
I.—Handling

The use of any tools which might puncture the treated wood shall not be applied within one foot above or one foot below the groundline area. See Paragraph B.

J.—Storing

Treated poles held in storage shall be piled upon treated or other non-decaying skids in a clean, well ventilated location free from vegetation and decaying wood. Skids shall be of such strength as to support the poles without producing injurious distortion of any of them, and of such height that no part of any pole shall be less than one foot above the surface of the soil.

American Standard Specifications for Western Red Cedar Poles

O—Introduction

These specifications cover western red cedar poles. The poles are to be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles (05c2—1931), which is part of these specifications.

The length and class of the poles wanted shall be stated in the orders.

Poles furnished under these specifications may be either seasoned or unseasoned. If seasoned poles are specifically called for in an order, the purchaser shall specify the seasoning requirements to be met.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

1.—Material Requirements

1.1—Species

All poles shall be of western red cedar (*Thuja plicata*) cut from live timber.

1.2—Prohibited Defects

All poles shall be free from sap rot, cracks, bird holes, plugged holes and injurious checks; from splits, shakes, hollow and decay in the tops; and from damage by marine borers. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

1.3—Limited Defects

1.31 DEAD STREAKS.—All poles shall be free from dead streaks that are wider than one-fourth ($\frac{1}{4}$) of the circumference of the pole at the point of measurement.

1.32 DECAY.—Poles shall be free from decay and from visible evidence of the presence of wood-rotting fungi except as permitted under Defective Butts.

1.33 DEFECTIVE BUTTS.—No poles shall have in the butt surface splits or checks extending from one point on the periphery to another point on the periphery and thence upward more than two (2) feet.

No pole shall have hollow heart, the diameter of which exceeds one-third ($\frac{1}{3}$) the butt diameter or the depth of which exceeds two (2) feet. The depth of hollow heart shall be measured from the butt surface.

Rot is permitted in the butt surface provided the aggregate area of rot and hollow heart does not exceed ten (10) per cent of the entire butt surface.

Complete circular shakes may be present on the butt surface provided the diameter of the ring which they follow is not more than one-third ($\frac{1}{3}$) of the diameter of the butt.

1.34 GRAIN.—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

1.35 INSECT DAMAGE.—All poles shall be free from insect damage, except that pin holes circular in outline, not more than one-sixteenth ($\frac{1}{16}$) of an inch in diameter, and not greater in number than fifteen (15) in an area of four (4) square inches, are permitted.

1.36 KNOTS.—All poles shall be free from unsound knots.

The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section, between the top and two (2) feet below the ground line, shall not exceed the limits set up in the following table. Knots and knot cavities one-half ($\frac{1}{2}$) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

MAXIMUM SIZES PERMITTED, INCHES

Length of Pole	Diameter of any Single Knot or Knot Cavity	Sum of Diameters of All Knots and Knot Cavities in any One (1) Foot Section
All lengths	3	10

1.37—SCARS.—No part of a scar shall appear on the upper one-fourth ($\frac{1}{4}$) of the length of a pole or within two (2) feet of the ground line.

Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth ($\frac{1}{5}$) of the circumference of the pole at that point, nor in any case more than five (5) inches.

1.38 SHAPE.—Poles shall be free from short crooks.

A pole may have sweep in the section above the ground line subject to the following limitations:

(a) Where sweep is in one (1) plane and (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

A pole may have offset in the section below ground line, provided that the projection of a straight line joining the mid-point at the top and the mid-point at the ground line does not fall outside the butt surface.

2.—Dimensions

2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles. This standard gives the minimum allowable circumference at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top for each length and class of pole listed, but does not preclude the acceptance of poles having greater circumference at these points of measurement than those shown. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

3.—Manufacturing Requirements

3.1—Bark Removal

Outer bark shall be completely removed from all poles.

3.2—Sawing

All poles shall be neatly sawed at the butt and top along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth ($\frac{1}{12}$) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

3.3—Shaving

Shaved poles shall not be furnished under these specifications unless specifically called for by the purchaser.

3.4—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

4.—Definitions of Terms

The following definitions shall apply in these specifications:

4.1—Fungous Defects

4.11 DECAY.—Decay¹ is disintegration of wood substance due to the action of wood destroying fungi. *Rot* and *Dote* mean the same as *Decay*.

4.12 HOLLOW HEART.—Hollow heart is a cavity in the heart of the pole resulting from decay.

¹NOTE: The terms "sound" and "unsound" are used in these specifications to imply that "sound" fiber is unaffected by decay and that "unsound" fiber is or has been affected by decay.

American Standard Specifications for Western Red Cedar Poles

Continued

4.—Definitions of Terms—Continued

4.34 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

4.35 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

4.36 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

4.2—Insect Defects

4.21 INSECT DAMAGE.—Insect damage is the result of boring in the poles by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

4.3—Timber Defects

4.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

4.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

4.33 DEAD STREAK.²—A dead streak is any portion of the sapwood in which the life process had ended prior to the cutting of the tree.

²NOTE: A dead streak starts from the butt and differs therein from a wound, such as a cat face or scar, where the growth of new wood shows that life processes are still acting to repair the injured part.

4.4—Shape

4.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half ($\frac{1}{2}$) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See Diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.5—Miscellaneous

4.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

4.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

5.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

6.—Subsidiary Standard

The following standard is subsidiary to the text of these specifications:

American Standard Dimensions of Western Red Cedar Poles (05c2—1931).

Official Manufacturing Specifications for Northern White Cedar Poles

16 Feet and Longer

1.—Live Timber

All poles must be manufactured from live, growing cedar timber in territory adjacent to the Great Lakes.

NOTE: The test of live timber is to cut into the sapwood. If the sapwood is white, the timber was alive when cut.

2.—Manufacture

All poles shall be peeled their entire length, knots trimmed close and butt and top sawed square. No poles with chopped or beveled butts will be accepted.

3.—Lengths

The length shall be measured between the extreme ends of the pole. No pole shall be over 3 inches shorter or 6 inches longer than its specified length.

4.—Top Measurements

Designated Size	CIRCUMFERENCE	
	Green & Watersoaked	Seasoned
4-inch top	12½ inches	12 inches
5-inch top	16 inches	15 inches
6-inch top	19½ inches	18½ inches
7-inch top	23 inches	22 inches
8-inch top	25 inches	24 inches

5.—Defects

A—Rot

Decay in the butt within three inches of the surface of the pole shall not exceed one (1) square inch in area.

Butt rot shall not exceed 5% of the area of the butt, which approximates $\frac{1}{5}$ the diameter, in all poles 5-inch top 25 foot long and smaller and shall not exceed 8% of the area of the butt, which approximates $\frac{1}{4}$ the diameter, in all poles six inch top 25 foot long and larger.

Complete circular shakes in the butt may be present provided the area encircled by the shake does not exceed ten (10) per cent of the total butt area.

B—Top

Tops must be sound.

C—Crook

No pole shall have a short crook or bend, a crook or bend in two planes or a reverse curve. The maximum amount of sweep measured between the ground line and the top shall not be in excess of one (1) inch for each five feet of the length of the pole.

D—Knots

All poles shall be free from unsound knots. The diameter of any single knot or knot cavity or the sum of the diameters of all knots and knot cavities in any one foot section between the top of the pole and two feet below the ground line shall not exceed the limits set up in the following table. Knots or knot cavities $\frac{1}{2}$ inch or under in diameter shall be ignored in applying the limitations for sum of diameters. The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

Limitations of Knot Sizes

Length of Pole	Diameter of any single knot or knot cavity	Max. sizes permitted, inches
		Sum of diameters of all knots and knot cavities in any one-foot section
35 feet and under	2.5 inches	9 inches
40 feet and over	4.5 inches	11 inches

E—Miscellaneous Defects

All poles shall be free from sap rot, bird holes, plugged holes, injurious checks and splits. No poles showing evidence of having been eaten by ants, worms or other insects shall be accepted, except that poles containing surface worm or insect marks below the ground line may be accepted.

F—Cat Faces and Scars

No part of a scar or cat face shall appear on the upper one-fourth ($\frac{1}{4}$) of the length of a pole or within two (2) feet of the ground line. Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth of the circumference of the pole at that point nor in any case more than five (5) inches.

G—Twist

Winding twist permitted unless unsightly and exaggerated except that there shall not be more than one complete twist of grain in any 20 feet of length.

H—Maximum Defects

No poles shall contain both the maximum crook and maximum butt rot.

Union Monotube Poles For Transmission and Distribution Service

Monotubes are the product of a manufacturer who has specialized in steel pole design and construction for over 34 years, and are designed to be used for the same purposes as wood, structural steel, or sectional tubular poles. They are made of high grade open hearth steel, whose structure is further improved by a patented cold rolling process.

Their chief advantages are: flexibility; one-piece construction; great strength with light weight; economy of installation and maintenance; and attractive appearance.

Either of two methods of anchorage can be employed; the pole may be embedded directly in the ground or concrete, or attached to a concrete foundation by means of the anchor rod construction. Advantages of the latter construction are ease of erection and alignment, low cost of replacement or removal, and elimination of ground line corrosion.

Monotube Steel Poles are available in a complete range of sizes and gages to meet every service requirement.

Complete Catalog Available

Union Steel Floodlighting Poles and Sign Standards

Steel Floodlighting Poles

Designed and constructed for maximum efficiency, safety, and economy.

Complete selection of fluted or plain round, tapered, steel poles for use in the floodlighting of service station yards and pump islands, baseball and football fields, tennis courts, swimming pools, skating rinks, industrial yards, parking lots, and building exteriors.

Attractive appearance of poles makes for a finished installation that is an asset during the day as well as the night.

Can be readily adapted to any type of lighting equipment and are available for either the embedded or anchor bolt type of construction.

Sign Standards

Complete installation insures permanency and attractive appearance. Designed to meet every engineering and architectural requirement of sign service. The great strength of their all-steel construction coupled with beauty of trim, tapered lines, guarantees a finished installation both good looking and long lived.

Available in either fluted or round design for free-swinging, fixed or center-mounted signs. Each unit is furnished with steel anchoring base complete with the necessary anchor rods. Advantages of the anchor rod construction are that it makes for faster erection, permits standard to be aligned easily after erection, has lower removal cost, and eliminates ground line corrosion.

If reflector-illuminated signs are used, standard can be supplied, at extra cost, with reflectors, reflector arms, mast arm condulets, and selected type of base' condulets. When desired, standards designed for combination sign and floodlighting service can be furnished.

Complete Catalog Available

Rainier Crossarms

The indispensable characteristics in a crossarm are strength and durability. Strength to carry the dead load of conductor, sleet and wind, and to withstand shock within any combination of these two duties that may be imposed upon the arm in service. Durability is just as necessary as strength because the arm is intended for many years of service and the cost to replace an arm in the line is many times the price of the arm itself.

Lightness in weight is also important. The lighter arms are less costly to transport and install and of course they place a lesser burden on the pole structures.

Rainier fir crossarms meet all of these requirements. They are carefully graded with the strength reducing defects eliminated. They are seasoned to approximately equilibrium moisture content which adds further to the strength. They are seasoned slowly and under such control that from the start to the finish of the seasoning process, the moisture content of the interior is substantially the same as at the surface of the arm. Even microscopic as well as visible checking is held to a minimum, so that the finished arm is sound and solid. It will not readily soak up moisture nor admit decay fungi to the interior of the arm.

The largest factory is at Chehalis, Washington, where the finest dry kilns and kiln control equipment are located. The dry kiln operations are supervised by men who are specialists and experts in the drying of crossarm sizes of Douglas fir. Carload orders can be shipped economically from Chehalis to all parts of the United States.

Minimum Carload Weight—Fir from Pacific Coast Mills, 38,000 pounds. Small cars are scarce and weight of at least

50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had.

For the benefit of customers who desire LCL quantities of crossarms, particularly with drillings of non-standard sizes or specially spaced, and to provide immediate delivery of any quantities in emergencies, factories are maintained at Chicago, Illinois; Kansas City, Missouri; Texarkana, Texas; and Wilmington, North Carolina. These factories are fully provided with manufacturing equipment and are heavily stocked with crossarm lumber which permits prompt attention to the needs of users in all parts of the country. Kiln drying at these factories is not economical due to the cost of fuel, but each point carries a reasonable stock of blanks, kiln dried on the West Coast, for customers who ask for kiln dried arms. All these factories have well designed drying sheds in which the ventilation is controlled. Also they are equipped with the instruments necessary to check the character of drying while the lumber is being conditioned, and in them are observed the same high standards for grading lumber and eliminating inferior pieces, as does the organization at Chehalis.

Southern yellow pine when properly graded is rated equal in strength to Douglas fir. With proper care before treatment, then with pressure treatment under the recognized standards with high grade creosote oil, there can be no question of such arms lasting as long as any other part of the line structure. Pine arms are considerably heavier than fir, but are preferred in a good many localities, due to shorter distances from the source of supply and consequent saving in freight rates. Creosoted yellow pine crossarms are produced at Texarkana, Texas, and Wilmington, North Carolina and we can vouch that these arms will conform to our high standards of quality in every respect.

Rainer Clear Douglas Fir Crossarm Specifications

General

This specification covers clear Douglas fir crossarm in sizes 5x6-inch cross-section and smaller.

Dimensions. All arms furnished shall conform to the design and dimensions specified by the purchaser. Allowable variations shall be within the limits shown on the drawing included herewith. Where allowable variations are not shown approximate conformity to the dimensions given, consistent with good commercial practice, is required.

Seasoning. The average moisture content of any lot of arms shall be not less than 12% nor more than 20% of the oven dry weights. The difference between the moisture content of a section one-half the width and one-half the height of the arm, cut from the center, and the slabs surrounding such section shall not be more than 5%.

Annual Rings. Not less than 8 annual rings per inch on either end of the piece, except that arm having 33 $\frac{1}{3}$ % summerwood may have not less than 6 rings per inch.

Checks, Shakes and Splits. No arm shall contain shakes or splits. On top of arm, no checks more than 6 inches long. No checks anywhere shall measure more than one-third the length of the arm nor more in depth than one-fifth the distance to the opposite face.

Grain. Except in deviations at knots and pitchpockets, arms shall be free from spiral or diagonal grain with a slope of more than 1-inch in 12 inches.

Knots. No knots in clusters. No knot exceeding 1 inch in the middle half and no knot exceeding 1 $\frac{1}{4}$ inches in any part of the arm. No 6-inch section in the middle half shall contain plurality of knots of which the diameters added together exceed 1 inch and no 12-inch section elsewhere shall contain knots of which the diameters added together exceed 1 $\frac{1}{4}$ inches.

No knot exceeding $\frac{1}{2}$ inch shall intersect any pin or bolt hole, and no knot exceeding $\frac{3}{4}$ inch shall be closer than its own diameter to any hole bored for a wood pin.

Loose knots and knot holes that show no evidence of decay shall not be cause for rejection, provided their diameters are within the maximum limits for knots, and will drain water when the arm is in its normal position on the pole.

The size of any knot shall mean its measurement across the smallest diameter.

Pitch Pockets. Shall not exceed $\frac{3}{4}$ inch in depth. No pitch pocket on top of an arm more than 4 inches in length, nor more than 8 inches in length elsewhere.

Sapwood. Not over 25% on any cross-section.

Loose Heart or Boxed Heart. No loose heart nor heart centers.

Rot. No stain, rot or decay.

Wane. No wane within $\frac{1}{4}$ inch of pin or bolt hole or on more than one edge. No wane surface more than $\frac{3}{4}$ inch wide within 12 inches of the middle bolt hole, or 1 $\frac{1}{2}$ inches elsewhere.

Warp. A straight edge laid lengthwise on the concave surface of an arm shall show no offset for the arm greater than $\frac{1}{10}$ -inch per foot of length. No arm shall be twisted nor bent in more than one direction.

Finish. Arms shall be planed smooth on all 4 sides, cut accurately to length, ends coated with transparent but moisture-resistant gloss oil compounds, bored and roofed as ordered.

Rainier Structural Douglas Fir Crossarm Specifications

General. This specification covers Rainier Structural Douglas Fir Crossarms made from dense select structural fir lumber in sizes 5x6-inch cross-section and smaller.

Dimensions. All arms furnished shall conform to the design and dimensions specified by the purchaser. Allowable variations shall be within the limits shown on the drawing included herewith. Where allowable variations are not shown, approximate conformity to the dimensions given, consistent with good commercial practice, is required.

Seasoning. The average moisture content of any lot of untreated arms of cross-section not exceeding 4x5 inches shall be not less than 12% nor more than 20% of the oven dry weights. The difference between the moisture content of a section one-half the width and one-half the height of the arm, cut from the center and the slabs surrounding such section shall not be more than 5%.

Dense Material. All crossarms shall be manufactured from lumber containing not less than six annular rings per inch on either one end or the other of a piece and in addition one-third or more summerwood (the dark portion of the annual ring) on either one end or the other. The contrast in color between summerwood and springwood shall be distinct.

Coarse grained pieces excluded by this rule are accepted as dense if they average one-half or more summerwood.

Checks. On top of arm. No checks more than 6 inches long. No checks anywhere shall measure more than one-third the length of the arm nor more in depth than one-fifth the distance of the opposite face.

Grain. Except in case of deviations at knots and pitch pockets, the grain, meaning the direction of the longitudinal wood fibers, shall throughout the central one-third portion of the arm, not depart from parallelism with the axis of the crossarm by more than 1 inch in 15 inches (approximately 4 degrees).

Knots. No knots in clusters. No knot exceeding 1/2 inch in its smallest diameter intersecting pin or bolt holes. In the middle half of the arm no knot exceeding 3/4 inch in diameter shall be closer than its own diameter to any hole bored for wood pins.

Otherwise any number of knots in any location may appear as follows:

Face.....	inches	3-4	4 1/4-6
Diam. between Center and Brace Bolt Holes .in.		1	1 1/4
Diam. between Brace Bolt Holes and Ends .in.		1 1/4	1 1/2

Loose knots and knot holes that show no evidence of decay shall not be cause for rejection provided their diameters are within maximum limits for knots, and will drain water when the arm is in its normal position on the pole.

Knots shall be measured across smallest dimension.

Pitch Pockets. Shall not exceed 3/4 inch in depth. No pitch pocket on top of an arm more than 4 inches in length, nor more than 8 inches in length elsewhere.

Sapwood. Bright sapwood permitted on not more than one-third the girth.

Loose Heart or Boxed Heart. No arms shall contain loose heart nor the exact pith center of the log.

Rot. Rot, dote or red heart will not be permitted.

Wane. Wand shall not be present within 1/4 inch of pin or bolt hole or on more than one edge of an arm. The width of the wane surface shall not exceed 3/4 inch within 12 inches of the middle bolt hole and 1 1/2 inch elsewhere.

Warp. A straight edge laid lengthwise on the concave surface of an arm shall show no offset for the arm greater than one-tenth or an inch per foot of length. No arm shall be twisted nor bent in more than one direction.

Finish. Arms shall be planed smooth on all four sides, cut accurately to length, ends coated with transparent but moisture-resistant gloss oil compound, bored and roofed as ordered. All workmanship of highest commercial quality.

Chance Wej-Lock Expanding Anchors

Without Rods

This anchor is cone-shaped to develop greater resistance against the undisturbed earth.

Easily installed and expanded. Base plate has a nut retainer. Has a minimum number of parts.

Cast of malleable iron. Made in four types and many sizes to meet all expanding anchor requirements.

Sozol for Wood Preservation

Brush Treatment

Brush treatment of poles consists in applying hot preservative to the ground line surface of a pole with a brush. This method is not in general use among pole dealers, but is used by operating companies for local treatment.

For effective brush treatment the highest boiling point coal tar distillate obtainable is recommended. High boiling creosote oils penetrate more readily and are free from black and sticky tars that do not penetrate but concentrate on the outer wood cells. Graybar Electric Sozol has been developed for this work.

Sozol

Sozol is for brush application for poles and all construction wood. It is a pure high boiling distillate of coal tar, that is, it is a product obtained in a distillation process through the elimination of volatile products of coal tar and this pure coal tar distillate is not adulterated by adding any other substances. It is not a byproduct, that is, the distillation process is primarily for the purpose of securing this particular oil—not for some other distillate of coal tar in which this oil or a modification of it would come off in the distilling process. All creosote wood preserving oils have two faults in a greater or less degree. Either they are so thin and volatile that when applied with a brush or by open tank method, they partially evaporate or leach out and their preservative qualities are thus impaired; or they are adulterated with heavier coal tar oils and these heavier constituents clog up outer cells of the wood and prevent the penetration required for effective treatment.

Sozol is of high specific gravity and greater body and in consequence, is more stable than ordinary pure creosote oils sold for wood preserving. It is not as volatile as these oils; at the same time, it has absolutely no viscous properties which interfere with effective penetration as in the case of mixed oils. In short, it has permanency and so affords the greatest possible continued protection. It is more than a creosote oil, it is a special wood preservative of stability.

Sozol is supplied in drums, barrels and cans.

Chance Never-Creep Anchors

Without Rods

This anchor pulls against solid undisturbed earth; none of the holding area is wasted.

Easy to handle and easy to install. To install, bore the hole, drive rod into hole, and hang plate on rod.

Consists of a rod and a plate. Rod is drop-forged steel with thimble-eye head and pointed Never-Creep knob on lower end. Plate is a certified malleable casting.

Order the rod separately.

Chance Steel Expanding Anchors

Without Rods

The Chance Steel Expanding Anchor will withstand the most severe punishment without danger of breakage. It is fool-proof in construction and powerful in pull.

Easily installed in any position. Nut retainer prevents riding up the rod during expansion.

*Can also be supplied for 1-inch rod if requested.

Chance No-Wrench Screw Anchors

With Rods

This anchor has a large triple eye rod which admits a bar for a wrench to use in screwing the anchor down.

Easy to install. Hub is small and the blade is sharp and thin. Drill point aids dirt displacement and speeds installation.

Has extra holding power because of small hub and wide tapered blade. Drop-forged steel rod and malleable anchor are fastened securely together.

Chance Swamp Screw Anchors

Without Pipe

The Chance Swamp Anchor is so constructed that the pipe wedges into the hub and becomes a part of the anchor. A water hole over the cutting edge of the blade makes it possible to get water down the pipe and out the hole to moisten the earth and clean the blade.

The triple eye nut accommodates 1, 2, or 3-guy strands.

No.	Size Anchor In.	Size Pipe In.	—*AVERAGE HOLDING POWER, POUNDS—				No. in. Bdl.	Wt. Lb. per 100

*When set 6 feet deep.

Chance Rock Anchors

With Rods

Before Expansion

This anchor eliminates the necessity for carrying lead, concrete, or grouting equipment on the job.

Installed in a small hole bored with hand or mechanical rock drill. Expanded and wedged against the side of the hole by turning the rod.

When strain is applied the wedge becomes tighter.

This anchor does an excellent, safe, rock anchoring job.

After Expansion

Chance Wrench Type Screw Anchors

With Rods

This wrench type anchor has a socket and a square shank combined. A regular screw anchor wrench fits down over the square shank that is built up inside the socket.

There is no danger of splitting the wrench and no need for extra wrench fittings.

Anchor is shipped complete with threaded steel rods and thimble-eye nuts.

No. 600 Chance Screw Anchor Wrenches

Adapter

This wrench gives ample leverage for turning a screw anchor into the ground. Net weight, 36 pounds.

Chance Pyramid Cone Anchors Without Rods

The Duramel cone anchor is cast of a special fine grained Duramel cast iron with extra toughness and durability. Flat opposing faces and flaring base create a wedging action that greatly increases holding power.

Nut retainer aids installation.

Everstick Cone Anchors

Used wherever rigid type anchor is required. Made of malleable iron with special ribbed construction which adds to its holding power and strength.

Everstick nut housing feature is used to assure a compact, tight connection between rod and anchor.

HOLDING POWER. In setting cone anchor, a sufficient amount of rock, dependent upon soil conditions, must be well tamped on top of anchor before back filled.

Oshkosh Diggers

No. 2051

The blades are made of special alloy steel. Welding is used for attaching the blades instead of riveting, making a durable joint. The fulcrum members are of heavily constructed, channel-shaped, steel forgings.

There are two pivot points for the blades, one on each side. This gives much stronger leverage and greater durability.

Made in two types, with split handles or with two solid handles. The handles are made of straight grained hard wood, 8 feet long.

Measurement marks are placed on the handles so that the workman can easily determine the exact depth of the hole.

The diameter of the circle circumscribed by the digger blades is 6 inches.

No. 2050, Split Handle Type, Wt., 13 Lbs. each \$8.00
No. 2051, Two Solid Handle Type, Wt., 14 1/2 Lbs. each 8.00

Chance Dual Never-Creep Anchors Without Rods

Designed to meet the demand for an inexpensive anchor to use in machine bored holes and in place of bulky logs, concrete blocks, or improvised scrap iron slugs.

Sturdily constructed and well balanced. Has a maximum load recommendation of from 22,000 pounds for the smallest size to 42,000 pounds for the largest.

May be used with either Never-Creep or threaded rods.

Hubbard Steelwing Anchors

Hot Galvanized

Anchor turns into the ground like a cork-screw and holds against a large area of undisturbed earth. It is easy to install or reclaim and the large thimbleye (E-Z eye) permits the insertion of a bar for leverage. The wing diameter is stamped on the rod (except Nos. 7542 and 7543) just under the eye as a permanent, above-ground record of its holding strength.

The No. 7524 Baby Steelwing, furnished with a 4-inch wing, is designed for permanent light guying or a temporary anchorage for heavier guys.

Nos. 7542 and 7543 are smaller sizes designed for anchoring fences, trees and other similar light work.

Hubbard Rock Guy Anchors

Hot Galvanized

No. 7544

Used in solid rock or in masonry. It is recommended that rock guy anchors be installed at an approximate right angle to line of guy pull.

No. 7544 consists of a one-inch round steel bolt with a 1 1/2-inch square head, 2 round washers and a round thimble. Bottom of bolt is split for a wedge which spreads end of anchor as it is driven against bottom of hole.

No. 7545

No. 7545 consists of two drop forged, wedge shaped sides, one shim and a 3/4x2 1/2-inch machine bolt. To install, a hole of the proper size is drilled and the two sides are placed in the hole. Shim is driven down between the two sides, expanding them against the sides of hole, and machine bolt is re-assembled. Anchor is then ready for use.

Crapo Galvanized Steel Strand

Guy and Messenger Strand

7 Wires Twisted into 1 Strand

All wire used in forming a particular size and grade is produced from steel of selected analysis, scientifically processed under laboratory supervision and galvanized by the time-proved Crapo process. Both wire and strand are subjected to laboratory tests for tensile strength, elongation, galvanizing, ductility, and gage to insure high uniform quality in the finished product.

Furnished in the following standard lengths: 250, 500 and 1000-foot coils and 1000, 2500, and 5000-foot reels.

Hubbard-Chance Threaded Anchor Rods

Hot Galvanized

Thimbleye

Twineye

The thimbleye is drop forged. Groove and side walls of eye extend completely around to the top of the rod, thus assuring proper lie of strand in eye. There is no tendency for strand to flatten out under heavy strain, its natural roundness being preserved by support of side walls.

Eyes are forged to such proportions that when rod is given a tensile test to destruction, break always occurs in the rod, never in the eye. Length of thread, 3 1/2 inches.

Sizes 3/4 inch and under have rolled threads; over 3/4 inch, cut threads. Furnished with one nut.

Hubbard Guyeye Anchor Rods
Hot Galvanized

Designed to provide a smooth curve with an ample radius for protection to the strand at the bend, thereby eliminating the use of a guy thimble. The strength of the Guyeye is greater than that of the rod.

The Tu-Guyeye, for two guys, is forged with the same generous radius as the Guyeye.

Hubbard Rock Guy Bolts
Hot Galvanized

Used in solid rock formations, in stone or concrete walls. Has split bottom end and wedge that spreads end as bolt is driven against bottom of hole. Of one-inch round steel, 18 inches over all with standard drop forged oval eye (1 1/2 x 2-inch inside eye).

Shipping weight per 100, 665 pounds.

Hubbard Gould Clamp Anchor Rods
Hot Galvanized

Designed for dead-man anchoring. Combines a rod, clamp and thimble in one article. Clamp body and snubbing post are drop forged and develop the full strength of the rod.

Diameters 3/4 inch and under have rolled threads, larger diameters have cut threads. All rods threaded 3 1/2 inches.

Clamp: width, 2 inches; length, 6 inches; height, 2 1/8 inches.

Hubbard Steel Ground Rods
Hot Galvanized
With Copper Wire

The wired rod has a length of No. 12 gage copper wire bonded firmly to upper end with five inches free for making ground wire connection.

All possibility of wire stripping loose is eliminated by the top turn being looped under itself, relieving the bond from carrying strain concentrated at that point.

Hubbard Drive Head Steel Ground Rods
Hot Galvanized

Provides a rod and clamp combination. The head receives the full hammer blow on the heavy rounded crown which prevents the clamp fitting from injury or distortion even under the hardest blows. The entire top of the rod is tinned.

Ground wires are solidly and permanently clamped under the head of the non-ferrous, oval neck clamp bolt.

Hubbard-Copperweld Ground Rods

Hubbard-Copperweld Ground Rod offers the permanence of copper, because of the molten-welded, rust-proof, copper exterior. Can be driven quickly, without bending, as the steel core of the rod makes it extremely rigid. The dependability of protective ground is insured by the use of the rod even though installed out of sight where periodic inspection is impractical.

Reliable Ground Rod Clamps

Supplied with 1/16 inch hex head screw. At 200-225 inch pounds, corners become rounded and prevent additional tightening. At this torsion, clamp is applying about three times pressure that can be applied with other clamps.

Made of Everdur bronze 97% copper, tough corrosion resisting, for copper and copperweld rods.

Made of steel, hot galvanized and electro-tinned for steel rods.

Coating minimizes corrosion and galvanic action.

Everdur clamps supplied with hollow head set screws when specified.

One wrench included with each 50 clamps or less.

Prices upon application.

Peirce Ground Rod Moulds

Used for making cast soldered connections on ground rods.

Drawn from sheet brass and tinned for easy soldering. The collar fits snugly to the rod preventing leakage.

Moulds must be placed on the rod before driving except when ground rod driver is used.

Hubbard-Copperweld Alarm Box Grounders

The alarm-box grounder takes the place of the conduit and grounding wire previously used for connecting police and fire alarm boxes to ground. It makes a neat installation, which is quickly and easily installed, and will last a lifetime. Consists of a 3/8-inch Copperweld rod with a bushing and a stranded copper lead wire for attachment to the alarm-box and internal mechanism.

The adapter type is for use on boxes with unthreaded holes. Copperweld staples for attachment to pole are also included. At bottom, it is connected to a 1/2-inch ground rod with special clamp No. 9492 or No. 9592, and to a 1/2-inch rod with

Hubbard-Copperweld Ground Wire Clamps

No. 9492 with Safety Set Screw

The great strength and high elastic limit of this non-ferrous clamp enables it to maintain permanently low-resistance grounding connections.

Accommodates solid or stranded ground wires, and is furnished either with safety set screw or square head set screw.

No. 9592 with Square Head Bolt

Hubbard Ground Pipes
Hot Galvanized

The ground wire connection is made by sweating in the wire. For this purpose, a wooden plug is furnished, 6 inches below the top of the pipe. The ground wire is inserted to the plug and molten solder poured around it, making a highly efficient and permanent mechanical and electrical contact.

Made of high grade steel pipe, forged solid at the point and carefully galvanized inside and out.

Hubbard Drive Caps
Hot Galvanized

Grooves accommodate Nos. 2, 4, 6, and 8 ground wire

No. 9530

Number designates size of ground wire for each groove

No. 9540

Nos. 9530 and 9531 are designed to drive over the top of pipe ground rods in such a way that the ground wire is wedged between pipe and cap making a permanent mechanical and electrical contact. Grooves are provided to fit Nos. 2, 4, 6, and 8 wire. Each groove has its wire size stamped on the outside of cap. Wire is gripped solidly over an area 2 inches long, with sufficient clearance so that it will not be sheared off or broken. Used on ¾ or 1-inch standard unthreaded pipe.

Nos. 9540, 9541, and 9542 employ the soldered connection. Driving spreads the pipe establishing a permanent, tight contact. Ground wires are "sweat in" the cap.

Made of certified malleable iron, heavily galvanized.

Hubbard Wall Straps

Hot Galvanized

Guyeye Type

Loop Type

Used on communication, signal and power systems for attaching guys or messengers to buildings or walls.

Loop type is attached by two 1/2-inch lag screws or bolts and requires the use of a thimble.

Guyeye type is attached in a similar manner but does not require a thimble, the guyeye providing the necessary radius for attachment without distortion of the strand.

Thickness, 1/4 inch. Diameter holes, 5/16 inch.

No.	Loop		Guyeye

Ship. Wt. Per 100	105 lb.	264	351	351

No. 8913 Hubbard Strand Connectors

Hot Galvanized

Malleable iron strand connector used with two or more guy clamps for joining messenger ends. Non-insulating. Cable groove and hole are sufficiently large for 5/16-inch cable with ample radii to prevent kinking strand. Width groove, 1 inch. Diameter, 5/8 inch.

No. 8913, Ship. Wt. 100 Pounds per 100 \$112.80

Hubbard-Chance Thimbleye Bolts

Hot Galvanized

This bolt saves from three to five feet of strand, eliminates strain plates, guy hooks, lags and nails and leaves the pole surface clear for ground wire or moulding. Guy assemblies can be made up on the ground and mounted on pole afterward.

Drop-forged eyes with an ample radius to prevent strand from being sharply kinked at any one point and to eliminate concentrated strain.

One-inch sizes have cut threads; smaller sizes, roll-threaded.

Peirce Pipe Sidewalk Guy Arm Fittings

Hot Galvanized

In order to meet a demand for a sidewalk guy arm to fit variable conditions, the fittings were designed for two-inch pipe. May be applied to any length of pipe.

Nos. 1501 and 1502 are the standard pole plate and end clamp for this style of guy.

No. 1511 replaces the clamp plate of No. 1502 to form assembly No. 1503, for separating the guy into two parts above and below the arm.

No. 1512 consists of No. 1502 with an extra clamp plate so that two guy wires may be used and attached at two points on the pole.

Pipe is not included unless specified.

No.	Per 100	Description	Ship. Wt. Lb. Per 100
1501	\$192.50	Pole Plate	350
1502	280.50	Clamp End Fitting	500
1503	582.10	Guy Connector End Fitting	573
1511	61.00	Guy Connector	225
1512	605.30	Double Clamp End Fitting	527

Peirce Pole Struts

Hot Galvanized

Cases often arise in overhead construction, especially in cities, where it is impossible to secure guying privileges or where space is insufficient for normal guying. Under such conditions, where the angle is not too great, or the pull not overly strong, the pole can be made self-supporting or hog-guyed by means of pole struts.

Such trussed poles should be set in concrete, deeper than standard, and slack spans used on each side.

Made of heavy steel channel with a broad bearing surface against the pole. May be sprung slightly during installation to fit a variation in pole diameter. Three 1/2-inch lag screws attach them rigidly in position. Two struts are needed for each pole. Braces are 1x1/2x1/8 inch channels for all sizes.

Hubbard Guy Clamps

Hot Galvanized

No. 7461

No. 7402

Hot rolled to a 3/8-inch thickness from steel plates. Clamping principle employed is the straight, parallel groove, smoothly galvanized.

Particular care is exercised to keep clamp sections straight, so that bolts will not be drawn tight on an area which may be warped out of contact with strand with consequent loss of holding power. Accurately spaced grooves and carefully centered holes. Cleanly sheared sections so that groove ends cannot cut or injure strand.

Clamp bolts are made of special steel to prevent elongation and eliminate stripping. Heads are made large to provide maximum clamping area and shoulders trap bolts to prevent turning while tightening.

Sizes with three or more bolts shipped with bolts reversed.

If desired, thimble can be supplied in copper or bronze at special prices.

Hubbard Drop-Forged Turnbuckles

Hot Galvanized

Eye and Eye

Eye and Hook

Turnbuckle parts including bodies, hooks, eyes, and clevises, excepting plain stubs, are drop-forged from open hearth steel. Bodies are fitted with hexagonal ends so that turnbuckles may be taken up with a wrench at the end as well as with a lever at the center.

In the case of clevis assemblies, clevis bolts are furnished $\frac{3}{8}$ -inch in diameter for the $\frac{3}{8}$ and $\frac{1}{2}$ -inch size turnbuckles; $\frac{1}{2}$ -inch in diameter for the $\frac{5}{8}$ -inch sizes; $\frac{3}{4}$ -inch in diameter for the $\frac{3}{4}$ -inch sizes; $\frac{3}{4}$ -inch in diameter for the 1-inch sizes; $1\frac{1}{8}$ -inch in diameter for the $1\frac{1}{4}$ -inch sizes.

Stub and stub style is furnished for use where stubs are to be welded to tie rods and other similar types of construction. Special assemblies can be made to suit requirements.

Hubbard Guards and Protection Strips

Hot Galvanized

Hub guard is used on wood pole to protect it from the hubs of vehicles. Dimensions given are those of the flat plates before bending, the 14-inch guard having a $5\frac{1}{2}$ -inch radius, and the 16-inch guard, a $7\frac{1}{2}$ -inch radius.

All holes are $\frac{1}{16}$ -inch diameter for $\frac{1}{2}$ -inch lag screws.

Pole protection strips are used to protect poles from chafing.

Hubbard Flat Crossarm Braces

Hot Galvanized

No. 8020

Made from new open hearth steel punched for a $\frac{1}{2}$ -inch through bolt or lag screw at the pole end and $\frac{3}{8}$ -inch carriage bolts at the arm end.

Ribbed braces offer approximately 25% additional strength. Clearance is allowed so that ribbed portion does not interfere with attachment to arm on either side.

If specified, standard braces may be obtained with rounded corners.

Hubbard Angle Crossarm Braces

Hot Galvanized

In the construction of heavy pole lines, the one-piece angle steel crossarm brace is in general use. It fastens under the arm with $\frac{1}{2}$ -inch machine bolts and to the pole with a $\frac{3}{8}$ -inch through bolt or lag screw. Special sizes supplied on request.

When ordering, state size of angle, A, B, and C dimensions, and hole sizes.

Hubbard Alley Arm Braces

Hot Galvanized

Used extensively on distribution lines in alleys or where obstructions make it necessary to support wires on one side of pole. Also used at points where poles must be set slightly out of alignment. Arm being off-set in this case makes it possible to avoid a slight angle in the line.

Two holes for arm adjustment are supplied on Types A and C. Braces are attached to pole with 1/2-inch lag screws and to arm with 1/2-inch machine bolts. Furnished with steps.

Type A

For side arm mounting with one leg of the angle under the arm.

No.	Per 100	Length Feet	Size Angle Inches	Ship. Wt. Lb. per 100

Hubbard Crossarm Back Braces

Hot Galvanized

Used to reinforce crossarms at corners and terminal poles and in many cases eliminates the necessity for double arming.

The angles are made of open hearth steel and are attached to the arm by means of two 1/2-inch machine bolts at each end. If vertical brace is not used, crossarm attachment may be made by using 1/2-inch carriage bolts.

Hubbard Square 2-Piece Wood Crossarm Braces

Made of hickory, 1/2-inch square, creosote dipped. Fitted with hot galvanized fittings.

Under compression, the strain against the metal pieces at the lower end is borne by the wedging effect rather than the assembly bolts. The same is true at the top except that crossarm acts as one plane of the wedge. Under tension, reinforcing bolts prevent wood from splitting. Members are the same so they may be interchanged or mounted on either side of the pole.

Pole and arm mounting bolts are not included. Nos. cover two pieces making one complete brace.

Rainier Crossarm Braces

Made Entirely of Wood

Provides the advantages of all-wood construction without reducing strength or life of pole structure or increasing its cost. Withstands greater stresses than balance of the pole structure; adequately survives shock and abuse.

Treated with 10 pounds of coal tar creosote per cubic foot of timber. Especially suitable near salt water or under corrosive atmospheric conditions.

The right and left-hand members are identical. The bolt holes fit and only three bolts are required to install a pair. They are interchangeable with double span steel braces.

This brace complies with crossarm freight classifications. Rainier Braces and Crossarms can be shipped in mixed carloads without sacrificing the carload freight rate.

Hubbard Universal Messenger Hangers

Hot Galvanized

Forged from new, open hearth steel, with a curved wire groove, which permits use on curves as well as straight runs.

Two 1/2-inch clamp bolts hold the messenger securely in place.

Hanger is mounted by means of a 5/8-inch through bolt and a 1/2-inch lag screw.

Size of strand, 5/16 to 1/2 inch.

Hubbard U-Cable Guards and Straps

Hot Galvanized

When telephone or power cables enter the ground at the base of a pole or the side of a building, they are protected by U-cable guards. The guards are formed of No. 14 gage steel pressed to a U-shape which provides protection for pedestrians as well as providing stiffness for guard.

Nos. 7536 and 7537 have a 2 1/8-inch inside diameter belled bottom to fit over ground conduit.

No. 7533

Hubbard Servisleeves

PAT. NO. 192177
Hot Galvanized

Servisleeve is quickly installed by slipping the sleeve over the guy wire, belled end toward the clamp, and driving it down over the loose end of strand. Six inches of loose strand should be left extending beyond clamp. If end is clipped too near clamp, the resultant angle will be too great for the sleeve to slide over.

Hubbard Long Span Equipment For Open Wire Construction on Telephone Lines

Hot Galvanized

No. 7477 Dead Ending Clamps

Used for holding long spans at the structure. Consists of a sheave wheel and wire clamp.

Mounting hole or eye diameter, 3/4 inch. Overall length, 10 7/8 inches. Steel size or diameter, 5/8 inch.

Length Clamp section, 5 7/8 inches.

Shipping weight per 100, 448 pounds.

Prices upon application.

No. 8968 Eye Bolts

This eye bolt is suspended vertically through the arm with Hanger No. 8969 listed below.

Mounting hole or eye diameter, 3/4 inch. Overall length, 18 inches. Steel size or diameter, 5/8 inch. Length thread, 12 inches.

Shipping weight per 100, 249 pounds.

Prices upon application.

No. 8969 Hangers

Attached by means of a clevis to the arm from which is suspended eye bolt listed above. Wires are carried through hanger and rest on a curved, wood bearing block.

Mounting hole or eye diameter, 1 1/8 inch. Overall length, 6 inches. Steel size or diameter, 3/8 inch.

Shipping weight per 100, 141 pounds.

No. 8969. per 100 \$424.20

Hubbard Strain Insulator Clevises

Light Type
Hot Galvanized

Drop forged from 1/8-inch diameter open hearth steel. Equipped with a 3/8-inch bolt and lock washer. A one-inch inside diameter eye is required to accommodate this clevis.

Ultimate strength, 8000 pounds.

No. 8902 Corner Cable Suspension Clamps

Hot Galvanized

For power or communication cable messengers. Used for heavy strains at corners where the included angle of the messenger is approximately 110° or over up to 180°.

It is used with the curved ends pointing toward the pole when the pull is toward the pole and with the curved ends away from the pole when the pull is away.

Used on 6000 and 10000-pound strand with the cable groove of the clamp below the pole bolt and on 16000-pound strand with the groove above the pole bolt. A reinforcing strap is recommended when 16000-pound strand is used. Clamp is drop forged from high carbon steel.

Three-bolt type. Overall length, 7 inches. Mounting hole diameter, 1 3/8 inches. Strand size, 1/4 to 1/2 inch inclusive.

Shipping weight per 100, 375 pounds.

No. 8902. per 100 \$125.40

Hubbard Protector Mounting Hangers

Hot Galvanized

For mounting line protectors on poles. Two 5/8x1 1/2 machine bolts furnished. Lags for mounting to pole not included.

Steel size, 12x2x3/8. Diameter holes, 2 end, 5/16 inch, 2 inner, 1/8 inch.

Shipping weight per 100, 250 pounds.

Hubbard Cable Extension Arms

Hot Galvanized

This arm is used when it is necessary to suspend cables at some distance from the pole. Attached at the top by one 3/8-inch through bolt. T-iron brace is fastened by lag screws. Cables are attached by means of a short 3/8-inch machine bolt with a washer under the head. Bolt-head and washer ride on the top of the angles with the shank of the bolt between the two sides.

No. 8903. Three-bolt cable suspension clamp is attached on the machine bolt under the arm in a flat position. Extension of the cable from the pole can be varied 8 1/2 inches with No. 8920 and 18 inches with No. 8921.

Hubbard Drop Forged Bolt Eyes

Hot Galvanized

Used extensively for dead-ending and guying. The standard bolt eye may be used for attaching dead-ending insulators to the cross arm. The long type is often used for supporting suspension insulators with a hook in the cap of the upper unit.

Unthreaded slot provides clearance for the insertion of bolt.

Hubbard Drop Forged Standard Eye Nuts
Hot Galvanized

This eye nut requires the use of a thimble. Used on through bolts, eye bolts, double arming bolts, etc. and for other attachments where it is desired to convert a standard, threaded bolt to a thimbleye bolt.

Commonly used for dead-ending a messenger wire or span guy on the threaded end of an angle thimbleye bolt on the opposite end of which is attached a down guy.

Hubbard Drop Forged Straight Bolt Thimbleyes
Hot Galvanized

Thimbleye has unthreaded slot to provide clearance for the insertion of bolts. Used for cross arm guying where a circuit has been dead-ended, although it is suitable for many other guying and dead-ending needs.

Follows the standard thimbleye design. Will take strand 1/2 inch diameter and under.

No.	Per 100	Diameter Bolt	Bolt Hole	Width Eye	Length Eye	Shipping Weight per 100

Hubbard Drop Forged Angle Bolt Thimbleyes
Hot Galvanized

Used almost exclusively for down guys. Eliminates the use of strain plates, guy hooks, guy thimbles, nails and lag screws and saves from three to five feet of guy strand. Often used on the nut end of a bolt for a down guy attachment with a straight bolt eye under the head of the bolt as a dead-end.

Nos. 1100 and 1101 will take strand 1/2 inch diameter and under. No. 1102 accommodates strand 5/8 inch diameter and under. Furnished with round unthreaded hole, no clearance being needed.

Peirce Detachable Pole Steps

Hot Galvanized

To install this pole step, slip the plate, which acts as a bearing surface for step, over lag screw and drive lag in until plate bites into pole. Step slips down in a groove on each side of lag screw head and is prevented from turning by a lug projecting from bottom of plate. A nail driven through a hole in plate offers additional security against turning. Five steps per pole are generally used. Unlicensed climbing is prevented by removing steps.

Hubbard Grade Clamps

Hot Galvanized

No. 8985

No. 8989

Used to prevent creepage where cables are run on grades. Presteel type is made with a large clamping area so that the soft cable may be firmly gripped but not crushed. It is tightened by means of the 3/8x1-inch stove bolts furnished.

Drop-forged clamp is equipped with four 1/2-inch, oval neck clamp bolts, which cannot turn while nuts are being tightened.

Tolerances are held very close in order to grip both cable and messenger with the proper pressure when tightened in place.

Strand size, 1/4 to 1/16 inch.

Steel size, 1/8 inch. Insulator spacing, 5 3/4 inches. No. 8918, Ship. Wt. 152 Pounds.....per 100 \$111.90

Type A Hubbard Pole Reinforcing Material

Hot Galvanized

When pole butts become rotted and weakened, reinforcing or stubbing is accomplished by the application of bands. Band and pipe assemblies are tightened in place by drawing the band together. No. 7852-A is a malleable casting which serves the same purpose as the pipe.

Band is attached first by a nail through the small hole in end. After wrapping pole and stub tightly by hand, a 1/2-inch lag screw is driven through loose end so that it engages both inside and outside wrap. Lag screws may be driven in either of end holes which are spaced farther apart than others.

This allows lining up with nearest inside hole. Four bands and four pipes are needed for a set.

Lag screws and take-up bolts should be ordered separately.

No. 3008 Telephone Pole Top Brackets

Hot Galvanized

Used primarily for oil line construction.

Any low voltage 5/8-inch diameter short shank pin may be used on this type bracket. Nos. 8015 and 8072 are recommended.

Pin hole size, 1/16 inch. Steel dimensions: brace, 1 1/2x1/2 inches; angle, 1 1/2x1 1/4x3/16 inches.

Shipping weight per 100, 520 pounds. No. 3008.....per 100 \$124.10

Peirce Pole Gains and Reinforcing Plates

Hot Galvanized

Peirce Pole Gains and Crossarm Reinforcing Plates used together form a highly efficient method of attaching and reinforcing a crossarm.

Presteel Pole Gains

Used for attaching crossarms to poles efficiently and quickly without the need for gaining the pole.

Permits easy adjustment for alignment of the crossarm and spaces the arm away from the pole allowing ample drainage and ventilation.

Compared with gaining a pole for double arming, an added spacing of approximately 2 inches between arms is obtained by using metal gains. The four spurs on the gain insure permanence of the original alignment.

No.	Per 100	Arm Size Inches	Bearing Surface on Crossarm Inches	Steel Gage No.	Shp. Wt. Lb. per 100

Hubbard Pole Extension Bands

Hot Galvanized

If desired to construct an extension for an additional arm, using a timber support instead of steel, an extension band is used. Installation is made by tightening band around the extension timber by means of a keeper and drawing sides together with through bolt.

Through bolts should be 5/8 inch diameter and 3 inches longer than thickness of extension timber. Partial installation of through bolt should be made before applying final tension on strap studs. After strap is completely tightened, through bolt is given its final take-up. Two bands are required for installation.

Bands are made of No. 12 gage by 2-inch steel with a stud attached at ends. Holes are provided for 5/8-inch lag screws to lock band against rotation.

Illustration shows vertical attachment of a 3 1/2 x 4 1/2-inch cross arm to a pole top using 2 No. 7858 extension bands.

Lag screws, through bolt not included.

Size of extension timber: Minimum, 3 1/4 x 4 1/4 inches; maximum, 6 x 8 inches.

Size of pole top: Minimum, 5 inches; maximum, 10 inches. Approximate shipping weight, 100 pieces, 660 pounds.

Hubbard Highway Crossover Brackets

Hot Galvanized

Used to obtain clearance for carrying telephone wires to houses or over cross lines.

Holes 7/16 inch in diameter are provided for insulator attachments, which consist of porcelain knobs Nos. 9225 or 9226. Wireholder No. 1654 may also be used on No. 2384 by adding a 3/8-inch nut.

No. 2384 has two 1/2-inch pole mounting holes spaced 10 inches apart, and one 1/6-inch insulator attachment hole in each angle leg at the top.

No. 2385 is mounted on two 5/8-inch cross arm through bolts. Adaptable to cross arm spacings of 12, 18 or 24 inches. Three sets of insulator attachment holes are provided spaced 24 inches apart.

Knobs, insulators and mounting bolts are not included.

Hubbard Extension Fixtures

Hot Galvanized

Diagonal Brace, Back Brace, and Vertical Brace Installed

When it is necessary to clear buildings or trees without the use of high poles, these fixtures are used. Also used to offset arms on a pole where such construction will partially relieve the strain of a slight angle in the line. This method of offsetting is also useful where lines follow country roads with many slight bends in both directions. With extension fixtures the poles may be set at the roadside, and by extending arms either toward road or away from road, to compensate for conditions, the wires may be strung in a straight line. A. T. & T. Co. Standard.

No. 8050 Diagonal Braces

For use on both 6 and 10-pin arms. Provided with a 6-inch step for lineman and may be used on either side of pole. Fastened to side of pole by a 1/2-inch lag screw and to cross arm by a 1/2-inch machine bolt.

Made of 2x2x3/16-inch angle steel. Bolts not included.

Length overall, 83 inches.

No. 8050, Ship. Wt. 1892 Pounds.....per 100 \$322.80

†Back Braces

This brace is attached to pole by a 5/8-inch through bolt and to cross arm by a 1/2-inch machine or carriage bolt.

Made of 2x2x1/4-inch angle steel. Bolts not included.

Hubbard Pole Extensions

Hot Galvanized

Replacement of poles in order to secure room for an additional cross arm may often be avoided by the use of pole extensions. For the dimensions in the table to hold true, these extensions should be installed so that the upper through bolt of extensions is located at the top of telephone arm.

Each fixture has $\frac{1}{16}$ -inch holes for $\frac{5}{8}$ -inch pole bolts, one hole in each leg being slotted $1\frac{1}{2}$ inches long. Pole bolts and crossarm straps are not included. Assembly bolts and pins are included with Nos. 2376 and 2377.

No. 2375 consists of two $3 \times 3 \times \frac{1}{4}$ -inch angles, to which the crossarm is clamped by two crossarm straps.

No. 2374 is the same as No. 2375 except that the extension is greater.

No. 2376 consists of two $3 \times 3 \times \frac{1}{4}$ -inch angle steel legs and a crossarm 65 inches long of the same material, with four 1-inch thread pins spaced 30 inches between pole pins and $14\frac{1}{2}$ inches between side pins.

No. 2377 is the same as No. 2376 except that the extension is greater.

No. 800 Economy Pins

Hot Galvanized

The wedge clip at the base of the pin is made of the best grade of stainless steel obtainable. It provides a solid, positive, locking device which holds the pin firmly in the arm. Strength in any direction horizontally (four inches above arm) is sufficient to offset 800 pounds strain with less than 10° deflection. Uplifts is resisted by the wedge shape of the clip. Crossarm pin holes should be 1 1/16-inch in diameter.

Made of No. 12-gage steel.

One installing rod is furnished with each lot of 100 pins.

Length overall, 8 5/8 inches. Diameter shank, 5/8 inch. Diameter body, 5/8 inch. Diameter pin thread, 1 inch. Size square base, 1 5/8 inches. Above base, 4 3/8 inches. Below base, 3 7/8 inches.

No. 800, Ship. Wt. 60 Pounds..... per 100 \$27.00

Lead Adapters

Used exclusively on the No. 800 Economy Pin. Variations of the insulator holes are absorbed by this thin lead adapter, which also cushions bottom of insulator hole and prevents popping of insulator heads.

Peirce Forged Steel Feeder Pins

Hot Galvanized

No. 3825

Used with composition feeder insulators.

Height above arm, 4 1/2 inches; diameter base, 2 1/2 inches; 1-inch die-forged insulator threads.

Peirce Forged Steel Pins

With 1-Inch Spring Thread for Low Voltage Insulators
Hot Galvanized

For lighting, telephone and telegraph lines on which insulators with 1-inch pin holes are used. Eliminates danger of extreme temperature changes causing rupture of porcelain due to expansion.

Pins can be driven into crossarms or poles without injury to thread, although driving is not recommended.

Long Shank Type—For Wood Crossarms

Furnished with lock washers.

94	75.80	3/4	2 1/2	6	4	10	178

Lag Screw Type—With 1-Inch Pressed Metal Thread

Thread is formed in two halves which are welded on opposite sides of pin top. Vertical weld further divides thread into four parts, similar to wings on which insulator rides and which have sufficient amount of spring to absorb expansion. Thread is drawn slightly in toward pin body when insulator is screwed down, providing a snug fit which is maintained by natural resiliency of the metal.

Peirce 1-Inch Drop-Forged Clamp Pins

Hot Galvanized

May be used at angles in the line when assembled with a crossarm reinforcing plate.

On straight line runs the pin is used without the plate and is prevented from canting by two 1/4-inch lugs. Mounting slots are for 1/2-inch diameter crossarm straps.

Size of crossarm, 4x5 inches and smaller.

Pin height above arm, 4 3/4 inches.

Peirce Wide Base Clamp Pins

For 1-Inch Pin Hole

Hot Galvanized

Designed for angle and corner construction.

Each pin is forged from a single piece of hot rolled open hearth steel. The broad base rests evenly on the arm and prevents pin from cutting into the wood, while the four lugs hold the pin from twisting on the crossarm.

Pins are used with 5/8-inch crossarm straps.

Pin height above arm, 5 3/4 inches.

No. 4320

Peirce Drop-Forged Crossarm Straps

Hot Galvanized

For Side Arm Mounting

For attaching clamp pins.

Designed with the spread equal to the larger dimension of the arm.

Thread length is 2 inches.

Peirce Forged Steel Pins
Tapered Body—Lead Thread
Hot Galvanized

Long Shank Type

Short Shank Type

Designed to carry the full strength of the pin body to the top regardless of the length. Under excessive strain where a yielding of the pin occurs, it will be found to take place in a uniform manner indicating the absence of any weak spots. The yield also occurs below the pin threads eliminating all danger of insulator fracture from this cause.

Lead threads are securely bonded to the steel and carefully formed to meet insulator manufacturers' standards. There are no troublesome fins or mold marks to hinder insulator installation or to cause imperfect seating of the insulator. Lead tops are recessed to prevent localized pressure on the insulator top when it is turned down too tightly. This feature eliminates popping off insulator tops. Base diameters insure proper bearing on the arm for maximum resistance to strain.

Made solid, of one-piece forgings. There are no joints, seams, or weak spots.

Pins are furnished with lock washers. Add letter P to Nos. to obtain the same style pin with pressed metal threads.

Special pins for insulators having 1 1/2-inch pin hole can be furnished.

Peirce Forged Steel Pins
Tapered Body—Steel Thread for Separable Thimble
Hot Galvanized

Long Shank Type

Short Shank Type

Designed for thimbles or for insulators with thimbles cemented in them.

Full strength is carried to the top of the pin regardless of height above the arm. Base diameters insure proper bearing on the arm for maximum resistance to strain.

It is general practice for some engineers to specify insulators with cemented-in thimbles in which case the assembly is screwed on the pin with no preliminary work. If it is preferred to buy thimbles and insulators separately, No. 5151 thimble is used on pin Nos. 5605 to 5612 and Nos. 5603 to 5611, inclusive. No. 5052 thimble is used on pin Nos. 5624 to 5638 and Nos. 5623 to 5637 inclusive. Insulators for these assemblies should have 1 and 1 1/8-inch pin holes respectively.

Pins are furnished with lock washers.

Special pins for insulators having 1 1/2-inch pin hole can be furnished.

Peirce Forged Steel Pins

Tapered Thread— $\frac{3}{4}$ -Inch U.S.S. Thread for Separable Thimble

Hot Galvanized

Long Shank Type

Short Shank Type

Fitted at the top with a wide shoulder for a thimble seat and a $\frac{3}{4}$ -inch U.S.S. machine threaded stud. The entire pin is a one-piece forging with no seams, joints, or weak spots.

By applying various thimbles or adaptors to this pin it can be made to suit almost any desirable purpose in the high tension pin field. The following suggestions are an indication of this versatility:

No. 5017 thimble adapter will provide a 1-inch lead thread.

No. 5018 thimble adapter will provide a $1\frac{1}{8}$ -inch lead thread.

No. 5059 adapter will provide a $5\frac{1}{4}$ -inch extension above the shoulder with a 1-inch lead thread.

No. 5059 adapter with No. 5023 thimble adapter will provide the $5\frac{1}{4}$ -inch extension with a $1\frac{1}{8}$ -inch lead thread.

No. 5021 is a malleable iron thimble for cementing into insulators and threaded to fit the No. 4100 series pins.

No. 5019 adapter is for adapting the pin top to zinc thimbles on which $1\frac{1}{8}$ -inch insulators may be used.

Pins are furnished with lock washers.

Hubbard-O-B Crossarm Pins

Hot Galvanized

Pins have bases designed to give 100 per cent contact area with the top of the arm, developing the full strength of the wood area involved, and extra strength in the shanks which pass through the crossarm.

The body portion is made of high grade cold drawn steel. A conical section fits into a corresponding socket in the forged steel base, as illustrated by the cut-away view, the two parts acting as a unit under load. Obtainable with permanent bond lead threads and separable cut steel thimbles.

Complete tabulations covering pins for roofed and flat top arms and flat steel arms sent upon request.

Peirce Lead Thread Thimble Adapters

For Pin Threads without Taper

No. 5020 is thimble No. 5051 with a lead thread cast over it to screw into standard 1-inch pin holes.

No. 5025 is No. 5052 thimble with a lead thread cast over it to screw into standard $1\frac{1}{8}$ -inch pin holes.

No. 5019 Peirce Adapters for Zinc Thimbles

Hot Galvanized

Provides a method for using insulators in which Peirce Drawn Zinc Separable Thimbles are cemented on old lines equipped with cast iron separable thimble pins.

The outside of the adapter is threaded to fit a $1\frac{1}{2}$ -inch Peirce Drawn Separable Thimble, the inside is tapped for a standard $\frac{3}{4}$ -inch center bolt.

Serrated portion: Top o.d., $1\frac{1}{8}$ inches; bottom o.d., $1\frac{1}{8}$ inches. Diameter of machine screw thread, $\frac{3}{4}$ inch. For maximum stud length, 2 inches. Overall length, 3 inches.

Shipping weight per 100, 98 pounds.
No. 5019.....per 100 \$40.90

Peirce Crossarm Saddles
Hot Galvanized
Presteel Type

Used in adapting a roofed top arm to a flat base pin. Fits the curve of the arm and presents a broad, flat area as a seat for the pin base.

No. 5008—Malleable Iron Type

Crossarm is made in all widths. Diameter of pin hole, 1 3/16 inch. Shipping weight per 100, 109 pounds. No. 5008 per 100 \$44.20

Hubbard Centering Washers

Hot Galvanized

Used on stock cross arms which have been drilled for wood pins, to adopt washer to smaller shanks of steel pins. Top centering washer designed to draw down into pin hole when pin is tightened on arm, leaving top surface clear for pin base. May be used on either flat or roofed arms.

Top centering washer may also be used on bottom of arm if a standard flat washer is placed between it and nut.

Hubbard Solid Steel Pole Top Pins

Hot Galvanized

With two holes at right angles to permit alternate use for lining up insulator grooves.

Bolts must be ordered separately.

Nos. 3152 and 4152 include a square washer and nut. No. 4152 also includes a 5 1/2 x 3 1/4-inch curved plate washer.

When ordering machine bolts, allow an extra inch for the pin in order to equal the eye bolt which is measured under the eye.

Furnished in mild. open hearth steel.

Peirce Pole Top Pins

Hot Galvanized

For higher voltage lines, extra heavy pipe pins are often used because of their high strength and light weight. They offer a considerable extension above the pole top.

Mounting holes are $\frac{1}{16}$ inch in diameter.

If it is desired to mount these pins by means of the pipe supporting fixtures listed below, specify pins with bottom mounting hole only.

Hubbard Insulated Clevises

Hot Galvanized

No. 1342

A standard, flat steel type clevis for mounting on a through bolt or an insulator bolt. Designed for $\frac{5}{8}$ -inch bolts. Uses the standard No. 355 dry process insulator for low voltage lines. Oval mounting hole, $1\frac{1}{16} \times \frac{3}{4}$ inches.

Shipping weight, 253 pounds per 100.

No. 1342, with Insulators.....per 100 \$59.00

Nos. 1341 and 1343

Uses the No. 1606 dry process insulator.

These clevises are similar except for the attachment hole. No. 1341 has oval hole for $\frac{5}{8}$ -inch bolts; No. 1343 has round hole for $\frac{1}{2}$ -inch bolts.

Shipping weight, 154 pounds per 100.

No. 1343

No.	1341	1343
With Insulators.....per 100	\$47.40	47.40
Mounting Hole.....inches	$1\frac{1}{16} \times \frac{3}{4}$ Oval	$\frac{1}{2}$ Round

No. 1339

Popular for rural construction. Has sufficient conductor clearance for low or medium voltage lines.

Uses No. 1608 wet process insulator.

Oval mounting hole, $1\frac{1}{16} \times \frac{3}{4}$ inches.

Shipping weight, 165 pounds per 100.

No. 1339, with Insulators.....per 100 \$53.40

No. 1340

This clevis has a higher flash-over rating than the No. 1339. Used where high mechanical strength is desirable as well as electrical efficiency.

Furnished in $\frac{3}{16} \times \frac{1}{2}$ -inch steel with $\frac{5}{8}$ -inch diameter cotter bolt. Uses No. 1609 wet process insulator. Oval mounting hole, $1\frac{1}{16} \times \frac{3}{4}$ inches.

Shipping weight, 288 pounds per 100.

No. 1340, with Insulators.....per 100 \$63.60

No. 1330

Used extensively on medium voltage lines for corner or dead-end attachments. Especially for 4000-volt primaries.

The $\frac{5}{8}$ -inch attachment bolt is designed for fastening on eye or hook bolts. Pole mounting bolts not included. With lead sleeve on insulator bolt at extra cost.

Uses No. 1613 wet process insulator.

Machine mounting bolt, $\frac{3}{8} \times 2\frac{3}{8}$ inches.

Shipping weight, 572 pounds per 100.

No. 1330, with Insulators.....per 100 \$145.10

No. 1344

Designed for through bolt or crossarm bolt mounting. Similar to No. 1330 clevis shown above.

Mounting bolts are not included. With lead sleeve on insulator at extra cost.

Uses No. 1613 wet process insulator.

Oval mounting hole, $1\frac{1}{16} \times \frac{3}{4}$ inches.

Shipping weight, 550 lbs. per 100.

No. 1344, with Insulators.....per 100 \$128.60

No. 674 Hubbard Open Side Thimble Clevises

Designed to eliminate the difficulties of line threading. Intended for angle work from 30° to 60°; can be used for lesser angles if desired.

Tie-wires can be used safely without danger of crystallization.

Side wire groove, 3/4 inch; diameter of thimble, 3 1/4 inches. Length overall, 6 5/8 inches.
No. 674, Shipping Weight 145 Pounds.....per 100 **\$90.10**

Hubbard Insulated Clevises

Hot Galvanized

No. 561

Formed of 1 1/2 x 3/16-inch channel steel. A sturdy dead-end or corner attachment.

Used with No. 355 dry process insulator for low voltage lines.

Oval mounting hole, 1 1/16 x 25/32 inches. Shipping weight, 242 pounds per 100.

No. 561, with Insulators.....per 100 **\$64.70**

Nos. 641

Formed of channel steel.

Has 1 1/16-inch square mounting hole for 5/8-inch mounting bolts.

Uses No. 357 dry process insulator.

Shipping weight, 116 pounds per 100.

No. 641, with Insulators...per 100 **\$43.60**

No. 8820

Formed of flat steel.

Has 1 1/16-inch round mounting hole for 5/8-inch mounting bolts.

Uses No. 357 dry process insulator.

Shipping weight, 131 pounds per 100.

No. 8820, with Insulators..per 100 **\$52.60**

Peirce Porcelain Strain Insulators

Standard Type—Dry Process

Ordinarily used for dead-ending secondary circuits or guying.

Made with dimensions in accordance with recommended specifications of the Edison Electric Institute (N.E.L.A.). Sharp corners and edges have been eliminated.

The radius of bolt or wire hole gives maximum bearing surface on clevis bolt. It may be used with guy strand or insulated wire.

When ordering insulators and clevises not listed as being applicable to each other, or when fitting different makes of insulators on clevises, make certain that proper clearances are allowed.

Clevises are not included with insulators.

Eye Type

No. 843

Similar to the heavy type shown above, except that this clevis has a drop-forged $\frac{1}{16}$ -inch diameter eye in the crotch. This eye permits clevis to be attached to head end of a through bolt, nut end of a through bolt, double arming bolt, eye bolt, or double arming eye bolt.

With $\frac{1}{2}$ -inch diameter curved clevis bolt and lock washer.

Hubbard Strain Insulator Clevises

Barmack Drop-Forged Type (Patented)

Hot Galvanized

Designed to provide a strong and adjustable means for dead-ending wires. Will fit many sizes and types of strain insulators. Well adapted to dead-ending on steel work where the size of the attaching hole is too small to permit the use of the ordinary steel clevis. Also used to assemble two strain insulators in series.

To assemble the split clevis place the two members into opposite grooves of insulator and estimate the spacing between parallel flat flanges of clevis. Insert curved bolt and screw nut on until above spacing is obtained. Then securely fasten assembly to eyelet or

steel structure with the $\frac{1}{2}$ -inch bolt.

Copper Bail Single Type

Hot Galvanized Yoke

No. 1535 clevis was designed to meet the demand for a boltless clevis, one easy to assemble with the insulator and with a bail made of soft metal (copper) to distribute strain over entire bearing surface of insulator.

Drop-forged yoke may be used through eye of a standard $\frac{3}{8}$ -inch eye bolt, No. 7502 eye nut, or No. 7515 bolt eye.

Diameter of head of copper bail, $\frac{3}{4}$ inch.

No. 1533 is similar to No. 1535 except that each end is threaded $\frac{1}{16}$ -inch diameter and fitted with nut which traps in the yoke.

No. 655 Peirce Forged Steel Thimble Clevises

Hot Galvanized

For dead-ending lines to suspension insulators. With 5/8-inch cotter bolt; will develop an ultimate strength of 20,000 pounds. A 1/2-inch cotter bolt may be substituted for the 5/8-inch size if fittings require.

Diameter wire groove, 1 1/4 inches. Shipping weight 122 pounds. No. 655 per 100 \$44.10

No. 9245 Hubbard Guard Arm Hooks

Hot Galvanized

Used on guard arms as dead-ends for telephone services. Fastened by bolting through the arm. Diameter steel, 1/2 inch. Overall length, 5 7/8 inches. Diameter eye, 1/8 inch. A. T. & T. Co. Std. Shipping weight 45 pounds. No. 9245 per 100 \$18.60

No. 9268 Hubbard Transposition Brackets

Rigid Type
For Phantom Circuits

Hot Galvanized

Used on phantom circuits and differs from the standard types by the addition of an arm which reaches out to the next pin hole and bolts under the base of the pin. This arm keeps the bracket flat against the side of the crossarm and prevents the bracket from pulling out of vertical alignment.

Three points. Size steel, 1 1/2 x 3/8 inches. Any size crossarm can be used.

No. 9268, Ship. Wt. 750 Lb. per 100 \$324.00

No. 9263 Hubbard Transposition Brackets
For Phantom Circuits

Hot Galvanized

For use in making transpositions on open wire lines. Two lugs are riveted into bracket to grip the arm and hold bracket in vertical alignment. Should be used with three No. 8010 pins.

Three points. Steel size, 1 1/2 x 3/8 inches. Crossarm size, 3 1/4 x 4 1/4 inches. No. 9263, Ship. Wt. 735 Pounds per 100 \$272.90

Hubbard Single Point Transposition Brackets

Hot Galvanized

No. 115. Attached under the crossarm on the bottom of 1/2-inch pin shanks. Held in place by the pin nut. Has 1 inch spring thread. No. 121. Tapped with a standard 1/2 inch thread on wood cob, so it may be screwed on the bottom of a Western Union type pin shank, replacing the nut and washer. Regular nut may be used as a lock nut if the shank extends a sufficient distance below the arm. No. 115 115 \$69.10 No. 121 121 118.80 Per 100 Size Steel inches 1 x 1/2 (Channel) 5/8 (Round) Ship. Peirce Transposition Brackets

Multipoint Type
Hot Galvanized

Nos. 20237 and 237 are for two-wire transposition.

Nos. 20437 and 437 are for transposing four wires of two circuits on which a phantom is connected.

Made with an angle steel back to which pressed steel points are riveted. Equipped with spring threads for insulators having a standard one-inch pin hole.

Brackets are punched with two holes and a slot so that they may be mounted on various size arms by means of the crossarm U-bolts. Attachment to the arm may be made horizontally or vertically.

Unless otherwise specified, furnished with No. 1021 U-bolt for 3 1/4 x 4 1/4-inch crossarms.

Can be obtained with a hole for a crossarm brace if desired.

No. 9270 Hubbard Transposition Brace Plates

Hot Galvanized

This brace plate is designed to prevent the transposition bracket from being pulled out of vertical, on slight angles in the line, because of the constant strain in one direction.

Holds the bracket in perfect alignment under excessive side pull.

Used with Nos. 9262 and 9275 on R.S.A. roofed cross arms.

No. 9270, Ship. Wt. 58 Pounds. per 100 \$38.70

Peirce Crossarm Spreader Brackets

Hot Galvanized

No. 317

Nos. 20217 and 217. Furnished with a hole so that Nos. 217A or 20217A, consisting of a single point and attachment bolt, may be added, forming a three point bracket similar to No. 317.

Nos. 201, 301, 20201, and 20301. May be adjusted vertically on arm when used with crossarm strap. If desired, may be bolted to arm through side holes in back. May also be used as house brackets for service wires.

Nos. 202, 302, 20202, and 20302. With rest riveted to back; aids in fastening bracket to crossarm, as well as keeping bracket in vertical alignment on crossarm.

No. 301

Two No. 3301 washers are included with angle back type brackets. Used for abridging slot between back angles to furnish a seat for the nuts of the crossarm strap.

Insulator points of angle back spreader brackets are of 1x1/2-inch channel steel, extending 4 1/4 inches from arm. Back is composed of two angles, spaced 3/16 inch apart, 2 3/16 inches wide with 1/16-inch bolt holes.

Peirce Wireholders

Multi-Point Type

Hot Galvanized

No. 4299

The insulators can be installed after back has been mounted to building. Insulators can be easily removed or installed to make wireholders of various wire spacing. For example, a 2-wire 9-inch spacing wireholder can be converted into a 3-wire 4 1/2-inch spacing by the addition of another insulator.

Back pressed from 12-gage steel; has 1/16-inch holes in center of 3/16x1 1/2-inch slot.

Peirce U Through Type Secondary Racks
Heavy Type
 Hot Galvanized

Used largely by power companies. Points are formed in the shape of a U, inserted through back and riveted in place. Under tension, strain is distributed over entire area of back. Rivets do not carry any dead end load. Under heavy line strains, they keep points from bending away from the back.

Points are pressed from 12-gage steel, formed and mounted so that smooth, round side is inside, toward line wire. Rack back is pressed from 9-gage steel and is 3 1/2 inches wide. Extension to center of insulator bolt is 4 inches. Racks may be mounted by using bolts behind insulators or between them. No. 355 insulator is standard.

When 4-inch spacing racks are specified, shield No. 3372, for attaching over upper edges of points, is furnished to prevent injury to insulation when stringing the wire.

Peirce Distributing Knob Racks
 Hot Galvanized

Used for running twisted pair telephone wires along poles and for attaching service take-off wires.

Made up of two solid steel points, or eyes, securely riveted to a 1 1/4 x 5/8 x 1/8-inch channel back. No. 9214 knobs are included. Rack bolts for these knobs are 3/8-inch in diameter, threaded at the lower end.

Racks are mounted by means of 1/2-inch lag screws through 3/8-inch holes in each end. Extension from pole to center of insulators is 2 3/8 inches. Spacing between corresponding grooves of adjacent insulators, or between insulator centers is 1 1/2 inches.

Prices upon application.

Peirce Wireholders

Standard Type
Hot Galvanized

No. 190

Not affected by temperature changes or by difference in coefficient of expansion of parts.

No. 190 is for making house service connections. Copper cotter pin interlocks insulator with metal portion of wireholder. No. 290 is similar to No. 190 except has wet process porcelain insulator.

No. 1190

Peirce Presteel House Racks

Hot Galvanized

Designed as a house bracket; also used for carrying secondary wires vertically on poles where conductor is lighter than No. 3 wire. Made with 3/4-inch channel back and Presteel points. Mounting slots, 1/16 x 1/2 inch.

Assembled with No. 1603 insulators. No. 501 corner iron is of 12-gage 1-inch flat steel.

Peirce Secondary Racks

Standard Type
Hot Galvanized

Rack points are of No. 9 gage steel with rounded tops so that wire insulation will not be harmed while stringing. Play between points and insulator is sufficient to eliminate jammed wires. Mounting may be accomplished at any point through the back with through bolts, using the No. 3350 mounting washers furnished.

Side mounting slots are for 3/8-inch lag screws.

No. 191-A

No. 296

No. 396

No. 299A is same as No. 299 except that it has a hole in center of back. When No. 191A is mounted in this hole it changes No. 299 from 2-wire 9-inch spacing to 3-wire 4 1/2-inch spacing. No. 191A is equipped with 5/16 x 5/8-inch stove bolt for attaching to back. Mounting slots are for 1/4 and 3/8-inch screws.

Peirce Insulated Telephone Knob Screws

Hot Galvanized

No. 2919

Porcelain knob used generally for running telephone wires along the sides of buildings.

Provided with small white glaze insulator No. 2917. Overall length, 3 inches. Size screw, No. 11x1 1/8 inches.

No. 2919, with Insulators, Ship. Wt. 11 Pounds.....per 100 \$17.70

No. 2920

May be used for dead-ending duplex or twisted pair telephone wires. Also as a service attachment for low voltage power lines in localities not visited by snow and sleet.

Provided with large brown glaze insulator No. 2927. Overall length, 4 1/4 inches. Size screw, No. 22x2 1/2 inches. No. 2920, with Insulators, Ship. Wt. 48 Pounds.....per 100 \$26.80

Peirce Swinging Knob Fixtures

Hot Galvanized

The sister hook feature of this bracket permits the removal of the insulator for driving the screw without the usual trouble with small bolts, nuts, or movable parts.

The 3/8x3-inch gimlet point lag screw is trapped in the eye in such a manner as to be locked against turning.

Peirce Telephone Wireholders

All Porcelain Type

Nos. 1621 and 1622 wireholders are for duplex and twisted pair telephone wire. They are furnished with sharp pointed, deep cut, galvanized or brass wood screws for easy starting and holding strength. The portion around which wires are looped is smooth and well rounded.

Unless otherwise specified, cemented-in screws will be furnished. Leaded in screws are optional, but must be specified by adding the letter L to the catalog number.

¶Brass screw.

Prices upon application.

Peirce Primary Lead Wireholders

A wet process porcelain wireholder so designed that it has sufficient leakage distance for primary voltages.

Either style may be used in the arm or pole. Unless otherwise specified No. 1650 will be furnished with cemented-in screw. If desired that screws be leaded in, specify by adding the letter L after the number.

Diameter of wire hole, 1 inch.

Peirce Prussian Hook Brackets

Hot Galvanized

Used for supporting wires on poles, trees and houses.

Nos. 311 and 313 are formed from 5/8-inch round steel and equipped with a 1-inch spring thread for an insulator and a 5/8-inch lag screw thread for mounting.

Nos. 911 and 913 are similar to Nos. 311 and 313 except that they have a 1-inch lead thread for an insulator.

No. 314

Nos. 314 and 914 are formed from 5/8-inch square steel and are furnished with a 5/8-inch gimlet point lag screw thread for mounting. No. 314 is furnished with a 1-inch spring thread and No. 914 with a 1-inch lead thread.

Nos. 315 and 915 are formed from 1/2-inch square steel with a 1/2-inch gimlet point lag screw thread for attachment. No. 315 is furnished with a 1-inch spring thread and No. 915 with a 1-inch lead thread.

Nos. 316 and 916 are formed from 1/2-inch round steel with a 1/2-inch lag screw thread for attachment. No. 316 is furnished with a 1-inch spring thread and No. 916 with a 1-inch lead thread.

Reliable Straightline Splices

For Copper Wires and Solid Copperweld

Straightline splices make positive joints that are as strong as the wire in the line. The weather has no serious effect on the splice. Parts are all non-ferrous.

A—Ends fit wire closely, prevent insertion of burred or out of shape wires. Such wires would project between jaws and prevent jaws from clamping. This close fit prevents insertion of over-sized wire, which cannot be held properly.

D—Ends of tube dampen vibrations before they reach clamping jaws.

B—Working taper permits jaws to hold full strength of wires one size smaller. This insures proper holding of used wires that have been stretched or scraped.

C—Strong phosphor bronze spring is needed to prevent the possibility of screwing wire out of splice on a light twisting pull when installing wire.

D—Tapered end permits pulling over cross arm without catching and kinking the wire.

E—Release hole permits easy salvage of splice by engaging washer with pin when jaws are pushed back of clamping position. Screw driver slot release holes furnished when specified.

F—Jaws ride in slots of a husky washer and cannot cluster to permit a strand to slip between them and cause trouble.

G—Jaws are forged silicon bronze, much harder than the wire, to insure that they will hold hard drawn wire repeatedly. Serrations develop approximately full strength of stranded as well as solid wire and do not allow wire to be screwed out of splice when not under tension.

For Copper Wires and Solid Copperweld

The straight line splice will break soft, medium or hard drawn copper, solid, three strand, or seven strand at approximately its full strength.

No.	WIRE SIZE B&S GAGE			Marking	Ship. Wt. Lb. per 100

Reliable Straightline Insulated Splices For Copper Wires

For series street lighting, where an insulated section is necessary.

Distribution secondaries easily sectionalized without removing wires from structure. Insulated splices may be inserted in the line without the necessity of dead-ending which requires cutting in additional wire.

Insulated section made of non-moisture absorbing plastic. All sizes designed to hold full wire strength. Insulated splices used without fuse clips can be supplied with a thin bakelite disc, for identification in the line. Specify when ordering. No additional charge.

Available with 5/8, 1, and 3-inch insulation, additional length of insulation furnished, depending upon voltage. Wire gripping features the same as used on all Reliable Straightline Splices.

Splices with clips for attaching fuses may be secured at a slight increase in cost over the regular Insulated Splice. These clips are adjustable to fit the various size fuses.

Reliable Cable Clamps

The concentric cable clamp is a low cost clamp that holds the cable securely under all conditions without bending or snubbing or otherwise damaging the insulation.

It is made of non-corrosive metals and has a large margin of strength over field requirements. It is easy to install and neat in appearance.

Type P Reliable Drop Wire Clamps

Parallel Wire

Twisted Pair Wire

An ideal device for attaching No. 17 B.&S. twisted pair or parallel drop wire to poles and buildings.

The clamp makes a very neat appearing installation. It is easy and quick to install. Two of them can be used to make an angular turn. Slack in drop wires can be taken up quickly without leaving any weak spots.

THE P CLAMP is wedge-shaped, with a copper wire loop at one end for hooking over a common drive hook, masonry hook or porcelain knob. When using twisted pair wire, it is essential to parallel the wires through the clamp.

THE R CLAMP for resistance braid (heavy duty drop wire) is the same design as the P clamp but is slightly larger.

No. in carton, 25. Standard package quantity, 500.
 No. P R
 Weight per 100. pounds 77 83

Reliable Standard Drive Hooks

Standard drive hooks as illustrated above are 5¼ inches long, heavily galvanized.

Shipping weight per 100, 28 pounds.

National Nicopress Splicing Sleeves, Dead-End Sleeves, and Tools

For Telephone, Telegraph, and Signal Line Wires

In the making of a Nicopress splice, the sleeves which are lined with a metal alloy, harder than the metal of either sleeve or conductor, are pressed onto the conductors with the special Nicopress tool. The hard alloy is forced into the softer metals of sleeve and conductor, forming practically a cold weld. The resultant joint has a strength that is equal to or greater than the rated breaking strength of the conductor, and is so tight that the conductor cannot pull out.

Nicopress splices will withstand the toughest strains of vibration. In addition the use of Nicopress splices assures a high electrical conductivity.

National Nicopress Tools

For Telephone, Telegraph, and Signal Work

In making the splice by the Nicopress method the tool must be of a size that is convenient and practical for the lineman to handle either in the air or on the ground. It must be so efficient in use that pressure can be applied with a certainty that each compression made will be exactly as required.

No. 0

No. 0. For telephone, telegraph, and signal lines. Length, 10 inches. Weight, 1¾ pounds.

No. 31

No. 31. For BB, 85, and 135, 12 B.W.G. galvanized steel wire. Length, 11 inches. Weight, 2 pounds.

No. 17

No. 17. For drop bridle and inside wire. Length, 8 inches. Weight, 9 ounces.

No. 41

No. 41. For power distribution; 4 B.&S. gage wire and smaller. Length, 15 inches. Weight, 3½ pounds.

No. 51

No. 51. For copper, copperweld and aluminum power lines; 1 B.&S. gage wire and smaller. Length, 18 inches. Weight, 4 pounds.

National Nicopress Sleeves

For Drop, Bridle, and Inside Wires

Completed Splice

Splices made with Nicopress sleeves have maximum strength and tightness, are small, compact, and neat. There is a saving of wire and tape due to the fact that the wires are butted and not overlapped. Splicing is quickly done with the light, compact, one-hand-operated No. 17 type tool, completely eliminating need of solder.

National Nicopress Copper Splicing Sleeves

For Copper Light and Power Conductors

Nicopress Power Sleeve

Completed Nicopress Splice

For splicing power distribution lines Nicopress sleeves and tools are highly efficient. Splices are quickly made; completed splices have maximum strength and tightness. Conductors will not pull out of sleeves. Splices are neat in appearance and not much larger in diameter than the wire, have low resistance, and are butted and not overlapped—no additional wire is required. The simple compression method of making the Nicopress splice assures proper handling of the wire.

Nicopress Splicing Units

For Aluminum Cable, Steel Reinforced (A.C.S.R.)

Steel Sleeve

Aluminum Sleeve

Completed Splice

The Nicopress method of splicing A.C.S.R. makes the work easier, speeds up completion of the job, and assures workmanlike splices of maximum strength. Every splice is small and compact and exceedingly neat in appearance.

The Nicopress unit for splicing A.C.S.R. consists of two sleeves, one aluminum for aluminum strands, and one of galvanized steel for the inside steel core and the practical convenient No. 51 Nicopress tool. The Nicopress method of making the A.C.S.R. splice does not injure either the steel core or the aluminum strand.

National Nicopress Dead-End Sleeves

For Telephone, Telegraph, and Signal Line Wires

Offset Dead-End Sleeve and Completed Dead-End

The outstanding advantages secured through the use of the Nicopress method of dead-ending are: simplicity and speed of installation; maximum tightness and strength of completed dead-ends; the remarkable degree to which they withstand vibration; the provision for a tail of any desired length in the offset dead-end sleeves; the fact that no special tools are needed as work is done with same tool used for making Nicopress line splices; the elimination of sleeve twist and all danger of damaging or weakening conductors by twisting.

Rolled Seamless Connectors

For splicing telephone, telegraph, signal and power line conductors. Forms splices of higher strength and lower resistance than the wire itself.

This type of connector shown above consists of a short piece of seamless copper tubing.

A slight dent midway between the ends, serves as a stop for the ends of the wires and insures equal distribution of the gripping action upon the wires to be spliced. The rounded ends slip easily over pole cross arms.

The inside surface of this connector is lacquered. Embedded in the lacquer are hard carbon particles that lock both ways on the conductor and in the connector as the connector is rolled on the wire.

Minimum shipment of each size, 100 connectors.

AMERICAN WIRE GAGE			
No.	Dec. Equiv. Inches	Per 1000	Approx. Ship. Wt. Lb. per 1000
4	0.204	115
6	0.162 or 0.165	75
8	0.128	66
9	0.114	35
10	0.102 or 0.104	30
12	0.081 or 0.080	31

For intermediate or odd sizes, use price applying to next larger size connector shown in table. Such intermediate or odd size connectors will be rolled in corresponding next larger groove on rolling tool.

Rolling Tools

Used to make splices on ground or upon pole cross arms. Rolls give tremendous pressure upon connector, but are easily turned by ratchet handle mounted on auxiliary shaft. Roll faces designed with flat sections so that wire may be inserted and connector started in its proper groove and completed splice removed from tool. Body of tool, tempered steel forging; rolls, stainless steel.

E	6, 8, 9

**National Galvanized Cable Rings
With Tension Grip
For Hanging Cable**

Quickly and easily placed on the messenger, and once in position, will not slip along or jump off, remaining rigid in position because of the tension grip design. Use of these rings enables pulling the cable from either direction and eliminates necessity of reriding the messenger to replace or respace rings. Made from flat, high carbon steel wire with rounded edges. Hot-dip galvanized, with an even deep coating of zinc assuring smoothness and long life.

Gathered in Handy-Five Clusters for convenience in handling. This simple method of gathering, prevents hooking together of rings and does away with all ground litter.

National Regular Cable Rings

Can also be furnished in copperweld and calsun bronze.

*Made in all strand sizes. Specify size desired.

National Cable Ring Saddles

Furnished in aluminum, galvanized steel, and bronze. Made in sizes 1½, 2, 2½, 3, and 3½ inches.

Aerial Cable Supports

The purpose of aerial cable supports is to supply flexible supports at each side of the pole to prevent ring cut. The strap is wrapped around the cable three times over itself passing through the hinge member. Adjustable to any height. Provides a flat bearing which will not injure the cable sheath.

The supports are placed two on each side of each pole. They are placed 20 inches apart.

The aerial cable support is composed of a zinc strip, hinge joint member which holds the free end of the zinc strip in position on a soft galvanized U-shaped wire, 1/2 inches long.

No.	Per 1000	Length Strap Inches	Maximum Diameter of Cable or Sleeve Inches	Maximum Circumference of Cable or Sleeve Inches	Standard Carton	Weight per 1000

*8	264.00	64	†6 1/2	20 1/2	200	38

*No. 8 is exactly the same as No. 7 except No. 8 has 1-inch long U-shaped wire on end instead of 5-inch long wire as on regular supports.

†Maximum diameter of sleeve.

Reliable Davidson Cable Hangers

Illustrating Method of Fastening

Cable hangers have proved that wear on cable sheath can be eliminated. Entire sheath is grounded solidly to messenger and grade clamp is not needed as cable does not creep on steepest grade.

Hanger is rust-proof and unusually neat in appearance. Maintenance cost of aerial cable is materially reduced as enclosure of entire cable and messenger with cable mold in trees is facilitated.

National Sign Brackets

For Mounting Flanged or Flat Telephone Signs

Used to obtain maximum visibility for signs by fastening them to poles or posts in a conspicuous position. Practically every type of metal sign can be quickly, securely, and neatly hung to wood, concrete, or metal pole or pipe post at minimum cost. Made of high grade materials, thoroughly hot-dip galvanized assuring protection against rust and wear.

Type 170

For Pipe Posts 1½ to 5 Inches in Diameter

Size Bracket inches	2	3	4
Post Diameter inches	1½ to 3	3 to 4	4 to 5

Type 188

For Wood, Metal, or Concrete Poles, 5 Inches in Diameter and Larger

Straps for Type 188 Furnished Flat

Size Bracket inches	6	10
Post Diameter inches	5 to 8	8 to 12
Length Back Strap inches	18	32

National Galvanized Bridle Rings

These rings are hot-dip galvanized, giving them high rust resistance.

They are a screw type ring, made to A.T.&T. standard, for running twisted pair, bridle, or parallel drop wire on building walls, fences, and poles.

Style.....	A	C	E	F
Eye Size.....inches	1 5/8	1 1/4	5/8	3
Approx. Shipping Wt. per 1000...pounds	115	75	30	300

National Angle Screws

Designed for use with porcelain knobs in dead ending drop wires on building, where angle between drop and building is 30° or more.

Hot-dip galvanized.

Made to A.T.&T. standard.

Size.....inches	5/16
Approx. Shipping Weight per 100.....pounds	12

National C-B Knobs for Drop Wires

For use on buildings and in trees, C-B Knobs offer many advantages over the rigid knob or insulator.

The knob is hooked into the bridle ring and the drop is dead ended on the knob. When used in trees to prevent abrasion, the drop wire

is simply carried over the knob with a simple tie.

It makes no difference at what angle the drop wire approaches, as the knob provides a flexible and self-adjusting support, equalizing the strain and taking up all vibration.

No.	190	191
Style.....	Single Groove	Double Groove
Shipping Wt. per 1000...lb.	250	250

Diamond Insulated Screw Eyes

Hot galvanized by the Diamond process.

The porcelain ring has a diagonal opening which allows the

easy insertion of wires and when pulled taut they cannot become released from the ring.

Packed 100 in a container.

Type.....	5/8"S	5/8"L	1"S	1"L
Per 1000.....	\$76.67	83.34	100.00	103.34

Weight per 1000, Enameled.....lb.	150	125	50	300

Diamond Drive Rings

Hot galvanized by the Diamond process.

Accomplish the same purpose as the screw threaded pigtail bridle rings, but are designed for driving instead of screwing into structures. When attached to wood, they are driven as an ordinary wire nail. When attached to hard substances, brick, stone, concrete, use the 1/2-inch with the 3/16x3/8-inch Diamond hammer drive anchor

and the 5/8 and 7/8-inch with 1/4x1-inch Diamond hammer drive anchor. Packed 100 to a box.

Diameter Eye.....in.	1/2	5/8	7/8
Per 100.....	\$7.00	12.00	17.00
Size Hammer Drive Anchor to Use.in.	3/16x3/8	1/4x1	1/4x1
Weight per 1000.....lb.	18	28	53

No. 6296 Drop Wire Clips

For use at intermediate attachments of parallel drop wire. This clip has supporting lip and specially formed hole to fit drive hooks, masonry hooks, and knob adapters.

Wire is placed in supporting groove and tongues of clip are crimped down. Pressure grips wire firmly.

No. 6296.....each ...

National Drive Rings

Low cost, efficient, hammer drive rings for use where only a few pairs of wire are being run. Hot-dip galvanized. Made to A.T.&T. standard. Eye size, 1/2 inch. Length, 2 inches. Approximate shipping weight per 1000, 17 pounds.

Whitall Tatum Glass Insulators

WT No. 1 meets the Bell System's standards for "DP," WT No. 2 for "Toll Line," WT No. 3 for "Exchange Line" and WT No. 15 for "TW."

Western Union, Postal Telegraph, and the country's leading railroads use W.T. No. 1.

Hemingray Insulators

The Hemingray Division of the Owens-Illinois Glass Company produces two lines of glass insulators. The Hemingray line of communication insulators has been manufactured continuously since 1863. The Lowex line of power insulators is a development resulting from exhaustive tests to produce a material with the specific qualities required for electrical insulating purposes.

Lowex glass, electrically, has a high dielectric strength and a low dielectric constant. Physically it is low in thermal expansion, high in mechanical strength and has a very hard surface.

Both the Hemingray and Lowex Lines are not affected by and do not deteriorate with aging or weathering. Homogeneous in character, having only one coefficient of expansion. A smooth hard surface renders them impervious to moisture absorption and makes them practically self-cleaning. Close manufacturing control, extensive research, and a constant development program have increased mechanical strength and product uniformity. These insulators are unaffected by sudden temperature changes and are devoid of internal strains and stresses.

Thorough inspection is made easy because the products are clear and flawless. Reasonable in first cost, this tougher glass withstands rough handling and gives long service which means low ultimate cost.

J-Bolts are standard on No. 6200 and 6201. U-Bolts can be supplied. Specify type of bolt required.

U-Bolts are standard on No. 6202 and larger sizes. J-Bolts can be supplied. Specify type of bolt required.

One-half inch round arcing horns on No. 6200, 01, 02 and 03 regularly furnished integral with keeper. On larger sizes, round or flat Arcing Horns are regularly attached to square shank adapters No. 3051 and 3052.

Aluminum or Copper Liners, which reduce the maximum cable-diameter accommodation by .1 of an inch, can be supplied, formed and riveted to both the clamp body and keeper.

*Furnished with reversible two-groove keeper for wide range of conductor diameter accommodation. All designs of the above-clamp can be furnished with fitting for attachment to Hewlett Type insulator strings. Specify type of liner required.

Thomas Moderate Voltage Cable Clamps

Boltless Type

No. 10455 is side opening type. No. 10441 without side opening.

No.	10455	10441
Minimum Cable Size	in. .20	.20
Maximum Cable Size	in. .62	.62
Ultimate Mechanical Strength	lb. 6500	7000
Shipping Weight per 100	lb. 155	140

No. 81460 Angle Clamps

Malleable Iron—Hot Dip Galvanized

For rural electrification. A one-piece assembly clamp.
 Minimum Cable Size.....in. .162
 Maximum Cable Size.....in. .60
 Ultimate Mechanical Strength.....lb. 5000
 Shipping weight per 100.....lb. 162

Snubbing Type

Drop Forged Steel—Hot Dip Galvanized

For all conductors within its size range, except A.C.S.R.

Clamp is well suited for use with solid or stranded copper, copperweld, copper, and other similar composite conductors.

Clamp is light in weight and

size, yet amply strong for the service for which it is designed. No. 2102 without ball and socket eye. No. 21028 with ball and socket eye.

No.	2102	21028
Minimum Cable Size	in. .128	.128
Maximum Cable Size	in. .375	.375
Ultimate Mechanical Strength	lb. 7000	7000
Shipping Weight per 100	lb. 175	260

Drop Forged Steel—Hot Dip Galvanized

No. 2200

No. 2300

For rural electrification. A one-piece assembly clamp.
 No. 2200 2300
 Minimum Cable Size.....in. .12 .12
 Maximum Cable Size.....in. .60 .60

 Shipping Weight per 100.....lb. 145 145

Thomas Dead End Strain Clamps

Snubbing Type

Drop Forged Steel—Hot Dip Galvanized

For all conductors within its size range including A.C.S.R., this clamp is amply strong while in service or while being pulled up during installation. Reversible two-groove keepers accommodate a wide range of conductor sizes. Side-opening feature

and reversible keepers make for easy installation and line work. For stranded copper, composites, and especially suited for No. 2-8 Strand and No. 4-8 Strand A.C.S.R.

No. 2104 without ball and socket eye. No. 21048 with ball and socket eye.

No.	2104	21048
Minimum Cable Size	in. .187	.187
Maximum Cable Size	in. .50	.50
Ultimate Mechanical Strength	lb. 9000	9000
Shipping Weight per 100	lb. 210	295

Designed for use with No. 6 to 2/0 bare solid copper; No. 7 to 4/0 bare stranded copper; No. 9 to No. 1-T. B.W.P.; No. 4 to 4/0 all aluminum and No. 8 to 2/0 A.C.S.R. with armor ribbon.

Being furnished with U bolts they will accommodate all conductors from .16 inch minimum to .55 inch maximum overall diameters.

No. 7511 without ball and socket eye. No. 7548 with ball and socket eye.

No.	7511	7548
Minimum Cable Size	in. .16	.16
Maximum Cable Size	in. .55	.55
Ultimate Mechanical Strength	lb. 10000	10000
Shipping Weight per 100	lb. 263	365

Thomas Forged Steel Strain Clamps

Hot Dip Galvanized

Trunnion Type

Designed especially for dead-ending steel, copperweld or other high strength cables.

Has transversely ribbed seats in both clamp body and keeper. All parts are heat treated to avoid distortion under severe bolt pull-up, necessary to obtain high slip-strength.

Aluminum or copper liners, can be supplied, formed and riveted to both clamp body and keeper.

Specify type of liner required.

Hubbard O-B Wood Guy Strain Insulators

Fittings Hot Galvanized

Provision is made for wood shrinkage and the loading of the wood fibers by friction and tension rather than by shear. These features are provided by the self-tightening grip and inner friction plates which will develop the full strength of the wood over a period of many years.

Furnished with arcing horns unless otherwise specified.

The number 6 or 9 after the No. indicates length of clear wood.

Matthews Cable Clamps

Galvanized cable clamp for use on all copper power cables from 000 to 1,500,000 C.M. inclusive. Designed to do away with the need for costly splices, hazardous soldering operations and waste of costly cable, where power cable is used in industrial plants or on transmission cables, where strains do not exceed 1200 pounds.

For a.c. cables, the No. 3 clamp has two of the carriage bolts, C, on one side, made of Everdur to break the magnetic field. When used on cables carrying d.c., the four carriage bolts, C, are made of hot galvanized steel. Steel clamping plates, A, B, and D, and the steel strain insulator bolt, E, are hot galvanized.

Shipping weight per 100, 400 pounds.

No. 2.....	each	\$1.60
No. 3.....	each	2.10

All-Steel Public Utility Bodies

Series 500 Mounted on Conventional Type Chassis

Models are designed for all power and light or telephone work.

All-steel, electrically welded line construction and maintenance bodies are available for all wheelbases of conventional or C. O. E. type chassis.

Bodies can be built to meet any desired specifications.

Write for complete information on utility bodies and equipment.

**Series 600 Mounted on Cab-Over-Body Type Chassis
with Custom-Built Utility Crew Cab**

All-Steel Public Utility Bodies

Series 60-M Meter Installation and General Service Body Mounted on a $\frac{3}{4}$ -Ton Chassis

All-Steel Utility Service Bodies are designed for all types of utility work—electric, water, street light maintenance and telephone.

All models available for $\frac{1}{2}$ to 1-ton chassis.

Bodies can be built to meet any desired specifications.

Write for complete information.

Series 55-M Meter Installation and General Service Body Mounted on $\frac{1}{2}$ -Ton Chassis

Model U-8 Graybar All Steel Line Maintenance Bodies**For Utility Service**

Designed to meet the requirements of the smaller utility companies, independent telephone companies and REA cooperatives.

The body is 96 inches long, 76 inches wide with tool compartments, 12 inches deep. The loading space is 52 inches wide and 72 inches long. The body will fit a 1½ ton capacity truck with a CA dimension of 57 inches.

The standard body is equipped with tarpaulin bows, material hooks, ladder racks, rear step, and grab handle. A winch compartment can be furnished at a slight additional cost.

Complete Information and Prices upon Request

Model B-7 Graybar All-Steel Utility Bodies

For $\frac{3}{4}$ and 1-ton truck chassis with cab to axle dimension of approximately 50 inches.

Outside length of body, 84 inches; outside width of body, 67 inches; floor width between compartments, 42 inches; compartment height from floor, 31 inches.

Approximate weight with ladder racks, 975 pounds.

Complete Information and Prices upon Request

Model B-7 Graybar All-Steel Utility Bodies

Applications

A sturdy, practical, compact unit built for years of service in diversified fields of operation.

The body has 30 square feet of floor space and is ideal as a delivery unit for radios, stoves, refrigerators and associated household furnishings.

The side panels open to conveniently located, roomy compartments which house supplies, tools and associated equipment needed for the installation, maintenance and repair of radios, stoves, refrigerators, telephones, and electric lines.

Because of the many purposes it serves, this body fits the needs of electric light and power companies, gas departments, RFA cooperatives, electrical contractors, independent telephone companies, etc.

Panels

The front and side panels are built of 18-gage stretcher leveled steel. The top of the compartments are covered with 16-gage stretcher leveled steel.

Floor

Constructed of 13-gage diamond plate steel securely riveted to the cross sills of the understructure. A 1½-inch flange of the floor is riveted to the panels.

Understructure

The understructure of the body is reinforced with 1½x2-inch steel strips welded to the 3-inch, 5-pound cross sills.

Tailgate

Constructed of 14-gage stretcher leveled steel, is strongly reinforced and operates on 3 hinges. May be lowered to the same parallel of the body's floor, increasing the floor length, 14 inches. The floor level is only 26 inches from the ground. When closed, the tailgate covers the compartments at the rear.

Compartment Doors

The two large compartment doors are 76 inches long and 13 inches wide. All doors operate on a full length, 2-inch piano type hinge and are fitted with hasp type handles which can be locked.

Snug fit and 18-gage drip moulding spot welded above each compartment door eliminate the entrance of moisture. When open, the two large doors are rigidly supported by steel rods. One end of these rods is fastened to the door and the other end operates in a slide.

The right side door has a wood filler and, at the rear, vise brackets. This together with its ample bracing makes the door suitable for a work bench.

Ladder Racks

Built of 1¼-inch pipe. The pipes are inserted in castings riveted to the body. The rear rack is removable and may be carried in sockets at the front end of the body.

Ladders, pike poles or other equipment can be carried on the racks. Casting on the racks and a hold-down clamp prevent creeping and rattling. Between the brackets and the clamp is a roller of Shelby tubing which facilitates removal and prevents scuffing of the ladder.

Notes

At a slight additional charge a tote-tray, sponge rubber lined, can be furnished.

Bodies may be purchased in prime paint or finished in colors to choice. It is recommended that bodies be installed to chassis at factory where experienced workmen have the necessary equipment available for installing the body satisfactorily.

A complete line of equipment for telephone, and electric power and light companies can be furnished, including winches, trailers, 8, 10 and 12-foot line construction and maintenance bodies, derricks, power reels, other accessories and small tools.

Graybar Line Construction and Maintenance Trucks

FWD Trucks complete with line bodies, single or double drum winches, pole derricks, and boring machines are available in sizes to meet every line construction and maintenance need.

For complete information and prices, contact your nearest Graybar house or The Four Wheel Drive Auto Company, Clintonville, Wisconsin.

Model 1417 Graybar Towing Hooks

For trucks up to 3½-ton capacity. Attaches to frame of truck with braces to the side bars. Has coil spring to cushion starting and stopping shocks. Positive locking latch eliminates danger of uncoupling. Weight, 48 pounds.

Type L Graybar Draw Bars

For use with pole dinkey and light trucks. Attaches to wood poles and forms link for connecting to pintle hook on truck. Inside diameter of pintle eye ring, 2⅝ inches. Weight, 31 pounds.

Prices upon Request

No. 12 Graybar Single Drum Winches 10,000-Pound Capacity

This winch is a modification of the regular standard single drum winch and is used for every purpose which requires pulling rope on a drum, operating cranes, pole setting derricks and for hoisting and hauling. This type winch is particularly popular for use on light model trucks where the use of a large winch-drum is not required and not much space is available for mounting.

No brake nor clutch is required on this winch, for the winch cannot run free; the winch is driven when pulling and also when lowering. An automatic worm brake is standard equipment on this winch and assures added safety in operation.

It is flexible, light in weight, and built for hard service. To keep the weight to a minimum and assure a greater factor of safety, only high grade heat treated alloy steels and electric steel castings are used in its construction.

Niggerheads

Graybar Winches can be furnished with niggerheads on one or both sides. Simply by the use of a longer shaft and auxiliary supporting bearings, Winch can be equipped with niggerheads to meet practically every demand.

Standard niggerheads furnished are 8-inch; 12-inch niggerheads can also be furnished if desired.

Especially popular on the single drum models and are furnished at a slight additional cost. Ordinarily, when one niggerhead is wanted the standard winch is supplied with the niggerhead mounted on shaft extension, on right hand side. If desired, shafts long enough to place niggerheads beyond cab-line are furnished. In that case, out-board bearings are provided.

Graybar Pole Binders

This portable binder is a small winch with a ratchet type holding attachment.

All surplus cable is carried on the drum of the small winch and there are no loose ends. The binder can be tightened at any time without releasing hook on the load.

Weight, 18½ pounds.

Prices upon Request

Model S Graybar Cable Splicer's Carts

An all steel, compact, rugged and theft-proof cart. The compartments provide a place for every tool within easy reach of the splicer. A folding leg supports the front end of the cart when parked.

Capacity, 1000 pounds; overall length, 74 inches; height, 41 inches; axle, 1¼ inches square; tread, 34 inches. Steel disc wheels; Timken bearings; tires, 4.75/19 4-ply.

Weight, 480 pounds.

Model 1775 Graybar Pole Dinkies

A 1-ton capacity, lightweight pole dinky for light construction or repair service.

Triangular shaped tongue is two 3-inch 5-pound channel beams. Bolsters are cast steel; axle is heat treated high carbon steel 2 inches square; tread, 50 inches. Tires 5.00/19 singles 6-ply or 5.50/17 singles 6-ply. Overall length, 104 inches.

Weight, 390 pounds.

Graybar Winch Line Hooks

For attaching to wire rope lines as used on truck winches.

It attaches easily and quickly to a line or loop and holds firmly until the pole is set. Slack in the line then permits detaching from ground with pike pole.

As line must be threaded through derrick sheave a hook that detaches easily increases the efficiency of the line crew. Weight, 4½ pounds.

Graybar Safety Hooks

Used with derrick and truck winch when raising derrick to operating position. Line is passed over spindle bar and threaded through the derrick sheave then attached to the safety hook. Winch power will then raise the derrick so it can be bolted in place by the linemen.

Hook is forged steel, designed so that the heaviest load is carried on the heavy section of the hook.

Weight, 3½ pounds.

Prices upon Request

Graybar LM Derricks

Light—Middle Type

This derrick is an ideal size for general purpose work, not only for maintenance, but for average line construction as well. Suitable for installation on trucks of 2 tons and larger capacity, and has a lift of 20 feet.

It is built to handle the average 45-foot pole with ample reserve for safety of men and equipment.

Specifications

Weight, 425 pounds.

Lifting Capacities

Ground Position (Center Leg Fully Telescoped)	10,000
Ground Position (Center Leg Fully Extended)	6,000
Truck Position	3,000

Notes

This derrick is also available with telescoping side legs at a slight additional charge. This feature was developed to allow the derrick to be transported more compactly and to allow free opening of both cab doors when the derrick is in carrying position.

The capacity of the derrick is the same as the standard derrick. The side legs are made in two sections; upper section 8 feet 10 inches, lower section 10 feet, 8 inches.

Malleable iron derrick head sheave, 8 inches in diameter. Mild steel derrick head plates, 3/16x12x13 1/2 inches. Middle leg section of Shelby tube: Upper section, 3 1/2x.134 inches, 11 feet 7 inches long; middle section, 4x.134 inches, 96 inches long. Side legs are of Shelby tube; 3 1/2x.134 inches, 17 feet 10 1/2 inches long. Mild steel head bolt, 1 1/4x8 3/4 inches. Mild steel connecting pins, 1x5 1/4 inches. Anchor pin, 3/8-inch bolt stock, 7 1/2 inches long, 1 1/8-inch head. Foot plate is a 7-inch, 15-pound I beam, 24 inches long.

Prices upon Request

Graybar XLM Derricks

Extra Light—Middle Type

This is the lightest derrick in the Graybar line and is ideal for the use of smaller municipalities who operate power companies. It is also ideal for the smaller independent telephone companies whose lines do not run cross country and where smaller poles are the rule rather than the exception.

Can be used with smaller and lighter trucks equipped with either powered or hand winches. It is built to handle the average 35-foot pole with ample reserve for the safety of the workers and equipment.

Specifications

7½ inches long, 1⅛-inch head. Foot plate is a 7-inch, 15-pound I beam, 24 inches long.
Weight, 325 pounds.

Lifting Capacities

Ground Position (Center Leg Fully Telescoped) pounds	10,000
Ground Position (Center Leg Fully Extended) pounds	6,000
Truck Position pounds	2,500

Notes

This derrick is also available with telescoping side legs at a slight additional charge. This feature was developed to allow the derrick to be transported more compactly and to allow free opening of both cab doors when the derrick is in a carrying position.

The capacity of this derrick is the same as for the standard type derrick. The side legs are made in two sections; upper section 7 feet 9 inches, lower section 9 feet 7 inches.

Cast steel derrick head sheave, 8 inches in diameter. Mild steel derrick head plates, ¾x12x13½ inches. Middle leg section of Shelby tube: Upper section, 3½x.134 inches, 11 feet long; middle section, 4x.134 inches, 5 feet 7 inches long; lower section, 2½x¾ inches, 6 feet 9 inches long. Side legs are of Shelby tube; 2½x.134 inches, 15 feet 3½ inches long. Mild steel head bolt, 1¼x8¼ inches. Mild steel connecting pin, 1x5¼ inches. Anchor pin is ⅞-inch bolt stock,

Prices upon Request

Salisbury Line Hose

A convenient device for protecting linemen from accidental contact with energized lines. By completely surrounding the wire with a substantial wall of voltage-resisting rubber more than ample insulation is provided.

The self-locking lip prevents the hose from being accidentally detached. Short bends can be made without exposing the conductor it covers.

Furnished in 1/4, 3/8, 5/8, 1, 1 1/4 and 1 1/2-inch sizes, inside diameter; in standard lengths of 3, 4 1/2 and 6-foot pieces.

Salisbury Line Hose Connector Ends

Standard line hose with the additional feature of an integral built-on connector end which overlaps and securely holds the end of an adjoining piece of hose when longer spans of line are to be covered, is increased in length by eight inches.

The connector end is also useful in covering connectors, bulky tap joints, and leads on stud type transformers.

The connector end does not interfere with the application of the hose in normal uses and it is recommended that a portion of the hose on each truck be of this connector end type.

Furnished in 5/8, 1, 1 1/4, and 1 1/2-inch inside diameters and in standard hose lengths of 3, 4 1/2, and 6-foot pieces.

**Salisbury Rubber Insulator Hoods
Universal Type**

Used in conjunction with line hose to cover tie-wires and conductors as they pass the insulators. Completely covers this point of hazard in a close fitting and positive manner. Can be used on double arm as well as single arm construction. The extending arms of the hood overlap the ends of the line hose.

Compounded to secure high insulating qualities over a long period of time. Vulcanized in steel molds while under great pressure, in heavy duty presses; retains its shape and flexibility. Thick walls of solid rubber give it ability to stand up under severe conditions of use.

Requires no attachments to hold it in place. Securely locks itself to the under side of the insulator and cannot open, turn, slide or become accidentally dislodged.

Solid rubber flanges extending inwardly from under sides of the body portion serve to grip the under side of the insulators. Exterior ribs are placed to reinforce the side walls and to increase the grip.

Inside dimensions arranged so hood properly fits all popular types of pin insulators in distribution service.

Length, 14 3/4 inches. Height, 6 1/4 inches.

Weight, 4 pounds. Packed one to a carton.

Telephone and telegraph companies use a special hood shaped to fit telephone style insulators. As it is used on single arm poles only both extending arms of hood are of the same diameter and will snugly grip the 1/4-inch size line hose. In ordering, specify Telephone Type.

Salisbury Snap-On Blankets and Jackets

Snap-On Jacket is especially useful in covering dead ends, pot heads, cutouts, arrestors, and like equipment which does not require the full size blanket.

Equipped with eight reinforced eyelet holes along each side and twelve hard rubber buttons. When folded over or wrapped around the apparatus to be covered, the edges are held closed by snapping the small heads of the buttons through the opposite eyelets. This self-contained method of fastening has been thoroughly tried and found practical.

Guaranteed to resist 20,000 volts on acceptance tests for 3 minutes.

Size blanket, 36x36x1/8 inches.

Size jacket, 22x22x1/8 inches.

Salisbury Rubber Protective Blankets

All Rubber—Black

Will fold, wrap or hang suspended in any position to provide an insulating barrier between electrical workers and hazards adjacent to their working position.

Bead molded on all four sides to prevent tearing.

Guaranteed on acceptance tests to resist 20,000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches

Salisbury Steam Cured Linemen's Rubber Gloves

No. 90
Straight Finger Style

No. 100
Curved Finger Style

Qualities of high insulation, low leakage, strength, flexibility and long life are evenly balanced. Each of these essentials is raised to the highest possible value without lowering the standard of some other property.

All gloves are seamless, form fitting, accurate to size, with finger lengths and widths adjusted to best meet average conditions.

Both Nos. 90 and 100 are furnished in 10,000, 15,000, and 20,000-volt ratings. Class B, 10,000-volt, 14-inch gloves are standard; Class A, 10,000-volt, heavier weight gloves are available.

Guaranteed to pass the most thorough inspection and to meet the A.S.T.M. specifications. Replacement made or return accepted of any which fail under initial tests at their rated voltage or otherwise prove unsatisfactory at time of delivery.

Furnished in sizes, 9, 9 1/2, 10, 10 1/2, 11, and 12.

Packed 1 pair to a box.

Salisbury Rubbercuff Protector Gloves

Gives complete protection with its rubbercuff protector and not only gives greater safety but allows a substantial reduction in glove expense.

Most rubber gloves are destroyed through reason of snags occurring on the upper ends of the gauntlets. Ordinary protector gloves made of leather cannot extend to the rim of the rubber gloves because leather is a conductor of electrical current.

Cuff is made from light but strong fabric reinforced, voltage resisting rubber. Tests prove that current creepage over it is no greater than over gauntlets themselves. Hand part is made from high quality leather.

For Use with Straight Finger Rubber Gloves

- No. 26, Sizes 9, 9½, and 10.....
- No. 28, Sizes 10½, 11, and 12.....

For Use with Curved Finger Rubber Gloves

- No. 128, Sizes 10½, 11, and 12.....

Salisbury Linemen's Protector Gloves

Full Gauntlet, 4-Inch Style

Designed to wear over Linemen's Rubber Gloves to protect them from snagging, tearing or abrasive wear. Made expressly for this work and should not be confused with the ordinary work gloves.

Made of specially tanned Grade A buffed horsehide, maroon color, and from selected weights.

Remains soft and pliable under all conditions and will not become

slippery when wet. Resists wire puncture to a great degree.

Salisbury Protective Rubber Sleeves

Formed and Vulcanized in Chromium Plated Molds
Full Length

Used to protect the arms and shoulders from accidental contact with energized equipment. Fastened across the shoulders by an adjustable rubber strap and rubber buttons. New chest strap feature prevents top of sleeves from sliding back and is so positioned that it does not interfere in any way.

Guaranteed to resist 10,000 volts for three minutes on initial tests. Chocolate color.

No. 40-R, standard size, is usually found suitable. No. 50-L, large size, is for men of large build or for use over heavy clothing.

Packed 1 pair to a carton.

Salisbury Static-Resisting Line Coats

The special construction of this coat retards static tingling at the neck or wrists when the garment is used during wet weather on work that is adjacent to energized conductors.

Special features: Inside double back; special rubber fasteners; reinforced at belt; all seams sewed and cemented; insulating skirt collar; roomy raglan shoulders; insulating storm cuffs; storm fly front.

Guaranteed to be free from all defects in material or workmanship.

The all rubber collar is standard. Corduroy faced collar can be furnished if desired.

Furnished in sizes 36 to 46 inclusive. Length, 47 inches.

Packed one to a carton.

Salisbury Electric All-Rubber Coats

Made of strong durable material, coated on the outside surface with high grade rubber and a frictioned coating on the inside. No metal is used in its construction.

The inner cuff of the double-storm cuff is made of pure gum rubber. The collar is of standard lay-down type. Reinforced at hips to protect coat from tool belt abrasion. Has raglan shoulders, all rubber fasteners and storm fly front.

Length, 46 inches.

Furnished in sizes 36 to 46.

Prices upon application.

Salisbury Insulating Stools

A low platform on which workmen can stand while performing hazardous tasks in sub-stations, power plants, underground vaults, etc. Has corrugated rubber top and double petticoat rubber insulators for legs. The stool is non-tipping and non-slipping. Dry test flashover, 82,000 volts. Wet test flashover, 19,000 volts.

Size, 18x12 inches, 8 inches high. Weight, 22 pounds.

Salisbury Switchboard Rubber Matting

A non-slip corrugated surface matting of high dielectric strength and long aging qualities.

Meets requirements of all standard specifications.

Guaranteed to resist 50000 volts for 3 minutes on acceptance tests.

Furnished in 1/4-inch thickness; 24, 30, 36 and 48-inch widths; lengths up to 75 feet. Other

widths and thicknesses can be furnished.

Salisbury Cable Bandages

For general use as temporary insulation. Made of highest grade pure gum rubber. Unusually strong, very flexible, with excellent ageing qualities. Acceptance tests prove that a single thickness can withstand 10,000 volts.

In rolls 14 feet long, 3 or 4 inches wide, 1/2 inch thick.

Net weight per 3-inch roll, 10 ounces; 4-inch, 12 ounces.

Salisbury Non-Spillable P.B. Paint Pots

This is a rubber container for carrying insulating and weather-proofing compounds that do not have an oil base.

Provides a safe and convenient means to carry both compound and brush, eliminating use of metal containers, glass bottles, and other makeshift devices.

Flange extends inward at junction of the neck preventing contents from spilling or splashing out during rough handling. Equipped with tapered cork through which a rubber-set brush is securely inserted.

Single compartment pot is for insulating only; double compartment pot is made with an extra receptacle to hold soldering paste.

No. 1030-CR Duff-Norton Automatic Lowering Cable Reel Jacks With T Base—10-Ton Capacity

For heavy cable reels 36 to 84 inches in diameter, and for outside work where uneven ground conditions are encountered.

Attached to a T-frame base which has been sectioned to prevent warping. Top hook is for 3-inch diameter spindles, the two lower hooks for 2 1/2-inch diameter spindles.

Height 30 inches. Raise, 14 inches.

Weight, 104 pounds.

No. 1030-CR...each \$55.00

Duff-Norton Genuine Barrett Cable Reel Jacks

Single Acting—5, 10 and 15 Tons Capacity

No. 521-CR

No. 539-CR

THE No. 521-CR JACK is adapted for warehouse use, handling cable, leather belting, etc. Equipped with Duff Adjustable Cable Reel Lift, incorporating a steel hook which can be placed at any point on lifting rack, enabling jack to pick up reels of different diameters at any height.

Nos. 518-CR AND 539-CR JACKS are recommended for general outdoor service for cable reels up to 90 inches in diameter. Equipped with extra long lifting racks, having hooks placed at various heights to make handling of reels of different sizes rapid and convenient.

Each jack furnished with oak base with detachable clamps, and 4-foot steel operating lever.

Duff-Norton Genuine Barrett Automatic Lowering Jacks

With or Without Trip—5-Ton Capacity

With Trip Flat Top—Single Socket

Without Trip Curved Top—Double Socket

The Duff-Norton 5-Ton Automatic Lowering Jack is ideal for modern coal mining operations. The inset cover is designed as an integral part of jack, but can be removed conveniently and easily. Cover eliminates costly part replacements and securely protects compact single unit mechanism.

Special oil-tempered cadmium-plated springs insure long life and efficiency. The convenient pistol grip handle facilitates carrying, and assures more accurate spotting.

Available with curved top or flat top in double and single socket levers as preferred. Furnished with round socket lever and 3-foot steel operating bar. When ordering, specify whether jack is desired with or without trip; also kind of top and socket.

No. 725 Duff-Norton Pipe Pulling and Pushing Jacks

Designed for pulling or pushing pipe through ground without changing the position of the jack. Used by contractors when laying pipe under streets, lawns or railroad right-of-way.

Capable of forcing pipe up to six inches in diameter.

Length, 6 feet. Travel, 36 inches.

Furnished with coupling for rack connection and pilots for end of 2-inch pipe.

Weight, 395 pounds.

No. 725.....each \$200.00

Duff-Norton Extensible Steel Trench Brace Fittings

Without pipe. Adding pipe makes brace complete.

No. 765 Greenlee Cable Pullers

Cable Puller Set Up For Pulling From the End of a Horizontal Section of Conduit

Cable Puller Set Up for Pulling Into a Box from a Vertical Section of Conduit

This puller has been designed to exert a maximum pull of 7500 pounds. Has two speeds.

The clamping device consists of a bracket with two lengths of pipe-wrench chain, which are tightened by two clamp nuts with attached wrenches. It will accommodate conduit sizes from 2 to 5-inch, and clamping is done direct to the conduit through which cable is to be pulled. This provides for pulling line in with the conduit, preventing the loosening of hangers.

Two cranks are supplied, but if preferred, ratchet wrenches can be used. A portable electric power unit can also be used for driving the machine.

Readily portable; net weight only 170 pounds.

Cable is not furnished with the machine. The recommendation is 3/8-inch 6-19 strand, having a breaking strength of 11,000 pounds or more as being satisfactory.

Shipping weight, 225 pounds.

No. 765 Cable Puller with Two Cranks, but Without Cable.....each \$160.00

No. 790 Greenlee Hydraulic Pipe Pushers

For underground installation in gas, electric, water-works, telephone and other fields.

By utilizing hydraulic pressure for the power, it has been possible to make this tool very compact. It is readily portable, and one man can easily exert the maximum pressure on the pipe clamp. There are 8 speeds available for varying soil conditions,

and these give pressures ranging from 6500 to 40000 pounds.

The power unit operates on a notched steel base, so that the pipe clamp is changed only every 4 to 7 feet, depending on length of base used. When the pipe has been pushed forward 4 inches a pawl on the body drops into a notch to hold it while the pressure is released by depressing the handles. Springs within the body rapidly return the pistons until their pawl drops into a new notch. This is repeated until the end of the base is reached, when the machine is pushed to the opposite end and the pipe clamp is reset.

Capacity 1 1/4 to 4-inch pipe, inclusive. Net weight, pusher only, 132 pounds; shipping weight, with 8 1/2-foot base and complete set of clamps, 480 pounds.

No. 790 Power Unit Only.....each \$185.00

Oshkosh Pike Poles

Handle is of old growth yellow Washington fir; only straight, close-grained fir is used.

Pike is of special steel made of one piece with upset face, which takes end thrust and distributes it over the entire end of the handle. Pike is set in oil and a rivet runs through malleable iron ferrule, handle, and pike to further secure them. Pike projects 4 inches.

No. 10 Oshkosh Pike Pole Guards

For guarding the hazardous point on pike poles.

The guard works easily and fastens securely in either the guarded or open position. When in the unguarded position, the guard is completely out of the way, snugly fitted around the pole. When in the guarded position, it automatically locks in place and provides complete protection from the pike point.

This guard will fit either the 2-inch or 2 1/2-inch pike poles.

Shipping weight, 3/4 pound.

No. 10.....each \$1.60

Oshkosh Special Pike Pole Coating

Oshkosh Pike Poles finished with this specially developed coating prevent loss of time caused by splinters and splinters.

It gives a smooth, hard, transparent coating.

This coating keeps the grain from raising.

It is a non-conductor of electricity.

Can be applied at a slight additional charge.

No. 740 Oshkosh Fir Deadman Wood Pole Supports

Of clear, straight grained fir. Measures 3x3 inches square, 8 1/2 feet over all. Steel fork has three prongs.

No. 740, Weight, 40 Pounds.....each \$14.00

Oshkosh Wood Mule Pole Supports

Oshkosh Combination Pay-Out and Take-Up Reels

As a Pay-Out Reel

A pay-out and take-up reel, all in one. It is lightweight, yet strong and durably constructed. The frame is made of tubing. Easy portability; the guide pins fold flat so that the whole reel is compact and easy to carry or slide in truck.

The guide pins are easily and quickly adjustable to take any size coil of wire from 13 to 27 inches inside diameter, to 34 inches outside diameter.

The automatic brake is another feature. As the wire is pulled the brake releases and the wire pays out freely. The instant tension is released, the brake sets and any possibility of back-lashing is prevented.

For converting into a take-up reel 2 braces are furnished which hold the reel in an upright position. Hand crank attached for ease in taking up wire.

The carrier frame is removable so that the reel can be bolted to a truck. A thumb screw terminal is provided for grounding the reel.

Length overall, 63 inches; width, 34 inches; height overall (guides up), 13 1/4 inches; height overall (guides down) 8 3/4 inches.

Weight, 75 pounds.

Prices upon application.

**No. 900 Oshkosh Barrow Reels
Heavy Western Union Type**

Used for heavy wire and heavy work.

Made of hardwood, braced and reinforced with steel. A wide bearing, together with a long pivot and sleeve, allow the reel to turn easily. Rests on strong, steel legs.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 900, Weight 80 Pounds.....each \$27.09
No. 901, Extra Pins, Weight 4 Pounds....per set of 4 3.00

No. 897 Oshkosh Folding Take-Up Reels

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

Reel is made of malleable iron and steel.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Take-up, 21 inches. Weight, 42 pounds.

No. 897.....each \$25.26

Coffing Flag Holders and Flags

Flag Holder is designed to fit all poles. Main body casting and locking handle are made of certified malleable iron. The chain wraps around the pole and hooks into main body of clamp.

Strong coil spring between chain and main body assures tension on locking chain.

Flag is made of 6-ounce army duck. Size, 12x16 inches. Has a 1x18-inch hardwood staff.

Flag Holder.....	each
Flag.....	each
Flag Holder and Flag.....	each

Oshkosh Metal Flags

This metal flag is light and strong. It is made of 16-gauge steel welded to a 5/8-inch hollow iron staff. The flag is painted bright red and the staff black. The little peg hole near the top is for conveniently hanging it up in the truck.

The Oshkosh Warning Sign and the Oshkosh Folding Barricade have handy sockets to accommodate this flag.

Staff, 20 inches high.

Size of flag, 12x10 inches.
Metal Flag.....each \$.90

Oshkosh Warning Signs

This warning sign is light in weight, yet durable. Legs are of 1/2-inch high carbon steel. Has 1 1/4-inch flange around edge of lettered side.

Has two hollow handles for adjusting angle of the legs. These handles also serve as flag sockets, and each is equipped with a lantern lock.

Black letters, 5 1/2 inches high, on traffic yellow background.

Height, 43 inches.

Width, 28 inches.

Thickness, 1 1/4 inches.

Size folded, 28x28x1 1/4 inches.

Weight, 23 pounds.

Warning Sign.....each \$5.30

No. 902 Oshkosh Plain Pay-Out Reels

For gang mounting on a wagon when paying out several wires at one time.

Made of hardwood, braced and reinforced with sheet steel.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 902, Wt. 40 Lb.each \$16.32

Oshkosh Safety Extension Ladders

A light weight, safety extension ladder designed expressly for public utilities.

Equipped with an automatic safety lock or latch. This lock is so arranged that when pulling on the raising rope, the lock is lifted out of position. The instant the strain on the rope is slackened, the lock drops in place. In lowering, the extension must be lowered slowly. It cannot accidentally drop.

The side rails are made from straight grained, properly seasoned aeroplane spruce.

The rungs are made from tough mountain hickory, straight grained. Each rung has a shouldered tenon joint which is pressed tightly into the side rails, assuring a safe, tight fit. The side rails of each section are connected at top, middle, and bottom with steel tie-rods. This combination makes a rugged, durable construction. Either section can be used separately as an individual ladder, both being equipped with safety tips and pikes.

Other safety features include corrugated rubber tips, transparent safety finish, safety pole-grippers, and rubber guarded safety pikes. All metal parts are parkerized.

Furnished in full range of lengths in multiples of 2 feet.

Weight, 2 pounds per foot, average.

Safety Extension Ladder...per ft. \$.87

Oshkosh Sectional Ladders

Each section is 6 feet long, making a handy ladder to have around for miscellaneous uses where a long extension ladder is larger than the need requires.

For small service trucks, one or two of these sections can be hooked on and carried around all the time so that a ladder is always handy for emergency use.

The sections join together interchangeably, lapping 1 foot. One section fits into the other at either end as shown in the illustration. The joint is stiff, solid and secure.

Outside width of top, 16 1/2 inches; inside width of bottom, 17 inches; rungs diameter, 1 1/8 inches; side rails, 1 1/8x2 3/4 inches.

Side rails are selected aeroplane spruce; rungs are straight grained mountain hickory; metals, Parkerized steel.

Special transparent finish.

Rubber pikes at bottom, on special order.

Weight per running foot, 2 pounds.

Prices upon application.

Section Which Fits Into End

No. 3600 Klein's Favorite Tree Trimmer Heads

No. 3600-21, with Straight Saw

This trimmer will sever a 1-inch branch. The head is one piece, and comprises the hook portion with which the knife engages and the socket into which the handle is inserted. Socket is perfectly straight, and eliminates the necessity of tapering the end of the handle.

The knife is forged from tool steel and is integral with the lever. Knife is held open by a flat steel spring, and is operated by a rope attached to the end of the lever.

Two threading holes are provided for attaching a screw.

No. 3601-9, 2 Sections; Weight, 9¾ Pounds.....	each	9.00

No. 3628 Klein Tree Trimmers

The entire head of this tool, comprising hook and socket into which handle fits, is sturdily constructed of pressed steel. The knife, made of tempered tool steel, is round in shape and arranged to rotate slightly with each cut, thus providing the entire circumference of the blade for cutting and giving an edge more than 3 times the length of that on the ordinary blade.

The leverage makes this trimmer cut the heavier branches quite easily. Knife may be readily removed for sharpening or renewal. Two threaded holes are provided for attaching saw.

Size over all, 12½ inches. Weight, 3½ pounds.
Price, No. 3628, Trimmer..... each \$11.10

No. 913 Klein's Tree Trimmer Saws

No. 913-12

No. 913-15

No. 3628-K.....each \$1.80

No. 913G Klein Saw Grasp

When a hand saw is required the regular tree trimmer saws can be set in this grasp in a few seconds and held securely with a single thumb screw. Efficient for cutting heavy branches.

Weight, ½ pound.

Price No. 913G.....each \$1.50

No. 915 Oshkosh Tree Trimmers

This trimmer has positive locking ferrules.

Head is made of two pieces of light forged steel, reinforced and riveted together. These sides act as a guide for the thin saw steel cutting blade. Blade is pivoted and starts cutting with a slicing motion the moment the rope is pulled. Cuts limbs up to 1½ inches in diameter.

Handle is made in three sections of 1½-inch diameter straight-grained, clear Washington fir. One 6-foot section is attached to head and two 7-foot lengths; all equipped with couplings. Furnished complete with handle and a short section of rope to which can easily be attached any kind and size of rope. One-half-inch rope is suggested for best results.

No. 916T, Extra Tightener. Weight 4 Ounces.....	each	1.40

No. 1-W Bartlett Pulley Type Tree Trimmers

A very powerful cutting tool.

It not only has the compound lever, but it also has double leverage due to the pulley which is attached to the curved lever.

Will sever any branch up to 1¼-inch diameter, and the pulley enables the operator to pull the rope at any angle. A special coil spring positively returns the blade to a full cutting position.

An important feature of this tree trimmer is the light weight, the head complete weighing only 1¾ pounds.

All poles have two coats of water-proof shellac to prevent moisture absorption.

Furnished with 1¼x1½-inch rectangular poles, one piece poles or short sections joined together with No. 156 brass sleeves which have a positive locking device.

With Rectangular Pole and No. P156-2 Ferrule

10-Foot Length.....	each	3.60

Six and 8-foot octagon poles with round sleeves are obtainable if desired at 10 cents per pole additional.

For bottom sections only, deduct 50 cents if ferrule is not wanted.

No. 44 Bartlett Pole Saws

For large limbs.

Has 16-inch peg tooth blade with 7 teeth per inch. Saw is securely held by the head, which is stamped from stiff cold rolled steel and fastened to the pole by three bolts.

Head is made of two strips of steel riveted together so as to secure a truss shaped support for the blade, which is fastened between the two sides. Hook serves as a means for hanging the tool on a limb when not in use.

Saw can be adjusted to three angles to suit operator's position and the blade is ground for clearance, which prevents binding.

File blade has No. 395 cant file.

Furnished without ferrule.

Size pole, 1¼x1½ inches.

4-Foot Length.....	each	\$4.10
6-Foot Length.....	each	4.40

Paint brush clip will be attached to side of pole near head at 30 cents extra when desired.

No. P156-2 brass ferrule attached at 50 cents each, when extra sections are ordered.

No. 50 Bartlett Safety Back Pole Saws

Constructed to give the maximum amount of safety possible in hazardous work.

Bent wood back tapers from standard size pole to a narrow point which enables the user to operate the saw in close crotches.

In order to make the cutting most effective the cutting head has been designed so that the blade can be turned to three positions by simply loosening the thumb nut and turning the knurled holder until the pin drops into the desired position, then again tightening the thumb nut with the lower pin in a position corresponding to the upper end.

Steel blade is 36 inches long and 7/8 inch wide, having a draw cut of 5 points per inch, and will cut with great rapidity.

Saw has a cutting capacity of 5 inches.

File blade with No. 390 slim file.

Complete Pruner

Solid or unjointed poles, 6, 8, and 12-foot lengths, and special length jointed pole sections for special purposes, can be supplied. Prices upon application.

No. 777 Bartlett Two-Hand Pruners

Due to the fact that the majority of men are right-handed, the blade has been placed on the opposite side than is the general custom. This permits the blade to be placed next to the body or main limb of the tree with hook handle held in left hand, while the right hand operates the blade.

Hook remains stationary while blade closes, instead of blade being held stationary while hook closes by twisting around the branch, wounding the bark.

Blade positively will not cut or dig into the hook. By dropping the hook considerably below the center line, a superior positive draw cut has been produced, with an opening between blade and hook, allowing a straight thrust at the branch.

Both blade and hook are hardened drop forged crucible tool steel. Has white ash handle.

26-Inch Handle with 10-Inch Strap Ferrule	each	\$3.60
26-Inch Handle with 4½-Inch Plain Ferrule	each	3.50
20-Inch Handle with 4½-Inch Plain Ferrule	each	3.40

Spaulding Universal Tree Wire Guards

For Insulation and Abrasion

Guard Ready to Wrap Around Wire

Guard Installed on Wire

These guards are made of two materials. For the inside of the tube a flexible bakelized fabric is provided, of high dielectric strength, affording perfect electrical protection. This is an inert material which will not oxidize nor deteriorate after long-time exposure.

Several turns of the flexible insulating material enclose the wire. Overlying this inner protection is a tough outside shell of glass-hard finish. This shell is built up of strong, tough fabric, bonded with phenolic varnish for density and resistance to abrasion. Will not abrade or wear through.

Economical in that it is not necessary to cover the wire from one pole to another in order to protect a section of it. Also has the constant gripping action which maintains the tightness of the convolutions and prevents any longitudinal displacement.

For 2600 Volts

Accessories

Double faced adhesive tape is furnished with each order of tree wire guards to secure guard to wire for easiest installation.

A set of installation directions is wrapped with each guard.

Fibre Installation Tool

A special tool of insulating fibre for installation of Spaulding Tree Wire Guards (Types A to K inclusive). The installation of these guards should not be attempted without the use of this tool.

With this tool, these guards can be completely installed in five minutes or less, even in extremely cold weather.

Each..... \$.75

B & L Star Brand Metal Blocks

For Manila Rope
With Loose Side Hooks

No. 2325-A Single

No. 2326-A Double

Drop forged hook of special steel and of extra large size and strength. Malleable iron shell carefully rounded and without sharp projections; constructed to prevent rope jamming between the shell and sheaves.

Double blocks have full center straps, which extend through the entire length of the block.

B & L Star Brand Aluminum Shell Conductor Stringing Snatch Blocks

For Aluminum Cable

Drop Forged Flatted Swivel Hooks, Heads and Links

Furnished in drop link or safety locking pattern.

Lynite roller bearing sheaves with polished scores.

This snatch block is made almost entirely of high-grade aluminum, combining lightness with strength, and is used in stringing aluminum conductors.

The main strain is taken through the drop forged swivel hook

attached to the drop forged steel straps which never come in contact with the conductor.

The PU 32-A drop link pattern furnished unless otherwise specified. When ordering specify number, size of sheave with size of cable to be used.

B & L Star Brand Conductor Stringing Snatch Blocks

Wood Shell—Drop Link Pattern

Drop Forged Flatted Stiff Swivel Hooks

Heads and Links

With Roller Bearing Sheaves

Equipped with specially designed roller bearings to insure freedom of action, as any failure would create a dangerous abrasion of the conductors.

These blocks furnished in various sizes and made with special wide throats when so desired, so as to accommodate any large splicing that may run over sheave.

When ordering blocks specify figure number, size and type of sheave with size cable to be used, Copper or Aluminum.

Manila Rope

AMCO All-Weather Manila Rope

Made from the finest grade of white manila fibre and specially treated to resist rotting, moisture and other forms of mildew and fibre deterioration. It remains soft and pliable when wet and will not freeze up hard in cold weather. The treatment does not increase the weight of the rope. Packed in 1200-foot coils.

American Superior Manila Rope

A best quality rope that is carefully and uniformly manufactured from the finest grade of white manila fibre. Used by steamship companies and by industrial concerns for a great number of years.

Constantly tested through every step of production, this rope meets all exacting requirements for weight and strength. Packed in 1200-foot coils.

Chance Rubber Wheel Flexible Safety Cable Chairs

No. 28 with Seat No. 8.

This chair can be collapsed, strapped or tied for convenient transportation. Adjustable up or down, by snaps and chain. Chain is made of steel, electric welded on sides of links to guard against weld opening. Snaps used are linemen's snaps of drop forged, galvanized steel.

Holes are provided in open side of chair frame for snapping on safety belt.

Chair is equipped with hand brake to hold chair stationary.

No. 7 seat is made of high grade fir lumber, reinforced with strap steel imbedded in wood. No. 8 seat is made with belting of best canvas, riveted at ends with copper rivets around electric welded iron hangers.

Width, 21 inches. Weight packed, 27 pounds.

Hubbard Pole Seats

Hot Galvanized

Will support more than three fourths of a tonsafely.

The frames and braces of all sizes are of 1x½ inch channel steel, except No. 9030, which is constructed of ¾-inch round steel.

The wood seats are 1½-inch cypress, boiled in creosote. The bars of the all-steel seats are ¾-inch square steel, secured to frame in such a manner as to leave no projecting ends. There is no strain on riveted joints. Bars are placed with corners up to prevent slipping.

Hubbard Pole Balconies

Hot Galvanized

No. 9035

Used for convenience and comfort in telephone terminal box work and serves as switching platform with power companies.

Frame, braces and guard rails of No. 9035 are made of open hearth steel, galvanized by hot-dip process. Wooden platform is of thoroughly seasoned oak, painted with two coats of standard green pole paint.

Nos. 9035 and 9045 are identical except that the railing on No. 9035 fastens to a telephone terminal box and the railing on No. 9045 fastens to the pole.

Upright braces are 1½x1½x¾ inch steel; the platform supports, 1¾x1¾x¾ inch angle steel; and the guard rail of 1¼ inch flat steel.

The complete balcony includes all bolts for fastening parts together but not the bolts for attaching to pole.

Coffing Quik-Lift Electric Hoists
Hook Suspension—Pendant Rope Control

This hoist incorporates a maximum amount of efficiency, speed, power and durability. Standard lift, 8 feet.

The heavy duty, ball bearing motor is fully enclosed; high starting torque. Voltage, 110 or 220-440 volts; single or three-phase; 60 cycles. Can be plugged into any light circuit or current connection, a.c. or d.c. D.c. current is \$10.00 extra on all hoists except those with numbers preceded by the letter S which are \$20.00 extra.

Hoist is furnished with lubri-seal ball bearings throughout. Gears and pinions are made of special alloy steel, heat treated; gear system is sealed and running in oil. Hooks are made of special alloy steel, heat treated; extra heavy load chain; fool-proof limit switches.

The letter D signifies that the hoist has a double chain.

Can be furnished with special motors, such as Explosion-Proof or 25, 30, and 50 cycle.

Coffing's Safety-Pull Ratchet Lever Hoists

Hoist is equipped with a dual ratchet and pawl assembly, independent of each other, and the handle is always under control. (Cannot slip or drop load.)

The Safety-Pull has the free chain feature. That is when there is no load on hoist a slight pressure on thumb latch allows load chain to be pulled through the hoist, either up or down, without operating the handle.

Reversible handle permits operating hoist in any position, horizontally, vertically or from either side of the hoist.

Handle will bend at maximum overload before chain will break or hooks will straighten out. Handle is made of certified malleable iron.

Safety stops prevent handle from spinning in case operator's hand should slip off handle.

Specially designed hooks are made of drop-forged, heat-treated alloy steel.

Cadmium plated roller chain is standard on all models.

The hoist frame is made of certified malleable iron.

Sprocket and ratchet are made of special alloy drop-forged steel, heat treated and ground.

Reversing mechanism, bearing pins, etc., are made of heat-treated alloy steel to meet their special functions.

Hoists are factory tested at 100% over rated capacity.

*If wanted with intermediate locking pawl, add \$5.00 to list.

NOTE.—Models A-S and F-S: By attaching a special iron block, called a super attachment, to Model A or F hoist (and 5 feet of chain to keep the standard 5-foot lift) they can be converted into double their rated capacities. Super attachment for Model A-S, \$5.05; Model F-S, \$6.55.

Coffing Power Master Spur Gear Chain Hoists Gravity Lowering

1, 1 1/2 and 2 Ton

Heat treated alloy steel swivel hooks. Certified malleable iron housing and hand chain wheel.

Free chain release for quick load adjustment. Hand control chain, gravity lowering, lowering speed controlled by governor. Load may be stopped at any position.

Special alloy heat treated Diamond load chain. All hooks and chains designed to carry 300% over rated capacity.

Expanding governor and brake. Safety band brake designed to slip at maximum overload, serves as a warning but will not drop load.

Cut alloy steel planetary gear system, sealed and running in oil.

Lubri-steel precision ball bearings.

Hardened and ground alloy steel load sprocket.

The 1, 1 1/2 and 2 ton hoists have single load chain; 3 and 4 ton hoists double chain.

Model C Coffing Two-Gear Chain Hoists High Efficiency Cam Actuated

A free-running hoist, anti-friction throughout, all weather type, suitable for any application. Conforms to Army and Navy specifications.

This hoist has a most efficient gear reduction system, sealed and running in oil. Equipped throughout with lubri-sealed precision ball bearings.

All working parts are fully enclosed in certified malleable iron housing.

Has special designed load hooks and special alloy steel electric welded chain.

Tested at 100 per cent over rated capacity.

Coffing Power Pike Poles

This pole is built of two pieces of galvanized pipe, one telescoping the other. Power is obtained through the use of a Coffing Load Binder or Safety-Pull Hoist.

For straightening leaning poles one man, with this tool, can do the work of from two to six men.

Pole has a heavy steel base. Top cannot slip off pole.

Load binder or hoist can be used for many other purposes.

Height: minimum, 8 feet 2 inches; maximum, 11 feet 7 inches.

Weight, 32 pounds.
Complete with Model A Load Binder.....each \$29.00
Pole Only.....each 14.00

Coffing Light Line Pullers

A tool for pulling telephone and light wires. Built on the ratchet or crank principle.

Equipped with a special steel load tape, 12 feet long. This tape has the advantage of being compact and strong. Has tensile strength of 2,500 pounds.

Although rated at 400 pounds, this puller is factory tested at 100% over rated capacity.

Weight, 5 pounds.
Each.....\$16.00

Coffing Load Binders

Drop-forged steel hooks with swivels on both ends. The take-up is 3/8 inch to each stroke of the handle.

If load becomes loose, it can be bound tight simply by drawing on lever. After load is taken off chain, both levers can be tripped at once and chain can be pulled through binder free.

Can also be used as a hoist and for stretching wire or cable.

Coffing Temporary Cross Arms

Built to stand hard usage. Weighs much less than a standard cross arm, and no line truck should be without at least one set.

No. 10-A

For electric work. Hooks are self-locking, made of certified malleable iron, large enough to hold line hose to prevent current from arcing.

No. 10-A.....each \$13.50

No. 10-C

For changing cross arms on corners.
No. 10-C.....each \$11.50

Coffing Temporary Guy Clamps

Built on the vise principle, with vise screw enclosed in a steel magazine. Has a powerful grip, is easy to handle and indispensable for necking guys.

Prevents driving 3-bolt clamp on neck and thus stripping off the protective coating.

An automatic grip placed on one end permits necking as close to the pole as desired without slipping.
Weight, 3 1/2 pounds.

Each.....\$5.00

Coffing Transformer Gins

Model ST

Model OST

Model WT

Tested to more than 3000 pounds without yielding.

Clamps on side of pole. Malleable iron and steel.
Model ST, Weight, 28 Pounds.....each \$14.00

Clamps securely to top of any size pole. Made of special spring steel, angle iron legs and malleable iron clamp.
Model OST, Weight, 33 Pounds.....each \$14.00

Main body and legs made of seasoned hickory, bolted to malleable iron clamp. Non-conductor of electricity.
Model WT, Weight, 28 Pounds.....each \$14.00

No. 102-1 Klein's Splicing Clamps

Arranged with 5 round holes for bare wire. For copper wire Nos. 8, 10, 12, 14, 16, A.W.G. For iron wire Nos. 10, 12, 14, 16, 18, B.W.G. Length, 8 inches.

No. 102-1.....each \$5.00

No. 102-3 Klein's Splicing Clamps

Large hole can be used for guy wire or messenger strand. Copper wire Nos. 2, 4, 6, 8, 10 and 12 A. W. G. Iron wire Nos. 4, 6, 8, 10 and 12 B. W. G.

No. 102-3, 10¾-Inch. Wt. per Doz., 16¾ lbs. each \$6.40

No. 102-30 Klein's Splicing Clamps

Holes reversed for those who prefer this arrangement.

Copper wire Nos. 2, 4, 6, 8, 10, 12 A. W. G. Iron wire Nos. 4, 6, 8, 10, 12, 14 B. W. G. No. 102-30, 10¾-Inch. Wt., per Doz., 15 lbs.each \$6.40

No. 102-48 Klein's Splicing Clamps

Largest hole convenient to bring together guy strand before applying a three bolt clamp.

Copper wire Nos. 0, 2, 4, 6, 8 A. W. G. No. 102-48, 10¾-Inch. Wt., per Doz., 15 lbs.each \$6.40

No. 105-15 Klein's Splicing Clamps For Twisting Double Tube Sleeves

For copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. No. 105-15, Size 8-inch.each \$5.30

No. 105-17 Klein's Splicing Clamps

Has five sets of chamber for twisting double tube sleeves. For copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. No. 105-17, Size 10¾-inch.each \$6.40

No. 105-31 Klein's Splicing Clamps

Three double chambers for twisting Nos. 10 and 12 A. W. G. sleeves, Nos. 12, 14, and 17 N. B. S. sleeves. No. 105-31, 8¾-Inch. Wt. per Doz., 5¾ lb.each \$5.30

No. 132-15 Klein's Combination Wire and Sleeve Clamps

The unusual range of wire and sleeve sizes covered by this clamp makes it practically a universal tool for telegraph, telephone and power line work. Has 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wire Nos. 4, 6, 8, 10, 12, A.W.G. Iron wire Nos. 6, 8, 10, 12, 14, B. W. G. Strand opening .437x.624.

Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles.

Weight, per dozen, 18 pounds. No. 132-15 Size 11¼ inches.each \$9.10

No. 132-46 Klein's Wire and Sleeve Clamps

One side for double tube copper sleeves Nos. 4, 6, 8, 10, and 12 A. W. G. Other side for copper wire Nos. 4, 6, 8, 10, and 12 A. W. G.

No. 132-46, Weight per Doz., 17¾ Lbs.each \$9.10

No. 132-12 Klein's Combination Wire and Sleeve Clamps

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire.

Copper wire Nos. 6, 8, 10, 12, A.W.G. Iron wire Nos. 8, 10, 12, 14, B. W. G. The reverse side has four double chambers for twisting sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle. Weight per dozen, 11 pounds. No. 132-12, Size, 9 inches.each \$6.70

No. 132-30 Klein's Combination Wire and Sleeve Clamps

Sleeve openings are for N.B.S. and B.W.G. sizes 9 and 8 respectively. Remaining five openings cover range of wire sizes used on railroad signal and telegraph work.

No. 132-30, Size, 11¼ In., Wt. per Doz., 18 Lb.each \$9.10

No.132-48 Klein's Copperweld Sleeve Clamps

This clamp has four chambers for twisting single tube (oval) sleeves used for making joints on copperweld conductors sizes 4A, 6A, 8A, and 3 No. 12. These chambers also accommodate single tube (oval) sleeves as in following table:

Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.	Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.
4A	1	2	8A	4	5
6A	3	4	3 No. 12	5	6

Swing latch holds head securely closed while joint is twisted preventing slippage or burning which might develop otherwise from bowing of handles when twisting larger sleeves.

No. 132-48, Size, 11½ In., Wt. per Doz., 18 Lb.each \$10.60

No. 132-39 Klein's Strand and Wire Holding Tools

This tool serves as a temporary clamp to hold together two sections of strand or wire while placing permanent clamps or splicing and serving.

Openings will fit: 7/16-inch strand (16000-lb. Bell System); 3/8-inch strand (10000-lb. Bell System); 1/2-inch strand (6000-lb. Bell System); 3/8-inch strand (2200-lb. Bell System); 3/4-inch solid No. 12 B.W.G. iron or No. 10 B. & S. copper wire; and 3/2-inch solid No. 13 B.W.G. iron or No. 11 B. & S. copper wire.

Hammer forged from high grade tool steel. Polished head and handles temper blued.

Weight per dozen, 18 pounds.

No. 132-39, Size, 11 1/4 Inches.....each \$9.10

No. 132-47 Klein's Wire and Sleeve Clamps

For single tube or oval copper sleeves. Nos. 2, 4, 6, 8, and 104.

Hinge has stop to prevent handles from opening beyond point convenient for clamping on sleeve.

No. 132-47, Weight per Doz., 18 Lbs.....each \$10.60

No. 132-74 Klein's Wire and Sleeve Clamps

Has three special chambers for twisting single tube or oval (Memco) sleeves Nos. 2, 4, and 6; also an oval (hog) hole .437x.624 for guy strand.

Chambers or openings are a modified figure eight shape, giving a secure hold which prevents burning sleeve when joint is twisted. Swing latch overcomes any spring in handle which might otherwise develop when used on larger sleeves. Stop in hinge prevents handles from opening beyond the point convenient for clamping onto the sleeve.

Hammer forged from high grade tool steel, polished head, temper blued handles. Size, 11 1/2 inches.

No. 132-74, Weight per Dozen, 16 Pounds.....each \$10.60

No. 107-20 Klein's Di-Stock Sleeve Twisters

For all types of oval or double tube copper or aluminum sleeves, from No. 4 B&S solid to No. 3/0 B&S strand. Tubular handles, 7/8

inch diameter, threaded onto head. Readily attached or removed. Space between yokes, 3 inches, usually sufficient for three sleeve openings. Head readily and securely tightened onto sleeve by thumb nut operating in hinged yoke. Central position of head makes for ease in keeping sleeve straight while twisting joint and provides ample leverage. Held in blank and finished with sleeve openings as ordered.

Length overall, 23 1/2 inches. Weight each, 3 1/4 pounds.

No. 107-20.....each \$20.60

No. 107-34 Klein's Di-Stock Sleeve Twister

A hand operated cam lever closes the head securely on the sleeve—no thumb screws to bother with.

Tubular handles are furnished.

No. 107-34, weight each, 9 Lbs.....each \$30.00

Klein's Chicago Grips

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined smooth.

No. 1613—For Bare Wire

Bronze lining of jaws prevents slippage and consequent surface abrasion of conductor or strand.

No.	Each	B. & S. WIRE SIZE		Approx. Max. Open. In.	Wt. Lb.
		Maximum	Minimum

Klein's Chicago Grips

With Bronze Lined Jaws

Construction engineers are demanding grips that will not slip under heavy loads and which will not damage the conductor or strand. These requirements are met by welding a lining of bronze into the jaws of standard Chicago Grips, indicated by "B" following catalog number.

Klein's Haven's Steel Grips

All parts are solid steel drop forgings, heat treated. Eye is pear shaped, 7/8 inch and 1/8 inch wide, and a roller fitted to body yoke makes motion free and allows

load to come on smoothly. Instantaneous hold, yet a shake on tackle rope releases grip. Will not slip due to hand cut serration in face of eccentric. Galvanized finish.

No.	1604-10	1604-20
Each.....	\$3.80	5.60
For Wire Size, and Smaller.....	No. 4 B.&S.	1/2 In.
Approx. Maximum Opening...inches	15/64 (.24)	17/32 (.53)
Approx. Minimum Opening...inches	1/16 (.06)	3/64 (.14)
Weight per Dozen.....pounds	12	28 1/2

Klein's Improved Haven's Grips

For wires 3/4 inch to No. 2 B.&S. Approximate maximum opening, 25/32 inch (.78); approximate minimum opening, 1/32 inch (.22). Parts are alloy steel drop forgings properly heat treated.

For use on solid or strand wires. Swing latch engages stud on lower jaw preventing any distortion of body or cross bolt under load. For use on trolley wire and weatherproof. Can be readily adapted, at slight extra cost, for hot line work on weatherproof (insulated) conductors. Swing latch holds tool on line in position for pull. Eye is pear shaped 1 1/4 in. wide. Hand cut serration in face of eccentric assures a hold that cannot slip. Galvanized finish.

No. 1625-20—Weight per Dozen, 45 Pounds...each \$13.10

No. 1700-30 Klein's Chicago Linemen's Tools

This tool is a combination of No. 1613-30 Chicago Grip and No. 1702-20 Howes Wire Tool. It is largely used by telephone companies.

For No. 6 wire and smaller down to No. 13. Other sizes of grips can be furnished in this combination to order only.

Weight, 4 pounds.

No. 1700-30.....each \$14.10
Strap for No. 1700-30, 1 1/4 In. x 7 Ft.....each 4.00

No. 1702-20 Klein's Howes Wire Tools

The strap is harness leather 1 1/4 inches wide and 7 feet long. At one end a forged steel swivel hook is provided with opening to permit anchoring round insulator pin. The forward end has a locking device to hold the load at any distance and is so arranged that a wire grip can be readily attached.

The metal parts are galvanized.

Weight per set, 2 1/2 pounds.

No. 1702-20, Single Purchase.....each \$10.00
Extra Strap, 1 1/4 Inches x 7 Feet.....each 4.00

No. 1802 Klein's Heavy Block Tackles

Drop Forged Hooks and Eye

Consist of two special double sheave blocks. Spring guarded snap hooks do away with taping. Pulleys are bronze bushed and self lubricating. Furnished with 30 feet best quality Manila rope, 4 strand.

No.	1802-40	1802-50	1802-60

No. 1803 Klein's Hand Lines

Best quality manila rope which will not twist. Spliced to eye of snap hook with galvanized steel thimble. Snap hook is drop forged with round eye, opens to 3/4 inch.

Complete with 3/8-inch, 4-strand manila rope and No. 443-A snap.

No. 1803-60, With 75-Foot Rope, Weight Each, 3 1/2 Pounds.....	each	\$8.50
No. 1803-120, With 120-Foot Rope, Weight Each, 5 1/4 Pounds.....	each	11.20

Klein's Self-Locking Block Tackles

No. 1802-30

Consists of light steel galvanized shell block, fitted with a snubbing hook to lock load in any position. Convenient and time-saving for man on the pole, also in handling a vertical load. To lock load, pull luff rope under hook. To release, pull rope. Block is arranged with spring guard snap hooks. When pulling up wire to make a split it may be used with two grips attached to the snaps, or with drop forged hook No. 258 to anchor to an insulator pin or other convenient anchorage. Hook is specially shaped to fit under double petticoat insulator on cross arm. Rope will not twist.

Furnished with 25 feet of 3/8-inch, 4-strand manila rope and detachable anchor hook. Shipped unassembled.

No. 1802-30.....	each	\$7.20
------------------	------	--------

Parts

No. 258 Anchor Hook.....	each	\$1.50
25-Foot, 3/8-Inch, 4-Strand Rope.....	each	1.50
No. 267 Plain Block Only.....	each	2.70
No. 268 Snubbing Block Only.....	each	3.30

No. H-1802-30—With Guarded Snaps

Same as No. 1802-30 except that snaps are guarded. The nose of each hook has been lengthened to extend over the latch or keeper. This does away with any necessity of taping snaps a'fer come-along has been engaged.

Furnished with 25 feet of 3/8-inch, 4-strand manila rope and detachable anchor hook. Shipped unassembled.

No. H-1803-30.....	each	\$8.30

No. 443-A Klein's Snaps For Hand Lines and Light Hoists

Can be used on all light hoisting, for roofers, etc. Drop forged with galvanized finish. Hook and eye are integral drop forging. Duck bill nose closes around latch.

Will carry loads up to 2000 pounds. When fitted to a 4-inch tackle block, it provides an ideal means for connecting with come-along; no taping is necessary.

Opening will take up to 3/4 inch. Eye, 1 1/8 inches. Length overall, 5 1/2 inches.

Weight per dozen, 6 1/2 pounds. No. 443-A.....each \$2.50

No. 258 Klein's Anchor Hooks for Tackles

Solid steel drop forging. Overall length, 5 1/2 inches x 3 1/4 inches across the hook. Size opening, 2 inches; inside diameter of eye, 5/8-inch.

Galvanized finish. Weight per dozen, 4 pounds. No. 258.....each \$1.50

Matthews Quick Release Slack Pullers

No. 730

No. 732

Enables one man to do the work of four when taking the slack out of guy strand, messenger wire or changing strain insulators, or for splicing trolley wire, telephone or power cable under tension; also used for pulling back underground cable. Takes the place of block and tackle. One man can easily pull 3000 pounds with the No. 730, 6000 pounds with the Nos. 731 or 732, and 10000 pounds with the Nos. 7100 or 7110. No slack is lost in dead ending as strain is held to the exact point pulled.

With the new quick release feature, when the entire take-up has been used, the wire is temporarily dead ended and the lock released. This permits the slack puller to be immediately extended to its maximum or any intervening length.

No.	Description	Ship. Wt. Lb.	Each
730	Maximum Take-Up, 19 Inches.....	17	\$24.00
731	Same as No. 730, Except That Clevis is Substituted for Hook.....	17	26.00
732	Same as No. 731, Except That it Also Has Quick Take-Up Feature.....	17	28.00
7100	Maximum Take-Up, 27 Inches.....	45	33.00
7110	Same as No. 7100, Except That it Also Has Quick Take-Up Feature.....	45	35.00

The 730, 731 and 7100 do not have the quick take-up feature.

Chance Linemen's Socket Wrenches

Fits heads and nuts of all standard bolts for pole and guy work.

Drop forged.

No.	154	234
For Nut Size.....inches	5/8 & Smaller	3/4 & Smaller
Net Weight.....pounds	2 1/2	3 1/4

No. 3109-20 Klein's Combination Steel Lag Screw Wrenches

This wrench is forged from select bar steel. The slot is formed in a cross shape and will fit machine bolts, nuts or lag screws from $\frac{3}{8}$ inch to $\frac{5}{8}$ inch. The small end of the wrench is arranged for $\frac{5}{16}$ -inch machine bolts or lag screws. The round hole allows the end of a bolt to come through as the nut is run on.

The jaw is wider at its upper portion and when this wrench is put on a nut or bolt the tendency is to draw the bolthead or nut into the wrench and prevent slipping off. Weight, per dozen, 24 pounds.

Nos. 3109-20 Length, 13 $\frac{1}{2}$ Inches..... each \$4.60

No. 3146 Klein's Linemen's Wrenches Bell System Type

Wrench is particularly adapted for use on heavy 3-bolt guy clamps on which the clearance for a wrench is limited.

This wrench is forged of select bar steel, heat treated, and is of the open end type with two openings of a different size at each end. There is a hole provided at the larger end so that the wrench may be used for turning in standard pole steps.

Size, 13 inches. Weight per dozen, 23 pounds.

No. 408-8 Klein's Bent Nose Slip Joint Pliers

For use in difficult places. An excellent general purpose tool.

Has polished head and handles temper blued.

No. 408-8, 8 Inch, Weight per Doz., 8 Lbs.....each \$3.50

No. 202-5-AV Klein's Oblique Cutting Pliers

Narrow Head

For heavy cutting. Hammer forged from high grade tool steel. With volute spring for bench work.

No. 202-5-AV, 5 1/2-Inch, Weight per Doz., 4 Lb..each \$4.60

No. 1550-2 Klein's Xela Electricians' Knives

A handy combination for the electrician, combining an emergency screwdriver, a knife blade for cutting or stripping wire; safely locked so that it cannot close during use. The commendable features are a well-tempered blade, a strong joint, a solid well-proportioned hand fitting handle and a lock to keep the blade safely open, yet promptly releasable when it is desired to close the blades.

Screwdriver blade is locked when open; to unlock a slight side pressure of the thumb releases the lock and permits the blade to be closed readily.

No. 1550-2, Double Blade.....each \$2.70

No. 245-5-V Klein's Oblique Cutting Pliers

For electricians, telephone men, etc. Hammer forged from high grade tool steel. With volute spring for bench work.

No. 245-5-V, 5-inch, Weight per Doz., 3 Lb.....each \$4.60

Xela Electrician's Scissors

Made of high grade steel properly tempered.

Has screw hinge.

Nickel plated finish.

Size, 5 in.

Weight per dozen, 2 pounds.

No. 2100-5.....each \$1.70

No. 301-5-V Klein's Long Nose Pliers

Without Cutting Knives

Hammer forged from high grade tool steel. With volute spring for bench work.

No. 301-5-V, 5-Inch, Weight per Doz., 3 1/2 Lb...each \$4.50

No. 5139 Klein's Canvas Tool-Packs

Made of sturdy, brown canvas. A heavy zipper instantly closes or opens the full length mouth. Especially useful for a selection of frequently used small tools.

Weight per dozen, 3 pounds.

No. 5139, Size, 6x12 Inches.....each \$1.50

No. 203-5-V Klein's Long Nose Cutting Pliers

For production bench work where a combination of long jaws with cutting knives is required. Fitted with volute spring.

Length, 5 3/4 ins.

No. 203-5-V, Weight per Dozen, 2 3/4 Pounds.....each \$5.10

No. 1305-2 Klein's Inspectors' Tool Kits

Solid black leather folding case strongly stitched, reinforced back. Fitted with one each of the following tools: No. 201-6 side-cutting plier; No. 301-5 long nose plier; No. 1550-2 Xela electricians' knife; 1 pair electricians' tweezers; 1 special file; 1 special screwdriver.

A handy assortment to fit the pocket.
Weight, 1½ pounds.

Price, No. 1305-2.....each \$15.00

Klein Tool-Kits

Designed for mechanics, service men and electricians.

Contains long nose plier, special side cutting plier, diagonal cutting plier, electrician's knife, a pair of electrician's tempered tweezers,

4½-inch file and a screw driver with insulated handle. All contained in a Keratol roll fastened with a strong strap and buckle.

No. 1305-33A.....each \$18.00

No. 5116 Klein's Detachable Plier Holsters

Made of heavy harness leather with loop to slip over belt.

Carries 7, 8 or 9-inch side cutting pliers.

Mouth of pocket is framed to hold open position permanently.

Length, 10 inches.

Weight per dozen, 6 pounds.

Price, No. 5116.....each \$3.00

Nos. 5107 and 5112 Leather Plier Pockets

Made of good quality leather. Has slits through which belt is inserted. No. 5112 is the same as No. 5107 except that plier does not protrude.

No. 5107, Weight per Dozen, 2½ Pounds.....each \$1.30

No. 5112, Weight per Dozen, 2½ Pounds.....each 1.30

No. 5111 Klein's Hip Pocket Tool Cases

This case is suitable for carrying pliers or other tools in hip pocket.

Prevents cutting of clothes, or possible injury to the person.

Made of black leather.

No. 5163.....each \$1.70

No. 4 Ideal Cable Rippers

For use on non-metallic sheathed duplex cable or lead covered cable. Ripper is squeezed onto the cable and pulled, ripping the cable with one simple operation. Can also be used for ripping the outer sheathing of other cords, lead cables, etc., where outside diameter is not greater than ½ inch.

No. 4.....each \$3.36

No. R62267 Braid Strippers

For use in stripping braid from switchboard cable.

This stripper consists of a steel blade slotted at one edge and sharpened. Assembled in a metal band by means of two screws.

Size, 5⁵/₈ inches.

No. R62267.....each

Ideal Wire Strippers

Standard Model

For stripping solid wires; also used for stranded wire. Cutting edges are shielded. Blind centers of the V-notches on blades prevent cutting or scarring of wire.

Automatic Model

For stripping stranded wire; used equally well on solid wire.

Lever stops return of arms until wire is removed after stripping, then they are quickly snapped back to normal. Lever will not operate unless wire with insulation .050 inch or larger is inserted between grippers. When no wire is inserted, lower gripper moves upward when handles are squeezed, pushing trigger and lever up and out of action.

Porter Foresters

No. 1 is especially designed for the fruit grower but it is also handy for the home gardener for light shrub cutting, root cutting and any general clearing up.

No. 2 is suitable for forest pruning, brush and shrub cutting and root cutting. Especially recommended as a forestry tool where pine pruning and rust control programs are being carried out. Convenient in close growth.

No. 3 is capable of cutting up to its rated capacity in hard wood such as oak, maple and beech. Designed for use in reforestation work for such jobs as brush cutting, trail clearing, roadside stripping and any general improvement cutting in stands of all ages.

These foresters have the slide shift 3-power slot which provides great extra power in the middle of a difficult cut by the simple shift from one notch of the power slot to the next. Power can be increased 50 or 100 per cent. Use of the power slot is easy, instantaneous and with a few minutes practice, instinctive.

Ruggedly built for life time use. Easily sharpened by the use of a half round, second cut file of the proper size. Edges are protected when the handles are closed. All parts are carefully heat treated, and fully interchangeable.

Cuts clean and without damage to bark.

Porter Rigid and Swivel Type Bolt Clippers

Clipper Cut—Center Cut

Rigid Type

Swivel Type

The swivel type flexible bolt clipper permits cutting at any desired angle. This is made possible by ball and socket joints and a positioning spring. The cutting jaws of rigid type clipper cut and center cut clippers are firmly fixed in line with the handles.

Clipper cut jaws are beveled almost entirely from one side for close cutting. Center cut jaws are beveled equally, bringing cutting edge at center of jaw. Clipper cut regularly furnished.

No. 10-CCRE Porter High Tensile Wire Cutters

A light, handy tool for linemen only, specially tempered to solve problem of cutting new high tensile telephone and telegraph line wire. Especially suitable for new Nos. 85 and 135 high strength wire in No. 10-12-14 BWG.

Fitted with sturdy holster made of weather resistant leather. Put together with rivets—no stitching. Special safety snap down retainer strap. Tool comes out easily and goes back in with no fumbling. Slides on belt and stays in position.

Length of tool, 10 inches. Length of tool and holster, 11 inches.

Approximate weight of tool, 1½ pounds; approximate weight of tool and holster, 2 pounds.

No. 10-CCRE Tool.....each \$4.25
Holster.....each 2.25

No. 31 Greenlee Electricians' Double Speed Auger Bits

A fast boring auger bit fitted with a double screw point which leads six turns to the inch. Head is of the double-spur pattern, providing two cutting edges, spurs and side lips which allow for maximum wear. Twist is open for good chip clearance and cutting edges are sharply pitched for fast cutting. Especially suited for boring soft wood, but can also be used in the harder woods.

All parts fully polished except the square.

Overall length, 9 inches.

Standard package, ½ dozen in a box.

Sizes in 16ths.....inches 10 11 12
No. 31.....per dozen \$6.00 7.00 7.00

No. 16 Greenlee Unispur Auger Bits

For electricians. Has twist length of 5½ inches; over all length without screw point, 10 inches. Has 8-pitch single screw point. Head has single cutter with 1 outlying spur.

Price, Extra Eccentric Pins.....per dozen 1.80

Greenlee Bit Extensions

No. 900 is made to drive a bit up to 1-inch diameter but small enough to follow a 5/8-inch bit. This is due to the thin outer shell, which does not drive the bit, the driving coming from the bit chuck within. There are 5 major parts, all exposed surfaces of which are nickel-plated except the square, which is lacquered. The positive lock prevents the loosening of the holding sleeve. This lock consists of a sleeve with a spring tension, which engages the screw sleeve when released, and two 1/8-inch pins prevent it turning.

No. 925 bit extension is similar in design to No. 900 except it is made extra heavy to follow a 1½-inch auger bit and drive tools up to 2-inch diameter.

Packed 1 in a leatherette case.

Length.....inches 12 15 18 21 24 30
Price, No. 900...each \$2.10 \$2.20 \$2.25 \$2.35 \$2.40 \$2.50

No. 11 Ideal Joist Boring Machines

The Ideal Boring Machine is operated from the floor, and bores holes at any angle through rafters, joists or studdings. Used on new or old floor and ceiling construction.

The bit eats right into the wood with a light pull on the chain. Reversing the pull backs the bit out without bending or breaking. Bit is locked in place by merely tightening knurled collar—no tools required. Bits are solid point type, with special lip construction for fast and easy boring. Available in 1/8 and 1/16-inch diameters.

Weight, 17 pounds.

No. 11 Complete with Two Special Bits.....each \$18.75
Extra Bits (Quick Cutting).....each 1.12

No. 220 Greenlee Short Socket Firmer Chisels

Beveled edges and leather tipped handles. Blades 4½ inches in length and are thinner than the regular firmer chisel, filling the demand for tools lighter in weight. They are shorter in length than the regular firmer chisel and yet longer than a butt chisel. Extra for beveled edges. Packed six in a box.

Klein's Linemen's Pole Climbers

(Also Called Spurs or Hooks)

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein's Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

Leg iron or shank is made of spring steel; gaff or spur is forged from tool steel.

The shape of Klein's Climbers has been carefully considered. It is the result of many years' experience and much practical suggestion from linemen. Klein's Climbers have flexible shanks and yield readily to pressure of leg; they do not chafe. Gaff or spur is correct in shape, set of angle and temper. It is hand riveted to leg iron in secure manner.

No. 1939 Klein's Streamlined Linemen's Climbers

A newly designed climber in which the use of any unnecessary metal has been carefully avoided. Leg irons are flexible and tapered in width and thickness. The "critical" section from 3 inches above the gaff to half way across the stirrup has been designed for ample strength. The gaffs are slender type, preferred on treated (Black Jack) poles. A wrought ring carries the ankle strap. Gaffs 3½ inches long measured on the outside. Riveted top loop.

Each climber individually tested.

Size is measured from instep to end of shank. Special sizes on order.

Average weight per pair, 2½ pounds.

Size . . . in. 15 15½ 16 16½ 17 17½ 18
Per Pair . . \$8.00 8.00 8.00 8.00 8.00 8.00 8.00

Klein's Eastern Climbers

When ordering specify length of shank desired. Measure from instep to extreme end. Other than stock sizes to order. Tested before leaving factory.

No. 1901

Stock sizes, 15, 15½, 16, 16½, 17, 17½ and 18 inches.

Has punched strap loops. Packed 1 pair in a carton.

No. 1901, Wt. 3½ Lbs. per pair \$7.20

No. 1900

Same and same sizes as No. 1901 but has riveted strap loops. Packed 1 pair in a carton.

No. 1900, Wt. 3½ Lbs. per pair \$7.20

No. 1903

Light weight pattern with riveted strap loops. Packed 1 pair in a carton.

No. 1903, Wt. 2½ Lbs. per pair \$7.20

No. 1907

This is the standard tree climber used by forest rangers, top loggers, fire wardens, surveyors, etc. Made in all standard sizes.

Has punched strap loop. Gaffs, or spurs, are 5½ inches long measured on the outside and 3½ inches long measured on the underside. They are set high in the leg iron so that points clear the ground.

Packed 1 pair in a carton.

No. 1907 per pair \$8.00

Klein's Linemen's Climber Straps and Pads

All leather used is first quality harness leather. All sewing is lock stitched with genuine linen thread hot waxed. Buckles and buckle tongues are Klein standard solid steel drop forgings, tested to 1500 pounds.

With Square Pads—Straps 1¼-Inches Wide

This set consists of 2 upper or calf straps and two lower or ankle straps; and two square pads. Size straps, 1¼x22 inches. Size pads, 4x4 inches.

Klein Safety Straps

Klein Safety Straps are made in various patterns in a choice of two materials.

First quality back stock vegetable tanned harness leather. The new Klein-Kord fabric especially made for this purpose.

In all cases sewing is with genuine linen thread, hot waxed and lock stitched. Riveted by hand with solid copper rivets.

All buckles, including tongues, are drop forged, tested to 1500 pounds. There are three patterns of drop forged, tested snaps available as illustrated below.

Standard Snaps

Have wide nose covering spring latch protecting it from accidentally twisting out of Dee Ring, and can be used with any Dee.

Straps listed with plain catalog numbers have Standard Snaps.

Hank's Snaps

Are of special construction and must be used in conjunction with Hank's Dee Rings on belt.

Straps listed with "H" prefixing catalog numbers have Hank's Snaps.

Klein-Lok Snaps

Have a twin latch arrangement. Both latches must be pressed simultaneously to release. Full factor of safety. Can be used with any Dee.

Straps listed with "KL" prefixing catalog numbers have Klein-Lok Snaps.

Neatsfoot Oil

Keeps leather soft and pliable. Prolongs its life.

Supplied in cans with full directions for use.

Pint Can.....each \$1.50
 Quart Can.....each 2.50
 Half Gallon Can.....each 4.50

Klein's Tool Belts

All Klein Belts are made of first quality vegetable tanned harness leather. Sewing is with genuine linen thread, hot waxed, lock stitched. Rivets are solid copper, hand set with burrs. Buckles, including tongues, and Dee Rings are steel drop forgings tested to 1500 lbs.

Catalog numbers prefixed by the letter "H" indicate belts fitted with Hank's Dee Rings which must be used with Hank's Safety Straps. All other makes are fitted with Standard Double or Single Bar Dees.

To insure proper fit select size that allows heel of Dee Rings to come about 1 inch in front of hip bones as per following table.

Belt Size, In.....	36	38	40	42	44	46

No. 5228 Klein's Leather Tool Belts

Made of one piece of soft pliable, tough russet latigo leather, doubled to form comfortable rolled edges and returned at each end. Cushion is 4 1/2 inches wide at the center of the back and tapers to 3 1/2 inches wide at the front. Body strap is first quality russet harness leather, 2 inches wide, stitched to the cushion at back and passing through loops at end of cushion as well as through the dee rings. A russet harness leather tool strap, 1 1/4 inches wide with five loops in the 1 1/4-inch loop strap is carried on leather hangers from the body strap to which it is looped at the ends. This keeps the tool loops from contracting when belt is buckled on.

Constructed so that no rivets come through to inside of belt. Dee rings and buckle are single bar type solid steel drop forgings. All hardware tested to 1500 pounds. Galvanized finish. Fitted with leather pliers pocket, knife snap and tape thong, complete. Weight per dozen, 45 pounds.

Klein's Fabric Tool Belts

This belt is especially recommended for the use of line patrolmen, inspectors, service men and others who must carry a belt for occasional use.

Constructed throughout of a new rubberized fabric. This fabric is made up of a number of plies laid and vulcanized in live rubber in such a way as to secure the flexibility necessary for comfort as well as to protect the fabric from the weather. The inner surfaces are left untreated to prevent condensation from body heat which might otherwise occur.

The cushion is 3 inches wide tapered at the hips where it is returned through the double bar dee rings. The body, or top strap, is 1½ inches wide riveted to the cushion to form four tool loops of convenient size. It also passes through the dees as an additional safety precaution. All edges are lock stitched with genuine linen thread. Dee rings and buckle are solid steel drop forgings, individually tested to 1500 pounds. Galvanized finish.

Weight per dozen, 25 pounds.

No. 5209 Klein's Safety Harnesses

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gassy manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2¼x10 inches is stitched and riveted around the 1¼-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the ¾-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are ¾ inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 75 pounds.

No. 5209, with Life Line.....each \$13.40

Bartlett Safety Saddles

Provides a belt and saddle combination.

Main belt is made of 3½-inch heavy leather, reinforced by the tightening strap which is adjustable from 36 to 44 inches.

It is provided with two D rings, and a ½-inch, 4-strand rope also passes through supports on the belt to encircle the leg supports, which are of 3-inch leather.

Used extensively by state highway departments, public utilities and tree expert companies.

Also used in painting steel towers in high tension transmission lines.

Complete.....each \$8.00

No. 5108 Klein's Inspectors' Harness Leather Tool Bags

This bag is made of harness leather and will stand rough and hard usage. The leather does not absorb moisture.

Bag has a shoulder strap combined with a pad and hand strap. The bottom is three-ply and is protected with steel studs. Retaining straps

pass clear around the bag so that it may be loaded to the limit of its capacity and be securely held intact. All seams are sewed with hot waxed linen thread, lock stitched.

Linemen's bags can be furnished with lock and key, and shoulder strap at slight additional cost.

No. 30 Salisbury Non-Metallic Tool Bags

The tool bag is an essential part of line crew equipment as it is an efficient method of raising tools, supplies and material to the pole top.

This bag is of sturdy construction, amply reinforced and designed throughout for heavy duty service.

Made of duck with a single side seam together with top and bottom fastenings strongly sewed. The heavy leather bottom extends 3 inches up the sides. The top is held open, in round form, by a stout non-metallic ring. A 3/8-inch rope handle is firmly spliced to the bag through leather reinforcements. Equipped with a utility pocket on the inside to accommodate small tools, bolts, washers, etc. Bag is collapsible.

Diameter, 12 inches. Height, 16 inches.

Tips Perma-Grip Tap Off Clamps

Carefully, scientifically proportioned to give proper electrical conductivity, maximum mechanical strength, and symmetrical appearance. Current carrying capacity is in proportion to that of the maximum jumper wire for which each clamp is designed.

Tests reveal a minimum yield point of 165 inch-pounds and an ultimate strength in excess of 260 to 500 inch-pounds (depending on size) applied torque on eye screw.

Gripper is designed for three-point contact with the conductor.

U.S.S. threads on the high strength bronze eye screw permit quick, easy application, and a tight positive grip with greatly minimized danger of sticking due to corrosion.

Clamps with S.A.E. threads available on request. If hex screws are wanted, specify on order.

- TYPE CC. Copper to copper connection.
- TYPE CA. Copper to aluminum connection.

Tips Fused Tap Clamps

50-Ampere Capacity

Used where a fused protective device is required for transformer installations or branch line taps on 2300 to 15,000-volt lines. Provides protection for rural line tap-offs. Easily installed and removed with a clamp stick.

Has high rupturing capacity, ample flashover value, and positive vibrationproof contact. Designed to extract fuse links and thus reduce arcing with its charring effect inside fuse tube.

Tapper is provided with a Tip Snap Clamp. The fuse tube is lightweight, corrosion-resisting, waterproof, laminated plastic of great mechanical strength. Fiber lining quenches arc.

Type of connection: No. S1630-CC, copper to copper. No. S1630-AC, aluminum to copper.

No.	WIRE SIZES		Jumper	Weight Pound
	Main Line

No. G4767-2 Tips Temporary Jumper Clamps

This clamp, equipped with 5000-volt rubber-covered extra-flexible cable, is recommended for extra protection to linemen doing general low voltage maintenance work.

Has large, positive, gripping surface.

Handle is of corrugated, medium hard rubber; will not break or crack if dropped from pole. Cable is easily and securely attached. Handle will accommodate 1-inch maximum overall diameter grounding cable.

No cable furnished.

Main line contact: maximum wire size, 750,000 CM stranded copper; minimum wire size, No. 10 solid copper. Jumper wire size: maximum, No. 2/0, 5000-volt flexible grounding cable. Length, 9 inches.

Weight each, 1 3/4 pounds.

Tips Grip-All Clamp Sticks

This clamp stick is safe and easy to handle.

To open jaws it is necessary to release the safety catch. Safety catch closes automatically when jaws are closed.

Full universal action is obtainable; eye screw may be turned with clamp stick at 0° to 90° angle to screw axis.

Hardwood pole is 1 1/2 inches in diameter; tested to withstand 75,000 volts per foot for five minutes.

Castings are aluminum and bronze.

Tips Hot Line Maintenance Tools

Tips Hot Line Tools make it possible to do all types of live line repair work safely without interrupting service.

A wide variety of Tips Tools are designed to do maintenance work on voltages 40 to 220 Kv.

New poles or crossarms may be installed in the line. Pin type, suspension, or dead end insulators may be replaced. Transformers may be installed or removed. Similar maintenance jobs may be accomplished on either pole or tower with the aid of Tips Tools.

Complete information furnished on application.

Tips Insulated Wire Cutters

A lever type cutter that is easy to use. Gives positive insulation to operator because both pole and lever provide insulation.

In two sizes: for cutting 2/0 weatherproof solid copper wire or 2/0 bare aluminum core steel reinforced wire; heavy duty cutter for 2/0 weatherproof stranded copper, 4/0 bare stranded copper, and 4/0 bare aluminum core steel reinforced wire. Poles are laminated spruce. Lever attachment is a fiber sleeve.

Diamond Tenax Expansion Shields For Machine Bolts

Hot galvanized by the Diamond process.

Tenax is cast in one piece of malleable iron. It has break-age connections between the nut and expansion shell. When the bolt is tightened the connections between the nut and shell break down and the nut telescopes into the shell and is guided by the slides in perfect alignment into the shell. A 4 way expansion with 4 ways to use. Smallest diameter of hole in any Malleable Iron expansion of equal bolt diameter. Has extremely high holding capacity. Prices do not include bolts.

Keystone Interlocking Expansion Shields Double—For Use with Machine Bolts

Made of malleable iron.

Hot galvanized by the Diamond process.

Makes permanent fastenings to concrete, brick, or stone. Prevents nut being drawn out of shield when heavy loads are applied. Guides mechanic in determining when to stop tightening up bolt. Prevents nut being drawn past point of maximum expansion. Locks two sides and nut into a unit of resistance against load.

Can be furnished with tapered shanks to fit electric hammers. Supplies on order in lengths up to 6 feet for rock drilling.

Diamond Steel Spring Toggle Bolts

Made with two wings that engage a trunnion nut and a spring which forces the wings outward when the head has passed through the wall. One end of the spring is extended to prevent rotation of the head while turning in the screw.

Each wing is a complete toggle in itself and forms a bridge with bearing on both sides of the hole.

This construction gives great strength and distributes the load over a maximum of wall area.

All toggle threads are National Standard Thread. Head and bolts packed 100 in a box.

TYPE R—with round head screws. TYPE F—with flat head screws. TYPE M—with mushroom head furnished in R type 1/8 inch diameter only. TYPE N—reverse R or F screw on 2 to 4-inch lengths, 5 and 6-inch lengths threaded rods only and add nut. TYPE P—reverse R or F screw 2 to 4-inch lengths, 5 and 6-inch lengths threaded rods only and add acorn nut. Cap nuts extra.

Diamond Hammer Drills

Drills holes with safety and accuracy. Each sliding stroke of this telescopic hammer penetrates further, with greater accuracy and less effort. No danger of striking hand or wrist.

Drills up, down, horizontally and in awkward corners with no discomfort to the operator.

Used particularly for installing expansion shields and anchors.

Either Diamond N drill points or Di-Forge twist drill points may be used.

Weight, 5 pounds each.

Each, without points..... \$10.00

Diamond Style B Drill Holders

A hand drilling tool for electricians and in other lines of industry where numerous small holes are to be drilled for fastening small fixtures, etc.

Either Diamond N or Di-Forge drill points may be used. Style B, without Points..... each \$2.00

Diamond Style C Rubber Grip Drill Holders

Made of Vanadium steel, with a soft rubber grip with flange to protect the hand of the operator. Hexagon flange to prevent rolling.

Either Diamond N or Di-Forge drill points may be used.

Style C.....each \$4.00

Diamond Di-Forge Twist Drills

Forged from a solid bar of Vanadium tool steel. For use with a hand or electric hammer. Rotates clockwise if used with hand hammer; rotates continuously if used with electric hammer.

May be used with Diamond Styles B, and C and Diamond Hammer Drills.

Diamond N Drill Points

Drills are carefully tempered to insure sufficient hardness at the point to withstand the wear of cutting and the temper is drawn away toward the shank, so as to produce a softer steel where it enters the handle to prevent its breaking off at that point.

May be used with Diamond Drill Holders Styles N, B and C and Diamond Hammer Drills.

No. 31 Peirce Expansion Shields

Used with wood or lag screws for masonry attachments.

Size screw, Nos. 20 and 22. Shield: diameter, 1/2 inch; length,

2 inches. Shipping weight per 100, 12 pounds.

No. 31.....per 100 \$14.80

Peirce Hammer Drills

Holes may be drilled in masonry with this drill in about one quarter of the time required by ordinary methods. The hazard of injured hands is also completely eliminated. Jammed drill points are quickly removed and most important, holes are neatly and quickly drilled. The outer end of the hammer drill is hollow for tamping lead sleeves. Chuck takes all sizes of drills.

No. 325 C & L Multi-Flame Torches
1-Quart Capacity
For Gasoline

The No. 325 Heavy Duty Torch has an extra powerful burner that produces a strong blue blast flame of remarkable volume and great heat intensity. Full flame control for heavy or light work. It will burn in any position.

Although this torch is regularly supplied for burning gasoline, by changing the burner jet, kerosene can be burned successfully.

Shipping weight, 5 3/4 pounds.

No. 325.....each \$11.10

No. 225 C & L Blow Torches
2-Quart Capacity
For Gasoline

Used by service stations and garage repair men, railroad shops, marine use, etc.

Multi-Flame burner; produces a 10-inch flame which may be closely regulated to small size, improved internal vein construction, cleaner tip on control needle.

Supplied with large size pump. Kerosene can be burned by changing the orifice block which will be furnished at no extra cost if specified. Ship. wt. 7 lbs.

No. 225.....each \$14.30

C & L Blow Torches

No. 32A, 1-Quart Capacity
No. 238, 1-Pint Capacity
For Gasoline

Performs perfectly either indoors or outdoors under severe weather conditions. Powerful burner of improved construction is fitted with wind shield and has self-cleaning, non-enlargeable gas orifice.

The quart size burner produces an intensely hot blue blast 7 inches long which may be regulated for lighter work. Pint size burner is smaller.

No.	32A	238
Each.....	\$9.10	7.10
Capacity.....	1 Qt.	1 Pt.
Ship. Wt.....lbs.	5	4 1/4

No. 144A C & L Blow Torches

1-Quart Capacity
For Gasoline

For the mechanic who uses a blow torch occasionally.

The self-cleaning burner is supplied with non-enlargeable orifice and cleaner tip on control needle.

Produces an excellent flame.

The pump is quick-acting having the T-handle and the lock-down feature for the pump plunger.

Shipping weight 4 3/4 pounds.

No. 144A.....each \$7.10

No. 252 C & L Tool Kit Torches

For Gasoline—1-Pint Capacity

Convenient to carry in tool kit and to use in corners and close places.

Burner produces powerful blast which may be regulated. It is equipped with non-enlargeable orifice and self-cleaning tip on control needle.

Tank is drawn from seamless cartridge brass and is so shaped that it will not tip over easily.

Thickness, 2 inches. Length, 5 inches. Height, 9½ inches.

Shipping weight, 4½ pounds.

No. 252.....each \$8.80

No. 158A C & L Single Needle Torches

For Gasoline

For use in the home workshop, garage or farm.

Produces a good sized flame, is economical in fuel consumption and has a long burning life.

Burner is of extra high grade bronze and the sharp point, self-cleaning needle has a large shoulder to prevent orifice enlargement. Burner is protected by a windshield for use outdoors.

Tank is finished chromium-plated brass and the quick acting T handle pump has the lock down feature for the pump plunger.

No. 158A.....each \$6.10

Capacity.....quarts 1

Shipping Weight.....pounds 4¾

No. 160A C & L Torches

1-Pint Capacity
For Gasoline

For the home workshop, garage or farm. Produces a good sized flame; operates outdoors perfectly.

Burner is made of high grade bronze, protected by windshield; self-cleaning needle is provided with large shoulder to prevent orifice enlargement.

Chrome-plated brass tank fitted with quick acting T handle pump. The lock down feature prevents the pump plunger from rising after pumping pressure. C & L patented interlocking fittings are used throughout.

Shipping weight, 4 pounds.

No. 160A.....each \$6.10

C & L Coil Fire Pots

1-Gallon Capacity

No. 22A, Pump Type—No. 12A, Bulb Type
For Gasoline

No. 22A

The drawn steel tank is leak-proof and heavily coated with tin inside and out. This prevents rust that works up into the coil and burner. Improved quick detachable coil unit and hinged door coil cup make it easy to clean and repair. Pump is extra large and powerful, producing air pressure quickly. Uprights and fittings are extra heavy.

No. 12A is exactly like No. 22A but fitted with air valve and bulb.

No. 3428 Klein's Torches

1-Quart Capacity
Burn Gasoline

This torch is designed to meet the requirements of public utility companies.

Quick starting is insured by double length generating channels. Flame is intensely hot, and is easily regulated from minimum to full blast.

Will not back generate. Clean out plugs at all angles. Needle has positive shoulder stop which prevents damage to burner by enlarging orifice. Built-in pump is well made.

Tank is of heavy gage copper.

Weight, each, 5½ pounds.

No. 3428.....each \$26.70

U.S. PAT. NO. 1,676,352

Klein's 1-Quart Copper Tank Gasoline Torch

Has a generator coil. Intense heat around this coil completely vaporizes the fuel so that it burns as a dry gas, giving a hot, but easily controlled flame. Generator coil can be replaced in a few minutes at small expense by backing off two nuts. Burner tip is replaceable. Wt. each, 5½ lb.

No. 3428C...each \$28.50

If torch head assembly to attach to present tank is wanted, order No. 808C.

No. 808C...each \$15.30

No. 3420 Klein's Staysalite Linemen's Torches

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or for soldering iron.

Weight, 1¼ pounds.

Price, No. 3420.....each \$10.00

Metal Melting Pots

These Metal Pots are of the deep pattern and hold sufficient metal or solder for all practical purposes, and fit any make of fire pot or furnace.

The 6-inch pot is the right size to fit the No. 1, large shield of Nos. 22 and 23 coil fire pots, also fire pots Nos. 1, 60, 70, 91, 26 and 27.

Price, 5-Inch.....	each \$1.65
Price, 6-Inch.....	each 2.00
Price, 7-Inch.....	each 5.00

No. 3529 Klein's Furnaces

1-Gallon Capacity

Burns Gasoline or Kerosene

This sturdy furnace is made to stand up to field requirements of public utility companies.

Quick starting is insured by multi-coil burner which vaporizes the fuel thoroughly.

A simple cleaning device removes carbon deposit without taking burner apart. Tank is formed of heavy gage steel with bottom rolled in—no chance for leaks due to wear. All fittings are brazed.

Furnace operates on either gasoline or kerosene without any change of parts.

Furnished with pump in fount, and with No. 3010 Windshield unless otherwise specified. Weight each, 20½ pounds. No. 3529.....each \$40.00

No. 3010 Klein's Furnace Shields

(Regularly Furnished with No. 3529 Klein's Furnaces unless Otherwise Specified)

Made of heavy gage sheet steel. The top edge is rolled and the bottom is reinforced with a heavy ring. All joints are welded.

Diameter at top, 9 inches. Weight each, 3 pounds. No. 3010.....each \$4.00

Klein's Folding Windshields

Made of heavy galvanized sheet steel in four leaves each 24 inches high and 18 inches wide hinged together. Hinges are securely riveted. Grate made of 3/16x3/4 inch steel, welded and swings on one leaf of the shield.

Grate designed so that it can be used with melting pot or the larger sizes of wax kettles.

Weight each, 42 pounds.

No. 3020, With Welded Grate.....each \$25.00

Kester Plastic Rosin-Filled Solder

For Electrical and Radio Work

Its plastic rosin flux is non-corrosive and electrically non-conductive.

The flux flows, as the solder melts, in just the right amounts for a perfect soldering job.

Requires only heat.

Standard size, 3/32 inch, about 50 feet to the pound.

Size Spool.....pounds 1 5 20
Each.....

Kester Acid-Filled Solder

For General Soldering

Easy to use, saves time, and is dependable for a permanent bond.

Contains a scientifically prepared flux that flows in just the right proportions as the solder melts. Requires only heat.

Standard size, 1/8 inch, about 25 feet to the pound.

1-Pound Carton.....each
1-Pound Spool.....each
5-Pound Spool.....each
20-Pound Spool.....each

Nokorode Core Solder

Ready for instant use; can be used for all kinds of soldering. Will replace acid or resin core solder.

Made of pure virgin tin and lead, with the proper amount of flux to a given amount of solder. Works quickly and leaves a strong, permanent soldered joint.

Nokorode Core Solder is so combined that the flux is in a solid form, care being taken that all parts of the solder contain flux. When heat is applied, the flux does not run out and leave parts of the solder that must be thrown away.

Put up in 1½-ounce and ¼-pound packages, 1, 5, 10 and 20-pound spools.

Prices upon application.

Bar Solder

An alloy of tin and lead, made up in the form of bars for convenience in handling, for making soldered joints in metals, such as lead piping systems, for cable splices and other heavy work.

Price, Solder in Regular Bars.....per pound \$1.00

Soldering Coppers

Furnished without handle but having an iron rod fastened to the head, ready to be driven into a wooden handle. Supplied in all sizes. Prices upon application.

Ideal Acid Core Solder

Metal virgin tin and lead—no scrap metals used. A superior liquid soldering acid flux. Size of solder approximately No. 8 standard gage.

Put up in spools only of 1, 5, 10 and 20 pounds each.

Prices upon application.

Gem Rosin Core Solder

Metals virgin tin and lead—no scrap metals used. Rosin flux. Size of solder approximately No. 11 standard gage.

Put up in 1½-ounce packages and in spools of 1, 5, 10 and 20 pounds each.

Prices upon application.

Allen Neutral Rosin Fluid Flux

Flux of absolute safety for electric motors, telephone, radio, commutators, instrument work, fine wires, etc.

Can be spilled on the work and allowed to remain forever with no corrosion hazard to finest wire or metals.

Absolutely neutral and moisture free and non-conductive to electrical current.

Size Can.....	1 Quart	1 Gallon
Each.....	\$.85	3.00
No. in Carton.....	3	1

Allen Aluminum Solder

Complete solder and flux combined. Requires only heat to permanently join aluminum to itself or other metals.

Card contains twelve 3-inch pieces.

Cards packed 2 per carton; bars and wire, 6 pounds to carton.

Per Card.....	each	\$2.28
¼-Pound Bars.....	per pound	2.00
1-Pound Bars.....	per pound	1.50
Wire, ½-Inch, 11-Gage, Square.....	per pound	2.20

Nokorode Soldering Paste

This paste will flux all metals except aluminum. It takes the place of acid in all soldering jobs. Non-corrosive, safe as resin and rapid as acid. Not affected by heat and does not spatter. The solder will not turn dark after using this paste.

No. 55 National Pyramid Brush Assortment

For Fractional Horsepower Motors

Brushes for vacuum cleaners, fans, vibrators, electric ironers, washing machines, sewing machines, food and drink mixers, heat regulators, pumps, electric tools, cash registers and office appliances.

Designed for effective counter or store display. Resale prices for each brush and spring shown on the label in each compartment. Contains 198 brushes of 17 different sizes (3 sizes complete with shunts, springs and terminals) and 100 springs in 3 sizes.

Sizes range between 3/8 in. square and 3/16 in. square with 10 intermediate sizes of round and rectangular brushes including 3 types of brushes with shunts, springs and terminals. Springs are made of the best grade phosphor bronze wire.

No. 55 Assortment Complete..... \$10.00

Sticka Black Friction Tape

A popular-priced tape for general use.

Used to protect the splicing compound on a wire joint from abrasion.

Roll contains 1/2 pound gross of 3/4-inch tape, length 60 feet to a roll.

Available in 1/4-pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.36

Victor Black Friction Tape

Protects the splicing compound on wire joints from abrasion.

A high grade tape for outside or inside work.

Roll contains 1/2 pound gross of 3/4-inch tape, 67 1/2 feet to a roll.

Also furnished in rolls 2 inches wide, 67 1/2 feet per roll, for repairing lead-covered telephone cables. Approximate weight per 2-inch roll in foil, 19 1/4 ounces.

Available in 1/4-pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.38

Amazon A.S.T.M. Black Friction Tape

Highest quality friction tape to meet the most strict specifications.

Roll contains 1/2 pound gross of 3/4-inch tape, which is 82 1/2 feet to a roll.

Available in 1/4-pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.40

Vim Gray Friction Tape

Vim tape is distinctly a quality tape. It has a very high percentage of rubber in the friction compound, giving unusually high insulating properties and long life.

Packed in tin cans. Roll contains 1/2 pound gross of 3/4-inch tape, length, 82 1/2 feet.

Available in 1/4-pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.70

Manson Friction Tape

Has a closely woven cotton fabric of highest quality into which has been frictioned (on both sides) a rubber compound containing new Hevea rubber with chemically pure admixture.

Rolls, 3/4 in. wide, containing 80 feet, black, per lb..... \$1.10

Ru-ber-oid Insulating Tape

Will not vulcanize with heat or become defective by exposure or use, will not dry and crack or harden; water, acid and alkali-proof.

Furnished in half-pound rolls 3/4 inches wide; other widths to order. Black Tape..... per pound \$.75

Amazon A.S.T.M. Splicing Compound (Rubber Tape)

Designed for the severest kind of service. Meets the A.S.T.M. and A.R.A. specifications as well as U.S. Navy specification 17-T-1d. Because of the high percentage of pure plantation rubber this tape is extremely elastic. Will amalgamate into a solid tube to make a watertight joint. Will withstand dielectric test of at least 350 volts per mil of thickness. Roll contains 1/2-pound gross of 3/4-inch No. 8 tape; length, 30 feet. Also available in 1/4-pound rolls. Special widths packed in foil only.

Per Pound..... \$.49

Victor Splicing Compound (Rubber Tape)

This tape is second in quality only to Amazon. It is designed primarily for ordinary service. Its performance has more than justified the high recommendation which has been given to it. Will withstand a dielectric test of 300 volts per mil of thickness. Roll contains 1/2-pound gross of 3/4-inch No. 8 tape; length, 21 feet. Also available in 1/4-pound rolls. Special widths packed in foil only.

Per Pound..... \$.40

Okonite Rubber Tape

Made from fine Up-River Para rubber. Ingredients are selected, prepared and mixed with care.

Impervious to moisture.

Rolls, 3/4 in. wide, containing 30 feet, black, per lb.....\$1.70

Hydro-Proof Tape

A waterproof tape with an average dielectric strength per layer of 1850 volts.

Width, 3/4 inch.

Packed 24 yards per 8-ounce roll.

Per Pound..... \$1.00

Scotch Electrical Tape For Neon Signs

A black tape particularly adapted for blocking out turnbacks and spacing between letters on Neon signs.

Requires no moistening to apply; permits of faster working. Has instant adhesion to glass and the slightest pressure seals it. Will withstand all weather conditions.

The thinness of this tape makes for easier wrapping. Rolls contain 72 yards.

Anchor Brand Flexible Tubing and Saturated Sleevng

Manufactured in standard sizes and colors.

Furnished in three foot pieces or continuous lengths on spools. A small additional cost for special cut lengths.

Furnished in three grades.

Grade F.R.

Often referred to as Radio Spaghetti or Varnished Tubing by the trade.

The special coating is not affected by water or oil and is highly resistant to acids.

Has high dielectric strength and will retain its flexibility and lustre for years.

Adaptable in colors to a wide range of uses as a decorative and protective covering.

Grade D.S.

Heavily saturated and coated with a slow burning insulating varnish.

Adapted to wide use in radio assembly. Can be cut in small pieces with clean non-fraying ends.

Ideal for covering leads in small motors and as a protection for wires, terminals, etc.

Dielectric strength is ample for all ordinary commercial applications.

Fiberglas Electrical Insulations

Fiberglas Electrical Insulating Materials provide an inorganic, temperature-resistant, flexible insulation of exceptional electrical characteristics in a convenient form for application to all types of electrical equipment.

These products are woven of Fiberglas electrical yarns. They are pure glass throughout, except for the fiber coatings which are applied to facilitate manufacture and, in the case of impregnated materials, the impregnants added in later stages of manufacture.

Complete Line of Electrical Insulation

The yarn is used in the insulation of magnet wire. Fiberglas-insulated magnet wire now is available in a wide variety of sizes and cross-sections for use in all types of electrical equipment.

Fiberglas tapes and braids are available for the insulation of all forms of electrical equipment. Fiberglas tying cord also can be supplied.

Fiberglas cloth is used as a base in the fabrication of varnished cloth or cambric and as a backing for mica. It can be supplied in full cloth width or cut into narrow tapes. A complete line of Fiberglas-mica cloths and tapes is available.

It also serves as the base of material for laminated products which are supplied in a variety of thicknesses and which can be machined or formed into intricate shapes as required.

All these Fiberglas products are used for electrical insulation in the same manner as any standard textile product.

Applications

Electrical insulating tapes are handled and applied to coils, cables and other electrical elements in exactly the same manner as standard tapes made of

Tapes

other materials. High tension may be applied to produce tighter windings and thinner tapes may be used where desired for space economy with equivalent electrical protection.

In the winding of pancake coils part of the Fiberglas tape may be cut away in order to reduce the thickness of the overlapping layers at the inner circumference of the sharp bends. The remaining fraction of the width of the tape has sufficient tensile

strength to permit this practice. A more compact and neater winding results.

Physical Properties

Fiberglas electrical slivers, rovings, and yarns bring to the electrical industry a unique insulating material combining desirable properties hitherto not found together in any single material. These properties include:

NON-INFLAMMABILITY AND HIGH HEAT RESISTANCE.

Fiberglas electrical textiles will successfully withstand temperatures in excess of 1000°F. without impairment of their electrical properties, and temperatures in the neighborhood of 650°F. before losing their original flexibility and resiliency. The output rating of a piece of electrical equipment is limited first of all by the temperature its insulation will stand without excessive deterioration. The commonly used types of organic insulation, that is, cotton, silk, linen and paper, rarely permit a rated temperature rise greater than 55°C. (99°F.) over an ambient temperature of 40°C. (72°F.). Where higher temperatures are unavoidable, asbestos has been used if the attendant space factor was not prohibitive, and the low tensile and dielectric strengths were not of great importance.

Mica has been used extensively but its lack of

Braids

Tying Cords

Fibreglas Electrical Insulations

Continued

mechanical strength and its high cost have imposed certain limitations. The maximum operating temperature of electrical apparatus is now limited only by the impregnant used, for Fibreglas yarns will withstand higher temperatures than any impregnant now available. Between the temperature limits of organic fibers and of the best electrical impregnants there is a field of use in which Fibreglas electrical textiles stand unique.

MOISTURE RESISTANCE. The individual glass fibers are non-absorbent, a property of obviously major importance in many electrical applications.

RESISTANCE TO ABUSE. Fibreglas electrical insulation is resistant to external abrasion and to attack by moisture, acids, oils, and most corrosive vapors.

SPACE CONSERVATION. Because Fibreglas electrical yarns and tapes combine high temperature resistance, exceptional electrical properties, and great tensile strength, they permit the design of many types of electrical equipment with a substantial decrease in the total volume occupied by insulation materials.

Electrical Properties

The electrical properties of Fibreglas electrical insulating tapes are shown in accompanying diagrams and tables. The dielectric strength, which is the ability of a dielectric material to resist penetration by electrical discharges through the thickness of the material, is shown in the chart for representative Fibreglas tapes and cloths that have been impregnated with various standard materials.

The dielectric strength of unimpregnated tapes differs little between various materials because the openings within the weave of the tape reduces the insulation value of the materials substantially to that of the air within these voids.

The insulation resistance of Fibreglas tapes, which is the insulating value of the tape, is shown in the chart. Insulation resistance of unimpregnated materials varies with the moisture content and surface contamination. Since water is a good conductor of electricity, insulation resistance tests show the advantage possessed by Fibreglas over other materials listed in the table because of the non-absorbent and non-hygroscopic character of the individual fibers.

Factor of Safety

These same characteristics of Fibreglas insulation may be applied to existing equipment without change of design with the result that a substantial increase in the operating factor of safety is introduced and the life of the equipment is generally greatly extended.

For example, standard motors formerly wound with organic insulation materials which have failed in service may be rewound with Fibreglas tapes or other forms of insulation and may thereafter be overloaded beyond the point which caused failure of the organic materials.

In effect this not only increases the factor of safety in the operation and reliability of equipment, but it also increases the potential output under continuous overload.

Note that the tensile strength of Fibreglas tapes is stronger at 800°F. than either cotton or asbestos tapes at ordinary room temperatures. The limiting service temperature of Fibreglas tapes is determined by the impregnant used.

Mica Insulator Company

From the mines in India to the finished product the Mica Insulator Company controls each step. Dependable Mica Insulating Materials are the result of this control. Lamicoid insulation made by Mica Insulator Company must meet the same strict standards set for Mica Materials and this is also true of Empire oiled insulating materials and Mico Materials.

Constant research, careful manufacturing, and tested materials work together in assuring the user that Mica Insulating Products will satisfy his most rigid requirements. Graybar, distributor for Mica Insulator Company, will make available to you their years of experience and research in this field.

Lamicoid Sheets, Rods and Tubes

Lamicoid is a laminated bakelite product made by moulding treated paper or fabric under heat and hydraulic pressure into uniformly dense, strong, non-hygroscopic sheets. Made in various types of sheets, rods, tubes, and special shapes to meet differing specific applications. Lamicoid is used where the qualities of strength, toughness, high dielectric values, low moisture absorption, resistance to chemicals, lightweight, and fine surface are important.

Translucent Lamicoid

Approximate Sheet Size, 36x42 Inches (10 1/2 Sq. Ft.)

Modern material used for modern displays, lighting fixtures, advertising novelties, and countless other applications where illuminated effects are desired.

Standard finish: glossy one side, satin reverse side.

It is sometimes necessary to trim sheets smaller than the standard size sheet. The right is reserved to ship the smaller size sheet and invoice on the basis of the area of the size shipped.

Micanite and Super-Micanite

Used widely for insulation between commutator bars because it will not slip or ooze when subjected to heat and pressure in the commutator.

Both are manufactured from super-imposed layers of thin, split mica films. The one essential difference is that Super-Micanite is made with a synthetic cement, glyptal, as a binding material rather than shellac of which Micanite is made. Both are cemented together to form a hard, rigid plate under heat and pressure.

Super-Micanite has the following advantages—Electrical: dielectric strength, 10% to 60% greater; volume resistivity, 100% greater; surface resistivity, 300% greater; dielectric power loss, 34% less. Physical: slippage shows practically none under pressure; transverse strength, 50 to 100% greater; density, 7% greater; carbonization, its binder shows only slight tendency to carbonize under high temperatures and when exposed to arcing; corrosion, non-corrosive to copper, its binder decomposes at higher temperature and decomposition products, formed below the carbonization point, are neither corrosive or conductive; effect of heat is slight.

Molding Plate

Sheet Size, 18x36 Inches

Commutator Segment Plate

Sheet Size, 18x36 Inches

Micanite and Super-Micanite plate for Commutator Segment Insulation are made in two qualities from different kinds of mica, Nos. 2, 22, and 222 from muscovite or white mica; Nos. 3 and 333 from phlogopite or amber mica.

These plates contain approximately 3 to 5% cement, evenly distributed and are designed especially for insulation between commutator bars. Cured under heat and pressure, Micanite and Super-Micanite will not slip or ooze when subjected to heat and pressure in the commutator.

Nos. 2, 22, and 222 are recommended for commutators that are undercut; Nos. 3 and 333 which are made with the softer amber mica, for commutators when the mica is flush with the surface.

The following characteristics are present: uniform thickness and density; high specific weight; extremely low compressibility; and very small cement content.

No. 2 India Micanite

Type of bonding material, shellac.
Milled to thickness.

No. 5 Flexible Micanite Plate—For Cold Forming

Sheet Size, 36x36 Inches

It is often used where a sheet mica insulation is preferable to tape or fabric.

This plate is made of thin films of white India mica cemented together with a specially developed binder. The resulting plate possesses a high dielectric strength and lends itself readily to any process where cold forming is desired. The plate can readily be bent over sharp corners because of the ability of the individual flakes to slip over one another.

A slight variation in thickness is inherent as the finished product cannot be milled or surfaced.

Furnished in .005, .010, .015, .020, .025, 1/32, 1/16, and 1/8-inch thicknesses.

No. 555 Flexible Super-Micanite—For Cold Forming

Sheet Size, 36x36 Inches

An ideal conductor and slot insulation which will withstand severe tests.

Manufactured similarly to the No. 5 plate, the main difference being the use of a synthetic binder instead of shellac.

Furnished in .005, .010, .015, .020, .025, 1/32, 1/16, and 1/8-inch thicknesses.

Micanite and Super-Micanite

Continued

Stocking of Cold Molding Flexible Micanite Materials

Sheet Size, 36x36 Inches

When exposed to air for any considerable period of time, cold molding materials are liable to lose some of their flexibility. This is accounted for by the gradual oxidation and hardening of plasticizers.

The original flexibility can frequently be restored by warming the material for a minute or two on a suitable hot-plate. Good results can also be secured by subjecting the material to rising fumes of benzol.

No. 5 Flexible Micanite

Type of bonding material, synthetic.

Thickness Inches	Approx. Wt. Lb. per Sheet	Thickness Inches	Approx. Wt. Lb. per Sheet

Micanite Electrical Heater Plates For Electrical Heating Units

Sheet Size, 18x36 Inches

Made in four varieties, muscovite, white mica, phlogopite, or amber mica, and with the use of both organic and inorganic cements.

White mica is safe to use for temperatures up to approximately 1000°F., and under ordinary conditions micanite heater plate made of white mica will answer admirably for domestic heating appliances.

Amber mica will stand a considerably higher degree of heat than white mica and is usually unaffected by temperatures up to 1800°F. For any device in which the element will reach a higher temperature than 1000°F. it is advisable to use micanite heater plate made of amber mica.

No. 6 white and No. 7 amber are firm, hard plates that can be trimmed, cut into patterns, drilled and used to wind resistances. They are made with an inorganic cement. The cement used is slightly hygroscopic and these varieties must be kept dry and not held in stock too long before using, on account of possible deteriorations in mechanical properties.

No. 666 white and No. 777 amber, while not strictly heatproof, are made with a very small amount of organic cement which is consumed and disappears at the first heating of the element, when a slight smoking is observed, and nothing is left but the natural films of mica. These varieties of plate therefore cannot be used unless mechanically supported on both sides. These plates are practically unaffected by hygroscopic action; can be kept in stock indefinitely, and being less brittle than Nos. 6 and 7, will stand punch press operations better. They are not as well adapted to wind resistances on as Nos. 6 and 7, as their firmness disappears when heated. They are, however, used extensively in devices where the heating element is clamped firmly against the surface of the metal to be heated.

No. 6 White Micanite Heater Plate

Type of bonding material, synthetic.

Mica Washers

Furnished standard in stained electrical mica.

Made of uncut or rock mica and usually supplied in random thicknesses, however, they can be built to uniform thickness on order.

In sizes from 1/16x1/16 to 3x1 1/16 inches in thickness from 1/32 to 1/4 inch. Built up washers sold by the 1000, random thicknesses sold by the pound.

Other qualities and sizes upon application.

No. 20 Micanite Cloth

Roll Size, 16 Feetx36 Inches—Sheet Size, 36x36 Inches

Consists of an appropriate number of layers of India mica films carefully faced with cotton cloth on one side and thin tissue paper on the other. The cotton base imparts excellent mechanical strength to this material. This, in conjunction with great flexibility, makes an excellent and efficient insulation for various conductors. It is often used in conjunction with Empire cloth and other insulations.

Thickness	Approximate Weight Roll	.008	.011	.014
..... inches pounds	3.0	4.5	6.0

No. 24 Micanite Paper

Roll Size, 16 Feetx36 Inches—Sheet Size, 36x36 Inches

Manufactured by placing a suitable thickness of white India mica between two sheets of .001-inch Japanese paper.

The bond produced for this material possesses a high degree of flexibility. In comparison with No. 20 Micanite Cloth, mechanical strength has been slightly reduced in order to offer a thinner and less expensive product.

Thickness	Approximate Weight Roll	.005	.008	.011
..... inches pounds	2.5	4.0	5.5

No. 26 Rope Paper and Mica

Sheet Size, 36x36 Inches

Composite insulation consisting of rope paper faced on one side, with two layers of India mica films and tissue paper. This material has a wide range of utility in the field of moderate voltages and temperatures.

Thickness	Approximate Weight Sheet	.007	.010	.015
..... inches pounds	.5	.75	.94

No. 27 Pressboard and Mica

Sheet Size, 36x36 Inches

Composed of No. 1 pressboard faced on one side with two overlapping layers of India mica and tissue paper. Mechanically it possesses greater rigidity than No. 26 rope paper and mica, otherwise this insulation is of the same order.

Thickness	Approximate Weight Sheet	.012	.017	.020
..... inches pounds	.90	1.28	1.5

No. 28 Coil Insulation—For Hot Molding

Sheet Size, 36x36 Inches

Especially recommended for coils of high voltage machines where it is important to remove all possibilities of air films in the insulation. Disrupted air films create ozone and nitrogen oxides which oxidize and impair the insulating properties of nearly all the insulating materials except mica. Composite material made by applying mica to paper or silk with a shellac bond and pressed under heat to secure the desired homogeneity. The thinnest product consists of a silk base with a single layer of hand-laid mica films, average thickness being .004 inch.

For thicknesses above .004 inch, a shellac treated .001-inch condenser or .0015-inch kraft paper, is used in conjunction with the necessary layers of mica films.

This material, not flexible at room temperature, is usually applied to coils under pressure and heat by special wrapping machines. The insulation thus formed is firm and solid; practically all air pockets being eliminated.

As an alternative, hand wrapping may be employed. In this instance it should be cut into the required size, heated by suitable means and wrapped around the coil before it has time to stiffen and cool.

Micanite and Super-Micanite

Continued

No. 29 Fish Paper and Mica
Sheet Sizes, 36x36 and 36x72 Inches

This material is composed of fish paper faced on one side with layers of India mica films and Japanese paper.

Strongly recommended for moderate temperature and voltages where mechanical strength is of prime importance. Thickness.....inches .010 .012 .015 .020 Approximate Weight Sheet,pounds .75 .90 1.13 1.50

No. 32 Micanite Tape
Roll Length, 100 Feet

Made by placing large selected India mica films between two layers of thin .001-inch Japanese paper. The use of these large films results in a product with superior dielectric properties.

Gum and varnish type of bonding material, of such nature that the resulting tape is flexible, thus permitting the mica laminae slipping over each other when the tape is applied. High grade mica is the chief ingredient.

Packed in sealed cartons. Width.....inches 3/4 1 Thickness.....inches .005 to .007 Approximate Weight Roll.....pounds .25 .375

No. 35 Micanite Tape
Roll Length, 100 Feet

Excellent composite material possessing desirable mechanical and electrical characteristics. Choice white India mica films are carefully laid on a very thin, .002-inch, cotton base and backed with tissue paper. The average thickness of the resulting product is approximately .005 inch.

It is very desirable for end coil insulation when used in conjunction with No. 28 micanite coil insulation.

Gum and varnish type of bonding material. Width.....inches 3/4 1 Thickness.....inches .005 to .007 Approximate Weight Roll.....pounds .31 .42

Silk and Micanite Tape
Roll Length, 100 Feet

Similar to No. 32 tape with the exception of the mica films being placed between a layer of silk and Japanese paper or two layers of silk, that is, this tape can be furnished with a backing of silk on one side or both sides.

In using mica in tape form it is desirable for the operator to place the roll in both hands, giving the layers of the tape a flexing action. In this manner laminations between individual layers can readily be dislodged.

Gum and varnish type of bonding material. Width.....inches 1/2 3/4 1 Thickness.....inches .005 to .007 Approximate Weight Roll.....pounds .17 .25 .33

Entire Micanite Round Tubing

Made entirely of micanite, for high potential work, induction coils, sleeves for small commutators, brushholder studs, grid rheostat rods, etc., and for apparatus subjected to sufficient heat to render paper objectionable. A protective covering of paper, less than 2% of the material, is applied when specified to tubes up to four inches in diameter.

Furnished with 1/32, 1/16, 3/32, 1/8, 3/16, and 1/4-inch wall thicknesses.

Micanite and Rice Paper Round Tubing

Composed of 85% micanite and 15% paper. Used universally where high grade insulation is required for use under ordinary temperatures. The small amount of paper does not materially affect its insulating qualities. It effects a saving in the cost of manufacture, enabling this grade to be offered at a lower price than the above tubing.

Furnished with 1/32, 1/16, 3/32, 1/8, 3/16, and 1/4-inch wall thicknesses.

Micanite and Asbestos Round Tubing

Composed of 40% micanite and 60% asbestos. Intended for apparatus subjected to moderate heating where a lower priced tube than the Entire Micanite Tubing will provide. It is used in grid rheostats, resistance boxes, etc.

Furnished with 1/32, 1/16, 3/32, 1/8, 3/16, and 1/4-inch wall thicknesses.

Micanite and Rope Paper Round Tubing

Composed of 50% micanite and 50% paper. Recommended for apparatus which is not subjected to enough heat to affect the paper and where the insulating requirements are fully met by a composite material of this kind.

Furnished with 1/32, 1/16, 3/32, 1/8, 3/16, and 1/4-inch wall thicknesses.

Standard Lengths in Inches for Round Tubing

On micanite tubes which are to fit over a rod, the outside diameter of the rod should be specified, as an allowance must be made on the inside diameter of the tube.

Round, square, oval, hexagonal, and other special shaped tubes of any size for special insulating requirements can be furnished. Large round tubing for induction coils, specially treated tubes or bushings for apparatus immersed in oil, special heat-proof bushings rolled without cement for spark plugs, etc. can also be supplied.

Micanite and Asbestos and Micanite and Rope Paper Round Tubes can be furnished only in 1/32-inch thickness and up.

Super Micanite and Micanite Commutator Segments

Made from super micanite and micanite plate. Provide all the advantages and desirable features of raw mica in a convenient and effective form. In addition, micanite segments can be secured in specified thickness to exact sizes and shapes. There is no oozing, shrinking or slipping. Micanite plate is supplied for punching your own segments or furnished to exact specifications.

Micanite Washers

Suitable for insulation where excessive heat is not encountered. For grid rheostats and other apparatus where high temperature is to be expected, built-up mica washers or mica washers without any binder are recommended.

Round washers of any size and also oval, square or rectangular washers with either round or square holes, etc. can be supplied.

Spools, Flanged Bushings, Etc.

Made in a variety of sizes and shapes, either round, oval or rectangular. Quotations will be submitted on any special forms of micanite not included in any of the above classifications.

High Tension X-Ray Terminal Insulation

Manufacturers of High Tension X-Ray apparatus have found micanite an ideal insulator for the most difficult insulation problems. Micanite can be molded successfully, with special tools, around straight or bent terminal rods, or cables.

Micanite Commutator V Rings

Super-micanite and micanite commutator rings are made from the size required for the smallest fractional hp. motor to the largest generator.

Most manufacturers of commutators prefer a micanite ring in one piece, usually designated as a solid V ring.

All types of solid V rings require special molds. When the design of a commutator does not permit sufficient distance between the apex of the follower and the bottom of the V, solid V rings are advocated. Solid V rings up to 45 inches in diameter can be made, but the molds for the larger diameter are expensive. For the larger diameters, sectional V rings, made up in one-half thicknesses, with the joints staggered, can be used. These are less expensive, particularly the mold equipment.

Micanite Plates for Artistic Lamp Shades

For this purpose a plate is made with a special light-colored cement so as to obtain a uniform color effect. In pressing the plate, special precautions to keep the shading uniform are taken.

Furnished in No. 14 amber, No. 15 white, No. 16 pearl; .010, .015, or .020-inch thick.

Empire Insulating Materials

Empire oiled insulating materials include both impregnated fabric and paper. Special fabrics have been developed for this use to give the proper strength and impregnation. The varnishes used are also specially manufactured and the manufacturing process assures great mechanical strength, tenacity, flexibility, long life, and high resistance to heat and electricity. Widely used by electrical manufacturers and repairmen.

Empire Oiled or Varnished Insulating Cloth

Very extensive use is made throughout the electrical industry of Empire Oiled Cloth, where its great flexibility, mechanical strength, high resistance to oil, heat and electricity, and long useful life, make it of the utmost value. The base consists of a high tensile strength, long fiber yarn, processed to remove all nap. This is impregnated and coated with specially treated oils and baked.

Yellow and Black Varnished Cambric—Regular Style

Standard rolls are 25 and 50 yards long.

Yellow No.	Black No.	Thickness Inches	PER YARD	
			Less Than 100 Sq. Yd.	100 Sq. Yd. and Over

Empire Varnished Tape

Seamless Bias

Provided in convenient form for uses on coils, cables, and bus bar insulations, having all the valuable qualities of the cloth and giving absolute dependability.

Insures a smooth, uniformly protective insulating tape. Can be hand or machine applied, and special length coils are supplied for coil winding machines. Saves both time and money in application, as every inch is usable, and in service gives a better job, doing away with plain woven tapes, thus eliminating the need of impregnation.

Yellow and Black Varnished Tape

Standard rolls are 36 and 72 yards long.

Gross yard of tape 1 inch wide is equal to 4 square yards.

Price per 144 Yards

Cutting for 200-yard roll minimum: Up to and including 6 cuts, add 1/2 cent per square yard; above 6 cuts, add 3/4 cent per square yard.

Cutting for less than 200-yard roll minimum: Up to and including 6 cuts, add 1 cent per square yard; above 6 cuts, add 1 1/4 cents per square yard.

Mico Varnished Cambric Tubing

Length, 36 Inches

For motor leads, phase connections, transformer leads or wherever a dependable age resisting insulation is required.

Sizes follow the B&S system of gaging bare wire. If tubing is to be used on covered wire, the proper allowance must be made for the thickness of the insulation. On an order for several sizes and colors, the aggregate footage will take the prices based on the total quantity ordered.

Order by number whenever possible.

Standard Grade. Sometimes called Magneto Grade.

Dielectric strength approximately 7000 volts.

Standard colors are black and yellow for all sizes. Nos. 24 to 12 supplied in 5 colors, black, yellow, red, green, and brown. All sizes are packed in bundles of 420 feet.

Standard length, 42 inches.

X Grade. Sometimes called Radio Grade. Of the same construction as the Standard Grade, coated inside and outside, but some lengths in any given bundle may be not as smoothly finished as the Standard Grade.

Dielectric strength approximately 5000 volts.

Nos. 20 to 12 are stocked in black, red, green, brown, and yellow. All other sizes stocked in black and yellow only. Standard length, 42 inches.

Size No. 3 and larger, 50 cents.

Armatite

Sheet Size, 35x36 Inches

Saves half the time now required to line and insulate armature slots and other electrical machinery parts requiring mechanical and insulating protection for the windings. Saves material as well and gives a better all-around job. Combines the mechanical protection of fish paper with the insulating properties of varnished cambric. These two are forced together with insulating cement under pressure to provide a flexible, easily handled material that does not dry out and become brittle in stock.

No.	Approx. Wt. Lb. per Sheet	Price per Pound							
		Less than 25	25 to 99	100 to 249	250 to 499	500 to 999	1000 to 4999	Over 5000

Rag Paper Armatite

A combination of 100 per cent rag stock, not chemically treated, paper and Empire brand varnished cloth, yellow bias cut. The bias cut of the cloth threads increases its resistance to tear and when combined with rag stock paper makes a strong and tough combination of high dielectric strength.

The yellow Empire cloth is heat and oil resisting. The film of yellow varnished cloth has higher resistance to abrasion than black varnished cloth.

The 100 per cent rag stock paper is a tough, high density, electrically and chemically clean paper, has good heat aging characteristics and will readily absorb insulating varnish.

Special combinations made to specification stating thickness of paper and cloth, with yellow or black bias cut varnished cloth provided quantity is sufficient to warrant making a run.

Sheets, 35x36 inches; or rolls, if specified, 35 inches wide, and 25 yards long.

Tape Cutting Charges

Less than 3/4 inch wide, plus 15%; 3/4 inch wide and wider, plus 10%.

Varnished Fibreglas Cloth

Straight Cut

Made with a straight, plain weave Fibreglas cloth base, impregnated with yellow or black varnish.

Approximately 36 inches wide.

All orders should contain the following information: Quantity desired in lineal yards; cloth designation number; thickness desired; varnish desired, yellow or black; and price per lineal yard.

Owens-Corning No.	Price per Lineal Yard			
	EC3C-112	EC3C-112	EC7B-127	EC7B-127

Less than 100 Yd.	1.45	1.58	2.33	2.38

For thicknesses or base cloths other than those listed, prices on request.

Varnished Fibreglas Cloth slit in widths 6 inches wide or less, shall be sold as tape at tape prices. Figure 36 cutting inches in full width when other than standard full width rolls are ordered.

Cutting charges: Less than 3/4 inch, add 7 cents per square yard; 3/4 inch and up, add 5 cents per square yard.

May not be aggregated with other material.

Varnished Fibreglas Tape

Straight Cut

Roll Size, 36x72 Yards

Made with a straight, plain weave Fibreglas cloth base, impregnated with black or yellow varnish.

All orders should contain the following information: Quantity desired in gross yards; cloth designation number; tape dimensions, width and thickness; varnish desired, yellow or black; and price per gross yard.

One square yard equals 1/4 inch by 1 gross yard.

Duro Armature Slot Papers

Sheet Size, 36x48 Inches

Duro paper comes in .007, .010, .015, and .020-inch thicknesses and over.

Thicknesses of .062 and .093, also other thicknesses can be supplied on order.

Duro paper will be cut into strips, at slight additional charge. The different thicknesses of paper may be lumped together to secure the benefit of quantity price applying to the total order.

Strips cannot be aggregated with sheets.

Rayco and Kaygrey Untreated Insulating Papers

Glazed Finish

Sheet Size, 36x48 Inches

Rayco and Kaygrey papers come in thicknesses of .007, .010, .015, .020, and .025 inch. Other thicknesses can be supplied on order.

All of the above thicknesses have a glazed finish.

For thicknesses of 1/32, 1/16, 3/32, and 1/8 inch this paper can be supplied with a dull or calendar finish, in sheets 48x96, 48x48, 60x120, and 60x60 inches.

Armo Armature Slot Papers

Sheet Size, 36x48 Inches

Armo paper is furnished in .007, .010, .015, .020, .025, .030, and .035-inch thicknesses; .062, .093 inch or other thicknesses can be supplied on order.

Armo paper will be cut into strips, at slight additional charge. The different thicknesses of paper may be lumped together to secure the benefit of quantity price applying to the total order.

Strips cannot be aggregated with sheets.

Mico Vulcanized Fiber Sheets
Hard and Flexible

Standard colors are red, gray, and black.
Standard sheets in thicknesses up to and including 3/8 inch are furnished approximately 45x60 inches or 60x90 inches; in thicknesses over 3/8 inch, 36x48 inches.
Sheets may be cut in halves, thirds, or quarters, or in two, three, or four pieces at no extra charge, providing there is no waste left.
Approximate weight of 20 cubic inches, 1 pound.

Mico Miscellaneous Materials

Mico paper, compound, tape, cement, wood wedges, and twines fulfill the needed requirements for insulation work.

Yellow Pressboard or Fullerboard
Sheet Size, 30x36 Inches

Smooth, tough, dense, highly glazed, and specially prepared insulating board made from cotton fiber. More pliable and not as hard as fiber and a better insulator.
Furnished in .008, .010, .015, .020, .025, 1/32, 1/16, and 1/8-inch thicknesses.

Red Rope

Specially prepared for electrical use.
In rolls 36 inches wide. Thickness, .005, .010, and .015 inch.

Mico Miscellaneous Materials

Adhesive Tape

Non-corrosive adhesive tape meeting the A.S.T.M. tests on polished copper. Holding power is much superior to ordinary tapes allowing narrower widths to be used. In coil winding it is used for anchoring the leads at the start and finish of the coil, protection of tapes, binding or outer cover and binding or core to replace metal clamps. Used in loud speaker construction for binding paper edges and padding under nameplates, or various other loose metal parts to prevent rattling, and as a protective covering for armature and field windings. Also employed in the masking of cabinets and panels when being sprayed with lacquer and paint.

Supplied in 1/4, 3/8, 1/2, 3/4, 7/8, 1, 1 1/4, 1 1/2, 2, 3, and 4-inch widths.

Individually or packed in the bulk in 60-yard rolls.

Insulating Glue

Neutral, extremely sensitive liquid glue made for fastening tape end and other insulating materials. Will not attract moisture and does not require heat for setting.

No. 3089 3090 3091
Quantity in Can. 1 Qt. 1 Gal. *5 Gal.
*Kegs.

Commutator Cement

For repairing pitted commutators. Composed of a liquid and a powder in separate containers to be mixed as used. It resists oil, acid, and water. Does not shrink when setting, nor does it absorb moisture and is not affected by contraction and expansion. Does not crumble or lose its insulating value when heated after installation.

In 5 1/2-ounce bottle powder and 5 1/2-ounce bottle liquid. Standard package, each containing one bottle powder and one of liquid.

Cramolin Paste and Liquid

Cleans, lubricates, and protects. Conducting efficiency from rubbing electrical contacts is increased.

Liquid is recommended for commutators, slip rings, and collectors. Easily applied with a coarse cloth free from lint. Perfectly harmless to brushes, insulation and metal surfaces. Will not develop acid or cause a commutator to short.

Paste is compounded for switch blades, and controller fingers, any sliding electrical contact except commutators. Applications are readily made with a brush under normal operating conditions, once every four weeks is sufficient to maintain clean, lubricated contacts.

Liquid is furnished in 1-pint bottles, 16 fluid ounces and 1/2-pint bottles, 8 fluid ounces.

Paste is supplied in 1/4, 1/2, and 1-pound cans.

Hard Maple Armature Wood Wedges

Standard length, 30 inches.

In package of 100 and 200 feet. Prices one size, not assorted, but various sizes may be aggregated when ordered 500 feet of a size.

Asbestos Listing Tapes, Tubing, and Cloth

Cable Protection (Fireproofing)

Practically all operating companies apply some form of fireproofing to underground cables. Without such protection, lead sheaths would be exposed to arcs, or manhole fires caused by failure of other cables. Public utilities and electrical companies are large users of listing tapes for this purpose and where cables are trained to the back of switchboards.

Fine Listing Tapes

Asbestos Braided Tubing or Sleeving

Fine Listing Tapes are used in winding armatures of electrical motors. Because of the nature of their application, tapes must be uniform in construction and of high quality. Uniformity of construction means a constant width, thickness, tensile strength and asbestos content. Quality means the use of soft pliable asbestos fibers properly opened, cleaned of all grit and foreign matter, spun into a fine yarn and woven into tape.

A high tensile strength is important when winding an armature to get smooth covered wires. There must be no soft places in the wrap and sufficient stress must be applied so that the over-lapping may be binding and yet not too thick. A low tensile tape would fracture and necessitate rewinding the armature.

Asbestos Listing Tapes

Heavy Asbestos Listing Tapes are mostly used for this type of insulation. They are also used for switchboard work. Tapes are woven from $\frac{1}{32}$ to $\frac{1}{8}$ -inch thick and in widths up to 6 inches inclusive.

Ferrous and Non-Ferrous Listing Tapes

Fiber from different countries and mines varies in amounts of ferrous and ferric oxides found present. The Cryostile Asbestos mined in Canada contains from three to five per cent of iron salts, while that mined in South Africa and Arizona has a half of one per cent or less. Fiber with a low iron content is termed non-ferrous—that with a high content, ferrous.

Ferrous Asbestos Listing Tapes are generally used, but there are special applications for the non-ferrous. Such is the case in the manufacture of generators where the non-ferrous material is wrapped around the wires to retard an action termed "corona" which is a result of electrical radiation terminating in deterioration of the wire. This application tends to prevent leakage of electrical energy. A ferrous tape would not be advisable for this purpose.

Standard rolls contain 100 feet of tape.

Approximate Lineal Feet per Pound

Width Inches	THICKNESS, INCHES

3	55	45	29	23	19	12	11

Probably the greatest uses for Asbestos Tubing are in the electrical equipment and electrical insulation field where there may be dangers from short circuit or flame. Tubing is used over soldered ends of coils in motors. Before the ends are joined, a length of sleeving is cut and placed over the wire, to later be slipped back into proper position after the ends have been soldered. Many joints and splices may be protected in the same manner.

Asbestos Tubing or sleeving is braided with fine yarns to inside diameters from $\frac{1}{32}$ to 3 inches. There are three classes of wall thicknesses: the light wall constructed with a thickness of approximately $\frac{1}{32}$ inch, the standard construction with a thickness of $\frac{1}{16}$ inch, and the heavy wall tubing with a thickness of $\frac{1}{8}$ inch. Tubing should be ordered by inside diameter and wall thickness.

Approximate Footage Based on Wall Thicknesses

$\frac{7}{8}$	10
1	9
$1\frac{1}{2}$	$6\frac{1}{2}$

Woven Asbestos Cloth

Asbestos Cloth is woven in many thicknesses and widths. It is possible to secure a fine cloth woven as thin as .030 inch and as thick as $\frac{1}{8}$ inch. The widths run from 6 to 122 inches, but standard rolls are 36 and 40 inches wide and 50, 60 or 100 yards long. The most common weave is the square or basket weave, but herringbone or twill weaves are available.

Insulating Varnishes and Enamels

No. 1 Clear Baking Varnish

This varnish has maximum life under continued heating at elevated temperatures. It is insoluble in oil, either the lubricating or transformer types. It is water and acid proof. It is designed for use on large transformer and motor coils where flexibility of the finished oil and freedom from brittleness under continued heat is essential. It has very high dielectric strength, both under the wet and dry tests. It will not sludge transformer oil.

Supplied at .875 specific gravity and should be reduced from 20% to 30% for 2-coat work with benzine for best results.

The baking time on large coils on 2-coat work is 12 to 14 hours at 250°F. For one-coat work, a longer time should be used.

No. 2 Clear Baking Varnish

This is a hard drying, through and through baking varnish. It has medium life under continued heating at elevated temperatures. It is oil, moisture, and acid proof. The dielectric strength is of the best. It has found particular application in the small relay and radio coils. It fits in well in general repair shop practice. For use on small high speed rotating apparatus, it gives an armature which will not throw varnish at high speeds and which will not relax and allow coils to shift their position. It is used extensively on drill and vacuum cleaner armatures which operate at speeds over 10,000 rpm.

This varnish is supplied at .875 specific gravity and should be reduced 20% to 30% with benzine for 2-coat work. The baking time, depending on the size of the coil, is from 4 to 12 hours at 250°F.

No. 3 Clear Synthetic Varnish

This varnish is designed for the more severe applications where very high speeds and operating temperatures are met. This varnish has extremely high dielectric strength, both wet and dry. It is oil, acid, and alkali proof. It has great resistance to salt spray and all kinds of chemicals and vapors met with in dye house and mine work. It is harder baking than the No. 2 clear baking varnish and has no tendency to relax at high temperatures and speeds.

This varnish is supplied at .960 specific gravity and should be reduced 10% to 20% with No. 109 base thinner for one or 2-coat work. It should be baked 8 to 10 hours at 250°F. Where it is used as a first coat under the No. 2 clear baking varnish, it can be baked for 4 hours at 250°F.

No. 4 Clear Air Drying Insulating Varnish

This is a clear varnish for all types of coils and armatures where it is not practical to use a baking varnish. It has good dielectric strength, both wet and dry. It is quite flexible and is oil and acid proof. It has good binding and cementing properties.

This varnish is supplied at .902 specific gravity and should be reduced 20% to 30% with benzine for 2-coat work. It can be applied by spraying, brushing, or dipping. When applied as a finishing varnish, it will air dry at ordinary room temperatures in 4 or 5 hours. This varnish can also be baked.

No. 5 Black Baking Varnish

This is the highest type of insulating varnish on the market at the present time. This is an extremely flexible varnish which has very long life under continued heat stress. It has very high dry dielectric strength and a wet dielectric greater than any varnish now available. It is absolutely oilproof and is, of course, acid proof. The film is firm, dries with a gloss free from grease, and does not wrinkle or frost when applied in thick coats. It can be used on all types of coils and armatures, but has found most wide application in the larger types of equipment.

Supplied at .870 specific gravity and should be reduced 30% to 40% with benzine for 2-coat work. It should be baked 12 to 14 hours at 250°F. or 8 hours at 275°F.

No. 6 Black Baking Varnish

This varnish is very similar to the No. 5 black baking varnish in that it has exceptionally good wet and dry dielectric strength together with the best of life under high heat. It is

oil resistant and is not affected by acids. It dries with a greasy finish which prevents the moisture from entering the film. This varnish has found particular application in the larger equipment field.

This varnish is supplied at .860 specific gravity and should be reduced 20% to 30% with benzine for 2-coat work. It should be baked 12 to 14 hours at 250°F.

No. 7 Quick Black Baking Varnish

This is a hard, tough varnish which is moisture, oil and acid proof. It has a medium life under continued heat, together with excellent binding and cementing properties. It dries with a hard, flexible film which has a high gloss. This varnish is designed for use on small coils and armatures which, due to production schedules or lack of oven space, must be baked quickly. Can also be used as a combination insulating and primary or finishing varnish. It has been particularly designed to have a minimum amount of softening under maximum operating temperatures.

Supplied at .875 specific gravity and should be reduced 20% to 30% with benzine for 2-coat work. It will bake in 5 hours at 300°F. or 7 to 8 hours at 250°F.

No. 8 Black Air Drying Varnish

This is a black air drying varnish of the asphaltic type which is supplied to the general repair shop and coil trade. It dries to a hard, glossy film which is acid and moisture proof, and which is quite oilproof. It will air dry on a flat surface in 4 to 6 hours, and in the inside of a coil in 3 to 4 hours at 250°F. It is difficult to air dry impregnating varnishes as it is almost impossible to get rid of the entrapped solvents at room temperatures.

Supplied at .850 specific gravity and should be reduced 10% to 20% with benzine for spraying or brushing purposes.

No. 9 Black Air Drying Varnish

This is the same type of varnish as No. 8 black air drying except that it will dry on a flat surface in about thirty minutes. The dried film has a rich, full gloss which is flexible, moisture and oilproof. It is highly oil resistant.

Supplied at .840 specific gravity and should be reduced 10% to 20% with benzine for spraying or brushing.

No. 10 Black Spirit Varnish

This is a black spirit varnish which dries to a rich full gloss. The film is absolutely oilproof and has found particular application as a finishing varnish on coils already impregnated with a baking or air drying varnish. It is quite flexible and moisture resistant. Because of its glossy finish, it serves to prevent the accumulation of dirt and oil on the surface of coils and armatures, and can be wiped off with a gasoline saturated rag without injury to the film.

It will air dry in fifteen minutes at room temperatures and should be thinned to brushing or spraying body with denatured alcohol. It is supplied at 1.010 specific gravity.

No. 11 Red Insulating Enamel

This is a red insulating enamel which is absolutely oilproof as well as highly moisture and acid proof. It is quite flexible and will not become brittle with age. It will dry to handle in less than an hour at room temperature, which makes it of great interest where speed is of importance. Because of its bright glossy surface, it will not collect oil or dirt which might contribute to shorting or arcing over of current. The electrical man is finding more and more uses for this type of insulating enamel in such applications as: Commutator ends, the inside of motor frames and brackets, the inside of controller boxes, and the outside of coils and armatures which are subjected to severe chemical and atmospheric conditions. This enamel is not designed as an impregnating material.

Should be thinned 10% to 20% for spraying or brushing with No. 300 synthetic thinner.

No. 12 Gray Machine Enamel

This enamel is used for finishing the outside of motor frames and brackets. It has standard gray motor color. It will air dry to an eggshell gloss in one hour. It is tough, durable, adherent to metal, and resistant to oil and water.

Can be thinned 20% to 30% with benzine for spraying or brushing.

Varnish

Due to the physical characteristics of the raw materials now available for use in insulating varnishes, it is not possible to make a universal varnish or one which can be used on all types of equipment. For example, varnish to be used on small high speed armature, such as the starting and lighting type, must dry hard through and through, giving a well baked out, tightly bound armature which will not throw varnish and whose coils will not be loosened under speeds of 10 or 12,000 rpm. On the other hand, varnish to be used in the large oil filled transformers must be very flexible, have long life under continued heat stress, and be entirely oil-proof. Obviously, two distinct varnishes must be used to fulfill these opposite conditions.

Black varnishes usually have greater dielectric strength, longer life, and greater water resistance than the clears. Clear varnishes have better binding properties and greater oil resistance.

A careful study of each particular insulating problem should be made before any one type of varnish is selected. There is a varnish for every purpose and if a standard type will not do the job, a special one can be made which will meet the requirements.

Nos. 4, 8, and 9 Air Drying Varnishes can be used on any surface application when a full coat, insulating and waterproofing finish is required.

No. 10 Black Spirit Varnish can be used as a finishing varnish where an oilproof film is required.

No. 11 Red Insulating Enamel is used chiefly on commutator ends, controller boxes, the inside of motor frames, and any place where a high gloss, tough, oilproof finish is needed.

No. 12 Gray Machine Enamel is used as a finish coat on touch-up material on the outside of motor frames.

Ideal Commutator and Slip Ring Resurfacers

Commutator Resurfacers

Extra Coarse. Exceptionally fast cutting. For "hogging" off excessive copper or other metals.

Coarse. Fast cutting. For use where a fair amount of copper or other material is to be removed.

Medium. For general utility, high mica, small ridges and burns.

Finish. For use after three grades above, bringing the surface to a velvet which quickly becomes a gloss after the brushes have been lowered. Used particularly for periodic application, and for the removal of small burns and ridges, immediately after their appearance.

Polish. An excellent grade, which gives a burnished finish. Made of an exceedingly fine, 220-grain aggregate.

Per Cubic Inch.....\$.40

No. 81 Slip Ring Resurfacers

Designed especially for grinding steel and cast iron slip rings. This resurfacer is a slight conductor and should be used with the current off and no load on machine.

Coarse No. 81. For rapid grinding and for removing large quantities of material.

Medium No. 81. For general utility and removing small pits and burns.

Finish No. 81. For final application after Coarse No. 81 or Medium No. 81 has been used.

Per Cubic Inch.....\$.40

Pencil Type (No Handle)

For fans or signal motors, auto generators, locomotive headlight motors and other fractional horse power motors.

Straight Handle Type

Used primarily on inaccessible types of commutators on small or enclosed motors.

There are four standard sizes, but other larger sizes can be made to order.

Vertical Adjustable, Tramway and Railway Handle Types

These three types of resurfacers are for use on medium size motors and small generators.

Vertical Adjustable Handle. The knob handle is fastened permanently. The extra rod handle makes this type universal to meet practically all conditions. The knob is drilled on two sides, also on the top, so that the rod handle can be adjusted to any one of three positions.

Tramway Handle. This is a stout handle with a good grip, permanently mounted at a 45° angle.

Railway Handle. This is a stout handle with a good grip, permanently mounted in a vertical position.

Wood Block Handle or Tool Type

For use in Ideal Precision Grinders or any type of lathe truing device. Equipped with wood block handle for clamping rigidly into the grinder.

U Handle and Saw Handle Types

These types are for use on large motors, small rotary converters, motor-generator sets, telephone generators, etc.

U Handle. Preferred when the stone is to be used with the handle parallel to the brush arm.

Saw Handle. Desirable when the stone is to be used with the handle at right angles to the brush arm.

Double U Handle and Double Saw Handle Types are also available.

Slip Ring Types

To secure the most efficient grinding results, specify material from which rings are made, such as iron, steel, bronze, or brass. When space permits, use a resurfacer, about 1 inch wider than the ring, bridging over the entire width. Resurfacer should be three times as long as the flat spots as bridging over them assures a perfect job.

"2-in-1" Pocket Type

For all-around shop practice. Made up in any combination of the five grades, two grades being cemented together.

Prices and Complete Information Sent on Request

Condensed Listing of Ideal Commutator Motor Winding and Repair Shop Tools

Brush Seaters

For seating carbon, graphite or metal-composition brushes. Standard size: length, 4¾ inches; face, 1½x5/8 inch. Per Dozen..... \$7.50

Portable Precision Grinders

No. 6 Perfect Model. A high grade precision tool for use with Ideal Tool-Type Resurfacers. Adaptable to all open type commutators and rings. Furnished in any one of fifteen different lengths, ranging from 6 to 36 inches inclusive by 2-inch variations.

Shipping weight, 12-inch size, 45 pounds.
No. 6, with 12-Inch Bed Plate, Including Brush Arm. Supports..... each \$122.50
For Each Additional 2 Inches..... 3.75

No. 8 Ideal Model. Designed especially for use in close quarters or on machines with outboard fans, large bearing pedestals, or close end frames. Furnished in the same lengths as the No. 6 Perfect Model.

Shipping weight, 12-inch size, 45 pounds.
No. 8, with 12-Inch Bed Plate, Including Brush Arm. Supports..... each \$156.25
For Each Additional 2 Inches..... 3.75

No. 4 Midget Model. Designed especially for use on small commutators having a face width of 8 inches or less, as well as for use on medium-sized slip rings. For use with Ideal Tool-Type Resurfacers. Compact design allows working in small spaces.

Shipping weight, 20 pounds.
No. 6, with Brush Arm Supports..... each \$81.25

No. 22 Commutator Turning Tool Heads

An excellent tool for removing the bead or ridge of copper left on the inside of the commutator next to the riser. Net weight, 7 pounds.

For Perfect and Ideal Model Precision Grinders..... each \$31.25
For Midget Model Precision Grinders..... each 24.40

No. 7 Universal Power Mica Undercutters

Cuts smoothly without vibrations. May be used in space only 2¾ inches wide.

Weight, including motor, 52 pounds.
Complete with Standard 110 Volt A.C. 60 Cycle Motor..... each \$156.25
Complete, but without Motor; with Motor Shaft Connection..... each 135.30

If desired, other voltages and cycles can be furnished at extra charge; also undercutters for d.c.

No. 11 Shop Type Undercutters

This undercutter is light enough for easy handling, and sturdy enough for continual heavy duty undercutting. Net weight of head only, 2¾ pounds.

No. 11, without Motor..... each \$135.30

No. 9 Direct Drive Undercutters

Intended primarily for field use, but the rugged, sturdy design makes this undercutter suitable also for shop use. Weight, with 8-foot cord, 5¾ pounds.

With 110-Volt Universal Motor..... each \$98.10
With 220-Volt (Also 250-Volt) Universal Motor..... each 107.95
If roller guide is omitted, deduct \$4.35.

Commutator Saws and Milling Cutters

Made of Special No. 1 High Speed Steel. Available in all types and sizes, not only for the Ideal Undercutter, but any type of undercutter. Available in outside diameters from ¼ to 1½ inches inclusive. Prices on application.

Slotting Files

Specially designed and constructed for commutator use. Weight per dozen, 1 pound.

No. 3 Large 8-Inch Type..... each \$1.12
No. 5 9½-Inch Single End Type (Specify Draw-Cut or Double-Cut)..... each .94

No. 6 Hand Type Commutator Mica Slotters and Scrapers

Designed for use on small commutators, and for plants which do not have sufficient work for a power driven unit.
No. 6..... each \$3.12

No. 12 Revolution Counters

The dial has scale divisions reading from zero to 100, and also from zero to 10,000. Overall height, 7 inches. Net weight, 2½ pounds.

No. 12..... each \$21.87

Balancing Ways

Indispensable for the static balancing of motor armatures, crank shafts, pulleys, fly wheels, etc.

No.....	10	20	42
Each.....	\$36.87	48.12	55.00
Capacity..... pounds	400	1000	1000

Approximate Shipping Weight.
..... pounds 13 43 105
Longer shafts can be furnished at slight extra charge.

Growlers

Used to quickly locate grounds and shorts.
Type U-2. Used as an external growler for armatures and as an internal growler for stators.

Type S. Contained in oblong cases; made in two sizes, with and without meters.

Type F. Made with a built-in feeler, and shaped to test armatures and stators.
Specifications and prices will be furnished on request.

Insulation Testers

Indicates in a second whether or not there is a short, ground or broken wire. Suitable for testing insulation of low voltage equipment. Capacity, 500 to 2500 volts.

For 110 volts, 50-60 cycles. Weight, 15 pounds.
Each..... \$47.50

No. 2 Armature Winding Heads

Winds small universal, shaded pole, two pole d.c. or re-ulsion induction motor armatures.
Net weight of head, 2 pounds.

No. 2..... each \$56.25

Coil Winder Heads

No. 5 Midget Model. For making coils 4x1¾ inches minimum up to 8½x6½ inches maximum.
Weight, 10 pounds.

No. 5..... each \$43.10

No. 10 Universal Model. Winds coils up to 13x16½ inches.
Weight, 35 pounds.

No. 10..... each \$71.87

No. 210 Coil Winder Drives

Gives an infinite number of driving speeds between 120 and 650 rpm. by moving control lever.
Weight, approximately 180 pounds.

No. 210 Complete..... each \$368.75

No. 4 Armature Winding Yokes

Winds any type armature with a shaft 9 to 19 inches long.
Weight, 28 pounds.

No. 4..... each \$75.00

No. 12 Armature and Stator Holders

Ideally suited for holding work while soldering commutator leads, inserting insulation, inserting wedges, banding armatures, rewinding, removing and inserting coils on stators or armatures, etc.

Approximate shipping weight, 40 pounds.
No. 12..... each \$31.25

No. 20 Concentric Field Coil Winding Heads

Designed for the winding of popular size, single phase motor coils. Adjustable for length and width.
Weight, 20 pounds.

No. 20..... each \$92.50

No. 9-C Brush Type Wire Strippers

Cleans enamel wire rapidly. Cleanly strips cotton and enamel, silk and enamel, string asbestos and similar types of light insulation from round wire, flat or rectangular wire, or solid or stranded wire.

Net weight, approximately 50 pounds.
No. 9-C Complete..... each \$181.25

No. 13 Vertical Brush Type Wire Strippers

For cleaning the coverings from armature leads before soldering them to the commutator riser.
Net weight, approximately 185 pounds.

No. 13 Complete..... each \$312.50

No. 8 Rotary Type Wire Strippers

This powerful, motor-driven wire stripper is needed wherever volume stripping is done. Strips wire up to ½-inch outside diameter. Net weight, 45 pounds.

No. 8 Complete..... each \$125.00
Extra Blades, Carboloy Tipped..... per set 12.50

Select-O-Speed Transmissions

Operates machine at exact speed needed for maximum quality production. Available with lever control, handwheel control, or electric motorized control. Prices on request.

Orangeburg Fibre Conduit

Orangeburg *Standard* Conduit, for Installation with Concrete Encasement Orangeburg *NOCRETE* Conduit, for Installation without Concrete Encasement

Since 1893, Orangeburg Fibre Conduit has been a standard of quality in underground construction. First to pioneer a material of unique merit for the difficult conditions encountered in underground construction, The Fibre Conduit Company has maintained leadership by constant research for product and service improvement.

While installations of Orangeburg Fibre Conduit made over thirty years ago are common, at many points installations made forty and more years ago are still providing clear, usable raceway.

The test supreme—the test of time in actual experience—has proved that Orangeburg gives permanent cable protection without any deformation that in any manner obstructs the raceway or reduces its (cross-sectional area) capacity.

Cable protection is, obviously, a primary requirement of underground transmission and distribution conduit. The characteristics of Orangeburg Conduits are unique in their balanced properties for maximum cable protection through decades of service.

Characteristics

Orangeburg Conduits are essentially tubes of everlasting, chemically inert pitch, felted fibre reinforced, which under all the difficult physical and chemical conditions encountered underground in all parts of the world remain neutral and afford 100% cable facilities and protection.

Orangeburg Conduits are smooth of bore, of frictional and abrasive minima and positively chemically inert.

Although mechanically strong conduit, the bore of Orangeburg does not abrade, tear or otherwise damage even the soft cover of lead-sheath cable . . . so often resulting in heavy maintenance costs, interruptions to service and expensive rebuilding of ducts.

Electrolytic action is impossible as between any metal (or other substance) and this material. Time has proved that high maintenance or replacement expense because of cable corrosion (whether alkaline contact, which develops through the years, or other corrosive agency) does not exist when Orangeburg is used. Laboratory tests are thus confirmed in fact.

Dielectric strength of Orangeburg, of importance in some applications, is very high.

Every Orangeburg item is inspected 100% and a special inspection staff is maintained constantly checking all materials and processes.

Installed and handled on the hottest deserts; in the bitter cold within the Arctic Circle; buried in the corrosive back-fill of seaside, tidewater locations; in cinder fill; in rain or shine; Orangeburg Conduits have economically and completely met the most difficult conditions conceivable.

Both Orangeburg *Standard* Fibre Conduit and Orangeburg *NOCRETE* Conduit are made of the same materials with identical cable sheath protection values.

The Ultimate Economy

When it is considered that the cost of an underground distribution system (of which conduit is a small part) is a capital investment made, not just for years, but for decades of service, the importance of the actual test of time under the varied and persistently difficult chemical and physical conditions encountered underground cannot be over-emphasized.

No-cost-saving compromise is tolerated in the production of the finest conduits for true economy in permanent service and enduring cable protection. Constant research has developed many product improvements consistently advancing Orangeburg in terms of the ultimate economy of underground installation.

Immediate Economy

Orangeburg Fibre Conduit is easy to handle. Light in weight, yet amply strong to resist breakage, it can be transported to the job in large truck loads, quickly unloaded and placed, one man carrying several lengths at a time.

The light weight, uniform long sections and careful machining of Orangeburg conduits are of great advantage in the aligning and assembling of the ducts resulting in labor savings and lower installation costs.

Precision machining of joints and couplings insures quick, perfect tight fit and "true" alignment. Tight-fitting joints are important in any underground cable system. All Orangeburg joints must pass three or more separate inspections before final approval. Seepage is thus prevented and the protective features of Orangeburg extended throughout the ductway.

The latest manufacturing improvements of Orangeburg, resulting in increased mechanical strengths per unit of wall thickness, permit savings of substantial amounts. For concrete encasement, the cost-saving is not only reflected in the lower prices of Orangeburg *Standard* Conduit but in the reduced amounts of concrete thickness required for any possible load.

The new Orangeburg *NOCRETE* Conduit, for use without concrete envelope, reflects savings of outstanding importance where installations of this character are contemplated.

Material costs for underground construction with Orangeburg compare favorably with any other material of any type, and are consistently held to the lowest possible figure in an effort to foster development of underground construction.

Research and Control Laboratory

A complete up-to-date laboratory is maintained by The Fibre Conduit Company.

All raw materials and the finished product are regularly tested to assure uniform quality and the maintenance of Orangeburg standards.

A continuing program of research and development work has resulted in substantial improvements in the product.

Of recent, outstanding importance is Orangeburg improved high-vacuum impregnation. A denser, more homogeneous wall structure has resulted in greatly increased mechanical strengths and practically unlimited life-expectancy.

For installation underground with concrete encasement, Orangeburg *Standard* Fibre Conduit is recommended for duct banks (4 ducts and over), main distribution, high tension and downtown locations.

For installation without concrete encasement, the Orangeburg dual-economy *NOCRETE* Conduit is recommended for house connections, laterals and extensions; street and parkway lighting; fire alarm and signal systems; sub-station yards; and industrial and institution grounds.

Features of Orangeburg *NOCRETE* Conduit

Conduit for installation underground without concrete encasement must have two prime characteristics: mechanical strength, and ability to endure permanently.

Because of its mechanical strength, steel conduit (or iron pipe) has been the most widely used for such type of installation. While there is no disputing the adequacy of its initial strength, corrosive agencies soon minimize or nullify the original strength. Corrosion develops from two sources: (1) Most soils contain to some degree (and cinder filled ground to a great degree) elements corrosive to ferrous metals. (2) Electrolysis caused by stray electric currents creates highly destructive action on metallic conduit.

STRENGTH. Made stronger and tougher than any fibre conduit ever before produced. High beam and crush strengths enable Orangeburg *NOCRETE* Conduit to withstand soil stresses.

PERMANENCE. Orangeburg *NOCRETE* Conduit is immune to all the corrosive elements encountered in the soil.

CABLE PROTECTION. *NOCRETE* is chemically inert and has all the values of permanent cable protection which have characterized Orangeburg for forty-five years. Being smooth of bore, cable pulling is easy and without danger of abrasion. With water-tight joints, high resistance to electric currents, *NOCRETE* provides protection against electrolysis and other damage to cable sheath.

DUAL ECONOMY. *NOCRETE* offers substantial savings in both initial material and installation costs. About half the cost of metal pipe, it will be found lower in ultimate cost than even cable buried directly in the ground. The easy handling, cutting and tooling of *NOCRETE* will reflect installation costs lower than any other type of conduit.

Orangeburg Standard Fibre Conduit

Harrington (Tapered Sleeve) Joint

Standard Conduit, for installation underground with concrete encasement, is recommended for duct banks (4 ducts and over), main distribution, high tension and downtown locations.

A Harrington Joint Coupling is furnished for every length of conduit, without extra charge, unless otherwise specified when ordering.

All Harrington Joint dimensions are standard and interchangeable, precision machined for tight connections. The design permits slight offset at couplings where field conditions require.

The X.W. (barrier wall) Harrington Joint Coupling is available at no extra charge when so specified. The length of barrier is a full half inch in the 2 and 2½-inch coupling sizes and a full inch in the 3, 3½, 4, 4½ and 5-inch sizes. The Standard Orangeburg Coupling is recommended, however, as it provides a clear even raceway and does not assemble with the pockets which may be objectionable in the barrier wall (or fillet) type coupling.

*The right is reserved to include 10% to 15% of lengths shorter than standard.

"Rough fit" couplings (loose sleeve to conduit O.D.) for joining butted ends of untooled conduit can be supplied for every size.

Dimensions

D Size Inches	Standard Conduit, Harrington Joint			Harrington Joint Coupling

Bends and Elbows

Orangeburg Fibre Conduit Bends and Elbows are accurately made, with special forms, to the required radius and degree. Furnished with standard interchangeable Harrington Joint (coupling included) or, if specified, socket joint.

All bends of radius and degree carried in stock at factory are 5 feet long. All elbows have short tangent beyond necessary length for angle required.

Special angle, special radius, split bends or elbows can be furnished to order.

Dimensions—Bends and Elbows Stocked at Factory

6	3/8	36	..	30	15	
8	3/16	30½	6½	27	12½	

Dimensions include finished joint.
 "S" bends with 20-inch offset and 36-inch radius are stocked at factory in sizes from 1 to 4½ inches.
 Other sizes and dimensions on special order.

Orangeburg NOCRETE Fibre Conduit Harrington (Tapered Sleeve) Joint

NOCRETE Conduit, for installation without concrete encasement, is recommended for house connections, laterals and extensions; street and parkway lighting; fire alarm and signal systems; sub-station yards; and industrial and institution grounds.

To those not accustomed to Orangeburg Fibre Conduit, assembly with the Harrington Joint Coupling will be found surprisingly simple. Accurate machining of the joint enables a tight connection by easy drive using a block and mallet.

The standard lengths (8-foot—5-foot in some sizes) enable rapid progress and good alignment. Orangeburg NOCRETE Conduit is readily cut by ordinary wood saw. It can be tooled to exact fit with inexpensive, portable tooling machine, hand operated.

The trench bottom should be graded reasonably true and free from stones. A 3-inch bed of selected backfill should be laid where there is rock foundation. Backfill should be soft dirt, sand or other fine fill which should be placed around the ducts and firmly tamped into place with hand tampers. After a "cover" of three inches of this selected backfill has been placed and tamped down over the top of the ducts, the remaining depth of the trench may be filled with regular run of excavated material. Care should be taken, however, to remove all unusually large stones or other hard objects. Power tampers may be used on this final fill. When more than one tier of ducts is used, a separation layer of three inches of backfill should be tamped into place around and over the bottom tier or ducts. Horizontally, a minimum separation of two inches between ducts is recommended to enable proper tamping of backfill.

Unless otherwise specified, Orangeburg NOCRETE Conduit is supplied with the Harrington (tapered sleeve) Joint and coupling. One coupling is furnished for every length of conduit, without extra charge, unless otherwise specified, when ordering.

All Harrington joint dimensions of Orangeburg NOCRETE are interchangeable for that line but require adapters to connect with Standard Orangeburg Conduit.

Orangeburg NOCRETE Conduit Bends and Elbows are accurately made, with special forms, to the required radius and degree. Furnished with NOCRETE Harrington Joint (coupling included) or, if specified, socket joint.

All joints and couplings are precision machined for tight connection. The design permits slight offset at couplings where field conditions require.

Orangeburg NOCRETE Conduit can be furnished with socket joint, when so specified, without extra charge. The socket joint is sometimes of advantage where the O.D. of the Harrington Joint Coupling is objectionable due to narrow clearance or for pole risers.

4½	.53	2.18	5	4, 4.5	4.5	6.23	

All dimensions are subject to manufacturing tolerances and may be modified without notice.

*The right is reserved to include 10% to 15% of lengths shorter than standard. All shorts included are packed separately in any shipment to facilitate identification and easy count.

Orangeburg NOCRETE Conduit Shorts are cut to even lengths less than standard as indicated. Each piece is fully tooled and coupling is furnished without extra charge. Shorts are generally of considerable assistance in avoiding obstacles by coupling offset.

Bends and Elbows

All bends of radius and degree carried in stock at factory are 5 feet long. All elbows have short tangent beyond necessary length for angle required.

Special angle or special radius (above minima indicated for elbows) can be furnished to order.

S Bends with 20-inch offset and 36-inch radius are stocked at factory in sizes from 1½ to 4½ inches. Other sizes and dimensions on special order.

Miscellaneous Fittings. Orangeburg NOCRETE Fittings include every type of adapter, reducer, bell end, cap, plug, connector, etc. similar in purpose to those described on following page for Orangeburg Standard Conduit.

Orangeburg Standard Fibre Conduit Fittings

(Similar Fittings Also Available for Orangeburg NOCRETE Conduit)

End Bells

For use at conduit terminals in manholes, at substations, etc., these end bells provide a wide radius flare which facilitates cable bending and protects the cable sheath from abrasion.

The greatly increased strength of the improved end bells insures against breakage under all conditions. End bells are available for conduit sizes 1 to 6 inches, inclusive.

The standard tooling is Harrington Joint for duct connection. If specified, socket joint or rough fit sleeve can be supplied.

End bells with extended neck can be made up on special order for special applications. Porcelain end bells can be furnished when so specified.

Reducers

Reducers from one size conduit to another are available in all combinations from 1 to 6 inches inclusive. The standard reducer is Harrington Joint at

both ends. Sizes and types of conduit, joints, etc. to be connected must be specified in detail.

Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 1 to 6 inches inclusive.

The standard adapter is Harrington joint at the fibre end and threaded for metal pipe size specified, at the other end. Can be supplied straight bore for unthreaded metal pipe or undersize for self-threading. Sizes and types of connections desired must be specified.

Fibre Plugs

For temporarily closing ends of ducts during concreting, etc.

Available for 2 to 6-inch size conduits inclusive.

Fibre Bushings

Solid

Split

Available for all conduit sizes 1 1/2 to 5 inches inclusive.

Fibre Caps

For sealing spare ducts or exposed conduit ends, etc. Harrington joint is standard; socket joint or sleeve fit if specified.

Made for conduit sizes 1 to 6 inches inclusive.

Orangeburg Fibre Conduit Accessories

Spacers (Bridges or Separators)

For built-up fibre conduit installations, grooved spacers of fireproof composition are available for one, two, three or four conduit wide assemblies. These spacers are cast accurately and can be furnished for conduit sizes from 2 to 4 1/2 inches inclusive.

As the general practice is to allow a separation of 1 inch between conduits, this is the standard separation provided. However, for special applications, spacers can be supplied for 1 1/2, 2 or 3-inch separation between ducts.

Orangeburg Conduit Spacers are handled as a service item. Although built for minimum weight with adequate strength, transportation cost may make it more economical for the large user at distant points to make his own spacers. Complete information as to mix employed will be cheerfully furnished upon request.

Dimensions I, II, III and IV indicate overall length of spacer for 1, 2, 3 or 4 conduits laterally spaced.

Orangeburg Fibre Conduit Tooling Lathes

Packed in a sturdy wood case for convenient transportation and use in the field, this lathe is designed to produce close tolerance joints easily and rapidly. The economy of quick accurate tooling over crude hand cutting, salvaging short lengths and accurate fitting to manhole, etc. quickly repays the user for the moderate cost of this device.

Orangeburg Fibre Conduit Jointing Compound

Orangeburg Fibre Conduit Jointing Compound, which hardens within a few hours and acts as a strong cement, is occasionally specified by engineers. Its use is not a necessity. A majority of the Orangeburg Fibre Conduit installed is put in without jointing compound as Orangeburg Joints are machined accurately, and the ends are beveled slightly, making a water tight fit when properly assembled.

To figure quantity required, use basis of one pint per thousand feet of conduit per inch of inside diameter of conduit. If ends are to be dipped instead of painted, double this quantity. Painting is preferable to dipping—it results in a better job and is, perhaps, no more expensive.

Jointing compound is available in barrels (60 gallons), half barrels (30 gallons), and 5 and 1-gallon cans.

Economical Handling. At both freight car doors, there will be found a car chart detailing every item.

All Orangeburg lengths are even footage, saving checking time in figuring inches. Shorts are conveniently segregated.

Economical Transportation. Orangeburg Conduit is transported by rail or truck most economically because it combines light weight with ample strength to resist breakage. The largest truck bodies can be loaded to maximum cubic carrying capacity, reducing trips and hourly costs to an almost negligible cost per foot.

Orangeburg price schedules are based on total weight of material involved, including all bends, elbows and items classified as fittings (*Standard* and *NOCRETE*); excluding items classified as accessories (such as spacers, jointing compound, tools, etc.).

Split Conduits (Half-Round or Sectional) Slotted, Pierced or Sectional

Orangeburg Conduits can be furnished split in half-round (cross section) or, slotted with single cut, in any size or type at nominal upcharge per foot.

It can be furnished with sectional cuts at specified degrees and, also, in specified lengths (standard length or less) pierced with holes as desired.

This type material is frequently used for pole risers, under crossarms, transformer lead covering, etc.

Socket Joints (Mortise and Tenon)

Orangeburg Fibre Conduit is available with socket joint in all sizes. It is generally preferred for pole risers as it enables the riser to closely follow the contour of the pole, either in the full round conduit or split in the half-round, etc.

Shipping Weights and Data

Shorts. The right is reserved to include 10% to 15% of lengths shorter than standard.

All shorts included are packed separately in any shipment, to facilitate identification and easy count. Shorts are cut to even lengths six or twelve inches less than standard.

Class A Orders. 30,000 pounds (minimum car) or over.

Class B Orders. 10,000 to 29,999 pounds.

Class C Orders. 9,999 pounds or less.

Crating. There is an extra charge for crating Class A and B orders, if so specified. Class C orders are usually packaged for less carload handling.

The weights listed below are used for pricing computations only (approximate shipping weights).

Orangeburg NOCRETE Conduit and Fittings

Conduit Inches	Conduit		Conduit Fittings WEIGHT, POUNDS EACH				
	Weight Pounds per Foot	*Min. Feet per 30,000 Lb.	*Min. Feet per 10,000 Lb.	Extra Couplings	Reducers, Adapters, Caps	Plugs, Bushings	Bends, Elbows
1½	1.4	21,429	7,143	.40	1.4	.3	7.0
2	2.1	14,286	4,762	.65	1.6	.4	9.5
2½	2.6	11,539	3,847	.85	1.8	.6	12.0
3	3.3	9,090	3,030	1.00	1.9	.7	15.0
3½	3.7	8,109	2,703	1.30	2.0	.7	18.5
4	4.1	7,318	2,439	1.45	2.3	1.1	22.0
4½	5.1	5,883	1,961	1.60	2.7	2.3	25.5

*Do not overlook that weights of bends and other fibre items are included in figuring minimum weights; consequently such items on an order will decrease footage indicated in the conduit weight tables. This includes combination orders covering both Orangeburg NOCRETE Conduit and Orangeburg Standard Conduit.

Natco Standard Single Duct Conduit

Adapted for high tension power lines, single cable terminals or for low tension laterals, as in telephone or signal lines.

In building up duct banks, this conduit provides two heavy insulating walls between adjacent cables, and permits breaking or staggering of all joints throughout the duct bank.

Permits the splaying or separation of individual duct lines in approaches to manholes.

Conduit is scarified lengthwise on the four outer sides, to provide anchorage for bedding mortar.

The inner edges of the duct entrances are properly bevelled and smoothed to eliminate projections and to make safe the pulling of cables.

Certain square single duct shapes are provided with through dowel holes in the corners, permitting the use of steel dowel pins for assembling, centering and aligning such duct lines.

Standard length, 18 inches, except in the 5 1/4-inch round bore shape which is 24 inches long. Short lengths as shown in table, are available for staggering joints.

Nom-inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pe.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

Natco Single Duct Conduit for Underground Distribution

Fitted with 5/32-Inch Steel Dowel Pins

Fitted with 5/32-inch steel dowel pins for effecting easy and accurate alignment also with rubber bands for enclosing joint prior to application of mortar or concrete encasement.

Advantages: Light weight; longer lengths; round bore in common sizes; controlled alignment with dowel pins; rubber band or adhesive tape joints; new exterior shape with flat sides and rounded corners; new type scarification; new end bevel, rounded and smooth; a deaired product; smoother, stronger and uniform in shape and dimensions; improved uniform glaze; non-corrosive to cable; low absorption; high thermal conductivity; displaces and saves concrete.

Natco Standard Multiple Duct Conduit

Particularly adapted for telephone, telegraph, railway signal, fire alarm and low tension light and power service. The large units are economical and quick to install, due to their longer lengths and multiplicity of duct holes.

At the extreme ends of each piece of conduit, a smooth surface is left to permit wrapping each joint with tape or fabric to exclude joint mortar from the ducts.

Supplied in either 3 1/4, 3 1/2 or 4 1/4-inch square bore shapes and in 2, 3, 4, 6 and 9-way multiple shapes.

The 3 1/4 inch is the standard bore, while 4 1/4 inch is the over-size bore, for most telephone service and for certain low tension power and lighting systems, while the 3 1/2 inch bore is frequently specified for certain municipal installation.

Nom-inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pe.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

Natco Split Conduit

Natco Conduit in both single and multiple duct shapes and in all standard bores is supplied, scored or knifed, for splitting apart on the job, for repairing or replacing duct lines, without the necessity of removing cables.

These split sections may be also used to enclose cable joints or splices in place of building manholes.

Natco Mitred Conduit

For Curve Construction

Natco Conduit, both single and multiple duct, in all standard bores, is supplied in mitred shapes, for building either simple or intricate curves in lines of clay conduit, for transposing narrow duct banks into wide ones or vice versa, or for splaying duct lines to enter manholes or service points.

Natco Mitred Conduit is made in one standard cut—3 degree and 10-foot radius. The radius of curves built of these sections, is varied simply by interposing straight short pieces between the mitred sections, and the arc of such curves is governed simply by the total number of pieces used.

True and easy curves from 10 to 30 foot radius, and ranging from 3 to 90 degrees, can thus be built.

In the 2, 3 and 6-way multiple conduit, the mitred sections are supplied in either a flat or edge position.

Mitred conduit also supplied scored for splitting apart.

Approximate length, 6x6 $\frac{5}{8}$ inches. Number of pieces in 90° curve, 30.

Bore Inches	No. of Duct Holes	Position
3 $\frac{1}{4}$, 3 $\frac{1}{2}$, or 4 $\frac{1}{4}$	Round
3 $\frac{1}{4}$, 3 $\frac{1}{2}$, or 4 $\frac{1}{4}$	Square
3 $\frac{1}{4}$, 3 $\frac{1}{2}$, or 4 $\frac{1}{4}$	Square	Flat or Edge

3 $\frac{1}{4}$ or 4 $\frac{1}{4}$	9-Way

Natco Branch Conduit

For Dividing Multiple Duct Main Lines

Natco Multiple Duct Conduit is supplied in branch shapes in all standard bores.

Natco Branch Conduit is a new shape, one end of which is the same shape and size as standard conduit, while at the opposite end, certain ducts are more widely separated by means of double webs, so as to permit alignment with abutting branch lines.

Branch conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in splaying main duct lines into central office buildings, manholes or cable vaults, or for turning laterals or service connections. It frequently saves the necessity of manholes.

Also supplied scored for splitting apart.

Length, 24 inches.

Bore Inches	No. of Duct Holes	Type	For Branching Into
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	2-Way	1-1	2 Single Duct
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-2	1 Single and 1 Two-Way
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-1-1	3 Single Duct
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	4-Way	2-2	2 Two-Way
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-4	1 Two-Way and 1 Four-Way
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-2-2	3 Two-Way
3 $\frac{1}{4}$, 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	3-3	2 Three-Way
3 $\frac{1}{4}$, or 4 $\frac{1}{4}$	9-Way	3-6	1 Three-Way and 1 Six-Way

Natco Transposition Conduit

For Transposing or Twisting 2, 3 and 6-Way Conduit Lines

Natco Multiple Duct Conduit is also supplied in transposition shapes in 2, 3 and 6-way multiples, with right or left-hand twist. The degree or angle of twist is 22 $\frac{1}{2}$ ° for 3 $\frac{1}{4}$ -inch bore shapes, 18° for 3 $\frac{1}{2}$ -inch bore shapes and 15° for 4 $\frac{1}{4}$ -inch bore shapes, and the standard length is 24 inches.

The number of pieces required to effect a quarter turn of 90° from a flat to an edge position, or vice versa, is four pieces in the 3 $\frac{1}{4}$ -inch bore, five pieces in 3 $\frac{1}{2}$ -inch bore or six pieces in the 4 $\frac{1}{4}$ -inch bore sizes.

These transposition shapes are of considerable advantage in changing the position or height of conduit lines, in order to avoid certain street obstructions, or to cross viaducts or bridges, or to change the position of cables on their approach to manholes or cable vaults, all of which frequently eliminates the need of manholes.

Bore.....inches	3 $\frac{1}{4}$	3 $\frac{1}{2}$	4 $\frac{1}{4}$
Twist.....	22 $\frac{1}{2}$ °	18°	15°
No. of Pieces in $\frac{1}{4}$ Turn.....	4	5	6

Direction of twist, right or left hand.

Natco Pipe Connectors

Single Duct Connector

2-Way Connector

3-Way Connector

Rear View of Connector Ready to Receive Conduit

For the purpose of connecting clay conduit lines to iron pipe lines as in pole risers or to enter buildings, Natco Pipe Connectors are available in the sizes shown below.

These connectors are made of cast iron, one end is shaped to receive the end of the clay conduit line, while the opposite end of the connector is tapped and threaded to receive the iron pipe lines.

For connecting to smaller sizes of pipe, ordinary pipe bushings can be screwed into these connectors to accommodate any standard size pipe.

Single Duct Connector

For 3 $\frac{1}{4}$ -inch bore conduit 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit 4-inch pipe.

2-Way Connector

For 3 $\frac{1}{4}$ -inch bore conduit 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit 4-inch pipe.

3-Way Connector

For 3 $\frac{1}{4}$ -inch bore conduit 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit 4-inch pipe.

No. 106 Natco Conduit

Illustrating the conversion of a 4-way multiple duct line into two 2-way multiple duct lines in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 feet and then continued straight on in the form of standard 2-way multiple duct conduit—in a flat position.

Specifications

B—One-piece 4-way type 2-2 branch conduit, 2 feet long (for dividing the 4-way line into two 2-way lines).

E—Six pieces 2-way mitred conduit—edge position—3° 10-inch radius—6¼ inches long, (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18° but any angle of flexure divisible by 3, may be attained by varying the number of mitred pieces).

H—One-piece 2-way standard conduit, 2 feet long (laid in edge position—to extend the flexed 2-way line on towards pole).

R—One cast iron 2-way connector for 3-inch wrought iron pipe.

P—Four pieces 2-way left-hand transposition conduit, 22½°, 2 feet long (for transposing the other 2-way line 90° from an edge to a flat position).

Dowel Pins

Pressed steel pins, 5/16x3 inches, with an integral central flange or collar, are generally used for joining or aligning individual sections of multiple duct, also certain sizes of square bore single duct conduit together.

Two pins are used at each joint or for each piece of conduit.

Joint Tape

An especially prepared tape is frequently used for wrapping the joints of multiple duct conduit prior to the application of the joint mortar, also occasionally used for wrapping joints of single duct conduit in trench, subway or masonry structures, prior to the pouring of the concrete encasement.

This tape has an adhesive waterproof coating on one side, and is supplied in 4 and 6-inch widths, and put up in rolls of 25 linear yards.

Tape adheres closely and firmly to the glazed surface of the conduit and aids in sealing the joints.

In ordering, specify total number of linear yards required.

Rainier Wood Conduit

Wood conduit (pump-log) has been used by telephone and telegraph companies for over 50 years.

Manufactured from Southern yellow pine. Pressure creosoted. Furnished in random lengths, 2 to 10 feet, mostly in 6 to 8-foot lengths.

Each piece has a mortise at one end and a tenon on the other end, insuring a snug, secure joint.

Diamond Manhole Cover Hooks

This is a useful tool for the subway construction force. It is designed to easily raise a heavy manhole cover by prying the wedged point end of the hook under the groove provided in the cover for the purpose.

The hook is made of an excellent quality of electric tool steel suitably hardened at and adjacent to the hook to prevent its bending, and at the same time sufficiently tough to prevent breaking off.

Price.....each \$1.50

Minerallac Insulating Compound

For Use in Cable Joints, Potheads and Terminal Bells

High Voltage Compound

No. 1. A compound having the consistency of molasses. Not affected by moisture. Especially effective in drying out tape and cloth, and between layers of such materials when wound on high-voltage electrical apparatus.

No. 2A. Cable joint or pothead compound. Melting point, 82°C. One of the most important characteristics of this compound is its ability to adhere to metal or porcelain. Suitable for use in warm climates.

No. 64. A compound suitable for use in mild climates where there is no great variation in temperature. A hard compound with a melting point of approximately 93°C.

No. 78. Cable joint or pothead compound. Dense and adhesive with little shrinkage. Recommended as an all-purpose insulating material. Low moisture absorption; pliable. Recommended for voltages 6000 and up. Melting point, 90°C. Dielectric strength 940 volts per mil at 30°C.

No. 80. Pothead compound. A hard compound for use on 6000 volts and over. Melting point, 130°C. Tests 990 volts per mil at 30°C.

No. 104. A semi-solid compound for use in cable joints on high voltage lines over 6000. Melting point, 50°C. Dielectric strength averages 800 volts per mil at 30°C.

No. 104A. A semi-solid compound with the same general characteristics as No. 104, except that it has a lower melting point (35°C.). Average viscosity, 800 seconds at 100°C. For use on high voltage potheads and cable joints where a low melting point compound is required.

Size Container.....gallons	1/2	1	2	5	*400
Per Gallon.....	\$2.25	1.75	1.70	1.55	.75

*Closed steel drum weighing approximately 400 pounds.

High Voltage Compound—Oil Insoluble

No. 33. For use in cable joints, potheads and terminals, and other electrical apparatus where a close seal against oil filtration is specified. For protection of transformer bushings on oil-filled transformers.

Size Container.....gallons	1	2	5
Per Gallon.....	\$2.75	2.70	2.55

Low Voltage Compound

High melting point compound for low voltage work. Softening point, 127°C. For use on low voltage distribution cables, street lighting, telephone work, etc. where a close seal is desired.

Size Container..gallons	1/2	1	2	5	*400	†400
Per Gallon.....	\$2.00	1.50	1.45	1.30	.60	.50

*Closed steel drum weighing approximately 400 pounds.

†Open headed sheet iron drum weighing approximately 400 pounds.

General Cable Unit Package Splicing and Jointing Materials

For convenience of customers, the complete materials required for splices and joints on all types of cable are put up in handy unit package form. By purchasing splicing and jointing materials in this manner, an accumulation of dead stock in the store room is prevented and the time and expense of buying the various items required for the work from more than one source is saved.

When ordering, specify number and size of conductors, thickness of insulation and lead sheath and voltage rating.

No. 2769 McGill Crescent Chatterton Compound

Domestic Brand

A para rubber compound for insulating 75% pure rubber. Gives complete assurance against danger of open contacts and terminals; can also be used for waterproofing. Used on all high grade electrical work. Formed in 1/4-pound sticks, 1 inch in diameter and 8 inches long.

Put up 10 sticks in a package; weight, 2 1/2 pounds.
No. 2769.....per pound \$2.00

No. 150 Minerallac Cable Pulling Compound

Minerallac Cable Pulling Compound is applied to the cable at the entrance of the cable feeder with a stiff brush. The properties of this compound cause it to cling to and lubricate the full length of the cable and conduit. The compound will follow through curves and bends in the conduit, eliminating damage to the cable sheath. No. 150 Cable Pulling Compound has the following features:

Chemically inert—no deterioration to either cable or conduit, including fiber conduit.

Economical—a comparatively small quantity is sufficient to pull a cable into the conduit: 5 to 7 pounds to pull a 2.83-inch diameter cable into approximately 400 feet of 3 1/2-inch tile conduit.

Not affected by temperature—cables may be pulled at temperatures as low as 10° above zero (F.).

Size Can.....pounds	12	25	60	*600
No. 150.....per pound	\$0.12	0.11	0.10	0.08

*Steel drum weighing approximately 600 pounds.

Cope Safety Compound Kettles

The double flue extending through the kettle bottom and up and out to the sides, conducts the heat to every part of the compound. This insures a uniform melting, thereby preventing all danger of explosion.

The short lip spout eliminates clogging and allows free pouring. The wide kettle opening provides ease in filling and also in dipping tubes and socking.

Made of heavy steel, welded throughout. Has an extra heavy bottom which is inset 1 inch from the base. Tight fitting lid prevents loss of compound.

Capacity, 3 gallons. Diameter, 10 inches; height, 12 inches. Each..... \$8.00

Ruberoid Rapid Asphalt Paint

(Formerly P & B Rapid Asphalt Paint)

Dries quickly to a hard, glossy coating, exceedingly tough and durable and with high insulating properties.

Adapted for cables, switchboards, battery boxes, shelving, conduit joints and all insulating requirements.

Made in medium brushing consistency.

Size Package.....gallon	50	5	1	1/4	1/8
Per Gallon.....	\$1.10	1.25	1.40	1.70	2.00

Ruberoid Black Air-Drying Varnish

(Formerly P & B Black Air-Drying Varnish)

A quick drying, acid resisting and moisture proof, insulating varnish, indispensable in the repair shop and in general construction work.

For quick repairs to dynamos and motors. For feed wires, cables, switchboards and all overhead and underground connections.

Size Package.....gallon	50	5	1	1/4
Per Gallon.....	\$1.00	1.15	1.30	1.60

Empire Duct Rods

Furnished in two styles, tapered and straight. Tapered sticks are furnished when not otherwise specified. They measure 1 1/4 inches at the middle of the rod and taper to 1 inch at coupling. Straight sticks are furnished of uniform diameter 1 inch throughout.

Couplings are malleable iron. Ends are interchangeable. Axles are machined from brass rod, solid head and shouldered on coupling. Wheels are machined at hub to fit axle and shaped to conform to curve of duct. The rod is made of best selected straight grain well seasoned hickory, tapering to 1 inch at opening.

Length.....feet	3	4
With Wheels.....each	\$1.80	\$2.00
Without Wheels.....each	1.55	1.75

Lewis Rodding Pick-Up Tools

Used on long runs. Made for flat steel tape or any size wooden duct rod. Made to fit any size round or square duct. Rod in from each end and pick-up. Set consists of head and pick-up.

Head is of composition aluminum, copper, and nickel. Minimum tensile strength, 35,000 pounds per square inch. Minimum elongation, 5% in 2 inches. Brinell hardness, 60-80. Springs are of oil-tempered spring steel.

Has four manganese steel pick-up arms. Tensile strength, 68,000 pounds per square inch.

Weight: complete, 2 1/4 pounds; head, 3/4 pound; pick-up, 1 1/2 pounds.

Per Set..... \$20.00

Lewis Duct Brush Cleaners

Round Edge Type

A steel wire bristle cleaner for stock work.

Can be pushed or pulled. Will clean and cut obstructions.

Solid steel shaft is made by the twisting of heavy tempered steel wires.

Saw Edge Type

For Round Duct In.

*Round Edge Type Each	\$2.40	\$2.40
3 1/2	2.40	2.40
4	2.40	2.40

Shaft: *1"; 1 1/4".

Cope Wire Brush Cleaners

Single End

Double End

Brush has a flat tempered steel bristle which will remove all sand and other light obstructions.

Made for all size conduits with either a rod connection or socket eyes on both ends.

Diameter.....inches	3	3 1/2	4
Single End.....each	\$2.50	\$2.75	\$3.00
Double End.....each	2.75	3.00	3.25

Diamond Screw Duct Rods

Couplings are made of government bronze. The hickory used in the shaft is selected stock, well seasoned. Threads are accurately cut to 3/4-inch U.S.S., 10 threads per inch. Rivets are countersunk. Hickory shafts are 1/8 inch in diameter.

3-Foot Length.....each	\$1.65
4-Foot Length.....each	1.80

Cope Underground Conduit Tools

Jar Hammers

Used in connection with all types of cutters for removal of stubborn obstructions such as heavy silt, cement, etc.

Made of 2-inch diameter steel tubing with heavy piston and hammer working inside the cylinder.

Size Stroke.....inches	8	12	18
Each.....	\$15.00	17.00	20.00

Laying Mandrels

Body is of well seasoned maple. Rear end is equipped with a leather wiping washer and the forward end with a counter-sunk steel hoop and tool steel cutting edge.

Length, 36 inches. In diameters to fit any size conduit.

Size.....inches	3	3 1/2	4
Each.....	\$4.50	5.00	6.00

Test Mandrels

Round

Square

Made to exact size for testing conduits after laying. Has tool steel cutting ends to remove concrete or other light obstructions. Length, 12 inches.

Size.....inches	3	3 1/2	4
Round.....each	\$4.00	\$5.00	\$6.00
Square.....each	5.00	6.00	7.00

Flexible Mandrels

For testing conduits having bends through which a rigid mandrel would not pass. Constructed of tool steel discs, mounted on a flexible wire rope, securely babbitted to the heavy socket eyes. Will withstand a pull of over 5000 pounds.

Each..... **\$25.00**

Pickups

Used to recover rods or tools lost in the conduit. Can also be used on long pulls where it is desirable to work from both ends.

Pickup has two steel shutters with beveled notches and spring action, so that it will recover and catch firmly no matter what position it may be in within the conduit.

Each..... **\$15.00**

Rod Grapples

Used where long lines of conduit are to be rodded. Permits rodding from both ends of conduit and provides positive connection where they meet. Several hooks engage opposite ends.

Each..... **\$7.50**

Sand Scoops

For removing loose sand and silt which may enter the conduit and prove harmful to lead sheathed cables.

Made of light weight tubing.

Size.....inches	3x15	3 1/2x18	4x20
Each.....	\$6.00	7.00	8.00

Perfection Flat Tape Conduit Rods

In general use by power, electric light, telephone, city fire alarm systems, street railway companies, and contractors in general.

This rod will handle laterals easily. One man can rod 300 feet, using the patent grip handle.

Rods have only one connection to every 200 feet; each length of rod is 100 feet.

The factor of broken rods has been eliminated. The average time required to rod 500 feet with two men is about twenty minutes, at an average cost of about 1/4 cent a running duct foot.

Connections are made quickly and easily with ordinary tools.

1/4x1/16-Inch Size. Will take right angles in 1 1/2-inch conduits. With flexible cleanout leader, ball roller, and adjustable hand grip. On safety holding frame.

In 100 to 500-foot lengths.
Per 100 Feet..... **\$6.00**

1/2x1/16-Inch Size. For 2 to 4-inch ducts. Flexible; will take laterals; will rod over another cable in ducts. Has ball roller and sliding rodding hand grip. On Safety holding frame.

In 100 to 400-foot lengths.
Per 100 Feet..... **\$11.25**

1/2x1/8-Inch Size. For 2 to 4-inch ducts. Rigid; for long runs; flexible enough to take laterals. Has ball roller which indicates clearance in duct where one or more cables are in and more cable is desired. Furnished with adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.
Per 100 Feet..... **\$15.75**

3/4x1/16-Inch Size. For 2 to 4-inch ducts. This size is more flexible than the 1/2x1/8-inch size. Has ball roller and adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.
Per 100 Feet..... **\$12.75**

3/4x1/8-Inch Standard Size. A standard duct size for long runs. For 3 to 4-inch ducts. This rod replaces the old type wooden rod.

Tensile strength, 225,000 pounds per square inch. Breaking strength, 21,000 pounds. On galvanized safety holding frame.

In 100, 200, and 300-foot lengths.
Net Weight per 100 feet, 33 pounds.
Per 100 Feet..... **\$22.00**

1x1/8-Inch Special Size. A rigid, yet sufficiently flexible rod to take laterals. On safety holding frame.

In 100-foot lengths.
Per 100 Feet..... **\$28.00**

Parts

*†Large Ball Feeding Rollers.....each	\$2.00
*†Small Ball Feeding Rollers.....each	2.00
*†Spear Boring Point, Solid.....each	1.75
16-Inch Sliding Hand Grips.....each	2.50
Pulling Shackles with Towing Bud.....per set	6.00
Mud and Sand Duct Cleaner.....each	8.00
Pick-Up Tools.....per set	20.00
Steel Brushes, All Sizes.....each	2.40
†Revolving Spear Heads, Large.....each	5.00
†Revolving Spear Heads, Small.....each	4.00

*Take laterals easily and slide rod through ducts rapidly.
†For 2 to 4-inch ducts.
†For small ducts or where rodding is done over another cable in ducts.

Reliable Cable Grips

Pulling grips for aerial or underground cable. Luffing grips for pulling slack or removing old cables. Split grips for moving cables where an end is not accessible. All supplied in a full range of sizes.

Single Eye Reinforced Flexible Pulling Grips

For pulling underground cables. Reinforcements protects wires of the grip at shoulder where wear is greatest.

Cope Manhole Guard Rails

Made of 3/4-inch standard black steel pipe with seamless steel tubing sleeves. Made with a completely welded construction.

Unless otherwise ordered, all rails are painted with two coats of Signal Red Enamel.

Type 264

This guard closely follows the design of the new American Telephone and Telegraph Company's standard. The bow-shaped wing brace holds the rail absolutely rigid against collapse when in place, leaving the open side entirely free for work. The chains allow this rail to be padlocked to pole, etc.

Open 23x32x42 inches high, folded 32x2x42 inches.

Weight, 49 pounds.

Each..... \$15.50

Type 110

This is somewhat lighter construction than the No. 264 while still holding to the same material.

It is equipped with Flag holder and steel hook for holding it rigid while open.

Open 32x32x42 inches high, closed 32x3x42 inches.

Weight, 40 pounds.

Each..... \$12.50

Cope Cable Benders

Designed to form and bend large cable in underground construction. Also may be used for straightening cable.

Type A. A light, convenient tool.

Made of forged tool steel with steel tube extension handle to provide greater leverage. Large surface of shoe prevents injury to cable.

Overall dimensions with handle extended, 26 to 36 inches.

Weight, 9 pounds.

Type A..... each \$10.00

Type A

Type C. Designed for heavy work.

Adjustable yoke provides seven positions of handle and permits work in close quarters. Simply pulling back on sleeve releases ratchet and permits handle to be moved in any position. Yoke and arm are alloy steel castings with extension handle of steel tubing.

Wide bearing surface and rounded edges of shoes prevent injury or deformation of cable sheath.

Overall dimensions, 36 inches.

Weight, 14 pounds.

Type C..... each \$15.00

Type C

Cope Cable Pulling Rigging

Type B

Designed to provide a direct pull through the conduit. When in the manhole, the lower sheave is located opposite the conduit with the upper sheave above the street line to lead to the winch.

Constructed of 6-inch 8.2 lb. channel, welded. The two sheaves with 10-inch minimum diameter have large, well finished grooves to prevent injury to the cable. Each sheave is mounted on a 1-inch steel shaft.

Length.....feet	9	10	12
Type B.....each	\$32.00	34.00	40.00

B & L Star Brand Pulling-In Frames

No. PU 26

The pulling-in frame is constructed to help install cable in underground ducts.

The sheave support consists of two 13-foot sections of 6-inch steel channels, fastened together at each end by two sections of 4-inch steel channels. Each 13-foot section is provided with 24 holes on 6-inch centers in order to allow the two sheaves to be adjusted to the proper position on the sheave support for any cable installation.

Two aluminum sheaves are used with each sheave support: one large sheave and one small sheave which have diameters of 20 and 5 3/4 inches respectively. The diameter and groove of large sheave are of sufficient size to allow a cable to be pulled over it without harming the cable sheath, when this procedure is necessary to obtain sufficient cable in the manhole for splicing. An important feature is that each sheave is provided with Graphite Bronze self-lubricating bushing which makes the use of lubricant unnecessary.

Shipping weight, 260 pounds.

No. PU'26, Complete..... \$120.00

Cope Pull-In-Guide or Cable Feeders

Used to lead the cable from the street reel into the mouth of the conduit without injury.

Constructed with heavy brass bell, completely finished, securely fixed to a length of heavy steel tubing. The conduit end has a steel sleeve which will accommodate various size brass nozzles to fit the several sizes of conduit.

Guides, Length.....feet	9	12	16	20
Each.....	\$45.00	48.00	52.00	56.00

B & L Star Brand Cable Feeders

No. PU 40

Designed to protect and guide underground cables into ducts, particularly in congested manholes.

The standard cable feeder consists of: One 7-foot length of 4-inch galvanized metal hose and one 3-foot length of 4-inch galvanized metal hose which may be joined together, to make up an uninterrupted length.

Also two nozzles: One No. 2 for 3-inch ducts and one No. 3 for 3¼, 3½ and 3¾-inch ducts.

Lengths of hose furnished separate with any size nozzle required for proper size ducts.

When ordering always specify size ducts to be used.

Approximate shipping weight, 100 pounds.

Prices upon application.

B & L Star Brand Cable Sheaves and Shackles

No. PU 27

The cable sheave and shackle may be used in place of the pulling-in frame when it is possible or advisable to locate the rear of the truck directly over the manhole. The device is attached to the manhole pulling iron and the winch line goes over a roller or sheave at the rear of the truck then down and under the cable sheave and shackle and thus into the duct. The sheave is made of special aluminum alloy for light weight, 20 inches in diameter, with a groove large enough to take a 2½-inch cable. The hook is drop-forged.

Approximate weight, 51 pounds.

No. PU27.....	\$80.00

Peirce Underground Cable Racks

Hot Galvanized

Rack section is made in three lengths which can be combined into almost any desired length. Section is made from 1½x3½x½-inch open hearth steel channel, amply strong to support the heaviest cable. Should be fastened to manhole wall with ½x4-inch Peirce Expansion Bolts.

Hook is cut from open hearth steel T section and has a smooth, well rounded top surface 1½ inches wide which will not injure the sheaths of cable. Steel size, 1½x1½x½ inches. Easily attached and with the weight of the cable on it, holds securely to the channel back.

Hubbard Underground Cable Racks

Hot Galvanized

Furnished to accommodate from one to four hooks. Combinations may be used for a greater number of hooks if desired.

Hook furnished in three lengths made from certified malleable iron, hot galvanized. Hook is placed in position by raising the outer end slightly above horizontal so that the supporting lug will engage the opening in the rack. It is then moved to alignment and allowed to drop into place where it is held against side movement by web braces which engage the back on both sides.

No. 2225 Peirce Heavy Cable Racks

Hot Galvanized

The rack section is 2 1/4 x 2 1/4 x 1/4-inch steel T section and is offset at the lower end for overlapping when combining two racks together. Any desired length of cable rack can be made in this manner.

Rack is provided with 1/16-inch mounting hole at top and bottom and is fastened to manhole walls with 1/2 x 4-inch expansion bolts. Anchor bolt No. 2246 is also used for this purpose. It consists of hook head which is cemented in masonry, opposite end being threaded and equipped with nut for attachment.

Number of holes, 14. Hook hole spacing, 1 1/2 inches; bolt hole spacing, 25 1/2 inches. Length overall, 27 1/2 inches.

Hubbard Cable Rack Extensions

Hot Galvanized

Used for mounting racks away from the wall because of obstructions, limited space or to escape water seepage. If used away from wall, racks can be mounted on approximately 4 1/2 inches less wall space than is needed for the rack. If extension is turned around and mounted, it will occupy 10 to 13 inches more wall space than the length of rack.

Mounting is generally accomplished by means of two No. 13, 1/2 x 4-inch Peirce Expansion Bolts. Furnished 1 and 1 1/4 inches wide in 1/2-inch stock. Mounting holes are for 1/2-inch bolts. Order two for each rack mounting.

Combination of Conductors

N.E.C. Table 11

For groups or combinations of conductors not included in the preceding tables, it is recommended that the conduit or tubing be of such size that the sum of the cross-sectional areas of the individual conductors will not be more than the percentage of the interior cross-sectional area of the conduit or tubing than as shown in the following table:

Per Cent Area of Conduit or Tubing

Description	No. of Conductors			
	1	2	3	4 Over 4
Conductors (Not Lead-Covered)	53	31	43	40
Lead-Covered Conductors	55	30	40	38
For Rewiring Existing Raceways with Thinner Insulated Conductors	60	40	50	50

Full-Load Currents of Motors

Currents are for motors running at speeds usual for belted motors and motors with normal torque characteristics. Motors built for low speeds or high torques may require more running current, therefore use nameplate current.

150	...	360.0	180.0	144.0	36	...	158	127	32.0		
200	...	480.0	240.0	195.0	49	...	210	168	42.0		

*For 90 and 80 per cent power factor the above figures should be multiplied by 1.1 and 1.25 respectively.

For full-load currents of 208 and 200-volt motors, increase the corresponding 220-volt motor full-load current by 6 and 10 per cent, respectively.

Rules for Measuring Belts

Rule 1—For Finding Length of Straight Belts

A.—Multiply one half the sum of the diameters of the pulleys by $3\frac{1}{4}$.

B.—Add to above twice the distance between centers.

C.—If one pulley is much larger than the other, it is necessary to add to the above a sum varying from one to ten or twelve inches, or more, and obtained by the following method: Square the difference in the diameters in pulleys in inches and divide by four times the distance between centers in inches.

EXAMPLE

Large pulley, 58".

Small pulley, 12".

Distance between centers, 10' = 120".

To find A— $58" + 12" = 70"$; $70" \times \frac{1}{2} = 35"$; $35" \times 3\frac{1}{4} = 110"$.

To find B— $10' = 120"$; $2 \times 120" = 240"$.

To find C— $58" - 12" = 46"$.

$46"$ squared = 2116".

4 times distance between centers is $4 \times 120" = 480"$.

$2116"$ divided by $480 = 5"$ approximately.

Total length A + B + C = $110" + 240" + 5" = 297"$, answer.

Rule 2—For Finding Length of Cross Belts

A.—Multiply one half the sum of the diameters of the pulleys by $3\frac{1}{4}$.

B.—Square one-half the sum of the diameters of the pulleys. Square the distance between centers. Add these two squares and take the square root. Multiply this by 2 and add to the result found in paragraph A.

EXAMPLE

Large pulley, 58".

Small pulley, 12".

Distance between centers, 10' = 120".

To find A—Same as Rule 1 = 110".

To find B—Half the sum of the diameters of the pulleys = 35".

Square $35" = 1225"$.

Square distance between centers ($120"$) = 14400".

Add 1225" and 14400" = 15625".

The square root of 15625" = 125".

Twice 125" = 250".

A + B = $110" + 250" = 360" = 30'$, answer.

Rule for Measuring Belts in the Roll

Add to the diameter of the roll in inches the diameter of the hole in the center of the roll. Multiply this sum by the number of coils in the roll, and multiply this product by 1.32. The three figures on the left represent number of feet in roll.

EXAMPLE

Roll of 5-inch single leather belt measures $37\frac{5}{8}$ inches in diameter; hole, $4\frac{1}{8}$ inches in diameter; number of coils in roll, 84:

$37\frac{5}{8} + 4\frac{1}{8} = 42\frac{1}{4} \times 84 = 3,549 \times 1.32 = 468,468$; or (taking the first three figures on the left) equals $468\frac{1}{2}$ feet.

Length of roll by actual measurement, 469 feet.

Rules for Piecing out Belts

In order to calculate the changed length of belt when different size pulley is put on in place of one removed, take out of the belt, or put in one and a half times the difference of the diameter of the pulleys.

EXAMPLE

Take off a 20-inch pulley and put on a 24-inch = 4-inch \times $1\frac{1}{2}$ inch = 6-inch of a new belt to the existing one.

Useful Information

Pulleys and Gears

For single reduction or increase of speed by means of belting where the speed at which each shaft should run is known, and one pulley is in place:

Multiply the diameter of the pulley which you have by the number of revolutions per minute that its shaft makes; divide this product by the speed in revolutions per minute at which the second shaft should run. The result is the diameter of pulley to use.

Where both shafts with pulleys are in operation and the speed of one is known:

Multiply the speed of the shaft by diameter of its pulley and divide this product by diameter of pulley on the other shaft. The result is the speed of the second shaft.

Where a countershaft is used, to obtain size of main driving or driven pulley, or speed of main driving or driven shaft, it is necessary to calculate, as above, between the known end of the transmission and the countershaft, then repeat this calculation between the countershaft and the unknown end.

A set of gears of the same pitch transmits speeds in proportion to the number of teeth they contain. Count the number of teeth in the gear wheel and use this quantity instead of the diameter of pulley, mentioned above, to obtain number of teeth cut in unknown gear, or speed of second shaft.

Rule for Finding Size of Pulleys

$$d = \frac{D \times S}{S'} \qquad D = \frac{d \times S'}{S}$$

d = diameter of driven pulley.

D = diameter of driving pulley.

S = number of revolutions per minute of driving pulley.

S' = number of revolutions per minute of driven pulley.

Shafting, Belting, Pulleys and Gears

Shafting

The rule for determining the size of shaft for transmitting a given power at a given speed (8-foot centers for hangers) is as follows:

$$\sqrt[3]{\frac{H. P. \times 80}{R. P. M.}} = \text{diameter in inches.}$$

When "H. P." = the horse power to be transmitted
"R. P. M." = the revolutions per minute.

Belts

The following formula is used to determine the length of belting:

$$\frac{(D + d \times 3.16)}{2} \times 2D^1 = \text{length.}$$

When D = diameter of large pulley, d = diameter of small pulley, and D¹ = distance between centers of shafting.

Depth of Pole Setting

In sandy or swamp ground, oil barrels or casks set in the ground will materially assist in securing substantial pole foundations. The following specifications are recommended for the depth in feet of holes:

Line (Height)	Solid Ground		Soft Ground		Solid Rock
	Poles (Depth)	Corners	Line	Corners	
22	5	5	5	5	3
25	5	5½	5½	6	3
30	5	5½	6	6½	3½
35	6	6½	6½	7	4
40	6½	7	7	7½	4
45	6½	7	7	7½	4½
50	7	7½	7½	8	4½
55	7½	8	8	8½	5
60	8	8½	8½	9	5½
65	8½	9	9	9½	5½

Guy stubs should be set not less than 7 feet in any soil except solid rock.

Cedar Poles for Electric Light Work

Height Feet	Size Top Inches	Average Wt., Lbs. Each	No. of Poles to a Car	Height Feet	Size Top Inches	Average Wt., Lbs. Each	No. of Poles to a Car
25	5½	225	130	40	6	800	80
25	6	250	100	40	7	900	75
28	7	400	80	45	6	900	70
30	5	300	110	45	7	1000	65
30	6	350	90	50	6	1200	55
30	7	420	75	55	6	1400	45
35	6	550	100

Wind Pressures

Velocity	37	53	65	75	83	91	105	119	130
Pounds per Sq. Ft.	5	10	15	20	25	30	40	50	60

The pressures given above are such as would be exerted against a flat surface set perpendicularly to the direction of the wind. For a cylindrical surface like a pole or wire, the effective pressure is two-thirds of what it would be for a square surface of the same area as the cylinder. It is considered that an allowance of from 20 to 30 pounds per square foot of area for pole lines is ample. The above table was calculated from Professor Langley's formula, $P = .0036V^2$, in which P is the pressure per square foot of surface in pounds, and V is the velocity of the wind.

General Construction Rules

SIZE OF HOLES.—The holes should be large enough to permit the free entrance of the poles, and should be full size at the bottom so as to admit of the use of tampers.

TAMPING POLE HOLES.—All pole holes, except those in very hard gravel or rock formations, should be tamped so thoroughly that the necessity for hauling away excess dirt is obviated.

PROTECTING POLES.—Where corner poles or other poles are exposed to injury from whittling, pole butt should be well painted and heavily sanded. If this is not sufficient in any special case, the pole butt should be wound with No. 10 galvanized wire, spaced ½ inch apart, painted and sanded.

PAINTING POLES.—The top and gaens of all poles should be painted with one or more coats of approved paint. All poles which are protected by strain plates or shims from the cutting of messengers or guys, should be painted with one or more coats of approved paint on the space occupied by the strain plate.

FACING ARMS (CITY CONSTRUCTION).—At long spans the cross arms should be placed on the side of the poles away from the long spans. Arms on poles should face the originating source of the lead, or face to face, depending on the general condition, except corner pole; then it should face the corner. At the terminals of a lead, the last two poles should face away from the originating source. On corners, arms should face the point of intersection of curb lines, thus facing each other. First arm each side of the corner should ordinarily face the corner.

ON CURVES.—Arms each side of center of curve should face the center of curve.

LOCATION OF POLES AND ANCHORAGES.—Special attention should be given to location of poles, where the ground washes badly, where there are cuts or excavations and along the banks of creeks or streams. Do not locate poles along the edges of cuts or embankments.

General Construction Rules

Continued

SPACING POLES.—In locating pole line, if it becomes necessary to either reduce or lengthen distance between poles on account of obstacles, objections of property holders, etc., the preference should be for the shorter spans.

LOCATION OF POLES AT STREET CROSSINGS.—In leading away from the originating end of the line when a cross street is reached, pole should not be located on the corners, but should be spaced to fall on the property line. In this connection, alleys may be regarded as street crossings.

ON STREETS.—Poles and stubs on streets should be set inside of and as near the curb line as possible.

IN ALLEYS.—Poles in alleys should be set as close as possible to the side lines of the alleys.

ON PROPERTY LINES.—Poles on streets should be located on or near property lines.

DISTRIBUTION OF POLES.—In distributing the poles, care should be taken to select the heaviest poles for corners and terminals and to place the straightest and best-looking poles on streets and in front of residences.

POLE FITTING AND SETTING—TRIMMING.—All poles that are rough in appearance should be smoothed, and knots should be trimmed close. Top of pole should be leveled with one cut of saw at right angles to length of pole, and edge should be beveled ¾ of an inch with a draw-knife.

FRAMING POLES.—Poles should be raised at the top and placed in a framing buck so that the heaviest sag or curve will be nearest the ground. If the pole be crooked or badly shaped it should be turned with cant hooks until the best side for framing is brought uppermost and the pole securely chocked. In this position it should first be roofed. Seven inches should be measured from the top of the pole, and this point should be the center of the top gaen. The succeeding gaens should be spaced 18 inches on centers. Gaens should be leveled with a straight edge or sighting sticks.

NOTE.—In alleys, poles stepped in line with alley as high as 12 to 15 feet; then turn at right angles to alley and continue to the top. This is to prevent liability of danger to top wagons in narrow alleys.

BUTTING POLES.—Every pole should be squared across the bottom before setting. This should be done with a crosscut saw, and not with an ax.

BRACES AND CROSS-ARM FITTING.—Arms should be sighted and leveled at right angles to pole length, and not parallel with the ground. This includes all corner poles.

A spirit level should not be used for leveling arms.

CANTING ARMS ON CORNERS.—When a lead makes a double corner or changes from one side of the street to the other, the last arm should set at right angles to the line of direction leading to the corner, and the first arm leading away should set at right angles to the line of direction leading away from the corner.

If the change of direction forms an angle of less than forty-five degrees, one or both corner arms may be canted slightly to secure the greatest space between lines. This should not be permissible where the angle is forty-five degrees or over.

CANTING ARMS ON SINGLE-POLE CORNERS.—The arm should set in a line that will divide in half the angle formed by the two lines of direction of the route.

On curves the inside of the arms should point to the common center of a circle of which the lead curve forms the circumference.

Single pole corners are not desirable and should not be used when the pull is over 20 feet, unless it is an unavoidable case.

GUY STUBS.—A guy stub in no case should be smaller in diameter at butt or top than the pole it supports, and should be as straight as possible on account of the tendency to buckle. A stub at the head of heavy lines should be as massive as possible.

A guy stub should be raked to position before filling hole, and should not be set straight and raked with the anchor guys. In the proportion that stub is curved or buckled its strength is decreased. No stub should be raked less than 24 inches.

Guy stubs holding a strain greater than a one-arm lead should measure 12 inches across the top or more, if procurable.

American or B. & S. Gauge

The resistance given in the table is that of pure copper wire; ordinary commercial copper has a resistance from 3% to 5% greater.

Gauge No.	Diam. in Mils	Area in Circular Mils	Weight in Lbs. per 1000 Feet	Feet per Pound	RESISTANCE OF PURE COPPER IN INTERNATIONAL OHMS AT 20°C. OR 68°F.

Equivalent Values in Different Units

1 H.P. =	{	746 watts .746 K.W. 33,000 ft.-lbs. per minute 550 ft.-lbs. per second 2,545 heat-units per hour 42.4 heat units per minute .707 heat-units per second .175 lb. carbon oxidized per hour 2.64 lbs. water evaporated per hour from and at 212° F.
1 H.P. Hour =	{	746 K.W. hours 1,980,000 ft.-lbs. 2,545 heat-units 273,740 k.g.m. .175 lb. carbon oxidized with perfect efficiency 2.64 lbs. water evaporated from and at 212° F. 17.0 lbs. water raised from 62° to 212° F.
1 Kilo-watt =	{	1,000 watts 1.34 H.P. 2,654,200 ft.-lbs. per hour 44,240 ft.-lbs. per minute 737.3 ft.-lbs. per second 3,412 heat-units per hour 56.9 heat-units per minute .948 heat-units per second .2275 lb. carbon oxidized per hour 3.53 lbs. water evaporated per hour from and at 212° F.
1 Watt per Sq. In. =	{	8.9 heat-units per sq. ft. per minute 6,371 ft.-lbs. per sq. ft. per minute .193 H.P. per sq. ft. 7.233 ft.-lbs.
1 Kilo-gram Meter =	{	.0000365 H.P. hour .0000272 K.W. hour .0093 heat-units
1 Lb. Water Evaporated from and at 212° F. =	{	.283 K.W. hour .379 H.P. hour 965.7 heat-units 103,900 k.g.m. 1,019,000 joules 751,300 ft.-lbs. .0664 lb. of carbon oxidized
1 Heat-Unit =	{	1,055 watt seconds 778 ft.-lbs. 107.6 kilogram meters .000293 K.W. hour .000393 H.P. hour .0000688 lb. carbon oxidized .001036 lb. water evaporated from and at 212° F.
1 Heat-Unit per Sq. Ft. per Min. =	{	.122 watt per sq. in. .0176 K.W. per sq. ft. .0236 H.P. per sq. ft.

Wiring Formula

Ohm's law is practically the basis for the various formulae in general use for determining the proper size of wire to use to carry various currents. It is essential to know the amount of current expressed in amperes, the distance, and to decide upon the loss to allow in transmission; the best rule is as follows:

The cross section (CM) of the necessary wire is found by multiplying twice the distance one way (2D) by the amount of current expressed in amperes (C) and this by the resistance of one mil-foot (10.7) and dividing by the loss in transmission expressed in volts (v).

$$\text{or, CM} = \frac{2D \times C \times 10.7}{v} \quad \text{or, CM} = \frac{D \times C \times 21.4}{v}$$

Equivalent Values in Different Units

Continued

1 Watt =	{	1 joule per second .00134 H.P. 3,412 heat-units per hour .7373 ft.-lbs. per second .0035 lb. water evaporated per hour 44.24 ft.-lbs. per minute
1 K.W. Hour =	{	1,000 watt hours 1.34 H.P. hours 2,654,200 ft.-lbs. 3,600,000 joules 3,412 heat-units 367,000 kilogram meters .235 lb. carbon oxidized with perfect efficiency 3.53 lbs. water evaporated from and at 212° F. 22.75 lbs. of water raised from 62° to 212° F.
1 Joule =	{	1 watt second .00000278 K.W. hour .102 k.g.m. .0009477 heat-units .7373 ft.-lb.
1 Ft.-Lb. =	{	1.356 joules .1383 k.g.m. .00000377 K.W. hours .001285 heat-units .0000005 H.P. hour
1 lb. Carbon Oxidized with Perfect Efficiency =	{	14,544 heat-units 1.11 lb. anthracite coal oxidized 2.5 lbs. dry wood oxidized 21 cu. ft. illuminating gas 4.26 K.W. hours 5.71 H.P. hours 11,315,000 ft.-lbs. 15 lbs. of water evaporated from and at 212° F.

Equivalent of Electrical Units

1 H.P. =	{	33,000 foot-pounds per minute 746 watts 42.746 B.T.U. (British Thermal Unit) per minute 2564.76 B.T.U. per hour
1 K.W. =	{	44,235 foot-pounds per minute 1.34 H.P. 0.955 B.T.U. per second 57.3 B.T.U. per minute 3,438 B.T.U. per hour
1 B.T.U. =	{	772 foot-pounds 17,452 watt minutes 0.2909 watt hours
1 Watt =	{	44.236 foot-pounds per minute 2,654.16 foot pounds per hour

Latent heat of evaporation of water = 966 B.T.U.

Latent heat of melting of water = 142 B.T.U.

To evaporate 1 lb. water from and at 212° = 16.859 K.W. minutes

To evaporate 1 lb. water from and at 212° = 0.281 K.W. hours

Weight per cu. ft. of water = 62.42 lbs.

Weight per gallon of water = 8.33 lbs.

Physical Data

The equivalent of one B.t.u. of heat = 778 foot-pounds.
 The equivalent of one calorie of heat = 426 kg-m., = 3.968 B.t.u.
 One cubic foot of water weighs 62.355 pounds at 62° Fahr.
 One cubic foot of air weighs 0.0807 pounds at 32° Fahr. and one atmosphere.
 One cubic foot of hydrogen weighs 0.00557 pounds.
 One foot-pound = 1.3562×10^7 ergs.
 One h.p. hour = $33,000 \times 60$ foot-pounds.
 One h.p. = 33,000 foot-pounds per min. = 550 foot-pounds per second = 746 watts, = 2545 B.t.u. per hour.
 Acceleration of gravity (g) = 32.2 feet per second. = 980 mm. per second.
 One atmosphere = 14.7 pounds per square inch. = 2116 pounds per square foot. = 760 mm. of mercury.
 Velocity of sound at 0° Cent. in dry air = 332.4 meters per sec. = 1091 feet per sec.
 Velocity of light in vacuum = 299,853 km. per sec. = 186,325 miles per sec.
 Specific heat of air at constant pressure = 0.237.
 A column of water 2.3 feet high corresponds to a pressure of 1 pound per square inch.
 Coefficient of expansion of gases = $1/273 = 0.00367$.
 Latent heat of water = 79.24.
 Latent heat of steam = 535.9.

Handy Table

Diameter of a circle $\times 3.1416$ = circumference.
 Radius of a circle $\times 6.283185$ = circumference.
 Square of the diameter of a circle $\times 0.7854$ = area.
 Square of the circumference of a circle $\times 0.07958$ = area.
 Half the circumference of a circle \times half its diameter = area.
 Circumference of a circle $\times 0.159155$ = radius.
 Square root of a circle $+ 0.56419$ = radius.
 Circumference of a circle $\times 0.31831$ = diameter.
 Square root of the area of a circle $\times 1.12838$ = diameter.
 Diameter of a circle = 0.86 = side of inscribed equilateral triangle.
 Diameter of a circle $\times 0.7071$ = side of an inscribed square.
 Circumference of a circle $+ 0.225$ = side of an inscribed square.
 Circumference of a circle $+ 0.282$ = side of an equal square.
 Diameter of a circle $\times 0.8862$ = side of an equal square.
 Base of a triangle $\times \frac{1}{2}$ the altitude = area.
 Multiplying both diameters and .7854 together = area of an ellipse.
 Surface of a sphere $\times \frac{1}{6}$ of its diameter = solidity.
 Circumference of a sphere \times its diameter = surface.
 Square of the diameter of a sphere $\times 3.1416$ = surface.
 Square of the circumference of a sphere $\times 0.3183$ = surface.
 Cube of the diameter of a sphere $\times 0.5236$ = solidity.
 Cube of the radius of a sphere $\times 4.1888$ = solidity.
 Cube of the circumference of a sphere $\times 0.016887$ = solidity.
 Square root of the surface of a sphere $\times 0.56419$ = diameter.
 Square root of the surface of a sphere $+ 1.772454$ = circumference.
 Cube root of the solidity of a sphere $\times 1.2407$ = diameter.
 Cube root of the solidity of a sphere $\times 3.8978$ = circumference.
 Radius of a sphere $\times 1.1547$ = side of an inscribed cube.
 Square root of ($\frac{1}{3}$ of the square of) the diameter of a sphere = side of inscribed cube.
 Area of its base $\times \frac{1}{3}$ of its altitude = solidity of a cone or pyramid, whether round, square, or triangular.
 Area of one of its sides $\times 6$ = surface of a cube.
 Altitude of trapezoid $\times \frac{1}{2}$ the sum of its parallel sides = area.

Tables

Metric System of Weights and Measures

Measures of Lengths			
1 Millimeter	=	0.001 Meter	= 0.0394 Inch
1 Centimeter	=	0.01 Meter	= 0.3937 Inch
1 Decimeter	=	0.1 Meter	= 3.937 Inch
1 Meter	=	1 Meter	= 39.37 Inch
1 Dekameter	=	10 Meters	= 393.7 Inch
1 Hectometer	=	100 Meters	= 328 Feet 1 Inch
1 Kilometer	=	1000 Meters	= 3280 Feet 10 In.
1 Myriameter	=	10000 Meters	= 6.2137 Miles

It will be noticed that 10 Millimeters equal 1 Centimeter
10 Centimeters equal 1 Decimeter and so on.

Measures of Volumes			
1 Milliliter	=	0.001 Liter	= 0.061 Cu. In.
1 Centiliter	=	0.01 Liter	= 0.6102 Cu. In.
1 Deciliter	=	0.1 Liter	= 6.1022 Cu. In.
1 Liter	=	1 Liter	= 0.9081 Quart
1 Dekaliter	=	10 Liters	= 9.081 Quarts
1 Hectoliter	=	100 Liters	= 2 Bu. 3.35 Pks.
1 Kiloliter	=	1000 Liters	= 1.308 Cu. Yds.

Weights			
1 Milligrm.	=	0.001 Gramme	= 0.0154 Grain
1 Centigrm.	=	0.01 Gramme	= 0.1543 Grain
1 Decigrm.	=	0.1 Gramme	= 1.5432 Grains
1 Gramme	=	1 Gramme	= 15.432 Grains
1 Dekagrme.	=	10 Grammes	= 0.3527 Ounce
1 Hectogrme.	=	100 Grammes	= 3.5274 Ounces

Field Current in D. C. Dynamos

It has been found that a fair average for the field amperes of different sized dynamos, is as follows:—

C. W.	1	5	10	20	30	50	75	100
Per Cent	8	6	5	4	3.5	3	3	2.75

The field current (expressed as a percentage of full load current on lines) is determined with all of the resistance out, that is, with rheostat on first notch.

Copper Wire Resistance

The basis for computation of resistance of copper wires is a wire one foot long and one circular mil of cross section known as a mil-foot, and which has a resistance of 24° C., or 75° F., of about 10.7 Ohms. The resistance of a copper wire varies directly as its length and inversely as its cross section: hence,

The resistance (R) of a copper wire is equal to its length (D) multiplied by the resistance of a mil-foot and divided by the cross section in circular mils (CM).

$$\text{Or, } R = \frac{D \times 10.7}{\text{CM}} \text{ also}$$

The cross section (CM) in circular mils of a wire is equal to its length (D) multiplied by the resistance of a mil-foot, divided by its resistance (R).

$$\text{CM} = \frac{D \times 10.7}{R} \text{ also}$$

The length (D) of a wire is equal to the cross section in circular mils (CM) multiplied by its resistance (R) and divided by the resistance of a mil-foot.

$$D = \frac{\text{CM} \times R}{10.7}$$

64	147.2	77	170.6	90	194.0

Seventy-five deg. Fahr., or 23.8 deg. Cent. is the standard temperature for measuring electrical resistances in submarine cable tests.

Sixty deg. Fahr., or 15.5 deg. Cent. is the standard temperature for measuring the electrical resistance of wire for general telegraphic and electric light purposes; it is assumed to be the average temperature of the air.

Nine deg. Fahr. = 5 deg. Centigrade = 4 deg. Reaumur.

One deg. Fahr. = .5556 deg. Centigrade.

One deg. Centigrade = 1.8 deg. Fahr.

To convert Fahr. to Centigrade, subtract 32, multiply by 5 and divide by 9.

To convert Fahr. to Reaumur, subtract 32, multiply by 4 and divide by 9.

To convert Centigrade to Fahr., multiply by 9, divide by 5 and add 32.

To convert Centigrade to Reaumur multiply by 4 and divide by 5.

To convert Reaumur to Fahr., multiply by 9, divide by 4 and add 32.

To convert Reaumur to Centigrade, multiply by 5, divide by 4.

If temperature is below freezing, the above formula should read "subtract from 32" in place of "subtract 32" and "add 32."

Per Cent of Profit Table

Profit is a percentage of the selling price and not of the cost. To have a profit of 25% upon sales, it is necessary that 33 1/3% be added to cost price, and all other percentages in a similar way, as per table below.

To obtain a profit of—

12 1/2% Add to Cost	*15% 33 1/3% Add to Cost	50%
15% Add to Cost	17 1/2% 35% Add to Cost	*55%
16 2/3% Add to Cost	20% 37 1/2% Add to Cost	60%
20% Add to Cost	25% 40% Add to Cost	*65%
25% Add to Cost	33 1/3% 42 1/2% Add to Cost	*75%
27 1/2% Add to Cost	*37 1/2% 45% Add to Cost	*80%
30% Add to Cost	*45% 50% Add to Cost	100%

*These figures are a fraction from being exact, but are near enough for practical use

Your percentage of net profit is represented by the figure at the junction of the two columns:

Explanation—If your cost of doing business is 15% of your gross sales and you mark goods at 25% above cost, your net profit is 5% on sales—as shown in diagram. If your cost of doing business is 18% and you mark your goods at 60% above cost, your net profit is 19 1/2% on sales.
