GE CALLOY RADIO CORES

An All-British product—the result of extensive research and development carried out during the last 15 years.

MAIN ADVANTAGES

- Greater magnification
- Small size
- Higher selectivity
- Robust construction
- Non-rusting
- Reduced costs
- Simple adjustment

SALFORD ELECTRICAL INSTRUMENTS LTD.

PROPRIETORS: THE GENERAL ELECTRIC Co. Ltd., OF ENGLAND

With the VARIAC . . . the *right* voltage every time

Thousands of enthusiastic users testify to the general usefulness of the VARIAC* continuously adjustable auto-transformer for use in hundreds of different applications where the voltage on any a.c. operated device must be set exactly right.

The VARIAC is the original continuously-adjustable, manually-operated voltage control with the following exclusive features, which are found in no *resistive* control.

- **EXCELLENT REGULATION**—Output voltages are independent of load, up to the full load rating of the VARIAC.
- **HIGH OUTPUT VOLTAGES**—VARIACS supply output voltages 15% higher than the line voltage.*
- **SMOOTH CONTROL**—The VARIAC may be set to supply any predetermined output voltage, with absolutely smooth and stepless variation.
- **HIGH EFFICIENCY**—Exceptionally low losses at both no load and at full power.
- **SMALL SIZE**—VARIACS are much smaller than any other voltage control of equal power rating.
- **LINEAR OUTPUT VOLTAGE**—Output voltages are continuously adjustable from zero by means of a 320 degree rotation of the control knob.
- **CALIBRATED DIALS**—Giving accurate indication of output voltage.
- **SMALL TEMPERATURE RISE**—Less than 50 degrees C. for continuous duty.
- **ADVANCED MECHANICAL DESIGN**—Rugged construction—no delicate parts or wires.

VARIACS are stocked in fifteen models with power ratings from 170 watts to 7 kw; prices range between 70/- and £32:10:0. Excellent deliveries can be arranged on 1A Priorities.

* Trade name VARIAC is registered No. 530,454 at The Patent Office. VARIACS are patented under British Patent 439,567 issued to General Radio Company.

Write for Bulletin 424-B & 743 for Complete Data.

And this is obviously a matter of extent, intensity and time.

Take Electrical condensers for instance—simple in conception maybe—but demanding infinite experience and skill, to satisfy the exacting operating conditions of modern requirements. The fulfilment of these has meant the whole time occupation of highly skilled specialists, working at high pressure, in this way to earn, along with their countrymen in other spheres, the right of survival.

What a wealth of experience and technical excellence will be available to all, when happier times arrive ; and nowhere more than in Dubilier Condensers.

Automatic Voltage Regulator

- CONSTANT A.C. OUTPUT
- WIDE A.C. INPUT LIMITS
- ENTIRELY AUTOMATIC
- QUICK ACTION

The constant A.C. input voltage called for in so many modern industrial and laboratory applications is provided with maximum accuracy and reliability by B.A.T. Automatic Voltage Regulators. Six standard nominal ratings are carried in stock, 10-1,000 Watts, giving 230 V \pm 1% with 185-270 input. Other ratings to special order.

On 1A Priorities delivery is either early or ex stock. Please request Bulletin V.R. 1243 for complete data.

ALSO SUPPLIERS OF

Static Mains Transformers of all types and "Variac" infinitely variable voltage regulating transformers.

Standard Sine Wave Sources

FREQUENCY RANGES (3 Models)

- 0-15,000 c.p.s.
- 0-25,000 c.p.s.
- 0-50,000 c.p.s.

Three range Output Voltmeter incorporated—0-250, 0-50, and 0-10.

Four output impedances, 5,000, 1,000, 600 and 15 ohms.

OUTPUT UP TO 5 WATTS.

10 CYCLES PER SECOND

TYPE LO.800A

This model is chosen as a Standard by most Departments.

Stable, reliable and indispensable to all serious workers.

TYPE LO.800A OSCILLATOR, a scale of which is illustrated together with an actual oscillogram of output voltage, gives good waveform even below 10 c.p.s. This necessitates a minimum "pull-in" between the two H.F. oscillators. Superlative design results in an almost perfect waveform from lowest to highest frequencies. Output voltage is constant to within a few per cent. over the frequency range.

SUBJECT INDEX

- Absorption.** (See also Atmosphere; Dispersion)
of infra-red radiation, by water vapour and CO₂, 2071
- Accumulators,** book: Accumulator Charging, 2853
car, freezing of electrolyte, 3169
lead, at low temperatures, 1247
silver-zinc, 3168
- Acoustics.** (See also Musical instruments; Sound)
acoustical conductivity of circular aperture, 3074
application to bombing accuracy, 2426
application to shaft-power measurement, 3451
architectural, distributed radiator systems, 3077; echoes in rooms, 2743; effect of walls on speech and music, 1449; movable soundproof rooms, 3072; noise reduction, 1152; Oelsner technique, 1443, 1448; R.C.A. acoustic lab., 3073; reflectors in, 1447; sound absorption, 1445; sound exclusion by thin walls, 1446; studios, broadcasting, 472, 2418, 2419, for microphonic pick-up, 3443, recording, 1704, speech, 3444; undesirable effects, 1444; Utrecht theatre, 817; variable reverberation, 818
books: Acoustic Design Charts, 90; Acoustics of Music, 1703; Die physikalischen und technischen Grundlagen der akustischen Landeshöhenmessers, 104
directivity increase, 1134
force at entrance of resonator, 3076
impedance measurement, 819, 3051
interaction impedance of resonators, 3075
of oscillating quartz plate, 822
patents, review, 2420
reactance theorem, in, 3302
sound relaying in factory, 1901
speech intensity, statistical analysis, 797
synthetic reverberation, 3442
telephone alarm, 2588
transient analysis, 2675
- Aerial construction, and use of transmission lines, 2384**
— coupling, circuit, 422; tapped-coil, 2370
— leads, screened, 767
— systems. (See also Direction finding; Quadriple)
directional, for secret communication, 2136
at KMPC, 427
linear arrays, mathematical theory, 1890
measurement of radiative coupling, 765
polar diagrams, calculation, 419, 420, charts, 421, machine, 3300
resonant circuits in, 3378
two-antenna array, 1685
umbrella, 766
- Aerials.** (See also Aircraft; Dipoles; Direction finding; Impedance; Radiation)
aircraft, characteristics, 1417; survey, 415
book: Rhombic Antenna Design, 62, 1415
broadcast, shunt-excited, 1684
capacitance calculation, 1687
centre-driven, mutual impedance, 2720; radiation field and current distribution, 2721
characteristics, 1887, data sheets, 3379
current in, due to given e.m.f., 2383
dipole, input resistance, 1889; for s.w., 1888, 3384
directive, absorption surfaces, 1886; adjustment, 3386; beam, patent, 3376; u.s.w., 3376; 112 Mc/s., 3377
glass kite string for, 3390
icing prevention, 414, 1882
loop system for feeder tuning, 3382
mast, effects of guys, 2140
polar diagrams, mechanical solution, 2318, 2722
radiation from, 1093
receiving, lightning effect, 3388
rhombic, inclined, 418
sensitivity to local interference, 1095
symmetrical, self-impedance, 423
theory of, 1416, 1686
tower, Australian design, 2139; optimum current distributions, 2138
transmitting, power, 2141; radiation resistance calculation, 2382
ultra-short-wave, 413; beam, 764; circular, 762, 1091, 1880, 1881; horizontal transmitting, polar diagrams, 763
vee, radiation from, 3385
- Air raid precautions,** alarm devices, 635, 942, 1346, 3207; glow-discharge lamps for black-out, 1961; preliminary warning distribution lines, 1347; use of television, 483
- Aircraft.** (See also Aerials; Blind landing); acoustic altimeter, 3024; cooling of valves, 779; distance from ground, 3023; interference suppression in, 2991; loop aerials for, 1683, 3018, 3389
— communication. THE PIONEERS OF LOW LOSS CERAMICS

*Clear as a
Crystal*

**AND HERE IS
THE REASON..**

... the answer has been found in Bullers Low Loss Ceramics to the problem of Dielectric Loss in High Frequency circuits.

Years of laboratory research and development have brought these materials to a high degree of efficiency. To-day they are in constant use for transmission and reception, and play a vital part in maintaining communications under all conditions.

Made in Three Principal Materials

FREQUELEX—An Insulating material of Low Dielectric Loss, for Coil Formers, Aerial Insulators, Valve Holders, etc.

PERMALEX—A High Permittivity Material. For the construction of Condensers of the smallest possible dimensions.

TEMPLEX—A Condenser material of medium permittivity. For the construction of Condensers having a constant capacity at all temperatures.
