Advanced technology, innovative design and refined workmanship is not always the perfect recipe for success, we believe a little more is required.

The Concert series has enabled Jamo to produce a range of loudspeakers which will reproduce music that is clean and neutral. The dynamic range transparency and sound stage are all raised to a higher dimension.

SOMA MERZ, Ludwigsburg

The successes attained by the Jamo development team the result of efforts to design high-quality loudspeaker components which are critically matched to one another.

oncert

It is an honour for us to introduce this new generation of loudspeakers to you...Jamo Concert 11, Jamo Concert 8 and Jamo Concert Center. THE SOUND OF EXCELLENCE - Made in Denmark.

Editor's Notebook

k

Fresh from Cologne, **Stan Vincent** gets to grips with the reality behind the promise of high technology.

The reason l'mtelling youthis is not to show off a glitzy, globe-trotting lifestyle. If only that was the case! The truth of the matter is that I didn't have time to write this before leaving our offices in London. Nor was it possible to finish the article on returning from my sojourn in the City of Sweet Smells. To file my copy in time I had to deploy a combination of modern and not-so-modern techniques. And suddenly it struck me that there was a parallel to be drawn with current fashions and trends in consumer electronics.

In an ideal world, here's what I would have done to send in my article. Step one: download notes from desk-top computer to Psion pocket computer. Step two: finish writing and edit article on Psion, then ping in modem and e-mail to magazine CompuServe account. Step three: enjoy leisurely breakfast.

In the real world, this is what happens. Step one: discover that vital software has been deleted from desktop computer. Step two: printout notes. Step three: leavenotes on desk. Step four: on discovering lack of notes, agree with superego that they were a load of cobblers, anyway, and start afresh with novel 'travel' theme. Step five: write and edit article on pocket computer. Step six: modem fails to operate so copy article onto hotel note paper and fax back to nimble-fingered Reviews Editor. Step seven: dash off to meeting with European colleagues, sans breakfast.

There's the problem. The ideal scenario mapped out above is technologically feasible, but depends crucially on the right hardware and software being in the right place at the right time. However, it is almost a full-time job in itself to keep these high-tech balls in the air. Inevitably, I have more pressing matters to occupy my week-day working hours.

Sowhatdoesthissorry talehavetodo with the price of fish? Well only that it is all too easy

If you thought Samsung only made microwave ovens and midi systems think again. At the September Ramada show the company surprised us all with a full on, no compromise system.

The system consisted of the *C-01* preamplifier and *M-30S* monoblock power amps driving the substantial *SP-01* loudspeakers. Front end was a Mark Levinson *No.30.5* CD transport and *No.31* DAC. Word at the show had it that Madrigal had designed the amps and Hales the speakers in this £30k system.

to become tied in knots over the equipment and widgets that modern society persuades us we need. And manufacturers still put the greatestemphasison technological innovation, paying scant regard to ease of use.

In the audio sphere of interest, this criticismappliesparticularly tohomecinema. Even while the concept is still taking root in British soil, even while aficionados are stillcoming to terms with basic concepts like Dolby Pro-Logic, the marketplace is awash with speculation over the next big thing, which just happens to be thewholenew ball-game of DVD and discrete digital surround. Already it's looking so complicated that I'm sure many potential buyers are throwing up their hands in despair.

Onenotablefeature of the recent Hi-FIShow at Heathrow's Ramada hotel was an aston-

ishing number of valve amps. I believe this is a manifestation of widely-held frustration with the complexity of modern existence and an appetite for products that are made by people to serve the needs of individuals, not massmarkets. Of course, the beauty of hi-fi is scalability: you can have as much or as little of it asyou desire. And the best equipment provides unparalleled access to one of the most precious commodities known to man — music.

In this month's edition, you'll find a roundup of 14 CD players at the affordable end of the market, while for vinyllovers we've taken a spin with five fantastic turntables. While on the subject of LP, the recould be nogreater British exponent than Alastair Roberts on-Aikman of SME Ltd, and we have been privileged in this issue to pay a visit to his legendary Music Room — read about it on page 54.

So it's "herzliche gruße" from your correspondentin Cologne, and

I hope you enjoy your listening this month!

Jan Vincent

We were honoured to be voted Hi-Fi Magazine Of The Year at the CETI Industry Awards, Harrogate, May 1996. Cheers!

ten strong speaker stand review.

CONTENTS

NOVEMBER 1996 ISSUE 159

REGULARS

Our resident news hound, Malcolm Steward, has been snuffling around the audio industry for the latest and finest hi-fi truffles.

Jason Kennedy runs amok among the latest hi-fi goodies. Before your very eyes, he will open boxes and play with stuff — disgusting.

29^{Write on!}

Your chance to become the Jane Austen of audio. Write about passions hidden beneath heaving class A amplifiers, swooning and pucks. *Hi-Fi Choice* will be at home for tea.

This month's landmark product is the SD Acoustics SD-IE loudspeaker — it's tall, thin and elegant. Alan Sircom, however, is none of these things.

Alvin Gold is just like every hi-fi's agony aunt, except that he's more hairy than Claire Rayner.

54 Inspirations

To celebrate SME's many years of making the finest tonearms and turntables, Paul Messenger revisits Alastair Robertson-Aikman's listening room.

Alan Sircom takes one branch of Musical Images and stirs in three hi-fi systems to see how much AV seasoning is required to get the perfect blend of taste and colour. Yum!

14

players on the test bench.

theatre shocker - Inspirations.

OPINION

3 From the Editor's Notebook

Stan Vincent goes to Cologne only to discover his widgets are incomplete and has to resort to old technology to get his point across.

Ear Waxings

Jason Kennedy plays Charles Darwin as he unveils the origin of the Pioneer Precision species.

23 Personal Messages

Paul Messenger has been so impressed with the current crop of loudspeaker stands, tested on page 58, that he just had to air his views.

25 The Jimmy Hughes Experience

Jimmy Hughes gets all misty-eyed about the new Musical Fidelity X10-D valve based CD accessory - and not only when he hooks it up to a CD player.

27 Paul Miller's Oasis of Sanity

Hi-Fi Choice's Technical Editor Paul Miller gets ultrasonic on a few CD players - and doesn't like what he sees.

146^{Ultra Vivian Scene}

David Vivian surrounds himself in DSP — is it any good for music?

REVIEWS

Turntables

Alan Sircom gets to grips with five of the latest turntables priced between £500 and £1,200.

58 Speaker stands

Paul Messenger stands tall and proud next to the latest crop of speaker stands, from the cheap and cheerful to exclusive carbon-fibre models.

72^{CD players}

Alvin Gold and Paul Miller join forces to take on 14 one box, budget CD players priced between £100 and £350.

Update

ACE REPORTER MALCOLM STEWARD RETURNS FROM THE FRONT WITH NEWS OF THE LATEST PRODUCTS AND EVENTS

In brief

Have you got an unused MM phono input on your amp, and more line sources than you can accommodate? If so, the Inverse RIAA Converter module, from EDL of Bristol, might be a good idea. For just £16.80 this discreet box attenuates signal and shapes frequency response, to make line-level sources amenable to your amp's phono stage. http://www.tecno.demon.co.uk/ riaa.htm. @ (0117) 974 1918.

Sevenoaks Hi-Fi has a new branch in Birmingham that features separate A/V and hi-fi demonstration rooms. You'll find it at Arch 12, Queensway Arches, Livery Street, Birmingham B3 1EU. 10 (0121) 233 2977

- The Virtuoso is the newest horn speaker from Bravura. Half the size of the Accelerando model and boasting 104dB sensitivity, it costs £2,995 and comes in a variety of real wood finishes. (01732) 851408
- In Singapore between 31 October and 3 November? See the International Audio Video Exhibition at the Raffles City Convention Centre and Le Meridien hotel. | 12 + 65 344 3866
- Chandos is clearing its stock of LPs. Limited quantities remain and none of the albums will be re-pressed, so if you want them you'd better get a move on. Price is £6.50 per LP; order four and you get another one free. ♀ (01206) 794000
- The High End Society show, High End '97, will take place at the Hotel Gravenbruch Kempinski near Frankfurt, Germany between 9 and 11 May 1997 with trade-only admission on 8 May. ☎ + 49 202 70 20 22

Cyrus cornucopia

Not so much additions to the range, more a cornucopia of Cyrus combinations hoves into view from Huntingdon. Along with a new CD player, a revised version of the Cyrus *III* amplifier, a new budget power amplifier and a new budget integrated, there's an equipment rack designed specifically to house Cyrus components.

The £598 dAD3 CD player looks to be a nifty piece of quart into pint-pot engineering, as Mission has managed to fit a front-loading mechanism into the compact Cyrus case. The mechanism, which features a highly-tuned, self-centring isolation system, feeds an 18-bit DAC. The power supply uses star-earthing and extensive decoupling but can be enhanced with a PSX-R power supply.

The Cyrus *IIIi* amplifier, which also sells for £598, is a completely redesigned version of the Cyrus *III*, incorporating several elements developed for the Cyrus *Pre* and *Power*. Rated at 50W per channel, it uses surface-mount components powered by a toroidal transformer. The *IIIi* uses an electronic management system to provide full remote control and a calibration memory referenced to the CD input to ensures constant volume levels when switching to other sources.

There's no such sophistication in the Cyrus Straight Line, the company's new entry-level, 50W per channel integrated amplifier. Priced at £398, it's a no-frills design

The new rack mountable Cyrus dAD3 CD player.

fitted with five line-level inputs and tape monitoring. Although it can't be upgraded with a *PSX-R*, preamp-out sockets allow for bi-amping with an additional power amplifier – such as the new 50W Cyrus *XPA*. This £298 power amplifier's input sensing switch-on feature also makes it ideal for all remote installations. \mathbf{G} (01480) 451777

Stu, stu, Studio 60

Studio 60 standing tall.

Monitor Audio has launched a new loudspeaker to top off its high-end Studio range. Said to "redefine the stateof-the-art in its market sector", the *Studio* 60 comes in at between £6,000 and £7,000 depending upon the veneer and lacquer finish.

Sitting on an MDF base, each 1.08 metre tall, floorstanding cabinet houses four drivers, each specified for the *Studio* 60. These include a 25mm Ceralloy tweeter, a 170mm Ceralloy midrange with a fixed phase corrector, and two 170mm Ceralloy bass units.

Driving the speaker promises to be easy with its "smooth" eight Ohm load impedance and highish 90dB sensitivity. Power handling is 250W while the frequency range is quoted as extending from 27Hz to 22kHz.**@** (01223) 246344

SonicLink is claiming a first for its new Vermilion interconnect. According to the company that broke the goldplated mould to bring you rhodium-plated plugs, it's the world's first hi-fi cable to feature solid-core titanium conductors. SonicLink's listening tests have shown that this material's sound quality is "substantially superior" to that of copper, silver and carbon fibre.

A 0.5m stereo pair of *Vermilion* cables will cost you £170 while a 1m stereo pair will deplete your savings by £195. A network of Rare Earth Metal dealerships will carry these and other unconventional cables.

It's refreshing to see SonicLink doing its bit for East-West relations: since the end of the Cold War the Soviets have been buried under a mountain of titanium that they can't use! (01332) 361390

Spot the difference!

The Rogers *Project D* loudspeaker is quite unlike any of the designs the company has produced in its long history. Super efficient, easy to drive and very loud (like the Lanzante-McLaren F1 supercar that inspired it), this high-tech compact is aimed primarily at the installation market. However, it's also available to more design conscious members of the public.

The futuristic speaker cabinet is crafted in the USA from injection-moulded polymers and aluminium. It houses an Aerogel-coned, five inch bass unit whose reflex port surrounds

the 14mm polymer tweeter – this is apparently the only place they could put the port without upsetting the speaker's aesthetics.

And aesthetics is where the *Project D* really aims to score. It comes in a range of nine finishes that include a faux Burr Walnut, carbon fibre, a cartoon, a guitar-style sunburst paint job, and one that pays homage to Oakley by reflecting light in a surf-punk mirror-sunglasses fashion. If you can't find a finish that harmonises with your lifestyle, you can

specify a design of your choice – on the proviso that you order a couple of hundred pairs, of course. Each pair will cost around £390.

NAD'S Watt-fest

Fully extendable: NAD's 218THX.

NAD's latest audiophile THX power amplifier, the 218 *THX*, boasts extended dynamic power, but the question is, just how extended is it? The answer is 1.2 kilowatts which, one would imagine, ought to be sufficient for most purposes. Needless to say, it incorporates NAD's proprietary Soft Clipping circuitry to reduce the chances of speakers being baked.

To achieve this monstrous output you need to switch the amplifier from stereo into bridged mode as in its regular two-channel configuration the *218 THX* 'only' delivers 200W per channel.

Priced at £849.95, the amplifier comes with fully balanced XLR inputs and traditional gunmetal grey, rack-mountable casework. ☎ (0181) 343 3240

Budget purism

Denon's new UK-designed *PMA-350SE* is a straight line amplifier for purists on a budget, with phono stage and remote control handset available as optional extras.

The bare bones amplifier costs £199.99, has five linelevel inputs and outputs 50W through two sets of speaker terminals arranged for bi-wiring; vinyl fans can convert one of those inputs to phono operation for £14.99 with a dealer-fitted circuit board. For the same money, couch spuds can add a remote handset that controls the amplifier's power, volume and mute functions as well as key features on all compatible Denon CD players, cassette decks and tuners.

Denon says that the *PMA-350SE*'s high current and load capabilities mean it will drive most loudspeakers. High-grade components, hard wired connections between critical circuits, and heavy duty power transistors just add to its audiophile appeal. **2** (01753) 888447

Bose revives the music centre

It's official – the music centre lives! That's precisely the term adopted by Bose to describe its new *Lifestyle 20*, which it says is the most technologically advanced system the company has yet produced.

The two-zone music centre includes a six-disc magazine-style CD changer, an AM/FM preset tuner, and inputs for two VCRs, tape and another line-level source. Also included is a radio frequency remote control that operates through walls and around corners. Proprietary equalisation circuitry and amplifiers rated at 200W come in the accompanying *Acoustimass*® bass module. Contributing to the £3,000 system's elegant and unobtrusive nature are the Direct/Reflecting *Jewel Cube* satellite speakers, which measure just over 4x2x3 inches (a little higher than a CD) and cover the mid and treble bands.

Buyers can exploit the *Lifestyle 20*'s second zone facility with one of three add-on packages available in white or black finishes: the music-oriented *Acoustimass* 5 and 3

powered speaker systems or the Acoustimass 9 powered speaker system, which also includes a zone 2 home cinema remote control to operate the incorporated Bose Videostage decoding circuit. Usefully, you can listen to different sources in each room. $\mathbf{\Omega}$ (01795) 475341

In brief

- Sanyo has two new micro systems, the £219.99 MS4 and the £249.99 MS6. The MS4 includes a 12.5W amplifier and a singledisc CD player while the MS6 provides a three-disc CD changer and 20W of power. Both include cassette, tuner, speakers and the usual micro features. The company's new midis, the £249.99 SYS750 and the £299.99 SYS1050, both feature semi-automatic turntables. (201923) 246363
- Silvertone has reduced the price of its Silvervoice loudspeaker cable from £85 to £55 per metre. This coincides with the introduction of the more refined Silvervoice Ultra at £85 per metre. (20973) 743054
- "The best club headphones in the world", is Sennheiser's boast about its £159.95 *HD25* and £84.95 *HD25SP*. Tough, repairable and designed to withstand DJ abuse, they also go very loud. ☎ (01494) 551551
- Richard Allan would like you to know that it now offers 11 dedicated A/V loudspeaker packages ranging in price from £269 to £1,439, all sold directly from its factory on a home trial basis. (01274) 872442
- Quarter Notes is Madrigal's rather smartly presented newsletter, which should be of interest to anyone who's interested in its products. You can sign up for it on the company's web site at http://www.madrigal.com/
- B-Tech has a new wall bracket for larger speakers. The £29.95 BT77 Ultragrip Pro will accommodate units weighing up to 25kg and measuring 170 -280mm wide, up to 330mm deep and 510mm high. 20 (01689) 849999
- Bib is now the UK distributor for Roladisc CD storage units. With a 150-disc capacity and available in wood, ABS and aluminium, they cost between £12.99 and £19.99. (01442) 233233
- Due to unprecedented demand, the price of Miller & Kreisel's V-125 THX subwoofer has been dropped from £895 to £800. 20 (01962) 886280

KEF has streamlined its six-strong

A hair on the back of the neck. amplified by Technics.

Technics For Music Lovers.

Myryad does digital In brief

Owners of Myryad amplifiers will be interested in the CD 44 player released to complement its existing range. The MC100 is a sleek minimalist offering whose facia is dominated by a large, easily read display panel complete with a custom-made, dark-tinted window and a centrallymounted CD mechanism. There's a minimal button count but all the major controls and the secondary functions appear on the remote control handset.

The unit is based on a 1-bit PLM DAC incorporating four convertors, providing push-pull outputs for each channel. The analogue filter circuits feed a second filter stage incorporated into the discrete output stage derived from the MI120 amplifier. The CD mechanism benefits from being mounted into the unit's rigid steel chassis. Some of onboard memory plus double C1 and quadruple C2 error correction provide "outstanding" playability of

The popular Epos ES11 has stepped off the production line to make way for a successor, the ES12. Selling for £499.99 and available in three real wood veneer finishes, the new speaker is a compact, ported two-way that, says its maker, remains faithful to the Epos spirit.

The ES12 uses two newly-developed drivers built inhouse at Epos. A 25mm aluminium dome tweeter, which provides improved sensitivity and dynamics at the top of the frequency range, partners a polymer cone bass/midrange driver that's designed to give an appropriately fast response and smooth integration. The bi-wire crossover that marries the units is, in typical Epos fashion, a hard-wired, single component network feeding the bass/midrange driver directly. 🕿 (01705) 407722

KLH sets the scene

KLH Audio Systems is back in the UK, with a range of 'High Fashion, High Fidelity' products that have transformed KLH into the second largest volume supplier of speakers in the US since 1989.

First out of the starting gates are the revolutionary £60 Soundbite (right) loudspeakers, with matching £68 Powerbite amplifier and £100

Bassbite subwoofer. These unique track-ball speakers are designed for use with everything from a PC to portable audio. KLH Audio Systems also has one of the largest ranges of

loudspeakers on the planet, with no less than 33 models ranging in price from £36 to £950.

Models of note include the £700 SX-9, a Cerwin-Vega challenger with a 380mm bass driver, 94dB sensitivity and 300W capability. Less earth-shaking models include the £35.99 970A two-way book shelf (left) and the £450 HT-200 six speaker home cinema package. 🕿 (01473) 833228

Another sleek minimalist offering from Myryad. 11 Y I

defective and scratched discs.

The MC100 uses 11 separately regulated power supplies, each of which is custom-designed for the job. You can sample their efficacy for £699.95. **2** (01705) 265508

JBL surround for all

Gamepath, the new UK distributors of JBL and Harman/Kardon domestic products, has a competitively priced package for budget-conscious A/V buyers. The £649.99 JBL AV Power Pack introduces JBL's first AV receiver, the JSR635, which is based on the Harman AVR10. This delivers 50W to the front speakers and 25W to each of the surrounds, and provides subwoofer and preamplifier outputs for the front channels. Dolby Pro-Logic and three-channel processing are bundled in too, and the tuner section offers 30 FM/AM presets. The speaker lineup consists of JBL TLX121 fronts, a TLX103 centre and TLX111 surrounds. 2 (01908) 317707

Petites with Gravitas

Neat Acoustics was aware that many of its customers were partnering its Petite II bookshelf speaker with a variety of subwoofers but felt that while many extended its bass admirably, none could truly improve its sound. Enter the Gravitas to rectify the matter.

The Gravitas system, which at the time of writing is expected to sell for £1,925, consists of a pair of Petite IIs, a pair of subwoofers and linking cables. Existing Petite II owners can buy the subwoofer sections separately for around £1,175.

The subwoofer enclosures act as stands for the Petite IIs and each contains two 165mm bass units. The slate base of the cabinet is spiked into the floor while the Petite II is spike coupled to the sub's top. 2 (01833) 631021

range of Q Series loudspeakers. Each uses new clear cone Uni-Q drivers, which give improved off-axis response and smoother midrange performance. The top of the range Q65 and Q75 models also feature KEF's new six by nine-inch "racetrack" drive unit and are finished in real wood veneers. They are biwirable and prices range from £199 for the Q15 to £999 for the Q75. 1 (01622) 672261

- Technics reckons its new £199.95 SLXP600 personal CD player will run for 17 hours on a set of batteries, long enough to entertain you on a round-trip flight to Washington, 🕿 (0990) 357357
- After a three-year stint, TDL has upgraded its RTL2 and RTL3 speakers. They feature improved cosmetics, including three-quarter length sculptured grilles and spiked plinths for greater stability. They also benefit from a new driver complement which is said to provide even deeper bass and cleaner treble. While performance might be improved, however, the prices haven't increased. The RTL3 is still £399.95 while the RTL2 has come down to £279.95. 🕿 (01628) 850111.

Grahams Hi-Fi has given its year-old World Wide Web site a facelift and added some new areas to entice surfers to visit. At pains to point out that "our presence on the Internet is not designed to introduce mail order business", the site now has information, magazine, installation, music, links and buying sections. www.Grahams.co.uk

Sharp has introduced the £400 MD-R1E. a 270mm width MD recorder designed to partner existing mini CD systems. It includes a sampling rate convertor for compatibility with CD, DAT and digital radio sources and a timer for unattended recording. The £800 MD-X3 midi system features a frontloading MD player, a three-disc CD changer, auto-reverse cassette, FM/AM tuner and a 50W amplifier. A 3D surround sound system using Sound Retrieval System technology claims to eliminate the stereo sweetspot. 2 (0345) 125387

Harbeth has produced its first floorstander. Developed from

.

DO WE REALLY NEED 86 QUALITY CHECKS FOR EACH AND EVERY SPEAKER?

You may have heard whispered rumours that every single one of our justly famous Danish loudspeakers has to pass 85 merciless quality checks before final assembly. Well, they're wrong. In fact, it's 86! The moment one of our newborn speakers leaves the hands of mastereven the slightest deviation from the path of musical truth doesn't go undetected. That the driver's backwardsradiated energy is really completely absorbed.

And that the speaker sounds as open, airy and natural, as transparent, precise and powerful as only a true Dynaudio could and should. If you want to experience the original Dynaudio effect (as shown by our exhausted

craftsman Hugo Nielsen, it has to survive the Skanderborg interrogation chambers. Where we discover any possible fault in cabling, driver or crossover. And after that, our victim is put to the ultimate test. Listening! Erik 'The Ear' Nielsen himself, our cold-hearted chieftester, and his no less fearsome colleages make sure that company raccoon. Knudsen, in the pic) please call us at 0 171 37 89 750 for your free personal copy of our most revealing "Book of Truth". Or visit your nearest true dealer. Even if you do not attempt to do the 1,000-wattdome-driver-test, we guarantee you an overwhelming experience, too.

Castle goes carbon

✓ What's light, stiff and moves fast? Carbon fibre cones, that's what. And woven carbon fibre cones are what you'll find in Castle's Avon loudspeaker. Not carbon fibre fragments loading some other material, but pure, unadulterated lengthy strands of the stuff identical to the material that keeps Damon Hill's bottom off the tarmac at 200mph.

The Avon is a floor-standing, reflex-loaded, two-way design intended for use in free space. Along with its carbon-coned, 6.5 inch bass unit mounted in a die-cast chassis - said to provide a fast, dynamic sound with negligible coloration - it has a 25mm, polyamide laminated, soft dome tweeter bolted into its heavy, 25mm MDF cabinet. A reflex port vents neatly at the base above the spiked floor-plinth providing a resistive element to extend and tighten the system's bass performance.

Standing 875mm tall, the Avon is bi-wirable and comes in a choice of finishes. Mahogany, cherry, walnut, black, and natural, medium and antique oak cost £699, while rosewood and yew cost £839. (01756) 795333

Avon: Castle's carbon coned cr ations

In brief

- the recently released HL-K6, the flagship HL-S8 comes in a range of real wood veneers for £1,895. The metre-tall speaker uses the same drivers as those fitted to the bookshelf HL-K6, a 200mm Radial bass/midrange driver and a 19mm anodised aluminium tweeter. Both units are fully magneticallyscreened. 2 (01444) 440955
- Mission has launched the Freeway automotive range. This starts with a £349 50W stereo amplifier and a range of in-car speakers, which kicks off with 5.25 and 6.5-inch woofers fitted with Aerogel cones. There's also a twin-driver, coupled cavity subwoofer for £199. (01480) 451777

Mana Acoustics Music With Life

We would like to thank the following:

Link House magazines/Hi-Fi News for putting on a great Ramada show. Hi-Fi Choice, Marantz, Audiolab, Cabletalk & Mordaunt-Short (especially Gary Mardell of MS for services beyond the call of duty, ie replacing drive units at a moment's notice. Sorry about that) for helping with our competition in room 1140, which has proved to be an overwhelming success. ATC for producing the amazing

100As (you were right Alan Ainsley, we | course - Damian. could not blow them up!)

- Naim Audio for the best tonearm in the world (ARO) and the NAC 52 preamp.
- Path group for the Sumiko Sho cartridge.

The following people for giving their time and effort (in no particular order):Paul Ogle, Ian Wright, Davey Cameron, Adrian Cowderoy, Tony Vassello, Paul Williams and - of

And – the biggest thank you to all the music lovers who attended the show.

Hope to see you all next year. John Watson Mana Acoustics

NAUD AUTHENTIC FIDELITY

NAIM NEVER PULL THE WOOL Over Your Ears

Naim believe that music is for playing. That's why when you're listening to the finest sounding audio equipment in the world you know it. Naim always stands out for the quality of its sound reproduction, whatever the price point, because the same engineering skills and exacting manufacturing standards always apply. Once you've auditioned them yourself we think you'll agree, for the very best hi-fi equipment there's only one name to ask for.

Choice Sessions

ZEN HITCH-HIKER JASON KENNEDY CHECKS OUT A STACK OF NEW KIT FROM AROUND THE AUDIO GLOBE

Mission 753 Freedom Updating a classic is tricky, but Mission seems to have hit the right note with revisions to the 753. £798 Black; £898 Prime Vera

The 753 put the £500-plus floorstanding speaker on the map of real-world hi-fi. Although there were plenty of floorstanders before it, and some of them caught the public's imagination (Castle *Chester*, for example), the 753, with its plethora of drive units, was the one that shaped the market. Four years on, it has achieved *Freedom* status.

Mission's revisions to the 753 have not really changed its appearance, except that there is a new light wood finish,

Fine lines: the Onix OA32 integrated.

Prima Vera, which is an alternative to Rosewood at the higher price of £898. However, there *are* changes: the one you can see is a silk-dome tweeter, the one you can't see is a change in internal proportions. What once was a box split half-and-half between bass and midrange/tweeter, has become a more complex cabinet, which devotes the greater amount of volume to the two lower bass drivers, and puts the midrange and high frequency units in their own sealed box. This should give greater bass extension and is claimed to improve the midrange.

I listened to the 753 Freedoms with the amps tested this month, and a couple of others. They worked well with all amps, but really sang with the little Pioneer Precision. In all the listening one thing became clear: these speakers like to be played loud. They'll never shout at you the way some speakers can, and they'll always remain in control of the situation.

The 753 Freedom's midrange is, if anything, a little veiled, which has a lot to do with preferred volume levels. The bass is well extended and solid, underpinning the music and giving it that sense of 'being there'.

It's too long since I heard the original 753 to say exactly what's changed, but from what I remember, the new speaker is better — and most people thought the last one was pretty good. All that remains is to see what the blind panel thinks, but if volume levels are high, I suspect the *Freedom* factor will make its mark. *Centralforce Ltd* **2** (01480) 451777 **Onix OA32** The nimble, musical OA32 will appeal to those who prefer an amp with

subtlety rather than raw power.

Onix made its mark in the '80s with a rather good, minimalist integrated amplifier called the OA21, a stylish alternative to the Naim Nait, which was devoid of such fripperies as source legends and what have you. Looking at the OA32, it would seem not a lot has changed, but it's the right way round and it tells you where each source is, so the last ten years have seen some ergonomic progress at least. This amp has a clean-looking design, with optional moving-magnet or moving-coil input boards available for a mere £20 extra.

The OA32 has a light touch and an open, airy midband that's sensitive to inflection and nuance, but it is less inclined to get with the go when it comes to the more solid stuff. It proved the most ethereal sounding of all the amps in this *Sessions*, and a couple of others to boot. Both the NAD 314 and the Audiolab 8000S sounded more confident and strong, but the Onix has a musical touch that lets you forget the equipment.

Although it does not fare well in detailed comparisons, with a sympathetic system (say one with a more vivacious source than the Marantz *CD-63mkII KI-SI* used) it could work nicely. The *OA32* has a degree of transparency and nimbleness which would suit gung-ho sources and dark-sounding speakers. That covers quite a few budget multi-bit CD players and a plethora of speakers! *Onix Electronics* **2** (01273) 517358.

The 753 has thrown off its fetters and found Freedom.

SESSIONS

Arion's Adonis is a hunky kit of parts.

Arion Adonis kit amp If you enjoyed making model aeroplanes as a kid, you'll love building your own valve amplifier especially when you hear how it sounds. \$495 in black (2645 fully built), \$549 in chrome (2699 fully built)

Valve amplifiers hail from an era when hi-fi enthusiasts were also constructors. They built their own loudspeakers, made plinths for turntables and were fully conversant with the art of amplifier design and construction. So a kit amp such as this Arion is more true to the genre than much of the expensive, snake-oilmassaged exotica that usually carries the torch for tubes.

Valve amps are relatively straightforward beasts; their only drawback to the novice is the sort of voltages they require when they're powered up. But I haven't heard of anyone getting scorched badly recently, so these muthas must be relatively safe.

There are two reasons for buying a kit amp: the obvious fiscal saving, which in this case amounts to £150; and the enjoyment and education to be derived from the process. There's even the sense of achievement to be considered on completing your amp, though if you get fed up half-way through, you can always get Arion to finish the job.

The *Adonis* is a classic push-pull pentode design in a line-integrated configuration. It would be easy for reviewers if all valve amplifiers sounded the same, but even component variations within a single type of valve amp can cause each model to have a distinctive character.

This pentode push-pull, for instance, sounds nothing like the Rogers *E20a* I tried a couple of months back. It has the same good tonal resolution and can reproduce instruments in a more lifelike fashion than average. It even has good timing, picking up on transient attack quite swiftly. However, it doesn't have quite the charm of the Rogers, and comparisons with an Audiolab 8000S did not give the sort of results I would have expected. As a tube enthusiast, I was surprised to find myself preferring the cohesion of the Audiolab 8000S — and this was with valve-friendly Audio Note speakers! The Silverado *Raider* speakers made a good job of the Arion's fine midrange, however, revelling in its timbral resolution and reproducing a great sense of image solidity.

It's a good set of parts for the mone; , with solid casework and a chrome finish. The competitive price is a result of direct sale from the manufacturer, so it's very difficult to hear before you buy. But as a first step on the ladder to tube heaven, this is as good a place to start as any. *Kronos Distribution* **2** (018687) 48632

Technics SC-CA01

A true digital amp is not the only surprise the SC-CA01 has in store for those who scoff at micro systems.

This tidy little desktop separates system is not only unusually cute, but has a technological ace up its sleevethatno-oneseems to have made any noise about. The amp in this system is a true digital amp: it amplifies in the digital domain and lets the loudspeaker carry out the final phase of digital to analogue con-

version. In other words, the speaker outputs supply an amplified digital code that describes the music in a series of very fast, synchronous snapshots. Harman Audio is working on an amplifier of this type in Denmark, and we heard and measured one of its early prototypes last year (*HFC* 149). It seems Technics, however, has gone and slipped one onto the market in a micro system!

But back to the *SC-CA01*. It comprises a single slot-entry cassette deck, RDS tuner, CD player and the aforementioned amplifier. These bits hook up with ribbon cables that congregate at the tuner, which presumably makes a bit of precious space available in the amp. There are all manner of features, including a scrolling display and buttons for source direct (not a common feature on minis and micros) and vocal presence, both of which make a distinct difference.

Turning to this system, after one of the better combinations from this month's separates, was a remarkably painless experience. The SC-CA01 has very good resolution, coherence and openness for any system at the price, let alone one with three sources on board. The speakers aren't too small (about the size of an Mordaunt-Short MS10i) and have gas-flowed reflex ports - two clues that suggest Technics knew what it was doing with this system. It provides smooth, even loud music, with none of the limitations one might expect. It didn't take too well to the Mordaunt-Short V-300s, making them sound unduly hollow, so there may be limited scope for speaker upgrades. Nonetheless, for the price and size, this is a kickin' system. Panasonic UK Ltd 🕿 (0990) 357357

Technics SC-CA01 has some serious technology hidden under its tiny hood!

Clearly better.

When one of the best loudspeaker engineering teams in the world advances its state-of-the-art technology, you'd expect the result to outperform the competition. It does.

KEF's new Q Series, with its distinctive clear cone Uni-Q $^{\otimes}$ drivers, delivers a more

precise stereo image, over a wider listening area, than any conventional loudspeaker can. This latest advance in KEF's patented technology delivers even smoother midrange response and clarity that's simply stunning. From bookshelf to 3-way floorstander, the entire range is magnetically shielded for Home Theatre use. And because aesthetics are integral to good design, the two largest models incorporate KEF's new 'racetrack' bass unit. With the performance of an 8 inch driver in

> the space of a 6 inch, it preserves the slim, elegant Q Series design.

With the new Q Series, the competition have been decisively outclassed. The difference is clear.

MODELS SHOWN ARE THE Q SERIES COMPRISING THE Q15, Q35, Q55, Q55, Q55, Q75 AND Q95C. KEF AND UNI-Q ARE REGISTERED TRADEMARKS. UNI-Q IS PROTECTED UNDER GB PATENT 2 236929. U.S. PAT. NO. 5,548,657.

SESSIONS

Mordaunt-Short VS-300 Mordaunt-Short has a big, bouncy new loudspeaker to do battle in the hotly contested budget floorstander market.

ordaunt-Short's latest budget design is a no-frills affair, built to fill a niche. That niche, it would seem, has been carved out by models such as the Gale 4, and it appears that M-S wants a piece of the action. To this end, it has produced a 78cm-high, not-too-heavyweight speaker with the basic array of constituent parts. The VS-300 is fitted with spike-sockets and supplied with spikes, which is unusual at this end of the market.

All things being equal, it appears that the smaller the speaker, the more easily it will 'disappear' behind the music. In other words, the sense of the sound source being the speaker is reduced with the size of that speaker. This is why smaller speakers generally image better: their cabinets are so insignificant that they can't generate much noise of their own.

The problem with making a large, inexpensive speaker is that it's nigh on impossible to hide the character of the box. So comparing this VS-300 with an MS10i on a pair of stands, which brings the combination up to the £200 mark, will often find in favour of the smaller box.

However, a bigger box has the twin advantages of offering greater bass extension and greater sensitivity. So, with the VS-300 you have a dynamic, if somewhat boxy, speaker that sounds relatively relaxed in the bass when compared to the tight, coherent sound of an

MS10*i*,

which projects a better image but sounds like it is trying too hard at low frequencies.

Which compromise you choose depends on taste, but I have to say the choice is less clear cut than I'd imagined, and the easy nature of the VS-300 is hard to resist. Mordaunt-Short Ltd **Q** (01705) 407722

Sharp MD-MS100 This cute little winner could be just what the MiniDisc format

needs to break into the UK market.

Minidisc is not giving up. It has made it in Japan, overtaking CD as far as uptake per year is concerned, and now it's back over here in its third or fourth generation. This time it means business.

Sharp's MD-MS100 makes a very convincing argument for the medium. It's very cute and highly featured. More importantly, it records from either analogue or digital line sources and an external microphone. The first two options use the same input, which is clever, but I've vet to see an optical lead to fit. The recording process is slightly different to tape, but ultimately quite simple. If you just want to dub from CD, the track numbers are put on automatically. You can rerecord all or part of a track and even rearrange track order. You can even record in mono to double disc-time.

You can name discs and individual tracks with a three-button procedure, and have them displayed scroll-style on the LCD. Although the writing procedure is straightforward, it's also a little slow.

The MD-MS100 has a digital volume control, which is something of a novelty for a per-

sonal stereo, and means that it offers a broader volume range. This thing will go a lot quieter than any other personal I've tried. The headphone lead is also conveniently short, being just long enough to put the box in a jacketpocket, but there's an extra section with remote control if it's too short for your needs. There are three levels of bass boost above the norm and a (thankfully defeatable) beep that ensues every time you hit a button. Sound quality is pretty good for a personal stereo. It's not quite up with the best CD players but not so far behind as it has been. With some of the early-generation discs that I tried, there was quite a variation in quality. For instance, Pearl Jam sounded a lot messier than Jamiroquai. The latter proved quite listenable through a system as well as the phones. I made a couple of recordings via the analogue line input and these also stood up well, retaining detail, timing and bandwidth commendably.

All in all, this Sharp is a lovely little thing. It has a remarkable selection of features and both looks and sounds good. While it's unlikely to set the hifi enthusiast afire, it must rate as an object of desire out in the real world. *Sharp Electronics (UK) Ltd* **2** (0161) 205 2333 Make friends and influence people with Sharp's new MD-MS100 MiniDisc recorder.

The 3D Sink comes complete with brushed facia and all important pump.

3D Seismic Sink

The latest Seismic Sink has entered the third dimension — now it pitches and yaws to give complete isolation!

The 3D Seismic Sink is the latest and most expensive in Townshend Audio's range of isolation platforms. It differs from the basic models by virtue of allowing movement in three rather than two planes, hence the '3D' bit. All the Sinks use air suspension and damped-steel casework to achieve decoupling from structure-borne resonance; in this case, filtering out energy above three Hertz. The 3D Sink has two air layers, allowing sideto-side, back-to-front and up-down energy absorption.

Features include a pump, supplied

M-S VS-300: a lot of box for the money!

Imagine an amplifier which offers the simplicity of an Integrated Amplifier and the flexibility of a separate Pre-Power Amplifier. It is the new Audiolab 8000S Stereo Amplifier.

At the turn of a switch you can use it as an Integrated Amplifier, as a Pre-Power Amplifier together with the Audiolab 8000P Stereo Power Amplifier in a bi-amplified system, as a high performance stand alone Pre-amplifier, with an external surround sound processor, or with a sub-woofer. It has remote control and outstanding sound quality. We couldn't think of anything else an Amplifier needs to do!

Ask your Audiolab dealer for a demonstration.

★ to achieve the desired pressure. A red light blinks when pressure is too high or low and the sensing device runs on a single AA battery. To alter pressure, you need to remove the brushed-alloy facia to reveal a cycle valve. I found that with heavy components, the *Sink* needed to be topped up from time to time. This 'big' *Sink* also has rather nice adjustable feet.

Using this *Sink* atop a Mana stack and under the Trichord *Genesis* elicited considerable improvements in the realms of bass extension, power, focus and coherence. I achieved pretty much the same results whatever and, for that matter, however many things were put on it. I tried both the preamp and phono stage on top of the CD player to good effect, and both Rega and Primare CD players produced cleaner and more powerful music in its company.

The 3D Sink is an expensive platform, but in the context of a decent system, it's great value. I'd like one, but I think I'll wait for the two-Sink rack that Max T has in the pipeline! *Townshend Audio* **2** (0181) 979 2155

Pioneer A-300R Precision Pioneer has used British expertise to customise a £200 amplifier and turn it into a giant slayer par excellence.

£400

This amplifier is the result of a very unusual collaboration between audio giant Pioneer and electronics designer Tom Evans. Tom's name has cropped up more than a couple of times in this journal as he has been involved with some of the most innovative products and tweaks that we've seen (see *Ear Waxings*, p.21, for the full story). This time Tom has managed to get into the product before it reaches the market by persuading Pioneer to let him design some tweaks for the modest £200 A-300R.

Although the A-300R has a remote control (for volume only), it is an extremely minimalist amp that caters for turntables and five other sources. However, it weighs next to nothing and wouldn't normally attract much attention. Tom, however, thought otherwise and devised a package of modifications for Pioneer UK to retro-fit.

The result is startling performance, way beyond that expected of a sub- $\pounds 500$ amplifier, and a bit of a shock for all of the integrated amps we had on hand for comparison. In nearly all respects it outshone the lot, and in one respect — three dimensionality — it swept the board. It produced a fullsize, speaker-independent image that conjured up instruments and voices in

the room. It took the music out of the speakers like a valve amp, but underpinned like a decent tranny. Dynamics, timing, timbre and tone were reproduced with extraordinary ease, and we were left struggling to find its peer. I doubt that any other amp could do this at the same price.

With the A-300R Precision Pioneer has an amp worthy of the mantle left by the A-400. If you want to hear real stereo this is the place to start. Pioneer High-Fidelity (UK) 🕿 (01753) 789789

Silverado Raider Bigh-end aspirant Silverado has a new compact monitor for those seeking a taste of the high life, without the cost!

Silverado is a little company with big ambitions. It's energetic proprietor, Mickey Thien, wants to compete with the high-end giants like Wilson Audio, and built the big

Silverado speaker (tested in *HFC* 155) to do battle with that company's *WATT* design.

The Raider is a scaled-down version to suit the British pocket, but still incorporates many of the cabinetsolidifying techniques devised for its marbled sibling. The Raider is an infinite baffle design with a pair of solid but straightforward drive units, and bi-wire connections. It needs the best 24-inch stand you can put under it and prefers the cable that Mickey makes for it.

Although the *Raider* is designed for quite serious amplification, I stuck to the likes of the Arion and Pioneer from this month as well as the steadfast Audiolab 8000S. I've no doubt the *Raiders* would respond to more exotic fare.

After the 753 Freedoms, the Raiders sounded attractively lucid and clean through the midband. For this reason they worked very well with the Pioneer Precision, whose nimbleness and imaging qualities were put to good effect — not to mention the dynamics and focus that the pairing extracted from the data streaming out of the Marantz CD-63mkII KI Sig.

The Silverados were a good match with the Arion as well, equalling the valve amp's capabilities in timbral accuracy and presence. It would seem that the *Raider* is a willing and capable slave to whatever drives it. It has a fine midrange and plenty of grunt when that is called for. This is the sort of speaker you wouldn't have to upgrade for a long, long time. *Silverado* 2 (0181) 567 0260 Precision's the name, three-D stereo's the game.

Shiny, shiny. Shiny speakers of lacquer... Silverado Raider.

Are you an INDIVIDUAL?

Yes, it's finally happened. Pioneer have lived up to their name yet again by introducing the very first consumer **CD Recorder**. The PDR-05 employs our acclaimed 'CD turntable' transport mechanism and advanced digital filter technology. Thanks to the 1-bit A-to-D Convertor and built-in sampling rate convertor

and anks HI-FI AWARDS 1996 PRODUCT OF THE YEAR

you can make the finest pure audio CD recordings from any analogue or digital music source.

For further information and details of your nearest stockist please call our HOTLINE on 0800 480480 any time. Pioneer have developed the very first consumer CD Recorder. It allows you to record onto CDs to create your own, individual CD compilations.

Ear Waxings

Jason Kennedy waxes lyrical about the bargain audiophile amp of the year - and yes, it has remote control...

n Sessions this month (p.14) I'm reviewing a rather unusual new amplifier from Pioneer. The A-300R Precision represents a collaboration between the Japanese audio-electronics giant and British chipmeister Tom Evans.

The project was instigated by former *Choice* Editor John Bamford (now Product Information Manager at Pioneer) who spent at least a year going through the traditional political shenanigans required to allow such a radical product to come about. From there, Tom and John went through the amplifier range to find a suitable candidate for what was originally called the *Omega* project; the name changed to *Precision* for the launch.

They picked the *A*-300*R*, a £200 budget audiophile offering, because of its fundamental purism. It's a single-PCB design, with a separate power supply for the allimportant motorised volume pot, and no tone controls. Unlike its spiritual predecessor the *A*-400, it does have a preamplifier section. But the ultimate decision-maker was the world's most basic remote control (hence the R in *A*-300*R*) catering solely for volume.

Tom Evans, who recently parted company with Trichord and formed Acoustic Precision with Paddy Hanscombe (Electrofluidics), had been looking at making the A-300R into a Genesis amp to go with

the Trichord Genesis CD player (based on the Pioneer PD-S504), but by colluding with Pioneer directly the amp has ended up being about £150 cheaper. The £200 that the Precision costs over the base model has been spent on customised chip sets and highspec components (existing A-300R owners can have their amps Precisioned for the same price). What differentiates the Precision from the Genesis it might have been, is that Pioneer retrospectively installs the components in its Yorkshire factory. Tom is presently working on a Genesis CD player which is planned to be out around Christmas time, and which will hopefully retail for the same price as the amp.

Tom has been designing well-regarded

products for some time now. The first one to make it big was EC Audio's *Finestra* preamp. This was followed by the Michell *Iso* phono stage and subsequently the *Argo* and *Alecto* pre and power amps (watch out for a new version of the latter Michell). More recently Tom has spearheaded the Trichord *Clock* crusade, providing turbocharged, Pioneer-based CD transports that have an embarrassing tendency to trash any competition you care to pit against them.

His association with Pioneer really started with the A-400 amp back in the late '80s. For our newer readers, the A-400 was the product that defined the term 'budget high-end' by fitting in very nicely with considerably dearer

something of an audiophile bar-

gain. I know of at least one guy who bi-amped his six-grand system with a pair of them. But Tom realised that for a modest investment the A-400 could be improved. His GTE modification cost in the region of £100 and proved remarkably successful in cleaning up the A-400's treble. Since the A-400 days, Tom has refined his audio goal to the

pursuit of phase linearity, a state of affairs engendered in no small part by Tom's familiarity with the work of speaker designer T e d J o r d a n. T e d's w o r k with aluminium drivers, which started in the '50s, has resulted in speaker designs with far greater phase linearity than usual. Since Tom started using the Jordan-coned Electrofluidics Sonolith speakers, he has become

A-300R's an audiophile bargain – and this is its handset!

obsessive about stereo — in its true, three-D, sonographic form. And as I found out when he visited recently, his tolerance for speakers that are less capable in this respect is about zero. In his opinion this involves any speaker with a dome tweeter, so perhaps now you can see why Tom does his best to avoid anything that's non-Jordan.

Yet the A300R Precision works spectacularly well with the more common or garden variety of loudspeaker, reproducing much of the stereo image found with the Sonoliths, albeit with less focus and a considerably smaller sweet-spot. It had no trouble vanquishing the opposition in our listening room. Its fine resolution of dynamics, timbre and spatial information provided an altogether m o r e coherent and effortless musical picture than one has any right to expect at £400. Its 35W or so had a little difficulty with

the less-than-friendly load presented by the Wilson-Benesch speakers that arrived recently, but with everything from *MS10is* to Audio Note *AN-Es*, the sound was closer to that of an amp costing twice the price.

Tom, John and Pioneer Electronics Technology UK deserve a hearty round of applause for bringing this level of fidelity to the market at such a low price. All I have left to utter is a confident prediction that the *A-300R Precision* will be the audiophile bargain of the year. ▲

*Subject to Status. Ask for written details. E&OE. Offer not valid with any other promotions or offers. e-mail: sales @ musical images.co.uk **Paul Messenger** reckons that bookshelf speakers have still got lots going for them. Size isn't everything...

ell, I finally drew the short straw and got to spend some quality time with a load of speaker stands (p.58). The prospect wasn't pleasant: all that metalwork to trip over, all those spikes to dodge, all that Blu-tack to tread into the carpet, all that sand to spread over the kitchen... However it did start me seriously thinking about the role of speaker stands, and the problems of assessing them.

Speaker stands are not among hi-fi's bestloved components. Dealers will never make a fortune out of them, and few customers would say that they enhance the loungescape. A discrete design is all, assuming that it can't be made to disappear altogether.

So why don't we simply put our bookshelf speakers on bookshelves like the hoi polloi out there in Minisystemland? The answer is simple: because stands work. Without stands, miniature and bookshelf-size speakers will never achieve their full potential, and the system as a whole will underperform.

The current trend seems to be towards ditching the bookshelf speaker/stand combo and spending the combined cash on a budget floorstanding speaker instead. It sounds tempting enough: a bigger, prettier box for the same money — that must be a better deal. Well sure, if you buy with your eyes rather than your ears. But our last group test of budget speakers (HFC 156) sent out some pretty strong warning signals. The small stand-mounted bookshelf speakers sounded unequivocally better than the larger budget floorstanders: cleaner, tighter, and for the most part, more coherent.

The reasons are quite simple. A bookshelf-size speaker consists of drive units (usually two) that create the sound, plus an enclosure to hold them together and absorb/ redirect the sound which comes from the back of the main cone. The stand's prime tasks are to lift the main driver clear of the floor and hold the speaker in place.

Budget floorstanding speakers use similar drivers to bookshelf models and tend to have a similar internal acoustic volume too, because the enclosure is usually partly blocked off. Extending the box down to the floor might avoid the need for separate stands but is unlikely to offer any acoustic benefit. More likely the reverse is true, due to a more columnular shape. Typically, the floorstander will also have something like four times the box surface area to vibrate, generating cabinet coloration in the process, although this can sometimes be mitigated by adding mass damping to the bottom section.

The bottom of the floorstander will have threaded inserts so that spikes can be fitted, but the inserts can tear out of the wood-chip only too easily. And in most cases the foreand-aft stability footprint is meagre; proper plinths and more serious enclosure engi-

Nobody understands me...

neering can undoubtedly improve matters for the floorstander, but obviously at a cost.

The separate stand can be endowed with a big enough base to ensure good stability, and spikes fix much more securely metal-tometal. Spikes (or *Blu-tack*) decouple the stand from enclosure vibration, while the main driver is also likely to perform better acoustically with unobstructed space underneath.

Even this brief analysis shows the advantages offered by a separate stand, but its subtleties and interactions are still poorly understood and there's little industry consensus.

When stands first appeared in the early '70s (as options with classic speakers such as the Spendor *BC1* and Gale 401), their main purpose was to get the main drive-units away from the floor and walls to reduce the contribution of reflections. It wasn't until ten years later that the spike reared its sharp little head and introduced a mechanical dimension. Big spikes pierced carpets and locked to the floor while smaller upward ones stopped speakers from rocking — though some people prefer the more glossy interface of a flattened *Blu-tack* bead.

The sound quality improvements were so dramatic that speaker companies and stand specialists soon started to explore various options. Influential early examples included lightweight open-frame stands (such as the Heybrook *HBS1* and Linn *Kan*) and filled-pillar types which were usually rather heavier (from Foundation and others).

The most creative period was probably during the mid-'80s. Integral speaker/stand combos appeared, such as the endoskeletal Mordaunt-Short 442, the exoskeletal Roksan *Darius* and the bit-of-both Naim *SBL*, arguably the most successful loudspeaker of the past decade. New ideas in stands included the ultra-lightweight RATA *Torlyte* and the ultra-heavy Slate Audio, both of which remain entirely viable today.

Floorstanders may have been attracting the bulk of attention over the last few years, but things have been happening to strengthen the case for the compact loudspeaker. The excellent but tiny £995 Totem Model One that I used (alongside B&W's £200 DM601) for the stand tests, sounded absolutely superb with the new and more upmarket 'tensiontuned' stands. Within an admittedly limited loudness capability, I reckon that besides looking much neater, it would beat most sub-£1500 floorstanders handsomely.

The most important development in sound reproduction for years.

And the box it comes in.

The Faraday ring may look insignificant. But it's this tiny component that gives the A Series its huge dynamic range. By counteracting rising impedance in the voice coil, it allows more power into the tweeter. And with

more power going in, you get more power out.

Even the highest frequencies sing out loud and clear, making the A Series the ideal speakers for the faithful reproduction of today's digital music and film recordings.

The Faraday ring is just one of many small, but vitally important components that make the new A Series so special. And there's only one place good enough for it. The beautiful box we put it in.

The Jimmy Hughes **Experience**

Musical Fidelity's Missing Link meets hi-fi's time-lord **Jimmy Hughes** and his brace of CD transformers.

ow what was I saying a few months back? Oh yes: the difficulty of improving an expensive system without a big outlay. Well, here's a product that proves the exception to the rule.

If we carried out a straw poll among readers, I bet many would cite CD harshness as their biggest problem. Compared to analogue LP, CD and digital recordings can suffer from a tendency to sound bright and harsh with a lack of sweetness and warmth.

It isn't just that the treble can be a touch fierce and edgy. At worst, CD can sound coarse and over-forceful, with a crude blatancy that lacks any delicacy or subtlety. Allied to this is a lack of depth and spaciousness which makes the music sound 'flat' dynamically, and lacking in dimension.

Since the UK launch of CD in 1983, we've seen many attempts to humanise the sound of CD and digital recordings, some more successful than others. Yet despite improvements in CD players and recording techniques, still there is often a certain ease and sweetness missing.

If all this strikes a chord, you'll be interested in Musical Fidelity's X10-D, which aims to reduce digital harshness without loss of detail, impact or focus. It's a valve lineoutput stage, using two ECC-88s, that fits between the analogue output of your CD player and the amplifier.

Please don't see 'valves' and assume the X10-D works by adding lots of nice secondharmonic distortion while rounding off sharp leading edges. It isn't so. Musical Fidelity claims the specification of the X10-D is high: ultra-low distortion, wide bandwidth and stereo separation, low noise, and that it's not a filter — although Paul Miller's findings from last month's Oasis Of Sanity suggest a slightly different interpretation.

The X10-D doesn't seem to colour the sound, nor does it reduce transient attack, dynamics or speed. True, the tonal balance is a bit richer, but this is partly because everything is much cleaner and less grainy. The music gains weight and tonal body, sounding much fuller and sweeter.

Play a bright recording and it still sounds bright, yet the treble seems smoother and richer with more depth. Instruments and voices separate out better. Rather than tending to crowd up, each part retains more of its individual timbre. Overall the music sounds cleaner and better-sorted, as though unwanted contamination has been reduced.

Some readers may know that I use special line-matching transformers between my CD player and amp. I don't mention this often because the transformers I use (made by Marantz and Luxman) are no longer available and it seems pointless to endorse something that's not in the shops. Nevertheless, these transformers play a big part in shaping the sound I get at home, and I wouldn't want to be without them.

I mention this because, sonically, the X10-D produces a similar effect to my transformers (albeit at a much lower cost), helping to reveal hidden space and depth in recordings that would otherwise sound thin and flat. It also civilises the sound, making the music more coherent and listenable.

Although sold as a CD upgrade, the X10-D has a wide range of uses. For example, you could put it between a preamp and power amp and enjoy the same kind of improvement you hear with it between the preamp and CD. In such cases it should be possible to use two X10-Ds with even better results.

It's also possible to use the X10-D with vinyl if you've got an outboard phono stage. I tried mine with the Audiolab 8000PPA and got excellent results. This particular phono stage offers superb CD-like clarity and openness, but can be rather revealing of faults. The X10-D manages to maintain the PPA's speed and articulation, but enhances warmth and spatial depth.

Another use would be with a cassette deck to give recordings a greater richness and depth. The X10-D could also be used to replay tapes. The same goes for your other sources, like an FM tuner.

Musical Fidelity rightly claims that many cheap CD players have poor line-output stages that fail to drive the low-impedance passive inputs of many amplifiers adequately. There's definitely merit in this argument, but it doesn't explain why the X10-D works its magic with my transformer-coupled equipment, for which the problem should have been eliminated.

Incidentally, the X10-D gives a small increase in gain of about one dB, so it sounds fractionally louder on an A/B comparison. This partly explains the slightly more powerful presentation and why the music has more presence and impact along with the improvements in smoothness and clarity.

Having no power on/off switch, the X10-D is clearly intended to be left switched on all the time. As it uses tubes, which have a finite lifespan, I wondered about this. But Antony Michaelson of MF said the valves are not pushed hard and should last for about ten to 15 years. During use the case of the X10-D gets mildly warm.

The X10-D is a lovely product that combines superb build and performance with exceptional value for money. It looks vastly more expensive than its relatively modest price tag would indicate. I was both surprised and pleased when I realised it sold for £100.

It isn't a panacea and won't suddenly make an awful system sound great. But it will prove beneficial in the great majority of situations, delivering the sort of improvement many modern systems are crying out for.

In short, the Musical Fidelity X10-D is a great little product! ▲ ☎ 0181-900 2866

MUSICAL FIDELITY

One affair worth having...

LIFE AND YOUR ABILITY TO CRAFT IT, will have rewarded you with a status that creates an intoxicating cocktail of pleasures. In your dreams and reflections of life's experiences, there remains but one pure affair, an affair of the heart, the mind and the soul, an ultimate passion that surpasses all others...

THE PURITY OF SOUND generated by AE Reference Series loudspeakers seduced the audio industry and hi-fi press into rapturous *worldwide* acclaim, awards and accolades. Conceived in the late 80's, the range was soon heralded as the industry benchmark.

IN THE RELENTLESS PURSUIT OF EXCELLENCE, Acoustic Energy has once again raised the threshold. The new AE1 and AE2 Series II have been acoustically re-engineered with *'no compromise'* design objectives and the latest technological advances. Completing the range, the new flagship AE5 is a floor-standing, multiple drive unit design; proven technology of the Reference Series, coupled with significant new developments, creates a sophisticated full-range loudspeaker of breathtaking sonic ability.

THESE NEW LEVELS OF PERFORMANCE, dynamic range and clarity will be a revelation. Whatever your aspirations, pursue your ultimate passion, contact us direct or through one of our carefully selected exclusive dealers, for an *uncoloured* audition.

Paul Miller's Oasis of Sanity

Paul Miller reckons that a CD player's ultrasonic noise output may lead to conflicting reviews....

n last month's *Personal Messages* column, our Consultant Editor, Paul Messenger, raised the thorny issue of system matching — arguably one of the greatest imponderables of hi-fi. As Paul rightly pointed out, some speakers seem better suited to the 'sound' of an analogue turntable, while others have a greater empathy with digital sources. Quite why this should be the case, however, isn't always obvious.

System matching has a lot to answer for. It's probably the principal reason behind conflicting reviews of the same product in different hi-fi magazines, a topic that continues to exercise the imagination of many readers if the *Choice* postbag is any guide. Mostly these variations in performance are quite subtle, and yet we occasionally stumble across a product whose sound quality can vary hugely from system to system.

I was reminded of this recently when auditioning Arcam's new *Alpha 7* CD player against several very smooth and gracioussounding PWM bitstream players from JVC and Sony. The *Alpha 7* is based on Arcam's older *Alpha One*, but has the capacity to sound significantly more dynamic, open and musically revealing. And yet, by replacing my usual *DPA100S* amplifier with an alternative model, this same CD player returned a more aggressive, brighter and generally disagreeable sound. By contrast, the Sony and JVC players both retained their respective aural characters regardless of my choice of amplifier.

You can begin to see the dilemma. If the *Alpha* 7 was auditioned with the 'wrong' amplifier, it would have received a bad review. Similarly, if the amplifier was reviewed with the *Alpha* 7 as a source, then this also would have prompted a page of derisive copy. The answer, it seems, lies in the ostensibly inaudible output of the CD player — the ultrasonic region beyond the 20kHz limit of our hearing.

Ve bounded this ultrasonic region (1) with two red lines on the three-D plot, encompassing a span from about 22kHz to 100kHz. This is fairly typical of a good PWM-style bitstream CD player handling a full sweep from 0Hz - 22kHz (2) at the musically-important level of -30dB. The bulk of the audio band is represented by the plateau area (3) which, in this case, is free of obvious distortions.

This generalised example shows that any ultrasonic output (1) is typically 120dB below the level of the -30dB sweep (-150dB below the player's peak output), so it poses no threat to other components further down the system's chain. Arcam's *Alpha* 7, however, is unusual in using one of Burr-Brown's *PCM1710* convertors. Burr-Brown describes this as a 'multi-bit, fourth-order, Delta Sigma' DAC with onboard eight-times oversampling. Like all Delta Sigma or PWM bitstream convertors, the *1710* reduces the size of the 16-bit digital code while speeding up the rate at which the code is processed.

In this instance, the *PCM1710* truncates incoming data from 16 bits to around two point three bits, handled by a five-level PWM output DAC. However, the reduction creates a huge error in the form of noise, distributed across the eight-times-oversampled bandwidth of the chip. Hence the on-board fourth-order noise-shaper, which redistributes this noise away from the audio range and accumulates it at higher, inaudible frequencies.

n this respect, Burr-Brown's *PCM1710* DAC bears comparison with other bitstream-style converters used by Sony, JVC and Technics, for example. However, because the *1710* uses less oversampling, its unwanted noise must be redistributed over a narrower ultrasonic bandwidth. In other words, a pile of unwanted digital garbage (4) ends up just outside the audio band (3).

The difference in level of ultrasonic output between the 'generic bitstream' player and the Arcam is obvious. Teamed up with any competently-designed amplifier this should not be an issue, but many manufacturers design their amps with plenty of compensation within the audio band to achieve low distortion figures, but give little thought to linearity at progressively higher frequencies.

In such cases, the huge welter of ultrasonic noise emerging from Arcam's *Alpha 7* could cause intermodulation (IM) distortion to occur within the amplifier at these inaudible frequencies. The products of IM distortion, however, fold directly back into the audio range (3) where they will cause the sound to become harsh and generally unforgiving. Which is precisely what we heard when changing from one amplifier to another.

By the same token, CD players with a far lower output of ultrasonic noise (as in our first graph) will tend to sound very much more consistent from one amplifier to the next. The moral of this technical tale is twofold. First, if different magazines publish contradictory reviews, then just as if you happen to disagree with your mates, dig deep enough and you'll unearth a valid reason for the dispute. Second, if you audition Arcam's fabulous little *Alpha 7*, make sure that you take along your own amplifier! *Do you have a subject for the Oasis? LETTER OF THE MONTH

Headphones say no to dogs

As a long-standing reader of your magazine, I wish to thank whoever was responsible for the latest revision of your directory pages at the back of the October issue of the magazine. I found it particularly difficult to track down products I was interested in, using the previous incarnation of this guide.

The new version is a true return to form, as it allows me to look up your own opinions, while quickly checking out similarlypriced alternatives. I recently had to buy a new pair of headphones, after the headband was accidentally chewed to pieces by my year-old dog, Bastard (he used to be called Gromit, after the character in *The Wrong Trousers*, but currently I feel that Bastard is more appropriate). Armed with your directory, I quickly picked out a pair of Beyerdynamic *DT331* headphones — and they're a perfect replacement.

E Lee

Guildford, Surrey

Grr-r-r-raphics

I find the continued existence of the domestic graphic equaliser strange. Don't people realise that the sound obtained in the final mix-down, by the mastering labs, is the best and cleanest sound possible? The likely fact is that, most of your readers, myself included, have been through the equaliser stage and are now enlightened. We know what damage they can do to the sound, sometimes distorting instruments beyond recognition. If the graphicequaliser buyer wants a box with plenty of knobs to play with, not to mention pretty lights, then by all means he/she should buy one for effect. But take the good advice and leave it out of the hi-fi system – unless the system is so poor that it might actually make some improvement.

I would like to take this opportunity to say how much I enjoyed reading my first copy of *Hi-Fi Choice*. I used to swear by another publication, but it pales into insignificance by comparison. I have even taken out a subscription, and look forward to many more interesting issues.

Ray Fowler Nottingham

Headphones say no to noise

I want to suggest that you do a review of expensive headphones. Under the new noise laws, people are not allowed to play their hi-fi very loud at all between the hours of 11pm and 7am, and I believe there are rules for day-time noise levels as well. If people flaunt these, they can be fined, or have their equipment (and music) confiscated. As these new laws filter through to the hi-fi community, it must be likely that more and more people will turn to headphones for their reference listening system. (That's what I am about to do, anyway.) I don't think that a group review of connoisseur cans has been done by any magazine for ages, and since you are the probably the most serious magazine on the market, I thought I would suggest this to you.

Also I have a query regarding mains filters. We suffer bad mains noise in our area, and I wondered what products could help. Trichord used to do a plug-in device, but has stopped making it.

Justin Marston, via the Internet

The Trichord Black Box is now being produced by Acoustic Precision, **2** (01443) 816856).

The Record Collection

I think it was about five years ago when you produced that first mouth-watering special issue called 'The Collection'. Apart from reviewing a few audiophile's dreams, you published a list of your reviewers' favourite recordings for assessing hi-fi systems, indicating which characteristics were more outstanding in each of them: imaging, speed, detail, and so forth.

I found that list very useful for what it was intended, but also, and more importantly, it led me to discover new artists and types of music that have broadened my musical tastes and, ultimately, increased the enjoyment I get in return for investing in hi-fi equipment.

I am sure that in the last five years, new and wonderful recordings have been produced and used in your reviews, so

Monster!

The Thorens Trail

So you want to buy the Thorens TCD2000 CD Player? Day 1: My first try ...

Me: "Hello. Is that store A in Swindon? I'd like to hear a demo of the TCD2000. If it sounds as good as they say it does, then I'll buy it - it costs £900, doesn't it?"

Shop: "Well we don't stock it, sir, but we might be able to get one... give me your number and we'll call you back." Day 6: No calls yet, so ...

Me: "Hello. Is that store B in Oxford? Blah blah blah -TCD2000 — blah blah blah."

Shop: "Well, sir, we do stock the TCD2000, but our only unit is out on loan. We will get a new delivery today... give me your number and we'll call you back."

Day 14: Still no calls, so ...

Me: "Hello. Is that store C in Bath? The UK distributors for Thorens suggested I call you about getting a demo of the TCD2000. Blah blah blahdeyblah and more blah."

Shop: "Oh yes, sir; we did have a TCD2000, but it is now in our Exeter store - give me your number and we'll call you back."

Day 20: Please. Will someone call me back? I really do have £900 cash to spend on a CD player - what is wrong with hi-fi retailers? Kevin Mannion

via the Internet

IPL get it sorted

Following publication of my letter concerning IPL speakers (Help! September '96), I received a call from IPL Acoustics, expressing disbelief at my comments.

After a simple modification to the crossover and a change of interconnect, the sound of my system has improved dramatically. It's proof that there are still companies in existence who are genuinely interested in customer satisfaction. Steve Lester, Yoxall

Off his trolley

As an avid follower of your organ, I have always looked to your 'sound' advice when buying hardware. Everything I own was checked out against the suggestions in Choice. And it all sounds pretty good to me.

However, I am stuck on the choice of an equipment rack which really performs and appeals to my eye. At present my amp is mounted on a twoinch stone slab. I came upon an ad for a wooden chef's trolley (below) which got me thinking. It's not Shun Mook obviously, but the three-inch-deep top and three-inch-square legs (all in solid timber) looked pretty good. There's even a handy drawer for odds and ends like cleaning gear. Change the castors for spikes and Bob's your uncle. And if your latest upgrade doesn't come up to scratch, one swipe of your butcher's cleaver will see its vital bits fly off!

Harvey Watkins, Worcester Park, Surrey

This might turn out to be a tweak too far! - SV

Weighing everything up

With regard to your review of the Lyra Lydian in the October issue, I used to own one myself, and found that the sound-quality improvement on removing the cover was as much to do with moving the counterweight closer to the pivot point. I discovered this when I purchased the heavier counterweight which Naim offers, only to find that the same improvements were present when the counterweight went on and the body was replaced. I couldn't use the heavier counterweight with the body off. I have also upgraded to the Clavis DC and agree wholeheartedly with your views on improvements over the very fine Lydian. Paul Ricketts, Swindon

an end grain blocked work surface measuring 25.5" x 19" and 3" deep. It includes racks for glasses, wine bottles and knives, a sliding drawer, removable side shelf and towel rail handle. There are castors on all legs, two are lockable.

Alan Sircom traces the history of a classic floorstander: the SD Acoustics SD1. In its latest piano black finish it looks a far sturdier beast than before, but how does it perform?

ack when jobs in the city were still cool and house prices doubled every six days, SD Acoustics was an important part of the British hi-fi underground. The company produced a range of speakers from conventional mid-priced box speakers up to skyscraper high-end aspirants with ribbon tweeters and price tags to match.

One of the most popular SD models of the time was the up-market floorstanding SD1. This 1.5m-tall, coffin-like blend of wood and cloth was good in its day but would have difficulty keeping up with the audio Jones's of today. Some of the more wacky SD designs are gone now, but the SD1 remains to this day. In its current £2,995 SD1E guise, however, the speaker bears almost no resemblance to its predecessor. Place them side-by-side and only the badge indicates the lineage.

The SD1E is a tall, slender affair and is divided into two discrete cabinets in the manner of the Wilson WATT/Puppy. The cabinets themselves are made from a new low-Q, polyester-based material called Polybimen. The top cabinet contains the two midrange cones, the planar ribbon tweeter and rear-firing supertweeter. This sits on a heavyweight ported bass unit that has four rear-firing 152mm bass drivers. The speakers can be used single wired with the cable connected to the base of the bass bin, but you will need a speaker cable between this and the mid/treble cabinet. Fortunately, it is also possible to bi-wire the speaker, and the *SD1E* sounds considerably more agile if you do this. With a claimed nominal impedance of six Ohms, suggested sensitivity of 90dB and quoted power handling of 300W, it is easy to drive but needs a beefy amp.

Serious set-up

Before you play the *SD1E* with any seriousness, the interfaces between the two speaker boxes and between the bass bin and the floor need to be thoroughly sorted. SD Acoustics supplies a set of cones for placing between mid/treble box and bass bin, but be prepared to experiment with Blu-Tack in exceptional circumstances. The *SD1E* is supplied with M8 spikes, and it is vital that you get the bass bin absolutely level and stable lest the bass sound loose, and lacking in definition.

Given these caveats, the SD1E has a lot to offer. Separating those bass and mid/treble frequencies certainly helps to keep each controlled and unsullied by the other. In particular, the bass is cavernous and dynamic and perfect for anything on the Ninja Tunes label, yet it doesn't mess up the strangeness of any of those trip-hop cuts in the middle and upper registers. As this music has been heavily visited by the DJ, any loudspeaker blurring quickly turns a mix into a mess.

Likewise, the mid/treble cab is as clean as a whistle, regardless of what is going on down below. Open mid and top frequencies were always a hallmark of the old SD1 and, if anything, the SD1E improves on these strengths. The new SD1E is more than transparent enough to put a smile on the face of even the most stoic Mahlerian, as it makes space for both orchestra and choir for the opening of Mahler's Eighth Symphony. The addition of the super-tweeter offers no quarter to bright-sounding electronics, but the clever use of a planar (rather than domed) tweeter and super-tweeter makes this design admirably free of spitch and grain, even with digital classical recordings or the handful of hideous remastering disasters I have in my collection.

It's not all perfect, however. The bass bin can be a mite overpowering in smaller rooms; the sheer extension and loading of the bass cabinet will make it less popular with the valves-'n'-vinyl brigade. There is a very slight lack of integration between treble and bass which is most noticeable on good recordings of simple music ('twas ever thus), and the overall sound is more cerebral and mannered than an outright headbanger would want. But such criticisms are minor, and I found myself missing the resolutely uncoloured performance of the SD1Es after they were gone.

Missing you

A little while has now passed since I last played any music through the SD1E and – for the most part – I still miss them. Although the piano-black chamfered monoliths did not match my listening room, and the sound was a little too shiny and hi-fi for my tastes, I was strongly swayed by the SD1E's vibrancy, transparency and raunchy bass depth. If you want an analogy with cars, the SD1E is the loudspeaker equivalent of a Caterham Seven: distinctive, powerful and full of accuracy and energy. Neither machine will ever have mass-market appeal, each reveling in its idiosyncrasies far too much for that. But long may such designs live, both in cars and in loudspeakers.

🕿 SD Acoustics (0181) 399 6308

Past Masters

The last time we investigated a SD Acoustics *SD1* loudspeaker was back in June 1991 (issue 95). Over five years ago, it was a very different beast, in every sense. The separated mid-treble cabinet, the four-driver bass enclosure and the chamfered piano-gloss finish were not even a glint in the eye of designer Steen Doessing of SD Acoustics.

There are some similarities, however. Both speakers are designed to be used in free-space, both are intent upon low levels of coloration and both are tall, imposing floorstanding designs that could never be used by a closet audiophile who wants to keep their passion under wraps. Shrinking hi-fi violets and hang-on-the-wallflowers need not apply.

The original *SD1* was a design full of paradoxes, yet retained a certain charm at the same time. The slim shape, stepped profile and veneered plinth and top plate made it relatively attractive by monolith standards of the time. The price, too, was an attractive factor; costing a little less than Meridian's flagship CD player of the day, the *SD1* undercut many of the top-flight loudspeakers at the time, in some cases by thousands of pounds.

It used a ribbon tweeter, allied to a plastic cone midrange unit and a pair of 150mm bass drivers. The treble and midrange speakers were set in an open back baffle. This effectively created a dipole arrangement, eliminating standing waves, changes in pressure and other such nasties that lurk within a conventional cabinet. Unfortunately, this open arrangement also left a number of unsightly exposed cables at the rear of the speaker. By contrast, the bass cabinet was a conventionally ported affair in a bluff rectangular box with a volume of about 40 litres.

Paul Messenger tested the speakers back in the Statements feature of issue 95. Although it lacked bass extension, he enjoyed the laid back perspective and precise, impressive soundstaging. However, he also felt that the *SD1* suffered in comparison to the cheaper *OBS* speaker from the same stable.

He also felt that the *SD1*'s ribbon tweeter rather accented the surface noise of a turntable. By contrast, such a frequency tilt would benefit the performance of a decent CD player. In today's CD-friendly climate, this would make for a popular design, but back in 1991, the high-end community was far more vinyl oriented than it is today. Perhaps the new *SD1E* will be better received for this reason.

Years later, however, there is still a tidy trade in second hand *SD1* loudspeakers. Paradoxically, although they were comparatively rare and need vast amounts of free-space around them, they still command a superb resale value.

If we go back still further to issue 60 (July 1988), the SD1 was a slightly different beast once more. A three-way open design with a ribbon tweeter, it's easy to follow the development from '88 to '91 — the same cannot be said of the latest version.

There are strong similarities between the *SD1*s though. Even the sound is broadly similar, with clear sounding vocals a strong-point with both models. But today's *SD1E* is every bit as likely to create as much of a reputation for itself as its predecessors patently did.

Left, the two box SD1E. Right its predecessor the SD1.

Help!

ALVIN GOLD DONS THE GURU'S HAT AND DISPENSES WISDOM TO TROUBLED DEVOTEES OF SOUND QUALITY

Query of the month

Is there a cure for a vinyl junkie?

Someone once said: "Turntables and loudspeakers are art; amplifiers and CD players are technology." In my opinion, the Linn LP12 exudes charm and an effortless ease, unparalleled by other ancillaries. Indeed, it has more charm in its little stylus than most CD players have in their entire circuitry. My dilemma is to find a CD player that sounds charming, integrated and, above all, musical!

My system includes: Naim NAC72, NAP140, NAC A5 cable; Quad ESL63s; Linn LP12, K9 and Ittok LVIII arm. I have tried the Naim CD3, Micromega Stage 1, 2 and 3. I have also tried digital-to-analogue convertors such as the Arcam Black Box 50 and Audio Alchemy DAC-In-The-Box. Although these made CD players more bearable, they still failed to satisfy. Is there an answer, or am I just a hopeless vinyl junkie? Nick Brocklehurst, Christchurch, Dorset

A discontinued Ittok arm suggests that your Linn LP12 is getting on a bit, but please remember that your deck was at the pinnacle of source components in its day. To get a sound that is on a par with your turntable you need a suitably top-flight CD source, one that will blend into your existing Linn/Naim/Quad system. Such CD front ends cost large amounts of cash, at least as much as you would have to spend to get a new LP12 of similar quality today.

Try having a listen to CD players costing about £800-£1,000 more than those you are considering at the moment; in particular the Meridian 508.20, the Naim CD2 and the Linn Karik III all blend smoothly into the Naim electronics sound. None of these players attempts to make analogue-sounding CDs, but have a quality that is entertaining in its own right.

You could also try introducing a Naim Hi-Cap power supply for the NAC 72 preamp at a later date. This huge transformer decouples the preamp from the NAP140, and drives it perfectly to get the best from all sources — analogue and digital. This should help you find the best of digital audio; if not, perhaps you are looking for a CD player that doesn't exist one that sounds exactly like your own LP12.

B&W DM602 - stand-mount solution for a budget system

All options open

I am considering speakers to replace my ancient Celestion Dittons. My room measures 3.5 x 7 metres and my system consists of a Technics SL-PG520A CD player, Aiwa AD-F810 cassette deck, Sony ST-S311 tuner and Technics SU-VX600 amp. Does this equipment justify expenditure on such speakers as the Acoustic Energy AE-100, Castle Isis or Monitor Audio CC200, or should I aim more modestly at, say, the Mission 731LE, Mordaunt-Short MS10i or KEF Coda 7 or 8? My music tastes include rock and classical. N D Revnolds Orpington, Kent

You're not really locked out of either group, though the Acoustic Energy really needs a different kind of home, and the Monitor Audio CC200 is a centre-channel dialogue speaker. Given your music tastes, size of room and the nature of your system, I would suggest starting with the Mission 752 or Polk RT8 compact floorstanders, or the B&W 602 if you prefer standmount speakers. **Swings and roundabouts** I would like a CD player, amp and speakers on a £500 budget. Would a combination of £150 per component be suitable? I was thinking of the Rotel 930AX or NAD 310 and KEF Coda 7, but I haven't got a particular CD player in mind. Geoffrey Lui University of Bath

Try to avoid dividing down an overall budget into individual budgets for each component all you're doing is imposing an artificial and arbitrary restriction on your choice. For example, there are some great cheapie speakers such as the Sony SS-86, which cost just £100 a pair, although you'll need a pair of stands to match. Equally, the Philips CD721 CD player, which costs £129 (see review on p.89), is hard to better, or there's the £160 Sony CDP-XE500. This choice would leave you at least £200 for the amp, which will make a big difference as it allows you to go for something better, such as the NAD 312 (£200).

Pro-Logic practicalities

My system comprises a Micromega *Drive* 2/Pink

Triangle Ordinal DAC/1307 filter, Mission Cyrus III amp with two PSX-Rs and B&W DM1 speakers. I would like to add a Dolby Pro-Logic amplifier and a centre speaker for dialogue at the front. I already have a pair of Mission 73S speakers to take care of the surround duties, and my available budget is £1,000. Jawed Arshad Ilford, Essex

Cyrus makes a very good decoder-cum-three-channelamplifier to match the Cyrus III - namely the Cyrus AV Master, which costs £650. It combines a first rate Pro-Logic decoder and a centre-channel amp, though you would need one or two further channels of amplification to drive the two rear speakers (they can be driven in series or parallel from a single amplifier, as long as the impedance limits of the amplifier are not exceeded). Alternatively, and perhaps this is a more practical suggestion given that it will drive both the centre and rear speakers, have vou thought about the Yamaha DSP-E580 at £449?

The centre speaker should match the main speakers as far as possible. The DM1 is a little too long in the tooth now for me to remember how it sounded, though I do recall it being clean and a little bright. I suggest the B&W CC6 (£200) as a good starting point. The fact that it is the same brand is entirely coincidental.

Focus unknown

I am considering buying the Harman/Kardon 2200 power amplifier and either the 2300 or 2500 preamp and the carousel CD *FL*8450. Someone has suggested that I go for the Focus Audio F7 or Mission 752 speakers. What do you think? Peter Madeley Bamboo Grove, Hong Kong

I can't tell you anything about

Focus, but the Mission 752 is well-established and liked, with no real snags other than a slight lack of drama and presence. It is certainly hard to beat at the price, though a replacement is said to be in the offing.

Magnetic attraction

I have a great interest in the Densen *DeMagic* which demagnetises CD players. I own an old Nakamichi cassette deck which still serves me well but, as we all know, even the best cassette decks sometimes need demagnetising.

Does the *DeMagic* have a positive effect on cassette decks? After all, why pay for conventional demagnetisers which only demagnetise the heads of cassette decks when a single CD will do it all? *Sandro Prenkocevic Vänersborg, Sweden*

The Densen DeMagic is designed to reduce residual low-level magnetism throughout the active circuit path of your system, including (presumably) the ferrous content of cables and component lead-out wires, and certainly cassette decks if you record the signal and play it back.

I am part of the way through evaluating a sample, but it is already apparent that it has a beneficial effect on the equipment I have used so far. But that it is no substitute for a tape demagnetiser which has a much stronger action. Incidentally, mains-driven demagnetisers are not used just on record and playback heads, but also on the guides, rollers and any other metallic component near the tape path. Nakamichi, however, takes a dim view of tape demagnetisers, believing them to be harmful to the delicate tape heads and the deck's circuitry. In short, Nakamichi says use a demagnetiser at your peril!

No joy from NAD

I have a CD-based NAD system (306 amp, 502 CD player) with B&W DM630 speakers and QED Qudos cable, but I am constantly annoyed by a lack of clear soundstaging which means I can't divine where instruments are located in the width and depth planes. Also, the frequency extremes are unsatisfactory. Will a quality interconnect do away with the flaws outlined? *Heinz Lefebre Ledebreg, Belgium*

You'd be more profitably employed experimenting with the position of your speakers. Try angling them towards the listening position.

Two boxes aren't better

I have just bought an Audiolab 8000Q/8000P pre/power amp and Audioquest Midnight 3 single bi-wire speaker cables. I need help choosing speakers and a two-box CD player. It will be used with sentimental songs and solo piano in a room measuring 10 x 12 ft, which dictates bookshelf speakers. Y J Yeoh Malaysia

If you're stuck on the idea of a two-box player, the Audiolab 8000CDM/8000DAC could hardly be bettered. However, if you want to spend less, you will not lose too much performance by opting for a good single-box unit such as the Marantz CD17.

Mission 752s: hard to beat at the price.

The new Profigold PGA301 from Bandridge has arrived...

Precision crafted from the finest materials available, the new PGA301 interconnect leads will ensure that you get the very best from your system.

Stop listening to your Hi-fi and start enjoying the music!

FOR MORE INFORMATION ON THE PGA301 AND OTHER PROFIGOLD PRODUCTS, CONTACT BANDRIDGE LTD. ON **0181 543 3633**

PREMIER HOUSE 18 DEER PARK ROAD WIMBELDON LONDON SW19 3BW

PROFIGOLD, THE NO.1 FROM BANDRIDGE

On the subject of speakers, I would strongly recommend the QLN Classic 1 (neutral with superb imaging) or the Harbeth HL-P3ES (sharper, astonishingly transparent and articulate). All the named hardware is available in Malaysia.

Plenty of power

Your advice please! I have a Linn LP12/Ekos/Troika and Lingo PSU, Hitachi FT-5500 MkII tuner, Technics M260 cassette deck, Audiolab 8000C/8000P pre/power amplifiers and Linn Isobarik speakers. I am considering Naim, Exposure and Audiolab amplifiers, though other suggestions would be welcome. Please bear in mind that I intend replacing the Isobariks - wife forces sale and the room measures 24 x 16 ft. I wouldn't expect to pay more than about £5,000. John Kellock Aberdeenshire

When I first encountered the Isobarik about 20 years ago, I heard in it everything that I thought made a loudspeaker great. The last time I heard one, about three years ago, it sounded offensively bad, like

the PA gear you hear in the kind of clubs that give you nightmares. I hope you have . one of the early ones.

It is not easy to give firm recommendations without knowing where you will be going with your loudspeakers. For example, Dynavector, Naim or Exposure amplifiers that would perfectly match a pair of Shahinian Obelisks, will prove a poor match for a pair of ProAc Response One S speakers. For relatively compact dynamic speakers, you will need plenty of power for your size of room. Within your price range, the best amplifier to my knowledge is the Michell Argo HR/Iso HR/Alecto preamp, phono stage and power amps.

Short shrift

I wish to upgrade my Kenwood KA-3020SE amplifier, Teac CD-P1100 CD player and a pair of Mordaunt-Short MS05 speakers, but I can only afford to upgrade two parts. My budget is £300 for the speakers and £350 for a CD player or amp. I am looking for a sound that is realistic, detailed and dynamic, but not harsh. Any ideas? Mark Skinner Thanet, Kent

I'm sorry to say that I don't know the Teac, but I do know the other two components. The Kenwood KA-3020SE is a cracker, and definitely worth retaining as long as you don't have any extraordinary power reauirements.

The Mordaunt-Short MS05, however, is certainly ripe for the chop, whatever else vou may decide on. I would point you towards the speakers recommended to Stephen Thompson (see Speakers on a budget, p. 39), namely the B&W DM602 and the Castle Isis. Also shortlist the Mission 751, a very sophisticated compact, though you will need tall, inert stands too and, ultimately, the Mission may need a slightly more heavyweight amplifier.

The problem here is that £350 is probably too little to pay if you want a substantial all-round improvement over the Kenwood. You'd need a model in the Audiolab 8000A or S class (£500 or £650 respectively), the Mission Cyrus I at £500, or perhaps the new Pioneer Precision — I say perhaps because I don't know what it sounds like yet (However, see Sessions, p.14, and Ear Waxings, p.21). If you're in the market for a CD player, check out the test in this issue (p.72).

Hi-fi newcomer

I am a newcomer to hi-fi and would like to buy a system to include a turntable, CD player, cassette deck, tuner amp and loudspeakers, costing up to £1,600. Any suggestions? Jerman Ferrer

(no address given)

I am sorry that I had to shorten your letter from the original six typewritten sides which, as you suggested, is probably a record. I only mention this because,

The irony is that your musical requirements are set out in terms devoid of real musical meaning. This leaves me two choices: either I reel out a list of gear as long as your arm or I point you towards a good specialist dealer (such as a BADA dealer). I'll do the latter. The BADA hotline on (0171) 226 4044 can provide suitable local names and addresses.

Lead the wav

My system consists of a Cyrus DAD7 CD player, Ar cam Delta 290 amp and Bose 305s which are stand-mounted. Could vou recommend some inter connects and speaker cables? Right now I have Tandy Gold Line interconnects but I would like something a little sharper that won't break the bank. Mark Millington Worcester

A lucky-dip question this, but for interconnects try the IXOS 103 (£40) or DNM TCC75 (£34) first, and for speaker cables start with Cable Talk 3 or Gale XL315 (both are priced at £3/metre).

Speakers on a budget

I have a Musical Fidelity 100 amplifier and 600 CD player, a Trio 1033 record deck with Shure 95HE replacement cartridge, and 24-inch, sand-filled Gale speaker stands. I have about £300 for speakers should I buy slightly cheaper speakers such as the Celestion 5 Mk II, for example, and improve the speaker cables and inter connects, or should I spend the whole lot on speakers and keep the existing Heybrook Heywire speaker cables? Stephen Thompson Alexandria, Scotland

There is no simple, definitive answer to the question of how to divide the resources, but there is a good bodge in the form of Gale XL315, which is

punches above its weight.

player, Kenwood KX-70505 cassette deck, Quad FM4 tuner, Quad 34/306 amplifiers and Linn Keilidhs with the ceramic base. It will not have escaped your attention that apart from the Quads, all the components have worn Hi-fi Choice swing-tags in the past.

cheap and works well with

most speakers. This will leave

most of your budget free for an

I listen mostly to classical and country music. While I am generally happy, I notice a certain lack of breath at higher volume levels, and put it down to the Ouad being under-powered for the Linns. Should I biamp the 306, replace it with the 405, or wait for the Quad 77 tuner and buy it with the Quad 77 amplifier and CD player? Any amp other than Quad is a non-starter because I have been a diehard Quad man since the long-gone days of the 33/303 (driving the KEF 104/ab).

A difficult question for me to answer to your satisfaction. The Quad is not in my view an optimum match for the Keilidhs, any more than the Quad 303 is the amplifier I would have chosen for the KEF

Castle Isis - exceptionally refined!

around the size of the 731s; my budget is £400. But why do I need more bass and volume? Because my musical preferences include hip-hop, happy hardcore and drum'n'bass. Neil Byrne Basildon, Essex

An active subwoofer could solve all of your problems in one go. You would retain all the fine qualities of the equipment you own, just adding bass when appropriate and tuning it at will by adjusting the sub's own level control. You won't even need a new amp because active subs have their own built-in. They can also be disguised as occasional tables, or positioned out of sight.

There are even some genuinely compact models that work very well. The latest version of the REL Q-Bass at £360 is a good example. But the Miller & Kreisel VX-7B sets the standards for delivering acres of bass from the audio equivalent of a pint-pot. It is only just over your budget at £450.

Bangin' choons required? Try the M&K VX-7B!

HINTS & TIPS SPEAKER TWEAKS

Jimmy Hughes shares one of his closelyquarded secrets of loudspeaker tuning.

Bi-wirable speakers have two pairs of red and black connection terminals: one pair supplies the tweeter; the other supplies the bass/mid unit. This kind of speaker is usually supplied with some form of wire link joining together its two pairs of terminals. This enables you to use the speakers with just a single set of speaker wires.

If you can bi-wire your speakers, you can listen to tweeters and bass/mid drive-units in isolation. This means you can home in on specific frequency areas when you're fine-tuning or evaluating equipment. Suppose you're auditioning two sets of cables, and one sounds cleaner at the top-end. You can listen to the tweeter on its own by temporarily removing the leads that drive the bass/mid unit, or removing the wire link that joins the two sets of terminals.

This should tell you very clearly whether there is a significant difference between the two cables under test. Just remember that if you've never heard a tweeter on its own, you're in for a shock! Most sound pretty brash and squawky without the bass and middle to fill in. As a result, small differences are highlighted, allowing you to hear precisely which combination gives the smoothest sound.

Listening to the bass/mid unit alone, you'll probably be struck by how 'thick' and coloured the sound is. Without any treble to give sparkle and detail, the sound will probably seem very dull and muffled, and much of the speaker's transient attack will be lost. So listen for a sense of instruments starting and stopping, and whether the pitch of each note is clearly defined. Can you hear the words to a song clearly? Is the tune obvious? If a system can produce articulate, vivid sound through its bass/mid driver alone, it's likely to be a good performer when all drive units are firing.

Clarity at mid and low frequencies is crucial. If your system depends absolutely on its treble for detail and definition, it will be

highly dependent on the quality of recordings you play. On a smooth recording, or one that's not as articulate and well-separated as it might be, the result will be a thick and muddy sound. Any change that increases clarity at middle and low registers, should be an overall improvement. So if you can listen to this part of the frequency range on its own, you should gain a clear opinion of which changes work, and which don't. Comparing speaker stands by listening just to the bass/mid driver can be extremely revealing!

Nevertheless, bear in mind that listening to just one part of the frequency-range requires some practice. A change may seem to have the ideal effect in isolation, but it's vital that the decisions you make while listening to just part of the system, still give a good sound when you put everything back together again.

TURNTABLES

Gramophone Official o

We were supposed to test five DVD players this month, but none of the review samples had their microwave-oven circuits installed. Instead, here's our mate **Alan Sircom** with a test of five fine turntables, all costing less than £1,200.

ver since the launch of CD back in the early '80s, people have been saying that turntables are dead meat. Officially, sales of record players have tailed off as vinyl becomes harder to obtain, but often it

seems that the reverse is true. Is vinyl really an unsupported white elephant? A significant number of vinyl production plants have come back on stream to produce records for enthusiasts. And it is an enthusiast-led market: those who still buy LPs seem prepared to search out their 12inch prizes, and pay a premium for all-analogue recordings and virgin vinyl pressings.

This has made the CD vs. LP debate hotter than ever. Those who invested heavily in CD cite all those 'perfect sound forever' arguments at vinylophiles, while LP lovers feel that CD is just 'too digital'. I prefer to take the middle path, and still buy and play records because I enjoy the format both for its sound and the size of the artwork. With vinyl, there is also a more intimate relationship between enthusiast and technology: you have to clean the record and handle it carefully, gently place it on the platter and cue up the stylus. Conversely, with CD, you just plop the disc in the tray and the rest is done for you. That said, I am buying more and more CDs, for their convenience, portability and accessibility. In the process I have become more accustomed to the clean, bright immediacy of CD sound.

New for old

As if to ram home the continued success of the turntable, only two of the five decks here have been around for any length of time, although the remaining three are all derivations of earlier models.

The bluff looks of the £600 Nottingham Analogue Spacedeck (with its Space arm and Tracer II cartridge) hint at the battleship engineering underneath. The deck does away with suspension and features a highmass platter that uses a low-power motor simply to keep it spinning. An integral outrigger holds the £350 unipivot Space arm (built like a tank, but more shapely), while the £175 Tracer II cartridge is a tweaked Len Gregory (aka The Cartridge Man) moving-magnet affair. Everything sits on a marble-effect plinth and is built to keep playing until hell freezes over. And that's it: there are no fancy power supplies and no tweaks. If you want a dust cover, buy a tea-towel!

Roksan's £470 Radius is no stranger to these pages, but since the company was absorbed into Mission parent Verity plc, the Radius has been revised. With an improved platter, bearing and motor housing, the Radius 3 certainly looks the part in its slinky matt-black finish. Somewhere along the line, it has gained an off-board £150 RokDSU power supply, too. However, the £420 Tabriz zi arm, with its intelligent counterweight, and the £130 Corus Black m-m cartridge, remain essentially unchanged.

Only the very stupid could fail to spot the similarities between the Systemdek and the Reson RS1 (£675 all-in). The Reson is essentially a Systemdek I with Swiss Karlev Audio modifications. These include a DNM Rota motor that has an external plug-top power supply, and an expensive smoothing capacitor that prevents the deck from accidentally running backwards. It also uses a special white "budget Ringmat" platter mat. The loose-fitting, double-decoupled Mita arm is a souped-up Rega RB250, and the Aciore cartridge is a tweaked Goldring moving-coil. Everything comes preset by the Virtual Reality boys, who use very-high-tech set-up gear worth thousands of pounds to ensure good alignment.

Systemdek's latest **Systemdek** – the **2X2** at £500 – is a rather refined device. It builds on the strengths of the old Systemdek *IIX* with an acrylic inner and outer platter, an easily-adjusted suspension system (as well as real suspension for the motor) and a new wooden surround to match the System loud-speakers. The Systemdek doesn't have a recommended arm and cartridge combination as such, but the £399 Roksan *Tabriz* arm with an Audio-Technica moving coil cartridge was just one of the many combinations used successfully on its predecessor. A Rega arm would be just as suitable.

Finally, the German company **Thorens** has been making turntables for almost as long as the discs have been in existence. Thorens has diversified into CD players, tuners and amplifiers, but a large proportion of its moolah still comes from black vinyl spinners. The cartridge-less £700 suspended-chassis **TD2001** is no newcomer (it was first reviewed back in issue 91) but it's one of the company's more upmarket models and the most expensive to feature the new **TP90** arm.

Testing times

All of the turntables were benchmarked against my own heavily-modified Linn Sondek LP12 deck, which has a Naim Armageddon power supply, Naim ARO tonearm and Sumiko Sho high-output moving coil cartridge. All were tested on a Phase VII Mana table and auditioned through an Audiolab 8000PPA phono stage into a Densen Beat B100 amplifier and a pair of Neat Mystique speakers, again resting on Mana tables and platforms and using hybrid copper/silver Ixos cables throughout. However, as Reson moves in a different tested the deck using DNM solid-core cables and the company's own ultra-lightweight deck-chair-cum-turntable stand.

To give each deck a workout I dug out the KLF's It's Grim Up North, Bob Dylan's Desire. Gene Ammons's Boss Tenor, a mighty Lyrita production of Bax's Tintagel tone poem, Everything But The Girl's Walking Wounded and Funki Porcini's Love, Pussycats and Carwrecks.

Rogers BRITISH HIGH-FIDELITY

Rogers International (UK) Ltd Sales and Marketing Centre Unit 13 Bath House Road Beddington Lane Croydon SURREY CR0 4TD Tel: 0181 683 2101 Fax: 0181 684 6469 Introducing...the Rogers db101, a fusion of Rogers sound technology with modern streamlined design from Peter Stevens, stylist of the McLaren F1 'Supercar'.

Powerful and efficient, the fully shielded db101 has a unique floating tweeter and high definition bass driver to suit professional, commercial and audiophile music applications.

The db101 is available in nine highgloss aluminium and natural finishes and custom finishes to order.

THE DB101 IS DESIGNED BY ROGERS, STYLED BY PETER STEVENS, AND DRIVEN BY ALL PRIVILEGED AMPLIFIERS.

Nottingham Analogue Spacedeck

£1,125

'Space' accurately sums up the *Spacedeck*'s performance, as reproduced music is given stunning amounts of air, in a virtual reality soundstage that goes way past mere holography. Then there's bass that is controlled and right-sounding, but which plumbs depths that few suspended decks could ever dream of. Most others sound slow or ill-controlled by comparison.

Most impressive of all is the sheer lack of artifice in the sound of this design — it plays LPs so honestly, it's enough to make you want to sign your name in blow-torch on your CD collection. The seven nominated test LPs soon came and went, only to be replaced by disc after disc as I trawled my vinyl collection for long-forgotten discs and tracks.

When you first buy a *Spacedeck*, the enthusiasm it engenders will mean you end up playing all those records that you would want no-one but your mum to know about. Just try keeping your cool in front of your peers when you are caught playing that extended 12-inch disco remix of Barry Manilow's *Copacabana*. Thus, it's best to make sure that your wife or girlfriend is in a different room (if you have both, you'll know the importance of segregation already).

Place a dense slab of Straussian vinyl on the platter and you're given as much gutwrenching emotion as you can stand; swap Richard Strauss for Richard Carpenter and you'll get a sound that's lighter than one of his sister's dinners. It sounds like Miles Davis playing on a rainy Saturday night in Chicago; it sounds like Ralph Vaughn Williams on a summer's day in Hampshire.

How does it sound? It just sounds like music. If you are dead serious about this turntable stuff, the Best Buy *Spacedeck* is one of the first real ports of call; otherwise, it's out with the Fisher-Price activity centre.

perfect balance

The New Meridian 508.20

Taking CD replay to the edge with a new 20 bit converter and precision re-clocking used throughout. With the lowest jitter and pure Class A analogue balanced output the 508 reaches a performance level previously unheard.

The New Meridian 566

A DAC with the performance where it counts. Meridian's twin Phase-Lock Loop yields the lowest jitter whilst our 20 bit DAC offers a new benchmark in clarity and deep fulfilling bass. The New Meridian 502

A Dual mono preamplifier design. Separating the channels onto individual boards gives Meridian a level of preamplifier performance to match our new 20 bit CD sources. With the highest quality components and Meridian's years of experience in preamplifier design we are now able to offer you a preamplifier that sonically disappears.

The New Meridian 557

Balanced has never been so right. With balanced inputs and a dual mono design this 200W amplifier is the perfect finish to our balanced range. A unique ground balancing system gives you the highest performance in bridged mode without compromising the superb stereo at which Meridian amplifiers excel. Bridged output into 4 Ohms gives a massive 1000W.

Meridian System Remote Control with audiophile quality balanced design from laser to loudspeaker.

What more could you ask?

Reson RS1

The Reson *RS1* defies almost every conventional idea about turntables at the price and triumphs almost every time!

£675

No other deck in the group could compete with the *RS1* in the detail stakes. Mid-band detail, in particular, was first-class. If there was any morsel of mid-band info on the disc, the *RS1* would dig it up. Away from the midband the sound was less impressive — bass, though tight, dropped away rapidly, and high frequencies were ragged at times. However, these factors conspired to make the *RS1* sound stunning on particular discs and with certain instruments.

Hurricane on Bob Dylan's Desire has seldom sounded so natural, and on the Reson it had one of the most authentic violin sounds around. The *RS1* definitely favours 'live' music, making the Bax cut (from the glory days of Lyrita/Decca recording) sound like it was like being beamed across time and space to the auditorium. Yet if you play any track with a synthesiser line, what results is as sharp as lemon juice on a razorblade.

The addition of the lightweight DNM table makes the deck sound considerably less bassy, but at once faster and more focused in the upper bass. It wasn't that the Mana table sounded wrong, just that its sound goes in a diametrically opposed direction to the DNM. The DNM table was just better suited to the *RS1*.

This only serves to prove that the Reson *RS1* is no normal deck and will not suit every buyer, as the reproductions it makes are just too individualistic for most tastes. But for those who like it, the sound is something to get truly passionate about. Given the affordable price-tag, a Best Buy is mandatory.

When seeking to even further improve the already remarkable CD-P3450, we decided to add input.

How? By asking the valued opinion of a top audio electronics engineer here in the UK - and acting on his advice. The result - a sub-£200 special edition CD player, the new CD-P3450SE. It is enhanced by a unique circuit modification, developed specifically to appeal to music lovers in the UK and Europe.

The new CD-P3450SE from TEAC. We put more in, so you'll get more out.

Roksan Radius 3

£1,170

The Roksan is arguably the prettiest of the five players tested here, and certainly achieves the most successful balance between convenience and good sound. Small and sleek in its new matt-black livery, the *Radius 3* delivers sound as neat as its looks would suggest.

Roksan's original Xerxes had a wonderful crisp, dry sound that was slightly light but fast, tidy and well-ordered. Listening to the latest *Radius*, it's clear why Roksan had to improve the Xerxes drastically: the *Radius* 3 has much the same sound as the original version of the cult-classic X-deck.

Tidy, fast, ordered bass is back, and it's still as light as ever, but now possesses excellent definition and pace. It goes deep enough to pick up the occasional subsonic boom on *Big Deal* (by the new-look, drum-and-bass oriented EBTG), but lacks the bass intensity of either the Linn reference point or the *Spacedeck*.

In some respects, the *Radius 3* would probably appeal most to CD users, as its tonal balance is similar to the digital format's. *Radius 3* lacks the resolution of finest detail, which separates the best decks from the rest, and this is obvious in the slight lack of space around the instruments on the otherwise-airy Gene Ammons cuts. This deck also pushes the soundstage forward, making the sound immediate and exciting — but combine the

Radius 3 with a forward-sounding amp and speakers, and you may have too much zing.

This must not detract from an intrinsically clean bill of health. The *Radius* 3 comes well Recommended, mainly because it is thé perfect solution for someone who seeks accord between the sound of their CD and vinyl recordings, and a record player that sounds as fresh and as crisp as a bright spring morning.

Ultimately, I felt it tended to suit classical

recordings, but it will still dig deep into any

pushes the soundstage forward artificially,

Systemdek 2X2

£500

Long ago, a bunch of audio revolutionaries called Audio By Design took the *Systemdek IIX* hostage. They forced it to wear an acrylic platter, making it sound similar to a Voyd, but at a much lower cost. This was the blueprint for the 2X2, except that the new deck sounds rather better than its inspiration.

Of all the decks in this group, the 2X2 had the most unfettered dynamics, and an expressive and refreshingly open sound. It was also one of the most comfortable-sounding, but didn't relax into a coma. I noticed also that it imprinted very little of its own character onto the music it played, but just let each recording show its true colours.

This platter-spinner has a fine sense of rhythm and order, whatever it's tracking. It didn't sparkle with detail on Funki Porcini's *Purrfect* the way the *RS1* did, or grip the bass drivers like the KLF did on the *Spacedeck*, but the *2X2* was still consummately musical and enjoyable at all times.

SYSTEMDEK - VERDICT SOUND ★★★☆ VALUE ★★★☆ PRICE £500 (excluding arm & cartridge) ▲ Very neutral and flexible performer; excellent soundstaging and dynamics. ▼ To rig it out according to its worth takes money. Systemdek Ltd, 34 Kyle Road, Irvine Industrial Estate, Irvine, Scotland KA12 8LD ② (01294) 271251

lic On simple, acoustic recordings like Boss rd, Tenor, there was excellent soundstaging the full three-dimensionality of the early stereo recording is clear, as the 2X2 neither

disc's microgrooves.

nor pulls it backwards. There was a great sense of stability as the music became more difficult and complex, and the often nomadic sax on this recording stayed put.

The 2X2's main strengths are neutrality and versatility. I'm sure we'd have had similar results with most alternative arms and cartridges, so I confer Recommended status.

H

Over the years he'll take your car, your hard earned cash and years off your life. Do you really think it will be any different with your Arcam?

We can confidently predict that you will enjoy the top quality sound of your Arcam Hi-Fi separates for many years to come.

It's a simple enough prediction, when you consider just how hard we work to produce Hi-Fi of the highest quality.

Like any good parent, we ensure that our little treasures go out into the world with every advantage.

So, before we bid a tearful farewell, the Hi-Fi produced at our Cambridge factory must pass the most rigorous set of tests, checks and double checks. This means that each Arcam separate is blessed with a long, active and productive life.

Then again, sonic excellence and reliability are bound to feature on all Arcam products, since we design them in from the outset.

A very pleasing aspect of all this dedication is that year after year our products make us rather proud with lots of top Hi-Fi industry awards.

So, do keep a close eye on Junior. He also knows quality when he hears it. (Well, you can't really blame the little angel for inheriting your good taste!)

On the other hand, you could invest in a lesser Hi-Fi system than Arcam...

But why deprive yourself, never mind future generations?

TURNTABLES

Thorens TD2001

£700

The German Thorens TD2001 is the most user-friendly of all the decks in this test. with both its speed-selector and arm-lift controlled by knobs on the front of the turntable. It is also the only one in the group to use an arm with a removable headshell — this has a little clear-plastic doo-hickey that fits behind the headshell to make cartridge alignment easier than with other decks. There's still a problem, however, about fitting such a headshell back into the arm without losing alignment, but you can align the cantilever on a tiny mirror that's supplied. If you have undiagnosed astigmatism, however, you could end up setting the cartridge at an odd angle. My astigmat-free eyesight used a DNM Rita m-m cartridge.

When adjusted to optimum settings, the *TD2001* acquits itself well, but only up to a point. It has a musical bounce to its delivery, and this makes it sound quite attractive, even addictive, with the majority of LPs. However, 'workout' platters that challenge the extremes of the deck do reveal problems, for example with the ludicrous bass present on the KLF record, which highlights the Thorens' lack of much-needed precision at the bottom end. Even with comparatively 'easy' LPs, the *TD2001* is not as detailed as I would like, painting a somewhat indistinct, muddied soundstage, or blurring rim-shots and other transient-led instrument noises.

Only to mention the sound of the *TD2001* is to lose the Thorens plot. This deck is about getting the best possible sound from a turntable without sacrificing convenience. In

this aspect, the *TD2001* is extremely successful and it is only in comparison to more hair-shirt decks such as the four in this test, that I can level my criticisms at sound quality. Many would not countenance using a deck with no speed control or automated liftlower, and for them the *TD2001* will offer what is probably the best sound it is possible to derive from a user-friendly record player.

Conclusion

Five decks, four flags, no duff models turntable fans have never had it so good. Even the tail-ender in the pack is no straggler. The **Thorens TD2001** produces sound that listeners of yesteryear would have dreamed about. It is rich, full and fast in a manner that could challenge a first-generation Linn LP12. Use it with a decent moving-magnet cartridge and you'll understand why people wax lyrical about vinyl, yet still stick with the convenience of a semi-automatic deck. If you value user-friendliness highly, then the Thorens wins out.

Both the **Systemdek 2X2** and the **Roksan Radius 3** are living proof that turntables are still developing, as both products improve upon earlier models. If you can't stretch to the ultra-percussive *Xerxes X* but seek that CD-clean sound, then the Recommended Roksan *Radius* 3 should be at the top of your audition list. There are few more tidy-sounding turntables at the price.

The Systemdek 2X2 also will be on many wish-lists, but for wholly different reasons. The Systemdek is honest and dynamic and perfect for those who are not quite ready for the uncompromised starkness of the Reson *RS1*. The 2X2 can be used with a large number of different arm/cartridge combinations, and will not sound out of place in a far more expensive system. A Recommendation is the only obvious conclusion.

The two Best Buys could hardly be more different. The DNM-inspired Reson RS1 is the turntable equivalent of a Formula One racing car. The RS1 extracts more detail from records (especially mid-band detail) than any other deck tested here. It's best used with solid-core cables, an ultra lightweight table and a system that can get the best out of the whole package. It will undermine a proportion of your record collection (many recordings will disagree totally with the RS1) and many listeners will find the sound unconscionable. Yet, for the performance it gives at an affordable price, the Reson RS1 deserves nothing less than a Best Buy.

Last but by no means least, we come to the most expensive deck in the test and the exalted price-tag is entirely justified. If more British products were built like this, we would still have a glorious Empire. The Nottingham Analogue Spacedeck is built on the same engineering principles that informed Isambard Kingdom Brunel's bridges, and it has a similarly uncompromising sound. In fact, the Spacedeck is so good that a special Best Buy tag is being built in its honour, using three RSJs, an oxyacetylene welding torch, Titanic-size rivets and several coats of 'Hammerite' paint. as it ever was

Our dashing reporter **Paul Messenger** returns to the rolling fields of Sussex, to visit an old friend and listen to exquisite opera played in what is probably the most perfect music room ever created.

hen *Hi-Fi Choice* went monthly and A4-sized, late in 1987, one of the first *Aspirations* features peeked through the keyhole of the legendary Music Room belonging to SME boss Alastair Robertson-Aikman (ARA — pictured right, and in the original article, top-right). A great deal has occurred in the eight years since, and this month SME is celebrating 35 years in the hi-fi business an excellent excuse to prepare the horseless carriage for a glorious day out among the leafy lanes of Sussex.

Steyning is one of Britain's prettiest villages, and unquestionably the most important in the development of British hi-fi. SME started it off all those years ago, but now the village also plays host to the research labs of our most successful speaker manufacturer, B&W. It must be something in the air, or maybe the vistas: from the terrace outside ARA's listening room, soft meadowland sweeps towards the Adur Valley surrounded by the rolling beauty of the South Downs.

In the beginning, SME wasn't actually a hi-fi company. It was originally called the Scale Model Equipment Company Ltd, but was renamed in 1959, since when the initial letters have reflected the owner's passion for the ultimate in precision. The hi-fi bit came about almost by chance. The engineering operation was already well-established when ARA got bitten by the hi-fi bug. He had the wherewithal to indulge his hobby, but was immensely irritated by the indifferent 'kitchen table' engineering standards of much of the equipment available to the growing body of hi-fi enthusiasts.

Finding a well-made pickup arm proved a particular problem for this perfectionist, so

in sheer frustration (and with the benefit of having a precision engineering company at his disposal), ARA decided to make his own. Being a perfectionist, he was going to make it the best pickup arm in the world. Indeed, rumour has it that when ARA recently underwent hip replacement surgery, he took one look at the engineering of the artificial unit being offered, decided he could do a lot better, and went off and made his own!

I went back to the archives to SME's first appearance in a 1961 edition of the *Hi-Fi Year Book*, and I sympathised with ARA's predicament. Most of the pickup arms then were cheap plastic affairs produced by the cartridgemanufacturers and selling for under a fiver. The new SME 3009 Precision Pickup Arm cost £18.15 plus £6.50 purchase tax. In engineering terms it was the difference between a Leica and a Box Brownie. Put that £25 into context by applying the seven-year rule (during which the value of money tends to halve), and it translates into £800 today, fitting in well with SME's current prices.

Only a handful of the hundreds of brands listed in that yellowing *Year Book* are still familiar, and to my knowledge, SME is the only one that is still owned and operated by its original founder. It's a vindication of a long-term strategy that set out to create the very best as its prime objective, and which has stayed totally consistent ever since. Equally pertinent is the fact that its founder was, is, and always will be, a dyed-in-thewool hi-fi nut — and moreover, one with the

The Series V – SME's ultimate tonearm is the direct consequence of its maker's perfectionism.

INSPIRATIONS

resources, the passion and the motivation to keep abreast of the many changes that have taken place over the past 40 years.

CD, the usurper of vinyl

With the coming of CD, it's been inevitable that demand for vinyl replay equipment has shrunk. While turntables and pickup arms no longer represent the major part of SME's activities, nevertheless they're still an important part of the total, as the company has, in a sense, reverted back to a more general precision engineering role.

When I visited back in '88, CD was an issue rather than an essential, and ARA had yet to install a player. Availability of new recordings has forced the issue, and ARA is well pleased with the Wadia CD player that now shares the limelight with his turntable. However, don't expect to find SME getting into digital engineering. It came close a couple of years back, showing a prototype convertor co-developed with Essex University at the Ramada show. But ARA is meticulous; he did the market research and came to the conclusion that the fast-changing world of digital processing was for the big boys, and that operations the size of SME were more likely to get their fingers burnt.

The Music Room revisited

Going back to the Music Room, the first impression was that little seemed to have changed. In fact, apart from the basic structure of the room, the power amps and speakers, just about everything *had* changed, but only in gentle, painstaking stages. Which is as it should be. The lifelong enthusiast sees his system in evolutionary terms, inching forward towards an idealised goal.

ARA's stubborn, perfectionist zeal keeps him on the quest for the unattainable, and continuing to investigate the latest developments. But the broad brushstrokes for this system were laid down long ago with the construction of the room itself, and the decision to use Quad Electrostatic loudspeakers.

The Quad *ESL63* is a natural choice for

anyone whose music collection is devoted almost exclusively to opera and operetta. The '63s' delicacy, transparency and evenhandedness in reproducing the human voice is legendary. Prior to the '63s, ARA used no less than 16 of the original *ESL57* electrostatics (£52 each in 1961!), while the two pairs of *ESL63s* currently in action have come a long way from original specification.

However, the room itself is probably the most important link in the whole chain. When you first arrive, the speakers and most of the other gubbins are quite invisible. It's the beginning of a process that helps suspend disbelief and build up a powerful illusion; very like entering a theatre, albeit a private one with an even more clearly audible hush.

Take your seats

The main seating area of the theatre is empty here, of course. Instead, an enormous and luxurious Chinese carpet covers up a wooden dancefloor, providing plenty of acoustic absorption. This audience sits right at one end, with backs to a heavily-curtained picture window, which affords that delightful view. It should also maximise the perceived bass, which is handy when using Quad *ESLs* in such a large room. At the other end of the room, a proscenium arch and curtained 'stage' heighten the sense of occasion and expectation (as well as hiding the equipment).

It was one of the hottest days of the summer, so we started off with the windows open to let a breeze in. As the window is far from the nearest road I wasn't consciously aware of any background noise, but a little later on in the proceedings, ARA suggested he shut the windows. As he did so, the hush again descended, and we immediately became more deeply immersed in the music, and concentration was sharpened. Having always lived in a rather more urban environment, I was quite shocked how much extra dimension this ultra-quiet background brought to the party.

The Music Room measures 36x22x10ft, which has the notable benefit of placing main

room modes well below those found in more normal-sized rooms — with the effect that the room modes have a very limited effect on audio frequencies. The ten-foot-high ceiling should introduce some reinforcement around 40Hz, which will help to compensate for the natural roll-off of the Quad speakers.

My last visit preceded the launch of SME's own turntables, but this time around, the magnificent Model 30 was spinning the platters in place of a Goldmund, while the groove was being tracked by a ClearAudio Insider cartridge mounted at the business end of an SME Series V arm. The low cartridge output is equalised and boosted by an LFD headamp before feeding a flat, line-level signal to the preamp proper. CD sounds are supplied by the redoubtable Wadia 16 - less a mere CD player, more a high-performance computer with 21-bit architecture and 80 MIPS data-handling capability. These two source components sit either side of a console that houses an almost-new Audio Research Reference One preamp.

The preamp sends its signal down long van den Hul II interconnects to the space behind the acoustically-transparent curtain covering the 'stage'. Here reside two enormous Krell *Reference* power amps, plus two pairs of heavily modified Quad *ESL63s*; one of each pair is aimed normally down the room while the other is set at right angles, directed outwards at the side walls. Luxurious (spare) cushions look rather incongruous suspended to hang in the V behind each pair of speakers, adding damping at the point where the axes cross. The rear wall is heavily lined with Rutex absorbent.

Strange... but I liked it

One aspect I did find a little strange was sitting some 30 feet or so from the speakers, as I'm more accustomed to a distance of about eight to 15 ft, and I found the major shift in perspective a little unsettling. Of course, when you think it through, 30 feet is much closer to the best seats at a concert or theatre. Our puny little lounges enforce a closer-than-life experience, which is itself a distortion, but because we get used to an intimate 'halfway-to-headphones' experience, 'the real thing' seems unfamiliarly distant.

I wasn't too familiar with ARA's music, either. His collection is almost exclusively opera/operetta, whereas mine is everything but, so I spent a very pleasant afternoon getting acquainted with *Rigoletto* and *Rosenkavalier*. The soundstaging is superb — it was impossible to guess the exact positions of the hidden speakers, although the central focus was exceptional, so it was easy to believe that there were real people behind the curtain. Voices were notably clear, natural and beautifully proportioned.

I came away with a much greater appreciation of the operatic tradition, but ruefully contemplating the realisation that the best starting point on the route to true high fidelity is a room about four times the size of the one I use. Ho hum!

HI-FI CHOICE

Standing room only

Before you replace your speakers in disgust, **Paul Messenger** suggests you try some new stands.

he speaker stand might be the ugly duckling of the hi-fi world, but it's a vital ingredient to extract maximum performance from miniature and bookshelfsized loudspeakers. Even budget speakers benefit dramatically from proper support and placement, while those using top-quality small speakers with serious systems will be gobsmacked by the differences. In fact, I'd value the stand's contribution at more than half that of the speaker itself.

For decent hi-fi sound quality, there are only two alternatives. One is to opt for floorstanding speakers (but see *Personal Messages*, page 23). The other is the wall bracket, which is cheaper but also far less flexible, a pain to install and only suitable for miniature loudspeakers (around seven litres) aligned for close-to-wall operation.

The purist will place sound quality at the top of the priority list, the impecunious will go for price and the house-proud will opt for aesthetic appearance. A review needs to consider all three dimensions, although we'll concentrate on the sound and let you decide if you like the price or the look of it.

Practicalities

Many speaker stands are available in different heights and top-plate sizes. Choose the top plate to match the speaker, but always go first for the taller stand. The tendency to partner larger speakers with lower stands may make some aesthetic sense, but it's completely wrong on performance grounds.

The larger the speaker, the more bass it produces, and the more important it is to get the main driver well off the ground to avoid a thick and boomy bottom end. Tweeter height has little relevance; it's the main driver that interacts most with the floor and listening room. If you want more bass, try moving the speaker closer to the wall behind first.

When you install speakers, try to have each stereo pair working within a similar environment – the same height off the floor,

THE CAST LIST

the same distance from the wall behind and the nearest side-wall, if possible. For the smoothest bass performance, make sure the three distances are different from each other.

Conclusions

Our group of ten spans prices from £35 to beyond £500, with most at under £100. We had the Award-Winning Best Buy Atacama *SE24* on hand, and this continued to impress as value for money while forming a yardstick to compare with the competition.

Although the *SE24* is a decent stand, at £70 it's also a cheap one, and there's no denying the sonic superiority of our two £100 Best Buys, the Kudos *S50* and Soundstyle *X124*. The pity is that there isn't an orderly pattern of improved performance at higher prices. It would be nice, for example, to find something that combines the *S50*'s bass with the *X124*'s midband – a mixture that should be worth £130 or £150.

The Kudos *S100* is substantially better than the *S50*, but because it's nearly three times the price, most people won't consider it. Ditto the RMS *Vivas*. It's interesting that all three high-performance up-market stands use 'tension-tuned' elements.

A top-quality speaker stand can be one of the most cost-effective upgrades – much better than exotic interconnect and speaker cables, in my opinion. What's needed is a better price/performance progression.

ALPHASON NCII60

£80

The £80 NCII, reviewed here in nominal 60cm form (the most sensible height for any stand, in my opinion), comes in a substantial flat pack which contains the flat top and bottom plates, four columns shaped as elongated tubes, four long, threaded bolts, two bags of sonic aggregate and the usual collection of nuts, bolts and spikes.

Assembly proved straightforward enough after perusal of the instructions revealed where the various bits were supposed to go, which was not immediately obvious. I'm still slightly surprised that the twin pillars are placed side by side rather than fore and aft. It's undoubtedly an aesthetically attractive solution, but less than ideal for rigidity.

The fact that everything comes in the pack, and you don't have to prepare any ballast, is a plus. But with no attempt to shape the top or bottom plate for extra rigidity, nor any disguise for the floor spikes, the engineering content seems unexceptional at the price. So is the sound quality. This stand has a rich and fruity signature through the bottom registers and a slightly obvious top end, the more so because the midband proper sounds recessed and de-focused.

A fine matt-grey finish and those slim twin pillars give the *NCII60* its elegance – ample justification for its existence. It's not a bad performer, but overall we still found it to be basically undistinguished from sonic and engineering points of view.

SPEAKER STANDS

APOLLO AZ6

One of over 30 Apollo models, but an £80 price-tag puts the AZ6 slightly above the budget-stand average. In engineering terms you get a lot for the money, including fully-welded construction and the ballast to damp and mass-load the column. The single large-section pillar is roughly square shaped. It makes a change from circles and truncated triangles, but seems illogical if you're trying to minimise forward reflections.

Although the top plate normally supplied with this AZ6 is very thick, it's also rather small for normal speakers (although it's pos-

sible to order larger plates). Everything else seems excellently executed; the inverted-tray base gives good stiffness while hiding the spikes from view. Thick steel is used throughout, and both base and top plate are screw-tapped to take 6mm spikes.

Given such a promising list of ingredients, it seems churlish to have to report that the sound quality was undistinguished. It's not unpleasant, but the midrange doesn't project with any enthusiasm. Consequently, the impressively deep bass was a bit heavy and thick, which didn't suit rhythmic material very well. The treble is sweet enough, but the overall sound was rather too laid back for this listener — though it may suit different ears.

ATACAMA BD21

£80

A tacama's £70 SE24 has been our Best Buy budget speaker stand for a few years, and won an Award in our June issue (155). However, there are over 12 models in Sambell Engineering's catalogue, and those on a tight budget might be tempted by this £55 BD21 alternative (or the £60 BD25).

Unlike the SE series, the BDs come in three bits, ready for assembly and filling with your choice of damping/mass-loading material. They're available in three heights: 17, 25 and 21 inches. The inverted tray-base is similar to that on the SEs, but the single central pillar here is a 100mm diameter steel pipe, topped by a small steel plate. The latter has holes for Atacama's £10 top-spike kit.

The result is neat and unobtrusive, making the SE24 look a bit of a blunderbuss by comparison. Given the cost saving involved, the SE24's sales might suffer, but not to peo-

ple who listen before they buy. The *BD21* is a decent performer for the price, but doesn't have the coherence or smoothness of its big brother. Bass sounds lumpier, thicker and more detached, while the midband isn't as well formed or focused. The Recommended flag acknowledges the *BD21*'s basic value for money, but the *SE24* is still rows ahead of it on the grid.

AVF TOWER 400

£55

240

A VF's main business is TV supports, but the company also makes a solitary speaker stand which is available from shops like Dixons and Tandy. It's more of a mass market than a specialist product, with a fullcolour, multi-lingual, point-of-sale carton. The engineering may be prosaic, but that's to be expected at £40 a pair, which is roughly half that charged for other budget models.

The *Tower* consists of two thin, flat plates and a rectangular section tube. Over-size holes are punched in the larger base for the spikes, while little rubber stick-on studs are provided for the top. The recommendation to fill the shaft with sand was followed, albeit with some difficulty, but the assembly still rang rather enthusiastically.

That the sound quality falls short of the mark came as no surprise. The midband has precedence over the rest and possesses a measure of coloration, somewhat emphasised by the reticent treble and a lack of firmness at the bottom end.

Anyone looking for something to bring out the subtle polyrhythms of today's dance-oriented sounds should avoid this very basic offering. At the same time, there's no disputing that the it offers many benefits at half the price of the competition. A *Tower 400* is certainly better than no stand at all.

SPEAKER STANDS

KUDOS \$50

£100

The £100 Kudos S50 has been slightly modified since our original Best Buy review (issue 146). It's now normally supplied as a flat pack (to avoid filling up the stock room) but was delivered to us fully assembled.

The only option left to the user is to add mass/damping ballast to the single, largesection steel pipe that forms the heart of the stand. Because this rings like a bell when unfilled, damping seemed advisable. So it was off to the builder's yard, on with the oven (to dry the sand), and a couple of hours fiddling about getting ballast on board.

The two-dimensional flat baseplate is perhaps less than ideal, aesthetically as well as functionally. But it's a good, thick plate fitted with good, thick spikes and decorated most effectively by large brass lock-nuts. Tripods don't necessarily have quite the stability of quadrupods, but they're easy to level and automatically provide the same downward pressure through each spike. Also, the S50's large footprint actually makes it stand more stable than most. The top plate is quite thick and a sensible shape, but it lacks any drill holes – use cones (allegedly supplied) or good ol' Blu-tack.

The sound quality doesn't match up to the *S100* by any means, but the *S50* is still a class act for its price. The midband might be a bit shut in, but the best bass I've heard from a low-cost stand is ample reason to continue the Best Buy rating.

THREADED SPIKE HOLES	base only

KUDOS S100

The Kudos S100 looks very similar to the S50: both feature the same 100mm steel pipe, a similar (and sensible) size top plate, and a broad, stable tripod base. The two main differences are a decidedly fancy, thick, polymer-composite, contoured base, and an equally fancy £280 price-tag. No lock-nuts were supplied to fix the spikes properly – apparently gravity suffices. The top plate is fitted with four wicked little adjustable spikes, which make an interference fit.

The S100 comes fully assembled. A substantial inner-tube clamps the main column between top plate and base under a pre-set

tension (and serves as a cable conduit). The rest of the column is filled with ballast.

My first impression was not entirely favourable. There was plenty going on, but the presentation didn't seem too tidy. Then I realised the stand was trying to tell me that the stylus needed a good clean. When that was done, everything started to work.

The more I played the S100, the more I came to appreciate its firm, deep bass, wide dynamic range and extended bandwidth. There's still a touch of the steel signature, but it's well disguised. The whole thing is so well balanced, it's clearly the result of extensive experimentation and listening. The S100 is the best all-round performer I've encountered.

REVOLVER RS1

£280

2/0

Revolver has been doing well in recent speaker group reviews, so it seemed only fair to look at its stands as well. The RS1 checks in at £70, which is average for budget speaker stands these days. It comes in a flat-pack that's a little more complex than some but logical enough to figure out.

I can't say the engineering content looks particularly good value. Both the top and bottom plates are simple and relatively thin, flatsteel sheets with no additional strengthening, just the un-tapped holes required for inserting and fixing upward and downward 6mm spikes. The result inevitably looks rather agricultural around the base.

What I like is the tri-column arrangement. It gives a pillar footprint as large as the truncated triangle designs, but without the same dense visual impact. Stylistically, it combines logic and purpose with something which might be called delicacy. You do have to find and cure your own ballast, filling the columns to provide mass and damping.

Sonically, it proved to be a pretty capable performer. Being shorter than most makes, the sound is a little warm and rich, but the bottom end sounds firm and controlled. The broad midband also hangs together very well without obvious coloration, even if the top end is a bit coarse and shut in.

Qudos[°], The Perfect Balance

The speaker cable forms a vital interface between your amplifier and loudspeaker system. The properties of the speaker cable you use will determine how well your amplifier can communicate with your speakers. Use the wrong cable and your speakers could be missing the message. To minimise the signal degrading properties present in all cable, QED's own research programme has

established that a Balanced Design Concept is essential for optimal performance.

+QED QUDOS BALANCED DESIGN CONCEPT SPEAKER CABLE MADE IN U

QED's Qudos speaker cable lowers all the cable's degrading Characteristic Properties in proportion and with the correct balance thereby delivering a superior and more accurate all round performance.

WHAT HI·FI? * * * * * "Sensational sound... You won't find a better cable at this price." MAY 1995

SPEAKER STANDS

SOUNDSTYLE X124

£100

S oundstyle's X124 follows the 'truncated by the Atacama SE24. This a logical approach which provides exceptional stiffness with relatively simple fabrication, and without creating too severe an acoustic shadow below the driver. It costs £100, the main justification being presumably the attractive, deep-gloss black finish, but heavyweight baseplate engineering and eight-mm floor-spikes are further strengths.

Assembly proved perfectly straightforward, apart from the usual hassle of obtaining and drying a considerable quantity of ballast to fill the capacious pillars. Four chunky Allen bolts are used to fix the base and top securely to the column. The top plate is arguably on the small side for the average bookshelf speaker, and is not especially thick either, but it does have four tapped holes for fitting the supplied top spikes.

The good news is that the X124 not only looks very smart, it also sounds rather good. In fact, I'd go so far as to say it's my personal favourite among the less expensive models included in this report. It's altogether more capable than the Atacama SE24 and, while it can't quite match the *Kudos* in bass performance, it definitely has the edge on midband projection and focus.

The Soundstyle *X124* may be a little bright for some tastes and systems, but most will find it invigorating and very entertaining, as well as good looking.

RMS VIVAS (with STANDS UNIQUE)

This product wasn't finalised at the time of writing, although several have been produced for specific customers. But the pair that arrived in the car was so different and sounded so interesting that a bit of media attention seemed well deserved. A couple of days later it was christened *Vivas* and the price was set at £550. This RMS product was co-developed by Stands Unique, and the final version is unlikely to be the same as the one reviewed.

£550

I found the skeletal, high-tech purposefulness of the *Vivas* very attractive, although hardwood disguises will be available. The quadrupod base consists of two steel plates

bonded at four points. The lower one carries the spikes, fixed by large black-chrome bosses. The upper plate supports three steeltensioned carbon-fibre rods topped by conventional spikes. There is no top plate, but a stability outrigger is planned.

Unlike a steel stand, it lacks any definable sonic character of its own, although it's not strictly neutral. The speaker delivers a much more up-front presentation, better suited to vinyl than CD. Voices take on a uniquely natural openness, and that alone is justification for the unit's existence. The bass is dry and quick, if-a bit reticent. Dynamics could be more dramatic, but the open transparency is going to enslave many an audiophile's heart.

STANDS UNIQUE TUNED SPEAKER SUPPORT FROM £220

What's your favourite choice of material for the speaker stands that will be gracing your lounge for the next ten years? Something in matt charcoal-grey bent steel, perhaps? Maybe not. How about solid cherry wood (or a wide range of alternatives)? Yes, I thought you might be interested.

Of course, it's going to cost. The basic, non-audiophile version of this stand costs £160, and has no real pretensions to sound quality – although the slanted wood column, figured wooden base and top (covering steel plates), and brass nuts do look a lot nicer than steel. The £220 *Tuned Speaker Support* version adds a stressed vertical steel tube behind the wooden pillar, providing a proper mechanical earth between the concealed steel top and bottom plates. An extra £120 substitutes the steel for a tensioned carbon-fibre tube developed by RMS.

It all depends how much importance you attach to aesthetics. With steel tube in place it's certainly a cut above the budget stands sonically, although the margin isn't dramatic. Substituting carbon fibre for steel proved a bit of a shock – the difference is immediately noticeable. The CF version is quieter, which is not a good thing in itself, but it also sounds cleaner, smoother and tidier, with more coherent and convincing voice reproduction. I feel there's a loss of power and purpose at the bottom end, but exceptional midband clarity and top-end control are very persuasive.

SIGNED JAMO SPEAKERS AND FRAMED PRINTS

Ten pairs of limited-edition Deco Art speakers, signed by the artist exclusively for Hi-Fi Choice! Plus: ten art prints in top-quality glazed frames!

amo's Deco Art speakers marry the art of loudspeaker making with the art of... art! Though designed to hang on the wall, these two-way bass reflex enclosures have quality drive units, including a 25-mm dome tweeter and 133-mm woofer, to ensure they sound as good as they look. Supplied with black or white cabinets, the 90-mm-thick boxes have a claimed 88db sensitivity and 60W continuous power handling. And now, it is not only tonal colours that will be painted in bold strokes – Jamo has commissioned the famous

Danish artist Jens Chr. Vestergaard to produce the unique image which decorates the Deco Art speakers. Born in 1960, Jens studied to be an engineer but now teaches art. Since 1987, his paintings have decorated many Danish homes, but here's your chance to be

among the first Britons to own his work! We have ten pairs of these superb £300 Jamo speakers to give away – five in black, five in white, all signed personally by the artist, exclusively for *Hi-Fi Choice* readers. What's more, each winner will receive an art print of the painting that inspired the Deco Art design, supplied in a top-quality, glazed, Scandinavian-style frame. So if you'd like to win one of these fantastic prizes, follow the instructions and enter today!

Jamo Deco ART

THE QUESTION

What is the name of the Danish artist commissioned to create the design for Jamo's Deco Art speakers?

a) Stig Halstrøm

Jamo Deco ART

- b) Erik Bloodaxe
- c) Lars Vanderspink
- d) Jens Chr. Vestergaard

HOW TO ENTER

To enter, answer the question above, on the back of a postcard or sealed-down envelope, and write down your name, address and daytime telephone number. Please tell us whether you would prefer the speaker in black or white – we will award the five white and five black speakers on a first-come first-served basis. We will assume you are over 18 years of age unless you tell us otherwise.

Address this entry to:

Hi-Fi Choice Competition (CHFC611A) Bradley Pavilions, Bradley Stoke North, Bristol BS12 OBQ

All entries must arrive by first post, Friday 15th November, 1996.

COMPETITION RULES

- The Closing Date for this competition is Friday 15th November, 1996.
 Winners of the Jamo competition will be judged from all correct entries
- submitted, and drawn at random after the Closing Date.
- We cannot guarantee that all winners will receive the colour of their choice. Five black and five white pairs of speakers will be apportioned on a first-come, first-served basis when ten winning entries have been drawn.
 All winners will be notified by post.
- The Editor's decision is final and no correspondence will be entered into.
- The Jamo competition is not open to employees of Dennis Publishing Ltd,
- Jamo (UK) Ltd, nor their suppliers, agents or associates.
- We regret this competition is open to UK residents only.
- No cash alternative will be offered.
- By entering the competition all entrants agree to be bound by the rules.
- You must notify us if you do not wish to be informed of any special offers or promotions. Please indicate clearly on your entry if you do not wish to receive details of further special offers.
- We will assume you are over 18 years of age unless you state otherwise.
 For a list of winners of the Jamo competition, write, enclosing a stamped, addressed envelope to: Hi-Fi Choice Winners, Dept 159/1, 19 Bolsover St, LONDON W1P 7HJ.

Alan Sircom once shock his head and refused to

his head and refused to believe that home cinema and hi-fi could ever marry, but now he's looking to convert others to the cause.

i-fi and home cinema — can they mix, or are they forever destined to be entirely separate entities? Are the subtleties of hi-fi too delicate for the home theatre enthusiast, or is there a chance for the hi-fi buff to get into A/V without throwing away the years spent chasing the absolute sound?

Fundamentalist hi-fi buffs get very upset indeed whenever the merest snippet of A/V appears in a hi-fi magazine. Traditionally, hifi is about neutrality and getting as close to the music as possible. Home cinema, on the other hand, is less concerned with accuracy so long as a good time is had by all.

We at *Hi-Fi Choice* believe that hi-fi and AV can mix... and so does specialist dealer Musical Images. When properly conceived, a good hi-fi system can serve as the basis of an A/V extravaganza — the fireworks and the explosions can be added in via the regular A/V contingent of processor, centre and rear-channel speakers and subwoofer to give that extra oomph for every crash, bang and wallop. We set the Covent Garden branch of Musical Images a challenge by asking them to see if they could add A/V to three very different hi-fi systems — and without spoiling the sounds issuing from the hi-fi itself.

This also offers us a prime opportunity to see just how great a proportion of the original budget spent on the hi-fi system must be spent on A/V to maintain the right balance. Usually people allocate a budget for the addon system which is either too high or too low for the rest of the hi-fi. It's interesting to see how the balance of AV budget changes as the hi-fi price-tag rockets upward.

And how could we possibly turn down the chance to check out three top-class hi-fi systems at very different prices in a single day? Normally, the sheer space swallowed up by three systems of this calibre (not to mention the logistics of getting everything to arrive at the same time) would prevent this from ever happening, at Choice Towers. Musical Images however, has a policy of stocking almost every product around, and the Monmouth Street outlet is ideal if you want to hear a wide selection of kit.

First out on the blocks

The first hi-fi system we looked at was straightforward enough, comprising a Marantz *CD-63II Special Edition* CD player, Arcam's new *Alpha 8* integrated amplifier and a pair of Mission's popular 733 floorstanding loudspeakers. This system is pretty typical of the current \pounds 1,000 breed.

It's easy to see why this system is such a favourite, it's great fun to listen to and has loads of the attributes that make music stunning. In particular, it digs up excellent bass without sacrificing the rest of the frequency range. It's also superbly forgiving of even the most compressed made-for-airplay mainstream musical tastes. Why buy a stack system when there are separates this good and which offer such stunning value?

Adding the A/V angle to such a great hifi system could so easily be a recipe for disaster, but the Musical Images team proved

that it can be done — and stylishly, at that. The A/V package consisted of a Yamaha DSP-E580 Dolby Pro-Logic processor/amp, with a Mission 73C centre channel speaker and a pair of Mission 73S rear speakers. This was bolstered with the small but meaty Miller & Kreisel V-75 subwoofer. For the record, the video source in all the systems was the £1,800 Pioneer Elite CLD-99 NTSConly LaserDisc player. This unit was overkill until we got to the AC-3-equipped high-end system — but then, overkill is part of the fun.

This add-on system doesn't undermine the main hi-fi system one jot. It offers the same fun factor, but throws in a remarkably subtle surround and well-controlled centre which match the hi-fi rather well. The ability to understand the voices above the background without straining more than justifies the whole Dolby Pro-Logic thing.

Then there's the M&K sub. For a box the size of a pack of peas it delivers chest-freezersized deep bass that is really noticeable above the Mission 733. As it isn't as musically sophisticated as the speakers, it's best left to A/V duties where it can be used to add filmscore impact at the touch of a button.

Ultimately, it would be possible to boost the A/V performance by opting for the bigger Mission 75C speaker in place of the 73C. This would maintain a similar tone to the 733 fronts, but would depart from the slightly lean balance of the 73C speaker; this would also up the sound of the Yamaha without highlighting any of the system's limitations.

SYSTEM 1 The hi-fi Marantz CD-63/ll Special Edition CD player £350 Arcam Alpha 8 amplifier £350 Mission 733 floorstanding speakers £330 The A/V: (Pioneer Elite CLD-99 LaserDisc player£1,800) Yamaha DSP-E580 Dolby Pro-Logic processor/amp Mission 73C centre speaker £150 Mission 73S rear speakers (pair) £160 Mission 73S rear speakers (pair) £420 TOTAL (excl. LaserDisc player) £2,179

Come in, number two

The middle-price hi-fi package begins life as Cyrus electronics with KEF speakers. The £900 dAD 7 CD player is accompanied by the £698 AV Master Dolby-equipped preamplifier (which is actually a superb stereo preamp in its own right). Power amplification is served up by the upgradeable Cyrus Power/PSX-R combination and from there is fed to a pair of KEF Reference Ones. The Cyrus amplifiers allow the user to add more Power/PSX-R combinations for bi-amping, monoblok or more for full-on maximum power applications.

Even in standard guise, the sound of the basic set-up is excellent, setting a standard considerably higher than the first system. This combination adds an extra octave or so of bass, while making the overall sound bigger and considerably less harsh and sharp - attributes that were only noticeable by comparison. It also improves imagery and stage depth, making the hi-fi system rather more versatile and musically transparent than the cheaper system but, paradoxically, rather more demanding and revealing.

Admittedly, using an A/V Master as a preamplifier is a pretty big hint that something A/V is on the cards. But how much do you need to spend to make A/V as good as hi-fi? The AV Master has a built-in centrechannel amp, but the further Power/PSX-R for the rear-channel is vital. For the rear speakers, a pair of KEF 70S speakers were drafted in, accompanied by a KEF 100 centre speaker which is tonally balanced to match the Reference Ones. Naturally a subwoofer was called in, but this time it was a bigger and better Miller & Kriesel 125THX. This all comes to approximately 60% of the cost of the hi-fi components in the system.

The whole A/V caboodle slots into the hifi with ease to create a slightly richer and darker aural picture than the budget system, How much more Cyrus electronics can you get in one system?

with a significant boost in scale and drama. The articulate centre-channel makes following film soundtracks a doddle. The bigger subwoofer more than justifies its existence

by adding an impressive amount of impact, welly and grunt without slowing the sound down. In all, this Cyrus/KEF/M&K package gives a impressive account of itself in both hi-fi and A/V modes and makes the jump from the first system so obvious that even my granny could spot it — and she's stone deaf.

Our highly trained direct sales operatives are always ready to take your calls

TOTAL COMMITMENT TOTAL SERVICE

UK's LEADING DIRECT SALES/MAIL ORDER SPECIALISTS - With our vast experience in direct sales you can be

'assured of a first class service. UK's LARGEST RANGE OF ELECTRICAL GOODS - Empire

Direct (UK) can supply almost any make/model of TV's, VIDEOS, CAMCORDERS, HIFI SYSTEMS and SEPARATES direct from our vast stockholdings.

FREE NATIONWIDE 48HR DELIVERY SERVICE goods delivered free to your doorstep anywhere in the UK mainland (for orders over £100).

NATIONWIDE IN-HOME AFTER SALES SERVICE NETWORK - Full manufacturers guarantee on all products covered by our exclusive in-home servicing

UK'S LOWEST PRICES - in the unlikely event that an identical product is advertised and available from stock at a lower price, Empire will beat that price!!!

A DEDICATED DIRECT SALES DEPARTMENT - our vastly experienced team of direct sales operatives are always at hand to help you with your choice.

FREEPHONE HOTLINE 0800 454980 - It's the only number you'll ever need and it won't cost you a penny.

NATIONWIDE INSTALLATION SERVICE - For a small fee we can arrange a professional installation of your equipment anywhere in the UK mainland.

SIMPLE ORDERING PROCEDURE - choose any make/model required, call us with your credit card number and one of our highly trained operatives will arrange delivery direct to your doorstep.

EMPIRE ARE MEMBERS OF RETRA - the electrical Radio Traders and Retailers association - our commitment to the utmost in quality performance and service.

EXCLUSIVE MEMBERSHIP TO OUR DIRECT SALES CLUB - access to exclusive members only offers. Simply dial our freephone number to register. No purchase necessary

Hail The Grande Fromage

Finally, in walked the big guns: the grande fromage; Musical Images' impression of the Mutts Nuts. Although it began innocently enough with the truly excellent Meridian 508.20 CD player, proceedings started to look much more serious when I realised it was connected to a Sumo *Artemis* line pre-amplifier from the US and thence to a pair of hefty Sumo M-10 monoblocks. These were hooked up to a pair of my all-time favourite speakers, the ProAc *Response 2.5*.

I had always considered these speakers to be the sole preserve of the valve amp, but the Sumo amps drove them as if they had been designed for the task. The sound was fullrange, free, warm and very, very sophisticated. Being used to the source and the speakers, I'd expected something smooth and satisfying, but I was taken aback by the sheer sit-in-frontability of the whole package. The demo almost stopped right then and there, had Musical Images not restrained me from playing every CD within reach.

But there was more to come. At the time, ProAc didn't have a centre-channel speaker in its portfolio, so Musical Images used a single *Response 2 'S'* speaker. This was powered by another Sumo *M-10* monoblock. A conventionally-sized, unshielded speaker on a heavy stand is not going to match in with a regular TV set, but at this level of sophistication the A/V buyer should be looking at a projection screen anyway — the new *Response CC One* centre channel negates the need for a *Response 2 'S'*, anyway. This kind of A/V system now has to feature the new AC-3 Dolby Digital 5.1-channel format, regardless of the fact that there are only a handful of LaserDisc titles that support it. As such, the system was enhanced by using a Meridian 519 laser demodulator and 565 AC-3-equipped processor all fed from that Pioneer Elite LD player.

AC-3 is the one for me

The main advantage of AC-3 is that it incorporates a pair of full-range speakers for the stereo rear-channels, so two ProAc *Studio* 150s were used along the side walls, facing toward the sofa from behind. These was driven by Meridian's superb 557 power amplifier (we'd run out of M-10s). Lastly, the bass was shored up by the awesome M&K MK200 subwoofer. This system costs a whopping 126% of the original hi-fi system.

If anyone ever says that A/V is all about explosions, this system proves otherwise. It is every bit as subtle and sophisticated as the hi-fi, yet can deliver powerful bangs with the rest of 'em. This is not just designed to sound impressive at the drop of a machinegun. If anything, it almost has a laid-back character, but with a clarity and definition that puts the others to shame. Voices have a living, breathing quality, while the surrounds blend in to place you in the centre of the action with refinement.

What can we draw from this? Well, in the first instance, that we hi-fi buffs should not be scared of AV. It may be a cliché but it really does lend that extra dimension. Next, it's easy to hear the tonal differences between the front, the centre and the rear speakers, so use products that match.

Cut your budget according to your hi-fi. The further up the ladder you go, the less you have to spend (in theory), but routinely 50%-60% or more of that original budget is required to add good A/V to your hi-fi.

Lastly, if your hi-fi system is ancient, change it. Aside from the difficulties you may face if your amplifier lacks inputs, try and find a pair of matching speakers!

If you are still unconvinced that A/V has a future in hi-fi, a trip to Musical Images will set the record straight. After all, if it can do it for me...

Does the best price always mean the best deal?

"I thought I had this buying hi-fi business sorted out. I bought all the hi-fi magazines and read them thoroughly, because I reckoned their experts knew exactly what they were talking about - at least a lot more than I did! It was reassuring to see the same product names cropping up regularly and I figured the writers' experience and guidance would steer me straight to the system of my dreams. The trouble is I've ended up more confused than when I started.

One reviewer said a product I fancied was absolutely brilliant but another said it was nothing special at all. How can that be? Surely one CD player is pretty much the same as another? And how can a loudspeaker that's one magazine's top recommendation not get so much as a mention in any of the others? And then there was the amplifier that was the best in the test six months ago, yet now I never see it mentioned. I don't mind admitting it, I'm completely lost."

Plan B — I'm going for a deal

"So, I've decided to adopt plan B. I'm sure there can't be any really dramatic differences between all this gear and it's all bound to work together properly, so I'm going to check the price lists and the adverts and shop around for the best deal. I know getting the right hi-fi is important hey, I'm as mad about music as anyone but if I can get close to the mark and save a few quid, I'm sure I'll end up with a good system and be happy. I know there

are specialist shops out there that do demonstrations and reckon they've got all the solutions but, to be honest, I'm a bit scared of going to one. I'd really welcome some advice and guidance but

I don't know all the technical jargon and I'd feel daft sitting there trying to "hear the differences" if I couldn't. Anyway, a friend told me that these shops only sell the really expensive gear and that they're not interested if you don't have loads of money to spend."

And so another hi-fi buyer starts his journey down the road to dissatisfaction, endless upgrades and a permanent overdraft. There is only one way to buy a hi-fi system that will prove satisfying, reliable and deliver true value for money, and that's through a specialist hi-fi dealer. Let's face it, you wouldn't think about buying a car if you couldn't take it for a test drive. You wouldn't buy a house solely on the strength of seeing the estate agent's details and a photograph. Even if you're spending far less, say buying a jacket or a pair of shoes, you want to try them on to make sure they fit you.

Buying a hi-fi system is no different. It doesn't matter what the specifications say or what the "experts" think: if it doesn't measure up to what you want from a system, then it's not the right choice. Knowing that you've bought a room full of five-star favourites or best-buys is no consolation when you can't bear to listen to them for more than five minutes. Even that ten per cent discount on the price won't make them sound any better.

Buying or being sold to?

Mind you, most of us are easily suckered when it comes to buying hi-fi. Given the choice of venturing into the unknown territory of a specialist dealer's shop and exerting some influence over what we buy, or taking what looks like the easy route having adverts and magazine reviews push us along a path sweetened with discounts and special offers — we opt for the latter. We don't buy a system, we allow ourselves to be sold one. We side-line our own ideas about quality and personal satisfaction and buy someone else's opinion of what's good for us and good value for our money.

Take control!

Now there's a group of long-established, independent specialist dealers who are totally committed to putting the customer back in the driving seat. They're encouraging the buyer to take control ... with a little help and guidance provided where required. They know how difficult it can be to establish the true quality and worth of hi-fi and home cinema systems.

2

Ask the UK's top twenty specialist hi-fi dealers.

They know that without

experiencing the performance of the systems they offer, you can't possibly assess the value of them. That's why their idea of "selling" is to play the systems for you and allow you to be the judge.

Listening to your choice of music in a peaceful, well organised demonstration room, you may be surprised and, almost certainly,

relieved to discover how easy it is to hear the differences between components and between systems. With the dealer's help and advice you will be able to make a clear and informed decision about what to buy. It comes down to trusting your own judgement rather than the opinion of a reviewer you've never met ... and who won't refund your money if you're not satisfied or be at the end of a phone to sort out any problems you might encounter.

The story doesn't end there. These shops won't abandon you once you've put your hand into your pocket. They won't leave you to set up the system you've selected as best you can. They'll install it in your home, make sure it sounds great, and make sure that you're entirely happy with the way it works.

Why bother?

There is, of course, one question that hasn't been answered: why should you and these dealers go to all this trouble? Well, from your point of view maybe it's because a good deal is about a great deal more than just price. Unless you've got money to burn, you'll be living with your new system for years — years during which most of those five star products will probably

stop shining quite so brightly.

As far as the dealers are concerned. maybe they believe that taking care of their customers properly is a nicer way of doing business than just handing over boxes.

Listed on the right of this page are the best hi-

fi shops in the country. They all have lots of stars. You'll find them on the shop floor: they're the people waiting to guide customers towards hi-fi for which the appeal won't fizzle out the next time you buy a hi-fi magazine.

CD players keep on getting better – and cheaper! Alvin Gold (listening test) and **Paul Miller** (lab test) pick out the gems among 14 new models.

e had no difficulty finding 14 new CD players to test this month. This product area is one in which manufacturers still see plenty of opportunities for change and development. So our latest bunch of hopefuls are priced from £130 through to £350, with eight coming in at £200 or less. In other words, we're looking at the affordable end of the market.

Putting sound quality to one side, many of the players share a distressing uniformity. There is less innovation in the range and type of facilities on offer, and while some make full use of all the editing and trick-play facilities provided, most people will be either indifferent to the unnecessary complication, or actively put off by it. And here is where

THE CAST LIST

Cambridge Audio CD6	£300
Harman/Kardon HD710	£200
JVC XL-Z574	£250
Kenwood DP-3080	£170
Marantz CD-67	£270

Sherwood CD-4030R	
Sony CDP-XE500	£160
Sony CDP-XE900E	
Technics SL-PG480A	
Yamaha CDX-490	£170

the first real division in our group of players arises. It's not so much the number of widgets, but how effectively they're integrated and hidden from those who don't want to use them. In this respect, there are some big variations, but good design should not cost significantly more than bad design.

It's worth noting that some players have headphone sockets, and others don't. Those with headphone sockets might also have volume controls to adjust the headphone volume level, so that you can listen to the CD player via headphones remote from the rest of your hi-fi system. In some cases, the level control is also in series with the main line output, which is inconvenient and inevitably impacts on sound quality.

HOW WE DID THE LISTENING TESTS

hese tests follow the pattern of previous months, though this time we're reporting on the numerical scores entered by the panellists. In most cases we're reporting minimum, maximum and average scores. To a certain extent, these figures reflect the immediate context of the listening test, so if a player sounded much better than the few preceding it, it may have been scored disproportionately well. Overall, though, the scores are representative of merit.

What hi-fi did we use for the tests?

The panel tests took place over two days, and the test system was designed to be neutral, analytical and a clear step or three up the greasy quality ladder. This avoided cramping the style of even the best of the players, while also making for a more realistic environment. The equipment list included a Musical Fidelity A1000 integrated amplifier and Definitive Technology BP10s, a high-grade, bi-polar

floorstanding design. Speaker cables were IXOS 606, interconnects were IXOS 103, and supports were from Mana Acoustics and IKEA.

We played a uniform selection of tracks (see right) on one or more occasions under single blind conditions, with each player identified by a number only. Panel judgements were weighted according to the consistency shown when players were presented more than once. For the most part results were very consistent. Where panel members had conflicting opinions, this is discussed in the individual reviews.

I also did my own, more extensive handson test. Using a wider variety of partnering equipment, I listened on a system whose capabilities roughly matched the best of the test group. I used a Mission Cyrus pre/power amplifier and Polk Audio RT8 compact floorstanding speakers, as well as a much wider range of music, and this is mentioned in the tests where appropriate. AG

The Listening Panel

Keith Haddock (Gamepath) • Russell Kauffman (Morel) • Jason Kennedy (Hi-Fi Choice) • Robin Marshall (Mission) • Guy Sargeant (ex-Audio Partnership) • Alan Sircom (Hi-Fi Choice) • Ken Weller (B&W) "Our grateful thanks to one and all!"

Music used for the panel tests

Ravel - Pièce en forme de habanera: Charles West (clarinet), Susan Grace (piano) (Wilson Audiophile)

Holst - First Suite in E flat Major for Military Band, Opus 28 No 1 (final movement): Eastman Wind Ensemble (Sony Classical) Bartok - Concerto for Orchestra (finale): Chicago Symphony Orchestra/Pierre Boulez (DGG)

Keb' Mo' - Tell Everybody I Know (Okeh) Jennifer Warnes - Somewhere, Somebody (Private Music)

Cambridge Audio CD6

Some CD players wear their hearts on their sleeves. Others — and the CD6 is a perfect example — conceal their true nature behind a bland facia. There is a touch of originality in the form of a graphical disc-remaining indicator in the otherwise ordinary back-lit LCD function display, but the CD6 is perhaps more notable for the very basic set of controls available on the frontpanel itself. The usual twiddly bits can of course be accessed via the remote control.

This is an ambitiously specified player, constructed internally as separate analogue and digital sections with extensive mutual screening and a jitter lock between them. The sophisticated power-supply section consists in total of three transformers and no fewer than 14 regulated supplies. The D/A convertor is a dual differential design built around the Philips *TDA1305*, with good quality internal wiring. Around the back you may be surprised to find AES/EBU balanced outputs in addition to the standard unbalanced analogue outputs. The digital S/PDIF output takes a BNC connector, but BNC/phono adaptors are readily available.

Sound Quality

Although the *CD6* was thought 'scrawny' at times, the panel's comments on this player were generally positive, and on occasion

one listener of Keb' Mo's *Tell Everybody I Know*, adding that there was 'a very strong sense of togetherness. It actually sounds like a band playing together'. In the Ravel piece for clarinet and piano. the same

listener described the CD6

very much so. 'Rhythmic and

bouncy', wrote

as 'very focused – almost mono-ish', and in the finale of Bartok's *Concerto for Orchestra*, he noted that 'There is less stage width than the others but an altogether more focused and integrated feel.' The Jennifer Warnes track showed very strong voice articulation, which was noted by most of the panel.

After listening to the complete presentation, one listener felt sufficiently moved to remark that the Cambridge CD6 was 'the only player (so far) that makes musical sense'. There was one dissenter, however, who thought the player was 'warm and mellifluous' but with a 'thick, glutinous bass', making for a 'pleasant if less than gripping sound' (Ravel). This one comment apart, the bass attracted nothing but praise, 'Nicely extended' and 'good bass reproduction' (Jennifer Warnes) were typical remarks, and then 'at least it has bass of sorts' according to a third ultra-critical listener who rarely brought himself to utter a positive word about the bass of any of the players in the session he attended.

I disagree about the 'warm and mellifluous' comment; I found the CD6 taut and crackling with energy, acting as an advocate by bringing music to life in a way that eluded most of the others. That said, it needs a good quality, well-focused system to show its best side. It could sound raucous and ill at ease with systems of limited resolution and dynamics — which, in practice, usually means budget systems. If you want something a little easier on the ear, you should perhaps look elsewhere, but if you want to hear, perhaps for the first time, what is on those discs in your collection, the *CD6* can do the job as well as some acclaimed players at two or three times the price.

ON TEST

Conclusion

Campridge au

Ignore the boring styling: this player (from the pen of John Westlake no less, formerly of Pink Triangle) is a thoroughbred unit that's well-honed and highly capable. Even better though, it's also thoroughly enjoyable. And with a price-tag of just £300, it's a snip. **AG**

THE LAB REPORT

The Cambridge *CD6* is rather like an integrated version of the company's *DACMagic II* outboard convertor, and includes individual power supplies (including three separate transformers) for its transport, digital signal processing and analogue stages. J-FET op-amps are employed in the final analogue output, which has a usefully low (<1 0hm) source impedance. Long interconnect cables and 'difficult' preamplifiers should be driven with ease.

Pairs of Philips' *TDA1305* Bitstream/Continuous Calibration (BCC) DACs are deployed to yield a massive 110dB S/N ratio, even though in practice this is dragged down by some + 14dB of noise modulation. This, plus the characteristic type of jitter incurred by the *CD6*, accounts for much of its bright and slightly over-hyped sound, despite the response drooping by about -0.5dB at 20kHz.

Traditional harmonic distortion, meanwhile, is consistently low at 0.006-0.018 per cent through the important -30dB zone, while its low-level linearity remains true to -0.5dB across a full 100dB dynamic range. Oh yes, the *CD6*'s dual-mono construction endows it with a stupendous >130dB channel separation. Plenty of engineering for the money, and no mistake. *PM*

23 Branches Nationwide

At Sevenoaks Hi Fi you will find a wide range of products on show with the emphasis on quality combined with unbeatable value for money.

Everything in stock is on display and available for audition in our dedicated Hi Fi and Home Cinema demonstration rooms.

Our friendly and experienced staff will be happy to assist you through every step of your purchase to ensure total listening satisfaction.

Harman/Kardon HD710

arman/Kardon's Class Of '96 includes a full range of CD players, including this £200 budget model. A full-width machine which is considerably taller than the average, the *HD710* is a relatively gimmick-free design with large, well laidout controls. A well-featured and attractive fluorescent display includes a calendar-style readout along the bottom edge, but this can be turned off, leaving just a tiny dot to show that the player is still alive.

The feature set is more comprehensive than the simple front panel leads you to expect, and includes a range of disc-to-tape programming options. There's program play, intro scan, several repeat modes including A-B (playing from arbitrarily-set end points — useful with instructional titles or when trying to copy chords or riffs) and random track access. This last feature can be activated via a numeric keypad on the remote handset. A digital output is available in electrical form, and the *HD710* can be plumbed into Harman/Kardon-branded systems, in which case it will respond to system remote control commands via a rear-panel link.

Only limited information is available to explain what lies under the skin. The linear

tracking mechanism is from Sony, and the convertor stage is b a s e d o n a Technics' MASH low-bit chip, the *MN6474*. There's no information on the filters, but the lab report shows their effectiveness.

Sound Quality

Praise and criticism alike were well-scattered, with few deficiencies noted consistently from one presentation to the next, and a similarly inconsistent set of judgements on a repeat presentation. Overall scores ranged widely in two separate presentations, in each case (with different panel members) varying from 3/10 to 8/10.

Making sense of these apparent contradictions is not easy, but analysis shows that the arithmetic average score was a reasonable if unexciting 5.5/10, and that the lack of agreement about specific problems and limitations was itself a positive sign. There was, however, some general criticism of a lightweight bass, and significant criticisms of treble quality described by one panel member as 'odd' with triangles and other percussion. The midband, though, was generally held to be open and detailed.

'A dynamic, articulate sound, full of delicate, pleasing nuances and good timing [in the Ravel],' wrote one judge; 'there was some feeling that the player struggles a bit through complex passages,' said another. The third member thought the player 'thickset' with a 'ponderous bass', and that it could do with 'more space around the

instruments' in the Bartok Concerto for Orchestra. My own separate listening left me slightly more favourably disposed than the panel, although I have no quarrel with most of the specific observations other than those describing the bass as ponderous. The HD710 is indeed a crisp and detailed, if not always very refined, player - almost a MASH trademark. It pulls a lot of information off a disc and presents it coherently and believably. There is a trace of hardness at times, evident with vocals, chamber music and piano and especially at high levels. However, the bass sounded weighty and tuneful with all the programme material tried.

ON TEST

Conclusion

harman/kardon

Not a mould-breaker, but a solid, workmanlike CD player with the traditional house sound associated with the brand. The *HD710* is a little too fussy about programme and partnering equipment to make a safe overall recommendation, but the price is reasonable and it's worth auditioning. **AG**

 \rightarrow

THE LAB REPORT

Despite blacking-out all the crucial chips within its budget *HD710* CD player (what is H/K trying to hide?), my measurements reveal Harman's latest choice of DAC to be the familiar *MN6474* from Technics. This would appear to mark a return to the '3D Bitstream' days of yesteryear, where players such as the *HD7500* and *HD7600* carried the flag for Harman. Either way, this puts the *HD710* in a similar technological pigeonhole to the NAD *512* in this issue.

Certain features, including its 'shaping' of ultrasonic noise, the healthy 82dB suppression of stopband images and flat frequency response are all familiar characteristics of Technics's MASH/PWM DAC. And yet, H/K has imposed additional 'color' of its own, with relatively high levels of distortion (midrange distortion is particularly messy at mid-to-low signal levels) and a S/N ratio compromised by spurious frame-pattern tones at 7.35kHz, 14.7kHz and 22.05kHz. Although these tones are unlikely to be directly audible, they do limit the overall range to a just-about-16-bit value of 98dB.

There's also some magnification of low-level detail (+3.3dB at -90dB) and an unusual pattern of jitter at 785psec to contend with. If nothing else, the *HD710* certainly has character! *PM*

JVC XL-Z574

middle-price player, the XL-Z574 is sold on the back of technical prowess, in particular a package of measures collectively known as Z-Chassis (although confusingly, not all are concerned with the chassis itself). The Z stands for zero, and the idea is to minimise resonant behaviour in the structure and to improve electrical behaviour. Resonant behaviour is addressed with thicker chassis panels, the base being heavily ribbed to resist deformation. The player mechanism is positioned to reduce the effect of chassis-borne vibrations, namely at the centre of gravity. In addition, the transformer is isolated from the rest of the chassis.

Electrical performance is optimised by keeping analogue and digital sections wellseparated and screened, and by employing short, optimised signal paths. Digital hardware follows recent JVC practice, with a proprietary 1-bit PEM (Pulse Edge Modulation) converter that uses twin DACs, allowing a reduced clock frequency for lower noise and improved resolution. The hardware also includes fourth-order VANS (JVC's Advanced Noise Shaper) which is said to allow comparatively gentle low-pass filtering with an improved phase response.

The XL-Z574 is fitted with an optical

digital output, which can and should be switched off when not in use, and a headphone socket whose output is fed via a volume control. (The control is electronic, but with finer steps than some.)

Random track access is available via remote control or front panel, and the over-fussy display can be turned off, although power-on default is with all lights shining bright. System remote sockets provide an interface with pre-existing JVC equipment.

Sound Quality

Mixed scores (averaging around 5/10) greeted this player, which attracted generally positive comments for the midband performance but some criticism for its frequency extremes. The bass was described as 'one-note' and the treble as bright and harsh. 'Forward, in-yer-face sound lacks body,' wrote one panel member after the Holst presentation, and went on to accuse the Jennifer Warnes song Somewhere, Somebody of having splashy percussion, some shushiness of sibilants and ill-defined bass pitch. The same Jennifer Warnes track was thought 'open, focused but loud' by another judge, but generally 'pretty together, with a good insight into the character of the voice'. The Bartok was felt to be both 'a bit thin and fatiguing', and 'quite big dynamically, but tonally bright and probably tending to aggression on complex brass, and splashy on percussion'. This judge also passed comment on a one-note quality in the bass response.

The one-note quality was not identified in the separate hands-on sessions, but there was no questioning the rather thin and anaemic balance: although undeniably detailed, it made a meal of complex, heavyweight symphonic and choral material. The bass was certainly dry, giving a rather lightweight, diminished-scale account of familiar recordings. There was also some effect on stereo imagery, which was precise but lacking in acoustic scale and presence. The midrange, however, was generally clean, open and detailed with good layering of sounds recorded at different distances. Also, the JVC worked well in instances where bass and extreme treble were not a prominent part of the sound.

Conclusion

0.00

CD player design is all about marrying a range of qualities, and there is no single magic key that assures good CD player performance. Assuming the player's technical performance matches JVC's claims, other weaknesses must be to blame for the rather raw, treble-led balance.

THE LAB REPORT

To all intents and purposes, JVC's XL-Z574 behaves like a slightly cheaper and K2-less version of the £300 XL-Z674 (issue 151). As a consequence, the Z574 version suffers slightly higher levels of distortion (up to 0.009 per cent at -30dB), even though in the context of this group, this still represents the best overall result. The XL-Z574 sets the standard in other areas too, offering excellent low-level linearity and a wide S/N ratio, even taking into account JVC's use of a digital mute circuit to 'improve' its noise figures.

Moreover, the Z574 has a tremendously clean spectrum; free of digital artefacts (stopband suppression is >105dB) with very, very low levels of ultrasonic requantisation noise. Indeed, JVC's PEM convertor strategy really does seem to combine the benefits of both bitstream technology (low distortion and excellent low-level linearity) with other areas of performance which were previously only associated with multi-bit convertors (wide dynamic range and low ultrasonic noise).

Nevertheless, previous experience with earlier JVC players – and particularly those with such a wide open 'dynamic window' – has indicated a susceptibility to RF noise from the local environment, potentially causing the bright sound heard on this occasion. PM

CD PLAYERS

The second cheapest in the five-strong DP series, this well-equipped model from the house of Kenwood costs a moderate £170. The full-width player is fairly bulky, though its flimsy structure pays no heed to microphony, and few unnecessary resources appear to have been expended inside.

Aesthetics are not the *DP-3080*'s strong suit. The display characters are small although the window they occupy is large, and the controls, presented in several clashing styles, are cramped into the central section of the facia while part of the right-hand side is left blank. There is even what appears to be a mistake in the design of the random track access keypad: the designer has had to usurp one of the keys from an unrelated group of controls to perform the 'ten-plus' track-number function.

In equipment terms, the *DP-3080* provides few hostages to fortune. There are edit facilities that allow tapes to be collated from multiple discs, peak-level search, repeat (including A-B repeat) and random play. Disc search tools include intro-scan. Headphones can be used via a front-panel rotary volume control. Other sockets enable the *DP-3080* to be wired into the system-

control circuits of a Kenwoodbranded system, and you'll find that an optical digital TOSLINK output is fitted.

The DP-3080 employs a one-bit KENWOOD NPC 5864 convertor and digital filter, along with Kenwood's recent Advanced High-Precision Master Clock iitter reduction circuit and DRIVE (Dynamic Resolution Intensive Vector Enhancement, no less). Notwithstanding the name, the latter is an adaptive digital low-pass filter designed to reduce step (quantisation) distortion on low-level and low-frequency waveforms, without detriment to large amplitude signals.

Sound Quality

The Kenwood was well received on audition, each listener describing the player in broadly the same terms as strong, dynamic and upfront. It came close to exposing the dynamic and spatial heart of the music, and reproducing much of the detail off-disc, too. 'Some real bass at least,' said one, and other comments pointed to the bright but articulate midrange/treble and the strong sense of transient attack, for example in the Bartok track.

However, some suggested that the Kenwood might not wear very well. 'More front than Sainsbury's,' wrote one participant, and another thought that the *DP-3080* was the most immediately exciting player so far, but perhaps fatiguing and superficial in the long run – and obviously loud and 'in

your face'. A nother member wrote that 'this player can party – but even parties have to come to an end sometimes. You can have too much of a good thing.'

- 11111

ON TEST

On a system synergy point, the slightly bright *DP-3080* is probably not the best choice for already aggressive-sounding systems. Otherwise it was difficult to trip up in the hands-on sessions where it played material as varied as *Mahler's 2nd/*Gilbert Kaplan (Conifer) and Capercaillie/Secret People with bold and vividly painted strokes, from a rich yet brightly-coloured tonal palette, and with uncluttered three-dimensional imagery set against inky black backgrounds.

Conclusion

Here is a £170 player with a £250-goingon-£300 sound, which is a real surprise given its modest build quality. Best Buy material obviously, though the player is more suitable for smooth, well-controlled systems than those that are bright, edgy or otherwise not well controlled. **AG**

THE LAB REPORT

This new *DP-3080* is distinct from Kenwood's earlier *DP-3060* (issue 139) in several key areas, although not wholly from the change in technology from NPC's one-chip *SM5872* to the combination of *SM5841* eight-times oversampling filter and *SM5864* bitstream DAC in this newer model. Distortion, for example, is very similar at 0.0009-0.025 per cent at peak output and 0.0025-0.03 per cent at -30dB. The pattern of ultrasonic noise remains comparable because both the *SM5872* and *SM5841* employ the same noise-shapers.

Importantly, the clump of sampling tones suffered by the *DP-3060* between 30 to 40kHz are absent in the *DP-3080*, although residual stopband images are still only suppressed to a maximum of -54dB. IM distortion has worsened slightly while its overall S/N ratio has been squeezed from 103dB to 101dB. Its output impedance has been 'loosened' from 400 Ohms to 1.2k Ohms, and low-level linearity has been allowed to deviate by up to +1.4/-5.5dB over a full 100dB dynamic range (+0.0/-1.3dB for the *DP-3060*).

For all this, the Kenwood *DP-3080* has one fundamental saving grace: just 193psec of digital jitter, which represents the lowest such corruption of any player in this test. Victory then, plucked from the jaws of potential doom. *PM*

Marantz CD-67

The *CD*-67 replaces the *CD*-63*mkll* at the same price (£270), and will be made available in an enhanced-sound-quality *SE* version, although it is the plain vanilla option we're testing here.

This is a one-bit player built around the Philips SAA7372GP CD7 decoder IC (upgraded from the CD6), with a new servodrive chipset. The improved specs should provide more accurate control of the linear tracking mechanism, plus better tracking and focusing of the servo, with the aim of improving the eye pattern retrieved from the laser. The E-core transformer has also been upgraded with better laminations and wiring. The SM5872 DAC is unchanged from the CD-63, which was the first Marantz not to use a Philips component (Marantz is a sub-sidiary of Philips).

This player offers a full goody bag of bells, whistles and interconnection possibilities, straight out of the CD-63 songsheet, although the sober aesthetics help tame a potentially intimidating control system. The CD-67 can be wired into Marantz systems using rear-panel bus links to complement the full-function remote control. The latter operates a resistive ladder-type output volume control that supplies both headphone socket

and line output phonos. Other fea-

tures on the list include a full set of programming options, intro scan, A-B and other repeat modes, random play and a three-stage display dimmer. Randomtrack-access keypads are available both locally and on the remote control. The player also has optical and electrical coaxial digital outputs, which make it easy to upgrade.

Sound Quality

There were mixed feelings about this player, which attracted scores from 3/10 to 7/10, with an average of just under 4.5/10 – a little disappointing in view of its predecessor's good showing. The rather restrained (even enclosed) sound, its 'muddy' bass and its idiosyncratic, mid-forward tonal balance were the key points holding it back. One panel member wrote of the superbly recorded Ravel piece (on Wilson Audio): 'The soundstage seems flatter than I remember, with less sense of depth, as though the musicians are printed on the wallpaper,' and that the Bartok was 'smallish and dynamically restrained, with wiry-sounding strings'.

Jennifer Warnes' Somewhere, Somebody was felt to have a 'muddy, detached bass with poor timing' by one judge, although this view wasn't held universally. However, a degree of hardness and aggression in the midband was noted in almost all the listening notes, both on the original and in the repeat presentation. Treble quality was considered to be graceless at worst and lacking in subtlety at best.

ON TEST

Nevertheless, the Marantz has other strengths. It has an unusually rich yet vivid sense of tonal colour, and an ability to deal with the architecture of large-scale music in a way that left most of the competition in the shade. Keb' Mo' and other rock and blues recordings came across with a pleasing solidity and physical presence, but the more complex orchestral recordings such as Arnold (Serenade for Small Orchestra Op 28 on Everest) and Schoenberg (Pelleas et Melisande/Israel Phil/Mehta on Sony) showed the Marantz's true mettle.

Conclusion

The slightly loud, overbearing presentation and lack of resolution of this player are only partly offset by its excellent musical architecture and tonal variety. The shortcomings should be addressed in the forthcoming SEversion, which could be pretty special. **AG**

THE LAB REPORT

Marantz's hugely successful 63-series players were all based on a combination of Philips' *CDM12* mechanism, servo and decoder chips, with NPC's combined eight-times-oversampling filter/bitstream DAC, the *SM5872*. The new *CD-67* is no different, although its use of two JRC op-amps in the analogue filter (including Cerafine decoupling caps) with a screened HDAM output buffer (including Silmic coupling caps) seems to put it closer to the *CD-6311* (issue 151) than any other.

However, in practice, its 103dB S/N ratio is closer to the *CD63SE* than the 101dB achieved by the *CD-63II*, and while its characteristic and highly complex jitter pattern remains recognisable, the overall level has fallen from 650psec to 498psec. This is a step in the right direction, although it's still too high to guarantee favour with all listeners.

Otherwise, the *CD-67* is a good egg, offering low distortion (0.0014 -0.03 per cent at -30dB) and a high-ish output (2.35V – beware non-matched A/B comparisons) driven from a usefully low 215 0hm source impedance.

Whether you appreciate the tonal colour of the *CD-67* may, in the final analysis, boil down to taste, but at least its performance should be consistent from system to system. *PM*

BLUE MURDER SALE O

UNILET SOUND & VISION 21st SEPTEMBER -10th NOVEMBER '96

We've murdered the prices of leading Hi-Fi and home cinema brands — if you want to move in for a killing it couldn't be simpler

- Just phone or clip the coupon for a sale price list
- Visit Unilet between 21st September and 10th November 1996
- Full demonstration facilities available during the sale period in our audio and home cinema rooms.

Micromega Minium CD

In the internal circuit boards. The *Minium CD* is, in effect, a hard-wired version of the basic *Stage* model, and cannot be upgraded; it is available also as part of a complete *Minium* system.

Although it lacks any strong styling features, the *Minium CD*'s ultra-simple alloy case, and complete lack of gimmickry, mark it out from the crowd. There are just six controls on the front-panel, which are sufficient for all normal purposes, including sequential track access and cueing (a two-speed, timercontrolled feature that provides an audible output only on the lower speed). An electrical coaxial digital output can be enabled or disabled with one of the front-panel switches. Unusually, absolute phase of the standard analogue output can be selected, typically to correct a phase-inverting system (though the player defaults to positive phase at power-on) or simply to 'correct' particular recordings.

Only the remote control provides any relief from the *Minium*'s austerity. This is a true multi-button monster (there are 46 of the blighters) that brings the feature count

PR	LICE £350
	Attractive, compact and easy-to-use player with a pleasing tonal balance, articulate midband and strong bass.
▼	Dynamically weak; rough and edgy with some kinds of music.
\boxtimes	Micromega D A Ltd, PO Box 13, London E18 1EG
2	(0181) 502 1416

up to industry standards. It also functions as a complete *Minium* system handset. Included are a

random-play, track-access keypad, programming, track/programme/disc and A-B repeat modes, and a display dim/bright switch, but no explicit support for tape-editing functions.

This Bitstream player uses a Philips *CDM12.2* mechanism, in-house control software and a *CD7* decoder.

Sound Quality

This Micromega divided the four-strong listening panel. Two participants marked it highly both in the original and the repeat presentations, one marked it slightly belowaverage both times, and the fourth marked it inconsistently in the two presentations. With low and high scores of 4/10 and 9/10, the average score was a smidgen short of 6/10, which is disappointing considering it was the most expensive model in the group.

'A night and day difference (compared to the previous players),' said one of the Bartok *Concerto for Orchestra*, 'This piece sounds as though it was composed instead of being just an orchestral warmup. It's not perfect – it could use some lowend weight – but this is a seriously musical player, with a sense of

musical scale and drama.' Another described it as 'slightly rounded but very expressive, with fair dynamics. I would really like to turn the volume up.' These comments encapsulate the attitude of the panel, the most negative comments coming from those who thought that some of the music was 'lacking in drive' (Jennifer Warnes) and 'insubstantial' (Keb' Mo') too. 'Ambient, but dry', is a view that was expressed in various forms on several occasions.

The bass quality, however, attracted particular praise. 'An appropriate, natural bass', and 'dynamic, expressive bass/mid', were typical comments following Bartok and the Keb' Mo' tracks respectively.

I found the *Minium CD* a fair-weather performer that was expressive and lucid. On the whole it made sense of the music, but the ambience was poorly formed on known, naturally-recorded discs (eg Inbal/Mahler 4 on Denon). After a while it became apparent that the deck was lacking in energy and dynamics and was slightly rough in texture.

Conclusion

While it's an interesting player that does many things well, Micromega's *Minium* is ultimately slightly less than the sum of its parts. It plays music unobtrusively and articulately, but with a slightly rough-hewn quality; it was also reluctant to rise to the occasion when the going got tough.

THE LAB REPORT

Details are somewhat sketchy to say the least thanks to the bonnet being sealed into place, but Micromega's £350 *Minium* bears some technical resemblance to Philips' £130 *CD721* in this issue. Judging by the release of substantial stopband images, it's safe to say that both players use the same oversampling technology, although Micromega's *Minium* does enjoy a superior resolution of low-level signals.

Nevertheless, the *Minium* is a very 'untidy' player, with a good 20mV worth of sampling patterns adding to its output of unwanted ultrasonic spuriae. Meanwhile, a complex hash of in-band products results in a very 'bumpy-looking' noise floor, populated with resonances, sampling patterns and idle tones. It is these largely uncorrelated products that contribute to the higher-than-expected distortion (<0.06 per cent at -30dB) and poor 89.7dB S/N suffered by the *Minium*. This is in spite of, I might add, its use of a digital mute to obtain better S/N figures under conventional measurement conditions.

Even so, this poor S/N ratio and limited dynamic range may serve to mask a multitude of sins. In particular there's a very nasty-looking jitter spectrum that amounts to some 1705psec of widely-distributed sidebands. PM

NAD 512

his is a NAD product in the company's classic vein: simple, evidently focused on the task of high-fidelity performance, and dressed in the distinctively familiar yet understated NAD suit of armour, with that mid-grey panel finish that looks great with, er, other NAD products.

Controls are few in number and more self-explanatory than the norm. They allow programmed play, repeat and the random play feature which seems to be obligatory these days (worthless, too, in my opinion; no doubt others will disagree). The display is a backlit design in white on a rather fetching burgundy-coloured background. What else? Just the back-panel bits, which include system remote sockets and an electrical S/PDIF digital output. This is a welcome departure from the usual optical-only provision with budget CD players.

The electrical design is based on a lowbit differential MASH D/A convertor with sharper than usual fifth-order passive filtering to reduce RF; most MASH players evidently use fourth-order filters. The output stage uses a DC servo rather than a capacitor to block DC offsets. A low (120 Ohm) output impedance is claimed, which should allow virtually any amplifier to be driven

without treble loss, even via long interconnects. A lot of thought has gone into the choice of passive components — by sound quality rather than cost or type, says NAD — and the design

features individually regulated supplies for the digital, servo and analogue sections, plus star-earthing.

NAD

Sound Quality

There was some disagreement about this player from members of the listening panel. On the whole, the NAD was not generally well received, achieving a disappointing average score of 3.5/10.

Criticisms were concentrated on two areas: the balance was generally thought to be recessed and distant with some lack of spatial and tonal depth. 'Shallow sounding', said one participant with reference to the Keb' Mo' track, while another remarked on the odd texture of the clarinet and piano, especially in the lower registers (Ravel).

The other main criticism voiced by the panel concerned a lack of expressiveness and dynamics. One judge expressed it as 'dynamically lacking in shade: everything appears to happen at one level'. He went on to describe the NAD as 'manipulative,' a word that appeared several times in the comments of others and was expanded on by another listener, 'Music is delivered in little discrete serial packages rather than as a coherent unified whole.' 'This player is b e c o m i n g annoying to listen to,' wrote another judge in apparent disgust, but not everyone agreed. After a presentation of the Holst brass band piece, a third listener commented that 'Although it lacks the purity and extension of the best, this player is more lively and vital than most, with an easy, fluid presentation.' But in the Keb' Mo' track, he criticised the 'dry, pinched-sounding voice'.

ON TEST

I concede the criticisms, but heard them in a slightly different way. Expressed as plus and minus points, the 512 is sharp and well-defined, and extremely consistent both with frequency and level. Dynamics are strongly, if not very expressively, presented, and vocal intelligibility is of a high order. The sins of the NAD are presentational rather than structural. It sounds rather hard and grainy by the best standards, and it lacks the finest players' organic, liquid quality.

Conclusion

Arguably more of a rock'n'roller than a classical music player, the *512* has some distinctive musical strengths. But the hard, grainy edge will alienate many. It's worth considering, but audition it first. **AG**

THE LAB REPORT

NAD has been employing the same MASH/PWM technology from Technics for the last four to five years with varying success. This *512* model uses the same *MN6474* MASH DAC as the £370 *514* (issue 151), but because of inevitable compromises, suffers a 4dB shortfall in its overall S/N from 102.7dB (*514*) to 98.6dB (*512*). Nevertheless, there's a commensurate improvement in any rough-sounding noise modulation from +6.8dB to +1.2dB in this instance.

In other ways the *512* is closer in temperament to NAD's earlier *502* (issue 119), particularly with respect to its multi-pole analogue filtering, which bites deeply into the wave of requantisation noise beyond 35kHz or so, caused by Technics' noise-shaping. The *514* is less effective in this regard, despite claiming to use a similar analogue filter.

Sadly, the cheaper 512 does suffer a slightly higher level of jitter (504 psecs), and data-induced jitter at that. This is a known cause of compromised dynamics, life and musical expressiveness, as Technics's own players continue to bear witness. Otherwise the 512 has plenty of engineering in its favour. A case of so near and yet so far. PM

It costs the same to get it right as it does to get it wrong.

At the Listening Rooms, we pride ourselves on matching your needs with exactly the right equipment, whatever your budget, and because we only stock the best, that's what you'll get.

What you'll also get is sound professional advice and a chance to relax and listen to some of the world's finest Hi-Fi equipment. 35 years combined experience.
Two Fully equipped listening rooms. Home installation service.

Philips CD721

ook very hard, and you might find a few CD players with remote control that undercut this new Philips model. In most cases, however, they will be discontinued, about to be discontinued or will hail from distinctly inferior brand names. The Philips name may not have the cachet it enjoyed a few years back — the company has left the quality hi-fi market to its Marantz subsidiary — but it's Philips technology that drives Marantz players and a sizeable proportion of players from other sources, at all price levels.

The CD721 is closely based on the popular but now discontinued CD720, and includes a number of apparently minor changes and tweaks. Among these, pride of place goes to a new set of resilient feet that are completely shrouded by bright but nonfunctional surrounds. Technically, the CD721 is similar if not identical to the £150 Marantz CD46, with a Bitcheck DAC and CDM12 linear-tracking mechanism, and an ultra-simple back-panel featuring only captive mains and signal leads. In case you're thinking about replacing the signal lead, it would certainly provide a sound-quality benefit, but would almost certainly void the guarantee, too.

The frontpanel is surprisingly both practical and attractive, with good attention to PHILIPS detail and the kind of fit and finish that would do credit to a more expensive product. Highlights include an excellent display and a variable-level headphone output. The track skip and scan keys are shared — a timer decides which function to offer --- but irritatingly, this two-speed scan function mutes when it reaches the higher speed.

One additional point: if you're really looking for a bargain, there is a non-remote control version of this player, the *CD711*, whose slightly simpler internal layout means it should sound even better. At £120, the *CD711* is £10 cheaper than the model reviewed here.

Sound Quality

With an average score of 5/10 from the super-critical listening panel, the Philips acquitted itself remarkably well for a player at this price level. The least complementary comments described the Philips as 'clear and tidy, but with a band-limited presentation' (Holst). Further comments were that the guitar didn't really sound natural, though vocals were well-reproduced, sounding clear and open. Similarly, in the Keb' Mo' track, the same listener reckoned the Philips did not 'hold apart the strands of the music as well as some others'. But then after listening to the Jennifer Warnes track, he commented that the Philips 'retrieves a high level of

detail without fuss, and is expressive enough to make it an enjoyable experience'. In the Bartok, which is admittedly a difficult piece for even the best players to pull off, the 'introductory brass is ripe and fat' — further praise for the Philips's stereo positioning and depth.

Other panel members limited critical remarks to highlighting the feeling that the Philips is a bit soft and lacking in dynamics, and in more general terms that it wasn't always the most scintillating, communicative player. One commented that the Philips was more relaxed and natural than most, specifically preferring it to certain wellregarded players costing twice as much.

Conclusion

I have no quarrels at all with the panel's view of this Philips CD player, which performs an only slightly limited task very well indeed. The *CD721* sounds articulate and open, with few obvious coloration effects. At the price, it's an obvious Best Buy.

THE LAB REPORT

To keep costs under control, Philips is using a single PCB, strapped beneath a familiar *CDM12* mechanism and assembled in deepest Malaysia. Philips's budget 'Bitcheck' oversampling and conversion does the digital honours, releasing substantial stopband images (-29dB), together with a high + 8.4dB noise modulation that holds its ultimate resolution to no more than 16-bits.

It's band-limited, too, with a -0.7dB loss in bass at 20Hz, falling to -1.2dB (L) and -0.6dB (R) at the treble extremes (20kHz). Pre-emphasised discs show a slightly greater loss in treble. Rather than bury its distortion in an evensounding carpet of noise — which is increasingly common these days — the *CD721* is just a little messier, with a spray of odd-order harmonics spreading across the mid and treble through the upper 40dB of its dynamic range. Musically speaking, this is where much of the action takes place.

Poor crystal selection causes a huge clock error that represents a + 21.5Hz shift at 20kHz. This change in pitch is not sufficient to be audible, but it is enough to force a 60-minute CD to finish in 59 minutes 56 seconds. *PM*

PETITE II

making the most of the music

This finely engineered precision turntable offers a new listening experience from your treasured L.Ps and 78s. Massive construction, extensional damping of major surfaces and lack of vibration from moving parts ensure tightly controlled detailed sound and stable stereo imaging. The Model 20/2A illustrated has a new heavier motor and power supply adding further to the remarkable presence and realism of the sound.

Available through leading dealers, further details on request from:

Pioneer PD-204

Time was when CD players from mainstream electronics multinationals were available for just one year. In practice this often meant just a few months of the high season before they were replaced by an alternatively styled variant, often with similar, or even identical, insides. These days successful designs tend to last longer, and the Pioneer *PD-204* is a case in point: it has been available for two full years and has now embarked on its third. The price has also been reduced by £10 to £150.

When first released, it was unusual for a one-bit PDM player because it used 384-times oversampling — the standard then was 256 — but most of the others have now caught up. The *PD-204* employs Pioneer's Pulseflow D/A convertor with low second-order noise-shaping and a relatively low clock frequency (16.9244MHz) by normal industry standards, which should translate into reduced RF noise. What the *PD-204* doesn't have, however, is the Stable Platter Mechanism and Legato Link DSP filter that were used on Pioneer's more costly players.

Although it was originally intended as a competitive, low-cost hi-fi player, these days the main market for the *PD*-204 turns out to

be semi-industrial. They are sold in tens and sometimes even in hundreds for use in large shops and other p u b l i c places where background or distributed music is required, and where its low cost a

and where its low cost and reliability are the prime considerations.

An alternative version of this player, called the *PD-104*, is also available at £130. This cheaper model lacks a remote control handset, but if linked to other Pioneer components it will respond to remote commands received via its rearpanel system remote control link.

The *PD-204* is averagely well-equipped, with random track access keys on the frontpanel. It has a remote control, a full calendar-type display, a headphone socket with an analogue volume control (hurrah!) and a separate digital output level control for the main line output. The latter is only accessible from the remote handset but, as usual, it does impact on sound quality. Using the amplifier volume control should give better results. Hi-Lite (intro) scan, random play, programme play, peak level search and various edit facilities, aimed at those who record CDs onto tape, complete the feature list.

Sound Quality

Of the three panel members present on the day, one rated the Pioneer positively with a 6/10 final score, while the other two ranked it rather lower. On closer examination, the nature of their observations were not altogether dissimilar. It was the weighting that

they placed on what they heard that made the difference.

The general feeling was that the player was well-balanced but a little bland and unexciting. 'The orchestra is quite lively but spatially challenged' (in English: the sound lacks spaciousness), said one.

ON TEST

The Jennifer Warnes test track was thought to 'lack substance, although it has a nice, responsive presentation'. One of the more critical listeners described the *PD-204* as 'balanced but uninspired' (Holst), and as having a 'good balance, but boring' (referring to all the other excerpts).

Contradicting the first listener to some extent, another felt the Pioneer sounded spacious, but a bit compressed dynamically (the author's view as well), and that the player tended to sound a bit scrawny at high levels (ditto). This listener also noted a lack of extreme low-frequency output and some sibilance with voices, which occasionally sounded 'spitchy'.

Conclusion

Now past its prime — and up against some recent cut-price competition — this remains a respectable performer and often a modestly attractive-sounding one, although it often sounds untidy when extended. **AG**

NOVEMBER 1996 91

THE LAB REPORT

Tracing back through Pioneer's more recent family tree reveals the roots of this latest *PD-204* in the *PD-201* from four years ago (issue 112) and the *PD-5700* before that. It's a straightforward bitstream-based player, using Pioneer's *PD2026B* Pulseflow DAC with a conventional eight-times (FIR type) oversampling filter in place of the Legato Link 'filter', which is used in slightly costlier players like the £200 *PD-S505*.

In common with other good bitstream players, the *PD-204* enjoys a good low-level linearity and low distortion at -30dB (typically 0.002 – 0.02 per cent), although the 101dB A-wtd S/N ratio is compromised by its high +7dB noise modulation. Furthermore, and in common with Pioneer's earlier players, the *PD-204* features a -0.6dB treble roll-off and rather high 1.1k Ohm output impedance, which is likely to encourage a rather mild sound and/or increased distortion if used with long or highly capacitive interconnects or an amplifier with a low (about <10k Ohm) input impedance.

Numerically speaking, the incidence of digital jitter is better than average, although its *type* is both complex and data-induced – forms of jitter known to strip the life and vitality from most forms of music. *PM*

Sherwood CD-4030R

A swith all consumer durables, there are fashion-conscious CD players, and there are those that make no attempt whatsoever to accommodate themselves to the modern world. Take the Sherwood *CD-4030R*, whose only concession to the last decade or so is the use of a bitstream D/A convertor with an eighttimes oversampling

digital filter — and bitstream itself is no technological spring chicken. The *CD-4030R* looks like a refugee from the '70s, with its fussy, overdressed front-panel and plethora of control buttons. Ergonomics are consequently not the *CD-4030R*'s strong suit.

Ironically, the range of facilities available is not unusually wide. The player has a fairly standard range of play and programming options, including random track access (from the front-panel and the remote control), peak search, CD-to-tape edit controls, random play, programming and index search — and not just on the remote control as usual, but also on the main player. A headphone socket and volume control are fitted, the latter being a standard analogue rotary which is in series with one of the two main

outputs on the back panel, as well as the headphone socket.

00011111

00 1111

00011110

00011110

OPENER

Add a fixed-level output (used for all the listening after confirming that it sounded better than the variable output), system remote sockets and an optical digital output, and you should have the picture. Oh yes, the remote control has a couple of tricks of its own, including intro scan and a very welcome display normal/dim/off switch.

Sound Quality

Although the *CD-4030R* was generally thought to be short on specific virtues, it scored consistently well as a 'nice' and a 'musical' player by each member of the panel and with all music types — and it did so again in a repeat presentation later in the day. Although it wasn't explicitly recognised as a repeat, it did attract comments that were entirely consistent with the first presentation, which adds credence to the panel's judgement. Even the scoring averaged close to 6/10 on both occasions.

'A well-balanced, good-sounding player' penned one writer in response to the Keb' Mo' track *Tell Everybody I Know*, while another noted a 'nice bass, with good timing, and a bouncy quality with an excellent sense of rhythm'. The Ravel piece for clar-

inet and piano was said to offer a 'nice tonal balance'. (The use of the word 'nice' was a distressingly persistent feature of the writcomments. ten arguably with good е ason on this occasion, though.) Dynamics were generally thought

to be a little weak, attracting the comment, 'lively orchestra, but dynamically not quite there' (Bartok *Concerto for Orchestra*).

The bass was a little soft and lacking in control, one judge saying: 'a bit fat [and] sounds slow, although it does show a good sense of pitch' (Keb' Mo'). The treble was felt to be lively and well-controlled, and on the whole lacking the flatness, sibilance and loss of emphasis of detail that are endemic in lesser players.

This is indeed an easy player to like. It sounds easy and relaxed, with a slightly softened, laid-back presentation that works well with most music types. But it loses a little of the drama with more challenging programme material. Better Mantovani than Martinu may be putting it too strongly, but you get the idea.

Conclusion

Antediluvian appearance notwithstanding, the Sherwood *CD-4030R* is easy on the ear and will never offend, although it may not always excite. If you can get along with that messy, over-endowed front-panel, a Recommended flag is well-earned. *AG*

 \mathbf{b}

THE LAB REPORT

To all intents and purposes, the *CD-4030R* looks and performs like a reworked version of Sherwood's *CD-5010R*, which was reviewed and recommended in issue 124. Once again, we find a combination of Yamaha's *YM3433* eight-times oversampling filter and Philips' *SAA7350* BS DAC providing a characteristic 'aural fingerprint' that includes peak level distortion of 0.0035-0.016 per cent and an unusual *compressive* low-level linearity trend, which will tend to boost the significance of subtle musical detail.

This sample suffers a 0.3-0.5dB channel imbalance, while its stereo separation actually deteriorates from 108dB at 1kHz to 86dB at 20Hz, suggesting some unwanted coupling via the power supply at bass frequencies. This is mirrored in the highish 634psec of jitter, which includes a deal of supply-induced sidebands. Fortunately, the player's modest sub-100dB S/N ratio and high +7dB noise modulation may tend to 'cloud' the worst excesses of these distortions, while its gently declining treble will take the edge off any harshness.

The end result is a player that probably sounds very much more palatable than its technical performance might initially suggest. *PM*

Sony CDP-XE500

ony seems to be going through a phase of introducing new products like they're going out of fashion. The CDP-XE500 is two up from the bottom of a range of SONV six CD players introduced this OVICE, DELECTOR season. Powered by a one-bit H-Pulse D/A convertor, the player's most notable user feature here is a jog dial - a small ratcheted rotary switch that can be used for rapid track selection in either play or programming modes. A tiny adjacent button acts as an 'enter' key to confirm selections.

The player has an impressive array of useless gadgetry, including programme edit, shuffle play, peak search, time edit, time fade and more. The minor control arrangement is somewhat anarchic, and the display, with its full 5x4 matrix calendar readout, is too fussy by half. The cut-away front-panel styling (also seen in the Philips *CD721*) gives the unit attractively sleek lines, however, and if you can live with the rather protracted track access times, the main controls are a peach. Headphones can be

VERDICT SOUND ★★★☆ VALUE ★★★★ PRICE £160 ▲ Good all-rounder with the kind of presentation that suits middle-ranking systems particularly well; jog dial. ■ Messy display; non-removable stickers plastered over facia. ■ Sony National Operations Centre, Pipers Way, Thatcham, Berks. RG13 4LZ 12 (0181) 784 1184

accommodated, although at fixed level only, and an optical flavour digital output is provided, but with no electrical equivalent.

The *CDP-XE500* reviewed here has clearly been through Sony's finishing school, a UK-based team of golden ears led by Eric Kingdon. The aim is to UK-orient or, if you prefer, simply improve the sound quality of the original factory prototype prior to production. Partly for cost reasons and also because the team was happy with the basic product, very few changes were deemed necessary in this case.

0 8 8

Sound Quality

With very consistent individual scoring averaging 7.5/10 overall, this baby Sony ranked convincingly higher than its more costly sibling, the *CDP-XE900E*. The following comments are typical: 'Good vocals with plenty of atmosphere around the voice and good timing. This is a clear, incisive player that offers a big window on the music (Jennifer Warnes),' and 'very impressive at capturing the drama and scale of a performance and the tension of this large-scale piece. Strings are very plausible and instrumental timbre is generally very good (Bartok).'

Mild criticisms were expressed by some, with one telling comment pointing to a 'wall of sound' quality (with the Holst brass piece), and a 'hi-fi-ish' overall balance from one

listener who recognised the ultra-detailed aural fingerprint of a Sony player. He went on to describe the player as the 'best of the day' up to that point. Other comments were directed at vocal quality (good), timing (clear and incisive) and immediacy (strong). To quote one typical sum-up comment: 'This is a good player which is both musical and bouncy with a fair sense of dynamics and timbre.' And so say all of us.

The panel was united in its view, and I agree with what they said. But my separate hands-on session suggested that the Sony has a gently constrained quality that is best suited to systems of medium capability and resolving power where other CD players will often sound harsh or thin.

Conclusion

With strong resolving power and very respectable dynamics, the *CDP-XE500* also brings good audio manners to an area of the market often lacking in such qualities. The jog dial is a boon to those who don't just play discs from the beginning to the end, and the overall strength of the package makes a Best Buy rating mandatory.

H

THE LAB REPORT

First things first. This *CDP-XE500* is not a stripped-down version of Sony's high-tech *CDP-XE900E*. Instead, the *XE500*, with its integrated H-Pulse DAC, is really a feature-packed version of the budget *XE200* and *XE300* players. The DAC's noise-shaping and digital filtering are not as effective as they are in the *CDP-XE900E*, therefore treble distortion is largely attributable to spurious noise, leading to a slightly brighter and perhaps more forward sound when partnered with amplifiers that are susceptible to such out-of-band signals. Odd-order IM distortion at 0.01 per cent is also slightly higher than expected.

Otherwise, the CDP-XE500 has a higher than average dynamic range and impressive low-level linearity, a very flat response, good crystal clock selection and a huge > 100dB separation between L and R stereo channels. Jitter looks appaling at 1782psec, but because it's composed entirely of low-rate hum and supply-induced components, it will have far less subjective impact than, say, the data-induced jitter suffered by the NAD, Yamaha and Technics players elsewhere in this test.

With a cleaned-up power supply the CDP-XE500 could easily become a serious force to contend with! PM

Sony CDP-XE900E

ON TEST

his is the key model in Sony's new sixstring range of CD players, and has had the greatest attention lavished on it by Sony's UK design team. (The aim is to invest audiophile pizzazz into high-fidelity components that are competitively priced, as only such a large company can offer.)

On one level, the CDP-XE900E looks like an up-spec version of the CDP-XE500, with a similar but slightly more complex control set. But the headphone socket has disappeared, and the digital output is still opticalonly. The parallel-tracking player mechanism is built into the sliding drawer, in the same fashion as a lightweight version of the topology that has been used by Meridian for years. The reason is the same: to dampen vibrations in the lightweight optical system.

The real news, however, is the package of some 40-odd sound-improving measures specified for the UK. They include thickened chassis panels, asymmetric shock-absorbing feet, beefed-up transformer, improved rectification, improved power supply condensers and wiring, plus optimised grounding and improved capacitors (from Muse and Silmic). The main PC board is of symmetrical construction, and the digital hardware includes a Pulse DAC (CDX8505BQ)

which features reduced spurious radiation, with a proprietary Full Feed-forward digital filter.

Sound Quality

The panel scored the CDP-XE900E a disappointingly pedestrian average of 5.5/10, significantly lower than the cheaper and less sophisticated CDP-XE500. But this doesn't necessarily mean that it is an inferior player. Indeed, some judges recognised in the CDP-XE900E a design that was more ambitious and more willing to go for the metaphorical jugular, even if it was thought only partly successful in doing so. In fairness, it should also be pointed out that the scoring was more scattered than usual, ranging from 4/10 to 7/10.

The general observation (with which I agree) is that the CDP-XE900E was lucid and well-separated with a strong sense of authority and weight in the bass, but with some distinctive colorations and loss of precision at mid and higher frequencies. 'Very sweet, perhaps too sweet, with muted dynamics', wrote one participant of the Holst brass piece, while another described it as 'lacking in detail - mellow, spongy and soft'. In a more positive vein, however, another wrote that the Bartok had 'a solid character to the sound', and that although not especially dynamic, it was nevertheless 'well-proportioned and lucid'.

Although the player was warmed up for

about 48 hours prior to the

panel listening tests, sound quality improved further over the days that followed. Much of the overt midband coloration was reduced to a point where it ceased to be a problem. Although it sometimes handled music as if with kid gloves, unlike more tactile alternatives like the Cambridge Audio CD6, I rate the Sony as a communicator par excellence. It made light of difficult musical scores and portrayed much of the tension, vitality and beauty in such potentially difficult recordings as Mahler 2/Kaplan on Everest and Sibelius Violin Concerto/Anne-Sophie Mutter.

Conclusion

So much work has gone into preventing this player from misbehaving that some of the more positive virtues have been ironed out. As one wit put it: 'Music that lifts has been turned into music for lifts.' My own subsequent hands-on suggests that this is a player whose virtues will grow on you after a period of time, thanks partly to an uncommonly protracted running-in time. On this basis, I am happy to subvert the panels' judgement with a Recommended tag. AG

Þ

THE LAB REPORT

The key to the uniqueness of the Sony CDP-XE900E is its newly-developed 'fixed laser pick-up unit'. Here, although the laser is fixed, it's able to focus. The CD and disc motor assembly is mounted in a cradle that slides to and fro over the laser's line of sight. Evidently, Sony believes that by separating these two planes of movement, any reduction in mechanical, if not electrical, intermodulation between the actions of the focus and tracking servos, represents a worthwhile goal

Either way, it's the digital heart of the player that promotes its smooth and sophisticated sound, combining elements of the CDP-761E and CDP-XA2ES with its superb eight-times digital filter and separate current-pulse bit convertor, the CXA-8042. This endows the CDP-XE900E with a low 218psec of jitter and distortion that remains below 0.0018 per cent at 0dB and 0.01 per cent at -30dB, which is where all the musical action takes place. Low-level linearity is held within tight 0.7dB limits, while the good 101.4dB S/N ratio and low + 3dB noise modulation all help to crank up its working dynamic range. PM

This is high-tech stuff at a very reasonable price.

Technics SL-PG480A

typically well-turned-out player from the Technics stable, the SL-PG480A has an unusually well-oiled drawer mechanism and a fluorescent dotmatrix display. It is well-equipped with all the usual widgets and then some — a digital output level control, peak-level search, random play, auto-cue and random track access via the remote control, although there's no headphone socket and no digital output. The most surprising feature here, however, is the price-tag: £140 is ultracompetitive for a player sporting build of this guality. By contrast, the correlation between features and price is often a negative one, with the cheapest units frequently being the best-equipped.

Buried at the heart of the *SL-PG480A*, and perhaps also one of the key reasons for the low selling price, is a single-chip LSI (Large Scale Integrated Circuit) that performs the functions of digital conversion, optical servo control and much of the remaining signal processing. This leads to a simple, well-rationalised circuit.

In common with other Technics players, the convertor is a MASH low-bit type, and the servo is said to be an improved version of one used in previous generations of Technics CD players.

Sound Quality

Panel judgements were mixed, with widespread complaints of upper midband glare, poor timing and, more generally, of a muddled, mechanical presentation. 'Slow, pond e r o u s bass', wrote one following the

Jennifer Warnes track Somewhere, Somebody, while

the excellent Holst brass recording of the *Opus 28 No 1* Suite was said to sound 'not entirely convincing and out of tune'. Similarly, the clarinet in the Ravel recording was criticised for being 'super-wide' and for sounding 'tonally strange... a bit like a recorder', a comment that found echoes in other pieces and from other panel members, albeit intermittently.

Only one panellist demurred, describing the player as displaying '(wide) tonal variety, some dynamics and good transparency'. 'Nicely balanced perspectives,' he wrote of the Ravel, although he did go on to criticise the bass for sounding 'light', which was echoed more strongly as 'lumpy' and 'slow and ponderous' by others.

My own separate listening also pointed to the Technics's modest standard of musicmaking. An acoustic guitar recording by Martin Taylor (*Artistry* on Linn Records) had a leaden, boomy bass, a steely mid and a recessed, rather unsubtle, upper harmonic structure. A similar lack of balance and analysis was heard elsewhere. Generally, the player was happiest with studiogenerated rock material where its full bass and prominent midband helped propel the music forwards in a convincing fashion. But the uneven nature of the design was clearly less at home with acoustic material, small or large-scale, and had the secondary effect of reducing both the expressiveness and individuality of vocal material.

00:00

ON TEST

During my hands-on sessions, I also found that the Technics was a little more sensitive to the physical condition of discs than some, sometimes muting momentarily where the best of the opposition would play cleanly without any break. The presumption is that it was also interpolating data more than some of the others, which may well have had an effect on sound quality.

Conclusion

The *SL-PG480A* might have done better if there weren't so many talented low-cost CD players around right now. As it is, this is a modestly effective deck with certain types of material, but it's also one that will be found wanting when the going gets tough. It is well-built, though, and very easy to use. *AG*

THE LAB REPORT

The Technics *SL-PG480A* is a highly integrated player employing a variation on Philips's *CDM12* transport mechanism and a super-slim audio board equipped with the latest version of its own 'player-on-a-chip' LSI (the *MN662713*) and very basic analogue filtering. Earlier versions of this LSI have been used in Technics's *SL-PG460A* (issue 139) and even in Yamaha's *CDX-*480 (issue 147); players that all featured a slightly rippled frequency response, an acceptable 98dB S/N ratio and a characteristic 'blip' in their low-level linearity below -90dB at 20kHz.

Otherwise, the SL-PG480A exhibits very similar characteristics to the Sony CDP-XE500 in respect of ultrasonic noise, but shows higher levels of THD overall (typically 0.0013-0.025 per cent at 0dB). There's also a shortfall in channel separation at both treble and bass frequencies due to capacitive and power supply coupling, respectively.

The latter is probably linked to the player's indistinct bass, while its high 1049psec of data-induced jitter (a common feature of Technics players) accounts for the muddling and unevenness heard elsewhere. Poor clock selection also accounts for the huge +975ppm error (equal to a +19.5Hz shift at 20kHz), although this is an issue of quality rather than audibility. *PM*

CD PLAYERS

Yamaha CDX-490

Selling at a few pence short of £170, the CDX-490 is a new budget model from Yamaha. The feature list is aimed at those interested in copying CDs: hence the automatic spacing facility, automatic peak level detection and automatic programming for recording to tape. With a suitable Yamaha cassette deck,

synchronised recordings

are readily possible. Other facilities have not been ignored, however. An optical digital output is fitted, although you'd have to go for one of the senior Yamaha CD players if you have a serious digital recording habit and prefer to use an electrical digital feed. The display can be dimmed, but it cannot be switched off altogether.

A headphone socket is supplied, and a front-panel digital output level control varies the feed to the headphones and the amplifier alike, though why anyone should need the latter is hard to imagine. More to the point, this type of control is detrimental to sound quality when left at anything other than full output, and the fact that the main

•	angular styling. Lack of precision and focus undermines the more interesting qualities of the music it plays.
	Yamaha Electronics UK Ltd, 200 Rickmansworth Road
	Watford, Herts WD1 7JS

and headphone levels

are forever linked together could prove a real inconvenience. However, the headphone socket was dead on our sample.

Ergonomics are good thanks to a welldesigned orange display, a set of randomaccess track-number keys fitted to the front of the player, and last but not least the remote control. Build quality is fairly standard, but the finish is a cut above average.

Sound Quality

This model elicited neutral to negative comments from the panel, with overall scores ranging between 3 and 5/10 on the first presentation, and between 2 and 5/10 on a repeat presentation, with one panel member correctly identifying the player as a repeat the second time around.

The main complaint was of a lack of control and focus, and a loss of sophistication. 'Forward, big-o-rama player with a ten-foothigh guitar and vocals... the kind of player that could plaster up the Grand Canyon,' wrote one, who later said that it had 'no articulation, no passion and no interest'. Another, more analytically-minded listener remarked that the Yamaha sounded 'loud' but veiled, and that overall the balance was dark and subdued, and failed to hold the attention due to a loss of resolution and fine detail, although it was also thought to be dynamic and relatively unfatiguing; its vocal quality also attracted some praise. Perhaps the most appropriate comment was the one that described the Yamaha as a 'difficult player that

doesn't really do anything very badly, but has no particular strengths'.

0

In all, the CDX-490 was uninspiring. A well-recorded acoustic jazz guitar (Martin 'Taylor Artistry) came across as overblown and bland; the more subtle intonation was underplayed and the action noise from the neck of the instrument curiously muted. A recently-acquired Gilbert Kaplan Mahler 2 (Everest) was leaden and dark-hewn in a second movement that should have lightened the spirits after hearing the first; the loss of detail and articulation was palpable, and so was the loss of interest that followed. Even stereo imagery seemed curiously unformed. Despite plenty of left and right information, focus was poor, giving a rather sloppy, cloud-like orchestral image.

Conclusion

Although promising-looking, this player is characterised by its uninspiring, plodding and ill-differentiated sound quality, exhibiting notes that don't appear to start and stop as quickly as they should. Regrettably, it can be summed up with a single word from the end of my listening notes: anodyne. **AG**

THE LAB REPORT

The origins of Yamaha's *CDX-490* can be traced back to the older *CDX-480* (issue 147) which used the same *MN66271R* LSI. This busy little processor, a predecessor of the chip found in the Technics *SL-PG480*, combines servo and signal processing, oversampling and MASH DAC functions on a single, cost-effective substrate. This also includes a 56-step digital volume control, which operates over the top 35dB of the player's dynamic range, dropping into mute below this level.

This single chip manages to totally dominate the player's overall performance, which is extremely similar to that of the rather grey and anodynesounding *CDX-480*.

All seems equal, except that this newer *CDX-490* benefits from a tighter crystal selection (with an 11ppm error as opposed to 377ppm) and a lower incidence of digital jitter (463psec instead of 1225psec). Otherwise, distortion rests at 0.0025-0.018 per cent at peak output and is mainly second harmonic in nature, while at lower levels true distortion is overtaken by noise.

In practice, the *CDX-490* only just achieves a 16-bit S/N ratio, while its high 1.1k Ohm output impedance augurs against long interconnects and/or amplifiers with a low (about 10k Ohm) input. *PM*

Does your Hi-Fi sound like this?

When it should sound like this.

Why put up with a blurred, tired sound when your hifi should sound crisp, clear and beautiful. At Audio Excellence you can choose from a wide range of Hi-Fi and Home Cinema products carefully chosen to give the best possible performance within your budget.

Audio Excellence is different. We have an unhurried, friendly atmosphere and helpful staff that won't blind you with jargon. Whether you are looking for a new system or upgrading your current system we will help you choose using our professional experience backed up by demonstration. We can deliver and install to make sure you get the best possible sound - crisp, clear and beautiful. **Sale now on - contact your local branch for details of the latest bargains**.

> Audio Excellence were nominated by CETI for Best Dealer '96 and by Home Cinema for Sony AV Dealer '95.

hese tests revealed that while most of the players offer similar levels of equipment, the same cannot be said for their sound quality, which varied enormously. This observation is reflected in the scoring. Four models were awarded Best Buys, nine emerged with no ranking at all, and only two earned Recommended swing tags. If this doesn't suggest polarisation, then it's hard to imagine what does.

Looking at the players in price order demonstrates a scant correlation between cost and value. The simple fact is that there are some incredible bargains to be had at giveaway prices, some equally impressive bargains at almost three times the price, while the less-fancied models are evenly distributed throughout the price range covered. The message from this is a mixed one. Choose carefully and you get what you pay for. The best players in absolute terms count among the most expensive here, and to this extent quality correlates with price. But the tests also show that you can buy badly at any price level – use our findings as a starting point, but take advantage of the dem room facilities provided by any half-decent hi-fi dealer, to listen to your shortlist.

sonc usio

While there were no absolute dogs in our test group, it was often the most impressively endowed that turned out to be the least exciting in practice. Take the Marantz *CD*-67, where the panel's general view was that it sounded simultaneously hard and spatially shut-in. It had its strengths too, not least a very physical style of delivery, but a

little more balance is needed before an unequivocal Recommendation is earned.

The list of misses and near misses included the MASH-powered models: the Technics SL-PG480A, (£140), the NAD 512 (£250) and the Harman/Kardon HD710 (£200). All suffered a hard-nosed quality, or at least a loss of subtlety, although previous experience suggests this isn't an inevitable MASH trait. Pioneer's PD-204 (£149) is nearing its sell-by date, but remains respectable, if untidy when extended. The Yamaha CDX-490 (£170) and the JVC XL-Z574 (£250) both demonstrated losses of euphony and articulation, and the Micromega Minium CD (£350) was uneven. with some positive qualities offset by a lack of dynamic range and some roughness.

Sony CDP-XE900E

Best Buys

The Best Buy bargain was the cracking £130 Philips CD721. Objectively, there's a lot that could be criticised — it's clearly a little soft and lacking in resolution — but it's attractive and easy to listen to for long periods. Anyway, at £130, who's counting?

A far more ambitious performer, the blandly-styled £170 Kenwood DP-3080, extracts a bolder and more visceral quality from your discs. However, it is by no means as easy-going as the Sony CDP- XE500, which is another Best Buy. At only £160, the Sony has much of the Kenwood's vitality and joie de vivre, with the easy-on-the-ear quality of the Philips.

The main surprise with the Cambridge CD6 was that a player so ugly could sound so damn good. Cast in the Kenwood mould, it has more control and focus, but is largely lacking the slight edge-of-theseat quality that can afflict the cheaper model. A true wolf in sheep's clothing.

Recommended

The £180 Sherwood CD-4030R looks like a fussy, ornate refugee from an earlier age. However, it has a clean, easy-going, attractive sound, although resolving power is not a strong suit. The other recommendation, the £300 Sony CDP-XE900E, is somewhat paradoxical. It delivers a sometimes soft yet full and authoritative bass, and a treble that is both analytical yet sweet-tongued. It needs a lot of running in and a sympathetic system, but if your budget is £300, keep it on your shortlist.

Now you can buy your CDs at dealer's cost price

As a member of the WSL Records at Cost Service you can buy any brand new CD at trade price + postage and a small handling charge of only 50p

NEW READERS

How to be a good customer

Steve Moore draws on his experience as a hi-fi retailer to help you get the best service from your dealer.

t isn't always easy buying a new audio or AV system. So this article is for anyone about to buy a simple stereo, a home cinema set-up or a complex, multi-room system. It should help you to enjoy the experience and maybe also lay the foundations for a great working relationship between yourself and your dealer. Still, at the end of the day, *all* dealers like good customers.

Chris Storch from The Cornflake Shop is in favour of building up a long-term relationship. 'Our best clients are those who keep in touch — they bring their friends in too. This means that the staff get to know them, which definitely makes a difference. We know what they need and go out of our way to help.'

The first step is to work out what you really need and think about what you want, all being well. Be prepared to be flexible with the ancillaries (like a tuner) if the quality of the main system is at stake.

Ideally, contact a dealer your friends recommend. If you know someone with a great hi-fi (not necessarily an expensive one, but one you like listening to), ask where they got it. Otherwise check out the *Choice* Dealer Directory (p.139).

Great expectations

As well as working out what you want, think about how you'll use it. Do you sit down and listen seriously, or will you use the system for back-

ground music but occasionally crank it up for parties?

You may have considerations other than the sound or picture quality. You may need remote control, or want something very small. Be aware of the compromises, though. You'll often pay more for a cute, tiny system of equivalent performance to a simpler, larger set-up.

Mayur Malde, of Musical Images, says: 'A lot of people come to us looking for a mini system but, in fact, end up with separates.'

If you have particular needs or expectations (for example: 'My blind aunt needs to be able to operate the system', or 'It must be installed and working for my party next Thursday'), make this clear at the start and ask if it will limit your options at all.

Remember that the time spent choosing the system is directly proportional to the time you will live with it. Don't be too impatient. Installation is often a vital part of the process, and you should steer clear of dealers who cannot (or will not) install your new system. Appreciate what the dealer is trying to do. On busy days in hi-fi stores, customers need to be dealt with, repairs booked in, equipment tested, and systems installed. So book a demo in advance (especially on Saturdays) or be prepared to wait.

When you book a demonstration, spell out what you're looking for, how much you might be prepared to spend (be flexible if you don't have much experience in this field) and what your priorities are. If, having done this, the dealer is ill-prepared or won't adequately explain the choice of equipment, leave. A final word on demos: if you have a piece of aged or unusual equipment, take it along to the demo, or arrange a loan of the equipment you are interested in (most good

stores will do this) as it is the only way you can be sure it'll work.

Listen closely now

Take simple, memorable pieces of music that you know well. But don't get stressed about the whole experience. Xavier Wilcox, owner of the Powerplant in Brighton, stresses the importance of being relaxed while listening. 'We don't put pressure on our clients. We'll play their music if they bring some, or we'll let them choose from our selection. We give them a cup of coffee and let them listen alone if they prefer.' And, if the whole family is going to use the system, take them along to help buy it.

If you trust the dealer, trust their advice — and don't be tempted to piece together a system from dif-

ferent locations, even if you can shave a few quid off the price. Also investigate the after-sales service on offer. David Graham, Sales Director of Grahams Hi-Fi, feels this is important: 'Our role doesn't end with the sale. We aim to help the customer in the future, if he moves, if something needs servicing or upgrading, or if he wants to expand or change the system.' If you plan to buy a lot of equipment from the same manufacturer, try to gauge the dealer's commitment to a brand. Long-term customer support is very important to manufacturers of quality equipment. Many firms offer better terms to those dealers who offer this support, for example by having good demonstration and service facilities.

A dealer will do best at what he/she likes and enjoys — this is what they understand. Don't be tempted to cajole them into supplying something they advise you against. Then they'll have no real inter-

START HERE

est in the sale, or expectation of a good solution. If you subsequently discover that the system doesn't sound too good, or isn't reliable, the dealer can honourably point out that they 'told you so at the start'.

If you trust the dealer, expect them to be at least as competent at their job as you are at yours. Most good stores train their staff thoroughly. Both the British Audio Dealers Association and Custom Electronic Design & Installation Association offer a range of training courses designed to improve professionalism and knowledge.

And finally, enjoy the experience!

Steve Moore has been selling AV systems since he left school. Now he specialises in comprehensive multi-room and home automation projects. He is the current chairman of CEDIA UK (Custom Electronic Design & Installation Association).

Our Three Step Guide to Buying Hi-Fi

The legendary Hi-Fi Choice Directory is now simpler to use than ever before, but contains all the information you need to select and buy the perfect hi-fi system.

Step One: Discover which products fall within your budget by using our Price Guide (starts on page 114). This listing is updated monthly and includes all hi-fi products currently available in the UK. It is organised by product type, then by price band, and is sorted alphabetically. Products whose names are printed in red are those that we have reviewed. Which leads us to...

Step Two: Read about the hi-fi equipment that we have reviewed in the Directory (starts on page 122). Here you will learn which items have been singled out for our famous Best Buy and Recommended awards, that denote products of exceptional quality and value. The Directory is sorted by product type and listed alphabetically, and the beginning of each section provides essential information about each kind of hi-fi component.

Step Three: Find your nearest hi-fi store in our Dealer Directory (starts on page 139) to book a demonstration of the products you are interested in.

Best Buys and Recommendations

If you see a Best Buy (red) or Recommended (blue) flag at the beginning of an entry in our Directory of reviewed products, the item concerned is particularly deserving of your attention.

This signifies the Best Buy swing-tag, which indicates products of the best quality and superb value for money in their price category. Recommended products offer excellent quality and value, though not at the superlative level of a Best Buy. Please note that an expensive Recommended product will nearly

always perform better than an inexpensive Best Buy.

Using Best Buys and Recommendations to buy hi-fi.

Do not commit the cardinal sin of dashing into your local dealer, magazine in hand, demanding to purchase Best Buy CD player A, Best Buy amplifier B and Best Buy speakers C. This

best Buy aniphilier B and Best Buy speakers C. This is unlikely to result in your long-term satisfaction. Our belief at *Hi-Fi Choice* is that you must consider the hi-fi system as a complete entity, not as a collection of components. While a superb system might well contain Best Buy and Recommended components, one cannot lump together Best Buys and Recommenda in the hope that they will automatically perform superbli

one cannot lump together Best Buys and Recommendations in the hope that they will automatically perform superbly. These ratings make a useful guideline for short-listing components worth trying, but only by hearing them for yourself can you draw meaningful conclusions about what suits your taste. Furthermore, don't panic if the dealer offers you equipment that we have not tested. At the end of the day, what matters most is that your hi-fi system fits your tastes like a glove, and it is the dealer's challenge to ensure your satisfaction by any means – and components – necessary!

THE DIRECTORY

Amplifiers

he amplifier sits at the heart of the system, processing the outputs from the various music sources as necessary and then driving the loudspeakers. These two (quite separate) functions are integrated into a single box at the low-to-middle price points; but become separated into preamps and power amplifiers. Even separate power supplies become increasingly common as one moves upmarket.

Bear in mind that output power and sound quality are not necessarily

related. Some of the finest amplifiers available have outputs as low as 12 Watts, but team them with high efficiency loudspeakers and you can achieve loudness aplenty.

Power output is equally no indication of sound quality.

KEY

LINE INPUTS: Amount of input sockets for non vinyl sources such as CD players, tuners and cassette decks. MM PHONO INPUT: If an amp has a vinyl phono input for moving magnet (normal output) cartridges.

MC PHONO INPUT: If an amp has a vinyl phono input for moving coil (low output) cartridges REMOTE CONTROL: If amp is couch potato ready. HEADPHONE SOCKET: If an amp is can friendly.

POWER OUTPUT (W): Lab tested power output in Watts per channel. RECEIVER: If an amp has a built in radio tuner. FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback

information page BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

Product	Price(£)	Comments								
Alchemist Maxim APD30A	299	Vivid and colourful sounding amp that's just too bold and brassy.	Ę	•			3	0	1737	154
AMC 3050	220	Low-price NAD-alike amplifier that is polite and modest but rather wooden. Phono better than line.	1	•			• 4	5	1738	154
AMC CVT3030	529	Attempt to mix transistors with valves only shines with simple musical styles.	(and the second			• 3	0		116
Arcam Alpha 5 Plus	240	Detailed improvement on predecessor, but lacks 'air'	5	•			• 4	0	1109	149
Arcam Alpha 6 Plus	350	Very mid-band oriented sound that was bright, yet lacks detail. Good for smaller speakers.	(-	•	•	• 5		1739	154
Arcam Delta 290	500	Combines dry restraint with detail, dynamics and musical colour.	e	-	•	•	• 7	100		110
Audio Innovations Alto	300	Probably becuase of a lack of deep bass, this stylish amp sounds open, natural and relaxed	(22750			3		1540	
Audio Innovations S700	1,199	Turns the roughest of digital sounds into understated and graceful music.	ł	-			2	8	-	11
Audio Note Ongaku	56,000	A single ended, zero negative feedback triode, line-level amplifier and a half. Probably the best amplifier in the world.	3	1000			2			C9
Audio Note Oto SE	1,500	Transparent, dynamic, clear and subtle, but limited power.		20.00			2		0.1	12
Audiolab 8000A	500	The 8000A remains a highly disciplined and mature sounding amp.		-	•		• 6		1581	
Audiolab 8000S	650	Informative in every sense, only a slight lack of bite detracts. Perhaps Audiolab's best yet!	(ALC: N		•	• 6		1740	
Aura VA100 II	330	Big, smooth yet slightly disjointed sound was equally familiar.		9001	2		• 7	100	1541	
Cambridge Audio A1	100	Dull musically - but at this price, Hobson's choice	1		,		• 3		1463	
Chimera X-80	800	Stonking looks, powerful, but ultimately lacking in dynamics. Tested in Sessions	5	800			8			13
Copland CSA-14	1,099	Great sound and looks, but watch out for high capacitance cables	-	00			6		1416	
Creek 4240	279	Bearing no relation to earlier Creek designs, this radical rethink is more successful via MM than CD.	4	- Course			• 4		1127	
Creek 4240SE	350	At best, bland and plodding, at worst grainy, shouty and honky. Best on simple rock.	1	-			• 3	-	1741	
Denon PMA-250 III	160	High resolution amp, can loses its grip but is engaging and enjoyable.	-	-	Sec.		• 3			12
Denon PMA-350 II	230	Modifications give this amp a powerful up-front and compelling performance.		- marine	-		56		1128 1258	
Denon PMA-450SE	280	Based on the original '450 and offers a fast, furious and entertaining sound.	1		-		69		1258	
Denon PMA-725R:	350	Warm, bold, up-front presentation but musically unexciting.		Page 1		•	• 9 6		1742	
Densen Beat B100	600	Seriously well controlled amp that does everything well. Very slightly shut-in sounding.	and the second s				65. R		1742	
DPA Renaissance	595	DPA's first integrated amp is typically innovative, but a little too 'crisp 'n dry' for our tastes.		i C	_		45			1
EMF Audio Sequel	349	Relaxed and restrained design from Mike Creek.		-			• 5 5	C 227 C	1743	
Exposure XX Super Gamma Acoustics Gemini	700 699	Rather transistorised, unexciting sound. Good coherence and rhythm. Best played loud.					1		1743	
	160	Genuine single-ended triode design, but low power, mundane sound and poor build Rhythmically dull. Never gets out of first gear.		, ; •			• 5		1803	
Grundig Fine Arts V-11 Harman/Kardon HK610	200	Lively and friendly sound, but could prove too exciting for the faint hearted		5	100		• 3		1465	-
Harman Kardon HK1200	300	Big sound with little bite. Becomes confused with complex music		1200			4	80 8	1405	
Harman/Kardon HK1200	400	Relaxed, confident sound is only troubled by the most dense of recordings.	100 M	5			4		1011	
Harman/Kardon HK640	400	Breezy, nimble sounding amp lacks grip and fortitude - it can sound artificial and insubstantial		i i			• 5		1542	20
John Shearne Phase 2	649	Either a natural-sounding superstar or nasal and hard to listen to — make up your own mind!					5		1744	
JVC AX-V4	200	Respectable performance for a Pro-Logic AV amplifier. Lacks resolution and sparkle, though.	and the second s	j e			• 6		1805	
JVC AX-R5	200	Versatile, and lots of even-handed, articulate detail; but let down by superficiality	and	i C	-		• 4		1466	
Kenwood KA-3020SE	200	Not a brilliant phono stage, but this is a lively, exuberant sounding amp via CD	Editor -	j C	-				1130	
Kenwood KA-3060R	230	Classy engineering, but sound is over-dry, often frustratingly restrained and rather unsophisticated.		5 (•	• 4		1260	
Kenwood KA-5050R	350	A listenable but neither particularly communicative nor captivating amplifier.		5	100		• 9	-	1012	
LFD Integrated Zero	499	Lively and brisk, but at the same time cold and unsympathetic		5			5		1584	~
Linn Majik-I (Phono)	725	The cornerstone of Linn's modular hi-fi system is innovative, but sounds vague and confused.		j e			• 3		1013	
Magnum IA170	270	Gives a realistic sense of instruments playing within a very believable acoustic, preserves colour & dynamics well		3			• 9		1260	
Magnum Quartet	329	An integrated model that incorporates four monoblocks optimised for bi-wiring, but sound is sandy in the treble.		5 0			• 3			1
Magnum Class A	599	Lashings of rich and compelling music, but the Class A trades lushness for accuracy.	Sec. 1	1				0		1
Marantz PM-44 MkIISE	200	Two generations on from the PM-40SE, this new model gives a disappointingly grey view of music		5 0			• 4		1131	÷
Minium Amp	350	Excellent musical performance but doesn't like high levels or low impedance speakers		6		•	• 4	Rev B	1806	
Mission Cyrus III	500	The classic Cyrus II sounds convincing, masterful and musical.	and the second se	5			5	-	1585	
Musical Fidelity E10	300	Smooth and high-endish sound that is marred by a lack of dynamics and a touch of grain.		i •			• 4		1746	
Musical Fidelity E100	599	Beautifully crafted with a vibrantly colourful, almost dramatic sound.		5	-	•	• 7		1586	
Myryad MI 120	530	Despite an ultra-modern appearance, the old-fashioned cold, dry transistor sound.	and the second se	5		•	• 6		1747	
NAD 310	100	Fleet and sure of foot, it seems likely to set all appendages tapping with itsblend of enthusiasm and artfulness		5			1		1468	
NAD 314	260	Lively if coloured presentation that is musically engaging and easy on the ear	6.00.0	6			• 5		1807	
Naim Nait 3	550	Distinctive and highly musical sounding integrated. Perhaps too distinctive for sme tastes.		5			100		1748	
Onix OA21S	430	CD input sounds dead, but via MM disc, this amplifier has a fresh, vibrant sound.					5			0

	ED	AMPLIFIERS	C PHOND	10	DPHON CONTRO	OWER DUI TE SOCKET	FACTSBACK RECEIV PUT(W)	ISSUE NUM NUMBER	BER
	rice(£)	Comments		V	V				
Onix OA31	480	Eager to please, dynamic and fresh sounding, but it's grip is wafer thin	5 5	•	•	•	60 50	1587 1749	
Orelle SA-100 Pioneer A-303R	449 200	A musically rewarding amplifier that grows on you. Trace of coarseness in treble. Fresh and uncomplicated sound bests much of the audiophile competition.	5	•			800 B	1129	
Pioneer A-300X	230	This revamped version of the A300 sounds more confident via CD than MM, yet our panel was unmoved.	5				40		116
Pioneer A-400X	300	On second audition, this amp was tonally unchanged but less compelling	6	•	•			1545	
Pioneer A-503R	300	Best via MM disc, the dull and claustrophobic sound is otherwise deeply uninspiring.	5	•		• •	70	1544	
Pro-ject Model 7	259	A minimalist amplifier brimming with good intent, but too quirky for its own good. Either MM or MC.	5	•			40	1264	142
Quad 77	650	Stylish remote driven amp, bright and lively. Tested in Sessions	4	•	•		50		139
Rega Elex	398	Minimalist amplifier sounds forward, hard and unforgiving.	4	•			50		116
Rotel RA920AX	120	Commendable performance at the price. Tuneful, robust bass	4	•		•	32	1808	157
Rotel RA970BX	300	Lively, fresh and perky with plenty of power, but not so clever with complex recordings.	6			•	North Contraction of the	1546	138
Sonic Frontiers SFC-1	1,795	Smooth, sophisticated Canadian valve amp with a decent direct input and more features than average.	6				50	10502	126
Sony TA-F448E	250	Confused and coloured sounding, it needs a large dose of delicacy adding to its presentation	5	•			and the	1809	
Technics SU-A600 Mk2	230	An amplifier that's great fun to be with, but a little untidy from time to time	5	•	•		37	1472	
Technics SU-A900 Mk2	450	Jeckyl and Hyde amplifier with a dismal-sounding phono stage but transparent CD input.	5	-	•	•	90	1547	138
Woodside ISA230 Disc Yamaha AX-490	899	Smooth and inoffensive valve amplifier, though it lacks the sparkle and euphony required for a truly entertaining sound.	3 5	-			30 85	1473	
	250	Widgets aplenty, but unemotional sound evoked an uncertain response from panel	5	-	•	-	45	-	149
	1,199	Audiophile spec French integrated with good resolution and nice phono stage.	J				43		121
Preamplifiers Alchemist Kraken/Pre	380	Quirky Class A design with an equally warm and colourful sound.	4						124
Audio Innovations L1	369	Reviewed with S800 Anniversary — Explicitly detailed, conveys the message of the music as a whole	4					1300	
Audiolab 8000C	520	Distinctive, stark neutrality that will not appeal to all. Good value engineering.	5	•					97
Audiolab 8000Q	1,000	Tested with 8000M monoblocks	6					1301	145
Conrad-Johnson PV-10A	1,250	Beautiful imaging, superb detail, plenty of gain on the phono input; classy build too. Tested in Sessions	4		•			1560	139
Conrad-Johnson Premier 7	11,000	The 7 is designed without compromise, and is clearly one of the finest (valve) preamplifiers money can buy.	5						C91
Copland CTA-301MkII	1,349	Sweet sounding - but never gets bogged down in audio treacle	4	•				1630	151
Creek P42	279	Tested with bridged A42 power amps, an articulate and open combo with tight tuneful bass (optional phono stage & remote)	6						155
Cyrus Pre	650	Tested with Cyrus Power. High tech design Punchy, light footed character with a sense of substance and natural warmth	5	٠		•			155
DPA DSP200S	495	Dramatic but detailed and transparent sound belies modest power rating (tested with DPA-200S).	6						124
EAR 802MC	2,599	Tested with £3499 509 Mk II - see comments in power amp section	4	•	•				63
ECA Vista	760	Wind up the volume and blow a breath of fresh music into your system (tested with Lectern).	5		_			1302	145
Exposure XVII	849	Superbly rhythmical; maybe a tad overpowering in the midband. Tested in Sessions with XVIII Super	5	•	•		-		142
Jadis JP-30MC Krell KRC-2s	5,978	French tubes, JP-30MC has beautiful build, nostalgic styling and delightful midrange. (tested with JA30).	5 6	•			-		60 141
Meridian 501	4,190 695	This is an exquisitely refined and transparent design (tested with KSA-50S in Statements) Tight, positive sound, but dispassionate; intense at high levels. Tested with 555	5	•				1303	141
Meridian 562V	995	Transparent and capable preamp, also features 6 digital inputs	9					1303	145
Moth 30 Passive	149	Modular system gives cracking results. Passive preamp and power amp warrant Best Buy (tested with 30/Stereo 60).	4	-					109
Moth 30 Active	249	Tested with 100W monobloks. While demonstrating solid, even balance it proved adept at delivering vital musical qualities	4						155
Musical Fidelity E200	599	Weighty, luxuriant but hardly scintillating. Tested with MF E300	7			•		1304	145
Rose RV-23	450	You can pay more to get a more transparent sound, but it's hard to criticise at the price.	3	•					77
Rotel RC970BX MkII	175	Confident, consistent sound, reviewed (in Sessions) with RB970BXMkII power amps	5						144
Rotel RC980BX	375	Tames enthusiastically recorded material with a laid back and occasionally smeared sound (tested with RB980BX).	5	٠	•				155
Sumo Athena IIB	767	Tested with Polaris III. Big, natural and tidy sounding with very natural reproduction of acoustic and electric instruments	6					1305	145
Thorens TTP2000	500	Minimalist shoebox preamp, rhythmical, warm balance. Tested in Sessions with TTA2000	4			•			139
Woodside SC26 Phono	1,931	Synergistic with STA35, with a cool, controlled sound, good focus and transparency (tested with STA35).	5	۲	•		-		100
YBA 3 Pre	1,250	See-through, ethereal stereo images, but more convincing towards centre of soundstage (tested with $\pounds1199$ 3 Pwr).	4	•					72
YBA 2 Pre	1,699	Superbly finished, good space and transparency. Needs transformer for MC cartridges (tested with £2150 2 Pwr).	4	•					56
YBA 1 Pre	3,750	Tested with £4250 1 Pwr - see power amp section for comments.	5	-	•				62
Power amplifiers Acurus A150	1400	Drive includes DI 11 process with which it was tested. Deverfull remain control HC combs with a slightly forward inclination	1				150		151
Alchemist Kraken/Pwr	1400 399	Price includes RL11 preamp with which it was tested. Powerfull remote control US combo with a slightly forward inclination	1				60		151
Art Audio Quintet	1,393	Hardly accurate, but entertaining nevertheless. Switchable triode, ultralinear output stage. In triode mode, these are 15 of the sweetest Watts around. Surprisingly gutsy.	1				15		124
Audio Innovations S800 Anni		Reviewed with L1 — Explicitly detailed, conveys the message of the music as a whole remarkably well	1				25	1300	
Audiolab 8000M	750	Strong, controlled sound; confident bass, but colourless. Tested with 8000Q	1				125	1301	
Audio Research VT60	2,645	Ranks as 'must try' American cultural item (tested in Statements). Tube design	1				35	1179	
Copland CTA-505	2,099	Grown up amplifier with a refined, yet never over-civilised air	1				67	1630	100
Creek A42	279	Tested with bridged P42 pre in bridged mode. Articulate and open combo with tight tuneful bass	1				100		155
Cyrus Power	450	Tested with Cyrus Pre. Punchy, light footed character with a sense of substance and natural warmth (bridgeable)	1				50		155
DPA 200S	750	Dramatic but crisp, open sound belies power rating (tested with DSP-200S).	1				60		124
EAR 509 Mk II	3,499	Combining sonic strengths of transistors and valves, this amp warrants attention (tested with £2599 802).	1				100		63
ECA Lectern	880	Tested with Vista. Wind up the volume and blow a breath of fresh music into your system	1				50	1302	145
Exposure XVIII Super	849	Slight dullness and hardness, but great 'boogie factor'	1				70	-	142

Cables

ables are not accessories, but an integral part of a system. Inevitably some cables are better than others. The best cable for your system will only be found through trial and error, but by combining our recommendations with those of a dealer, you will end up shown are for a terminated linear metre. with something suitable. Generally speaking, budget to spend about ten per cent of the total system cost on cables.

Analogue interconnects are the leads that connect source components to amplifiers and pre to power amps. The cables in this section are priced for a one-metre terminated pair.

■ Digital interconnects connect CD transports to DACs, and are traditionally coaxial with a 75 Ohm impedance. They come in optical and electrical varieties, the former being made of plastic or glass. The prices

Speaker cables are used between the amplifier and speaker. Our prices are per unterminated metre. Termination (plugs and soldering) costs vary with brands.

KEY

SYMMETRICAL: A twisted pair of conductors. COAXIAL: A central 'hot' conductor and a shield that carries the negative signal STRANDED: Multiple strands with no intervening insulation.

SOLID CORE: single or multiple individually insulated strands. COPPER: Material used for conductor. SILVER: Material used for conductor. DIG CABLE TYPE: 0 - optical digital, E - electrical digital.

FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback information page

Analogue Interconnects	18. 3								100
Audio Note AN-A	29.50				•	•		1007	108
Audio Note AN-C	59.50	Neutral but lacking in subtle texture and unable to distinguish fine detail			-	•		1687	-
Audio Note AN-S	139	Up-beat and enthusiastic sound with satisfyingly deep and grumbly bass					•	1687	-
Audio Note AN-V	219	15 individually insulated silver strands make up this very clean and dynamically unchallenged cable	•	-	-	-	•	1687	-
Bandridge AL421	5	Light and airy sound lacks authority, splashy treble	-		•	•		1688	-
Bandridge AL426G	10	Gold plated plug OFC version of AL421 with same innefectual sound quality	1	-	•	•	-	1688	
Bandridge SG AL4720	13	4N OF copper, full smooth balance but a little plodding and relentless, lacks panache	-		•	•		1688	-
Bandridge SG+ AL4820	25	4N OF copper, distinctly teutonic, thrusting detail forward but still plodding and relentless	-	•	•	•		1688	
Chord Chameleon	68	Anomalous treble with a dry but vaguely sibilant quality, sometimes sounds smooth, sometimes harsh!			•	•			108
Chord Solid DNM TCC75	99	Thin but very stiff with excellent resolution of subtle timbral detail and fine dynamics	_	•	•	•	-		108
DNM TCC75	34	Price for 0.75m length. High resolution cable, but best in short runs due to higher than average series impedence		2		•		1690	-
DPA Slink	41	Slightly bright and zingy sound with flat soundstaging and hollow sounding bass, vocals and strings sound convincing thou	gh		•	•		1690	1000
DPA White Slink	75	Highly expressive, very easy on the ear and attractively detailed though not entirel characterless at high frequencies	1		•	•		1691	-
DPA Black Slink	220	Initially dark and meaty but becoming lucid and transparent with running in. Quad geometry, Gore-tex dielectric	•		•	•		1691	-
lxos 104	20	Open and detailed presentation, full bass and silky if overly smooth treble		•	•	•		1692	-
lxos 103	40	Even handed and generous sound, bass has a well rounded, bouncy quality		•	•	•		1692	-
Ixos 101	100	A cable with personality, its veiled and shut in quality brings an earthiness to vocals and rhythm guitar alike		•	•	•	•	1693	-
LFD Spirolink I	35	Price for 0.7m length. Dynamic but smoothly detiled perfomance, but gives the impression of looking down on the music			•			1694	13
LFD Spirolink II	70	Price for 0.7m length. Strong and confident sound enhancing bass depth and subtlety, concentrates of nthe meat of the mu	isic 🤇		•			1694	13
LFD Trilink	150	Price for 0.7m length. Warm and luxurious sound but a little too fruity in balance, treble is a little subdued, bass detached	•		•			1695	131
Linn Phono to Phono	47	Encourages a delicate performance underpinned by a strong and authoritative bass		•	•	•		1695	13
Monster Interlink 200	20	Colourful in an appealing rather than contrived sense, bass is slightly over-blown, large and ingratiating sound stage			•	•		1696	13
Mon ter Interlink 300	30	Richer, smoother more civilised sound than 200 with improved articulation and reduced sibilance	•		•	•		1696	13
Monster Interlink 400	40	Compromised by a grainy top end, treble and vocal range sound particularly sharp and untidy	•		•	•		1697	131
Monster Interlink 500	50	Sounds rather good, providing a livelier and more interesting account of music than most sub £100 cables			•	•			108
Monster Interlink 800	80	Not as bright or aggressive as the 400 but streble is trangely lumpy, muted and manipulated - odd cable	•)	•	•		1697	131
Monster Interlink Reference	2 100	Easy on the ear but rather contrived, slightly clanky treble fails to integrate with the smoother but splodgy midband			•	•		1697	131
Moth Ley Line Black	100	Offers a full and big sound, neutral yet very solid and condifdent in delivery. Expansive imaging retains music's energy			•	•	٠		108
Moth Ley Line Grey	200	Detailed enough but there's a sense of distance between the music and the listener, vox are course rather than liquid	•		•	•	•		108
Panasonic RP-CA910	50	Uncongested and even handed balance if slightly flat imagewise, retains impact but has a vaguexly untransparent quality		•	•	•			108
SonicLink Crimson	55	Using PTFE insulated nickel conductors this is a rather matter of fact cable that can inject a little bit of mirth	•		•			1698	131
SonicLink Blue HPMC	115	Flat and matter of fact, but grasps music firmly and remains in control. Not very 'hear through', Nickel conductors			•)		1698	131
SonicLink Black	165	Encourages an upbeat and snappy sound that's driven by leading edges, full and rumbustious bass maintains an even ter	про		•	•	•	1699	131
Tara Labs Prism 11	45	Very compatible cable that wins through with a naturally balanced and realistically dynamic sound. 6N purity copper			•			1699	131
Tara Labs Prism 22	56	Delivers a fresh and detailed sound with clear and bright treble giving it a free, quick and dynamic character						1700	131
Tara Labs Quantum CD	75	Lacking in obvious vices, neutral and transparent, there's also a good solid bass. Vox are not always as intimate as possib	le 🔵						108
Tara Labs Prism 33	90	A pedestrian cable that sounds lively but muddled. Quite dynamic, quite rich, quite smooth but also quite indistinct		•		•		1700	13
Transparent Audio Music Lin	k 119	No aggressive nasties to tax the ears, neither does it sparkle with inspirational detail. Only suited to low output impedance	s	•	•	•	-	1701	131
van den Hul The Storm	25	Price for 0.8m length. Rich and warm but bass is rolled off, however there's plenty of drive and high frequencies are clean	-	•	•	•	8	1701	_
van den Hul The Source	50	Price for 0.8m length. Good foot tapping sound that accurately reflects the life of the music without throwing detail at you							108

THE DIRECTORY

		NTINUED)	~	STRAND	OLID CO	COPP	DIG CABL SILVER		SSUE NU IMBER	-
Product	rice(a)) Comments								
van den Hul The First	210	Using 12,000 carbon fibres, a gentle and subtle sounding cable that conveys oodles of information but lacks dynamic punch		•	•				1702	13
van den Hul The Second	225	Wonderfully open and relaxing but also intimately detailed, slightly softens percussive dynamics	٠		•		•	191	1702	13
KLO Type 150	50	A restrained but useful cable for taming lively CD players, dynamics lack freedom, treble lacks clarity		•	•		•		1703	13
KLO Type 0.1	180	Unusual but highly expressive and detailed with a hint of graininess on powerful vocals				• •			1703	13
Digital Interconnects									1701	
Audio Note AN-V	110	Ostensibly an analogue cable but gives a meaty and natural performance when used for digital duty	•			•	•	and the second	1704	
Audioquest Video X	40	A decent level of detail, imparts a gentle lift from vocal to high treble that can sound a little splashy	-	•		•		1000	1705	- 64
Audioquest Video Z	60	The very best available, with an expressive sound, but generously priced.	•	•	•	•	•	E		1
Audioquest Optilink Z	120	Good level of midband detail but frequency extremes lack depth and extension.		-				0		1
Audioquest Digital Pro	100	A silver cable with all the drive of Video Z but lacking its clear cut transparency.	-	•	•			E	1705	1
Bandridge AL4900G	40	Lacks deep rounded bass and treble is coloured with a spittiness, a little rough and ready	-		•			and a second	1705	- 50
Chord Codac	32	A connection with a stranded inner core and a sound that lacks integration.	-	-	•	-	•	E	1700	1
Chord Prodac	50	Price for 0.6m length. Lively detailed treble, drives music along confidently with no hint of fizz	-	•		•		-	1706	-
DPA Opti-link	20	Very similar to Bandridge AL560; sound is lacklustre	-					0		1
DPA Digi-link	28	Can seem slightly impassive but there's no avoiding its exceptionally detailed sound.			•	-		Ε	1707	1
ixos 105	25	Extended but soft edged treble that's mercifully free of fatigueing colourations, plenty of weight, smooth vox	-			•		And a state	1707	12
Kimber Cable PSB D'link	39	Priced for 0.5metre. Analogue cable inappropriately pressed into digital service. A visible deterioration in the signal results.		•	•	-	•	E		1
Kimber Cable KC-1 D'link	55	This cable adopts a woven construction with the addition of a conductive screen. Music lacks detail and spirit.		•	•			E	-	1
Kimber Cable Opti-link	70	Hardly cheap for what appears to be a bog-standard PMNA fibre, yet it sounds a little brighter and livelier than most.					-	0		1
Kimber Cable KC-AG D'link	136	Priced for 0.5metre. Asymmetric cable that deviates from the 75ohm standard. Not ideal for digital applications.	-	-	•		•	E	1700	1
LFD Digilink Copper	30	Slightly grainy highly compatible cable with coherent and forward dynamic quality	-	•		•	•	-	1708	10
Monster Interlink LS100	45	Well constructed stepped-index fibre with polished ends and connectors. Lean, fuzzy, engaging performance.					_	0		1
Monster Datalink 100	45	Price for 0.5m. A colourful coaxial interconnect with an equally colourful and up-beat sound. Very compatible.	-		•	-		E	-	1
Moth Leyline Datalink	140	A thin, coaxial version of Leyline Black with a rather hard and unforgiving character. Too expensive.	-	-	•	•		E		1
QED Digiflex	20	A top perforance, low-loss 75ohm coax with a very open, almost liquid quality.	-	-	•	-		E	1700	1
Siltech HF-6 Senial ink Light Brown 75	150	Sounds detailed, very clean and very extended, but bass is less well resolved - a treat for high end systems		-		-	•	and the second second	1709	- 60
SonicLink Light Brown 75 SonicLink Green	30 50	Hampers life like dynamics, stripping out vigour but will never sound harsh		-	•			100	1709	- 10
van den Hul MC Videolink 75		Spacious, positive and engaging if a tad over crisp at times, very compelling however		-		•	•••	-	1709	
van den Hul The First	48	An AV-cum-digital cable that nearly beats QED's Digiflex, but emphasises sibilants.	1	-				E	1710	1
Loudpeaker Cables	120	Exceptionally natural albeit slightly dark or cautious compared to some, plenty of subtle information and beautiful integration		-	-		1	t	1710	1
Audio Note AN-D	4.50	Supplied in linear, non-polarised lengths that should be twisted into stereo pairs. Sounds rather grippy and forward.						-		1
Audio Note AN-B	16.50			-	-			-	1711	- 6
Audio Note AN-L	29.50				-	-	•		1711	- 8
Audio Note AN-SP	125	A calm and civilised presentation, very quiet in the way it reveals subtle low level detail. Great poise and clarity				-			1/12	- 6
Audioquest F-14	1.95	Ideal for laying under carpets, F-14 encourages a slightly warm and vibrant sound	-			-		-		1
Audioquest Type 4	4.95	Four 18-gauge OFHC copper conductors wound in a Litz-type fashion increases capacitance but restrains the cable's 'bite'.	-			-		-		1
Audioquest Cobalt 2	4.55	A rather polite and aneamic sound that bubbles gently with detail and is largely uncoloured and cautiously spacious			-			-	-	1
Bandridge SF LC1070	42p	Basic figure 8 bellwire, lightweight balance and a softness that dilutes even the strongest bass		-					1713	- 53
Bandridge SF LC1259	42p	Fresh and open, bubbly and naturally colourful soundstage that's neither forced or unduly edgy. Treble is slightly messy						-	1713	1
Bandridge Highflex LC2604	3.50	Substantial 6mm ² conductor produces weighty but ploddy music that lacks transparency						-	1713	- 50
Bandridge LC7409	3.85	Detailed and up-beat cable. A bit too steely for classical strings	-	1					1/14	-69
Cable Talk 3	3	Easy on the ear but far from lazy, should yeild a round, smooth yet colourful sound in most systems	-						1714	- 63
Cable Talk 4	4.25	Smooth and cultured sound that lacks fine detail and is a bit too restrained				-			1/14	- 65
DNM LSCB500	5.95	High impedance can influence the treble response, but this was a winner on sound per pound. Bi-wire			-	-			1000	- 67
DPA Black Sixteen	90	Unflappable resolution of fine musical details, there's no dampening of dynamics simply oodles of taut information	-	-					1716 1717	- 63
Gale XL315	2	A little lacking in detail but plenty of life and excellent value				-			1/1/	- 92
Gale XL160-2	2.50	A fittle facking in defail but plefty of the and excellent value Rhythmic and bouncy sounding bi-wire cable. Slightly manipulative sounding							-	- 81
Heybrook Heywire	2.50	This well-meaning facsimile of earlier ribbon cables ends up sounding lumpy and uneven.	-		•				1800	- 21
Ixos 603	2	Big and expansive sounding cable, full and engaging while retaining a high degree of neutrality				-		-	1710	1
1403 003				-					1718 1719	- 65
Ivos 604										
Ixos 604 Mission Quartet	5 7.90	Midrange is detailed and surprisingly smooth but treble is hard and synthetic and the bass no better Mixed, inoffensive sound, adds gutteral resonance to yocals and could be generally more coherent. Bi-wire.		-	-			-	1713	- 66

DED Profile 8	5	Sophisticated flat cable that lacks decent bass and get up and go			•	2	•	1800)
SonicLink AST50	5	It may look like bell-wire, but AST50 sounds detailed, ordered and balanced			•		•	1800)
SonicLink Grey	9	A spaghetti-thin silver plated cable lacks bass impact and treble 'air'				•	•	•	
SonicLink Care Music	15	Lack of conviction and integration through treble and relatively shallow bass but waffle free and open at high frequencies	es		•		• •	1724	ł
SonicLink Blue Bi-wire	20	Small sounding and bass light with limited subtle detail and a dirtiness to percussion				•		1724	ł
fara Labs Rectangular SCM	725	Price for terminated 2m pair. Dynamics are exquisite, luxurious smooth sound, brimming with unforced detail				•	•	1725	,
fransparent Audio Musichord	11.42	Sweet, open and refined treble, a bit of breathy exuberance and can sound slightly lackadaisical			•		•	1728	\$
Fransparent Audio Wave	22.84	Very close to the sound of 'no cable', one of the very best. Slightly softens treble detail		•	•		•	1728	\$
lech+Link OFC79	1	Bargain basement cable that sounds cosy, but suffers from a wobbly bass			•		•	1800)
van den Hul The Clearwater	6	Despite its evocative title, the Clearwater turns out to be a disappointingly murky sounding cable.			•		• •)	
van den Hul CS122	19	Smooth and articulate with superb focus and control, its sheer coherence makes it a winner (tested in Sessions)			•		• •)	
van den Hul The Magnum	31	Touted as vdH's most prestigious twinlead cable, Magnum sounds soft and old fashioned.			•		• •		
van den Hul The Wind	35	'The Wind' kicks up a storm with its lush midrange and bone-crunching bass!			•		•		
van den Hul Revolution	64	Silver plated OFC combined with carbon fibre prompts a sombre character with an easy and relaxed treble			•		• •	1726	ò
KLO Pro Type 625	4	Lively but natural and relaxed sounding but a hint of congestion at frequency extremes					• •	1726	ò

Cartridges

artridges fall into two groups: high output MM (moving magnet) models, capable of working directly into most phono inputs; and generally more expensive low and very low output MC (moving coil) models. MC cartridges usually have better mechanical integrity, tighter tolerances and give better performance. Many amplifiers are no longer equipped with the necessary phono input for a cartridge, and a separate phono stage is necessary. Phono input equipped valve designs need a

transformer to cope with MC cartridges.

Cartridge/amplifier interfacing can be very subtle, but even basic high output MM designs benefit in overall balance from optimised amplifier capacitance loading.

KEY MM: Moving magnet cartridge with a normal output suitable for all sensitivity vinyl disc amplifier inputs vinyl disc amplifier inputs. REPLACEABLE STYLUS: Most MM cartridges have a stylus that MC: Moving coil cartridge with a low output only suitable for high can be removed and replaced

OUTPUT (MV): Cartridge output in millivolts. MASS (g):Cartridge mass can affect arm choice FACTSBACK NUMBER: The Factsback reference for ordering a fax

the second se	rice(£)		and the first of		V				
Arcam C77	30	A sensible moving magnet package with good bounce at a competitive price.		•		•	4.0	6	48
Arcam C77MG	40	Punchy, with plenty of energy to liven things up. The solid body is well worth the extra £10.		•		•	4.0	6	67
Arcam E77MG	60	Our sample had a disappointing stylus, but gave a coherent, rich and laid back sound.		•		•	4.0	6	48
Arcam P77MG	73	Preferred to its cheaper partner thanks to a better tip. Channel balance poor		•		•	4.0		48
Audio Note lo IIV	1,395	One of the best, giving an extraordinarily relaxing midrange clarity. Needs a transformer.			•		0.1		100
Audio Technica AT-95E	19	Clear and dynamic, though richly balanced.		•		•	2.8		48
Audio Technica ART-1	944	This is a delicate and very fluid-sounding MC that tracks well.			•		0.4	9	72
Audioquest 404L	599	Slight harshness detracted from the performance of this otherwise clear-sounding and detailed cartridge.			•		0.5	6	84
Audioquest 7000NSX	1,495	Stunning stereo imaging and detail spoiled by poor tracking and high sensitivity to arms.			•		0.4	6	91
Denon DL110	70	A fine all-rounder, this high output MC model is likely to perform well					1.0	6	48
Denon DL160	90	Although listeners just preferred the 110, its brother here survived lab tests and is still 'thoroughly competent'.			•		0.1	6	43
Denon DL103	100	Good performance in bass and good 'life' is seriously let down by its spherical stylus which kills subtle setail.			•		0.1	6	103
Denon DL304	200	Uncoloured, detailed, tracks superbly. Top notch altogether and a top notch bargain too.							103
Dynavector Karat 17D2 mk2	449	Clean and controlled sound with taut, tuneful bass. Detailed and musically cogent.			•		0.15	5.3	158
Dynavector XX-1L	998	Very clear, very detailed; a response lift around 20kHz seems to do no harm.		61	•		0.25	12	84
Dynavector XX-1	998	Good, but not immensely competitive at the price, and not helped by comparison with the low output version.		1	•		2.0	12	84
Goldring Elan	17	A lightweight and frisky-sounding MM apparently based on Nagaoka MM4 body		٠		•	5.0	7	67
Goldring 1012GX	65	Slightly harsh but plenty of life and detail. Some high frequency colouration apparent.		٠		•	6.5	7	85
Goldring 1022GX	85	As with 1012, a touch harsh; detail and transient purity improved		٠		•	6.5	7	85
Goldring Eroica LX	100	Not the most subtle cartridge in the world: can sound edgy at times, but lively and informative.			•		0.5	8	84
Goldring 1042	105	Not terribly subtle, and not such good value alongside 1012 and 1022. Quite lively though.		٠		•	6.5	6	91
Goldring Elite	200	The basics are right, and it will cheerfully tackle any source material, but its sound has a certain dirtiness.		2	•		0.5	8	103
Grado Prestige Gold	150	Rich sounding with an unusually refined top-end for a moving magnet-type cartridge		•		•	4	6	158
Linn K5	65	Not as crisply focussed as the othe Linn magnetics, but the K5 is smoother.		•		•	4.5	6	67
Linn K9	150	Linn improved this model by beefing up the Basik's bodywork and adding a super stylus.		•		•	4.5	5	Col
London Decca Maroon	199	Now manufactured under the London brand name, this Decca cartridge is as iconclastic as ever.		•			5.0	6	67
London Decca S Gold	339	Immediate and detailed, but coloured, nonlinear with a questionable effect on records.		•	2		5.0	6	84
A Lyra Lydian	699	Superbly capable all-round musical performer that improves markedly when its body cover is removed		1	•		0.3	7	158

	Price(£						V	
Lyra Clavis Da Capo	1,069	A stable tracker, and one of the finest cartridges we've heard			1	0.1	7	14
Milltek Aurora	299	An overall feeling of relaxed ease characterised this clear and atmospheric Kiseki-built cartridge.		٠	2	2.0	0.1	29
Ortofon 510/P	32	For the price, a good blend of virtues - weight, clarity and neutrality			• 2	3.0	5	8
Ortofon 520/P	55	Sensitive to load capacitance, the 520/P has a lively, effervescent sound.			• 3	3.0	5	
Ortofon MC10 Super	85	'What a delightfully sweet-sounding cartridge this is' we said.		•	(0.3	7	4
Ortofon MC3 Turbo	110	The 3 Turbo is bright, cheerful and bouncy, but unsubtle - take it as it comes.		٠	2	3.3	4	10
Ortofon MC15 Super II	110	A good all-rounder, with outstanding resolution, if slightly bright and clos up.		•	0.	.35	7	10
Ortofon MC25E	160	An excellent upgrade for a mid-price turntable		•	(0.5	11	13
Ortofon MC25FL	210	A bit too stark and honest, but faithful to what's on the LP		•	(0.5	11	13
Ortofon MC30 Supreme	450	Highly detailed and even-sounding cartridge that has a special affinity with female vocal recordings		•	(0.5	10.7	15
Ortofon MC3000II	950	A real eye-opener. Nothing to criticise anywhere, one of the very best.		•	0.	.12	10	8
Ortofon MC5000	1,500	Limited tracking abiity, bright and forward sound, but good stereo		•	0.	.12	10	9
Rega Bias	34	Difficult to mount in some arms due to its shallow build, the Bias offers a gentle, refined sound.			•	5	4	6
Rega Elys	74	Clearly superior to the Bias, the Elys is both more detailed, accurate and convincing.			•	5.0	5	6
Roksan Corus Black	130	Recognisably related to the Corus Blue, but more civilised and smoother.			• (6.5	5	9
van den Hul MM-1	250	If woody midrange could be tamed, imaging and security would pull it through	•		•	5.5	6	10
van den Hul DDT	699	Outstanding stereo imaging and neutral balance are appealing but rhythmically the DDT-II is a bit lazy		•	0.	.35	7.6	15
van den Hul MC-10	799	A neutral, balanced performer gives, fine depth and focus and a firm, extended bass			(0.4	6	6
van den Hul MC-One	999	This extended all the positive qualities of the '10, but added greater authority and scale - worth all the extra money.			(0.4	6	6
van den Hul MC-Two	1,349	MC-Two rewards with a highly deailed yet fluid and musically covincing portrayal.		•	(0.4	6	7
van den Hul G' hopper IIIGLA	2,999	Undoubtedly one of the finest cartridges available, it has tremendous bandwidth, energy and finesse.		•	(0.4	6	12
Wilson benesch Matrix	689	Extraordinarily well balanced cartridge: neutral and detailed yet lively and rhythmically assertive.			0.	.58	6	15

Cassette Decks

he compact cassette is still the world's most versatile and ubiquitous music storage medium. Buffs may wrinkle their noses, but they all use it.

There should be no problems in connecting a cassette deck to any normal amplifier, but some care needs to be taken in choosing the best tapes for a specific machine. (Trial and error is one effective technique, but many decks have manual bias adjustment and some match up to the tape automatically.) Twin decks offer the option to dub tapes and play two cassettes sequentially. Autoreverse is a useful feature, but usually implies some mechanical compromise. The sort of facilities that are useful include tape monitor switching and Dolby S.

appeared

KEY

DOLBY C: A rather extreme noise reduction system not usually associated with high sound quality DOLBY S: A desirable derivative of the Dolby SR professional noise reduction system.

DOLBY HX PRO: System designed by B&O to extend headroom

for cassette recording.

3-HEAD: If you want to monitor a recording whilst you are making it a third head is essential. TWIN DECK: Contains two decks for dubbing and continuous play, in most instances only one deck will record.

AUTOREVERSE: Automatically plays both sides of the cassette. AUTO CALIBRATION: The deck will automatically set up bias and EQ for any tape.

ADJUSTABLE BIAS: Bias can be manually set to suit the tape being used.

	echnics RS-AZ7	300	Thin-film head gives a solid, almost CD-like bass and midrange. A clear advance in the state-of-the-art.			•					158
4 Y	'amaha KX-490	199	Electrifyingly transparent and capable deck, whos only flaw is a trace of audiable wow and flutter.	•		•		•	•		158
4	amaha KX-580	250	Stable and clean, if bright. Play Trim helps wake up recalcitrant recordings.	•		•		•		1388	146

CD Players brought to you in association with

II CD players offer a basic selection of facilities, and some can keep you entertained for hours as you programme in disc names and track orders. All but the excessively inexpensive feature remote control. Most CD players can be upgraded by adding an outboard DAC (see below). To do this the player needs a digital output of either electrical or optical persuasion; sonically the former is preferable. A CD player can be split into two basic components: the disc drive or

transport, and a device which turns the digital bitstream coming off the disc into an analogue audio signal. This is called a digital to analogue convertor, or DAC. Although most players are contained in a single box, expensive players are usually two-box affairs.

KEY

ELECTRICAL DIGITAL OUTPUTE For electrical connection to an outboard DAC. AES/EBU ELEC DIG OUTPUTE Balanced digital output to be used with similarly equipped DACs. OPTICAL DIGITAL OUTPUTE For optical connection to an outboard DAC.

CD DI AVERS

AT&T OPT DIG OUTPUT: High speed optical output to be used with similarly equipped DACs. BAL ANALOGUE OUTPUT: Balanced analogue output for amplifiers equipped with balanced inputs. HEADPHONE SOCKEF: For can users. VARIABLE OUTPUT: Remotely adjustable volume controlled

output. MULTI-DISC: Equipped with a carousel or multi-tray system for continuous play of multiple discs. DAC TYPE: Digital to analogue convertor: BS - Philips Bistream, MB - multibit, Hyb - hybrid of multibit and bitstream technologies, 1bit - single bit types such as MASH, bitstream, PWM etc FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Digital Recorders

igital recorders come in a variety of different guises, but have tape), MD (Mini Disc), and DCC (digital compact cassette) and CD-R (CD Recordable). DCC is backwards compatible inasmuch as the machines can play regular audio cassette. MD's claim to fame is its optical disc format, which offers instant track access and can't be wom out like a tape. DAT has been on the market for quite some time now, but has never

really 'made it' as a consumer medium due to the dearth of pre-recorded material. However it has begun to carve itself a niche in the top end of the market, replacing reel-to-reel as the audiophile's tape based medium. Home CD-R is coming into its own with Pioneer's PD-R05 machine attempting to set a trend.

KEY

FORMAT: Type of recorder, see above for descriptions. DAC TYPE: Digital to analogue convertor: BS - Philips Bitstream, MB - multibit, Hyb - hybrid of multibit and bitstream technologies, Ibit - single bit types such as MASH, bitstream, PWM etc

yet to make much of an impact on the domestic market. At present there are four types to choose from: DAT (digital audio

> BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

800 Second generation 96kHz DAT recorder can offer startling realism with the right software - ie first generation

ADC TYPE: Analogue to digital convertor types as per DACs. PORTABLE: Can be run off batteries but not necessarily personal

OPTICAL IN/OUTPUTS: Digital socketry for optical cable.

Headphones

here are a variety of different approaches to headphone design. Among the more expensive models, electrostatic drivers are used in open-backed phones. Most models feature dynamic (moving coil) drivers in circular, open or closed-back designs. The advantage of open backs seems to be a correspondingly open sound, but one can also hear external noise, of course. Closed-back designs are useful in situations where it is necessary to block out noise.

There are three styles of headphone: circumaural models enclose the ear: supra-aural designs feature a flat pad which presses on the outer ear; and intra-aurals (in-ear) rest inside the ear itself, à la personal stereos. For best results a separate headphone amplifier is recommended.

KEY

TYPE: Operating principle: D - dynamic, E - electrostatic. SUPRA-AURAL: Style where a flat pad presses on the outer ear. CIRCUMAURAL: Style which encloses the ear. OPEN BACK: Offers an open sound but lets in noise.

CLOSED BACK: Keeps out external noise. WEIGHT (G): Mass in grams IMPEDANCE (S2): Load offered to the headphone amplifier. The higher the impedance the louder the sound for a given amplifier output. 3.5MM JACK ADAPTOR: Can be used with mini-jack-equipped components such as personal stereos. Vivanco IR7100	120	Infra-red phones that work well but suffer from the limitations of the medium ie compression and hiss(Sessions)	D	•		•	265	-			14

Hi-Fi Loudspeakers

s the last item in the hi-fi chain, the loudspeaker is merely the slave of what has gone before; it is only as good as the signal it is fed. Nevertheless, the distortions introduced by loudspeakers (and rooms) tend to be the most obvious.

The average loudspeaker consists of an enclosure plus a couple of drive units behind a removable grille. Inside the box lurks a simple electrical circuit known as a crossover, which divides the incoming (full range) signal into the right bits for the drivers to handle. The designer's primary

task is to balance the 'sensitivity' of the loudspeaker (how loud it goes for a given electrical input) against the bass extension (how low it goes), for the given box size.

Subwoofers augment the bass and come in passive and amplified active form, they are less sensitive to placement than regular speakers.

KEY

SIZE WXHxD (cm): Width by height by depth in centimetres. FLOORSTANDER: As opposed to requiring a dedicated stand. SENSITIVITY (dB/W): Efficiency: how much volume you get for a given input; the higher the louder. IMPEDANCE (Ω): Measured in Ohms impedance it is a measure of how hard a loudspeaker is to drive: the lower the number the more powerful the amplifier needs to be. BASS FROM (Hz): The lowest frequency that a speaker can reproduce, based on in-room measurements. FREE SPACE: Speakers should be placed away from walls. CLOSE TO WALL: It is recommended that these speakers be placed close (between 3 and 12cm) to the rear wall. FACTSBACK NUMBER: The reference for ordering a fax copy of the review. Use the contents page to find the Factsback page. BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

Stands & Supports

i-fi furniture is more important than you might imagine. The effect it can have on the sound of your system is far from subtle. Hi-fi furniture can be split up into two categories equipment supports and loudspeaker stands.

It is not entirely clear what makes a great equipment support, but some are definitely more equal than others. There's a variety of approaches and materials used, including particle board, glass and all

Speaker stands come in a variety of sizes and styles to suit different models. Use dealer or manufacturer recommendations to narrow down the choice, but as a rule you want the tweeter at ear height.

Target TR60		Lively, dynamic midrange and detailed treble from a less than audiophile oriented twin column design	and the second s	15.15			20- 2	1373 14

Tonearms

be supplied with a matching tonearm, and often include a 'starter' cartridge. Still better quality is found at higher prices among the separate motor units and tonearms. Careful partnering and set-up is essential for these components.

Although the turntable is the most important part of a record player, the tonearm is the second most important, and the quality of

its construction and design have a significant bearing on sound quality.

KEY

Product	Price(£)	Comments				
Alphason HR100S	490	S-shaped arm sounds smooth, but nevertheless reproduces transients with fine attack.	Medium	•	229	8
Kuzma Stogi Ref	1,000	Large, solid and well made arm, gives exceptionally clear sound with just a hint of brightness.	High	•	C	7
Linn Ekos	1,297	Superb, state of the art design which builds significantly on predecessor's strengths.	Medium	•	229	e e
Moth Arm	95	The ultimate budget arm? Refined, sweet, detailed and natural.	Low	•	237	6
Rega RB300	139	Despite its modest price it sets exceptional standards and could be used on many high end turntables.	Low	•	237	6
Roksan Tabriz Basic	275	Targetted at the Xerxes, this is a good alternative to the Rega arm in many cases - a touch bright though.	Low	•	240	9
SME Series 300-309	657	Beautifully made and finished: fully adjustable and a highly neutral performer.	Low	•	238	7
SME Series IV	936	Superb engineering and finish with a finely balanced sound, impressive stereo focus and low colouration.	Low	•	233	6
SME Series V	1,391	Excellent in all respects, this arm arguably sets the standards for pivoted arms, regardless of price,	Low	•	233	6

Tuners

he radio medium operates at a lower profile than TV, but in areas outside pop music the BBC service is the envy of the world. Live concerts rival all other sources from a hi-fi perspective.

Though tuners might seem something of a hi-fi afterthought, the task they discharge is far from simple, since it requires the skills of RF (reception) and audio (signal processing) engineering. The importance of the former will depend on reception conditions, but a high-quality aerial system is

well worth having. Tuners come in two basic types. Analogue models tune gradually and can have analogue or digital displays; they are often preferred for sound quality. Digital tuners offer convenient automatic tune facilities and pre-set memories.

WAVEBANDS: Only the FM (VHF) bands give stereo hi-fi sound,	applications. Basically RDS tuners can identify and display the	aerial, useful for aligning your 'twig' during installation	to find the Factsback information page

Product	Price(£) Comments		V			7	•		V
Arcam Alpha 5 Plus	220	Selectivity modest and there is some susceptibility to front end overload, though basic sound quality is pretty good	FM,M,L	24					1254	142
Arcam Delta 280	399	Fine sound quality marred by mild synthesiser whine; RF performance only average. remote £60 extra	FM	20			•			120
Audiolab 8000T	750	Unusually combination of fine sound quality and RF performance (inc AM), and superb ergonomics	FM,M,L	39			•	•	1254	142
Denon TU-260L	120	Careful minimalist design promises a surprisingly open and vivacious sound.	FM,M,L	20						93
Harman/Kardon TU950	200	Sound quality is among the best in its price range, only exposing its rough edges at high playback levels	FM,M,L	30	•		•	•	1810	157
Harman/Kardon TU9400	299	This striking tuner exceeded our expectations. On stereo FM, it's HK's best yet	FM,M	24					1254	142
Linn Kremlin	2,600	Controversially good sound at a very high price. The reviewer's saving up but you should check it out for yourself.	FM	80		•	•		1254	142
Magnum Dynalab FT101	825	Although fairly expensive given its minimum set of facilities, its excellent sound provided ample compensation.	FM							72
Micromega Tuner	700	Has digital output but even without the Micromega DAC, this provides exceptional sound quality. Looks good too.	FM	39		•	•		1810	157
Mission Cyrus FM7	400	Open, generous soundstaging gives the music plenty of foundation, if a touch shut in at the top	FM	29		•	•	•	1254	142
Musical Fidelity E50	300	Sounds involving if coloured and with a subjectively larger thanlife p resentation	FM	20					1810	157
Naim NAT01	1,645	There may be better sounding tuners in the world, but we have yet to hear one.	FM						1254	142
Onkyo T-430RDS	190	Pleasingly neutral, but rather undynamic and congested	FM/MW	30	•				1254	142
Quad FM66	554	Very pretty and compact but technically unadventurous. Sound is smooth, but only makes sense in Quad system contex	FM	19		•			1254	142
Sony ST-SA3ES	250	Clean, lean presentation but needs a quality aerial to its best	FM,M,L	30	•		•	•	1810	157
Technics ST-GT350L	150	Decent RF poerformance is offset by sound quality more typical of a mini/midi system	FM,M,L	30		•		•	1254	142
Thorens TRT2000	450	Not exactly neutral sounding, it nonetheless makes listening fun	FM,M	59		•	•	•	1810	157

HI-FI CHOICE

Turntables

pecialist turntables are what high fidelity sound is all about. CD players may offer silent backrounds and flat frequency responses, but they can't match the dynamics and superlative timing that serious turntable users take for granted. Turntables at the cheaper end of the market tend to be supplied with a matching tonearm, and often include a 'starter' cartridge. Still better quality is found at higher prices among the separate motor units

and tonearms. Careful partnering and set-up is essential for these components, but many so-called 'sympathetic' combinations exist.

Because turntables are mechanical devices that are designed to retrieve modulations as small as a micron, engineering quality is of paramount importance. It is also the reason why turntables cost as much as they do, and require high quality support systems.

KEY

MANUAL: You do it all: put the needle on the record and tale it off. AUTO: The record player does it all. SEMI-AUTO: You share the work: you put it on, it takes it off. SPEEDS: In RPM to correspond with your platters. SUSPENDED SUBCHASSIS: Sprung suspension to minimise structural interference. EXTERNAL PSU: Outboard power supply; generally it indicates high quality. SUPPLIED WITH ARM: Many turntables require a separate arm to

be fitted; if not, this tells you so.

SUPPLIED WITH CARTRIDGE: Most turntables do not come supplied with a needle FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback information page.

Course and and some of the second	Price(£) Comments		V					
Alphason Sonata	835	Good sound in all areas - bass, clari y and neutrality all in top class (tested with HR100S MCS).	•		33	•			
Clearaudio Reference	2,500	Opulent beast tested with Souther TQ-1 arm. Tends to gloss over detail with a fizzy character but is quite bold	•		33/45			1328	; ;
DNM Rota 2	4,800	Tonally slightly bleached, but extracts detail like few others. Works well on own table	•		33/45	•	•	• 1328	;
Dual CS503-2	170	Coarse and woolly sound - not inoffensive, but be tered by the CS-505-3.			• 33/45	•	•		
Dual 505-4 UK	200	Consistent sounding and well isolated turntable. It is slightly lacking in oomph.			• 33/45	•	•		
Kuzma Stabi/PS	1,200	(Tested with Stogi Reference) Solid oak plinth; sound is very clear, detailed and extended.	•		33/45	•			
Linn LP12 Basik	1,050	Trails the full LP12 significantly, but pace, rhythm, timing etc still top rank	•		33	•			
Linn LP12 Lingo	1,750	The classic reference is improved by the Lingo, but charming character remains.	•		33/45	•			
Michell Gyrodek	765	Sweet and natural sounding player, well matched to Rega RB300 arm	•		33/45	•	,		
Notts Analogue Spacedeck/Arn	n 1,125	No frills, just a first rate, outstandingly natural sounding deck that will last forever.	•		33/45	(
Pink Triangle Anniversary	1,980	Possibly the most detailed, clear and neutral sounding deck around. Likeness to master tape is uncanny.	•		33/45	•			
Pro-ject 6/Sumiko	699	Don't think of this as a mid price deck with a good arm, but as a scaled down Oracle Delphi - it's that good	•		33/45	•			
Rega Planar 2	214	A remarkable product at the price, surprisingly articulate and confident			33/45				
Rega Planar 3	274	The '3 (with RB300 arm) sounds musical in a balanced and coherent manner, needs decent isolation			33/45				
Rega Planar 9	1,598	Featuring the RB900 arm and a ceramic plinth this deck puts Rega into contention with the best decks available	•		33/45		,		
Reson RS1	675	Supplied set-up and ready-tuned, this unconventional deck is packed with mid-band detail.			33/45			16 () () () () () () () () () (
Rivelin Eclipse	1,100	Tested with SME 309. Tends to simply things and add a slightly ragged edge to the proceedings	•		33/45			1328	5
Roksan Radius 3/Tabriz zi	890	Elegant looking turntable with a tidy, ordered sound. Bright and breezy if a shade ligh weight.	•		33/45	• •			
SME Model 20A	4,631	Supplied with Series V arm. Engineered to last a lifetime, giving excellent stereo and detail retrieval.	•		33/45/78	•			
Systemdek I/920/Moth	235	The motor is derivative of the Rega Planar 2 with a Moth arm. Uptempo, even bright at times but never lacks enthusiasm	ı. 🔴		33/45	•	•		
Systemdek 2X2	499	Neutral, flexible and dynamic deck that begs to be used with a good arm and cartridge.	•		33/45	•			
Thorens TD166 VI/UK/RB	300	Refined and solid sound with well focussed imagery; suitable for use with good MM and budget MC cartridges.	.0		33/45	•	•		
Thorens TD2001	700	Balances convenience and sound well, but deck lacks detail and bass could be be ter controlled			• 33/45	•	•		
Thorens TD3001/UK	770	Excellent middle ranking esoterica, with strong all-round abilities rather than excellence in particular areas.	•		33/45	•	•		
Voyd 0.5	3,940	Cross between standard and Reference Voyds. Superb finish, colourful and dynamic.			33/45	•		1328	3
Voyd Reference	6,962	Voyd's flagship, equipped with three substatial motors, is a strong contender for world's best.	•		33/45	•			
Well Tempered Record Player		Intriguing and challenging. Musically it is not ideal, but has a limpid quality and a lack of artificiali y that sets standards.			33/45	•		1180)

ver wanted to look back at a *Hi-Fi Choice* review or needed some sound independent advice to make up that 'Best Buy' system? Factsback is a personal service designed to help you navigate the ever-increasing list of available products. Now, our reprints are instantly available to you via your fax (or fax/modem) 24 hours a day. You get the review you need, just when you need it. International readers can order copies of reviews (£1.50 per page with a credit card) by calling Starcomm on 44 1132 940600

How much will it cost?

The cost of our easy-to-use service is 39p per minute off-peak and 49p per minute at all other times. The pages you will receive have been designed to keep user costs to a minimum. The Factsback system was put together by Starcomm Ltd (01132) 940600

0891 616518

How Hi-Fi Choice Factsback works

Call the Factsback system from the handset of your fax machine. The handset must be switched to 'tone'.

2 Following voice prompts, select either an index of documents or specific documents by a known document number from the keypad of your fax machine.

6 Factsback delivers your choice of documents to your fax machine complete with coversheet.

Free delivery and installation. Full service department. Open Mon-Fri 10-7, Sat 10-6.

INDICATES MEMBERSHIP OF The British Audio Dealers

If you're picking up bad vibes, pick up one of our brochures.

You can spend a fortune on your hi-fi, but without proper support it won't sound as good as it should. Sound waves bounce off the walls, your floor and components, causing distortion. It's a problem we've been working on since 1975, resulting in some of the finest speaker, hi-fi and audiovisual supports available today. For example, the Adagio table shown here boasts a fully assembled, welded tubular steel frame, braced at the corners for extra rigidity. The legs and top shelf are supported on isolation spikes to minimize sonic interference. It's just one of many Apollo designs free of bad vibrations. For full details return the coupon or ask your hi-fi dealer.

I want good vibes. Please send me a brochure.

NEXT MONTH

CARRY ON WHAT'S ON IN DECEMBER'S WHAY-HAY-HI-FI CHOICE!

STYLISH SYSTEMS

Oooh-er, that's a nice big sleek one you've got there, Missus. How do you keep it so shiny, then? Polish it, do you? Oooh, I say! Sexy systems from saucy stunners like Technics, Denon, B&O and the like, all line up for a right seeing to. Phwoarr-r-r-r.

CABLES

Just the thing to get tied up over. Ten sets of interconnect cables strip down to their undies and cavort about in the campsite.

Letch at the lovelies from Cable Talk, Sonic Link, vdH and many others. See that AudioQuest Turquoise strain as it does its morning exercises... "bend

and fling, exhale and fli... ooh, matron!"

LOUDSPEAKERS

Cor, look at the size of those. Blimey, they're huge! Loudspeakers, that is. 14 of them, between £400 and £1,000, in groups of little tiddlers from Epos and Roksan and great big whoppers from Polk, Monitor Audio and Castle (left). Oomigawd!

IT'S ME KRELL'S, NURSE

EISA award-winning hi-fi doesn't come much better than the Krell KAV-300i integrated amplifier. Faster than the Rumpo Kid, the new line-integrated amplifier really recharges those batteries when it's plugged into the mains, yet it doesn't run so hot that you have to yell 'Frying Tonite' when you switch it on! Join Hi-Fi Choice experts Sir Sidney Ruff-Diamond, Gladstone

Screwer, Odd-Bod Junior, Hengist Pod and Bungdit In as they get knee-deep in Krell. Yak, yak.

PLUS

Exclusive first UK review of Jamo's £1,300 Concert 8 speakers • Plenty of double entendre jokes about marrows, melons and other plant-related fun in Sessions • Win loads of saucy stuff • Infamy, infamy, they've all got it in for me, etc...

Get your titters out for the next issue of Hi-Fi Choice on Friday 1st November, 1996.

What can DSP do for music? **David Vivian** grapples with spiffing home cinema kit in the hope of finding pan-dimensional musical enlightenment!

Jivia

amaha's Ian Galloway and Mr Stan (Editor) Vincent shoot the breeze over a brew. Ian to Stan: "Reviewers always miss the point about our Cinema DSP A/V amps. They bang on about 'enhanced Dolby Surround' and processing speed and all the flashy cinema stuff, but they never mention what DSP can do for music."

Galloway's point, also espoused in Yamaha's ads, is that heavy-duty DSP electronics are just as capable of enhancing straight-ahead music, as of simulating the cinema thrill. 'More dimension' is the phrase. Sounds far out. Can I try?

One of the obstacles that has dissuaded me from the A/V phenomenon is lack of house room: if a full-on home theatre system moved in, I'd have to move out. The proliferation of mini systems toting Dolby Pro-Logic processors, and a pair of tinpot speakers to hang on the wall behind, suggests that the concept is so sexy, everyone wants a slice of it.

Now my friend Steve has a fair-sized basement den in which resides the Hulk Hogan of cathode-ray-tube televisions. I helped him get it down there, and it was like lowering a hippo down a lift shaft.

Of course, now I could find out what the fuss is all about, and whether you can justify having an A/V system in one room and a musiconly system in another. Given the disposable income and available floor area of a middleclass American family, then maybe. But here in Blighty you need a system that will do it all: match action and sound, rattle the windows and, crucially, move you with music.

So we set about putting such a system together. Every component seemed to carry a scary four-figure price-tag, including the cables and interconnects, custom-made for the exercise by Audioquest. The American cables, marketed by Arcam, have many friends in audiophile circles.

Yamaha's contribution was its legendary £1,100 DSP-A2070 - regarded by home cinema buffs as the guv'nor of A/V amps. I was hoping we might get the even more densely featured DSP-A3090, but its AC-3 circuitry would doubtless have shifted my attention towards the cinema aspect when I should have been listening to music. Ah well.

Source responsibilities were shared between a Pioneer CLD-D515 LaserDisc player and my Meridian 602/603 CD player,

while the speaker arrays were supplied by Harman/Kardon (big-boy Citation 7.2s main front and centre; meaty bi-polars front and rear effects) and REL (Stentor II subwoofer). All in all, about £10,000-plus of kit. Phew!

What makes the Yamaha different is its use of front- as well as rear-effects speakers in enhanced DSP modes, making seven channels in all — and that's not including the sub. The idea of the extra front speakers is to project depth and a sense of spaciousness behind the plane of the TV screen to bring you that much closer to the real Leicester Square experience. It also allows a far more realistic portrayal of the tweakable (room size, liveness, reverb and so forth) digital soundfields stored in the 2070's memory.

Finally, it was time to get to grips with this mutha of a system. Much of the first evening was spent fine-tuning the REL (because the Citations are quite bassy, we had it coming in low and hard) and playing with the settings of the various enhanced DSP modes. The second evening passed in the company of Arnie (T2), Sandra Bullock (Speed) and Tom Hanks (Apollo 13). By the time we called it a night, I was both elated and

exhausted. It wasn't just the depth-charge bass from the REL that left me with wobbly knees; all my senses were shattered and shocked. On the third evening we listened to music - first in plain stereo, then, one by one, in the whole panoply of DSP modes.

Plain stereo sounded dull, dull, dull, and we couldn't decide which mode was best with different types of music. Unsurprisingly, 'Jazz Club' sounded grreattt with jazz, but it sounded grreattt with just about every other style of music, too. 'Rock' was less spacious but had amazingly wide applications. Personally I'd have relabelled it the 'Active Naim' mode. Only the hugely reverberative 'Church' proved unlistenable, but with a Saturn V taking off it was a blast.

It's a good demonstration of just how much the Yamaha's sophisticated computer adds to the sound, but it can't make music more musical, it can only manipulate it. I'm not going to condemn it for that, though – the 2070 is possibly the most impressive piece of hi-fi kit I've ever used, and by a long way, the most versatile.

So what if it isn't purist hi-fi? It's fun on a galactic scale. I felt the force...

-

MAGIOSERIES

Imagine a world where sound has no boundaries, where perfect stereo images combine with magical sound quality to create the perfect high fidelity experience. A dream? It needn't be, with GLL's new Imagio range of loudspeakers. The first hi-fi loudspeakers to incorporate GLL's world-beating

ICT drivers, they are capable of superb stereo performance thanks to their unique point source design. And because they have no crossover to intrude on the music, they bring real freedom to music. The Imagio series from GLL...

Sound ativalle wit
