A different Classé

For more than 20 years Classé has been designing and manufacturing extraordinary audio equipment for enthusiasts who demand nothing less than the very best. Our engineers have a passion for what they create and it shows: engineering, style, user-interface, product reliability and performance are all second to none. The new Delta series is an inspired statement about the art of high performance design. Visit us at www.classeaudio.com or experience the product range at one of the following authorised retailers.

Dan is a hi-fi nut whose

dream came true when

reviews editor. Armed

with a bristling contacts

My wife's not happy... and it has got nothing to do with the washing up that's still sitting in the sink. She's not happy because the summer has finally arrived, the sun has spread its golden glow across the garden at Bowern Towers and yet I'm still sitting

inside... glued to my beloved hi-fi.

She shouldn't complain. After all, it's the hi-fi that makes her Robbie Williams albums sound like she's standing in the front row at Knebworth with her ears grafted to the mixing desk. Clearly, it's not Robbie who's keeping me from the sunshine; so far it has been Sigur Ròs, Boards of Canada and Grandaddy keeping me bonded to the sofa.

In the world of consumer electronics, nothing speaks to the emotions like good music on great hi-fi. But it's not only hi-fi's function that provides pleasure; the sheer joy of possessing a piece of high-quality engineering is as apparent at hi-fi's high end, as it is in the world of watches and cars. Who wouldn't enjoy owning, say, a phono cartridge with a tiny body fashioned from semiprecious stone, handmade by a master-craftsman in Japan? (Interested parties should seek out last month's special *The Collection* edition for details!)

This issue's varied gems include exclusive reviews of key newcomers from Linn, Creek and Sonus Faber, plus the return of an old favourite from Acoustic Energy. So... not much chance of a tan this summer, then!

THE EVOLUTION CHAPTER

Since launching the legendary **KSA-50** amplifier a quarter of a century ago, **Krell** have established themselves as the absolute world leaders in the design of high end audio electronics, rocking the establishment over the years with novel technologies that have redefined the way we listen to music.

In 2005, chief designer Dan D'Agostino took the audio community by storm with the introduction of the stunning eight-chassis **Evolution One** and **Evolution Two** amplification systems, a creation that represented his ultimate strike of genius on the high end, and received accolades all over the world.

What's more, it doesn't stop there: this year sees the launch of a complete new range of **Krell Evolution** pre- and power amplifiers - plus two exciting source components and an extraordinary unique integrated amplifier.

Out go the sharp heatsinks, in comes the most beautiful casework ever seen, housing technology that delivers totally lifelike music, with nothing added and nothing taken away. Included in the line-up are the **Evolution 505** CD/SACD player, the **Evolution 525** audio-video source, the Evolution 202 two-chassis preamplifier with the **Evolution 222** single case version, the **Evolution 402** stereo amplifier plus the incredibly powerful **Evolution 600** and **900** monoblocs.

For the home theatre, there is the powerful **Evolution 403** three-channel amplifier and the **Evolution 707** processor, a reference model that is without equal, and demonstrates Krells' passion for unparalleled performance and innovation.

Attracting huge interest and praise is the unique **FBI** Fully Balanced Integrated amplifier. Aimed at those who desire the superb performance of the long-established Class 'A' Krell **FPB** series in a single chassis, this is the true master of all integrated amplifiers.

KRELL the badge of prestige, passion and excellence. Call Absolute Sounds for full details.

■ audiofic NEW PRODUCT SPOTLIGHT

DENON 700AE CD PLAYER AND INTEGRATED AMPLIFIER

Here's more fuel for the hi-fi resurgence fire – it's Denon's £250-per-piece, 700-Series models from the Advanced Evolution (AE) range. Yes, budget hi-fi Denon-style is back in the UK, after the company's sojourn in the world of raging home cinema sales. The new kit follows the delicious 2000AE and 1500AE hi-fi introduced recently and although the price has been driven down, Denon hasn't skimped on quality. Both models enjoy a high standard of fit and finish that includes solid alloy fascia panels and 'heavyweight' power supplies.

Key to the DCD-700AE CD player is Denon's proprietary AL24 Processing, which takes CD's 16-bit digital data to higher sampling levels. Analogue conversion is then performed using an upmarket chipset as used in the more expensive models. Its partner in rhyme – the PMA-700AE stereo integrated amp – is a high current, push-pull design, packed with useful features such as a MM phono stage, preamp output and bypassable tone controls.

To find out more, see our exclusive in-depth review in the September issue of Hi-Fi Choice

PRODUCT Denon 700AE TYPE CD player and integrated stereo amplifier PRICE £250 each

ARCAM AVR350 MULTICHANNEL RECEIVER

This is the all-new AVR350 receiver from Arcam, which replaces one of our favourite amps – the AVR300. It has been brought bang up-to-date with the latest video technology and "marked improvements in sound quality", according to Arcam. It says the new receiver has been built for movies and tuned for music. There's HDMI switching for Sky HD and high-def sources, plus HD-compatible component video switching.

recurd source pectives

SUP

Audio is well served too, with Crystal DSPs, Wolfson DACs and 100 watts across all seven channels. There's also a huge new toroidal transformer for faster transients, a high quality preamp circuit derived from the flagship AVP700 processor, plus Arcam's proprietary 'Mask of Silence' technologies, said to enhance high frequency clarity.

To find out more, see our exclusive in-depth review in the Spetember issue of Hi-Fi Choice

HEARTH

PRODUCT Arcam AVR350 TYPE Multichannel receiver

PRICE £1,500

KEY FEATURES 100 watts (across seven channels) ● HDMI switching ● second room output ● Crystal DSPs and Wolfson DACs ● stereo direct mode CONTACT ☎ 01223 203200 ⊕ www.arcam.co.uk

MARANTZ WEAVE

Marantz's WEAVE (Wired Entertainment Accessible via Electricity) multiroom system uses your home's mains electricity wiring to transport hi-fi quality music to any room in the house.

Touted as a 'plug and play' solution and using 'Power Line Communication' technology, the ZC4001 receptor unit plugs directly into the mains and can deliver sound from your main system to its twin speakers and built-in amplifier. It also includes an RDS text display, clock, sleep and wake up timer. Up to six ZC4001 units can be used from one main system.

The catch is that your hi-fi system needs to include a Marantz amp featuring WEAVE technology. This is currently limited to the new ZR6001 receiver (£550), although all new Marantz hardware is promised to include the technology. **Price** £200 **Due** now

CAMBRIDGE AUDIO 840C

Cambridge Audio's top-of-the-range upsampling CD player, the Azur 840C, joins the Azur 840A stereo integrated (tested in *HFC* 281) to mount a serious challenge to its mid-priced rivals. CD data gets upsampled to 32-bit/384kHz precision with Cambridge Audio's proprietary technology and is then decoded with high-quality Analog Devices DACs in dual-differential configuration.

It features two digital inputs too, so other sources can benefit from upsampling and has both RCA and XLR outputs as standard. There's also a recording digital output capable of feeding bit-for-bit, or upsampled data at 48, 96 or 192kHz to a suitable device. Expect a review soon.

Price £750 Due now ☎ 0870 900 1000 ⊕ www.cambridgeaudio.com

ECLIPSE TD725SW

Eclipse's new high-end subwoofer has been specifically designed to speed-match its Time Domain loudspeakers. Described as ultra-fast, the 42.5kg monster has a 500 watt digital amplifier on board, which drives twin 'high-speed' 250mm drivers, mounted horizontally and back-to-back. The technique is said to match the air displacement of a 350mm driver. For rigidity, both drivers are mounted to an aluminium shaft, which acts as a ground anchor, increasing the drive units' radiated output. **Price** £2,700 **Due** now

☎ 020 7328 4499 ⊛ www.eclipse-td.com

PMC WAFER-IW

The wafer-iw series of in-wall speakers from PMC expands the range of the company's ATL (Advanced Transmission Line) technology, hitherto only found in conventional speaker designs. The wafer2-iw sports a 150mm bass unit while the wafer1-iw features a 125mm version – the only difference between the two. Both models feature PMC's Twin Tweeter technology, which is said to offer flexible vertical placement with no loss of performance. **Price** wafer2-iw £1,650 (each); wafer1-iw £1,150 (each) **Due** now @ 0870 444 1044 # www.pmc-speakers.com

HARMAN KARDON DVD 47

US giant Harman Kardon has a new, entry-level, HDMI-equipped universal disc player. It's called the DVD 47 and boasts a number of audio and videophile features, including 24-bit/192kHz DACs and 720p/1080i upscaling. Harman Kardon points out that the player boasts pixel-by-pixel processing rather than line-by-line upconversion, to eliminate motion blur effects. There's also an 'audiophile grade' DSD chipset, audio control and bass management for SACD/DVD-Audio, plus uprated components in the audio signal path. Expect a review in the October issue.

Price £400 Due now 🕿 01707 278100 🗰 www.harmankardon.com

TRANSFIGURATION ORPHEUS

The Transfiguration Orpheus is a yokeless moving coil cartridge that is said to simplify standard cartridge design in order to improve it. The new range-topping Orpheus cartridge uses extremely tight magnet-to-coil coupling and push-pull damping, thanks to a special compound that is

impervious to temperature changes. Price £2,750 Due now ☎ 01252 702705 ↔ www.audioreference.co.uk

MOON ANDROMEDA

New CD players are thin on the ground these days, but high-end audio manufacturer Moon, part of Canada's Simaudio group, has just released not one, but two new designs. The Andromeda offers 24-bit/705.6kHz internal upsampling, a digital clock with five parts per million accuracy and quad layer circuit boards. Its CD Pro 2 mechanism sits on gel-base 'Delt' suspension and there are separate power feeds for the digital and analogue circuitry. Moon also offers the SuperNova, which offers 24-bit/352.8kHz upsampling and costs far less. **Price** Andromeda £9,990; SuperNova £4,500 **Due** now @ 0131 555 3922 # www.simaudio.com

O'HEOCHA D2 SATURN

Bearing a passing resemblance to the spheres and curves of O'hoecha's earlier D2-XCT, the radical Irish designer's new speaker is said to boast improvements in almost every area, in order to deliver a wide-scale, realistic soundstage from the idiosyncratic design. Each hand-made unit is crafted from aircraft-grade aluminium, with the whole structure stiffened by 10mm horizontal and vertical bracing rods. It features five drive units per speaker, with twin 275mm isobarically loaded subwoofers built into the bases, along with two gas-flowed bass reflex ports for even more of the low stuff. There are also twin 155mm midrange drivers firing front and back

from a spherical cabinet, that's designed to eliminate standing waves, plus a 28mm soft dome fabric tweeter. It's bi-wirable and compatible with O-Link wireless systems too.

Price £5,500 Due now ☎ 0035 391 558 030 ⊕ www.oheocha.com

Soundbites 🛇

TEAC has a new Reference 200 Series Model, the CR-H255 DAB/CD receiver. Features include a USB port on the front for playback from compatible MP3 players. The receiver also allows USB-equipped devices to record from its CD, AUX, AM/ FM and DAB inputs. Expect to pay £270. **2** 0845 130 2511

WAVAC AUDIO LAB is a Japanese, high-end valve amplifier specialist with UK distribution courtesy of Berkshire-based Audio Acoustics. The ten year-old esoteric manufacturer has a small range of tube-based equipment with aspirational price tags. Audio Acoustics will be shipping selected models from the range. 20 07968 388 118

CRYSTAL AUDIO the Athens-based loudspeaker specialist has a new subwoofer in development called Ballad – an eight foot tall, hand finished, solid wood design that takes its design lead from classical musical instruments. Ballad has a 30.5cm woofer, 200 watt amp and will cost £4,500. ☎ 020 7022 2970

THE CHORD COMPANY has two new speaker cables, the Epic Twin (dual-conductor, £39/m) and Epic Super Twin (twin dual-conductor, £78/m). In both cable designs, the conductors are twisted together, insulated by Teflon and then surrounded by a silicon jacket. Both feature extensive insulation and damping. ☎ 01980 625700

\bigcirc The Insider

THIS MONTH, HFC TALKS TO.

JOHN FRANKS Job Title: Managing Director Company: Chord Electronics

What is your most exciting product in development?

We are developing three products currently and the most interesting is an advanced, upsampling CD player.

DVD-Audio or SACD - and why?

I feel that neither of those formats have a long-term future. Both failed to break into the mass-market.

Any great albums you've heard recently? Oh, anything by The Feeling; I like the lyrics and the plaintive English style of singing is rather reminiscent of Robert Wyatt on the song *Ship Building* by Elvis Costello.

Are audio servers the source of the future? Our experience with our high-end media server

Our experience with our high-end media server has taught us that you can capture and store data perfectly with the necessary processing and data conversion technologies. But, there will always be cost-reduced products. My only hope is that there will be room for products that have not cut corners.

Are we experiencing a two-channel resurgence?

Surprisingly yes. Especially with our style-led products such as the Aspire system. This may only be in our exalted price point where these systems are being sold to consumers often coming into high end hi-fi for the first time.

SHOW REPORT

High End 2006, Munich

٢

May 2006: **Jason Kennedy** goes in search of the biggest and best audiophile show in the world. Taking a break between bratwursts, here's what he found!

ermans love big, shiny hi-fi! As a result, the annual High End show in Munich is a celebration of all things over the top. This is a big show, held in an exhibition centre with decent sized rooms – perfect for demonstrating extreme audio gear. No tiny hotel rooms here! The High End show is a hugely popular event, with thousands of visitors, in which you can find a huge selection of the most mouth-watering components.

Turntables are very big in all senses of the word, and few come bigger than **Transrotor's** range-topping Artus, a deck that sits in a high mass aluminium cradle on gimbals and has what can only be described as a pendulum hanging underneath. A snip at €118,000 (£81,000). From the UK, John Jeffries showed off the latest incarnation of his **Lumley** Stratosphere, that boasts a bearing that avoids metal-to-metal contact, extensive damping and a magnetic isolation system. **Brinkmann** showed the long awaited Oasis, a less

expensive variation on the La Grange covered in *The Collection* (HFC282) incorporating the same great standard of engineering. **EMT**, one-time maker of the

with a range of hybrid integrated amps. Its Reference, Signature and Statement all deliver 180 watts per channel and start at a £2,500. It was also a treat to see some genuine Luxman kit too, in the form of the CL88 preamp, EQ88 tube phono stage and MQ88 power amp proving that the Japanese still have the edge when it comes to high quality engineering.

On the loudspeakers front, **Quad** showed the metal framed ESL 2805 and 2905 electrostatics. These are bigger and heavier than the existing models and offer improvements in bandwidth. **KEF** covered its 'engineering exercise' speakers with black cloth and

"The variety and quality of kit on demonstration gives one hope for the high end. What's more, I didn't hear *Hell Freezes Over* in a single room!"

ultimate professional turntables and cartridges, has risen again this time with the JPA-66 preamp, which has with four phono inputs, adjustable impedance, gain and RIAA equalisation. Final pricing is not set, but expect it to be in the stratospheric class. Closer to the real world is the beautifully veneered **Pro-Ject** Xpression Comfort, which will be available in apple, olive and wenge finishes.

On the digital front, SACD players were very popular. TEAC's high end **Esoteric** wing showcased the SZ-1 and matching AZ-1 digital amplifier with i.Link connection, alongside the new P-03/D-03 transport and DAC, this converts the PCM digital stream of CD to SACD's DSD standard, the first example we have seen of such extreme upsampling. Didier De Luca, of Helios fame, turned up with new CD player brand, **EERA**. Its shiny acrylic casework could have easily come off the Helios production line and with a bit of luck it should see UK distribution soon.

Amplifiers that caught our eye included a retro style beauty, the Japanese Leben CS300 integrated, designed by ex-Luxman employees using EL84 tubes. The LSA Group bridges the tube/transistor divide powered them with a bank of **Chord Electronics** SPM14000 power amps to great effect (see *Dispatches*, p14). Along the hall, **B&W** unveiled an elegant floorstanding partner to its CM1. The new model, dubbed CM7, brings the surroundless FST driver technology to the sub-£1,000 price point at last. B&W's French rival **Focal** unleashed the Chorus 800V series, which features distinctive styling, a new aluminium/ magnesium tweeter and for the floorstanders, a separate metal plinth. Focal's compatriot **Cabasse** made a big impression with La Sphére, which has four- way coaxial drivers and an outboard active crossover with EQ and phase delay. This kicks serious derrière for its €120,000 (£82,350) price.

Last, but by no means least, **Revolver** is getting ambitious with its Cygnis speaker, that has an isolated crossover, two separate enclosures and a curved top in carbon fibre producing a high efficiency design with great potential.

Munich is a tremendous show, the variety and quality of kit on demonstration giving one renewed hope for the high end. What's more, I didn't hear *Hell Freezes Over* in a single room! **HFC**

New Music

IN THE STUDIO

ARTISTS RECENTLY ABSENT FROM THE CUT AND THRUST OF SHOWBIZ HYPE DUE TO FINISHING THEIR LATEST ALBUMS

THOM YORKE Title: The Eraser Release date: July

We've speculated before about Radiohead's work-in-progress but it seems it's finally on the way. During live dates in May, the band played eight new songs from the forthcoming record, including 4 Minute Warning, Bangers /N' Mash, 15 Step and the instrumental Spooks. Before then, however, comes singer Thom Yorke's debut solo project The Eraser, a collection of nine songs produced by Nigel Godrich.

RAZORLIGHT Title: tbc Release date: late July

The follow-up to Razorlight's 2004 top three album Up All Night is due before the end of July and they're working to a tight deadline for mid-May. Johnny Borrell briefly emerged from the studio to unveil the first single, Somewhere Else. "It was one of the first contenders for the album," he says, "so I suppose it's quite apt that it's the first one off the bat."

PUFF DADDY Title: tbc

Release date: Sept

"Diddy", as he now prefers to be known, was recently named one of America's 100 most influential people by Time magazine, which estimated his wealth at 315 million dollars. This may explain why at 36, he has announced his next album will be his last. Still untitled, it's slated to include collaborations with Mary J Blige, Christina Aguilera, Brandy, Busta Rhymes and Nas.

KILLERS Title: tbc Release date: Sept

Never one for false modesty, Killers frontman Brandon Flowers has been talking up the follow-up to the band's debut *Hot Fuss.* "It's one of the best albums in the past

20 years. There's nothing that touches this album. That sounds like I'm being cocky, but I'm just excited." He describes the songs as "very optimistic about making it to the promised land."

THE LEMONHEADS Title: tbc Poloose date: late 200

Release date: late 2006 After Evan Dando put together a new

version of the Lemonheads for live dates last year, the band are recording their first album since 1996's *Car Button Cloth*. Drummer Bill Stevenson and bassist Karl Alvarez complete the line-up and the trio have been working up new material at Stevenson's Colorado studio. Dando initially funded the recording, but the album has now been signed to Vagrant Records.

DISPATCHES

Mahlermania

In praise of structurally dense music

hen my children were about three feet tall, I wanted to introduce them to the kind of music that I felt strongly about. After some consideration, I chose to expose them first to the music of Gustav Mahler - not obviously particularly tuneful, and hard going at times. But on a good day it is also rhythmic, compelling and almost infinitely varied. And it is the last guality in particular, that I thought would make it such a good choice. Of the four children who were subject to this treatment, two have become avid classical music lovers and concert goers, though I am glad to say their musical interests are by no means limited to this one genre. So far I haven't succeeded with the other two, but I live in hope.

"When my children were about three feet tall, I wanted to introduce them to the kind of music that I felt strongly about."

On one occasion, when asked by a hi-fi manufacturer to choose a Prom concert programme for a bunch of journalists they wanted to invite one year, I suggested Messiaen's *Turangalila Symphony*. It's an extravagant and at first apparently cacophonous creation, but again compelling in the same way that I imagine staring at a poisonous snake at close quarters would be compelling. It worked better than I could have hoped with the impromptu audience of about 10-15 invitees, few of whom had much affinity with classical music generally and not one of whom knew the work.

Part of the appeal is that these works engage with the world on a grand scale and there is something uniquely powerful in such an experience. There is clearly something going on here and I think it has a lot to do with sound quality. This at least is the opinion of others who have accompanied me on such jaunts, such as the other day, for example, to a concert given by the home town Philharmonic Orchestra which was laid on by a hi-fi manufacturer for their guests during the Munich High End show. All enjoyed the Ravel and the Mozart part of the programme, but what triggered discussion and comment was the much less attractive and less immediately tuneful Schumann *Fourth Symphony* which was unfamiliar for all concerned.

The point here is that works like this, open a soundworld that is simply not available in any other form. Electronically aided music can in principle be reproduced well and relatively easily given a good hi-fi system. After all, the music was recorded and was meant to be reproduced electronically. But, there is no naturally acoustic Fender Strat. Acoustic music (meaning classical of course, but also jazz, folk and many other seemingly unrelated genres) is fundamentally harder to pull off and provides a unique insight into good sound. And this is where sometimes even the best high fidelity struggles to keep its head above water. Alvin Gold began writing about hi-fi more than 20 years ago and has since become one of the UK's most internationally renowned reviewers

The cover up

KEF shrouds its concept speaker in secrecy

The recent High End show in Munich (see our report on p12) was full of weird and wonderful kit. Loudspeakers in particular were found in almost every shape and material, from the glass and slate of Fischer & Fischer's elegant Dipole, to the glass fibre beach ball of Cabasse's impressive La Sphére. So, it came as quite a surprise to visit KEF's room and see that the company had covered up its groundbreaking new loudspeakers. All you could see in the gloom was an array of Chord Electronics power amps with their blue lights providing the visual focus.

It's not possible to separate the appearance of a product from one's visually-based expectations of its potential: by suspending tubes of black cloth around the speakers, KEF removed the visual cue usually given by the scale and design of a loudspeaker. This leaves the important bit (the sound) to one's perception alone – exactly like a blind listening test, in fact.

Under the black cloth tubes were some pretty big KEF speakers, about two metres tall and shaped like a slab with half column sides. The sort of speaker that one would expect to be blown away by, which puts it at an expectational disadvantage. Fortunately, the resulting sound was one of the best at this key show which gathers a great majority of the world's top hi-fi companies and thus one where sound quality is unusually high.

So why the cover up? KEFs senior acoustics engineer Steve Watson explained that this speaker was not a finished product and, much like a concept car, may never actually materialise. Unlike a concept car, this was not even a finished loudspeaker. It's not an exercise in styling, but in engineering. It sports an impressive driver array with four front-firing bass units and two at the rear, alongside a lower midrange in paper and a new version of the Uni-Q driver array. The rear mounted bass units form a cardioid system, a technique used in professional microphones and speaker systems for avoiding bass overkill by sending an out of phase signal to the rear drivers. This effectively reduces the low frequency output of the system as a whole. 🔼

It's a funny thing. There is probably more misunderstanding, mythology and downright misinformation about TAG McLaren Audio and its CEO, Udo Zucker (whose personality and desires perfectly

ETR

HI-FI REVISITED

TAG MCLAREN DVD32R

matched that of the company) than any other hi-fi manufacturer since the heyday of Linn Products. But TAG McLaren Audio does have special place in our industry, which is perhaps better appreciated in retrospect than it was at the time. Suffice to say that TAG McLaren Audio's goal was to design home cinema equipment that was as beautiful as it sounded, and that sounded as good as the best high-end stereo equipment. A typically ambitious goal, but undeniably worthwhile.

Let's not get into a navel gazing exercise about whether it succeeded or not, except to say that without a shadow of doubt, it got closer than most. Another misunderstanding concerns whether it was successful as a company. Of course we know the answer to that: TAG McLaren Audio was forced to sell out (to IAG, of Wharfedale and Quad fame) after a few short but brilliant years in the sun, though much of the factory, R&D equipment and so on is now in the hands of erstwhile competitor Meridian. But the real problem with TAG McLaren Audio wasn't the products or the prices, but a fatal lack of overseas distribution. It did also suffer poor early reviews of reengineered Audiolab products being 'overpriced', where in hindsight, the problem was the first iteration of Audiolab was underpricing its range.

One of the specific claims we've heard of the impressive DVD32R, was that only a handful were ever made and that they were fearsomely unreliable. Well there's some truth in the reliability issue. In particular, there was a problem with the motor drive for the sliding top plate which necessitated a redesign. But we have established that there were more loan players in circulation (for shows, reviewers and that like) than they were reputed to have made in total and that they actually sold more of the DVD32R than any other UK producer did of comparable high-end players.

"Most of all however, the DVD32R was designed to be, and was, a truly excellent CD player."

In one sense, the DVD32R was not a DVD player at all, but a transport, as D/A conversion was performed externally – usually by the AV32R processor. This was the key component in the TAG McLaren gameplan and part of the strategy to facilitate easy and regular enhancements and upgrades.

The player's master clock could be synchronised with the one in the AV32R and of course, all TAG components could in effect be networked to synchronise display messages and the like using the innovative TAGtronic Communication Bus.

But the DVD32R was no afterthought and had a number of innovative features; the massive top cover, for example, was part of a sophisticated strategy to counter microphony. Most of all, however, the DVD32R was designed to be, and is, a truly excellent CD player, a claim that many have tried to live up to, but one in which few have succeeded.

TAG McLaren Audio sort of lives on in the reborn Audiolab product range, but sadly the DVD32R and similar groundbreakers are gone. Perhaps they'll return. Perhaps not.

Products like the DVD32R remain a beacon of their time, and would not look out of place today, as it addressed a much wider audience than the core home theatre market. It was truly an object of desire. **HFC**

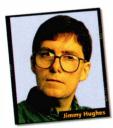

Alvin Gold

The most radical aspect of this speaker, the new Uni-Q array, is also the element that will filter into production loudspeakers first, around this autumn. It has a shallower cone than its predecessor, which improves dispersion from the tweeter. In addition, the unit's dome is now made from two parts. KEF has also vented the pole piece to allow greater freedom of movement for the dome, a process that reduces magnet density and has been made up for by three neodymium rings. In terms of performance, these changes mean that the high frequency extension of the coaxial Uni-Q tweeter is now great enough to make the use of a separate super tweeter (seen on the current 2000 series) unnecessary

This is undoubtedly the best sounding KEF we have heard. It's also the biggest, and it can't have been too much of a setback to have a pair of kilowatt Chord SPM 14000 monoblocks driving each channel. But this was in the challenging environs of a hi-fi show, so I have high expectations for the finished products that trickle down from this fascinating technology showcase.

Jason Kennedy began working on Hi-Fi Choice over 15 years ago, eventually rising to the position of editor. He's currently indulging his passion as a freelance hi-fi writer

Ch-ch-ch-changes!

Turn and face the strain (of upgrading)

t's not difficult to make changes to your hi-fi system and hear a difference. It's less easy to interpret the difference, and correctly decide whether or not the change represents a genuine improvement.

It's easy to be fooled. What seems 'better' in the heat of the moment can sound distinctly worse a week or two down the line – like meeting your 'perfect' partner, only to find you can't live with them on a day to day basis¹ So, when you make changes to your hi-fi system, evaluate the difference carefully. If the change strikes you as an improvement, go for it. Hi-fi is totally subjective; if it sounds better, it is better.

Nevertheless, there's a big difference between a change or upgrade that really improves the quality of the sound and one that merely alters things. How do you tell a real and genuine improvement from one that's superficial? Here's a few pointers. A real improvement works across the board. It benefits all recordings and every type of music. Not only your best discs – those that always sound great – but also the ones that disappoint, or seem to have areas of weakness.

If every recording you play sounds better than ever, the change made was a real improvement. If you find you're now able to listen to (and enjoy or understand) music you never previously liked that much, the improvement is genuine. Another sign is when you play a recording of new music you don't know, and 'get it' first time. It demonstrates that your system's doing its job and communicating - your brain is having to do less processing work to make sense of everything. When you enjoy each album so much, you don't want it to end - your hi-fi system is working. Yet, it's one of hi-fi's paradoxes that (sometimes) the really big worthwhile improvements do not seem that significant at the time.

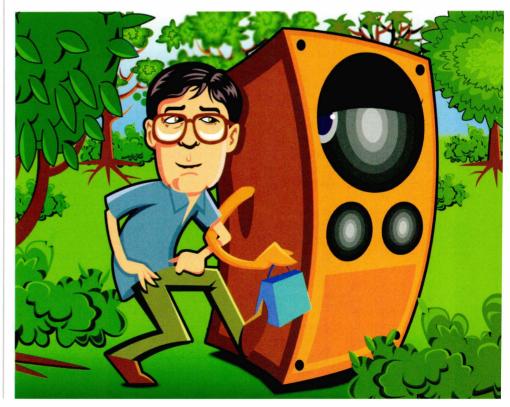

Sometimes, you make a change that represents a genuine leap forward, yet the improvement doesn't immediately strike home. It's not until you've lived with things for a day or two that the penny drops. Then, when you go back to things as they were, the sound is awful.

One last tip; when you upgrade or tweak, don't worry too much about the technical/ hi-fi aspects of the sound. Just listen to the music; the music tells you everything. If it sounds more real and communicative, more intense and personal, it's a genuine improvement. The opposite of this is when you make a change and the sound immediately impresses in hi-fi terms (deeper more powerful bass, sharper treble, crisper dynamics, etc). It all seems great. But, as the novelty wears off, and you listen more carefully, you find that the sound obtrudes over the music - your attention is drawn to the power and depth of the bass, or the bright immediacy of the treble, not the music itself

Alas, too many hi-fi systems fall into this trap. They produce high quality sounds – great detail, wide dynamics, and a broad frequency range – yet fail to communicate and engage musically.

Jimmy Hughes is one of the country's best known hi-fi experts. His knowledge of tweaking and his record collection know no bounds

"What's 'better' can sound worse later – like meeting your 'perfect' partner, to find you can't live with them on a day to day basis!"

Home hi-fi truths

What your partner really thinks about hi-fi!

ell, no two ways about it, I'm a hi-fi anorak. Many years ago I realised that although we audiophiles are committed to our set-ups, most of the world ranks music systems on a par with toasters in a tastefully minimalist chrome finish and electrically-powered, flip-top bins. But why? I decided to take the unsettling step of venturing into the world of those exposed to hi-fi but immune to its charm – my other half.

'Long-suffering' probably best describes the apple of my eye and what she's had to put up with in terms of a steady flow of contemporary gear and 'classic' audio doorstops.

Well, the first step is always the hardest, so I thought I'd get it over with quickly:

"What do you like about hi-fi?"

"Mmmm."

"Mmmmm?"

"That's a tough one. It's nice to be able to hear the music clearly, hear all of the various nuances of the tune. It's certainly better than my old midi system."

Pregnant pause. "Anything else?"

Another pause. "Nope."

I still couldn't fundamentally grasp the workings of the non-audiophile mind, so I plunged on recklessly:

"Then what is it you don't like about my equipment (ahem)?"

"Well, there's nothing I dislike about it really. It's just that I find it puzzling that men can get so enthralled by it. They say they can hear the differences between their various hi-fi systems. I don't think most people care – they don't ask for all these refinements that men want. I think that at the end of the day it's, 'My toy is better than your toy.'

Sigh. I could see the headlines in the local paper – there, in small print beneath, *Tabby* rescued by fearless firemen!, the forlorn headline, *Local audiophile succumbs to* depression and throws self under Robin Reliant. Something catchy like that.

"But what about the way the system looks, the superb build quality?"

"Yes, that's a problem too... it can ruin the ambience of a room pretty effectively, especially with all the ironwork and macho cables like hosepipes."

When the Small Faces had been knocking out pop soul gems for Decca, they'd been expected to cut two sides after breakfast (and have them mixed and finished before nightfall). But at Andrew Loog Oldham's Immediate Records and with pop being taken more seriously than ever, the boys – Steve Marriott, Ronnie Lane, Ian (Mac) MacLagan and Kenney Jones – were given almost unlimited studio time. The result was 1968's stunning, self-produced *Ogdens' Nut Gone Flake*, a dazzling slice of late 1960s whimsy.

"We dreamt up the idea on a canal boat, Stevie Marriott, Ronnie Lane and myself," says keyboardist MacLagan now, "three mods on a boat!" Steve came up with a lot of the ideas. He and Ronnie were poets, you know? Something that's still not appreciated even now. I mean, the lyrics to things like *ltchycoo Park*, they're brilliant, taking side-swipes at Oxbridge, while finding beauty in a patch of nettles in the East End!"

Ogdens' was the album follow-up to that Itchycoo Park hit, a pioneering track in itself with its phased guitar FX that took three tape decks to achieve and it didn't disappoint. Even as the pop mods started to embrace the new psychedelia, they still found room for great tunes, odes to dockside doxies, Dean Martin impersonations, whistles, fade-outs that faded back in and on side two, the concept section narrated by ex-BBC audio engineer and gobbledegook king, Professor Stanley Unwin.

And it worked, beautifully. Numbers like Rollin' Over, with its proto-punk guitars, rocked like there was no tomorrow, while noisy neighbour anthem Lazy Sunday was a bona fide Cockney classic and in the shape of Mac's Long Ago And Worlds Apart, they had an authentically haunting piece of romantic pop poetry that could put Nick Drake to shame.

"There's sounds on that track made with an instrument I still can't identify," Mac admits, "Same with the *Afterglow* song. We were allowed weeks in Olympic – a big orchestral studio and there was this wooden box that made this strange noise. Never seen or heard anything quite like it since!"

"Taking side-swipes at Oxbridge, while finding beauty in a patch of nettles in the East End."

It was all superbly recorded too, with crisp separation and wonderful layers of both vocals and early Mellotrons. *Ogdens'* reached No1 in both the US and UK and should have made the band a fortune, but the Small Faces received little or no recording royalties.

"Decca finally found £70,000 in some account in 1993, that was all we ever got apart from some gig payments," MacLagan insists now. "Steve and Ronnie were my brothers, musically speaking, and it annoys me that they got paid next to nothing while they were alive." Steve Marriott died in a house fire in 1991 and Ronnie Lane – who'd be diagnosed with multiple sclerosis in the late 1970s – died of pneumonia in 1997.

Such a financial mess made sure Ogdens' was the last Small Faces album before they split but their reputation has grown enormously over the years. Those influenced by the band who were Britpop before Britpop, include Paul Weller, The Sex Pistols, Supergrass, Blur, Arctic Monkeys and a host of others.

The eclectic *Ogdens'* has a few flaws, but like that last decade of genuine hope, it remains in so many ways, both charming and unbeatable.

A three CD edition of Ogdens' Nut Gone Flake is out now on Castle and Ian MacLagan's new album, Spiritual Boy, can be downloaded at www.macpages.com HFC

Phil Strongman

C That headline now reads *Hapless local* audiophile throws partner and self under Robin Reliant. Not much room under a Robin Reliant, I suppose...

"In that case, if you had to have hi-fi, how would it be designed?"

"Something unobtrusive – small would be good. And no spaghetti all over the place. Ideally, it should be heard but not seen."

My trip to the dark side of audiophobia may not have left me mentally scarred, but I do worry for my future. What does it hold for me? I can at least console myself with the thought that my hi-fi is my only gizmo at present – I feel no urge to purchase the latest executive pencil sharpener with speech recognition, thermonuclear heated toilet seat or microprocessor-controlled biscuit dispenser. No, I still have those to look forward to...

Jon Marks has been happily addicted to hi-fi for 20 years, especially since becoming a member of the hi-fi press in the mid-1990s

No spleen unvented

Angry manufacturer rant hits the right nerve?

here's a programme on BBC Radio 4 called *Heresy* that I usually listen to if I'm driving on a Wednesday afternoon. A panel show hosted by David Baddiel, it plays around with the idea that some of our most deeply held received opinions are plain wrong. As well as being funny, it gives the grey matter a rare old kicking – no bad thing in my case.

Someone who emails me on a fairly regularly basis really should be on it. We'll call him Mr. Angry. He runs a small but well respected British hi-fi company. Railing against received opinion and breathing are one and the same for Mr. Angry, but recently, he sent me a broadside that knocked me off the sofa. It wasn't prompted by anything in particular but, working back from the thrust of its theme, we can construct the following piece of received opinion. People who want a music system in their lives should read a hi-fi magazine first.

This is the gist of his argument. "There is a very obvious change in attitudes towards purchasing a hi-fi. Magazines no longer reflect the requirements of the best customers. Instead they tend to titillate low-budget tweak artists. Our big sales come from dealers who

"Railing against opinion and breathing are one and the same for Mr. Angry, but he sent a broadside that knocked me off the sofa."

have stalled on multi-room installations, because customers can't use it or it sounds poor, even to non-enthusiasts. They prefer simple, easy to use and good sounding kit.

"Magazines have been dismissive of computer-based music and then given complimentary reviews to hi-fi amps and CD players that are far worse. Many of our customers have found Mac computers have an extremely good line output. It may not be as good as the best CD players, but it's far from unpleasant and not particularly noticeable unless direct comparison is made.

"Fit an M-Audio 24/96 pro-audio sound card to a Dell computer and hook it to a pair of active speakers. Then use the Dell Media interface with iTunes or Windows Media Player and the results are better than can be achieved by most separates at the price (just under £2,000) and many that cost far more.

"Loads of people use a laptop with wi-fi to control the hi-fi. And people actually come to hear our stuff with everything in an iBook! The truth is that the market is probably splintering. Some want complex home automation, some want extreme hi-fi, some want basic multiroom and so on. They all want speakers and amps. Last year, we doubled speaker sales and saw a big rise in amplifier sales to people anxious to have a good sound but mistrusting magazines and this is a definite trend.

"You'd never believe how many people ring us because they want a complete one-make system. Most have burnt their fingers in the past mix and matching and are delighted to find a company that makes a system. People buy three group test winners, hate the result and don't know which product is wrong."

I don't agree with all of this, but it undoubtedly touches a nerve. The way we listen to music is changing. Some of us may think it's not for the better, but we ignore it at our peril.

David Vivian has been wallowing in gorgeous hi-fi and then describing its virtues and vices in Hi-Fi Choice since 1990

Stability is good

Who needs rapid technological change?

n the wider world of electrical equipment, the current state of hi-fi separates is, right now, a blissfully stable one. Past times have seen the steep decline of many a recording format. First open reel and then, I suppose around the same time, eight track bit the dust. One of the most popular formats of all time, compact cassette, finally succumbed to the digital age, while even its digital descendants; DCC, MD and CD-R, have now all but vanished from the hi-fi separates world. Vinyl's not what it used to be, although in recent years, it has shown something of a rally. Still, despite the profits of doom predicting the death of CD, the format continues to be popular in the separates market along with good old vinyl and, of course, the radio – digital or otherwise.

In short, hi-fi retailers know exactly where they are with hi-fi separates. Computers and phones radically change at least once a year. With television there's a new connection, screen technology or definition always just around the corner. Even the multichannel world has to endure an annual launch of a new Dolby system or two, something from the rival (DTS) and a new format such as HD DVD on a regular basis. With stereo we've not really had anything 'new' since SACD and, before that, DAB. Yet really, I can't help but think that we're much better for it.

Electrical retailers who spread their net broadly are looking at the hi-fi separates market with either renewed interest or envy. They don't have to worry about format battles, unproven technologies or even the success or otherwise of the England football team, which undoubtedly shifts the fortunes of those who rely on flatscreen TV sales. Instead, hi-fi separates retailers have a sense of predictable foresight. With much component and even product manufacture now done in the Far East, the value of hi-fi separates is better than ever. This is right across the board, too. So whether you're selling a starter system or high-end extravagance, you can be confident your customer is getting decent value and longevity of format life.

Yet, just because the stereo market is stable right now, doesn't mean to say that is in any way stale. In fact, the very opposite is true. There are plenty of respected brands bringing new products and even new versions of existing technology, to the market. For proof of this you only need to look at Rotel. It's just launched an entire new 2006 range. Arcam too has been busy of late and Denon recently replaced the iconic TU-260L tuner with a new model – the superb TU-1500AE.

Perhaps most exciting of all for the hi-fi separates world, is the announcement of product such as the Cambridge Audio Azur 840A amplifier. This is not only a significant shift upmarket for a traditionally budget-end manufacturer, but also a showcase for an intriguing new technology – Class XD. Times may not be a changin' for hi-fi separates, but there are still plenty of reasons to be cheerful.

Dominic Todd began his hi-fi career in the retail business and has been a freelance hi-fi reviewer and columnist since 1993

TECHNOLOGY EXPLORED

BOFFINS OF THE WORLD UNITE!

In late May, *Techno* visited Paris to read a paper at the Audio Engineering Society convention (the paper was on *Neglected*

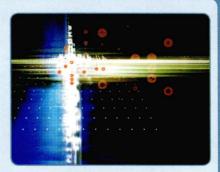

Audio Distortions and you've read most of it here already). These conventions are a chance for technical audio types to get together and present to each other the developments that will shape the future of sound.

As you'd expect, there was plenty of talk about more efficient ways to compress audio data for MP3 and suchlike schemes – 'efficient' meaning higher compression, or lower computing power, or quicker execution, or some combination. That's fascinating, but not the stuff of which audiophile dreams are made, and the same can be said for wireless audio, laptop computer sound and hearing aids.

Among the more intriguing presentations we encountered were one on computer simulation of valve amplifiers and another on an intriguing scheme for producing (slightly) more practical single-ended valve amps. If you've ever enjoyed the mellow sound of a valve amp, you'll doubtless be glad to know that their design is taken seriously enough to feature at an event like this.

A session on Signal Processing and High Resolution Audio brought forth some interesting papers on ways to improve the performance of 'digital' power amplifiers (as one paper title reminded us, Some amplifiers are more analogue than others). It's clear that this technology is being taken very seriously indeed. Given the decent, sometimes even impressive results we've already had with various digital amps, we look forward to this research bearing fruit.

Of course, the holy grail of digital audio is the true digital loudspeaker and a paper from Malcolm Hawksford of the University of Essex; a charming man who conceals a fearsome mathematical brain under characteristically eccentric headwear; discussed possible solutions to some of the many tricky problems in the way of this goal. It does look as if we'll be waiting a while for this one, though, so don't put off the purchase of those Wilson Alexandrias on that score!

"Given the decent results we've already had with digital amps, we look forward to this."

Loudspeakers always generate a large amount of discussion within the AES, equalled only by their counterparts, microphones. We were particularly impressed by some of the loudspeaker testing methods under discussion, methods aimed at both improving intrinsic performance and ensuring consistent manufacturing quality.

A demonstration by Klippel GmbH showed that it is possible to detect a couple of grains of salt on a loudspeaker cone, with the testing performed in a noisy environment. This may sound irrelevant but is in fact representative of a very real problem in speakers, 'rub and buzz', which is traditionally a right pain to identify and hence to correct. Another interesting loudspeaker tack was high-efficiency speakers of poor linearity, which are linearised by digital signal processing: whether that will have any benefit for what audiophiles call sound quality is not yet obvious.

Finally the papers turned to surround sound, although there was surprisingly little discussion on this topic. There was, however, a particularly interesting tutorial on microphone techniques for surround, which did address it in detail. Ironically, a lot of the stuff covered in the session was just as relevant in the days of the first stereo recordings. Sometimes you have to keep running to stand still! **HFC**

Richard Black

Great Music - Italian Style

Total bliss!

How wonderful to sit back and immerse yourself in your favourite music, with a luxurious audio system that looks as exciting as it sounds - thanks to Italian craftsmanship, style and flair. Opera, Unison Research, Audio Analogue, Pathos, GRAAF - these names are synonymous with the best sound quality and Italian styling and, most importantly, offer unsurpassed value for money. With UKD's comprehensive selection of respected dealers around the country you can choose from a whole range of beautiful hi-fi and home entertainment products from Italy. Contact us for your nearest retailer and start your very own Italian musical journey today...

The Finest Italian Hi-Fi

For the Birds

All of her records are multi-platinum in her New Zealand homeland and she's gaining popularity here, but singer songwriter **Bic Runga** just wants to write good songs

he gentle melodies and songs of love lost and found have led to her being called the Kiwi Dido, but there's much more to her than just a pretty voice and face. Bic Runga (Briolette Kahbic Runga to her Chinese mother, her Maori father died last year) started playing drums when she was 11 and later took up guitar and keyboards, as well as singing in local jazz groups. She was just 21 when her debut album hit the shops in 1997 it went to number one in New Zealand and stayed there for almost a year.

Her second album sold even better, but for her third album, Birds, she chose to get out of the studio and record in Monte Cecilia, a 150-year-old house in Auckland that has the reputation of being haunted. Accompanied by a group made up mostly of friends from the NZ pop scene – including long-time collaborator Neil Finn, who contributes piano backing vocals and some string arrangements - she brought in some recording equipment and set to work.

"It's a spooky old house that's been used as a film set. It was in Narnia and some others too I think. It was a Catholic girls' school for a while and we recorded in the chapel so there was a lot of vibe, a lot of history.

"I wanted to make something really dark, but I guess I'm not really as dark as I like to think I am. I just wanted to make a record that's not trying to break radio and that could be just atmospheric. Trying to appease radio was going to do my head in.

"It was pretty much played live, so it took quite a while to get it set up to start with. We spent days getting the balance right in the room, so the vocals weren't too far away from the drums and with three backing vocalists working together, the blend in the room was crucial. Once we'd got that right, it was pretty much just free recording.

"It might seem like a lot of hassle, but there aren't actually that many good recording studios in New Zealand and I wanted to be in

"I'm sick of the concept of production. It's really contrived and everything gets squashed to death for the sake of radio."

the same room with the musicians - I didn't want to be singing in an isolation booth with headphones on. We didn't use headphones at all actually - we were all listening to what was happening around us - you can blend better. It's more immediate and makes you feel that you're playing the music, rather than just doing something technical. It doesn't feel like music when you're recording in a booth.

"I've produced my last three records and I'm sick of the concept of production. It's really contrived and everything gets squashed to death for the sake of radio. In a perfect world, you would just present the song in a natural

way and try to capture its atmosphere; let it breathe and let it have a rawness and actually capture the essence of what the song is.

"I learnt production from hearing people do that sort of thing. When you're signed to a major label as a 21-year-old, they put you with a producer and hope for a hit. I picked it up as I went along. I was always around these guys who tried to hold their position by trying to make me feel like I didn't know what I was doing, it was just bluff. I'd be saying 'no I think I'll just play my song, let's just record'." HFC

Dave Oliver Birds is out now on Columbia

ESSENTIAL BIC RUNGA

Drive (1997)

Bic wrote the songs, played guitar and xylophone and ended up producing her debut pop and rock-themed album. Includes the perfect pop track Sway that deserves more attention

Beautiful Collision (2002)

More ambitious in scope and content, the songs rely less on traditional pop arrangements and reach for something more classic, foregrounding Bic's deceptively childlike voice.

Birds (2005)

The latest album has less hooks and catchy phrases, but is a rich and rewarding record with great depth and emotional range. A darker, but more mature and cerebral work.

A PAIR OF MERIDIAN M3100 ACTIVE LOUDSPEAKERS WORTH £1,845!

s a world authority on digital audio processing, Meridian knows a thing or two about sound. And as its superb £1,845 M3100 active loudspeaker proved in our June issue (*HFC* 280), it's not just the company's electronics that are superior, its speakers are a class act too. In fact, the gorgeous standmount with its electronic crossovers and 75 watts of on-board amplification, makes a convincing case for going active.

The Cambridge stalwart has been making active speakers since the 1970s, and was the first (and still the best) company to marry active speaker technology with DSP processing to outstanding effect. The M3100 flaunts carbon fibre drive units and Meridian's own doped fabric tweeter, all encased in a luxurious aluminium-clad box. Each driver has its own bi-polar power amp and each speaker is supplied with a Meridian-branded, five-metre van den Hul interconnect cable for easy installation.

The results are spectacular. They couple low coloration with high neutrality, making the M3100 an obvious choice for our coveted Best Buy award.

For your chance to win a pair, simply correctly answer the question below. The lucky winner will be drawn at random.

CONGRATULATIONS...

0000

...to our last winner, Mr. P. Joseph of South-East London who wins a superb Arcam FMJ CD36 CD player worth £1,400.

QUESTION: What does Meridian know a thing or two about?

- A: Sound?
- B: Zero longitude?
- C: Early English church music?

TO ENTER:

By Phone: Simply call **0906 403 1013** and follow the instructions (maximum cost of call: £1.50).

By Text: Simply send the text message **MERIDIAN** (followed by a space) with the answer A, B or C to **80889**. For example, if you think the answer is B: Zero longitude, then text MERIDIAN B to 80889.

TERMS AND CONDITIONS

Employees of Future Publishing (including freelancers) and their relatives and any agents involved are ineligible to enter. The Editor's decision is final and no correspondence will be entered into. Prizes cannot be exchanged for cash. Closing date for entries is 26 July 2006. The entries will be judged after the closing date and the winners will be notified by telephone within ten days of that date. Prizes will be sent out within 28 days of notification by the companies involved, not Hi-Fi Choice or Future Publishing. Entering costs – BY TEXT: 1x 50p (including VAT) for each entry plus your usual text message cost. This service is available to T-Mobile, Orange, Vodafone and O2 customers only. BY PHONELINE: Each call costs a maximum of £1.50. Please remember to get permission from the person who pays the bill before you enter. No purchase necessary. Alternatively, please send your name, address and telephone number with the correct answer to: Hi-Fi Choice, Future Publishing, 2 Balcombe Street, London NW1 6NW. If you have any problems making your call or sending your text, please contact the service provider, Opal Telecom. Tel: 0845 330 5002. Email: futuresupport@opaltelecom.co.uk

Reviews by Alvin Gold, Jason Kennedy, Dave Oliver, Mark Prendergast, Phil Strongman and Nigel Williamson

AUDIOPHILE VINYL

JOHN FAHEY

The Yellow Princess Comet Italy/Vanguard

Music: Recorded in 1968, this is John Fahey going further with the acoustic guitar than anyone had done before and very few have managed since. The contrasts and

depths he plumbs in tracks like Irish Setter have a poignancy and beauty which has rarely been evoked by a single instrument. This man was the John Coltrane of the guitar – the fact that he didn't achieve the same fame was largely a personal choice and perhaps, a reflection of the status of the acoustic guitar in era of the electric guitar hero. Technically and emotionally this is a powerful LP, treat with due reverence. **** Sound: While it's a luxury to be able to get a new copy of this album, the quality of this pressing is not always that great. It occasionally sounds as if it was dubbed from an original LP rather than master tapes, but perhaps we got a bad sample. $\star \star \star JK$

BUDDY GUY & JUNIOR WELLS Going Back To Acoustic

Pure Pleasure

180g vinyl Music: Guitar player and singer Buddy Guy is best known for his electric playing and Junior Wells (who also sings) is first and foremost a harp player. But on this

1984 recording, we find both men keeping things very simple with renditions of their own tunes, and those of their mentors such as John Lee Hooker and Muddy Waters. The result is not so far from Waters' country blues in feel and quality. The guitar playing is relaxed, but right on the money and the singing clearly that of genuine feeling. **** Sound: What marks this album out is its combination of original country blues playing with clean, open recording quality, something you won't find with the previous generation's output. The lack of distortion may be all that keeps it from sounding like its antecedents. *** JK

LPs were supplied by Edward's Music & Pure Pleasure 20 020 8723 7297 www.nurenleasurerecords.com

COMPACT DISC & VINYL

NEIL YOUNG Living With War

Reprise

Music: George Bush may be an easy target, but Young strikes with unerring accuracy on ten of his most visceral and vital songs in years. Written and recorded in just two weeks, even by his own standards the results are spontaneous and raw. The lyrics favour sloganising over analysis ("let's impeach the president") but he's reviving the almost-forgotten art of protest and the direct simplicity of the message is what makes *Living With War* so immediately arresting. Indeed, it's hard to remember when Young last sounded this committed. ********

Sound: A dense fudge of snarling guitars, pitched somewhere between *Everybody Knows This Is Nowhere* and *Mirrorball*, but lifted by such sonic surprises as trumpet solos and a top ramshackle choir. ** * * * *NW*

COCTEAU TWINS Lullabies To Violaine (Vols 1 & 2) 4AD

Music: Robyn Guthrie and Liz Fraser formed a trio with Simon Raymonde that embarked on the most ravishing journey in sound from any British indie band in history. The 12in single and EP was their form of choice and always allied to an equally ravishing sleeve by Vaughan Oliver. Favouring Guthrie's processed guitars and the coloratura vocalese of Fraser, the experiment reached a zenith on Tiny Dynamine/ Echoes In A Shallow Bay in 1985. possibly the most arresting, original, avant garde and downright genius music to ever come out of the punk movement. ****

Sound: Compiled and remastered by Guthrie himself, now we can hear all the details. Just listen the guitars on *Plain Tiger* to be knocked into the ground. A miracle! ********* MP

TONY KOFI Future Passed

Music: This West African-born, Nottingham-based saxophonist was associated with one of the UK's finest jazz bands, the Jazz Warriors, in the early 1990s and has played with lots of bigger names including Courtney Pine, Branford Marsalis and Donald Byrd This trio with drummer Robert Fordjour, Hammond organist Anders Olinder and occasional guests features quotes aplenty from Monk, Mingus, Davis and Coltrane (especially Coltrane), all nicely offset by the soulful, bluesy tone of the Hammond B3, which can't help but conjure up the spirit of Mose Allison on occasion. Radical no, but as a lesson in the art of swing, it's a joy. **** Sound: Warm and immediate, in contrast to the clean sound of many modern jazz records, it's a little gem of small group grooving. ★★★★ DO

ALI FARKA TOURE Savane

World Circuit

Music: Ali Farka Toure finished his final, and ultimately posthumous, album just a few weeks before he died of cancer in March this year. But, he had at least, the satisfaction of knowing that he was signing off with his

magnum opus. Savane is a remarkable final chapter to the Malian guitarist's extraordinary career and the most blues-drenched record he ever made. Hypnotic guitar riffs and deep-throated vocals of defiant power and conviction conjure up a primeval profundity that recalls the unearthly quality of Robert Johnson or the early recordings of Muddy Waters. If the world's ethno-musicologists ever needed proof that the blues came from Africa, it's here in every last supreme note. $\star \star \star \star \star$

Sound: Scratchy traditional African instruments mix seamlessly with Little George Sueref's blues harp and Pee Wee Ellis's tenor sax, while Ali serenely holds the bridge. $\star \star \star \star NW$

WAGNER Parsifal

Plácido Domingo, Christian Thielemann (conductor), Choir and Orchestra of the Vienna State Opera DGC 00289 477 6006

Music: Thielmann brings a rare understanding to this long, complex and moving work. Of course, it helps that Domingo's soul really belongs to Parsifal, plus the special affinity that the Vienna State Opera has with the music. The performance is truly magisterial, with rare concentration and passion, speeds that just sound unarguably right and a complete sense of conviction. ****

Sound: The recording was made live at the Vienna Staatoper and reproduces with great clarity and with a strong sense of presence. If ever a recording called out for release in multichannel SACD sound, this is it. ****** * AG**

THIS MONTH'S CLASSIC HI-FI TEST DISC "Don't turn the quiet bits up too high!"

ROGER WATERS The Pros and Cons of Hitchhiking Harvest

Music: Although not a big commercial success, former Floyd linchpin Roger Water's 1984 solo album is still worthy of note because of its high style and impressively polished playing. It's something of a rock opera: the track titles start with 4.30 AM and finish with 5.11 AM and describe a complex and detailed dream story in condensed form. As one expects of Waters, this is no easy ride. There are the usual nightmarish scenes, but these are interspersed with lighter

passages. Waters may use music making as therapy, but he does it in a unique and inventive style that can sound stunning on a decent system. 🖈 Sound: Rarely has a rock album been made with the bandwidth and dynamic range on offer here. The combination of field recordings and close-miked whisperings contrast with big band crescendos to startling effect. Don't turn the quiet bits up too high! $\star \star \star \star JK$

SUFJAN STEVENS The Avalanche

Rough Trade

Music: Part two of Sufjan Stevens' musical map of the USA came out last year. He's writing one album for each state, although there have been contradictory statements about the project from his US record label,

Asthmatic Kitty. Presumably, this is because Stevens discovered there wasn't much of an album to be had regarding the potatoes of Idaho. Regardless, it turns out that Illinois was originally conceived as a double album, and this record of odds and sods is effectively disc two. With a history like that it's hard to escape the feeling that this is second best, but the 21 tracks include all his usual hallmarks - quietly keening chamber orchestra, plaintive banjo, quirky woodwind, contrapuntal horns, choral interludes and Stevens' own, quietly unprepossessing voice. It may be an also-ran, but this is a beautiful album in its own right. ***

Sound: Never sounding polished or slick, most of the tracks have a low-fi but intimate feel, like a sort of folky Stereolab, with oodles of charm. $\star \star \star DO$

MOZART

Die Zauberflöte (The Magic Flute) Dorothea Röschmann, Claudio Abbado (conductor) Arnold Schoenberg Choir, Mahler Chamber Orchestra

DGG 00289 477 5789 Music: Surprisingly, this marks the first time Abbado has committed The Magic Flute to disc. He and the Mahler Chamber Orchestra bring verve and litheness to the work, and the soloists add a brilliance and passion often missing from this Mozart landmark. The recording is notable for its colour and range, transparency, naturalness and lightness of touch. * * * *

Sound: Recorded in Modena, the recording is every bit as fresh and lively as the performance, which makes this a standout among recent versions with modern sound. Voices are naturally spotlit, and it has the vitality and coherence of a real event. $\star \star \star \star AG$

ELAINE PALMER Waves

Cosmos Recordings

Music: With a tough but tender voice both sultry and intelligent - and some great acoustic songs of her own creation, Elaine Palmer has a fine original talent. Older listeners will find echoes of Rebecca Pidgeon, Melanie and even Joni Mitchell in some of these eleven tracks but Palmer's skill lies in effortlessly fusing such iconic sources into a total, and mostly innovative, whole. The tuneful, bittersweet Terease, the forceful In Your Company and the gentle In My Dream are perhaps the best numbers here but, honestly, they're all very strong. The perfect soundtrack for a memorable night in. ★ ★ 🖈 Sound: Well recorded - with rounded edges that are never flabby - by Julie McLaren at Madchester's Analogue Catalogue studio. *** * PS

DVD-AUDIO & SACD

VANTAGE POINT

Resolution DVD-Audio (24/96 stereo and surround, DTS-Audio, Dolby Digital)

AIX Music: This DVD-Audio title takes the comprehensive approach to content, with almost every format option that the medium will support on board the

double-sided disc. Session drummer supreme Simon Phillips (the man who replaced Jeff Porcaro in Toto), is joined by Jeff Babko on piano, Brandon Fields on tenor, Walt Fowler on trumpet and Alphonso Johnson on double

bass. Their sound is rhythmically strong and energetic, the latter largely provided by Phillips without whom the band would have more of a 1950s jazz sound. As it is, this is straight-ahead stuff with impressive playing on all seven self-penned tunes. ★ ★ ★

Music: Choose between 'audience' and 'stage' mixes in Dolby Digital and DTS respectively whilst watching the HD video, or take the purist option and play the full 24/96 multi and two-channel mixes. It all sounds good. $\star \star \star \star \star JK$

MOZART

Wind Concertos: Flute Concerto in G, Bassoon Concerto in B Flat, Clarinet Concerto in A

Alexander Janiczek (dir), Scottish Chamber Orchestra SACD (stereo/multichannel SACD plus stereo CD layer) Linn CKD 273

Music: The Scottish Chamber ensemble is particularly appropriate for this repertoire. Not so small it sounds lightweight or lacking in body and not so large that it is staid or lacking in vitality. Their accomplishment adds to the strength of a Mozart disc that really has wings.

Nevertheless, the clarinet concerto featuring Maximiliano Martin is the work that has the strongest impact here. The two earlier works are excellent, familiar fare, but somehow lack the Clarinet Concerto's depth and passion. What really makes

this recording fly, however, is the security of the soloist's delivery. Martin's playing has the easy virtuosity that only top class musicians can achieve. $\star\star\star\star\star$ Sound: The clarinet can often sound subtly out of tune, which has something to do with the physical qualities of the instrument, but here it sounds bright and clean, and always on top of intonation issues in this warmly attractive recording made in Edinburgh's Usher Hall. * * * * AG

PERE UBU

The Modern Dance

DualDisc: (one side CD stereo, one side DVD-Audio 5.1) Immergen

Music: Of all the weird shapes thrown in the wake of punk, one of the most enduringly odd was surely Cleveland's Pere Ubu. Led by portly bleater David Thomas, their angular, experimental blend of rock rhythms and avant garde sensibilities fitted well into the 'anything goes' climate of the late 1970s, bridging the gaps between Captain Beefheart, The Stooges, industrial

noise and free jazz. Their 1978 debut album's opener, Non-Alignment Pact was probably about as traditionally 'rock' as they ever got, and they soon left conventional song structures and conventions behind, (basically on side two), but their influence spread wide, to Joy Division, Wire and the Comsat Angels in the UK and later US groups like Sonic Youth. $\star \star \star \star$

Sound: The original was recorded on a budget and wisely, the DVD-Audio version does nothing to hide its origins, the rough and ready sound adding to the atmosphere. The DVD also includes an interview with main man David Thomas. ** * * DO

The New Gold Standard

Gold signature

The Power of a Thousand Small Impressions

The radiating surface of Monitor Audio's innovative RST®2 drivers, used exclusively by the new Gold Signature speakers, is patterned with hundreds of concentric dimples, meticulously fashioned to preserve cone geometry at all volume levels. This means you'll enjoy smoother, distortion-free sound however hard you play music and film.

With a choice of slender stand, floor, centre and surround speakers, expertly engineered in beautiful real wood and lacquer finishes, the new Gold Signature range will make a big impression all round.

For details of the new GS Series please visit: www.monitoraudio.co.uk mail: info@monitoraudio.co.uk or call free on: 0800 0352032

QUANTITY VERSUS QUALITY

At present there appears to be a tension of opposites shaking the hi-fi industry. These opposites are 'quantity' – as personified by the hard disk recorders with their large gigabyte memories – and pure sound 'quality', typified by Super Audio CD players and highly detailed recordings. Why can't we have both?

So, my question is: does any company yet possess the technology to create one machine that can burn SACDs and save the results onto a hard disk drive?

Conrad Nell Netherlands

HFC The short answer is no. Home SACD recorders won't appear because of copyright restrictions. For the same reason, you can't extract the raw data from SACD and save it to a hard disc. It is, however, possible to create DVDs on a PC or Mac and if you've a real hunger for home recording quality, this is probably the way to go.

BURNING BRIDGES?

It's one thing to virtualise CDs, but it's hardly wise to then dispose of the originals as Alan Sircom's friend did, *Dispatches (HFC* 281). Hard drive storage is fragile, whereas CDs are robust and electrically and mechanically inert.

Someone with an IT background should know that the average life of a hard drive is a risible three to five years and any hard drive can expire without warning at pretty much any time. Should you therefore constantly back up your library onto another equally unpredictable hard drive? Or perhaps onto recordable discs,

"Does any company create a machine that can burn SACDs and save them?"

thus defeating the purpose of disposing of the (sonically superior) originals?

Roger Thomas via email

HFC We would tend to agree with you, Roger, although Alan's pal apparently retains several hard drive back-ups of his departed discs, to guard against degeneration and loss. We're also assured that much of his music is 'less than timeless' and that he doesn't necessarily intend to keep it forever. Each to his own...

NO SUPPORTS

Am I the only hi-fi enthusiast with a smallish listening room where speaker stands are not a practical option? Is there nothing that I can do to improve my listening experience when circumstances force me to place my speakers on shelves (fixed into alcoves – shock! horror!). I appreciate that with bookshelves, there is a limit to how far from room boundaries speakers can be placed.

LetterofthemAnth

SONY'S FOLLY?

I am perplexed by Sony's efforts to promote the DualDisc format. Why is Sony doing this, when a brilliantly reasonable solution to the competing format war is already here? The recent excellent special editions of Goldfrapp's *Supernature* and Depeche Mode's *Violator* (offering both SACD and DVD-Audio) have all the benefits of DualDisc and give better value via the choice of either format in one neat case!

For universal disc player owners who already own the original CDs, it's an

incentive to buy the title again and with the extra perceived value given by the discs, everyone is happy.

Roy Li via email

HFC Like you, we're sad at *HFC* that SACD has never had the push it really deserves. But, given the choice of a hi-res alternative to CD, or none at all, we would still give our backing to DualDisc. We still make every attempt to pick up SACD and DVD-Audio discs when we can.

WIN CRYSTAL CABLE PICCOLO INTERCONNECTS!

The author of our letter of the month receives a one-metre pair of Crystal Cable Connect Piccolo interconnects worth £260, featuring a silver/gold conductor with Kapton insulation, plus a transparent Teflon jacket. So get writing! (150 words max please...)

[Choice Mail] Readers' letters

Above: Spendor S9e loudspeakers

My Neat Critiques are about a foot from the back wall, standing on wide, solid-pine shelves. I would greatly appreciate recommendations about shelf materials. speaker supports, wall treatments or other tweaks, as well as suitable alternative speakers if necessary, to go with my Sugden A21a amp and Meridian 506/24 source. I mainly listen to classical music.

Peter Pienkowski Exeter

HFC The two main attributes of speaker stands are isolation and rigidity. You can improve the sound of bookshelf speakers by packing them in with books (sounds daft, but this will help to dampen any inherent

micro-movements caused by the speaker driver's pistonic action) and/or sticking them down with Blu-tack.

You could also try wall supports, which are becoming more popular thanks to the increasing popularity of home cinema. Steer clear of the really cheap ones and try the quality products available from Omnimount, AVF and others, which can do the job well.

SMALL WORLD

Hi-Fi Choice is a good magazine. However, your obvious tendency towards British products - cool as it may seem - makes your magazine useless to the reader who wants to choose his next components wisely. Why, one look at your Buyer's Bible is enough to understand that it's biased and hence unhelpful. For example, in your May issue, 18 out of 22 turntables you list are from English manufacturers.

With today's global economy being what it is and the fact that great audio products are made everywhere, not only your readers outside England, but even your local ones, do not get the coherent, unbiased advice they expect. Eval Israel

HFC We hear you Eyal, although much of the kit purportedly made by UK manufacturers is in fact manufactured in China these days. We have to reflect the main market for the magazine, which of course is the UK and while it's certainly possible to obtain products from just about anywhere in the world, we naturally focus on products that are available through UK dealers. After all, we advise our readers to use their own ears. Things are different in the UK high-end market, though; only 12 of the 57 products tested in The Collection 2006 (HFC 282) were from the UK.

"How far up the cost ladder will I need to go to realise an improvement?"

ALMOST THE REAL THING

Having had my present equipment (Audio Precision Eikos CD player, John Shearne Phase 6 preamp with two Phase 3 Reference power amps, Living Voice Auditorium speakers) for some seven or eight years, I am in a position where I can afford an upgrade.

The problem I have is that £1,000-£1,500 amps and CD players have become so good, according to your editorials that is, how far up the cost ladder will I need to go to realise a significant improvement? I presently find the upper register of female voices quiet strident and prominent. More air, space and delicacy would be desirable, with a more natural sound. Your thoughts would be appreciated.

John Langley via e-mail

HFC Ah, the old system fatigue. Your system is in a price range where money won't necessarily buy you an equivalent improvement in sound. In fact, you may find that even substituting some elements of your system for similarly priced components may produce the desired effect, without a huge spend.

The sound from your system should be very clean and precise - but without making female vocals hard to enjoy. If you're really keen to make radical change, start with the speakers; exchanging the highly efficient Auditoria for something that offers a fuller and more rounded output, such as Spendor's delightful S9e (HFC 256)

HI-FICHDICE subs HOTLINE 0870 644 8650 when you subscribe to HI-FICHOICE

HI-FICHOICE

A few choice comments plucked from our online forum. Join in the fun at www.hifichoice.co.uk

It's nteresting that people accept that a high quality record player can make poorly recorded records more listenable, yet find it difficult to fathom that CD players are guilty of making a CD sound like a poor recording.

Sastusbulbas

... It's a good point. I think some of the problem

stems from magazines that test using

'audiophile' recordings plinky-plonk jazz and other unlistenable nonsense - and then hold up 'detailed' and 'revealing' as the be-all and end-all of CD reproduction. One of the bigger titles is particularly guilty of this.

Meninblack

How long would you expect on average a CD player to last and what will most often fail? Kit cat man

...Old ones, which were made better, might last longer. Newer ones, maybe about 15 years average. It's the laser mechanism that fails first. Emperor

Modern manufacturers advertise their advances in electronics, materials and construction techniques, but have speakers really changed that much? After all, it's just a box with a magnet and simple cone in it... Rockmonkey

... Progress has been made in technology for both

driver materials and cabinet design. This makes most modern speakers more accurate than their older counterparts (although paradoxically, this also often makes them less enjoyable to listen to, but I guess that's probably a matter for an entirely different topic). Beobloke

Announcing RoomPerfectTM our most exciting technology yet!

TDA2200

-0

True Digital Amplifier A truly versatile system offering digital & optional analog inputs, DSP crossovers, parametric EQ, analogue outputs and available with RoomPerfect.

1.00

CD1 Versatile CD Player/Transport Superb sound quality and value, an ideal match for any system seeking a high-performance source. Stunning reviews.

Millennium Mk4 Reference Digital Amplifier The world's first and best fully digital amplifier is even better with the release of the Mk4.

SDA2175 SemI-Digital Power Amplifier Awarded 'Power Amplifier of

the Year' by Hi-Fi World, this fully balanced 200W unit offers superb sound quality and value.

SDAi2175 Semi-Digital Integrated Amplifier Fully balanced 200W amplifier with 6 RCA and 1 XLR inputs. Amazing value for money.

What is RoomPerfect[™]?

RoomPerfect[™] is the eagerly awaited room correction system, developed and patented by Lyngdorf Audio.

RoomPerfectTM conceptually and effectively removes the negative influence of your room from the music, allowing the system to sing as designed.

The performance of the RoomPerfect[™] system is outstanding, obtaining a new level of performance in your listening room.

The system is easy to set up and requires no room acoustic knowledge or even a computer.

Why use RoomPerfectTM?

The quality of your CD player, amplifier and speakers might be exemplary, but the system may still not be cutting it at home. It's often the case that even highly acclaimed speakers sound great in some rooms, and disappoint in others.

Your speakers are not at fault.

The performance of a speaker is known to be highly dependent on the acoustics of the room and relative positions of the speaker and listener.

Innovative technology

The unique RoomPerfect[™] system measures both the listening position(s) and a number of other room positions, mapping a 3-dimensional sound-field of your room.

The RoomPerfect[™] system is then capable of combining the listening position(s) information with the sound-field information in a wholly new and innovative way, ensuring that you achieve superior sound, irrespective of your room, speaker and listening position.

Simple to use

The RoomPerfect[™] system is very advanced, but easy to use. A computer is not required. The calibration procedure will guide you through setting up the supplied microphone in a number of positions, each measurement taking a few seconds. The system evaluates and displays the quality of the sound-field, to help you optimise the results.

First product available!

The first implementation of the RoomPerfect [™] system is an integrated module for our True Digital Amplifier (TDA2200), offering a great leap in performance for a modest outlay.

The TDA2200 becomes a single high performance unit replacing a DAC, room correction system and pre/power amplifier – a truly scalable, versatile product.

And the results...?

Sweet, dynamic, detailed, coherent and musical performances free from booming, smearing, congestion, shouting and other room-induced distortion.

NAIM CDX2 CD PLAYER | NAC202 PREAMPLIFIER | NAIM NAP200 POWER AMPLIFIER NAIM HI-CAP POWER SUPPLY | NAIM n-SAT/n-SUB SPEAKER SYSTEM | £9,145

Naim-plan

There is an easy route to the high-end and Naim knows what it is

i-fi, eh? What a can of worms. Don't you wish you could say 'pah!' – to hell with it all. Just give me some boxes that plug together and play music. But, it goes against hi-fi's enshrined mix 'n' match principles. What about the endless hours of separates auditioning, head scratching and crises of confidence? What about the cabling conundrums, the snake oil, the infinite finessing, the angst? Isn't it all just a part of hi-fi's rich tapestry?

Maybe. And maybe we should all buy a Naim system and have done with it. Now, I know what you're thinking. Why Naim? There are any number of reputable manufacturers out there, many British, that will sell you an entire, grown-up, aesthetically-matched, zero-hassle stereo system. We can think of a few – Meridian, Linn, AVI – whose products might just hit the sweet spot straight out of the box and kill the yearning for 'that little bit more' stone dead.

Then again, ingrained audiophile instincts die hard; deny them altogether and the buzz you get from owning a real hi-fi rig can perish too. And it's here, as a one-stop brand, that Naim makes the difference. What Naim offers, from an affordable starting point, is a perfectly choreographed, cost-effective route through evenly spaced performance gateways. No blind alleys, no tantalizing diversions, no exotic cables (well, unless you insist) and no snake excretions.

It's one of the reasons (that stark, dark industrial design being the other) that Naim Audio – while relatively small and still operating out of Salisbury, Wiltshire where it was founded by the late Julian Vereker – is arguably the most famous hi-fi brand in the world. And probably the coolest. Whereas other producers of audio hardware have customers, some inevitably casual, Naim has acolytes.

"Whereas other producers of audio hardware have customers, Naim has acolytes. They've bought into the belief system."

They've bought the kit but, more importantly, they've bought into the belief system.

Boxes you plug together that play music - that's the essence of the thing With the emphasis firmly on the music. It sounds obvious - the kind of philosophy you'd expect a hi-fi manufacturer to have - but, for Naim, communication of the music takes on an almost religious dimension. It's born out of a respect for musicians and a disdain (even mistrust) of the conventional tenets of hi-fi. For example; it's a music system's ability to nail the quality of a performance that is the true measure of its worth. Real music is made by real people: the best hi-fi should have that 'human' quality, too. For this reason, very little hi-fi does 'excitement' and 'presence' quite as well as a Naim system. And this one's a corker.

RUN SILENT, RUN DEEP

First, there's no need to rub your eyes: that is a subwoofer you can see. And yes, a pair of bijou satellite speakers barely taller than the hi-fi. You were expecting something a little more audiophilic, a little less audio visual. Big, bold, deep-chested cabinets in the spirit of the company's famous DBL and SBL behemoths, perhaps. Well, here's the thing. Generally, I don't much care for Naim's current line-up of loudspeakers. Yes, it's personal but, in my experience, on the end of Naim electronics, they can sound in-yer-face, dry and overly taut. And while Naim might argue that these are largely 'hi-fi' issues and have little to do with communicating the musical message (true enough), it's equally true that Naim systems, in the past at least, often sound their best with music that generates much of its impact from pace, rhythm and timing. Hence a question ▷

.

[Beautiful Systems]

Naim CDX2 CD player E2,925 The upgradable CDX2 runs the same decode and control software as the flagship CDS3.

E E R E E E E

Naim NAC202 preamplifier

£1,500 An extremely fine preamp, even by Naim's exacting standards. With plenty of 552 DNA.

NAP200 power amplifier £1,475 A power amp very much in the mould of the legendary the NAP250. Claimed power is 70 watts, but sounds more.

Naim HI-CAP power supply £985

Latest HI-CAP has anti-vibration and anti-magnetic chassis, but remains the power supply of choice for many.

Systems. How do you preserve all that excitement, drive, verve and vitality and at the same time, stay a few inches back from the ragged edge?

Until a year or so ago, you looked for your speakers elsewhere. For our last Naim *Beautiful System*, we chose Wilson Benesch Arcs (great). Scottish speaker maker ART is reported to being doing brisk business to Naim owners, too. But Naim's PR man assured me that, with Naim's own n-SAT/n-SUB system, the yearning to search outside the Naim box would stop. I didn't believe that it would. But it did. More on that in a moment.

First, the front end. This £6,885 CD, pre/power, power supply combo checks in a couple of rungs above the entry-level Nait kit, but still leaves plenty of room for future Naim-style upgrading. The £2,925 CDX2 is the current update of the original CDX. Both the swing-drawer transport with its disc-stabilising magnetic puck and the chipset have been upgraded, the latter to include an HDCD decoder/digital filter. Eight-times oversampled data is sent to two (one per channel) Burr-Brown PCM mono D/A converters. A separate, fully optimised master clock controls all main digital functions, while the clock configuration and layout are engineered to minimise jitter.

A seven-pole analogue filter follows the DAC to remove spurious noise. In addition to a clearer back-panel layout, RC5 and optional RS232 ports have been fitted, so that the CDX2 can be integrated into home installations.

All the main control functions are handled by a microprocessor running Naim-written software. Every aspect of the SAA 7376 servo controller/decoder functionality is under software control: Naim-written codes maximise performance in all areas. For example, the transport parameters are optimised for each disc as it is loaded. Confidence inspiring. As is the build quality. Archeologists will be digging up the black metal CDX2s in thousands of years time, delighted to discover they can still slide open the disc drawers to extract the priceless Antonio Forcioni CDs.

FIRST PRINCIPLES

The £1,500 NAC202 preamp combines Naim's first-principles approach – exceptional overload capabilities over the whole audio bandwidth, perfect stability under all working conditions, no switched filters or tone controls – with trickle-down features from its flagship NAC552, as well as the pragmatic option of using two sets of phono sockets and interconnect cables of your own choosing alongside the usual (and in Naim's view, superior) DINs, making

six inputs in all. Low-resonance, star-earthed circuit boards, anti-vibration chassis feet and carefully matched precision rotary potentiometers with precious metal wipers to ensure stability also reflect Naim's high-end-down philosophy. And the NAC202's 'silent' chip - that controls all aspects of the preamp - 'sleeps' during listening to maximise sound quality. Another tactic for extracting more music is keeping the power supply outboard. In a basic configuration, the NAC202 would take its power from the matching £1,475 NAP200 amplifier, but Naim promises audible benefits (improved timing, dynamic range, clarity and order) if your use one of its separate ultra low- noise power supplies to feed the analogue audio and digital control circuits - in this system, that duty falls to the midpriced HI-CAP.

Naim makes one of hi-fi's great statements about its power amplifiers; they can easily deal with any impedance from zero ohms to infinity without damage or signs of instability. In the light of which, the NAP200's fairly modest-sounding 70 watts assumes rather more authority. Like Naim's £10k flagship NAP500 power amp, the NAP200 uses a new circuit design with improved earthing arrangements built on a very high quality, anti-resonance main audio

"It is the kit's abundant musical skills that hold you in their thrall, though. None more than its way with tempo and rhythm. It's a Naim system, what did you expect?"

circuit board, while separate windings provide dedicated left and right channel rectified supplies with two smoothing capacitors per channel.

And so to the speakers, or rather the speaker package. As well as forming part of Naim's 5.1 channel n-System, the £735 n-SAT speakers are two-channel mini monitors in their own right, featuring a 130mm pulp cone main driver with low-loss suspension and phase plug, plus a 19mm annular radiator tweeter, mounted in a separate sealed enclosure. The curved-back, five-litre cabinets boast mass-damping and heavy duty internal wiring. Naim recommends its own £205 n-STAND which has a three-point, minimal contact speaker interface and includes cable management for a tidy installation.

The £1,525 n-SUB is based around a 250mm long-throw driver and a 350 watt integral amplifier (housed in a separate compartment) and has three inputs to allow easily selectable stereo or multichannel LFE options. But the flexible nature of the beast doesn't stop there. Its low pass filter has 22 positions,

and six set-up configurations for music, and movies can be preset into memory for recall from the remote handset.

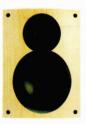

DESCRIBE AND PREJUDICE

The beauty of systems that get it right is that they're easy to describe. And despite the perhaps inevitable prejudice that sub/sat systems don't sit comfortably in purist stereo kit, this one gets its right straight out of the box – even the sub's default setting is spot on for music. The first thing that hits you is intelligibility. The system is easy to listen to because it's so easy to understand. It still puts the music ahead of traditional hi-fi considerations such as imaging and neutrality, but it sounds as if the real thing is in the room: palpable, tactile, full of texture, colour and life.

Judged by hi-fi criteria, the system clearly has formidable resolving power and precision and a beautifully open, expressive and lucid midband. And there's a soundstage that extends well behind and to the sides of the speakers; a little sat/sub magic. The sub's contribution is seriously deep and powerful. Its seductively sumptuous quality is justification enough for its inclusion, but it's also agile and tuneful; musical without a doubt. The clean, extended upper frequencies are naturally textured and free from grain, gloriously detailed yet unforced.

It is the kit's abundant musical skills that hold you in their thrall, though. None more than its way with tempo and rhythm. It's a Naim system, what did you expect? The deftest shifts in timing – a dragged beat, a subtle change of emphasis – are faithfully captured. There's speed without the edgy transients Naim products were once criticised for. Rock thunders out with breathtaking energy and drive, sounding improbably massive given the diminutive size of the speakers. But small acoustic ensembles are reproduced with just as much enjoyable honesty tingle factor.

So here it is, the Naim system that does it all. Speed and timing, bass and brio, scale and dynamics (without the large boxes). And with all types of music. Honestly, it doesn't get any better. HFC David Vivian

e don't think Linn ever lost the taste for music that was embodied in Sondek LP12 turntable. But the last few years have seen much of the company's energies and resources devoted to the development of multichannel and multiroom capabilities, and this new Majik system marks a public 'return' to Linn's two-channel roots.

The three components involved in this system are all new, though all have engineering links to previous Linn components. The Majik CD player is a development of the Ikemi, with lessons learned with the top-of-the-line Sondek CD12. The Majik Kontrol preamp has its roots in the longstanding Kairn, but has also benefited from Klimax architecture. And the Majik 2100 power amp is based around Linn's patented Chakra output stage.

All three components are compact and lightweight. The reason is that all three use Linn's proprietary switch-mode power supply, which operates at very high frequencies above

Linn Majik CD player, preamp and power amp [Review]

LAB REPORT

CD PLAYER

The CD player is almost beyond reasonable reproach on technical grounds. Distortion, noise and jitter are all good enough to make measuring them with certainty a difficult task, which means you are guaranteed a clean 90-odd dB dynamic range. It's 2.0 volt output is absolutely fine, too. The only measurement we might quibble over is of frequency response, which as in most CD players is flat to 20kHz, but doesn't roll off fast enough. This allows some aliasing near half the sampling frequency. It's a small point, but there is some evidence that faster-attenuating filters can sound better. Otherwise, the Majik CD's measured performance is exemplary.

AMPLIFIERS

Linn's Majik Control amplifier is pretty much exemplary, too. It has vanishing distortion (better than 0.001% under most conditions), low output impedance, low noise via both line and phono inputs, and flat response across the audio band. The power amplifier delivers 50 watts into eight ohms and 95 watts into four, one or both channels driven. However, it has quite high distortion by present-day standards. This is around the 0.02% mark in the midband and nearer 0.1% at high frequencies, with a residual and associated spectrum reminiscent of crossover distortion. The level of this distortion doesn't depend much on loading, though higher harmonics are more visible under heavily-loaded conditions. Noise is good and frequency response gently tailored to -1dB at 23kHz. HFC **Richard Black**

the audio band and therefore needs only a small and light mains transformer.

All three share similar casework and styling; with nicely bowed convex front panels with softened edges and corners, some 5cm narrower than 'standard' 43cm components. Our samples had dark grey matt casework, enlivened by a silver and slightly recessed central section. Fashionable all-silver versions are also available.

Both the Majik CD and Majik Kontrol pre have decent size display panels and just six buttons; additionally the CD player has a frontloading drawer, while the preamp has a 3.5mm socket. The power amp looks rather different, with a grey central section with silver badge flanked by cooling vents that are also found in the top panel. All three have steel,wrap casework, perhaps parsimonious at the price.

The Majik CD player is primarily intended for regular stereo CD replay, but it also supports a number of other two-channel optical disc formats, including CD-R,RW, DTS Audio, MP3 and HDCD. Other features are also very comprehensive. Socketry includes two pairs of analogue output phono pairs, optical and electrical digital outputs, plus Linn KNEKT and RS232 control sockets. All the usual disc

"Most users will settle for the default options, but the sheer flexibility will make it very handy in multiroom settings."

navigation functions are available, though the scan only operates at twice normal speed. A wide variety of display and user-configuration options are also available.

Although both may be operated via their front panel buttons, in reality, the supplied remote handset will be doing the work. Although usefully slim for one-handed operation, it's not a particularly inviting device, with more than fifty tiny buttons. Yes, it does support a range of products and it does all the necessary functions with a bit of practice; but, it's not ergonomically friendly.

The Majik Kontrol preamp is the most complex component, partly because it includes the necessary socketry for integrating with Linn's multi-room KNEKT system, over and beyond its standalone stereo capabilities. As a stereo preamp, it has eight phono pairs, clustered rather too close together for some of the bulkier plugs around these days. Two pairs cover line and tape outputs, while the six input pairs provide for plenty of sources. One of these inputs allows re-positioning of an internal 'piggy-back' board for three alternative configurations – matching high output (MM), low output (MC) phono cartridges, or an additional line level source.

Microprocessor control - via an elaborate series of menus and sub-menus - allows a huge number of user-adjustable features. Some are more useful than others, but all of them taken together make for a rather daunting prospect. To explain all the options would use up all the space available for this review. The short version includes a range of display options covering brightness, content, 'time out' and 'sleep'; inputs can be assigned names, selected directly and adjusted for relative volume; the rate of volume change, muting, maximum, relative headphone and start-up levels. Then there are numerous others, rather more obscure - indeed often very obscure options, but most users will settle for the default settings here, but the sheer flexibility over the operation of the preamp will make it very handy in multiroom settings.

Last comes the power amp. The Chakra output configuration consists of a central IC module surrounded by an array of bi-polar 'boosters' that come into operation as power requirements are increased. Power output is always the headline-maker for power amps, and here it's a relatively modest but entirely adequate 2x 56 watts into eight ohms. In addition to the two phono inputs and

084

Ian Wilson is Linn's principal design engineer in the company's electronics division. He was particularly closely involved with the Kontrol preamp and came up with the idea for its clever multi-purpose phono stage.

HFC Linn is a strong proponent of switch-mode power supplies. Is this merely because their small transformers are less costly?

IW Actually they're rather more costly to implement, because of all the extra high quality silicon (electronics) - the high-speed diodes and low impedance FETs we have to use. The reason we use them is that they make the products immune from variations in mains power. Our power amps will give a consistent specified power output across a mains voltage range from 90V to 264V, so they can cope with problem mains conditions anywhere in the world - even with the diesel generators used in vachts.

What particular factors do you need to employ to use switch-mode supplies?

The fast (75kHz) switching waveforms have to be completely isolated from the devices themselves, from the signal path and from the mains network. And, if you're good at stopping stuff getting into the mains, you're also good at avoiding it coming in and causing problems. You'll have noticed how many mains conditioning devices have appeared in recent years; these are completely unnecessary with our switch-mode supplies.

What influence have your top-of-the-line Klimax models had on the Majik components?

It's long been our policy to 'work down' the technology developed for our top models to those lower down the range. The architecture of the Majik Kontrol, for which I was responsible, is based heavily on that used in the Klimax Kontrol. And the lessons in clocking and data manipulation learned with the Sondek CD12 are found in the Majik CD.

What is the best upgrade path for owners of the new Majik system?

We've always recommended focusing first on the source components, so upgrading the Majik CD to a Unidisk 1.1 would make a lot of

two pairs of socket/binder speaker output terminals, a pair of audio output terminals is also provided to drive subwoofers. An interesting feature is the ability to retro-fit active filter modules, so the amplifier can operate alongside additional power amps as part of a Linn Aktiv system. Auto-sensing is also fitted - the amplifier reverting to stand-by if no signal is received for twenty minutes.

SOUND QUALITY

Wiring up the system took very little time and involved no aggravation, though the 'default' condition for the display brightness differs

clearly rather over-specified and overpriced for the electronics here, but their wide bandwidth and prodigious dynamic range are very useful in assessing the quality of the driving system.

Now, it was time to settle down and enjoy the music - and enjoyment is very much the word here. An afternoon was spent spinning a variety of different discs, some familiar, others much less so. Live rock recordings, including the Grateful Dead in a stadium concert and Hot Tuna in a clubland setting were equally well handled. Coming a little more up-to-date, the guitar duo Rodrigo y Gabriele put in a captivatingly percussive performance.

"One thing stands out: the overall character of the components of this system remains impressively consistent throughout."

between the CD player and the preamp. The former comes out the box set to full brightness, the latter to 'Auto'

With everything up and running, using Linn's mains cables and interconnects and placing each component on its own separate glass shelf, the power amp was connected to a pair of massive B&W 800Ds, via my usual Vertex AQ Moncayo speaker cable. The speakers are

The Majik system has a lightness of touch, because the bass registers sound uncommonly clean and free from any resonance or overhang. Indeed, first impressions were that it sounded a little bass-light, but that thought was quickly quashed when the first track with serious bass content came along and the Majik responded with considerable enthusiasm and power, and not a little poise.

The overall character is just slightly cool and if the weight is ample, warmth seems a little shy, and there's a slight tendency to emphasise the upper registers of the voice band. The sound is a little upfront and the presence zone notably well presented, projecting plenty of important detail and information - though the top end as a whole might have been a little sweeter and more delicate. Playing some vintage classical material, recorded originally with simple mike techniques, highlighted some limitations in stereo depth and focus, with some loss of coherence and spaciousness in the concert hall acoustic. And the system as a whole seemed to lose a little of its incisiveness and

Linn Majik CD player, preamp and power amp [Review]

authority when asked to play at very quiet late-into-the-night levels,

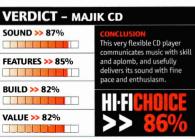

Of the three components here, the Majik CD player is the stand-out performer, delivering its music with fine pace and urgency and decent dynamic drive and enthusiasm. While it doesn't entirely transcend the innate artificiality of the medium, nor deliver the quietest backgrounds, it does communicate the musical messages with fine clarity and aplomb.

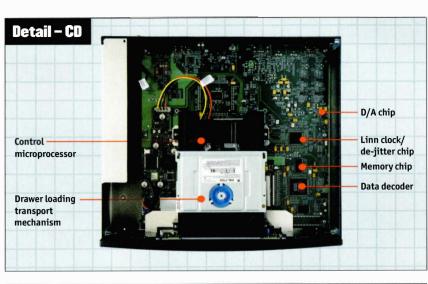

Although most of the reviewing was done using the system as supplied, along with other line-level sources, the vinyl options were also explored and found to be well up to scratch. Using a Linn Sondek LP12 with Ekos tonearm, a Rega Exact moving magnet type performed admirably enough within the limitations of this type of cartridge. The internal sub-board was realigned and a Linn Akiva fitted to check compatibility and performance with a low output moving-coil device. This amply showed why demand for vinyl remains healthy.

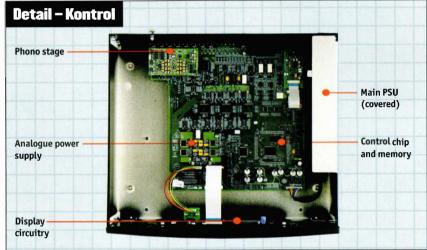

Direct comparison of LP and CD can never be entirely valid, because of the very different mastering processes involved, but sometimes it's irresistible. We compared both versions of Christine Collister's *Love* album, which clearly demonstrated the extra coherence, warmth and sheer humanity of the vinyl version, using an admittedly significantly more costly record player. The Kontrol's vinyl stage is clearly a facility that's worth taking seriously.

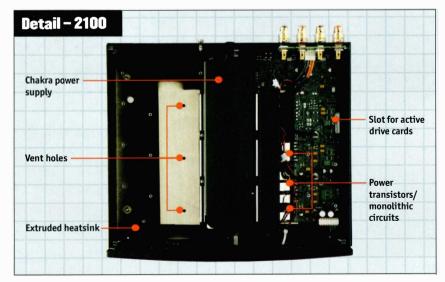

One thing that particularly stands out, is that the overall character of the components of this system remains impressively consistent throughout. It has a bright, light and notably open balance, with a very dry, clean bass end that's unusually free from any thickening. The result might be a little cool for some tastes perhaps, but detail is uncommonly clear and well projected. Styling is particularly neat and compact, though the ergonomics could certainly benefit from some simplification – perhaps the inevitable consequence of its very comprehensive roster of features. **HFC** *Paul Messenger*

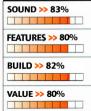

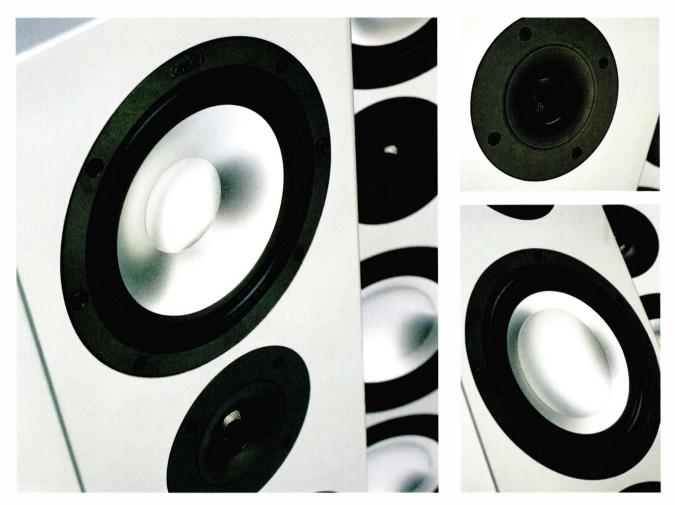

VERDICT - MAJIK KONTROL SOUND >> 77% FEATURES >> 90% FEATURES >> 90% Image: Sound Stress Stres

VERDICT - MAJIK 2100

CONCLUSION This lightweight unit has the flexibility to accommodate active filters. Bass delivery is clean and dry, though the top end might have been sweeter.

n *HFC* 267 we reviewed a loudspeaker called the Vento 809 DC, from Germany's leading speaker brand Canton. The £1,800 model did very well, earning itself a Best Buy primarily because it delivered a lively and dynamic sound alongside an excellent overall balance in our listening room. The discovery that Canton had a more luxurious, more costly and higher performance model called the Vento Reference 5 DC, based on very similar driver configuration and dimensions, made this an obvious candidate for a one-off review.

Canton makes two such Reference Ventos, this £3,500 per pair Reference 5 DC based closely on the 809, and also a significantly larger and more costly £10,000 Vento Reference 1 DC, featuring two 300mm bass drivers, rather than the 2x200mm arrangement used here. It may well be that the larger model is better still, but past experience has shown that this is not always the case.

There's a widespread tendency to assume that the largest and most costly loudspeaker in any manufacturer's range is necessarily the best. While that may well sometimes be true, it's also important to achieve a good match between bass output and room, and in many cases the largest model in a range will only achieve this when used in a very large room, or one with walls, floor and ceiling that tend to absorb low frequency energy. Although the room used for our reviews is a good size by UK standards, measuring 4.3x2.6x5.5m, it's not as large as those typically found elsewhere in the world, such as the US. It also has more solid plaster-on-brick walls, rather than the energy absorbing plasterboard-on-stud construction. And since the 809's bass alignment had worked very well in our room, it seemed probable that the Reference 5 DC would, too.

Which is not to say it's small. By any standards, this is a generously proportioned floorstander, standing 112cm tall and weighing a hefty 30kg. It's a full three-way design with four drivers on board. A pair of 200mm units, each with 130mm diameter metal 'dish' diaphragms and supplemented by a reflex port, handle the bass. A 180mm midrange driver, placed above the tweeter at the top of the enclosure, has a 115mm aluminium dish diaphragm. And the tweeter has a 25mm

aluminium-manganese alloy dome under a moulded phase compensator.

The Reference 5 DC might look very like an 809, but there are numerous subtle

examination of the measurements, however, reveals some subtle but significant differences between the two models, so this is clearly a quite separate design.

"A very good speaker indeed, but one that succeeds more through subtle understatement than any overt charms."

under-the-skin improvements. According to Canton, copper rings within the magnet poles of both midrange and bass drivers have substantially reduced asymmetric inductance distortions. The efficiency of the midrange driver has been improved, assisting the crossover transition to the tweeter and giving a better impulse response. The woofer voice coil has lower inductance and improved excursion linearity, reducing distortion and improving power handling and loudness capabilities. The tweeter has better distribution characteristics, and superior quality components are used throughout the crossover network.

The enclosures of our samples were beautifully finished in a deep-lacquer-finish silver, which contrasts very effectively with the black frames and much shinier diaphragms, though traditionalists might prefer the maple or cherry real-wood veneer options. Curved sides taper towards the back, an arrangement that has several distinct benefits, adding considerable extra stiffness, helping avoid the focusing of internal standing waves and dispersing reflections. On the Reference 5 DC, these are manufactured by laminating together multiple layers of thin fibreboard, giving a very superior combination of stiffness and damping. Grilles are supplied, and their mounting lugs are cleverly integrated into the driver frames. Furthermore, the drive units are properly flush-mounted, so this speaker looks very good if the grilles are left off.

The whole thing is mounted on small shock absorbing feet that separate the enclosure proper from a chunky black MDF plinth. The simple stud-like spikes supplied are clearly intended to avoid damaging wooden floors, and are probably insufficiently sharp to pierce carpets. There's no lock-nut provision to facilitate height adjustment here either, but it should be easy enough to substitute regular 6mm spikes instead if desired. Perhaps Canton might consider including regular (sharp) spikes for those with fitted carpets. Twin terminal pairs are fitted, nice and close to the floor, so it will be easy enough to keep the cables tidy.

SOUND QUALITY

Unfortunately, because of sample availability it wasn't possible to carry out a direct side-by-side (or sequential) subjective comparisons between the Vento R5 DC and the superficially very similar Vento 809. Close Indeed, the in-room measurements did indicate that the Reference 5 DC is not quite as smooth or flat as its junior 809

range-mate. But it's still an exceedingly well balanced design, with a studied neutrality and very little real character of its own. Entirely free from any warm, cuddly tendencies, it's not a design that immediately impresses at first listen - instead it's a rather cool customer that goes about its business in a matter-of-fact, understated sort of way. But after a short period of acclimatisation one starts to appreciate that this is actually a very good speaker indeed, but one that succeeds more through subtle understatement than any overt charms.

One of its major strengths is that it manages to sound open through the voice band without any obvious aggressive tendencies: the sound is bright, for sure, but clean and clear with it. Even more impressive is the way the speaker maintains excellent linearity, fine clarity and superior communication skills even when operating at the sort of low levels that are necessary to avoid disturbing the rest of a household at 3am. The bass might have been better aligned for our room. Although the bass delivery is generally crisp, clean and very well

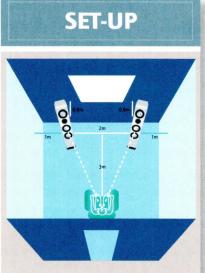

damped, generating little if any thickening or overhang, the relatively high port tuning frequency of 48Hz does rather limit the genuinely deep bottom-octave bass on offer here, while the mid-bass output is correspondingly a little strong. The result is a touch lacking in the sort of scale that can make the ambience of choral music in a gothic cathedral sound totally spine-tingling, while the dead-weight atonal slap of a kick drum is a little less convincing than tuned tympani.

The midband is where this speaker really shines, showing marvellous voice rendition, whether speech or song, solo or in harmony, and the believable way in which it rendered

the subtle textures of instruments was a regular source of delight. An ancient recording from the very late and even more lamented Buddy Holly sounded eerily

ANO

[Review] Canton Vento Reference 5 DC loudspeaker

POSITIONING

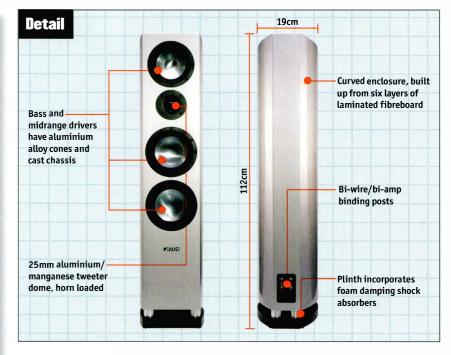

Low bass is a little lacking here, thanks to a port tuning frequency around 48Hz, which is relatively high for such a large loudspeaker; output falls rather quickly below 40Hz, and the 20Hz level under our far-field in-room conditions registered around -14dB ref the midband. There's little that can compensate for this, as wall reinforcement tends to boost the mid-bass, 50-100Hz, and output from 50Hz upwards is quite full even with the speakers well away from the room walls,

Every room has its own, often unpredictable, characteristics, so try moving the speakers around while playing music with plenty of bass content. However, our tests do indicate that this speaker is likely to work best with clear space all around it, and that close-to-wall siting is likely to result in excessive mid-bass output.

The Cantons came supplied with blunt studs without lock-nuts – not good for penetrating a deep-pile carpet. Dealers should be able to find a set of sharp spikes, with lock-nuts to assist levelling. However, do carry out positioning experiments prior to fitting the spikes. If close-to-wall siting is considered aesthetically important, and it gives a heavy and thickened mid-bass, it may be worth trying port blocking.

SYSTEM MATCHING

Sensitivity here is a generous 92dB under our measurement regime 3.5dB above the manufacturer's claim, and 2dB more than the Vento 809, thanks to stronger midband. However, the load is quite demanding, with three distinct 3.3-ohm minima through the bass region. Furthermore, over its actual impedance, the complexity of the load is unlikely to make life easy for a driving amplifier. A high quality amplifier, supplying generous quantities of electrical current, is clearly indicated here, though it needn't be a particularly powerful design in the usual sense as the voltage sensitivity is well above average.

realistic, while it was fascinating to pick out the harmonising layers in a multi-tracked Simon and Garfunkel duet.

Brass instruments are always tricky, either losing their rasp altogether or delivering it with too much 'edge', yet the Canton judges this beautifully, with an open realism that is thoroughly convincing. Orchestral strings also have a tendency to 'clump together' into a homogenous mass, yet here it was easy enough to gain some idea of the size of the orchestra that was playing, and take note of the texture of the instruments themselves.

Some of this speaker's subtle midband discrimination might have been

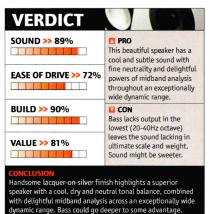

attributed to the improved CD sound brought about by upgrading the Naim CDS3's power supply from XPS2 to 555ps (as reviewed on p48). But the observation wasn't limited to CD sources alone Much the same was true when vinyl was being used, and when the Magnum Dynalab MD102 FM tuner was doing its thing.

Imaging is precise and well focused, giving a nice impression of height, though depth perception did seem a little constrained. In addition, the very low cabinet coloration right across the band ensures superior dynamic

range, but mild time-smear slightly reduces the impact of dynamics. In the final analysis, the Reference 5 DC could perhaps sound sweeter, but it's a clean, crisp and unfailingly honest high-performance loudspeaker. And that makes it well worth investigating. **HFC**

Freek's reputation as a budget specialist is, we fear, not long for this world. It's not so much that these units aren't really at the budget end of things any more (although more of that later), it's just that they don't look the part. Creek started out making dinky little boxes with plain black paint, distinctive green legends and some distinctly ho-hum plastic push-buttons which fell off after a few years. Now compare that with the current offerings, heavyweight boxes smartly and fashionably decked out and featuring the kind of extra-thick front panel (12mm of solid aluminium) that traditionally graces expensive exotica. We like it!

12 57:00

30

What will cause a few raised eyebrows and nostalgically sad smiles, however, is the revelation that Creek has joined many of the old-time UK names and gone overseas for manufacturing of this range, the economics clearly having become irresistible. Still, at least, as the front panel proudly proclaims, the stuff is 'designed in the UK'.

There's a family resemblance to Creek's top Destiny range (which is still manufactured in the UK, incidentally), from which we reviewed the amp and CD player in *HFC* 277. That's mostly an external likeness though, for the circuits seem to have little in common.

The CD player starts with a dedicated CD-Audio transport (in contrast, Destiny uses a DVD-ROM drive) which is controlled by an all-in-one chip from Philips. It's typical of the way Mike Creek designs, though, that the DAC part of this chip is neglected in favour of a higher quality specialised chip, one we've seen in a few products lately including multi-format disc players. In turn, its analogue output is fed to top quality audio op-amps, which perform filtering and buffering functions before a further pair of 'Audio' capacitors isolate the output sockets from any residual DC voltage. Power is derived from an 'R-core' mains transformer of moderate capacity and the whole assembly is very neatly laid out and assembled, as indeed is the amplifier. While the Destiny amplifier uses a cunning output configuration based on MOSFETs – which has become something of a Creek trademark – the EVO has an altogether simpler

ligned in the UK

and more traditional bipolar transistor circuit.

'Simpler' maybe, but there's plenty going on inside that amp. In the usual fashion, it has an internal heatsink carrying the output transistors, while a chunky toroidal transformer steps down the mains voltage. An unusually generous allocation of power supply capacitors filters the output from a pair of rectifiers, one for each channel and the large main circuit board is well filled with discrete transistors and

Creek EVO CD player and integrated amplifier [Review]

"Creek has sensibly avoided making EVO a pale imitation of Destiny and instead aimed at a more lively, energetic presentation."

a few good quality op-amps. Oh, and a 'programmable gain amplifier', otherwise known as an electronic volume control. replaces the traditional mechanical potentiometer. This particular type is new to us but looks from its data sheet like a suitably high grade part. It has been configured by Creek to give 0.5dB steps over the top 15dB or so of its range. 3dB steps at the bottom and 1dB over the most-used part of the range in between. Input switching is carried out by relays. Components are all 'through-hole' types rather than the more modern surface-mounted variants and there is a sprinkling of specialist 'For Audio' capacitors at critical points. The amp can be supplied with phono replacing one of the five line inputs, too.

A new EVO remote control is supplied, which operates both units. It looks reminiscent of the Destiny remote, but is not compatible.

SOUND QUALITY

The thing we liked most about the Destiny amp was its sonic sophistication. Creek has sensibly avoided making EVO a pale imitation of Destiny and instead aimed at a more lively, energetic musical presentation.

Of the two EVO components, the CD player has less of an obvious character – if you prefer, it's more straightforward and honest. It is not boring and is an ideal match for the amp, but we think some may demand more than the EVO's ability to present the musical facts efficiently and without artifice. There are limits to its resolution and also to its low-level detail in the high treble (which tends to 'dry out' subtle acoustics just a shade), but by the standards of £500 CD players, it's a very fine machine with excellent bass, good imaging and neutral tonality.

Some may remember Creek amps started off as the 'poor man's Naim' – or at least quite a few dealers seemed to present them as such. Naim is probably the first, er, name people think of when 'lively and energetic' amps are mentioned, or certainly when 'rhythmic' qualities are invoked in an amplifier. So has Creek come full circle and emulated the minimalists from Salisbury? Not consciously is our guess and indeed while there is something of the vintage Naim about the EVO amp, it is rather more general-purpose in the way it also makes the most of more laid-back tones.

It's not quite as overtly rhythmic as older Naims tended to be, but it does seem to be biased ivan favour of the toe-tapping school of hi-fi. In addition though, it has a nice mellifluous touch, which means that in a way it presents the best of both worlds. Okay, a good bit of two possible worlds. There's no getting

away from the fact that what we're really talking about here is sonic character, which is intrinsically at odds with ultimate accuracy. But, in this case the deviation from accuracy is very small and the gain in involvement and enjoyment is more than compensation.

Creek has produced an amplifier which gets on well with many recent recordings. Damien Rice was one such that we found, the relatively simple musical textures yet quite 'heavy' recording benefiting from EVO's combination of drive and charm. Classic rock did well too, jazz only slightly less so and classical moderate to well depending on the forces involved: we particularly liked solo piano, but were less convinced about it handling a full orchestra.

Neither product will please everyone, but we feel both will find a lot of very happy fans. As a pair they work very well, offering a different 'take' on sound from the average. **HFC**

Richard Black

Roots revival

Although other variations have appeared, AE has gone back to its roots with this Classic AE1

PRODUCT Acoustic Energy AE1 Classic TYPE Standmount loudspeaker PRICE £845 per pair

KEY FEATURES Size (WxHxD): 18x29.5x25.5cm
Weight: 8kg ● 25mm magnesium dome tweeter
90mm aluminium bass/mid driver on 110mm surround
Sensitivity/Impedance: 88dB/8 ohms (nom)
201285 654432 ⊕ www.acoustic-energy.co.uk

t was 18 years ago that the first Acoustic Energy AE1 made its debut. The launch caused a stir, and a positive reaction among reviewers who got their hands on early samples. Way back in *HFC* 59 (1988), Alvin Gold described it as: "the most awesomely articulate and dynamic miniature ever made".

MAEW

0

The original AE1 broke fresh ground. It invented the concept of the high performance miniature, where there was virtually no relationship between size and price, and where at least as much effort was expended on engineering the enclosure as the drive units.

We reviewed an evolved version of the same speaker in 1991 with somewhat more equivocal results. But in the mid-1990s Acoustic Energy upped the ante by introducing a Signature variation, which cost £2,000 in 1995. Whereas the original AE1 had been finished in the rugged textured black that is regarded as mandatory by professional users, the Signature added 'luxury finish' to its 'high performance' characteristics. That Signature formed the basis of a formal MkII version of the AE1, which ran from 1996 until a new and considerably revised MkIII appeared in 2003. While the original AE1 initiated the modern trend towards

C

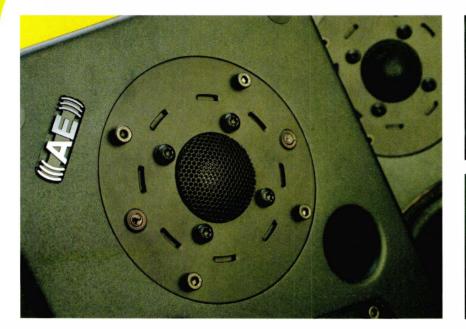

high performance miniature monitors in the late 1980s, it wasn't without some precedents – one can point towards the remarkable Goodmans Maxim from the 1960s, or the legendary BBC LS3/5a, based on carefully selected KEF drive units, in the 1970s. While the LS3/5a was popular with broadcast engineers and hi-fi enthusiasts, modest power handling and loudness capabilities kept it out of the recording studios. These were effectively the key ingredients that the AE1 brought to the party – the specification claims suitability for use with amplification capable of 200 watts per channel.

One contributing factor in the enhanced power handling was the use of a metal cone for the main bass/mid drive unit. Indeed, the use of metal diaphragms for both of the drive units was another of the AE1's more influential innovations. We'd seen metal diaphragms used previously for tweeters (Celestion etc), and for full-range drivers (Jordan, Bandor). But the AE1 might well have been the first traditional two-way, and certainly inspired brands like Monitor Audio to follow suit.

That original AE1 cost £700 per pair in 1988, in an era where most miniatures from most leading brands

cost £99 or even £79. Eighteen years of inflation would probably take the equivalent price today up to or beyond £2,000 (which is roughly what AE charges for its current AE1 MkIII, reviewed in *HFC* 281), so it's all the more credible that this replica costs an inflation-busting £845 per pair.

Every effort has been made to create an accurate replica of the original, and to these eyes it looks as good today as it did back then. There might be customers who prefer fancy real wood veneers covered in layers of lacquer, or high gloss piano black, but the Pro-look textured matt black has an understated power and a persuasive purposefulness all of its own.

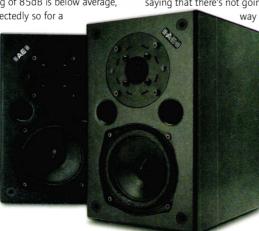

"The AE1's elaborate enclosure engineering creates an exceptionally 'quiet' box with very little sonic signature of its own."

Both drivers are neatly flush-mounted, and separated by attractively symmetrical twin flared ports, and all the cabinet edges are slightly rounded. The only asymmetry is the badge, fixed across a top corner, and this is mirror imaged between the two samples of a pair. The main driver has a 110mm pressed steel frame and a deep-anodised 90mm aluminium cone, stiffened by an oxide skin, while the tweeter uses a 25mm magnesium dome. The crossover network, fed from a single terminal pair, uses symmetric third-order slopes. The wood-based enclosure is actually made in Malaysia by AE's parent, but all the rest of the manufacture is carried out in Britain. The most interesting feature of the latter is that the insides have a sort of plaster (polymer composite) lining.

SOUND QUALITY

The specification claims a sensitivity of 88dB, which is at least 2dB more optimistic than the figure indicated by our own far-field in-room findings. Our rating of 85dB is below average, though not unexpectedly so for a

system with such a small main driver, especially since the impedance is very benign, staying comfortably above eight ohms throughout. The twin port

arrangement is tuned to 55Hz, ensuring reasonable bass output down to around 45Hz, though the impedance does show a slight discontinuity at around 5.5kHz.

The in-room far-field tonal balance response trace in free space shows the expected shortfall at the bass end of things, with output starting to roll off below 70Hz. However, from 80Hz upwards, the curve looks very well balanced, holding within the tightly specified +/-3dB limits even under in-room conditions. The modest bass extension suggests close-to-wall bass reinforcement might prove beneficial, and the speaker is likely to work best in smaller rooms, but achieving a good alignment is not guaranteed. If one's prepared to sacrifice bass weight and extension, though, the AE1 seems likely to fill a nearfield monitor role rather well.

Placed on Partington Heavi stands and connected to the end of a Naim-based system, this little speaker immediately demonstrated both the advantages and the disadvantages of its miniature dimensions. It goes without saying that there's not going to be much in the way of low bass going

> on here, and this is an obvious candidate for subwoofer reinforcement. But its fine coherence and impressive freedom from boxy effects provide very fair compensation.

A small box is nearly always associated with low cabinet coloration and sharp, precise imaging, and the AE1's elaborate enclosure engineering really pays off here by creating an exceptionally 'quiet' box with very little sonic signature of its own. The consequence is a beautifully spacious image with fine focus alongside a broad and deep spread.

Superior midband neutrality and a very even balance are both on the agenda here, going a long way towards justifying this speaker's monitoring status. This is further strengthened by the notably wide dynamic range and very low level of background 'grunge' created by that remarkably well controlled enclosure, even though the degree of dynamic expression seemed a little muted.

The top end is bright and obvious, maybe because it lacks the treble sweetness of the latest tweeter designs. To some extent, the original AE1 design is starting to show its age, but at the same time it's a fun product that goes a long way towards justifying its 'classic' status as a high-quality compact monitor. **HFC** *Paul Messenger*

PRO This classic replica delivers a beautifully balanced midband
with an impressively wide dynamic range and freedom
from boxiness. CON Bass is weak and the top end is rather obvious, in relative level and some lack of sweetness compared to more recent tweeters. Could be more dynamically expressive.
ks good and does most things d to compensate for the strong delivers a beautifully balanced ge and little boxiness.

PS: we love you

Developed alongside Naim's new flagship CD player, this top-notch power supply is a brilliant upgrade

IT MIL

PRODUCT Naim NA 555ps

TYPE CD player power supply

PRICE £3,995

KEY FEATURES Size (WxHxD): 43x9x32cm ♥ Weight: 14kg ● Power supply compatible with CD555, CDX, CDS2, CDS3 CD players ● Tryptich styling with central illuminated badge ● Cast alloy casework CONTACT ☎ 01722 426600 ⊕ www.naim-audio.com

erhaps the most exciting new product to make its debut at the Autumn 2005 Heathrow hi-fi show was Naim's new range-topping CD555 CD player. It's built to survive a nuclear strike, gorgeously styled with a hefty central loading bay, and priced at an intimidating £14,295.

That's the short and superficial version of the story. The CD555 might have been the sexy looking visual statement into which one places and plays CDs, but lurking a few shelves down on the same Fraim rack was the less glamorous but equally useful NA 555ps.

This similarly massive unit is an external power supply. It's an essential partner to the CD555, and included in its £14,295 price, but it can also be purchased separately for £3,995. It has an equally important role as an upgrade to the XPS and XPS2 power supplies, for those using earlier Naim CD players such as the CDX, CDX2, CDS2 or CDS3 models. Furthermore, at the time of writing some hundreds of 555ps units have already been built and sold –

reputedly, a number sold to Naim dealers for their own personal use – while first examples of the more complex CD555 have only just started to trickle out of the factory.

Indeed, one could argue that the 555ps supply is the more interesting component from a practical rather than a glamour perspective, because of its applicability to provide upgrades for a substantial and well-established customer base. Naim has used similar strategies before. The (original) XPS first appeared as an upgrade option to the original one-box CDX, and was then supplied as the standard outboard power supply with CDX2. An improved and restyled XPS2 was introduced as an upgrade option with CDX2, again appearing some time before it came as part of the CDS3 package. Furthermore, in our reviews of those various components and combinations, although both player and power supply upgrades were significant, the supply upgrades often gave the greater improvements.

Naim has long practised the 'upgrade via the power supply' technique, in the first instance with its preamps back in the 1970s. It was a relative latecomer to CD, only introducing the original CDS in 1991, and this two-box player followed that same Naim tradition of packaging its power supplies separately. In so doing it flew in the face of the then 'accepted' architecture for a two-boxer, which housed the disc drive mechanism in one unit and the digital-to-analogue conversion (DAC) electronics in the other. Naim's justifications were partly that it keeps mains voltages and transformers well away from the player proper, feeding a number of low-voltage supplies to the player via a hefty multi-way connector. No less important, it allows a parallel connection from the drive to the DAC to be used, avoiding the S/PDIF connection. Keeping drive and DACs close together allows a much faster data transfer as the digital signals only travel a few millimetres.

The new 555ps looks very like an XPS from the front, apart from the silkier, shinier surface finish reserved for 500-series components, though there are a number of important differences from the earlier unit. For starters, XPS remains available at £2,550, while 555ps costs £3,995. From the rear it can be seen that 555ps now has two chunky multi-way Burndy sockets, so that separate hawser-like leads are used to connect the analogue and digital supplies to CD555; only one combined lead is used to connect to CDS3, CDX2 et al. The transformer of the 555ps is 40 per cent larger than that used in XPS, and this is very evident when you try to pick it up. Internally it uses seven separately regulated supplies, with five secondary windings on the transformer. Particular care has been taken to isolate the ultra-quiet master clock supply from the rest.

SOUND QUALITY

Nearly all the auditioning was done using Naim NAC 552 preamp, NAP 500 power amp

and B&W 800D speakers, linked using a mixture of Naim and Vertex AQ cables. Substituting a 555ps for an XPS2 in powering a CDS3 CD player took no time at all. It didn't take very much longer to hear the substantial improvement in sound quality that changing the power supply had wrought. The change was not subtle, and anyone who takes time out to audition the comparison will find it very difficult to resist this new power supply.

Information deep in the mix is clearer and easier to make out, which makes familiar recordings more explicit, interesting and involving. The real delight comes in slipping on a CD unplayed for a year or so, and discovering new and previously unsuspected subtleties well down in the mix, simply because of the superior low-level resolution.

Lambchop's *Is a Woman* was one such example, the title track revealing the subtle interplay of the guitars much more clearly than had been audible before. Indeed, from a musical analysis (though not a sweetness) point of view, the CD supplied greater detail and clarity than the vinyl version, which came as something of a surprise.

We also subsequently managed to borrow a CDX2 for a brief listening test, and this brought a broader perspective to the whole

"On balance the superior power supply with the inferior player was most preferable, demonstrating impressive dynamic range."

upgrade scenario. The CDX2 (£2,925) comes complete with a modest built-in power supply, and on its own puts in an entertaining performance, albeit with a rather matter-of-fact 'plinkety plonk' presentation, lacking the sense of scale and space generated when the accessory power supplies are used.

Adding an XPS2 (total cost £5,475) immediately added substantial extra poise, space, air, and gave the sound a much more out-of-the-box character. However, neither authority nor dynamic range seemed fully developed here, and the sonic character might have been a little sweeter. Replacing the XPS2 with a 555ps (total cost £6,920) took the performance comfortably up to the level of an XPS2/CDS3 combo (total cost £7,875) – indeed, on balance the superior power supply with the inferior player was most preferable, demonstrating very impressive dynamic range, quiet backgrounds, extra authority, better distinction between voices in a choir, and extra sweetness, too. That said, it never sounded as relaxed as the CDS3/555ps combo (total cost £9,320), which definitely brought a better sense of flow and coherence, with greater security in low-level resolution.

The one negative I could find with the 555ps is that some mechanical hum was occasionally audible (presumably responding to minor vagaries in the quality of the mains waveform or voltage), usually in the wee small hours when background noise was at its lowest. This was never the case with the XPS, and is presumably because the bigger a toroid, the more it is inclined to hum if the mains voltage drops or its waveform becomes distorted. However, this should not detract from an otherwise brilliant upgrade from Naim. **HFC** *Paul Messenger*

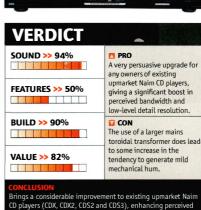

THE CDX2 AND CDS3 CD PLAYERS

Both the £2,925 CDX2 (*HFC* 238) and £5,325 CDS3 (*HFC* 258) use basic Philips-sourced 'building blocks' – the VAM1250 drive mechanism and the DAC chip sets. The differences lie in the implementation.

The front-loading CDX2 features a non-resonant tray with mechanical decoupling for the disc drive mechanism, hinged at one point. The player also incorporates its own modest on-board power supply. The top-loading CDS3 sits on three hard feet, and both the internal main circuit board and the disc drive are spring-decoupled. The drive is suspended on a wire and leaf spring suspension, carefully tuned to take account of the motor torgues, and all

relevant surfaces have a light-absorbing coating. All the analogue electronics use discrete circuitry, and the player employs extra jitter reduction techniques and more separately regulated supplies than CDX2.

CD players (CDX, CDX2, CDS2 and CDS3), enhancing perceived bandwidth at low and high frequencies, and making low-level detail sound much clearer and more coherent.

Exceeding expectations....

Marantz astounded us with the PM7001 amp. Now it has been tweaked by the brand ambassador...

PRODUCT Marantz PM7001 KI	
TYPE Integrated stereo amplifier	
PRICE £550	
CONTACT @ 01753 680868 @ www.marantz	com

menente.

ack in HFC 279, we enthused over Marantz's new amplifier, the PM7001. So the 'KI Signature' version ought to make it one of the year's hottest amps. 'KI', of course, is Ken Ishiwata, 'brand ambassador' for Marantz and an infectiously enthusiastic individual whose input guides the basic design of many Marantz products. He also applies further audiophile-type tweaks for the special edition versions that will bear his moniker.

In this case, those tweaks cover a wide range. Most obvious to the user is the addition of copper-plating to the case (inside and out) and gold-plating to the phono sockets, the former to improve interference rejection and the latter to enhance conductivity and reliability of the connections. Inside, while the basic amplifying circuit is essentially unchanged, the mains transformer has been swapped for a toroidal type with a substantial screening band round it. Also, individual copper-plated screens have been attached to significant transistors and diodes, and the main power-supply capacitors have been upgraded both in value and in type.

Various other components have been changed too, parts with the same basic values but higher performance in other ways. This

may sound a bit 'snake-oily' but there is a body of evidence that suggests not all capacitors of X value and Y working voltage give exactly the same performance in every way - one may be more stable than another, or give lower distortion, or have lower stray inductance and so on. That doesn't automatically mean they will sound different, but hey, they might...

Finally, the phono board has been substantially altered with an improved circuit of all-round higher performance. And just to recap the outline specification: 70/88 watts (its claim/our measurement) per channel, phono plus five line-level inputs, separable pre and power amplifier sections, twin speaker outputs and, by our measurements, stunningly good lab performance which falls just slightly short of the basic PM7001.

SOUND QUALITY

The general performance of the KI is clearly in the same ballpark as regards musical energy, detail and neutrality - in short, damn fine.

Our very few reservations regarding the PM7001 included a slight lack of authority in its handling of bass. Mr Ishiwata has been able to wring a touch more class out of the 7001 circuit, for the KI has more bass grip and came close in its degree of control to some quite expensive amps we tried.

We were also particularly impressed by the way it can simultaneously control bass and do the subtlest things with the treble. Music doesn't so often demand this, luckily, for not

that many amps can really bring this off, but the 7001 KI showed itself particularly adept in preserving delicacies like the decay of small percussion instruments while there's lots going on in the bottom octaves.

We continue to rate the excellent stereo imaging and clean, open and silky treble, both uncolored (barring some slight chestiness that was also present in the original 7001) and full of detail and insight, and the general way in which the amp can grab the listener's attention and hold it without discomfort for long periods. The phono input is clearer, too. That Ken Ishiwata knows his stuff! HFC

Pianissimo!

At the top of Sonus Faber's entry-level Domus range, the Grand Piano makes sweet music

PRODUCT Sonus Faber Grand Piano Domus
TYPE Floorstanding loudspeaker

PRICE £2,498 per pair

KEY FEATURES Size (WxHxD): 20.5x106x31cm • Weight: 26kg each • 25mm ring radiator tweeter • 150mm doped paper midrange cone • 2x180mm doped paper woofer cones • Real leather trim • Overhanging steel plinth • Sensitivity/Impedance 90dB/4 ohms (nominal)

CONTACT 2 020 8971 3909 @ www.sonusfaber.com

ithout doubt, Sonus Faber is the most prestigious and best known of all the high-end Italian loudspeaker brands.

The company is particularly and justifiably renowned for superb construction and finish and also the musical qualities of most of its speakers, which in some cases are little short of legendary. Domus is the entry level Sonus Faber range and the Grand Piano is the top model from the line-up.

It is a four-driver, three-way, floorstanding column. The tweeter is Sonus Faber's customised 25mm ring radiator unit, with a prominent central diffuser. The two identical bass units are 180mm doped paper cone drivers and the midrange is a smaller version of the same thing, this time with a 150mm cone and a nominal coverage between 400Hz-3.6kHz. This means that the whole of the midband in effect is covered by a single unit. It is quite common for three-way systems to use a much lower treble crossover frequency, so the upper midband will to some extent be disturbed by the treble crossover, depending in part on crossover design. In this case, the crossover uses compound slopes - first order initially, though the final attenuation rate is not specified in this instance.

The real head turner, however, is not the drive unit complement, or the large front mounted reflex port – used to tune the enclosure somewhere around 32Hz by our reckoning. Instead, it's the enclosure itself, which is a typically extravagant, Sonus Faber creation. Although this model is from the entry level range, we are dealing with a beautifully constructed, heavy enclosure with a cross section said to mirror that of a lute – it is wider

at the front, narrow at the back and has outward bowed side panels. The front, top and rear panels are covered in real black leather (not leatherette as in some accounts), which is used to apply surface damping and helps control diffraction with its textured surface. It also serves yet another purpose by helping guarantee a good pneumatic seal around the drivers. The sides consist of what appear to be resiliently mounted panels. These use horizontally arranged staves of wood, which are glued together and then highly polished.

BEST BU

magazine

FICHOICE

Our test pair were supplied in the teak option with a horizontal grain structure, but there's also a nice piano black lacquer finish available.

The enclosure sits on an overhanging steel plinth which provides the wide wheelbase required for stability and of course, anchor points for carpet piercing spikes. These have enough adjustment available for some useful tweaking of the speaker's angle of attack. What you end up with is an unusually elegant tall column, with no hard edges and a very organic shape, enhanced more than a

little aesthetically by the unusual grain orientation of the side panels and by the leather trim. But this is not a loudspeaker that sets out to give the user an easy ride.....

SOUND QUALITY

This is in most respects an utterly wonderful and beguiling loudspeaker, but it is not without foibles and criticism. It's not too hard to see just which strings are being pulled and how.

First and foremost, we had some difficulty in determining appropriate positioning. Used with a wide baseline, the speaker sounded phasey and back near a rear wall, the sound was soft and recessive. The optimum turned out to be with the speakers pulled well forward from the back wall, relatively close together and toed-in so that they were pointing directly at the listening hotseat. Vertical orientation is possible using the adjustable feet, and this should also should be tweaked with some care.

The speakers will need to be extensively run-in and for a considerable period. Straight from the box, or after an extended period of inaction, we found the speaker sounded congested and lacking in 'air'. But, after a couple of hours under drive and sometimes with a slightly higher than normal volume setting (which turns out to suit the balance of this speaker) it wakes up noticably. The right choice of amplifier and also speaker cable is key to this design. It doesn't need - in fact cannot realistically cope with - enormous quantities of power, but it does need a replay chain that is lean, crisp and detailed if the aim is to avoid playing to the Sonus Faber's weaknesses. Experimentation here will pay dividends and we'd avoid valve amplifiers that sound too much like valve amplifiers.

"The common factor in each case is the Sonus Faber's natural grace, harmonic complexity and tonal beauty."

All of this effort still doesn't deliver a sound that could be described as completely neutral. In fact, the Grand Piano Domus has a highly distinctive and unusual balance which we cannot believe is inadvertent. It is almost as though the design was conceived from the outset as a special case of a musical instrument. What has been delivered is a speaker with a slightly woofy bottom end.

It doesn't go particularly deep, though it matches other speakers of similar overall proportions. However, it seems to compensate, or over compensate, with what is best described as an inherent loudness contour – a warm and somewhat waffly mid and upper bass that projects the sound of those instruments within its compass; cellos, basses, the lowest octave of the piano for example – forward of the enclosure.

Pulling the speaker forward of the rear wall has a similar effect on the midband, which is perhaps why it works so well. The treble meanwhile is clean, detailed and extremely sophisticated, with many of the qualities that we have learned to associate with ring radiating tweeters – a kind of dry, tightness. It's all there, but there's nothing demonstrative about this unit. Having adapted to the peccadilloes of this almost wilfully idiosyncratic loudspeaker, we had a great deal of thoroughly musical pleasure from this entry-level model, whose musical attributes are an excellent match for its stunning aesthetic gualities.

You'll not be surprised though to hear that it favours certain types of music over others. It was least convincing with driving rock and pop, where bass lines would sometimes overwhelm the sound. The rich, resonant upper bass gave rock material an overcooked quality. It was much better with orchestral music and best of all with small-scale material, chamber or otherwise.

It has a particular affinity for voice, acting as an excellent advocate for the likes of Beth Nielson, Madeleine Peyroux, Herbie Hancock (an excellent track with Christina Aguilera – you couldn't make it up!) and Liz Wright. It was pure magic with the Bach *Goldberg Variations* played by Ito Ema. The common factor in each case is the speaker's natural grace, harmonic complexity and tonal beauty. It has an unusual clarity and in so many ways

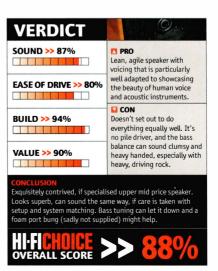

it really does sound more like a musical instrument than just another box that's good for reproducing music.

The Grand Piano Domus fits neatly into the familiar strand of upper-class Italian hi-fi. It is meticulously voiced and rather than attempt to be all things to all listeners, it concentrates its talents on being a superb match for small to medium scale acoustic material. There's enough raw power and bandwidth available too for forays into full scale orchestral and choral music. And for once, it is real furniture you will not want to hide. **HFC**

Wilson Audio Duette

The engineering team at Wilson Audio were challenged to design a loudspeaker that could work in hostile environments. That didn't mean "work acceptably." With Duette, the goal was to create a product that would produce the signature Wilson sound in those settings: a wide, deep soundstage in which instruments and voices occupied discrete, three-dimensional space. Voices would sound real, tonally accurate, and coherent from top to bottom. Percussion would explode from a deep, grain-free background with believable dynamics and speed.

At Wilson Audio, the size of a speaker is irrelevant to the care given to its design and manufacture.

Strictly limited

At last, 'Limited Edition' with meaning. Time is running out to snap up this tempting package

PRODUCT Harman Kardon HD 970 and HK 970 Limited Edition
TYPE CD player and integrated amplifier
PRICE £650
CONTACT ፼ 01707 278100 ∉ www.harmankardon.com

arman Kardon is so huge that when it ploughs its sizeable resources into two channel gear, we listen. This pairing is bonded together at the point of sale and earns its Limited Edition certificate by only being sold that way. The HD 970 CD player and HK 970 amplifier can be purchased separately, for £300 and £350 respectively, but not in the sublime 'Limited Edition' black.

You might not expect it at the price, but the HD 970 CD player offers all manner of features, including MP3 playback with the ability to show file and folder names as well as the data rate. It also handles CD-Text where it is available. Under the lid the player upsamples to 24-bit/384kHz and in a bid to keep analogue filtering 'minimalist', uses Harman Kardon's proprietary real time linear smoothing (RLS). It also offers a coaxial digital input too, enabling you to upsample digital sources such as DAB tuners, or digital set-top boxes, for improved analogue conversion and a more detailed sound. A digital output is also fitted, also a coaxial electrical type. The HK 970 amplifier is said to deliver 80 watts a side into eight ohms and 120 watts for a four ohm load, yet the manual suggests that it will increase its output right down to a one ohm load. The amp has an impressive number of inputs including phono, some attractive and chunky, gold-plated terminals for two pairs of speakers and a variable level (+/- 3dB) preamp output for bi-amping – which is unusual. 'Digital tone controls' are available, but also avoidable with the 'source direct' mode and headphone users will be pleased to see a proper 6mm jack on the front panel.

SOUND QUALITY

.79dB

CD

The duo put on an up-front and lively show. If you avoid revealing or forward sounding speakers, it's convincing and enthusiastic. While low bass is not the tightest around, it's not thick or lacking control. The midrange is clearly more forward than average, which emphasises dynamics and brings out the excitement in the music. The treble meanwhile adds a degree of shine to the proceedings.

There is an edginess about the sound that can be unforgiving at high levels, but when played moderately, gives a greater sense of detail; it's a bit like a loudness contour effect. Again with relaxed speakers, this aspect will make the sound more engaging and the power of the system allows it to play loud with ease. Individually, both components reveal a similarly energetic character that makes competing alternatives sound relaxed by comparison. Similarly priced rivals can produce a smoother sound, albeit not with the power or feature count on offer here.

As always with systems, it's the amplifier/ speaker interface that has to be most carefully matched. This Limited Edition combo will suit a warmer sounding speaker, making the Harman Kardons an exciting and exclusive choice. Be quick. **HFC**

Revel rebel

Revel liberates itself from high-end bondage

PRODUCT Revel Concerta F12 TYPE Floorstanding loudspeaker

PRICE £900 per pair

 KEY FEATURES
 Size (WxHxD): 24.8x107.4x36.3cm

 ♥ Weight 28.4kg ♥ 25mm organic ceramic composite

 (OCC) dome tweeter ● 130mm OCC midrange cone

 ● Twin 200mm OCC bass cones ● Sensitivity/

 Impedance: 90.5d8/6 ohms ● Magnetically shielded

 CONTACT № 01423 359054 ₩ www.revelspeakers.com

ntil recently, Revel – the flag carrier of LA-based Harman Specialty Group – had its focus set exclusively on the high end of the speaker market. Its Performa range was the mainstay, and the Ultima series existed at the bleeding edge. Concerta, a radical departure for Revel, is a range of more affordable loudspeakers.

The range includes stereo models, and some designed specifically for home cinema use – namely a dedicated surround speaker, a centre speaker and a powered subwoofer. The Concerta F12 is the largest of the stereo models, a substantial floorstander at a price well below normal Revel levels. At £900 per pair, it is not just affordable by Revel standards, it is well priced by any standards for a speaker this size.

How has this pricing been achieved? The speakers are built in Mexico, which means lower manufacturing costs, and the F12 has a straightforward rectilinear enclosure. It's big enough to imply a strong, well-extended bass, but it doesn't boast cost-consuming angled side panels like the equivalent Performa F32, or the rounded construction used for the Ultima models.

Another cost saving measure is the use of vinyl wrap, where the senior ranges use wood veneers or piano gloss. But despite the simplifications, the internally braced, 28.4kg MDF enclosure is solid and well made, and not that hollow sounding when rapped. The vinyl wrap is good enough to pass for the real thing at first sight, too.

The active hardware has not been shortchanged. This is a three-way system with a 130mm midrange cone and doubled-up 200mm cone bass drivers, all of which feature die-cast frames and Organic Ceramic Composite cones. OCC is a proprietary technology, with high-current voice coils, butyl rubber surrounds and flat high excursion spiders (all designed in house). The tweeter is a 25mm OCC dome unit

"Bold and muscular, the Revel Concerta F12 is also low in coloration and has the quality of invisibility or transparency."

with a neodymium magnet set in a deep, computer-optimised waveguide designed to match the dispersion (axial and off-axis) to the adjacent midrange unit. Magnet and voice coil design are optimised for minimum dynamic compression. The crossover uses high-tolerance components and high order (24dB/octave) slopes to minimise overlap, with crossover points set at 575Hz and 3kHz. The speaker has a very flat claimed midrange response (58Hz-8kHz +/-1dB), bass output said to extend to 52Hz (-3dB) or 28Hz (-10dB) and an impressive rated sensitivity of 90.5dB/W/m.

SOUND QUALITY

The F12 is rear vented, which reinforces the need for room behind so that the speaker can 'breathe'. The cabinet is fitted with rubber feet, which means they can be placed directly on the floor, but threaded inserts allow the use of spikes. These will be preferable in most circumstances, though we would have been happier if they had been designed for more sturdy 8mm spikes.

The Concerta F12 is sensitive enough to cope with a relatively low-power amplifier, but you will need one that offers good control, and a speaker cable that allows good damping – on balance, this is not a loudspeaker that suggests itself for use with many valve amps. At the same time, it is capable of handling quite a lot of power without distress or dynamic compression (manifest as a change in sound quality with level), and this points to a good amplifier match somewhere in the 100-200 watts per channel area. We found an ideal match in the 200-watt Krell KAV-400xi. This has the necessary power, authority and control and a relatively lean, dry balance. This helps offset the F12's native balance, which is on the warm side of neutral.

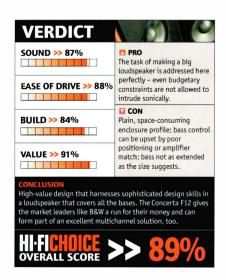

It turns out that bass extension is not as extended as might have been anticipated from such a large enclosure, albeit one that consumes less than one square foot of floor space. For normal stereo listening (as opposed to special effects in film soundtracks) the F12 should cover 95 per cent of what is required. 32 foot organ pipes are a little short changed, but that's about it, and with the Felix Hell organ disc (reviewed in HFC 280) the Revel was in its element, generating a sound with a limpid, yet atmospheric guality and the truly compelling tactile authority of a steam hammer. What the Concerta does deliver is a full, muscular bass, and as long as the speakers are positioned clear of reflecting surfaces (which puts the limited floor space utilisation into perspective), and the amplifier exerts proper control, the Revel's bass is also tuneful and quick.

The mid and top are excellent. This is a speaker in which the treble is seamlessly integrated into the midrange on a direct forward axis that is clean, sparklingly detailed and open. It also appears to have neutral tonality. Off axis, the extreme treble output falls off exactly as expected, the sound remaining pure and clean. There is little evidence of the peakiness that you will experience with some competitors. Stereo imagery is stable and large in scale, though correspondingly not quite as pin sharp as you will hear from some loudspeakers.

We had some great musical experiences with this loudspeaker. Bold and muscular, it is also low in coloration and has the quality of invisibility or transparency. That is, it is in no sense intrusive, and the midband in particular has an almost electrostatic purity, yet it does music justice even with difficult material. It reproduced the quality of rapt concentration with Arvo Part, the sense of occasion and the scale of Mahler symphonies, and the vocal purity of Strauss' Four Last Sonas, which generates a kind of impassioned, full-on communicativeness that is too easily lost in the reproduction. The F12 also delivers full value with well-recorded rock material. It's good enough to respond well to Radiohead and Marc Cohn, for example, while having enough resolution to show just how grubby bands like Arctic Monkeys sound when reproduced by a well-endowed, high-resolution hi-fi system.

This is a big, muscular loudspeaker which does just about everything and does it well. If it doesn't have quite the finesse or articulation you'll find in the more costly Revel ranges, it readily outperforms just about anything in its price range, even leaving the extended LF bandwidth aside. By any standards, it's great value for money. **HFC**

BEE here now

The replacement for the C320BEE has just walked off the designer's catwalk

PRODUCT NAD C325BEE **TYPE** Integrated stereo amplifier PRICE £250 CONTACT 2 01908 319360 @ www.nadelectronics.com

AD is proud of its designer, Bjorn Erik Edvardsen. So proud, his initials adorn the amplifiers he designs. Justifiably proud? He certainly did the business on the C320BEE, one of the best-loved budget amplifiers ever. But how will his input on its replacement - the C325BEE - stack up?

At the very least, he's packed a lot of components into a neat and attractively priced box. The majority of the amplification is carried out by discrete components and NAD has incorporated a couple of little modules into each channel. These are matchbox-size boards, densely populated with components and just one of many clues to cost-conscious thinking under the lid. Others include the use of cheaper passive components. The savings allowing for the use of a decent toroidal transformer with a metal screen, unusually large reservoir capacitors and an above average motorised potentiometer for the volume control

The basic specification is pretty typical, with seven line-level inputs including two 'tape' loops, external linking of preamp and power sections and defeatable tone controls. There's also a thoughtful extra socket mounted on the

VAR

front panel, for portable music devices. NAD's ever-present 'Soft clipping' is included, too. NAD quotes a continuous output power of 50 watts, which is really conservative: we obtained a value of very nearly 80 watts with short-term peaks in excess of 100 watts, so it's hardly gutless. Within that nominal 50 watt envelope, distortion is held very low, barely exceeding 0.01 per cent at high frequencies, less than half that in the midband and vanishing altogether below a couple of watts output.

SOUND QUALITY

We've found some evidence of a 'house sound' among recent NAD amps, with a lively but not always amazingly sophisticated presentation. On the whole, this model fits that bill, but there are some notable specifics. First of all, we must congratulate NAD on a remarkably fine bass performance, well beyond normal expectations of a £250 amplifier. Not only does the bass extend convincingly into the seismic reaches, it has a combination of tunefulness and attack that is seriously reminiscent of high-end amplification. The only budget giveaway is a slight lack of control at times. But even here the C325BEE gives little or no leeway to any other competing amp we can think of. Classy bass like this is of obvious benefit to bass-rich music, but in many ways is even more useful with classical, jazz and generally mellower tones. Such music often relies in less overt ways on the bass, but really appreciates confident underpinning.

The midrange and treble are not quite so starry. There's a little midrange coloration, a slight 'quack' that occasionally becomes audible on instruments like sax or trumpet, while the treble is not as open and clear as its best rivals can manage. All the same, it is well extended, has good detail to it, and stereo imaging is quite impressively precise laterally, if sometimes rather vague in terms of depth.

Although intensive listening can become wearing, it's impressive with high-octane music. Horses for courses, then, but there's plenty in the C325BEE's favour and we do advise giving it a listen if you can. HFC

ound is lively and immediate

pper frequencies lack a little

Clearly this is the amplifier to go for if you adore high-grade bass in your system. The compromises up top are not for everyone, but are also not at all beyond the pale. For many listeners this will prove a most pleasing amplifier.

Custom Design SQ404

TYPE Loudspeaker stand PRICE £200 per pair CONTACT ☎ 0191 262 4646 # www.customdesign.co.uk

his is a considerably bulkier-looking stand than the RS300 that we reviewed in HFC 281 and with four columns, it takes a bit more putting together, but it's well worth the bother. It's supplied in two heavy packages; one containing the ironware and the other; eight bags of 'Inert' filler to damp the square-section columns. 'Inert' is supplied as standard and don't even think about saving the trouble of using it - just do the job outside, as it's fiddly stuff to clear up after a spill. Without it, the stands will ring and resonate in a most unbecoming fashion. With it, and the 'acoustic steel' top plates, they are among the most completely dead stands we've yet encountered.

As a result, the sound of loudspeakers we tried on these stands is particularly clear and crisp, with a welcome freedom from coloration. We all pay lip service to the importance of getting speaker positioning right, but the fact is that standmount speakers are nearly impossible to position effectively while they're mounted on resonant stands. With really stable, 'sound-less' stands like these, it's so much easier to hear differences from one position to another. The net result is that not only do coloration levels drop but, because the positioning can now be properly optimised, you will benefit also from improved stereo imaging and focus. Relatively large, heavy standmount speakers and small lightweights seemed equally at home on the SQ404s and we've no hesitation in calling this design one of the best speaker stands currently available. HFC **Richard Black**

CONCLUSION Any half-decent standmount speaker will be improved by this efficient stand, giving clearer sound in every way.

HI-FICHOI

magazine

Clearer Audio Copper-line Alpha

TYPE Loudspeaker cable

PRICE £10 (per mono metre, terminations extra) CONTACT ☎ 01702 543981 ↔ www.cleareraudio.com

his is not a discreet cable – its 9x18mm size does not go under carpets! The bulk is not entirely occupied by copper: Clearer Audio employs a rather complex arrangement of conductors and insulating cores in an attempt to maximise the dielectric properties of polythene and PTFE, though the use of a PVC overall insulation does compromise things to some extent. The conductors are high-purity copper, totalling some three square mm, giving low resistance and the geometry gives low capacitance.

The review set was supplied terminated with Eichmann 4mm plugs, adding £70 to the cost, plus an additional £50 termination charge. The latter may seem a bit steep, but it does include treatment of all connector mating surfaces with Caig contact enhancer and a 72-hour burn-in. This should eliminate waiting for days to hear what your new cable is doing.

On that score, we were left in little doubt. This cable has quite a pronounced character

that we liked with some reservations. The latter concern the treble, which we thought was just a little more shut in than we would have liked.

The bass, however, is rather magnificent – strong and ringing, with both good tuning and real attack. Tonality is neutral and detail good for the price, though imaging we thought only fair. Still, you don't expect to cover all bases for a tenner a metre and this loudspeaker cable represents a perfectly valid set of (minor) compromises. **HFC**

Richard Black

Cables and accessories [Review]

IXOS Ixotica IX1

	-
TYPE Interconnect cable	
PRICE £200 (1 m pair)	
CONTACT 2 01844 219000 @ www.ixos.co.uk	

xos has been around as a cable brand for a few years now and its trademark Gamma Geometry has become a familiar sight. The essence of Gamma is that the two signal-conducting cores of the cable (be it interconnect or speaker cable) are twisted with a third, non-conducting, core in such a way that the conductors cross at right angles. These are held further apart than usual in a basic twisted-pair geometry, where of course they are basically in contact along their length.

While we can't entirely endorse all the technical claims made by Ixos for this arrangement, it's clear that it is a cunning way of reducing capacitance without significantly worsening the excellent interference rejection of twisted pair cable. In this particular embodiment, the cheapest of the relatively new and upmarket Ixotica range, the stranded conductors are individually insulated with a coating Ixos calls Aptimus. This prevents any imperfect conduction between strands.

We found the sound

of this cable neutral and clean, with a rather unusual quality to the bass. This seems full, but just a touch more present than we're used to. It's not blowsy or out of control, but tonally a little forward and as a result the overall sound of the cable is very appealing, particularly so at low listening levels. Bass lines are easy to follow and because the treble is nicely open everything is very relaxing to listen to. Not utterly truthful, perhaps, but delightful in its own way. **HFC**

Richard Black

Oehlbach Air Absorb

TYPE Isolating feet PRICE £40 (set of four)

CONTACT ☎ 020 8863 8979 ⊕ www.oehlbach.de

hough primarily a cable vendor, Oehlbach does offer a small range of support products, including these vibration absorbing feet. The name is possibly slightly misleading as, while we're quite sure there is air inside the feet, the structure contains enough rubber and metal to ensure that there remains physical continuity between top and bottom surfaces, so any isolation will be a function principally of the rubber's inherent springiness.

It is springy, though, and usefully grippy too. This ensures that kit mounted on the feet won't slide around without severe provocation. Suggested applications includes CD players and amplifiers and also loudspeakers. This may be anathema to some but there is growing awareness that rigid coupling of speakers to their stands or the floor is not always the most efficient way of eliminating spurious vibration. It's often quite the opposite.

The load rating of these feet, 70kg per set of four, is enough for most equipment and we

had plenty of fun trying different items and also different foot configurations (three or four). On the whole, despite the theoretical problem on instability, we found four the most useful number with speakers, which benefitted across the board in terms of improved focus and clarity, with some gain in the depth of stereo imaging and – in some instances, at least – a perceived increase in bass extension. If there's a downside, it's a slight loss in 'speed'. Under electronic components benefits are less marked, but we're taken with these as a general-purpose loudspeaker foot. **HFC**

Cables and accessories [Review]

IXOS Ixotica IX2

TYPE Interconnect cable	
PRICE £300 (1m pair)	
CONTACT 2 01844 219000 @ www.ixos.co.uk	

This is lxos's top Gamma Geometry cable, the big brother of IX1. The two share many features, including proprietary Aptimus-coated conductors and the geometry, but IX2 naturally differs in several ways from its cheaper stablemate.

Most noticeably, while IX1 is screened, IX2 uses an earth drain wire and as a result has significantly lower capacitance. In principle, it also has higher susceptibility to interference, but in practice we found no sign of that, and it should be suitable for long runs if the price isn't a barrier! Conductors are of oxygen-free copper and insulation is foamed polythene.

Clearly one would hope to find this cable superior to the cheaper IX1, but we weren't quite sure whether we preferred it in every way. The bass, yes, that is an improvement, combining the tunefulness and extension we found in IX1 with a more neutral, less overt, presentation. In fact if anything, the extension seems slightly better but there wasn't much wrong with IX1 in that department anyway. Midrange is also neutral, but we have some reservations about the treble, which is extended but does seem a little dry at times. As a result, there's not quite so much 'air' in the sound, less of a sense of real live performing acoustic and, almost certainly linked to that, there's less precision in the stereo imaging. By most standards, these criteria would be considered good: but in a £300 cable, we would really like them to be excellent. We did enjoy this cable, but can't quite allay some doubts about its value. **HFC** *Richard Black*

TYPE Stylus pressure gauge PRICE £75 CONTACT ☎ 0870 240 7228 ↔ www.choicebits.co.uk

or any lover of LP, stylus force is one of the major bugbears. It is essential to get right because it directly affects tracking and stylus wear, and interacts strongly with vertical tracking angles. This is why one can spend forever fiddling with stylus force. The ideal setting is not necessarily exactly the notional value published by the cartridge manufacturers, for all sorts of reasons. So the value of a really good stylus pressure gauge is not principally in allowing one to set 1.7g downforce, just because that's 'what the book suggests'. Optimisation is always by ear.

No, the true benefit of an accurate gauge is only appreciated when for whatever reason a cartridge has to be disturbed from its mounting, or the tracking force re-adjusted for some reason (cleaning and servicing or simply trying a new cartridge). You spend ages tweaking downforce to perfection – and then lose the setting and have to start all over again. Except that with a high-accuracy gauge

like this you don't: you just make sure to measure downforce before changing anything, then when you restore original conditions, you know you can get at least that parameter back exactly where it was.

This is by far the best gauge we've tried, with repeatable resolution to a very few milligrams. Admittedly it took ages to calibrate (better instructions and/or internal software would be welcome!) but after that, it was simple and effective. It may seem expensive, but it's actually cheaper than some less-good gauges. As it's apparently robust and impervious to being moved between measurements, it's a godsend. **HFC**

GROUP TEST AND LAB REPORTS: RICHARD BLACK

With DAB/FM tuners offering two-for-one convenience, can FM-only tuners compete?

pparently it's official: FM will be switched off one day. Supposedly. The estimated time of arrival of that day is put by some as early as 2012, though few industry insiders put any store by that. At worst, then, a new FM tuner has six years of life in it, and probably a good deal more.

Meanwhile, DAB has certainly taken off in terms of the range and number of stations available, or at least it has if you're in a heavily-populated area. Reports from the hills and dales suggest that FM can often be a better bet in such areas.

FM still rules the airwaves when it comes to in-car, too. Although of little direct bearing on the home hi-fi system, the continued support of FM by car manufacturers and in-car entertainment installers – because of in-car DAB systems being plagued with constant retuning issues – will only serve to lengthen FM's lifespan.

Don't discount digital radio though. DAB can be very attractive to city slickers, offering clear reception where FM is plagued by multipath distortion, which is much worse for those urban flat-dwellers who are often unable to erect an outdoor antenna.

On the hardware side, the arrival of good quality, sensibly-priced dual-mode (analogue and digital) tuners has done a good deal to make the question a moot point, but it's still worth posing: FM or DAB?

We've long made no secret of our dislike for the sound quality of most DAB broadcasts. The UK has just about the lowest average bitrate of any country to operate the system, and as a result the majority of stations sound spitty and synthetic – really quite nasty much of the time. Other supposed advantages of DAB, including wider dynamic range and extra text information, are frequently not put into practice by broadcasters. So often, all else being equal, there's actually not a lot going for it.

But all else may not be equal, as many new stations are on DAB only. And Radio 3 continues to fly a lonely flag for sound quality, with higher bitrates than any other station and impressive dynamics, too. Nevertheless, if you listen mainly to non-classical radio and can receive decent FM at your home, we have no hesitation in recommending a good FM tuner as today's quality option.

FM is a mature technology and there's some clever engineering to be had for very friendly prices. We enjoyed testing this group of tuners and were reminded just how much free aural entertainment is on the airwaves. Per hour of pleasure it can give you, a decent tuner (DAB or FM) is a very cheap luxury! **HFC**

LISTENING TESTS

-

Remote

BBC Radio 2 DOR RAC National DOR

BEC R2

DIMME

FM 88.80MHZ A The live, and ever-changing nature of radio makes it ill-suited to our usual listening panel tests, which were therefore dispensed with on this occasion. The majority of listening was carried out at a venue in inner London, where a number of FM stations can be clearly received thanks to a large rooftop antenna mounted on a rotator – the radio junkie's ultimate. DAB reception at the same location is essentially error-free with even the crudest indoor antenna. A brief period was also spent with each tuner connected to a local FM generator fed from CDs, to check performance under artificially high and low signal conditions.

LAB TESTS

Each tuner was measured with a variety of equipment, including the Sound Tech FM generator plus a Hameg distortion measuring set, and also items of audio equipment (ADCs and DACs) adapted to lab duty and reporting data for analysis to Cool Edit and Mathcad on a PC. This approach enabled us to build up a picture of the tuners' performance under different conditions both RF and audio, simulating the extremes of the real world. DAB performance was measured inferentially, by comparison with output from a known high quality DAC, while receiving real broadcasts.

No other magazine offers an equivalent test and listening programme for comparative tests.

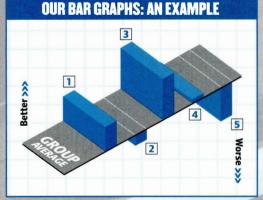

LAB REPORTS: THE BAR GRAPH

Our 3D bar graphs are a simple way of showing how the products compare (on FM) across five technical parameters. In each case, a percentage is given that falls above or below the group average. In this test, the parameters are: **1)** Noise floor: This reflects not only the absolute level of residual noise but also how the spectrum of that noise influences its audibility.

2] Distortion: Measured at various frequencies and levels, this shows how 'clean' the demodulation and audio circuits in the tuner are.

3] Stereo separation: A measure of how much left channel leaks into the right, and vice versa. This can affect stereo imaging precision.

4] Sensitivity: High sensitivity means that a tuner can work well with low received signals. However, this has no direct correlation with sound under good signal conditions.
5] Frequency response: FM radio is limited by design to a 15kHz bandwidth. Our measurement relates to flatness below that limit.

DAB FM AN

[Ultimate Group Test] Radio tuners £200-£1,000

£500 (FM) ☎ 01480 435577 ₩ www.cyrusaudio.com

The FM-X tuner has an ace up its small alloy sleeve... it's upgradable!

yrus offers only one tuner in its current range, and here it is. It fits neatly into that range both physically and conceptually, claiming fuss-free performance based on traditional sonic virtues, at a sensibly middling price.

Most manufacturers generally buy in sub-assemblies for use in their tuners. Cyrus is no exception; the FM-X features a pretty familiar selection of chips for the various decoding functions, But, the way in which these sub-assemblies are all used together has a few nips and tucks beyond the basic 'application note' circuit and the neat and efficient layout is also Cyrus's own.

In addition, this tuner offers a truly unique feature in its compatibility with Cyrus's PSX-R external power supply. It's not required for basic operation, but it can be added as an upgrade, supposedly bringing sonic improvements. Other features include fine-step tuning, with 10kHz increments (rather than the more common 25kHz) and seven, one-touch presets. Plus one of the nicest signal-strength meters we've seen in a while, with lots of segments and 'full strength' for once indicating more than just so-so reception.

SOUND QUALITY

First impressions of this tuner were of a lively and communicative sound, free from any obvious nasties. But, it wasn't until we'd had a really good chance to listen to it under varying conditions and in direct comparison with its competitors, that we realised just how good it is. There are limitations: the treble is not quite as open and detailed as the very best tuners we've heard and stereo imaging depth is likewise slightly compromised. One or two currently available models will give just a shade more insight into really low-level details of live BBC Radio 3 broadcasts and other demonstration-quality transmissions.

But that's nit-picking. What we heard from the FM-X, consistently over different music

types and in two locations with differing reception conditions, convinced us that it's a lot more than just a pretty face. For a start, it has truly excellent bass. Tuners usually measure flat in the low frequencies but don't always sound it, finding it hard to tread the line between leanness and flab. In this case, we'd say the line is marked out with precision, the sound possessing plentiful depth but never straying into vague woofiness. On the contrary; it's tuneful, clear and that old favourite of plucked double bass is admirably easy to pick out and follow.

The midrange, meanwhile, is largely free of colorations with just the occasional trace of perceived lift on female voice, spoken and sung. It's detailed, too, resulting in unusually good imaging – good width and decent depth with it. And treble is free of congestion and unnatural sibilance too, all adding up to sound that is both involving and analytical. Only under really demanding reception conditions (such as bad multipath distortion) does audio really suffer in comparison with more comprehensively equipped tuners. If you can get a good FM signal at your location, this is something of a radiophonic bargain. **HFC**

VERDICT	
SOUND >> 87%	Smart, simple, very well built and with a select but well-considered set of features, this tuner achieves particularly gratifying sonic results. The PSX-R upgrade potential is the icing on the cake.
FEATURES >> 80%	
BUILD >> 88%	
VALUE >> 87%	HI-FICHOICE 87%

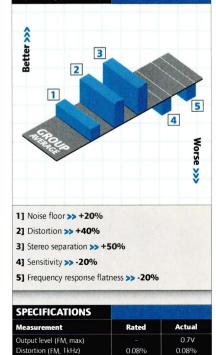

LAB REPORT

Cyrus has opted for a fairly low audio output level. But, don't be put off! The FM-X's measured performance underlines the high standard of sonic achievement with distortion that's actually better than the limits quoted for our measuring test set. The frequency response is not the flattest in the group, but it's still only 1dB shy at 15kHz – probably audible in A/B comparisons, but certainly not worrying.

Crosstalk performance is exemplary at better than 40dB over a wide frequency range, and noise with a good strong signal is well suppressed, as are the 19kHz pilot tones and the intermodulation distortion that invariably accompanies it. With weak incoming RF, noise does climb somewhat and it's evident that this tuner is not optimised for marginal reception conditions, but if that's the price one pays for excellent audio performance we're happy to accept it.

HOW IT COMPARES

Frequency response (FM, 20Hz-15kHz)

±1.0dB

£250 (DAB/FM) ☎ 01234 741200 ♥ www.denon.co.uk DENON TU-1800DAB

Denon's always near the top of the tuner tree. Now it bears DAB fruit

e reviewed this tuner on its own in HFC 274 and on that occasion, hailed it as the first DAB/FM model we'd come across that broadly equalled the performance of decent FM-only alternatives. Whatever the outcome, as it faces two head-on competitors in this group, nothing can detract from its smart and user-friendly manner. It's moderately well featured, with a few touches we particularly appreciate on DAB, including a 'Bit Error Rate' (BER) display which gives ultimate confidence that reception is digitally perfect as it falls to zero and Dynamic Range Control. On FM, there's less to fiddle with, but that's probably little or no loss in most installations. 100 presets per band strikes us as more than one could possibly ever want.

FM and DAB sections are completely separate as far as the analogue output stage, with each handled by a highly integrated module. The FM/AM part is from Kwang Sung and is basically a complete FM tuner, from RF input to audio output. The the DAB module is from TBK, with D-A conversion of DAB signals being carried out on Denon's main circuit board by a chip from Analog Devices. Build quality is decent rather than outstanding, with respectable commercial-grade components all round and the medium-size frame type mains transformer is a pleasant surprise in a tuner.

Outputs are provided from the usual phono sockets, plus both flavours of digital (DAB only, of course). There's also a Radio Data Interface.

SOUND QUALITY

Comparing audio performance between DAB models is generally not a particularly edifying exercise: on the whole most tuners are so much more capable than the broadcast system as an overall entity (including MPEG data-reduction coding) that differences border on the imperceptible. In this case, adopting as a reference the digital output of this, or any other tuner via some of the finest external DACs available, the sound is ever so slightly

veiled but we're not inclined to worry about it. What DAB does well - like quiet backgrounds and deep bass - you'll enjoy to the full through this model and what it does badly won't irritate you significantly more or less than any other.

FM, by contrast, remains one of domestic audio's tougher challenges and while this isn't the last word in what can be achieved, we continue to be impressed by the FM quality of the TU-1800DAB. It comfortably meets the basic criteria of decently low noise and lack of break-up in the sound at high levels and reaches beyond that to offer a good taste of the proper hi-fi FM experience, with good solidity to the sound and some good imaging too. Voices are natural and not unduly sibilant and music is appealingly vibrant and rhythmic.

There are still clues that this is after all a budget tuner - for instance, in the way it lacks the last smidgen of noise-floor suppression. It's not so much that the noise level is obviously higher than say, the T+A, more that the Denon's noise seems grainier and hence more intrusive. Bass is not as assured as some and treble a touch harsh. But all the same, by any sane standards, at this attractive price, the TU-1800DAB is a mighty capable component and a worthy successor to the long-standing and justly famous TU-260L. HFC

VERDICT	
SOUND >> 84%	FM performance is lively and informative if not truly high end, but with a little grain audible under some conditions: DAB is about as good as it gets. Factor in the good price and this is a great all-rounder.
FEATURES >> 86%	
BUILD >> 83%	
VALUE >> 88%	HI-FICHOICE 86%

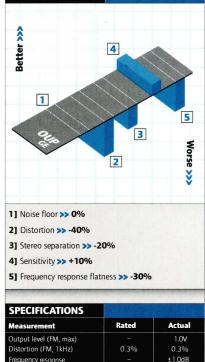

LAB REPORT

DAB performance seems absolutely fine, with the usual low levels of distortion and dead flat frequency response extending further than the broadcasts. On FM, the basics are good, with pretty low distortion and just a little treble roll-off. Two factors of interest turned up, however. First, distortion rises considerably when only one channel is carrying an audio signal (because of the way stereo FM is encoded, this situation always causes somewhat worse distortion than when left and right channels are identical. But in this case, it's more pronounced than usual. Second, there's quite a lot of 'modulation noise' - the noise floor rises by around 7dB when the audio level is high.

With little doubt, these two factors contribute to the tuner's sound and probably largely account for the slight lack of subtlety. There are worse things that can happen to a tuner, though, and the overall picture is good.

HOW IT COMPARES

Frequency response (FM, 20Hz-15kHz)

June 2006 marks the launch of some long-awaited products.

INTRODUCTION After almost three decades in this industry I have some perspective, and I can say that the high-end is not a shrinking industry; and in terms of quality and value we are living in the Golden Age of Hi-Fi! Real Hi-Fi has always been the pursuit of the enlightened and minority; today's iPods are bought by yesterday's owners of rack systems. What I find surprising is the commercial success in Britain of the usual suspects. If you look just a little beyond the magazines and the High Street, the same money buys crafted and calibrated products with pride of possession, long-term currency, value and most of all pleasure. We are very happy to offer a premium no-frills mail-order service; indeed we think ours is the best in the land: with no grey imports, no phantom products, six month guarantees on Hi-FiShop.com, what you see is what you get. Two floors up from our bargain basement, (or clearance cellar!) The Audio Salon's spacious Victorian Drawing Room people travel from near and far to hear, for example, the fabulous Gryphon Poseidon system, which redefines the state of the art.

In Tom Brown's schooldays, six of the best was to be avoided at all costs. This month we proudly debut Hi-Fi that redefines investment opportunities, and getting in before the rest!

ATC SCM-40 Launched in May 2006 at £1,999, this speaker by ATC asks (if there is anybody out there; yes Pink Floyd are among ATC users) why spend two grand on a hyped or second-hand loudspeaker when you can cut to the chase and hear your music the same way most musicians heard their recordings in the studio.

Ayre Acoustics MX-R

There is a well-founded rumour that Charles Hansen knows a thing or two about amplifier design, and when his amps outperform behemoths costing more than double, you wonder what his forthcoming £11,590 monoblocks will do.

At a product launch in Amsterdam, a Hi-Fi manufacturer said to Hansen, "These are simply the best amps I have heard." And he has heard most. The MX-R revises what you expect from amplifiers. And yet it is so small...

Brinkmann Oasis Mr Brinkmann

has come up the fast lane to produce turntables with a vengeance and a long waiting list too! They are the best. And untypically they are affordable, but now they are a bargain. The Oasis at £3,495 (launched in May 2006) employs the same precision engineering but

without the costs of belt drive. This new revolution (intentional pun) has been made possible by a wholly new motor which redefines direct drive. Do not expect quick delivery. Do not buy anything else.

Esoteric X-03se TEAC decided

to keep UK customers waiting for the special edition at no extra price for the stiffened power supply and other refinements. It has been worth the wait. This is a combination of VRDS precision engineering and painstaking audiophile refinement. At £4,995 it has to be the high-end bargain of the decade.

JPSLabs Jilt your girlfriend, divorce your wife if she moans about "a bit of wire that costs two grand." Is she deaf or something? The Aluminata range from JPS reflects the company's commitment to spend less than 5% revenue on <u>advertising</u>

(ie. your money) and avoid off-the-shelf materials which make an ordinary product. The new SC-3 interconnect is available on saleor-return; a nasty trap for the unwary. Barely legal.

Pathos Endorphin And then

there comes along the long-awaited Italian CD player and it gives you the goose bumps. Comparisons with Alfa Romeos and Ferraris convey the excitement that a product of passion; stimulating and absolutely sensational. Do

not waste £4,500 on ... What you were about to buy!!!

To find out more - call the Audio Salon on 0845 4000 400 today!

4 Park Circus, Glasgow, G3 6AX, Scotland 0845 4000 400 info@audiosalon.co.uk www.audiosalon.co.uk We sell products that are worth that little bit of extra effort...

£300 (DAB/FM) ☎ 01753 680868 ↔ www.marantz.com

Two from the same stable, but is this a horse of a different colour?

ow that Marantz is run under the same umbrella company as Denon (D&M Holdings, which also owns McIntosh, Boston Acoustics and Snell loudspeakers), one might perhaps expect some commonality of components and design between this and a similarly-specified Denon tuner. Indeed, the specifications list of this model looks very similar to that of the TU-1800DAB. And under the hood? Well, the same DAB tuner module resides in each, the same DAC, the same FM tuner module, the same mains transformer... and very nearly the same circuit board. It's not quite identical - the odd component here and there seeming unique to one model or the other - but the similarities are marked to say the least.

Basic specs are exactly the same too – DAB, FM, MW, electrical and optical digital output from DAB, RDI, RDS on FM and squillions of presets. Build quality is respectable and the unit occupies a considerably larger case than the Denon, with slightly more fresh air inside. It's nice to use too, with manual tuning aided by the swift-responding rotary knob.

So should we expect the same performance? We don't want to jump the gun on our conclusions, but in the course of conducting the lab tests, we did find some component changes in the FM module that have some marked effects. By the way, almost all our listening was carried out before we realised quite how similar the two units were.

SOUND QUALITY

In the event, comments on the ST7001's sound tallied broadly with those on the TU-1800DAB but varied in enough specifics to suggest that the technical differences between the pair may not be so very trivial after all. That's on FM, anyway: DAB seems frankly indistinguishable in every way. But analogue radio, while it comes in loud and clear with considerable gusto and insight, has its own particular characteristics.

Most noticeable is the bass, which seems a touch more present through the ST7001. It's not any deeper, nor is its level obviously higher, but it seems a little more palpable and if anything, a shade more tuneful too. The extent to which this is obvious depends quite strongly on musical material and it's not that marked on most commercial pop radio. Subtler classical and jazz tones show it up much more, however.

In the midband, we thought the present contender behind the TU-1800DAB on detail and imaging, but no less lively. In some situations it can come across as more energetic, which we assume is due to the difference in the bass. Meanwhile, the treble is basically clean, but once again lacks some of the clarity and openness that the very best FM tuners can achieve.

As a result of those differences, admittedly not vast in the great scheme of things, we found this tuner to be more immediately appealing than the Denon, but not necessarily more involving to listen to in the long run. With most pop music styles it scored about the same, but for classical, all things considered, it seemed a touch less convincing. All the same, it's clearly a perfectly decent budget tuner and a safe purchase for most lovers of the airwaves. **HFC**

VERDICT	
SOUND >> 83%	Sharing a great deal with the Denon, this tuner seems similarly lively on FM, but it offered slightly less detail and insight. As a result, it was less engaging in the long run. DAB performance is good.
FEATURES >> 86%	
BUILD >> 83%	
VALUE >> 86%	HI-FICHOICE 84%

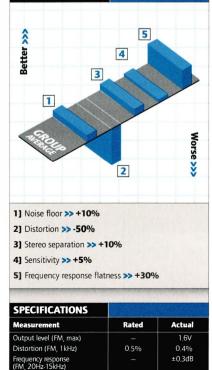

LAB REPORT

The most obvious difference between this and the TU-1800DAB is in output level, which at 1.6V is the higher by some 4dB. It was this that alerted us to the changes within the FM module, which we assume are also responsible for the slight, but quite possibly significant, difference in distortion between the two units. Under most conditions the ST7001's distortion is a little higher, third harmonic reaching the sort of level (just under 0.5%) where it can cause subtle coloration-like effects: this may well account for the bass differences noted.

There's also a difference in frequency response between the tuners, but this may be indicative of no more than component tolerances and about half a decibel brighter treble is not a make-or-break difference by any means. Overall, though, the picture is the same, with a similar tendency for noise floor to rise in the presence of loud audio. This allows single-channel distortion to dominate. A generally good set of results.

HOW IT COMPARES

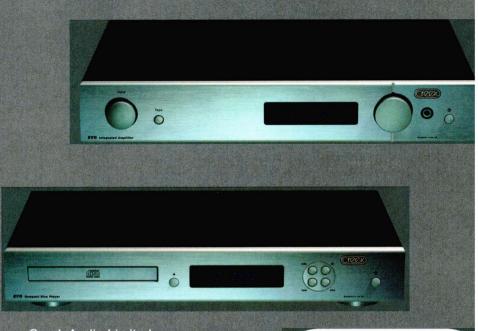

EVO A New Beginning

Renowned for the quality of its entry evel products, Creek Audio is set to recapture the hearts of first time buyers with its exciting new line - EVO.

Initially comprising a matching integrated amplifier and CD player, EVO products represent extraordinary value for money.

£210 (DAB/FM) ☎ 01923 260511 ↔ www.pure.com

DAB's leading light in the UK hasn't abandoned FM yet

e reviewed this tuner back in *HFC* 242 and we thought it would be interesting to see how this – one of the early DAB/FM models – stacks up against recent models. The price has come down a fair chunk and the unit remains competitive on a specs/price basis at least.

The specs are rather good. On this occasion, we are considering the basic model with unbalanced outputs, but balanced signals via XLR sockets are an option and naturally there are also digital outputs (both flavours) active when DAB is being received. Also on the hardware front, there is a Radio Data Interface and a USB socket for firmware upgrades.

On the software side, things are interesting. Pure started out in DAB tuners and came to FM later, a career which is unusual or possibly unique and thus it thinks in DAB terms. As a result, there are no conventional FM presets. Instead the tuner features autotune on FM just as on DAB, scanning the band to find receivable stations and storing them by RDS name or frequency (you can also add names manually) in memory. This makes finding an FM station as simple as on DAB – just scroll through an alphabetical list of names.

Nothing seems to have been missed off the DAB features list. Dynamic Range Control is implemented with three settings (off, half and full), there's a good signal quality indicator and you can get full text information, though the display is looking a little dated alongside some on the market. FM information is similarly displayed, with an optimistic signal strength meter. Overall it's a well thought-out device, though, with a neat and tidy internal layout.

SOUND QUALITY

As in most of its recent hi-fi component DAB tuners, Pure has included PAC ('Psychoacoustic Correction') into the DRX-702, making DAB sound immediately distinctive in any direct comparison with other models. There's nothing mysterious about this: it's a fairly simple filter

which cuts the level of treble output by a couple of dB, ostensibly in order to lessen the 'birdies' and other MPEG coding artefacts which afflict practically all DAB broadcasts. While we appreciate the point, we're not convinced that 2dB is really enough to make much of a difference to that, but on the other hand, it is certainly an audible tonal change from regular DAB tuners.

That apart, DAB reception is much of a muchness with most other tuners and via the digital outputs, there's nothing in it at all. FM is a different matter and in fact we found ourselves liking that side of things better than three years ago. It could simply be that this sample was better aligned than the earlier one, but, however it came about, we enjoyed a lively and upbeat performance from the unit with low levels of noise and audible distortion.

In the end though, FM sound is not quite as clear as we heard from the Denon and Marantz models. There's a persistent mild grain and veiling that bothered us across a range of programmes and was less than conducive to extended listening. The basic tonality is good in the bass and a little bright in the treble and performance is average under marginal reception conditions, but we can't help feeling there is more detail in the aether than the DRX-702 seems inclined to extract. **HFC**

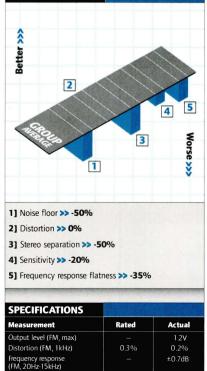

VERDICT	•		
SOUND >> 80%	Basically decent FM sound is plagued by persistent slight veiling which comes		
FEATURES >> 88%	between the listener and true involvement in the		
BUILD >> 88%	music. DAB sound is distinctly mellower than most thanks to PAC.		
VALUE >> 86%	HIFICHOICE 83%		

LAB REPORT

DAB performance is dominated by PAC, which gives a total cut of about 2.5dB at highest frequencies and around 2dB over most of the treble range: otherwise there's nothing much to comment on. On FM, there's some quite impressive performance, particularly in decoding signals on only one channel, where distortion is held to a commendably low level, barely more than when the signal is identical on left and right. Response is a touch lifted in the treble, which is not always welcome given how 'spitty' many broadcasts are already, but half a dB isn't too frightening. Noise is somewhat below par for the course: it varies little with audio signal level, but rises more than most with low RF signal levels. suggesting a slightly noisy input stage. The 19kHz stereo pilot tone and the intermodulation artefacts near it are less well suppressed than in the other tuners here, and this may well account for the grainy sound noted.

HOW IT COMPARES

Classic in every sense of the word

In recent years there have been three exceptional Creek products which have time and again been the recipient of awards for excellence.

Rather than see them give way to new models, all three have become Creek 'Classics'.

The 5350SE integrated amplifier, CD50mk2 CD player and T50 tuner make up this legendary range. A power amplifier is being added to complement Creek's 'Classics'.

Rega's long-standing FM tuner is a minimalist's dream

nother established model, also tested in *HFC* 242, the Radio 3 remains one of the most competitively priced tuners from any of the UK hi-fi specialists. Externally, it's absolutely Rega – the design and construction being quite distinct from anything made by other brands. Unless you've a passion against plastic front panels, it's eye-catching and practical. The minimalist control make the unit slightly trickier to use than some, but one can soon learn to live with that.

At the rear is the minimum number of connectors for aerials and audio - none of your fancy remote control connections or USB here! All the money has gone inside the case, where one finds a tuner head from Kwang Sung (who seems to have nearly monopolised the market for such things, replacing the familiar names of old, Alps and Mitsui) followed by three wellestablished chips from Sanyo that do most of the decoding work. The output buffers use discrete transistors, while the power supply is based on a small toroidal transformer. Passive components throughout the unit are of good commercial quality and the general theme is clearly thoughtful design of circuitry for performance to a budget.

Tuning is in half-step increments (25kHz) and there are the usual automatic scan-tuning and presets to speed things up, but no RDS, and no signal strength indicator either. Even the remote control is an optional extra – since it controls a complete Rega system, many purchasers will presumably have one already.

SOUND QUALITY

What this tuner lacks in features it comfortably makes up for in performance. In a group extending to over twice its price, it shouldn't be the outright best and it isn't, but in terms of value it's as attractive as any. Just as on the last occasion we heard it, we continue to be impressed by its natural and extended bass – ultimately it's not quite as solid as that of the Cyrus but it is certainly more than passable,

with real presence and a convincing way of following low-lying melodic lines and percussion alike.

In the midrange, there isn't quite the transparency that the very best in FM tuners can offer, but there is a commendable level of detail. There's also mild coloration that affects the high midrange, just slightly adding a bloom to high-lying melody instruments. It's not unpleasant, but if one's being really picky it isn't quite accurate. Above it, however, the real treble has a nice relaxed quality to it which is just occasionally compromised by a hint of 'boxiness', closing in slightly on high harmonics and their decay into ambience.

If this sounds like pretty picky criticism for a tuner, that's a fair point. Overall, we were impressed by the musical and communicative qualities of the Radio 3. It is not fussy about musical styles and indeed handles spoken voice just as confidently and such sins as it possesses are minor ones mostly of omission rather than commission – it hasn't quite the authority of real high-end wireless nor the purity of treble, but it adds little signature of its own and strongly resists obvious distortion. Under poor reception conditions it does about as well as any 'no-frills' tuner we can recall, too and we've no hesitation about giving it a high recommendation. **HFC**

VERDICT	
SOUND >> 85%	A classic low-feature-count audiophile product from a hi-fi legend, with FM sound
FEATURES >> 75%	that's strong in the bass, clear in the treble and
BUILD >> 82%	detailed in the midrange. It's always plenty of fun to listen to.
VALUE >> 87%	HI-FICHOICE 85%

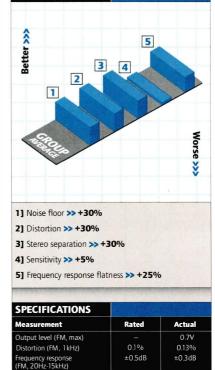

LAB REPORT

In almost every area, measured performance of the Radio 3 is middling to good. Distortion particularly is better than many, but not as good as some, with a marked increase when only one audio channel is transmitted. Noise is about par for the course, too, but what may be significant is that it has a distinct 'colour' compared with the group average, with a slightly lower level in the psychoacoustically significant band from 2kHz to 5kHz but a minor lift above 6kHz.

Differences are slight, not much more than 1dB, but it's probably not fanciful to relate this to the slightly closed in treble. Pilot suppression is good and the intermodulation artefacts in the band above 15kHz are kept to a remarkably low level, which can only help keep the sound clean as they represent highly unnatural, anharmonic distortion which tends to be very unpleasant. As with all the tuners in this group, distortion basically vanishes into noise for levels below -20dB.

HOW IT COMPARES

As fate would have it.....

It was inevitable that in time, Creek would produce a superior range of products that would completely captivate the imagination of lovers of music - young and old.

Appropriately named Destiny, the latest products to emerge from Creek Audio leave no doubt that, given the available resources, Creek can produce outstanding high end products.

Destiny proves yet again that Creek designs exceptional products at a price that continues to astound.

£1,000 (FM) ☎ 01623 517000 ⊕ www.taelektroakustik.de **T+A T1210R**

T+A's high end FM tuner is built to last

e've been impressed by one or two T+A products recently, which tend to present a singularly hi-tech face to the world and contain some impressive engineering. This tuner is no exception. Fit and finish are superb and the unit has a very professional air all round. It's simple and pleasant to operate, with the exception of manual tuning, which we found a bit of a bore. But, once you've loaded your favourite stations into the presets, it's all quick and easy. RDS helps keep track of stations, too.

Within the case, construction is as smart as on the outside. The circuit board carrying the main RF and audio blocks is positioned away from the back panel and linked to it by cables of a few inches length – we've some slight reservations about the use of a phono connector on the link from the aerial socket! This board is quite small, very neat, and loaded with a tuner head from Kwang Sung and chips from Sanyo and Philips, the latter decoding RDS while the former handle audio.

The power supply features a generous mains transformer shielded in copper-plated steel, but otherwise is typical of those fitted to the other tuners in the group. Electronically then, this looks quite similar to the other models in the group, but it does have two features on the RF side that can help optimise reception under marginal conditions. First, a bandwidth control that when set to 'Narrow' can help exclude interference from nearby stations or multipath distortion, plus an attenuator which helps prevent overload if there is a strong station nearby. Both useful with crowded airwaves.

SOUND QUALITY

This tuner faces some stiff competition in the group from cheaper models, but although it didn't blow away the Cyrus and Rega offerings, the T1210R did put in a performance which equalled either of them in any area and bettered them both in some. For a start, its bass is really very solid and extended, reaching

the lowest frequencies but always immaculately controlled and as a result taut and rhythmic when need be.

Treble is clean and nicely open too, with a good deal of air around delicate sounds, but the real deciding factor in this tuner's favour is its midband, which is by a small but significant margin the clearest and most detailed of the group. It is not absolutely devoid of coloration – on occasion we heard hints of lower-mid hollowness – but it's pretty close and it offers some of the best detail and imaging we've heard from the airwaves. Just now and then Radios 2, 3 and 4 particularly, will put out a broadcast with some fine imaging depth and frankly there aren't many tuners that can make the most of that.

Depth, after all, is a hard trick for CD players and amplifiers to get right and on FM there's arguably a good deal more to go wrong. Even so, this one makes a very good stab at it, surpassed only by a couple of reference tuners (both expensive, long out of production and somewhat tweaked) in our cupboard. At the same time, the essentials for listener involvement are well provided for, with good rhythmic drive and lack of any obvious grain or excess spit in the sound. We have no hesitation in pronouncing it a grand grand's-worth. **HFC**

VERDICT	000 0000 000		
SOUND >> 88%	A classy-looking bit of kit which sounds similarly		
FEATURES >> 82%	upmarket, with assured detail and imaging and some real polish to the		
BUILD >> 87%	overall presentation. Useful control over the dread multipath nasties, too.		
VALUE >> 84%	HI-FICHOICE 88%		

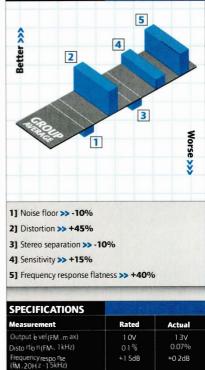

LAB REPORT

In no one area is this tuner obviously superior to the others, but on the whole it equals or exceeds all of them in each detail. Distortion is low under any conditions, rising by a modest amount when only one channel is driven and noise is really much of a muchness with most of the others in terms of both level and spectrum. Meanwhile, suppression of pilot tone and distortions above 15kHz is good but not devastatingly better than the rest can manage.

Channel separation is weak by modern standards, but while we're used to seeing very high figures for this from CD players, LP never managed to beat even a so-so FM tuner and still achieved good imaging, so it's probably not a real limitation. Frequency response is very flat; within two tenths of a dB to 10kHz and less than 0.5dB out at 14kHz. Finally, the 'Narrow' tuning mode gives less increase in distortion than is often the case, making it more generally applicable.

HOW IT COMPARES

CONCLUSIONS

Anyone expecting DAB to have eclipsed FM by now is in for a big surprise

This has been an interesting group for several reasons – not least because it shows how much life there still is in FM. As far as DAB is concerned, the outlook from the hi-fi buyer's point of view seems pretty simple; there just ain't much between tuners in performance terms, apart from some super-cheap models we've seen.

So, if a tuner takes your fancy on grounds of looks or user interface, don't waste time agonising.

With FM though, the situation is completely different. There's plenty of reason to choose carefully between models.

Of those models tested in this issue, none is actually bad or indeed anything very close to it. We derived particular pleasure from listening to the T+A, which shows just what can be done with 'wireless' when cost isn't too tightly reined-in. It has all the hallmarks of fine audio kit from any category - good bass extension and control, clean treble and detailed midrange, plus that essential civilised quality that makes for relaxed yet insightful long-term listening. If you want to enjoy what may be the twilight years of FM in style, it's an excellent choice.

At around half the T+A's price, the Cyrus and Rega models run it surprisingly close and in value terms, we're very taken with them. Neither is ideally suited to poor reception conditions, but then you'll never get a true hi-fi experience unless the RF signal is reasonably decent – put your money into an aerial! Assuming that's sorted, either model will very likely give lasting pleasure. The Cyrus is slightly more refined, but we'd recommend having a listen to both if possible.

Pure's DRX-702 scores highly on versatility, build quality and price and is strongly recommended if

>> Most important: for FM, use the best

aerial you can accommodate unless you

breakthrough, try a ferrite ring or two

can see the transmitter from your

window. It's money well spent!
>> If you suffer occasional noise

on the aerial cable.

you're likely to listen more to DAB than FM. If the reverse is true though, you may find its FM performance less involving than that of the Denon and Marantz models. These two – closely related internally, but sounding only moderately similar – both offer good FM sound in most areas. But while we enjoyed the Marantz's bass, we thought its level of detail retrieval was a shade behind that of the Denon.

Given that the latter is significantly cheaper, we have little hesitation in awarding it the highest points for value among the group. **HFC**

This issue, the ultimate gadget for the serious vinyl user. Katli Audio's excellent stylus pressure gauge brings precision cartridge set-up to the vinyl enthusiast, without the need to spend hundreds of pounds. Just see p63 for our review! For our full selection, visit our dedicated website: www.choicebits.co.uk

KATLI AUDIO STYLUS PRESSURE GAUGE The standard stylus pressure suggested by a cartridge manufacturer is just that – a suggestion. In reality, any LP enthusiast worth their weight in 180g vinyl knows that the best way to good sound is to experiment. This poses a problem. What happens when you get the perfect stylus downforce and then have to remove the cartridge? Without a precision gauge to measure your ideal settings before removal, you'll be back to square one and a lot of experimentation. A good gauge changes all that – just measure the downforce, then make sure you get exactly the same figure when refitting the cartridge.

Good, accurate stylus pressure gauges are thin on the ground. They are also punishingly expensive, often costing hundreds of pounds. Like the expensive gauges, the Katli measures down to thousandths of a gram, but it's...

BACK ISSUES

Back issues are available by mail order (as long as stocks remain). They cost £5.95 (UK), £6.95 (Europe) or £7.95 (rest of the world). All prices include p&p. You can order by phone on 0870 837 4773 - we accept Mastercard and Visa credit cards, and Maestro debit cards. Alternatively, send a cheque or PO made payable to Future Publishing Ltd. Please fill in your details on the left of this form.

ORDER A REVIEW REPRINT If you're interested in an HFC review of an older component and the back issue has sold out, we can usually send photocopies of individual reviews to any UK address for a flat fee (inc. p&p) of £5 per review. You must know in which issue the original review appeared; we are unable to search back issues for old reviews.

Please send a written request, enclosing a cheque for £5 made payable to Future Publishing Ltd, to:

Hi-Fi Choice Reprint Service, Future Publishing, 2 Balcombe Street, London, NW1 6NW.

PLEASE NOTE: THIS SERVICE IS ONLY FOR OTHERWISE UNOBTAINABLE REVIEWS _ _ _ _ _ _ _ _ _ _ _

The New Densen B-110

The B-110 is the successor to the B-100, which became the most sold high-end amplifier ever from a Scandinavian audio manufacturer. The reviews have confirmed the quality of the "old" B-100 by awarding the B-100 a string of very favourable reviews: "You just can't beat it", "rhythmic magic" and "build quality that should embarrass everyone fighting in this price category" - words that tell you it is time to open your ears and listen! Even so the B-110 is in all aspects a giant step forward in terms of musicality, features, user friendliness and upgradability. This completely new design is simply sonically superior because of the high-end details and features it inherits from its close relation to the B-150. The B-110 even comes with liftetime warranty.

The B-110 employs a true attenuator, while everybody else uses potentiometers or cheap digital volume IC's. Densen use a sophisticated microprocessor controlled attenuator; this is the reason for the distinct click you hear as you adjust the volume and it is a definitive sign that Densen use the advanced relay driven attenuator instead of cheap inferior technologies, which substantially downgrade sound quality. The click is your assurance that Densen does not compromise!

Features:

- Upgradeable with external power supply
- Ready for SAXO electronic crossover
- Ready for remote control and phono stages
- Ready for multiroom systems
- Ready for Bi-amping and Tri-amping
- Upgradeable with plug-in 7.1 pass-through surround board

B-110 2x60w 8 ohms / 2x120w 4 ohms - £ 1,000 B-150 2x100w 8 ohms / 2x200w 4 ohms - £ 3,000

The B-150 has already been awarded Best Integrated Amp of the year in Portugal. The B-110 is a down-scalled version of the B-150, so it is a real High End killer!

Densen Audio Technologies - Phone: (+45) 75 18 12 14 - E-mail: mail@densen.dk

INTRO BUYER'S BIBLE

FICTIOIGE BUYER'S BIBLE

Welcome to the *Hi-Fi Choice Buyer's Bible* – the ultimate guide to the very best high performance hi-fi and multichannel gear you can buy. Here, you'll find our favourite current products listed under easy to use categories, plus useful information on what to look for and how to get the most from your components.

Reviews you can trust

Our test results are the most reliable in the business. We employ the most experienced reviewers and use the most stringent techniques to ensure our ratings are the ones you can trust. All the equipment we rate most highly is contained within these pages, from CD and vinyl to the latest multichannel disc players. Whether hi-fi stereo or high performance surround and vision, these components will take you a step closer to reality.

How to use this guide

The *Hi-Fi Choice Buyer's Bible* is the best way to make a shortlist of components for your system. Pick the ones that best suit your taste and budget, then use our *Dealer Classified* section to find specialist outlets where you can audition these components with your favourite discs.

Products that score more than 80 per cent overall are automatically considered for inclusion in the *Hi-Fi Choice Buyer's Bible*. Any Best Buy or Editor's Choice Badges awarded are also displayed.

BUYER'S BIBLE CD PLAYERS

CD PLAYERS

Audio disc players for music only

resurgence of an old one (vinyl), CD is still the king of formats if you require breadth of choice. And despite the fact that other sources will play CDs, if you want to hear your discs at their best, there's little substitute for a dedicated CD player.

It's also the most enduring format on the market. Despite high-resolution contenders like SACD and DVD-Audio. nothing has been able to undermine this universally popular format.

CD players work by reading a stream of 1s and 0s off a disc that spins at a constantly changing speed (to counteract the increasing length of 'groove'). This bitstream is then digitally filtered before undergoing digital-to-analogue conversion in the DAC (D-to-A convertor). Thereafter, the signal is filtered

again before being amplified and sent to the output sockets.

The processes of reading the disc and converting the data are sometimes split between a CD transport and separate DAC in so-called two-box players. A popular approach with very high-end kit, this separates the electronically noisy elements from the sensitive analogue stages, but can introduce timing errors known as jitter, therefore one-box players usually offer best results where budget is a consideration.

SUPER AUDIO CD

SACD or Super Audio CD is a relatively new audio-only format introduced by Sony and Philips. It offers higher resolution than CD in the form of considerably greater bandwidth and improved dynamic range. It also has the potential for uncompressed surround sound using up to six channels, and most new discs take advantage of this. SACD discs are usually hybrids and will play on normal CD players, but you won't be able to appreciate their highest quality or their multichannel capability without an SACD-compatible player. Some SACD players also play DVD and even DVD-Audio - these are listed in our DVD section.

A.\$0

WHAT'S A DAC?

A DAC or digital-to-analogue convertor is a fundamental part of any CD player and converts the digits read from the disc into an analogue music waveform which is amplified to line level.

WHY HAVE SEPARATE TRANSPORTS & DACS?

Discs are read by a transport or disc drive, which creates radio frequency 'noise'. Separating the DAC means the conversion can be done with less interference.

CAN I USE AN OUTBOARD DAC WITH MY INTEGRATED CD PLAYER?

Yes, if it has a digital output - and most do.

DO I NEED DIGITAL CABLES FOR A CD PLAYER?

No. All analogue cables are suitable for connecting a CD player to an amp. Digital specific cables with 75ohms impedance are useful when connecting the player to a digital recorder or DAC.

WHAT IS OVERSAMPLING/UPSAMPLING?

Oversampling involves multiplying the sampling frequency by a whole number, usually between four and 32, but sometimes higher, and is designed let the DAC to work in a more linear fashion. Upsampling is where the data stream is stretched out by interpolation and is typically used to refer to large changes in sampling rate such as from 44.1 kHz to 192kHz.

CAN I PLAY SACDS ON A NORMAL CD PLAYER?

Yes. The vast majority of SACD discs are hybrids, with a CD layer that all CD players can read.

CAN I PLAY DVDS ON A CD PLAYER?

No, the same applies to DVD-As. But you can play CDs and DVD-As on normal DVD players.

Cyrus CD8x £1,000 The latest diminutive CD spinner from Cyrus is an absolute stormer. Highly detailed and supremely musical, it's more than a match for many more outwardly exotic machines.

SPECSKEY SACD COMPATIBLE Plays high-resolution SACD discs in multichannel and/or two-channel mode. ELEC DIGITAL OUTPUT Electrical coaxial output for digital connection to a DAC or digital recorder. OPT DIGITAL OUTPUT Optical Toslink output for digital connection to a DAC or digital recorder. CD-RW COMPATIBLE Will play CD-RW (rewritable) discs, most CD players can cope with CD-Rs. CD TEXT Will display album and track titles from inserted disc. BAL ANALOGUE OUT Balanced XLR output connections for similarly equipped amplifiers. USEADPLONGE bOXET CONTEXT is a complementation of the CD clayer. (NaRIABLE CUTED) Elever fortune to the find during the value and variable outputs.

BUYER'S BIBLE DVD PLAYERS

DVD PLAYERS

Disc players for audio and video

DVD has proved a phenomenal success in commercial terms and has virtually extinguished the market for budget CD players – you can't really beat a multiformat player when it comes to features. Early DVD players were not particularly good CD spinners because of the enormous amount of RF interference produced by video circuits, but as this problem has been identified manufacturers have begun to tackle it. Nowadays, most DVD players are competent CD players and a few are very good – often as not they are the ones that play DVD-Audio discs as well.

The great advantage of DVD is that it offers sufficient capacity to hold a feature length movie or music concert *and* discrete multichannel sound on a disc the size of a CD. In the case of plain DVD-Video discs, the audio is encoded in either the Dolby Digital or DTS format, both of which use 'lossy' compression to fit the audio onto the disc alongside the video data. You can use

a DVD player with your stereo system by connecting the stereo outputs, though this won't give the surround sound benefits that the format specialises in.

DVD-AUDIO

DVD-Audio is a high-resolution format that offers multichannel, stereo and Dolby Digital tracks on dedicated DVD-A discs. The discs can be played on any DVD player, but the

CD-beating high-fidelity sound can only be appreciated with a DVD-A player. While offering similar benefits to SACD, it has the advantage of on-screen display for information – lyrics, images and so on. To save you having to decide which format to go for, a few brands are bringing out universal players to cover SACD and DVD-A, alongside CD and DVD-Video – a neat and relatively future proof route into high-resolution multichannel music. Higher-end models featuring high-bandwidth compatible digital audio links are now also appearing, enhancing DVD-A/SACD sound when used with similarly equipped amps.

Q&A

WHICH AUDIO OUTPUTS GIVE THE BEST QUALITY?

Use the analogue outputs for CD, DVD-A and SACD, and the coaxial digital output for DTS and Dolby Digital movie soundtracks.

WHICH VIDEO OUTPUTS GIVE THE BEST QUALITY?

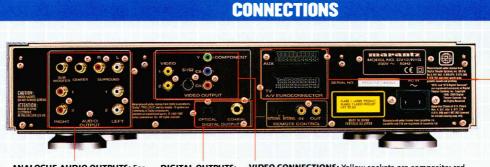

The best connection is component video closely followed by RGB Scart, which is clearly superior to S-video and the basic composite video option.

DO I NEED A MULTICHANNEL AMP TO USE A DVD PLAYER?

Only if you want to hear music and movie soundtracks in multichannel surround. DVD players can be used with stereo amps and just two speakers to great effect, but you'll only get stereo, not surround sound.

DO I NEED PROGRESSIVE SCAN VIDEO?

It's worthwhile for the very best picture quality, but make sure your DVD player and display device support PAL progressive.

ANALOGUE AUDIO OUTPUTS: For stereo and multichannel connections, use these for best results with DVD-Audio, SACD and CD. **DIGITAL OUTPUTS:** For Dolby Digital, DTS and PCM audio bitstreams. VIDEO CONNECTIONS: Yellow sockets are composite; red, green and blue sockets are for component which gives best results, while the black multipin socket is S-Video, which sits qualitatively between the two.

SCART CONNECTIONS: These are a good-quality option for video, especially ones that output RGB.

BUYER'S BIBLE VINYL

VINYL Turntables, cartridges and phono stages

Record players or turntables offer the digital revolution serious competition when it comes to sound quality. Even a modest model can turn musical tricks that most CD players struggle

with. Some call it vinyl warmth, but in reality it's a lack of digital hardness that makes the format so engaging. True, the software requires a bit more care, but even a knackered LP is more playable than a scratched CD.

Record players are made of three, perhaps four, fundamental parts. The turntable is the plinth and platter, usually also containing the motor and any suspension system. A tonearm sits on the plinth and allows the cartridge to trace the vinyl groove by pivoting or parallel tracking over the record. The cartridge contains the means of turning the mechanical movement of the groove wall into an electrical signal.

A fourth element is an amp dedicated to the delicate job of amplifying and equalising the cartridge's insubstantial output. This is called a phono stage and can be found in some integrated amplifiers and preamps, but is increasingly purchased separately for use with line-only amps.

There are two types of phono cartridge: moving magnet (MM) and moving coil (MC), and with a few exceptions the latter outperforms the former. But MCs produce a lower output and require better-quality amplification to be heard at their best. As a general rule, MCs offer a broader bandwidth, greater dynamics and more detail, but the better moving magnets do most things well enough to distract you from your CD collection.

TURNTABLE SET-UP

AVID

Setting up a turntable varies from model to model, but the general principle is to level the platter by adjusting the suspension or, as with solid platters, the surface it sits on. Sprung suspensions sometimes require a bit of fine-tuning to sound their best, but the principle is to achieve a smooth, pistonic bounce. Cartridge set-up is even more critical, as the angles at which the stylus traces the groove affects its tonal balance and levels of distortion. A good alignment protractor is essential if you are intending to set up your own cartridge, as is a degree of patience. In essence, there are two angles you need to get right: the tracing angle as the cartridge crosses the record if you are looking from above, and the vertical tracking angle (VTA), which is adjusted by raising or lowering the arm base to bring the arm parallel with the record surface.

TOP BUYS

GR2 £265 This Rega-derived design is stunning value for money. Supplied with an RB250 am and Goldring 1012GX cartridge, it'll blow most budget CD players into the weeds.

Michell Tecnodec £767 A distillation of all the good things from some of Michell's past masters, all knitted together beautifully. Understated looks and a full-bodied sound make this a star.

Clearaudio Champion £1,475 Current king of acrylic, the Clearaudio deck, arm and cartridge combination turns in a beautifully well-balanced delivery, but choose your support wisely.

Avid Volvere Sequel £3,500 Avid has been one of the most impressive exponents of the vinyl arts in recent years, and this mid-range deck is a stunning example of analogue engineering.

asr amplifiers

emitter I: The Emitter I is the entry model, offering all the qualities of the Emitter- family. Separate power supply are keeping electro-magnetic fields and vibrations away from the control unit.

emitter 2: The sovereign entrance into the class of our large integrated amplifiers. The Emitter II was developed in order to drive the most pretentious loudspeakers with ease of power.

akku : For a perfect sound and musical picture, an amplifier has to be supplied with a very clean and stable supply voltage to the input stage. This is of the up-most importance. You have the option to supply the input stage of the Emitter with a perfect voltage, achieved with a separate accumulator power unit.

mcintosh

ma6300 : The MA6300 is the latest integrated amplifier, rich with all the premium technologies that McIntosh is famous for, including Power Assurance System and Silent Electromagnetic Switching, With 100 watts per channel at 8 ohms and 160 watts into 4 ohm loads, the MA6300 can effortlessly power virtually any speaker.

mcd201 : The MCD201 will play your CDs, CD-R, CD-RW, SACD and MP3. Utilizing a purposedesigned transport that spins CDs at 4 times normal read speed and SACD discs at 2 times normal read speed gives the laser multiple chances to extract and refocus through imperfect discs resulting in fewer errors. A stunning CD/SACD Player.

ma2275: Combines the world class performance characteristics of our highly acclaimed tube control and power amplifiers into one, compact chassis. Created to make the most of both new and venerable technology, the MA2275 relies on vacuum tubes for all signal amplification, with incredible results.

mc501 : The MC50 I, 500 watt mono block amplifier has a new and bold, yet unmistakably McIntosh look. It features 3-dimensional glass and new cool-running, ultra long life, fiber optic LED lighting. The extraordinary quad-differential amplifier design reduces noise and distortion to record low levels.

TUNERS BUYER'S BIBLE

RADIO TUNERS

FM and DAB hi-fi separates

Radio is a fantastic musical resource that's in danger of being taken for granted, but whatever your tastes there's someone out there catering for it. If you haven't got a decent tuner hooked up to your hi-fi already, you're missing out!

DAB or FM?

Digital Audio Broadcasting (DAB) is now said to be available to more than 80 per cent of the population and the long-term plan is to switch public broadcasting over to digital entirely, but hardware prices have yet to come down to a point where this would be acceptable. Its advantages over FM include hiss-free reception, the potential for a wider range of stations and the ability to display comprehensive programming information. FM's RDS system means that station name and occasionally track titles are displayed, but the range of information is fairly limited.

Where FM scores over DAB is in the lower cost of hardware and the greater reception

area. It can also provide higher sound quality if reception conditions are favourable. Absolute sound quality judgements are muddied by the fact that you are listening to different forms of compression and processing at the studio for each station.

What is clear, however, is that there are more and more radio stations broadcasting on DAB that aren't available on FM. So if it's variety of programming you're after, they have a lot to offer.

RECEPTION

The quality of signal you feed a tuner will dictate its sound quality. So serious FM listeners should get a decent external aerial and connect it with as few junctions and splits as possible. Every time you split the cable (ie take a feed for another tuner) you halve signal strength! With DAB the same applies but get a DAB-specific aerial. See www.bbc.co.uk/digitalradio for details.

The benchmark for all other budget FM/AM tuners, with great sound and features.

Denon TU-1800DAB £250 Combines DAB with FM/AM reception and good all-round design at a tempting price.

Creek T50 £550 A thoroughly accomplished AM/FM tuner with a substantial and detailed sound.

FM tuner with valves - 'affordable' for an MD, but still streets ahead of most radios.

DIGITAL AUDIO RECORDERS

CD, MiniDisc and hard drive recorders

MiniDisc

MD's strength is versatility. You can record and then re-record many times over. Editing facilities are second to none you can erase mistakes, name tracks and re-order a disc's contents with a few simple button pushes, making it ideal for building compilations. They're pretty robust too.

Sound quality is below that of CD-R/ CD-RW. The format uses a Sony-developed compression technology called ATRAC, which discards part of the data in order to squeeze it on the disc. If you're copying from CD to MD, the result tends to sound a little cold in comparison. lacking a degree of detail and ambience. But to most people it still sounds light years ahead of cassette - clean and hiss-free.

Recordable CD

With recordable CD you have a choice of two disc types: CD-R discs are the cheapest, but you can only record once; and CD-RW discs are a little more costly, but you can re-record on them ad infinitum.

Though the latest machines incorporate some useful editing facilities, CD-R/RW is not as flexible as MD. However, sound

quality is higher - if you're recording from a CD, the best models will give you a copy that is very close to the original. In terms of compatibility, most CD players will play back a CD-R disc, but older models might have trouble with CD-RW (though you can, of course, play the disc back on your own recorder). If you want to play a CD-R/RW on a DVD player, check for compatibility.

Hard drive

The latest contender on the digital recording scene is also the most flexible. Some HDD (hard disk drive) recorders can store whole music collections if you use a compression format such as MP3. HDD recorders are taking over from multidisc CD changers as sound servers in multiroom installations, where their ability to play more than one piece of music at a time is a great boon. HDD also offers impressive editing facilities on a par with MD, and they can also record from CD (or to CD-R/RW) at high speed.

At present, sound quality isn't the driving force behind the format - flexibility and storage capacity being bigger issues - and a plain CD-R/RW machine will outperform an HDD recorder in fidelity terms.

flexibility to digital audio recording. HI-FI **Cambridge** Audio Azur 640H £600 Rip and store CD tracks on hard disk, create playlists, connect to a PC and more. HI-FI Hermstedt

Hifidelio Pro £850 160GB hard disk and CD-R/RW drive in a box - as music servers go, this is a cracker.

STEREO AMPLIFIERS

Integrated and pre/power amps

Amplifiers come in two basic forms: integrated and preamplifier (pre) plus power amp combinations. Integrated simply means that both pre and power sections are in one box. There are definite advantages to separating the low level, delicate signals in the preamp from the radiations of a power amp, so the more ambitious designs come in two or more cases. In some cases, each channel has its own power amp called a monoblock.

Amplifiers use two basic technologies: transistors or valves. Transistors are popular because of their practical and technical advantages, but valves - aka tubes - live on owing to aspects of sound quality that trannies can't replicate. If you want to play your music loud, use trannies; if you appreciate acoustic music, try valves.

The fundamental of amp/speaker interfacing is power rating and speaker sensitivity. You can drive a high-sensitivity speaker with a ten watt valve amp, but it takes a 200W behemoth to get the best out of speakers which present a difficult load. As a rule, you can't have too much power.

How to choose an amp

The main areas in which amps vary are: timing, dynamics, stereo imaging and transparency. Timing is the ability to present the attack and decay of each note precisely; amps with strong timing have a snap and coherence that is very appealing.

HOME CINEMA STEREO

Stereo amps can be used in home cinema set-ups as well. You don't get the surround and centre channels, but well set-up stereo speakers do a remarkably good job of creating atmosphere for movies. Stereo amps

Dynamics is a general term for the ability to portray variations in level between individual notes and is different to dynamic range (the difference between the loudest and softest notes). Dynamically strong amps tend to have more life and energy.

Stereo imaging is how solid or three-dimensional an instrument or voice sounds. The point of having two rather than one speaker is to make it possible to recreate the soundstage of the original recording, thus amps that have strong imaging skills can create a sonic space that seems to extend the room.

Transparency of detail is the most obvious difference between amps. One amp will present more subtlety than another, but the drawback with using this as your main criterion is that a forward or 'bright' sounding amplifier will emphasise detail at the expense of overall musical coherence.

tend to be better at reproducing music as they don't have the (electrical) noiseinducing digital processing of AV amps. AV amps cost three to four times as much as stereo models of a similar quality.

0.&.A SHOULD I LEAVE MY AMP ON **ALL THE TIME FOR BEST RESULTS?**

All audio electronics perform better when they are warmed up, and this is particularly the case when it comes to amplifiers. If there's no way that you can leave it on all the time, make an effort to switch it on at least 20 minutes before listening.

WHAT IS BI-WIRING AND **BI-AMPING?**

Bi-wiring is when you run separate cables to the treble and bass/mid terminals on the speaker. In most instances, this improves sound quality so long as identical cables are used. Bi-amping is using two stereo amps to drive one pair of speakers, using one amp to drive the treble and the other for the bass/mid sections of the speakers.

WHY DO VALVE AMPS HAVE **SO LITTLE POWER?**

Valve amps are inherently low powered in absolute terms - at least when you compare them to their transistor-based cousins. But when partnered with high-sensitivity loudspeakers, they are quite capable of producing perfectly adequate head-banging levels.

PM7001 £350 If you thought the PM7200 was a great budget amp, just wait until you hear this! Its sound is so detailed and involving, you'll think it costs twice the price.

Arcam DiVA A90 £890 Top dog in Arcam's DiVA range is this excellent integrated amp. Its strengths include a slick, flexible user interface and beautifully smooth and detailed sound.

Naim's new entry-level pre/power amp is a fabulously engaging combo. As you'd expect, rhythm and timing are to the fore, with a healthy dollop of finesse to boot.

PRE30/A30.2 £2,400 Beautifully made and with a sound to match, this Scandinavian pre/power combines warmth and body with energy and detail - a truly musical performer.

AVAMPLIFIERS Surround sound amps for music and movies

The multichannel, surround sound or AV amplifier is a popular option, thanks to the success of the DVD player and home cinema. Now you can buy five channels or more of amplification for the price of two. Now that multichannel music is also on the agenda, there's a lot to be said for a good AV amp or receiver (an amp with a radio tuner built in)

So if you fancy hearing what DVD-Audio, SACD or even music DVD-Video can do, then check out a multichannel amp and speaker set-up – they're stunning with movies and none too shabby with music.

AV amps are usually designed primarily for movies and come with digital processing for the various soundtrack formats – Dolby Pro-Logic (analogue), Dolby Digital and DTS, which offer discrete surround sound in 5.1 and 7.1 channel formats. More ambitious designs also offer THX post processing, designed to emulate the sound of the mixing theatre at home.

Processing in AV amps is needed because the surround formats on DVD-Vs are compressed, limiting their high-fidelity

With DVD-Audio and SACD offering high-

quality multichannel music, surround

sound is no longer just a home cinema

thing. An increasing number of people

want to build a multichannel system that

will do their music as well as their movie

potential. This is why new formats SACD and DVD-A, which don't use 'lossy' compression, were created for music.

All this processing power can take its toll on analogue formats. The best multichannel amps for music are often the simplest, but any that offer a complete bypass option with six-channel input are suitable. It's also worth looking at real power – five or seven channels of amplification are not easy to produce with a feeble power supply, and the cheaper amps in particular often fail to live up to the claims.

HI-FI MEETS SURROUND SOUND

DVDs justice, and the number of AV products delivering sufficient quality is on the increase. But most aren't cheap – building a top-quality system with five or more channels is inevitably more expensive than sticking with stereo. There

Q&A

REMOT

HOW MANY CHANNELS?

Depends on how many speakers you want. Multichannel music discs come with six or 5.1 channels, but for new movies, 7.1 is where it's at. 7.1 set-ups also mean you have speakers directly behind you – preferable for music discs.

WHAT'S THE DIFFERENCE Between a processor AND AN AV AMP?

Processors don't have built-in amplification and you need separate power amps. AV amps and receivers have processing and amps in the same box.

WHAT DOES THE .1 In 5.1 stand for?

This is the LFE (low frequency effects) or bass channel that is reproduced by a subwoofer.

are some very decent integrated options below £1,000, though the best (and most costly) route is to buy a separate processor and power amp(s). Or you can add AV amplification to a stereo model you can't bear to part with.

AV AMPS BUYER'S BIBLE

:11

DSP-AX757SE £499 If you're looking for a multichannel amp that's good with music as well as home cinema, this is your best bet below £500.

Arcam DiVA AVR300 £1,300 Here's one for those who value great sound over numerous gizmos and gadgets - an integrated AV amp for audiophiles.

AVC-A11XV £2,500 A splendid 7.1-channel ampthat packs in the latest digital links and processing formats without sacrificing sound quality.

FMJ AV8/P7 £5,750 A fantastic achievement from this respected UK brand -a top-ranking AV processor and seven-channel power amp.

AV SPEAKERS

Speaker solutions for multichannel surround sound

JUUSPEAKE

Multichannel speaker systems have a front left/right (L/R) stereo pair, a centre or dialogue channel, two (5.1) or four (7.1) surround speakers and often a subwoofer. For best results, each of these speakers bar the sub should be identical. The problem is that few surround systems are dedicated to music and perform a home cinematic role as well, meaning the centre speaker has to sit above or below a video monitor. Centre channels are usually wide and short for this reason.

This should not be a barrier to great surround for music and movies however, as many brands make centre channels with a very close sound to their L/R designs.

Music vs movies

High-resolution SACD and DVD-A music recordings tend to be mastered with

SET-UP

Ideally you should set up surround speakers with as much care as you would stereo systems, but practical issues tend to have a significant bearing on surround and centre speaker placement. Surround channels can be floorstanding or wallmounted, and centres usually have to perch on the TV or underneath it. Given these limitations, adjust your L/R front speakers to give the best tonal match with the centre. If there's more than just you listening, 'toe in' the speakers so that their axis crosses in front of the listening position – this gives a wider stereo image. And if there's a subwoofer it should be placed near the front speakers. Use a sound pressure metre (available from Tandy among others) to accurately set levels. surround speakers in the ITU standard position which is as far behind the listener as the front channels are in front. 5.1 movie soundtracks tend to place surround channels not so far behind and to the side of listeners. Usually, practical limitations will dictate a limited range of placement options, but if you are a dedicated music fan, check out the ITU set-up regulations in the booklet supplied with SACD discs.

SPECIFICATIONS

SUBWOOFERS

Subs start working where stereo speakers run out of steam at low frequencies. The idea is to create deeper, better-controlled bass rather than more of it. They usually have onboard amplification (active) and connect to either the LFE (Low Frequency Effects) channel in a home cinema set-up or the speaker terminals in a stereo set-up.

AV SPEAKERS BUYER'S BIBLE

TOP BUYS

600 S3 package £900 Incorporates 602s, 601s and an LCR 600 centre speaker. Great in both stereo and multichannel surround modes.

Our favourite III BEST BUY I FOTOR'S CHOICE

n-SAT/CENT/SUB £3,385 Five n-SATs, and n-CENT and an n-SUB make a highly engaging and (for Naim) discreet multichannel package.

ATC Concept 3 £4,877 It might not look as flashy as some, but the quality of engineering in this ATC package ensures superb all-round performance.

L'EL

Akurate package £13,750 Linn has worked wonders with its new multichannel speaker system – it's not cheap, but its performance is breathtaking.

HEADPHONES BUYER'S BIBLE

HEADPHONES

For your ears only

Headphones come in several varieties and some are designed for particular usage. The majority of 'cans' use dynamic cone and coil-type drive units and can be used with anything from a personal stereo to a dedicated amplifier. Other types also exist, most significantly electrostatics that use a charged panel membrane to produce a distinctly refined sound. These are supplied with their own dedicated amplifiers, which tends to increase the price.

Cans are split into several types. There are open and closed-back designs, the latter being best for noisy (or noise sensitive) environments as they minimise leakage and intrusion. Open-back types tend to have a more open, less 'in-head' sound. There are also three variants of earpad design: circumaurals enclose the ear and press on your head, supra-aurals press on

WEIGHT in grams. 3.5MM JACK ADAPTOR Allows connection to personal stereos, computers etc.

PASSION FOR SOUND

To advertise please contact the Sales Team on 0207 042 4255

the ear and intra-aurals sit in the ear and are particularly popular with personal stereo users.

Getting the best from your cans

Getting a good result with headphones is not quite as straightforward as it should be. Merely plugging them into the output on your CD player or amp will not give particularly engaging results unless you are very lucky. If you are planning on serious listening, invest in a dedicated amp – the increase in dynamics is not in the least bit subtle. A variety of models are made and prices start at around £80 for a QED, a little more for designs from, say, Creek or Musical Fidelity. And if you're really into cans, look up the valve-powered Earmax.

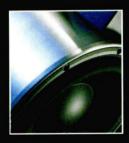

The new Reference 3

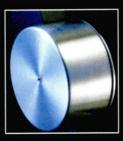

with CDT II** Tweeter Technology

Anthony Gallo isn't one to follow the crowd, a characteristic he shares with the people who buy his loudspeakers.

His latest speaker design, the Reference 3. is rewriting the price versus performance equation. So much so in fact that influential U.S. publication The Absolute Sound have bestowed on it their ultimate honour - product of the year.

"Gallo's Reference 3's are rewriting the book on value in high-end loudspeakers, making accessible a level of performance that might previously have been far beyond the reach of most of us. The Absolute Sound

nonconformist

adj. an individual who does not comply with conventional norms or socially approved patterns of behavior or thought

CABLES BUYER'S BIBLE

CABLES

Wires to hook your system together

Hi-fi cables come in two varieties: interconnects and speaker cables. Analogue interconnects come in preset lengths, generally with RCA (phono) plugs attached, though some equipment uses XLR connectors for balanced connection – this can be sonically advantageous, especially over longer runs. Speaker cable is commonly sold by the metre and can be used without plugs or can be fitted with screw or solder-on types. Choosing cables is not quite as straightforward as it might seem. One problem is that components interact with the cables you use and this often results in audible effects, but there are few cables that are fundamentally incompatible with any components, and we recommend the advice of a good dealer. In any case, you should look to spend as much as you can afford. Digital cables come in two flavours: electrical and optical. In most instances electrical varieties sound better than optical, given the choice, but optical cables may be a better bet over long runs (10m+). Optical inputs/outputs usually use Toslink connectors, while most electrical types use RCA plugs, but some opt for BNC connection instead – check your components before you buy.

EC	Townshend Isolda DCT	50	Cryogenically treated 'impedance matched' cable with stabilising components added: great sound all-round		•	•			241
	van den Hul The Bridge	6	Lively, energetic and possessed of fine midrange detail and imaging	•		•			277
_	Wyrewizard Spellbinder	5.50	Sold off the reel, this entry-level cable is a surprisingly purist performer, lean yet powerful, with good detail resolution.		•	•			267
88	Wireworld Terra 5	5	Deep powerful bass, clear treble and very solid imaging add up to above-class performance	•		•			261
BB	Wireworld Solstice 5	20	Unfriendly to handle, but makes up for it with very assured sound – heaps of bass and great insight	•		•			248
88	Wireworld Oasis 5 Biwire	38	Full-bodied and precise sound across the board - an excellent performer in bi-wire or single-wire mode	•				0	262

COPPER Material used to form the conducting element of the cable. SILVER Alternative material used to form the conducting element of the cable. DIGITAL CABLE TYPE E - electrical, 0 - optical

Cables are one metre length unless otherwise stated.

≈COOL GALES

At www.coolgales.com, we believe that buying hi-fi gear should be a breeze.

Check out the **reviews and brochure downloads** on our product listings. Read how the Aesthetix Rhea phono stage has "a sense of palpability and immediacy that recalls the magic of live music" (*The Absolute Sound*).

Give us a **free call on 0800 043 6710** if you need more info. We'll tell you how we've been blown away by the Leema Acoustics electronics range, including the sensational Tucana integrated amp.

Free delivery on all orders over £100, including Supra Sword speaker cables, "more than a match for most of the highly touted (and highly priced) cables out there" (*Hi-Fi Plus*).

A 30-day money-back guarantee on most products (details on our website), including the Nordost Thor mains conditioner—"taking it out means no music—it's as simple as that." (*Hi-Fi Plus*).

A huge selection of **hi-fi components with style**, like the Clearaudio Ambient. "With its high quality of build and great looks, you'll be hard pressed to find a stronger sonic and visual aesthetic" (*Hi-Fi Choice*).

Cool Gales, hi-fi made easy. Give us a click. Give us a call. www.coolgales.com 0800 043 6710

STANDS AND SUPPORTS BUYER'S BIBLE

STANDS AND SUPPORTS

Equipment racks and speaker stands

If you want to get the most from your source and amp components, it's important to consider good quality support. Dedicated equipment supports are racks and tables made specifically to hold hi-fi gear, and the best can have a profoundly positive effect on sound

because, for example, they can help to isolate kit from ground-borne vibrations and mechanical or electrical interference. Equally, if you own a pair of small 'bookshelf' or 'standmount' speakers, it's important to place them on good quality, purpose-built speaker stands

Bryston B100 SST

This new amplifier from Bryston is only their second integrated amplifier in 32 years. Not only will this 100wpc Amplifier bring your speakers to life but your CD Player and any other digital sources as well with its stunning optional onboard D/A Converter (4 inputs).

Was it worth the wait? You bet! Don't just take our word for it - come and listen for yourself!

Super Scoutmaster Signature

A direct development of both the state of the art VPI TNT HR-X and the Scout entry level turntable.

The standard Scout uses an all acrylic platter, this one uses a composite platter manufactured from two slabs of acrylic, sandwiching a steel plate.

The bearing is the same design as used throughout the VPI range and is very much at the heart of the Scout's design. Harry Weisfeld has taken the drive system already used in the awesome HR-X.

Ships with a JMW - 9 Signature Tone Arm, critically acclaimed Worldwide and is wired with Nordost Valhalla Micro Monofilament tonearm cable.

The performance of the VPI Super Scoutmaster truly challenges the very best available.

Acoustic Energy

Return of the ultimate minimonitor.

It's 18 years since the AE1 Reference first wowed reviewers and became the audio-industry benchmark for compact loudspeaker design. To celebrate the AE1 is back for 2005/6 in its completely original form. Designed from the outset as a somi perofectional monitor. as a semi-professional monitor, painstaking attention to detail in the design and construction of cabinets. crossovers and baffles ensure the new AE1 Classic reproduces complex, dynamic

material as faithful as the award winning original.

We also have the incredible AE1 Mk III on demonstration as well !!

to the Hyperion 938 and the first thing you'll ears will tell you is just how balanced the 938 is. You really cannot fault its performance in any area.

When a product wins this many awards in a single year, you know to expect something pretty special!

EAR/Yoshino

Hyperion 938

Shadow Audio are very excited and pleased to represent EAR/Yoshino in Scotland.

All EAR amplifiers are truly original, including the custom transformers, metal work, printed circuit board. All the work of Tim de Paravicini.

Tim works by a simple premise: If he designs it, it must be a better design than anything else, or he will not manufacture it. His sole goal is taking audio to the furthest possible point of development. Current research is taking him further along this path than any single competitor.

We have the full-range of products on demonstration and the following will be arriving shortly:

Master Disk Turntable. Primary Drive Loudspeaker. Acute Valve CD Player.

Stingray

(£1,895) - Integrated Amplifier

Using the brilliant EL84 tube for the output stage means Stingray can be factory configured for either 25 watts of TRIODE or 50 watts of Ultra Linear mode push-pull operation. (UL Mode is the

GLOSSARY

TECHNICAL TERMS

S.1-CHANNEL AUDIO Six discrete channels, typically front left and right, centre, surround left and right, and LFE (Low Frequency Effects) for a subwoofer. BALANCE Most loudspeakers have a characteristic frequency balance resulting from emphasising parts of the audio range and/or de-emphasising others. BASS The lowest three octaves of the audio band - 'low bass' refers to the bottom octave (20-40Hz), 'mid-bass' the middle octave (40-80Hz) and 'upper bass' the top octave (80-160Hz). BI-AMP (sometimes tri-amp). Loudspeakers equipped with separate access terminals to each drive unit can

be driven by separate (matching) power amplifiers for each driver. BI-WIRE (sometimes tri-wire).

Loudspeakers with separate access terminals to each drive unit can be driven by separate cable runs between the amp and each driver.

CD-R Recordable CD that cannot be erased, though discs that have not been completely filled can have tracks added until the disc is finalised.

CD-RW Re-writable or re-recordable CD, incompatible with older CD players. CLASS A The operation of an amplifying stage or device in which current always flows, as opposed to Class B, where some of the devices are effectively turned off some of the time. Class A tends to have the advantage of offering lower distortion, while Class B tends to generate less heat.

CLASS AB Most practical amps operate in Class A for the first fraction of a watt and Class B thereafter.

CLIPPING An amplifier's output waveform is 'clipped' if the volume is advanced too far and no more 'volts' are available to sustain ever-increasing power levels. Distortion increases dramatically at this point.

CLOCK Any electronic oscillator that is used to generate a timing reference signal. Used to synchronise the data being taken from a disc.

CROSSOVER A simple electrical network which divides the full bandwidth signal received from the power amplifier, apportioning appropriate parts of the spectrum to the various drive units.

DAB (digital audio broadcasting). Digital radio using frequencies in the

217.5-230MHz band. Broadcasters use varying degrees of compression and offer a broad range of programming. **DAC** or Digital-to-Analogue Converter. The stage in any digital component at which incoming digital data is used to reconstruct a recognisable analogue (music) waveform.

DOLBY DIGITAL A compressed digital audio format that typically contains five or more entirely discrete channels, eg 7.1 EX where side and rear channels are used.

DOLBY PRO-LOGIC, DPL Forerunner to DD that 'steers' information to the front L/R, centre and mono surround channels via an analogue matrix.

DRIVE UNIT/DRIVER A transducer which converts electrical energy into acoustic energy, eg bass driver, tweeter. DSD (direct stream digital) The coding format used for SACD offers a frequency response of over 100kHz and a dynamic range over 120dB. It has over four times the data capacity of CD.

DSP (digital signal processor). Integrated circuit that handles the decoding of digital audio streams. In 5.1 processors, it separates the left from right and front

from rear, while managing the various bass options. **DTS** or Digital Theatre Sound. Competitor

to Dolby Digital with a reduced 4:1 compression ratio that, ostensibly, promises higher quality.

DVD-AUDIO High-resolution variant on DVD offering up to 192kHz bandwidth and 24-bit dynamic range. Discs are compatible with standard DVD players.

ELECTRICAL DIGITAL Any digital connection that uses an electrical cable rather than optical. Includes the balanced ('AES/EBU') interface.

FILTERS Filters are intrinsic to digital audio, both analogue and digital. These are often very sophisticated in design, and in total they probably have rather more to do with the 'personality' of CD player sound than most other factors.

FREQUENCY RESPONSE The range of frequencies, from low to high, which a

loudspeaker will reproduce. IMPEDANCE With speakers, the complex electrical load that a

loudspeaker presents to the amplifier driving it. JITTER An insidious distortion specific to

digital audio caused by imprecision in the clock, used to regulate the conversion of data into analogue audio.

KBPS (Kilobits per second) Digital data rate measurement system used primarily with highly compressed formats such as MP3, DAB etc. The higher the amount, the better the quality.

LINE LEVEL Practically every modem source component (except phono cartridges) gives an output in the region of 1-2V, referred to as 'line level'. It follows that all inputs labelled 'CD', 'tuner', 'aux' or 'tape' are designed for this input level and are thus interchangeable.

LOSSLESS COMPRESSION A method of reducing the number of data bits (density) without corrupting the original description of the musical signal.

LOSSY COMPRESSION Reduction in data density by recourse to a complex psycho-acoustical model that predicts what is, and what is not, 'audible' within a sequence of music.

MIDRANGE The middle three or so octaves of the audio band, where the ear

is most sensitive, covering the approximate frequency span from 160Hz up to 3kHz.

MP3 (MPEG layer 3) Lossy compression format for digital audio that drastically reduces data content in order to squeeze music through internet connections or allow hundreds of CDs to be stored on a hard disc.

OUTPUT IMPEDANCE A measure of resistance to alternating current, a source with low output impedance (below 100 ohms) helps ensure compatibility with most amplifiers, even with long interconnect cables

PCM (pulse code modulation) The digital coding system for analogue waveforms used for CD and DVD. Quality is limited by the oversample and bit rates used – CD is 44.1kHz/16-bit while DVD-A is capable of 192kHz/24-bit. PRESENCE BAND Critical section of the audio band at the point where midrange

and treble meet. QUANTISATION NOISE A form of distortion or noise resulting from errors in

the description of the musical signal by the digital code.

SACD (Super Audio CD) was launched in 1999 and is a Sony/Philips format based on DSD coding that offers high resolution stereo and multichannel sound from hybrid discs that can also be played on ordinary CD drives.

SAMPLE RATE The rate at which the musical waveform is sliced up into discrete chunks. For CD, this is 44.1kHz or once every 0.023msec. DVD will also support 48kHz and 96kHz.

SENSITIVITY The relative loudness that a speaker generates for a specific voltage input. Expressed in decibels per watt (dB/ W), measured 1m from the speaker. THX Standards system for home cinema set-ups which includes amplifier power and speaker dispersion characteristics. The latest THX Ultra 2 standard is more

stringent than THX Select. **TOSLINK** The proprietary name given by Toshiba to the optical fibre signal transmission system it invented for consumer applications.

TRANSISTOR/MOSFET The two main types of power semiconductor used in solid state amplifier output stages. TREBLE High frequencies, the top end of the audio band, ie above 3kHz. TWEETER Treble driver.

TWO/THREE-VAY Loudspeaker crossovers split the signal into two or three frequency bands, a two-way speaker can have more than two drive units. WATTS (per channel) The watt is the unit of electrical power and the WPC rating is the maximum average undistorted power that an amp can deliver to a typical speaker. However, speaker sensitivity variations can make more difference than amplifier output.

WOOFER Bass driver

DESCRIPTIVE TERMS

AGGRESSIVE Forward and bright sonic character.
AMBIENCE The impression of an

acoustical space, such as the performing hall in which a recording was made.

ANALYTICAL Highly detailed. ARTICULATE Intelligibility of voice(s) and instruments and the interactions between them.

ATTACK The leading edge of a note and the ability of a system to reproduce the attack transients in music.

BALANCE Essentially tonal balance, the degree to which one aspect of the sonic spectrum is emphasised above the rest. Also channel balance, the relative level of the left and right stereo channels.

BODY Fullness of sound, with particular emphasis on upper bass. Opposite of thin.

BOXY The sound of a loudspeaker with audible cabinet resonances. BRIGHT A sound that emphasises the

upper midrange/lower treble. **DARK** A tonal balance that tilts downwards with increasing frequency.

Opposite of bright. DECAY The fadeout of a note, it

follows the attack. **DEFINITION** (or resolution) The ability of a component to reveal the subtle information that is fundamental to high fidelity sound.

DEPTH (of image) The perception of music being reproduced behind the loudspeakers and inhabiting a reproduction of the acoustic space of the original recording.

DETAIL The most delicate elements of the original sound and those which are the first to disappear with lesser equipment.

DRY A sound that is devoid of 'juice', which usually comes across as fine-grained and lean. Also a loss of reverberation as produced by a damped environment

DYNAMIC The suggestion of energy

and wide dynamic range. Related to perceived speed as well as contrasts in volume both large and small.

EUPHONIC An appealing form of distortion that generally enhances perceived fidelity, often ascribed to the harmonic elaborations of some

valve amps. **FAST** Good reproduction of rapid transients which increase the sense of

realism and 'snap'. FOCUS A strong, precise sense of

image projection. FORWARD(NESS) Similar to an aggressive sound, a sense of the image being projected in front of the speakers and of music being forced upon the listener

GRAINY A slightly raw, exposed sound which lacks finesse.

GRIP A sense of control and sturdiness in the bass. GRUNT See grip. HARD Uncomfortable, forward, aggressive sound with a metallic tinge.

HARSH Grating, abrasive. IMAGING (stereo) The sense that a

voice or instrument is in a particular place in the room. JUICY Sound that has ioie de vivre.

energy and life. LOW-LEVEL DETAIL The quietest

sounds in a recording.

MUSICAL or musicality. A sense of cohesion and subjective 'rightness' in the sound.

NATURALNESS Realism. OPAQUE Unclear, lacking

transparency. OPEN Sound which has height and 'air', relates to clean upper midrange and treble.

PACE Often associated with rhythm, a strong sense of timing and beat.

PRESENCE A sense of an instrument or voice occupying a

place in the listening room. **PRESENCE RANGE** The upper midrange.

SEISMIC Very low bass that you feel rather than hear.

SIBILANCE An emphasis of the 'S' sound, often heard on radio.

SNAP A system with good speed and transient response can deliver the immediacy or 'snap' of live instruments.

SPEED A fast system with good pace gives the impression of being right on the money in its timing. STURDY Solid, powerful, robust

sound. THICK A lack of articulation and clarity in the bass.

THIN Bass light.

TIMBRE The tonal character of an instrument.

TIMING A sense of precision in tempo. See speed and pace. **TRANSIENT** The leading edge of a percussive sound. Good transient response makes the sound as a whole more live and realistic.

TRANSPARENCY, TRANSPARENT

A hear-through quality that is akin to clarity and reveals all aspects of detail.

TWEAK To tune a system or component in an attempt to get the best performance from it. TWEAKER Someone who enjoys

this process. **VEILED** Loss of detail due to limited transparency.

WARM A fullness in the lower

midrange/upper bass. WEIGHT A sense of substance and underpinning produced by deep, controlled bass.

JungSon JA-88D

" tune your system around this amplifier and you'll get startling results...

"...you have here before one of the best budget audiophile buys in a long time. Power, pace, punch, clarity and insight – it has them all – and for just £899. Enough said. "

David Price, Hi-Fi World, May 2006 JungSon JA-88D Amplifier

MiniMax Valve CD Player

than brilliant; it's a fantastic 'do-it-all' package that delivers swingeing body blows to all other machines here in the midband."

VERDICT @@@@@ £

Eastern Electric M520

" In action, it's a terrifically musical amp, painting a solid, authoritative sonic picture, finessed by a high level of detail. "

McIntosh

free next day UK

delivery. Mon - Fri*

For more than 55 years, they have earned a supreme reputation for performance and reliability. The exceptional longevity of McIntosh products owes to a design philosophy established with the very first McIntosh amp: that every component will be created with capacity so great that it will never be operated at or near its stress point.

McIntosh is one of our best selling brands and its easy to hear why..

IsoTek / Nordost Special Offers

On the following IsoTek/Nordost mains filtration

systems:		
IsoTek NOVA	£1695	
lsoTek Titan	£1495	
IsoTek Sigmus (NEW)	£995	
lsoTek Gll Minisub	£545	
IsoTek GII Solus	£325	
Nordost THOR	£1599	

FREE delivery, FREE Isol8/IsoTek mains cable worth £49 and a 30-day money back guarantee*.

Nordost THOR

The Nordost Thor is an upgradeable solution to AC mains power distribution. By systematically improving the quality of the input and output power cords

 \checkmark

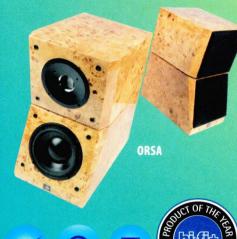

the performance of the unit increases dramatically. Upgrading through the range of Nordost cables, utilising Shiva, Vishnu and Valhalla, prioritising the input cable first will offer major performance enhancements. The THOR is a stunning achievement.

Titan

JAS Audio Loudspeakers

Can you buy a better range of speakers even at twice the price??

" In some ways it always feels more rewarding to review a product that punches above its weight and this is a special little speaker that sets a price/ performance yardstick that is hard to beat. Chris Thomas, JAS Orsa, Hi>Fi+ Issue 42

NEW Models Now Available!

JAS Audio have just introduced new models, all of which are floorstanders. Orsus (£2,299), Orior Grand (£2,995), Odin (£4,495) and the truly magnificent Plato (£13,995).

Twin ribbon tweeter technology gives you electrostatic speed and transparency coupled with ultra fast bass units for unheard levels of depth/scale. Beautiful cabinets complete what are astonishing loudspeakers.

With our experience, free expert advice, customer care and service - you can't go wrong!

Do you want to choose your hifi or home cinema system, in a comfortable and relaxing environment...? Do you want friendly and impartial advice (and a cup of tea) ...? Do you want to buy your system based on what you hear, and see, and not what somebody tells you...?

Do you live in GUILDFORD ...?

.....or Addlestone, Aldershot, Ashford(Middx), Ashstead, Bagshot, Basingstoke, Bracknell, Bookham, Bramley, Camberley, Chertsey, Chipstead, Chobham, Cobham, Cranleigh, Crowthorne, Dorking, Epsom, Esher, Farnborough, Farnham, Fleet, Frimley, Godalming, Hartley Wintney, Hampton, Haslemere, Hook, Horsham, Kingston, Liphook, Leatherhead, Liss, Molesey (East&West), New Malden, Odiham, Petersfield, Reading, Reigate, Redhill, Richmond, Shepperton, Virginia Water, Walton-on-Thames, West Byfleet, Weybridge, Windsor, Woking, Wokingham, Yateley

Nobody else in these areas carries all the following major hifi brands:

We have superb demonstration rooms for both Hifi and Home Cinema, and we will deliver and install. We are a **Mountainsnow** dealer, and members of **BADA**, so you can trust us to look after your every need.

PJhi-fi

The only real hi-fi shop in Guildford

Guildford's only REAL Hifi and Home Cinema store Open 9-6 Monday to Saturday (later by appointment) 3, Bridge Street, Guildford, Surrey GU1 4RY (opposite Wetherspoons) 01483 504801 and 01483 304756 www.pjhifi.co.uk email:info@pjhifi.co.uk.

The MPA stands to convince you that a MOSFET based amplifier can convey the emotion and warmness of tubes, in exactly the same way we proved that digital and analogue were not antagonist concepts when serving musicality.

The DAC has inherited the fabulous electronic design of the Nagra D and Nagra V digital recorders used by the most prestigious music companies and recording engineers in the world. These exceptional machines have convinced the engineers that digital audio could convey the emotion and warmth of analog tape recorders and long play disks that they miss with other digital formats.

The DAC was designed with the same ingredients and philosophy to provide you with state-of-the-art technology respecting your music.

MPA 250W AMPLIFIER

For audiophiles and tube-lovers who need a tremendous power, the MPA will deliver 250 Watts of tear and pure audio. The MPA remains, since its introduction in 2000, an innovative product based on a specific Nagra design.

selection, balance and volume controls, as well as a precision modulometer for system level matching. The PL-L is designed to provide the highest quality audio performance in an ultra-high-resolution audio system. The PL-L is a Pure Class A vacuum tube line pre-amplifier, based on the proven design concepts of the world-renowned PL-P. The jewel-like machined anodized aluminum case features input source

The PL-L uses three high-grade vacuum tubes and Nagra-made transformers to provide a variety of operating options. Each vacuum tube used in the PL-L has been burned-in for 12 hours and thoroughly tested to ensure the highest level of performance. The PL-L is designed in a pure audiophile approach of both quality and simplicity in signal's path.

A-Z GUIDE TO SECOND-HAND KIT #25 THORENS

n the year 2000, after more than 100 years of trading. Thorens of Germany went out of business, a victim of the reduced demand for turntables. Happily, the company has since been resurrected, but spares aren't necessarily available for pre-2000 models. In fact, with the exception of belts and power supplies, you'd be hard pushed to find much from the Thorens of today to support the Thorens of old – even photographs! Yet, as Ian Dury would have said, there are still plenty of reasons to be cheerful. First, many user and service manuals are available at www.thorens.com. Armed with these, there are also a good number of turntable specialists that could help you out should disaster strike. Another reason why Thorens decks are a

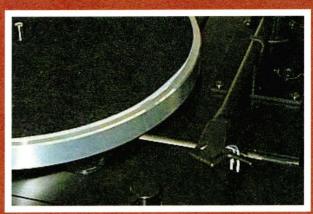

Another reason why Thorens decks are a great second-hand buy is because of the build quality. The company has an excellent reputation for reliability. Without going to the rarefied extremes of the Prestige model, the most recent models that best demonstrate this are probably the TD3001 and TD520.

24-pole synchronised motor, real wood veneered plinth and an upgraded version of the TD90 tonearm. Not exactly the last word in transparency, the sound has an involving, big-boned presentation, not too dissimilar to a Linn LP12. Second-hand, it makes a great buy for a number of reasons. The first is that, at around £200-£350, it's

cheap for the quality offered. Secondly, reliability is excellent with their being no known problems with either deck or tonearm. Finally, it's upgradeable, so that if the power supply is broken or has gone missing, you can always upgrade it to a Thorens TPN2000 (around £165) or something similar. Various upgraded plinths are also on the market.

"Thorens decks are a great second-hand buy because of the build quality."

Launched in 1990, the TD3001 is one of the last of the previous generation. At the time, it was one of Thorens's most prestigious models and sold for over £600. Based on the more common TD2001, it came with a 3.3kg balanced aluminium platter, a superb quality In rather a different ball-park, but still a fine buy, is the TD520. This awesome deck is the size of a sideboard with a lid so large it requires three hinges. Its main advantage, however, is the TD520's ability to accept a 12" tonearm. Equip it with something like an SME

Above: Thorens TD3001 turntable

312 and it shows the sort of dynamic clout, control and accuracy that only comes from that crucial extra 75mm on the tonearm. Made from 1986-89 and then 1989-99 in MKII form, the TD520 doesn't come cheap. Many found second-hand will come complete with the above SME arm and so will set you back around £1,000. Get (very) lucky though and you may find one for considerably less than this. Find one finished in one of the wackier woods, such as the zebra stripe rosewood and you'll also have one of the few decks with more room presence than a Michell Gyrodec Perhaps not one of the best audio bargains in these pages then, but certainly one of the most covetable. Buy with your heart. HFC

> Dominic Todd Next month: Yam<u>aha</u>

DIY CORNER SPEAKERS

Part 25 Enclosure Subtleties (part 6)

echniques for treating the inside of a speaker enclosure vary so widely, it's impossible to lay down any specific rules. Even the most sophisticated manufacturers rely on an 'suck-it-and-see' approach to finalising a given design.

There are two distinct forms of damping: one type is used to try and control the vibrations that are generated in the panels which make up the enclosure; the other tries to control and absorb sound waves – especially the standing waves – generated within the enclosure.

The problem with using damping techniques on either acoustic or panel vibrations is that although a damping medium can absorb some of the vibrational energy, it can also store and re-radiate some of it at a lower level. This adds an element of time-smear.

The real trick with damping materials is to use as little as you can get away with. Enclosure panel damping is rarely encountered these days and manufacturers control panel resonances by building relatively stiff enclosures. Two basic approaches of damping enclosure volumes are used: one lines the inside walls of the enclosure with an absorbing material (such as 'egg-box' foam or thick felt); the other fills the bulk of the volume with a lossy lightweight wadding, either synthetic or long-hair wool. The key to getting best results is to try alternatives, making mono comparisons by adjusting the damping of one speaker and comparing it to the other. **HFC**

Now in its 10th Year in the UK

" As the importer of JPS for almost ten years, I would like to sincerely praise the quality and integrity of this company and all products. Build quality and consistency are not an issue with JPS. Each model is carefully refined before it is launched and some are even abandoned. Each product really delivers the promise, converts sceptics, delights everyone in search of music that speaks to the soul but must travel electronically and then through the human hearing physiology. "

Jack Lawson, Audio Salon

(NEW) Superconductor 3

The SC3 is absolutely amazing: even wellexperienced audiophiles have been surprised and find it very hard to explain just how great is the improvement to their system.

To celebrate the launch of this exciting cable, a small collection of JPS cables are now available for home approval.

Ultra Conductors

Our entry point range says a great deal about what JPS is all about. Budget products really can deliver the performance of a high-end system.

FX Series

Replacing the highly acclaimed SuperConductor+ with a flexible slim wire and no price increase was a major turning point for JPS. For quarter the price of the magazines' acclaimed products, you can let others become the victims of marketing.

SuperConductor

SuperConductor-2 was the new flagship line for many years, and it still outperforms the competition. In a major leap forward, era three begins. The measurements prove the performance, but SC3 is simply magic. In my experience, Kapton as an insulator is leagues ahead of anything else. Can't live without it.

Aluminata

These employ a quad twist of flexible Alumiloy with the world's finest shielding. In audio systems of high resolution, typically with excellent loudspeakers, the high cost of Alumiloy products is immediately apparent and deeply satisfying in the long term.

LUXMAN Integrated amplifiers Incomparable build quality is a Luxman trade-mark and their latest range of integrated amplifiers extend the company's reputation for outstanding reliability.

Superior sound quality is a given, Luxman amplifiers are frequently the reference products in countries where audiophiles' performance criteria always transcend British 'value for money' compromises. Prices start at £2293

AUDIO DESK

The amazing CD lathe is as vital for CDs as a disc cleaner is for vinvl collectors. Check the web for full details and reviews - it never fails. In stock now- £320

> LIKE NEW NOTHING LIKE THE PRICE!

KR AUDIO

The KR Audio Antares VA340 is a naturally musical integrated amplifier. Featuring the powerful KR300BXL variant of the 300B output valve, it recreates all types of music with effortless authority and realism, restoring that vital emotional connection

drivers of our reference Horning Agathons deliver deep, tight bass while Lowther midrange driver and Lotus tweeter offers between recordings and listeners. £4995. valves a dream coupling.

BUYING TIPS

Buying second-hand can be a great way to pick up a bargain. A formerly expensive second-hand component might well prove a better long-term bet than a brand-new product if the price is right.

Do some research on which brands have a good service back-up, so if something does go wrong, you can get it fixed. Unless you purchase from a dealer, you're unlikely to get any warranty, so it's up to you to ensure the fitness of any gear that you buy.

Usually, speakers should be less prone to breakdown than amps, and amps should be more reliable than CD players. But any abused component could be trouble – have a proper dem, and judge the seller as well as the goods!

FOR SALE

LINN LK100 power amp boxed, mint, £250. Hi-fi support Target four shelf, black, vgc, £25. 01226 391531 or 07836 784579 (Barnsley).

REDISCOVER MUSIC

Rediscover music with the new MAJIK System from Linn: a dedicated stereo music system designed for those truly passionate about music.

The MAJIK System is the result of more than 30 years of Linn's experience in developing systems to recreate the emotion of a live performance in your home.

The MAJIK system comprises the MAJIK CD player, MAJIK KONTROL pre-amplifier and MAJIK 2100 power amplifier. Individually, each component is designed to deliver exceptional sound quality from stereo music, and working together as a complete system, offer a leap in performance that simply cannot be ignored.

Through its simplicity and focus on delivering the most musical performance, the new MAJIK System will have you rediscovering favourite CDs and cherished vinyl recordings.

To experience the system for yourself, visit your Linn retailer, or reserve your place at one of our forthcoming MAJIK Musical Evenings listed opposite.

For more information visit our website or call us on 0500 888 909

THE NEW MAJIK SYSTEM FROM LINN: REDISCOVER MUSIC www.linn.co.uk

B&W Bowers & Wilkins

The new B&W 800 Series

Incorporating B&W crossover technology

Audio signals are like spring water. The further they flow from their source, the greater the risk to their natural purity and vitality. Like a glass of cool, clear water, fresh from the stream, nothing compares to hearing music with the cleansing clarity it was created with.

At B&W, we like to get listeners as close to the source as possible. The signal path in an 800 Series speaker couldn't be any shorter, simpler or sweeter. By optimising, in every detail, the mechanical design of the drive units, we minimise the need for extra electrical components in the crossover. Less quantity, more quality. Every component we do use is handpicked after painstaking listening tests. Together in the 800 Series crossover, they deliver sound with every original nuance and texture intact.

Not all water tastes the same. No other speakers sound like the 800 Series.
