MICRO TRAINING FOR COMPUTER USERS

6 Micro courses

Which would you like to attend?

Digitus is running a number of courses to train users and potential users in the basic skills of micro-computing. Conducted at our Central London Workshop, the courses provide hands-on experience of microcomputers, demonstrations of working systems and tutorials on your particular needs.

INTRODUCTION TO MICROCOMPUTERS

One day's concentrated information on microcomputing aimed at the potential user in small and large organisations. A practical course which includes business applications of micros, guidelines on selecting microcomputer systems and an introduction to programming.

FUNDAMENTALS OF PROGRAMMING IN BASIC

A two day course designed to teach the first principals of programming in BASIC. Aimed at those with some understanding of micros who want to learn how to instruct their computer to perform tasks.

IMPROVE YOUR BASIC

A two day course for those who have learned Basic from hands-on experience and want to brush up their BASIC techniques and learn some timesaving software tools.

WORDSTAR WORDPROCESSING

A one day course for people who want to learn the fundamentals of wordprocessing. Uses the popular Wordstar wordprocessing package available on most CP/M micros and teaches by hands-on use.

DATASTAR INFORMATION MANAGEMENT

The DataStar data entry, retrieval and management system is a powerful aid which enables the educated user and computer professional to build information systems economically and rapidly.

Training for Computer Professionals
Course in: Micro Technology for Management • Local Area Networks • Micros for Computer Professionals.
Courses are run at the Workshop or on site. Telephone or write for details.

Micro Technology Workshop Set in 8,500 sq.ft in Central London, the Workshop is a few minutes from Covent Garden, Trafalgar Square, Charing Cross, Embankment and Waterloo stations. Specialist areas include: Personal Computers, Technical Systems, Business Systems, 16 bit and Local Network Systems, Bookstore and Training Rooms.

Booking and Fees The fee for all courses is £80 per day plus VAT, payable 14 days prior to starting date.

MICRO-PRO SOFTWARE TOOLS

In addition to Wordstar, Micro-Pro Inc have produced a variety of aids to improve productivity in offices and systems departments. This one day course includes: Mail-Merge linked to Wordstar • Supersort sorting utility • CalcStar rows and columns manipulation • DataStar information manager • harnessing the 'Star' products together.

COMPUTERS**

Spectrum Computer Group is a division of Spectrum (UK) Limited
- Britain's largest photographic retailing group.

Spectrum

Attention all Home Computer dealers ...
(and those thinking of becoming one.)

Next month sees the advertising launch of the Spectrum Home Computer Centres. A new group of independent retailers specialising in selling a range of popular domestic machines and software.

If you are currently a dealer in home computers and would like to know more about Spectrum call Mike Stern or Alan Warren on **0727 66646** or write to Spectrum (UK) Limited, Unit 6, Marlborough Trading Estate, Latimore Road, St. Albans, Herts.

At the Micro House we talk business as well as computers

When you come to us for a micro computer, we'll ask you a lot of questions. So that we know your needs before we install the system. And after that we'll still be available — to give you plenty of support.

It isn't the only possible way of buying a micro. But it is the way to maximise the return on your investment. Because there's one rule about computers which always holds good, no matter how much you've paid for the

hardware. Rubbish in equals rubbish out.

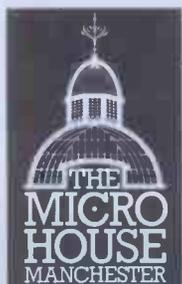

- We market the unique A.C.T. Sirius 1 - a breakthrough in high-performance business computing at low cost.

- Plus a big choice of packaged software. Plus tailor-made software. Plus a range of financial packages, including Supercalc and Micromodeller.

- We organise 'hands-on' training for your staff under experienced F.C.A. supervision.

Talk to:

RICHARD ALLISON B.Sc. F.C.A. STEPHEN COLTER B.Sc., (Hons.).

Also available at Greens within major branches of Debenhams.

You can't get a Home Computer from Texas Instruments under 16 K RAM.

Make the right move into computing with the Home Computer from Texas Instruments. It gives you a large combined RAM/ROM capacity up to 110 K Byte and the ability to expand with a full range of peripherals and software. So as your knowledge of computers increases the TI Home Computer will grow with you.

Just compare the versatility of the TI Home Computer with its price—you'll find it real value for money that will prove to be a good long term investment.

The TI-99/4A is a sophisticated computer designed not only for the beginner with its ease of operation, but also for the professional with its vast computing power through a 16 bit microprocessor. And it simply plugs into an ordinary household TV set.

With its high resolution graphics with 32 characters over 24 lines in 16 colours (256 x 192 dots), 3 tones in five octaves plus noise, and BASIC as standard equipment and options such as other programming languages—UCSD-PASCAL, TI-LOGO and ASSEMBLER—and speech synthesis, you'll find that the TI 99/4A more than compares with the competition. Especially when the starting price is £340 or less. When you want to solve problems there are over 600 software programs available worldwide—including more than 40 on easy-to-use Solid State Software® Modules.

After all, from the inventors of the microprocessor, integrated circuit and microcomputer, it's only natural to expect high technology at a realistic price.

We'll help you do better.

TEXAS INSTRUMENTS

New ZX81 Software from Sinclair.

A whole new range of software for the Sinclair ZX81 Personal Computer is now available – direct from Sinclair. Produced by ICL and Psion, these really excellent cassettes cover games, education, and business/household management.

Some of the more elaborate programs can only be run on a ZX81 augmented by the ZX 16K RAM pack. (The description of each cassette makes it clear what hardware is required.) The RAM pack provides 16-times more memory in one complete module, and simply plugs into the rear of a ZX81. And the price has just been dramatically reduced to only £29.95.

The Sinclair ZX Printer offer full alphanumeric and highly-sophisticated graphics. A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. So now you can print out your results for a permanent record. The ZX Printer plugs into the rear of your ZX81, and you can connect a RAM pack as well.

Games

Cassette G1: Super Programs 1 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Invasion from Jupiter. Skittles. Magic Square. Doodle. Kim. Liquid Capacity.

Description – Five games programs plus easy conversion between pints/gallons and litres.

Cassette G2: Super Programs 2 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Rings around Saturn. Secret Code. Mindboggling. Silhouette. Memory Test. Metric conversion.

Description – Five games plus easy conversion between inches/feet/yards and centimetres/metres.

Cassette G3: Super Programs 3 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Train Race. Challenge. Secret Message. Mind that Meteor. Character Doodle. Currency Conversion.

Description – Fives games plus currency conversion at will – for example, dollars to pounds.

Cassette G4: Super Programs 4 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Down Under. Submarines. Doodling with Graphics. The Invisible Invader. Reaction. Petrol.

Description – Five games plus easy conversion between miles per gallon and European fuel consumption figures.

Cassette G5: Super Programs 5 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Martian Knock Out. Graffiti. Find the Mate. Labyrinth. Drop a Brick. Continental.

Description – Five games plus easy conversion between English and continental dress sizes.

Cassette G6: Super Programs 6 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Galactic Invasion, Journey into Danger. Create. Nine Hole Golf. Solitaire. Daylight Robbery.

Description – Six games making full use of the ZX81's moving graphics capability.

Cassette G7: Super Programs 7 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Racetrack. Chase. NIM. Tower of Hanoi. Docking the Spaceship. Golf.

Description – Six games including the fascinating Tower of Hanoi problem.

Cassette G8: Super Programs 8 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Star Trail (plus blank tape on side 2).

Description – Can you, as Captain Church of the UK spaceship Endeavour, rid the galaxy of the Klingon menace?

Cassette G9: Biorhythms (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – What are Biorhythms? Your Biohythms.

Description – When will you be at your peak (and trough) physically, emotionally, and intellectually?

Cassette G10: Backgammon (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £5.95.

Programs – Backgammon. Dice.

Description – A great program, using fast and efficient machine code, with graphics board, rolling dice, and doubling dice. The dice program can be used for any dice game.

Cassette G11: Chess (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Chess, Chess Clock.

Description – Fast, efficient machine code, a graphic display of the board and pieces, plus six levels of ability, combine to make this one of the best chess programs available. The Chess Clock program can be used at any time.

Cassette G12: Fantasy Games (Psion)

Hardware required – ZX81 (or ZX80 with 8K BASIC ROM) + 16K RAM.

Price – £4.75.

Programs – Perilous Swamp. Sorcerer's Island.

Description – Perilous Swamp: rescue a beautiful princess from the evil wizard. Sorcerer's Island: you're marooned. To escape, you'll probably need the help of the Grand Sorcerer.

Cassette G13:

Space Raiders and Bomber (Psion)

Hardware required – ZX81 + 16K RAM

Price – £3.95.

Programs – Space Raiders. Bomber.

Description – Space Raiders is the ZX81 version of the popular pub game. Bomber: destroy a city before you hit sky-scraper.

Cassette G14: Flight Simulation (Psion)

Hardware required – ZX81 + 16K RAM

Price – £5.95.

Program – Flight Simulation (plus blank tape on side 2).

Description – Simulates a highly manoeuvrable light aircraft with full controls, instrumentation, a view through the cockpit window, and navigational aids. Happy landings!

Education

Cassette E1: Fun to Learn series – English Literature 1 (ICL)

Hardware required – ZX81 + 16K RAM

Price – £6.95.

Programs – Novelists. Authors.

Description – Who wrote 'Robinson Crusoe'? Which novelist do you associate with Father Brown?

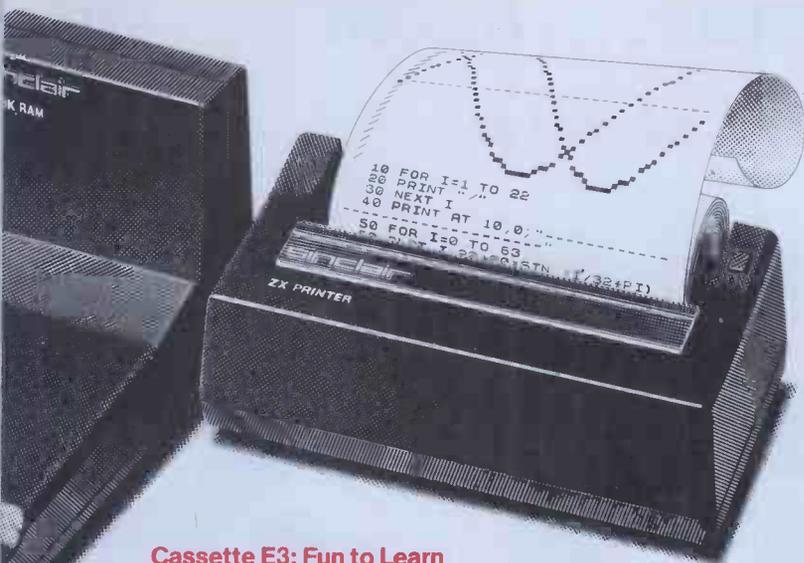

Cassette E2: Fun to Learn series – English Literature 2 (ICL)

Hardware required – ZX81 + 16K RAM

Price – £6.95.

Programs – Poets, Playwrights. Modern Authors.

Description – Who wrote 'Song of the Shirt'? Which playwright also played cricket for England?

Cassette E3: Fun to Learn series - Geography 1 (ICL)

Hardware required - ZX81 + 16K RAM.

Price - £6.95.

Programs - Towns in England and

Wales. Countries and Capitals of Europe.

Description - The computer shows you a map and a list of towns. You locate the towns correctly. Or the computer challenges you to name a pinpointed location.

Cassette E4: Fun to Learn series - History 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Events in British History. British Monarchs.

Description - From 1066 to 1981, find out when important events occurred. Recognise monarchs in an identity parade.

Cassette E5: Fun to Learn series - Mathematics 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Addition/Subtraction. Multiplication/Division.

Description - Questions and answers on basic mathematics at different levels of difficulty.

Cassette E6: Fun to Learn series - Music 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Composers. Musicians.

Description - Which instrument does James Galway play? Who composed Peter Grimes?

Cassette E7: Fun to Learn series - Inventions 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Inventions before 1850. Inventions since 1850.

Description - Who invented television? What was the 'dangerous Lucifer'?

Cassette E8: Fun to Learn series - Spelling 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Series A1-A15. Series B1-B15.

Description - Listen to the word spoken on your tape recorder, then spell it out on your ZX81. 300 words in total suitable for 6-11 year olds.

Business/household

Cassette B1: The Collector's Pack (ICL)

Hardware required - ZX81 + 16K RAM.

Price - £9.95.

Program - Collector's Pack, plus blank tape or side 2 for program/data storage.

Description - This comprehensive program should allow collectors (of stamps, coins etc.) to hold up to 400 records of up to 6 different items on one cassette. Keep your records up to date and sorted into order.

Cassette B2: The Club Record Controller (ICL)

Hardware required - ZX81 + 16K RAM. Price - £9.95.

Program - Club Record Controller plus blank tape on side 2 for program/data storage.

Description - Enables clubs to hold records of up to 100 members on one cassette. Allows for names, addresses, 'phone numbers plus five lots of additional information - eg type of membership.

Cassette B3: VU-CALC (Psion)

Hardware required - ZX81 + 16K RAM.

Price - £7.95.

Program - VU-CALC.

Description - Turns your ZX81 into an immensely powerful analysis chart. VU-CALC constructs, generates and calculates large tables for applications such as financial analysis, budget sheets, and projections. Complete with full instructions.

Cassette B4: VU-FILE (Psion)

Hardware required - ZX81 + 16K RAM.

Price - £7.95.

Programs - VU-FILE. Examples.

Description - A general-purpose information storage and retrieval program with emphasis on user-friendliness and visual display. Use it to catalogue your collection, maintain records or club memberships, keep track of your accounts, or as a telephone directory.

How to order

Simply use the FREEPOST order form below and either enclose a cheque or give us your credit card number. Credit card holders can order by phone - simply call Camberley (0276) 66104 or 21282 during office hours. Either way, please allow up to 28 days for delivery, and there's a 14-day money-back option, of course.

ZX81 B.B.C. MICRO ATOM VIC

BBC

SPACEWARP

THE FINAL FRONTIER!

For users of the B.B.C. Micro, comes the most sophisticated 'Star Trek' type game currently on the market. Complete with high resolution colour graphics, sound, real time, a sixteen page manual, and function key labels, 'Space Warp' is the ultimate test of skill and imagination.

You are required to show the ability to handle complex control and weaponry systems, and to show the required aptitude in order to be judged both suitable for, and capable of the enormous responsibility inherent in the protection of the Federations boundaries from the dual menaces of lawlessness and alien aggression!

With these factors in mind, those aspiring to the giddy heights of captain and commander of a Starship in the Federation Deep Space Fleet are provided with this, the most sophisticated and complete Starship simulator yet devised, and instructed to prepare for the penultimate test - Starship Command in space - the final frontier!

Space Warp is available from Bug-Byte or most good computer shops at £11.50 inclusive.

LSI Computers Limited, one of Britain's most progressive and entrepreneurial computer manufacturers whose products have, in a relatively short space of time, captured a significant market share, and whose products have the potential to dominate in the demanding and constantly developing market of small business and personal computers, are expanding their Dealer network.

Through our OEM Division we are looking to appoint Dealers all over the U.K. for some very exceptional and technically advanced microcomputer products.

Massive Success

OEM business is very important to LSI, and we are dedicated to offering our next generation computers through our Dealer network. Using our reputation and financial strength, we are implementing a vigorous programme of research and development to secure the very latest technology and products for our Dealers. In an era of unparalleled growth and keen competition LSI are more than confident of maintaining their justifiable reputation for

Putting Britain back in front

Ring

technical innovation and achievement and their ability to provide the market with the right product at the right time and at the right price.

Our Dealer programme offers you the opportunities of higher sales of demanded products at excellent margins. There's an ambitious stock programme, full engineering and technical support facilities, and a substantial and exciting advertising and promotional programme already established - in all a package that we can rightfully predict will bring our Dealers massive success. The 8 bit System M-Three continues it's amazing success and it's complimentary partner, the eagerly awaited 16 bit, High performance micro, System M-Four is soon to be launched. In addition, we are able to offer our dealers attractive arrangements on a range of Daisy Wheel and Matrix printers. **And for the larger OEM, specially configured machines totally badge engineered in your own colour schemes.** All at amazing and highly competitive prices.

And that's not all, our exciting new, high performance, low cost word processing system, still under wraps for now, is to be launched in a very, very big way this Autumn.

Move Now!

Grasp this amazing opportunity to ensure your future prosperity. Act NOW - phone Laurie Bright on Woking (04862) 23411 today to discuss this fantastic offer in more detail - you could be just one phone call away from a long and prosperous partnership.

Business Opportunities that cannot be missed!

LSI Computers are expanding and looking for dealers all over the UK to handle some exceptional and technically advanced micro computer products.

Using our reputation and financial strength we are implementing a vigorous and successful programme to secure the very latest technology and machines for our dealers.

Take the if800 for example, Japanese innovation at it's best. The if800 brings a new, ultra efficient and colourful dimension to the role of business information and scientific data communication. The if800 has extensive multi-coloured graphics and a CP/M★ environment on the same compact system. Built around a CPU utilising the high speed Z-80A processor, the if800 combines keyboard, hardcopy 5x7 dot 80 cps printer twin 400K 5 inch floppy disk drives, high resolution display and every type of interface into one complete unit.

As well as an already established substantial and exciting advertising and promotional support as an LSI dealer you could expect to benefit from an ambitious stock programme and full engineering, technical and training support. And our dealer margins are very attractive.

Take advantage of this amazing offer, give Laurence Bright a call now on Woking (04862) 23411.

End Users

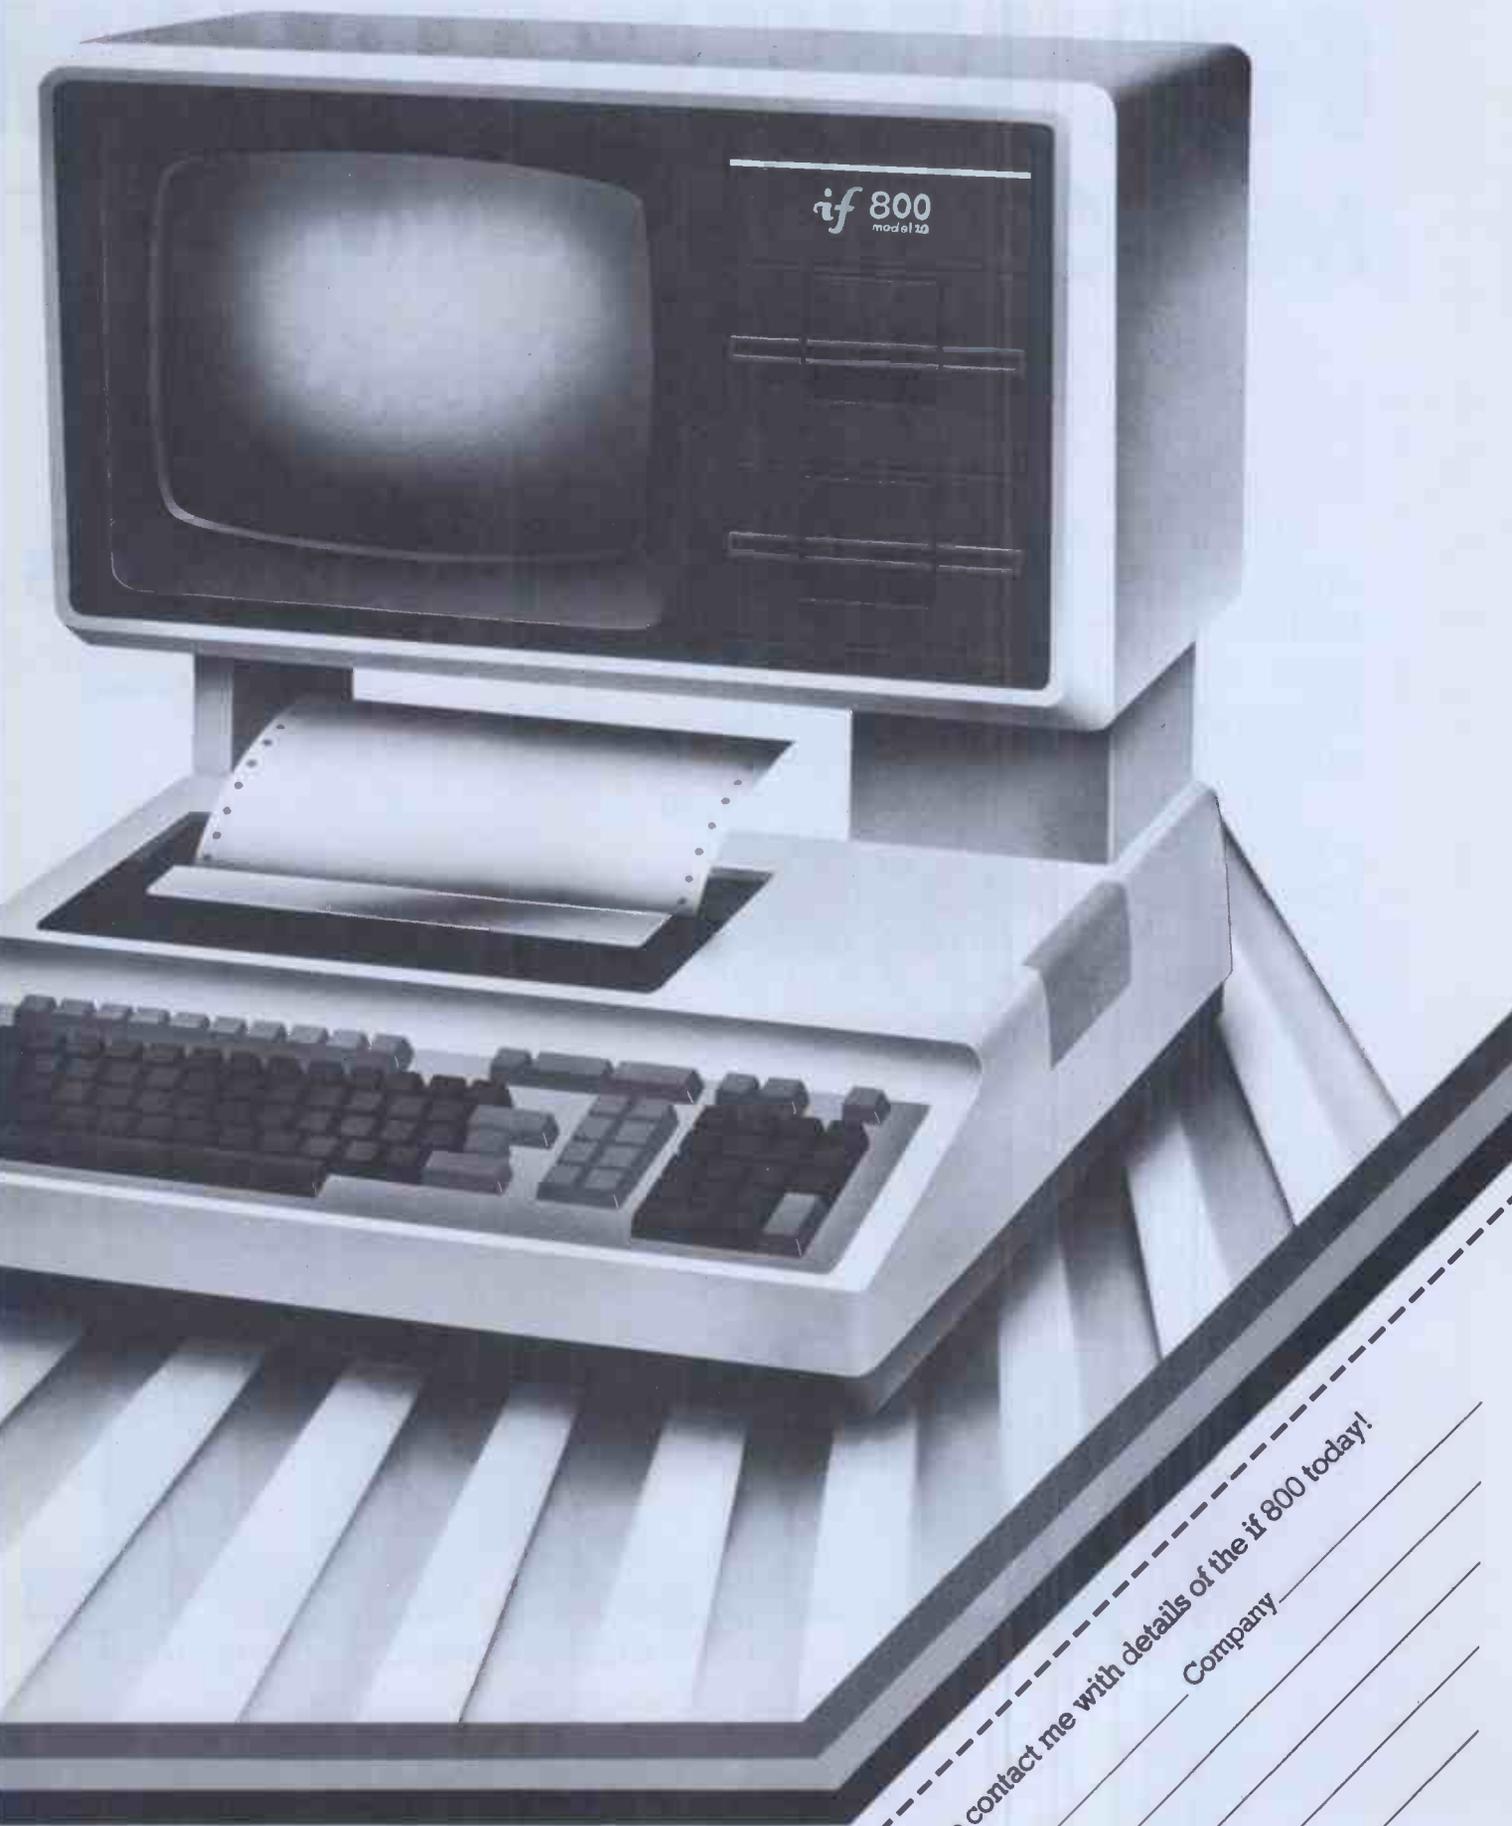

The if800 could benefit you too. Take a look at some of the fantastic features, facilities and options offered on the if800 ... a truly versatile and fully integrated computer system than more than meets the demands and varied application in todays world of business information technology and management at an amazingly low price. Clip the coupon and post today for more details. Discover the new horizons of efficient Multi-colour business and technical management.

THE CORNERSTONE OF SUCCESSFUL BUSINESS!

Every business needs fast, reliable accounting systems to improve its profitability!

JARMAN COMPUTER SYSTEMS produce integrated programs which have been specifically planned to realise the fullest potential from a microcomputer.

- PAYROLL & PERSONNEL RECORDS
- SALES ACCOUNTING WITH INVOICING
- PURCHASE ACCOUNTING WITH COSTING
- NOMINAL LEDGER WITH BUDGETARY CONTROL
- STOCK CONTROL

JARMAN COMPUTER SYSTEMS are designed by experienced business men, rather than 'computer experts' to provide you with the most flexible programs which can be operated by your existing staff with very little training.

All our integrated software is available for Apple II and Apple /// computers in a range of configurations to suit the needs of businesses of all sizes, and is currently satisfying the stringent requirements of several multi-national companies. Our systems are programmed in the Pascal language to optimise the speed and capability of the desk top-computer.

Our carefully selected nationwide network of dealers have been chosen

for their professionalism and for their experience in installing and supporting business systems.

Contact us soon—we will be pleased to give you all the information and advice you need—there is someone in your area waiting to be of help.

JARMAN

Computer Systems
6A, DOLPHIN SQUARE, TRING,
HERTS HP23 5BW.

TELEPHONE: TRING (0442 82) 6841/2/3.

Why take risks with accounting software?

Logic Computer Systems specialise in financial management systems on microcomputers.

We provide a comprehensive service which begins when we help you select the right system. But we don't stop there; we also install the computer and train your staff. Then we provide professional on going service and support.

We know that the choice of software is crucial. We recommend only the very best proven software. For instance . . .

Jarman accounting software, designed by Accountants to provide the right information to help you to control your business.

We offer programs for integrated sales purchase and nominal ledgers, payroll and stock control. They are all available for Apple II and Apple III computers.

For further information or a demonstration simply return the coupon or phone 01-222 1122/5492

Please send me details of Logic Computers accounting systems:

Lucas Logic

We'd love to market the game you've invented. If we can tear ourselves away from it.

If your program is compelling enough to glue us to our television sets, then it's just what we're looking for. And if we can leave it alone for long enough to produce it, we'll glue millions of other people to their sets as well.

THORN EMI is looking for video games and other general interest programs, which have been produced for home computers from the following:

Apple, Atari, B.B.C., Commodore, Sinclair or Texas Instruments.

Whether you're a professional programmer or competent amateur, if you have produced a program that you think we may be interested in, we'd love to hear from you.

Please don't send the program direct. Write to Home Computer Software Department, THORN EMI Video Programmes, Upper St. Martins Lane, London W.C.2. and we will send you an application form.

Leaders in home video entertainment.

BIG VIC SAVERS from the Experts

HOME COMPUTERS LTD

THE LARGEST MICROCOMPUTING SHOW IN BRITAIN

**Barbican Centre, City of London
9-12 September 1982**

Breaking all records!

By the first week in March, Exhibitors had already booked more space in the 5th Personal Computer World Show than the total on exhibition last year! It is absolutely certain now that the Show will be at least twice the size of last year's record breaking event. Possibly even three times the size or more.

Fortunately, the superb facilities at the Barbican offer us the opportunity to satisfy the staggering demands for space we are currently experiencing. The majority of Exhibitors have doubled their stand size in both sections of the Show which, like last year, will be divided into two floors. One floor will cater for professional and business microcomputing. The other will be devoted to home and hobbyist applications.

Massive stands have been booked or under offer from virtually all the big names in microcomputing. And a surprising proportion from foreign manufacturers!

Last year, the PCW Show brought more visitors to a microcomputing show than had ever been seen in the UK before. Sixteen thousand people in three days. This year the Show has been extended to four days and we are expecting record-breaking crowds.

Our promotional budget for the Show has been doubled and we are arranging the most exciting programme of features to attract the widest possible spectrum of visitors.

If your company is involved in microcomputing we strongly advise you to send off for details and reserve space now. The 5th Personal Computer World Show is already set to be a stunning success. Be a part of that success by calling Timothy Collins on 01-486 1951 today. Or use the coupon below to obtain a full information pack.

The 5th Personal Computer World Show is sponsored by Personal Computer World and organised by Montbuild Ltd.

Please rush me details of exhibition at the 5th Personal Computer World Show:

Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations including VAT automatic and provision for your own messages on the form produced.

*Not Spectrum £19.95

RUBIK SOLVER

It's not our policy to offer games but we make an exception here for a program to solve the cube from ANY position. Shorthand notation makes learning the solution by heart possible for most active brains.

£12.95

THE CATALOGUER

This dedicated database is ideal for use in any situation where a catalogue could be utilised. E.g. stamp collection, coins, photos, slides, books, records etc.

£19.95

COMMERCIAL ACCOUNTS

A gem of a program, all for cassette, with the following features:-

Daily Journal	Sales Ledger
Credit Sales	Purchase Ledger
Cash Sales	Bank Account
Credit Purchases	Year to Date Summary
Purchases - other	

A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

£19.95

HOME ACCOUNTS

£19.95

Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P. etc etc etc!! You'll wonder how you ever managed without it.

CHOPIN - LES ETUDES

Six beautiful studies from Opus 10 and 25 performed for you live by Mr. Computer Spellbinding!!!

*Not Spectrum £5.95

MOTOR ACCOUNTANT

Find out exactly what that car is costing you and keep a data file with all your expenses therein!

£5.95

RECIPE FILE

Let all those computer widows have a bash! The wives will really enjoy the fun of this program designed to keep all her recipes. Will even suggest a menu for the day/week! Excellent value.

£19.95

All programs supplied with exhaustive documentation.

All orders despatched by return - no waiting.
All prices include VAT and post & packing except Hardware. Full range of Sharp peripherals available - please 'phone for quotations.
Please state machine type and memory size when ordering software.

Access Welcome

OUR APPLE PRICES TURN OTHERS GREEN.

C/WP Computer prices are so low, we reckon they're the most competitive you will find for a standard factory-fresh Apple with a full 12-month warranty.

And we're not just clever at keeping prices down: C/WP are experts in CP/M and its software. If you already have a 48K Apple II with two disc drives it could cost you only £125 to make it a CP/M APPLE.

If you are starting from scratch, you can buy a complete CP/M APPLE for under £2,000.

Write or 'phone for our full CP/M hardware and software list.

If you're hungry for an Apple at these prices, contact C/WP Computers on 01-828 3127.

PAXTON BUSINESS DESK

**Standard Integrated Business Software
Single or Multi-User on 8 bit
and 16 Bit Micros**

Business Desk: The proven system.

Business Desk is already established across a broad spectrum of microcomputer users as a working system. It has also achieved recognition as an industry standard by microcomputer dealers and manufacturers alike. And, unlike its competitors, Business Desk is not a BASIC program. It's written in COBOL, and that is the business computer language.

Business Desk's reputation is founded on a flexible architecture that has made it the ideal system for the first time user regardless of the scale of their requirements. It's easy to operate and implement; its modules can be sized to the requirements of each User. Its disciplined and robust in its handling of information and data; its form filling screen conventions are highly standardised to minimise operator error, and its main functions follow true double entry methods and accounting convention.

Business Desk is an integrated suite of Microcomputer Software Programs available as a complete system or individual modules. The modules are: Invoicing, Stock Control, Sales Ledger, Purchase Ledger, Nominal Ledger.

Business Desk is written in CIS COBOL for operation on any CP/M or MP/M, or networked Microcomputer.

Business Desk is available from Microcomputer Dealers and Systems Houses throughout the UK.

Finally, Business Desk can be successfully and economically implemented on almost any CP/M supported microcomputer from Apples through to Hard Disk Multiuser Systems.

Business Desk: Leaves the final choice to the User

Business Desk is exceptionally flexible in its User specification. It offer over 65 function selections driven by over 150 programs. Its program modules can be implemented individually, or collectively. It can be operated as a single user or true multiuser system with simultaneous operator access to the same data. It can be implemented as a "Balance Brought Forward", or "Open Item" accounting system. It can be supported on 5", 8" or Hard Disk CP/M based Microcomputers with a minimum of 56K dynamic RAM.

So, when you have looked at all the BASIC choice make Business Desk the Final Choice. So many others have!

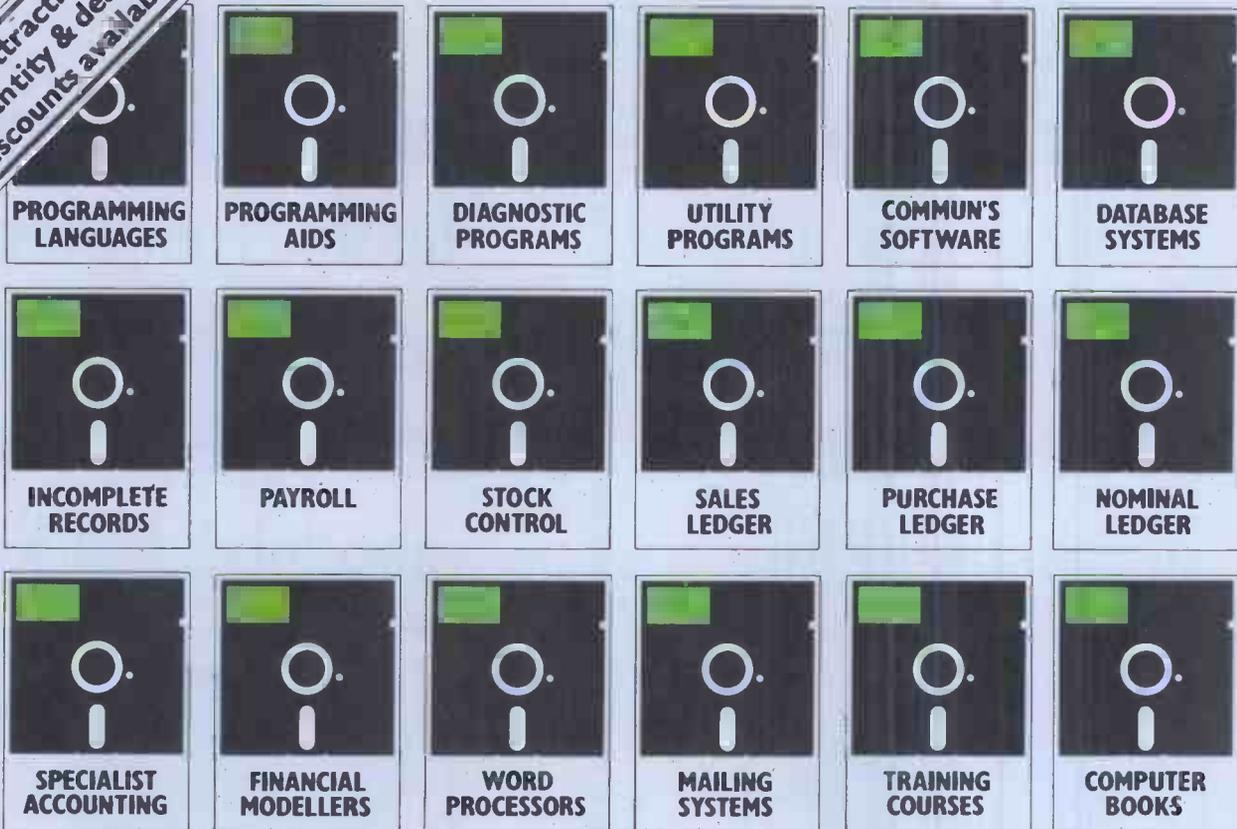

Dealer Enquiries.

Dealer enquiries for Business Desk are always welcome. Talk to Jason Brown or Gareth Jones for full Dealer information. Business Desk is implemented on a wide range of micros including Altos, Xerox 820, Comart, Digico, Sirius, MFB Summit, ICL, FTS, Superbrain, Apple, Transtec, TVI, Equinox, Onyx, Northstar, Cromemco, LSI, Dynabyte, Memory, Pet, Rair, IMS.

Buy our
£475*
Electronic Typewriter
and you have a
Daisy Wheel Printer
for your computer
absolutely FREE

The T/Printer 35 is a superb portable typewriter that also doubles as a computer printer. It's the first electronic typewriter that's truly portable (it weighs only 17 pounds and is supplied with an ABS carrying case) and has all the features you'd expect of an electronic office typewriter. Except price.

Features include self-correction, dual function 100 character keyboard, triple pitch (10, 12 and 15 characters per inch), up to 12 in. wide paper—all with excellent print quality. And with Olivetti reliability.

Best of all, when you're finished using it as a typewriter, it's all set to go to work as a word processing quality computer output printer.

That makes the T/Printer 35 about the most versatile and cost effective piece of equipment you can buy. You get all the advantages of having a daisy wheel printer *and* electronic typewriter in a compact unit. And at one low price of £475*, including carrying case.

** The T/Printer 35 costs £475 with Centronics compatible parallel interface. With RS-232C interface it costs £535. Prices listed are exclusive of VAT.*

Buy our
£475*
Daisy Wheel Printer
for your computer
and you have an
Electronic Typewriter
absolutely FREE

The T/Printer 35 is the lightest weight and lowest cost daisy wheel printer you can buy for your computer. So it will fit within your budget and you can carry it wherever you take your micro. Yet it is tough enough to give years of reliable service. Interchangeable typefaces (standard Olivetti 100 character daisy wheels), variable pitch, multiple copies—all the features you would expect of more expensive word processing printers.

Yet the T/Printer 35 costs only £475 with parallel interface. Operating speed under computer control is approximately 120 words per minute of letter perfect output. What typist can equal that?

Then when you're finished using it as a computer printer, the T/Printer 35 is ready to go right on working as an electronic typewriter.

That's the dual-purpose T/Printer 35—the versatile computer printer that fits your budget.

Orders are shipped within the UK carriage-free. To order or for more information about the T/Printer 35:

ANGLO AMERICAN SOFTWARE CO

BBC — TRS-80 — ATARI — PET — APPLE — VIC — ZX81

We know what it is like out there, because that's where we came from. Before we decided to become software entrepreneurs, we were just like you enthusiasts searching through magazines for the ideal mail order software source. What we hoped to find was a single entity that offered an ultra-wide selection for our micro-computer. That pre-selected only the best of many similar sounding programs that reached the market every month. That could give us personal assistance with the purchase-decision process, and that stood behind its products. When we couldn't find it we decided to become it. So ANGLO-AMERICAN SOFTWARE CO WAS BORN.

Starfleet Orion PET 8K TRS-80 Level II 16K TRS-80 32K w/disk APPLE Integer BASIC 16K APPLE Integer BASIC w/disk 48K 19.50	Introductory 3-Pack 24K PET w/disk TRS-80 32K APPLE 48K w/disk 32.00 3-Pack: Morloc's Tower Rescue at Rigel and Datestones of Ryn 15.50	Star Warrior TRS-80 Level II 16K - ATARI 32K TRS-80 32K - APPLE 48K w/disk ATARI 32K w/disk 22.50

One Expander Card for apple leads to another....

In fact it leads to many others! Joining the amazing success of our PAL Encoder Card, these four new expander cards all featuring the unique 'Digitek Safety Tab' are ready to plug straight into your Apple Computer.

PAL Colour Encoder Card £105 This amazing card with it's on-board modulator, displays exceptional colour graphics to your TV.

16k Ramcard £91 Insert the card straight into slot 0, and increase the memory capability of your Apple without having to remove any memory chips.

Z80 Expansion Card £110 Installing the Z80 into your Apple gives you two systems in one, which enables you to run the popular CP/M operating system.

RS232 High Speed Serial Interface £72 The RS232 Interface Card incorporates 13 selectable Baud rates from 75 to 19,200.

Print-master Interface £79 The ultimate parallel interface for Apple to all popular dot matrix printers.

The PRINT-MASTER accepts Apple protocols, 15+ software commands and has on-board graphics dump capability to all popular graphics printers. No need to load clumsy software routines - it's all at your fingertips on the PRINT-MASTER - choice of inverse printing, double size picture, 90° picture rotation, many word processor type text commands, plus many more.

Apple is the trademark of Apple Computer, Inc. Digitek and Digitek International are the trademarks of Digitek International Ltd.

The people who are really into Apples.

FLOWWRITER™

*A Daisywheel Printer that
thinks it's a computer !*

The RICOH FLOWWRITER is the most intelligent Daisy Wheel printer on the world market. Equipped with an internal micro computer and a large memory it will intelligently handle all printing and word processing operations; hence relieving the host computer for simultaneous use.

The Flowriter is fully compatible with software written for any intelligent printer and is plug compatible with all popular hardware.

Standard Features

- Prints up to 60 characters in 1 second.
- Compatible with QUME SPRINT, DIABLO and NEC Spinwriter standard and enhanced word processing commands including graphics.
- Proportional spacing tables programmed internally.
- Automatic margin justification even with proportional spacing.
- 8K buffer under full program control.
- Auto bidirectional printing.
- Optimised auto logic seeking in both vertical and horizontal directions.
- Graphics capability down to 1/120".
- Three interfaces included internally: Centronics -IEEE 488 - RS232C.
- Detached keyboard option.
- External program mode, allows use of many more printwheels.
- Selectable international languages.

.....and ITS CHEAP!!

MORE GOOD REASONS TO RING 01-591 6511

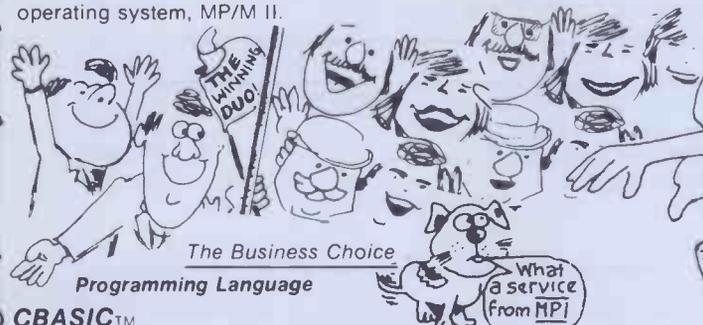

Simplicity Plus Speed

CB-80™

Programming Language

CB-80 is a native code compiler of the CBASIC language. As a direct enhancement of CBASIC, CB-80 offers all the features of CBASIC plus the speed and versatility of a compiler. Other enhancements include support of 32K byte strings, external multiple line functions, run-time error trapping and extended file handling capabilities. CB-80 also includes the LK-80™ linker. LK-80 easily links assembler routines into CB-80 programs and is used to create overlay modules. CB-80 supports the multi-user operating system, MP/M II.

The Business Choice

Programming Language

CBASIC™

CBASIC is the most widely used BASIC dialect in the business community today. The precision and easy-to-use format of CBASIC gives programmers one of the most accurate tools for implementing business applications. CBASIC's portability allows users to upgrade to more powerful hardware without losing their software investment.

The Investment Saver

XLT86™

Assembly Language Translator

XLT86 is an aid to software and hardware manufacturers wanting to convert their existing 8-bit 8080 programs to the 16-bit 8086 microcomputer. XLT86 allows a user to translate an 8080 assembly source code file into an optimized 8086 assembly source code file, while preserving all existing labels, comments, and symbols from the 8080 source program. This feature reduces the amount of time required to develop and support 8086 code. XLT86 uses extensive program flow analysis, to perform the translation. XLT86 is written in Subset G of PL I

DATA SYSTEMS

FOR TOMORROW'S SYSTEMS TODAY

Don't let its size fool you.

If anything NewBrain is like the Tardis.

It may look small on the outside, but inside there's an awful lot going on.

It's got the kind of features you'd expect from one of the really big business micros, but at a price of under £200 excluding VAT it won't give you any sleepless nights.

However, let the facts speak for themselves.

You get what you don't pay for.

NewBrain comes with 24K ROM and 32K RAM, most competitors expect you to make do with 16K RAM.

What's more you can expand all the way up to 2 Mbytes, a figure that wouldn't look out of place on a machine costing ten times as much.

We've also given you the choice of 256, 320, 512 and 640 x 250 screen resolution, whereas most only offer a maximum of 256 x 192.

Big enough for your business.

Although NewBrain is as easy as ABC to use (and child's-play to learn to use) this doesn't mean it's a toy.

Far from it.

It comes with ENHANCED ANSI BASIC, which should give you plenty to get your teeth into.

And it'll also take CP/M® so it speaks the same language as all the big business micros, and feels perfectly at home with their software.

NO OTHER MICRO HAS THIS MUCH POWER IN THIS MUCH SIZE FOR THIS MUCH MONEY.

So as a business machine it really comes into its own.

The video allows 40 or 80 characters per line with 25 or 30 lines per page, giving a very professional 2000 or 2400 characters display in all on TV and/or monitor. And the keyboard is full-sized so even if you're all fingers and thumbs you'll still be able to get to grips with NewBrain's excellent editing capabilities.

When it comes to business graphics, things couldn't be easier. With software capabilities that can handle graphs, charts and computer drawings you'll soon be up to things that used to be strictly for the big league.

Answers a growing need.

Although NewBrain, with its optional onboard display, is a truly portable micro, that doesn't stop it becoming the basis of a very powerful system.

The Store Expansion Modules come in packages containing 64K, 128K, 256K or 512K of RAM. So, hook up four of the 512K modules to your machine and you've got 2 Mbytes to play with. Another feature that'll come as a surprise are the two onboard V24 interfaces.

With the aid of the multiple V24 module this allows you to run up to 32 machines at once, all on the same peripherals, saving you a fortune on extras.

The range of peripherals on offer include dot matrix and daisy wheel printers, 9", 12" and 24" monitors plus 5¼" floppy disk drives (100 Kbytes and 1 Mbyte) and 5¼" Winchester drive (6-18 Mbytes).

As we said, this isn't a toy.

It doesn't stop here.

Here are a couple of extras that deserve a special mention.

The first, the Battery Module, means you won't be tied to a 13 amp socket. And, even more importantly, it means you don't have to worry about mains fluctuations wreaking havoc with your programs.

The ROM buffer module gives you a freedom of another sort.

Freedom to expand in a big way. It gives you additional ROM slots, for system software upgrades such as the Z80 Assembler and COMAL, 2 additional V24 ports, analogue ports and parallel ports.

From now on the sky's the limit.

Software that's hard to beat.

A lot of features you'd expect to find on software are actually built into NewBrain so you don't need to worry about screen editing, maths, BASIC and graphics.

However, if you're feeling practical you can always tackle household management, statistics and educational packages. And because NewBrain isn't all work and no play, there's the usual range of mind-bending games to while away spare time.

Waste no more time.

To get hold of NewBrain you need go no further than the coupon at the bottom of the page.

With your order we'll include a hefty instruction manual so you'll know where to start, and a list of peripherals, expansion modules, and software so you'll know where to go next.

NEWBRAIN

The ultimate in expansion for your Apple II from the people that gave you the RAMEX 16. The first Ram Expansion Card to go strapless.

RAMEX 128[©]

- ★ **Ramex 128** has enhanced DOS with several new commands such as, 'MOUNT', 'DUMP', etc., for your simulated disk operations.
- ★ **Ramex 128** really adds power to your Apple with its virtual disk software.
- ★ **Ramex 128** as with its baby brother the Ramex 16, needs no strapping to the motherboard.
- ★ **Ramex 128** comes with its own software to enable you to utilise any existing Ram Boards you may have, and is not slot dependant.
- ★ **Ramex 128** is accompanied by a very comprehensive manual for the more technically minded.
- ★ **Ramex 128** is equipped with six LED indicators for instant status checking; a very useful tool for the programmer.

128K VISICALC

Now that all this memory is available, Vergecourt has developed an 'expander' program for Visicalc, allowing Visicalc to use at least 128K. When used with your RAMEX 128. Just like our development to give you 50K Visicalc with the Ramex 16 Vergecourt is in tune with your needs.

ROM SELECTOR BOARD

Suffering from congestion? (PROGRAMMER'S TOOLBOX, WORD PROCESSOR etc.) Switch between up to 4 ROMS located at Hex A000. Assembled and tested unit with compact, professionally produced PCB and good quality components. Fits easily into the Utility Socket (IC 24). **Only £19.50**

BBC MICRO

MODEL A or B

- **CHESS**
High quality chess game with castling, 'en passant', play black or white, rejection of illegal moves and 6 levels of play. Set up problem games. **£7.95**
- **STARTREK**
Full feature version of the classic battle against the Klingons. All the usual features - phasers, photon torpedoes, long and short range scans, 'on-board' computer - together with sound effects and 'real time' torpedo battles. **£7.95**
- **MUNCHYMAN**
Colourful and highly entertaining version of this popular arcade game. Munch your way to a high score, before the 'munchers' devour you. Reverse roles by munching the stars. The more you score, the harder the game gets. **£5.95**
- **GOMOKU**
Well presented board game, written in Basic and m/c code. The objective is to be first to get five counters in a row. The computer plays a tough game and is very hard to beat, especially when making first move. **£3.95**
- **DISASSEMBLER**
Relocatable program. Lists object code and assembler mnemonics, from any specified address. Stop and restart the listing, page mode option, ASCII symbol and printer output options. **£5.95**
- **MODEL B ONLY**
- **SPACE MAZE**
You have crash landed in the legendary labyrinth of Titan, inhabited by alien monsters known as 'Froogs'. Find your way out, to the 'Transmat' probe before being cornered and eaten. 8 skill levels and 3D colour graphics. **£5.95**

Adventure

ALL THE EXCITEMENT, INTRIGUE AND FRUSTRATION OF A MAIN-FRAME ADVENTURE! **12K**

Explore the tortuous forests, dark caverns & castle dungeons. Beware the maze of twisting tunnels and the desert wastelands. Outwit the predators. Rescue the PRINCESS and carry off the treasures.

Great skill & imagination are required to play this excellent game & you may still never exhaust all the possibilities.

By devising methods of condensing messages, the author has been able to include many features which would otherwise be available only on much larger computers. Start your adventure now - **£7.95**

GM813 CPU/64K RAM Card

The Gemini GM813 is a new 80-BUS compatible CPU card incorporating 64K dynamic RAM and utilising the powerful Z80A microprocessor running at 4MHz. Extended addressing and page mode facilities allow for future memory expansion up to 2 megabytes. Input and output capabilities include both programmable serial and parallel interfaces — RS232, 1200 baud CUTS cassette interface and the Z80A PIO. When used with the GM812 video card, the GM813's unique RPIM monitor allows the creation of cassette or EPROM based programs or files which are upwards compatible with a disk based CP/M system.

OTHER 80-BUS PRODUCTS FOR Nascom & Gemini SYSTEMS

GM816 GEMINI I/O BOARD

The new GM816 Gemini I/O board takes a unique approach to the problems of interfacing your Nascom or Gemini Multi-board to external devices. This 80 Bus and Nas-Bus compatible card is supplied fully built, populated and tested and includes three Z80 PIOs, a CTC and a Real Time Clock with battery back-up. In addition, a range of 'daughter' boards that attach straight to the I/O board are under development, catering for a wide variety of interfacing requirements.

Gemini DISK SYSTEM FOR NASCOM

GM809 — full Nas-Bus floppy disk controller card — drives up to 4 drives — optional 8" expansion — £125+VAT.

GM815 — Double density disk system.

With a thousand in daily use, the Gemini Disk system is now the standard for Nascom and Gemini Multiboard systems. Single or twin drive configurations are available, giving 350K storage per drive. The CP/M 2.2 package available supports on-screen editing with either the normal Nascom or Gemini IVC screens, parallel or serial printers, and auto single-double density selection. An optional alternative to CP/M is available for Nascom owners wishing to support existing software. Called POLYDOS 2, it includes an editor and assembler and extends the Nascom BASIC to include disk commands.

**Over forty
of the world's
leading
software
houses have
one thing in
common.**

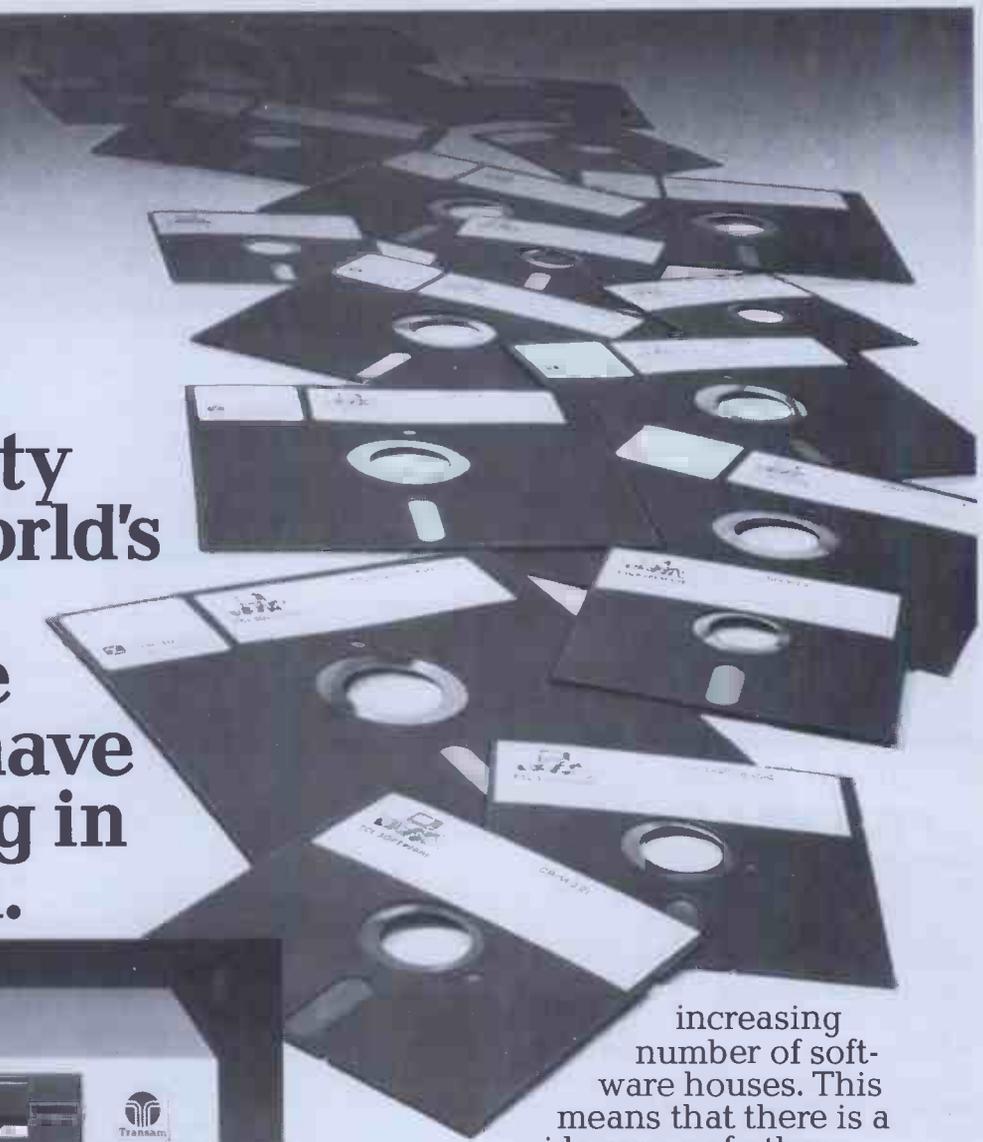

They support a worldwide standard in software, and so do we.

We understand that one of the most important considerations, before buying a computer, is the software which will be available to you.

This is made easy by the choice of the CP/M operating system. TCL Software, a division of Transam, provides an enormous range of software packages for commercial, scientific, educational and personal needs.

But there is one important difference - we at Transam really understand the CP/M based computer.

CP/M has the advantage of being adopted by an ever

increasing number of software houses. This means that there is a wide range of other software packages written to run on a CP/M based system.

And, of course, any programs you may develop yourself will be compatible with, and can be run on, other systems which are CP/M based.

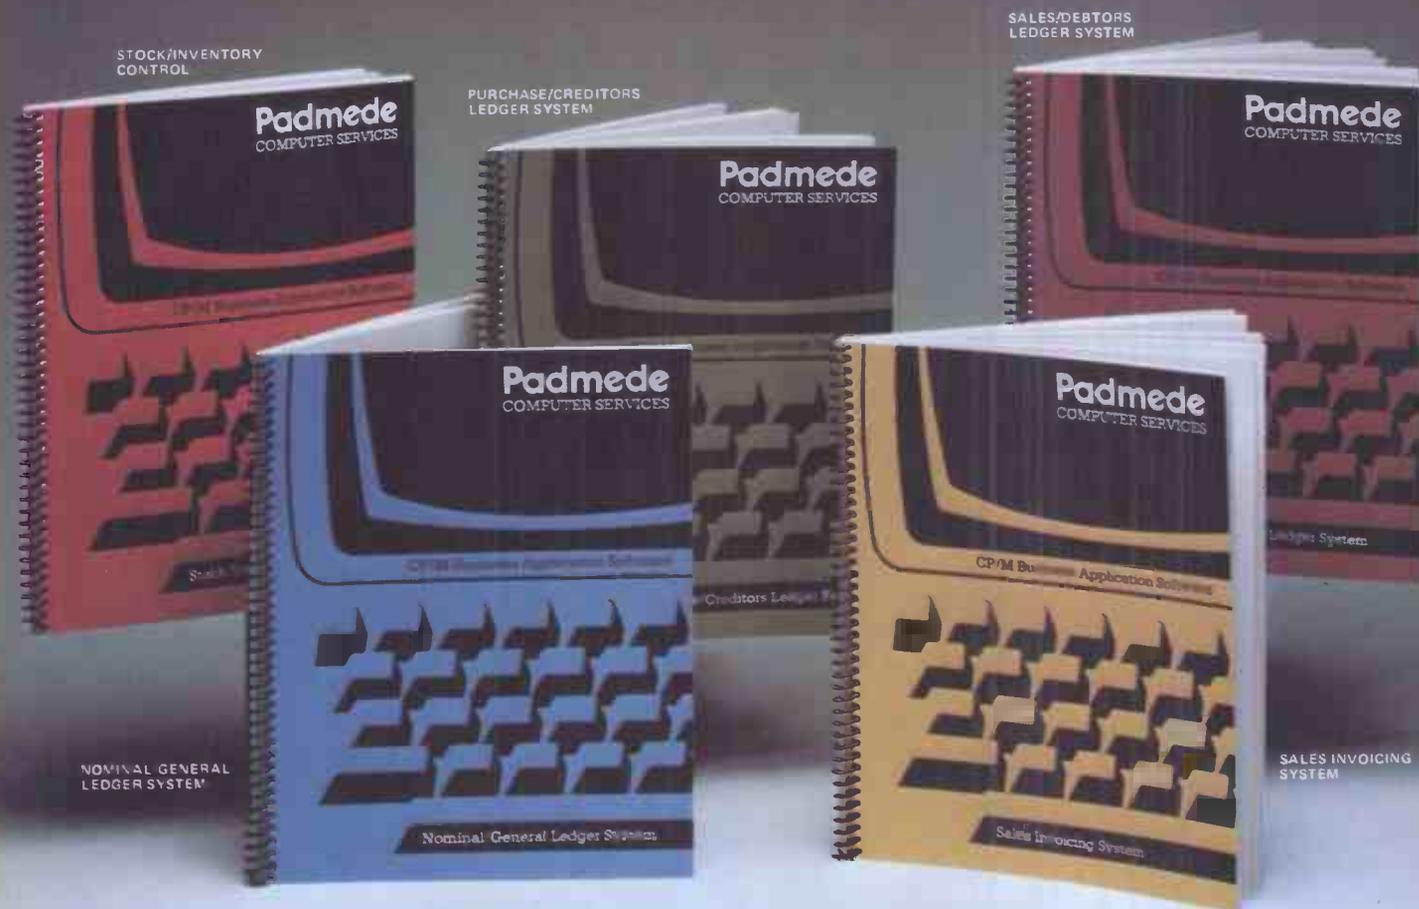

The Transam range of computers are designed and built in Britain. Our experience gives us the capability to support our users at a very high level, with advice and spares only a phone call away.

Call in to our West End showrooms for all the advice you need about computers and what they can do for you, or for further information write to Transam Microsystems Limited, 59/61 Theobald's Road, London WC1. Telephone 01-405 5240/2113.

North Star's ADVANTAGE is easy to see.

The best value in microcomputing.

The North Star ADVANTAGE is the perfect low cost micro-computer for business or personal use. With 720Kb of floppy disk storage, or an optional 5Mb Winchester disk, the North Star ADVANTAGE offers the most memory in its price/performance class. And it comes with advanced business graphics software at no extra cost. You can look everywhere, but you won't find a better micro-computer for the money.

High performance computing and high performance software.

The North Star ADVANTAGE system offers high speed computing based on the Zilog Z80A® microprocessor, the most accepted 8-bit microprocessor in the world, plus an Intel 8035 auxiliary processor. 64Kb of RAM main memory delivers fast program execution, with an additional 20Kb of RAM for the graphic display. North Star provides graphics software com-

patible with CP/M® and HDOS operating systems and application packages, and most standard languages. There are thousands of CP/M compatible software programs available throughout the world. Or you can choose any of the North Star application

packages available for word processing, financial analysis, accounting and data base management.

Graphic displays for every need.

The free North Star ADVANTAGE BUSIGRAPH™ package makes it possible to generate line, bar, pie, and 3-dimensional charts, plus complex 3-dimensional forms. Reports can be transformed into impressive hard copy graphic displays in a matter of seconds.

Build a network of ADVANTAGES.

One North Star ADVANTAGE computer can be linked to other North Star ADVANTAGES by twisted pair cable using North Star's new network interface and software package. This allows you to have a low cost network of individual systems sharing the more expensive peripherals. This can be the first step toward fully automating an entire office or department.

Convenient design and service.

The North Star ADVANTAGE is a fully integrated micro-computer in an attractive, integrated enclosure. It provides high reliability and excellent operator comfort, plus straightforward servicing. For more information about the North Star ADVANTAGE, contact...

Explore the Excellence of your ZX81

With MEMOTECH Add-Ons High Resolution Graphics

MEMOTECH
ADD-ON
£ 52⁰⁰
plus
VAT

- Fully programmable high resolution (192x248 pixels).
- Video page is both memory and bit mapped.
- Video page can be located anywhere in the RAM.
- The number of video pages is limited only by your RAM size (each page occupies about 6.5K RAM) and pages can overlap.
- Instant inverse video.
- Switching inverse video on and off gives flashing characters/numerals etc.
- Video pages can be superimposed by software switching.
- Access to video page is similar to plot and unplot commands in BASIC.

The pack comes in an elegant aluminium case, anodised black and styled to fit onto the back of the ZX81, allowing more add-ons (Memopak RAM, Sinclair printer, etc) to be connected without a further power supply. It contains a 2K EPROM monitor, holding a full range of graphics subroutines which can be called by the BASIC USR function or by machine code.

Unique 3 month trade-in offer!

For your future needs, we'll allow you £10 against your purchase of our 64K model if:

- you return your 16K pack within 3 months of receipt;
- you supply evidence of purchase;
- your 16K model is received by us undamaged and unopened.

*We reserve the right to reject, for discounting purposes, units which have been either opened or damaged in any way.

Memopak 16K Memory Extension

It is a fact that the ZX81 has revolutionised home computing and coupled with the new Memopak 16K it gives you a massive 16K of Directly Addressable RAM, which is neither switched nor paged. With the addition of the Memopak 16K your ZX81's enlarged memory capacity will enable it to execute longer and more sophisticated programs, and to hold an extended database.

The 16K and 64K Memopaks come in attractive custom-designed and engineered cases which fit snugly on to the back of the ZX81 giving firm, wobble-free connections.

MEMOTECH
ADD-ON
£ 68⁷⁰
plus
VAT

Memopak 64K Memory Extension

The 64K Memopak is a pack which extends the memory of the ZX81 by a further 56K, and together with the ZX81 gives a full 64K, which is neither switched nor paged, and is directly addressable. The unit is user transparent and accepts BASIC commands such as 10 DIM A(9000).

BREAKDOWN OF MEMORY AREAS

0-8K . . . Sinclair ROM 8-16K . . . This section of memory switches in or out in 4K blocks to leave space for memory mapping, holds its contents during cassette loads, allows communication between programmes, and can be used to run assembly language routines. 16-32K . . . This area can be used for BASIC programmes and assembly language routines. 32-64K . . . 32K of RAM memory for BASIC variables and large arrays. With the Memopak 64K extension the ZX81 is transformed into a powerful computer, suitable for business, leisure and educational use, at a fraction of the cost of comparable systems.

Coming Soon...

A complete range of ZX81 plug-in peripherals
Centronics Interface & Software Drivers
Digitising Tablet RS232 Interface

GW Computers Ltd

SUPERBRAIN™

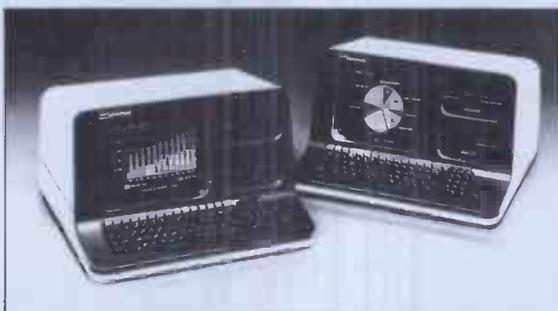

SuperBrain users get exceptional performance for just a fraction of what they'd expect to pay. Standard SuperBrain features include: two double density mini-floppies with 350k bytes of disk storage, 32k of RAM memory (expandable to 64k) to handle even the most sophisticated programs, a CP/M® Disk Operating System with a high powered text editor, assembler, debugger and a disk formatter. And, with SuperBrain's S-100 bus adaptor, you can add all the programming power you will ever need... almost any type of S-100 compatible bus accessory.

SuperBrain's CP/M operating system boasts an overwhelming amount of available software in BASIC, FORTRAN, COBOL, and APL. Whatever your application... General Ledger, Accounts Receivable, Payroll, Inventory of Word Processing, SuperBrain is tops in its class. And th SuperBrain QD boasts the same powerful performance but also features a double-sided drive system to render more than 700k bytes of disk storage and a full 64k of RAM. All standard!

Whatever model you choose, you'll appreciate the careful attention given to every engineering detail. A full ASCII keyboard with numeric pad and user-programmable function keys. A non-glare, specially focused 12-inch CRT for sharp images everywhere on the screen. Twin Z-80 microprocessors to insure efficient data transfer to auxiliary peripheral devices. Dual universal RS-232 communications ports for serial data transmission. And, a single board design to make servicing a snap!

ADVANTAGE

Integrated Desk Top Computer with 12 inch Bit-Mapped Graphics or Character Display, 64Kb RAM, 4 MHz Z80A, Two Quad Capacity Floppy Disk Drives, Selectric™ Style 87 Key Keyboard, Business Graphics Software.

The North Star ADVANTAGE™ is an interactive Integrated graphics computer supplying the single user with a balanced set of Business-Data, Word, or Scientific-Data processing capabilities along with both character and graphics output. ADVANTAGE is fully supported by North Star's wide range of System and Application Software.

The ADVANTAGE contains a 4 MHz Z80A CPU with 64Kb of 200 nsec Dynamic RAM (with parity) for program storage, a separate 20Kb 200 nsec RAM to drive the bit-mapped display, a 2Kb bootstrap PROM and an auxiliary Intel 8035 microprocessor to control the keyboard and floppy disks. The display can be operated as a 1920 (24 lines by 80 characters) character display or as a bit-mapped display (240x640 pixels), where each pixel is controlled by one bit in the 20Kb display RAM. The two integrated 5 1/4 inch floppy disks are double-sided, double-density providing storage of 3600Kb per drive for a total of 720Kb. The 87-key rollover Selectric style keyboard contains 49 standard typewriter keys, 9 symbol or control keys, a 14 key numeric/cursor control pad and 15 user programmable function keys.

ANSWERING MACHINES
Office certified

Buying your first Genie I microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box**, which immediately expands your Genie's capacity to 32K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or S100 cards.

The supreme advantage of the Genie I system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

Then there is the **Printer**, a compact unit with 80 column, 5 x 7 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

**SPECIAL TECHNICAL GENIE
HOT - LINE ON 0629 4995**
for all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

The **Disk Drive** gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter. New Dual Disk Drive now available!

Please send me **FREE**, 16 page colour brochure on the Genie Computer System. I enclose 25p postage.

Name _____

Address _____

Telephone _____ PCW-82

Finally, there is Genie's very own **12" Monitor**, a must if you want to let the rest of the family watch their T.V. in peace! Available in B & W or green tube.

When you outgrow your personal computer that's the time you'll wish you'd bought a DAI.

Very low priced personal computers can leave you feeling very low, after the initial novelty has worn off. Having learned what the computer can do, you then find out what it can't do. Unless you expand the system. And that can set you back a few hundred pounds for items such as extra RAM and serial interface. In fact, more than you paid in the first place! So when you've done all the sums, you'll realise that the DAI personal computer offers incredibly good value for money. Just look what you get for the all-in price.

1. 48K RAM.
2. 24K ROM-based software that includes a fast BASIC interpreter, scrolling screen editor, machine code utility program, twin cassette tape handling, and disc support.
3. A full duplex RS232 serial interface allowing direct connection of a printer (with resident software support) and other peripherals.
4. A parallel interface for connection of the CP/M compatible DAI disc unit and other user devices.
5. Superb 16-colour high resolution graphics (256 x 336).

6. Sound commands for music generation.
7. Standard TV interface via aerial socket.

These standard features pave the way for a whole new vista of personal computing possibilities. Find out more by completing the coupon today. Large range of "Dainasoft" software available, e.g. viewdata, word processing, educational, games . . .

The HP-87 from Hewlett-Packard. Designed with growth in mind.

The new HP-87 computer from Hewlett-Packard combines all the latest advanced technology with a personal touch. It acts as your professional advisor on all complex computational tasks.

The HP-87 features a bigger screen and greater memory capacity than its predecessors.

And the modular approach provides you with a wide choice to plan and structure the system. Made by Hewlett-Packard to guarantee you quality and reliability, the HP-87 is supported by a full range of peripherals and has the means to communicate with other computers or instrumentation systems.

At the touch of a button this personal computer will produce sophisticated graphics, converting complicated results into plots or graphs.

It has a built in 80 column display for text and graphics and seven special function keys which make available 4 user defined functions.

As one of Hewlett-Packard's major distributors, Sumlock Bondain can provide the HP-87 as part of a complete personal computer system with full back-up resources.

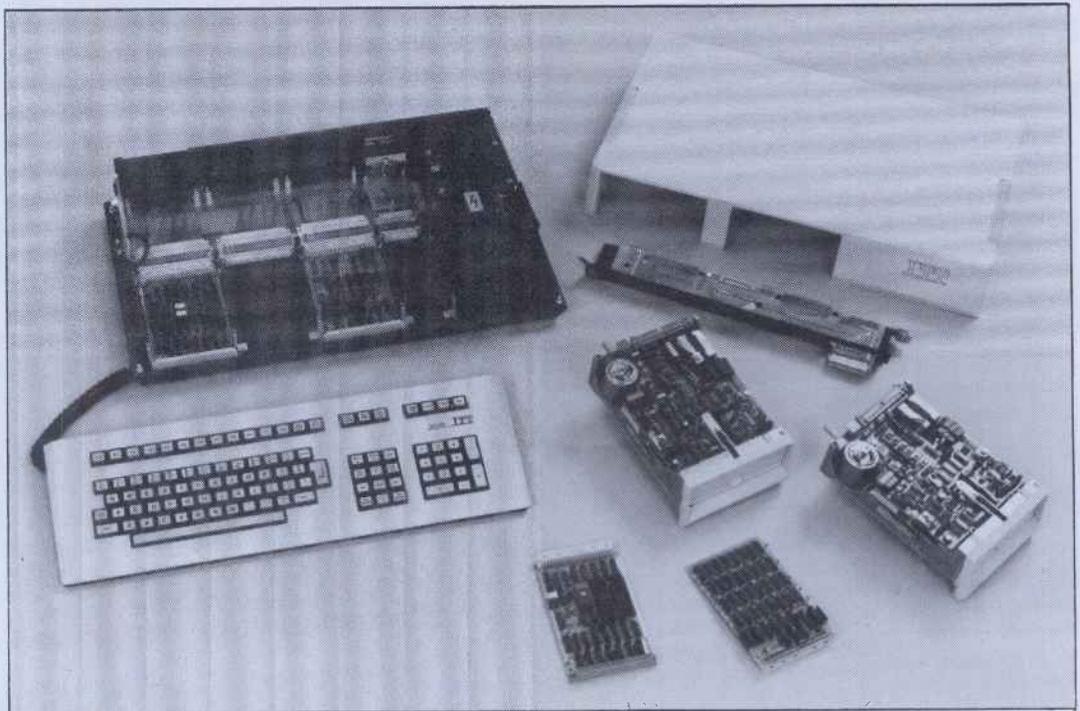

The HP-87 from Sumlock Bondain. Designed with growth in mind.

SUMLOCK BONDAIN LTD.

Sumlock Bondain Ltd., 263-269 City Road, London EC1V 1JK. Telephone: 01-250-0505.

Think ahead!

ITT 3030

programmed for growth

The ITT 3030 Microcomputer is the ultimate in modularity of design. Starting with a 64k, Z80A 4 MHz processor with twin 280k 5¼" Floppy disks, the ITT 3030 can be expanded to a 256k 16-bit Intel 8086 processor supporting twin 10 MB Winchester hard disks.

The keyboard features 15 programmable function keys, numeric keypad and a 12 key Word Processing keypad. The keyboard is "soft" permitting simple customisation of control key functions for differing applications.

The display is 80 chs × 24 lines with an 8 × 12 matrix, upper and lower case with true descenders. The RS232 interface comes as standard.

Hardware Modules.

The ingenious hardware design permits the addition of the following:-

- RS232 adaptors (2 or 4 lines),
- IEEE - 488 Interface,
- Real Time Clock,
- Graphics/Colour Adaptor,
- Parallel Interface,
- S100 Interface,
- TV Adaptor - Colour,
- Monitor Adaptor - Colour.

Keeping Ahead.

By using this unique modular approach, the ITT 3030 is able to keep up with the day to day improvements in the fastest growing technology on earth.

Software.

The ITT 3030 applies the same principles of modularity to its software as it does to its hardware. There is a choice of three operating systems:-

- CP/M, MP/M® — BOS/5,®
- UCSDp System (V.4)®

which support a wide variety of application programs. There is a complete range of Accounting and Business applications available from ITT running under BOS/5 plus a whole variety of business packages designed to run under CP/M. New software is continually being added under both CP/M and the BOS operating systems.

With the ITT 3030 you can confidently think ahead to Multi-user, Networking facilities, advanced operating systems knowing that the modular construction of the ITT 3030 will enable the hardware to keep pace with software innovation.

THINK AHEAD with the ITT 3030.

® CP/M and MP/M are registered trademarks of Digital Research Inc.
BOS is a registered trademark of MicroProducts Software Ltd.
UCSD p - system version 4 is a registered trademark of the Regents of University of California and Softech Inc.

Setting new standards.

TABS congratulate the above named Accredited Dealers who have attained the approved standard to advise on and install our fully integrated, modular accounting software.

You can also rely on the best possible advice and after service when you buy TABS software from our accredited Dealers or direct from us.
Free Seminars and Demonstrations are held in London at the World Trade Centre, each Thursday, and at our sources centre in Andover each Friday where our software can be seen running on many popular micros including Apple, Commodore, SIRIUS, Xerox, IBM and perbrain.

TABS also provide:
Unbiased advice on complete systems and software from our Applications Desk
Comprehensive 4-day Dealer and Customer Training Courses
(We also provide you with a free lunch each day!)
Hotline telephone support
Video Training Tapes on most modules

Free London Demonstrations and Seminars are held at the World Trade Centre within a few minutes walk of Tower Hill tube station.

The World's First

Z-80A™ CPU, Floppy Disk Controller, 64K of Memory, Serial & Parallel I/O Ports . . . all on a SINGLE S-100 BOARD!

Don't buy another one of those 3 Board Sets until you see what one can do!

Advanced Micro Digital has been producing the SUPER QUAD for some time now and it's truly one of a kind. Just plug this board into any S-100 mother board and hook-up your disk drives to it. It flies.

Runs with CP/M, MP/M, and turbo-DOS. You can also plug in additional boards, I/O, hard disk controllers, etc. SUPER QUAD is a BUS master. The cost of this board is one-third to one-half of what you have been paying for the three board set.

Just take a look at these features:

- IEEE S-100 Standard
- Z-80A CPU
- 64K of Bank Select Memory as well as extended addressing
- Double density floppy disk controller. Both 8 or 5 1/4" Disk Drives
- 2 serial & 2 parallel I/O ports (RS-232 and intelligent hard disk interface)
- 2K or 4K of monitor EPROM
- Runs with CP/M®, MP/M® and turbo-DOS™
- One year warranty
- BIOS disk available

Also introducing SUPER/SLAVE to run multi-processing operating systems such as turbo-DOS™. With 128/64K of memory, serial & parallel I/O, you can plug multiple of the slaves with the master and each user will have its own CPU and memory local.

Now it's time to replace or throw away the old S-100 boards and plug the SUPER QUAD in. Save space, money and power. Retail price is £610.

Dealer enquiries welcome

THE APPLE SYSTEM

Getting Started APPLE II is faster, smaller, and more powerful than its predecessors. And it's more fun to use too because of built-in features like:

- BASIC — The Language that Makes Programming Fun.
- High-Resolution Graphics (in a 54,000-Point Array) for Finely-Detailed Displays.
- Sound Capability that Brings Programs to Life.
- Hand Controls for Games and Other Human-Input Applications.
- Internal Memory Capacity of 48K Bytes of RAM, 12K Bytes of ROM; for Big-System Performance in a Small Package.
- Eight Accessory Expansion Slots to let the System Grow With Your Needs.

You don't need to be an expert to enjoy APPLE II. It is a complete, ready-to-run computer. Just connect it to a video display and start using programs (or writing your own) the first day. You'll find that its tutorial manuals help you make it your own personal problem solver.

HARDWARE GUARANTEE

All advertised products are guaranteed one year from date of purchase against defects in materials and workmanship.

During the guarantee period, Metrotech will repair or replace, at no extra charge, components that prove defective - providing that the product is returned, shipping or postage prepaid, stating when bought and enclosing proof of purchase.

This guarantee does not apply if, in the opinion of the Company, the product has been damaged by accident, misuse or misapplication.

CONDITIONS OF BUSINESS.

We accept cheques or Access, Barclaycard, American Express and Diners Club Cards. All prices, specifications and terms are subject to change without notice at the discretion of the management. All offers subject to availability.

Prices correct at time of going to press. E. & O.E.

Hardware Post and packaging subject to confirmation.

New CP/M software at hard to beat prices

DIGITAL RESEARCH

C BASIC II
Commercial Disk Extended Basic **£75/£30**

NEW CB 80. Ultra fast Basic compiler. All the features of C Basic plus the speed and versatility of a compiler. 32K Byte strings, external multiple line functions, run time error trapping and extended file handling capabilities. **£275/£30**

NEW PU1-80. A standard structured commercial applications programming language. Saves design time. Minimises debugging and maintenance problems. Designs high quality output with picture specifications. Includes the compiler, run-time library, lineage editor and relocating macro-assembler. **£275/£30**

MICROPRO INC.

WORDSTAR 3XX. New features: column move capabilities, horizontal scrolling up to 240 columns and even clearer menus. **£195/£30**

MAILMERGE 3XX (optional) **£55/£10**

DATASSTAR Powerful data entry, retrieval and up-date system. **£150/£30**

SUPERSORT 1. Combines high performance and operational flexibility to perform sorting, merging and record selection functions. **£105/£20**

WORDMASTER Superior text editor. **£105/£20**

NEW CALCSTAR. This sophisticated but easy to use calculating and planning tool is Micropro's new spread sheet and financial modelling program. **£120/£30**

COMPSOFT

NEW COMPSOFT DMS. Ideal for office records. Personnel, stock, client's and account's records are more easily stored and updated. Features include: Comprehensive calculation • Full sorting facilities • Record selection on updates and reports • Wordstar interface for selective mailing. **£345/£25**

MICROSOFT INC.

BASIC 80 Interpreter **£155/£25**

BASIC 80 Compiler **£195/£25**

FORTRAM 80 **£215/£25**

COBOL 80 **£315/£25**

MICROPLAN

NEW MICROPLAN. A program designed to cope easily with advanced financial analysis. Microplan helps you to perform all the calculations you presently solve with pen, paper and calculator. Microplan will perform most types of calculations working on rows and columns. **£245/£20**

SUPERCALC

NEW SUPERCALC. Accountants, Planners, Engineers, and Business owners have found Supercalc invaluable for day to day "what if?" and "what now?" questions. Answers for the time when the unexpected occurs. Simple to use advanced financial planning. **£190**

BCPL

NEW BCPL. BCPL CINTCODE is a full and extended implementation of the popular systems' programming language. BCPL CINTCODE gives a dramatic reduction in programme storage space, requiring about one third of a fully compiled Z80 code. **£250/£35**

DATA MANAGEMENT

SELECTOR III—C2. An easy to use information management system, requires C Basic II. **£185/£30**

SELECTOR IV. An advanced information management system requires C Basic II. **£275/£35**

S. BASIC VERSION 5.4. A high level language that combines the flexibility of Basic with the power of advanced structured techniques. A compiling language that is hard to match. **£175/£30**

METROTECH

MET/TWAM. An index sequential file access in C Basic II designed to increase the flexibility of C Basic. **£55/£20**

CAXTON SOFTWARE

NEW OPTIMISER. A linear programming system for finding the best practical solution to resource allocation and planning problems. Easy to learn. Easy to use. Immediately available. Please ring for more details. **£295**

NEW CARDBOX. Described simply. Cardbox is an electronic card index system. Choose your own format for cards, and categorise the information to your own specification. Cardbox provides an immensely powerful method of handling large amounts of information. **£155**

COMMUNICATIONS

BISYNC-80/3780 and BISYNC-80/3270 are full function IBM 2780, 3780 and 3270 emulators for micro computers. BISYNC-80/3780 gives you a Remote Job Entry terminal for the price of a micro! BISYNC-80/3270 combines the local processing power of a micro with a sophisticated screen capability. Make your dumb terminal smart! MET/TTY will connect your micro to a Timesharing service in simple teletype emulation.

BISYNC-80/3780 **£445/£20**

BISYNC-80/3270 **£445/£20**

MET/TTY **£145/£20**

FINANCIAL REPORTING

REPORT WRITER You input the values. Report Writer will perform your calculations and produce a report with your headings, totals and summaries. **£70/£10**

GLECTOR General Ledger option in Selector III, requires Selector III and C BASIC II. **£125/£30**

NEWLY RELEASED SOFTWARE

TRADE ENQUIRIES WELCOMED

SENSIBLE SOFTWARE SPECIALS!!

10% Discount on the purchase of three or more utilities

SUPER DISK COPY III £17.95
Apple II or Apple II Plus with 48K and 1 or more Disk II drive(s)

Practically a "mini-DOS" in itself, SUPER DISK COPY III is destined to become the standard for APPLE disk utilities. SDC is a menu-driven program that allows manipulation of all types of files under DOS 3.1, 3.2 and DOS 3.3.

SDC is the only disk utility available for the APPLE that combines these features: 1) COPY single files (Integer, Applesoft, Binary, or Text); 2) COPY DOS; 3) COPY entire disk; 4) UNDELETE deleted files; 5) Optional "INIT" of copy disk (with optimized "skew" factors for 13 sector disks); 6) REPLACE illegal characters in filenames; 7) FIX filesizes; 8) Use of DOS and directory sectors for up to 13K additional storage; 9) ALPHABETIZE filenames in diskette catalog; 10) LOCK or UNLOCK files; 11) PLOT of disk usage; and 12) Optional rearrangement of files so.

DOS PLUS £15.95
Apple II or Apple II Plus with 32K and 1 or more Disk II drive(s)

DOS PLUS is the software solution for living with both 13-sector (DOS 3.1, DOS 3.2, DOS 3.2.1) and 16-sector (DOS 3.3) APPLE diskettes.

DOS PLUS adds 8 new commands to APPLE DOS. Three of these are built-in and the remaining five are user definable. IT IS EVEN POSSIBLE TO CHANGE DOS VERSIONS WHILE A PROGRAM IS RUNNING!

If you have a language card, DOS PLUS will quickly load it with the "missing" language. A "B" BLOOD-analysis command is also provided to display the starting address and length of the last binary file loaded.

DOS PLUS also includes a DOS COMMAND CHANGER program to allow easy customization of APPLE DOS commands to suit individual tastes.

APPLESOFT PROGRAM OPTIMIZERS (AOPT) £15.95
Apple II or Apple II Plus with 16K
AOPT is a 2.2K machine-language utility that will substantially reduce the size of an Applesoft program without affecting the operation of the program. AOPT automatically shortens variable names, removes remarks, removes unreferenced lines, appends short lines together, removes extra colons, and renumbers line numbers. AOPT will convert a verbose, well-documented, development version of a program into a memory-efficient, more-secure, production version of the same program.

APPLESOFT-PLUS STRUCTURED BASIC (APLUS) £15.95
Apple II or Apple II Plus with 16K

APLUS is a 4K machine-language utility that adds the following structured-programming commands to Applesoft basic: WHEN . . . ELSE . . . FIN, UNTIL, WHILE, UNLESS, CASE, SELECT (variable), and (OTHERWISE). Multi-line IF . . . FIN statements are also supported. APLUS also allows the use of "named" subroutines or "procedures". A programmer can now instruct a program to "DO CURVE-FIT", without worrying about the location of the "TO CURVE-FIT" subroutine. APLUS automatically indents "&LIST"ed programs to clarify the logic flow. The APLUS "&CONVERT" command replaces the above structured-programming commands with "GOTO"s and "GOSUB"s to provide a STANDARD Applesoft program as output.

New programs can now be written using "GOTO"-less logic. Existing Applesoft programs can be maintained using APLUS without special conversion.

PROTECTOR III £60.00
Apple II or Apple II Plus with 48K, and 2 or more Disk II drives

The PROTECTOR III is designed to make "protected" copies of a "master" DOS 3.3 disk containing Applesoft programs. The resulting "protected" disks can not be

copied by presently available commercial copy programs (the APPLE COPY program, SUPER DISK COPY, the Lawrence copy program, etc.). Applesoft programs on the "protected" disks will "auto run", preventing end purchasers from "LIST"ing or "SAVE"ing programs off a "protected" disk. A USERBACKUP program is provided that can be distributed to enable end users to make unexecutable backup copies of protected disks.

DISC RECOVERY £17.95
Apple II or Apple II Plus with 48K and 1 or more Disk II drive(s)

This utility will help keep you out of trouble with its BAD BLOCK SCAN option and if you do get into trouble with a "messed up" disk, DISK RECOVERY may "save the day" with its REDO VTOC option.

The REDO VTOC option examines every file on the diskette to detect and correct the following types of errors in the disk VTOC: 1) two files trying to use the same disk sector; 2) part of a file not protected by a "sector-in-use" bit in the VTOC; and 3) "sector-in-use" bits in the VTOC that really aren't being used by any files.

MULTI-DISK CATALOG III £15.95
Apple II or Apple II Plus with 48K and a Disk II drive

MDC III is a very fast, machine-language database program designed specifically for keeping track of the contents of your APPLE diskette library. MDC III requires only seconds to read FILENAMES, FILE-TYPES, FILE-SIZES, numbers of free sectors remaining on diskette, and actual volume number from each of your diskettes. Both sides of a diskette can be loaded and assigned to the same DISK ID No. MDC III supports use of a two-character CLASSIFICATION field that can be used to group games, utilities, and other types of related files together. MDC III supports a fast Shell-Metzner. A "FLIP DOS" command allows MDC III to read directories from DOS 3.1, 3.2 and 3.3 disks and to store the resulting database on either a 13 or 16 sector disk.

Write or Ring us for a full software catalogue. All prices plus VAT, postage and packing free. Dealers enquire. are welcome.

SBD SOFTWARE

15 Jocelyn Road, Richmond, TW9 2TJ

STEMMOS LTD FOR SUPERBRAIN USERS

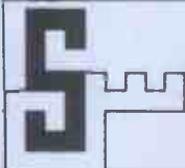

1. Has your system run out of storage?
2. Do you have a hardware problem?
3. Is your system under-utilised?
4. Do you need more software?
5. Do you need extra hardware?
6. Do you require a flexible maintenance contract?

STEMMOS HAS THE ANSWERS

1. STEMMOS can increase the capacity of your Superbrain disk sub-system to 1.5MB or 5/10MB internally.
2. STEMMOS can supply external Winchester disks system with capacity of up to 35MB.
3. STEMMOS repairs and maintains Superbrains and a wide range of peripherals, on site and off site.
4. STEMMOS provides special training courses to suit your requirements and improve the utilisation you get from your machine.
5. STEMMOS supplies a wide range of high standard quality software to run in your system. And we can train your personnel to use it and get the most out of it.
6. STEMMOS customises and designs software to suit your exact requirements.
7. STEMMOS supplies the hardware; Superbrain and peripherals at very competitive prices.

Please contact Stemmos for our excellent services and competitive prices

★ NEW BROOM FOR EPROMS ★ TEX ERASER SWEEPS CLEAN!

EPROMPT is Prompt Enough!

Eproms need careful treatment to survive their expected lifetime. Rushing it could burn their brains out. So cop-out of this helter-skelter world; take it easy the TEX way and give your chips a well-earned break. Cool, gentle and affordable; EPROMPT does it properly.

- ★ 16-chip basic economy EPROMPT EB: £32 nett; £39 c.w.o. ★
- ★ 32-chip interlocked de-luxe EPROMPT GT: £40 nett; £49 c.w.o. ★

TEXTIME
is
Tea-Break Time!

Our EPROMPT needs just half-an-hour to finish its job; this is the proper erase time for all Eproms. While it's busy you may as well take a break yourself, but don't take too long without a timer on the job; over-erasing can shorten data storage time. So our TEXTIME will remember to turn out the light and your chips will forget nothing new.

- ★ 30-minute solid-state TEXTIME M30: £15 nett; £19 c.w.o. ★

Guy Kewney delivers his monthly package of micronews.

How secure is 'secure'?

Some points for bravery must be awarded to Hammersmith Hospital. The authorities there are setting up a local area network to hold patient records.

It isn't the choice of technology that must have taken courage — Acorn's subsidiary Orbis seems to have a better-than-average grasp of local nets — but the mere idea of having six computers scattered around the hospital, all with highly confidential records on them. In a country where the bakers sell as much white bread as they do, and where sugar is a major trade commodity, it isn't at all uncommon for people to suffer from intestinal problems but, astonishingly, few people afflicted by piles could be said to have anybody find out. And some medical secrets are even more mortifying.

In a world where there were no secrets, blackmail would be impossible. But there are, and it isn't, and so hospital records just have to be kept secure.

Acorn says that the installation 'will serve as a pilot study for the Department of Health'. With one million patient records accessed 1500 times a day on average, we can bet it will be quite a headache.

Something of the scale of the sort of opposition which could be whipped up can be read in British Medical Association pronouncements.

The BMA is one of many bodies worrying itself to death about 'Data Protec-

tion', a subject which never should have been tackled from the protection end.

Rightly, the BMA suspects that a system which requires some Government official to keep a list of computers and what is on them might be a system which doesn't keep too diligent a note of what 'security' forces hold in their computers.

And the BMA obviously also suspects that information in medical computers might find its way into security computers. All that is wrong with the theory is that it is already too late — the information is comfortably stashed away, and cross-indexed, by a great many Home Office and other funny ministry computers.

'The proposal to make police computers exempt from data protection legislation would make it impossible for the medical profession to continue to cooperate with the police,' noted a BMA spokesman in April. The medical profession does work with the police in cases such as baby-battering.

It is a fundamental truth about computer security systems that they are breachable. The more secure they are, the more necessary it becomes for the designer to insert loopholes for his own purposes, for testing. And, also, the more likely the normal users are to put wedges under the automatic doors to save them from having to operate the security mechanisms — both literally and

metaphorically.

I'll be impressed by a security system which doesn't try to prevent access. Instead, it must make sure that whoever gets access is identified and cannot shelter behind his own secrecy.

Until then, we will continue to have the absurd fact that information which is supposedly 'secure' is in fact easily obtainable by people with friends who know the passwords and, in order to maintain the pretence of 'security', any breaches of information will be denied. In the case of the Government funny departments, they will even continue to deny that they hold the information (or else they will say that information on what information they hold is classified), while part-time ex-police operators can dig out information at £5 a time from their old colleagues, and powerful industrialists can lean on contacts inside the establishment for what they need to know about you and me.

Fanfare

The Queen's Award which Micro Focus won for 'export achievement' with its CIS Cobol language is really a fanfare, or maybe a prelude, to a truly enormous change in the role of the cheap micro.

Micro Focus started out with a Cobol compiler which did little more than write code as instructed by Cobol statements. That was something its rivals somehow never managed to do (you would think a Cobol compiler had to do that to earn the name, but apparently not), and the result is that the company and its reputation is booming.

More importantly, however, so is CIS Cobol. Each time Micro Focus has something to say about this compiler, it is bigger and better, and by the time this item appears in print, the company will be dangerously close to getting CIS Cobol certified as being equivalent to any giant mainframe Cobol.

And it will soon be available, not just to micro users, but to mainframe computer users too.

That means that programmers in the big City banks, the giant corporations, the government departments, and all the giant administrative beehives that use those enor-

mous IBM and other computers will be able to write their programs on a small, cheap micro and then send them up to the central computer tested and debugged.

Not all of them will do it, of course. Some of them seem to believe that programming is something inherently suited to paper and pencil work, and that however useful computers may be to accountants or lawyers, programmers don't need automation.

The shoemaker's children never get shoes, do they?

Hello friend

'Within a few minutes, it'll be talking to you like an old friend.' Perhaps you recognise the allusion to Clive Sinclair's advertising copy for the ZX81 but this time, it is twisted to indicate that there is something to make the ZX81 talk.

The speech synthesis interface is the latest product from DCP Microdevelopments.

To make it talk, you have to use POKE commands, to force it to search through a list of sounds which cover all the letters of the alphabet, numbers zero to over a million 'and other useful words and sounds,' says DCP of its Speech Pack.

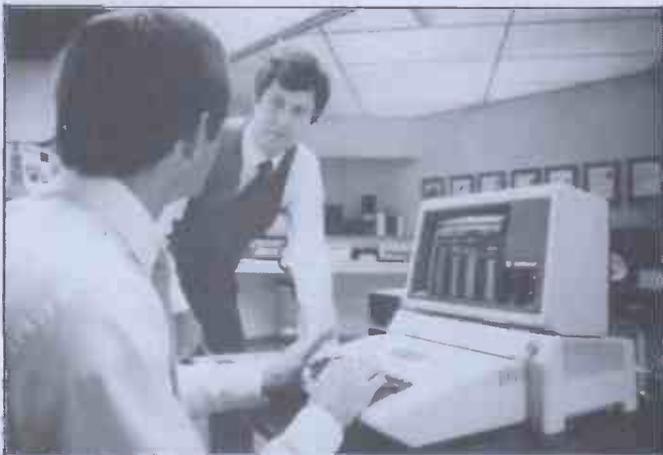

Cost of the basic unit is £50. Extra wordpacks (three extra) are available at £15 each (all including VAT). Details from 2 Station Close, Lingwood, Norwich NR13 4AX.

Prestel push

It is now becoming more important and urgent than ever to get the last step taken in making Prestel usable — that is, to standardise its stupid modem.

Prestel authorities are now recognising how useful its big databases can be to micro owners, and they are cooperating in launching a new viewdata adaptor, through and with Tandata Marketing, which will let them sell software down the phone lines.

The new product is called Telesoft Tantel, which will plug in to any micro with an RS232 plug (most of them, these days) and into a telephone line at the other end. As a way of dialling up the Telecom-owned Prestel computers and getting information (or

This may look like an attempt to disguise an Apple II as an Apple III — instead, it's a device which tries to tidy up the II by giving it a single on-off switch, a voltage surge suppressor, and fewer trailing cables, all for £125 (inc VAT). Details from Fletcher Dennys Systems, 01-570 8999.

The comfortable looking man on the left, formerly a school-boy at Shrewsbury, has just given his company's seven-year-old ICL 2903 to his old school. He has bought an IBM System/34 instead. The bloke on the right is Gilbert Roscoe, the school's Computer Department Head. He looks quite pleased. I wish I could have thought of a similar way of revenging myself on my old school. . .

programs) stored on them, it is pretty good value at £220 including VAT.

If only it could also be used to connect the micro to standard computer interfaces! Technically it could do both, but it needs to be switched from one form to the other when moving from Prestel to normal use. We merely wait for official permission from Telecom, to make life a lot easier. Details on 01-546 5144 from Tandata's publicity office.

Same name

There is no obvious reason to imagine that anybody is going to be confused by the similarities between Clive Sinclair's Spectrum and the enormously different giant MicroAPL Spectrum, which has been around rather longer.

Nonetheless, at press time, MicroAPL was making all the noises of a company which planned to make its lawyers rich. Let's hope the dispute dies there: MicroAPL now comes of age in one respect, by getting its own user group for the 16-bit machine. Anybody keen to join should contact the secretary, David Quas, at Imperial Group, Bristol (0272) 666961 ext 2380.

Apple push

Owl hasn't waited for permission to give its viewdata adaptor (for the Apple) both Prestel and normal capabilities — not at the same time, of course.

It produces an interface package with its own modem which allows the Apple II to send messages to or receive them from Prestel computers and also to link to other Apples. Used in this way, 'it converts the Apple into

an intelligent viewdata terminal with local storage, and can be used for sending messages at a cost which is very competitive compared to telegram or telex charges,' says Owl.

The product is a plug-in card for the Apple, with its own built-in modem, plus a box outside the Apple with a plug to connect to a phone socket, plus a disk with all the necessary software, plus a manual.

Price is £455 including VAT. As long as viewdata television sets cost that or more, I suppose the price isn't really as bad as it sounds. Details on (0279) 723848.

Prestel add-on

The difference between a competition that attracted 160 enquiries and a competition that got 160 entries is not just a choice of words. Unofficially, I gather there were only three entries that were worth serious judging in the Sinclair Prestel adaptor competition.

The prize was shared by Barry Schofield of Lion TV in London, and two employees of Martochoice Ltd, a Hertfordshire computer company.

Unfortunately, details of exactly what these people designed hadn't reached me by press time. If it all turns out to be worth the fuss, I'll let you know about it. . .

CBM cleans up

Commodore is working very hard to make sure that it has cleaned up its 'approved products' act before anybody notices that it needs a wash. Or so I am assured.

It is going to have to work hard. A quick cross-check

between the things in the Commodore catalogue of things to add to your PET on the one hand, and the things you know about and would like to buy on the other, will quickly show you that there are some strange inconsistencies.

That is, there are splendid products which are not 'Approved' and some fairly ordinary ones which are. There is a simple explanation and that's the way Commodore used to approve products. It did this very sweetly, by asking the maker of the product to pay it a 'royalty' for the privilege of having the product in the catalogue. No pay, no in catalogue.

Things are changing, an earnest John Baxter (marketing chief) told me recently. Nowadays, the scheme is being heavily improved to ensure that only 'substantial companies' are included — not people who are likely to go bust in between the sending of a customer's order and the arrival of the postman with a faulty product.

Also, Bob Gleadow (the UK boss) added, the scheme is now becoming much more ethical, and the royalties will be re-invested in marketing. The company will promote the catalogue, will contribute promotional money of its own to help, and will

merchandise the products in it. Also, products are expected to prove themselves with several sales in the field, and to be evaluated by engineers in Slough, before getting the big Approved stamp.

But the company is sticking firmly by its policy of refusing to take on anybody who won't pay the royalty.

So although the catalogue is now becoming a repository of respectable stuff, there is nothing to say that anything left out may not, in fact, be rather better. I don't quite see what Commodore can do about this, either.

Tax pack

The introduction of a program called Taxpayer 1 into an accounting practice, says Personal Computers, 'would require no staff training — it is no more difficult to use than a desk top calculator'.

The £575 (including VAT) package runs on Apple II and the beauty of it, from Personal Computers' point of view, is that it is like Coronation Street — it should run and run. You don't buy it: you subscribe.

'Subscribers will receive annual or more frequent updates, as the law is amended,' says my informa-

Once upon a time, there were record players which could take a dozen or so of your 78 rpm records and drop them one at a time on top of each other, playing each one as it is dropped. It gave the effect of a very scratchy long-player with crashing noises and breaks for tea every four minutes.

Apparently this auto-change disk drive gives all the storage of an eight megabyte hard disk, costs around £1400, and is actually quite quick to whip one disk in and the old one out.

Symbiotic Computer Systems managed to make me feel timid not to trust the thing. But I still think I'm more interested in the five megabyte Seagate type drive the company has bought in enormous bulk through Honeywell Bull in France, and is selling at somewhere between £1450 and £1600 (which they said they thought was definitely the top price they might ask for it) with interfaces to Xerox 820, Apple, NEC, and IBM personal computers.

You may not have heard of this company before, by the way. I guess you will hear of it in the future — it has apparently received considerable financial backing from the government-sponsored ICFC.

Details on 01-680 8606. And just to put it all in context, Templeman Software has announced a dual eight-inch floppy disk for Apple users. It provides two megabytes, it costs £1,900, and they must wish they were dead. Con-dolences on (0789) 66237.

*In Dublin,
Tomorrow's World is closer
than you think*

If you're interested in computers, Tomorrow's World is definitely worth a visit. At Tomorrow's World in Grafton Arcade and The Ilac Centre you can see a very impressive array of personal, recreational and educational computers. And there's always someone on hand to answer any questions you may have.

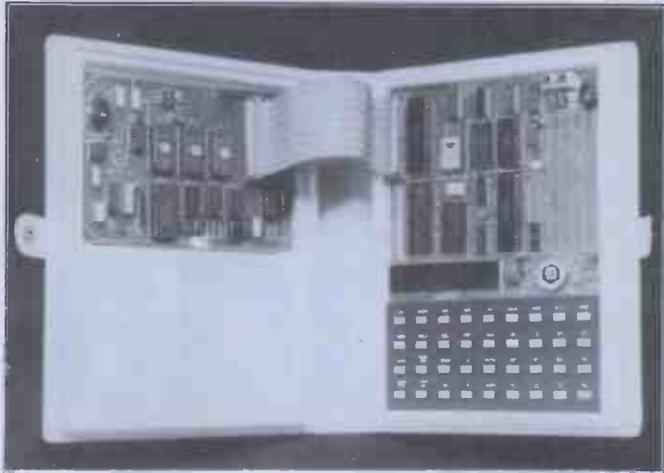

Tomorrow's World have recently opened another shop in Grafton Arcade. This store provides Dublin with its first retail computer outlet. And it gives you a chance to look at a unique range of the leading business and personal systems, together with extensive software support.

So if you're into computers, take a step into Tomorrow's World today.

TOMORROW'S WORLD LTD.

For further information you can contact your computer store
at: Parnell Mall, Ilac Centre Tel: 728045, Grafton Arcade
Tel: 776861 Ext. 226, Business Centre 8 Duke St. Tel: 777460.

The MicroProfessor (see 'Flight trainer').

tion handout happily, adding: 'it costs £400 plus VAT (£460) for annual renewals.'

The authors, Taxation Software, reckon it can take an accountant between five minutes and half an hour to process one of his clients through the system, 'depending on the speed of input' (how fast you type) and how fast your printer works.

Details on 01-626 8121.

TI software

If you can write a £6 cheque to Stephen Shaw, you can get software to play games on the Texas Instruments 99/4 home computer. Packages now released include bio-rhythm, crossword, black-jack, black box, and box lines. There is also a 'Mortgage Amortisation Schedule' package, said to be 'great for planning monthly payments over several terms, and comparing them to allow for the best length of loan'.

Details from S Shaw, 10 Alstone Road, Stockport, Cheshire SK4 5AH.

Flight trainer

Just because it is possible to build a winning micro-mouse around a Sinclair ZX80 or 81 computer, that doesn't mean that it is easy. On a new machine (also costing £70) from Flight Electronics, it is possible that a beginner might learn how to do the job, however.

'Unlike personal or home computers,' says Flight, 'which usually teach their users about the application software, the MicroProfessor educational set, or MPF, instructs its operator in the hardware and engineering software of the basic micro chip.'

The set, says Flight, is a 'simple microcomputer system with a Z80 central processing unit, memory, and some input/output devices.'

That understates the equipment quite a bit.

From the photograph, it looks as though the machine has no ordinary letters on

the keyboard. However there is (as on the ZX81) a removable keyboard overlay, which can be changed to make the thing work in a small Basic, despite its incredibly primitive display.

It does let you get at the internal bits of the processor, however, which is virtually the only way of learning machine code programming.

And, for an extra £65, you can buy a speech synthesis board to plug into the central plus an EPROM programmer board for £75.

This machine is never going to be the popular toy that the ZX81 became but (without actually testing one out) I think it is likely to produce more computer engineers amongst its younger users.

Details of the MicroProfessor from Flight House, Quay-side Road, Bitterne Manor, Southampton SO2 4AD; phone (0703) 34003.

Taped software

Normally people don't supply 'business software' on tape, so Gemini Marketing's range of database, accounts, mailing list and stock control programs (each at £20) is unusual. The price, I suppose, reflects the normal thinking — that people who have a system without disk drives probably aren't very rich. Details from Quay House, Quay Road, Newton Abbot, Devon TQ12 2BU, phone (0626) 62869.

Ultimate horror!

I just have to try out Trader Jack, a Monopoly type game on the Sinclair ZX81 — it's the description that has sold me.

Try this: 'At the start of the game, the program kindly credits you with \$40,000 to purchase SUPPLIES, CARGOES, FITTINGS, CREW'S WAGES, and a SHIP.'

After that, it says: 'You're on your own. You get a choice of 4 SHIPS all offered by a native whose fees resemble those of an

ESTATE AGENT...'

Wow! No game of the adventure sort has ever offered a monster of comparable horror to the ESTATE AGENT! I'm sold, I'm sold, shiver my flesh, make my timbers creep...

Details on Luton (0582) 454456 from Work Force director Derek Tidman, Price £7.00

Extra graphics

Provided you have expanded a VIC-20 with an extra 3k memory, you can use GraphVICS to draw high resolution pictures. The package provides a new area of memory in which a screen is held, and the user can look at either the normal VIC memory picture, which is usually used for text, or the expanded GraphVICS area.

The product is released by Michigan software producer Abacus Software, PO Box 7211, Grand Rapids, Michigan 49510, phone (616) 241 5510.

IBM memory

IBM micros now can get more memory: add-on boards are available from Electronic Office Services in London for anybody who can afford the 'highest quality multi-layer printed circuit bases, which

keep signal distortion to a minimum, and maximise the radio frequency interference performance.' At £280 for a 64 kbyte board, rising to £1130 for a 512 kbyte board (that's half a megabyte) all that impressive verbiage better be more than just waffle. Details on 01-248 6971.

More Sirius software

Independent software for the ACT Sirius: following TABS' early release of versions of its integrated accounting packages, Graffcom has followed up by announcing that its ISBS-F range of software is available now. Details on 01-727 5561.

8088 chance

I think there is a genuine career opportunity here for anyone with £300 or so: a 'low-cost evaluation system' for the Intel 8088 micro-processor, the chip inside the IBM and Sirius and new Commodore and several other micros.

The fact of the matter is that there are going to be a million and one of these chips around — and still, hardly anybody knows how to program the thing. Almost all the software running on the

This tidy backside belongs to a nice, old-fashioned Apple II without the normal plateful of spaghetti. It is achieved by a product called Applefan, which not only sucks cold air through the nine expensive add-in cards that you've undoubtedly plugged into your machine by now (to give 80-column display, and serial interface, and add-on language memory, and Pascal, and a modem, and a colour card, and a Z80 softcard, and a clock, and a voice output) but tidies all the tangled wire coming out of all these devices into something that looks like any modern micro. You buy this useful box from Data Efficiency for £70 — details from your Apple dealer (or from 0442 63561 if you are the local Apple dealer).

Only 20 minutes by car or tube from the West End.

IBM and Sirius so far has been produced by the one or two companies with this expertise — or has been translated from Intel 8080 or Zilog Z80 programs.

If you don't believe me, watch the soporific way Wordstar runs on a Sirius compared with its speed on the Osborne — it's almost as slow as a Superbrain.

The 8088 is five times (at least) as fast as the Z80 but nobody has written proper code for it yet.

This evaluation system, the EV88, is no luxurious automatic teaching machine. It has minimal memory, minimal software aids, and needs a power supply — but at least you can sit down with the 8086 manual and learn to program in assembler code.

Details from LFH Associates, 40A High Street, Stony Stratford, Milton Keynes, tel: (0908) 566660.

Caxton's Cardbox

Cardbox, the new program from Caxton for storing and indexing any information you care to type into your computer, works better on a micro than similar products used to work on mainframes.

This challenging claim was made by the program's author, the highly articulate Martin Kochanski (pictured).

His logic is staggeringly obvious: 'Programs like this used to exist, and things like Stairs on big IBM computers were very similar. But their drawback was the fact that they ran on big mainframes.'

'This means that not only is the whole environment more expensive, but it is less easy to use. Most users would not be plugged directly into the computer but would be sitting at an expensive terminal at the other end of an expensive telephone line.'

'You can't really be very helpful because the costs of waiting while your expensive computer sends a screenful of instructions down the expensive line, just so that you can type two characters and then wait for another screenful of instructions, are bad enough. Then there is the problem of

Martin Kochanski

the time waiting for the information to come down the line.'

It's perfectly true. The program, too, is very nice, and costs £150. I'd say that even if Caxton's boss wasn't David Tebbutt, former editor of PCW.

Legal stuff

Solicitors need different software. So says Automatic Information Management, a company which originally produced a solicitor's program called Charter and has now followed it up with DebtCharter, which deals with the accounting of debts to the solicitor's clients. If you are a solicitor, you'll instantly understand (the rest of you shut up, you don't care) and get in touch on (0482) 26971.

Sick leave '81

A new small business record system to let management know what is going on with holidays and sick leave has been crammed into a Sinclair ZX81 by Computatutor of Greenwich. You need an extra 16 kbytes of memory and £10. Details on 01-703 2403 from Warren Newman.

Nascom Pascal

Getting back into the business groove, our almost forgotten favourite old computer from the 70s — yes the Nascom now has Pascal. Lucas has released the language in a tape version at £45 or in an EPROM version at £75. Details on (0926) 497733.

Commodore fights back

Commodore's position as biggest-selling non-Sinclair machine in Britain makes it a target for everybody, and the ammunition being used to attack its position now is the phrase '16-bit micro' of which Commodore has none as yet.

It has announced a new machine which deals with this threat (in a strange sort

of way) by being an ordinary 8-bit machine with a big 16-bit chip bolted on the back.

In particular, Commodore feels threatened by the Chuck Peddle machine, the Sirius 1, available through ACT in Britain. And, not to put too fine a point on it,

Commodore is fighting back, in two ways. First, it says, there is no need to go for a 16-bit chip like the Intel 8088, because all the software in the world is written for the eight-bit chips. Second, it has the 8088 in its new machine, the CBM-2, or the 700 series (depending if you live in the US or the UK).

The main fear seems to be the possibility that Commodore dealers will start selling the Sirius as well as the PET. Currently, there is a clause in the Commodore dealer agreement which says that dealers must not take on any 'rival machines'.

Dealers have been saying, however, that since Commodore doesn't make any 16-bit machines, the ACT Sirius is not a rival.

Commodore says that its 700 series will be available with the Intel 8088 and 256 kbytes of memory, and CP/M (including Concurrent CP/M-86) by September. That means that the ACT Sirius will be a rival, and will dealers please leave it out. . .

You can place your bets on whether there will be any 700 series machines in September. Concurrent CP/M-86, however, is not yet available on the Sirius 1 and software bosses inside Sirius in Santa

Cruz assure me that their opinion of the package doesn't indicate any need to rush to sign contracts.

According to one Sirius executive I met at Hanover Fair (courtesy of Commodore, which kindly smuggled a few journalists over on the plane it chartered to ferry dealers into Germany to see its new machines) — the Concurrent CP/M-86 code still has plenty of 'design faults' — not bugs, not yet, just 'design faults' — based on the fact that it is derived from MP/M.

According to Commodore however, the deal is struck, the work is proceeding, the machine is virtually ready, and the code will run on it by September or sooner. I don't necessarily disbelieve them; I just think they have a very obvious vested interest in being optimistic and I'll believe it when I see it.

Whenever the machine does appear, it looks good. It is fast, with a souped-up central processor which runs normal Commodore software, sort of, plus an add-on processor treated very much the way the BBC Computer treats its newly-announced 32-bit add-on — down the Tube.

Pricing, as foretold at Hanover, looks good, too. It starts at £1600 for a two-disk system with masses of memory and quite a load of new features.

Acorn's Electron

At the game-playing end of the micro market, where the really big money is going to

WHEN YOU HAVE 637 PROSPECTS TO REMEMBER YOU NEED OUR ELECTRONIC CARD-INDEXING AND RETRIEVAL SYSTEM

Many people know Henry VIII had six wives. But few are aware of his 637 girlfriends. Poor Henry! Is it any wonder he laid about them with an axe. Just imagine trying to remember all those first names, addresses, birthdays, pigeon hole numbers and personal details.

With CARDBOX, Caxton's new electronic card indexing system, keeping and retrieving information is simplicity itself. Not only could Henry have found his ladies but he could have kept tabs on all those barons, bishops and bowmen. (Rent demands would have gone on time, confiscations would have been orderly and executioners would have been selected to suit every occasion.)

And he wouldn't have had to understand a thing about computers. CARDBOX looks like your favourite card index on the screen. You draw the card yourself. You decide where you want lines. You make up your own headings. And you fill in the details.

At this point CARDBOX stops behaving

like a flat inflexible card. It becomes multi-dimensional electronic paper. You can change any information you want. You can retrieve portions of information. You can print out all or selected information from your cards.

You talk to CARDBOX in plain English. You search your records on key words or on selected criteria. CARDBOX acts like a sieve, sifting through the records reducing the number until it finds only those that meet your needs. You display records on your screen or print them out in a format of your own design. Label production for mailing is simple. You can also use CARDBOX with some of your favourite wordprocessing packages, eg Wordstar.

CARDBOX works on most popular CP/M machines including those with special screens, eg Osborne. Use the CARDBOX Tutorial to learn all about this simple, fast aid to better record management. Study the detailed Reference Manual to take full advantage of its sophisticated features.

See CARDBOX at your local computer dealer. Or we'll send it to you with a dealer list. Call or return the coupon to us.

CP/M, Wordstar and Osborne are registered trademarks of Digital Research, MicroPro and Osborne Computer Corporation respectively.

Computer _____ Disk Format _____

Supposing that, now that there are lots of Sinclair ZX Spectrum machines around, nobody ever buys another ZX81, there are still half a million possible customers for add-on bits and pieces like this keyboard.

This one is a bit special because it actually fits into the same space as the ordinary ZX81 keyboard, but has proper moving keys. It is supplied by Kempston Electronics, and costs £22.50. What I like about it is the way the designer has managed to make the whole thing look very like the original layout, with very similar letter typefaces, and without the confusing mess that some keyboards make of getting three functions on one key.

Details from 60 Adamson Court, Hillgrounds Road, Kempston, Bedford MK42 8QZ.

be made, here are a few hints about what Acorn will produce to rival the Sinclair Spectrum (they think, and Clive doesn't think).

It will be very like the Spectrum in appearance, with a rather different set of keys. It will be a baby brother to the BBC micro, and largely compatible with it — but without the option of going to 80 column displays, and without any of the input and output lines to link to printers, terminals, and modems.

It will probably concede the edge on price to the Spectrum, but it will probably have a better quality colour display on most ordinary TV sets.

All its keys will be entirely programmable — that is to say that if you want the button with Q on it to show a Greek alpha, an elephant, or a 'Kilroy' was 'ere' sign, you can make it happen.

It will be called the Electron, and it will possibly be available this year.

Games people play...

Just as toy trucks and dolls can help children learn the language of the people and traffic they will have to cope with as adults, playing with video games today may prepare the adults of the next two decades to react with computers.

Not my own idea, but that of someone called Victor Walling, one of a fascinating clutch of academics unearthed by Atari, in a publicity handout designed

to show how useful games are.

I hope that some of the academics have been misrepresented — they read like a 'Pseud's Corner' anthology in all too many cases.

For instance, there is one who is quoted as knowing of 'no hard evidence that violence from blowing up a Space Invader would transfer to normal, day-to-day interactions with other people'. Violence? Ah well, probably some strange new usage of the word...

Then there is the psychologist who uses video games as a means of treating depression in teenagers. A fascinating report summarised in Atari's publication, but a bit confusing to find that 'he also plans to use the game as a reward for good behaviour' for some of the aggressive boys who have behaviour problems — he feels that 'the game provides a particularly good reward, compared with jukeboxes and snacks'.

Others are disappointing in their lack of results, presumably because the studies are being turned into somebody's thesis. For example, the chief of the Stress Analysis Research Unit at the Aviation Physiology lab in Oklahoma City, has been testing people — about 25 of them — with bad hangovers.

He's lucky to be alive, really: he tested these unfortunates on Atari games to check coordination and response — and I know what sort of response I would have for a doctor if I complained of a severe hangover, and he asked me to play Asteroids. 'Apparently the study

evolved from problems with alcohol use among pilots,' notes Atari, unnervingly.

The really interesting thing about it all is that Atari has donated games and cartridges for research purposes, to most of these researchers who had approached the firm for help in studying these areas. Nice to see encouragement of academic effort, yes — but very revealing. It becomes clear that there is starting to be considerable pressure on Atari from a lobby of people who think that games encourage crime, and train children in violence.

Myself, I agree with the researcher who said that this chain of 'logic' was really a lot of sloppy thinking. But throughout the Atari report, it is clear that many of the researchers quoted assume that they have to somehow justify games, against a rising consensus that they are harmful.

One researcher said that 'the negative response of some of the public to video games may stem from some sort of "technological phobia" but video games are less likely to bring out violent responses than TV'.

Another said in an equally defensive tone that 'the games are absorbing, much like music, but they're not addictive in the technical sense of the word'.

I didn't know anybody thought they were addictive

in the 'technical sense of the word'.

Profitapple

Any hint of gloom for Apple that may have existed at the beginning of the year can be somewhat dispelled by a quiet read of its second quarter's results. It increased sales by 66 percent over last year, and profit went up 51 percent.

New Acorn coming

Acorn has decided to leapfrog the rest of the world, and leave the 16-bit micro market to the tadpoles. It has announced a 32-bit micro — for around \$2000, including a big hard disk.

Nothing could be better designed to illustrate the divergence between the directions in which Acorn is going with its BBC micro and Sinclair with his 'not the BBC micro'.

Acorn gets its first crack at the big American market through the deal it has struck with the builder of the 32-bit micro (National Semiconductor, as attentive readers of this column will have guessed before now).

It also gets a crack at Commodore, Apple and Radio Shack, on their home

The whole point of a needle (hem, hem) is that it is sharp, and can pull thread through fabric. It would be nice, admittedly, if it were unbreakable too — but no seamster would give you a lot of money for an unbreakable needle without a point or an eye.

Similarly, the whole point of a microcomputer is that it is cheap. Admittedly, it would be nice if they were generally much more powerful and sophisticated, but nobody is going to form a queue outside your office for a micro with the performance of a big mainframe if it also has the price tag of a big mainframe.

I'm sorry, NCR, but just because the NCR 9010 has CP/M doesn't make it a personal computer. And starting at £5700 you really mustn't describe it as 'competitively priced'. Go away and try again.

grounds and through their own dealers.

To get the best out of the machine, it will be sensible to get a BBC micro, and hang the 32-bit model on the end of the Tube. However, it will be possible to use any ordinary Petappletandy machine in much the same way, as a terminal to this one, with control being arranged down an ordinary RS232 link.

A 32-bit machine with Unix as its operating system, with a BBC micro as its display terminal, with several megabytes of disk storage, and with a quarter megabyte of internal memory — if Acorn can really do that for \$2000 (I don't know what it will be in pounds sterling) then Americans are going to buy.

Other manufacturers are being signed up by Nat Semi now and over the next few months to provide several different versions of its official machine — but all will have a fundamentally compatible operating system, say my sources. All will have the same languages (a deal is still being hammered out to arrange these) and all will be in with a serious chance of beating Intel into the 32-bit market.

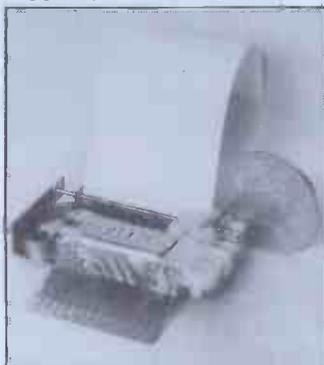

TLO training

The Last One was always going to make enemies — it was announced in a challenging way as 'all the programs you'll ever need for £260' and a great many people took up the dare to prove that it wouldn't be able to write that many programs, or at least, it wouldn't be that easy.

So the boss of DJ 'AI' systems, Scotty Bambury, is entitled to get a bit uppity about the fact that the National Computing Centre 'will be selling software not produced by themselves, for the first time ever', and that this software will be The Last One.

More, The Last One will be featured in a series of one-day training courses run by the NCC.

You could argue, I suppose, that if the program

This is said to be the world's smallest thermal printer. It is supplied by Epson. Details on 01-900 0466.

makes programming skill unnecessary, you shouldn't need a training course to learn the necessary skills. I dare say somebody will say it. Meanwhile you can go on the course, and at the end of it, you will have a copy of TLO for your very own — from which you can work out what the course will cost, can't you?

Details from the NCC or from Bambury's outfit on (04605) 4117.

Humorous maths

A sense of humour is obviously as important as mathematical ability at MacMicro Ltd, where a symbolic algebra system has been given the impressive name of Fully Interactive Algebraic Symbolic Computing (FIASCO) by the proud designer, H J Gawlik. It runs on Commodore 2000 and 8000 micros, it costs a mere £80, and details are available on (0463) 712774.

ZX81 winners

During late April we ran a competition at eight London rail termini to win six ZX81s. Of the 50,000 leaflets given away, almost one in eight were completed and handed in at the collection boxes on W H Smith's bookstalls. Over 5,000 entries were correct and the first six to be drawn out of the boxes were: Paul Berry of Orpington; B C Billing of Carshalton; A M Brown of London WC1; Peter Faircloth of Putney; M B Hill of New Addington; S W Till of Woking.

The puzzle was to find the number of routes from Notting Hill Gate to Liverpool Street on a simplified tube map. The answer was 27. Many thanks to all of you who entered.

Texas talkie

Texas Instruments devotes a lot of effort and funds to research on synthesised speech; the results are to be seen in its speech chips and in products such as Speak and Spell and Speak and Math. These last products give vocally aided instruction, using ROM based vocabularies; in the case of Speak and Spell you can buy further ROM packs to enlarge the repertoire but the range is still rather limited. TI's latest offering, announced in Nice at the end of May, overcomes this limitation by allowing a speech synthesiser to read software encoded as bar-codes on the printed page.

Called the Magic Wand Speaking Reader (wonder what Peachtree thinks about that?), the unit comprises a box of tricks with an on/off

See Texas talkie.

switch as its only control, and a hand held bar-code reader which uses fibre-optics. This is scanned over a high-density bar-code in one of the books which will be sold for the device, and the result is a spoken sentence.

Currently the books are designed for pre-school age children and have pictures and written words over the bar-codes. Eventually, however, TI hopes to apply the system to language teaching for adults as well. The synthesis system uses principles recently developed in TI's labs, which break down English speech into 128 'allophones'; these are encoded and stored in ROM and can then be used in combination to build up any word. The high-density bar-code used by Magic-Wand allows a certain amount of inflection to be encoded into the speech, so that the result is less robotlike than previous efforts; the book I tried even had a singing voice ('Twinkle, twinkle Little Star'). The allophone system makes it possible to synthesise other languages by analysing them into a suitable allophone set. Dick Pountain

The Latest One

Inspired, no doubt, by The Last One, a Michigan city firm called Advanced Operating Systems has launched a \$500 program called The Programmer. It runs on the Apple II CP/M version, and the IBM PC, and an ordinary Apple version is planned. And yes, it does everything, too.

Details from Kenneth Jones, at 450 St John Road, Michigan City, IN 46360.

Small floppies

There is quite a difference between £50 and £250, and though a disk drive costing £250 would be nice, a disk drive costing £50 would be astonishingly nice.

Everybody knows that Clive Sinclair has promised us a £50 disk drive for his Spectrum. Some may also

know that the Hungarians have produced a tiny disk system, which appeared at the Computer Fair in April, and which then was said to cost £250. And subsequently, I've seen reports that it will cost £50.

The Hungarian unit, imported by a company with the courage to call itself Bats NCI, was invented in 1974, and looks astonishingly like a Japanese invention(?) which is available in Japan but not in Europe. Instead of storing data on floppy disks five inches (or eight inches) across, it stores it inside a rigid plastic cartridge like a music compact cassette, inside which there is a floppy disk three inches across.

According to the Bats people, the reason the Japanese version has taken so long to reach the market is because they have been trying to beat the Hungarian patents.

This doesn't explain the long delay in Hungary's production, nor the confusion over price. If the Hungarian price can be held below £100, including the necessary controller electronics needed to connect it to normal microcomputers, it will take a lot of the wind out of the sails of Sinclair's £50 floppy, because it is known to work already, and his device is still a prototype.

I'm expecting the Bats device to cost around £200, however. We'll see. Details from Bats on 01-349 4511 or 9271, or from Lowe Electronics, importer of the Video Genie on (0629) 2430.

'This new system is selling like hot cakes. Now it's just up to you to design it.'

The 5th Personal Computer World Show

Barbican Centre, City of London 9-12 September 1982

First of all an apology for telling you how wonderful the show was going to be last month and then not telling you either when or where it was going to be held. This month we've got it right.

At the time of writing (mid May) we had twice last year's show area under contract. That's 2,000 square metres of space which had been booked by some 85 companies and it means that the final show should be at least three times the size of last year's.

Quite a variety of companies have booked their space since the last issue went to press. Bugbyte, from Liverpool, will be there — they seem to be making quite a name for themselves in games for the BBC machine, the VIC and the ZX81. At the other end of the spectrum (sorry!) is Computer Ancillaries who will be waving the flag for up-market business systems made in the UK. While we're in the office it would be very interesting to know how many shiny new micros are insured in the same way as desks and typewriters. An outfit by the name of Geoffrey Hoodless Associates is going to be at the show trying to change all that.

Creative Computing from the US has been to nearly every other PCW Show. The sight of publisher David Ahl in his apron trying to live up to his claim that he never takes anything back from a PCW show is one that you shouldn't miss. If your timing is good it's also one of the best ways of getting US-published stuff at really keen prices. Talking about publishers, it's good to see that just about every other micro magazine is going to be at our show.

We have just completed plans to have ZX and BBC/Acorn mini shows within the PCW Show. Mike Johnston, who organises the now-legendary ZX fairs that fill Westminster with ZX freaks every couple of months, will be coordinating the ZX feature. By September there should be enough Spectrum software to keep everyone happy. The mini show for BBC/Acorn users is being organised by Small Enterprises who are on 01-930 1612. If your company is exclusively selling products

to one of these markets then these special areas are just right for meeting lots of users.

To keep everyone posted about events at the show while they are happening we are working with Telemap to put in a local Viewdata system. Exhibitors will also be advertising on the system so you won't miss those special show offers that you always hear about but never get to see.

If you are a businessman coming to the show to look at the latest professional systems you will be delighted to hear that we are to introduce a special priority ticket system to save time. Anyone booking in advance with either a business card or headed notepaper will be able to use a special 'no waiting' entrance to the show. Advance bookings without the use of the special entrance will also be available as usual for parties arriving together. For details of party discounts write to Timothy Collins at Montbuild, 11 Manchester Square, London W1.

Finally, if you are planning to travel to the Show from any distance we have organised some very attractive travel and hotel packages. For example, packages of a 2nd class rail ticket, a show ticket and one night at the Regent Palace hotel (in a twin room with breakfast) would cost £25.00 from Manchester, £21.50 from Birmingham, £25.50 from Huddersfield and £19.50 from Southampton. A single

room is available for £2 extra and each extra night is £10. The packages without travel are £13.50 per night.

If you need further details or want to book, contact Frank Gilbert of Pharoah & Hughes on 01-995 8995.

"Test-drive your software?"

You can buy software without trying it first...

- The trouble is** — sometimes it doesn't meet your particular needs.
- **And** it doesn't *always* live up to all of the advertising claims made for it.
 - **And** often the write-ups you read about it (even in the best magazines), are just not *specific* enough.
 - **And** even though your dealer *wants* to help, he's hard pushed to find the time for a full demonstration.

When it comes to purchasing software, the list of pitfalls is endless.

We have started the **Software Rental Bank** because we believe you should have the opportunity to evaluate software, on your own machine, with your own data, *before* committing yourself to a purchase.

And if you do decide to purchase — **the rental is free.**

For more details see page 98 or phone Ruth Elks on 0908 53491.

The Software Rental Bank Ltd. 58 North St., Leighton Buzzard, Beds. LU7 7EN

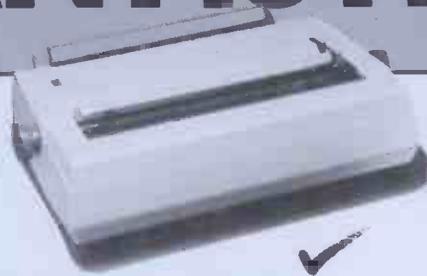

THE PRINTER YOU WANT IS HERE

PERTEC P80

- * Heavy duty matrix printer at a sensible price. * 80cps.
- * 80/120 character lines.
- * Optional character sets, with true descenders. * Centronics and RS232 serial interfaces.

£439 + VAT

RICOH RP 1600

- * Advanced daisywheel printer for word processing, mini and micro applications. * 60cps.
- * Intelligent option includes Qume/Diablo compatible commands and auto bidirectional operation.

£1395 + VAT

TRIUMPH-ADLER STYLIST

- * Low cost daisywheel printer for most popular micros and minis. * 14.5cps. * Proportional spacing. * Bidirectional / logic seeking. * Range of type styles and languages.

£695 + VAT

Trade and OEM discounts available.

Write or call for further information.

CTUK! NEWS

by David Tebbutt

It seems that, despite PCW's ever-increasing size, the Editor still has great difficulty squeezing everything into the magazine. While he still had his foot on my neck, I agreed to give a half-size 'ComputerTown News' a try. One thing which will disappear is the list of towns from which enquiries have been received. I do maintain an index of all enquirers on a computer system so, if you mention the towns and villages near you when you write to me, I'll scour the database and pass on any local contacts to you. Don't forget the SAE if you do write.

We have a little news from existing 'Towns this month. First, Computer-Town Palmers Green, which was started by the folk at ComputerTown Enfield, has now become independent and your contacts there are now Ted Ellerton, Stephen Gorski and Anne Sempkins, the librarian. Rex Shipton is now the official contact at ComputerTown Eastcote. Over the last year or so, Rex has increasingly taken on the lion's share of the responsibility. Another thing that's happened at Eastcote is that we've dropped the booking system we had. Every session was being booked by those already 'in the know' and this was acting as a severe discouragement to those we really wished to attract. In fact, it was becoming more of a club. If

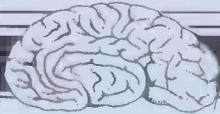

anyone in Eastcote would like to start a computer club then please let Rex know (address in Direct Access) because ComputerTown can supply a lot of enthusiastic members. Finally, on existing 'Towns, I had a letter from Richard Powell of South Shields. You may remember that I mentioned recently that he had lost both his job and his mean of transport. It seems that I was misinformed and his company is currently sponsoring him to take a full-time degree course. ComputerTown South Shields will be revived in June. I'm sorry, Richard, for any embarrassment I may have caused you.

I had a number of letters from *School CourseWare Journal* in America. It publishes disks and cassettes, each containing two educational programs, as well as a conventional magazine. Five issues will set you back \$75 or \$90 depending on whether you choose disk or cassette. At the moment programs are available on PET, Apple and TRS-80, although Atari products will be introduced soon. Further information from 4919 N Millbrook, Suite 2228, Fresno, CA 93726.

Now for the people who look as if they'd get a 'Town going, given the help. If you feel you'd like to give a hand then I just know they'd love to hear from you:

Peter Earthy, 46 High Street, Church Stretton, Shropshire SY6 6BX; Dave Clare, Mid Cheshire Computer Club, telephone Winsford 51374; Charlotte Hursey, Rural Information Officer, Cambridgeshire Community Council, Great Eastern House, Tenison Road, Cambridge CB1 2DU; Edward G Collier, 26 St John's Road, Ludlow, Shropshire SY8 1PG; Lesley Donnelly, Branch Librarian, Hanworth Library, 2-12 Hampton Road West, Hanworth, Feltham, Middlesex TW13 6AW; Bruce Emblem, Hill House, Station Road, Brundall; Lorna Carson, Librarian, Barrow-in-Furness Library, Ramsden Square, Barrow-in-Furness, Cumbria; Roy Pearce, 50 Green Road, Hall Green, Birmingham B28 8DD; Malcolm Rush, 18 Shakespeare Road, St Ives, Huntingdon, Cambs PE17 4TR; Peter Bendall, Flottmooring 67, 2358 Kalttenkirchen, West Germany; Harry McMahon, Director, Micronet Centre, New University of Ulster, Coleraine, N Ireland BT52 1SA.

For further details of CTUK! write to: CTUK!, 7 Collins Drive, Eastcote, Middlesex HA4 9EL. Please enclose a large SAE for your reply.

BRAIN DUMP

Peter Rodwell reports on how he's been killing time waiting for his Spectrum

This is very embarrassing. I had intended to devote this 'Brain Dump' to a crowing report on the delights of owning a Sinclair ZX Spectrum. At the Spectrum launch, somebody asked 'Uncle' Clive about delivery dates and he replied, 'If you order one today you'll get it in two weeks!' Never one to miss a challenge, I promptly filled in one of the order forms thoughtfully supplied in the press packs and handed it to Clive there and then. He looked a little surprised, mumbled something about 'Well, it does say 28 days on the order form' and stuffed it into his pocket.

Precisely two weeks later, a postcard from Sinclair arrived, saying that my order was being despatched. Today, four weeks from the launch, I am still waiting. To while away the time, and only partly as a joke, I have written a word processor for it, entirely in assembler, and I'm currently trying to work out a way of getting the object file across from my Cromemco to the Spectrum without having to convert thousands of hex bytes into decimal and then POKE them all in. I guess I'll have to build a port for the Spectrum and zap it out via the Cromemco's Centronics interface.

Talking of my Cromemco reminds me that I have recently solved a very annoying problem with this machine.

It concerns Cromemco's CDOS operating system, an 'upwards-compatible' version of CP/M. Like

CP/M, this contains several intrinsic commands, such as DIR to obtain a directory and REN to rename a file. When you type a command, CDOS first checks to see if what you've typed is one of these intrinsic commands; if it isn't, it then searches the disk directory for a program with the same name which, if found, is then loaded into memory and executed. When that program stops, control is handed back to CDOS — but if you want to re-run the same program there's no way to do so other than by typing the program name again and waiting for it to be re-loaded from disk; there's no facility for re-running the program directly, even though it's still there in memory. What I wanted was a RUN command but I could never figure out how to do it — one tweak which, I'm told, works under CP/M is to create a file on disk called RUN.COM with zero length, so that when you type RUN, the operating system tries to load this in and run it but, as its length is zero, the effect is simply to jump to the program still in memory. This doesn't work with CDOS, which is smart enough to recognise a dummy file when it sees one and reject it.

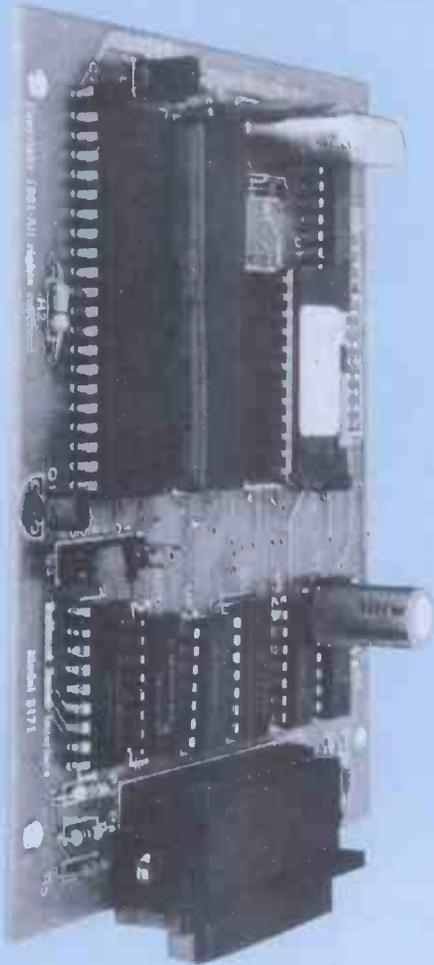

The solution came when I was looking through a Debug dump of CDOS version 2.36 in search of something else and came across the intrinsic commands look-up table; I found it included a command called REM. This is undocumented in the CDOS manual

and using it seems to do nothing. From a very hurried delve into CDOS, it appears that REM might clear up the input buffers but I'm not sure yet. However, it's easy to modify REM to RUN and change the appropriate jump to 0100H and — hey presto! — you have an intrinsic command which allows you to re-start a program. This is particularly handy when using INIT (CDOS's version of Format) to initialise a box of disks; INIT formats one disk and returns to CDOS, so you have to load and run it again for each disk. Now, however, I simply type RUN and it runs again without re-loading. Also, you can use RUN with the 'switches' required by some programs. For example, running STAT by itself gives the normal status printout and stops; if you then want to enter the date, RUN/D will re-start STAT in the date entry mode.

There isn't space here to document these mods so I'm afraid you'll have to wait until next month, when I'll stick them into 'TJ's Workshop'. Meanwhile, if anyone knows exactly what REM is supposed to do, and why, when using RUN with Basic I get a 'Cannot open file' error message for no apparent reason, I'd like to hear from you.

I don't yet know whether CP/M has any similar, unused intrinsic commands which could be altered to provide a RUN; if not, then us CDOS users have scored yet another superiority point! **END**

HOW TO USE YOUR EPSON WITHOUT WASTING COMPUTER TIME

SERIAL 8K
£119 + VAT

Your computer is capable of sending data at thousands of characters per second but the Epson can only print 80/100 characters per second.

This means your computer is forced to wait for the printer to finish one line before it can send the next. A waste of valuable time.

**THE NEW MICROBUFFER
ACCEPTS DATA AS FAST AS
YOUR COMPUTER CAN SEND IT**

Microbuffer stores the data in its own memory buffer and then takes control of the printer. This frees your computer for more productive functions.

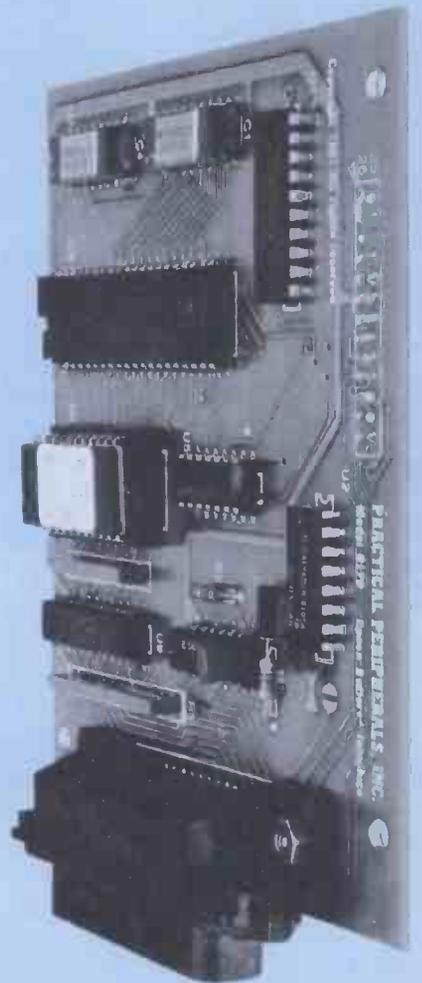

PARALLEL OR SERIAL

Microbuffer model MBK-16K is a Centronics - compatible parallel interface with 16,384 bytes of on-board RAM for data buffering.

The MBS-8K is a full featured RS232C serial interface with both hardware and software (x-On/X-Off) handshaking, baud rates from 300 to 19,000 and an 8,192 byte RAM buffer.

SIMPLY PLUG IT IN

Either model fits the existing auxillary interface connector inside the Epson MX80, MX80 F/T or MX100 without modification, and is compatible with standard Epson cables and printer control software.

PARALLEL

Even if you're still waiting for your BBC Computer, you can become an expert on the machine with this special, three-part delve into its innards: expansion possibilities, use of the sound generator and a detailed memory map of the system. To kick off, Paul Beverley of Norwich City College talks about expanding the 'Beebon'.

EXPANDA-BEEB!

If you have been trying to sort out how the BBC Computer actually works, either from a hardware or software point of view, you will probably have come to the same two conclusions as I have. Firstly, it's a very complex system, but secondly it is extremely versatile and expandable. Everything possible seems to have been done to ensure that this is not a 'dead-end' machine which you will have to throw away after a year or two when its basic technology is, inevitably, superseded. As you can see from Figure 1, the basic computer is just the starting point for connecting to all sorts of other systems.

Obviously the system supports all the usual peripherals — VDU, cassette, disk, etc — but the most important single feature which ensures that this system will keep going much longer than most is the Acorn Tube. I have no doubt that some other manufacturer could, and possibly will, come out with a machine which, on the face of it, has the same features as the BBC machine, but is only half the price and is available off the shelf. But beware of imitations! If it does not have an Acorn Tube then it will be a dead-end machine.

The Tube

What's so special about the Tube? Well, it's a high speed (2MHz) communication system requiring a quite complex hardware interface (in a ULA!) to pass bytes back and forth between two processors. It uses FIFO buffers and interrupts, so it allows true parallel processing. The idea is that the 6502 on the main board should handle all the input and output (keyboard, VDU, printer, cassette, disk, user ports, etc) which all takes quite a lot of computing time, while the second processor does the language processing, calculations and so on.

The first gain you get from this is that the processing speed, even using a 6502 as second processor, is more than doubled. The reason is that, with only one processor, every time it wants to output some data it has to stop its calculations, output the data and then pick up the calculations where it left off. With two processors, however, the second processor, having done some

calculations, simply shoots the data off down the Tube, allowing the I/O processor to deal with it in its own time, and carries on with the calculations unhindered.

Those who are not so keen on the 6502 will be pleased to know that you do not have to use the same processor on either end of the Tube. You could equally well use a Z80 as the language processor so that you can take advantage of its superiority over the 6502 for data processing applications. Also, choosing a Z80 second processor opens up the vast array of CP/M software currently available, since the Z80 second processor board which Acorn is producing is said to be 'fully CP/M compatible'. However, you obviously cannot use any of the CP/M software which is machine specific, so that rules out virtually all the 380Z software, for example.

The other factor giving an overall speed improvement is that both the Z80 and 6502 second processor boards will be working at a clock rate of at least 3 MHz and Acorn is in fact trying to push the speed up to 4 MHz.

Why stop there? Why be satisfied with a Z80? Acorn is at present developing a second processor board using the National chip, the 16032, which, it is also hoped, will run at 4 MHz and Unix, UCSD, Pascal, Fortran, Cobol and at least another half dozen other high-level languages are being talked about for 'sometime in '83'. That would give the machine a level of processing power similar to some of the present day minicomputers at a fraction of the cost and, some would say, with much greater reliability. Acorn says it is trying to get all these boards on the market by the autumn.

Memory expansion

Apart from the gain in speed achieved by using a second processor, there is also a gain in size and speed of memory access. The maximum amount of memory which one 8-bit processor can address is limited to 64 kbytes — and this has to include both ROM and memory-mapped input/output, as well as RAM. The model 'B' BBC Computer has 32 kbytes of ROM, memory-mapped I/O, and 32 kbytes

of RAM but, since to make use of the highest resolution of graphics you need 20k of RAM, and since nearly 4k is used up for operating system work-space, serial I/O buffers, sound buffers, soft key buffers, etc, you are really down to about 8k for your program and variable storage.

Paged memory expansion

One possible means of improving on this that has been provided is the capacity for accessing an extra 64k of RAM, ROM or I/O in a 'paged' mode via the 1 MHz extension bus. That is to say, you store the top eight bits of the auxiliary address in a special register (FCFFH) and then as you read and write to locations F000H to FFFFH you will actually be addressing locations in the specified page of the auxiliary RAM — but obviously this is much slower than accessing the on-board RAM. This is not only because the access is at 1 MHz rather than the 2 MHz at which the 6502 is running, but because of the time taken in setting up the paging register. Also, some thought would have to be given to the software implementation of this system. For more information on this you could get a copy of 'Application Note 1: The 1 MHz Extension Bus', on sale from Acorn.

Second processor memory

If you have a second processor, even an 8-bit one, it will immediately provide an extra 64k of addresses. There will have to be a small 'bootstrap' ROM on the second board in order to get it started on power-up, but Acorn suggests there will be the capacity for 60k of RAM on both the 6502 board and the Z80 board. Also, this RAM will be accessed at the full 3 or 4 MHz at which the second processor is running.

If you then go to the 16-bit second processor, you are into the megabyte region in terms of memory capacity. We don't yet know what Acorn will be providing in the way of RAM with the new board, but the 16032 has an addressing range of 16 megabytes (24-bit address)

EXPANDA-BEEB!

which should be enough for most applications! You may think that this amount of memory would be prohibitively expensive, but no doubt by the time the board is in production the price of RAM will be only a fraction of its present cost and 16 megabytes will be reasonably realistic. If you doubt whether Acorn really intends to implement the 16-bit second processor, just take a look at the cassette tape format and you will see that all addresses are 32 bits long, and not 16 bits as in all currently available 8-bit machines.

Language expansion

Anyone who has used the RML 380Z will appreciate the advantages of holding the high level language interpreter in RAM instead of ROM. It makes the system very flexible in that you can use Basic one minute and then, say, Pascal the next. However, anyone who has used the cassette version of the RML 380Z will also know the disadvantages of this idea. The time spent loading 16k of high level language every time you want to use the machine, and the frustration of crashing the machine by over-writing the interpreter through injudicious POKEing, can soon dampen one's enthusiasm for the idea.

In the BBC machine, however, you get what seems to be the best of both worlds. Resident in the machine at any one time you can have up to four different 16 kbyte interpreters. Acorn says that these will include Pascal, Forth and Lisp, a CAD package and a word processor, and also possibly Comal for the ardent structuralists! Also I am sure that as this machine becomes more widely used, independent companies will be producing alternative interpreters.

Swapping between languages is simplicity itself. When you first switch on the machine you find yourself in Basic or whichever language ROM you have in the default position, and then to change to another language, you simply say **PASCAL* or **LISP*. This can be done either in immediate mode or from within a program; so it will be possible, without the user being aware of it, to change from one language to another *even as a program is running!*

This is possible because, on power-up, the operating system interrogates each of the installed ROMs to find out how much 'private' workspace and how much 'public' workspace it needs. It then reserves the requisite amount of private space for each ROM, decides on the largest amount of public space needed by any one ROM and sets the value of PAGE accordingly. This ensures that the ROMs can all work together without overwriting each other's private workspace but minimises the total amount of workspace by defining a public 'scratch-pad' area.

Command lines

The other very important feature of software expansion is the command line structure. Any command which is prefixed by an asterisk is called a command

line and is 'offered' to each of the language ROMs in turn to see if they recognise it. If they do, then they will execute it, but if it is not recognised by any of the language ROMs it will be passed on to the service ROMs — graphics packages, voice synthesiser, user EPROMs, etc, and if it is not on their list of commands it is finally passed to the current file system, disk or net, where, if a file of that name exists, it will be loaded and executed.

ROM cartridges

Another form of expansion which has been provided is the strange-looking hole at the left-hand side of the keyboard. This is not to provide extra cooling but to allow you to plug in ROM cartridges — rather like the Atari games cartridges. These could contain professionally-produced applications programs which, as a matter of interest, will be extremely difficult to copy as they could only be RUN and not LOADED. This will be very useful in situations where the user is to be a complete computer novice. Also they could be used to provide an alternative character set or to give extra vocabulary to the voice synthesiser.

Although I have spoken of these applications of the ROM extension as alternatives, it should be noted that you can in fact have up to 16 ROMs all piggy-backed onto the same connector — that is to say electrically piggy-backed, not piled up on top of each other! So, when a command line is encountered which is not recognised by any of the language ROMs, it will be passed on to the ROMs within the cartridge to check whether each in turn might recognise it.

Machine operating system

It is the use of a very extensive (16k) machine operating system which makes it so easy to change high-level interpreters. What this means is that the sort of things you need to do in any language, such as writing to the screen, reading and writing to cassette, disk, serial I/O, printers, etc, are all provided as firmware subroutines. Many of these routines are vectored so that if you want to intercept them you can redirect them to some code you have written by changing the appropriate vector. Also it means that changing filing systems from cassette to disk or net is just a matter of changing the vectors.

Many of the firmware routines have been provided with expandability. If you look at the VDU calls especially, you will see that many of them are followed by strings of zeros, 'to allow for future expansion'. For example, to change logical colour 1 to actual colour 6 you use 'VDU 19,1,6,0,0,0', the last three zeros being redundant to the call. Similarly, the so-called 'advanced graphics call', VDU23, 0 has to have a total of 10 bytes in it. The third byte is the register within the 6845 CRT controller chip and the fourth is the data

that you want to put in it. Then you need to follow it with six zeros. That represents a lot of future expansion!

Incidentally, if you want to 'see' the internal workings of the machine, try this:

MODE 4 (or any other two colour mode).
VDU19,0,4,0,0,0 (change background colour)

VDU23;12;0;0;0 (use zero page upwards as video RAM).

You will then see what an 'interrupt driven machine' looks like.

Extension bus

I have already mentioned the 1 MHz extension bus with reference to memory expansion, but there is much more which can be hung on this bus than just 64k of paged addresses. First of all you could use some of the 64k addresses for memory mapped I/O — such as the 6522 versatile interface adaptor, as is used for the printer and user ports on the basic machine — and you could also address a number of ADC and DAC devices such as the ZN427 and ZN428 which, having tristate buffers, can be put directly onto the data bus. This would then make complex data acquisition systems a distinct possibility. You could also make use of these addresses for your own machine code routines by storing them in EPROM. Acorn is already in the process of producing a suitable programmer for the BBC micro. The list of applications of the 1 MHz bus is endless, limited only by your imagination.

Paged addressing only uses addresses &FCFF to &FDFF, so there is almost the whole of page &FC00 to be accounted for. The idea is that this should be used for memory-mapped devices that only have a small memory requirement. As you can see from the system plan, it is this bus onto which the Teletext and Prestel acquisition units are connected. Here are the preliminary allocations which Acorn is suggesting:

FC00 — FC0F Test hardware
FC10 — FC13 Teletext
FC14 — FC1F Prestel
FC20 — FC7F Not yet allocated
FC80 — FC8F Test hardware
FC90 — FCBF Not yet allocated
FCC0 — FCFE User Applications
FCFF Paging register for 64k paged addresses

FD00 — FDFF Access to paged memory

As you will also see from the system plan, the bus will support Eurocards and there are already a number of these available from Acorn, originally intended for the Systems 3, 4, and 5 but equally applicable to the BBC system. You will, however, need some sort of buffered back-plane if you want to use more than one card — again Acorn is busy preparing one for production at the moment.

The actual Eurocards currently available include a 'universal' interface for digital I/O including 6522 and 8255 parallel I/O chips and a 6850 for serial I/O. Then there's a laboratory interface which has 16 I/O lines, optically buffered with an output drive capability of 3 amps at up to 48 volts, and an analogue interface with two 12-bit DACs and an eight-channel, 12-bit ADC with a conversion time of 100 µs per channel, all controlled by a 6522 VIA. There's also a 32k dynamic RAM card

— but don't forget that it is only accessible in the paged mode and then only at 1 MHz. So if it's extra memory capacity you need, then you should go for a second processor board.

Econet

Another very powerful expansion facility is the Acorn Econet. This will be particularly useful in schools and colleges but could also be put to good use in business applications. It is a simple communication system using only a cheap four-wire telephone type cable to link together up to 254 computer stations which can be Atoms, Systems 3, 4 or 5, or BBC Computers. Apart from allowing any machine to communicate with any other machine, the idea is that you should be able to use it to allow a number of machines to share the use of expensive peripherals such as disks or printers. One of the systems has to be dedicated as a 'file server' and another as a 'printer server', though either of these systems can revert immediately to being ordinary systems if disks or printer are not required. If you divide out the cost of the disks, printer and server systems among the number of other systems which have immediate access to them, its cost effectiveness very soon becomes apparent.

Intelligent terminal

Another exciting possibility for schools and colleges is to use the BBC Computer as a terminal to a mini or mainframe computer. This is made possible by the RS423 interface and the programmable serial processor (another ULA!) which provide bi-directional data flow with control through 'ready to send' and 'clear to send' lines. The RS423 standard is compatible with RS232, but has superior drive capabilities. Since the serial processor is programmable, it is a simple matter to select the baud rates for transmit and receive and these can be any of the standard rates up to 9600 baud — at a push it will even go up to 19,200 baud though Acorn doesn't guarantee its operation at this speed. It is worth noting that the transmit and receive baud rates are set separately so that split rates can be used, ie, when the user transmits, since it comes from a keyboard, its speed is limited and you would therefore use a relatively slow transmission rate, but the big computer's replies can be relatively fast, depending on the length of cable and/or the limitations of any modem.

What is much more exciting is the possibility of using the BBC micro as an intelligent colour graphics terminal. It would seem on the face of it to be a relatively simple piece of programming to allow the mini or mainframe to control the BBC's colour graphics. The idea of a room full of BBC machines linked on an Econet to common disks and printer which could then link straight into a mainframe would be extremely attractive, giving you the best of both worlds — the processing power and memory capabilities of the mainframe plus the independence of the micros. And certainly if we are talking in terms of cost effectiveness for an educational establishment, there can be nothing currently available to touch this system.

I still have not mentioned the on-board A-to-D converters which could be

used for games applications or scientific measurement, or the light pen input which has a variety of applications. Then there is the user I/O which employs a 6522 versatile interface adaptor and can be used for a very wide range of control applications. So, even without any major expansion, the machine has quite a fair bit of control capability.

Conclusions

I'm sure there will be various criticisms of this new system, but it seems to me that it has the potential for a very wide range of applications. I think that the area where it will be most heavily used will be education, especially with the Econet system and the possibility of use as dumb or intelligent terminals, but I can also see the system getting quite well used in business applications, especially with the Z80 second processor running CP/M — though I do think it

will need a better quality keyboard in this area.

The other area in which it may well be quite extensively used is in scientific and simple industrial control. It represents, in terms of hardware, a cheap solution to many simple control and monitoring problems and a number of companies are already considering its use in terms of IEEE 488 bus applications.

All in all, it seems to me that whether your interests lie in business, educational, scientific, control or games applications, this system provides a possibility for expansion which is unparalleled in any other machine available at present — although where one leads, others will follow. Judging by the current sales figures, I don't believe that even those recalcitrant ULAs will stop this system becoming the best-selling computer system in Britain and maybe even in one or two other countries.

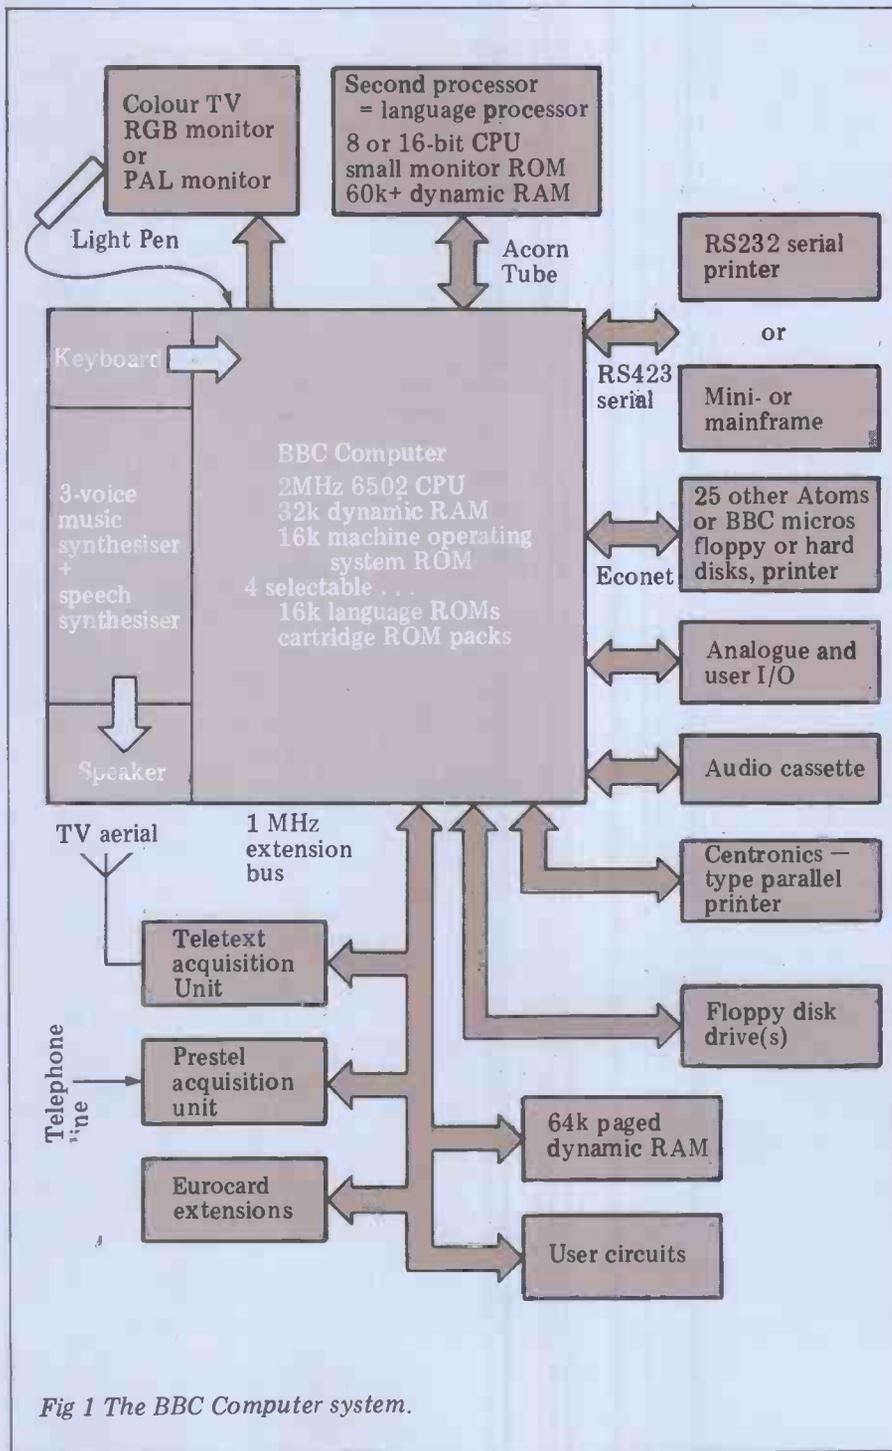

Fig 1 The BBC Computer system.

If you've been struggling to get sound out of your BBC micro, Mark Holmes can help you.

SOUND ADVICE

Many users of the BBC Computer will have been very disappointed to discover the lack of information on the control of the sound generator in the User's Guide. Those of us hoping to learn something from the noise producing programs on the 'Welcome' cassette became more dismayed on discovering that these noises had been created using a short machine code routine accessing the memory-mapped SN76489 directly. The sound generator provides four independent channels, three of which produce independently programmable square waves and the fourth which can be programmed to produce either grey noise or a pulse wave.

The power of the sound generator system lies not in the choice of chip, which is not the most exotic available, but in the software which handles its control. Once a sound is programmed and initiated, the microprocessor is returned to the user. Updating the sound is achieved by interrupting the processor when required, enabling complex sounds to be generated requiring extensive control with the minimum of awareness from the programmer.

There are two commands available from Basic for the control of the generator: SOUND and ENVELOPE. The SOUND command causes a sound request to be added to the sound buffer and thus queued for output. The sound buffer can store up to four SOUNDS for each channel, not including the one currently executing. SOUND is described by one 16-bit parameter and three single byte parameters. The ENVELOPE command is described by 14 single byte parameters defining frequency (pitch) and amplitude (volume) envelopes for a sound. An envelope is a description of how a sound varies in note and volume; a full appreciation of how the shape of the envelope affects the sound produced can only really be gained through experimentation and the process of trial and error.

The SOUND command can be used either to produce a sound of constant frequency and amplitude or to produce a sound predefined by the use

of the ENVELOPE command — see Figure 1 which produces a long, low-pitched note.

The duration can be in the range of 0-255; a value of 255 gives a note without end and durations of less than 255 define the duration of the note in 50ms units.

The pitch parameter describes the initial frequency of the sound within a range of 0 to 255. The available preset frequencies are based on quarter semitones, I believe.

The amplitude or envelope number can be used either to describe the amplitude of a note of constant pitch and amplitude if it is a number in the range -16 to -1, or to identify a predefined envelope in the range 0 to 15.

The channel parameter is a two-byte value passing four separate items of information. The least significant four bits (or hex digit) describe the destination channel for the sound. As 0 is a reasonable default value for the other sub-parameters (these being the other three hex digits) this parameter will mostly be passed as a single decimal digit in the range 0-3, corresponding to the channel number. The most significant next digit can be a 0 or a 1: if it's 1 the sound buffer will be flushed and the sound passed immediately to the generator, otherwise it will be queued.

The second most significant digit enables the synchronisation of up to four sounds to be played as a chord. The value, between 1 and 3, describes the number of other sounds having the same value for this parameter required before the chord can be sounded, eg:

```
SOUND &0201, -14, 150, 20
SOUND &0202, -12, 100, 40
SOUND &0203, -10, 50, 60
```

The third most significant digit may be 0 or 1. This parameter allows a 'dummy' sound to be sent to the generator which has no effect other than to allow the previous sound to be heard when it might otherwise be truncated.

Figure 2 shows the form which the ENVELOPE command takes. The first parameter is an index in the range 0 to 15 which identifies the envelope, as used for the SOUND command. The second parameter, in the range 1-127, describes the time intervals at which the envelope is updated in units of 10ms. This will normally be 1, allowing rapid changes in the envelope, but longer,

more extended sounds are possible by using greater values for this parameter. If the top bit of this parameter is set, the frequency envelope will only be run through once even if the end of the frequency envelope is reached before the amplitude or duration terminates the sound; otherwise, the sound will cycle through the frequency envelope, restarting as the end is reached.

For example, try:

```
ENVELOPE 1, 1, 3, -3, 3, 20, 20, 20,
127, 0, -127, -127, 126, 0
SOUND 1, 1, 30, 100
```

```
or
ENVELOPE 1, 129, 3, -3, 3, 20, 20,
20, 127, 0, -127, -127, 126, 0
SOUND 1, 1, 30, 100
```

The frequency envelope is separated into three segments for envelope definition. Each segment is described by a pair of parameters which define the segment in terms of a rate of change of frequency and a number of time units for which this rate holds.

fr1, fr2 and fr3 describe the rate at which the frequency changes during a given segment. This rate is described by a value between -127 and 127, where a negative value describes a decreasing frequency and a positive value an increasing frequency.

ft1, ft2 and ft3 are values in the range of 0 to 255 and describe the number of timebase units during which the rate of change is applied — see Figures 3 and 4. If a large rate of change is used over a long period, the sound will cycle through the range of frequencies several times, creating some interesting effects.

The amplitude envelope follows the pattern used by some other sound generating devices, that is the ADSR system (attack, decay, sustain, release). The first four parameters of the amplitude section correspond to these elements and the final two parameters describe the amplitude levels at points within the envelope. The attack parameter describes the rate at which the amplitude rises to level 1 (range 1 to 127). The decay parameter, a slight misnomer, can describe a rate of rise or fall to the second amplitude level (range -127 to 127). The third amplitude parameter, sustain, describes the rate of fall from the second level to the end of the sound as defined by the duration in the SOUND command. The sustain parameter, like the release parameter, describes the rate of fall of the sound after the 'official' end of the sound. This part may be truncated by a following sound in the same channel and so use of a dummy sound may be called for — see Figure 5.

If the value of decay is 0, the sound will continue at an amplitude set by level 1 until the end of the sound. If the value of sustain is 0 then the sound will continue at level 2. If the value of the

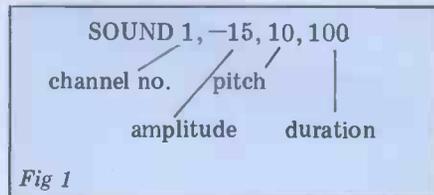

Fig 1

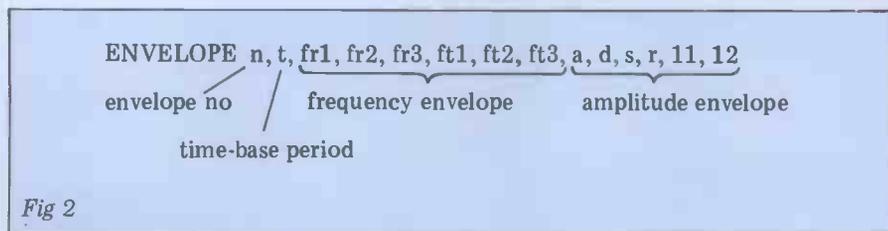

Fig 2

release parameter is 0, the pitch and the amplitude reached at the end of the duration will be continued *ad infinitum*.

Channel 0, the 'noise' channel, is controlled principally via the pitch parameter of the sound command. If bit 2 of this parameter is set then the channel will produce grey noise, otherwise it will produce a pulse wave. Bits 0 and 1 control the frequency of a pulse wave. If both bits are set then frequency will be linked to the frequency of channel 1, eg:

```
10 ENVELOPE 1, 1, -1, 1, -1, 40, 40,
   40, 127, 0, 0, 0, 20, 0
20 SOUND 1, 1, 30, 40
30 TIME=0:REPEAT UNTIL TIME>500
40 FOR I=0 TO 7
50 SOUND 0, -15, I, 100
60 PRINT I
70 NEXT I
```

This short program demonstrates what sounds can be made via the noise channel. The FOR...NEXT loop index used to provide the different value for the 'pitch' parameter of SOUND is printed out as each SOUND is placed in the sound buffer. The first five values are rapidly printed as the sound buffer fills up, subsequent numbers are printed more slowly as vacancies occur in the

buffer on the termination of the earlier sounds. There is no synchrony between the printing of the numbers and the sounds emitted.

The actual duration of a generated sound will depend on either the duration as defined in the SOUND command or the description of the amplitude envelope in the ENVELOPE command that is the sound will end if the amplitude reaches 0. The value of the release parameter will have no effect if this occurs.

To achieve maximum effect from the sound generator, I recommend you use an external speaker. A 3-4in speaker placed in a suitable box or tube for resonance, produces a considerable increase in volume and improvement in tone. A 3.5mm jack-socket enables the connection of the external speaker, hi-fi amplifier or an earphone. The latter may be advisable if the computer shares the living room with other members of the family.

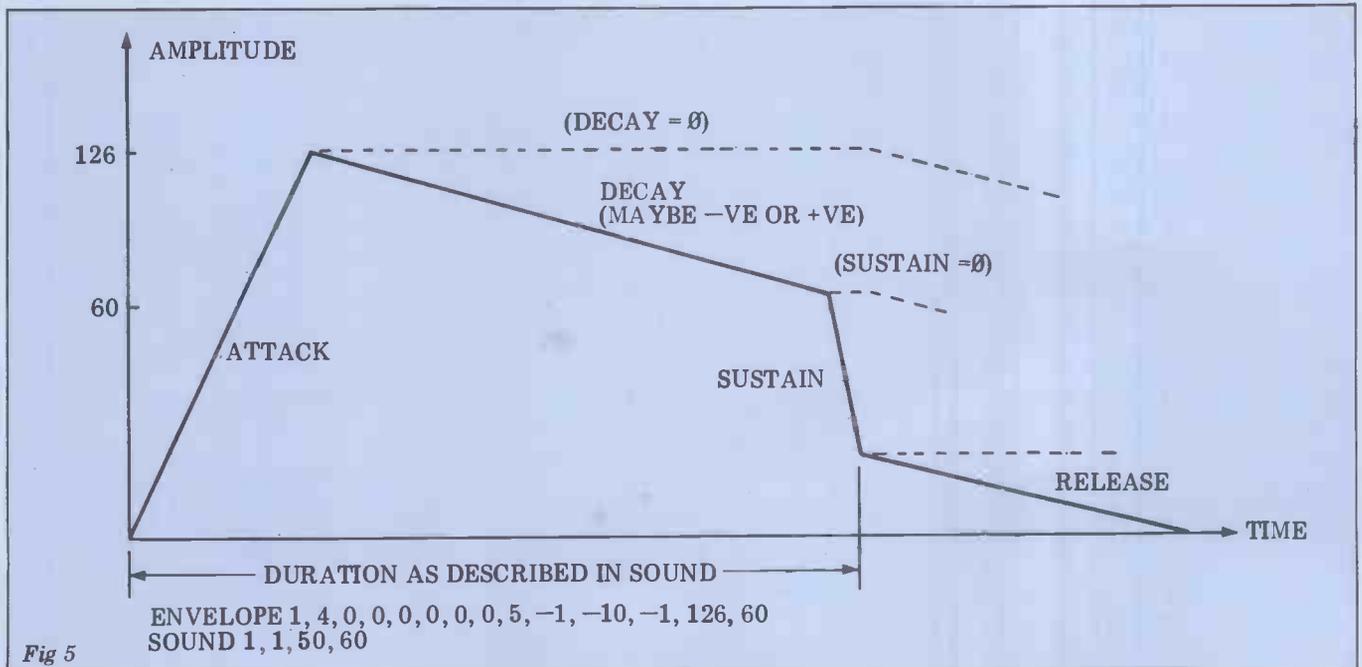

Fig 5

A Guide to good British Software

"Lesson No. 1 What is DMS?"

DMS is Britain's best selling records management program for micro computers. You can think of DMS as a computerised super-efficient filing cabinet. Nearly 3000 companies, colleges, hospitals and other organisations use DMS to increase efficiency.

"What machines does it run on?"

It runs on all Commodore Machines, plus virtually any micro with an operating system known as CP/M or MP/M. This includes the ACT SIRIUS, the NEC PC 8000, the Rank Xerox 820 or 860, Superbrains, Apples with CP/M cards, the ICL Personal Computer. The Rair Black Box, the Sharp MZ 80B, the LSI M2 and M3, and the Caltext, and all machines with standard 8" disks.

"Who uses it?"

It's designed for use by managers, secretaries and clerical staff. They use it to make life easier by storing their personnel records, their student or patient records, their stock records, library lists, contract records, customer and client records, parts files, property and policy records etc etc.

"How do I use it?"

All instructions are in everyday conversational English, so you need never have used a computer before. Just tell DMS what information you need to store, then type your records on to disk. Once they are on there you really start to reap the benefits. For instance DMS will find an individual records for you to check, amend or print, or it will find all those which meet various parameters handling batches of record faster than you could imagine possible. It can sort them into any order needed to print lists, or transfer the information into your wordprocessor (eg Wordstar, Spellbinder, Wordcraft, Wordpro and User Written Software etc) to do selective mailing. It even gives a little extra help by printing labels to match. Or it can do some clever calculations. Or print reports, write letters, to your own special layouts. Every facility is designed to save you time, remove those tedious clerical tasks and make your organisation more efficient. More than anything, DMS allows you to have all your information at your fingertips as soon as you want it.

"How much does it cost?"

Work on the Commodore version costing around £290, and the CP/M versions from £400. Staff can be trained on regular courses run at our training centre, and both versions now have their own internal mini word processing system.

"What about Lesson No. 2?"

ANATOMY OF
THE BBC MICRO

MAPPING OUT THE BEEBON

One of the useful features built into the BBC Computer is the built-in assembler. This facilitates the writing of very powerful machine-code programs, but the process can be made easier still if existing firmware routines can be called. To make this possible, I have compiled a memory map for the machine.

The map is derived from one of the first released machines, which the Department of Industry used for prizes in its MAP schools competition. I would like to thank Portsmouth Grammar School's Computing Department, and in particular the Director of Computing, Mr Roy Thornton, for allowing me to use their BBC micro for this map.

The machine, originally a Model A but upgraded to allow it to talk to a printer, had the language installed in ROM, but the Machine Operating System (MOS) was only in EPROM. Since this gave 'No filing system' errors with *DISK/C and *NET without checking the presence of the required hardware and since there is no room to add these functions, Acorn must be going to substantially update the ROM from the version I studied. For this reason, I am giving here only the memory map of the Basic used areas.

Throughout the map I have used hexadecimal as the numbering system for addresses. To be consistent with the BBC usage, I am using '&' to represent hexadecimal.

What the map covers

The memory map is in several parts. The page usage section summarises the use of each page of memory (a 'page' is a block of 256 bytes; &X00 to &XFF — this would be Page X).

The action addresses section lists all the Basic keywords, with the token that represents each, and their action addresses (where applicable). Keywords with tokens less than &8F do not have their action addresses stored in a table and neither are they jumped to from the standard despatching routine. Instead, they are dealt with as they are encountered — ie, the procedure is along the lines of 'get byte from Basic text. Is it &84? If so, jump to &9B14, else carry on'. Because of this, they may be dealt with in more than one place — the location I have given is the principal one. A token of &8D precedes a line number in text. The line number is stored neither in ASCII nor hex but in a complicated manipulation of the hex of the number. The reason for this is not

readily apparent — I would be grateful if anyone could enlighten me on this subject.

The zero page locations section outlines the use made by the language of zero page. Not every use of each location is given, otherwise locations like &37,38 would need about a page each, but I have tried to include all the important ones. Much of zero page is not used. In the Model A machine I was using, none of &50 — 9F was used, although the user guide only guarantees that &70 — 8F is reserved for the user.

The ROM locations section gives the locations of various routines in the Basic ROM. Where applicable, I have given the entry points to the routines — they may well go lower in memory than the location specified, as well as higher. The map is not continuous — there are some routines between those given which I have not stated, either because they are fragments which on their own perform no function or because they are unimportant.

Basic interpreter operation

The basic operation of the interpreter is very much to Microsoft standards, although there are several striking differences compared to something like PET Basic. The most obvious is the existence of a Basic stack, located at the top of Basic memory (ie, just below HIMEM) which moves downwards. It is used as a temporary store for anything from variable references (when evaluating expressions) to the entire used part of the processor stack (when performing PROC, etc). The Basic stack pointer is a two-byte pointer in memory locations &04,05.

Another obvious difference is that there is no routine in the BBC micro equivalent to CHARGET in the PET. This means that, as far as I can see, the only way of adding extra commands to the Basic is to intercept the error handling routine and to test for a new command when a syntax error is encountered. The error handling routine can be intercepted because of one of the peculiarities of the BBC micro — when an error condition is encountered, the interpreter executes a 6502 BRK instruction located immediately before the error message. The BRK handling routine, after restoring the stack and pointing &FD,FE to the location of the BRK instructions, performs a JMP (&0202) which normally jumps

to &B433 which performs ON ERROR. Note that if no ON ERROR is provided by the user, the interpreter still needs a Basic error handling program to execute and for this reason &B433 — &B460 contains the text of the following Basic program:

```
REPORT: IF ERL<>0 PRINT  
"at line"; ERL;  
PRINT: END
```

It is conceivably possible, therefore, that the contents of &0202,0203 could be altered to point to a routine which would check for additional commands and afterwards re-enter execution of the Basic. It would, however, be much more difficult than intercepting CHARGET on the PET. This use of the BRK vector would make it difficult to include a monitor in any later versions of the ROM.

The writer(s) of the interpreter seem to have a strong dislike for indexed loops. This means that the firmware is slightly faster, but much larger, than the equivalent 'indexed' written version.

The overall form of the interpreter could be described as 'well structured'. For instance, the main 'evaluate expression' subroutine, if entered at the highest possible level (which is one above the normal entry point of &9B03), proceeds as follows:

```
928C JSR &9B03  
9B03 JSR &9B4C  
9B4C JSR &9B76  
9B76 JSR &9C1D  
9C1D JSR &9DAE  
9DAE JSR &9DFD  
9DFD JSR &AE1B  
AE1B LDY &1B  
etc.
```

This nest of subroutines can be entered at any level, depending on the range of keywords allowable in the expression to be evaluated. Examination of these stages in this nest of subroutines also clearly shows the operator hierarchy.

The arithmetic in the interpreter contains several nice features: when rounding, it performs the binary equivalent of rounding to the odd last digit in a number when the next least significant one is 5, eg 33.15 rounds to 33.1 while 33.25 rounds to 33.3. Also, square roots are calculated by using Newton's successive approximation method and performing only five iterations after the initial approximation.

Most arithmetical routines test to see if integer arithmetic can be used, and use it wherever possible. This is another of the speedy features of BBC Basic.

MAPPING OUT THE BEEBON

For example, using one of A% to Z% as the control variable in a FOR loop is about three times as fast as using a floating point variable. Also,
 FOR I% = 1 TO 10000 :
 A% = B% + C% : NEXT
 is twice as fast as
 FOR I = 1 TO 10000 :
 A = B + C : NEXT

The method of storing variables is very different to that used in, for example, the PET. Separate regions are not allocated for numeric, string and array variables, but they are all put one after another from TOP (the end of the Basic program) upwards. As well as this, the 'system integer variables', ie, @% to Z%, are stored from &0400 onwards @ % at 0400, A% at 0404, B% at 0408, etc) and the memory from &0480 onwards is used to keep a catalogue of the variables:

0482,3 points to first variable starting with A
 0484,5 points to first variable starting with B
 04C2,3 points to first variable starting with a
 04F4,5 points to first variable starting with z
 04F6,7 points to first definition of a FN
 04F8,9 points to first definition of a PROC

Within the variable storage area, all variables are stored according to the same general format, as shown in Figure 1. The top of the variable storage is pointed to by &02, 03, which I have called VARTOP.

The program is stored according to the format in Figure 2.

One of the few things I have found that could be called a mistake in Basic is to do with the allocation of strings; if the following program line is encountered:
 100 A\$ = "ABCDEFGH"

then ABCDEFGH is transferred into variable storage space.

This also occurs when data is read from DATA statements. This means that, for example, allocating a 100 byte-long value to a string from data statements actually uses 200 bytes of memory. You might not consider this too much of a problem, but with a Model A in Mode 4 with, say, a 600-byte program, you only have 2k of RAM available for variables. If you wanted most of your variables to be strings stored in data statements, you would then find you had a meagre 1k at your disposal, not the 2k you might expect.

This problem cannot be avoided with the method of manipulating strings used in the BBC micro, but a slightly different method would allow the string pointer to point into the Basic program text.

I have come across several interesting facets of the language: TAB (x,y) does not skip over characters on the screen, but under certain circumstances erases them with spaces; EVAL (" ") gives 'no such variables' rather than the 0 you might expect; INPUT "ENTER X", X, "ENTER Y", Y is a valid syntax; the SOUND command has the following syntax: SOUND OSC, CHANNEL, FREQ, DUR, where OSC is the voice number 0-3 (0=white noise generator), CHANNEL specifies the envelope to be used (if it is negative, the 'default envelope' is used with a volume equal to the absolute number given with -15 = max volume), FREQ is 0 - 255 and DUR is 0 - 254 (255 means 'don't stop'); ENVELOPE is followed by 14 parameters, which are signed bytes (ie, 255 = -1): ENVELOPE CHANNEL, P2, P3, P4, P5, P6, P7, P8, P9, P10, P11, P12, P13, VOLUME. It is not easy to describe what all of these do, but some of the simpler ones are shown in Figure 3. With the white noise generator, there are eight basic sounds selected by frequencies 0 - 7. Programmers writing rifle-range type games may be interested in this sound:
 ENVELOPE 1,0,0,0,0,0,0,0,1,0,254,100,128
 SOUND 0,1,5,1

See page 88 for further details of SOUND and ENVELOPE.

Useful routines

Figure 4 outlines some of the most useful routines. Many of the mathematical functions (eg, SQR, LN, etc) can be accessed from machine code by calling an address three higher than the action address, but this will not work for all of them (eg, LOG).

If you want to write hybrid Basic/assembler programs, as most machine-code programmers will, then variables can be transferred into and out of machine code using the very powerful 'CALL' command; this is best explained with an example. Suppose you want to access from machine code the values of the variables A, B% and C\$, and the machine code starts, very imaginatively, with the label 'BEGIN'. Then the Basic statement would be
 CALL BEGIN,A,B%,C\$
 This would set up a parameter block at &0600 onwards which would contain
 &0600 03 05 AB 0F 04 BC 0F 81 CD 0F.

This shows that there are three parameters (from &0600): the first is

LO	HI	Name of Variable*	00	VALUE
----	----	-------------------	----	-------

Address of next variable
 *includes \$, %, etc, where applicable, but does not include first letter of name

The format of the value depends on the type of variable:

Floating point

E	M ₅	M	M	M
MSB		LSB		

Where bit 7 of the MSB of the mantissa is the sign bit

Integer

M	M	M	M
LSB		MSB	

String

LO	HI	L ₁	L ₂
----	----	----------------	----------------

Pointer to location of text

L1 is the space (in bytes) allocated for the string.

L2 is the length of the string.

L2 may well be less than L1, if for example you perform A\$ = "0123456789" then AS = "01234", L2 will be 05 but L1 will be 0A.

LO	HI	LO	HI	LO	HI	Value 0, 0	Value 0, 1	Value N, N
----	----	----	----	----	----	------------	------------	------------

No of bytes in array header
 No of elements in 0th dimension
 No of elements in Nth dimension
 Each formatted as above

Fig 1 Variable storage

&0E00	OD	HI	LO	Text of Line	OD	Next Line
-------	----	----	----	--------------	----	-----------

Line # NB. HI-LO
 Length of line

The last line in the program has the format

HI	LO	TEXT	OD	FF
----	----	------	----	----

Fig 2 Program storage

floating point (&0601 = 05) and is located at 0FAB; the second is integer (&0604 = 04) and is located at 0FBC; the third is a string variable (&0607 = &81) and is located at 0FCD.

For a full list of what type of variable is represented by which number, see the user guide description of CALL.

The 'value' (in the same sense as that used in the description of variable storage, above) of each variable is stored starting at the location given. Note that for a string this is the 'String Information Block' as outlined above.

When a variable needs to be manipulated, it must first be unpacked from memory. This is done by storing its type in &2C, and its address (ie, that given in the parameter block, even for strings) in &2A,B. Then JSR &B35B. Integer variables will be unpacked in IAC, floating point into FAC#1 and string variables into the string buffer. Note that this is on top of the CALL parameter block, so if you want to access the parameters after string manipulation, it would probably be best to transfer the parameter block (from &0600 to &0600+ (06FF) inclusive) into Page 13 (ie, &0D00 onwards) and use the latter as parameter block. Of course, this latter region will be used for other things if you have disks!

Values can be reallocated to variables as follows: for a numeric variable, store the type of the variable in &39, and the type of result you have obtained in &27 (ie, saying whether it is in FAC#1 or IAC), and point to the value of the variable in &37,38. Then JSR &B4E3. For a string variable, store the value of the string in &0600 onwards, its length in &36 and point to the variable's 'string information block' with &2A,2B. Then JSR &8BD3. This will work when the length of the string is now longer than the space originally allocated, and will then allocate a new space.

Other points

Graphics can be accessed from machine code using the VDU codes via OSWRCH &FFEE or &FFE3). For further details see Chapter 7 of the user guide. POINT cannot be performed via OSWRCH and must be done as follows: store the coordinates of the point in the order Xlo, Xhi, Ylo, Yhi in consecutive memory locations. Make XR, YR, lo-hi point to the first of these, load the accumulator immediately with 9 and JSR &FFF1. The location immediately after the four given will contain the result — if it is negative, the point is off the graphics screen.

Many of the '*' commands are described in the *User Guide* but some are not, or only partially. These include:

*DEBUG: This does nothing at all on the version I studied.

*MOTOR: *MOTOR 0 turns the cassette motor off; *MOTOR 1 turns the cassette motor on.

*NOTAPE: this turns off the tape filing system. Attempting to use the tape before *TAPE or TAPE3 will give 'No filing system'.

*SPOOL: *SPOOL "FILENAME" performs the reverse of EXEC, causing all output to be copied to the tape. This is reversed (ie, default o/p restored and file closed) by *SPOOL with no filename.

Many of the *FX commands are out-

Parameter	White Noise Generator (OSC = 0)	Tone Generator (OSC 1-3)
P2	Speed of Execution	Delay on Attack
P3	Basic Attack 'Melody'	Frequency sweep speed (Fss) on Attack
P4	Basic Sustain 'Melody'	Fss on sustain
P5	Basic Decay 'Melody'	Fss on Decay
P6-8	Modifiers of P3 -5 respectively	
P10	Attack Speed	
P11	Sustain parameter	
P12	Decay Speed (use 128 - 255)	
P13	Start volume on Attack (which will also affect the speed at which sound will repeat)	

Fig 3 Envelope parameters

Address (&)	Function	Set Up	Output
9834	Test escape key	None	If escape not pressed, has no effect. Else performs same function as Basic would.
B571	O/P char in AC updating COUNT	Char in AC	Uses AC only
AE9C	Evaluate ASCII for Hex and store result in IAC	(&19), &1B points to the start of the text	In IAC. AC=&40 on exit.
BC17	Input string from keyboard into string buffer at &0600	None	&37,38 points to the start of string (at &0600) YR= no of chars in string
AC5A	Calc VAL of string in buffer	&36= Length of string eg, JSR &BC17 STY &36 JSR &AC5A will work	If result is a (small) integer then AC = &40, result in IAC else AC = &FF, result in FAC#1
AE1B	Evaluate simple expression	(&19), &1B points to start of text	As &AC5A
9ED0	Assemble ASCII string of number	If number in IAC, YR = &40 If in FAC#1, YR = &FF Decimal o/p if &15 is +ve, otherwise in Hex.	Stored in &0600 Length in &36
A691	FAC#1 = 0	None	In FAC#1
A6A4	FAC#1 = 1	None	"
A6B0	FAC#1 = 1/FAC#1	None	"
A50E	FAC#1 = FAC#1 + variable	&4B,4C points to value of variable	"
A505	FAC#1 = FAC#1 - variable	"	"
A50B	FAC#1 = variable - FAC#1	"	"
ADA0	FAC#1 = -FAC#1	None	"
A661	FAC#1 = FAC#1 * variable	&4B,4C points to value of variable	"
A6F2	FAC#1 = FAC#1 / variable	"	"
A6B8	FAC#1 = variable / FAC#1	"	"

Fig 4

lined in the user guide. Some that aren't are:

*FX0: gives firmware message ("OS EPROM 0.10").

*FX4: selects keyboard mode. *FX4 1 means that INKEY\$, GET, etc, will return ASCII values for certain control keys including cursor keys.

*FX11,x: sets delay (by x, which must be a number not a variable) before a key repeats when held down, in 100ths of a second. The default value is 50.

*FX12,y: Sets delay between key repeats, default of 7.

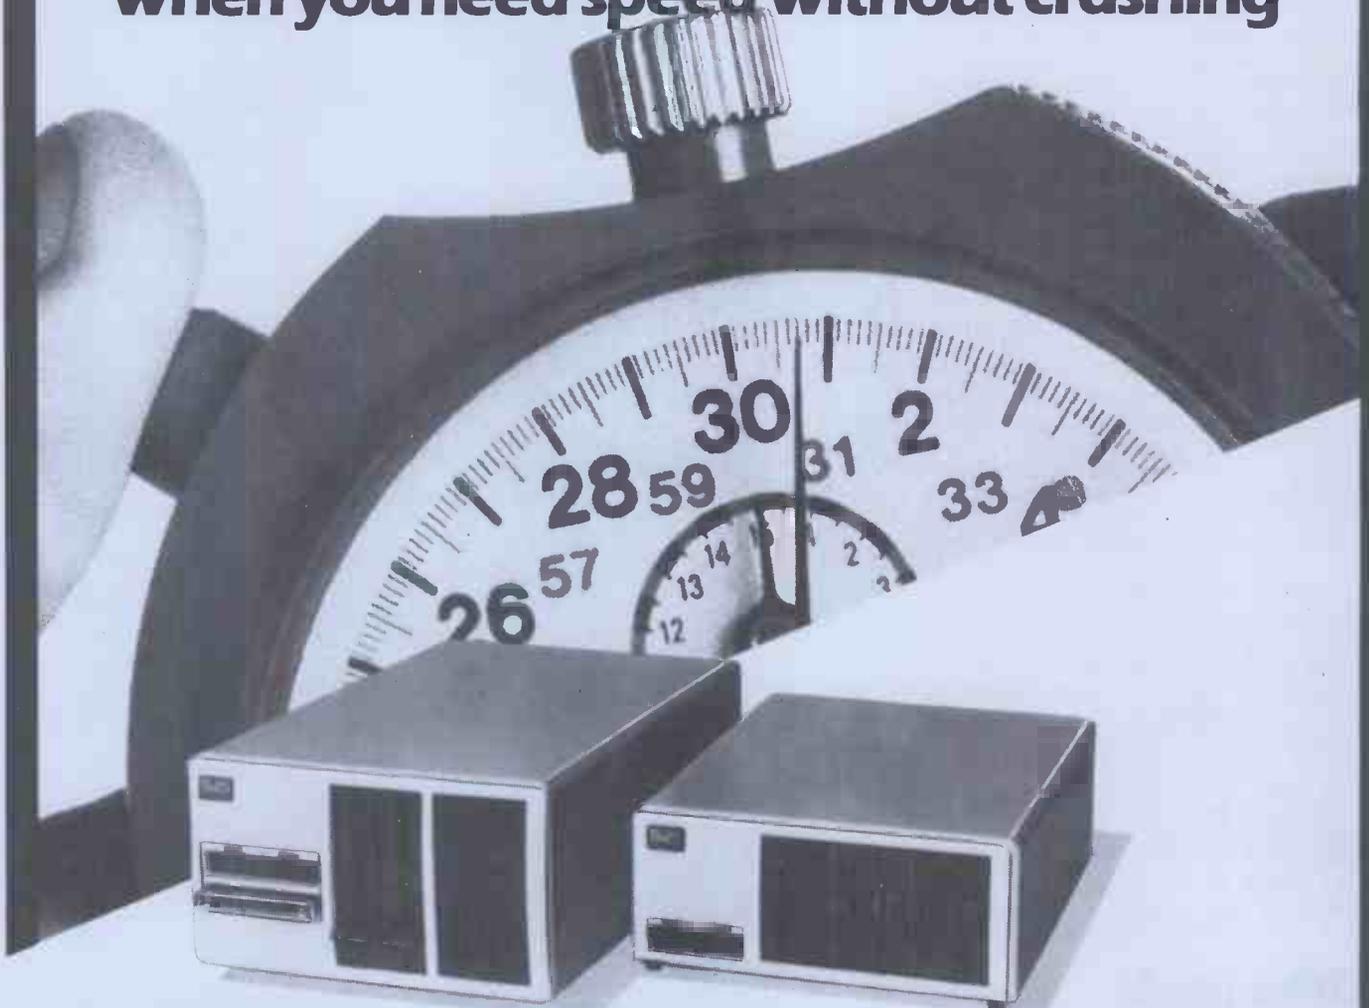

*FX15,0: Clears keyboard buffer.

*TVa,b: modifies the video display output. 'a' modifies the vertical sync position, which means that if your display has one line missing off the top of the screen, *TV255,0 will rectify this

(since 255 = -1). Similarly, to get a missing bottom line back on the screen, *TV1,0 will solve the problem. However, this will not work if the display is too tall, only if it is in the wrong place. 'b' modifies the interlace mode of the display, and is of little practical use unless you are contemplating taking pictures of the display. Note that *TV only takes place when the MODE is changed.

If you want to stop the cursor blinking annoyingly throughout your program, then !&FE00 = &10200A should solve the problem. The cursor can be retrieved either by moving the copy cursor, or with !&FE00 = &10720A in mode 7, or !&FE00 = &10670A in other modes.

TURBOCHARGED PERFORMANCE: when you need speed without crashing

Start a stopwatch on our new Turbocharged Series 5000SX and Series 8000SX microsystems and watch them run rings around other systems.

Built to the highest standard of reliability, they support a mixture of 5In and 8In floppy and Winchester drives with tape back-up units. In other words, a storage capability extending from 400KB to 130MB.

But what makes the Series 5000SX and Series 8000SX really pull away from the rest of the field is their unique and exceptionally powerful disk operating system – TURBOdos. Written specifically for the Z80, TURBOdos loads programs up to six times quicker than CP/M*. And processes files up to five times faster.

TURBOdos gives the new systems many of the features available only on minicomputers. In multi-user mode, it allows multi-processor network users to share mass storage, printers and other peripherals. And its advanced

failure detection and recovery facility makes a TURBOdos system virtually crash-proof! Other features include:

- Full CP/M compatibility even in multi-user/network systems.
- Up to 30% more data can be stored on each floppy disk, compared to CP/M.
- Support for up to 2000MB of hard disk storage.
- Random access to files up to 67MB.
- Up to 16 users supported in multi-processor mode.
- Automatic concurrent print-spooling support for up to 16 printers.
- File and record-locking facilities.
- Complete diagnostic self-test is performed at every start-up.
- Read after write verification of all disk update operations.
- When errors are detected, operator is given clear diagnostic messages and a variety of recovery options.

- User-defined program auto-load at cold or warm start.
- Disks can be changed at any time without warm start delays.
- Command files may be nested to any depth.
- User programs may activate command files for execution.
- Communications channel interface.
- Real-time clock support.
- Systems are easy to configure due to modular construction.

THE GALAXY 1 COMPUTER

The cost effective solution to your computer needs for only **£1,450***

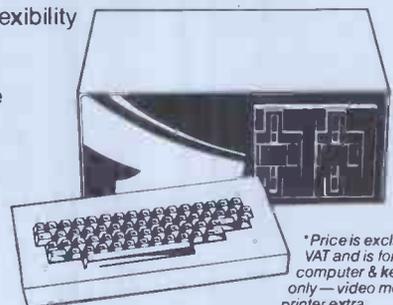

The Galaxy 1 desk top computer system can be used in education, small business applications, word processing, stock control and a host of other environments. Our choice of CP/M as the operating system means that our customers can select a suitable application package from the widest possible range.

However, unlike our competitors, we supply not only the hardware but all the essential system software needed to start using the Galaxy 1 as soon as it is installed. We have adopted COMAL-80 as our standard language. This structured basic is rapidly gaining widespread acceptance and popularity especially in the education market, offering much greater flexibility and ease of use than existing Basics. We also supply a very powerful Z80 assembler/editor called GEM ZAP with GEM PEN, a compact but very powerful word processing package. The system software suite is completed with GEM DEBUG, a useful machine code program de-bugging utility.

Modular design means reliability and ease of maintenance. Unlike many other manufacturers Gemini offer a full one year warranty (except Disc heads which are guaranteed for 3 months). Our distributors carry a full range of replacement boards thereby facilitating a quick, efficient and cost effective back up customer service.

Features include:

- Twin Z80 Processors
- 64K Dynamic RAM
- 800 K Disc Based Storage
- 80x25 Screen Format
- Dual Printer Interfaces
- Modular Design
- CP/M 2.2 Operating system
- COMAL-80 - Structured Basic
- Z80 Editor/Assembler
- Text Editor & Formatter
- Program De-Bugging Utility

**Price is exclusive of VAT and is for computer & keyboard only - video monitor & printer extra.*

BRITISH MADE

Telephone Amersham 28321 for the name and address of your nearest distributor.
* Dealer enquiries invited.

Gemini Microcomputers Oakfield Corner, Sycamore Road, Amersham, Bucks HP6 5EQ.

"There's no such thing as bad software!"

The trouble is — sometimes it doesn't meet your particular needs.

— **And** it doesn't *always* live up to all of the advertising claims made for it.

— **And** often the write-ups you read about it (even in the best magazines), are just not *specific* enough.

— **And** even though your dealer *wants* to help, he's hard pushed to find the time for a full demonstration.

When it comes to purchasing software, the list of pitfalls is endless.

We have started the **Software Rental Bank** because we believe you should have the opportunity to evaluate software, on your own machine, with your own data, *before* committing yourself to a purchase.

And if you do decide to purchase — **the rental is free.**

The Software Rental Bank offers a unique range of services

- ★ Short-term rental of software packages and firmware products for 7, 14, or 28 days depending on your class of membership.
- ★ Free rental if you decide to purchase.
- ★ Access to the newest software available - a chance to simply 'taste' some of the latest and most controversial products.
- ★ A really wide range of software including most of the well-established packages available such as the "Visi" range, Micromodeller and the Wordstar range.
- ★ Speedy Service. Join the Bank and rent software by telephone or by mail. - all the items on our Software Asset Listing are held in stock.
- ★ An advisory 'hot line' in case you have difficulty with a rented package.

Our service is designed to give you all the time you need to evaluate the software packages you rent, and to find out if they suit your particular application. The Software Rental Bank takes the risk out of software purchasing.

The Software Rental Bank is operating now

The Bank is already in operation and is currently supporting the Apple II computer - including CP/M products for use with the Z80 softcard. Software for other microcomputers including the Sirius, the IBM Personal Computer and certain CP/M machines will be added to the Bank shortly.

Members will periodically receive our *Software Asset Listing* which gives details of the packages available for rental. Members are encouraged to nominate new items for addition to our stock.

Membership is open both to individuals and to organisations and can cost as little as £30 a year.

To receive our brochure phone Ruth Elks on 0908-53491 or clip the coupon below.

MAPPING OUT THE BEEBON

9839	Syntax error
9851	Move to next statement with trace output if necessary
9893	Copy pointers then evaluate expr
98D6	Do TRACE output if req
98C2	Search for ELSE & execute it
98F1	Out decimal for no in &2A,2B, lo-hi
9942	Search Basic for given line no, if not found, C=1
9B03	Evaluate expression (main entry point)
9BEF	Concatenate strings
9DFD	Evaluate expr & get non-space char into XR
9ED0	Assemble PRINT output string
9E81	Assemble hex output string for PRINT
9EB9	Assemble floating point output string
A04B	Convert AC to dec ASCII & store in string buffer
A057	Store char in string buffer, incr'ing pointers
A06C	Get f/point number from ASCII
A188	FAC#1 = FAC#1*10 (acting on mantissa only), preserving AC
A1CB	Get sign of FAC#1
A20F	Copy FAC#1 into FAC#2
A23E	FAC#1 = FAC#1/10
A2AF	Convert fixed to floating
A2F4	Normalise FAC#1
A33F	Unpack variable into FAC#2
A37E	Pack FAC#1 to memory
A3A3	Unpack &046C onwards to FAC#1
A3A6	Unpack variable to FAC#1 - pointed to by (&4B,4C)
A3D8	Round FAC#1
A3F2	Floating to fixed conversion
A463	Clear FAC#2
A476	Convert sign in &2E and mantissa in &31-4 to signed integer in &31-4
A4C4	Incr mantissa of RAC#1
A4DE	Swap variable and FAC#1
A61E	FAC#1 = FAC#1*FAC#2
A68B	Test for under/overflow
A691	Clear FAC#1

Table 4 Basic action addresses

END

P FOR PERFECT?

Sue Eisenbach and Chris Sadler start a three-part look at the UCSD p-System.

As programmers we were ripe candidates for the microcomputer revolution when it came to Britain in 1978. We had been working on a course timetabling program on a large remote batch-oriented mainframe. The program consisted of 1500 lines of Algol 68, all of which the remote mainframe insisted on spooling out in front of any results. Unfortunately, the local site set a limit of 700 lines of output per run and had very strict operators. We were unable to find out how to either suppress the listings or get the line limit lifted. Our rather extravagant solution was to submit the program 10 times for each data set. This ensured that the output of one run would finish printing while the operator was taking a coffee break.

Once the project was completed, we decided that there had to be a better method of producing programs. The new personal computers had great appeal. We were not really worried about the limitations of the hardware. What we lost in absolute computing power we would more than make up in availability — our machine could run continuously all weekend if need be. What we were concerned with, however, was the state of micro software. It seemed that all that was around was Basic and assembler, neither of which had much appeal. Then we saw a small ad in *Byte* magazine for something called UCSD Pascal.

History

In the early '70s Ken Bowles and Mark Overgaard at the University of California at San Diego (UCSD) foresaw the advent of microcomputer systems. They were teaching programming in an environment similar to the one we found so frustrating. In 1974 they, with a group of students, started a project to develop software for the up-and-coming inexpensive hardware. Rather than producing a cut-down version of mainframe or mini system software, the UCSD project aimed to provide the single user with a congenial environment in which to develop programs.

The main feature of the congeniality took the form of specifically designing the interaction between user and system to occur via a VDU screen. Most operating systems at the time (and this is still the case today) were designed to interact through a slow-printing terminal so that the machine's response (the 'promptline') tends to be a terse one or two-character (eg, A>) message, which cannot convey very much information. Using the faster screen, on the other hand, the p-System is able to display as its promptline a list of the commands available in the current mode — clearly a great deal more information for the user. (If there are more commands at a particular level than will fit on one line, then a '?' will bring up the next line.)

The other side of interaction is input

from the keyboard and good system software should keep its input requirements to a minimum. On a printing terminal, this consists of having short utility names (eg, PIP) whose options are controlled by sub-commands ('switches') which appear on the same line. With the screen-oriented p-System, however, since all the available commands are displayed in the promptline, each utility is selected by a single character and the particular options filled in by subsequent prompting and (usually single character) replies. Although helpful for the novice, this scheme might sound slow since several responses are required from the user instead of just one — but there is a type-ahead buffer so that expert users who know what they want can type in at full speed.

The second decision which the UCSD group had to make concerned the hardware on which the software would run. To keep options open, and in order to cash in on the expected drop in hardware prices, this decision had to be deferred as long as possible. The classic way of doing this had been inspired by Wirth in his design of an implementation for Pascal. Instead of producing a compiler for an actual machine, he wrote one for an ideal 'pseudo' or p-machine. From there it is relatively simple to produce a p-code 'interpreter' program which simulates the p-machine on a particular real system.

The UCSD team's idea was to extend this concept to the entire operating system. They started with a Pascal compiler which produced pseudo-code for the p-machine. Then the system software (editor, file-handler etc) was written in Pascal. Now the entire system could be moved (including all application programs) from machine to machine as new, cheaper computers appeared, simply by writing a new interpreter. (This approach would have been useful to, for instance, Digital Research, which now has to try to get its creaking 8080-based software running on the new, powerful 16-bit 8088/8086 and 6800 systems.) Of course the interpreter cannot execute p-code as fast as the 'naked' processor could execute its own machine code but, in general, p-code programs are more compact than native-code programs and so what you lose in speed you gain in space.

Work done in American universities is frequently done against the background of the 'public domain', whereby work funded by public money should be available on demand to members of the public. Accordingly, the first few versions of the UCSD p-System (up to version I.3) which ran on DEC PDP-11s and LSI-11s were in the public domain and were distributed as such. Subsequent versions were somewhat differently funded and began to migrate from machine to machine, so that versions I.4 and I.5 could run on 8080/Z80 systems and version II took in the Apple

as well. By the time they had hit version II.0 the University of California was making a lot of money, so much so that by 1979 the Internal Revenue was becoming interested in reversing the direction of funding.

The University gave Bowles two choices — close down the Pascal project altogether or move the revenue-earning parts of the operation (ie, the distribution and support of p-Systems for the public) off the campus. Accordingly, Bowles revoked all the licences that had been issued from version I.4 onwards (including ours!) and began looking for a buyer. The obvious microcomputer software house, Microsoft, was not particularly interested in his terms and Bowles insisted on dealing only with firms which had a 'track record'. Eventually, in 1980, SofTech, a major American software house (whose main work is in military contracts), set up a special division (SofTech Micro Systems) which became the new licensee for the UCSD p-System.

At present there are an estimated 100,000 p-Systems (compared with 300,000 CP/M systems) in existence; the majority (approximately two-thirds) of which are Apple Pascal systems; but there are also Pascal Microengines (a Western Digital product which implements the version III p-machine in micro-code) and an increasing number of SofTech's new version IV. There are p-interpreters for 8088/8086, Z80, 8080/8085, 6502, 6809, TI9900, PDP and LSI 11, VAX, Z8000 and 68000 processors.

Several manufacturers support the p-System as an operating environment (sometimes exclusively) for their systems — notably Philips, Western Digital, Apple, Texas Instruments and IBM; and anyone who scans the Japanese micro magazines will be surprised at how frequently the characters 'UCSD' turn up among the Kana. For owners of systems whose manufacturers don't support it, SofTech provides 'adaptable' systems. In particular the 'CP/M adaptable system' can be brought up on any standard CP/M system, extracting information about the underlying hardware from the CP/M system software.

Many people associate UCSD with its famous Pascal compiler: few realise that, in addition, it provides a development environment for programming in Fortran 77, Basic, APL, Lisp, Modula-2 and various assembler languages (and cross-assemblers). There is an active Users' Society in the US — USUS (the UCSD p-System User's Society — about 1000 members) and in this country USUS(UK) (about 150 members). Both of these bodies hold frequent conferences and share a software library which is available free to all members.

Prices

The price of the p-System depends on from whom it is bought, which version

of the p-System is purchased and whether extra memory is required. The version that runs on the Apple II requires additional memory (to make it a 64k system) and can be purchased for £225. The Apple III p-System is available for £150. The version II p-System is available for the North Star Horizon for £180, while the version III p-System is included in the price of the MicroEngine. Version IV for the Superbrain can be bought for £350. SofTech sells all its software unbundled and has recently announced price rises. The operating system and compilers are \$400 each (30 percent discount for educational establishments) while smaller pieces of software tend to be between \$50 and \$100. These prices are all for object code only. SofTech charges vast sums (eg, around \$20,000) for source code of different components of the system.

In contrast, source code of Version 1.3 (in the public domain) should be available soon from the USUS library.

SofTech's address is: SofTech Microsystems, 9494 Black Mountain Road, San Diego, CA 92126, USA. USUS(UK)'s address is: Mark Woodman, Membership Sec USUS(UK), Department of Mathematics, The Open University, Walton Hall, Milton Keynes.

Applications software

Many people say that the p-System is too academic for the real world because it lacks a sufficiently wide applications base. The question of applications packages is particularly acute today as relatively cheap 16-bit systems come onto the market. Of the 8-bit operating systems, CP/M undoubtedly has the most applications packages, but the bulk of these are written in 8080 assembler, which is not directly executable on the 8086/88 (let alone on the 68000 or Z8000). Apparently the conversion process has proved non-trivial (even with the aid of proprietary packages) and the results tend to execute at about the same speed so, for all the new technology, the customer may as well stick to the Z80. There is more to portability than getting 'A>' to come up on the screen.

Knowing about this problem, most manufacturers of 16-bit systems looked about for a good 16-bit operating system under which new applications packages could be developed. They came up with Unix, which provides a development environment for professional programmers with lots of powerful utilities. Unfortunately, its user interface is also designed for professional programmers, and the history of microcomputing reveals that fortunes are made by providing computer power to the user rather than to the programmer, so Unix-based systems are unlikely to have immediate, pervasive market appeal. Besides, being a mini-computer operating system (whatever machine it's actually running on), Unix is fairly greedy about resources (memory and disk) and the current crop of 16-bit machines don't have the required storage capacities.

Although much less famous than either of these, the p-System seems to lie midway between the two (and

appears to offer the best of both worlds); like CP/M, it has an applications base (although smaller); like Unix, it provides a good program development environment (although not so well equipped with utilities).

On the next page is a list of applications packages which run on the UCSD p-System. We have only listed those which we know to be available in Britain. (SofTech supplies a catalogue which lists some 139 packages from 81 suppliers, mostly American.) Most of those listed were developed on and are supplied for Apple computers, these being the most populous group of p-Systems. Unless they depend on graphics (which can be ported — see next article) there is probably no reason why they shouldn't run on other p-Systems, but enquirers should check this with individual suppliers.

We'd like to thank Edinburgh Regional Computer Centre Micro-computer Support Unit, Tom Short and Cornelia Boldyreff for their help in compiling the list. We're sure it isn't comprehensive and would be interested in hearing from anyone who

knows of or supplies a package which could be included.

Conclusion

Programs written under the p-System can be ported from one microsystem to another, either in source or (pseudo) object form. Given its not insubstantial applications base, therefore, the p-System should be of interest not only to the end-user but also to software developers wishing to keep afloat in the rising tide of technology. In two subsequent articles we plan to look at the p-System in much more detail, starting with the operating system, its philosophy, design and utilities; and concluding with a description of all the language translators available on the system. To finish up we have reproduced a diagram originating from SofTech which purports to explain how the portability works. The hexagonal shape is used by SofTech as a symbol for a self-contained module — touching modules communicate with one another.

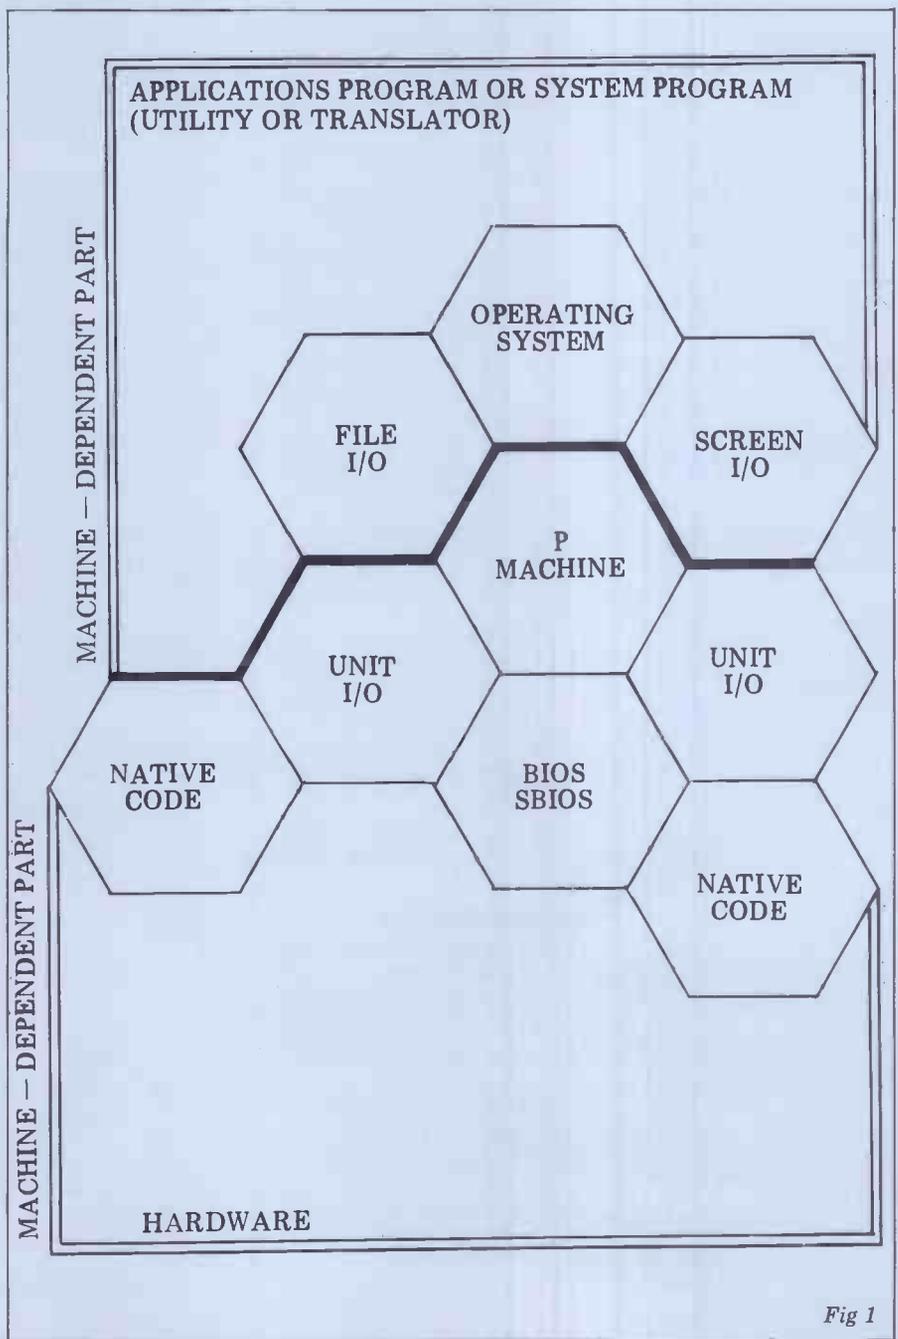

Fig 1

P FOR PERFECT?

Accounting and business

Financial Controller (integrated suite) for all p-Systems, £250 per package; Systematics International Microsystems Ltd, Cleves House, Hamlet Road, Haverhill, Suffolk, phone (0440) 61121.

Jarman Systems: (suite) for Apple and other p-Systems, £490-£550 per package; Jarman Systems, 110 Western Road, Tring, Herts, phone (044282) 6841.

Orbit: (integrated suite) for Apple, £855; Vlasak Computer Systems, Vlasak House, 8 Stuart Road, High Wycombe, Bucks, phone (0494) 448633.

SPI Business Packages: for all p-Systems, price on appl; Asolv Ltd, 12-14 Church Street, Basingstoke, Hants, phone (0256) 68935.

Educational

Cyclops: an audio-visual presentation preparation tool and delivery system, for Pascal Microengine, up to £14,000; Cyclops Project, Open University, Walton Hall, Milton Keynes MK7 6AA. Little Genius: computer-based programming course for Apple, £49.95; Little Genius Ltd, Suite 504, Albany House, 324 Regent Street, London W1, phone 01-580 6361.

Pascal Tutor: computer-based Pascal programming course for Apple, £79; Pete and Pam Computers, Waingate Lodge, Waingate Close, Rossendale BB4 7SQ, phone (0706) 227011.

Filing systems and databases

Apple Pascal Database: for Apple, £250; Ormbeta Software, Ormskirk Computer Services, Wheatshaf Walk, Burscough Street, Ormskirk, Lancs, phone (0695) 77043.

Infotree: hierarchic information management system for Apple, £39.95; Pete and Pam Computers, Waingate Lodge, Waingate Close, Rossendale BB4 7SQ, phone (0706) 227011.

Omnis management system: full multi-key ISAM system for Apple II (£174) & Apple III (£225); Blyth Computers Ltd, Wenhaston, Halesworth, Suffolk, phone (050270) 565.

Mailing list: for all p-Systems, at cost of media for USUS members; USUS (UK) library, Ann Macintosh, ERCC Microcomputer Support Unit, 59 George Square, Edinburgh EH8 9JU, phone 031-667 1011 x 2300.

PISAM: 3-level ISAM system for all (large) p-Systems, £500; IBC Computer Systems Ltd, Sunderland House, Sunderland Street, Macclesfield, Cheshire

SK11 6JP, phone (0625) 616399.

Quest III: relational database management system for all p-Systems, £350; Asolv Ltd, 12-14 Church Street, Basingstoke, Hants, phone (0256) 68935.

Financial modelling and planning

Decision Modeller: extension package for Micromodeller (see below) for Apple, £535; Applied Computer Techniques Ltd, Shenstone House, Dudley Rd, Halesowen, W Midlands B63 3NT, phone 021-454 8585. Job control costing: for Apple, £195; Pete and Pam Computers, Waingate Lodge, Waingate Close, Rossendale BB4 7SQ, phone (0706) 227011.

Logicalc: electronic 'spread-sheet' for all p-Systems, £150 (Apple £75); Asolv Ltd, 12-14 Church St, Basingstoke, phone (0256) 68935.

Micromodeller: financial modelling package for Apple, £595; Applied Computer Techniques, Shenstone House, Dudley Road, Halesowen, W Midlands B63 3NT, phone 021-454 8585. Microplanner: interactive critical path project planner for Apple, £695; Microplanning Services, 8 Howcroft Gardens, Bristol BS9 1HN, phone (0272) 684530.

PERT critical path analysis: time analysis and resource allocations for any 64k system, £1000; IBC, Sunderland House, Sunderland Street, Macclesfield, Cheshire SK11 6JP, phone (0625) 616399.

Games

Adventure: for all p-Systems, cost of media to USUS members; USUS (UK) library, Ann Macintosh, ERCC Microcomputer Support Unit, 59 George Square, Edinburgh EH8 9JU, phone 031-667 1011 x 2300. Blackjack, Castles, Othello, Spacewar, Startrek, Wumpus: (as above).

Miscellaneous

Datalogger: real-time data-logging package for Apple, £350 plus 'customisation'; Eicon Research Ltd, Viking Way, Bar Hill, Cambridge, phone (0954) 81825.

Unix subsystem: the p-System as a program on any time-sharing Unix system, £500 (£50 for Universities); South West Universities Regional Computing Centre, University of Bath, Claverton Down, Bath BA2 7AY, phone (0225) 60371.

Programming aids and utilities

Advanced system editor: enhanced screen editor for any p-System, POA; Asolv Ltd, 12-14 Church St, Basingstoke, phone (0256) 68935.

Artist designer: colour graphics editing system for Apple £29.95; Pete and Pam Computers, Waingate Lodge, Waingate Close, Rossendale BB4 7SQ, phone (0706) 227011.

Convert: Converts Basic to Pascal files for Apple, £25.95; Blyth Computers Ltd, Wenhaston, Halesworth, Suffolk IP19 9DH, phone (050270) 565.

Cross referencer: Debugging tool for all p-Systems, from USUS (see above).

Disk: access to Pascal files at block level, for Apple, £29.95; Blyth Computers Ltd, Wenhaston, Halesworth, Suffolk IP19 9DH, phone (050270) 565.

Formulex: callable routines for data-entry screen forms for Apple, £34; Pete and Pam Computers (see above).

Linkdisk: Apple DOS 3.3/ Pascal file handling, £55; Anglia Computer Centre, 88 St Benedicts Street, Norwich NR2 4AB, phone (0603) 29652.

Linkvideo: screen handling package with data validation for Apple, £45; Anglia Computer Centre, 88 St Benedicts Street, Norwich NR2 4AB, phone (0603) 29652.

Map program: Debugging aid from USUS (see above). MCC Pascal utility package: for Apple, £40; Micro Computer Connections Ltd, 41 High Street, Egham, Surrey TW20 9DS.

Pascal animation tools: animations frame editor for Apple, £34; Pete and Pam Computers (see above).

Pascal graphics dump: Paper Tiger, Anadex or Spinwriter/ Qume screen dump for Apple, £21; Pete and Pam Computers (see above).

Pascal programmer: useful set of pre-linked routine for Apple, £79; Pete and Pam Computers (see above).

Pasdos: DOS 3.3 - Pascal file transfer for Apple £39.50; Aurac Control Systems, 12a Baldwin Street, Bristol BS1 1RZ, phone (0272) 292966.

Pilot animation tools: used with Pilot Authoring System to design and store animation sequences, for Apple, £34; Pete and Pam Computers (see above).

P-Sort: callable sorting routines for Apple, £38; Pete and Pam Computers (see above). Pretty printers: two programs to layout Pascal source code, from USUS (see above).

Pascal transfer program: a file transfer program, from USUS (see above).

Screen formatter: screen formatting package, for Qupro Q-Engine, £120; Qupro Data Systems Ltd, Qupro House, Greenacres, Woolton Hill, Newbury, Berks.

Tridee: 3-D graphics package for Apple, £49.95; Leicester Computer Centre Ltd, 67 Regent Road, Leicester, phone (0533) 556268.

UCSD-to-CP/M: programs to convert to and from CP/M file formats, from USUS (see above).

Vector MZ long integer package for Vector Graphic, £50; Essex Electronics Centre, University of Essex, Wivenhoe Park, Colchester, phone (0206) 862286 x 2267.

Special purpose

Bookshop management: from USUS (see above), free to non-profit co-operatives.

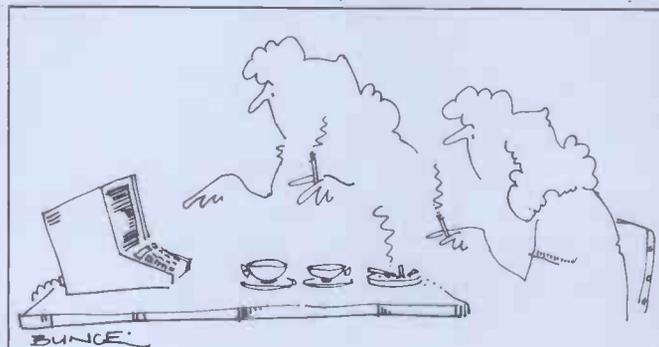

Insurance broker package: accounts and records, BIBA approved method, for all p-Systems, £1000 (approx); IBC, Sunderland House, Sunderland Street, Macclesfield, Cheshire SK11 6JP, phone (0625) 616399.

UCCA package: provides access to UCCA computer, for Vector Graphics, £1000; Mike Jones, The Computer Centre, The University of Essex, Wivenhoe Park, Colchester, phone (0206) 862286.

Text processing

Quille: word processor for Q-Engine, £120; Qupro Data Systems Ltd, Qupro House, Greenacres, Woolton Hill, Newbury.

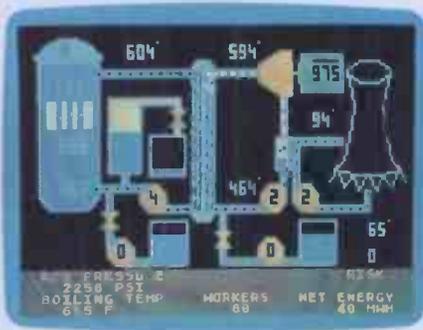

Word processor: text editor with address insertion for all p-Systems, £200; IBC, Sunderland House, Sunderland Street, Macclesfield, Cheshire SK11 6JP, phone (0625) 616399; **END**

3.7 million reasons why the Atari Home Computer is something to see. The display screen used with our computers is composed of 192 horizontal lines, each containing 320 dots. Delivering colour and luminosity instructions to each dot for a second requires 3.7 million cycles...a lot of work for the normal 6502 processor.

That's why the Atari computer has equipped its 6502 with its own electronic assistant. It's called ANTIC, and it handles all the display work, leaving the 6502 free to handle the rest. What this means to you is uncompromisingly spectacular display capabilities without loss of computer power needed to carry out the demands of your program.

That's a quality you just don't find in ordinary home computers. And it's one of the reasons some computer experts say that Atari computers are so far ahead of their time.

There's more...which is what you'd expect from Atari Language. The Atari Home Computer uses several programming languages to give the user maximum control of its extraordinary capabilities. PILOT, Microsoft BASIC and Atari BASIC are understood and spoken by the Atari computer. You'll also find our Assembler Editor cartridge indispensable for machine language programming.

Sound. An Atari computer has four sound generators, or voices, activated by a separate microchip. This leaves the principal micro-processor chips free to perform other tasks. And you can take full advantage of this capability which is designed for easy programming.

Change. Atari Home Computers have been designed to make change and expansion easy. The Atari computer has a modular operating system that can be easily replaced as new technology develops. If you need it, memory expansion requires no more than inserting additional RAM modules.* And the Atari ROM cartridge system also makes it easy to change languages. In short, your Atari computer won't become obsolete by future developments...because it already incorporates the future.

Sharing. To learn more about the amazing capabilities of Atari Home Computers, either visit your local dealer or fill in the coupon below.

THE GRAPHIC DIFFERENCE BETWEEN ATARI® COMPUTERS AND ALL THE OTHERS.

*Atari 800™ computer only.

A Warner Communications Company

When the Newbrain was announced to the world two years ago the design concept was significantly in advance of anything that had been seen in the field of hand-held computing. About the size of a hard-back book, it was to have a built-in display, battery operation and a large internal ROM capacity to hold applications software.

Since that announcement the original company, Newbury Labs, has sold the project, having encountered production difficulties, and has returned to its main business of producing terminals. The Newbrain was at one time in line to be the original BBC Computer but production difficulties intervened and the rest is history. The specification has been revised from its perhaps over-ambitious original form and the machine has now been launched onto the market by its new owners, Grundy Business Systems. In those two years the market for hand-held and portable computers has been changed considerably by the introduction of the Sharp and Casio models and the Osborne 1, and Grundy is no longer stressing the hand-held aspect of the Newbrain but rather offering it as a low-priced compact computer for business and educational uses; though the development of a fully portable model still continues and it is intended to be launched later this year.

Hardware

The model tested is the Newbrain AD, which has a built-in display and the option of 40 or 80 column screen width. The unit is housed in a very robust moulded ABS case measuring 11x6x2 inches with the 16-character green fluorescent tube display at the top right hand corner. The rest of the case top is taken up by the keyboard which, although at first sight looking like a calculator type with its widely spaced keys, is a normal pitch typewriter one. In fact the size of the keyboard dictated the overall size of the machine. The 62 keys have slightly concave tops and a good positive feel so that, unusually on a machine of this size, touch typing is perfectly possible. The keyboard is fully debounced and has sufficient rollover to allow fast typing speeds. The layout is that of a standard typewriter without numeric keypad and with the addition of Control, Escape, Stop, Graphics, Repeat, Home, Insert and Teletext keys, plus four cursor keys and a proper space bar.

Turning to the back of the case reveals a row of sockets for power, expansion bus, printer and modem and two tape recorders along with phono outlets for monitor or UHF TV. Unfortunately the peripheral sockets are non-standard industrial-type connectors, so you'll be relying on the manufacturer for all your plugs and leads. The printer and modem ports are RS232/V24, the modem one being bidirectional and programmable between 75 and 9600 baud.

One clear departure from the original hand-held idea becomes apparent; the power supply is not on board but comes in a separate metal box. It supplies three voltages (6.5, 13.5 and -12v) and runs perilously hot. Curiously no power on/off switch is fitted either to the computer or the power supply and one would be well advised to switch off at

BRAIN WITHOUT BRAWN

BENCHTEST
PERSONAL COMPUTER

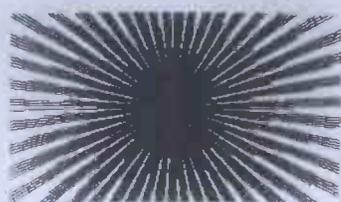

The Newbrain portable microcomputer, announced over two years ago, has now arrived on the market. Dick Pountain checks it out.

the wall when leaving the machine for any length of time. Opening up the case reveals why the powerpack is outboard; there simply is no room for anything more. Two and a half boards fill the case, containing around 80 chips, an enormous number compared to some recent designs. The processor is a Z80A running at 4MHz and it serves 32k of RAM and 28k of ROM as well as a lot of discrete TTL logic. To get rid of the heat generated by this mass of NMOS circuitry the boards are arranged in a sandwich, the filling of which is a matt-black alloy extrusion the width of the case which is attached to the chunky alloy back plate holding the I/O sockets and acts as a heat sink. In use it becomes very warm, but no trouble was experienced on this account. Between the board containing the keyboard circuitry and the processor board is a paxolin sheet to prevent electrical contact. The quality of construction is far from skimpy, and remarkable at the price; all screws go into brass collets moulded into the case and the boards

and ribbon connectors are of almost military ruggedness. I was prompted to wonder how much the Newbrain would cost if it used 64k RAMs and ULAs, 'sticky tape' connectors, self-tappers into plastic and other minimum-cost technology — or, alternatively, how much profit are certain other manufacturers making?

Supplied, (but not included in the £229 price) with the Newbrain was a

Samples of hi-res plotting

10in green screen monitor and a standard Panasonic miniature cassette recorder. The former provided a steady sharp picture, particularly in reverse video modes, and had separate brightness and contrast controls on the front panel; it was fairly tricky, however, to find a combination of settings that gave a good display in both modes without requiring a re-adjustment.

Firmware

The 28k of ROM aboard the Newbrain contains an operating system, Basic and a maths and graphics package — of which more later. On power up the operating system checks all the RAM, producing a seemingly random 'garbage' output on the line display; after a few seconds control passes to the monitor which announces 'Newbrain Basic Ready'. The ROM also contains an unusually large character set of 512 symbols which includes the 96 ASCII characters (with 95 replaced by £), Greek letters, Scandinavian characters, other European accents and so forth. Viewdata, games block graphics and line-drawing symbols are in there as well.

To access all these different fonts a system of control codes of Byzantine complexity has been implemented. Only 255 of the characters may be displayed at any one time, and these are produced from the keyboard by using the Shift and Graphics keys to get alternative

characters from a key. Which part of the ROM set is available can be set by sending Control W followed by a digit from the keyboard; three bits of the binary representation of this number select upper or lower ROM, full or half character set (ie, ordinary letters still available) and normal or reverse field. For example Ctrl W 1 gives reverse video Ctrl W 7 gives Greek and other symbols. The number of combinations is perplexing and the modes appear to interact with one another in unpredictable ways, leaving you stuck with strange displays and error messages in Greek. You can always get back to the ordinary keyboard by Shift Escape, however.

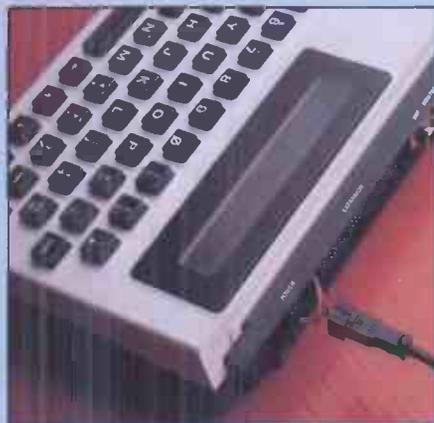

Other control codes clear the screen, move or read the cursor position, turn the cursor off, and delete or insert lines and characters (the latter is also supported by a hardware key). There are 32 codes in all and they provide a comprehensive set of screen controls.

Another curious omission is that no hardware reset button is provided. The designers may believe it to be uncrashable but while messing around with the Ctrl W codes I managed it; it is also possible by opening silly or forbidden streams to the operating system.

The editor is fully screen-oriented and has some unusual features such as upward scrolling through a Basic listing and provision for making and unmaking new lines out of Basic lines which wrap around the screen. The

cursor controls auto-repeat, and this, together with the Insert key (insert mode remains active until a cursor key is pressed) and deletion via Shift ←, allows for very rapid and easy editing. The editor and related topics such as the length and width of a screen are more properly discussed in the next section under Software, as they are intimately connected with the unusual philosophy of the operating system.

All of the above applies to the Newbrain connected to a monitor or TV; when used with the built-in display it can only display upper case ASCII and 64 rather odd-looking symbols, due to the limitations of the 14-segment matrix. Editing is of course line only. The display is a 16-character window

This is the way you reset

BRAIN WITHOUT BRAUN

onto an 80-character line and scrolls sideways in answer to the ← and → cursor keys.

Software

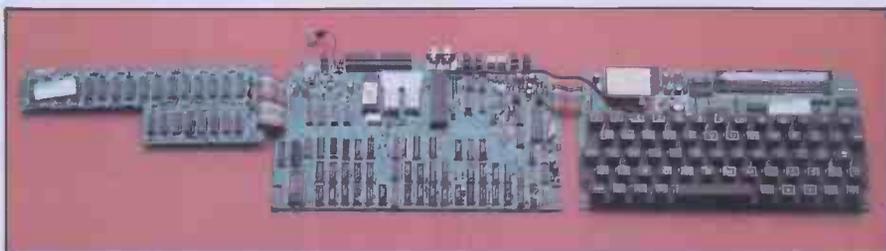

The Newbrain's operating system is a highly modular set of programs which are designed to provide a degree of hardware independence. It is separate from the ROM Basic which interfaces with it through a high-level program called OS, the core of the system. This in turn interfaces with IOS, the I/O handling module which can call device drivers for the various recognised devices. IOS treats all devices in an identical fashion as single-byte serial devices. The screen editor itself is one such device, called XIO, and is the means of communication between the user and a Basic program. Other devices are the two cassettes, line display, two configurations of the keyboard, modem and printer.

All input and output to devices is performed via data-streams (or simply 'streams') of which 255 may be open at the same time. The fundamental operations are OPEN a device on a stream (for INPUT or OUTPUT), INPUT from or OUTPUT to a stream and CLOSE a stream. If all this sounds a little abstract, you're right; it takes quite some time to get to grips with what's happening especially if you're used to a more (or is it less?) transparent I/O system via Basic or CP/M. But it has some interesting and useful consequences for the use of the machine.

For instance, it is possible to have multiple copies of a device open on different streams. If the screen editor is copied in this way you can have as many separate screen 'pages' as there is room for in RAM; each screen can be written to and displayed independently by OPENING it on stream n and then calling INPUT #n from a Basic program. Each such screen can have up to 255 lines, the physical VDU screen being a 24-line window which can be scrolled up and down. The choice of 40 or 80 columns is made by attaching a parameter string to the OPEN statement such as "s100" which would give a 40-column ('s' for 'short') by 100-line display. On power up the operating system opens the monitor with a 100-line screen as the console device; to use the line display you must open it with OPEN # 0, 3 as stream 0 is always the console and 3 is the line display's device number. OPEN #0,4 opens both monitor and line display together.

Another powerful and interesting consequence is that Basic is enabled to handle interrupts directly by means of an ON BREAK GOTO statement which directs program execution to a suitable routine when the STOP key is pressed; combined with error-trapping this means that application programs can be made virtually foolproof as there should never be any need to leave the program.

Lastly, the addition of new devices becomes very easy as there are about 248 device numbers currently unused.

The two-and-a-half boards fill the case with nothing to spare

By writing a suitable driver program and adding it to IOS's device table the new device is incorporated. But, more important, commands for using the device from Basic (or other high level language) can be added without changing the Basic ROM. This is because Basic routines are called by vectoring from an address in low memory; new routines such as the Maths, Graphics and Statistics packages currently available can be added to the existing set. When the paged memory expansion system is released this will allow up to four megabytes of ROM routines to be supported. This is why the Newbrain team is adamant that this is not a disk or a cassette operating system; it's a general purpose one.

The Basic is unusual in two ways: firstly that the ANSI standard has been preferred to the almost universal Microsoft 'standard' and secondly that it is an interactive compiling Basic. The first time a program is run it is compiled, a line at a time, to pseudo-code and this is the code which is run. Compilation is not necessary on subsequent runs but the source code is retained in memory to allow interactive editing and debugging. In some exceptional circumstances, such as shortage of RAM space, the object code may be deleted after execution by the dynamic memory management activities of the operating system. Some commands, such as CLEAR and DELETE, also destroy the object code. Limited syntax checking is done at compilation time. As can be seen from the Benchmark timings, this results in better than average execution times.

The choice of ANSI standard will not affect most users as it still looks very much like Microsoft; the structured controls IF...THEN...ELSE, DO...WHILE, etc, have regrettably not been implemented. The principal different statements are LINPUT in addition to INPUT, which accepts lines including commas as input, the addition of INSTR to the string-handling functions to perform substring searches, and NUM, which returns 'true' if a string contains a valid numeric input. Variable names are two characters and arrays have at most two dimensions, but there is no limit to the length of strings (to be exact, there is a 32k limit!). PEEK, POKE and CALL give access to memory and machine code routines, space for which can be RESERVED above the top of Basic programs.

ON ERROR GOTO and RESUME [line number] are both supported. The error messages are unfriendly numbers (200 of them!), though they do identify which section of a multistatement line is the culprit — eg, ERROR 59 AT 30:2. Quite a few of the errors for the graphics package are listed as 'not used' in the manual, which is only a draft document.

A line of Basic can occupy a whole

screen — ie, up to 25 lines or 937 characters.

The supplied maths package (in ROM) performs floating point arithmetic to 10 significant figures with the unusually large dynamic range of $10^{\pm 99}$. It supports the usual trig and log functions.

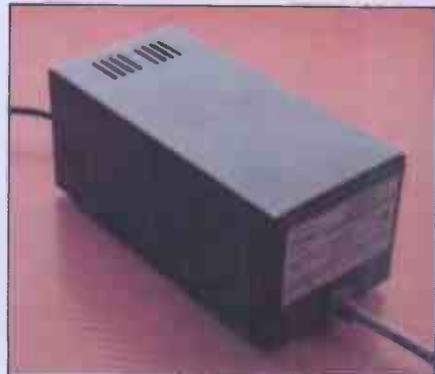

File I/O is straightforward once you understand the operating system. A datastream is assigned to the relevant device (the cassette recorders are devices 1 and 2) with the options (added to the OPEN statement) of adding a filename and selecting the file buffer size in 256-byte blocks. Random files are treated in the same way as sequential, and by using PUT# and GET# you can write bytestreams to tape. With the supplied recorder, tape operations were totally reliable, as they were with my own micro-cassette pocket recorder.

The Graphics package, which I saw in pre-release form, adds 20 new statements to Basic to provide high-resolution plotting facilities. It is used by opening an editor screen and then opening a graphics screen (device 11) 'on its back'. This results in a scrolling text area of from 0 to 29 lines above a high-res area of 8 to 250 scan lines. Two levels of resolution — 640 or 320 dots per line — are selected in the open statement.

The plotting statements are unusual but powerful. The plotting point is

Socket panel is also a heat sink

Power supply is 3-voltage

regarded as a 'pen' (something like a turtle) and the commands fall into two groups — those which move the pen in the direction it's facing by a given distance (whose names end in BY) and those which move to an x,y coordinate. They are further split into those which leave the pen at the end of the new line (MOVE) and those which leave it at the beginning (DRAW). Combined with two commands for absolute or relative pen rotation, these allow easy implementation of turtle graphics and of plotting in polar coordinates as well as ordinary cartesian plots. The commands are invoked by using PLOT — eg, PLOT DEGREES, TURNBY(30), DRAWBY (10,1) would turn the pen through 30 degrees and send out a line 10 units long leaving the pen where it is. One seeming inconsistency is the inclusion of PLACE(x,y) which moves the pen without drawing, but not its complementary PLACEBY(d), which would be invaluable in polar plots; however this effect can be achieved by combining other commands.

The size of the plotting unit is decided by a scaling command RANGE, and CENTRE fixes the origin. Three of the commands, ARC to draw curves, FILL to fill areas and AXES, which draws labelled axes, were not running but will be in the final version. This is a well thought out and powerful package.

I was also supplied with an early version of a text processor package on tape. While not really a word processor, it allows the entering and storage of text which it 'cleans up' into justified form; it is driven from a menu of options.

Documentation

Two levels of manual are intended to be made available for the Newbrain; a user guide and a technical manual for programmers.

I received a pre-draft of the former and frankly it was not impressive. The bare bones of the Basic are adequately covered with listing of reserved words and examples of the syntax. The operation of the control codes is covered in a terse and hurried fashion and the error

messages are documented (with the exception of those which arise in using the graphics). However, the Newbrain operating system is somewhat unusual in its extreme formality and abstraction, where all you see are logical devices and data streams. It will be sufficiently unfamiliar to many users to require a fair bit of explaining, with lots of examples and step by step instructions on the use of the OPEN# and CLOSE# statements and the input and output procedures. It is to be hoped that this will be there in the released versions; in the pre-draft these matters are dealt with in an abbreviated and academic fashion, eg, 'the default back-up store is seldom a sensible console', which left me and I suspect many other 'lay' users floundering by trial and error (200 errors to be exact).

Expansion and potential use

Expandability is an important part of the Newbrain design philosophy. The first step is a module soon to be released which contains the hardware for paged memory addressing, sockets for expansion ROM and parallel user I/O ports. This module and others will be housed in a box the size of the computer but 1in deep; this clips underneath the unit. With this fitted, up to 4Mb of ROM and 2Mb of RAM can be addressed — the accent being on the former as much of the software is planned to be released in ROM. RAM modules of 64, 128, 256 and 512k are planned, as is a battery back-up module which allows 75 minutes' use away from the mains and which is really only intended for protection against power failure and preservation of data in RAM for short journeys. Other modules promised contain CP/M (in ROM) and extra RS232 ports to allow networking and sharing of peripherals. All of the software so far announced will be presented in ROM modules — namely a Z80 Assembler, Comal, Statistics and Word Processing packages.

Disk drives are promised for the near future, with the option of CP/M as the op system. Serial printers can be hung on the RS232 port of the 'naked' Newbrain; device 8 is configured for such a printer and has programmable baud rate.

Late in 1982 a model M Newbrain is intended which will have the rechargeable battery backup and memory paging hardware built in. An A model without the line display is already on sale.

Who will use the Newbrain? The maths capability and graphics make it suitable as a low-cost machine for scientific and educational purposes;

its small size would be a boon on the crowded laboratory bench, and its communication ability would permit a school to share disk drives to serve many pupils for small outlay. For business use it suggests itself more in a data-capture role than for accounting or heavy data processing tasks. With suitable bulletproof software in ROM it has many virtues as a machine for stock control and order entry tasks; the independence from a monitor/TV provided by the AD model is attractive here. Indeed 2000 have already been ordered by an OEM firm which is installing them in chemist shops for ordering by telephone and for labelling. It has the advantage over a dedicated hand-held data-capture terminal in that it can be used for limited word processing and other general duties as well. Its role as a portable computer for managers, running WP and spread sheet programs, as envisaged in the original publicity is heavily compromised by the lack of real battery operation. You won't be using it on trains or airliners with only an hour of battery.

Finally it will appeal to the serious hobbyist — defined as one who is not bothered by the lack of colour and sound but wants a low-priced, expandable system with powerful facilities. The relative unfriendliness of the operating system will not be a deterrent to such buyers as it would be to first-timers.

Conclusions

The Newbrain is a well-made computer with some powerful and flexible software and hardware features designed into it. It has all the facilities to allow good bulletproof software to be written, and if this is supplied in ROM it will offer good value as a serious small business computer for even inexperienced users. In its naked form it is somewhat unfriendly to use, due to the very formal design approach and the (at present) poor documentation. Professional programmers and serious hobbyists will soon come to terms with this, however, and will then find that it offers a lot of serious computer features at a toy computer price.

There are some annoying omissions on the hardware side, such as a power switch and reset switch. It is also difficult not to reflect on what this design could achieve if it had been built with CMOS technology (like, for instance, the Sharp PC1500). The power requirements of the NMOS used are such that true battery operation with a sensible battery life is going to be very difficult to achieve.

Nevertheless, in its present form it is a lot of very useful hardware for the price.

SCREENPLAY

This month Dick Olney reviews *games for the Apple II.*

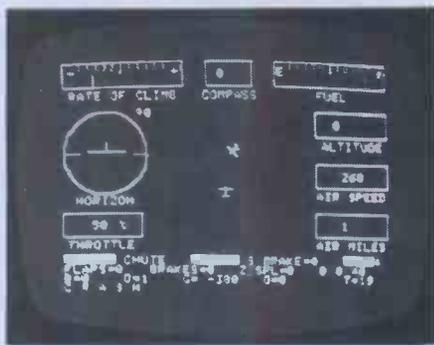

This month I've been playing some of the games available for the Apple II microcomputer. Although this machine is rather different to most of those I've previously covered, and is not marketed as a games machine, there is a considerable volume of such software available for it. Apple itself produces very little in this area, but this is made up for by dozens of (mostly American) software publishers. The configuration I used was a 48k Apple II Europlus with a single mini disk drive and the Applesoft ROM with an automatic boot feature. The machine was fitted with a colour card

and UHF modulator so that I could plug it directly into my television.

Apple will supply a set of games paddles for £15, but for most of the games I used a sort of universal joystick with dual buttons and paddle-emulating slide switches as well as the stick itself. This is manufactured in Texas by TG Products, and is undoubtedly the best-designed games controller I've used. The price of the system would be £1293 for the machine and extras with an additional £29.95 for the joystick (ex

VAT). This is clearly more than most people would be willing to pay just to play games, but I'm sure there are plenty of people with Apples who spend at least some of the time doing just that.

All of the games were of course supplied on 5¼in disks. Although I have concentrated here on real time arcade-type games I should point out that this machine is also notable for the many Adventure games available for it. Note that star ratings are based on a maximum of eight and reflect those qualities most appropriate to the nature of the game.

GAME: Jet Fighter Pilot
PRICE: £16.50
SUPPLIER: Instant Software

This is a fairly standard flight simulator in which your mission is to take off, chase and destroy an enemy aircraft and then land back at the airport. Though the program makes no real use of graphics (it's entirely in black and white) the flight information panel is reasonably comprehensive, as are the controls. Vertical and horizontal attitude are controlled by the paddles (or in my case the paddle surrogates on the joystick) while all other functions such as throttle, flaps, missiles and brakes are accessed through the keyboard. The program does a scan every second or so to determine the status of the fighter and changes the readings accordingly; an approach which takes a little getting

used to from a playing point of view.

The extensive features this game provides in terms of control and navigational aids means that a fair degree of skill is required to play it well, but the rather uninspired presentation make it less exciting than one might expect. At one point the program crashed due to a RETURN without GOSUB error. I've no way of knowing how often this might occur, but there didn't seem to be anything particularly unusual about the circumstances.

GAME: International Grand Prix
PRICE: £15.95
SUPPLIER: Riverbank Software

Given the front view from a racing car your task in this game is to use the paddle or joystick to drive as quickly as possible around a racetrack (no surprises there!). The interesting thing about this game is the number of options. Firstly there are five international circuits to choose from, each of which has all the elements of its real life counterpart. You can choose the number of laps, amount of fuel on board and difficulty level (zero to seven determines road surface skid potential) as well as manual or automatic transmission. The button on your paddle or joystick is used to accelerate the car. For manual transmission, taking your finger off the button for a second changes gear and

with automatic you can stabilise your speed using the cruise control (space bar). The array of options and crisp presentation cannot however conceal the uninspired and rather dull nature of this game.

GAME: County Fair
PRICE: £14.95
SUPPLIER: Datamost

This game, another arcade descendant, combines some of the playing technique (though not the speed) of Space Invaders with the 'cuteness' of Pacman. It's based on a shooting gallery, and involves moving a small gun along the bottom of the screen firing at various objects above you. You have a limited number of bullets and when they are finished the game is over. If you fail to hit the white ducks they fly down and eat up a good portion of your ammunition, but apart from this the targets are completely passive, though their numbers are steadily replenished so you have to be quick. Occasionally rows of bullets appear at the top of the screen with plus or minus signs by them

and these, if hit, will increase or decrease your stock of bullets. In addition there is a row of 'trees' in white lines at the very top of the screen which you only hit through a narrow gaps in their surround. If you manage to clear the entire screen your bullets are replenished and a new, slightly speedier, frame begins. The presentation of this game is impeccable with its hopping rabbits and flying ducks and though it is somewhat trivial in principle I thoroughly enjoyed playing it.

GAME: Epoch
PRICE: £17.95
SUPPLIER: Sirius Software

Written by Harry Miller, this game is a true real time interpretation of Star Trek in which all movement and firing is controlled by the joystick or games paddles. Though it lacks the complexity found in more traditional games of this genre (there are no charts, scans or textual commands) the excellent use of graphics and control precision made it a

joy to behold. You are under attack by four different types of enemy craft which can only be destroyed by a direct hit at the centre of their mass. To achieve this you position the crosshair sights over the alien ship before firing your missiles. These crosshairs dictate direction of motion as well as aim, and though of course they actually always remain in the centre of the screen, the impression of three-dimensional movement is surprisingly effective. One of the controller buttons gives acceleration and the other deceleration, and pressing them both together achieves self-repeating fire power. As well as alien ships there are stationary enemy bases which can again only be destroyed by accurate central hits.

The constraints upon your degree of destruction are fuel, ammunition and time — the game ends if any one of these runs out. The amount of fuel decreases steadily during any change of speed (though not while in stable motion) and also drops if you are hit by alien fire. Ammunition level, of course, depends on how many shots you fire.

Both of these can be completely replenished by driving through the porthole of a friendly base, requiring careful navigation. Time is lost at a steady rate whatever you do and can only be regained by travelling through the centre of a time portal. These are great fun, involving steering the ship through a colourful corridor of gateways.

The fundamental principles of this game resemble the real time section of Atari's Star Raiders, though saying this does not do it justice. It is certainly one of the best games of this type that I've come across. If you've got an Apple II with a colour set up then you *need* Epoch.

GAME: Firebird
PRICE: £14.95
SUPPLIER: Gebelli Software

Although this game has a very familiar feel about it I can't actually remember seeing anything quite like it. The scenario is a building, made up of 72 rectangular rooms, which is under attack from a firebird racing through

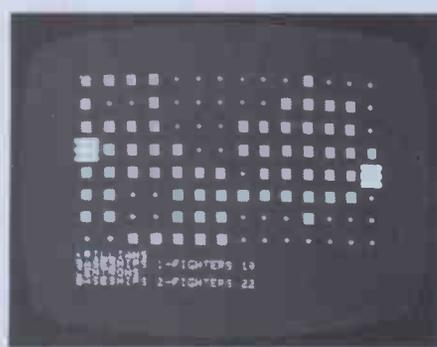

the sky and dropping incendiary eggs at random. The latter set fire to a room, eventually destroying it and forcing its occupant to leap from the building. You can put the fire out (if you're quick enough) by positioning 'Piggo the fire-fighting pig' next to the room and dousing it with water; failing this you must attempt to catch the unfortunate occupant before he falls to his death. Moving Piggo and his ladder and squirting water are all controlled by the keyboard, and specific keys can be re-defined to best suit your play.

If you manage to catch one of the falling victims you must take him to the top of the ladder where he will eventually be rescued by a circling helicopter. You should do this quickly since Piggo can only carry one person at a time, and cannot squirt water with his hands full. For each person saved the helicopter will replace one room; dropping it onto the top of the smallest column. The only hazard you encounter

is if one of the people falls directly on top of Piggo, in which case he will topple off the ladder. He has three lives and the game ends when these have been used up or (more often the case) when two complete columns of rooms have been destroyed. If you manage to save the entire bottom row when all other rooms have burnt down you start a new frame.

It takes some time to get used to this game, though it is well worth the effort. Firebird is well thought out and professionally presented, and should certainly provide plenty of entertainment. It is a little surprising that there is no joystick option, though the keyboard controls are satisfactory (they give incremental rather than continuous motion) so this shouldn't put you off.

GAME: Galactic Wars
PRICE: £20
SUPPLIER: Apple

This is one of Apple's own 'special delivery' software packs and as such is nicely packaged with a backup disk supplied. There is a short manual on how to play the game, which at first sight looks quite complex — though this

is in fact a little deceptive. Galactic Wars is a two-player game based on familiar concepts which is played on an eight by fourteen grid of 'star systems'. At the outset each player is provided with a homebase containing five, ten or twenty 'baseships', and at each turn any number of these can be moved to adjacent star systems. This is done using the games paddles (the joystick is not really satisfactory for this game) to move a prompt cursor, pressing the button when it is in the desired target position. Each baseship carries a limited number of fighters, one of which is left behind to guard each star system visited.

The 'Krillians' always move first and the idea is that the 'Centron' player does not watch his opponent position his ships. After the Centron moves, the program scans for battle situations; that is, star systems occupied in some way by both players. Battles are fought with each player controlling a single ship in an Asteroids-style shoot out, with the

number of fighters a player has in the star system determining how many hits his ship can take before it is eliminated. When all star system disputes have been settled a new movement phase begins, and on each complete cycle new ships are provided at the home bases dependent on the number of star systems you control. The winner is the first person to conquer his opponent's home base.

Certain aspects of this game require careful strategy but the overall effect is rather weak somehow, partly due to the very basic battle scenario. Despite this I can see two enthusiastic players becoming quite addicted.

GAME: ABM
PRICE: £13.95
SUPPLIER: Muse Software

As you may have guessed, this is a variant of the popular Missile Command, Atari's version of which I covered in April. It is in fact virtually identical except that you have five missile bases firing two different sizes of missile. Your task is, of course, to shoot down approaching nuclear warheads in an attempt to protect the east coast of the USA from its impending (and indeed inevitable) demise. Paddles or the joystick are used to guide the target sight and ABMs are sent ploughing towards its position at the press of a button. The precise action of the control unit can be customised at beginning of play, though apparently only once. In the original game the sight would leave

a marker immediately you fired, whilst remaining active, allowing you to launch missiles as frequently as you wished. In ABM, however, the sight disappears while your missile is in flight and thus you can only launch them one at a time, a serious defect as it entirely changes the nature of play. The bombers and formidable 'smart missiles' seen in Missile Command are also sadly lacking in this game. I must admit that I like it anyway, so although I rate this 'cover version' a poor copy I should add that it's a good substitute.

GAME: Olympic Decathlon
PRICE: £14.95
SUPPLIER: Microsoft

insists that paddles or a joystick are necessary — these are in fact only used in two of the events; the shot put and the hurdles (neither of which were exactly my forte!). Mostly the game demands rapid finger movement over the keyboard, often literally using two fingers as legs as if running. Up to six players can take part, each entering their names into the computer, and there is the opportunity for unlimited practice before the decathlon proper. Each event is heralded by a little fanfare, and full instructions are displayed throughout with the option to look at the scoreboard at any time. The graphics and presentation are flawless, but the general pace of the game is rather slow because of the low percentage of the playing time during which you are active. The long and high jumps were my favourite events, closely fol-

lowed by the pole vault. I must admit I found the frantic finger pumping in the track events rather boring and tending to cause severe knuckle cramp; but I suppose this mirrors reality in some ways! Essentially this is ten quite simple games neatly compiled into an exclusive games package (they are even accessed from disk individually). Although the actual 'events' are, in themselves, rather trivial and unlikely to stimulate the hyperactive Defender freak or intrepid Star Trekker, Olympic Decathlon should appeal to the family audience where it would undoubtedly provide many hours of amusement.

This glossy athletics simulator from Microsoft is likely to receive a mixed welcome from gamers. The manual

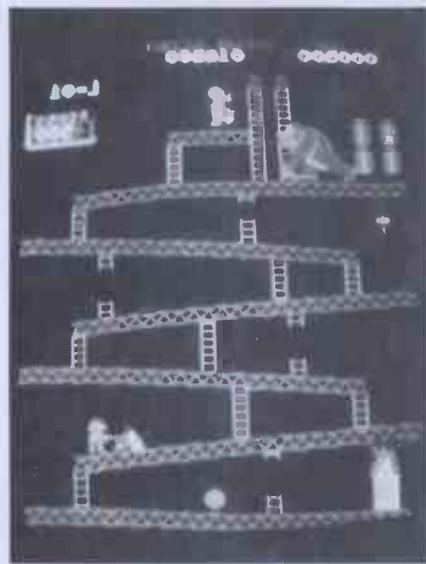

Conclusion.

As I mentioned in the introduction, the Apple II is neither designed nor marketed as a games machine. Despite this, the quality of the graphics and lack of memory limitations make it an admir-

able instrument for such pursuits. The games I have seen are varied and colourful and often of a quality much closer to that of their dedicated arcade peers than on smaller machines. Any Apple II users currently restricting their machines to more serious pursuits

would be well advised to investigate its leisure potential. *Jet Fighter Pilot* was supplied by Calisto Computers of Birmingham and *Galactic Wars* by Apple. The joystick and all other software was loaned by Peter and Pam's Computers.

ARCADE ACE

This month I have chosen a game whose variety has always impressed me, despite my inability to really master it. The oddly named Donkey Kong sets you the task of rescuing a maiden from an enraged gorilla. At the outset the gorilla carries his victim to the top of the screen and, using a four-way joystick, you control a little 'jumpman' who must ascend the various levels to save her. The problem is that our oversized primate is not too happy about your presence and spends his time rolling heavy barrels down at you. Luckily you have the ability to leap over these as they approach — but the timing of this is critical. There are a couple of mallets dotted around and if you manage to grab one of these you have a limited period of time in which you can smash the barrels before they reach you. To add further to your problems, as time passes

increasing numbers of fireballs arrive to chase you.

The first frame is a simple configuration of girders and ladders with the main problems being the barrels and fireballs. If you manage to get to the top Kong makes off, carrying his reluctant victim to a new vantage point, and as the game progresses the scenarios become increasingly complex with lifts, conveyor belts and boiling vats to be negotiated. When you have successfully completed four screens the girl is finally released and the game starts again with increased ferocity. Donkey Kong combines simple controls with an interesting selection of game tasks. This, together with its colourful graphics, makes it almost as much fun to watch as to play and puts it at the forefront of the current move away from space shootouts.

EPSON'S NEW TYPE III simply out of this world

Epson's new Type III series brings quality graphic printing within the price range of alphanumeric users for the first time.

The MX-80, MX80F/T and the MX-100 offer high reliability, improved performance and greater flexibility.

Performance of the MX-100 has been boosted to 100 cps, and the MX-80 and MX-80F/T each give 80 cps. New features include super and subscript, underlining, deletion and italics. Users can select a unidirectional print mode and system reset.

High resolution printing quality is from a 9x9 dot matrix head, and a wide range of type sizes is available. Other user benefits include an easy-change cartridge ribbon, and quiet operation.

All three are equipped with a full 96-character ASCII set, with descenders. The standard interface is Centronics-style 8-bit parallel, with optional RS 232 or IEEE 488 ports, and most popular micro computer systems.

Epson . . . Simply out of this world.

THE 16-BIT PERSONAL

The ACT Sirius 1 is more than the UK's best-selling 16-bit personal computer. It is the only one with such a large choice of 16-bit software — business and scientific programs specially developed to take advantage of the high speed 16-bit Intel 8088 microprocessor at the heart of every Sirius.

Combine this faster and more powerful software with the advanced specifications of the Sirius 1 and you can see why more and more business users are choosing Sirius.

Because Sirius users have both the latest microcomputer technology and the powerful 16-bit software that takes full advantage of it.

Ergonomics plays a vital part in the design of ACT's Sirius 1. The screen tilts and swivels to suit the user and glare is eliminated.

The display is razor sharp, and the brilliance and contrast can be adjusted using keys on the low profile detachable keyboard.

UP TO 896 KBYTES RAM

128 Kbytes of RAM memory as standard easily upgraded to a massive 896 Kbytes ensures plenty of capacity for fully fledged business software and associated record files.

Within the basic system is 1.2 Mbytes of floppy disk storage, with 2.4 Mbytes double sided disks available as an option. More than any other comparable personal computer.

As a result, the Sirius is suitable from the start for large record processing applications. And with 5 and 10 Mbyte Winchester disk drives scheduled for early introduction, the Sirius can easily match your own organisation's growth.

SOFTWARE THAT TALKS BACK

And built into every Sirius is a revolutionary new concept: An audio decoder that can play back verbal messages and prompts under program instruction to assist the non-computer people to get acquainted with the software more quickly.

NEW 16-BIT SOFTWARE

All the big names in applications software are on the Sirius: ACT's Pulsar for accounting, WordStar for word processing, MicroModeller for financial modelling and SuperCalc the "spread sheet" program.

Plus the exciting SELECT, the only word processor that teaches you how to use it in less than 90 minutes.

And more than 100 top software companies are currently developing specialist software for every business and profession from the motor trade to solicitors.

The ACT octagon encapsulates our philosophy of providing users with a single source for their computing solutions.

ACT products include personal computers — network micro-computer systems — turnkey mini computers and a total range of services, including software development, computer field engineering, computer supplies, and a complete range of Bureau services.

The eight specialist ACT companies are each leaders in their field and are wholly owned by Applied Computer Techniques (Holdings) p.l.c., one of Britain's largest and most successful computer companies.

ACT SIRIUS 1 PERSONAL COMPUTER Price £2,395

MORE LANGUAGES

The Sirius has more available programming languages than any newly introduced personal computer. MicroSoft's BASIC 86, interpretative or compiled, CBASIC, a choice of several versions of COBOL, three different PASCALs and a full scale FORTRAN.

The benefits? Programmers and software houses are making the Sirius their first choice computer for business software development.

Unlike other personal computers, the ACT Sirius 1 is delivered with the two industry standards at 16-bit level — MS-DOS and CP/M-86.

Once again a guarantee now of the widest choice of off-the-shelf 16-bit software.

And further operating systems are under development. The much vaunted UNIX and a new system to support a low cost local area network.

COMMUNICATIONS

The Sirius is the ideal communications system, with two independent RS232 communications ports in addition to parallel and IEEE 488 ports. Available NOW are all the facilities required to communicate directly with large, mainframe computers.

Further backing is available by way of a dedicated Sirius Training Centre, run by ACT and open to all.

To support the product ACT has a truly professional network of systems dealers, handpicked for its knowledge of the business environment, enabling top quality support to always be close at hand.

THE MIMI 801

BENCHTEST

PERSONAL COMPUTER

Photography by Karin Cuddock

Mike Curtis reviews a CP/M based machine of British manufacture which can be had for £1350.

The Mimi is a new British computer, aimed directly at the most competitive section of the market, the small business sector. It is in competition not only with such well-established machines as the Superbrain but also with the flood of Japanese machines which is just hitting us. To succeed against this very stiff competition, then, a machine will have to offer some obvious advantage in price or performance; experience has unfortunately shown that being made in this country is no longer sufficient to guarantee even sales at home, let alone in Europe and the rest of the world. I am pleased to be able to report that British Micro has produced a machine that looks as though it will stand at least a sporting chance, and may well be able to capture a sizeable chunk of the ever-growing market.

Hardware

The Mimi comes, like so many of its competitors, with processor, keyboard and twin 5¼in minifloppy drives in a single unit, though without a monitor. I must admit to preferring this arrangement to the all-in-one adopted by so many companies; I like to see video circuitry kept as far away as possible from the rest of the electronics and I appreciate being able to position the screen at the most comfortable position. There is obviously a good case for putting as much as possible in one box, but one major advantage of keeping the monitor separate is that the Mimi is quite light and it's quite reasonable to carry it around, with a monitor in the other hand!

The case is quite attractive; it's the traditional off-white/grey/fawn colour

so beloved of computer manufacturers. It is not quite rectangular — the keyboard narrows slightly towards the front and the top of the case slopes down slightly towards the back, which makes it a little more aesthetically pleasing than some of its competitors, and means that a monitor standing on the top of the case is at a good angle for viewing without having to be propped up. The Design Centre chose the Mimi for a six-week display in London and another in Glasgow.

The two disk drives are mounted horizontally above the keyboard, leaving a little space beside them for a panel showing the maker's logo and two LEDs; one is labelled 'Halt' — I don't know under what conditions this one lights up as it never did while I was testing the machine, despite 'Halting' on a few occasions.

The keyboard itself is standard qwerty layout and feels robust and pleasant to use. There are some nice touches, showing the sort of attention to detail that is normally the prerogative of the Japanese: the keys come in various shades ranging from light grey for the normal alphanumeric to darker shades for the different types of control keys; there is a separate numeric keypad with its own return key (labelled ENTER), minus sign and comma as well as the decimal point. Four cursor control keys, in black, are conveniently situated together on the right-hand side of the main set of keys; unfortunately they did not control the cursor, at least not on any of the software that I was using — Wordstar for example, used the more normal control functions.

Above the main set of keys is a row of unlabelled mid-grey keys with a black 'BRK' at one end and a black 'HOME' at the other; neither of these did their proper job, 'BRK' being the same as control 'DEL' and 'HOME' being control-Z. The 15 keys in between were various control characters — useful provided that you could remember which was which. The 'ESC', 'TAB' and 'BS' (BackSpace) did work correctly. There are the normal CTRL, SHIFT, SHIFT LOCK and CAPS LOCK keys and all keys except for these are auto-repeating. The keyboard is not programmable in the normal sense — the interpretations for every key are stored in a 2716 EPROM, so any variation is possible by blowing a new ROM; the intention presumably is to tailor the keyboard to fit the application. Machines which are bought as a part of a complete system should (I hope!) have all keys labelled so as to reflect their actual usage.

Looking at the back of the case reveals a variety of connectors; along the bottom, the edge of the PCB, are from left to right a connector for disk drives 3 and 4, a standard RS232 connector containing two ports, a parallel output port and, finally, a 50-pin bus extension. At the top, on the right-hand side, are an on/off switch and the video coaxial socket. The two RS232 ports inside one D-type connector can be used either for the normal connection of serial devices or for communication between processors. One of the ports is connected to the standard pins in the female D-type socket, the other to a group of normally unused pins. The port connected to the standard pins is configured as a receiver, which may perhaps indicate that one of the possible applications for this machine is as an intelligent terminal, for which it would probably be very well suited. I do not know whether a terminal emulator package is likely to be available in the near future. The printer that I attached happened to use a serial port, which meant that the lines had to be crossed over before it would work. The dual port may be particularly useful in networking where a number of computers may be connected in a ring.

The case comes apart with the removal of seven small screws on the underside. The disk drives, their control circuitry and the keyboard come off with the top and are attached by ribbon cables to a single large board and the very compact power supply left on the

base. The main board is very big (410cm x 340cm), occupying virtually the entire base of the machine. Boards this big usually cause some problems in design and manufacture. I understand that British Micro has now split it up onto two boards with the video circuitry on a separate board. This may give greater flexibility and more display facilities as well as easing production problems. The RAM is all in one block at the front right, in the form of 16k dynamic chips.

Next to the RAM is the video controller, the Motorola chip which seems set to become another de-facto standard. The Z80 processor, the ROM, the PIO and the two UARTs, one for each of the RS232 ports, are at the back.

At the left-hand side of the board I discovered a socket for attaching a light pen, which I had not noticed from outside — another potentially useful extra. The disk drives are Pertec.

The interior looks well engineered and the boards are of high quality, as you might expect from a company

run in under 48k. There is 4k of ROM at the top of the memory map which contains, among other things, a simple machine code monitor called Simon, but this is switched out of the map when CP/M is booted in. The display can be either 80 or 64 characters wide, with 24 lines; the 80 column display came up as the default on my machine. The manual states that 64 should be

Big board has been split in two on latest version.

that has been in the board-making business for a long time before branching out into the micro market.

The Mimi comes supplied with a reasonably long mains lead and a video lead with a phono plug on the monitor end. Having plugged those in, a disk can be inserted in drive A (the left one) and the machine switched on; after a brief flash the screen clears to show the message 'Mimi 801', the system size, and the CP/M prompt 'A>'. The Mimi has a cooling fan which makes a reasonably unobtrusive noise — I sat for up to three hours at a time at the keyboard without it ever bothering me. The disks are fairly quiet as well, far more so than many I have heard. The normal size to run CP/M is 62k, the top 2k of RAM being used for the video display. When using the graphics the top 16k is taken up so CP/M has to be

the default and also gives the patches that have to be made to the I/O routines in order to change from one to the other. I did try to effect this patch to convert to 64 lines but found the contents of the various memory location were not as the manual showed and it did not seem terribly important. The 80 column width did run over the edge of my screen, losing about the last 4 characters in every line, which could have been a peculiarity of my monitor or the dot-clock not set properly. It did not seem too matter too much, anyway; Wordstar came with the right margin set at 64 by default and I do not believe I would have noticed had I not deliberately counted the character positions.

CP/M is, of course, the operating system supplied with the Mimi. This means that a vast array of software

Now you can add 64K CP/M[®] to your Pet Commodore for only £497,- With the CP/M[®]Maker

It takes only five minutes and £ 497,- to raise your standard Commodore operating level by CP/M and add a hefty 64K RAM.

Not another tag-on box, this module actually plugs inside your present console. No new power supply, no soldering, no fiddling.

Whether you own the 3000, 4000 or 8000 series model you can still add CP/M versatility.

The CP/Maker gives you a massive 96K RAM at your disposal.

The Z80 microprocessor, incorporated in the CP/Maker will also enable you to use your 6502 as an intelligent I/O processor.

Look at all these other CP/Maker advantages:

- Compatible with all CP/M software such as wordstar.
- Compatible with all normal CBM software, including 69K Visicalc.
- The Z80 and 6502 work simultaneously.
- Languages include CB 80 (the fastest Basic compiler for micros), C-Basic, M-Basic, M-Pascal, PL1, CISCobol, Fortran...
- Comes complete with CP/M 2.2 diskette and operating manual.

PERSONAL COMPUTER

becomes available, in theory at least. There is usually some snag, and versions of CP/M differ somewhat from machine to machine; this one seems to be a straightforward version 2.2 with BIOS version 1.1. There are a couple of extra utilities supplied to supplement the usual CP/M ones — Format and Backup. The Mimi uses a rather unusual disk format, which has certain advantages in terms of speed of access and capacity, but has the side effect of making it incompatible with other systems, so there is no chance of putting a disk from another system in and expecting it to work straight away. The disks are double-sided double-density and use a sector size of 512 bytes instead of the more usual 128. The heads access the track on side 0 followed by the track on side 1 before moving on to the next track, which saves head movement, so the disk appears to have 35 tracks each containing 20x512-byte sectors. CP/M expects to find 128 byte sectors so software is interposed to fool CP/M into seeing 35 tracks of 80x128-byte sectors. The sector skew is left variable on this system. The skew is the order in which sectors are accessed; there will usually be some processing after a sector is read which means that the physically next sector will have passed the head, and if that was the next one to be read you would have to wait nearly a whole revolution before it comes round again. So the idea is to skip a few sectors and hope that the next sector that you actually want to read is in exactly the right position when you try to read it. The number of sectors that you skip is the skew factor, which is normally set at some average value. The Format program allows you to set the skew factor when you format a new disk, allowing you to squeeze the best performance out of your disk for a particular application. I do not think that this will make very much difference in the majority of applications and most people would find a skew factor of 2 the best compromise. I experimented with a few different values and it made no detectable difference, but then nothing of what I was doing was in any sense time-critical. Backup is a useful command to create a backup copy of a disk, system track and all; unlike many such utilities, this one only copies the sectors which are not empty, saving a little more time. Both Format and Backup did seem to work quite quickly, though I did not have another machine around to compare them with directly. The larger sector size brings capacity bonuses as each disk can hold a full 340 kbytes. The software people at British Micro have attacked the problem of incompatibility and I was provided with a disk which, when booted up, reconfigured one of the drives to accept Superbrain 'QD' double-sided double-density disks, another clear indication of the market at which this machine is aimed.

RS232 connector contains two ports.

Software

The form of Basic I used was the standard CP/M MBasic, about which plenty has been written in the past. I was also given a preliminary form of a graphics package which took the form of an extension to MBasic. The graphics facilities on this machine are quite nice. Two resolutions are available: 512x256 and 256x256. Resolutions in powers of two would seem to make sense and might make possible some improvements in speed through good software design; the benefits of a square resolution should also be quite apparent, particularly for drawing graphs. I found the graphics quite impressive — the speed was good and the resolution fine enough for nearly all purposes. There is a graphics demonstration program to show off the features, which include double-width characters, free mixing of graphics and text, and half-tones.

This was only a preliminary package

so the procedure for setting up the graphics extension was rather complicated, involving the loading of the graphics package (a CP/M command), then loading MBasic and finally setting up the linkage from within MBasic. I hope this procedure will be simplified before the package becomes generally available.

The graphics commands available reflect the intention that this machine will be primarily used for business rather than game-playing. There are no direct animation commands, nor any to fill in a block on the screen; but there are commands to draw vertical bars in full or half-tone, which make the drawing of histograms very much easier. Another useful command is DRAW, which takes as parameters the angle at which a line is to be drawn and the length, which I find very much more useful than the normal type of command which specifies the finishing coordinates although this is also available in the form of DRAWTO X,Y.

THE
MIM1801
BENCHTEST
PERSONAL COMPUTER

Graphics and text can be freely mixed anywhere on the screen, and a further useful command, which unfortunately had not been fully debugged in time for me to try out, is DOWN X,Y, 'string' which prints the string vertically down from the specified coordinates, without updating the cursor position.

It is possible to restrict the amount of screen which scrolls to a given number of lines at the bottom of the screen, but there is no other facility for creating 'windows' on the screen. The various routines are also available as a library which can be called from a Basic program, thus making them usable with the MBasic compiler and other languages.

The Benchmark timings show that the Mimi with MBasic is no slouch. The two sets of figures are because of the use of the top 16k of RAM for video; a CP/M system of more than 48k will use this RAM and, because it is shared by the processor and the video controller, access is slower than elsewhere in the memory map. The difference in the two sets of figures for the 62k and 44k systems shows what effect this has. The times are quite fast, even for the 62k system so, with the more efficient disk organisation and the fast graphics, the Mimi is certainly going to hold its own as far as speed is concerned.

Documentation

The documentation that comes with the Mimi is, to say the least, minimal, consisting of a 'Software manual' and some extra sheets detailing the pin layouts of the various connectors and a few pages on the graphics extension. The manual is in fact merely a list of the particular features of CP/M on this machine, with some details of the Format and Backup commands. Some examples of customisation to deal with particular printers are given but the reader is continually being referred to a 'CP/M manual' for more details. I am not overly familiar with CP/M myself, but with the aid of a CP/M manual (and a quick phone call) I managed to configure my printer (a Paper Tiger) to be the CP/M listing device. I would not like to recommend trying any of this to a beginner, but anyone familiar with the innards of CP/M should be able to find their way around without difficulty. The obvious intention is that dealers will put together a complete system based on the Mimi, and this will include application software and user documentation. I understand that the documentation is being revamped, at least in presentation if not in quantity; but I was rather disappointed by what there was. I usually find that CP/M manuals are not the easiest of documents to find your way through. I had no documentation for MBasic and Wordstar, which were the main items of software that I used, but they are both 'standards' of their type so I could find out how to do most things without needing too much experimentation.

Conclusions

The Mimi is a pleasant machine to use. CP/M opens the door to a very wide range of software and the machine's ability to read Superbrain disks and possibly other CP/M machines' disks in the future means that most of this software is going to be available very shortly, despite the Mimi's own unusual disk format. The price of £1350 is very competitive, even after adding on the price of a monitor — a full business system with dot-matrix printer and appropriate software might be had for around £2000, and could show a significant saving over many similar systems.

Initial cost is not everything, of course, and a lot will depend upon the amount of support available for both hardware and software and that will depend on the numbers being sold. There is now, I believe, a network of 19 dealers offering systems based on the Mimi in this country; three types of maintenance contract are available, covering the usual degrees of service. The Mimi is already established in Denmark, Holland, France and Holland; units have been shipped to South Africa, Greece and Iceland and orders have been received from West Germany. British Micro is expecting to move 2500 units this year, which is quite a respectable level of business. It should have some clear advantages over its immediate rivals for, as an indigenous company, it benefits from Common Market regulations and the government tries to maintain a 'buy British' policy where possible. One market which the Mimi could enter quite strongly is the educational one, despite the subsidies in favour of the RML 380Z and the BBC machine; it offers a clear price advantage over the 380Z and would look an attractive prospect to those institutions teaching about business systems rather than simply using the computer as a classroom tool. I understand that 12 have already been installed at Nottingham University.

I would like to see better documentation and I would definitely hope that the keyboard will be sorted out so that all key labels reflect their actual functions. British Micro is an offshoot of a company that has been in the board-making business for some time. I think it deserves to succeed even if I might query the wisdom of jumping in at the deep end in what is simultaneously the most competitive section of the market and the one that could well show the greatest upheaval in the near future as new processors and operating systems challenge the Z80-CP/M stranglehold. I liked the Mimi and it created a very favourable impression while sitting on my desk; it is a good-looking, well-engineered, professional system. The only trouble that arose was a fault on disk drive B which started to reject sectors that drive A continued to read perfectly. This only occurred late in the test but by the time I finished this review British Micro had not come back to me about getting it repaired; I hope the company dealing with maintenance can manage a quicker service. A businessman looking for a reasonably priced entry level system could do worse than this new British micro.

GRAPHICS COMMANDS

G256	sets 256x256 resolution
G512	sets 512x256
PSET X,Y	lights a pixel at specified coordinates
PRESET X,Y	erases a pixel at specified coordinates
PENDOWN	following graphics statements will display a trace on the screen
PENUP	following graphics statements will not display a trace on the screen
PENERA	following graphics statements will cause any pixels already aight to be erased
PENFLIP	following graphics statements will invert pixels
PENRET	causes the pen to return to the position it was at before the last graphics statement
START@ X,Y	updates current pen position
DRAW a,d	draws a line from current pen position to length d at an angle a to the x-axis
DRAWTO X,Y	draws a line from current pen position to the point whose coordinates are X,Y
SCREEN X,Y	updates the position of the screen cursor on a 64x25 grid
VBAR X,Y,N	draws a solid vertical bar from screen coordinate X,Y for N dots
VBARH X,Y,N	draws a half-tone vertical solid bar
DOWN X,Y, "str"	prints the string "str" downwards from X,Y
CAP	prints current pen coordinates on the screen
CAP@ X,Y	prints current pen coordinates at point X,Y
LCAP	prints current pen coordinates on the CP/M list device
SCROLL N	limits screen scrolling to the bottom N lines

Introducing the... EOS 7000

FEATURES

- Simple mechanism with high reliability.
- Heavy duty 16 wire head.
- Snap-in cartridge ribbon.
- Single electronics board.
- Test print and Self diagnostic.
- HT, VT as standard.
- Automatic underline.
- Model variation for paper handling.
- 116", 11/20" paper feed.
- 110 cps (TYP) for proportional spacing, skipping and logic seeking.
- 180 cps for drafts, 30 ips automatic space
- 1,080 dot columns/sec for graphic printing
- AC 100, 120, 220 and 240 volts in 48 Hz—62Hz.

3-in-1 Printer

1. Letter quality dot matrix 90 cps
2. High speed draft 180 cps
3. Ultra high resolution screen dump graphics

Sinclair ZX81 Personal Computer the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day.

Lower price: higher capability

With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

Every ZX81 comes with a comprehensive, specially-written manual – a complete course in BASIC programming, from first principles to complex programs.

Kit: £49.⁹⁵

Higher specification, lower price – how's it done?

Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

New, improved specification

- Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.
- Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.
- Unique syntax-check and report codes identify programming errors immediately.
- Full range of mathematical and scientific functions accurate to eight decimal places.
- Graph-drawing and animated-display facilities.
- Multi-dimensional string and numerical arrays.
- Up to 26 FOR/NEXT loops.
- Randomise function – useful for games as well as serious applications.
- Cassette LOAD and SAVE with named programs.
- 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.
- Able to drive the new Sinclair printer.
- Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips.

Built: £69.⁹⁵

Kit or built – it's up to you!

You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 700 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder.

ter-

Available now- the ZX Printer for only £59.⁹⁵

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alpha- numerics and highly sophisticated graphics.

A special feature is COPY, which prints out exactly what is on the whole TV screen without the need for further intructions.

At last you can have a hard copy of your program listings – particularly useful when writing or editing programs.

And of course you can print out your results for permanent records or sending to a friend.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZXPrinter connects to the rear of your computer – using a stackable connector so you can plug in a RAM pack as well. A roll of paper (65 ft long x 4 in wide) is supplied, along with full instructions.

16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sinclair ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port at the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personal database. Yet it costs as little as half the price of competitive additional memory.

With the RAM pack, you can also run some of the more sophisticated ZX Software – the Business & Household management systems for example.

How to order your ZX81

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day.
BY FREEPOST – use the no-stamp-needed coupon below. You can pay

by cheque, postal order, Access, Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

FIVE OUT OF TEN • MUST TRY HARDER

William Dargue describes his experiences with micros in the classroom

There's no doubt at all that micro-computers are wonderful machines. I've had great fun with them and learnt a lot. But isn't it time that teachers with the micro bug stopped and had a look at where we're actually going in education? Computers are certainly addictive, and just as an alcoholic can think of all sorts of reasons why he should have just one more drink, so micro-mad teachers will justify their machine in education.

I'm a teacher in an inner area school in Birmingham. I had no contact with micros whatsoever until 18 months ago when I was offered a Tandy TRS-80 Level II on permanent loan by Colin Watkins, Birmingham's Primary Computer Adviser and an ex-primary teacher. Tandy, it seemed, was willing to loan a machine to us, presumably to impress the Birmingham Educational Computing Centre, which was then trying to decide which machine to standardise on in primary schools.

I agreed to go on a 10-session Basic course and to report on my experience with the computer, which was to be kept in the classroom full time. Apparently this was hitherto unheard of. Where schools had their own machine they were shuffled round the classes on a rota basis, so that in a two-form entry junior school each class would only have the micro for one morning or afternoon a week, and quite probably not every child would even have a go once a week. Other computers were loaned out by colleges or local authority computer centres and hands-on time would be even less.

It would be interesting to see how the children in my class reacted to the computer being with them all the time, with each child using the machine at least once a day.

So I learnt some Basic. My first shock (perhaps I was a little naive) was finding that computers couldn't do anything until you told them to. They couldn't tell you when Shakespeare's birthday is or how far it is to the Moon. Quite a disappointment at first. And I learnt how you have to tell them how to do every damn thing (worse than kids in that respect!). And I experienced the thrill of running a crude 'What's-your-name?' 'Hello-Bill' program. And then times tables! It

really was an exciting achievement. Then the TRS-80 arrived. The children were ecstatic and the rest of the staff pretended not to notice.

The first day every child had a go on my wonderful tables-testing program. All day the whole class watched and normal work came to a standstill. After a few days, however, no one took any notice and the children

would go and have turns on a rota basis without disturbing the rest of the class at all.

But there had to be a gremlin in the works! From the first we had a problem which I found out later was called 'debounce'. Whatever you typed came up double or worse. It only took a few days for the roars of laughter to stop, however, when the computer said,

'Hello, Sseebbaasstiann' or, 'Well done, Ppaatssy!' We were later given a very short program by Tandy which could be put in before any other program and that problem was solved.

But there's more! I had terrible trouble loading the programs from cassette. I learnt later that the TRS-80 can be very temperamental about volume and only slight adjustments can mean success or failure. But it meant at first my having to type in programs every morning before school because the program would not load from tape. And can you imagine that with every other character doubling up?

Experience has taught me how to fiddle about with the volume, although it is frustratingly time-consuming and not always successful even now. But there was also the problem of the machine being in four parts: the screen, the keyboard, the cassette player and the power supply. These bits and a hundred different wires had to be got out every morning and taken to the other side of the room where the socket was and all connected up. I coped and even learnt to do it without much effort, but this sort of rigmarole really is not on for a primary school where there are many different subjects to be taught and the demands of other apparatus to be met.

So the children quickly became used to it, though their enthusiasm for using it never flagged (even with a constant diet of tables testing), and other teachers even peeped round the door at it once or twice!

Fortunately, at this point, our primary adviser came up with some new programs. One was a tables-testing program which increased the difficulty as the children improved and which also kept a record of their scores with only a little manipulation of tapes. Another was a program whereby the teacher could type in the week's spelling and the children would type them in on a 'Hangman' basis without the hangman. This was useful because it directly related to classroom work. And a third set of programs was Tandy's own K8 maths programs.

The K8 maths program was great. It is a very carefully worked out American program of arithmetic from the very simplest level (kindergarten) to the most difficult four rules (+, -, x, ÷) practice that you could want. The program will grade the children and then provide practice at their own level. Although there were differences in procedure compared with the way we taught, it seemed to worry the children very little. Other teachers peeped a little more and seemed to be quite impressed with K8. It is, after all, the type of practice arithmetic primary schools still do a lot of.

Other programs were brought in from time to time. The primary adviser gave us a noughts and crosses game. The children enjoyed his sense of humour in the comments the machine produced when it won or lost. There was a maze game where you had to steer a dot round a maze to knock out a number of targets. And a very crude Space Invaders. The children did not tire of the computer at all — they used it usually once a day and sometimes more often, but I made sure that I kept changing the programs often enough to stop them getting bored.

Really it was me who was getting bored. What with the continual humping about of the equipment, the problems in loading the programs, seeing the same drill-type programs all the time and the enormous amount of time and effort involved in producing the very crudest, graphicless programs, the micro began to get me down.

I had no doubt that the children enjoyed it. I was sure it was doing the useful sort of work we often did in class, but I knew it was capable of so much more than I was able to do with it.

Meetings were held from time to time at the Computing Centre in Birmingham and people from various

'Programs need to come from teachers and not from computer experts with bright ideas...'

parts of the country would demonstrate their own programs. Some were designed to be used on a large TV in front of a whole class. These seemed particularly futile: they couldn't compete with a real TV programme, and what's wrong with a blackboard anyway? Many were of the drill-type programs with which I was already very familiar. Others were supposedly decision making programs for use with groups of children. These were fine as long as the programmer had included all the possibilities that the children were likely to come up with, otherwise they ended up as 'guess-what-I'm-thinking' games. It left me feeling that there was nothing much that £500 of equipment could do that any good teacher couldn't do with chalk, talk, pencil and paper.

And then the cuts in education spending began to bite. Birmingham decided it couldn't fund a full-time primary adviser, despite Mrs Thatcher's £9 million for computers in schools. Our primary adviser had to be half-time adviser and half-time teacher. He spent his half-time teaching at our school.

He brought with him another TRS-80 complete with expansion interface and a disk drive. And, most important of all, we had an easily accessible programmer to hand.

So, with two computers, we changed tack. We decided that the computer permanently in a classroom was a great success. This was to be the way forward. But with limited resources it was time to make the machines available to a wider range of children. The two computers were set up permanently in the library on our top floor, where they never had to be moved and where they were within easy reach of our 3rd and 4th year juniors (aged 9-11). Each class was time-tabled for two morning or afternoon sessions using both machines.

Now we had to justify to the teachers what the computers could do. It was amazing how I managed to gloss over the problems and present a God's-gift-to-mankind image of our troublesome micros when faced by a critical staff.

But they were keen to give them a try. So what happened? After an initial surge the whole thing has died a little. Teachers have found it too difficult in practice to keep hopping in and out of

the library to check results and solve the minor problems of children who are stuck. It means leaving the whole class for the sake of one child, and that is just not on with primary children. Whereas the micro was in use virtually full-time in one classroom, it is not uncommon now to find both machines unused with a 'Ready' sign on.

However, with an almost resident programmer it has meant that the teachers' criticisms of programs have been acted upon fairly immediately. Small things have been easily altered: we have a time-telling clock program which asks 10 questions which weren't numbered. That would have taxed my ability but has been quickly dealt with. In our tables test there was no way for children to solve problems to which they did not know the answer. We tried supplying them with paper and pencils (remember them?) and counters, but now, if they still fail to get the right answer after a certain number of tries, the screen displays (for example) a grid of 9 by 7 stars for the child to count up. For, say, 23 x 6 it prompts 3 x 6 and 20 x 6 and then adds the answer.

We now have spelling programs and games of Hangman which use a common pool of weekly spelling lists. Our disk drive provides this flexibility.

The disk drive has given my own programming a new lease of life. I've developed a number of programs to better suit my own needs. And at the moment I'm working on a program which produces poems by request. It's a computerised poetry book whereby the poems appear line by line at the speed I've selected with such wonderful graphics as falling snow, winking snowmen, random time clocks and emptying dustbins. It's an as-yet-crude attempt to break away from practice drills and give the computer another dimension than Space Invaders, spelling and tables. If only I had more time!

So, what are my observations after some considerable experience using computers with primary school children? Firstly, let me restate my credentials. I am a class teacher with some small ability to program. My attitude to computers is the same as regards any new classroom tool, whether it be a new type of pen or new paint. I haven't got much money to spend and I'm very critical of advertisers' claims to solve all my problems.

It seems to me that too many teachers involved with computers are being carried away with their own enthusiasms. They feel a desperate need to justify the huge amount of time and money they are spending on micros and are being blinded to the real problems and achievements of the machine.

The problems are massive. One is that micros are as yet too complex to be used by the uninitiated teacher. I'm not denigrating the average primary teacher, whose time is precious, when I say that any apparatus more difficult to use than the blackboard or the textbook or the human voice is likely to be rejected unless it's bloody good.

And what can existing programs offer that a good class teacher can't? The most appealing aspect of a good program is that it has a very important element of personal contact with the individual child and that it can be

the filing, typing and

Silicon Office is the latest microcomputer software program from the Bristol Software Factory.

Designed specifically for use with the Commodore PET 8096, it'll help you run your office with the minimum amount of effort and maximum efficiency.

Think of it like three normal software packages in one, each separate package totally interactive with the other.

For around £4,500, you can have the complete electronic office, the solution to practically all your business problems. The price includes Commodore hardware, a high quality daisy wheel printer and Silicon Office software.

Silicon Office is made up from a flexible information management system which lets you create and maintain an extensive filing arrangement. Allowing you to search quickly through your records, making cross references between files in order to gain the facts you require.

A highly sophisticated word processing program allows you to generate letters, documents and reports. Letting secretaries get on with the more important tasks.

And a fully comprehensive calculator means you can handle all the number crunching you're ever likely to do in a business situation. Leaving the

accounts department to concentrate on more profitable things.

But that's not all by any means.

Silicon Office also has a special programmability feature which means you or your dealer can expand and tailor the Silicon Office program to your business.

When Silicon Office is used in an everyday business situation, certain command sequences are inevitably repeated. By writing short, very simple programs which are entered into the computer's memory, Silicon Office can perform the necessary tasks, automatically.

And last, but by no means least is an optional communications facility.

It doesn't take much imagination to see the potential of Silicon Office in virtually any line of business.

So to get a better grasp, send away for our brochure. It'll only cost you a stamp. And it could save you a fortune. Or talk to your local Commodore dealer who has all the facts at his fingertips.

You'll soon see how you're much better off with Silicon Office. Than without.

Getting the strength of insurance

Playing safe is Martin Banks' policy this month.

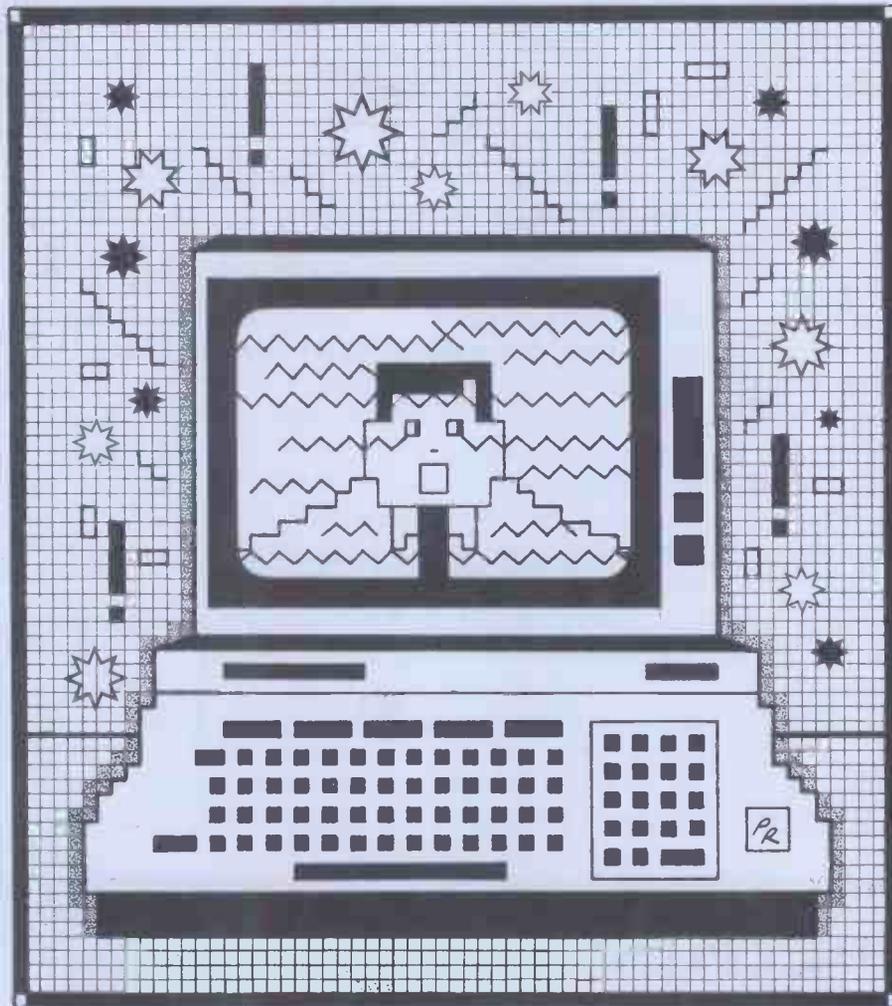

Illustration: Pauline Rosenthal

There is something very civilised about insurance, about the way that we seek to protect ourselves against the loss of a valuable item (or person) so that we can — within the bounds of reason and practicality — replace the loss with something that is just as good.

There is something about insurance that is a problem, however, and that is the way it has become such a complex subject to comprehend. For example, how many of you have ever actually read all the sections of an insurance policy, all the small print that sneaks around the bottom of page 94 of the great tome that makes up the policy? I suspect that the answer is very few.

This does mean, unfortunately, that we regularly place ourselves in the position of having to take a great deal of what is written in such documents on trust. It also means that, however fair and scrupulous the insurance industry is, we are liable to oversell or underprice ourselves on a policy on something we value. We are often going to make fundamental mistakes on policy selection. We are even going to get completely the wrong idea about what a policy will actually provide, and be shocked beyond both comprehension and bank balance as a result.

Despite its civility, therefore, insurance can be a tricky little minefield to

negotiate for the unwary, and that is exactly what seems to be starting to happen in the personal computer business.

Many users — the majority if they are sensible — are taking out insurance policies on their brand new machinery when they purchase it from the dealer's shiny showroom. They are not, however, always actually buying what they thought they might be. What they thought they might be purchasing was some form of insured maintenance deal.

It is only later that they find they weren't. What they were buying was an ordinary insurance policy — and that is something completely different.

There are now several companies offering insurance policies that have been developed especially to cover domestically located high technology products; this includes hi-fi and video equipment as well as personal computers. Among them are Commercial Union, Entertainment and Leisure, and British Engine Insurance.

The policies they offer are broadly similar, though obviously a special deal can always be arrived at. Most provide for theft, damage in transit, and the accidental catastrophic failure of the equipment. Under these circumstances the insurance company promises to pay the value of the policy or the

replacement value of the equipment as new, subject to all the usual terms and conditions of the policy.

The list of items and events that the policies *do not* cover is, as might be expected, normally extremely long. The Entertainment and Leisure policy, for example, has a list of 17 exclusions, ranging from faulty manipulation, erasure and loss of magnetism of tapes, cassettes or memory banks on to inherent vice (which we can't write about in a family magazine like *PCW*), and ending up with theft from vehicles with removable or soft tops.

All well and good. These are the things one normally tends to find in insurance policies. Sometimes there can be more abstruse items that should be checked, like for example the exclusion of consequential loss over and above the loss of the insured property. This means that, though you have a replace-as-new clause in your policy, you won't be covered for having to hire a system while waiting for the new one to arrive.

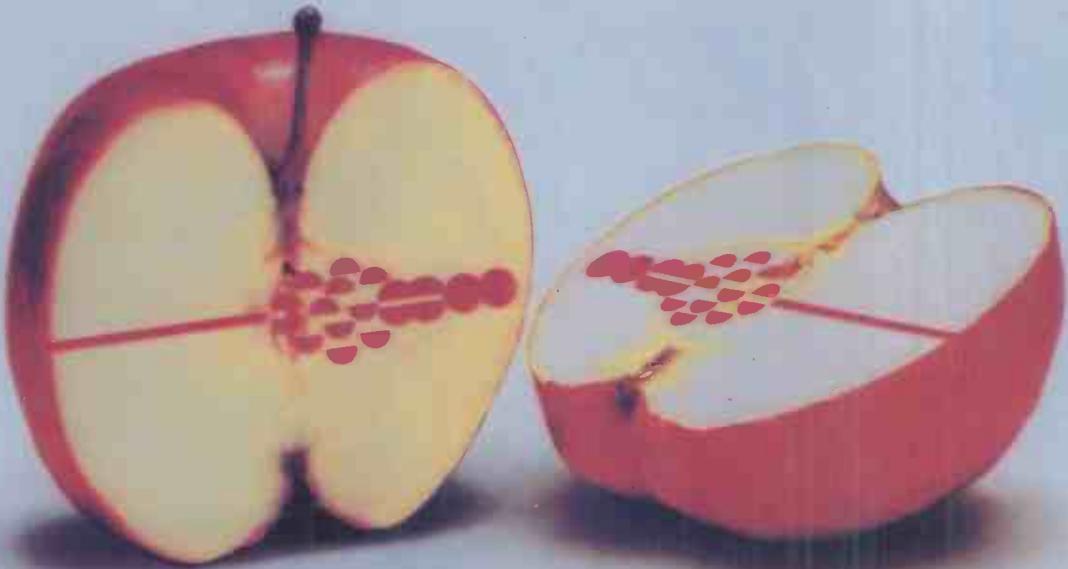

Despite things like that, the policies are useful items to have as the final financial fall-back position, and they are good value for money for what they offer. The Entertainment and Leisure policy, for example, costs £114 a year to cover a system valued at £2500. That covers a system anywhere in the UK, including transit and theft from a vehicle. If the system is insured in a specified building only, it costs £70 to insure.

That is considerably cheaper than the equivalent maintenance contract. Most companies in the maintenance business will look towards charging around 20 per cent of the system's value, per year, to run a maintenance contract on a machine. This can seem a lot to many new users just on the point of signing the cheque for their computer. At its silliest, it represents £13.99 a year to get a maintenance contract on a Sinclair ZX81. The notional £2500 system will cost around £500 a year on that basis.

So what do you get for this amount of money? Well at one extreme it must be said that all you will be paying for is the privilege of having the engineer come out within 24 hours to confirm your diagnosis that, yes, the machine has broken. At that level it is something of a waste of time and money. The more comprehensive contracts will provide such things as a guaranteed call-out time, which can be extremely important for users that base revenue-earning activities on the operation of a computing system; preventive maintenance, which means that the engineer comes round maybe twice a year just to give the machine the once-over and a clean (dirt and dust being a popular source of failure modes); and, finally, skilled engineers. These should be people who know and understand the quirks of a particular system, who can diagnose many faults just from experience but have the ability to find the

GOTO page 179

Great minds think alike.

Look inside the top microcomputers on the market and you will find the best business brains in the country. Ours. Because the key to the efficient use of the microcomputer in your business is high quality 'software' — a set of programs which direct and instruct the computers operation. A microcomputer without software is like a car without a driver! And as one of the foremost software organisations in the industry we're amongst the enterprising few whose software packages are compatible with most leading manufacturers models — including the Apple II & III Xerox 820, Phillips P2000, IBM Personal Computer and NEC PC-8000.

It means that whichever of these microcomputers you own, or contemplate purchasing, you have access to the most advanced range of business software currently available — as well as one of the most widely distributed and preferred.

On the financial front for example, there is a definite meeting of minds over the superiority of our software to perform your ledger accounting, payroll, invoicing, cashflow, planning, budgeting and stock control. Word processing, addressing and mailing, job costing and more will be available in the near future.

In the last year alone over 500 companies have invested in our Financial Controller suite of programs and over 2000 packages have been sold in the UK alone — which together with a full complement of Systematics International software is now available at around £250 per package from Currys Micro-C, Beams Business Centres, The Xerox Stores and over 100 of the best microcomputer centres throughout the UK.

Needless to say, the technical excellence of our software is matched by its high commercial quality. All software is supported by comprehensive easy to follow manuals that take you through organising, setting up and using your microcomputer business system — from an International Company with over 10 years experience and hundreds of satisfied customers worldwide. All can be complemented by management and staff training facilities at our computer and business study centre in Suffolk.

UNDERSTANDING MICROCOMPUTERS— a video tape

To help you decide whether a microcomputer could help you better manage and control your business, Systematics International have prepared a video tape to put you in the picture!

It shows, the elements of a microcomputer business system, how it can help, how to choose, the benefits to be gained and the pitfalls to avoid.

At only £39.95 plus VAT and carriage, it could save you from making an expensive mistake. And considering the business potential of the right microcomputer it's also a small price to pay for success.

So if you really want to get to grips with your business, pick our brains. Everybody else does!

SHARP The elegant MZ80B desktop computer, with a range of options.

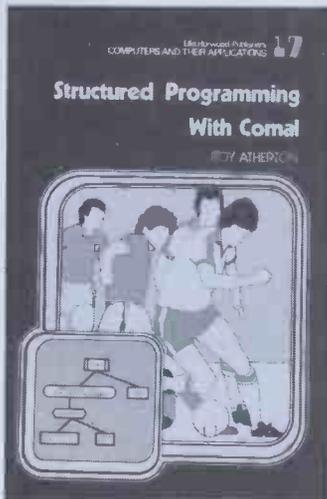

XITAN The essential back-up for every system, Xitan offer unrivalled knowhow in commercial, industrial, educational and scientific microcomputer applications. Xitan's services include system development, hardware and software support, and fast and effective service in the field.

BOOK FARE

By Malcolm Peltu

Innocence is bliss

Structured Programming with Comal by Roy Atherton (Ellis Horwood/Wiley, £18.50 hardback, £6.90 paperback)

Most micro freaks are still in the full flushing delight of computing innocence. Having been armed with a smattering of Basic and oblivious of the complex webs ahead, micro users can set out enthusiastically and uninhibitedly into the computing adventureland.

This attitude has helped personal computing to crack open new frontiers, with blissful innocents going where old computer fogies would have feared to tread. Unaware of the faults of Basic, the micro stars have exploited the language's advantages to the full. But innocence cannot last forever. The Apple II of first knowledge may be sweet and easy but the Apple III of experience has a bitter taste and a toughened core. The thrill of Basic is that it makes programming easy. It breaks down the initial fear of computing but it can be a honeyed trap for the unwary. Programming *per se* is easy but software development can be a complex task.

A few years ago when I roundly attacked Basic in some Bookfares, I was squarely attacked as a computing square. Since then, I believe, there has been a growing and inevitable awareness that there is much computing life beyond Basic. The importance of structured programming and design has been recognised. Pascal is joining Basic as a standard micro language. Other languages, like Forth and Lisp, are being rightfully included in the standard armoury of micro programming.

The trouble with experience, however, is that the joyous simplicity of innocence gives way to murky compromise and com-

plexities. Certainties become doubts. Mistakes may be avoided but so are the crazy risks which turn out to be unexpected breakthroughs. These musings on the loss of innocence have been sparked by reading *Structured Programming with Comal* by Roy Atherton in conjunction with an article by Thomas Green in the first issue of *Behaviour and Information Technology* (which is reviewed fully below).

Comal is the language developed in Denmark by Borge Christensen. It aims to combine the simplicity of Basic with a design that intrinsically promotes the principles of good programming practices and structured design which were previously the preserve of 'grown up' less easy to learn languages like Pascal.

Atherton was one of the founders of MUSE when the acronym stood for 'Mini-computer Users in Secondary Education', ie, in those distant pre-micro days. He has been one of the most eloquent spokesmen for the teaching of good programming practice, not just any old Basic programming. His book on Comal adopts the pragmatic style of most micro books. It is more concerned with doing than theory. He introduces language concepts through example rather than abstract discussion.

This is both the main strength and weakness of the book. It means that newcomers are introduced to structured programming concepts and techniques painlessly and practically. On the other hand, it has insufficient space to explore the wider context of programming theories and developments. As a first step on the road to good programming, this weakness is unimportant. As Atherton comments, in terms of the way he has organised material in the book, 'A good learning scheme is sometimes like a spiral in which topics are treated a bit at a time, returning to previous topics when the time seems right.'

Having provided a basic literacy in structured techniques, Atherton gives the reader the strength to venture forward and, hopefully, to start asking questions.

This is where Green's article provides a healthy reminder that structured programming raises doubts as well as solutions. It will be disillusioning for those Basic innocents, who were exhorted to turn to structured programming as a panacea to cure the ills of Basic, to learn that there is much doubt and argument about best ways of implementing structured programming. But one of the

lessons of experience is that there ain't no easy solution to complex problems.

The undisputed virtue of structured programming is that it provides a systematic way of clarifying problems and matching the intrinsic problem structures to the structure of the actual program. There is much dispute, however, over the interpretation and effectiveness of different structured techniques.

Green focuses on the specific issue of the pictorial representation of programs — flowcharts, structured diagrams, etc. Whereas Atherton says that 'it is fairly easy to reject the flowchart as irrelevant to modern methods,' Green suggests that flowcharts may have some value.

Green's general thesis is that there is insufficient evidence to make definitive statements on the best notation to be used for graphical program representations. He describes some experiments which indicate that, in some circumstances, flowcharts can be as effective as structured diagrams. His advice is for the 'less sophisticated readership' to stick to flowcharts which are laid out to reflect structure, for example putting different parts of processes well away from each other. For the more sophisticated readership, he recommends structured diagrams based on a notation by Kenneth Bowles, who developed the UCSD Pascal system.

Although Atherton aims at the novice, he sticks to Bowles's method. Having rejected flowcharts out of hand, he does look very briefly at other notations, without going into much historical or background detail.

On balance, Atherton is probably right to stick to a straightforward and practical exposition of structured programming without raising doubts. It is a major leap forward to have a book like Atherton's which addresses itself to the micro world but which is informed by the light of experience and research which dates back to before most micro computer-niks were born.

It is pleasing, for example, to see Atherton acknowledge the work of computer scientists like Edsger Dijkstra, Tony Hoare and David Barron, who have contributed so much to software techniques but who are unknown to most personal computer users. I would have liked Atherton to have attempted the task of explaining the contributions that these people have made to computing and the whole background to structured pro-

gramming and the still hotly disputed issues, of which Green provides an example. But I suppose that would be another book in its own right.

As it is, *Structured Programming with Comal* is an excellent introductory book for total computing novices or for Basic freaks wanting to learn about Comal. As would be expected, concepts are introduced in a way which reflects the significance of program structure rather than just as a collection of descriptions of language functions.

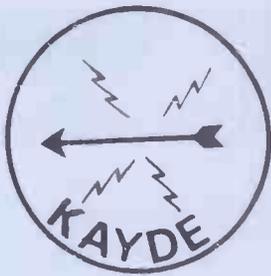

Atherton starts with a brief overview of Comal facilities. He then moves on to data representations and movement (READ, DATA, input and output). The next six chapters are about program structures, beginning with repeated operations, like FOR loops, then moving through program decision making, modularity and procedures to structure diagrams and top-down analysis. There is a useful chapter looking at structured programming with Basic. Which clearly illustrates that, although it may seem to be little more than an extension of Basic, Comal produces programs which are much clearer and intrinsically better structured. The last three chapters are concerned with general programming ideas like sorts, arrays, queues, stacks and files.

Throughout the book, Atherton provides examples that can be worked through. He writes lucidly, with no frills. As the content of the book is based on practical experience with student teachers, it would make an excellent basis for an education course.

Of course, much of the credit for a book like this must go to the nature of Comal itself. Without Comal, Atherton would have had to write about structured programming either as a botched extension to Basic, in relation to a more complex language, or in completely abstract terms. As Atherton says, 'The book follows Borge Christensen's view that there is more to be gained from building on the strengths of Basic than totally rejecting it for the serious deficiencies which have become painfully apparent.'

Comal loses none of Basic's simplicity, which has been so vital in stimulating the enthusiasm of personal computing innocents. At the same time it assimilates the experience of some of the venerable old fogies who know better.

Atherton shows that it is possible to learn about programming at the same

ZX 80/1 WAR!

ZX KEYBOARD FULLY CASED WITH REPEAT KEY

FULLY CASED KEYBOARD	£37.95
UNCASED KEYBOARD	£27.95
KEYBOARD CASE	£10.95

This is a highly professional keyboard using executive buttons as found on top quality computers. It has a repeat key and comes, complete in its own luxury case. This is a genuine professional keyboard and should not be confused with toy keyboards currently available on the market.

16K RAMPACKS MASSIVE ADD ON MEMORY FULLY CASED

comes fully assembled, tested and guaranteed

The 16K Rampack plugs straight into the user port at the rear of your computer. And, of course, as in all our products the Rampack is fully enclosed in a matt black slimline plastic case.

This means you can handle it with complete safety and you do not have to stare at ugly components – as in other makes of 16K. The Rampack NEEDS NO EXTRA POWER and will operate quite happily on your Sinclair power supply. Fully built and tested.

Don't forget you can always order on the telephone with your credit card.

Six days a week for a same-day service.

BOOK FARE

time as learning about good programming principles. With the increased awareness of the benefits of Comal and other structured languages, it will hopefully become possible to ensure that the loss of computing innocence and the awareness of underlying software and systems complexity will still be allied to the enthusiasm and adventurousness of the Basic brigades.

Coming together

Behaviour and Information Technology, edited by Tom Stewart (Taylor and Francis, £34.00 per year; £10 per issue; published quarterly)

'It is becoming apparent that what limits the successful exploitation of (information technology) equipment is not so much the technology but rather how it can be made acceptable and usable. The rate of absorption will be determined as much by human considerations as by technical ones.'

That is how the editor, Tom Stewart, introduces an important new quarterly journal, *Behaviour and Information Technology*. Its aim is to try to discover the key aspects of human behaviour relevant to information technology and it will involve a coming-together from a variety of disciplines, including psychology, sociology, ergonomics, computer science and economics.

It is an ambitious objective to try to cover such a disparate range of topics. The effort is worthwhile. Just as various technologies have merged to create information technology, so are many other areas associated with the uses and impact of the converging technology. This convergence means that experts from different fields need to be informed about each others' work.

Judging by the first issue of the journal, however, Stewart will have a problem in trying to give the journal cohesiveness. The subject

matter covers such a wide range that it is difficult to determine any coherent thrust.

As already discussed above, there is an interesting article by Thomas Green of the Department of Psychology at Sheffield University on the use of diagrams to describe programs. The interest of Green's piece, however, is for the light it sheds on the techniques of structured programming rather than any particular insights into human behaviour.

An article by George Colouris of Queen Mary College on designing office systems is very disappointing because it is so brief. It is more like an outline for an article than the completed work. In a journal like this, which has the space to explore matters in depth, more should be given than just an outline of the requirements for an interactive office system.

The inadequacy of Colouris's contribution is overcome by an intriguing examination of some innovative techniques for 'navigating' through a database in an office environment. Robert Spence and Mark Apperley describe work being carried out at Imperial College, London into new techniques of searching for and displaying information in electronic office systems.

Their work draws on pioneering studies at Massachusetts Institute of Technology by Nicholas Negropont. It involves large screen wall displays, pointing, gesturing, touching, speaking and other non-keyboard interactions.

Spence and Apperley dig beneath the surface but do not get lost in technicalities. They indicate how systems could be developed that match natural human ways of behaviour.

Martin Maguire of Leicester University looks at how keyboard interactive dialogues could be made easier to use and more tolerant of human foibles and variations.

Other contributions include a technically-oriented evaluation of the physical ergonomic characteristics of Visual Terminals; some unsurprised results from an American study of how professionals (like accountants and lawyers) perceive computers; and the role of computing in medical General Practice.

Most contributions in the first issue of the new journal are interesting in their own right. However, they still fail to mesh together.

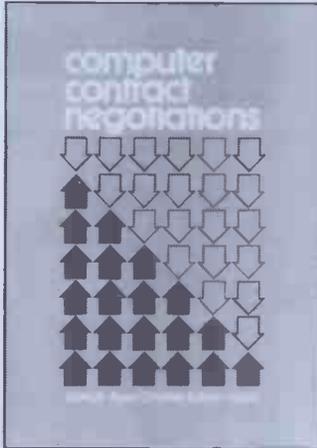

Given the scope of the journal's objectives, some element of higgledy-pigglediness is inevitable. I hope that, as the journal matures, it will develop a stronger focus which turns the disparate threads into a coherent whole.

There is a vital need to bridge the gap between users

and technologists which brings in those specialists who understand human behaviour. The new journal may have got off to a patchy start but it is a bridge that needs as much support as possible if it is to provide a forum for the exchange of experiences, research evidence and views.

As illustrated above by the overlap between Green's paper and Roy Atherton's Comal book, the human dimension can provide added depth to what seems a straightforward technical issue.

Getting a good deal

Computer Contract Negotiations by Joseph Auer and Charles Edison Harris (Van Nostrand Reinhold, £29.35)

The process of selecting an appropriate computer can be a lengthy one. Having sifted through the bumb, the articles, the manuals and the sales chat, a short list may be drawn up, evaluation tests carried out, discussions held with manufacturers and dealers, etc, etc.

At the end of the process, having finally chosen what seems to be the best system, there is a natural tendency to want to get the system in and working as quickly as possible. 'Sign here on the dotted line,' says the victorious salesman. And too often the user signs, without questioning the contract details.

Computer Contract Negotiations provides a battleplan to be used by the customer. The authors indeed see the contract negotiating process as a war. This is because they are mainly writing about American business, which is a warlike environment where the executive's motto seems to be 'kill or be killed'. They are also concerned mainly with large computer contracts where the stakes are high.

The authors base their views on hard experience. Joseph Auer has made a career of computer contract negotiations and set up the first full service devoted to help users to screw the most from manufacturers through the contract. Charles Edison

Harris is a lawyer who has specialised in computing.

Together they provide a great deal of practical advice. They also vividly illuminate the darkest recesses of the manufacturers' sales and marketing ploys. Unfortunately, the price of the book, its heavy concentration on large computers and its emphasis on much American law and procedure may put it out of the scope of most personal micro users.

I would recommend, however, that any computer user, particularly in business, gets hold of a copy, at least from a library, and reads and digests the relevant good bits.

For instance, Auer and Harris point out that 'For the contract to do its job as a legal document, it should cover all aspects of the transaction and clearly specify the promises and obligations of each party. The simple fact is that all vendor form (standard) agreements fail to meet the test. Most vendor contracts are blatantly one-sided documents that clearly indicate the user's responsibilities, omit or minimise the vendor's obligation and eliminate or limit the vendor's liability for non-performance.'

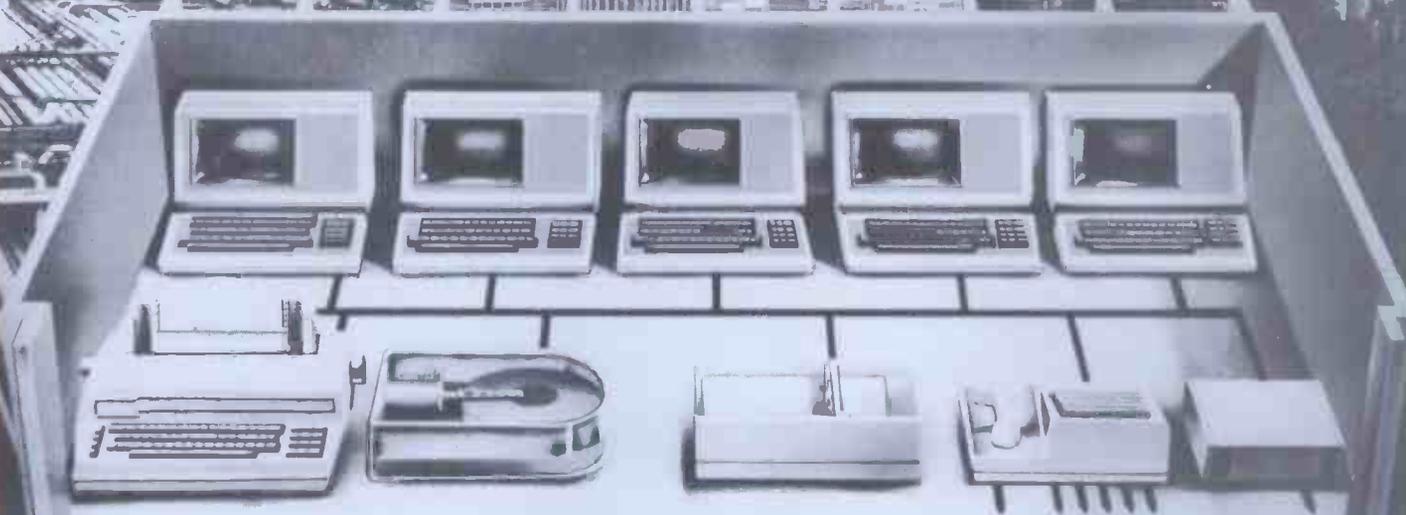

The main emphasis of the book is to show how the contract can be balanced so that the user gets a fair deal. This advice is summarised in two useful appendices which provide a checklist of items to be covered in the contract and some selected provisions which could be incorporated into contracts.

Auer and Harris are openly cynical in their view of vendors. They provide a sharp rundown of the ploys deliberately used by suppliers to try to foist onto users standard contracts which are biased in the vendors' favour.

The authors' treatment of the negotiation process as a war leads them, however, into fanciful depths in discussing the psychology of negotiations. They would make excellent tutors for the CIA or KGB. In fact, at one point they actually refer to the use of 'the good guy/bad guy negotiating strategy, sometimes called "The Streets of San Francisco Technique" because of the popularity of the method in TV detective shows.'

Of much more value to purchasers of any size of computer are the chapters covering general contract provisions, maintenance agreements and software agreements. They discuss the need for particular provisions, using examples gained from real experience to show what happens if the provisions are excluded from the contract. They also provide suggested wordings for certain provisions and examine in detail areas, such as expected system performance, which are difficult to pin down in

ASK KEEN

Unleash the power of your micro with Corvus hard disc networking systems.

Whatever microcomputer system you have now, or are considering buying in the future, Corvus 6, 10 and 18Mb hard-disc systems will give it a mighty boost in performance. And to exploit this power to the full, Omninet will link your computers, disc drives and peripherals in the world's fastest local microcomputer network.

Corvus hard-disc and Omninet give you massive data storage with fast access...and installation couldn't be simpler.

Corvus technology enables a micro-computer to handle 600 times more data 20 times faster than traditional floppy-based systems, and you have no more worries about damage, theft or loss of valuable information.

Using easily installed twisted-pair cable, the Corvus Omninet local network enables up to 64 microcomputers to be interconnected over 4000 feet, sharing up to 40Mb of mass storage and expensive peripherals. You get multifunction capability at each keyboard, file protection, and electronic mail at incredibly low cost.

Modems and gateways will link to other networks, providing national and international communications.

Available for Apple II and III, PET, Superbrain, S-100, IBM, Rank Xerox, NEC and DEC LSI 11.

Whether your particular application is scientific, business or educational, Corvus systems are compatible with the best micro for the job – a well-established 'favourite' or one of the recently introduced 'big names'.

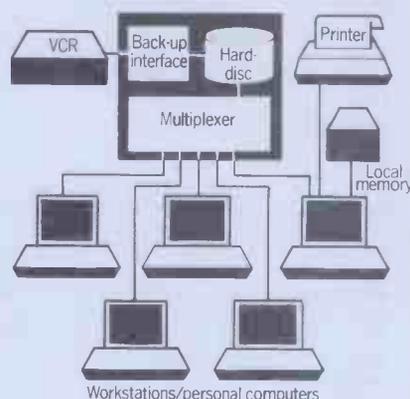

Miracle – a cost-effective network for the individual office, laboratory or classroom.

Small installations can also reap the benefits of Corvus technology. With his own dedicated computer and associated memory, each user has interference-free access to a 5, 10 or 18Mb central data-base, and communication with other computers and peripherals in the network. Miracle gives you disc storage, network multiplexing and tape back-up interface in one convenient package.

Comprehensive languages and field-proven applications software packages.

BASIC, COBOL, FORTRAN, PASCAL,

Typical five-user Miracle system

ALGOL, and APL give you the choice to suit your application, and software packages include Accounting Systems, Payroll and Stock Control, Addressing/Mailing, Database Management and the Microplanner project management (PERT) control system.

Consult the experts. Ask Keen.

Peltu pelted

As producers of the BBC's Computer Literacy Project over the past couple of years, we've developed a pretty robust attitude towards your contributor Malcolm Peltu. 'Ah well,' we'd say in the office, 'he probably had a tight deadline to meet, can't have had time to check it. They'll probably get it right next week.' Or, on another day, 'it's only old Peltu rabbiting on, everyone knows he's got bees in his belfry.' (And, presumably, bats in his bonnet — *Sub Ed.*) 'But shouldn't we reply?' someone would say, 'put the record straight?' 'No, life's too short — and there's this script to finish.' So it goes. But Malcolm's piece this week ('Has the BBC Microcomputer sent Auntie off the Straight and Narrow?') has risen to new heights, even though it's not exactly breaking new ground. Studded with arresting phrases — 'arrogance of the computer illiterate... sheer hypocrisy... wriggling excuses... sell, sell, sell...' — it's challenging, headline-worthy, entertaining. Only one snag though, it bears very little relation to the facts of the case. So may I, as briefly as possible, straighten out the record a bit?

The reason for providing a BBC micro, as we have often stated, was that this was the only acceptable way we could ensure that a well co-ordinated and language-compatible television series, book, correspondence course, high-quality microcomputer and software could be made available to our viewers. Some wanted some parts of this system, others others, and some we knew would want to move from one part of the system to another, as indeed they have done. Surely a public service of powerful educational value, built around a television series? Our trade is, of course, to make programmes, but it is also to provide for other educational needs that arise from broadcast series. This is precisely what we have done, and the public response suggests that it wasn't a bad idea. Over 80,000 people have contacted our Referral Service for help and information, over 60,000 have bought copies of the associated correspondence course. Over 55,000 have bought copies of *The Computer Book*. Over 3,000 enquirers have been referred to courses and clubs. Over 25,000 people have ordered microcomputers, and we are

constantly bombarded by requests for software.

To suggest that the project made it seem that computing literacy and programming are synonymous is nonsense. As anyone who saw it will know, the television series, the most public part of the BBC project, was concerned with computing principles and there was very little attempt to teach programming. As a matter of fact we were criticised by a good many viewers for *not* including more on programming, and the demand for the NEC course suggests, that, whether Malcolm likes it or not, a lot of people want to learn something of programming in Basic. But this certainly wasn't what we did in this television series, although we may do more on programming next time round.

To say that the BBC book is more of a support for the microcomputer than for the TV programmes is also nonsense. It hardly even mentions the BBC micro, nor is it, as Malcolm implies, only concerned with personal computers. The book, like the series, is intended to be a layman's introduction to the world of computing.

The BBC is not selling a computer, it is licensing an outside company to do so. There was no suggestion at the end of the programmes that you have to buy a BBC micro to be part of the computer age. People are perfectly capable of making up their own minds to buy a cheaper or less sophisticated machine, as Clive Sinclair can confirm.

To suggest that the television transmission times were deliberately off-peak because the BBC 'wanted to dampen down demand for the microcomputer' is pure eyewash. The transmission times were fixed before we ever decided to have a machine, and at those times we have managed to attract a total of over 1½ million people for each broadcast — about what we expected.

The specification for the computer was neither tailor-made for Newbury nor altered to suit Acorn. The provision of software, which will support a whole range of our new broadcast series, is not against the BBC Charter. Sheila Innes did *not* say that 'Managing the Micro' was designed to be propaganda: it wasn't. What she actually said was that in retrospect we might have preferred the series to be a little more critical of the technology, but that certainly didn't amount

to saying we'd set out to 'sell, sell, sell'.

I could go on, but I think I have made my central point, which is simply this: if Malcolm Peltu is going to get on his soapbox, he should take more trouble to get his facts right. John Radcliffe, Executive Producer, BBC Computer Literacy Project

Draught exclusion

Keep up the good work — PCW is fascinating and always has 'something for everyone'. One significant and important omission, however, you have nothing on the rapidly growing area of computer draughting; digitising tablets.

plotters, software, etc. I know that there are (vastly expensive) specialist mags which are directed to the trade, and deal with the large systems but there appears to be nothing at all on *micro* applications — which is your field. So — how about a special issue.

M G Mathews, Eaglescliffe

Dunno about a special issue. Mr Matthews, but we do review peripherals from time to time in our 'Checkout' series — Ed.

General malaise

I am writing with reference to Mr Alan Wood's article in your March issue entitled 'A DP Manager's Guide to Micros'. I would like to take the opportunity to correct some misunderstandings and inaccuracies that appear therein with reference to our company's marketing strategies and products.

Mr Wood refers to the microNova as old technology. Such a dismissal fails to take notice of the past and continuing sales success of this product line, whose primary marketplace is *not* that of commercial desk-top micros. Because of the copy date of this issue, the statement also misses the fact that Data General has just announced the microEclipse range of products — which is very new 16-bit technology.

Mr Wood is similarly dismissive of the soon-to-be-launched Enterprise 1000 desk-top micro. His statement takes no account of the true UK marketing strategy that has been set up over the last year in preparation for the launch. As recent press announcements have made clear, the Enterprise *will* have immediate access to what Mr

Wood calls 'industry standard software' due to an agreement with Micro Products Software Ltd (MPSL) that has made the BOS/5 operating system available to Enterprise users,

Perhaps the most surprising statement in Mr Wood's article is that Data General 'completely missed the word processing and office automation market'. I have to inform Mr Wood that in the UK alone Data General has several thousand installed machines performing word processing and related text processing functions. These are almost all in shared logic environments as the Company made a deliberate marketing decision not to enter a short-term, free-standing WP market.

My apologies for the length of this letter. Of course, I do not expect you to publish it in full, nor would I expect your readers to be particularly interested in some of these high-level products. However, I think I have made the point that glib dismissals of a major supplier should not be made without checking one's facts. Please contact me here at any time in the future if you require such facts about how our company operates and markets its products in the UK.

Tony Richards, Marketing Communications, Data General.

Mr Richards' letter has been abridged — Ed.

Fearsome factors

In response to your 'Factors Freak' in the May 1982 'Communications' columns, I suspect that the answer is, 'not in a million years'. The reason for this (and I quote): 'Multiplying is easy for a computer, but factoring is extremely difficult. For example, whereas two 100-bit factors can be multiplied electronically in a fraction of a second, the reverse process of factoring them might take a million years, even with a one-microsecond instruction time.' ('Electronic Cryptography' — *Wireless World*, 9/80.)

The article I quote from is a discussion on methods of Data Encryption, where the security of the system relies on the above-mentioned facts; ie, knowledge of the factors involved permits the decipherment of text enciphered by the result of such a multiplication. The cipher 'keys' are easy to create and use, but without

the factors being known the 'code' is well-nigh impossible to break — I wonder if that's why D Hunter wants his 150-digit number factorised?

The commonest methods of factorisation are Exhaustive Search, whereby the factors of a number N are found by testing each integer from 1 to N in turn and noting down those which produce no remainder when divided into N (which is the rigorous mathematical definition of a Factor), and an optimised version of the Exhaustive Search which I tend to call Exhaustive Reduction. This works in a similar manner, except that only prime numbers are tested and as each factor of N is found, it is divided into N and the quotient factorised instead.

This method produces the Prime Factors of N, from which all factors on N may be produced by cross-multiplication. For numbers with a lot of factors this method works exceptionally well, and since it is a recursive process (of sorts), it proves rather easy to program onto a computer. The difficulties arise if the number is exceptionally large, and has relatively few factors.

If the 150-digit number you published is 'rich' in (low) prime factors, and a table of prime numbers is available, or can be produced easily by your computer (mine reeled off the first 1000 or so in about 15 minutes) then the task of factorisation merely requires a standard computing 'trick' to con the computer into doing 150-digit arithmetic for you. (Divisions are, unfortunately, the hardest to program!) It will also require a mass of machine time, though the judicious use of multiple processors should speed this considerably.

If, as I suspect, this number only has a very few large factors and a handful of smaller ones, then even using a Cray 1 mainframe dedicated to the task might take a lifetime (or several). A W Bain, Welwyn Garden City

Felonious factors?

The answer to your own question at the bottom of the letter from Saffron Walden can perhaps be found in *Scientific American* for August 1979, where on pages 146 to 157 Martin E Hellman goes into the mathematics of Public-Key cryptography.

One of the possible procedures discussed is that put forward by Ronald Rivest *et al* in April 1977, working in the Laboratory for Computer Science of the Massachusetts Institute of Technology.

This procedure is based on

the then-perceived virtual impossibility of factorising the product of two prime numbers each some 50 to 60 integers long.

Mr D Hunter's number might well be just such a product, and it would come then as no surprise at all to learn that he, like many others, is in search of algorithms capable of solving this particular factorising problem.

In fact it is generally believed that the problem is no nearer solution than it was in 1977, and that very recent work on high-speed algorithms for testing primality, whilst tantalisingly close, does not actually address the problem itself.

It is to be hoped that Mr Hunter is not using your columns to break a privately held decryption key. That would indeed be an improper use of them.

D A Fagandini, Dulwich

ZX81 maths and other bugs

Your correspondent Jonathan Empon asks for an explanation of a few results on the ZX81. These observations may help:

1. PRINT (-4)**2 gives error report A/O, ie, 'invalid argument' because the ZX81 tries to evaluate this expression as EXP (2*LN(-4)), and it considers -4 to be an invalid argument for the LN function. In short, there is no provision in the ZX81 ROM for finding powers of negative numbers by using **. You have to use the positive number, taking care of the sign yourself, or use some other expression, like PRINT -4 * -4. VAL behaves like PRINT in this respect.

2. PRINT -4**2 gives -16 because exponentiation (**) has a higher priority, ie, 10, than unary minus, which has priority 9 (ZX81 manual, page 196). So PRINT -4**2 is equivalent to PRINT -(4**2).

3. PRINT VAL " " gives error report C/O, ie, 'not a valid numerical expression' because the ZX81 ROM does not regard the text of the empty string as a numerical expression but as a string expression.

4. The expression X**2 seems to work on my ZX81. If I enter LET X=3 and then PRINT X**2 I get 9.

5. Whether 1 to 3 should be called bugs I have to leave to others to discuss. I have five or six other bugs now in the ZX81 ROM. In view of the wide sales of the ZX81, I wonder if you would like an article on them, perhaps also indicating how all the arithmetical mistakes caused by the original bug (superbug?) traced back to one mistake on addition. I should perhaps add that I am co-author with Dr Ian Logan of Part B of the ZX81 ROM Disassembly, in which I have analysed

floating point calculator. (Dr) Frank O'Hara, Surbiton

Be Thou Our Help...

I have just been reading your review of Wordstar in the free supplement to the May 1982 issue of PCW, and I noticed a minor error which I think is significantly unfair to Wordstar.

You state that there is no way to re-configure Wordstar to start at any help level except 3. In fact this is very simple, and full details are given in the 'Customization Notes' manual, which includes well-documented assembly-language listings (with actual addresses) of all the relevant sections of code which any user might wish to alter. Changing the initial help-level involves just changing one byte.

We use Wordstar on a Cromemco, and using the Cromemco Debug it is only two minutes' work to make the necessary change, and write the modified version of Wordstar back to disk (at least, once you have found out how and done it first time) — the same goes for all the other defaults (like left and right margins, lines per page, and so on).

I realise that many users of Wordstar do not have the technical knowledge or software tools to do this, but I would have thought that any good supplier who looked after his customers would be able to make such changes for a nominal charge.

We have a number of different users who use Wordstar on the same machine, and the tendency is for them each to 'customise' their own versions with the defaults they prefer (which are easily changed as I have described). Prof A C Davies, City University

Yes, you're right but what I really meant was that this facility ought to be easily available to every user rather than limited to those able and willing to dive into assembler language — Ed.

Peaches are off...

I read with great interest Steve Withers' Benchtest article on the Hitachi 'Peach' Personal Computer which is currently on sale in Australia and Japan. It is always valuable to hear the opinions of an independent reviewer.

Unfortunately, UK readers eager to get their hands on the MB-6890 Basic Master Level III Computer will either have to go to Japan, or take a trip down-under. Hitachi has no plans to release this machine in the UK.

However we can promise

exciting developments in personal computers in the near future. To quote from the last paragraph in Mr Withers' article — 'who knows what the next year or two will bring?'

We will, of course, make sure that PCW readers will be among the first to find out about these new developments.

E C Marshall, Divisional Manager, Hitachi Computer Products.

Too many bugs

I have now had my personal computer for 18 months. During that time I have copied many programs out of diverse magazines but find that due to misprints and errors not more than about one in ten runs first time. The best (!) one so far contained eight errors in 43 lines.

As this is most discouraging to beginners, would it be presumptuous of me to ask programmers to take more care with their listings as I presume publishers cannot check out every program submitted?

M Lievers, Leicester

We send out every program we publish to have it checked (apart from the ones I try out myself). Our listings are taken directly from working cassettes and if ever something does go wrong, corrections are published as soon as we have them.

However, yes, I do agree. If a program is considered fit for publication by its author then, it is up to him to see that it reaches us free from errors — Maggie Burton

SBAS vs Comal

I read with interest the article by Borge Christensen ('Is BBC Basic Structured?') in your April issue. In it he makes reference to the fact that 'You must be able to handle

branchings globally, ie, with several lines packed and controlled as one block. Comal and Waterloo Basic have this structure, and RML Basic has one that looks very much like it. . . . I think that I should point out to Mr Christensen that RML Basic does not have this sort of block structure, and can only infer that he is thinking of our own SBAS — a fully structured Basic which

we supply for the RML 380Z. SBAS includes BEGIN. . . END keywords which enable the programmer to treat several lines as one block in IF. . . THEN. . . ELSE conditions. Also included are REPEAT. . . UNTIL, WHILE. . . DO, CASE statements, procedures, etc.

We believe that SBAS offers significant advantages over Comal, and would hate Mr Christensen to be labouring under a misapprehension. Spencer Instone, Software Production Associates.

WHEN IT COMES TO MICROCOMPUTER SOFTWARE WE WROTE THE BOOK

How do you stay up-to-the-minute with the rapidly changing world of microcomputer software? Get the Lifeboat Catalogue.

The latest innovations The new Lifeboat Catalogue is packed with the latest state-of-the-art software. And if we publish a new program after the latest catalogue has gone to press, we enclose a flash bulletin in your copy.

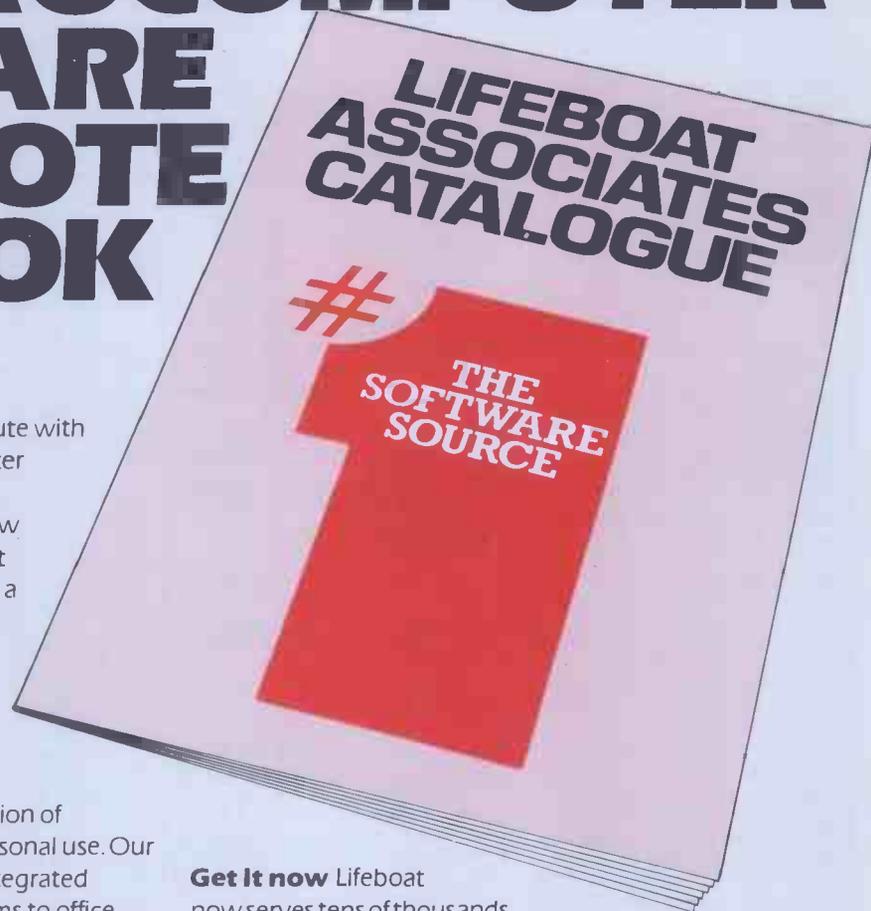

The greatest selection Because Lifeboat is the world's largest publisher of microcomputer software, our catalogue offers you the greatest selection of programs for business, professional and personal use. Our more than 200 programs range from the integrated accounting and professional practice systems to office tools for book-keepers and secretaries to sophisticated tools for programmers. Included are business systems, word processors, programming languages, database management systems, application tools and advanced system utilities.

We specialise in software that runs on most small business computers. Our more than 60 media formats, including floppy disks, data cartridges, magnetic tape and disk cartridges, support well over 100 different types of computer.

Get full service We give the crucial dimension of after-sales service and full support to everything we sell.

That includes:

- An update service for software and documentation.
- Telephone, telex and mail-order services in the London office and at overseas offices in the United States, France, Switzerland, West Germany and Japan.
- Subscriptions to Lifelines,™ the monthly magazine that offers comparative reviews, tips, techniques, identified bugs and updates that keep you abreast of change.

Get It now Lifeboat now serves tens of thousands of satisfied customers with our breadth of up-to-date, fully tested, fully supported and competitively priced software.

You may not need all we offer, but we offer just what you need. After all, we wrote the book.

#1 Lifeboat Associates
World's foremost software source

I BEG YOUR PARDON?

The case against computer literacy

David Tebbutt explains why he doesn't believe in computer literacy.

For the last 6000 or so days I have been kidding myself that I believe in computer literacy. Worse, I have diligently preached and even practised what I've been preaching. As a programmer I was always ready to explain bits, bytes, Boolean algebra and flowcharts to anyone who'd care to listen. Later on, as a system designer, I'd spend hours trying to convince reluctant users that their lives would be greatly enriched if only they would adapt their way of working so that it was more in tune with the requirements of my latest system. As a systems analyst, I had a wonderful opportunity to examine and criticise some of the far-out manual methods of my clients. All the time I was convinced that the elegance of computer-enforced logic couldn't fail to make a convert out of the most stubborn user, if only he'd give it a try.

As a data processing manager, I virtually had the power to dictate the way in which users worked. In the early days much input was through punched cards, so it was simply a case of forcing the necessary input information into the 80-column limitation of this medium. Since alphabetic information was hard to unscramble, it also meant that a lot of codes had to be used. Still, if the users wanted the benefits, the argument ran, they simply had to adapt to the requirements of the computer. Then along came visual display units. Together with the ability to allow the users to work in a more natural way, they also brought a chance for them to learn to type and ruin their eyesight.

Not satisfied with this, I then embarked on 1000 or so days of teaching others how they, too, could bring the benefits of 'computer literacy' to their unsuspecting users. My dream then, as I remember, was a terminal on everyone's desk with instant access to all relevant company information. Computer staff from all over the world were attending the courses and then rushing back to implement systems which would bring the greatest benefits to their users. During this time I also

'I used to lie awake at nights thinking of the number of new "computer literati" being made ...'

learnt an awful lot of new tricks, so I eagerly returned to the coal-face where I spent another 800 or so days implementing a number of elegant systems which matched the companies' informational needs but possibly totally alienated some users who, up 'til then, had probably managed brilliantly with an assortment of wall charts, felt-tipped pens, forms and biros.

Somewhere along the way I discovered micros. A quick look at my company's five-year plan told me that micros didn't even get a look in so I

decided to move to pastures new. My dream of a computer on every desk was about to become a reality. For a year or so I devoured every piece of information I could on these micro-computers. To a man, my colleagues thought I had gone off my trolley and when I announced that I was to launch a new microcomputer magazine they tried to convince me that no one would ever read such a thing. Just after I resigned, *PCW* came up for sale so the launch of a new magazine became the relaunch of *PCW*.

I used to lie awake at nights thinking about the number of new 'computer literati' being made. We watched *PCW*'s sales rise from 25,000 to 50,000 then to 75,000. The magazine thickened, and the tide of information flowed through the editorial department, causing great stresses and strains but creating an enormous sense of satisfaction too. On my first visit to the American West Coast, I met Bob Albrecht and Ramon Zamora who had recently started a project there called ComputerTown, USA! This involved taking computers into the local library and introducing them, free of charge, to all interested members of the public. ComputerTown's stated aim was to 'Bring Computer Literacy to the Entire Community' — in this case Menlo Park, California, a town of 27,000 souls.

This project really caught my imagination, so, about six months later, ComputerTown UK! was launched in *PCW*. Now there are 30 or so ComputerTowns up and down the country, all manned by volunteers and all prepared to welcome any member of the public who expresses an interest in computing. ComputerTown acts as the first step for many towards the removal of the computer fear which seems to afflict so many people, probably as a direct result of the awful systems that have been implemented in the past.

After 800 happy days with *PCW*, I left to become a software publisher. I still carried on writing articles and coordinating ComputerTown in my ever-diminishing spare time but my main energies became focused on Caxton and its software authors. Now, I thought, I can spread computer literacy throughout the world. I'll publish programs which people will want to use, which they'll enjoy and which will actually achieve something worthwhile for them. I'll make documentation so thorough that the user will be totally unaware of his transition from computer illiterate to computer literate.

After 100 days or so into Caxton, I received a letter from one Alan Waring, inviting me to give a talk on 'The Importance of Computer Literacy'. Two things bothered me about this. One was I didn't have a clue what to say and the other was that the title sounded awfully pompous. This made me feel uneasy so I rang Alan and he promised to change the title to something more suitable.

Another 100 days went by and I got a reminder from Alan that I would be giving a talk on 'My Views on Computer Literacy' — 20 days hence. Ah! That's better, I thought, I can now say anything I like. Then I sat down to list my views on computer literacy and, do you know what? After a lot of thinking and a lot of writing, I realised that *I don't believe in computer literacy*. I don't think I ever have. We were all being swept along so fast by the so-called 'micro-revolution' that I don't think we had

“Computer literacy” was a good-sounding label so we used it here, there and everywhere ...'

too much time to stop and question what we were doing. 'Computer Literacy' was a good-sounding label so we preached it here, there and everywhere — but I think very few of us paused to examine exactly what we meant by it. I wouldn't be at all surprised if the term meant something different to each person using it.

Well now that I've 'seen the light', it's time for a bit of clarification. No more shall I talk of Joe Public becoming computer literate. That's strictly for programmers, engineers, designers and documentation writers — all those, in fact, who really need to know something about computers. Hobbyists, too, clearly fall into this category. From now on I shall be preaching a new doctrine — that of making computer systems 'People Literate'. That, in my view, is what many of us have believed in all this time. We were seduced by a label and no-one stopped to question it until we were almost too deep in its embrace.

'People Literate' computer systems will have a number of hallmarks. They will be very easy to use, presenting no more barriers to the user than, say, the average washing machine. The user will be prompted and guided by instructions on the screen or, at worst, available on the display at the touch of a button. Wherever possible the key that the user has to press will remind him or her of the function about to be performed. Clear complete documentation should be provided to help the user get to know the system and to learn about things like security measures and recovery procedures if something goes wrong. Ideally, the user should rarely need to look at manuals when actually using the system. I'm sure that you will have all sorts of ideas on what constitutes a 'people literate' computer system. Why not share your views with other readers through the 'Communications' section in this magazine?

Forget computer literacy if you want to change the world. Let's make computers 'People Literate' instead. **END**

SILICON OFFICE

Kathy Lang reviews a file management system with word processing and network connections.

All the packages I've reviewed so far have been dedicated to file management, although some do allow the running of other programs directly without recourse to the operating system. Silicon Office, from the Bristol Software Factory, runs on the 80-column screen PET and takes an integrated approach, providing facilities for word processing and for transmitting information between Silicon Office systems, as well as the file management functions which are the main concern of these reviews. Thus the user has only a single package to learn, with a consistent user image across the three functions. The approach taken is to use a set of two-letter commands, each of which provides one file, word or communications processing function. For instance, GR tells Silicon Office to get a record from a structured data file, while ET is the instruction to edit a text file. The full set of commands can be displayed on two screens-worth of 'Help' text. To give an idea of the range of commands, these tables are shown in Figure 1. Single commands can be issued from the keyboard and executed at once, or several commands assembled into a 'program' which can then be run by issuing a single command from the keyboard.

Within the file management area, Silicon Office uses fixed-length records indexed on a main key field. The structure of a record must be defined in advance; it can subsequently be changed, but only by defining a new structure and copying all the data across. The user can create an association between the main key field and any other field in the record, so it is possible to access records directly using any one field as the key. The record structure is defined on the screen in such a way that the screen format defines both the way records will be displayed on the screen and the format of the record in the file. Records can be amended, deleted, displayed on the screen and printed. A field in a record in one file may be used as a key to access records in another. You may carry out calculations on field values and store the results in data or work files, or accumulate the results for later display. Limited facilities are provided for selection according to specified criteria. Direct sorting of files would be impracticable, but is unnecessary as the key mechanism can be used to display or print records ordered by the values of any field.

Constraints

Files in Silicon Office are of two kinds: data files and work files. For either kind, filenames may be up to 14 characters long. The two types may not be mixed on a single disk. A data file disk can contain a maximum of three data files with their associated record struc-

ture information. Work disks are used to store any number of files of Silicon Office programs, files containing memory variables used for calculations, and word processing files.

When you load the Silicon Office software, it resides entirely in the PET's memory, so the program disk can then be removed; similarly, when writing your own SO programs, these are loaded into memory and the work disk can then be removed. The practical effect is to make six files of structured data available at any one time. This would probably be enough as far as simultaneous access to several files goes, but the restriction to three data files per disk is likely to put a premium on proper record-keeping about what is stored where, and can mean that security copying will take quite a lot of time.

The structure of data files is defined when they are created. The maximum size of record allowed is 252 characters, with no field being greater than 78

characters. Each record has a single key field, which must be the first; the key field must be text, not numeric, and must be at least 10 characters long (if it is longer, only the first 10 characters are used). Data may be either character or numeric; numbers are fixed point, stored using 14 significant figures. The user can decide how great an accuracy is to be used when displaying numbers. Data may also be held in memory using calculator variables - up to 64 numeric variables and up to 26 character variables. Names of data items in files, and of numeric memory variables have two-character names (A\$ to Z\$). Where the same name has been used for a record data item and a numeric calculator variable, if it is not clear which item a command refers to then the memory variable is 'found' first. There is no explicit 'date' variable type but SO does data-stamp files with their creation date and provide functions to manipulate dates effectively.

Fig. 1

Files may be searched directly only on complete key fields, and for all fields other than the main key field an index file must be explicitly created by writing a short SO program to associate the main key field with the subsidiary key field. These subsidiary indexes (SO calls them inverted files) are not kept up to date automatically when the file changes — you would be wise to include SO statements to do this explicitly in your updating processes, as forming complete index files takes rather a long time.

Input and updating

Silicon Office uses the same mechanism for defining record structures and for describing the way records are to be displayed on the screen. The cursor keys and insert/delete functions are used to 'draw' the format of the record on the screen. A typical record structure/display is shown in Figure 2.

The process of form design is a curious mixture of good and bad features. Being able to input the cursor anywhere on the screen and tell SO to start or finish a field there is great; also the system won't let you exit from formatting if a field is unterminated or if the record is more than 252 characters long. On the other hand, Carriage Return doesn't move the cursor, so to get it to the beginning of a line means moving it explicitly; the box markers which show whether you have created a text or numeric field differ so little I needed a magnifying glass to be sure I could tell the difference; worst of all, you aren't told what the cursor position is, so to create a field, say, 20 characters long means you have to count 20 spaces. You can check the length of the whole record so far, but not the length of individual fields.

Once the file structure is defined, data can be put into the file, amended and deleted with appropriate commands. (When adding data, there is no method provided of carrying over the value of the same field in the previous record, although you could easily do it using SO statements and memory variables.) Access to individual records involves exactly the same methods whether access is for amendment or just display, so I'll describe those methods in the next section.

If subsequently you need to change the file structure, perhaps by adding an extra field, it can be done — but the process is a bit tedious and can take the

PET a long time for a file of any size. Ideally one would like to be able to copy the initial format, make the necessary changes, and then copy across all the data into the new version of the file. Within SO, the only way I could find of copying a data file with its associated formatting information was to copy the whole disk; having done so, I couldn't find a way within SO to rename the data file, so I would have been stuck with old and new versions having the same name.

The alternative, which I used, is to create a new record format identical to the old except for the new field, but for a record of any complexity that can take 15 minutes or so, and has lots of potential for error. Then comes the writing of a SO program to actually create the new records and transfer the data. Writing the program was easy — SO programs are straightforward, if a little limited in their facilities — but tedious, since I couldn't find a way to say 'transfer all the data items from the old file to the new'. So I had to write one assignment statement for each field in the record (which is the way it's done in the example in the SO Training Guide). It also took a very long time — well over three hours to copy 250 records containing 21 fields totalling 152 characters, using a system with twin 8050 disks — obviously it should be quicker on a hard disk system but I doubt if it would be a big improvement, as from other runs I did the time seems to be mainly taken up in processing the assignment statements. Using a similar method and a Basic program (which I adapted from a SO example) one can import data from standard ASCII files.

Displaying data

Data is displayed using the same format for all kinds of access, that is, the format used when setting up the file. The approach of using the screen as a 'scratch pad' on which the user can design a data format with the cursor keys is excellent as far as it goes but it needs further development to reach its full potential for the user. Since the record definition and display are tied together completely, there can only be one way of displaying a particular set of records. There doesn't seem to be any mechanism, even within SO programs, to allow the user to show the data differently — perhaps by displaying only certain fields for some operators and the

whole record for others. This approach can be particularly useful with records containing a mix of confidential and open information, such as personnel files which might contain both addresses and salaries. Again, you could have two versions of the file, but then the updating process must work double time to keep both copies up-to-date.

Records are accessed either by main key or by record number; if you have set up the appropriate index file and written a short SO program you may also access by other fields. Key fields may be completely specified, or abbreviated to as few characters as you wish; if this results in ambiguity, SO will give you the 'first' record in the file which matches. If you ask for a record which doesn't exist, you will get the record which most nearly matches. For keyed access, only identity with the key value can be requested — you can't say 'find the first record where a type of goods is X or Y and price is less than Z' except by writing an SO program which uses sequential access. Once a record is accessed, you can step through the file using Next Record and Prior Record commands (the latter doesn't work if the preceding Next Record command reaches end of file). The stepping is by record number if your initial access used the number, by key if you used the main key.

As well as accessing records within the 'current' file, you can include a file name with the key, making it possible to switch files. For instance, 'GR keyname' will get the record of the current file with key 'keyname'; 'GR keyname (filename)' will get the record with key 'keyname' in file 'filename' and this file becomes the 'current file' for use with the Next and Prior record commands. Whatever method is used, and whether complete or abbreviated keys are specified, access is very fast — typically three seconds to any record in a file of 1000 records.

If you don't know in which record or field lies the value you are looking for, SO also provides a general search facility. This will take any word or value, and search every field of every record sequentially, starting from the current record in the current file, until it finds a match. This process is very fast — about one minute to find a match on a field in the 250th record of a file containing 21 fields, total size 152 characters, per record.

Printed reports

Silicon Office gives the user a simple facility for taking a 'snapshot' of the screen, which is extremely useful for getting paper copies of disk directories, screen formats and the like. For more formal and complete reports on data files, you need to use the set of commands which Silicon Office provides for word processing. This again is both good and bad. Good because it gives you the flexibility and power of a word processor when setting up reports; bad, because it means that you have to learn quite a bit about the word processing part of SO to get even quite simple reports.

The way the reporting works involves first getting up a format file for your report; this consists of setting a format for a 'typical' page of the report, complete with headings, headers and

THE PROFESSIONAL'S CHOICE

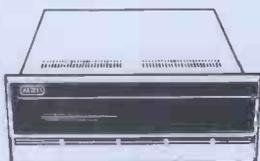

Act Sirius 1

16 Bit Stand Alone micro with superb features.
128K, 1.2MB Floppies,
CPM86 as standard - £2395.

Altos

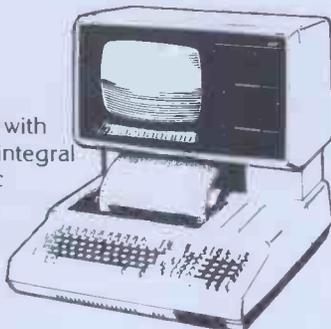

Up to 4 terminals and 40MB of Winchester Disc.
One of the biggest selling small business systems starting at £2350.

16 Bit system with 8 terminals available soon.

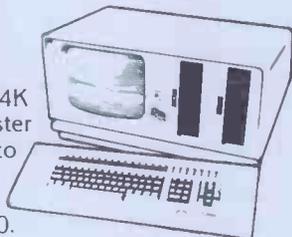

OKI 1F800

Quality graphics micro with full colour screen and integral printer. 64K and Basic are standard - £4750.
Wide range of peripherals available.

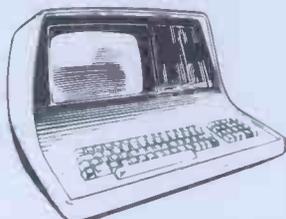

LSI M3

High specification Stand Alone micro. CPM, 64K and up to 10MB of Winchester in one package. Very easy to use. Detachable keyboard. User programmable function keys. From £2250.

Superbrain

Still a leader in 8 bit price performance. KGB having sold over 400 Superbrains has unbeatable experience on them. From £1875.

Word Processing - Wordstar £250. Mailmerge £75.

Full on-screen facilities enabling the printing of standard letters and preparation of mail shots.

Accounting - From £300 per module.

Integrated accounting systems with Invoicing, Sales, Purchase and Nominal Ledgers.

Financial Modelling - Micromodeller £645.

Budgets, forecasts and accounting data become easy to prepare. Allows "what if" projections.

Calculation - Supercalc £175.

Electronic worksheet for preparation of budgets and tables of data.

Record Keeping - DMS £400.

Personnel, stock or any other records with quick retrieval, sorting and reporting.

Sales Office Management - Sales Desk £300.

For the busy sales office to manage sales leads and marketing lists.

Accounts - IRIS £750.

Incomplete records and time recording systems.

Payroll - Graffcom £500.

Up to 500 employees both weekly and monthly paid. Automatic deduction for items like company pensions.

Graphics - Price depends on application.

Full on-screen graphics both colour and black and white.

Engineering - SPERT £450.

Suite of programmes for PERT analysis and civil engineering applications.

Communications - Liberator £250.

Enables a micro-computer to act like a mainframe terminal and transfer data from Floppy disc to another computer.

Languages - From £175.

Most major computer languages are available: Basic, Cobol, Fortran, Pascal and Assembler.

Solicitors - Solace £1600.

Solicitors accounting, client accounting and time recording.

Multi-terminals - MP/M and Oasis from £350.

Multi-user systems available.

SILICON OFFICE

footers. Then you write an SO program which includes a command to print using this format. So you can use the SO commands for keying, selection and so on, and for calculating accumulated totals. You can also use the memory variables to accumulate subtotals, and by having them print as part of the page 'footer' report them each time a field value changes. Report pro formas are limited to a single text page, which might be limiting in some applications.

Selection

Selection is achieved by using IF statements in SO programs. Each IF statement can make a single comparison using the usual comparison operators (less than, greater than, not equal to, etc) and branch on the result — a simple IF. . .GOTO without any provision for ANDing or ORing comparisons within a single IF statement. These can, of course, be built up by branching, but that can be error-prone. When a match is made, the resulting record is displayed on the screen; for how long depends on the SO program. For instance, you can create a new file which is a subfile of an existing file by putting IF statements in a read/write loop; SO will then display the record momentarily while it is being processed. Or you can use a statement which needs a response from the keyboard before the program continues, so you could use this facility to build up programs for scrolling through data files in a variety of ways.

Sorting

Silicon Office doesn't provide any explicit facilities for sorting records. It would be possible to write (slow) SO programs to do so, but the facility for creating indexes on any field makes it largely unnecessary unless you want to order the display of the file on more than one field.

Calculations

The calculation features of Silicon Office are powerful and flexible. The user can have up to 64 numeric and 26 character variables in memory in addition to performing calculations on record variables. Memory variables can be stored in special files, displayed on the screen and printed. All the usual arithmetic operators can be used, including brackets, and the precision to which calculations are carried out can be defined by the user. There are also a number of built-in functions such as MIN and MAX; these include a function to convert numeric variables to character format but not the reverse (though you could write a SO program to do that). One particularly useful function calculates the *period* between one date and another — very useful for, say, checking if an account was issued more than three months before the current date.

Security

Security has at least three aspects: hardware and software reliability and integrity, protection against accidental user

error, and protection against unauthorised access. To help with the first of these, SO provides a verification command, which rescues as much as it can from a file which has become corrupted. (It also gives the usual homilies about avoiding such corruption in the first place.) There is no command for logging each transaction to the printer as it is performed, though you could add this quite easily to any SO program, using the Copy Screen facility. Password or other protection against unauthorised access would again have to be provided by the user's own SO program, and there would be nothing to stop any reasonably intelligent person working out how to access files without going through SO programs which checked access. Where security is an important issue, this could be a serious problem, as in the absence of transaction logging there would be no way of telling that a file had been read or written.

Tailoring

I've already mentioned the Silicon Office programming facility. Any command which can be used from the keyboard can be included in a SO program, and with the simple looping and testing facilities provided by IF and GO you can write quite extensive programs to process your data. Programs may not contain more than 100 statements, but they can be chained together without limit; however, like most Basic-like languages, you can't use parameters when calling another SO program, though you can pass data across using memory variables.

The programming provides a good — if crude — facility for flexible manipulation of data; again, though, there are some avoidable nasties which detract from its good points. SO numbers program lines for you, and you can edit the lines using a simple screen editor. However, if you insert lines in the middle of an existing program references to line numbers in loop statements are not renumbered accordingly (as they are, for instance, in the RENUMBER command in Basic); since the initial numbering uses increments of 1, you can't even guard against this by leaving gaps for insertion as you can in Basic. There is no COMMENT statement, so you can't leave reminders to yourself about what the program is doing or what memory variables are supposed to hold — the latter would be particularly useful when chaining programs together and using memory variables to pass information between them. The crudity of the looping instructions — no structured programming here! — can be somewhat error-prone. Last but not least, the error messages are very unhelpful — for instance, I got 'syntax error' when trying to assign a numeric value to a text variable and when trying to load a work program from a data disk.

Stability and reliability

For this review I was lent a complete set of hardware (except for a modem) courtesy of AC Systems of Plymouth and Exeter, as well as the software from the Bristol Software Factory. In the month I was using the system it didn't go wrong once, nor did it lose any files

or data. Updates are issued free of charge if needed to correct errors — I understand that Bristol Software Factory does not have immediate plans for adding facilities.

Housekeeping

Silicon Office provides commands for formatting disks for use in SO, for copying disks and for displaying directories of SO disks. You can't copy individual files within SO, nor rename them, and I couldn't find a way to delete data files — there is a command to scratch work files.

User image

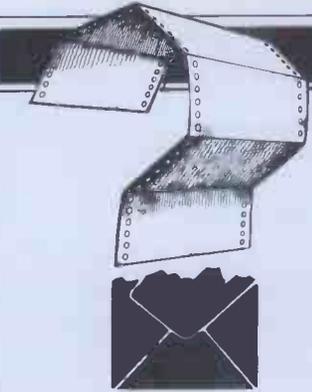

Once again, we have a package which is like the curate's egg — some excellent features, but marred by some unimaginative and inflexible implementation. Some examples: confirmation is required for every command given from the keyboard, which is very irritating for commands like Next Record, life-saving for Scratch File — and confirmation is with Carriage Return every time! It would be much better to save confirmation for really dangerous commands like Scratch File, and make it something more positive than Carriage Return. The ability to create record formats on the screen is an attractive feature, but the fact that you can have only one such format for displaying records in a single file is a real limitation, and a number of the screen editing features, such as the difficulty of distinguishing between text and numeric fields, made life unnecessarily difficult.

Again, when editing SO programs, you can store and recall programs from disk, which is good. But when you edit an existing program, SO doesn't 'remember' the name of the file whence the program came, and you have to re-enter it when you come to save the edited version again. If you make a mistake, you could end up overwriting another program. The display of help information on the screen is an excellent feature, especially for novices. But SO quite unnecessarily uses two screens to display the summary information, and gives no detail at all except the page number in the manual — and then uses the word 'page' to prompt the user to request the second help text display.

By contrast to the patchy nature of the user image of the package, the documentation is among the best I've seen. There is a Training Guide which takes the user through the basic steps of using all the features of Silicon Office; actual screens are used in plenty (a bit hard to read sometimes) and the instructions are given in terms of 'How To Do. . .' so the user gets the feeling of acquiring information and skills which are actually likely to be useful in practice. The Training Guide also contains a set of sample programs for useful applications. There is a separate Reference Guide, which is also very readable; my only real criticism is that there is no cross-referencing, so that where precise definitions are only in the Reference Manual and a useful example only in the Training Guide you have to do a bit of ferreting about to get the information you need. Both manuals have indexes, though they're a bit limited. *GOTO page 181*

VIC interface

I need a tape cassette deck to go with my VIC-20 computer, but its price here in Athens is nearly £90. Is there any way of using an ordinary cassette recorder?
P Michaelidis, Athens, Greece

Like Commodore's PET/CBM range, the VIC-20 uses a digital data format and also senses the cassette key actions. It therefore requires a special cassette deck. Until recently there was no easy way round this problem, but now one can purchase a 'domestic cassette interface' from Customised Electronics Limited, 155 Marton Road, Middlesbrough, Cleveland TS4 2EN, England. The UK price is £19.55 including VAT (UK postage £1.50 extra).

R D Geere, Editor, Independent Commodore Products User Group

IncompETable

Why will cassette programs written for the 80-column PET not run on my VIC-20?
W P Scott, Glasgow G13

There are two possible causes. Firstly, if the program contains machine-dependent items such as PEEK or POKE addresses or machine code, then these will probably need some alteration in order to work as intended.

Secondly, if the program is Basic throughout, when it loads into the VIC it is re-located. In so doing the pointers that link one Basic line to the next will need to be corrected. You can force the VIC to do this by entering a dummy line at the beginning, such as 0 REM then deleting it.
R D Geere

Arming the VIC

Is there any way in which I could get my VIC-20 to operate a robotic arm of some sort without having to spend a lot of money?
Philip Richardson, Lindfield, Sussex RH16 2DF

It depends what you call a lot of money! Presumably the arm movements are to be controlled by electric motors, either conventional or stepper motor type, and to drive these you will need an

interface connected to the user port. Design of this interface will depend to a large extent on the details of the motors. Alternatively, an increasing number of companies are advertising robot arms ready built and tested, some of which will connect direct to the VIC-20.
R D Geere

ZX audio

I am working on the article 'Control your own Substation' in the Oct & Nov 81 issues. So far everything works okay but I am stuck on the audio subroutine on p81, Nov 81. Using a ZX81, what do I enter on line 1, the REM statement — it's not very clear in the article whether I just enter the 27 bytes as listed (IE 62 0 14 etc)? Where does the assembler listing come in?
P Crowley, Preston, Lancs.

The REM statement in line 1 will be used to hold a machine code routine, which will be accessed from Basic with the USR call. In practice you cannot type in the REM statement with all the correct code in it because of the way the ZX81 is designed. So what I have done is to fill the REM statement with 30 or so letter As as you see in the program you refer to. The rest of the program replaces the As with the correct code.

So just type the program as it stands — with the 30 or so As. Then run it and it will keep asking for data (ie, the INPUT statement in line 30). When it does this, just enter 62 (return), then 0 (return) then 14, etc, from the data list in the article until the program ends after you have entered the number 201. (Don't forget to execute CONT after the screen fills up).

Now if you list the program, the REM statement in line 1 will contain a series of odd symbols and Basic words. This is what the ZX81 interpreter thinks is in the REM statement — but of course we will not use the line in Basic but in raw machine code, when the Z80 processor will interpret what we have entered very differently to Basic. As a quick test that all has gone according to plan, wire up the speaker as in the diagram, and execute in Basic: LET X=USR 16515 (in the fast mode). You should hear a beep of about 0.5 sec duration.

All you need in future to produce sounds on the ZX81 is the REM statement in line 1. So you can erase lines 10

to 60, and save what remains on tape.

If ever you want to put sound into a program you are writing, just load from the tape the one-line REM statement and access it with the USR call as described in the article — you can of course change both pitch and duration by using a pair of POKEs before executing the USR call.

You ask where the assembler listing comes in — the answer is that it doesn't. We are not using an assembler to enter the code, but entering it directly in machine code. Using an assembler makes life a lot easier for fairly lengthy programs, but of course, you have to buy (or write!) an assembler first.

Good luck with the rest of the experiments.
D E Graham.

Quick cursor

I need a fast routine for positioning the cursor anywhere on the screen of my 8000 series PET. The two standard methods of using loops with cursor movements and POKEs with calculations are too slow. Can you help?
David James, Twickenham

The following hex code can be placed into locations 0384 to 03AB and be called via Basic using SYS 900,X,Y, where X and Y are the column and row for the cursor.

```
0384 20 F5 BE 20 98 BD 20 2D
038C C9 A5 11 29 1F 85 D9 20
0394 F5 BE 20 98 BD 20 2D C9
039C A5 11 29 7F 85 C6 78 A5
03A4 D9 85 D8 20 67 E0 58 60
```

I hope this solves your problem — it is quite fast.
SW

Computer camps

I have heard that there are such things as 'Computer Summer Camps'. Are there any in the South London area that you know of, and what do they offer?
D Duckfield, Petts Wood, Kent

The only one that I know of that is accessible to you would probably be 'Dolphin Camps' which is running one in the Sevenoaks area. The address is: 'Dolphin Camps', 8-10 Parkway, London NW1 7AA. Please mention that you read about them in PCW's answers page.

To quote from the glossy brochure, 'This is not a summer school in computer programming. We have a

wealth of micros, interfacing devices including robots and music synthesisers. However, young people will be able to choose a combination of activities that are sporting, creative and technology based.'

If you or anyone else goes, then I would be grateful to hear what you thought.
SW

Wrong address

In the article 'HP business' in 'Computer Answers' in the April '82 issue of PCW you mistakenly gave our address as that of the Association of Professional Computer Consultants.

DBA Computer Consultants, 11 West Halkin Street, London SW1X 8JL. My profound apologies to DBA. I made the mistake because I wrote to that address when APCC was being founded. DBA is obviously one of the founder members. The correct address is: APCC, 109 Baker Street, London W1M 2BH. Tel: 01-235 7292.
SW

ZX catalogue

Do you know of any ZX81 computer clubs in the Stratford, Leytonstone, Forest Gate area of London? I would also like to catalogue my record collection (approx 200 LPs), and be able to recall and list them alphabetically by artist, song title, record label, and date of the record. Has anyone a program for the ZX81 that will do this, that I could possibly use? You may publish my address for replies.

Diane Soall, 110 Trumpington Rd, Forest Gate, London E7 9EQ.

I personally do not know of any clubs in your area that specialise in the ZX81, but there are two ways to find out. First (and most likely) is to contact (and join) the ZX81 User Group at 44-46 Earls Court Road, London W8 6EJ. Second, look in the PCW 'User Group Index' which appears in PCW every few months. I would not concentrate too hard on trying to find a group that specialises in the ZX81, but join any local group. It will broaden your mind and may lead to greater insights into all aspects of computing.

Your question about cataloguing your record collection needs advice from someone who has tried it, but my views are that it will take a huge amount of time to enter

the data and will need endless stopping and starting the cassette (unless you have motor control) while the data is being written. After having done all that you may hit problems, like the ZX81 being unable to hold all the titles in store for sorting purposes. Please seek advice before proceeding on what might be a fruitless task.

SW

Cheapest - but best?

How well does the Sinclair Spectrum compare with other colour micros?
P Beckett, Horsham, Sussex.

'You pays your money and you takes your choice' is the simple answer. It compares very well indeed. But remember that it only costs £125, while the VIC-20, Tandy, BBC Micro, DAI, Apple, Texas, etc, all cost more.

Is a Ford Cortina twice as good as a Mini Metro? It is impossible to say unless you know what you want it for and the same goes for the microcomputer argument. Always write down what you want out of a computer before looking at the market. Then read the appropriate Benchtests in PCW and decide which machine best suits your need and pocket.

SW

Beeb leads

Does the BBC micro come with cassette and TV leads? Also I may wish to purchase a colour TV set, so are there any specific makes that you can recommend? Can you also recommend any particular cassette recorders or should I buy the BBC's one?
D Staines, Liverpool

Yes, the BBC Micro comes with a cassette lead and TV lead. However the cassette lead only has a plug on the micro end so it's up to you to place a plug on the other end. The 'provisional manual' (proper one is due out at the end of May) has a connection diagram at the back. The simple answer is to buy a ready-made-up lead - if you have a DIN plug on your cassette player virtually any hi-fi or radio shop will be able to supply you - stereo or mono will do. If you do buy a ready-made lead it will have a motor control plug, which although not strictly necessary, is useful for file handling.

The TV lead is no problem and fits any TV set. On the subject of the best cassette recorder, you will probably find that most domestic ones will be usable, but a few people have encountered problems, due to the fact that

their machines have ALC (Automatic Level Control). The recorder will adjust the recording level to what it thinks is the best level. The correct level is about +2dB which is considerably higher than the ALC will allow. The only solutions are to adjust the ALC, which needs a workshop manual, or to obtain another cassette recorder. When buying one choose one with motor control and record level adjustment. If you cannot get the latter then ask to try the recorder out - any decent shop should allow you to do that. Remember - if you insist that you want the machine for recording from the BBC Micro and it doesn't work you are entitled to your money back by the 'Sale of Goods Act'.

Choice of TV - the BBC micro has a mode where you can display 80 characters across the screen. This is essential for word processing, but no TV that I have found (black & white, or colour) gives sufficient quality to be usable; you need to use a monitor set. Try and obtain a TV that has monitor and RGB (red-green-blue) input as well - the only two makes that I have found are Salora and Luxor, and of the two, the Luxor appears better value for money. We are reviewing colour monitors/TVs in the June issue of the Beebug magazine so details of other sets and where to get them cheaply will appear there (see User Group index for details of Beebug's address).

D E Graham, Beebug - National BBC Micro User Group.

Parts problem

In our stores we would like to have a system where part numbers, quantities, etc, are automatically recorded as soon as the receipt or issue is entered on the bin card. This information would then be sent to our main computer. Such a system should both save labour and reduce errors in punching or reading. Can you suggest any suitable terminals? They should be inexpensive, as we may require 15 to 20 of them.
M M Salim, London W1

Without knowing the size of your bin cards, the thickness of the card and whether they are hand-written or typed it is not possible to be as specific as I would like.

However, if they are typed then a reasonably inexpensive printing terminal with a pressure feed platen should handle most types of card. The operator can insert the card in the terminal, and type the required details, which will be printed on the card. At the same time the details will be transmitted to your

mainframe, to be received by a suitable program, which will update the file.

Suitable terminals for this are widely available. One which comes immediately to mind as used by many companies is Digital Equipment's DECwriter LA34, which costs about £600 new in this country. Alternatively, you could consider the original Teletype model KSR 33; these are available at about £300-£400 for reconditioned units.

If your cards are entered by hand, your choice is restricted. The one device I know of is the Micropad terminal, sold by Micropad Ltd, Whittle Road, Ferndown, Dorset BH21 7SD, at about £1800 each.

In either case, you may well need special communications facilities to allow your mainframe to accept input from the terminals and you will need to discuss this with your mainframe suppliers.

P L McIlmoyle

Compatible compiler?

I am developing a package on a microcomputer system running under CP/M and MBasic. I have two requirements that I cannot solve and wonder whether the Microsoft Basic compiler would help; is it compatible with MBasic? The problems are that first I cannot disable the 'Control-C' break into Basic; and second, I cannot provide enough protection from people looking at the program listing.

D Johnson, Twickenham

I have not found how to trap the 'Control-C' break-in to Basic, when running under MBasic. However this is disabled when the program has been compiled. One way to provide some means of protection against prying eyes is to use the 'P' option when saving the program; (ie SAVE "PROG 1", P). The real way to do it is to use the compiler, though. This leaves no copy of the source once you have compiled and erased it.

The Microsoft Basic Compiler is as compatible as is reasonable with MBasic. As long as you haven't used dynamic arrays or the ERASE statement, then you are unlikely to encounter any problems. A few points are worth considering if you are writing with a compiler in mind:

1. Use integer variables as much as possible as they will speed up the running, and keep the size of the object code to a minimum. This is hardly true when using an interpreter.
2. You can liberally scatter REMark lines around as these are ignored by the

compiler. Indent loops as well as this makes the code easier to read.

3. Use long (descriptive) variable names, as again the compiler codes these.

The compiler will also check all your syntax for you, and find unassigned statements. I had an interpreted Basic program running without errors for two years; when I compiled it I found two unassigned GOTOs. Finally, the Microsoft Basic compiler produces object code which is disappointingly slow - it is only about twice as fast; so don't expect startling improvements, especially as most time might be spent on file access anyway.

While on the subject of compilers, I get many enquiries asking about the speed improvement of compilers. I think this is often over-emphasised. If your program spends much of its time accessing files or printing, then a compiler will not make any noticeable improvement, especially if it runs using CP/M which will slow it down anyway.

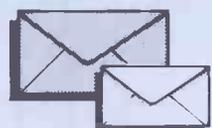

Nascom replacement

I am considering replacing my Nascom II computer with a more expensive system. One advantage that I have observed of the Nascom over the TRS-80 or Apple is the excellent editing facility. Can you suggest a system which can offer the Nascom method of editing?

A Hetherington, Cleckheaton, Yorks

The screen editing facility on the Nascom is as you say exceptional - I have seen none better and a good many worse, including several mainframes and large minis. I can't recommend anything from personal experience that's quite as good but some word processing packages such as WordStar can be used to edit program files on the screen and provide a good many extra facilities besides. Have you considered the Gemini Multiboard - its intelligent video gives 80 character lines, clears up any display faults and perhaps it may provide Nascom editing? At any rate it offers an upgrade path that has the advantage that it is compatible with the rest of your Nascom. It might be worth ringing up one of the Microvalue dealers (see their advertisement).

Executive Planning with BASIC

THE
COMPUTER BOOKSHOP
IS THE SOLE U.K.
DISTRIBUTOR FOR ALL
SYBEX BOOKS

Basic Programs for Scientists & Engineers By Alan R Miller 345 Pages Only £11.50

This vital book provides a comprehensive Library of Programs designed to solve problems commonly encountered in Science and Engineering. It's designed to teach BASIC programming and each program is explained in detail to help the reader develop proficiency in the use of BASIC.

Introduction to Word Star By Arthur Naiman 200 Pages Only £10.95

For anyone who owns Word Star, or is considering buying it, this book will quickly and easily teach how it works while presenting a clear picture of what a word processing program can do. The clearly written and well organised guide clarifies the process of learning how to use a high-powered word processing program.

Executive Planning with BASIC By X T Bui 197 Pages Only £11.50

This invaluable book has 3 goals.

1. To explain the quantitative methods of management decision making in clear and practical terms.
2. To dispel the idea that programming is only for specialists and that it is practical for management to have direct access to computers for analysis, planning and control.
3. To provide an efficient and time-saving set of computer implementations for quantitative analysis.

Get these invaluable books from your Local Computer Store or Book Shop. In case of difficulty send S.A.E. and we will supply the name and address of your nearest stockist by return.

TEXAS ON THE MOVE

Dick Pountain reports on TI's replacement for the TI-59.

It is more than three years since Texas Instruments introduced the TI-59 card programmable calculator which, at the time, put them into the lead in calculator technology. This lead did not last long, however, as Hewlett Packard replied with the HP-41C and CV which featured LCD alphanumeric display, CMOS constant memory and a communications ring interface. Other products from Casio and Sharp introduced Basic language programming and/or friendlier operating systems than the 59, as well as cassette mass storage. The 59 still sells and has a worldwide band of devotees who enjoy getting the most out of its powerful but spartan facilities; nevertheless, for the last three years I and many others who follow the calculator scene have been asking 'when is Texas going to bring out something new?' and receiving no answer. The answer is now here, in the shape of the TI-88 which will be launched in September.

In order to bring you this information I, and a handful of European journalists, undertook a perilous adventure, risking our lives by flying to Nice, enduring the dangerous rays of the Mediterranean sun and inviting an early heart attack by consuming the livers of unwell geese and Roquefort cheese steeped in Armagnac. I only hope you're grateful.

The 88 has been developed in Lubbock, Texas and at TI France in Nice where a few production prototypes are to be seen. It uses CMOS technology, has a 16-digit LCD display (5x7 dot-matrix) and uses cassette for backing store instead of cards. However, it makes some concessions to current 59 users and the huge software base by re-

mark them. Further speed improvements are claimed from the use of a new fast ROM (three times the speed of the 59's) in the operating system.

On the hardware side the 88 is novel in that it uses removable RAM packs which have built-in lithium battery back-up which is good for five years' storage. There are two compartments in the back of the machine which can take RAM or ROM packs (CRAM or CROM as TI has dubbed them). The basic machine has 960 steps of memory built in, as on the 59, but two CRAMs with 1184 steps each would bring this up to 3328 steps maximum. The machine has 130-hour rechargeable batteries and CRAMs, while installed, draw off these and not their own internal supplies. CROMs hold 15,000 steps, and the whole 59 range of library modules will be available with added alpha prompting.

On the firmware side, the 88 has a new and enhanced operating system with some nice features. A very extensive prompting system is built in, making this a very friendly machine to use. On switching on in Prompt mode the 88 asks 'May I Help You?' and then leads into a menu of options, such as selecting a module, setting date and time or inspecting built-in functions. The op code system of the 59 is retained, but now each code has a brief explanation available by pressing INV OP nn. The time and date are provided by a clock-calendar chip which includes day of the week and can be used as an alarm in conjunction with the (single tone) bleeper. Keys called YES, NO and UNKnown are provided to answer menu questions. There is no proper alpha keyboard, the characters being obtained

name, not code.

Editing is by cursor, and the display scrolls sideways, thus overcoming my main objection to the 59 — its dreadful editing facilities. All instructions of the 59 are supported, with the addition of new ones to allow inclusion of alpha-strings, though no string functions are provided; manipulation of text is strictly for prompting, as on the Casio 602p.

The arithmetic precision has been increased by performing 16-digit internal operations and displaying 13, while the number of built-in functions has been expanded to 231 from the 59's 137.

TI-59 software can be run directly on the 88 by keying it in with a Program Development CROM in place; cards cannot be read. TI is, however, encouraging authors to modify software to take advantage of the prompting ability of the 88.

Peripherals are attached via a two-wire serial bus which is to TI's own standard, though in answer to my query the company said that an adaptor to RS232/V24 would be produced later. It can control 128 devices with six active simultaneously.

Current peripherals are a 16-column thermal printer (PC-800) with rechargeable battery/mains operation and a cassette interface box (CA-800) with remote control. Future plans include a bar code reader.

All in all, the TI-88 is a great improvement on the 59 and represents a catching-up with current technology, though I would not accept TI's claim that it is the most powerful hand-held yet; it is certainly the equal but not the superior of the HP-41CV and the Sharp PC1500. There is no doubt that in the hands of an ingenious and experienced programmer the TI 'language' is both more economical of memory and more flexible than Basic, and that the prompting system will make the TI-88 easy for naive users with off-the-peg software or for complex maths. On the subject of language, TI defended its choice by pointing out the large user base of the 59; nevertheless it is pushing ahead with a high-level language machine as well; this is due in late '82 and will have a choice of languages, including Basic and perhaps Pascal in ROM packs.

The only problem I foresee for the 88 is its price. The basic unit will be £289.95 (inc VAT) including one CRAM module, the Master Library Module with English/French/German or Swedish/Italian/Dutch prompting, battery pack and charger. The printer is £199.95 and additional CRAMs and CROMs £37.95. This makes it comparable in price with a variety of fully fledged micros (eg, the Newbrain in this issue) and so means that you must value portability and maths power very highly to consider it. More important, it is significantly dearer than the PC1500 with 11k RAM. I would not be surprised to see this price fall within a year. Watch for a full test soon in this column. **END**

taining the same assembler-type language as the 59 but with the addition of alpha prompting. The reason for the delayed appearance (it should have been out more than a year ago) is that TI developed a new CMOS technology for the 88 and ran into the dreaded substrate problems (the BBC Computer was delayed by similar trouble). Twin 4-bit processors of new design are used; they are claimed to run two to three times faster than the 59 though the prototypes I used were not up to speed and so it would have been unfair to Bench-

from other keys with an ALPHA shift.

A key called EVAL allows the entry of algebraic formulae without programming; variables are declared by, eg, Defn A, and the formula is entered as written, including implied multiplication (2AsinB). The formula can then be repeatedly evaluated, changing all or some of the variables each time using the YES, NO, UNK, ENTER and CONTINUE keys.

In Learn mode four-digit line numbers are automatically provided and all instructions are displayed by

TJ's WORKSHOP

Our monthly pot-pourri of hardware and software tips for the popular micros. If you have a favourite tip to pass on, send it to: "TJ's Workshop", PCW, 14 Rathbone Place, London W1P 1DE. Please keep your contributions as concise as possible. We will pay £5-£30 for any tips we publish (think how much solder and/or Elastoplast that would buy).

PET COMPUTED RESTORE

Listed below is a routine which allows the user to perform RESTORE to a line number. After running the appropriate Basic loader program for new or old ROMs (Basic 4 and VIC owners will have to make their own alterations), SYS RE, X will RESTORE to line X. The next time DATA is required the Basic interpreter will start searching from line X as if nothing had happened.

This function can be useful in reading information from a table of DATA statements too large to be copied into an array. Considerable memory space is saved with only a slight loss in speed.

The following example uses the routine to get close to the required item, then READs consecutive items until the right one is reached. To READ the Nth string into D\$ from the program's own DATA use:

```
SYSRE,100+10*INT(N/8):
FOR X=0 TO N AND 7:
READ D$:NEXT
```

Remember to check that N lies within 0-29 and that

RE = 1031. Note that the INT (N/8) and N AND 7 bits refer to the number of items on a DATA line, ie, 8.

The routine is POKE0 into the REM statement on line 0, so once the program has been run only lines 0 and 10 are required. Alternatively the routine can be located elsewhere by changing the value of RE, although I find that having the code in a REM statement is more convenient.

An 'ILLEGAL QUANTITY ERROR' will occur if the line number is not in the range 0-65535 and an 'UNDEF'D STATEMENT ERROR' if the line does not exist. The latter of these may be disabled by changing the JMP instruction to BIT (line 110 - replace 4C with 2C), causing RESTORE to the line following.

David McKeran

COMPUTED RESTORE

```

ATOM INVERT

Often I find it necessary to print information on the screen in inverted form but many of the ASCII codes available in normal text are not available inverted by using the lock key, for example the numbers.

This program redirects the character output vector but because Atom screen codes are not the same as ASCII codes above 63 it is not just a simple matter of setting the high bit before sending to output, hence lines 310-330.

After typing in or loading from tape, link LL1 (or Link #2800 after Break) and the

basic can be erased. If you re-locate it make sure you change the initialising routine accordingly.

It is turned on or off via the keyboard by 'CTRL A' or in a program by 'Print \$1'. Try experimenting with the EOR value in line 230 - it can give your listings a new look!

ZX81 MEMORY MANAGEMENT

This subroutine was designed for use with the ZX81 plus 16K expansion board, to show how much memory was being used by a main program for each of the four main RAM areas — 'Program', 'Display', 'Variables' and 'Spare capacity'. The start and finish addresses are also printed under each subheading, and the memory utilisation is printed at the bottom of the screen as a percentage of the total available.

String variables A\$ and B\$, suitably sliced and added to 16000, generate the PEEK addresses of the RAM boundaries. E\$ is an array containing subheadings. The loop 9610 to 9700 carries out all functions except for printing the percentage utilisation, which is undertaken by 9710. Statements 9650, 9730 and 9740 generate the first RAM address which is not available as a PEEK function. The first three characters in B\$ are dummies.

The subroutine could be extended to give information about the GOSUB stack, etc, by adding additional addresses into A\$ and B\$, enlarging E\$ to include additional subheadings, and increasing the number in the FOR-NEXT statement, but the format would have to be reorganised to prevent screen overflow. Remember also that the subroutine detracts from the total usable memory available for the main program, so don't overdo it!

If the subroutine is loaded from tape before keying in the main program, it will be SAVED again whenever the main program is saved and will therefore always be avail-

able to keep tabs on the memory situation. When the bottom line says 'MEMORY UTILISATION = 98%' — don't panic. Just erase the subroutine and release a few more bytes.

Any machine code subroutines used in the main program after RAMTOP should not affect the accuracy of the 'Memory status' statement, but any bytes POKED between STKEND and ERR SP will reduce the spare capacity available without being detected by the subroutine. The machine stack will usually also occupy a few bytes in this area. No attempt has been made to quantify these sources of error because they are normally relatively small, but purists may wish to take the matter further themselves.

The choice of names of the string variables used in the listing was made to avoid ambiguity with those in a specific main program; others may be more suitable for readers' applications.

It might be possible to use the subroutine on a 1k memory provided the centre parentheses of 9710 were changed to 1 — (JA-JB)/1024 and some of the frills were removed. Statements 9500-9600 could be omitted for minimisation after the variables A\$, B\$ and E\$ have been set up and SAVED onto tape, provided the RUN button is avoided. Any advantage gained by using this routine on a 1k memory should be balanced against the amount of precious memory it uses up itself.

G E Coucher

ZERO-COST ATOM SERIAL INTERFACE

A simple interface for V24 (RS232C) serial printers may be simulated using two output bits from the cassette DIN socket, together with a software UART routine. The software first sets one output bit to logic 1 and the other to logic 0, then reverses them, thus generating an output signal of +3V to -3V. This avoids the need for dual-voltage power supplies. While this does not strictly conform to V24 standards, in practice it works with most serial printers. Note that the printer's signal ground must not be connected to the Atom's ground, for example via mains earth.

The connector cable should have DIN plug pin 4 connected to the printer's Received Data line (normally pin 3 of a 25-pin connector), and DIN plug pin 5 connected to the Signal Ground (normally pin 7). The cassette output and the bleeper also use these pins — so cannot be used simultaneously with the printer. Other pins may of course be used (by chang-

ing lines 400 and 430), but these are convenient as the bleeper monitors the output signal, while not preventing cassette tapes being read.

The program given should be RUN, and then saved by the *SAVE command which it prints. It may then be loaded in future by *RUN "PRINTER". This version loads over the floating-point variables at #2800. It must be relocated by changing line 30 if floating-point variables are used.

Three entry points are provided:
LINK # 2800 — Use after BREAK to set up OSWRCH without reloading.
LINK LLO — Prints character in A. All registers are preserved.
LINK LL6 — Front-end for OSWRCH — tests for STX and ETX to turn printer on and off.

To change the baud rate, alter the constants in lines 270 and 290. The values shown give baud rates with better than 0.1% accuracy.

Trader Computers Limited brings you the ADVANTAGE - an integrated desk-top computer with 64k RAM + 20k video RAM & 2k boot PROM, 12" green screen, bit-mapped graphics and/or character display, twin quad-capacity 5¼" floppy disc drives (720k) and 15 function keys. Complete with business graphics, diagnostic and demonstration software this Advantage retails at only £2995.00 plus V.A.T.

Now the new Hard Disc ADVANTAGE is available - one 5 Mb Mini-Winchester and one 0.36 Mb floppy drive at £3795.00 plus V.A.T.

Trader Computers Limited brings you HMSOS - the sophisticated all-British MULTI-USER operating system for Z80-based micro computers. HMSOS features include:

- Self-configuration for number of users
- File lockup in BASIC
- Tape Backup utilities for Winchester drives
- Pseudo-keyboards for background tasks
- Interrupt-driven printer spooler
- Disc handling out-performs CP/M

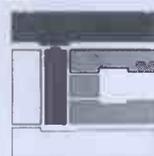

HMSOS costs only £150.00

The North Star Horizon: A high-speed 4 Mhz Z80-A CPU, 64kb High-Speed Dynamic RAM, optional PROM, S-100 Bus, Two Serial Ports, one Parallel port, and two integrated 360kb 5¼inch quad-capacity Floppy Disc Drives. With 30,000 in use throughout the world you know it's a proven system

ZX81 KEYBOARD FEEDBACK

The lack of feedback on the original touch-sensitive ZX81 keyboard need no longer be a setback.

One LED, a 7430 chip and a few connections will give visual indication of any single key closure. The 7430's inputs monitor all five lines KBD0 to KBD4 and a LED is lit as soon as a key is pressed. If the key is held down the LED stays lit. This feature is particularly useful for acknowledging SHIFT key closure.

A good place to mount the LED is on the sloping edge just below the lettering 'ZX81', as it is in our line of sight as we look down at the keyboard.

To give the modification a professional appearance a black plastic LED holder should be used. The power rails, ground and +5v can be taken from the holes next to the 7805 regulator chip (centre pin is ground and pin nearest PCB's edge is +5v).
Robin J D Cheng

NASCOM KEYBOARD GET

When displaying large amounts of data it is usual to display one screenful of text and then wait for the operator to press a key before displaying the next. Nascom Basic does not support GET or INKEY\$ so a machine-code routine is often written for the purpose. However NAS-SYS monitors have just such a routine at 0008H. Thus if, DOKE 4100,8 is put at the start of a Basic program then whenever X=USR(X) is encountered the computer will wait for a

key to be pressed before continuing execution of the program. The value of X remains unchanged.

It should be noted that this method is not breaking the rule about calling NAS-SYS routines directly since location 0008H is a Z80 restart and will therefore be the same for any future versions of the monitor.

A.D. May

SHARP LOGIC

The version of Basic supplied with the MZ-80K has the boolean values for TRUE and FALSE as -1 and 0 respectively. However this can be changed so that TRUE is represented by 1, which is much more useful since in Sharp Basic 'AND' and 'OR' are replaced by '*' and '+'; this can lead to mistakes in logic: eg, TRUE AND TRUE OR TRUE should give the

result TRUE but $-1 * -1 + -1 = 1 - 1 = 0$, ie, FALSE. To make TRUE=1, POKE 8861, 20: POKE 13541, 20: POKE 13561, 20. To make TRUE=-1, POKE 8861, 30: POKE 13541, 30: POKE 13561, 30.

I hope this will prove useful to other Sharp users.

Simon N Brown

APPLESOFT FORMATTER

In many programming applications it is important to produce nice-looking tables which can be used and understood with pleasure. To make this task easier some dialects Basic and most of the more sophisticated languages have formatters built into them which handle the presentation of numeric output. Unfortunately, Applesoft has no such feature and it is the purpose of this note to offer a flexible formatting subroutine for use in Applesoft programmes.

The subroutine is listed in Fig 1 where it will be seen that, despite its simplicity, it has the following powerful features:

All rounding is correct and symmetric for both posi-

tive and negative numbers.

Numbers are presented right justified in a field of specified width. Furthermore they are located so that when printed in columns they line up correctly.

Decimal points are suppressed in whole numbers.

Zeros are replaced by blank space or, if preferred, by a specified string.

Numbers which are too large for the field width are replaced by a specified string and do not throw adjacent fields out of alignment.

A prefix or suffix can easily be added to numbers.

Negative numbers need not be denoted by a minus sign but could use, eg, brackets.

Commas are inserted between thousands in large

numbers.

The symbol used to denote the decimal point or to separate thousands can easily be changed.

An example program, listed in Fig 2, shows how simple it is to use the subroutine in a program.

The most obvious improvement is to shift lines 10010-10040 to the calling program. This will ensure that they are only repeated when absolutely necessary and not every single time the subroutine is called. Furthermore, since the calculation of DD would be particularly slow it may be worth taking some extra trouble with this to gain more speed. One possible approach would be to set up an array D with D

(I)=INT(10^I+.5) and subsequently to use DD=D(D) instead of the actual calculation.

A couple of further speed improvements are possible because of specific characteristics of Applesoft. The first of these is to replace all the integer constants by variables of equivalent value because, surprisingly enough, evaluating (L1+1) would be slower than evaluating (L1+Z). The second improvement would be to renumber the subroutine so that it resides as early in the program as possible.

If speed continues to be a problem after these steps have been taken it is possible to gain a little more by deleting line 10090. Commas would, of course, no longer be inserted but otherwise there would be no effect on the operation of the program.

The only significant shortcoming of the formatter is its inability to handle more than nine significant figures. The reason for this is that beyond nine figures the Applesoft function STR\$ returns the number in exponent form. However, if that would be acceptable in a particular application the subroutine may be appropriately modified by replacing the right hand side of 10050 by X\$=STR\$(X):L1=LEN(X\$):GOTO 10120.

Michael J Barron

PCW SUBSET

Alan Tootill presents more useful assembler-language subroutines. This is your chance to help build a library of general-purpose routines, documented to the standards we have developed together in this series. You can contribute a Datasheet, improve or develop one already printed or translate the implementation of a good idea from one processor to another. PCW will pay for those contributions that achieve Datasheet status. Contributions (for any of the popular processors) should be sent to: Sub Set, PCW, 14 Rathbone Place, London W1P 1DE

Delay

With great self-control (my BBC micro has just arrived!) I start this month with a Z80 routine. It is a Universal Delay Routine from Dave Barrow of Hemsworth — just what is needed to go with his shape drawing and transforming routines of last March. Dave doesn't think his 6502 version of UDRZ, in 54 bytes, good enough to release. Can anybody do better? And what about a version of this routine in M6800 code?

There are two factors governing the length of the delay: the input value in A, the numerator, and the value assembled from FRAC. FRAC is determined by dividing the system clock hertz by a denominator. If, for

example, with a 2 Mhz clock (2,000,000 pulses per second) a FRAC delay of 1/100th of a second is required, the denominator is 100 so the value in FRAC must be 20,000 from 2,000,000/100 = 20,000.

To produce a FRAC delay of 1/50th of a second, the value in FRAC will be 40,000 from 2,000,000/50=40,000.

The FRAC delay is then multiplied by the value input in A to give the total delay.

To check this out, take FRAC=40,000 to make the code at label NUMLP: LD HL, FRAC; 21 40 9C and execute the following code for a delay of 200 x 1/150th of a second = 4 seconds: LA A,+200 ; 3E C8 CALL UDRZ ; CD XX XX jump to your monitor

There is one slight flaw in all this exactitude: the system hertz. The quartz crystals controlling most of our clock pulses are not absolutely accurate. They have a

tolerance, varying with quality, above or below their rated speed of operation. But you are unlikely to notice this unless you get into delays of several hours.

Timing

For those of us who are going to check the evidence of our

senses with our brains where we can, Dave has thoughtfully provided timings for UDRZ — see Figure 1.

6502 arithmetic

Our next Datasheet, from Vincent Fojut now of Altrincham, is an improvement on the 32-bit negation subroutine, SNEG46, we printed in February. Vincent expected that others would have hit on this improvement before him but nobody has so far, unless they are hugging it to themselves.

The improvement hinges on the fact that, although negative indexing is not possible with the absolute addressing modes of the 6502, it is possible when using the Zero Page, X and Zero Page, Y modes. This allows the index register to act both as an index register (on a suit-

ably modified base address) and as a counter, counting upwards to zero. Consequently, Vincent's routine, functionally identical to the earlier one, is six bytes shorter and 21 T-States faster. It also frees one of the zero page locations, used in the original version as a counter.

It particularly like the illuminating comment against the SEC instruction, 'prepare to subtract with no borrow'. Illuminating because, in the 6502, the carry set indicates no borrow while in Z80 the carry clear set indicates no borrow. The action of the 6502 SBC instruction is A ← A - Memory - Cy and that of the Z80 SBC A ← A - Memory - Cy.

Moving shapes

Richard Ryder of Macclesfield, who gave us May's revolving spaceship idea, now gives us a routine to move it around a memory-mapped screen. The routine, MOOV, moves a shape consisting of adjacent characters on a single row.

The direction of movement is related to the decimal value in the A register as follows:

This gives a binary representation of the right, left, down and up movements of: bit 76543210

- 64 01000000 bit 6 set; move right
- 32 00100000 bit 5 set; move left
- 16 00010000 bit 4 set; move down
- 8 00001000 bit 3 set; move up

The routine has to cater only for these four basic movements because the other possible values of A each set two bits, which cause the desired movement as follows:-

- 80 01010000 bits 6 & 4 set; move right and down
- 72 01001000 bits 6 & 3 set; move right and up
- 48 00110000 bits 5 & 4 set; move left and down
- 40 00101000 bits 5 & 3 set; move left and up

Richard wrote MOOV for the Video Genie and I tested it on a Nascom 1 under Nas-Sys 1. It should be clear from the documentation (write in with suggestions if it is not) how to adapt the routine for other memory-mapped Z80 microcomputers. But to give further help in following MOOV to those with other equipment, figures 2 and 3 show the screen memory addresses for the Video Genie and the Nascom 1:

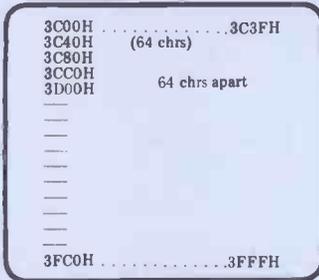

Fig 2 Video Genie

Fig 3 Nascom 1

Nascom's lowest line (by address) is actually the top line of the screen and, as press day dawns, I have made no provision for this.

It should be possible to confine movement to a restricted 'window' of the whole screen, by adjustment to the screen edges and their testing procedures.

```

;/INTERFACES: Video Genie memory-mapped screen needed for
;/ the code given. Alternate code is given in
;/ comments for Nascom 1. The routines LEFT
;/ through DOMV must be located contiguously

NEWCOMERS START HERE

Welcome to the confusing world of the microcomputer. First of all, don't be fooled; there's nothing complicated about this business, it's just that we're surrounded by an immense amount of necessary jargon. Imagine if we had to continually say 'numbering system with a radix of 16 in which the letters A to F represent the values ten to 15' when instead we can simply say 'hex'. No doubt soon many of the words and phrases we are about to explain will eventually fall into common English usage. Until that time, **PCW** will be publishing this guide — every month.

We'll start by considering a microcomputer's functions and then examine the physical components necessary to implement these functions.

The microcomputer is capable of receiving information, processing it, storing the results or sending them somewhere else. All this information is called **data** and it comprises numbers, letters and special symbols which can be read by humans. Although the data is accepted and output by the computer in 'human' form, inside it's a different story — it must be held in the form of an electronic code. This code is called **binary** — a system of numbering which uses only 0s and 1s. Thus in most micros each character, number or symbol is represented by eight binary digits or **bits** as they are called, ranging from 00000000 to 11111111.

To simplify communication between computers, several standard coding systems exist, the most common being **ASCII** (American Standard Code for Information Interchange). As an example of this standard, the number five is represented as 00110101 — complicated for humans, but easy for the computer! This collection of eight bits is called a **byte** and computer freaks who spend a lot of time messing around with bits and bytes use a half-way human representation called **hex**. The hex equivalent of a byte is obtained by giving each half a single character code (0—9, A—F): 0=0000, 1=0001, 2=0010, 3=0011, 4=0100, 5=0101 E=1110 and F=1111. Our example of 5 is therefore 35 in hex. This makes it easier for humans to handle complicated collections of 0s and 1s. The machine detects these 0s and 1s by recognising different voltage levels.

The computer processes data by reshuffling, performing arithmetic on, or by comparing it with other data. It's the latter function that gives a computer its apparent 'intelligence' — the ability to make decisions and to act upon them. It has to be given a set of rules in order to do this and, once again, these rules are stored in **memory** as bytes. The rules are called **programs** and while they can be input in binary

This is our unique quick-reference guide, reprinted every month to help our readers pick their way through the most important pieces of (necessary) jargon found in PCW. While it's in no way totally comprehensive, we trust you'll find it a useful introduction. Happy microcomputing!

or hex (**machine code programming**), the usual method is to have a special program which translates English or near-English into machine code. This speeds programming considerably; the nearer the programming language is to English, the faster the programming time. On the other hand, program execution speed tends to be slower.

The most common microcomputer language is **Basic**. Program instructions are typed in at the keyboard, to be coded and stored in the computer's memory. To run such a program the computer uses an **interpreter** which picks up each English-type instruction, translates it into machine code and then feeds it into the processor for execution. It has to do this each time the same instruction has to be executed.

Two strange words you will hear in connection with Basic are **PEEK** and **POKE**. They give the programmer access to the memory of the machine. It's possible to read (**PEEK**) the contents of a byte in the computer and to modify a byte (**POKE**).

Moving on to **hardware**, this means the physical components of a computer system as opposed to **software** — the programs needed to make the system work.

At the heart of a microcomputer system is the central processing unit (**CPU**), a single microprocessor chip with supporting devices such as **buffers**, which 'amplify' the CPU's signals for use by other components in the system. The packaged chips are either soldered directly to a printed circuit board (**PCB**) or are mounted in sockets.

In some microcomputers, the entire system is mounted on a single, large, PCB; in others a **bus system** is used, comprising a long PCB holding a number of interconnected sockets. Plugged into these are several smaller PCBs, each with a specific function — for instance, one card would hold the CPU and its support chips. The most widely-used bus system is called the **S100**.

The CPU needs memory in which to keep programs and data. Microcomputers generally have two types of memory, **RAM** (Random Access Memory) and **ROM** (Read Only Memory). The CPU can read information stored in RAM — and also put information into RAM. Two types of RAM exist — **static** and **dynamic**; all you really need know is that dynamic RAM uses less power and is less expensive than static, but it requires additional, complex, circuitry to make it work. Both types of RAM lose their contents when power is switched off, whereas ROM retains its contents permanently. Not surprisingly, manufacturers often store interpreters and the like in ROM. The CPU can only read the ROM's contents and cannot alter them in any way. You can buy special ROMs called **PROMs** (Programmable ROMs) and **EPROMs** (Erasable PROMs) which can be programmed using a special device; EPROMs can be erased using ultra-violet light.

Because RAM loses its contents when power is switched off, **cassettes** and **floppy disks** are used to save programs and data for later use. Audio-type tape recorders are often used by converting data to a series of audio tones and recording them; later the computer can listen to these same tones and re-convert them into data. Various methods are used for this, so a cassette recorded by one make of computer

won't necessarily work on another make. It takes a long time to record and play back information and it's difficult to locate one specific item among a whole mass of information on a cassette; therefore, to overcome these problems, **floppy disks** are used on more sophisticated systems.

A floppy disk is made of thin plastic, coated with a magnetic recording surface rather like that used on tape. The disk, in its protective envelope, is placed in a disk drive which rotates it and moves a **read/write head** across the disk's surface. The disk is divided into concentric rings called **tracks**, each of which is in turn subdivided into **sectors**. Using a program called a **disk operating system**, the computer keeps track of exactly where information is on the disk and it can get to any item of data by moving the head to the appropriate track and then waiting for the right sector to come round. Two methods are used to tell the computer where on a track each sector starts: **soft sectoring** where special signals are recorded on the surface and **hard sectoring** where holes are punched through the disk around the central hole, one per sector.

Half-way between cassettes and disks is the **stringy floppy** — a miniature continuous loop tape cartridge, faster than a cassette but cheaper than a disk system. **Hard disk** systems are also available for micro-computers; they store more information than floppy disks, are more reliable and information can be transferred to and from them much more quickly.

You, the user, must be able to communicate with the computer and the generally accepted minimum for this is the visual display unit (**VDU**), which looks like a TV screen with a typewriter-style **keyboard**; sometimes these are built into the system, sometimes they're separate. If you want a written record (**hard copy**) of the computer's output, you'll need a **printer**.

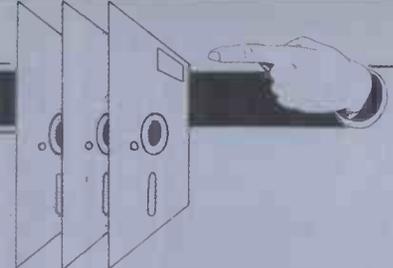

The computer can send out and receive information in two forms — **parallel** and **serial**. Parallel input/output (**I/O**) requires a series of wires to connect the computer to another device, such as a printer, and it sends out data a byte at a time, with a separate wire carrying each bit. Serial I/O involves sending data one bit at a time along a single piece of wire, with extra bits added to tell the receiving device when a byte is about to start and when it has finished. The speed that data is transmitted is referred to as the **baud rate** and, very roughly, the baud rate divided by ten equals the number of bytes being sent per second.

To ensure that both receiver and transmitter link up without any electrical horrors, standards exist for serial interfaces; the most common is **RS232** (or **V24**) while, for parallel interfaces to printers, the **Centronics** standard is popular.

Finally, a **modem** connects a computer, via a serial interface, to the telephone system allowing two computers with modems to exchange information. A modem must be wired into the telephone system and you need British Telecom's permission; instead you could use an **acoustic coupler**, which has two obscene-looking rubber cups into which the handset fits, and which has no electrical connection with the phone system — British Telecom isn't so uppity about the use of these.

PACKAGES

PCW's 'Packages' section is produced bi-monthly, alternating with our 'In Store' hardware guide. We have confined coverage to business packages which are available and supported at national level and which have been in use for at least six months in a minimum of five sites. Producers of packages which fall within these constraints should send details or updates to: Dick Olney, PCW, 14 Rathbone Place, London W1P 1DE.

The layout has been designed to allow you to discover which packages are available for the application you have in mind and to show you which packages are available for your computer if you already have a machine. In either case the code enables you to look up the supplier's name and telephone number in the table below. All details published are the latest made available - some may have changed since this issue went to press.

ZX81 ROM EXPOSED!

Dr. Ian Logan, winner of the 1981 Rosetta Stone Award has written three essential books for those who really want to understand the full working of the SINCLAIR ZX81!

Understanding Your ZX81 ROM

In this book Dr. Logan gives a complete overview of Z80 machine language using the ZX81 monitor program as an example. Dr. Logan explains the structure of the ZX81 ROM, its peculiarities, and how you can use the ZX81 ROM routines for your own purposes. PLUS a special section which shows how you can squeeze more power into your ZX81 by using machine language and machine language subroutines. Complete with example programs, reference tables, etc.

ZX81 ROM Disassembly Part A

This book is for the programmer that needs complete answers about the ZX81. Dr. Logan has examined all routines in the ROM and here he comments on each one. It covers all ROM locations from 0000H to 0F54H, and includes all functions except for the routines used in the floating point calculator.

ZX81 ROM Disassembly Part B

In this the companion volume to Part A Dr. Logan covers locations 0F55H to 1DFFH and includes all routines used in the ZX81 floating point calculator.

OTHER TITLES AVAILABLE

- ★ **Machine Language Programming Made Simple for the Sinclair**
- ★ **Not Only 30 Programs for the Sinclair ZX81: 1K** —
- ★ **Complete Sinclair ZX81 Basic Course** is a 240 page in-depth comprehensive for complete beginners and experienced programmers. Over 100 programs and examples illustrate the use and possibilities of the Sinclair ZX81:
 - programming techniques and memory saving devices
 - every function covered
 - BASIC Course programs available on cassette

Orders to Melbourne House Publishers 131 Trafalgar Road, Greenwich London SE10

HOME COMPUTERS

ACORN ATOM The mighty Atom continues to smash records. Come and talk to us about Atom extras like Atom colour, Atom expansion, Atom printers, Atom Invaders (from Computer Concepts). And our prices are low – how about £232 for a fully expanded Atom with PSU!

BBC MICRO We're a support centre for the new BBC machines. So we have software, spares, upgrade kits – and plenty of advice!

SHARP MZ-80A For around £550 what other machine offers a 48K Z80-based computer with an integral high definition screen and cassette unit – and is expandable with dual disc units, printers, etc? Come and see this fantastic new machine!

TEXAS TI-99/4A THE computer for the home if you really want a big range of plug-in cartridges for early-learning, education and games. AND you get a 16-bit micro with 5 octaves of music, 16 colours, etc.

VIC-20 You've read all about it, now come and see the famous VIC in action! Full and expanding range of accessories from Commodore, Arfon, Audiogenics, Hi-tech, Rabbit, Stack, etc. **SPECIAL OFFERS:**

VIC-20 & C2N cassette... £235

8K VIC & C2N... £265

21K VIC & C2N... £299

BUSINESS COMPUTERS

If you've got a business problem that needs a computer solution, come and talk to us. Mention stock control, accounting, file/record management or word-processing and – since we're dealers for **APPLE** ● **COMMODORE** ● **SHARP** – we'll probably mention names like:

● **SILICON OFFICE** ● **ANAGRAM** ● **MICROFACTS** ● **CP/M** ● **WORDCRAFT** ● **VISICALC**

– but only as a way of solving your problem. We try to keep it simple!

AND we stock – books – magazines – games – peripherals – diskettes – tapes – paper – labels, etc

ACC NEWS

Rupert Steele of the Amateur Computer Club reports the latest Club news. Contact Rupert at: St. John's College, Oxford.

April was Computer Fair month. Yes, there were no less than two shows in the second half of April, in London, described as some sort of 'computer fair' (I think you could distinguish between them by the type-face of the logo).

Needless to say, lots of people turned up with tickets to the wrong fair and, also needless to say, the ACC was present at both the events. At the first, the ALCC (Association of London Computer Clubs) Computer Fair at the North London Polytechnic, there was a strong hobbyist flavour, with a very strong club presence. The ACC ran the customary club database, and we put hundreds of people in touch with their local clubs.

On the Saturday of the ALCC Fair, the ACC held a symposium entitled 'Your Computer and the Telephone' which consisted of a general introduction to the principles of computer communication over the public telephone network. The discussions included modems and general interfacing hardware, Prestel, bulletin boards and telesoftware (the transmission of programs from pages on Prestel into a micro). Speakers came from many of the leaders in the field, and included representatives from British Telecom (the Post Office to us humble mortals) and CET.

We made a tape recording of the event and hope soon to make available a set of proceedings, either in audio or printed form, depending on whether the treasurer can pawn his wristwatch again to pay for the printing. Anyway, the symposium was a great success, and it pointed the way to the great explosion in information technol-

ogy that many of us believe is around the corner in IT'82. I think that it won't be long before intercomputer communication via the phone network becomes a standard facility for the hobbyist; all we'll then need is a higher bandwidth telephone system.

The second fair was organised by one of the computer mags (not PCW of course, as they organise the 'PCW Show' in September). There was more of a business flavour, although there was a lot of interest in the ACC stand, and those of other clubs. The ACC was again responsible for administering the club stands, and provided a worthwhile part of the exhibition, particularly because the commercial stands were a little thin on the ground.

On the Saturday of this show, there was a very productive meeting between representatives of the ACC and key figures in the various national user groups. The meeting was chaired by Robin Bradbeer, the local groups represented included BASUG (Apple), ICPUG (Commodore independent), LASERBUG (BBC machine), National ZX80/81 Group, Sorcerer, TUG (Tangerine), the new 68xx group (6800, 6809, 68000 etc.), and the National TRS-80 User Group.

Initially, the various user groups described their own organisation. Many of these groups had found that the whole thing had become too much to handle on a purely voluntary basis and had had to take on part-time or permanent staff. Most of those who had taken this step used other methods as well as subscriptions to raise the money; this varied from selling the odd book or program to fairly comprehensive programmes of hardware add-on manufacture. Some

of the groups, however, are still organised on a voluntary basis.

The national user groups present felt that the ACC was doing a good job of being a national liaison group for all personal computer users, and that they would like to formally ask that we continue to perform this function. The ACC Secretary, David Annal, mentioned the cost to ACC of performing this role, and of organising the club stands at exhibitions, and the national user groups offered to pay towards the cost of this. It was felt that the larger groups, who were not entirely subscription supported, might be able to give more than those who had less money.

The groups generally expressed support for the ACC, and various cooperation schemes were agreed. Finally, the committee agreed to reconvene at the PCW Show this September. So if you're the chairman of a large user group that wasn't represented at that meeting, drop a line to me, and I'll pass it on to Peter Whittle, the ACC Chairman.

A couple of the user groups at the meeting mentioned this column and, when they discovered that I wrote it, demanded plugs. BASUG is running a course on Pascal in July (so hurry!). It's in Uxbridge and will concentrate on UCSD Pascal for the Apple, although UCSD is meant to be portable so it should (!) be applicable to other machines. Registration fee is £70 for three days, and there is cheap accommodation available. Contact: John Sharp, BASUG, PO Box 174, Watford WD2 6NF.

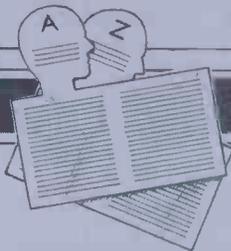

The National TRS-80 Users' Group will be holding a number of workshops at various places in the next few months. The cost is £3.50 (without food) and

dates are as follows: 22 Aug - Bournemouth; 12 Sep - Caml ridge; 2 Oct - Birmingham; 25 Oct - London; 31 Oct - Leicester; ? Nov - Manchester. Write to Brian Pahn, 40a High Street, Stony Stratford, Milton Keynes for the details.

Another thing that has caught my eye is the Sinclair ZX Spectrum. This is clearly seen by Sinclair as its answer to the BBC machine, with a much reduced cost and (Clive claims) similar facilities. Sinclair has very sensibly included 16k of RAM as standard, rather than fiddling about with unreliable extension packs. The keyboard looks to be better than the ZX80/81 type, and everybody seems very interested. No doubt there will be reviews in the mags by the time this is printed, but I predict (for what that is worth) that this is a winner. The ACC chairman has ordered one; so I'll be able to tell you my impressions in greater detail once it arrives.

A couple of clubs have asked for plugs since last month's column, so here goes...

The West Surrey Computer Club meet on the first Thursday of the month, September to June (so you've missed this year's programme), in the Green Man, Burpham, Guildford. As well as the obvious benefits of the venue, meetings are open to people of all levels of experience. Contact Mark Webb, 101 Park Barn Drive, Guildford, GU2 6ER (04862 76111 - work). The Haverhill Microcomputer Club meets at Castle Manor Adult Centre, Haverhill, Suffolk, Contact: Andrew Holliman, 5 Trinity Close, Balsham, Cambridge CB1 6DW.

INTERNATIONAL
Geneva Apple Group (GAG) - group of Apple enthusiasts & owners from Geneva and nearby France. Regular newsletter ("GAG's Letter") and several special interest groups incl machine code, Pascal, graphics, education etc. Would like to enter into contact with other Apple users throughout the world to exchange

ideas and information. Contact: Alan Ehrlich, Geneva Apple Group, Ch. Ami-Argand 9, Case Postale 20, CH-1290 Versoix, Switzerland.

Nascom Brugergroupe (user group). Newsletter published 10 times per annum. Meetings and courses arranged in Copenhagen - membership 80 Danish Krone PA. Contact: A Lind, Sidevolden 23, Dk2730 Herlev, Denmark.

NATIONAL
BBC (National) User Group. Monthly meetings, free software library, monthly newsletter. Discounts arranged on future hardware (ie printers). Membership £8 pa payable to above group. Contact: J Craig, 40, Mount Pleasant Ave, Wells, Somerset BA5 2JQ.

Computer Users Club: monthly journal of programs and hints for TRS-80, Video Game, Atom and BBC machines. Willing to help

anyone having trouble with Beeb Basic. Membership £1 Per month (min 6 months). Need to know comprehensive hardware details. Contact: Tony Latham, Computer Users' Club, 72, Sidmouth Road, Welling, Kent.

USUS (UK) - UCSD P System user group. New Membership secretary: Mark Woodman, Dept of Mathematics, Open University, Walton Hall, Milton Keynes. Tel: 0908-74066

USER GROUPS INDEX

Here's an update of changes and new clubs.

USER GROUPS INDEX

COUNTY
Norwich & District BBC Micro User Group: Membership £2 pa (£1 for OAPs & students). Regular meetings and workshops with various speakers. Contact: Paul

Beverley, Room B12a, Norwich City College. Tel: 0603-60011 ext 233

Mid-Cheshire Computer Club: Meetings 2nd Friday monthly in the main Winsford library (town centre precinct). Contact: Dave Clare, Providence House,

222, Townsfield Road, Winsford, Cheshire. Tel: Winsford 51374

North Herts Computer Club. Meetings 1st & 3rd Fridays monthly at: The Settlement, Nevells Road, Letchworth. Contact: R Crutchfield, 2, Durham road, Stevenage, Herts.

TOWNS
Arun Microcomputer Club. Caters for a wide range of micros. Meetings usually fortnightly - Sundays and Mondays. Contact: Mr P Cherriman, Littlehampton 7607.

MICROMART

ELCOMP BOOKS and SOFTWARE

For ATARI - PET/CBM - OSI - 6502

8K Microsoft BASIC Reference Manual

Authoritative reference for the original Microsoft 4K + 8K BASIC developed for Altair and later computers including OSI, PET and TRS-80.

Order-No. 141 **\$9.95**
Expansion Handbook for 6502 and 6802

S-44 Card Manual describes all of the 4.5 x 6.5 44-pin S-44 cards incl. schematics. A MUST for every KIM-, SYM- and AIM-owner.

Order-No. 152 **\$9.95**
Microcomputer Application Notes

Reprint of Intel's most important application notes including 2708, 8085, 8255, 6251 chips. Very necessary for the hardware buff.

Order-No. 153 **\$9.95**

Complex Sound Generation New revised applications manual for the Texas Instruments SN 76477 Complex Sound Generator. Circuit Board available (\$8.95).

Order-No. 154 **\$6.95**

Small Business Programs Complete listings for the business user. Inventory, Invoice Writing, Mailing List and much more. Introduction to Business Applications.

Order-No. 156 **\$14.90**

The First Book of Ohio Scientific

Introduction to OSI computers. Diagrams, Hardware and software information not previously available in one compact source. 192 pages.

Order-No. 157 **\$7.95**

The Second Book of Ohio Scientific

Very valuable information about OSI microcomputer systems. Introduction to OS-65 D and OS-65U Networking. Hardware and Software hints and tips. Systems specifications. Business applications.

Order-No. 158 **\$7.95**

The Fourth Book of OHIO

Very Important Programs Many interesting programs for OSI computers. Sorting (Binary Tree), Differential Equation, Statistics, Astrology, Gas Consumption, Games a.o.

Order-No. 160 **\$9.95**

VIP Package - Above book plus a cassette with the programs.

Order-No. 160 A **\$19.95**

Invoice Writing Program for OSI-C1PMF, C4P, Disk and Cassette, 8K RAM.

Order-No. 8234 **\$29.80**

Mailing List for C1PMF or C4PMF 24K RAM

250 addresses incl. phone number and parameters on one 5 1/4 Disk

Order-No. 8240 **\$29.80**

Programs for the Challenger

C1/C2 8K

Order-No. 2004 "Bare Bones" Wordprocessor **\$9.95**

Order-No. 2005, "Bare Bones" Mailing List **\$9.95**

Care and Feeding of the Commodore PET

Eight chapters exploring PET hardware. Includes repair and interfacing information. Programming tricks and schematics.

Order-No. 150 **\$9.95**

ELCOMP Publishing, Inc.

53 Redrock Lane, Pomona, CA 91766

Phone: (714) 623-8314

Payment: Check, Money Order, VISA, Mastercard, Eurocheck, POSTPAID or PREPAID in USA. \$ 5.00 handling fee for C.O.D. All orders outside USA: ADD 15 % shipping, CA add 6 % sales tax. ATARI is a registered trademark of ATARI INC. PET/CBM is a registered trademark of Commodore Business Machines.

Important Software for CBM 16K/32K

Most powerful Editor/Assembler for Commodore CBM 16/32K on cassette. Assembler can be started directly from editor or from the TIM-Monitor. Translates in three passes. If an error is encountered, automatic return to the editor. Cassette with DEMO.

Order-No. 3276 **\$39.00**

MONJANA/1 Makes Machine Language Programming Easy! in every Commodore CBM there is a spare ROM socket waiting for it's MONJANA/1.

The new MONJANA/1 Machine Language Monitor in ROM offers more user guidance and debugging aids than any other monitor available today. Comprehensive manual included.

Order-No. 2001 **\$49.00**

SPECIAL PRICE JANA Monitor on Cassette for the PET. Similar to MONJANA/1. Very powerful.

Order-No. 2002 **\$19.95**

Programming in Machine Language with the Commodore PET

This book includes EDITOR/ASSEMBLER, MONJANA, JANA, EDITOR, ASSEMBLER, LINKER and DISASSEMBLER, HEXDUMP and complete descriptions of the programs.

Order-No. 165 **\$19.95**

BLANK CASSETTES

Highest Quality C-10 cassettes. Blank Cassettes (Quantity 10)

Order-No. 8095G **\$4.99**

ATARI OWNERS TAKE

NOTE:

EPROM-BURNER for ATARI 400/800. Bare boards only with description, schematic + software (2716, 2732).

Order-No. 7041 **\$99.00**

Invoice Writing for very small business with ATARI 400/800 16K RAM.

Order-No. 7022, cass. **\$29.85**

Order-No. 7200, disc. **\$39.99**

ATARI-BASIC - Learning by Using

A new book with programs and learning exercises. Many of the programs are appropriate for beginners as well as experienced computer users. (Screen Drawings, Special Sounds, Keys, Paddles + Joysticks, Specialized Screen Routines, Graphics and Sound, Peeks and Pokes and special stuff).

Order-No. 164 **\$9.95**

ATMONA-1 Machine

Language Monitor for the ATARI 400/800

This powerful monitor provides you with the firmware support that you need to get the most out of your powerful system. ATMONA-1 comes on a bootable cassette. No cartridges required. Disassemble, Memory Dump HEX + ASCII, (Change Memory Locations, Blocktransfer, Fill memory block, Save and Load Machine Language Programs, Start Mach. Lang. Progr. (Printer Options)).

Order-No. 7022 **\$19.95**

ATMONA-2 Superstepper

A very powerful Tracer to explore the ATARI ROM/RAM area. Stop at previously selected address, Opcode or operand. (cassette)

Order-No. 7049 (includes ATMONA-1) **\$49.95**

EDITOR/ASSEMBLER for ATARI 800, 32K RAM

Extremely fast and powerful Editor/Assembler. (8K Sourcecode in about 5 seconds) includes ATMONA-1. (cass.)

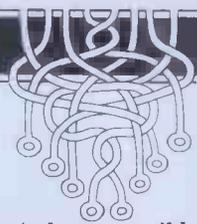

Order-No. 7098 **\$49.95**

MACRO-Assembler for ATARI-800, 48K RAM (cass.)

Order-No. 7099 **\$89.00**

LEISURE LINES

by J. J. Clessa

There was a very good response to our puzzle about the committee of the ladies' golf club - about 260 entries, mostly with the correct solution. The answer was beautifully given in verse by R E L Farquhar of Aberdeen who wrote:

When all the votes were counted
And all the likes and dislikes reckoned,
The captain's place went Audrey's way
With Freda closely second.
Wee Betty became treasurer,
But what a fuss. I guess
If that's the kind of folk who play
Golf, I'll stick to Chess.

Nice one, R E L, but unfortunately your name was not the random selection. That honour went to Mr. Geoffrey Tennant of Upper Norwood, London SE19. Congrats, Mr Tennant - your prize is on its way.

Meanwhile, thanks for all the ideas for puzzles that some of you send in from

time to time. It's not always possible to use them, for a variety of reasons, but whenever we do, we certainly acknowledge the originator. Keep the ideas flowing.

Quickie

Using the symbols +, -, / or *, rearrange four fives to equal the numbers one to ten. For example 5/5 * 5/5 = 1; 5/5 + 5/5 = 2, etc.

Prize puzzle

By subtracting two million from a perfect cube, a number can be obtained which is itself a perfect square of one of the factors of two million. What is that factor (all numbers are positive integers)? Answers, on postcards only please July Prize Puzzle, PCW, 14, Rathbone Place, London W1P 1DE, to arrive not later than 30 July 1982.

PROGRAMS

PCW is interested in Basic or Pascal Programs for any popular micro - please tell us which one you wrote your program on and how much memory it uses.

Make sure your programs are fully debugged before you send them in on cassette (although we will accept disks) with a clear listing on plain paper. Documentation would be welcome, and if you want it returned please label everything with your name and address and include an SAE. Send contributions to Maggie Burton, PCW Programs, 14 Rathbone Place, London W1P 1DE

ZX81 Hypocycloids

by R Clark

Several readers have written in to ask for more programs for the 1k ZX81. As I've received so many letters about it here is a 1k program which will draw circular patterns on the screen. There is room in this type of program for experimentation and it is useful for demonstrating to beginners how to use the

PLOT command in conjunction with functions like SIN and COS.

When the computer requests input all that is required are three numbers, the variables A, N and R. The pattern will vary according to the numbers you assign to these variables.

- 10 INPUT A
- 20 INPUT N
- 30 INPUT R
- 35 REM N*A+R<31, N*A-R<21

BBC Character Generator

by Malcolm Howlett

One of the attractive features of Auntie's micro is the ability to redefine character codes 224-255 in all modes except 7 (Teletext). However, users of the BBC will know that these are defined with VDU 23 followed by the appropriate numbers from 0 to 255, indicating dot positions within the matrix. Working this out can be tedious for a long list of characters, so the following program was written to make this easier.

It prints an 8x8 grid with a cursor on it which can be moved about using W(up), X(down), A(left) and D(right). Dots are placed in position by pressing 'space'; erasure of an individual dot is by moving the cursor over the dot and pressing 'M'. Pressing 'F' will erase a whole grid, and to save one press '*'. The rest of the program is equipped with prompts.

The rest of the program is equipped with prompts.

A maximum of 10 characters can be saved on tape at a time for later use. A point well worth remembering is that if the cursor freezes in the middle of a VDU statement while characters are being loaded from tape this just means that the computer is waiting to load the next block. It can look as if the computer has crashed and it is tempting to press 'escape'.

As listed the program uses mode 6 for the grid and mode 7 for the instructions. Once characters have been re-defined it is not possible to jump from mode to mode except to mode 7 and back.

Listing courtesy of Acorn Computers.

Colossal Adventure NEW £8
Rumours tell of Fantastic treasures hidden in the depths of the Earth. Naturally they are guarded but you are not worried - at first! Colossal Adventure has 200 detailed locations, dozens of artefacts and a host of weird creatures; yet sophisticated code & data compression has reduced it to 16K. The best.

Asteroids £8 Missile Defence £8
Nightmare Park £5 5 Games Collection .. £6
Q-DOS disk filing for 0805 drive .. £25 (£35 in ROM)

Extension Basic £15 (£25 in ROM)
Enhances ROM BASIC with 30 new keywords: AUTO, GET, FIND, REMEMBER, REDUCE, REPEAT, UNTIL, ELSE, LINE, TRACE, XREF etc. And you can add more yourself. EB is fully compatible with standard BASIC & only 4K.

FREE PAP. NO VAT. Money back if not happy. Fully documented. (Nascom 1a need Nas-Sys/Cottis B.) Send order or large SAE for details of all programs to:

TRS-80 Truth by Mike Costello

This is a single-player game of reasoning in which the player tries to crack a secret rule set at the start by the computer. It is played using a standard card deck but is otherwise unlike a normal card game.

The player's hand consists of the full deck, which is played one card at a time. If a card is in accordance with the computer's rule it is put in a part of the screen reserved for correct plays. If it is not, it is put in the part of the screen

reserved for wrong cards. Guessing the rule is indicated by playing eight correct cards in succession, after which a score is given between 0 and 100%. This is based on the number of cards left in the pack and the number of mistakes made.

To play a card, type S,H,D or C for the suit and A,K,Q,J or 2-10 for the rank. A full stop enters the play and backspacing or pressing 'enter' will erase it. Truth will run in 14k on a TRS-80 Model 1 Level 2.

TRS80 MODEL 1 & 3 GENIE • ATOM BBC MICROCOMPUTER

HARDWARE - PHOTOPEN lightpen for Model 1 or 3 TRS80 and Genie. Complete with four programs on cassette. £14.99 + 50p P&P.

TANDYSTIK joystick for Model 1 TRS80. Complete with two programs on cassette. Works with most "Big Five" arcade games. Only £22.50 + £1.00 P&P.

ATOMSTIK joystick for the Atom. Requires VTA and G4 way connector. User Integer Basic. Includes two programs on cassette. Only £22.50 + £1.00 P&P.

SOFTWARE - PENPACK ONE is a cassette of four extra programs for your CSL PHOTOPEN. Includes Pen Gometer, Towers of Hanoi, Geography Test and Propad. Terrific value at only £2.50 + 20p P&P.

SOFTSTIK allows the Tandystik to operate with your existing Basic software without program changes. £9.50 (18k version on cassette) £11.00 (32/48k version on disk) + 50p P&P.

MICROPATH - critical path analysis for your TRS80 or Genie.

Disk or cassette storage, full editor, printer or screen output. £13.50 (cassette) or £15.00 (disk) + 50p P&P.

TRUSPOOL - a software print buffer for the Model 1 TRS80 or Genie. Free your system from waiting for printing to finish before resuming processing. £11.50 (on disk) + 50p P&P.

VISIFORM produces a hardcopy listing of Visicalc model structures on your TRS80 Model 1 or Genie. £13.50 (cassette) or £15.00 (disk) + 50p P&P.

BEETAPE is a bimonthly cassette of ready to run programs for your BBC Microcomputer. Available by annual subscription. SAE for details.

We are currently seeking innovative and original programs for all the above systems. VERY good royalties paid.

HISOFT PASCAL 4 INCREDIBLE SPEED, INCREDIBLE PRICE!

Hisoft announces a new, disk-based Pascal compiler which is available for Z80 CP/M systems.

The compiler produces Z80 object code directly, no P-codes, and this code executes faster than that produced by any other currently available micro-computer Pascal compiler.

All the major features of the Pascal language are supported including RECORDS, POINTERS and FILES (of CHAR).

Hisoft's policy is to continuously extend the capabilities of its software and further versions of the compiler will be supplied to purchasers of the current version at a minimal cost. Extensions to FILE handling will be available soon.

Hisoft Pascal 4 is a powerful and reliable piece of software and yet it requires a 32K system in which to run and costs:
* Currently available for SUPERBRAIN, RML380Z, NASCOMs & GEMINI.

- Hisoft also have available:
- Hisoft Pascal 3 tape-based Pascal compiler for Nascom & SHARP M280K £35
 - a Z80 Development System for GEMINI (G805 or G809) disk systems £45
 - NASMON 4K NASCOM monitor £25
 - NASGEN assembler under NASMON £15
 - NASNEM disassembler under NASMON £10
 - BAS12K 12K BASIC interpreter under NASMON £20

All prices are fully inclusive.
Full details from:
HISOFT

MICROMART

UK 101 SOFTWARE ON TAPE
from the guy who wrote "Le Passe Temps"

GALACTIC HITCHHIKER (8K). An adventure, all in machine code. A beauty! (£7.00)
SUPERTREK (8K). Sail boldly through the universe, zap-ping moving Klingons in real time. Superb graphics. (£7.00)
STARTREK (8K). The old favourite, beautifully presented. (£6.00)
LUNAR LANDER. A real challenge. You won't get down in less than 3 hours. (£3.00)
HANGMAN. Excellent graphics, P.E. said so! (£3.00)
BASIC TUTOR 16 x 4K. The only way to learn - at the keyboard. (£12.00)
LE PASSE-TEMPS. YOU NEED this, if you haven't already got it. (£3.00)
MAD MONK (8K). It's ready at last! A machine code adventure with some truly remarkable graphics, this programme is in a class by itself. (£9.50)
These ORIGINAL PROGRAMS are compatible all 2K Monitors and are available for 16 x 48 and 32 x 48 displays (including enhanced Superboards).

HARDWARE

These kits are complete in every way: - Full socketed high quality PCB, all components, switches etc, plus performed cable assembly for easy interconnection to J1, or our...
MOTHERBOARD SYSTEM. Now you can add on all those extras easily. Provides eight, yes EIGHT, fully buffered J1 type sockets. (£19.50)
8K STATIC RAM BOARD (£39.50)
HI-SPEED CASSETTE INTERFACE. At last, a system that works. COMPLETELY RELIABLE 4000 baud (8000 with reasonable cassette) plus software for named file handling. A delight to use. (£19.50). For software in EPROM, add £8.00
VIDEO ENHANCEMENT. Switch selectable 16 x 48 or 32 x 48 displays without butchering your computer. (£19.50)
Monitor EPROMS re-blown to suit for just £2.50
8K EPROM BOARD (£19.50). A 2K Extended Monitor is available in EPROM for £12.00 plus, coming soon, TOOLKIT in EPROM and BASIC V.
MONITOR BOARD. Plug into Monitor socket to provide switch selection of up to 4 EPROMS. (£9.50)
AVAILABLE SHORTLY: EPROM Programmer. PIA/Sound Board. Analogue Board and something rather nice on the graphics side.

All inclusive
Please add 15% V.A.T.
Write or phone for further details.

SUPERBOARD UK101 Accessories H100 £19.50
8k EPROM BOARD 2716 eproms extra H101 £19.50
EPROM PROGRAMMER H101 £19.50
2716 single supply programmer which plugs into any of the 4 sockets on the H100 board. A BASIC program is provided which POKES the eprom with data.
MOTHER BOARD H102 £25.00
provides 5 J1 type expansion sockets, 40 pin jumper required.
2K RAM BOARD H103 £15.00
the board is pin compatible with a 2716 eprom (requires a 24 pin jumper extra) and connects to any eprom socket on the H100 board. Invaluable for testing machine code before burning an eprom.
EPROM PROGRAMMING SERVICE
Have your favourite machine code and BASIC programs stored in eprom. write for details.
8728 buffers 92 required £1.60
24 pin jumper £3.50
40 pin jumper £5.50
2716 Eprom £2.50

The above products are fully built and tested wire wrapped boards. Prices include postage.

PET Doc

by Bob Chappell

Doc is an 'Eliza' type program - ie, the computer will strike up a conversation with you. The computer will introduce itself as 'Dr Solace', a psychiatrist who wants to know all your problems and will give replies based on your input. Writing a program like this needs cunning logic if it's not to become

nonsensical. Cramming such logic and a good range of responses into 8k is not an easy task, so it is possible to make rubbish out of a conversation with the 'doctor'.

Doc contains full instructions and will run on any PET.

```

FOOTBALL MANAGER

A GREAT NEW GAME FROM

Addictive Games

for ZX81 ZX80 TRS80 VIDEO GENIE

- * AS MANY SEASONS AS YOU LIKE *
 - * 4 DIVISIONS *
 - * PROMOTION & RELEGATION *
 - * FULL LEAGUE TABLES *
 - * TRANSFER MARKET *
 - * INJURIES *
 - * 7 LEVELS OF PLAY *
 - * SAFE GAME FACILITY *
 - * MANAGERIAL RATING *
 - * PICK YOUR TEAM FOR EACH MATCH *
 - * F.A. CUP *
- JUST LOOK AT THESE FEATURES

This is NOT a mere simulation. This is an exciting and highly enjoyable game in which you play the part of a football manager coping with the problems and decisions involved in running your club. There are so many features it is impossible to list them here but included are form (top teams NORMAL), win, giant-killing, wage bills to pay, and you can even be sacked. It is a game requiring a great deal of skill, and people play it for literally hours on end (we have proof!). WE GUARANTEE that this is one of the best computer games you've ever played!

IT'S BEEN SAID... this game is extremely addictive!

### UK101 Screen Converter

by A Britton

This program will convert screen you on your way. Absolute top left screen coordinates between five computers and will run on a UK101 with Cegmon. may be altered for UK101 as they vary Adaptation to run on a different micro from machine to machine although should not present any great difficulty line lengths should be left alone. With this listing has a lot of REMs to help out REMs the program occupies 4k.

- ```

PET Boxes

by Victor Russell

Boxes is actually made up of three games — Boxes, Knight and Ladder. All three are instructive, entertaining and 'user-proof'. They could easily be useful for demonstrations at club meetings, etc.

The program is not well annotated so

splitting the program into its three component games would not be very easy. Full instructions for each game are included in the program. As it is so long a good deal of RAM will be needed — at an educated guess about 32k. Boxes was written in Basic 2.0.

COMPUTER SUPPLIES

Do you NEED supplies for micro and word processors — if so give us a call on:

021-771-3000

or telex 826843 Dutom G.

We offer:

Floppy disks, printer wheels, ribbons, storage and cleaning products, office furniture and equipment. All at very competitive prices.

MICROMART

COLOUR and SOUND

'SIMPLY FILE' RECORDS SYSTEM (DBMS). Select by any key. Print alphabetic lists, mailing labels. Calculate, total, average columns. Fast, easy, robust and VERY versatile. **DISK ONLY: £65**

'SIMPLY WRITE' FAST WORD PROCESSOR. Some £300-£400 programs have no more facilities. Tape or disk, any printer, 40-80 column PET. Needs 16K. **TAPE £40, DISK £45**

GOTTA PET? ADDA VIC! High resolution graphics, programmable characters, colour and sound on your PET? All this PLUS a complete extra computer using your PET's drives, printer etc? Under £200 including VIC and our super PET-VIC LINK! (Available separately)

PRICES PLUS VAT BUT INCLUDING P&P. SEND FOR DETAILS, MORE UNUSUAL ITEMS. GET OUR FREE 'MICROMAIL' PET NEWSLETTERS.

ZX81 MEMORIES with a DIFFERENCE

ANNOUNCING THE BHO OF THE FLOPPY RAM PACK! Now, for the first time, as you need to fit up to a full 56K of low power memory INSIDE your ZX81 (as is normal with more expensive personal computers), in a screwdriver. Experience has shown that the two commonest causes of ZX81 memory and on failure are:

- Lack of rigidity in the connection to the expansion port.
- Inadequate regulated power supply.

Both these problems have been overcome with our low power, internally fitting INCREMENTAL and MAXIMEM memories.

INCREMENTAL 1.2 The truly expandable memory system that starts you off at a price you can afford but offers no restrictions on your future expansion.

EASY TO FIT — The uniquely designed board plugs straight in to the existing microprocessor (CPU) socket on ZX81 board (See page 162 of ZX81 manual so, following the instructions provided, you simply cover up the ZX81 case, unplug the CPU and plug it into the memory board, then plug the memory board into the vacant CPU socket. Four additional bolts fit through existing holes in ZX81 board to give high rigidity, reliability. Simple to follow instructions makes chemists play of fitting (and removing).

TRULY EXPANDABLE — Expandable up to 16K bytes in increments of 2K simply by plugging in memory chips — but does not stop there! Plug and socket switches allow running in conjunction with external memory add-ons — e.g. with Sinclair 16K RAM pack to give up to 32K and with 32K and 48K packs to give up to 48K and 56K (max poss) respectively. Full instructions provided.

ULTRA LOW POWER — A full 16K takes typically less power than existing 1K Sinclair RAM layout (8mA).

ECONOMICAL — Incremental 1.2 with one 2K chip giving 3K of RAM costs only £16.43 (plus 2A?) and you won't have to throw it away when you want more memory.

MONEY BACK GUARANTEE — Return within 14 days of receipt secures full refund of price of goods.

Introducing the new **MAXIMEM 1.1** * **NEW LOW PRICE!**

The ZX81 microprocessor can address a maximum of 64K of memory directly. More than this would require frequent additional statements in programs to switch between different memory banks. 8K of the 64K is already taken up by the Sinclair ROM (containing the Operating system program and Basic interpreter) thus leaving a maximum RAM capacity of 56K (= 64K-8K). The MAXIMEM 1.1 attains this upper limit in one bound by utilising the latest in high density, ultra-low-power memory. Board design is similar and fitting identical to the Incremental memory described above.

Orders and enquiries to: East London Robotics, Finlandia House, 14 Darwell Close, East Ham, London E64BT. Or call us on 01-471 3300.

Quantity	Item	ORDER FORM	Price per item	Total
	Incremental 1.2 socketed for max of 8K		£10.50	
	Incremental 1.2 socketed for max of 16K		£11.50	
	2K CMOS 6116 memory chips		£4.93	
	Maximem 1.1 56K memory		£73.50

PROGRAMS

Atari Earth

by Martin Stiby

This is a two player game with a difference, in that each player has a completely different role within the game rather than both players doing the same thing and vying for the higher score. One player controls an alien and the other a satellite which has to ram the alien and destroy it. The concept behind the game is that our planet is being threatened (as always) by the alien who wants to vaporise all of us. The satellite has a time limit in which to vanquish the invader.

Earth is displayed on the screen and both players can hide behind it, although this affords little in the way of protection. Full instructions are provided on request by the program.

To vary the amount of acceleration on both alien and satellite, the value of M in line 545 can be altered. The '{' in lines 10,40 and 3015 is a clear screen symbol and any text to be printed in lines 400, 2000 and 3015 is in inverse video.

Correction

MZ-80K Catch in the May issue was the latest program to be printed with an omission in the listing. All that was missing was a POKE at the end of line 10. For tape Basic this should be POKE 10167, 1 and for disk Basic it should be

POKE 8048, 1. This will enable the user to access areas of RAM other than video by switching off the Sharp's PEEK protect. If this is not done the machine code which moves the men back and forth won't work as the program won't read keyboard input (which controls the movement of the men). This POKE should make the program work.

BANKS STATEMENT

Continued from page 126

failures that are rare, if not unique. Having such people available for the user is bound to cost someone — in this case the maintenance company — a great deal of money in salaries and equipment. That is why maintenance contracts are expensive. They are even more expensive, pro rata, for personal computer systems, for the systems themselves are now so cheap. Well, that is only partly true. The computers are inexpensive, but some of the peripheral

equipment that goes to make a system isn't. The peripheral equipment often contains a fair element of mechanical gubbins as well, and it is usually those bits that crap-out and require the expensive maintenance. Years ago, the now departed Isherwoods was offering a £20-plus-parts fix on Commodore PETs. For the box alone that fee is probably still economic, but it certainly wouldn't be for disk drives or printers.

ZX81owners

Protos

Keyboard is here!

At last! A real, full size keyboard in a top quality case for your ZX 81. Simply unscrew your ZX 81 printed circuit board from its black Sinclair case and plug into Protos.

FULLY BUILT £64.95 inc. VAT.

- More accurate, faster typing with bigger and real keys.
- 40 colour coded key-tops for easy reading
- Robust, 'big' computer construction
- PCB prepared for more add-ons to come
- New edge connector provided for Sinclair and other manufacturers' peripherals
- Key legends can be changed for future new ROM functions
- Sinclair PCB fully enclosed — and room for much more

If you feel you've outgrown your ZX 81 don't sell it for peanuts and move to another system. Add it to Protos and make your ZX 81 grow.

For details, large SAE, please. For orders add £2.50 post and packing. Cheques to 'Frome Computing'

PET HI-RES

The new HR-40 board offers —

- 8k of its own RAM
- 64,000 individually addressable points
- 320 by 200 resolution
- machine code utility software in EPROM
- existing PET features unaffected
- easily fitted, no soldering necessary
- low price of £149 plus VAT

There's no limit to what you can do when
you have the HR-40 board fitted to your
PET. The single dot resolution allows you
to draw smooth curves, accurate diagrams
and much more. If you've got one of the
new 4000 machines with a 12 inch screen
then you'll need the HR-40B, but it won't
cost a penny more.

The HR-80 board for the 8032 is now avail-
able at the same low price £149.00 plus
V.A.T.

Tel: 01-861 1166

So maintenance, unfortunately, is
expensive. Yet for many users in this
country, where what market figures
there are indicate a predominance of
business and professional users, main-
tenance is an important aspect of long-
term ownership. It would seem that this
particular dilemma is the cause of the
problems with insurance policies.

It would appear that some users,
either through their own misunderstand-
ings or those of the insurance brokers,
or even of the few personal computer
dealers that also handle insurance
policies, are taking out such policies
with the firm belief that they are insur-
ing against maintenance.

It is easy enough to write the words:
'Well of course they ain't.' For the users
caught in this trap, however, it is not
easy, for they do not find this out until
it is too late. Here is a 'for instance'.

User has a policy on machine X,
which fails. User contacts insurance
company which says 'find someone to
fix, pay the bill, and we will reimburse'.
This is the way things are normally done
with insurance policies. User does all
this by employing maintenance
company. Insurance company then says,
probably quite rightly, that the fix was
for 'fair wear and tear' so it won't pay.

User gets stuck with large bill and risks
bankruptcy. It has happened.

Some users seem to assume that the
policies being offered are like those
commonly found with domestic 'white
goods' — things like washing machines,
fridges and televisions. Here, because
the technology used changes little and
then only slowly, it has become possible
to predict failure rates and modes
accurately. This means that the cost of
repairs for a typical year on the installed
base of such equipment can be
estimated. From this it is possible to
offer an insurance policy where the
premium is based on this well-known
estimate.

The policy is in effect a pre-payment
for predictable failures. With items like
personal computers it can't be offered
in the same way, though many users
seem to be assuming it can.

The answer seems to be for users to
be made aware that here are two
distinct and separate factors: insurance
and maintenance. They are not the same
animal. Insurance is a good thing to
have and no user should be without it.
Maintenance is optional, though if the
cost of repair is likely to be high, or the
time taken to get a fix is important, it
will be worth it. **END**

FIVE OUT OF TEN • MUST TRY HARDER

Continued from page 123

geared to aim at the ability level of the
child. But how many good programs are
there? In my experience there are very
few.

Our machines are too difficult to
handle physically. For a primary
school a single unit machine is the only
practical possibility. If you can't have
one micro per class, you've got to hump
your one machine around easily.

Cassettes are too slow and inflex-
ible. One head asked me if it would be
practical to file all his school emergency
address records on cassette. In the case
of a serious accident the child could be
dead by the time you've loaded the
information from tape. What's wrong
with a filing cabinet? Disks are
obviously the answer. But disks double
the price of your equipment.

Which brings us to the question of
price. In Birmingham we've just had the
remainder of our current capitation (the
amount of money allowed per child)
frozen for all but essentials. Forecasts
for the year ahead bode ill indeed. Our
school fund is struggling too with
increasing unemployment, and it seems
as if we're going to have to start buying
necessary things from it. So where does

£500 come from to buy a micro? Even
if the Department of Industry forks out
half, as seems possible, can our primary
schools really justify such expenditure
on something that has not yet proven its
worth?

But don't get me wrong! If Tandy
asked for its machines back tomorrow, I
would definitely be heartbroken,
despite the problems. However I would
make no attempt to replace them. I
couldn't honestly recommend it to the
rest of the staff in view of the hard-
ships we face and will face. And how
can other schools?

So where's the future? For one thing
the ridiculous situation of incom-
patibility of micros must be overcome.
In Birmingham our secondary
schools are standardised on the
Research Machines 380Z. With my
Tandy I'm unable to use any of their
expertise. It seems likely that our
primary schools will standardise on the
BBC Computer. Despite being in the
inner area of the city, I have two
children with computers, one with a
VIC 20, the other with a PET. I have a
friend with a Sinclair ZX80. We might
as well live on different planets for all
we are able to exchange programs.

The great hope for primary (and
secondary) schools must be the BBC
machine. Even as a layman, I think its
specifications seem to be tremendous.

Friendly HELP and ADVICE

Chrisalid, 13, High Street
BERKHAMSTED Herts. (Tel:
74569)

With the weight of the BBC behind it and the facility to take programs from off air, it really must set the standard of compatibility for all micros. Let's hope so.

The great worry I have is that it will be supplied with programs by the sort of enthusiasts I've come across at computer courses and meetings. What we need is teachers who are computer-illiterate to assess the real educational and practical value of programs. Programs need to come from teachers and teaching needs and *not* from computer experts with bright ideas as to

what would make a good program.

In the meantime, schools with computers must continue to battle on. They must make mistakes for us all. They must be prepared to see all their work go down the drain for the sake of the rest of us. They must forge the way ahead and expect no reward. As for the rest of us; can we honestly justify the expenditure of money and time for something that is as little advanced as the ancient Chinese printing block compared to the printed word of today? I don't think we can.

William E Dargue

SILICON OFFICE

Continued from page 147

Conclusions

At £790 for the floppy disk version and £990 for the hard disk, without the hardware, Silicon Office is the most expensive package I've tested. (These prices include a two-year warranty from Bristol Software Factory.) Its file management features are comparable with those of the more limited packages I've reviewed so far. In some areas, such as the ability to specify both file name and key in a single statement, the design of record formats on the screen and the flexibility of layout for reports, it is an attractive package. (I feel I should remind readers again that most of my comments have involved the file management features — I haven't attempted a full review of the word processing and file transmission facilities.) The manual is excellent both as a training guide and for reference.

Against these advantages should be set some serious limitations. The

inability to combine keys when selecting records, the lack of any data protection from unauthorised access and the restriction to a single format for the display of records in one file would be serious constraints in many applications. The limitation of 252 characters per file, even taking account of the ability to create linked records through the key mechanism, would often be a real handicap, as would the restriction to three data files per disk. If the ability to combine word and data processing with communications in a single package is of sufficient importance to overcome these handicaps, then for applications of limited size Silicon Office could be a good buy. But, as with all packages which may be used to process large amounts of data, make sure you get a demonstration using files of a realistic size. I found it much slower than most of the CP/M packages I've tested, as regular readers will note when my summary of the Benchtests on all the packages, based on floppy disk systems throughout, is published later in this series.

END

BLUDNERS

MZ-80K 'Catch' in May PCW suffered from a serious attack of mischievous gremlins. A POKE was omitted from line 10 which meant that the little men who moved the stretcher to catch the suicides could not move under control from the player.

Users of MZ-80K tape Basic should add POKE 10167,1 and disk Basic users should add POKE 8048,1 to the end of line 10. Hopefully now all those frustrat-

ed readers should be able to save many lives. Also, thank you to all readers who offered possible corrections. Although we can't list all the options here (some were rather long and involved!) they were certainly appreciated.

In our free Word Processing supplement in the May issue, we forgot to mention that Magic Wand is now distributed by Peachtree Software International, tel 0628 71011.

PERSONAL COMPUTER WORLD BINDERS

AN EXPANDING BUSINESS!

We heard you!! The size of *Personal Computer World* has been growing at such a rate that our Mark II binders just couldn't keep pace. Twelve issues used to fit very comfortably into a binder, but now it's too much of a squeeze.

Enter our Mark III binder. Bigger and stronger. We've widened the spine to allow twelve issues room to breathe. We've added strength to the back of the binder to carry the additional weight. And we've done it without resorting to the metal rod system of binding magazines . . . a system which causes problems if the rods bend.

PCW Mk. III binders are still attractively bound with the logos of the magazine printed in gold on the front and spine. They keep your back issues of *PCW* in pristine condition and discourage other persons from 'borrowing' your copies. They lie completely flat, even when full, to allow ease of reading and reference. And they come mailed to you in a specially designed protective pack to guard against any over-enthusiasm on the part of the Post Office delivery system.

All in all, they represent exceptional value at £3.95. (A price below that charged by many competing magazines. Indeed, we know of several organisations who keep *all* their back issues of computing magazines in *PCW* binders because of their sturdy construction and their value for money. This is not a practise we can formally condone, but it's flattering nonetheless.) The price covers all postage, VAT and handling. Use the coupon below, or if you do not wish to deface your copy of *PCW*, send your order with remittance clearly written to the address indicated.

Please rush me..... *PCW* Mk III binders at £3.95 each. I enclose a cheque/ PO for £.....

Cheques should be made payable to *Personal Computer World*. Send this coupon to *Personal Computer World*, 14 Rathbone Place, London W1P 4DE

TWO BOOKS YOU CAN'T AFFORD TO BE WITHOUT

SUCCESSFUL PROFESSIONAL AND BUSINESS MICROCOMPUTING

We live in an age of cheap computing power.

For the first time the cost of a computer is within the reach of the small businessman, the professional or the private citizen.

But will your desk top computer be a boon or a curse?

Will it increase your profits or disrupt your workplace?

Success in computer installation depends on taking a logical approach to your task — the Systems Approach; the side of the microcomputing revolution they didn't tell you about.

Desk Top Computing, from the publishers of *PCW*, Britain's largest-selling micro magazine, tells you.

Lyn Antill explains, in language plain enough for the most non-technical user, the secrets of Systems Analysis.

Step by step, this book tells you how to:

Define exactly what tasks you wish your computer to undertake.

Choose the right machine for your present and future needs.

Buy off-the-peg software.

Hire and supervise a programmer when necessary.

Write program specifications tailored to your staff and working methods.

Test programs and introduce them into your business with minimal disruption.

Maintain and modify programs.

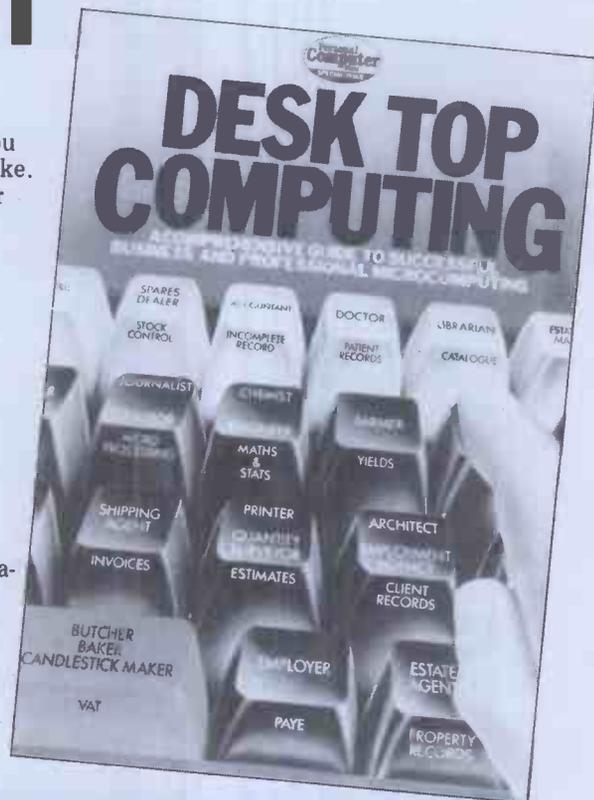

Also included are several case studies covering the installation of desk top computers in small businesses.

COMPREHENSIVE BENCHTESTS OF TWENTY-FIVE LEADING MICROCOMPUTERS

Here are twenty-five of the most popular micros in the world benchtested to the exacting standards that only *PCW* insists upon before going into print.

We believe that even if you have not seen our publications here and in the USA will be amazed that *PCW*'s Benchtests have set an industry standard which is a byword.

Completely updated and revised by Dick Olney, *Benchtest Special* contains 164 pages of fascinating and essential information covering hardware, software, speed of operation, potential, expansion, documentation and conclusions on each machine.

For just £1.50 you can obtain the results of hundreds of hours of Benchtesting by our skilled team of reviewers.

We are not exaggerating when we say that demand for this special issue has been enormous and we advise you to call or write now, using the coupon below, before we go out of stock.

CM2020 is a powerful information retrieval system which the user can configure to suit individual needs. It runs on Z80 based CP/M systems and requires 48k memory. The query processor supports relational and logical operators and incorporates its own internal sorting module. All program modules are in Z80 native code and the system uses standard CP/M files allowing easy access by other programs. CM2020 can be used standalone, as a basic filing program for a customized system, or as a records management system which can be used in conjunction with WP2020.

GRAFFCOM SYSTEMS GROUP

For further details or a demonstration of the 2020 series then call us direct or contact your nearest dealer. Attractive dealer and superdealer arrangements available on request.

GRAFFCOM SYSTEMS, 102 PORTLAND ROAD, LONDON W11 4LX 01-727 5564

it's here at last!

NEW

Disc pack for the atom

Upgrade your atom with our new low cost disc pack only **£299** plus VAT

- 40 - track single-sided 5 1/4" disc drive
- power supply to run both the disc pack and a fully expanded Atom
- disc controller card with 4K DOS ROM
- 3k bytes of static RAM
- 64-way Euro-connector plug and cable
- full operating instructions and manual

The disc controller is based on the Intel 8271 chip. This highly intelligent device minimises the amount of control software and memory requirement and so allows phenomenal high speed operation. Both soft and hardware has been vigorously tested and proved very, very reliable.

You will need an Atom with bus buffers and indirect edge connectors. The mail order price is £350 including VAT post, packing and insurance, the price at your Atom dealer £345.

If you do not have a dealer near you just write to us at the address below, or credit card holders can ring Cambridge (0223) 245200 and order directly.

Acorn Computers Ltd.,
Fulbourne Road,
Cherry Hinton, CAMBRIDGE

The disk operating system (DOS) decodes the following commands used to control the storage of files on disk:—

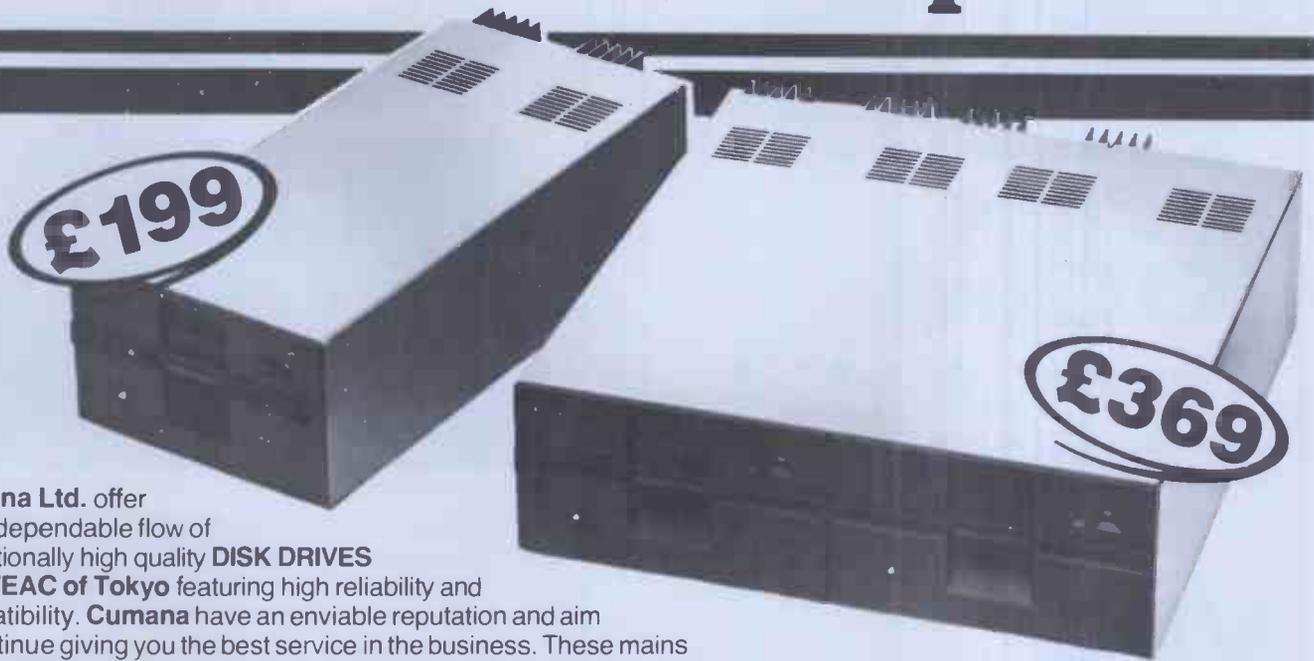

- * CAT catalogue files on disk
- * LOAD load image of memory contents as file
- * SAVE save image of memory contents as file
- * DELETE delete file from disk
- * SPOOL store all printer characters on disk
- * EXEC read characters from disk as if from keyboard

The DOS also replaces the cassette operating system vectors as used by BASIC to allow the use of the following commands in Atom BASIC:—

- LOAD load BASIC program from disk
- SAVE save BASIC program to disk
- FOUT open file for output
- FIN open file for input
- SHUT close file
- EXT find extent of file
- PRT find value of pointer into file
- PUT put number to file
- BPUT put byte to file
- SPUT put string to file
- GET get number from file
- BGET get byte from file
- SGET get string from file

These commands provide full random access of up to 5 disk files simultaneously.

Better buy Cumana strictly dependable top Quality Products like TEAC... like no one else for price!

Cumana Ltd. offer you a dependable flow of exceptionally high quality **DISK DRIVES** from **TEAC of Tokyo** featuring high reliability and compatibility. Cumana have an enviable reputation and aim to continue giving you the best service in the business. These mains powered Disk Drive units are designed to interface to a wide range of computers such as **TRS 80 models I and III, Genie I and II, SWTP, Heathkit, Superbrain, Nascom** and the **BBC Micro, Model B.**

Floppy Disk Drives 40 and 80 Track Cased Units

6808 COMPUTER

The 6808 computer comprises of separate double eurocards as outlined below:-

CPU Card

Comprises of 6802/6808 C.P.U.
8K of on Board Ram (+ 128 Bytes in 6802)
Up to 4K of Rom ie 2 x 2716 Eproms.
and address decoding for other boards.

IO Card

Comprises of 2 x 6821 P.I. A. I.C.S.
1 x 6840 P.T.M.
2 x 6850 A.C.I.A. with RS232 outputs.
and two on Board Baud Generators to set up
any Baud rate required

VDG

Gives 6K of Memory Mapped Graphics + Alpha
Display using 6847 I.C. also has on Board Sound
generator.

Backplane

Backplane Accommodates up to 11 x 80 pin
edge connectors power requirements $\pm 5V$, $\pm 12V$

Available Shortly

6809 Computer system with twin disk drives
(8" double sided double density) 65K user Ram,
14" colour monitor.

Ideal for small business accounts and word
processing

ex. Works price £4200.00 Plus VAT
Business Package software available

new Sams books

VIC 20 Programmer's Reference Guide

A. Finkel, N. Harris, P. Higginbottom and M. Tomczyk

This practical source of information on VIC 20 software and hardware includes a BASIC Vocabulary Guide which explains the complete VIC BASIC language instruction set; a Programming Tips Guide; a Machine Language Programming Guide; and a section on Input/Output Operations which explains how to connect your VIC to special peripherals such as RS232 devices, lightpens, etc.

£11.85 290 pages 672-21948-4

Published by Commodore Business Machines and Howard W. Sams

Circuit Design Programs for the Apple II

Howard M. Berlin

A variety of useful BASIC language programs are presented in this book that will simplify the design and analysis of common circuit problems related to plotting and the statistical verification of experimental data. The programs, written in Applesoft BASIC, cover the design of filters, analysis of 2-port networks, the inverse Laplace transform, real and imaginary roots of polynomials, Pi-Tee (Delta-Wye) transformations, and solution of mesh and node equations.

£11.15 132 pages 672-21863-1

Advanced 6502 Interfacing

John M. Holland

For robotics and computer control enthusiasts, this book provides a collection of design techniques and circuits that can be used or adapted to virtually any situation where computer control is needed. Discussed in full are I/O port design, serial communications, timing and timers, A/D and D/A conversion, data acquisition, and closed-loop control.

£9.05 190 pages 672-21836-4

Microcomputer Design and Troubleshooting

Eugene M. Zumchak

This advanced experimenter's book covers hardware and software design, interfacing, testing and troubleshooting.

£12.55 350 pages 672-21819-4

Microcomputer Data-Base Management

E. G. Brooner

File handling, sorting, searching, linking and hashing are explained in this practical guide to tapping the full potential of your micro-computer.

£9.05 158 pages 672-21875-5

Understanding and Buying a Small-Business Computer

Susan Blumenthal

£6.25 158 pages 672-21890-9

Prices and publication dates are correct at the time of going to press but may be subject to change.

TELETYPE ASR33 I/O TERMINALS

"OLIVETTI TE300" PRINTER/TERMINALS

MPU EXPERIMENTORS +5v, 12v, 12v, 24v POWER SUPPLY

HIGH SPEED DATA MODEMS

From £195 + CAR + VAT

Fully fledged industry standard ASR33 data terminal. Many features including: ASCII keyboard and printer for data I/O, auto data detect circuitry, RS232 serial interface, 110 baud, 8 bit paper tape punch and reader for off line data preparation and ridiculously cheap and reliable data storage. Supplied in good condition and in working order. Options: Floor stand £12.50 + VAT

KSR33 With 20ma loop interface £125.00 + VAT.
Sound proof enclosure £25.00 + VAT

A complete I/O terminal with integral 8 hole paper tape punch and reader, full ASCII keyboard, 120 column printer, and control unit. The printer is capable of 150 baud with a serial TTL or balanced input-output sold in good overall condition but untested. Complete with circuit unguaranteed. Connect direct to your micro at ONLY £99.00 + £11.50 carr + vat.

Once again we are very pleased to offer this superb Power Supply Unit, and hope to satisfy most of our previous customers who were disappointed when we sold out due to demand last time they were advertised!!! These units may just have well been made for your lab, they consist of a semi-enclosed chassis measuring 160mm x 120mm x 350mm containing all silicon electronics to give the following fully regulated and short circuit proof outputs of
+ 5v @ 2 amps DC + 12v @ 800 ma DC
-12v @ 800 ma DC + 24v @ 350 ma DC
and if that's not enough a fully floating 5v output @ 50 ma DC which may be seriesed to give a host of other voltages. All outputs are brought out to the front panel via miniature jack sockets and are also duplicated at the rear on short flying leads. Units accept standard 240v mains input. They are ex GPO and may have minor scratches on the front panels, they are sold untested but in good internal condition. £16.50 each + £2.50 p+p complete with circuit and component list. Transformer guaranteed. **HURRY WHILE STOCKS LAST!!**

A superb piece of engineering made by SE Labs Ltd. to a "no cost spared" spec for the GPO, the Modem 12 is a synchronous Modem for use on DATED 2412 services, or other data links. Many features include: switchable V26 modulation, 2400 baud full duplex 800/1200 standby, auto answer, 4 wire or 2 wire operation, Self test, LED status indication, CMOS technology, modular construction, original cost over £700 each. Believed brand new, supplied complete with PSU etc.
£185.00 + £9.50 carriage + VAT.

5v D.C. POWER SUPPLIES

Following the recent "SELL OUT" demand for our 5v 3 amp P.S.U. we have managed to secure a large quantity of ex-computer systems P.S.U.'s with the following spec.: 240 or 110v A.C. input. Outputs of 5v @ 3-4 amps, 7.2v @ 3 amps and 6.5v @ 1 amp. The 5v and 7.2v outputs are fully regulated and adjustable with variable current limiting on the 5v supply. Unit is self contained on a P.C.B. measuring only 12" x 5" x 3". The 7.2v output is ideal for feeding "on board" regulators or a further 3 amp LM323K regulator to give an effective 5v @ 7 amp supply. Supplied complete with circuit at only £10.95 + £1.75 pp. Believed working but untested, unguaranteed.

ZX Spectrum

20 Programs £6.95

The ZX Spectrum has brought advanced computing power into your home, The Cambridge Colour Collection, a book of 20 programs, is all you need to make it come alive.

No experience required. Simply enter the programs from the book or load them from tape (£2.95 extra) and run.

Amazing effects. All programs are fully animated using hi-res graphics, colour and sound wherever possible.

Entirely original. None of these programs has ever been published before.

Proven Quality. The author already has 30,000 satisfied purchasers of his book of ZX81 programs.

Hours of entertainment

- **Lunar Landing.** Control the angle of descent and jet thrust to steer the lunar module to a safe landing on the moon's surface.
- **Maze.** Find your way out from the centre of a random maze.
- **Android Nim.** Play the Spectrum at the ancient game of Nim using creatures from outer-space.
- **Biorhythms.** Plot the cycles of your Emotional, Intellectual and Physical activity. Some would say this is not a game at all.

Improve your mind

- **Morse.** A complete morse-code training kit. This program will take a complete beginner to R.A.E. proficiency.
- **Maths.** Adjustable to various levels, this program is an invaluable aid to anyone trying to improve their arithmetic.

Run your life more efficiently

- **Home Accounts.** Keeping track of your finances with this easy-to-use program will enable you to see at a glance where the money goes and plan your spending more effectively.
- **Telephone Address Pad.** Instant access to many pages of information.
- **Calendar.** Displays a 3 month calendar past or future, ideal for planning or tracing past events.

turbo apple

'ADD A TURBO TO YOUR APPLE - SYSTEM'

One of the most annoying things when working with microcomputers is to wait for the print-outs. This becomes a real irritation in interactive situations such as wordprocessing, generating invoices etc.

There are two ways of solving the problem:

1

Buy a very fast printer. Cost approx. £1500 - £2000.

2

Buy a buffered printer-interface card for your APPLE. Cost £149.

The Turbo-card from Torsby Microprocessor, has its own microprocessor and 6K of RAM.

The characters to be printed are transferred into the RAM of the card at machine-language speed. The control of the APPLE is almost immediately returned to the program or key-board, provided you do not exceed the buffer capacity (5,5K).

The Turbo-card transmits the characters as soon as the printer is ready to accept more data.

The Turbo-card increases your system-speed with up to 30% depending on the application.

The Turbo-card is the first buffered interface card that provide on-board firmware for dumping APPLE Hi-res-graphics to a printer. The firmware resides in an EPROM. At the moment EPROMs are available for EPSON MX-70, 80, 100, Anadex, IDS Paper Tiger and Centronics 739.

You can use the Turbo-card in just the same way as any other parallel-printer interface card. Just plug it in and go.

Specification

Size: 230x77x10mm.

System interface

Internal: APPLE slots 1 - 7

Processor: 6504

Program memory: 4k EPROM

Other:

Glass-Epoxy PC-board. Solder-resist on both sides of board, Component Silkscreen, Goldplated edge-connectors. 1.5M cable including connectors.

Burnt-in more than 10 hours.

Works from Monitor, Basic, Pascal, I/O 1.1 and CP/M.

Weight: 130 grams

External: Centronics parallel
8 bits, AKN, STROBE

Memory: 6K static RAM CMOS

Developed, manufactured and tested in SWEDEN.

Warranty 1 year on parts and labour

PRICE only

TORSBY MICROPROCESSOR AB PL 2317 S 685 00 TORSBY SWEDEN

STAR DP-8480

Manufactured by STAR Co. LTD., Japan

MINIPRICED, MAXISPEED, MICROPRINTER!

The STAR DP-8480 printer is so reliable, our service team are quite bored! It's a friendly printer too, being compatible with the BBC microcomputer, Acorn Atom, Tandy and most other major computers.

And fast! With 80 columns, 80 cps (also 96 and 132 cols.) plus bi-directional, logic-seeking print head.

There's traction feed and friction feed on both the **RS232C** and the **Centronics** models and at a price that's almost embarrassing: **RS232C** with traction feed is £301.15, centronics friction feed is £243.63 and the traction feed version only £267.86 (plus VAT and delivery).

All available from stock so there's no waiting!

We are primarily a Software/Systems House specialising in the nationally used and applauded 'CFACC' integrated Accounts Programme and other associated business user programmes, for such things as ESTIMATING, SPECIALISED STOCK CONTROL, and JOB COSTING. We are not tied to one type of micro and since we are frequently asked to supply "CFACC" on a multitude of different machines, we probably have experience of more different kinds of micros than anyone else in the country. At the lower end of the "proper" business micro we have found that the "Superbrains" from our suppliers (not necessarily from other suppliers since conversion has to be done in this country) are so reliable that we now sell:—

SUPERBRAINS with 12 MONTHS GUARANTEE

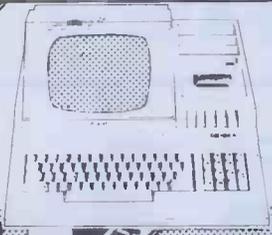

DD'S — £2,080 : QD's — £2,460 (exc. VAT) including delivery, manuals, CP/M and 24 hour nationwide replacement service.

Computers for All Ltd

Stratford upon Avon 840064.

We also stock and recommend TELEVIDEO SYSTEMS for slightly more sophistication at similar prices.

SPT announce INTERPRINTER Typewriter and computer printer

For less than £250 most electronic daisywheel typewriters can be converted to a quality computer printer. With SPT's range of INTERPRINTER units, word processing is within the financial budget of even the smallest enterprise. Letter quality printing of any information within the computer becomes immediately available. The typewriter facilities remain unchanged.

Commodore *

The SPT series of INTERPRINTER units accommodate inputs from Commodore*, Tandy TRS80*, BBC Microcomputer*, Apple* or almost any other serial or available (Centronics IEE488 etc) computer output. The INTERPRINTER output will drive the Brother EM1/EM2*, Olivetti ET121/201/221*, Silver Reed EX55*, Smith Corona EL2000* and other electronic typewriters.

Interprinter *

To compliment the INTERPRINTER range, SPT manufacture interface boards to convert RS232 to CENTRONICS/PARALLEL and, IEEE to CENTRONICS/PARALLEL.

MAIN GENIE DEALER

Premier Publications now offer the FULL range of Genie equipment, including expander boxes, disk drives and video monitors for the Genie and TRS80 I/III range. Sample prices...

GENIE I with cassette deck	£319.95 inc
GENIE II with numeric pad	£342.95 inc
40 track disk drive (EG400)	£229.95 inc
32K Expander Box (EG3014)	£224.95 inc
12 inch black & white monitor	£69.95 inc
9 inch high quality monitor	£95.95 inc
Parallel Printer Interface	£37.95 inc

PREMIER WORD PROCESSOR PACKAGES

Premier offer a wide range of WP packages for the hobbyist and small businessman, starting from as little as £370. All use our phenomenally successful WORD4WORD word processor which was our top-selling business program in 1981. Most of the packages now use the EPSON MX80F/T, a superb printer which is the world's best selling printer. The WORD4WORD supplied makes full use of the features of this printer, and gives true right justification, whether the text is a letter or a series of columns. All disk-based packages are supplied with DOSPLUS.

WP1 W4W + GENIE II	£369.95
WP2 W4W + GENIE II + MX80F/T PRINTER + all cables	£824.95
WP3 W4W + 48K GENIE + 40 track disk drive + DOSPLUS + MX80F/T Printer	£1295.00
WP4 as WP3, but twin drives	£1449
WP5 as WP4, but with twin double density disk system	£POA
WP6 W4W, GENIE II, disk and a daisywheel printer	£2295.00.

WORD4WORD PLUS

STUNNING NEW TRS80/VG WORD PROCESSOR
Why pay £75 to £150 for a W.P? W4W gives you all the facilities you could wish for in WP for a sensible price. Amongst the features included are:

FULL SCREEN EDITING & TWO WAY SCROLLING
FULL TEXT INSERT/DELETE ON SCREEN
GLOBAL SEARCH & AMEND
TEXT SEARCH - TOTAL TEXT MOBILITY
TEXT FORMATTING TO SCREEN OR PRINTER
CASSETTE/DISK STORAGE OF TEXT
VISION LOAD OF STORED TEXT
STANDARD LETTER ROUTINES
OVERTYPE CORRECTION, WORD COUNTER
SINGLE KEY WORD DELETION
PAGE LAYOUT & NUMBERING
TOTAL PRINTER CONTROL
TEXT HIGHLIGHTING FOR U/L RECOGNITION
TEXT BLOCK MANIPULATION
COMPREHENSIVE TAB & TABLE GENERATION
HEADER & FOOTERS
PRINTER SPOOLER

Many other features are included in W4W. We would need several pages to do justice to this superb product. W4W is comparable to most purpose-built systems. COMMISSIONED AND DEVELOPED BY PREMIER WITH THE HOBBYIST AND SMALL BUSINESSMAN IN MIND. 6K M/C PROGRAM
Please state machine type and printer when ordering. W4W can cope with the Centronics 737/9 and Tandy proportional spacing modes. Price CASSETTE £39.95 FLOPPY DISK £43.95
TAPE £45.95

TOOLKIT 2 FOR TRS80 I & III/VG

TOOLKIT 2 features 17 new easy-to-remember command words and a machine code monitor which greatly enhance an already powerful BASIC
REPLACE replace any string, word or variable
VARS gives a list of variables on screen
TRACE see line contents as executed
ABBREV 26 BASIC words become single-key entries
RENUMBER operates from any start in any increment
BLANK removes unwanted spaces and LET statements
VTAPE true Vision load plus APPENDING
MC a full machine code monitor
VARTRACE lists lines as executed plus variables

PAGE controlled list scrolling
OLD retrieves lost programs!
FIND anything in a BASIC listing
REMKILL kills REMS!
DUPL copy existing line to new line
LFIND LVARS LREPLACE - all work to printer
PRICES Cassette £29.95 Disk (Specify DOS) £32.95

MICROTRAIN FOR TRS80/VG

At last you can combine two of the most popular hobbies in the country - railways and computing. MICROTRAIN, a brand-new quality simulation from Premier, allows you to set up a network of tracks, points, stations, tunnels, bridges etc and then runs trains to your own timetable! Signalling is provided either automatically or to your own design.
MICROTRAIN is a screen-based simulation. With one keystroke you can draw and signal lines many scale-miles long. Trains can be run simultaneously and the speed and length of each train is user-selectable. A cursor is used to move the whole screen display left or right for visual inspection of any part of the network. You can use any of the machine's graphics on-screen to build up scenery. Designs can be stored onto tape/disk for future retrieval.
MICROTRAIN is a machine code program and will run on any Genie or TRS80. State machine when ordering. CASSETTE £14.95 inc DISK (specify DOS) £16.95 inc.

SCREDIT

This fabulous screen editor has the following features:-

- * twin cursors for easy editing
- * two speed copying from second to main cursor
- * complete mobility of new cursor
- * User-definable cursor locations
- * auto-repeat cursor movement keys
- * twenty-six new functions
- * useable with most assemblers

SCREDIT also allows the user to save a segment of screen information to memory for later retrieval/editing. SCREDIT is a machine code program needing less than 3K of user RAM. It is compatible with Premier's TOOLKIT II, and locates at the top of memory.

Specify Model I,III GENIE I, II and memory size when ordering.
Cassette £14.95 DISK (specify DOS) £16.95 Floppy Tape £17.95

OEM's This is Your Board

The RADER single board computer has been developed in the U.K. and tailored to offer the user the most up-to-date techniques of microprocessor technology coupled with the built in facilities of ultimate expandability and flexibility.

Based on the popular Z80A Microprocessor running at 4 MHz, up to 16K of internal ROM may be addressed. 2K of video RAM and 2K of character generator RAM is included (both memory mapped). Decoded bank switching permits the addition of as many boards as may be required, each board containing 3 pages of 64K RAM, giving unlimited capacity. A highly flexible memory capability is achievable by the addition of external pages of ROM.

Floppy Disc interface utilises Western Digital's 1797 Disc Controller allowing interfacing to 5¼" or 8" floppy disc drives, side selection for double sided drives and single or double density recording. All data transfers are accomplished by the on-board DMA controller. Other standard features include: On board keyboard port, composite video output and "disc mains" on/off signals; light pen input; inverse video switch to select normal video display background (white on black/black on white); video enhancements switch; plus choice of invert character or dual intensity enhancements.

Monitor with full screen editing facilities plus a full 8 point cursor control. ● Autoboot for business systems ● Autoselect for varying disc densities ● Ability to auto-load extra ROM ● Commands: Dump, boot, edit, input port/output port, break point, go to, copy.

The board is configured to run the latest CPM version 2.2 and ideally suited as the basis for small to medium business machines, games machines, industrial control machines, research and development equipment ● **Board Price £350 plus £4.00 P+P excluding VAT.** (Please state whether 8" or 5¼" board is required.)

Standard features

- 64K RAM
- 4 MHz Z80A CPU
- 5¼" or 8" Disc Interface, single/double/sided density
- Z80A CTC (clock/timer/counter)
- DMA Controller
- Memory Mapped Video Display
- Memory Mapped RAM Character Generator
- Programmable Video Controller
- 8 Expansion Connectors

Configured to run CPM 2.2

- CP/M DOS also includes a utility programme that allows you to format your discs and dynamically configure the systems for a variety of disc and printer types. A set of manuals are also included.

Price £100 plus £3.00 P+P. Send for complete technical specification. All prices excluding VAT.

- Full Custom software development support available

Add on option boards

- Dual Parallel Ports **£35**
- Dual Serial Ports **£50**
- Cassette Interface **£50**
- RAM Expansion Board, Capacity 192K, in 64K Increments **£250**
- User Prototyping Board **£16.75**
- Real time clock with battery back-up **£45**

All option boards; add **£2.00 P+P** Prices exclude VAT.

128K and 32K boards and VC— Expand
The 32K BOARD

Comes with utilities to allow the movement of DOS and the use of Integer together with the ability to store subroutines on the board to be called from a main program. The final utility allows the board, or multiple of boards to be used as a fast disk drive
£149.00

128K BOARD

Can be used as above with the additional facility to use the card as a fast disk drive in C/PM and PASCAL in addition to BASIC
£359.00

VC EXPAND

Is a utility that can be used with either the above two boards to give additional memory for VISICALC models, up to 146K with the 128 board—and more with additional boards
£55.00

COMING SOON

A version of VC EXPAND to allow use of VISICALC with the VIDEX 80 column board (VIDEX 80 column board—£185.00) (VISICALC—£105.00)

WHAT HAS

- ★ A 6502 and Z-80 Microprocessor
- ★ 64K RAM Expandable to 128K
- ★ 2K System ROM plus sockets for 10K additional user ROM
- ★ RGB and Composite Video
- ★ Selectable 80 or 40 Column Text Display
- ★ Hires Graphics 280X192 in 6 Colors
- ★ An 8 Bit Parallel Port
- ★ An RS232 Serial Port
- ★ A Detachable Keyboard with Upper/lower Case, Numeric Keypad
- ★ Cursor Control Block and 15 Programmable Special Function Keys
- ★ Built in Mounting for Two 5¼ inch Floppy Drives
- ★ Six Apple II Compatible Slots for Plug in Peripherals
- ★ Game Paddle I/O
- ★ Built in Loudspeaker
- ★ Two Switched Accessory Power Outlets

and Costs Only £1095.00 plus VAT?

COMPUTECH for apple

Authorised dealer, service centre and system consultancy

SUCCESS BREEDS SUCCESS!

As authorised dealer and service centre for Apple computers we have acquired extensive experience of users' needs and the most cost effective means of satisfying them from the considerable resources of this popular and reliable machine. Over 1,000 of our financial accounting packages have been installed. In the process we have detected areas of special need and opportunities for enhancing these resources. Our own manufactured hardware and system software have been produced to meet these requirements. As a result we have compatible products for all configurations of Apple II and ITT 2020 installations - and the new Apple /// !

Apple /// now on demonstration - systems from	£1,645
Pro-File 5 MB mass storage for Apple ///	£2,256
Computech mass storage for Apple II and Apple ///, up to 12 MB, from	£1,950

COMPUTECH SOFTWARE AND HARDWARE INCLUDES:

Payroll for 350 employees, 100 departments, all pay periods, printed payslips, approved year end documents, very quick and easy to use, **£375**. **Sales, Purchases** and **General Ledgers** **£295** each, detailed statements. **Job Costing** and **Group Consolidation** are amongst many and various applications of the **General Ledger** package, which supports values to totals of one thousand million accurate to a penny! Our **Utilities Disk** available like other packages in 13 sector or 16 sector format, is widely used for reliable, error checking, copying, including single drive, and the renowned **DPATCH** program beloved of programmers for **£20**. We have developed a **Terminal Utilities** package which enables Apple to Apple and Apple to mainframe communications with local processing and storage as well as Apple to host communications from the amazingly low price of **£130**. Our **Graphics Utilities** program for use with the **Microline** and **Epson** families of printers enable the plain paper production on low cost printers of high resolution screen pictures, graphs etc. - free with **Microlines** or **£30** separately. **Keyboard Driver** enables the use of our **Lower Case** adaptor with BASIC programs and **Applewriter Patches** supplied **FREE** with our character generator package (total cost **£50**) is separately available on disk with documents for **£10**. At the same price **CAI** (convert Apple pictures for ITT) makes binary high resolution picture files display properly on the ITT 2020. We sell the famous **Visicalc** for **£130** and have delivered systems using it to do amazing things like production control, shipping accounts and stocks and shares valuations! The versatile **Applewriter** word-processing package at only **£39**, especially employed with our **Lower Case Character Generator** is widely used by people who cannot type to produce word-perfect copy! Experience with Apple systems has led to the design and manufacture of compatible products with enhanced features at very favourable prices to satisfy users' needs. These include the **Diplomat Serial Interface** which has handshaking capability and switchable options (**£80**), the **Diplomat Parallel Interface** which enables the direct use of text and graphics with the **Microline** and **Epson** printers and is a complete 'plug in and go' item with gold-plated edge-connector at **£80** and has optional direct connection for **Centronics 730/737** printers. Our new **Diplomat Communications Card** at **£95** is a sophisticated peripheral especially suitable for Apple to mainframe communications at high speeds in full duplex mode with switch selectable bit rates and other options. The **Lower Case** adaptor is available for Apples (revision 7 and earlier) as well as ITT 2020, complete with diskette software for **£50**. It offers true descenders on screen and the £ sign. We also have an **Optional Character Generator** for the ever popular **Microline M80** at **£15**. This provides £ sign and improved digits and lower case characters with USASCII special symbols. Our price for the **Microline M80**, with graphics, 40, 80 and 132 characters per line, friction, sprocket and teleprinter feed, is only **£295**, amazing for this small, quiet reliable 'look alike' printer. Tractor option is **£40** and **Serial Adaptor** **£80**. The **Microline M82A** bidirectional printer with both parallel and serial input is only **£395**, it can have an optional 2K buffer, while the **Microline M83A** full width adjustable tractor 120 cps printer with similar specification is only **£645**. Then for all computer users there is the unique **Micromux** which from **£800** provides up to 16 ports for simultaneous independent serial asynchronous communications! Telephone for data sheets or to arrange a demonstration or for the address of our nearest dealer. Please hurry - the demand for our products has been such that some have been temporarily out of stock. We offer the effective low cost solutions you need. **Prices exclude V.A.T., carriage and packing.**

NEWSSCRIPT offers Professional Word Processing Software with:

- Easy to use Full Screen Editing.
- Typeahead — never loses keystrokes.
- Headings, Page Numbering, Centering.
- Form Letters, Large Documents.
- Global Search and Change.
- Double Width, Underlining, Boldface.†
- Table of Contents, Indexing.
- Sub-scripts, Super-scripts.†
- Includes handy reference card.
- Based on large mainframe-type systems.

NEWSSCRIPT controls these printers:

- Epson MX-80, MX-100, all 12 fonts, plus underlining and block graphics; italics with Graftrax.
- Centronics 737, 739; R.S.-Tandy, L.P IV, L.P. VIII, Daisy Wheel II, NEC PC- 8023A, TEC 8500R, C.ITOH 8510: - justified true proportional printing.
- Good support for: Diablo, Spinwriter, Starwriter, QUME, Microline, Anadex, modified Selectric.

160 pages of well presented documentation — includes self-study tutorial, and hundreds of examples. Supplied ready-to-run on "tiny" DOSPLUS. Easily transferred to most other D.O. Systems. Requires 48k with one or more disk drives.

† Some features operate only if your printer is mechanically capable.

NEWSSCRIPT offers a really professional W.P. System for **£79** + V.A.T. + £2.00 p&p. in U.K.

NEWSSCRIPT with a mailing label facility costs **£92** + V.A.T. + £2.50 p&p. in U.K.

Please specify Mod. I or III or V.G. when ordering.

Catalogue £1.00 (Includes credit vouchers value £5.00)

When it comes to choosing a business computer we can eliminate some of the maybe's

If you are investing in a business computer it's important to know that it will be able to do everything you need of it. Maybe just isn't enough.

Maybe it can cope with my needs?

Being such a versatile machine the Dynabyte 5000 can be used for word processing, general ledger, sales ledger, financial modelling, database, information storage and retrieval, communications and viewdata.

Maybe I can get the support and service I will need.

To back up the excellence of our hardware and software there is continuous national support with highly trained expert service personnel.

As part of the Grand Metropolitan Group we have the backing to provide you with the support you need.

Maybe I can buy a more powerful one when I need it?

There's no need. Dynabyte is a modular expandable system. By plugging in extra boards in a simple add-on, unit-by-unit process the

computer expands to meet any new requirements. It can grow from a small office system to a sophisticated and powerful multi-processing, multi-user network offering a massive storage capability. Naturally you start with the system just right for you.

Maybe I will be able to get the programs I need?

Not only do we provide a large range of software options but the Metrotech Dynabyte uses the industry standard CP/M, MP/M and CP/NET operating systems which are compatible with many of the software packages available.

Powerful, ready-to-run applications software on cassette, for business, science, engineering and the professions.

MICROL 1500 Software Series products available now and under development include:

1500 PROCOS - the most powerful, practical, yet easy-to-learn software package ever developed for a portable computer.

Using PROCOS, you will be able to create powerful, reliable programs in just minutes - even if you have never programmed a computer before.

Designed for all applications involving calculations, PROCOS cuts program development time by as much as 80-90%, whilst offering user features normally only found on 'Visicalc'-type systems, helping you answer 'what if' questions and analyse trends.

Fully menu-driven for easy operation, with over forty touch commands for complete, flexible data management.

The detailed tutorial manual includes examples illustrating how PROCOS can be used to create a powerful financial accounting package, a business management aid, and general purpose 'super-calculator', but the full range of applications is as wide as your imagination.

PROCOS is an expandable professional computing system. The first expansion modules (available June) include:

GRAPHIX adds the easy-read clarity of graphic presentation to PROCOS. Data may be presented as displayed barcharts, printed pie and bar charts, with Autocolour options and 'note-printing' feature.

STATIX brings the benefits of statistical analysis to PROCOS. Designed for the non-technical user, STATIX helps you determine trends and predict future developments.

Available soon:

DATABASE; A powerful data management system that does not require PROCOS to run.

MICROL 1500 Software Series products require the following hardware:

PC-1500, CE-150 and compatible standard cassette recorder, CE-151/CE-155 memory modules (CE-155 recommended)

1500 PROCOS	£34.95	1500 GRAPHIX	£17.95
1500 DATABASE	£24.95	1500 STATIX	£17.95

The new Transtec BC2.

A total business computer package under £1,500.

The Transtec BC2 is a brand new business computer with a 64K capacity and double sided double density disk-500K per drive. It utilises the CP/M operating system giving the user access to a huge range of already proven software packages. Alternatively, the BC2 also operates on the UCSD Pascal system. The stylish console incorporates a 12" non-glare green screen and comes with separate matching keyboard. And the BC2 is totally expandable so it can grow as you do! Find out more by clipping the coupon and mailing it to your nearest Transtec office.

FULLER FD SYSTEM £39.95

Professional Keyboard & Case for Sinclair ZX81 & ZX Spectrum

The ZX81 fits inside

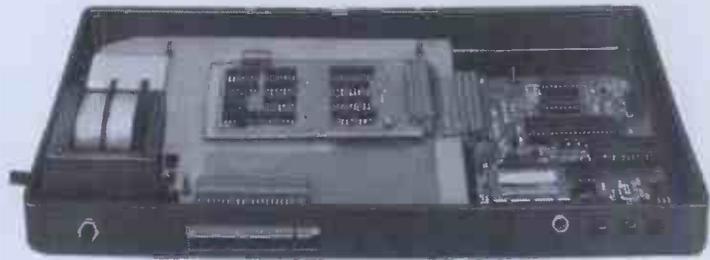

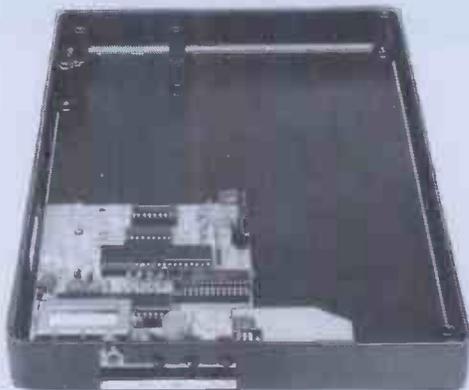

The tough ABS injection moulded plastic case measures 8" x 14" x 2½" and hooks up to your ZX printed circuit board in minutes. No technical know how or soldering is required.

The ZX16K Memory Module will fit inside the case, using the new Adaptor Board at £9.75 or the Motherboard.

By removing the ZX PSU from its case this can also be fixed inside. We will carry out the installation work free of charge if required.

KEYBOARD LAYOUT:

All the Sinclair ZX81 keys are duplicated on our layout, with extra shift and new line keys. The professional momentary action key switches have a guaranteed life of 10⁶ operations. The unit is fully built tested and comes complete with a money back guarantee.

INSTALLATION

Simply unscrew the ZX printed circuit board from its case and screw it into the FD Case.

MOTHERBOARD:

We also manufacture a mother board which allows expansion to the ZX memory and I/O facilities WITHIN the case, as well as our power supply unit and reset switch.

COMPUTING

April/May 1982 £1.25

An exciting new Commodore peripheral

Own or use a Pet or a Vic?
Fed up with being ignored by all the
traditional monthly magazines?

Fed up with listings, which are too simple
or simply do not work?

You need *Commodore Computing*, the new
monthly magazine. *Commodore Computing*
is published by Nick Hampshire, author of
The Pet Revealed, *Pet Graphics*, *A Library
Subroutines* and *The Vic Revealed*.

Each issue is packed with advanced

advice on how to make the most of your
computer, whether you use a Pet or a Vic.

Each issue covers a host of applications
– software, hardware, machine code, games,
business use – whatever it is you'll find it in
Commodore Computing.

If you want to learn more about your
computer, take out a subscription to
Commodore Computing.

That's the only way to get it, and get it
straight.

Send £12.50 for 1 year's subscription (10 issues) to:

Commodore Computing,
Magsub, Oakfield House, Perrymount Road, Haywards Heath, Sussex RH16 3DH

VIDEO GENIE and TRS80

THE ROM-VIDEO GENIE & TRS 80 (3 ROM Models)

Are you fed up of loading a lower case drive every time you switch on? — Want your name inside our computer — Better loading (TRS80) — Sick of bouncy keyboards-s!

You need our new ROM—simply remove old—plug in new.

- 1) Firmware driver for lower case
- 2) Security code displays—(your name & post code?)—up to 21 characters
- 3) Improved tape loading
- 4) Alleviates repeating characters (key-bounce)
- 5) Checks for feature ROMS

£14.95 + VAT + P&P (80p)

FEATURE ROMS £18.95 + VAT + P&P (80p)

A series of ROMS starting with FEATURE 'A'

- 1) Single keystroke commands e.g. Shift A = Auto etc.
- 2) Flashing cursor (can be toggled on/off)
- 3) Repeating characters—with delay—(toggle)
- 4) Machine code monitor and editor
- 5) System load and save for backing up those system Programs—uses no RAM and so can deal with a FULL 16K program

NEW

FEATURE 'B'—extended basic

- 1) Merge—two basic programs to one
- 2) Renumber
- 3) Screen print
- 4) Various basic tools PLUS

Access and Barclaycard accepted.

General Northern Microcomputers (GNOMIC)

46 Middle Street, Blackhall, Hartlepool, Cleveland. Tel. Peterlee (0783) 863871

Plug on for feature ROMS

Now you can simply plug on the back of your computer, insert ROM and away you go.

VG £29.95 inc. ROM A + VAT + P&P
TRS80 £34.50 + VAT + P&P (80p)

48K RAM—internal
TRS80 & VG £70 + VAT + P&P (80p)
Plug in our modules. Connect three wires (VG) or five (TRS80). You are not required to piggyback chips. Keep your old RAM (or sell it!). Compatible with expansion.

LOWER CASE HARDWARE (VG & TRS80)
Unplug two IC's, plug in two modules, connect three wires—EASY! £19.00 + VAT + P&P

Where else can you get features like these...
A full on screen instant display of the catalogue.
Auto verification of each file as it is written.
CRC error checking.
Link selectable 2MHz or 4MHz option.
Fast data transfer rate of 6000 bps.
Powered from NASBUS.
8" sq NASBUS compatible PCB.
Far more reliable than any floppy disk system.
112K on-line storage with 2 drive system.

The HS-IN has a Command Set which makes it a floppy-disk "look-alike". It can load an 8K program in under 11 seconds and can store up to 56K (28 files) on each side of tape. Why spend £700 on a floppy disk system when the less expensive HS-IN system has a command set like this...

BRIDGE THE GAP BETWEEN EXPENSIVE FLOPPY DISK SYSTEMS AND UNRELIABLE CASSETTES.

B — Write a Basic file
C — Instant display of catalogue.
D — Delete file
J — Jump to Basic.
N — Jump to NAS.SYS.
Q — Warm start to NASPEN text editor.
R — Read a file.
T — Transfer file to another drive.
W — Write a file.
X — Exit and rewind cassettes.
Z — Warm start to Basic.

This Mini-Cassette Storage System is technologically far ahead of anything like it on the market and is extremely reliable in the bargain. AND THE COST?

Single Drive System built and tested £199
Double Drive System built and tested £279
Carriage £3.50

MICRO-SPARES CARRY FULL RANGE OF NASCOM AND GEMINI COMPUTERS.

MICRO-SPARES ARE A MEMBER OF THE MICROVALUE GROUP

See pages 12, 13

QUALITY MEMORIES

AT PRICES THAT CANNOT BE BEATEN IN THE U.K.
MICRO-SPARES can supply these memories in quantities from 1 to 10,000+. Parts delivery is fast — orders received by 4.30pm are shipped same day.

All memories are guaranteed for 1 year from date of purchase. Memories supplied are good quality but should you have a faulty part a replacement will be sent as soon as the part is received — without question.

Thousands of memories have already been supplied to Manufacturers Computer Traders, Government Bodies and Individuals all over the U.K. and the continent. If you are buying in large quantities please telephone for price. Official orders are welcome!

Payment is by Cheque, Postal Order, ACCESS, VISA etc. PLEASE add postage and VAT. Postage on component orders under £30 is 50p. All in stock items sent same day. All none Kit items have a 1 year guarantee. Official orders welcome. Discount on large orders by arrangement.

ARE KNIGHTS MAD? — SHARP MZ-80B £899

Dear Microfans,

At a recent Sharp Dealers meeting it was suggested that Knights were mad to sell the MZ-80B at £899. Only one dealer supported us by indicating that he too wanted to cut the price — the other seventy plus wanted to get the full £1045 + VAT. OK we confess Knights are mad. Mad enough to sell the B for £899. Mad enough to have written our KNIGHT COMMANDER for the B (it adds renumber, trace, dump variables, single step etc to Basic), mad enough to be just back from our second visit to Sharp Japan in 6 months thus ensuring our customers have exclusive Sharp items. Mad enough to sell the MZ-80K at £345 with Basic and Pascal or at £399 with Basic, Pascal, Forth, Fortran, and machine code. Mad enough to have sold Sharp for eight years and never ever to have charged for any servicing to any of our Sharp customers.

Write for our latest price lists and software catalogue. Our latest newsletters detail the new Sharp single floppy, the PC1511 hand held micro and colour printer and all the latest news from Japan which the sane dealers are waiting to hear.

Happy Computing, from Graham Knight
All prices exclude VAT but include delivery. ACCESS + VISA welcomed.

BUY ATOM LISP and discover artificial intelligence

Essential for :

- * students learning LISP
- * research
- * hobbyists interested in artificial intelligence
- * systems designers.

ATOM LISP is an interpreter for the language LISP consisting of 5½K of machine - code interpreter plus 2K of initialised LISP utilities and constants which can be deleted if not required.

Important Features

- fully interactive with explicit EVALUATE and VALUE IS messages
- automatic parenthesis count
- SUPERPRINT to format the printing of large expressions
- screen editing or built-in LISP editor
- errors trapped and optional full traceback printed.

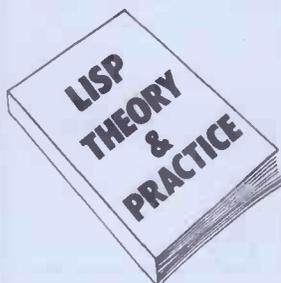

ATOM LISP includes a number of extensions to basic LISP, including:

- PEEK, POKE and CALL to control hardware and machine-code programs
- functions can have optional arguments with default values
- improved interactive control structures using LOOP, WHILE and UNTIL
- automatic access to COS or DOS commands
- cassette (or disk) input/output control.

The fast compacting garbage collector automatically finds space for numbers, lists, or character strings if there is any space at all remaining. This means that the programmer never need be concerned about the details of storage allocation.

LISP Functions

AND, APPLY, ATOM, BLANK, CALL, CAR, CDR, CAAR, CADR, CDAR, CDDR, CHARP, CHARS, CLOSE, COND, CONS, CR, DEFUN, DIFFERENCE, DOLLAR, EDIT, EQ, ERROR, ERRORSET, EVAL, F, FSUBRP, GET, GETCHAR, GREATERP, LAMBDA, LESSP, LIST, LISTP, LOAD, LOOP, LPAR, MESSOFF, MESSON, MINUS, NIL, NOT, NULL, NUMBERP, OBLIST, OPEN, OR, ORDINAL, PEEK, PERIOD, PLIST, PLUS, POKE, PRINO, PRINT, PROG, PUT, QUOTE, QUOTIENT, READ, READLINE, RECLAIM, REMAINDER, REMPROP, RPAR, RPLACA, REPLACD, SAVE, SET, SETQ, SUBRP, SUPERPRINT, SUPERVISOR, T, TIMES, UNDEFINED, UNTIL, WHILE, WRITE, WRITEQ, ZEROP.

ATOM LISP is available on cassette at only £17.25 inc VAT from your Acorn dealer or direct from Acornsoft. Accompanying 44 page instruction manual "Lisp Theory and Practice" available for £6 (no VAT).

All Acornsoft products are available from authorised Acorn dealers or can be ordered direct from Acornsoft Ltd. 4A Market Hill, Cambridge CB2 3NJ.

Credit card holders can ring 0223 - 316039 and place their orders direct.

VISIT OUR GREATLY EXPANDED SHOW ROOM

Typeset text from your disks

NOW

Unlike some computer-typesetting services you've seen advertised, wordsmiths' Anvil service is ready for you *now* if you use any of the following machines:

Superbrain SD or QD (or any compatible system); *Apple II* under DOS3.3 or CP/M; *Tandy* TRS-80 Model I or III; *North Star Horizon*; *Comart*; or *Ohio Scientific* C2 or C3 series.

(We'll have links to other systems ready by the time you read this advert - ring for details).

We have special software support for *WordStar*, *Spellbinder*, *Scriptit* and *Applewriter*: so even tricky jobs such as directories, technical publications, tables and foreign languages are no problem for your word-processor and Anvil.

If you're not sure how to do it, come to one of our *word-processing workshops* and see how we can help you to produce anything from a price list to a batch of bar-code labels.

(And since we're in central Somerset rather than on the Central Line, we might even offer you some cyder and a byte to eat as well!).

Quite simply, we're the specialists in print for micro-computer users.

For details of our typesetting, print and other services for the word-processor user, and for dates of our word-processing 'workshops', return the coupon or ring Mike Cooper on 0458 45359.

"PLUTO" COLOUR GRAPHICS PROCESSOR

Pluto is a self-contained colour display processor on an 8" x 8" NASBUS and 80-BUS compatible card featuring:

- Own 16 bit microprocessor
- 1192 Kbytes of dual-ported display memory for fast flicker-free screen updates. (Outside of the host address space).
- 640(H) x 288(V) x 3 planes (8 colours) - 2 screenfulls OR 640(H) x 576(V) x 3 planes (optional extra)
- Fast parallel I/O interface usable with ALMOST ANY MICRO. Only single +5v supply required.

Pluto executes on-board firmware providing high level functions such as:

- Fast vector draw - over 100,000 pixels/sec. Lines can be drawn using REPLACE, XOR, AND, OR functions
- User-definable characters or symbols
- Spare display memory with memory management facilities for allocating symbol storage space or workspace
- Rectangle Fill and copy using REPLACE, XOR, AND, OR plus 5 other functions
- Fast access to single pixels
- Write protect memory planes during copy
- Double-buffered screen memory for animated displays
- Complex polygon colour fill

Pluto is expandable. An expansion board will be available later this year to give Pluto up to 8 memory planes with no loss of resolution. S100 Interface now available.

AVAILABLE NOW. ONLY £399 + VAT (p&p free)

THE '6809' CENTRE

The FLEX9 Operating System for '6809' Based Micro-Computers. This disk operating system is now the standard single user system for machines using the powerful '6809' micro. Having many advantages over similar operating systems for other micro-computers, this system can now be run on many different '6809' based machines. Furthermore, the Configurable Version is available for implementation on custom '6809' computers. Programs written to run with this operating system are almost completely machine independent, thus allowing the easy transfer of software. There is a wide range of software available for this system, some of which is listed below. Please send for our full list.

'6809' HARDWARE, RUNNING FLEX9.

	Excl VAT	Inc VAT
Convert your APPLE II to FLEX9 - with the new EXCEL-9 '6809' board.		
Complete with FLEX9 on 5 1/4" disk	181.74	209.00

BBC MICRO

WORDWISE - THE WORD PROCESSOR for the
BBC Micro - A professionally written program supplied
in ROM, containing all the usual word processor facilities
plus several unusual ones like a fully automatic word
count. Extremely fast and very simple to use, a powerful
piece of software. Supplied with a full manual for £65
+ £1.50 p&p + VAT.

SNAKE (Model B) £5.80 + VAT
This colourful arcade-type game for the model B makes full
use of the amazing graphics and sound facilities of the BBC
Micro. It is a highly addictive game that will give hours of
fun.

CHARACTERS (Model A or B) £5.80 + VAT
Forget about clumsy binary notation when re-defined
characters. This genuinely useful utility program could not
make it simpler. Ideal for those who want to define "Invader
"Invader" shapes, foreign character sets, technical symbols
etc.

CODE-RACE (Model A or B) £5.80 + VAT
A "Mastermind"-type game with a difference. The computer
tries to guess your code before you guess its hidden code.

CASH or royalties waiting for any interesting software
(not just games) for the BBC machine. The better the
program the more we will pay.

Send a stamp to get latest details of our ever growing range
of software. Please add VAT to all prices. Mail order only.

MICROCOMPUTER CASSETTE

**The POWER
BANK**

The Uninterruptable Power Supply that will run
ANY Micro-Computer System...

A VITAL PIECE OF EQUIPMENT FOR RUNNING BUSINESS SYSTEMS

THE COMPLETE ANSWER TO YOUR POWER SUPPLY PROBLEMS!

Just plug your Micro-Computer, Video, Disc Drives and PRINTER into The Power Bank and continue to run your system in the event of a mains supply failure.

Electrical spikes and surges suppressed which protects your hardware as well as your programme and data.

Output voltage stabilised for all conditions of input voltage.

System compatible
sine wave output.
Built-in
sealed for life
batteries

The Power Bank illustrated is rated continuously at 120 VA output. A typical load being a micro-computer, 2 floppy disc drives, video display and a 9.5 inch dot matrix printer.

250 VA SYSTEMS ARE ALSO AVAILABLE

Depending upon the load, your system will continue to operate for up to one hour from the internal batteries with the electrical supply off, while an audible alarm warns of a loss of the mains supply. The batteries are monitored when the mains supply is off.

Learn VisiCalc

LEARN VISICALC!

For Better Business Decisions
A single day! That's all it takes at a Micromark seminar, and you can learn for yourself modern decision-making with VisiCalc — an incredibly simple-to-use microcomputer program. An easy as a calculator! Anyone can learn VisiCalc.

YOUR PLANS PLAIN AND SIMPLE

VisiCalc is a decision-support system used worldwide by half a million firms. Big and small alike. You can use it too, for financial decisions, planning, forecasting, costing, pricing, production, inventory, scheduling, budgeting, cash flow, bill of materials, estimating and thousands of other applications.

MACHINE INDEPENDENT

LEARN VISICALC! uses Apple work stations for fast 'hands-on' tuition. But you can use VisiCalc on Pets, Tandys, the new IBM Personal Computer and many others.

This makes LEARN VISICALC! an ideal starting point for anyone considering microcomputers for the first time... because you get a basis for comparing computers difficult to achieve any other way — all for a cost of £108.00 (+ VAT) including course notes, work disks and lunch with wine.

But the one-day seminar is equally valuable for self-taught VisiCalc users. Many never get past the basic commands. Micromark explains the more complex functions as well.

SUMMER PROGRAMME 1982

Our summer programme started in June, with weekly dates at Kensington, Gatwick Airport, Bracknell, Hammer-smith, Egham, Swindon, Heathrow Airport and Luton, ending in August. Write or phone now for the remaining programme.

WHO SHOULD ATTEND

*Company directors and senior managers who specify the facts & figures they need. *Managers and executive who present the figures. *Small businessmen, professionals, accountants, sales, production, personnel, training, advertising & market research executives, planners and financial managers.

LEARN VISICALC! assumes you know what figures and reports you want. Let us show you how to get them, the way you want to see them!

APPLY NOW FOR COURSE PROSPECTUS

Complete and return to Micromark Training Division, Ravenscroft Road, Henley on Thames, Oxon RG9 2DH. Telephone 049-12 777926 or 77085.

MICROTEK

We now have the Sharp MZ-80A in stock. A compact personal computer which has the CRT, the keyboard and the cassette-based data storage all incorporated in one complete system. The MZ-80A CPU is loaded with a 48K-byte dynamic RAM. It allows direct access to all data. The MZ-80A employs BASIC in the tape mode. PASCAL software system is also available by simply replacing tapes. The MZ-80A can with its floppy disk system, respond to higher-level software, such as disk BASIC and FDOS (including BASIC) compiler). We have payroll, cashbook, stock control and invoicing programs available for the MZ-80A, so why not call round for a demonstration or write for further details to:

EVERYONE WANTS TO USE TIM...

He's powerful, versatile and so easy to use.

He remembers all your clients', customers' or patients' details. He can tell you who owes you money. He keeps all your employees' records. He generates and summarises business reports, files and mailing lists fast. And he can even tell you the full name and address of "a Mr Mac somebody or other" in seconds!

Yet a secretary can handle him with one finger.

Who is this superworker?

His full name is Total Information Management - TIM III[®] for short.

TIM III is the non-programmers Data Base Management programme for CP/M[®]* or IBM personal computers. And TIM III interfaces with Wordstar[®] and Magic Wand[®] word processing packages so he can merge data from a TIM file into personal letters making him ideal for all mailing list work.

*CP/M is a Trademark of Digital Research.

Well proven in the USA, TIM III is now available from Juniper Business Systems. TIM III costs £390 + VAT and once he's working for you we guarantee he'll never ask for longer holidays or a rise in salary!

Return the coupon for full details and brochure.

I would like to know more about TIM III.

SIMPLICALC

NOW ON
VIC 20!

.....FROM CRONITE

THE LOW COST ALTERNATIVE

SIMPLICALC is a small, powerful work sheet program. It runs on any CBM PET, except "old ROM", even cassette-based. The sheet is viewed on the screen.

SIMPLICALC makes the "what if" exercise available on all sizes of CBM. On a 32k it provides a much larger useable matrix than any other similar program: on an 8k it provides enough space to analyse a capital purchase or personal tax computation.

SIMPLICALC is freeform. Its uses are many. For instance, it's been used for calculating chemical weights, projecting profits by product group, and costing out salary reviews. Be inventive.

SIMPLICALC is simple to use, with 8 single-key commands. Print your sheet out, and save it on cassette or disk depending on version. A comprehensive manual is provided.

To order your copy of this versatile numeric tool, send cheque with details of your system, specifying whether your CBM is *2001/3000/early 4000 (PEEK (144)=46) *late 4000 *8032 and whether you want cassette £29.90 incl. VAT or disk £36.80 incl. VAT (specify drive type). Security copies available (no backup possible) at £4.00 cassette and £6.00 disk incl. VAT.

Cronite Computer Systems Limited

Montgomery Street

Birmingham

B11 1DT

Further details from Mark Turner on 021 773 8281 telex 338247

PROTECT YOUR SOFTWARE INVESTMENT

COPY II PLUS

Apple Copy II Plus gives you the power to make back-up copies of nearly all the "protected" software packages currently available.

INSURANCE

With Copy II Plus you can protect your valuable software investment. Make back-up copies of Visicalc DB Master, DeskTop Plan, the Apple Special Delivery Software range and many other packages.

RELAX

Copy II Plus allows you to make back-up copies for normal use, so you can keep your originals safely locked away – away from the dangers of spills or stray magnetic fields, or just the wear and tear of everyday usage.

EASILY PAYS FOR ITSELF

While some software companies offer replacement of expensive damaged diskettes, many do not. With Copy II Plus you eliminate the time, expense and worry of costly accidental damage.

FAST

The high-speed option allows you to copy diskettes in less than 45 seconds – faster than any other bit copier – ideal for backing-up your ordinary data disks.

THE ZX81 COMPANION

by Bob Maunder.

ISBN 0 907211 01 1

If you have a Sinclair ZX81 and want to use it to its full potential then, as the experts have all agreed, this is the book for you. It contains detailed guidelines and documented programs in the areas of gaming, information retrieval and education, as well as a unique listing of the 8K ROM for machine code applications.

'Far and away the best . . . once again Linsac has produced the book for the serious end of the market'. — *Your Computer*, November 1981.

'The ZX81 Companion is a most professional product . . . with many good illustrative programs, tips and warnings'. — *Education Equipment*, October 1981.

'Bob Maunder's attempt to show meaningful uses of the machine is brilliantly successful . . . thoughtfully written, detailed and illustrated with meaningful programs . . . To conclude — the book is definitely an outstandingly useful second step for the ZX81 user'. — *Educational ZX80/81 Users' Group Newsletter*, September 1981.

TEACH YOURSELF COMPUTING VIA THE BBC SERIES AND HAVE FUN!

Introducing the TEXAS TI99/4A home computer which plugs direct into any T.V. for full colour.

Superior colour, music, sound and graphics – and a powerful extended BASIC – all built in. Plus a unique, new Solid State Speech™ Synthesizer and TI's special Solid State Software™. Compare it. Pound for pound. Feature for feature. There's a computer in your future. And the future is now . . . We've entered a new and exciting era – the age of the home computer. Perhaps you're already quite knowledgeable about computers and are looking for the most programming power and versatility for your money. Perhaps you've just read about it, and want to learn more. Either way, you need to look closely at Texas Instruments TI99/4A Home Computer. The TI99/4A was designed to be the first true home computer – skilled computer users and beginners alike will be able to put it to effective use immediately.

If you're new to computers, the TI99/4A is for you.

You can begin using the TI Home Computer literally minutes after you unpack it.

Without any previous computer experience or programming knowledge. You simply snap in one of TI's Solid State Software™ Command Modules and touch a few keys.

Step-by-step instructions are displayed on the screen. So you or just about anyone in your family can use the TI99/4A.

Two pioneering technological developments in particular set the TI99/4A apart from the rest.

Solid State Speech™ – This optional speech synthesiser enables the TI99/4A to literally speak-to provide verbal prompts and special messages to the user. Actually reproduces the human voice electronically. Hundreds of words are available, and plug-in word modules will add hundreds more.

TI's exclusive technology lets you call up the words you want by simply typing them in. Outstanding voice clarity and fidelity. Solid State Speech is a proven technology already on the market in TI's unique Speak and Spell™ electronic learning aid for children.

Solid State Software™ Command Modules – Available in a wide range of application areas including many games, (Chess, Blackjack/Poker, Pin Ball, Bingo, Attack From Outer Space,) to name but a few. These optional ROM modules actually add application program memory to your TI99/4A. Software now includes Teach Yourself Basic, Extended Basic, Teaching Aids for Young Children etc. etc. **They let you use the TI Home Computer immediately, with no programming.**

Serious programmers will appreciate the time and effort saved by these pre-programmed modules. Plus, they'll let you introduce your family to the computer in the easiest possible way. Solid State Software was pioneered by TI for use with its powerful programmable calculators.

If you know computers you'll quickly see the difference in the TI99/4A.

Texas Instruments has taken those features you've been wanting – plus some you may not have heard about yet – and included them in one incredible, affordable computer system. The TI99/4A gives you an unmatched combination of features and capabilities, including:

- **Powerful TI-BASIC** – Built-in 13-digit, floating point BASIC. Fully compatible with ANSI Minimal Basic, but with special features and extensions for colour, sound and graphics.
- **Up to 72k total memory capacity** – 16K RAM (Random Access Memory) (Expandable to 48K). 26K ROM (Read Only Memory) plus up to 30K ROM in TI's Solid State Software Command Modules.
- **26K ROM** – Operating system, BASIC, floating point, sound and colour graphics software are contained in ROM.
- **16-colour graphics capability** – Easy-to-access, high resolution graphics have special features that let you define your own characters, create animated displays, charts, graphs . . . and more.
- **Music and Sound effects** – Provides outstanding audio capability. Build three-note chords and adjust frequency, duration and volume quickly and simply. You can build notes with short, straightforward commands. Five octaves from 110 Hz (Hertz) to beyond 40,000 Hz.
- **Built-in equation calculator** – Unique convenience feature helps you find quick solutions to every day maths problems, as well as complex scientific calculations. Directly accessible from the keyboard.

Ideal learning aid for every member of your family – including pre-school children and fun too only —

SPIDER SOFTWARE APPLE SOFTWARE

OH NO - NOT ANOTHER APPLE DATABASE?!!

Some Questions and Answers on ACCESS - A new database management system for Apple computers from SPIDER SOFTWARE.

How many records can I have?

This depends on the size of each record. The maximum record size is 1560 characters. The maximum number of records per disk volume is 7936 but this is dependent on the record size. As an example, if your records are 200 characters long, you may have a maximum of 671 records per volume. A maximum of 40 fields per record is available.

How long will it take to find a record?

A powerful advanced IRAM (Indexed Random Access Method) is utilised for major record retrieval purposes giving an access speed of either instant recall within 3 seconds. Any field (or combinations thereof) with multiple search criteria will either give instant recall or will take a maximum of 23 seconds. On the SyMBfile hard disk everything is at least 7 times faster.

How long will it take to sort a disk full of information?

All sorting is done on an index. If the sort is on the primary index it will take 0.2 seconds regardless of the number of records. To sort on any field which is not indexed involves first creating an index for that field which is then sorted. The time taken depends on the record size (generally less than 3 minutes). Any index can be saved for later use or made into a primary index. Sorting a disk need not involve creating a sorted version of the database.

How many disk drives do I need?

ACCESS will ideally run on 2 drives. However, it will support a single drive system and a version is available for the SyMBfile 5 megabyte hard drive.

How about report formats?

Reports are user-configured and can contain report headings, column headings, column sub-totals, brought forward totals, grand totals, computed fields, page numbering etc. Reports can be on selected and/or sorted data.

What if the dog chews my program disk?

We provide copy routines for backing-up of the program disk and the data disks as many times as you require. The ACCESS system is a combination of hardware and software.

Is the program menu-driven?

YES. ACCESS constantly displays prompts indicating the options available wherever you may be in the program.

How is the data stored?

ACCESS creates and uses its own data disks. However, facilities are provided to enable you to produce standard DOS 3.3 text files in either sequential or random access format using any sorted or selected fields. Because of ACCESS's own data storage techniques a very large database may require more than one disk to store the text file(s) produced.

How easy is it to create records and edit them?

ACCESS has a powerful word processor style screen editor enabling insertion and deletion of the characters, etc., full cursor control across fields and pages of a record. A maximum of 40 screen pages are available. Password-protected fields are supported as are computed on-screen fields.

What if I delete a record by mistake?

ACCESS only marks a record as deleted. Facilities are given to either 'un-delete' deleted records or purge deleted records from the database.

My current database takes ages for me to add and save records because it needs to re-structure the entire file to keep the 'primary key' in alphabetical order. Will this happen with ACCESS?

No!!! ACCESS uses logic and technique to handle your data; there is no reason (should you have the stamina) why you should not fill an entire disk with information as fast as you can type and immediately retrieve all the information in sorted order or order of entry, etc. All complex and time-critical functions including disk input and output, indexing, sorting, searching, screen display and editing are performed by ACCESS using powerful machine-code routines.

What hardware do I need?

48K Apple II Plus with DOS 3.3 and 1 or 2 disk drives. Most makes of printer are supported.

Why should I buy ACCESS and how much is it?

Most facilities in ACCESS are available in other comparably priced database managers. However, ACCESS is more powerful and faster than its competitors in each function. ACCESS has gone beyond the boundary of merely complex facilities, it is powerful and 'intelligent' enough to make itself extremely simple to use. The retail price including VAT is £199.95.

A technical sheet is available on the ACCESS system from your local Apple dealer who should also be able to give you a demonstration of its flexibility.

We stock a large range of packaged software for the Apple. Please write or telephone for a copy of our comprehensive list.

Hard Disks for the PET

The Small Systems **HARDBOX** acts as an intelligent controller for up to 4 Corvus Winchester drives

- PET DOS 1 and 2 compatibility
- Multi user capability on Corvus Drives
- 16 Megabyte max file size
- 65535 max records per relative file
- Over 2000 files on 5 MB drive

CORVUS DRIVES

Well proven systems with nationwide support and maintenance.

- 5, 10, 20MB capacity
- Up to 4 drives can be daisy chained
- Backup onto standard video cassette using the Mirror unit
- Up to 64 users with the Constellation multiplexer unit.

5MB Corvus drive	£2295
10MB	£3595
20MB	£4495
Mirror back up unit	£495
Constellation	£495

SSE MINI WINCHESTER

The MW-1000 Mini-Winchester is a compact desktop unit that just plugs into the PET-gives you up to 12 Mb of hard disk storage under CP/M or PET DOS or both !!

At the flick of a switch, this amazing unit allows you to have:-

- The whole disk under CP/M (plus 60k of RAM and Z80)
- The whole disk under PET DOS
- Half of the disk under PET DOS and half under CP/M !!

No changes to the PET or ROMS are required - just plug in and go.

Prices include CP/M, utilities, 60K RAM and Z80

SOFTBOX and CP/M SOFTWARE

SOFTBOX allows the PET to run the worlds most popular operating system for micros. Operates with PET floppies and/or a Hard disk system.

Comprehensive range of CP/M software available - ask for our Catalogue.

Softbox	£550
RS232 Option	£45
Corvus Option	£65

IEEE-488 INTERFACES

Comprehensive range for PET and HP-85 e.g. B300 RS232 40 char buffer, full handshake

The Famous Book
"ALL ABOUT APPLESOFT"
Now available @ £9.50 incl. P. & P.

SPOCK: "Computer! Calculate the value of Pi to ten thousand decimal places!"
COMPUTER: "Working..."

CAN YOUR COMPUTER SPEAK?

The **WIDEBAND SPEAKEASY** speech synthesiser adds voice response to any computer with a parallel port including PET, APPLE, expanded ATOM, HORIZON etc.

for Only £69 + VAT

- * UNLIMITED VOCABULARY
- * EASY TO PROGRAM
- * LOW MEMORY OVERHEAD
- * COMPLETE MANUAL WITH DICTIONARY, SAMPLE SOFTWARE AND TUTORIAL ON SPEECH PRODUCTION.

Also includes high flux speaker and power supply, all housed in high quality wood cabinet, with volume control and rear pitch control.

Programmed with simple phonetic codes. Apart from the obvious applications of voice response in manufacturing, testing, blind terminals etc., this product also teaches a great deal about linguistics and speech production.

Software is available in BASIC and Z-80 and 6502 assembly for direct input in PHONETIC SPELLING closely related to the ARPABET international phonetic alphabet.

ZX99 AUTOMATIC TAPE CONTROL

The logical extension for the Sinclair ZX81 giving data retrieval & word processing **£59.95** plus P & P

The ZX99 Tape Control system is a sophisticated extension to the Sinclair ZX81 Microcomputer, providing remarkable additional capabilities, which allow both the beginner and expert access to a professional computing system without the expected expense.

★ DATA PROCESSING

The ZX99 gives you full software control of up to four tape decks (two for reading and two for writing) allowing merging of data files to update and modify them. This is achieved by using the remote sockets of the tape decks to control their motors as commanded by a program.

★ PRINTER INTERFACE

The ZX99 has a RS232C interface allowing you direct connection with any such serial printer using the industry standard ASCII character code (you can now print on plain paper in upper and lower case and up to 132 characters per line.)

★ MANY SPECIAL FEATURES

There are so many different features that it is difficult to list them all:

For example:

AUTOMATIC TAPE TO TAPE COPY: You can copy any data file regardless of your memory capacity (a C90 has approx 200K bytes on it) as it is loaded through the Sinclair block by block.

TAPE BLOCK SKIP without destroying the contents of memory.

DIAGNOSTIC INFORMATION to assist in achieving the best recording settings.

★ TAPE DRIVES

We supply (and guarantee its compatibility) a Tape Drive that works with your computer.

★ COMPUTER CASSETTES

We supply quality (screw assembled) computer cassettes. Please enquire for any not shown:

The ZX99 contains its own 2K ROM which acts as an extension to the firmware already resident in your ZX81'S own ROM. The ZX99'S ROM contains the tape operating system, whose functions are accessed via Basic USR function calls. Each function has an entry address which must be quoted after the USR keyword. All of the functions can be used in program statements, or in immediate commands (i.e. both statements with line numbers and commands without them).

There is an extension board on the rear to plug in your RAM pack (larger than 16K if required). The unit is supplied with one special cassette lead, more are available at £1 each (see below).

COMPREHENSIVE USER MANUAL INCLUDED IN PRICE

★ ZX99 SOFTWARE ★

We now have available "Editor-99", a quality word processing program including mail-merge, supplied on cassette for £9.95.

Also, following soon will be:

- * Stock Control
- * Sales Ledger
- * Business Accounts
- * Order Processing
- * Debtors Ledger
- * Tax Accounting

They said it couldn't be done!

Galactic FIREBIRD

Those ever circling, swooping, diving Firebirds of the famous arcade machines, brought to the micro in Mike Chalk's ultimate achievement—Galactic Firebird

Yes, it's the latest in the Kansas Arcade series, but alas, his last, for Mike has been writing these right back from the original Arcade Invaders, and feels he wants a rest.

The reason being that he has always bettered his preceding program, and feels that with Firebird he has reached a pinnacle.

Many programmers of many machines have tried to emulate the arcade game, Firebird, but nobody, the Americans included, have managed to get the circling, swooping firebirds on a computer. Until now!

It is incredible how the Firebirds peel away, circle around in numerous positions on the screen, then suddenly sweep in to attack, all the while raining down their bombs.

Even if you manage to dodge all their bombs whilst shooting them down, it is as though they realise they will not get you this way, for without warning they'll take kamikazi action and come straight for you!

Then come the Astro Blasters, shooting down a solid energy bolt, to fry you completely, in addition to their own brand of super bomb. Oh, you can fire at them, but a solitary hit will have no effect whatsoever on these nasties.

As though Firebirds and Astro Blasters are not enough, as the game progresses, come the Megon Bombs. With no less than three hits needed to destruct! And you can't dodge them easily either, as their explosions spread.

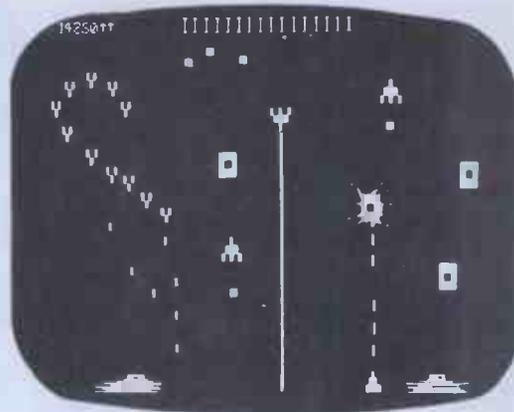

Scores are kept of course, and there is the now expected realistic sound effects. And—wait for it—it progresses to FOURTEEN levels of difficulty! Mike's last words: "Nobody will ever get there!"

It's ONLY available direct from Kansas but at a sensible £9.50 Vat and post paid

Kansas

Kansas City Systems, Unit 3, Sutton Springs Wood, Chesterfield, S44 5XF. Tel. 0246 850357

As publishers (we do not retail other people's programs) we have absolute quality control and thus give an unconditional guarantee on all our software. And of course all programs are always in stock for our famed return first class post service whether ordered by cheque or credit card. Ask for a copy of our free catalogue, you won't find any 'South Coast' prices there! Access and Barclaycard welcome.

- * FULL COLOUR
- * PRESTEL +
- * TELETEXT

- * TELETEXT +
- * PRESTEL
- * Full COLOUR

LION COMBINED PRESTEL TELETEXT VIEWDATA ADAPTOR MXV05

The Lion Combined Prestel Teletext Viewdata Adaptor for Microcomputers MXV05 combines both Teletext and Prestel in one adaptor specifically for most popular microcomputers that are fitted with an RS 232 interface. The unit is extremely versatile and based on the successful Lion AXV03 television add-on adaptor less the infra red remote control but with a bi-directional RS232 interface.

The adaptor has full alphanumeric graphics and editing ability with software available for most micro's to manipulate both Teletext and Viewdata pages. All the normal Prestel and Teletext facilities are available with additional features: - Timed Teletext pages which are essential on the crowded Telesoftware pages planned from TV and satellites, local editing for page preparation with full colour graphics reducing costs in page preparation for information providers, 6 Autodial stored numbers, printer and cassette outputs and optional 8 page memory storage.

Full colour, full Viewdata and Teletext are available to micro's even with RS232 out only, via the adaptor's UHF output; the micro need not have Prestel Teletext character or graphics set and the micro can operate still in its own screen format with the minimum of software. Micro's with the adaptor can directly load Telesoftware from Teletext, software from Prestel databases or private software Viewdata computer databases and then operate directly or save programs, e.g., Lion Viewdata Computer, which as a special offer for purchasers on an experimental basis, will be allowed to market their software through the Lion Viewdata Computer or at reduced rates purchase programs directly from it.

The MXV05 is only £299 incl. add £3.50 P&P

SAE for further details.

Why are the big computer companies so bad at making micros? IBM went to Microsoft for help with its Personal Computer while ICL, Digico and Burrough did OEM deals with, respectively, Rair, Heath and Convergent Technology. As far as we can make out, Data General, DEC and Control Data managed their own designs, albeit very slowly — but that's only as far as we can make out. When questioned, the companies which couldn't produce their own micros tend to come up with phrases like, 'Well, there's no point in re-inventing the wheel...'. Actually, it sometimes looks as though it's a case of people in the big companies getting fed up with their employers' lack of foresight, leaving to set up on their own and then doing OEM deals with their former bosses. So, if you're a designer with, say, Wang or Prime or Honeywell or Cray and, you can design a micro

that's even half decent, resign now and start negotiating... Adam Osborne is on the record as saying that the only company capable of offering a serious threat to the Osborne 1 is Sinclair Research. So, now that the Spectrum is launched (but not delivered — see 'Brain Dump'), we're taking bets on a 64k, Z80-based CP/M portable with a bundle of software, at least two Microdrives and possibly a flat screen coming out of Sinclair Research this autumn and selling at — well, less than £500?... As we've said so many time before, being a monthly magazine prevents us from bringing really hot, up-to-the-minute news, especially on as changeable a situation as that surrounding the BBC Computer. Here's the latest at the time we went to press — by the time you read it, things will certainly have changed one way or the other: delivery of Model A is down to a 21-day wait for

new orders and the backlog has been overcome, but in the meantime the Model B situation has worsened with 12,000 orders outstanding and the end of July being mentioned as the earliest many people are likely to get delivery... We can't resist a snipe at Apple UK on this one: for months following its re-launch we tried to persuade Apple's UK HQ in Hemel Hempstead to let us have an Apple III to Benchtest, but without luck. The nearest we got was a letter saying we were on the 'waiting list' and it would be at least six weeks before a machine was available. When, after a further two months, we'd heard nothing, we lost patience and tried to borrow one from a dealer. He was too scared to loan us a machine for fear of terrible reprisals from the Brewer Brothers but 'Big Al' Wood at Digitus wasn't and allowed Dick to live in the Digitus shop for a fortnight

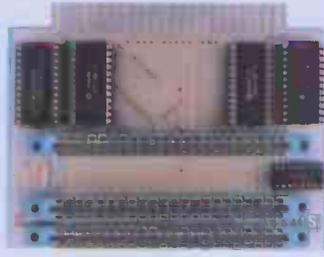

while Benchtesting a demo machine. Now Apple has asked if it can buy reprints of our Benchtest!... Something of a mystery surrounds Sinclair's ZX Microdrive: is it really a disk in there or could it be a stringy-floppy type of tape? One unkind person has even suggested that the Microdrive at the Spectrum launch might have contained a load of RAM chips. 'Uncle' Clive is being remarkably reticent about the whole thing, refusing to state categorically one way or the other, but it seems probable that it will be a disk and that Sinclair's reluctance to talk centres around the fact that he wants to patent the design before anyone spills the beans. Earlier ideas of using a tape have, it seems, been dropped, at least for the time being, but might be revived if cost/patent/technical problems with the disk prevent its going into production in time for the autumn launch.

... At Personal Computers we'll give it a happy ending.

Personal Computers Limited have been in the personal computing business right from the start — so we've got our values sorted out.

It's important for you to choose the right hardware and vital to select the right software.

To help you make the right choice we offer our highly-trained staff.

They know what makes computers whirr, and they know how to give you the right kind of support and maintenance.

THE BEST AVAILABLE

We stock the best available hardware and software packages in the market.

Such as Apple and Sharp units, with the latest additions like 16K RAM card.

We have I.E.E.E. Interface, low cost serial, parallel interfaces, Doublevision 80 character card, numeric keypads, personal computer plotters, Paper Tiger printers and much more besides.

Whatever you need in computing, we will satisfy your requirements.

FROM PERSONAL COMPUTERS

- **Small Business/Accounting.** We provide low-cost invoicing, purchase, sales and general ledger systems.
- **Financial Planning.** Micromodeller or Visicalc for ad hoc or regular financial reporting.

- **Dow Jones & Prestel** (including I.P. Terminal) services to the city, plus access to city commodities data base.
- **Word Processing.** Our Format 80 system is recognised as the best of its kind.
- **Databases.** State-of-the-art products like Personal Filing Systems and Data Factory.
- **Graphics.** Pad to plotter software and low-cost plotter.
- **Technical Support.** Our knowledge of computer languages and application requirements is unrivalled. And we can supply either on-site or in-house maintenance.

Once again ... Personal Computers Limited give the story a happy ending.

Computers are only as good as the people who use them ... and sell them. Think about that! Then give us a call.
