

The Jamo Concert Series. HEAR...SEE...RELAX & ENJOY...

Advanced technology, innovative design and refined workmanship is not always the perfect recipe for success, we believe a little more is required.

The Concert series has enabled Jamo to produce a range of loudspeakers which will reproduce music that is clean and neutral. The dynamic range transparency and sound stage are all raised to a higher dimension.

IA MERZ, Ludwigsb

The successes attained by the Jamo development team is the result of efforts to design high-quality loudspeaker components which are critically matched to one another.

It is an honour for us to introduce this new generation of loudspeakers to you... ... Jamo Concert 11, Jamo Concert 8 and Jamo Concert Center. THE SOUND OF EXCELLENCE - Made in Denmark.

Editor's Notebook

Stan Vincent gets all hot under the collar about hi-fi poseurs, and sings the praises of the airwaves.

he last few years have witnessed a trend of spiralling excesses. Not long ago, gratuitous displays of wealth were frowned upon, but this was no less a fashion fad than the current vogue for flaunting it. In America, naturally, they have already coined a term for this backlash against asceticism: 'pleasure revenging'. No surprise, then, that in so many ways the wave of excess visible in Britain today stems directly from our dollar-crazed cousins.

Naturally there is a hi-fi angle on all this. From where does most stratosphericallypriced 'high-end' equipment originate? Why, the good ol' US of A. Stereophile, the American magazine which is the high-end's stamping ground, is awash with the stuff; AV Interiors, the Hello! magazine of the US home-cinema world, likewise groans under the weight of THX, home automation and leather settees galore. In a strange way this audio-visual excess seems appropriate to the States, in the same way that stretchlimos blend perfectly with the Yanks' streets and sidewalks. The problem, however, with hi-fi as much as cars, occurs when you transplant exotic foreign species and expect them to take root on more austere British soil. Like the worst kind of expatriate visitors, foreign/artefacts live up to all the worst stereotypes assumed of them in their country of emigration.

It's all about attitude. In America people buy big cars and big hi-fis simply because that's what they were put on God's earth to do. (Although there seems to be a healthy US underground movement trumpeting the virtues of stripped-down British hi-fi over and above the more extravagant local variety.) In the UK, our inferiority complex starts with US-saturated TV programmes

> and filters down into our buying decisions. In an ideal world, as I have suggested in this column previously,

We were honoured to be voted Hi-Fi Magazine Of The Year at the CETI Industry Awards, Harrogate, May 1996. one selects the best tool to do the job, and in musical terms that means good-quality hi-fi equipment. But one shouldn't take a sledgehammer to crack a nut, and I deplore those who invest in hi-fi for its macho appeal as a sop to their egos, not a soother to their sounds — as much as I despise those who never buy hi-fi in the first place.

Get your priorities right!

What set me off on this tack was the result of our gigantic CD player test this month, which you'll find reported from page 50 onwards. There, as you'll see, we've listened to 20 players priced from the sublime to the ridiculous, under blind conditions, in an attempt to answer the eternal question "...but is hi-fi really worth that much money?" Regrettably, the answer is "it may be", but our findings indicate that a high price is no guarantee of sound quality. All you can be sure of is something that looks big, metallic and macho...

The question of hi-fi profligacy leads inevitably to the amount of electrical energy needed to operate a system. Again, this is an area where posturing outweighs pragmatism. When there is growing evidence by the day that we are burning up our future by sucking too much juice out of the wall, don't you agree that your system should be as energy efficient as possible? And do you really need to leave everything on 24 hours a day, seven days a week? I well remember my physics teacher intoning that heat was the most useless form of energy, and you should give that maxim some thought if your Class A amp is cooking idly in the corner.

However, even if we're not prepared to compromise on power requirements, there may be a conscience-salve in sight. Solar power is being taken increasingly seriously as an alternative to fossil-fuelled electricity. More importantly it might improve sound at the same time! I say this without a shred of technical evidence, merely a hunch that since so many evils are attributed to mainsborne interference, surely one's own solar farm would be a boon for pristine sound. The technology's available and affordable right now. The environmental organisation Greenpeace recently toured the country demonstrating a kitchen chock-full of electrical gadgetry, which operated happily from solar panels generating two kW of power. If any hi-fi enthusiasts have actually experimented with alternative energy sources such as this, I'd be interested to hear from them.

The art of procrastination

The pre-Christmas health-guilt complex has bitten with a vengeance, so to improve my sorry state of fitness I resolved to start walking in to work. I would need two tools for this job: a pair of stout walking shoes, and a radio to keep me company. Regrettably it will take some time before I acquire the shoes, but I have managed to secure a radio from my friends at Aiwa: their dinky little CR-DS15 model (£42.99), which offers AM/FM reception, enough presets to store my favourite stations, and a speaker for use without headphones. Regrettably, because I just haven't managed to acquire those shoes yet, I have been reduced to testing the radio on the bus. Being a headphone pedant I'm using a pair of Grado SR80 headphones in place of the flimsy little in-ear jobs supplied, and the £110 Grados have revealed surprisingly full-bodied, detailed sound from the radio itself. Inevitably, walking around London incurs numerous glitches of distortion and noise to mar reception. but I would rather listen to the radio than some mangy old cassette tape any day.

I mention this only because a radio is the ideal way to wind down after hard days in the office, which is what we've been enduring to ensure you get your copy of *Hi-Fi Choice* on time. I only hope you enjoy reading it! Listen to some great music this month,

and please accept the very best wishes for 1997 from all of us here.

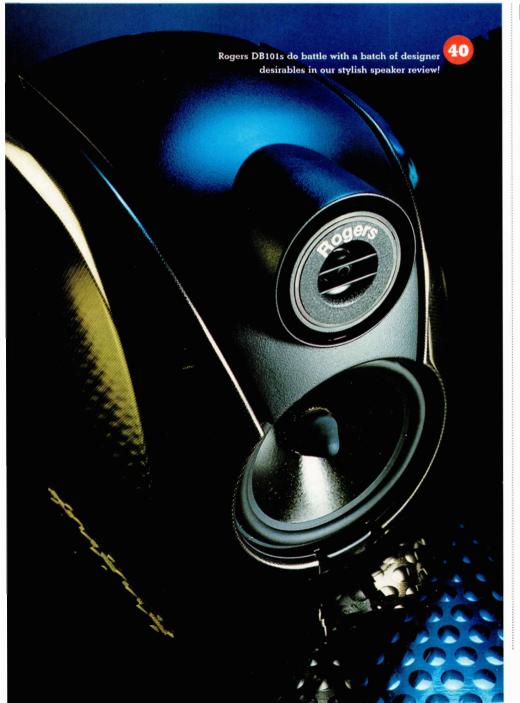

Sound Association (EISA). Every year EISA awards the finest hi-fi and home cinema products throughout Europe.

UPDATE

Update

KEEP YOUR EYES GLUED TO THE SCREEN AS THIS FACT-PACKED BULLETIN BRINGS YOU THE LATEST HI-FI HAPPENINGS

In brief

The 'Mana Effect' has begun to spread to the recording industry. The recent *Broken China* CD by Pink Floyd's keyboard player Rick Wright has been produced using Mana's professional equipment tables. These support key items in the recording chain and have made a Mana convert of top record producer, James Guthrie. ☎ (0181) 429 0118

Silvernote has a new series of interconnect cables called *Coppernote*. Prices range from £29 to £69 and there are three models. Silvernote is also sponsoring a new quarterly magazine called *Ultra High Fidelity* aimed at the DIY and vintage audio enthusiast. (2009)

North London hi-fi dealer Grahams Hi-Fi has just announced later evening demonstrations. Traditionally Grahams Hi-Fi has opened until 6pm from Tuesday to Saturday. This has been extended to 7pm on Thursday evenings. 🕿 (0171) 226 5500

Origin Live has three new loudspeakers. The *Resolution* at £732 is a bookshelf monitor, the *Sovereign* at £975 is a floorstander and the *Conqueror* at £1,650 is a three-way floorstander. All three employ large radius-curved edges and are available in cherry and mahogany. Another common feature is a tuning system for integration into a variety of placements and rooms. \mathbf{G} (01703) 442183

JVC has launched its 'home-cinema audio' line with the £350 AX-V8BK Dolby Pro-Logic

A fistful of bits

Technology king Meridian Audio, in a burst of pre-Christmas activity, has launched a 20-bit version of the 506 CD player, and a new monoblok amp, the 505.

The 506 has been honed to take advantage of discs with an effective dynamic range of 19 bits, which are being produced with the company's own 618 professional mastering processor. The new £1,100 506 uses the same Crystal DAC as the 508, but without the re-clocking or stabilised master oscillator. Within its case you'll find a carbon-and-glass-fibre anti-vibration disc clamp, and a high-speed three-beam laser pick-up.

The 506 also incorporates a proprietary processing system that de-jitters the data being abstracted from the disc before it is decoded.

The £795 505 power amp is a 160 Watt monoblok device that's designed to partner Meridian's 501, 502, 541 or 562A preamps. The company claims it will deliver in excess of 30 amps, meaning that few if any loudspeaker loads should cause it discomfort. It provides both balanced and regular inputs. \mathbf{x} (01480) 434334

Meridian's 506 goes up to 19! (Bits, that is...)

QED Profile cables: the genesis of a new sound?

Cable and accessory specialist QED has launched the *Profile* series of loudspeaker cables. Produced to combine the qualities of thin solid core and thick multistrand topologies, the *Profile* series is the result of QED's *Genesis* report. This is not, it would seem, an investigation into the activities of Messrs Collins, Rutherford and Banks, but a comprehensive study of the effects of cables on hi-fi systems.

The resulting *Profile* range bears a passing resemblance to the high-priced Nordost cables, and comprises small bundles of multi-strand conductors arranged in a flat array. There are two *Profile* models: the 4x4 (at £9/m) features four copper conductors for signal and return, while *Silver 12* (at £15/m) benefits from silver-plated OFHPC (oxygen-free high purity copper) in its six cores per conductor. 201276) 451166

Down by the sea

Just blown in from Clacton is a new range of entry-level amplifiers from LFD Audio. The *Mistral* range includes integrated, power, pre and phono amps with prices well below £500. Derived from the company's *Zero* range, the *Mistral*'s notable points are an aluminium and stainless-steel construction, with specially-designed components within.

The *Mistral Integrated* (£449) is a 50 Watt MOSFET affair, with point-to-point wiring, a "meticulously-laid-out" circuit board, star earthing, and separate power supplies for input and output stages. This feature, combined with a high-current-output capability, means that few speakers will cause this amp any concern. The *Phonostage* (£299) accepts moving-magnet and high-output moving-coil cartidges, and is claimed to offer a dynamic but smooth sound by virtue of its multiple hybrid active/passive power supplies.

The *Mistral Line* and *Powerstage* pre/power amps cost £449 apiece, with the *Linestage* featuring dual-mono construction, and the *Powerstage* offering an ultra-low impedance output by virtue of its multiple-capacitor PSU. **(01255)** 422533

LFD Mistral range blows in from the coast.

Tannoy's big box bonanza

Tannoy is the latest member of the 'will-you-look-at-thesize-of-that-speaker-and-how-little-it-costs' club. The Tannoy Mercury M2 offers 380x203x270mm of box for the paltry sum of £140, thanks to Hungarian manufacture. This makes it a larger and £9 cheaper proposition than Tannoy's current budget baby, the 631. M2 is wood-built throughout and packs a hefty six-and-a-half inch papercone main driver plus one-inch soft-dome tweeter.

Front baffle finishes are cherry or grey birds' eye maple; sensitivity is 88dB at eight Ohms. 2 (01236) 420199

Akai trumpets DVD début

Akai will be launching its DVD player, the DV-P1000, at the end of January in Japan, and to the rest of the world in April. The first non-DVD consortium company to launch a player for this new audio/video format, Akai's is only the fourth player to be announced.

Due to retail for 80,000 \pm en (approx £500) the DV-P1000 incorporates MPEG 2/Dolby AC-3 surround processing and a multi-angle function that allows viewpoint switching within the image. This is alongside the standard DVD features such as multi-language and captioning, not to mention compatibility with conventional CDs and PC data formats. 🕿 (0181) 897 6388

Goin' down to Bristol

More than 100 hi-fi brands are forecast to appear at the Sound & Vision Bristol hi-fi show, due to be held at the Bristol Marriott Hotel, Lower Castle Street, from 21st-23rd February 1997.

At this 10th anniversary event, organised by dealers Audio Excellence and Audio T. key manufacturers present will include Arcam, Audiolab, B&W, Denon, KEF, Linn, Marantz, Mission-Cyrus, NAD, Pioneer, Teac and Yamaha.

There will be numerous new product launches, among which a preview of Meridian's prototype DVD player, the 586, is sure to be a major draw.

The show will be open from 11.00am-6.00pm the first day, 10.00am-6.00pm the second, and 10.00am-5.00pm the third. For further details call @ (01222) 398201 or 2 (01865) 742194.

"Affordable" Classé

Classé Audio has introduced two new products retailing at £1,895. The CAP-100 is a 100

Watt, line-only design with balanced inputs, four regular inputs, divisible pre/power amps. and an aluminium remote control. £200 buys a plug-in

phono stage. *CDP*.5 is a cut-down Classé *CDP*-1, incorporating Burr-Brown 20-bit DACs and an HDCD decoding facility. Digital output is via an AES/EBU balanced socket; analogue via balanced and single-ended outputs. (0181) 947 5047

In brief

amplifier which incorporates DAP (digital acoustics processor). This is a variation on the digital soundfield processing theme instigated by Yamaha. The JVC amp accepts four video and four audio inputs (including phono) and is remote controlled. 22 (0181) 450 3282

Sovtek has produced its own version of the legendary 300B triode valve. Claimed to outperform all current brands as well as the legendary Western Electric model, Sovtek's version will retail for £73. ☎ (01273) 220511

Tubistor is a 'revolutionary' new audio amplification device said to combine the sonic strengths of valves and transistors. Created by the American Tomorrows Research Today company, the Tubistor is claimed to sound like a tube but with the practicality and economy of solid-state devices. It's also claimed suitable for substitution into existing solid state circuits. 🕿 (00 1 619) 724 8999

- Kudos has a new budget speaker stand called the Arrow. A threecolumn design, this £50 stand can be sand filled and is supplied with floor spikes and optional top plates, with and without spikes. 🕿 (01903) 750750
- RockBase v2 for Windows is a 'comprehensive' database of 337,000 records (ie CDs, LPs, cassettes etc) from over 43,000 artists. This £34 CD rom has information on recordings and artists going back to 1952, with search facilities to locate information by artist, album or single track. 🕿 (01895) 444603
- Linn Products has a new mono amplifier called the LK240. Priced at £750, this DC-coupled design can accommodate active crossover modules and pumps out 125 Watts into 8 Ohms. Its name derives from the 240 Watt output it will deliver into Linn-style four Ohm speakers. 2 (0141) 307 7777

HI-FI CHOICE

Mixing 'n Matching

Richard Black spends quality time with two more separates systems getting the review treatment. Which components are really compatible?

or the second instalment of Instant Systems, two very different systems come under scrutiny. In the budget one, the amp and CD player together cost about the same as the speakers, the whole lot coming in at £730. The more expensive system, at just under £3,400, features speakers costing only one fifth of the whole, fed from a £1,300 CD player; not such a common way to distribute the budget, perhaps, but it proved exceptionally interesting. If nothing else, this exercise showed that Rule Number One in system building is that there is no Rule Number One — sometimes the results of quite improbable pairings can be quite remarkable.

It's always worth mentioning just why system matching is such an important part of hi-fi selection. In fact I believe that it can be overdone, and there is a sense in which a component is either good or bad, full stop. But if one remembers that the 'best' hi-fi is really the 'least bad', or perhaps more kindly 'least compromised', it does follow sensibly enough that matching a set of compromises to obtain a palatable whole is not a bad idea. And don't forget the personal factor either: apart from the unknown surroundings of your listening room, which will never be quite the same as any reviewer's or retailer's, there is the question of what sort of music you play and what sorts of flaws really bug you.

At *Hi-Fi Choice* we're here to give you as much help as possible, and selecting compatible systems is a part of that. At the very least, we hope this and similar reviews will give you a good place to start with your own system building.

SYSTEM A

 Philips CD721
 £129.99

 Harman/Kardon HK620
 £249.99

 B&W DM305
 £349.95

 Total (excl. cables, stands, etc.)..£729.93

The components

n Issue 159, Philips' *CD721* got an 'obvious Best Buy' recommendation, and at its very modest price (which includes a remote control) it seems as good a place as any to start with CD. Purists will throw up their hands in horror at the captive, no-quality output cable, but worse things happen; I've found more wire of similar quality inside

PHILIPS

harman/kardon

some very expensive audio. The *CD721's* biggest single virtue is that it demonstrably doesn't sound cheap in the way some £100-odd CD players do, with their nasty, spitty treble and coarse midrange. High end it ain't, but it's never less than well-behaved.

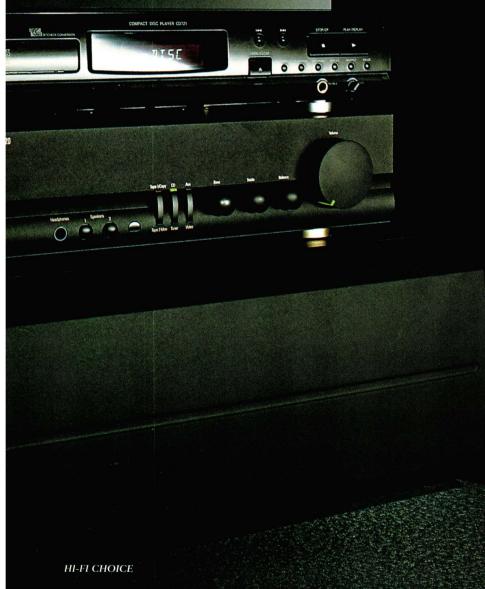

Harman/Kardon's HK620 was selected from amplifiers reviewed in issue 162, where it too was awarded a Best Buy. H/K seems to have had quite a good line in cheap and not-so-cheap amplifiers in recent years, and I still sometimes haul out my HK3500 (£370 in about 1989) as a handy reference when I forget what a mid-price amp should sound like. The '620 features six line-level inputs, two tape outputs, a headphone output and tone controls. I have mixed feelings about tone controls --- they can be handy in moderation but can also be a right bind when, as on this sample, they aren't quite perfectly centred and have to be tweaked for flat response.

Finally, the B&W *DM305* is a new, floorstanding speaker using B&W's 'Prism' technology to help reduce internal standing waves and, therefore, cabinet coloration. Economically built but smartly finished, this model has a rear-facing port and is intended for away-from-wall positioning. It features the usual two drivers and claims quite a high sensitivity, although I found it is not quite the easiest load in the world to drive.

Ancillary bits? Interconnects clearly aren't an issue; I used some Furukawa speaker cable which was to hand but I'm sure basic 79-strand would be great for starters. The *DM305*s come with spikes, which I duly tried, but I've never really believed in spikes and used sorbothane feet instead. Spikes just make your floor sing along, while soft or springy feet isolate the floor, and I couldn't care less that the speaker is a bit wobbly at about 1Hz, which hardly has any bearing on the audio band. The most important thing is to get the speakers sensibly positioned in the room, which we'll come to in a minute.

Sound quality

There is a school of thought which says that a good hi-fi should major on the 'party factor': instant excitement, great impact, lots of up-front energy and blow the hangover afterwards. If that's you, you may not care for this system. If, on the other hand, you value naturalness of tone, good detail, plenty of treble and bass extension and a perfect willingness to pump up the volume and have a good time now and then, you could spend £730 in far worse ways. This

system is not about giving a taste of the high end in some area at the expense of others, but about giving a pleasant, easy-going and above all unfatiguing blend of virtues across the board.

Of course there are things to criticise. There is a certain amount of coloration in evidence and on some programme material the treble can develop a bit of a 'sheen' which can be a little intrusive, for instance with orchestral strings playing high up. This seems to be largely a function of the speakers but is also related to the amp/speaker interaction as was shown by swapping the H/K for a Musical Fidelity *A2* (floating around as a result of moving goalposts on the expensive system review). I hasten to add that perfect treble is really very much the domain of far pricier gear, but this experiment did serve to show what might later be improved in this system by upgrading.

Even so, the extent tauwhich it is possible to hear 'through' the *DM305s* is really very good and certainly most creditable at the price. I was particularly struck, for instance, by the aplomb with which the system handled full orchestral material, cheerfully rendering the massed attack of brass and percussion without squashing the more subtle tones of woodwind. Piano recordings also came out pretty well, perhaps just a shade hollow and brittle but certainly a lot more like a piano than many systems I have heard.

Moving from classical material to something a little more dance-beat oriented, I was at first nonplussed by over-the-top bass coming out. Having set the system up with a handful of classical albums which I know well, I had ended up with the speakers only about six inches from the back wall, not so much because they sounded best there but because they didn't seem to sound any better further forward and I like a few more square inches spare! However, a driving pop drum kit got the room booming along horribly, and I soon appreciated the wisdom of B&W's recommendation for 20 inches behind the speakers. Thus adjusted, I was treated to some gratifyingly strong and welldefined bass; again, perhaps not the full high-end monty but still nicely believable. And on reflection, classical music did perhaps seem a bit clearer in the bass. Meanwhile, electric guitar had a good 'twang' and vocals were suitably expressive. In my 200 sq ft room, it played loud enough for all but true headbangers without strain.

Two experiments with amplifiers are worth mentioning: Denon's *PMA350SE* was tried but seemed much less happy with the speakers, having a little more initial impact but decidedly less refinement and detail; on the other hand, the £500 Musical Fidelity A2 justified its higher price with a great improvement in authority, showing just where the limits of the H/K occur in terms of bass control and depth (although the MF has less bass output), and upper midrange clarity. Clearly, there is a beneficial upgrade path for this fine starter system.

INSTANT SYSTEMS

4

Marantz CD-17 KI SIG£1,299.90 Aura CA200/PA100 ..£699.95/£699.95 Tannoy D100£689.90 Total (exc. cables, stands, etc.)..£3,389.70

SYSTEM B

The components

his system definitely hails from the 'what if?' school of system building. There probably aren't many systems sold where the CD player costs twice as much as the speakers. It is generally accepted that CD players reach a pretty decent level around the £300 mark (give or take), while loudspeakers benefit more obviously from increased expenditure. However, the exact kinds of distortion introduced by CD players and speakers differ profoundly, and perhaps, we reasoned, there are listeners who are more bothered by the former than the latter and would gladly gain some CD player refinement at the expense of speaker sophistication.

The *CD-17* in its basic form was well recieved in issue 155, but the '*KI*' is a specially tweaked-up version specified by Ken Ishiwata, Marantz's top electronics bod. One of the more expensive single-box CD players around, it looks and feels every inch a highend machine, with a very heavy and beautifully-finished chassis and a particularly smart gold remote control.

Aura's *CA200* preamp and *PA100* power amp seem to offer a lot for the money. The former has one phono and no less than seven line inputs, all relay switched, plus balanced and unbalanced outputs, a monster dedicated headphone amp (very good, by the way) and remote control, while the latter offers a nominal 100 Watts (in practice about 120 Watts) output and the option of bridging for 250 Watt mono operation. Both amps are very well-built internally and smartly finished (chrome, as reviewed, actually costs £50 per unit extra).

Finally, the *D100* is a recent addition to Tannoy's '*Definition*' range. It's a diminutive

speaker sporting a dual concentric drive unit and a rear-facing port. Again, finish is excellent although at first sight few would guess the price; it's visually rather understated. I used the *D100*s on stands about 15 inches high, resting on high-density foam rubber, and about four inches from the rear wall (that might be a bit close in some rooms, however).

Sound quality

Well, sometimes being a bit radical pays off. This unlikely partnership produced some exceptionally pleasing results on a very wide range of musical material. Perhaps I can best pay tribute by citing an experiment a friend and I carried out at a recording session. We made a series of test recordings of a very fine Bösendorfer Imperial piano, using four different types of microphone (all among the best in the world) through two high-quality A/D convertors, to CD-R. At the session, with £10,000-worth of monitoring gear, we could certainly hear differences

between microphones, though not so clearly between convertors. Through this system (admittedly in a better environment) differences became immediately obvious. Actually, the principal conclusion is that trying to make good recordings is a mug's game and I'm taking up stamp collecting instead. Well, how would you feel on discovering proof of your nasty feeling that the 'best' microphone is the unacceptably noisy one? However, the ease with which one could hear what was going on in the various recordings was quite remarkable and showed immediately that this system is something a bit special.

I turned next to a recording of a string orchestra; not the greatest recording ever but one I love (Alan Bush's *English Suite*). Here, massed string tone was reproduced almost faultlessly, with a real feeling that there were indeed a couple of dozen individual violins playing, rather than a chorused synthesizer or something, while pizzicati on the double basses had real weight and impact. Similarly, a full symphony orchestra had the real presence of 70 players, while chamber music was suitably intimate and precisely imaged.

At this point you're probably thinking, as I was, 'Ah, a classical-music-only system'. How wrong! A favourite CD by Donald Fagen revealed new layers of information and even

3

27

000

EB

more grit on his voice, without losing an iota of rhythmic drive or precision. And John Pizzarelli's *Blue Heaven* album on Chesky, featuring hi-hat which through most hi-fi systems can strip paint, was as wellbehaved as I have ever heard it. Even a bit of heavy synthi-bass from some ghastly fusion track had impressive impact; okay, not quite the weight of some 100-litre megalith speaker, but very, very good for something this small.

Limitations? As mentioned, ultimate bass weight, and absolute loudness likewise, but not by much. Obviously the *D100s* like to be driven hard, and the Aura *PA100* seems completely unflustered at high power. Ergonomics on amps and CD player are good, the preamp can drive enormouslylong cables if required, all three brands are well-respected and generally very reliable what more could one want? Evidently a marriage made in heaven, this system will take some beating at its price.

Conclusion

Two very happy systems here; one showing the way from humble beginnings, the other a good way towards true high-end refinement. The former is by its nature more open to variation than the latter and although I felt the Philips, H/K and B&Ws worked very well together I would be interested, for instance, to see what might occur with a few extra pennies spared for the CD player. The more expensive system, however, I would be most reluctant to tamper with. A truly serendipitous find.

A shiver down the backbone, amplified by Technics.

The Jimmy Hughes Experience

Jimmy Hughes waxes lyrical on the subject of ears, and reminds us it takes experience to interpret what you hear!

eafness is something that afflicts hi-fi scribes in much the same way blindness affects football referees. Because hearing (like sight) often deteriorates through life, as age extends towards 70 there will be losses of sensitivity and high-frequency response.

Much depends on the kind of punishment your ears receive on a day to day basis. Someone who lives in a quiet rural environment should maintain their hearing better than another forced to put up with the noise of a big city. Constant use of personal hi-fi played loudly is also very damaging.

I was 17 years old when I first had my hearing tested, and my high note response extended to about

18kHz. I could never hear above that, yet was crucially aware of the 19kHz pilot tone from stereo FM tuners because it created an unpleasant feeling of pressure on my ears.

I am now 45, and my treble response is

tailing a bit; perhaps surprisingly I can still hear 16kHz, though 18kHz is sadly inaudible. Actually I say 'sadly', but I'm not sure it isn't beneficial to have a slightly less extended HF response. It allows one to play certain flawed recordings without discomfort.

For example, I could never enjoy the Rikki Lee Jones track Chuck E's In Love on widerange speakers because of a high-pitched whistle that comes and goes throughout the track. Now I can listen and not be disturbed. If you can't detect the whistle in real time, play the LP and when the vocal starts, switch the turntable motor off so the speed winds down — yoù'll hear it then.

It was much the same with Deutsche Grammophon's recording of Beethoven's third piano concerto with Maurizio Pollini. A film was made of this performance, and perhaps the use of extra cables and lighting created some interference. A very highpitched whistle comes and goes, especially when Pollini plays, and it used to drive me nuts though no one else could hear it. Now I no longer hear the whistle — bliss at last.

The question is: does curtailment of the upper frequencies make one less discerning and thus a less critical judge of sound quality? Years ago I remember a reader in his 60s writing to a hi-fi mag and asking whether he should take his young nephew when choosing a system, on the basis that the lad's hearing would be so much better than his!

Naturally the wider your ear's response, the more aware you'll be of faults at frequency extremes, but bandwidth isn't everything.

In much the same way that having good

You need to take care of your ears, if you want to be a skilled football critic.

> eyesight won't make you observant, acute hearing doesn't necessarily turn you into a good listener - at least not in the sense of being able to hear what's right with something as opposed to what's wrong with it.

> It takes experience and intelligence to interpret what you hear, and that is only gained with practice. Dogs have a very extended high-frequency hearing response, but they're not good judges of hi-fi or music.

> I like football, but don't have the depth of knowledge and experience of someone like Match of the Day's Alan Hansen. We can view the same match, but what he 'sees' is very different because his understanding of tactics is far more profound than mine.

> I've watched games where Man of the Match has been given to someone I've barely

noticed - perhaps a defender who's read each situation so well that any danger was immediately nipped in the bud. To my superficial eye the guy's done nothing special, but a fellow pro appreciates the skill and vision needed to be in the right place at the right time.

Perhaps ironically, once such things are pointed out they're often very obvious. Hifi is similar. A recent visitor to my place was impressed by a CD of flamenco singing and the way the system recreated the scale and dynamics of the music. I also admired the sheer presence and attack of the sound.

But what impressed me more was still being able to hear exactly what the guitar was playing, even when the singer was bawling his head off and stamping hard on a wooden stage. Most systems can play loudly, but encompassing extremes of loud and soft simultaneously is far more difficult — and valuable.

Going back to ears, a build-up of wax may lead to loss of sensitivity and reduced high frequencies. It's possible to have this cleared by syringing, but for some years doctors have been unwilling to do this, due to possible damage to the ear drum as water is squirted onto it.

I had my ears syringed in 1989, and it made a big difference to my hearing. However, the change was almost too much; I found the sound of a heavy lorry going past, or a power drill, almost painfully noisy because my ears were now so sensitive.

I'm not sure I'll ever have my ears syringed again, but do find a little maintenance necessary from time to time. Otex ear drops seem effective at dealing with the build-up of wax, but without flooding your ears and making you partly deaf - something that used to happen with ear drops in the '60s and '70s.

However, take care as the ear is very sensitive and easily infected; never poke it with a sharp point as you may perforate your ear drum. If you do suffer persistent trouble with blocked ears or infection, seek proper medical advice — or become a hi-fi reviewer... 📤

Paul Miller's Oasis of Sanity

Paul Miller explains the subtle art of managing a successful blind-listening test.

ince I assumed the rôle of *Hi-Fi Choice*'s Technical Editor, my responsibilities have broadened into 'technical support' for all product categories. As a result, we now have a very consistent method of evaluation, not only for CD players and amplifiers, but also for loudspeakers, tape decks, tuners and so on.

This is an important feature of *Choice*'s review approach, as is our continued use of blind listening tests. Which brings me onto my core topic, prompted by one of the rare occasions where I had the luxury of organising a complete test from beginning to end (this month's festival of CD players, which commences on p.50 – Ed).

It is easy, and popular among the chattering classes, to knock the ideals of 'blind

listening', particularly when detractors have no experience of the technique. It's far simpler to assess a product underarbitrary conditions, at leisure in one's own time — to hell with consistency, objectivity and accountability.

So what are the advantages afforded by a well-run blind listening test? Arguably, the most important benefit of listening 'blind' is the freedom it grants from the baggage of preconceptions. Our listeners may know that they are listening to CD players, for example, but they have absolutely no idea of each model's name and price until the session is over.

It is all well and good being confident in your ability to subjectively assess a product's performance, but this assessment is inevitably coloured by expectations. The subjective opinion of even stalwart listeners will always be influenced by factors other than the product's sound quality — it is human nature to be fallible.

Want some proof? Let me relate a specific tale of human frailty, albeit one that has been repeated before and since and with a wide variety of products. A couple of years ago we were knee-deep in a week-long blind listening sequence of 20-odd CD players, auditioning and repeating various combinations of the players in a random order, day after day and with a broad selection of panelists. During this week, one particular player proved uniformly out of favour, specifically for its weak and light-sounding bass. But this was the very same player that had been expressly praised for possessing a strong, deep and rugged-sounding bass, according to some subjective reviews published a month or two earlier.

By way of experiment, I revealed the player to our panel on the final day, allowing them to appreciate its massive construction. "Beefy, macho aesthetics" was the panel's general consensus — they were oblivious to the fact it had already been auditioned, and derided, at every session in the past week. They seemed very keen to hear a player that had already received favourable press coverage, so we ran through the same sequence of music software used during the blind tests. Yes, you've guessed it: the machine now sounded "deep, powerful and

Consistent opinions mark out the best listeners.

underpinned by a strong bass".

Same player, same system, same panel of listeners, same selection of music and even the same listening level, but an entirely different verdict due to the listeners' bewitchment by the unit's price, reputation and intimidating appearance.

Getting the right balance

Returning to the present day and this month's mammoth CD player test, as our panel began warming to the task ahead, I was reminded that the by-now-familiar listening procedure did not evolve overnight, but gradually over at least seven years.

Clearly, some 'blind listening' tests are greater than others. Choosing the right panel is half the battle. Through a process of trial and error, for example, we now know specific listeners who work well together on a panel. These are participants who will consider the opinions of others, but will not be railroaded into a bland consensus they cannot condone.

What makes a good listener?

Consistency of opinion is vital. Whether the panelist is a Linn/Naim die-hard, prefers valves to transistors, LPs to CDs, or chooses to use 25-year-old Quad electrostatics is not the issue, so long as the person is individually consistent in outlook. If CD player 'number two' in the morning is repeated as CD player 'number six' in the afternoon, 90 per cent of listeners will respond to it differently, demonstrating either that they are easily dis-

tracted or that they do not have a clear idea of what they seek from a musical performance.

Over the years I've weeded out lesser listeners, leaving us with panel members who offer reliable and very specific descriptions of a product's sound quality. There may be some variety between each listener's description of a product, but this simply reflects the diverse tastes that must surely inform *Hi-Fi Choice* readers.

The most important part of the test is the group discussion that follows the auditioning of each product. Without such a discourse, the listening notes would have to be collated at a later date. What, then, if one listener has

written "sounds cold, dry and harsh" while another has suggested it sounds "warm and soft"? It's this sort of discrepancy that is quickly dispelled once each listener has the opportunity to clearly and verbally articulate a description of the sound. We capture the essence of a product's sound there and then, committing a description to computer that the entire panel feels content to endorse.

This wealth of experience is concentrated in our group test of CD players this month, resulting in a combination of objectivity, repeatability and accountability that has earned *Hi-Fi Choice*'s tests the reputation they enjoy today.

Who'd

like to

have our

new Mini separates?

We think our

competitors

would.

Why? Simply because our new *Reference 500* mini separates sound every bit as stunning as they look.

These are real separates boasting outstanding performance which, when combined, are quite remarkable.

Individually powered, the TEAC *Reference 500* components are engineered to exacting standards of precision. Right down to their gold terminals.

But it doesn't end here. This range will grow and grow. We already have plans for a CD player featuring TEAC's unique VRDS mechanism as well as a Pro Logic surround-sound amplifier and an all new mini-disc recorder.

The new *Reference 500* mini separates from TEAC. Stand alone units which together set new industry standards.

Paul Messenger ponders Mission's revolutionary 'nxt' speaker system, and the penny drops...

he *nxt* panel speaker technology, developed by Mission siblings V-Labs and reported in issue 160, is still the talk of the industry. An *nxt* panel acts as a diffuse or 'distributed' sound source, whereas conventional speakers are more like a coherent, point source. True enough, but oversimplified: in practice, sound from 'normal' speakers is a mixture of coherent and diffuse, and the ratio between them fundamentally affects the end result.

Personal

Sound travelling directly to the listener's ears from a speaker drive unit will be more or less coherent, while sound reflected from an adjoining surface is at least partly diffuse. Our total sonic experience inevitably comprises a mixture of direct and reflected sound, given that the reflected/diffuse waveform always arrives a little later than its directly radiated sibling, having travelled further.

If you want to know what your speakers really sound like, build an anechoic chamber — or adopt the cheap alternative and put them in the garden. Either way you'll hear the coherent, direct bit without the diffuse, reverberant contribution from the surroundings.

Speaker designers like to use anechoic chambers, since they are useful for indicating what a speaker is doing in isolation. Regrettably, they do not provide a real-world representation. A single speaker in non-reverberant surroundings sounds very different from two speakers in a room, which is why room measurements continue to feature in our speaker reviews.

The engineer can design the speaker, but has no control over where it's used. This 'room factor' is one of the Great Imponderables. Many theories are propounded, but only the very conceited would claim to possess true mastery. However, 'room factor' does provide a real, if rarely utilised opportunity for manufacturers and enthusiasts to indulge in some real sonic creativity, by manipulating the all-important direct/diffuse sound ratio.

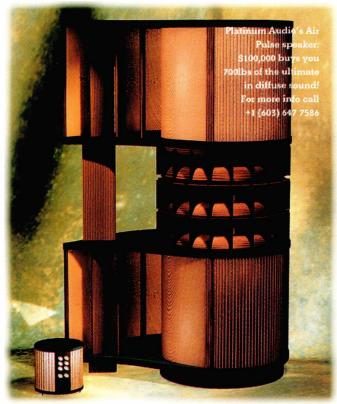

Face the wall

Regular *Choice* contributor Jimmy Hughes points his speakers away from the listening zone (*Hi-Fi* *Choice* Jan '97, page 25). Much of the sound, especially higher frequencies, is heard after reflection from the wall, turning a coherent source into a semi-diffuse one.

Jimmy's is a rather special case, as his Impulse horn loudspeakers are more directional than average. The intention is to turn a 'spotlight' into a 'floodlight' experience, which in his experience provides more natural perspectives and hides contributions from the drive units. Jimmy's rig has other refinements, including a small 'centre fill' driver to improve central focus, but most importantly he knows what he's trying to achieve with his system, and is prepared to work hard at the refinement process.

Commercial speakers show numerous approaches. Platinum Audio's monstrous *Air Pulse*, pictured below, costs \$100,000 and weighs 700lbs. It features 360-degree omnidirectional horns, to maintain the power response throughout the room and add diffusion. The equally dear direct-radiating Wilson Audio *Grand SLAMM X-1* incorporates a rear-facing tweeter.

In my December '96 column I highlighted the spacious qualities of the two semi-omni

designs in that issue's group test — the Castle *Harlech* and Canon *S*-75. A major factor in their favour was probably greater than average ratios of diffuse to direct sound. (Canon-style lens-reflectors are inherently diffusive.)

The classic Bose 901 omni-directional design — one driver facing forwards, eight back — is one of the oldest in current production. It's no audiophile favourite, since a lack of stereo precision is an inevitable consequence of the high diffuse/direct ratio. Nonetheless, as this is probably the most commercially successful hi-fi design of all time, it would appear that non-enthusiast listeners prefer the more diffuse approach.

Generally speaking, imaging limitations have meant our stereophonic age has not favoured the diffuse sound source, simply because some loss of image precision is inevitable. Things were quite the reverse back in the days of mono, however, when adding a bit more space and scale to a point source was one things designers set out to achieve.

Single-driver designs like James Worden's *Panasonar* corner horn/diffuser, and Wharfedale's *Column Eight* upward-facing, cone-deflectedconcretecolumn, used diffusion

partly to enlarge the sound source, and partly to de-focus the vicious high-frequency break-up modes of full-range paper-cone drivers.

So there are plenty of examples demonstrating the long history of diffuse sound in hi-fi, even though most of them have been deployed in combination with an element of 'driver-direct' sound. All listeners, except those outdoors, get some diffuse sound as a matter of course; but how much will depend on the installation.

Is there an ideal diffuse/direct ratio? Probably not; personal preferences prevail. A direct-rich balance gives precise stereo, but many find treble somewhat artificial, and greater diffusion more relaxing and natural.

Last month I suggested *nxt* panels would be better suited to home cinema applications than hi-fi stereo. Now I'm wondering whether a combination of conventional driver and diffuse panel might be an exciting audiophile prospect...

THIS MONTH READERS HAVE GONE DIY CRAZY, SO DIG OUT THE TOOL KIT AND GET YOUR SYSTEM SORTED!

LETTER OF THE MONTH

Grab a nice slab for sound that's fab

Like a lot of houses, the floors in mine are constructed with somewhat uneven wooden floorboards. I recently decided to conduct an experiment to see if my floor-standing Ruark *Paladin* speakers would sound better on a more solid base.

I popped down to my local DIY Superstore and purchased two 400x400mm paving slabs for 89p each. I laid them on the floor, levelled them up and placed my speakers on them (with the spikes left on). Somewhat sceptical about the outcome I turned on my Naim system and... Wow! What an amazing surprise! It was like a new lease of life for my speakers. Almost everything was improved, especially clarity and stereo separation, and all for £1.78. This has to be the best value for money upgrade I can imagine! I have now promised my wife that I shall replace the paving slabs with marble ones to suit the living room. *Roger Hooton, Swindon, Wilts*

The taming of the screw

I've been thinking about some of the things that have been written about equipment tables over the years. And I found something in a magazine of a few years ago, about using cross-headed screws under spikes. I tried this simple and inexpensive experiment myself.

Fortunately all the news is good. Simply lift out your table and place a screw in the hole in the carpet (dead easy with a power screwdriver). Then return the table to the screws and level the table up — very straight-forward as the spikes now locate positively. I've used them under my two Sound Org' tables and Linn *Keilidhs*, in addition to the MDF spiked bases I use under PSUs.

The improvement in sound is not subtle. I reckon I would need to spend at least £1,000 in amplification to match this improvement — really quite awesome. Everything about the sound has tightened up — the music seems more natural, as if the components are working more efficiently.

I simply dig out a favourite piece of music, sit back and tune in. I have just had a most rewarding 40 minutes in the studio with George Winston as he recorded his *December* album back in 1982! Uncanny. Even a filthy pressing cannot mask such euphoric playing. I

Fancy a home-made upgrade?

can't say this would work for everyone's system nor everyone's room, but for my Linn/Exposure system in a room with a heavily sprung floor it has been most beneficial. And the best news of all? The screws cost me just 99p! Simon Chambers, Doncaster.

Rattles on the cage

How about subjecting the 'Mana phenomenon' to some unbiased scrutiny?

I can't think of any other hifi manufacturer which not only has its products regularly endorsed as a panacea but also has a magazine using them as the basis (literally) for most of its listening tests. The implications of this erroneous 'everything sounds better with Mana' axiom are far-reaching and potentially undermine the credibility of your reviews.

To have blithely assumed that because something suits most of your equipment/musical tastes/hi-fi aspirations it will miraculously benefit all and sundry is folly. Then to have incorporated it as a standardised feature of your test envi-

ronment is methodological madness — in reality you've merely

been testing how compatible (or otherwise) products are with Mana's supports.

I hope that the 'Mana Mafia' which appears to dominate your magazine will be open-minded enough to address this issue, though I fear that their ideological commitment to the 'path of ultimate revealment' (and the small fortune spent in the process) may impair their objectivity. I know it's going to be hard for them to come clean, Mana being (allegedly) "more addictive than crack cocaine". Or maybe a spot of rehab in the inestimable Dr Miller's *Oasis of Sanity* might help?

Mick Sissine, address withheld

The support systems that reviewers use are, like everything else in their systems, selected on the basis of sound quality. And given that reviewed products have to be supported on something, it would seem sensible to use the best that's available. That so many of our contributors use Mana seems to indicate Mana is one of the better options for a variety of equipment.

A blind-listening test of equipment supports would be interesting, and we welcome all comments from those who've experienced the Mana effect, whatever the findings. – AS

Gadzooks.

Jason Kennedy experiences Living Voice's new domestic subwoofer and transforms his perspective on a record collection.

ome people will not leave well alone they always want more. This affliction is unusually prevalent in the audio community but even here there are those who will not let it lie long after everyone else has gone home. One such character is Kevin Scott of Living Voice; in 1992 he got together with Vitavox and produced the Air Partner loudspeaker, a magnificent horn design that wowed everyone who heard it. This was followed by the Airscout, a pared down version of the Partner with the same mid- and high-frequency drivers but a smaller bass horn. This design Kevin preferred in many ways, not least because it could be transported with relative ease, weighing a mere 85kg. The 'Scout, however, does have limited bass extension, a factor of its horn mouth area, and it was clear that some form of subwoofer would be very useful. Somewhat inevitably none of the conventional designs of actively driven cubes with big drivers inside could blend in with the dynamic qualities of the 'Scouts. So he built what is probably the only domestic horn subwoofer in commercial production, the Living Voice RW24. The combination has proved very effective indeed.

The Airscout retails for £14,750 and measures a manageable if not diminutive 115x62.5x57cm. It contains a Vitavox 12-inch bass driver which faces forward under the grill, its rear radiation being horn-loaded through the mouth at the bottom. The midrange is created by a Vitavox pressure driver behind the cast aluminium dispersive horn; treble, meanwhile, is provided by the JBL slot tweeter on the 'outside' panel. Its crossover has stepped attenuators for adjusting the output of midrange and bass drivers, and the components include handwound, air-core chokes. The plywood carcass is veneered in birds' eye maple and khaya.

The similarly-finished RW24, socalled because it is a re-entrant (bi-furcated) 'W' horn containing two 12 inch drive units, retails for £9,500 and comes in two parts — one unit sitting atop the other. In these two horns the Vitavox drive unit faces forward and fires into the visible part of the horn through slots between the khaya and maple veneered facets. The RW24 measures 84x146x59cm and is surprisingly innocuous — visitors didn't realise it was a speaker at all, possibly because the *Airscouts* are bigger than any domestic speaker they'd seen before.

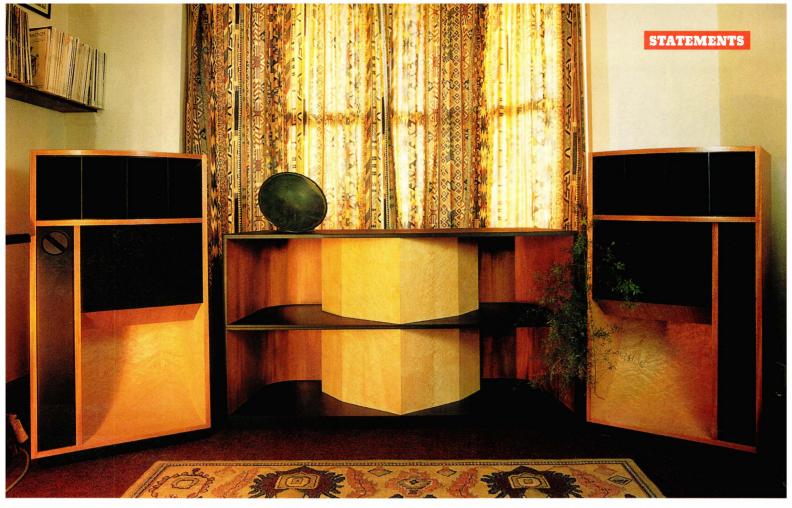

The system can be driven in a number of ways. The *R* W24, for instance, can be connected in parallel for mono operation or hooked up to either channel for stereo. You can use one or two stereo amplifiers to do the job but efficiency is so high, a claimed 108dB broad-band for the combination, that a single (preferably valve) amp is quite capable of extreme volume levels.

Method behind the madness

What we're talking about here is professional PA technology that's been refined and tailored for domestic use. The reason for putting a horn in front of a loudspeaker is to provide more efficient coupling to the air, which is why horns are always so dynamically strong. Because of this efficiency cones need very little travel and can therefore respond extremely quickly to changes in the signal; pressure drivers such as used here have one-and-ahalf-inch aluminium domes, albeit with massive magnets, yet they can produce undistorted SPLs beyond the reach of virtually all conventional direct-radiating speakers. The traditional bugbear of horns has been tonal colouration, in PA you can EQ this out but in domestic circumstances more sophisticated solutions are required. One of these is compact disc, a source with a flat response, which makes it a lot easier to build horns that will suit a variety of systems. Another is having level controls on the individual drive units so that the speaker's response can be adjusted to suit the room it's in. But most significant is the

The Airscout combines a 12inch bass driver (behind the grille) with a cast aluminium midrange horn and slot tweeter.

design of the horn itself, and this is the area where Living Voice and Vitavox have concentrated their energies to good effect. When the *Airscoutl RW24* combo is used with tonally balanced amplification, itsounds very even, a factor borne out by the wide variation in, but constant intelligibility of, material played through it.

Listening to a legend

Even though the temptation was to go for the best and apparently most appropriate amplification I could lay my hands on, I tried a variety of options with these speakers. The starting point was of the Art Audio persuasion, and consisted of a VPL SE preamp with valve-regulated PSU and a pair of Diavolo single-ended stereo power amps. The finishing point was a lone triode-connected, Quintet push-pull with an external Border Patrol HT supply. In between were the **Ouintet** with an Audio Innovations Series 700, a Densen DM20/30 pre/power and the nimble little Pioneer A-300R Precision.

Frankly I was surprised at how much better the push-pull (PP) amp sounded than the single-ended one, possibly because of the amps concerned but equally likely due to the way that these topologies interact with the speakers. Either way I think a lot more of PPs, especially those employing triodes. Sources were Wadia 16 and Trichord *Revelation* CD players; cables were Living Voice and Hitachi.

Listening to all my favourite discs through the Airscouts and RW24 via the above was a voyage of discovery that will tarnish my opinion of regular hi-fi for years to come. A month later I'm playing discs that I've not revisited since, wondering what's wrong with the very accomplished system I currently have in action. What really strikes you about these speakers is their effortless dynamics regular speakers can't even begin to create this sort of power and scale without resorting to excessive levels or aggressiveness under duress. You can listen at the sort of sound pressure levels that John Watson and Malcolm Steward enjoy (eg extreme), without thinking that the neighbours are plotting your demise or that your ears are in danger.

But it's not all about level, in fact it's about energy. I heard The Who's Live At Leeds for the first time the other day. That band had energy, and it wasn't because I played loud, it was because they put so much into the performance — even today Pete Townsend can get more power out of an acoustic guitar than most can get out of an electric one. With these speakers you get that type of inherent strength out of the music, whatever level you listen at. It comes down to extraordinary resolution right across the band. Everything is there: full timbral colour, perfect timing, transparency without brightness and coherence like you wouldn't believe.

The RW24 is itself quite extraordinary. When you're listening to it you quickly become accustomed to its openness and dynamics, and only on substituting a box speaker do you realise how clean, uncompressed and natural it sounds. It turns what previously seemed an amorphous blob of bass into double bass with all the body, colour and timbre that comes with the real thing. The difference it made to an old Terry Callier recording was so great that I'll think twice before ever criticising a record's bass again. Kevin Scott estimates that the RW24 will go down to 40Hz before roll-off sets in with a vengeance; what I want to hear is a brace of the things! The thought of bass this good down to 30Hz is alarming and appealing in almost equal measure.

What is most alluring about these speakers is that they bring out so much in your music collection. Nearly every disc or LP is far better recorded than you could imagine and great music becomes fantastic, addictive and totally engrossing. In many respects the loudspeaker is the weakest link in most systems, but in this instance that is so far from the case as to be irrelevant. Try alternatives for everything else but don't expect to find a better speaker system.

Living Voice 🕿 (0115) 981 3562

They may look pretty civilised but the Living Voice Airscouts and RW24 subwoofer (above) have the firepower to take on all comers.

Alvin Gold has the elixir that'll make your system sound better. Send your hi-fi queries to 'Help!' at the usual address (page 137) or 100433.1130@compuserve.com. We regret that we cannot answer individual queries on a personal basis.

Query of the month

Back-to-back

I have a £2,000 budget to spend on a hi-fi system, basically a CD player, amp, speakers, cables and so-on. I am inclined towards either Naim (*CD3*, *NAIT3* and Royd *Doublets*) or Mission-Cyrus (*dAD7*, *III* amp and 752 or 753s), but my dilemma is that in Norfolk I am limited to what I can hear demonstrated, especially in 'back-to-back' comparisons. The above represents the best that I have listened to, but not back-to-back. I am willing to travel to hear stuff. Can you suggest anywhere, near-ish to Norfolk?

I like the clear, spacey sound of the Naim but I wonder whether I can cope with listening to such a crisp, clear sound every day. I prefer the facilities of the Cyrus but I am not convinced about the *PSX-R* thing and the performance of the machine on the end of the 753s. It refuses to rock at any volume (I suspect this is due to the four smaller bass units). If it did rock then I guess I'd like the more mellow sound.

My dilemma is that I have a very limited knowledge of hi-fi and the different brands available at the higher-end of the market. Any pointers will be gratefully received. I

listen mainly to pop and indie music; from Pulp, Oasis, Blur and Paul Weller to Bon Jovi and Pearl Jam. Any thoughts?

Spencer Flugge, Norfolk

I have always thought that the secret of good system building is forming a relationship with the right dealer. In your case, there is an excellent dealer just outside Norwich, namely Basically Sound. A dealer like this should be able to tailor a system to your tastes and guide you through the hi-fi maze.

The two systems you have outlined above are so different in temperament that it is almost meaningless to talk of which is the better of the two. Oversimplifying like crazy, choose the Naim/Royd solution if you like your music rough and physical (in the very best sense), and Mission for transparency and detail. Forget about facilities: neither lacks anything important, and don't worry about the multiplicity of drive units in the 753, which is one of its strengths for reasons there isn't room to go into here.

Royd Doublets: part of a Naim system in Norfolk?

The Marantz CD63mkII K I Signature

Drastic solutions

My system consists of a Technics *SU-A900D* amplifier, the original Marantz *CD52*, Jamo 507 speakers and cable, and Monster interconnects. My next planned purchase is a CD player upgrade, possibly the *CD63mkII/K I Sig*, or a separate player and DAC such as the TEAC *VRDS-T1* with the Cambridge *DACMagic*. Or should I try a DAC to improve my *CD52*? Budget – the Australian equivalent of £2,500.

Nigel Wadsworth, Australia

Don't spend it all on a CD player. You should be able to reap all the improvements you're looking for from the Ken Ishiwata player. The reality is that the rest of your system is unlikely to benefit significantly from any more drastic solution, and adding a DAC to your existing player will probably result in less than optimal results, as it will be limited by the performance of the existing player as a transport. By all means test this advice if you can at hi-fi dealer, and if you agree, why not use some of the

extra money to add to your collection of CDs?

Sub-standard

My system (Rega *Planar 3*, Marantz *CD63*, Arcam *Alpha* 6 amp, Castle *Isis*) is absolutely perfect for 90 per cent of the stuff I listen to, but lacks the bass extension for dance music, which I occasionally listen to. As a result, I'm thinking of buying a sub-woofer. Now, as I know precisely nothing about them, could you please (a) recommend a suitable model (I prefer sweetness to volume and cannot spend more than £250) and (b) tell me how they attach to the amp? Mainstream brands are preferred. *Joe Partridge, via the internet*

I regret to say that I know of no subwoofer at or near £250 that won't severely compromise the performance of the system. In my judgement the REL Q-Bass 50, at £375, represents the entry level for models suitable for systems like yours. My advice: defer the purchase until you can afford it. Wiring involves connecting the subwoofer input in parallel with the main speakers. The Q-Bass has a high input impedance and no material effect on the main speakers.

If you really can't wait, Kenwood makes a cute little AV subwoofer called the SW-500 (£250), which will do a reasonable job.

HELP

No jazz or opera

My system consists of an Arcam *Alpha* 5 CD player, Audioquest *Quartz* interconnect, Naim *Nait* 2 (a definite improvement on my old Aura *VA100 Evolution II*), with Audioquest *Indigo* cable bi-wired to Ruark *Sabre II* speakers on Alphason *Titan* stands. This system is refined and pleasant with good dynamics, but lacks deep bass, punch and an open soundstage. Am I right in thinking that the CD, cables and amplifier are capable of these characteristics and that my speakers are the weak link? I would consider spending up to £600 on an upgrade and my shortlist (needing sensitive speakers to partner the Naim) includes the ProAc *Tablette* 50, B&W *CDM1*, Naim *Intro* and Mission *752 Freedom* floorstanders. I listen to well-produced pop, rock, acoustic blues and orchestral works but no jazz or (ugh) opera. Mike Lowndes, via the internet

I agree that the Ruark Sabre is probably the weak link. It is not one of the best from this generally excellent marque, especially in respect of dynamics and control. Choose the right speakers and who knows, jazz and (ugh) opera may suddenly become palatable. Stranger things have happened.

You've named a talented bunch of possibilities, and it is difficult to know what I can contribute. For what it's worth, however, I heard the Naim Intro on a recent trip abroad and was very impressed. It is quite likely to suit you amplifier better than the others, all of which need considerably more

power than the Naim Nait is designed to deliver.

Synergistic necessity

My system includes a Marantz CD63 used as a transport, Cambridge Audio DACMagic 2 DAC and Status XL-120 floorstanding speakers. I intend to replace my JVC RX808VBK AV amp with a strictly audiophile design, and have two in mind: the Copland CSA14 integrated or the Naim NAC92/NAP 90 pre/power combination. Can you advise which of the two I should choose to achieve the most detailed possible sound? I listen to pop and slow music. I have listened to both amps many times, but I can't decide which one to select.

Teo Chee Leong, via the internet

Here we have two excellent amplifiers which happen to be modelled on two different ideals of amplifier behaviour, and if I say that I prefer the

Copland CSA14 integrated amp: Alvin's preference!

Copland approach, I have to admit that this is more a matter of personal taste than of

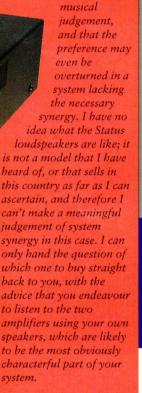

Separate stages The main part of my system is a Rega *Planar* 3 with Linn

K9 record player, JVC AX-A472 amp, Mission 760i speakers and Cable Talk 3 speaker wire, plus a CD player, tape deck and tuner. After reading your review of the JVC AX-A662 amp, in which you suggested the phono stage wasn't all it could be, I wondered if you think it's worth my while buying a separate phono equaliser. Up until now I've been happy enough with the sound from my amp but if spending money on something like the Rotel *RQ*-970 phono equaliser is going to make a significant difference, then I will definitely consider it. My budget would be around £250. Your thoughts, please. *James Houston*, *Glasgow*

COPLAND

Measured against the probable benefits, it's a close-run thing, but on balance I think that you may well benefit to a degree from the use of a separate phono stage such as the Rotel one, though I have not auditioned it personally. Even so, I'm not totally convinced that you'll achieve really worthwhile gains given the nature of your system as a whole – but by all means seek a

demonstration from a stockist. Of course the case for an outboard phono step-up is strengthened significantly if you decide to upgrade to a higher quality line-only amplifier in the foreseeable future. The JVC AX-A472 — would it benefit from a separate phono equaliser?

4 Mini upgrade

I have a Denon *D-C30* complete system with standard *SC-M3* speakers on Atacama *SE24* stands using QED *Qudos* cable. These are the only changes I have made to the basic Denon system and although the sound quality is good, I am wondering if I can get more from it. Any advice? *Andrew Couchman, Ayrshire.*

For the dedicated audiophile not afraid to get his hands dirty, there is no end to what can be done. In this case you could consider major steps like a cable upgrade (though Qudos probably strike more or less the right balance in your system), or the most basic chores like cleaning plugs and sockets. There are all kinds of accessories, gadget incantations and potions you can use to help you. I'm not sure that many of them offer value for money in the context of your particular system, but plug-cleaning is free and often effective, and careful positioning and orientation of the speakers should also be attended to. Although the Denon speakers are nominally boundary designs, they do improve in projection and image scale when they are pulled a little away from the back wall, though you might want to compensate for the resulting loss of low

frequencies with a touch of right-hand-down on the bass control. And you could do worse than getting a dedicated support, either a wall shelf or stand; see the Directory for recommendations.

Beyond this, I'm afraid you're into wholesale changes to your system components, which could mean a speaker transplant (the KEF Coda 7 is ideally suited to this kind of application). The next step beyond this is a complete system upgrade.

Good listening

I currently own a six-year-old Yamaha *CDX530* CD player and a 10-year-old Marantz *TT220* turntable. I want to buy a new amplifier and a new pair of loudspeakers. What is your opinion of the *NAD 314* amp and KEF *Coda 8* loudspeakers? *R. Ozeg, Croatia*

Sounds fine to me. The KEF Coda 8 is a well-liked and wellpriced mid-size speaker which sounds lively and open, and the NAD has similar virtues. Both could be described as a little coloured, but at moderate levels you should find them engaging and musical. Both have also been formally Recommended in these pages. What little I remember of the Yamaha and the Marantz suggests they will live very happily in the same company, so what more can I say — except to wish you good listening.

A NAD 314 should sit happily alongside a Yamaha CDX530.

A traditional request

I currently own a Naim *Nait 3*, a Quad *CD* 67 and have just inherited a Linn *Sondek LP12 Valhalla* with an *Ittok* arm. As this equipment has a certain tradition I want speakers with the same kind of style. My budget is around £500. While we are at it, could you also recommend an MC cartridge for the turntable, please? Thank you! *Teck Leong, Malaysia*

My first idea was the Linn Sara, which appears to meet your requirements and should be available secondhand within your budget, though the Nait is not really powerful or good enough to make the best of it. If you intend moving further up the Naim hierarchy then this would be a practical suggestion. In the meantime, consider the Epos ES14 you might be able to get a second-hand pair that fits your budget.

Forget moving coils. The Nait lacks a moving coil input, a decision the designers made because the amp was intended as an entry-level product, and it was thought

Epos ES14: ideal partners for the Naim Nait 3?

that it would not benefit significantly from the rather subtle advantages that a moving coil might provide. Think in terms of the Linn K9 (£150), the Grado Prestige Gold (also £150) or the Rega Elys (£74).

Big factors

My current system comprises Audiolab 8000C/8000P amps, Meridian 206 CD player with Wharfedale 730.2 (I think?) and Linn *Tukan* speakers, which reside in a nine foot by eight foot room. My musical tastes are varied, but centre on new-wave/rock and classical with a bit of easy listening thrown in.

Firstly, I would like your recommendation on interconnects and speaker cables as I made up my current sets some time ago and now feel that they are not giving of their best.

Future acquisitions will include a turntable, DAC, speaker stands, rack, and speakers to replace the Wharfedales. Please advise on a few worthy selections for each category including items that will take advantage of my current amplification. Budget is not a big factor. *Stewart Mala, Chigwell, Essex*

What is your reason for using two pairs of speakers? Are they in the same room and used together, or in separate rooms? Given

that the Audiolab 8000P power amp lacks switching for two pairs of speakers, I assume the former is the case, yet I can think of no good reason for using them together since these speakers' characters are at odds.

Recently I had the opportunity to reacquaint myself with the Tukan after a long period, and was impressed by its tidy, controlled and articulate nature. It is certainly the better speaker by any criterion I can think of. If the idea of using two speakers is to add a degree of fullness to the sound, why not use a subwoofer? Carefully set up, a REL Q-Bass 100 might be the answer.

The REL comes with cable, and take your pick of speaker leads. Ortofon SPK300 at £8/metre is a good bet, but cables as cheap as Audioquest F-14 at £1.95/metre should also do the job. Speaker stands are difficult to be categorical about as performance is often related to price. For the Tukan, why not start with the ones Linn make (£85); alternatively seek out the Kudos S50 (£100).

harman/kardon maa

Realism

I am a student with varied musical tastes from Depeche Mode and U2 to classical and new-age. My overriding musical requirement is realism. My budget for a single-source CD system is approximately £600 including stands and cables. Please advise. Xerxes | Medora, Canterbury

Central to the success of any good system is an amplifier that has sufficient authority and control, and at the time of writing, the Harman/Kardon HK620 (£250) is about as good as they come within your budget, though it is not hugely powerful, and could be overwhelmed in spacious surroundings unlikely in a student's digs. Another possibility is the Denon PMA-350SE (£200). Good, inexpensive CD players include no less than three Best Buys: the Philips CD-721 (£130), the Sony CDP-XE500 (£160) and the Kenwood DP-3080 (£170). There is no shortage of decent inexpensive speakers either, including the B&W DM302 and Mission 731 (both £130); the former being brighter and more demonstrative. My money would go on the harman/kardon, Sony and Mission, which leaves £60 for cables and stands.

'Better' product ahoy

I would like to make a system from the following separates, and I would be interested in your comments and suggestions. I have a Sony *CDP-561* CD player which I want to connect to an Audio Innovations *Alto* amp with Sonus Faber *Concertino* speakers and a **REL** *Q-Bass* subwoofer. In my country it is impossible to audition complete systems because they come from different dealers and every one of them has 'better' product on offer, so I would be very grateful if you can help me with this.

ILIIII

D'amir Wanz`guard, North Yemen

Stop! You're well on the way to a fundamentally unbalanced system. The objections are not to the use of a subwoofer per se, but to its use with an amplifier driving the main speakers that will not come close to being able to track the dynamics in the bass. In any case, the Alto is not really man enough for the Sonus Faber Concertinos, which really need something a little grander — I'd suggest the Copland CSA-14 (£1,095) or the Musical Fidelity A1000 (£1,399). If necessary postpone the REL purchase to a later date. If you really can't stretch to these ideal choices, may I suggest the Densen Beat at £599.

The £120 CD challenge

I have a pair of Magneplanar *Tympani 1D* speakers, *Project 6* turntable, Linn *Klyde* pickup, Denon *PRA-S10* preamp and NAD *218 THX* power amp. I'm very satisfied with the sound of the speakers but my big problem is finding a matching CD player under £120; I prefer multi-bit players. But first of all I would like to know your views on my existing gear, since I have the possibility to trade my NAD for a Carver Sunfire. Should I do that? *Rodrigo Concha, via the internet*

1124

If you're talking about a part-exchange, how about using some of that money to increase the budget available for the CD player? It is true that the cost/performance curve for CD players follows a fairly erratic path, but £120 really is below the level that makes sense. By all means trawl the listings at the back of this magazine and try and arrange a demonstration of one of the better ranked models in your own system — dealers will often allow a home loan against a cash deposit of the purchase price — but your system deserves something like the Trichord Revelation (£800) or the Meridian 506 (£995). Maybe you could compromise somewhere between the two. How about the Orelle CD-100SE at £549, which is a remarkably grown-up player at the price?

Sitting closer

My system consists of a NAD 502 CD player, a NAD 602 cassette deck and an old Akai amplifier (45W) which powers a pair of Yamaha AX-490: powerful budget amplification

Tannoy PBM5 II speakers. I get quite a good sound but sometimes I feel that I would do much better if I replaced my amplifier. I need one which is accurate and has a stable clear image, even at high volumes sustained for long periods of time. Tone controls are a must, and the budget is about £300. I was thinking about the NAD 312 or 314, or the Kenwood KA-3020S. I should also mention that the speakers are not far apart due to lack of room, so stereo image is compromised.

Name & address supplied

If you want lots of power and tone controls, you should investigate the Yamaha AX-490 (£250), which is considerably more powerful than the other two named at 85 Watts per channel, and in the same class sonically as your shortlisted models. You will inevitably lose something compared to the best tone controlless models at this price — but it's your choice. You can widen the apparent size of the soundstage either by sitting closer to the speakers, or by pointing the speakers down the room instead of toeing them in towards each other.

Aesthetic appeal

I purchased a Denon DRM800A two or three years ago to replace my original but terminally-ill cassette deck. Since then, I have also bought a

Denon TU425RD tuner to replace a Yamaha CT810 and a Denon DCD 825 CD player. I hope I haven't blundered too much already, but I'm happy with it so far.

Unfortunately, I'm still in possession of an ageing **Optonica SA5100 integrated** amplifier and a couple of prehistoric Goodmans Magnum Ks and Wharfedale Denton 2s (used in different rooms of the house).

Pioneer A-300R Precision: helps give a balanced system

Having had a warning about aesthetic appeal, I am considering the purchase of a Denon PMA 450SE amplifier to replace the SA5100. What speakers would you recommend for use with this system, on a £400 budget? Mike Hall, Warwick

It might be more productive to pool the budgets you have allocated to the amplifier and the loudspeakers, and divide them on merit rather than according to inevitably meaningless formula. This

cohesive. By narrowing dispersion at high

way you can shortlist loudspeakers like the B&W DM602, Castle Durham 900 or perhaps the Rega EL8, all of which cost around £300, with a Harman/Kardon HK1400 (£400) or Pioneer A-300R Precision amplifier, which should result in a better balanced system thanks to the superiority of the higher-priced amplifiers.

The PMA-450 is a decent amplifier, but approaching its sell-by date. Cheaper models in the range have already been superseded by SE variants, which sound considerably better (see the Denon PMA350SE review in the January issue), and have a much cleaned-up appearance to match. If you are willing to wait a few months, the PMA-450SE will be another option to consider.

HINTS AND TIP Ionastic midrange

Jimmy Hughes relates the benefit to be had from fashioning cowls for speakers!

A wide, even dispersion of sound over a broad range of frequencies is the goal of many speaker designers, and to this end they design enclosures with smooth, rounded contours so that the sound waves are not impeded. The result is greater tonal openness and reduced coloration, yet I wonder if this isn't yet another area where a battle or two lost can win the war.

I have a fairly unusual split-level living room, and the two chairs from where I do most of my listening are placed in the middle of the floor. Recently, I noticed music actually sounded more integrated and coherent if I sat behind these seats on the floor, an arrangement which blocks my view of the speakers.

Of course this is hardly an ideal listening position, and it doesn't do much for soundstaging or stereo imagery. But disregarding all that, from a musical standpoint the sound is far more cohesive and easier to follow. Given that I sit about 15ft back from speakers placed in reverse, my sound is already remarkably smooth and integrated. Yet, getting even further out of the firing line improves cohesion and homogeneity yet more.

Getting that same sound from my main listening chair was the next goal. In the end I came up with some cowls put on the top and sides of the loudspeaker to narrow the dispersion of the middle and high frequencies. I simply got some pieces of thick card and made an 'n' shape to cover the upper half of the enclosure. I then moved it back and forth to see what sort of effect it had on the sound.

I can't honestly say it was quite the same as listening with the two speakers hidden from aural view, but the effect was similar. Instruments and voices were better separated, yet overall, things were more integrated. The sound had far greater depth and space and it was easier to follow individual strands.

There was some loss of openness, but much depended on how deep the cowl was; a couple of inches hardly made any

difference, but if increased to (say) six inches the tonal balance hardened noticeably. I also felt the bass driver was more adversely affected by being 'blinkered' in the way described; the low bass could get a touch heavy and boomy.

There's no doubt that diffraction has a big effect on the perceived sound of a speaker, and readers may recall ideas aired some years back which suggested rounded

beading on the side of the enclosure improved results. The idea was to eliminate the abrupt edge between the front and top/bottom/sides of a typical enclosure.

My idea is similar but not quite the same. I'm aiming for a much better integration between the drive units so things sound more seamless and frequencies you can obtain some worthwhile benefits. Try it and see!

ON TEST: HIGH END HEADPHONES

masters

Alvin Gold invites you into the intimate world of top-quality headphones, gathering five premier models around his highly tuned ears.

istening through headphones can be rather like peering through a goldfish bowl. All sense of perspective disappears, and stereo imaging becomes a caricature, with left, centre and right strung out like a beads on a string. Detail is magnified unmercifully as the larger picture is pushed aside. This is very much

> the worst-case scenario that our exotic group of tested headphones are designed to improve upon. And on the whole, they do. I've been a regular headphone user for as long as I can remember, partly because I work hours of the

day when loudspeaker listening would be anti-social, but mainly because I like 'cans'. Given the prices of the models tested (none of which is less than £140) there is the implicit promise of something extraordinary and well worth hearing.

When a loudspeaker is shrunk to the size of something you can wear on your head, and maximum sound pressure levels are scaled down to match, many problems facing loudspeaker designers are swept away, but others rear their heads.

When a transducer is positioned close to the eardrum, every tiny little design flaw becomes magnified. After all, headphone design is an infinitely subtle art, and as you may have found out, there are few very good models around.

THE CAST LIST

Grado SR225£225.00 Precide Ergo Model 2£139.00 Sennheiser HE-60 & HEV70UK.£998.00 Sony MDR-CD1700£199.99 Stax Lambda Nova Basic£449.95

This test addresses what is euphemistically described as 'the high end', which is headphones from the top (or near the top) of manufacturers' ranges. All are designed specifically for excellent sound.

Headphones are seen largely as convenience products, but those on test here place conve-

nience well down the priority list. Some of the models could, in theory, partner personal stereos; a pair of Grados or Jecklins might make good sense with a personal CD player but most folk would think twice about walking down the street with such enormous cans wrapped around their skulls. Two of the candidates can't even be connected to a standard headphone socket!

These headphones are primarily intended for use in a fixed location, partnered with normal hi-fi equipment, and this is the yardstick against which they've been measured.

Upstream from the headphones, equipment used for this test included (but was not limited to) Krell *KAV-300i* and Denon *PMA-450SE* integrated amplifiers, and a Wadia 23 CD player.

ELECTROSTATIC VS. MOVING-COIL HEADPHONES

Most headphones are based on variants of the **moving-coil** drive unit, like the treble unit in a loudspeaker. The advantages are design simplicity, and the fact that a headphone can be connected directly to a lowvoltage amplifier output. The disadvantage is the weight incurred by the

> diaphragm's need for strength, which compromises its ability to follow the musical action at high rates of acceleration. At high frequencies such drive units reach a point where they fail to respond homogeneously, compromising sound quality. **Electrostatic** drive is another

well established technology, but involves greater complication and, ergo, higher selling prices. It uses a flat, high-resistance conductive membrane, suspended between fixed electrodes which take the form of perforated plates. The diaphragm is driven evenly over its entire surface and therefore doesn't need to be rigid. Electrostatics require a high polarising voltage which is applied to the diaphragm, usually supplied by an external transformer or special drive circuitry. The models tested here have their own amplifiers and accept line-level signals from existing systems. Advantages? The diaphragm can be extremely light

(allowing it to respond more quickly and accurately) and physically large (which helps produce a more even soundfield around the ear).

GRADO SR225

Joe Grado has for a long time been one of the great iconoclasts of this industry, though his non-conformism has previously been expressed best through cartridges, which shared with Decca needles a peculiar and slightly unrefined immediacy, and certain physical oddities, too. Grado's headphones are ostensibly less idiosyncratic, and in some ways appear to hark back to the earliest lightweight Koss models.

Uncle Joe's latest and greatest (though it is not his most expensive) is a suspiciously modest-looking affair, with compact capsules attached to simple swivelling yokes which in turn are attached to the single hoop headband via steel rods. The capsules can be freely rotated (allowing the headphones to be packed flat, potentially useful in portable applications), and extended to allow proper positioning over the ears. The ear cushions, which are readily removable for cleaning, are made from a stiff reticulated foam with no supplementary covering, which gives a direct sound path, but which like all reticulated foam tends to be poor at conducting heat away from the ears. In this case it also has a slightly rough feel.

There are two metres of cable, which are

tipped with a fixed 6.3mm jack plug.

If rather unsophisticated build-quality is a prologue, the *SR225*'s highly distinctive voice is the story. It sounds rather good on the whole, with a powerful and authoritative bass, and a warm, lucid midband. It is also obviously coloured, especially in the upper midrange area where the sound changes in character and becomes shut-in; and at the frequency extremes, both of which sound cloudy and lacking in fine detail.

Tonal colours are darker than usual. Strings lose their cutting edge, and although there is nothing overtly aggressive or nasty about string tone or other musical content, there is some muted evidence for a resonance in the treble, which is indicated, for example, by the tinny, coloured sound of close-miked percussion.

On the whole, though, the Grado's sins are largely those of omission. Music flows through this headphone organically and believably, with irrepressible dynamics and bounce. The treble resonance described above is not particularly aggressive, partly because the output is muted in this region. What's left is that rather distinctive tonal quality and some opacity, which doesn't prevent music sounding musical. In fact sometimes it even helps massage the evidence in a positive way. Change, let's say, to the Sony *MDR-CD1700* (page 34) and it soon becomes apparent what's missing. The Grado leaves much, much more to the imagination. But it gives good expression to the dynamics and the 'shape' of the music, much as some valve amplifiers do when compared to their more literal solid-state transistor cousins.

The Grado would not be an effective monitoring tool in a recording environment where a warts'n'all presentation is required. For the simple communication of fine music, however, the Grado makes more sense, though the romanticised veneer it imposes on music is not always appropriate.

F

Hand crafted sweeping curves of real wood veneer combine with precision engineered steel columns to form a distinctive and stylish piece of audio furniture. Finewoods are available in a selection of beautiful finishes which have been

introduced to match your existing furniture. The choice is yours.

PRECIDE ERGO MODEL 2

Hands up those of you who've heard of the Jecklin *Float*. I see. For the rest of you, and it looks like the majority, Jecklin is another personality in the Joe Grado mould, but of Swiss rather than American extraction, who made his name with the *Float* headphones.

So who or what is Precide? Precide is the Swiss company that has made Jecklin *Floats* since Day One, and has now branched out with its own in-house designs, loosely modelled on the *Float*, all of which it must be said strongly resemble a Darth Vader skull protector.

The physical construction of the *Float* was simplicity itself: a flat sheet of what appeared to be mineral-loaded plastics was moulded into a shape that fitted around the head, and the drive-unit capsules were mounted into cut-outs near each ear. The *Ergo* has the additional complication of some structure to enclose the inner workings and allow for head-size adjustment. With early *Float* models the capsules were held well away from the ears themselves, being only loosely restrained from swivelling or falling off altogether when the user moved.

The *Ergo* range, which runs in parallel with the *Float* series (the model under test is closely related to the *Model 2 Float*), has a new neodymium magnet system which increases sensitivity to the point where the system will make good use of the limited output from personal stereos, though the 2.7 metre ribbon lead counts against portable use, as does the fixed 6.3mm plug. Not to mention questions of fashion!

The original concept for the *Float* was 'the ultimate open headphone', in which a couple of loudspeakers were suspended near each ear (without the colorations inevitable from a shell-like structure on the outside, or earpads and other clutter between the headphone and the ear) and with the minimum of acoustic loading.

The *Ergo Model 2* follows the same pattern, but has been reined in a little. The 'phones fit rather more snugly around the ears, and there is no longer that inescapable suspicion that the headphones are about to fall off the head at every turn. At the same time, they don't sound quite as open and detached as their progenitors, partly no doubt because of the tighter physical build, but partly also because the balance of the *Ergo Model 2* is brighter and more forward than the *Float*, and because the Model 2 suppresses some of the subtle information that informs the ear and brain about space.

The makers claim these new models sound more dynamic in a side by side comparison, and I have no doubt this is the case, but the new rare-earth magnet models are coarser in texture. Strings have a shiny, edgy tone, as though burnished with metal polish, and there is evidence of a sharp resonant peak, probably around the 6-8kHz range, which leaves vocal timbre badly affected.

SENNHEISER HE60 & HEV70/UK

The *HE60* and *HEV70/UK* combination the former a headphone, the latter a mainspowered energiser — is derived directly from Sennheiser's £9,600 *Orpheus*, but is simpler and more affordable. The headphone is still electrostatic, but its electronics are of the solid-state rather than vacuum-tube variety, though they run in Class A.

The *HEV70/UK* preamp is fed by a linelevel input from your system amplifier's tape output (or similar), and is equipped with a friction-coupled dual-concentric volume control from ALPS. The only controls are a signal overload/power telltale and an on/off switch. To preserve existing tape loops there are both line in and output sockets.

The *HE60*'s large electrostatic diaphragm is protected by a steel mesh cover internally, matched to an open-back enclosure fitted with firm oval circumaural earpads. A comfortable felted material covers the latter keeping one's head reasonably cool. The headband is a simple padded hoop, which is comfortable but no match for those of the Sony and Stax models. Cable length is 2.9 metres.

The *HE60* and *HEV70/UK* combination is almost twice the price of any other model in this test, and by comparison with them it was disappointing. The open, pure-sounding midband is not bettered by any of the others in this group, and the frequency balance, very similar to the Sony *MDR-CD1700*, is light, open and agile, with a suggestion of treble lift. The bass is excellent, though lacks the authority and weight of the much more expensive *Orpheus*.

It's the treble that betrays this Sennheiser, being less refined than that of Sony and Stax rivals in this comparison. There's clear evidence of a very-high-fre-

quency in-band resonance revealed as vocal sibilance with some performances, and as a phasey edge that can be detected with many recordings — rapid phase shifts are associated with high-Q resonances, and the audible effect can be a comb-filter type of phasiness. The effect lent an uncomfortable edge to Jennifer Warnes's voice, and a squeaky, slightly metallic overlay to orchestral strings. Percussion suffered most, sounding coloured and coarse.

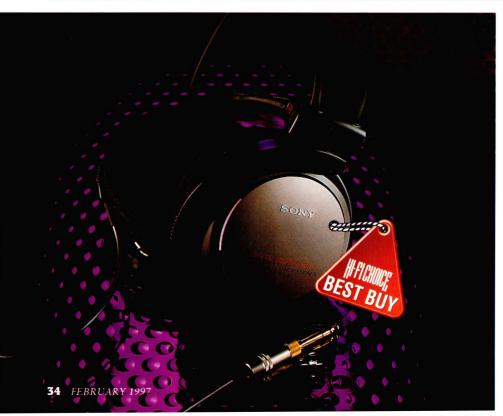

The good news is that the resonance identified was limited strictly to the treble. There was no audible consequence in the midband, which seemed completely free from coloration of any kind. In the main, the Sennheiser sounded precise and articulate, with excellent imaging like the Sony *MDR*-*CD1700* but with a much greater feeling of overall depth and spaciousness.

	Wycombe, Bucks HP12 3SL
2	(01494) 551551

Few printed details accompanied this headphone, which is a very recent introduction. I was told however, that the *MDR-CD1700* is derived from the flagship *MDR-R10 King*, which had large, sealed capsule surrounds hand-carved from an exotic wood, fitted internally with a bio-cellulose diaphragm 'hand-made' by acetic bacteria. Despite their enormous cost (£2,500), these were a moving-coil headphone, as the *MDR-CD1700* is. It echoes its predecessor's shape and reprises the '*R10*'s biocellulose and 'Vectran' diaphragms.

At first sight the 'CD1700 looks dubious. It is bulky and has a sealed-back construction, often shorthand for coloration and compressed dynamics. But this time Sony has bucked stereotypes, as the headphone's structure is very light and comfortable, thanks to an outer steel hoop and a pliable, spring-loaded inner band that automatically adjusts to head size. Extra pampering comes from large circumaural earpads covered in soft felt. Thanks to low weight the 'CD1700 exerts low inward pressure on the listener's

ears without sacrificing any stability. The price paid is minimal attenuation of external sound. The 3.4m-long cable is fixed to one earpiece.

For a dynamic headphone, sound quality is startlingly good. It has the kind of exquisite clarity and delicacy that are normally the province of top-class electrostatics like the Sennheiser and Stax models in this test. Bass is tuneful and well extended, but still immaculately controlled though lacking the last word in weight. Treble is balanced on the bright side of neutral, lending music a lively, detailed feel. The only trade-off is imagery constrained in scope compared, say, with the Stax. Image scale tends to suffer as a result, though there appears to be no loss of fine detail, which is reproduced by the bucket-load.

Lest I split any more hairs, even though the *CD1700's* balance is a little bright, it sings the cleanest, sweetest and most articulate treble of any dynamic headphone I've heard. Cymbal crashes have only the metallic quality that belongs, while drum brush strokes have a wholly tactile quality with no suggestion of distortion at reasonable volume levels or well above. Vocal quality is superb: a perfect miniature model of the real thing. The absence of coloration, usually perceived in open-back headphones alone, is quite startling and very difficult to explain.

STAX LAMBDA NOVA BASIC

There has long been a preconception that Japanese hi-fi producers are predominantly massive multinationals, and that the specialist, cottage-industry end of the trade is dominated by Western companies. Anyone in the know will soon disabuse you of that notion, as Japan possesses its own crop of highly-distinguished specialists, many of which are unknown off their home turf.

Here is an exception. Stax is by common consent the premier name in electrostatic headphones world-wide. Their products have long lifetimes, and are universally costly or very costly, which keeps them away from the mainstream. The *Lambda Nova Basic* is no exception.

The Nova makes even the plush Sony feel knobbly. It is quite simply ravishingly comfortable, both in the short and the long term, courtesy of attention to fine detail in the shaping of the large rectangular leatherettecovered-foam ear cushions; and thanks also to the two-part headband, which works much like Sony's except that it adjusts manually. Stax makes a variety of power supplies at different quality levels and prices: the one supplied in this package is a simple solidstate design with an on/off switch and volume control (better quality comes in the Nova Classic package at £795). Say goodbye to your tape loop, all those whose amps have only one: here there is no duplicated line output on Stax's dedicated energiser. The headphone lead, 2.3m long, has a custom plug to fit Stax's energiser unit.

The Lambda body style conceals an outsize electrostatic diaphragm standing a little proud of the ears. It's rotated slightly to the front to encourage a wide image forward of the head. The ploy works, though the Lambda's strong resolving power and lack of coloration are equally responsible. In any case the sound has a bold, physical quality

that's very similar to the result of loudspeaker listening, but with the understated precision and fine detail that are special properties of good electrostatic headphones.

This headphone is quite simply one of the best at any price. It rivals the Sony for resolution and control, but is more evenly balanced, and has a solidity, weight and presence all its own. The effect is electric, making it the only headphone in the test that doesn't sound like a headphone, and almost justifying Stax's claim that the *Lambda* is an 'earspeaker'.

The first movement of Mahler's 9th (Karajan) blazed with ferocity and physical stature that eluded all competitors here, and the almost vanishingly-quiet bars of the finale remained starkly audible against the ambient backdrop without any help from the volume knob. Any headphone doing justice to this masterwork is something special.

HEADPHONE SAFETY

There is a hidden danger in headphones that doesn't exist with loudspeakers. Loudspeakers are placed two meters or more from the listener. Headphone drive units are suspended a few centimetres from the eardrum, which means that their spectral content tends to favour the upper midband and treble, which has no chance to dissipate as it does from a loudspeaker's treble unit. It is these penetrating mid and higher frequencies that can damage the hearing, but it's an insidious process as headphones can scale a vast range of loudnesses with a freedom from compression and distortion that loudspeakers can only dream of.

The result? It's all too easy to end up with volume settings that are much higher than they seem. Full marks to Sennheiser for fitting an indicator to show when the level is too high.

TAKE CARE OF THE FOLLOWING POINTS AND TAKE CARE OF YOUR EARS.

• Start with the volume low, and increase it slowly until the listening level is comfortable.

 Avoid audible distortion, which can inject high frequency harmonics directly into the ear.

The ear quickly acclimatises to new volume settings. Having established an appropriate level, don't increase it unduly. Remember that the lack of visceral bass from most headphones means volume levels often seem lower than they really are.

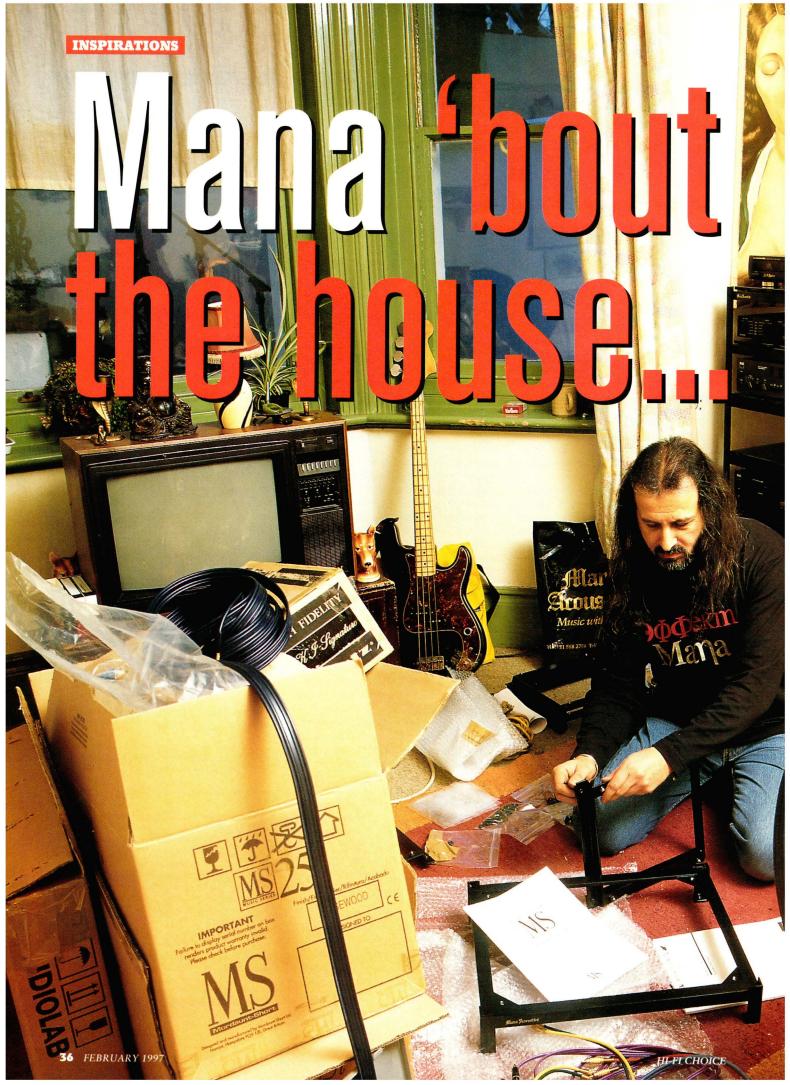

• Never turn up the volume so high that external sounds are completely drowned out.

 Never use headphones when driving a motor vehicle, or when hearing is important to your

Personal safety.
Children also need to be educated about how to

use headphones safely.

Finally, remember that hearing damage is only detectable when it is already too late!

In October '96 we teamed up with Mana Acoustics to offer a mega prize. **Jason Kennedy** joined the Mana men to see the giveaway gear installed.

ome guys have all the luck. One of them is Glenn Hurst, winner of our 'all-the-Mana-support-equipmentyour-floor-can-take-plus-completesystem' competition featured in issue 158 of *Hi-Fi Choice*. It's not the first *Choice* competition Glenn has entered — more like the 25th — so it was about time fate smiled on him. And how!

The prize that Glenn has grabbed consists primarily of enough Mana kit to support his existing hi-fi gear and the system he has won, which itself comprises a Marantz *CD*-63*mkII KI Signature* CD player, an Audiolab 8000S integrated amplifier, Mordaunt-Short *MS25i* speakers, Cable Talk *Professional 2* interconnect and *Talk 3.1 Biwire* speaker cables.

Before Mana and *Hi-Fi Choice* invaded his space, Glenn was listening to Stranglers and Pink Floyd vinyl on a Micro-Seiki *MB-10* turntable, and his Leonard Cohen CDs on an Arcam *Alpha Plus* CD player, with amplification provided by a NAD 7240PE receiver and final transduction undertaken by a pair of Mission 700 speakers. Aiwa and NAD cassette decks play what appear to be the complete works of Philip Glass.

By the time we left, the turntable was on a Mana *Reference* wall shelf, the electronics racked up on a six-tier stand atop three *Soundstages*, and the new speakers were putting the boot in with the aid of two pairs of *Soundbases*. The whole stand and support array, together with the all-important spirit level, would have cost Glenn £2,000, and should be more than equal to any future upgrades he might consider.

This system was demonstrated by Mana in one of their rooms at the Ramada show back in September '96, when it made an impression on all who heard it. Listening to the same equipment in action at Glenn's

Who Are These Men?

The Lone Ranger and Tonto — aka John Watson (kneeling) and Damian McNamara of Mana Acoustics — install the ironwork in Glenn Hurst's living room. The spoils of a bonanza competition lie around them: Mordaunt-Short MS25i loudspeakers on the right, with Cable Talk Talk 3.1 bi-wire on one; and the tools of the support installation trade on the other. The six-tier rack in the corner is ready for action with the new Audiolab 8000S amp and Marantz CD63mkII KI Signature CD player adjoining the pre-existing hi-fi kit.

HI-FI CHOICE

POWER AND PURITY

Audiolab 8000DAC Audiolab 8000CDM Audiolab 8000C Audiolab 8000P Audiolab 8000S Audiolab 8000T

Audiolab 8000Q Audiolab 8000M Audiolab 8000T

Audiolab 8000S

By combining advanced design and innovative engineering we created pure direct coupled circuitry for the Audiolab 8000Q Pre-amplifier. We call it Audiolab Z^{q} TECHNOLOGY. Combine the 8000Q with two or four Audiolab 8000M Monobloc Power Amplifiers and you have a formidable amplification system.

If your requirements are more modest, Audiolab manufactures a range of seven amplifiers beginning with the internationally acclaimed Audiolab 8000A Integrated Amplifier.

For more information and details of your Audiolab dealer call or write.

place it wasn't hard to understand why. I still can't begin to fathom how so much grunt can emanate from such diminutive and essentially inexpensive speakers.

Okay, they had a decent CD player, amplifier and cabling behind them, but nonetheless I'm lucky if I can get that sort of bass out of speakers costing twice as much. Those little *Soundbase* supports are clearly very effective; Mr Editor-in-Chief, I feel a stand review coming on!

As well as being a big music fan Glenn is also a musician, playing bass in a Pink Floyd cover band called Sheep, which he claims, modestly, can perform vintage Floyd more authentically than Messrs Mason, Gilmour, Wright et al. Come January 20th, Sheep will play the complete *Dark Side Of The Moon* set at the Brighton Dome, in a 25th anniversary celebration of the première, which the original Floyd played at the same venue.

As you may have noticed, Glenn's musi-

Above: the prize system fully installed, complete with cat, bass axe, bananas, and some of Glenn's records. Inset: the lucky winner himself.

cal tastes are more eclectic than average. An inherited classical collection sits alongside Brian Eno, Arvo Pärt, Planxty, and contemporary classical composer John Adams not to mention the Stranglers.

Glenn's partner Jo, whose paintings hang in the room, has slightly more popular tastes but it's clear both are avid music fans. This prize is clearly going to be appreciated.

John and Damian, Mana's dynamic duo, spent a couple of hours setting up the system, bolting the turntable bracket to the wall, underpinning the speakers and finetuning the glass platforms. As Glenn had dismantled the existing system before we arrived it wasn't possible to make any comparisons, but both Glenn and Jo's reaction to the new set-up suggested a less-than-subtle change had taken place. Given my limited knowledge of Glenn's original gear I'd say that was an understatement: John and Damian's preferred volume levels made a big change for everyone in the building!

INSPIRATIONS

I called up Glenn a week after the 'invasion' to see how he was getting on with the system. I found he'd been experimenting with connections between the NAD receiver (now serving as a phono stage/tuner) and the Audiolab amp, and had found that the NAD's preamp output was yielding much better results than the tape output we'd started with. Overall he was enjoying 'the Mana effect', with the speakers coming in for particular praise. He was very surprised at how good his record player sounded on the Reference wall shelf; not bad when said platter-spinner cost £3 at a car-boot fair. Possibly the ultimate accolade was Glenn's first complaint from the neighbours, which arrived the evening after we'd been round. A Cure record was on the wheels of steel, presumably to test the set-up to its limit!

We leave Glenn stunned but happy, and offer our thanks to Audiolab, Cable Talk, Marantz and Mordaunt-Short, but above all to John and Damian at Mana for suggesting the competition and making it happen.

FOR LIFE

David Vivian experiences the latest in designer speakers, and debates whether they are a viable alternative to 'real' hi-fi.

mall speakers divide loosely into three types: the purely functional, like-it-or-lump-it box; the transducer that tries to hide by blending seamlessly with its surroundings; and its alter-ego — the full-on style statement.

Your eyes are wondering across the page already. But that's fine because style statements are meant to be talked about and looked at as much as they are listened to. They are to hi-fi what Swatches are to horology, the Ford *Ka* is to the city jamscape and Cameron Diaz is to short skirts. Their dynamics are social as well as sonic, as aspirational as a Psion *Series 3c* pocket computer. They can even sound good. But there's little question you pay extra for aesthetic attitude, and value can suffer as a result.

If extracting maximum sonic performance from minimum outlay is not your chief priority, read on. I had a humble pair of B&W *DM601*s lying around; at £200, they cost the same as the cheapest contender here. Truth to tell, they took the most expensive (the £400 Rogers *dB101*s and the Blue Room *Mini Pods*) to the cleaners and paid for their taxi ride home.

But then the '601s are biggish, black and brick-like. The db101s - styled by freelance car designer Peter Stevens of McLaren F1 fame - look like streamlined classic steel toasters up-ended, and instantly confer on anyone who owns them the native good taste of Terence Conran, David Hockney and Stephen Bayley rolled into one. The Mini Pods, conversely, have oodles of teddy-bear factor. Their bulbous, three-segment shape is open to almost infinite interpretation - nudged towards deeply strange X-Files imaginings by the 'Blue Room' nomenclature - but the truth is you just want to cuddle them. They're more akin to ET than Alien.

Perhaps the neatest design solution of all is provided by the KLH Europe *Soundbites* ensemble, with satellite speakers that look like IKEA spot-lamps, powered by a tiny, dome-shaped 15+15 Watt amplifier over which you can cup your hand like a computer mouse, and an active 45 Watt subwoofer slim enough to slide into those nooks and crannies denied more con-

Soundbites£59.90/£129	.90/£85.90

ventionally bulky bass boxes. The deal with the *Soundbites* is pure mid-'90s lifestyle. Hook them up to your multi-media PC for added grunt and zap, or plug them into a personal CD for an instant hi-fi system. There are no rules. Do what you like.

The literally-named Jamo Deco Art is a rectangular and shallow affair, like a bulky picture frame. And that's pretty much the desired illusion. You can hang them on your walls, prop them up on a sideboard or even on the floor by means of a little bent metal stand that folds out from the back. The 'art' bit refers to the baffle cover which comes in a variety of colours and styles: neutral to match your room's décor, or flamboyant to clash with it. Ours combined a black enclosure with a riot of abstract swirling colour (predominantly reds and yellows).

More lurid still was the pale green and white finish of the Rock Solid *Classic Monitors* — one of six colour options that can be supplied. The Solids' inclusion here requires no justification. In many ways it was the original affordable, all-purpose designer speaker; in its first year on the market (1990) it became the fastest growing new speaker brand in the USA. Apart from its innate cuteness, the Solid is small, versatile, tough, weather-proof and can soak up oodles of power.

To give all the speakers a fighting chance, they were hooked up to a Pioneer *PD-S904* CD player and Pioneer *A-300R Precision* amp, via Audioquest cables and interconnects. Stands weren't used since most of the products come with their own, and these are essentially non-audiophile products. A deep window-ledge seems much more fitting. We listened to all types of music but concentrated on classic Oscar Peterson from the early '70s, funky saxophonist George Howard's latest outing on GRP and the brilliant Steve Lipson remix of Sting's *I Was Brought To My Senses*.

BLUE ROOM MINI PODS

These are touchy-feely speakers. Not only do their Glass Reinforced Plastic (GRP) cabinets look extraordinary, they feel wonderful: glossy and cool. Their resemblance to some other-worldly lifeform is further enhanced by an obvious backbone that runs in a gentle curve from top to bottom. Face-on, the three bulging segments each have their own orifice: 25mm aluminium dome tweeter at the top, Kevlar mid/bass driver in the middle, reflex port at the bottom. The scientific reason for them looking like this is all to do with the elimination of cabinet coloration and the reduction of high-frequency diffraction. The real reason is that aliens have crash-landed and they look exactly like this. Then there are the creature's 'legs' - three aluminium spikes screwed into the base of each cabinet. Blue is the obvious colour, but they also come in red, yellow and white.

The *Pods* sound more obviously 'hi-fi' than the other speakers in the group, and this isn't meant pejoratively. They have the

cleanest, most extended treble, an open and articulate mid-range and a consistency of performance that puts the Rogers *db101s* to shame. It could simply be, of course, that the *db 101s* are altogether less forgiving of indifferent recordings.

Perhaps 'refined' is the best way to describe the *Pods*. Tonally faithful, careful not to offend, just so. In some ways, this works to their advantage. Oscar's dazzling keyboard runs positively sparkled through these speakers, and the other members of his band seemed more believably placed around him. This doesn't mean the *Pods* are polite or laid back, just open, controlled and even-handed.

Where they come unstuck is in that bass. Be it the double bass of the Peterson trio, the heavy-funk electric bass of Howard's band or the subterranean synth bass on the Sting production, the blue ones struggle. It isn't that they can't pump it out, just that they squash it so the bass sounds forced and congested; low frequencies take on a peculiar tubby character that draws attention to itself, never more so than when the second George Howard track gets the reflex port audibly huffing and chuffing.

This is a shame because the rest of the audio spectrum is handled with great openness and subtlety. Still, none of these speakers are close to being perfect and the bits the *Mini Pods* do get right are really very impressive. If you like your bass taut, tuneful and fast you'll be better off with the *db101s*. If mid and treble accuracy are your thing, though, the *Mini Pods* suddenly look like a more compelling proposition.

You walk in to the Hi-Fi shop. Across a crowded showroom, a Hi-Fi system catches your eye, then seduces your ear. Infatuated, you pay your money.

On the other hand, once the ear is wooed by the sumptuous sound quality unique to Arcam, a life-long love affair usually ensues.

Unfortunately, you also take your chances.

Year after year, our dedication to sonic excellence is rewarded with top industry awards and, believe us, luck has nothing to do with it.

All of our Hi-Fi is produced at our Cambridge HQ, where it must pass the most rigorous set of tests, checks and double checks. Then, just when another quality Arcam product thinks it's safe to go into the loving arms of a new customer, we check it again.

We work hard to produce Hi-Fi separates of the highest quality, keeping construction simple and building in long service and reliability at every stage of production. So, if you're about to invest in Hi-Fi, invest in an Arcam. After all, we don't leave anything to chance.

Should you?

ROCK SOLID CLASSIC MONITOR

Familiarity hasn't dimmed the Solids' visual clout. Bright colours help, of course, but the rounded ends, symmetry and dinky, three-toed uni-ball stand still cut the mustard — even though the *db101*s look far sexier and the *Mini Pods* even cuter. But then they are twice as expensive. 'Plasticky' is a word that might have been invented for the Solids — it's what both the diminutive vented enclosures and drive units are made from. Some even say they sound 'plasticky' but there's no denying that with 160 Watts peak power handling and 91dB sensitivity, they can go remarkably loud for their size.

In a good system, they're explicit little speakers with a distinctively dry balance, but musical and rhythmically coherent nonetheless. Imaging is not a strong point. The sound is by no means box-bound, but the images are small-scale and the soundstage never develops much width or depth. So, like the Jamos, not ultimately a triumph of hi-fi, but the way they successfully captured the infectious joy of Oscar's playing was very appealing. They can swing, and what bass that exists is tuneful and easy to follow. Technically, the upper-mid-range has a tendency to glare and made Oscar's piano sound a bit clanky on forcefully played passages. The treble can sound a little coarse, too.

With Sting, the Solids sounded immediate, imperturbable and exciting. Ultimate realism is compromised by a mild cardboardy coloration, but musically they hang together remarkably well. Sting's voice was more powerful than with the *db101s* but a bit closed in, without as much ambient detail or 'atmosphere'.

George Howard's slick but soulful jazzfunk suited the Solids, which again proved surprisingly full-bodied and convincing with this track. They had the knack of cutting straight to the core of the music, which survives largely intact despite the rather closedin imaging and occasionally restricted colorations. The point is, they boogie well enough for you not to worry unduly about the hi-fi shortcomings.

On the second Howard piece, these boxes displayed amazing punch for their size, yet didn't exaggerate the material. They sounded bouncy, funky and fun — just as the track dictated. Also appreciated was an excellent sense of flow and integration with fine timing. They lapped it up.

There was no great hurry to switch from these *Classic Monitors* to the next pair of speakers, which was a good sign. For their numerous shortcomings, these are essentially honest, musical speakers.

📢 JAMO DECO ART

Make sure your walls are up to it if you're tempted to hang these Jamos. Their bass reflex enclosures, a mere 90mm deep, are made out of metal and each weighs 4.8kg. There are two drive units: a 130mm woofer and 25mm dome tweeter. They'll handle a continuous 60 Watts but need an amp with most of that to generate decent sound levels because sensitivity is low at 88dB.

Peterson's acoustic trio probably contributed to the Jamos' easy-going, unforced sound. They're slightly dark tonally, not as bright and breezy as the best in the group, but very well integrated and coherent in and around the mid-range. Some softness at the frequency extremes is obvious but the presentation hangs together so well it doesn't seem to matter.

The Jamos confidently project music into the room, but depth and dynamics are both compressed. They won't appeal immediately to those after an overtly 'hi-fi' presentation. Others might find their slightly cosy style of music-making naturally inviting. Bass is full with reasonable shape, but limited extension. Oscar's piano had plenty of attack but didn't sound at all weedy — the lower octaves had a rich, woody resonance. Rhythmically, though, these speakers tended to gloss over the subtler stuff.

With the slow but majestically powerful Sting track, the Jamos painted a bigger picture than the other speakers, again with a likeable naturalness and impressive weight but not much air. It was as if Sting was singing in a vacuum, his voice slightly thickened and constricted.

George Howard's sax sounded warm yet crisp, although the heavy bass line carried a slight bloom. Good mid-range presence was partially compromised by a mildly leaden quality which tended to suck out some emotion. But they packed a wallop with the funky track and you could never accuse these speakers of sounding thin. At least they have a good stab at trying to capture the scale of a big recording.

The Jamos can plod sometimes, but are remarkably consistent with most types of music and, sonically at least, hard to dislike.

	JAMO DECO ART - VERDICT

	Warm, inviting, weighty; available in plain finishes. Too heavy, screen print may be an acquired taste. Jamo UK Ltd, Jamo House, 5 Faraday Close, Drayton Fields, Daventry, Northants NN11 5RD. (01327) 301300

ROGERS DB 101

No question about it, the db101s look gorgeous. If you don't want to be considered a sci-fi wacko they're a far more compelling choice than the Mini Pods - no offence to X-Files fans intended. The precise effect you create depends on your choice of finish, and there are lots to choose from. Ours had lacquered aluminium cheeks finished in a weave-pattern. A swept back cranium with a floating tweeter set into it like a miner's helmet lamp, and exposed 110mm aerogel bass driver, are other defining design elements. Easier to resist are the nasty springclip connectors at the back. Apparently an audiophile version of the *db101* is on the way with two sets of binding posts for biwiring and completely different voicing. Yeah, but £400 speakers don't have spring clips.

Besides, these *db101s* have a serious audiophile reputation to uphold and, from the opening bars of Oscar's inspired ivory tickling, it's obvious Rogers hasn't taken too many liberties. While not as smooth as the *Mini Pods*, as warm as the Jamos nor as immediately catchy as the Solids, with an acoustic jazz trio at least they sound more poised and glamorous than any of them. In the best Rogers tradition they play tunes well with drive, dynamics and pace. Despite a very slight lower-mid range honk, they actually sound

ON TEST: DESIGNER SPEAKERS

jazzy, an impression helped along by their good bass weight, speed and tonality.

Sting wasn't handled so sympathetically. His voice sounded both nasal and shouty with little sense of flow. Everything seemed taut to the point of tenseness, as if the amp was being overdriven. The effect was too forceful for comfort and not especially enjoyable.

With the dynamic and immaculatelyrecorded George Howard tracks, though, the *db101s* showed what they were really capable of, and comfortably trashed the opposition. Howard's soprano sax was lucid and lyrical with superbly-resolved sounds and ambience. Bass wasn't just strong, but smooth and surprisingly extended. And here the forward balance and determination to dig up bags of subtle detail worked to great effect. Now the db101s came over more like the expensive speakers they are.

Given all of this, we were expecting great things with the second, harder-hitting Howard track, but the *db101s* decided to throttle back. Sax was nicely rendered again and ambience well portrayed, but the anticipated punch didn't materialise. Deep bass and percussion carried less weight than with the Solids or the Jamos. Not that this killed the enjoyment of the track, just that the *db101s* seemed a little too laid-back and even-handed for their own good. And strangely so given their earlier exuberance. The *db101s* gave the least consistent results of the group. With well-recorded material, they (nearly) always sound great, but fed a more assorted commercial diet their mood tends to swing like that of a manic depressive.

	ROGERS db101 - VERDICT

KLH EUROPE SOUNDBITES

There's nothing new about speaker systems that combine an active sub-woofer with putanywhere satellite speakers, but *Soundbites* have honed and simplified the concept to the point where it's being sold as the solution to any number of domestic audio problems. We settled for a couple of *Soundbites* (full-range drivers magnetically shielded with low 86dB sensitivity in spotlight-style cups with a neat swivel base for desktop, wall or ceiling mounting), a *Powerbite* amp and a *Bassbite* subwoofer.

You connect your source to the *Bassbite*, which feeds the *Powerbite* mini amp, which in turn hooks up to the *Soundbite* cables via spring clips located on the amp's belly. This has two controls: the dome top swivels on its base for 'on' and volume, and a little thumbwheel on the side controls the bass and treble. The *Bassbite* has its own 45 Watt amp and a volume control that increases the thump, but not the frequency at which it cuts in, which is set at 180Hz. The claimed bottom-end cut-off-point is 50Hz.

Simple it is. And nicely unobtrusive, even if you order your *Soundbites* in one of the more exotic finishes. Ours came in an albino carbon-fibre effect but you can have pseudowalnut plastic if you want a less hi-tech feel.

Regrettably, it all looks better than it sounds. Even fed from the Pioneer combo the results were dull, flat and lifeless. True, the subwoofer provided a solid foundation and, used with some of the other speakers in the test, enhanced bass weight and extension. It worked particularly well with the Solids, adding not only lower-register benefits but an extraordinary three-dimensionality to 'the soundstage as well. Costing from £129.90, this contender makes a reasonable sub-bass addition to any system, but it can't save the sub-fi efforts of the little *Soundbites* and *Powerbite* amp.

Why labour the point with a blow-byblow account of how Oscar, George and Sting fared? Soundbites are a fab design solution, but sonically they do not compare with hi-fi as she is traditionally perceived.

OVERALL VERDICT

t would be great to say that the only thing you stand to lose by investing in designer speakers is your friends' perception of you as a hi-fi buff. Sadly, this isn't the case. Buy the **KLH Europe Soundbites** as your sole means of listening to music and you'll go off the whole idea of hi-fi, period. Lovely idea, lamentable sound, even at the price.

The Jamo Deco Arts sound better than all right but, to my eyes at least, look just too European for British tastes. Maybe they're better in white. Still, why fret about that when there are speakers like the **Blue Room Mini Pods** around? It's hard to know exactly what sort of wallpaper goes with these, but then Pods will be bought by people who stopped caring about wallpaper a long time ago. They'll still be interested in quality sound reproduction, though, because, bass notwith-

standing, the *Pods* are delightfully open, informative and enjoyable. In the end, though, we'd make our selection from the **Rock Solid**

Classic Monitors and the **Rogers** *db101s*. If looks really matter, the *db101s* are must-have items. This side of hard-carved Italian exotica, they're the sexiest small speakers on the planet and, even at £399, they can be considered fair value. Sonically, they offer plenty of bangs for your buck, too, though the forthcoming audiophile versions should provide more consistent performance.

The real star has to be the **Solids**. They may not have the sensual appeal of the *db101s* or the sonic finesse of the *Mini Pods* but they remain remarkably honest, musical and coherent little speakers that can do virtually anything you ask. As designer speakers go, they're a steal.

2nd Prize DC MS6 Three-CD Micro System **3rd Prize** MCD Z96 Remote Control CD Radio Cassette £200 **Runners'-Up Prizes** Three CDP 550 CD Personals £150 each

LIGHTYEAR

COMPETITION

WIN A PRO-LOGIC TV, NICAM VCR, MICRO SYSTEM OR CD PORTABLE!

anyo has built an enviable reputation for topquality home entertainment equipment in today's fast-moving market. Whether it's Pro-Logic TVs, VCRs, CD-toting systems or portable audio, Sanyo has it covered. And now you can be part of the Sanyo story, in this super-generous giveaway competition. It couldn't be simpler – just follow the instructions in the box opposite and send in your entry today!

THE FIRST PRIZE PACKAGE

Sanyo's 28 XP1 Pro-Logic TV, worth £750, has a 40W (RMS) sound system and a Black Matrix FST picture tube. Viewers benefit from 28Watts of power supplied to front and centre speakers, and 12Watts to the rear, plus the low-end ministrations of a 'BassXpander'. Other features include twin Scart connectors, auto set-up and Fastext with ten-page memory.

To complement this big screen there's the bonus of Sanyo's VHR 796E, worth £350, which offers Nicam stereo TV sound, four long-life pick-up heads, NTSC playback, VideoPlus programming with Programme Delivery Control (PDC), auto set-up, and a satellite channel recording control. There are phono outputs so you can hook up to your hi-fi, plus twin Scarts and front AV connector for camcorders.

The VHR 796E's key feature is 'QuickReview', which enables fast scanning at up to nine times normal speed, or picture pause, while audio playback continues.

THE SECOND PRIZE

Sanyo's DG MS6 packs a lot of features and power into

its 260mm-high casework. Its principal feature is a three-CD autochanger, with a 24-track programmable memory. Complementing this is a logic-controlled, auto-reverse cassette deck, which offers the novel facility of dubbing CDs at twice normal speed. There's power output of 20Watts per channel, feeding two-way speakers via a four-preset EQ system and BassXpander. Last but not least there's a clock timer, 40-preset three-band tuner and full remote control.

THE THIRD PRIZE

Sanyo's *MCD Z96* blends the features of fixed systems with the convenience of portability. Within its sculpted bodywork lurk a programmable draw-loading CD player, twin auto-reverse tape decks, 20-preset two-band tuner, three-mode BassXpander and clock timer. Best of all, it has an infra-red remote control!

RUNNERS'-UP PRIZES

To those who send the last three correct postcards drawn from the hat, we will award a Sanyo *CDP* 550 personal CD player worth £150. This unit was deemed a Best Buy when reviewed in the July/August 1996 edition of *Hi-Fi Choice*, thanks largely to its superb sound, tensecond anti-shock buffer, 22-track programmable memory, rechargeable batteries and wired remote control.

MINIDISC SYSTEM AND PORTABL

harp Electronics has teamed up with *Hi-Fi Choice* to offer a complete 'home and away' MiniDisc outfit, offering advanced recording, editing and playback facilities) Sharp's snazzy mini system, the *MD-X8*,

Sharp's snazzy mini system, the *MD-X*3, includes a fully-specified MD recorder that will play back prerecorded discs or make its own recordings. The *MD-X3*'s CD autochanger even allows you to record selections from three discs at once. The remote-controlled *MD-X3* backs its MD abilities with a full-featured tape deck and radio tuner.

> SHARP MD-S50E PORTABLE MINIDISC PLAYER WORTH £300

MINI SYSTEM WORTH £700

layer must be wonk

Once you've committed your favourite songs to disc, you can head out for the hills with Sharp's new MD-S50# MD player, which is currently the smallest and lightest (150g) MD unit in the world, it has an in-lead remote control with LCD read-out for easy operation, plus a three-stage bass-boost circuit, up to ten seconds of shock-proof (buffer' nemory, and a maximum battery life of 4.5 hours, DON'T MISS THIS MONTH'S SUPPLEMENT. THE ULTIMATE GUIDE TO MINIOSE, PUBLISHED IN ASSOCIATION WITH SHARP!

HOW TO ENTER

Answer the question below by circling the correct answer, then fill in your name, address and day-time telephone number in the spaces given below. Please remember to tell us whether you are over 18 years of age.

Post this entry form to: Hi Ei Choice Competition ((

Hi-Fi Choice Competition (CHFC702B) Bradley Pavilions, Bradley Stoke North, Bristol BS12 OBQ *All entries must arrive by first post, Friday 21st February 1997.*

THE QUESTION

Which of the following statements about Sharp's MD-S50E MiniDisc player is true?

- a) It weighs only 150 grams.
- b) It was carried by the hero in one of Terry Pratchett's *Discworld* books.
 c) It is powered by plutonium batteries.
- d) It is a cult item among Mini Cooper drivers.

COMPETITION RULES

- The Closing Date for this competition is Friday 21st February 1997.
- Winners of the Sharp Competition will be judged from all correct entries submitted, and drawn
 at random after the Closing Date.
- All winners will be notified by post.
- The Editor's decision is final and no correspondence will be entered into.
- The Sharp Competition is not open to employees of Dennis Publishing Ltd., Sharp Electronics
- (U.K.) Ltd., nor their suppliers, agents or associates.
 - We regret this competition is open to UK residents only
 No cash alternative will be offered.
 - No cash alternative will be offered.
 By entering the competition all entrants agree to be bound by the rules.
 - By entering the compension an entrants agree to be bound by the rules.
 For a list of winners of the Sharp Competition, write, enclosing a stamped, addressed enve-
 - lope, to: Hi-Fi Choice Winners, Dept 163/2, 19 Bolsover Street, LONDON W1P 7HJ. • All entries must be on this official entry coupon. If you do not wish to cut your magazine, you

may send a photocopy of the page instead. Please note: only one entry form per household. CHFC 702B

Paul Miller compares 20 CD players from the budget sector to true high end, in hope of answering that eternal question: how much for great sound?

his is the big one. The test that pitches the digital plankton against the basking sharks of the CD realm. Will the £1,000+ behemoths devour our favourite budget players with merely a burp by way of recognition? Or will the £150-£200 shrimps give our high-end champions more than a mild stomach-ache? After all, many of the players in our sub-£400 category use precisely the same digital technology as the more costly models to be found in our £400-£1,000 and

£1,000+ camps. Comparing players by features alone is meaningless. Regardless of price, you should expect full remote control, direct track access, plus various programming and repeat modes. The vast majority of players will also provide intro-scan, peak search, CD/tape editing options, random play, and perhaps even index search, up/down fade and auto-cueing facilities.

Digital outputs will facilitate future upgrades while the option of both fixed and variable analogue outputs allow the player to be connected directly to a power amplifier instead of an intermediate preamp or all-in-one integrated amp. This cuts down on the superfluous boxes and unnecessary circuitry which, in many instances, simply get in the way of the music. If a player is equipped with a digital volume control, however, do check it has not defaulted to maximum output before loading a CD.

Paying more for a CD player should reward you with enhanced build and component qual-

1000 FADO-20	

ity, although it's unlikely to speed up track access or improve the handling of grubby discs dramatically. As I've already mentioned, most players use very similar combinations of digital circuitry and much the same is true of the CD mechanisms themselves. Philips' transports are widely used (Audiolab, Cambridge, Meridian, Naim, Rotel etc) as are mechanisms from Sony (Myryad, Sony and Arcam). Proprietary mechanisms range from Pioneer's 'Stable Platter' design to the very esoteric VRDS (Vibration-free Rigid Disc-clamping System) from Teac.

Copland

Roksan Attessa DP3P, p.83

Rotel RCD-970BX, p.85

> Sherwood CD1, p.87

So why pay more than a few hundred pounds? Because it is not just the basic digital ingredients; their *implementation* holds the key to the final sound quality realised by the player. Even the highest-quality ICs, power supplies and analogue stages will deliver substandard sound if misused. By contrast, models like Audio Research's *CD1* show us that

HI-FI CHOICE

THE LISTENING DAYS

Quad 77, p.81

Each CD player was auditioned over a period of two days under strict, blind conditions at a precisely-matched listening level. This way the excessive 3.4V output of the Cambridge *CD4SE* could not secure it any advantage over the lower 2V of Kenwood's *DP*-7090 and Naim's *CD2*, or the unusually low 1.4V of Roksan's *Attessa DP3P*.

This represents a maximum variation of 7.7dB between the 'loudest' and 'quietest' players in this broad survey, which would make a mockery of the test if it were not for the precise, electrical level-matching techniques employed on this occasion. The use of level-matched listening tests remain unique to *Hi-Fi Choice* group reviews.

Each player was left spinning on 'all repeat' for at least 48 hours to ensure every contender was fully 'cooked' prior to listening. The CDs listed below were auditioned and panelists' comments entered directly into a computer. Sound, value and swing-tag ratings were all awarded prior to the CD players' identities being revealed.

The partnering system included DPA 100S pre and power amps with Audio Note AN-E (main) and REL Stentor (sub) loudspeakers. My thanks to John Bamford (Pioneer), Roger Batchelor (Denon), Mark Hockey (Trio/Kenwood), Mike Martindell (Arcam), and Alan Sircom (Hi-Fi Choice) — this month's blind but golden-eared panelists.

WHAT MUSIC DID WE USE? Rebecca Pldgeon: Friday Night Crowd from A New York Girl's Club on Chesky. Rachmaninov: Symphony No. 3/Symphonic Dances — David Zinman/Baltimore Symphony Orchestra on Telarc. Nusrat Fateh Ali Khan: The Face Of Love duet with Eddie Vedder from Dead Man Walking Original Soundtrack on Columbia.

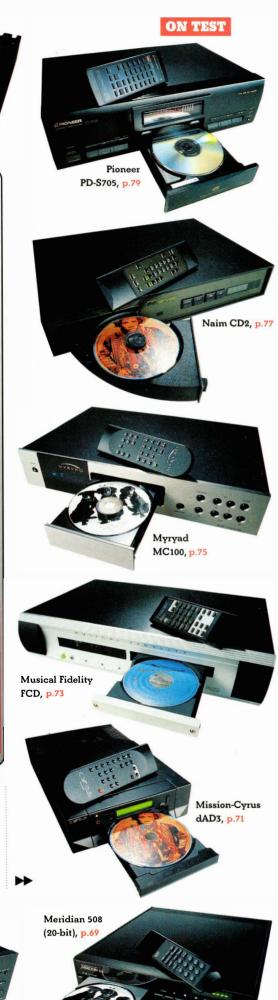

Julian "Cannonball" Adderley: Autumn Leaves from Something Else on Blue Note.

even the humblest of digital components can be made to sing if engineered by masters.

Make no mistake: it's the sympathetic application of science and not nefarious mumbo-jumbo that ultimately distinguish the performance of one CD player from another. The precise degree of sympathy will be revealed over the next 20 pages.

Kenwood DP-7090, p.67

ON TEST

Arcam Alpha 7

or its latest series of Alpha CD players, Arcam is taking the added value route deployed to such good effect by Micromega for example. Upgradability is the issue here since, like Micromega's Stage series, the Alpha 7, 8 and forthcoming 9 all feature interchangeable MALLING SI motherboards to avoid the built-in obsolescence that befalls the 'average' CD player. So, if your bank balance will only stretch as far as the £319.90 Alpha 7 for the time being, at least the option to upgrade to an 8 or 9 remains well and truly open in the future.

Although only the 7 and 8 are available at present, all three models will share the same dark grey and thoroughly curvy livery that, at long last, marks a welcome break from Arcam's customary conservatism. Incidentally, the little gold 'Alpha' badge can be replaced at the time of an upgrade to reflect new-found status.

A good range of features are provided, including an attractive yellow/green fluorescent display which can be switched off when not required. Arcam uses the same handset

across the range and though the volume and mute facilities will not operate with the Alpha 7, the direct track access, intro scan and shuffle (random) play modes are enabled and join the skip/search, repeat and program play options provided on the player itself. Incidentally, the function buttons look and feel just like a row of M&Ms!

Sound quality

Described as a "dynamic and confident performer", Arcam's latest baby is also significantly more refined than the earlier Alpha One, upon which parts of it at least are based. Rachmaninov's *3rd Symphony* opened up into a very coherent and composed performance, the sound of strings, brass and woodwind appearing very active without ever sounding aggressive or, indeed, hyper-active. The *Alpha 7* does not run away with itself, even though it can keep pace with the most quicksilver recordings. As separate auditioning with a mass-market amplifier proved less agreeable, however (see lab report).

Back in our test system, the muted trumpet from Cannonball Adderley's Autumn

Leaves sounded especially solid and convincing on this occasion, standing proud from the pitterpatter of percussion even if, as one listener put it, "this also reflects the slight loss of body and richness that is a characteristic of the

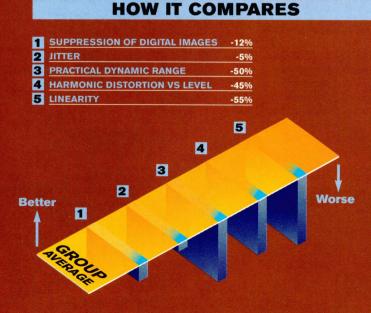

player". Much the same was heard, and felt, with Rebecca Pidgeon's

Friday Night Crowd, her voice sounding particularly clear, clean and articulate but still lacking a hint of the warmth and vibrancy we know to be possible. A great and thoroughly involving performance, nonetheless.

Conclusion

Rather like Audio Research's *CD1*, Arcam's *Alpha* 7 is another player that succeeds almost despite itself. Nevertheless, unlike the *CD1*, the *Alpha* 7 will demonstrate a degree of unpredictability in its performance with different amplifiers and, to some degree, loudspeakers (see lab report).

In our test system, which is fundamentally insensitive to the 7's pattern of noise, it fared astonishingly well, rewarding us with considerably more detail than that typically offered by a budget player, aided and abetted by a slick and free sense of dynamics. But as I cannot guarantee this will always be the case, Arcam will have to settle for Recommendation rather than the Best Buy it might otherwise have entertained.

THE LAB REPORT

This player was the subject of my *Oasis* column back in issue 159 where its ultrasonic requantisation noise was used to explain the player's unpredictable performance with different amplifiers. This inaudible noise is linked to the DAC (Burr-Brown's PCM1710) whose on-board eight-times oversampling filter and fourth-order noise-shaper truncates incoming data from 16- to approximately 2.3-bits which, latterly, is handled by a five-level PWM output stage.

This 'bit chopping' causes a quantisation error that manifests as the noise in question and, though it lies outside of the audioband, is sufficiently high (-43dBV from 24.1kHz-100kHz) to cause audible IM distortion from some amplifiers. So if the *Alpha 7* sounds gritty, hard, harsh or otherwise uncomfortable in your system then this will be the likely cause.

This one technical foible is of potentially greater significance than, say, its widely varying harmonic distortion (0.004-0.6% at -30dB), poor 91dB S/N ratio and spurious idle pattern tones that wander between 712Hz to 1.3kHz, depending on signal conditions. The *Alpha 7* could sound great or grotty, so a home demo is vital.

CD PLAYERS

Arcam Alpha 8

f this Alpha 8 CD player bears an uncanny resemblance to the cheaper Alpha 7 (see previous page) and, when it's eventually launched, the Alpha 9, then that's because all three players share the same CDM14 transport mechanism, chassis, contoured plastic facia, yellow/green display and complement of function buttons. Inside, the motherboard is interchangeable to allow an owner of an Alpha 7 to experience the joys of an Alpha 8, and so on.

Technically, the *Alpha* 8 is a very different kettle of chips, substantially removed from the *Alpha* 7 and only loosely based upon its predecessor, the *Alpha* 6 (see HFC issue 155). In this instance, Arcam has retained the NPC SM5864 bitstream DAC used in the *Alpha* 6 but has married it to the superior SM5843 eight-times oversampling filter. A new discrete oscillator is used with its own regulated power supply which, together with screening around the board and a partitioned ground plane, all help

reduce sources of interference and digital jitter.

On the features-front, we're left with precisely the same complement of track access, search, random, repeat and program play modes seen on the '7. Round the back, however, the '8 is fitted with a parallel pair of line-level outputs in addition to its coaxial digital output. Once again, none of these is influenced by the 'mute' or 'volume' buttons on Arcam's remote control.

Sound quality

With extra cash to spend on the design of a CD player, there is always the temptation to over-engineer the product, resulting in an 'over-refinement' of its performance. It's a tricky line to tread, particularly when like Arcam, you have a succession of ostensibly similar-looking players on your books. In the event, the *Alpha 8* is not merely an *Alpha 7* drained of its life and exuberance. Sure enough, our panel did liken its very neutral and sober sound to the likes of Myryad's *MC-100*, rather than the more casual dynamics of the *Alpha 7*.

And yet there are parallels. There was

also a slight loss to the richness and

body of Rachmaninov's 3rd Symphony, which remained both intricately detailed and beautifully composed but just a little cautious in scale. limiting the freedom and fresh expression of strings, for example. In similar fashion, Cannonball's sax sounded perfectly civil on occasions where the Alpha 7 might have let slip the odd, but perfectly realistic, brassy

rasp. The *Alpha* 8's rendition was deeper, darker and more intriguing, peeling away layers of detail that might have been lost through the distraction of a more exuberant performance. Despite appearances then, the *Alpha* 7 and 8 sound very different.

Conclusion

COMMENDED

Both our blind listening tests and my lab exercise have left the *Alpha* 8 with a cleaner bill of health than the older *Alpha* 6, which sounded rather less even-handed. The new *Alpha* 8 is even slightly cheaper at £519.90, while its reduced output of ultrasonic noise makes it more compatible than the budget *Alpha* 7.

Whether the less 'colourful' but more mature disposition of the '8 is a worthwhile upgrade, is very much a matter of personal taste. Quite where the soon-to-be-launched *Alpha 9* will take us is anyone's guess, but the team at *Hi-Fi Choice* is certainly excited at the prospect.

Þ

THE LAB REPORT

In virtually every respect, the technical performance of this *Alpha 8* is superior to the *Alpha 6* (issue 155) with jitter being reduced from 993psec to 228psec, distortion from 1.8 per cent to one per cent at -60dB (still too high) and errors in low-level linearity improved by an astonishing 97 per cent to just +/-0.4dB over a full 100dB dynamic range. Talking of which, though the *Alpha 8*'s S/N ratio has lifted from the 6's 89dB to some 95dB, this figure is still compromised by a spurious idle pattern tone that drifts from 865Hz-1253Hz (-97dB re. peak output). The 'real' A-weighted S/N is probably around 102dB.

As we saw on page 52, Arcam's *Alpha 7* also suffers from a similar idle pattern even though it employs an entirely different PCM1710 converter. Otherwise, the *Alpha 8*'s improved handling of ultrasonic noise (from the SM5864's noise-shapers) makes it slightly more amplifier-friendly than the Alpha 7, but do remember to take into account its high 2.6V output level if the '8 is not to sound 'louder' and, by inference, 'better' during quick A/B demonstrations at a dealer.

ON TEST

Audiolab 8000 CD

f points were awarded for technical excellence, Audiolab (the least-likely brand to make a song and dance about its achievements) would settle very near the top of the pile. The 8000CD is a perfect example of, well, the perfectionist approach that Audiolab brings to its engineering, of both digital and analogue audio. Now this doesn't

always mean the end result will satisfy the musical demands of every listener out there in couchland, but it does reflect very positively indeed on the standards of build, of consistency and long-term reliability, of the product at hand.

So let's peel the layers away from Audiolab's first fully integrated CD player. The solid alloy slab that is the 8000CD's facia is clearly taken from the existing 8000CDM transport, as are the standard controls and, for that matter, the remote handset with its direct track access, index skip, repeat and rather convoluted programplay options. The up/down volume and mute facilities are disabled here, incidentally.

For reasons of performance and expediency, Audiolab has retained Philips' CDM12.4 CD mechanism, which is care-

fully screened

alongside all the associated servo, decoding and signal processing ICs to prevent the egress of RF interference from compromising the sensitive DAC and analogue stages. Audiolab has employed a back-lit LC display, rather than a 'noisy' fluorescent panel, for much the same reason.

And the DAC? Well, this is Crystal's new CS4329, a bitstream converter with 128 times oversampling and fourth-order noise-shaping, with a differential output to squeeze one extra three to four dB of extra dynamic range. It's the next-generation on from the CS4328 still used by the Roksan and Quad players in this test.

Sound quality

In the words of one disingenuous listener, Audiolab's 8000CD is "not so much laid back as laid out". A reference, I was led to believe, to its highly neutral but overly smooth and somewhat fettered sound that mopped the typically fevered brow of Nusrat Fateh Ali Khan to produce an atypically restrained and undramatic performance. Instead of bursting onto the musical scene, the introduction to this track merely 'arrived', it was suggested.

Heaven forbid that the 8000CD should stumble over any musical challenge.

Instead, it's difficult to avoid the sensation of

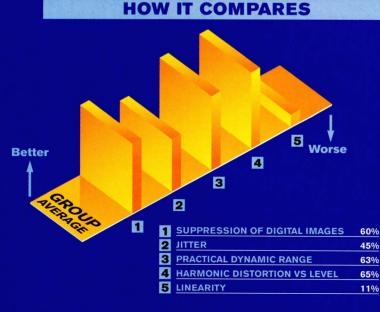

'sedate confidence', a mature balance that's ideally placed for listening at 3am with a large bourbon (the whisky, not the biscuit). There's no excess bass to prove troublesome nor an aggressive treble to bring on fatigue, while the midband sounds moody and sweet — as such, the 8000CD seems

more favourably disposed to some styles of music than others.

More often than not, it manages to sound atmospheric without being terribly expressive, possibly a result of the far treble being a little defocused. So Rachmaninov's *3rd Symphony* might have accented the midband warmth of the player, elevating the violas and woodwind very nicely indeed, but the 'cellos and all below sounded a little soggy, tugging at the heels of the performance as a whole.

Conclusion

The fact that Audiolab has achieved such a consistent performance with digital players employing diverse technologies, suggests a common link in the 'sound' of its Signetics-based analogue stages. This sound, in common with earlier reviews, prompted the suggestion that the 8000CD was "developed according to the Green Cross Code of digital audio". It's an elegantly constructed player that proffers an equally elegant but very safe and undemanding view of its music. It will never offend but neither is it likely to inspire a climactic musical experience.

THE LAB REPORT

Crystal may claim a 20-bit resolution for its new CS4329 converter, though Audiolab, in common with Meridian which also uses the CS4329 in its *508* player, only succeeds in achieving a 104dB S/N ratio once the dubious 'digital kill' circuit is disabled. Nevertheless, with a noise modulation of + 6dB, the practical dynamic range available to the *8000CD* still exceeds the 16-bit code stamped onto every conventional music CD. Errors in low-level resolution amount to just -0.6dB over 100dB.

I must report a slight mistracking problem with CD-R discs that were ably handled by every other player in this test, causing the *8000CD* to report an 'error' before re-searching and locating the appropriate track. Otherwise, the *8000CD* has a clean bill of health from its low 260psec of (admittedly) high-rate jitter patterns to the low 0.0018-0.02 per cent distortion at the important -30dB level — far better than that achieved by Meridian's *508*. The response shows Audiolab's (essentially inaudible) but characteristic -0.5dB drop at 20kHz while the solid 108 Ohm output impedance and accurate 2V peak level remain true to the digital textbook.

CD PLAYERS

ew but the daffiest hi-fi enthusiasts appreciate that an element, at least, of so-called 'high end audio' is pure hokum. After all, in years of strict, blind listening tests conducted for *Hi-Fi Choice*, the players that emerge as real humdingers, the players that truly set new standards are typically budget models. Sony's £250 *CDP-715E*, for example, has remained something of a reference point from as far back as issue 137. And what about the new *CD4 SE* from Cambridge? It's another utterly incredible player that costs but a fraction of the high-end imports.

Then we heard Audio Research's *CD1*. This CD player costs an arm and a leg. Well, \pounds 3,290 to be precise. Its styling is very typical of the breed, with a functional alloy facia (complete with grab-handles), bold fluorescent display and a long row of function buttons catering for skip, search, intro scan, repeat and random play. Direct track access and program play modes come courtesy of its remote control.

Round the back is a profusion of AES/EBU, AT&T optical and standard digital outputs plus both balanced and unbalanced (phono) analogue outputs. Inside, however, the CDM12 mechanism and fully integrated SAA7341 'CD-player-on-a-chip' are, perhaps, more commonly at home in a player at

twentieth) of the price. We've seen examples of this chip over several years in budget players from both

least a tenth (if not a

audio research

Philips and Rotel. In this instance, however, Audio Research's implementation, and especially its DEC technology, has succeeded in spinning a silk purse from a veritable sow's ear.

Sound quality

"Not unlike listening to a classic Roberts Radio" it was suggested: "this player makes everything sound lovely". In particular, Rebecca Pidgeon's vocals were projected well above the accompanying instruments without sounding either bright or sibilant, simply very wholesome and believable. However, our listeners did suggest that the *CD1* imparts something of a 'beautification filter', sounding a little too delightful and agreeable for its own good — if the idea that anything can sound "too good" can be countenanced

"Where's the sharp snap and abrupt leading edges?" queried one listener by way of explanation. Adderley's sax undoubtedly lacked the full brassy rasp we had come to expect but this instrument, the mute trumpet, double bass and the percussion still sounded so incredibly vibrant, colourful and alive that all the music remained entirely plausible and utterly irresistible. The sense of space and layering conveyed by the *CD1* is equally magnifi-

cent without, our panel suggested, "sounding airy-fairy". The sheer depth of sound that accompanied Rachmaninov's *3rd Symphony* was unmatched by any player in this test as instruments, and reflections of instruments, plunged back and back into a seemingly limitless void of sound.

Conclusion

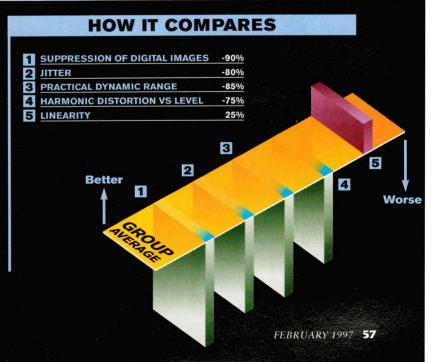

Like a compelling novel, not only is the *CD1* almost impossible to put down but it has the uncanny knack of suspending disbelief in the face of a musical performance that's frighteningly 'real' and yet obviously coloured. The fact that Audio Research has achieved such a preposterous level of performance from the same building blocks used in Philips' sub-£150 *CD920* and *CD732* (issues 119 and 128) only serves to fuel my incredulity.

As a consequence, the *CD1* can only be described as a rare, if not entirely unique proposition among CD players — an uncommonly attractive machine available at a suitably uncommon price. Ah, but we can always dream...

THE LAB REPORT

I've clearly got some explaining to do here. After all, the plummeting barchart hardly looks like the stuff of recommendation. Basically, attempting to squeeze the entire digital chain of a CD player (i.e. the decoder, 256 times oversampling, noise-shaping and Bit Stream conversion) onto a single chip is economic but technically inadvisable. The digital filter, for example, still leaves behind very obvious 'images' beyond the 20kHz cut-off frequency (just -16dB down, in fact) and this may influence the sound of the CD1 with, for example, valve or low-feedback transistor amps that are less linear at these very high frequencies. Our 'test amplifier' is exceptionally tolerant of these artefacts, I might add.

Any 'roughness' is ameliorated by a sweet-sounding treble that's one dB down at 20kHz, is populated by moderate levels of low-order distortion (typically 0.03 per cent), leaving any digital 'nasties' submerged beneath a convenient carpet of noise. So the *CD1* has a sub-16 bit 92dB S/N ratio, but if the dynamic range were any wider, the player would sound proportionally coarser. This really is a case of 'what you don't hear won't hurt the sound'.

"I thought I had this buying hi-fi business sorted out. I bought all the hi-fi magazines and read them thoroughly, because I reckoned their experts knew exactly what they were talking about - at least a lot more than I did! It was reassuring to see the same product names cropping up regularly and I figured the writers' experience and guidance would steer me straight to the system of my dreams. The trouble is I've ended up more confused than when I started.

One reviewer said a product I fancied was absolutely brilliant but another said it was nothing special at all. How can that be? Surely one CD player is pretty much the same as another? And how can a loudspeaker that's one magazine's top recommendation not get so much as a mention in any of the others? I don't mind admitting it, I'm completely lost."

Plan B — I'm going for a deal

"So, I've decided to adopt plan B. I'm sure there can't be any really dramatic differences between all this gear and it's all bound to work together properly, so I'm going to check the price lists and the adverts and shop around for the best deal. I know getting the right hi-fi is important — hey, I'm as mad about music as anyone — but if I can get close to the mark and save a few quid, I'm sure I'll end up with

a good system and be happy. I know there are specialist shops out there that do demonstrations and reckon they've got all the solutions but, to be honest, I'm a bit scared of going to one. I'd really welcome some advice and guidance but I don't know all the technical jargon and I'd feel daft sitting there trying to "hear the differences" if I couldn't. Anyway, a friend told me that these shops only sell the really expensive gear and that they're not interested if you don't have loads of money to spend."

And so another hi-fi buyer starts his journey down the road to dissatisfaction, endless upgrades and a permanent overdraft. There is only one way to buy a hi-fi system that will prove satisfying, reliable and deliver true value for money, and that's through a specialist hi-fi dealer. Let's face it, you wouldn't think about buying a car if you couldn't take it for a test drive. You wouldn't buy a house solely on the strength of seeing the estate agent's details and a photograph. Even if you're spending far less, say buying a jacket or a pair of shoes, you want to try them on to make sure they fit you.

Buying a hi-fi system is no different. It doesn't matter what the specifications say or what the "experts" think: if it doesn't measure up to what you want from a system, then it's not the right choice. Knowing that you've bought a room full of five-star favourites or best-buys is no consolation when you can't bear to listen to them for more than five minutes. Even that ten per cent discount on the price won't make them sound any better.

Buying or being sold to?

Mind you, most of us are easily suckered when it comes to buying hi-fi. Given the choice of venturing into the unknown territory of a specialist dealer's shop and exerting some influence over what we buy, or taking what looks like the easy route having adverts and magazine reviews push us along a path sweetened with discounts and special offers — we opt for the latter. We don't buy a system, we allow ourselves to be sold one. We side-line our own ideas about quality and personal satisfaction and buy someone else's opinion of what's good for us and good value for our money.

Take control!

Now there's a group of long-established, independent specialist dealers who are totally committed to putting the customer back in the driving seat. They're encouraging the buyer to take control ... with a little help and guidance provided where required. They know how difficult it can be to establish the true quality and

Je Ask the UK's top twenty specialist hi-fi dealers.

worth of hi-fi and home cinema systems. They know that without experiencing the performance of the systems they offer, you can't possibly assess the value of them. That's why their idea of "selling" is to play the systems for you and allow you to be the judge.

Listening to your choice of music in a peaceful, well organised

demonstration room, you may be surprised and, almost certainly, relieved to discover how easy it is to hear the differences between components and between systems. With the dealer's help and advice you will be able to make a clear and informed decision about what to buy. It comes down to trusting your own judgement rather than the opinion of a reviewer you've never met ... and who won't refund your money if you're not satisfied or be at the end of a phone to sort out any problems you might encounter.

The story doesn't end there. These shops won't abandon you once you've put your hand into your pocket. They won't

leave you to set up the system you've selected as best you can. They'll install it in your home, make sure it sounds great, and make sure that you're entirely happy with the way it works.

Why bother?

There is, of course, one question that hasn't been answered: why should you and these dealers go to all this trouble? Well, from your point of view maybe it's because a good deal is about a great deal more than just price. Unless you've got money to burn, you'll be living with your new system for years - years during which most of those five star products will

probably stop shining quite so brightly. As far as

the dealers are concerned, maybe they believe that taking care of their customers properly is a nicer way of doing business than just handing over boxes.

Listed on the right of this page are the best hi-fi shops in the country. They all have lots of stars. You'll find them on the shop floor: they're the people waiting to guide customers towards hi-fi that will give them years of musical enjoyment and total satisfaction.

ON TEST

Cambridge Audio CD4SE

When is a Special Edition not a Special Edition? When it's a completely different machine. Enter Cambridge's *CD4 SE* which, despite appearances, bears absolutely no resemblance whatsoever to the original *CD4* reviewed so favourably in issue 147. I'm obliged to say, however, that by the time you read this missive, Cambridge is likely to have 'tarted-up' its standard and rather dour front panel with a few extra grooves, curves and blue paint. So at least the *CD4 SE* will look a little different from the matt-black *CD4*. We live in hope.

Widgets like direct track access, intro search, repeat, random and program play are all retained. But why is the *CD4 SE* one of the few players not to accept direct track selection with the drawer still open? A silly oversight in my view.

Inside, of course, it's all change. Gone is the Sanyo-based mechanism with its sluggish track access, replaced by the altogether crisper CDM12 transport from Philips. Cambridge has even re-laid all the supplied servo-electronics on a new board, for ease of manufacture, while improving the supply regulation to boost performance. Gone too is Philips' TDA1305 DAC to be replaced by the *very* different and very new CS4327 from

Crystal. This is a high oversampling/ Bitstream-style converter claimed to offer something close to 20-bit performance.

Not only is Cambridge the first manufacturer to use this chip but it's actually employed *two* in a differential arrangement, hoping to lift the player's dynamic range while simultaneously reducing odd-order distortions. The final analogue stage is similar, in fact, to the *CD4*, though — in characteristically extravagant fashion — the final wiring is accomplished using lengths of Cambridge's banana-yellow *Pacific* audio interconnect!

Sound quality

• cartor cor a ra

"There's more than a hint of valve amp in this player" remarked one imaginative listener in response to the warm, rich and colourful sound of the *CD4 SE*. The player certainly places some emphasis on midrange detail and 'lushness' ahead of extreme treble 'airiness' and yet, despite this

> merest hint of darkness, Cannonball Adderley's mute trumpet and sax still possessed a realistic sense of attack and bite.

Importantly, the emotive strength of Rachmaninov's 3rd Symphony also remained quite undiluted. This piece proved a real challenge for the majority of players in our 20-way test where only a very few — the CD4 SE included — suc-

ceeded in flowing from theme to theme in a seamless and genuinely captivating fashion. There is absolutely no sense of 'going through the motions' with this player, just good, honest vibrant-sounding music.

There's always plenty of body and richness to its performance, but the likes of Rebecca Pidgeon did expose what was described as the player's "shaved treble", its one, albeit minor, Achilles' heel. But this could never undermine the performance of the player as a whole which sounds remarkably natural, and very close in temperament to the gloriously expensive *CD1* from Audio Research.

Conclusion

1:1:2

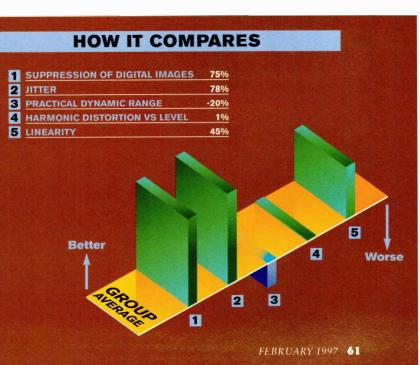

Cinter

Aesthetic and ergonomic quibbles aside, this latest offering from Cambridge ranks among the very best players we have ever encountered, and is certainly as good as you are ever likely to trip over at this price. Gone is the exuberant 'rough diamond' that was the original *CD4* to be replaced by a doppelgänger that's altogether more refined, mature and musically convincing. Possibly the greatest surprise of this test earns itself the heartiest of Best Buys.

THE LAB REPORT

Not only is the *CD4 SE* fundamentally different from the *CD4* (issue 147), but neither, at this time, is there any direct comparison with any other manufacturer's player. Key features include the exceptionally low 0.0005-0.01 per cent distortion at peak output and the superb low-level linearity which holds true to within + 0.2/-0.3dB over a full 100dB dynamic range. Excellent on-chip digital filtering suppresses any digital images to below -100dB while the low 261psec of jitter is primarily power supply- and data-induced and is free of the high-rate/very low-rate patterns that populate the Audiolab 8000CD and Meridian 508 respectively. These players use the costlier CS4329 bitstream DAC.

In typical Cambridge fashion, the analogue stage is based around Analog Devices' op-amps and features an amp/cable tolerant < 10hm output impedance. The output level, however, is set at an outrageous 3.4V, +4.7dB over the notional 2V standard. All things being equal, this ensures the *CD4 SE* will sound louder than any other likely competitor, giving it an unfair advantage in quick A/B demonstrations. Frankly, the player is more than good enough to stand its ground without such trickery.

Wall to Wall Magic!

The Widest Choice of THX in the UK!

Nothing will prepare you for the sound of THX Kamla style. Experience each soundtrack as the director intended through the JBL Synthesis II system and two other superlative THX Home Audio loudspeaker systems. Copland CDA-288

f the eight £1,000+ players in our 'top-end' category, Copland's distinguished-looking CDA-288 is the only model to offer built-in compatibility with Pacific Microsonics HDCD (High Definition Compatible Digital) CD software. This comes courtesy of the PMD-100 eighttimes oversampling filter, chosen for reasons of sound quality by Copland, but also featuring a 'built-in' HDCD decoder by way of a bonus. However, judging by the debate currently raging over the true value of HDCD, this facility is unlikely to represent a significant purchasing decision.

More likely to impress, I would suspect, is the typically bold but minimalist styling of this Scandinavian beast, which features a clear, centralised display window and a slither of a CD drawer that loads into one of Teac's marvellous VRDS mechanisms. Either side are two spring-loaded rotary controls for power on/off and, on the right, a single turned-alloy dial to prompt play, track skip (either direction) and pause. It's unusual but wonderfully tactile in operation.

Copland has re-styled its remote control, which now looks a little, well, less 'Teac-like' but still offers direct track access, program and single/all repeat play modes, plus a useful index skip facility. Under the bonnet we find two 20-bit DACs which are offset from

VERDICT				
	UND ★★☆☆☆ LUE ★★☆☆☆			
PH	LICE £2,199.00			
Even-handed and thoroughly inoffensive; beautifully constructed.				
V	Accentuates any blandness inherent in the music.

2	(0181) 947 5047			

one another by one-half of the eight-times oversample time period. Averaging (or interpolating) the output of both DACs confers some of the benefits of a true 16times oversampled system but without the reduction in distortion and noise we would normally expect. It's all part of Copland's desire to engineer a more favourable complement of distortion than is typical from modern CD players.

Sound quality

Sparking obvious comparison with a wellknown Harry Enfield character, this player was described by our panel of listeners as 'nice but dim', a player that boasts a pleasantly large 'ball of sound' that rolls agreeably enough from the speakers but simply lacks the bite and conviction we know to be possible. There was more than a suggestion of vagueness and insipidity throughout Rebecca Pidgeon's *Friday Night Crowd* though the music, as a whole, never appeared annoying or aggressive.

In similar fashion, Ali Khan's powerful vocals lacked some sense of direction while Cannonball Adderley's *Autumn Leaves* was likened to "fey dinner jazz". There's nothing wrong with this of course, provided you are looking for a very undemanding and unchallenging view of musical life. Otherwise, the *CDA-288* is somewhat picky and precise-

sounding, being

obsessed, it was suggested "with the edges of detail, the timbral highlights rather than the meat and two veg of the performance". Our Rachmaninov disc, that had come alive with the Kenwood and Cambridge players, now remained slightly impassive — perfectly proportioned, granted, but lacking the thrill of strings and 'quack' of woodwind that might otherwise have generated the tension to hold the interest of our panel.

ON TEST

Conclusion

OPLAND

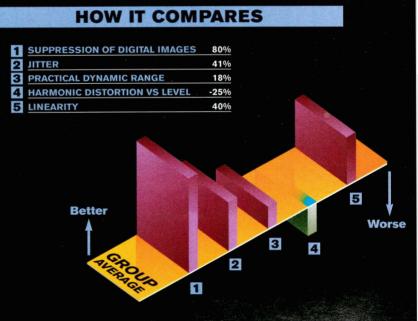

Make no mistake, and despite the slight disappointment of our panel, Copland's *CDA*-288 still has a very individual role to play in the haute couture of high-end audio. Never forget that its unusual, but highly effective aesthetic design is complemented by some equally thought-provoking digital engineering. The end result, however, is a gentle giant of a player that errs in favour of pastel shades rather than bold daubs of colour. So don't be fooled by appearances, for the *CDA*-288 is really something of a softie at heart.

 \mathbf{b}

THE LAB REPORT

Subject to a full re-test, Copland's *CDA-288* has evidently witnessed some revisions since it last graced my lab bench just under a year ago. Nevertheless, the *key* features of the *CDA-288* remain. Specifically, distortion is 'manipulated' to a level of some 0.13-0.71 per cent across the audioband at peak output but actually *falls* to some 0.014-0.06 per cent across the same band at -30dB (more appropriate for a 20-bit technology), the level at which much of the musical action takes place. This unusual variation in distortion is reflected in the bargraph, but its true complexity is not adequately shown.

Furthermore, Burr-Brown's PCM63P DACs would normally realise a S/N ratio in excess of 110dB, with a dynamic range to match, but Copland's use of the HDCD filter tends to impair noise performance, reducing the S/N to 103.6dB. Fortunately, the residual +5.5dB noise modulation is less violent than the +12dB or so normally anticipated. Output level is high at 2.5V, so do watch out for misleading A/B demonstrations where there is no level-matching between players, and between HDCD and non-HDCD software.

Denon DCD-3000

Both the Pioneer and Kenwood players in our sub-£400 category employ manipulative forms of DSP (Digital Signal Processing) as part of the business of digital filtering. They call this Hi-bit and DRIVE respectively. In point of fact, however, Denon had already pipped both these manufacturers to the post with its Alpha processing facility, first seen on the *DCD-1015* (issue 141) and now featured in the £1,000 *DCD-3000* battleship among others.

Features like direct track access, program, random and repeat play, index skip, fader, volume and tape-edit options are not unexpected on a player of this price. But how many CD players also have the facility to accept a digital *output* from another CD transport? In this guise the *DCD-3000* becomes an 'outboard DAC' with both optical and coaxial digital inputs, a phase invert function and variable analogue outputs.

Denon's 'digital engine' is equally highoctane stuff. The fun begins with its proprietary Alpha processing which reconstructs the original 16-bit data into 20-bit form according to the direction and rate of change of successive bits. This type of processing is interpretative, responding to impulsive

(transient) signals rather like Pioneer's Legato Link

where it imposes a 'dulling' treble roll-off. Under other musical conditions, Alpha behaves like Kenwood's DRIVE. The extra cost of the *DCD-3000*, however, is more than adequately reflected in the sheer bulk of its engineering.

Sound quality

RECOMMENDED

DENON

If the efficacy of Denon's Alpha processing continues to prove technically erratic, at least the subjective impression of our listeners was that of an entirely graceful, composed and, largely, very consistent performance. The balance is essentially neutral and refined, a description also levelled at Audiolab's 8000CD and Sherwood's CD1, and yet the DCD-3000 is somehow deepersounding, richer, darker and more accommodating. There's no sense of strain, no underlying greyness to tax the listener over a period of time yet neither does the player seem tempted to throw musical caution to the wind and really let its hair down.

The sheer scale and tension of

Rachmaninov's 3rd Symphony built impressively with this player at the helm, the soundstage swelling to encompass the introduction of the horns and woodwind after the violins had finished swirling about the ears of our panel. "It's not as thrilling as we've heard" commented one member, "but it's impossible not to admire how it comfortably

strides such a bold recording". So the *DCD-3000* manages to impart a feeling of unflappability in the face of the most arduous material, sounding smooth, subtly-detailed when required but also massively powerful on occasion. What you don't hear is all the fire and passion that's possible — the player never sounds compressed for it enjoys an excellent dynamic contrast, but the sharp crack of percussion or, in this instance, the raw edge of Adderley's solo saxophone did lack some bite and hardedged determination.

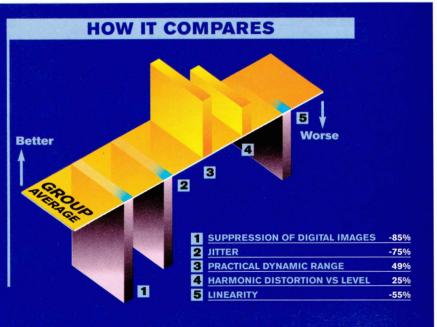

Conclusion

This substantial player surely sings, but does so with the temperament of a huge orchestra under the baton of a slightly timid conductor. Better this, our panel was forced to concede, than an unruly group of musicians allowed to run riot with your favourite CD. No nasty shocks then, just a tour-deforce of substantial engineering and an unusual quota of facilities and an exceptionally agreeable sound. Recommended for those who appreciate the finer things in life.

THE LAB REPORT

As I've already suggested, not only are there technical parallels between the *DCD-3000* and the *DCD-1015*, but also between the '3000, Pioneer's *PD-S705* and Kenwood's *DP-7090*. It's possible to 'force' a Legato-like response from the player which drops to -6dB at 20kHz using digital impulses, while, under other conditions, its response is as flat as the Kenwood or, indeed, any previous Denon player using the SM5841 oversampling filter. Now, the DCD-3000 uses NPC's SM5845 digital filter, but its characteristics are otherwise identical, including its release of stopband images at a (comparably high) -54dB.

Like Kenwood, Denon is also using complementary 20-bit DACs from Burr-Brown, earning it a massive 117dB A-weighted S/N ratio. This use of multi-bit technology ensures that any ultrasonic noise is greatly reduced, enhancing the player's compatibility. On the other hand it does prompt a vast + 19dB noise modulation that inevitably eats into its dynamic range under 'real life' conditions. Jitter is also a little high at 585psec, and it's data-induced too, which is a known cause of audible 'reticence'. An interesting player then, but not entirely straightforward in execution!

Kenwood DP-7090

KENWOOD

rom an aesthetic viewpoint, the unwieldy and frankly unnecessary bulk of Kenwood's new *DP-7090* CD player rather flies in the face of today's cosmetic wisdom. Fortunately, our blind listeners are completely unaware of the product's name or price and so 'saw through' its clumsy apparel to the beauty of the performance lying within. Yep, the *DP-7090* is a cracking player, so long as you don't dismiss it on the grounds of tasteless styling.

Its comprehensive features include index and track selection, peak search, program and repeat play plus a digital volume control that services both its (parallel) line-level outputs. But it's the internal technology that is the *DP-7090*'s most startling feature. Not only has Kenwood crafted a sealed and 'tuned' transport mechanism to afford a deal of isolation, but the associated digital electronics (called DRIVE or Dynamic Resolution Intensive Vector Enhancement) would not be out of place in a sophisticated £2,000 player.

Here we find no less than four of Burr-Brown's top PCM1702 20-bit DACs per channel, each fed from the same eight-times

oversampling filter also used to great effect in

Arcam's *Alpha 8* CD player. In this case, however, each DAC is offset by 1/32 of the sampling rate and the analogue signal summed after conversion. This confers the benefits of 'true' 32-times oversampling with a potential resolution of some 22-bits which, in a roundabout sort of way, is what Kenwood has claimed for its DRIVE innovation. Interesting idea, but daft name nonetheless.

Sound quality

Auditioned immediately after Musical Fidelity's costlier *FCD*, this player, though more distant-sounding, struck our panel as more even-handed and fundamentally more coherent in its disposition. For a change, the complex vocal intonation of Nusrat Fateh Ali Khan now captured our attention through its emotive strength, rather than tonal forwardness. "It whisks you off to a land of sticky coffee and minarets" remarked one listener, who also had half a mind on lunch. Cannonball Adderley's Autumn Leaves also possessed this same 'cuddly' quality which was described as "neither adding to nor getting in the way of the essence of this original '50's recording". The sound of sax and mute trumpet appeared very natural indeed, a version of reality that captured the solidity and potency of the instruments without making them sound oppressive. In a similar vein, the sound of the double bass also

ON TEST

took on a more purposeful 'feel' — once again, it sounded delightfully 'real'.

All in all, this proved to be a very enjoyable player, not euphonic, though, in the fashion of the Cambridge or Audio Research players. Neither grey nor clinical, it was admirably natural and unmanipulative in disposition. It just plays great music, pure and simple.

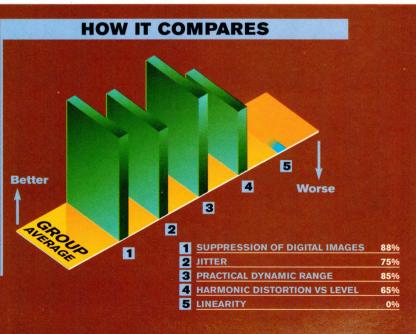

Conclusion

Having already tested an early production sample of Kenwood's *DP*-7090, thoroughly re-testing a fresh sample for this mammoth review has demonstrated a worthwhile gain in performance. Evidently, the intervening period has allowed Kenwood an opportunity to iron out what few bugs remained, allowing a more lively and compelling performance than had previously been anticipated. The technology within the *DP*-7090 has never been available at such a low price, yielding an involving player; a Best Buy and a gentleman among digital ruffians.

THE LAB REPORT

Just look at that barchart: a testament to Kenwood's digital technology, and no mistake. Stopband images, for example, are squashed by more than 105dB by the combination of NPC's SM5843 digital filter and Kenwood's own four-times interpolation stage while digital jitter, at just 265psec, keeps the *DP-7090* out of trouble. Even the practical dynamic range of the player is top of this particular heap when, in practice, the odds were stacked against it. You see, Kenwood may have achieved a near 20-bit performance with its 119dB S/N ratio but, because modulation noise is also 'summed' between the four 20-bit DACs, this puts a +16dB hole in the aforementioned figure.

Furthermore, Kenwood's use of a multi-bit technology and high oversampling ensures the *DP-7090* produces just about the lowest spurious ultrasonic noise of any CD player on the planet, promising a very consistent performance with different amplifiers and systems. Distortion is also exceedingly low at just 0.0045-0.011 per cent at -30dB but, because of finite differences between each of the four DACs, the player's low-level linearity is just a little poorer than expected.

Mission Quite Possible Welcome Agent Audiophile

Your mission, should you choose to accept it, is to contact <u>Audio Masters</u> and order the folowing item:-

<u>Musical Fidelity</u> <u>X10D</u>

This is a vital piece of any audiophile's hi-fi system.

It is also the very latest technology from one of the UK's most innovative hi-fi manufacturer.

Connected between your CD player and amplifier, the X10D gives you that warm but detailed sound associated with a high end valve CD player. How? I hear you say.

It's quite simple - the unbelievably cheap X10D contains the very latest in valve technology!

Priced at only £99.99 + £2.50 P&P this is a true bargain.

For more information or an <u>Audio Masters</u> price list please give us a call or drop us a line.

Meridian 508 (20-bit)

Take Meridian's acclaimed 500/566 transport/DAC combination and squeeze the crucial technology into one case and, broadly speaking, you've got yourself what Meridian describes as its '20-bit 508'. The allusion to 20-bit performance actually stems from its use, along with Audiolab, of the new Crystal CS4329 bitstream converter. Crystal itself refers to the CS4329 as offering '20-bit resolution' as a consequence of its 128times oversampling,

fourth-order noise shaping and deltasigma (bitstream) DAC technology.

So Meridian is clearly off to a good start. Otherwise, the 508 uses a Philips CDM12.4 mechanism mounted inside what it describes as its familiar 'brick loader' CD tray. The discrete little display and fine, vertical function keys are right out of Meridian folklore. The 508 is also suitably eccentric. For example, just because you've loaded a CD this does not mean the 508 has read its TOC (table of contents). In practice, the disc is only 'loaded' once you've closed the drawer and pressed 'play'.

Other Meridian tricks of the trade include

its continued use of Philips' old SAA7310 decoder, which actually offers a better standard of error correction than the more recent generations of chips. Meridian also employs

what it describes as an 'analogue de-jittering' circuit to stabilise the RF eye-pattern (the signal coming from the laser pick-up). The same analogue stage as the 566 DAC is used, complete with four-layer board, a Class A output driver and high-quality passive components including Nichicon electrolytics and polypropylene supply decoupling capacitors. All tried and tested stuff from one of the masters of the digital art.

Sound quality

Meridian's flagship player is characteristically delicate and refined in tone. Strings sound almost ethereal though a bass guitar, and particularly that from Rebecca Pidgeon's *Friday Night Crowd*, can sound a little thick or plummy by comparison. The player's delicate quality allowed us to hear through and into the mix of layered recordings like Ali Khan's *Face of Love*, revealing the varied texture of the harmonium and fret noises from the guitar and sitar to marvellous effect, even though this was very slightly encumbered by the leaden quality of the player's bass.

Cannonball Adderley's Autumn Leaves prompted two slightly contrasting points of view. On one hand the sound of trumpet and percussion proved to be very clear and vibrant while soundstaging, as a whole, was described as "dry and non-invasive". Turning this interpretation on

its head, another listener suggested this same sound was "distinctly hi-fi with a Technicolor spotlighting of the individual performers".

Evidently, your point of view will depend very much on whether you take a fancy to the 508, bearing in mind that small systems are likely to work in its favour. A middle line is more likely, for the player flows with a clean, open and clear sound, is slightly dry and raw in its delivery, and includes a bass that, on occasions, refuses to stay put.

Conclusion

Meridian is a long-standing exponent of the digital art, but its creative faculties are being applied to so many varied products (it's there with the best of them in the race to launch DVD), the digital bullseye cannot be struck true on each and every occasion. So the 508 combines a delicate-sounding mid and treble with a rich and opulent-sounding bass. If the idea appeals, and you want to avoid some excess of bass, partner the 508 with a system of modest bandwidth.

THE LAB REPORT

Whatever else Crystal, or Meridian, might claim, one thing you can be sure of with the CS4329 (like the CS4328 before it) is very, very low levels of digital jitter. 220psec worth in this case, though the 508's spectrum also reveals a broad, low-rate noise-like jitter that is difficult to quantify and possibly greater in significance than the discrete patterns I've already mentioned. Incidentally, the 566 also suffers from the same phenomenon though Audiolab's 8000CD (which uses the same DAC) does not.

The 508 (and 566) also emit a far higher level of ultrasonic requantisation noise than the 8000CD, suggesting a lower Master Clock rate. This noise not only pushes THD + noise beyond 100 per cent with HF signal levels lower than -70dB but also places greater stress on the analogue stage(s) and partnering amplifier/loudspeaker combination. As a result, and rather like Arcam's Alpha 7, the 508 and 566 could sound very different from one system to another.

Otherwise, the small errors in resolution (+0.0/-0.6dB over a 100dB range), the low midband distortion (just 0.009 per cent at -30dB), wide separation (>100dB) and very flat response all suggest that Meridian has done its homework.

HOW IT COMPARES 1 SUPPRESSION OF DIGITAL IMAGES 70% 2 JITTER 27% **3** PRACTICAL DYNAMIC RANGE -2% 4 HARMONIC DISTORTION VS LEVEL 60% **5** LINEARITY 23% 5 Better 4 3 Worse 2 1 FEBRUARY 1997 69

Mission-Cyrus dAD3

mall but perfectly formed, the latest addition to the Cyrus brand has clearly been conceived to blend in with the growing clan of tuner, amp and AV separates. All these components are shoehorned into a very distinctive mini-sized case that's somewhat deeper than it's wide, and equipped with fluted heatsinking (superfluous in this instance) and a very attractive back-lit liquid-crystal display.

The *dAD3* looks superficially similar to Cyrus's earlier, and costlier, *dAD7* though this was a top-loader and based on a very different 18-bit technology. In point of fact, the *dAD3* has a sleeker display to accommodate a new front-loading CD assembly based on Philips' popular CDM12 mechanism. Otherwise, the row of function buttons, including track-skip, search, repeat and program play, looks pretty similar, as does the familiar Cyrus handset with its extra direct access, display and master off controls.

Furthermore, and in common with the likes of Arcam and Micromega, Cyrus is also adopting a more modular design approach. For example, it's possible to upgrade the *dAD3* with an outboard *PSX-R* power supply, a high-current reservoir that also reduces any supply-induced jitter currently suffered by the player. There's also a retro-

fittable 'Q-module' that supplants the *dAD3*'s existing TDA1305 DAC for a new stage featuring the same 18-bit Analog Devices converters used very successfully in the earlier *dAD7*. Once fitted, preferably by your dealer, the upgrade is acknowledged by a little 'Q' legend in the corner of the *dAD3*'s display. A neat touch for a very neat little player.

Sound quality

Many players in the recent past have done rather well with Philips' hybrid converter, Cambridge and Rotel among them, and this Cyrus *dAD3* is not about to buck such a favourable trend. Nevertheless, the Cyrus implementation does yield a slightly softer, less pointed style of delivery, convincing our listeners with guile and subtlety rather than orchestral ordnance.

In line with more expensive playback experience, Rachmaninov's *3rd Symphony* unfolded with a fluid seamlessness, one theme developing smoothly into another and drawing us deeper into an undemanding pool of sound. The flourish of the violins was not as confident as possible but then neither did the raw quality of Adderley's sax tear our ears off — and yet each instrument, or group of instruments, still seemed blessed with a wealth of colourful detail.

Like Rotel's player, the *dAD3* also relishes a strong bass line. This was as evident from the confident roll of timpani as the resurgence in weight and sheer presence of the low strings from our classical selection. Meanwhile, the sudden appearance of a very, very low drum from Ali Khan's *Face of Love*, slipping unexpectedly from the depths of the subwoofer, which caused at least one listener to sit up in pleasant surprise!

Conclusion

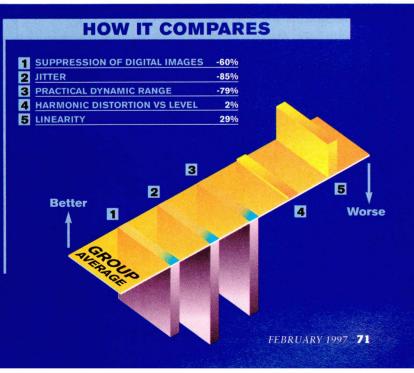

ECOM

Though this mid-priced dAD3 is not exactly replacing the older dAD7, the latter is in the process of being phased-out. And at least you can stack other units on top of the dAD3 without blocking access to the CD loading bay! Meanwhile, not unlike Kenwood's DP-7090, the dAD3 is settling very nicely into production with one or two earlier technical issues having been resolved by updates to the PCB. As such, and bearing in mind the 'open-ended' nature of the product with its PSX-R power supply and Q-module upgrade options, the dAD3 looks to be a most effective successor. Like the rest of the range, it's a stylish player, clearly oriented towards a complete Cyrus system and, as such, comes confidently recommended.

THE LAB REPORT

Although both this *dAD3*, Cambridge's original *CD4* (issue 147) and Rotel's *RCD-970BX* all employ a single TDA1305 BCC (Bitstream/Continuous Calibration) oversampling filter and DAC, the players are not a carbon copy of one another. If nothing else, a miniature 5532 op-amp and proprietary fourth-order analogue filtering ensure the *dAD3* retains a character all of its own. In terms of distortion, all three players hover around 0.001-0.003 per cent at peak output (2.1V from 55 Ohms in this instance) but at -30dB the dAD3 suffers a good 10dB less treble distortion than its fellows.

On the debit side, the *dAD3* falls a few dB short of the *CD4* and *RCD-970BX* with its 103dB S/N ratio (109dB and 107dB respectively), compromising its dynamic range very slightly. But at least the lower 10-11dB noise modulation should result in less audible 'roughness'. Otherwise, the bulk of the *dAD3*'s slightly warm and self-effacing sound may well be linked to the pattern of hum and PSU-induced jitter, avoided by the preferential layout of both Rotel and Cambridge players. Fortunately, this is one area witnessing improvement as the *dAD3* begins full scale production.

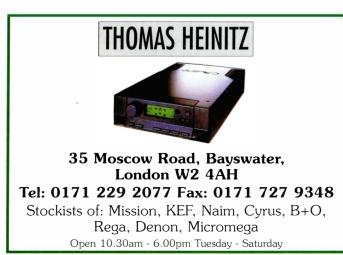

The Cyrus dAD3 is available at the following authorized dealers....

Musical Fidelity FCD

USICAL

he moon may not be composed of green cheese, but the substance of Musical Fidelity's FCD is

unlikely. Any equally guesses? And no, you won't find the answer in any other hi-fi magazine. Believe it or not, the player 'inside' the player is

Teac's CD-P3500, a £170 Bit Stream model that we reviewed over four years ago in issue 112! Quite obviously, Musical Fidelity has gone to town on this basic chassis, incarcerating it in a steel and cast-alloy shell designed to complement its other highend F-series separates.

I'm bound to say that Musical Fidelity's attention in the UK is most keenly focused on its burgeoning X-series products (kicked off by the X10-D, reviewed in issue 159), so costly models like the FCD are mainly produced for the Far Eastern market to accompany MF's F25/F16/F19 pre/power amplifiers. Nevertheless, there's still plenty here to tickle the fancy of enthusiasts who desire something, well, something removed from the mainstream.

Facilities include a decent fluorescent display, basic transport functions on the beast itself, and a full complement of direct track access, 20-track program, repeat, fast

search and cue lock, index skipping and volume adjustment presented on the remote handset. Comprehensive stuff, but then this is a 'Teac CD player' ...

IDELITY

Musical Fidelity's 'magic dust' includes the addition of a triode-based output buffer (not a million miles removed from the latterday X10-D) which is added onto the original (solid state) analogue filter of the Teac player. Some will say this can only add distortion, while others, no doubt, will bathe in the warmth that only a valve stage can offer. Long-term readers of Hi-Fi Choice will know that my views are with the former camp.

Sound quality

This a big and not 'inexpensive-sounding' but slightly dry and unforgiving player, albeit one that certainly sounded gracious enough with the articulate outpouring of Rebecca Pidgeon's Friday Night Crowd. In this instance, the player's tendency to sound upfront actually helped to project the voice in a very confident manner. However, this same

2

3

'confidence' can quickly be con-

strued as a brash immaturity, as it did with the harder and colder sound of Cannonball's sax.

"Charging ahead without really thinking about it" proposed one panellist, who considered the overall performance to be a little too spicy, thanks to the fruity bass and parched treble. Adderley's mute trumpet sounded a little too 'muted' or pinched, with a coldness that

only allowed our ears to relax after each brassy sequence ended, leaving the piano sounding very big, open and easy-going. It's an unusual contrast of the sweet and sour. but such tension rarely encourages fatiguefree listening in the longer term.

We concluded by auditioning the large and expansive recording of Rachmaninov's 3rd Symphony which proved more effusive in character because, as one listener put it, "there's no central character for the player to latch onto". Good in parts then, but neither sufficiently integrated, or smooth to inspire the confidence of our hard-nosed panel.

Conclusion

This unusual player really does seem to exist at the mercy of different software. Its forward disposition is ideally suited to the Fender Telecaster, among other instruments of lore and, as a direct consequence, The Clash, Bruce Springsteen and Keith Richards en route. The FCD is highly unlikely, it was suggested, to appeal to classical tastes. But I wonder what it would sound like with an X10-D on its tail?

THE LAB REPORT

First the good news. MF has maintained a slightly wider S/N ratio than Teac's original CD-P3500 (103.3dB vs. 101.6dB) while jitter, at just 201psec, is all low-rate and possibly linked to the CD transport mechanism. The mild but compressive linearity trend (boosting low-level detail by up to +3dB) was present in the CD-P3500 as was the poor-ish clock selection (+167ppm adrift).

Now for the unusual news. MF's triode-based output buffer stamps a thumbprint of its own on proceedings with a high 2.8V output (beware A/B demo's) and a significant increase in (audio) IM distortion caused by its interaction with digital sampling images outside of the audioband. Contrary to practice, distortion actually increases from 0.015 per cent midband at -30dB to 0.05 per cent at -10dB and 0.3 per cent at peak output, due to the compromised overload margins of the valve stage.

Basically, the higher the analogue output, the higher the distortion and the more extended the harmonics. The optimum setting appears to be around the -5dB point on MF's display (1.55V output level) where 2nd/3rd harmonic distortion is just 0.08 per cent.

CD PLAYERS

Myryad MC100

AD's loss is evidently Myryad's gain, as the former's erstwhile Director of Technology is now beginning to make a real impact with his own brand. That man is Chris Evans and the latest addition to his armoury is the *MC-100* CD player, logical partner, in every respect, to the *MI-120* integrated amplifier reviewed in issue 154. Regular readers will recognise Myryad's 'house style', reflected here in the solid, brushed-alloy facia of the *MC-100*, with its blue-filtered fluorescent display and inset push-buttons for track skip and search, random play and display mode options.

The accompanying remote, which is a dead ringer for Mission's Cyrus handset, adds extra features including direct track access, a display dimmer, program and repeat play. Round the back, you'll find a digital output and a bus connection, called My-Link, which allows some of the *MC*-100's functions to be synchronised with its partnering *MI*-120 amplifier.

Not only does the *MC-100* look very distinctive, but behind the dominating facade of its centrally-mounted mechanism, it has an equally individual selection of digital electronics. Not for Myryad the customary choice of either a Philips, NPC or Crystal-

based DAC circuit. Instead. like Arcam, Myryad has plumped for a Sony CDM14 CD transport but with extra attention paid to the control circuitry and regulation of its power supplies. The converter, too, is a PLM bitstream device also sourced from Sony the very same DAC, in fact, that drove Sony's CDP-312 to a recommendation back in issue 139.

Sound quality

Judging by the initial murmuring of our listening panel, the MC-100 is most certainly not the sort of player to blow your socks off with bursts of audio dynamite. Instead, the sheer refinement and gentle elegance of its sound bears comparison with both the Arcam Alpha 8 and, to a lesser degree, the 8000CD from Audiolab. It does not labour over much on the thrills and spills, the 'electricity' of the music at hand, but gradually won over our panel with a grace and subtlety lacking from the 'rough diamonds' of CD. Interestingly, it took the determination of Adderley's sax to really rouse the MC-100 from its occasional bouts of 'stuffiness', even though the brush of percussion - however delicately portrayed — still lacked a certain alertness.

Rebecca Pidgeon's *Friday Night Crowd* sounded "more like the morning after" it was suggested, thanks a certain loss of airiness and atmosphere, a dulling of what would typically be a more sparkling performance. Not that her voice suffered. Quite

the contrary, as our panel continued by applauding the lack of sibilance and abundance of "rich characterisation" in her vocals. In much the same way, the chants that populate Ali Khan's *Face of Love* sounded positively haunting, sweeping out from the speakers before the steady rattle of the tabla.

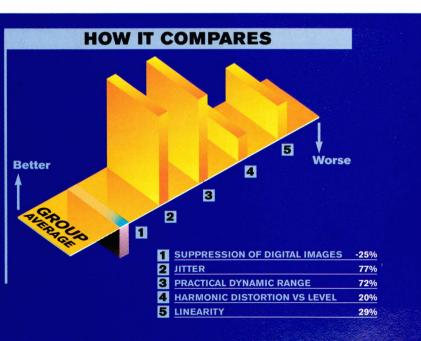

Conclusion

In a rare moment of candour, Myryad's designer admitted to me that his choice of transport and digital componentry for the *MC-100* was derived from a study of CD player lab tests from several years-worth of *Hi-Fi Choice* back issues! I would not normally endorse this approach as automatically guaranteeing a 'fully-rounded product' but, in this case at least, Myryad's homework has evidently reaped some musical reward. A little extra get-up-and-go would not go amiss and yet, like many other players in this price band, the sheer maturity, composure and all-round compatibility of the *MC-100* ensures its Recommendation.

THE LAB REPORT

Although the digital building blocks of the *MC-100* were derived from players like the Sony *CDP-312*, Myryad's *implementation* ensures a technically superior performance. Specifically, Myryad's application of an off-board clock with its own low-noise, regulated power supply, has reduced jitter down to 191psec. This is one of the lowest values recorded for a CD player of any description. The response is as flat as a pancake while operational features, like the two second track access, perform with slick efficiency.

Combining the CXD-2565 oversampling filter/DAC with a proprietary Class A analogue output stage and six-pole analogue filter has reduced high frequency distortion from 0.035 per cent (Sony *CDP-312*) to just 0.004 per cent at peak level while filtering away any ultrasonic noise in a manner not unlike NAD's *512* and *502* (issues 159 and 119 respectively). Low-level resolution has also improved ten-fold with errors of just + 0.2/-0.3dB over a full 100dB dynamic range. This range is capitalised upon for, though the overall S/N might seem unexceptional at 103dB, the level of noise modulation is kept equally low at +4.5dB — another boon for a smooth-sounding CD player.

n many respects, Naim's latest player is akin to a fully integrated version of its older, two-box CDS, which split the player proper from the bulk and potential interference of its multifarious power supplies. The CD2 employs trimmed-down, on-board power supplies alongside the same complement of four-times oversampling filter and 16-bit DAC, though the transport mechanism is a CDM9 instead of the CDM4 used before. All these components, originally sourced from Philips, are now effectively obsolete; but Naim maintains a healthy stockpile to fuel production in the years ahead.

Many designers feel that the older swingarm mechanisms like the CDM9 (mounted here in a retractable tray) represented a high point in Philips' career, and I am tempted to agree. It's also interesting to note that other manufacturers with their eye on the digital ball, Meridian included, also use Philips' revered SAA7310 decoder chip (now several generations old) because of its superior error-correction.

Otherwise, Naim's *CD2* also 'borrows' the four-point suspension idea from its *CDS*, isolating both the mechanism *and* motherboard from the worst effects of external vibration. Feature-wise, you are limited to

play, track skip, fast search and either time or track display modes. The remote volume and direct access keypad of the remote control are inoperative, while in keeping with Naim's philosophy, there is no digital output.

Sound quality

"This player really has a lot going for it" remarked one listener as the evenly-paced but conspicuously ripe sound of Rebecca Pidgeon's *Friday Night Crowd* flowed easily from the speakers, the rolling 'thrum' of bass guitar perfectly complementing the solid and articulate sound of her voice. Rather like Teac's *VRDS-25*, the *CD2* produces plenty of bass but somewhat better controlled, encouraging an equally big but more 'natural and correct' sound.

One listener did refer to some emphasis of leading-edge detail — the tabla from Nusrat's *Face of Love* in particular — but was bowled-over by the live feel of the track which remained full of beans without tripping over itself. "The wailing chant of Nusrat Fateh Ali Khan and Eddie Vedder

ON TEST

sounded more like music and less like the sounds of labour (small 'l')", it was suggested by one listener.

By contrast, Cannonball Adderley's Autumn Leaves sounded very much more measured, with each instrument remarkably well separated. The bold sound of the saxophone was even described as "alarmingly natural" though there was a question mark over the integration or wholesomeness of the piece in its entirety.

This is the sort of player you might discover in a recording studio, providing bags of detail with a very solid stereo focus, but perhaps not all the 'romanticism' we know to be possible.

Conclusion

The ergonomics of the *CD2* are something of an acquired taste. Disc ejection is manual, for example, while a lightweight magnetic puck has to be positioned over the centre of the CD before loading. Features are minimal, while many owners will require a fivepin-DIN-to-phono adapter before enjoying the *CD2*'s dulcet tones.

But in this regard alone, the relative 'inconvenience' of Naim's *CD2* seems a small burden to bear, for this player is a true reference in respect of its detailing, soundstaging and uncompromising solidity achieved, perhaps, at the expense of some passion and fireworks.

THE LAB REPORT

There was a time when virtually every self-respecting CD player used this combination of Philips' SAA7220 four-times oversampling filter and TDA1541A 16-bit DAC, a duo that gives rise to a familiar technical performance. The (relatively) poor 41dB stopband rejection, the lightly rippled frequency response, the -5dB 'notch' in linearity at -90dB and the multi-bit lurch in distortion from 0.0009-0.04 per cent over the first 30dB of its dynamic range are all very predictable sights.

Naturally, with Naim being Naim, it has introduced a few novel twists of its own. The proprietary seven-pole analogue filter certainly makes its mark, obliterating any digital 'images' beyond 30kHz or so, and this, along with a fabulously low output impedance, ensures the *CD2* will sound very consistent from system to system.

Jitter is also very low with just 236psec-worth of data-induced and spurious (high-rate) sidebands. The only remaining 'bug' concerns some leakage of the 7.35kHz frame tone signal (and its harmonics), compromising the 109dB S/N ratio with offset signals by about 3dB. This tone also shows up on my 3D plot, but was not directly audible to our listeners.

CD PLAYERS

Pioneer PD-S705

() PIONEER

B ringing its CD players to market with innovations such as the 'Stable Platter Mechanism' and 'Legato Link Conversion' (LLC) has allowed Pioneer to carve itself a very distinctive niche. But with the new £300 PD-S705 and its 'Hi-bit LLC' processing, this position looks to have become even more specialised.

For a first-hand view of the Stable Platter Mechanism, just press the open/close button and watch the CD transport slide into view. This rubbercoated platter supports the disc label-side down, but is driven and read from above once the tray is loaded. It's a very neat idea, supporting the CD over its entire surface to prevent it 'flapping' as it spins. Naturally, this transport also offers the customary array of direct track access, index skip, fast search, intro scan, tape edit, repeat, random and program play options. A comprehensive widget-fest, and no mistake.

LLC refers to Pioneer's digital filter (see issue 113) which deliberately permits the mirror-image of the audio-range (from 44.1kHz back to 20kHz) to rise-up and merge with the 'real' audio signals themselves (from 20Hz to 20kHz). By retaining the very digital images ordinarily removed by digital filtering, this gives the (false)

impression of an analogue-like extended frequency response.

Hi-bit is this season's addition to the brew, and seems to work rather like

Denon's Alpha processing (see *DCD-3000* review). It's an attempt to improve low-level resolution via a new DSP chip that responds to the level and rate of change of successive bits within the datastream. According to the music signal, Hi-bit restructures the data from 16- to 24-bit accuracy, though this must be truncated back to 20bits before being accepted by the Legato Link filter and bitstream DAC. Phew, what a palaver!

Sound quality

In perfect accord with our previous experience of Pioneer's Legato Link players (issue 137, for example), this new model prompted a characteristically mixed response from our panel. On the one hand, various members applauded its excellent use of stereo space, its robust and highly articulate rendition of vocals, and good sense of musical integration.

Others, however, were more concerned

at what they described as "some unusual background DSP" (I kid you not), referring to a hint of additional reverberation that seems to accompany Rebecca Pidgeon, tending to make her, and her accompaniment, sound larger than life. So the PD-S705 almost sounds too impressive, boosting the relative importance of what are typically subtle-sounding instruments. The background percussion from Rachmaninov's mighty 3rd Symphony certainly appeared too 'significant', altering the sense of dynamic contrast in this busy recording.

ON TEST

Cannonball Adderley's Autumn Leaves would have benefited from a little extra weight, but here Pioneer's explosion of spaciousness went a little too far, throwing the percussion and mute trumpet to the extremes of the soundstage, and leaving the centre stage somewhat exposed and empty of detail.

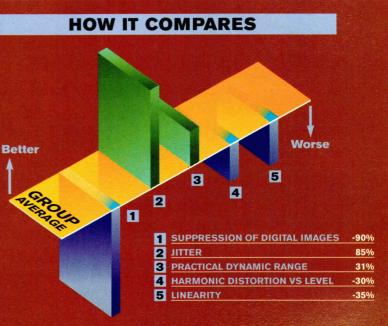

Conclusion

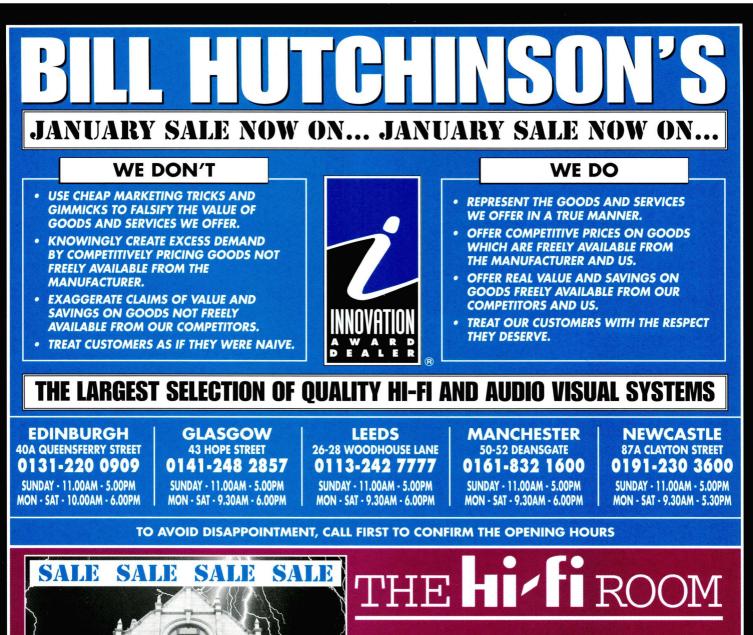

Pioneer's *PD-S705* is a highly evolved machine and one packed with what might best be described as 'manipulative signal processing' that attempts to mimic extra detail at the extremes of both frequency and signal level. The player operates like a dream and is generously equipped but its sound is highly 'interpretative' and bound to polarise opinion. As a result, and though too unusual for a formal recommendation, the *PD-S705* is certainly not a player to dismiss out of hand, but one to explore on your own territory and in your own time.

THE LAB REPORT

So how, exactly, has the *PD-S705* evolved from its direct descendants like the *PD-S703* (issue 137)? On the face of it, Pioneer's Legato Link digital filter still dominates the proceedings with its deliberate use of stopband images to simulate the 'energy' of musical detail that might otherwise have existed beyond CD's 20kHz cut-off frequency. The filter still results in a droopy high-frequency response, amounting to -4dB in the far treble, though its gentler slope promises a reduction in the group (phase) delay normally associated with conventional 'brickwall' filters.

Jitter is low at 217psec but is dominated by three main high-rate components, specific to Pioneer's technology. The real S/N ratio works out as 104.2dB which is some two dB better than that recorded for Pioneer's *PD-S703* even if it's a far cry from the 119.4dB and 116.8dB achieved by Kenwood and Denon, who also employ a similar form of 'resolution enhancement'. Then again, with a lower + 4dB noise modulation, Pioneer's dynamic range is just as good! Distortion, while a very low 0.003-0.025 per cent (at -30dB), remains comparable with the older, non-Hi-bit *PD-S703*.

Quad 77

ot new, but now available in two distinct flavours, Quad's 77 is yet another highly specialised, system-orientated CD player and another, I might add, that makes excellent use of Crystal's evergreen bitstream technology. The two guises of this 'repackaged' 77 include a Nextel-coated version with a blue plastic moulded facia; and a second with glossy carbonfibre (Kevlar) facia, and black-

with-a-hint-of-blue bodywork. In both instances, a slim but very sturdy alloy case forms the backbone of the player, housing Philips' equally svelte CDM12 mechanism.

I have already alluded to the 77's role as the digital front-end to Quad's midi-sized '77 system'. This includes either the 77 integrated amplifier or 77/77SA pre/power combination, all of which are conjoined by a proprietary Quad-link comms bus where, among other things, the audio signal is transmitted in differential mode to reduce distortion and interference. The 'other things' include power and control com-

mands should the slave version of the 77 (the so-called 7714 with no on-board power supply) be employed instead.

Ordinarily, the 77 comes complete with a little remote control, expanding the simple track skip, play and pause facilities on the player itself to include direct track access, repeat, program and random play. Fanatics might also consider investing another £300 in the talk-back *System Console* commander, with its intuitive menus. In this case, full time and track information is relayed back from the 77 player onto the local display of the remote Console. Handy, huh?

Sound quality

This, according to one particularly erudite member of the listening panel, "is one classy-sounding player". In many respects it paralleled the Myryad and the Arcam *Alpha* 8 in its even-handedness while, more importantly, taking that extra step with a fresher, cleaner and generally more sprightly sense of occasion. There is musical emotion in abundance with the '77, emotion that sent a

shiver down the collective spine of the panel as Adderley took his first breath through the mute trumpet while effortlessly manipulating our spirits through the twists and turns of Rachmaninov's 3rd Symphony. The beauty of this sound is in its transparent honesty. There's no sense of coercion, of obvious coloration or straining for effect though there is some shortfall in the deepest bass. The unusual drums that underpin Ali Khan's Face of Love certainly lost that hint of resonance, that 'shudder' of bass that is part-heard and partsensed, and yet the feeling of proportion and of harmony between the musicians themselves held this piece of music firmly together. For many listeners, ours included, a properly extended treble that captures the sparkle of percussion and provides a real feeling of freshness and 'air' will be more

Conclusion

An unexpected result? Perhaps not, especially if we look back a couple of years to the time when Quad's 67 earned itself a Best Buy. The 77 is a refined version of the latter, certainly in respect of its aesthetic quality and implementation of Crystal's bitstream DAC. The replacement of Philips' swing-arm CDM9 mechanism for the more recent CDM12 and an increase in price of over £100 are regrettable, however.

important than that last Hz of bass.

And yet the 77 remains a true thoroughbred, combining a penetrating insight into the minutiae of its music with a poise rarely entertained by its rivals. Recommended, in or out of Quad's family home.

THE LAB REPORT

For the '77, like the '67 before it (issue 124), Quad prides itself in squeezing the maximum performance from Crystal's CS4328 DAC. For example, this converter probably has the lowest inherent jitter level of any on the market and yet, by feeding the clock signal from the decoder onwards in differential form (to reduce common-mode noise) the overall level is pushed down still further to 250psec. These countermeasures also help the 77 comply with the full rigours of our EMC requirements — and less (RF) noise all round is never bad for sound quality.

Distortion is a very, very low 0.0007-0.008 per cent across the audioband at peak output (1.96V) which is lower than that achieved for the '67 and significantly so compared with Roksan's *Attessa*, which uses the same converter. Typically, however, the presence of requantisation noise from the CS4328's noise-shapers tends to mask any harmonics at lower signal levels. This same noise is probably responsible for the player's limited 97dB S/N ratio, a dB within the 16-bit specification, but just fine for a player that maintains a + 0.8/-0.1dB resolution over a full 100dB range.

Roksan DP3P

ast month's *Hi-Fi Choice* featured the *Attessa DP3.P*'s alter ego — the *DP3.P* with Roksan's *ATT-DA2* DAC and *ATT-DS5* PSU. As a result, all the features and foibles that were described by Richard Black for the *Attessa* transport also hold true for the *Attessa* CD player, including the overlong end-of-side track access. For those who were not paying attention first time around, however, here's a brief refresher course.

This is a top-loader that's only accessible once the player is fully powered-up. Once the lid is open you must negotiate the frightfully compliant suspension upon which the (Far Eastern) linear-tracking mechanism is isolated. Tap it, and this transport will wobble for a week. Great for resilience against external vibration but something of a fiddle when you have to pull Roksan's magnetic puck free from the centre spindle to release your CD. It's fiddlier still if, like me, you find the part-plastic/part-ceramic puck falls apart in your fingers. Still, a touch of glue and the *Attessa* is back in business.

Standard transport controls are provided on the angled frontispiece of this unusual player while the full roll-call of direct access, program, repeat and random play options are relegated to the handy remote. Further under the bonnet we find the analogue section of the *Attessa* CD player is rather like a

stripped-down version of the *ATT-DA2*, complete with the same Crystal CS4328 bitstream DAC, a modified output stage and simplified (onboard) power supplies.

Sound quality

This is a very open and also a very slightly 'loud'-sounding player that pushed its detail forward ever-so-slightly but without ever incurring the wrath of our assembled listeners. In such instances, an increase in the perceived loudness of the music is a direct result of the player's balance or presentation, because every model is precisely levelmatched before it is auditioned.

On this occasion, Eddie Vedder's voice (from Ali Khan's *Face of Love*) was projected firmly to the front of the soundstage, retaining an exceptional solidity that gripped both the performance and the panel an intensity of emotion achieved without obvious aggression. Dramatic, demanding and only occasionally strident, Cannonball Adderley's *Autumn Leaves* sounded big, bold and brassy. The layering of brushwork, sax and mute trumpet was especially realistic, creating a genuinely deep and believable acoustic populated with performers who were obviously enjoying their trade. It was a little sharp at times,

to be sure, but the sheer animation of its performance clearly had our panel enthralled.

Rachmaninov's *3rd Symphony* had proved a trial for many players in this test, often sounding grey and matter-of-fact. With the *Attessa*, however, much like both the Cambridge and Audio Research, the music swept gracefully along, bursting climactically or spiralling into silence when required. Dramatic and compelling.

Conclusion

CHEERE

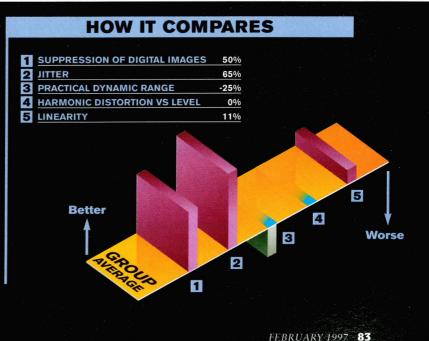

It is possible of course, but designers have to try pretty damn hard to make a mess of Crystal's CS4328. Others, and Roksan in particular, have evidently surpassed themselves, preparing a CD player that's so full of musical beans that our panel declared "classical listeners should be ready to 'air conduct' when auditioning this player". A compliment, of sorts, for one of the more pleasant surprises in our 20-way test, the Attessa earns itself a Recommendation.

THE LAB REPORT

Comparisons between the *Attessa* CD player and *ATT-DA2* converter prove interesting because, on the whole, they reflect the advantage of the latter's outboard DC power supplies. For example, the pattern of distortion is broadly what you would expect for the CS4328 DAC (around 0.003 per cent midband/peak level) but the *ATT-DA2* is almost uniformly 10dB *lower* at very low frequencies where it compares favourably with Quad's 77 (see page 81).

The smattering of data-induced sidebands from the *Attessa*'s jitter spectrum also look remarkably like those from Quad's 77, but at a very low 169psec. The *Attessa*'s low-level resolution is slightly more deviant than the *ATT-DA2* with errors of +0.0/-0.8dB over a full 100dB range, while its high frequency performance, particularly in respect of distortion, also shows signs of peak-level compression. This was avoided in Quad's 77.

For the same reason, odd-order IM distortion increases to around 0.1 per cent at peak level while noise, rather than harmonics, tends to dominate at lower signal levels. Finally, the sub-one Ohm output impedance of the *Attessa* should make it very tolerant of wacky interconnect cables and/or difficult amplifier loads.

Rotel RCD-970BX

nyone who was put off Rotel's £450 *RCD*-975 by its disappointing showing in issue 155 might also dismiss its cheaper sibling, the £350 *RCD*-970BX. After all, they look almost identical, don't they? This, however, would be a very, very big mistake. Sure enough, both players are built into the same slim but rugged chassis, feature the same fluorescent display and even the same CDM9 transport mechanism from Philips.

An important issue this, for the CDM9 is rarely employed these days (having been superseded by the linear-tracking CDM12) despite offering almost unparalleled handling of less-than-perfect CDs — especially, I might add, when it's used with the equally 'old' SAA7310 decoder — also a favourite of switched-on companies like Meridian and Naim. Anyway, the *RCD-970BX* is only otherwise distinguished by the loss of its onboard edit, scan and A/B repeat facilities, widgets that are already duplicated on the matching handset. No loss here then, plus you get the advantage of direct track access, random and program play modes.

Where the *RCD*-970BX really scores is in the relative simplicity of its internal circuitry. Gone are the additional analogue filter boards, the pair of dual-differential

SOMMENDED

TDA1305 DACs and troublesome shift-registers that infested the *RCD*-975 which, quite frankly, is too complicated for its own good. Instead, the pared-down *RCD*-970BX uses a single TDA1305 converter (not unlike Mission's *dAD3*) in a very thoughtful and elegant configuration. Throwing less money but more thought at a problem so often reaps major dividends...

Sound quality

The very deliberate and structurally solid sound of Rotel's *RCD-970BX* comes as a real contrast to the somewhat colder, harsher and coarser performance of its bigger brother. In this instance, the young pretender strides boldly through the likes of Rachmaninov's *3rd Symphony*, overlooking a little of the texture and quiet subtlety of strings and woodwind, perhaps, but certainly capturing the spirit, the gusto and majesty of the performance as the orchestra winds up to one of the many climaxes.

> Where the music itself is a little less ostentatious, the *RCD*-970BX

can end up sounding a touch unsympathetic. Rebecca Pidgeon's *Friday Night Crowd*, for example, proved less communicative or emotive — "its not simply going through the motions" commented one panellist, "but I've less empathy with her voice than usual". So the *RCD*-*970BX* can sound articulate and even forthright where a touch more humility and softness might have served it better.

Otherwise, our panel found much to admire in this rough diamond as it put its full enthusiasm behind Adderley's sax and mute trumpet, projecting both clearly into the room while retaining the rich, resonant weight of the double bass. More often than not, it seems the *RCD-970BX* will hit the musical mark.

Conclusion

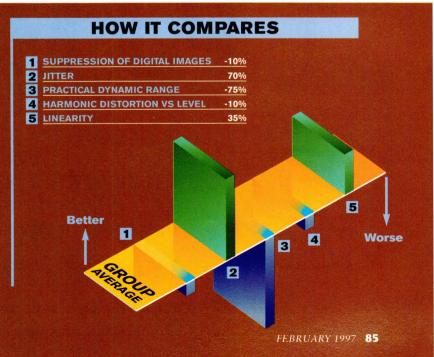

Time was when new CD players from Rotel were like money in the bank: sure-fire winners in each and every price category, regardless of the technology they adopted. Nowadays, if the competition is tougher and Rotel seems less sure of its direction, at least cracking players like the *RCD-970BX* demonstrate there's life yet in a Far Eastern specialist that once ruled the budget roost.

The *RCD*-970BX's flair is occasionally stilted, but its combination of solid build, useful facilities and an attention-grabbing sound make Recommendation a must.

THE LAB REPORT

The single TDA1305 adopted by Rotel is one of a series of combined Bitstream/Continuous Calibration digital filter/DACs from Philips. It's a mixed-technology device that employs a second-order noise shaper to truncate incoming data (from the decoder) from 16 to five-bits. This five-bit bitstream is converted by two pairs of high-speed four-bit converters: four bits + four bits yielding an equivalent resolution of five-bits per channel. In practice, Rotel achieves a wide 107dB S/N ratio (only three dB short of what is usually obtained with two DACs in dual-differential mode) though, thanks to the 'multi-bit' part of the DAC's architecture, the huge + 14dB noise modulation inevitably restricts the practical dynamic range.

Low-level linearity is held to within very tight +/-0.7dB limits while, more importantly, and by avoiding the use of multiple shift-registers, jitter is reduced from 647 psec (RCD-975) to just 289 psec. This smattering of lowlevel data-induced sidebands (4) is fundamental to the '970BX's triumph. Distortion, meanwhile, at typically <0.035 per cent still compares very favourably with the *RCD-975*'s <0.025 per cent (both re -30dB), even if it does tend to increase at higher frequencies and lower levels.

Do you want to choose your hifi in a comfortable and relaxing environment . . ? Do you want friendly and helpful advice (and a cup of tea) . . ?

Do you want to buy your system based on what you hear (and not what somebody tells you) . . ?

Complete service – We are the only outlet in the area to offer the complete service. As well as stocking selected items from the above manufacturers we are able to service and/or repair on the premises all the above brands (and others also).

Sherwood CD1

0

hink Sherwood and a vision of high-volume, budget separates

springs to mind, many of which have done rather well in previous Hi-Fi Choice blind listening tests. But there's more to Sherwood than a low-brow stack 'em high, sell 'em cheap mentality, as its high-end TEMA range serves to remind us. The CD-1 is the source component for the TEMA brand of CD players and pre/power amplifiers, all featuring a glorious standard of construction with silver-gold anodised milled-alloy facias, gold and coppergalvanised bolts, and die-cast knobs and buttons. Even the frontispiece for the CD loading tray and transport controls are diecast items. As a result, the CD-1 is a lot heavier than it looks.

By comparison, the long, plastic remote control seems a trifle shabby, though its wide range of direct track access, program, repeat and random play options are all welcome accessories. As, I might add, are the choice of balanced analogue outputs and proprietary 'Digi-Link' control terminals which allow the *CD-1* to be fully integrated into a TEMA system.

The CD-1 is not just a cosmetic exercise:

its internal engineering is no less impressive. The 'pro'-version of Philips' CDM9

mechanism is deployed (complete with glass-lensed laser) instead of the ubiquitous CDM12, while D/A conversion is accomplished with a combination of Philips' SAA7350 and TDA1547 — the so-called 'DAC7' chipset once used by Meridian, Audiolab and even Teac in days gone by. Sherwood's choice of NPC's 'high-end' eight times oversampling filter is a further indication of its intent, all achieved, I might add, without pushing the price sky-high.

Sound quality

Sherwood's *CD-1* is a player whose very neutral, even-handed and 'flat' sound tells a tale of engineers trying desperately hard to scrub any hint of coloration or character from its being. However, instead of affording an entirely transparent view of the music at hand it actually succeeds in suppressing the colour, the passion and vivacity that is a natural and vital part of the recorded event. "This all sounds very professional" mentioned one panelist, "but the performers

have no empathy with the music they are playing".

This was certainly the case with Rachmaninov's *3rd Symphony*, which possessed a wealth of detail, from the rumble of timpani, the woody resonance of oboe through to the rush and strings and sparkle of percussion — an emotive descrip-

tion of detail that was, in practice, rather less interesting. There was no harshness, no sibilance to roughen a vocalict or coldnoss to taint Cannonball's says

harshness, no sibilance to roughen a vocalist or coldness to taint Cannonball's saxophone. Dynamic contrasts are handled with the same proficiency, but spine-tingling passion remains firmly off the musical agenda.

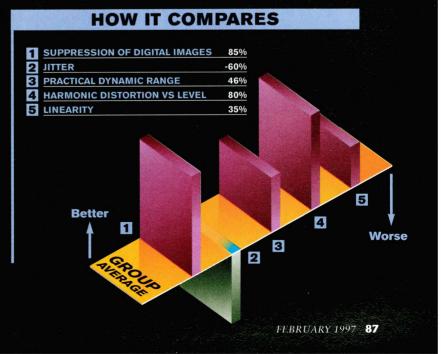

Conclusion

It is tricky to generalise, however the CD-1 looks, performs and sounds rather like a player that's received too much attention, to the point where the music itself has been engineered out of the system. It's not the first time we've encountered such a player and, no doubt, it won't be the last. Nevertheless, this result remains frustrating when so much care and good intent has obviously been lavished by Sherwood on a product destined to serve as its flagship. Interestingly, there is another intermediate range of separates called LF-7 whose appearance is clearly modelled on the TEMA superstars but whose innards may not be quite so over-engineered. A subject for a reprise test, methinks.

THE LAB REPORT

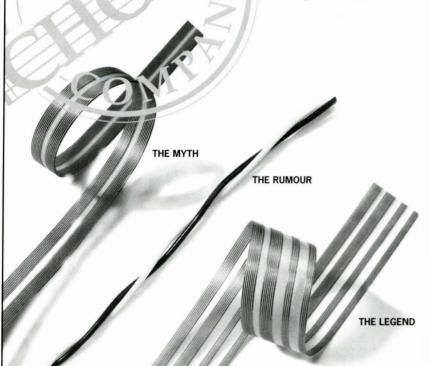

The most obvious discrepancy in an otherwise very positive-looking barchart is caused by the *CD-1*'s 400psec of jitter. This is only twice as high as other models in this group but, because it's almost entirely composed of data-induced patterns, could explain the slightly lacklustre 'feel' of its music. The significance of this one foible could be magnified by the 'wide open window' effect of its huge 106dB S/N ratio (state-of-the-art for a single TDA1547) and lack of 'camouflage' provided by the exceptionally low 0.0005 per cent (0dB) and 0.009 per cent (-30dB) distortion.

The high quality SM5813 eight-times oversampling filter also ensures a ripple-free response (the analogue filter includes a -0.6dB roll-off at 20kHz). However, implementing the SAA7350 as a third-order noise-shaper is notoriously difficult and, as Teac, Kenwood and Audiolab have discovered to their cost in the past, it can (and has) resulted in a comprehensive 'spray' of high-order sampling images (digitally-derived distortions). This effect, combined with the swell of ultrasonic noise (also from the SAA7350) is also likely to contribute to the slightly cool or grey sound of the *CD-1*.

The New Collection from The Chord Company

What are your speakers wearing?

CHORD LEGEND (Patent pending)

This is something really special.

Interconnects

A unique flat cable specially designed to optimise the performance of bi-wireable speakers. Constructed from four runs of oxygen free round copper conductors (two x seven strands for the bass and two x four strands for the treble)

The larger conductors used for the bass and the smaller conductors used for the treble are spaced in a way that produces ideal inductance and capacitance figures for perfect bass and treble reproduction. It is extremely unusual to find this in speaker cable. Bass needs more current than treble, therefore Legend provides more current carrying capacity.

Chord Legend will give you all the openness and detail that a good bi-wire cable produces, together with a wonderful degree of coherence and musicality.

For information on the finest handmade a/v leads, interconnects, speaker cables and loudspeakers, please return the coupon. Tel: 01722 331674 Fax: 01722 411388 Speaker Cables

CD PLAYERS

Sony CDP-XE300

Take one Best Buy *CDP-XE500*, rip out its optical digital output and partner it with a trimmed-down remote control, lacking peak search, time edit/fade and music scan facilities. The result? A saving of £20 and an ostensibly 'new' CD player called the *CDP-XE300*.

Crucially, however, nearly everything that makes the *CDP*-*XE500* great (issue 159) is retained by the baby *CDP*-*XE300*. Same chassis, same detailed fluorescent display, same CD transport assembly

and even the same circuit board inside. There are one or two components missing which would otherwise have serviced the digital output, but the *CDP-XE300*, '500 (and *CDP-XE200* for that matter) are all struck from a common mould.

Sony's jog dial control, originally used for track access on its MiniDisc recorders, is also retained on the slimline *CDP-XE300*. This is a detented rotary encoder — you just spin it in either direction to rapidly scroll through the track list displayed on the 20position music calendar, press enter or play ,and the on-board digital servo ensures super-slick track access.

The same jog dial control is used during the program edit and program play modes which will accommodate up to 24 track selections. This jog dial is effectively duplicated by a more conventional direct track-access keypad located on the remote control, which also adds a digital fader and up/down digital volume control to the crew of widgets. A canny blend of high value with genuine high fidelity.

Sound quality

TRACK SELECTOR

Just like its bigger brother, the *CDP-XE300* promotes itself as a fresh, light and breezysounding player that's not afraid to get stuck into the trickier musical selections gracing its in-tray. It certainly tried desperately hard to push the sweeping sound of violins from Rachmaninov's *3rd Symphony* to the fore, supplying all the gusto and drive it could muster, if not quite the body or weight to fully back it up.

Dissension was limited, though there was some criticism of Ali Khan's principal vocals which, ordinarily, have a very tightly defined sense of space. On this occasion they sounded as if they were "viewed through lightly misted windows", being perfectly intelligible but making it tricky to pin down the exact position of each performer.

At this budget price, however, the loss of a deep 3D image is perhaps not surprising even if the sheer lack of nasties and maturity of its presentation is equally

unexpected. The sheer fact that this player was auditioned after one costing 30 times the price without being shouted down as either "crass" or "appalling" speaks volumes in its favour. Sure enough, its sound is a little light, a little monochrome and has a habit of shifting the tonal balance of vocals (tilting Rebecca Pidgeon's voice towards the like of Joni Mitchell, for example). And yet the overall picture remains very clear, articulate and informative with little in the way of fatiguing colorations.

Conclusion

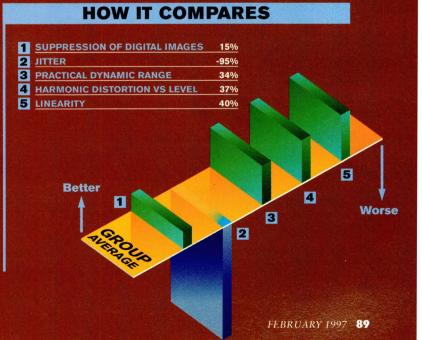

In the parlance beloved of marketing departments, the 'cost/performance ratio' of Sony's *CDP-XE300* seems little short of remarkable, ensuring that the giant-killing reputation earned by the *CDP-XE500* is at least broadly maintained by this ultra-budget *CDP-XE300*. Clearly there's nothing to touch it at the price, though I'm bound to say that spending the cost of a few extra CDs will realise even greater musical gains, if only from the comprehensive hierarchy of Sony's own stable.

•

THE LAB REPORT

As we've already discussed, the *CDP-XE300*'s closest relative is the *CDP-XE500* and this is reflected both in lab performance and the final barchart values, despite the results being averaged across a different group of budget CD players. Once again, the noise-shaping and digital filtering of Sony's CXD8567 H-Pulse DAC is not as effective as the classier chips found in the *CDP-XE900E*, for example, so its treble distortion (rising to 0.025 per cent) is largely accounted for by spurious noise. This, in turn, could lead to a slightly rougher sound when partnered with amplifiers that are susceptible to such out-of-band signals.

Otherwise, the *CDP-XE300* also enjoys a higher-than-average dynamic range and impressive low-level linearity, a very flat response, good crystal clock selection and a huge >100dB separation between L and R stereo channels. The common PCB layout and power supply means that, once again, the *CDP-XE300* is awash with (relatively innocuous) hum and PSU-related phenomena which, for a ha'porth of tar, could easily have been redressed by Sony. This contributes to the 1768psec of jitter and to the loss of bass definition and vague imagery reported by our listeners.

" Fine build quality, a sweet sound and super styling."

making the most of the music

Teac VRDS-25

ooking for a new CD player with a big personality? Then look no further than Teac's *VRDS-25*, a player whose appearance, if not its technology, is clearly derived from predecessors like the *VRDS-10* and, more recently, the *VRDS-7* (issue 119 and 155 respectively).

This massive structure plays host to Teac's famous VRDS (Vibration-free Rigid Disc-clamping System) which clamps the CD onto the underside of a cast alloy turntable which, in turn, is suspended and driven from above by a powerful motor.

The surface of this miniature turntable is very slightly concave, and has the effect of ironing-out any small warps that may exist across the entire area of the CD. The mechanical stability of VRDS, coupled with Teac's DSRLL technology (Digital Servo Ratio Locked Loop) ensures just about the lowest jitter levels of any integrated player currently available. Sadly, because of its high cost, this fabulous mechanism is not more widely used by other manufacturers — Copland and Wadia are two exceptions.

Widgets are plentiful but relegated to the long remote control which covers direct

track access, program, repeat and random play, index skipping, mute, fade and volume options. It seems every whim is catered for. Neither is there any skimping on the internal DAC technology which, with its 20-bit architecture, is derived from Teac's very expensive X-1s rather than the Philips Bit Stream devices used in its 'budget' VRDS players.

Sound quality

TEAC

This is one CD player that actually sounds as big and powerful as it looks, even if one listener suggested wryly that it had "a somewhat over-inflated view of its own importance". The player seems to delight in conveying a huge sound, resonating with a richness that's reminiscent of a truly 'live' performance though one that is not necessarily uncoloured.

Ali Khan's voice was that is imbued with a new-found reverberation while the bass was mildly overblown. *The Face of Love* is an acoustic recording and yet every performer sounded both 'amplified' and slightly 'out of control', as our subwoofer reminded us with the odd, seemingly misplaced note from time to time. Otherwise

this really is a very detailed and mighty-sounding player which, generally speaking, has a very even balance. The only weak point is the bass, which is perhaps too forceful and strong, tending to slow down the largest of recordings. Perhaps as a result, the mighty Rachmaninov 3rd Symphony was not desperately thrilling: "a little too much chocolate fudge sundae", concluded one listener

who was clearly thinking about his lunch. Adderley's jazz set was, perhaps, not quite so well measured, but the bold sound of the sax and trumpet and weighty presence of the double bass all contributed to a thoroughly big and bouncy sound that, our panel conceded, "could not fail to get us caught up in the music".

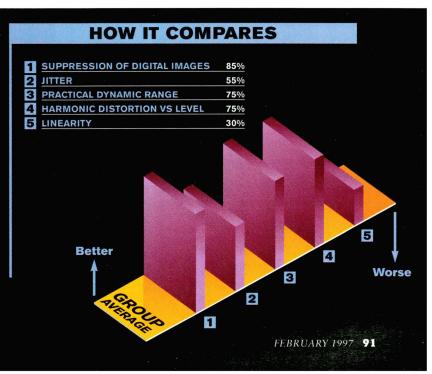

Conclusion

In every respect, Teac's *VRDS-25* is a solid player, combining a great structural resilience with a powerful sound and a technical copybook that, in many areas, defines the state of the digital art. But if its spiritual compatriot, Copland's *CDA-288*, proved a little grey and unexciting, then Teac's own implementation sounds too rich and colourful, a big and fruity outpouring that's probably better matched to small, though not necessarily budget loudspeakers. And if you own any expensive wooden furniture, *do* remember to detach Teac's optional pointed metal feet before proudly displaying your new acquisition...

THE LAB REPORT

The VRDS-25 is one of the very few multi-bit CD players to maintain a consistently low distortion from 0dB right through to low signal levels. At peak output, distortion is a steady 0.0014 per cent and is primarily second/third harmonic in nature while, at -30dB, there is a small increase to between 0.005-0.01 per cent that is accounted for by noise rather than discrete harmonics. Most 18 or 20-bit players suffer an increase in distortion to around 0.06 per cent at -30dB, resulting in a potentially audible change to the player's 'character' over the uppermost 30dB of its dynamic range.

The combination of Teac's ZD-II dithering circuit and Analog Devices' 20bit DACs (discussed above) also distinguishes its performance from other 20-bit DACs like the Burr Brown PCM63P. The overall S/N ratio is a few dB lower than expected at 110dB (though still higher than that achieved by bitstream technology) but the noise modulation is also lower at +9dB rather than +12 to +14dB. Low-level linearity is also held to within +0.0/-0.5dB limits over a 100dB range while jitter — a function of the digital 'stability' across the entire player — is just 178psec.

CD PLAYERS

ON TEST

high proportion of Recommendations in this 20strong group of CD players reflects both the quality of digital hardware these days, and also the fact that a certain 'pre-selection' of candidates — based on my experience of all new and up-and-coming models — was undertaken prior to the test proper.

Nonetheless, our sub-dividing of the 20 players into three distinct price groups has confirmed a trend that we had suspected from the empirical evidence of past CD player reviews. This is that a higher proportion of budget and mid-priced CD players will achieve a given standard of quality than their higher-priced cousins. No less than five of the six sub-£400 and £400-£1,000 players earned themselves swingtags, leaving three of the remaining eight 'high-end' players to fulfil the same requirements in the £1,000-plus category.

Several explanations suggest themselves, though the perception that budget CD players are inherently better or more 'correct' than the higher-priced competition is not one likely to gain favour. Instead, consider the following. The sub-£400 sector is fiercely competitive and, as such, it's not uncommon for budget CD players to be 'subsidised' or treated as loss-leaders in the battle to achieve larger market shares. So some budget CD players do offer better value for money than is strictly plausible.

On the flip-side, high-cost players are just that. They are not subsidised in any way and, unit for unit, will provide a greater financial return for the manufacturer. It is not unreasonable for a manufacturer to establish its credibility with a loss-making budget range while 'making its money' from a spin-off range of higher-priced units.

When there is more money to throw at the problem, a CD player designer is given

more freedom to endow a player with a certain 'character' or musical emphasis. You might expect all high-priced players to converge towards a common notion of the 'perfect sound', but in truth they diverge and display greatly varied sonic qualities.

Finally, some manufacturers will make the mistake of justifying the cost of a player by using an unnecessarily complex circuit. This might include banks of shift registers, delay lines, multiple-DAC topologies and manipulative DSP routines in the digital path; or perhaps labyrinthine analogue filters, riddled with coupling capacitors and oodles of other components across and within the signal path.

Such efforts add up to over-engineering that looks very clever on paper, but which kills the spontaneity and passion of the music in practice. Naturally, 'overengineering' is one thing a budget player is rarely accused of!

GROUP A (UP TO £399.99)

Arcam Alpha 7	£319.90
Cambridge Audio CD4SE	£199.95
Kenwood DP-7090	£399.95
Ploneer PD-S705	£299.95
Rotel RCD-970BX	£349.95
Sony CDP-XE300	£139.99
Sony CDP-XE300	

A broad range of technologies is represented in our budget group, from the different hybrid converters chosen by Rotel and Arcam, to the bitstream offerings of Cambridge and Sony, the DSP antics of Pioneer, and the highly-evolved 20-bit scheme adopted by Kenwood. Each player has a very distinct story to tell, that goes beyond mere differences in appearance and flexibility. Sony's *CDP-XE300* provides a remarkable blend of good sound and useful widgets while Cambridge's *CD4SE* might look and feel like a member of the underclass by comparison, but its sound was a hair's breadth from the very best, regardless of price.

The Arcam and Rotel players are both bet-

GROUP B (£400-£999.99)

Arcam Alpha 8	£519.90
Audiolab 8000CD	£999.90
Denon DCD-3000	£999.99
Mission dAD3	£598
Myryad System MC-100	£699.95
Quad 77	0063

A slightly bigger budget certainly boosts the build quality and physical mass of these players, with models from Audiolab and Myryad featuring very sturdy alloy faceplates that reinforce the entire 'being' of the player. Both Mission and Quad take this a step further by wrapping their *dAD3* and 77, respectively, in novel die-cast alloy casings. There's a hint of minimalism creeping in too, with all players (save the Denon) relegating the vast majority of their user-convenient widgets to a handy remote control.

In this group upgrade facilities are also taken that bit more seriously, above and beyond the use of a digital output to service an outboard DAC at a later date. Specifically, both the Arcam and Mission players feature ter built, but no better specified, and each provides something of a dynamic slant on the music event. There's less 'back to basics' and more 'onward march of technology' about both the Pioneer and Kenwood players; the latter squeezes an obscene amount of technology into what is, relatively speaking, a very affordable package. There are players costing thousands that use this sort of topology, and quite how Kenwood can afford to 'give away' the *DP-7090* remains a mystery!

plug-in boards to change both the underlying technology and, presumably, the sound of their players. The Mission will even accept a feed from its external *PSX-R* power supply by way of a further upgrade. Meanwhile the Myryad and Quad players both employ comms links to fully integrate them into their respective systems. In fact only the Denon *DCD-3000* is what you might call 'conventional', but even this employs a diverse technology in the form of its Alpha Processing. Nothing is what it seems!

Other examples, including the Sherwood, the Copland and, to a degree, the Meridian, fail to deliver the goods despite deploying upto-the-minute engineering principles, while in the final analysis the Musical Fidelity ends up looking like a well-meaning but alas flawed attempt to inject a little valve-like brio into a budget bitstream box.

Teac's heavyweight VRDS mechanism serves the VRDS-25 very well indeed, but the strong character of this battleship player will not suit the pacifists among you.

GROUP C (OVER £1000)

	Contraction of the second
Audio Research CD 1	£3,290
Copland CDA-288	£2,199
Meridian 508	£1,685
Musical Fidelity FCD	£1,499.99
Naim CD2	£1,997.50
Roksan Attessa DP3P	£1,595
Sherwood CD1	£1,099.95
Teac VRDS-25	£1,299.95

Kudos, pride of ownership, call it what you will, but the sheer status of these top-notch players will account for as much of their popularity as straightforward sound quality. Sure enough, the best of the bunch can afford a genuinely grander and more masterful sound than the tiddlers, but others also demonstrate that a better sound cannot be *guaranteed* just because you hand over wads of cash. Players like the Audio Research and Naim respectively use either uninspiring or old technology, yet despite this they still put in a marvellous performance. Roksan, by contrast, is sticking with a tried-and-tested design that continues to deliver a thoroughly engaging sound.

BEST BUYS

nly two players really achieved a price/performance ratio sufficient to justify the coveted Best Buy swing-tag. Kenwood's £399.95 DP-7090 is the costliest of the pair, but its rendition of Rachmaninov's 3rd Symphony, a notoriously difficult recording, flowed with a graciousness lost to all but a few players in this test,

convincing our panel of its hidden depths. This is a fabulous-sounding player and one that success-

fully employs a highly complex digital technology. More often than not, these highly-evolved players are either flaky or engineered to death. Not the DP-7090, which sounds much more refined than its price-tag would suggest.

Cambridge Audio CD4SE

Less mature but invigorating and realistic to the last drop, Cambridge Audio's £199.95 CD4 SE

bears no internal resemblance to the plain vanilla CD4 and yet sounds fright-

eningly close to Audio Research's £3,290 CD1. It's slightly less coloured in outlook but, equally, not able to recreate such an astonishing sense of depth. Then again, our panel were at pains to point out they had never heard a £200

player sound so tactile, vibrant and, above all, musically convincing. If you don't like the aesthetics, buy it and keep your eyes shut.

Kenwood DP-7090

Myryad MC100

Denon DCD-3000

he least expensive but by no means least impressive Recommendation is Sony's CDP-XE300, which looks and sounds more exalted than its measly £139.99 price tag. Arcam's Alpha 7 looks slightly more 'domestic' but puts more meat on the bones of its music, and can be upgraded to the smoother and more sophisticated-sounding Alpha 8 with a plug-in DAC card. Rotel's RCD-970BX sounds more dynamic again and serves to demonstrate where the costlier RCD-975 continues to go wrong.

Nestling comfortably in the 'mid-priced' zone, both Myryad with its MC-100 and Mission with its upgradable dAD3 illustrate the advantage of a higher price, the former sounding typically neutral and unruffled while the latter introduces a little extra colour and flair into its music. Both are solidly constructed, as is the exceptionally fine-sounding Quad 77, whose performance belies its insignificant physical bulk. Even if you don't own other Quad components, the 77 should never be overlooked.

Teetering on the £1,000 barrier, Denon's DCD-3000 looks every inch the traditional Japanese flagship, with standards of build. features and an interesting technical performance to match. Roksan's Attessa is somewhat more idiosyncratic, particularly with its loosely-sprung transport assembly. Perseverance brings its own rewards, however, in the exceptionally graceful and enthralling sound that ensues.

Cyrus dAD3

At the £2,000 break-point, Naim's CD2 seduced our blind listeners with a very evenhanded, neutral and utterly convincing performance that, while nothing short of delightful, seems slightly at odds with the archetypal 'Naim sound'. Less neutral but fabulously compelling all the same is Audio Research's CD1. Few people will be able to afford this wonderfully deep and rosy-sounding player, but those lucky souls at least will come to appreciate the digital adage that 'it's not the chips, but how you use them that really counts'.

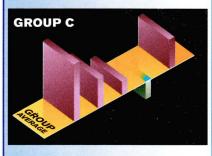

UNDERSTANDING OUR **BAR-GRAPHS AND GROUP AVERAGES**

GROUP A

GROUP B

here are huge differences between a CD player that costs £140 and one that costs £3.290. For this reason we have divided our 20 CD players into three groups to extract meaningful 'group averages' for our bar-graph lab-test summaries. The three groups (A, B and C) are explained in our introduction (pages 50-51), but just so that you can tell which player is in which group throughout the reviews, here is the key to the colour codings shown above:

Group A	(Up to £399.99)
Group B	(£400 - £999.99)
Group C	(Over £1,000)

Using this information, you can work out with which of its peers each CD player is being compared. Our aim is to assess every product's measured performance in the context of its closest rivals.

The bar-graphs themselves are derived from measurements performed by our Technical Editor, Paul Miller, using instruments controlled by his own awardwinning, PC-based 'Virtual Instrument' software. Actual measured parameters are weighted and statistically processed to give the bar-graph values, relative to the group averages explained above. For more information, e-mail Paul Miller at 100576.3021@compuserve.com .

FEBRUARY 1997

BUYING ADVICE

Here Is The Knowledge

Stan Vincent and **Jason Kennedy** reveal trade secrets to help you buy a truly great hi-fi system.

f you're new to hi-fi, or even if you're a regular *Choice* reader about to go on a spending spree, this part of the magazine is where we try to help you 'buy smarter'. Novices may find it hard to understand how one component can sound different to another. And it's probably just as perplexing when hi-fi buffs talk about 'sonic characteristics', or about how the best systems are carefully blended from individual components, just like a tasty recipe. But this is the beauty of buying individual pieces of separates hi-fi – it lets you tweak a system's performance to suit your tastes precisely.

Hearing is believing

If you haven't listened to much good quality equipment before, you need to calibrate your hearing to understand just what hi-fi can do for you. We'd advise listening to as many different systems as possible, perhaps with help from your friends or, if you can find a friendly, accommodating hi-fi store, in a dealer's listening room. Ask them to play you their really expensive systems – even if you can't afford a megabucks outfit, at least you'll realise what is possible from the best of today's gear!

Here are just a few examples of some typical – but diverse – systems that are in favour today. Once you escape the economic confines of real world audio equipment you can sample some rather more distinct interpretations of the so-called absolute sound. Ironically, expensive systems often have more character than budget ones, but at the same time they get a lot closer to the sense of 'being there'.

There are many hi-fi paths you can follow, but the more popular ones include multi-amp systems, as exemplified by the Naim philosophy, for example. The ultimate Naim system has separate power supplies for virtually everything, and the result is awesome fire-power.

Some go for a more hair-shirt style with a minimum of high quality components. Exponents of this approach include DNM, whose top amp has a lower power output than many cheaper models. The pay-off is that when the amp is coupled with efficient Rehdeko speakers, for example, you get extraordinary clarity. Low power is also seen as an asset in the valve world, where the ultimate systems combine amplifiers with single-figure outputs and ultra-efficient horn speakers.

The pursuit of 'phase linearity' is a new gospel preached by Trichord Research and Pioneer among others. It prioritises resolution and the pursuit of 'stereo' in the Greek root of the word: three-dimensional sound.

Deal me in!

While you're finding your feet in hi-fi, a friendly local dealer is an essential ally. And when you've heard enough hi-fi to start forming an opinion about your likes and dislikes, you can start to build a system that's tailored precisely to your own requirements. Here's a home truth: to make the most of hi-fi, you need to take a 'whole system' approach. This is taken as read if you're buying a complete outfit from scratch, but if you're upgrading just one part of your hi-fi, it is essential to assess any potential purchase in the context of your existing system. Again, this is where a good dealer can help – ask nicely, and you should be able to try new components at home, to be sure that they will work with your existing rig.

Upgrading your system is one of the joys of hi-fi. Many integrated amplifiers have preamp outputs, which means that they can be upgraded with the addition of external power amps. Many speakers can be bi-wired – with separate cable runs to woofer and tweeter – to improve the sound. And nowadays all but the cheapest CD players offer a digital output to plug into an external digital-to-analogue converter.

A tailor-made hi-fi system

In an age when most consumer goods are marketed to death, and sold in stores where salespeople are positively predatory, the great thing about

buying hi-fi is its need for a little customer participation. And by the same token, you would be foolish to buy hi-fi purely on the basis of low prices, eye-catching deals or special offers. It's much more important to find equipment that you can live with. So don't be too surprised if your hi-fi dealer expresses strong views about what you're proposing to buy.

Try not to get hot under the collar if your dealer does not share your opinion of the 'ultimate' hifi components. All dealers should treat their customers with civility, and clearly it's in their best interests to ensure that you walk out of the door satisfied: what sounds mighty enticing on a first listen may begin to pall over the months ahead. Sometimes a dealer's experience is your insurance for lasting listening pleasure. Inevitably, there is a lot of 'badge consciousness'

attached to hi-fi. We get many letters from readers saying: "This is my system – what do you think?" Our response is always: "Stop worrying whether your system is hip. Just enjoy it." The hallmark of a really good system is that it seems to disappear when the music starts playing.

Thank you for the music

Some authorities maintain that a good hi-fi should really bring out the differences between your records. Others hold fast to the idea that hi-fi should recreate an accurate representation of instruments as they were recorded – sometimes tricky for drum'n'bass fans. But often, the greatest pleasure is to play a recording you thought you knew well, and suddenly hear musical nuances appear from deep in the mix.

Always remember that this stuff is about pleasure and leisure. And like most other leisure pursuits, if it hurts, you're doing it wrong!

THE DIRECTORY

Our Three Step Guide to Buying Hi-Fi

The legendary *Hi-Fi Choice* Directory is now simpler to use than ever before, but contains all the information you need to select and buy the perfect hi-fi system.

Discover which products fall within your budget by using our Price Guide (starts on page 106). This listing is updated monthly and includes all hi-fi products currently available in the UK. It is organised by product type, then by price band, and is sorted alphabetically. Products whose names are printed in red are those that we have reviewed. Which leads us to...

Read about the hi-fi equipment that we have reviewed in the Directory (starts on page 114). Here you will learn which items have been singled out for our famous Best Buy and Recommended awards, which denote products of exceptional quality and value. The Directory is sorted by product type and listed alphabetically, and the beginning of each section provides essential information about each kind of hi-fi component.

STEP 3 Find your nearest hi-fi store in our Dealer Directory (starts on page 131) to book a demonstration of the products you are interested in.

Best Buys and Recommendations

If you see a Best Buy (red) or Recommended (blue) flag at the beginning of an entry in our Directory of reviewed products, the item

concerned is particularly deserving of your attention.
 Red signifies the Best Buy swing-tag, which indicates products of the best quality and superb value for money in their price category.
 Blue Recommended products offer excellent quality and value, but not the same cost-effectiveness as a Best Buy.
 Please note that an expensive Recommended product will nearly always perform better than an inexpensive Best Buy.

Using Best Buys and Recommendations to buy hi-fi.

Do not commit the cardinal sin of dashing into your local dealer, magazine in hand, demanding to purchase Best Buy CD player A,

Best Buy amplifier B and Best Buy speakers C. This is unlikely to result in your long-term satisfaction. Our belief at *Hi-Fi Choice* is that you must consider the hi-fi system as a complete entity, not as a collection of components. While a superb system might well contain Best Buy and Recommended components,

one cannot lump together Best Buys and Recommendations in the hope that they will automatically perform superbly. These ratings make a useful guideline for short-listing components worth trying, but only by hearing them for yourself can you draw meaningful conclusions about what suits your taste. Furthermore, don't panic if the dealer offers you equipment that we have not tested. At the end of the day, what matters most is that your hi-fi system fits your tastes like a glove, and it is the dealer's challenge to ensure your satisfaction by any means – and components – necessary!

HI-FI CHOICE

THE DIRECTORY

Amplifiers

he amplifier sits at the heart of the system, processing the outputs related. Some of the finest amplifiers available have outputs as low as the loudspeakers. These two (quite separate) functions are integrated into a single box at the low-to-middle price points; but become separated into preamps and power amplifiers. Even separate power supplies become increasingly common as one moves upmarket.

Bear in mind that output power and sound quality are not necessarily

from the various music sources as necessary and then driving 12 Watts, but team thern with high efficiency loudspeakers and you can achieve loudness aplenty.

Power output is equally no indication of sound quality.

KEY

LINE INPUTS: Amount of input sockets for non vinyl sources such as CD players, tuners and cassette decks. MM PHONO INPUT: If an amp has a vinyl phono input for moving magnet (normal output) cartridges.

MC PHONO INPUT: If an amp has a vinyl phono input for moving coil (low output) cartridges. REMOTE CONTROL: If amp is couch potato ready. HEADPHONE SOCKET: If an amp is can friendly.

POWER OUTPUT (W): Lab tested power output in Watts per channel. RECEIVER: If an amp has a built in radio tuner. FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback

information page. BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

INTEGDATED AMDI IEIEDS

INTEGRA						HENDRY POWER OUTPUT RECEIVER NUMBER NO INDIE SOUNDE SOCKET INDIE SOCKET						
Product	Price(£)	Comments	V	V	V	V	-	V				
Alchemist Maxim APD30A	299	Vivid and colourful sounding amp that's just too bold and brassy	5	•				30	1737	1		
MC 3050	220	Low-price NAD-alike amplifier that is polite and modest but rather wooden. Phono better than line	4	•	2		•	45	1738			
Arcam Alpha 8	350	Enjoyably soft-centred amp won't frighten the animals. Upgradeable via preamp output, and R/C (not supplied).	5	•			•	50				
Audio Innovations Alto	300	Probably because of a lack of deep bass, this stylish amp sounds open, natural and relaxed	6					35	1540)		
Audio Innovations S700	1,199	Turns the roughest of digital sounds into understated and graceful music	5					25				
Audio Note Ongaku	56,000	A single ended, zero negative feedback triode, line-level amplifier and a half. Probably the best amplifier in the world	3					26				
Audio Note Oto SE	1,500	Transparent, dynamic, clear and subtle, but limited power	4					24				
Audiolab 8000A	500	The 8000A remains a highly disciplined and mature sounding amp	5	•	•		•	60	1581			
Audiolab 8000S	650	Informative in every sense, only a slight lack of bite detracts. Perhaps Audiolab's best yet!	6			•	•	60	1740)		
Aura VA100 II	330	Big, smooth yet slightly disjointed sound was equally familiar	5	•			•	70	1541			
Copland CSA-14	1,099	Great sound and looks, but watch out for high capacitance cables	4	•				60	1416	;		
Creek 4240	279	Bearing no relation to earlier Creek designs, this radical rethink is more successful via MM than CD	4	•			•	40	1127	-		
Creek 4240SE	350	At best, bland and plodding, at worst grainy, shouty and honky. Best on simple rock	5				•	35	1741			
Denon PMA-350SE	200	Reinvented in the minimalist tradition, the new SE model is a control freak, but can sound wonderful	5				•	50		Ì		
Denon PMA-450SE	280	Based on the original '450 and offers a fast, furious and entertaining sound	5	•			•	60	1258	3		
Denon PMA-725R:	350	Warm, bold, up-front presentation but musically unexciting	5		•	•	•	97	1802			
Densen Beat B-100	600	Low feedback amp with passive internal preamp gives a bold, pacey and thoroughly involving sound. Phono option listed.	5	-				60				
DeVa 125	249	Subjectively loud this throws an unlikely quantity of music at the audience, bouncy sense of rhythm	6		-			20	1464	1		
OPA Renaissance	595	DPA's first integrated amp is typically innovative, but a little too 'crisp 'n dry' for our tastes	5	•			•	40	1582			
MF Audio Sequel	349	Relaxed and restrained design from Mike Creek	5		-	1		50	1302			
xposure XX Super	700	Rather transistorised, unexciting sound. Good coherence and rhythm. Best played loud	6		-			55	1743			
amma Acoustics Gemini	699	Genuine single-ended triode design, but low power, mundane sound and poor build	3				-	12	1416			
rundig Fine Arts V-11	160	Rhythmically dull. Never gets out of first gear	5	•	-		•	55	1803			
larman/Kardon HK610	200	North 2 1 1 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2	6			-		30	146			
Harman/Kardon HK620	250	Lively and friendly sound, but could prove too exciting for the faint hearted Capable and musical amplifier which is among the nicest available at the price. Optional add-in MM/MC board available.	6	-	-	•		40	140			
	300		7			-	-	40	1804			
Harman Kardon HK1200	1000	Big sound with little bite. Becomes confused with complex music	5		•	-	-	40	1011			
Harman/Kardon HK1400	400	Relaxed, confident sound is only troubled by the most dense of recordings.	6	•	-		•	40 55				
Harman/Kardon HK640	450	Breezy, nimble sounding amp lacks grip and fortitude - it can sound artificial and insubstantial	0.7	-	-	-	-	BURK B	1542			
ohn Shearne Phase 2	649	Either a natural-sounding superstar or nasal and hard to listen to — make up your own mind!	5		-			50	1744			
IVC AX-V4	200	Respectable performance for a Pro-Logic AV amplifier. Lacks resolution and sparkle, though	5	•		•	•	63	1805			
VC AX-R5	200	Versatile, and lots of even-handed, articulate detail; but let down by superficiality	5	•	-	•	•	45	1466			
Kenwood KA-3020SE	200	Not a brilliant phono stage, but this is a lively, exuberant sounding amp via CD	5	•			•	50	1130			
Kenwood KA-3060R	230	Classy engineering, but sound is over-dry, often frustratingly restrained and rather unsophisticated	5	•	-	•	•	45	1260			
Kenwood KA-5050R	350	A listenable but neither particularly communicative nor captivating amplifier	5	•		•	•	95	1012			
Kenwood KA-7090R	400	Power with responsibility here, but the Kenwood can sound lean and lacks transparency	6	•	•	-	•	85	150			
FD Integrated Zero	499	Lively and brisk, but at the same time cold and unsympathetic	6		-			50	1584			
inn Majik-I (Phono)	725	The cornerstone of Linn's modular hi-fi system is innovative, but sounds vague and confused	5	•	•	-	•	33	1013			
Magnum IA170	270	Gives a realistic sense of instruments playing within a very believable acoustic, preserves colour & dynamics well	6			-	•	96	126			
Magnum Quartet	329	An integrated model that incorporates four monoblocks optimised for bi-wiring, but sound is sandy in the treble	5	•			•	36				
Magnum IA-200	465	Sweet, valve -flavoured solid state amplifier flatters where it doesn't cast light. Note: power output listed is peak	7		-		1	100				
Magnum Class A	599	Lashings of rich and compelling music, but the Class A trades lushness for accuracy.	4	•	•			60				
Minium Amp	350	Excellent musical performance but doesn't like high levels or low impedance speakers	6	•		•	•	100000000	1806			
Mission Cyrus IIIi	600	Beautifully presented, but mid-dominated balance and other anomalies were not liked on test. Upgradeable using PSX unit	Marco-	۲		•		50				
Musical Fidelity E10	300	Smooth and high-endish sound that is marred by a lack of dynamics and a touch of grain	5	•			•	40	1746			
Musical Fidelity A2	499	Lucid, transparent midband and a full upper bass are provided by this highly proficient A1 replacement	5	•				25				
Ayryad MI 120	530	Despite an ultra-modern appearance, the old-fashioned cold, dry transistor sound	5			•	•	60	1747			
VAD 310	100	Fleet and sure of foot, it seems likely to set all appendages tapping with itsblend of enthusiasm and artfulness	5				Sec.	20	146			
NAD 314	260	Lively if coloured presentation that is musically engaging and easy on the ear	6	•		1	•	53	180			
Naim Nait 3	550	Distinctive and highly musical sounding integrated. Perhaps too distinctive for sme tastes	5					30	1748	i		
Dnix OA31	480	Eager to please, dynamic and fresh sounding, but it's grip is wafer thin	5	•	•		•	60	1587			
Orelle SA-100	449	A musically rewarding amplifier that grows on you. Trace of coarseness in treble	5					50	1749			
Pioneer A-300R	200	Its bright and breezy sound is a natural tonic to those of use worn down by the ongoing stress of life	5	•		٠	٠	50	1469			
Pioneer A-303R	200	Fresh and uncomplicated sound bests much of the audiophile competition	5				•	45	112	ļ

Cables

ables are not accessories, but an integral part of a system. Inevitably some cables are better than others. The best cable for your system will only be found through trial and error, but by combining our recommendations with those of a dealer, you will end up with something suitable. Generally speaking, budget to spend about ten per cent of the total system cost on cables.

Analogue interconnects are the leads that connect source components to amplifiers and pre to power amps. The cables in this section are priced for a one-metre terminated pair.

■ Digital interconnects connect CD transports to DACs, and are traditionally coaxial with a 75 Ohm impedance. They come in optical and electrical varieties, the former being made of plastic or glass. The prices shown are for a terminated linear metre.

Speaker cables are used between the amplifier and speaker. Our prices are per unterminated metre. Termination (plugs and soldering) costs vary with brands.

KEY

SYMMETRICAL: A twisted pair of conductors. COAVIAL: A central 'hot' conductor and a shield that carries the negative signal. STRANDED: Multiple strands with no intervening insulation.

SOLID CORE: single or multiple individually insulated strands. COPPER: Material used for conductor. SILVER: Material used for conductor. DIG CABLE TYPE: 0 - optical digital, E - electrical digital.

FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback information page.

BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

Tara Labs Quantum CD	75	Lacking in obvious vices, neutral and transparent, there's also a good solid bass. Vox are not always as intimate as possible							1700	
fara Labs Prism 33	90	A pedestrian cable that sounds lively but muddled. Quite dynamic, quite rich, quite smooth but also quite indistinct	-	•					1700)
Fransparent Audio Music Link		No aggressive nasties to tax the ears, neither does it sparkle with inspirational detail. Only suited to low output impedances			•	-			1701	-
an den Hul The Storm	25	Price for 0.8m length. Rich and warm but bass is rolled off, however there's plenty of drive and high frequencies are clean							1701	-
van den Hul Source HB	50	(Priced for 0.8m) Hybrid carbon-fibre/copper cable that is a paragon of naturalness. Airy and well controlled	1			-			1701	
van den Hul The First	210	Using 12,000 carbon fibres, a gentle and subtle sounding cable that conveys codles of information but lacks dynamic punch							1702	-
van den Hul The Second	225	Wonderfully open and relaxing but also intimately detailed, slightly softens percussive dynamics	•		-	-		•	1702	-
LO Type 150	50		-				•	-	-	-
		A restrained but useful cable for taming lively CD players, dynamics lack freedom, treble lacks clarity		-	-		-		1703	
(LO Type 0.1	180	Unusual but highly expressive and detailed with a hint of graininess on powerful vocals				•	•		1703	1
Digital Interconnects	110			No.			10000		1704	
Audio Note AN-V	110	Ostensibly an analogue cable but gives a meaty and natural performance when used for digital duty	•			•		•		
Audioquest Video X	40	A decent level of detail, imparts a gentle lift from vocal to high treble that can sound a little splashy		•		•	•	B122 - 200	E 1705	-
Audioquest Video Z	60	The very best available, with an expressive sound, but generously priced	•	•	•	•	•	Received and		_
ludioquest Optilink Z	120	Good level of midband detail but frequency extremes lack depth and extension						(Contraction of the	
udioquest Digital Pro	100	A silver cable with all the drive of Video Z but lacking its clear cut transparency		•	•		1 Sec	F	11. Barrier	
Bandridge AL4900G	40	Lacks deep rounded bass and treble is coloured with a spittiness, a little rough and ready			•		•	E		-
Chord Codac	32	A connection with a stranded inner core and a sound that lacks integration		•	•			• 6		
Chord Prodac	50	Price for 0.6m length. Lively detailed treble, drives music along confidently with no hint of fizz		٠		•	•	H	E 1706	5
OPA Opti-link	20	Very similar to Bandridge AL560; sound is lacklustre						(1	
DPA Digi-link	28	Can seem slightly impassive but there's no avoiding its exceptionally detailed sound			•		•	1		
xos 105	25	Extended but soft edged treble that's mercifully free of fatigueing colourations, plenty of weight, smooth vox		•		•	•	E	1707	1
limber Kable Opti-link	70	Hardly cheap for what appears to be a bog-standard PMNA fibre, yet it sounds a little brighter and livelier than most						(
FD Digilink Copper	30	Slightly grainy highly compatible cable with coherent and forward dynamic quality		•		•	•	E	Contraction of the second	
Aonster Interlink LS100	45	Well constructed stepped-index fibre with polished ends and connectors. Lean, fuzzy, engaging performance						(COLUMN T	
Aonster Datalink 100	45	Price for 0.5m. A colourful coaxial interconnect with an equally colourful and up-beat sound. Very compatible		•			•	E		
	140	A thin, coaxial version of Leyline Black with a rather hard and unforgiving character. Too expensive				•		E	and the second second	
ED Digiflex	20	A top perforance, low-loss 75ohm coax with a very open, almost liquid quality		-				ł		
	150	Sounds detailed, very clean and very extended, but bass is less well resolved - a treat for high end systems					-	• E	and the second	- 1
onicLink Green	60		-	-	-	-			Contraction of the second	
an den Hul MC Videolink 75		Spacious, positive and engaging if a tad over crisp at times, ve y compelling however				-	-			
City and the second		An AV-cum-digital cable that nearly beats QED's Digiflex, but emphasises sibilants		-	-	-	-	E		
an den Hul The First	120	Exceptionally natural albeit slightly dark or cautious compared to some, plenty of subtle information and beautiful integration		•	•			E	E 1710	
Loudpeaker Cables										
	4.50	Supplied in linear, non-polarised lengths that should be twisted into stereo pairs. Sounds rather grippy and forward		_		•	•			
	16.50				•		•		1711	
	29.50	Fruity bass and expressive vocal rendition was appreciated by the panel which was happy to accept its foibles	٠			•		•	1712	
******	125	A calm and civilised presentation, very quiet in the way it reveals subtle low level detail. Great poise and clarity	٠			•		•		
	1.95	Ideal for laying under carpets, F-14 encourages a slightly warm and vibrant sound				•	•			
udioquest Type 4	4.95	Four 18-gauge OFHC copper conductors wound in a Litz-type fashion increases capacitance but restrains the cable's 'bite'	•		•		•			
udioquest Cobalt 2	45	A rather polite and aneamic sound that bubbles gently with detail and is largely uncoloured and cautiously spacious	•		•		•			
andridge SF LC1070	42p	Basic figure 8 bellwire, lightweight balance and a softness that dilutes even the strongest bass	•		•		•		1713	
andridge SF LC1259	1	Fresh and open, bubbly and naturally colourful soundstage that's neither forced or unduly edgy. Treble is slightly messy			•		•		1713	
andridge Highflex LC2604	3.50	Substantial 6mm ² conductor produces weighty but ploddy music that lacks transparency	•		•		•		1714	
andridge LC7409	3.85	Detailed and up-beat cable. A bit too steely for classical strings	1		•		•		1800	
	4.25	Smooth and cultured sound that lacks fine detail and is a bit too restrained					•		1800	
	5.95	High impedance can influence the treble response, but this was a winner on sound per pound. Bi-wire					•		1716	- 5
PA Black Sixteen	90	Unflappable resolution of fine musical details, there's no dampening of dynamics simply oodles of taut information	•			-		•	1710	
ale XL315	2	A little lacking in detail but plenty of life and excellent value			•		-		1/1/	
Construction of the second s	2.50									1
		Rhythmic and bouncy sounding bi-wire cable. Slightly manipulative sounding	-		-	-	•		1800	
eybrook Heywire	4	This well-meaning facsimile of earlier ribbon cables ends up sounding lumpy and uneven		-		-	-			
kos 603	2	Big and expansive sounding cable, full and engaging while retaining a high degree of neutrality	100 million (1990)				•		1718

Product F	rice(£) Comments			V	VV		ISSUE NUI NUMBER	
Mission Quartet	7.90	Mixed, inoffensive sound, adds gutteral resonance to vocals and could be generally more coherent. Bi-wire				• •		1722	1
Monster Cable XP	1.50	XP offers plenty of slightly soft bass and a slightly rounded treble, a relaxed cable whose indiscretions are not bothersome		•	•	•		1723	1
Naim NACA 5	5.11	Described as a 'dinosaur of a cable', this stiff wire rod doesn't belong outside Naim systems. But it works a treat in them			•	•			1
Ortofon SPK100	3	Grey sounding and strips instruments of their natural richness and resonance, a bit bass shy too			•	•			1
Ortofon SPK300	8	Tremendously open and atmospheric with robust full blooded bass, and dynamic too if slightly bright at times				• •			1
Puresonic 7845	1.95	Big, weighty sound — but too messy and bloated for its own good			•	•		1800	1
Puresonic 7891	2.85	Chunky cable design, shame about the sound quality			•	•		1800	and a second
QED Qudos	2.50	Despite high tech design and excellent Air-Loc plugs, the music failed to gel			•	•		1800	
QED Profile 8	5	Sophisticated flat cable that lacks decent bass and get up and go			•	•		1800	-
SonicLink AST50	1.95	It may look like bell-wire, but AST50 sounds detailed, ordered and balanced			•	•		1800	
Tara Labs Rectangular SCM	725	Price for terminated 2m pair. Dynamics are exquisite, luxurious smooth sound, brimming with unforced detail				• •		1725	
Transparent Audio Musichord	11.42	Sweet, open and refined treble, a bit of breathy exuberance and can sound slightly lackadaisical			•	•		1728	
Transparent Audio Wave	22.84	Very close to the sound of 'no cable', one of the very best. Slightly softens treble detail		•	•	•		1728	
Tech+Link OFC79	1	Bargain basement cable that sounds cosy, but suffers from a wobbly bass			•	•		1800	
van den Hul The Clearwater	6	Despite its evocative title, the Clearwater turns out to be a disappointingly murky sounding cable			•	•	•		
van den Hul CS122	19	Smooth and articulate with superb focus and control, its sheer coherence makes it a winner (tested in Sessions)			•	•	•		
van den Hul The Magnum	31	Touted as vdH's most prestigious twinlead cable, Magnum sounds soft and old fashioned			•	•	•		
van den Hul The Wind	35	'The Wind' kicks up a storm with its lush midrange and bone-crunching bass!			•	•			
van den Hul Revolution	64	Silver plated OFC combined with carbon fibre prompts a sombre character with an easy and relaxed treble			•	•	•	1726	
XLO Pro Type 625	4	Lively but natural and relaxed sounding but a hint of congestion at frequency extremes	8		•	•	•	1726	

Cartridges

artridges fall into two groups: high output MM (moving magnet) models, capable of working directly into most phono inputs; and generally more expensive low and very low output MC (moving coil) models. MC cartridges usually have better mechanical integrity, tighter tolerances and give better performance. Many amplifiers are no longer equipped with the necessary phono input for a cartridge, and a separate phono stage is necessary. Phono input equipped valve designs need a

transformer to cope with MC cartridges.

Cartridge/amplifier interfacing can be very subtle, but even basic high output MM designs benefit in overall balance from optimised amplifier capacitance loading.

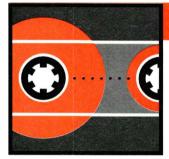

KEY MM: Moving magnet carbridge with a normal output suitable for all sensitivity vinyl disc amplifier inputs OUTPUT (MV): Cartridge output in millivolts. copy of the review vinyl disc amplifier inputs. REPLACEABLE STYLUS: Most MM cartridges have a stylus that MASS (g):Cartridge mass can affect arm choice. BACK ISSUE: The issue of Hi-Fi Choice in which the original re MC: Moving coil cartridge with a low output only suitable for high can be removed and replaced FACTSBACK NUMBER: The Factsback reference for ordering a fax appeared. REPLACEAL

Product	Price(£)	Comment	a salar		V	V	$\mathbf{\nabla}$	V	V
Arcam C77	30	A sensible moving magnet package with good bounce at a competitive price.				•	4.0	6	48
Arcam C77MG	40	Punchy, with plenty of energy to liven things up. The solid body is well worth the extra £10.		•		•	4.0	6	67
Arcam E77MG	60	Our sample had a disappointing stylus, but gave a coherent, rich and laid back sound.		•		•	4.0	6	48
Arcam P77MG	73	Preferred to its cheaper partner thanks to a better tip. Channel balance poor		•		•	4.0		48
Audio Note lo IIV	1,395	One of the best, giving an extraordinarily relaxing midrange clarity. Needs a transformer.			•		0.1		100
Audio Technica AT-95E	19	Clear and dynamic, though richly balanced.		•		•	2.8		48
Audio Technica ART-1	944	This is a delicate and very fluid-sounding MC that tracks well.			٠		0.4	9	7:
Audioquest 404L	599	Slight harshness detracted from the performance of this otherwise clear-sounding and detailed cartridge.			•		0.5	6	8
Audioquest 7000NSX	1,495	Stunning stereo imaging and detail spoiled by poor tracking and high sensitivity to arms.			•		0.4	6	9
Denon DL110	70	A fine all-rounder, this high output MC model is likely to perform well			•		1.0	6	4
Denon DL160	90	Although listeners just preferred the 110, its brother here survived lab tests and is still 'thoroughly competent'.			•		0.1	6	4
Denon DL103	100	Good performance in bass and good 'life' is seriously let down by its spherical stylus which kills subtle setail.			•		0.1	6	10
Denon DL304	200	Uncoloured, detailed, tracks superbly. Top notch altogether and a top notch bargain too.			•				10
Dynavector Karat 17D2 mk	4 49	Clean and controlled sound with taut, tuneful bass. Detailed and musically cogent.			•	1	0.15	5.3	158
Dynavector XX-1L	998	Very clear, very detailed; a response lift around 20kHz seems to do no harm.			•		0.25	12	8
Dynavector XX-1	998	Good, but not immensely competitive at the price, and not helped by comparison with the low output version.			•		2.0	12	8
Goldring Elan	17	A lightweight and frisky-sounding MM apparently based on Nagaoka MM4 body		•		•	5.0	7	6
Goldring 1012GX	65	Slightly harsh but plenty of life and detail. Some high frequency colouration apparent.		•		•	6.5	7	8
Goldring 1022GX	85	As with 1012, a touch harsh; detail and transient purity improved		•		•	6.5	7	8
Goldring Eroica LX	100	Not the most subtle cartridge in the world: can sound edgy at times, but lively and informative.			•		0.5	8	8
Goldring 1042	105	Not terribly subtle, and not such good value alongside 1012 and 1022. Quite lively though.		•		•	6.5	6	9
Goldring Elite	200	The basics are right, and it will cheerfully tackle any source material, but its sound has a certain dirtiness.			•		0.5	8	10
Grado Prestige Gold	150	Rich sounding with an unusually refined top-end for a moving magnet-type cartridge		•			4	6	15
Linn K5	65	Not as crisply focussed as the othe Linn magnetics, but the K5 is smoother.		•		•	4.5	6	6
Linn K9	150	Linn improved this model by beefing up the Basik's bodywork and adding a super stylus.		•		•	4.5	5	Ci
London Decca Maroon	199	Now manufactured under the London brand name, this Decca cartridge is as iconclastic as ever.		•			5.0	6	6
London Decca S Gold	339	Immediate and detailed, but coloured, nonlinear with a questionable effect on records.		•			5.0	6	84
Lyra Lydian	699	Superbly capable all-round musical performer that improves markedly when its body cover is removed			•		0.3	7	158

RED

CARTRID	Clavis Da Capo 1,069 A stable tracker, and one of the finest cartridges we've heard kk Aurora 299 An overall feeling of relaxed ease characterised this clear and atmospheric Kiseki-built cartridge. an 510/P 32 For the price, a good blend of virtues - weight, clarity and neutrality on 520/P 55 Sensitive to load capacitance, the 520/P has a lively, effervescent sound. on MC10 Super 85 'What a delightfully sweet-sounding cartridge this is' we said. on MC3 Turbo 110 The 3 Turbo is bright, cheerful and bouncy, but unsubtle - take it as it comes. on MC35 Super II 110 A good all-rounder, with outstanding resolution, if slightly bright and clos up. on MC25E 160 An excellent upgrade for a mid-price turntable on MC30 Supreme 450 Highly detailed and even-sounding cartridge that has a special affinity with female vocal recordings on MC300II 950 A real eye-opener. Nothing to criticise anywhere, one of the very best. on MC5000 1,500 Limited tracking abiity, bright and forward sound, but good stereo Bias 34 Difficult to mount in some arms due to its shallow build, the Bias offers a gentle, refined sound. Elys 74 Clearly superior to the Bias, the Elys is both more detailed, accurate and convincing. <th>ABLE STV</th> <th>FAXE UTPUT MA US (MV)</th> <th>ACK NUL SS (g)</th> <th>SUE NUMBER</th>				ABLE STV	FAXE UTPUT MA US (MV)	ACK NUL SS (g)	SUE NUMBER

Ortofon MC25E	160	An excellent upgrade for a mid-price turntable			•	0.5	11	139
Ortofon MC25FL	210	A bit too stark and honest, but faithful to what's on the LP			•	0.5	11	139
Ortofon MC30 Supreme	450	Highly detailed and even-sounding cartridge that has a special affinity with female vocal recordings			•	0.5	10.7	158
Ortofon MC3000II	950	A real eye-opener. Nothing to criticise anywhere, one of the very best.			•	0.12	10	84
Ortofon MC5000	1,500	Limited tracking abiity, bright and forward sound, but good stereo			•	0.12	10	91
Rega Bias	34	Difficult to mount in some arms due to its shallow build, the Bias offers a gentle, refined sound.		•		• 5	4	67
Rega Elys	74	Clearly superior to the Bias, the Elys is both more detailed, accurate and convincing.		٠		• 5.0	5	67
Roksan Corus Black	130	Recognisably related to the Corus Blue, but more civilised and smoother.		٠		6.5	5	91
van den Hul MM-1	250	If woody midrange could be tamed, imaging and security would pull it through		٠		• 5.5	6	103
van den Hul DDT	699	Outstanding stereo imaging and neutral balance are appealing but rhythmically the DDT-II is a bit lazy			•	0.35	7.6	158
van den Hul MC-10	799	A neutral, balanced performer gives, fine depth and focus and a firm, extended bass			•	0.4	6	60
van den Hul MC-One	999	This extended all the positive qualities of the '10, but added greater authority and scale - worth all the extra money.			•	0.4	6	60
van den Hul MC-Two	1,349	MC-Two rewards with a highly deailed yet fluid and musically covincing portrayal.			•	0.4	6	72
van den Hul G' hopper IIIGLA	2,999	Undoubtedly one of the finest cartridges available, it has tremendous bandwidth, energy and finesse.			•	0.4	6	122
Wilson benesch Matrix	689	Extraordinarily well balanced cartridge: neutral and detailed yet lively and rhythmically assertive.			•	0.58	6	158

Cassette Decks

he compact cassette is still the world's most versatile and ubiquitous music storage medium. Buffs may wrinkle their noses, but they all use it.

There should be no problems in connecting a cassette deck to any normal amplifier, but some care needs to be taken in choosing the best tapes for a specific machine. (Trial and error is one effective technique, but many decks have manual bias adjustment and some match up to the tape automatically.) Twin decks offer the option to dub tapes and play two cassettes sequentially. Autoreverse is a useful feature, but usually implies some mechanical compromise. The sort of facilities that are useful include tape monitor switching and Dolby S.

appeared.

KEY

DOLBY C: A rather extreme noise reduction system not usually ciated with high sound quality. DOLBY S: A desirable derivative of the Dolby SR professional ise reduction system. DOLBY HX PRO: System designed by B&O to extend headroom

for cassette recording. 3-HEAD: If you want to monitor a recording whilst you are

making it a third head is essential. TWIN DECK: Contains two decks for dubbing and continuous play, in most instances only one deck will record.

AUTOREVERSE: Automatically plays both sides of the cassette. AUTO CALIBRATION: The deck will automatically set up bias and EQ forany tape. ADJUSTABLE BIAS: Bias can be manually set to suit the tape being used.

.

CD Players brought to you in association with

II CD players offer a basic selection of facilities, and some can keep you entertained for hours as you programme in disc names and track orders. All but the excessively inexpensive feature remote control. Most CD players can be upgraded by adding an outboard DAC (see below). To do this the player needs a digital output of either electrical or optical persuasioh; sonically the former is preferable.

A CD player can be split into two basic components: the disc drive or

transport, and a device which turns the digital bitstream coming off the disc into an analogue audio signal. This is called a digital to analogue convertor, or DAC. Although most players are contained in a single box, expensive players are usually two-box affairs.

KEY

ELECTRICAL DIGITAL OUTPUT: For electrical connection to an outboard DAC. AES/EBU ELEC DIG OUTPUT: Balanced digital output to be used with similarly equipped DACs. OPTICAL DIGITAL OUTPUT: For optical connection to an outboard DAC.

D DI AVEDS

AT&T OPT DIG OUTPUT: High speed optical output to be used with similarly equipped DACs. BAL ANALOGUE OUTPUT: Balanced analogue output for amplifiers equipped with balanced inputs. HEADPHONE SOCKET: For can users. VARABLE OUTPUT: Remotely adjustable volume controlled

output. MULTI-DISC: Equipped with a carousel or multi-tray system for continuous play of multiple discs. DAC TYPE: Digital to analogue convertor: BS - Philips Bitstream, MB - multibit, Hyb - hybrid of multibit and bitstream technologies, 1bit - single bit types such as MASH, bitstream, PWM etc FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Digital Recorders

igital recorders come in a variety of different guises, but have yet to make much of an impact on the domestic market. At present there are four types to choose from: DAT (digital audio tape), MD (Mini Disc), and DCC (digital compact cassette) and CD-R (CD Recordable). DCC is backwards compatible inasmuch as the machines can play regular audio cassette. MD's claim to fame is its optical disc format, which offers instant track access and can't be worn out like a tape. DAT has been on the market for quite some time now, but has never

really 'made it' as a consumer medium due to the dearth of pre-recorded material. However it has begun to carve itself a niche in the top end of the market, replacing reel-to-reel as the audiophile's tape based medium. Home CD-R is coming into its own with Pioneer's *PD-R05* machine attempting to set a trend.

KEY

FORMAT: Type of recorder, see above for descriptions. DAC TYPE: Digital to analogue convertor: BS - Philips Bitstream, MB - multibit, Hyb - hybrid of multibit and bitstream technologies, 1bit - single bit types such as MASH, bitstream, PWM etc.

ADC TYPE: Analogue to digital convertor types a sper DACs. PORTABLE: Can be run off batteries but not necessarily personal stereo size: OPTICAL INFOURTPUTS: Digital socketry for optical cable.

ELECTRICAL INVOLTPUTS: Digital socketry for electrical cable. FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback information page. BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

Brought to you in association with Headphones

here are a variety of different approaches to headphone design. Among the more expensive models, electrostatic drivers are used in open-backed phones. Most models feature dynamic (moving coil) drivers in circular, open or closed-back designs. The advantage of open backs seems to be a correspondingly open sound, but one can also hear external noise, of course. Closed-back designs are useful in situations where it is necessary to block out noise.

There are three styles of headphone: circumaural models enclose the ear; supra-aural designs feature a flat pad which presses on the outer ear; and intra-aurals (in-ear) rest inside the ear itself, à la personal stereos. For best results a separate headphone amplifier is recommended.

Pioneer D-07

Pioneer PDR-05

Pioneer D-C88

Sharp MD-M11

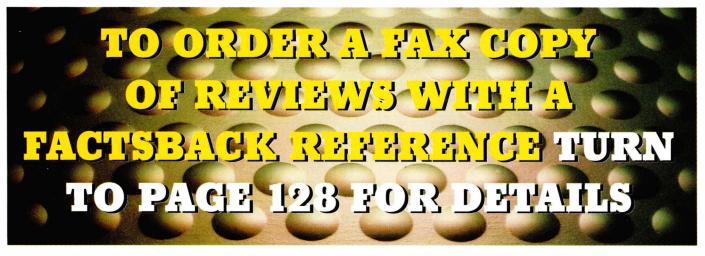

Sony MDA-JA3ES

TYPE: Operating principle: D - dynamic, E - electrostatic. SUPRA-AURAL: Style where a flat pad presses on the outer ear. AURAL: Style which encloses the ear. OPEN BACK: Offers an open sound but lets in noise.

CLOSED BACK: Keeps out external noise. WEIGHT (G): Mass in grams IMPEDANCE (Ω): Load offered to the headphone amplifier. The higher the impedance the louder the sound for a given amplifier output. 3.5MM JACK ADAPTOR: Can be used with mini-jack-equipped components such as personal stereos. Hi-Fi Loudspeakers

s the last item in the hi-fi chain, the loudspeaker is merely the slave of what has gone before; it is only as good as the signal it is fed. Nevertheless, the distortions introduced by loudspeakers (and rooms) tend to be the most obvious.

The average loudspeaker consists of an enclosure plus a couple of drive units behind a removable grille. Inside the box lurks a simple electrical circuit known as a crossover, which divides the incoming (full range) signal into the right bits for the drivers to handle. The designer's primary task is to balance the 'sensitivity' of the loudspeaker (how loud it goes for a given electrical input) against the bass extension (how low it goes), for the given box size.

Subwoofers augment the bass and come in passive and amplified active form, they are less sensitive to placement than regular speakers.

KEY

SIZE WoldbD (cm): Width by height by depth in centimetres. FLOORSTANDER: As opposed to requiring a dedicated stand. SENSITIVITY (dB/W): Efficiency: how much volume you get for a given input; the higher the louder. INPEDANCE (Ω): Measured in Ohms impedance it is a measure of how hard a loudspeaker is to drive: the lower the number the more powerful the amplifier needs to be. BASS FROM (Hz): The lowest frequency that a speaker can reproduce, based on in-room measurements. FREE SPACE: Speakers should be placed away from walls. CLOSE TO WALL: It is recommended that these speakers be placed close (between 3 and 12cm) to the rear wall. FACTSBACK NUMBER: The reference for ordering a fax copy of the review. Use the contents page to find the Factsback page. BACK ISSUE: The issue of Hi-Fi Choice in which the original review appeared.

Stands & Supports

i-fi furniture is more important than you might imagine. The effect it can have on the sound of your system is far from subtle. Hi-fi furniture can be split up into two categories — equipment supports and loudspeaker stands.

It is not entirely clear what makes a great equipment support, but some are definitely more equal than others. There's a variety of approaches and materials used, including particle board, glass and all manner of steel tube and section.

Speaker stands come in a variety of sizes and styles to suit different models. Use dealer or manufacturer recommendations to narrow down the choice, but as a rule you want the tweeter at ear height.

TOP PLATE SIZE (CM): Dimensions of top plate on speaker shand WELDED: The better stands and supports are welded rather than or equipment support. SHELF TYPE: Material that shelves are made of on an equipment rack. Wood generally means MDF. BACK ISSUE: The issue of Hi-Fi Choice in which the	KEY

Tonearms

umtables at the cheaper end of the market tend to be supplied with a matching tonearm, and often include a 'starter' cartridge. Still better quality is found at higher prices among the separate motor units and tonearms. Careful partnering and set-up is essential for these components.

Although the turntable is the most important part of a record player, the tonearm is the second most important, and the quality of

its construction and design have a significant bearing on sound quality.

There are three basic types of arms listed in the key and each has its

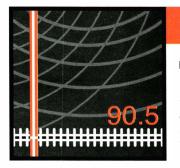

strengths, but pivoted designs are the most popular, for reasons both

Alphason HR100S	Price(£) 490	Comments S-shaped arm sounds smooth, but nevertheless reproduces transients with fine attack.	Medium		•	22	9		86
Kuzma Stogi Ref	1,000	Large, solid and well made arm, gives exceptionally clear sound with just a hint of brightness.	High		•		•		79
Linn Ekos	1,297	Superb, state of the art design which builds significantly on predecessor's strengths.	Medium		•	22	9 🔸		6
Moth Arm	- 95	The ultimate budget arm? Refined, sweet, detailed and natural.	Low		•	23	7		60
Rega RB300	139	Despite its modest price it sets exceptional standards and could be used on many high end turntables.	Low			23	7		60
Roksan Tabriz Basic	275	Targetted at the Xerxes, this is a good alternative to the Rega arm in many cases - a touch bright though.	Low		•	24	0 🔴		91
SME Series 300-309	657	Beautifully made and finished: fully adjustable and a highly neutral performer.	Low		•	23	8 🔴		79
SME Series IV	936	Superb engineering and finish with a finely balanced sound, impressive stereo focus and low colouration.	Low		•	23	3 🔴		60
SME Series V	1,391	Excellent in all respects, this arm arguably sets the standards for pivoted arms, regardless of price.	Low		•	23	3 🔴		60

Tuners

he radio medium operates at a lower profile than TV, but in areas outside pop music the BBC service is the envy of the world. Live concerts rival all other sources from a hi-fi perspective.

Though tuners might seem something of a hi-fi afterthought, the task they discharge is far from simple, since it requires the skills of RF (reception) and audio (signal processing) engineering. The importance of the former will depend on reception conditions, but a high-quality aerial system is

well worth having. Tuners come in two basic types. Analogue models tune gradually and can have analogue or digital displays; they are often preferred for sound quality. Digital tuners offer convenient automatic tune facilities and pre-set memories.

See

KEY

WAVEBANDS: Only the FM (VHF) bands give stereo hi-fi sound, though AM (MW & LW) are useful for receiving certain transmissions in the UK. PRESETS: Number of station frequencies that can be stored.

RDS: (radio data system) was originally designed for in-car

applications. Basically RDS tuners can identify and display the name of the radio station being received, but they offer a variety of other features as well. **REMOTE CONTROL:** Couch-potato friendly. SIGNAL STRENGTH METER: Indicates strength of signal from

aerial, useful for aligning your 'twig' during installation ROTARY TUNING KNOB: The ergonomically attractive approach to dial-surfing FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page

Turntables

pecialist turntables are what high fidelity sound is all about. CD players may offer silent backrounds and flat frequency responses, but they can't match the dynamics and superlative timing that serious turntable users take for granted. Turntables at the cheaper end of the market tend to be supplied with a matching tonearm, and often include a 'starter' cartridge. Still better quality is found at higher prices among the separate motor units

and tonearms. Careful partnering and set-up is essential for these components, but many so-called 'sympathetic' combinations exist.

Because turntables are mechanical devices that are designed to retrieve modulations as small as a micron, engineering quality is of paramount importance. It is also the reason why turntables cost as much as they do, and require high quality support systems.

KEY

MANUAL: You do it all: put the needle on the record and tale it off. AUTO: The record player does it all. SEMI-AUTO: You share the work: you put it on, it tales it off. SPEEDS: In PRM to correspond with your platters. SUSPENDED SUBCHASSIS: Sprung suspension to minimise structural interference. EXTERNAL PSU: Outboard power supply; generally it indicates high quality. SUPPLIED WITH ARM: Many turntables require a separate arm to be fitted: if not, this tells you so. SUPPLIED WITH CARTRIDGE: Most turntables do not come supplied with a needle. FACTSBACK NUMBER: The Factsback reference for ordering a fax copy of the review. Use the contents page to find the Factsback information page.

State of the state	Price(£					VV		
Alphason Sonata	835	Good sound in all areas - bass, clarity and neutrality all in top class (tested with HR100S MCS).			33	••	•	1328 1
Clearaudio Reference	2,500	Opulent beast tested with Souther TQ-1 arm. Tends to gloss over detail with a fizzy character but is quite bold			33/45			
DNM Rota 2	4,800	Tonally slightly bleached, but extracts detail like few others. Works well on own table	-	,	33/45			1328 1
Dual CS503-2	170	Coarse and woolly sound - not inoffensive, but bettered by the CS-505-3.	-		33/45	•	•	
Dual 505-4 UK	200	Consistent sounding and well isolated turntable. It is slightly lacking in oomph.			33/45	•	•	
Kezma Stebi/PS	1,200	(Tested with Stogi Reference) Solid oak plinth; sound is very clear, detailed and extended.	•		33/45	••	•	
Linn LP12 Basik	1,050	Trails the full LP12 significantly, but pace, rhythm, timing etc still top rank	•	•	33	•	•	
Lina LP12 Lingo	1,750	The classic reference is improved by the Lingo, but charming character remains.	•		33/45	••		-
Michell Gyrodek	765	Sweet and natural sounding player, well matched to Rega RB300 arm			33/45	••		
Notts Analogue Spacedeck/Arn		No frills, just a first rate, outstandingly natural sounding deck that will last forever.			33/45		•	
Pink Triangle Anniversary	1,980	Possibly the most detailed, clear and neutral sounding deck around. Likeness to master tape is uncanny.	•	1	33/45	• •		
Pro-ject 6/Sumiko	699	Don't think of this as a mid price deck with a good arm, but as a scaled down Oracle Delphi - it's that good	•		33/45	••	•	
Rega Planar 2	214	A remarkable product at the price, surprisingly articulate and confident	•		33/45		•	
Rega Planar 3	274	The '3 (with RB300 arm) sounds musical in a balanced and coherent manner, needs decent isolation	•		33/45		•	
Rega Planar 9	1,598	Featuring the RB900 arm and a ceramic plinth this deck puts Rega into contention with the best decks available			33/45	•		
Reson RS1	675	Supplied set-up and ready-tuned, this unconventional deck is packed with mid-band detail.	•		33/45	•	•	
Rivelin Eclipse	1,100	Tested with SME 309. Tends to simply things and add a slightly ragged edge to the proceedings			33/45			1328
Roksan Radius 3/Tabriz zi	890	Elegant looking turntable with a tidy, ordered sound. Bright and breezy if a shade lightweight.			33/45	• •		
SME Model 20A	4,631	Supplied with Series V arm. Engineered to last a lifetime, giving excellent stereo and detail retrieval.		e de la	33/45/78	••	•	
Systemdek 1/920/Moth	235	The motor is derivative of the Rega Planar 2 with a Moth arm. Uptempo, even bright at times but never lacks enthusiasm			33/45	•	•	
Systemdek 2X2	499	Neutral, flexible and dynamic deck that begs to be used with a good arm and cartridge.			33/45	•		
Thorens TD166 VI/UK/RB	300	Refined and solid sound with well focussed imagery; suitable for use with good MM and budget MC cartridges.			33/45	•	•	
Thorens TD2001	700	Balances convenience and sound well, but deck lacks detail and bass could be better controlled			33/45	•	•	
Thorens TD3001/UK	770	Excellent middle ranking esoterica, with strong all-round abilities rather than excellence in particular areas.			33/45	•	•	
Voyd 0.5	3,940	Cross between standard and Reference Voyds. Superb finish, colourful and dynamic.			33/45	• •		1328
Voyd Reference	6,962	Voyd's flagship, equipped with three substatial motors, is a strong contender for world's best.			33/45	• •		
	1.800	Intriguing and challenging. Musically it is not ideal, but has a limpid quality and a lack of artificiality that sets standards.			33/45			1180

ver wanted to look back at a *Hi-Fi Choice* review or needed some sound independent advice to make up that 'Best Buy' system? Factsback is a personal service designed to help you navigate the ever-increasing list of available products. Now, our reprints are instantly available to you via your fax (or fax/modem) 24 hours a day. You get the review you need, just when you need it. International readers can order copies of reviews (£1.50 per page with a credit card) by calling Starcomm on 44 1132 940600

How much will it cost?

The cost of our easy-to-use service is 39p per minute off-peak and 49p per minute at all other times. The pages you will receive have been designed to keep user costs to a minimum. The Factsback system was put together by Starcomm Ltd (01132) 940600

How Hi-Fi Choice Factsback works

- Call the Factsback system from the handset of your fax machine. The handset must be switched to 'tone'.
- Following voice prompts, select either an index of documents or specific documents by a known document number from the keypad of your fax machine.
- **3** Factsback delivers your choice of documents to your fax machine complete with coversheet.

We only stock the best products, based on performance and reliability - not reviews or sales patter! Call Mark or drop in for a listen. Three single speaker demo rooms. Free delivery and installation. Full service department. Open Mon-Fri 10-7, Sat 10-6.

If you're picking up bad vibes, pick up one of our brochures.

> You can spend a fortune on your hi-fi, but without proper support it won't sound as good as it should. Sound waves bounce off the walls. your floor and components, causing distortion. It's a problem we've been working on since 1975, resulting in some of the finest speaker, hi-fi and audiovisual supports available today. For example, the Adagio table shown here boasts a fully assembled, welded tubular steel frame, braced at the corners for extra rigidity. The legs and top shelf are supported on isolation spikes to minimize sonic interference. It's just one of many Apollo designs free of bad vibrations. For full details return the coupon or ask your hi-fi dealer.

I want good vibes. Please send me a brochure.

NEXT MONTH'S ISSUE

A MEDLEY OF MELLIFLUOUS MORSELS IN OUR MARCH MAGAZINE

Loudspeakers

Paul Messenger and his panel of blind listening experts concentrate their cochleae on loudspeakers. All the latest models, priced from £200 to £800 and including the latest speakers from Castle, Naim Audio, Tannoy and Wharfedale, will be marched around the exercise yard several times prior to their ordeal.

Cassette decks

Still not got your MiniDisc recorder? If your religion forbids digits, and your recordings are still on tape, we test five cassette decks under \pounds 300 to keep the compilations coming.

Meridian 518 Jitter busters

ilations coming.

Trichord, Meridian, Monarchy and Theta. Paul Miller measures performance against expectations.

Statements

Those mad Danish amps with their funky knobs — the Densen *DM20/DM30* prepower amps, to be plain — were regrettably postponed from this issue, but will *definitely* appear in the March issue of *Choice*. Also, Alan Sircom is the first reviewer in this country to get to grips with the latest digital combo from US high-end valve kings Conrad-Johnson — its first-ever CD transport and latest valve D/A converter.

PLUS: OUR FAMOUS BUYERS GUIDE, NEWS, ANSWERS TO YOUR HI-FI QUERIES, INFLUENTIAL OPINIONS AND MUCH MORE.

Ensure you never miss another issue by subscribing to Hi-Fi Choice! With prices starting from £14.97, and superb free gifts on offer, it's the ideal way to keep up to date with hi-fi. See page 26 for full details.

THE MARCH 1997 EDITION OF HI-FI CHOICE WILL BE ON SALE FRIDAY FEBRUARY 7, 1997 — DON'T MISS IT.

NAD 614 gets it taped next month.

David Vivian debates the desert that has become hi-fi shopping – is an oasis being created in the Kentish town of Maidstone?

Vivian Scene

ook up," he said. "You can only judge the true prosperity of a town above street level, above the shop facades". This canny hi-fi dealer reckoned that by scrutinising first-floor paintwork, curtains, roof-tiles and the general décor of the shops in an area, he could tell you if it was possible, as it was in his case, to run a successful hi-fi retail business. Eastbourne

tra

passed the roof-tile test. Brighton, too. The shops in question (archetypal dens of purist pretension, staffed by people with beards wearing Naim t-shirts) have been part of the scenery for many years.

According to this seemingly reliable social theory, it also explained why where I live, Maidstone in Kent, was the hi-fi shopping equivalent of the Gobi Desert. County town, plenty of big-name stores, promising catchment area and great beer, but flaky paint, frayed curtains and crumbling tiles. Only poor people shopped in Maidstone, the dealer contended, and they didn't buy hi-fi. We'll returned to this in

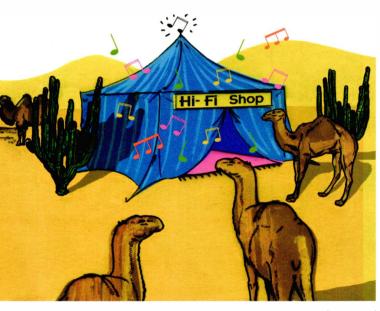

a moment. Meantime, bloody cheek...

He exposed a paradox, though. Maidstone is surrounded by probably the highest concentration of wealth in the southeast. But back then, some 10 years ago, not much of it came to town. The serious plastic preferred to drive to posher Kentish addresses — Canterbury, Tunbridge Wells or Sevenoaks. Hence the Moon-like aridity of Maidstone's terrain for audiophiles and the lean pickings for purveyors of serious stereos.

I have to report that Maidstone hasn't changed much. It's a bit smarter, there are a few more pubs in the high street and the river festival fireworks lasted an extra 15 seconds this year. But there's little to suggest that Maidstone has become the tourist magnet prophesied just before the Channel Tunnel opened. Foreigners want to see Canterbury Cathedral, and who can blame them? The excuse is the ongoing recession, and the promise that there are plans for multiplex cinemas, hypermarkets and, apparently, lots of night clubs. But none of this really matters.

Maidstone's main claim to fame remains its fascination for market research companies. Teams of clip-board ladies pepper the town centre waiting to pounce on anyone who can't be bothered to affect a menacing scowl. Why Maidstone? Apparently it's meant to be a true barometer of what ordinary people eat, drink, think and buy.

It's easy to conclude from this that the men

"Free sheep's eyes with all amps this week, sir!"

and women in the street, as represented by the fair folk of Maidstone, aren't interested in hifi. Seems to square with the national attitude. Sales of quality separates down, sales of any old micro, mini or midi rubbish purporting to be hi-fi up. There are a lot of depressed and worried people in the "real" hi-fi industry. Even the ones doing well look to the future with a sense of foreboding.

Well, here's some news to cheer us all up. As of November 1996, Maidstone has three hi-fi shops. Two of them — Unilet Sound & Vision and Sevenoaks Hi-Fi — are British Audio Dealers Association (BADA) outlets operating within a quarter of a mile of each other. Both have a thoroughly modern and accessible approach to selling the Good Stuff and have impressive demo facilities, AV suites, home visit and installation options and a broad range of quality brands.

I asked Sevenoaks Hi-Fi's founder and

boss Paul Lee Kemp why he chose Maidstone for his latest store. He said its because the lease on his shop in the nearby Medway town of Chatham expires in February and the site in Maidstone showed promise. So it does, sandwiched as it is by Blockbuster Video and McDonald's. Not exactly a flagship location, but not to be sniffed at, either. Kemp isn't known as a reckless gambler.

BADA's Mike Lewin admitted to being a

little surprised by Unilet's choice but fancied the shop's chances and felt the proximity of the two BADA stores was a healthy sign. At least it fits in with his perception of how things are going. He sees the split between "real" hi-fi (as espoused by BADA) and everything else under the general "audio" banner growing wider. This trend is supported by BADA membership which has grown from 105 in 1994/'95 to 131 now. Over the same period the number of hi-fi companies BADA deals with has contracted from 78 to 63 as bigger names join forces and smaller ones sink or swim.

The struggle is typified by the almost evangelical zeal of Richer Sounds. Once king of the pile-'em-high school of retailing, Julian Richer has declared war on midi systems and probably believes his ability to sell quality separates so cheaply (£299 for a system that will blow any midi out of the water is his claim) is "real" hi-fi's last chance saloon. He may be right. Time will tell.

So, people of Maidstone, this is it. There will probably never be a better opportunity to improve your lives. The truth is, hi-fi isn't the exclusive preserve of the well-heeled, it's the perfect means for ordinary people to buy into something special while the less-discerning throw cash at goods that are palpably inferior. All we have to invest is a little time and patience. And it all starts when you walk through the door of a good hi-fi dealer.

If Sevenoaks and Unilet can survive in Maidstone, real hi-fi will have taken root in the desert. Who knows what might happen then? We wish them well.
