HOW TO USE THE SECTION FINDER

A **BLACK GUIDE MARK** is printed on the outer margin of the first page of each section of this catalogue. In each instance the guide mark is printed directly opposite the wording on this end sheet which refers to the particular section.

1—Fold back the pages of the catalogue as shown in the illustration, which will expose the edges of the guide marks.

2—Place the thumb of the right hand on the mark opposite the marginal section which contains the kind of goods sought.

This will open the catalogue at the beginning of the desired section.

SECTION	PAGE	
1 INSIDE WIRING SUPPLIES	Wire, Cable, Cord, Reels	5
	Lugs, Connectors, Insulators, Tubes, Cleats	78

GraybaR

ELECTRIC COMPANY

—CATALOG No. 102—

We believe Graybar Catalog No. 102 to be the most complete electrical material catalog yet published. We have tried to include all frequently or widely used electrical items; but *if you don't see what you want listed in this catalog, ask your nearby Graybar office for literature and full information.*

•

PRICES IN THIS CATALOG ARE APPROXIMATE LIST PRICES AND
SUBJECT TO CHANGE WITHOUT NOTICE

GRAYBAR'S Creed AS A DISTRIBUTOR

The Graybar Electric Company Believes:

1. That it performs an economic service for the wholesale buyer of electrical goods by maintaining adequate, well-selected, and convenient stocks of quality materials, thus relieving him of the burdens of handling, storage, investment, and obsolescence.
2. That likewise it performs an economic service for the maker of electrical goods by providing immediate nation-wide distribution without duplication of warehousing, selling, and credit operations; and,
3. That in performing these services, it lowers the cost of distribution to the benefit of the entire Industry; and,
4. That, consequently, it has a recognized place in the economic structure of the Industry and that it need not and should not engage in any activity detrimental to the Industry;
5. That finally, since its own success will follow the success of the Industry, it should endeavor in its publicity to bring about a greater public appreciation of Electricity; and that it should pursue and encourage sound merchandising and credit practices and in every way possible contribute to the advancement of the Electrical Industry.

GRAYBAR ELECTRIC COMPANY—DISTRIBUTORS OF 60,000 ELECTRICAL ITEMS THROUGH MORE THAN 80 DISTRIBUTING HOUSES

AT YOUR SERVICE

GRAY

BARTON

A 71-Year Background of Experience

THEN

The illustration above of the two founders—Gray and Barton—whose names were combined to make Graybar, and the original factory, sales and office force, almost tells the story without words.

“The business in those early days before electric lighting, before central stations, and in fact, before 98% of the electrical things so familiar today, was a very simple business.

“Bells, Buzzers, Telegraph Equipment, and Annunciators were made in this small plant and sold by a top-hatted sales force of two or three men.

NOW

Graybar makes available through more than 80 distributing houses, the products of nearly 300 manufacturers. From coast to coast and border to border, wholesale electrical buyers can find prompt, intelligent service on almost everything electrical. Dependable products, knowledge of your electrical needs and the willingness to stand back of everything we supply are also features of Graybar Service.

“We hope that this catalog of 1072 pages, listing the more frequently used electrical items of all types, except household appliances, will prove of value to you.

PRICES

Prices found in this catalog are revised to agree with the latest lists at the time of going to press. It is understood that they are subject to change without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified, except such goods as are shipped regularly direct from factories, in which cases prices are for factory delivery unless otherwise specifically agreed upon.

ORDERS

When possible, we have placed opposite each article a catalog number. When ordering material, kindly order by the catalog number and give a description of the article required.

* You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra trucking expenses at destination.

TERMS

Our terms are 30 days net from date of invoice.

* Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

* Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

* Receipts are not issued for remittances unless requested. Our endorsement on remittance is acknowledgment of the receipt of the funds.

* We solicit new accounts on a credit basis, and in order to give prompt service, request that where you are not rated by the Commercial Agencies, references or other information of a credit character be forwarded with the order. These will be immediately acted upon, and the results held in strict confidence for our sole use and, when reasonably satisfactory, shipment will follow with all possible dispatch.

* To avoid the delay incidental to communicating with references, etc., it would be mutually convenient, when immediate shipment is desired, to instruct us to ship C. O. D. by express, or parcel post (insured if so instructed) or by freight subject to sight draft through a local bank against bill of lading.

* We shall advise the terms on future orders promptly after communications from references are received.

RETURNED GOODS

To save transportation charges, and to facilitate the handling of goods upon receipt, you are requested not to return goods without having obtained shipping instructions from us.

SHIPMENTS

As experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

* Shipments of glassware are made at your risk.

* Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

Habirshaw Bare and Insulated Wire

General Information

Stocks

We carry at our various distributing houses large stocks of wires and cables, which, in addition to the large reserve stock carried by the manufacturers from whom we buy, gives this company a unique and comprehensive assortment. We handle thousands of types of wires, bare and insulated, suitable for general purposes, and, of course, in addition, special wires and cables for aerial, underground, submarine, mine, signal, telephone, and telegraph service.

Factory Facilities

Factory facilities for the manufacture of rubber covered wires and cables have been continually improved, so that to-day the Graybar Electric Company is in a position to offer its customers unsurpassed facilities for the production of rubber insulated wires, and we are as well able to have produced promptly special wires and cables such as are used by the railroads, the mines and the United States Government.

Price and Quality

The Graybar Electric Company sells its wires and cables at prices consistent with the quality of material used, and our customers will find that we are in line with other suppliers of high grade wires and cables.

Special Wires

Although the foregoing refers principally to the standard types of rubber covered wire, the same holds good to other classes of insulated wire handled by the Graybar Electric Company. We are in a position to furnish not only material from a large stock of wires and cables, which meet these ordinary specifications, and from which shipment can usually be made as soon as order is received, but we also have exceptional facilities for executing promptly all orders for emergency or special cables even of the most complicated construction.

Service

Our distributing houses are so well located and our stocks are so large that we are able to give customers service of a quality that cannot be exceeded by any of our competitors in any part of the country, and salesmen can unhesitatingly assure their customers that all stock of Graybar Electric wire receives the most careful scrutiny and inspection by men experienced in that line of work.

Habirshaw Wire and Cable Insulation

Habirshaw wires and cables, distributed by the Graybar Electric Company are insulated with rubber, synthetic plastic material, asbestos or varnished cambric. The various types of insulation are briefly described below.

Black Core Code Grade Compound Underwriters' Type R

Habirshaw Code Grade Rubber Compound is a standard compound and, although designed primarily to meet the minimum requirements of the National Electrical Code, it possesses superior electrical, mechanical and aging properties. Its quality and uniformity are carefully controlled by rigid inspection.

Performance Test Compound Underwriters' Type RP

Habirshaw Performance grade type of rubber insulation is a high grade insulation having long life, good electrical and physical properties as well as low water absorption. This insulation conforms to the N.E.M.A. Building Wire Specification for Performance Test Insulation and also to A.S.T.M. Specification D-353-39T Performance Rubber Compound.

The suitability of this type of compound as insulation is determined solely by physical and electrical tests. No limitations as to the kind or amount of rubber or other ingredients are specified, so as to permit the use of new materials and modern developments in the art, provided rigid tests are complied with. Performance grade compound replaces Thirty Per Cent grades and is one which represents the most advanced progress in compounding unrestricted by chemical analysis. It is approved by the Underwriters' Laboratories for operation at 60° C. copper temperature.

Some of the special compounds regularly furnished by the Habirshaw Cable and Wire Division, Phelps Dodge Copper Products Corporation, are briefly described below.

Complete specifications and information on these types of insulation will be furnished on request.

Habirite

Habirshaw Habirite is a high voltage compound of the oil base type for use in circuits up to 27,000 volts in both single and multiple conductor constructions. It is corona-resistant and has remarkable aging qualities, as indicated by natural life and Geer Oven aging test A.S.T.M. No. D-353-39T.

Recommended for installation at low voltages where cable is to be subjected to alternate wet and dry conditions up to 70° C. Habirite is furnished with any of the standard coverings such as lead sheath, tough rubber jacket, neoprene sheath, cotton braid, asbestos braid, etc.

Principal application is in medium voltage distribution circuits and series street lighting.

Habirite braided cables were used by the New York World's Fair for their 4000-volt distribution system both buried and in ducts.

Heat Resistant Grade Compound Underwriters' Type RH

Habirshaw Heat Resistant Grade Compound represents the most modern development in so-called super-aging compounds. It shows remarkable results in both Oxygen Bomb and Geer Oven aging tests and has been approved by the Underwriters' Laboratories for operation at 75° C. copper temperature. This compound is standard for I.M.S.A. Fire and Police Signal Cables.

Forty Per Cent and Sixty Per Cent Jacket Compounds

These compounds are used for abrasion-proof coverings on portable cords, arc-welding cable, mine cable, etc.

Habirdry Moisture-Proof Compound Underwriters' Type RW

Habirshaw Habirdry is a moisture-proof non-leaded building wire which provides economical and dependable wiring for wet locations. Habirdry is highly resistant to contaminating elements in wet ducts. It is a heat-resisting type compound and one that has exceptionally long life. Habirdry has been thoroughly tested and approved by the Underwriters' Laboratories for installation in wet locations where the code ordinarily requires a lead sheathed cable.

Habirshaw Wire and Cable

Continued

Habirdure

Habirshaw Habirdure wires and cables are insulated with a plasticized synthetic resin which is non-inflammable, highly resistant to oils and corrosive chemicals. It is mechanically tough and requires no outer protective covering. Electrically it has exceptionally high dielectric strength and is highly corona-resistant. Habirdure insulation is practically non-aging as it does not oxidize. It is made in a wide variety of fadeless colors. The clean, smooth, tough finish of Habirdure wire makes it easy to install.

Habirduet

A single conductor non-leaded cable developed for severe conditions encountered on public utility secondary distribution systems, ideal for wet locations. Habirduet insulation is a special moisture and heat-resistant rubber compound applied in standard 600-volt wall thicknesses. Habirduet cable is covered with a rubber filled tape and a saturated cotton braid. It has proven satisfactory for operation up to 75°C. conductor temperature.

Habirduet XXX

Habirduet XXX has in addition to the fine heat-resisting qualities of Habirduet an extremely low water absorption, less than 10 mg. per square inch of exposed surface.

Both Habirduet and Habirduet XXX after 504 hours in the oxygen bomb at 70°C. meet the requirements of 25 per cent maximum depreciation in tensile strength and elongation.

Habirubber

A cable consisting of a conductor covered with a single belt of rubber insulation whose excellent physical properties necessitate no covering over it. Habirubber is recommended for use on 600-volt circuits for burial directly in the ground or for installation in underground ducts.

Varnished Cloth Insulation

Habirshaw varnished cambric insulated cables are manufactured and guaranteed in accordance with I.P.C.E.A. Specifications. Wires and cables of this type may be used at higher operating temperatures than rubber insulated cable and are used for switchboard wiring, feeders and power wiring. They are also used for voltages higher than ordinarily recommended for rubber cables.

Asbestos Insulation

Habirshaw asbestos wires and cables conform with the N.E.M.A. Standard for asbestos and asbestos-varnished cambric insulated wires and cables. Asbestos insulated cables are supplied for operation where temperatures are exceedingly high and preclude the use of other insulations.

Two general types are supplied. Type AVC, a combination asbestos and varnished cambric construction for use in conduits or exposed wiring in locations where exposed to heat and moisture at voltages up to and including 8000 volts. Where extreme moisture is encountered, lead sheathed asbestos cables are recommended. Type A is an all-asbestos construction for use in exposed wiring up to 600 volts in dry locations where high temperatures are encountered.

Habirprene

A tough rubber-like jacket recommended for installations which are exposed to sunlight. It is recommended also for installations where the cable is in contact with oil.

Other Compounds

In addition to the above, rubber compounds can be furnished for special service conditions.

Inquiries involving use of special rubber compounds should be referred to Graybar Electric Company for complete engineering advice.

The Habirshaw Cable and Wire Division, Phelps Dodge Copper Products Corporation, is in a position, with its well-equipped research laboratories and technical staff, to give expert advice on all special problems. Write to your nearest Graybar office.

Habirshaw Wire and Cable

Continued

Flame-Stop Finish

The N.E.C. requires that all 600-volt braided building wire have a flame retarding, moisture-resisting finish, one of the most constructive rulings ever introduced, tending to improve the quality of wire.

Several years ago, Habirshaw, looking to the future, developed Habirshaw Flame-Stop Wire with the required flame retarding and moisture resisting finish.

There have been many hundred millions of feet of Habirshaw Flame-Stop Wire installed in the outstanding buildings of the United States due to the foresight of the leading architects, engineers and electrical contractors.

Habirshaw Flame-Stop Wire is backed up by Habirshaw's policy slogan "Proven by the test of time."

Habirshaw Wires and Cables are also supplied with metallic protective coverings. Lead sheathed and Parkway cables are carried in stock; steel strip and wire armored and other special coverings are manufactured to order.

Reels

Reels not included in price of cable, but charged separately and paid for at price charged, net 30 days, without discount. All such reels returned in good condition, reasonable wear and tear excepted, freight collect to point of origin within 12 months from date of original shipment from factory, will be credited at price originally charged. Reels requiring repairs will be accepted at option of Seller, in which case a reasonable charge for repairs will be deducted from credit allowance.

Reels returned after 12 months from date of original shipment will be accepted for credit under same conditions as above, but subject to deduction if such reels are returned in a depreciated condition.

On all such reels returned after 12 months from date of original shipment, however, Seller reserves right to allow no credit for reels which are in a condition unsatisfactory to Seller, or which in Seller's opinion have become partly or wholly obsolete due to changes in Seller's manufacturing and shipping standards or methods.

No charge made for wood lagging and no credit allowed for return of wood lagging.

Reel Capacities

Curves Showing Reel Capacity for Cable Diameters Up to 3 Inches Example

Diameter of Cable	1.60 inches
Length of Cable	730 feet
Reel to Use	48-inch

Habirshaw Small Diameter Building Wire

600 Volts, N.E.C.

Habirshaw Small Diameter Building Wire has been developed principally to fill the need for rewiring purposes. Many buildings today are inadequately wired, and due to limitations of existing conduits, the needed extra capacity cannot be provided by Types R, RP, or RH wire. Through the use of small diameter building wire, it is possible to deliver increased wattages approximately three times greater than using existing conduits.

Habirshaw Small Diameter Building Wires are furnished in three general types: Type RHT, for all-purpose wiring and Types RPT and SN, for rewiring purposes only.

Type RPT

Thin Wall Rubber Insulated Braided Type

Type RPT Small Diameter Building Wire is recommended for rewiring purposes only and where copper temperatures do not exceed 60°C.

Size A.W.G. No.	Thickness Insulation 64ths Inch	SINGLE BRAID		DOUBLE BRAID

12	2	.180	29	.196	33
10	2	.203	42	.219	47

Type RHT

Thin Wall Rubber Insulated Braided Type

Type RHT Small Diameter Building Wire is an all-purpose wire and therefore may be used for new wiring as well as for rewiring jobs. Type RHT may be operated at copper temperatures up to 75°C.

When used for new wiring, the Code does not permit a greater conduit fill than that approved for Types R, RP, and RH wires.

Size A.W.G. No.	Thickness Insulation 64ths Inch	SINGLE BRAID		DOUBLE BRAID

Habirdure—Type SN

All-Synthetic Insulated Type

Type SN Small Diameter Building Wire differs from the conventional rubber insulated braided building wires in that the insulation consists of a wall of Habirdure, a synthetic resin. Habirdure has exceptionally high dielectric strength, is practically non-aging and is highly resistant to moisture, oil, acids, and alkalis. The tough nature of the material makes it unnecessary to use a braided covering for protection against mechanical injury. The omission of an overall braiding reduces the outside diameter to a minimum and makes Type SN the smallest of the Small Diameter Building wires. Its hard, smooth surface makes it extremely easy to pull. Type SN is furnished in a range of bright, fadeless colors which are unaffected under the roughest possible handling during installation.

Type SN is approved for rewiring purposes and for operation at copper temperatures up to 60°C. Type SN is supplied in a large range of sizes from No. 14 A.W.G. to No. 4/0 A.W.G. inclusive.

Size A.W.G. No.	Thickness Insulation 64ths Inch	Solid		Approx. O.D. In.	Approx. Net Wt. Lb. per 1000 Feet

6	4	.38x .72	1000	Reel, 30"	340

Coils paper wrapped.

NOTE. For both cable and wire corrugated paper is used on reels up to 42 inches inclusive. Lagging is used only when specified. Sizes 48 to 84 inches inclusive, lagged.

Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, if returned to mill in good condition within twelve months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

Habirshaw Rubber Covered Braided Wire Type RM, N. E. C. S.—3-Conductor—Solid 600 Volts

Each conductor of the 3-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A.W.G., one rubber filled tape, and an 8 to 14 A.W.G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Size A.W.G. Gauge	No. of Strands	Rubber Wall 64th Inch	Approximate O.D. Inches	Std. Pkg. Feet	Type Package	Shipping Wt., Lbs. per 1000 Feet

NOTE.—Corrugated paper used on reels up to 42 inches, inclusive, lagging used on above sizes only when specified. Sizes 48 to 84 inches inclusive, lagged.

Habirshaw Rubber Covered Braided Cable Type RM, N.E.C.S.—3-Conductor—Stranded 600 Volts

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes. Number of conductors, 3.

Range of sizes, 500,000 cm to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 500,000 cm to 6 A.W.G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

Habirshaw Lead Covered Cable
 Type RML—600 Volts, N.E.C.S.

Used for 3-phase circuits. Stranded are used where extra flexibility is required in smaller sizes and always in larger sizes where solid conductors would make cable too stiff to handle.

Contains 3 conductors. Sizes range from 500,000 cm. to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

Habirshaw Solid Traffic Control Cable
 600 Volts

Habirshaw Traffic Signal Control Cables are suitable for general application in control circuits rated at 600 volts or less. For normal installations, and particularly in aerial circuits, this type of cable is constructed with an overall braid covering.

A cotton braid is normally furnished, conforming to the heavy braid requirements of A.S.T.M. Designation D27, latest revision thereof. However, if desired, a cotton loom covering can be supplied.

Habirshaw Traffic Signal Control Cables can be supplied in accordance with various specifications, however, the specification for Rubber Insulated, Heavy Braid or Loom Covered Multi-Conductor Signal Cable of the International Municipal Signal Association, Inc., is normally followed.

The individual rubber insulated conductors of Habirshaw Traffic Signal Control Cable are normally enclosed in a colored cotton braid, conforming to N.E.M.A. Standard Color Coding.

Conductors of stranded construction can be furnished, also cables with lead sheath.

Habirshaw Steel Tape Parkway Cable

Parkway cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Insulation on each conductor, Black Core rubber compound for 5000 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Parkway cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Parkway Cables are made to conform to I.P.C.E.A. standards for rubber insulation and metallic coverings.

0/600 Volts

Habirshaw Pole and Bracket Cable 600 Volts

This type of cable is recommended for wiring between the pole base and the lighting fixture inside an ornamental pole and between the overhead circuit and the lighting fixture on a street lighting bracket; for internal or external wiring, or for any other application requiring a two-conductor, flexible cable insulated for 600 volts and less between conductors, and for higher voltages used in series street lighting between the conductor and ground.

Non-Belted—Two-Conductor

The construction consists of tinned copper conductors, rubber insulation (30% rubber to A.S.T.M. specifications can be supplied at same price) rubber filled tape or saturated braid on each conductor, the two insulated conductors laid parallel with one rubber filled tape and single cotton braid overall saturated with weatherproof compound and finish.

Application: For 600-volt service for plain conductors, and 0 to 600 volts, 2001 to 3000 volts, 3001 to 4000 volts service between conductors and ground.

Belted—Two-Conductor

The construction consists of tinned copper conductors, rubber insulation, rubber filled tape or saturated braid on each conductor, the two insulated conductors laid parallel, rubber belt, rubber filled tape and single braid or double braid overall, saturated with weather-proof compound and finished.

Application: For 600-volt service between conductors, and 4001 to 6000 volts, 7001 to 9000 volts, and 9001 to 10,000 volts between conductors and ground.

Habirshaw Armored Submarine Cable

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities and does not attain an unusually high temperature. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, *run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

Habirshaw Signal Wire and Cable Association of American Railroads, Signal Division Standard

Railway signal wire is made to conform with the exacting specifications of the Association of American Railroads, Signal Section Standard and represents the standard engineering practice in this line.

The present Association of American Railroads, Signal Section Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts. Habirshaw also makes a higher grade signal wire known as Habirite signal wire which is recommended for locations where operating conditions are exceptionally severe.

Habirshaw has specialized on A.A.R. Signal wire and makes all standard types including the following:

Rubber Insulated Signal Wire for 600 Volts or Less

Single conductor, solid or stranded.

Range of sizes, Nos. 1/0 to 18 A.W.G.

Insulation, A.A.R. Signal Section compound.

Covering over insulation is one cotton braid, weatherproof saturated and finished.

Thickness of insulation: Nos. 18 and 16 A.W.G., $\frac{3}{16}$ inch; Nos. 14 to 9 A.W.G., $\frac{1}{4}$ inch; Nos. 8 to 4 A.W.G., $\frac{5}{16}$ inch; and Nos. 2 to 1/0 A.W.G., $\frac{3}{8}$ inch.

Aerial Braided Cable, for 600 Volts or Less

Number of conductors as specified.

Range of sizes, Nos. 1/0 to 18 A.W.G., solid or stranded.

Insulation, A.A.R. Signal Section compound.

Paraffined jute fillers. Has one rubber filled tape over assembly; one cotton braid weatherproof saturated and finished overall. Can be furnished lead covered if requested.

Thickness of insulation: Nos. 18 and 16 A.W.G., $\frac{3}{16}$ inch; Nos. 14 to 9 A.W.G., $\frac{1}{4}$ inch; Nos. 8 to 4 A.W.G., $\frac{5}{16}$ inch; and Nos. 2 to 1/0 A.W.G., $\frac{3}{8}$ inch.

Habirshaw Control Cable

Station control cables are used for the remote control of outdoor or automotive substations and are installed in conduit being either braid or lead covered.

Number of conductors, as required.

Usual size, 19 No. 22 A.W.G. or 19 No. 25 A.W.G.

Insulation on each conductor, rubber compound of quality specified.

Thickness of insulation each conductor, $\frac{3}{16}$ inch, for 600-volt service unless otherwise specified.

Covering over insulation, colored dry cotton braid.

Grouping of conductors, cabled.

Fillers, dry jute.

Covering over assembly, one rubber filled tape.

Covering overall, one weatherproof saturated cotton braid, lead rubber jacket, or nonmetal sheath, as specified.

Identification of circuits may be made by ridged tracer in each layer of conductors, by color of rubber, or by colored braids on the conductors according to N.E.M.A. color code.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

Habirshaw Varnished Cambric Insulated Cable

Varnished Cambric Insulated Cable is used: In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable); In buildings in place of rubber insulated cable, where special reliability is desired; On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease.

Varnished Cambric Insulated Cable is covered as follows: Apparatus cable, saturated cotton braid or varnished treated braid; Station cable, flameproof braid; Building mains, a saturated cotton braid or a rubber filled tape and one saturated cotton braid; Underground cable, lead sheath; Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering department will furnish additional data.

*Recommended by the N.E.M.A.—N.E.L.A. Joint Committee on voltage standardization as "preferred voltage ratings" for general apparatus, except 1000 which has been added because of the large amount of very low voltage cable used.

All cables have an operating tolerance of 5% above the rated voltage except those rated at 15,000 volts and below which have no operating tolerance. All cables for three-phase circuits are rated on the conductor to conductor basis.

Unless otherwise specified, two-conductor cable will be of the round type.

Specifications listed above are recommended by I.P.C.E.A.

Habirshaw Service Drop and Entrance Cable 600 Volts, 3-Conductor

Habirshaw concentric bare neutral cable may be used economically for many types of installations such as service drop cable from secondary wires at the pole point of attachment at building, service entrance cable or combination service drop and service entrance permitting a non-splice connection between service wires at pole and service equipment.

It also has further use as a range cable and can be used for this service within the building up to range receptacle.

Habirshaw Service Drop and Entrance Cables have a smooth moisture-resisting flame-retarding finish. Standard color for Style SBU cable is black. Standard color for Styles SBUN and SBAT is neutral gray. However, other colors can be furnished upon request. The coverage of insulated conductors by the concentrically stranded bare neutral makes Habirshaw Service Drop and Entrance Cables virtually tamperproof.

Standard fittings are available for all types.

Style SBU Service Drop Cable Underwriters' SD

Style SBU is primarily a service drop cable for use from secondary wires at the pole to point of attachment at building. It may also be used as a service entrance cable if protected by conduit.

Style SBU cables have either one or two insulated inner conductors over which is laid a concentric bare conductor protected by a paper tape and moisture and flame-resisting braid. In 3-conductor cables, the insulated conductors are coded for quick identification.

Style SBAT Service Entrance Cable Underwriters' SE—Armored

Style SBAT armored service entrance cable for use without conduit is similar in construction to Style SBUN except that it has a flat steel armor tape applied directly over the bare neutral. It is approved for the same service as Style SBUN without exception. Style SBAT cable is generally used on the exterior of a building where it may be subject to mechanical injury.

Style SBUN Service Entrance Cable Underwriters' SE

Style SBUN, service entrance cable can be installed on exterior and interior of a building without conduit.

Approved by the Underwriters for service directly to the range receptacle and may be used for the entire service or any portion of the wiring between the pole line and the electric range or service receptacle.

The use of Style SBUN cable reduces the items required for any installation to a minimum and thereby effects savings where used.

Style SBUN entrance cables have either one or two insulated inner conductors over which is laid a concentric bare conductor protected by two heavy rubberized tapes and a substantial weatherproofed cotton braid, finished gray or other suitable color if desired, and forming a smooth, moisture-proof covering.

Habirshaw Trench Type Nometal Cable For Direct Burial in Earth

Habirshaw Nometal Cable is adapted to the following types of services:
POWER COMPANIES. Low and medium tension networks, series and multiple street lighting, underground service entrances, rural underground distribution, etc.
RAILROADS. Signalling, power and lighting for yards.
MUNICIPALITIES. Street lighting, traffic signals.
AIRPORTS. Lighting and signalling.
INDUSTRIAL PLANTS. Lighting and power in yards.

The salient feature of Habirshaw Nometal Cable is that it alone of all the non-metallic trench cables has a continuous, homogeneous, non-fibrous sheath. The Habirshaw Nometal sheath is of vulcanized oil compound, a material known for half a century for water and acid-proofness, resistance to air and ozone, oxidation and decay, and general permanence.

Habirshaw Nometal Cable can be supplied with a special covering when it is desired to install it into ducts for network systems or other special service. Complete information sent on request.

Habirshaw Rubber Sheathed Parkway Cable

Single Conductor

Two-Conductor

Three-Conductor

Habirshaw Rubber Sheathed Parkway Cable is designed for use either in ducts or buried directly in the ground.

INSULATION. A.S.T.M. Class AO insulation (D-27-39T) or latest revision is recommended, other grades can be furnished upon application.

SHEATH. Moisture-resisting tough rubber compound containing not less than 60 per cent by weight of rubber designed to withstand exposure to moisture, alkalis and acids.

SINGLE-CONDUCTOR. Has no separator between insulation and sheath on sizes up to and including 4/0.

MULTIPLE-CONDUCTOR. Has a rubber filled tape over each conductor; jute fillers and a rubber filled tape over the assembly under the sheath.

These cables are designed to conform to dimensional and performance requirements as established in N.E.M.A. standard for Rubber Sheathed Parkway Cables.

Data for sizes and voltages not listed herein will be furnished upon application.

Habirshaw Habirdure Non-Inflammable Wire and Cable

Type SN—600 Volts

Habirshaw Habirdure Non-Inflammable Wire and Cable is insulated with a synthetic plastic material which is non-inflammable, highly resistant to oils and corrosive chemicals. Electrically it has high dielectric strength and is highly corona-resistant. It is mechanically tough and requires no outer protective covering.

In view of its oil proofness and neat appearance, Habirdure wire is particularly recommended for machine tool and printing press wiring, switchboards, chemical plants, sewage disposal plants and around batteries, in fact, in all places where oil or corrosive substances affect the usual grades of rubber.

Habirdure is approved by the Underwriters' Laboratories under Guide Card 460-190Y, File E13092 for use as follows:

In recognized metal raceways where exposed to oil, temperatures not exceeding 60°C., and in damp places but not in moist locations as described in Section 3035 of the 1937 Edition of the National Electrical Code.

On switchboards where oil is not present and temperatures do not exceed 80°C.

Within appliances where exposed to oil and temperatures not exceeding 60°C.

Within appliances where exposed to air and temperatures not exceeding 80°C.

Habirdure can be supplied in the following colors: black, blue, green, yellow, brown, red, orange, white, and purple.

Habirshaw Tree Wire

Solid—Single Conductor
Grounded and Ungrounded Neutral

Habirshaw Tree Wire is a single, rubber insulated, medium-hard drawn, tinned copper conductor, enclosed in protective coverings of rubber filled tapes, pre-asphalt saturated with weather-resisting compound.

It is used to maintain uniform line voltage where service lines extend through trees. It prevents dangerous arcs, eliminates short circuits, leakage, swinging grounds and removes the cause of flickering lights and radio interference.

Habirshaw Tree Wire gives maximum protection at low cost. It is available in a wide range of voltages, has long life, and gives dependable, uninterrupted service.

Habirshaw P.D.C.P. Habir-Bus Drop Cable

For branch circuits from bus to individual machine tool drives. Habir-Bus Drop Cable is resistant to oil, grease, gasoline and mechanical abuses. It is flexible and easy to handle. Provides a low cost installation.

The cable consists of three rubber insulated stranded copper conductors, color-coded, and one uninsulated ground conductor cabled together with impregnated jute fillers, covered with a pre-saturated fibrous tape and a heavy durable loom, saturated and finished with a compound that renders it flame-retarding and moisture-resisting.

For installing this cable, adaptable fittings can be obtained from leading fitting manufacturers.

Habirshaw Braided A.V.C Power Cable

Stranded Conductor
600 Volts

Insulated with felted asbestos, varnished cambric, felted asbestos and asbestos braid.

For general power wiring, either open or in conduit where heat with limited moisture or vapor is encountered. It will maintain uninterrupted service under conditions prohibitive to ordinary insulations.

Steel mills, boiler rooms, industrial plants, refineries, power plants, soaking pits, furnaces, ovens, lehrs, tender frames, and steam tunnels present many applications for this heat and moisture-resistant cable.

Finished black with a compound that will resist heat, flame, moisture, oil and corrosive vapors.

Where exposed to excessive moisture, lead covered cables should be used.

Approved by Underwriters' Laboratories.

Available in 1000, 2000, 3000, 5000, and 8000-volt construction.

Habirshaw Lead Sheathed A.V.C. Power Cable

Stranded Conductor
600 Volts

Recommended for use in conduit exposed to widely varying conditions throughout its length.

It is particularly suitable for power stations located at tidewater where ducts are sometimes flooded but other parts of the same circuit are exposed to high temperature, also where condensation is especially heavy, as in ashpits where it is the practice to wet down ashes.

Lead sheathed cable is of standard A.V.C. construction, except that a lead sheath has been substituted for the asbestos braid.

The lead sheath enables this cable to stand up successfully when completely and continually submerged.

Approved by Underwriters' Laboratories

Habirshaw A.V.C. Boiler Room Wire and Cable

Solid Conductor
600 Volts

Sizes 18 to 8 are insulated with varnished cambric and a heavy layer of felted asbestos. Sizes 6 to 4/0 have an additional layer of felted asbestos over the conductor.

Used for open wiring and general conduit work where exposed to heat, corrosive vapors, oil, or grease. Designed especially for boiler rooms, ovens, furnaces, lehrs, tender frames, soaking pits, elevators and locomotive control panels. Where parts of the circuit are liable to long periods of submersion, lead sheathed A.V.C. cable is recommended.

Finished black with a compound that will resist heat, flame, moisture and corrosive vapors.

Approved by Underwriters' Laboratories.

*A tolerance of plus or minus 5% is necessary due to variations in process of manufacture. Dielectric test voltage 1.5 kilovolts on all sizes.

Habirshaw Motor Lead Wire
Single Conductor—600 Volts

Habirshaw extra flexible motor lead wire is available with tinned copper or bare copper conductor, with or without cotton separator, insulation N.E.C. rubber and weather-proof or lacquer finish braid.

Habirshaw Mold Cured Cords and Cables
Rubber Armored—Cured in Lead

Made in many types to meet various service conditions. Used wherever a flexible portable lead is needed for the transmission of electrical energy. The 60% Habirshaw mold cured rubber jacket is unexcelled for toughness and resistance to abrasion. Recommended for electric shovels, dredges, mining equipment, and other portable services where a flexible, abrasion-resisting cable is required.

Phelps Dodge Bare Copper Wire and Cable

The Bare Copper Wire and Cable listed below are manufactured by the American Copper Products Division of Phelps Dodge Copper Products Corporation at their mills, Bayway, New Jersey.

They are all made, unless otherwise specified, to the specifications of the American Society for Testing Materials which are the recognized American Standard.

Phelps Dodge Slow Burning Wire and Cable

Underwriters' Approved
Solid—Triple Braid

All three braids of cotton are thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard, but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces, and foundries.

Phelps Dodge Rectangular Copper Bus Bar

P-D Rectangular Copper Bus Bars are guaranteed to have a minimum conductivity of 98%. They are manufactured by the extrusion process, instead of being drawn assuring even temper and full straight edges.

P-D bars fully comply with the latest A.S.T.M. specification, but can be manufactured to individual specification when specified.

*At current density of 1000 amperes.

Phelps Dodge Seamless Copper Bus Tubing Bulldog Brand

The advantages due to the inherent properties of tubular bus bars for high amperages have been a deciding factor in the increasing use of copper tubes for outdoor busses. Bulldog copper bus bar tubes have a minimum conductivity of 98%, can be bent to meet special field conditions, or flattened for terminal connections.

Uniform in temper, accurately manufactured to size by the extrusion process, Bulldog copper bus tubes lend themselves readily to clamp connectors or internal splices.

Phelps Dodge P-M-G Rigid Conduit and EMT Tubing

P-M-G conduit is available in both standard heavy wall rigid conduit and thin-wall electrical metallic tubing. P-M-G metal is a rustless alloy of unusually high tensile strength.

This conduit is recommended for use where severe corrosive conditions exist and is suitable for such installations as chemical plants, railroad terminals, dairy barns, textile finishing and dye plants, also installations in coastal areas or where conduit might be directly subjected to salt spray.

P-M-G conduit is fully approved by Underwriters' Laboratories and fittings of the same alloy are available from many manufacturers. Complete bulletin on request.

Bare Conductors. If bare conductors are used in conduit with insulated conductors, their allowable current-carrying capacity shall be limited to that permitted for the insulated conductor with which they are used.

Neutral Conductor. A neutral conductor which carries only the unbalanced current from other conductors, as in the case of normally balanced circuits of three or more conductors, shall not be counted in determining the current-carrying capacities of cable in conduit.

In a 3-wire circuit from a 4-wire, 3-phase system, a common conductor carries approximately the same current as the other conductors and is not, therefore, considered as a neutral conductor.

Application of Table. For open wiring on insulators and for concealed knob-and-tube work, the allowable current-carrying capacities of cable in air shall be used. For all other recognized wiring methods, the allowable current-carrying capacities of cable in conduit shall be used, unless otherwise provided in this code.

More Than Three Conductors in a Conduit. Table above gives the allowable current-carrying capacity for not more than three conductors in a conduit or cable. If the number of conductors in a conduit or cable is from 4 to 6, the allowable current-carrying capacity of each conductor shall be reduced to 80 per cent of the values of cable in conduit. If the number of conductors is from 7 to 9, the allowable current-carrying capacity of each conductor shall be reduced to 70 per cent of the values of cable in conduit.

Use of Conductors with Higher Operating Temperatures. If the room temperature is within 10 degrees of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the table of correction factors for different room temperatures.

Voltage Drop. The allowable current-carrying capacities in the tables are based on temperature alone and do not take voltage drop into consideration.

General Cable Romex* Non-metallic Sheathed Cable

600 Volts

Inspected and labeled by Underwriters' Laboratories. Applications. New and old house wiring for all circuits beyond entrance; wiring boats and trailers; for extensions to new outlets; for circuits for radios and refrigerators.

General Cable Service Drop Cable Type SD—150 Volts

For use in continuous overhead connection between pole and meter, switch or service equipment. Designed for circuits not exceeding 150 volts to ground. Where used as service entrance cable, cable must be installed in conduit.

†Not listed in National Electrical Code.

Percentage of the surface of the underlying core which is covered by the concentric uninsulated neutral conductor, subject to a tolerance of plus or minus 5%.

Peerless* Type SD—150 Volts

A cable of concentric unisulated neutral construction for use in continuous overhead connection between pole and meter, switch or service equipment. Designed for circuits not exceeding 150 volts to ground. Where used as service entrance cable, cable must be installed in conduit.

Has a weather-resisting outer covering of asphalt saturated Peerless felt in which the concentric unisulated neutral conductor is embedded and gives added mechanical protection to the cable.

††† used as a service entrance cable within the jurisdiction of the National Board of Fire Underwriters the maximum voltage to ground is 150 volts.

General Cable Ruralay* Non-metallic Underground Cable

2001-8000 Volts

For underground installation in rural areas where the distribution problem is characterized by long cable runs, scattered service connections, and relatively few customers per mile. Especially adaptable for installation by the use of a cable plow. No additional protection of cable is required except at highway crossings and points of unusual mechanical hazard. Under dirt highways creosoted wood planking affords adequate protection.

General Cable Supersheath* Non-metallic Underground Cable

0-15,000 Volts

Supersheath cable is rubber-insulated non-metallic cable of the rubber jacketed type. Intended primarily for non-portable uses, such as in underground ducts or direct installation in the ground.

The rubber jacket of this cable has high resistance to deterioration from moisture, earth acids, alkalies, or other earth chemicals. In cinder fills, railway ballast, and other locations having a distinctly acid character, Supersheath cable is performing exceptionally good service. Where metallic sheaths and armors are troubled by electrolysis and where it is difficult to eliminate induced or stray currents from the sheaths and armors, a change to non-metallic Supersheath cable is recommended. This cable can also be used to good advantage in mines, for underground distribution for both primary and secondary, for secondary alternating current networks, for underground service entrances, and for many general purposes where light weight and high corrosion resistance is desired.

Supersheath cable can be supplied with or without outer fibrous covering of pretreated, well-saturated sisal braid or duck tape. Fibrous coverings are primarily intended to protect the jacket from deterioration by sunlight. This cable is also an additional mechanical protection during installation and settlement of the back fill, and supplement the rubber jacket protection against corrosion.

Style RS—0-2000 Volts

A single conductor cable insulated with a single layer of Supersheath compound. Has high strength, is tough and abrasion-resisting, and is an excellent insulation. Has good electrical and aging properties. Well suited to withstand both duct and direct earth installation services.

Conductor Size	Total Wall Thickness (0-600 Volts) Inches
14-2 A.W.G.	6/64
1-4/0 A.W.G.	7/64
250,000- 500,000 C.M.	8/64
501,000-1,000,000 C.M.	10/64
1,100,000-2,000,000 C.M.	12/64

Style PRS—0-5000 Volts

Includes single and multi-conductor Supersheath cable.

Single conductor cable which does not require shielding has the insulation and jacket firmly bonded together. Construction may include a separating tape between the insulation and the jacket. Shielded single conductor cable has a separating tape and the shielding tape between the insulation and jacket.

Multiple conductor cable has a tape over each insulated conductor, copper shielding tapes when required, fillers where necessary to round out the construction and a tough Supersheath jacket overall.

Conductor insulation is Performance Grade compound in accordance with A.S.T.M. Specification D353, latest issue, and the insulation thicknesses are standard in accordance with the same specification.

The Supersheath jackets are designed to have high strength and long life.

*Trade-mark

General Cable Supersheath* Non-metallic Underground Cable

Style HRS—0-2000 Volts

Similar in construction to Style PRS. The conductor insulation is Thermax, and the Supersheath is of the heat-resisting type. This style is recommended where heat resistance is of primary importance and the cable is to be installed in relatively warm and dry locations. Cable should preferably be operated below 2000 volts, but can be applied for ratings up to 5000 volts.

Style GRS—0-15,000 Volts

Similar in construction to Style PRS except that conductor insulation is Gencorone.

Furnished for a variety of special applications in voltage ratings up to 15,000 volts. Principally intended for use at voltages above those permitted for Style PRS, that is, between 5000 and 15,000 volts.

Information on the construction and application of Supersheath cable may be obtained on application.

Recommended Shielding Practice for Supersheath Cable

Shielding is recommended where the 3-phase (line to line) operating voltage exceeds the following values:

	Duct or Conduit Installation Volts	Direct Earth Installation Volts
(1) If protected against accidental direct contact by persons:		
(a) Neutral Grounded	2000	\$\$\$5000
(b) Neutral Ungrounded	2000	3000
(c) Directly Connected to Overhead Lines	**2000	**2000
(2) Not Protected Against Accidental Direct Contact by Persons	2000	2000

*Trade-mark.

††It is important to note that all non-metallic cables operated above 2000 volts should be shielded, except those which fulfill the three conditions—(1) not connected to overhead lines which are exposed to lightning; (2) completely buried directly in earth; (3) fully protected against accidental contact.

**If connected to overhead lines exposed to lightning, shielding is advisable regardless of the operating voltage.

For maximum safety, cables containing ground wires (in addition to shielding) are recommended for voltages exceeding 2000 volts.

General Cable Thiokol*-Supersheath* Non-metallic Underground Cable

Style RTS—0-5000 Volts

For installations where oil, grease, and petroleum products may be encountered, rubber-jacketed cable should not be used without further protection of suitable non-rubber covering. For such service and where exceptional protection against sunlight, moisture, acids, and ozone are desired, Thiokol-Supersheath cable is recommended. This cable has high inherent resistance to corrosion, and offers long probable life.

Similar in construction to Style PRS except that an inner layer of high strength Supersheath compound is firmly vulcanized to an outer layer of Thiokol sheath compound. Has an overall protective covering of saturated duck tape.

Designed for use at 5000 volts or less. Recommended for subways, refineries, gas works, oil wells, and similar severe applications.

*Trade-mark (General Cable).

*Trade-mark (Thiokol Corporation).

General Cable Series Street Lighting Underground Cable

0-10,000 Volts

For underground installation either in ducts or directly in the earth. Supplied in a variety of types.

The usual sizes are 8 and 6 A.W.G., although other sizes can be furnished if required.

Conductors for all types are tinned, soft or annealed copper, usually solid, and comply with all requirements of A.S.A. Specification C8bl.

Lead Sheathed Parkway Cable

Insulated with A.S.T.M. Performance compound to standard thicknesses and enclosed in a lead sheath over which protective coverings may be applied.

Dimensions and weights are given for the following lead-sheathed types:

(1) Lead sheath with no additional covering, for use in ducts and conduit.

(2) Lead sheath with one or two servings of jute overall, for direct earth installation. As an alternate to the jute covering, duck tape can be supplied.

(3) Lead sheath with jute, double flat steel tape armor, and jute overall for direct earth installation. This type should not be used when current exceeds 12 amperes.

Thiokol* Sheathed Cable

For use either in ducts or directly in the earth. Conductors are insulated with A.S.T.M. Performance compound. Thiokol compound, applied directly over the rubber insulation and vulcanized thereto, provides a non-metallic protection against moisture, gasoline, oil, acid, sunlight, and ozone. Additional coverings are supplied, depending on voltage and use, as follows:

Type	Installation	Open Circuit Voltage	Additional Coverings
A	In Ducts	6000	Duck Tape
B	In Earth	3000	Fibrous Armor, Caulk, Duck Tape
C	In Ducts	10000	Semi-conducting Tape, Drain Wires, Duck Tape

Construction data for cables of other sizes and voltage ratings will be supplied on request.

General Cable Series Street Lighting Underground Cable

0-10,000 Volts Rubber Sheathed Type Cable

Supersheath series street lighting cable is insulated to the standard thickness required for the operating voltage, in accordance with table on preceding page. Shielding tapes are required when the maximum open circuit voltage will exceed 6000 volts. A Supersheath jacket is applied overall. This cable may be used in ducts or installed directly in earth.

Concentric Type Cable

Concentric types for series street lighting cable have an inner insulated conductor and an outer uninsulated conductor, the latter serving as a shield.

These types are designed primarily for power circuits but are well suited to series street lighting use where a non-leaded cable is required. Description of this cable will be found under Concentric Trenchlay.

Gencorone Type Cable

Non-leaded series street lighting cable having Gencorone insulation is supplied either for duct installation or for direct earth installation. Gencorone insulation is suitable for this type of service because of its high dielectric strength and corona resistance. Gencorone can be supplied with Ruralay cable or in the following forms:

FOR DUCT INSTALLATION. Conductors insulated with Gencorone, covered with Gencorone tape, and enclosed in heavy braid. When the maximum open circuit voltage exceeds 6000 volts, shielding is recommended.

FOR DIRECT EARTH INSTALLATION. Conductors insulated with Gencorone, covered with Gencorone tape, jute bedding, double steel tape armor, and jute serving overall.

General Cable Rubber Insulated Ornamental Pole and Bracket Cable

0-10,000 Volts

Used for interior wiring of ornamental poles which are fed by underground cable, or for the exterior wiring of pole type bracket fixtures.

Standard pkg., 1000 feet on reel unless otherwise ordered.

Twin Type

Two insulated and braided conductors laid parallel and enclosed in overall tape and braid. Saturated and filled with weatherproof compound and coated with special arc cable finishing compound.

Twin Belted Type

Two insulated and braided conductors laid parallel, enclosed in a close fitting belt of insulating compound and covered with an overall tape and braid. The overall braid is saturated and filled with weatherproof compound and coated with special arc cable finishing compound.

The maximum permissible voltage between conductors is 600 volts.

**General Cable Rubber Insulated Tree Wire
0-8000 Volts**

Tree wire constructions consist of a rubber-insulated conductor having fibrous coverings or non-metallic sheath to withstand the abrasive action of tree limbs.

The use of tree wire on overhead distribution systems where heavy tree growth is encountered avoids re-routing of lines, or when alternate routes are not available, eliminates expense and other disadvantages of tree trimming.

Tree wire is made in single conductor form only, and, since it is normally installed on insulators, has lighter insulation walls than the usual standards for rubber insulated wire and cable. When tree wire is used for other purposes, and not supported on insulators, standard insulation walls should be used.

A.S.A. Type

Has tinned, medium hard, solid copper conductors for No. 4 A.W.G. and smaller; stranded for larger sizes.

Insulation, A.S.T.M. Performance grade rubber compound.

Tape and hawser cord braid coverings.

Saturant is of special synthetic compound (Barkhide treatment).

Pitch and mica finish.

Stantree*

A loom-woven tree wire having an abrasion resistance nearly twice that of the A.S.A. type.

Has tinned, medium hard, solid copper conductors for No. 4 A.W.G. and smaller; stranded for larger sizes.

Insulation, General Cable tree wire compound.

Tape and heavy specially constructed loom coverings of hard twisted paper twine and cotton cord.

Saturant is of special synthetic compound (Barkhide treatment).

Pitch and mica finish.

Barkhide*

An excellent tree wire, having in addition to the superior electrical properties of General Cable tree wire compound, a high degree of abrasion resistance.

Has tinned, medium hard, solid copper conductors for No. 4 A.W.G. and smaller; stranded for larger sizes.

Insulation, General Cable tree wire compound.

Tape, Rohide fiber armor covering not less than .035 inch in thickness, and closely woven hawser cord braid.

Saturant is of special synthetic compound (Barkhide treatment).

Pitch and mica finish.

*Trade-mark.

When installed without insulators, insulation thicknesses must be in accordance with the standards for series street lighting cables and for power cables. If the voltage exceeds 2000 volts on tree wire installed without insulators, shielding recommendations should be obtained from the nearest Graybar office.

**General Cable Rubber Insulated
Traffic Control or Signal Cable**

600 Volts

Braid Finished

Lead Sheathed

Suitable for general application in control circuits rated at 600 volts or less.

BRAID FINISHED. Recommended for general application, particularly in aerial circuits, and for inside use in conduit where not subject to immersion.

LEAD SHEATHED. Recommended for service in underground ducts or in locations where cable is subject to either continuous or intermittent immersion in water.

Standard conductors are solid, tinned copper, insulated with 3/64-inch N.E.C. insulation covered with N.E.M.A. color-coded braids.

Standard I.P.C.E.A. Parkway cable finish can be supplied over the lead sheath on cables to be used for direct earth installation.

Shipped on reels containing 1000 feet.

General Cable Trenchlay* Rubber Insulated Control Cable

600 Volts

Designed for direct earth installation. The non-metallic armoring is of the fibrous type which has been used on Trenchlay cable for many years. This sheath results in a lightweight cable which is easy to splice and to terminate, and which is free from trouble due to electrolysis.

Conductors are insulated with 3/4-inch Trenchlay compound which is highly resistant to water and earth solutions.

A color-coded cotton braid is applied on each conductor.

The taped assembly is provided with a moisture seal of asbestos base caulk, a heavy saturated asbestos braid, a second layer of caulk, pretreated fibrous armor tape, a third layer of caulk, and a heavy presaturated duck tape.

Cable is finished with pitch and mica to provide a non-tacky surface.

A variation in the regular Trenchlay underground finish can be supplied when a control cable is desired for underground, aerial, and duct (universal) service.

Shipped on reels containing 1000 feet.

General Cable Fire Alarm, Police Signal, and Municipal Signal Cable

600 Volts

For general service in fire alarm, police signal, and other municipal signal systems.

Constructed with many combinations of conductors and pairs. Designed with suitable overall coverings for underground, aerial, or inside use.

May be made to conform to various specifications, but the Specifications and Operating Standards of the International Municipal Signal Association, Inc. are most generally accepted and followed unless otherwise specified.

This cable is standard in the following forms:

(1) Rubber insulated, lead sheathed multiple conductor signal cable for general use in underground ducts, aerial use with messenger or in stations and buildings.

(2) Rubber insulated, lead sheathed and armored multiple conductor Parkway signal cable for general use installed directly in the earth without conduit protection.

(3) Rubber insulated, heavy braid or loom covered multiple conductor signal cable for aerial use with messenger or for conduit and duct installations.

(4) Rubber insulated, braid covered single conductor signal wire for general use in stations, boxes, etc.

(5) Rubber insulated, 2-conductor, twisted or parallel outside telephone drop wire.

Variable Construction Features

CONDUCTORS. All conductors are tinned copper in accordance with American Standards Association Specifications.

INSULATION. The insulation is high-grade heat-resisting long-life rubber compound (Thermax). Other grades such as A.S.T.M. Class AO can be supplied if requested. The thicknesses of insulation are standard for operation at 600 volts or less.

BRAIDS. Saturated braids, either color-coded or plain will be furnished on the individual conductors only when specified by the purchaser.

ASSEMBLY. Multiple conductor assemblies are laid up symmetrically in layers in round form, jute fillers being used where necessary. Tracer conductors are included in each layer for identification purposes. A tape is applied over the core.

LEAD SHEATH. The sheath of non-armored cable is a lead-tin alloy containing approximately 2% tin.

The sheath of armored cable is commercially pure lead without alloy.

Diameter tolerances:
 (a) Soft or annealed (A.S.T.M. Spec. B 3) $\pm 1\%$.
 (b) Medium hard (A.S.T.M. Spec. B 2) or hard drawn (A.S.T.M. Spec. B 1): For wires 100 mils in diameter or larger $\pm 1\%$. For wires less than 100 mils in diameter ± 1 mil.
 Breaking strengths are based on tensile strength requirements of A.S.T.M. Spec. B 3) (soft or annealed), B2 (medium hard); B 1 (hard drawn).

Fine Wire Sizes

Size A.W.G.	MAX. RESISTANCE OHMS PER 1000 FT., 68°F.

19	8.202	8.330	8.373
18	6.505	6.606	6.640

Resistances are maximum values for nominal diameters based upon A.S.T.M. Specification resistivities, as follows:

	Lb. Mile- Ohm	Equip. I.A.C.S. Conduc- tivity%
Soft or Annealed (A.S.T.M. Spec. B3)	891.58	98.16
Medium Hard (A.S.T.M. Spec. B2): Diam. .400" - .325" (4/0-1/0 A.W.G.)	896.15	97.66
Diam. .324" - .040" (1-18 A.W.G.)	905.44	96.66
Hard Drawn (A.S.T.M. Spec. B1): Diam. .400" - .325" (4/0-1/0 A.W.G.)	900.77	97.16
Diam. .324" - .040" (1-18 A.W.G.)	910.15	96.16

For wire sizes smaller than 18 A.W.G. in medium hard and hard drawn tempers: No A.S.T.M. requirements; resistances for these sizes in table based on 905.44 pounds per mile-ohm (96.66% conductivity) for medium hard wire, and 910.15 pounds per mile-ohm (96.16% conductivity) for hard drawn wire.

General Cable Square and Rectangular Copper Wire Soft or Annealed, Bare and Tinned (A.S.T.M. Specification B48)

Used in the construction of transformers and other electrical machinery. Made by processing round wires. Finished with round corners.

Physical characteristics are controlled to provide sections suitable for edgewise bending. Fabricated wire is subjected to special final polishing and cleaning.

Section	Bare Wire		Tinned Wire	
	Max.	Min.	Max.	Min.
Square	Width and Thickness	.365, .0571	.325, .0571

5,000,000	2.581	B-217	145,300	.002219	15,890.		

Area of cross section (equivalent to sum of areas of individual wires) shall not be less than 98% of listed areas (A.S.T.M. Spec. B 8).

Letter designation under "Number of Strands" indicates A.S.T.M. strand class.

Breaking strengths: Maximum values for nominal diameters based upon tensile strength limits of A.S.T.M. Specs. B 3 and B 8.

Resistances: Maximum values for nominal diameters based upon A.S.T.M. Spec. B 3 resistivity of 891.58 lbs. per mile-ohm (equivalent to 98.16% I.A.C.S. conductivity), increased as follows for stranding:

- (a) 5,000,000—4,500,000 C.M. 5%
- (b) 4,000,000—3,500,000 C.M. 4%
- (c) 3,000,000—2,500,000 C.M. 3%
- (d) 2,000,000—250,000 C.M. 2%

Weights: Same percentage increases as for resistance stranding allowance.

Also supplied in alternate strandings.

Area of cross section (equivalent to sum of areas of individual wires) shall not be less than 98% of listed areas (A.S.T.M. Spec. B 8).

Letter designation under "Number of Strands" indicates A.S.T.M. strand class.

Breaking strengths: Maximum values for nominal diameters based upon tensile strength limits of A.S.T.M. Specs. B 3 and B 8.

Also supplied in alternate strandings.

Resistances: Maximum values for nominal diameters based upon A.S.T.M. Spec. B 3 resistivity of 891.58 lbs. per mile-ohm (equivalent to 98.16% I.A.C.S. conductivity) increased 2% for stranding.

Weights: Same percentage increases as for resistance stranding allowance.

General Cable Tinned or Amaloy Coated Solid Wire

Soft or Annealed Copper

Tinned copper wire and cable can be furnished, either soft annealed or hard drawn, in strandings as well as in solid conductor form. The solid conductor form is normally limited to No. 1 A.W.G. and smaller sizes. Tinned soft or annealed wires are manufactured in accordance with all requirements of A.S.T.M. Spec. B33.

The more commonly used tinned wires and cables are shown in the following table.

Special Amaloy, in place of tin, is used in numerous applications where desirable and can be supplied when required.

Size A.W.G.	Nom. Diam. Mils	DIAMETER RANGE, MILLS		Breaking Strength Lb.	Resist. Ohms per 1000 Feet 68°F.	Net Wt. Lb. per 1000 Feet	STANDARD (PACKAGES) Feet	Net Wt. Lb.

Breaking strengths: Maximum values for nominal diameters based upon tensile strength limits of A.S.T.M. Spec. B33.

Resistances: Maximum values for nominal diameters based upon resistivity limits of A.S.T.M. Spec. B33.

Weights: Nominal values for estimating purposes only and subject to normal variations in manufacture.

General Cable Concentric Stranded Cable Bare and Tinned Copper—Soft or Annealed Medium Hard and Hard Drawn

CLASS AA. Used for bare cable.

CLASS A. For weather-resistant (weatherproof), slow burning and slow-burning weather-resistant cable, and for bare cable where greater flexibility than is afforded by Class AA is required.

CLASS B. For cable insulated with various materials such as rubber, paper, varnished cloth, etc., and for the cable indicated under Class A where greater flexibility is required.

CLASS C and CLASS D. For cable where greater flexibility is required than is provided by Class B cable.

†Optional construction for No. 4/0 A.W.G. size in Class AA and Class A is 12 wires of 132.8 mils diameter.

‡Optional construction for No. 3/0 A.W.G. size in Class AA and Class A is 12 wires of 118.3 mils diameter.

§Optional construction for 600,000 c.m. size in Class B is 37 wires of 127.3 mils diameter.

¶Optional construction for 550,000 c.m. size in Class B is 37 wires of 121.9 mils diameter.

General Cable Overhead Line Conductors

Bare Copper—Hard Drawn and Medium Hard Drawn

General Cable supplies a complete series of bare overhead line conductors to cover the entire range of electrical and physical requirements necessary for all forms of transmission or distribution system design for power, communication, and signal circuits.

Copper conductors provide a useful combination of electrical and physical properties not possessed by any other commercial metal.

Important advantages are: **High Electrical Conductivity.** Copper has the highest electrical conductivity of all commercial metals which results in the smallest conductor diameter and therefore the lowest transverse stressing of supporting structures in most applications.

Low Cost. The low cost of copper makes it a particularly economical conductor.

Strength. Hard drawn copper possesses the strength of mild steel. Other tempers provide a wide range of tensile strengths, as required for different applications. A correct adjustment between required strength and necessary flexibility, of particular importance in larger conductor sizes, is therefore always possible with standard copper conductor constructions.

Hardness. The hardness and abrasion resistance of copper insure freedom from conductor injury during construction and operation.

Fatigue Resistance. Considering vibration troubles of certain types of overhead line conductors, copper has maintained an enviable record of practical freedom from injury due to vibration.

Copper conductors can be assembled by any method available to other conductor types. Special assemblies, such as 3-wire strand, are therefore available to reduce the possibility of vibration under particularly severe operating conditions.

Permanence. The exceedingly high resistance of copper to corrosion results in a greater freedom from deterioration, both electrically and mechanically.

Reliability and Ease of Splicing. The physical characteristics and corrosion-resisting properties of copper conductors make possible easy and efficient splicing in the field and eliminate the use of special clamps and tools.

Resistance to Flashover. The relatively higher melting point and electrical conductivity of copper conductors safeguard them to a remarkable degree from the injurious effects of arcs or flashovers.

Re-use. The characteristics which make copper the outstanding metal for line conductors also make practical its re-use when desirable.

Salvage Value. Based upon sound economic principles, copper possesses an extra-

ordinarily high salvage value.

Dependability. The uniformly satisfactory experience from a tremendous aggregate line mileage over a period of many years is eloquent evidence of the dependability of copper line conductors.

For those applications requiring tensile strengths beyond the limits of copper conductors, constructions using either copper bearing alloys or copper clad steel conductors are available.

Basis for strength, weight, and resistance data:

Hard drawn conductors—A.S.T.M. Specifications B 1 and B 8.

Medium hard drawn conductors—A.S.T.M. Specifications B 2 and B 8.

Increments for stranded conductors (weight and resistance data): 3-wire strand—1%. 7-wire to 37-wire strand inclusive—2%.

The average resistivity of copper ordinarily furnished is somewhat lower than A.S.T.M. maximums.

When lengths are not specified, random lengths will be included. When lengths are specifically agreed upon for any item, 90 per cent of the reels shall have the specified length subject to a variation of 10% plus or minus; the remainder of the item may be shipped in random lengths of not less than 50% of the specified length.

*Not at present included in A.S.T.M. Specification B47.

*For Fig. 8 and 9 wire, dimensions given are nominal height of entire section and width of lower lobe.

For 6/0 A.W.G. (336,200 c.m.) grooved or Fig. 8 will regularly be furnished in 350,000 c.m.

General Cable Copper Trolley Wire

In the manufacture of this wire special care is taken in rolling and drawing to obtain a surface free from imperfections and wire continually true in shape. This produces a contact wire giving maximum life and freedom from operating trouble.

Round and Grooved

Figure 8 and Figure 9 (Deep Section)

Manufactured in accordance with American Society for Testing Materials, Specification B47 and American Transit Engineering Association Specification D2. Specifications were prepared jointly by the two associations in collaboration with Association of American Railroads and are identical.

Trolley wire of these configurations are not at present included in the specifications of the American Society of Testing Materials. These shapes conform with requirements of specifications covering round and grooved wire.

Figure 9 furnished primarily for industrial use.

General Cable Bare Cable Composite Copper-Copperweld

Type A

Composite cable unites the electrical conductance of copper with mechanical strength of copperweld. This cable is rugged and long-lived; little affected by corrosion even in unfavorable atmospheres.

Particularly adapted to long span construction or other service conditions requiring more than average strength combined with liberal conductance. For use on transmission

lines, rural distribution lines, railroad electrification, river crossings, and many kinds of special construction.

Composite cable is available in a wide range of properties and sizes. The table below shows a number of representative copper-copperweld cable sizes. Other composite cable sizes, adapted to specific requirements, can be supplied.

TYPE E. Consists of 7-strand concentric stranded core of Copperweld and outer layer of twelve copper strands.

TYPE F. Consists of inner strand Copperweld and outer layer of six copper strands.

TYPE A. Consists of three wires cabled together, two of hard drawn copper and one of extra high strength Copperweld.

SPECIAL. Consists of three Copperweld wires cabled together as a core covered by seven copper wires.

Ninety per cent of the reels in any shipment shall have an average length of conductor not less than the values shown in the above table, with no lengths more than 10% below the value given. The remaining 10% of the reels (or one reel where total number of reels is less than 10) may be in random lengths, but no such lengths shall be less than 50% of the table value.

General Cable Weatherproof Wire and Cable

With Solid Copperweld Conductors

Sizes 8 to 14 A.W.G. inclusive also supplied in 100-pound bundles of four coils each weighing approximately 25 pounds.

General Cable Super Service* Cable

Single Conductor—600 Volts

Designed for general portable power supply service whenever a heavy duty flexible cable is required. Specific uses, especially in the smaller conductor sizes, are for gathering reel locomotives in mines. For motor lead use, this cable can be supplied with a paper separator over the conductor.

Sizes 4, 3, and 2 A.W.G. single-conductor cable are made with a spider web braid of heavy single end cotton between inner insulating rubber and outer jacket to serve the special requirements of cables used on gathering reel locomotives in coal mines. All other sizes have helical winds.

General Cable Super Service* Welding Cable

This cable possesses an overall Super 6-T protective jacket of exceedingly tough, resilient 60% rubber compound especially designed to withstand severe service and yet remain flexible. Complies with N.E.M.A. standard requirements.

Exceptional flexibility is obtained by the use of a large number of extremely fine bare copper wires, rope stranded.

Coils easily, lies flat, does not kink or tangle. May be dragged through puddles and subjected to all kinds of hard usage in damp places.

The above values for carrying capacity are based on a copper temperature of 60°C. and an ambient temperature of 40°C. and yield load factors of from approximately 32% for 2 A.W.G. cable to approximately 23% for 3 A.W.G. cable, and higher for the smaller sizes. The sizes of cable used range from 2 to 3/0 A.W.G. In actual service the load factor may be much higher without overheating the cable as the ambient temperature will generally be substantially lower than 40°C.

The sizes of cable recommended by the Machine Group of the N.E.M.A. Electric Welding Section for standard hand welding equipment based on lengths up to 90 feet, that is, 45 feet of welding cable and 45 feet of return cable, are as follows:

Welder.....	100	200	300	400	600
Cable No.....	2	2	1/0	2/0	3/0

General Cable Super Service* Grounding Cable

Extensively used for temporary grounding of transmission lines of all voltages to 132,000 volts.

Ground clamp with cable attached is hooked on the line by means of a grounding stick, the other end having previously been connected to ground by clamping to transmission tower or when working on a pole, to any temporary ground connection available. This cable is also used in generating stations and substations for grounding apparatus during repairs.

General Cable Super Service* Mining Machine Cable

2-Conductor Concentric Type—600 Volts

Used almost exclusively in mines on cutting machines and locomotives and are designed to have maximum flexibility for this type of cable. Manufactured in sizes 6 to 4/0 A.W.G. inclusive.

Central conductor is insulated with 40% rubber over which is applied a rubber-filled tape. The concentric wires, having conductivity equal to the central conductor, are laid helically, to provide full coverage over the insulated and taped inner conductor. The core thus formed is then covered with a layer of 40% insulating rubber which adheres strongly to the concentric strands. There is then applied a spider web braid of heavy single end cotton, and finally, a heavy Super Service (Super 6-T) jacket overall.

Cables of larger sizes, up to and including 4/0 A.W.G., can also be supplied.

2-Conductor Parallel Duplex Type—600 Volts

Made in conformity with requirements of U. S. Bureau of Mines for use on explosion-proof equipment. Used in mines on cutting machines, as a battery charging cable, and for other general uses requiring a 2-conductor all-rubber cable.

Insulated with 40% rubber compound. Identified by rubber of different colors, i.e., black and white. Conductors are laid parallel with rubber fillers in lateral interstices, and covered with a sheath of 60% Super Service (Super 6-T) rubber. A strong reinforcing cord directly under jacket strengthens cable and opposes kinking.

Easy to splice.

Conductors are enclosed in and surrounded by a solid compact mass of rubber which prevents kinking.

General Cable Super Service* High-voltage Cable

SUPER SERVICE high-voltage portable power cables are designed for a wide variety of purposes. In general their use covers both transmission of power from the supply to the portable equipment and distribution of that power to the electrical machines or control devices which are installed in or on the equipment.

The principal use of SUPER SERVICE portable power cables is to convey energy for electrically operated shovels, dredges, cranes, etc., where arduous service and safety must combine for uninterrupted production and long cable life.

Further use of SUPER SERVICE high-voltage cables of this type is found wherever both high voltage and portability are required, such as in construction work and for temporary or emergency power transfer in central stations and substations during equipment repairs and alterations. SUPER SERVICE cables are available for operating voltages up to and including 13,000 volts, in single and multi-conductor form, and in a wide range of conductor sizes.

When unusual service conditions are encountered it is highly desirable that all requirements be known before attempting to select the proper type of SUPER SERVICE cable to use. General Cable engineers are prepared to submit recommendations and to furnish full information on modifications.

There are three general types of SUPER SERVICE high-voltage cables. These are:

- TYPE W, without ground wires.
- TYPE G, with ground wires.
- TYPE SH (shielded) with or without ground wires.

Type W—(Without Ground Wires)

This cable is not recommended for service exceeding 2500 volts, although it can be furnished for higher voltages. Even at 2500 volts, special precautions should be used in the handling of the cable to minimize hazard of shock to workmen.

Has heavy walls of insulation and jacket.

Type G—(With Ground Wires)

The same construction as Type W except that it has a flexible ground wire in each filler space. While cables operating above 2500 volts should preferably be shielded, the ground wires in Type G cables in effect provide some shielding and afford a certain degree of protection to operators when the wires are grounded at both ends of the cable length. In some instances Type G cables have proved satisfactory at 5000 volts. The ground wires are normally of tinned copper strands covered with a cushioning cotton braid. If desired, ground wires composed of tinned steel strands can be supplied in place of copper.

Type SH—(Shielded—With or Without Ground Wires)

Similar to Types W and G, as previously described, except for the addition of shielding braids, and are recommended for all operating voltages above 2500 volts. These cables are classified in four groups as follows:

Type	Ground Wires	Shielding
SH-A	Without	On Each Conductor
SH-B	Without	Over Cabled Conductors
SH-C	With	Over Cabled Conductors
SH-D	With	On Each Conductor

Shielding braids over the assembled conductors confine the voltage stress within the core of the cable. When applied over the separate conductors, shielding confines the stress to the individual conductor insulations, eliminating corona and the attendant formation of ozone which is deleterious to rubber. Shielding braids, properly grounded, afford protection to the cable and to the operator.

The preferred shield consists of a combination copper-cotton braid with the tinned copper wires running in a direction opposite to the lay of the cable, and the cotton threads running in the same direction as the lay of the cable. An all-copper shielding braid can be furnished if desired but the combination shield has been found to give better service in cables subjected to repeated flexing.

It is considered good practice to employ ground wires in all shielded high-voltage portable cables. These ground wires are normally uninsulated to permit electrical contact with the shielding braids.

For operating voltages up to 6000 volts, a shield over the assembled conductors with the use of ground wires (Type SH-C) is generally recommended. For voltages over 6000 volts, shielding over the individual conductors with the use of ground wires (Type SH-D) is recommended.

*Trade-mark.

*Trade-mark.
Rubber sheathed portable cable molded in lead, having larger diameters or diameters other than those listed above, can also be furnished.
Four-conductor Type SH Cables are also supplied.

General Cable Wire Armored Cable 3-Conductor

Designed for semi-portable use, such as power supply to dredges, shovels, etc. The use of galvanized steel armor wire provides exceptional longitudinal strength, allowing long lengths to be pulled into position or moved about without imposing undue strain on the conductors or insulation. Protection is also afforded against fouling by ship anchors, abrasion, and impact of heavy bodies.

Conductors are of tinned, soft annealed copper, and are flexible stranded (A.S.T.M. Class C).

The insulation on the separate conductors is either a 30% or 40% submarine compound, enclosed in a color-coded rubber-faced tape for conductor identification.

For cable operating at more than 3500 volts with the neutral ungrounded, and for all cable operating at more than 6000 volts, shielding recommendations can be obtained upon request.

The insulated and taped conductors are cabled with a short lay with presaturated jute fillers, and are bound together with a heavy rubber-faced tape. A bedding of presaturated jute yarn is next applied, over which the galvanized steel armor wires are served. The armor wires are applied tightly with a short lay in order to provide maximum flexibility in the finished cable.

Cable can also be supplied with an all-rubber, or a reinforced rubber, jacket under the armor.

Rated Voltage, 2001-3000 Phase to Phase (Grounded or Ungrounded)

This cable does not contain shielding.

General Cable Special Heavy Duty Cords
600 Volts

Type NS Neoprene Cord

Type TS Thiokol* Cord

Flexible or extra-flexible stranded conductors are enclosed in color-coded A.S.T.M. Performance compound, cabled with jute fillers and assembled in a close fitting outer sheath of Neoprene or Thiokol compounds.

Sheaths are applied over a reinforcing layer of close wrapped cotton. Normally supplied with untinned conductors and cotton separators.

TYPE NS NEOPRENE. Recommended where toughness, heat, sunlight, and abrasion resistance together with moderate degrees of oil and solvent resistance are required.

TYPE TS THIOKOL.* Unaffected by sunlight, oil, or solvents (other than strong alkali), does not have heat or abrasion resistance characteristics of Type NS.

*Trade-mark Thiokol Corp. ^oPer carton of 4 coils.
Color-coding of conductors, insulation colors: black; black and white; black, white, and green; black, white, green, and red; for single, 2, 3, or 4-conductor cords respectively.
Neoprene cords bear printed rubber labels vulcanized into sheath indicating cords of General Cable manufacture.

General Cable Special Light Duty Cords
Type NSJ—Neoprene Sheathed—300 Volts

For use where conditions of sunlight, heat, oil; or solvent-attack would be unsuitable for rubber-jacketed Type SJ cords.

16	66x#34	7	2/64	.390	4	26	107

These cords (except 2-conductor size 18 A.W.G.) bear printed colored labels vulcanized into sheath indicating cords of General Cable manufacture.

Neoprene cords not listed by Underwriters' Laboratories.

General Cable Cords

300 Volts

Type SJ Standard Cord—40% Jacket

Underwriters' Approved

Used with office, household and similar appliances. Prescribed by the N.E.C. for use in damp places and where subject to hard usage.

Construction comprises flexible or extra-flexible, bunch stranded conductors of soft annealed copper, cotton separator, insulation of 30% grade compound (color-coded), cabled with cushioning jute fillers.

The 40% rubber jacket is available in black, ivory, green or brown. Also supplied with a 60% jacket molded in lead; has extra-flexible stranding.

Put up in 250-foot lengths.

Size A.W.G.	Construction	Current Carrying Capacity Amperes	Insulation Thickness Inches	Overall Diameter Inches	Net Weight Pounds per 1000 Feet	Weight Pounds per 1000-Foot Coil

Current carrying capacities, N.E.C. 1937.

Color-coding of conductors, insulation colors: black and white; black, white, and green; black, white, green, and red; for 2, 3 or 4-conductor cords respectively.

Type SJ Super Service* Shot Firing or Blasting Cords

Designed for use as control wiring in remote firing of explosive charges by electric impulses. Suitable for use in either battery or magneto circuits.

Waterproof, light weight, flexible, and highly resistant to abrasion and normal wear. Cords are continuously reusable by cutting off damaged ends after each firing.

Size A.W.G.	Construction	Current Carrying Capacity Amperes	Insulation Thickness Inches	Overall Diameter Inches	Net Weight Pounds per 1000 Feet	Weight Pounds per 1000-Foot Coil
18	16x#30	5	.023	.30	47	48

14	41x#30	15	.023	.35	70	71

Super Service* Miners' Hat Lamp Cord

A lightweight, rubber-jacketed 2-conductor cord for miners' individual electric lamps. Waterproof, durable, and extremely flexible.

Two extra-flexible, rope-stranded conductors of soft annealed copper, each insulated with 30% rubber compound, are assembled with a short lay around a center supporting cord of strong cotton, and enclosed in a jacket of 60% Super Service tough tread compound.

Size A.W.G.	Construction	Current Carrying Capacity Amperes	Insulation Thickness Inches	Overall Diameter Inches	Net Weight Pounds per 1000 Feet	Weight Pounds per 1000-Foot Spool
18	42x#34	5	.023	.300	65	80
16	70x#34	7	.023	.354	95	110

*Trade-mark.

General Cable Gencaseal*

Gencaseal is an electrical insulation made from a synthetic thermoplastic material. The physical properties of Gencaseal are comparable to those of rubber compounds; dielectric strength is higher. Gencaseal is highly resistant to the deteriorating effects of heat, oxidation, sunlight, oil, acids and alkalis, water, and other chemical solutions; will not support combustion. Overall protection such as a tape, braid or lead sheath is not required.

Principal characteristics are:

1. Dielectric strength substantially above that of rubber compounds.
2. Resistance to oils and chemical solutions beyond comparison with rubber or most rubber-like insulations.
3. Ages more slowly than rubber because of its greater resistance to oxidation and light.
4. Flame-resistant to the extent that it will not support combustion even in open flame.
5. Tough, flexible, and durable; needs no protective coverings except where subjected to severe mechanical abuse.
6. Attractive finish; a clean, glossy, enamel-like appearance. Available in a number of bright, permanent colors.
7. Small diameter and reduced weight compared to other types of insulation which require protective coverings.
8. Strips easily from the conductor leaving the tin clean and bright.

Gencaseal insulated wire is recommended for station and industrial switchboard, meter and control wiring; for machine shop and printing press motor leads and control circuits; for distributing frame and other small wiring in the telephone plant; for appliance wiring or other small applications at 600 volts or less and where the operating temperature does not exceed 80°C.

The Underwriters' Laboratories have no fixed standards covering this type of wire for any particular application. However, their "Appliance Wiring Material" procedure provides for the listing and labeling of the wire after a sample appliance, motor or machine with suitable wiring as a component part has been submitted by the appliance maker to the Underwriters' Laboratories and approval given.

For low voltage wiring problems where severe conditions are encountered, Gencaseal may be the solution. However, it should be employed only on the recommendation of engineers who are familiar with its characteristics performance.

In solid, flexible, or extra flexible stranding. Sizes smaller than 14 A.W.G. rated at 300 volts. Insulation thickness is the same as the standard rubber wall for the size involved. Other sizes and wall thicknesses on request.

Standard colors: black, white, red, yellow, green, and blue. Unless otherwise specified, black will be supplied. Ridged insulation can be supplied for further identification where required.

All conductors soft tinned copper. Protective tapes or braids are not required.

Other strandings for flexible and extra flexible conductors can be supplied when quantity justifies.

Weights and diameters are for cables with tape and braid; other braided cables have single braid only. For ungrounded neutral service, heavier insulation walls are required.

All conductors untempered, soft annealed copper (also supplied with tin or alternate special Alloy coated strands). Construction data for cables of other sizes, types, and voltage ratings will be supplied on request.

American Steel & Wire Electrical Wires and Cable

Nearly fifty years—half a century—of steady growth and development are back of American Steel & Wire Company leadership in the production of insulated wires and cables.

The phenomenal growth of the electrical industry during the ensuing years is a matter of common knowledge; and it was accompanied by corresponding advances in the insulated wire field. The American Steel & Wire Company has always been conspicuously identified with this progress. Their products include almost every type of insulated conductor from magnet wires, finer than a human hair, to huge power cables nearly five inches in diameter. All operations—rolling, drawing, annealing, and insulating—are performed in their own mills, and every process is, therefore, under close control from start to finish.

Well equipped research laboratories are constantly investigating and testing new processes and new materials for the improvement of these products. Careful supervision and frequent inspections, repeated at successive stages of production, insure adherence to our strict standards of high uniform quality.

Firefite Rubber-Insulated Braid-Covered Building Wire and Cable

N.E.C. Standard

This wire and cable conforms in every respect to standards established by the Underwriters' Laboratories and the National Electrical Code.

Available in all recognized types, grades, and finishes—braided or lead-sheathed—single, twin, or multiple-conductor—for working pressures up to 5000 volts or higher.

Building Wire Types

Trade Name	Underwriters' Type	Grade of Insulation	General Construction	Maximum Operating Temperature
Americore	R	Code	Rub. & Braid	50°C.
Amerite	RP	Performance (30%)	Rub. & Braid	60°C.
Amperox	RH	Heat-Resistant	Rub. & Braid	75°C.
Amarine	RW	Moisture-Resistant	Rub. & Braid	50°C.

Thin-Wall Types

Amerite	RPT	Performance (30%)	Rub. & Braid	60°C.
Amperox	RHT	Heat-Resistant	Rub. & Braid	75°C.
Ampyrol	SN	Synthetic (No Braid)	Plain Core	60°C.

Corresponding to the four grades of building wire recognized by Underwriters' Laboratories, Firefite wire and cable is available with any one of four different grades of rubber insulation, as follows:

Americore (Type R) wire meets all requirements for Underwriters' "code grade" and is approved for operating temperatures up to 50°C.

Amerite (Type RP), formerly known as 30% grade, corresponds to Underwriters' requirements for "performance grade." Approved for operation at temperatures up to 60°C. Amerite also complies with A.S.T.M. specification D27 for Class AO rubber insulation.

Amperox (Type RH) complies with Underwriters' standards for "heat-resistant grade." Approved for operating temperatures up to 75°C. Formerly known as "super-aging grade," Amperox conforms in all respects with requirements of latest issue of Federal specification No. 106.

Amarine (Type RW) is Underwriters' "moisture-resistant" grade that is approved for use in moist locations where lead-sheathed cable is ordinarily required.

Firefite Thin-Wall Building Wire

600 Volts

By the use of thin-wall building wire, old buildings can be rewired and current-carrying capacities doubled, without disturbing existing conduit systems. The American Steel & Wire Company manufactures three different types of thin-wall wires: Types RHT, RPT, and SN.

Rubber-Insulated and Braid-Covered Single Conductor

Amerite Type RPT—Performance Grade (30%)
Amperox Type RHT—Heat-Resistant Grade

Type RPT is similar in construction to Type RHT except for the grade of rubber insulation employed. Type RPT is insulated with a light wall of Amerite (30%) performance grade rubber and covered with a standard Firefite braid. It is approved for rewiring jobs only. The maximum allowable operating temperature is 60°C. Current-carrying capacities are correspondingly lower than those of Type RHT.

Type RHT is insulated with a light wall of Amperox heat-resistant rubber compound and covered with a standard Firefite braid that is both flame-retarding and weather-resistant. This is the only type of thin-wall wire that is intended for both new wiring and for rewiring jobs. It is suitable for operation at temperatures up to 75°C. It has highest current-carrying capacity, size for size, of any of the thin-wall types.

10	7	3/64	.21	42	.24	47	500
8	7	3/64	.27	72	.30	80	500

Synthetic Insulation—No Braid—Single Conductor

Ampyrol Type SN—Synthetic Grade

Type SN wires are insulated with a thin wall of Ampyrol, a synthetic resin developed by the American Steel & Wire Company. Ampyrol is the only covering, no braid is used. Intended for rewiring only. Recommended for operation at temperatures up to 60°C. Type SN wire is somewhat smaller in diameter than corresponding sizes of Type RHT, but that advantage is offset to some extent by its lower current-carrying capacity.

A. S. & W. Rubber-Insulated Lead-Sheathed Building Cable

600 Volts

N.E.C. Standard

Rubber-insulated, lead-sheathed cable of American Steel & Wire manufacture is available in all sizes—single, twin, or multiple-conductor—for any specified operating voltage. Three different types of rubber insulation are regularly furnished, corresponding to the three standard grades recognized by the Underwriters' Laboratories and the National Electrical Code:

Americore (Type RL) Underwriters' code grade, approved for operation at 50°C.

Amerite (Type RPL) Underwriters' performance (30%) grade, approved for operation at 60°C.

Amperox (Type RHL) Underwriters' heat-resistant grade, approved for operation at 75°C.

Other special compounds can be furnished for unusual conditions of installation or operation. American Steel & Wire Company engineers will gladly make recommendations.

2-Conductor

3-Conductor

This cable is approved by the Underwriters' Laboratories for use in accordance with rules of the National Electrical Code. Tamper-proof type; neutral conductor is applied concentrically over the inner insulated conductors. The inner conductors are insulated with Amerite 30% performance grade rubber compound. The outer covering is a flame-retarding, moisture-resistant braid.

Amerite Type SD-F 3-Conductor Service Drop Cable

U. S. Patent No. 2163235

Approved by the Fire Underwriters for the same service as standard Type SD. Similar in construction to standard Type SD cable except for the outer covering. Instead of a braid, this cable is protected by a unique outer sheath consisting of the neutral wires deeply embedded in a covering of impregnated felted cotton.

Amerite Type SE Service Entrance Cable

A cable of tamper-proof construction. Has wires of neutral conductor applied helically around inner insulated conductors.

Made in two different styles, both approved by Underwriters' Laboratories for the same type of service.

Style A cable has flat steel armor applied over the neutral conductor.

Style U cable does not have steel tape.

Amerite Type ASE Service Entrance Cable Protected Type

This cable is approved by the Underwriters' Laboratories for use under conditions where the National Electrical Code calls for a cable of the protected type. It is also approved for underground service entrance and for range circuits. The insulated conductors are protected by a heavy armor of interlocking galvanized steel tape, covered with a flame-resistant, weatherproof braid.

A. S. & W. Heavy Duty Braided Mining Cable

600 Volts

Many users prefer mining cable of the braided type. This cable is less expensive (in first cost) than all-rubber types, easier to splice and to repair, and considerably smaller in diameter.

Recommended for hard service at moderate cost. Flexible conductors are insulated with Americore rubber protected by a heavy braid of strong seine twine, deeply embedded in the insulation to prevent slipping.

The American Steel & Wire Company also manufactures loom-covered mining cable having the familiar fire-hose finish.

A. S. & W. Type RLJFJ Steel-Taped Parkway Cable

Single Conductor

Flat Twin Conductor

3-Conductor

Amerseal Type RJ Non-Metallic Sheathed Parkway Cable

Single Conductor

Flat Twin Conductor

3-Conductor

Designed for burial direct in earth without conduit or other external protection. The insulation may be either rubber or varnished cambric.

Cable consists of rubber-insulated conductors encased in a lead sheath and protected by two layers of flat steel tape applied between two wraps of impregnated jute. Any specified grade of rubber insulation can be furnished suitable for any specified working voltage.

Suitable for burial direct in the earth. Used extensively for airport and street lighting and for railway signal work. Because of the light weight, this cable is also suitable for aerial service.

Insulated conductors are hermetically sealed in a tough resilient rubber sheath further protected by a covering of asphalted jute.

A. S. & W. Varnished Cambric Insulated Wire and Cable

Varnished cambric cable is commonly used for general power station wiring and for general power distribution within manufacturing plants. Especially for use in heavy industries where large blocks of power are to be transmitted for relatively short distances.

Unless otherwise specified, varnished cambric insulated cable of American Steel & Wire manufacture conforms in all respects to I. P. C. E. A. specifications.

Varnished cambric is a heat-resistant insulation, unaffected by oil or grease. Cable with this type of insulation has high current-carrying capacity and high dielectric strength. Strong and rugged to withstand the mechanical strains of installation; simple to install and maintain.

Can be furnished in a wide range of sizes and working voltages, single or multiple-conductor; with braid, lead sheath, or steel-armored finish. The tables below show sizes to 4/0 A. W. G. only, but larger sizes can be furnished up to 2,000,000 cm.

Reliance U. R. C. Type Weatherproof Wire and Cable

N.E.C. Standard

Reliance weatherproof wire and cable complies with all requirements of A.S.A. specifications C8.18 for weather-resistant wire and cable, U.R.C. Type. Conductors may be solid or stranded, soft or hard drawn, covered with 2 or 3 weatherproof braids, as specified. Coverings are saturated with pure air-blown asphalt and finished with mica flake.

Solid—Triple-Braid

Standard packing: No. 1/0 and larger, on reels; No. 1 and smaller, in coils.

Amerfelt Weatherproof Wire

Amerfelt weatherproof wire, covered with impregnated felted cotton and one weatherproof braid is also manufactured by the American Steel & Wire Company.

Reliance Slow-Burning Wire and Cable

3 White Braids

N.E.C. Standard

Solid or stranded conductors are covered with 3 white braids, each thoroughly saturated with white flame-resistant compound. The outside is slicked down to produce a hard, smooth surface.

This wire does not carry flame and is especially useful for wiring in hot dry places.

Standard packing: No. 6 and larger, on reels; No. 8 and smaller, in coils.

A. S. & W. Magnet Wire

Made to meet A.S.T.M. standards. Widely known for high conductivity, soft temper, and easy winding properties.

Manufactured in all shapes—round, square, and rectangular; sizes 4/0 to 42 A.W.G. Insulations of baked enamel, cotton, silk, paper, asbestos, and glass.

Information on Amerglass, the new heat-resistant magnet wire with the high space factor, furnished on request.

A. S. & W. Bare Copper Wire

Round Copper Wire

Grooved Trolley Wire

Figure 8 Trolley Wire

Copper wire and strand manufactured by the American Steel & Wire Company complies in all respects with latest A. S. T. M. specifications—plain or tinned, soft, medium, or hard drawn.

Copper trolley wire is made in sizes 1/0 to 350,000 cm. (6/0), and in three different shapes—round, grooved, and figure 8. Size 6/0 grooved wire can be furnished to fit 4/0 hangers.

Amerclad Rubber-Sheathed Portable Cord and Cable

Type S Cord

Twin Mining Machine Cable

The insulated conductors of Amerclad cable are encased in a tough, resilient sheath of tire-tread rubber. Amerclad cable is extremely flexible, yet tough and durable enough to withstand severest usage.

All sizes and types are available from Type SJ cords no larger than a pencil to huge portable dredge cables 5 inches in diameter for operation at 13,000 volts.

Ask for the catalog describing:

- Portable Cords—Type S and Type SJ
- Oilproof Cords—Type N
- Locomotive and Mining Machine Cable
- Motor Lead Cable
- Welding Cable
- Shovel Cable, and Many Others.

Amerbestos Asbestos-Insulated Wire and Cable

AVC Power Cable

Insulated with felted asbestos or with a combination of asbestos and varnished cambric. Designed for operation at high temperatures that would soon destroy any other type of insulation.

AVC Mining Cable

Ask for the catalog describing:

- Asbestos-Insulated Rheostat and Switchboard Wire
- Stove Wire
- Boiler-Room Wire
- Apparatus Cable
- Control Cable
- Heat-Resistant Cord
- Fixture Wire

Type RU Simplex Latox 600 Volt Insulated Building Wire

Single Conductor

60°C. Latox Rubber, Weatherproof-Flameproof Finish
.018 Inches Latox Insulation

For rewiring as recommended by Edison Electric Institute and Underwriters' Laboratories.

A small diameter building wire offered for use in rewiring of existing buildings. Permission for its use must be obtained from the local authorities having jurisdiction.

Consists of tinned copper conductor with 90% Latox milled grainless rubber insulation, applied by the dip and pass process, special fibrous protective covering with a weatherproof-flameproof finish.

Because of its small overall diameter allows a maximum number of conductors to be placed in existing conduit systems and has been made available for that purpose. The fibrous covering affords mechanical protection to the conductor insulation where the inside of the conduits may be corroded or rough.

2	259	.65	435	4/0	427	.95	1140

*With steel reinforcing strands—to be used as mine locomotive cable.

With or without steel reinforcing strands.

Twin—Parallel

For use where 2-conductor cable of this construction is preferred. Easy to reel as it lies flat. May also be used for battery charging.

Size A.W.G.	No. of Strands	O.D. In.	Gross Wt. Lb. per 1000 Ft.	Size A.W.G.	No. of Strands	O.D. In.	Gross Wt. Lb. per 1000 Ft.

Type S Simplex-Tirex Flexible Rubber Cord For Electrical Tools and Appliances

The flexible copper conductors have high grade, not less than 30 per cent, rubber insulation. The insulated conductors are twisted and covered with a 60 per cent Selenium rubber which is highly resistant to abrasion.

Single conductor Type S is approved by Underwriters for car wiring only. Type S Simplex-Tirex Cord in 2, 3, and 4-conductor is N.E.C. standard for 600 V.W.P. It fits standard bushings and is satisfactory for portable lamps, tools, and other appliances.

Usually supplied in standard lengths of approximately 250 feet (from 200 to 270 feet). The cartons are so constructed that any length of cord may be drawn out as needed without disturbing the remainder of the coil. Two-conductor No. 14 packed in cartons; 2 and 3-conductor No. 16 packed in spools or cartons; 4-conductor No. 16 packed in cartons;

2, 3, and 4-conductor No. 18 packed in spools or cartons. Other sizes and in coils. All sizes can be furnished in coils or longer lengths can be shipped on reels.

Type SJ Tirex Portable Cord Selenium Rubber Armored 300 Volts

2-Conductor

A small lightweight cord suitable for service in offices, dwellings and similar places where a small flexible conductor is needed. It is intended for service on such equipment as vacuum cleaners, refrigerators, fans, washing machines, lamps, office equipment and small electric tools which do not require a heavy, sturdy cord.

Nos. 18 and 16 are approved by Underwriters' Laboratories, Inc.

Packed in cartons or on spools, each package containing approximately 250 feet of 2-conductor cord.

Tirex Shot Fire Cable

Two-conductor

Suitable for rough work in damp or wet places. Not affected by acid, gas or oil.

The particular features which will appeal to the shot firer, are the small diameter of about 1/4 inch and the light weight of 4 1/2 pounds to 100 feet.

Cable is flexible and has adequate tensile strength for the work for which it was designed. Does not kink or snarl.

Tirex Welding Cable

Super Flexible—Single Conductor Selenium Rubber Armored

This cable is extremely flexible and designed so as not to drag on operator's wrist. Safe for both operator and the public when used on streets and public ways.

Conductor consists of fine copper wires stranded to give maximum flexibility. The insulation is compounded and cured to meet the unusual service conditions. It strips clean because of the separator between the insulation and the conductor. A tough, selenium rubber sheath provides protection from abrasion.

Tirex Motor Lead Cable Single Conductor—Paper Taped Selenium Rubber Armored

This cable is recommended for the interior wiring of motors, mine locomotives and wherever a flexible cable is needed; also where it is an advantage to have the rubber strip easily from the copper leaving it clean for soldering into lugs or connectors.

Accessories for Simplex-Telex Twin Underground Telephone Cable

Spinners

A means of transposing conductor every 3 to 5 feet, and at the same time protecting the cable as it comes off over the head of the reel.

Each

Vulcanizers

Including mold, indicating light, buzzer, battery leads and clips, self-contained in cover box for use with 6-volt automobile battery.

Each

No. D-156209 U-Type Terminal Boxes

For rubber jacket or armored cable.

Each

No. 150-A Loading Coil Cases Equipped with No. 628 Coil

Each

Crimping Tools

For crimping brass sleeves to copper conductor.

Each \$4.00

Splicing Kits

Rubber slab and four brass conductor splicing sleeves, two extra. Packed in individual packages. For One Splice
.....each

No. 17T Graybar Wire Laying Plows

Used for placing U distribution wire and shield wire from the road or main run to the subscribers' premises.

Designed to be pulled through the ground with a light construction truck direct or with the winch rope from such a truck. A 5000-pound shear pin towing connection protects plow when an obstruction is met. This shear pin is a 1/4x2-inch steel rivet.

Plow is of all steel construction; replaceable plow point and landside are of special iron. Two loading weights are furnished. These weights mount, without bolts, on crossbar near handle.

Shipped in five bundles. Can be assembled by connecting parts and placing six bolts.

Weight: complete plow, less loading weights, 170 pounds; loading weight, 75 pounds.

Prices upon application.

A heavy plow built suitable for laying Simplex-Telex Twin Underground Telephone Cable under all soil conditions can also be furnished.

Prices upon application.

Simplex-Telex Twin Underground Telephone Cable

Anhydrex AA Deproteinized Rubber Jacket or Armored

A rubber insulated, non-water absorptive telephone cable made with a rodent resistant tough rubber jacket, or with an armor over the jacket, but without lead, for laying directly in the ground for rural telephone lines, private estates and similar applications.

Standard packages of 2500 feet of rubber jacketed and 1500 feet of armored cable are carried in stock on 22-inch non-returnable reels. No charge for this stock type reel; and no credit will be allowed.

If other lengths are required, there will be an extra charge for packaging or for the use of returnable reels.

Rubber Jacket Telex Cable

No. 17 solid tinned copper twin cable, insulated with tough rubber jacket.

Outside diameter, .350x.200-inch.
Standard package is 2500-foot length on 22-inch non-returnable reel.

Shipping weight per 1000 feet, 46 pounds.
Per 1000 Feet.....

Armored Telex Cable

No. 17 solid tinned copper twin cable, insulated with a tough rubber jacket; armored with 2 bright steel tapes. Impregnated paper tape overall.

Does not require a ground wire, but the following precautions should be taken.

At each splice a jumper wire should be soldered from steel to steel to assure continuous electrical circuits in the steel.

At the pole line end a jumper wire should be soldered onto the steel of the cable and connected to the grounding system which is always a part of the installation at the last pole of the overhead run.

The jumper wire should be about No. 14 A.W.G. either tinned or lead coated and without insulation. A special solder should be used to resist corrosion.

Outside diameter, .418x.315 inch.
Standard package is 1500-foot length on 22-inch non-returnable reel.

Shipping weight per 1000 feet, 134 pounds.
Per 1000 Feet.....

Telex Ground Wire Rubber Jacket

No. 14 (.066) lead dipped bare copper wire for grounding. Furnished on 11-inch non-returnable reels containing 3000 feet.

Shipping weight per 1000 feet, 14.1 pounds.
Per 1000 Feet.....

Simplex-Anhydrex Underground Cable

A modern cable particularly applicable to networks, series lighting circuits, municipal street lighting, park, playground and airport illuminating systems, etc.

Consists essentially of conductors insulated with Anhydrex AA-60 deproteinized rubber insulation, protected with a hard-service rubber jacket.

Suitable for burial direct in the ground or in ducts.

Specifications and prices upon application.

Whitney Blake Long Life Telephone Wires

Inside Wire

No. 22, Soft Copper, Twisted Pair, 1/4-Inch Rubber Insulation, Specification 4256

No. 19, Soft Copper, Twisted Pair, 1/2-Inch Rubber Insulation, Specification 4926

Used inside buildings for extending circuits from arrestors or other terminating fixtures of outside lines to station sets. Furnished in single, pair, triple, and quadruple.

Conductor is tinned soft copper in accordance with A.S.T.M. Standard B-33. Each conductor is covered with a braid of brown hard glazed cotton yarn, having polarity marker threads woven in the braid.

Cellulose Acetate Lacquered Distributing Frame or Jumper Wire

No. 22, Twisted Pair, 1 Conductor Black, 1 Conductor White, Specification 2239

No. 20, Twisted Pair, 1 Conductor Brown, 1 Conductor Brown-Black, Specification 2039

Used on distributing frames and cross connecting racks.

Conductor is tinned soft copper in accordance with A.S.T.M. Standard B-33. Conductor has flexible high dielectric strength coating of enamel. Over the conductor is applied two wraps of Tussah silk and one cotton wrap treated with multiple coats of flame-resisting clear cellulose acetate lacquer. There is sufficient lacquer to prevent fraying of the ends when the conductors are stripped. Also furnished in triple and quadruple.

Crapo Iron Rubber-Insulated Wire

Drop wire can be furnished with galvanized Crapo iron conductors. These conductors possess high strength and conductivity and are galvanized so that the protective coating will not crack or peel even if the wire is bent or twisted abruptly. Rubber insulation applied to these wires is the same grade as other telephone wires. Braids are closely woven and weatherproofed with air-blown asphalt saturant and Stearine pitch-mica finish. The raised tracer is put in the braid of one of the twisted pair wires.

Whitney Blake Long Life Telephone Wires

Telephone wire is the chief product of The Whitney Blake Company and years of specialization in this field enables this company to produce long life telephone wire. Research and study of its products go on continuously to make these products better, longer lived, and less expensive for the telephone industry to use.

The Graybar Electric Company, the oldest supplier to the telephone industry, is the sole distributor of Whitney Blake products, and maintains eighty-three houses in principal trading centers with adequate stocks.

No. 17 Drop Wire

Bronze, Parallel, Specification 5730
Copperweld, Parallel, Specification 5791

Used to extend telephone circuit from open wire leads or distributing cable terminals to the subscriber's station.

Bronze or Copperweld furnished to meet varying climatic conditions. The standard bronze conductor is known as signal bronze, but Hitenso bronze having properties listed below can be supplied when specified. All conductors are tinned in accordance with A.S.T.M. Standard B-33.

The rubber insulation is high compression-resistant and long life compound. It has excellent moisture resistance, providing the finished wire with insulation resistance in excess of 2,500 megohms per 1,000 feet. A raised ridge in the rubber insulation provides polarity identification.

Braid is applied over the two parallel laid conductors. The long staple 2-ply cotton yarn used in the braid is 50% heavier than formerly. Closely woven braids of this heavier yarn add life to the wire.

The braid is completely saturated with an air-blown petroleum asphalt of crude oil origin that is moisture-resisting and weather-resisting. A tough, flexible, high melting point, finishing coat of Stearine pitch and mica is applied over the saturated braid. The life of rubber and braid are lengthened by this effective seal against light, moisture, and oxygen.

	Spec. 5730	Spec. 5791	Hitenso Bronze
Conductor Resist. ohms per 1000 ft.	*15	20	6
Conductor Breaking Load. pounds	170	200	145

Weight per 1000 Feet. pounds	31	31	31

*Signal bronze.

Bronze, Twisted Pair, Specification 3730
Copperweld, Twisted Pair, Specification 3791

Has a raised tracer in the rubber insulation. This permits more even application of weatherproof finish and more uniform wear of the braid.

Has same grade rubber insulation, braid, and weatherproofing as Specification 5730. Conductor resistance, breaking strength, and diameter over rubber same as shown above. Specification 3730 can also be furnished with Hitenso bronze conductor.

	Spec. 3730	Spec. 3791
Coil Eye. inches	16	16
Weight per 1000 Feet. pounds	33	33

Bronze, Parallel, Specification 4746
Hawser Cord Braid, Abrasion-Proof Tree Wire

Constructed same as Specification 5730, with the exception of the heavy Hawser cord braid. Made for service where swaying of limbs rub and fray the standard braids quickly.

Standard conductor is signal bronze. Conductor resistance breaking strength, diameter over rubber, rubber insulation and weatherproofing are same as Specification 5730.

Weight, 47 pounds per 1000 feet.

Outside Wire

No. 14, Hard Copper, Twisted Pair, Specification 4830

Used in drops extending the telephone circuit from open wire leads or distributing cable terminals, where, the transmission efficiency of the wire must be higher than that of No. 17 bronze or Copperweld. Also used in bridling toll line circuits.

Rubber insulation, braid, and weatherproofing same as Specification 5730. Wire has raised ridge in rubber insulation for polarity identification.

Conductor Resistance. ohms per 1000 feet	3
Conductor Breaking Strength. pounds	190
Diameter Over Rubber. inches	.156
Coil Eye. inches	16
Weight per 1000 Feet. pounds	60

No. 16, Hard Copper, Twisted Pair, Specification 3632

For the same applications as Specification 4830. Rubber insulation, braid, and weatherproofing are the same grade as Specification 5730.

Conductor Resistance. ohms per 1000 feet	4.55
Conductor Breaking Load. pounds	120
Diameter Over Rubber. inches	.125
Coil Eye. inches	16
Weight per 1000 Feet. pounds	42

Bridle Wire

Soft Copper, Twisted Pair, Specification 4823

Used in ring wiring and in bridling open wire lines.

Conductor is tinned soft annealed copper in accordance with A.S.T.M. Standard B-33. Rubber insulation, same as Specification 5730. Braid has raised tracer thread or threads to identify extra conductors in pair, triple, or quadruple wires; finished with high melting point black wax.

Gage No.	18	19	20
Conductor Resist. ohms per 1000 ft.	7.5	10	11
Diameter Over Rubber. inches	.090	.080	.072
Coil Eye. inches	16	9	9
Weight per 1000 Feet. pounds	31	22	20

No. 22 Colored Duct Wire

Soft Copper, Twisted Pair, Specification 5689

Used in building conduit systems, for building wiring in damp locations, etc. Single conductor is yellow; twisted pair, green and red; triple, red, green, and yellow; quadruple, red, green, yellow, and black.

Conductor is tinned soft copper in accordance with A.S.T.M. Standard B-33. Rubber insulation is moisture-resistant compound which provides wire with an insulation resistance of 750 megohms per 1,000 feet after 96 hours immersion in water. Each conductor has a braid of special size cotton to keep the diameter small and impregnated with asphalt saturant and finished with special colored pitches. A coating of paraffin is applied overall.

Put up in fishline coils of 200 feet; tied in bundles.	
Conductor Resistance. ohms per 1000 feet	20
Diameter Over Rubber. inches	.060
Bundle Coil Eye. inches	5
Weight per 1000 Feet. pounds	14

Whitney Blake Shielded Wires and Cordage

For Sound Amplification Systems, Speech Input Equipment, and Intercommunicating Systems

Whitney Blake Microphone Extension Cordage

No. GB-403-A

A flexible cable for microphone circuits and low impedance transmission lines.

Made with No. 18 gage extra flexible stranded conductors, 30% rubber insulation, braided tinned copper shield, cotton wrapping, and a tough 40% black rubber jacket overall.

Regular round wire shield is standard.

O.D., .280-inch.

Put up in 250-foot coils.

Weight per 1000 feet, 60 pounds.

Whitney Blake Microphone Transmission Line Cable

No. GB-213-A—Standard Round Wire Shield

No. GB-213-FS—Special Flat Wire Shield

A cable for fixed portion of microphone circuits in conduit, etc.

Made with No. 22 tinned solid conductors, cotton wrapped, 30% pushback rubber insulation, tinned copper shield, cotton wrapping, and 40% gray outer rubber jacket.

Available with regular round wire shield or with flat wire shield which reduces diameters, thereby lowering costs.

No.	GB-213-A	GB-213-FS
O.D.	.218 in.	.195 in.
Weight per 1000 Feet	29 lb.	26 lb.

Put up on 500-foot spools.

Whitney Blake Interpanel Wiring and Communication System Cordage

No. GB-205-A—Standard Round Wire Shield

No. GB-205-FS—Special Flat Wire Shield

No. GB-206-A—Standard Round Wire Shield

No. GB-206-FS—Special Flat Wire Shield

No. GB-207-A

For use in wiring panel boards. Small diameters give a neat appearance and reduce bulk on back of board.

Also for voice circuits in communication systems in offices, factories, hospitals, etc.

No. GB-205-A.—Made with No. 20 gage tinned enameled conductor, cotton wound and braided, beeswaxed, and braided bare copper shield over twisted conductors.

Available with regular round wire shield or with flat wire shield which reduces diameters thereby lowering costs.

Nos. GB-206-A AND GB-207-A.—Constructed the same as Nos. GB-205-A and GB-208-A, respectively, but have an additional outer black cotton braid.

Regular round wire shield is standard.

Available with regular round wire shield or with flat wire shield which reduces diameters thereby lowering costs.

*No. GB-208-A.—Also suited for same applications.

O.D. in.	.187	.143	.205	.165	.140
Wt. per 1000 Ft. lb.	27	12	28	15	13

Put up on 500-foot spools.

Whitney Blake Speaker Transmission Cable

No. GB-208-A

No. GB-209-A—Standard Round Wire Shield

No. GB-209-FS—Special Flat Wire Shield

This cable is for low or high impedance loud speaker circuits.

*No. GB-208-A.—Made with No. 22 gage tinned enameled conductors, double silk and single cotton wound, cellulose acetate lacquered and braided and bare copper shield over twisted conductors.

Put up on 500-foot spools.

No. GB-209-A.—Made with No. 18 gage tinned solid copper conductor, 1/2-inch code rubber insulation, cotton braid on each conductor, waxed, and braided bare copper shield over twisted conductors.

Available with regular round wire shield or with flat wire shield which reduces diameters thereby lowering costs.

Put up on 500-foot coils.

Weight per 1000 Feet	52 lb.	31 lb.	12 lb.

Whitney Blake Concentric Type Cable

No. GB-211-A

No. GB-212-A

For loud speaker and communication system circuits, the shield being used for the grounded side of the circuit.

This cable is moistureproof, has small diameters and pushback insulation.

No. GB-211-A.—Made with No. 18 gage tinned stranded conductor, cotton wrapped, 30% pushback rubber insulation, braided tinned copper shield, cotton wrapping and a 40% gray rubber jacket.

No. GB-212-A.—Made with No. 22 gage tinned solid conductor, cotton wrapped, 30% pushback rubber insulation, braided tinned copper shield, cotton wrapping and a 40% gray rubber jacket.

No.	GB-211-A	GB-212-A
O.D.	.171 in.	.140 in.
Weight per 1000 Feet	21 lb.	16 lb.

Put up on 500-foot spools.

Type SJ Whitney Blake Rubber Sheathed Cord

Recommended for light duty tools, refrigerators, vacuum cleaners, washing machines, sewing machines, multigraph machines, cash registers, billing machines, etc.

Made with standard and flexible stranded conductors, 30% rubber insulated, twisted with fillers and covered with cotton braid, 40% tough rubber jacket overall.

Standard stranding is for stationary service, and flexible stranding for movable devices.

Maximum voltage rating, 300 volts.

The rubber compounds of this moisture-proof cord are age resisting and provide high resistance to abrasion, shock and twisting. It is non-kinking, non-fraying, and has non-dust collecting satin finish.

Size A.W.G.	Regular Stranding		Flexible Stranding		2-Conductor		3-Conductor		No. of Coil

Type SV Whitney Blake Rubber Sheathed Cord

A cord for light duty appliances, such as food mixers, vacuum cleaners and fans.

Made with flexible stranded conductors 30% rubber insulated, conductors twisted with fillers and covered with cotton braid and 40% tough rubber jacket overall.

Maximum voltage rating, 300 volts.

The rubber compounds of this moisture-proof cord are age resisting and provide high resistance to abrasion, shock and twisting. It is non-kinking, non-fraying, and has non-dust collecting satin finish.

Size A.W.G., 18. No. of strands, 41. Size wire, 34. Approximate O.D., .250 inch.

Put up in 250-foot coils. Approximate weight per 1000 feet, 31 pounds.

Whitney Blake Gas Tube Sign and Oil Burner Ignition Cable

Weatherproof Type

Conductor is No. 14—26 strands No. 28 tinned copper. Cellophane separator. High dielectric strength insulation with corona resistant compound.

Ozone, flame and moisture resistant.

Weatherproof type has cotton braid covering with moisture and flame retarding compounds.

Lacquered and tinned copper shield types have fibreglas braid treated with multiple coats of high tension lacquer.

Standard packages, 250 and 500-foot coils.

**Whitney Blake Automotive Cable
Type 716 High Tension Ignition Cable
Braided-Lacquered Construction**

Made of No. 16 B. & S. gage, 19 strands No. 29 tinned copper. Rubber insulation, cotton braid treated with multiple even coats of flexible heat, oil, water and corona resistant black lacquer. High dielectric strength.

Approximate o.d., .275-inch. Put up in 500-foot coils. Approximate weight per 1000 feet, 38 pounds.

**Type 716-N High Tension Ignition Cable
Neoprene Jacketed Construction**

Made of No. 16 B. & S. gage, 19 strands No. 29 tinned copper, rubber insulated, and covered with a heat, oil, water, and corona resistant neoprene jacket.

Approximate o.d., .275-inch. Put up in 500-foot coils. Approximate weight per 1000 feet, 43 pounds.

**Lighting and Primary Cable
Braided-Lacquered Finish
Single Conductor**

Stranded tinned copper conductors, rubber insulated, glazed cotton braid treated with multiple coats of clear, oil, heat and water resistant lacquer.

Furnished only with light brown braid and blue tracers. Put up in 500-foot coils.

Type CF Whitney Blake Flexible Heat Resisting Fixture Cord N.E.C. Standard

A cord for wiring of fixtures and appliances where temperature does not exceed 194° F. Made with stranded copper conductor, paper separator and cotton braids thoroughly saturated with a flameproof and moisture-resisting compound. Cotton or rayon appearance braids are applied over the plain type when required.

This wire can be furnished in multiple conductor constructions, CFC, CFPO, and CFPD with outer braids of cotton or rayon.

Type S Whitney Blake Rubber Sheathed Cord

A cord for heavy portable tools, pendant lighting, car heaters, conveyors, garage heaters, game machines, slot machines, ticket venders, floor polishers and sanders, etc.

Made with flexible stranded conductors 30% rubber insulated, conductors twisted with fillers and covered with cotton wrap or braid and 40% heavy duty rubber jacket applied overall.

Maximum voltage rating, 600 volts.

The rubber compounds of this moisture-proof cord are age resisting and provide high resistance to abrasion, shock and twisting. It is non-kinking, non-fraying, and has non-dust collecting satin finish.

DeLuxe Flat Iron Cord Sets

Listed and Approved by Underwriters' Laboratories, Inc., for Ring Label Service

Constructed with heavy heater plug with non-arcing and heat-resisting bi-metallic contacts. No strain on electrical connections. Heater plug fastened with rivets—no bolts or nuts to work loose. Rubber guard on plug reduces fatigue at point where failure usually occurs.

Length, 8 feet.

Individually packaged and packed 10 in a display carton. Standard package, 50.

Approximate shipping weight per package, 28 pounds.

No. 500, No. 18 10000-Cycle Twine Braid Heater Cord with Black and Red Tracers; Black Rubber Attachment Plug Cap Molded to Cord; and Black Flat Iron Plug..... each \$.98

No. 501, Same as the No. 500, Except Cord is Brown Braid with Green and White Tracers and Cap and Plug are Brown..... each \$.98

No. 600 Utility Flat Iron Cord Sets

Listed and Approved by Underwriters' Laboratories, Inc., for Ring Label Service

Constructed with heater plug fastened with rivets—no bolts or nuts to work loose.

Length, 8 feet.

Individually packaged and packed 10 in a display carton. Standard package, 50.

Approximate shipping weight per package, 24 pounds.

No. 600, No. 18 3000-cycle Glazed Cotton Braid Heater Cord with Black and Red Rayon Tracers; Black Rubber Unbreakable Separable Attachment Plug; and Black Flat Iron Plug..... each \$.55

Switch Appliance Plug Cord Sets

Listed and Approved by Underwriters' Laboratories, Inc., for Ring Label Service

Made with modern design, durable switch appliance plug and heater plug fastened with rivets—no bolts or nuts to work loose. Internal strain relief protects connections.

Length, 8 feet.

Individually packaged and packed 50 in a standard package.

Approximate shipping weight per package, 37 pounds.

No. 550, No. 18 10000-cycle Twine Braid Heater Cord with Black and Red Tracers; Black Rubber Molded-On Attachment Plug Cap; and Black Switch Appliance Plug with Molded Rubber Guard..... each \$1.25

No. 551, Same as the No. 500, Except Cord is Brown Braid with Green and White Tracers and Cap and Plug are Brown..... each \$1.25

Deltabeston Flexible Cord

Type AFS
(Table YK-8290)

Made with flexible conductors and a tough 40% overall rubber jacket which enables it to withstand severe mechanical abuse. Recommended for use as a portable cord where the individual conductors are in direct contact with the heating element of heating devices.

Due to its construction, this flexible cord is moisture-proof and heat-resisting.

2-Conductor

No. 1500 Table Appliance Cord Sets

Listed and Approved by Underwriters' Laboratories, Inc., for Ring Label Service

Made with No. 18 3000-cycle rayon braid black heater cord with scarlet tracers; separable and unbreakable rubber attachment plug cap, with anchored contacts and black miniature table appliance plug fastened with rivets—no bolts or nuts to work loose.

Length, 6 feet.

Individually tagged and packed in cartons of 10. Standard package, 50.

Approximate shipping weight per package, 18 pounds.

No. 1500.....each \$.40

Type AF Deltabeston Fixture Wire

Plain Type — N.E.C. Standard
300 Volts

This wire is approved for wiring all types of lighting fixtures designed for interior illumination, sun lamps, therapeutic devices, showcase wiring and all types of high-wattage units, especially where socket temperature exceeds 90°C. (194°F.). Flame, heat, and moisture-resisting felted asbestos insulation.

Standard colors: black or white. Other colors available on request at no extra charge in quantities of 1000 feet or more. All based on N.E.M.A. color specifications.

Deltabeston Thermostat Control Wire

12½-Mil Wall of Felted Asbestos—Table YK-2140
25 -Mil Wall of Felted Asbestos—Table YK-2141
32 -Mil Wall of Felted Asbestos—Table YK-2142

This control wire is designed for use with automatic thermostat controls such as are used in modern automatic coal and oil-burning furnaces; and in connection with all 10W-voltage types of signal and intercommunicating systems.

Felted asbestos insulation, impregnated with flame and moisture-resisting compounds. Enameled solid copper conductors. Overall flexible steel armor.

Because of the flame and moisture-resisting qualities of this wire, it may be installed in close proximity to furnaces, hot water or steam pipes, or if necessary, it may be wired in actual contact with the heated surface.

Due to the inorganic construction of the insulation, the electrical and physical properties will neither change nor deteriorate. The insulation will not dry out with heat nor age, and it will neither burn nor conduct flame.

Designed for use on low voltages—usually fed by small stepdown transformers. For this application, the 12½ mil wall insulation is recommended. When control wire is to be used, direct on 115-volt circuits, a minimum insulation thickness of 32 mils is required. Can also be furnished with metallic braid and tinned copper conductors.

600 Volts

Solid Conductor

Recommended for wiring switchboards and all other types of control apparatus. Approved for 90°C. (194°F.) service. Will resist heat, flame, oil, and corrosive vapors. Insulated with varnished cambric and felted asbestos. Overall cotton braid. Dark gray flame-proof finish. Other colors can be furnished upon request. Available with solid tinned copper conductor or stranded tinned copper conductor.

Deltabeston Rheostat Wire

Listed Under the Re-Examination Service of Underwriters' Laboratories, Inc.

600 Volts

Solid Conductor

Recommended for wiring rheostats, furnaces, oven connections, and similar installations where subjected to heat, flame, oil, grease, and corrosive vapors. Maximum copper temperature is 200°C. (392°F.). Insulated with an impregnated wall of purified felted asbestos. Overall asbestos braid, white finish. Black finish can be furnished if required. Available with solid or stranded copper conductors. The copper conductor is normally plain, however, tinned copper will be furnished if specified.

Deltabeston Appliance Lead Wire

300 Volts

Solid Conductor

MOISTURE-RESISTING INSULATION.—Recommended for wiring of electric ranges, stoves, hot plates, and other electrical appliances where both heat and moisture resistance is desirable.

Consists of a highly compressed covering of felted asbestos which contains a moisture and heat resistant wax. The insulation is moisture-resisting but will smoke at approximately 300°F.

Available with copper, nickel or monel conductors. Monel and nickel conductors are recommended when the conductor temperatures exceed 150°C. (302°F.).

Available in sizes A.W.G. 8 to 20.

Standard colors: black, white, red, gray, or blue.

This wire can be furnished in a 3-conductor assembly, if desired. A 3-conductor range cable may be found advantageous for wiring heating devices such as electric ranges, ovens, or furnaces where a 3-heat switch controls the heating units.

SMOKELESS INSULATION.—Recommended for wiring of electrical appliances where high temperature with a minimum of moisture must be met, and a non-smoking insulation is essential.

Consists of a highly compressed covering of felted purified asbestos which contains less organic material than any other type of electrical insulation. This type is smokeless but will not resist moisture.

Available with copper, nickel or monel conductors. Monel and nickel conductors are recommended when the conductor temperatures exceed 150°C. (302°F.).

Available in sizes A.W.G. 8 to 20.

Standard colors: black, white, red, gray, or blue.

Deltabeston Electric Stove Wire

Listed Under the Re-Examination Service of Underwriters' Laboratories, Inc.

300 Volts

Stranded Conductor

The smokeless insulation applied on copper, nickel or monel conductors is designed for wiring electric ranges, space heaters and all other types of electrical heating devices where heat but little or no moisture will be encountered after the wire is installed. The treatment of the insulation is such as to provide a minimum of smoking, but embodies no resistance to moisture.

Maximum copper temperature is 200°C. (392°F.).

Felted asbestos wall has flame and heat-resisting saturant and finish. Standard colors: black, white, red, gray, or blue.

Available with either solid or stranded copper, nickel, or monel conductor.

Recommended for connection of control on signal circuits, either exposed or in conduit, where the operating temperature is too severe for other insulations. Maximum copper temperature 110°C. (230°F.).

Each tinned copper conductor insulated with felted asbestos and varnished cambric insert. Overall asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

Standard shipping lengths as specified.

*Subject to ±5% tolerance due to variation in manufacturing processes.

Deltabeston Power Cable
Listed by the Underwriters' Laboratories, Inc.
(Table YK-2250)
600 Volts

For general power wiring as used in boiler rooms, power plants and steel mills. The cable can be installed exposed or in conduit. Maximum copper temperature, 110° C. (230° F.) Insulation consists of a layer of felted asbestos, wrapped with varnished cambric, a layer of felted asbestos, and then an asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

Deltabeston All-Asbestos Apparatus Cable

Listed Under the Re-Examination Service of Underwriters' Laboratories, Inc.
300 Volts

Recommended for the wiring of motion picture projectors, stage lights, searchlights, floodlights, spotlights, all types of electric cranes and controllers, and all other apparatus where the wires are subjected to high temperatures. Maximum copper temperature is 200° C. (392° F.)

Insulated with a wall of felted asbestos, finished with an overall asbestos braid. Flame and heat-resisting saturant and finish. Standard color of finish, white.

Available in two grades: flexible, and extra flexible.

Deltabeston Apparatus or Motor Lead Cable

Listed by the Underwriters' Laboratories, Inc.
(Table YK-2251)
600 Volts

Recommended where flexibility is desired. Used for wiring all low-voltage apparatus in power plants, steel mills, mine locomotives, foundries, boiler rooms, ash pits, cranes, and any other installation, either exposed or in conduit, where the operating temperature is too severe for other insulations. Maximum copper temperature rating is 110°C. (230°F.).

Insulation consists of a layer of felted asbestos, wrapped with varnished cambric felted asbestos, and then an asbestos braid.

Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

†Bunched strands.

Deltabeston Boiler Room Wire

Listed Under the Re-Examination Service of Underwriters' Laboratories, Inc.
600 Volts

Construction of Sizes 8-18 A.W.G.

Recommended for general conduit and boiler room wiring where heat and moisture-resisting qualities are essential. Typical applications are for lighting and control circuits. Maximum copper temperature, 110°C. (230°F.).

Insulated with felted asbestos and varnished cambric insert. Asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black. White is available on request.

Available in solid or stranded copper conductor.

Deltabeston Elevator Control, Trailer, and Lighting Cable

Listed by Underwriters' Laboratories, Inc.
300 Volts

This cable is designed to be used in connection with the wiring of all automatic and high rise elevators.

Each conductor of soft flexible copper stranding is insulated with a wall of moisture-resisting rubber, over which is felted a fire-resisting wall of asbestos fibre. To facilitate circuit identification in this cable, a coded rayon braid is woven over each conductor.

The individual conductors are cabled around a well padded and flexible steel core which is designed for the specific purpose of carrying the entire weight of the cable with no stress or strain whatever on the electrical conductors. A textile braid is woven around the cabled conductors to hold them in place. A rubberized fabric tape, spirally wound around the textile covering acts a further protection against moisture. Overall is woven an impregnated asbestos braid to resist abrasion and to serve as an additional safeguard against flame from an outside source.

*A tolerance of 5% over or under the o.d. shown above is necessary due to variations in process of manufacture.

Supplied cut to length in any number of conductors from 2 to 37.

For lighting control, a 2-conductor cable of Size 14 A.W.G. is recommended. The construction of this cable is identical with that of the control or trailer cable with the exception that no steel core is required as no support is necessary.

Deltabeston Magnet Wire
Asbestos Insulated—Round Wire

All Deltabeston Magnet Wire is interchangeable for replacement of double cotton covered magnet wire, having the same uniform thickness of insulation.

Standard Finishes

STANDARD BROWN W-E. Flame and heat resisting varnish with a smooth waxy finish.

STANDARD WHITE. Bonded white asbestos designed for impregnation after coil is formed when it will absorb any insulating varnish.

BLACK "A". Asbestos fibre treated with compound having smooth, waxy finish.

Square and Rectangular Magnet Wire

Increasing attention is being given to the economies to be secured by the substitution of Square or Rectangular for round magnet wire. When round wire is used, considerable space is wasted, even when turns are fitted together as closely as possible, whereas the waste spaces are filled when square or rectangular wire is used, and a greater current carrying capacity secured.

Square Magnet Wire

Square magnet wire can be furnished in all sizes from number 14 to 0000 B. & S. gauge. (In computing the gauge the diameter of round wire is comparable to the thickness of square wire.) Sizes smaller than No. 14 cannot be regularly procured owing to the difficulty of winding.

Rectangular Magnet Wire

Rectangular magnet wire sizes have not, as yet, been standardized but can be supplied in sizes from .410 to .020 in thickness and from .460 to .064 in width and the regular insulation is double cotton wound. Rectangular wire is not carried in stock, but made specially on order, and in view of this, orders should not be for less than 200 pounds of any size.

Prices on square and rectangular magnet wire will be quoted upon application.

Ansonia Annunciator Wire

Insulated with two winds of cotton yarn applied in opposite directions, saturated with a wax compound and highly polished, furnished in solid and mixed colors.

On spools of 1 or approximately 8 pounds; in 1, 1/2, or 1/4-pound coils. Packed in cases.

Ansonia Damp-Proof Office Wire

Double braided, the inner braid saturated with a black weatherproof compound. Outer braid is specially treated with wax and highly polished.

Regularly made in No. 18 in the following colors: red, red and white, blue, blue and white, brown, brown and white, black, black and white, orange, orange and white.

In coils of about 10 pounds; on spools of 5 or 10 pounds. Packed in cases of approximately 150 and 200 pounds.

Crapo Double Galvanized Telephone and Telegraph Wire

Drawn from iron or steel, of specific analysis, processed under laboratory supervision, double galvanized by the Crapo patented process, and rigidly inspected. Is guaranteed to meet all standard specifications for electrical conductivity, tensile strength, elongation, galvanizing, and ductility which users of line wire require.

Heavy, uniform galvanized zinc coating applied to this wire by Crapo process gives perfect adhesion, withstands sharp bending and twisting, and affords lasting protection against corrosion. This coating is tough and ductile so that wire to which it is applied may be spliced without impairing the continuity of the galvanizing. This gives corrosion-resisting joints, for longer life, and lower maintenance costs.

Crapo High-Tensile Line Wire

For Long Spans

For Extra Long Spans

A high-tensile, low resistance telephone line wire that makes possible longer-span, lower-cost construction on new lines; provides stronger spans, with lower maintenance expense, on present lines. Development of Indiana Steel & Wire Company.

Crapo HTL-85 High Tensile

Provides for spans of 225 feet in heavy loading districts, 325 feet in medium loading districts, and 375 feet in light loading districts. Used on existing pole structures, it tends to increase strength of line, lessen hazards of ice and wind, minimize service interruptions, reduce maintenance costs. Affords improved transmission at voice frequency with currents of voice frequency magnitude.

It is extra galvanized by the Crapo patented process. Furnished in continuous lengths without splices and joints. Galvanized steel compression-type sleeves are recommended for splicing this wire.

Size B.W.G.	9	10	12	14

Max. Resistance per Mile	18.47 ohms	22.48 ohms	34.12 ohms	58.59 ohms

Crapo HTL-135 Extra High Tensile

For extra long spans of 350 feet in heavy loading districts, 450 feet in medium loading districts, and 500 feet in light loading districts. Has a minimum tensile strength approximately two and one-half times that of standard B.B. wire. Its effective resistance at voice frequencies with currents of voice frequency magnitude is superior to that of the older grade.

Galvanized by time-tested Crapo process to insure a uniform tightly adherent zinc coating.

Regularly furnished in No. 12 B.W.G. and in continuous lengths without splices or joints. Galvanized steel compression-type sleeves are recommended for splicing.

Gleason Reels

Gleason Reels are designed to furnish electric power to portable machinery and tools. The capacities of reels are unlimited, and vary according to the work, whether retrieving, lifting or stretching.

Special Features. Steel instead of cast iron, ball bearings, Micarta insulation, non-ferrous brush rigging, and most important—ability to cover. For example, 200-foot run with 100-foot cable, without central obstruction of right angle outlet. The steel construction permits this.

Motor Driven Reel

Motor Driven Reels

Specially developed G-E Motors and Control are used. These motors stand still with normal torque and normal current.

Motor No. 1. Squirrel cage 10 minutes.

Motor No. 2. Slip ring—continuous.

Motor reels are designed to fit the job, preferably in close cooperation with your engineer.

Prices start at \$750.00 net. Complete information will be furnished on request.

Gear Driven Spring Reels

No. SHO-400

Nos. S-60 and S-25

No. S-15

Gear driven spring reels permit the spring to be stationary and uncoil in a grease filled case driving spool through variable gear ratio to fit the application. They also permit the use of parallel springs which divide the risk, whereas series springs multiply the chance of breakage. Springs can lift and stretch cables horizontally—motors cannot.

Nos. S-75 and S-100 with Revolving or Swivel Base

No.	Description	Each
SHO-400	Overhung, Limit 150 Feet 3/0 Cable	\$850.00

Light Tension Reels

For light cranes and Monorail hoist. The standard reel will pull a light Monorail hoist along the track. Prices include cable.

No.	Description	Each
S-62	Single Phase 220 Volt, Limit 50 Feet No. 16 Cord Only	\$50.00
S-35	Three Phase 600 Volt, Limit 50 Feet No. 16; 40 Feet No. 14; 30 Feet No. 10	75.00
S-61	For 50 Feet No. 10	110.00

Appleton Portable Reelites

Portable Type
660 Watts, 250 Volts

An automatic reeling device for extension light cords. The light is always available within arm's reach and no time is lost in untangling cords or plugging in for new extensions. Each reel has a ratchet stop which works exactly like a window shade.

Furnished standard with cover plate which fits over all 3 1/4 or 4-inch octagonal outlet boxes. Furnished with No. 18 gage rubber cord.

With 12 Feet of Cord—5 1/2-Inch Reelite

Appleton Portable Reelites

Rubber Handle Type

With Half Reflector
660 Watts, 250 Volts

Furnished with or without switch in handle. Also has heavy duty wire guard accommodating up to and including 100-watt lamps.

Black enameled reel-unit 7 1/4 inches diameter, with base for attaching to 3 1/4 to 4-inch outlet boxes; 25 feet No. 18 cord, rubber handle.

Rubber Handle Type

Battery Lamp Type
660 Watts, 250 Volts

This special type reelite is equipped for 21 or 32-cp. 6-8-volt battery lamp to operate off a storage battery. Bulbs not included.

Black enameled reel-unit 7 1/4 inches diameter, with base for attaching to ceiling, or wall of truck; 25 feet No. 18 cord.

Weight per dozen, 96 pounds.

No. 1518...each \$13.00

Battery Lamp Type

Machine Tool Type
660 Watts, 250 Volts

This reelite is equipped with a connector body so that any portable electrical tool or device can be attached.

Black enameled reel-unit 7 1/4 inches diameter, with base for attaching to 3 1/4 or 4-inch outlet boxes; 25 feet No. 18 cord.

Weight per dozen, 97 pounds.

No. 1523...each \$12.50

Machine Tool Type

Special reelite with swivel cover, light spring tension without ratchet stop. No wiring devices furnished.

Black enameled reel-unit with base for attaching to 3 1/4 or 4-inch outlet boxes.

Supplied with No. 18 cord.

Roller Cable Outlets For Constant Duty Reelites

Guide Roller Type

Swivel Type

Large Roller Type

In order to obtain maximum efficiency from the constant duty reelite, it is necessary not only to choose the correct outlet, but also to set it in correct position so that future difficulties and additional expense are avoided.

Guide Roller Type Cable Outlet.—Used generally for all conditions where cable is drawn at a tangent to reel drum. Cable may be pulled within a conical plain of 30 to 40 degrees without a serious loss of efficiency.

Swivel Type Cable Outlet.—Used where cable must be drawn at right angles to drum and in arcs of a maximum range of 225 degrees. Only cable o.d. of 1½ inches and less can be used with this outlet.

Large Roller Type.—Used for installation where cable is drawn out in a straight line parallel to the track and where current source is at the mid-point of the runway. Only cable o.d. of 1½ inches and less can be used.

All constant duty reelites are furnished with any one of the cable outlets as standard equipment. When purchased separately, prices on request.

T & B Tite-Bind Solderless Connectors

T & B Tite-Bind Connectors and Lugs are designed to give the best electrical contact and mechanical connection, utilizing a principle unique in this field.

The bore of the body has a slight (3°) taper into which the tapered sleeve is forced by the bushed nut. Corrugations in the sleeve form numerous line contacts, increase the area of contact and strengthen the mechanical grip. The sleeve exerts a uniform pressure on the cable throughout its length.

If the insulation is cut the length of the sleeve and nut, when the nut is made up, the cable travels with the sleeve into the connector body and the insulation will remain tight against the nut.

As the sleeve travels into the body the slight tapers exert a great pressure on the cable. This maximum pressure produces the minimum electrical resistance and the maximum electrical conductivity.

The open end of the lug offers visual evidence that the cable is of proper size and in place.

Once made up tight, the sleeve stays wedged in place and exerts the same pressure on cable even with nut removed.

Solderless Lugs

Tite-Bind Solderless Lugs are for connecting wire, cable, or tubing to terminals on equipment, to bus bars, etc.

Front-connected lug as illustrated, with either one or two bolt holes is standard, with standard tongue dimensions and drillings. For special tongue dimensions and drillings, add 20 per cent to list price.

Center-formed lugs, angle lugs, round-tongue lugs, and other varieties will be furnished at an increase in price.

2-Way Connectors

Used for splicing the ends of conductors of the same size.

Reducers for splicing the ends of two conductors of different sizes can also be furnished.

Elbow Connectors

Elbow connectors are used for splicing two conductors at right angles and are useful where short bends must be made in heavy conductors.

Reducing elbows and elbows of other angles are also furnished

3-Way Connectors

The 3-way connectors are used to splice three conductors of the same size or of different sizes.

The T or right angle type is illustrated. The Y type is also regularly furnished.

Cable Taps

Tee Taps

Hinjon Cable Taps are used for tapping off from a continuous main to a branch at right angles.

They are a one-piece fitting and are quickly installed.

Furnished for all combinations of main and branch conductor sizes.

Insulating covers are available for sizes up to 500,000 c.m.

**T & B Tite-Bind Solderless Connectors
Hinjon Parallel Gutter Taps**

Hinjon Parallel Taps are similar in design to the cable taps, except that the main and branch conductor connections are parallel.

Used to tap a main conductor where space is limited, as in panel board gutters, etc. Regularly furnished for all combinations of main and branch conductor sizes.

Connecting Blocks

The 3-way connecting block is illustrated, but connecting blocks are furnished for any number of conductors and any combination of sizes.

Additional Designs

Only a few of the more popular types of connectors are illustrated. Other types are designed for all types of transmission line, high tension and special installations. There are connectors designed to hold in excess of the cable strength. For example, a T & B 2-Way Connector of special construction has been approved for use with Type HH cable, the connector developing the full cable strength.

T & B Solderless Connectors or related material will be specially designed to meet any special requirements.

All T & B Solderless Connectors can be furnished with parts rounded for high tension installation, as illustrated.

When ordering, give size and type of conductor being used. Connectors will be furnished for stranded cable unless otherwise specified.

Reducers, reducing elbows, and 3-way connectors, cable taps, and parallel taps to take different sizes of cables are regularly furnished. Prices on these items, listings of other items, and dimensional data furnished on request.

T & B Hinjon Junior Tee-Parallel Tap-In One

Will take any type wire, cable, or tubing that will go into the fitting. Installation consists of skinning the main, inserting the branch and tightening. Tightening locks the threads; vibration-proof.

Approved by Underwriters' Laboratories. Made of high conductivity bronze.

T & B Lug-Its

A one-piece assembly that will not come apart. Floating saddle gives even pressure and maximum contact. Overlapping saddle assures inclusion of all strands. Tongue of pure copper for maximum conductivity. Body and saddle of high conductivity bronze. Electro-tin plated to prevent corrosion.

Approved by Underwriters' Laboratories.

T & B Disconnect Hangers

Provides a safety disconnect for light and power circuits. Designed primarily for Mercury Vapor Lighting Units, it can be used equally well with other types of industrial lighting fixtures.

Consists of a locking hook with 10-ampere, 250-volt polarized receptacle and a bushed loop. Made of malleable iron, it supports fixture or pendant outlet. Approved by Underwriters' Laboratories.

Size Male Loop In.	Size Female Loop In.	2-Wire Receptacle			3-Wire Receptacle

T. & B. Wedge-On Conductor Terminals

Designed to eliminate breakage of soldering lugs and other types of terminals. Puts a heavy pressure on wire to hold it securely and applies pressure so wire cannot break. Supports wire so that vibration or flexing

of wire will not break strands. Makes a tight joint. Approved by Underwriters' Laboratories. Can be furnished with insulating case when specified. No. 9L101 takes 19 strands of No. 22 control wire. Std. package, 200.

T & B Lock-Tite Lugs

With Socket Screws

With Hex Head Screws

A lug that fits any kind of cable—solid, stranded, flexible, hemp-core, etc. Is easily installed with a key wrench. Resists vibration because it is locked tight. One-piece design; has no loose parts. Can be used over and over again.

Approved by Underwriters' Laboratories.

For hex head screws, prefix number with H; no extra charge.

T & B Lock-Tite Tee-Parallel Taps

This tap will do the work of 264 conventional type tee and parallel taps. Will take any type wire within its range as well as round or tubular bus of equivalent diameters. Body sizes open wide to allow easiest imaginable assembly to main and branch. All in one-piece; no detachable parts.

This tap can be used in any position; the branch can be run above, below or alongside the main on a parallel job, above, or below the main on a tee job, by swinging the tap to desired position.

Approved by the Underwriters' Laboratories.

Dossert Solderless Connectors

Type A, 2-Way

Type C, 2-Way

3-Way Joint

Elbow

Y-Joint

Type F Stud Connector

Type M Stud Connector

Style R Cable Anchor

Style S Cable Anchor

Style E Cable Anchor

Dossert Connectors eliminate the use of solder in making electrical connections. They are approved for use without solder on all classes of wiring on both solid and stranded conductors.

The Dossert joint has greater mechanical strength than a soldered joint and an electrical conductance in excess of the cable.

2-Way Connectors

Size of Conductor	Each
14-4*	\$.40

2,500,000 CM	12.50
3,000,000 CM	16.00

*Specify if for solid or stranded on sizes 14 to 0000.

Reducers take the maximum 2-way list.

The 3-ways and Y's add 50 per cent to 2-way list.

The 3-ways, Y's reducers take maximum cable size price.

Elbows take same price as 2-ways. See list above.

List prices of Styles F and M Stud Connectors are the same as a 2-way of corresponding size less 20 per cent, except when special large diameter or length of stud end is specified.

List prices of Style S Cable Anchor are the same as for 2-way connectors of corresponding sizes.

List prices of Styles R and E Cable Anchors are the same as for regular 3-way connectors of corresponding size.

Dossert Cable Taps

Dossert Parallel Gutter Taps

Hook Type

Bolt Type

Insulated Type

Type W, Not Insulated

The cable tap is used to connect a branch wire, rod, or bleeder to a main wire, rod, or feeder. It does not splice the main but simply clamps onto it.

The hook type consists of hook, cover, jam nut, compression nut, and compression sleeve. The upper parts of cover and hook are machined to fit the main wire, while the lower end or shank is threaded, drilled, and tapered to form a nipple of a regular 2-way connector.

The bolt type is in the form of a split tee clamp tightened by four strong bolts. The branch connection is held by a Dossert compression sleeve and nut. The tap is made without cutting the main conductor.

The insulated parallel gutter tap consists of two parts only. It has two countersunk hardened screws of the wrench type. The screws are held in place by washers to prevent falling out. This molded insulated unit saves practically all of the time required for taking off or putting on loose covers with screws in the narrow gutter of a panel. It is especially adapted for making taps on live cables. Made in the same sizes as Type W; prices upon application.

Frankel Solderless Connectors

View Showing Construction

Compression on the cable is obtained by the action of the bevel inside the nut, and the bevel outside, on the body of the connector. The Gripping Jaws are one piece with the body of the connector. There are no loose sleeves.

No. 2563 Front Lugs

For connecting cable to a bus bar or terminal. These lugs can be supplied for bolting to the bus with one, two, or four bolts; offset as illustrated or at various angles to the wire. Special sizes and shapes can be supplied quickly.

No. 2560 Tway Connectors

The tway splices two cables end to end. Two-ways can be supplied to connect two cables of the same size, or different sizes.

No. 2559 Y and No. 2561 Threeway Connectors

Connectors are available for splicing two wires at right angles, and three wires in a T or Y shape, and four wires in an X shape.

Parallel Guttertaps

No. 2601 Guttertap

No. 2603 Insulating Cover

The No. 2601 Guttertap is a simple compact tap built for crowding and is easy to tape. Each connector fits several sizes of cable.

The No. 2603 Bakelite cover is small and snaps in place, to eliminate taping a guttertap.

Size Main Cable	Branch Cable Connectors Only				Covers For Any Branch Size Each

Frankel Solderless Connectors

Flexilugs

No. 1/0 Size

Sizes 250MCM to 1,000MCM

Each size lug fits many sizes of cable, and seven sizes fit any conductor from 14 solid to 1,000MCM cable, including flexible and extra flexible cables. The larger sizes are made to be bolted to the bus with either one or two bolts. All lugs are cadmium plated and constructed so that no parts can be removed. The current is carried through pure copper of 100% conductivity. Everdur is used where a part is subjected to heavy strains.

Note in the large size, contact is made all around the cable and carried through one continuous piece of copper to the bus bar.

Flexilug Size	WILL FIT CABLE SIZE		Per 100
	Minimum	Maximum	
4	14	4	\$11.50
1/0	6	1/0	35.00
4/0	1/0	4/0	60.00
350	250MCM	350MCM	130.00
500	400MCM	500MCM	160.00
700	550MCM	700MCM	225.00
1,000	750MCM	1,000MCM	300.00

Flexisplice

Based on the same principle as the Flexilug, the Flexisplice has the same contact and continuity of current carrying parts. Seven sizes take all cables from No. 14 solid to 1,000MCM cable, including flexible and extra flexible cables. These splices may be used for reducers within the range for which they are made. They represent a smooth surface and can easily be taped to nearly the size of the cable.

Flexilug Size	WILL FIT CABLE SIZE		Per 100
	Minimum	Maximum	
4	14	4	\$30.00
1/0	6	1/0	60.00
4/0	1/0	4/0	100.00

700	550MCM	700MCM	400.00
1,000	750MCM	1,000MCM	500.00

Frankel Heavy Duty Bolted Connectors

For use on standard iron pipe size, copper tubing, cable and solid rod for substations, outdoor installations, plating plants, transformer vaults, etc. The construction is extra heavy, the body being made of bronze of high copper content. Clamping is done by means of heavy Everdur bolts, nuts and lockwashers.

No. 2775 Heavy Duty Bolted T Taps

Made for any combination of any size cable, I.P.S. tubing or rod, with three bolts or six bolts as shown, depending on the size of the tap.

No. 2760 Heavy Duty Bolted Twoway Connectors

Made to connect two conductors of the same size, or any combination of any size cable, I.P.S. copper tube and rod. Made with four to eight bolts, depending on the size.

No. 2768 Heavy Duty Bolted Lugs

Made for any size of cable, standard iron pipe size, copper tube or rod, with round or rectangular plates, center formed, offset as shown, angle, or right angle.

Reliable Solderless Connectors

Reliable Connectors are available for use with all types of conductors. Tap connectors for copper, copperweld, aluminum and steel conductors and for guy strand are designed with precision threads to maintain high pressure solderless connections. Reliable Connectors are manufactured under a quality control inspection system supervised by a laboratory organization, which is equipped with the best testing facilities.

Reliable Connectors are economical to use, convenient to install, made of sound proved alloy and provide much more strength than actually required.

Made of 90% copper high strength bronze and brass. The bronze connectors resist corrosion and are not subject to season cracking.

A—Precision threads, high percentage of thread engagement, uniformly machined.

B—Bolt and nut have large margin of strength over actual field requirements. Equally efficient on first use and repeated reuse.

C—Made with two-point pressure contactors and solid pressure bars which act as spacers between legs of bolt.

D—Nuts are inspected 100% to insure against flaws.

E—Tolerances between bolt slot and spacer are held to close limits to maintain a high percentage of thread engagement and prevent more than the slightest collapse of the legs of the bolt.

F—Pilot makes it easy to start nut.

**Reliable Solderless Connectors
Aluminum to Copper or Steel to Copper**

The Reliable aluminum to copper connector clamps large areas of the relatively soft aluminum conductor in order to exert sufficient pressure on the copper tap to maintain a low resistance joint and to avoid deforming the aluminum line wire.

The wide separation of the aluminum line from the copper makes it extremely unlikely that galvanic corrosion will attack the line wire and impossible for a drop of moisture to bridge the space and form a battery between wires.

1. Precision threads transmit high pressure connection.
2. Pressure is distributed over large area of aluminum and concentrated on a small area of copper to maintain a low resistance connection and avoid deforming the wire.
3. A curved separator provides adequate space between the red and white wires.
4. The parts contacting or close to the aluminum wire are made of aluminum.
5. Bi-metallic aluminum-copper parts with heavy aluminum sections minimize corrosion in the connector.

Reliable Flip-On Tap Clamps

The Flip-On tap clamp presents a new design principle that combines high strength with light weight.

The clamp is very easy to install, low in cost, and makes a fine electrical and mechanical joint without damaging the conductor or introducing corrosion problems.

For A.C.S.R. over armor rods to aluminum, steel or copper. For grounding aluminum, copper, copperweld or steel neutrals to guy wire.

Aluminum parts of clamp contact aluminum or steel wire. Copper and aluminum are well separated. Copper surfaces contact copper wire.

The reinforced body and screw are hot galvanized steel.

Type AL for aluminum to aluminum or aluminum to guy wire. Type ALC for aluminum to copper.

Ideal Universal Wire Connectors

Solderless—Tapeless

Ideal Connectors replace solder and tape, plug connections, terminal blocks, binding posts, etc.

Approved by Underwriters' and Factory Mutual Laboratories. Recommended by National Electrical Code.

Making a joint with an Ideal Connector is just like screwing a nut on a bolt. The connector simply screws on giving a positive and permanent contact. Spiral metal insert (copper coated), which acts as a current carrying sleeve, presses threads into the wires and binds them together in a vise-like grip—assuring a doubly secure joint.

No. 72 Fixture-Appliance Type

For fixture wiring, joints in appliances, etc.

No.	Description	Per 100	Per 1000
72	For 2 No. 16 or 2 or 3 No. 18 Wires, Solid or Stranded.....	\$2.25	18.75

No. 73 Junior Universal Type

For fixture wiring, joints in shallow canopies, signs, etc.

73	For Nos. 14, 16, and 18 up to 2 No. 14 and 2 No. 18 or 4 No. 16 or 5 No. 18 Wires, Solid or Stranded.....	\$2.88	24.00
----	---	--------	-------

No. 74 Standard Universal Type

For all joints of common wiring practice.

74	For Nos. 12, 14, 16 and 18 up to 2 No. 12 and 1 No. 18 or 4 No. 14 and 1 No. 18 Solid or Stranded.....	\$4.05	33.75
----	--	--------	-------

No. 76 Large Universal Type

For larger gage wires or where a large number of small wires are to be joined.

76	For Nos. 10, 12, 14, 16 and 18 up to 3 No. 10 and 1 No. 18, 6 No. 14 and 1 No. 18, or 4 No. 12 and 1 No. 18 Solid or Stranded.	\$4.59	38.25

Sherman Set Screw Connectors

Number Plainly Stamped on Each Connector. A great help in re-ordering and saves much time and possible mistakes in sorting small mixed stocks.

Screws Heavily Galvanized, Hence Rust-proof. This prevents rusting in dealer's stock, and enables consumer to use connectors over again when removed from temporary work.

Neatly Boxed and Plainly Labeled. Insuring neat shelf stock.

These connectors are made from solid brass rod; all dimensions and proportions are carefully held to accurate size.

Four-screw connectors are made also with hole clear through, and two-screw connectors can be furnished in divided wall style.

**For Stranded Cable
With Divided Wall**

Sherman Soldering Lugs

U. S. Pat. Reissue 14401

Lugs are seamless all around. The solder cannot leak out at the closed end, and better conductivity is secured. Round end lugs in small sizes are recommended.

These soldering lugs, or drawn copper terminals, are approved and listed by the Underwriters' Laboratories.

Round End

Size Inches	Amp. Cap. Rubber Insl. Conductors N. E. C. Std.	Maximum Stranded Cable A. W. G.	Approx. Weight Pounds per 1000

STUD HOLE.—Lugs furnished with special size or location of stud holes at same prices as for regular lugs, with extra charge for each size.

TINNING.—Lugs tinned inside of tubular portion will be furnished at extra charge, depending on size.

MARKING.—For identification, as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

To Select Terminals According to the N.E.C. Ratings Governing Knife Switches, Use the Following Equivalents
Capacity...amperes 30 60 100 200 400 600 800 1000
Size Lug...inches 1/4 3/8 1/2 11/16 13/16 1 1/4 1 3/4 2 1/16

Sherman Soldering Lugs 2-Hole

Two-hole lugs are made from seamless tubing and furnished square end, unless otherwise specified.

Flat portion (E) may be made to order either longer or shorter but tubular portion (D) cannot be changed.

Sherman Heavy Duty Soldering Lugs

N.E.L.A. Standard

2-Bolt Tongue

These lugs are made of best quality seamless copper tubing.

Lugs Nos. 8, 8-A, 9-A, 10 and 11 have a sufficient socket diameter to take rope core

cables of sizes listed without removing core. Core can be drilled out and space filled with copper plug or solder.

Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had if specified. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified. Special finishes as follows at added prices: Rosin dipped, cadmium plated, tinned inside only and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

SINGLE BOLT

TWO BOLT

FOUR BOLT

Bull Dog Wire Grips

Solderless Lugs

Cold formed from pure electrolytic copper to provide maximum conductivity and greater mechanical strength. Clear wire holes enable user to see that full and proper contact is made.

Type SM Sherman Solderless Lugs

Listed by Underwriters' Laboratories, Inc.

No. SM-6

Adaptable for use with solder. Made of pure copper.

The thick metal in the barrel and large screw give this lug the ability to withstand excessive tightening efforts and enable it to carry current far in excess of the normal rating without excessive heating.

To select terminals according to N. E. C. rating governing knife switches, use the following equivalents: 30-50 amperes, use No. SM-6; 60 amperes, No. SM-4; 100 amperes, No. SM-1/0; 200 amperes, No. SM-4/0; and 400 amperes, No. SM-500.

Nos. SM-6 to SM-2 inclusive have screws with screwdriver slots. Nos. SM-1/0 and larger have countersunk hexagon hole for use with standard hexagon set screw wrench.

One wrench packed with each full carton.

Lugs furnished with special size or location of stud holes, slight additional charge.

Special length lugs will be billed at a price increase, in proportion to the increased overall length, plus an additional charge for each size.

For annealing, to permit bending, add 10%.

For cadmium plating, rosin dipping, tinning all over or grinding bottom of flat portion, add 10% to regular prices plus an extra charge for each size.

Orders for special material will be manufactured with an allowable variation of 10% over or under the quantity specified.

Sherman Wedge-Grip Connectors

No. SC-6X

For service entrance connections and all small wire connections.

The ovalpoint, hexagon head, non-removable bronze screw wedges wires between V-shaped corrugations.

No. SC-4X

Pure copper body is hard drawn with highest conductivity; needs no taping.

Mueller Alligator Test Clips

No. 60-S

No. 60-HS

For use in making quick, temporary electrical connections.

Has slim jaws, fine meshing teeth, round thumb grip, and barrel connection for banana plug. Bright finish.

No.	Each	Description	Length Inches
60	\$.05	Steel, with Soldering Lip	2
60-S	.06	Steel, with Screw Connection	2
*60-CS	.10	Copper, for R. F. Work, Screw Conn.	2
60-HS	.10	Steel, with Red and Black Insulating Sleeves on End, Screw Connection	2 1/4
60-CHS	.17	Copper, Otherwise Same as No. 60-HS.	2 1/4

*Will not heat up in high frequency circuits.

Reliable Testing Clips

For temporary connections to insulated wires. Made of heavy nickel silver with hard sharp insulation puncturing points and perfectly registering teeth.

No. 1

Fitted with screw, nut and washer for attaching to instrument cord.

No. 1.....each

No. 2

Same as No. 1 but with screw, nut and washer omitted. Preferred where connection to cord is to be soldered.

No. 2.....each

No. 3

Same as No. 1 but without the spike.

No. 3.....each

No. 5

A light, sturdy clip with a strong spring. Convenient for temporary connections in radio, telephone and signal work.

Particularly good for congested telephone equipment.

Plenty of room for soldering flat cord terminals.

No. 5.....each

Mueller Universal Test Clips and Insulators

No. 24-A Clip Only

No. 45 Clip with No. 47 Insulator

Test clips save time in electrical work requiring quick temporary connections. May be used over and over again.

Rubber insulators are a convenient protection against electric shock and prevent clips from shorting on each other. Furnished half red and half black to indicate polarity.

Packed 10 to a box and 10 boxes to a carton.

Mueller Crocodile Clips and Rubber Insulators

No. 85 Clip with No. 87 Insulator

No. 85 Clips

Cadmium plated, 5-ampere clip for radio and electrical test work. Long thin nose on clip enables user to make tests in

deep recesses. Teeth mesh along entire length of jaw. May be completely insulated. Jaw spread, 1/2 inch.

Packed 10 in box; 100 in carton, weight, 2 pounds.

No. 85.....each \$.06

No. 85-T Tip Clips

Same as No. 85 except that it has a standard phone tip soldered to the front end of the lower jaw. Can be used as a combination test clip and test prod; also for making connections to binding posts having insulated, non-removable heads. Jaw spread, 1/2 inch.

Packed 10 in box; 100 in carton, weight, 1 pound.

No. 85-T.....each \$.13

No. 87 Insulators

For use with both of the above clips.

Half red and half black.

Packed 10 in box; 100 in carton, weight, 1 pound.

No. 87.....each \$.05

No. 8893 Mueller Wee-Pee-Wee Insulated Clips

Very tiny clip used in fine electrical and telephone test work. Made entirely of phosphor bronze. Equipped with tight fitting glove-like rubber insulator. Extremely small and flat jaws with 1/4-inch spread.

Packed 10 in box; 100 in carton, weight, 1 pound.

No. 8893.....each \$.14

Fahnestock Test Connectors

No. 30

Made of special copper bronze spring metal. Two large clips riveted together. Both snap over the line. Made for different size wire. Used for test poles or for party line work. Length over all, 1 1/8 inches. Width, 5/8 inch.

In ordering, state kind and size of wires to be connected.

Price, No. 30, Bronze.....each \$.15

No. 31

One large and one small clip riveted together. Large clip snaps over the line wire. The small clip does not snap over, and will take up to and including No. 10 B. & S. Used for attaching drop or jumper wires to line on junction poles or party lines. Length over all, 1 1/8 inches. Width, 5/8 inch.

In ordering, state kind and size of wires to be connected.

Price, No. 31, Bronze.....each \$.10

No. 33

Temporary connector for emergency work and test sets.

Will snap over a No. 8 B. W. G. Wire.

Price, No. 33, Bronze.....each \$.15

No. 34

One end snaps over the line. Made in only one size. Snaps over a No. 12 B. W. G. Wire.

Other end does not snap over wire but will take any size wire up to No. 9 B. W. G.

Length over all, 2 3/4 inches. Width, 5/8 inch.

Price, No. 34, Bronze.....each \$.10

Fahnestock Phosphor Bronze Clips

For Neon Signs

Listed by Underwriters' Laboratories

No. 3

Will take up to No. 10 B. & S. wire. Length overall, 1 inch. Width, $\frac{3}{8}$ inch.

Screw hole for No. 8 screw.

No. 3.....per 100 \$1.50

No. 10

Will take up to No. 14 B. & S. wire. Length overall, $\frac{3}{4}$ inch. Width, $\frac{5}{16}$ inch.

Screw hole for No. 6 screw.

No. 10.....per 100 \$1.25

No. 15

Will take up to No. 16 B. & S. wire. Has projecting lug to which a wire can be soldered.

Length overall, not including soldering lug, $\frac{1}{2}$ inch. Length of soldering lug, $\frac{1}{8}$ inch. Width, $\frac{7}{32}$ inch.

Screw hole for No. 4 screw.

No. 15.....per 100 \$1.00

No. 59

Will take up to No. 14 B. & S. wire. Length overall, 1 inch. Width, $\frac{5}{16}$ inch.

Copper lug riveted to clip will take $\frac{1}{8}$ -inch cable or wire.

No. 59.....per 100 \$2.00

Nos. 60 and 61

No. 60 will take up to $\frac{3}{32}$ -inch screw terminal.

No. 61 made for $\frac{1}{4}$ -inch screw terminal.

Shank will take up to $\frac{5}{16}$ -inch cable.

Length overall, $1\frac{1}{2}$ inches. Width, $\frac{5}{16}$ inch.

No. 60.....per 100 \$2.50

No. 61.....per 100 2.75

No. 48

Will take up to No. 10 B. & S. wire. Length overall, 2 inches. Width, $\frac{1}{2}$ inch.

Copper lug riveted to clip will take $\frac{3}{16}$ -inch cable.

No. 48.....per 100 \$3.00

No. 36

Will take up to No. 10 B. & S. wire. Length overall, $1\frac{1}{8}$ inches. Width, $\frac{3}{8}$ inch.

Copper lug riveted to clip will take $\frac{3}{16}$ -inch cable.

No. 36.....per 100 \$2.50

No. 58

Will snap over No. 10 B. & S. wire. Length overall, $1\frac{1}{8}$ inches. Width, $\frac{3}{8}$ inch.

Copper lug riveted to clip will take $\frac{3}{16}$ -inch cable.

Clip snaps over wire and has a thumb-piece, $\frac{1}{2}$ inch long, which makes it convenient to grip wire.

No. 58.....per 100 \$3.00

No. 70

Has 3-way grip which makes it impossible to become loose from either the electrode or housing.

Can be used on a porcelain housing; takes up to an $\frac{3}{32}$ screw.

No. 70.....per 100 \$2.50

Pig Tail Assembly

Consists of braided copper wire $\frac{3}{32}$ -inch wide, cut to a length of $4\frac{1}{2}$ inches; to which is soldered one No. 15 clip at one end, and a copper terminal that will take up to a No. 8 screw at the other end.

Length overall of complete assembly, 6 inches.

Per 100..... \$2.50

Rhodes Telephone Wiring Nails

Designed for paired or triple conductor telephone wires.

Made under standard specifications to withstand driving, withdrawing, bending, and immersion tests.

Heads are made of tough fibre board and will not easily come off;

brads are specially selected and the finish is both waterproof and di-electric.

Furnished in 4 lengths of pins (measured under the head), 1/2, 5/8, 3/4, and 7/8 inch and each size is furnished in 3 colors.

	Dark Brown	Green	White
Packed in 1000's.....	per 1000 \$1.25	\$1.25	\$1.45
Packed in 100's.....	per 1000 1.45	1.45	1.65

For packing in 50's, add 10 cents per 1000 to above prices.

Rhodes Washer Telephone Wiring Nails

Head is steel drawn over a specially prepared tough fibre in such a way that washer is formed below steel. Insulation is assured. Finish is waterproof and di-electric.

Furnished in 1/2 and 7/8-inch sizes in white, ivory or any standard color.

Per 1000..... \$1.50

Rhodestaples

For all types of inside wiring. Fiber top. Constructed with two separate pins joined together with specially prepared and hardened waterproof fiber.

Regularly supplied in neutral gray and dark brown. Packed 100 to box; 10 boxes to carton.

No. 18 Milonite Perfection Insulated Nails

Recommended for installing two-conductor or three-conductor twisted insulated wire.

They are easy to handle and install and prevent short circuiting.

Furnished in light oak, dark oak, dark green olive green, black and white.

Made with shank 1/2, 5/8 and 3/4 inch long.

Price, No 18, All Lengths.....per 1000

Universal Insulator Supports

Supports are malleable iron clamp fitted with cup-pointed casehardened steel set screws (cadmium-plated, electro-

galvanized or sherardized) for securing porcelain and glass insulators, knobs or brackets to exposed steel framework in all classes of structures.

**National Rigid Steel Conduit
Enamelled Conduit**

Enamelled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves clean surface for the application of the compound.

Sherarduct

Sherarduct rigid conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

Fretz-Moon Easy-Bending Steel Conduit

Ductile and easy-bending. Severe bends are easily made. The protective galvanized coating will not flake or scale off. This is due to the continuous process of manufacture of the pipe from specially made low carbon, open hearth steel, which eliminates any burnt spots or hard, brittle zones in the metal. Furthermore, the zinc or enameled coating is applied by continuous automatic controlled method which assures a uniform coating on the entire length of the conduit.

Enamelite Finish

Orange label. Finished inside and out with a heavy, baked on coating of wear resisting black enamel. This enamel, of special analysis, is exceedingly tough and flexible. It will not chip, crack or flake under the most severe installation requirements.

Hot Dipped Galvite Finish

Blue label. Offers maximum protection against rust and corrosion, the conduit that outlasts the building. Carefully hot galvanized as described above. Coated inside with special, baked on lacquer.

Conduit is furnished in 10-foot lengths, threaded both ends, with coupling screwed on one end.

Conduit is always designated by its nominal inside diameter. All weights and dimensions shown are nominal.

Type A Everdur Silicon Bronze Electrical Conduit

Composed principally of copper, these alloys are non-magnetic. They provide great strength, excellent corrosion resistance, high fatigue limit and exceptional ductility.

In addition to strength and other excellent physical qualities, silicon copper bronze metals offer good resistance to a large number of corroding agents. The durability of these metals is attested by the records of equipment, such as smoke and soot washers and blowers; air conditioning and drainage fittings in battery and plating rooms; pumps, valves, process piping and vessels in many chemical plants which have been operated successfully for long periods under unusually corrosive conditions.

Seamless Rigid Conduit

Everdur Rigid Conduit is supplied in nominal sizes from 1/4 to 4 inches inclusive. Its physical properties are about equal to mild steel rigid conduit. As ordinarily supplied, the 10-foot lengths are threaded both ends with one Everdur coupling attached, but they may also be obtained unthreaded for use with threadless fittings.

Nom. Size In.	O.D. Inches	I.D. Inches	Wall Thickness Inches	Wt. Lb. per Foot

4	4.500	4.026	.237	12.04

Seamless EMT Conduit

Everdur Electrical Metallic Tubing is a thin-wall conduit made of Everdur Metal. Its physical properties are about equal to mild steel tubing of comparable wall thickness. It is available in sizes from 3/8 to 2 inches in diameter, in standard 10-foot lengths, for assembly with threadless fittings which facilitate installation and dismantling.

Listed under Factory Inspection and Label Service Procedure by the Underwriters' Laboratories, Inc.

**Electrunite Steeltubes
Thin Wall Conduit**

No threads to cut, ductile, bends easily, is light, tough and strong; resists corrosion.

Steeltubes takes up less space and consequently can be used in narrower quarters.

Hangers for 3/8-inch heavy conduit are the right size for 1/2-inch Steeltubes, hangers for 3/4-inch Steeltubes are the same as for 1/2-inch heavy conduit, etc.

Electrunite Steeltubes Conduit with the knurled inside finish showed by actual test a saving of 20 to 30 per cent in the effort required to pull cable through. The cable rides the tops of the tiny knobs instead of making contact the entire length.

The 1933 National Electrical Code approves Steeltubes for open and concealed work and buried in concrete (except cinder fill) in all sizes up to 2 inches inclusive, 600 V. No. 0 conductors.

Furnished in 10-foot lengths; galvanized finish only—inside finish is black enamel.

**Electrician's Thin Wall Conduit
Utility Tools**

With two of these tools it is possible to tighten nuts on couplings, remove burrs from conduit, ream for a smooth edge, and tighten nut at outlet box. Will fit both 1/2 and 3/4-inch thin wall conduit fittings.

Drop forged from selected steel. Heat-treated and tempered. Heavily plated with polished heads.

Packed 12 in a display carton.

Weight per dozen, 5 pounds.

- No. 2000, For Appleton and Similar Type Fittings, Openings, 1 5/16 and 1 3/8 Inches. each \$2.00
- No. 2001, For T&B and Similar Type Fittings, Openings, 1x1 1/4 Inches. each 2.00

**T & B Capped Elbows
For Heavywall Conduit**

Eliminates the fishing of wires through a sharp bend. Provides a weatherproof entrance.

All openings are bushed to prevent abrasion of wires.

Approved by Underwriters' Laboratories.

T & B Erickson Conduit Couplings

Conduit Union does away with running threads, saving dies and labor. Permits opening of conduit at any desired point. Enables the start of circuit from 2 outlets and makes a good, strong connection at any point in the run. The pipe ends abut so that no space is left between the lengths of conduit, therefore, it is not necessary to draw the 2 ends of the conduit together. Vibration will not loosen a connection made with an Erickson coupling. The hexagon shoulder and ridges on the outside of the coupling make an easy grip for a pipe wrench.

National Malleable Iron Insulated Bushings

Designed to prevent disastrous grounds which frequently occur with uninsulated bushings. Insulating ring is an integral part of bushing and cannot loosen or fall out. Extremely tough, but not brittle, material and will stand intense strain in installation and use.

Made to N.E.C. standard.

Sherardized; minimum four-dip Preece test; rustproof.

National Bushcaps

Sherardized Bushings—Tin Caps

A National Bushcap consists of a full strength, National Malleable Iron Bushing closed by a tin cap. The cap is pressed in tightly and will stay put. It can be easily removed when desired.

A National Bushcap placed on an open end, when conduit is installed, will keep it clean and clear until the wires are drawn in.

T & B Insulating End Bushings

Used to provide a smoothly rounded insulated surface protecting wires against possible abrasion and shorts where wires emerge from conduit. Especially useful where conduit terminates in switch or junction boxes and also on conduit runs terminating behind switch boards, at motors, etc.

Formed from solid insulating material of the strongest and most durable type available, and are unaffected by normal heat, moisture and corrosive agents.

Deep Type—Threaded for 1/2 to 6-Inch Conduit

For ends of conduit at switchboards, motors, etc. Can be used with insulating inserts. Long threads and rugged design assure against breakage.

T & B Insulating Inserts

Blank

2-Hole

3-Hole

Blank is for use with deep type, threaded and threadless, insulating end bushings where it is desired to insulate each conductor.

Two-Hole and Three-Hole will pass the maximum size of conductors allowed in the conduit by the N.E.C.

Federal Porcelain Clamp Bushings

No. A-1

No. B-1

No. K-1

Made of vitrified porcelain in one piece. Clamping rings are made of metal, threaded to fit threads on the porcelain. By reversing the clamp ring bushings can be used on thicker material. Bushings furnished in all colors.

Nos. K-1 and K-2 elbow bushings are of a special shape for outdoor work, preventing water from entering around wire; also prevents damage to wire or insulation by sudden bending at the bushing.

T & B Insuliners

Can be used in any raceway outlet. Overlapping ends automatically adjust Insuliner to normal variations in conduit diameters—either standard heavywall conduit or thin-wall conduit (E.M.T.). Smoothly rounded mouth covers bushing shoulder and long

skirt shields end of conduit. Approved by Underwriters' Laboratories.

Appleton Conduit Fittings

For Electrical Metallic Tubing—Cadmium Finish
Schedule TW

Gland Ring Type Couplings and Connectors

Approved Watertight—PATENT 2064140

Coupling

Connector

Gland ring type coupling and connector are furnished with a round split curved ring and tightening nut. The ring drops into position and the nut tightens the ring securely to the electrical metallic tubing, making a rigid connection which is absolutely watertight.

Connector is similar to coupling except that one end is threaded and equipped with a locknut for use in connecting to boxes.

Coupling No.	Connector No.	Per 100	Size In.	Std. Pkg.	Car-ton	Wt. Lb. Std. Pkg.

Brass Ring Type Couplings and Connectors

Approved Watertight

Coupling

Connector

Brass ring type coupling and connector are furnished with a round steel wire ring and flat brass ring, which also makes the connection absolutely watertight. Both types of couplings in 1/2 to 2-inch sizes have hexagonal nuts and the center portion is also hexagonal so that it can be held rigidly with wrench when connecting lengths of electrical metallic tubing.

Connector is similar to coupling except that one end is threaded and equipped with a locknut for use in connecting to boxes.

*Designed to take 3/8-inch electrical metallic tubing, and the other end is threaded and furnished with locknut to fit in regular 1/2-inch knock out.

Adapters

(Threadless Thin-Wall Conduit)

Any Appleton Threaded Unilets or similar fittings made by other manufacturers will take electrical metallic tubing with the use of this adapter screwed into the hub of any 3/8 to 2-inch threaded type fittings, and grips the conduit securely. This adapter practically makes a no-thread fitting out of any threaded conduit fitting.

No. 1655 T & B Cable End Insulets

This is a cable insulet making use of the tite-bite grip to hold either armored cable or non-metallic sheathed cable. Suitable for 1, 2, or 3 wires. Holds the following sizes: 2-14, 3-14, 2-12, 3-12, 2-10, and 3/8-inch flexible conduit.

No.	Per 100	Size In.	Car-ton	Std. Pkg.	Wt. Lb. per 100
1655	\$20.00	3/8	25	100	18

T & B Slip-In Fixture Studs

Can be installed from interior of box without removal of parts. Occupies minimum space in box, thus allowing more room for wires.

No small nuts and bolts to lose or fuss with.

To install this stud, back off locknut a few turns, slip base of stud into knockout

from inside of box, allow prongs to drop into fixture stud holes and tighten down the locknut.

No.	Type	Size In.	Car-ton	Std. Pkg.	Wt. Lb. per 100	Per 100

T & B Adjustable Ground Clamps

Designed to take three sizes of ground wire, Nos. 8 and 6 armored and No. 4 bare to 1/2, 3/4, and 1-inch waterpipe, as well as ground rods from 1/2 inch up.

When using 1-inch waterpipe, clamp ground wire with top hook (one on the end of jaw). When using 1/2-inch waterpipe, use lower hook. For 3/4-inch pipe, use either hook.

There is nothing to loosen, nothing to take apart. Wrap fitting around waterpipe, insert ground wire, tighten bolt and job is done. Ground wire locks jaws together and bolt clamps them tightly on waterpipe. Small screw grounds armor of No. 6 and 8 wire.

Made of tough malleable iron and protected from corrosion by Tabolite superior galvanizing. Approved by Underwriters.

No.	Description	Unit Pkg.	Std. Pkg.	Wt. Lb. per 100	Per 100
3841	For Nos. 8 or 6 Armored Ground Wire or No. 4 Bare Copper Ground Wire to 1/2, 3/4, or 1-In. Waterpipe with Clamp Grounding Armor of No. 8 or No. 6 Wire	5	25	38	\$40.00
3843	Same as No. 3841 with Adapter for Ground Rods from 1/2-In. up.	5	25	48	40.00

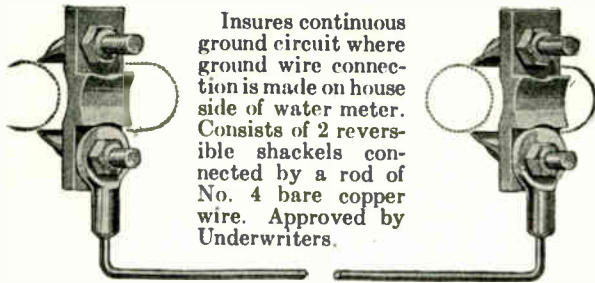

Solderless Ground Fittings

To be used in cases where plain bare copper wire or insulated building wire is used as the grounding conductor.

No.	Description	Unit Pkg.	Std. Pkg.	Wt. Lb. per 100	Per 100
3840	For No. 4 B. & S. Bare or Insulated Copper Wire to 1/2, 3/4, or 1-In. Waterpipe.....	5	25	38	\$35.00
3842	Same as No. 3840 with Adapter for Ground Rods from 1/2-In. Up....	5	25	48	35.00

Nos. 3840 and 3842 may also be used with No. 8 or No. 6 bare or insulated copper wire.

T & B Meter Shunts

Insures continuous ground circuit where ground wire connection is made on house side of water meter. Consists of 2 reversible shackels connected by a rod of No. 4 bare copper wire. Approved by Underwriters.

Sherman Ground Fittings

For Bare Copper Wire

No. GF3

No. GF3 with lug is designed expressly for No. 4 bare copper wire; will take to No. 10 B. & S.

No. GF14 is same as No. GF3 except that no soldering lug is provided.

Heavy malleable iron, rust-proofed.

Approved by Underwriters' Laboratories.

Slotted clamp allows easy installation. Reversible clamp for pipe or rod.

Solder Type

National New York Ground Clamps

Tinned copper strap for both types furnished in coils if desired.

Specify type and size. For B, also specify wire size.

Type A

For use on signalling systems, telephone and telegraph circuits.

Furnished in sizes 1, 2, and 3 inches.

Type B

For heavy circuits, no soldering required. Post drilled for any two sizes, either No. 4, 6, 8, 10, 12, or 14 B&S wire gage.

Furnished in sizes 1, 2, 3 and 4 inches.

No. 1 Reliable Station Ground Clamps

For telephone, radio and signal circuit station grounds.

For 3/8 to 1 1/4 inch pipe. Tinned copper strips, round edge with close fitting threads.

No. 1.....each

No. 3830 T & B Ground Fittings

If a conduit connection is not required, it is economical to use this fitting, which consists of U-bolt, adapter bar and soldering lug assembly without conduit hub. Solder lug takes No. 4 wire.

For 1/2, 3/4 and 1-Inch Water Pipe

T & B 3/8-Inch Cable Clips

No. 90 For Armored Cable

The pitch of the clip legs is counter clockwise to the spiral of cable and holds the flat top of clip from following the convolutions and cannot enter between them. Dent in top of clip settles between rounds of cable convolutions. Cable cannot slip or pull out.

Packed in unit package, 100, 500, or bulk; 10,000 in standard package. Weight per 1000, 14 pounds. per 100 \$.40

No. 91 For Non-Metallic Sheathed Cable

This clip is the same as the No. 90 except that it has no dent in the top. The legs are also shorter because the clip does not have to be driven into the wood as far as the No. 90.

Packed in unit package, 100, 500, or bulk; 10,000 in standard package. Weight per 1000, 11 pounds. No. 91. per 100 \$.35

T & B Adjustable Conduit Hangers

Type A

Hanger will fit any flange from 2 3/4 to 12 inches. It is adjustable for varying plaster lines and will support any number of conduits from 1 to 8, which may run at any angle with the beams and close against the beam, or far enough below to permit a second line of conduits to be run above. Additional

runs of conduit can be added without interfering with lines already in position. It is not necessary to loosen clamp to meet any condition which may arise. Clamps of stamped steel.

Minerallac Cable and Conduit Hangers

Approved by the National Board of Underwriters

Made of cadmium-plated steel or Everdur metal and is much stronger than cast iron hangers for the same purpose.

It is easily and quickly put in place, so open wiring, conduit and cable may be run with greater rapidity and be more compactly arranged than by the use of other hangers.

For voltages above 550 volts the hanger should be used with insulated bushings.

R & S Cable Supports

Standard Conduit Type

A compact, strong and easily installed device for supporting cables in conduit risers.

Support consists of a threaded collar, not much larger in diameter than the outlet bushing which it replaces at the end of the conduit inside of the pull box. It has a set of inserts for one or more cables as required and individual tapered cable grips. They are suitable alike for lead, paper or braid-covered cables.

In installing, the collar is screwed on to end of riser, in lieu of a bushing, the cables are then pulled, the inserts dropped into socket of collar and the split, tapered grip bushings placed over the individual cables, which are now allowed to pull the grips into place by their

own weight. A perceptible slack of cable should be provided between supports to allow for expansion and contraction.

Made of galvanized iron, with hard fiber cable grips.

When ordering, be sure to state exact outside diameter of cable over insulation. Size of conductor is not sufficient information.

*Maximum diameter of cable over insulation.

Special Tile Duct Type

Made on special order only. Used to support risers run through tile duct. Can be furnished in any number of gangs. Prices and full information upon application.

Split Type

Where installations are already in use, and the necessity of a support for the cables occurs, it is possible to utilize this type of support without the necessity of disconnecting and pulling out the cable risers. This split type can be installed around the cable and the necessary inserts and bushings as used on the conduit type inserted. The range of sizes is the same as on the conduit type.

Prices and full information upon application.

Ideal Fish Tape Reels and Pullers

Three tools in one: a reel, a puller and a tape. Tape is pulled through the conduit and reeled in one operation; reel automatically locks tape in place. By keeping the tape reeled up, it is prevented from spreading all over the job, avoiding breakage and the possibility of tape contacting live parts.

No.	Each	O.D. Inches	Length Feet	Tape Size Inches	Ship Wt. Lb.	Max. Cap. Ft.	For 50 Ft. of Tape, Add

Ideal Fish Tapes

Ideal Fish Tape is made of the highest grade of tempered spring steel wire—no curling. Tape is flexible and easy to use on long runs of conduit having several bends.

All sizes are available in any length, multiples of 50 feet.

Packed in individual cartons.

No.	Per 100 Ft.	Tape Size Inches

T & B Hickeys

For Thinwall Conduit (E.M.T.)

Makes bends of any desired radius. To insure against kinking tubing, not more than 10° should be pulled at a time. Radius of bend depends on how much hickey is allowed to slip back on tubing between pulls.

No.	Each	Size, In.	Std. Pkg.	Wt., Lb.
4185	\$2.50	1/2	1	2
4186	3.00	3/4	1	3.5
4187	5.00	1	1	5

T & B Lakin Conduit Hickeys

The shank has a bushed hole into which the end of the conduit enters when a short bend is made at its end or a bend is to be worked down.

The bushed opening in the shank fits snugly over the end of the conduit and protects the threads.

This hickey will not slip on the conduit while a bend is being made. It enables a workman to make bends having different curvatures. It will not kink the pipe when making the shortest practical bends. Made of malleable iron. Japanned finish. No. 336 can be used to bend 1/2-inch pipe.

Cat. No.	Each	Size Pipe Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100
335	\$1.75	1/2	1	10	190
336	2.25	3/4	1	10	220
337	3.25	1	1	2	520

Allen Improved Pipe Benders

This bender is made of high test steel. Has tempered case hardened teeth which grip in all positions. Has solid jaws, no adjustments; 2-in-1 design with V receiving groove to prevent any contact on inner part of curve, thus preventing mashing, crushing or deforming the pipe. It will bend anything tubular or solid that can be bent cold.

In 2 sizes: Combination of 1/4 to 3/4 inch inclusive, combination of 3/4 to 1 1/4 inclusive. Side opening. Individually boxed.

No. 1 packed 10 boxes in standard package, No. 2 packed 5 in a standard package.
 Price, No. 1, Sizes 1/4 to 3/4 Inch.....each \$6.20
 Price, No. 2, Sizes 3/4 to 1 1/4 Inches.....each 9.00

Benders For Thinwall Conduit

This bender will also bend standard conduit; 1/2-inch bender will bend 1/2 and 3/8-inch tubing or 3/8-inch conduit; 3/4-inch will bend 3/4-inch tubing or 1/2-inch conduit; 1-inch will bend 1-inch tubing or 3/4-inch conduit.

*No. 4192 is a combination bench bender for 1/2, 3/4 and 1-inch thinwall conduit.

Steeltubes Hickeys

An excellent tool for stubbing-up in concrete work and for making short or close bends.

Makes bends of any desired radius. To insure against kinking, the tube should be inched through, not more than 10 degrees being pulled at a time.

Standard package, 1.

Greenlee Improved Hydraulic Benders For Rigid Conduit and Pipe

Readily portable. Does bending with conduit in horizontal position, doing away with interference with the floor. Almost no limit to degree of bend that can be made.

No. 770 will develop a piston pressure of 50000 pounds, and will bend conduit, 1/4, 1/2, 2, 2 1/2 and 3-inch; standard pipe up to 3-inch; extra strong pipe up to 2 1/2-inch; double extra strong pipe up to 2-inch and solid bars up to 2 1/2-inch.

No. 775 will develop a piston pressure of 80000 pounds and will bend conduit 2 1/2, 3, 3 1/2, 4 and 4 1/2-inch; standard pipe up to 4 1/2-inch; extra strong pipe up to 4-inch; double extra strong pipe up to 3-inch and solid bars up to 3 1/2-inch. Also valuable for straightening pipe and solid bars.

Has safety valve which blows at 50000 pounds piston pressure on No. 770 and 80000 pounds on No. 775.

No. 740 Greenlee Knockout Cutters

The Greenlee Knockout Cutter will enlarge holes in metal up to 1/8-inch thick in 1 1/2 minutes or less per hole. Enlarging is done by cutting, the power being applied by screw action. Cutters are mounted in the body of the tool and are always rigid.

One complete cutter comes packed in a leather case and includes four metal discs for cutting 1 1/8, 2 3/8, 2 7/8, and 3 1/2-inch holes to fit 1 1/2, 2, 2 1/2, and 3-inch conduit.

All parts are made from high grade tool steel, carefully heat treated and ground for size and clearance.

Weight, 4 pounds 8 ounces.
 No. 740.....each \$15.00

Greenlee Knockout Punches

The Greenlee Knockout punch will enlarge holes in metal boxes up to 10 gauge in one minute per hole, doing away with drilling, reaming, and filing. Cutting is done by a 2-point punch, driven by screw action through the metal into a die of proper size.

The No. 735 consists of four punches to cut 7/8, 1 1/8, 1 1/2, and 1 3/4-inch holes to fit 1/2, 3/4, 1, and 1 1/4-inch conduit. The No. 737 consists of two punches to cut 1 1/8 and 2 3/8-inch holes to fit 1 1/2 and 2-inch conduit.

Packed in a leather case. Weight No. 735, complete in case, 2 pounds 12 ounces; No. 737, 4 pounds 4 ounces.

Beaver Cam-Type Fully-Adjustable Pipe Threaders

Threads 1 to 2 Inch—1 Set of Dies

This medium-weight cam-type tool, using one set of dies to thread 1 to 2-inch pipe, inclusive, is fully-adjustable to cut as much over or under size as desired. Available with a choice of two different centering devices.

Straight-line pull; ratchet drive ring on die head in same plane as dies; easier cutting and less wear. Dies on top for easy oiling and chip clearance. Twin recession posts insure smooth die recession and proper thread taper.

Cuts uniform threads, close nipples, including 2-inch. Air-furnace malleable iron. Vanadium alloy steel dies. Standard pipe handle. Painted black enamel with orange trim.

Packed in individual fibreboard boxes.

Model C Beaver Power Units

Model C is a sturdy power unit for bench use which makes machines of hand tools. Model C-2 is recommended if a pipe vise is required. Where a pipe vise is unnecessary, Model C-1 will be more convenient to use because the pipe vise on Model C-2 prevents complete rotation of the chuck wrench.

A Cushman all-steel universal geared chuck holds pipe from $\frac{1}{8}$ to 2 inches and bolts $\frac{1}{4}$ inch and larger. Machine is equipped with an automatic safety chuck wrench ejector, chuck wrench holder, and a safety latch. Gears are fully enclosed; the main driving gear revolves through an oil bath. Chuck is opened and closed by turning a chuck wrench, and chuck remains stationary—this relieves the gears of severe strain. Model C also has an outboard pipe support and anti-friction bearings.

Black & Decker universal motor, $\frac{1}{2}$ hp. nominal rating (actual developed power, 1.59 hp.). Motor will operate on either a.c. or d.c. current, 25 to 60 cycles. Choice of 110 or 220-volt motor; specify when ordering.

Base, 18x18 inches; height, 12 $\frac{1}{2}$ inches. Base dimensions, mounted on legs, 42x46 inches.

Model C-1 Left, No Provision for Vise; Net Weight 140 Pounds; Shipping Weight, 167 Pounds...each **\$125.00**
 Model C-2 Right, without Vise; Net Weight, 166 Pounds; Shipping Weight, 193 Pounds...each **127.50**

Accessories

Galvanized Legs, Front Feet, Rear Spikes...per set **\$5.50**
 Pipe Vise, $\frac{1}{8}$ to 2-Inch...each **3.50**

Beaver Pipe and Bolt Machines
 Capacity, $\frac{1}{8}$ to 2 In. Pipe; $\frac{1}{4}$ to 2 In. Bolts
 2 $\frac{1}{2}$ to 12 In. with Shaft and Geared Tools

Model A.—Heavy-duty deluxe machine. Weight, 415 pounds,

Model B.—A highly efficient, lighter-weight, lower-priced machine combining same features and using same accessory equipment. Approximate weight, 280 pounds.

Furnished with either wheel and roller cutoff ($\frac{1}{8}$ to 2 inches), or knife cutoff ($\frac{1}{4}$ to 2 inches). Wheel cutter will cut off $\frac{3}{8}$ to 1 inch bolts. Knife cutter will not cut off bolts.

The automatic-feed knife cutoff, interchangeable with the wheel cutter by removing one set screw, is preferable for cutting soft electric conduit and is necessary for beveling pipe for welding and for grooving pipe for Victaulic joints.

The wheel cutter is simple, fast, and foolproof. A single cutting wheel often gives months of service.

Right hand operation; all controls in front; 50% more open working space than similar machines. Standard all-steel 3-jaw universal scroll chuck, automatic chuck wrench ejector. Rack and pinion feed. Outboard pipe support which stops the whip of long lengths of pipe. Die heads are adjustable for cutting standard, oversize, or undersize threads and are of the solid ring type without hinge to become fouled with chips. Reversible oil pump easily accessible. Has 8-fluted alloy tool-steel cone reamer. Interchangeable die segments. Sliding handle bars for easy portability. Steel iron housings.

Complete, less cutting and threading equipment which is to be specified as desired. Choice of 110 or 220-volt universal motor. Special motors; prices upon application.

 Sizes $\frac{1}{8}$ to 2-In. by 8ths; Specify Sizes...per set **6.00**

Portable Stands

Enclosed Stand, with 17-inch Steel Wheels:
 For Model A...each **\$22.50**
 For Model B...each **25.00**
 Rubber-Tired Wheels, Extra...**5.00**

Drive Shaft

For Operating Geared Tools 2 $\frac{1}{2}$ to 12 Inches...each **\$20.00**

Nye Self-Locking Pipe Vises

Will hold iron or brass pipe or plated tubing, also short nipples without danger of marring.

The jaws have one piece in upper and one piece in lower, assuring perfect contact with pipe for full length of jaws, thus eliminating any possibility of bending the smaller sizes of pipe, a trouble frequently experienced with the type jaws having two sections to the lower portion.

No.	Each	Capacity Inches	No.	Each	Capacity Inches
700	\$3.60	1/8 to 1 1/2	72	\$7.50	1/2 to 3 1/2

71	5.00	1/8 to 2 1/2

Nye Chain Vises

A handy and dependable, one-piece malleable iron vise.

For use by the plumber, steamfitter and electrician.

Has long full-grip jaws and clamping handle located above the base.

No. 61 has the added feature of a pipe rest and bender.

No.	Each	Capacity Inches	No.	Each	Capacity Inches

Nye Champion Combination Vises and Stands

This portable folding combination vise and 3-legged stand is made of malleable iron. Designed for those who require light weight equipment.

Base of the vise is cast integral with the stand, thus cutting down weight.

Vise capacity, 1/8 to 2 1/2 inches. Has long full-grip jaws, pipe rest and bender.

Extra heavy chain furnished for locking legs when folded. Weight, 42 pounds.

Complete, with Legs.....each \$16.00

Beaver Threading Oil For Hand Tools and Threading Machines

A sulphur-base threading oil (high in heat-absorbing properties) that both cools and lubricates. Improper oil causes overheating, chipped dies and bad threads.

Beaver Square-End Pipe Cutters

No. 1, 1/8 to 1 Inch

No. 5, 1/2 to 2 Inch

For cutting, grooving or beveling pipe.

This pipe cutter cuts like a lathe tool, each turn removing a thin shaving until the pipe is severed. Leaves no burr to be reamed or filed, or to reduce the capacity of the pipe, and threading dies start easily and with less wear.

No.	1	5	
Complete.....	each	\$13.50	\$15.00

Nye Tube Cutters with Rollers

No. 20

Used by plumbers, refrigerator repair men, and automobile mechanics for cutting copper, brass, and lead tubing.

Roller reduces friction to the extent that tubing is not marred or torn during cutting operation. Wheel with finely ground edge leaves a slight burr, easily removed by reamer.

No. 30 is equipped with burr scraper instead of reamer.

No.	10	20	30

National A.B.C. Armored Bushed Cable

National A.B.C. Cable with Anti-Short bushing has a moisture-proofed wrapping of Kraft over conductors. Stripping conductors for terminals, Kraft unwinds quickly without use of sharp tools next to conductors, can be broken off by hand, and allows space inside steel for Anti-Short bushing.

Kraft armor strips with a pull—no possible injury to conductors—reduces labor.

Kraft armor unwinds below steel, providing space for Anti-Short bushing.

Anti-Short Bushing lays over conductors from the side—a squeeze inserts it inside steel.

National Flexsteel Flexible Steel Conduit

The steel armor of Flexsteel (E.+S.+S.) flexible metallic conduit is of bondhook construction which enables it to be flexed more readily than other types of this material.

No. 2208-EZ National Peepole 45° Angle Box Connectors

Open Back Type

An open back connector at 45° angle allowing for easy fishing with separate cable clamps.

Fits 14-2, 14-3, 12-2, and 4-1 armored cable; 6-1 armored lead cable; 14-2 and 14-3 plain lampcord; and 3/8-inch flexible conduit.

With Peepoles and Bondnuts. Hinged strap fitting.

Sherardized finish.

Open I.D., 4 1/4 inch; closed I.D., 1/2 inch; wire throat, 1 5/8 inch; K.O. size, 1/2 inch.

Packed 100 in standard package; 20 in carton.

Weight per standard package, 14 pounds.

No. 2208-EZ.....per 100 \$18.20

No. 163 National Peepole Box Connectors

Pitcher Lip Type

Fits 14-2, 14-3, 14-4, 12-2, 12-3, 10-2, and 4-1 armored cable; 6-1 armored lead cable; 14-2 and 14-3 plain lampcord; and 3/8-inch flexible conduit.

With Peepole. No locknut; a simple angle lip inserted in knockout. By tightening screw, strong, firm box connection is formed; perfect ground. Firm holding clamp for cable.

Sherardized finish.

Made from best grade cold rolled open hearth steel.

Open I.D., 4 3/4 inch; closed I.D., 1 1/2 inch; wire throat, 1/2 inch; K.O. size, 1/2 inch.

Weight per standard package, 48 pounds.

No. 163.....per 100 \$3.60

National Peepole Box Connectors EZ Hinged Strap Type

With Peepole and Bondnut. Sherardized finish.

No. 2163-EZ fits 14-2, 14-3, 12-2, 12-3, 10-2, and 4-1 armored cable; 6-1 armored lead cable; 14-2 and 14-3 plain lampcord; and 3/8-inch flexible conduit. It also fits 14-2, 14-3, 12-2, 12-3, and 10-2 loom wire; 14-2 and 12-2 Ovalflex; and 6-1 and 4-1 bare armored ground wire.

No. 2164-EZ fits 14-4, 12-3, 10-2, and 10-3 armored cable; 14-2, 14-3, and 4-1 armored lead cable.

T & B Squeeze Type Connectors

For Non-Metallic Sheathed Cable and Flexible Tubing

Each connector has an insert so held in place that it cannot be displaced; can be removed without taking out and replacing screw. Has threaded ends, with locknuts. Malleable iron connector, insert steel galvanized.

No. 239V T & B $\frac{3}{8}$ -Inch Wedge Type Duplex Box Connectors

Fits in a standard $\frac{1}{2}$ -inch knockout and takes Nos. 14W2, 14W3, and 12W2.

Packed 100 in standard package.

Weight per 100, 15 pounds.

No. 239V.....per 100 \$10.00

T & B Inclined Set Screw Connectors

Open-mouth, visible type, for bushed cables.

The screw is on the right-hand side, making it easy to tighten.

No. 240V is made to hold Nos. 14W2, 14W3, 12W2, 12W3, 10W2, 10W3, $\frac{3}{8}$ -inch flexible conduit.

No. 241V is made to hold Nos. 8W2, 8W3, 10W2L, 8W2L, 10W3L, $\frac{1}{2}$ -inch flexible conduit.

No.	Per 100	Size In.	K.O. In.	Open I.D. In.	Closed I.D. In.	Throat Bushed In.	Unit Pkg.	Std. Pkg.	Wt. Lb. per 100

T & B 2020 Type Connectors

For 14W2, 14W3, 12W2, 12W3, 10W2, and 10W3 non-metallic sheathed cable, also $\frac{1}{32}$, $\frac{1}{4}$, and $\frac{3}{8}$ -inch flexible fibre tubing.

Can be installed outside or inside box. Simply snap connector into knockout, insert cable or tubing and tighten down screw. Has no rough edges or projections to cut into fibre armor. At same time they protect armor from rough edges of knockout opening. Present long rounded bearing surfaces to armor, doing away with possibility of injury to cable. Present nicely rounded shoulders to conductors as they are bent up to the outlet.

Cat. No.	Per 100	Size Inches	Knockout Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100
2020	\$7.50	$\frac{3}{8}$	$\frac{1}{2}$	1000		$3\frac{1}{2}$

T & B Watertight Connectors
For Use with Service Entrance Cable

Approved by Underwriters' Laboratories.

National Ovalflex A.B.C. Flat Armored Bushed Cable

2-Conductor

A safely bushed and insulated flat armored cable for under-plaster installations and alterations. Its neat appearance recommends it for exposed surface wiring. Easy bending, edgewise or flatwise, makes it suitable for fitting snugly into corners and around machinery.

Anti-short dependable bushes cut end of steel armor, preventing damage to wires.

Regularly made with solid conductors and N.E.C. insulation, but can be furnished with stranded conductors or special insulation.

*Can be equipped with the usual supporting ears but because of the length of box, 4 inches, an ordinary switch plate will not cover the ears (sherardized).

Flextube Non-Metallic Flexible Conduit Loom

Made from an especially prepared stiff fiber cord interwoven with a tough yarn. The result is a seamless tube with a smooth, hard, canvas-like roller-bearing interior which affords the best obtainable fishing surface. This interwoven insulating tubing is then treated with a superior moisture and flame resisting compound, is further protected by a strong, tough braiding which is also compounded.

Regularly inspected and labeled by the Underwriters' Laboratories.

National 3-Wire Ovalduct

Ovalduct is a flat raceway for extension work on the walls and ceilings of fireproof buildings. It is a rigid tube formed from sheet steel.

Ovalduct is installed without channelling the underlying concrete, tile, or brick. It can be laid in a shallow groove in the plaster, and fastened to the ceiling or wall with straps and wire toggles provided for the purpose, or with short tie wires which are fished through small holes drilled in tile on each side of duct. It is shallow enough that plaster of ordinary thickness will completely cover it.

The Ovalduct line includes elbows, couplings, and boxes to take care of any wiring situation, and connectors which permit this raceway to be installed in conjunction with any other type of raceway or wiring system. All fittings are especially designed for the purpose and are easily installed. Approved by the Underwriters' Laboratories.

Nominal outside over all dimensions are 1 3/8 inch high, 1 1/2 inch wide and 10 feet long.

Standard package, 100 feet.

Weight per 100 feet, 35 pounds.

Per 1000 Feet..... \$20.00

No. 333 National La-In Molding

Consists of two pieces, base and capping, so formed as to snap together—the capping snapping over the base. Wires are laid-in, not fished. The shape of base has been improved to hold wires in place and to allow the capping to be snapped on more easily and securely.

Provided with non-corrosive Sherardized finish, a process in which finely divided zinc is driven into the pores of the metal, effecting an alloy which is not only rust-proof but which cannot be knocked off. It can be painted to match walls or ceilings, or grained to match woodwork, taking oil or water paints equally well.

For 2 to 4 wires; 1 inch wide, ¼ inch high, and 8½ feet long. Capacity, 4 No. 12 or No. 14 wires or 3 No. 8 or No. 10 wires.

Packed 12 pieces 8½ feet long in corrugated containers; 100 feet in unit package; 1000 feet in standard package.

Weight per standard package, 410 pounds. No. 333..... per 100 feet \$11.20

La-In Florduct

Florduct makes practical surface floor wiring across aisles and will stand the abuse of hand trucks and general office traffic.

Consists of two pieces, base and capping so formed as to snap together, the capping snapping over the base. Capping is a ramp-like plate offering the minimum of obstruction.

Special rust-proofed zinc finish can be painted to match or harmonize with any given surface.

No. 711 capacity, 4 pairs inside telephone twist wire; 10 annunciator wires; 2 No. 14 wires.

No. 733 capacity, 4 No. 12 or No. 14 wires or 3 No. 8 or No. 10 wires; telephone feeder cables up to 3/16-inch diameter; 8 pairs inside telephone twist wire; 25 annunciator wires.

Standard package, 100 feet.

La-In Florduct Fittings

No. 738

Small internal adapter elbow for No. 711 Florduct only. For making bends from Florduct on floor to open wiring or Xtensionduct on baseboard. Furnished with fiber bushing to be used with open wiring.

Unit package, 10; standard package, 20.

Weight per standard package, 1 1/2 pounds.

No. 738. per 100 \$13.00

No. 739

Internal adapter elbow for open wiring to No. 733 Florduct.

For telephone cables up to 3/16-inch diameter. Furnished with fiber bushing to be used with open wiring.

Unit package, 10; standard package, 20.

Weight per standard package, 1 1/2 pounds.

No. 739. per 100 \$16.00

No. 740

Large internal adapter elbow for No. 733 Florduct only.

For making bends from Florduct on floor to molding on wall or baseboard.

Unit package, 10; standard package, 20.

Weight per standard package, 1 1/2 pounds.

No. 740. per 100 \$16.00

No. 749

Service fitting to be used at the new outlet location for protecting wires leaving Florduct and extending to apparatus on desks, etc.

Equipped with four double twistouts, for use at ends, for through runs or for right angle branches.

Unit package, 1; standard package, 10.

Weight per standard package, 4 1/2 pounds.

No. 749. per 100 \$90.00

La-In Florduct Fittings

No. 750

Service fitting for No. 733 or No. 711 Florduct to be used at the new outlet location for protecting wires leaving Florduct and extending to apparatus on desks, etc.

Equipped with four double twistouts. Used at ends, for through runs or for right angle branches.

Unit package, 1; standard package, 10.

Weight per standard package, 4 1/2 pounds.

No. 750. per 100 \$56.00

No. 743

Duplex plug receptacle for No. 711 and No. 733 Florduct. Brass receptacle mounted on sherardized box.

Unit package, 1; standard package, 1.

Weight per standard package, 1 1/4 pounds.

No. 743. per 100 \$512.00

No. 760

Single plug receptacle for No. 711 and No. 733 Florduct mounted on sherardized box.

Unit package, 1; standard package, 10.

Weight per standard package, 4 1/2 pounds.

No. 760. per 100 \$92.00

No. 765

Outlet extension cap for No. 711 Florduct only. Used as a junction fitting between Florduct and the outlet from which extension is made.

Arranged for mounting on wood floor. May be used as flat elbow or junction of Florduct runs.

Unit package, 10; standard package, 20.

Weight per standard package, 5 1/2 pounds.

No. 765. per 100 \$40.00

No. 352-F

Junction box for branch from top to face of baseboard. Provided with opening for No. 333 metal molding and elbow cap.

Unit package, 5; standard package, 20.

Weight per standard package, 9 pounds.

No. 352-F. per 100 \$78.70

Nos. 702 and 703

Adapter for connecting and fastening No. 765 extension cap to threaded outlet or floor box.

Unit package, 10; standard package, 20.

*Supplied with mounting lugs. All others without lugs unless specified on order.

**R & S Watertight Cast Junction Boxes
Heavy Wall and Mounting Lugs**

Hinged Cover Type

Bolted Cover Type

Made of cast iron. Furnished complete with cover and gasket. Small sizes of the hinged cover type junction boxes are provided with a flat cover. The raised panel cover furnished on the large sizes prevents bending when the cover is clamped in position.

All outlets are extra. Specify size and location of outlets when ordering.

Aluminized finish. Can also be furnished hot galvanized and in cast brass or aluminum. Prices on request.

Typical Square-Duct Installations

Fig. 1

Fig. 1 is a down-view showing how the use of 4 vertical elbows makes it possible to cross over or to bridge another section of wiring trough. The use of 2 of these fittings makes it possible to drop to a lower level whenever desirable. In this view, the wiring trough sections are mounted to the side wall by means of bracket hangers.

Fig. 2 illustrates the use of the telescope fitting, the drop hanger, the junction box and connecting a wiring trough section to the power panel.

Fig. 2

By looking carefully at the bottom of the telescope fitting, you will notice a cutaway view showing how the use of the panel fitting collar provides a smooth surface over which wires can be drawn without trouble.

Fig. 3

Fig. 3 illustrates the use of elbows, telescope fitting and mounting brackets, in coming up out of a panel to a section of wiring trough suspended from the ceiling.

Using one of the many knockouts in the wiring trough to make a connection to a switch.

Fig. 4

Fig. 5

Illustration shows how a bracket hanger is used to mount a section of trough to the sidewall.

Fig. 6 shows the use of the T fitting in a section of trough. The use of this fitting permits the connection to another section of trough running at right angles, to a junction box, or to make a right angle connection when the joints are not conveniently located.

Fig. 6

Fig. 7

Illustration shows the use of two 45° elbows, passing a column located in a corner.

Fig. 8

Fig. 8 shows one method of using Square Duct trough to connect power panels in one common gutter. It also illustrates the use of the junction box as a cross fitting.

Square D Duct and Fittings

Schedule A

Duct

The trough is flanged at both ends so that two sections can be clamped together. Cover is hinged. Knockouts are provided in sides and back for 1/2 and 3/4-inch conduit in 2 1/2 x 2 1/2-inch duct, and 1/2, 3/4, 1 and 1 1/4-inch conduit in 4x4 and 6x6-inch duct.

20422	\$.60	4x4 to 2 1/2 x 2 1/2
20622	2.50	6x6 to 5x5

Junction Boxes

To form T, L or cross. Price includes two closing plates. Cover is removable.

No.	Each	Size Inches
20248	\$2.10	2 1/2 x 2 1/2
20448	2.50	4x4
20648	8.80	6x6

Closing Plates

For closing end of section or any side of junction box.

No.	Each	Size In.
20216	\$1.50	2 1/2 x 2 1/2
20559	.60	4x4
20659	2.50	6x6

Prices on Square D Duct without knockouts will be furnished on request. Prices on cadmium plating and other special weatherproofing finishes on Square D Duct and Fittings furnished on application.

Bull Dog BUStribution Systems

A Bull Dog BUStribution installation possesses many advantages due both to the construction of its parts and to its method of installation. A few of the important features are listed below.

Unlimited Flexibility. The flexibility of BUStribution is practically unlimited. Readily adaptable to either vertical or horizontal mounting. Various parts are so constructed that they may be interconnected by means of standard fittings such as elbows, tees, and cross-overs to fit any building layout and to permit installations near ceiling or floor.

BUStribution is easy to install and reinstall and may be dismantled at any time and reinstalled elsewhere without any loss of material whatsoever. Branch circuit controls or plugs may be easily moved from one point of the system to another to take care of new loads or changes in loads.

Interchangeability. Branch circuit plugs are not only interchangeable for volts, amperes and number of poles, but also for type.

Designed so that switch-and-fuse, fuse only and circuit breaker controls may be used interchangeably and varied in a run to meet individual circuit requirements.

Different types of plugs may be substituted one for another even after the original installation is made. This may be accomplished without interfering with other circuits and without interrupting service, except at the point where the change is being made.

Unit Construction. Facilitates installation and permits branch circuit controls to be plugged-in where needed. Stand-

ardization of duct sections, auxiliary parts and plugs simplifies work involving alterations and additions.

No Wiring Gutters. Eliminates troublesome concentration of branch circuit controls in crowded cabinets. All plugs are individually housed on the outer casing walls of standard plug-in duct sections. All branch wiring connections are made on the outer side of these casing walls and not within the limited confines of a wiring trough.

Dust and Moisture Proof. Duct section halves are tightly bolted together. Adjacent sections are joined by means of scarf lap joints which are covered by the overlap of handhole covers. Handhole covers are of the screw-on type and extend beyond the actual cutouts of the handhole openings. Plug-in opening covers are embossed and when closed fit snugly into the crescent shaped cutouts. Plugs are individually housed. When the door of a plug is opened, only one unit is exposed to atmospheric conditions in contrast to the conventional panelboard where the opening of a large door exposes all circuits to possible dust and moisture.

High Salvage Value. The component parts of BUStribution centers and systems consist of sheet metal, enclosure bus bars and vitreous type insulators. These are materials which do not readily depreciate. Consequently, an investment in BUStribution is preserved for a longer period than is the case with other distribution systems.

For Industrial Plants

The modern production line idea is being adopted by an ever increasing number of industries. The use of a production line means frequent rearrangement of machines for different production. Wiring changes are made necessary. With the conventional type distribution panel, wiring changes usually mean delay and inconvenience to factory personnel, inter-

rupted production and an expensive outlay for temporary wiring.

With BUStribution, the stretched out distribution panel, wiring changes are made quickly and easily. It is the most flexible method of electrical distribution available, makes an ideal distribution system for industrial plants.

21. Rigid Conduit to Motor

For Office Buildings

BUStribution is not limited to industrial applications. The elimination of many runs of large conduit and cable and the saving of space allotted for the conventional switchboard makes BUStribution, in most cases, a more economical system of distribution for office and commercial buildings. It is equally suitable for the relatively small building or the building of skyscraper height.

Can be used as a main riser for both light and power within a building. Various type plugs can be mounted directly on the vertical BUStribution run and branch wires brought directly to each circuit. Can be installed as a complete integral distribution system.

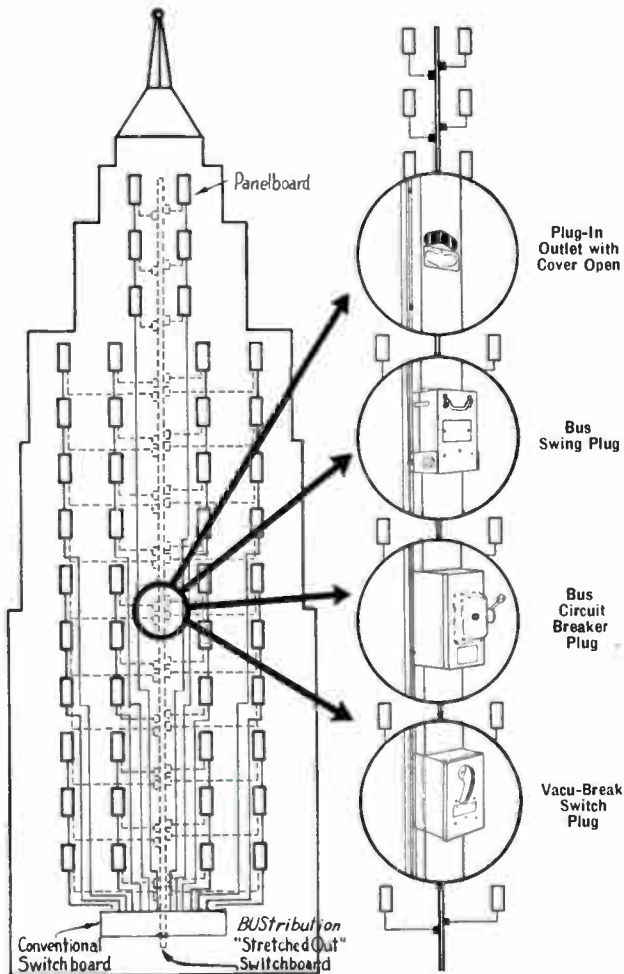

The Older Way

The solid line of distribution depicts a wire and conduit installation with a concentrated switchboard of the conventional type, located on or below the ground floor. This method, it will be noted, employs 4 wiring shafts, involving long runs of large cables and conduit. It also involves 2 separate services—one for light and one for power.

The BUStribution Way

The dotted line illustrates the BUStribution method. Note there is only 1 wire shaft, stretching up through the building for this installation and 1 service for both light and power on any 3-phase, 4-wire system.

Note further the deconcentration of circuits which are thus located more conveniently and closer to their respective loads or panels. This also materially reduces the size and length of conduit and cable runs.

Bull Dog Duct Systems

BUStribution Duct

For Flexible Power Circuits

BUStribution is a pre-fabricated, enclosed bus bar wiring system for flexible electric power. With convenience outlets spaced every 12 inches of the duct run, power circuit protective devices of any type can be plugged in at any point and at any time. Any number of new circuits may be added to the system at will, or user can plug in instantly at new machine locations. Bull Dog 125 Type BUStribution makes it possible for even the smallest shop or individual plant department to use this mobile, flexible system that is always modern.

Write for 44-page BUStribution Bulletin containing illustrations, diagrams, etc.

Kbl-Duct and Fittings

For Enclosing Wires and Cables

Kbl-Duct is an enclosed metal raceway provided with conveniently placed knockouts in sides and bottom. It has a hinged cover for ready accessibility to conductors which can be laid in place in the metal trough. Circuits can be run from the knockouts at any point to feed Universal Trol-E-Duct runs or motors. It is a flexible wiring system suitable for exposed work in industrial plants.

Write for current catalog for description and listing of Kbl-Duct parts and fittings.

Universal Trol-E-Duct

For Flexible Lighting Circuits

Trol-E-Duct provides the answer to every demand for adequate lighting. Through movable trolleys or twistout plugs, every inch of the system is a potential electrical outlet. It is ideal for both general and local lighting because lights can be moved along the duct run to meet changes in plant layout or requirements. If a plant is Trol-E-Duct equipped, new and finer luminaires may be adopted from time to time without delay or rewiring expense. Trol-E-Duct is the modern, flexible lighting system.

Send for manufacturer's 36-page bulletin giving detailed description and numerous illustrations.

Industrial Trol-E-Duct

For Feeding and Conveying Portable Tools

Industrial Trol-E-Duct is the ideal distribution system to install for heavy-duty power applications where mobility of tools and equipment is essential. Designed for operation under severe service conditions, it not only acts as a ready source of current, but as a means of support for high cycle tools used over assembly lines, work benches, etc. Useful for crane and hoist applications.

For complete and useful data, send for 16-page Industrial Trol-E-Duct Catalog.

T & B Watertight Floor Boxes

Box is furnished with polarized receptacle plug.

Three outlets in sides and 2 in bottom for 1/2-inch rigid conduit or any connector with 1/2-inch threads.

Has 5 tapped holes for 1/2-inch conduit, 4 of these are plugged with watertight steel plugs.

Box is Tabolite finish, bronze cover.

Outside diameter: Box body (under flange), 2 3/4"; overall (face of plate), 3 3/4". Outside height: Box body (under flange), 2 5/8"; overall, including plate but not nozzle, 3". Height of nozzle, 1 1/4"

Standard package, 25. Weight, 70 pounds.

- No. 1700, Box with 2-Wire Recp. each \$4.00
- No. 1701, Box with 3-Wire Recp. each 5.00
- No. 1702, Box with 3-Wire Grnd. Recp. each 5.00
- No. 1703, Phone or Signal Floor Box, No Recp. each 3.00

No. 8000 T & B Utility Outlets

10 Amperes, 250 Volts—15 Amperes, 125 Volts

An ideal convenience outlet for baseboards, plaster walls, mantles, etc.

Screws slip through keyhole slots in bottom of box. When tightened, box body, connector and convenience outlet become a rigid, compact unit.

Total height, 2 1/4 inches. Diameter body, 1 5/8 inches; diameter plate, 2 1/2 inches.

Tabolite finish.

Standard package, 50.

Price, No. 8000 each \$1.00

T & B Adjustable Watertight Floor Boxes

No. 1730, with Bell Nozzle

The bell nozzle is not standard equipment.

Adjustment range is 5/8-inch vertical and 10 degrees angular.

Minimum height of deep series boxes is 3 3/8 inches; of shallow series, 3 inches. Cover plate is 4 inches in diameter.

Unit package, 1; standard package, 10.

Description	CAT. No.		Each
	Deep Series	Shallow Series	
Box with 2-Wire Receptacle	1730	1760	\$5.00
Box with 3-Wire Receptacle	1731	1761	5.50
Box with 3-Wire Grounded Receptacle..	1732	1762	5.50
Tel. or Signal Box, No Receptacle	1733	1763	4.00

T & B Rectangular Gang Floor Boxes

Adjustable—Watertight

Combination 1/2 and 2-inch bronze disc with each gang is standard equipment. Receptacles and other accessories must be ordered separately. Two 1/2-inch drilled and tapped holes straight through each gang and one at each end of box is standard, with all but one hole in each gang plugged. Boxes drilled and tapped to specification, no extra charge.

Adjustment, 5/8-inch vertical, 10 degrees angular.

Unit package is 1. Standard package is \$60.00 net value.

4-Wire	364	22.00	10 3/4	337	5.00	3/4

These receptacles can be furnished in adjustable type. Prices upon application.

Can also be furnished in 75 amperes—440 volts, 100 amperes—250 volts, 3-wire, polarized to be used in series with switches and not for closing or opening circuits under load.

R & S Floor Outlets

Future requirements for service connections may be anticipated by systematically studding the floor with these outlets, all radiating from one or more pull boxes, from which any changes or additions may subsequently be made by the

pulling of wires. The complete outfit consists of a galvanized iron long radius conduit fitting, and brass adjustable top with watertight cap, which can be raised or lowered to meet the final surfacing of floor.

FA Floor Boxes

Types FB-5, FB-345 and FB-345-2

Type FB-5

Type FB-345-2

Particularly designed for installation in wood floors with concrete base, can also be installed in concrete or tile floors.

Adjustable type with 5-inch diameter, satin finish brass reversible cover.

Type FB-5 is for telephone, signal and bell system outlets, also light and small capacity power outlets without receptacle. Cover has 1/2-inch pipe size tapped opening with brass plug and one-piece fiber bushing.

Type FB-345 is for light or power service with small capacity receptacle (15-amp., 125-v., 2-pole, single flush receptacles with fastening screws on 2 3/8-inch centers and standard plug cap); also telephone, signal and bell service. Cover has 1 1/4-inch pipe size tapped opening with brass plug and split bushing.

Type FB-345-2 is of same type and for same application as Type FB-345, except cover has 2-inch tapped opening with brass plug, but no bushing, and is particularly suitable for use with the following capacity.

15 amp., 125 v., 2 pole, Arrow 7960-7963, H&H 7960-7963, Hubbell 5566-6730.

15 amp., 125 v., 3 pole, Arrow 8147-SA, Bryant, 9116-9111, H&H 7310-7070, Hubbell 6051-6149.

20 amp., 250 v., 2 pole, Arrow 8245-JA, Bryant 556-652, H&H 7089-7303, Hubbell 5552-6720.

20 amp., 250 v., 3 pole, Arrow 8140-KA, Bryant 9326-9322, H&H 7316-7314, Hubbell 6810-7198.

Each unit is furnished with a hot galvanized finish No. 12 gage, 4 1/4-inch diameter, 3-inch deep pressed steel box, having two 1/2-inch and two 3/4-inch conduit knockouts in opposite sides and one 1/2-inch knockout in bottom; 1-inch conduit can be used by reaming these knockouts.

Cadmium plated drawn steel adjusting ring permits adjustment for 3/4-inch variation in setting of box. Extra depth rings for greater variation are available at an additional charge. Rubber gaskets make the box reasonably watertight.

Standard package, 24 of one type.

Shipping weight, 100 pounds.

All Types.....each \$6.00

For special depth adjusting rings add \$1.50 for each additional inch.

FA Signal Floor Boxes

Cast iron box with brass cover.

Type 437-S complies with U.S. Treasury Department specifications for work under its jurisdiction.

Tapped conduit holes will be provided if template accompanies order.

No.....	437-S	437-D
Each.....	\$16.50	17.50
Inside Dimensions.....inches	5 1/2 x 5 1/2 x 3	5 1/2 x 5 1/2 x 4

FA Floor Boxes

Types FB-3W and FB-343R

Type FB-3W

Type FB-343R

For installation in concrete or tile floors.

Adjustable type with 3-inch diameter, satin finish brass reversible cover.

Type FB-3W is for telephone, signal and bell system outlets; also light and small capacity power outlets without receptacle. Cover has 1/2-inch pipe size tapped opening with brass plug and one-piece fiber bushing.

Type FB-343R is for light or power service with small capacity receptacle; also telephone, signal and bell systems. Special receptacles are furnished at extra charge. The following receptacle and plug combinations can also be used.

15 amp., 125 v., 2 pole, H&H 7176-1407, Hubbell 7331-7068, Arrow 8232-RA.

15 amp., 125 v., 3 pole polarized, Hubbell 7214-9975.

Each unit is furnished with a hot galvanized finish No. 12 gage, 4 1/4-inch diameter, 3-inch deep pressed steel box, having two 1/2-inch and two 3/4-inch conduit knockouts in opposite sides and one 1/2-inch knockout in bottom; 1-inch conduit can be used by reaming these knockouts.

Cadmium plated drawn steel adjusting ring permits adjustment for 3/4-inch variation in setting of box. Extra depth rings for greater variation are available at an additional charge. Rubber gaskets make the box reasonably watertight.

Standard package, 24 of one type.

Shipping weight, 100 pounds.

Both Types.....each \$6.00

Special depth adjusting rings, add \$1.50 for each additional inch.

Covers with Cord Clamps

Sheet Steel

Drop cord fixtures, especially in industrial plants, are frequently subjected to very hard usage. This Condulet cover is provided with a cord clamp and bushed hole which safeguard the drop cord. The clamp prevents any strain on the soldered connections. When the lamp socket is provided with a similar cord clamp, the drop cord is effectually protected against damage.

Takes cord .250 to .375-inch diameter.

Cadmium-galvanized is the standard finish.

Size Inches	Std. Pkg.	No.	Each

Type LBD Condulets

Schedule CR

For use when it is necessary to make a 90° bend in the conduit system.

An ample cover opening is arranged at an angle with the center line of the body to make it possible for conductors to be pulled straight through either hub.

Covers are domed to provide extra space inside the Condulets for the bend in the enclosed conductors. Covers are fastened by machine screws threading into tapped lugs on the bodies.

Furnished with blank, cast Feraloy cover.

Cadmium-galvanized is the standard finish.

Form 8 Series Condulets
General Information

Relative Sizes of 2-Inch Type C, Forms 7 and 8 Condulets

Form 8 series Condulets are for use where sizes of conductors, number of splices or tapping and pulling requirements necessitate more room than provided in the Oround series.

Form 8 series wiring chambers are wider and longer than in the Form 7 series of comparable sizes. The construction of these Condulets also provides an extra wide surface for a gasket between the Condulet and cover.

Form 8 Series Condulets
Threaded for Thick Wall Conduit
Schedule CR

Cadmium-galvanized is the standard finish.

Mogul Series Condulets

Schedule CR

Comparison of Size of Type BC 1/4-Inch Mogul Condulet and Type C 1/4-Inch Obround Condulet

Large conductors are difficult to pull around bends in conduit systems. Pull outlets are, therefore, advisable at such locations.

A pull outlet for this purpose must have a long opening to avoid sharp bends and kinks in the conductor.

Mogul Condulets have the required length of opening and yet are so designed as to preserve the symmetry of the conduit system.

Mogul Series Condulets take Mogul covers.

Cadmium-galvanized is the standard finish.

Type BC

Size In.	Std. Pkg.	No.	Each

Type ARB Vaportight Industrial Lighting Fixtures

Schedule CR

For SK Series Condulets, or 3/4 or 4-Inch Outlet Boxes

When mounted on SK series Condulets or outlet boxes mounted flush with the wall or ceiling, Type ARB is for use with concealed conduit.

Body of fixture is sufficiently large to cover the uneven line of plaster around edge of Condulet or outlet box, and will cover corners of 4-inch octagonal box.

Guards are made of cast aluminum; Condulets of cast Feraloy.

Cadmium-galvanized is the standard finish.

Clamp Guard Type

Form 100

Furnished with globe V75 and guard V97 and takes 50, 60, 75, or 100-watt lamps.

Type VXHA Vaportight Industrial Lighting Condulets

Schedule CR

Clamp Guard Type—With 5 Hubs

Form 100

Type VXHA is a V series, having threaded conduit hubs flush with the outside of the body. One hub is in center of the top; all hubs open or with one hub open and others closed with four flush type threaded pipe plugs.

One or more conduits may be used with the Condulet in various ways by removing or changing the plugs to suit requirements.

Furnished with GS126M2 lamp receptacle and gasket.

Furnished with globe V75 and guard V97 and takes accessories and parts, for V and VH series Condulets, clamp guard type, and 50, 60, 75, or 100-watt lamps.

Guards are made of cast aluminum. Condulets are made of cast Feraloy; cadmium-galvanized is the standard finish.

If specified, lamp receptacle with lamp grip will be furnished at advance of 10 cents in list price.

If specified, pigtail receptacle will be furnished at advance of 45 cents in list price.

These Condulets can be equipped with externally operated switch at advance of \$1.00 in list price.

Type VDB Vaportight Industrial Lighting Fixtures with Reflectors

Schedule R

Type VDB is a cast aluminum fixture of the vaportight type, designed to meet the need for a simple, effective, and inexpensive vaportight industrial lighting fixture.

Made so that dust or vapor cannot enter the conduit system even if the globe is removed or broken. The opening into the conduit system is entirely closed by the lamp receptacle.

Furnished with a clear, plain pear-shaped globe, and a porcelain enameled reflector. The reflector is held to the body by four screws.

Form 3 is furnished with pear-shaped globe VDB3, reflector, and medium base lamp receptacle.

Form 5 is furnished with pear-shaped globe VDB5, reflector, and mogul base lamp receptacle.

Type VS Vaportight Portable Hand Lamps

Schedule CR

Type VS portable hand lamps are suited for use in refineries, bakeries, flour mills, grain elevators, marine work or wherever inflammable vapor, dust or moisture is present. They are not intended for use in hazardous, combustible, or explosive atmospheres such as gasoline vapor, grain dust, or coal dust.

A composition one-piece receptacle is used. An additional binding screw terminal is provided for a safety circuit wire in the connecting cord or cable, for grounding the holder, guard, and other non-current, carrying metal parts.

Type VS, Clamp Guard Type With Rubber Handle

The guard and globe holder are made of cast aluminum; the handle of moulded rubber; and the gland nut of moulded composition. The rubber handle provides a comfortable grip for the hand, yet has sufficient flexibility to prevent breakage when subjected to rough usage.

The improved clamp for fastening the globe to the holder grips it throughout its entire circumference.

Furnished complete with globe, guard, receptacle, gasket, and vaportight gland in handle.

Size Lamp Watts	Size Globe Inches	Size Cable Inches	Cat. No.	Each
60	5 3/8	.250 to .625	VS20	\$6.15
100	6 3/4	.250 to .625	VS30	6.15

Type VS, Screw Guard Type

With Cast Metal Handle

The handle is cast as an integral part of the guard and globe holder, and is made of cast aluminum. The handle is provided with a stuffing box, consisting of a gland nut and tapered rubber bushing for the cord.

The globe screws into the holder and is protected by a guard which also screws into the same holder.

Furnished complete with globe, guard, receptacle, gasket, cord guard spring, and vaportight gland in handle.

If specified on order, lamp receptacle with lamp grip will be furnished at an advance of 10 cents in the list price.

Type VS Vaportight Portable Hand Lamps

Schedule CR

Handle and globe holder are made of moulded rubber in one piece. Handle provides a comfortable, insulated grip for hand and has sufficient flexibility to prevent breakage when subjected to rough usage. This flexibility also cushions the lamp and globe from direct shock. One end of handle is provided with a tapered rubber bushing and moulded composition gland nut. Bushing clamps the cord and protects it where it leaves the handle. The other end of handle is enlarged to hold the lamp receptacle and globe.

Body of lamp receptacle is one piece of moulded composition, held in position in handle by a retaining snap ring. Globe is pear-shaped of clear, Pyrex glass. Guard is fabricated from heavy steel wire, bright tinned. It screws on a threaded metal ring around the handle and when in place, also clamps globe in handle to prevent it from working loose.

Furnished with guard and pear-shaped globe.

Globe Watts	Lamp Watts	Cord In.	Without Hook		Without Interchangeable Hook	
			No.	Each	No.	Each
*100	100	.250 to .625	VS121	\$11.25	VS120	\$11.50

*Heat-resisting.

†Impact-resisting.

If specified, these lamps can be furnished with handle and globe holder made of DuPrene compound, which resists heat, oil, and gasoline and gives longer service under such conditions. Add to number suffix "SI," and \$2.00 to list price.

If specified, lamp receptacle with lamp grip will be furnished at advance of 10 cents in list price.

Safety Hand Lamps

Schedule CR

Take 15 to 75-Watt Lamps

Type LPG

Types LPG and LPH Safety Hand Lamps are constructed to withstand the severe service encountered in railroad shops, garages, industrial plants, storehouses, etc.

Special attention has been given to safety circuit requirements. A terminal is provided for a safety circuit wire in the connecting cord for grounding the guard and other metal parts not connected with the electrical circuit.

The handle is maple, black enameled. A metal bracket on which the ground terminal is mounted also provides a cord strain relief and support for the lamp socket as a unit. The strain relief, being a unit with the lamp socket assembly,

provides a more secure support for the cord entirely independent of the handle and the unit is accessible for making the splice between the lamp cord and the socket terminal wires.

The guard and half shade are made of aluminum alloy, light in weight, but strong; they will resist bending or breaking.

The hook, which is large and strong, can be turned so that when the half shade is used the light can be directed as desired.

A compression washer prevents a twisted lamp cord from turning the lamp out of a set position.

Type LPG, with Guard

Cat. No. LPG24.....each \$3.00

Type LPH, with Guard and Half Shade

Cat. No. LPH24.....each \$3.15

Type LPH

AL Series Flexible Fixture Hanger Condulets

Schedule CR

For Pendent Fixtures

AL series Condulets provide a flexible suspension for electrical fixtures. The fixtures are suspended from a universal joint which assures that the fixture will hang plumb. It also prevents breaking the fixture stem at the point of suspension, due to strains set up by the wind or by accidental impact. This universal joint permits the fixture to swing through an angle of about 20 degrees in any direction from the perpendicular.

To remove a fixture as a unit it is necessary only to take off the cover of the Condulet, disconnect the fixture wires, and slide the supporting nipple out of the groove in the Condulet. A specially designed terminal block may be used, thereby facilitating connecting and disconnecting.

The fixture stem cannot twist in the joint in such a manner as to injure the wires or connections.

The cushion fixture hanger differs from the ball fixture hanger in that it is provided with a spring which carries the weight of the fixture and absorbs any shocks due to vibration or other causes.

Cadmium-galvanized is the standard finish.

2-Wire Connection Blocks

Schedule CR

For AL Series Fixture Hanger Condulets

20 Amperes, 125 Volts

Provides a convenient means for connecting line and fixture wires, without splices. Entire fixture and stem can be assembled and wired on the bench. It can then be hung by sliding the supporting nipple into the groove of the Condulet body and connecting fixture wires to two binding terminals of the connection block. Fixture can easily be removed at any time for changes and replacements.

Designed so that it can be placed in the Condulet without any fastenings, yet, it supports itself and remains out of interference with swinging nipple.

No.	Each	Material	Std. Pkg.
CB308	\$.30	Porcelain	25

Flexible Fixture Hangers

Schedule CR

For Pendent Fixtures

For supporting pendent fixtures so that they will always hang plumb, even though supported from an inclined surface. The hangers can be used in conjunction with Condulets.

The flexibility of these joints also prevents breaking the fixture at the point of suspension, due to strains set up by the wind or by accidental impact.

The construction is such that the wires pass through the hanger joint, consequently no wires are exposed.

They will allow the fixture to swing through an angle of 20° in any direction from the perpendicular.

Cadmium-galvanized is the standard finish.

*20-ampere plugs and receptacles are interchangeable with former 15-ampere plugs and receptacles; 30-ampere (except the 2-wire, 2-pole), with former 15-ampere; 60-ampere, with former 30-ampere; 100-ampere, with former 60-ampere.

†100-ampere, also furnished with auxiliary metal cable clamp.

‡20-ampere, 2-pole plugs and receptacles have binding screw terminals, all others have soldered terminals.

Type BP Plugs

Schedule CR

For use with types BRD and BRME, plug receptacle housings.

The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently, these plugs are rated at 20 amperes. Otherwise, the 20 and 30-ampere plugs are exactly alike.

GROUNDING.—Provision is made for an extra grounding wire in the cable for grounding frame of portable device to shell of plug. Grounding or safety circuit is completed through shell of plug, detent spring, receptacle housing, and conduit system. Detent spring in receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

Cadmium-galvanized is the standard finish.

For Flexible Cable

Furnished with cable clamp. With composition handle (non-watertight). Standard package quantity, 25.

2-Pole		Diam. Opening in Cable Clamp, In.	
Cat. No.	Each

RS Series Junction Condulets

Schedule CR

Take conduit hub plates. Furnished with cast Feraloy cover, screws and gaskets for cover and hub plates.

The use of these Condulets provides an easy method of tapping a conduit system, where a Condulet body of this series has been installed in the line.

Cover, hub plates, and blank side plates are gasketed, making the Condulet watertight. Cap screws and gaskets are furnished with the Condulet body and not with the cover or hub plates.

Cadmium-galvanized is the standard finish.

Type	Approx. Inside Dimen. Inches	Std. Pkg.	No.	Each

Drilled for seal wire at 10 cents advance in price.

Type YAC Watertight Condulets

Schedule CR

For Cutouts

Take connection blocks, or 2-wire, 30-ampere, 250-volt main line fuse cutouts.

Furnishes compact housing for cutouts or connection blocks. No cutout fastening plate is used, the wiring device being attached directly to bottom of Condulet.

Hubs are cast solid with body and have an integral bushing and tapered thread.

Gasketed doors and adjustable hinges.

Cadmium-galvanized is the standard finish.

Size In.	Std. Pkg.	No.	Each
1/2	15	YAC1302	\$4.00

1	10	YYC3303	5.60

Take main line fuse cutouts.

Have doors and hinges of cast Feraloy, and spring catches. Furnished with removable conduit hub plates, and cutout fastening plate.

The removable conduit hub plates provide flexibility in installing.

Cadmium-galvanized is the standard finish.

Type YWC Watertight Condulets

Schedule CR

With Hub Plates—For Cutouts

30 Amperes, 250 Volts

Take main line fuse cutouts.

Furnished with cast Feraloy door, removable conduit hub plates, gaskets, and cutout fastening plate.

These Condulets are watertight. They have gasketed doors with adjustable eyebolt hinges; an eyebolt with a wing nut clamps the door tight. A tubular gasket

is cemented in the door which, when closed, is watertight. Removable conduit hub plates, thoroughly gasketed, are secured to the cast Feraloy body by four screws.

Cadmium-galvanized is the standard finish.

Type YKC Condulets

Schedule CR

For Fusible Knife Switches

Take fusible knife switches.

A removable switch fastening plate permits mounting switch and making connections before it is installed in Condulet. Two accessible fastening screws quickly and effectually secure switch fastening

plate in Condulet. Switch fastening plates are slotted so that most standard makes of switches can be mounted thereon by means of the bolts and nuts furnished with switch fastening plates.

Door is furnished with spring catch. Hubs are cast solid with body and have an integral bushing and tapered thread.

Cadmium-galvanized is the standard finish.

For Fusible Knife Switches

Protect the switches and fuses from mechanical injury and the weather.

A cast Feraloy door, a tubular gasket cemented in a groove, adjustable hinges, and eyebolt and wing nut fastening device make Condulet watertight. Provision is

made for a padlock whereby door can be locked to prevent unauthorized persons tampering with switch. Provision consists of strap with a large hole in it for padlock. When door is closed, end of strap projects through slot in door.

Furnished with removable switch fastening plate which is slotted so that most standard makes of switches can be mounted on it by means of bolts and nuts furnished with switch fastening plate.

Hubs are cast solid with body and have an integral bushing and tapered thread.

Cadmium-galvanized is the standard finish.

FA Series Safety Switch Condulets

Schedule CR

FA Series Condulets are furnished with Crouse-Hinds tumbler switch, cover and gasket.

They are for use in industrial plants or wherever switches would be subjected to unusually severe conditions. The switches are enclosed in Condulets and are externally operated, affording the switch maximum protection from mechanical injury.

The watertight covers are especially adapted for use out-of-doors or wherever dust, moisture, or gases are present. They are provided with a handle for external operation of the switch.

The non-watertight cover is provided with a rim to protect the switch handle which projects through a slot in the cover. The handle is self-indicating and can be furnished with a luminous finder at an advance of 50 cents in the list price.

Cadmium-galvanized is the standard finish.

Type MK Safety Switch Condulets Without Hub Plates

Schedule CR

250 Volts, 500 Volts A.C.

Take conduit hub plates.

With this safety switch Condulet installed at each motor, repairs can be made to compensator, the motor, or machinery driven by motor, in full confidence that all apparatus beyond switch is completely isolated from power circuit, and will remain so as long as repair man or men may desire, since switch can be locked in off position with either one or two padlocks.

Consists of a line of fusible knife switches in cast Feraloy housings, operated by an outside handle. Door over fuse compartment gives access to fuses, but as this door is interlocked with handle, fuses are accessible only when dead.

Provision for locks has been made so that it is possible to lock switch in off or running position and also to prevent unauthorized persons from opening switch case.

Detachable hub plates make possible various conduit hub arrangements and often facilitate installation.

Furnished with fusible knife switch.

Cadmium-galvanized is the standard finish.

Type MKS Condulets without Hub Plates

Schedule CR

Interlocking Safety Switch and Plug Receptacle Condulets

Switch Arranged for Cartridge Fuses

250 Volts, 500 Volts A.C.

Take conduit hub plates and Type DP interlocking plugs.

For use with portable electrical appliances such as welding machines, rivet heaters, motor-driven machines, or for similar purposes where switches and plugs are used.

Consists of a safety switch and a plug receptacle. Receptacle and switch are so interlocked that plug cannot be withdrawn unless switch is open, nor can switch be closed unless plug is fully inserted. Wing nut and eyebolt on housing engage a forked lug on plug handle, so that plug cannot be withdrawn accidentally or due to weight of cable even when switch is open.

Plug contacts are protected by a shell or sleeve which is cast as an integral part of aluminum handle.

Plugs and receptacles are polarized, and contacts are self-aligning. Insulating parts of both plug and receptacle are held in place without use of screws, and cannot become loosened by vibration.

Any type and size of round flexible cable, armored cable, or flexible conduit can be used with any interlocking plug if outside diameter comes within limits specified for that plug. A clamp on plug grips cable or flexible conduit, thereby relieving terminals of any tension.

Not weatherproof and when installed out-of-doors or where exposed to weather, a weatherproof housing should be built around Condulet.

Furnished with fusible knife switch and interlocking plug receptacle with spring door housing.

Cadmium-galvanized is the standard finish.

Type FSQ Interlocking Safety Switch Condulets

Schedule CR

For use with small portable electrical appliances such as hand lamps and portable tools, or for similar purposes where interlocked switches and plugs are desirable.

Switch is a standard 20-ampere, 2-pole, single-throw tumbler switch which operates in a vaportight compartment.

Switch operating handle interlocks with receptacle compartment cover so that cover cannot be opened and plug inserted or withdrawn unless switch is in off position.

Third or grounded terminal of receptacle and plug are for connection of third wire, which can be included in cable as a grounding wire for portable device.

In addition to twist lock feature of plug, adjusting screw is provided in receptacle compartment cover so that when cover is closed, plug cannot be pulled out of full contact by cable, even though twist lock feature is not utilized. Plug is provided with effective cable grip and strain relief.

Furnished with tumbler switch, vaportight cover, Hubbell 3-pole twist lock receptacle, and Hubbell 3-pole twist lock plug.

Cadmium-galvanized is the standard finish.

Size, In.	Std. Pkg.	No.	Each
3/4	10	FSQ28	\$12.00

ZT Series Watertight Safety Switch Condulets without Hub Plates

Schedule CR

Take plug or cartridge fuses, and conduit hub plates or plug receptacle housings.

Handle is so interlocked with fused door of Type ZT that door cannot be opened until switch is opened, nor can switch be closed until door is closed. As machine operator can change fuses in this Condulet with perfect safety, its use prevents loss in productive time which is unavoidable when electrician

must be sent for to replace fuses.

Furnished with tumbler switch, cover with fuse door, and gaskets for hub plates.

Cadmium-galvanized is the standard finish.

Standard package, 5.

Type AF Mine Signal Switches

Schedule CR

A single-pole, double make, quick break, mine signal pull switch. The normal position is open. Spring is packed in grease and will support the weight indicated in the column Initial Pull without starting to close the switch. The weight indicated in the column Final Pull is required to operate the switch, but this includes the weight of pull rope.

Switch is enclosed in a sturdy water-shedding housing and is fastened to it by four cap screws.

Wires enter through clearance holes in flange on switch mechanism.

All insulating parts are of high grade material.

Cadmium-galvanized is the standard finish.

No.	Each	*Initial Pull Lb.	†Final Pull Lb.	Total Wt. Pounds Pull Rope Including Moisture	Additional Pull Req. to Operate Switch Pounds	Std. Pkg. Assorted

Type EL Condulet Elbows

Schedule CR

Female—For Threadless Conduit

Cadmium-galvanized is the standard finish.

Size In.	For Thick Wall		For Thin Wall	
	No.	Each	No.	Each
1/2	EL191	\$.40	EL192	\$.40
3/4	EL291	.50	EL292	.50

Type UCT Adapters

Schedule CR

For electrical metallic tubing which has the same inside diameter as the corresponding size of standard rigid conduit; therefore, the outside diameter of E.M.T. is considerably less than corresponding sizes of standard rigid conduit. This gives an opportunity for use of an adapter in standard Condulet threaded hubs. Type UCT screws into tapered threaded hub of Condulet and securely grips E.M.T.

May be used to connect electrical metallic tubing not only to Condulets, but also to Condulet elbows, Condulet unions, Condulet reducers, threaded pipe couplings, or to any fitting that has a standard female tapered pipe thread of the corresponding size. Thus, a standard conduit coupling and two Type UCT adapters make a coupling suitable for use with electrical metallic tubing.

Cadmium-galvanized is the standard finish.

Size In.	Std. Pkg.	No.	Per 100
1/2	200	UCT1	\$4.50
3/4	100	UCT2	6.80

1 1/2	25	UNF5	1.80
2	10	UNF6	2.75

*Male end is given first.

Type UNA Connectors and Unions

Schedule CE

A convenient coupling or union for conduit joints made at angles from 90° to 180°. A single clamping nut provides a union feature as well as easy adjustment to required angles.

Unless a Type UNA universal union is placed at or near an outlet, or unless it is installed at an angle of about 140° to 180°, it may prove to be difficult to fish wires through union. For this reason, these devices are not approved as conduit unions for general use.

Cadmium-galvanized is the standard finish.

Box Connectors—Male

For use only if adjacent to a Condulet. Explosion-proof and dust-tight.

Size In.	Std. Pkg.	DIMEN., IN.		No.	Each
		Length	Width

3/4	25	UNA2	1.45
1	10	UNA3	1.75

Wedgtite Pipe Hangers

Schedule CR

***Furnished with Wedge CHWI**

Wedgtite Pipe Hangers are quickly and easily installed as only a few blows of a hammer are necessary. They can be used with any I-beam, channel, or other structural shape having a lower flange $\frac{1}{8}$ to $\frac{3}{8}$ inch thick. They consist of two pieces, a hook and a wedge, which is provided with saw teeth so that vibration will not loosen it. The wedge is interchangeable with all types and sizes of hooks.

Also may be used in connection with water pipes, steam pipes, and sprinkler systems.

Made so that one end hooks under pipe and other over flange of supporting steel beam. End that hooks over flange has a groove into which the wedge is driven, tightly drawing pipe against flange and securely holding it in position.

Hanger is made of malleable iron, the wedge of hardened steel.

Type CHP Hangers

For pipe running parallel with supporting steel beam.

Size In.	Std. Pkg.	No.	Each
$\frac{1}{2}$	100	CHP1	\$.40
$\frac{3}{4}$	100	CHP2	.45
1	100	CHP3	.50
$1\frac{1}{4}$	100	CHP4	.55
$1\frac{1}{2}$	100	CHP5	.60
2	100	CHP6	.65

Type CHR Hangers

For pipe running at right angles to supporting steel beam.

Size In.	Std. Pkg.	No.	Each
$\frac{1}{2}$	100	CHR1	\$.40
$\frac{3}{4}$	100	CHR2	.45
1	100	CHR3	.50
$1\frac{1}{4}$	100	CHR4	.55
$1\frac{1}{2}$	100	CHR5	.60
2	100	CHR6	.65

*Teeth of wedge must be installed against girder.

If specified, wedge CHW2 furnished at same list price.

Type CUC Sign Condulets

Schedule CR

Used for lighting a bracket support on sign posts or arms. Has a malleable iron clamp held by two screws for securing Condulet to pipe. Gasket provided makes a watertight joint between the Condulet and pipe. A threaded dome cover provides access to wires and splices and makes a watertight enclosure. Has a bushing that extends into pipe through a $\frac{1}{16}$ -inch hole drilled in pipe.

Cadmium-galvanized is the standard finish.

Support Pipe	Bracket Arms	Std. Pkg.	No.	Each
1	$\frac{1}{2}$	10	CUC13	\$1.00
$1\frac{1}{4}$	$\frac{1}{2}$	10	CUC14	1.05

2	$\frac{1}{2}$	10	CUC16	1.15
$2\frac{1}{2}$	$\frac{1}{2}$	10	CUC17	1.20
1	$\frac{3}{4}$	10	CUC23	1.10
$1\frac{1}{4}$	$\frac{3}{4}$	10	CUC24	1.15
$1\frac{1}{2}$	$\frac{3}{4}$	10	CUC25	1.20
2	$\frac{3}{4}$	10	CUC26	1.25

Type PED Condulet Pedestals

Schedule CR
Threaded

Furnish a rigid support with threaded hub for feeder conduit which comes through floor. Feeder conduit threads into lower hub inside pedestal. Upper hub of pedestal may be used to take a connector such as Type CGB with flexible conduit or armored cable for connection to control switch Condulet mounted on frame of machine, or upper hub of pedestal may be used to take a threaded stem of conduit for independent support of a control switch Condulet at a convenient height from floor. Flange of Condulet pedestal has four holes for fastening bolts or screws.

Cadmium-galvanized is the standard finish.

Size In.	Height In.	Std. Pkg.	No.	Each
$\frac{3}{4}$	3	25	PED223	\$1.20
1	3	25	PED333	1.45
$1\frac{1}{4}$	3	25	PED443	1.70

Groundulet Safety Circuit Equipment

Schedule CM

Cadmium-galvanized is the standard finish.

Type GCH

For Threaded Heavy Wall Conduit—With Swivel Feature

For use where conduit is employed to protect the grounding conductor. Grounding conductor is connected to conduit-hub part by swivel bolt. Conduit can be brought in from any angle. Malleable.

SIZE, INCHES		O.D. Grounding Electrode	Car-ton	Std. Pkg.	No.	Per 100
Conduit	Water Pipe	$\frac{1}{2}$ to 1	5	25	GCH1

Type GCH With Clamp Connection for Ground Conductor

For Nos. 8, 6, or 4 Armored or Unarmored Ground Conductor

In this type the grounding conductor passes through the bolt and is clamped between the under side of bolthead and upper face of square cavity. A set screw holds armor in place and effectively grounds it to clamp. Malleable.

SIZE, INCHES		O.D. Grounding Electrode	Car-ton	Std. Pkg.	No.	Per 100
Water Pipe	$\frac{1}{2}$ to 1	$\frac{1}{2}$ to 1	5	25	GCH08

GC102	25	100

Type GC Grounding Straps

For bonding and grounding equipment in interior wiring systems.

Flexible copper, tinned.
Length coil, 50 feet.

No. GC100.....per coil

*For use also on lead pipe in sizes $\frac{1}{2}$ and $\frac{3}{4}$ -inch Grades AA and AAA, and 1-inch Grades A, AA, and AAA.

Groundulet Safety Circuit Equipment

Schedule CM

All conduits entering a service box must be properly bonded to it by bonding jumpers, ground clamps, lugs or devices approved for the purpose.

Type GC Groundulet bushings and jumpers make dependable and approved bonding connections. The bushings provide a means for connecting bonding jumpers to them.

The bonding jumpers being within the cabinet, are protected from mechanical injury and all fire hazard is confined within the cabinet.

Cadmium-galvanized is the standard finish.

Type GC Bushings

*Over insulation.

†Over armor or concentric bare neutral after removing outer insulation.

Type CGY Service Entrance Connectors

Schedule CM

2-Screw Compression Clamp Type

This connector meets the requirements of watertightness and resistance to corrosion, the two most important requirements of a service entrance cable connector.

Screws are reversible which means they may be threaded in from either direction, making heads accessible under all conditions of installation.

Non-ferrous metal, corrosion-resistant alloy, and chromium-plated steel clamping screws.

*Neutral concentric conductor.

Type FEA Service Entrance Condulets

Schedule CR

For Third Rail Feeder

Takes composition cover.

Single conductor feed wires or cables such as are required in third rail systems and overhead trolley lines, when enclosed in conduit, require an outlet that is water-shedding, and of easy access for installing the cable.

Body of Type FEA Condulet is designed so as to form a drip loop in cable, thus preventing water seeping into conduit and eventually breaking down the insulation and causing trouble.

A removable cap permits easy installation of cable.

Composition cover protects cable from abrasion or grounding. Cadmium-galvanized is the standard finish.

Size, In.	Std. Pkg.	No.	Each

GUA Series Junction Condulets

Schedule CF

Explosion-Proof and Dust-Tight

For general wiring purposes in hazardous locations. May serve two purposes: As a pull box or to make taps or splices, and as a sealing fitting.

Seal wire applied by drilling hole through cover boss and passing seal wire through it and around conduit or hub.

Furnished with all hubs threaded for rigid conduit, or with all hubs provided with explosion-proof and dust-tight unions for rigid conduit. Furnished with surface cover.

Cadmium-galvanized is the standard finish.

Threaded Covers and Canopies

Schedule CE

For Condulets of the GUA and GUF Series

The sealing cover is provided with a removable plug making it possible to fill the Condulet with sealing compound after installation.

The fixture canopy is intended especially for mounting pendant lighting fixtures, such as Type EVA. Body canopy is cast Feraloy.

The fixture cover is intended for mounting pendant lighting fixtures with 3/4-inch stem, such as Type EVA, especially where there is not enough head room for No. GUA068 canopy. Covers are made of aluminum alloy.

Type ECT Transformer Condulets

Schedule CE

Explosion-Proof and Dust-Tight

Class I, Group D, and Classes II, III, and IV

Arranged for connection to primary circuits of 230, 460, or 575 volts and reduce the voltage of the secondary circuit to 115 volts.

Particularly adapted for use in connection with the FS series explosion-proof pilot light Condulets, when the supply current is 230, 460, or 575 volts, 50 to 133 cycles.

Outside dimensions, exclusive of hubs: Length, 7 inches; width, 6 1/2 inches; depth, 5 1/2 inches; diameter of cover opening, 5 1/2 inches.

Cadmium-galvanized is the standard finish.

Rating Watts	Hub Size, In.	No.	Each
15	3/4	ECT211	\$14.80
50	3/4	ECT215	28.50

Industrial Signal Condulets

Schedule CE

Explosion-Proof and Dust-Tight
Class I, Group D; and Classes II, III, and IV

For use in hazardous locations.

Housings for each of these signals have sealing hubs at the bottom. Leads from the signal operating means are sealed in these hubs and brought through short pieces of conduit into GUA series junction Condulets where they can be spliced to the line wires.

Cadmium-galvanized is the standard finish.

Type TCH Electric Clock Condulets

Schedule CE

Explosion-Proof and Dust-Tight

115-Volt, 60-Cycle A.C.

Class I, Groups C and D; and Classes II, III, and IV

For the use of electric clocks in hazardous locations without danger of explosions from electrical causes.

Case or body is cast aluminum with a heavy, clear glass disc sealed into the front over the face of the clock. A round opening in the back permits mounting or removal of the clock mechanism. This opening is equipped with a cast aluminum threaded cover. There is a mounting lug with fastening hole on each side of the hub at the top of the body.

A Seth Thomas self-starting synchronous electric clock mechanism is mounted in the Condulet and an external knob is provided for setting the hands.

Pigtail leads from the clock motor are brought into the splicing and sealing chamber at the top and sealed in place. The splicing chamber has a round opening in the front,

equipped with a threaded cover, through which circuit wires can be spliced to motor leads after complete unit has been installed. Explosion-proof and dust-tight union hub is provided at top to permit easy connection to threaded conduit line.

Furnished with clock.

Outside dimensions: Length, 13 1/4 inches; width, 7 1/2 inches; depth, 4 inches.

No.	Each	Size Hub In.
TCH151	\$65.00	1 1/2
TCH251	65.00	3/4

EV Series Lighting Fixture Condulets

Schedule R

Explosion-Proof

Class I, Groups C and D

For use in hazardous locations where with ordinary lighting fixtures a broken lamp or a ground or short circuit in the receptacles or wires might cause an explosion. They are so designed that any explosion occurring within the fixture will not be communicated to the surrounding atmosphere.

Hoods are cast aluminum with aluminum inner reflectors. Globe holder assembly consists of clear, Pyrex, impact-resisting, glass globe, equipped with sheet aluminum gasket and cast aluminum mounting and retaining rings. Cast aluminum guards are held to globe mounting rings by three machine screws.

Furnished without reflectors.

Type EVA—Pendent Type

Complete with a Condulet body for pendent mounting on a conduit stem. A set screw in hub may be tightened against unthreaded part of conduit to prevent unscrewing from conduit when relamping. May be suspended by a conduit stem from GUA or GUF series Condulets with three-inch cover opening and GUA fixture covers or canopies.

EFS Series Tumbler Switch Condulets

Schedule CE

Explosion-Proof and Dust-Tight

For the control of lighting, appliance, and small motor circuits, or for push button remote control of magnetically operated motor controllers.

Meets requirements of the Underwriters' Laboratories for devices for Class I (explosion-proof) locations.

Furnished with tumbler switches.

Cadmium-galvanized is the standard finish.

‡Order by catalog number. Use type and form number (rather than catalog number) for identification of Condulets for hazardous locations, when consulting Underwriters Laboratories' list of inspected electrical appliances.

EFS Series Tumbler Switch Condulets

Schedule CE

Explosion-Proof and Dust-Tight

For flush or surface mounting.

Meets requirements of the Underwriters' Laboratories for devices for Class I (explosion-proof) locations.

Provides controls for 1 or 2 circuits in a single-gang EFS series Condulet.

Furnished with tumbler switches.

Outside dimensions, exclusive of hubs: Length, 5 5/8 inches; width, 4 inches; depth, 3 1/2 inches.

Cadmium-galvanized is the standard finish.

*Price includes switch with one interchangeable heater.

EFS Series Pilot Light Condulets

Schedule CE

Explosion-Proof and Dust-Tight

Type EFS

Type EFSC

For use as an indicator light. Meets more exacting requirements of the Underwriters' Laboratories for devices for Class I (explosion-proof) locations.

Furnished with candelabra base receptacle; 6-watt, 115-volts, Type S-6 clear bulb lamp; jewel; and guard. Ten-watt, 230-volt type S-8 clear bulb lamps furnished in Condulets by adding suffix V2 to number, at advance in price of 75 cents per lamp.

Outside dimensions, exclusive of hubs: Length, 5 1/8 inches; width, 3 1/2 inches; depth, 4 1/8 inches.

*Price includes breaker with integral heater.

†Price includes breaker with one interchangeable heater.

‡Order by catalog number. Use type and form number (rather than catalog number) for identification of Condulets for hazardous locations, when consulting Underwriters' Laboratories' list of inspected electrical appliances.

Information upon request for heater units and motor ratings of the secondary breakers.

Type FLP Panelboards with Circuit Breakers

Schedule CE
Explosion-Proof and Dust-Tight

8 Circuits—Double-Pole

If more than 8 circuits are required, two or more panelboards can be connected by means of 2-inch conduit nipples.

Furnished with Westinghouse circuit breakers, but can be furnished with ITE circuit breakers at same list price, if specified; main hubs, 2 inches; branch circuit hubs, 3/4 inch. Dimensions over all, including hubs: Length, 8 circuits, 27 1/8 inches; 6 circuits, 23 1/2 inches; 4 circuits, 18 1/2 inches; width, 21 3/4 inches; depth, 6 3/4 inches.

Cadmium-galvanized is the standard finish.

8	35	100	200	FLP81-35	236.00	FLP82-35	286.00

One compartment may be used for a main circuit breaker (not over 35 amperes) at a slight additional cost.

Type EPC Condulets

Explosion-Proof—Dust-Tight—Vapor-Tight—Weatherproof

Class I, Group D; and Classes II, III, and IV

Circuit Breaker Condulet

Motor Starting Switch Condulet—Air Break

Combination Line Starter Condulet—Air Break

The EPC series Condulets provide maximum safety for arcing devices in hazardous locations. The construction also provides an excellent unit for reliable operation under severe corrosive conditions. Where weatherproof construction is desired, these units are most satisfactory.

USE.—Type EPC Condulets are ideal housings for circuit breakers, across-the-line starters for polyphase induction a.c. motors, magnetic switches, or combinations of circuit breakers with motor starters or with magnetic switches; where used in hazardous locations or where exposed to vapors or weather.

DESIGN.—The EPC Condulet consists of a body with top and bottom openings into which are threaded a cover and a tub.

The body has four conduit hubs all of the same size: Two at the top and two opposite them at the bottom. This convenient hub arrangement makes it possible for the conduit to enter or leave from one or both directions. These hubs are taper tapped and have integral bushings. If conduit smaller than the sizes listed is to be used, Type RE reducers may be employed.

Three substantial mounting lugs are provided: Two at the bottom with open slots; and one at the top with a keyhole. This provision saves time in mounting as the Condulet can be supported by the top bolt while the lower bolts are being located and tightened.

The covers and tubs have tapered threads which make the joint explosion-proof, dust-tight, vapor-tight, and weather-proof. The threads are treated to facilitate removal of the covers and tubs.

The ends of the covers and tubs have grooves into which a bar may be placed for tightening or loosening.

WIRING.—The supporting frame which carries the circuit breaker and/or starting switch, can be detached and removed easily and quickly without dismantling any of these devices.

With the cover, tub, and devices removed, free access is had to the wiring chamber. The feeder and branch circuit conductors can be pulled in without difficulty.

After the conductors are in place, the frame with its devices may be replaced, final connections made, and the tub and cover attached.

ACCESSIBILITY.—Removal of the tub and cover gives complete access to the devices; much more so than when mounted in a conventional rectangular box. Contacts can be repaired or replaced, and examination and adjustments are facilitated, because all sides are exposed.

Prices and further information upon request.

Type FLS General Use Switch Condulets

Schedule CE

Explosion-Proof and Dust-Tight Single Throw, Tumbler

With Switch—Not Fusible

Type FLS Explosion-Proof and Dust-Tight Switch Condulets are general use enclosed switches, rated in amperes, for use in hazardous locations. If used as motor switches, allowance should be made for the locked rotor motor current, which may be five or six times the full load motor current.

The single throw is furnished with switches of the tumbler type, positive quick make and break; therefore, it cannot be held in partial contact.

These Condulets are listed with two hubs, through feed, both hubs for threaded conduit of the same size. Other hub arrangements, hub sizes, and/or union hubs or combinations can be furnished.

Cadmium-galvanized is the standard finish.

Type FLB Condulets

Explosion-Proof and Dust-Tight For Feeder and Branch Circuit Protection

This Condulet is suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuits; but is not recommended as a substitute for motor running protective devices.

Can be furnished to meet the requirements of the U.S. Bureau of Mines.

Can be made weatherproof by the use of vellumoid gaskets under the flange of threaded cover.

Prices and further information upon application.

Type FLF Manual Motor Starting Switch Condulets

Explosion-Proof and Dust-Tight

Designed as explosion-proof and dust-tight housings with operating handles or push buttons for external operation of certain definite manual motor starting switch mechanisms.

Motor starting switches are all of across-the-line starting type with thermal overload trip, and are nearly all three-pole switches. In the N.E.C. they are classed as motor running protective devices.

Listed for threaded hub arrangements. Other hub arrangements and/or union hubs or combinations can be furnished.

Prices and further information upon application.

Type FLM Magnetic Motor Starting Condulets

Explosion-Proof and Dust-Tight

For G-E and Trumbull

Housings for certain definite magnetic, remote control motor starting switches.

Motor starting switches are of across-the-line type with thermostatic trip released by heater units. Provide time limit overload together with no voltage protection. Operated from "start" and "stop" push button station Condulets which may be installed at any convenient location.

Prices and further information upon request.

Delayed Action Arktite Plugs and Receptacles

Schedule CE

Explosion-Proof

For industrial use. Arranged for surface mounting. Receptacle housing is equipped with a spring door.

With Dead End Hub Arrangement

Type CPS Receptacle Equipment
2-Wire, 3-Pole—15-Ampere or 1-Hp., 115 or 230-Volt, 60-Cycle A.C.

Includes Condulet and receptacle.

Takes Type CPP plugs.

Receptacle equipment is made of cast ferrous, cadmium-galvanized finish.

Outside dimensions of body, exclusive of hubs: Diameter, 4 inches; depth, 3 3/8 inches.

Cadmium-galvanized is the standard finish.

Each. \$18.50 19.00 20.00
Dimension A. inches 1 1/8 2 3

Type CPS Receptacle Equipment For Rectangular Opening Wall Boxes

For replacement of non-explosion-proof convenience outlets.

Takes type CPP plugs.

While these receptacles, installed on wall outlet boxes of the usual type, cannot be considered 100% explosion-proof, yet the hazard due to normal operation is eliminated, leaving only the hazards

due to abnormal conditions. Even these hazards may be reduced by sealing each conduit entering the box, and by careful workmanship in making and insulating the joints and splices.

The receptacles with explosion-proof Condulets listed above, should always be used in new installations, and wherever possible in re-wiring old installations. The CPS212-S33 receptacles should be used only where existing convenience outlets, admittedly hazardous in explosive atmospheres, are to be replaced by explosion-proof receptacles, and where it is not practicable to remove the sheet metal wall boxes and replace them with the explosion-proof Condulets used with the receptacles listed above.

A GR terminal is provided for connection to a copper grounding conductor.

Cat. No. CPS212-S33
Each. \$18.50

2-Hp., 230-V. or 460-V., 3-Phase A.C.

Type FSQC, with Threaded Housing

Bodies are cylindrical and furnished with hubs for threaded conduit and external mounting lugs with fastening holes. Cover opening is threaded and equipped with a cover which is locked by a special screw so arranged that it locks the switch in off position before it releases cover. Cover cannot be removed while switch is in on position and switch cannot be thrown to on position until cover is locked.

Tumbler switch and plug are mechanically, as well as electrically, connected with receptacle which is rotated by plug to turn switch on and off. Plug cannot be inserted or withdrawn unless switch is in off position and switch

cannot be operated except by plug.

An extra pole in plug and receptacle is provided for grounding conductor in cord.

Furnished with tumbler type switch and receptacle with threaded housing.

Approximate dimensions over all, exclusive of hubs: Height, 9 1/4 inches; diameter of body, 4 1/8 inches; depth, 5 5/8 inches.

Cadmium-galvanized is the standard finish.

Order by catalog number. Use type and form number (rather than catalog number) for identification of Condulets for hazardous locations, when consulting Underwriters Laboratories' list of inspected electrical appliances.

A cast aluminum threaded cap with gasket and suspension chain will be furnished, if specified. Add suffix S1 to number and \$1.00 to list price.

Type FSQ Interlocked Receptacle and Switch Condulets

Schedule CE

Explosion-Proof and Dust-Tight

2-Wire, 3-Pole, 10-Ampere, 250-Volt A.C. or D.C. For use in explosion-proof and dust-tight locations. Takes type FP plug.

A threaded cover is locked on by screw so arranged that it locks switch in off position before it releases cover. Cover cannot be removed while switch is in on position, and switch cannot be turned to on position until cover is replaced and locked.

Receptacle is two-wire, three-pole with one pole grounded to Condulet body. It is arranged to interlock with plug mechanically as well as electrically, and can be rotated by plug far enough to turn switch on and off. Switch is two-pole tumbler type.

Plug is three-pole with prongs protected by steel sleeve which has a polarizing guide. Guide follows groove in receptacle housing and, when plug is rotated to turn switch on, it cannot be withdrawn while switch is in on position. Handle of plug is equipped with rubber bushing and cord clamp.

A connection block with binding screws for circuit wires is mounted in body. Outside dimensions, exclusive of hubs: length, 7 3/4 inches; depth, 4 1/4 inches; and diameter, 3 3/8 inches.

Cadmium-galvanized is the standard finish.

Furnished with 2-pole switch and 2-wire, 3-pole receptacle. No. FSQ223, Size, 3/4 Inch.....each \$14.00

Type EYS Sealing Condulets

Schedule CE

Explosion-Proof

For Sealing Vertical Runs of Conduit

In hazardous locations, Class I, the conduit system should be sectionalized by sealing at frequent intervals.

Type EYS is a small, compact sealing Condulet for use in vertical runs of conduit. Taps or splices within the fitting are not permissible, and it is not recommended where there are more than three or four wires in the conduit. Condulets of the GUA series are convenient for use in horizontal runs, or where there are four or more wires in the conduit.

Furnished with pipe plug.

Cadmium-galvanized is the standard finish.

With Female Hub Top and Bottom

3-Wire 4-Pole	1 1/8	3924	9.50	3760	4.50	3934	5.00

*Has no provision for equipment grounding. All others have equipment ground through separate pole.

These connectors can also be furnished for sound and control circuit service.

R & S Battery Charging Cable Connectors

100 Amperes—250 Volts—2-Wire—Polarized

Nos. 92B and 92C

Nos. 991C and 991B

For charging batteries or connecting cables. Especially designed for industrial electric trucks, provision being made for battery tray mounting. Bakelite interior, cast aluminum housing and large self-aligning machined contacts.

Description	CABLE END No.	Each	BATTERY END No.	Each
For Round Cable with Cable Grips	90C	\$4.50	90B	\$4.00
For Flat Cable.....	91C	4.25	91B	3.75
For Round Cable with Spring Clip.	92C	4.50	92B	4.25
For Flat Cable with Side Latches.	991C	4.25	991B	5.00

These connectors can also be supplied with 3rd contacts or metering connection at \$2.00 extra.

R & S Type FS & FD Conduit Box Fittings

No. 3749

No. 3801

No. 3908

No. 3831

Maximum outlets, 1 inch, 4-way. Specify size and location when ordering.

Cast iron boxes have aluminized finish; cast brass, bright dip. Covers and other exposed parts are finished to match boxes.

218	1.50	For 1 1/4-Inch Tapped Hole.....	3/4

Can also be supplied in larger sizes. Prices upon application.

R & S Watertight Air Break Cast Circuit Breakers

Frame ratings are from 15 to 50 amperes, 50 to 100 amperes, 50 to 225 amperes and 225 to 600 amperes either 230 volts a.c.—125/250 volts d.c. or 600 volts a.c.—250 volts d.c. The maximum rating of each frame size indicates the maximum continuous current-carrying capacity of that frame. On all frames except the 15 to 50-ampere size, the thermal and magnetic trip is built into a separate unit, so that the breaker rating can be changed by changing the trip unit. Within the capacity limitations of the various frames, trip units are available in ratings corresponding to standard wire and cable sizes. The breaker unit comes complete with the trip unit assembled to it and requires no adjusting on installation.

Made of cast iron. Aluminized finish.

Furnished complete with or without circuit breaker.

Enclosures are provided with heavy pads top and bottom for conduit tapping. Specify size and location of outlets when ordering. Catalog numbers determine size of frame, ampere rating and voltage, and should also be given complete when ordering.

*Customer's breakers will be assembled in the above housings at an additional charge. Prices furnished upon request.

R & S Angle Type Receptacles, Plugs and Cable Connectors

Type A, Weathertight

Type B, Watertight

Designed for use with 2, 3, and 4-wire systems. Provided for equipment grounding in either of two ways: by means of a conducting path through the housings, using the ground connection of the conduit system; or by means of an additional pole which connects the casings of the portable equipment directly to the ground.

On the weathertight type the box and receptacle housing is heavy aluminized iron casting with gaskets and aluminized cast iron hinged spring flap cover. Spring is concealed and packed with grease to insure easy action of the cover. The watertight type housing is provided with a screw thread to take gasketed aluminized brass cap and plug collar.

Plug housing is silicon aluminum alloy casting. Weather-tight type has concealed, adjustable cable grip. Watertight type has stuffing gland cable outlet. External rib provides visual indication for plug insertion.

Interiors are fitted with accurately machined contact members which have provision for direct wire connections. Interiors can only be assembled in plug and receptacle housings in polarized positions.

Weather-tight connectors have concealed cable grip in each end. Watertight connectors have stuffing glands in each end and a gasketed screw type locking collar.

*Have no provision for equipment grounding. All others have equipment ground through separate pole.

Plugs (male ends) listed will also fit wall receptacles.

These connectors can also be furnished in 600 volts.

R & S Ever-Lok Receptacles, Plugs, and Cord Connectors

Ever-Lok is available in cord connector form and for use with its own type of receptacle.

For existing conduit systems, easily adapted to standard conduit boxes. For new installations, receptacles may be supplied with boxes, tapped to specification.

The large (grounded) contact A will not fit into any but the one large hole A. The three smaller contacts fit into their corresponding holes. The staggered lugs B and C in the plug shell, will fit only into the corresponding staggered grooves in the shell of the connector or receptacle. (B to B only and C to C only.)

The interiors of molded bakelite are grooved to fit upset lugs on the shells so that improper assembly or alignment of the interior is impossible. Shell caps are fiber lined to prevent stray wire ends touching the shell.

Terminals of the 4-pole devices are marked X, Y, Z, and G (ground). Terminals of 3-pole devices are marked 1, 2, and G. These markings maintain identity of polarity throughout.

The outer shell of the plug floats on the inner shell and turns within the limits allowed by two screws in two slots on opposite sides of the shell. As the plug is inserted in a connector or receptacle, the lugs on outer shell ride diagonally down into the funnel-shaped grooves until they strike the bottom. The outer shell automatically turns on its axis by means of a spring in its base, and the lugs snap into position.

This double locking arrangement (on opposite sides of the shell) provides balanced support and prevents poor alignment. Eliminates strains from the electrical contacts.

To unlock, it is necessary to grasp the plug firmly and give it a short reverse twist to bring the lugs back to where they will pull out of the grooves. Outer shoulders are knurled to facilitate this action, but the lock is positive and the plug cannot be withdrawn without first giving it this reverse twist.

Casings are positively grounded by double phosphor bronze springs. Equipment grounding is secured by a separate set of contacts which make first and break last (as required by Underwriters' Laboratories).

A thick sponge-rubber washer is provided in each cap, to be forced over the cord. This serves as a bushing and also as a shield to exclude metal particles, dust, etc., from interiors of plugs and connectors. Receptacle covers are sealed to the boxes by gaskets and have hinged flap doors which are gasket-lined and equipped with strong springs to keep them closed and dust-tight.

Plugs and connectors are entirely steel-clad, cadmium finish. Provided with adjustable cord grips to prevent strains. Plugs have encased locking spring in machine assembled non-separable housings.

Contacts are machined, self-wiping, and self-aligning.

Contacts and terminals are permanently assembled in bakelite body permitting removal of interior only as a unit for wiring. All connections are entirely enclosed, thus obviating accidental short circuits and tampering by inexperienced persons.

Round receptacle covers have four knockout screw holes to permit proper attachment on either horizontally or vertically installed conduit fittings. Cadmium plated screws are provided with each receptacle cover.

Rectangular covers are furnished with retained pointed mounting screws to prevent loss, and assist in installation.

Can also be furnished in reverse service.

R & S Ever-Lok Flush Receptacles

2, 3, and 4-Pole—Polarized

For Type FS and Similar Conduit Fittings

No. 8004

No. 8138

R&S Vaportight and Dust-Tight Fixtures Screw Globe

Designed for use in all place where dampness, dust, or corrosive vapors exist.

So constructed that, should the protecting globe accidentally be broken, the fixture body will remain air-tight preventing vapors from entering the conduit line.

Fixtures are made in cast iron (aluminized), cast brass and cast aluminum alloy.

Iron fixture bodies; aluminized finish.

All globes are made of best American natural colored flint glass and guaranteed true to size. Seating surfaces are ground true and smooth.

High grade cloth inserted rubber gaskets are furnished as standard equipment. Gaskets of other material will be supplied on request.

Maximum size of conduit, 3/4 inch. When ordering, specify outlets required.

Type SF R&S Pendent Vaportight Fixtures With RLM Steel Reflector and Screw Globe

Has 6-inch cast guard for 75-watt fixture; round wire brass guard for all 100 to 300-watt fixtures. Cast guards can be furnished with set screw lock if specified, at no additional charge.

Outlets, 1/2 or 3/4 inch. Specify size when ordering.

R & S Swimming Pool and Fountain Lighting Fixtures

Russell & Stoll Company, pioneers in the field of watertight and marine lighting, offer a complete line of underwater lighting units, perfect in every detail and suitable for every type of pool construction.

These fixtures are constructed of high grade valve bronze; equipped with polished chromium copper reflectors, clear spreadlight lens producing a wide horizontal beam of light without glare.

By the addition of color filters many attractive tints may be produced.

The illustration depicts a typical swimming pool wall construction with a No. 2362 bronze adjustable underwater floodlight in position in a cast bronze housing No. 2362H and a bronze cable box No. 2363 with cover removed and in which is coiled all surplus cable.

This floodlight pivots in the bronze housing allowing the fixture to be adjusted to the most efficient lighting angle; water cooled, because it is entirely surrounded by water when installed. By lifting floodlight out of pivot bearings in the bronze housing, fixture can be raised to surface and relamped in a few minutes without draining pool or disturbing current carrying line.

This unit will accommodate a Type G-30 floodlight lamp, 250 or 400 watts. Prices and detailed information of this fixture and various other style units covered in Bulletin 65 will be gladly forwarded upon application.

Bryant Titan Brass Socket Caps and Bodies

Listed by Underwriters' Laboratories, Inc.

No. TA-4315 Showing Method of Fastening Shell to Cap

The connection between the socket body and cap is effected by means of a threaded ring which engages with a corresponding thread in the shell.

The threaded ring is packed with the socket body.

Each cap will fit all bodies.

Packed 25 in a carton.

Hubbell Lumiline Lampholders

The unique applications of Lumiline Lamps by means of Lumiline Receptacles and Caps are now many and varied, especially in the indirect cove, or trough lighting fields.

Ideally suited for built-in or built-on illumination where space limitation is a factor; showcases, mirrors, scales, signs, display windows, railroad cars, buses; and in all lighting where a tubular source of light is required.

Hubbell Fluorescent Lamp Starters and Sockets

660 Watts, 250 Volts

No. FS-2 Starter No. FS-4 Starter

No. 2946

No. 2947

No. 2948

A new development makes the essential starting switch and condenser of a fluorescent lamp auxiliary replaceable. Heretofore, the switch and condenser, assembled with a choke coil, comprised a complete auxiliary unit.

Now, the switch and condenser are mounted in a small aluminum container fitted with contacts. This unit, designated as a starter, fits into the socket of the lampholders. When mounted, the starter projects through a reflector or channel surface immediately below the lamp.

The starter is inserted and locked in contact by a slight turn in a clockwise direction. Reversing the procedure removes the starter.

Auxiliaries are required.

Hubbell Fluorescent Lampholders

Nos. 2940 and 2936 fluorescent lampholders are designed for 1 and 1½-inch fluorescent lamps, and may be used for either flush or surface mounting. Wiring is protected with insulation cover plate. Lampholders are held to reflector or wiring channel with one screw and nut. Wiring grooves take conductors up to size 14, solid wire. Casing of lampholder is of molded black or white bakelite.

No. 2938 fluorescent lampholder is designed for use exclusively with a 1-inch fluorescent lamp. Particularly suitable for narrow channel wiring work, show case lighting and side-wall fixtures. Built for flush mounting, and wiring is protected with sheet insulation cover plate. One screw mounting provides easy and rapid assembly. Available in black or white bakelite.

H & H Lumiline Lampholders

660 Watts, 250 Volts

These lampholders, designed to fit Lumiline Lamps, are supplied in black or white bakelite, either front or back connected styles. Single Lumiline Sockets fit one lamp and the Twin style supports two lamps in line.

There are two parts to each socket, the receptacle and the cap. The cap snaps over the end of the Lumiline Lamp and the circular contact goes into the receptacle with the contact screws facing inwards so that the flat surface is at the end of the lamp. Another lamp can then be installed very closely with only a small space between.

H & H Fluorescent Lampholders, Starters and Combinations

The starter switch and condenser are mounted in a small aluminum container fitted with contacts. This development makes the essential starting switch and condenser of a fluorescent lamp auxiliary easily replaceable.

The starter unit, No. FS-2, FS-4 fits into the combination starter socket and lampholder. When mounted, the starter projects through the reflector or channel surface immediately below the lamp.

The starter unit is easily inserted and locked in contact by a short turn in a clockwise direction. If replacements are necessary reversing the process removes the starter.

A reactor is required when installed.

Hubbellock Devices

For High-Cycle Portable Equipment

These rugged devices break the circuit and seal it in a split second; the safest and most practical means of applying electrical current to industrial use.

The rugged contacts of the cap are machined from heavy brass stock and molded into special, impact-resisting bakelite supporting posts which absolutely prevents shifting out of alignment or bending or twisting, no matter how rough the usage. Positive polarity and ground connection is thus assured at all times under all conditions. The lock is positive with nothing to jam out-of-order and therefore allows no accidental breaking of current with consequent loss of production.

3-Wire Connectors

With Adjustable Cord Grip

10 Amperes, 250 Volts D.C.; 460 Volts A.C.
20 Amperes, 125 Volts A.C. or D.C.

No. 23002

No. 23005

Cadmium is standard finish.

If desired with ground shunt from contact to cover or casing, suffix letter G to number.

Hubbell 10-Ampere Twist-Lock Devices

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

National Electric Code rules advise installation of polarized and grounded devices to protect the users of portable motor driven tools and equipment.

Positive protection against both electrical hazard and disconnection delays is provided by Twist-Lock Polarized Devices. Twist-Lock Devices never part in the middle of a job, no matter how hard the cord is yanked. A lock-fast connection is made by a twist of the cap.

All 3 and 4-wire Twist-Lock Devices are polarized by blades designed to engage correspondingly shaped slots in receptacles or connector bodies. Grounding blade is longer than others so as to make contact first and break last.

No. 7794

When not in use, the metal cap threads over the receptacle opening. When connected, the regular plug cap may be protected from the weather by the use of metal cover No. 7793. A rubber mat fitting under the plate completes the weatherproofing.

Exposed metal parts are cadmium plated brass to resist rust and corrosion.

**Hubbell 50-Ampere 3-Wire Power Outlets
With Solderless Terminals**

50 Amperes, 250 Volts

Designed to be mounted through a 3 1/8-inch hole. Receptacle body is of black bakelite. Regularly supplied with grounding slots through plate to accommodate caps with independent ground clips as on Nos. 7923, 7977, 7952, 9304 and 9305. Also takes all standard 50-ampere, 250-volt 3-wire caps without grounding clips. Receptacle has angle cable grip clamp which will accommodate BX, or other metal sheathed cable, or non-metallic cable measuring .750-inch to 1.187 inches. Diameter of flange is 4 5/8 inches. Maximum depth from underside of flange to bottom of cord clamp, with largest cable in place is 3 1/2 inches. Regularly supplied with three nickel plated wood screws. Specify No. 9325-G if receptacle is desired with one contact grounded to metal casing.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.

H & H Floor Outlets

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7797

Made to plug in lamps or appliances without running long cords from the wall.

Made in two styles: bevel edge plate, .060-inch brass, and square edge solid brass plate where it is desired to make an absolutely flush job. Two threaded solid brass covers are supplied, one for completely closing the outlet when not in use; the other with cord hole and bushing to shield the plug cap when connected.

Receptacle is recessed so plug is sunk flush with the floor. Not waterproof, designed for hardwood floors or dry plates.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.

H & H Tumbler Switches and Warning Lights

Jewel Flush with Plate

Single Pole and 3-Way, 10 Amperes, 125 Volts;
5 Amperes, 250 Volts

Double Pole, 10 Amperes, 250 Volts

No. 7759

No. 7739

Warning light shows at a glance when lights are left on in cellars, attics, closets, etc. The jewel is flush with the plate, thus eliminating lamp breakage. Intermediate base lamp is used.

Brass plates are .060-inch.

H & H Clock Hanger Outlets

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7707

A double service device providing mechanical support for the clock and electrical connection. Receptacle is recessed so the plug cap goes flush with the plate. This allows the clock to hang flat over the outlet, entirely covering it, with all wiring concealed. May be installed in a mantel for shelf clocks.

Standard plate finish is brush brass.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.	Pkg. Lb.
7707	\$151.00	2-Wire, with .040" Plate	2	10	5

*Fits Nos. 7440 and 7077 caps.

H & H Fan Hanger Outlets

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7750

This outlet provides electrical connection and mechanical support for fans. It is easy to install and fits a standard 4-inch square box. Supports a weight many times greater than a fan. Two types are supplied: clamp type for the average job where the outlet fastens to the box cover, and the stud type where hickey fastens to the box stud.

Brush brass .060-inch plate standard on both types.

FA Hanger Outlets

Combination of support and electrical connection in one unit, for hanger outlet service. Originally designed for fan hanger service, the outlet is also used with electric heaters, art pictures, show window spot lights, radio, and public address systems.

Hanger outlet is a permanent feature of the electrical system, built into the structure of the building at the same time as the rest of the equipment. Provides a safe, permanent and efficient outlet and eliminates unsightly and dangerous temporary means of support such as wall brackets, standards, shelves, and other makeshift arrangements.

Listed and approved by Underwriters' Laboratories.

Correct installation is to center outlet 7 1/2 feet from floor for 9 and 12-inch fans; 9 1/2 feet for 16-inch fans.

Packed 20 in a standard package.

Security Type

Consists of 4-inch square by 1 1/2-inch deep outlet box made of No. 14 gage galvanized steel and 1/2-inch deep raised box cover. Cover has special plaster keys to securely hold the plaster and prevent it from cracking around the outlet.

Box provides ample wiring space to serve as a junction box when two or more outlets are connected to the same circuit. Knockouts are provided for 1/2-inch and 3/4-inch conduit.

Heavy stamped steel hanger bracket is adjustably fastened to back of box. Bracket carries weight of fan and provides for plumbing and centering the face plate. Heavy brass adjusting tube threaded into the mounting bracket allows for variation in thickness of plaster.

Fan or other appliance is hung upon a 1/4-inch steel hanger bolt threaded into the brass tube and finished with a washer and screwdriver type cap-nut.

Face plate, 2 1/2 x 4 1/4 inches, is made of .060 brass with brushed finish. Special finishes available at extra cost.

T-slot type, brown bakelite receptacle is riveted to a steel sub-plate. This method of mounting permits the installation to be completed, except for mounting of the face plate, before the wall surface is finished, thus avoids marring the face plate. Approximate weight, 40 pounds.

Complete with Box and Cover..... each \$2.75

Fixture Stud Type

Similar in design to the Security Type, but the box, with cover and 3/8-inch fixture stud, must be furnished by the contractor. Any 4-inch square by 1 1/2-inch deep standardized outlet with 3/8-inch fixture stud securely fastened to it and 1/2-inch deep single gang cover can be used.

The ordinary type of switch box cannot be used.

Stamped steel adjustable hanger bracket has a cleared hole to fit the fixture stud. Two 3/8-inch lock nuts are included for fastening.

Approximate weight, 12 pounds.
Each..... \$2.44

Type FHSB

Same type of box and cover specified above must be supplied by the customer for Type FHSB.

Formed steel supporting frame is fastened to box cover, and fan or other appliance is attached to it. Receptacle is fastened directly to brass face plate.

This type carries the weight of appliance from box cover, not from back of box.

Approximate weight, 12 pounds.
Each..... \$2.44

Safeway Rubber Duplex Receptacles

Inner-Lock

15-Amperes, 125-Volts—10-Amperes, 250-Volts

Made of a high-grade rubber casing, in which are enclosed heavy duty inner-lock brass and bronze contacts. Body is non-breakable and the contacts are designed to hold plug caps in place, even up to a direct pull of 15 pounds. Has two binding screws in each side terminal.

Packed 5 in a carton, 25 in a standard package.

P & S Surfex Wiring Devices

A simple, safe, surface wiring device that is easily installed—just mount the device, run the wire, and connect to terminals. It makes the work of circuit-testing easier and simpler because the user needs only to disconnect the cable from the terminals, and properly connect it up again. No longer is it necessary to tear out expensive taping, soldering and splicing to locate the trouble on a dead line. Surfex saves a foot of cable on every

outlet, in addition to boxes, connectors, solder, rubber tape and friction tape.

The Surfex Wiring Device has the following features: rigid cable clamp fastening to metal backplate—suitable for armored or non-metallic sheathed cable; 1 1/4-inch width of all devices permits mounting on 2x4-inch studs; large wiring chambers for cross overs; No. 8 wood screws for mounting; easy wiring terminals—no wire loops necessary; bus bar for feed through circuits; and metal reinforcing back plate which carries ground through device when armored cable is required. Made of porcelain; gives full protection against shock, corrosion and short circuit. Brown finish.

No. 4529 P&S Single Weatherproof Outlets

Parallel Slots

15 Amperes, 125 Volts—10 Amperes, 250 Volts

No. 4529

May be installed in a single gang switch box or flat face FS fitting. Sealed with cover and plate gaskets for complete protection. The plate is .060-inch brass with baked-on aluminum finish.

Lock Switch

This device incorporates the regular P&S Despard 1320 outlet which has constant tension contacts, gripping both sides of the plug blades. When outlet is in use attachment plug cap may be covered with No. 4528 protective cap.

Due to the fact that this device incorporates the standard No. 1320 P&S Despard outlet, it can be readily converted into a weatherproof lock switch by removing outlet and substituting a P&S Despard switch of the 1311-L type (see illustration above at right).

Carton, 2. Standard package, 10; weight, 7 pounds.

P & S Despard Specification Type Flush Tumbler Switches

One, two or three P & S Despard Switches may be installed in a single gang box. They may be wired with either common or separate feed. When installing these switches, it is necessary to use mounting straps. Switches will satisfactorily handle Type C lamp loads and carry Underwriters' T Rating as indicated below.

Made of bakelite; front and back are enclosed, making switch thoroughly dust-proof. The handle and strap are insulated from the mechanism. Switching mechanism has a four-point break to insure against breakdown from overloads. Contact member is designed to snuff all arcs.

These switches conform to the most rigid government and architectural specifications. Each switch is tested under full load current in the factory before shipment.

P & S Despard Convenience Outlets
Outlet Rating: 15 Amperes, 125 Volts;
10 Amperes, 250 Volts
Single Convenience Outlets

For assembly in combination with switches, radio outlets, or any other P & S Despard devices. These outlets have bakelite bodies, and double, wide contact surfaces with spring tension sufficiently removed from heat of arc to prevent withdrawal of temper, which is the cause of loose contacts.

Where one convenience outlet is to be switch-controlled, a combination of two No. 1320 or 1420 outlets having separate feed and return may be installed. Where common return is desired, the two negative terminals may be bussed together.

Bakelite Plates for P & S Despard Devices

These plates have thick, strong sections, and the wiring device strap furnished with each plate has been designed to form a metal backing or reinforcement for the plate. These two features, combined with the fact that the plate fastening screws are located at the extreme ends near the bevel, make it impossible for plates to warp or crack.

Brown bakelite plates are furnished as standard with brown plated screws. Ivory plates are furnished as standard with metal screws in ivory enamel finish.

New Process Metal Plates for P & S Despard Devices

Brown-X and Ivory-X. These plates have a multiple coat of baked-on, insulating enamel. Closely resembling bakelite, they have all of the sturdiness of metal plates. They will not warp or crack, and their surface is satisfactory for painting.

Chrome-X. These plates are made of .040-inch stainless steel. Their soft, semi-polished, silver-like finish is right in the metal and will last indefinitely.

*These plates are regularly supplied with brown bakelite insulating adapters. When ivory adapters are desired, specify regular number with suffix "I."

Wall plates listed above are supplied complete with the necessary straps for mounting P & S Despard devices.

NOTE: The installation of P & S Despard Convenience Outlets in non-insulated metal plates is not recommended unless the plates are equipped with bakelite insulating adapters.

Bryant Flush Tumbler Switches

Shallow Type—With Porcelain Cups

Dimensions of porcelain cups: Length, $2\frac{3}{16}$ inches; width, Nos. 3951 and 3951-L, $1\frac{1}{2}$ inches, others $1\frac{11}{16}$ inches; depth, $1\frac{1}{32}$ inches.

Supporting screw spacing, $3\frac{3}{32}$ inches.

Screws for mounting are furnished.

One key is furnished with each lock switch.

When ordering combination plates, specify S sections to accommodate these switches.

These switches, on special order, can be furnished with black handles (lock switches with black bosses) without extra charge.

No. 3951

Bryant Enclosed Flush Tumbler Switches

**For Type C Lamp Loads
Black Composition Cups**

These switches will give uniform performance, high minimum break-down, and exceptionally long life.

Dimensions of cups: Length, $2\frac{1}{16}$ inches; depth, $1\frac{3}{8}$ inches; width, Nos. 4961 and 4961-L, $1\frac{13}{32}$ inches, others, $1\frac{11}{16}$ inches.

Supporting screw spacing, $3\frac{3}{32}$ inches.

When ordering combination plates, specify S section. Single plates OS11, OS61, HS41, and HS31.

On special order, these switches can be furnished with black handles (lock switches with black bosses) without extra charge.

Diamond H Slow Break Toggle Switches

20 Amperes, 250 Volts,—1 Hp., 250 Volts—For A.C. Only

No. 980A3

This toggle switch is for use on machines, heavy duty appliances, equipment using fractional hp. motors, and special lighting circuits; for a.c. only. It uses the principle of slow breaking heavy silver contacts. The slow-break principle will enable the switch to give extremely long, trouble-free life under the most severe operating conditions far beyond ordinary requirements.

Made in two or three position, for flush mounting in standard boxes, and for interior or exterior mounting as part of machine equipment.

Switch is 2 1/2 inches long, 1 1/4 inches wide, and 1 1/2 inches deep. Mounting screws are for standard spacing. Plate slot for toggle is 1 x 1/2 inch.

The case and toggle are made of molded Bakelite. Surface type metal boxes may be supplied for industrial applications.

Bryant Expulsion Type Switches
For Inductive Loads and Electric Railway Circuits

No. 2773

Designed with barriers between parts of opposite polarity which are effective in limiting the arc formed when the circuit is broken.

The window in the cover of the indicating switch, is located so that, when switch is mounted on a wall above eye level, the indications can be read right side up under the handle.

Slotted bases furnished on specifications.

Packed 2 in a carton, 50 in a standard package.

Bryant Rotary Switch Handles

No. 2779

No. 2780

No. 2781

All switch handles, lock attachments, and switch center posts, except heater and reversible switches, are threaded 8x32 except No. 18150. The handles differ in external shape and size for purposes of leverage appropriate to the size of the switch. When switches are ordered without these handles, deduct from list \$2.00 per 100.

In an emergency, any available handle can be attached to any switch. The list below shows in a general way what handles are suitable for various sizes of switches.

No. 23 McGill Fixture Switches

3 Amperes, 125 Volts—1 Ampere, 250 Volts

A small, compact, single pole, off and on switch which fits wall thickness up to 5/16 inch. Approved and listed by Underwriters. Has 9-inch wire leads, stripped 3/4 inch. Furnished with 7-foot cord assembly with bell at end. Size, 5/8x7/8x7/8 inch.

Carton, 10; standard package, 100.

No. 23, Weight of Std. Pkg., 10 Pounds.....per 100 \$20.00

Levolier Conduit Box and Fixture Switches

6 Amperes, 125 Volts—3 Amperes, 250 Volts

No. 41

No. 39

Nos. 39 and 59 are the same as Nos. 41 and 61 respectively, with the addition of a link. This adapts them for use in any chain fixture—simply remove the top link immediately below canopy ring in the chain, and substitute either No. 39 or 59 Switch. Eliminates the expense of rewiring.

Equipped with 7-foot cord, with bell at end, or plain lever control.

Standard finishes are brush brass, Jap bronze and nickel flash. Other finishes supplied on special order.

Levolier Multiple Circuit Switches

4 and 6 Amperes, 125 Volts

No. 275

These switches carry a 6-ampere load, 125 volts, d.c. without undue arcing, pitting or heating. They are adaptable to a wide scope and variety of circuits, and can be furnished with standard plain lever, chain or cord pull control.

No. 400

No. 400 3-speed switch is designed particularly for ventilating fans and fractional hp. motors. Enclosed in fan housing—caps or casings are not necessary. In combination fan and lighting units, No. 400 controls the fan, No. 41 the lights. When used together, No. 41 is furnished with the same type lever as on No. 400.

No. 475

Nos. 275 and 475 are double pole, double throw switches with complete line cut-off. Load leads may be winding of a motor, in which case by interchanging the load leads it is possible to use the switch as a pole changer. Order of rotation:

first pull, load 1; second pull, off; third pull, load 2; and fourth pull, off. Subsequent pulls repetition of order.

Levolier Canopy Pull Switches

3 Amperes, 125 Volts

No. 201

Equipped with 7-foot cord with bell at end.

Standard finishes are brush brass, Jap bronze and nickel flash. Other finishes supplied on special order.

2-Circuit. Operates the No. PS-35 three-light lamp.

3-Circuit. Designed to control lights from two different points. May be used as a reversing switch on fractional hp. motors.

Levolier Canopy Pull Switches

10 Amperes, T Rating, 125 Volts—5 Amperes, 250 Volts

No. 1010

A single-pole switch designed for safe control of modern high watt and high intensity lamps.

No. 1039 is the same as No. 1010 with the addition of a link for fitting into chain fixture without rewiring.

Equipped with 7-foot cord, with bell at end, or plain lever control. Standard finishes are brush brass, Jap bronze and nickel.

No. 85 Levolier Extension Arms

Constant pulling of lamp cords that rub against reflectors, shades and bowls can be eliminated by slipping an extension arm over each Levolier Switch Lever, inserting the cord through the end hole of loop, and knotting to hold. Arm is 1/2 inch thick, tubular formed for rigidity.

No. 85-W can be extended to meet changing conditions for use with 18 and 22-inch and larger basin fixtures.

Standard or special finishes to match Levolier Switches. Carton, 10; standard package, 100.

*IN MULTIPLE GANG AND COMBINATION PLATES. For each additional gang over one in the finishes listed above, add \$15 list per 100.

SPECIAL FINISHES ON PLATES FOR FAN HANGERS. Take a 10 per cent advance over the cost of special finishes for regular plates.

QUANTITY ORDERS, PLATES. The extra charge for special finishes on flush plates will be reduced as follows: 100-499 gangs, 10 per cent; 500-999 gangs, 20 per cent; 1000 gangs, 50 per cent.

SPRAY BRASS FINISH. Any brass plate can be supplied in spray brass finish (the symbol for which is P following the number) for \$1.50 list per 100 gangs less than the price of the same plate in brush brass finish.

CHROMIUM PLATING. Polished chromium will be furnished unless dull chromium is specified. Chromium plates are not lacquered.

PERMACHROME FINISH. Competitive grade can be furnished on tumbler switch, and single and duplex convenience outlet plates in .040-inch metal.

PLATES FOR PLATING. Plates which are to be plated by the purchaser should be ordered "for plating." They will be billed at the price of corresponding brush brass plates.

PLATES FOR PAINTING. Plates, which are to be painted by the purchaser should be ordered "for painting." They will

be billed at the price of the corresponding plate in spray brass finish.

HAMMERED PLATES. Solid only, \$56 per 100 gangs.

GOLD PLATING. The extra charge for genuine gold plating will be quoted on application.

BLACK BAKELITE PLATES. Add \$2.00 to list per 100 gangs.

BRIGHT DIPPED LAMP HOLDERS. Deduct \$1.00 list per 100 for complete lampholders.

NICKEL OR GUN METAL FINISHES. On brass shell competitive grade lampholders. Add \$4.00 list per 100 to the brush brass prices. Not subject to Quantity Discounts.

For mogul lampholders in special finishes, add double the prices listed above.

For twin lampholders in special finish, add one and one-half times the prices listed above.

QUANTITY ORDERS, LAMP HOLDERS, ETC. The extra charge for special finishes on lampholders, etc., will be reduced as follows: 250-499 lots, one shipment, one finish, 10 per cent; 500-999 lots, one shipment, one finish, 20 per cent; and 1000 lots or over, one shipment, one finish, 50 per cent.

UNBROKEN CARTONS, of devices in the above table in special finishes, may be assorted with unbroken cartons of the same catalog number in standard finish, to make up standard package quantity.

Bryant Flush Devices and Plates

Standard Spacings and Dimensions

One-Gang Flush Device

- A—Plate screw spacing usually $2\frac{3}{8}$ in.
- B—Supporting screw spacing, $3\frac{1}{2}$ in.
- L—Length of body or cup, not over $2\frac{1}{16}$ in.
- W—Width of body or cup, not over $1\frac{3}{4}$ in.
- D—Depth of body or cup.

One-Gang Flush Plate

- A—Plate screw spacing, usually $2\frac{3}{8}$ in.
- L—Height of plate, $4\frac{1}{2}$ in.
- W—Width of plate, $2\frac{3}{4}$ in.
- T—Thickness of plate, solid, 0.100 in.;
.060 stamped, 0.060 in.;
.040 stamped, 0.040 in.

Five-Gang Flush Plate

One Horizontal Row

- A—Plate screw spacing, usually $2\frac{3}{8}$ in.
- S—Spacing between centers of adjacent gangs always $1\frac{13}{16}$ in.
- L—Height of plate, $4\frac{1}{2}$ in.
- W—Width of plate varies for different number of gangs as follows:

1-Gang..... $2\frac{3}{4}$ in.	5-Gang....10 in.
2-Gang..... $4\frac{1}{16}$ in.	6-Gang.... $11\frac{13}{16}$ in.
3-Gang..... $6\frac{3}{8}$ in.	7-Gang.... $13\frac{5}{8}$ in.
4-Gang..... $8\frac{1}{16}$ in.	8-Gang.... $15\frac{1}{16}$ in.

Three-Gang Tandem Flush Plate

One Vertical Row

- A—Plate screw spacing usually $2\frac{3}{8}$ in.
 - V—Spacing between centers of adjacent tandem devices always $3\frac{5}{8}$ in.
 - W—Width of plate varies according to number of vertical rows.
 - L—Height of plate varies according to number of devices in tandem as follows:
- | |
|-----------------------------------|
| 2-Gang tandem $8\frac{1}{8}$ in. |
| 3-Gang tandem $11\frac{3}{4}$ in. |
| 4-Gang tandem $15\frac{3}{8}$ in. |
| 5-Gang tandem 19 in. |
| 6-Gang tandem $22\frac{5}{8}$ in. |
| 7-Gang tandem $26\frac{1}{4}$ in. |

Plates to Fit FD and FS Condulets, Solid Only

When plates are specified "Condulet dimensions," the extra charge will be \$21.00 list per 100 plates.

Special Spacings and Dimensions, Solid Only

Plates of special dimensions or spacings will be billed at \$9.80 list per 100 square inches in addition to the list price of the corresponding standard solid plate. The standard package quantity will be 10 plates and the carton quantity 2 plates of one style and size.

On quantity orders for identical plates the following list prices per 100 square inches will be added; 100-499 plates, \$8.82, 500-999 plates \$7.84; 1000 and over, \$6.86.

When plates are other than rectangular in shape, the area by which the list price is determined will be the size of the smallest rectangular piece from which the specified plate can be cut.

No plates of special dimensions will be sold for less than the list price of a standard plate of the same kind for a similar purpose.

Plate Symbols

When the simple elements of this system are learned, it will be found very easy to specify Bryant Plates by the Cat. No.

- H means Hemo Plate
- S means S section
- 32 means Bakelite composition
- 2 means 2 gang

- O means plate
- S means S section
- V means V section
- 42 means .040 in. thick
- 2 means 2-gang

- O means plate
- V means V section
- 6 means .060 in. thick
- 1 means 1 gang

- O means plate
- S means S section
- 2 means 2-gang
- 11 means solid
- 1-gang

P after any plate Cat. No. indicates that Perma finish is desired.

Combination Plates

(At Least Two Different Symbols and Not More Than One Horizontal Row)

Up to and including three gangs, combination plates, as described above, will be billed at the sum of the list prices shown on page 44. Above three gangs, add 25% to the sum of the list prices.

Carton, 2 plates. Standard package, 10 plates.

Tandem Plates

(One Symbol Only)

Up to and including three gangs, tandem plates, as described above, will be billed at the sum of the list prices shown on page 44, plus 25% (above three gangs, plus 50%).

Available in solid (.100-inch) metal only.
Carton, 10 gangs. Standard package, 100 gangs.

Tandem-Combination Plates

(Two or More Horizontal Rows; Two or More Different Symbols)

Same additions as for tandem plates.
Available in solid (.100-inch) metal only.
Carton, 2 plates. Standard package, 10 plates.

Bryant Process Plates

No. OV71-BX

No. OF71-CX

No. OSV72-BX

No. OK71-CX

No. OG71-CX

Brown-X and Ivory-X plates have a multiple coating of baked-on, insulating enamel. The finish resembles bakelite and may be painted to match decorations.

Chrome-X plates are made of .040-inch stainless steel. The dull silver-like finish is part of the metal and will last indefinitely.

Approximate weight per standard package of 100, 14 pounds.

Tumbler Switch Plates

Packed 10 gangs in a carton, 100 in a standard package.

Bryant Flush Plates for Tumbler Switches

1-Gang

2-Gang

The standard finish is brush brass which will be furnished when no finish is specified.

Perma finish is a durable colored lacquer that resembles brush brass.

S plates of the same material may be assorted in various finishes, thicknesses and gangs to make up carton and standard package quantities. No other assortment permitted.

When ordering combination plates, specify S section to accommodate switches with handles operating vertically.

By installing No. 746 jewel, any of these plates can be made into pilot light plates.

Brass mounting screws, finished to match, are packed in the carton with each plate.

Solid Brass Plates, One Horizontal Row Symbol S

Cat. No.	Standard Finish		Cat. No.	Perma Finish		No. Gangs	Carton Gangs	Std. Pkg. Gangs	Wt. Lbs. Std. Pkg.

Standard Package Gangs	50

Bryant Flush Plate Sections

Combination plates should be described by using the letters shown with the illustrations of the respective plates, giving the letters in order from left to right, or from top to bottom, as the devices are to be mounted.

The list price of a horizontal combination plate of two or three sections, in brush brass finish when dimensions and spacings are standard and the devices are arranged in one horizontal row, will be the sum of the lists shown. The list

price of a horizontal combination plate of 4 or more sections in combination is the sum of the list prices shown plus 25% of that sum for the combination feature.

For plates with devices mounted tandem or in more than one horizontal row, add 20% to the sum of the list prices for 2 and 3-gang plates; for 4 or more gangs, add 50%.

Packed 2 in a carton, 10 in a standard package.

Use the prices below when ordering combination plates.

Type B Bulls' Eye Plates

For Nos. 427 and 627 lampholder receptacles.

Consists of Type F plate with No. 3850 jewel.

Solid.....each \$.98

Hubbell Combination Brass Plates

Hubbell Standard Combination Plates are made in .100-inch solid brass, also struck up .060 and .040-inch brass. Combination plates with sections for Interchangeable Line made in .060-inch brass only. Standard finish is brush brass. Special finishes are available at an advance in price.

If plates are ordered by letter only and no finish is specified, brush brass will be supplied. A combination plate must be made of 2 or more different letters and not gangs of standard plates. For example: AA is not a combination plate.

*Screw spacing, 2 3/8 inches. Adapter to 3 1/2 inches for box mounting supplied with this section.

†Only supplied in solid brass.

‡Available in .060-inch metal only.

§Combinations embracing two adjacent G, Y, or K sections for Nos. 7250, 7310, 7410 or 7438 receptacles, require an extra blank gang between them to provide space for insertion of caps.

¶Tandem.

Tandem or special size combination plates can only be supplied in solid brass. When arranged in tandem, add 25% to solid price of horizontal plates.

In ordering combination plates, use letters and thickness of metal in the same relative position as required. For example: P C G .060-inch would cover a plate to take one toggle switch, one bull's-eye, and one single convenience outlet—the bull's-eye to be in the middle, to be of .060-inch brass.

Brown bakelite plates are furnished as standard with brown plated screws. Ivory plates are furnished as standard with Ivory enameled screws. Brown bakelite and Ivory head screws may be furnished on order at a slight additional charge.

Any of the above plates can be furnished in black bakelite at an addition of \$2.00 per hundred to the regular brown bakelite prices.

The numbers applying to the black bakelite are the same as for the brown bakelite, except that the second number is 3 instead of 1. For example: No. 91071 brown bakelite plate becomes No. 93071 black bakelite plate.

H & H Metal Plates

SPACINGS.—Plates which are to be attached to flush devices have screw holes spaced 2 3/8 inches on centers. Gangs are spaced 1 3/8 inches on centers horizontally, and 3 3/8 inches on centers vertically.

ROUND CORNERS.—Solid plates can be furnished on special order with round corners at an advance in price. Prices upon application.

SQUARE CORNERS AND SQUARE EDGES.—Solid plates can be furnished without the usual bevel edge but with square corners and square edges at the same price as solid plates, if the dimensions and spacings are standard. Otherwise, special prices apply.

ENGRAVING OR MARKING.—Plates can be engraved in block design lettering of any height. Prices upon application.

HAMMERED BRASS.—Solid plates can be furnished on special order with a genuine hammered finish. Prices upon request.

RETURN OR EXTENSION EDGES.—These plates are used when the wall case or switch box projects from the wall and the devices are not flush. Prices upon application.

COMBINATION PLATES.—A combination plate is made to order from 2 or more of the standard units listed below. If spacings or dimensions differ from standard units, special plate prices apply. The list price of any combination plate is the sum of the list of the standard units making up the combination.

The same symbol letters are used for struck-up or solid plates and the thickness of brass desired must be specified as well as the symbol letters. Three thicknesses of brass are supplied, .100 inch (solid), .060 inch and .040 inch.

Combination plates are made only on special order and are therefore not subject to return for credit.

The standard package is 10 plates of the same combination, carton, 10.

Type C Bull Dog Vacu-Break Safety Switches

Standard Line

Single Throw—Fusible—Non-Interlocking

Quick Make—Quick Break

The highly effective Vacu-Break arc control principle is incorporated in all Bull Dog Vacu-Break Safety Switches, regardless of price. As in other lines of switches, the Master (Type A) construction provides the maximum in service and safety. The Standard (Type C) construction is designed for those installations where an interlock is not required, as motor circuits and certain other industrial uses. The Junior (Type D) construction is intended for general purpose installations, such as service entrance and for motor circuits not exceeding 2 hp.

Cable terminals are solderless Wire Grips.
Standard finish is black enamel.

2-Pole, 230 Volts A.C.—250 Volts D.C.

Bull Dog Rocker Type Safety Switches

30-Ampere—Front Operated
An exceptionally depend-
able switch for use where the
more conventional toggle type
switches have been used be-
fore: oil burners, refrigeration
equipment, printing presses,
drill presses, other small
power driven equipment, etc.
Compact cabinet is 7½ in.
high, 4½ in. wide, and 3½
in. deep, including handle.
Weight, 4 pounds.

*One circuit for bell transformer only.

Square D Sheet Steel Outdoor Meter Boxes

Schedule A

No. 12611. Upper half of box is equipped with wood block for mounting meter. Space in lower half is for mounting any standardized accessible or sealable fuse switch. Cabinet is standard sheet metal with one coat of gray enamel. Hinged cover with sealing device permits access to switch. Price does not include switch.

Height, 22 $\frac{1}{8}$ inches; width, 9 $\frac{1}{2}$ inches; depth, 7 $\frac{1}{4}$ inches.

Cannot be furnished with conduit hub.

No. 12952. Has Square D 60-ampere Fuse-Break in the bottom section which serves as main switch and fuse holder. Price includes pole mounting bracket but does not include conduit hub.

No. 12952

Height, 19 $\frac{1}{4}$ inches; width, 7 $\frac{3}{8}$ inches; depth, 7 $\frac{3}{8}$ inches. Knockouts: one $\frac{3}{4}$ -inch size in back and sides and one ($\frac{1}{2}$, $\frac{3}{4}$, 1-inch) in bottom.

No. 12501-A. Has a two-in two-out test block. Box is made of copper bearing galvanized sheet metal with baked aluminum finish. Price includes 1-inch hub in top.

Height, 16 $\frac{5}{8}$ inches; width, 7 $\frac{3}{8}$ inches; depth, 6 $\frac{1}{8}$ inches. Knockouts: one ($\frac{1}{2}$, $\frac{3}{4}$, 1, 1 $\frac{1}{4}$ -inch) in back; one ($\frac{1}{2}$, $\frac{3}{4}$, 1, 1 $\frac{1}{4}$ -inch) in each side; and one $\frac{1}{2}$ -inch size, one ($\frac{3}{4}$, 1-inch) and one ($\frac{1}{2}$, $\frac{3}{4}$, 1-inch) in bottom.

No. 12501-B. Similar to No. 12501-A, but has a two-strap block for 2-wire single phase service. Price includes 1-inch hub in top.

No. 12541. Similar to No. 12501-A but is cabinet only, without test block. Price includes 1-inch hub in top.

No. SK-2608. Similar to No. 12501-A but has a cross-over test block. Price includes 1-inch hub in top.

No. 12601. Has galvanized sheet metal cabinet with one coat of gray enamel and cross-over type test block, permitting straight connection to meter. Cannot be furnished with conduit hub.

Height, 20 $\frac{7}{8}$ inches; width, 7 $\frac{7}{8}$ inches; depth, 7 $\frac{1}{16}$ inches. Knockouts: one ($\frac{3}{4}$, 1, 1 $\frac{1}{4}$ -inch) in sides, two ($\frac{3}{4}$, 1, 1 $\frac{1}{4}$ -inch) in back, and two ($\frac{3}{4}$, 1, 1 $\frac{1}{4}$ -inch) and one $\frac{1}{2}$ -inch in bottom.

No. 12501-A

Nos. 12621 and SK-2186. Have galvanite cabinets. Cannot be furnished with conduit hubs. No. 12621 test block is of the standard straight-through type. No. SK-2186 is the cabinet without test block. Dimensions and knockouts are the same as those of No. 12601.

Amps.	With Test Block		Without Test Block	
	No.	Each	No.	Each

Square D Indoor Meter Boxes

Schedule A

No. 12392B

Nos. 12452, 12461, 12462, 12463, 12464, 12662 and 12663. Supplied with a blank steel shutter closing the opening of top of box.

No. 12411. Used on Meter-Control Panelboards as a test block and meter trim.

No. 12372. Has plug-in type meter connectors. The box is sealable and contains test links.

No. 12392B. A small compact box with a two-in, two-out test block, and removable test links. Has 1/2, 3/4, 1 and 1 1/4-inch concentric knockouts.

No.	With End-wall, Each	Amperes	Volts	Wire

*Has swing-out interior for easier wiring and side operating handle. All other breakers have front operating handles.

Square D Industrial Nofuze Circuit Breakers

Manually Operable—Quick Make—Quick Break

Schedule D1

Two and 3-Pole Circuit Breakers. All of these breakers have hinged covers. For 2-pole flush mounting breakers, refer to 3-wire solid neutral breakers. For 3-pole flush mounting breakers, refer to 4-wire solid neutral breakers.

Three and 4-Wire Solid Neutral Breakers. All of these breakers have removable covers except 600-ampere frame circuit breakers for surface mounting which have hinged covers.

All surface mounting circuit breakers have dust-resisting sheet steel enclosures.

Square D Cast Iron General Purpose Circuit Breakers

Type ABI—Form L Breakers

125, 125-250 Volts A.C./D.C. and 230 Volts A.C.

Schedule D1

No. 62150X

No. 62120D

These breakers are furnished with explosion resisting and weatherproof and dust-tight enclosures.

Enclosures are supplied with conduit openings. Explosion or weather-resisting enclosures can be furnished with blank reinforced end, if specified on order, at no extra charge.

One Single-Pole

Amps.	Standard Hub or Drilling Size, In.	Explosion-Resisting Form W Enclosures		Weather-proof and Dust-Tight Enclosures

Type A Style A Trumbull Heavy Duty Safety Switches

Single Throw Steel Boxes

Quick Make and Break Interlocking Cover
General Purpose N.E.M.A. Type 1 Enclosure

SN (Solid Neutral) Switches have a neutral strap between two poles. For example: No. 72221, a 2-pole switch, by the addition of this neutral strap becomes No. 72321SN, a 3-pole solid neutral switch. Exception: 3, 4 and 5-pole solid neutral switches 800-ampere and above have regular 3, 4 and 5-pole bases.

SWN (Switching Neutral) Switches can be supplied at same prices as regular. The fuse terminals are omitted from one pole and lug for load connection is placed on the blade hinge post of neutral pole. Add SWN to regular number for this type of switch.

Solderless lugs standard.

Switches available with 1800 and 2400 amperes. Prices upon request.

Machine grey finish.

*Twin lugs per pole.

Type A Trumbull Heavy Duty Safety Switches

Single Throw Steel Boxes

**Quick Make and Break Interlocking Cover
General Purpose N.E.M.A. Type 1 Enclosure**

Style RBA

Solid Neutral Switches having a neutral strap between two poles can be supplied.

Switching Neutral Switches can be supplied at same prices as regular switches. Add SWN to regular number for this type of switch.

Flush mounting type available. Prices upon request.

Solderless lugs standard.

Machine grey finish.

Type C Trumbull Safety Switches

Single Throw Steel Boxes
Quick Make and Quick Break
General Purpose N.E.M.A. Type 1 Enclosure

No Fuse—60 Amp, 230 V.

Solid Neutral

Fusible—60 Amp, 230 V.

SN (Solid Neutral) Switches are furnished with insulated groundable neutral 30-100 amperes inclusive; 200 amperes and above insulated neutral only with lugs for grounding if desired. Lug on box for conduit ground wire.

SWN (Switching Neutral) Switches have the fuse terminals omitted from the neutral pole and lug for load connection is placed on the blade hinge post of neutral pole. Solderless lugs standard. Machine grey finish.

*Has removable insulated shield over wiring and connections.

†Can be rated 125-250 volts, if required.

‡Base mounted on saddle, entire unit easily removed.

§Switching Neutral can be furnished at 3-pole price, if desired. Add SWN to number for this type of switch.

SN (Solid Neutral) switches are furnished with insulated groundable neutral 30-100 inclusive, 200 amperes and above; insulated neutral only with lug for grounding.

*One heater required for each starter, either single or double-pole. In ordering heaters only, or starters with heaters, select the heater rated nearest to the ampere rating indicated on the motor nameplate.

Complete installation instructions furnished with each heater.

No. 1199 Trumbull Flush Covers

For starter unit only.

Fits standard wall box.

No. 1199.....each \$.25

Type RB Trumbull Tumbler Motor Control Manual Starters

Steel Box

Without Overload Protection
Across-the-Line Type

Particularly adapted for use with small motor-driven machines, and automatic apparatus, such as oil burners, refrigerators, etc., either as control or as a positive disconnect.

Also used on lighting circuits and Type C Lamps.

Nos. 3228 and 3328 fit into any standard deep wall box. Plate size, 3 1/8 inches wide x 4 1/16 inches high.

Plate size of No. 3361, 5 5/8 inches wide x 7 5/8 inches high.

Baked aluminum finish.

2-Pole

30 Amperes, 250 Volts; 5 Amperes, 600 Volts
2 Hp., 250 Volts; 1 Hp., 600 Volts, D.C. 2 Hp., 600 Volts A.C.

KNOCKOUTS.—one 1/2x3/4-inch in each end, and two 1/2-inch in rear and sides.

*For type FS shallow cast fittings. (Appleton, Crouse-Hinds, Pyle-National, V. V. Fittings).

†May be used with either flush or surface Trumbull Boxes.

**H & H Type NF Line Starting Switches
Surface Type—For Small Motors**

Quick Make and Quick Break
No. 6808: Double Pole, Single Phase, 2 Hp. 115-600 Volts
30 Amperes, 250 Volts; 20 Amperes, 600 Volts
No. 7808: Three Pole, Three Phase, 2 Hp. 230, 460, 575 Volts A.C.;
30 Amperes, 250 Volts; 20 Amperes, 600 Volts
Listed as Standard by Underwriters' Laboratories, Inc.

This tumbler switch gives positive control for motors and is especially suitable for oil burners, refrigerators, motor driven machinery and lighting loads.

No fuses or overload protection is provided for. Box is made of pressed metal. Standard finish, cadmium.

This switch passed the stalled rotor test which is six times the normal full motor load.

Forms KA and KAZ Sangamo Time-Switches
Synchronous Motor—Silver Contacts

Form KA

Form KAZ

Form KA. Six levers are provided for a maximum of three daily on and off operations. Accurate timing is obtained by turning the minute hand reset staff on the 24-hour dial. If desired, the time-switch can be manually operated without affecting subsequent operations.

Form KAZ. This Astronomic Dial Time-Switch functions to close the circuit at sunset and open it at sunrise. Off operation may be set at any time between 9:30 P.M. and 2:15 A.M.

Width, 4½ inches; height, 9¼ inches; depth, 3¾ inches. Four ¼-inch pryouts in back, bottom and both sides.

Underwriters' Laboratories E-10220. Ship. weight, 6½ lb.

Form VSW Sangamo Time-Switches
Synchronous Motor—With Carryover

Synchronous timing is combined with reserve spring clock operation, providing continuous operation during current interruptions up to ten hours. This entirely automatic carryover eliminates the necessity of resetting the dial after current interruptions; insures accurate timing under all conditions.

Width, 4½ inches; height, 9¼ inches; depth, 3¾ inches. Four ¼-inch pryouts in back, bottom and both sides. Underwriters' Laboratories E-10220.

Ship. weight, 6½ pounds.

Sangamo Astronomic Dials

Efficient control of window lights, bill-boards, and street lighting can be best accomplished by use of a Sangamo Time-Switch equipped with an astronomic dial. This allows on and off operations to accurately follow sunset and sunrise time.

Add..... \$12.50

Sangamo Outdoor Cases

For outdoor installations, a heavy cast iron, cadmium plated, weatherproof case finished with aluminum paint can be furnished. Ideal for outdoor sign boards. For Forms KA, KAZ, VSW, VSWZ and VW.

With Window..... add \$11.00

Without Window..... add 10.00

G-E Automatic Time Switches and Timing Devices

Telechron Motor Driven

G-E automatic time switches are operated by the well-known telechron synchronous motor, and do not require winding, regulating, or other attention.

While the types listed include a wide range of ratings and meet many requirements, switches of other ratings and types can be furnished, usually from stock.

The following table may be of assistance in selecting the proper type of switch for the desired operation.

Operation Related to Hour of Day (Outdoor and Indoor Installation).....	Use Type
Repeating Operation Cycle, Not Related to Hour of Day (Indoor Installation).....	T-44
Process Timing and Control, Readily Adjusted Switch (Indoor Installation).....	TSA-14
Counting Units of Time (Machine Operation Time)	TSA-10 KT

Type T-44 for Indoor or Outdoor Installation

For Use in Temperature Ranges of 0°F. to 110°F.

60 Cycles—Contacts 35 Amperes—230 Volts, A.C.

The Type T-44 time switch employs the well-known telechron synchronous motor, and is equipped with removable and adjustable riders to provide for convenience of adjustment. Can be furnished with the skip-a-day device, omitting device at \$3.00 extra.

Switches are equipped with Type B-8, 2-watt motor. Can be furnished equipped with 6-watt motors for operation in temperature ranges of -20°F. to +110°F, when specified at no increase in price.

Dimensions, 7½x5½x4¼ inches.

Approximate shipping weight, 6 pounds.

Motor Volts	Pole	SWITCH Pole Throw	*Plain Dial		†Astronomic Dial	
			No.	Each	No.	Each
115	1	1	93x932	\$20.00	93x968	\$32.50

230	2	‡2	93x951	25.00	93x987	37.50

Same prices for 50 or 25-cycle ratings.

*One set of riders mounted dial; one additional set supplied in sealed envelope inside switch case. All over two sets per switch, 20 cents extra per set.

†When ordering, specify city or town in which to be used. Above prices are for standard astronomic schedules (civil twilight) within latitudes of 30 to 50° in Northern Hemisphere.

‡In double-throw forms, circuit No. 2 may close before the arc in No. 1 is wholly out, and vice versa.

G-E Automatic Time Switches and Timing Devices

Telechron Motor Driven
Continued

Type TSA-14 for Control of Repeating Schedules
60 Cycles—Contacts Rated 10 Amperes, A.C.

Type TSA-14 is designed to control repeating cycles of operation of electric circuits without respect to the time of day. The "on" time may be varied between 1 and 99 per cent of the total time cycle.

Die-cast base is equipped with a pipe nipple that is suitable for mounting in a knockout of any convenient junction box or switch box.

Timing is obtained by a telechron synchronous motor, therefore no winding or regulating is required.

Dimensions, 5-inch diameter by 3½-inch depth.
Approximate shipping weight, 4 pounds.

Total Cycle: 10 or 15 Seconds			Total Cycle: 5, 7, 10, or 15 Minutes		
Conduit Mounting Nipple	Volts	Each	Conduit Mounting Nipple	Volts	Each

Top	230	17.50	Top	230	14.50
Bottom	230	17.50	Bottom	230	14.50

When ordering specify total ("on" plus "off") time cycle.
Same prices for 50 or 25-cycle ratings.

Type TSA-10 for Process Timing
60 Cycles

Type TSA-10 process timer is suitable for the control of electrically operated machines, devices, etc., and is readily adjusted over a wide range of operating cycles. Can be supplied with normally open or normally closed contacts. Resetting is automatic when the clutch coil is de-energized.

Because of its flexibility of adjustment and connection, and since its operations can be controlled electrically, this timer is adaptable to many control applications.

Relays for use with the Type TSA-10 timer, enabling completely automatic control, can also be furnished.

Dimensions, 9x6x4 inches.

Approximate shipping weight, 8 pounds.

Type KT Automatic Time Meters
60 Cycles

Round for Flush Mounting

Square for Flush Mounting

Conduit

Portable

Whenever knowledge of elapsed time is of value, the Type KT time meter is a profitable investment. Machine-operating time, often very difficult and expensive to measure, is easily and inexpensively measured with this device.

This time meter consists of a cyclometer, driven by a telechron synchronous motor. Connected to an electric circuit, it will measure and indicate the number of hours, tenths of hours, or minutes that the circuit is in use.

Approximate shipping weight, 6 pounds.

Round

Approximate dimensions, 3½ inches in diameter.

Diamond H Remote Control Equipment

Type G Throw Over Switches Automatic Double Throw

Type G consists of two Type F Remote Control Switches with a mechanical interlocking arm and relay mounted on a bronze metal sub base. The Type F Switch consists of two closing and one opening coils in a dust-proof cast iron frame, together with an operating coil circuit breaker and mechanical ball locking device. The coils are energized momentarily only during the opening and closing operations. Type F mechanism operates the brush carrier in a straight line motion, making and breaking the circuit with the contacts which are mounted on a slate base or panel.

The purpose of the Type G Switch is to furnish automatic control of lighting circuits when two sources of current supply are used (main line and emergency circuit). Used in theatres, auditoriums of public buildings, operating rooms of hospitals, schools, or wherever it is essential to maintain a continuous supply of current.

Control is always connected to emergency service, operation being fully automatic. Armature of relay drops by gravity upon failure of normal service and closes a set of contacts which transfers the load from normal to emergency service. Upon resumption of normal service, armature of relay is pulled upwards, connecting a set of contacts; this restores the switches to normal position and the load is again connected to normal service. Consumption of continuous current solenoid is about 15 watts.

Type G Switch can also be controlled manually by the use of momentary contact switches or other suitable controlling device.

Standard double throw switches are wired with normal service on right-hand side. May be furnished with normal on left or right of emergency as desired. May also be furnished for vertical mounting.

Type G Switch can be furnished with relays for phase protection. Prices on application.

Switch can be made in four poles if desired. Quotations on request.

Momentary Contact Toggle Switches

For Manual Control of Remote Control Switches

This is a special switch for use in connection with remote control switches. The mechanism is similar to the regular Diamond H Switch, and is so arranged that a snap contact is made and a quick break is obtained. The contacts are made of pure silver. This switch fits all standard conduit boxes and uses a regular switch plate.

Mercury Tube Relays

20 Amperes, 250 Volts—30 Amperes, 125 Volts
Non-Inductive Rating

No. 40011X, with Box

These relays are positive in action, silent, fool-proof and will stand up under constant use for a long time. They are used for controlling automatic machines, signal systems, temperature control on all kinds of industrial equipment, for motor starting and stopping and control of lighting circuits. In places where inflammable gases and dust are prevalent, this type of switch is essential, such as in chemical, rubber, oil, flour, cement, and similar plants.

Relays have been designed for controlling loads up to 30 amperes at 125 volts by means of a low amperage secondary circuit. The coils are of the continuous current type, and are wound for 110 or 220 volts a.c. or d.c. Special low voltage coils as low as 6 volts d.c. may be supplied. The relay coils consume only a few watts and can be left in the circuit with no possibility of burning out.

No open arc is made because the current is broken by a mercury tube.

Made in single, double, triple and four pole; also single pole double throw, and double pole double throw. May be furnished in double throw combination.

Solenoid windings are designed for continuous operation and can be controlled by any suitable single pole switch.

Standard Type A or flush metal boxes furnished to take relays. May be supplied with two or more in single box or in vaporproof box.

No. 15009

Mercoïd Mercury Switches

No. 855 Mercoïd Thermostats

Type 9-51R

Type 9-61R

Type 9-81

Mercoïd Hermetically Sealed Mercury Switch is used for making and breaking an electrical circuit. Not subject to open arcing, pitting or sticking of contacts. Cannot be affected by dust, dirt or corrosion. Long lived dependable service. Positive operation is assured under various operating conditions.

Many types available to meet different requirements.

- Types 9-51R or 9-51S, 10 Amp. 115 V., 5 Amp. 230 V. each \$2.10
- Types 9-61R or 9-61S, 4 Amp. 115 V., 2 Amp. 230 V...ea. 1.15
- Type 9-81, 9/10 Amp. 24 V. each 3.00
- Type PP-93-11 Magnet for Type 9-81 Switch.... each .60

Mercoïd Sensatherms

9/10 Ampere, 24 Volts or Less

Extremely sensitive and accurate in performance. Follows room temperature changes so quickly that uniform control is assured.

Operates on temperature variation of 1/2° above or below point set (total differential 1°F.) No internal heater coils or other means of artificial acceleration are used.

Champagne tone finish.

- Type H, for Heating Applications 55-85°F. each \$6.00
- Type R, for Air Conditioning and Cooling, 55-85°F. and 65-95°F. each 6.50

Mercoïd Dual Sensatherms

9/10 Ampere, 24 Volts or Less

Provides fully automatic day-night temperature when employed in connection with Type T-41 Timercoïd. This instrument combines in one unit, two single circuit sensatherms with individual adjustments.

Type HR used for both heating and cooling equipment and also for air conditioning.

- Type HH, 55-85°F. each \$11.00
 - Type HR, 55-85°F. each 11.50
- Other ranges available.

Mercoïd Day-Night Sensatherms

Type DNH is a compact hand wound time controlled high and low day and night temperature regulating thermostat. Maintains lowered temperature up to nine hours.

Electric capacity, range and differential same as Type H sensatherm.

- Type DNH. each \$17.00
- Type DNHA, Line Voltage Type, Single Pole Capacity, 20 W. at 115 V. or 230 V., A.C. or D.C. each 17.50

Mercoïd Two-Stage Sensatherms

For control of high-low gas or oil burners. Provides regulation of two-speed fans on air conditioning. Eliminates overshooting temperature on stoker fired forced circulating warm air systems. Two mercury magnetic switches used.

Differential and electrical capacity same as Type H.

- Type HBH, for Heating, 55-85°F. each \$11.00
- Type HBR, for Heating and Cooling each 11.00

4-9135
Scott
Mahin

For high voltage applications, to handle motor load directly, without the use of a relay.

- Standard ranges: 56-80°, 38-70°, 65-90° and 25-60°.
 - No. 855, without Thermometer. each \$9.00
 - No. 855T, With Thermometer. each 10.00
- Special ranges available at additional cost.

Type T-41 Mercoïd Timercoïds

Lik?
Kane

A self-starting Telechron clock in combination with Type HH Sensatherm and a 24-volt transformer. With fully automatic day and night time switch.

Clock automatically controls the day and night temperature in accordance with the desired temperature setting.

- Type T-41, Std. 24 V. 60 Cy. each \$20.00
 - Transformer, 110-24 V. 60 Cy. each 1.50
- Other capacities available.

Mercoïd Transformer-Relays

For A.C. Current

For use with stokers, oil burners, air conditioning and industrial applications.

Transformer is self-contained in the relay, as the primary coil induces 24 volts in the secondary coil by transformer action. Quiet and dependable mercury contact instrument with low voltage thermostat or pilot circuit. No metal contacting faces to hum or chatter.

Single pole circuit, normally open (load circuit common with supply circuit). Electrical capacity, 10 amperes, 115 volts; 5 amperes, 230 volts. Motor rating, 1 hp. repulsion-induction; 1/2 hp. split-phase. Remote control circuit, 24-volt, self induced.

Type....	V2-3A	V2-3B	V2-3D	V2-3F	V2-3G	V2-3J

For Heater Loads

Types V2-26A and V2-26F especially designed to handle heavy non-inductive heater loads. Non-inductive a.c. heater load rating: Type V2-26A, 20 amperes, 115 volts, maximum 2000 watt; Type V2-26F, 20 amperes, 230 volts, maximum 4000 watt.

Type.....	V2-26A	V2-26F
Each.....	\$9.50	9.50
Volts.....	115	230
Cycles.....	60	60

Other types also available.

Type DA-31 Mercoid Pressure Controls

Has independent outside adjustments for setting both cut-in and cut-out pressures. Indicators show exact pressures for which instrument is set to operate.

Furnished with adjustment locking device and iron pig-tail siphon.

Electrical capacity, 10 amperes, 115 volts; 5 amperes, 230 volts and on order 3 amperes, 440 volts, a.c. or d.c. Motor rating 1-h.p. repulsion-induction, 1/2-hp. split phase or d.c.

5S	16.00	0 to 60	Steel	4	60	150
6	16.50	0 to 100	Brass	5	100	200

Type DA-231 Mercoid Pressure Controls

For steam or other applications where close operating differential and wide range adjustments are required and where pressure medium is not injurious to brass. Has same outside adjustments as Type DA-31. Furnished with 12 feet remote copper tubing with 1/4-inch I.P.S. connection.

Electric capacity, 20 watts, 115 or 230 volts a.c. or d.c., 9/10 amperes at 24 volts or less. Motor rating, 1/60 hp.

Range No.	Each	Adjustable Operating Range Pounds	Bourdon Tubing	DIFFERENTIALS, POUNDS		Maximum Pressure Pounds
				Min.	Max.	
1	\$16.50	0 to 14	Brass	1/8	14	30

4	22.00	0 to 35	Brass	1/4	35	50

Other ranges available.

Type DA-221 Mercoid Pressure Controls

For industrial applications (other than steam) for close operating differentials at high pressures and where pressure medium is not injurious to steel. It is similar in construction to Type DA-231, except that it has a heavier gage chrome molybdenum steel bourdon tube. Furnished with 12 feet remote copper tubing.

Electric capacity, 20 watts, 115 or 230 volts a.c. or d.c. Motor rating, maximum 1/60 hp.

Range No.	Each	Adjustable Operating Range Pounds	Bourdon Tubing	DIFFERENTIALS, POUNDS		Maximum Pressure Pounds
				Min.	Max.	
5S	\$29.50	0 to 60	Steel	7/16	60	150

8S	32.50	0 to 200	Steel	3/4	200	300

Type DA-36 Mercoid Immersion Hot Water Controls

Used as hot water storage tank or boiler water temperature control; also as a limit control.

Has double outside adjustments, accurately calibrated visible dial and close operating differential.

Differential 2° minimum, 100° maximum. Rating, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 1-hp., R.I. 1/2-hp. s.p. or d.c. Bulb, 3 inches long with 1/2-inch I.P.T. connection.

Type DA-36 has straight stem.

If back angle stem is desired, specify Type DA-37.

Range No.	Each	Adjustable Operating Range	MIN. DIFFERENTIALS		Max. Temp. Must Not Exceed
			High	Low	
5	\$10.50	100-200°	2°	9°	220°
6	10.50	135-235°	3°	10°	260°

Type DA-35 Mercoid Temperature Controls

For control of liquids or gases not injurious to copper or brass, such as air, oil, water, paraffin, glue or distillate vapors.

Has double outside adjustment, accurately calibrated visible dial.

Furnished standard with 6 feet flexible tubing.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 1-hp., R.I. 1/2-hp. s.p. or d.c.

Range No.	Each	Adjustable Operating Range	MIN. DIFFERENTIALS	
			High	Low
3	\$17.50	25-100°	1°	5°
4	17.50	50-150°	2°	12°
5	15.00	100-200°	2°	9°

Other ranges available.

Type 115-W Mercoid Immersatherms

A summer-winter hot water supply control.

Has many industrial applications for controlling temperatures of liquids or gases not injurious to copper.

Low voltage, 9/10 amperes, 24 volts.

Type 115-W, Range 50-250°F.....	each	\$6.50
Type 115-W, Range 170-430°F.....	each	12.00

Mercoid Clamp-On Type Risertherms

A temperature limiting control designed to be clamped on risers of hot water heating systems or the surfaces of hot water tanks.

Electrical capacity either a.c. or d.c., 10 amperes, 115 volts, 5 amperes, 230 volts, and on special order at extra charge of \$3.00, 3 amperes, 440 volts. Motor is 1-hp. repulsion-induction, 1/2-hp. split phase, or d.c.

No. 34

For use in connection with thermostat for dual control of unit heaters. Standard range 140 to 230°F., differential 6 to 25°F.

No. 34, 10-Ampere, Single Pole.....	each	\$6.50
-------------------------------------	------	--------

No. 35

A limit control for hot water systems. Standard range 110 to 200°F., differential 6 to 25°F.

No. 35, 10-Ampere, Single Pole.....	each	\$6.00
-------------------------------------	------	--------

Mercoïd Warm Air Fan and Limit Controls

Type M-51 prevents furnace from overheating.

Type M-53 fan control prevents cold air from blowing into rooms until correct temperature is reached.

Type M-80 combines in one unit each of the above controls and is known as a combination fan and limit control.

Two-wire system is employed. Controls are equipped with dials calibrated in degrees F. and a pointer indicates the temperature in furnace hood or duct. Simple adjustment provided for setting operation.

Furnished standard with mounting flange.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts, a.c. or d.c.

Type M-51, Range 25-300° or 50-500°F..... each \$7.00

Type M-53SW, Range 25-300° or 50-500°F..... each 7.50

Type M-80, Range 50-300°F..... each 11.00

Type 116 Mercoïd Ductatherms

For regulating temperatures of air conditioning ducts and in higher range for bakery or drying ovens.

Uses low voltage only, 9/10 ampere at 24 volts or less.

Type 116, Range 50-300°F..... each \$7.00

Type 116, Range 50-500°F..... each 10.00

Type 116, Range 250-500°F..... each 10.00

Type B-11 Mercoïd Motor Damper Controls

Designed for automatic regulation of draft and check dampers of domestic coal fired heating plants; also industrial applications such as controlling large lever valves for steam, water or gas.

Special motor bearings and quiet bakelite gears. Operates on 16 volts through a transformer. Lifting capacity, 10 pounds at end of 2 1/2-in. crankarm.

Standard voltage, 16 volts, 50 or 60 cycles.

Type B-11..... each \$15.00

Type DA-131Q Mercoïd Combination Pressure and Low Water Controls

Protects low pressure automatically fired steam boilers from firing into dry boilers or building up excess pressure. No packing gland is employed; seal is by means of a flexible diaphragm.

With quick hook-up fittings designed in accordance with the A.S.M.E. code.

Range, 0-10 pounds. Maximum pressure not to exceed 15 pounds.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 1-hp. repulsion-induction, 1/2-hp. split phase or d.c.

Type DA-131Q, with Quick Hook-Up Attachments. ea. \$23.00

Type DA71 Mercoïd Combination Pressure and Low Water Controls

For high pressure steam systems. I.P.S. connection, one inch. With Mercoïd sealed mercury contact switch, double outside adjustment, and accurately calibrated visible dial.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts a.c. or d.c. Furnished 3 amperes 440 volts a.c. or d.c. on special order. Extra charge of \$3.00 for 440-volt

single-pole. Motor rating 1-hp. repulsion-induction, or 1/2-hp. split phase or d.c. motor. Available 2-pole and 2-circuit also.

Range No.	Each	Adjustable Operating Range, Lb.	Max. Press. Must Not Exceed, Lb.	Ship. Wt. Lb.
8	\$42.00	0-200	240	35
9	44.00	0-300	300	35

Type DA-121 Mercoïd Combination Pressure and Low Water Controls

For low pressure steam.

Dial has two adjustable pointers which show pressures at which instrument is set to operate. Range is set by turning outside adjustments.

Electrical capacity, 10 amperes 115 volts, 5 amperes 230 volts; and on special order 3 amperes 440 volts, a.c. or d.c. Motor rating, 1-hp. repulsion-induction, 1/2-hp. split phase, or d.c.

Range No.	Each	Adjustable Operating Range, Lb.	DIFFERENTIALS POUNDS		Max. Press. Lb.
			Min.	Max.	
1	\$20.00	0 to 14-Lb.	1	14	30
3	23.00	10-In. Vac. to 12-Lb.	1	Entire Range	30

Type 75 Mercoïd Boiler Feed Water Pump Controls

300 Pounds Maximum Pressure Rating

Especially designed for the regulation of motor driven feed water pumps in connection with boilers operating between 150 and 300 pounds pressure. Operates feed water pump on approximately 1/4-inch variation in water level.

Boilers used for the generation of steam for industrial applications require constant replacement of water to make up for evaporation losses. As such boilers generally operate on high pressures, motor driven feed water pumps are required. Very close regulation of water level is desirable to prevent lowering of steam pressure due to admission of too great a quantity of water.

Equipped with sealed mercury contact switch. No. 2120 feed water pump control only. Single pole, 10 ampere.

No. 2122 has alarm circuit; as water level drops, 10-ampere pump circuit closes first. If water level continues to drop, 4-ampere alarm circuit closes.

No. 2123 has low water cut-out; as water level drops, 10-ampere pump circuit closes first. If water level continues to drop, 10-ampere circuit controlling heating equipment opens.

Pipe connections, 1 inch I.P.S. Electrical capacity: 10 amperes 115 volts, 5 amperes 230 volts a.c. or d.c. Alarm circuit, 4 amperes 115 volts, 2 amperes 230 volts.

Motor rating: 1-hp. repulsion-induction, 1/2-hp. split phase or d.c.

Approximate shipping weight, 35 pounds.

No. 2120, Single Pole, 10 Amperes..... each \$32.00

No. 2122, with Alarm Circuit..... each 35.00

No. 2123, with Low Water Cut-Out..... each 36.00

Available on special order for 3 amperes 440 volts at \$3.00 additional.

For 150 pounds maximum pressures, deduct \$5.00 from list.

Type THV Mercoïd Stok-A-Timers

A stoker fire maintaining control that maintains stoker fire during periods when thermostat does not call for heat.

It is equipped with a unique heat operated motor which is quiet in operation. No gears are employed. Requires no lubrication. Only one rotating member is used which turns at the rate of one revolution per hour. No high speed operating parts.

Electric capacity, 10 amperes 115 volts 60 cycles, 5 amperes 230 volts. Motor rating, 1-hp. repulsion-induction, 1/2-hp. split phase.

Type THV..... each \$16.00

Mercoïd Pyratherms

Type JMI is a Safety and ignition control for oil burners employing intermittent spark or gas ignition. Provides full protection against flame or ignition failure and includes positive ignition control which insures having ignition circuit closed before every starting operation of burner.

Type JM is used for constant ignition burners.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts, a.c. only, 60 cycles.

- Type JMI..... each \$21.00
- Type JM..... each 19.00

Mercoïd Controls Lever Arm Type

To open and close circuits.
No. 46 Snap Action ea. \$6.00
No. 47 Direct Action ea. 5.00
No. 48 3-Position ..ea. 8.00

Float Type

To maintain fluid levels in tanks or control sump pumps or cellar drainers.

No. 40 Counter-Balance.....ea. \$16.50
No. 41 Plunger.....ea. 16.50

If rod or floats are not desired, deduct \$5.50.

Type 855 EHT Mercoïd Thermostats

Used for room air temperature control in hazardous locations. Explosion-proof housing is cast aluminum. Proper provisions are made for making connections with circuit wires and access to Mercoïd switch.

Furnished with explosion-proof case.

For heating, 56-80° and 38-70°F. Differential, 3°F. For air conditioning, 65-90°F; for refrigeration, 25-60°F.

Electric cap., 10 amps. 115 volts, 5 amps-230 volts. Motor rating, 115 volts, 1/2-hp.

- R.I., s.p. or d.c.; 230 volts, 1-hp. R.I., 1/2-hp. s.p. or d.c. No. 855EHT, with Thermometer..... each \$30.00
- No. 855EH, without Thermometer..... each 29.00

Type 970 Mercoïd Explosion-Proof Cases

For use with Mercoïd temperature and pressure controls on applications such as oil refineries, gasoline service stations, dry cleaning plants, flour mills, etc. Explosion hazards are eliminated as the complete control unit is housed in the explosion-proof chamber.

Used with Types DA-31, DA-21, DA-231, DA-221, DA-51, and DA-61 pressure type controls. For Types DA-35, DA-235, DA-55, and DA-255 temperature controls.

Has shatter-proof glass cover, external reset button and external adjustments for setting operating range.

- Type 970..... each \$65.00

Type 76EH Mercoïd Explosion-Proof Cases

For liquid level control. For use in oil refineries, gasoline service stations, dry cleaning plants, flour mills, etc., where dust or vapors form an explosive mixture with air. Eliminates explosion hazards as all current carrying parts are housed in explosion-proof chamber. For water or other high specific gravity liquids not corrosive to copper or brass. Maximum pressure rating, 300 pounds.

- No. 7600 single-pole circuit opens as liquid level rises.
- No. 7601 same as No. 7600 excepting that circuit opens as liquid level lowers.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 115 volts, 1/2-hp. R.I., s.p. or d.c.; 230 volts, 1-hp. R.I., 1/2-hp. s.p. or d.c.

- Special No. 7600..... each \$60.00
- Special No. 7601..... each 60.00

Type DA-55 Mercoïd Temperature Controls Remote Stem Type

Type DA-55 with Mounting Bracket

For refrigeration and air conditioning applications. For the control of brine, water, or low air temperatures in freezing rooms.

Has calibrated visible dial and double adjustments. Two pointers are adjustable over a calibrated dial and show at a glance the temperature at which the instrument is set to operate.

Furnished standard with a locking bar, which can be placed on instrument after installation, to prevent tampering with range adjustment. Equipped with the Mercoïd Sealed Mercury Contact Switch. Available with or without 3/4-inch I.P.S. connection at bulb. Standard with plain case, complete with mounting bracket. Furnished with 6 feet of flexible tubing. Available on special order with tubing up to 25 feet in length.

Electrical capacity, either a.c. or d.c.; 10 amperes, 115 volts; 5 amperes, 230 volts; and on special order, 3 amperes, 440 volts at extra charge of \$3.00.

Approximate shipping weight, 7 pounds.

Available Style Bulbs

Style No. 1
B, 3 3/8 in. C, 1 1/8 in.

Style No. 4
A, 1 in. I.P.S. C, 1 1/8 in.
D, 6 in. E, 4 in.

Style No. 2
A, 3/4 in. I.P.S. C, 1 1/8 in.
D, 2 3/4 in.

Style No. 1 is for open tanks on applications where tight connection is not required. Style No. 2 has a 3/4-inch union connection for pressure applications. Where very close regulation is desired on air or gases, bulb style No. 4 can be furnished on special order at extra charge of \$2.50.

Adjustable Operating Range	*Type DA55-3 Each	†Type DA-55 Each	MINIMUM DIFFERENTIAL WHEN OPERATING POINT SET AT			Max. Differential	Temp. Must Not Exceed
			High	Med.	Low		
-30° to +60°	\$15.00	\$15.00	3°	5°	12°	90°	120°
0 to 75°	15.00	15.00	1 1/2°	4°	8°	75°	120°

*Type DA-55-3 controls close circuit as temperature rises.
†Type DA-55 controls open circuit as temperature rises.

Mercoïd Low and High Pressure Controls For Freon, Methyl Chloride or Sulphur Dioxide

Type DA-61

Provides accurate and reliable regulation of refrigeration equipment using any refrigerants not injurious to bronze. Employs bourdon tube.

Equipped with convenient double outside adjustments, and accurately calibrated visible dial. The pointers indicate the exact pressures at which the switch operates. Locking means is provided as standard, to prevent tampering. The Mercoïd mercury contact switch cannot burn or stick and is not affected by moisture, dirt or corrosion.

Electrical capacity, either a.c. or d.c.; 10 amperes 115 volts; 5 amperes 230 volts; and on special order, 3 amperes 440 volts at extra charge of \$3.00.

Type DA51-3 (STANDARD).—Range adjustable from 25 inches vacuum to 50 pounds. Minimum differential, 3 1/2 pounds (or equivalent vacuum). Maximum operating pressure, 125 pounds. Furnished in plain case bottom connection, fully automatic, with switch arranged to close circuit as pressure increases.

Type DA51 (STANDARD).—Range adjustable from 0 to 200 pounds. Minimum differential, 6 pounds. Maximum operating pressure, 240 pounds. Plain case bottom connection; fully automatic, with switch arranged to open circuit as pressure increases.

Type DR51.—Same as Type DA51 except semi-automatic with hand-reset. Prices covers single pole-10 ampere instruments.

- Approximate shipping weight, 4 pounds.
- Type..... DA51-3 DA51 DR51
- Each..... \$10.50 12.50 12.50

Type DA-61 Mercoid Low Pressure Ammonia Controls

Type DA-61 with Plain Case Bottom Connection

Provides close regulation of ammonia refrigeration equipment, from changes in suction pressure. By means of this control, the regulation of individual box temperatures on a multiple system is simplified. This instrument is actuated by a heavy chrome-molybdenum steel Bourdon tube which is Udylyte-plated to prevent corrosion. All mechanism parts are of nickel silver or are nickel plated. The sealed Mercoid mercury contact switch eliminates possibilities of open arcing, oxidation or corrosion. The case of pressed steel is 5 3/4 inches in diameter, with black heat resisting finish. The 1/4-inch I.P.S. connection has tapered thread which insures tight fit.

Has accurately calibrated visible dial and external double adjustments. Two pointers are adjustable over a calibrated dial, and show at a glance the pressure at which the instrument is set to operate. When setting the range, it is necessary merely to turn the outside adjustments until the pointers indicate, on the accurately calibrated dial, the operating pressures desired.

Standard range, 10 inches vacuum to 75 pounds. Will withstand a maximum pressure of 150 pounds without injury. Differential, can be set as close as 6 pounds or widened as much as desired.

Electrical capacity, either a.c. or d.c.; 10 amperes, 115 volts; 5 amperes, 230 volts; and on special order, 3 amperes, 440 volts at extra charge of \$3.00.

Prices cover standard instruments with plain case, bottom connection, single pole, fully automatic, and will be so shipped unless otherwise specified.

Approximate shipping weight, 4 pounds.
 Type DA61, Circuit Opens as Pressure Rises... each \$18.00
 Type DA61-3, Circuit Closes as Pressure Rises... each 18.00

No. 61 Mercoid High Pressure Safety Cut-Out Controls

For Use on Ammonia and CO²

Designed for control of refrigerants. Specially treated, heavy steel Bourdon tubing is of correct size and construction for accurate and enduring performance. Udylyte-plated to prevent corrosion.

Snap-action movement locks switch in position at both cut-in and cut-out points. All mechanism parts of nickel silver or nickel-plated.

Furnished in 5 3/4-inch plain steel case with 1/4-inch drop forged male bottom connection and approved electrical outlet box.

Where used with ammonia, usually furnished semi-automatic to cut out at 225 pounds pressure, requiring hand reset to restart the compressor as many states require this feature. An adjustment is provided on back of case so that cut-out point can easily be changed for any operating pressure between 100 and 300 pounds.

For fully automatic service the differential is 75 pounds. When furnished for CO², this control is set to cut out at 1250 pounds. When fully automatic a differential of 500 pounds or more is required. Shipping weight 4 pounds.

Orders should specify circuit, range, operation (fully or semi-automatic), style of case (plain or flanged) and style of connection (bottom or back).

Ammonia Cut-Outs

Single Circuit..... each \$18.00
 2 Circuit (1 Pole, 10 Amp. Alarm, 4 Amp.).... each 20.50
 2 Circuit or Double Pole..... each 21.00

CO² Cut-Outs

Single Circuit..... each \$40.00
 2 Circuit (1 Pole, 10 Amp. Alarm, 4 Amp.).... each 42.50
 2 Circuit or Double Pole..... each 43.00

Type K-3B Mercoid Magnetic Valves

This straight magnetic two-wire valve opens and closes the gas line at the demand of a room thermostat or other control unit. It is adapted to a variety of uses, such as fuel supply control for gas fired furnaces and boilers, water heaters, industrial furnaces, bake ovens, etc.

Will not stick, and closes in case of current failure. On all valves larger than 3/8 inch, a manual bi-pass feature is provided to open valve in case of prolonged current failure.

Low voltage valve is 24 volts, 50-60 cycle.

Line voltage valve is 115 volts, 60-cycle, unless otherwise specified.

Size In.	*Low Voltage Each	Line Voltage Each	†GAS CAPACITY (Cu. Ft. P.S. Hr.)			Max. Operating Press. Lb.	Lgth. over Body In.	Ctr. Line of Pipe to Top In.	†App. prox. Ship. Wt. Lb.	
			5-In.	1-In.	4-In.					
3/8	\$6.40	\$6.40	8	90	127	250	2	2 1/4	3 1/4	2
1/2	6.40	6.40	8	165	230	470	1	2 7/8	3 5/8	2 1/2
3/4	7.00	7.00	8	320	450	910	2/3	3 3/8	4	3
1	8.80	8.80	8	520	730	1470	1/3	4 1/8	4 1/8	4

*Price includes valve only (without transformer). If transformer is desired, order must so specify.

†-0.6 specific gravity.

‡Weights do not include transformers.

Line voltage valve available for 230 volts, 60-cycle, add 60 cents. On sizes up to 1 1/2-inch, for 115 volts, 50-cycle, no extra charge. Available on special order for d.c. or odd a.c. voltages and frequencies (4-week delivery), add \$2.00.

Available on special order (4 weeks delivery) for Butane or Propane, add \$2.00.

Valves from 3/8 to 1-inch inclusive, available for high pressure gas on order.

Larger sizes available.

Type K10-1 Mercoid Lever Valves

Designed for controlling light and heavy oils, water, air, steam, gas, and ammonia.

The lever-action develops six times the power of usual solenoid, making possible operation at very high pressures for corresponding port sizes.

Quiet in operation, two-wire, of packless construction and closes upon current failure.

Normally closed type; opens when energized.

Pipe size, 3/8 and 1/2 inch; 3/8-inch is standard.

Standard port sizes, 3/16, 1/8, and 1/4 inch.

Type K10-1, 3/8-Inch Pipe Size..... each \$11.00

Type K10-1, 1/2-Inch Pipe Size..... each 12.00

Other types available.

Type K-15 Mercoid Pilot Piston Operated Valves

Recommended for water, low viscosity oils (not heavier than No. 3) and gases where the maximum temperature does not exceed 240°F. Suitable for controlling low pressure steam not in excess of ten pounds pressure.

Full-ported in all sizes up to and including one inch and capable of handling large capacities with a minimum pressure drop.

Pipe Size, In.	Solenoid Size	Each
3/8	180	\$13.60
1/2	225	16.00
1/2	300	22.00
3/4	225	17.80
3/4	300	24.80
1	300	32.00
1	400	44.00
1 1/4	400	48.00
1 1/2	400	56.00
2	400	68.00

Dunco General Control Relays

Used for control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver; the design of the shading coil insures quiet a.c. operation. Each relay is tested by two different inspection departments before shipment.

Available with any desired number of poles. Various types of housings can be furnished.

Midget Relays

Base size, 2 3/4 x 1 7/8 inches.

Coils furnished as specified: 6 to 220 volts, a.c.; or 2 to 230 volts, d.c.

Contacts: 110 volts a.c. 6 amperes; 220 volts a.c. 3 amperes; 115 volts d.c. 1 ampere. Non-inductive loads.

Type CDBX1

Type	Description	Each
ABTX1	S.P., D.B., Front Contact	\$3.75
ADBX1	D.P., S.B., Front Contact	4.75
BBTX1	S.P., D.B., Back Contact	3.75

BTBK8	10.75	T.P., S.B., Back Contact	5 x 3
CDBP8	11.00	D.P., S.B., D.T.	6 1/4 x 3
DSBT8	8.50	S.P., S.B., D.T., Separate Circuit	4 1/4 x 3
DDBP8	12.00	D.P., S.B., D.T., Separate Circuit	6 1/4 x 3

Dunco Mechanical Latch-In Electrical Release Relays

Used for push button control or similar applications.

Two coils: one coil closes contacts which latch closed; the other coil when energized trips the latch and opens the contacts.

Base size, 4 1/2 x 3 1/4 inches.

Available with any desired number of poles. Midget types are also available.

Type ABUY5N

Type	Each	Description	CONTACT RATING, AMPS.			
			110 V. A.C.	220 V. A.C.	115 V. D.C.	230 V. D.C.

Dunco Relay Sets for Low-Voltage Thermostat Control

Type RS239

Complete with relay and transformer mounted in sheet metal housing with external binding posts for thermostat connections.

Used with 2-Wire Snap Action Thermostat

Type	Each	110 Volt A.C. RATING	
		Hp.	Amps.
RS239	\$7.00	1/4	6
RS71	10.75	1	30

Used with 3-Wire H-L-C Thermostat

Type	Each	110 Volt A.C. RATING
RS240	\$8.00	1/4
RS73	12.75	1

Dunco Telephone Auxiliary Signalling Relays

Type RS3A

Type RS2.—Relay and condenser in H3 sheet metal, hinged cover housing. Signal remains on as long as circuit is closed.

Type RS2..... each \$11.00

Type RSA2.—Same as Type RS2 except in W6 cast aluminum housing.

Type RSA2..... each \$15.00

Type RS3A.—Relay, condenser and push button in W6 cast aluminum weatherproof housing. After telephone circuit once energizes relay the signal remains on until relay is released.

Type RS3A..... each \$24.00

Dunco Mercury Plunger Relays

Type MR-1

Contacts enclosed from corrosion, dust and dirt. Only one moving part.

Contacts single pole, either normally open or normally closed.

Add \$1.00 for coil voltages other than 110 or 220 volts, 60 cycles.

Type	Each	Normally	Contacts Amperes	Base Size Inches
MR-1	\$6.00	Open	{ 110 V., A.C.-30 } { 220 V., A.C.-20 }	3 1/2 x 2 1/2
MR-2	7.00	Closed		4 x 2 1/2
MR-6	6.00	Open	{ 115 V., D.C.-5 } { 230 V., D.C.-2 }	3 1/2 x 2 1/2
MR-7	7.00	Closed		4 x 2 1/2

Type S Dunco Sensitive Relays

The moving parts are balanced making the relay suitable for many applications where vibration is encountered.

Two types are available—the contacts separate from the coil circuit and the contact interconnected with the coil circuit for use with contact making galvanometers or sensitive mercurial thermostats. Sensitivity 0.008 watts, d.c., 0.10 volt amperes at 60 cycles.

S.P., D.T. contacts rated 2 amperes at 110 volts, a.c., ¼ ampere at 115 volts d.c. Non-inductive loads.

Base size, 2½x2⅝ inches front connected. Relays with coils wound with wire up to and including 40-gage.

Type S For D.C. on Coil.....each \$6.00
Type S For A.C. on Coil.....each 6.50

Type TD-130 Dunco Time Delay Relays

Many types of time delay relays are available including motor driven, both repeating and recycling, thermal, and inertia types.

This motor driven timer consists of a small synchronous motor driving a single cam at one rpm. The contacts close once per minute and the closure time is adjustable from 0 to 30 seconds. Contacts rated 10 amperes at 110 volts, a.c.

Motor for operation on 110 volts, 60 cycles, but may be furnished for other ratings at an increased price. Base size, 4¼x3 inches front connected.

Type TD-130.....each \$16.00

Type CX464 Dunco Ratchet Type Sequence Relays

Ratchet type sequence relays move their contacts when the coil is energized and then remain in this position until the coil is de-energized and again energized.

Has two poles and by factory adjustment of the cams may be made single pole, single throw, double break; double pole, single throw, single break; or single pole, double throw, single break.

Contacts rated 110 volts, a.c., 20 amperes; 115 volts, d.c., 2 amperes.

Coils approximate 8 watts, a.c.; 4 watts, d.c. Base size, 5x3 inches.

Type CX464.....each \$14.00

Similar relays, except using midjet construction are available at \$8.00 and \$9.00.

Dunco Emergency Lamp Relays

Type CX1498

Designed to automatically cut in a standby or emergency lamp should the main lamp burn out.

If an auxiliary source of power (such as a storage battery) is available the relays may be connected to switch the emergency lamp into the auxiliary circuit should the main line voltage fail or the main lamp burn out.

The relay is equipped with coils of minimum voltage drop to operate in series with the main lamp, upon the failure of which the relay armature opens, closing a set of contacts and completing the circuit to the standby lamp. Contacts are fine silver with low resistance which practically eliminates voltage drop at the contacts.

Contacts: 110-220 volts, a.c., 800 watts; 115-230 volts, d.c., 100 watts.

Base size, 4x2¾ inches front connected.
Type CX1498, S.P., S.T., S.B.....each \$5.50
Type CX1500, S.P., S.T., D.B.....each 5.50

Buss One-Time Fuses

Non-Renewable—250 to 600 Volts

Buss One-Time Fuses are guaranteed, with good contact, to operate perfectly at any overload without charring or burning the fuse case.

Buss One-Time Cartridge Fuses are listed as standard by the Underwriters' Laboratories in all sizes up to and including 600 amperes.

Ferrule Contact—1 to 60 Amperes

*Except for instrument protection, Fusetrons should be used instead of small size fuses, as they give true and complete protection while their remarkable time-lag prevents useless blows from starting currents, etc.

Sizes not listed, in any quantity, take price of next larger amperage, plus a set-up charge of \$2.50 on each size or type on each shipment.

Buss Super-Lag Renewable Fuses and Renewal Links

3 to 60 Amperes

70 to 600 Amperes

8 to 60 Amperes

70 to 200 Amperes

Fuses. Buss Super-Lag Renewable Fuses prevent money-wasting shutdowns, keep circuits in operation, and keep machines running and workers on the job. Patent fuse-case design and Super-Lag development prevent them from blowing needlessly.

Costs are often cut in half on new motor installations because Code (Paragraph 4347) permits smaller size fused safety switches, fuse panels or fuse blocks if Buss Super-Lag Fuses are used.

Every Buss Fuse carries inspection label of Underwriters' Laboratories.

Renewal Links. The Super-Lag construction of Buss Renewal Links keeps them from blowing on harmless overloads that would blow ordinary fuses.

Links are made in one piece in all sizes. This makes renewal handy and prevents poor contact developing while fuse is in use.

Packed a small quantity in sealed boxes for convenience, and to prevent dust, moisture or oxidation from affecting them.

Interchangeable with all makes of standard fuse links.

Economy Renewable Cartridge Fuses

250 and 600 Volts

Economy Fuses always operate at rated capacities. The drop out renewal link is quickly and easily replaced and the restoration of a blown Economy Fuse to its original efficiency is the work of a few moments only.

These fuses operate successfully under all conditions of service without filling material of any description. Fuses bear the "Und. Inspected" label in all capacities from 0 to 600 amperes in both 250 and 600 volts.

Ideal Fuse Pullers

Designed to eliminate danger of pulling and replacing cartridge fuses by hand and bending of fuse clips through improper removal. Also adapted for adjusting loose cutout clips, handling laboratory test tubes, live electrical parts, etc.

Approved as standard by safety departments of thousands of industrial plants. Made in four handy sizes.

Midget Size

For handling small fuses, grid leaks, etc., 1/4 to 1/2 inch in diameter. Has 3 laminations, 5 inches long.

Each..... \$.45

Pocket Size

A popular size for general use. For fuses 0 to 200 amperes, 250 volts and 1 to 100 amperes, 600 volts. Has 5 laminations, 7 1/2 inches long.

Each..... \$ 1.25

Giant Size

For fuses 100 to 600 amperes, 250 volts and 60 to 400 amperes, 600 volts. Has 7 laminations, 12 inches long.

Each..... \$ 3.75

Jumbo Size

A large powerful tool for handling fuses 200 to 800 amperes, 250 volts and 200 to 600 amperes, 600 volts. Has 9 laminations, 20 inches long.

Each..... \$ 11.25

Eco Non-Indicating Non-Renewable Enclosed Fuses

Sold under the label service of Underwriters' Laboratories. Made of heavy fiber tubing. Caps are permanently rolled on the fiber tube, not merely crimped. Caps on ferrule type ECO fuses are pierced without distorting out-of-round, and the piercing not only permanently prevents relative movement, but it also provides full clip contact and a means for venting.

Heavy copper lead-in terminals are used throughout and thereby provide accurate and dependable rating and performance. Unexcelled for uniformity of current-time operation.

No. 10 Ideal Combination Test-Lite and Fuse Puller

For testing, removing, or inserting fuses from 30 to 100 amperes capacity, testing circuits of from 110 to 550 volts, handling all types of live electrical parts, adjusting loose cut-out clips, etc.

Made of reinforced bakelite. Similar in design to a pair of pliers. Test pins are mounted in handle ends and are adjusted to various spans by opening or closing the handles. Test lite is enclosed in handle to safeguard against breakage.

Length overall, 7 inches.

No. 10.....each \$2.50
18-Inch Flexible Leads.....each .44

Jefferson Super-Lag Renewable Enclosed Fuses

Care should be taken to insure clean contact surfaces between the copper blades, renewals and washers. The nut should always be drawn up tight.

Jefferson Union Renewable Enclosed Fuses

250 and 600 Volts

Listed As Standard by Underwriters' Laboratories

Ferrule Type
3 to 60 Amperes

The ferrule type fuse is quick and easy to renew. No loose washers, both ends open for inspection and cleaning, and the link bent at one end which automatically adjusts it to the proper length.

Only three simple parts.

70 to 600 Amperes

Jefferson Union Renewable Fuses are assembled in casings of extreme durability, from which all trace of volatilized link metal can be quickly removed and in which all threads are protected from molten metal. The renewability of such a fuse will continue after any number of blows.

In addition to these important advantages Jefferson Union Renewable Fuses can be renewed with exceptional speed. They are made in all standard ratings.

15 to 30-Ampere Buss Fusetrons

For Circuit Protection on Voltages up to 125

Stops needless blowing of plug fuses. Will not blow when motors start on washing machines, refrigerators and such appliances. Has a long time-lag, because it is a fuse to which a thermal cutout has been added.

Abolishes unsafe practice of using over-size fuse to prevent needless blowing. Gives all the protection a fuse does, holds like a large fuse when safety permits, yet opens like a small fuse when safety demands.

Large clear window facilitates locating of blown Fusetron. No installation cost; fits regular fuse receptacle. Packed 4 in a box; 100 in a shelf package.

No.	715	720	725	730
Each	\$.07½	.07½	.07½	.07½
Amperes	15	20	25	30

15 to 30-Ampere Buss Fustats

For Circuit Protection on Voltages up to 125

Permits addition of more appliances to present circuits. Will not blow out when motors start on washing machines, refrigerators, or other appliances. Fits all Edison base fuse holders by use of adapter which locks in place.

Adapter

Has a thermal cutout combined with a fuse. Operates like a Fusetron, but has a non-tamperable base. Resists over-fusing. A 20, 25, or 30-ampere size will not fit in a 15-ampere receptacle or adapter. Similar limitations apply to all other sizes.

Adapters not included with Fustats; order separately and specify size.

Packed 4 in a box; 100 in a shelf package.

Amperes	Fustats		Adapters	
	No.	Each	No.	Each
15	915	\$.07½	A15	\$.07½
20	920	.07½	A20	.07½
25	925	.07½	A25	.07½
30	930	.07½	A30	.07½

0 to 14-Ampere Buss Fustats

For Motor Apparatus, or Circuit Protection on Voltages up to 125

Has Underwriters' approval for motor-running protection. Fits all standard Edison base fuse holders by use of adapter which locks in place.

Adapter

Holds starting current and harmless overloads, yet protects motor against burnout from any excessive current, even light overloads if continued. Opens like a fuse on short-circuit.

It is a fuse to which a thermal cutout is added. Non-tamperable device for safe protection. Instead of fuse, install in the same block or switch, a Fustat having the same, or slightly higher, ampere rating as the motor.

Adapters not included with Fustat; order separately, and specify size Fustat for which they are intended.

Packed 4 in a box; 100 in a shelf package.

Amperes	Fustats		Adapter	
	No.	Each	No.	Each

12.	912	.15	A15	.07½
14.	914	.15	A15	.07½

Many other sizes from 3/10 to 9 amperes can be obtained.

Buss Fusetrons

250 and 600 Volts

0 to 60 Amps.

70 to 600 Amps.

Contains a thermal cutout as well as a fuse link.

For all types of circuits or feeders as thermal cutout will open to protect panelboards and switches from excessive heating before it can oxidize contact surfaces or damage insulation—yet it will not open needlessly.

Protects motor against burnout from overloading, single phasing, dry bearings, etc. On normal installations size about 100 to 125 per cent of ampere rating of motor can be used. Will not blow on starting currents—yet gives same short circuit protection as fuses.

Because Fusetrons can be used in smaller sizes than ordinary fuses, savings on original installations can be made through use of smaller size switches and panelboards.

Carries Underwriters' Laboratories label and is approved for both motor-running and circuit protection.

Ask for bulletin Fis for further information, or bulletin Spd for motor tables and size to use.

Glass plug fuses will be packed in display cartons of 5 when so specified.

Jefferson Plug Fuses

Jefferson Gem Plug Fuses are equipped with clear mica windows making it possible to see at a glance whether or not fuse is blown.

These fuses are listed as standard and bear the Underwriters' label. Packed in display cartons of 5 each and shelf packages of 100 fuses (20 cartons of 5 each).

Buss Clear Window Plug Fuses

Carries Underwriters' Laboratories inspected label.

Buss fuses have an extra large, clear window and an all white background which makes it easy to see if fuse is blown. Brass cap protects fuse against any chipping of the top. Insulated with porcelain and mica.

Packed 5 in a box. Information printed on box tells what to do when a fuse blows.

Standard package, 100. Weight per 1000, 65 pounds.

Clearsite Non-Renewable Plug Fuses

Clearsite Plug Fuses mount the fuse link under the fuse window thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure.

The fuse body is made of heat-resisting molded insulation, black in color.

Tamper-Resisting Plug Fuses

Standard Edison base. Will fit any existing standard fuseholder or cut-out. Can be used with or without adapter.

Without the adapter it is like any ordinary plug fuse, but becomes tamper-resisting with adapter.

Made of black Textolite with large, clear window. Listed by Underwriters' Laboratories.

No. 559 Bryant Neutral Wire Fuseless Plugs

30 Amperes, 125 Volts

Listed by Underwriters' Laboratories, Inc.

 Can be inserted in neutral fuse receptacle of triple-pole cut-out base and soldered in place. Complies with N.E.C. which requires omission of fuses from grounded side of line except at cut-out base just preceding lamp socket or other translating device.

Packed 75 in carton, 300 in standard package.

Buss Fuse Wire and Strip

Buss fuse wire and strips will carry indefinitely current shown under heading capacity and will open the circuit when subjected to current 25 per cent in excess thereof.

This is based on a distance between contacts or terminals of 2 inches.

When used on contacts of other distances, the carrying capacity is affected as shown in table below.

Will Carry More Current

Distance Between Contacts Inches	Per Cent Additional
1/2	100
3/4	70
1	45
1 1/4	30
1 1/2	15

Will Carry Less Current

Distance Between Contacts Inches	Per Cent Less
2 1/2	5
3	10
4	15
5	20
6	25

The size of terminal and other local conditions will greatly affect these figures. They are only approximate.

Fuse Wire

Furnished only in full spools.

Buss Clip-Clamps

These clip-clamps are built for hard service, and insure good contact between clips and fuses or Fusetrons. They make replacement of fuse-clips unnecessary; generally permit even injured clips to be used.

To prevent corrosion, all steel parts are heavily cadmium plated.

No.	Each	Size of Clamp	Carton Quantity	Wt. Lb. per 100
1	\$.40	0- 30 Amp. 250 Volt	12	5
2	.60	{ 31- 60 Amp. 250 Volt 0- 30 Amp. 600 Volt }	12	8

8	2.50	401-600 Amp.	6	42

Open Link Fuses

A set-up charge for each size and type of fuse ordered is made in addition to the net prices per fuse. This is necessary because these fuses are not stocked, and are made up on special order only. Great care should be exercised in ordering this material as it is not returnable.

Open link fuses can be obtained with many other styles of terminals and in larger capacities. When in need of open link fuses not listed, send sample or complete description.

Amperes	*Each	No.	STANDARD TERMINAL Slot Inches	Width Inches	Other Terminal No.
1 to 30	\$.025	1	3/16	3/8	3
35 to 60	.035	3	3/16	9/16	5
65 to 100	.05	5	1/4	1 1/16	7
110 to 200	.08	7	3/8	3/4	16
225 to 400	.15	16	7/8	1 1/2	10
450 to 600	.30	10	1 1/2	1 3/8	16
650 to 1000	.60	28	5/8	2 1/16	10

*A set-up charge of \$1.50 is made for each size and type fuse ordered on each shipment, in addition to prices shown.

In ordering, be sure to specify exact amperage and centers desired. Unless otherwise specified, standard terminals as listed above will be furnished. The terminals listed in column headed "Other Terminal No." can be obtained, if desired, without additional cost.

Slots are slightly larger than dimensions given so that bolts of such sizes fit the slot. Terminals are all copper.

Type D

Amperes	30 to 200
†Each	\$.035+
Center to Center	in. 2 1/16 to 2 5/8
Slot	in. 1/4

†A set-up charge of \$1.50 is made on each size fuse ordered on each shipment, in addition to price shown above.

Large Open Link Fuses

Terminals are of cold rolled copper, entirely flat, one edge being slotted to receive the fuse strip.

Terminal No.	†Each	TERMINAL Size	Thickness	Usual Amperages
51	\$4.00	2 1/2 x 2 1/2	1/4	1 to 1500
52	5.00	3 x 3	1/4	1 to 2000
53	6.00	3 x 3	3/8	1 to 2000
54	8.00	3 1/2 x 3 1/2	3/8	1 to 2500
55	10.00	4 x 4	3/8	1 to 3000

†A set-up charge of \$4.00 is made for each size and type fuse ordered on each shipment, in addition to prices shown.

When ordering, specify exact amperage, center to center dimensions and size of hole required. If more than one hole is desired, a sketch of the fuse must be submitted and 25 cents added for each additional hole.

Sherman Fuse Clips

N.E.C. Standard

31-60 Amp. 250 Volts	31-60 Amp. 600 Volts	31-60 Amp. 250 Volts	0-30 Amp. 250 Volts
Tit Retainer Types		Slit Retainer Types	

Ferrule types are made of special heat and fatigue resisting bronze.

Knife-blade types are heavy special tempered spring copper, and especially designed to secure strong spring tension with resulting perfect contact.

Slit retainer type and Tit type are available. Specify type desired when ordering.

Ideal Fuse Clip Clamps

These fuse clip clamps grip all makes of clips. The knurled grip knob completely insulates the metal parts. The heavy steel clamping ring brings pressure directly around outside of jaws adjacent to ends of clip. This clamping ring rides on a fiber washer, reducing friction of turning knob. The steel jaws are strongly reinforced, and the spring holds the jaws in open position.

All metal parts are cadmium plated.

Ideal Fuse Reducers

Ferrule Type

Ideal Fuse Reducers protect over fused circuits without the expense of a change in switch, panel or switchboard equipment. Fully approved by Underwriters' Laboratories. These reducers can be supplied for standard N. E. C. cartridge fuse holders.

Special reducers are also available for reducing from 600 volts to 250 volts. If a circuit is being changed from 600 volts to 250 volts by means of special adaptors, the same switches, panel boards, cutouts, etc. can be used.

The 30 and 60-ampere fuse blocks have ferrule type clips.

The 100 and 200-ampere fuse blocks have formed clips.

The 400 and 600-ampere fuse blocks have milled in clips.

Fuse blocks over 600 amperes are made with multiple milled parts for each pole.

Type A Columbia Surface Steel Cabinets

Adapted to nearly all installations where a cabinet for surface mounting is to be used as a junction, service, switch, panel, or cut-out cabinet.

Construction. Of sheet steel, required thickness to conform with Underwriters'.

Finish. Standard finish is high grade baked-on black Japan. Olive green, aluminum, white enamel, or other special finishes at extra charge.

Hardware. Cabinets up to 18 inches in width or height are regularly equipped with flush ring handle and friction catch; over 18 inches wide and not exceeding 24 inches high a turn knob and latch is used. Larger cabinets and all double door cabinets are fitted with vault handle latch. Unless otherwise specified, all boxes are hinged on the long side. Code requirements for double and three-point catches

are provided for in the listing.

Knockouts. All sizes, including 12x10 inches have one 3/4-inch knockout in center of each side and balance 1/2-inch knockouts; sizes 12x12 inches and up, one 1 1/4 and one 1-inch knockouts located near center of each side with remaining space filled with 1/2-inch knockouts.

Galvanized Cabinets can be furnished at 15% extra charge.

Boxes without Covers can be furnished at a deduction of 20% in list prices.

Flange can be supplied on front edges for mounting a wood trim or other cover when specified.

For drilled holes, 1 cent extra for each hole per box; drilled and tapped holes, 2 cents for each hole per box; minimum charge per order, 50 cents.

Type B Columbia Flush Steel Cabinets

Construction. Of sheet steel, required thickness to conform with Board of Underwriters'. Removable trim and door. Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

Finish. Standard finish is black baked Japan.

Hardware. Cabinet is regularly equipped with knob and turn catch. Cabinet with surface area of over 360 square inches is furnished with vault handle.

Cabinet can be supplied with any style hinges, catch or lock.

Holes for Cutouts, Switches, etc. Add 1 cent per hole for each box; for tapped holes, 2

cents per hole for each box; minimum charge per order, 50 cents.

Conduit Drilling. Cabinet is regularly furnished with standard knockouts: all sizes, including 12x10 inches have one 3/4-inch knockout in center of each side and balance 1/2-inch knockouts; sizes 12x12 inches and up, one 1 1/4 and one 1-inch knockouts located near center of each side with remaining space filled with 1/2-inch knockouts.

For special knockouts, add \$1.00 for each additional size change. Specify if boxes are desired without knockouts.

Approved cabinet will be furnished unless otherwise ordered.

*A convertible neutral is a grounded neutral which may be converted into an insulated neutral by removing the bonding screw which grounds the neutral to the box.
†Grounded neutral.

Bull Dog Fusenter Lighting Panelboards

Type NRP

- MAINS.** 3 Wire, 125/250 Volts, Lugs Only.
BRANCHES. 2 Wire, 30 Amperes, 125 Volts, Plug Fuse Only.
CABINET. Box, Code Gage Galvanized Steel—10½ Inches Wide, 4½ Inches Deep, 3-Inch Wiring Gutters. Front, Code Thickness Steel, Flush Spring Locks—Luminized Finish.

No. NRP320L
Flush Type

The Fusenter Lighting Panel contains a compact porcelain unit, with silver surfaced current-carrying parts.

Main terminals are solderless Nire Grips.

Flush fronts will be furnished unless surface type is specified on order.

No. NRP320L
Surface Type

Interior Assembly—Lug Cover Removed to Show Solderless Main Terminations

NRP324L	34.15	24	100	28	43

Bull Dog Rocker Type Switch Centers

No. RPS312L

- MAINS.** Lugs Only, 60-Ampere Solderless Type.
BRANCHES. 30-Ampere Single Pole Rocker Type Switches and Plug Fuse Connections.
CABINET. One Door Construction. Ring Spring Catch Only—Locks Cannot Be Furnished with This Type. Width, 12 Inches, Depth, 3¾ Inches, 1½-Inch Wiring Gutters.

The shallow boxes permit flush type switch centers to be mounted in thin walls composed of sheet rock, wall board, masonite, or similar material.

3/2 Wire—125-250 Volts Solid Neutral

No. of Circuits	INSIDE BOX DIMENSIONS, INCHES	Weight Pounds	Flush Type No.	Surface Type No.	Each

42	100	NMM42-4L	177.00	MH35	NMM42-4AB	219.00	MH41

Type NMM-4 Panels may contain all 1-pole circuits, all 2-pole circuits (not exceeding 20 per panel) or any combination of 1 and 2-pole circuits (not exceeding 42 poles per panel).

*Last two figures of box number indicate box height.

General Notes

Listings are based on 15-ampere breakers, which will be furnished unless otherwise specified. The 20, 25, 35 or 50-ampere breakers will be furnished at no extra charge if specified, except that increased mains may be required; see additions in table at right.

For panels having combination of 1 and 2-pole branches, all fed from same bus and under one door, determine total number of poles in branches. With this equivalent number of 1-pole circuits, obtain price of panel from listings given, and add \$1.00 for each 2-pole circuit.

All 2-pole branch circuit breakers have separate trip.

Standard knockouts are furnished in top and bottom ends of all boxes.

When space only for further branches is required, figure panels on basis of total number of branches and deduct \$1.00 for each breaker pole omitted.

When any panel has both 1 and 2-pole branches, or two or more capacities of breakers, the Square D Company reserves the right to determine the relative positions of the branches on the panels.

When ordering, specify number, number of 1-pole and 1 or 2-pole branch circuits, ampere rating of each branch, ampere rating of mains, flush or surface mounting, and price.

• Additions for Increased Mains, with or without Neutral Bar 2 and 3-Pole Main Breakers Have Common Trip

Main Amperes	2 Ungrounded Poles		3 Ungrounded Poles	
	Lugs Only Each	Circuit Breaker Each	Lugs Only Each	Circuit Breaker Each
50 to 100	\$4.00	\$23.00	\$5.00	\$24.00
50 to 200	6.00	84.00	8.00	101.00
100 to 200	5.00	61.00	7.00	77.00

†For use on panelboards with 3 wire mains only.

Narrow Column Types NMM-4X and NMM-4XX—4 Wire Mains

MAIN: Lugs Only, Three Phase, 4-Wire S/N 115/230 Volts A.C. Only. For Use on 120/208 Volts 3Ø 4-Wire Star Connected System.
 BRANCHES: 2-Wire 115-Volt S/N 15-Ampere Single Pole Breakers—Form M1 (Single Row).
 CABINET: Single Door in Hinged Front. Finish: Academy Brown.
 Type NMM-4X: 8 3/4 Inches Wide and 4 3/4 Inches Deep (Outside Dimensions).
 Type NMM-4XX: 7 1/4 Inches Wide and 4 3/4 Inches Deep (Outside Dimensions).

Type LX Single Row Narrow Multi-Breaker Lighting Panelboard

Prices are for panels either 8 3/4 or 7 1/4 inches wide. Wiring gutters are at top, bottom and left side. Top gutter varies from 6 to 10 inches, depending on neutral bar which is placed there since branch feeders usually come into that end of box. Bottom gutter is 4 inches high. Side gutter is 3 1/4 inches wide in the 8 3/4-inch wide cabinet, and 1 3/4 inches wide in the 7 1/4-inch wide cabinet.

It is recommended that panels with 16 or more poles have cabinets 6 1/2 inches deep instead of 4 3/4 inches, so that additional wiring space in back of interior may be had. When cabinets 6 1/2 inches deep are desired, increase above prices by 5 per cent (before adding for double pole branches when required).

These panels can be furnished with cable troughs and pull boxes for H-beam mounting. Prices on request.

Listings are based on 15-ampere breakers, which will be furnished unless otherwise specified. The 20, 25, 35 or 50-ampere breakers will be furnished at no extra charge if specified, except that increased mains may be required; see additions in table at right.

For panels having combination of 1 and 2-pole branches, all fed from same bus and under one door, determine total number of poles in branches. With this equivalent number of 1-pole circuits, obtain price of panel from tables shown, and add \$1.00 for each 2-pole circuit.

All 2-pole branch circuit breakers have separate trip.

Standard knockouts are furnished in top and bottom ends of all boxes, except the boxes for Types NMM-3XX and NMM-4XX which are furnished with blank top and bottom ends as standard.

When space only for further branches is required, figure panels on basis of total number of branches and deduct \$1.00 for each breaker pole omitted.

When any panel has both 1 and 2-pole branches, or two or more capacities of breakers, the Square D Company reserves the right to determine the relative positions of the branches on the panels.

When ordering, specify number, number of 1-pole and 1 or 2-pole branch circuits, ampere rating of each branch, ampere rating of mains, flush or surface mounting, and price.

Additions for Increased Mains, with or without Neutral Bar
 2 and 3-Pole Main Breakers Have Common Trip

Main Amperes	2 Ungrounded Poles		3 Ungrounded Poles	
	Lugs Only Each	Circuit Breaker Each	Lugs Only Each	Circuit Breaker Each
50 to 100	\$23.00	\$19.00	\$5.00	\$24.00
50 to 200	84.00	90.00	8.00	*
100 to 200	61.00	71.00	7.00	*

†For use on panelboards with 3 wire mains only.

*Main breakers are limited to 100 amperes.

Square D Saflex Distribution Panels

A Special Combination Lighting and Distribution Panelboard in a Box 20 Inches Wide

The Square D Saflex Distribution Panel was first designed to meet the rigid requirements of the industrial field, with the thought of providing a maximum degree of safety, convenience and dependability in a compact form to control electric service and feeders supplying current for power, heat and light. The Saflex fusible switch units used in these panels have proved, over a decade of actual use, to be highly desirable where trouble-proof service is essential. They insure undisturbed control of electric current where interruptions in electric service are very costly and therefore cannot be allowed.

The Saflex panelboard is made up of interchangeable switch units mounted upon steel channels within a steel cabinet with copper bus bars mounted in an isolated bus compartment in the rear of the switch units. All Saflex panels are listed and approved by Underwriters' Laboratories, Inc.

Saflex panels are used and highly recommended by many of the largest industries in the United States and Canada. They can also be found in many other parts of the world. They are ideally suited for industrials, schools, hospitals and other buildings where safety and dependability are of prime importance. They can be furnished for controlling any of the following services:

- 125, 250 or 575 volts, 3 phase, 3 wire, a.c.
- 120/208 volts, 3 phase, 4 wire, a.c.
- 115 or 230 volts, 1 phase, 3 wire, a.c.
- 125, 250 or 575 volts, 1 phase, 2 wire, a.c.
- 115 or 230 volts, 3 wire, d.c.
- 125, 250 or 600 volts, 2 wire, d.c.

Special Combination Lighting and Distribution Panelboards

Special combinations can be furnished in addition to the standard Saflex units. These may include double throw Saflex switch units, motor starters, meters, current transformers, etc. Prices and complete information upon request.

Bull Dog Rocker Type Lighting Panelboards

CABINET. X Boxes, 15½ Inches; Depth, 4½ Inches; 4-Inch Gutters. W Boxes: Width 20 Inches; Depth 5½ Inches; 4 Inch Gutters. Height in Inches Is Indicated by Numerals in Box Numbers.
Front, One Door Construction. Code Thickness Steel, Black Finish—Flush Spring Locks.

For inner doors, add extra list price shown below, and add suffix "D" to numbers, for example: NTPR316LD.

Flush fronts will be furnished unless surface type is specified on order.

3/2 Wire, Solid Neutral

MAINS. 3-Wire, 125-250 Volts.

BRANCHES: 2-Wire, 125-Volt, 30-Ampere Single Pole Rocker Type Switch and Fuse.

Mains: Lugs Only (Solderless Wire Grips), Solid Neutral

Bull Dog Superba Lighting Panelboards

CABINET. Box, Code Gage Galvanized Steel—20 Inches Wide, 5½ Inches Deep, 4-Inch Gutters. Height in Inches is Indicated by Numerals in Box Numbers. Front, Code Thickness Steel, Black Finish—Flush Spring Locks.

Modified Type. Has the improved features of the Superba design, but is furnished without separate doors over fuses.
Standard Type. Equipped with separate doors over the fuses of each branch circuit, interlocked with the toggle switches for safety.

Numbers and prices include complete panel (less fuses) and cabinet.
 Flush fronts will be furnished unless surface type is specified on order.

Single Fusing—3/2 Wire, Solid Neutral

MAINS. 3-Wire, 125-250 Volts.
BRANCHES. 2-Wire, 125-Volt, 30-Ampere Single Pole Toggle Switch and Fuse.
 Mains: Lugs Only, Solid Neutral

Modified Superba, with Single Door Front

Standard Superba, with Doors over Fuses—Single Door Front

Modified Superba, with Door-in-Door Front

*For Modified Superba Type with door-in-door front (shown at lower left) add suffix letter "D" and use the price of the corresponding Standard Superba Type Panel.

Bull Dog Superba Lighting Panelboards

CABINET. Box, Code Gage Galvanized Steel—20 Inches Wide, 5½ Inches Deep, 4-Inch Gutters. Height in Inches is Indicated by Numerals in Box Numbers. Front, Code Thickness Steel, Black Finish—Flush Spring Locks.

Modified Type. Has the improved features of the Superba design, but is furnished without separate doors over fuses.
Standard Type. Equipped with separate doors over the fuses of each branch circuit, interlocked with the toggle switches for safety.

Numbers and prices include complete panel (less fuses) and cabinet.
 Flush fronts will be furnished unless surface type is specified on order.

Double Fusing—2/2 Wire

MAINS. 2-Wire, 125/250 Volts.
BRANCHES. 2-Wire, 30-Ampere Double Pole Toggle Switch and Fuse. Plug Fuse Type, 125 Volts; Cartridge Fuse Type, 250 Volts.

Mains: Lugs Only

Bull Dog Nofuze Lighting Panels and Cabinets

Circuit Breaker Type

These panels have circuit breakers in the branches in lieu of toggle switches and fuses.

They are adapted for use in buildings where circuits are subject to overloads which would involve much fuse replacement and where frequent switching is done at the panels.

The breakers are quick-make and quick-break with automatic overload trip and inverse-time-limit feature. They cannot be held closed against overload. The trip is automatic and self-indicating with manual reset.

Code gage galvanized sheet steel boxes; width, 20 inches, depth, 5½ inches; gutters, 4 inches. Height of box in inches is indicated by numerals in box catalog numbers shown in tables.

Flush fronts furnished unless surface type specified.

Catalog Nos. listed cover 15-ampere breakers. No increase in price for 20 and 25-ampere breakers. For 35 and 50 amperes, add \$1.00 for single pole and \$2.00 for double pole. Capacity of each branch circuit must be specified on order.

No. NA1B312—with Main Lugs

Type NA1B3

3-Wire, Single Phase, 125/250 Volt, Solid Neutral

FA Service Equipment For New Sequence—Pulfuzsw Type

BASES. MAINS. Moulded Insulating Material. Pull Fuse Switch Unit, 30 Amp., S.P., 125 V., 30 and 60 Amp., D.P., 125-250 V. Solid Neutral Plate Grounded to Box. 60 Amp. with Thru Feeder Connection.
BRANCHES. BOX. S.P. Plug Fuse Connection, Range D.P. 60 Amp. with Solid Neutral. Code Thickness Galvanized Steel. 3/2 Inches Deep.
FRONT. Code Thickness Furniture Steel. Pearl Grey Finish. Flush and Surface Mounting. Ring Handle Catch on Door.

Designed only for the new sequence meter connection with the meter placed in the line side of the service switch.

Following assemblies are shown, all with the neutral connection bonded to the box: first, service switch only; second, service switch with 15-ampere branches; and third, service switch with 60-ampere range or sub-feeder branch, either with or without 15-ampere branches. Intended to be used for 125 to 250-volt, a.c. feeder systems only.

Meter loop connection can be furnished if required, between service entrance switch and range switch and 15-ampere

cutout base, except in combination of service and range switch placed side by side.

All 60-ampere capacity service switches either with or without 60-ampere range switch, are furnished with connections for a thru feeder, so that the main feeder cable can be continued from this service equipment on to an additional center of distribution for the other branch circuits in the building.

Locking or sealing arrangement can be furnished at extra charge. Bell transformer space with partition can also be furnished extra.

For New Sequence: Meter—Switch—Fuse

BASES. MAINS. Made of Sections of Moulded Material. Safety Type Service Entrance Switch with Solid Neutral Ground Connection for 2-Wire, 125 V. and 3-Wire, 125-250 V. Feeder System.
BRANCHES. BOX. 30 Amp., S.P., N.E.C. Plug Type Fuse Connections, 125 V., 2-Wire, Solid Neutral. Code Thickness Galvanized Steel, with Enclosure for Bell Transformer.
FRONT. Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Flush and Surface Mounting. Ring Handle Catch on Door.

No. SE635F

Units with 30-ampere mains have N.E.C. plug type main fuse connections in same non-interlocked compartment with branch circuit fuse connections; upper left-hand fuse for 2-wire mains and both upper fuses for 3-wire mains. Sixty and 100-ampere mains have N.E.C. cartridge type fuse connections under separate door interlocked with switch operating handle.

For omitting bell transformer enclosure, and knock-outs, deduct \$1.00. This decreases cabinet height 3 inches on 12-branch circuit units and under.

With Range Feeder Branch

BASES. Made of Sections of Moulded Material.
BRANCHES. 30 Amp., S.P., N.E.C. Plug Type Fuse Connections, 125 V., 2-Wire, Solid Neutral and 60 Amp., D.P., Solid Neutral Safety Fuslok Type Switch for Range Feeder.
MAINS. Lugs Only. 3-Wire, 125-250 V., Solid Neutral.
BOX. Code Thickness Galvanized Steel, 1½-Inch Gutters for 60 Amp.; 3 Inches for 100 Amp. Main Capacity.
FRONT. Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Flush and Surface Mounting.

*Can also be used for 250 v., 3-phase mains and branches with one phase grounded.

For 30-ampere circuits on Type NPFS-3L, deduct \$3.50 each; for Types NPFS-4L and PFS-3HL, deduct \$8.00 each.

FA Service Equipment

Type A.C. Circuit Breakers

No. LC60-3B5F

With All S.P. Branches

With S.P. and 1 D.P. Branches

- BASE.** Steel Mounting Back with Adjustment.
MAINS. Type A.C. 120 V. Main Breaker, with Insulated, Groundable Solid Neutral. S.P. for 2-Wire, 115 V., A.C. and Double Pole, Individual Trip, for 3-Wire 115-230 V., A.C. Feeder Systems.
BRANCHES. Type A.C. 120 V. Circuit Breakers. 15 Amp. S.P. for 2-Wire Solid Neutral Circuits and 35 Amp. D.P., Individual Trip, for 3-Wire Solid Neutral Circuits.
BOX. Code Thickness Galvanized Steel.
COVER. Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Flush Mounting, F, unless Surface Mounting, S, is Ordered.

One Pole Breaker—Connected A-B-C Sequence

Type NA1BS-4L

Double Row

Single Row

Type NA1BS-4AB

PANELBOARD. Made of Sections of Moulded Material.

BRANCHES. 15 Amp., S.P., Dubbrak Thermal Type Automatic Circuit Breakers for 120 V., 2 Wire, Solid Neutral Circuits.

MAINS. 3-Phase, 4-Wire, 120-208 V., Solid Neutral.

BOX. Code Thickness Galvanized Steel, 4-Inch Gutters.

FRONT. Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Flush Mounting unless Surface Is Ordered.

It is standard practice to assemble 3-phase, 4-wire lighting and appliance branch circuit panelboards so that all branch circuits on each phase are grouped together.

Ordinarily this scheme of connection meets all requirements, and since it is possible to make panelboards of this type somewhat narrower, a saving of space is effected. When panelboards are mounted on columns in industrial plants, the matter of additional width might be objectionable.

However, specifications occasionally specify the adjacent circuit branches to be connected in the sequence of phase A, B, and C, repeating this connection all the way from the top to the bottom of the panelboard.

The cost of the A, B, C, sequence arrangement is slightly higher than that of the group-phase arrangement, because a wider box is required and branch circuits require copper connecting straps between the main bus bar and circuit branches.

Prices are based on 15-amp. breakers, 20 and 25-amp. breakers supplied at same prices except when increased capacity bus bars are required; 35 and 50-amp. breakers, \$1.00 extra per circuit, plus extra list for increased main.

FA Industrial Column Type NA1BC Circuit Breaker Panelboards and Cabinets

One Pole Breaker

PANELBOARD BRANCHES. Made of Section of Moulded Material. 15 Amp. S.P. Dubbrak Thermal Type Automatic Circuit Breakers for 120 V., 2-Wire, Solid Neutral Circuits.

MAINS BOX. FRONT. Cable Lugs Only with Solid Neutral. Code Thickness Galvanized Steel with Side and Rear Wiring Gutters. Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Surface Mounting unless Flush is Ordered.

JUNCTION BOX. Code Thickness Galvanized Steel. Neutral Plate Included. Size and Design as Shown Above.

Designed to be mounted between the flanges of a 10-inch H column; it may also be used to advantage in any other location where the available space will not accommodate a standard width panelboard.

Design A has the neutral plate located in an extension of the panelboard box. This extension has a removable screw cover which is separate from the panelboard front. There is also furnished a junction box for mounting on the ceiling directly above the panelboard location.

Design B is the same as Design A, except that the neutral plate is mounted in the junction box on the ceiling. In both

designs, A and B, the contractor must furnish one or more riser conduits between the junction box and the panelboard.

Design C is similar to Design B, except that the connection between the junction box and the panelboard box is made by means of a wire duct instead of riser conduits.

Wire and cable duct is furnished extra as follows:

Height Duct..... inches	12	24	36	48	60
Each.....	\$5.00	8.00	11.00	14.00	17.00
Width Duct..... inches	8	8	8	8	8
Depth Duct..... inches	5	5	5	5	5

Over 60 inches high, add \$3.50 per lineal foot.

3-Wire—125/250 V., Solid Neutral

Prices are based on 15-amp. breakers, 20 and 25-amp. breakers supplied at same prices except when increased capacity bus bars are required; 35 and 50-amp. breakers, \$1.00 extra per circuit, plus extra list for increased main.

When Design A is specified add to box height as follows: 4 to 24 branches, 6 inches; 26 to 42 branches, 10 inches. No additional charge.

Trumbull Unit Lighting Panelboards

125 Volts D.C., 125-250 Volts A.C. or D.C., and 250 Volts A.C.

A unit lighting panelboard of the sectional type, which is an essential part of the interior distribution system, provides for multiple grouping of many small circuits or branches; facilitates their control and allows for convenient renewal of protective devices.

This type of panelboard is available in two types: Standard, with 20-inch width box, and the narrow type panel with a 12½-inch width box. The latter is particularly suitable for mounting in areas limited or restricted.

APPLICATION.—A unit lighting panelboard is designed for low voltage lighting distribution, 125 volts d.c., 125-250 volts a.c. or d.c. and 250 volts a.c. where the capacity in all branch circuits does not exceed 30 amperes.

CONSTRUCTION.—This panel is constructed of standardized parts,

thereby providing additional features of flexibility and interchangeability.

Dead front type, consisting of an assembly of moulded bakelite sections, each containing a maximum of four tumbler switches, with fuses of the plug or cartridge type. Tumbler switches are available in both single and double pole, having a rating of 30 amperes, 250 volts. Panel is furnished complete with box of code gage galvanized sheet steel and trim. Solderless lugs standard in the mains of all panelboards.

Trumbull Circuit Breaker Lighting Panelboards

125 Volts D.C., 125-250 Volts or 250 Volts A.C.

A circuit breaker lighting panelboard is particularly adaptable when automatic overload protection and flexibility are important factors of the installation.

This type of panelboard incorporates the Type AT Circuit Breaker with improved electrical and mechanical features.

APPLICATION.—This panelboard is designed for low voltage, branch circuit lighting and power distribution, 125 volts d.c., 125-250 volts or 250 volts a.c. where the capacity of any branch circuit does not exceed 50 amperes, although one subfeed up to 225 amperes can be furnished.

CONSTRUCTION.—Breakers are assembled on a heavy black enamel steel back plate, to

accommodate the mounting of either 1, 2 or 3-pole breakers of 15, 20, 25, 35 or 50-ampere rating. This provides a feature of interchangeability which may be desirable at some later date to accommodate changes within the electrical wiring system.

Breakers are calibrated and sealed at the factory to prevent unauthorized tampering or changes.

Panelboard boxes are 4½ inches deep, with the exception of where main breakers are of 100 or 225 amperes, frame size, which require a box 3¼ inches deep.

Solderless lugs standard in the mains of all panelboards.

This panelboard is also available in the narrow type construction for use in areas where space may be a limiting factor.

Trumbull Multi-Breaker Lighting Panelboards

115-230 Volts A.C.

This type of panelboard is particularly suitable for restricted space, usually encountered in modern homes, stores and office buildings.

APPLICATION.—Designed for 115-230 volts a.c.

Branch circuit breakers are available in 15, 20, 25, 35 and 50-ampere, single and double-pole.

CONSTRUCTION.—Panel is assembled with molded unit blocks, each of which houses a number of unit pole breakers. The entire unit is rivet sealed with metal cover at the factory to prevent unauthorized changes.

Available with two types of breakers: one, utilizing the Type MB breaker, which can house as many as four single pole units in one block, and the other the Type M breaker, which houses two single pole units in one block.

The latter is particularly advantageous where added flexibility may be desired.

Solderless lugs standard in the mains of all panelboards.

Trumbull Column Type Lighting Panelboards

Single-Phase, 115-230 Volts A.C., 3-Phase, 4-Wire 115-208 Volts A.C.

A new type of panelboard, which has been particularly designed for use in factory buildings where it may be desirable to assemble panelboards in the web of H columns.

APPLICATION.—Available for single-phase, 115-230 volts a.c., 3-phase, 4-wire 115-208 volts a.c. with branch circuits ranging from 15 to 50 amperes inclusive, single and double pole.

CONSTRUCTION.—This type of panelboard incorporates the use of Type M breaker, consisting of 2 unit pole breakers, assembled in a moulded unit block and rivet sealed to prevent any tampering. This panel is furnished in two widths, 8¾-inch designed for a 10-inch H beam, and a 7¼-inch maximum width panel designed for an 8-inch beam.

Solderless lugs standard in the mains of all panelboards.

WHEN ORDERING PANELBOARDS

specify Surface or Flush Mounting. Flush mounting will be furnished unless Surface is specified. Standard drilling furnished on all Lighting Panelboard Boxes unless otherwise specified on order.

For complete information regarding additions for special features, ask the nearest GRAYBAR office.

Trumbull Circuit Breaker Panelboards

Standard Type

*Types NAB and NMM

Single-Phase and 3-Phase, 4-Wire

*No. NAB-3 and No. NAB-4 equipped with Type AT breaker. Price is for 15, 20 or 25-ampere rating. For 35 or 50 amperes, single pole add \$1.00; for 2 poles add \$2.00. No. NMM-3L and No. NMM-4L equipped with Multi-Breaker for a.c. service only. Price is for 15, 20, 25, 35 and 50-ampere rating. For each double pole breaker when substituted for 2 single poles add \$1.00.

Numbers and price include combined panel, barriers, code gage steel cabinet and tumbler switches. Fuses not included in price.

Standard drilling furnished on all lighting panelboard boxes unless otherwise specified on order.

For combination panels having some circuits tumbler switched and some with fuses only in branch circuits requiring only one door opening, price should be determined

by figuring the panel as occupying the same space as an equivalent panel with tumbler switches in all circuits less a deduction of \$1.00 each for each tumbler switch omitted. If split bus bars are required between two sections add \$6.00 to the price.

Solderless lugs standard in the mains.
When ordering panelboards, specify surface or flush mounting. Flush mounting will be furnished unless surface is specified.

Numbers and price include combined panel, barriers, code gage steel cabinet and tumbler switches. Fuses not included in prices.

Standard drilling furnished on all lighting panelboard boxes unless otherwise specified on order. Solderless lugs standard in the mains. When ordering panelboards specify surface or flush mounting. Flush mounting will be furnished unless surface is specified.

*For combination panels having some circuits tumbler switched and some with fuses only in branch circuits requiring only one door opening, prices should be determined by figuring the panel as occupying the same space as an equivalent panel with tumbler switches in all circuits less a deduction of \$1.00 each for each tumbler switch omitted. If split bus bars are required between two sections add \$6.00 to the price as per above.

Trumbull Converte-Fuse Power Panelboards

With Enclosing Steel Cabinets

This panel is particularly adaptable where space is a limiting factor and rugged design and simplicity are desirable features.

APPLICATION—This type of panelboard is designed for 125-250 volts or 600-volt service. Branch circuits are available in 1, 2 or 3-pole, from 30 to 600 amperes, inclusive.

CONSTRUCTION—This panel consists of an assembly of unit bakelite sections mounted on a steel back plate, or channel iron construction.

Complete dead front design is provided—the individual base sections and removable caps being

made of bakelite. Sections are interchangeable. The caps not only serve as holders for the fuse, but when pulled, may act as a disconnect switch.

This panelboard is adaptable in either vertical or horizontal assembly. Solderless lugs standard in mains.

Base Prices—Main Capacity

Base price includes main lugs (either 2, 3 or 4-wire), top and bottom gutter, with respective sections of bus, box and front to circuit edge. Remaining equipment for complete panelboard included in circuit prices.

125 or 250 Volts Only

For Main or Branch Cir. Amperes	AMPERES				
	200	400	600	800	1200
200 and Under	\$20.00	\$30.00	\$50.00	\$80.00	\$125.00
400 and Under		50.00	70.00	110.00	150.00
600 and Under			90.00	150.00	190.00

600 Volts or Less

For Main or Branch Cir. Amperes	AMPERES				
	200	400	600	800	1200
200 and Under	\$37.00	\$47.00	\$67.00	\$93.00	\$137.00
400 and Under		69.00	87.00	124.00	162.00
600 and Under			100.00	162.00	200.00

For 250-volt panel only with 30, 60 or 100-ampere circuits only, no larger, requiring cabinets not over 6 inches deep with maximum 4-inch gutters and not exceeding 24X in height, (73-inch), mains not over 600 amperes, deduct \$10.00 from base price.

Circuit Prices

Includes circuit sections complete and portions of busbars, box and trim. All circuits interchangeable or convertible (fusible) downward.

X = 2 3/8 inches x full panel width.

Panel Com. with Cabinet. ea.	\$12.00	24.00	36.00	48.00	60.00

†Price includes lugs and portion of busbars, back plate, box and trim that may be necessary.

Specify flush or surface mounting. Blank box-ends furnished unless knockout information accompanies order. Solderless lugs standard in the mains.

Trumbull Swing-Wa Power Panelboards

Swing-Wa type of construction provides a dead front safety type panelboard for heavy duty, light and power applications.

APPLICATION—This type of panelboard is available for 575 volts a.c. and 250 volts d.c. service. Branch circuits can be furnished in 1, 2 or 3-pole construction, 30 to 400 amperes inclusive.

CONSTRUCTION—Individual units are enclosed in their own protective steel compartment and possess common dimensions allowing for the maximum of interchangeability, flexibility and rearrangement of circuits. The individual units provide an ingenious simplified switching system, built into the cover and easily operated by hand. Equipped with a newly developed operating handle.

Full floating contacts and thermostatic contact reinforcements. Solderless lugs standard in mains.

Base Prices—Main Capacity

Base price includes main lugs (either single or 3-phase), top and bottom gutter, with respective sections of bus, box and front to circuit edge. Remaining equipment for complete panelboard included in circuit prices.

Prices for Connecting Busses on Multi-Section Panels

Panelboards whose circuit section in height exceeds 60 inches should be ordered as two separate panels of equal height, mounted in one box. Double lugs can be supplied on one of these panels to permit facilities for cable connection by the contractor. This combination is priced as two separate panels with addition for double lugs on one panel. When desired the two panels may be furnished with insulated and tapped bus bar connections in accordance with the following:

Total Amp. Cap. Mains	400	600	800	1200
2-Wire..... each	\$58.00	\$63.00	\$66.00	\$74.00
3-Wire..... each	83.00	90.00	95.00	106.00

Additional Prices for Special Features

Neutral Bars, 3-Wire, Single Phase, 110 or 220 Volts, Solid Neutral Service

Trumbull Circuit Breaker Convertible Distribution Power Panelboards

Base Prices—Main Capacity (Up to 600 Volts A.C.)

This particular type of panelboard is adaptable where automatic overload current protection is desired for heavy duty light and power distribution.

APPLICATION— Available for 125-250 volts a.c. and d.c. systems and 600 volts a.c. Branch circuits are available from 15 to 600 amperes inclusive, 1 and 3-pole.

CONSTRUCTION— This type of panelboard is of the sectionalized type with breakers mounted on steel back plates, thereby making it readily possible to provide space in the cabinet for future additional circuits, or to interchange circuits when the occasion arises. The larger size circuit breakers above 50-ampere frame equipped with

removable trip units, thus allowing in certain instances desirable changes in capacity without removing the unit itself. Because of standard breaker dimensions, it is also possible to interchange units of different poles or capacities. Solderless lugs standard in mains.

NOTE—When ordering panelboards specify flush or surface mounting. Boxes without knockouts unless arrangement specified on order

Base price includes main lugs (either single or 3-phase), top and bottom gutter, with respective sections of bus, box and front to circuit edge. Remaining equipment for complete panelboard included in circuit prices.

MAIN BREAKERS—Figure same as branch circuit from circuit prices after adding base price considering main breaker as largest branch circuit.

*Space Only price is used when circuits do not evenly balance; also when space is left for future additions.

†This rating to be used only when circuit is later to be changed to a rating of 70, 90, or 100 amperes.

‡These ratings to be used only when circuit is later to be changed to a rating of 125 to 225 amperes.

§This rating to be used only when circuit is later to be changed to a rating of 250 to 600 amperes.

||These circuits are non-convertible.

Pricing Information

In pricing there are six important steps: to avoid mistakes each one should be checked.

1. Select proper base price from table.
2. Add correct price for each branch circuit required as per first two columns of prices. Be sure to have correct ampere capacity, frame size and voltage rating.
3. Separate spaces per last column must be added when circuits do not evenly balance because of double branch construction for 50 and 100 ampere frame sizes or when future additions are to be provided for.
4. If solid neutral bar is required, add price additions as per following table:

Additions for Solid Neutral Bars					
Ampere Cap. of Neutral Bar.....	200	400	600	800	1000
Each.....	\$12.00	16.00	20.00	28.00	36.00

Price includes neutral bar, main lug, lug for each branch circuit, and portion of back plate, box and trim.

5. Extra features may be required such as lugs for feed-thru tables.

6. If panel is too large (over 72 inches high) to be built as a single panel, divide into two or more sections and price each section as a separate and distinct panelboard.

Additions for Single-Pole Breaker

Solderless lugs—mains standard. Branch circuits available at following additions.

No. of Volts.....	600	250 or 600
Additions.....	each \$1.50	1.75 6.00
Amp. Frame.....	*50	100 225 600

*For 50 amperes, 250 volts all ratings and 50 amperes, 600 volts, 15, 20, 25 and 35-ampere ratings washer head screws are standard—solderless lugs not required.

Specify flush or surface mounting. Blank box-ends furnished unless knockout information accompanies order.

G-E Mazda Lamps

Graybar Lighting Service Prescribes Amount and Quality of Light for Real Light Conditioning

Light Conditioning is Profitable Lighting

Select G-E Mazda Lamps with the four basic principles of Light Conditioning firmly in mind:

1. Enough light.
2. Freedom from glare.
3. No sharp contrasts.
4. Light in enough places.

Light Conditioning is the business technique of fitting the lighting system to the work to be done; not the work to the system. It is smart, the sensible way to spend your lighting dollar because it stresses the importance of lighting efficiency and lamp efficiency.

Remember that when buying lamps, you are purchasing all those factors of profit and efficiency dependent on light. Think them over carefully, before spending a dollar to save a penny.

Ask for facts and figures on Light Conditioning.

Check How Light Conditioning Pays for Itself

In Manufacturing . . . increases efficiency . . . speeds up production . . . decreases spoilage and rejects . . . improves employee morale . . . reduces accidents . . . permits utilizing maximum floor space . . . allows better supervision . . . increases productive capacity of employees and equipment.

In Selling . . . attracts new customers . . . holds old ones . . . increases display effectiveness . . . enhances merchandise, makes selection easier . . . draws traffic to inactive departments . . . results in fewer returns, increased customer satisfaction . . . marks store as modern and progressive.

In Offices . . . increases property values . . . improves employee efficiency and morale . . . reduces costly errors and mistakes . . . creates more pleasant surroundings . . . reduces nervous and muscular

fatigue . . . eliminates a major cause of eyestrain . . . conserves eyesight, health and energy.

Cheap Lighting Demands Quality Lamps Operated at Proper Voltage

Figure it on the basis of Cheap Lighting, and you will always specify the best lamps, Mazda lamps bearing the G-E monogram.

That makes sound common sense when recalling that current costs from 10 to 20 times the price of the lamps. And that is why the real measure of a lamp cost is how efficiently the lamp converts the electrical energy into light. Yet slight variations in purity of materials, in design and in procedure can make a great deal of difference in efficiency, and what is more important, in whether you are getting your money's worth from your lighting dollar.

Mazda research and G-E manufacture are the best guarantee that you are receiving every bit of light that you pay for. The mark Mazda stands for years of continuing research and a constant check on processes throughout manufacture to insure high quality. At G-E factories the lamps are subjected to continuous tests and checks by inspectors of the Electrical Testing Laboratories, the largest independent laboratories of this type in the world.

When you add to G-E research and G-E manufacturing, Graybar distribution, you have a combination that is hard to equal. The result is the finest in lamps, readily available from adequate stocks plus intelligent understanding of your lighting needs.

When you burn lamps under their rated voltage, you waste useful electrical energy. Or if you burn them above their proper voltage, life is materially shortened. Make certain you get all the light you pay for by using lamps of the proper voltage.

G-E Mazda Lamps

Bulb Shapes

Base Designations

How to Order Lamps

All orders should give the following information:
QUANTITY.—Number of lamps desired. Purchasers will avoid delays and get best discount by ordering standard package quantities.
SIZE OF LAMPS.—Specify wattage of multiple lamps and lumens of street series lamps.
VOLTAGE.—For multiple lamps.
AMPERES.—For series lamps.
BULB.—For example; A-19, G-25, T-8, P-19, PS-30, etc. The letter in the bulb designation indicates its shape and the

figure its approximate diameter in eighths of an inch. Thus a PS-30 bulb is pear shaped and is approximately 30/8 or 3 3/4 inches in diameter. G indicates a round (globular), and T a tubular bulb. The letter A indicates the standard line bulb shape with inside frost, unless otherwise noted.
FINISH OF BULB.—Clear, inside frosted, white owl, daylight, white, etc.
BASE.—Medium screw, mogul screw, candelabra screw, etc.
SERVICE.—For example; projection, floodlight, locomotive headlight, etc.

Special Lamps

Any Mazda lamp requiring a change in construction from the standard, in voltage, bulb shape or finish, basing or special etching will take a special price, which may be obtained upon application. All orders for special lamps except special etching may be filled either short or in excess, within the limits of 10

per cent, except that on orders for ten lamps or less there will not be any shortage or excess. Orders for Mazda lamps with special etching may be filled either short or in excess by 5 per cent; except that on orders for less than forty lamps the shortage or excess may equal but not exceed two lamps.

Discount Schedule for Large Lamp Purchasers

Standard Package Discounts

A. LARGE MAZDA LAMPS.—Standard package discounts may be allowed on the purchase of any quantity of any large Mazda lamps for delivery at one time at one place, provided such purchase includes at least one standard package quantity defined as follows:

1. A standard package quantity is that No. in Standard Package, designated for each lamp in the manufacturer's price schedules, and the lamps in such a standard package quantity may be only of one voltage and finish.

2. An assortment of different large Mazda lamps which have the same designated No. in Standard Package, provided the total quantity of lamps in the assortment is equal to the designated No. in Standard Package, and lamps in such a standard package quantity may be of different voltages and finishes of bulb.

B. TYPE D LAMPS.—Standard package discounts may be allowed only on any purchase of an exact No. in Standard Package (or multiple thereof) as designated for each lamp in the manufacturer's price schedules, and the lamps in such a standard package quantity may be only of one wattage, voltage, and finish of bulb. However, Type D lamps of different finishes may be assorted to make a standard package quantity provided the quantity of lamps of any one finish is a multiple of six and provided all lamps are of the same wattage and voltage.

C. Under no circumstances may Type D lamps and large Mazda lamps be combined for the purpose of allowing standard package discounts.

Provision is made for contracts on less than the \$150.00 basis in order that purchasers not at the time eligible to at least the \$150.00 basis, may obtain the greatest discounts justified by their total purchases within a year, in case purchases amount to \$150.00 or more.

G-E Mazda General Lighting Service Lamps

110, 115, and 120 Volts

A-19 A-19 A-19 A-21 A-23 A-25

T-24

For ordinary use in homes, stores, offices, schools and factories. The light maintenance, particularly in the lamps of higher wattage, is best when lamps are burned vertically, base up.

Finishes: clear, inside frosted for diffusion; white bowl for open type equipment.

Medium bipost base lamp is made of hard glass in a small bulb permitting smaller size lighting equipment. Resistant to bulb failure resulting from contact with rain or snow.

Medium Screw Base

G-E Mazda Glow Lamps

S-14 S-14 G-10 G-10 T-4 1/2

A glow lamp produces light through the agency of electrically excited rare gases. Has no filaments and is not seriously affected by vibration and voltage fluctuation. Operates directly from commercial lighting circuits without the use of accessory devices. Used as pilots, indicators, and signals; as a stroboscopic source; as oscillators; in the home as night lights; in public buildings as exit lights.

The 2 1/2-watt lamp is adapted for use as a fluorescent exciter where simplicity and low cost are important.

No. 5 No. 16A No. 11A No. 21 No. 31 No. 75

No. 5 Synchro-Press

A midget photoflash lamp with a wide peak of illumination for all-around use. Contains fine aluminum wire.

Flash on batteries only. Total light output, 14,000 to 16,000 lumen seconds. Bulb; B-11, clear, single contact bayonet base.

Packed 60 in a standard package.

No. 5 each \$.13

No. 16A Synchro-Press

Has wide illumination peak; recommended for all-around press and commercial use. Contains fine aluminum wire.

Flash on batteries only. Total light output, 40,000 to 45,000 lumen seconds. Bulb; A-17, clear, medium screw base.

Packed 60 in a standard package.

No. 16A each \$.15

No. 11A Synchro-Press

An amateur lamp with high peak illumination best for open flash shots. Contains aluminum foil.

Operates on 3 to 125 volts. Total light output, 18,000 to 22,000 lumen seconds. Bulb; A-15, clear, medium screw base.

Packed 60 in a standard package.

No. 11A each \$.13

No. 21 Synchro-Press

Similar to No. 11A in construction and application. Has extra covering power for press use and between-the-lens shutter synchronizers.

Operates on 3 to 125 volts. Total light output, 50,000 to 60,000 lumen seconds. Bulb; A-19, clear, medium screw base.

Packed 60 in a standard package.

No. 21 each \$.15

No. 21B Synchro-Press

Same construction as No. 21, with blue filter coating for correct rendition with outdoor type of color films. Light output approximately one-third of No. 21.

Bulb; A-19, clear, medium screw base.

Packed 60 in a standard package.

No. 21B each \$.20

No. 31 Focal Plane

Specifically for synchronized use with focal plane shutter cameras, up to and including 4x5-inch negative size. Has ultra-long peak of illumination.

Flash on batteries only. Total light output, 70,000 to 80,000 lumen seconds. Bulb; A-21, clear, medium screw base.

Packed 60 in a standard package.

No. 31 each \$.23

No. 75

Has extremely high peak of illumination. For use where great intensities of light from a single source are desired. Not designed for synchronized use. Aluminum foil filling.

Operates on 3 to 125 volts. Total light output, 160,000 to 180,000 lumen seconds. Bulb; PS-35, clear, medium screw base.

Packed 24 in a standard package.

No. 75 each \$.55

G-E Mazda Photoflood Lamps

105-120 Volts, A.C. or D.C.

No. 1 No. 2 No. 4 No. R2

No. 1

Draws 250 watts at 115 volts photographically equal to as much as 750 watts in standard lighting lamps.

Rated life, 3 hours at 115 volts. Bulb; A-21, inside frosted, medium screw base.

Packed 60 in a standard package.

No. 1 each \$.15

No. 2

Draws 500 watts at 115 volts, but photographically is equal to as much as 1500 watts in standard lighting lamps.

Rated life, 6 hours at 115 volts. Bulb; A-25, inside frosted, medium screw base.

Packed 24 in a standard package.

No. 2 each \$.30

No. 4

Draws 1000 watts at 115 volts, and is much more effective photographically than the regular 1000-watt lamp.

Rated life, 10 hours at 115 volts. Bulb; PS-35, inside frosted, mogul screw base.

Packed 24 in a standard package.

No. 4 each \$ 1.20

No. R2

Same as No. 2 in current consumption, light output and life. Specially shaped bulb, with inside coating of mirror aluminum redirects the light so that the most effective illumination is obtained within a 60° zone.

Diameter, 5 inches; overall, 6½ inches. Bulb; R-40, inside frosted, medium screw base.

Packed 12 in a standard package.

No. R2 each \$.85

Daylight Bulb

Same characteristics as standard photoflood lamps except for inside frosted daylight bulb. Useful for color photography, especially where daylight and artificial light must be mixed.

G-E Mazda Sunlight Lamps

A-21 A-17 PS-22

Produces most of the beneficial effects of the ultra-violet.

No. S-4—Admedium Screw Base

Emits characteristic blue-green light of mercury spectrum. For a total input of 120 watts, a fixture containing this lamp, at a distance of 54 inches, produces ultraviolet of about the intensity of midsummer noonday sunlight. Has A-21 bulb.
No. S-4..... each **\$8.50**

No. S-1—Mogul Screw Base

Has approximately the same ultraviolet potency as the No. S-4; delivers a large proportion of visible light. Total input, 500 watts; enables lamp to deliver more heat energy. With PS-22 bulb.
No. S-1..... each **\$5.75**

No. S-2—Admedium Screw Base

A mild source of ultraviolet for use where the Nos. S-1 or S-4 are not desirable. Total input, 130 watts. Has A-17 bulb.
No. S-2..... each **\$3.75**

G-E Mazda CX Lamps

A-19 G-30 G-38

A source of energy widely used on poultry and other animals. Consists essentially of a tungsten filament in an inside frosted bulb of special ultraviolet-transmitting glass. Also emits infrared (heat energy), and is widely used as a heat lamp. Its production of ultraviolet is so small that it is not used for irradiation of human beings, who can benefit more from its infrared.

Operates directly on a.c. or d.c., without the use of transformers or other regulating devices.

G-E Type H Mazda Mercury Lamps

T-10 T-9 T-16

Type H Mercury Lamp generates up to 80 per cent more light per watts than do other illuminants in general use. Designed for use on standard lighting circuits with special auxiliary equipment designed to produce correct lamp starting and operating values.

When used in combination with equal lumens of incandescent light, objectives are seen in the approximate daylight colors. Several minutes are required for mercury lamps to come up to full brilliance.

Type H-1, 400 watts, consists of an interior arc tube, containing the electrodes and mercury, enclosed within an outer tubular bulb which makes the lamp less subject to the effects of surrounding temperature.

Orders should specify whether lamps are for base up or base down operation.

Type H-2, 250 watts, has only a single bulb. Sensitive to moving air and should be used in equipment which protects it from air currents. May be burned in any position.

Type H-4, 100 watts, is sometimes referred to as a capillary lamp, because the arc discharge takes place within a small capsule-like tube of quartz. The outer bulb serves merely as a protective container.

G-E Mazda Train and Locomotive Lighting Service Lamps

Medium Screw Base

A-17 A-19 A-21 A-23 S-14 P-25

Trainlighting. To insure satisfactory lamp performance voltage regulating devices should be adjusted to maintain rated lamp voltage at the socket. The 30 and 60-volt lamps recommended as being best adapted to average voltage conditions encountered in trainlighting service.

Locomotive Headlighting. When operated at the rated voltage, in suitable headlight equipment, this lamp gives satisfactory service. Bulb must be protected from water which might strike it while hot. The 250-watt lamp is designed for road locomotives; 100-watt for switching locomotives.

Locomotive Cab Lighting. Designed for all locomotive lighting except headlighting.

G-E Sealed Beam Mazda Lamps

For 1940 Cars

The Sealed Beam system, standard on most 1940 cars, is a two-beam system. The country beam gives a maximum of 75,000 beam candlepower; the traffic beam, maximum relief from glare.

The G-E Sealed Beam Mazda lamp fits all cars using the Sealed Beam system. Left and right lamps are interchangeable. The aiming mechanism is simple, requiring only a screwdriver. Beam pattern for all cars is identical.

Packed 8 in a standard package.

No. 4030..... each \$1.10

G-E Mazda Aviation Service Lamps

A-19 G-25 T-20 T-32 G-64 G-96

The development of Mazda lamps for aviation service has aided night mail and transport flying. Effective functioning of aviation lighting equipment requires accurate positioning. Bipost and prefocus bases provide a high degree of accuracy.

Airport code beacons take the 500-watt PS-40 bulb general service lamp fitted with mogul prefocus base, while the airway code beacons use the 200-watt PS-30 bulb general service lamp with mogul prefocus base. For airport boundary light, 6.6-ampere series lamps are widely used. The 50 and 100-watt general service lamps are employed in obstruction lights.

G-E Mazda Driving and Passing Lamps

For Pre-1940 Cars

For pre-1940 cars, benefits of Sealed Beam lighting may be obtained by installing auxiliary units equipped with G-E Mazda Driving and Passing lamps.

These lamps are similar to G-E Sealed Beam Mazda lamps except that they are smaller and the system requires lamps in pairs—one for driving and one for passing. The lamps are wired into the regular lighting system to work automatically with it. Use of Mazda Driving and Passing lamps

adds 35,000 beam candlepower to the 20,000 found on average pre-1940 cars.

Packed 8 in a standard package.

Height in.	1⅞	1⅞	1⅞	2¼	3⅞	6

§Miniature flange base.

‡Fitted with miniature bayonet base.

McGill Crescent Coloring Fluid and Frosting

Used extensively during holiday seasons to color and frost lamps, by dipping, for temporary outdoor coloring schemes; not weatherproof. Recommended for lamps up to 60 watts.

Apply all tints and shades to lighted lamps; apply frosted white to unlighted lamps—then light and let dry.

Available in amber, red, blue, pink, ruby, green, canary, violet, purple and frosted white. When ordering, specify color.

Dipping cup is included.

G-E Mazda F Fluorescent Lamps

Stores

Factories

For lighting stores, factories, offices, homes, showcases, vending machines, etc.

The size and shape of fluorescent lamps allow freedom of application for creative design in lighting. Has less than 50 per cent of the radiant heat of filament lamps. No concentration of heat in one spot. Unique application possibilities, exposed or concealed, singly or combined, one color or several colors.

The low surface brightness of the 1½-inch lamp permits its use for many direct lighting applications. The small diameter of the 1-inch lamp makes it an effective tool for special attraction lighting. The 2½-inch lamp has slightly greater surface brightness than the 1½-inch lamp.

Furnished in seven colors. Daylight color is effective in many color-matching and inspection operations. White is nearly the color of regular incandescent lamps. Other colors have a glowing quality obtainable only by fluorescence.

G-E Mazda F Daylight and White Fluorescent Lamps
Medium Bipin Base

For use only with specially designed auxiliary equipment to produce proper electrical values. Assures maximum use from the wiring system. Burns in any position.

Rated average life, 2500 hrs. (except 100-watt, 2000 hrs).

Packed 24 in a standard package (except 100-watt, which is 12).

*Available in blue (B), green (G), or pink (PK) at 10 cents additional charge; in gold (GO) or red (R) at 20 cents additional charge. When ordering these colors, substitute proper symbol in abbreviation in place of D or W, thus: F15T8/PK.

†Approximate lumens and lumens per watt when measured at 80°F. ambient and under specified test conditions. Initial values apply after 100 hours of operation.

G-E RF Fluorescent Luminaires

Cooper Hewitt

No. CH-200

High Light Output. The G-E 85-watt RF (Fluorescent) lamp and single tube reflector have a light output of over 3200 lumens. For industrial lighting, this lamp may be used to obtain the higher levels of illumination desirable for increased production and better employee welfare.

The G-E RF (Fluorescent) lamps and the two-tube reflector have an initial output of approximately 6500 lumens. The Cooper Hewitt Fluorescent luminaire has an efficiency of more than 80 per cent in the lower hemisphere.

Low Installation Cost. Installation costs for the Cooper Hewitt Fluorescent luminaire will be low as existing wiring will frequently prove adequate. The nearly normal starting current allows full use of branch circuit wiring and fuses. The complete luminaire is assembled readily. Suspension is easily and substantially fixed with the two-point hangers supplied as part of the luminaire. Taps for various voltage conditions permit operation of the lamp at prevailing supply line voltages.

No Dark Shadows. Diffused light from a relatively large-area low-brightness source minimizes shadows. Glare is also minimized. Operators do not have to fight against sharp reflections from bright metal parts.

Dust-Tight Auxiliary. The electrical equipment is contained in a dust-tight compartment. This, together with low operating temperatures, makes the luminaire admirably suited to normally dusty and lint-laden atmosphere.

Available in Two Industrial Colors. These two colors, blue-white and industrial-white, are interchangeable in the luminaires permitting a choice of either color. The blue-white lamp has a complete spectrum output which emphasizes the cooler blue end while still providing enough red and green to render colors sufficiently pronounced for most industrial purposes. The industrial-white lamp also has a complete spectrum and will give somewhat warmer lighting for manufacturing areas with a more natural appearance of materials. Psychologically cool due to their distinctive colors, light from the RF (Fluorescent) lamps is also physically cool due to their high lumen output for current consumed.

Full-Wave Rectified Lamp Circuit. Because of the Cooper Hewitt full-wave rectifier-type circuit, operating from an alternating current supply, the RF (Fluorescent) lamp furnishes a virtually steady source of light. This type of circuit, with the use of a G-E Pyranol condenser, improves the power factor to 83 per cent. Higher power factor can be obtained if external changes are in the circuit.

Specifications. White porcelain enamel reflector surface. Reflector cut-off (from vertical) 70°. Clearance required, 12 inches below ceiling.

Supply line voltage, 105-125, 208-250; 60 cycles only. Fifty cycle equipment available on special order.
