Roger Corey, W1JYH, has been sending forth head-phone-rattling sigs from New England environs for years. In the 21st SS Rog wound up with 119,340 points, No. 1 tally for W. Mass. section and W1-land. (Photo by W1KFV)

# May 1955

# Results-1955 Novice Round-up

# BY ELLEN WHITE, WIYYM

M ORE PARTICIPANTS, more operating savvy, and more fun for all personified the Novice Round-up, '55 style. With over 200 WN/KN competing Novices available to QSO, high tallies proved the rule, not the exception. After all, "... There is certainly no lack of operating ability on the part of the WNs. In most cases, excellent technique and a knowledge of operating procedure equal to that of the higher classes were exhibited." — W5VNW

After a quick look-see at how you placed in your section, you may wish to compare your score with the following call-area leaders. In this summary, only contact and section totals are given; full details may be found in the complete tabulation.

| WN1CKA  | 180-45 | KN6EVR | 110-43 |
|---------|--------|--------|--------|
| KN2HXR  | 219-42 | WN7YAQ | 126-50 |
| WN3ZKH  | 245-47 | WN8SYZ | 140-40 |
| WN4FRO  | 139-47 | WN9GWS | 185-44 |
| A'N5EIN | 173-61 | WNØVKI | 205-55 |

Two of the tougher states to acquire while working for WAS are Utah and Rhode Island. Not so in the NR! On our left, representing Rhode Island, WN1BIS supplied a multiplier for 134, while WN7WSS from the Beehive State (Utah) was a choice one for 115. In the words of KN6HAN, "The contest brought out a lot of the rarer ones!"

#### Sidelights

From down Virginia way, W4YZC reports some of the best signals emanating from WN1ACD, KN2HXR, WN3ZKN, KN4ASU/4, WN8SWB, WN9GWS and WN9GBC. From the West Coast, San Joaquin Valley leader KN6HFA reports outstanding signals from W1MX, WNØVKI, KN4ANW, WN5FJN, W4VRT and W1WPO.

Giving testimony to sharp ears for faraway sections, the following licensees racked up 45 or more of those juicy multipliers. In descending order are eight star performers: WN5FJN, WNØVKI, WN7YAQ, WN9GBC, WN7WSS, WN3ZKH, WN4FRO and WN1CKA. Not only

<sup>1</sup> W1QIS, W1WPR, W1YYM oprs. <sup>2</sup> W1YFM, W4YHD, W5ZID oprs. <sup>3</sup> WØHAW, opr.

that, but "during the contest I worked my first ZL and an XE" reports WN1CKA.

"After having taken part in two SS contests, I believe that the NR is about four times as difficult a test of operating ability." — WISSZ. Yet, in spite of QRM, QRP, QSB and homework, twelve of the boys came through with 150 or more QSOs. Well-earned plaudits to WN1CKA, KN2HXR, KN2ICU, KN2JKC, WN3AML, WN3ZKH, WN4GFT, WN5FJN, WN9GWS, WN9HFB, WN9ICE and WNØVKI.

## Round-up Remarks

"My copying has improved: the NR helped me recognize numbers at faster speeds." --KN2JGU... "Between the kitchen, the store, the 'phone and the neighbors I managed to get in 35 hours of operating time. Had good technical

"I'D LIKE TO CATCH UP WITH THE GUY THAT GAVE ME THE FLU ON THE NEXT TO THE LAST NIGHT OF THE CONTEST, "

advice from OM W7HMQ. Bring on the Field Day." — WN7WHV. . . . "My ears are still red after being broken in by a brand-new set of headphones." — WN9ILE. . . . "Found some snappy operators for future FD and SS contests." — W80MK. . . . "That WN1AXD — what a beautiful fist!" — W1VNX. . . . "FB 60% QSL percentage." — W1AW. . . . Our nominee for the neatest log keeper (indicating 35-w.p.m. certification): KN4ASU/4.

#### Non-Novice High Scorers

Again this year, many non-Novice stations supplied a helping hand. Calls shown in bold-face are those of last year's participating WN/KN operators, returning in '55 to help the new licensees. The following scores are shown in alphabetical order. W1AW 3321,<sup>1</sup> W1BDI 720, W1CDD 1218, W1GKJ 900, W1JYH 3132,

۲

Equipment of aid to WN7WHV (Puyallup, Wash.) in acquiring 162 QSOs in 41 sections consists of a Lysco 600 for 21 Mc. topped by a Communicator for monitoring the Pierce County c.d. frequency, a Ranger for 40 and 80 (beneath the RME 23 preselector), and an HRO-50 with Selectoject. Alice collects elephants too!

#### During the first week of the contest, WNØVKI paused to rebuild his 5763-4D32 rig. Result? Seventyfive watts and fine operating ability (plus an IIRO-60) garnered 295 QSOs for Dick! This contest leader from Omaha worked 47 of the 48 states in his first 4 months on the air. Vermont is still the clusive 48th.

# HAMFEST CALENDAR

**ALABAMA** — The Birmingham Amateur Radio Club will hold its annual Hamfest at the State Fair Grounds, Birmingham, Sunday, May 15th. For further information and tickets write P. O. Box 603, Birmingham, Ala.

GEORGIA — The Atlanta Radio Club hamfest will be held May 28th-29th. The place for the Saturday night Dutch supper is Joe's Steak House on the four-lane highway near Marietta. Guests will be accommodated at the Marietta Motel and other motels nearby. The Sunday hamfest will be at Robertson's Tropical Gardens on West Paces Ferry Road at the *Chattahoochee River*. Barbecue chicken will be served, and refreshments will be available. Tickets are \$3.00. Tickets and motel accommodations may be handled through Jack Farr, W4TJS, 572 Wells Ave., Hapeville, Ga., or Tom Moss. W4HYW, 1009 Connally Drive, East Point, Ga.

**INDIANA** — Clifty Falls picnic, sponsored by the Madison Amateur Radio Club, will be held at Poplar Grove, Clifty Falls State Park, Madison, on Sunday, May 15th. 10 A.M. to 4 P.M. No registration fee; the only cost is a 10 cent charge for admission to the state park. This is a family affair, so load up the lunch basket, XYL and the kids for a big time. Only a short drive from Cincinnati, Louisville or Indianapolis. Plenty of shelter, so come rain or shine. For further information contact W9QOT, R.F.D. No. 6, Madison. Ind.

ILLINOIS — Sunday, May 22nd, Fourth Annual Mississippi Valley Hamfest at Rock Island County Conservation Grounds on Big Island, Milan. There is a new road along the Canal fellows so the going will be smooth. There will be plenty of good food and fun for all. Advance registration tickets are \$1,25 or \$1,75 at the gate. For advance registrations write Harry Studer, W9RYU, R.R. No. 1, Milan, III.

ILLINOIS — Starved Rock Radio Club Hamfest, June 5th, at a beautiful new and larger site, overlooking the *Illinois River* at the South edge of Ottawa, Ill. Follow Rt. 23 south through Ottawa, cross *Illinois River* bridge, go up hill, and turn left at Center Street eight blocks to CIO pienic area. Site features large dining hall and kitchen, new auditorium, meeting rooms and space for display of equipment. For the ladies and children, special attractions, all modern facilities, lots of pienic tables, playground equipment, swinming pool, etc. The usual good program and features of previous hamfests. Registration \$1.00 if postmarked before May 28th, \$1.50 at hamfest. Listen on 3940, 3920 and 3515 kc. for late news or write W9MKS, Utica, Ill., for details and advance registrations.

**KANSAS** — The Hi Plains Amateur Radio Club sixth annual Hamfest will be held at Plains, May 22nd. Registration will be \$1.00. A covered-dish luncheon will be served at noon, and everyone is invited to attend. Please bring a covered dish and service for your own group.

KANSAS — The Central Kansas Radio Club, Salina, 7th annual Hamfest will be held June 5th. Starting at 10 o'clock till (?); all inquiries should be addressed to Howard Baker, 404 Woodlawn. Salina, Kans.

MISSOURI — The Greater St. Louis Radio Amateur's annual Hamfest will take place May 22nd. Games, cuter tainment for adults and children. Refreshments obtaiuable on grounds. Admission, adults \$1.00, children free. Creve Coeur Farmer's Club.

**NEW MEXICO** — The Amateur Radio Caravan Club of New Mexico, Albuquerque chapter, will sponsor the 5th annual New Mexico State Hamfest on Saturday and Sunday, June 4th and 5th, in Albuquerque. Stations will be on 29.6 Me. and 3838 ke. to direct mobiles into Albuquerque. Registration will begin Saturday. June 4th; \$2.50 in advance and \$3.00 at the gate. All amateurs and their families, both in and out of the State of New Mexico, are invited to attend. For further information contact the club at 107 Washington St., S.E., Albuquerque, N. M.

**NEW YORK** — The Rochester Amateur Radio Association will hold its annual Western New York Hamfest Saturday May 21st in the Doud American Lexion Post at 898 Buffalo Road (Rt. 33) near the western city limits of Rochester. The tops in speakers and honored guests as usual. Whether your special interest is mobile, DX, traffic, v.h.f./u.h.f., e.d., hi-fi, or renewing old acquaintances, don't miss this one! Registration from 1 p.M. to 5 p.M. Banquet at 7 P.M., \$3.75 per person as always. For advance registration write to RARA, P. O. Box 1388, Rochester 3, N. Y.

**NEW YORK** — 'The New York Radio Club is holding its third annual Picnic and Transmitter Hunt at Bethpage State Park, Long Island, N. Y., on Sunday, May 22nd, starting at 11 A.M. Women and children free; all OMs \$1.00. All hams are welcome and a good time is assured.

OKLAHOMA — The North Fork Amateur Radio Club of Western Oklahoma will hold its Third Annual Hamfest and Picnic at the Quartz Mountain State Park and Lugert Lake on May 21st and 22nd. Registration fees will be \$2.50. For further information contact Jay Thompson, W5ZZP, Sayre, Okla.

**PENNSYLVANIA** — The Breezeshooter's Tri-State Hamfest will be held on Sunday, May 22nd, at the Lodge, North Park, Pittsburgh, Penna. Registration free, Come one, come all!

RHODE ISLAND — The Providence Radio Association will again hold the largest Rhode Island gathering of amateurs, its annual Dinner Dance at Johnson's Hummocks on May 14th at 8 p.m. Entertainment for all.

TEXAS — The South Texas Emergency Network will have its tenth annual Convention in Kerrville on May 27th-29th. There will be a barbeene, two dances, two water carnivals, three transmitter hunts, a swap session, and the usual banquet and business sessions. There will be many entertainment and educational features.

#### FEED-BACK

In Hadlock, "Improved Audio Circuit for the 50-Mc. C.D. Unit," page 36 of the March issue, Fig. 2 should show a 0.1-megohm screen dropping resistor for the left-hand section of the 6U8.

In Fig. 2 of Thomason, "Mobile S.S.B. Receiver for 80 and 40," in March QST, a connection should have been shown between the cathode of the 6SQ7 and junction of the 0.15-megohm and 2700-ohm resistors and 15- $\mu$ f. capacitor.

A not-too-serious error got past us in "A 5-Band Antenna Coupler," by McCoy, in April QST. In Fig. 2, a jumper should be shown between Pins 2 and 4 in "D." If the jumper isn't used, only half of the total capacitance is available.

# Strays 🕉

At the request of the local government, VP2DL, Windward Islands, B.W.I., broadcast a debate put on by native officials. The program was transmitted on a non-ham frequency and mct with much enthusiasm. *I. to r.*: His Honor, Mr. Josse, Asst. Administrator; Government Secy. Hugh Grell, VP2DH; Missionary Merritt Hoath, VP2DL; and Mr. William Surbrook, VP2DA.

# LUCITE REPLACEMENT FOR WINDOW GLASS

A SHEET of ½-inch lucite, cut to size and used as provides an easily worked surface for mounting feed-line feed-through insulators, etc. Mount the lucite in place with regular glazier's tacks and putty. Save the window glass for the day when it becomes desirable to return it to the frame.

--- E. M. Fry, K2CW

# FULL RANGE SPEED CONTROL FOR SEMIAUTOMATIC KEYS

A HIGHLY successful method of controlling the speed of a bug or semiautomatic key is shown in Fig. 1. With this system, it is possible to slow down the dot frequency instantaneously to any desired rate.

The drawing is more or less self-explanatory. The only parts added to the original key are a hairpin-shaped piece of iron wire and one or more small cylindrical Alnico magnets such as those used in speaker manufacture. The hairpin is held in place under the thumbscrew which normally holds the sliding weight in position and the magnet or magnets hold themselves in the cradle formed by the hairpin.

The hairpin can be made from a section removed from an iron coat hanger. Before mounting the hairpin, move the regular weight up to

Fig. 1 — Detail drawing of the speed-control for bugs or semiautomatic keys.

the maximum speed position. When the cradle is locked in position, orientate it with the open end facing toward the rear of the key. Thus, by merely removing the magnet or magnets, top speed is available without need for lossening any screws. To come down to a slower speed, put a magnet or two on the cradle (preferable sizes are those having a diameter measuring between  $\frac{34}{14}$ and  $1\frac{14}{14}$  inches) and slide same to the most effective position. Even with the heaviest combination of weights on my bug, and while keying at the rate of less than six dots per second, I can

# May 1955

get over 50 cleanly formed dots before the bug comes to rest.

For a few weeks after this idea was first put to work, I had the extra magnets lying around on the desk where they were easily misplaced. When I finally remembered the basic properties of magnets, I simply placed them against the front panel of my receiver where they stay put until wanted.

--- Cyrus T. Read, W9AA

# PROTECTION OF TETRODE SCREEN GRIDS

O<sup>NE</sup> of the disadvantages of using a fixed screen supply is the excessive screen dissipation that occurs when plate voltage is unintentionally removed from the tube. This drawback of the fixed-supply system can be overcome by feeding the screen through the contacts of a normally open s.p.s.t. relay as shown in Fig. 2. Voltage for the relay is obtained from the

Fig. 2 — Protective circuit for fixed screen-supply operation.

high-voltage plate supply through the dropping resistor,  $R_1$ . The value of resistance and the wattage rating of  $R_1$  will be determined, using Ohm's Law, by the resistance of the relay winding and by the output voltage of the h.v. supply.

The most desirable feature of the system is that it is automatic. If the plate voltage is removed from the tube because of a blown fuse, defective component or the unintentional opening of a control switch, the relay opens and breaks the screen voltage lead.

- Don Priebe, WSMQQ

[EDITOR'S NOTE: This circuit is quite similar to the one described by  $W\emptyset NCV$  in QST for December, 1952. However, in the event of an opening in the relay winding, W8MQQ's arrangement does not affect operation of the power-supply bleder as would be the case with the previously-described installation.]

# HOMEMADE RUBBER STAMPS

 $\mathbf{I}^{\mathrm{N}}$  "Hints and Kinks," QST. November, 1954, there appeared a brief article on homemade QSL cards printed with a rubber stamp. This prompts me to call attention to an article entitled, "You Can Make Your Own Rubber Stamps," presented in the September, 1954, issue of *Popular Science*.

- Herbert Sinofsky, W2GKS

The publishers of QST assume no responsibility for statements made herein by correspondents.

#### PIRATE G

44 Hawkhurst Road Coldean, Brighton Sussex, England

Editor, QST:

I am being inundated with QSL cards, mostly from W hams, purporting to be confirmation of 3.5-Mc, contacts (c.w.) over the past few months and nearly all during the hours 0100-0400 GMT. All report high signal strength—which gives me an impression that the station making these contacts may be on the American continent. At any rate, they are all "pirate" contacts as I do not work 3.5 Mc, and near work during the "little hours" I...

. . Their cards sent to me reporting the "contacts" with my station are being held for evidence for the G.P.O. here! Incidentally, my name is Cyril and nearly all the cards sent address me as Carl so I guess my "pirate" is using that name on the air.

--- C. T. Fairchild, G3YY

#### THIRD-PARTY TRAFFIC

MARS/Amateur Station K3WBJ Walter Reed Army Med. Center Washington 12, D. C.

Editor. QST:

If one listens on 20 meters he is certain to hear Stateside stations handling traffic with the DL4s, Gs, CSs, Fs and others. Most Stateside amateurs do not realize that FCC prohibits third-party traffic with foreign countries, excepting Liberia. Cuba, Canada, Chile, Peru, Ecuador, and those stations operating beyond the continental U. S. A., such as KZ, KP, KG, KL, KÅ, etc., who are licensed by FCC.

The only way traffic can be passed to the U. S. A. from Germany is on MARS frequencies where the German station becomes a U. S. military station using military calls issued by chief Army or Air Force MARS, Pentagon, Washington, D. C.

It is possible that the Stateside amateur does not know this or is too kind-hearted to reply "Sorry OM, but we are not supposed to handle traffic with DL4 stations."

To those who are accepting phone-patch traffic and written messages from DL4 amateurs, 1 say let's do our duty and follow the rules of FCC — no traffic from Germany on the amateur bands.

---- Pfc. Mcrle W. Wynn, W1DLO [EDITOR'S NOTE --- Message traffic for U. S. military personnel overseas is permitted only with amateur stations identified by properly authorized call signs having a one- or two-letter prefix beginning with W or K.]

#### NOT THIS WAY

1595 N. Virginia St. St. Paul 3, Minn.

Editor. QST: .... In tuning across 14 Mc. I hear a weak ET3 in Ethiopia. When he finishes his CQ I call him, but he comes back to a W1. After giving the W1 his report and expressing delight in working the W1 again, he turns it back to the W1. This W1 immediately opens the formalities with the words "Say. I worked you two months ago and I still haven't got your QSL — how come? Also, if you run across that ET2 in Eritrea, tell him I haven't got his, either."

If I had been the ET3, I would have thereupon turned off the rig and slunk away, but the ET3 gamely comes back and says. "Say, OM, mail delivery in this country is really very poor compared to the U. S. A. We consider if we get a letter from your country in two months that that would be normal delivery time. I also been off the air since last working you as my 837 oscillator failed and I just managed to hum a substitute from a passing camel caravan." He then turns it back to Soft-hearted John, the W1 station, whose first words of sorrow, condolence, and understanding go like this:

this: "Well, if mail delivery in your country is so lousy as to take 2 months, you'll probably be getting my card any day, so how's about mailing me your card airmail today?" I never did hear the ET3 come back to that bit of genius so maybe even he forgot he was a gentleman.

To my mind a suitable cartoon to illustrate how bad this QSL mania has become would be one like "Gil" made up years ago of a big bandit with a blackjack in his hand hovering over a small cringing citizen and overhead the words "Gimme your handle"; but in this case substitute the words "Gimme your QSL."

. . . I wonder how many U. S. hams understand the value to a foreign ham of postage. Eight cents is plenty but even to me 25 cents for airmail is pretty strong between paydays. I looked up the ET3 and he was listed as an Air Force man so I would presume even he ate off crockery and not gold plate. (Ethiopian Air Force man, that is;)

Every time a DX station calls CQ, hordes of U. S. stations call him and flood him with QSLs. He no doubt already has hundreds of U. S. cards, but being a gentleman, he is obliged to mail his in return and postage can become an important item. Include return postage coupons to defray the return postage and to help remind him to QSL. If he happens to he wealthy, he can turn the postage money over to his favorite charity.

Don't lose your head if a foreign ham doesn't QSL. Who knows — maybe he is having labor trouble with the follows that turn his tread-mill-powerd generator like the OQ5 in the Belgian Congo I read of years ago. After all, it's not quite as bad as having a doctor tell you that you have cancer.

--- Cliff Proctz, WØPDN

# 'PHONE-BAND C.W.

133 Cherry Ridge Rd. Peoria, Ill.

Editor, QST:

I read the letters sent in by W5UWQ and W4UWA (March 1955, p. 46) and I agree with both of them, to a certain extent.

Contrary to what most 'phone addicts seem to think, c.w. is not "a thing of the past"; it plays just as large a rôle in ham radio as 'phone does. I will admit, however, that some c.w. operators are inconsiderate enough to work in the 'phone bands, and 1 agree that these bands should be set aside for 'phone only.

As for s.s.b., the letter from W8HKE (right below the other two letters) hats the nail on the head. I hope most of the anti-s.s.b. men read it carefully.

Let's face it; all three are here to stay. Instead of arguing ..bout which one to eliminate we should try to get 'phone and c.w. separated, and convince those d.s.b. guys that s.s.b. is doing more good than harm.

- Bill Wildfong, W91WC

58 Throop Ave. Auburn, New York

Editor, QST:

In reply to W5UWQ's letter griping about c.w. on the 'phone bands — I agree with him completely. However, I fred that something should be done about the overlapping of the VE 'phone band and the American Novice band on 80 (Continued on page 144)

# BY ELEANOR WILSON,\* WIQON

# Additional YL Clubs

The following augments information on YL clubs given in this department last month:

Canal Zone QRMarys — YLRL unit; organized 1952; seven members (all of the Canal Zone YLs); meets bimonthly at members' homes; no dues; president KZ5DG, Grace Dunlap, Box 28, Balboa Heights, C. Z.; issues the Canal Zone QRMary-Go-Round Certificate.

San Diego Young Ladies Radio League — YIRL unit; organized 1947; seven members; meets second Friday of the month at the American Red Cross Building, 3650 5th Ave., San Diego, Calif.; no dues; president, W60LP, Alice Mc-Cleary, 1524 Missouri St., San Diego 9.

XYL Club -Composed of wives and feminine relatives (licensed and nonlicensed) of members of the Black Hills ARC, Rapid City, S. Dak.; organized 1948; meets monthly in members' homes; dues \$1.25 a year; purpose is to assist the Black Hills ARC with its annual hobby show and to aid in its recreational program.

#### Sentiments on C.W.

What is c.w. to me? It is a magic key that opens many mysterious doors — an ethereal bridge forged of countless dits and dahs, borne aloft on the wings of light, space, and divine mystery . . . a sparkling want that spans great distances or hops backyard fences to afford its disciples a brief glimpse into the lives of others. . . It is a lilting language which commands either detached respect or frank and warm love, depending upon whose mind it touches. . . . C.w. is a subtle bouding accut that delieately welds two strangers into an intimate oneness for a fleeting moment . . . a delightful, tantalizing and yet thoroughly satisfying mistress to all her lovers.

These thoughtful words were copied by OM W6KMJ. Dan Peterson, of Long Beach, during a recent 40-meter QSO with W6OQY, Betty Entner, of Coronado. Dan, impressed by Betty's "beautiful bug fist" and devotion to e.w., shares her sentiments with us with the hope that they may strike a spark in the hearts of many struggling YL Novices and inspire them toward the mastery of the necessary 13 w.p.m. for their General Class license.

\*YL Editor, QST. Please send all contributions to W1QON's home address: 318 Fisher St., Walpole, Mass.

#### COMING YL GET-TOGETHERS

May 20th-22nd — LARK Convention, W9 YLs, Allerton Hotel, Chicago. Write W9MYC.

June 24th–27th — First YLRL International Convention, Hotel Miramar, Santa Monica, Calif. W6UHA, general chairman.

## YLs You May Have Worked

Lenore Kingston Conn, W6NAZ, has been a familiar face and voice to countless amateurs and to the general public as well for some 15 years. Licensed in 1939 (as W9CHD, later W2NAZ), she has combined her multiple radio activities with years of free-lancing as a radio actress and a commercial announcer for radio and TV.

Considered "a sort of 'pioneer'" in TV, she started work in that medium in 1941, Lenore is a member of the Los Angeles VLRC and a charter member of the YLRL (Vice-Pres., 1947). She is currently editing a second edition of the YLRL Directory, which will contain information on more than 500 YLRL members. She also edited the first edition in 1948. Married to W6MSC, technical director for NBC-TV, Lenore divides her hobby time at her Sherman Oaks QTII between e.w. and 'phone, primarily on twenty. Lenore's friends testify that she is a conscientious worker and deserves the success she has enjoyed in her vocation and avocation.

#### Keeping Up with the Girls

The annual luncheon and installation of officers of the N.Y.C. YLRL took place Feb. 19th at a downtown restaurant. YLs who attended were new officers W2IQP, Pres.; W2IGA, V.P.; W2MVV, Secy.; Helen Zuparn, Treas.; and members 1828 EEO, EUL, JZX. OWL, PZA, QGK, QWL, TBU, K2AFR, and KN2DPN. . . . Three KZ YLs plan Stateside vacations this summer: KZ5KA, Kay (W9RIH). KZ5PL, Pat; and KZ5DG, Grace (WØDLU). KZ5DG worked all but six of her 240 contacts in the YL-OM contest on 15 'phone. . . . W8fIWX. Lillian, hasn't missed a session of the 40-meter YLRL net since its inception in 1953. . . . W4YYJ, Lois Anne, has her 25w,p.m. Code Proficiency Certificate. . . . VE3DEA, Denny, attended a ham gathering in Scotland and enjoyed meeting 150 OMs, some of whom she has QSOd on 20 'phone since returning home to Toronto. . . During the Mothers' March of Dimes for polio. W4UDI and W4UDQ relayed to mobiles who picked up money at various collection points in Memphis, Tenn. Lenette and D. B. also assisted with relays in a welcomehome reception for the National March of Dimes poster . W1ZOL, Leta, of Bangor, Mc., has assembled a child. . . Johnson Ranger and is enjoying 40 meters. . . . W1LYR continues to handle considerable traffic for Presque Isle and vicinity. Along with W1UZR, Rita, and W1YTE, Isabel, Hazel checks into the Sea Gull Net daily. . . . WIYYM, Ellen, of Hq., reports that about 6 per cent of participating Novices in the 1955 Novice Round-up were YLs - by call: WNICOL, KN28 INQ, KER, WN3YTM, WN4HYV, KN68 EIG, HTC, HWH, WN7WHV, WN8UAP, IFN88 UZM, VGE, VVY., ... W4RLG, Frances, YLRL chairman of the Fourth District, is home after almost a year in a hospital. . . . Two new harmonics announcements; a boy in February to W3RXV, Peg, editor of YLRL Harmonics, and OM W3RXW; a girl in January to W4HHI, Joanne, (Continued on page 148)

# Armed Forces Day Program-May 21st

THE Army, Navy and Air Force invite all U.S. amateur radio operators to participate in the Armed Forces Day Program for 1955. The amateur activities are jointly sponsored by the Army Signal Corps, Air Force Directorate of Communication, and the Naval Communications Division.

A receiving contest will be open to anyone who can copy International Morse Code at 25 w.p.m. Listeners who submit a perfect copy of the transmission will receive a Certificate of Merit, attesting to their code-copying proficiency, from the Secretary of Defense.

A military-to-amateur transmitting and receiving test will be conducted for all holders of valid U. S. amateur radio licenses. Headquarters stations of the Army, Navy and Air Force will establish radio contact with amateur stations and will acknowledge these contacts with special QSL cards. Each service headquarters station will QSL separately so amateurs will have an opportunity to qualify for three different QSLs.

In addition, a radioteletype transmission will be sent from MARS Headquarters and from official Navy stations. Any amateur station capable of receiving radioteletype transmissions is invited to copy the special message. A special letter of acknowledgment will be awarded to each amateur who participates.

MARS directors and Naval Reserve organizations are being urged to feature radio activities at their military installations as part of this year's plan for inviting the public to visit the Armed Forces "at home" in 1955.

# C.W. Receiving Competition

The c.w. receiving competition will feature a message from the Secretary of Defense. All individuals, amateur operators and others, are eligible to participate. A Certificate of Merit will be issued to each participant who makes perfect copy.

Transmissions will be at 25 w.p.m. on the following schedules:

| May 21st                                            | Station                            | Frequencies (Kc.)                                 |
|-----------------------------------------------------|------------------------------------|---------------------------------------------------|
| 1900(EST)                                           | WAR                                | 14,405;20,994                                     |
| 1900(EST)                                           | NSS                                | 121.95;4390;9425;<br>12.804:17.050.4;22.491       |
| 1900 (EST)                                          | AIR                                | 3347; 6997.5; 143,460                             |
| 0600 (GCT) (0100 EST<br>May 22, 2200 PST<br>May 21) | WAR                                | 14.405:20.994                                     |
| 2200 (PST)                                          | NPG (Navy Radio,<br>San Francisco) | 114.95; 6428.5; 9277.5;<br>12.966; 17,055.2       |
| 0100 (EST) (May 22)                                 | AIR                                | 3347; 6997.5; 143,460                             |
| 1100 (GCT) (2000 Item<br>May 21)                    | NDT (Navy Radio,<br>Yokosuka)      | 2287.5; 4545; 9427.5;<br>13,471.5; 16,445; 23,010 |

Each transmission will commence with a fiveminute CQ call. It is not necessary to copy more than one station, and no extra credit will be given for doing so. Transmissions should be submitted

56

"as received": do not correct possible transmission errors. Punctuation will be spelled out and should be copied as sent. Copies should be mailed to Armed Forces Day Contest, Room BE-1000, The Pentagon, Washington 25, D. C. Time, frequency, and call letters of the station copied should also be included.

# Military-to-Amateur Test

Military stations WAR, NSS and AIR will be on the air between 1800 and 2400 EST on 21 May 1955, to contact and test with amateur radio stations. The military stations will operate on spot frequencies outside the amateur bands as follows:

. ....

| v vedmournen (seci) |
|---------------------|
| 4025 (A-3)          |
| 6997.5 (A-1)        |
| 4010 (A-1)          |
| 7375 (A-1)          |
| 14,385 (A-1)        |
| 3347 (A-1)          |
| 7635 (A-3)          |
| 14,405 (A-3)        |
|                     |

Contacts will consist of a brief exchange of location and signal report. The military station will not be permitted to handle traffic nor exchange messages.

## Radioteletypewriter Receiving Competition

The radioteletypewriter receiving competition will feature a special joint message from the Chief Signal Officer, USA; the Director, Naval Communications, USN; and the Air Force Director of Communications. A letter of acknowledgment will be sent to each amateur participant who submits a copy made from the radioteletype transmission of this message. Transmission will be at 60 w.p.m. on the following schedules:

| May List   | Station                                                                                           | Frequency (Kc.)      |
|------------|---------------------------------------------------------------------------------------------------|----------------------|
| 1300 (EST) | NDC (Norfolk, Va.)<br>AIR (Washington, D. C.)                                                     | 7375<br>7915         |
| 1300 (CST) | NDS (Great Lakes, 111.)<br>A4USA (Atlanta, Ga.)                                                   | 737 <b>5</b><br>5760 |
| 1300 (MST) | NDF (New Orleans, La.)<br>or NDW2 (Salt Lake City,<br>Utah)<br>A5USA (Fort Sam Houston,<br>Texaa) | 7375<br>14,405       |
| 1300 (PST) | NDW (Treasure Island,                                                                             | 7375                 |
|            | AF6AIR (Hamilton AFB,<br>Calif.)                                                                  | 14,405               |

Each transmission will commence with a period of ten minutes of test and station identification to permit amateurs to adjust their equipment. At the end of the test period, the message will be transmitted. Copy should be submitted "as received" to Armed Forces Day Contest, Room BE-1000, The Pentagon, Washington 25, D. C. Time and call of station copied and name and call of amateur receiving the transmission should be included.

# CONDUCTED BY EDWARD P. TILTON, WIHDQ

The best 50-Mc. season in years could be about to begin. Interest in the band, lagging for some time, shows every sign of coming back strong. How well it comes back will depend on how well we respond to the opportunity that is inherent in the opening of the band to Technician Licensees, effective April 12th. Conditions are almost sure to be better than for several years, and for the first time we have a real incentive that will attract new hams. Now it's up to 50-Mc. enthusiasts the country over to make the most of this chance to sell the band, and keep it sold.

Why has 50-Mc. interest lagged? We have to go back to the resumption of activity following World War II for all the factors. One certainly was war-surplus gear, or the lack of it. Right at the most opportune time for the good of the 2-meter band, just as we were changing over from 112 to 144 Mc., thousands of SCR-522s and other surplus gear for the new band were dumped on the market. You could get on 2 for next to nothing, and v.h.f. men by the thousands snapped up the chance.

But the 6-meter band enjoyed no such bonanza. During the first months on the air, we had to make the shift from 56 to 50 Mc., at a time when there was no gear, surplus or new, for the new frequency. What we had we made ourselves, and it is a credit to amateur radio that we managed to show several hundred active stations on 50 Mc. almost at once. The 6-meter band was intriguing territory, and it attracted quite a few operators who were interested in more than just routine QSOs, though it was good for that kind of hamming, too.

Then came TVI. First in the New York area, then elsewhere as new TV stations appeared on Channel 2, 50-Mc. men found the going too rough for many of them. Since the lifting of the TV allocations "freeze" and the resultant open-

This antenna system could be the means of achieving the long-sought goal of 144-Mc. DX up the Pacific Coast. A 30-foot parabola mounted on a dolly, so that it can be rolled around on the flat roof, it is erected on a 1200-foot elevation directly above Hollywood. The lights of the Los Angeles area stretch out for 20 miles toward Long Beach in this night shot by KN6GLG. K6EGP is seated at the left, W6COH climbs the framework on the rear of the reflector, and K6BXW is at the right. W6MJ, who sent the picture in, says that a kilowatt rig will be feeding the array this spring.

May 1955

ing of many new Channel 2 stations around the country, the number of active 50-Mc. stations has dropped off from its already none-toohealthy level.

TVI in Channel 2, from 50-Mc. transmitters, is undoubtedly one of the more difficult problems hams have had to face, but there are redeeming factors, even here. Not the least of these is the less avid interest in TV on the part of the general public. Televiewing is more general than ever, of course, but with more than one channel available in nearly all localities, interference in one of them is not the life-and-death matter it once was. Remember, too, that it is usually a receiver fault; if your rig is "clean" you can stay on the air. And we are learning that the Channel 2 problem is not insurmountable. W2IDZ showed the way in a two part article in June and July, 1954, QST; an effort that won him second place in the "Outstanding QST Article of the Year" contest for 1954, incidentally.

How bad is the problem, anyway? It's rough, if you live in a weak-signal Channel 2 area, with a forest of TV antennas around you, but there are several tricks that can be employed advantageously, in addition to the filters described by W2IDZ. It's a local problem, mainly, so you can help things a lot by using a high antenna, to keep the main radiation pattern from warming up neighboring TV arrays. Low power works

wonders, and fortunately, operating on 6 with no more than a few watts can be real fun.

If you don't have Channel 2 to worry about, 6 is likely to be one of the most TVI-free bands we have. What interference you do encounter is easily cured, in almost all cases except where Channel 2 is involved. In many areas, the extensive shielding and filtering, now so commonly practiced in low-frequency circles, may be wholly unnecessary. Thousands of U. S. hams could operate around the clock on 50 Mc. without the slightest worry about TVI. The main thing is to get them to try it!

A series of QST articles for the 50-Mc. newcomer begins in this issue. Technician licensees in all parts of the country will be building 6meter gear in the coming months. One of them may be your neighbor, or a member of your radio club. Like any other beginner, he may need help. When he gets ready to go on the air he'll need someone to talk to. It's some time since we've had an opportunity to develop new activity on 6. Let's not muff this one!

#### Here and There on the V.H.F. Bands

The best West Const 2-meter DX in several years is reported this month by K0CAL, San Diego. Her 146.5-Me, signals were heard by W6SXK/num at a distance of more than 600 miles out in the Pacific, at 2037 PST, Jan. 28th. The report was delayed until the completion of a round trip by the *Hawaiian Rancher*, the slip on which W6SXK makes the run to KH6-land regularly. Cliff has also heard the Bay Area repeater station, K6GWE, at distances of more than 300 miles.

Such reports point up the fact that conditions along the Pacific Coast may be very favorable for long-distance v.h.f. propagation. The K6GWE antenna is a simple nondirectional affair, and the 16-element beam at K6CAL/W6IBS was aimed at Los Angeles during the 600-mile reception, so the signal was heard off its side. How long will it be before home stations in San Diego or Los Angeles work into the Bay Area, or farther? We feel that such an event still awaits only the use of high power, big antennas. c.w. techniques, and selective low-noise receivers on regular schedules.

A likely prospect for such DX is the set-up shown in the adjoining photograph. This 30-foot parabola should provide the autenna gain (though we feel that the dipole is in the wrong position!) and the members of the Two Meter and Down Club who are in back of project say that there will be a high-powered rig feeding the big array this spring. This would seem to have what it takes to work K6GWE. W6AJF, or any of the other good set-ups in the Bay area, and it shouldn't stop there. With W6JIP, W7OKV and others around Portland using high power, and W7LHL reported to be nearly ready to go with a kilowatt rig in Seattle, why stop at the Bay area?

It's less than 1000 miles from Los Angeles to Seattle. Portland is about 850 miles. San Diego to San Francisco is less than 500 miles. Are these impossible distances on 144 Mc. in 1955? Having had a good look at the terrain along these paths last fall, we still feel that the best possible equipment and techniques will turn the trick within a month of the first time they're tried. We hope that there is provision in that Hollywood array for going to horizontal polarization, and that there will be a keying jack in that high-powered rig!

An attractive prospect for 2-meter DX off the Atlantic Coast is Bernuda. W3YHI sends word that VP9BM is to be on 2 regularly with 100 watts, a low-noise converter and a rhombic centered on Philadelphia. Address: M/Sgt. J. W. Wenglare, 1934 AACS Sqdn, APO 856, Postmaster, N. Y.

Another buddy of W3YHI (when they were DL4CK and DL4XS on 144 Mc.) is getting set to make a name for himself on 144 Mc. in North Africa. Jo visited us during the winter, full of plans for high power, rhombics, hot converters and other 2-meter DX necessities. Then he was about to hop off for Casablanca, and we're standing by to hear from him

any day that he is ready to take on all comers for a shot at the 2-meter DX record.

In the spring, the young man's fancy lightly turns to thoughts of expeditions to choice v.h.f. locations. Here are two trips that are well along in the planning stages. W3JWV and W8GUZ have been dreaming this one up all winter. They will operate W8JWV/4 from the summit of Mt. Mitchell, in North Carolina, the night before and during the June V.H.F. Party, the 7th, 8th and 9th, A 16-element array will be used on a 75-watt 2-meter rig with an 829B final. Operation will start around 1900 EST, June 7th. Mimeographed notices have already been sent out to a considerable mailing list, and final details will be sent just prior to the Farty.

And here's one to delight the hearts of searchers after 50-Mc. WAS. W2QCY has decided that something has to be done about the lack of 6-meter stations in certain Western States. Roy is planning to load his panel truck with 6-meter gear and take off for Nevada. Utah and possibly other states that are keeping scores of 50-Mc. men from achieving WAS. This expedition will be well equipped as to gear, autennas and emergency power, and operation is scheduled for the height of the DX season. in the latter part of June and early July. There should be a batch of new candidates for the coveted 50-Mc. WAS award before W2QCY/7 linishes his rounds. Right now, Roy is looking for two stalwart and experienced 6-meter DX men to accompany him. Any takers?

If you prefer picnics to expeditions, here are a couple of talk-eat parties scheduled for the same date, July 31st. The Annual Turkey Run V.H.F. Picnic, a fixture in Midweetern v.h.f. circles, will be held, as always at the State Park of that name, just north of Terre Haute, Ind. W92HL. Terre Haute, is the man to see for more information. And W8NOH. Grand Rapids, Mich., tells us that the v.h.f. fraternity of Western Michigan will congregate for the same purposes at Allegan County Park on the shores of Lake Michigan, also on July 31st.

W8NOII also writes of an interesting comparison of 2 and 75 in checks made with W9RXS, Milwaukee, Wise. This path of about 120 miles across Lake Michigan shows very satisfactory signals with 100 watts on 144 Mc. On 3.9 Mc., a 400-watt rig has rough going, what with skip effects and heavy QRM.

A 175-mile sked has been kept reliably on 144 Me, by W9ZHL and WØYRX, near St. Louis, since last October. On only three occasions since that time has communication been difficult on voice, and many other stations in the St. Louis area and Western Illinois have called in also.

Last month we mentioned the appearance of W1DEO, Cape Elizabeth, Maine, on 144 Mc. Herb has been on regularly since, working W1OOP, Needham, Mass., nightly. He is also on 50 Mc., and is working down into Connecticut on that band also, though signals are stronger on the higher band, when conditions are above normal. W1DEO is presently working on 144.12 and 50.7 Mc.

If you were waiting for a shot at Florida, following our recent report that W5VWU was moving there, don't wait any longer, W5AJG writes that he worked W5VWU/mobile, en route back to New Mexico. Leroy reports that the tropospheric season began early this year, in the Gulf States, with W4UUF, Pensacola, Fla., working into Texas on the night of March 11th. The following morning signals were excellent from W5RCI, Marks, and W5JTI, Jackson, Miss., so W5RCI and W5AJG went to 220, for their first contact on that band. The distance is about 370 miles. W5AJG has been running daily skeds on 144 Mc, with W5HXK, Watonga, Okla., 230 miles, for the past three weeks without a miss.

The 220-Mc. band is very much alive in Swarthmore, Ridley Park, Springfield and other towns west of Philadelphia, according to W3TEE. Several stations are on nightly between 2100 and 2200, some having been at it for several years. W3UGA holds the local record with more than 1000 QSOs on 220, and W3KPK is not far behind. All sorts of equipment is in use. including simple modulated uscillators and dipole antennas. Anyone needing help in getting started may get in touch with any of the gang, the more active members being W3s AHL KPK RWH QMQ QZT TEE UGA UKG YQS.

The Philadelphia area is good round-table territory. A 6-meter group has held forth each Monday night for years, and they frequently join in a similar session held in the Washington area on Sunday mornings. The over-the-air friendships thus formed were brought to a more personal status on March 20th, when a delegation consisting of W2ORA and W3s CGV CUB MXW RQT GGR and W8NRM/3 visited the Washington stations in a body. First stop was W3OJU, District Hts., Md., where W3s YHI JES UJG WOD and W4UMF joined the party. Next they converged on W3OTC, Silver Spring, where Bob played them some recordings to show how their signals sound at the southern end of the circuit. The tinal shack stop was W3KMV, Chevy Chase, where a main attraction was 5-over-5 array for 50 Mc., soon to be described in QST. The party wound up with dinner at O'Donnell's Restaurant. A return visit to the City of Brotherly Love is now planned:

More Philadelphia area v.h.f. activity: The York Road Radio Club has about 40 crystals on 146.25 Mc. An informal net is conducted each Sunday at 0930 on this frequency, with the club station, W3RDM, as control. A club project recently completed the construction of 14 tunable converters, with 6BQ7 front ends. A companion transmitter is next on the program. Chief engineer for this project is W3NKD. The club is pushing for polarization standardization, to end the confusion now prevalent within a 100-mile radius, and they want ARRL to assist in this.

For a long time we've been pushing as hard as we know how for horizontal polarization. Conversion to horizontal is well along throughout New England, New York, and Northern New Jersey. In view of the improvement in working range that has resulted, and the excellent results in working the vertically-polarized mobile stations that have shown cross polarization to be no problem in that connection, we feel that there is little reason to continue vertical polarization at any home station. The way to get standardization on horizontal is simply to change over. If any appreciable number do it, the rest will follow.

#### **OES** Notes

K#BAH, Richmond Hill, N. Y. --- Would like to hear from near-by operators interested in 220 Mc.

K2DYC, Phelps, N. Y. — Made several crossband contacts 220-144 Mc. with W2QS, but no activity heard on 220 as yet.

W3UQJ, York, Penna. — New 50-Mc, rig with 41)32 in linal, and 3-element array nearing completion. New 220-Mc, station, W3AJD, Nightly skeds kept with W3LZD on 220.05 Mc, at 2200, and Sundays at 0900 and 1230.

W4HHK, Collierville, Tenn. — Joint 50-Me, receiver project with W4BAQ. Has crystal-controlled front end that can be switched to either communications receiver tuning 7 to 11 Mc., or to fixed-tuned i.f. for reception of local CD net frequencies. Meteor skeds on 144 Mc. continue with W2UK and W1HDQ, as do scatter skeds with W4PCT and W9WOK. Statewide Tennessee net on 50.5 Mc. in prospect.

W4UIW, Miami, Fla. — New 6-meter converter completed. Made duplex crossband contacts, 2 to 6, with W4KQG, and with W4ZDR on 11 and 6.

W5FPB, Albuquerque, N. Mex. -- Reception of unidentitied DX signals from the west on 144 and 432 Mc., Feb. 18th, reported by W5DNK and W5FAG.

W7JRG, Billings, Mont. --- New 6-meter rig and beam ready for the spring DX season.

W8WRN, Columbus, Ohio — Work well along on 432-Mc. tripler-amplifier using 6524 tubes. Converter for 432 Mc. modified to tune 8 to 12 Mc., replacing the former tripleconversion arrangement to 50 Mc. Lots of local activity observed on 144 Mc.

WØMOX, Lawrence, Kansas — 2-Meter band checked daily on hour and half hour, 0630 to 0800, and evenings beginning at 1930 CST. New 125-watt rig for 50 and 144 Me. completed, WØKEC and WØZDB working on 420 Me.

#### W7VMP 144-Mc. May-June Schedule

Experience has shown again and again that 144-Mc. signals can be heard over paths of up to 500 miles consistently, if optimum equipment and techniques are enployed at both ends. What lies in between, in the way of mountains, may have very little to do with it, except that when the mountains are at the right point along the path the signal is better than would be the case over flat terrain.

Most of our inability to work over mountains on the v.h.f. bands in the past has been the result of insufficient power, ineffective antennas or poor receivers. With these factors taken care of, v.h.f. men in many locations that once seemed "impossible" are finding that 2-meter DX can be worked. The only real problem, when equipment is taken care of, is the lack of stations to work.

We would have once considered it ridiculous to try 144 Mc. between Phoenix, Ariz, and Los Angeles, for instance, but W7VMP has done it often. Results have also been obtained on schedules with Albuquerque, a mountainous path of about the same length in the opposite direction.

After a rebuilding operation on the exciter, in the interest of improved c.w. stability. The Three Fenwicks are ready for more 144-Mc. DX schedules. Here is what W7VMP will be up to in May and June. All times are in MST. Transmissions will be on c.w., with 1 kilowatt input. Frequency: 144.0165 Mc. Antenna: 32 element horizontal array, 72 feet up. 2000 — transmit east. 2005 — listen east. 2010 — transmit northeast. 2015 — listen northeast. 2020 — transmit northe. 2025 — listen north. Other skeds will be made, and kept, upon request.

# Or Why a DXer Leaves Home

# BY JOHN R. BECK, \* W6MHB

O FF the west coast of Costa Rica lies fabulous Cocos Island, subject of many legends concerning hidden pirate treasure. While eavesdropping on a QSO between KV4AA and W6VBY, I learned that an expedition had been organized to journey to that tiny dot in hope of finding legendary pirate loot. Moreover, the adventurers needed someone to keep them in touch with their families via amateur radio. Being a DX-minded ham, this was a wonderful opportunity to set up as a rare DX station and be part of what promised to be a highly exciting adventure.

Arrangements were made for me to become a member of the expedition and it looked as though I was all set. My XYL, Margaret, said that I would kick myself for the rest of my life if I didn't go, and my employers — the Navy Department — in effect said the same thing.

On January 8th our party sailed from Los Angeles for Costa Rica on the Isle of Capri. Operating as W6MHB/mm on 21 Mc., preliminary traffic handling was commenced along with a few conventional QSOs. Many contacts were made despite an S9 noise level from numerous generators, fans, blowers and the like. During our voyage, the ocean was generally smooth except for two storms that lasted five days out of the thirteen we were at sea. Nevertheless, I was unable to operate for only one day; it was just too rough to sit on my camp stool in the radio shack. Also, I had wheel watches from twelve to four — both morning and afternoon causing operation to be limited to the morning hours during which 21 Mc. was open.

On the second day out of Los Angeles, we received news that Costa Rica was in a state of revolution. Naturally, there was much worry over this, both among the expedition members and stations worked. Roy Colwell, W6LW, undertook to relay news concerning the rebellion. Broadcast reception was anything but dependable.

We arrived at the Costa Rican port of Pun-\* 1567 Terrace Road, Walnut Creek, Calif.

tarenas on the 21st of January - a very hot and steamy spot. Upon clearance with the Port Captain, we took a jeep to San José, capital of Costa Rica, to have our contract to hunt treasure signed and seek permission for amateur operation while on Cocos. The fact that our treasure-hunting contract with the Costa Rican government clearly stated that there was to be no radio communication, except with government stations on the mainland, definitely complicated matters. Conferences with Tommy Gabbert, TI2TG/ K6INI, brought out information that the Radio Club of Costa Rica was greatly interested in having Cocos represented on the DX bands. He said that David L. Maduro, TI2DLM, the guiding light of that organization, would be the man to see for assistance in securing government approval. David was contacted and he and I made trips to see the radio inspector. It was agreed that if no mention was made of the purpose of the expedition, it might be possible to operate as TI9MHB. With the signing of the expedition contracts to hunt treasure on the island, permission was granted.

I was really in high spirits!

We departed for Cocos with a full crew and all of our equipment. The voyage again was smooth, and at four on the morning of February 7th, we dropped anchor in Chatham Bay. There was work aplenty to be done. Rafts had to be constructed and camping gear and food had to be moved ashore, not to mention setting up ham radio gear. Landings were difficult in the surf and could only be made at low tide as places to beach the small boats often became nonexistent. Furthermore, many jagged rocks protrude from the water, making the shore boatwork dangerous as well as difficult.

By sundown on February 9th all of the radio equipment had been unloaded and set up. The generators were serviced and tested and all was ready with the exception of an antenna system. A clear spot extending across the

sandy beach looked like an ideal place for installing a long-wire. Don Wallace, W6AM, had previously presented me with

Operating as TI9MHB from Cocos Island, John R. Beck, W6MHB, spent many hours at his operating position to provide a large number of stations with a rare DX contact. Working 15 to 160 meters, 2024 contacts were logged at his remote location.

QST for

a good-sized spool of wire which was strung 900 feet to a tree trunk on the far side of the beach. Height: about *ten feet* above high tide!

The transmitter was funed to 7003 kc. and seemed to perk. Two receivers were in operation, one to monitor my own transmissions and the other to listen to the frequency specified for stations calling.

To test the long ears of the DX fraternity, first transmissions consisted of "DE TI9-MHB," sent once and at intervals. Nothing happened for several minutes. The boys were supposed to be waiting on pins and needles and for a time it was thought that the super long-wire was not so super after all. Finally W1DDF answered; then he of the calloused ears, KV4AA. While a five-minute QSO with Dick was in progress, the boys caught on and the pile-ups were beginning to form.

Our camp's location was excellent for working the United States and Europe. Since most of the island terrain is very steep, the only direction in the clear extended from approximately the Rocky Mountains eastward to North Africa. The effect of the hills was borne out by the fact that all Pacific island signals were quite weak. EL2X was worked, but his fine signal was all but inaudible most of the time.

The reports received while using the long-wire were not too favorable. To correct the situation, a ground plane for 40 meters was put up on the beach area when the tide was low. Rocks weighing up to one hundred pounds were piled to a height of six feet around the base of the supporting poles. The ground wires were tied to some of the larger rocks surrounding it, but the first time the waves roared in they were scattered over the surrounding area. However, the antenna remained erect and it was left that way for the entire period of operation. Later an antenna of the same type was put up for 14 Mc. When the tide was in, water came to within eight inches of the bottom of the radiator and the ground planes were submerged.

Fifteen meters was good while it was "in." Calling stations apparently did not hear each other too well as there was quite a bit of calling out of turn. For 'phone operation, it proved to be the best band because of the lack of commercial QRM and the amount of space available.

Twenty, of course, was the stand-by in the daytime. Usual conditions prevailed except that W6s required openings for loud signals. These occurred in the early morning and just before the band closed for Ws in the late afternoon. During the openings, W6 signals were tremendous

The Isle of Capri being made ready for the voyage to Cocos Island.

and equaled those from other districts. Normally, most stations heard from W7-land eastward were S9 during the entire daylight period.

Operation on 14 Mc. 'phone was slow because of the large number of strong stations calling simultaneously. Nevertheless, many contacts were made in spite of the QRM.

For the first few evenings Forty was very good but when the pile-ups got down to the weaker stations commercial interference became troublesome.

Eighty provided a big surprise. It seemed to be the best band for all-around contacts and many stations reported our signals strongest on that band. It was found that the long-wire did not function too well on Eighty. Something better had to be crected. Two trees, one in our camp, were found situated about 150 feet apart. A bow and arrow, used by one of the expedition members for hunting, was used to get a piece of light twine over one of the trees. The twine was fastened to an insulator at one end of a 3.5-Mc. doublet and then raised. One of the Costa Rican boys climbed, "Tarzan style," up the vines that hung from the other tree and secured the far end. This new antenna was forty feet high and seemed to perform very effectively.

Many European contacts were made on all bands and I was greatly surprised at the solid signals that were booming in from that part of the world. Many U.S.S.R. stations were heard working each other. In fact, several times during our schedules with W6LW, these stations were much louder than Roy.

A few contacts were also made on 75 'phone, but broadcast harmonics from the Mainland proved troublesome on that band.

I had promised several of the 160-meter gang that I would make an attempt to operate on the "top." So the old long-wire was loaded up and several CQs were sent. Just about the time it was thought that 160 was for the birds. WØNWX, "ye olde Clippertonian," heard my peanut whistle and the first 160-meter QSO with Cocos was in the books. Twenty-one contacts on that band followed. Subsequent reports from England indicated that TI9MHB was heard in Europe by at least one listener. The morning after the 160meter operation, seaweed was hanging from the long-wire. How the thing worked is beyond me!

An attempt was made to improve the contact format used by previous expedition and contest ops. One gimmick was to end a transmission with the call of the station being worked, the idea

The shore at Chatham Bay is littered with rocks. The larger ones are carved with the names of ships and seafarers who have visited Cocos. Some inscriptions date back over 100 years; almost to the time pirates were active in the area. The expedition also left its share of autographs.

Chief inhabitants of Cocos are hermit crabs, wild pigs, deer, and small lizards; there are also many tropical birds. Fishing is excellent but sharks up to six feet in length infest the waters surrounding the island.

Rising above the rocks on the shore of Chatham Bay stands the ground plane antenna used by TI9MIHB for 40-meter operation. The antenna remained erect despite merciless pounding by waves. being that everyone calling should know the characteristics of my signal. Also, if there was interference during the first part of my transmission, it might be gone before the end. The fact that very few repeats were requested indicated that the practice paid off.

Another scheme, although not new, was to specify the calling frequency. I had my VFO running at all times so I was unable to listen in on my own frequency. Calls were always requested to be from ten to twenty kc. higher.

On twenty 'phone, especially, the calling frequency system was abandoned because the resulting heterodynes were so fierce that it was impossible to read anyone. The practice of not specifying a listening frequency and continuously tuning over the entire 'phone band was the only logical solution. This jammed up the band fairly effectively for everyone but seemed to be the only way that stations could be copied. Some of the *sharper* (?) operators would make nice long calls after every transmission from me. Naturally, this did nothing to alleviate QRM.

Several hundred messages were handled and the expedition crew and their families were quite pleased with TI9MHB's efforts to maintain efficient communications between them. The DX gang stood by in a most commendable manner during the traffic-handling periods. All traffic for the expedition was handled by W6DFY, W6LW, WØCO and WØELA.

Who provided the best signals? W4KFC was one of the better from the East Coast; even on 160 he peaked to S9. The Midwest provided the most consistently strong signals. W8DUS was always thundering. From the West Coast, W6YMD stood head and shoulders above all others.

Finally, on February 22nd, the expedition had completed its task. The equipment was loaded aboard the *Isle of Capri* and we sailed for Puntarenas on the evening of the same day. Upon my return to San José, Ted Westlake, TI2BX, and his wife, Virginia, invited me to their beautiful country home. It was there that the process of returning flesh to my bones began (I had lost some fifty pounds during the expedition).

Later, W6LW, W6TT and TI2RU arranged for me to fly home. Arriving at the Oakland airport, Igwas greeted by W6DIP, W6LW, and Margaret, my ever-faithful wife.

In conclusion, thanks to all who helped make TI9MHB a reality: The Northern California DX Club; the Radio Club of Costa Rica; W6TT and W6DUB of Elmar Electronics who supplied a good portion of the equipment; W6DIP who loaned me a receiver and a generator; and W6KEK who supplied another generator.

The TI hams are certainly a wonderful group and their hospitality and generosity are not easily exceeded. They treated our group royally and we are more than grateful for their help and consideration.

And so now — the end of a wonderful journey. Did I hear someone say, "Where next?" ?

# CONDUCTED BY ROD NEWKIRK,\* W9BRD

# How:

When the hounds of spring arc on winter's traces ... goes the first stanza of the Wouff Hong Song, the hallowed club anthem of our beloved DXHPDS (DX Hoggery and Poetry Depreciation Society). We swiped that from Swinburne because we know he referred to DX hounds in particular and because we, too, congregate annually around this time. Yes, indeed, a goodly crowd was there!

It was put up to Great Circles Root to get the show on the road after the first round of Old Haywire began radiating. This he did with a lilting lament to the late QSL file of one bright boy who didn't believe in DXCC's "DX insurance":

> "Two-fifty confirmed," claimed O'Squire Who dared them to call him a liar. "Send in, men? What for? I'll wait till I've more!" You guessed it: O'Squire had a fire.

Slickrig Toppenbottom followed Circles to the rostrum with a blast directed at schizophrenic DX stations who advocate operating procedures they themselves negate:

> This rare one bleats out in great heat: "Spread out! Spread out or I'll queet!" So we move for the jerk And who does he work? The lid who remains zero-beat.

Then Owlbait Ostrowski limned in rhyme the impressive ingenuity of 100,000 McScree, a bird who tallies his DX score in terms of kilocountries:

> "The rules are all wrong!" cried McScree Whose Slobovian card was n.g. So he made his own list And there's nothing he missed — All stations are countries, you see.

The next ration of ridicule, delivered by Feeders N. Twining, was dedicated to that small pack of watt-mad megacyclic megalomaniacs who erroneously visualize themselves as ham-band Voices of America:

> When Two-Gallon Mossbrain dropped dead We found nary a tear being shed. For Hamdom, no loss --Such input made Moss Just a bootleg commercial, instead.

W6MUR, the sole out-of-towner to brave the vicissitudes of this year's DXHPDS powwow, then rose to the occasion with a tongue-in-cheek salute to all purveyors of scuttlebut DXpeditionary sensationalisms:

One rare catch popped up "in Albania," And another "in West Transylvania"; The grapevine went mad But the outcome was sad ...

\* New Mailing Address: Effective immediately, please mail all reports of DX activity to DX Editor Newkirk's new address: 4128 North Tripp Ave., Chicago 41, Illinois. You'll have to finish that last one yourselves, gang, for Bill's punch line was drowned out by commotion in the rear of the hall. A flying squad of our sworn adversaries from the Euphemistic Order of DXpurgators barged in and broke up our gathering with tear gas, cherry bombs, and a shower of leaflets labeled, "It's Only a Hobby, Fellows."

#### What:

And what a hobby! (They laughed and laughed when little Elmer said he was going up into his attic to chat with the U. S. Underscervtary of State and the King of Nepal. They didn't know that Elmer was a ham.) But that is neither here nor there. Before we tackle our monthly "How's" Bandwagon we should remind you that

In the lext to follow, frequencies (given in number of kc, above the lower band-limit) appear in parentheses, times withholt,  $K_{,0,i}(\theta) =$ 14009 kc, if the paragraph deals with 30-meter work. Times are (MT, using the nearest whole-hour floure such as 7 for 0720 or 0550, 0 for 0015 or 2349. As a rule each DX call is mentioned but once per band.

WN3ZKH hooked CO2GU, VP6KL, W4FH1/VO6 and WP4AAQ, plus 45 states. KN2JKC knocked off CM7JA, CO2BL and DL1FF on 7188 kc. W8RGF/2 heard ZL3GQ calling WN5FQR and other unsuspecting WNs around 7178 kc. at 0830 GMT. Other DX stations appear to get a bang from thrilling the WN/KN 7-Mc. gang so you Novices had better pass up no weak signals!

40 'phone DX work attracts but a hardy few. W1APA has what it takes, and it takes plenty. Gil collected CM2ZZ (193) 13, COs 2NT (186) 12, SLS (210) 14, HH2s JL (194) 12, RM (120) 11, KG4s AG (255) 12, AJ (208) 6, AV (267) 2, KH6s AGB (215) 11, AUB (210) 11, KV4BK (210) 11, PJ2AF (223) 11, PY7AGR (265) 3, TI2GC (194-250) 12-13, TG9VS (206) 11, VP8 10JF (300) 4, 2GW (200), 2LN (120) 12, 4TI (193) 12, 6JR (220) 11, 6KL (192) 12, 9BO (120) 12, 9BL (175) 12 and VK3ATN (100) 12....NNRC ears twitched over 7-Mc. voicers CTs 1CL 3AE, DU7SV, EAs 8AX 8BQ 9AS, EL2X (65), HH2s IA PL, HI6EC, HKØAI, HP3s FL OJ, HR1JB, JA2CT, KG6GX, KL7BBK, LUS a-plenty, PYs likewise, KJ6FAA, TG9BG (190), VPs 2DN 6FO 6WR 9L, Tasmatian VK7WA, YN4CB (70), ZLs galore and ZS1PM.

80 c.w. has forty's atmospherics-selectivity in no-trump and times ten. Stronghearts hold fast on 3.5 Mc., however, and doubtless there will be considerable DX worked by the W/K gang right through the hot months. DU7SV (20) 13, EL2X (12) 5-6, GD3UB (6) 0-1, HA5KBA (12) 1, HB1MX/HE (2) 5 and ZD2DCP (6) 6-7 contacted W911UZ..... EAGAE and H18EW (9) carried W4BRB to the 80-meter 117-country mark..... W5UUK gassed with an EL2, HK4DP, KL7PI, KM6AX, TI28 BX and PZ .... W3AXT concentrated on CTs 1UX 2BO 2, 3AB (18), EA8BF 2, FA9s RW RZ (10) 7, FPAP, LU2GB, LZ1KAA, OE5JK, PY6FI, VP7NG and ZS2A..... Eighty good DX fortune at this shack and that, at W21VS: VP7NX (5) 5, ZB1BF, W2LPV: FA9, KV4AA, OK2DG. K2BZT: FP8, KT1UX, OE2JG. K2HZR: HZ1HZ,

SP9KAD, YU1AD, 9S4AX. W4TFB: FA8DA. W6NJU: KR6LJ, XE2OK. W3YIN: KM6 VP7 ZS 9S4. W9UDK: XE1OE, ZLs 1BY 3GQ. W9VFM: KH4 KH6 KV4. DL4ZC: Ws 2HFP 4CDC.....WGDXC and SCDXC list 3.5-Mc. radiotelegraphers FF8AR (13), GD31BQ 0, HK4BD (17) 7, HA5KK 4, JAs 1CJ (5), 8AH (18), LA8RB 8, LZ1KDP 6, OE3SE 4, PJ2AA 4, PY5EK 3, UA9DH, UB5CF, VK7KM 12, VP8BD 2, YU2AEF and ZB2A 4.

'phone is the preferred playground of numerous DX 16 chasers these days and W6ZZ confirms the reason why: CES 31 6AB, HCls FK FS, HP3FL, KAS 2KC 8RK, KG4AR, KL7s AN BFW BGG CC, KM6AX, KV4BD, VP5AE of Turks, VQ2s DT FU, YV5FL, ZL1s BY MQ, ZS6s CV ZO and ZP5IB. Miles also collected ten more MMs on 21-Mc. A3. \_\_\_\_ HK3DP and PJ2AR were new 15-meter countries for W6NJU. \_\_\_\_ W4DOU now has 80 countries on 21 Mc. thanks to CT3AE, FA3OA, HI6EC, OQ5RU, YS1RA and others . \_ . \_ . \_ Still searching for an Asian, W4UWC reached the 72-country mark on fifteen by way of TG9CR, VP3YG, a VQ2, VP8AQ of the So. Orkneys way of 109CH, VP31C, a VQ2, VP3AC of the 50. Orange and ZB1AJ; six weeks on 21-Mc. 'phone furnished 67 coun-tries for 10-meter specialist W4NQM...... Fifteen-A3 desiderata here and there, at W1HDQ: VP1GG. W3TYW: HC1PL, KH6s, W6UED: HC1, K66GX, OA5G. W6NJU: DU7SV, KA2KC, VKs, ZLs and VR2CG. \_.\_ 21-Mc. phones reported by NNRC: CN8CS, CP5EP (220), EAØAC, EL2X, GDs 3ENK 61A, KV4BI, OA5E, OQ5VP 20, PJ2AO, VP8AZ, VQ4AR, YV5BV, ZE2KR 21, sundry ZLs, 3V8BP and 4X4DK.

15 c.w. got a play, too, and even the Novice gaug bestirred their DX bones. WN3ZKH scored with FA8s DA RJ, GS 210 3DCU, GM3GJB and KZ5DM while WN7WSS provided Utah for T19MHB's Novice-band WAS effort.....EA6AF (75), 11BLF/Trieste (67), KT1UX (10), ZB2A (15) and ZS3K (100) waggled keys with W91UZ (10), ZB2A (15) and ZS3K (100) waggled keys with W91UZ w3TYW assembled a pile of Europeans while W7VWS consorted with several KH6s, KL7CGA, XE2OK and ZL1BY.....ZES 3JP and 5.JI came back to W5UUK.....DL4ZC worked OA4ED, HZ1HZ and a Z85 without fuss or bother....WGDXC got the tifteen-A1 goods on AP2K, CE3AG (1) 18, CR6AI (33) 18, FAs 8CR (20) 16, 9RW (20) 17, FF8AJ (30) 16, FR7ZA (180), FY7YC (75) 20, HK4DP (2) 18, VP7NX (40) 17, V02GW (30) 16, ZDS 6BX (50) 17, 9AC, ZS3K (100) 19, 3V8s AP AX BL and BP.

10 'phone and c.w. received narcotic shots in their ionospheric arms or clse the ARRL DX Test deserves the credit. Anyhoo, a few mailbag missives have favorable comments concerning the 28-Mc. range. W6NJU worked A3 with LUS 7BQ 7QB 8FAO, KH6AFS and TI2BX .....ZS3E was a welcomed 10-meter customer at W8YIN around 28,320 kc.....W1WXC recommends present-day 10-meter work for DXers who like to dig for 'em and reports W1s HJB LSZ ONK QNC UQW and YWU enjoying this strenuous sport. W1WXC ran down CR6BX, CXs 3AA 7BA, HC1MB, KZ5s, KV4BI, LUS 4AAR 4DZI 8AM, TI3LA, VPs 1GG and 2KM on voice.

160 c.w. activities may be in the post-mortem stage for most participants in the past season's doings but you'd better keep an ear on this band. It's a tricky one! The North American path fizzled out somewhat to make European pickings slim but several South American folk turned up to enliven recent 1.8-Mc. soirces. YV5s DE FH and HK4DP worked a flock of W/K brethren; W1s BB and ZL, in that order, were among the first to nab the Colombian. YV5FII's performance was topped with a smooth W0NWX 'phone QSO..... W1BB understands that W2SKE was the only North American to put a consistent

The pile-ups inspired by Burma's X72OM are all out of proportion to the mere 25 watts Mike runs to a 3stage 807 rig on 7-, 14- and 21-Mc. 'phone and c.w. Dipoles radiate on 40 and 20, a ground-plane on 15, and an AR-88 receives. XZ2OM was in there pitching during this year's ARRL DX Test although his reception was hampered by unusually severe KA, KR6 and KG6 interference.

signal into Europe on 160 during the ARRL Test, A3 section . \_ . \_ . \_ W6KIP/6, strongly abetted by W8GDQ. continues his efforts to work VS6CQ on one-sixty and results to date feature a W6KIP/6-VS6CQ crossband contact on 160-40 meters. The perseverence of W6KIP/6 deserves plaudits inasmuch as he persists in the face of East Coast success with European and African DX, listening to people working stuff he can't quite pull through out his way. It certainly would be some form of poetic justice if W6KIP/6 succeeded in making the grade with VS6CQ. This will be a very fancy 160-meter QSOI. \_... TI9MHB's 1.8-Mc. activity boosted the top-band countries totals of Ws SEIS 9FIM 9PNE and many others. KH6IJ and KL7TM appeared on the band; KG4AB and XE2OK showed up during the Test to swell the list of near-but-rare 160meter countries available ..... We close the Bandwagon on a sad note this month with word of the passing of outstanding 160-meter DX specialist VE1EA. Clarry, along with G5BY and W1BB, pioneered the annual Traus atlantic Tests in the years before WW-II. VE1EA, you will recall, scored the first recorded North America-Asia QSO (with HZ1KE) in January of 1951.

# Where:

XZ2OM confirms that all XZ2-bound QSLs can be sent via Box 611 or Box 367, Rangoon, Burma. Mike adds, "I will do my best to [help] any station needing an XZ2 QSL. Full QSO information is required, together with IRCs, and cards will arrive direct." .\_.\_. W2GT emphasizes that FG7XB does not receive QSLs via Box 11, Pointe-a-Pitre. Use this address only: 44 Chemin des Petites Abymes, same town. Antoine, who started out QSLing upon QSO, rapidly is becoming disillusioned with that approach; we have on hand his list of prominent DXers who as yet haven't bothered to answer his cards . \_ . \_ . \_ As previously noted, a new slate of VK1s is active from Australian outposts on Macquarie and at Mawson Base, Antarctica. In lieu of other addresses they can be QSLd via WIA. W10JR reports fast response from VK4FJ on behalf of VK1EG if IRCs are sent. Along this same line, when you seek to do business with other good Samaritans helping out rare DX stations with

QSL problems, by all means cooperate fully by sending selfaddressed envelopes plus postage or IRCs where necessary. It's more than enough that such agents contribute time and effort without incurring monetary expense as well . U. S. QSLs for QSOs (over 300) with PJ2MA (PJ2AA) on St. Martin Island can be shipped via W1PST, but all non-U. S. amateurs should QSL direct to PJ2AA . \_ . Don't look now but seattered U.S.S.R. QSLs are sliding through QSL bureaus once more . \_ . \_ . \_ Periodically we caution newcomer DXers to QSL DX stations via foreign radio-society bureaus only when instructed to do so by stations worked, or when so noted in this column. Unlike your ARRL QSL Bureau, which handles eards for ARRL members and nonmembers alike, many overseas societies make their bureau facilities available for members only. QSLs they receive for nonmembers may be returned, pigeonholed or destroyed. So, when you work a flock of stations in Outer Baldonia don't just drop your QSLs into an envelope and ship the lot to the Outer Baldonian Radio Society QSL Bureau. That could be an excellent way to guarantee yourself a rockbottom QSL-returns percentage! Another thing: Unless exception is noted in this column, do not mail foreignbound QSLs to the ARRL QSL Bureau. Your League bureau is chartered only for the distribution of QSLs incoming from overseas and foreign sources . \_ . \_ . The accuracy of the individual items to follow is by no means guaranteed, nor are they in any case necessarily "official." Garnered mainly from third-party sources, they are published here in the hope that they may assist someone to a fast QSL or two. Wis APA RDV UED WPO, W28 BBK GT OLU, K2JCS, W4s AUL CBQ QCW TFB, W5UUK, W6ZZ, W8s KAK YIN, W9s CFT EU TRD, WØVFM, F7ER, EDR, OVSV, NNRC, NCDXC, SCDXC, WGDXC and WIA deserve your gratitude for these:

#### Whence:

- From the pen of Asian airman XZ2OM : "Regard-Asia ing W DX, W6s frequently are heard, but very few W1s and W0s. VE/VOs are so rare I wonder if they are on the air!" Mike lists XZ2s EM KN ST and SY as other currently active Burmese amateurs . \_ . \_ . \_ HZ1AB reports a surprising lack of W5 W6 and W7 signals during the ARRL DX Test but other U.S. call areas were breaking through consistently. Ron has trouble loading some of the various antennae he rigs up, for the HZ1AB stock of antennacoupler components is quite limited . \_ . \_ . \_ Japan's International DX League lost its headquarters by fire but pluckily plugs on, IDXL issues several DX certificate awards that may be of interest to wallpaper hunters. For information on same write the organization at Box 56, Central P. O., Kyoto . \_ . \_ . \_ An intriguing tidbit from the pages of Zero-Beat, organ of the Hampden County (Conn.) Radio Association: "W1YCG hopes to operate from Afghanistan if permission can be obtained. Will be using a Viking Adventurer for both c.w. and 'phone. Start listening a round July 1st."...., WGDXC Asiatic gleanings: G3FQX heads for a ZC4 session.... VS9XZ has been operated by ex-SU5XZ... MP4BBS (G8RP) does shipboard hamming off Bahrein island with a BC-610.

Africa - After six months at the key of ZSIRG, G6UT tinds 100-plus ARRL DXCC List countries in his log. OT St. Johnston now is back in the U. K. picking up where he left off on the G6UT DX trail . \_ . \_ . \_ W7PCZ was EL2X's 48th state after a year of WAS effort. EL2X now has a DX tally close to the 200-country mark .... EL5B (ex-DL3WH) finds the fishin' easier with his present call sign, although he did all right in Germany, too . \_ . \_ . \_ There are gratifying signs that Egypt is taking a more tolerant view toward amateur radio. Several official licenses now siderable time in Floridian environments. \_.\_. Club African comments, SCDXC: One ZD3ES soon should be available. . . . FL8AI often is heard by EL2X but no answers result. WGDXC: FE8AE's inactivity is the result of illness but Marcel still had hopes of doing 100-watt business on several DX bands before leaving the 'Roons.

Oceania — No U. S. amateur yet has collected the NZART (New Zcaland) WAZL award. G6BS turned the trick, though, so it is possible. W&IUB stands ready to provide information on WAZL and all interested North American DXers are invited to apply...\_\_\_ The scarcity of VK2s in the 1955 ARRL DX Test was caused by serious New South Wales flood conditions, the worst in recent years. Most VK2s on the air at that time were QRL pushing emergency traffic on WIA's emergency nets. VK2WI was NCS on 3525 and 7050 kc. Favorable newspaper publicity resulted from a communications task well done..... Pago Pago's KS6AB is bring coaxed back to 20 from his 80-meter hideout by WGDXC cohorts.

Europe - Yank-in-Yugoslavia YU1GM reports bagging his 100th country. "Am not faring so well in the confirmations department but have caught up on my own QSLing now and am keeping it current. Those who have not received cards will eventually get them as most went through bu-reaus. I have worked nearly 2000 W stations and shall be switching to 15 and 10 meters as conditions improve." The  $\chi\,U1GM$  address appearing in this month's "Where" promises faster results than Bob's old via-APO listing . \_ . \_ . ZB1JRK, slated to remain in Malta until August. punches out a big 25-watt signal by virtue of a 650-foot long-wire, as noted by W2OLU. ZB1DM closed station for return to New England ..... Albanian and Vatican State continue to be the object of Dxpeditionary intentions by several well-known DXers, but so far not so good . \_ . \_ . \_ Another trophy for diploma-hunters: WAYUR (Worked All Yugoslav Republics). W1UED, who spotted it, suggests those will be heard from Rhodes . \_ . \_ . \_ European club diggings,

May 1955

NCDXC: Never lose heart — W6TT just received a QSL for a 1930 QSO with SM6SB. TT was CAZ in those days. WGDXC: Over 1500 QSLs, 1000 from W/Ks, have been received by Monaco authorities as a result of phoney 3A2 activity. . . Write UBA (Belgium). Post Box 634, Brussels, for information on their new WABP (Worked All Belgian Provinces) DX award. . . . ZB2s I M and O are current Gibraltar actives.

Hereabouts - VPIGG, due for QRT shortly, hopes to appear next from VR2 environs. W1HDQ hears he'll be taking a ham-band vacation until around November ..... VP2VA, host to W2BBK's recent FP8AK/VP2 DXcursion, is a retired British engineer down British Virgin Islands way. Ivan knows no c.w. but gets great kicks from 20- and 75-meter 'phone operation. VP2VA's home is powered by a battery Windcharger set-up while his ham gear runs off a 1.5-kw. 110-volt generator... WØBAF contributes a brilliant color shot of his 100 hard-earned DXCC QSLs which causes Jeeves to wonder: What is more colorfully impressive than a large display of DX pastcboards? ..... ADXC (Alaskan DX Certificate) is a new one issued by the Anchorage Amateur Radio Club, P. O. Box

"Hungarian headquarters station" HA5KBA has logged about 3000 QSOs since activating in October of last year. Its staff of several operators is hunting for the last few states needed for WAS and has worked well over 100 ARRL DXCC Countries List items. Chief op "Bandi," HA5BM, put this home-built equipment through fast paces during the 21st ARRL DX Competition recently concluded. QSLs for HA5KBA go via W3AXT who provided this photograph.

211, Anchorage, Alaska. Ten KL7 confirmations, including at least one from each of the following Alaska areas, will do the job: southeastern Alaska (the area bounded by British Columbia), northern Alaska (the Islands plus Kodiak), and central Alaska (what's left). Write AARC for complete rules. \_\_\_\_\_ OT DXcr W4MR felt the nip of the DX Bug once more and reports similar awakenings in the shacks of local W4s AIT CS and ZH. McSwindle and W2GVZ were right!...... W1APA observes that KG4AG is operated (Continued on page 150)

F. E. HANDY, WIBDI, Communications Mgr. R. L. WHITE, WIWPO, Asst. Comm. Mgr., C.W PHIL SIMMONS, WIZDP, Communications Asst. GEORGE HART, WINJM, Natl. Emerg. Coördinator ELLEN WHITE, WIYYM, Asst. Comm. Mgr., 'Phone LILLIAN M. SALTER, WIZJE, Administrative Aide

Full Addresses and Proper Check Required on Originations. Ever find yourself on the delivery end and unable to do the job? All amateurs (and MARS originators too) are asked not to permit amateur traffic to start on its way by radio unless it can carry an adequate address to insure delivery. Each handling station should have an understanding about the check or word count before receipting (QSL) for the message! The *newcomer* is urged to study all the concise information in the League's booklet Operating an Amateur Radio Station relating to checking, servicing and handling messages. It's part of the tradition of amateurs that they actually can communicate, and in a responsible manner. Both old and new timers may benefit by rereading W3ECP's "Net Know-How" in March QST.

But let's hear from Cy Read, W9AA, who takes up this matter with Hq.: "I am still running a full head of steam about the way messages are coming through. Some addresses are 'strictly from hunger.' In this case there was no one nearer, and the NCS asked me to mail it. In due time it came back marked 'unknown' whereupon I sent out a SVC. . . . It appeared that many of the traffic stations located in small towns or at great distances don't seem to realize that any message going into a big city must have a complete and accurate address, if it is to get through. Get the boys to understand and insist on a proper address on every message originated, and our service will be improved. Note the check on the original message doesn't agree with the text count. . . ."

The example Cy attached was a MARS origination (Hawaii). The principle of needing more address applies to many a U. S. A. amateur radiogram. Refile procedure is given in detail, page 130, June '53 QST. All amateurs should refuse to start messages unless they are complete and in standard ARRL form for amateur circuits. There are more amateur nets functioning effectively to get traffic through than *ever* before. Make texts concise, address complete, with a 'phone number where feasible, and operators *should* check them carefully as to destination. Haphazard and rubber-stamp originations generally impair more than they advance the amateur traffic reputation!

How to Improve Your "Fist." Sending at home on a code practice oscillator or buzzer in step with tape-sent transmissions is a good way that some are overlooking to improve one's sending. You can note from page 70 in this OST, the days when we send practice text from QST if you wish to try this. Experienced amateurs concede it is much easier to copy at high speed than it is to send manually *and well* even at moderate speeds. Interspersed periods of sending practice are worth while, since they buck up the ability on the receiving side too.

Smoothness in sending requires good spacing and rhythm. Newcomers: to avoid having your sending fall into the category where TEST becomes "NST" and CQ becomes "NNQ" bear in mind that by copying tape (automatic) transmissions regularly with some time spent sending in step with the tape, such defects can be overcome. Code then becomes most enjoyable and effective for two-way communications.

Country Considerations. What makes a country in the ARRL Countries List? Not many DXers think much about this since the standard list for reference is reprinted up-to-date in each January QST, and put out in folder form. You can mark your countries as you work them, while collecting your 100 cards to submit for DXCC. Watch DXCC Notes headings in QST for any possible list changes; such are usually additions. "How's DX?" may give you additional facts about the presence or absence of signals or countries, also "where to find" the DX reported, documenting your kind assistance. The ARRL Countries List is a yardstick for DX, the standard for use in connection with the ARRL DX Competition and the DX Century Club. But we started to tell you what's behind the list in terms of country policy.

The League Communications Department is assigned the honor and responsibility for making operator certifications and awards. A standard published list assures uniformity, and one goal for all concerned to work toward, either contestwise or for countries credits. A group of experienced staff-member licensed amateurs assist the Communications Manager in arriving at decisions through discussion and analysis of operating problems requiring administrative review. On countries the "approach to the problem" may, we think, interest you.

There are three criteria on which facts are determined in approaching any countries problem: (1) Does the area have political independence? (2) Does it have adequate geographical separation from a parent nation? (3) Does it have foreign lands in between? Of course, whatever the list permits, it is *the same* for all working to the goal. But the reason respect for our list is general is, we think, because it is progressively kept up to date as governments change; also that any modifications only follow League inquiry and precedents and consultation with authorities such as our U. S. Department of State, Webster's *Geographical Dictionary*, and Rand McNally.

The ARRL Countries List is the guide in determining what to send us in order to qualify for the ARRL DX Century Club award. It is available to members of the League on request; ask for Operating Aid No. 7.

-F. E. H.

## CODE-PRACTICE STATIONS

The following is an up-to-date list of all stations participating in the ARRL Code-Practice Program:

W1ACT, Fall River ARC, 57 Richmond St., Fall River, Mass.; 3545 kc.; Mon., Wed., Thurs. and Fri., 1900 EST; 5-7 w.p.m.

W1QZO, Harry Warner, 11 Berlin St., Wollaston, Mass.; 146.8 Mc.; Tues. through Sun., 1900 EST; 6-14 w.p.m.

WISRB, Al Vesce, 84 N. Main St., Thompsonville, Conn.;
 29.6 Mc.; Mon., Wed. and Fri., 1930 EST; beginner's speeds.
 W2HEI, William Teso, Mountain Ave., Hillburn, N. Y.;

3950 kc.; Sat. and Sun., 1400 EST; 5-18 w.p.m. K2IBC, Avenel Radio Club by W2FSL. Adolph F. Elster,

53 Commercial Ave., Avenel, N. J.; 3675 kc.; Sat., Sun. and holidays, 0730 EST; beginner's speeds.

W2NRM, Howard B. Jack, 12 Beech St., Ramsey, N. J.; 29.118 Mc, and 1880 kc.; Mon. through Fri., 0715 EST; 29.118 Mc.; Mon. and Thurs., 2200 EST; 3-8-15 w.p.m.

W3KWH, Steel City Amateur Radio Club, R.D. 5, McMichael Rd., Pittsburgh 5, Pa.; 29.108 Mc.; Wed., 2000 EST; 5-13-25 w.p.m.

W3UVD, Walter C. Downes, R.D. 2, Box 328, Jeannette,
 Pa.; 3585 kc.; Sun. 0930 EST, Wed. 1830 EST; 5-15 w.p.m.
 W3VEJ, James M. Alcorn, 2071/2 Longfellow St., Vander-

grift, Pa.; 7150 kc.; Mon. and Wed., 1900 EST; 5-15 w.p.m. W4RUR, for St. Petersburg Amateur Radio Club, E. J.

Blatt, 538 16th Ave. So., St. Petersburg, Fla.; 28.05 Mc.; Mon. and Wed., 1900 EST; 6-22 w.p.m.

W4ZRH, Carlton R. Commander, 17 Joyce St., Mt. Pleasant, S. C.; 3700 kc.; Mon. through Fri., 1830 EST; 5-13 w.p.m.

W5JRV, for Galveston County Amateur Radio Club, Blanchard Boldman, 4802 Ave. Q14, Galveston, Tex.; 1882 kc.; Mon. and Fri., 1900 CST; 3-15 w.p.m.

W5USN, Dan Baird, W5SPZ, chief-in-charge, 8th Hdqtrs. USNR Radio Station, Marconi Drive and Robert E. Lee Blvd., Route 3, New Orleans 24, La.; 7100 kc.; Mon. through Fri., 1230 CST, 15 w.p.m., 7100 and 3750 kc.; Fri. through Mon., 1930 CST, 15 w.p.m.

W6JZ, Ray Cornell, 909 Curtis St., Albany 6, Calif.; 3590 kc.; Mon. Wed. and Fri., 1830 PST, 5-25 w.p.m., 1920 PST, 35-45 w.p.m. (When needed, schedule maintained by W6EFD.)

K6USN, Cmdr. J. M. McCoy, 12th Naval District Reserve Electronics Stn., Bldg. 7, Treasure Island, San Francisco, Calif.; 3590 kc.; Tues, and Thurs., 1830 PST; 5-25 w.p.m.

K7FCV, Lyle B. Clemans, CWO USAF, MARS Base Dir., Davis-Monthan AFB, Tucson, Ariz.; 3825 kc.; Tues., 1830 MST: 8-20 w.p.m.

W7FWD, O. U. Tatro, 513 N. Central, Olympia, Wash.; 3646 kc.; Mon. through Fri., 1700 PST; 4-25 w.p.m.

W8MAI, Blossomland Amateur Radio Assn., c/o W8FGB, Dean Manley, R.F.D. 1, Box 147F, St. Joseph, Mich.; 1890 kc.; Mon. through Fri., 2000 EST; 5-20 w.p.m.

W9KLD, for Kankakee County Radio Club, Don Rockwell, 685 Rutledge Ave., Kankakee, Ill.; 1895 kc.; Mon. through Sun., 1900 CST; beginner's speeds.

W9NPC, for Fox River Radio League, Lewis R. Hill, 212 N. Evanslawn Ave., Aurora, Ill.; 1810 kc.; Mon. through Sat., 1900 CST; 5-20 w.p.m.

W9UIN, Joseph H. Kadlec, 1148 Ashland Ave., Evanston, Ill.; 7240 kc.; Sat. and Sun., 0800 CST; 5-71/2 w.p.m.

WØEGQ, Bob McMullin, Route 1, Lehigh, Nebr.; 3755 kc.; Mon. through Sun., 1800 CST; 5-13 w.p.m. with text from *The Braille Technical Press.* Same schedule alternated with WØLGG, Bertha V. Willits, 108 N. 19th St., Marshalltown, Iowa, with text from QST.

WØLQC, F. Bion McCurry, 1234 Stanford, Springfield, Mo.; 29.18 Mc.; Tues., 2130 CST; beginner's speeds.

W0ONF, for Se Kan Radio Club, Kenneth M. Parker, Box 141, Howard, Kansas; 3805.5 kc.; Mon., Wed. and Sat., 1730 CST; 31/2-15 w.p.m. WEQDF, W. H. DuBord, 10247 Midland, Overland, Mo.; 29.6 Mc.; Mon. and Wed., 2000 CST; Mon. 5-13 w.p.m., Wed. beginner's speeds.

WØSQE, Bill Heitritter, 11141/2 Virginia St., Sioux City, owa; 3750 kc.; Mon. through Fri., 1600 CST; 5-13 w.p.m.

#### FIELD DAY STATISTICS

#### By Roy T. Harmon, WØIUB

Field Day is the most important event of the year in amateur radio. It started in 1933 and has continued to the present day (except for the war years), and Field Day records should interest many hams. Americans seem to like records as incentives. The four-minute-mile hope kept track fans enthused for many years even though there were no milers around who could come close to it. Following this line of thought, I sat down with my QST back issues and figured out the postwar records for Field Day. I used numbers of contacts to determine winners, since multipliers and point systems have changed from time to time.

Some of the feats look almost impossible, while others seem like they could be beaten easily by concerted effort. One fact that surprised me was that so many of the records were set in 1949, 1950 and 1951. One would think that since Field Day popularity has always grown from year to year, all of the records would have been set in 1953 and 1954, but not so! The W6MBA mobile rig sure must be a corker, and W3JTK's outstanding work as single operator at home has stood unchallenged since 1949. And in 1951 eighty-seven ops participated at one club set-up; what a circus that must have been!

Here are the figures. Hope the hams around the country enjoy them.

OSO Party June 17th: CP Qualifying Run - WIAW June 25th-26th: ARRL Field Day July 2nd: CP Qualifying Run — W6OWP July 11th: CP Qualifying Run — W1AW July 16th-17th: CD QSO Party (c.w.) July 23rd-24th: CD QSO Party ('phone) Aug. 5th: CP Qualifying Run - W6OWP Aug. 16th: CP Qualifying Run — WIAW Sept. 3rd: CP Qualifying Run - W6OWP Sept. 14th: CP Qualifying Run - WIAW

### CODE-PROFICIENCY PROGRAM

Twice each month special transmissions are made to enable you to qualify for the ARRI. Code Proficiency Certificate. The next qualifying run from W1AW will be made on May 12th at 2130 EDST. Identical texts will be sent simultaneously by automatic transmitters on 1885, 3555, 7125, 14,100, 21,010, 52,000 and 145,600 kc. The next qualifying run from WGOWP only will be transmitted on May 7th at 2100 PDST on 3590 and 7138 kc.

Any person may apply; neither ARRL membership nor an amateur license is required. Send copies of all qualifying runs to ARRL for grading, stating the call of the station you copied. If you qualify at one of the six speeds transmitted, 10 through 35 w.p.m., you will receive a certificate. If your initial qualification is for a speed below 35 w.p.m., you may try later for endorsement stickers.

Code-practice transmissions will be made from WIAW each evening at 2130 EDST. Speeds are 15, 20, 25, 30 and 35 w.p.m. on Monday, Wednesday and Friday, and 5, 71/2, 10 and 13 w.p.m. on Sunday, Tuesday, Thursday and Saturday. Approximately 10 minutes' practice is given at each speed. References to texts used on several of the transmissions are given below. These make it possible to check your copy. For practice purposes the order of words in each line of QST text sometimes is reversed.

Date Subject of Practice Text from March QST May 3rd: A Compact Dual Beam . . ., p. 11 May 6th: Frequency Marker with 50-Kc. Intervals, p. 14 May 9th: Overtone Crystals . . ., p. 16 May 11th: Flexibility in the Antenna Coupler, p. 18 May 16th: Low-Noise Receiver Design, p. 20

May 19th: The Multimatch Antenna System, p. 22

May 24th: The "Hidden Gem," p. 24

May 26th: Transmitter Hunting - Seattle Style, p. 25

#### BRIEF

An amateur recently wrote the ARRL Communications Department as follows: "Is it possible to obtain a duplicate A-1 Operator Club certificate? Some time ago my wife pitched mine in the alley in a fit of pique. Now my new wife might like to see how important the old boy is!" (P. S.: He got the certificate.)

#### WIAW SUMMER SCHEDULE

(Effective June 1, 1955)

(All times given are Eastern Daylight Saving Time) Operating-Visiting Hours:

Monday through Friday: 1300-0100 (following day).

Saturday: 1900-0230 (Sunday). Sunday: 1500-2230.

A mimeographed local map showing how to get from main highways (or from HQ. office) to WIAW will be sent to amateurs advising their intention to visit the station.

Official ARRL Bulletin Schedule: Bulletins containing latest information on matters of general amateur interest are transmitted on regular schedules. Frequencies:

C.w.: 1885, 3555, 7125, 14,100, 21,010, 52,000, 145,600 kc. 'Phone: 1885, 3945, 7255, 14,280, 21,350 kc.; 52, 145.6

Mc. Times:

Sunday through Friday, 2000 by c.w., 2100 by 'phone. Monday through Saturday, 2330 by 'phone, 2400 by c.w. General Operation: Use the chart below for determining times and frequencies for WIAW general contact with any amateur. Note that since the schedule is organized in EDST, the operation between 0000 and 0100 each day will fall in the evening of the previous day in western time zones.

Code-Proficiency Program: Practice transmissions at 15, 20, 25, 30 and 35 w.p.m. on Monday, Wednesday and Friday, and at 5, 71%, 10 and 13 w.p.m. on Sunday, Tuesday, Thursday and Saturday are made on the above-listed frequencies. Code practice starts at 2130 each day. Approximately 10 minutes' practice is given at each speed. On June 17th instead of the regular code practice, W1AW will transmit a certificate qualifying run.

#### WIAW OPERATING NOTE

Until June 1st, when the complete W1AW Summer Schedule detailed elsewhere on these pages goes into effect, WIAW will conduct general operation as shown on the chart on page 70, Sept. 1954 QST, except that EDST instead of EST will be used. Other operation will follow the pattern set down on page 71, March 1955 QST, also in EDST instead of EST. Exceptions: (1) On May 12th, W1AW will transmit a Code-Proficiency Qualifying Run instead of the regular code practice. (2) On May 20th, W1AW will make a special transmission for frequency measurement instead of the regular code practice. (3) WIAW will be closed from 2230 EDST May 29th, until 1500 EDST May 31st, in observance of Memorial Day.

#### W1AW GENERAL-CONTACT SCHEDULE

(in Effect June 1, 1955)

W1AW welcomes calls from any amateur station. Starting June 1st, W1AW will listen for calls in accordance with the following time-frequency chart.

| Time (EDST)     | Sunday    | Monday    | Tuesday   | Wednesday | Thursday  | Friday             | Saturday |
|-----------------|-----------|-----------|-----------|-----------|-----------|--------------------|----------|
| 0000-01001      |           |           | 35553     |           | 3945      | 71253              |          |
| 1300-14002      |           | 21/28 Mc.          |          |
| 1500-1600       |           | 7125      | 14,100    | 7255      | 14,100    | 7125               |          |
| 1600 - 1700     |           | 14,280    | 7125      | 14,100    | 14,280    | 14,100             |          |
| 1800-1900       |           | 14,280    | 14,280    | 14,280    | 14,100    | 7255               |          |
| 1900-1930       |           | 7255      |           | 21,010    |           | 14,280             |          |
| 1930-2000       |           | 14,100    |           | 3555      |           | 14,280             |          |

| 2230-2300       |           |           | 1885      |           | 1885      |                    |          |
| 2300-2330       |           |           | 3555      |           | 3945      | <b></b> . <b>.</b> |          |
| 2330-24001      |           | 3945      | 7255      | 3945      | 7255      | 3945               |          |

<sup>1</sup> Starting time is approximate. General-contact period on stated frequency begins immediately following transmission of Official Bulletin, on c.w. at 0000 and 2000, on 'phone at 2100 and 2330,

 $^2$  Operation will be on 21,010, 21,350, 28,060 or 29,000 kc., depending on band and other conditions.

<sup>3</sup> W1AW willlisten for Novice Class licensees on the Novice portion of this band before looking for other contacts.

Having just finished compiling some figures based on 169 EC annual reports received (10 per cent of all ECs), we thought you might be interested in some of the statistics and estimates derived therefrom. We'll present these in expository fashion, so you won't have to try to interpret from tables.

First of all, let us note the percentage of EC annual reports received — 10 per cent. Not too good, is it? Yes, we know that being an EC has a lot of work connected with it, and to a person not too fond of paper work (and whe is?) it seems as though Headquarters or the SEC or someone is constantly badgering ECs for reports. Actually, all we ask is a Form 5 (post-card size) once a month to the SEC and a one-page group of figures once a year. From these, we can glean some well-educated national estimates, since 100 per cent response is unthinkable.

You see, we use these data; we're not just trying to make you work for nothing. Once each month we summarize SEC reports (which are based on your monthly Form 5 reports to the SEC), and once each year we summarize EC annual reports and make estimates of national totals based on this. Naturally, the larger the percentage of reports received, the more accurate our estimates will be. However, based on the 10 per cent received this year, here's about what the AREC looks like nationally.

We have about 40,000 AREC members, of which 75 per cent are full members. Almost 13,000 of these are "signed up in RACES," by which they probably mean they are enrolled in local, regional or state civil defense communications with RACES in mind, whether or not they are RACES-authorized. There are about 780 existing RACES plans within the AREC structure, not all approved by FCDA and FCC as yet. Most AREC members continue to operate on the 28-Mic. band (over 20,000), but 3.5-Mic. e.w., 3.8-Mic. 'phone and 7 Mic, also have strong followings — and of course most of them operate regularly on more than one band. Six and two meters have shown great increase in popularity, however.

The AREC has an estimated 17,000 mobile units in operation. Ten meters is still the most popular band for mobile emergency communication, followed by 80/75 meters, 2 meters and "other" bands, in that order. However, since the 1953 year end, the greatest percentage increase in mobile emergency operation has been on two meters. The increase on ten meters has been alight.

Nearly all estimates are up from last year, an indication that amateur interest in emergency work is still on the increase, probably a result of the impact of civil defense. Our estimates show a decline in the number of fixed stations having emergency power available, and declines in the number of AREC members using 80 c.w., 75 'phone and two meters (although *mobile* operation on 2 shows a large increase).

Interesting? We thought so, and encouraging, too. How accurate are these estimates? Just exactly as accurate as a 10 per cent response in reporting will allow.

Fellows, how about putting *dates* on the emergencies, drills and tests you tell us about? We had reports on four different emergencies lined up this month that had to be

May 1955

shelved because there was no hint as to when the emergency occurred. The dute of a blizzard, tornado, fire or other memorable local occurrence might be well known to you, but chances are we never heard about it — so date your emergencies, will ya, huh?

#### **—**···-

W5ZU calls our attention to an emergency operation which occurred last year that never got written up, except in his SCM column. We think it should be recorded in this column. It seems that last October 6th, 7th, 8th they had quite a flood in the Roswell-Dexter-Hagerman-Artesia-Carlsbad region of New Mexico when seven inches of rainfall within 48 hours sent the Hondo and Pecos Rivers on a rampage. Roswell amateurs W5\* BZA/BZB QKG TBP WPA YFN YUM YWU ZM ZU gathered on 3838 kc. while mobiles 158 BZA BZB WPA YUM visited the flood area and relayed reports. Once the situation was "cased." a few stations staved on hand all night while the rest got some sleep. During the night, W5WPA participated in the rescue of a truck and workers at the Hondo Dam, west of Roswell. At 0630 on the 7th, W5ZU fired up as control station with W5s ARD CXC EFT PSP UTS QKA RNG YAS ZGG AHQ FAB PGJ RZS TDB UP in the net, in addition to those on the previous night. Emergency work conducted included: (1) Assistance to Southern Union Gas Company in coordinating work on an eight-inch gas main crossing the Felix River north of Hagerman (mobiles W5s CXC BZA, BZB WPA, and fixed stations W5s AK YAS PSP), (2) An emergency call for boats to be furnished by the National Guard was coordinated by W58 BZA CXC and AK, and later rescue of a man on an overturned boat was coordinated by W58 AK ARD CXC. (3) Communications for radio station KSVP, which had to leave the air; CAA was notified that tower lights were off (W5PSP and W5ZU). (4) Reports on flood conditions were relayed up and down the valley. (5) W5UP stood by at National Guard Headquarters in Roswell to link units in Dexter and Hagerman areas. (6) W5BZA/BZB mobile encountered extremely high water between Dexter and Roswell; as a result, the road was closed to traffic. (7) Railroad tracks were washed out near Dexter, W5BZB reporting same to the Santa Fe Railroad office. (8) Because of the loss of life and number of missing persons, many welfare messages were handled in the 3838-kc. network. - W5ZU. SCM New Mexico

On January 14th, an Air Force C-45 ran out of fuel 20 miles northwest of Austin, Texas. Upon hearing the engines quit as the plane passed overhead, W5YYM contacted W5TFY in Austin and set the Austin Emergency Net in operation on 29.2 Mc. A few 'phone calls indicated the authorities knew the plane was down, but had no idea where, W5YYM soon located the airplane on a ranch about

a mile from the nearest road. Doctors and ambulances were ordered and the CAA, Texas Department of Public Safety and Sheriff's department were notified. Mobiles W5s KNM PRO QZJ left immediately for Lake Travis to aid in the search for a crew member who bailed out and was missing. For the first 30 minutes YYM/m was the sole means of communications between the scene of the crash and the state police and other authorities. Much traffic was handled concerning directions to the scene of the crash, medical aid, etc. The missing crewman was found by a ranch hand so all mobile units except YYM returned to Austin by 2030. The net closed down at 2115. Mobile units participating were W5s FXN EHD QZJ PRO. W5TFY Was NCS. - W5TFY.

Amateurs in Paterson, N. J., assisted police in solving some mysterious crimes during 1954. EC W2ESW was contacted by the civil defense director, at the request of police, and 21 amateurs set up a net on two meters, with a

Three amateurs who assisted the Illinois Central Railroad during the ice storm last December received citations from the railroad on March 2nd. Shown holding their medals are, left to right, W9PQS, W9KXN and W9PEK. W9KRII was also cited.

control station at police headquarters in charge of KN2CYZ. Each car was assigned a "beat" in the neighborhood where the assailant was known to be operating. The patrol started at 0100 and continued until 0530. This continued for four months, but no further attacks were made. However, on October 14th at 0347 one of the cars (W2ZOE with KN2JCR) reported a suspicious character on one of the streets in the area, and he was picked up by police. His retention resulted in eventual arrest and the solving of a number of previously-unsolved robberies. This continuing patrol in cooperation with Paterson police was conducted by the following amateurs: W2s ESW GQD ZOE NEZ GLO MIU NPT ESC KXR FLQ WBY EHM, K2s CMB GYH CVR EIZ, KN2s JCR IPF IEY IDH CYZ. Thanks to Mr. Arthur Donnelly, a Paterson Morning Call police reporter, for this report.

Members of the American Legion Amateur Radio Net and the Lancaster, Calif., AREC and Civil Defense collaborated in assisting search operations for a crashed jet plane on January 13th. Search was conducted from 1900 to 0500 the next day using the 10 meter c.d. frequency, but distances proved too great and the search was reorganized using 75 meters. Here the situation was just the opposite, with long skip making multiple relays necessary. W6EJU's portable emergency trailer was set up as control station, with one relay via W6OLG. W6EJU, K6ARY and K6FCZ operated the control station. Amateurs were responsible for finding the pilot's body and unopened parachute, first reports of this coming from W6PIQ. W6WJF says that training in traffic handling showed up clearly in all operations. Other amateurs reported to have participated in this emergency include K68 HWB DBH GZZ AJN BNS and W6GRO.

Reportwise, we started the new year with a bang, as 17 SECs submitted monthly reports, representing 3878

#### RACES News

A good many RACES organizers have written us for "the latest dope on RACES," or information on how to organize RACES. These are pretty general requests, and they usually get pretty general answers. Just in case you are contemplating asking us the same sort of questions, here are some answers:

1) There is a brief boildown on how to organize RACES in our booklet "Emergency Communications," distributed free of charge to all AREC members. If you'd like a copy, just ask for it.

2) The complete RACES regulations are included in any recent edition of The Radio Amateur's License Manual. available from ARRL for fifty cents. Or, if you're interested only in the RACES regulations, your best bet is to write to the Superintendent of Documents, Government Printing Office, Washington, and ask for Part 12, FCC Regulations, Rules Governing the Amateur Service. It'll cost you twenty cents a copy.

3) Three articles on the subject of RACES were written in 1953, and most of the information therein still applies. In any event, it's good background. Read "The Radio Anateur Civil Emergency Service" in three parts, in March, April and May 1953 QST. Other articles on RACES have appeared in 1953 QSTs for Jan., Feb., July, Sept., and 1954 QSTs for Feb., Apr., July, Aug., Sept., Nov., and Dec.

4) If you have any specific questions or problems, write and tell us about them. We'll try to help you.

FCDA now will approve for matching funds civil defense equipment installed in private cars provided title remains with the state or political subdivision. So if you've been held up in getting that mobile rig installed for civil defense because you think you can't get matching funds for installation in private cars, now you can go to it. Reference is FCDA Memorandum COMM-2.

Speaking of matching funds, there still seems to be some confusion regarding the term "FCDA approval" as it applies to RACES equipment. Such approval has to do only with matching funds, and admittedly the FCDA specs are high. If your civil defense people want to pay the whole price (and this is invariably considerably less than you would have to pay for gear that does meet FCDA specs), any type of amateur equipment is permissible. provided it complies with FCC regulations.

What's new in your RACES outfit? Got any hot ideas you'd like to share with the rest of the amateur world? How about gimmicks for recruiting, training, getting results in drills, building gear, etc.? Come on, you RACES enthusiasts, give!

#### TRAFFIC TOPICS

Someone reminded us that we have never printed a picture of our BPL Traffic Medallion, authorized by the Board of Directors at its 1954 meeting. Most of you traffic men (and gals) who have been working so hard to get this award don't even know what it looks like. So here it is, about twice actual size. Purty, an't it?

How do you get it? Well, it's easy — all you have to do is to make BPL three times since June 1, 1954. After your third BPL is printed in QST, we send you a little card that says you handled all that traffic by yourself, at your own station, on amateur frequencies. in standard ARRL form. You sign this card, send it back to us, and we send you the medallion.

You only get one medallion, so take care of it. We're not going to send you one for each three times you make the BPL. Wear it on your watch chain, or as a necklace ornament, and wear it proudly at club meetings, conventions, or other amateur gatherings. It's a mark of distinction, like a Phi Beta Kappa key.

#### -----

Miscellaneous net reports: (1) The Early Bird Net traffic count for February was 782. (2) The Transcontinental Relay Net had 28 sessions, traffic total of 1230, participation by seven stations. (3) The North Texas-Oklahoma Section Net had 28 sessions, 923 check-ins. 333 messages handled. (4) The First Call Area of the Transcontinental 'Phone Net registered 674 message counts with 14 stations participating. (5) The College Net met 8 times, was attended by 56 different stations, handled 13 messages.

National Traffic System. We have just completed complation of some NTS 1954 statistics, which might be of interest. NTS nets reported 9642 sessions in 1954, handled 106,904 messages. We received 285 reports altogether, about half of them reports of section nets, the rest regional and area. About 25 per cent of the reported NTS traffic total for the year was reported by section nets. Kudos to the managers of 1RN, 4RN, 8RN, EAN and CAN for a 100 per cent reporting job during 1954. RN6, 9RN, TEN, TRN and PAN also reported every month. but data on the report were incomplete or not properly exceuted through misunderstanding. This makes ten of the 14 NTS nets at regional and area level turning in reports every month during 1954. A very wonderful reporting record, gang. We dream of 1955 and a perfect record. Yes, we said "dream."

The Tenth Regional Net handled by far the greatest amount of traffic (21,972) during the year, with 9RN second with less than half as much (7822). Much of this traffic, in both cases, was "through" traffic not ordinarily handled at regional level, although 9RN returned to a strictly regional function with its separation from TLJ in April. Among the remaining regional nets, RNG was high with 4501, followed closely by RN5 with 3874 and 4RN with 3765. The three area nots were very close, with PAN tops at 9506, followed by EAN with 8109 and CAN at 7715.

All in all, a very good NTS year, showing a continued increase in interest and activity. Of course we can't show an increase forever, but we think still more progress can be made before we reach a peak. Let each NTS net endeavor to do its share to account for an even better showing in the year 1955.

February reports:

\* Section nets reported: NLI (N.Y.C.-L.I.); QKN, QKS & QKS-SS (Kans.); NEB (Nebr.); CN & MCN (Conn.); TLCN (Iowa); AENB & AENP (Ala.); MON (Mo.); WVN (W.Va.); Tenn. Regular & Tenn. Early; NTX (No. Tex.); KYN (Ky.); Minn, Sect. & Minn. Phone: WSN (Wash.); QMN (Mich.).

At the time this copy was being written, reports were missing from 3RN, RNG, 9RN, TEN and two TCC directors — just after we got through bragging above about the reporting record for 1954. No doubt some of them will be coming through late, and whether or not we can get them into the copy remains to be seen. NCSs can help their net managers to report on time by reporting their session figures to him promptly. Depend on your report not making QST unless received here by the fifteenth of the mouth, even though we can sometimes squeeze it in late: because sometimes we can't.

WIBVR is proud of the fine work being done by his IRN gang. All section nets reported 100 per cent in 2RN. Negotiations are about completed for a new 3RN manager. Representation on 4RN is needed from C. Z. and West Indies; any help from down there? RNS net certificates have been issued to W5GVS and W4UHA, RN7 still needs

A few of the Minn. Section Net gang got together in WØKJZ's shack for the above snapshot. That's Lydia, WØKJZ, in front, while gathered about her from left to right are WØDQL (TEN Manager), WØCGK, WØOMC and WØTKX. Lydia is manager of the Minn. Junior Net.

representation from Saskatchewan and Alaska, both zero for February; several other sections have been spotty, mostly represented by only one or two stations. WBDSX has designated W8JWX assistant 8RN manager for West Virginia. We should be able to announce new managers for 3RN, RN6 and PAN in the near future.

TCC news: W6QPY got himself married and has dropped out of TCC temporarily. W6PKL:0 and VE7QC have combined to take over his many functions. W0BDR, W0SCA and W0JUJ are performing all the functions in Central Area TCC. Some "night owls" are needed for a late-hour (0030 EST) function in Eastern Area TCC, on Monday, Wednesday, and Saturday; contact W8UPB,

#### SECOND ANNIVERSARY RADIOTELETYPE SS

The RTTY Society of Southern California announces final results of the RTTY SS, held the week end of February 20th. Ninety-four stations in thirty-two ARRL sections were reported active, with W2BDI (S.N.J.), W8ZM (Mich.) and W3PYW (Md.-Del.-D. C.) turning in the top scores. The following tabulation lists call, score and number of sections worked:

| W5HZF | 520 - 13                                                                                                                                                                                              |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| W9ZBK | 515 - 12                                                                                                                                                                                              |
| W6OWP | 456-                                                                                                                                                                                                  |
| W7CO  | 405-15                                                                                                                                                                                                |
| W8IJV | 398 - 11                                                                                                                                                                                              |

#### SUPPLEMENT TO NET DIRECTORY

The following list of nets will supplement and correct the listings on page 78, Nov. 1954 QST; page 74, January QST; and page 75, March QST. This list brings the record up to date as of March 18, 1955, and may be used to correct the cross-indexed master multilithed net directory.

An asterisk (\*) indicates correction from previous listing in Novem-ber, January or March QST. This is the final QST net supplement prior to fall reregistration of all nets.

RPL medallions (see Aug. 1954 QST, p. 64) have been awarded to the following amateurs since last month's listing; WSAKO, WØNIY. The BPL is open to all amateurs in the United States, Canada, Cuba, and U. B. possessions who report to their SCM a message total of 500 or more, or 100 or more orig-inations-plus-deliveries for any calendar month. All mes-sages must be handled on amateur frequencies, within 48 hours of receipt, in standard AKRL form.

 All operating amateurs are invited to report to the SCM on the first of each month, covering station activities for the preceding month. Radio Club news is also desired by SCMs for inclusion in these columns. The addresses of all SCMs will be found on page 6.

#### ATLANTIC DIVISION

EASTERN PENNSYLVANIA — SCM, W. H. Wiand, W3BIP — SEC: IGW, RM: AXA, PAM: PYF, E. Pa. Nets: 3610, 3850 kc. The West Philadelphia RA held its annual Dinner Party Feb. 22nd. The club wishes to thank DVB, OWK, and WN3ZIA for a very line banquet. The York Road RC, now 105 members strong, meets on the 1st and 3rd Tue. of each month in Elkins Park at 815 p.m. Visitors are invited. The club station, RDM, is net control for its 2-meter net in session every Sun evening at 9.20 p. Visitors are invited. The club station, RDM, is new control for its 2-meter net in aession every Sun, evening at 9:30 P.M. on 146.25 Mc. All hams in the Philadelphia Area are invited to check in. VMJ reports the club is all set for Field Day. JNQ, NNV, and VOI are newly-appointed OOs, while ZSH is now OES. TYW has a new ground plane working ZSH is now OES. TYW has a new ground plane working on 15 meters and ZFL is building a beam for the same band. AZZ, ex-K6GHL, now on his way back to Germany, is looking forward to a DL4 call. KAG is buck on the air moving to a new QTH. VVV/WUE, an XYL/OM combi-nation, currently active on the PFN, is sporting a new Viking KW. We're pleased to report QGI is back on the air after six weeks in the hospital. OZV is looking for more traffic. UOE is up to 43 countries on 80 meters using his 807s but still needs Asia to make WAC on that hand. DUI report of the product of the parameter of the product of the parameter. Solve but still needs Asia to make wAC on that band. DOI raises a good question. Are we going to have another pienic this year? Let's plan for it now and announce the date and place in this column. NNV reports his two sons. WNS 3AQI and AQM, are soon to be transferred to Kelly AFB. EAN keeps in tourch with his Dad in Miaui Heach on 20 and 40 meters. ZBD is a newconner to the traffic business and 40 meters. ZBD is a herecomer to the traffic business and the only c.w. outlet for Reading in many a year. The EPA Net welcomes your presence. OM. ABT reports better luck in hearing DX since tuning the receiving antonna. The most recent Novice station to report is WN3BFM. Welcome, OM. Traffic: (Feb.) W3CUL 1456, OK 124, TEJ 91, WUE 66, DUI 65, VVV 58, GES 56, OZV 55, MWL 50, UOF 38, BFF 31, PYF 27, ELI 20, QLZ 17, PVY 7, VPY 7, ZBD 6, JNQ 5, ADE 2, (Jan.) W3MWL 39, ABT 2. MARY LAND-DELAWARE-DISTRICT OF COLUM-

39, ABT 2. MARYLAND-DELAWARE-DISTRICT OF COLUM-BIA -- SCM, Arthur W. Plummer, W3EQK -- On a recent Sat. at 6:30 p.m. approximately 150 members of the Amal-gamated Association of Ozone Sniffers gathered at the famous Olney Inn between Washington and Baltimore where they were nobly entertained with masterful demon-strations of metaphysics and mendacity by DWD. A very interesting informal talk was given by George Sterling, 3DF/1AE, who also presented Haraden Pratt, ex-SKH, with the uply certificate af its kind for heing the uddest ham 3DF/IAE, who also presented Haraden Pratt, ex-SKH, with the only certificate of its kind for being the oldest ham in or out of captivity. It seems that he started his hobby of spark-gapping the ozone way back in Sept. 1905. Informa-tion from several W4s present is to the effect that the Roanoke Division Convention will be held Aug. 12-13-14 at the Chamberlain Hotel at Old Point Comfort, Va. For information contact 4HV or 4NV. RVL reports the Ra-diation Lab. Radio Club, ZIB, had two transmitters in operation at Parkton, Md., during the V.H.F. Sweepstakes. The Club also sponsored a transmitter hunt Jan. 20th 

May 1955

and well known to everyone in electronics, was operated on during the latter part of February in Mercy Hospital but is coming along very uicely. EQK has a new Hammer-lund HQ-140X. GBB is moving from Baltimore City to Anne Arundel County. The Delaware Amateur Radio Club of Wilmington now ucets the 2nd Wed. of each month in the uceting room of the Grace Methodist Church. At the February meeting the DARC heard a talk on tran-sistors by a Bell Telephone Company representative. TGF is rearranging his station and expects to be much more active. EQK received a TPA certificate from the Radio Club of Argentina for having worked the 21 Pan-American Club of Argentina for having worked the 21 Pan-American Countries and Canada. He needs only a QSO with a British Colony station in Asia to get the WBE certificate. MZK has completed a cubical quad for 20-meter c.w. Ron also is sporting his OTC certificate. CDQ is teaching code like mad these days and is very active on 40 meters. HKS hopes to be on soon with a new rig. QCB reports he recently made a killing on some nice equipment. LMC recently was guest speaker at the Aero Amateur Radio Club. KLA was named chairman of the Club TVI committee. WN3YZJ has completed ten-element "Brownie" beam for 2 meters and is on nightly with a Gonset Communicator, YQD skeds UJG regularly on 220 Mc. along with 4UMF and signals are from S4 to S9 with seldom a miss. YQD is using an 832A into 16 horizontal elements. Traffic: (Feb.) W3WV 539, K3WBJ 376, W3UE 274, PKC 171. KV 135, ONB 121, PQ 107, HC 26, EQK 9, (Jan.) W3COK 90, MCG 76, ONB 63.

ONB 63. SOUTHERN NEW JERSEY — SCM, Herbert C. Brooks, K2BG — PAM: ZI. New appointments: K2EDL as OO and YRW as OBS. EGP and EWN has reactivated the South Jersey 2-meter Net at 1900 Tues. on 145.4 Mc. UKS. Ocean City, expects to be "chief" aboard the SS North America on the Lakes this summer. Look for Bill on all bands 20 meters and below. We are indebted to K2CEF, Pleasantville, for the Southern Counties Amateur Radio Society news. The SCARA meets the 2nd Mon. of each month at the Pleasantville City Hall. CGP is active on 20 meters with a new three-demontheam Art has each month at the Pleasautville City Hall. CGP is active on 20 meters with a new three-element beam. Art has worked 109 countries. AQP is on 2 and 75 meters. K2KAA, K2JIO, and K2EQC are giving 160 meters a fling. HIB has just returned from a 6-month trip in and around the Mediterranean. The SCARA runs two nets, Sun, at 10:30 A.M. on 3975 kc. aud Mon, at 8 P.M. on 1815 kc. The Club is planning more activities in c.d. The DVRA WAS Contest is planning more activities in c.d. The DVRA WAS Contest is planning more activities in c.d. The DVRA WAS Contest out the maximum structure of the structure of the structure point of the structure of the struct

the 'N.' PB, reggy. The birnington County Franto Coup is holding workly drills Fri. nights on 2 and 10 meters. KN2JWZ, Lawrenceville, is interested in starting a Novice net. Drop him a line for particulars. ADA is on the mend after a recent operation. LYL has a new rig on 10 meters. Again we urge that emergency gear be kept in good repair and be given periodic checks. Traffic: W2RG 127, ZI 30 ASG 16, K2BG 10, W2SUG 10, YRW 8. WESTERN NEW YORK — SCM, Edward G. Graf, W2SJV — Asst. SCM: Jeanne Walker, 2HTB. SEC: UTH/FRL. RM: RUF. PAMs: GSS and NAI. NYS meets on 3615 kc. at 6:30 P.M. and 3925 kc. at 7 P.M.; NYSS on 3595 kc. at 8 P.M.; NYS CD. on 3509.5 and 3993 kc. at 9 A.M. Sun.; TCPN 2nd Call Area on 3970 kc. at 7 P.M.; SRPN on 3970 kc. at 10 A.M.; ISN on 3980 kc. at 3 P.M. New officers of Lockport ARC are K2EGD, pres.; TPE, vice-pres.; A. Retzloff. secy. JFN. treas. The meeting topic was Show and Tell. Those bringing gadgets and telling about them were FEB. ZOC. RXM. YLT, JFN. RUI, ALR. CWB, and K2s GKM, ALZ, and ELS. DVD's XYL is K2GHF. Niagara RC officers are LCP, pres.; CMV, vice-pres.; VE3IM, secy.; RVJ. treas. Net certificates have been issued to COB. ZZG, BKC. MZ, PKG, and K2s APV and CIG. A new club has been formed in Watertown with ZYD. pres.; K2DUO, vice-pres.; K2GWN, secy.; and KN2JDE, treas., which meets the '2D/4th Thurs. at 7 P.M. in Jefferson County c.d. rooms in Thompson Park. FE and QQ are active 0Os. BLO. EZP, and PZF are on 2 meters. K2HXC received General Class license. K2GVF dropped the "N." VMW is on with an 813. FJN runs 150 watts into a Zepp on 75 meters, burchased a surplus Collins 30-J and is modifying it for ham use. TQ finds 15-meter DX good. UXC has 813 final running 30 watts. ETW is on with a BdW. DUZ is on 20-meter 'phone. GSX uses an Elima for fixed and mobile. OZY has been appointed RO for Clinton County. Corning QRM states

75

the first group of walkie-talkies has been completed. The Club conducts code classes. KEL is catching up on DX on 20 meters after OBS work. CXM is running propagation tests with SZ, IYU, AEE, and others on 160, 80, 75, and 2 meters. FDI had help putting up a 20-meter beam. K2CWN is coördinator of the Tri-State Net on 3687 kc. at 0700 daily, with 1ZHO and K2EQP assisting. OPD has resigned as manager of NYSS and K2DYB has taken over. EMW is running 200 watts to an 813. All amatters interresigned as manager of NYSS and K2DYB has taken over. EMW is running 200 watts to an 813. All amateurs inter-ested in forming a club in Clinton County, please contart K2LI/C. KN2LBL is a new Novice in Morrisonville. QBB received his WAS certilicate and is on 20-meter c.w. since swapping his BC-312 for an HQ-129X. The KBT held an auction. New officers of Elmira ARA are K2DNN, pres.; SILE, vice-pres.; WZF, servy; KN2HWB, trens. K2BUI is putting c.d. modifications to a Viking II. K2DOZ and PPR have new HQ-140 receivers. K2GOK, of Olean, now in the Air Force with the call KR0PR, would like to hook up with Stateside pals on 20 meters, 'phone or c.w. K2DYC reports that K2DXE worked France in the Novice band. K2B\_DOL, and DAO, are on 220 Mc. KN2s KIR, KTE,

PPR have new HQ-140 receivers. K2GOK, of Olean, now in the Air Force with the call KR0PR, would like to hook up with Stateside pals on 20 meters, 'phone or c.w. WWT has a philed for OBS appointment. New NCS on QIN are WRO and SKP. FIM 0 is building 220-

LISTENING on almost any amateur band one is likely to get the impression that a new type of r.f. amplifying system has recently been developed. This "new" system eliminates all T.V.I., all spurious and harmonic radiations, has high efficiency, has low efficiency, uses only special tubes, can use any tubes, etc., etc. Thus, it is evident that some degree of confusion exists and it seems appropriate to again review some of the clear-cut facts about linear amplifiers.

<sup>C</sup> HEY are not new at radio frequencies as they have been used for years by commercial services. All amplifiers have some degree of distortion thus developing harmonics and inter-modulation products. A linear by its nature will have less of these unwanted products, but good operating and engineering practice make mandatory a carefully designed, tuned tank circuit or pi-network output to reduce spurious radiations to a minimum level.

 $G_{\text{HE}}$  efficiency of a linear amplifier is lower than a Class C stage when rated on a plate power input basis, but when used for S.S.B. and properly rated and measured can provide about 65% plate efficiency.

ALMOST any tubes can be used as linear amplifiers. Some, however, will have higher internal losses than others, but would also exhibit these same characteristics when used in Class G applications.

A CONVENIENT measure for evaluating linear amplifiers on a cost basis, for a given plate input, is to compare the combined replacement cost of the r.f. and rectifier tubes. For 500 watts input and Class B operation the most economical combination is a pair of 811-A's and 866-A's for a total cost of slightly more than \$14.00. The associated circuit simplicity for this combination also assures increased reliability and further economies. The dollars thus conserved can be spent for the most efficient r.f. input and output circuits to reduce drive requirements and obtain the maximum suppression of spurious signals.

 $\mathcal{A}_{LL}$  of these features, and more, are in the new HT-31 amplifier soon to be announced.

### a new concept in linears

CENTRAL ELECTRONICS takes pride in presenting a product of intensive research — the new Multiphase 600L Broad-band\* Linear. "It is destined to change the entire concept of RF amplifier design in the military, commercial and amateur fields." There are no tuning controls, servos or moving parts other than bandswitch.

- Single 813 in Class AB<sub>2</sub>.
- New band-pass couplers provide high linear efficiency: 60 to 65%.
- Designed for 50 70 ohm co-axial input and output.
- Easy to drive Approx. 2 watts effective or 4 watts peak drive power required for 500 watts DC input.
- Built-in power supply bias and screen regulation, 45 mfd. oil filled paper output capacitor. Excellent static and dynamic regulation.
- Extremely low intermodulation distortion.
- Automatic relay protects 813 and RF couplers.
- Excellent stability -- complete freedom from parasitics.
- Effectively TVI suppressed -RF compartments thoroughly shielded and Hypassed.
- Choice of grey table model, grey or black wrinkle finish rack model.
- Table model cabinet size -175/8" W, 83/4" H, 13" D.

Watch for early an-nouncement of other new CENTRAL ELECTRONICS equipment.

Chicago 13, Illinois

### NEW MULTIPHASE **"Q" MULTIPLIER** AVAILABLE THREE WAYS

1. It's built-in the new Model B Sideband Slicer.

2. Plug it into your present Model A Slicer.

3. Attractive Desk Model, for installation directly into receiver.

The new Multiphase ''Q'' MULTIPLIER is a tunable IF electronic filter that provides tremendous receiver selectivity for peaking or rejecting a signal on AM, CW or SSB. It employs a new two tube circuit\* with a spe-cial very high "Q" pot core inductor. Continuously variable selectivity from 60 cps to normal IF pass-band. Nulls out interfering heterodynes without affecting speech intelligibility. Peak the desired signal; interfering carriers are attenuated up to 50 db,

MODEL DX-100

Shipped motor freight unless otherwise specified. \$50.00 deposit with C.O.D. orders.

- R.F. output 100 watts Phone, 125 watts CW.
- Built-in VFO, modulator, power supplies. Kit includes all components, tubes, cabinet and detailed construction manual.
- Crystal or VFO operation (crystals not included with kit).
- Pi network output, matches 50-600 ohms non-reactive load. Reduces harmonic output.
- Treated for TVI suppression by extensive shielding and filtering.
- Single knob bandswitching, 160 meters through 10 meters.
- Pre-punched chassis, well illustrated construction manual, high quality components used throughout-sturdy mechanical assembly.

#### Heathkit GRID DIP METER КІТ

MODEL GD-1B 50 Ship. Wt. 4 lbs.

The invaluable instrument for all Hams. Numerous applications such as pretuning, neutralization, locating parasitics, correcting TVI, Jocating parasitics, correcting 171, adjusting antennas, design pro-cedures, etc. Receiver applications include measuring C, L and Q of components—determining RF clr-cult resonant frequencies. Covers 80, 40, 20, 11, 10, 6, 2, and

1¼ meter Ham bands. Complete frequency coverage from 2-250 -250 Mc, using ready-wound plug-in coils provided with the kit. Acces-sory coil kit. Part 341-A at \$3.00 extends low frequency range to 350 Kc. Dial correlation curves furnished.

Compact construction, one hand operation, AC transformer oper-ated, variable sensitivity control. thumb wheel drive, and direct read-ing calibrations. Precalibrated dial

with additional blank dials for individual calibration, You'll like the ready convenience and smart appearance of this kit with its baked enamel panel and crackle finish cabinet.

This modern-design Transmitter has its own VFO and plate-modulator built in to provide CW or phone operation from 160 meters through 10 meters. It is TVI suppressed, with all incoming and out-going circuits filtered, plenty of shielding, and strong metal cabinet with interlocking seams. Uses pi network interstage and output tals not included).

PHONE AND CW

TRANSM

Incorporates high quality features not expected at this price level. Copper plated chassis-wide-spaced tuning capacitors ---- excellent quality components throughout-illuminated VFO dial and meter faceremote socket for connection of external switch or control of an external antenna relay. Preformed wiring harness-concentric control shafts. Plenty of step-by-

step instructions and pictorial diagrams. All power supplies built-in. Covers 160, 80, 40, 20, 15,

11 and 10 meters with single-knob bandswitching. Panel meter reads Driver IP Final IG. IP, and EP, and Modulator IP. Uses 6AU6 VFO, 12BY7 Xtal osc.-buffer, 5763 driver, and parallel 6146 final. 12AX7 speech amp., 12BY7 driver, push-pull 1625 modulators. Power supplies use 5V4 low voltage rect., 6AL5 bias rect., 0A2 VFO voltage reg., (2) 5R4GY hi voltage rect., and 6AQ5 clamp tube. R.F. output to coax. connector. Overall dimensions 201/8" W x 13¾" H x 16" D.

80 meters-tapped inductor 4 İbs. and variable condenserneon RF indicator-copper plated chassis and high

quality components.

"LITTLE MAC" does a big job!

# Ideal trimmer for VHF range

To keep pace with the continuing efforts of the electronic industry toward miniaturization of components, Hammarlund has introduced a tiny variable capacitor, type "MAC". This component provides the low minimum capacity essential for use as a trimmer in the VHF range.

The silicone-treated base is only  $\frac{3}{4} \times \frac{5}{8}$ inches. Its rotor and stator are soldered assemblies of brass, nickel-plated for low losses, while the wiper rotor contact is nickel-plated beryllium-copper. Rotor and stator terminals are positioned to permit short leads. A threaded bearing is provided with flat sides to permit single-hole mounting without turning.

The new units are available to fulfill capacity requirements between 1.4 and 19.6 mmf. Try one in your next piece of gear.

(Continued from page 76) and VFO. LNM worked TI9MIHB on 160 meters with his Viking Ranger, RQK has had good luck on 14 Ale, with 40 works out east. WN9G2S has a four-element beam on 144 Me. CCO received his 9RN certificate. The present roster of WIN lists 40 members. YZA is active on WIN with a Viking II and an RME-70. WN9HIYV, using a BC-454, reports an unusual 4-way QSO between 9NSX, 8NSX, 9PCY, and 8PCY. Fred J. Rescorl is both a science teacher and a ham, and as such can appreciate both the practical and theoretical sides of radio. Fred has been a satisfied Hammarlund customer for years, using Hammarlund capacitors and other components in home-built equipment, and now has a Hammarlund HQ-140-X receiver in his ham station.

Fred is enthusiastic about Hammarlund products. In his latest letter, he says, "My HQ-140-X is the best buy I ever made. It's the receiver I recommend to my friends. It has performed the way you said it would — outstanding sensitivity and selectivity, with almost no frequency drift."

Fred J. Rescorl's happy experience with Hammarlund products is no accident. Rather, it is the result of careful engineering exemplified in the professional characteristics of the HQ-140-X.

Be completely satisfied with your next receiver. Get an HQ-140-X1 It's available either as a cabinet model or for rackmounting. For complete details, write to The Hammarlund Manufacturing Co., Inc., 460 W. 34th Street, New York 1, N.Y. Ask for Bulletin R5

## **ENGINEERING OPPORTUNITIES** AT JOHNSON

We invite QST readers to consider technical employment in the following categories made necessary by an expanding products development program.

#### COMMUNICATIONS ENGINEERS ... With EE DEGREES

... or equivalent professional experience in the communications field.

#### MECHANICAL ENGINEERS

... with design experience on small mechanical and electrical parts similar to those used in electronics equipment, or with methods and production experience in this field.

#### DESIGNER-DRAFTSMEN

... for diversified work on equipment and components.

#### ELECTRONIC TECHNICIANS

... for laboratory or production test work.

These openings result from steady growth of our company over a period of 30 years. The excellent reputation and wide acceptance of Johnson products have been the result of sound engineering, close control of manufacturing, conservative but progressive management and adequate financial strength. These factors, plus widely diversified lines, lead to job security that is unsurpassed in the industry.

Waseca offers an attractive small city environment, ideal for family life, close to work, to good schools and recreational opportunities in the Land of Ten Thousand Lakes.

If you feel you are qualified and interested in working with a compatible and highly respected group on projects ranging from component items to broadcast and amateur equipment and without the disadvantages of over-specialization and resultant boredom, write to A. M. Pichitino, Chief Engineer. We would appreciate a resume of your education and experience in your first letter together with a recent photo. All responses will, of course, be held in strict confidence.

Viking "Ranger" Transmitter/Exciter Kit complete with tubes and all necessary instructions, less crystals, key, and mike. \$214.50 Amateur Net

Viking "Ranger" Transmitter/Exciter wired and tested including tubes, less crystals, key, and mike....\$293.00 Amateur Net

For the complete stary on the Viking "Ranger" write for Booklet 724 containing detailed information, and schematic diagram.

Here it is! The new, improved Viking "Ranger" with the perfect keying system. No more clicks and chirps even when driving a full kilowatt! Timed sequence keying provides ideal "make" and "break" on your keyed signal, yet VFO is keyed for fast break-in. Press the key and the VFO turns on quickly (before the keyed amplifier), and it stays on a fraction of a second after the amplifier cuts off. Wave shaping is then applied to the keyed amplifier stages for a perfect waveform. Time delay sequence is adjustable and may be set to operate so fast that a "breaking" signal can be heard between transmitted dots! Entirely electronic in operation, the system utilizes a type of grid block keying without relays and provides clean and crisp electronic keying.

NO CLICKS! MW NO CHIRPS! MU OLEAN and CRISP

ELECTRONIC BREAK IN!

Buy your Viking "Ranger" today! Truly the finest low power rig available, it packs enough power for enjoyable contacts all over the world. Later using the "Ranger" as an exciter you can add a Viking Kilowatt Power Amplifier and enjoy the ultimate in high power performance and convenience.

Exercise Interim worked nicely on both phone and c.w. TDZ reports a good attendance on the Chattanooga Area Radio Net. WQT has 3 new countries on 80 meters. The Clarksville Club teaches code to local Boy Scouts, shows ARRL i lims at meetings, and welcomes new member 9YKT. WHC, now is /KL7 and is looking for Tennessee contacts. The Memphis Club Station, EM, worked the Heart Fund drive, assisted by mobiles ADM, AFB, IBG SUK, ZGG, FYJ, STI, CV, GQQ, PKI, IQX, WTI, YMB, LVM, DIX, DCH, CRP, BDK, UDL, UDQ, ACK, RLU, RBL, BAO, ADY, WTJ, ATQ, BTZ, HMJ, HHK, and WBK. New 2-meter Memphis stations are PKI, WTI, AFB, FRB, and FRE. The Knoxville Club's new officers are TYU, pres.; TZJ, vice-pres.; SVE, secy.; J. P. Morgan, program chairman; and PHW, publicity chairman. Oak Ridge Operators Club, Inc., operated SKH/4 at the Hobby Show. Brother Luke, an operator at YN4CB, is visiting his many friends in Memphis. Traffic: W4PL 1196, OGG 551, K4FET 265, W4PFP 231, SCF 147, WAX 118, WQW 109, SKH/4 101, CXY 91, IB 90, TZD 90, PQP 87, BQG 78, K4FEU 72, W40DR 52, VI 44, YMB 40, ZJY 40, HIH 33, IV 32, AFB 31, RRV 27, HEZ 19, TIE 19, SAR 15, UVS 15, TDZ 10, RMJ 6, BAQ 5, FLW 5, HSX 5, HUT 5, UOA 5, UDI 4, GFV 3, YPG 2, NPS 1.

#### **GREAT LAKES DIVISION**

**GREAT LAKES DIVISION** KENTUCKY — SCM, Robert F. Fields; W4SBI — NIZ is really carrying the ball for the new (KPN) Ken-tucky 'Phone Net. The first 14 days of the new Kentucky Net operation showed these figures: 236 stations called in, an average of 16.7 stations per net; 32 messages handled, an average of 2.28 per net. Net time is 1:30 p.m. CST. Mon, through Sat. and 8:00 A.M. Sun. The frequency is 3960 kc. CDA, SEC for Kentucky, asks that all Kentucky ECs report to hum the number of AREC members they have signed up. Every amateur in Kentucky should register station facilities and availability as an operator with AREC. Registration forms may be had by contacting your EC. SEC. or SCM. The Mic-Key Radio Club of Russellville has a Novice Emergency Net operating Sun. at 2:00 p.m. CST and Thurs. at 7:00 p.m. CST on 3735 kc. under the capable leadership of JHU. The Novice Net has 15 active stations at the present time. Our hat is off to you, Marvin. Trailie: K4WBG 420, W4KKW 369, K4FBW 92. W4NIZ 64. RPF 54, HSI 49, CDA 47, SBI 42, JCN 41. GFG 19, HEA 12, ZDB 12, ZDA 11, KRC 7, URF/I 5, K4AXE 4, W4SUD 4. MICHIGAN — Thomas G. Mitchell, W8RAE — Asst. SCMs: Joe Beljan, 88CW; Bob Cooper, SAQA. SEC: GJH. With HK Tretiring as our SCM I am sure that you will join me in expressing our thanks to him for a job well done and extend to him heat wishes for the future. In taking our

me in expressing our thanks to him for a job well done and extend to him best wishes for the future. In taking over the duties of this office I pledge you my very best effort the diffus of this office 1 pledge you my very best effort to maintain the same calibre of service that you are accus-tomed to. Many thanks to all who supported me in the election. There is no misunderstanding on my part that this is a one-man job. Rather, it is one of coördinating the cooperative efforts of all members in this section. Let's all keep striving to keep the fine reputation that we in Mich-

igan enjoy. Examination of the appointments file indicates a laxity on the part of some appointces to have their ap-pointment certificates endorsed. Please be reminded that failure to keep your appointment current is basis for can-cellation. It is impossible to notify each appointce when to cellation. It is impossible to notify each appointce when to apply for endorsement — it is your responsibility. Word from our SEC regarding approval of the Michigan Com-nunications Plan is encouraging. As soon as it is rutified by the FCC and the FCDA, our RACES Plan can blossom into being. Many AREC registrations are being received, but many more will be needed to fill the ranks. GJH has spent nuch time doing the ground work so let's show our appreciation by backing him and the rest of his AREC organization with a solid membership. Remember, fellows, in the event of a disaster only those outlifted as RACES organization with a solid membership. Remember, fellows, in the event of a disaster only those qualified as RACES stations will be allowed to help. Traffic: (Feb.) W8NUL 144, 1LP 137, URM 75, NOII 73, SWG 68, IU3 66, DAP 60, QIX 59, HKT 58, PHA 54, SRK 52, WVL 49, FX 40, IV 37, OQH 27, WXO 25, ZHB 23, RAE 22, HSG 21, AUD 17, DSE 17, TBP 12, PHM 10, NTC 9, QQK 7, FGI 5, FSZ 4, TQP 4, TIC 3, (Jan.) Davis, 8JNF; E. F. Bonnet, 80VG, SEC: UPB. RMs: DAE and FYO. PAMs: EQN and HUX. DAE and FYO made BPL for February traffic. New appointments are GLM as EC. WN8UJG as OES, and MYV and OMK as OBSs. EL2X is looking for stations on 20-meter 'phone in the Youngstown Area at about 2000Z. DZO will remain indefinitely in Arizona. Recently-elected Intercity Radio Club officers are 1HTO. pres.; OZZ, vice-pres.; and QXD, seey. MIIF and NFO are the transmitter-hunting champs in Cincy, while IFX and HDA invariably finish last. VPX is the assigned call of Patterson Co-op High in Dayton. ILC has been bitten by the 2-meter hug. HHF is conducting code and theory classes for his neighbors. This is one way to alleviate TVI complaints. The Tillin gang was scheduled to join ranks with the SVARC in Fremont on Mar. 14th to honor our fabulous SEC. PBX's Boy Scout students are making great progress, with WNSSAI attaining a nice score in the Novice Roundup. RCJ reports he now has 33 states worked. The Lake and Geauge Club had 36 attending its annual dimner. WNSSVL's 25 watts gives the Cincy "Big Boys" some-thing to worry about. According to DAE, the Sat, and Sun. 1100 BN sessions are bringing 'em out. The Net has procured 1000 message cards with a pool of 12 shring the expense. This should afford excellent publicity for BN and the National Traffic System. UVF has returned to Columbus and has resumed his duties as NCS of the 2-meter FM Net. QEF did a uice job as acting NCS during his absence. You can't beat the feminine touchI New officers of the Toledo Mobile Radio Assu. are VQP, pres.; MBE, vice-pres.; MNR, secy-treas.; and OFG, corr. secy. The Netsonville Tribune gave the Hocking Valley Club a front-page spread with numerous references to Rita, HPP, Ohio's "Miss Amateur Radio." PIZ is the new activities manager of the Van Wert Club. Hamilton's Requered is 2.4 Mic. Daylou is in Convertice assigns; QFA is on 220 Mic.; Novices VGA and UVW are: VLs: and the Hanvention program is shaping up beautifully. The Co-lumbus Carascope states that ZYU is running high power with 80 watts; AER is operating mobile in Florida; JDKs and VHO are vacationing in Florida; and WN8VFI was the leading local scorer in the Novice Roundup. The OvARA's Ether Waves has developed into a lirst-rate DX publication. New OVARA officers are 4EPA, pres.; SDQC, vice-pres.; JBQ, trees.; SSIJ, seev.; 40NIW, editor; KVX, DX editor; SDJ, v.h.f. editor; and PBU, art. mr. The Hocking Valley Key Kits and Feed Back, the newest bulletin received here, tells us that LQ11 has gotten on 75 meters; LGR/M worked Connecticut on 75 meters; HPP has a new romantic interest; and membership is now up to 35. Springlield's Q-5 features an article by OKB on how to work DX. The Folded Shack Gossip relates that BIQ has 76 countries on 15 meters; YAE is making his home in Toledo; TLC's son is serving in the Far East; HCN has an 813 clicking on 20 and 75 meters; and OKO has deserted 160 for 80 meters; Eastern Ohio's Ham Flushes rotoret at hat BZW has Youngstown's lirst TV transmitter; PWI has returned to 10 meters; JWC has enserted a 44-foot vertical; OYQ is a city detective in the Youngstown Police Dept.; the Tri-State Club meets at RZ's home every other Fri. night; and EX is a rotoreding Fenn College in Cleveland. EASTERN NEW YORK — SCM, Stephen J. Neason, W2ILI — SEC: RTE. RM: TYC. PAMs: GDD and IJG. (Continued on page 88)

# ... heart of the deluxe mobile rig!

**P**OWERFUL all-band operation through 420mc, top performance in double or single sideband service and more watthours per dollar make the Eimac 4X150A radial-beam power tetrode a tube for the deluxe mobile rig. The advantages offered by the versatility, power and reliability of the Eimac 4X150A make the necessary simple forced-air cooling well worth while—with an Eimac Air-System Socket an automobile defroster type blower is all that's needed to do the trick. With 1000 volts on the plate in typical plate modulated service, the Eimac 4X150A delivers 150 watts of useful plate power output with 200 watts of power input and only 2 watts driving power. The high power gain Eimac 4X150A is also ideal for increasingly popular Single Sideband mobile application. In typical AB<sub>1</sub> operation at 1000 plate volts, it delivers 150 watts of peak

#### MIDWEST DIVISION

DIPUTED TO DESCRIPTION OF A DESCRIPTI IOWA -- SCM, William G. Davis, WØPP -~ The Water-

# QUALITY PRODUCTS BY B&W

#### MINIDUCTORS

Highly efficient miniature coils offering extremely low losses and real space saving economy. Ideal for compact, high frequency circuits, mobile and portable rigs. Diameters from  $\frac{1}{2}$ " to 1", standard lengths of 2" or 3". Choice of 4, 8, 16, or 32 turns/inch.

#### JUNIOR AND HEAVY DUTY BUTTERFLY VARIABLE CAPACITORS

B&W heavy duty butterfly capacitors pave the way for increased efficiency in single-ended and push-pull circuits, provide better L.C. ratios at high frequencies with beam power tubes. Junior butterfly capacitors are ideal for medium power triode or tetrode stage plate circuits, etc. Having 25% of the frontal area of the heavy-duty type, these units provide peak efficiency, more power, in less than normal space.

ALL OF THESE FINE B&W products are available at leading distributors' everywhere.

#### COAXIAL CONNECTOR

Permits efficient, watertight, coaxial cable connections for antenna systems. In addition, it serves as a center insulator for a half wave doublet antenna. Ruggedly constructed of aluminum, with steatite insulation, connector withstands a 500 lb. pull.

#### **DIP METER**

This indispensable instrument serves as a sensitive grid dip meter, signal generator, absorption wave meter, or signal monitor from 1.75 to 260 mc. Saves time in transmitter tuning, neutralizing, antenna loading, etc. Color coded 5 band dial matches five coils supplied.

#### BASES, MOUNTING ASSEMBLIES

Barker & Williamson,

Barker & Williamson, Inc., 237 Fairfield Ave., Upper Darby,

Permit compact assemblies with capacitors, jack bars, plug-in coils, and links. Available for open wire plug-in swinging links or Faraday shielded links. Assemblies include jack bar, arm and hinge, open wire or shielded link, metal bottom plate or capacitor mounting bracket.

# we can deliver from stock

The new smart-looking PR-1 has sufficient compen-sation available to provide wide-view Panoramic reception with modern receivers featuring high selectivity. Operates with receivers having an IF of 450 kc-470kc or 500 kc.

The PR-1 offers visual monitoring over a band of frequencies up to 200 kc, let's you "see"... everything from the other fellow's frequencies in three-way or round robin QSO's to replies to your CQ's. You see it all on a 3-inch CR Tube which also simplifies frequency setting and station monitor-ion, facilitates network constituent seciets in making also simplifies nequency setting and station monitor-ing, facilitates network operations, assists in making adjustments of transmitters and antenna, enables identification and interpretation of transmitter signal characteristics (your own and others), selects QRM-free spots for sending and listening.

Features • Visual displays up to 200 kc. wide • 3-inch Cathode Ray Tube • Phone output for use of PR-1 as a second unisignal aural receiver • Cath-ode Ray Tube connection for use as external 'scope.

ONLY \$199.75 Net When ordering specify model of your receiver and I.F.

# The 1955 EDITION

# THE RADIO AMATEUR'S HANDBOOK

AN INVALUABLE reference work and text for everyone—hams, engineers, lab men, technicians, experimenters, students, purchasing agents.

 $\mathcal D$ istributors throughout the Nation have the 1955 Edition in stock. Better get your copy of this complete Handbook now. The demand is terrific!

In the pages of this latest edition will be found, in addition to accumulated knowledge since the first Handbook was issued in 1926, the latest proved findings and experiments invaluable to ham and engineer alike. Every field of ham radio is covered: transmitting, both c.w. and 'phone; receiving; propagation; antennas; construction; theory; charts; diagrams; circuits; miscellaneous data; procedures; station operation, etc.

### For instance, the 1955 Edition carries

- Chapters on Theory: Electrical Laws and Circuits, Vacuum Tube Principles, High Frequency Communication, Antennas, Modulation, V.H.F. and U.H.F.
- Chapters which include How-to-make-it articles dealing with Receivers, Transmitters, Power Supplies, Radiotelephony, V.H.F., U.H.F., Antennas and Mobile Equipment, etc.
- A separate chapter on test and measuring equipment
- 67 pages of data on vacuum tubes and semiconductors, a great time-saver to both engineer and ham
- 148 pages of valuable catalog/advertising sheets, containing manufacturers' and distributors' products and services... a useful supplement to the editorial section
- Plus thorough treatment of such subjects as assembling and operating a station, BCI and TVI, construction practices, etc.—and fully indexed and completely illustrated throughout. You can locate in a jiffy what you want.

\$3.00 U.S.A. Proper. \$3.50 U.S. Possessions & Canada. Elsewhere, \$4.00. Buckram bound Edition, \$5.00 everywhere. All prices postpaid. The AMERICAN RADIO RELAY LEAGUE, INC. West Hartford 7, Conn. • U.S.A.

EXCLUSIVE

Single Knob Tuning-The only commercial amateur transmitter, gangtuned exciter through final.

Antenna Loading System--The only system designed for efficient coupling and transmission of power into the impedances encountered in mobile antennas! (Pi-network systems simply will not cover mobile antenna impe-dance ranges.) The Viking Mobile uses special, series tuned link circuits for each band ganged to a single front panel control. No annoying plug-in coils or coil tapping necessary

RF Fixed Bias Supply—A feature exclusive to the Viking Mobile—Saves up to 7 amperes car battery drain while transmitter is operating!

Most Powerful Audio—PP807's mod-ulating a single 807! Terrific audio punch for cutting through QRM.

Bands witching —75, 40, 20, 15, 11 and 10 meters. Compact — measures only 6" high by 7" wide by 10" deep. Flexible — operates with 300 volt supply as well as with 6001 Available for 6 or 12 volt operation. Dynamotor base kits for use with your dynamotor or complete dynamotor power supplies are available.

The Best

Viking Mobile Transmitter Kit, less tubes \$99.50 Amateur Net

Viking Mobile Transmitter wired, test-ed, less tubes, \$144.50 Amateur Net

Other Fine Johnson Mobile Equipment

Mobile VFO—Designed for steering post mounting ... exceptionally stable mobile frequency control.

Whip Load-6 — Bandswitching Anten-na Loading System. 75, 40, 20, 15, and 11-10 meters.

### Further discussion of the "Robert Dollar" Oscillator

Last month we discussed use of the circuit shown in Fig. 1 for overtone use; and, as redrawn in Fig. 2, as a basic Pierce Oscillator. (QST, April, 1955).

Now, if capacitor C (Fig. 2) is tuned to approach the third overtone resonant frequency, a point will be reached where the crystal ceases to oscillate on its fundamental and begins to oscillate on its overtone frequency. At this point a change in the oscillator frequency occurs, since the overtone frequency is not an even multiple of the fundamental. An increase in grid current and output on the third harmonic will be noted as capicator C is tuned. This same circuit may be used on even harmonics, however the crystal continues to oscillate on its fundamental in this case. Thus it can be seen that the "Robert Dollar" circuit will oscillate under a wide variety of conditions and if the tuned circuit L-C is not properly adjusted, overtone operation will not be realized.

With plated overtone crystals the circuit shown in Fig. 3 provides equal or more output under similar conditions than does the circuit in Fig. 1. In this circuit the crystal will operate only on its overtone frequency and depends on the tuning of L-C.

# ONE-DAY PROCESSING

Spot Frequencies 1500 KC to 75 MC

.01% TOLERANCE—Crystals are all of the plated, hermetically sealed type and calibrated to .01% or better of the specified frequency. See specifications below:

For closer tolerance and commercial applications use the F-6 series crystal. Write for full information.

#### **SPECIFICATIONS**

Holders: Metal, hermetically sealed, available in .093 dia. pins (FA-9) or .050 dia. pins (FA-5). Calibration Tolerance:  $\pm$ .01% of nominal at 30° C.

Temperature Range: -40° C to +70° C.

Tolerance over temperature range from frequency at 30° C  $\pm$ .01%.

**Circuit:** Designed to operate into a load capacitance of 32 mmf on the fundamental between 2000 KC and 15 MC. Designed to operate at anti-resonance on overtone modes into a grid circuit without additional capacitance load. Write for recommended circuits). Orders for less than five crystals will be processed and shipped in **one working day.** 

FA-9

**HOW TO ORDER**—In order to give the fastest possible services, crystals are sold direct. However, crystals are also available by special order through your local jobber. Where cash accompanies the order, International will prepay the Airmail postage; otherwise shipment will be made C.O.D.

#### PRICES FA-9\* (Pin Diameter .093)\* FA-5 (Pin Diameter .050)

At the time of writing this, there are two bills in the General Assembly of Vermont which are of interest to the hams. (1) H-181. Subject: Tcle-vision Interference. Information to date leads to the belief that if FCC regs are complied with the stations have noth-ing to worry about (1 hope). (2) H-285. Subject: Special number plates. This was introduced by Mr. Niquette of Winooski and has been referred to the Committee on High-way Traffic, where it still is at this writing. Several hams have requested the above committee to hold a public hear-(Continued on page 90) (Continued on page 96)

New, compact Vibrapacks® to power your mobile rigs...

MALLORY HAM BULLETIN

Before you start working over your batterypowered gear for the outdoor radio activity that will soon be in full swing, stop in and see your Mallory distributor. He is prepared to introduce you to a new Mallory Vibrapack vibrator power supply that you can fit into almost any type of mobile equipment.

So small that it fits into the palm of your hand, this new power supply puts out plenty of wattage. It embodies design principles that Mallory engineers have learned in 25 years' experience in building vibrator operated power supplies for communications equipment. You'll find that our designers have used techniques formerly reserved exclusively for commercial mobile equipment.

Here are some highlights. The same communication-duty, series drive vibrator found in taxi, police and utility two-way transmitters and receivers is used. High stability ceramic capacitors are used in critical parts of the circuit. Heavy gauge steel protective cover and bottom plate snap on and off in an instant, to make replacement of vibrator and rectifier tube a few seconds' work even on field location. When you remove the bottom plate, all wiring

> P. R. MALLORY & CO. Inc. P. O. Box 1558 INDIANAPOLIS 6 INDIANA

is exposed and accessible for trouble-shooting. Special attention has been given to hash filtering in the "A" and "B" power leads. A separate external connection to the rectifier heater saves your battery during standby, and provides instant return to operation.

The Vibrapack has been designed to let you provide whatever low frequency filtering is necessary for your particular equipment... without paying for parts and wiring that you may not need. You can connect the output "as is" to a transmitter or receiver that already has its own filter system. Or, if you want to add a filter to the Vibrapack, the chassis has been punched and space allowed for the installation of a Mallory multi-section FP electrolytic capacitor.

Power ratings are conservative, to assure you of higher efficiency, peak conservation of battery power and long operation between charges.

Ask your Mallory distributor to show you the new Mallory VP (6), (12) and (24) Series Vibrapacks. and to give you their electrical eharacteristics. Or, just drop us a letter and we'll send you complete details.

## HOW TO IMPROVE YOUR MOBILE RIG

**By Bill Cummings WIRMG** 

You can always do a better job and get better performance from your mobile rig by keeping up with the latest developments. When the mobile season comes round, the Dale ham staff—including Vinny Scalise W1WEV, Don Onofrio W1TYE, Charles Boynton W1ATT, and myself—start tinkering with the new gear. We can help you sharpen up your reception and work out the bugs with any setup you are now operating. We have the dynamotors, filters, receivers, converters, noise clippers, squelches, mounts, loading coils, relays, cable and mikes. Drop in or drop a card, and we'll do our best.

MONTANA -- SCM, Leslie E. Crouter, W7CT -- SFK has a new Globe King 500 and is working on plans for the Glacier Park Hamfest to be held at Apgar Camp Ground July 23rd and 24th. RIL has been transferred to Ellensburg, Wash, KUHI is NCS for the Montana Weather Net Sun-mornings. MAI has a new 20-A on s.s.b. Others on s.s.b. in the Great Falls Area are GCS, YPY, UWN, YLM, and DSS, RRI has moved to Butte and is with the CAA. Ex-FYN is now KAIOJ. FDH, with the help of JGG, put up a 30-ft, "Pop-can" vertical on the house of FDH on New Year's Day. SWE has a two-element 15-meter beam. NPV meeds Asia for WAC on 15 meters. OOY has been appointed chairman of the seventh district YLRL. New calls in Great Falls are VLA, YLC, YLD, and YLM, also WYNYIO and YDY. Recent appointments or endorsements: FDH as 0ES. BSU as 00, EWR, PAF, and VYU as ECs. The SCM is in the process of moving to Ilelena and inelficiency was been by W7SFK 71, PCZ 28, EWR 12, CJN 6, Gan.). W7FK 82, TKB 21, CJN 8, EWR 8.
ORGON -- SCM, Edward F. Conyngham, W7ESJ --SEC; WAT, RM: AJN, PAM: IRZ, ESJ has assumed the duties

drill was held in Oregon the hrst Sun. in February to ascer-tain the coverage and signal strength. Those participating were AJN, BDU, BVH, ESJ, FIX, LT, LJC, PRA, RNY, SBX, USO, WAT, and WHE. The test will be repeated on the first Sun. of each month at 1100 PST on 3585 kc. The Oregon State Net (USN), meeting on 3585 kc. at 1830 PST daily, has made rapid gains. Attendance was 202 in 23 ses-sions. EZR advises that the Rogue Valley Club is now meeting in UGE's school room until the new club house is finished. Steve at GPJ expresses thanks and appreciation for the help received from all anateurs and MARS and ARS

finished. Steve at GPJ expresses thanks and appreciation for the help received from all anateurs and NARS and ARS members who sent watermelons on his emergency request for two hemophilia victims in the hospital in Portland, Oregon. Traffic: WAPF 533. OKU 138, BLN 96, WAT 70, AJN 64, THX 33, HDN 23, PRA 23, ESJ 16. WASHINGTON - SCM, Victor S, Gish, W7FIX --The Valley Amateur Radio Club (Puyallup) reports its an-nual election and banquet was held Feb. 18th. New officers are MCU, pres.; GWK, vice-pres.; UZE, secy.; VLC, treas.; SWA, trustee; WN7VZ, st. at arms. The Tacoma Ama-teur Radio Club, Inc., heard a talk on "The Role the Amateur Plays in C.D." given by Tacoma C.D. Director, Frank Evans. RGD reports further that MFG's ½-watt handie-talkie was head in Eatonville; GDW is off the air as mobile temporarily while getting a new Mercury hard-top handie-talkie was heard in Eatonville; GDW is off the air as mobile temporarily while getting a new Mercury hard-top convertible; OVW was on the air with a Ranger, but the big wind came and took the antenna and chimney down: AZI is NCS of the Tacoma AREC Net the 1st and 3rd Wed, at 8 p.m. on 29.6 Mc.; band practice was held at the QTH of IMB with RCD, RXT, RXS, OVW. KKN, SKR, AEA, and IG attending. The Skagit Amateur Radio Club reports 1955 officers are PQT, pres.; REC, vice-pres.; LVB, seex-treas. The Skagit AREC Net meets on 50.7 Mc. at 0800 Sat. RA really, cut down on traffic by enopdone half the to replace off-center Hertz and keep the antenna in his own yard. FZB and the four jr. operators had chicken pox, which allowed the OMI to try out his new Ranger. AVM reports working Olympia on 2 meters but has neither heard nor worked any other 2-meter station. TGO worked (80-meter c.w.) KMI6AX, VP9PL, SM8CWC, several ZLs, and YV5BJ. VAZ reports going TDY (trmporary duty) in Alabama in March. ZU reports QRM on 14-Mc. 'phone Sun. mornings on his sked with 7PRZ/2 chased them back to c.w. PHO is working a Ranger. K6BDF/7 is all shook up over the lack of discipline on the local nets. All radio clubs Wash-(Continued on page 89) to replace off-center Hertz and keep the antenna in his own (Continued on page 98)

# 2 Element, 40 Meter MOSLEY VEST POCKET BEAM

FOR

"

Real 40 Meter DX and effortless solid QSO's are yours with the MOSLEY 40 Meter "V-P" Beam Antenna!

Developed from the tried and proven Original Design MOSLEY 20 Meter Vest Pocket Beam, the Model VPA40-2, for the first time, provides outstanding 40 Meter beam performance ... at low cost and with an array of convenient size and weight!

#### SPECIFICATIONS

- 14'10" Tubular Steel Boom with factory welded element support plates.
- 36'1¾'' Maximum Element Length. (61S-T6 alum. alloy.)
- 68 Ibs. Assembled Weight.
- Element Sections and Element Supports pre-cut, pre-drilled for fast assembly.
- Sturdy 3" Ceramic Insulators and extra long Redwood Supports minimize element sag.

- $\mathcal{K}$  Pretuned to 3 frequencies in 7 Mc. band!
- 5 Db., or more, forward gain over reference dipole!
- び 19 Db. front-to-back ratio!
- \$1.1/1 SWR at resonant freqquency!
- ✓ Factory made coils wound on ceramic forms with weatherproof covers will handle full KW!
- CLink inductance matches 52 ohm co-ax line!

MODEL VPA40-2, MOSLEY 2 Element 40 Meter ''V-P'' Beam, less 52 ohm coax line, rotor and mast.

AMATEUR NET \$74.95

Other MOSLEY ''V—P'' Beam Antennas include: Model VPA20-2, 2 Element, 20 Meter, Amateur Net \$55.95; Model VPA20-3, 3 Element, 20 Meter, Amateur Net \$79.95.

ORDER FROM YOUR HAM SUPPLIER

## Here's where

## the fun begins! Centralab Ampec<sup>®</sup>

3-stage P.E.C.\* Audio Amplifiers

You can use them to build all sorts of exciting, miniature projects pocket radios, mike preamplifiers, signal tracers, portable megaphones, phonograph pick-ups, hearing aids, model controls—even stethescopes

Yes, sir, you can really have a "picnic" with Ampec. It's the highest form of Printed Electronic Circuit and provides complete electrical service from input to output. Wiring, capacitors, resistor, and tube sockets are bonded to a single, master plate.

Even with tubes, Model 2 Ampec is smaller than a book of matches. Model 3 is smaller than a postage stamp—and it has a tone circuit, besides!

Ask your Centralab distributor to tell you more about Ampec. And send coupon for Booklet 42-142 with specifications and applications.

#### PACIFIC DIVISION

**HAWAII** — SCM, Samuel H. Lewbel, KH6AED — On Feb. 28th a big volcanic eruption started, YI, 34 miles from the spot, alerted the Hilo hams. AFQ, AFS, AXQ, ATT, AQE, IN, GP, AU, AUP, AYG, AZL, and BFQ set up the net between Pahoa and Hilo, AED set up the C.D. Net with AUJ, OS, AXY, BEH, AN, AAI, and DE manning the Honolulu end for traffic to c.d. headquarters. The Hilo-Pahoa Net operated 24 hours a day from the start and at report deadline, 7 days later, was still working. All other hams in the Islands are to be commended for the way they kept the frequencies clear. Now that you have seen how an organized net can step in and handle a rush situation let's have your applications for AREC membership. I am also looking for applications for OBS, OPS, ORS, and OO appointments. The 49th State Net reorganized in Feb. AGB is NCS. The Net meets Wed, and Fri at 1645 HST and Sun. at 1300 on 7200 kc. with outlets for traffic on all Islands. Traffic: (Feb.) KA2GE 882, AK 712, HQ 139. (Jan.) KA7LJ 1025.

KATLJ 1025. NEVADA - SCM, Ray T. Warner, W7JU - ECa: PEW, PRM, TVF, TJY, and ZT. OPSs: JUO and UPS. ORSs: MVP, PEW, and VIU. OBS: BVZ. Nevada State Frequencies: Phone, 3880 and 7160 Kc. cw., 3660 and 7110 kc. Old-Timer ex-8CNC blossoms out with a new call. YRY, and a show of activity in Boulder City. K6BJ is expected to give another lecture, this time on VFO Construction and Single Sideband, at the Water and Power Itali in Boulder City. June 2nd. LGS is active from his new QTH in Reno. UPS, in Elko, completed his new three-element 20meter beam. JU is preparing for some 6-meter activity with a rebuilt Channel 2 TV Yagi. SXD confines his 40-meter activities to the early morning hours. SNP, Virginia, kceus sinping for 100 Nevada QSLs! Write to BJY if you are interested. in the "Worked 25 Nevada" certificate.

meter beam. JU is preparing for some 6-meter activity with a rebuilt Channel 2 TV Yagi, SXD confines his 40-meter activities to the early morning hours. SNP, Virginia, keeps her Viking busy on all bands from 15 to 75 meters. TVF is sniping for 100 Nevada QSLsI Write to BJY if you are interested in the "Worked 25 Nevada" certificate. SANTA CLARA VALLEY – SCM, R. Paul Tibbs, W6WGO – SEC: NVO. Ed Turner has just been appointed SEC and is busy organizing the section. Any club which has not been contacted and has any suggestions to make about its area and AREC problems should drop Ed a line at 2337 Fernwood Ave., San Mateo. AIT is active in traffic and will be break-in operation soon with the new system just com-pleted. YHM got a BPL medallion for making BPL three times. EDC is building an amplifier for use on 420 Mc. us-ing a 4X150. The San Mateo. Radio Club Hamfest will be held on June 5th this year. Further details will be an nounced later. This column was in error some time back and it corrects this by saying that the San Mateo Club elected NUL, pres.; and QOY, vice-pres.; MKM was named EC for the San Mateo Area. WLI is having fun on 144 Mc. and reports only two new countries were worked in this year's DX Contest. The larger the total the harder new ones come, Norm. NX is having a Collins KW-1 converted to single sideband. We advise everyone to remove the autenna colla sideband. We advise everyone to remove the antenna coils from the receiver when Frank opens up now. The SCCARA reports there have been no new cases of TVI for some time sidebald. We advise evolution of the latter and entropy of the second of The v.h.f. gang really started making plans for 6 meters as soon as the word on the Technician privilege there was (Continued on page 100)

received. The Oakland Radio Club heard EFT on RTTY and other Robert Dollar equipment. Prof. Lester Reukema, of the University of California, talked to the East Bay Radio Club on atomic energy. VSV talked to the SARO on 2-meter antennas. JHV moved to Castro Valley. A new active member of the 2-meter gang is NCL. ACN is hard at work at the license plate bill. Are you supporting him? PCN is the new editor of the *CCRC Calendar*. Her QTH is San Francisco. Because I have moved out of the East Bay section. to 281 Loucks Ave., Los Altos. I have resigned as SCM. However, I will continue to serve as Acting SCM until an election can be held, so for the time being send your reports to my Los Altos QTH. Traffic: K6WAY 858, FDG 522, W61PW 152, K6GK 88, W6EFD 50, HBF 15, ITH 11. K6CCQ 4 received. The Oakland Radio Club heard EFT on RTTY

KGCCQ 4. SAN FRANCISCO — SCM, Walter A. Buckley, W0GGC — The Humboldt Radio Club members are help-ing 14-year-old Linda Harvey (who is confined in a wheeling 14-year-old Linda Harvey (who is confined in a wheel-chair because of polio) to obtain her ticket. They also are preparing the rig for her to go on the air. JSY won the Club's "California Counties Contest" (worked 43 counties). The Mt. Tamalpais Radio Club held its annual dinner at "Tommie's Place" in Novato. CDF gave a very informative talk on single sideband. YME, a technical director, will talk on the opposing side at the next meeting. K. D. Wilson received a certificate for working all California counties. HAMS still is on 2 meters but has 10 stations checking in on 6 meters each Sun, night. URA is NCS. The SF. Naval Shipyard Club members have agreed to join HAMS on Field Day and also have invited the HAMS to join them in their annual dinner sometime in April. Membership in the Suppard Club memoers have agreed to join DAAMS on Field Day and also have invited the HAMS to join them in their annual dinner sometime in April. Membership in the SF Naval Shipyard has been opened to outsiders. Newcom-ers will not be allowed into the slipyard proper for the meeting night but can attend the other meeting, which is held in Red Cross Bldg. LOU. of the Sonoma County Radio Club, reports that he is busily working on plans for the Mission Trail Roundup which will be held in El Verano on June 18th. CBE, of the Larkspur Radio Club, says he worked 31 counties on 'phone the first week end. The Cathay Radio Club acted as host to the SCM at the Pebruary meet-ing and treated him royally in Chinatown after the meeting. The San Francisco Radio Club had John F. Honey, of the Stanford Research Institute, as guest speaker in February. He spoke on single sideband. A'TO has been doing a fine job on the speakers committee and has excellent features lined up for future meetings. The Club presented GGC with a beautiful plaque. Thanks again, gang. The Ladies Club SF combined a meeting night with a baby shower for PIR. BIP was appointed chairman for the San Francisco Club Field Day activities. The 29ers Club had 17 cars with about 50 passengers at its February hidden transmitter hunt. CCV card BCM are updowning a nor play a counties. Field Day activities. The 29ers Club had 17 cars with about 50 passengers at its February hidden transmitter hunt. GCV and PCN are planning a new QTH soon. DEK is back on the air after receiver troubles. K6HEZ is mobile on 6 meters. MXV is playing around with an 813. K6BJO, W6LL, JWF, GHI, K6CPX, EKF, and GGC all attended the Wasco Whing-dling Feb. 26-27. Seventy-two anateurs were there. The License Plate Committee reports that more then 2014 dollars was scont on another out literature. were there. In a License Plate Committee reports that more than 300 dollars was spent on sending out literature on Senate Bill #222 and Assembly Bill #593. ACN was ap-pointed by the Central California Radio Clubs to repre-sent them as lobbyist at the legislature. To date a clause has been added to the original bill; that special plates are to be awarded to amateurs with mobile installations only.

sent them as lobbyist at the lexislature. To date a clause has been added to the original bill; that special plates are to be awarded to amateurs with mobile installations only. The California Motor Vehicle Dept. reports that the lists sent to law representatives in California cost \$75 per copy. If the bill is made permanent at this session there is hope of lowering the \$3.00 extra fee. Tratific: W65WP 1111, GQY 234, QMO 160, GGC 26, YC 16, CBE 6, GQA 3. SACRAMENTO VALLEY — SCM, Harold L. Lucero, W6DD — The Dunsmuir Amateur Radio Club elected new officers as follows: JDN, pres.; K01VD, vice-pres.; W61OM. Sccy.-tress., K6BJO, act. mgr. IVD also is EC. KTB is EC for the Yreka Area, C.d. is taking form in Siski-you County and all towns now have an EC. The Siskiyou County AREC Net meets each Sun. at 0900, K6CFZ reports new hams in Colusa are KN6IRZ, GNJ, and IUT. K6BJV is in RACES. Colusa will be the relay point during the boat races. Stockton to Redding. K6ER is doing fine work as 00. FYK still is on 2, 6, and 440 Mc. K6BYS is EC for the Chico Area. There will be a ham get-together at Ruth, Calif., July 3-4. New officers of the Golden Empire Radio Sciety are MWR, pres.; HNL, vice-pres.; K6BMU, secy.; K6BSY, act. mgr. The Club has an Instructograph code machine to be loaned to radio aspirants. The Club's call is RHC, a me-morial to Nola Dixon who joined the Silent Keys some time ago. MWR has reënlisted for another four-year bitch and volunteered for another year as NVRES station-keeper in Chico. The Sacramento Council of Amateur Radio Clubs would like to have representatives from all clubs attend its meetings. The license plate bill is up during this session of the State Legislation. We hope that it becomes a law. All anateurs should write their State Senator and their Assemblyman and state their wishes. Traffic: W60PY 33, MWR 20, JDN 5. SAN JOA QUIN VALLEY — SCM, Edward L. #### **ROCKY MOUNTAIN DIVISION**

COLORADO - Karl Brueggeman, W&CDX - SEC: MMT. RM: KQD. PAM: IUF. We now have about 1100 hams in Colorado with only 220 AREC members. There is lots of room for improvement so let's all join and see how close we can come to 100 per cent. MMT or your SCM will be very happy to send out applications, so just send either one of us a post card, and we will answer promptly. Also remember the EC check-in around the first of the month. OMN has inished this year's radio class and has three ready for Novice Class examinations. Ben will con-duct a similar class next fall. WNØZZS and KNØAAI are two new Novices from Pueblo, IUF has a new final. TVI two new Novices from Pueblo. IUF has a new final. TVI has 41 states toward WAS, including W1AW. The Colorado nets have been having a lot of trouble lately with QRM. Most of it seems to come from hams who do not check their frequency before transmitting. Net operation is very imrequency before transmitting. Net operation is very im-portant and can be done efficiently only if all of us co-operate. The news was quite sparse this month and as a result this column is short. Traffic: KØWBB 821, WØKQD 398, W6PKL/Ø 262, WØTVI 73, PGN 61, LNH 47, IA 10 IUF 3, W6PKL/Ø 262, WØTVI 73, PGN 61, LNH 47, IA 10

IUF 3. UTAH — SCM, Floyd L. Hinshaw, W7UTM — The Utah license call bill has passed the House. By the time you read this it is hoped the bill will have become law! TCC expects to be back in Utah to participate in the April CD Party. JPN still is busy with defense activities and is not on the air as much as he would like. Hal is sparking the 2-meter activity in this Area. Orden news: SAZ says that OCX has gained membership in the c.d. net. RQT has toaster interference (TI?). Hi. VHS is looking for 6-meter spenings. MWR made HPL on originations plus deliveries. Traffic: (Feb.) W7MWR 212, UTM 7. (Jan.) W7JPN 6. WYOMING — SCM, Wallace J. Ritter, W7PKX.— Sorry to report the failure of the Wyoming License Plate Bill S-41 to pass the House Committee. The Casper Radio Club had a very successful booth at the hobby show. The

Sorry to report the faille of the wyoning Dicesse Flate Bill S-11 to pass the House Committee. The Caspier Radio Club had a very successful booth at the hobby show. The Sheridan Radio Club is starting on mobile 2-metrer c.d. rigs and is getting started on RACES set-up. HLA, in a new home, should have an antenna up soon. WET is re-building the all-band rig. JJO was elected sceretary of the Cheyenne Club and is sporting a new Ranger. SQT would like to start a 7-ML. Wyoming Net. Two new ones at Chey-enne are WNTYWV and WNTYWW. POA. OZP, and BJS transferred out of Cheyenne. EUZ is very lonesome on 2 meters, all fired up with no one to QSO. Wyoming now has a c.w. net, known as the "YO" Net, in operation on 3610 kc. Mon., Wed., and Fri. at H330 MST, with DXV acting net control. PKX is going on vacation to XE-Land. Traffic: W7PKX 260, DXV 65, HDS 36, MNW 20, PMH 6, VXV 2.

ALABAMA - SCM, Joe A. Shannon, W4MI - SEC: TKL, RM: KIX, PAM: RNX, Section nets: AENB, daily at 1900 on 3575 kc.; AENP daily at 1800 on 3955 kc.; AENB C.W. operates at a speed of 15 w.p.m. on Sat. and Sun, and welcomes newcomers. Four stalwarts hit the BPL trail in February: K4FDY, W4COU, HKK, and UHA. (Continued on page 106)

# JOIN THE LONG-LIFE FAMILY

When you rebuild, see how many of these Los Gatos favorites will fit your new circuitry. Or, use them when re-tubing.

You may be surprised, and you'll certainly be pleased with the additional nine-plus lives you'll get from these carefully-made electron tubes.

Ask for them at your jobber. If he doesn't have them, he can get them for you --- overnight in most locations.

COU is experimenting with a Franklin Oscillator. ZSQ was voted the most efficient NCS on AENP for February, and RTQ the outstanding net member ior the month. WOG has moved to a new location and FAJ is now living in Coral Gables, Fla. ZWE is signing portable from York. After four trics at 'phone patches, ZSQ says he can now offer his scrvices in Birmingham! Welcome to KN4ASG, Winfield, aui KN4CCI, Anniston. TKL has a new Chevvic and the job of converting mobile to 12 volts and reinstalling. CAH says he has worked VP5AE. Grand Turks Island, on 15 meters! RLG is back in the traffic column after a year's absence. Traffic: K4FDY 1158, W4COU 602, HKK 516, UHA 449, YRO 69, EJZ 60, WOG 59, ZSQ 52, KIX 48, K4ACO 27, W4ZSH 26, OAO 24, TKL 24, YAI 24, RNX 21, BFM 14, CEF 14, PWS 14, TXO 14, HYI 12, DXB 10, JKU 6, CAH 4, OR 4, HLG 4, NLB 2, USM 2, EASTERN FLORIDA — SCM, John W. Hollister, jr., W4FWZ- Our SEC, IM, is planning on May 15th for JOCO. A nice report was received from PJU on the LJM transmitter fund. The R&W 5100 was delivered Feb. 27th and set up by DPD, DDW, CPG, and VIE, Because TOJ was listening, a dying child in Oregon received her wish to taste some Floridia watermelon via Eastern Air. The three foregoing disassociated ham activities certainly point up our belief in our hoby and my belief in the amateur. Yc SCM got first-hand information on some good things in store for those heading for XE, Petreburg in June for the

EASTERN FLORIDA — SCM, John W. Hollister, jr., W4FWZ- Our SEC, IM, is planning on May 15th for born and set up by DFD, DDW. CPG, and VIE. Because TOJ was listening, a dying child in Oregon received her wish to trate some Florida watermelon via Eastern Air. The three foregoing disassociated ham activities certainly point up our belief in our hobby and my belief in the amateur. Ye SCM got first-hand information on some good things in store for those heading for St. Petersburg in June for the ARRL Convention. An enjoyable evening was spent at the SPARC meeting, Ft. Lauderdale: The Flamingos are aining to please the gals in their outings this year. Bird Sparks: VGT is building a new shack. TOJ uses an SX-88 with a Globe King and TOK uses the NC-183. WAQ uses B&W 5100 and s.b. on 20 meters with Telrex two-element Mini. Thanks to SDI/MVR for the TOJ-Oregon story. KN4BXR is 15. WN4HRU is NCS for 3735-kc. Novice division of Broward Emergency Net. Gainesville: TJU reports new GAS officiers are KAQR, TJU ways the gang is getting polished up for Field Day June 25-26). Jacksonville: CNC reports NEK has nice skeds, so drop him a line. Key West: We are sorry DRT is moving on. ELS says club station K4NCN now has the beam up. Miami: Thanks to 1YT and PBS for the honorary DEN certificate. PBS and IYT report the DEN drill of Feb. 28th was a big success with 11 mobiles. Key men included PBS, YCL, UIW, CUR, and IYT. Renewed 144-Mc. activity brought in FLH with 600-watt duplex with KQG and ZDR, RNV also is on 144 Mc. CUR says AZO is on 144 Mc. with 500 watts and reports a new club, the South Miami Radio Club. Y12 uses B&W 5100. Orlando: BM Y is building a new shack and console. Tampa: 2JWJ swears by his rhombic. Norm says KL7AWH did in Clearwater, Trafic: (Feb.) W4TYE 679, IYT 585, PJU 526, LAP 340. # designed for GROUNDED GRID

PL-6569 is a new high-mu triode, designed especially for grounded - grid amplifiers. It is THE choice for a 1-KW amplifier to follow a "100-watt" transmitter.

Its high amplification factor (mu=45) and its high perveance mean a power gain of *ten or more*. More than 800 watts output, with only 75 watts drive! PL-6569 is conservatively rated at 250 watts plate dissipation. Its low plate-tofilament capacitance  $(0.10\mu\mu f)$  makes for real stability as a grounded-grid amplifier.

# PL-6569

A technical data sheet, giving ratings, typical operating conditions, suggested circuits . . . including single-sideband data . . . is available. Ask for Data File 301.

beam on a 35-ft. telephone pole and is after that rare DX on 20 meters. YUIGM (GMP) works the home town regularly from Belgrade. If YN, in LaGrange, is back on the air on 75 meters. All appointees are requested to check appointment expiration dates and forward their certificates to the SCM for endorsement if over one year old. Traffic: K4WAR 706, W4CFJ 320, PIM 315, BVE 225, ZDP 64, BWD 30, NS 22, MITS 20, ZD 14, K4BGB 10, W4YTO 2.

WEST INDIES — SCM, William Werner, KP4DJ — KD renewed ORS appointment. The appointments of HZ, QR, and KG4AO have been cancelled because of inactivity. ZW is preparing to get on 75 meters to QSO Island stations. SK, one of our co-workers and an oid-time amateur, has gone back to W2-Land. ABC has a new Viking Ranger working on all bands. W2ADD visited WV at Aquadila. W2TO visited AZ, MP, C.D. Radio Officer, is active on 75 meters. RA has returned from a long visit to the States and promises early activity. WD made WAC-phone. YT has a new HRO-40. DA is active on 7 Mc. DV and ZW are working feverially in the c.w. portion of the DX Contest. ACB, with the highest QTH in KP4 on top of a mountain near Castaner, applied for amateur weather observer appointment to report to the Antilles Net. ABA has 40-meter Zepp and reports working 64 countries on 3.5 Mc. US and ABA were subjects of a two-page write-up in a newspaper rinted by the Dept. of Instruction with an 8 x.10 picture in color on the front page. AZ has a new Lysco Transmateur, Traffic: (Feb.) KP4WT 76, ZW 8, DJ 2. (Jan.) KP4WT 90.

KP4WT 90. CANAL ZONE -- SCM, Roger M. Howe, KZ5RM --AU and FL moved into new homes in the new housing development on Ridge Road. They are practically across the street from each other, but both claim this is not going to cause trouble because they are going to install a special switch which will automatically lock out the other's converter for a half hour. The ham gang surprised ML and FL available at the Cristobal. Margarita. Balboa, and Balboa Heights Post Offices. They also will be available at the Cristobal. Margarita. Balboa, and Balboa Heights Post Offices. They also will be station, is in business with the interlaced 10-20 beam. SCM, RM, and his XYL, KA, will be on leave Stateside from the end of May to the end of August, during which time SEC, WA, will act as SCM. Traffic: KZ5WA 118. DG 52, CF 30, KA 22, LB 11, GD 9, BD 8.

#### SOUTHWESTERN DIVISION

LOS ANGELES — SCM, Howard C. Bellman, W6YVJ Explorer Post No. 177, SLW, worked PY4DK with its 500-watt Grayhound Mobile. These boys are all physically handicapped. KN61CI's best DX is WN7YHD, in Montana. All scouts are invited to take part in radio classes at the Lowman School, North Hollywood, 7:30 to 9:00 p.M. Fri. QJW reports that the ECs in the southern part of Los Angeles County are participating in the American Heart Campaign by providing mobile units to pick up money from the volunteer workers. Two W6s were heard by JFAG, Albuquerque, on Feb. 18th, according to ORS, who worked FAG on the 21st on 75 meters. Apparently this was caused by ionization from atom blasts. K6BAG, the Alt, Pacifico Radio Club, is scheduled for the mountain of the same name next Field Day. K6JLY, publicity secretary of Hamilton High Radio Club, indicates that the Club's constitution now includes words which provide for expulsion of any member known to be "bootlegging." The Oscillator, from Long Beach, reminds us of the YLRL Convention to be held at the Miramar Hotel in Santa Monica in June. New calls for "Riohons" include K6JLS. TV technician at Lovell's, a recent graduate of the code class. Russ is on the Novice c.w. bands. Tom Lovell sr., father of KN61PD. is now KN6JRH and has worked San Francisco with his Heathkit. Another father and son combination will be Pres. Beaird, who recently passed the Novice exam and is awaiting his call, and his son, Gil, now General Class with the call K61NF. Gil is on 40-meter 'phone with a Globe Scout. KN61MG is bringing his dad around to code classes. The Jennings family, father and two sons, are making progress toward 5 w.p.m. Thanks for the report from UKC, of the *Riohon List* ining Post. FMG has asked for cancellation of his ORS appointment as he expects to be very inactive in ham radio circles in the uear future. Trallic: (Feb.) W6MBW 425, USY 234. GYH 210, K6DQA 172. # HARVEY PRESENTS CENTRAL ELECTRONICS EQUIPMENT for AM, CW and SSB

The 600L has no tuning controls except a single knob selector covering all amateur bands from 10 through 160 meters. Requires only 2 watts effective or 4 watts peak envelope drive power for 500 watts dc input. New band-pass couplers provide 60 to 65% linear efficiency. Uses single 813, class  $AB_2$  and has automatic relay to protect 813 and RF couplers.

New meter features include: reads input power directly in watts...reads grid current...reads output in RF amperes...shows reflected power due to mismatched load...input level calibrations for AM, PM and CW. Function selector knob switches meter to any reading while transmitting.

Has built-in power supply with excellent regulation of bias and screen voltages. The 600L is effectively TVI-suppressed with thoroughly shielded and Hypossed RF compartments.

Available in either table or rack model.

Complete (factory-wired).....

# New 'Q' MULTIPHASE

A tunable IF electronic filter that provides tremendous receiver selectivity for peaking or rejecting signals on AM, CW or SSB, Employs new 2-tube circuit with high-Q inductor. Continuously variable from 60 cps to normal IF pass-band. Interfering carriers attentuated up to 50 db.

 Model DQ — Designed for use with any receiver with 450 to 500 kc IF. Has power-IF connecting cable. Power requirements are 225-300 vdc at 12 ma and 6.3v at .6 amps. Can provide additional selectivity and BFO for mobile SSB or CW reception.

HARVEY is known the world over ... wherever Hams operate... as a reliable source for Ham Equipment . . . assuring fast service and prompt deliveries.

# 4 AMECO Courses Available:

your receivin / price 

No. 3 — COMPLETE RADIO THEORY COURSE. A com-plete, simplified home study theory course in radio covering the Novice, Technician, conditional and general classes — all under one cover — with nearly four hundred typical FCC type ques-tions to prepare you for license exam. No technical background required. You also get, FKEEL, a guide to setting up your own Ham station. All for the amazing low, low price of ...... \$3.95

- NEW ADVANCED COURSE. Prepares Novice ou-No. erators for the amateur general class and second class commer-cial license tests. Contains 12 recordings (8 through 18 W.P.M.) PLUS the complete rode book — PLUS typical F.C.C. code examinationsforgeneral and commercial tests. ALL for only. \$6,95

No. 5 — RADIO AMATEUR QUESTION & ANSWER LICENSE GUIDE. A "must" if preparing for Novice, technician or general class exams. Approx. 200 questions of answers (most multiple choice type) similar to ones given on F.C.C. exams. thas 2 typical F.C.C. type exams. Other **50**<sup>#</sup> questions by subjects, easier to study, Low, low price of

# DELUXE CODE PRACTICE OSCILLATOR With Built-in Key-Click Filter The AMECO Code Practice In Kit Form

or Wired 111401

Oscillator, for 110 volts AC or DC, with a built-in 4 inch speaker, produces a pure, steady tone with no clicks or chirps. It can take a large number of headphones or keys. After the code has been learned, the AMECO code practice oscillator is easily converted to an excel-lent c.w. monitor.

- Other features include:
- Variable tone control
- Volume control
- Sturdy grey hammertone cabinet
- Lowest prices

In Kit Form, with Instruction, less tubes (Model CPS-KL)....\$1175 Completely Wired & Tested, less tubes (Model CPS-WL)........\$1295 \$ 780 Set of two tubes (35W4 and 50C5)

# Everybody's Talking About Our GLOBE KING!

A Globe King transmitter was used in the Amateur Radio Booth at the recent State Fair of Texas. How did it operate? Here's what Mr. Edward F. Aymond, Jr. Amateur Day Committee Chairman, has to say:

ONLY \$3678 mo. \$67.50 DOWN

CASH PRICE: \$675.00

And write for complete information about:

- The New Johnson Kilowatt Xmttr.
   Our Latest Reconditioned Eqpt. List
   Single Sideband Eqpt.
  - Fasy-Pay, 10% Down Plan
  - ✓ Top-Value Trade-In Offers

Here's an advanced design, high power transmitter of 500 watts input on both CW and fone 100% modulated. Is completely bandswitching 10 thru 160M. bands. Consists of FR. Speech Modulator and Dual Power Supply Sections. Entire unit is specially screened for TVI. Pi Network output matches any antenna from 52-600 ohms. Has provisions for VFO and Single Sideband input. Forced air-cooled 4-250 tube, pushto-talk, special aluminum mesh screening of RF Section — just a few of the many fine features. Enclosed in grey hammertone cabinet, 31" x 213/4" x 15".

Edward F. Aymond, Jr. Dallas, Texas W5UHV "... was operated on 14.228 mc for 16 days continuous from 10:00 a.m. till 10:00 p.m. Some 200 different amateurs used this transmitter and not once ... did we have any trouble whatsoever.

"... no interference either on the video or the sound as a result of the Globe King being operated in this close proximity (3 feet) to (two) television sets. During the operation at the Fair, 41 states were contacted, 5 of the Canadian Districts, Alaska, Hawaiian Islands, Canal Zone, Cuba, Nicaraqua, Honduras, Peru, and Columbia. All operation was via bhone.

". . . we were more than pleased with this operation and wish this transmitter had belonged to one of us personally"

Dan Hoover (W9VEY) of Hillsboro, Illinois says, "It sure is a wonderful rig. QRM just melts and backs off to either side."

In the words of George H. Cooke (W2LOP) of 25 Cottler Ave., Springfield, N. J.: "... there is absolutely no intereference on our own TV set ... Needless to say I'm very well satisfied with my purchase."

And from Don Smith, La Junta, Colorado,: "I think you have topped the field . . . I congratulate World Radio Labs for really turning out a FB rig!!! . . . The modulation reports I get are 'The best sounding rig on the band OM what are you running?'

# 65 WATT GLOBE SCOUT

**Completely Bandswitching** This excellent Xmttr. offers 65 watts input on CW, 50 watts on fone. Is completely bandswitching 10 thru 160M. Combination Pi Network antenna tuner. 100% modulation of Final. Housed in 8" x 16" x 8" grey cabinet.

# THE AMERICAN RADIO RELAY LEAGUE

West Hartford 7, Connecticut

**ONTARIO** — SCM, G. Eric Farquhar, VE3IA — We record with deep regret two Silent Keys, OW and AP. OW was well known as a member of the Air Transport Board and an active member of the Ottawa Amateur Radio Club. AP, a past secretary of the same club, and a member of the Dept. of Transport, was very active on 20. 40, and 80 meters. The Nortown Kadio Club of Toronto is possessor of the Marconi Trophy for being top Canadian scorer in the 1954 ARRL Field Day operation. Up Simcoe way the Norfolk Club recently held a banquet, but lack of informa-tion has us guessing as to what took place. The annual banquet of the Brantford ARC was a tremendous success. Some eighty hams who attended, representing Windsor, Chatham, Gravenhurst, Elora, Toronto, Hamilton, Galt, Kitchener, and Belmont, heard some very interesting data on civil defense, ably presented by P. H. Yox, Chief Trans-port Oflicer for Canadian Civil Defense. IIe described civil defense as "a pressing necessity toward safeguarding the lives and well-being of our people and the preservation of that way of life which we hold so dearly and prize so deeply, within our hearts." 2BE, ARRL Canadian Division Direc-tor, who recently completed 25 years of service to Canadian Amateur Radio as its representative, outlined the benefits derived from being a League member. Touching on the tor, who recently completed 25 years of service to Canadian Amateur Radio as its representative, outlined the benefits derived from being a League member. Touching on the AREC, which forms communication networks across Can-ada, he said, "These are the boys who control and operate the civil defense networks. All other organizations get their reservoir of trained personnel from this organization." TM changes receivers and says "There is a difference." BUR and his XYL were seen vacationing down Tampa way. VZ represented to the second sec

reservoir of trained personnel from this organization." TM changes receivers and says "There's a difference." BUR and his XYL were seen vacationing down Tampa way, VZ reports OSN activity keeps up. A newcomer in Belleville is BDT. VWI, in Kapuskasing, puts out a nice signal on 40 and 80 meters. BSW reports being the "lirst VE contart" to about 25 Novices. U.h.f. fellows are asked to be on the lookout on the 420-Mc. band for BDT, CAB, BEE, and ASD, Traifie: VE3GI 172, BUR 168, VZ 126, AJR 95, AUU 74, TM 62, DQX 38, BJV 35, CP 22, KM 22, NO 21, AVS 17, AOE 14, DPV 14, PH 10. **QUEBEC** — SCM, Gordon A. Lynn, VE2GL — PQN is taking a beating these days from poor conditions, par-ticularly long skip making short hauls difficult. However, DR continues behind it with quite a few stations reporting in. The same difficulty is being experienced on the Northland Net, as reported by FL. CA reports nothing new, just lots of traffic for the Far North. II has renewed ORS appoint-ment after a lapse of a few years, this time from Sherbrooke. The 5t. Maurice Valley gang has one station or another covering 3075 kc. continuously throughout the day, as well as on 3740-kc. 'phone, on the lookout for traffic for that way. Reports from all parts of the VE2 district are solicited. Traffic: VE2CA 101, BB 82, LM 35, GL 16, CP 14, EC 14, ATQ 10, FL 10, LO 7. **ALBERTA** — SCM, Sydney T. Jones, VE6MJ — PANI: OD. RM: NG, AL has n.f.m, and a.m. ready to go as soon as the OK has been received from the R.I. WC was away on a business trip to Houston, Tex. UB is artive from the new QTH at Cowley. KL is building new remote control VFO, MJ is building a new antenna tuner. LQ has the new rig well under way. PS has a new TA12 rig. CE has plans for a vertical antenna. ZR has been hobnobbing with the Eskimos and working from VE8-Land. Congratulations to WO and his XYL on the arrival of a YL jr, operator. CP stays up nights chasing the elusive DX. YE is active on the BC Net. Make plans now to attend the Alberta Hamfest which will be held this year in Let that the death of JJ is reported. A charter member of the

be vert many plans now to attend the Alberta Hallest which will be held this year in Lethbridge. It is with regret that the death of JJ is reported. A charter member of the Hat Ham Club, his advice and help were highly valued. Traffic: VE6HM 117, YE28, OD 27, AL25, WC7, IZ 5, MJ4. MANITOBA — SCM, John Polmark, VE4HL — OO: RB. New officers of the ARLM1 are NW, pres.; MO, treas; PE, seey. The Noon Net now is registered with the ARRL. EF is having trouble with his 20-meter beam. ML, IF, and JW are sporting new mobiles all with very nice signals. QD is having TVI trouble. JW has a new antenna but still has TVI. It is curling time so we don't see much of GB. XW, wouldn't it be better to stay on the ground? We don't have too many active YLs now. No reports were received from the 20-meter gang. A fine time was had by all at the ARLM's annual "Ham Do" Mar. 5th. The ARLM1 had a booth at the Sportsmen's Slow and handled lots of traflic; a very nice showing for ham radio. Thanks to all relaying stations Traffic: VE4GE 98, LO 18, EF 14, HL 14, KL 2, YR 11, QD 7, JM 6, AI 4, RB 4, AY 3, HS 2, OS 2. SASKATCHEWAN — SCM, Harold R. Horn, VE5HR — QL's activities are curtailed while changing the QTH to Govan. RE is looking after PAM duties in the meantime. LT finally made the air with 807s running 40 watts and puts out a nice signal. CM put in a busy week as communi-rations station at civil defense. Fort Qu'Appelle. FG says his big traffic count is 1 delivered 1 received with a new addition to the family, a baby girl. Congratulations, Don. TV, at Swift Current, reports the formation of a club known as the Frontier City Radio Club with BC, pres.; TV, vice-pres, and JR, secy-treas. Meetings are held Fri. at 7:30 P.M. and any visiting ham is welcome. LU has changed his OBS frequencies to 3827 and 3798 kc. Tue. and Hurs. at 1830 hours. HN is a new ham at Nipawin and can be heard on 75- and 40-meter c.w. Traffic: VE5FG 31, HR 16, LU 12, VL 12, BF 10, DD 10, DS 10, CB 6, LJ 6, MX 6, CI 5, GX 4, LE 4, IL 2, RG 2, RE 1.

# Antenna Coupler

(Continued from page 13)

(Globar) provides a convenient load for transmitter adjustments. Our requirements were for power inputs up to 250 watts with the transmitter terminated with 50 ohms; however, work is being done on a 70-ohm version of the "Z-match."

The transmitter used here has a pi-network output circuit and this is adjusted for proper plate loading with  $S_2$  in the first position, which connects the 50-ohm dummy load. Power can be read in the forward position of the bridge on the proper scale. No reflected power will be evident with the resistive load. The proper forward reading scale on  $M_1$  should be selected by means of  $S_1$ , depending on the power output of the transmitter. As can be seen from the schematic and photographs,  $R_2$ ,  $R_3$ , and  $R_4$  set the 0-10-, 0-100and 0-1000-watt full-scale levels. Reflected power calibrations are automatically taken care of by the settings of  $R_2$ ,  $R_3$  and  $R_4$  when adjusted in the forward position.

It might be well to note here that transmitters having outputs in excess of 50 watts should be tuned up at lower power, because the dummy load in the "Z-match" is rated at 50 watts and excessive power could ruin the resistor. However, the "on-the-air" rating of the "Z-match" is much higher than 50 watts.

The antenna should be connected to the output terminals  $J_3$  or  $J_4$ , depending on the frequency.  $S_2$  is then switched to the second position and  $C_{10}$  and  $C_{11}$  tuned for minimum reflected power, as read on the meter. The two controls will interlock somewhat, but a few trials will readily lead to a good null. The system is then ready for use. In testing with a wide variety of both antennas and resistive loads, the reflected power was below one watt in all cases. After this minimum or zero reflected-power reading has been obtained no readjustment of the transmitter is necessary if it has previously been adjusted to work into the dummy load.

The tuning capacitor  $C_{11}$  will be near maximum capacitance for both 3.5- and 14-Mc. operation, while the setting will be near midscale at 21 Mc. On 7 and 28 Mc., the capacitance will be nearly at minimum. The setting of  $C_{10}$  will vary with different loads. In the third position of  $S_2$ straight-through operation can be used, enabling the amateur with a matched 50-ohm line to use the bridge. The bridge is an excellent instrument for adjusting element lengths on a beam for lowest reflected power.

(Continued on page 118)

As a service to visiting mobileers, the Amateur Radio Society of Eglin Air Force Base, Fort Walton, Fla., maintains a monitoring watch on 29,560 kc. Signs patterned after the ARRL diamond have been posted on main highways in the area to bring attention to the call-in frequency.

BOB CHEEK ... WHO HAS BEEN A "HAM" FOR 23 YEARS AND OPERATES W3LOE ... IS ASSISTANT MANAGER OF THE ENGINEERING DEPARTMENT AT THE WESTINGHOUSE ELECTRONICS DIVISION.

# WITH AN IMPORTANT MESSAGE FOR ALL ELECTRONIC ENGINEERS!

You may have heard Bob Cheek on the DX bands during the recent DX contest. Bob is a ham of 23 years standing, and is recognized as an outstanding DX operator, both phone and CW. Like many hams, Bob finds that his "rig" is relaxing and educational . . . and as stimulating as his work on advanced development projects at the Westinghouse Electronics Division. Can a job be as interesting as a hobby? Bob says it can! "At Westinghouse," he contends, "the combination of professional surroundings, creative freedom and challenging 'projects of tomorrow' has put me in a real 'engineer's heaven'! In addition, the income and employe benefits, fine suburban living conditions, and so forth have helped both myself and my family achieve many of our lifetime goals while we are still young enough to enjoy them!" For the expansion of work on the interesting projects mentioned by Bob Cheek, Westinghouse needs still more experienced electronics engineers. If you have an engineering degree and would like more information on top-level openings to be filled in the near future . . . drop us a line today! All replies will be treated with the strictest confidence!

# Build your own TRANSISTOR DEVICES

- dynamic microphone
  audio preamplifier
  five-watt audio amplifier
  multivibrator
  - 100 KC oscillator
     field strength meter

You'll find complete instructions for these and many other equally useful transistorized devices in Sylvania's new booklet.

This new booklet is a must for anyone interested in getting a firsthand practical understanding of the transistor. Each of the circuits has been designed by Sylvania engineers, built around Sylvania transistors and tested in Sylvania Laboratories to give you a compilation of practical transistor data. Circuit descriptions are preceded by a full, referenced chapter on Transistor Theory.

Pick up your copy at your Sylvania Distributor—or send 25¢ in coin with this coupon.

#### Results

The "Z-match" has been in use at the writer's station for the past several months and the results have been excellent on all bands from 3.5 to 30 Mc. Two transmitters have been used. One is a Harvey-Wells T-90 Bandmaster running between 75 and 90 watts input on both c.w. and 'phone. The second, with a pair of 4-65As in the final running inputs up to 300 watts, has been used with no apparent breakdown of capacitors, coils or the Z bridge. The first transmitter utilizes a pi-network output tank, and after tuning this properly on any band into the 50-ohm load, no retuning is necessary after the "Z-match" is tuned for minimum reflected power. The second transmitter uses an all-band tank with seriestuned link output and the results were the same with this output circuit. The fact that retuning the transmitter is not required after tuning the coupler for zero reflected power indicates a definite impedance match.

Although the functions of the "Z-match" have been described in terms of matching the transmission line to a coax line to the transmitter, it is equally useful for coupling the line to a receiver. The same antenna is used for both transmitting and receiving at the writer's station, and received signals have been given a tremendous boost by the use of this coupler, mainly because the receiver has a nominal input impedance of 50 ohms and its antenna terminals are finally looking at the proper impedance. The send-receive switching is of course done in the coax link.

After operating conventional-type antenna couplers with no visual means of obtaining a match, we wonder how many times a mismatch has been tolerated. Quite often, we think, at this station, because the percentage of contacts for stations called has gone up tremendously since the installation of the "Z-match," and in the recent DX contest the speed of tuning helped in running up the best score we ever had, on both 'phone and c.w.

# **Mobile Antenna Tuning**

(Continued from page 18)

completed unit is ready for testing and adjustment. With all turns of the variable series antenna inductor removed (tap at top of  $L_1$  in Fig. 4), the externally-mounted loading coil (center or base) should be adjusted for resonance at the extreme high end of the band in use. This adjustment will place the transmitter and the antenna system on precisely the same frequency. Temporarily disconnect the tuning motor from the control unit. Adjust balance control  $R_1$ to its electrical center position, and adjust the sensitivity control to the point where both relays  $K_1$  and  $K_2$  (Fig. 3) are operated, as evidenced by illumination of both indicator lamps,  $I_1$  and  $I_2$ . Then slowly back off the sensitivity control until either one or both relays deënergize. If both relays

Lafayette made a terrific deal with the U. S. Navy—bought a quantity of U. S. Navy Model PAE-2 Portable Amplified Electronic Megaphone Systems which enables us to offer the complete system at a price which can never be duplicated again.

Here is an ideal system for such applications as fishing boats, yachts, traffic control, sports events, construction crews, surveyors, carnivals, car owners, life-saving stations, or any place where handling of large crowds is necessary, and wherever convenient power line connections are not available, because unit operates from self-contained rechargeable 6-volt storage battery. Can also be used as a stationary or permanent system when used with charging rack, which is designed to hold entire portable amplifier and battery.

System consists of portable amplified electronic megaphone—operated by a trigger switch in the pistol-grip-handle—dynamic type microphone unit rated at 50 ohms at 1000 cps, and a reproducing unit, all contained in megaphone mouthpiece and housing.

A powerful 20 watt 6 tube amplifier, housed in a water-proof, two-piece, portable metal case (as illustrated), having compartment for and supplied with 3-cell 6-volt storage battery. Amplifier built with finest quality parts to rigid Navy specifications.

A UNIVERSAL BATTERY CHARGING RACK that operates from 110 volts AC 50-60 cycles, 110 volts DC, 12 volts DC, 24 volts DC, 48 volts DC, or 96 volts DC. The charging rack consists of a battery recharger with time switch and also provides a space for stowing the portable amplifier. Two pilot lights in the front panel of rack indicate a "Low" or "High" charging rate. Timing switch controls the rate of charging. Has separate On/Off switch.

Approximate Dimensions & Weight : Megaphone 20" long, diameter 13%". Amplifier dimensions—in 2-piece Portable Metal Case, housing 6 volt storage battery—1334" N, 1234" W, 934" deep. Charging Rack 15%" N, 13" W, 12" deep.

COMPLETE SHIPPING WEIGHT 88 LBS.

Complete System consisting of electronic megaphone. 20 watt portable amplifier with tubes and storage battery in case, as illustrated, Universal Battery Charging Rack with all necessary interconnecting cables and plugs and 30 page Instruction Book with schematic diagrams of all units. Net 89.50

drop out at the same positioning of the sensitivity control, no balance adjustment is necessary. If one relay drops out before the other, the balance control should be adjusted for simultaneous operation of  $K_1$  and  $K_2$ . Following adjustment of the balance control, the sensitivity control may be adjusted for optimum sensitivity. This system may be made sufficiently sensitive to respond to carrier shift brought about by nonlinear modulation and slight overmodulation excursions and to antenna detuning caused by passing pedestrians, automobiles or any phenomena causing even the slightest antenna detuning effect. Normal sensitivity adjustment is a matter of choice and will vary with individual operating requirements.  $R_3$  should not be adjusted to the point where  $K_1$  and  $K_2$  are energized simultaneously. Such an adjustment renders the tuning motor inoperative.

Sensing of this system may be changed by reversal of the output and input coaxial connectors. Reversal of the tuning-unit operation may be obtained by reversal of the two control leads from the remote control unit. In normal operation, series inductance is automatically added with a capacitive antenna and inductance reduced with an inductive load.

A great deal of satisfaction in mobile operating has been brought about by the use of this system. It is a real pleasure to QSY about the 40- and 75-meter bands without the worry of antenna resonance, and to be confident that no matter what the position of the mobile whip — it is resonant.

# **Two-Tone Generator**

(Continued from page 35)

# Using the Two-Tone Generator

If the generator is used to test an s.s.b. exciter equipped with a high-impedance microphone input circuit, it will be desirable to divide down the output signal by means of a circuit such as shown in Fig. 4. If an input terminal or jack for audio

Fig. 4 — Method of connecting the two-tone generator to the microphone input terminals of a speech amplifier. The 33K resistors provide good isolation hetween the sources of the two output frequencies. C<sub>1</sub> may be 0.01  $\mu$ f. for the usual high-impedance microphone input circuit.

input at higher levels is provided on the unit, the output of the generator need not be divided down. Since a few volts of d.c. exists from the output of the generator to ground, a blocking capacitor should be used if one is not employed in the equipment under test.

Two-tone test procedures have been outlined in references (2), (3) and (4). (See p. 124.) (Continued on page 122) Looking for mobile gear?

...you'll do better on trade-ins and financing at Burghardt's!

Terrific Trade-Ins-Asliberal as anyone in the country .. and yours may be worth more at Burghardt's, Tradeins usually cover down payment on your new gedr.

10% Down—Easy Terms —10% down lets you "take it away." Up to 18 months to pay on balances over \$200. Burghardt's financing saves you money—adjusts terms to your budget. All time pay-ments on ½ of 1 % per month based on original unpaid balance. Full payment within 90 days cancels interest.

Speedy Delivery—Per-sonal Attention—No order too large or small for personal attention. All inquires acknowledged and orders processed day received.

Satisfaction Guaranteed or your money refunded after 10 day trial. 

MULTI-ELMAC AF-67 TRANSCITER-Designed as an exciter—speech amplifier, VFO, driver, or a complete low powered transmitter. Covers 7 amateur bands: 10 through 160 meters. Single control bandswitches all stages simultaneously—built-in VFO. Output circuit uses coaxial connector and a Universal Pi Matching network for wide variety of impedance matching. Provisions for 40 watts of audio at 500 ohms. Grid and plate circuits metered. Operates from 6 or 12 volt AC-DC source. ONLY

Complete with tubes and 15 prong \$17.70 power connector ..... DOWN \$9.64 per month for 18 months.

MODEL PS-2V POWER SUPPLY-A universal power supply for use with the AF-67 or in many other applications. 6 V. (a) 6 A. or 12 V. (a) 3 A. Delivers 230 volts at 80 ma. DC output or 475 volts at 170 DC output. Separate plate and filament transformers. Fused primary circuit—Separate rectifier and filter circuits for each DC ONIY output. 111/4" x 7" x 81/2". Weight: 26 pounds.

PSR-6 POWER SUPPLY—Designed especially to power the PMR-6A receiver, 3 models: for 115 volt AC or 6 volt or 12 volt DC operation. Power turned on or off by switch on receiver volume control. Delivers 250 volts at 90 ma. B plus. Circuit is arranged to permit easy connec-tion of an "S" meter. 6 and 12 volt units ONLY

\$3.93 per month for 12 months.

PMR 6-A RECEIVER-A complete 10 tube, dual conversion, mobile communications receiver. Only 6 inches wide-covers 10, 15, 20, 40, 75, 80 and 160 meters as well as standard broadcast band. Built-in noise limiter is highly effectivebuilt in BFO. Full 31/2 watts audio output with less than 1 microvolt signal. AVC "on-off" switch located on ONLY front panel. Ten tuned circuits provide high \$13.45 selectivity.

\$7.33 per month for 18 months.

Improve the selectivity of your present receiver with this improved Q-Multiplier

All the advantages of a crystal filter without the disadvantage of poor speech quality.

Actual superimposed photos of HQ-129 pass-band with mechanical filter and DRAKE Q-X'er.

The R. L. Drake Model 583 is an improved Q-Multiplier which provides complete flexibility in use to provide either a sharply peaked IF curve or a deep rejection notch. Results are so superior that some communications set manufacturers are planning to substitute this type of unit for the usual crystal filter. And, with the R. L. Drake Q-X'er you can have these advantages with your present receiver.

#### **Controls:**

#### • Selector Switch

- Notch Adjust Potentiometer Provides elimination of unwanted carrier and its heterodyne with no audible change in speech quality,
- Peak Adjust Potentiometer—True single signal reception for cw provides sharp peak and minimum passband.
- Tuning with 8-to-1 vernier control of condenser, which allows tuning to any part of IF band.

#### Additional Features

- Closed core shielded Hi-Q coil not affected by nearby metal
- Peak and notch come at same point on tuning dial
- Uses a single 12AX7
- External connections: shielded lead to mixer plate or 1st IF grid, and 4-wire cable to 6.3 V at 300 mils and 100-250 volts at less than 1 ma.

Q-X'er Model 583 for 455KC. \$**24**.95 Amateur Net

Other models for other IFs to be announced soon. Available from your local distributor who handles R. L. Drake Filters

R. L. DRAKE CO. MIAMISBURG, OHIO

In the preceding paragraphs considerable emphasis has been placed on minimizing distortion. Low-distortion test signals are especially important when testing phasing types of transmitters because distortion on the test signal produces sideband components in the region of desired sideband suppression.

Another point which is worthy of consideration when evaluating the performance of the phasingtype exciter is the absolute phase shift in the 90-degree audio phasing network at the two test frequencies used. Reference (5), which discusses a typical phasing network, indicates a possible variation of about  $\pm 1.3$  degrees phase shift over a frequency range of 225 to 2750 c.p.s. For best results it is therefore desirable to select two test frequencies such as to produce equal phase shift; this results in equal suppression at each frequency and minimizes any slight ripple modulation which would otherwise be superimposed on the two-tone envelope output. Slight variation in components of one of the two oscillators may be made in this case so as to obtain a pair of frequencies fulfilling the above requirement.

The two-tone test generator is simple and inexpensive to construct and is believed to be a very worth-while addition to the test equipment used by the s.s.b. and a.m. man.

#### (Continued from page 37)

released.  $V_{10}$  conducts and  $R_{28}R_{29}$  is negative. The dash selection potential is clamped by  $D_4R_{26}$ . The dot memory clears as the dot starts.  $V_{10}$  cuts off on -13 volts from  $R_{30}R_{32}$ .  $R_{28}R_{29}$ rises to +12 volts to pass the dash selection to  $V_{11}$ . Conduction in  $V_{11}$  establishes +10 volts at  $R_{25}$  for a dash on the next positive time-base pulse, and drops  $R_{19}R_{20}$  to -7 volts to lock out any new dot selection made before the dash starts. The reverse transfer actions are obtained through circuit symmetry.

With their interlocks and activation circuits,  $V_{10}$  and  $V_{11}$  comprise effectually a tri-stable system. Either one or the other tube may be conductive, but never both. However, both tubes may be nonconductive. The three conditions correspond to selection of dot, dash, and spacing characters. By itself, this structure guarantees that a given character will be held in storage if an opposite type character(s) has been priorly selected, and it will not be released until that prior character(s) has been transmitted.

 $C_8$  and  $C_9$  delay the rise of sequencor cathode voltages. When control is transferred from one (Continued on page 124)

We want you to be satisfied. Ask any Ham about Henry. And Henry has the new equipment first.

side to the other this delay guarantees that both memories are not cleared by the same clearance pulse and that both generating triggers are not tripped by the same time-base pulse. Without capacitive delay this would occur, since generator trip, memory clearance and sequence transfer are virtually simultaneous.

#### Sequence Seizure

Thus far, a given sequencor tube cannot be activated by its associated memory or key until the opposite sequencor is released by both its key and memory, because of the interlock function.  $V_9$  and  $V_{12}$  generate seizure pulses to override the interlocks in such a manner that the output exactly follows the order of selection, regardless of subsequent key manipulations or holdings. The crisscross grid and cathode connection to the memories results in nonconduction in both tubes if both memories are clear or if both memories are actuated, and conduction in one of the tubes when the memory associated with its grid is actuated and the other memory is clear. This obtains from the following potentials in the memories: actuated - cathodes +11volts, junctions  $R_{32}R_{33}$  and  $R_{40}R_{41}$  +1 volt; clear — cathodes +1.3 volts,  $R_{32}R_{33}$  and  $R_{40}R_{41}$ -17 volts. When both memories are actuated,  $R_{32}R_{33}$  and  $R_{40}R_{41}$  rise to +3 volts as the gridcurrent loading in  $V_9$  and  $V_{12}$  is removed.

Assume the dot and dash keys closed in that order before any output starts, with only the dot key held closed. Without seizure the closed dot key would hold the sequencor after the first dot on  $\pm 10$  volts from  $R_{37}R_{38}$  for continuous dot output, and the stored dash would not appear in the order of selection. However, when the dot memory clears, its cathode (and that of  $V_9$ ) drops to +1.3 volts and  $V_9$  conducts as a result of the +1 volt on its grid from the actuated dash memory.  $C_6$ , slowly reverse charged by  $R_{17}$ , charges through  $V_9$  and  $R_{18}$ . This momentarily reduces  $R_{19}R_{20}$  from +12 to -7 volts, to cut off  $V_{10}$  by pulling down the dot-holding potential at  $D_3R_{21}$ . Junction  $R_{28}R_{29}$  momentarily rises to +12 volts while  $V_{10}$  is cut off. The positive selection potential from the actuated dash memory seizes  $V_{11}$ via  $R_{26}$  while  $R_{28}R_{29}$  is positive, and conduction in  $V_{11}$  permanently holds  $R_{19}R_{20}$  at negative interlock potential to isolate the closed dot key. Thus sequence control has been transferred to the dash side despite the closed dot key, and the next output character will be the dash. When the dash memory clears, the still-closed dot key will reëstablish  $V_{10}$  conduction for dot output. If both keys have been held closed, the dash hold potential will retain control of the sequencor, since the dot memory is now clear and no pulse will be generated by  $V_{12}C_{10}$  when the dash memory clears in the presence of an alreadycleared dot memory.

Assume that the dash key is not closed until after the first dot (or any dot of a series) has started. The dot memory will be clear at this time with  $V_{10}$  conducting on the +10 volts from the closed dot key. The cathode of  $V_9$  stands at (Continued on page 126) rminal Radio

+1.3 volts and that tube will conduct immediately when the dash memory is activated, seizing the sequencor as before.

In both cases, with both keys held closed, the subsequent output is a series of dashes until either the dash key is released or the dot key is released and reclosed. After clearance of the dash memory, release of the dash key applies -13volts to the grid of  $V_{11}$  and initiates a simple sequencor transfer to the +10 volts from the closed dot key. Opening and reclosing the dot key with the dash key still closed actuates the dot memory for a  $V_{12}C_{10}$  seizure, and the output switches to dots. The opposites of these seizure actions obtain from symmetry.

# Summary of SMS Functions

1) Momentary closure of a key actuates the associated memory. The memory directs an activating potential toward the associated sequencor.

2) Continued closure of a key directs an independent holding voltage toward the associated sequencor. This hold potential is effective only after the associated memory has assumed or seized control of the sequencor.

3) Actuation of a memory with the opposite key and memory idle assumes control of the sequencor, isolating the opposite memory and hold potentials.

4) Actuation of a memory seizes control of the sequencor over continuously closed opposite key hold potential, if the opposite memory is clear.

5) Actuation of a memory does not take control of the sequencor over an actuated opposite memory.

6) Clearance of a memory whose key is closed allows an actuated opposite memory to seize control of the sequencer over the hold potential from that closed key.

7) Clearance of a memory whose associated key is closed does not relinquish control to an opposite closed key whose associated memory is not actuated.

8) In the absence of any actuated memories, release of one key after both keys have been held closed places the sequencor under control of the still-closed key.

## Summary of Actions of the Keys

1) A single character is generated by momentary or prolonged closure of a key. The character is held by the memory for a positive time-base pulse if the key is released prior to that pulse.

2) Successive like characters are generated by constant closure of a key.

3) When one memory is already actuated, closure of the opposite key before generation of the first-stored character activates the opposite memory. The firstly actuated memory retains control of the sequencor until one character of its type is delivered at the output. The secondly actuated memory then assumes control of the sequencor (as the first key is open or still closed) and the next output character is of the second type.

The Vibroplex bug does all the arm-tiring work for you automatically. Relieves nervous and muscular tension so noticeable when sending by hand. Suits any hand. No special skill required. Adjustable to any speed and any degree of key tension. Easy to operate. Beginners use it in a matter of minutes. Built for long life and rough usage. Vibroplex is the only key with Jewel movement — insuring better and easier keying. Used and recommended by thousands of hams and commercial operators on land, sea and in the air. Five models, \$12.95 to \$29.95. Left-hand models, one dollar more. Order yours today. At dealers or direct. FREE folder.

THE VIBROPLEX CO., INC. 833 Broadway New York 3, N. Y.

4) Continued closure of this second key maintains control of the sequencor after the transfer action, and the output is a series of the second type until that key is released. This obtains even with the first key still closed.

5) Release of the second key, with the first key still closed, causes the output to revert to the first character type.

6) Release and reclosure of the first key (just a flick!) reactuates the first memory and seizes control of the sequencor — the second key closed all the while — and the output reverts to the first character type until that first key is again released or until the opposite type character is flicked in by the second key. At least one character of the first type is guaranteed by the memory.

7) In recapitulation, any closure of a key guarantees at least one character of that type, transmitted in correct relationship to the order of closure, regardless of intervening selective motions. Whenever a key makes contact, the output subsequent to the character in progress corresponds to that key until the other key makes contact or the first key is released.

With automatic spacing, perfect characters, and memory and seizure leeways, all the operator has to do is spell. With a few more tubes, the keyer might be tied in to a dictionary.

# D.C. Output

To eliminate the one relay, the circuit modification of Fig. 3 (Part I) can be applied. With this circuit,  $V_3$  conducts during spacing and its plate stands 120 volts negative with respect to ground. Cut-off voltage from -30 to -120 is available at the arm of  $R_2$ , for control of a vacuum-tube keyer.  $R_3$  protects the memory clearance junction  $R_1R_2$  from loading effects by connected equipment and also serves as the key-click filter resistance.

The plate of  $V_3$  drops 60 volts on marking, transmitting a 60-volt negative pulse via  $C_1$  to the grid of  $V_3$ . The  $C_1R_4$  time constant is sufficiently long to hold  $V_3$  cut off for a 2-w.p.m. dash. With  $V_3$  cut off the output load stands at ground potential, marking condition for the standard vacuum-tube keyer.

Heavy line surges can produce as much as 10 volts negative swing across  $R_4$ . The 24-volt positive grid return of  $V_3$  to  $R_5R_6$  ensures that these surges do not appear in the output. Since the generator and SMS trigger configurations are quite independent of source voltage, they are stable in the presence of any surge short of complete outage. Use of this output circuit demands that  $V_3V_4$  be at the absolute ground end of any heater strings. Even though the 12AU7 heater-cathode insulation is rated at 180 volts, the maximum point is approached in  $V_3$  when the line voltage exceeds 125.

(Scramble in Part I, April, 1955, QST: Page 14, left-hand column, in last paragraph, the text should read: "... insulated from the chassis by  $\frac{3}{5}$ -inch Plexiglas. Metal pivot blocks, tapped for 8–32, are bolted to the  $\frac{3}{5}$ -inch Plexiglas levers and threaded on the 8–32 pivot bolts. The pivot bolts are secured. ...")

Contact Uncledave, W2APF. He can help you pick the right gear at the right price. On the air almost 35 years is your guarantee that Uncledave knows the Ham and his needs.

Fort Orange 904 BROADWAY, ALBANY, N. Y. TELEPHONE ALBANY 5-1394

Designed expressly for Central Electronics SSB Exciters (Models 10A, 10B and 20A). Provides complete band coverage on 80 and 20 meters. No modification of Exciters is required.

Each band is accurately calibrated and divided into two sections selected by a front panel switch, Has 6-inch dial. Provides approximately 5 inches of bandspread on 75meter phone band and 3 inches on 20-meter phone. Sturdy cabinet construction and rugged mounting of components achieve maximum mechanical stability. Electrical stability is attained through the use of circuit employing high-Q inductor and a precision geared tuning condenser. There are no tubes in the VFO proper, hence no heat to cause drift. A single tube (68A6) oscillator unit plugs directly into octal socket on C.E. Exciters. The only external connection is a single coax line from the exciter to the VFO.

E.E. or PHYSICS

# GRADUATES

with experience in

RADAR or

# ELECTRONICS

or those desiring to enter these areas...

Hughes-equipped Convair F-102 all-weather interceptor.

Since 1948 Hughes Research and Development Laboratories have been engaged in an expanding program for design, development and manufacture of highly complex radar fire control systems for fighter and interceptor aircraft. This requires Hughes technical advisors in the field to serve companies and military agencies employing the equipment.

As one of these field engineers you will become familiar with the entire systems involved, including the most advanced electronic computers. With this advantage you will be ideally situated to broaden your experience and learning more quickly for future application to advanced electronics activity in either the military or the commercial field.

Positions are available in the continental United States for married and single men under 35 years of age. Overseas assignments are open to single men only. The time was never more opportune than now for becoming associated with the field of advanced electronics. Because of military emphasis this is the most rapidly growing and promising sphere of endeavor for the young electrical engineer or physicist.

**8-TUBE SYLVANIA FM-AM** CHASSIS

1.

Worth \$70

★ 7 OV. FM SENSITIVITY: ★ AC CIRCUIT SUPPLY! ★ OUTPUT TRANSFORMER! ★ PHONO INPUT SWITCH! ★ "FLAT" TONE CONTROL! ★ UNTUNED RF STAGE FM! ★ AM LOOP ANTENNA! ★ 8 NEW SYLVANIA TUBES!

OVER

50% OFF

EXCLUSIVE IN EASTERN U.S.A. AT RADIO SHACK, this brand new famous-make Sylvania chassis is the buy of '55 at a price less than a common garden variety ac/dc FM-AM radio! The straight AC circuit with transformer power supply allows conversion — if desired — to tuner with 71c-worth of parts (listed below) and our SIMPLE instructions which are INCLUDED with every set. To operate at once, attach ANY speaker having 3.2 ohm voice coil impedance.

95

SPECIFICATIONS INCLUDE: dual concentric controls: volume-power/tone, and FM-AM-Phono/Tuning. Tone control: flat center position and continuous from bass boost through treble droop — an important feature! Lab-checked excellent sensitivity of 7 microvolts for 30 db quieting — very fine figure.

★ NEEDS ONLY A SPEAKER TO USE IMMEDIATELY! Untuned RF stage on FM, shielded condenser gang, ratio detector circuit will operate with only a 4 ft. piece of hookup wire in local areas; provision for external antenna. Spare fuses AC receptacle on rear for phono motor. AC power transformer AND 3.2 ohm output transformer! AM loop. Includes instructions, schematic diagrams, conversion to tuner procedure for feeding external amplifier, lucite escutcheon which edge-lights by pilot lamp. IMPORTANT: circuit is AC – not AC-DC – and employs 8 tubes: two 6AU6, 6BE6, 6BA6, 6AL5, 6AT6, 6W6GT output, 7Z4 rectifier tube. Overall size:  $10^{1}/4^{"}$  wide,  $5^{1}/2^{"}$  high less escutcheon,  $6^{1}/2^{"}$  deep (8" with knobs). Ship. wt, 15 lbs.

TUNER, WE SHOW HOW!

# **Beginner's Receiver**

(Continued from page 32)

choke lead. Four leads are brought out from the power supply to connect to the receiver: the two heater leads, the B + lead, and the B - lead.

When the power supply is wired and the leads connected to the receiver, the unit is ready for testing.

#### Testing and Using the Receiver

If you already have an antenna strung up, connect the end of it to Terminal 2 - the one connected to the rotor of  $C_1$ . If you don't have an antenna, any wire, 20 to 40 feet long or longer, can be strung up. An outside antenna will perform better than one indoors, although you'll hear plenty of signals with a wire just strung around the room.

Connect your headphones to the tip jacks and plug in the 80-meter coil. Plug the power cord into the 115-volt a.c. line and watch the 6U8 to see if the heater lights up. If it doesn't, turn off the power and check your wiring from the power supply to the heater pins, 4 and 5, on the 6U8 socket.

The receiver will only take a minute to warm up. Turn the regeneration control and, at one point, you should hear a change in the characteristic of the noise. This is the point where the receiver starts to oscillate. Tune the generalcoverage condenser slowly and you should hear signals. Leave the capacitor set at or near one (Continued on page 138)

# Take The Fuss Out of Switching Circuits

Now you can eliminate the fumbling and annoyance of screwing and unscrewing coax connections. With B&W's new Model 550 coaxial switch, you can instantly select antennas, transmitters, exciters, receivers, and other r-f generating devices merely by turning a knob.

This new multi-position coaxial switch has six S0239 connectors for selecting any one of five 52 or 75 ohm lines. It will handle up to 1 kw of modulated power

with a maximum crosstalk of -45 db at 30 mc. Housed in a  $2\frac{3}{4}$ " diameter aluminum case, the unit is designed for single hole mounting.

# **NOW** You can build a low cost transistorized receiver! send for FREE BOOK

### "THE TRANSISTOR AND YOU"

With this book as a guide you can transistorize your workshop. It's crammed with information and instructions on transistor applications, complete with diagrams. Look at this list of things you can build, using Hydro-Aire's CQ-1 Transistors, now available from many radio parts jobbers.

- Three-stage Transistorized Regenerative Radio Receiver
- Dynamic Microphone Preamplifier
- Radiophone Monitor
- Electronic Timer
- Relay Control Circuit
- Electronic Time Generator
- Audio Oscillators (using Hydro-Aire PNP Junction Type Transistor)
- Field Strength Meter

## using AEC's Model 410

Here is our AEC-410, 400 watt linear which provided W2JXH with the first SSB 'WAC' and top signals for many discriminating amateurs. To abrain POWER OUTPUT you must have POWER INPUT, which we provide with our rugged high voltage supplies. Only the finest components are used, and every precaution is taken to insure stability and linearity.

Tubes: Two 811A Push-Pull.

- The low drive requirements of the 811A (in a push-pull plug-in swinging link type final) lend themselves admirably to use with the existing exciters of 3 to 10, watts output without addi-
- Power supply: Self contained 1600 volts @ 325 mills, well filtered. Grid Circuit: High efficiency band switching turret —well shielded, high Q. Metering: Two large 3" square meters provide

simultaneous and continual reading of grid and plate currents.

Size: Table top cabinet 22" W. x 14" H, x 143/4" D., with hinged top. Panel is stnd. 121/4" rack mounting. (Grey or black.) Price: Complete all band \$295.00

**400 WATTS** DC INPUT LINEAR AMPLIFIER

AEC-420: Band switching, pi-network parallel 811A's grid turret, otherwise similar to AEC-410 \$335.00.

AEC-1010 Kilowatt Linear with grid and screen supplies \$650.00 Complete with plate supply and cabi-net \$875.00. For details of these or other A.E.C. SSB see them at your dealer or write or phone us.

(Continued from page 54)

meters. This is a problem for the Novices who are located near the Canadian border. Also, many Novices are not financially able to buy a super-selective receiver at the first chance. Each 'phone station takes up more room than a few c.w. stations. If the 'phone station is stronger than the c.w. station, it will blank it out. Furthermore, since Novices are crystal-controlled, they are not able to change frequency so readily when 'phone or other QRM appears.

George Hippisley, KN2KIR

202 N. High St. Mt. Vernon, N. Y.

Editor, QST:

I wish to take issue with the viewpoints taken by Messrs. Clark and Brogdon in March QST. Both of these letters scem to indicate signs of the so-called "progressive" viewpoint prevalent in amateur circles.

I agree with Mr. Clark in condemning the use of c.w. in the 'phone bands; it is definitely an ungentlemanly practice. But the reason is not that c.w. was here first. The same argument could be applied to argue that spark was here first so it should be allowed. As has been pointed out before, c.w. is necessary in case of communications emergency or breakdown of speech equipment, so it is necessary to have c.w. allowed everywhere (on the hambands that is). This does not give c.w. operators the right to use normallyassigned 'phone channels, the reason being courtesy to the phone men.

Mr. Brogdon carries his "progressive" ideas a bit too far. Granted that "sideband" is a more efficient form of communication. But how many, in spite of the technical niceties. are on s.s.b. compared to those on double-sideband? For that matter, a kilowatt is technically superior to 50 watts for reliability and readability of communication but are 50watt rigs outlawed? The factor that makes for outlawing something should be the will of the majority of hams, not how closely some new system approaches perfection.

- Karl Felperin, W2FSJ

R. D. No. 2, So. Side Oneonta, N. Y.

### Editor, QST:

. . . I too came up through the Novice ranks; I too am disgusted with the shenanigans to be heard on the 75-meter phone band; but please, I say please, don't ask for five hundred kilocycles of unidentified carriers, sloppy splatterband operators, etc. . . Admitted, there are always a few c.w. signals to be found in the 'phone bands, also admitted that there are quite a few lids running "kilowatts. Nothing has sounded as jolly as the character from Ohio heard for several evenings calling "CQ eighty" on the socalled wide-open c.w. portion of the band!

As you have assumed, I am primarily a c.w. man, part Scotch, yes, with a full 25 watts on 80 meters. I wouldn't be caught dead in your end of the band, because I don't have the patience or the experience to make me feel eligible to work a band which I always recall as the Happy-Hunting Grounds for the old-timers of this business.

- W. W. Thompson, W2MTA

2029 Hopkins Court

Alameda, Calif.

### C.W.-BAND S.S.B.

Editor, OST:

After reading the pros and cons of a.m. 'phone vs. s.s.b. in the March issue from some of our (ugh) brothers, some

of the heated arguments are rather nauseating. I think both a.m. and s.s.b. definitely have their place in amateur communications if operated properly and I have heard some poor excuses for both. Some operators have the idea that s.s.b. operation eliminates the possibility of TVI, BCI, and even improper operation, but this to me is only an admission of ignorance. I have heard extremely wide signals complaining of the other, while operating close to each other.

The a.m. 'phone men complain naturally about s.s.b. and e.w. signals in the 'phone portions of bands, and I agree with them in many respects, but I think the fault lies with (Continued on page 146)

# SINGLE SIDEBAND

 ${\cal H}$ ERE'S the latest addition to the ARRL library of publications tailored especially to the needs of amateur radio. Single sideband operation is here to stay and it behooves us all to learn about this modern and revolutionary form of transmission. Whether or not you're already using SSB, you'll find much useful information on both transmitting and receiving techniques in "Single Sideband for the Radio Amateur." The work of more than twenty-five authors is collected between two covers for convenient reference. Keep up with the game, get your copy now!

# \$1.50 Postpaid

"The AMERICAN RADIO RELAY LEAGUE, Inc." WEST HARTFORD 7, CONN.

the FCC in allocating such large portions of the bands to c.w. operation and small portions to the more useful means of communications, a.m. 'phone. If the c.w. and s.s.b. boys continually pat themselves on the back for operating on such small segments then maybe they would like to have less and be forced to operate in what the a.m. boys are using now.

It is my belief that if s.s.b. were forced to operate in separate portions of the band from a.m. they would have many more join them in true progress. The a.m. boys would leave the crowded 'phone segments to enjoy the merits of s.s.b. This may not lay too well on the s.s.b. boys' stomachs at first but think it over hoys, it would be wonderful to operate s.s.b. in the c.w. bands. It is a nuisance to try to operate a.m. and have a s.s.b. close in frequency. Also, it must be tough for s.s.b. boys to be repeatedly referred to as "voice modulated key-clicks."

So it all boils down to this: we are not getting any place beating each other on the head, trying to convert a.m. to a.s.b., preaching lengthy sermons over the air, and committing the very act of libel and slander. The only reason for rivalry between s.s.b. and a.m. is because we are guilty as poor representatives and members of ARRL properly to govern ourselves and correctly allocate bands for proper operation. Instead of fighting each other we should exert all our force to allow s.s.b. to operate in the c.w. bands and let the a.m. boys have their segment in peace.

-Jack R. Perciful, W4PDC/6

### THEY CAME, TOO

119 Eustis Avenue Newport, R. I.

Editor. QST:

The second paragraph of your editorial in the March issue of QST might lead some to think that amateur affairs were handled by the Federal Radio Commission between 1927 and 1934. However, some of us who originally obtained our amateur and commercial tickets from the Radio Division of the Department of Commerce recall that it was not until July, 1932, that the responsibilities and duties of the old Radio Division were transferred to the FRC.

514 TENTH ST.

# In this top rated rig TVI is sealed in with METEX Electronic Weatherstrip

This inexpensive product will do the same for your own rigs. Follow the lead of Johnson and other high placed manufacturers.

viking kange

For sealing your own rigs or any consumer, industrial or military equipment against RF leakage METEX Electronic Weatherstrip is highly effective and is a simple operation. It's made of highly resilient compressed knitted wire which comes in several forms to meet all normal requirements even where closure is of an uneven nature. Type TVI 20-S is

easily applied to most rigs in the home workshop. METEX Electronic Weatherstrip is the simplest and most inexpensive method for sealing in RF leakage yet devised. Try it. Results are amazing. Ham and industrial inquiries invited.

I also recall that originally the FRC was created by Congress in 1927 to bring order out of the chaos in the broadcast field. At that time its life was only going to be for one year, yet like many other Washington agencies that came along later, they imitated the "Man Who Came to Dinner" and picked up additional duties along the way. That is how they got amateur affairs in 1932. Then, in 1934, Congressstraightened out the whole thing by creating the Federal Communications Commission.

It is refreshing to read an article that compares today's activities with earlier days.

-- Lester C. Harlow, W4CV0/1 [EDITOR'S NOTE -- OM Harlow is correct. The story appeared in Sept. 1932 QST.]

#### ONE SOLUTION

Rt. 1, Box 825 Tigard, Ore.

Editor, QST:

... True — there is a lot of QRM these days, but why not solve it nicely instead of trying to either change the rules or shove other amateurs around. Since one of the prides of being an American amateur is to be flexible and help with many new "firsts" in radio, wouldn't the best solution be to improve your own operating techniques first and then try to help the other fellow instead of drowning him out.

Many hams in this area have taken their rigs "upstairs" and are finding a new world in v.h.f.; c.w. for me on 80 and 40, and 'phone on 2 — and you can't ask for better ham radio when you practice good operating principles. — Jim Strickland, W7SEZ

### YL News & Views

#### (Continued from page 55)

and OM W411HH.... W5SYL, Iva, was one of some 100 YLs and OMs who assisted in the search for the body of W5DM, pilot of a plane which crashed in Texas... And in Lancaster, Calif., K6HWB, Vivian, stayed on the air for more than 20 hours monitoring, relaying, and keeping 3995 kc. clear during a search for a Douglas jet test pilot on (Continued on page 150)

Devotees of amateur radio come younger all the time. Here's one chap who was exposed to 75-meter QRM at the innocent age of several hours.

For five days following the birth of son Mark Eric in January, Mildred Drummond, WØGXG, kept three schedules daily with OM WØBWP, Rev. Wesley J. Drummond, pastor of the Second Presbyterian Church, Flandreau, S. Dak. Mildred's transmitted instructions on household matters were dutifully carried out at home by her OM, 11-year-old son John, WNØTLR, and 9-year-old daughter, Darlene.

We note with womanly interest that it is becoming fairly common practice for mothers-to-be to pack a portable transmitter and receiver with a suitcase to take to the hospital for a maternity confinement. Seems opportune for a few days of leisurely (?) QSUing.

# NOW! SSB

at a new low cost\*

4" long x 1-3/8" wide, 2-3/16" high

# with the **BURNELL S-15000** single side band filter

Modest budgets no longer stand in the way of single side band advantages. Not with the new BURNELL S-15000 filter. This *low cost* filter can be adapted to commercial or ham receivers or transmitters!

Although the S-15000 is made with the same commercial quality toroids and condensers as employed in the regular BURNELL Commercial Grade Audio Filters, it is designed for low budget application.

Also available: a new low cost upper single side band filter, S-16000.

Write Dept. P for our new booklet "Low Cost Single Side Band for Amateur and Commercial Equipment" and order your SSB FILTER now.

\*PRICE \$35.00 Net, plus postage Price on quantity quoted upon request.

HAMFESTI Another Big Annual Affair for the Midwest hams, their families and friends. The Starverl Rock Radio Club Hamfest, June 5, 1955. For details, see Hamfest Calendar or write W9MKS, Utica, Illinois.

XVI, approved, the VS haby mobile antenna is beautifully chromed, only 4 ft. high. High Q, weatherproof plug-in miniature loading coils permit instant band changes. Top section resonates antenna to operating frequency. Becomes regular car whip when coil is re-noved. Perfect for 50-watt bandswitching transmitters. It's tiny but effective on all bands. Replaces regular cowl or fender broadcast whip. Easily installed in a few minutes. Coils available 75 thru 10 meters. With all mounting hardware and one coil, \$12.95 ca. Specify band. Other coils, \$27.57 ea. WOVS, Bill Davis, 225 Cam-bridge Ave., Berkeley 8, Calif.

F. section needs TVI suppressing. Make offer. Drake low pass, \$6.00. Locals preferred. W2NHV, D'Onofrio, 26 Eaton Road, Hicksville, L. I., N. Y. HI 3-6417.

HIGH Q, all band autenna coils for center-loaded mobile antennas. 10-80 meters. Tapped on both ends for \*\*" studs. Price: \$7.95: Universal Measurements Co., 44110 Heaton, Lancaster, Calif.

SELL: Elincor lo-meter beam, 50' of RG8U, rotator and wire, chimney mount: \$40. WØMSB, Pass, 33 Briarcliff, Clayton, Mo.

SELL: Globe Scout mod. 40-A, with Lysco mod. 382 V.R. VFO. Like new, \$95, Fred Kurz, W9VTQ, 2711 W. 29th St., Zion, Ill.

I.OW loss open wire line antennas for all ham bands, complete kits \$4.95 and up, or completely assembled extra, by antenna experts, 55 years' experience. "Antenna Joe" Gibbons, K2EF, 18 Liberty St., Port Jervis, N. Y.

HIGH Power final 4-125As. Sell for less than cost of parts. W3KJ. General License theory training course, tuition free to members of afult educational center; will begin in May, evenings. Applications must be in by May 5th. Contact Schachet, W2HNG, 135-30 232 St., Springfield Gardens 13, L. 1.

FOR Sale: QSTS complete from first issue through 1940. Personal collection of late A. A. Hebert, W1ES, ARRL Treasurer, Bound in volumes, inst-class condition. Includes special issue selling ARRL honds after War I. Make offer. Write Secretarial Dept., ARRL Hq.

CRVSTALS: Precision units 3500 to 8700 Kc.±1 kc.\$1.50. Exact frequency in our oscillator, \$2.00. Breon Laboratories, Williamsport, Penna.

NEW and used Motorola, Link, RCA, G-E, etc., FM commercial communications equipment bought & sold. Allan M. Klein, W2FOU, 95-33 2251h St., Bellerose, L. 1., N. Y. Phone FL 4-3394.

WYOMING Hamfest, July 23-24. South Fork Inn, 18 m. west of Buffalo, attend Annual Wyoming Hamfest. Write Bob Miller, W7QPP, Pres., 362 E. Loucks St., Sheridan, Wyoming 7est your QRK\*

**T**HIS little quiz is based on articles appearing in QST for March. How much do you remember from the issue of two months ago?

1. What is the least noisy vacuum tube amplifier?

2. What benefit is gained by "fanning" elements of a beam antenna?

3. Multivibrators are usually used to divide the frequency of a crystal oscillator by a factor of not more than \_\_\_\_\_.

4. What adjustments at the transmitter will affect the s.w.r. in the transmission line?

5. What bill of interest to amateurs is pending in Congress?

How you scored doesn't matter too much. The important question for any active amateur is "What magazine covers the whole of amateur radio regulatory matters, operating activities, and first class technical articles?"... and the answer is: *QST*. Is it delivered to your door every month?

### QST and ARRL Membership \$4 in the USA \$4.25 in Canada \$5 elsewhere

The American Radio Relay League, Inc.

West Hartford 7, Conn.

ANSWERS: 1. The triode (Low-Noise Receiver Design, page 20) 2. Increased broadband characteristics (A Compact Dual Beam for 20 and 40 Meters, page 11) 3. Ten (Frequency Marker with 50 kc Intervals, page 14) 4. None (Meetthe S.W.R. Bridge, page 30) 5. S. J. Res. 25, pertaining to Amateur Radio Week (Happenings of the Month, page 47)

\* QRK — QST Reading Knowledge. It is also the International Q-Signal meaning "Your readability is . . .". You'll find QST always QRK 5 — Perfectly Readable.

# **T-90 BANDMASTER TRANSMITTER**

APS-90 Power Supply (115 V AC) **\$79 50**\*

The Midget with a Mighty Punch!

It has been worth waiting for — this power packed dream transmitter with every feature for efficient operating under today's conditions. TVI suppressed — complete bandswitching unmatched flexibility and versatility for either fixed or mobile operation.

VPS-T90 Mobile Power Supply S 20 50\*

# your best supply source for **ELECTRON TUBES** for every **Amateur & Industrial Use**

## IMMEDIATE DELIVERY FROM STOCK

ALLIED stocks for *quick shipment* the world's largest distributor inventory of receiving, kinescope and special-purpose electron tubes. Whether your tube requirements are for your station equipment or for your work in industry, you can always depend on us for quick, efficient shipment direct from our huge stocks. To save time, effort and money-phone, wire or write to us for fast delivery.

### FREE 308-PAGE BUYING GUIDE

Refer to your latest ALLIED Catalog for everything you require in Amateur gear and electronic supplies. Get every buying advantage: quick shipment from the largest stocks available; easy payment plan on Ham gear; unbeatable trade-ins; real help from our Ham staff. Yes, get everything you need at ALLIED. If you haven't a copy of our 1955 Catalog, write for it today.

**Everything for the Amateur** from one complete dependable source

you can't bog 'em if you can't hear 'em!

No matter what else a receiver does, it must pull 'em in! And that's just what the NC-183D does! Compare its luv. sensitivity (on 6 meters) and extremely low noise level with the highest-priced amateur receivers made (\$150 higher!) and vou'll see why you'll hear more, log more on an NC-183D!

COVERAGE: Continuous from 540 kcs. to 31 mcs. plus 48 to 56 mcs. for 6-meter reception.

FEATURES: Two tuned R.F. stages. 3 stages of I.F. Voltage regulated osc. and BFO. Main tuning dial covers range in five bands. Bandspread dial calibrated for amateur 80, 40, 20, 15, 11-10 and 6-meter bands. Bandspread usable over entire range. Six-position crystal filter. New-type noise limiter. High fidelity push-pull audio. Accessory socket for NFM adaptor or other unit, such as crystal calibrator.

\$399.50

### PRECISION-WOUND RF CHOKES

National makes a complete line of quality RF chokes, covering virtually every frequency range and every electronic need. In addition, National's engineering staff and production facilities are capable of winding chokes to any specifications for commercial or military applications. Write for complete information.

Popular beam power combination for medium pow-er. RCA-5763 takes up to 17 watts input CW, 15 watts 'phone; RCA-6146 takes up to 90 watts input CW, 67.5 watts 'phone. Both types are original **RCA** designs!

Final Amplifier of the Heathkit DX-100, showing two RCA-6146's in parallel.

# Leading Amateur Designs .. USE RCA TUBES

In the Heathkit DX-100, a single RCA-5763 beam power tube drives two RCA-6146 beam power types in parallel in the final-an ideal combination that is capable of delivering a "healthy" signal at a very modest cost.

Here's ONE basic reason-among many-why amateur and professional designers prefer RCA Tubes.

RCA High-Perveance tubes deliver high power outputat lower blate voltages. For you this means: (1) lower-voltage filter capacitors, (2) lower-voltage tank circuits, (3) more reasonable values of pi-network components, (4) fewer problems with rf and dc insulation.

RCA high-perveance power tubes-both beam and triode types-are available at your RCA Tube Distributor. For technical data, write RCA, Commercial Engineering, Section, E37M Harrison, N. J.

### **NEW EDITION! RCA Headliners** for Hams

Completely revised, upto-date data on RCA Tubes for amateur transmitter applications. Free --- from your Tube Distributor.
