-cycle input.

Model H, for 50 or 60-Cycle Input.....each

Leich Ringing Frequency Converters

110 Volts, 60 Cycles, A.C.

This converter utilizes the principle of rectifying an alternating current into two pulsating currents of unlike polarity and interrupting them through the primary windings to produce a 20-cycle ringing current in the secondary winding of a transformer.

Harmonic converters are also available.

For complete information, write your nearest Graybar Service Warehouse.

Edwards General Purpose Relays

Schedule D

Made in two sizes with magnets, bases, contacts, etc., proportioned according to use.

All even numbers are the senior relays, approximately 3 inches wide, 5 inches high and 3 inches deep.

All odd numbers are junior relays, approximately 2 inches wide, 3 inches high and 2 inches deep.

On a.c., relay will be found free from hum and efficient in operation. The contacts are pure hard drawn silver

of the wiping type and liberally proportioned.

When ordering give: Exact operating voltage of coil and whether d.c. or a.c. (give cycles); voltage and current to be connected to contacts and whether inductive such as solenoids, motors, etc., or non-inductive such as lamps, heaters, etc. If there is any question a brief description or sketch of its intended use should be furnished with order.

*All senior relays can be equipped with blow out coils which increases the contact ratings to 30 amperes, 250 volts a.c. or d.c. for \$4.80 additional.

†Low voltage relay, approximately 1½ inches wide, 2½ inches high, 1⅜ inches deep. Bronze contacts. Suitable for lamp annunciators, etc.

Unless otherwise indicated in price information a box and cover is not furnished, but can be supplied if specified at \$4.80 additional. Weatherproof cast boxes can also be furnished at \$20.00 additional.

Edwards Telephone Relays

For the operation of loud ringing extension bells or horns on any desired voltage. The relay operates on all standard telephone ringing circuits, 70 to 90 volts a.c., 16 to 20 cycles. Supplied complete in metal hinged cover box with condenser.

No. 962

Schedule D

For momentary operation as long as telephone ringing circuit is closed. Contact ratings—10 amperes a.c. or 5 amperes d.c. up to 48 volts, 10 amperes a.c. or 3 amperes d.c. up to 130 volts, 5 amperes a.c. or 1 ampere d.c. up to 250 volts.

No. 962.....each \$24.20

No. 26-T

Schedule T

For continuous ringing until reset. Contact ratings, 2 amperes a.c. or d.c. up to 48 volts.

No. 26-T.....each \$20.00

Brach WJZ Potheads for Pedestals

8-Wire

In pedestal locations and other places where space is extremely limited it is desirable to have a terminal pothead that is extremely small and at the same time offers the advantages of high insulation, accessibility and a number of circuits.

The design includes a bakelite panel mounted on a heavy cast zinc box. Cable enters through a rubber sealed stuffing box. Provision is made for completely filling the pothead with pitch after cable is installed. The pothead is suspended by soft lead links so that any undue stress on cable will cause it to fall without breaking cable.

Bakelite panel on front of pothead and back cover are both removable. Panel is backed with waterproof paper.

Size, width and depth approximately 2⅞ inches. The height depends upon the number of wires.

No.	WJZ-8	WJZ-10	WJZ-12	WJZ-19
No. of Terminals.....	16	20	24	38

NOTE: It is important to advise the diameter of the lead cable so that we can furnish the correct size watertight gland bushing.

Brach Pole Top Potheads

No. PT-20

The purpose of this pothead is to provide either a sealed cable end with accessible terminals for testing and interconnecting, or a junction terminal to facilitate the connecting of cables to cables and open wires.

Cables brought up behind the terminal panel are skinned and passed out through the hollow studs of the binding posts and soldered. The enclosed chamber behind the terminal panel can then be entirely filled with compound. Cables or wires brought up in front of the terminal are connected to the binding posts in the

usual manner and can be sealed with compound in a well provided for this purpose. Compounding chamber, compounding well, base, and mounting bracket are castings. Panel is of solid ⅝ inch bakelite. Solid copper cover is permanently chained to base.

No.	PT-10	PT-20
No. of Terminals.....	10	20
Height.....inches	7½	12½
Diameter Overall.....inches	4½	4½

Brach Terminals In Sheet Metal Cabinets

Terminals in sheet metal cabinets are furnished to order.

Specify the type of terminal and the number of circuits required.

Be sure to advise size and location of entrance holes.

Brach Universal Terminal Strips

Type 2500

Each terminal strip is made in ten units moulded in one piece. Terminal strips may be sawed apart into smaller groups or single units. Each unit has its own mounting hole.

Sliding links are flanged to lock the nuts in place. Strips are made of bakelite. Each section of a strip may be further isolated by means of removable barriers. Insulated covers can be provided to fit over strips. Wires may be transferred or loops cut out without opening main circuit.

Size, 9½ inches long, 1¾ inches wide, 1¾ inches high.

Type 2500T

The same general description as Type 2500, but in addition carries Auxiliary Transfer Terminals, permitting two or more wires to be connected to each side of the terminal. These transfer terminals are desirable where temporary connections are needed without disturbing the permanent connections.

Size, 9½ inches long, 2¾ inches wide, 1¾ inches high.

ORDERING REFERENCE NOTE: By the addition of the letters B and C to any of the above ordering references we will understand that barriers and covers are to be included; or by adding B only that barriers only are required in addition to the terminals. For example: 2500TBC would be the 2500 terminal with extra transfer terminals, barriers and cover.

Type 1500

A smaller and a more compact unit than the Type 2500 Terminal Strip, but since silicon bronze screws are used throughout with heavy specially designed nuts they are far stronger than their size would normally indicate. Each terminal is made of eight units molded in one piece and may be separated into smaller groups or single units. Its design includes the same features as the 2500 strip including slide links, large creepage distance and resistance to the effects of gases, water or chemical action. Insulating cover can be furnished.

Size 6 inches long, 1¼ inches wide, 1⅝ inches high.

Type 1500T

Same general description as Type 1500, but in addition carries auxiliary transfer terminals, permitting two or more wires to be connected to each side of the terminal. These transfer terminals are also desirable where temporary connections are needed without disturbing the permanent connections.

Size 6 inches long, 2⅜ inches wide, 1⅝ inches high.

Brach Entrance Panels For Telephone Wire and Cable

Meets the demand for a rugged, combined protection and test panel for indoor mounting where cables or wires enter headquarters or fire houses.

Panel provides for each wire a heavy duty Rare Gas Lightning Arrester, a 3-ampere 2000-volt line fuse, a slide test link and a common ground buss with terminal posts top and bottom so that ground wires can be connected in two places, all assembled on a ¼-inch ebony asbestos panel mounted upon four porcelain insulators.

The slide test link permits opening a circuit without disturbing or injuring any

connected wire. The test links are marked to distinguish the circuit.

Panels can be mounted directly to the wall and set off from wall by porcelain knobs. Furnished mounted in sheet metal cases which may be fastened to the wall, these cases being provided with suitable doors and locks; or they can be furnished in weatherproof housings for mounting outdoors.

The arrester cartridges are heavy duty No. 272 Thermal Element Rare Gas Cartridges and are non-grounding. One is provided for each wire and meets the National Fire Protection Association requirements.

Fuses are nipped type rated at 2000 volts. One is provided for each wire.

Other size panels than those listed can be built to specifications.

Designation tags marked to specifications by stamp die markings on black fibre, filled in white are provided. They are shipped blank if no specification accompanies order.

Sneak current fuses, if not otherwise provided, may be had on protective panels embodying this additional equipment.

Entrance Panel in Sheet Metal Cabinets

The above entrance panels are frequently furnished in sheet metal cabinets with brass hinges and locks.

As the number of circuits vary we will be glad to quote if advised the arrangement preferred and the number of circuits required. Be sure to advise size and location of entrance holes.

Brach Switchboard Arresters

No. 27SB

No. 29SB

The switchboard is the logical location for lightning arresters in central offices. It not only facilitates in the wiring but it is also the preferred location in conjunction with fuses so that they may be readily maintained.

These arresters can be furnished in any finish desired—polished or satin chromium, lacquered brass and gold plated ferrules, cadmium, or black bakelite. The fuses can be furnished in polished bakelite with chromium or brass terminals.

- Underwriters' Laboratories approved.
 Can be used with horizontal or perpendicular mounting.
 No. 27SB casing 2 inches long, overall, 3 1/2 inches.
 No. 29SB casing 2 7/8 inches long, overall, 4 inches.
 No. 27SB, Cartridge Only..... each
 No. 29SB, Cartridge Only..... each
 No. 53 Line Fuse..... each
 No. 53-S, Sneak Current Fuse..... each

Be sure and specify type of finish desired on cartridges When ordering.

Brach Portable Rare Gas Arrester Testing Sets

The Brach Portable Testing Set is a small compact instrument and is capable of testing all types and makes of vacuum and rare gas lightning arresters.

This testing set can be used in determining the effectiveness of air-gap arresters as well.

It is good practice to make periodic tests of lightning arresters, or after a series of bad storms, to obtain uniform protection.

- No. R2605, Set Complete. ea.
 No. R2605-55 Batteries only each

Type RTC-2 Vincent Rare Gas Relays For Noise Elimination on Telephone Lines

In metallic telephone circuits the use of divided ringing to ground in order to simplify code or harmonic ringing on party lines has often resulted in noisy transmission. When a RTC-2 Vincent Rare Gas Relay is connected in series with each grounded bell circuit the line is automatically freed from ground during voice transmission and ground current noises are eliminated. The higher ringing voltages, however, pass through the relays and ring the bells. The relay is also applicable to the central office drop ground connection.

Furnished with an ingenious clip requiring a single bolt to mount it within the bell box or at any other convenient location.

The relay has no moving parts and is unaffected by atmospheric or temperature changes. Lines equipped with the relay are

free from grounds in normal operation and therefore free from noises which would ordinarily be picked up through ground connections. Can be used on magneto or common battery lines with either harmonic or code ringing. Ringer load is removed from voice circuit, improving transmission. Length, 2 1/2 inches. Height, when mounted, 1 1/2 inches.

Brach Rare Gas Lightning Arresters

The sensitivity and uniformity of Rare Gas Lightning Arresters, together with their ability to absorb extremely heavy surges without permanently grounding has caused their wide spread acceptance for the protection of Telephone, Railway Signalling, and Municipal Fire and Police Alarm Circuits. The arrester gap is hermetically sealed in an atmosphere of inert rare gases and is not subject to moisture, corrosion, insects or dirt.

No. 402

A two wire outdoor arrester to protect a single pair of wires by two type MCD arrester units without fuses.

The housing includes the arrester units mounted between heavy phosphor bronze clip terminals supported by a porcelain base and protected by a weatherproof galvanized iron can type cover. These units are interchangeable with the standard carbon mica blocks.

- A mounting bracket is provided.
 Size, 3 inches diameter, 4 1/2 inches high.
 No. 402, Arrester Complete..... each
 No. MCD, Cartridge Only..... each

No. 502

No. 502

A two wire outdoor arrester to protect a pair of wires by two type MCD cartridges units and two 2,000 volt nutted end fuses.

The housing includes the arrester units and fuses mounted upon a porcelain base. The entire arrester is covered by a weatherproof zinc can type cover. A mounting bracket is provided. Uses No. 53 Fuses. Size 3 1/2 inches wide, 2 1/4 inches deep, 5 3/4 inches high.

- No. 502, Arrester Complete..... each
 No. MCD, Cartridge Only..... each
 No. 53, Fuse Only..... each

Type MCD Brach Rare Gas Lightning Arrester Cartridges

The cartridge unit supplies the demand for a small size thermal element lightning arrester which fits the clips of standard carbon mica block units with which it is interchangeable.

Will operate under conditions where humidity is high. Gives good protection.

Size 3/4 inch wide, 1 3/4 inches long, mounted on 1/2 inch centers.

- No. MCD-2 MCD-4 MCD-6
 Each.....
 Breakdown volts 200-400 400-600 600-900

Brach Rare Gas Heavy Duty Lightning Arresters

Where space is not at a premium the larger Heavy Duty Rare Gas Arresters are recommended. A few of the many available types are listed. In the triple path types, two line electrodes and a ground electrode are contained in the same arrester cartridge facilitating the equalization of surge voltages between twisted pair conductors and cable conductors.

Standard voltage breakdown ranges 200-400, 350-600 volts a.c. Special ranges available from 90 volts to several thousand volts.

Type 27-A Arresters—Single Line

Has external saw gap plates. Is recommended for fire alarm circuits, telephone and telegraph circuits.

Equipped with an auxiliary air-gap under the cartridge to provide an additional path for any discharge in excess of the capacity of the cartridge.

The base is made of Bakelite, and carries two binding posts, one for line and one for ground. Uses No. 27-M cartridge only.

- Size 5 inches long, 1 1/4 inches wide and 2 inches high.
 No. 27-A, Arrester Complete..... each
 No. 27-M, Cartridge Only..... each

Brach Rare Gas Heavy Duty Lightning Arresters

Type 272 Arresters
Designed for telephone and telegraph circuits, where a Rare Gas Arrester is desired in combination with a line fuse.

The arrester is also largely used on single or grounded telephone lines.

Fuses are of the nutted end type, 5 ampere unless otherwise specified. Uses No. 272 Cartridge only and No. 53 Fuse only. Underwriters' Laboratories approved. Size 8 1/4 inches long, 4 3/8 inches high, 1 inch wide.
Type No. 272, Arrester Complete.....each
No. 272, Cartridge Only.....each
No. 53, Fuse Only.....each

Type 184 Arresters
Single Line, 2,000 Volts

Underwriters' Laboratories approved for fire alarm and other signal services.

Especially designed to fulfill the requirements of the Red Book with respect to location at the entrance of headquarters.

Consists of three operating portions: The lightning protective cartridge No. 272; The sneak current fuse No. 53-S; The regulation 2,000 volt fuse No. 53, 5 ampere unless otherwise specified.

Type 284-C Housed Arresters
Double Line Outdoor

A lightning arrester suitable for use where a single pair of wires is to be protected by heavy duty arrester cartridges arranged to be mounted outdoors without fuses. The housing for the arrester cartridges consists of a porcelain base with heavy phosphor bronze clip terminals and the entire unit is covered by a can type weatherproof cover.

A mounting bracket is provided. The arrester cartridges are heavy duty Type 272 Thermal Element Neon Cartridges and are non-grounding.

Meets the latest requirements of the National Fire Protection Association.

Type No. 284-C, Housed Arrester Complete.....each
No. 272, Cartridge Only.....each
Size 9 1/2 inches long, 4 1/2 inches high, 1/2 inch wide.

No. 272, Cartridge Only.....each
No. 53, Fuse Only.....each
No. 53-S, Sneak Current Fuse Only.....each

Type 60 Arresters
Double Line

Recommended for all low voltage protection.

The base is arranged for two cartridges taking care of a pair of circuit wires.

Auxiliary saw tooth gaps are provided. Uses No. 27-M cartridge only.

Size 5 1/2 inches long, 3 1/8 inches wide, 2 1/4 inches high.

No. 60, Arrester Complete.....each
No. 27-M, Cartridge Only.....each

Type 40-B Arresters
Double Line with 2,000 Volt Fuses

Recommended for all telephone and train dispatching circuits. Designed to accommodate the usual two wires or pairs of such circuits. Auxiliary air gaps are included.

Arrester is equipped with line fuses rated for 2,000 volts complying with the requirements of the National Board of Fire Underwriters.

Uses No. 27-M cartridge only and No. 53 fuse only. Size 6 7/8 inches long, 4 inches wide, 2 1/4 inches high.

No. 40-B, Arrester Complete.....each
No. 27-M, Cartridge Only.....each
No. 53, Fuse Only.....each

No. 3-A Fahnestock Arrester Relays

Used to replace standard cable or office protectors where the latter operate too often due to induction. Relay may be located within a cable box or in a switchboard cabinet.

Carries continuously, currents in excess of 10 amperes, and unfaithfully restores itself when inductive discharge or cross is over. Each relay provides for the protection of a pair. Consists of a fast a.c. relay fitted with large electrolytic silver contacts which short circuit both arresters when armature is pulled up. Relay will operate within a half cycle of the beginning of a discharge passing over an ampere through either arrester. Unless otherwise instructed the arresters furnished are Nos. 26 and 27 Western Electric Protector Blocks. The coil has a low impedance; never exceeds 1 ohm at 60 cycles.

Bronze and stainless steel armature bearing. All metal parts are phosphor bronze, with the exception of the magnetic portion. Parts plated to prevent rust and corrosion.

Bakelite base, 4 1/2 inches long, 2 inches wide.

Brach Rare Gas Heavy Duty Lightning Arresters

Type 390 Arresters
Triple Path

For signal and telephone work.

Maintains a triple balanced system of protection from lightning and electrostatic charges.

Provides a sensitive and reliable shunt path across the telephone pair.

Consists of an improved cartridge tube filled with Rare Gas having one end equipped with two terminals for the two line wires.

Uses No. 390 cartridge only.

Size 6 1/4 inches long, 1 1/2 inches wide, 2 1/4 inches high.
Type No. 390, Arrester Complete.....each
No. 390, Cartridge Only.....each

Type 440 Arresters

Triple Path with 2,000 Volt Fuses

For telephone protection or for a pair of circuit wires. The use of the single triple-path cartridge gives the advantage of discharge between line and line, and line and ground within one tube.

This type includes fuses. Uses No. 53 fuse only and No. 440 cartridge only.

Size 7 inches long, 3 1/4 inches wide, 2 1/2 inches high.

Type No. 440, Arrester Complete.....each
No. 440, Cartridge Only.....each
No. 53, Fuse Only.....each

Faraday Electric Clocks

Faraday Electric Clocks are used in small schools, hospitals, residences, and commercial establishments. They have self-starting 450-rpm. synchronous motor mechanisms, and are regularly furnished for 24 volts or 110 volts, 60 cycles a.c. Clocks require approximately 2 watts (at 50 per cent power factor) for normal operation.

Red sweep second hands are furnished on 8 to 15-inch single-motored clocks, but not on dual-motored clocks.

On a dual-motored clock, one motor operates clock on regular time; the second motor, used for resetting only, is controlled by a manual or automatic resetting device, either of which must be used with a dual motor clock system. If the supply of current from the central station fails, the clock stops. When normal supply of current is resumed, the second motor (when actuated by the manual reset switch) advances the clock hands at ten times regular time-speed until the period of current interruption is compensated for. In this way, a current interruption of one hour can be made up within six minutes.

Buzzers for signaling purposes can be mounted in any of the clocks listed below at an additional charge.

Surface Wall Type—Round

This surface wall type clock in a metal case has long been favored for practically every type of industrial and institutional application.

Standard finish, statuary bronze lacquer.

Dial Diameter Inches	No. 1650, Single-Motored Each	No. 1653, Dual-Motored Each
8	\$9.75	\$13.75
10	10.50	14.50
12	10.75	14.75
15	18.00	22.00
18	30.00	34.00

Semi-Flush Type—Round

A semi-flush wall clock in a metal case; furnished complete with wall box.

Standard finish, statuary bronze lacquer. Other finishes available as specified.

Dial Diameter Inches	No. 1652, Single-Motored Each	No. 1655, Dual-Motored Each
8	\$10.50	\$14.50
10	11.25	15.25
12	11.50	15.50
15	18.75	22.75
18	30.75	34.75
24	70.00	75.00

Surface Wall Type—Square

This wood clock is regularly furnished with an oak, walnut or mahogany finish; special finishes can be furnished.

Dial Diameter Inches	No. 1656, Single-Motored Each	No. 1657, Dual-Motored Each
8	\$15.00	\$19.00
10	16.00	20.00
12	17.00	21.00
15	23.00	28.00
18	36.00	41.00
24	74.00	79.00

Double Dial Type—Round

Clock is for either side wall or ceiling mounting. It is a 450-rpm. synchronous-motor double dial clock made of cast aluminum—completely cast.

Finished in natural aluminum or dark statuary bronze.

Dial Diam. In.	No. 1660, Single-Motored Each	No. 1661, Dual-Motored Each
10	\$38.00	\$46.00
12	41.00	49.00
15	57.00	67.00
18	82.00	92.00

Type P-160 Self-Winding Adjustable Program Clocks

24-Hour Schedule

An automatic clock combined with a program device. Used as a master clock to control a system of clocks as well as to operate programmed signal system. Can be checked hourly with official time by connection with local Western Union Time Service.

Program device sounds 4-second signals any 5-minute period of the day. Time of sounding signals is easily adjusted by rearranging pins on program disc. Operates a number of different schedules concurrently. Can be equipped with contact for silencing bells. One-bell installations can be furnished in compact units with bell mounted on side of clock case.

Height, 41 1/4 inches; width, 18 1/2 inches; depth, 7 3/8 inches; and dial, 12 inches. Oak or birch case finished to match trim.

Movement; 80 beat, spring-driven, pendulum-controlled. Has 1 hour of reserve power.

Operation; 110 volts, a.c., through transformer rectifier, or dry cell batteries direct.

Large installations requiring a number of bells, need additional relay and transformer rectifier to furnish extra power for bells. These are furnished at a slight additional charge.

Prices and complete information upon request.

Faraday Electric Time Systems

Listed as Standard by Underwriters' Laboratories

No. 1634 4-Schedule Program Clock

Faraday Synchronous Motor Operated Time Systems are so far superior to the pendulum master clock and minute impulse secondary clocks (outlying dials), that most architects, electrical engineers and school boards specify them as standard equipment. Year in and year out, these time systems maintain correct time within $2/10$ of a second—an accuracy impossible with the pendulum clock and minute impulse dial systems.

Faraday Single and Dual-Motored Time Systems are especially designed for use in schools, colleges, hospitals, institutions, banks, offices, public buildings, railroad stations, industrial plants, department stores and mercantile establishments. These clocks are furnished in two general types:

Time service only, with any desired number of clock dials from 8 to 30 inches in diameter as standard—larger sizes to order.

Time service with additional program instrument providing audible signals on predetermined schedules.

Program Instruments

Faraday Program Clocks are designed for use in schools, colleges, hospitals, etc. to automatically sound bells, buzzers, chimes, horns, etc. on a predetermined schedule in the classrooms, corridors or playgrounds. Operated by 450-rpm. synchronous motors. Regularly furnished in 1, 2, 4, 6 and 8-circuit capacity. All capacities, except the 1-schedule, are available in the 12, 18 or 24-hour type; the 1-schedule clock is the 24-hour, 5-minute interval type.

Operation of Dual-Motored Electric Time Systems

Dual-motored electric time systems are generally used where no "stand-by" source of current is provided.

Dual-motored clocks and program instruments require three wire circuits. The re-setting of dual-motored clocks and program instruments, if made necessary by failure of central station current, may be accomplished in two ways: either by manual re-set or by automatic re-set.

Manual Re-Setting

On dual-motored clocks and program instruments, one motor operates clocks and program instruments on regular time. If the supply of current from central station fails, the clocks and other devices stop.

When normal supply of current is resumed, the second motor (when actuated by the manual re-set switch) advances the clock hands and program instrument at ten times regular time-speed until period of current interruption is compensated for. In this way, after central station current has been restored by manually closing switch controlling the second motor, current interruption of one hour can be made up within 6 minutes; of 2 hours, within 12 minutes, etc.

Automatic Re-Setting

No. 1694 Automatic Re-setting Control

On dual-motored electric time systems, an automatic re-set unit may be substituted for the manual re-set switch. In case of central station failure, this unit will automatically and immediately time the duration of the interruption. When central station supply of current is restored the re-set unit automatically operates, as described above, the re-setting devices for the exact length of time required to compensate for the period of interruption. After that time, the equipment will be restored automatically to normal operation. However, it is more advantageous to use single-motor operated clocks with emergency supply outfits because, when central station current fails, clocks and other devices are kept in continuous operation, whereas without the emergency current supply outfits clocks and other devices stop.

Edwards Lokator Systems

Each unit is carefully designed to operate with every other unit for the utmost efficiency. System is standardized and may be assorted on the same circuit.

Automatic Lokator Schedule T

Standard 20-Call Lokator

This standardized instrument is used for the operation of all types of signals from whatever power unit best suits the installation.

Operated by low voltage irrespective of the voltage operating the signals. Its mechanism is driven by a small, noiseless, synchronous motor. The codes are started automatically when the selector key is pressed in the locked position. The code sounds continuously until the selector lever is flipped up.

The baked black finish relieved in dull chromium harmonizes with all interiors and furniture.

Description	*A.C.		†D.C.	
	No.	Each	No.	Each
20 Calls.....	5020M	\$75.00	5120M	\$75.00
40 Calls.....	5040M	175.00	5140M	175.00
60 Calls.....	5060M	350.00	5160M	350.00

*Unless otherwise specified Lokator will be furnished to operate in conjunction with power units connected to 120 volts, 60 cycles lighting circuit. Other frequency units (25-33-40 etc.) and voltages (up to 250 volts) may be furnished at no extra charge when specified.

†Furnished for operation in conjunction with power units connected to 120 volts d.c. lighting circuit, unless otherwise specified.

Larger sizes on application.

Power Units Schedule T

Connected to standard lighting circuits, it distributes 24 volts a.c. or 120 volts a.c. or d.c. to the signals but allows only low voltage to enter the Lokator itself. Protects the Lokator from undue strain on its contacts and provides a convenient terminal box for centralizing the various factors that make up a complete system. When the signal circuit has reached the limit of the initial power unit, an auxiliary power unit is introduced at that point and so on indefinitely.

No.	Description	Each
5061M	To Operate 24-V. Signals from 120 V. A. C. Lt. Circuit.....	\$36.00
5062M	To Operate 120-V. Signals from 120 V. A. C. Lt. Circuit.....	36.00
§5063M	To Operate 120-V. Signals from 120 V. D. C. Lt. Circuit.....

5062A	To Operate Additional 120-V. Signals on Circuit Using No. 5062M Unit.....	36.00
§5063A	To Operate Additional 120-V. Signals on Circuit Using No. 5063M Unit.....

§Prices on application.

Chime Signals Schedule T

No. 5001

This is the most commonly used signal for all systems. It has a pleasant musical tone to which the ear responds subconsciously—but is not annoying. It mounts directly on a wall for open wiring, on a standard switch box, or any fitting designed for a switch or receptacle.

No.	Each	Watts	†Cycles	Volts	From Power Unit No.
5001	\$6.00	6	41-60	24	5061A or 5061M
5003	12.00	6	41-60	120	5062A or 5062M
5004	12.00	6	D.C.	120	5063A or 5063M

Quiet Signals Schedule T

No. 5011

Signal produces a quiet ding which attracts attention in immediate vicinity but is not annoying. Particularly desirable in conference rooms and for the extension of the call system to a remote place where one or two people are interested. For surface wiring it mounts in any wiremold or similar fitting designed for a switch or a receptacle, and for concealed wiring mounts in any standard switch box. It is covered with any standard toggle switch plate.

Price does not include plate.

5011	\$2.00	10	41-60	24	5061A or 5061M
5013	8.00	10	41-60	120	5062A or 5062M
5014	8.00	12	D.C.	120	5063A or 5063M

Bells for 24-Volt Operation from Nos. 5061A or 5061M Power Units

Schedule T

No. 5023

Specially designed for use on Lokator Systems, bell gives a clear crisp tone and will stand many years of hard service. For open wiring it mounts directly on the wall. For use with wiremold and similar surface fittings or with switch box for concealed conduit, an adaptor plate will be furnished when specified at \$1.25 added to list. Specify No. 5029 adaptor plate. The plate mounts on any 4-inch square or 3¼-inch octagon box or on any standard single gang switch box.

No.	Each	Size Gong Inches	Watts	†Cycles	Volts
5023	\$5.00	3	6	41-60	24
5024	6.00	4	6	41-60	24
5026	8.00	6	18	41-60	24
5028	12.00	8	18	41-60	24

A heavier duty bell striking a harder blow and consequently giving more volume is available in 8, 10 and 12-inch sizes. Mounts directly on wall or on various type boxes and fittings.

5008	\$19.00	8	22	41-60	24
5010	30.00	10	24	41-60	24
5012	38.00	12	24	41-60	24

†Unless otherwise specified all a.c. units will be furnished for 60 cycles. Other frequency units (25-33-40 etc.) can be furnished without extra charge but must be specified.

Edwards Lokator Systems

Bells for 120-Volt Operation

Schedule T

No. 562-6

A back plate mounts on any four-inch square box, standard switchbox, outlet box with single gang cover or any single gang conduit or wiremold type fitting. Wires are brought through entrance hole in plate and connections made to binding posts on front of plate where there is plenty of room to work. The bell is then hung on two strong lugs and pressed home where it snaps solidly into place and is held securely. Underwriters' listed.

No.	From Nos. 5062A or 5062M A.C. Power Unit 120 V., *41-60 Cycles			From Nos. 5063A or 5063M D.C. Power Unit 120 Volts D.C.		
	562-4	562-6	562-8	563-4	563-6	563-8

Size.....inches	4	6	8	4	6	8
Watts.....	15	22	22	14	14	14

Light Signals

Schedule T

No. 5031

Ideal for locations where no noise is desired and where the call is shown by the flashing light. Protruding glass dome enables it to be seen from all directions. The dome is hinged so that lamps may be replaced easily. Signal comes equipped with a lamp. For surface wiring it fits any standard two-gang wiremold or similar fitting with a depth of two inches. For concealed wiring it fits any two-gang switch box or outlet box with two-gang cover where the two-inch depth is provided.

No.	Each	Watts	*Cycles	Volts	From Power Unit No.
5031	\$6.00	4	41-60	24	5061A or 5061M
5032	6.50	6	{41-60}	120	{5062A or 5062M 5063A or 5063M}

Horns for 24-Volt Operation from Nos. 5061A or 5061M Power Unit

Schedule T

No. 5111

Designed for use on Lokator Systems. Easily adjustable (after installed) for the desired pitch of tone. Underwriters' approved.

Back plate for interior horn mounts directly on wall for non-conduit wiring.

No.	Each	Description	Watts	*Cycles	Volts
5110	\$12.50	Interior, Megaphone	24	41-60	24
5111	11.25	Interior, Grill Front	24	41-60	24
5112	15.00	Exterior, Megaphone	24	41-60	24
5113	20.00	Exterior, Two-Way	24	41-60	24

*Unless otherwise specified all a.c. units will be furnished for 60 cycles. Other frequency units (25-33-40 etc.) can be furnished without extra charge but must be specified.

Bryant Hospital Signal Devices

Bedside Calling Station

No. CS56 Switch

No. CS258 Switch

No. 480 Switch

No. 482 Cord

No. 484 Fuse

Annunciator

Dome Light and Buzzer

Bedside Calling Stations

Operated by the patient; calls can only be cancelled at the bedside. Designed for use on 125 volts, but suitable low voltage lamps, buzzers and transformers are available to permit operation at lower voltages when desired.

Furnished single gang or in combination with bull's eye, switch, power and radio outlets, etc.

Station switches, Nos. CS56 and CS256 (2 cords) with audible signal contact; Nos. CS58 and CS258 (2 cords) without audible signal contact; and No. 480, for magnetic system. No. 482 cord used, with JD plug. Fuses, No. 483 for d.c. and No. 484 for a.c.

Annunciators

With 2 to 150 signals in flush, surface or double-face bracket mounting.

Dome Lights

One to four light types, with or without buzzers. Also bedside Roto-Lights.

Audible Signals

Bells and buzzers; either flush or surface mounted, in high and low voltages.

Doctors' In-and-Out Registers

With 20 to 200 signals.

Doctors' Paging Systems

Three signals simultaneously; 120 code calls.

Elapsed-Time Recorders

Four sizes; 5, 10, 15 and 20 pen.

Prices and Complete Information upon Request

Hospital Signaling Systems and Equipment

Hospital signaling systems are an absolute necessity in every modern hospital.

Nurses' Calling Systems

Nurses' calling systems may be of either one of the following three types:

LOCKING-BUTTON TYPE in which the locking push button, suspended from a flexible, rubber-covered cord contains all the mechanism to actuate the audible and visible signals and to reset these when call has been answered.

LOCKING-MAGNETIC SWITCH TYPE in which the contacts of the non-locking push button at the end of a flexible, rubber-covered cord actuate a magnetic switch, protected by a steel case in the wall, the

Nurses' and Maids' Location Systems

These systems indicate the location of nurses and maids in private rooms by an illuminated plug inserted in a receptacle at the door when entering. Upon leaving the room this plug is removed.

Nurses' Home-Calling Systems

These systems provide communication between office and the nurses' and attendants' rooms at their homes. Two types of systems may be used, viz.:

Return-Call Annunciator Type

Intercommunicating Telephone Type

In the return-call annunciator systems, nurses' or attendants' rooms are provided with a combination buzzer and push button-station while at building office, a combination annunciator and push button board is installed. In this way the office may call the nurse and the nurse may answer the call by operating the corresponding push buttons.

switch operating both audible and visible signals; this locking-magnetic switch type may be used on 110-volt circuits, either a.c. or d.c., or on low-voltage circuits if preferred.

PULL-CORD-SWITCH TYPE consisting of special toggle-type switch installed in the wall and operated by a pull-cord. This system is used in hospitals where low initial cost is a deciding factor; the operation of the pull-cord switch requires more effort on the part of the patient, and is sometimes not favored because of this.

Ambulance and Entrance Signaling Systems

Consist chiefly of the necessary push button, located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location with buzzer as audible signal. Useful for night service.

Room stations may be provided with indicating drops which in nurses' absence remains visible until reset, indicating that a call has been made.

In the telephone call system the combination annunciator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. The room telephone may be provided with indicating drop for the same purpose as stated above.

Hospital signaling equipment is approved by Underwriters' Laboratories as well as by the U. S. Government for Veterans' Hospitals, etc.

Engineering Advice

Our engineering department—specialists in this particular field of signaling—will gladly co-operate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service.

Webster Electric Teletalk Amplified Intercommunication Systems

Teletalk is amplified voice intercommunication. It is adaptable to every size and type of business. It is available in six basic models, each obtainable with special features to suit specific conditions. Capacities of individual models range from 5 to 24 stations. Systems based on any one model may be used for departmental operations or they can be combined to provide complete intercommunication for an entire office, plant or building operation.

Teletalk eliminates the countless, unnecessary and time-wasting steps and time consuming conferences that are inherent in any organization activity.

Three series available are M or Master, S or selective and SS or super selective.

Models 105 and 110

Particularly suited for use in small offices, service organizations, retail stores or factory groups, where intercommunication between a small group of executives or employees is desired.

Used for the purpose of securing information quickly, handling will-calls and alteration requests; information regarding credits, shipments and for similar purposes. Also used in large homes and apartments and on large estates for convenient and instant communication with servants.

Available in the M series in which the basic unit has complete control of the intercommunication and is not secretive, but speaker microphones can be used for two-way conversation. Also available in the SS series which is secretive and in which each station uses a basic Teletalk unit, each can select stations, call any other station or reply to calls with full secrecy. Available with earphones.

Cabinet is two-tone, solid walnut, hand-rubbed finish. Size, 11½ inches wide, 8½ inches high, 6¼ inches deep. Power supply, 110-125 volts a.c. or d.c., 50-60 cycles. Station capacity, Model 105, 5 stations, Model 110, 10 stations. Power consumption, approximately 35 watts.

Models 206 and 206-A

Ideal for executives of small businesses; advertising agencies, lawyers' offices, architects and consulting engineers, and others, where appearance as well as the utmost operating convenience are the dominating factors.

For in a system made up of these models it is easy to select a station. Simply trip up the key of the station for instant communication. Has a telephone handset for confidential use. A broader service is supplied in the Model 206-A through the annunciator system, which identifies the station that has called in the event the person called was not at his desk at the time of the call.

Available in the M and SS series. (See Model 105.) Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grill. Model 206-A has bronzed annunciator panel with indicators of contrasting aluminum finish.

Size, 13½ inches wide, 7½ inches high, 6¼ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 6 stations.

Models 212, 212-A and 224

Ideal for professional and service organizations, Models 212, 212-A and 224 offer a wide range of service for executive and inter-department communication in the larger types of business.

Provide just the type of service demanded in larger organizations. For example, the conducting of conferences without any executive leaving his desk. This is particularly desirable. It means that a conference can be called by simply tripping the Teletalk selector keys bearing the name or number of each executive. As each one trips up the keys of those who are to be a part of the conference, every man listens to the words of the speaker and each one can speak as thoughts occur to him. All the time consumed in going to one office or waiting for the group to gather is eliminated. Has a telephone handset for confidential use.

Available in the M and SS series. (See model 105.)

Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grills.

Size, 13½ inches wide, 7½ inches high, 6¼ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 12 stations with or without annunciators, 24 stations without annunciators.

Models 512, 512-A and 524

Designed for the business executive who desires the utmost in convenience, appearance, simplified operation, maximum secrecy and the widest possible range of service.

With separate microphone on top of the cabinet. The speaker is for reception only. Has a telephone handset for confidential use. No manual operation of a Talk-Listen switch is required. The user need only trip the keys in the panel to talk with one or a number of stations. If any one of these stations is busy, the green pilot light goes out. The light will go on again as soon as the line is clear. Then proceed to talk. In the event the station with which you wish to communicate is located in a noisy location, the volume can be greatly increased by pushing the extra-volume knob located under the speaker.

Available only in S series.

Cabinet is two-tone burled walnut with hand-rubbed finish and bronzed speaker grill and inbuilt microphone.

Size, 13½ inches wide, 7½ inches high, 6¼ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 12 stations with and without annunciators, 24 stations without annunciators.

Send for catalog containing complete information on Teletalk Amplified Intercommunication Systems

Webster Electric Teletalk Amplified Intercommunication Systems

Speaker-Microphones

No. 5A-45B

Many buyers who install a Teletalk Intercommunication System—particularly an M series system—find there are some locations at which the initiation of calls is not necessary.

To meet this requirement and reduce expense for the purchaser, we recommend the use of Speaker-Microphones. However, where paging only is required, Speaker-Microphones will be used at all stations except where the paging originates.

Model 5A-45 will prove highly satisfactory wherever the noise level is low and the room or department is small. This unit can be used with all models in M series for two-way communication; in the S series, for one-way communication and with all paging models.

Model 5A-45B is intended for use only with annunciator models, that is, all models in which the letter A is a part of the model number.

Model 10B-45 is a large, powerful unit which can be used in both M and S series. It is primarily intended for use where the area to be covered by either intercommunication or paging is

large or where the noise level is higher than can be overcome by the power of the No. 5A-45 unit.

Model 8C-45 serves the same purposes as the No. 10B-45 except that it is required where the air has a high moisture content, or where the speaker must be located out-of-doors.

Webster Electric Paging Systems

Models 1006 and 1012

It is an established fact that in paging, an individual responds much quicker to a voice calling his name than he does to a signal which has been assigned to him.

Many people whose places of business are now equipped with Teletalk Intercommunication Systems find that they are not getting maximum benefit from them because of the tendency to use the system to too great an extent for paging. These two models—for paging only—are the answer. They are particularly designed for office paging.

Operation is simple and the scope of service is broad.

Model 1006 has a capacity of six stations. Each station may be paged individually, or by the use of the all-call feature, all stations can be paged at one time.

Model 1012 has a capacity of twelve stations. It also has the all-call feature.

Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grille.

Size, 13 $\frac{1}{8}$ inches wide, 7 $\frac{7}{8}$ inches high, 6 $\frac{3}{4}$ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles.

Models 10112, 10212, 10124 and 10224

With Amplifier

Designed to bring Teletalk's fine design and excellent tone as an answer to the many requests for a satisfactory system for paging for factories, warehouses and in other locations where the noise level is high.

Features are the inbuilt microphone in the instrument panel, all-call or group-call provisions, a separate, remotely located, beam power amplifier of either 12 or 50 watts output with tamperproof adjustments for tone and volume. The control cabinet, which can be placed on the operator's desk is the only part of the system that need be visible.

Any of the Teletalk speakers or special speakers, if required, can be used with these models.

Cabinet is two-tone solid walnut with hand-rubbed finish. Amplifier is metal enclosed with three-tone, modernistic finish.

Cabinet size, 9 $\frac{3}{8}$ inches wide, 7 $\frac{1}{2}$ inches high, 5 $\frac{1}{4}$ inches deep; 12-watt amplifier size, 13 $\frac{3}{4}$ inches wide, 8 inches high, 7 inches deep. Power supply, 110-120 volts a.c., 50-60 cycles. Station capacity, Model 10112, 12 stations with all-call switch; Model 10212, 12 stations with 2 group-call switches; Model 10124, 24 stations with all-call switch; Model 10224, 24 stations with 2 group-call switches.

Send for catalog containing complete information on Teletalk Amplified Intercommunication and Paging Systems.

Graybar No. 1-A Inter-Phone Systems

Selective Ringing—Selective Talking

No. 6140-C Desk Set

No. 6140-C Wall Set

THE GRAYBAR NO. 1-A SYSTEM is recognized as the most satisfactory interior communication system for general office, factory and institutional use. It is the only system allowing for several simultaneous conversations, and is recommended where instantaneous connections without loss of time are necessary and the highest grade of transmission is required.

In a system consisting of six Inter-Phones, three separate conversations can be carried on at the same time.

Complete instructions and wiring diagrams are furnished with each Inter-Phone in order to guide the installer in the proper installation methods. We have set the standard for Inter-Phone installation practices with the result that after the system has been installed and in operating condition, no further attention is required. The only maintenance necessary is the replacement of dry cell batteries. Even this maintenance is not required when a RectiFilter is used for the battery supply.

PUSH BUTTON CAPACITY: For each station in the system one push button is required in each Inter-Phone. The Inter-Phones are available in standard sizes as follows:

Push Button Capacity.....	6	12	16	20	24
No. of Stations Which May Be Connected in the System..	7	13	17	21	25

CONSTRUCTION OF INTER-PHONES: This No. 6140-C type Inter-Phone consists of a combination key box and cradle type unit. The push button keys and their operating mechanism are mounted in a rigid metal frame.

Finished in dull black with nickel trim.

No. of Buttons	Code No.	Width Inches	KEY BOX ONLY	
			Length Inches	Depth Inches
* 6	6140-C6	5	7½	2½
*12	6140-C12	5	7½	2½
*16	6140-C16	5¾	10¾	2½
*20	6140-C20	5¾	10¾	2½
*24	6140-C24	5¾	10¾	2½

*When ordering, please specify whether desk or wall mounting.

Accessories for Use with Graybar No. 1-A Inter-Phone Systems

Cable

For connections between various stations cable especially designed for Inter-Phones should always be used. This cable includes the necessary number of wire conductors (2 pairs for battery supply, 1 pair for each station in the system) and is furnished in three different types to suit the various locations and conditions. Lead covered cable should always be used especially where there is moisture present, and where there is a possibility of the cable being damaged after its installation. The lead covered cable is an added protection for all installations where the cable is to be run in conduit or exposed locations.

Type	STATIONS				
	7	13	17	21	25
Fireproof Braid No...	244B	246B	248B	249B	250B
Brown Cotton Braid No.	245B	247B
Lead Covered No....	244BS	246BS	248BS	249BS	250BS

Stranded Flexible Cables

Stranded flexible cable is for use with the No. 6140-C Inter-Phone when mounted on a desk, and where it is required to move the Inter-Phone about the desk.

This cable is furnished in silk covered or mercerized brown braid.

Cord Code No.....	418	430	438	446	454
No. Single Conductors.....	18	30	38	46	54
No. of Inter-Phone Buttons.....	6	12	16	20	24

Cable Terminals

A cable terminal should be used wherever a junction is to be made between cables, also for each desk mounting. In cases where cable can be run direct to the Inter-Phone, no cable terminal is necessary. The number of cable terminals required should be determined by the installer.

Width, 5¼ inches. Depth, 2½ inches.

Code No.....	19AC	19BC
Capacity..... pairs	15	27
Length..... inches	8	14
Use with No. of Stations.....	7, 13	17, 21, 25

RectiFilters

RectiFilters are recommended in place of dry cells to deliver noiseless direct current for Inter-Phone systems. These are copperoxide units designed to operate from 110 volts a.c. source and will supply necessary direct current voltage for the talking circuit of the No. 1 system, also alternating current for the ringing circuit.

Graybar No. 11 Inter-Phone Systems
Selective Ringing—Common Talking

For use in residences, banks, institutions, warehouses, where conversations can be limited to one at a time.

Each Inter-Phone in the system is equipped with a number of push buttons (one for each other station in the system). By depressing the button marked with the name or number of the station wanted, the bell at that station will ring and there only. Any station in the system can selectively ring any other station. Only one conversation can be carried on at a time.

The wall type Inter-Phones can be furnished in capacities of 2, 3, 4, 6 and 8 buttons, accommodating 3, 4, 5, 7 and 9 stations respectively in a system.

Nos. 2527 and 2539 Wall Type Inter-Phones

No. 2527C-8

No. 2539C-8

Metal wall Inter-Phones having black enamel finish and made rustproof by the Parker Process.

The No. 2527 type Inter-Phone has a surface mounting metal housing which contains all the talking and signaling apparatus, also a metal back-board with a hinge arrangement for mounting the set to the wall.

The No. 2539 type Inter-Phone has a flush steel face plate on which is mounted all of the talking and signaling apparatus also a metal outlet box and a set of outlet box hangers for mounting the set in the wall.

No. of Buttons	2	3	4	6	8
Surface Type Code No.	2527C-2	2527C-3	2527C-4	2527C-6	2527C-8
Flush Type Code No.	2539C-2	2539C-3	2539C-4	2539C-6	2539C-8

Code No. 2527C-2 to C-8—Surface Type

Dimensions of housing: height, 7½ inches; width, 5 inches; and depth, 2⅝ inches.

Code No. 2539C-2 to C-8—Flush Type

Dimensions of face plate: height, 9 inches; width, 5⅝ inches. Dimensions of outlet box: height, 7½ inches, width, 4 inches, and depth, 2⅝ inches.

The No. 2527C type Inter-Phone can be furnished in larger capacities of 10, 12, 14 and 16 buttons.

No. 6247 Wall Type Handset Inter-Phones

Streamlined in accordance with the modern trend in design.

The case is a durable molded black phenol compound which is mar-resisting and which will give exceptionally long service. The push button unit is entirely enclosed in a handsome mounting attached to the top. A long Duretex cord allows free use of the handset.

Mounted by means of two screws and two bayonet slots, one vertical and one horizontal, to insure firmness and with a minimum of installation work. The hook switch has only one moving part which extends through the case and which is amply protected by the molding and cup hanger. Interior is easily accessible for wiring and inspection.

No. 6247C-8

Code No.	6247C-4	6247C-8
No. of Buttons	4	8
System No.	11	11

Desk and Hand Set Inter-Phones

Furnished in capacities of 4 and 8 buttons, accommodating 5 and 9 stations respectively in a system.

Cradle Type Inter-Phones

Consists of a hand set with a cradle type mounting having push buttons moulded in the base. Hand set is black moulded Bakelite. The Inter-Phone set includes an apparatus box containing a bell and a connecting block.

No. 6245C-8

No. 6239 Hand Set Inter-Phones

Code No.	No. of Buttons
6245C-4	4
6245C-8	8

No. 6239C-8

This hand set unit is designed for installation at the side of a desk, on the wall, or any vertical surface, also recommended for residential purposes for mounting at the bedside, either on the bed or on the wall within reach of the bed. The Inter-Phone set includes the metal push button block and apparatus box.

Code No.	6239C-4	6239C-8
No. of Buttons	4	8

No. 6034 Hand Set Inter-Phones

This Inter-Phone consists of a hand set, a push button block and an apparatus box. All metal parts with the exception of the hand set transmitter and receiver unit are finished in black enamel. The hand set has a press-to-talk lever.

No. 6034BH

Code No.	6034BG	6034BH

Accessories for Use with Graybar No. 11 Inter-Phone Systems

Retardation Coil. A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

Cable. Three common wires and one individual wire for each station.

Batteries. Five dry cells are required for the complete operation of this system. If 110-volt alternating current is available a rectifier may be used in place of batteries.

Graybar No. 12 Inter-Phone Systems

Master Station—Common Talking

Consists of one centrally located Master Station Inter-Phone to which are connected other outlying station Inter-Phones. The system provides for communication from a central point to different stations.

The Master Station Inter-Phone is equipped with a number of push buttons; one for each outlying station in the system. By depressing the button marked with the name or number of the outlying station wanted, the bell at that station will ring and there only.

The outlying stations are equipped with only one button which will ring the master station when depressed. Only one conversation can be carried on at a time.

Capacity is one master station and from two to sixteen outlying stations. Wall, desk and handset Inter-Phones may be used in this system for either the master or outlying stations, as indicated in the code number listings.

No. 6245C-1

Accessories for Use with Graybar No. 12 Inter-Phone Systems

Retardation Coil

A No. 51H retardation coil must be ordered separately with each master station Inter-Phone and installed near the battery of the system.

Wiring

For connections between the outlying stations and the master station either cable or insulated wires can be used, depending largely upon the layout of the system. Three common wires are required throughout the system, and in addition, one individual wire from the master to each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable, and at all distributing and junction points to install connecting blocks. From these connecting blocks separate wires can be run to the Inter-Phones.

The sizes of cable and the number of connecting blocks required should be determined in accordance with the installation instructions.

Batteries

Five dry cells are required for the operation of this system when the distance between the master station and most distant outlying station is 750 feet or less, based on using standard Inter-Phone cable which consists of No. 22 B. & S. gage conductors.

NOTE.—Detailed information covering wiring diagrams, connection of wires and cables, connecting blocks, etc., can be found in our booklet, "Installing and Maintaining Inter-Phones," which will be furnished upon request.

Graybar No. 12A and No. 12AC Inter-Phone Systems

Master Annunciator System—Common Talking

Conforms with Inter-Phone system requirements for schools. For use in the principal's office for registering the calls from the classrooms.

Master station equipment consists of a cradle set Inter-Phone, a push button block with buttons for each outlying station and a drop reset button, a terminal box, and an electric reset annunciator (flush or surface type) equipped with drops for each station in the system.

A brown mercerized cord, 6 feet long, is attached to the push button block. An extra cord eyelet is also provided for attaching the desk stand cord.

The No. 19 type cable terminal, made of hard wood, is equipped with a sheet steel cover.

No. 6245C-O annunciator and cradle set has all-metal, black finish case. Drop indicator is a white arrow which points directly at a drop number. The audible signal is a double adjusting buzzer. Equipped with a 5½-foot connecting cord.

System No. 12A

The principal's or master station equipment consists of an electric reset annunciator and a push button block with one drop and button for each classroom station in the system. The push button block also contains buttons for electrically resetting the operated drops. The principal is signaled from the classroom set by means of the push button on each set.

Wiring and Battery Requirements

Two wires common to all stations in the system and two individual wires for each outlying station.

System No. 12A requires a battery of five dry cells, connected in series, to furnish current for ringing and talking.

System No. 12AC requires a battery of dry cells or storage batteries to total 24 volts to furnish current for the ringing and talking battery supply.

Graybar No. 12B and No. 12C Inter-Phone Systems

Master Annunciator System

Provides for communication between a master station annunciator and a number of outlying stations.

The master annunciator is equipped with a hand set Inter-Phone, and can be obtained with or without push buttons.

System No. 12B—1-Way Ringing

The annunciator is equipped with push buttons, enabling the outlying stations to ring the master station but the master station cannot ring the outlying stations.

System No. 12C—2-Way Ringing

The annunciator is equipped with push buttons, one for each outlying station, enabling the outlying stations to ring the master station and the master station to ring the outlying stations individually.

Each outlying station is equipped with a push button for signaling the master station. The call will also be registered at the master station annunciator.

Only one conversation can be carried on at a time.

Capacity is one master station and any number of outlying stations up to twenty-four or more.

Master Station Annunciators

Annunciator for System No. 12C
2-Way Service

The annunciator is equipped complete with electrical reset drops for each outlying station. The indication is a white arrow which points directly at the number plate. It can be easily seen from any angle. The annunciator includes push buttons for resetting the drops and terminals for the reset buttons to permit remote restoring of the drops.

CODE No.		No. of Drops	CODE No.		No. of Drops

1212B	1212C	12			

A No. 1003D Handset must be ordered separately with each annunciator. This set is equipped with a 3-foot cord, and can be hung on the hook on the side of the annunciator.

Outlying Stations

METAL WALL INTER-PHONES		HANDSET INTER-PHONES		No. of Buttons
Surface	Flush	Surface	Flush	
2527C-1	2539C-1	6043D	6042M	1

Wiring

For System No. 12B one wire, common to all stations in the system, and in addition, one individual wire from the master station to each outlying station.

For System No. 12C one wire, common to all stations in the system, also two individual wires from the master station to each outlying station.

Batteries

Only one battery is required for the operation of the system. This should consist of three or four dry cells, where the distance between the master station and the farthest outlying station is 250 feet or less, and No. 22 B. & S. gage copper wire is used. On lines of greater length it is recommended that instead of increasing the number of dry cells to more than four, larger wires be used.

NOTE.—Detailed information for installing, wiring, diagrams, battery requirements, cable connections, etc., are included in our bulletin, "Installing and Maintaining Graybar Inter-Phones," which will be furnished upon request.

Graybar No. 12SS Inter-Phone Systems

Master Station Secret Service

Provides non-interfering or secret service between the master station and any number of outlying stations. The master station can connect his line to any one of the outlying stations and no other outlying station can listen in on the conversation.

The master station will press the button of the station to be called to its "way-down" position. This will ring the bell at the outlying station and the button in the key box will remain locked in the "talking position." This button will be reset when the master station operator makes another call.

Each outlying station is equipped with a push button for calling the master. This will signal the master and will operate the annunciator drop. The master station operator will answer the call by operating the button in the key box corresponding to the number of the drop.

Capacity is one master station and from six to twenty-four outlying stations.

Master Station Equipment

Desk Set Key Box No.	Cradle Set No.	Cable Terminal No.	Flexible Cable Code No.	ANNUNCIATOR CODE NO.			No. of Outlying Stations
				Surface	Flush	Desk	
328C-6	1245C-0	19-AC	418	403-6	409-6	673-6	6
328C-12	1245C-0	19-AC	430	403-12	409-12	673-12	12
328C-16	1245C-0	19-BC	438	403-16	409-16	673-16	16
328C-20	1245C-0	19-BC	446	403-20	409-20	673-20	20
328C-24	1245C-0	19-BC	454	403-24	409-24	673-24	24

The last button in each key box may be used for annunciator reset if wall type of annunciators are to be furnished. This means that one outlying station must be deducted from the total number mentioned above.

Wiring and Battery Requirements

Only one battery is required for furnishing the talking and ringing current. Not more than five dry cells should be used for this battery. This will take up to 750 feet of No. 22 B. & S. gage Inter-Phone cable wire. On lines of greater length, larger wires should be used as follows:

- 750—1,000 feet No. 20 B. & S. gage
- 1,000—1,500 feet No. 18 B. & S. gage
- 1,500—2,500 feet No. 16 B. & S. gage

Graybar No. 14 and No. 14C Inter-Phone Systems

Two-Station Private Line

For use where only two stations are required. Either station can ring the other by simply depressing the push button of the set.

System No. 14

Requires two wires for connecting the Inter-Phones. Dry cells must be installed at each station.

System No. 14C

Requires three wires for connecting the Inter-Phones. Dry cells are required at one station only.

Types of Inter-Phones

Wall, desk or handset Inter-Phones may be used interchangeably.

METAL WALL Surface	INTER-PHONES Flush	HANDSET INTER-PHONES			No. of Buttons

Wiring and Battery Requirements

System No. 14 requires three dry cells at each station for both talking and ringing service. If the length of line is more than 750 feet, additional dry cells are required.

System No. 14C requires five dry cells at one station for both talking and ringing purposes. If the line length is more than 750 feet, larger wires should be used in accordance with installation instructions given in our installation bulletin.

NOTE.—Refer also the description of Inter-Phone outfits composed of two handset Inter-Phones and the necessary installing material complete.

Graybar No. 15 Inter-Phone Systems

Code Ringing—Common Talking

Each station is equipped with one push button which, when depressed, rings the bells at all the other stations.

The various stations are called by signaling each one with a different code ring; for instance, two rings for Station No. 2, three rings for Station No. 3, etc.

Two to six stations may be operated in this system.

METAL WALL Surface	INTER-PHONES Flush	HANDSET INTER-PHONES			No. of Buttons

Accessories

A No. 51H retardation coil must be ordered separately and installed near the battery of the system.

Four wires are required for connecting the Inter-Phones.

Only one battery is required to furnish current for talking and ringing. Do not use more than five dry cells connected in series. The battery requirements of this system are determined by the number of Inter-Phones to be connected, the length of line, and the size of wire to be used. Further information furnished upon request.

Graybar No. 18C Inter-Phone Systems

Master Annunciator System—Non-Interfering

Provides for communication between a central or master station and a large number of outlying stations. The master station can selectively ring and talk with any of the outlying stations and the outlying stations can call the master station. Communication can be arranged between any two outlying stations through the medium of a connecting cord at the master station.

Master Station Annunciators

The master station, surface-mounting type annunciator is equipped with an electrical reset drop and metallic push for each outlying station. The equipment includes push buttons for resetting the drops and a ringing button for calling the stations. Each annunciator is furnished with an answering cord and a connecting cord. Extra connecting cords can be furnished as required.

Accessories

One wire, common to all stations in the system is required, and, in addition, two individual wires between the master and each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable and install cable terminals or connecting blocks at all distributing and junction points.

Five or more dry cells are required for operating the system. The cells can be placed in the basement or any other accessible place. If 110 volts alternating current is available, a power filter may be used.

NOTE.—Detailed information for installing, including wiring diagrams, battery requirements, cable connections, etc., are included in our bulletin, "Installing and Maintaining Inter-Phones," which will be furnished upon request.

Graybar No. 31A and No. 31B Inter-Phone Outfits

Outfits consist of two Inter-Phones with all necessary wiring material and installation data (excepting batteries) for installation in the home or in the business office.

No. 31A, for inside installation; No. 31B for inside or outside installation.

Graybar Wall Inter-Phones
Selective Ringing—Common Talking

No. 2527C, Surface Type
0 to 8 Button Capacity

No. 2527C-4

Sheet steel housing equipped with hinge hooks which match slots in the base of the metal backboard. This arrangement permits fastening the backboard in place on the wall and then mounting the housing unit to it.

The metal backboard is designed to permit the entrance of wires or cabling from either the top, bottom or center of the set. A metal guide ring is located near the cable entrance at the base of the backboard so that the connecting wires may be looped through this ring to hold them in place and provide a proper

bending point when the housing is swung forward.

Dimensions of housing: height, 7½ inches; width, 5 inches; depth, 2⅝ inches.

Watch-case type receivers are regularly furnished with these Inter-Phones.

Durable dull black enamel finish with chrome nickel trimmings.

No. 6247 Graybar Wall Type Handset Inter-Phones
Selective Ringing—Common Talking

For System No. 11

The push button unit is entirely enclosed in a mounting attached to the top. A long Duretex cord allows free use of the handset.

The hook switch has only one moving part which extends through the case and which is amply protected by the molding and cup hanger. Interior is easily accessible for wiring and inspection.

Mounted by means of two screws and two bayonet slots—one vertical and one horizontal, to insure firmness.

Case is streamlined, molded black phenol compound; mar-resisting.

Graybar Cradle Type Handset Inter-Phones

Selective Ringing—Common Talking

No. 6245B-1

The most convenient type of talking equipment available, as the transmitter and receiver are part of the handset which can be held with one hand.

The handset is made of phenol fiber and designed to conform with the contour of the head.

The cradle mounting for supporting the handset consists of a phenol fiber base with a black enamel finish. It contains a switch for closing the talking circuit when the handset is removed from the stand and opens the circuit when the handset is replaced on the mounting.

The No. 6245C-0 Inter-Phone is for general use, where a handset is required without the push buttons or signals included. The set is equipped with a two-conductor cord and a connecting block with two terminals for line connections.

The No. 6245B-1, C-1, D-1 and AC-1 are each equipped with a push button and buzzer which are mounted in the base of the cradle stand.

The four and eight button types have the push buttons mounted on the base of the stand (including the blank name or number plates). The apparatus box used with these sets contains the bell and connecting block for making line connections.

Graybar Handset Inter-Phones

Selective Ringing—Common Talking

The Inter-Phone transmitter and receiver are a part of the handset. A bar marked Press to Talk mounted in the handle is held down by the natural position of the hand while talking. When not in use, the handset can be hung on a hook or laid down in any position.

Finished in dull black.

No. 6043, Surface Mounting

Surface Mounting Apparatus Units (No. 383 Type) are equipped with an insulated base, black finished round metal cover and nickel hook. Approximate size, $3\frac{1}{8}$ inches in diameter by $1\frac{1}{8}$ inches deep. Handset cord is permanently attached to apparatus unit.

No. 6042, Flush Mounting

Flush Mounting Apparatus Boxes (No. 382 Type) are intended to be set in the wall and are equipped with a brush brass finished face plate. These boxes consist of three parts—a Gem A Union sectional switchbox, an apparatus unit, and a face plate. The face plate is $4\frac{1}{2} \times 2\frac{3}{4}$ inches; the wall box, $2 \times 3 \times 3$ inches deep.

Except on No. 6042K, the handset cord is permanently attached to the box. On No. 6042K the cord is equipped with a plug which can be inserted or removed from the receptacle located in the center of the face plate.

An important point to be observed is that wall box and face plate are the same as those used in electric light wiring for push button switches.

Graybar Annunciators
Janitor Answering and Calling Annunciators
For Sectional Talking System No. 22

Nos. 2202-D to 2206-D

There are three main types of janitor's answering and calling annunciators for sectional talking Systems 22-D, G and J, depending upon the service requirements.

The annunciators are equipped with a hook on one side for mounting a handset Inter-Phone, also a cord bushing for the entrance of the handset cord.

The annunciators are finished in Black Duco.

Annunciators for System No. 22-D

Equipped with electrical reset drops, one for each section of the system, also a jack for each section for answering calls. Push buttons are provided for opening the doors of each section and for electrically resetting the operated drops.

Code No.	No. of Drops Jacks and Door Buttons	For No. of Sections

2206-J	36	36	6	6

Additional sections and additional drops and push buttons may be ordered as required.

A No. 1003K handset Inter-Phone must be ordered separately with each annunciator. This set is equipped with a 3-foot cord, and can be hung on the hook on the side of the annunciator. Handset has black finish.

Graybar Apartment House Inter-Phone Systems

Graybar Apartment House Inter-Phone Systems are designed to provide service between the vestibule, apartments, janitor and tradesmen. The systems are planned throughout with the utmost care to cover the practical service requirements of apartment houses.

There are two main types of systems, the selection of which depends upon the individual service requirements.

Common Talking Systems

By common talking is meant that only one conversation can take place at a time in the system between the vestibule, janitor's or tradesmen's Inter-Phone and any one of the apartment Inter-Phones.

Common talking systems are divided into groups known as Systems No. 20 and No. 21.

System No. 20 consists of a vestibule set equipped with the usual hand receiver with flexible armored cord. This system in turn is divided into different groups to conform with the service requirements between the vestibule, janitor or tradesmen's and the apartments, and known as Systems 20-A, D, E, G, H and J.

System No. 21 includes the loud-speaking vestibule set and is divided into groups known as Systems 21-A, D, E, G, H, J, AR, DR and GR.

Sectional Talking Systems

Sectional talking systems are recommended where the same janitor serves several buildings, each having one or more vestibule entrances or one building having several vestibule entrances. This system consists of two or more common talking systems terminating at one janitor's station and connected so as to permit conversation taking place between each vestibule and apartment group without interference. These systems are coded as No. 22. System No. 22 is arranged with the vestibule set having the usual hand receiver with flexible armored cord.

This system is in turn divided into groups to conform with the service requirements between the vestibule, janitor or tradesmen and the apartment. They are known as Systems 22-D, G and J.

Graybar No. 22 Apartment House Inter-Phone Systems
Sectional Common Talking Systems

These systems consist of two or more common talking systems (System No. 20) each section terminating at one janitor's annunciator and connected so as to permit conversation taking place between each vestibule and apartment group without interference. Vestibule equipment consists of two or more No. 1520-R armored receiver cord type Inter-Phones, push button plates, and mail boxes.

System No. 22-D

Vestibule can call apartments and janitor; apartments can call janitor and open door. Janitor can open doors. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor: No. 2202-D to 2206-D Annunciator (depending upon the number of drops, jacks and door buttons required), and No. 1003K handset Inter-Phone.

System No. 22-G

Vestibule can call apartments and janitor; apartments can call janitor and open door. Janitor can call each apartment and open doors. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor: No. 2202-G to 2206-G Annunciator (depending upon the number of drops, jacks and push buttons required), and No. 1003K handset Inter-Phone.

System No. 22-J

Vestibule can call apartment and janitor; apartments can call janitor (individual drops) and open door. Janitor can call each apartment and open doors. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor: No. 2202-J to 2206-J Annunciator (depending upon the number of drops, jacks and push buttons required), and No. 1003K handset Inter-Phone.

Graybar No. 20 Apartment House Inter-Phone Systems

Selective Ringing—Common Talking

There are six combinations of the No. 20 System, differing from each other in the number of locations in the apartments which are to be connected for inter-communicating service.

Only one conversation can be carried on at a time.

The general vestibule equipment consists of the No. 1520-R armored receiver cord type Inter-Phone, push button plate, and mail boxes as required.

System No. 20-A

Vestibule can call apartments; apartments can open door. For apartments: No. 2527C-0 surface wall Inter-Phone, No. 2527C-1 surface wall Inter-Phone (button for door), No. 2539C-0 flush wall Inter-Phone, or No. 2539C-1 flush wall Inter-Phone (button for door).

System No. 20-D

Vestibule can call apartments and janitor; apartments can open door and call janitor. For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor or laundry: one No. 2527C-0 surface wall Inter-Phone.

System No. 20-E

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and laundry); No. 2527C-3 surface wall Inter-Phone, three buttons (for janitor, laundry and door); No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and laundry); or No. 2539C-3 flush wall Inter-Phone, three buttons (for janitor, laundry and door). For janitor and laundry: two No. 2527C-0 surface wall Inter-Phones.

System No. 20-G

Vestibule can call apartments and janitor; apartments can open door and call janitor, and janitor can call apartments. For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor or laundry: one No. 2527C-2 to 2527C-16 surface wall Inter-Phone (depending upon number of push buttons required).

System No. 20-H

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry, janitor and laundry can call apartments. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and laundry); No. 2527C-3 surface wall Inter-Phone, three buttons (for janitor, laundry and door); No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and laundry); or No. 2539C-3 flush wall Inter-Phone, three buttons (for janitor, laundry and door). For janitor and laundry: two Nos. 2527C-2 to 2527C-16 surface wall Inter-Phones (depending upon number of push buttons required).

System No. 20-J

Vestibule can call apartments and janitor; apartments can open door and call janitor, and janitor can call apartments. For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor: No. 2010 to 2100 Annunciator (depending upon the number of drops and push buttons required), and No. 1003K handset Inter-Phone.

Graybar No. 21 Apartment House Inter-Phone Systems

Selective Ringing—Common Talking

The general vestibule equipment consists of the No. 1524-E & F loud speaking, cordless type Inter-Phone, push button plate, and mail boxes as required.

System No. 21-A & AR

Vestibule can call apartments; apartments can open door. For vestibule: No. 1524-E Inter-Phone (with Press to Talk button), or No. 1524-F Inter-Phone (relay operated). For apartments: No. 2527C-0 surface wall Inter-Phone, No. 2527C-1 surface wall Inter-Phone (button for door), No. 2539C-0 flush wall Inter-Phone, or No. 2539C-1 flush wall Inter-Phone (button for door).

No. 1524-E

System No. 21-D & DR

Vestibule can call apartments and janitor; apartments can open door and call janitor. For vestibule: No. 1524-E Inter-Phone (with Press to Talk button), or No. 1524-F Inter-Phone (relay operated). For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor or laundry: No. 2527C-0 surface wall Inter-Phone.

System No. 21-E

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry. For vestibule: No. 1524-E Inter-Phone. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and laundry); No. 2527C-3 surface wall Inter-Phone, three buttons (for janitor, laundry and door); No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and laundry); or No. 2539C-3 flush wall Inter-Phone, three buttons (for janitor, laundry and door). For janitor and laundry: two No. 2529C-0 surface wall Inter-Phones.

System No. 21-G & GR

Vestibule can call apartments and janitor; apartments can open door and call janitor, and janitor can call apartments. For vestibule: No. 1524-E Inter-Phone (with Press to Talk button), or No. 1524-F Inter-Phone (relay operated). For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor or laundry: No. 2527C-2 to 2527C-16 surface wall Inter-Phone (depending upon number of push buttons required).

System No. 21-H

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry; janitor and laundry can call apartments. For vestibule: No. 1524-E Inter-Phone. For apartments: No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and laundry); No. 2527C-3 surface wall Inter-Phone, three buttons (for janitor, laundry and door); No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and laundry); or No. 2539C-3 flush wall Inter-Phone, three buttons (for janitor, laundry and door). For janitor and laundry: two Nos. 2527C-2 to 2527C-16 surface wall Inter-Phones (depending upon number of push buttons required).

System No. 21-J

Vestibule can call apartments and janitor; apartments can open door and call janitor, and janitor can call apartments. For vestibule: No. 1524-E Inter-Phone. For apartments: No. 2527C-1 surface wall Inter-Phone, one button (for janitor); No. 2527C-2 surface wall Inter-Phone, two buttons (for janitor and door); No. 2539C-1 flush wall Inter-Phone, one button (for janitor); or No. 2539C-2 flush wall Inter-Phone, two buttons (for janitor and door). For janitor: No. 2010 to 2100 Annunciator (depending upon the number of drops and push buttons required).

No. 1524-F

Graybar Vestibule Inter-Phones

No. 1520-R
Systems 20 and 22

No. 1524-E
for System 21

These are flush wall mounting vestibule Inter-Phones conforming with the 16½-inch size mail boxes. The sets are designed for common talking selective ringing service for Systems 20, 21 and 22.

The No. 1520-R Inter-Phone is recommended for apartment house service where the requirements call for an inexpensive vestibule set equipped with the regulation watch-case type receiver with armored cord.

The No. 1524-E Inter-Phone set is recommended for apartment house service where a loud speaking type vestibule set is required, and where it is necessary to operate a talking button to carry on a conversation with the apartment.

The No. 1524-F Inter-Phone is recommended for apartment house service where a loud speaking type vestibule set is required. This unit differs from the No. 1524-E in that it is equipped with a relay in place of the talking button, so that the talking circuit is automatically closed through the operation of the relay when the apartment party removes the receiver from the switch hook enabling the party in the vestibule to communicate directly with the apartment without any further operation.

The apparatus block is made of hard maple wood, boiled in oil, and stained black. This block supports the transmitting and receiving apparatus of the set.

The face plate is drawn brass, having squared corners to match up with the mail boxes. It is equipped with a metal transmitter mouthpiece. A push button name plate holder is furnished for the janitor button. Four corner mounting screw holes are provided for mounting by means of wood screws. On the No. 1524-E set an instruction plate for operating the set is fastened below the transmitter mouthpiece.

Each Inter-Phone set includes an outlet box. This box has flanges at the top and bottom for mounting. Knockouts are provided at the top and bottom and both sides of the box for the entrance of ½-inch conduit or connecting wires. The dimensions of the outlet box are 14x4¾x4½ inches.

Each set includes a circuit label, also a label showing the wall-cut dimensions for mounting the Inter-Phones and the associated push button plates and mail boxes.

The Inter-Phone sets are finished in bronze brass, and the steel or iron parts with the exception of the transmitter and receiver unit are treated with the Parker rust-proof process.

Graybar Push Button Plates

No. 412-A

No. 424-A

The No. 400 series Push Button Plates are designed for mounting with the No. 1520-R, No. 1524-E and No. 1524-F vestibule Inter-Phones for calling selectively each apartment Inter-Phone in the system, depending upon the total number of buttons required.

Plates are made of drawn brass, finished in bronze brass. For larger than 24 buttons, additional push button plates may be installed.

Graybar Annunciators

Janitor Answering and Calling Annunciators For Common Talking Systems Nos. 20-J and 21-J

Equipped with electrical reset drops, one for each apartment and the vestibule, also push buttons for calling each apartment and for opening the door. A reset button is provided for electrically resetting the operated drops.

Annunciators are finished in Black Duco.

Graybar Inter-Phone Cable

For Interior Use

For Outside Use

The conductors are provided with single silk and single cotton insulation, which is colored in such a way that each pair and each single wire can be identified.

The cable is impregnated with a wax compound and is covered with servings of paper and a heavy braiding, which is given a heavy coat of fireproofing paint.

Three General Types of Cable are Provided

1. INTERIOR CABLE with outside braiding treated with gray fireproofing paint. Use only in dry places.
2. INTERIOR CABLE with brown glazed cotton outside braiding. Use only in dry places where exposed to view.
3. OUTSIDE CABLE, lead covered. Always use this cable outside, and inside where there is apt to be moisture even in a small degree. In conduit installations lead covered cable should be used.

Lead-covered cables are not listed with separate Code Nos. Any fireproofed type of cable may be ordered with a lead sheath.

All cables are provided with a standard color scheme, so that each pair can be distinguished from any other. The pairs are properly twisted to prevent inductive disturbances.

Graybar Mail Boxes

Mail boxes are made in gangs of 3, 4, 5, 6, 7, and 8 units to a gang. Each unit accommodates the mail for one tenant and each gang is provided for mounting post office lock which is furnished and installed, free, by the Post Office Department. By combining these gangs in various multiples, using 8-unit gangs wherever permissible, and the smaller gangs where the number of apartments is less than eight, or where the number of apartments to be served is not an even multiple of eight, any requirement can be fulfilled.

Mail boxes have solid brass front with no projecting parts. Drawn return flange on edges of brass front for reinforcement. Reinforced master door and concealed hinges. Mail box is 4 1/8 inches deep. Make wall opening 4 3/4 inches deep.

Tenant's card holder is placed at the upper edge of tenant's door, visible to postman when master door is open. Tenant's lock is of the flat cylinder type.

Mail boxes are finished in old (sprayed) brass. Other finishes are special.

Wall Opening for No. 30A Mail Boxes

Single row mounting: top of wall opening, 60 inches from floor; height of wall-opening, 15 1/4 inches; height overall, 16 1/2 inches.

Double row mounting: top of wall opening, 67 inches from floor; height of wall opening, 31 3/4 inches; height overall, 33 inches.

Graybar Inter-Phones

Elevator Inter-Phone Service

No. D-1640

An elevator Inter-Phone system provides for communication between the elevator starter and each elevator cab, also between the elevator starter, the engineer, the superintendent, the machine room, etc., depending upon the total number of master and outlying stations to be installed.

The elevator cab Inter-Phone D-1640 is designed to mount in back of the Underwriters' building certificate frame, which in a number of cases is required by law. This frame is hinged to a metal outlet box so that the cab operator has access to the Inter-Phone through this door. The set is compact, is concealed, has no projecting parts, and the exterior frame may be designed to match the trim of the cab in which it is installed.

The D-1640 Inter-Phone Set does not include the outlet box and mounting frame as shown in the illustrations. The elevator company usually provides a suitable type of frame and outlet box in which to mount the Inter-Phone Set. In some cases the elevator companies may wish to install a standard surface wall or hand type of instrument, depending upon the local requirements.

The starter's station Inter-Phone is usually installed in the control panel with the other operator's signalling equipment. This Inter-Phone may consist of a wall or hand type, depending upon the space available for mounting the instrument. The regular cab call button on the starter's panel will also be used for signalling the cab Inter-Phone by means of a code ring. Extra buttons will be provided for signalling the other stations in the system.

Assembly drawings of Inter-Phones and wiring diagrams will be furnished upon request.

Graybar Inter-Phone Switchboards

Flush Wall Mounting Type

Designed to satisfy the need of apartments, apartment hotels, and other public buildings for an Inter-Phone Switchboard that combines mechanical perfection with compactness and attractive appearance.

Standing type switchboards are rapidly becoming out of harmony with the general plan and decorative scheme of entrance halls and lobbies of many of the larger apartments and other buildings. This flush type switchboard which can be mounted compactly and neatly into the wall does not take up space, yet gives all the service of the standing type and even greater convenience.

In most lobbies or entrance halls, the board, if properly mounted, is instantly visible from almost any angle or distance. Unless the board is continuously in use, this might make possible a reduction in personnel in some cases, as the operator could be utilized at other nearby tasks between calls. This is usually more difficult with the standing type due to its construction and the fact that its bulkiness causes it to be placed in some remote corner.

There are four main types of No. 108 and No. 109 Inter-Phone Switchboards which can be obtained in single or double panel types.

No. 108 Type

The No. 108 Type Inter-Phone Switchboard is a flush wall type unit designed for a three-wire system and is arranged for single supervision. One battery is required for operating the signaling and talking circuit of the system, and the outlying telephone sets are equipped with vibrating bells or buzzers for operation on 24 volts d.c. A single supervisory lamp is furnished with each cord circuit. The operating characteristics and the circuit arrangement of the No. 108 Type Switchboard are similar to the No. 116 Floor Standing Type.

No. 109 Type

The No. 109 Type Inter-Phone Switchboard is a flush wall type unit and is similar in construction to the No. 108 Type described above except that it is arranged for a two-wire system and for single supervision of the connecting cord circuits. This system requires one battery for operating the talking and line lamp signal circuits, also a ringing machine for operating the ringing circuit of the system. The line connections to each outlying station in the system consist of a pair of wires and a single lamp is provided to supervise the talking and answering sides of each cord circuit. The operating characteristics and the circuit arrangement of this switchboard are similar to the No. 117 Floor Standing Type Inter-Phone Switchboard.

90	10
100	10

Floor Standing Type

No. 116 Type

The No. 116 Type Inter-Phone Switchboard is a floor standing type unit designed for a three-wire system and is arranged for single supervision. One battery is required for operating both the signaling and talking circuit of the system. The line connections to each station in the system consist of two individual wires and one common wire. The telephone sets are equipped with vibrating bells or buzzers for operating on 24 volts d.c. A single supervisory lamp is furnished with each cord circuit.

No. 117 Type

The No. 117 Type Inter-Phone Switchboard is a floor standing type and is similar in construction to the No. 116 Type described above except that it is arranged for a two-wire system and for double supervision of the connecting cord circuits. One battery is required for operating the talking and lamp signal circuit. A ringing machine is required for operating the ringing circuit of the system. The line connections to each outlying station in the system consist of a pair of wires. The double supervision feature provides double lamps to supervise the talking and answering sides of each cord circuit.

Capacities

There are three main types of No. 116 and No. 117 Inter-Phone Switchboards, as follows:

No. 116-A and No. 117-A Switchboard of 50 line capacity.

No. 116-B and No. 117-B Switchboard of 100 line capacity.

No. 116-C and No. 117-C Switchboard of 200 line capacity and over.

NOTE—These switchboards are fully described in bulletin GBT-113, a copy of which will be furnished upon request.

Graybar Inter-Phones for Switchboards

Cradle Type

Consists of a handset with cradle mounting having a buzzer mounted in the base. A connecting block is furnished for making the line connections.

Code No.	CONSISTS OF		For Switchboard

Western Electric Type 6000 Switchboard Cable

No. 6084

This cable employs tinned enameled conductors which are covered with two servings of cotton. The core of each cable is bound with a binder serving of cotton, a serving of paper tape, a serving of metal tape, and a second serving of paper tape. Over this is applied a close serving of cotton and a close braiding of cotton. The completed cable is painted with a gray cable paint.

Western Electric Cable Terminals

Type B—Protected

No. B26, Open

The listing of Type B cable terminals complete includes a terminal box, equipped with fuse chambers and binding post chambers, each of which is supplied with a cable stub attached and potheaded. Fuse chambers and binding post chambers may be ordered as separate items.

No. B26 terminal will terminate both a 26 pair underground cable and a 26 pair aerial cable. It provides for cross-connection. Other sizes have similar capacity ratings.

Pole seats may be used with the two smaller sizes of Type B cable terminals. These together with balconies for the large terminals can be obtained.

Code No.	Capacity Pairs	Cable Terminal No.	*Fuse Chamber		Binding Post Chamber

			B101C	2	B101C	2

*B fuse chambers do not include the No. 7T fuses which must be ordered separately.

Type F—Unprotected

Provides a moisture-proof seal for lead-covered cables terminated on outside walls or poles.

Consists essentially of a metal sealing chamber having an insulating panel with binding posts, nuts, and washers. With galvanized slip cover and detachable metal mounting plate. Terminal may be mounted with stubs out of top or bottom of mounting. With $5\frac{1}{2}$ -foot cable stub projecting from top of terminal. Can be furnished with 10 or 12-foot cable stub (out of top on.), or 8-foot cable stub (out of top or bottom) as specified.

Cook and Reliable Protected Terminals can also be furnished.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric
Carrier Telephone Systems

Type C

A multi-channel carrier system operating at a frequency range of from 6 to 29 kilocycles. Provides facilities for superimposing three additional telephone circuits upon an existing open wire voice frequency telephone circuit.

The C5 carrier telephone terminal is used at each end of a Type C carrier telephone system and the C1 carrier telephone repeater is used at intermediate points of such a system to amplify the three carrier channels.

Where the total length of entrance and intermediate cable involved is relatively short, a Type C system employing two C5 terminals without repeaters can be operated under average conditions over lines up to about 150 to 200 miles in length. By using intermediate C1 carrier telephone repeaters and spacing them approximately 200 miles apart, the length of such a system can be extended almost indefinitely provided the transmission and crosstalk characteristics of the line are satisfactory.

When repeaters are not employed the Type C system can be arranged to operate with either manual or automatic regulation of the circuit net losses. When one or more repeaters are required the latter arrangement is always utilized.

Ringin

The C5 terminal is designed to operate with 1000-cycle ringer equipment. Any standard 1000-cycle terminal or intermediate ringer can be used. Western Electric 1000-cycle ringer oscillator equipment is recommended. Three of these units are required for each C5 terminal, one being used for each channel. The ringing equipment is not an integral part of the terminal and should be ordered separately.

Power Supply

The C5 terminal and the C1 repeater may be operated from either 24 and 130-volt office batteries or by the addition of suitable power supply equipment from a 105 to 125-volt, 50-60-cycle, a.c. source. In battery operated case about 6 watts of 55-volt, 50-60-cycle power is also required for the repeater, and a like amount for a terminal if the carrier pilot channel equipment is employed.

The C5 terminal or the C1 repeater can be obtained mounted complete on one relay rack bay. This bay may be $8\frac{3}{8}$, $10\frac{1}{2}$, or $11\frac{1}{2}$ feet in height. Additional relay rack space may be required for the associated equipment required.

The selection of the apparatus required for a carrier system is dependent upon all the physical and electrical characteristics of the line on which it is to be placed. Such information should be forwarded to Graybar in a specially prepared questionnaire which can be obtained upon request. After the job has been studied, quotations and complete recommendations will be made on equipment to meet your requirements.

Type G1

The Western Electric G1 Carrier Telephone System is a relatively simple and inexpensive single-channel system. The equipment is small in size and has been arranged for operation from an a.c. supply of 105-125 volts, 50-60 cycles.

The carrier frequency employed is 10.3 kc. It is generated by a vacuum-tube oscillator at one terminal only, which is called the active terminal. Both upper and lower sidebands are transmitted over the line and the carrier is transmitted along with them for use in modulation and demodulation at distant terminal which is called the inert terminal because it contains no vacuum-tube apparatus and requires no power supply. Transmission in the reverse direction is accomplished in the same way except for the fact that a phase corrector is required at the inert terminal.

For ringdown operation 20-cycle signaling is employed on a simplex basis. For cases where this is not feasible a simple composite set is available which provides two signaling paths, one for the carrier circuit and one for the voice circuit on which the carrier is superimposed.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10.
Consult your nearby Graybar office and warehouse.

C5 Carrier Terminal

C1 Repeater

Western Electric
No. H1 Type Carrier Telephone Systems

A single channel system for use on open wire lines.

Equipment includes provision for operation on a ringdown basis and can be applied on a line without the loss of any existing service. Suitable for use as a permanent installation, and also for temporary or emergency circuits. Typical applications are on the telephone lines of telephone, railroad, power, oil and pipe line companies where long distance telephone facilities are required.

The power supply may be either 105 to 125 volt, 50 to 60 cycles, single phase, a.c. or regular central office filament, signal and plate battery potentials.

This system, without an intermediate repeater, finds its widest application on open wire circuits of about 50 to 250 miles in length. With one or two intermediate repeaters this system is applicable on circuits up to as much as 600 or 700 miles in length, depending on gage of open wire conductors, amount of intermediate cable in line, number of bridged way stations, etc.

No. H1 Type Carrier Telephone—Terminal Panel, Line Filter, and Balancing Panel Mounted in Apparatus Cabinet

Western Electric
No. 22 Type A.C. Operated Repeaters

Precision Balanced Type

This repeater with its various types of precision networks and associated equipment, has been developed to meet the wide variety of needs of telephone companies, railroads, and pipe line companies.

The equipment is provided in two units called a primary and a secondary unit. Each of these units may be obtained mounted on cabinets or assembled on a framework for relay rack mounting. Both units are completely wired and assembled at the factory to meet the particular apparatus arrangements specified by the customer.

Approximate Balance Type

Developed for application on railroad dispatching circuits or message circuits of a similar nature.

This repeater provides a simple and economical form of repeater installation. Operates from a 50 or 60-cycle, 105 to 125-volt, a.c. lighting circuit. The signaling currents are bypassed around the repeater. Thus no changes in the signaling systems in general are required. Relays are also included so that the repeater is automatically cut out of the circuit in event of failure of power or vacuum tubes.

Tests have demonstrated that No. 22 repeaters with compromise balancing arrangements and without special engineering study of the line will ordinarily yield gains of 7 or 8 db., sufficient for many practical applications. Higher gains are generally obtainable by making minor modifications of the sub-station sets.

This repeater is not suitable for general use on railroad trunk circuits or on toll lines, because of the different signaling conditions and the requirements for toll line and network repeating coils and the precision type balancing equipment.

Western Electric

Voice Frequency Loading Coils

M Type Loading Unit Phantom Group

No. 623 Loading Coil

No. 622 Loading Coil

Available Voice Frequency Loading Coils and Loading Units for 2-Wire Telephone Circuits

Class	Code No.	Nominal Inductance—Henry	Class	Loading Units	NOMINAL INDUCTANCES HENRY	
					Each Side Circuit	Phantom Circuit
I-a	622	.088	II	M1	.172	.063
	628	.044		M3	.044	.025
	629	.022		M4	.031	.018
I-b	623	.135	M5	.011	.007	
	624	.175	M6	.027	.016	
	625	.250	M9	.088	.050	
			M10	.044	.025	
			M11	.088	.050	

Loading Coil Cases

Potting arrangements for the loading coils and units listed are available for a wide range of installation conditions and circuit complement sizes.

When only a few loaded circuits are required, the small size of the non-phantom type coils make it especially economical to pot these coils in individual containers suitable for installation within cable splice sleeves in aerial and underground installations. For larger groups of non-phantomed circuits, up to about 100 Class I-a coils and 25 Class I-b coils, or for locations where conditions may be difficult for "Splice Sleeve" loading, low cost types of lead sleeve cases are available. These designs are suitable for aerial and underground installations. For larger loading complements, welded steel case designs are available; these differ in finish and minor installation details, for aerial and underground installations. Also, a limited number of case designs are available for small complement office installations on apparatus racks.

For phantom loading units, lead sleeve type case designs are available for 1, 2, and 3 loading units and welded steel designs provide for complements in the range of 4 to 80 loading units.

By the application of loading coils on telephone cable circuits the unit loss can usually be reduced to the order of one-third to one-fourth the non-loaded value. The reduction is less than this amount at low frequencies and more at high frequencies, resulting in a nearly constant loss at all important voice frequencies. This contributes to the fidelity of reproduction, which is dependent largely upon a uniform transmission of the various frequencies required for intelligibility and naturalness. The loaded circuit is superior to the non-loaded circuit with respect to both loss and transmission distortion.

The following table lists the code numbers of the individual coils and loading units which comprise the different classes and include their nominal design inductance values.

Western Electric

No. 1417 Type Magneto Telephones

A local battery magneto wall set arranged for anti-sidetone rural service. Equipped with high efficiency No. 635A transmitter and No. 706A receiver. Furnished with a shelf for writing.

The standard type telephone set operates on three dry cells and is equipped with a No. 48 type (5-bar) generator.

Equipment

Two or three batteries are required but must be ordered separately. In addition to the apparatus mentioned, telephone is equipped with the following:

- Code No. 635A Transmitter
- Code No. 706A Receiver
- Code No. R2DW Receiver Cord
- Code No. 143Y Switch-Hook
- Code No. T1A Transmitter Cord (6 Inches)
- Code No. 113D Induction Coil
- Code No. 8A Transmitter Bracket

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric Magneto Mine Telephones No. 1336 Type

No. 1336—Outer and Inner Doors Open

These are metal case magneto telephones having all apparatus and parts treated to resist the action of moisture. Primarily designed for use on heavily loaded lines where code ringing is employed. Intended chiefly for mine service where danger from explosive gases is not present. Also recommended for outdoor use.

DRY CELLS. Two standard size dry cells are required for each telephone to furnish current for talking.

Two special cartons, impregnated with moisture-proofing compound are furnished with each No. 1336 type telephone. These are to be substituted for the standard cartons furnished on the dry cells. These cartons resist the action of any moisture that may form on the inside of the case and prevent current leakage and rapid deterioration.

No. 1336A. This telephone is not equipped with a ringer as it is intended for use where an extension bell is preferred to the regular telephone ringer. Also for service where all the calls will be outgoing.

Nos. 1336E and 1336K. These telephones differ from the No. 1336A in that they are equipped with a ringer and an iron hood for protecting the gongs.

No. 1336J. This telephone differs from the No. 1336E only in that a condenser is provided to permit the ringers of this telephone as well as others on the same line, being rung even though its receiver may have been left off the switchhook.

Transmitter No. 312. Receiver No. 144. Generator No. 48C.

Code No.	Receiver Cord	Con-denser	RINGER		Signalling Service	For Line Load
			Code No.	Resistance		
1336A		None	None		Code Ringing	Heavily Loaded
1336E	384	None	45BG	2500		
1336J	10½"	149A	45BG (Spl.)	2500		
1336K		149A	45BG	1600		Medium Loaded

In addition to the apparatus listed above the No. 1336 type telephone is equipped with a No. 143J switchhook and a No. 31 induction coil.

Special No. 1336 type telephones equipped with a heavy brass padlock and with two keys are obtainable. The padlock is attached to the chain in place of the latch pin. Orders must state that padlocks are desired.

No. 1536E

This type of telephone is for use in mines where explosive gas is present. In the words of the United States Bureau of Mines the Western Electric Mine Telephone Type No. 1536E "is permissible for use in mines or other locations where methane or other explosive gases or coal dust are or are likely to be present in dangerous proportions."

This telephone set is enclosed in a cast iron housing 8¼x11¼x17½ inches having a sloping roof and a hood extending out from the top of the door. These two features protect the working parts of the set from damage by falling debris and facilitate the shedding of water. This construction permits mounting the transmitter, receiver and generator-handle entirely exposed on the door but under the protection of the hood. The set is therefore under all conditions immediately recognizable as a telephone.

Closed View

The design of this set safeguards against the explosions which might result from the sparking of the switchhook and generator shunt spring contacts. Safeguards against explosions due to sparking caused by poor or loose connections also have been incorporated and every precaution has been used to guard against mechanical injuries to coils and other parts which might later develop into sparking points.

Western Electric

Subscriber Magneto Desk Set Boxes

No. 300 Type with No. 48 Type Generators

With ringers to operate on a.e. for code ringing service between central office and telephones.

Used with desk stands and No. 250 type telephone sets.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric No. 684A-3 Subscriber Sets

Open View

Closed View

A small anti-sidetone common battery desk set with metal base for mounting apparatus; has removable moulded cover.

Intended for use at dial and manual individual line, P.B.X. 4-party semi-selective and extension stations on 4-party selective lines; also dial 2-party selective flat rate, manual 2-party selective flat rate or message rate and non-selective code ringing party lines.

Ringer No. 78A; condenser No. 194A; induction coil, No. 101A. Gongs, Nos. 36A and 37A; two No. 36B, two No. 36D, or one No. 39A gong will be furnished when specified.

Replaces No. 584A-3.

Western Electric
No. 250 Type Telephone Sets

With proper connections this set can be used with either common battery or magneto subsets.

Each set consists of an F1AW-3 hand set, an AA1-3 telephone set mounting, and the necessary cords and wiring. Each set requires a suitable subscriber's set associated with it in order to complete the station equipment.

Code No.	250AW-3	†250BW-3
Dial No.	5HA-3
Dial Adapter No.	59A
Apparatus Blank No.	82A-3
‡Cord No.	D4U-9	D4U-9

†When specified in order, set can be obtained equipped with No. 61P filter to suppress dialing induction into radio receiving sets.

‡Cords 5½ feet long furnished unless otherwise ordered. Available in 9, 13, and 25-foot lengths. If cord equipped with plug is desired, specify D4W-9 cord and 283B plug.

Western Electric
No. 1653A Central Battery Wall Telephones

A common battery anti-sidetone wall set with enclosed gongs. Intended for use in manual or dial systems. For dial service telephone requires a No. 5H type dial, which is not furnished unless specified. For manual service telephone requires a No. 50B apparatus blank which also is not furnished unless specified.

Has metal case with black finish. Base is flanged to prevent marring of walls.

*Ringer No. 68AG; resistance, 1500 ohms. Dial as specified in order.

The following apparatus is common to the telephone set listed above:

No. 140AK Switch Hook	No. 706A Receiver
No. 101A Induction Coil	No. R2B Cord
No. 194A Condenser	2 No. T1A Transmitter
No. 635A Transmitter	Cords, 9¾ Inches Long

*No. 68AG ringer in No. 1653A telephone only. This type set can be furnished with harmonic ringers.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric
No. 302 Type Central Battery Telephone Sets

No. 302AW-3

No. 302BW-3

The combined telephone set consists of a housing and a base on which is mounted the induction coil, condenser, ringer, and other apparatus. Telephone set mounting and a hand set form the complete telephone set.

Intended for use in common battery service.

Nos. 302AW-3 and BW-3. For individual line, P.B.X. extensions, and bridged stations.

Nos. 302EW-3 and FW-3. For 2-party selective and 4-party semi-selective stations, and divided code ringing.

The suffix -3 refers to a black finish telephone set.

Code No.	Tel. Set Mounting	Dial No.	Dial Adapter No.	Apparatus Blank No.	§Cords	Hand Set
†302AW-3	H1-3	82A-3	¶D2D-9	F1AW-3
*†302BW-3	H1-3	5HA-3	59A	¶D2D-9	F1AW-3

*†302FW-3	H1-3	5HA-3	59A	¶D3AL-9	F1AW-3

*When specified can be equipped with No. 61P filter to suppress dialing induction into radio receiving sets.

†For use at manual stations. ‡For use at dial stations.

§Cords are 5½ feet long. Can be obtained in 9, 13, and 25-foot lengths when specified in the order.

¶When specified No. D2E-9 cord assembled with No. 273A plug can be obtained instead of No. D2D-9.

¶When specified No. D3AD-9 cord assembled with No. 273A plug can be obtained instead of No. D3AL-9.

Western Electric

Central Battery Telephone Sets

No. 300 Type—For Outdoor Use

Closed View

Approximate overall dimensions: height, 1 foot 1 inch; width, 9 inches; depth, 6¼ inches.

For outdoor use in anti-side-tone equipment in manual or dial service. Consists of a gray finished metal mounting in which induction coil, ringer, and condensers are assembled. A moisture-proofed handset is hung on a switch hook which is assembled to inner door. Inner door provides a method of mounting dial or apparatus blank. Outer door is fastened by means of a lock and has an instruction card holder welded to its inside surface.

A No. 29A bracket is required for use in mounting each of the telephone sets on buildings, fences, poles, etc., and must be ordered separately.

Outer Door Open

In addition to apparatus listed below each set contains: two No. 29C gongs; No. 147A condenser; No. 101A induction coil; No. 68L ringer; No. 149D condenser; No. FICW-3 handset.

Telephone Set No.	Service	Dial No.	No. Plate	Dial Adapter No.	Apparatus Blank No.
300AW	Manual	80A
300BW	Dial	5HH-3	147A	56A & 58A	...

No. 320 Type

Intended for use in Class 1, Groups B, C, and D atmospheres, as defined by the National Electrical Code.

The component parts of this set, except the hand set, are contained within an enclosure consisting of a cast aluminum housing and base having a threaded joint. Protection against probability of flames resulting from internal explosion reaching surrounding atmosphere is accomplished by strength of castings and by controlling length and clearance of openings through which any element in the design is brought through the housing.

Intended for use in common battery systems and for individual lines.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric

Magnetic Telephones

**Sound Powered
No. 10A**

A sound powered unit which functions both in the transmission and reception of speech and signals without the use of batteries or other external source of power or excitation. Intended primarily for portable use or for semi-permanent installations. Used in railroad yards, coal mines, construction camps, lumber yards, golf clubs, gun clubs, on ships, docks, in fact any place where dependable portable telephone facilities would be advantageous.

All parts of this telephone are mounted on a die cast metal faceplate and are protected from mechanical injury and weather by a substantial, semi-hard rubber housing which stretches over the faceplate.

The set has a 2-conductor, waterproof cord. Conductors of cord terminate in spring clips for easy connection to a telephone line.

Carrying Case

A small leather carrying case (No. KS-10001) provided with a shoulder strap is available for the telephone.

Approximate overall dimensions of telephone, 3x3x2½ inches, exclusive of handle.

Weight, 2½ pounds.

No. 11A

Designed primarily for marine application. Approved for use on shipboard by the United States Department of Commerce. Requires no batteries or other source of electrical power for speech transmission and reception or signaling. Suitable also for many uses on land where a waterproof telephone system is desired, especially in installations where battery systems would be difficult or impracticable to maintain.

The internal parts are assembled in a waterproof cast aluminum box. Transmitter diaphragm which mounts in front of the faceplate behind the mouthpiece, has a non-corrosive moisture-resistant finish. Receiver has a soft rubber waterproof housing which stretches over faceplate. Waterproof receiver cord enters housing of telephone set through a watertight gland.

Western Electric
Hand Set Telephones
No. 1011A

For installer's and repairman's use in manual areas. Consists of soft rubber handle containing the following:

- No. F1 Transmitter Unit
- No. HA1 Receiver Unit
- No. W2BT Cord, 4 Ft. Long, Connected Externally
- Condenser (.10 Min., .15 Max. Mf.)
- Talking and Monitoring Switch
- Apparatus Blank

The switch is connected so as to shunt out the condenser when in the talking position.

No. 1002AC

Used in place of local battery bridging or central battery desk stands. Functions same as No. 1040AL desk stand in No. 1801 switchboard.

Transmitter and receiver are mounted on nickel-plated tubular brass frame, equipped with hard rubber handle. A switch mounted within frame is actuated by a plunger which terminates in a ring by which hand set is suspended when not in use. When hand set is removed from hook, switch is automatically closed. These hand sets may be used in place of desk stands if required. A

hook (No. 141A switch-hook) is furnished with each hand set.

Code No.	Transmitter	Receiver	Cords		Switch Combination
			Code No.	Length

Western Electric
Connecting Blocks

No. 8A

One screw and cord tip terminal on each connector. Number of connectors, 6. Ebonized wood base: length, 5 inches; width, 1 inch; thickness, 5/8 inch.

No. 11 Type

Two screw terminals on each connector. Opposite terminals electrically connected. Base: length, 1½ inches; width, 1½ inches; thickness, 9/16 inch.

Code No.	11A	*11B	†11C
No. Connectors.....	2	2	2

*Consists of No. 11A with black finished metal cover.

†Same as No. 11B except under-surface of top of cover has insulating strip to protect terminals from short circuits.

No. 12 Type

Same as No. 11 Type except has three slots in under side of base.

Base: length, 1½ inches; width, 1½ inches; thickness, 9/16 inch.

Code No.	12E	†12F
No. Connectors.....	3	3

†Consists of No. 12E with black finished metal cover.

No. 30 Type

Binding posts have locknuts with posts spun over to prevent loss of locknuts.

Composition base: width, 1½ inches; thickness, ½ inch.

Code No.	30A	30B	30C	30D
No. Connectors.....	12	22	32	52
Length Base.....	4¾ inches	7¾ inches	10¾ inches	16¼ inches

No. 31 Type

Each connector has one locknut binding post and one soldering terminal, brought out on the side.

Composition base: width, 1½ inches; thickness, ½ inch.

Code No.	31A	31B	31C	31D
No. Connectors.....	12	22	32	52
Length Base.....	4¾ inches	7¾ inches	10¾ inches	16¼ inches

No. 42A Type

Cover Off

For use with combined handset mountings for fastening the handset mounting cord and the inside wire. Has a removable metal cover.

Composition base: length, 1½ inches; width, 1½ inches; thickness, ½ inch.

No.	42A-4	42A-9
Color.....	Ivory	Brown

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric Telephone Cords

There is a Western Electric cord to fit any telephone set or switchboard. If none of the cords described below meet your requirements, write us, sending if possible a sample cord or a sketch, paying particular attention to the kind of tip required. Always specify length of cord when ordering.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric Tubular Fuses

Fiber Shell Type

Lead fuse wire prevents possibility of overheating shell. Fuses carry rated currents indefinitely without injury; act reliably on one and one-half times rated values.

Fuses of same code number and rated capacity give consistent performance as to rated and operating current values.

No. 7T

Used with B cable terminals and fuse chambers. Rated capacity, 7 amperes.

No. 11C

Used with Nos. 58AP and 1079AP protectors. Rated capacity, 7 amperes.

No. 7A

Used with Nos. 77, 1074A, 1075A, and 1078A protectors. Rated capacity, 1, 2, 3, 4, 5, or 7 amperes, as specified.

Western Electric
Subscriber Extension Bell Sets

Intended for auxiliary use as extension bells in connection with wall, desk, and transmitter arm telephones.

No. 127 Type

Set consists of a ringer mounted on the cover of a box. Each set is equipped with No. 2A binding posts for making line connections.

Operating current, a.c., not biased.

Golden oak finish.
Approximate overall dimensions: width, 6½ inches; height, 5¾ inches; depth, 4¾ inches.
Code No.... 127E 127F 127G
Ringer..... 38A 38B 38F
Approx. Resist. ohms. 1020 2500 1620
Gongs..... 26A 26A 26A

No. 392 Type—Loud Ringing

The windings of this bell are moisture-proofed. Metal parts are given a protective finish. Bells may be used on magneto telephone lines and in signaling systems are normally finished, that is, without a condenser. If bridged across a central battery telephone line a condenser must be connected in series with the ringer.

Base is arranged for mounting a condenser. Wiring is so arranged that a condenser may be connected in series with ringer. If a condenser is desired, specify on order.

Code No.	Approx. Resistance Ohms	Diam. of Gongs Inches	Operating Current	Condensers Used	Replaces

†392L	2500	6 (28A)	A.C. Biased	149D	

*Equipped with biasing arrangement if specified on order.
†Equipped with condenser.

Western Electric
Hand Generators
No. 48 Type

No. 48A

A powerful generator. Used in telephones for heavily loaded line service.

With a non-inductive load of 1500 ohms and an armature speed of 1025 rpm., this generator will give 80 volts a.c.

Code No.	Voltage	Normal Condition of Generator Circuit	Principal Use and Description
48A	80 A.C.	Open	Standard for Telephones Intended for Use on Heavily Loaded Lines
48C	80 A.C.	Open	Mine Telephone—All Parts are Treated to Resist the Action of Moisture and Fumes
48G	80 A.C.	Closed	No. 1800 Switchboards
48H	80 A.C.	Closed	Switchboards
48J	80 A.C.	Open	No. 1800 Switchboards
48P	80 A.C.	Open	Switchboards

No. 50 Type

Delivers 60 volts a.c. under a 1500-ohm non-inductive load (after being short-circuited for ½ minute) and an armature speed of 1025 rpm.

Western Electric
No. 299F Hand Generator Boxes

Consists of a No. 48A generator mounted in an oak cabinet having a hinged cover.

For a.c.

Width, 8 inches; depth, 6 inches; length, 9 inches.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric

No. 98 Type Telephone Set Protectors

Protects central battery and magneto telephones against high potential (lightning) and abnormal current (crosses with electrical circuit).

Has two No. 11C fuses.

Line protection, 2 wire.

Code No.....	98A	98B
With Two Protector Blocks, Nos....	26 and 27	26 and 30

Western Electric

Protector Blocks

Nos. 26 and 27—Full Size

Ordinary lightning discharges will cause an arc across the air gap between the carbon blocks but will not heat them sufficiently to melt the cement used for holding the carbon plug in place. A cross with an electric light or power line, however, will cause a discharge or repeated discharges of such duration that the heating of the carbon insert of the No. 27 blocks will melt the cement holding it in place. This allows the mounting spring to push it into direct contact with the No. 26 block, thus permanently grounding the line.

No. 26

A solid piece of hard non-dusting carbon. Used with Nos. 27 and 30 type protector blocks.

No. 27

Used in central office protectors. Consists of a porcelain frame with a countersunk hard carbon plug which is fastened in place with low temperature fusing cement.

Color, white.

Western Electric

Protector Mountings

JACKS. Welded frame or cast, single or multiple mounting, single or multiple springs for use with standard Western Electric plugs are available for all purposes.

KEYS. Push button or lever type with practically any spring combination can be supplied.

PLUGS. Single or multiple, 1, 2, or 3-conductor for use with jack can be supplied.

RELAYS. Many types and innumerable spring combinations for low voltage work can be supplied.

RESISTANCES. Inductively and non-induction on brass core, single and double wound on Miconite core, spool type of various values and Lavite core types can be supplied.

TELEPHONE WIRES. Textile insulated, lacquer treated in 14, 16, 18, 19, 20, 22, 24 gage, single, paired, triple, and quadruple. In various colors for all types of low voltage work.

No. 83A

Protects drop wires between overhead lines and subscriber's telephone set from lightning.

Consists of an iron box $8\frac{3}{4} \times 3\frac{1}{2} \times 2\frac{1}{2}$ inches with a hinged cover having a No. 84A protector mounting within it. Arranged for pole mounting. Intended to be equipped with Nos. 26 and 30 protector blocks for cable protection for five pairs of wires. Box mounted underneath crossarms on poles. Two mounting lugs are provided for this purpose.

No. 93AW

Consists of a galvanized metal box having a slip cover with locking screws and two screws for mounting protector in box. Cover includes a shield of insulating material which protects line terminals from gases expelled during fuse operation. For use in housing No. 98A protector in outdoor installations. When equipped with a No. 98A protector entirely replaces the No. 1086A protector.

Overall dimensions, $7\frac{3}{4} \times 5\frac{1}{2} \times 2\frac{1}{16}$ inches.

Western Electric
Receivers
No. 528

For use in operators' telephone sets, common battery switchboards, and in public address systems.

With No. 11 type head band. D.C. resistance approximately 56 ohms. Impedance at 800 cycles, approximately 260 ohms. Black finished metal case and hard rubber earpiece.

No. 706A

Consists of a moulded case with HA-1 receiver unit. Springs for making electrical contact with receiver unit and a cap for holding unit in place are provided.

Western Electric
No. 635A Transmitters

Designed to permit the use of the high quality F1 transmitter unit in desk stands and wall sets. Furnishes a better grade of transmission than older desk stand transmitters using a carbon button.

Western Electric
Ringers

No. 38 Type

Western Electric Company ringers are wound with black enamel wire of Western Electric manufacture. Designed to give maximum ringing efficiency and at the same time offer high impedance to voice currents.

The gong posts are designed for engaging slotted gongs thereby assuring permanent gong adjustment.

Code No.	Ringer Code No.	Resistance Ohms	Biasing Feature	Current Adjusted For	GONG Posts		GONGS	
					Lgth. In.	Woodwork Thick. In.	Code No.	Diam. In.

53FG	53F	1620	None	A.C.	1 9/16	5/8	29A	2 1/2

No. B1A

A unit type biased ringer intended for use in H1 type telephone set mountings. Has a cantilever type biasing spring arranged for three settings and a stroke adjusting stop for adjusting the sound output.

Equipped with one No. 40A and one No. 40B gong. Can also be obtained equipped with two No. 40C or one No. 40D and one No. 40E gong when specified on the order. These ringers can also be obtained with a wooden clapper (P-465312) instead of a metal clapper, when specified in the order.

Has two coils having a total d.c. resistance of 4600 ohms ± 10%. The 900-cycle inductance is minimum 20 henries.

Western Electric

Telephone Switchboards and Systems

Western Electric telephone switchboards represent the result of over fifty years experience in the manufacture and design of telephone central office equipment.

The smaller switchboards will be found adequate to meet the requirement of every non-multiple central office. The larger central offices must of necessity be designed to care for the individual requirements of each exchange area. Western Electric engineers are equipped to make studies and recommend correct central office equipments for any part of the country.

Western Electric

Magneto Non-Multiple Switchboards

No. 1240D Type

A magneto non-multiple board with a capacity of 165 line circuits and 15 cord circuits. Constructed so that when more than 165 lines are necessary, additional sections may be added. It is possible for one operator to attend two boards which are lined up side by side.

The cabinet is of quarter-sawed oak, thoroughly seasoned and dried; full golden oak finish. All inside surfaces are shellac-treated.

No. 1800 Sectional Unit Type

Method of Assembling No. 1800 Switchboard to 35 Line Capacity

No. 1800 Sectional Switchboard Line Units Equipped with Combined Jacks and Signals

A small switchboard that meets traffic requirements and eliminates the necessity of buying an oversize switchboard. Recommended for small rapidly growing telephone exchanges where the ultimate capacity cannot be definitely determined.

Arranged for either desk or wall mounting.

The capacity of the No. 1800 switchboard is from ten to fifty lines.

There are different types of base or supporting units, cord units, line units, and top units.

Units are assembled into a complete switchboard and can be arranged to meet any service conditions. Line units can be added at any time.

Each unit of the No. 1800 switchboard is constructed so that the entire equipment, including wiring, is accessible through doors in back. The circuits are comparatively simple. Cabinet is of red oak which has been thoroughly kiln dried and seasoned to eliminate warping. Exterior surfaces are dark, rubbed finish. Interior surfaces are treated to preserve the wood and prevent warping and cracking.

Western Electric
**No. 1012 Magneto Wall
 Switchboards—Ringer Type**

For use on exchanges having ten lines or less, and where number of calls does not warrant having a regular telephone operator in attendance. Being equipped with ringers, constant attendance at switchboard is not necessary as the bells can be heard at some distance from the board. In addition, indicators are supplied with each ringer which gives a visible signal showing which bell has been ringing.

The cabinet is well constructed of thoroughly seasoned, quarter-sawed oak, which is given a durable light finish. The front is hinged and the apparatus and wiring is within easy reach for inspection or maintenance.

Western Electric
**No. 551 Type P.B.X. Private Branch Exchange Switchboards
 No. 551A**

A switchboard of the single position, non-multiple type. Arranged for operation with either a manual or a dial central office.

Switchboard in either oak with natural finish or in mahogany with a mahogany-walnut finish. Lumber is kiln dried and thoroughly seasoned to prevent warping and cracking.

Capacity

Station Line Circuits.....	40
Trunk Circuits.....	10
Cord Circuits.....	10

Ten station line circuits may be equipped with line relays for long lines.

Similar to the No. 551A except has larger capacity, as follows:

Station Line Circuits	320
Trunk Circuits	15
Cord Circuits	15

Twenty of the station line circuits may be equipped with line relays.

This switchboard has a maximum capacity of 320 lines but may be had with a capacity of eighty lines, the different capacities being arranged for by the use of different local cables.

Multiple Switchboard In Operation

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10. Consult your nearby Graybar office and warehouse.

Western Electric
No. 1801 Private Branch Exchange Switchboards
 Sectional Unit Type

No. 1801 Switchboard
 Showing Method of Enlarging

No. 1801 P.B.X. Switchboard System B,
 Wall Mounted with Cord Casing

No. 1801 P.B.X. Switchboard System D,
 Desk Mounted

The Western Electric No. 1801 P.B.X. is a manual central battery system utilizing a small single position, non-multiple switchboard of the sectional unit type.

Suitable for use in medium-size industrial plants, department stores, apartment buildings, schools, hospitals, sanitariums, hotels, and public buildings.

May be used with either a dial or a manual central battery central office. It is flexible and economical in operation, particularly suited to locations where the final capacity cannot be determined initially and is readily adaptable to the diversified line and traffic conditions encountered on private branch exchanges.

The units which comprise the No. 1801 P.B.X. can be assembled in the same way as those of a sectional bookcase.

The wood may be either oak in full red oak finish, or birch in mahogany finish.

Western Electric

No. 506 Type Cordless P.B.X. Switchboards

No. 506A

A single position turret of the cordless type. All connections are made by operation of keys.

Circuits are arranged for local manual service and for operation into either manual or machine switching central offices. The wiring and equipment are same for all systems.

A desk stand is provided for use of attendant. When required a dial is furnished with desk stand so connections can be made to a dial central office.

	Capacity	
Code No.	506A	506B
Positions	1	1
Trunk Circuits	3	5
Connecting Circuits	5	5
Station Line Circuits	7	12
Attendants Telephone Circuit	1	1
Ringing and Buzzer Circuit	1	1

Equipment Arrangements

The following four equipment arrangements are available:
SYSTEM A. Communication between attendant and stations.
SYSTEM B. Communication between attendant and stations. Intercommunication between stations.
SYSTEM C. Communication between attendant and stations. Intercommunication between stations. Trunk lines to a central battery central office. Direct current ringing.

SYSTEM D. Similar to System C, except that station bells are rung with alternating current and the trunks of System D may be connected into either a dial or a manual central battery central office.

Power Requirements

Since the quality of service obtained from a P.B.X. is affected materially by the efficiency of the power supply, power equipment designed particularly for this kind of service should be selected.

For talking, signaling, and direct current ringing, the No. 1801 P.B.X. requires a 20-28-volt, single battery supply. The 20-cycle alternating current ringing current required for System D may be obtained from a source outside the P.B.X. or at the P.B.X. by the use of a hand generator.

Western Electric

Magneto Cordless Switchboards

10 Line

Intended for use in an area where the telephone company's central office is a magneto exchange or where the conditions are such that power cannot be supplied over cable pairs from central office. This type of switchboard is simple and economical in operation and will provide for the needs of an isolated factory or institution desiring intra-department communication.

This cordless magneto board is equipped with ten magneto station lines, any of which may be connected to the magneto office for trunking purposes. Five simultaneous connections are provided between lines by keys. There is one operator's telephone circuit, one ringing circuit, and a night alarm circuit. The trunks from the central office terminate on drops. This enables central to recall the P.B.X. operator at any time.

Cabinet is quarter-sawed white oak with light finish unless otherwise specified. Similar in appearance to the No. 506 type switchboard.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10.
 Consult your nearby Graybar office and warehouse.

Western Electric
No. 301A Portable Telephone Sets

For applications where a portable magneto telephone of rugged construction is required.

Set consists of a hand set and an aluminum chassis on which are mounted a hand generator, an induction coil, condenser, two battery containers, and a ringer mounting bracket. Assembled chassis is mounted in black fiber, wood-lined carrying case equipped with shoulder strap.

The F3CW-3 handset includes No. F1 transmitter unit and No. HA-1 receiver unit. A push-button switch in handset handle is used to set up the talking condition.

A ringer may be mounted in this set if one is desired; specify when ordering.

Four Type D, 1.5-volt dry cell flashlight batteries are required for operation. The low battery drain of the transmitter unit insures a long battery life. The batteries should be specified on the order if desired.

Western Electric
No. F1AW-3 Type Hand Sets

No. F1AW-3. For use with and forms a part of the No. 302 type combined telephone set. For general use at subscriber stations.

Consists of: No. F1 transmitter unit; No. HA1 receiver unit; No. H3C-9, 4-foot cord; No. F1W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

No. F2AW-3. For use in central offices and P.B.X. systems. Similar to No. F1AW-3 except with 4-conductor cord terminating in twin plug. Replaces the No. F2A-3.

Consists of: No. F1 transmitter unit; No. HA1 receiver unit; No. H4U cord; No. 289A plug; No. F2W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

No. F2BW-3. For use in anti-sidetone local battery talking, common battery signaling subscribers' stations in manual and dial areas, and in key cabinets. Similar to No. F1AW-3 except that it employs a 4-conductor cord and a different receiver unit.

Consists of: No. F1 transmitter unit; No. HA2 receiver unit; No. H4T-9 cord; No. F2W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

Western Electric
Portable Test Sets
No. 1017C

No. 1017 Type

In birch mahogany finish case; length, 6 $\frac{1}{2}$ inches; width, 4 $\frac{3}{8}$ inches; height, 7 $\frac{3}{8}$ inches. Weight, 7 pounds.

No. 1017E

Similar to No. 1017C set except equipped for use on either composed or straight telephone lines.

Contains the following:

- *No. 29F Generator
- No. 2E Buzzer
- No. 515 Receiver
- No. 13 Induction Coil
- No. 266 Transmitter
- *Operates a No. 56A drop through 11,500 ohms resistance.
- No. 714 Eveready Battery (must be ordered separately)
- No. 572 Cord, 2 Feet
- No. 6000A Interrupter

Nos. 90510 to 90530

Consists of a generator and ringer in series for testing through various line resistances.

Birch finished case measures 5 $\frac{3}{4}$ x6 $\frac{5}{8}$ x5 $\frac{1}{4}$ inches. A leather strap handle is provided.

No. 90530

List No.	Generator No.	RINGER		Gen. Operates Ringer Through Ohms
		Type	Ohms	
90530	22K	19B	2500	10,000
90510	22K	19H	500	35,000
90511	22N	19A	1000	50,000
90512	22N	19B	2500	100,000

Western Electric
G Type Handset Mountings

Arranged for use with the Nos. F1AW and F2BW or similar type hand sets.

Equipped with a bracket designed to permit adjustment of mounting to various lengths of desk top overhang. Bracket also permits mounting to be secured for hand set to hang on either side of the mounting or in front of the mounting.

Western Electric

Railway Train Dispatching Telephone Systems

Repeating Coils

Nos. 70A and 77A

No. 70A

No. 77A

Intended for use in phantom and simplex circuits. No. 70A is for use in connection with a.c. selectors. No. 77A has coil mounted on a wood base.

No.	70A	77A
No. of Coils.....	1	1
No. of Windings Each Coil.....	4	4
Resistances, Ohms:		
Primary.....	2 of 45	2 of 20
Secondary.....	2 of 40	2 of 21
Impedance Ratio.....	1 to 1	1 to 1
Wood Base..... inches	11x8 $\frac{3}{8}$	6x4

No. 121A

For protecting subscribers sets from high potential hazards when the telephone lines are located in exposure area of high tension power lines.

Consists of toroidal type coil potted in a cast iron case arranged for panel and telephone pole mounting. Average d.c. resistance of the set winding 131 ohms and of the line winding 37

ohms. Optimum terminating impedance of the subscriber's set winding and the line winding is 600 ohms each. Case is furnished with 6 foot leads.

Height, 14 $\frac{3}{4}$ inches. Width, 13 $\frac{1}{4}$ inches.

Replaces the No. 50A repeating coil except for additions and maintenance purposes.

A.C. Selector Sets

No. 160C Equipped with No. 60 Type Selector

in the selector circuit. Replaces Nos. 160AC and 160BC selector sets. Metal box, 13x7x5 $\frac{1}{2}$ inches, equipped with No. 60CG ringer, No. 138B condenser and No. 141H condenser.

No. 160R.—Same as No. 160C except it is used when selectors are operated through repeating coils. Replaces Nos. 160AR and 160BR selector sets. Metal box, 13x7x5 $\frac{1}{2}$ inches, equipped with No. 60CG ringer and No. 141H condenser.

Recommended for all new installations. Nos. 160C and 160R selector sets consist of a housing and the necessary associated apparatus and wiring for mounting Nos. 60AP or 60BP selectors. The selector is not furnished as a part of the set and must be ordered separately.

No. 160C.—Used at way stations on a.c. train dispatching and message circuits when condensers are desired

Transmitter Arms

No. 1048DD

No. 1048DA.—Adjustable folding arm, having telephone set incorporated in it. Mounts on side of a roll top desk. Includes: No. 148DA transmitter arm, No. 349 transmitter, No. 186 receiver, 8 feet No. 409 cord and 2 $\frac{1}{2}$ feet No. 554 cord.

No. 1048DB.—Adjustable folding arm, having telephone set incorporated in it. Mounts on side of flat top desk or on wall. Includes: No. 148DB transmitter arm, No. 349 transmitter, No. 186 receiver and two 9 $\frac{7}{8}$ inches No. 427 cords.

No. 1048DC.—Same as No. 1048DA, except mounts on top of flat top desk.

No. 1048DD.—Same as No. 1048DA except mounts on wall in way stations where it is desired to place a flat top desk against the wall.

No. 1048GA.—Train dispatching at way stations with a desk set box employing a four conductor cord and an induction coil having the primary and secondary windings insulated from each other. Equipped with a No. 349 transmitter, No. 186 receiver, 8 feet No. 416 cord, 2 $\frac{1}{2}$ feet No. 554 cord and 9 $\frac{7}{8}$ inches No. 330 cord. Mounts on side of roll top desk.

No. 1048GB.—Same as No. 1048GA except mounts on wall or side of flat top desk.

No. 1048GC.—Same as No. 1048GA except mounts on top of flat top desk.

No. 1048GD.—Same as No. 1048GA except mounts on wall in way stations where it is desired to place a flat top desk against the wall.

No. 386 Transmitters

Head Telephone Set with No. 386 Transmitter

A low resistance insulated aluminum centrally damped local battery chest transmitter. Replaces No. 283 transmitter.

Used with No. 375 cord in dispatcher telephone sets.

Transmitter Attachments

No. 3A

Used for supporting chest type transmitter.

No. 2A.—Buckle only.

No. 3A.—Buckle and slate colored tape.

No. 3B.—Buckle and black colored tape.

No. 3C.—Buckle and white colored tape.

Western Electric
Railway Train Dispatching Telephone Systems
No. 100E Loud Speaker Sets

Consists of a two-stage resistance-coupled amplifier and a Jensen midget speaker mounted in a walnut finished cabinet. The approximate overall dimensions are 11½ inches long by 7 inches high by 5½ inches deep. The gain of the amplifier when operating from an impedance of 300 to 600 ohms is approximately 60 decibels.

The set will operate on a power supply of 105-125 volt, 25-60 cycle a.c. or on a power supply of 105-125 volt d.c. It is necessary to pole the power cord correctly when connecting the No. 100E loud speaker to a d.c. source. It is also desirable to pole the cord when using an a.c. source, since the noise with one polarity connection is generally less than with the opposite polarity connection. The power consumption is approximately 60 watts.

The power switch (right-hand knob) has three positions. In the first or off position (maximum counter-clockwise) the power supply is open. In the second position the power circuit is closed and sufficient current is provided to maintain the tube heating elements at a temperature where response may be obtained quickly from the amplifier when desired without shortening the life of the tubes. Also in the second position the signal lamp will light up with moderate brightness and the amplifier output is short circuited to prevent any response. In the third position, the heating elements of the tubes receive full current, the signal lamp assumes full brightness, the short circuit is removed from the output of the amplifier and the set is ready for operation.

For complete information write your nearby Graybar Warehouse.

Way Station Desk Set Boxes

Used on train dispatching circuits in way station telephone sets with desk stand, flexiphones or transmitter arm, equipped with No. 349 transmitter and No. 189 receiver.

No. 501B desk set box, together with the No. 501A, replaces No. 295AK on new installations.

No.	Con- denser No.	Induc- tion Coil No.	Description
501A	*142B	42	Equipped with One No. 1014A Push Button
501B	*142B	42	Arranged for No. 3C Foot Switch

*When ordering this condenser to replace 21 type used in earlier equipment see notes under condensers for type of bracket or adapter required.

No. 2B Circuit Breakers

An overload circuit breaker, designed for use in the main battery circuit of train dispatching lines to protect the relays and associated apparatus from excess currents, due to short circuits. It consists of a coil, armature and circuit breaker arm mounted on a black phenol fibre base, the overall dimensions being approximately 3¾x6 inches, and extending out from the wall approximately 4 inches, when the arm is in the open or operating position. The resistance of the circuit breaker is two ohms and it is normally adjusted to operate on 0.6 ampere and not to operate on 0.4 ampere. These values can be increased or decreased by adjusting the air gap between the armature and the magnet by means of a knurled nut at the extreme end of the magnet. The best setting for the circuit breaker will depend somewhat on the local conditions for each installation.

Has coin silver contacts and is equipped with alarm contacts.

Foot Switches

No. 1B.—Used in dispatcher telephone set. Spring makes on contact.

No. 3B.—Used in way station telephone set. Spring makes two and breaks one contact.

No. 3C.—Used in way station telephone set with No. 501B desk set boxes. Spring makes three and breaks two contacts.

No. 3D.—Used in towers with No. 501B desk set boxes and No. 6052A amplifier. Spring makes 4 and breaks two contacts.

No. 1B

Western Electric Railway Train Dispatching Telephone Systems Selector Keys

No. 62A

Selector keys are master calling keys arranged to operate any or all selectors on a line to ringing position by pushing one small locking key in each of the two groups of keys.

Nos. 62A and 62B are arranged for desk or table mounting and the main apparatus unit is arranged so that it can be removed from its base by means of a jack connection.

Nos. 63A and 63B are arranged for mounting in the face equipment of a No. 604 P.B.X. switchboard between the stiles (10¼-inch face mounting). Arranged so that keys may be removed from the switchboard either from the front or rear.

No. 62A.—Provides means for calling all selectors in the 17 step selector code. Keys have two groups of 14 keys each and one group of 7 keys. The metal frame and cover are finished in black.

No. 63B

No. 62B.—Provides means for calling all selectors in the 27 step selector code. Keys have two groups of 21 keys each and one group of 7 keys. The metal frame and cover are finished in black.

No. 63A.—Provides means for calling all selectors in the 17 step selector code. Keys have two groups of 14 keys each and one group of 7 keys. The metal frame and cover are finished in aluminum.

No. 63B.—Provides means for calling selectors in the 27 step selector code. Keys have two groups of 21 keys each and one group of 7 keys. The metal frame and cover are finished in aluminum.

No. 60AP Selectors

Used at way stations in Nos. 160C and 160R selector sets. Alternating selector, mounted on phenol base and supplied with a glass cover. Operates on 17 impulses which give a total of 78 code settings. Also equipped for receiving time signals. Resistance, 21000 ohms.

No. 60B Selector Apparatus Cases

Used at dispatchers office on train dispatching systems. Replaces No. 60A selector apparatus case. Metal case, 16⅞x20½x6⅞ inches.

Western Electric
Lead Covered Telephone Cable

2121 Pair Cable

Types of Cable

Lead-covered cable may be divided into three general classes as follows:

1. Paper insulated cable for aerial or underground use. (Lead covered or lead covered and jute protected or lead covered and steel tape armored).
2. Paper insulated cable, submarine or gully type. (Lead covered, steel wire armored).
3. Textile insulated cable.

Aerial or Underground Cable**Lead Covered**

Under the usual conditions of installation of telephone cables the same type of cable may be used for aerial construction or in ducts underground. The various types of lead-covered cable for aerial or underground use are as follows: NH, CNB, CSA, BPA, DSM, and BST.

Jute Protected

A type of cover for the cable sheath has been developed which effectively protects the sheath from soil corrosion. This protection consists of wrappings of paper and jute which have been impregnated with preservative compound and which are flooded with asphaltic compound while being applied to the cable. Cables having this covering are referred to as jute protected. Jute protected cables are about .2 inch larger in overall diameter than unprotected cables for smaller sizes and about .3 inch larger for full size cables. Any lead-covered cable can be furnished jute protected if so noted on the order.

Tape Armored

This type of sheath covering is similar to that used for the jute protected cables except for the addition of the steel tapes and a further covering of asphalt flooded jute. For the tape armored cable the increase in diameter varies with the size of the cable from about .3 to .6 inches. Any lead-covered cable can be furnished tape armored if so noted on the order.

Galvanized Tape Armored

Galvanized tape armored cable for aerial use can be furnished where some protection against low frequency induction from power lines is desired. If individual condition necessitates this type of cable, write nearest distributor, giving details and information; prices will be furnished.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 10.
Consult your nearby Graybar office and warehouse.

Unit Stranded Cable—Paper Pulp Insulation

A new form of paper insulation has been developed by the Western Electric Company which is known as pulp insulation because of its method of application to the wire. Paper is made directly on conductor in such a way as to form a continuous, seamless tube.

Submarine and Gully Type Cable, Wire Armored

Paper insulated submarine and gully type cable may be divided into three general classes:

1. High dielectric strength, tight core cable. Used in comparatively long lengths where cost of repairing a break in cable will be less than cost of new cable.
2. High dielectric strength, loose core cable. Used in comparatively short lengths where high transmission efficiency and high dielectric strength are of importance. For example, a short crossing cable connecting important open wire.
3. Single paper insulated loose core cable. Used in comparatively short lengths where so high a dielectric strength is not necessary. For example, a short crossing cable connecting land cables.

Submarine Type

Single or double armored cable can be furnished. Double armor is used in cases of severe mechanical requirements. In still water with a mud bottom, single armor will be sufficient. With a rocky or uneven bottom, or with strong tides or currents, double armor should be considered.

Gully Type

A light wire armored cable for crossing gullies, small streams and swamps. This cable provides greater mechanical strength than the tape armored cable and is lighter and less expensive than standard wire armored submarine design. Has same protection against soil corrosion as jute protected cable.

Textile Insulated Cable

Paper insulated cables are usually terminated in buildings by splicing on a short piece of lead covered textile insulated cable. Commercial textile yarns are liable to contain soluble salts, which will cause electrolytic action when exposed to moist atmospheres and result in poor insulation and sometimes produce corrosion of the conductors. It has been found that by removing such impurities substantial improvements of the insulating properties of the textiles are obtained. Only purified textiles are used in Western Electric Cables.

Special Cable

Special conditions often require cables with different characteristics from those which have been standardized and coded. Paper insulated cable, designed to withstand test potentials up to 1,500 volts a.c., is supplied for special circuits such as for telegraph or signal circuits. If an individual condition necessitates special cable, write the nearest distributor.

Composite Cable

Composite cable, composed of conductors of two or more gages can be furnished if desired. The combinations of pairs which will utilize the space within the lead sheath most economically are somewhat limited. Recommendations will be made along this line. Consult nearest distributor.

Quadded Cable

Paper and textile insulated quadded lead covered cable for toll telephone and telegraph purposes can be furnished if desired. Recommendations will be made upon receipt of detailed information. Consult nearest distributor.

Reels

Cable is shipped on reels. Ends of cable are fastened securely to reels, and unarmored cable is protected by lags nailed around periphery of reel.

Guarantee

Coding of cables is on basis of actual number of pairs in cable. The number of pairs indicated in tables are guaranteed to be free from opens, shorts, crosses, and grounds. The capacitance and the conductor resistance are guaranteed not to increase nor the insulation resistance to decrease beyond the limits stated due to defective material or manufacture.

Western Electric

Lead Covered Telephone Cable

Advantages

As a means to practically uninterrupted communication, Western Electric Lead Covered Cable offers a number of conspicuous advantages, making for better service, better public relations, and money economies.

This lead covered cable possesses several advantages of material benefit to its users, among which are:

1. They make use of the most suitable designs and materials to secure and maintain the highest class of telephone transmission, as determined by many years of research work conducted by Bell Telephone Laboratories, and by constant tests in the field, in close cooperation with the largest users of telephone cable in the world.

2. The reliability of the Western Electric product is proved by the fact that more than half the telephone cable throughout the world is of Western Electric design.

3. Cables are manufactured by the Western Electric as an essential part of the telephone plant which must not only give the most efficient performance possible, but must maintain this efficiency through the greatest possible number of years. To accomplish this object, every part of telephone cable is designed not only to give the electrical qualities required, but to insure a maximum of mechanical ruggedness and protection against damage. As an example of this, a given mutual capacitance can be obtained in either a soft core or a hard core cable. The hard core cable is somewhat larger in diameter and contains a larger amount of insulating paper. The soft core cable is bound to be soft or mushy to such an extent that it has a decided tendency to buckle when bent. It is therefore more difficult to install than the harder core cable. Western Electric cables are designed to have satisfactory mechanical characteristics.

Transmission

Transmission efficiency of telephone cable depends upon its capacitance and conductor resistance. When telephone cable forms a portion of a completed telephone connection, the transmission efficiency of the telephone connection as affected by the cable portion depends somewhat on the relative position of the cable in that circuit and also on the type of other construction to which it is connected.

The length of circuit which, when connected to short subscribers' loops, will cause a transmission loss of 30 db. (units of transmission loss, called decibels) is considered about the maximum length over which commercial transmission can be secured.

Type NH—Paper-Ribbon Insulated

SHEATH. Lead antimony.

CONDUCTORS. No. 16 A.W.G. single dry paper tape insulation. Blue-orange pairs alternating with green-orange pairs, except for two orange-white tracer pairs, one in the center and one in the outside layer and a red-orange pair in each layer containing an odd number of pairs.

MUTUAL CAPACITANCE. A.c. testing average any reel not exceeding .072 microfarad per mile of cable at 60°F.

CONDUCTOR RESISTANCE. Not exceeding 23 ohms per mile of cable at 68°F.; any conductor.

INSULATION RESISTANCE. Not less than 500 megohm miles at 60°F.; any conductor.

DIELECTRIC STRENGTH. Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 1000 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean O.D. Inches	Convenient No. of Feet on Reels	Approx. Weight Pounds per Foot
NH 26	26	.080	1.13	2000	1.78
NH 51	51	.089	1.52	1500	2.92
NH101	101	.103	2.11	1000	5.07
NH152	152	.113	2.54	750	7.05

Capacitance

The capacitance of a cable circuit is important because it limits to a large extent the length of cable through which it is possible to transmit speech. The capacitance may be specified either as mutual, that is, the capacitance between the two wires or a pair; or as grounded, that is, the capacitance between a wire and all the other wires and the sheath. Mutual capacitance is preferable in defining the quality of the cable for telephone transmission, since the conductors are used in pairs as metallic circuits and seldom, if ever, singly as grounded lines. The grounded capacitance is about 1.6 times the mutual, but this ratio varies somewhat for different cables.

Capacitance may be measured by the d.c. charge method, the d.c. discharge method, or the a.c. method. The a.c. method, using a frequency of 800 cycles or higher, is preferable because it measures the true capacitance for the voice currents. The d.c. capacitance tends to be higher than the a.c. capacitance. The d.c. charge method is less subject to error due to improper manipulation of the testing equipment than the d.c. discharge method.

Western Electric cables are tested for mutual capacitance by the a.c. method, unless specifically requested otherwise.

Extra Pairs

Extra pairs are placed in all cables containing conductors smaller than No. 16 to take care of any pairs which may become defective in manufacture. In the majority of cables all or part of the extra pairs will often be found good and may be used for additional circuits. All pairs of No. 16 A.W.G. and larger except in submarine cable are guaranteed to meet the specification requirements when the cable leaves our factory.

The coding of all cables is on the basis of the actual number of pairs. Actual and guaranteed numbers of pairs in the various sizes of standard cables containing conductors smaller than No. 16 A.W.G. are as follows:

Actual Pairs	Guaranteed Pairs
6 to 149	Actual pairs less one
150 to 249	Actual pairs less two
250 to 349	Actual pairs less three
350 to 449	Actual pairs less four
450 to 505	Actual pairs less five
606	Actual pairs less six
909	Actual pairs less nine
1212	Actual pairs less twelve
1818	Actual pairs less eighteen

For Aerial or Underground Use

Type CNB—Paper-Ribbon Insulated

SHEATH AND INSULATION RESISTANCE. Same as for Type NH. **CONDUCTORS.** No. 19 A.W.G. single dry paper tape insulation, with color groups depending upon size.

MUTUAL CAPACITANCE. A.c. testing, average any reel not exceeding .090 microfarad per mile of cable at 60°F.

CONDUCTOR RESISTANCE. Not exceeding 46 ohms per mile of cable at 68°F.; any conductor.

DIELECTRIC STRENGTH. Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Western Electric

Lead Covered Telephone Cable

Type FA—For Inside Construction

Textile Insulated

Type MFA—For Inside Construction

SHEATH. Pure lead.

CONDUCTORS. No. 22 A.W.G. tinned, double silk and single cotton insulation, covering on each pair colored white and red-white.

TRACER PAIR. One in outer layer colored blue and white.

INSULATION RESISTANCE. Not less than 500 megohm miles at 60°F.

CONDUCTOR RESISTANCE. Not exceeding 96 ohms per mile of cable at 68°F.

DIELECTRIC STRENGTH. Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean O.D. Inches	Convenient No. of Ft. on Reels	Approx. Wt. Lbs. per Foot

Type GA—For Inside Construction

SHEATH. Pure lead.

CONDUCTORS. No. 22 A.W.G. tinned, double silk and single cotton insulation, colored in accordance with a standard color scheme so that each pair is distinguishable from other pairs in the cable.

CONDUCTOR RESISTANCE. Not exceeding 96 ohms per mile of cable at 68°F.

INSULATION RESISTANCE. Not less than 500 megohm miles at 60°F.

DIELECTRIC STRENGTH. Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog No. 10. Consult your nearby Graybar office and warehouse.

Western Electric Type CL Switchboard Cable

This cable represents the highest development in the art of switchboard cable manufacture.

Designed in three general shapes—flat, oval, and round.

The Type CL cable listed in the following tables consists of tinned copper conductors with two servings of silk and one serving of cotton impregnated with cellulose acetate. Cellulose acetate impregnated conductors are referred to in the tabulation as lacquered conductors. Included in the Type CL cables are cables with tinned copper enameled conductors. These are identified by four digit code numbers—1016CL, 1024CL, etc.

All CL cables except the quadded 500CL and 1500CL have an outer covering consisting of the following: The core of each cable is bound with a binder serving of cotton, a serving of paper tape, a serving of metal tape, and a second serving of paper tape. Over this is applied a close serving of cotton and a close braiding of cotton. The completed cable is painted with a gray cable paint.

In quadded cable (500 CL and 1500 CL types) the cotton binder serving is omitted and a heavier first serving of paper tape is used.

In the tabulations the larger dimensions for oval or flat cable represent the width, and the smaller dimensions represent the thickness.

Showing Binder Serving Not Used on Quadded Cable

Western Electric Hearing Aids Audiphone

Ortho-tronic

Ortho-technic

Ortho-technic

Hard of hearing men, women or children will find that the Western Electric Audiphone brings new hearing happiness. Both vacuum tube sets and carbon sets, with air and bone conduction receivers, are available in a number of combinations to meet a variety of hearing needs.

Ortho-tronic

No. 4C Audiometers

The Western Electric Audiphone has the following important features:

Natural tone quality.

Low battery consumption.

Non-positional operation.

High degree of sensitivity.

Compact, attractive styling.

Durability and reliability.

Stability of operation.

Made by the makers of Bell Telephones.

Audiometer Complete with Four Receiver Trays and Carrying Cases

Plays records of voices speaking numbers with diminishing volume. Children or adults being tested write as many numbers as they can hear. Results are checked with master card and permanent record of hearing acuity of each ear is provided in less than 20 minutes. As many as forty persons may be tested simultaneously.

Western Electric Hearing Aids Type 6 Audiometers

Determines a patient's hearing loss at various frequencies, with either bone or air conduction receiver. By comparing results of tests, supplemented by findings of an otoscopic examination, an otologist may fix the location of lesions and thus diagnose the case. A transmitter, located within the audiometer, provides the media for conducting voice, whisper and watch tests as well as providing a means of communication with a hard of hearing patient.

A masking attachment, available for use with this audiometer, is a further diagnostic aid in determining the exact bone conduction acuity of each ear.

Western Electric Speech Input Equipment No. 754A Volume Indicating Equipment with No. KS-8218 Volume Indicator Meter

Nos. 754A and 754B Volume Indicators and associated units provide means not only for measuring volume levels in vu but also for transmission measurements

in db. They are of panel type construction suitable for mounting on a 19-inch relay rack or bay cabinet and differ only in that No. 754B has provision for an increased sensitivity of 10 db. when terminating a line. The No. 754A Volume Indicator is direct reading when bridged on a 600 ohm circuit. It includes a switch for adjusting the sensitivity over a range from +4 to +26 vu at the 0 vu or 100 mark on the scale (about two-thirds full scale).

Type 22 Portable Equipment

Incorporates stabilized feedback. Provides portable pick-up facilities. Designed for fast set-up, simple in operation and easily handled by one man. May be used in studios and auditorium locations for supplementary or emergency purposes and for regular service where flexible program control facilities in limited space are needed. Each equipment consists of an Amplifier-Control unit, power supply for either a.c. or battery operation, two luggage-type carrying cases, and the necessary interconnecting and power cords. Equal to many so-called studio equipments. Key-switching feature allows rapid interchange between the line of the telephone set for communication and the amplifier output for program transmission. Can reverse instantaneously line used for "cue" and other communication with line used for program transmission—a feature especially desirable in case of emergency. Four microphone inputs, monitoring facilities with headsets or loudspeaker and amplifier are also provided for. Battery operation can be provided for if preferred to a.c. operation.

Dimensions of carrying cases: 14x17x8 inches. Each case weighs approximately 30 pounds equipped.

Western Electric
Speech Input Equipment

Type 23 Console Equipment

Custom Built Desk Type Equipment

Total gain, approximately 100 db. Input circuits will match nominal microphone impedances of either 30 or 250 ohms. Using maximum gain, the unweighted noise introduced is 60 db below the program level.

Exceptionally high fidelity performance and low tube cost are achieved through use of stabilized feedback.

Frequency response is essentially uniform from 30 to 10,000 cycles.

Microphone switching keys arranged to accommodate eight microphones, with keys and controls for one or two studio broadcasting systems, are all located in a small, attractive "organ console" type cabinet 34 inches long, 14 inches deep, and 10 inches high.

The Western Electric custom built desk type studio speech input equipment is designed, constructed and tested as a complete audio frequency system for radio broadcasting. Conforming to Federal Communications Commission's Standards of Good Engineering Practice for both standard and high frequency (FM) broadcasting stations. It can be furnished in standard functional arrangements or both the amplifier complement and number and type of controls may be varied to suit an individual station's specific requirements.

Amplifier and other circuit components designed for uniform transmission over a 30 to 15,000 cycle audio range.

Operation of equipment from 110 volts; 50-60 cycle a.c. power supply.

Studio Equipment No. 704A Bay

Designed to meet the highest standards of performance. Provides a maximum of flexibility through ingeniously devised circuits. Complete a.c. operated assembly for single studio or two-channel systems. Contains jacks, relays, program and monitor amplifiers as well as mounting space for additional apparatus required for special layouts.

Dimensions: height, 83 $\frac{3}{4}$ inches; width, 21 $\frac{1}{2}$ inches; depth, 13 $\frac{1}{8}$ inches. Inputs; two program, three studio microphone, one booth microphone, two transcriptions, one spare line. Outputs: one 600 ohm circuit. Power required: 105-125 volts, 50 to 60 cycles. Consumption: approximately 160 watts.

No. 721A Control Cabinet

Contains all facilities necessary for a four-channel mixing circuit, master gain control and studio switching control. Tapered T type attenuators are used for all operating controls, and provide constant impedance characteristics with minimum losses. A sloping hinged panel on which all of the apparatus is mounted provides easy accessibility for servicing.

Dimensions: height, 8 inches; length, 20 inches; depth, 7 $\frac{3}{8}$ inches at base.

The 704A bay and this cabinet provide an ideal assembly when they are associated.

No. 705A Bay

The Western Electric No. 705A Speech Input Bay accommodates two input program lines of 150 or 600 ohms and one announce microphone. Two output lines, 500 to 600 ohms. Key selection of both output and input lines.

Normal power consumption approximately 187 watts at 105-125 volt, 50-60 cycle supply.

Cabinet dimensions of 83 $\frac{3}{4}$ inches high, 21 $\frac{1}{2}$ inches wide and 13 $\frac{1}{8}$ inches deep.

This equipment has an overall gain of 55 db, line gain control range of 51 db, frequency response uniform from 30 to 10,000 cycles, normal output level 0 db, maximum output level of 20 db, noise level—65 db weighted and less than 1 per cent distortion under normal operation conditions.

No. 704A Bay

No. 705A Bay

Western Electric Speech Input Equipment

No. 104B Pre-Mixing Amplifier and No. 15A Rectifier

Designed for use in modern studio amplifier channels as a pre-mixing or low level amplifier to improve the signal to noise ratio by raising the audio levels at which the mixing function takes place. For addition to existing studio channel bay equipments or for new installation. Features are: tandem operation, high overall quality, space economy $5\frac{1}{4} \times 4\frac{1}{8} \times 6\frac{3}{4}$ inches), and low cost. Frequency response uniform over range 35 to 10,000 cycles. Single stage, fixed gain amplifier, with a gain of approximately 28 db. Operates from an impedance of 30 or 250 ohms into an impedance of 30 or 500 ohms and may be used with either a dynamic or a ribbon type microphone. Requires 0.32 ampere at 10 ± 0.3 volts a.c. for the tube filament. Also properly filtered plate supply of approximately 0.6 milliamperes at 200, 250 or 375 volts d.c.

proximately 28 db. Operates from an impedance of 30 or 250 ohms into an impedance of 30 or 500 ohms and may be used with either a dynamic or a ribbon type microphone. Requires 0.32 ampere at 10 ± 0.3 volts a.c. for the tube filament. Also properly filtered plate supply of approximately 0.6 milliamperes at 200, 250 or 375 volts d.c.

No. 105A Program Amplifier

Designed for use as the main program amplifier in speech input equipments. Will amplify the output of a Western Electric dynamic microphone, or of a high level microphone mixing system using pre-amplifiers, such as the Western Electric No. 104 type to a level sufficient for feeding into a wire line or output switching system. Operates from an impedance of 30 or 600 ohms and into an impedance of 600 ohms. Operates equally well with 500 ohm impedances. Frequency response uniform 35 to 10,000 cycle range. Overall gain of the amplifier, including a 6 db isolation pad in the output circuit, is approximately 70 db. Output power 0.6 watts. Contains its own complete power supply as well as a 38 db gain control, a volume indicator meter and a separate plate current meter capable of serving a whole bay of equipment. Amplifier is only $10\frac{1}{2}$ inches high on a 19-inch rack.

to a wire line or output switching system. Operates from an impedance of 30 or 600 ohms and into an impedance of 600 ohms. Operates equally well with 500 ohm impedances. Frequency response uniform 35 to 10,000 cycle range. Overall gain of the amplifier, including a 6 db isolation pad in the output circuit, is approximately 70 db. Output power 0.6 watts. Contains its own complete power supply as well as a 38 db gain control, a volume indicator meter and a separate plate current meter capable of serving a whole bay of equipment. Amplifier is only $10\frac{1}{2}$ inches high on a 19-inch rack.

No. 106A Line Amplifier

Two-stage a.c. type with a gain of approximately 45 db. Designed for use as a line amplifier in speech input equipment, particularly where compactness and high quality amplification are desired. Used at studio locations to compensate for output switching circuit losses and to provide isolation between outgoing program lines. Also used as a general purpose amplifier for applications where moderate gains and power levels are required. Designed primarily to operate between impedances of 600 ohms. Amplifier also has a high impedance input of 10,000 ohms for bridging across 600 ohm circuits. Uniform response 30 to 15,000 cycles. Power supply: 105-125 volts, 50 or 60 cycles a.c. Power consumption: approximately 45 watts. Output power 0.6 watts.

Component parts of the No. 106A Amplifier are assembled on a recessed panel 19 inches wide and 7 inches high designed for mounting on standard relay rack or in an equipment cabinet.

No. 120A Input Amplifier

Compact, high quality, two-stage fixed gain, FM quality, pre-mixing or booster amplifier. Frequency response 30 to 15,000 cycles with only ± 1 db. variation. Source impedance 30, 250 or 600 ohms; load impedance 600 ohms. Gain 40 db. Level of noise contribution measured on output—82 db unweighted (0 level calibration 1 milliwatt). Maximum output level plus 16 db with 1% total harmonic distortion.

(0 level calibration 1 milliwatt). Maximum output level plus 16 db with 1% total harmonic distortion.

No. 121A Line Amplifier

Three-stage unit for high quality performance as a speech input intermediate level amplifier. Frequency response 30 to 15,000 cycles with only ± 1 db variation. Source impedance 30, 250 or 600 ohms; load impedance 600 ohms. Gain 78 db. Level of noise contribution measured at output minus 42 db unweighted (0 level calibration 1 mw). Output level plus 28 db with 1% total harmonic distortion.

No. 18A Rectifier

A full wave vacuum tube rectifier with filter for use with amplifiers in speech input equipment. Will supply up to 8 amperes at 6.3 volts, 60 cycles, 4 filaments and from .007 to .075 ampere dc at 285 ± 35 volts for plates. Power required; 110 to 120 volts, 60 cycles, 100 watts.

Mounting Facilities

One No. 177A mounting plate mounts: Up to three No. 120A Amplifiers or one No. 120A and one No. 121A amplifiers, or up to three No. 18A rectifiers. One No. 296A panel (face mat) covers wiring side and mounts accessory controls and meters in front of mounting plate.

*Western Electric***Speech Input Equipment****Nos. 124A and 124E Loudspeaker Amplifiers**

These amplifiers provide great flexibility of application and increased power output at low cost. Designed for use as high impedance bridging type booster or monitoring amplifiers with self-contained a.c. power supply. Also inexpensive general purpose amplifiers for applications where a gain of approximately 45 db (on a 600 ohm input circuit) is ample. Includes stabilized feed back. Nos. 124A and 124E are similar except that No. 124E has a high quality volume control and power switch mounted on a bracket on the underside of the chassis with the control elements extending through the mat for operation from the face of the amplifier. Power supply: 105-125 volts, 45-65 cycles. Power consumption: approximately 100 watts. Power output 20 watts. Frequency response uniform 30 to 15,000 cycles.

Overall length, 19 $\frac{1}{16}$ inches; depth, 7 $\frac{1}{2}$ inches; height, 7 inches.

Western Electric **Police and Mobile Radio Equipment****No. 28D Ultra-High Frequency Radio Receivers**

For use at fixed stations. Operates on frequencies between 30-40 mc. A.c. operated, compact, superheterodyne set. Designed specifically for fixed locations for reception of messages from mobile transmitters. May be used at central station or monitoring location, or unattended at remote location with its output connected into wire line to headquarters. Serves with equal dependability and efficiency in police, fire power line maintenance, highway maintenance and other radio telephone communication systems. With loud speaker, receiver is used for monitoring or for reception at precinct stations, sub-stations, officials quarters and similar locations. Has self-contained rectifiers operating from 105-120 volt, 50-60 cycle a.c. source, and draws approximately 55 watts.

Overall dimensions of receiver, including terminals and plugs: height, 9 $\frac{1}{16}$ inches; width, 10 $\frac{5}{8}$ inches; depth, 17 $\frac{3}{8}$ inches.

Weights approximately 31 $\frac{1}{2}$ pounds, including base plate.

**Headquarters Radio Telephone Equipment**

A complete line of ultra-high frequency radio transmitters and associated equipment for use at headquarters or control stations for either one-way or two-way radio telephone communication with cruising, maintenance or trouble cars.

The transmitters designed for this type of service are rated at from 50 to 500 watts for large cities, and 5 and 25 watts for towns.

No. 16B 50-Watt Radio Transmitter.

Crystal controlled; delivers to its antenna 50 watts of carrier power in the ultra-high frequency band between 30 and 60 mc.

Operates from 100-120 or 200-240 volt, single phase,

500 Watt Equipment (No. 16B Transmitter and No. 88A Radio Frequency Amplifier)

50-60 cycle a.c. commercial supply. Cabinet measures approximately 83 inches in height, 21 inches in width, and 18 inches in depth. Weighs approximately 650 pounds.

500-Watt Equipment. Designed for use in large cities. Capable of complete modulation and delivers to its antenna 500 watts of carrier power on any frequency within ultra-high frequency band 30 to 42 mc. Consists of two units: the No. 16B Transmitter, and the No. 88A Radio Frequency Amplifier with self-contained plate supply rectifier, operating from 200-250 volt, 3 phase, 60 cycle a.c. supply.

No. 228A Two-Way Ultra-High Frequency Mobile Radio Telephone Systems

15 Watts

With this equipment, areas overshadowed by tall buildings, hills or other obstacles are easily penetrated and made usable for constant, dependable communication service. The basic units are: radio transmitter, radio receiver, antenna system, control unit, telephone handset and loud-speaker; comprising complete two-way communication system. Transmitting equipment may be used with a medium frequency receiver or with No. 6018A, B or E Receiving Equipment. The receiving equipment may be used separately in one-way systems. System operates in frequency band from 30 to 40 mc.

No. 28A Radio Transmitter. Compact transmitting unit of No. 228A Radio Transmitting Equipment includes dynamotor for plate supply. Operates directly from any 6-volt car battery system. Delivers 15 watts of carrier power to antenna and carrier frequency stability of better than .02% assured by the use of quartz crystal.

Overall dimensions, including terminals and plugs: height, 9 inches; width, 11 $\frac{3}{8}$ inches; depth, 17 $\frac{3}{8}$ inches.

Weights approximately 37 pounds, including base.

No. 28C Radio Receiver.

The superheterodyne receiver of No. 228A Radio Transmitting Equipment for mobile use. Audio output of 3 watts assures good reception over high acoustical noises prevalent in streets.

Overall dimensions, including terminals and plugs: height, 9 $\frac{1}{16}$ inches; width, 10 $\frac{5}{8}$ inches; depth, 17 $\frac{3}{8}$ inches.

Weights approximately 31 $\frac{1}{2}$ pounds.

Control unit is small, compact and measures only 3 $\frac{3}{4}$ inches in length, 2 $\frac{1}{2}$ inches in height, and 2 inches in depth. Operates on 6-volt battery with high voltage furnished through new, efficient vibrator.

Western Electric
Police Radio Equipment

No. 222A Radio Telephone Equipment for Police Headquarters

Designed for use in medium sized cities. Consists principally of No. 22A Radio Transmitter and No. 28D Radio Receiver, No. 633 "Salt Shaker" Microphone and No. KS-10017 Coaxial Antenna. These units, with accessories included, provide complete transmitting and receiving facilities for headquarters operation in the ultra-high frequency band.

No. 22A Radio Transmitter. Embodies many notable features and operates in ultra-high frequency spectrum from 30 to 42 mc. Incorporates volume limiter and sufficient audio amplification for dynamic microphone. Crystal controlled, delivering 25 watts of power into a coaxial transmission line. All a.c. operated. Power supply requires 370 watts when transmitting and 140 watts when in standby position.

No. 28D Radio Receiver. See listing on preceding page.

Western Electric
Broadcasting Equipment
Radio Transmitting Equipment
No.443A-1

No. 443A-1

For radio broadcasting and police; 1000 watts, all a.c. operation, 550 to 2500 kc. Doherty high efficiency amplifier circuit with attendant increased stability is here introduced for first time in a medium-powered broadcasting transmitter. Grid bias modulation inexpensive complement of radiation cooled tubes, small circuit elements. Efficiency of the power amplifier stage increased to 60% or more. Stabilized feedback keeps harmonic distortion and noise low; magnetic circuit breakers used instead of fuses. Central structure assembly—all parts easily accessible. Meets F.C.C. requirements.

Attractive, modern design and finish; needs only 44x39 inches of floor space.

No. 451A-1

For 250 watts (can be furnished with few additional small parts for toggle-switch change between 250 and 100 watts).

This equipment was designed for application where power in excess of 250 watts is not contemplated. It effectively covers the broadcast, police and emergency services and can be furnished to operate in the range of 550 to 2750 kilocycles.

Economy of operation and of maintenance are factors which make this transmitter especially desirable. Among those features are low power consumption and low tube cost, surprisingly little time and effort for maintenance and complete freedom from breakdowns.

Operates from 230 volt, single phase 60 cycle power source and requires an input of 750 watts for a power output of 250 watts and 1250 watts for an output of 100 watts. The power factor is approximately 90 per cent. Manually operated voltage regulator permits adjustments for any primary voltage over the range of 200 to 240 volts. Can be furnished for 50 cycle operation.

All tuning and operating controls and some meters are mounted in front on two vertical panels. The controls are divided into three groups according to function, and a distinctive knob or slot is used for each group in order to eliminate confusion.

The transmitter is delivered in two parts: a cabinet and inside frame upon which is mounted the apparatus. Doors both front and rear provide complete access to the apparatus.

Dimensions: 30 inches wide, 28 inches deep and 76 inches high. The approximate weight is 1000 pounds.

No. 451A-1

Western Electric
Broadcasting Equipment

No. 405B-1 Radio Transmitting Equipment

Partial Rear View Showing No. D-99110 Oscillator-Amplifier and No. D-99114 Rectifier Units

Performance unequalled in the 5 KW field. Radiation cooled, all water cooling apparatus eliminated; entirely a.c. operated, for radio broadcasting, 550 to 1600 kc. Similar equipment available for police service. Includes Doherty high efficiency amplifier increasing power amplifier stage efficiency to over 60%, reducing plate dissipation, minimizing tube cooling requirements. Stabilized feedback, increased stability, automatic voltage regulator, visual indications of circuit conditions, cathode ray oscillograph connections in all important circuits, easily and accurately tuned by key operated tuning controls. More than fulfills F.C.C. requirements. Compactness permits installation in small space, 10' 9" x 11' 7".

No. 2A Phase Monitors

For measuring the phase and amplitude relations of the currents in the antenna elements so that these relations can be correlated with the field pattern. Provides for terminating as many as three sampling lines, originating on small untuned loops on each tower of an array. Single control used

to select desired pair when measuring phase angles. Additional switching facilities optional. In a few minutes, adjustment can be made for accurate operation on any frequency from 550 to 1600 kc. without auxiliary apparatus except for a radio frequency power source of at least 1/5 watt. Apparatus mounted upon steel panel covered by a mat. Quickly installed and permanently adjusted. Includes vacuum tubes.

Space requirements, 15 3/4 x 19 x 7 1/2 inches.

Weight, 43 pounds.

Reproducing Group

Consists of a lateral-vertical reproducer, reproducer arm, equalizing equipment and accessories.

Designed to meet severe requirement of radio broadcasting and high quality results demanded of sound distribution systems. The group is all conceived and constructed to provide sound reproduction without equal.

Simple instructions easily followed permit installation readily.

No. 1300A Reproducer Sets

Set with Cover Raised Showing No. 300A Reproducer Panel

For radio broadcasting and sound reproduction systems. Plays vertically or laterally cut records up to 16 inches in diameter at a speed of 33 1/2 rpm. or 78 rpm. Includes cabinet, cover, reproducer panel with turn-table, and filter selector switch control and on-off switch, reproducer

and reproducer arm. Cabinet cover optional. With this set, there is no slighting of the smallest recorded detail—reproduction is clear and full.

Western Electric **Microphones**

No. 639 Type Cardioid Directional Microphones

Affords unparalleled clarity, fidelity and pick-up control. Equally good for broadcasting and public address, it will enable jobs to be handled which were before thought impossible.

A ribbon and a dynamic mike are combined.

No. 639A has a three-way switch which provides a choice of either of these two or of cardioid directional.

No. 639B has a 6-way switch and offers three additional directivity patterns which make it particularly suited for use in difficult applications.

No. 633A "Salt Shaker" Type Microphones

This microphone can handle a wide variety of pick-ups and possesses performance characteristics in complete keeping with more expensive microphones.

Convenient mountings, adaptability, small size, light weight, high quality performance, for directional and non-directional use, with and without baffle.

Suited for use with sound systems in schools, restaurants, hotels, hospitals, by radio telephone amateurs, police radio systems, other radio services, and in commercial broadcasting—particularly for all remote pick-ups.

Western Electric Sound System Equipment

No. 31A Horns

Designed for speech and music reproduction in sound systems where wide angle horizontal coverage is desired. May be adapted for use with a No. 713A Western Electric Receiver as part of a high quality speaker system, or a No. 707F Western Electric Receiver. Uniform sound field over a horizontal angle of 120° and

vertical angle of 40°. Range from 400 to 10,000 cycles with No. 713A Receiver and 300 to 6500 cycles with No. 707F Receiver. Can be mounted on ceiling, side wall, deck or platform, or to a pipe by means of two U bolts.

Approximately 23 inches wide, 9 inches high and 15 inches deep.

No. 117A Line Amplifiers

Multi-purpose line or voltage amplifier especially suited for use in sound system installations. Includes one No. 116B Mixer Stage Amplifier and sufficient space for accommodating three additional No. 116B Amplifiers. Includes volume limiting, volume expansion, selective speech or scratch equalization and operates from an input source with an impedance of any value between 15 and 250 ohms and into a 300 to 1200-ohm load. Can be used directly with a single power amplifier or to feed a bridging "bus" or wire line across which may be connected as many as 75 No. 118A Western Electric Amplifiers. Independent of other equipment for its power supply; 105-115 volts, 50-60 cycle a.c. power supply, consuming approximately 50 watts.

No. 118A Amplifiers

A medium gain, high power (50 watts) bridging amplifier suitable for high quality sound systems. Self-contained, operates directly from the usual 110-125 volt, 50-60 cycle a.c. supply consuming approximately 250 watts. Designed to work with any speech "bus" or equipment having approximately zero level output, such as the No. 117A Western Electric Amplifier.

No. 6030 Type Horns

Designed for speech and music reproduction in announcing, public address and music reproduction systems. Particularly adaptable to outdoor use, and has directional qualities that make it possible to direct and confine the sound beam to the areas occupied by the audience.

No. 6030A, equipped with one No. 707F receiver, is capable of handling 25 watts.

No. 6030B, equipped with two No. 707F receivers, 50 watts; they efficiently reproduce frequencies from 110 to 6500 cycles.

No. 750A and 751B Loud Speaking Telephones

Designed for music reproduction systems, radio program monitoring and sound systems in schools, hotels and restaurants, etc., where high quality reproduction is the first consideration and where the areas to be covered are not too large. A single direct radiator type of loud speaker with 20-watt power handling capacity and capable of reproducing over a

frequency range 60 to 10,000 cycles that, heretofore, required a multiple device. Permanent magnet, dynamic, voice coil impedance approximately 8 ohms.

No. 750A without housing.

No. 751B with housing.

No. 124D Amplifiers

A general purpose, high gain, power amplifier for use in high quality sound systems such as are required in churches, schools and similar institutions. It supersedes the Western Electric Nos. 86 and 92 type Amplifiers and is particularly adaptable to portable use.

It includes one No. 116B amplifier and has sufficient mounting space for a second No. 116B, thus providing for two electronic mixing channels. It also has facilities for supplying power to one or two additional No. 116B's, which may be mounted apart from the No. 124D, or a total of four mixing channels as well.

Source impedances is 15-250 ohms (30 and 120 ohm nominal). Load impedances 1-1200 ohms. It has a gain of 107 db measured between nominal impedances. Frequency response 35-15,000 cycles; maximum departure from 1000 cycle gain less than 2 db—from 50 to 10,000 cycles maximum variation less than 1 db. Power output 12 or 20 watts with less than 2% total harmonic distortion. (The No. 124D amplifier as shipped will deliver an output power of 12 watts. Output of 20 watts obtained by simply changing transformer connections). Operates from 105-125 volt a.c., 50-60 cycles, 125 watts.

Aluminum finished chassis capable of horizontal or vertical mounting on a standard relay rack or in an adequately ventilated perforated metal cabinet.

Length, 18 $\frac{3}{16}$ inches; width, 6 $\frac{7}{8}$ inches; overall depth, 8 inches. The weight is approximately 20 pounds.

Thor Drill Champion 1/4-Inch Light Duty Electric Drills

Universal Motor for A.C. and D.C., 110 or 220 Volts

Designed for general light duty drilling. Has aluminum housing and oilless bearings. Motor provides ample power for light duty drilling in wood or metal.

Length overall, 12 inches. Free speed, 2000 rpm.

Equipped with Jacobs chuck; 3-conductor cable and plug; recessed, thumb-control switch.

Net weight, 4 pounds.

Shipping weight, 7 pounds.

Each..... \$19.95

Thor 5/16-Inch Heavy Production Electric Drills

For production drilling in wood or metal.

Thor Universal Electric Screwdrivers

No. UBG

A grip switch screwdriver for use in automotive plants, furniture factories, etc. For Nos. 10 to 16 wood screws.

Equipped with positive clutch attachment but can be furnished with a variety of attachments for difficult screw and nut driving.

No.	UBG
Each	\$72.00
Free Speed	750 rpm.
Length Overall	14 1/2 inches
Weight	8 3/4 pounds

No. UBG-D Combination Screwdriver and Drill

By means of a specially designed Jacobs chuck and adapter, the UBG-D can be quickly converted from a heavy duty screwdriver or nut setter into a drill for heavy duty 3/8-inch drilling. The No. 3 Positive Clutch attachment for screw-driving and the No. 372, 3/8-inch Jacobs chuck and adapter are standard equipment. Other screwdriving and nut attachments are also available.

For Nos. 10 to 16 wood screws and 3/8-inch drill chuck.

Grip handle, plunger switch type. Equipped with ground wire. Available with a momentary trigger switch if so specified.

No.	UBG-D
Each	\$82.00
Free Speed	750 rpm.
Length Overall	14 inches
Weight	9 pounds

Thor 1/4-Inch Universal Electric Nut Setters

Grip switch type; with No. 140 Thor Kick-Out Nut Driving Attachment.

Nut and bolt setting require elasticity in attachment, so that various tensions may be easily obtained. Thor Double Slip Clutch with kickout was developed for this purpose.

No.	UBGN
Each	\$84.00
Free Speed	750 rpm.
Length Over All	17 3/4 inches
From Side of Case to Center of Spindle	1 3/8 inches
Weight	12 3/4 pounds

Thor 3/8 and 1/2-Inch Electric Nut Setters

A powerful, sturdy nut driving machine used particularly in production lines because of its light weight.

Ordinarily furnished with a grip handle; also can be obtained with a suspension cap and hook. Furnished with a side switch and a No. A136 positive attachment. Has positive clutch.

No.	UCG
Each	\$94.00
Free Speed	450 r.p.m.
Length Overall	13 3/4 inches
Weight	15 1/2 pounds

Thor Electric Nut Setters

For 1/2-Inch Nuts

Equipped with suspension cap and hook or grip handle. Has side switch and dead handle. Has the Thor No. 141 kick-out attachment which drives nuts to any pre-determined tension.

No.	UEH	UCH
Each	\$135.00	110.00
Capacity	1/2 in.	1/2 in.
Free Speed	550 r.p.m.	450 r.p.m.
Length over All	17 1/2 in.	16 1/2 in.
Weight	23 3/4 lbs.	15 1/2 lbs.

Thor 1/2-Inch Heavy Duty Electric Nut Setters

Used where constant, severe service is required.

Can be furnished with suspension cap and hook, if specified. Equipped with a side switch and a No. A136 positive attachment.

In ordering, specify voltage desired.

No.	UEG
Each	\$120.00
Free Speed	550 r.p.m.
Length Overall	15 inches
Weight	23 pounds

Thor Universal Electric Tappers

No. UKS

Grip switch type; for tapping or stud driving jobs.

Super-power motors, ball-bearing design, special heat-treated gears, etc.

Tappers have the mechanical reversing feature. A slight pull on the machine disengages the forward speed and engages the reverse speed.

Have universal motors; will operate on a.c. or d.c.

No. UBR

No. UKS is equipped with a 5/16-inch chuck, No. UBR with a 3/8-inch chuck.

From side of case to center of spindle: No. UKS, 1 inch; No. UBR, 1 3/8 inches.

No.	UKS	UBR
Each	\$68.00	85.00
Capacity	1/4 inches	3/8 inches
Free Speed	460 r.p.m.	500 r.p.m.
Length Over All	14 3/4 inches	16 1/2 inches
Weight	8 3/4 pounds	10 1/4 pounds

Thor Universal Portable Electric Grinders

A powerful electric grinder with heat-treated, alloy steel, spiral helical gears. Armature and spindle provided with large over-size ball bearings with convenient means for lubrication. Outer end of spindle support has labyrinth grease seal and is reinforced with steel hub where wheel guard is clamped.

Furnished with ground wire, wheel guard and 10 feet of cable. Spindle thread, 1/2-inch x 13; spindle offset, 1 inch. Length, 19 1/2 inches. Shipping weight, 18 pounds.

No. U58 Thor Light Duty Portable Electric Sanders

For sanding, grinding, cleaning, preparing automobile bodies and fenders for paint jobs, and every application which might involve sandpaper or emery.

Armature and spindle run in ball bearings. Cut gears of alloy steel, heat treated. Inspection of motor can be made while sander is running by removing 2 brush covers. Side handle can be used on either side of machine.

Free speed, 4000 r.p.m. Length, 14 1/4 inches.

Equipped with 7-inch flexible rubber pad and a box of 3 assorted abrasive discs. Weight less pads, 9 1/2 pounds.

No. U58..... each \$48.00

Thor 7-Inch Electric Polishers

A light weight, perfectly balanced and easily handled polisher that is equipped with a powerful Thor motor.

Armature and spindle run in ball bearings. Alloy steel heat-treated gears. Easily taken apart for cleaning by removing brush covers. Handle can be used on either side of machine. Equipped with one 7-inch flexible rubber pad; one 7-inch felt pad and one 8-inch sheep wool pad.

OFFICES IN ALL PRINCIPAL CITIES

No. U1N Thor Electric Nibblers For Cutting Sheet Metal and Tubes 110-220 Volts, A.C. or D.C.

Internal cuts of any shape may be made without breaking-in from the edge of the stock. Curves and circles with as small a radius as 1 inch can be cut. Shapes can be cut out of tubing that is as small as 1½ inches in diameter. Has yoke type front head. Capacity; No. 18 gage in sheet metal, No. 15 gage in aluminum.

Minimum cutting radius, 1-inch; length overall, 9 inches; diameter of body, 2½ inches.
Input; free speed, 90 watts; full load, 200 watts.
Weight, 3¾ pounds.
When ordering, specify voltage.
No. U1N..... each \$60.00

Ideal 3-in-1 Electric Cleaners

As a Blower

This cleaner is easily adaptable to all kinds of cleaning work. Used for vacuum cleaning and blowing. Cleaner can be easily converted into a blower and vice versa. Also used for all general plant cleaning jobs as well as for spraying insecticides, varnishes, shellacs, paint, etc.

Jumbo Model No. 50. For extra heavy duty service; super-powered. Has a full 1-hp., 11,000-rpm. motor. Air velocity, 24,200 feet per minute. For 110, 220, and 250 volts; 25 to 60 cycles. Equipped with 20 feet of heavy duty 3-wire safety cord and rubber plug.
No. 50, Weight 14 Pounds..... each \$105.62

Whiz Model No. 10. For light duty cleaning work. Has ¼-hp. universal motor. Air velocity, 15,000 feet per minute. For 32 to 250 volts; 25 to 60 cycles.
No. 10, Weight 7 Pounds..... each \$49.37

Giant Model No. 20. For intermediate duty service. Has ½-hp. universal motor. Air velocity, 15,600 feet per minute. For 32 to 250 volts; 25 to 60 cycles.
No. 20, Weight 7½ Pounds..... each \$61.87

Super-Giant Model No. 30. For heavy duty service. Has a ¾-hp. motor. Air velocity, 18,720 feet per minute. For 32 to 250 volts; 25 to 60 cycles.
No. 30, Weight 9½ Pounds..... each \$81.25

Hot and Cold Air Model No. 40. For use where moisture constitutes an industrial problem. Has a double action switch; may be set for either hot or cold air. Equipped with ½-hp. universal motor. For 32 to 250 volts; 25 to 60 cycles.
No. 40, Weight 8 Pounds..... each \$74.37

Sturtevant Big Midget Portable Blowers

Delivers dry air for removing dust from machinery. Compressed air ordinarily contains moisture; this blower shoots dry air. Does away with air lines and lugging a

hose around, and work is reached from all sides. Has ½ h.p. universal motor, 110 or 220 volts; speed, open outlet, 9895 r.p.m., closed outlet, 11100 r.p.m.; volume delivered, 43.2 cubic feet per minute; air velocity, 14820 feet per minute; static pressure, outlet closed, 16.62 ins. water; inside diameter nozzle, ¾ inch.

Furnished with 20-foot cord and plug; switch in handle. Weight, 7 Pounds.

Each..... \$82.00

Peiffer Universal Cylinder Bellows

Made especially for cleaning out switchboards and all telephone and telegraph apparatus.

Bellows has no metal mountings, being made of a composition fiber. Will not short-circuit.

11g Electric Propeller Fans

11g Self-Cooled Propeller Fans

Selecting the Correct Size of 11g Self-Cooled Motor Propeller Fan

The air change required in a room differs with the conditions found therein. The worse the air conditions, the faster the air should be changed; restaurants for instance need a more rapid air change than do offices. Air conditions in a given type of building are fairly uniform and it is possible to generalize on the rate of air change advocated for various classes of buildings. Note the listing below.

Air Changes

Class of Buildings	Air Should be Changed
Restaurant and Hotel Kitchens....	Every 1 to 2 Minutes
Offices and Stores, Depending on the Climate.....	Every 2 to 5 Minutes
Workrooms and Factories.....	Every 5 to 10 Minutes
Residence Kitchens.....	Every 1 to 2 Minutes
Garages.....	Every 5 to 10 Minutes
Theatres.....	Every 2 to 5 Minutes
Halls.....	Every 5 Minutes
Laundries.....	Every 2 to 5 Minutes
Farm Barns.....	Every 10 Minutes
Attic Cooling.....	Every 2 minutes on floor beneath attic

Self-Cooled Motor

The ingenious, exclusive self-cooling features of the 11g ventilating fan motor combines the low operating cost of the open motor with the protection of the fully enclosed motor.

The 11g self-cooled motor is an open motor, protected and enclosed by a metal hood. The fan action draws clean air through the vent-pipe from the outside, circulates it through the motor and exhausts it. The motor stays clean, stays cool; no foul air reaches it.

The value of this self-cooling feature is reflected in lower operating costs, quieter operation and longer service life.

Slow Speed—Quietness—Long Life

This motor propeller fan is made to operate efficiently at low speeds, from the 12-inch 11gair running at 1140 r.p.m. to the 72-inch 11g fan at 315 r.p.m.; slow speeds characterize the 11g line. Slow speeds permit quiet operation, smoother, effortless running, less vibration and bearing wear. Many an 11g self-cooled motor propeller fan is as good as new after years of service. Slow speed is the answer.

Two Fans in One

The 11g self-cooled motor propeller fan for single phase operation is equipped with two speed controllers. In effect, this gives the user two fans for the price of one; at top speed a reasonably quiet ventilator for peak loads, and for hot weather duty; at low speed, a fan which is noiseless, ready for cold weather ventilation duty. Here is year round use, top capacity, silent operation, and flexibility of performance, all in one fan.

Improved Balanced Wheel

Slow speeds are possible because of the improved 11g bucket type fan wheel. The deeply cupped blades scoop up the air, working efficiently at low speeds. Dynamic balancing on a costly machine makes the 11g fan wheel quiet, vibration-free for life.

Constructed with patented 11g enclosed self-cooled motor which affords the low operating cost of the open motor with the protection of a fully enclosed motor.

Fan action draws clean air through vent pipe in the bottom of the fan from out-of-doors, circulates it through the motor and exhausts it.

Motor stays cool and clean and uses less power.

Ratings are certified to be in accordance with the A.S.H. & V.E.

Ilg Automatic Shutters

Fan Running

Fan Not Running

These shutters are used on the outside of propeller fans to protect the fan when not running and also to keep out the wind, rain, snow and cold.

Ilg Automatic Shutters are built of special hard rolled aluminum leaves, pressed on Whiting Alloy copper coated rods supported in cast frame.

When fan is running, the shutter is held open by the force of the air current. When fan is shut off, the shutter closes automatically by gravity.

Shutters are moisture proof and need no attention after they are installed.

Size of shutter corresponds to size of fan.

Sizes 48-inch and larger are built in two sections.

No. BM388 Filter Type Ilgairator Window Ventilators

This is an electric fan and air filter unit that can be used with any sliding sash window for supplying fresh, filtered air to a room. Dust, soot, and plant pollens are filtered out of the air with over 98% efficiency.

The cabinet is made of furniture steel attractively proportioned and finished in natural walnut grain. Six adjustable panel widths are furnished for various window widths. The installation does not interfere with opening, closing or locking window. Filter is replaceable; a new cartridge is easily inserted.

With all necessary accessories including rubber covered cord and plug; operates from any electric light socket.

Single phase, 60 cycles, 110 volts.

Air capacity, 250 cfm. Speed, 1550 rpm. Watts, 40.

Also available for d.c. Prices on application.

1lg Built-In Kitchen Ventilators

This ventilator is permanently installed behind an attractive grill. A pull chain starts and stops fan, simultaneously opening and closing the outer weather-tight door, which keeps out insects and cold air when the ventilator is not in operation. Installation can be made with little trouble.

ILGAIR.—For the large kitchen, cabinet dimensions, 8 $\frac{3}{4}$ inches deep, 12 $\frac{3}{4}$

inches high, and 13 $\frac{1}{2}$ inches wide. Ivory finish, including grill.

ILGETTE.—For the small kitchen. Dimensions: 12 inches high, 12 inches wide, adjustable depth. Enameled French gray with mirror-finish metal grill.

AUTOMATIC ILGETTE.—Equipped with a small motor in place of pull chain for complete electrical operation of the unit from a wall switch.

1lgstream Fans

Floor Type

Universal Type Wall Mounting

Universal Type Display Case Mounting

A new type air disturbance fan for stores, restaurants, offices, etc. It has high volume, setting into motion air currents over wide floor areas.

While discharging the air at high velocity, the 1lgstream fan is quiet, entirely suitable for any room where noise is out of place.

Floor Type

Has the advantage of portability. A strong chrome-plated fan guard prevents accidental injuries. The fan wheel is mirror-finished aluminum alloy, and the upright is chromium plated. The heavy weighted base is in black crackle with chromium trim. The motor hood is finished to match.

The 4-blade wheel is designed to operate at low speed and deliver a large volume of air at high velocity. Has locked-tight up and down directional fan adjustment.

Overall heights are: Model 23, 102 inches; Model 27, 105 inches.

No. 23 series weighs 140 pounds, No. 27 series weighs 240 pounds.

**Ilgwind Fans
For Recirculation**

A portable plug-in unit used for cooling homes and apartments. Expels hot air and draws in cool air. Inside temperatures drop from 5° to 20° as an Ilgwind fan is placed at one window, and other windows and doors are opened to make possible a complete air change. For handling up to eight rooms.

Adjustable in height. Has a fine mesh safety guard. With 2-speed, 60-cycle, single-phase motor, 110 or 220 volts. Direct connection of motor and fan eliminates friction and noise. With 20-foot rubber-covered cord.

Ilg Power Roof Ventilators

For buildings where roof ventilation provides the only practical means of exhausting foul air.

There is a constant suction created by the Ilg Self-Cooled Motor Propeller Fan which is enclosed in the penthouse. The foul, dead air and excess heat are positively and uniformly drawn off by the action of the fan. Wind and weather can have no effect.

Placed above machines in special processes and connected by duct work, the unit serves as a fume or smoke and

heat exhauster. Since heat's natural direction of travel is upward, the Ilg Power Roof Ventilator has found wide use in every industry confronted with excessive heat.

The Ilg Self-Cooled Motor Propeller Fan is mounted within a sheet steel penthouse. Solidly constructed over a heavy angle iron frame, the house is weathertight in every respect. Furnished complete with shutter. Prices do not include fan.

Type P Ilg Volume Blowers

The Ilg Type P Volume Blower is designed to handle small quantities of air over a pressure range of 1/2 to 3 in. The housing is of heavy cast-iron; the wheel is of cast aluminum.

This blower can be hung from ceiling or suspended from side wall and fitted into any one of four different discharges quickly and easily.

It is particularly useful for exhausting fumes from chemical laboratories. It can also be used for handling light dust from polishing wheels

and grinders and is suitable for any small exhaust purpose where a considerable amount of resistance is caused by a long run of small duct. The 7 1/2 Type P Blower at 3400 r.p.m. can be satisfactorily used on single-fire blacksmith forges.

Type B IIg Volume Blowers

Gasoline Engine Driven

Driven by a direct connected 4-cycle gasoline engine, blower is for ventilating where electricity is not available. Manholes, vats, tanks and other places can be ventilated with this portable blower which is complete-

ly self-contained. Canvas hose is ordinarily used to convey the fresh air from blower to spot requiring ventilation.

The blower inlet is screened to prevent paper, leaves, etc. from entering. The outlet is fitted with a flange to accommodate a canvas hose. No batteries or other connections are required.

IIg Type BW Universal Blowers

For Belt Drive

Sides of housing are of cast iron and the cast iron bearing bracket is recessed in the sheet metal bowl in blower's side. The multiblade wheel is overhung on the shaft which runs on ball bearings in cast iron bracket. This two bearing construction makes possible a completely unobstructed inlet.

Special Whiting ribbon steel blades of wheel have slight forward curve developing high air volume at low tip speeds and against comparatively high static pressures. Blades are spot welded to rims, and rim and blade assembly mounted on cast iron spider.

Ball bearings make these blowers suitable for any installation requiring quietness. Bearings are oversized and grease lubricated.

Angle of discharge and direction of rotation can be changed at any time.

Available in single width, single inlet and double width, double inlet types.

Type B IIg Volume Blowers

Suitable for all kinds of small volume, low pressure installations. This blower combines high efficiency and low power consumption. Quiet and smooth running.

The housing and multi-blade wheel are die-cut steel. The wheel is carefully balanced. The inlet flange and the base which bears both housing and the direct connected motor, are cast iron. Discharge is universal.

Ilg Type B Universal Blowers
With Forward Curved Wheel

The motor is machined circular and held in a cast iron ring and recessed within the cast iron side of the blower in a sheet steel bowl. The multiblade wheel is mounted directly in the motor shaft. There is little overhang because the motor is recessed. This construction eliminates the inlet bearing, independent motor base, and alignment of motor and wheel. Mounted on 4 legs, the Ilg Blower is quickly installed; the universal discharge is possible by relocation of the legs.

All direct current blowers are furnished with speed regulators and covers.

Give current, voltage, cycle, and phase—specify discharge arrangement on order.

Type BC 11g Blowers

With Backward Curved Non-Overloading Wheel

Non-overloading characteristics have been brought to a high state of development in the 11g Type BC Blowers. The motor load remains constant for a large range of air volume over a considerable change in static pressure.

This feature is of distinct value to the architect, the engineer, and contractor in installations where the actual resistance in the system does not agree with the calculated figure, for there is not a chance of a motor overload in case the resistance is less than calculated.

Blower has high efficiency available in direct-connected and belted single width, single inlet types and belted double width, double inlet type. The discharge is universal.

Enclosed speed regulators furnished with direct current blowers.

For frequencies other than 60 cycle add 5%.

Type HT IIg Electric Unit Heaters

No Controller Is Required

For space heating or drying. Eye bolts provided for suspension of unit.

Heating element is non-overheating and interchangeable. Its temperature, whether fan is running or not, does not exceed 400°F. Self-adjusting to temperature, having a slightly higher kilowatt capacity in a cold room than in a warm room.

Suitable for connection to 110 or 220 volts single-phase and to 220 volts 3-phase.

Dimensions over all: Width, 12 $\frac{3}{8}$ inches; height, 15 inches; depth, 12 $\frac{1}{4}$ inches. Dimensions of case only excluding fan and hanger bolts: Width, 12 $\frac{3}{8}$ inches; height, 13 $\frac{3}{8}$ inches; depth, 5 $\frac{7}{8}$ inches; distance between eye bolts, 10 inches. Speed, 1550 rpm.

Complete unit is finished in brown crinkle enamel.

When ordering, specify exact voltage. Units for direct current and special voltages can also be supplied.

Shipping weight, 42 pounds. Net weight, 20 pounds.

IIg Electric Unit Heaters

Nos. 513 to 4819

Rear View

Nos. 513 to 4819 can be furnished only for those currents for which controllers are listed since controller is necessary to obtain operation of thermal safety switch on unit heater.

Controller equipment includes enclosed magnetic starter and remote control switch.

‡Upon application.

Ilg Steam Unit Heaters

Powerful Ilg self-cooled motor propeller fan enables a stream of warm air to be concentrated at the floor level and minimizes heat loss above the working zone. Ordinarily suspended by eye bolts 7 or 8 feet from the floor.

Can be operated manually, by electric thermostat, or steam regulator. Uniformity of design and construction assures balanced performance.

Controllers: Single-phase 2-speed motors are equipped with controllers having 2 speeds and an off position; single-phase 3-speed motors are equipped with controllers having 3 speeds and an off position; 2-speed controllers are available for 2 and 3-phase motors in each speed as extra equipment; variable speed d.c. motors are equipped with enclosed speed regulators.

Unit heater prices include fan, motor, casing, individually adjusted air deflectors, and heating element. Speed regulator is included where specifically stated. No air valves or other accessories are included.

Net Extra for DeLuxe Units with Color Finish

Unit No.	10	13	17	19	25	19-2	31
Each.	\$4.00	5.00	7.50	9.00	15.00	18.00	23.00

Ratings apply only to recirculation and free discharge; *Cubic feet per minute of standard air at 70° F. and standard basis of rating (2 pounds steam pressure and 60° F. entering air); †Equivalent direct radiation at standard basis of rating.

For constant speed units equipped with explosion proof motors, add 10%. Prices on variable speed explosion proof motors on application. Explosion proof motors are not available for No. 10 and No. 13 series excepting the No. 13 for single phase which carries an extra of \$19.00.

For 25-cycle, add 10% to price of 60-cycle unit of nearest r.p.m. Where 50-cycle motors are required, use 60-cycle prices.

Where steam pressure is referred to as a condition of rating, it is meant to be the gauge pressure maintained on the heating surface; and to determine the pressure required at the boiler a suitable line drop must be allowed for.

Where heaters are to handle air at temperatures below freezing, it is recommended that a minimum pressure of 5 pounds gauge should be maintained on the heating surface.

G-E Natural-Convection Type Unit Heaters

Horizontal Type

A convenient, easily-installed heater for heating out-of-the-way places.

Common applications: substations, valve houses, pump houses, warehouses, crane cabs, airplane hangars, electric locomotives, blower rooms, repair shops, service stations, laboratories, garages, scale rooms, watchmen's houses, elevators, drying rooms, waiting stations, and ticket booths.

Free air circulation provides maximum heat. Heater is easily installed, simply mount on wall or floor and connect to power line. Easily moved from one job to another.

Heat is available at the turn of the switch. The 3-heat switch provides simple regulation of temperature and economy of operation.

Heater consists of a number of G-E Strip Heaters mounted in a perforated, pressed-steel case with heat-resisting painted finish.

Wall-Mounted Model

Designed for mounting directly on wall with main axis horizontal. Can be mounted with cable emerging from either right or left end. Equipped with heat baffles to prevent overheating and scorching of wall surfaces.

G-E Forced-Convection Type Heaters

50-60 Cycles, A.C.

Portable Model

Available in two models: portable model, primarily for floor mounting; suspension model, for wall or ceiling mounting.

HEATING UNIT. Equipped with G-E Calrod Unit with strong radiating fins that multiply radiating surface of the Calrod. These fins are electric-furnace brazed on Calrod to provide maximum heat-transfer efficiency.

FAN. With G-E aphonic pressure-type fan with matching outlet orifice. Provides efficient and quiet operation.

MOTOR. A G-E totally-enclosed motor with sleeve bearings. Motor is protected against direct radiation from heating units by an ingenious baffle. Cool air is drawn over the motor frame at all times through the space between motor and the baffle.

AUTOMATIC PROTECTION AGAINST OVERHEATING. Heaters

Suspension Models

rated under 10 kilowatts have a convenient reset button located on outside of case. On heaters rated 10 kilowatts and over, remote push-button control is used, and the push-button provides the necessary reset feature.

HOUSING. Heater may be directed upward or downward as much as 30° from horizontal, to serve required area. The absence of louvers allows free flow of air.

WIDE UTILITY. The two smaller sizes of heaters are so designed that they can be used as fans during hot weather.

To operate motor and fan independently of heating unit, the 2, 3, and 4-kw. heaters are provided with tumbler switch mounted on casing. On the 5 and 7.5-kw. heaters, fan-motor leads are brought out so that fan can be connected to manual switch.

¶Portable Model—For Floor Mounting

Can be arranged for suspension mounting. Unbolt foot pedestal and supporting arm and readjust arm so that it will be 180° from standard location.

†Special unit heaters can be supplied for connection of both fan motor and heating elements to circuits listed: 50-60 cycles, 115 volts, single-phase, a.c. (special 4-kw. heater); 25 cycles, 115 or 230 volts, single-phase, a.c.; 25, 50, or 60 cycles, 208 or 440 volts, single-phase, a.c.; d.c., 115 volts, 2 and 3 kw.; d.c., 230 volts, 2, 3, and 4 kw. Add \$10.00 to standard heater.

§Special unit heaters can be supplied for connection of both fan motor and heating elements to circuits listed below. The 5 and 7.5-kw. heaters will be single-phase only; the 10, 12.5, and 15-kw. heaters will be 3-phase only, 25 cycles, a.c., 230 volts; 25, 50, or 60 cycles, a.c., 208 or 440 volts; d.c., 230 or 250 volts. Add \$10.00 to standard heater.

G-E Strip Heaters

Serves as an air and clamp-on heater. A few of the common applications are for: process machinery, drying ovens, warming tables, glue tables, water baths, drying cabinets,

pipe lines, incubators, valve and pump houses, etc. Features: uniform heat distribution; ridged construction that withstands vibration; compressed insulation.

Type H Chromalox Electric Air Heaters

Listed Under Underwriters' Laboratories, Inc.
Re-Examination Service—Reference No. 7601
For 115, 208, 230, 250, 440, and 550 Volts

No. EH-2405

This heater is designed for those many hard-to-heat places where heat must be concentrated near the floor. Ideal for mounting underneath low windows.

This heater discharges heated air horizontally into the room where it is needed (not up to the ceiling), thereby providing even heat distribution and eliminating the usual hot spots and cold corners. Mounting side (back part) is always cool, therefore this heater can be fastened to walls or wooden partitions without fire hazard.

Fully Assembled with 3 Feet of Flexible Cable and 3-Heat Switch Mounted on Standard Conduit Box Ready to Connect to Power Line

*These heaters can be supplied for 3-heat operation on 440 or 550 volts. All other heaters can be supplied for single-heat operations on 440 or 550 volts. For single or 3-heat switch (440-550 volts) add \$4.00 to above prices.

Type D Chromalox Electric Air Heaters

For 115, 208, 230, and 250 Volts

Recommended for small offices or shops.

The 1000-watt and 1500-watt heaters are supplied complete with 3-heat switch, 6 feet of heater cord and attachment plug. The two larger sizes are furnished with 3-heat switch and 6 feet of heater cord for connection to power line.

Type V Chromalox Electric Air Heaters

Listed Under Underwriters' Laboratories, Inc.
Re-Examination Service—Reference No. 7601
For 115, 208, 230, 250, 440, and 550 Volts

Exterior View of No. EH-2030

Showing Overall Dimensions

This heater is constructed to give strong flue action and rapid air circulation.

Easily mounted on walls or wooden partitions without fire hazard.

Furnished fully assembled with 3 feet of flexible cable and 3-heat switch mounted on standard conduit box ready to connect to power line.

No.	Complete Each	Without Switch or Cable Each	Wattage	Overall Height Inches	Approx. Ship. Wt. Pounds

†EH-2040	45.00	39.00	4500	27	65

*Can be supplied for 3-heat operation on 440 or 550 volts. All other heaters can be supplied for single-heat operation on 440 or 550 volts. For single or 3-heat switch (440-550 volts) add \$4.00 to above prices.

†The 4500-watt (4.5 kw.) heater can be supplied on order for 3-phase, 2-phase or single-phase operation and the load will be evenly balanced on each phase. If greater heating capacity is required than is supplied by a 4.5 kw. heater, mount two or more heaters side by side and thus secure the necessary total kw. of heater capacity.

Type HF Chromalox Electric Unit Heaters

Blower Type

115-230 Volts, 60 Cycles, A.C., Single Phase

Used to heat watchmen's shelters, factory offices, stock rooms, warehouses, etc.; in place of steam heating system for heating offices and rooms in spring and fall; to supplement steam heating in cold weather in rooms inadequately heated; and for temporary heating where a portable or easily mounted heater is needed.

Steel heater case provided with handle and rubber feet or pads for portable use. Brackets available for permanent wall mounting. Adjustable louvers will direct air in desired direction. Chromalox Koilstrip elements within the heater warm air drawn in back of heater and forced out the front by cadmium-plated fan. Enclosed type electric motor drives fan.

Positive acting thermostatic switch automatically opens heater circuit if normal operating temperatures are exceeded. Manually operated reset button closes heater circuit when normal temperatures are restored.

Manual control switch turns on heater circuit and fan for winter use, and fan only for summer use. For automatic temperature control, order PA-85 thermostat at \$11.50; no contactor is required.

The 1500-watt heaters supplied with 10 feet of heater cord and attachment plug; all other sizes supplied with 10 feet of heater cord only.

HF-400	\$38.50	4.0	230	13648	72	250	24

NOTE. The 115-volt, 4-kilowatt heater is furnished with line terminals and without hand control switch, at \$36.50 each. Control with contactor and thermostat.

G-E Heating Cable

A flexible, lead-covered cable which can be bent and formed readily to fit almost any low-temperature heating job. Should be used on those jobs requiring a heater sheath temperature of 165°F. or less. The gentle heating effect can be extended along a line or spread evenly over a wide area. Cable is so pliable that it can easily be concentrated in certain areas.

Soil heating is one of the widest applications of heating cable as well as one of the oldest, but ingenious operators have been alert to the low-cost possibilities of this electric heating medium and have put it to work on a great diversification of application. The following jobs are being done successfully on a wide scale: protecting pipes and valves from freezing; warming water for poultry; warming testing rooms; warming valves and pipe lines of viscous material; acid baths (acids that will not attack lead); protecting sprinkler systems; melting ice from eaves and downspouts; miscellaneous air heating; freeing ice from sidewalks and other surfaces; floor heating; for heating brooders, lily ponds, and kennel floors.

Application Data

The tabulation below shows lengths of cable recommended for more common voltages, and the resultant wattages. Never use shorter lengths on these voltages because such practice will increase the wattage and operating temperature and shorten the cable life. Longer lengths can be used, in which case the total watts will decrease according to the following equation:

$$\text{Total Watts} = \frac{(\text{Volts})^2}{\text{Ft. Length} \times 0.53}$$

Length, No. 19 A.W.G. feet	60	120	240
Volts	110	220	440
Total Watts	400	800	1600

Never apply in a location where sheath temperatures will exceed 165°F. When used in the lengths indicated in the table, in free air the sheath temperature will be approximately 95°F. above air ambient temperature. It is usually safe to mount on boards as well. In soil of average moisture content, the sheath temperature will be approximately 60°F. above the soil temperature.

Bend on a minimum diameter of 2 inches.

Vertical suspension can be made of lengths up to 120 feet.

When making connections to G-E heating cable, strip the lead sheath back about one inch further than the insulation to provide adequate creepage distance between the conductor and the sheath. Make a waterproof connection by covering splice with alternate layers of tape and varnish or shellac.

When applying heating cable to long sections, such as to a pipe line, it is advisable to bend selected length of cable back on itself and then apply doubly. Thus, the two ends will be together to facilitate connections and the inductive heating effect will be lessened.

Specifications

RESISTOR. No. 19 A.W.G., nickel-chromium alloy, .036 inch diameter; resistance, .53 ohms per linear foot.

INSULATION. Felted asbestos, .031 inch thick; two separate wraps of black varnished cambric, each wrap .008 inch thick and each wrap lapped.

SHEATH. Lead, .047 inch thick.

FINISHED DIAMETER. .240 inch.

Chromalox Immersion Heaters

Types M, MO, CM and CMO

Type M or MO

Type CM or CMO with Switch and Outlet Box

USES.—Because of their efficiency, Chromalox Immersion Heaters supply the most economical method for heating fluids in tanks, vats, kettles, boilers, stills and other containers where direct heat energy is desirable. Hundreds of companies are using these durable heaters for heating cleaning solutions, volatile solutions, tempering baths, pickling baths, water, oils, acids, glues, paraffin, syrups, gasoline, caustics and other fluids.

CONSTRUCTION.—All Chromalox Immersion Heater blades or heating units proper are similar in construction to Chromalox Strip Heaters having the resistor embedded in refractory material. The heating units are encased in seamless metal tubing or sheath pressed tightly over them, the seamless sheath being welded or brazed to the pipe threaded screw plug making entire unit waterproof and insuring efficient heat transfer.

OPERATION.—Single heat heaters have one blade or heating unit while 3-heat immersion heaters have two blades or heating units that can be operated in parallel or series giving full or 1/4 total wattage; operating only one blade or unit of a heater gives 1/2 total wattage. 440-volt operation, single heat, can be obtained by connecting the two blades or heating units of a 3-heat, 230-volt immersion heater in series. A 3-heat, 115-volt immersion will operate with the two blades in series on 230 volts.

INSTALLATION.—Chromalox Immersion Heaters are easily installed. Where tank wall is 3/8 inch thick or more,

simply drill a hole and thread it with either 1 1/4 or 2-inch standard pipe thread, depending upon what immersion heater is used. If tank wall is less than 3/8-inch thick, solder or weld a standard 1 1/4 or 2-inch pipe threaded flange or metal disc to tank wall and install immersion heater.

Types of Heaters

TYPE M.—For water heating and solutions that readily absorb generated heat. Regularly supplied with copper sheath and bronze screw plug. *For alkali solutions* where copper is attacked, steel sheath, iron screw plug and welded seam construction is supplied—when specified.

TYPE CM.—Same as Type M except furnished with 3-heat switch mounted on outlet box which covers heater terminals, providing for conduit or BX wiring if desired.

TYPE MO.—For heating mineral oils, paraffin and other fluids that absorb heat slowly. Supplied with steel sheath, iron screw plug, and brazed seams. Can be furnished with copper sheath and bronze screw plug where steel would be attacked.

TYPE CMO.—Same as Type MO except furnished with 3-heat switch mounted on outlet box, which covers heater terminals, providing for conduit or BX wiring if desired.

NOTE.—If solution to be heated will attack the standard immersion heater construction, special seamless metal sheathed heaters can be furnished. Write for prices specifying type of solution.

Vulcan Electric Soldering Irons

Display Board

These electric soldering irons are approved by Underwriters' Laboratories. Can be connected to any lighting socket and will operate with identical results on either a.c. or d.c.

They are wound for standard voltages as follows: 110-120, 220-240 volts. An extra charge of \$1.00 is made for special voltages. Specify voltage when ordering.

Each iron is equipped with a patented, ventilated, adjustable handle, by which it can be lengthened or shortened, and a 6-foot approved heater cord and attachment plug cap.

No. 10 and No. 20

For finest instruments, smallest fuses, light telephone repairs, radio, and all very light soldering.

No. 20 is recommended for industrial use.

Vulcan Electric Branding Irons

Permanent identity, quickly, economically, and indelibly. Protects property against loss.

Send sketches of desired imprints for estimate.

Prices upon application.

Vulcan Rheostats

Provides flexible and accurate temperature control of Vulcan electric soldering tools. It protects them, when not actually delivering their working heat, by preventing the unused heat from storing up; it saves the expense of wasted current; it protects the tinning from burning off the tip and prolongs the life of the winding.

Rheostat maintains the exact degree of temperature required for perfect soldering on any particular job.

No. 250 Vulcan Solder Pouring Ladles

Pouring may be done without removing ladle from stand by turning handle enough to tip pot. Pot remains upright otherwise. Quick, efficient heating. Cast iron pot.

Capacity, approximately 1 1/2 pounds solder.

Cartridge unit of 200 watts is easily replaceable.

When ordering, specify voltage.

No. 250.....each \$10.50

Vulcan Plug Tip Type Tools

No. 35

Equipped with six-foot (10,000 cycle) approved heater cord with rubber plug cap, except No. 25 which is equipped with six feet of Tirez rubber cord and plug which is smaller and more suitable for this size.

Operate equally well on either a.c. or d.c. Stocked in standard voltages.

Specify voltage when ordering.

No. 25

For small fuses, light telephone repairs, radio and all very light soldering.

American Beauty Electric Soldering Irons

No. 3138

No. 3158

All irons are made with a special baffle plate at the shank to prevent free conduction of heat to handles.

Copper tips are treated with special nickel coating to prevent oxidation and corrosion.

Heating element core is machined from solid steel rod. Outer surfaces are impregnated with zinc.

Stands are supplied with all irons.

Pyramid type tips are regularly supplied with Nos. 3138 and 3158, chisel type with Nos. 3178 and 3198. All numbers can be supplied with either type tip, when so specified. A special long drawn semi-chisel shape tip can be furnished for No. 3138.

No. 3138. Primarily adapted for light work; radio, telephone, telegraph, ignition work, etc.

No. 3158. For the same purposes as No. 3138 iron and work of a somewhat heavier nature; for electric starter and ignition manufacturers, repair work, etc.

No. 3178. For use on heavy work; connections, light commutators, and for service and production work.

No. 3198. For shop, service, production work, etc. Supplies a large volume of heat at high temperature.

No. 475 American Beauty Temperature Regulating Stand

A thermostatically controlled device for regulating the temperature of electric soldering irons. The soldering iron, when placed on this stand, is maintained at working temperature ready for instant use.

Through an adjustment on bottom of stand, thermostat may be set for the maintenance of any desired temperature.

Body of stand is of molded plastic. Soldering iron holder is of copper.

For use with electric soldering irons up to 660 watts consumption and for circuits up to 240 volts, a.c. only.

Stand is provided with cord and attachment plug cap for connection to current and with a receptacle for connection of the electric soldering iron.

Packed 1 in a paper box.

Net weight, 27 ounces.

No. 475.....each \$4.95

No. S-76 American Beauty Electric Soldering Irons

For small, light work; consumes 50 watts. Specially treated copper core with aluminum head, on to which tip screws with taper fit. Diam. tip, 1/16 in.; lgth., 1 1/8 in.

No. S-76, Net Weight, 6 Ounces.....each \$4.50

Ideal Electric Etchers and Markers

Etcher. Permanently marks, labels and engraves identification data on smooth surfaced iron, steel, case hardened steel, etc. Operates on resistance-burning principle.

Marker. For marking all materials—metals, glass, plastics, wood, etc.

Operates from a 110-volt, 60 cycle a.c. outlet. Other voltages and frequencies are available at slight additional cost.

Ideal Electric Soldering Tools

No. 5 Thermo-Grip Set

A general all-purpose soldering unit. Attachments are interchangeable with transformer. Available complete or with attachments as selected. Includes the following:

No. 5 Transformer. Furnished with quick make-and-break connectors so that any one of the Deluxe Thermo-Grip attachments can be used, and easily interchanged. For 110 volts, 50-60 cycles. each **\$17.50**

No. 5 Standard Plier Type Head. Grips work while heating. For applying or removing solder lugs and terminals up to 400-ampere size, and sweating or unsweating threadless copper pipe and fittings up to 1 inch in diameter. . . each **\$14.40**

No. 5 Pencil Type Head. A single pointed, round carbon rod clamped in suitable holder. Furnished with ground clamp for seam and spot soldering. Especially suitable for soldering lids on cans, wires to terminals, etc. each **\$12.50**

No. 5 Fork Type Head. Has two carbons mounted on a single handle. For soldering small lugs, terminals or connections in restricted spaces. Also for sweating and unsweating small pipe joints. each **\$18.10**

No. 5 Right Angle Plier Type Head. Made with long tong-like jaws that reach into places where straight tools cannot be used. For soldering in switchboxes and transformer cases, flush against the back of switchboards, or return bends on refrigerator units. each **\$20.60**

No. 2 Midget Plier Type Head. For small and lighter soldering work such as small terminals and lugs up to 150-ampere size, or sweating threadless copper tubing and fittings up to 3/8 inch in diameter. each **\$11.25**

No. 2 Pencil Type Head. Fitted with special 1/4-inch diameter carbon electrode, fixed either in line with or at 45° to handle. For spot or seam welding in tight places. Overall length, 8 1/2 inches. each **\$7.50**

No. 2 Fork Type Head. This tool is only 8 1/2 inches long. It is especially suited for soldering in close places, such as switchboxes, refrigerators, etc. Both carbons are held in single handle. each **\$10.00**

No. 25 Electric Etcher. Used like a pencil for the permanent writing or marking of tools, gages, dies and hard metal parts. each **\$15.00**

No. 5 Set Complete. Consists of the transformer and all the attachments listed above, supplied with a carrying case. per set **\$126.90**

G-E Soldering Irons

Equipped with long-lasting G-E cartridge unit of swaged construction, which is insulated with densely compact magnesium oxide. Renewable, calorized copper tip prevents undue oxidation.

Furnished with 6 feet of rubber cord and molded-on rubber plug.

Built to withstand the rigors of daily industrial service.

*Price includes radiating stand.
†Chisel type tips are employed on all sizes. Pyramid type tips may be substituted at 25 cents extra per iron.

Type CI
Primarily designed for light or medium work, such as is handled daily in many industrial plants. Especially suited, because of light weight and speed in heating, for work on telephone equipment, radio sets, light wires, electric instruments, switchboards, etc.

No.		Each	Type No.	†Diam. Tip In.	Watts	Wt., Oz.	
115 Volts	230 Volts					Net	Ship.
6A106	6A106G2	\$4.30	CI-80	3/8	80	17	22

6A108	6A108G2	4.30	CI-76	3/4	110	19	24

†All tips and holders have the same thread size, thereby permitting interchangeability of tips on all three sizes of Type CI irons. However, irons are stocked with chisel type tips of sizes indicated in table. Any of the other sizes of chisel type tips or any similar size tips of the pyramid type may be substituted at 25 cents extra per iron.

For Extra Heavy Duty

Designed to meet the difficult requirements of heavy, continuous soldering.

Equipped with G-E Calrod unit which is cast directly into copper heating head. Tip is of calorized copper, chisel type, and is brazed to copper heating head, thereby providing efficient heat transfer. To renew tip, unbrazed it from heating head and braze (silver solder) on a new one.

Chromalox Electric Melting Pots

For Soft Metals

115, 208 and 230 Volts
800°F. Maximum Operating Temperature

Nos. P-100 to P-750 Inclusive, with Lifting Lugs. With No. MR-10 Thermostat for Automatic Control

Nos. P-15, P-25 and P-50 Showing Flexible Conduit and 3-Heat Switch

Top View of No. P-50 Showing Large Capacity with No Interior Obstructions

For melting solder, lead, babbitt, tin, type metal; but not zinc. For heating soldering irons or metal parts.

Heated by Chromalox ring units clamped to the bottom of the pot. The larger pots also have strip heaters clamped to the sides. Interior of pots left free for maximum capacity and low radiation losses.

Nos. P-15 to P-50 inclusive for manual control have the 3-heat switch mounted on conduit box, connected to pot by 3 feet of flexible conduit. The No. P-8 pot is single heat only, and has 3 feet of flexible conduit with armored attachment plug.

Nos. P-25 to P-750 inclusive for automatic temperature control are wired for single-heat operation, and have terminal box for line connections mounted on the side. Thermostat No. MR-10, JKR-10 or JR-10 and correct magnetic contactor should be used. When thermostat is ordered with melting pot, a steel protecting tube for the thermostat bulb is furnished attached to pot.

Nos. P-100 to P-750 pots inclusive, can be furnished for 3 phase 230 volt operation and should always be used with automatic temperature control.

All pots furnished for single-phase operations; when specified Nos. P-350 and P-750 can be furnished for 2-phase or open delta operation.

G-E Metal-Melting Pots

For Soft Metals

Maximum Operating Temperature, 950°F.

For melting lead, babbitt, tin, solder, type metal, and similar alloys or metals except spelter or zinc.

Each pot consists of sheet steel cylindrical casing in which is supported a cast iron crucible. Space between casing and crucible is insulated with a heat insulator.

G-E Calrod cast-in immersion type heating units are suspended from rim of pot and extend directly into metal to be melted.

Nos. 2666404G1, 2666404G2, 2666407G1, or 2666407G2

Vulcan Electric Solder Pots

High Speed and Standard

No. 1600

For tinning parts, leads, and fast dip soldering. Rate of speed of pot soldering depends on correct size of pot, size of parts, and melting point of the solder used.

Replaceable element. Always specify voltage wanted when ordering.

No. 1600 is cast in one piece and attached to a square base of heat resisting material. Flat type element.

No. 1606 is cast in two pieces well insulated from each other against heat loss. Flat type element.

No. 1701 has cast iron pot securely assembled in an outer casing of heavy sheet steel. Flat type element.

No. 1703 comprises a replaceable unit and cast iron pot.

Nos. 1700, 1702, 1704, 1705, 1706, and 1716 have heavy cast iron pots with outer casing of heavy sheet steel. Cartridge type elements.

American Beauty Electric Glue Pots

Automatic Temperature Control

Nos. 1041, 1042, 1044

Pails are equipped with reversible wiping bailes.

Complete with cord, separable connector and attachment plug.

Constructed of aluminum alloy castings with heavy spun seamless copper, nickered, glue containers.

Outer enclosing casings of heavy sheet steel.

Made in all standard voltages.

In ordering, always specify whether for use on a.c. or d.c. current.

Water-Jacketed Type With Water Bath

In this type the glue pail is immersed in a water bath and the contents thus heated.

G-E Automatic Style Gluepots

Made up of removable copper container for holding glue, heated copper jacket in contact with glue container, and steel protecting casing.

Heat insulation is placed between heated jacket and outer casing. Heating unit surrounds jacket and is completely mica-insulated.

A sensitive snap-acting thermostat is mounted on jacket.

Each pot is equipped with contact plug, 8 feet of rubber-covered cord, and socket attaching plug.

G-E General Purpose Squirrel-Cage Induction Motors

¼ to 75 H.P., Constant-Speed, 2 and 3-Phase, 60 Cycles, Continuous Duty, 40° C. Rise

Type K—Normal Torque, Normal Starting Current

Type K, 2 H.P., 1800 R.P.M. Sleeve-Bearing Motor

The Type K Induction Motor is suitable for either full voltage or reduced voltage starting, depending upon the permissible starting current of the particular application. It is of the highest efficiencies and power factors of all the standard lines of induction motors, and is well fitted for driving pumps, fans, blowers, line shafting, and similar equipment requiring continuous operation with fairly constant load.

In general, this motor can be used for any application where continuous operation and constant speed are required together with a fairly constant load.

Type KF—Normal Torque, Low Starting Current

The essential difference between the Type KF and the Type K motors is in the design of the rotor slot. The rotor in the Type KF motor is designed to give a low starting current, permitting full voltage starting in sizes 30 h.p. and smaller. Obviously, this permits the use of a small, light, and compact magnetic starter.

The Type KF motor may be applied to any drive for which the Type K motor is suitable. It should be chosen where it is desirable to keep the first cost of apparatus as low as possible or where limitations as to weight or space make it desirable to use as small and compact control as is possible.

Type KG—High Torque, Low Starting Current

Type KG motor has high starting torque and low starting current and is intended to supply the need for motors having a higher percentage of starting torque than can be obtained from the Type K or the Type KF motors with full voltage applied, yet having a percentage of starting current equal to or lower than the Type KF motor, together with high full-load efficiency and power factor.

Recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque.

Type KG motors starting at full voltage should be applied only where high torque at start is actually required and only when the driven mechanism will not be injured by the sudden application of this torque. This latter caution applies especially to drives or driven machines utilizing belts, either of the flat or V type, chains, or other flexible or flat elements.

G-E General-Purpose Squirrel-Cage Induction Motors

Type K—Normal Torque, Normal Starting Current
¼ to 1 Hp., Constant Speed, 2 and 3-Phase
60 Cycles, Continuous Duty, 40° C. Rise

All open-type, general-purpose, 60-cycle, polyphase motors, rated 40°C., when operated on 50 cycles at maintained voltages; that is, 110, 220, 440, and 550 will operate without injurious heating, not exceeding 50°C. rise. The 60-cycle horsepower ratings and prices apply. Synchronous speeds are ⅔ of those at 60 cycles.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

Type K Squirrel-Cage Splash-Proof Motors

1/4 to 25 Hp., Constant Speed, 2 and 3-Phase 60 Cycles

Typical of Frames Nos. 204-326

These motors are constructed to operate under conditions subject to dripping and splashing liquids, particularly in certain industries, such as dairies, meat packing plants, etc. where, for obvious reasons, it is necessary to "hose-down" the equipment regularly, at least once a day. Since in order to meet these conditions, these motors are constructed to exclude falling water or other materials coming directly at the motor, at an angle not exceeding 100° from the vertical, they can and have been used successfully out of doors without pump-house or other protection, in those localities where the hazards of climate are not greater than those encountered in the conditions for which they are designed.

110, 208, 220, 440, and 550 Volts

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

G-E Totally-Enclosed and Totally-Enclosed, Fan-Cooled Squirrel-Cage Induction Motors

Type K—Normal Torque, Normal Starting Current

Type KF—Normal Torque, Low Starting Current

Type KG—High Torque, Low Starting Current

Standard and Explosion-Proof—Enclosed, 1/6 to 5 Hp.; Fan-Cooled, 3/4 to 20 Hp. Constant Speed, 2 and 3-Phase, 60 Cycles, Continuous Duty, 55°C. Rise

G-E has a complete line of totally-enclosed and totally-enclosed, fan-cooled motors, which have been tested and listed by the Underwriters' Laboratories, for Class I, Group D, hazardous gas conditions (this means explosive atmospheres equal to high-test gasoline, or less), and for Class II, Group G, hazardous dust conditions (this means grain dust, or less). Motors may be furnished bearing the Underwriters' label indicating their suitability for either one of these conditions.

Type K—Totally-Enclosed Motor

Types KF and KG—Totally-Enclosed, Fan-Cooled Motor

The fan-cooled type of enclosure essentially involves motors totally enclosed with an additional housing which has an external fan mounted at the end opposite the pulley. This fan draws air and directs it over the motor frame along especially designed ventilating paths, and exhausts it at the pulley end. The

fans on the motor rotor keep the air inside the motor agitated, thus dissipating heat from the motor to the frame.

In the smaller ratings, motors are built in totally-enclosed (not fan-cooled) frames. In the larger ratings, the totally-enclosed, fan-cooled design is standard. The latter type permits total enclosure of a motor, yet allows full open-motor horsepower rating in those sizes which would otherwise require frames larger than those of open ratings.

The explosion-proof motors are furnished with an external fan, made of nonsparking metal, similar to that on the standard totally-enclosed, fan-cooled motors.

G-E Totally-Enclosed Squirrel-Cage Induction Motors

‡Two-phase motors in these ratings are not reconnectible for 220/440 volts.

For 50-cycle motors, use price of next larger horsepower at same speed. Frame size may be different. The 50-cycle synchronous speeds are 2/3 of those at 60 cycles.

Explosion-proof motors are for Class I, Group D, hazardous gas conditions, tested and listed by Underwriters' Laboratories. Motors for Class II, Group G, hazardous dust conditions are priced the same as standard enclosed motors. However, motors must be specified for this service in order that they may bear the proper Underwriters' label.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

*All standard 220 and 440-volt, polyphase, squirrel-cage motors, in frames 204 to 505 inclusive, except those 2-phase ratings as noted, have sufficient leads brought out so that they can be connected at the terminal board for either 220 or 440 volts.
 †These ratings have sleeve bearings. For motors with ball bearings, add \$3.75.
 ‡These ratings have sleeve bearings. For motors with ball bearings, add \$4.00.

*All standard 220 and 440-volt, polyphase, squirrel-cage motors, in frames 204 to 505 inclusive, except those 2-phase ratings as noted, have sufficient leads brought out so that they can be connected at the terminal board for either 220 or 440 volts.

†Two-phase motors in these ratings are not reconnectable for 220/440 volts.

‡If motors with 225 per cent starting torque are required in ratings 3 hp., 1800 rpm., and smaller, use price of normal-torque (Type K) motors and specify 225 per cent starting torque. This applies only to motors built in frames 225 and below. For motors in frames 204 to 225 inclusive, at 1200 or 1800 rpm., requiring starting torques of more than 225 per cent, refer to our nearest house.

§These motors recommended only for direct connection. Order should specify direction of rotation.

**Type KG motor is built in larger frame.

††These ratings are built with Valv-amp rotor.

For 50-cycle motors, use price of next larger horsepower at same speed. Frame size may be different. For example, price of Type K, fan-cooled, 3-hp., 4-pole motor for 50-cycle service is \$99. The 50-cycle synchronous speeds are ⅘ of those at 60 cycles.

Explosion-proof motors are for Class I, Group D, hazardous gas conditions, tested and listed by Underwriters' Laboratories. Motors for Class II, Group G, hazardous dust conditions are priced the same as standard fan-cooled motors. However, motors must be specified for this service in order that they may bear the proper Underwriters' label.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

G-E Type KH General-Purpose Fractional-Horsepower Motors

1/20 to 1/3 Hp., Constant Speed, Single-Phase
60 Cycles, Continuous Duty, 40° C. Rise
Wound Stator, Split-Phase Starting, Solid Base

Type KH motors have moderate starting and accelerating torque and large reserve power. Suitable for driving any easily started device requiring constant speed, such as oil burners, blowers and ironing machines.

The 1/8 and 1/4-hp. short service motors are for devices requiring high maximum output but which operate only a small part of the time.

Base is equipped with slots for belt tightening. Drip-proof end shields, built-in terminal box, and a device to eliminate end bump are included in the 40 series frames.

All motors are reconnectable for either rotation. All rated for continuous duty.

1/3	47	110	3450	14.20

Furnished with 8-foot cord and plug at 40 cents extra.

While these motors are considered quiet, a resilient base can be furnished on long hour service motors at a slight additional cost where more quiet operation is desired.

Prices of motors with other voltages and frequencies upon application.

G-E Type KC General-Purpose Fractional-Horsepower Motors

1/8 to 1 Hp., Constant Speed, 2 and 3-Phase
60 Cycles, Continuous Duty, 40° C. Rise
Capacitor Start Induction Run, Solid Base

Designed for high starting and pull-up torque to meet the requirements of such machines as stokers, pumps, compressors, etc.

The starting torque ranges from 400 per cent of full load torque on the 1/8-hp. rating to 275 per cent of full load torque on the 1-hp. rating.

The maximum and pull-up torques are approximately 250 to 300 per cent of the full load torque of the motor.

All 40-frame motors, have a terminal board built in the switch-end shield. All 30, 60, and 70-frame motors have the leads brought out to a conduit box located on the side of the motor stator. Rotation may be easily reversed.

All motors are rated for continuous service and will give long care-free dependable service.

G-E Type K General-Purpose Fractional-Horsepower Motors

1/6 to 1 Hp., Constant Speed, 2 and 3-Phase, 60/50 Cycles, Continuous Duty, 40° C. Rise
Wound Stator, Squirrel-Cage Rotor, Solid Base

Type K polyphase motor has excellent starting and accelerating torque and large reserve power. It will start and drive any device operated by any of the single-phase motors or corresponding rating. As far as possible, the single-phase and polyphase motors are built from interchangeable mechanical parts and have similar external appearance. Mounting interchangeability between single-phase and polyphase motors is maintained.

G-E Single-Phase Motors

Type SCR

1/4 to 10 Hp., 60 Cycles, 220 Volts

The Type SCR motor is a constant-speed repulsion-induction single-phase motor intended for use in general purpose applications. This motor combines the high starting torque of the repulsion motor with the excellent speed characteristics of an induction motor, and is consequently a successful motor for use in a wide range of industrial applications.

The following list of ratings of type SCR single-phase motors covers sizes and designs which meet the majority of application requirements usually found in industry.

	326	1800	224.00	235.00

SCR motors through 5 hp., 110/220 volts; SCR motors 7 1/2 and 10 hp., 220/440 volts.

Frame Nos. 204 to 225 inclusive, all speeds 1800 rpm. and lower, have wool-yarn-packed bearings. Speeds higher than 1800 rpm., also frame Nos. 254 through 326, all speeds, have oil-ring-lubricated sleeve bearings.

Where quiet operation is essential, sleeve-bearing motors should be quoted in preference to ball-bearing motors.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

For additional information, and for single-phase motors with mechanical or electrical variations not provided for by the motors listed here, refer to our nearest house.

G-E General Purpose Gear Motors

40° C., Continuous Rated

Types K, KG and M—2 and 3-Phase, 60 Cycles, 208, 220, 440 and 550 Volts

Type B—D.C., Shunt-Wound, 115 or 230 Volts

Type SCR—Single-Phase, 60 Cycles, 110-220 Volts

Typical of Riveted-Frame, Squirrel-Cage Induction Designs, Single-Reduction

The G-E Gear Motor consists of a highly efficient straight-line helical gear reduction unit built into the end frame of a standard ball-bearing, normal speed motor. Connection to the driven machine may be either direct, or through a belt, chain or gear. The listed low speed r.p.m. are based on 1800 r.p.m. synchronous speed and full load r.p.m. will be slightly lower depending on the variation of full load motor speed from synchronous speed. Access to entire gear mechanism is obtained by removing front cover plate. Gears run in oil. Oil is kept in and dust kept out by felt seals on shaft apertures. Low working stresses plus the helical gear construction eliminate the noises associated with geared speed reduction.

Gear motors may be furnished for vertical or flange mounting and with all mechanical and electrical modifications available with standard general purpose motors.

Typical of Skeleton-Frame, Squirrel-Cage Induction Designs, Single-Reduction

In applying gear motors the following information should be obtained and sent with order:

Torque—starting (high) (low); accelerating (high) (low); running: constant torque, constant speed, adjustable speed; variable torque, periodic; intermittent, varies with speed, give duty cycle, including time and magnitude.

Speed—constant, variable, adjustable.

Load—continuous (8 to 10 hours daily) (24 hours daily); intermittent, frequent starts and sudden stops, reversing.

Method of drive—directly mounted, coupled, belt or chain (give type of belting and relative position of shafts), pinion.

Space limitations.

Ambient conditions—hazards, temperature, protection, atmosphere (abrasive) (corrosive) (explosive) (excessive moisture).

Attention—regular (skilled), uncertain.

The normal control for the type of motor involved should be selected from the standard G-E control shown on other pages of this catalogue.

G-E General-Purpose Gear Motors
Types K, KF, KG and M—2 and 3-Phase, 60 Cycles, 208, 220, 440, and 550 Volts
Type B—D.C., Shunt-Wound, 115 or 230 Volts
Type SCR—Single Phase, 60 Cycles, 110-220 Volts

*For Type SCR motors, frame is A-225.

†These prices apply to Type KF also.

‡Refer to company for frame size.

All types of gear motors are suitable for operation with standard listed controllers. Where full-voltage starting

is used to obtain maximum starting torque of motor, the number of starts should be limited to 4 to 6 per day.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

G-E General-Purpose Synchronous Motors

Type TS, 3-Phase—Type QS, 2-Phase
900 Series—Form BL—Skeleton Frame

High Speed, 60 Cycles

1.0 Power-Factor—40°C. Stator and Rotor
0.8 Power-Factor—40°C. Stator, 50°C. Rotor

Typical General-Purpose Motor for Belt Drive

Developed to fill the need for a synchronous motor which could be recommended for most general purpose applications, in the same way that a squirrel-cage induction motor is recommended—that is, without a detailed study of the requirements of this application. For this reason, in the line of general-purpose synchronous motors, there were incorporated high starting torque, overload capacity, mechanical simplicity, and reliability of G-E squirrel-cage motors.

Since the exciter is direct connected and overhung on the motor end shield, the general-purpose synchronous motors form complete and compact units which, like the squirrel-cage induction motors, merely require connection to the a.c. power supply.

Typical General-Purpose Motor with Direct Connected Exciter for Direct Drive

G-E Type BC General-Purpose Fractional-Horsepower Motors

1/20 to 1 Hp., Constant Speed, Direct Current

Continuous Duty, 40°C. Rise

Compound Wound, Solid Base

These motors have excellent starting and accelerating torque and large reserve power. They will start and drive any device operated by any of the single-phase motors of corresponding rating.

As far as possible the design of the d.c. motors follows the general design of the single-phase motors. They have a similar external appearance and in general, the same mechanical features.

Mounting interchangeability between single-phase and d.c. motors is maintained.

†Prices and other information upon application.
‡Short shaft.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

*These motors are shunt wound.

†Direct current motors in these ratings may be supplied with 550-volt windings at an additional price of \$7.00.

Prices for motors with resilient bases and with other voltages upon application.

G-E Type B Direct Current Motors 115 or 230 Volts

These motors are particularly suitable for a wide range of industrial applications, such as driving pumps, fans, blowers, line shafting and similar equipment requiring continuous operation and fairly close speed regulation. The hp. ratings are based on continuous duty at 40°C.

Constant Speed—Shunt or Compound-Wound

On all constant speed motors, speed may be increased at least 25 per cent by field control and reduced 50 per cent by armature control.

*For ball bearings, add 5 per cent to sleeve bearing price, minimum addition \$4.00.

†Constant hp.: from basic speed upward to 150 per cent, temperature will not exceed 50°C. rise; above 150 per cent of basic speed the temperature will not exceed 40°C. rise.

‡Tapered hp.: from basic speed upward to 150 per cent, motor delivers minimum rated hp., temperature not to exceed 50°C. rise; 40°C. rise is not exceeded at speeds above 150 per cent of basic speed.

Prices are for motor only. Pulley and base, when required, will be furnished at slight additional cost.

G-E Series Wound Motors

1/100 H.P. at 5000 R.P.M. to 1/3 H.P. at 1000 R.P.M.
110 and 220 Volts, Varying Speed

Type BA with 45A Frame

A complete line of series wound motors are available for portable machines, domestic devices, etc. requiring high outputs with small size and weight. Self-aligning bearings and large oil capacity housings with oil returns provide lubrication. Only occasional oiling is required. Ventilating

system cools motor even when operating under heavy loads.

Series type motors offer high starting and accelerating torque and operate at high speeds. They have varying speed characteristics, that is the speed varies with the load, but with constant load they offer constant speed. A motor must be chosen whose output closely matches the requirements of the device. The requirements of the device to be motorized are usually determined by test.

Motor parts, consisting of rotor, stator and brush mechanism are also available for built-in applications.

G-E Motors for Unusual Requirements

In addition to general purpose motors, G-E Fractional H.P. Motors are designed for special requirements.

The following is intended to indicate the wide scope of special service motors available: gear motors, for low speeds; explosion-proof motors, for explosive atmospheres; synchronous motors, for close speed regulation; fan duty motors, for fans and blowers; totally enclosed motors, for dusty locations; dynamotors, for converting d.c. to a.c.; motor generators, for converting power; vertical and flange-mounted motors, where special mounting arrangements are required.

Further information will be furnished on application.

G-E Induction Motor-Generator Sets

Types B or CD, D.C. Generator—Shunt or Compound Wound

3-Bearing, 40° C. Continuous Rated, 2 or 3-Phase, 60 Cycles

Made up of standard G-E motors and generators connected by solid steel couplings and mounted on welded structural steel bases. Bearings are of the self-aligning, self-feeding, oil-ring sleeve type.

K.W. Rating of Set	Syn. Speed R.P.M.	Generator Volts	Motor Volts	Set with Gen. Field Rheo. Only Each

G-E Type CR1003 D.C. Enclosed Heavy Duty Starting Rheostats

For Series, Shunt or Compound-Wound Motors

N.E.M.A. Resistor Class. { Up to 25 Hp., No. 135
Above 25 Hp., No. 134

This heavy duty starting rheostat affords a convenient, simple means of providing starting and smooth acceleration for all kinds of d.c. motors.

Provides undervoltage protection.

Order by CR number and number and state rating of motor with which rheostat is to be used.

32 Volts

G-E CR1026 A.C. Enclosed Starting Rheostats

For Type SCR Repulsion-Induction Motors

40, 50 and 60 Cycles, Single-Phase

These starters may be used with motors that do not require more than 150 per cent torque to start or longer than 30 seconds to attain full speed.

They comply with N. E. M. A. Standard Resistor Classification No. 135.

They are primarily for use with the single-phase repulsion-induction motors (Type SCR) where the inrush of current resulting from throwing the motor directly upon the line is objectionable. When these motors are started by being thrown directly upon the line, they require from 250 to 300 per cent full-load current. While in many cases this starting current may not be objectionable, it is recommended that a starter be installed in every case with the 7 1/2 and 10-hp. motors and with the smaller motors when it is desired to reduce the starting current.

Starters for use with motors up to and including 5-hp. 110 volts and 7 1/2-hp. 220 volts are provided with button contacts. Larger sizes have renewable segments.

Motor Hp.	110 Volts Each	220 Volts Each	440 Volts Each
Up to 1	\$22.00	\$22.00
1 1/2	24.00	24.00
2	24.00	24.00
3	24.00	24.00
5	26.00	26.00
7 1/2	49.00	36.00	\$38.00
10	50.00	53.00	38.00

When ordering state CR Number of rheostat and hp., voltage and frequency of motor.

G-E Type CR1034 A.C. Manual Reduced Voltage Starters

For Squirrel-Cage Induction Motors

Type CR1034-K1 Starter with Ammeter Attachment

Type CR1034-K1 Starter Cover Removed Showing Type CR2824-TC-121 Relay Mounted

Suitable for starting squirrel-cage induction motors on applications requiring not more than 15 seconds to attain full speed, once every 4 minutes for an hour.

Starters consist of an auto-transformer with suitable taps, a switching device, an instantaneous undervoltage protective device and a hand-reset overload relay, all self-contained within a sheet metal case.

Arranged for wall mounting; has conduit wiring box. The 2200-volt size is floor mounted. Switch is oil immersed. Starters can be furnished with ammeter attachment (including ammeter) at \$64.00 additional.

When ordering, specify a CR1034 starter with temperature overload relay, giving the complete motor rating. Order ammeter attachment if desired.

G-E Type CR1061 Motor Starting Switches For Fractional-Hp. Motors—Manually Operated

Maximum Ratings { A. C. { Single Pole, 3/4 Hp., 110 to 220 Volts
Double Pole, 3/4 Hp., 110 to 220 Volts
D. C. { Single Pole, 1/2 Hp., 115 to 230 Volts
Double Pole, 1/2 Hp., 115 to 230 Volts

Listed by Underwriters' Laboratories

For Wall Mounting

This small, compact, hand-operated starting switch incorporates positive overload protection. It is designed for use with fractional-horsepower motors, and can be supplied for a.c. or d.c. circuits.

For flush-mounted type, order an open-type switch by nomenclature designation and number. For a single switch, order from a local dealer the following material: one flush plate—No. GE2316 Textolite or No. GE1701 brass; and one conduit box 2 1/2 inches deep—No. SP6971 for rigid conduit and No. SP6972 for BX or flexible conduit. For gang mounting, specify flush plate and/or conduit box "similar to number

and state number of switches to be included in gang. For all other types, order switch by nomenclature designation and number. Order one heater for overload device by number. Select heater, from table at bottom of this column, in accordance with full-load motor current.

Example: 1 CR1061-C1A, motor starting switch
1 No. 81D70 heater

G-E Type CR1062 Motor Starting Switches
For Small A.C. Motors—Manually Operated
25, 40, 50 and 60 Cycles

Two Type CR1062-C5 Switches Mounted on No. 4923350G1 Pedestal

These switches are single throw with double-break contacts. Overload protection is provided by means of hand-reset thermal overload device, and are used for throwing small a.c. single or 3-phase 60, 50, 40 or 25-cycle motors directly across the line. Operating mechanism trips free from handle. Contacts are of silver.

Cases have conduit knock-outs and sufficient wiring space for No. 8 line wires with soldered terminals. Protects against single-phase operation of polyphase motors.

Order by CR number and switch number and form number. Also give rating of motor with which switch is to be used. Specify if heaters are required for overload

protection. Order pedestals by number.

G-E Type CR2927 Pressure and Vacuum Switches

Diaphragm Type—For Starting Small Motors or for Pilot-Circuit Control

Maximum Hp. Ratings:

2 Hp. 110 Volts, 5 Hp. 220 Volts, 5 Hp. 440 and 550 Volts A.C. Polyphase

1½ Hp. 110 Volts and 3 Hp. 210 Volts A.C. Single-Phase

½ Hp. 110 to 550 Volts D.C.

Pressure Switch (Cover Removed) with Unloader Valve and Differential-Adjusting Attachment Mounted in Place

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect synthetic rubber or brass or steel parts.

Used for starting motors not larger than 2 hp. 110 volts, 5 hp. 220, 440, and 550 volts polyphase; 1½ hp. 110 volts and 3 hp. 220 volts single-phase or ½ hp. 110 to 550 volts d.c. When larger motors are used, these switches can be used in connection with automatic starters which will also provide overload protection.

Order by CR number and specify adjustment if other than factory adjustment is required.

G-E Type CR2931 Enclosed Float Switches

For A.C. or D.C. Motors

Form D

Form P

Suitable for use in the control circuit of a.c. or d.c. automatic starters, and, except for the Form P, can directly handle the circuits of small motors.

These switches, as furnished, are arranged for tank operation, that is, the switch closes as the lower liquid level is reached, and opens as the top level is reached. This action may be easily changed for sump operation by interchanging the float and counterweight. Standard floats should not be subjected to pressure. Quotation on special floats will be furnished on request.

All switches are drip and splash-proof and suitable for outdoor installation where they are not subjected to snow or sleet. Where the liquid whose level is to be controlled is subject to freezing, a float switch should not be used.

All switches are quick acting when closing and opening, and this insures a minimum of arcing and burning of the contacts.

Form	No. of Poles	Description	Each
A	Dbl.	For Clamping to Inside Top Edge of Tank; Operated by Rod and Float; Range, 10 Inches to 2 Feet.....	\$37
A	4	Same as Form A Double-Pole.....	41
B	Dbl.	For Bolting to Tank Cover; Requires Guide in Cover for Operating Rod; Range, 10 Inches to 3½ Feet.....	39
B	4	Same as Form B Double-Pole.....	43
C	Dbl.	For Bolting to Tank Cover; Range, 10 Inches to 3½ Feet.....	41
C	4	Same as Form C Double-Pole.....	45
D	Dbl.	†For Bolting to Tank Cover; Operated by Chain and Float; Suitable for Any Depth of Tank or Any Variation in Water Level Not Less Than 10 Inches.....	*41
D	4	†Same as Form D Double-Pole.....	*45
L	Dbl.	†Operated by Chain and Float; For Any Variation in Water Level Not Less Than 5".....	*29
M	Dbl.	Rod-Operated; Range, 2½ In. to 4½ Ft..	29
F	Sgl.	§Operated by Chain and Float; For Any Variation in Water Level Not Less Than 2".....	†16
AW	Sgl.	Same as Form P, Except with Mercury-Tube, Heavy Duty Connectors.....	†18

Order by CR and Form numbers. Specify number poles of switch.

*Price includes 15 feet of bronze chain. If more is required add 15 cents for each additional foot.

†Price includes 15 feet of brass chain. If more is required add 5 cents for each additional foot.

To obtain maximum operating range: †Deduct 3½ feet from length of chain; §deduct 1½ feet from length of chain.

G-E Type CR2940 Pushbutton Stations

Typical 3 Button Station for Front-of-Panel or Wall Mounting

Type CR2940 pushbutton stations are primarily intended for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and ordinary rough usage of machine-tool and similar applications.

The stations listed are divided into three general classes: momentary contact, maintaining contact and a combination of momentary and maintaining contacts. With a momentary contact the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide under-voltage protection. A maintaining contact holds the circuit open or closed as does an ordinary knife switch.

G-E Type CR4052 D.C. Definite Mechanical Time Starters
Constant Speed—Non-Reversing—Non-Jogging—Without Dynamic Braking
 Maximum Rating, 5 Hp., 115 Volts; 10 Hp., 230 Volts

Typical CR4052-A1L Starter with Cover Removed

Types CR4052-A1L and -A2L starters are non-reversing, non-jogging, general purpose starters designed for use with constant-speed direct current motors up to 5 hp. 115 volts and 10 hp. 230 volts. They consist of a solenoid-operated multifinger contactor and a temperature overload relay (either hand or automatic reset), all mounted on a molded Textolite base on the back of which is mounted the Class 115 starting resistor. The multifinger contactor has a blow-out and arc chute on the line contact to interrupt the arc quickly.

The starters can be applied, within their rating, to constant-speed motors up to and including 1800 rpm. that do not require more than 150% full-load torque to start nor longer than 10 seconds to attain full speed. Before using these starters on 3600-rpm. motors, or on motors that require longer than 10 seconds to attain full speed, the application should be checked with the nearest district office. These starters provide isothermic overload protection, hand or

automatic reset, and undervoltage protection or release depending on the accessory used.

Supplied in N.E.M.A. Type 1 enclosing case.

Order by number and form, and specify motor with which starter is to be used. Order relay heater from table below.

Non-reversing, non-jogging pushbutton stations: Type CR2940-B579J, \$2.00; Type CR2940-2A1, \$6.00.

Heaters for Thermal Overload Devices

Listed values are for motors rated 40° C. continuous. For motors rated 50° C. continuous, use heaters one size smaller than listed.

G-E Type CR7006 A.C. Magnetic Switches

For Throwing Single, 2 or 3-Phase Motors Directly on the Line

25, 50 and 60 Cycles

Type CR7006-D50B, Size 0, with Cover Removed

Type CR7006-D30B, Size 2, with Cover Removed

These switches consist of a 2 or 3-pole magnetically-operated contactor with overload relays mounted on a base and enclosed in a suitable case. Provides undervoltage protection or release. May be operated by means of a push button station, float or pressure switch, etc.

Prices will be quoted on request on these switches designed specially for installation in dusty or corrosive atmospheres or in Class I Group D hazardous gas locations.

Order by CR number and specify rating of motor with which to be used and heater units required for overload protection.

G-E Type CR705 A.C. Magnetic Reduced Voltage Starters

For Squirrel-Cage Induction Motors

60 Cycles

Size 1 Starter

Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists chiefly of an autotransformer for supplying reduced voltage to motor during acceleration, accelerating contactor which connects autotransformer to line and motor to low-voltage taps, line contactor, temperature overload relay, a definite time relay which causes accelerating contactor to open and line contactor to close after a predetermined time.

Size No. 1—3-Phase, 3-Wire

†Cat. No. does not include relay heater units.

G-E Type CR7008 A.C. Combination Magnetic Switches

Full-Voltage Starters for Induction Motors

Air-Break or Oil-Immersed—Undervoltage Protection or Release—Thermal Overload Protection
—Maximum Voltage, 600—25-60 Cycles—3 or 2-Phase

Size 2, Fusible Switch in Type I, General-Purpose Case

Size 2 Switch with Air Circuit Breaker in Type I, General-Purpose Case

This combination device consists of a standard full-voltage starter enclosed in the same case with a motor-circuit switch or an air circuit breaker, operated from the outside of the case. Fusible motor-circuit switches can be furnished with the air-break switches.

A CR7008 combination magnetic switch and a CR2940 momentary-contact "start"-"stop" push-button station make a simple and reliable equipment for starting a small alternating-current motor. The combination provides complete protection to both the motor and the operator. The switch and push-button station are completely enclosed, which prevents accidental contact with any live parts.

These switches can be used with any pilot control, such as float switches or pressure governors. They also are suitable for use as primary switches in connection with wound-rotor motors.

The fuse clips will accommodate fuses for average values of motor current when the fusing practice is in accordance

with the 1937 National Electrical Code recommendations, which require that:

1. Squirrel-cage motors should be fused at not more than 300% of rated motor current.
2. High-reactance motors rated at not more than 30 amperes should be fused at not more than 250% of rated motor current, or, if rated at more than 30 amperes, should be fused at not more than 200% of rated motor current.
3. Wound-rotor motors should be fused at not more than 150% of rated motor current.

Fuse clips must likewise be of a size which will accommodate the maximum rating of fuse calculated in accordance with the above percentages. It is always desirable to check the fuse-clip recommendations for a particular value of motor current, to insure that a fuse of suitable size can be used. In no case should the size of fuse used exceed 400% of rated motor current.

*For switch with test jack, add \$7.00.

†Prices do not include fuses. Relay heaters may be omitted or additional ones furnished at \$.60 each.

‡Also available in Type V Dust-Tight case.

Heaters for above switches are listed on another page.

G-E Type CR7009 A.C. Magnetic Reversing Switches—Size 0

With Type CR2810, Size 0 Contactors

*Polyphase Rating—1½ Hp., 110 Volts; 2 Hp., 220-250 Volts

Typical Horizontally Mechanically Interlocked, Magnetic Reversing Switch with Overload Relays, in Type 1, General-Purpose Case—Cover Removed

G-E Type CR7009 size 0 magnetic reversing switches are particularly suitable for reversing small polyphase a.c. motors. The switches consist of two mechanically interlocked, magnetically operated, size 0 contactors. All listed forms are furnished with one normally open electrical interlock on each contactor, for use in the holding circuit.

Mechanical Interlocks. The horizontal mechanical interlock arm is pivoted on a cadmium plated steel base, to which the two contactors are also rigidly fastened. This firm assembly minimizes the possibility of improper operation due to misalignment of parts.

Connections. The standard forms of the switches are so arranged that all external power and control connections are made to terminals on the top of the contactor. These terminals are clearly numbered and are readily accessible from the front of the switch. All connections are made with a screwdriver.

Undervoltage Protection or Release. This magnetic switch and a momentary-contact Forward-Reverse-Stop push-button station afford a simple and reliable means of starting and reversing a small a.c. motor. On failure of voltage, the switch opens, and will not reclose until the Forward or Reverse button is depressed. Undervoltage release is provided by the use of a maintaining-contact push-button station, or other maintaining-contact device.

When a snap-action maintained pilot switch is used, the normally open interlocks should be replaced by normally closed interlocks to provide electrical interlocking. This modification should be specified on the order—it does not change the price.

Overload Protection. When overload protection is desired, two temperature overload relays are provided and may be either hand or automatic reset. The relays are furnished hand reset. Various rated relay heaters are available for use with motors of different ratings.

Enclosing Cases. The enclosed forms are furnished in attractive, Type 1 sheet metal cases which are suitable for general-purpose applications indoors and where the atmospheric conditions are normal.

Ordering Directions. Order a magnetic reversing switch by CR number, form, root number and suffix number from supplementary table. Example: a 3-pole, open-type reversing switch, with mechanical interlock, less overload relays, for operation on 220 volts, 60 cycles would be ordered—one CR7009-B40U, No. 5368680U3.

For special voltage or frequency, order a magnetic reversing switch by CR number, form and root number, and specify correct voltage and frequency.

For switches with overload relays, order two heaters from table at the bottom of this page.

Order Type CR2943-A300 push-button station separately.

Open-Type Switch without Overload Relays

*Where normal operation requires repeated opening of stalled motor current, such as plug stop or jogging (inching) duty requiring continued operation at a rate in excess of 5 per minute, the following motor hp. ratings apply:

Polyphase—110 volts, ¾ hp.
220 volts, 1 hp.
440-550 volts, 1 hp.

†For complete number, add suffix number from table below.
‡Price includes one heater for 2-pole switches, and two heaters for 3-pole and 4-pole switches. Heaters may be omitted or additional ones furnished at 60 cents each.

§In addition to the main poles, each contactor is equipped with one normally open interlock to provide undervoltage protection when used with momentary-contact push-button station.

¶For continuous-rated 40°C. rise motors, select heaters from table above. For continuous 50°C. and 55°C. motors, multiply full-load current of motor by .9 and use this value to select heaters from table above.

To protect the heater and starter during short circuit, provide motor branch-circuit fuses in accordance with N.E. code. In no case should fuse ratings exceed four times the motor full-load current.

G-E Type CR7009 A. C. Magnetic Reversing Switches—Sizes 1, 2, 3 and 4

110 to 600 Volts—Up to 100 Hp.

G-E Type CR7009 Magnetic Switches are suitable for use with reversing motors which are thrown directly across the line or which are controlled by automatic starters. Each switch consists of two mechanically interlocked, magnetically operated, three-pole contactors with overload relay. The entire assembly is mounted in a suitable enclosure. The switches can be controlled remotely through push-button stations, limit switches, or other pilot devices.

Size 1 Magnetic Reversing Switch with Cover Open

Undervoltage Protection or Release. These switches are ordinarily operated by a momentary-contact Forward-Reverse-Stop push-button station. A normally open interlock is furnished on both the forward and the reverse contactors of all sizes of switches, and completes the holding circuit.

Overload Protection. Each switch is provided with a two-element hand-reset thermal overload relay. Provision is made for external resetting of the overload relays on Sizes 1 to 3 inclusive. On Size 4, it is necessary to open the door to reset the relay.

Type 1, General-Purpose Enclosures. Sizes 1 to 3 switches are enclosed in wall-mounted cases which have covers hinged on the side and which are held closed by clasps. Size 4 is provided with a floor-mounted case.

Ordering Directions. Order a magnetic reversing switch by CR number and complete number (root number plus suffix number).

Order a relay or two heaters from table at the bottom of this page.

Order Type CR2943-A300A push-button station separately.

Accessories

Two-Button Station for General-Purpose Applications

Master Switch Control Station

These magnetic reversing switches are generally controlled by push-button stations. They can also be controlled by a small master switch. Many applications, such as motor-operated doors and windows, valves and machine tools, require either a geared-type or track-type limit switch in addition to the reversing switch and push-button station.

Complete information and prices will be furnished on application.

G-E Synchronous Motor Controllers

2 or 3-Phase, 3-Wire 50 or 60 Cycles
 Undervoltage Protection (Time Delay above 600 Volts)
 Thermal Overload Protection of Stator and Squirrel-Cage Windings
 Automatic Speed-Responsive Field Control

Typical CR7061 Reduced-Voltage Magnetic Controller for Low-Voltage Application (below 600 Volts)

Available in four types: full-voltage, magnetic; full-voltage, semi-magnetic; reduced-voltage, magnetic; and reduced voltage, semi-magnetic. Magnetic controllers are controlled by push buttons, whereas semi-magnetic controllers are equipped with manual starting devices. Both types have automatic field application and removal equipment.

The following equipment is common to all types: a.c. line ammeter, d.c. field ammeter, field applying contactor and field discharge contactor with discharge resistor; slip cycle impedance relay and auxiliary devices to apply field at critical speed and favorable angle and to remove field on pull-out within first slip-cycle, stator temperature overload relay and temperature squirrel-cage protective relay, and drilling for exciter field rheostat.

The full-voltage magnetic controllers employ a magnetically operated contactor for connecting the motor to the line, and the semi-magnetic type is equipped with a manually-operated circuit breaker.

Reduced-voltage magnetic controllers are furnished with starting and running contactors and an auto-transformer for supplying reduced voltage to the motor in starting. The accelerating time is automatically determined by a telechron-motor-operated transfer relay, which is adjustable.

The reduced-voltage semi-magnetic controllers are similar to the magnetic type except that the starting and running devices are manually-operated.

G-E Type CR7505 Photoelectric Relays

Types CR7505-2

For certain control problems, G-E photoelectric relays offer many definite advantages over more conventional control devices.

All units have an adjustable sensitivity to meet various conditions of phototube illumination, and may be adjusted either to close or to open a circuit upon suitable light change.

A separate phototube holder can be mounted in any position by means of a mounting bracket, which is included.

Type CR7505-A100. This general purpose relay is for indoor application. It has an extended phototube holder, and is often applied where mounting space for the phototube is limited, or where the phototube will be subject to considerable vibration. The use of tubes, which are designed for long life, makes this unit especially desirable for installations which have infrequent inspection. The unit also includes a 15-ampere a.c. contactor for operation of the controlled electric circuit.

Type CR7505-G100. The thyatron relay is designed for indoor applications where high-speed response is necessary. The load may be handled by a 15-ampere a.c. contactor or may be handled directly by the thyatron tube, thus eliminating all moving parts. This device also uses the industrial type tubes which are designed for long life. Type CR7505-G100 is furnished with an extended phototube holder.

Type CR7505-M2, with Cover Removed

Types CR7505-K2, -K1, -L2, and -M2. These general purpose, self-contained relays are applied where the complete photoelectric relay can be mounted to receive the beam of light, and where the per cent change in light is adequate. Types CR7505-K2 and -K1 are for a.c. indoor application. Type CR7505-L2 is for d.c. indoor application; and Type CR7505-M2 is for a.c. outdoor application.

These relays may either open or close the controlled circuit when the light beam is interrupted. The relay tips are rated one ampere at 110 volts and will operate small magnetic devices directly. It is recommended that a small capacitor be connected across such inductive loads to insure maximum life of the relay tips.

For certain applications, an extended phototube holder can be added to Type CR7505-K2 and -L2 relays. A combination plug, cable and phototube holder is available.

A special cover, No. CR7500-F1, can be added to Types CR7505-K2 or -L2 to increase the sensitivity and to make the units directional.

Order by CR number and specify voltage and frequency.

Numerous special photoelectric devices are also available. For information refer to the nearest G-E sales office.

**G-E Type CR7500 Photoelectric Accessories
For Type CR7505 Photoelectric Relays
Light Sources**

In some cases, the operating light source for use with a photoelectric relay may be an ordinary domestic Mazda lamp. For many applications, and for those in which the light source must be at some considerable distance from the phototube, a light source of greater intensity is required.

G-E Type CR7500 light sources employ a low voltage, concentrated-filament lamp of the type commonly used in automobile headlights. A double contact lamp socket permits the use of a single or double-filament Mazda lamp, to which voltage is supplied by a separately mounted transformer.

Type CR7500-A4. This general-purpose light source is designed for indoor service to be used with the Type CR7505 photoelectric relays. The unit consists of a metal conduit box. A lens with an arrangement for focusing is mounted on the cover of the box.

Type CR7500-G1A. For general-purpose, indoor application. Of cast-aluminum construction with a snap-on steel cover. The unit is provided with an adjustable optical system, adjustment being made by removing the back cover and loosening one screw. By means of an adjustable bracket, the unit may be mounted in any position, but it is preferable that the mounting be such that the lamp is upright.

A Type CR7500-K2 infra-red filter cap may be fitted to the end of the lens barrel so that an invisible beam can be produced where a visible beam would be objectionable.

Type CR7500-G3A. This light source for indoor service is similar to Type CR7500-G1A except that an additional lens is added to provide a short-focus concentrated beam of light. This unit will concentrate an intense spot of light approximately 1/4 inch in diameter at a distance of 2 inches from the lens. The appearance and dimensions are the same as Type CR7500-G1A.

Type CR7500-B2. Light source consists of a cast iron enclosing case with rubber gaskets, in which is mounted a No. 9TM321A1 transformer. For outdoor service—weather-

Indoor Light-Source Transformers

This transformer may be used to supply low voltage a.c. to one Mazda 21 or 32-candlepower lamp in any one of the indoor light sources. It is rated 110/220 volts primary with a secondary voltage to provide approximately 1000 hours' life from either a 21 or 32-candlepower, 6-8-volt Mazda automobile lamp. A tap is also provided on the secondary to give approximately 3000 hours' life from either a 21 or

Type CR7500-G1A Type CR7500-A4 Type CR7500-B2

proof. The cover mounts a lens and arrangement for focusing and a double-contact lamp socket.

Order light sources by CR number. Specify voltage and frequency for transformer to be used with indoor light source; specify voltage and frequency for Type CR7500-B2.

Type	Without Lamp or Transformer, Each	DIMENSIONS, INCHES			Approx. Ship. Wt. Lb.
		Height	Width	Depth

Accessories

Type CR7500-F1 Special Cover. This cover is provided with a light-collecting lens 3 inches in diameter, and a small aperture between the lens and the phototube. The light tunnel projects 3 inches from the front of the cover. The addition of this cover makes either Type CR7505-K2 or CR7505-L2 sensitive to an illumination of 1 foot-candle at the lens, and minimizes the effect of extraneous light.

Type CR7500-H1 Phototube Holder, Cable and Plug. If it is necessary to locate the phototube at some distance from Types CR7505-K2 or -L2 relays, this holder may be used. The dimensions of this unit are the same as those of the Type CR7500-G1A light source.

Type CR7500-K2 Infra-Red Filter Cap. This unit is a small cap which fits over the end of the lens barrel of the Type CR7500-G1A or -B2 light source to provide a practically invisible beam. The cap contains a filter glass which absorbs practically all of the visible energy radiated by the lamp, but permits the infra-red energy to pass. The photoelectric relays are sensitive to this infra-red energy.

Special Lens and Mask. This lens and mask is an accessory for use with the Type CR7500-H1 phototube holder (the type of phototube holder used with the Type CR7505-A100 and -G100) to minimize the effect of extraneous light and to make the unit directional. It consists of a lens barrel, a lens, and a mask or diaphragm located at the focal point of the lens. A small hole in the center of the mask permits light which enters approximately perpendicular to the plane of the lens to reach the phototube. For some special applications, the shape of the hole in the mask may be changed to permit the phototube to "see" only a definite area. The lens barrel fits into the phototube holder in place of the light tunnel normally employed.

Type CR7500-H1 Phototube Holder Special Lens and Mask Type CR7500-K2 Infra-Red Filter Cap

†For intermediate watt ratings, use next larger listed rating.

§If intermediate ohm ratings are desired, use price of next higher listed rating.

NOTE.—The terms Maximum Standard Ohms and Mini-

mum Standard Ohms used in the table above, establish a definite range for selecting resistors that does not require extra care or supervision during manufacture. Resistors rated within this range should be selected where possible.

G-E Type CR9440 Lever-Type Limit Switches

No. CR9440-A2A

A small, compact, track type, spring-return limit switch for applications where it is desired to make or break control or indicating circuits at a fixed point in the travel of a part of the machine or mechanism. The switch has one normally closed and one normally open circuit. Double-break, self-alignment; silver contacts are used in both directions and open or close with a sliding motion. The movable tips and the stationary tip assemblies are easily replaceable.

The operating arm moves in a plane parallel

to base of switch. The plane of rotation of the operating arm can be moved nearer the base by reversing the arm about the shaft.

A precision mechanism on the operating arm permits accurate adjustment of the arm around the shaft. Moving the arm 24° from the normal position operates the switch mechanism; in addition, an overtravel of 48° is possible without damaging the switch.

The switch is enclosed in a die-cast box arranged for conduit connection. An aluminum cover is provided for the box. The removal of this cover gives easy access to the contacts and wiring studs. The operating shaft is grease-packed during assembly.

No. CR9440-A2B

This limit switch is similar to the No. CR9440-A2A, except that it is arranged for operation in clockwise direction.

Mounting Bracket

A right-angle mounting bracket is available for use with either Nos. CR9440-A2A or CR9440-A2B limit switches.

No. CR9440-B1B

With Side Plate Removed

Closed

A heavy-duty, snap-action, single-pole, double throw switch with two independent circuits. This limit switch should be used whenever a small, compact, heavy-duty reversing limit switch is required to open or close a control circuit and where maintained accuracy of operation is of primary importance. Its field of application includes tapping machines, threading machines, grinder tables, welding machines, and other reciprocating machines where a reversing limit switch is applicable.

The contacts are double-break, and both stationary and movable tips are of fine silver to insure long life and dependable operation.

The movable contacts are held in either position by a small Alnico magnet acting on an iron yoke. When the yoke is broken away from the magnet face, by direct mechanical action of the operating lever, a sturdy spring snaps the contact assembly to the opposite position, where it is held in by the same Alnico magnet until the yoke is broken away in the opposite direction. For this reason, the operating point is determined entirely by the position of the operating

lever and is independent of tension in the spring. This construction insures maintained accuracy of operation in spite of changes in spring tension caused by aging under repeated operation.

Switch is enclosed in an oiltight steel enclosing case with two gasketed side plates and an opening in the rear for 1/2-inch conduit connection. With the side plates removed, the terminals are easily accessible and large working clearances make the switch easy to wire and install.

No. CR9440-D2

Roller-Lever Operated, Clockwise

Push-Rod Operated, Spring-Return Ratchet Operated, Spring-Return Operating Rod

A lever-operated, push-rod-operated or plunger-operated limit switch. All except the plunger-operated form have snap-action contacts. A variety of contact arrangements is available, which can be changed in the field from normally open to normally closed operation, or vice versa. The operating heads can be interchanged, or turned 180°. Holes are provided for mounting the switch on either its back or its side. These features allow maximum flexibility in application.

The switches are available in both open and enclosed forms. The open switches are particularly adapted to built-in applications where space is limited. Frames and plungers are constructed of molded Textolite. The contacts are solid silver and are designed to close with a rolling action. All switches are equipped with flag terminals to accommodate two wires on each terminal. The construction is extremely compact and flexible. The enclosed form has a die-cast case, and is provided with velumoid gaskets and grease seals at shaft journals to make the switch oilproof for machine-tool use.

Application extends to virtually any automatic equipment where a traverse motion must be converted into control of an electric circuit, particularly where the motion is slow and snap-action contacts are necessary to prevent burning of the contact tips.

No. CR9440-LS416

This hatchway-type limit switch is of lever construction, and is particularly for mounting in the hatch of an elevator. Although the switch is light and compact to facilitate mounting where space is limited, it is substantially built and is suitable for severe service. Only a small amount of pressure is needed to operate the roller lever. The Forms A, B and C have a rubber-tired roller to eliminate noise.

The switch is obtainable with either one open, one closed, one open and one closed (with overlapping or non-overlapping contacts), or two closed circuits. The various forms cannot be conveniently interchanged in the field.

G-E Type CR9441 Direct-Connected, Rotating-Type Limit Switches

No. CR9441-LS424. This geared-type, general-purpose limit switch has two cam-operated switch elements which make it suitable for limiting travel in two directions.

No. CR9441-LS80. This is a direct-connected, traveling-nut type limit switch built in a cast-iron, water-tight case with non-corrodible fittings. The nut traveling along the threaded shaft is provided with adjustable studs which operate the contacts at each end of travel. This switch is for valve or similar service.

With Cover Removed

G-E Type CR9504 Thrustors

Provides Smooth Straight-Line Thrust From Electric Motor Drive

This is a self-contained hydraulic device which exerts a smooth, straight-line thrust (50 to 3200 pounds maximum thrust) in one direction throughout a definite distance (2 and 16-inch maximum stroke). The return stroke is effected by gravity or a spring.

The device can repeat this cycle of operation indefinitely at a rate of 10 to 30 times per minute depending on the size of unit. It is driven by a built-in fractional h.p. motor and therefore the power consumption is small.

Type CR9504 Thrustor performs services similar to those accomplished by air cylinders and large a.c. and d.c. magnets and solenoids.

Order by CR number and form giving voltage, frequency and phase.

Type CR9504-L—50 Pounds Maximum—2-Inch Stroke

Volts	Phase	Cycle	*Running Current Amperes	Each
110	3	60 & 50	.92	\$79.00

550	3	60 & 50	.56	200.00

110 1 60 5.0 200.00

220 1 60 2.5 200.00

*Inrush current for a.c. motors is approximately 5 times running current.

†Have Universal motors with limited brush life of 400 hours. These thrustors may be used for 50-pound d.c. application also.

‡Information on single phase d.c. and 25-cycle forms on application.

Type L Matthews Woodpecker Telefaults

Used on telephone, telegraph, signal and certain other cables.

A self-contained instrument that will locate water, shorts of all kinds, crosses, grounds, split pairs—every kind of cable trouble except opens.

Uses one dry cell battery. Maximum voltage, under 5. No batteries furnished.

Cannot be confused with other inductive noises—has a tone like a woodpecker on a pole.

Type L, Complete with Coil, Cord, and Receiver, Weight 9 Pounds.....each \$60.00
Extra Exploring Coils.....each 15.00
Extra Receivers.....each 6.00

Type CW Matthews Teleheights

Used by central stations, telephone and telegraph companies to secure height of poles, trees, etc. Used for figuring cubical contents of buildings, clearance of bridges, highlines, etc.

To find height A, stand away from A until bubble and line cross each other. Then measure off distance CD and add distance CB. The sum will equal DA.

Furnished with leather carrying case. Length, 5 inches. Type CW.....each \$11.00

No. 5000 Square D Voltage Testers

This voltage tester operates on a.c. or d.c., indicating the voltage of either.

It is used for 110 to 600 volts.

Tester does not require lamps; easily carried in pocket.

Sharp points on end of long rubber covered leads permits piercing insulation without damaging it.

Insulation is armored at entrance to case to prevent breakage.

No. 5000 Voltage Tester.....each \$12.80
No. 5002 Voltage Tester Case.....each 1.30

G-E Switchgear

G-E manufactures complete lines of Switchgear for all systems involving the generation and distribution of electric power.

These lines comprise: switchgear for primary circuits (above 600 volts) including metal-clad switchgear, power circuit breakers, disconnecting switches, and relays; switchgear for secondary circuits (600 volts and below) including drawout air-circuit breaker switchboards, small plant switchboards, air circuit breakers, miscellaneous switches, switchboard fittings, and accessories.

G-E Type MC-9 Midget Metal-Clad Switchgear, 5000 Volts

Metal-Clad Switchgear

This comprises a line of moderate and heavy duty switching equipment in ratings of 5 and 15 kilovolts, 600 to 2000 amperes, with breakers of interrupting ratings from 25,000 to 500,000 kilovolt-amperes, for power plants, industrial plants and public buildings.

The equipment is compactly designed, with all component parts of G-E manufacture, of the type best suited to their function and properly coordinated, with liberal factors of safety to withstand severe service. The neat appearance and harmonious finish make a most attractive installation.

Generating Station Switchboard, 240 Volts A.C., with Front of Board Knife Switches and Fuses

Drawout Air Circuit Breaker Switchboards

This type of switchgear comprises a line of low-voltage equipment in ratings of 250 to 600 volts a.c., 250 volts d.c., to 5000 amperes (and higher), with breakers of interrupting ratings to 80,000 amperes. Each circuit breaker is mounted on a carriage that is easily drawn out to permit removal of the breaker. Mechanical interlocks prevent withdrawal unless the breaker is open, and self-coupling disconnecting devices remove all sources of potential from the withdrawn breaker. Buses and connections are enclosed, and this type of equipment offers all the advantages of safety to personnel, ease of maintenance, reliability of service, and compactness of design provided by high-voltage metal-clad equipment.

G-E Drawout Air Circuit Breaker Switchboard, 600 Volts A.C. (One Unit Withdrawn)

Packing and Shipment

An outstanding feature of G-E metal-clad and metal-enclosed switchgear is the shipped assembled construction. The structures are factory built and delivered completely assembled. This means not only a reduction in installation, maintenance, and engineering costs, but also a saving in floor space. The number of units that can be shipped assembled together is limited only by transportation and handling facilities.

Small Plant Switchboards

Where the importance of the installation does not justify the expense of metal-enclosed drawout air circuit breaker switchgear a line of inexpensive switchboard panels is available.

These are equipped with knife switches and fuses, with air circuit breakers, or with oil circuit breakers. Panels of live-front (as illustrated) or of dead-front construction are available.

All equipment has the same careful design as the most expensive equipment for adequate capacity and protective ability, with instruments, meters, relays, instrument transformers, breakers, etc., of high quality and accuracy.

Consult the Nearest Graybar Sales Office for Complete Information, Prices and Specifications

**G-E Standard Switchgear Equipment
With Manually Operated Oil Circuit Breakers**
3-Phase—3-Wire—25 or 60-Cycle—5000 Volts

Standard 64-Inch Self-Supporting Oil Circuit Breaker Panel with Instantaneous Trip Coils on Breaker

Standard 76-Inch Self-Supporting Oil Circuit Breaker Panel with Ammeter Switch, *Overcurrent Relays, and *600-Volt Disconnecting Switch

This standard equipment is for use in isolated industrial installations, or where voltages and currents are within the limits specified and no bus is required.

The panel is made of steel, with a web on each vertical edge, with self-supporting steel plates welded to the sides with provision for bolting to the floor. Panel has a dull black marine finish.

Each 64-inch equipment includes:

One steel panel with floor braces.

One oil circuit breaker, three-pole single throw, automatic trip, mounted directly back of panel. With two-coil, time-delay, secondary-trip, manual operating mechanism.

Two tripping current transformers.

Bare copper connections.

Small wire and terminal block.

One cardholder.

Each 76-inch equipment includes the same, plus one Type AD-6 Ammeter, with suitable scale.

Equipment is shipped completely assembled and wired to the terminal blocks, and is ready for installation when received.

When ordering, describe equipment, specify circuit voltage and frequency, and specify current-transformer rating, or circuit rating, in amperes.

†For equipment with double or four-pole breakers, refer to nearest Graybar office for data.

Type FK-33 G-E Oil Circuit Breakers

Manually or Electrically Operated

Non-Automatic Trip

5000 Volts—200 and 400 Amperes—15,000 Kva.

Type FK-33 Oil Circuit Breaker Mounted Directly on Back of Panel

Type FK-33 Oil Circuit Breaker is recommended for use on a.c. circuits in small and isolated plants, and for other duties when a breaker of moderate rating is desired.

This breaker is of the single-tank type—all poles are in one tank. It is available in double, triple, or four-pole units, single or double throw.

Breaker may be mounted directly on back of panel, on a framework, wall, or any flat surface remote from panel. Suitable for manual, or solenoid operation.

Material included: Type FK-33 breaker, Type HA-2 operating lever, mounting details for breaker element, bell cranks with remote control, terminals and nuts, necessary oil.

For solenoid-operated breaker, price also includes solenoid control relay, a potential trip coil, a terminal board, and a four-stage rotary auxiliary switch.

Type FK-142 G-E Oil Circuit Breakers Manually or Electrically Operated

Non-Automatic Trip

7500 Volts, 400 and 600 Amperes; 5000 Volts, 800 Amperes
25,000 Kva.

Type FK-142 Manually Operated Oil-Blast Circuit Breaker Mounted on Panel

Type FK-142 Oil-Blast Circuit Breaker is recommended for use on a.c. circuits where a sturdy, compact breaker with interrupting rating up to 25,000 kva. is required. It is especially applicable in industrial plants, and in stations where only minimum space is available.

This breaker is available in double, triple, and four-pole, single-throw units with all poles in a single rectangular steel tank. All units are provided with oil-blast contacts, including silver-to-silver main contacts and heavy butt-type arcing contacts; Herkolite bushings; and internal mechanisms.

These features assure this breaker's ability to give thoroughly reliable and dependable service with long life and low maintenance.

Breaker may be mounted directly on back of panel, 5 inches back, on a framework, wall, or any flat surface remote from panel; or in cubicles, switchhouses, or metal-clad switchgear.

Price includes: oil, operating mechanisms, terminal connectors, and fittings for mounting breaker.

For solenoid-operated breaker, price also includes solenoid control relay, a potential trip coil, terminal board, and a four-stage auxiliary switch.

*G-E does not recommend the installation of apparatus on the panel or switchboard for voltages higher than 5000 volts. For such voltages, remote control or metal-enclosed switchgear is recommended.

†For a.c. rectifier solenoid operated mechanism, add \$65.

To obtain the price of double-throw breakers, double the prices of the single-throw breakers.

Type FK-143 G-E Oil Circuit Breakers Manually or Electrically Operated

Non-Automatic Trip

15,000 Volts, 600 Amperes; 7500 Volts, 1200 Amperes;
5000 Volts, 2000 Amperes—50,000 Kva.

Type FK-143, 15,000-Volt, 600-Ampere Oil Circuit Breaker Mounted on Self-Supporting Steel Framework

Recommended for use on a.c. circuits where a sturdy, compact breaker with interrupting rating up to 50,000 kva. is required.

Available in double and triple-pole, single-throw units with all poles in a single rectangular, welded steel-plate tank. All units have oil-blast contacts, including silver-to-silver main contacts and heavy butt-

type arcing contacts (in the 600 and 1200-ampere ratings; heavy wedge and finger-type arcing contacts in the 2000-ampere size); Herkolite bushings; and internal mechanisms.

The 600 and 1200-ampere breakers may be mounted directly on back of panels, 5 inches back of panel, on a framework or wall, any flat surface remote from the panel, on a self-supporting framework, or in cubicles, switchhouses, or metal-clad switchgear. The

2000-ampere breaker may be mounted on a self-supporting framework immediately back of the panel or remote from the panel, or in cubicles, switchhouses or metal-clad switchgear.

Price includes: oil, operating lever, mounting details, bell cranks with remote control, and terminals.

For remote manually operated breaker, horizontal and vertical hangers and bell cranks are also included.

For solenoid-operated breaker, solenoids with connecting links, solenoid control relay, potential trip coil, terminal board, and a four-stage auxiliary switch are also included.

*The price of manually operated 2000-ampere breakers includes a self-supporting steel framework. For the 600 and 1200-ampere, manually operated and all solenoid-operated breakers, this framework must be ordered separately.

†For A.C. rectifier solenoid operated mechanism, add \$75.00 net.

To obtain the price of double-throw breakers, double the prices of the single-throw breakers.

Accessories for G-E Oil Circuit Breakers
Coils for Automatic Tripping

Manual Operating Lever with Two Time-Delay Current Trip Coils

Solenoid Operating Mechanism with Two Time-Delay Current Coils, One Potential Trip Coil, Time-Delay, Type PG-5 Undervoltage Device and Copper-Oxide Rectifier

Prices of oil circuit breakers, as listed, do not include trip coils, but provision is included for current transformer coils for use directly in the secondaries of current transformers, or in connection with relays. One, two, or three coils are required, depending on the number of poles of the breaker and the type of protection desired.

Instantaneous and inverse-time current coils, and instantaneous potential coils are available.

In ordering, full requirements should be specified.

No. of Coils	Manual Operating Mechanism		Solenoid Operating Mechanism	
	Instantaneous Each	Inverse-Time Each	Instantaneous Each	Inverse-Time Each
1	\$6.00	\$11.00	\$31.00	\$36.00
2	12.00	22.00	37.00	47.00
3	18.00	33.00	43.00	58.00

Undervoltage Devices

Operates to trip the breaker when the voltage falls to approximately one-half of normal (or lower). One is required per breaker.

Instantaneous devices are available for 115 to 575 volts; inverse-time for 115 volts only. For higher voltages potential transformers must be used.

Instantaneous, for Manual Operating Mechanism. ea. \$32.00

*Instantaneous, for Solenoid Operating Mechanism. ea. 32.00

Inverse-Time, for Manual Operating Mechanism. ea. 63.00

*Inverse-Time, for Solenoid Operating Mechanism. ea. 63.00

Orders must state type of solenoid for which device is required and also state whether the circuit voltage is 125 or 250 volts d.c.

In ordering a supply give nameplate data of mechanism and specify if current trip coils (give number) are now on mechanism.

*If current trip coils are not on mechanism, add \$25.

Steel Panels for Mounting Small Oil Circuit Breakers

Use of these steel panels makes it possible to order an oil circuit breaker and operating mechanism completely assembled on a self-supporting steel panel.

Type of Breaker	Each	Throw	Height Inches	Width Inches	Approx. Ship. Weight Pounds
FK-33	\$27.00	Single	64	16	160
FK-33	38.00	Double	64	24	200
FK-142	32.00	Single	64	16	160
†FK-143	38.00	Single	64	24	200

†Not available for 2000-ampere breaker.

Prices include self-supporting steel panel and mounting of operating lever and breaker for direct operation.

Oil circuit breakers and undervoltage devices must be ordered and priced separately. Add \$2.00, for drilling and mounting undervoltage device.

Type AF-1 G-E Air Circuit Breakers
Manually Operated—Quick Make—Quick Break
Trip Free

Type AF-1 600-Volt, 225-Ampere, Triple-Pole Air Circuit Breaker

Type AF-1 Air Circuit Breaker is recommended for use in panelboards and other load centers as a modern substitute for fuses and fused switches, in service entrances instead of fused switches, in dead-front switchboards, and also for individual circuits and appliances. The operation is automatic on either overload or short circuit. Power is restored by a slight movement of the handle.

Available in single, double and triple-pole in the 50-ampere frame size; and double and triple-pole in all other sizes.

Breakers of the 50-ampere frame size are equipped with thermal over-current trip, while the larger sizes also have the thermal trip for moderate overcurrents, plus an instantaneous magnetic trip for short circuits.

The silver-alloy, self-aligning contacts are of the non-welding pressure type. These produce a firm, positive contact, operating at a very low temperature. The contacts are contained in a small, closed, cylindrical metal chamber. As the contacts part, an arc is drawn and gases are formed which set up a comparatively high pressure. This so increases the resistance of the arc path that the arc is interrupted very quickly.

Breakers are furnished front-connected. Breakers may be made back-connected by the addition of studs.

Standard ratings: 15, 20, 25, 35, 50, 70, 90, 100, 125, 150, 175, 200, 225, 250, 275, 300, 325, 350, 400, 450, 500, 550, and 600 amperes.

*Type AF-1 d.c. ratings are for non-inductive circuits only.

†Price for stud covers one stud only and must be multiplied by the number required for each breaker: two for single-pole, six for triple-pole, etc.

‡Studs are 5½, 8 and 10½ inches long. Available at slight extra charge.

Type JY-285 G-E Tripping Current Transformers

This tripping transformer is for use in connection with secondary current automatic trip coils of oil circuit breakers. It is insulated for 5000 volts and may be used with any of the 4 and 5-ampere standard current trip coils for manually and solenoid-operated breakers, or with relays.

*Mechanical limits: 100 times primary rating, except that the 500, 600 and 800-ampere ratings are bar-type and have no mechanical limits.

Type FP-119 G-E Outdoor Oil Circuit Reclosers

Single-Pole—Automatic—Self-Resetting
For Pole Mounting

Type FP-119 Crossarm-Mounted Oil-Circuit Recloser

Type FP-119 Recloser is normally closed and connected in the line. When a fault occurs, the operating coil opens the contacts. After three seconds have elapsed, the device recloses the circuit. In the case of long-duration faults, this device recloses the circuit three times and, if the fault is still on the line after the last reclosure, it will lock open. If after one, two, or three reclosures, the fault has cleared, the mechanism of the recloser returns to its normal position.

The Type FP-119 Recloser can be used on any single-phase circuit, the normal voltage of which does not exceed 15 kv. It can also be used on three-phase lines where the maximum potential, which may occur between lines and be

applied across the contacts of any one recloser, does not exceed 15,000 volts.

Price includes: recloser, operation counter, oil gage, position indicator, fill plug, drain plug, provision for connecting leads in sizes up to A.W.G. No. 1 wire, and necessary straps and bolts for mounting on crossarm or directly on pole. When ordering, give ampere rating and mounting desired (for crossarm or mounting directly on pole).

G-E Type Y-298A Tripping Current Transformers

For Oil Circuit Breakers

25-125 Cycles, 15000 Volts or Less

400 Amperes and Below

These transformers are for tripping oil circuit breakers. They may be used with any of the standard 4- and 5-ampere trip coils. They are listed in capacities from 5 to 800 amperes at 15000 volts or less.

In general their use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may be used.

As these transformers are small and inexpensive they may be used very conveniently in installations where series trip has heretofore been recommended.

500 to 800 Amperes

The smaller capacities from 5 to 400 amperes inclusive are equipped with cast metal bases with two-bolt holes, allowing them to be bolted to flat surfaces or pipe supports.

The larger capacities from 500 to 800 amperes inclusive are of the bus type and are supported by the buses or the stud of the oil circuit breaker, no bases being required due to the light weight of these transformers.

Cat. No.	Primary Capacity in Amperes	Ratio	Shipping Weight Pounds	Price Each

216855	350	70-1	44	56.00
246264	400	80-1	44	56.00
246265	500	100-1	44	56.00
246266	600	120-1	44	56.00
246267	800	160-1	44	56.00

All transformers are provided with an additional turn on secondary for ammeters only.

These transformers are tested at 5000 volts between primary and all other parts, and at 2500 volts between secondary and ground.

Types AE-1A and AE-1B G-E Air Circuit Breakers
Manually or Electrically Operated
Trip Free

Type AE-1A Air Circuit Breaker, Manually Operated, Triple-Pole, for Dead-Front Switchboard Mounting (Barriers Partially Cut Away to Show Arc Quenchers)

Type AE-1B Air Circuit Breaker, Electrically Operated, Enclosed Type, with Pull Box

Types AE-1A and AE-1B Air Circuit Breakers are particularly adapted to general industrial and switchgear service where numerous opening and closing operations are required. They provide economical and reliable protection for power and lighting feeder circuits.

These breakers are capable of operating thousands of times without requiring maintenance and their simple, compact, and sturdy construction makes them especially suitable for mounting in steel enclosures.

The Type AE-1A with 10,000-ampere interrupting rating and the Type AE-1B with 20,000-ampere interrupting rating are similar, except that the Type AE-1B is generally heavier and sturdier than the Type AE-1A in order to handle the 20,000-ampere current.

Breakers are available in single, double, triple and four-pole units, with overcurrent trip element for each pole, or for fewer poles as desired.

Calibration range: all ratings, 100-200 per cent of rating.

Voltage ratings: 600 volts a.c., 250 volts d.c.

The multipole breakers consist of single-pole elements grouped compactly together and operated simultaneously by a sturdy insulated steel shaft. Manually operated breakers have a pistol-grip handle—turn to close, pull to trip. Electrical operation is by means of a solenoid mounted at the side of the breaker within the same space occupied by the manual mechanism.

Solid metallic contacts of silver alloy assure long life and

reliable operation. In the Type AE-1B Breakers there are, in addition, solid silver-to-silver main current contacts. The arc-resisting silver alloy, and the solid-silver contacts provide low contact resistance and obviate oxidation troubles and consequent heating.

The arc quencher, one on each pole, is a most important factor in the dependable operation of these breakers. It minimizes disturbances and quickly extinguishes the arc. Metal pins above the contacts split up and cool the arc. The arc energy is rapidly absorbed by parts having high thermal capacity and large radiating surfaces.

These breakers are equipped with dual magnetic overcurrent tripping devices which differentiate between overloads and short circuits by providing a time delay inversely proportional to the overcurrent for values up to approximately ten times normal and instantaneous tripping for higher, or short-circuit, currents.

Prices include: time-delay, dual-magnetic, overcurrent tripping device per pole; arc quenchers; and ebony-asbestos base. Breakers in steel enclosures include, in addition, position indicator to show open or closed position of breaker, and a pull box. Manually operated breakers have pistol-grip handle on the enclosing case cover. Electrically operated breakers in enclosures include push-button closing switch and push-button mechanical trip.

When ordering, specify type, number of poles, number of current trips, voltage rating, a.c. or d.c. circuit, current rating, and whether for front-of-board or dead-front mounting or enclosed for individual mounting.

Type AL-2 G-E Air Circuit Breakers Manually or Electrically Operated

Trip Free

The unit frame construction of this breaker makes each pole a self-contained unit. These single-pole units are mechanically connected for simultaneous operation in multipole breakers. Individual toggle mechanisms put the contacts under strong pressure—yet the breaker is easily closed.

When manually operated, this breaker is preferably mounted back of a dead-front panel, or within a metal enclosure. The handle then extends through a slot in the cover and is completely insulated from all live parts. A positive indicator shows open or closed position of the breaker.

tion that provides positive action. Universal motors for a.c. or d.c. are employed.

Calibration range: all ratings, 100-200 per cent of rating.

Voltage ratings: one-pole breakers, 600 volts a.c., 250 volts d.c.; multipole breakers, 250 volts, a.c. and d.c.

The overcurrent tripping is direct-acting and, in no case, are current transformers or overcurrent relays required.

Price includes: time-delay, direct-acting overcurrent tripping device per pole; arc quenchers; and ebony-asbestos base. Electrically operated breaker price includes, in addition, shunt trip; closing; control relay; and four-stage, rotary-type, auxiliary switch, all mounted on breaker permanent base and wired to a terminal block.

When ordering, specify type, number of poles, number of current trips, time or instantaneous, voltage rating (order barriers for multipole breakers above 250 volts a.c. or d.c.), a.c. or d.c. circuit, current rating, manually or electrically operated (if electrically operated, give voltage, a.c. or d.c. for control source), front-of-board or dead-front mounting (Price includes a permanent base of standard size. If a different size base is ordered, give full information), and laminated stud slots for 2000 amperes and above:

Accessories for G-E Air Circuit Breakers

Undervoltage Device Mounted on Type AL-2 Air Circuit Breaker

Undervoltage Devices. The undervoltage device is designed to open the circuit breaker when the line voltage drops to approximately 50 per cent or less of normal voltage. These devices are especially adapted to motor service.

Shunt Trips. The shunt trip resembles the undervoltage device in construction, but differs in that it trips the circuit breaker when energized. It should be allowed to remain in the circuit only during time of tripping.

Reverse-Current Devices. Available for use with the Types AE-1B and AL-2 Breakers only. Recommended wherever

it is desired to trip d.c. breakers on reversal of current flow.

Auxiliary and Bell-Alarm Switches. The standard auxiliary switch for use with manually operated air circuit breakers is both circuit-opening and circuit-closing, and is supplied in every case where an auxiliary switch is required for use with the Type AL-2 Breaker. It is of the push-button type. The circuit-closing contacts are arranged to make contact when the breaker opens, and may be used for interlocking systems or to indicate the opening of the breaker by means of an indicating lamp or bell alarm. These contacts can be opened by hand after the breaker opens, and are automatically reset when the breaker closes.

The auxiliary switches for electrically operated air circuit breakers are of the rotary type, built in single-pole units (stages) up to a total of eight. Each stage can be adjusted independently to be either circuit-opening or circuit-closing.

G-E Relays

Relay protection is applied to an electric system for minimizing interruptions of service and damage to apparatus which result from abnormal conditions in the system. The primary considerations are:

To maintain service over the greatest possible portion of the system, under all conditions.

To disconnect only the circuit in which a fault has developed.

To disconnect the faulty portion as quickly as possible.

To prevent injurious heating due to short circuits or heavy overcurrents.

The General Electric Company makes more than 400 varieties of protective relays, including current, voltage, directional power, overpower, underpower, frequency, phase-failure, differential, temperature, control, and auxiliary relays. Space does not permit the listing of all types, but there is a G-E Relay for every purpose. Upon receipt of information concerning application requirements, recommendations will be given by the nearest Graybar office.

Type IAC Time Induction Overcurrent Relay, 5 1/2 Inches Wide and 6 Inches High

Type PAC Plunger Overcurrent Relay (Time or Instantaneous), 4 Inches Wide and 11 1/2 Inches High

Type IBC Time Induction Power-Directional Overcurrent Relay with Directional Control, 5 1/2 Inches Wide and 12 Inches High

Type CAP15A Polyphase Power-Directional Relay, 5 1/2 Inches Wide and 6 Inches High

Type AC-1 Reclosing Relay for Immediate or Time-Delay Initial Reclosure (Three Reclosures before Lockout) 5 1/2 Inches Wide and 16 Inches High

Type MF Synchronous Timer, Calibrated in Cycles, or in Hundredths of Seconds for Setting Relays, 6 1/2 Inches Square

G-E Plunger Relays

Type PAC Plunger Overcurrent Relay (Time or Instantaneous)

Type PCV Undervoltage Relay (Time or Instantaneous)

The line of G-E Plunger Relays for switchboard mounting is complete, including relays to protect against overcurrent and undervoltage, and for use as auxiliary relays for a.c. and d.c. circuits. The same principle of operation is common to all of them, and depends upon the action of a magnet coil in attracting or releasing the plunger when predetermined values of current or voltage exist in the coil circuit. The a.c. relays are for use in connection with current or potential transformers. Voltage relays are available up to 575 volts without potential transformers.

All these relays are single-pole, have interchangeable parts, and the contacts can be arranged for circuit opening, circuit closing, or for circuit opening and closing. This design, with its varieties of adjustments, coils, and the arrangement of its contacts, makes possible the adaptation of these relays to an unusually large number of applications.

Some of the principal features of these relays are:

Die-cast supporting frame. This results in a very light-weight relay.

Cover of insulating material, eliminating inadvertent contact with live parts.

Bellows for time operation are made of a special compound which needs no oiling or treating, and is not affected in either action or durability by high or low temperature.

Removable studs provide back connection.

Only one valve is provided for time relays. This valve serves a triple-duty purpose, and can readily be adjusted to make the time interval effective on either the up or the down stroke of the plunger, or both.

Contacts are of universal design, silver-to-silver, and can be readily changed from circuit-opening to circuit-closing, or vice versa.

In the Types PAC and PAA "hand or self-resetting" types, the toggle can be changed from self-resetting to hand-resetting, or vice versa, by a simple means provided for this purpose.

All relays except the undervoltage types are provided with an orange-colored mechanical target indicator, hand-reset by means of a push button in the cover.

In ordering, specify by type and description.

Relays are 11½ inches high, 3¾ inches wide, and 3¼ inches deep. Shipping weight, 6 pounds.

G-E Induction Time Relays for A.C. Circuits

Type IAC Time Induction Overcurrent Relay

Type IAC Induction Time Relays are for the overcurrent protection of single-phase and polyphase circuits where permanence of operating characteristics and high accuracy in timing are essential. The time of operation is inverse at low current values, and approaches a definite time at higher current values. These relays are for use in connection with current transformers, for mounting on switchboard panels. Single-unit or three-unit relays are available.

Some of the principal features of these relays are:

Time-lever adjustment by calibrated scale.

Current tap-plate for varying current-operating adjustment.

Index table for determining time of operation-lever adjustment.

Jewel bearings with shock-resisting seat.

Indicating target, visible from all angles, is hand-reset.

Low volt-ampere burden on current transformers.

Type IAC Overcurrent Relays can be had also with an internal instantaneous attachment, as well as with a current indicator which indicates at all times the amount of current flowing through the operating coil. The IAC Relay is also available with an internal tripping relay to provide the equivalent of circuit-opening contacts for use in connection with an a.c. oil-circuit breaker, current transformer trip coil.

The Type IAV Undervoltage Relays are made in single-pole units only and are used for the undervoltage protection of circuits. They are similar in appearance to the Type IAC, and have the same construction features.

The standard undervoltage adjustment of the Type IAV Relays is 70 per cent of rated voltage to close the contacts. This may be adjusted to any value between 50 per cent and 95 per cent of rated voltage.

All Type IAC Relays listed below have target coils to operate the indicating targets. These are connected in series with the trip coil of the apparatus operated by the relay. Two ratings of coils are available: 1 ampere, 0.25 ohm (for use up to 18 amperes); and 0.2 ampere, 7.0 ohms (for use where tripping current is less than 1 ampere).

When ordering, specify which target coil, or the device with which the relay is to be used.

Single units are 6 inches high, 5½ inches wide, and 7 inches deep. Triple units (Type IAC only) are 16 inches high, 5½ inches wide, and 7 inches deep.

G-E Auxiliary Relays

Type HFA Instantaneous Auxiliary Relay, 6-Circuit

Type HGA Instantaneous Auxiliary Relay

Auxiliary Relays are ordinarily controlled by the contacts of other relays or other devices. They are generally used, in combination with other relays, for obtaining certain performances not available in the main controlling or relay combination, and for circuit-controlling devices such as auxiliary or control switches.

Standard overcurrent or undercurrent relays may be used as auxiliary relays—see Type PAA listed on the preceding page. The following table lists a few typical auxiliary relays with a brief description of their features.

Order by type reference, giving voltage and frequency of relay circuit, or stating the use for which relay is desired.

*Specify whether for a.c. or d.c. service, and in all cases give voltage of circuits in which relays are to be used.

†Contacts are provided with 4 or 18-ampere holding coils in series with contacts.

G-E Solenoid Closing (Control) Relays

Single-pole relays are for use in solenoid circuits where the current is higher than can be broken by the contacts of the control switch. They have an instantaneous pickup and a hesitating drop-out. The hesitating feature prevents failure of solenoid operation due to premature opening of

relay coil circuit. The relays are provided with dustproof cover. They may be mounted on any flat surface or on vertical or horizontal pipe. They are for use on d.c. circuits only.

Specify voltage of control circuit in ordering. *

Type TB-2 G-E Temperature Relays

The Type TB-2 Relay is recommended for protecting machine bearings against overheating. The contacts are silver-to-silver, and are operated on the quick-make and quick-break principle. Relay will carry 5 amperes continuously or 20 amperes for 1 minute. It will interrupt 1 ampere at 125 volts, d.c., or 7 amperes at 220 volts, a.c.

Each relay has a syphon bulb containing a volatile liquid which vaporizes when heated to a predetermined temperature. This causes a bellows to expand and operate the

contacts. Relay is adjusted to operate at approximately 105°C. After the syphon cools, the contacts will remain in the operated position and must be reset by hand.

Relay, exclusive of bulb, is 3³/₄ inches wide and 6 inches high.

A Portable Load-Testing Box and a Portable Synchronous Timer for Testing Relays Are Also Available; Information on Application

Miscellaneous G-E Switchgear Devices

Type SB-1 Control and Instrument Transfer Switches

Panel Mounting Typical Type SB-1 Control Switches

These multicontact switches are for the control of circuit breakers, electrically operated governors, rheostats, and other devices, for the transfer of current and potential coils of instruments and for many other similar applications.

They are rotary type with cam-operated silver-to-silver contacts. The contacts will carry 20 amperes continuously and are insulated for 600 volts. They will interrupt 10 amperes at 125 volts d.c., noninductive circuits.

Switches are compact, totally enclosed, dead front, and require small panel space. Circuit-breaker control switches have a red-green mechanical target that shows last previous operation. Instrument transfer switches have fixed or removable handles according to application. The design is extremely flexible and can be applied to meet special requirements.

*Handle not included; order as required at \$1.50 each.

Indicating Lamps

These indicating lamps are used separately wherever a clearly visible indication is desired, or in combination with control switches. They have a high visibility with low wattage consumption and long life. They occupy little space, and may be mounted on 1½-inch centers.

Lamps consist of a receptacle body and escutcheon of insulating compound which permits using the device on metal panels. Resilient metal contact clips hold the lamps and provide the rear connections. Lamp is a No. 59X243 G-E Mazda lamp similar to a telephone type of lamp. This is a T2 lamp, No. 902 slide base, rated 24 volts. Its current consumption at normal volts is 0.035 ampere. For potentials higher than 24 volts, a resistor is used. This resistor element forms a component part of the device as commonly used; it slides over the receptacle body from the rear.

Compound color caps, easily removed and replaced, are used over the lamp and give positive indication. Five colors are available: clear, red, green, white, and amber; color desired should be specified.

The device is for mounting on ½, 1, 1½ or 2-inch steel panel. Panels more than 1 inch thick must be counter-bored on the back, 1¼-inch diameter to a depth of 1 inch from the front of the panel.

Prices include lamp, resistor and color cap. Standard package quantity, 40.

Extra color caps, 25 cents each; standard package of 40, \$9.00. When ordering, specify color.

Miscellaneous G-E Switchgear Devices

Type PJ-4 Current and Potential Transfer Jacks and Plugs

Type PJ-4 Jacks and Plugs are of strong and compact construction, require a small amount of panel space, and are especially adapted to switchboard mounting. They are dead-front, and are equipped with an insulating and dust-proof cover in the rear. They may be used to connect an ammeter or a voltmeter, or both, to any phase of one or more polyphase circuits, or to transfer a temperature meter to any one of various temperature detectors.

The jacks are available as single units or, in some cases, in triple-unit assemblies as illustrated.

Type PK-2 Test Blocks and Plugs

Type PK-2 Test Block, 4-Pole, with Cover in Place

Type PK-2 Test Blocks and Plugs are for testing instruments, meters, and relays. The blocks are essentially 4-pole and 6-pole jacks, provided with molded Textolite covers having internal plug contacts, which make a through connection when the cover is in place. The blocks are furnished with various combinations of auxiliary contacts which automatically short-circuit the current transformer when the cover is removed. A block and its cover are the equivalent of a double-throw test switch.

The 4-pole and 6-pole test plugs are provided with studs and links, and may be permanently connected to the testing equipment for any of the various test methods in use. Testing setup is obtained simply by removing the cover and substituting the properly connected test plug. Normal connections are restored by replacing the cover.

The device is rated 250 volts, 10 amperes.

4-Pole Test Blocks with Covers, Current or Potential

6-Pole Test Blocks with Covers, Current or Potential

Approximate shipping weight, 3 pounds.

For 1, 1½ or 2-Inch Panels.....	each	\$8.00
For 5/32 to 1/2-Inch Steel Panels.....	each	8.50
6-Pole Test Plug.....	each	4.00

Write for detailed information.

Terminal Boards

Where a large amount of small wiring is necessary on the back of switchboards, these terminal boards are convenient for attaching the wires, giving the back of the board a neat and compact arrangement.

Nominal rating, 30 amperes. Terminals take wire up to No. 12 or 19/22.

Compound Terminal Boards, with Cup Terminals, for Potentials Not Exceeding 110 Volts

Compound terminal boards are particularly adapted to use with devices on switchboards that have flexible leads instead of studs, such as certain types of relays, trip coils, etc.

Miscellaneous G-E Switchgear Devices

Indoor Pipe Fittings

Applications of Panel Pipe Fittings

Threadless pipe fittings enable a purchaser to install a switchboard with the minimum amount of labor. They are shipped unassembled ready to install, each number including all necessary yokes and nuts. They are for 3/4 or 1 1/4-inch standard pipe.

The most generally used fittings are punched from hot-rolled stamping steel, insuring uniformity of size and design; others are made of malleable iron. Malleable iron fittings can be obtained for use in place of the punched fittings if desired. Standard fittings have a dark-blue Glyptal finish

cadmium-zinc plated yokes and nuts. Fittings can also be furnished with cadmium, or hot-dip galvanized finish; prices on application.

For convenience in stocking, the fittings most generally used are packed in cartons. All cartons are of the same size: 4 1/4 inches high, 7 1/4 inches wide and 10 1/4 inches long. Standard packages contain 10 cartons.

When ordering, order by number giving size of pipe. Information on other fittings on request. Write for bulletin GEA-940.

Types LG-218 and LG-118 G-E Indoor Disconnecting Switches

Single-Pole, Single-Throw, 7500 V., 3000 Amp. Disconnecting Switch Front-Connected on Class A-4 Porcelain Insulator Units

Type LG-218. These switches are of laminated blade construction, with each blade composed of two pieces of hard-drawn, high-quality copper, contacting over stationary copper tongues. Switches have silver-to-silver line-pressure contacts at both the hinge tongue and the contact tongue. Contacts are self-adjusting, and pressure is maintained by phosphor-bronze spring washers.

Each switch is mounted on porcelain insulators with metal bases. High quality insulators are in accordance with N.E.M.A. Standards, as listed on the third following page.

Type LG-118. These switches are similar to Type LG-218 except that they are mounted directly on bases of insulating material.

Where moisture is likely to be present, or where excessive dust is prevalent, Type LG-218 Switches are recommended in preference to Type LG-118.

All switches include blade latches. Up to and including 1200 amperes, all switches have round studs; up to and including 600 amperes, pressed tube, cable terminal connectors with contact nuts are included. For 1200-ampere switches, terminal connectors must be ordered as extras if desired. Switches above 1200 amperes are provided with laminated bar connections; no cable-terminal connectors are included. The switches can be had with the laminations of any back-connected stud either vertical or horizontal, but unless otherwise specified, the switches will be furnished with contact-stud laminations horizontal; hinge-stud, vertical.

When ordering, specify the type, figure number, and the voltage and current rating.

Prices of all switches include silver line-pressure contacts. Switches 1200 amperes and below can be supplied without the silver at no change in price.

For ratings above 23,000 volts, or 4000 amperes, and for

grouping of three switches on one base, write for information.

Double-blade, double-throw transfer, or single-throw, tandem transfer switches in ratings listed for Types LG-218 or LG-118 Switches are also available upon application.

G-E Control Mechanisms

Type LG-218 Disconnecting Switch with Class 2 Mechanism

Manually or motor-operated control mechanisms for operating Types LG-218 or LG-118 Disconnecting Switches simultaneously in groups of three or six are available as listed at the right. These mechanisms are divided into two classes as follows:

Class 1, direct-operated control with insulating connections from switch blades to an interphase shaft, with operating handle (for manual mechanism) mounted directly on interphase shaft (as illustrated in Fig. 1), or with an operating eye on the switch blade (Fig. 3C).

Class 2, indirect-operated control with insulating connections from switch blades to an interphase shaft, with operating handle remote from interphase shaft.

The prices listed on the preceding page include the mechanisms only (insulating connections from interphase shaft to switch blade, shaft, shaft bearings, cranks, operating pipe for Class 2, and operating handle). Switches are not included—these must be ordered from switch listings.

Accessories for Control Mechanisms for Group-Operated Switches

Auxiliary Switch, up to Four-Pole, Single-Throw with Operating Cranks.....	net each	\$45.00
For Additional Auxiliary Switch Stages, Single-Pole, Single-Throw Units.....	net each	4.00
Mounting Plate for Interphase Shaft.....	net each	10.00
Extra Bell Crank and Clevis.....	net each	10.00
Extension Shaft and Outboard Bearing.....	net each	10.00
Solenoid-Type Electrical Interlock.....	net each	50.00
Mechanical Interlock between Two Group Switches.....	net each	40.00
Mechanical Interlock between One Group Switch and Cell Door.....	net each	60.00
Mechanical Interlock between One Group Switch and Oil Circuit Breaker.....	net each	75.00
Mechanical Interlock between One Group Switch, Oil Circuit Breaker, and Cell Door.....	net each	100.00

Motor-Operated Control Mechanisms for Single-Throw Group Switches

For information and prices, consult your nearest Graybar office and warehouse.

Accessories for Indoor Disconnecting Switches

Barriers

Barriers prevent accidental contacts with live parts of switches. They are recommended for safety when disconnecting switches are mounted at heights less than those given in the table below, which lists the minimum vertical clearances from unguarded live parts to floor. Recommended by the National Electric Safety Code.

Circuit Voltage	Minimum Vertical Unguarded Clearance	Circuit Voltage	Minimum Vertical Unguarded Clearance
600	7' 8"	11,000	9'
2300	7' 9"	22,000	9' 3"
6600	7' 10"	33,000	9' 6"

Ebony asbestos compound barriers for use with Types LG-218 or LG-118 Indoor Disconnecting Switches, 5000 to 34,500 volts:

For Single-Throw Switch.....net each \$5.00

For Double-Throw Switch.....net each 8.00

When ordering, specify type and voltage of switch, method of mounting, and whether switches are single or double-throw.

Switch Hooks

A non-metallic, strong, lightweight hook made entirely of insulating material is recommended for use with hook-operated indoor disconnecting switches.

Where there is ample room for manipulation without danger of short circuit between live parts, a malleable-iron hook on a strong treated wood rod can be used.

Length Feet	NON-METALLIC		WOOD ROD, METAL HOOK	
	Each	Ship. Wt. Lb.	Each	Ship. Wt. Lb.

16	23.00	36	21.00	28

G-E Current Limiting Power Fuse Units

Type EJ-1, for Indoor Service

The G-E Current-Limiting Power Fuse Unit is an outstanding development in interrupting devices. It is different from other fuse units in that it limits the short-circuit current to a value considerably below that usually encountered in short-circuit interruptions. The link melts on the rising current-wave, limiting further rise by the rapid increase of resistance, and causes complete interruption at the first current zero. The fuse unit acts as a current-limiting device in this manner on all currents of sufficient magnitude to melt the fuse link before the current reaches the peak of its initial normal short-circuit value.

The fuse unit consists of one or more fuse wires, wound on a heat-resisting core and surrounded by quartz granules enclosed in a glass tube with a metal ferrule at each end.

There is no discharge during interruption, no noise, and negligible gas pressure. The fuse units may be completely enclosed and mounted with the same electrical clearances used for noninterrupting devices of the same voltage rating, such as disconnecting switches, etc. This makes them particularly suitable for mounting in metal-enclosed switchgear,

Type EJO-1, for Outdoor Service

in any location where space economy is needed, or where expulsion fuses are not acceptable. Their high interrupting ratings are also strong recommendations for their use.

Two types are available: Type EJ-1 for indoor service only, and Type EJO-1 for outdoor service at all voltages and for indoor use at voltages above 5000.

The Type EJ-1 Indoor Unit is made in three tube sizes:

SIZE A. 1 $\frac{1}{8}$ -inch diameter ferrules, for use interchangeably with No. 197563 G-E 2300-volt potential-transformer cartridge fuses.

SIZE B. 1 $\frac{3}{8}$ -inch diameter ferrules, for use interchangeably with Type ES-1 G-E Spring-Operated Potential-Transformer Fuse Units.

SIZE C. 2-inch diameter ferrules, the standard line of current-limiting fuse units.

The Type EJO-1 Outdoor Units are available only in the Size C, 2-inch diameter ferrule units.

Write to the nearest Graybar office and warehouse for more complete information.

G-E Indoor Insulators

To obtain uniformity of indoor insulator units for disconnecting switches, fuse supports, etc. N. E. M. A. has adopted standards covering: dry-flashover ratings; construction classes, distinguished by the method of securing metal parts; and average ultimate cantilever-strength classes.

G-E Insulator Units meet the N.E.M.A. standards, as shown in the table below. A 5000-volt porcelain insulator unit (no N.E.M.A. class) has been developed for use in G-E indoor devices. Cantilever strength, 750 pounds, 1 inch above tap; and 500 pounds, 2½ inches above tap.

The insulator units are of best-quality wet-process porcelain, and are available in ratings of 5000, 7500, 15000, 23000 and 34500 volts. These insulators are designed for mounting in air and operating at temperatures not exceeding 100°C.

Where insulators are desired for mounting in oil or for temperatures higher than 100°C., consult the nearest Graybar office and warehouse.

All of the insulator units (except the 5000-volt) are N.E.M.A. Class A, that is, with metal inserts in top and bottom. Disconnecting switches as listed include insulators as follows:
 All Voltages, 400 to 1200 Amperes..... Class A-2
 All Voltages, 2000 Amperes..... Class A-3
 All Voltages, above 2000 Amperes..... Class A-4

In ordering insulators for busbar supports, etc., the corresponding classes should be used. Unless otherwise specified, Class A-2 will be furnished.

For insulator units of cantilever Classes 5, 7 and 9, consult the nearest Graybar office and warehouse.

On Application

Insulators listed above are with base fittings for mounting on flat surface. If desired for mounting on 1¼-inch pipe, add \$1.00 net each insulator for fitting.

G-E Indoor Busbar Clamps and Busbar Terminals

Busbar clamps provide the most economical and easiest means for tap-off connections or splices in busbars. The outstanding feature of G-E indoor clamps is the circular pad, cast integrally in the face of the clamping surface. These pads produce uniform pressure-contact between the clamped surfaces. For d.c. service, malleable-iron clamps are used. For a.c. service not exceeding 2000 amperes, one malleable

iron and one nonmagnetic metal clamp per connection are recommended; for higher a.c. currents, both clamps of each pair should be nonmagnetic.

To facilitate identification, the malleable iron clamps are given a dark blue finish while the nonmagnetic clamps are given a natural bronze or aluminum finish.

Triangular-Clamp Bus Terminals

*The prices include two clamps with bolts to accommodate a total of three bars ¼ inch thick. Longer bolts will be furnished, when specified with the order, at no increase in price. Nonferrous bolts, nuts, and washers also will be furnished at no increase in price if specified with the order. Fillers for spaces between bus laminations, ¼ inch thick, are available at 30 cents each net.

G-E Indoor Bus-Support and Conductor Fittings

Fittings for indoor bus supports are available for round conductors and for rectangular bars.

For round conductors, there are two classes: top half of conductor fitting (movable clamp) made of nonmagnetic metal and the fixed clamp (lower half of conductor fitting) made of malleable iron, and with both movable and fixed clamps of nonmagnetic metal.

For rectangular bars, edgewise and flat fittings are made with both parts of malleable iron for d.c. service, half malleable iron and half nonmagnetic metal for a.c. service up to 2000 amperes, or all nonmagnetic metal for higher currents. Any one of these three styles can be furnished with triangular three-bolt or rectangular four-bolt clamps.

The clamps for the rectangular bars are the same as those for busbar clamps, with circular pressure pads. This is an exclusive G-E feature which compensates for uneven tightening of the clamping bolts.

Steel bolts are regularly supplied to accommodate three laminations of 1/4-inch bus and two sets of 1/4-inch fillers. These bolts are threaded so that clamps can be tightened to one lamination. Longer bolts will be furnished at no increase in price if requested with the order. Nonferrous bolts will be furnished at no increase in price if specified with the order.

Add the price of insulator (from preceding page) to the price of the fitting listed at the right for a complete bus support. If mounting is desired for 1 1/4-inch pipe, add \$1.00 for base adapter.

Fittings for Round Conductors

Cable O.D. over Insulation Inches	I.P.S. Tubing Inches	Half Malleable Iron, Half Non-magnetic Metal Net Each	All Non-Magnetic Metal Net Each

G-E Outdoor Switching Equipment Outdoor Stations

Available for any application; but for small installations consisting on one incoming or outgoing line and a single bank of transformers, a line has been standardized to eliminate development expense incurred on special designs and to expedite shipment.

Data will be furnished on request.

G-E Outdoor Air Switches

*Types TA-1, TA-2 and TA-6 Horn Gap Switches

The complete line of switches identified with the type letters TA is made for all classes of outdoor service. This type is group-operated and of tilting-insulator construction. The application of these switches is most advantageous where maintenance of service and reliable switching equipment are of great importance. Features of the Type TA Switches are:

Spring-pressure line contacts.

All copper current-carrying parts.

Coiled buffer springs assist switch operation.

Corrosion-resisting pins prevent rusting and binding.

All steel and malleable iron parts hot-dip galvanized.

Standard cemented cap-and-pin insulators.

Insulators interchangeable with those on other outdoor devices of same rating.

Manual or motor mechanism can be padlocked in either open or closed position.

Arc horns prevent burning of contacts during switch operation.

The TA switches may be had in single, double, triple, or four-pole groups, the poles being interconnected by a common shaft to provide simultaneous operation of all the poles from a single mechanism.

The switch parts consist of the blade, a short copper bar of ample cross section; the stationary contact, made up of two large semi-cylindrical copper blocks floating against heavy springs that force them against the blade for line-pressure contacts; and the tilting insulator which carries the blade. Flexible, woven wire copper braids provide full copper current carrying from all fixed to movable parts.

Type TA-1. A horizontally mounted horn-gap switch with vertical break. It has three insulators; one for the in-

Type TA-1 Horn Gap Switch, Triple-Pole, Single-throw, 345,000 Volts, 400 Amperes, with Direct Manual Operating Mechanism

coming cable connection, the central insulator which tilts, and one for the contact (as illustrated).

Type TA-2. For vertical mounting; not provided with horn gaps.

Type TA-6. Similar to the Type TA-1, except that it is provided with only two insulators, namely the front contact and the tilting. The tilting insulator connection is looped over to the dead-ending line insulator.

All prices are for 3-pole switches, including manual operating mechanism with a maximum of one offset bearing, and

including inter-connecting pipe or equivalent square shafting. For prices of other than 3-pole switches, refer to the nearest Graybar office and warehouse.

Motor Operating Mechanisms

Prices of group-operated air switches include manual mechanism with a maximum of one offset bearing, vertical operating pipe and, when included in the order, pipe couplings and guide plates. Prices of motor operating mechanism include the additional equipment to add to the manual mechanism for electrical operation. Prices of the motor operating mechanism also include one 4-stage, 4-pole auxiliary switch and necessary control relays, but no control switch; control switch must be ordered separately. For additional auxiliary stages, add these at \$4.00 net each.

Range of Voltage Rating, Kv.	Current Rating of Switch, Amp.	MANUAL MECHANISM FOR 1, 2 OR 3-POLE SWITCHES		Motor Mechanism for 1, 2, or 3-Pole Switches
		*Direct with Single Outboard Bearing, Net Each	†Indirect with Outboard Bearing and Auxiliary Bearing, Net Each	
7½ - 69	400-600	†\$75.00 \$350.00
88S-110S	600	†\$125.00 450.00

*Included in switch price.
†Add \$25 to price of switch.
‡Add \$50 to price of switch.

For 4, 5 or 6-pole mechanism, or for double-throw switch, refer to the nearest Graybar office and warehouse.

Types RK-6 and RH-6 Switches

These are triple-pole, single-throw, group-operated outdoor air switches of the rotating-insulator type—two insulators per pole.

Type RK-6. Furnished without horn gaps, and used as disconnecting switches only.

Type RH-6. Provided with horn gaps.

Prices include manual mechanism with a maximum of one offset bearing. See above for prices of motor operating mechanism.

The prices below are for triple-pole switches only. For other pole combinations, refer to the nearest Graybar office and warehouse.

	23000	222.00	183.00	

Prices include triple-pole switches with manual direct mechanism either with or without a single outboard bearing. If indirect mechanism with auxiliary bearing is required, add \$10 to above net prices.

Type TB-101 Switches

This is a group-operated tilting-insulator switch for low revenue producing installations. It is especially suitable for pole top mounting on rural lines, distribution circuits with light loads, and small industrial applications. The insulators are of the 2-inch, bolt-circle, rural type. The switch parts are of high quality, line-pressure contact, with non-corrodible hardware parts, and horn gaps.

Amperes.....	200	400	200	400
Volts.....	7500	7500	15000	15000
Type TB-101..... net each	\$115.00	123.00	140.30	150.10

Prices include triple-pole switches with direct mechanism (with single outboard bearing and guide plates when required and vertical operating pipe. If indirect mechanism with auxiliary bearing is required, add \$10 to above net prices.

Types FA-101 and FC-2 Hook-Operated Switches

These switches are made in single-pole units, single and double-throw, in the voltage and current ratings listed.

They are suitable for disconnecting purposes and should not be used to open load currents. The switch parts are mounted on G-E standard-type insulators.

The blades consist of two hard-drawn copper sections mounted back-to-back to form a blade of great mechanical strength. On switches rated above 23,000 volts, the blades are of truss-like formation. The blades slide over a tongue-like contact, and pressure is maintained by phosphor-bronze spring washers, providing maximum conductivity.

Type FA-101. This switch is for current ratings of 400 amperes and above. The tongue-like contacts and the contact portions of the blades have silver surfaces.

Type FC-2. A 200-ampere switch of similar characteristics and the same voltage ranges as the Type FA-101.

All switches are provided with blade latches, blade guides, and operating eye.

Type FA-101 Hook-Operated Outdoor Disconnecting Switch, 34500 Volts, 600 Amperes

§Prices of these switches include silver line-pressure contacts. Switches can be supplied without the silver at no reduction in price.

G-E Outdoor Air Switches

Continued

Types EF-1 and EF-2 Switches and Type FR-2 Resistors

Type EF-1. This is a combined fuse cutout and disconnecting switch to protect circuits against short circuit currents. It consists of a galvanized steel channel base, insulators, and a hinge-and-contact assembly for mounting a Type EG-1 Fuse Unit.

Type EF-2. This switch is similar to the Type EF-1 plus the drop-out feature, i.e., when the fuse blows, the fuse opens to a drop-out position as illustrated.

Type FR-2. The amount of electric energy which a large electric system can deliver may be of such proportions that it requires some form of current-limiting resistor between the main bus and the connected auxiliary apparatus. To meet this application for outdoor installations of potential transformers, the Type FR-2 Resistor, in combination with the EF-1 Fuse-Disconnecting Switch, has proved most successful. The Type FR-2 Resistor is a dry-type element, housed in a porcelain insulator. Its resistance is such that it introduces only negligible error, yet it is of ample value and possesses thermal capacity to withstand successfully short circuit on the potential transformer. The Type FR-2 may be had alone for individual mounting, or in combination with the Type EF-1, as listed below.

For ratings not listed, consult the nearest Graybar office and warehouse.

Type EF-2 Fuse-Disconnecting Drop-Out Switch, 15,000 Volts

Type FR-2 Current-Limiting Resistor, Mounted on Insulator

Types FD-102 and FD-103 Hook-Operated Switches

These switches are made in single-pole, single-throw units, and are particularly applicable to rural lines, low-voltage distribution circuits with light loads, railroad signal service, etc. They made in ratings of 7500S and 15,000S volts, 200 and 400 amperes. They are suitable for disconnecting purposes only, and should not be used to open load currents.

The switch parts are mounted on 2-inch bolt-circle, porcelain insulators.

Switches are of the laminated blade, tongue-type, contact construction.

Type FD-102. This switch is mounted on top of the insulators.

Type FD-103. This switch is underhung as illustrated. All switches are furnished with blade latches.

Type FD-103 Hook-Operated, Outdoor Disconnecting Switch, 15,000 Volts, 200 Amperes

Type EG-1 Expulsion Fuse Units

The type EG-1 Fuse is of the spring-expulsion type, providing rapid operation, high interrupting ability, and positive operating performance. Available in current ratings as included in the price list below; higher voltage ratings furnished on request.

Each fuse unit is stamped with two ratings, i.e., 30N-50. The rating followed by the letter N is the 100 per cent rating; the other is the current the fuse will carry for one hour.

G-E Switch Hooks

Superinsulated switch hooks, with or without rain shield and grounding device, are available for use with outdoor hook-operated air switches.

The lower portion of the rod is turned from carefully selected, kiln-dried, straight-grained wood, treated to assure insulating properties. The upper portion is a tubular section made of an insulating compound. The hook is an aluminum-alloy casting.

This construction produces a switch hook with excellent insulating qualities and mechanical strength, yet light enough to be handled easily by the average operator.

**G-E Outdoor Switching Equipment
Insulator Units**

G-E Insulator Units for outdoor devices are the result of many years of research in the ceramic and electrical industries. The porcelain used in their manufacture is of the best quality that can be produced. These insulators belong to the class known as the cemented cap and pin type. They are standardized in ratings of 7500 to 230,000 volts, and have high mechanical and dielectric strength. The caps and pins, from 7500 to 69,000 volts inclusive have 3-inch bolt centers except those for

heavy-duty applications where N.E.M.A. specifies a 5-inch bolt circle insulator, 7500 to 34,500 volts. Insulators for higher than 69 kv. are provided with 5-inch bolt circles.

G-E Insulators meet all the requirements of N.E.M.A. and the A.I.E.E. Standardization Rules.

Post-type insulators with ratings 7.5 to 69 kv. can be furnished at no extra charge.

G-E Outdoor Bus Supports and Fittings

Bus supports for outdoor stations are made up of standard insulators with fittings listed below, and completely assembled as illustrated. All fittings of malleable iron are hot-dip galvanized. The conductor clamps are nonferrous, preventing the establishment of magnetic circuit, and eliminating the danger of heating at the point of support. Nonferrous bolts, nuts, and lock washers will be furnished if specified with the order at no increase in price.

G-E Outdoor Switching Equipment Electric Power Connectors

The purpose of these connectors is to enable connections to be made between electric conductors, or between conductors and apparatus, with minimum time and expense. The line of G-E Connectors is complete, comprising styles for all kinds of joints and various shapes of conductors. The illustration shows a group of assembled connectors. The fittings are made of high-conductivity copper alloy, and are equipped with nonferrous bolts, nuts, and lock washers.

G-E Connectors have improved features that mark a distinct advance in this kind of equipment. Their outstanding feature is the line pressure contact principle, the same as has been so successfully applied to G-E Indoor and Outdoor Air Switches and other apparatus. In the smaller fittings, this line-pressure contact is obtained by means of a series of threadlike cuts which present a serrated surface. In the larger sizes, contact between the conductor and the fitting is by a controlled

Typical Conductor Connectors

line pressure contact, rather than by the haphazard, or chance, point contact here and there as would result from a surface contact. Write for detailed data and dimensions. Prices will be furnished on request.

Live Line Connectors

Illustration Shows How Live Line Connectors Are Used and Disconnected

These devices are economical and easily adaptable for making connections to live power lines. The device consists of a copper alloy hook which can easily be placed on the main conductor, a screw eye which actuates the clamping part which also secures the device to the switch hook during operation, and a cap for fastening the branch conductor to the device.

Pipe frameworks of any design can be assembled with this assortment of fittings and standard 1/2-inch bolts. Fittings can be used for outdoor substations, indoor switching or bus structures, stands for mounting various equipment, racks for shelving and display purposes, temporary scaffolding for building construction, etc. Made of certified malleable iron, hot-dip galvanized. Use one size of steel bolt, 1/2 inch-13 by 1 1/4 inches with hexagon nut for all connections. Bolts and nuts, including threads of both, are hot-dip galvanized by a special process.

*Number covers one section of clamp only. For complete clamp, select combination of parts and quantity of bolts.

G-E Watthour Meters

All General Electric a.c. watthour meters have substantially the same electrical characteristics. The mechanical details differ in accordance with the particular application, that is, whether they are for residential or switchboard service, and for single-phase or polyphase circuits.

The term long-range accuracy has been applied to these

meters because of their remarkable straight-line characteristics. When correctly adjusted at rated load, their accuracy is practically unaffected at double load; and even on a load of 300% their accuracy is phenomenal.

Application of a unique development has reduced to negligible values errors resulting from temperature changes.

Sockets with 3/4 or 1 1/4-inch conduit outlets available.

Type V-2-A

Type V-2-S

Single-disk meter of the induction type for 3-wire service. Primarily intended for metering that class of 3-wire service obtained from two phases of a four-wire, 3-phase circuit in low-voltage a.c. network systems.

Type V-2-A meter can be used with connection box and block similar to Type I-30-A single-phase meter, the block requiring an attachable potential terminal. Approximate dimensions, 7 1/8 x 6 3/4 x 8 7/8 inches.

Type V-2-S meter is used with a socket which must be ordered separately. Approximate dimensions, 7 x 8 1/2 inches.

The potential coils are wound and rated for the line-to-neutral voltage, and these are the values used in the listing below. For example, order meters rated 120 volts for use on 120/240-volt, 3-wire circuits.

Approximate shipping weight, 17 pounds.

Sockets with 3/4 or 1 1/4-inch conduit outlets available.

G-E Watthour Meters

Types V-3-A and V-3-S—Polyphase—2-Element—3-Wire 60 Cycles

Type V-3-A

Type V-3-S

Type V-3-A is for wall mounting, bottom-connected, and can be used by itself or in conjunction with the usual polyphase meter trims. The terminal arrangements and block dimensions are standard for polyphase meters. A maximum of 15 terminals can be provided, eight terminals for current connections and seven terminals for potential connections, contact-device connections, and test links. Approximate dimensions, 9 $\frac{1}{2}$ x6 $\frac{3}{4}$ x6 $\frac{1}{8}$ inches. Approximate shipping weight, 12 pounds.

Type V-3-S is for socket mounting. Terminal blades up to a maximum of eight provide for connections to almost any standard circuit. This meter requires a socket entirely different from that of the single-element meter or the 2-element Type V-2-S meter. Sockets have up to eight terminals. Approximate dimensions, including socket, 13 $\frac{1}{4}$ x7 $\frac{1}{2}$ x11 inches. Approximate shipping weight, 10 pounds.

Meters in 50-cycle ratings can be furnished at same prices.

G-E Watthour Meters

For Switchboard Service

For Use with Instrument Transformers

Type DS-19

This line of back-connected single-phase and polyphase meters combines the improved elements of the new front-connected meters with the narrow 5 1/2-inch universal-type switchboard case.

These meters are listed only for use with instrument transformers, i.e., in 2.5-ampere ratings. However, they are also available in 5 or 10-ampere self-contained ratings. Self-contained sizes have liberal overload rating. These meters may therefore be used with good accuracy on loads up to 300% of normal load and with ample margin of safety on loads considerably in excess of this.

Test links are not provided for these meters. Separate test blocks are available for this purpose.

Type IS-8

Single-Element—2-Wire—Single Phase

For 3-wire service, the Type DS-19 meter is recommended; 3-wire, single-phase circuits can however, be metered with the 2-wire meter, No. 21x925, when connected with double-primary, single-secondary, 3-wire type of current transformers.

Approximate dimensions, 6x5 1/2 x 7 inches.

Approximate shipping weight, 20 pounds.

SECONDARY RATING OF INSTRUMENT TRANSFORMERS	METER RATING		No.	Each
	Volts	Amp.		
115	5	120 2.5	21x921	\$40.00

Transformers	5	480 2.5	21x945	89.00
	5	600 2.5	21x947	89.00

Type DS-20

3-Element—4-Wire Y—3-Phase

Approximate dimensions, 16x5 1/2 x 7 inches.

Approximate shipping weight, 35 pounds.

SECONDARY RATING OF INSTRUMENT TRANSFORMERS	METER RATING		No.	Each
	Volts	Amp.		
115	5	120 2.5	21x957	\$108.00
No Potential	5	120 2.5	21x959	108.00
Transformers				

Meters in 50 or 25-cycle ratings can be furnished at same prices.

Catalog numbers are for meters with jewel-pivot bearings. Same prices for meters with ball bearings.

Catalog numbers and prices do not include instrument transformers. Specify ratios of transformers with which meter is to be used. It is standard practice (for meters of modern construction) to use 2.5-ampere meters with current transformers having 5-ampere secondary rating, since this results in the best overall accuracy and performance.

G-E Jewels for Watthour Meters

Jewel-Pivot Bearings—Mounted in Screws
No. 39924—Sapphire

For d.c. meters, Types C, C-5, C-6, C-7, C-9 and C-15; single-phase, house and switchboard meters, Types I, I-8, IS-2 and IS-3 and polyphase meters Types D-3, D-4, D-9, DS-2, DS-3, DS-4, DS-5 and DS-9.

No. 39924, In Lots of 10.....per box \$6.00

No. 68X1—Sapphire

Oil-tight jewel screw with removable jewel plug. For single-phase meters, Types I-14, I-15, I-16, I-18, I-20, I-30, IS-4, IS-5, IS-6, IS-7, IS-8 and IS-9; for polyphase meters, Types D-6, D-7, D-8, D-14, D-15, DS-6, DS-7, DS-11, DS-12, DS-19, DS-20, DS-21, DS-23, DS-34, DS-35, and V-2 to V-10 inclusive; and for test meters, Types IB-5, IB-6, IB-7, IB-8 and IB-9.

No. 68X1, In Lots of 10.....per box \$4.00

No. 68X2, Jewel Plug with Jewel for No. 68X1 Jewel Screw, in Lots of 10.....per box 3.00

No. 39925—Diamond

For d.c. house service meters of Type C construction. No. 39925, In Lots of 10.....per box \$60.00

No. 118569—Diamond

For d.c. meters of double armature construction, Types CS, CS-2, CS-3, CS-4, G-2 and G-3.

No. 118569, In Lots of 10.....per box \$60.00

No. 39926—Diamond

For Types E and G house service d.c. meters of earlier than Type C construction. No. 39926, In Lots of 10....per box \$60.00

No. 295309 G-E Pivots

For all types of meters. Packed in boxes of 25.

No. 295309.....per box \$3.80

G-E Meter Jewel Oil

No. 66X728, 1-Dram Bottle Cemented in Brass Container.....each \$6.00
No. 66X727, 1-Ounce Bottle.....each 1.80

G-E Ball Bearings

Enclosed Type

Enclosed type ball bearings are recommended for meters: Types I-16, I-20, I-30, IS-8, IS-9, and V-2 to V-10 inclusive; also these meters with the letter M or W added to the type designation.

No.	Description	lots of	Price
94X672	Jewel-Screw Assembly with Ball	lots of 10	\$8.60
77X922	Lower Jewel Screw with Sleeve	lots of 10	4.00
77X925	Upper Jewel	lots of 10	4.00
94X673	Lot of 25 Balls in Vial	lots of 10 vials	15.00
4130598	Adapter for Use with Meters Originally Furnished with Pivot Type Bearing	per 100	6.00
4131844	Adapter Assembly Tool	each	.10

Open Type

Open type ball bearings are recommended for meters: Types I-14, I-15, IS-4, IS-5, I-18, D-6, D-7, D-14, D-15, DS-6, DS-7, DS-19, DS-20, DS-21, DS-23, DS-34, and DS-35; also these meters with the letter M or W added to the type designation.

No.	Description	lots of	Price
77X926	Lower Jewel Screw with Sleeve	lots of 10	\$4.00

94X673	Lot of 25 Balls in Vial	lots of 10 vials	15.00
4131823	Wrench for Use on Upper Jewel	each	.30

G-E Strip-Chart Recording Instruments

Switchboard and Portable Types

60 Cycles—For A.C. and D.C.

Switchboard
Back-Connected

Portable

Types CD recording instruments are available for switchboards, front or back-connected, or in portable form. There is a complete line for a.c. or d.c. circuits, including ammeters, voltmeters, wattmeters, frequency meters, and powerfactor meters. Standard chart speeds are 3 inches per hour for switchboard instruments. Portable instruments have a gear shift that permits chart speeds of either 3 inches per hour or 3 inches per minute. The driving mechanism may be either an eight-day, spring-operated clock, or a telechron motor, as specified.

Type CD recording instruments are available with provision for inkless recording at a slight increase in price.

This listing covers only the portable instruments with telechron motor drive. Switchboard instruments have somewhat lower prices; dimensions: instrument, 12x5 $\frac{1}{2}$ x10 inches and chart, 4 $\frac{3}{8}$ inches wide and 60 feet long. Instruments with spring-driven, hand or motor-wound timing mechanisms have somewhat higher prices.

Type CD-13—For A.C.

Potential resistances self-contained.

Instrument is calibrated for 25 to 60 cycles, a.c.

Voltmeters will read correctly on d.c. circuits but ammeters will read approximately 3% high if used on d.c. circuits.

Approximate shipping weight, 60 pounds.

Voltmeters					
Double-Voltage Rated, Volts		No.	Each		
0-150 or 0-300		76x84	\$270.00		
0-300 or 0-750		76x85	280.00		
Ammeters

G-E Strip-Chart Recording Instruments

Portable, Type CF-1

60 Cycles—For A.C. and D.C.

Type CF-1 inkless recording instrument is designed to provide inexpensive recording voltmeters and ammeters for those applications where reliability and maximum convenience to the user are important.

Recommended for either indoor or outdoor service, the instrument is portable but may be wall or pole mounted.

Voltage surveys, complaint investigation, and checking circuit load conditions are typical applications.

Continuous operation for 30 days without attention at a chart speed of one inch per hour renders these instruments ideal for installation in locations where frequent servicing is impractical.

For applications where extreme conditions of temperature are likely to be encountered, inkless recorder is recommended. Successful operation down to -10°F. and as high as 120°F. can be expected. It is also recommended for applications where high humidity may retard the normal drying of ink.

Designed for a.c. operation but can be used on d.c. at reduced accuracy. Records are usually within 5% of full-scale value.

Voltmeters should be ordered with separate telechron motor terminals.

Approximate dimensions: instrument, 9 $\frac{3}{4}$ x8 $\frac{1}{2}$ x6 inches; chart, 4 inches wide and 65 feet long.

Approximate shipping weight, 25 pounds.

Voltmeters			
Volts	Scale Volts	No.	Each
0-140/280	0-140	88x726	\$105.00

Telechron motor circuits internally connected to element terminals. Instruments can be supplied with separate motor terminals, \$5.00 extra. Specify with separate motor terminals.

Single range 0-140 or 0-280-volt instruments can be supplied at no increase in price.

Ammeters			
Amperes	Scale Amperes	No.	Each
0-5/10	0-5	88x731	\$105.00

Ammeter has 115/230-volt or 230/460-volt telechron motor circuit. Connections to separate terminals on terminal block. Motor ratings changed by link arrangement on terminal block.

Single-range ammeters 0-5 to 0-10 amperes can be supplied at no increase in price.

Ordering directions: 3-inch per hour is standard chart; 1 or 2-inch per hour is optional.

Supplies

Ribbon on Spool.....	each	\$.75
Empty Spool.....	each	.25
Rate Gear Unit, 1, 2, or 3 Inches.....	each	3.00
Record Rolls.....	each	1.10
Lamps.....	each	.15

**G-E Current-Measuring Sets
For Measuring Amperes Only
With Indicating Ammeter—For A.C.**

This current-measuring set is very convenient for measuring the current in the leads to motors and transformers and in feeder circuits, because it permits the measurement to be made without interrupting service.

Set includes a small Type AS-5 ammeter, test leads, and a Type G-4 split-core current transformer.

When in use, the transformer is clamped around the cable or lead in which the current is to be measured.

Sets with recording ammeters can also be furnished.

Length lead, 10 feet.

Approximate shipping weight, 24 pounds.

No.	Each	Frequency Cycles	Amperes	No.	Each	Frequency Cycles	Amperes
77X50	\$115.00	50/60	50/200	77X58	\$120.00	50/60	150/600

Leads in 50-foot lengths can be furnished, \$4.00 extra.

**G-E Hook-On Volt-Ammeters
Type AK-1—For A.C.**

This hook-on volt-ammeter is a versatile portable instrument for measuring a.c. and voltage quickly and accurately. It is safe, simple, and easy to use for making measurements on the job. A.c. can be read instantaneously on both insulated and non-insulated conductors by simply hooking the instrument around the line; no necessity for separate transformers or additional equipment of any kind.

The instrument also measures a.c. voltages. Two voltage ranges (0-150/600 volts) are available without the use of auxiliary equipment. It is only necessary to connect leads to the two convenient terminals on the instrument, then click the selector switch to the desired voltage position on the scale. Voltage leads, 6 feet long, are included with each instrument. Approximate dimensions, 13¼x3¾x2½ inches. Approximate weight: net, 3½ pounds; shipping, 7½ pounds.

No.	Each	Amperes	Volts

No. 99x68	Hot-Line Extension Pole, 6 Feet Long each 9.00		

G-E Portable Transformers

For use with meters, instruments, and similar devices. Used in laboratory and general testing work.

**Current Transformers
2500 Volts—25-125 Cycles**

Current transformers include a wide range of primary currents. For example, the Type P-3 is a multirange transformer having either three or six primary ratings. Changes in ratio are made by changing the link connections on the top of the case. The R-2 and R-3 are of the through type and have much higher ratings. Type JP-1 is especially suited for industrial work. The accuracy of these transformers is sufficiently high to obviate the need for correction during most commercial tests. However, certificates of phase-angle and ratio characteristics can be furnished.

Type JP-1

Type P-3

No.	Each	Primary Cap., Amp.	Ratio

Potential Transformers

Under ordinary conditions of load and power-factor, the accuracy of these types will not vary more than 1% from rated ratio.

When used with a test certificate, the ratio can be corrected to within one tenth of 1%, and the phase angle can be corrected to within three minutes.

Type E-6 is rated 25 volt-amperes, and is compensated for 12.5 volt-amperes.

Type JE-9 is rated 200 volt-amperes, and is compensated for 50 volt-amperes.

Weston Portable Instruments

Model 430 D.C. Instruments

For General Plant Testing

Accurate within 1/2 of 1 per cent. Permanent magnet moving coil type. Unshielded from external magnetic fields. Voltmeters are made with single and triple ranges at a standard sensitivity of 1000 ohms per volt, with 5000 ohms per volt also available at an increase in price.

Ammeters and milliammeters regularly made with single and triple ranges, self-contained up to 50 amperes inclusive. Double ranges available on special order. Microammeters are made only in single range form.

Voltmeters with triple ranges only; sensitivity, 1000 ohms per volt. Available with self-contained ranges of 300 volts and 50 amperes. Prices on application.

Dimensions, 5 1/2 x 6 1/2 x 3 1/2 inches; scale length, 4 inches.

Approximate weight, 3 1/2 pounds.

Weston Portable Instruments

Model 432 D.C. and Single Phase A.C. Wattmeters

For General Plant Testing

This wattmeter is of the electro-dynamometer type, accurate within 1/2 of 1 per cent. Shielded from external magnetic fields.

Made with double voltage and single and double current ranges, self-contained up to 300 volts and 50 amperes. Potential ranges up to 750 volts are available by using external multipliers, higher ranges require the use of potential transformers. Current ranges can be extended beyond 50 amperes by using a 5-ampere instrument in conjunction with the Model 461 current transformer.

These instruments are accurate on all commercial frequencies up to 133 cycles per second. The phase angle is negligible on such frequencies. They may be used on d.c. and checked in comparison with d.c. standards. The temperature error is less than 1 per cent for 25°C. change in temperature.

As the working error is negligible, they may be left in circuit continuously without appreciable effect on the accuracy.

Power consumption: Potential side, at 115 volts, 1.2 watts; at 115 volts, 25 or 60 cycles, 1.2 volt-amperes. Current side, at 5 amperes, .67 watt; at 5 amperes, 25 cycles, .73 volt-ampere and at 5 amperes, 60 cycles, .98 volt-ampere.

Dimensions: 6 1/2 x 5 1/4 x 3 1/2 inches; scale length, 4 1/8 inches. Weight, 3 1/4 pounds.

Weston Portable Instruments

**Model 433 A.C. Instruments
For General Plant Testing**

Electromagnetic or moving iron type instruments contained in bakelite cases with leather carrying handles. Shielded from external magnetic fields. Accurate within 3/4 of 1 per cent.

Instruments can be left in circuit continuously without overheating, therefore, no contact key is used.

Size 5 1/8 x 6 1/2 x 3 1/2 inches; scale length, 4 1/8 inches.

Weight, 2 1/2 pounds.

Voltmeters

Self-contained for ranges shown. Higher ranges obtained by using multipliers or Model 311 or 457 potential transformer in conjunction with a 150-volt instrument; for use on frequencies up to 133 cycles per second.

Voltmeters to be used in 500 cycles, add \$4.00 to prices.

Weston Portable Instruments Model 461 Multi-Range Current Transformers For General Plant Testing

This transformer is for primary current ranges from 10 to 800 amperes inclusive. Four self-contained primary ranges of 10, 20, 50 and 100 amperes are brought out to binding posts. With one turn of the primary through the core opening a primary range of 800 amperes results; with two turns, 400 amperes; and with four turns, 200 amperes, etc. The secondary current rating at normal primary current is 5 amperes.

The normal secondary capacity for Type 1 is 5 volt-amperes, and its

ratio accuracy is sufficiently high for use with Models 155 and 433 Ammeters, or Model 329 and 432 Wattmeters, without correction curves. Type 2 has a normal secondary capacity of 15 volt-amperes, and in addition to its greater secondary capacity, offers superior accuracy. Line potentials up to 2500 volts are permissible for both types. Type 1 is supplied in a black bakelite case and Type 2 in a tan or natural color canvas filler bakelite case.

Size, $6\frac{5}{8} \times 7\frac{7}{8} \times 2\frac{3}{4}$ inches.

When ordering transformer correction curves, always state the model, type and serial number of the instruments to be used. Also give the frequency at which the curves are to be made. If more than one curve is required with different combinations of instruments, list those combinations. Also state the length and size of leads to be used.

Type	1	2
Model 461	each \$73.50	98.00
Weight	pounds $7\frac{1}{4}$	$8\frac{1}{2}$

Weston Portable Instruments Model 539 Miniature Current Transformers For General Plant Testing

This transformer is intended for use with Models 433 and 528 Ammeters. Accurate within 1 per cent from 25 to 150 cycles. For work requiring medium accuracy, it may be used with Model 155. It is not suitable for use with wattmeters for accurate work.

Four self-contained primary ranges of 2, 5, 10 and 20 amperes are selected through a switch; maximum of 200 amperes inserted primary. Secondary current rating at normal primary current is 1 ampere.

Ranges of 200, 100 and 50 amperes are available when the conductor is passed through the transformer one, two or four times respectively.

Capacity, 2 volt-amperes. Frequency, 25 to 150 cycles. Insulation test, 4000 volts for one minute.

Contained in a sturdy red and black bakelite case. A switch is provided for changing the self-contained primary ranges. In addition, a short-circuiting switch is provided for the secondary winding to prevent damage to the transformer if the secondary circuit should be opened while current is on the primary.

Size, $5\frac{1}{4} \times 4\frac{1}{8} \times 1\frac{7}{8}$ inches.

Approximate weight, $2\frac{5}{8}$ pounds.

Model 539 each \$35.00

Weston Portable Instruments Model 489 D.C. Instruments For General Plant Testing

For all-around checking purposes.

Accurate within 2 per cent. Permanent magnet moving coil type. Double range meters have binding posts; triple range meters have pin jacks.

Instruments are enclosed in black bakelite cases. Silver etched dials are $2\frac{3}{8}$ inches long with black markings.

Size, $3\frac{7}{8} \times 3\frac{3}{4} \times 1\frac{1}{2}$ inches.

Approximate weight, 11 ounces.

Weston Portable Instruments Model 528 A.C. Instruments For General Plant Testing

For all-around checking purposes.

Accurate within 2 per cent. Movable iron type. Unshielded from external magnetic fields. Single and double range meters have binding posts; triple range meters have pin jacks.

Instruments are enclosed in mottled red and black bakelite cases. Size, $3\frac{7}{8} \times 3\frac{3}{4} \times 2\frac{1}{2}$ inches; scale length, $2\frac{1}{2}$ inches.

Approximate weight, 11 ounces.

Leather Case for Model 528 Instruments each \$2.50

Weston Portable Instruments

**Model 540 Fused 6-Range Volt-Ammeters
For General Plant Testing—For D.C. Only**

Accurate within one per cent. Permanent magnet moving coil type. Contained in bakelite case with hinged cover and leather carrying strap.

All ranges fused for protection from overloads. Voltage ranges protected by single fuse located in a cap. Each of current ranges protected by individual fuse mounted in special compartment covered by hinged back. Ranges are brought out through selector switch to three binding posts, a common +, a current and a potential post. By this arrangement instrument can be so connected to circuit that both current and voltage readings can be taken by turning switch without changing connections. Line is closed at all times when connected to ammeter binding post.

Dimensions, 3¹/₁₆x4⁷/₁₆x2¹/₂ inches; scale length, 2¹/₁₆ inches. Approximate weight, 2 pounds.

Extra replacement fuses in assorted lots of one dozen, \$1.00. When ordering, give range of instrument and quantity of fuses desired for each range.

Weston Portable Instruments

**Model 330 A.C. Voltmeters
For General Plant Testing**

In this type of voltmeter, low ranges combined with an unusually high sensitivity are possible. For use wherever current drain caused by instrument must be limited to a low value. Although the high sensitivities of the copper oxide type of voltmeter are not possible with this meter, nevertheless its accuracy is unaffected by wave form and variations in frequencies over relatively wide limits.

Accurate within one per cent at 60 cycles, two percent at 25 to 100 cycles. Iron core dynamometer type. Contained in a mottled red and black bakelite case with hinged cover and leather carrying handle.

A range-changing switch is incorporated for selection of ranges. To eliminate parallax errors and facilitate accurate readings, a knife-edged pointer and mirror scale are used.

Dimensions, 3¹/₁₆x4⁷/₁₆x1¹/₁₆ inches; scale length, 2¹/₁₆ inches. Approximate weight, 1³/₄ pounds.

For measurement of a.c. voltages below .2 volt, the use of Model 482 thermocouple instruments is recommended.

Ranges	Each	Sensitivity Ohms per Volt	Scale Div.
10/5/1	\$55.00	20	50
25/5/1	55.00	20	50
125/25/12.5	60.00	20	50

150/30/15/1.5	60.00	20	75
150/50/10/1	60.00	20	50

*Conforms with A.R.A. specifications.

Weston Portable Instruments

**Model 45 D.C. Instruments
For General Plant Testing**

For general testing work for rugged service.

Accurate within 1/2 of 1 per cent. Permanent magnet moving coil type. Shielded from external magnetic fields.

Instruments are enclosed in polished hardwood cases provided with hinged covers and carrying handles.

Size, 8x8x4¹/₄ inches; scale length, 5¹/₁₆ inches.

Approximate weight, 9.9 pounds.

Voltmeters

Resistance, 100 ohms per volt, self-contained to 750 volts inclusive; ranges from 750 to 25000 volts may be had by using external multipliers. Voltmeters having a higher sensitivity than 100 ohms per volt available on order.

Single Range		Scale Div.	Range Volts	Each	Scale Div.

Leather Case for Model 280 Instruments.....each \$3.00

Weston Portable Multi-Purpose Instruments

Model 785 Industrial Circuit Testers

For Circuit Analysis and Maintenance Testing

Has 27 practical, sensitive ranges applicable to all types
of testing.

Especially suited to testing on signal, telegraph, telephone
and communication circuits, and power distribution net-
works, as well as all types of industrial testing.

The meter is a standard 4¹/₂-inch Weston instrument with
a d.c. sensitivity of 50 microamperes. Has sensitivities of
20,000 ohms per volt on d.c., and 1000 ohms per volt on a.c.
ranges. This high sensitivity permits the use of this model
on sensitive relay and vacuum tube circuits without dis-
turbance of the circuit conditions. Rapid selection of ranges
accomplished by marked selector switches.

Can be used for a.c. measurements up to 500 volts and 10
amperes without external transformers. Current trans-
formers can be used with the 1 or 5-ampere range for higher
a.c. measurements. The d.c. ranges can be extended through
the use of external shunts. Ohmmeter ranges operate from a
self-contained battery, and incorporate an adjustment fea-
ture for compensating for variations in battery voltage.

Accuracy on all d.c. ranges guaranteed to be within 2 per
cent up to 500 volts. Accuracy on 1000 volt range, 3 per cent.
Accuracy on all a.c. ranges, guaranteed to be within 3 per
cent on 60 cycles. Slightly less accuracy on 25 and 133 cycles.
Accuracy on ohmmeter ranges guaranteed to be within 2
per cent of linear arc length.

Dimensions, 13x12¹/₂x5¹/₂ inches.

Weight with batteries and oak case, 13¹/₂ pounds.

Model 785, With Oak Carrying Case.....each \$125.00

Model 785, Less Carrying Case.....each 105.00

Weston Portable Multi-Purpose Instruments
Model 639 A.C. Industrial Analyzers
For Circuit Analysis and Maintenance Testing
Type 2

The model 639 Industrial Analyzer is widely used by plant maintenance men, utility service engineers, electrical contractors and those engaged in general industrial testing or installation work. It is designed to analyze industrial loads by measuring current, voltage and power in single and polyphase circuits as well as power factor in 3-phase circuits.

An analysis of plant load conditions with Model 639 quickly detects over or underloaded motors, indicating that relocating transformers or interchanging motors will effect considerable savings. Four Model 610 instruments (a voltmeter, wattmeter, power factor meter, and an ammeter) are included in its strong oak carrying case. The ammeter is equipped with an adjustable pointer stop which allows the maximum value of starting currents to be quickly determined. Accuracy: voltmeter and ammeter, 1 per cent; power factor meter, 1 per cent; wattmeter, 2 per cent. Scale lengths, 3.5 inches.

Only a few simple connections are necessary to place this instrument in circuit; the maze of interconnecting wires necessary when individual meters are used is eliminated. Basic connection diagrams and operating instructions are contained in one card in the cover of the instrument. A pocket manual, containing additional connection diagrams and detailed information relative to the use of this analyzer, is also furnished.

Model 639 has self-contained potential ranges of 150/300/600 volts, current ranges of 5/25/125 amperes and corresponding wattmeter ranges. External current and potential transformers may be used for extending these ranges. Power factor indications are for 3-phase 3-wire only; .30 lag through unity to .80 lead.

On 220 volt 3-phase circuits the 5-ampere range will take care of loads to 1 hp. on the 2 kw. scale; on the 25-ampere range up to 7½ hp. on the 10 kw. scale; on the 125-ampere range up to 40 hp. on the 50 kw. scale. At 440 or 550 volts, the hp. and kw. ranges are doubled. A full technical description including connection diagrams is available upon request.

Size, 18½x10½x6½.

Approximate weight, 32 pounds.

Model 639 each \$400.00

Weston Portable Multi-Purpose Instruments
Model 633 A.C. Clamp-Ammeters
For Circuit Analysis and Maintenance Testing

Permits the measurement of alternating current without breaking the circuit for the insertion of the conventional ammeter or current transformer. Rapid a.c. measurements can be easily made on insulated or non-insulated conductors.

The design of the Model 633 permits its use as a completely self-contained instrument for direct measurement at the point of application. In addition, through the use of the extension cable feature, readings can be obtained at a point remote from the current carrying conductor.

The clamping jaws of this instrument will accommodate any electrical conductor with a maximum cross-section of 2 inches. Their heavy insulation makes it possible to use the instrument on insulated or non-insulated conductors.

Accurate within 3 per cent when used on frequencies between 50 and 70 cycles. Voltage breakdown test, 3700 volts a.c. Scale length, 2.36 inches.

- Size, 13½x4½x3½ inches. Weight, 3¼ pounds.
- Model 633, Type A-1, for 0-10/25/50/100/250/500 Amperes.....each **\$110.00**

Weston Portable Multi-Purpose Instruments
Model 772 Super-Sensitive Analyzers
For Circuit Analysis and Maintenance Testing
Type 2

Model 772 Weston Super-Sensitive Analyzer is for a.c. and d.c. voltage, d.c. current, resistance and decibel measurement in sensitive telephone, telegraph and industrial control relay circuits, and in electronic devices. Has 20,000 ohm per volt sensitivity on d.c. voltage ranges and 1000 ohms per volt on a.c. voltage ranges.

Accurate within 2 per cent on d.c. (1000-volt range, 3 per cent), and 3 per cent on a.c.

Positive action selector switch facilitates rapid range selection. Enclosed in a wooden case with removable cover. Separate compartment for tools and small parts.

Size, 15½x5½x8¾ inches.

Approximate weight, 8½ pounds.

Model 772 each \$66.00

Weston Portable Multi-Purpose Instruments
Model 564 Volt-Ohmmeters
For Circuit Analysis and Maintenance Testing
Type 3C

The equipment consists of a Model 301 with four 1000 ohms per volt voltage ranges of 600/300/30/3 and resistance ranges of either 0-100000 and 0-1000 ohms or 0-1000000, 0-100000 and 0-1000 ohms. A self-contained 4½-volt C battery is provided for potential. A pair of 50-inch test leads is shipped with each volt-ohmmeter.

Any change in potential of the self-contained battery can be readily compensated for by short circuiting the pin-jacks X-X and adjusting the pointer to the zero ohm position by turning the voltage adjuster located at the top of the name-plate.

All voltage ranges are brought out to pin-jacks. A toggle switch connects the meter in circuit as a voltmeter or ohmmeter.

Pocket size; shipping weight, 6 pounds.
 Model 564, Type 3C.....each \$35.50
 Carrying Case.....each 7.00

Weston Portable Multi-Purpose Instruments
Model 663 Volt-Ohmmeters
For Circuit Analysis and Maintenance Testing

Supplies the demand for an ohmmeter capable of measuring very low and very high resistances. Accuracy within two per cent.

This volt-ohmmeter is made possible by the use of a super-sensitive instrument requiring only 50 microamperes for full scale deflection. This instrument is connected into circuit network by means of a control switch which selects desired range of six available ohmmeter ranges, or as a milliammeter or voltmeter for d.c. and voltage measurements. Resistance measurements from .1 ohm to 10 meg-ohms; voltage measurements to 1000 volts and current measurements to 100 milliamperes are available.

The scale of the indicating instrument is marked 0-1000 ohms, 0-2.5-5-10 volts and milliamperes. The following ranges are available: 0-5-25-250-2500-25000-250000 ohms center scale; 0-200-1000-10000-100000-1000000 ohms full scale; 0-2.5-10-100-250-500-1000 volts full scale, 1000 ohms per volt; 0-1-5-25-100 milliamperes full scale at 500 millivolts.

Model 663, Less Carrying Case.....each \$65.50
 Model 663 Carrying Case.....each 5.50

Weston Portable Multi-Purpose Instruments
Model 703 Direct-Reading Sight Meters
For Circuit Analysis and Maintenance Testing

Lighting engineers choose this sight meter as the accepted means of measuring illumination in terms of seeing. This compact, direct reading instrument serves as an invaluable aid in the promotion of better sight through the use of better light. It is an ideal tool in the selling of lighting equipment, such as lamps and reflectors, in that it can be used for actual demonstration to show the amount of light available at the location.

The use of a multiplier disc over the cell will extend the range to ten times its normal full scale value.

Model 703, Type 3, for 0-75 Foot-Candles.....each \$19.50
 Model 703, Type 4, for 0-100 Foot-Candles.....each 20.50
 Multiplier Disc for Types 3 or 4.....each .75
 Leather Carrying Case.....each 2.00

Weston Portable Multi-Purpose Instruments
Model 614 Foot-Candle Meters
For Circuit Analysis and Maintenance Testing

A direct reading foot-candle meter calibrated directly in terms of tungsten filament standard lamps. Responds quickly to even slight variations of light.

With this meter any user of light can analyze lighting conditions and determine the correct illumination for each particular and individual purpose.

Does not require the use of batteries, voltage or lamps; has indefinite life with permanent calibration.

The operating equipment consists of an indicating instrument, a three-way toggle switch and a Photronic photo-electric cell all mounted on a bakelite panel. The instrument reads directly in foot-candles and has three ranges, 0-60, 0-120 and 0-600 which are controlled by the three-way toggle switch. The Photronic photo-electric cell or light target is hinged so that it can be lifted from the horizontal to the vertical position.

This meter is always ready for instant use. To measure illumination on a horizontal plane it is only necessary to open cover, hold instrument in a horizontal position with the cell or light target lying in its socket and then take the readings. The toggle switch simplifies switching to any of the three meter ranges so as to give a good scale deflection for any value of light intensity within maximum range of instrument. Available with Viscor Filter (range 0-100/250/500).

Assembled in a moulded black bakelite carrying case equipped with hinged cover and strap handle. Length of case, 7½ inches; height, 3½ inches; width, 2¼ inches.

Weight, 1.8 pounds.
 Model 614, without Viscor Filter.....each \$40.00
 Model 614, with Viscor Filter.....each 47.50

Weston Portable Precision Instruments

For Standardization and High Accuracy Measurements

Model 341 A.C. and D.C. Voltmeters

Electrodynamometer type. Shielded from external magnetic fields. All ranges listed are self-contained.

Regularly supplied as single, double, and triple range voltmeters for use on direct current, or alternating current at frequencies from 15 to 133 cycles.

Power consumption: 150-volt range at 115 volts, 3.9 watts; at 25 or 60 cycles, 3.9 volt-amperes.

Accurate within 1/4 of 1 per cent. Scale length, 5.25 in.

Size, 8x10 1/4 x 5 3/4 inches.

Approximate weight, 11 pound.

Double Range

Range Volts	Each	Scale Div.	Approx. Resist. Ohms	Range Volts	Each	Scale Div.	Approx. Resist. Ohms
5/1	\$155.00	100	10/2	120/60	\$150.00	120	2700/1350
6/3	155.00	150	21/10.5	150/75	150.00	150	3300/1650
15/1.5	155.00	150	30/3	300/150	160.00	150	6700/3350
15/7.5	155.00	150	100/50	600/150	170.00	150	20000/5000
30/15	155.00	150	300/150	600/300	170.00	150	20000/10000

Triple Range

Range Volts	Each	Scale Div.	Approx. Resist. Ohms
75/150/300	\$170.00	150	1675/3350/6700
150/300/600	180.00	150	5000/10000/20000
150/300/750	185.00	150	5000/10000/25000

Leather Case for Model 341.....each \$20.00

For higher ranges, Models 311 or 457 Potential Transformers or external resistors can be used. Instruments for use on frequencies up to 600 cycles are available on special order at \$10.00 extra. In this case, the current drain will be somewhat greater than in standard instruments.

Model 370 A.C. and D.C. Instruments

Electrodynamometer type. Shielded from external magnetic fields.

Model 370 instruments will maintain their guaranteed accuracy when used on direct current, or alternating current within the following frequencies: ammeters, 15 to 133 cycles; single range milliammeters, 15 to 1000 cycles; double range milliammeters, 15 to 133 cycles.

Power consumption: 5-ampere range at 5 amperes; at 60 cycles, 4.5 watts; at 25 cycles, 4.5 volt-amperes;

4.7 volt-amperes; at 25 cycles, 4.5 watts, 4.5 volt-amperes. Accurate within 1/4 of 1 per cent. Scale length, 5.25 inches.

Size, 8x10 1/4 x 5 3/4 inches.

Approximate weight, 10 pounds.

Ammeters

Range Amp.	Each	Scale Div.	Range Amp.	Each	Scale Div.
1/5	\$160.00	100	10/5	\$160.00	100
2/1	160.00	100	20/10	160.00	100
5/2.5	160.00	100			

Ammeters for 1000-cycle service are available on special order at \$16.50 extra.

Milliammeters

Range Milli-amp.	Each	Scale Div.	Approx. Resist. Ohms	Range Milli-amp.	Each	Scale Div.	Approx. Resist. Ohms
15	\$160.00	150	1130	150/75	\$160.00	150	45/110
30	160.00	150	325	300/150	160.00	150	14/14
				500/250	160.00	100	4.5/4.5

Leather Case for Model 370.....each \$20.00

For certified tests and precise laboratory measurements exceeding the self-contained ranges listed, Models 327, 328, or 461 Type 2 Current Transformers are recommended in conjunction with a 5/2.5 or 10/5 ampere instrument. For less exacting requirements, the Model 461 Type 1 Current Transformer will prove satisfactory.

Model 329 Polyphase Wattmeters

Electrodynamometer type. Shielded from external magnetic fields. All ranges listed are self-contained.

Model 329 Polyphase Wattmeter actually consists of two electrically independent single-phase wattmeters having their movable coils mounted on a common shaft, with each coil surrounded by its own system of field coils. They may be used independently

importance for measurements on unbalanced polyphase circuits, or on balanced three-phase circuits at low power factors. They are for use on frequencies from 15 to 133 cycles.

Model 329 is made with double current and triple voltage ranges. Current ranges are changed by means of links, and voltage ranges have independent binding posts. Power measurements on direct current, single-phase a.c. two or three-wire circuits, two-phase three or four-wire circuits, and on three-phase circuits may be made directly.

Power consumption per element: potential circuit at 115 volts, 3 watts; at 25 or 60 cycles, 3 volt-amperes. Current circuit at 5 amperes, 0.81 watt. At 25 cycles, 0.83 volt-ampere and at 60 cycles, 0.95 volt-ampere.

Accurate within 1/2 of 1 per cent. Scale length, 5.25 in.

Size, 9 1/2 x 10 1/2 x 8 1/4 inches.

Approximate weight, 18 pounds.

with scale errors of less than 1/2 per cent, which is of great

Leather case for Model 329, \$24.00 each.

For higher ranges, current and potential transformers or multipliers are recommended.

Weston Portable Precision Instruments

Model 310 D.C. and Single Phase A.C. Wattmeters

For Standardization and High Accuracy Measurements

Electrodynamometer type. Shielded from external magnetic fields.

Power consumption, Forms 1 and 3: potential circuit at 115 volts, 2.9 watts; at 25 or 60 cycles, 2.9 volt-amperes. Current circuit at 5 amperes, 0.81 watt; at 25 cycles, 0.83 volt-ampere and at 60 cycles, 0.95 volt-ampere.

Power consumption, Form 2: potential circuit at 115 volts, 4.4 watts. At 25 or 60 cycles, 4.4 volt-amperes. Current circuit at 5 amperes, 3.6 watts; at 25 cycles, 3.7 volt-amperes, and at 60 cycles, 4 volt-amperes.

FORM 1. For use on direct current, and alternating current at frequencies from 15 to 133 cycles. Exactly compensated for temperature changes. Full scale deflection obtained with normal potential and current values.

FORM 2. For low power factor use on frequencies from 15 to 133 cycles. Full scale deflection obtained with 20 per cent power factor.

FORM 3. This instrument will maintain its guaranteed accuracy when used on direct current or alternating current within the following frequencies: ranges between 50 and 100 volts—15 to 600 cycles; above 100 volts, 15 to 1200 cycles. Full scale deflection obtained with normal potential and current values at unity power factor.

Forms 1 and 3 Wattmeters have field coils designed to stand approximately double normal current continuously, and the potential circuits about 1½ times their normal voltage. They have double current ranges equipped with range-changing links and triple voltage ranges having independent binding posts. Form 2 Wattmeters have two potential ranges. All wattmeters have a locking contact key and a reversing switch for measuring three-phase power by the two wattmeter method.

Accurate within ¼ of 1 per cent. Scale length, 5.25 in.

Approximate weight, 12 pounds.

*This range is not compensated and is useful for special conditions only. The power required to operate this instrument will often be as much, and in some cases more, than the power to be measured. Therefore, all possible information should be given in correspondence previous to placing order.

Leather Case for Model 310.....each \$20.00

Weston Switchboard Instruments
For Power Distribution Panels
7-Inch Round Pattern

Regularly supplied surface type; back connected; pressed steel cases; dull black finish.
Accurate within 1 per cent. Scale, 5.1 inches (130 mm.). Diameter at base, 7 $\frac{3}{4}$ inches.
Flush type available at \$4.00 extra.
Instruments having a nominal diameter of 9 $\frac{1}{2}$ inches, with ranges as listed in this group, are available on special order at \$15.00 extra.

Model 252, D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity, approximately 100 ohms per volt. Self-contained up to 300 volts. Voltmeters can be provided with a second but lower range at \$5.50 extra.

Resistance thermometers for use with external exploring coils can be supplied in Model 252.

Range	Each	Scale Div.	Range	Each	Scale Div.
150	\$39.00	30	300	\$43.00	30

Model 252, D.C. Ammeters

Permanent magnet moving coil type. All ranges are provided with external 50 mv. shunts and 8-foot leads.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
10	\$44.50	50	75	\$44.50	30	250	\$44.50	50

50	44.50	50	200	44.50	40	500	48.75	50

Model 260, A.C. Voltmeters

Movable iron type. Power consumption, 150-volt range at 115 volts, 6.8 watts. At 25 or 60 cycles, 6.8 volt-amperes.

For use on frequencies from 25 to 133 cycles. For 500-cycle service, add \$4.00 to the prices below. Self-contained up to 300 volts.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
150	\$37.00	30	300	\$41.00	30	600	\$49.00	60

Model 260, A.C. Ammeters

Movable iron type. Power consumption, 5-ampere range at 5 amperes, 1.1 watts. At 25 cycles, 1.1 volt-amperes and at 60 cycles, 1.4 volt-amperes.

For use on frequencies from 25 to 500 cycles. Furnished with ranges from 1 to 10 amperes and scaled to correspond at \$35.00. May also be furnished in any of these ranges, but scaled for use with current transformers, at the same price. When so ordered, specify scale desired and transformer ratio.

Thermo ammeters are available in Model 400; prices on application.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
5	\$35.00	50	5	\$35.00	200	5	\$35.00	600

5	35.00	150	5	35.00	500			

Wattmeters, Power Factor Meters, Frequency Meters, and Synchroscopes

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

Weston Switchboard Instruments
For Power Distribution Panels
6-Inch Rectangular Pattern

Regularly supplied surface type; back connected; pressed steel cases; dull black finish.

Accurate within 1 per cent. Scale 5.12 inches (130 mm.).

Size at base, 5 $\frac{3}{4}$ x6 inches.

Flush or semi-flush type available at \$4.00 extra.

Model 502, D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity, approximately 100 ohms per volt. All ranges listed are self-contained. Can be provided with a second but lower range at \$5.50 extra.

Resistance thermometers for use with external exploring coils can be supplied in Model 502.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
15	\$39.00	30	150	\$39.00	30	600	\$51.00	30

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

Weston Switchboard Instruments

Models 267, 269, 271 and 273 Ammeters, Milliammeters and Voltmeters

Fan-Shaped—For Power Distribution Panels—D.C.

Permanent magnet moving coil type; magnetically shielded.

In surface type pressed steel cases with back connections, dull black finish, at prices shown. Model 269, with bakelite case at a surcharge of \$3.50 above regular price. When a bakelite case is used, instrument is not shielded.

Approximate resistance in ohms per volt: Model 267, 60; Model 269, 75; Model 271, 100; Model 273, 100.

*Supplied with external resistor. Millivoltmeters are also available in the fan-shaped instruments. Prices upon application.

Weston Switchboard Instruments

Model 501 Triplex A.C. Ammeters For Power Distribution Panels

For use on frequencies up to 500 cycles per second. Listed in one range only; employed generally with current transformers, and price shown covers instrument for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Triplex instruments supplied in any combination of three rectangular a.c. or d.c. switchboard instruments; prices upon application.

Accurate within 1 per cent. Power consumption: voltmeters at 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than rated primary capacity of current transformer, can be supplied at no extra charge.

Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish.

Size at base, 5³/₄x15¹/₂ inches; projection from panel, 4¹/₄ inches; and length of scale, 5¹/₂ inches.

Weight, 17 pounds.

Model 501..... each \$100.00

Weston Panel Instruments
Model 640 Group (Models 643, 642, 641 and 640)
For General Small Panel Requirements

Models 643, 642 and 640 are supplied in flush or surface cases of metal or bakelite. Model 641 Wattmeter is supplied in flush metal or semi-flush metal cases only. When ordering, specify style and whether metal or bakelite case is desired.

D.c. instruments for use on circuits above 750 volts should be specified with bakelite cases when not possible to connect in grounded side of line.

Dimensions: Metal case, 4 3/8 inches diameter; bakelite case, 4 1/8 inches diameter.

Approximate weights: Models 640, 642 and 643, 1 1/4 pounds; Model 641, 1 1/2 pounds.

Model 643 D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity approximately 100 ohms per volt. All ranges listed are self-contained. Model 643 can be provided with a second but lower range at \$5.50 extra.

Accurate within 1 per cent. Scale length, 3.34 inches.

Range	Each	Scale	Range	Each	Scale
Volts		Div.	Volts		Div.
10	\$20.00	50	100	\$21.00	50

500	25.25	50	218
*500	25.25	50	60

*These instruments are used for applications where low resistance is the first consideration, even at the expense of other performance characteristics.

Model 642 A.C. Voltmeters

Movable iron type for use on frequencies from 25 to 133 cycles. For 500 cycle service, add \$4.00 to the prices shown.

Model 642 Instruments for use on circuits above 300 volts should be specified with bakelite cases when not possible to connect in grounded side of line.

Power consumption: 150-volt range at 115 volts, 1.42 watts. At 25 or 60 cycles, 1.42 volt-amperes.

Accurate within 1 per cent. Scale length, 2.8 inches.

†600	32.00	60	37,000

†With Type 5 No. 1 External Resistor.
 †With Type 5 No. 2 External Resistor.

Model 642 A.C. Ammeters

Movable iron type for use on frequencies from 25 to 600 cycles. Normally supplied self-contained up to and including 50 amperes. No extra charge when scaled for use with current transformers. When so ordered, specify scale desired and transformer ratio.

Power consumption: 5-ampere range at 5 amperes, 1.3 watts. At 25 or 60 cycles, 1.3 volt-amperes.

Accurate within 1 per cent. Scale length, 2.8 inches.

Model 642 A.C. Ammeters

10	20.00	50

Model 641 D.C. and Single Phase A.C. Wattmeters

Electrodynamometer type for use on direct current or alternating current at frequencies from 25 to 133 cycles. Instruments are available for 500-cycle service on special order. Model 641 Wattmeters are furnished in flush or semi-flush type, black metal cases only.

Wattmeters may be used with a Y-box on balanced 3-phase, 3-wire circuits. Reactive component on balanced polyphase circuits can also be measured. When ordering, give complete circuit information.

Instruments listed have self-contained current and potential ranges. Higher current ranges require the use of a current transformer. A Type 5 No. 2 resistance box is required for ranges between 251 and 600 volts. Between 601 and 750 volts, a Type 5 No. 3 box is used. Instruments for use on potentials above 750 volts require both current and potential transformers.

Power consumption: potential circuit at 115 volts, 1.96 watts; at 25 or 60 cycles, 1.96 volt-amperes. Current circuit at 5 amperes, 0.67 watt; at 25 cycles, 0.73 volt-ampere and at 60 cycles, 0.98 volt-ampere.

Accurate within 1 per cent. Scale length, 2.8 inches.

Model 640 Thermo-Ammeters

Thermocouple type. Ranges listed are self-contained. Similar or higher ranges can be obtained with external heating elements; prices on request. When external elements are ordered, specify length of leads desired.

Power consumption; 1 to 4 amperes inclusive, varies from 0.2 to 0.4 watt per ampere approximately; 5 amperes and above, 0.15 per ampere.

Accurate within 1 per cent. Scale 3.34 inches. Write for information on the use of these instruments at frequencies in excess of those indicated. When circuit conditions do not permit connecting the instrument in the grounded side of the line, bakelite cases should be specified.

A.C. Microammeters

Use in horizontal or 45° positions.
500 Microamperes, 50 Scale Divisions.....each \$19.30
Bakelite cases should be specified for ammeters and milliammeters when used on circuits above 300 volts when it is not possible to connect instrument in grounded side of line. Bakelite case supplied at no additional cost.

Test-O-Lites

The Test-O-Lite contains two electrodes in a neon gas filled bulb, each of which is connected in series with a suitable protecting resistor.

It will indicate voltage—a dim glow is shown when testing 110 volts, and on higher voltages up to 550 volts the glow is brighter in proportion.

Indicates whether a.c. or d.c. If a.c. both electrodes will glow, and if d.c. only one will glow and at the same time indicate the negative pole of the circuit.

Detects the live and ground wires. One can test whether a conductor has tension against ground or not by touching one of the leads with the hand.

Tests resistance leaks. Can be used as a pilot light if connected permanently to any circuit.

Furnished in a bakelite casing. Is no bigger than a fountain pen.

Each..... \$1.50

Brach Fixed Neon High Voltage Indicators

TYPE "R"

TYPE "RC"

TYPE "RS"

Consists of a sensitive Neon tube enclosed in a glass protecting case with metal ferrules on each end connected to electrodes of the tube.

Designed for permanent installation. With sufficiently high voltage indicator will give an indication if only one end is attached to line.

Greater brilliance is obtained if a plate or other metal is attached to free end giving greater capacity to electrodes.

Wherever practical the indicator may be placed directly across a high voltage line, provided sufficient resistance is placed in series with tube to limit current to only a few milliamps. Another type of indicator has been developed recently for use across a line (or from line to ground) with a suitable resistance in series.

Also furnished when specified, at \$1.00 extra, with metal strap arranged to act as condenser plate and support one end of tube.

Type R.—Neon tube is a straight tube with electrodes about 3/4-inch apart. Will give an indication on 500 volts.

Type R..... each \$2.50

Type RC.—Neon tube is straight but has a constriction between electrodes. Will give an indication on 500 volts.

Type RC..... each \$2.80

Type RS.—Neon tube is of small bore tubing wound into a spiral. This type gives more illumination than Types R and RC when voltage is sufficiently high to operate same. Requires about 3000 volts for an indication.

Type RS..... each \$3.70

Brach Safe-T-Glow High Tension Detectors

Safe-T-Glow consists of a sensitive Neon tube mounted on cushion supports, the light of this tube being amplified by a mirror reflector. It is sensitive to the presence of high tension current and will start to glow at 2000 volts when exposed terminal is held in contact with high tension wire. With increased voltage the tube will glow at varying distances away from the wire, depending on the voltage.

Model A, with 3-Foot Handle for Circuits 2000 to 35000 Volts..... each

Model B, Same as Model A except with 6-Foot Added Extension to 3-Foot Handle for Circuits from 45000 to 220000 Volts..... each

Minerallac Staticopes

A Safety Device for the Protection of the Electrical Worker

A glow-tube form of electroscope, encased in hard rubber, that will indicate the presence of potential when held in the changing static field such as is found surrounding: alternating current circuits, pulsating direct current, X-Ray equipment, static from belting, high frequency, condenser discharges, automobile ignition, etc.

Pocket Type

The pocket type is intended for all around testing where a sensitive instrument is desired and is specially adapted for use on underground cable work. It is designed to give positive indication on 2000 volts and up in contact with the outside of conductor insulation and at a point several times the flashover distance on non-insulated conductors.

It is understood that materials which destroy or absorb the static field such as the lead on underground cables, metal switch cabinets, grounded framework, etc. should not be between any of the instruments and the conductor being tested.

With this instrument, it is not necessary to touch the conductor carrying high potential.

Each..... \$4.00

Overhead Type

Overhead Type, Extended

The overhead type is a less sensitive instrument, which makes it specially adaptable for overhead lines. It is furnished with a telescopic cover which makes it suitable for direct contact up to and including 2300 volts, when held in the operator's hands.

The red fiber ring is placed on the cover to indicate the handle portion of the instrument.

When closed, this staticope is 7 1/8 inches long and 3/4 inch in diameter; when extended, it is 12 inches long.

Each..... \$6.00

Station Type

The Station Type Staticope is recommended for use in stations, substations and on outdoor high voltage equipment. It is designed to give positive indication on 2000 volts and up.

The breakdown strength of this instrument is well over 75,000 volts. Direct contact is not necessary as the instrument will indicate at a point well over the flashover distance.

Made from hard rubber rod, 24 inches long. Staticope has 12 inches of solid rubber between the handle guard and the internal metal parts. There is no metal exposed.

As the instrument is entirely self-contained and its sensitivity is independent of external capacities, it may be attached to an extension handle to reach inaccessible conductors.

Each..... \$6.00

Periscope Attachment

The periscope attachment is for use with the Station Type Staticope and is recommended when the Staticope is to be used in brightly-lighted places such as outdoors in bright sunshine, when it is difficult to distinguish the glow in the tube.

It can be obtained at a small additional cost, and increases the visibility of the glow considerably.

Each..... \$2.00

G-E Type H Pyranol Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled

This transformer generally affords substantial savings over the total installed cost of oil-filled equipment for all installations indoors or in confined locations.

Filled with Pyranol which is G-E's synthetic insulating and cooling liquid which has all of the desirable characteristics of mineral oil, and in addition is non-inflammable. Pyranol transformers can, therefore, be safely installed indoors or in confined locations without expensive fireproof vaults. They can usually be installed at the load center, giving additional savings by the elimination of long and costly runs of secondary copper,

with improved voltage regulation at the load.

Pyranol transformers have made possible savings on overall installed costs of as high as twenty-three per cent, compared with the cost of oil-filled equipment.

Recognized by the National Electrical Code.

Pyranol is suitable for use only in Pyranol transformers, designed especially for the purpose.

Send for Bulletin GEA-2048 for complete information.

For Nominal 440 and 550-Volt Circuits

APPLICATION.—By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

G-E Type H Pyranol Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled
For Nominal 4000-Volt Circuits

This transformer is to provide service where it is more economical or desirable to connect transformer across phases than between line and neutral on 2300/4000-volt Y circuits. The use of this transformer gives the same service voltages as 10:1 ratio transformers connected between line and neutral.

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—4330/4114/3898
Low Voltage Rating—125/250

By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

G-E Type H Oil-Immersed Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled

Small Distribution Transformer with Low Voltage Tank-Wall Bushings

Large Distribution Transformer with Cooling Tubes and Low Voltage Pocket Bushings

Interior Assembly of Spirakore Transformer

Typical Interior Assembly of Larger Transformer Using Distributed Core Construction

The G-E Type H Distribution Transformer offers the highest degree of service reliability, backed by careful attention to all details of manufacture, including the selection and preparation of the raw materials used, the adoption of the most progressive manufacturing processes and the constant improvement of transformer design.

Among the most recent of these improvements is the introduction of the wound-core construction, identified by the G-E trade name Spirakore.

This new design, at present furnished in the smaller sizes, 15,000 volts and below, results in higher efficiency at heavy loads, better voltage regulation at higher power factors, low exciting current, smaller size and lighter weight.

The tanks are of all-welded copper-bearing steel with corrugations or cooling tubes in the larger sizes to provide ample radiating surface for the dissipation of heat. Each tank is given two coats of specially selected Glyptal paint, each coat oven dried, resulting in an attractive and durable finish.

Send for Bulletin GEA-2600 for Complete Information

G-E Type H Oil-Immersed Distribution Transformers

**Single Phase, 60 Cycles, Self-Cooled
For Nominal 440 or 550-Volt Circuits**

APPLICATION.—By connection of the low voltage leads, transformers are arranged for series or multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in the weight of all sizes up to 100 kva. inclusive.

G-E Type H Oil-Immersed Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled For Nominal 4000-Volt Circuits

These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2300-4000-volt Y circuit. The use of these transformers give the same service voltages as 10:1 ratio transformers connected between line and neutral.

Transformers below, are also suitable for operation as follows:

High Voltage Rating—4330/4114/3898

Low Voltage Rating—125/250

By connection of low voltage leads, transformers are arranged for series, or multiple two-wire service or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in weight of all sizes up to 100 kva., inclusive.

For Nominal 6600 and 11000Y-Volt Circuits

Transformers listed in Line No. 1 below are also suitable for operation as follows:

High Voltage Rating—7200/12470Y/6875/6545 Kva/6220 Reduced Kva

Low Voltage Rating—120/240

Transformers listed in line 2 below are also suitable for operation as follows:

High Voltage Rating—7200/12470Y/6875/6545 Kva/6220 Reduced Kva

Low Voltage Rating—240/480

By connection of low voltage leads, transformers having low voltage rating of 115/230 are arranged for series or multiple two-wire service, or for three-wire service. Transformers having low voltage rating of 230/460 volts are suitable for series and multiple service only.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with and included in weight of all sizes up to 50 kva., inclusive.

G-E Type H Oil-Immersed Rural-Line Transformers

Single Phase, 60 Cycles, Self-Cooled

Typical of 1½ to 5 KVA. Sizes

This transformer is of the single-high-voltage-bushing design, with one end of the high voltage winding permanently connected to the tank, which in turn is to be solidly grounded by connection to the common system neutral.

This transformer offers the utmost in service reliability as it embodies the same perfection of detail in design and construction as the standard Type H distribution transformer.

Available with or without a support on the tank for mounting a G-E pellet lightning arrester. Sizes 10 kva. and less, without the arrester support, have two sets of mounting brackets on opposite sides of

the tank. Mounting plates for direct bolting to the pole are provided with all sizes and ratings. Sizes 5 kva. and below are of the new wound core construction identified by the G-E trade name Spirakore.

For Nominal 6600 and 11000 Gr-Y-Volt Circuits

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—11950 Gr-Y/6900/6585/6275 Kva/5960 Reduced Kva.

Low Voltage Rating—115/230

By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service or for three-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

MOUNTING PLATES.—Mounting plates are provided with all sizes and are included in the weights given below.

G-E Type HBA Unit-Type Oil-Immersed Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled
1-High-Voltage-Bushing Design

7200 to 120/240 Volts
1-High-Voltage Bushing
Design

For rural line service on solidly-grounded common-neutral circuits.

A thoroughly reliable unit with self-contained lightning protection by means of heavy duty pellet lightning arresters and self-contained over-current protection and indication by means of an oil-immersed low voltage circuit breaker and overload signal lamp.

The following is furnished as standard on sizes 5 kva. and larger: One pellet lightning arrester, low voltage circuit breaker, overload signal lamp, (optional on 1½ and 3 kva. sizes), internal high voltage fuses and through-bolt mounting plates for direct bolting to the pole. The tank must be solidly grounded.

For Nominal 2300 or 4000 Gr-Y-Volt Circuits

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—4330 Gr-Y/2500

Low Voltage Rating—125/250

By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

SERVICE.—Suitable for indoor or outdoor installation.

G-E Type HBA Unit-Type Oil-Immersed Distribution Transformers

Single Phase, 60 Cycles, Self-Cooled
2-High-Voltage-Bushing Design

4800 to 120/240 Volts

For Delta circuits, circuits grounded at the substation only, solidly grounded circuits, open Delta circuits, Open Y circuits solidly grounded at the source only and for two-phase, three-wire circuits with grounded neutral.

A thoroughly reliable unit with self-contained lightning protection by means of heavy duty pellet lightning arresters

and self-contained over-current protection and indication by means of an oil-immersed low voltage circuit breaker and overload signal lamp.

Each unit includes two pellet lightning arresters, tank isolating gap, low voltage circuit breaker, overload signal lamp, internal high voltage fuses and suspension hooks for crossarm mounting.

For Nominal 2300 and 4000Y-Volt Circuits

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—2500/4330Y
Low Voltage Rating—125/250

By connection of the low voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service or for three-wire service.

SERVICE.—Suitable for indoor or outdoor installation.

SUSPENSION HOOKS.—Suspension hooks are provided with all sizes and are included in the weights given below.

G-E 30,000-Volt 0.5-KVA. Portable Oil Testers

This oil tester affords a compact, convenient, and accurate means for testing oil in the field, as it combines in a single unit, a step-up transformer, a means for gradually raising the test voltage, a voltmeter to measure breakdown values, an automatic circuit breaker, and an oil-testing receptacle.

The successful operation of high voltage oil-insulated apparatus requires that the dielectric strength of the oil be maintained at a high value. Assurance that the oil is always satisfactory dielectrically is possible only by testing oil regularly.

All live parts of the equipment are enclosed and complete safety features assure full protection to the operator.

Furnished complete with 15 feet of 3-conductor attaching cord and plug.

No.	Supply Voltage	Frequency Cycles	Shipping Weight Pounds

Send for Bulletin GEA-2935 for complete information.

G-E No. 10-C Oil

G-E No. 10-C Oil is a specially repared insulating and cooling oil for use in transformers, feeder voltage regulators, and oil fuse cutouts.

The development of this oil and the attainment of proper characteristics and uniform quality have required the closest cooperation for many years between G-E engineers and oil refiners and involves a careful selection of proper crude oil, as well as the use and control of special refining processes applicable only to insulating oil.

Refined from selected grades of crude oil by refiners experienced in producing oil for this highly special application, this oil has the characteristics which provide both the cooling and insulating factors essential to transformer operation; it does not affect the transformer insulation, and is unaffected by these insulating materials. An important quality in transformer oil is long service life, the inherent resistance to sludge formation. Only oil known to have such properties should be used for this purpose.

G-E Air-Cooled Transformers

Type M—For Indoor and Outdoor Service

Type D—For Indoor Service Only

Type M

Type D

G-E Air-Cooled Transformers have a wide range of applications on circuits 600 volts and below. Such applications include supplying the proper voltage for special lamps, tools, bells, buzzers, airport lights, brazing, welding, testing and industrial heating equipment. They are also used for insulating circuits to promote safety, operating lights and portable tools from power circuits, boosting voltage, phase changing and many other unusual applications.

In transformers rated 15 kva. and below, as well as auto-transformers of equivalent physical size, the Type M construction is used. It forms a solid, compact unit which dissipates heat from its external surfaces by radiation. In the larger sizes, the Type D, natural-draft construction is used. The transformer is effectively cooled by air currents which enter ventilating louvers in the housing and circulate around the core and coils.

These transformers are built in standard ratings up to 50 kva. and 600 volts, 60 cycles. Special transformers, up to 200 kva. for 60-cycle circuits, are built from an extensive line of standardized parts, economically and for quick delivery. They are applicable to circuits of 600 volts and below.

Type M transformers include a built-in junction box designed for conduit connection or for open wiring. For conduit connection, knockouts are provided in the sides, end, and back of the compartment. For open wiring, a fiber bushing is used in place of the bottom cover of the compartment.

Type D transformers have leads brought out for open wiring, through bushed holes in the side plates. For enclosed wiring, conduits can be run directly into these side plates, or when desired, 90° junction boxes may be used.

Type D transformers are normally arranged for floor mounting, but when desired they can be wall mounted by the use of angle iron brackets.

Send for Bulletin GEA-897 for complete description.

Wall Brackets for Type D Transformers

For mounting single phase Type D transformers.

Wall Hanger No.	Each	For Transformer KVA.	Ship. Wt. Lb.
4255370G2	\$5.00	25	8
4255370G3	5.00	37.5	9
4255370G4	5.00	50	9½

G-E Type M Service Auto-Transformers

To Supply 115 and 230-Volt Circuits
For Indoor or Outdoor Service
For General Light and Power Service

Single Phase, 60 Cycles, Air-Cooled
Primary 220—230—240 Volts
Secondary 110—115—120—2-Wire or 220/110—230/115—
240/120—3-Wire

Auto-transformers are more economical and smaller than a transformer designed to carry the same load. Within their voltage limitations, they will perform the same function as service transformers with the exception of insulating two circuits. They may be used to obtain 115 volts from a 230-volt circuit, to derive a neutral on a 230-volt 2-wire circuit, or to balance a 115/230-volt 3-wire circuit. They also may be used in banks on polyphase circuits.

Care should be exercised in ordering auto-transformers that the installation will meet local electrical inspector's requirements.

G-E Type M Air-Cooled Transformers

For 32-Volt Applications
For Indoor or Outdoor Service

Single Phase, 60 Cycles
Primary 110/220—115/230—120/240 Volts
Secondary 30.6—32—33.4 Volts

These transformers derive 32-volt circuits from 115 or 230-volt lighting or power circuits; 32-volt portable lamps and portable tools are frequently used in mines, steel plants, meat packing plants and in damp locations to prevent injury in case of accidental grounding of the circuit through the operator's body. The 32-volt lamps are often more economical and have longer life than those rated at higher voltages.

These transformers can also be used as auto-transformers to boost the voltage of circuits. When so connected, the kva. output of each transformer will equal the kva. output listed below, multiplied by $\left(\frac{H.V.}{H.V.-L.V.}\right)$ and the kva. output of a 3-phase bank will be three times that of each unit.

G-E Transformers and Auto-Transformers for Phase Changing

Air-Cooled, 3 to 2, or 2 to 3-Phase, 60 Cycles

Type M—For Indoor or Outdoor Service
Type D—For Indoor Service Only

Phase-changing transformers and auto-transformers are primarily of use when a phase change is made on a distribution system. They permit the economical use of motors and other polyphase equipment which would otherwise become obsolete.

The two lines of auto-transformers are not interchangeable and it is necessary to determine whether the 2-phase circuit is 3-wire or 4-wire in order to select the proper unit. These auto-transformers cannot be used on a 4-wire circuit having the mid-points of the two phases connected together. For this application, the 2-winding transformer is recommended, although especially designed auto-transformers can be furnished.

§Care should be exercised in ordering auto-transformers so that the installation will meet local electrical inspector's requirements.

G-E Type AIRS Induction Voltage Regulators

For Indoor Service

Single Phase, 60 Cycles, Air-Cooled

Large Automatic

This is an indoor-type, natural-draft, air-cooled, induction voltage regulator for secondary circuit regulation and for testing and industrial service.

Automatic regulators can be used where lighting and power are both supplied from the same source; the regulator will maintain illumination at correct levels by compensating for voltage drop due to changes in lighting loads, or changes in load on the power feeders.

Hand operated or manually controlled motor operated regulators can be used wherever a convenient source of variable voltage is required for various industrial processes. Send for Bulletin GEA-3057 for complete information.

A complete line of larger voltage regulating equipment for every point in the distribution or transmission circuit is offered. Send for Bulletin GEA-2762 for complete information on this line.

G-E Pyranol Capacitors for Power-Factor Improvement

Large Outdoor Rack-Type

Pyranol capacitors are used to counteract low power-factor caused by heavy inductive loads, and are especially suitable on systems having low power-factor where attention and maintenance needed for a synchronous condenser is scarcely warranted.

Pyranol is non-inflammable; therefore, Pyranol capacitors afford maximum degree of safety.

Built for 230 up to 13800 volts in standard equipment, and for higher voltages for special applications.

Capacitors range in size from .5 up to 1260 kva.—from the small enclosed units especially suited for connection to motor terminals, up to units for pole mounting; also large rack-type capacitors for either indoor or outdoor service.

Rack-type capacitors consist of standard single phase units arranged in racks, complete with fuses and discharge devices. Fusible switches are supplied for connecting and disconnecting the smaller capacitors, and cut outs and circuit breakers are supplied for the larger capacitors.

Send for Bulletins GEA-2742 and GEA-2860 for complete information.

G-E Pyranol Capacitors

For Low Voltage Industrial Applications

Enclosed Dust-Tight Capacitor Units, Class EDT

Single-Phase or Polyphase, 60 Cycles

230 Volts, .5 to 7.5 Kva.; 460 and 575 Volts, 1 to 15 Kva.

This capacitor unit, Class EDT, is for indoor service where it is desired to improve power-factor directly at individual motors or other small loads. Group installations consisting of a small number of enclosed units can be made if the kva. required exceeds that of a single unit.

G-E enclosed capacitor units, while applicable to all small loads, are particularly suited for use with individual motors. Connected directly across the motor terminals, the capacitors can be installed without separate switches.

For larger loads, or for connection to a plant feeder, enclosed units may be grouped in a bank. However, if an application requires a group of individual units, a small rack-type equipment (Class SR or Class DTSR) is recommended. The latter, at about the same price, presents a neater and more compact installation.

Small Rack-Type Capacitor Equipment, Class SR and DTSR

Single-Phase or Polyphase

230 Volts, 15 to 90 Kva.; 460 and 575 Volts, 30 to 180 Kva.

For use where small blocks of improvement capacity, requiring a group of individual units, are desired. These equipments are available for: indoor service, outdoor service; or in dust-tight designs for use in textile mills, grain elevators, feed mills, etc.

In the improvement of plant power-factor, it is very often desired to locate capacitor equipment in one group on the low-voltage circuit, or perhaps in several smaller groups, governed by the particular plant arrangement and engineering considerations. The total kva. rating generally exceeds the output of a single individual capacitor unit. For

Dust-Tight Design
Class DTSR

such applications, a group of units is mounted in a rack, and provided with buses for the connection of the individual units to one another, and to the line. An important adjunct to the rack and individual unit is a switch which must be selected not only as a means of disconnecting, but also as a circuit-interrupting device adequate for the fault current obtainable at the point of installation of the capacitor equipment.

Large Rack-Type Capacitor Equipments, Class LR

230 Volts, 135 to 630 Kva.; 460 and 575 Volts, 270 to 1260 Kva.

Large rack-type capacitor equipments, Class LR, afford a means of applying large blocks of power-factor improvement capacity as, for example, in substations or large industrial plants. These equipments are available for either indoor or outdoor service.

The individual capacitor units used are essentially the same in details of design and construction as those furnished with the small rack-type equipments, Class SR and Class DTSR.

Complete Information and Prices Furnished on Application

G-E Pyranol Capacitors

For High Voltage Industrial Applications

Small Rack-Type Capacitor Equipments, Class SR

Single-Phase or Polyphase

2400 to 4800 Volts, 30 to 180 Kva.; 7200 to 13,800 Volts, 90 and 180 Kva.

For use on indoor circuits where small blocks of improvement capacity are desired.

In the application of capacitors on circuits 2300 volts and higher in small industrial plants, ratings 180 kva. and less are often desired. The small rack-type equipments (Class SR) are ideal for this purpose, and in large plants a number of these installed at various load centers may prove more advantageous than one large equipment.

Pole-Type Capacitor Equipments, Class PT

2400 to 4800 Volts, 30 to 180 Kva.; 7200 to 13,800 Volts, 90 and 180 Kva.

For use on outdoor circuits where small blocks of improvement capacity are desired.

In applying capacitors on outdoor primary circuits for small industrial plants, ratings 180 kva. and less are often desired for either pole or platform mounting. This is especially the case where the power is metered on the primary side of the transformer bank. The pole-type equipments (Class PT) are ideal for this purpose, and in larger plants, a number of these installed at various points may prove more advantageous than one large equipment.

The Class PT equipments for this service have been designed after careful consideration of the general practices throughout the country in the construction and voltage rating of outdoor overhead distribution systems.

Large Rack-Type Capacitor Equipments, Class LR

Single-Phase or Polyphase

2400 to 13,800 Volts, 270 to 1260 Kva.

Large rack-type capacitor equipments (Class LR) afford a means of applying large blocks of improvement capacity which are frequently desirable in substations or large industrial plants. These equipments are available for either indoor or outdoor service.

The illustration shows a completely assembled capacitor equipment with oil circuit breaker enclosed in steel cubicle.

Complete Information and Prices Furnished on Application

G-E Enclosed Indicating and Drop-Out Fuse Cutouts

5000 Volts, 50 Amperes

7500/12, 500 Gr-Y Volts, 50 Amperes

Indicating and Drop-Out Fuse Cutouts, with Clamp-Type Crossarm Hangers

This cutout provides for positive indication of outages in either of two ways, depending on preference:

AS AN INDICATING CUTOUT. When a fuse link melts, the door opens at the bottom sufficiently to give a visual indication that the circuit is open.

WHEN USED AS A DROP-OUT CUTOUT. The door opens to a horizontal position. This not only gives indication that the circuit is open, but also removes the fuse holder from the circuit. In this position, the door and fuse holder are isolated, and the open end of the fuse holder is protected from even a driving rain.

Cutout In Indicating Position

Cutout In Drop-Out Position

The change from the indicating to drop-out operation is easily and quickly made. All current transfer contacts are silver plated.

Exclusive features are: complete interchangeability of three doors—indicating and drop-out door with single fuse holder, automatic reclosing door with two fuse holders, and disconnecting-blade door; the same doors can be used with either 5000-volt or 7500/12,500 Gr-Y volt cutouts in the same ampere rating.

Cutout Complete with Fuse Holder

No.	Each	*Voltage Rating	†Current Rating, Amperes	Type of Hanger	Ship. Wt. Lb.

9F6A4	30.00	7500/12,500 Gr-Y	100	Clamp	33

*Cutouts rated 7500/12,500 Gr-Y volts may be used on grounded neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 8 kv. and where the insulation to ground meets operating requirements.

†The interrupting capacity of 50-ampere cutouts is 1200 rms. amperes at 60 cycles; 100-ampere cutouts, 3000 rms. amperes at 60 cycles.

Send for Bulletin GEA-3448 for Complete Description

G-E Enclosed Indicating and Drop-Out Fuse Cutouts

Hangers

The clamp-type crossarm hanger for the 50-ampere fuse cutout provides for mounting the cutout either in a vertical position or at an angle. In either position, the cutout can be turned to any desired horizontal angle.

The 100-ampere cutout, being heavier than the 50-ampere cutout, is arranged for vertical mounting only. Its hanger is identical with that of the smaller cutouts except that the arm has only one hole, and the parts are proportionately stronger.

In addition to the clamp-type crossarm hanger, 50-ampere indicating and drop-out fuse cutouts are available with hangers for different types of mounting, as shown in the sketches below.

Unit Mounting Hanger

Hook-Type Crossarm Hanger

Pole-Mounting Hanger

Combination Pole Hanger
(T-Bracket Not Included with Cutout)

Combination Crossarm Hanger

G-E Enclosed Indicating and Drop-Out Fuse Cutouts

With Disconnecting-Blade Door

No. 3995930G1 100-Ampere Disconnecting-Blade Door, for 50-Ampere Cutouts

G-E enclosed indicating and drop-out fuse cutouts can easily be converted into disconnecting switches by substituting a disconnecting-blade door, complete with a flexible copper connector, for the door and fuseholder. These disconnecting doors are not designed to open the circuit while carrying load current, but will interrupt the transformer exciting current.

A disconnecting door installed in a 50-ampere cutout permits the cutout to be used as a 100-ampere disconnecting switch. One installed in the 100-ampere cutout can be used as a 200-ampere disconnecting switch. Where the circuit is to remain disconnected for a period of time, the flexible connector is uncoupled from the upper terminal on the door, pulled down and then the spring-actuated contact arm is pushed back and securely hooked to the door so that it is completely out of the circuit when the door is closed. The flexible connector then protrudes from the bottom of the cutout, giving positive visual indication that the circuit is disconnected.

Cutout with Disconnecting Blade Instead of Fuse Holder

No.	Each	*Voltage Rating	Current Rating, Amperes	Type of Hanger	Ship. Wt. Lb.
9F6A13	\$10.30	5000	100	Clamp	11
9F6A23	13.25	7500/12,500 Gr-Y	100	Clamp	12

G-E Reclosing Fuse Cutouts

5000 Volts, 50 Amperes

7500/12,500 Gr-Y Volts, 50 Amperes

Reclosing Fuse Cutouts with Clamp-Type Crossarm Hangers
The G-E reclosing fuse cutout restores service within one second after a temporary fault, by a second fuse link which is connected in the circuit after the first fuse link blows. This interruption is so brief that motors and other devices will continue in service.

If the line is patrolled after a storm, and a cutout found that indicates the first fuse has blown, this fuse link can be easily renewed by the use of a jumper, without interrupting service.

When the first fuse link is blown, positive visual indication is given by a red indicator which projects below the door and is readily visible from the ground. In addition, the door of the 50-ampere cutout is pushed out at bottom.

When the second fuse link is blown, the reclosing door drops out to a horizontal position, indicating that the circuit is open. All current transfer contacts are silver plated.

Cutout in Indicating Position

The cutout is entirely sleet-proof and will restore service after a temporary fault by connecting the second fuse link into the circuit under the most severe sleet conditions, with the door firmly frozen shut.

Cutout in Drop-Out Position

Cutout Complete with Two Fuse Holders and †Clamp-Type Crossarm Hanger

No.	Each	*Voltage Rating	†Current Rating Amperes	Ship. Wt. Lb.

G-E Porcelain-Enclosed Non-Indicating Fuse Cutouts

The G-E porcelain-enclosed fuse cutout provides a high degree of overcurrent protection under all conditions.

Housing is made of G-E wet-process porcelain. Barriers, which mesh with barriers on the door, prevent hot conducting gases from bridging the space between the contacts. Textolite door.

Full floating contact clips and terminals are self-aligning. All current carrying contacts are silver plated.

The fuse-holder tube consists of a vulcanized fiber tube over which is wound laminated Textolite having a linen-fabric base. In this way, a strong, dense, and homogeneous tube without molding seams is produced.

Hangers

In addition to the clamp-type crossarm hanger illustrated above, 50-ampere porcelain enclosed non-indicating fuse cutouts are available with hangers for different types of mounting as shown in the sketches below.

Unit Mounting Hanger

Hook-Type Crossarm Hanger

Pole-Mounting Hanger

Combination Crossarm Hanger

The clamp-type crossarm hanger for the 50-ampere fuse cutout provides for mounting the cutout either in a vertical position or at an angle. In either position, the cutout can be turned to any desired horizontal angle. The 100-ampere cutout, being heavier than the 50-ampere cutout, is arranged for vertical mounting only. Its hanger is identical with that of the smaller cutouts except that the arm has only one hole, and the parts are proportionately stronger.

G-E Open Fuse Cutouts

The G-E open fuse cutout gives a positive indication that the circuit is open, whenever a fuse link is blown, by causing the fuse holder to drop to a horizontal position.

The cone on the fuse-holder cap maintains contact for sufficient time after the fuse link melts to assure complete interruption of the short-circuit current within the fuse-holder tube.

An automatic latch incorporated in the toggle mechanism prevents the fuse holder from falling out of the support during the recoil resulting from expulsion action.

The switch-hook socket permits the use of any standard switch hook. The fuse holder need not be touched by hand until it is completely removed from the fuse support.

Fuse-holder tube can easily be replaced without renewing the switch-hook socket or toggle mechanism. This tube is a combination tube similar to that used with a porcelain-enclosed cutout and will withstand the direct action of the weather. In the open position, the tube is not under electrical stress.

Cutout Complete with Fuse Holder

G-E Open Fuse Cutouts

Hangers

In addition to the clamp-type crossarm hanger illustrated in the preceding column, open fuse cutouts are available with hangers for different types of mounting as shown in these two sketches.

Pole Mounting Hanger

Combination Pole Hanger
(T-Bracket Not Included with Cutout)

G-E Indicating Secondary Fuses

Outdoor Type

The G-E indicating secondary fuse is an outdoor cartridge-type, non-renewable fuse designed to permit transformer secondary banking, transformer secondary protection, and the isolating of service entrance faults at the minimum initial expense.

The fuse element is totally enclosed and protected from the weather and cannot be twisted when swayed by the wind.

It can easily be installed with any type of overhead secondary construction by means of conventional solderless connectors.

For circuits 600 volts and below.

Packed 25 fuses in a carton, 200 Amp. and less.

Packed 5 fuses in a carton, 250 and 300 Amp.

G-E Fast-Blowing Universal Cable-Type Fuse Links

For Use with All G-E Reclosing, Enclosed Indicating and Drop-Out, Enclosed Non-Indicating, and Open Type Fuse Cutouts

These fuse links are rated on the 100 per cent basis and are designed to carry their rated current without blowing, and to blow at not over 230 per cent rating within five minutes. All G-E fast-blowing universal cable-type fuse links may be operated safely and continuously at 100 per cent rating, with a maximum temperature rise of 30°C. for conducting parts of the fuse holder above an ambient temperature of 40°C.

Packed 25 in a carton.

G-E Secondary Indicating Fuse Cutouts

The G-E Secondary Fuse Cutout gives positive indication that the circuit is open whenever a fuse link is blown, by pushing the Textolite housing down from the upper terminal cap and displaying the red fuse holder tube which is readily visible from the ground. This secondary cutout makes transformer secondary banking, transformer secondary protection, and the isolating of service entrance faults economically possible.

The fuse link is protected from the weather; in this way, maintenance is minimized. The small size and light weight of the cutout enable it to be mounted in the space between secondary lines, attached directly to the line conductor, or mounted directly on the clamp terminals of a distribution transformer (using an adapter). Cutout can be easily and safely refused.

G-E D & W Type Oil Fuse Cutouts

Pole Type,
100 to 300 Amperes

Subway Type,
100 to 200 Amperes, 2500 Volts;
Also 100 Amperes, 5000 Volts

Pothead Type,
100 to 300 Amperes

No. 73X705 Expansion Chamber for Subway Type Cutouts

No. 294258 Subway Type Cutout with Pellet Vent

The G-E D & W type oil fuse cutout is completely metal-enclosed, with a fusible element under oil, by which the circuit is broken safely and rapidly. Standard oil fuse cutouts are available in three designs for pole, subway, or pothead service on circuits up to 7500 volts and 300 amperes.

The fuse link is surrounded by a Textolite sleeve which prevents mechanical damage or accidental electric contact, while carrier is being inserted in cutout. All live parts are enclosed. Fuse carrier is locked in place before circuit is closed.

Flame from arc is confined within housing, and prevents ignition of explosive gases and external damage.

Fuse link is under oil—this prevents deterioration from oxidation or electrolysis. Gases are released, but oil is confined. Subway fuse cutouts have operated for years while submerged in water.

Fuse links are quickly and easily replaced. Oil level can be maintained without removing cutouts from service.

Heavy self-aligning contacts make possible repeated opening under load.

Cutouts may be fused closely to load, providing simultaneously, protection against overload and heavy short circuits.

G-E oil fuse cutouts are particularly applicable for subway service, for replacement of potheads, and for installations where high current-interrupting ability is required and where high-speed operation is essential. Other locations in which they can be used to advantage are:

Where quiet operation is desirable.

Where the cutouts are exposed to smoke, corrosive fumes, salt-air, explosive gases, or inflammable dust. All indoor installations.

Where it is desired to have no exposed live parts, whether the cutout is in the open or the closed position.

They are ideal for indoor industrial applications. As no flame is expelled, and as all live parts are completely enclosed, the oil fuse cutout best meets the requirements of the National Electrical Code.

*The 2500-volt cutouts are suitable for operation on 4000-volt Y-connected circuits with dead grounded neutral. In all cases, two cutouts are required between lines.

†The bushings on Nos. 9F2A9 and 9F2A15 cutouts are not the separable-sleeve type, but are designed for connection to the cables using standard splicing material.

‡With right-hand subway sleeve bushings.

§With left-hand subway sleeve bushings.

¶Venting. Subway-type cutouts usually require accessories for venting, either by means of an expansion chamber or pellet vent. Prices above do not include venting accessories which should be selected as follows:

No. 73X705 Expansion Chamber, for Use Where Complete Submersion Is Possible..... each \$14.00
No. 294258 Pellet Vent, for Use Where Cutouts Are Not Subjected to Flooding..... each 14.00

Gang Operation of G-E Oil Fuse Cutouts

Pole Type Cutouts Arranged for Three-Phase Operation

A simple and low cost, gang operated, three-phase assembly of standard G-E oil fuse cutouts can readily be made by the addition of a mounting rack and lever-operated mechanism for safely opening or closing the full-rated current on all three phases simultaneously.

G-E Pellet Type Distribution Lightning Arresters

For Circuits 1 to 15 Kv.

6 Kv. Maximum Permissible Line-to-Ground Voltage and with Standard Hanger

The electric elements consist of a column of pellets and a series-gap assembly. The pellet column forms the valve element, preventing the flow of system current following discharge, while the series gap isolates the valve element from the line until it is sparked over by a surge.

The pellets are made of lead peroxide, with a thin, porous coating of litharge and are assembled in a porcelain-tube container with metal electrodes in contact with each end of the pellet column. The length of the column is proportional to the arrester voltage rating.

The series gap assembly is sealed within a gap chamber, which is entirely isolated from the pellet valve column. This sealed gap chamber prevents the entrance of moisture and makes the arrester independent of atmospheric conditions, thereby assuring permanent freedom from current leakage and corrosion.

The elements of the arrester are contained in a porcelain tube with corrugated exterior. A porcelain cap is mechanically secured by weatherproof compound of high flow point.

This compound, however, is not depended on for sealing the arrester.

Well-glazed, wet-process porcelains are used in pellet arresters of all ratings. A flexible lead, securely soldered, provides for line connection.

The clamp-type ground terminal permits either one or two solid or stranded ground wires to be clamped to the arrester, eliminating connectors, splicing, soldering, and taping. In this way, both labor and materials are saved.

After gap breakdown, discharge current begins to flow, and the resistance of the pellet valve column decreases as long as the current increases. When the current begins to decrease, the resistance increases, and to such an extent that, at the end of a discharge, the normal system voltage is unable to maintain a current flow through the arrester. This valve action prevents any arc or short-circuit attending discharge and thereby avoids tripping of line breakers and blowing of sectionalizing fuses from lightning.

9 Kv. Maximum Permissible Line-to-Ground Voltage and Above with Standard Hanger

Hangers and Mountings

Altitude, 0 to 6000 Feet

The standard and special hangers which are available for pellet arresters will satisfy virtually all desired mountings of the arresters—alone, in combination with primary fuse cut-outs, or on transformer tanks. It will be seen that the pellet-arrester porcelain has two mounting grooves providing for alternate positions of the arresters in either standard or special hangers, making it possible to balance either the clearances or the appearance of the installation. The arrester can be inserted in any hanger either before or after the hanger has been mounted.

G-E Pellet Type Distribution Lightning Arresters

For Circuits 1 to 15 Kv.

Special Hangers

In addition to the standard hangers shown on the preceding page, pellet arresters are available with special hangers as shown in the following sketches. Arresters with special hangers have the same price as arresters of the same rating, with standard hangers. To determine the number of an arrester with a special hanger, first select the standard arrester from Tables 1, 2, 3 or 4, and then refer to Table 5 for the number of the corresponding arrester with the special hanger desired.

G-E Neutral Gaps
Altitude, 0 to 6000 Feet

No. 9LA11A1

No. 146187

These neutral gaps are plain gaps having an impulse spark-over voltage of about 15 kv. crest on the A.I.E.E. standard impulse test, and embody no valve element. They are for application on the neutral wire of the usual ground-neutral 3-phase, 4-wire primary systems, where the neutral wire voltage to ground does not exceed 300 volts rms.

No. 9LA11A1 embodies the same desirable features of construction and mounting that are incorporated in the standard pellet arresters for protection of the phase wires.

No. 146187, being less expensive, does not possess the refinements of No. 9LA11A1. Unit has a ground lead similar to the line lead, and is mounted on crossarm by wood screws.

*No.	Each	Ship. Wt. Lb., Each
9LA11A1	\$5.50	4
146187	3.50	1 $\frac{3}{16}$

*Use on neutral wire of 3-phase, 4-wire circuits having the neutral solidly grounded only at the substation, if voltage of neutral wire to ground is not over 300 volts rms. If, because of unbalancing, voltage of neutral wire is between 300 and 1000 volts, use No. 9LA10A1 pellet arrester. Use standard pellet arresters on phase wires.

Send for Bulletin GEA-2975 for complete description.

G-E Isolating Gaps

For Distribution Circuits 15 Kv. and Below

G-E porcelain-enclosed isolating gaps effect efficient interconnection through a gap, where it is desired to isolate the primary lightning-arrester ground from the secondary neutral. These gaps can also be used wherever distribution-transformer tanks are to be grounded through a gap.

Nos. 9LA11A1, A2, and A3 with Mounting Hanger

Standard spark-potential ratings have been established at 6, 11 and 15 kv. rms. These ratings are average values subject to about 10% tolerance, plus or minus.

Nos. 9LA11A5, A7, and A9 with Mounting Hanger

Nos. 9LA11A1, A2 and A3 gaps are sturdily constructed, and have no exposed live parts. Nos. 9LA11A5, A7 and A9 gaps are smaller, and designed for mounting on a pole, crossarm, transformer tank, or for suspension from a line conductor.

No. 9LA11A1 gap (6-kv. spark potential) is recommended as a primary-neutral arrester for protecting the neutral side of distribution transformers operating on grounded-neutral systems with the system neutral grounded only at the substation, and where the neutral potential does not exceed 300 volts rms.

No.	Each	Primary-Circuit Voltage	60 Cy. Rms. Spark Potential Kv.	Impulse Spark Potential Kv.

Send for Bulletin GEA-2976 for complete description.

G-E High Voltage Thyrite Distribution Lightning Arresters

For Circuits 20 to 73 Kv.

Nos. 9LA2D59 to 9LA2D62 Inclusive

The G-E Thyrite distribution arresters, frequently called "line-type," afford economical lightning protection for small substations and apparatus on systems in the voltage range from 20 to 73 kv. Their low cost, small physical size, light weight, good impulse protective characteristics, new features of mechanical design for flexibilities of applications, and a variety of mountings make these arresters particularly adaptable to, and commensurate with, the numerous small or medium-sized substations where the economic considerations do not justify the larger and more expensive station-type Thyrite arresters. While not possessing the large cross-sectional area of discharge path, heat-storage capacity, endurance, and overall reliability of the station-type arresters, the line-type arresters do possess refinements of construction and performance characteristics not before available in high-voltage distribution arresters.

The impulse breakdown voltage to start discharge and the IR voltage drop during discharge are about equal and are well below impulse basic-insulation levels or standard impulse test levels of modern transformers and other apparatus. On A.I.E.E. standard impulse test, the arresters will limit the impulse voltage to about 2.5 times the crest value or reseat rating of the arrester.

Thyrite shunted series gaps, combined with the Thyrite shunted series gaps, result in limiting both magnitude and duration of power follow-current after discharge. The excellent valve characteristics interrupt the small power follow-current in not more than a half cycle.

Some of the distinctive features of these arresters are:

- Good impulse protective characteristics.
- Thyrite shunted and shielded gap construction.
- Interchangeable line and ground connections.
- Liberal discharge capacity.
- Interchangeable unit construction.
- Sealed from moisture and atmospheric influences.
- Simplified mounting.
- Small physical size and light weight.
- No service maintenance.

The standard arresters are designed for direct base mounting either on foundations or on substation steel members.

By the addition of mounting brackets, the arresters are easily mounted on a single crossarm, on a substation wall, or on structure cross members.

The addition of an eyebolt-cap casting permits suspension mounting.

See the following page for specifications and arrester mounting accessories.

Send for Bulletin GEA-2978 for Complete Description

G-E Low Voltage Pellet Type Lightning Arresters

0 to 650 Volts—Altitude, 0 to 6000 Feet

No. 9LA10A202 Single-Pole Pellet Arrester with Mounting Bracket

No. 9LA10A204 Double-Pole Pellet Arrester with Mounting Bracket

For outdoor service, crossarm or pole mounting, on railway signal lines or secondary power lines, for protection of railway signal transformers, distribution-transformer secondaries, autotransformer boosters, cables, and other line apparatus in the 0 to 650-volt class.

The single-pole arrester unit consists of a series gap and a pellet valve column completely housed in a wet-process porcelain container. The series gap has two electrodes, separated by a porcelain spacer and sealed within a gap chamber completely isolated from the pellet valve column. This sealed gap chamber in the upper part of the container prevents the entrance of moisture and makes the arrester operation independent of atmospheric conditions. The pellet valve column in the lower part of the container prevents the flow of system power current following discharge.

The double-pole arrester consists of two single-pole units mounted in a single hanger. This arrester is economically advantageous on single-phase, 2-wire circuits.

No.	Each	No. of Poles	Circuit Voltage Rating Rms.	Maximum Permissible Line-to-Ground Voltage, Rms.	Ship. Wt. Lb.
*9LA10A202	\$6.00	1	0-650	650	2
†9LA10A204	12.00	2	0-650	650	4

*Use two arresters at each single-phase installation and three arresters at each 3-phase installation.

†Use one arrester at each single-phase installation.

G-E Thyrite Meter or Service Protectors

0 to 650 Volts—Altitude, 0 to 6000 Feet

No. 9LA12B3 Three-Pole Thyrite Protector for Indoor Installation

No. 9LA12B6 Three-Pole Thyrite Protector for Outdoor Installation

For protection of watt-hour meters, industrial power service entrances, or consumer apparatus and appliances on single or polyphase secondary circuits or services in the 0 to 650-volt class.

The case of the protector is of drawn aluminum. Each single-pole assembly has a series gap and a Thyrite disk valve element 3 inches in diameter and 5/16 inch thick. These single-pole elements are mounted in a Textolite container, and one, two, or three of these assemblies (for single, double or three-pole protectors respectively) are sealed within the outer aluminum case. The bottom of the case bears complete nameplate data.

Indoor Service—For Mounting to Knockout Hole

The indoor design is arranged for mounting directly in a knockout hole in the meter case or connection box.

No.	Each	No. of Poles	Circuit Voltage Rating Rms.	Maximum Permissible Line-to-Ground Voltage, Rms.	Ship. Wt. Lb.
9LA12B1	\$14.00	1	0-650	650	3
9LA12B2	19.00	2	0-650	650	3½
9LA12B3	22.00	3	0-650	650	4

Outdoor Service—For Separate Bracket Mounting

The outdoor design is provided with a conduit weather cap and mounting bracket as illustrated.

9LA12B4	\$16.00	1	0-650	650	3½
9LA12B5	21.00	2	0-650	650	4
9LA12B6	24.00	3	0-650	650	4½

Number of Arresters Required at Installation

Use two single-pole arresters at each single-phase installation. Use three single-pole arresters at each 3-phase installation. Use one 2-pole arrester at each single-phase installation. Use one 3-pole arrester at each 3-phase installation.

G-E Pellet Meter or Service Protectors

115/230 Volts—Altitude, 0 to 6000 Feet

No. 9LA15A1 Pellet Protector for Direct Metal-Clad Mounting to Bottom Knockout Hole

No. 9LA15A3 Pellet Protector with Bracket for Separate Mounting

For 115-volt, single-phase, 2-wire; or 115/230-volt, single phase 3-wire grounded neutral, secondary services. For indoor or outdoor service.

Pellet protector is a two-pole device having two line leads and one ground lead, as required for typical 115/230-volt, single-phase, three-wire secondary services. The protector has a porcelain interior containing the two single-pole pellet valve elements, all housed within a cylindrical drawn-aluminum case with threaded nipple. Each pole of the protector has a pellet column designed to give valve action up to 175 volts rms. line-to-ground. This provides a sizable margin in rating above the normal 115 volts or 120 volts phase-to-ground on this class of secondary circuits.

The indoor protector is designed to permit direct mounting in the knockout holes of a service switch, fuse box, meter-connection cabinet, or meter case. In some applications it may be preferable to locate the protector on the building wall at the point where the exposed secondary circuit enters the conduit gooseneck or the service cap of the enclosed service wiring. Therefore, another design is provided for such separate outdoor mounting.

No.	Each	Maximum Permissible Line-to-Ground Voltage, Rms.	Type of Mounting	Net Wt. Lb. Each
9LA15A1	\$5.50	175	{ Mounting to Bottom Knockout Hole Mounting to Side Knockout Hole Separate Bracket Mounting }	2
9LA15A2	6.50	175		2½
9LA15A3	6.00	175		2½

Send for Bulletin GEA-2977 for Complete Description

G-E Station Type Thyrite Lightning Arresters Altitude, 0 to 6000 Feet

The G-E Form E station-type Thyrite lightning arrester combines refinements of mechanical construction and improved electrical characteristics which establish a new standard of protective efficiency and over-all dependability.

Designed for protection of service continuity as well as apparatus insulation, the Thyrite arrester provides excellent valve performance which prevents system disturbances or outages as the result of lightning discharges.

The Thyrite arrester can be applied indoors or outdoors for the protection of either large or small generating or substation equipment, on either grounded or ungrounded neutral systems, and over a voltage range of 2.3 to 287 kv.

The simplicity of design and the small space requirement make this arrester ideal for mounting directly on power transformers and unit substations or for mounting on substation steel structures, as well as on concrete foundations or piers.

Possessing every mechanical and electrical feature known to the art for reliability, endurance, fidelity of protective performance, and economies of application, the Thyrite station-type arrester should be applied at generating stations and substations where either the investment in equipment to be protected or the importance of service continuity warrants the highest degree of protection.

The unexcelled protection record established by Thyrite station type arresters in service operation over the past nine years, and the demonstrated economies of their interchangeable unit construction, are notable evidence of the soundness of investing in this class of protection.

Distinctive features of these Thyrite station type arresters include:

- Excellent protective efficiency.
- Enormous discharge capacity.
- Thyrite-shunted and shielded gap construction.
- Interchangeable unit construction.
- Freedom from moisture or atmospheric influences.
- Ease of installation.

The following information applies to single-pole arresters. For 3-phase circuits, use three single-pole arresters.

Send for Bulletin GEA-1304 for complete description.

9LA1E35	1096.00						660

*Use only when the system neutral is solidly grounded.

†Select arrester according to "Circuit Voltage." However, the "Maximum Permissible Line-to-Ground Voltage" denotes the margin for rises above the normal line-to-ground system voltage, and should be considered for poorly regulated systems or for doubtful reliability of system neutral grounding, or any other operating conditions by which the line-to-ground voltage might exceed this "Maximum Permissible" rating.

‡Arresters of these ratings can be supplied for mounting in a 3-phase single-stack assembly as shown. If the 3-phase, single-stack mounting is desired, order by the following numbers which include one base casting, one special insulating unit, three single-pole arrester units, and one cap casting:

Parts for Station Type Thyrite Arresters

§ Does not include cap or base castings.
¶ Can be supplied instead of standard base.

G-E D.C. Capacitor Type Arresters

For D.C. Railway Circuits

751-2000-Volt D.C. Capacitor Type Arrester

The protection of d.c. electric transportation systems involves principally the protection of d.c. generators or motors. This necessitates the reduction of

turn-to-turn stresses as well as major insulation stresses from line to ground. D.c. capacitor type arresters, because of their inherent characteristics in sloping off the lightning-wave front as well as reducing the amplitude of the wave, provide a high degree of protection for such systems.

As with any lightning protective device, the d.c. capacitor type arresters should be installed from line to ground in close shunt relation to the insulation of the apparatus being protected. At generating stations or substations, an arrester should preferably be installed on each outgoing d.c. feeder in addition to an arrester on the generator or converter bus.

An arrester should also be installed on each locomotive, multiple-unit car, trolley car, or trolley coach, for protection of motor propulsion equipment and lighting and control circuits. In the case of equipment operated on steel rails, the arrester should be connected from line to the steel frame of the equipment and may be located on the roof close to the pantograph or trolley pole, or under the locomotive or car. When used on trackless trolley coaches, the arrester

should be connected from positive to negative trolley poles, without any connection to the frame of the coach, because the latter is isolated from ground by the pneumatic tires.

Where radio frequency choke coils are present on any rolling stock, the arrester should always be connected on the line side of such choke coils.

When arresters are applied directly on a generating station or substation bus, suitable provision for disconnecting and for

2001-3900-Volt D.C. Capacitor Type Arrester

short-circuit protection should be included. Similar protection by external series fuse may also be desired with arresters installed on locomotives or cars. D.c. fuses are available for circuit voltages up to 3000 volts.

If a fuse is used in series with the arrester, it should have low internal resistance (less than 1 ohm) and should not be less than 15-ampere rating to avoid unnecessary fuse blowing by lightning current passing through the fuse.

The arrester should be placed so as to obtain the minimum physical length of connecting leads between the arrester and the apparatus, and the ground lead should take the most direct path to ground.

No.	Each	Circuit Voltage Permissible Rating Rms.	Maximum Permissible Line-to-Ground Voltage, Rms.	Ship. Wt. Lb. Each

*18F34	206.00	2001-3900	3900	62

*Includes mounting bracket.

Crystal Valve Lightning Arresters

Distribution Types—300 to 25,000 Volts A.C.

Crystal valve lightning arresters are regularly supplied with line leads of No. 6 B & S gage stranded cable 18 inches long and with stud terminals for ground connection. They may also be obtained with line Stud-Ground Lead, Line Stud-Ground Stud or Line Lead-Ground Lead construction.

Arresters listed are fitted with standard cross arm mounting brackets as illustrated. Various other types of brackets for special conditions will be supplied at no extra cost.

For altitude 0 to 6,000 feet.

Crystal Valve A.C. Lightning Arresters

All voltages specified are maximum phase to phase voltages.

For straight single phase circuits use arresters recommended in Table No. 1.

Treat single-phase circuits split from 2-phase, and single and 2-phase circuits split from 3-phase circuits in accordance with the recommendations covering the particular type of circuit from which they are split.

For 2-phase 4-wire ungrounded circuits use arresters recommended in Table No. 1. For 2 phase 3-wire circuits with ungrounded neutral use arresters recommended in Table No. 1 for the phase wires; for the neutral wire use arresters rated at 71 per cent of the phase to phase voltage.

For neutral wire of 3-phase 4-wire ungrounded Y circuits use arresters rated at 58 per cent of the phase to phase voltage.

For neutral protection on either 2 or 3-phase circuits where the neutral is solidly grounded, use Types T-300, N or NS arresters. If due to unbalancing, the voltage between neutral and ground is between 350 and 750 volts, use type CV Form D arrester.

Type CV
With Cross-Arm
Mounting
Bracket

Form 11 arrester is designed for application to systems having phase to phase voltages of from 15,000 to 25,000; these include Delta systems, Y systems with solidly grounded neutral, and Y systems with ungrounded neutral. On a 4-wire ungrounded Y system form 11 arrester should be used on the phase wires while the form 10 arrester should be used on the neutral. On 4-wire Y systems with solidly grounded neutral, for neutral protection use Type T-300, N or NS arresters. If, due to unbalancing, the voltage between neutral and ground is above 350, use any of the listed Crystal Valve Arresters rated for the maximum voltage existing between neutral and ground.

Matthews Porcelain Housed Disconnecting Switches

For 7500 Volts or Less

Efficient, enclosed disconnecting switch.

Excellent grade cast porcelain housing with ample dielectric and mechanical strength. Compact with no excessive weight.

Can be furnished with silver contacts and quick break blades.

No. 275, 200-Ampere Rating.....	each	\$9.25
No. 475, 400-Ampere Rating.....	each	10.25
No. 675, 600-Ampere Rating.....	each	13.75

Three-E Clamp Insulator Supports

Type CIL
Pipe Mounting

Type CIL
Flat Mounting

Type MIL
Flat Mounting

Consists of porcelain spools held by metal clamps. The lower half is made of heavy pressed steel and the top half of heavy pressed non-ferrous metal. Also available with a heavy cast malleable base instead of pressed steel.

Can be used on either a.c. or d.c. service. Available for conductor sizes ranging from 3/16 to 3 1/2 inches.

Three-E Bus Clamps

Heavy Duty

Type AD

Type HD

Available for all sizes of bus bars used commercially. The extra heavy duty type is recommended where a large number of bars is used to carry currents of high amperage.

Medium Duty

Type AM

Type HM

For average conditions in central station and industrial plant work. Both heavy and medium duty clamps are available for a.c. or d.c. service. Type of service should be specified when ordering.

Three-E Outdoor Bus Supports

Type BFU

Type AFU

Type HFU

Type BPU

Type APU

Type MPU

Type HPU

Type RPU

Type FPU

Type MFU

Type RFU

Type FFU

The Three-E line of Outdoor Bus Supports is complete in every respect. It includes upright and underhung types for carrying: flat bars in vertical or horizontal positions or round conductors. Fittings are available for pipe mounting. Adjustable adaptors can be supplied to permit 90° adjustment on bus clamps. Three-E Bus Supports use outdoor insulating units which meet N.E.M.A. Standards for dimensions and performance, supplied in all ratings to 69,000 volts.

Three-E Form A-1 Indoor Bus Supports

For Flat Vertical Bus Bar

Type HF

Type AF

Type HP

Type AP

All bus supports illustrated are the Form A-1. Heavy pressed steel mounting bases are used on this form of bus support.

These supports are available for voltages from 5000 to 34,500 and the cantilever strength at insulator cap. of 6000 inch pounds.

Indoor bus supports are also furnished in what is known as Form A. This form uses heavy cast malleable bases.

For Round Buses

Type RF

Type RP

Three-E Potheads Indoor Types

A complete line of Three-E indoor potheads is available in both open bushing and capnut styles. Aerial lugs, pothead bodies and entrance flanges can be supplied in all shapes and sizes to fit almost every installation requirement. Furnished as standard in 1, 2, 3, and 4 conductor units in all commercial ratings. Special potheads are also available.

Disconnect Potheads

Disconnect heads and dummy caps and studs are available as standard units to fit Three-E Capnut style Potheads shown.

Flexibility of these disconnect heads in fitting standard pothead studs has proved to be a very economical means of converting regular potheads into the disconnect type.

Outdoor Capnut Potheads

Suitable for either indoor or outdoor service these potheads feature one piece bodies with clamped bushings and front inspection plate. Construction is air and oil tight. Can be supplied as standard with many body styles and various types of entrance fittings to fit all requirements.

Outdoor Open Bushing Potheads

Available in 1, 2, 3, and 4 conductor units in voltages of from 2300 to 34,500.

Bushings inverted for full weather protection. Ideal for pole mounting.

Three-E Electrical Copper Fittings

For Wire, Cable, Rod, Tubing and Bar

Only a very small portion of the Three-E line of copper fittings is shown in the above illustration. Clamp and solder types are available to meet practically every requirement in connecting wires, cables, rods, tubing and bars.

Only the best grade of electrolytic copper is used in Three-E connectors and careful machining is a major feature.

Three-E Iron Pipe Fittings

The above illustrations show but a small portion of the Three-E line of pipe fittings. Fittings can be supplied for the commercial pipe sizes in all manner of shapes to meet most any condition.

Ask for Bulletin Giving Complete Information

Three-E Isolators

5 K.V. Telescoping Isolator

15 K.V. Telescoping Isolator

15 K.V. Cable Isolator

Typical Installation of Telescoping Isolators

Three-E Isolators have completely revolutionized disconnecting methods and cubicle design. Isolators consist of telescoping tubular current carrying parts operating within telescoping insulating bushings. Unique and compact design permits great savings to be made in space requirements, steel enclosures, etc., since Isolators occupy no more space in open position than in closed position while still maintaining proper clearances. Bushings are arranged for easy taping and live parts are fully enclosed, making accidental contact by the operator an impossibility.

Isolators are built in many forms to meet any installation problems and for interlocking with other equipment. Isolators are furnished in 1, 2, 3, and 4 pole units ratings of 200 to 2,000 amperes, and 5,000 to 15,000 volts.

Three-E Indoor Type Disconnecting Switches

The double blade type of construction is used throughout, giving the advantages of low temperature rise, self-aligning contacts, etc. The clips are cast copper.

Built for voltages from 110 to 34,500 and ampere capacity from 100 to 5,000.

Switches can be supplied in all combinations of front and back connection, of the single throw, double throw, and transfer types with or without blade locks, for flat or pipe mounting on steel, slate, marble, ebony asbestos and alberene stone.

Insulating barriers, blade stops, and terminals can be supplied for all switches.

Single Throw and Double Throw Types

Three-E Outdoor Disconnects

Available in single and double throw. Tandem transfer and double blade transfer in upright, vertical and underhung mountings, rating from 400 to 2000 amperes, and 7500 to 69,000 volts.

Equipped with horn type locks and N.E.M.A. standard insulators.

Distribution and Rural Line Disconnects are furnished in standard sizes of 200 to 400 amperes and from 7.5 to 34.5 K.V.

The 400 and 600 ampere Line Suspension Switches for all spans supplement a very complete and high quality line of Three-E Outdoor Disconnects.

Three-E Outdoor Fuse Disconnects

Type F.V.H.

Available as expulsion Fuses or arranged for use with S & C liquid fuses.

Furnished in all standard ratings and mountings for stick operation.

Features simplicity and easy fuse replacement.

Three-E Indoor Fuses and Fuse Mountings

Available in disconnect type as shown or in permanent mounting styles.

Furnished in all standard ratings and mounting—Styles with or without locks.

No. 8900-L Type Three-E Air Break Switches

A rural line switch for pole top mounting features ease and flexibility of mounting. Arranged for cross arm or steel structure mounting and equipped with forged rings for strain insulators.

Used with Wood or steel shafts and Pivot sleet hoods for easy operation 7500 to 34,500 volts sizes in 3 and 4 pole units.

No. 8900-U Type Three-E Air Break Switches

Same as No. 8900-L Type except supplied with three insulators per pole. Features simplicity of design, high quality materials, and careful construction. Pivot sleet-hoods, snap-break arcing horns, double clamp terminals furnished as standard equipment.
Available from 7500 to 34,500 volts.

Three-E Hand Control Mechanisms

Reciprocating

Torsional

Hand operating mechanisms for remote control of switches are available in rotating or reciprocating types and furnished with locking pins. These handles are very flexible in design and can be used to advantage wherever remote control is desired.

No. 6600 Type Three-E Sidebreak Switches

Furnished for rural service as pole units or for stations.

Pivot sleethoods standard on station types. Also available in No. 6200 style with three insulators and double break.

Standard ratings from 200 to 1200 amperes, and voltages to 161,000.

Three-E Motor Control Mechanisms

Automatic motor control of either torsional or reciprocating action for correct operation of all Three-E gang operated switches is available in the OM-100 motor mechanism.

Equipped with auxiliary hand operating handle and completely sealed against dust and moisture. Internal heating unit keeps inside parts dry and always in condition for instantaneous operation

No. 8400 Three-E High Pressure Switches

Features balanced high pressure. Unusually fine design remarkably easy to operate in all weather conditions. Pressure is predetermined and does not vary. Contact surfaces are self-cleaning. Patented limiting sleeve removes 90% of the strain on current carrying parts. A long-life switch for heavy duty service at low maintenance cost. Operated by hand or motor mechanism. Ratings to 161 K.V. standard.

Three-E Complete Substations

Type PH Three-E Indoor High Pressure Switches

A simple yet dependable pressure switch for stick operation individually or in gangs. Uses left and right hand threaded stud principle to establish high pressure.

Contacts are self-cleaning.

Furnished in ratings of 1200 to 6000 amperes from 5 to 15 K.V. Also available in outdoor types for stick or gang operation.

More than thirty years of designing and building substations of all sizes and types, both indoor and outdoor, have equipped Three-E engineers to give you the utmost in modern, correct substations that will prove to be economical and require a minimum in the way of maintenance costs.

Three-E engineers are always available to help you with your designing, building, or operation problems.

G & W Potheads

Unusually high factors of safety, generous clearances, liberal designs and accurate fit of separate parts are general characteristics of G & W Potheads.

Type T Capnut

Type T Capnut Style is a logical choice for general installations—indoors as well as outdoors. The positive seal against entrance of moisture also prevents leakage of compound and cable impregnating oil. Capnut potheads will withstand appreciable internal pressure and will provide the necessary protection to paper insulated cables. Available as standard for all voltages and conductor sizes, single and multiple conductor. Specify Type T for outdoors and Type NT for indoors.

Type ES is used wherever the disconnecting feature will add to the convenience of system operation. Inasmuch as all live parts are enclosed in porcelain, they provide a desirable protection in close quarters, indoors or outdoors. This pothead provides hermetically sealed protection to single and multiple conductor cables. Available in three ampere ratings, 100, 250, and 500; and in three voltage ratings, 5,000, 7,500, and 15,000. Gang operated disconnecting potheads are a further convenience for quick isolation of circuits.

Type ES Disconnecting

Type N Straight Through

Types N, P, and L are for varnished cambric and rubber insulated cables; these are straight through style potheads and can be used indoors (or outdoors up to 600 volts). The conductors pass through the pothead without splicing and no sealing connectors are used. Hence, this style should not be used on paper insulated cables if there is an appreciable static pressure head, because taped up bushings and asphalt base compound will not seal cable oil under pressure.

Type P Porcelain Lid, 6600 Volts Indoor

Type L, 600 Volts Outdoor

Type C Flexible Band Cable Support

Type T

Type ES

Type A

Type B

Control Cable Heads

With or without conduit fittings on top end. Bakelite lids are furnished with proper number and size of holes for conductors. Also suitable for motor connections.

Standard Shapes of Multiple Conductor Potheads

Shape B

Shape C

Shape D

Shape BY

Shape BW

Shape BK

Shape BU

Shape BT

When ordering potheads, specify type of pothead (and whether outdoor or indoor); No. of conductors and size of conductors; voltage rating of pothead (or circuit voltage); shape of pothead, if multiple conductor; cable diameters (also style of base fittings); and whether G & W Novoid compound is wanted.

Interchangeable Base Fittings

Wiping Sleeve—"WS"

Clamp ring and stuffing box. Invert when used with CC. Symbol—"CR-SB"

Plain stuffing box. Can be drilled on job to cable size. Uses cord packing. Symbol—"SB"

Symbol—"PB" & conduit coupling "CC"

Symbol—"CR-SB" & armor clamp "AC"

Conduit Bell for Closing Top of Conduit and Supporting Cables

International Creosoted Pine Poles

Old Lines of International Creosoted Pine Poles—25 Years in Service
In Above Lines—6712 Poles— $\frac{1}{2}$ of 1 Per Cent Replaced to Date (1933)

General

Graybar Electric Company brings to the utility trade the highest quality in creosoted pine poles and offers for support of this statement the fact that its supplier has more long-time service records of poles without failures than any creosoting concern. Low annual cost, reliability, the fact that in times of financial stress or weather hazard the utility company *needs lines that will stand without failure*, all of these have dominated us in our creosoted pine pole policy.

International As A Supplier

Our supplier, International Creosoting and Construction Company, organized in 1875 and one of the largest commercial creosoting concerns in the business, has an outstanding record and a dominant place in the treating industry. We call special attention to the records of old and new lines cited in this concern's photographs here shown. They are typical, and a few of the many available.

Operating in one of the finest timber-producing areas in the South-West, International has added to its advantages of location and natural resources the skill of graduate chemical engineers and treating operators whose work is conducted in modern plants and well equipped laboratories. Pioneered and trained by a background of 65 years experience, International timbermen select the cream of the timber area (surpassing even the quality of the lumber logging operations) for the manufacture of Graybar-International poles. This production moves to conditioning yards at the treating plants by means of a highly developed and well organized concentrating system. The yards themselves have been built in conformity with Government seasoning recommendations.

Always using only one grade, and that the best grade of creosote in the treatment of its poles, and standing against every tendency towards departures in quality or reduction in quantity of the preservative that would make of the user's line an experimental laboratory, Graybar-International creosoted pine poles have gone to almost every state of the Union and without exception have given outstanding service.

Reasons For The Standing Of The International Pine Pole

- | | |
|--------------------|---------------------|
| 1—Long Life | 5—Cleanliness |
| 2—Low Annual Cost | 6—Fire Resistant |
| 3—Great Strength | 7—Bird Resistant |
| 4—Lasting Strength | 8—Termite Resistant |

The utilities of the United States use more creosoted pine than all other treated poles put together. Only briefly need their qualifications be given to account for this preference. The tall straight pine trees of the South are natural poles. They grow with a gradually tapering stem, practically without branches, and when sheared of their bark and browned as the result of treatment, they present a stately appearance in the line. Their wood is the strongest of the poles commonly used in line construction. Fortunately pine is a wood into which creosote goes very deeply during the course of scientifically controlled and proper treating operation, and the depth of this protection is the reason for the exceedingly long life of the pine pole. It is the explanation also of pine's resistance to termite attacks, for the checks which open in

every wood and expose it to the ravages of these insects do not go past the deep creosote penetration in the pine pole. Modern methods and advances in the science of wood preservation now makes available the creosoted pine pole so well manufactured in appearance, and with surface so clean that they are in use on the streets of New York, Detroit, Los Angeles, St. Louis, Baltimore, Boston, San Francisco, and thousands of other cities.

American Standards Association
Specifications for Southern Pine Poles

Approved June 20, 1931

Introduction

These specifications cover southern pine poles which are to be given a preservative treatment. The poles are to be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931), which is a part of these specifications.

The length and class of poles wanted and full details of the framing desired shall be stated in the orders.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

1.—Material Requirements

1.1—Species

All poles shall be cut from live southern pine timber: Longleaf Pine (*Pinus palustris*), Shortleaf pine (*Pinus echinata*), Loblolly Pine (*Pinus taeda*), Slash Pine (*Pinus caribaea*), and Pond Pine (*Pinus rigida serotina*).

1.2—Prohibited Defects

All poles shall be free from decay, red heart, cracks, plugged holes, and bird holes. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

1.3—Permitted Defects

1.31 BLUE SAP STAIN.—Blue sap stain that is not accompanied by softening or other disintegration of the wood (decay) is permitted under these specifications.

1.32 HOLLOW PITH CENTERS.—Hollow pith centers in the tops or butts of poles and in knots are permitted.

1.4—Limited Defects

1.41 CHECKS.—The top and side surfaces of poles shall be free from injurious checks.

1.42 SHAKES.—Shakes in the butt surface extending over not more than one-quarter ($\frac{1}{4}$) of the circumference are permitted provided they are at least one (1) inch distant from the edge of the butt. Shakes extending over more than one-quarter ($\frac{1}{4}$) of the circumference are permitted when they are inside of a circle whose center corresponds to the center of the butt surface and whose diameter equals one-half ($\frac{1}{2}$) of the average butt diameter.

International Creosoted Pine Poles

New Lines of International Creosoted Pine Poles—18 Years in Service
In Above Lines—4026 Poles—No Replacements to Date (1941)

Specifications for Southern Pine Poles

Continued

Shakes in the top surface whose width does not exceed one-sixteenth ($\frac{1}{16}$) of an inch are permitted provided they do not extend over more than one-half ($\frac{1}{2}$) of the top circumference.

1.43 SPLITS.—Splits are prohibited in the top surfaces of poles. Splits in butt surfaces are permitted provided that their height from the butt along the side surfaces does not exceed two (2) feet.

1.44 GRAIN.—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

1.45 INSECT DAMAGE.—Insect damage consisting of holes less than one sixteenth ($\frac{1}{16}$) of an inch in diameter is permitted.

1.46 KNOTS.—The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section shall not exceed the limits set up in the following table. Knots and knot cavities one-half ($\frac{1}{2}$) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

Length of Pole	MAXIMUM SIZES PERMITTED, INCHES		
	DIAMETER OF ANY SINGLE KNOT OR KNOT CAVITY	Sum of Diameters of All Knots and Knot Cavities in Any 1 Foot Section	All Classes
	Classes 1-3	Classes 4-10	
45 Ft. and Under	4	3	8
50 Ft. and Over	5	5	10

Knots one (1) inch or over in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged to a depth of not more than one-fifth ($\frac{1}{5}$) of the diameter of the pole at the point where the knot is located, to permit determination of the character and extent of decay. The gouging shall be done without unnecessary removal of sound wood, and in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging does not completely remove the decay (heart rot), the pole shall be rejected.

Knots under one (1) inch in diameter need not be gouged unless after trimming the presence of decay is revealed and upon further examination the decay is found to extend to a depth of more than two (2) inches.

When more than one (1) cavity is present in a pole, the sum of the depths of all cavities in the same six (6) inch longitudinal section of the pole shall not exceed one-third ($\frac{1}{3}$) of the mean diameter of that section.

1.47 SCARS.—No pole shall have a turpentine face or other scar located within two (2) feet of the ground line.

In other sections of the pole, scars which have been smoothly trimmed so as to remove all bark and all surrounding or overhanging wood that is not completely intergrown with the wood of the body of the pole are permitted, provided

(a) that such trimming does not result in abrupt changes in the contour of the pole surface and that trimmed scar does not have a depth of more than one (1) inch, except that where the diameter of the pole at the location of the scar is more than ten (10) inches the depth may be one-tenth ($\frac{1}{10}$) of the diameter; and

(b) that the circumference of the pole at any point on trimmed surfaces located between the butt and a point two (2) feet below the ground line is not less than the circumference of the pole at the ground line.

1.48 SHAPE.—Poles shall be free from short crooks.

A pole may have sweep subject to the following limitations:

(a) Where sweep is in one (1) plane and one (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

2.—Dimensions

2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles. Minimum allowable circumferences at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top, for each length and class of pole listed, are shown in this standard. Poles having circumferences which are greater, at the same points of measurement, than those shown for the length and class desired, shall be acceptable, provided that the six (6) foot from butt circumference is less than the minimum given for the second larger class pole of the same length. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

*No butt requirement on Classes 8, 9 and 10.

3.—Manufacturing Requirements

3.1—Bark Removal

Outer bark shall be completely removed from all poles. No patch of inner bark left on the pole surface shall be more than one quarter (¼) of an inch in width or more than four (4) inches long.

3.2—Sawing

All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth (1/12) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

3.3—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

3.4—Framing

All poles shall be framed in accordance with the terms of the order before they are subjected to the preservative treatment.

Gains on poles showing sweep or curvature shall be located on the concave side in the plane of the greatest curvature.

All gains on the same pole shall be cut so that their flat surfaces are approximately parallel. Conformance to this requirement may be tested by placing straight edges thirty (30) inches long on the faces of the finished gains so that the ends of the straight edges extend fifteen (15) inches on either side of the center line of the pole. The straight edges in any two (2) gains, when sighted in the direction of the longitudinal axis of the pole, shall not be out of parallel at their ends by more than one-sixteenth (1/16) of an inch. Bolt holes shall be bored perpendicular to the faces of the gains.

4.—Storage and Handling

4.1—Storage

When it is necessary for any reason to hold in storage poles offered under these specifications, they shall be stacked on creosoted or non-decaying skids of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. Poles shall be piled in such a manner as to permit free circulation of air and they shall be supported at all points at least one (1) foot above the general ground level, or any vegetation growing thereon. No decayed or decaying wood shall be permitted to remain underneath stored poles.

4.2—Handling

Pole tongs, cant hooks, and other pointed tools capable of producing indentations of more than one (1) inch in depth shall not be used on poles furnished under these specifications.

5.—Definitions of Terms

The following definitions shall apply in these specifications:

5.1—Fungous Defects

5.11 BLUE SAP STAIN.—Blue sap stain is a bluish coloration in the sapwood, caused by the action of certain molds and fungi, that is not accompanied by softening or other disintegration of the wood.

5.12 DECAY.—Decay is disintegration of wood substance due to the action of wood-destroying fungi. Rot and Dote mean the same as Decay.

5.13 RED HEART.—Red heart is the incipient stage of a destructive heart rot caused by *Trametes pini* that occurs in the living tree. It is characterized by a reddish or brownish color in the heartwood.

5.2—Insect Defects

5.21 INSECT DAMAGE.—Insect damage is the result of boring in the pole by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

5.3—Timber Defects

5.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

Heart checks are checks which extend from the pith center of the pole toward but not to the periphery of the pole.

5.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

5.33 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

5.34 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

5.35 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

5.4—Shape

5.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half (½) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

5.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in poles.")

5.5—Miscellaneous

5.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

5.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

6.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

7.—Subsidiary Standard

The foregoing dimension table is subsidiary to the text of these specifications: It is designated as:

American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931).

International Creosoted Pine Poles

Measurement of Sweep and Short Crook in Poles

Diagram 1—Measurement of Sweep in One Plane and One Direction

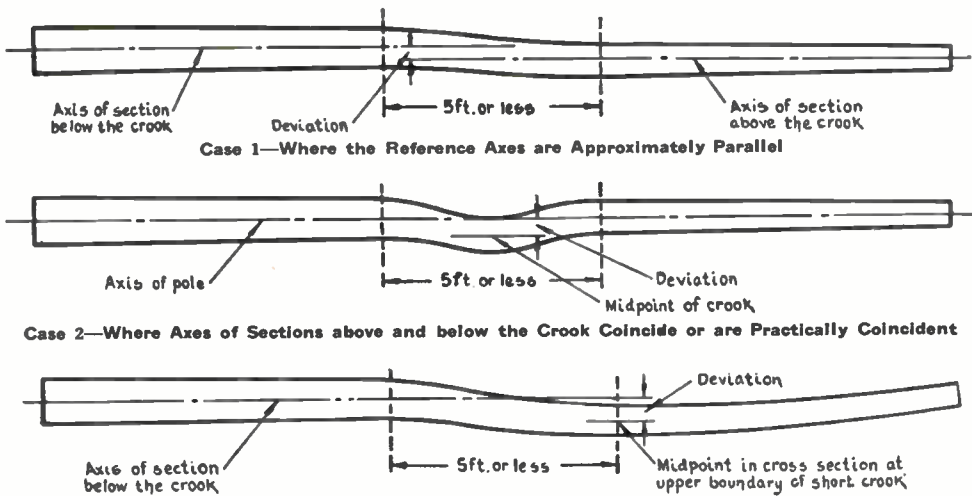

Diagram 2—Measurement of Sweep in 2 Planes (Double Sweep) or in 2 Directions in One Plane (Reverse Sweep)

NOTE: Diagram No. 2 applies to the measurement of double sweep in Western Red Cedar and Southern Pine

Poles. For measurement of double sweep in Northern White Cedar and Chestnut Poles, see text.

Diagram 3—Measurement of Short Crook (Three Cases Shown)

Case 3—Where Axis of Section above Short Crook is not Parallel or Coincident with Axis below the Crook

NOTE: The three cases shown under Diagram 3 are typical and are intended to establish the principle of meas-

uring short crooks. There may be other cases not exactly like those illustrated.

International Pine Poles have the Straightness and Symmetry of a Machined Product

International Creosoted Pine Poles

Stacks Such as Here Shown on One of International's Conditioning Yards Make Possible Our Quick Shipment of Quality Creosoted Pine Poles

*Specification for the Preservative Treatment of Southern Yellow Pine Poles

Rueping Empty Cell Process

*Note: A descriptive specification only. It must be recognized that specifications do not guarantee quality, and should not be regarded as adequate protection to the buyer. In any treated wood, the all important factor is the source of supply.

General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

Seasoning

Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least six inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

Seasoning By Steam

When time for air-seasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 254° F., not more than 259° F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible, which must be at least twenty-four inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least one hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

Top Dimension Poles

Top dimension poles conform in all respects to American Standards Association Specification poles, with the sole difference that top diameter poles specify minimum top diameter only; whereas A. S. A. Specification poles specify both minimum top circumference and circumference six feet from the butt.

Length Feet	TOP DIAMETER IN INCHES*							
16	4-5	5-6	6-7
18	4-5	5-6	6-7
20	4-5	5-6	6-7	7-8

8	...	5-6	6-7	7-8	8-9	9-10	...
9	...	5-6	6-7	7-8	8-9	9-10	...

*Note: Top diameter is determined by placing a tape around the circumference of the pole at the base of the roof.

What an Order Should Show

To avoid delays and prevent the possibility of error, an inquiry or an order for International poles should contain the following information:

- 1.—Name of consignee.
- 2.—Destination of shipment.
- 3.—Date shipment is desired.
- 4.—Number of poles required.
- 5.—Length and minimum top diameter.
- 6.—Number of pounds of creosote required per cubic foot of wood.
- 7.—Type of framing desired. A blue print or sketch is preferable. Poles can be framed more economically at a treating plant than in the field at point of installation. Insofar as possible therefore complete framing instructions are desirable.

International Creosoted Pine Poles

Specification for the Preservative Treatment of Southern Yellow Pine Poles

Seasoning—Continued

Initial Air Pressure

In the case of air-seasoned poles, Initial Air Pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the Initial Vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 lbs. to 100 lbs.) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

Treatment

The creosote shall be introduced between 170° F. and 210° F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 lbs. per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention, calculation being based on readings of the working tank gauges and the weight of the creosote at 100° F. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by overage in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

Penetration

The treating processes shall be directed toward complete sapwood penetration with the preservative.

Preservative

For preservative see Creosote Specification.

Note: A final retention of 8, 10 or 12 pounds of creosote per cubic foot are most frequently used. Of these, the 8-pound treatment is specified in the great majority of cases.

Standard Specifications for Creosote Oil
American Wood Preservers Association

Grade 1

- 1.—The oil shall be a distillate of coal-gas tar or coke-oven tar.¹ It shall comply with the following requirements:
- 2.—It shall not contain more than three per cent of water.
- 3.—It shall not contain more than 0.5 per cent of matter insoluble in benzol.²
- 4.—The specific gravity of the oil at 38° C., compared with water at 15.5° C., shall be not less than 1.03.
- 5.—The distillate, based on water-free oil, shall be within the following limits:
 - Up to 210° C., not more than 5 per cent.
 - Up to 235° C., not more than 25 per cent.
- 6.—The residue above 355° C., if it exceeds 5 per cent shall have a float test of not more than 50 seconds at 70° C.
- 7.—The oil shall yield not more than 2 per cent of coke residue.
- 8.—The foregoing tests shall be made in accordance with the standard methods of the American Wood-Preservers' Association. (See Manual—Creosote, Analysis.)

¹Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal-tar origin:

A.—Fraction distilling between 210° and 235° C. is usually solid or contains some solids when cooled to 25° C.

B.—All of the fractions up to 315° C. contain tar acids in varying amounts, usually at least 1 per cent calculated on the amount of the fraction tested. (See Manual—Creosote, Analysis, Tar Acids.)

C.—The specific gravity of the fraction between 235° and 315° C. is usually not lower than 1.025 and specific gravity of the fraction between 315° and 355° C. is usually not lower than 1.085 at 38° C. compared with water at 15.5° C. However, some pure coal-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

²Samples of oil taken from working tanks may show an increase in matter insoluble in benzol due to treating operations. Such increases provided they do not exceed by 1 per cent the specification limits should not serve to cause rejection of the oil for non-conformity with specifications if it can be shown that the original fresh oil was of specified quality.

Depth of Creosote Penetration

Increment Borer

The increment borer shown here is used for extracting sections of wood from poles to determine how deeply the preservative has penetrated into the wood.

The use of this instrument is recommended as one means by which the buyer can gauge the quality of the product he receives. It does not damage the pole and the only precaution is that a creosoted wood plug be driven into the hole after the boring has been extracted.

For adequate protection it is essential that creosote penetrates wood deeply (see discussion on penetration later in this section).

Prices for increment borers, on request.

Machine Trimming

All International poles are now being machine trimmed for their entire length. The machines are the most modern type that has been developed, and the depth of cut is uniform from top to butt. Only a light shaving is made to remove the knots and other protuberances. The grading into classes is done after the trimming.

Machine trimming has many advantages. The freshly trimmed surface facilitates seasoning. Unnecessary cutting into the body of the pole by hand trimming and gouging is eliminated. The appearance of the pole is greatly improved and bleeding is further reduced.

Characteristics of Quality Pine Poles

Status of Pine Poles

During a period covering the last several years, more treated pine poles have been used than all other treated poles put together. The utility that uses this commodity therefore is using the most generally accepted pole of the utility field. Important lines that must stand up under greatest stress and for the longest period of time are well built when built with quality-creosoted pine poles. Every sleet storm brings a further degree of proof of this fact. Bearing in mind the salvage value even of an abandoned line of creosoted pine poles, the costliness of individual pole failures, and creosoted pine's comparatively low annual cost, it seems difficult to think of any line not sufficiently important to justify their use.

Life of Creosoted Pine Poles

Whole lines of creosoted pine poles furnished by our supplier 25 and 30 years ago are still in use with practically no replacements, and are obviously good for many years to come. Many estimates have been made of the life to expect, and the Pennsylvania Electric Association, as the result of a study, estimated 35 years. This figure seems conservative with so many International creosoted pine lines now approaching that age and still in good condition. The

oldest lines still standing, and differences in climatic conditions, make it impossible to forecast definitely just what life to expect from the creosoted pine pole.

Section of the Chemistry Laboratory Scientific Control Is Essential

International Creosoted Pine Poles Characteristics of Quality Pine Poles

Continued

Value of Penetration

Uniform Penetration
Is a Criterion of Good
Treatment

Deep Penetration
Means Long Life
For the Poles

While several factors are important, and particularly the grade of preservative is important, no single factor has such bearing on the life and the quality of creosoted pine poles as the depth of creosote penetration and the uniformity of creosote penetration. Untreated wood of any kind commonly used for poles will decay eventually, and the only preventive is to have the penetration of the preservative deep and uniform and of proper grade. This is accomplished only when skilled technicians analyze the creosote and apply the treating process.

Strength

The standard for ultimate fiber stresses for the commonly used pole woods has been developed by the Sectional Committee on Wood Poles under the sponsorship of the Telephone Group, American Standards Association. These ultimate fiber stresses quoted verbatim are tabulated below.

Northern White Cedar.....	3600 lbs. per sq. in.
Western Red Cedar.....	5600 lbs. per sq. in.
Chestnut.....	6000 lbs. per sq. in.
Southern Yellow Pine (Creosoted)....	7400 lbs. per sq. in.

Fire Resistance

Fires that rage across the dry cane fields of Cuba crack insulators, melt steel, and burn untreated wood to ashes, but creosoted pine poles stand the flames. Such is the actual experience. Along almost every railroad right-of-way fire gangs burn the weeds each fall and it is a matter of common record that while untreated posts burn completely, creosoted pine poles are undamaged. Under these severe conditions the creosoted pine pole may take fire and smolder and smoke for a while, but finally the fire smothers itself out, leaving a practically undamaged pole. The action is analogous to a burning oil lamp wherein the wick though it forms the support for the flame is itself consumed very slowly.

Appearance and Cleanliness

Early in the history of the development of creosoted pine poles some question was raised as to their use on city streets. It was feared that the bleeding of some of the poles might cause trouble if the clothing of pedestrians rubbed against them. No longer are these objections heard either in protest or propaganda. International's care in timber selection, the skill of its production and manufacturing forces, and advances in the science of timber treatment all have contributed to relegate these objections to the background and to give to the business district and the residential street the security and economy of the creosoted pine pole. Graybar-International poles are in use in the business and residential districts of the largest cities of the United States, and in thousands of the smaller ones. The present-day pole is a clean pole. It is smooth and shapely and stands with the appearance of tapered wrought-iron pipe, rather than that of processed trees.

Termites

Termites are attracting more and more attention because of their attacks on poles. Formerly termites lived in the forests, but as the forests become depleted they seek shelter elsewhere and find their way into untreated structural wood. Untreated pole lines have been accused of acting as termite highways by means of which they could fly from pole to pole and then to residence; infesting new areas. It is a fact that termites have now been found in all but three states of the United States.

Creosoted pine poles are practically immune to termite attack. Even though checks in the wood may form, they do not go deep enough to expose untreated interior wood that would afford shelter for these insects.

Improved Roof

The illustration shows a new type of pole roof that many of the utility companies are standardizing upon. It is a one-way roof, cut at an angle of 15°. It is to be recommended. The advantages of this roof are:

1. Reduces Checking

A roof cut in this  manner leaves a minimum of wood along the center line, the natural cleavage point of the pole. This invites checking. The one-way roof eliminates this disadvantage.

2. Provides Better Drainage

As the roof of a pole weathers, the springwood rings of any species being softer than the summerwood, weather faster, causing the summerwood to stand out in ridges. On the two-way roof these ridges form retaining cups for rain water while on the one-way roof they drain.

3. Conserves the Preservative

Evaporation is a surface phenomenon. There is less surface on a one-way than on a two-way roof.

Marked Poles

Above is the mark by which Graybar-International poles are identified wherever found. This appears as a date-brand on the side ten feet from the butt of the pole; and is supplemented by an identifying brand on the top and the butt of each pole. These marks are conclusive evidence of our confidence in the quality of the product and the desire to be permanently identified with it.

Beware of unmarked poles. If in a few years they begin to fail, the experience is that it is impossible to tie them definitely to the source of supply. On the other hand when a company consistently uses high grade materials and good preservative treatment which result in long-time dependable service, the company willingly and permanently attaches its name to the product.

International Creosoted Pine Poles
Characteristics of Quality Pine Poles

Continued

THE TREND OF CREOSOTED PINE POLE USAGE IN THE UNITED STATES DURING THE PAST SEVEN YEARS

The use of creosoted pine continues to expand. Utility engineers know from experience that they get fine value for their pole dollar when buying creosoted pine, due to its many advantages. Some of these advantages are longer life, greater strength, lasting strength, less checking, safer to climb, and better appearance.

International Pine for City Use

International Creosoted Pine Poles in Street Lighting Service

Present day International poles are at home on city streets. They are remarkably straight, and with their smooth, black, machine-trimmed surfaces they appear like tapered steel pipes. The type of creosote used and the improved International treating procedure results in the production of poles which are so clean that they can be used in any city location. The fine appearance creates good public acceptance generally, and city fathers are well pleased when an attractive street lighting system can be installed at a surprisingly low price by using Internationals.

Hubbard Pole Dating Nails

No. 1940

Used for indicating the year or pole heights. Any two numerals may be ordered.

Square head, 5/16 inch. Square shank, 1/4 inch. Length, 2 1/2 inches.

Approximate shipping weight per 100 pieces, 5.5 pounds.

Smaller or special sizes of pins furnished on request.
 Brass eyelets packed 1000 per box.

Wood Pole Specifications

Values for the ultimate fibre stresses of wood poles were approved
by the American Standards Association November, 1930.

Western Red Cedar.....5,600 lbs. per sq. in.
Northern White Cedar.....3,600 lbs. per sq. in.

This Association adopted the principles given below as a working plan for the development of the specification circumference table in which table Classes 1 to 7 are defined primarily by their circumferences at 6 ft. from the butt and designed to meet the following breaking loads under the conditions imposed in Principle 4. Classes 8, 9 and 10, having no butt requirement, were defined by minimum permitted top circumferences only.

Class.....	1	2	3	4	5	6	7
Lb. Sq. In.	4500	3700	3000	2400	1900	1500	1200

These principles are:

1.—All tables shall be based on standard fibre strengths, for the respective species.

2.—The tables shall specify dimensions in terms of circumference in inches at six feet from the butt, except for classes of "No Butt Requirement," and circumference in inches at the top for poles of the respective lengths and classes.

3.—All poles of the same length and class shall have when new approximately equal strength, or in more precise terms, equal moments of resistance at the ground line.

4.—All poles of different lengths within the same class shall be of suitable size to withstand approximately the same breaking load, assuming that the load is applied two feet from the top and that the break would occur at the ground line.

5.—The smallest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 1200 pounds.

6.—The largest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 4500 pounds.

7.—The classes from the lowest to the highest shall be arranged in geometric progression, the increments between classes, measured in terms of breaking load, to be approximately 25 per cent.

A.S.A. Specification dimension tables will be found in this catalog under each species of timber we discuss.

The breaking loads of the various classes previously mentioned are translated into terms of moments of resistance at the ground line and the required ground line circumferences were calculated by using beam formula $Mr = 0.00264 \cdot fC^3$.

Mr is moment of resistance
 f is the standard fibre stress
 c is circumference in inches

In all classes and lengths the 6-foot circumference is usually larger than the minimums given in the table. Stating this in another way, the average 6-foot circumference for all lengths in any class is greater than one-half the difference between the class and the minimum of the next higher class. In general, too, the average pole of a given class will be considerably stronger than the rating for the class.

The basic principles upon which A.S.A. Specification tables have been worked out conform to and are consistent with the accepted engineering practice of the larger transmission and communication utilities.

While these simplifications and standardizations on a national scale are of great interest to our customers, we still retain a belief that they cannot replace our individual specialization of method, developed over twenty-five and more years in this particular field.

*No butt requirement.

Western Red and Northern White Cedar Poles

The National Pole & Treating Company supplier of Graybar Northern and Western Cedar Poles for more than 25 years has a well earned reputation for furnishing a quality product.

It maintains at the treating plants both a graduate chemist and a graduate timber pathologist who are charged with treating operations, oil analyses, yard sanitation and research, all important essentials in the manufacture of quality poles.

Pole Quality

Poles sold by the Graybar Electric Company conform to nationally accepted standards. Inspections are thorough.

Cedar presents the following qualities:

- | | |
|------------------|------------------|
| 1.—Strength. | 6.—Appearance. |
| 2.—Durability. | 7.—Cleanliness. |
| 3.—Stability. | 8.—Availability. |
| 4.—Light weight. | 9.—Safety. |
| 5.—Adaptability. | |

Processed Cedar Poles

The National Pole & Treating Company maintains at its concentrating yards trained workmen who, for a small extra charge, roof, gable and stain poles to specifications.

Cedar Pole Service

At Minneapolis, and Everett, Washington, cedar poles are concentrated, handled by steam equipment, etc. The stock runs 100,000 poles and more.

Emergency service is always available.

Preservative Treatment for Cedar Poles

One of the Butt Treating Vats Showing View of 130,000 Gallon Reserve Creosote Tank at Minneapolis Plant

Description

Years of scientific observation by engineers of the largest pole users in the United States has demonstrated that the life of cedar poles can be increased by proper open tank butt-treatment. If a satisfactory permeation is obtained in the ground line area, the life of a pole, butt-treated in creosote, will depend upon the mechanical wear of the pole above.

Unless there is a thorough and even permeation, decay will occur in small pockets and in checks through the treated wood.

Proper treatment more than doubles cedar pole value, as the original factor of safety is maintained far beyond the replacement date of the untreated pole.

Incised Treatment

Permex Method Worth More Money

The incised treatment of cedar poles is the logical development of the open-tank process.

The preservative value of creosote has been recognized for many years and, as a treatment for cedar poles, was first applied with a brush. However, it was found that the painting did not get the creosote into the smaller and deeper season checks and cracks, so the poles were dipped into the creosote. This treatment was named AA and was specified as a continuous immersion for fifteen minutes in creosote heated to not less than 212° F., and not more than 230° F. We are still prepared to furnish AA treatment, at some initial price saving if that is in special cases what our customers wish to buy.

The penetration secured by the AA treatment was so shallow and unreliable that the time of treatment was lengthened to a period of from four to six hours in creosote ranging from 212° F. to 230° F. and an immediately succeeding bath in cold creosote for two hours at not more than 110° F. This treatment was called B. (We will on special request quote and furnish B treatment.) By this process a deeper penetration was secured and better results in service were obtained, but it was found that the absorption was irregular. In fact, in seasoned timber of apparently the same condition, some poles absorbed the creosote readily and showed a good penetration while others gave evidence of one surface treatment. Likewise, in the same pole there might be a full sapwood penetration at one point, whereas, in an area but a few inches away there might be little penetration. This uneven absorption naturally led to very uncertain results in service because, after the poles were set in line and were subjected to the various conditions of the seasons with the resultant checking and parting of the fibres, the cracks descending from the upper untreated portion of the pole entered the treated area and where they ran through the shallow treatment they opened up and exposed untreated timber. This permitted the fungi to come in direct contact with the untreated fibres with the resultant infection and rotting of the wood within the pole behind the layer of treated timber. This action proved that any treatment was only as effective as the protection given by the shallowest penetration at any point in the ground line area.

This conclusion necessitated the development of a uniformly deep permeation. Much research and experimental work was done to develop a treating process which would give this result.

Permex Machine with Pole in Position Ready for Puncturing. The Oil Lift that Raises the Lower Carriage into the Head of the Machine and Acts as a Cushion while the Machine is in Operation

A microscopic study of cedar shows the wood to be very porous. It is made up of long, hollow longitudinal fibres which are spindle shaped cells, arranged in rings from the pith to the bark. These rings of cells form the annular rings. These fibres, besides furnishing support for the tree, provide means for the movement of the sap. Other than the longitudinal fibres are the medullary rays or cells which extend radially from the pith into the bark. There are no passages in the timber other than the cells within these longitudinal fibres and medullary rays and the sap moves from cell to cell through minute pits or pores which connect adjoining cells at their points of contact.

Western Red and Northern White Cedar Poles

Continued

Although cedar fibre will absorb from 12 per cent to 15 per cent of its oven dry weight in water it will not absorb creosote. Examination under the microscope, of treated cedar discloses creosote within the cells but shows no absorption in the fibre. Consequently, in order to obtain penetration in cedar the movement of creosote must be by means of the openings in the cells and not through the cell fibre.

If the conditions within the timber remained unchanged after being cut, not so much difficulty would be experienced in treating it, but such is not the case. The sap is a watery solution of sugars, starches, resins, etc., and, while the tree is alive, it is constantly in solution and circulating, but, when the timber is cut, peeled and begins to season, some of the water from the sap evaporated and concentrates the sugars and resins which seal up most, if not all, of the minute pits or pores between the adjoining cells.

Average Penetration of Punctured Section, $2\frac{1}{32}$ -Inch,
by our Permex Method

Treatment

Incised Method of Treatment for Cedar Poles Permex for Permanency

In our Permex treatment no external pressure is applied. The movement of creosote in the cells is entirely dependent on the action of capillary attraction. This is created by first applying heated creosote ranging from 212° to 223° F. for a continuous period of eight hours, thereby vaporizing the moisture in the sapwood, causing it to expand $1/273$ times its volume for every degree of heat through which it passes and partially expelling it from the timber, and then applying an immediately succeeding bath in cold creosote from 110° to 150° F. The cold treatment contracts the vapors, forms a partial vacuum within the cells and draws the surrounding creosote into the timber. This action creates an appreciable longitudinal creep or movement but does not produce much penetration radially or tangentially.

The loss in strength to a pole through incising has been determined to be in direct proportion to the percentage of the circumference cut away in a horizontal plane and to the depth of the incision.

A scientific machine for incising, therefore, must meet the existing structural conditions in cedar. Ours was designed to cut radial passages through the fibre just to the depth of the required penetration. The incisions cut the fibres and open the ends of the longitudinal cells, providing passage for the movement of creosote so that with the least amount of timber cut in a horizontal plane and with perforations only to the depth of the required penetration, a complete saturation of the fibre is obtained between all incisions.

There are many other incising machines in operation, but they have been designed with no consideration of the structure of cedar with the result that their perforations are made deeper than necessary and may be spaced so closely that the timber is weakened to a great extent, or the sapwood may be so mutilated that it is made no more than a loosely adhering shell. Even though such perforating may produce the required penetration, it is detrimental to the pole, inasmuch as the strength of the pole may be reduced and the sapwood may become a weakened shell which will not withstand the abuses of service.

Some apply incising by means of a studded belt or plate. These belts or plates are about eighteen inches long by six inches wide and contain from seventy-five to one hundred and twenty-five teeth. A mallet is used to pound the teeth into the timber. When the plate is removed, the teeth, which are binding the timber between them, tear the fibres and in some cases loosen the outer sapwood from the heartwood. It is practically impossible to obtain uniform depth of perforation and impregnation by using belts or plates because the body holding the teeth is not flexible and cannot follow the crevices and irregularities of the timber. On the other hand, the teeth of our machine are operated by automatic adjusting cams and inserted into the timber in such a way as to insure a uniform depth of perforation regardless of the uneven surface over which it has to work.

Incised Method Prevents Season Checking at Ground Line

It was thought at first that if the same penetration could be obtained in a cedar pole without perforating as with perforating, that better service results could be obtained. Experience has proven the contrary to be true. If creosote were not volatile, and if its preservative value were of indefinite existence, and if the layer or treated timber around the outside of the pole were never broken, then a creosoted area on the surface, regardless of depth of penetration, would be sufficient to preserve the pole indefinitely. It has been found, however, in green and even in seasoned poles that season checking occurs after the poles are set in line. But in perforated poles, these checks descending from the upper untreated section run out when they reach the treated perforated area. Thus the perforating protects the poles, not only in securing a deeper, more uniform impregnation, but also in providing means of relieving the stresses which cause checking in treated ground line section thereby insuring constant and complete protection against infection of the timber.

Incising Machines at Minnesota Transfer, Minn. and Everett, Washington

Two of these proper incising Permex machines are at the Minneapolis Transfer yard where the National Pole & Treating Company maintains an adequate stock of poles. A third machine is operated by the National Pole & Treating Company at Everett, Washington. These machines handle this work for us.

It is felt that studies by means of an increment borer could well be made by pole users. One large Central Station, whose engineers make such studies independent of the operating department, report informally that our Permex treatment was 30 per cent more efficient than some others.

Specification for Preservative Treatment Cedar Poles

Incised Process—A Guaranteed Penetration

A.—Seasoning

Poles shall be satisfactorily air seasoned under proper sanitary conditions.

B.—Shaving

All inner bark shall be removed from the groundline area of the pole; i.e., that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The amount of wood shaved off in the removal of the inner bark shall be limited to a minimum.

C.—Incising

All poles shall be incised throughout that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The depth of incisions shall be $\frac{1}{2}$ inch. A variation of $\frac{1}{2}$ of an inch in the depth of the incisions shall be allowed. The sapwood shall not be splintered nor loosened by the incising operation. The pattern and spacing of the incisions shall be such as to insure a uniform depth of penetration of the preservative throughout the incised area.

D.—Preservative

The preservative used shall be a distillate of coal-tar or coke-oven tar. It shall comply with the following requirements:

- 1.—It shall not contain more than 3% water.
- 2.—It shall not contain more than .5% of matter insoluble in benzol.
- 3.—The specific gravity of the oil at 38 degrees C. compared with water at 15.5 degrees C. shall not be less than 1.03.
- 4.—The distillate, based on water free oil, shall be within the following limits:
Up to 210 degrees C.—Not more than 5%.
Up to 235 degrees C.—Not more than 25%.
- 5.—The residue above 355 degrees C., if it exceeds 5%, shall have a float test of not more than fifty seconds at 70 degrees C.
- 6.—The oil shall yield not more than 2% of coke residue.
- 7.—The foregoing test shall be made in accordance with the standard methods of the American Wood Preservers' Association.

Treating Operations

E.—Plant Equipment

Treating plants shall be equipped with thermometers to indicate and record accurately the temperature of the preservative during all stages of treatment. The apparatus and chemicals for making necessary analyses and tests shall be available for use by the purchaser or purchaser's representative. All equipment shall be maintained in good working order.

F.—Length of Treated Sections

Poles shall be immersed in the preservative so as to completely cover the groundline area. The depth of immersion shall not exceed by more than two feet the height of treatment given in the table below. The following table shows the relationship between the height of groundline and the height of treatment from the butt end of the pole:

Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.	Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.
16	3 $\frac{1}{2}$	4 $\frac{1}{2}$	45	6 $\frac{1}{2}$	7 $\frac{1}{2}$
18	3 $\frac{1}{2}$	4 $\frac{1}{2}$	50	7	8
20	4	5	55	7 $\frac{1}{2}$	8 $\frac{1}{2}$
22	4	5	60	8	9
25	5	6	65	8 $\frac{1}{2}$	9 $\frac{1}{2}$
30	5 $\frac{1}{2}$	6 $\frac{1}{2}$	70	9	10
35	6	7	75	9 $\frac{1}{2}$	10 $\frac{1}{2}$
40	6	7	80	10	11

G.—Manner of Treatment

The treatment shall consist of two immersions; first, the hot immersion; second, the cold or cooling immersion.

Temperature and Duration of Hot Immersion

Poles shall be continuously immersed in the preservative at a temperature of 230 degrees F. plus or minus five degrees for not less than eight (8) hours and such period in addition thereto as will insure impregnation of the sapwood of the incised area with preservative to a depth of $\frac{1}{2}$ inch. In case the sapwood of the incised area is less than $\frac{1}{2}$ inch thick, the impregnation shall be to the full depth of the sapwood.

Temperature and Duration of Cold or Cooling Immersion

The preservative of the hot immersion may be allowed to cool in the treating tank or it may be replaced with cold preservative. When the preservative of the hot immersion is replaced with cold preservative, the exchange must be complete within ten minutes.

When the preservative of the hot immersion is replaced with cold preservative, the poles shall be continuously immersed in the cold preservative for a period of not less than two hours, and the temperature of the preservative for the entire period shall be between 150 degrees F. and the temperature at which solids form in the preservative.

When the preservative of the hot immersion is allowed to cool in the treating tank, the poles shall be continuously immersed in the cooling preservative at least two hours and until the temperature of the preservative has been reduced to a point between 150 degrees F. and the temperature at which solids form in the preservative. The poles shall remain immersed at this temperature for a period of not less than ten minutes.

The height of the preservative in the hot, cold, or cooling immersion shall be maintained at the same levels required in paragraph F.

H.—Impregnation

The results obtained under this specification shall be a uniform impregnation of the incised area with preservative to a depth of $\frac{1}{2}$ inch, except where the thickness of the sapwood is less than $\frac{1}{2}$ inch, in which case the impregnation shall be to the full depth of the sapwood. The depth of the impregnation shall be determined by testing with an increment borer at any point within the incised area. All such holes shall be filled with tight-fitting, thoroughly creosoted plugs.

Adherence to this specification results in not only the stipulated depth of impregnation, but also in a very large volume of preservative in the sapwood of the incised area, thus affording maximum protection against decay. No specific preservative content is mentioned owing to the difficulty of accurately making volume tests in the field. The presence of a large volume of preservative can be determined by observing the borings taken for penetration tests.
