BRITAIN'S BIGGEST MICROCOMPUTER MAGAZINE

WILL ADAM EAT THE APPLE?

**Just because you
need it in a flash,
don't expose
yourself!**

You've a deadline to meet, the right CP/M Software package is needed, the right decision has to be made; which format, which product, when can it be delivered, at what price?

You need good advice, and just as important, you need to talk to someone who has a large enough range to be able to offer honest advice. Someone who can then deliver on time, someone whose catalogue is fast becoming the byword of the software industry.

So don't expose yourself, talk to Software Limited. Choice, advice and delivery, all aimed at meeting your deadline.

Software Limited...
Because there's more to choose from, we're the only choice to make.

Everything you ever wanted in micros but didn't know who to ask

Digitus SYSTEMS

The 80/20 Solution

Eighty per cent of our customer needs are satisfied by matching requirements to packaged programs and machines.

Business Systems Group offers a comprehensive range of packages for both the Sophisticated User and New User.

Office Systems Group covers wordprocessing and record management needs, with single and multi-workstation systems.

Personal Systems Group helps managers and professionals with Micro Aided Management tools including: financial planning, modelling, linear programming, PERT and personal productivity aids.

Special Systems Group supplies packages to suit particular professions and industries including agencies, printers, manufacturers, distributors, dentists etc.

The Systems Groups install complete solutions, arrange training and hand hold you through to comfortable operation of your system.

The 20/80 Solution

Twenty per cent of our customers needs are satisfied by tailored design, programming, engineering and project management.

Digitus has a five-year record of fulfilling small and large microcomputing projects, e.g.

Technical Projects to take data from (1) solar heating panels (2) weighing machines and (3) oil tankers.

Administrative Projects to organise (1) 2000 bottles of urine per week (2) £1 million of barley receipts and (3) 6000 graduate applicants for 27 sites.

Multi-Machine Projects for (1) the complete computerisation of a City commodity broker and (2) a flight information system in an International Airport to drive 300 information receivers, staff monitors, passenger displays and flapperboards.

The Project Groups take turnkey responsibility and use as many standard software and hardware components as requirement and technical constraints allow.

Digitus PROJECTS

Digitus TRAINING

The 100% Solution

Everyone needs some education and training in micros. Digitus modular training programme provides for executives, managers, technicians, computer and office personnel.

Introductory Courses

- IC/1 Introduction to Microcomputers
- IC/2 Business Systems
- IC/3 Information Management
- IC/4 Management Aids

Skills Training

- ST/5 Fundamentals of BASIC
- ST/6 Improve your BASIC
- ST/7 Wordprocessing with WordStar
- ST/8 DataStar/SuperSort/MailMerge
- ST/18 Spreadsheets with SuperCalc
- ST/19 dBase II
- ST/17 Introducing Systems Design

Computer Professionals Courses

- CPC/9 Hardware for Software People
- CPC/10 Operating Systems and Languages
- CPC/11 Communications & Networks
- CPC/12 Applications Design & Products
- CPC/13 System & Program Generators
- CPC/20 UNIX
- CPC/21 Programming in C

Computing Management Seminars

- CMS/14 Micro Technology & Strategy
- CMS/15 Local Area Networks
- CMS/16 Micro DataBase Managers

All courses include practical work and advice on microcomputers. Course fees: IC and ST courses £95 per day; CPC and CMS £125 per day + VAT, including luncheon and detailed course notes. You save £10 per day by booking more than one day's training at one time, or you can book five days for the price of four.

WE'RE CENTRAL AND EASY TO FIND!

AFFORDABLE PERIPHERALS.

Opus peripherals are the best buys in the whole peripherals market—bar none.

Just compare the prices below with anything else in this magazine. And note just what our prices include: VAT, all necessary leads, carriage and a full one year's guarantee.

All products are suitable for use with the BBC and most other leading Micros. And all are of the very highest quality—a fact endorsed by the enthusiasm of dealers

all over the country to carry OPUS brands.

WH Smith, for example, carry the 3" microdrive, while John Menzies carry our 5¼" drives and JVC colour monitors. Spectrum dealers have the 5401 and 5402 drives.

All products offered here,—and many more, are on display in our showroom. Trade enquiries welcome and discounts are available for Government and Educational authorities.

OPUS 3" MICRODRIVE.

Opus 3402 Double Sided 40 Track Drive ½ Megabyte Unformatted.

- Twice the capacity on line of other available drives
- 200K Single Density—400K. Double Density
- Ex-stock delivery • 3ms. access time
- Lowest power consumption—direct drive
- Includes case, leads and utilities disc
- Totally compatible with 5¼" drives

Single Drive. _____

£229.95

Dual Drive. _____

£459.95

5¼" JAPANESE DISC DRIVES. SINGLE DRIVE.

Opus 5401 Single Sided 40 Track—250k. Unformatted. Formatted:

BROTHER HR-15 DAISY-WHEEL PRINTER

An exceptionally high quality Daisy Wheel printer at the price of a Dot matrix printer. 18CPS: Bi-directional, has 3K of Buffer; has clear buffer facility, Carriage skip movement, Proportional spacing; underlining; Bold print and Shadow print. Prints in two colours; Super and subscript facility. Impact control facility to vary pressure on paper for making carbon copies. Has Centronics parallel or RS-232 interface. Connects directly to BBC Micro. A ribbon cassette plus a separate red ribbon. Optional extras: Single Sheet Feeder takes up to 150 A4 sheets; a Keyboard that transforms HR15 into a sophisticated electronics typewriter. Attractively finished in Beige.

Special Introductory Offer:
£375
Single Sheet Feeder..... £199
Keyboard £150

BBC MICRO BBC Model B £346

BBC MICRO WORD-PROCESSING PACKAGE

A complete wordprocessing package consisting of BBC Micro Model B; Zenith 12" Green Hi-res Monitor; twin cased 200K Teac Drives, the popular Wordwise word-processor, Watford's own highly sophisticated 62file DFS interface, world renown Brother HR15 Daisy Wheel Printer, Beebplot & Beebcal spreadsheet Analysis software discs, 10 blank diskettes, 500 sheets of paper, Manuals and all cables. All you require is a mains power point to have it up and running (we even supply the mains 4 way mains trailing socket).

Only: £1350
(P.S. We will alter the package to suit your particular requirement. Call in for a demonstration)

Z80A 2nd PROCESSOR BOARD FOR BBC MICRO

- Although intended as a BBC add-on, it is totally stand alone (i.e. Can be used with any RS232 Terminal/Computer).
- Z80A Processor running at 4MHz (No. wait states) 64K Dynamic Memory, 16K ROM space. Disc Interface with single/double density, 40/80 track, also another 64K Ram card can be plugged inside the unit)
- CPM 2.2 - Not a lookalike, making the CPM/Users Group available to you.
- All BBC screen, sound and OSBYTE facilities available to the CPM user.
- Uses a full intelligent terminal emulator to enable the user to run 99% of all commercially produced CPM software with no modifications whatsoever.
- Supplied in a standard half height drive case with integral PSU and finished in the standard BBC colour.

UPSTAIRS AND DOWNSTAIRS AT LONDON'S NEWEST MICRO SHOP

On the ground floor at Morse you can browse through the demonstration hall and try out the TeleVideo TS1605 IBM-graphics-compatible, the new TeleVideo TPC1 portable, the DEC Rainbow 100 and 100 Plus, the DecMate dedicated word processor (we have the kit to convert it to a computer), the Hyperion, the NEC PC8201 hand-held and APC, the Kaypro II, 4 and hard-disk 10, the Hewlett Packard touch-sensitive HP150, the Epson QX-10 with Multi-Font, the absolutely new Sanyo IBM-compatibles at sub-£1000 prices, and the best-selling "4th Generation" Apricot. Packaged programs like Lotus 1-2-3, dBASE II (we are dBASE fanatics), Quickcode, Quickgraph, Friday, Wordstar, Calcstar, Datastar, Infostar, Reportstar, Zork, Deadline, Context MBA, Versaform, PFS Write, PFS File, PFS Report, PFS Graph, Supercalc 1, 2 and 3, VisiCalc and all the Visi's, Micromodeller, Turtle-Logo, Norton Utilities, KnowledgeMan, Superfile, Rescue. Most of these we have in IBM PC-DOS format, MS-DOS and a few others. Also accounting software by Pegasus and Compact. We also have computers, programs and advice for people to whom the above paragraph is quite, quite meaningless! Our prices are extremely competitive and the phone number is 01-831 0644.

But DOWNSTAIRS you'll find our bargain basement. We have surplus and ex-demo computers, peripherals and software at exceptionally low prices. E.g. the Osborne computer absolutely complete with two disk drives and the usual bundle of software from only £399. The Hewlett Packard HP-83 and HP-87 at less than ONE THIRD of list price. The lowest priced Apple II's and III's its possible to find. An enormous collection of items, will be fully listed and priced in next month's PCW.

Or come and look round!

4

MORSE

MORSE COMPUTERS, 78 HIGH HOLBORN, LONDON, WC1

New machines from Amstrad and Oric, a sound box for the Spectrum and a look at the growth in the multi-user market. Guy Kewney reports.

Strategic move

A report categorising the IBM personal computer as 'too expensive to be used by more than a fraction of the office workforce', suggests that multi-user microsystems are usually half the price per user.

The report is based on the US market and, if it had been made here, it would have suggested the same thing about the ACT Sirius—that machine being still the leading office microcomputer at the last count.

Strategic Inc, author of the report, reckons that an IBM personal computer with a local network linking it to other IBMs in the same office works out at \$3000 to \$4000 per head—obviously including some kind of bulk-buy discount.

By contrast, multi-user machines such as those from Convergent Technologies, Burroughs (the same machine!), Molecular, NCR, Televideo, Onyx and a dozen or so other established suppliers, can put computing power onto a family of desks for around \$2000 per head.

For a report costing \$1500, it has missed the point by several feet.

Strategic suggests (quite sensibly) that 'potential end users of computer systems need to be reminded that IBM is not the only solution to be considered, and that other computer vendors are viable and offer very competitive

personal computing alternatives.'

The company quotes itself as a guinea-pig. 'Strategic itself has been able to save over \$40,000 by installing Televideo terminals on every employee's desk, and connecting them together via a Molecular Computer (Multicomputer in the UK) multi-user microprocessor system, as opposed to installing IBM PCs.'

But the fact that there are cheaper alternatives to the IBM can't be so much of a surprise to Strategic, that it feels obliged to part with the details only in exchange for \$1500!

And to be fair, it isn't. What the report does contain is a mass of statistics which any company manager would find useful, showing where users of micro networks have had problems, and what sort of costs are ahead. And it shows how the different manufacturers differ in their solutions.

But it fails to notice that there really is a difference between the cost of a computer, and the cost of selling it.

And the cost of selling a computer in the minicomputer bracket includes the cost of paying a salesman. And salesmen have to be trained.

The dealers of Commodore computers can tell a tale or two about this. Customers who know what they are about tend to ask irritating questions—questions like 'Why can't I just buy a 64 and a hard disk and an 80-column adaptor and that cheap word processor program and a cheap printer? They ignore the fact that the dealer would go bust trying to pay his salesman's commission out of that sort of deal.

As long as the cost of 'training' is included in the price, single microcomputers will cost more than a terminal plus a share in a community micro.

And as long as that is true,

people will buy multi-user micros for large departments.

But one day, when the typical micro costs roughly the same as a typical terminal (and why shouldn't it? It's got screen, keyboard and some circuitry), people who want training will go out and buy it separately.

And, in the meantime, Strategic's consultants are quite right, and the multi-user market will grow.

I rather think however we will see the costs of stand-alone micros plus network coming down very heavily.

And we will see a boom in corporate training.

Support for APL

Excitement mounts among

Delighted though I am to see Micronet win an award, I have to confess to a wry grin at the award it did win.

The electronic mail and electronic software distribution side of Micronet is the jam on a very ordinary Prestel service. As electronic mail, it works—just. As software distribution, it is improving as the quality of its stock of programs improves.

'Innovation of the year', even on the top of Prestel, I might buy. But the idea of 'systems innovation' to me carries too much of a suggestion that there is a sense of purpose and organisation about it.

Still, there it is: The Recognition of Information Technology Achievement (RITA) team calls Micronet the systems innovation of the year, and good luck to them.

The photo shows Richard Hease, boss of EMAP (who put Micronet together), receiving the award from David Fairbairn and Ian McNaught-Davis, TV star and computer company chief.

Access Card holders ring 01-289 2188 (24 hours)

It's a step in an interesting direction, a credit card reader for an IBM personal computer. In America, every shop telephone has one, and the phone automatically reads the magnetic stripe, dials the credit card, asks whether you're good for more credit, and gets the authorisation code.

Thanks to the care with which British Telecom and the Dol protect telephone engineers from computers, getting something that can dial the number is an exercise in frustration. But at least, now, with an expensive computer, you can read the card. Details from Alloy Computer Products, on (0285) 68709.

absolutely prohibit your making backup copies.

Whether the terms under which it imposes this licence are in fact legally enforceable has yet to be tested.

However, given Acornsoft's known predilections for taking legal action over this matter, customers would be well advised not to make backup copies.

Other software suppliers attempt to prevent backing up of programs, too, but tend to be less draconian about it.

I know of no other case where a software publisher has taken this beyond the mild deterrence stage, into the High Court, as Acornsoft has done in the case of this publication.

I do not recommend the purchase of software which cannot be backed up, and neither would any sensible computer consultant—especially business software.

Details from Inner Product Ltd, on (01) 673 4047.

No kidding!

Now that the American builder of the Sirius, Victor,

has filed for Chapter XI bankruptcy, the fight for survival by ACT is going to get nasty.

For the most part, the people who might have been frightened by the death of Victor were frightened enough by the mere possibility.

But there were a lot of people who reasoned that 'Victor is still selling machines, in America and in Europe, and so it must be making enough money to be a viable business, once it gets its staffing to a sensible level.'

Apparently, not. The former boss of Victor, Chuck Peddle, was forced by Victor's owner, Kidde Corporation, to retain the network of Victor distributors and the staff.

They will say that it was IBM. It wasn't—it was Victor.

ACT, however, will have to face the dismay of people who really didn't expect this, and will have to convince the world that the Sirius really can be built in Scotland.

Crystal ball-gazing is profitless: but, for the record, I will predict that ACT's survival depends more on how soon it speeds up the Apricot, gets the 'snow' off its

screen, and gets version 3 of Concurrent CP/M on both machines.

Concurrent CP/M is set for April. Demonstrations have been done already.

In America, look forward to what Chuck Peddle will do next, having resigned from Victor last Christmas. He is no longer rich, down to his last couple of million dollars. In terms of launching a new corporation, that isn't a peanut. In terms of personal finance, it should keep him in the gambling style he likes for a few years. But that isn't really enough, and I expect to see him start up a new machine, soon.

Whether it'll be another micro, I don't know. I expect his latest hobby-horse, communications, to loom large.

Alternative plans

Having spotted that the £40,000 Plan 4000 local network was a bit beyond the pocket of most small offices, and that the company wanted something more powerful than Plan 2000, Zynar has launched Plan 3000. This offers a central file server of 15Mbytes (and up) and runs the same software as the other two.

Price starts at around £8500, and details are available on (0895) 59831.

Spectrum amplifier

For those who like to be able to hear their Spectrum chirping away, the Amplisound box has the extra benefit of switching all the other leads in and out of the box. It saves swapping mic and ear cables, for instance. But it does take its

power from the Spectrum. Cost is £26 including £1 handling charge from AGF Hardware, 26 Van Gough Place, Bognor Regis, PO22 9BY, or phone (0243) 823337.

Atmos error

Initial versions of the new Oric Atmos micro (reviewed next month), with that lovely new keyboard, are likely to be recalled for a chip change in the next couple of months.

The new version includes, among its other improvements, a tape error checking algorithm.

Early users report that this works so well, it finds errors in tapes where there are no errors: so before loading a tape, a program has to be loaded to disable the error checking program.

Later versions of the Atmos will have this interesting 'feature' removed, and the error checking process should work correctly.

Oric has now formed a new joint venture company with Kenure Plastics—to manufacture British micros.

The new company, called M3 (it is sited at the end of the M3 motorway), is expected to make 10,000 units a month—Oric also expects to have to make 20,000 extra units each month, at other sites.

Come-back

So much for my theory that the Apple II was dead: the corporation has announced worldwide sales of over 100,000 Iles in December.

John Sculley, the president of Apple, attributed the sales to 'a reduction in price and strong dealer promotion programmes'. He also noted that the \$2.5 million paid by Franklin 'had been included as income.'

Sculley told me that another contributing factor, perhaps as important, had

been the announcement of IBM's 'peanut' or PC Junior.

That machine failed to impress people who had been postponing the purchase of their Apple, and they went ahead with the Apple.

The result was a first quarter revenue report showing sales up by 48% over the same quarter last year — though profits were heavily down at \$5.8 million compared with \$23.5 million for last year's first quarter.

Sculley insists that the high figures aren't just a flash in the pan. 'We will sell as many IIe machines as we sell Macintosh machines, this year,' he said.

Happy family

Brother got very excited about its HR5 printer because it costs £147.

It also runs off torch batteries.

But I would say that printing at 30 characters per second, using a matrix and a thermal transfer ribbon with a life of only 50,000 characters (two medium-size articles in PCW), the only reason to be excited about it would be that it is pretty quiet. But talk to distributors Thame Systems on (084 421) 5471 if you must have a portable printer. Or read the review of Brother's EP44 on page 168 of this issue.

More knowledge

Responding to criticism that MDBS was 'great for storing data, but you need to be a programmer to use it', Micro Database Systems has released Knowledgeman Plus.

The new product is vaguely reminiscent of Lotus

1-2-3, in that it does more than the single function of database (Lotus does more than spreadsheet).

Where Lotus 1-2-3 is a spreadsheet with some data retrieval and some text editing, this product is a database, with spreadsheet and text editing. It also includes a graphics package, and a painting package, in colour.

Tamsys will be distributing the product for 16-bit micros using CP/M-86 and MS-DOS operating systems, and Tamsys director Patricia Oldcorn predicts a Unix version.

The company is also releasing a version of Knowledgeman which software houses can use to build specialist applications.

It isn't user programmable, but it does allow the user as many Knowledgeman functions as are needed for the specialist data processing function it has been turned into.

Details from Tamsys on (07535) 56747.

QL user group

Quick off the mark: an Independent QL Users' Group (IQLUG) has been

formed already.

The founders are well known for organising good user group activities: they are Brian Pain and Leon Heller who originally set up the Tandy Users' Group.

Fascinating to see how quickly they have become enthusiastic about the Sinclair QL. The first newsletter, *Quanta*, landed on my desk a week after the launch.

It included information on the group, a comment on SuperBasic, a discussion of the 'C' language, and an introduction to the 68008 processor chip.

The article on 'C' includes a little program that turns the TRS-80 into a terminal on a phone line, and which, Leon Heller hopes, will 'probably run with little change on the QL, when the Sinclair 'C' compiler comes along.'

I think it could be fun, however.

The last item in the little newsletter is entitled: 'Thirty-two bits indeed! Who do Sinclair think they are kidding?'

And it quotes Motorola, the maker of the chip, as calling the 68008 'a 16-bit chip with an 8-bit data bus.'

I said there would be arguments about 8-16-32, didn't I?

For details contact Brian

Pain at 24 Oxford Street, Stony Stratford, Milton Keynes, or phone (0908) 564271. No, you don't have to have a QL to join.

Not so sweet Apple

Apple's operating system 'can be protected by copyright', according to a legal decision in America.

Franklin made imitation Apples, and Apple sued on the grounds that Franklin used Apple operating software. Franklin counter sued, saying that Apple was guilty of breaking US laws on fair trading.

The decision by a 'third circuit court of appeal' led to a judgement that cost Franklin \$2.5 million, paid to Apple.

UK users should contact CK Computers, the Franklin distributor, for details of how this might affect them. Phone (0934) 516246.

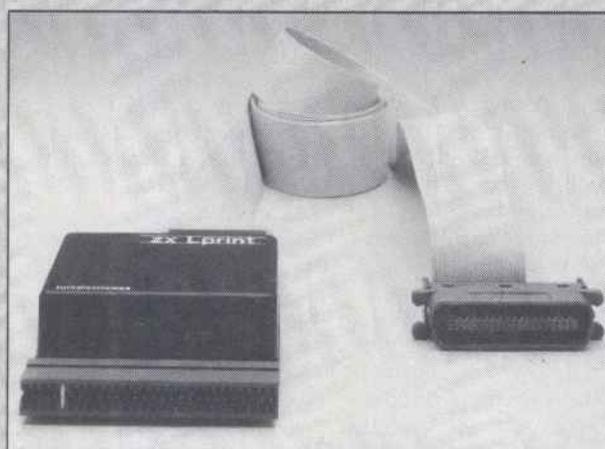

Legal duplication

Discussing the fact that most pirated copies of programs emerge from the supplier and the printer before they are even released is a touchy subject, like discussing one's chronic flatulence at a flower show.

Nothing daunted, a Bradford company has plunged in with reckless honesty, offering a service to software authors — they make the hundreds of duplicate diskettes the author can send to the stores.

That is duplication, not copying. 'The main danger is unauthorised copying,' remarks Jeff Eke, founder of the company, Discform.

'To protect against this, we check every package's original authorship,' (you

It may look like a cable with a big plug on one end: it is actually a peripheral for the Spectrum, intelligent enough to take the contents of the screen, and print them on a wide range of ordinary matrix printers. Price, including a Centronics cable, is £45. It also prints, normally. ZX Lprint III is available from Euroelectronics at 26 Clarence Square, Cheltenham, Gloucester. Phone (0242) 582009.

have to prove you wrote it!) 'and issue a guarantee assuring confidentiality and security of copies' (they don't make a few copies for themselves while they're about it).

Discform makes it sound unusual. Maybe it is. Every time I go to a computer club meeting, I am always surprised to find people playing games which Acornsoft won't even admit it is thinking of writing.

How does this happen? Nobody at Acornsoft would do it, would they?

Discform is on (0532) 451440.

IBM-compatible Osborne

Osborne has finally unveiled the IBM-compatible version, which it hopes to make in the UK, and sell for £2500. Probable release, if plans go ahead, would be around June/July.

The demonstration I saw was impressive enough up to a point. The machine would load and run any program — provided it didn't use the P-system. Then, quirks of the IBM Pascal implementation occasionally baffled it. 'We're still working on it,' Mike Healy, managing director of Osborne UK, assured us all.

Still it did run Lotus 1-2-3 and Flight Simulator, which often throw other imitation IBMs.

Osborne has also released its Disk-Pac which upgrades the original miserly 100k per drive to a comfortable 400k each.

The system does make the box a little more fragile, with two heads flapping around inside the diskettes, needing to be protected when you travel.

Irritatingly, you can't read data off a new quad density diskette, even off one side of

it (it doesn't work in discrete sides) with the original single density or double density machines. IBM you can read, Xerox, you can read. Osborne, you can't. Grrr. I haven't met a 'single-sided' diskette that won't format both sides, yet.

C you later

Not content with charging you money for the software, a great many people who sell language compilers also want you to send them a share of the money you make selling your own programs, written with their compiler.

This handicap doesn't apply to Desmet C. The language C is popular for two reasons — first, because it is the one that Unix people use, and second, because it is a pretty good language.

At £125, if Desmet C is any good at all, then it must be good value for users of Sirius, Apricot and IBM personal computers.

Going purely on information provided by the distributor, MLH Technology, special features include the ability to write programs that use the 8087 maths chip (an option on all three machines) and the ability to link assembly language routines in.

MLH Technology is contactable in Cheshire on (0606) 891146.

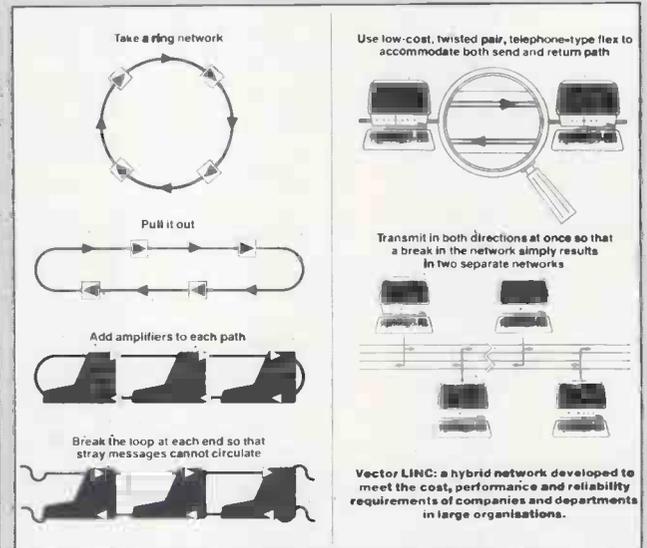

Special service

Hoskyns, one of the best-known names in the traditional computer business, reckons that the main benefit to be gained by buying micros from itself is the Hoskyns Gold Service.

This involves bulk discounts on IBM, DEC Apple and Hewlett Packard micros, plus printers.

To my mind, however, the

Vector once announced a local area network. Guess what: it linked micros together, not people. So if you wanted to send a message to somebody, you had to know which machine they were using.

Now, 'electronic mail' has been added to LINC, Vector's network. You may wonder why that wasn't the first application for LINC, and the answer is: computer people don't think that way.

Details, for Vector owners, on (07535) 69375.

really interesting side of Gold from Hoskyns is the 'access to seminars, product updates, onsite maintenance', and also priority access to Hoskyns 'extensive people and machine resources.'

This group has its own range of IT Series software, which it modestly describes as 'the first truly integrated range of personal computer software specially designed for the corporate user.'

It may be true, even though I've heard the claim more than once before.

The heart of the software is a program called KeepIT, costing £300, which is 'a menu-driven relational database system from Mathematica, the company that produced the world-beating Ramis II database.'

The other nine packages, things like CalcIT at £270 and WritIT (£350) can be linked into KeepIT.

More interestingly, so can

independent software products like Lotus 1-2-3 and Spellbinder.

Hoskyns reckons that the corporate user, buying bulk orders of personal computers, currently makes up 70% of pc purchases.

Revenge

An enraged publicist rang on behalf of Digital Research, after I reported on Concurrent CP/M and its drawbacks last month.

'Didn't you compare it with MS-DOS directly?' stormed this old friend.

No, I hadn't. 'Why not?' Because the one is concurrent, and the other is not. The one lets me do two things at once, the other doesn't. 'That's not the point!' he argued.

No, I suppose it isn't. I should have mentioned the small point that WordStar

under Concurrent, even the first Apricot version, runs roughly twice to three times as fast as the MS-DOS version.

The episode was symptomatic of the sudden upsurge in aggression noticeable from Digital Research. The company seems to be smelling blood.

If Steve Jobs, Apple's founder, is right, there will be blood. Just before Macintosh was launched, Jobs predicted that IBM was on the point of dumping Microsoft.

His theory is that PC-DOS is soon to become an IBM product, not a Microsoft one, and that MS-DOS will be separate from, and noticeably different from, PC-DOS. And he predicted that IBM would not support windows, but would write its own windowing package.

Jobs isn't the first person to come up with this sort of theory: it is widespread. At press time, neither Microsoft nor IBM had said anything to confirm the idea. Nor did I expect them to.

Concurrent support

One new supporter for Concurrent CP/M is a software house, Graffcom.

The company sells an office management package called O-Man, and an integrated accounting system, ISBS-F. Both are now available under Concurrent.

In a sermon which I couldn't have declaimed better myself, Robert Owen, head of Graffcom, pointed out sternly: 'It must be remembered that systems software, like hardware, needs good application software to make it work.'

Manufacturers, he said, are now beginning to install and use Concurrent, 'but this is only a halfway house since you need application software to capitalise on

A sort of rival to the Apricot, the Octopus, appeared in public for the first time at the Which Computer? Show. It is like an imitation DEC Rainbow.

Like the Rainbow, it uses both Z80 and 8088 (8 and 16-bit) micro chips, and like the Apricot, the sandpapering and finishing varnish has yet to be applied.

It has one more operating system than the Apricot, being a multi-user system as well as standalone. If LSI Computers has built it right, it will be very fast as an 8-bit machine. And LSI has added its own supervising operating system to share tasks to the appropriate processor — this is called Elsie.

If it starts getting dealers, I'll start getting excited. Details on (04862) 23411.

concurrent features.'

He didn't actually say that there is no software available, but he came uncomfortably close, and if I were Digital Research, I might wonder whether I needed friends with quite so explicit a line in praise.

But embarrassing friends or not, Owen is quite right: and at least he has provided word processor, spreadsheet, database and accounting programs which really will run concurrently.

Graffcom is on (01) 385 9422.

Health and maturity

On another concurrent stage, it distresses me to report that the suggestion by another magazine that Clive Sinclair's QL will run those nice Psion programs all at the same time is wrong.

Concurrent operating systems for the Motorola 68000 family of chips (the

68008 is the one in the Sinclair QL) have been proliferating — Digital Research has just been commissioned to write one, by Motorola itself.

But the Psion software was written before the operating system was ready, and doesn't use it, and is not concurrent.

Word reaches me that it will be.

While Psion is busily converting its business QL software, Digital Research has some time to catch up, by writing a product called Concurrent DOS.

'Written in the "C" language, Concurrent DOS is derived from Concurrent CP/M,' states Digital Research. 'It provides a CP/M mode, and an IBM PC-DOS mode,' the company says. That is designed to let Motorola run IBM programs on its own microcomputer, the VME/10, built around the 68000.

Some people have ignored this side of the news, and have concentrated, instead, on the fact that the deal covers Unix.

Unix, unless we are all

careful, threatens to drag computing back into the dark ages, where all micros have to pretend that they are dumb appendages to a remote computer, and can hardly even change a dot on their screens.

However, it does look as if taking Unix seriously is supposed to be a sign of health and maturity, and since Digital Research has actually done a deal with the bit of American Bell holding the rights to Unix, and intends to let people move programs from Unix System V to other operating systems, people are naturally going to say that Digital Research is showing signs of health and maturity.

Windows on ICL

Trust ICL to prepare a microcomputer with the latest windowing version of Concurrent CP/M, present it at the Which Computer? Show, and not tell anybody that they had the operating software up. They said 'we will preview our new 16-bit computer', which somehow failed to strike the necessary sense of 'wow!' So I didn't bother looking at it. Only afterwards, did somebody from Digital Research pass the message on. But I gather that ICL has not actually implemented the windows on its machine.

You can get details of the new machine on (01) 788 7272.

TV licence evasion?

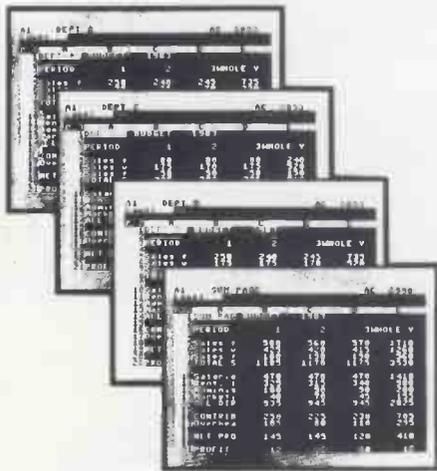

You can watch television on your new MicroVitek Cub colour monitor.

That may not sound too much of a deal, but it does make it a lot more likely that

Calc Result Turns a Commodore 64 into a powerful professional tool

Thousands of senior managers, sales professionals, scientists, doctors, dentists, business people, barristers, bankers, accountants and other top professionals have suddenly discovered the value of **Calc Result**. Overnight they've transformed their Commodore 64 from a family computer into a powerful, professional tool.

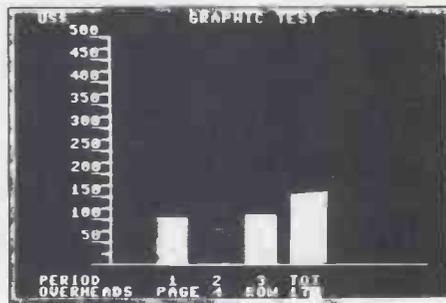

Calc Result is versatile... use it to calculate loan and mortgage payments, forecast budgets, balance cash flow, monitor stocks and shares, plan personal and corporate taxation, check expenses, log and analyse all kinds of bills.

Calc Result

offers you a new perspective on financial planning. Our 3-dimensional spreadsheet sums up pages of figures in one easily understood financial model.

Calc Result instantly translates figures into multi-coloured bar charts.

Calc Result has a built-in 'HELP' function. This program actually shows you how to exploit its full potential and versatility.

Calc Result is absolutely accident proof. A built-in program protects your formulae.

Calc Result Advanced

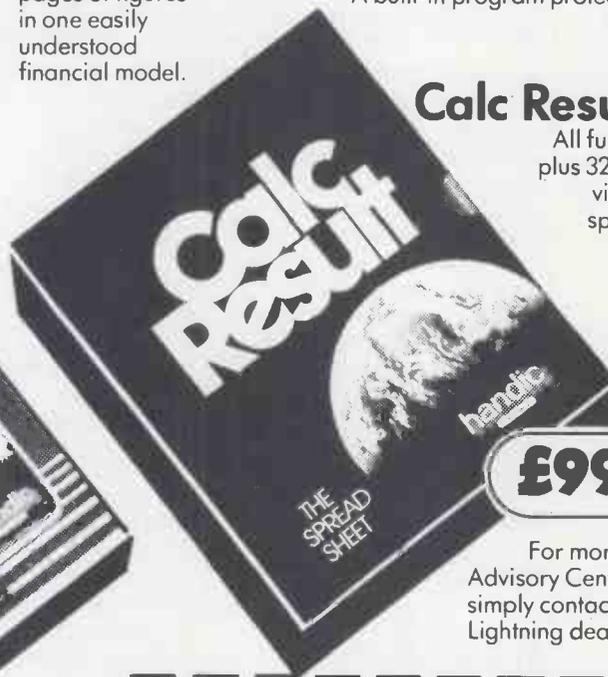

All functions in **Calc Result Easy** plus 32 pages (Three-dimensional viewing). Page add, window, split-screen (up to four pages on the screen at the same time), and help functions. Delivered on plug-in cartridge plus disk. Requires disk drive.

Calc Result Easy

Single page spreadsheet (64 columns x 254 rows). Built-in graphics. Formula protection, flexible print-out, colour conditional functions and mathematical functions. Delivered on plug-in cartridge. Data storage on cassette or disk.

£49.95 (inc.VAT)

£99.00 (inc.VAT)

For more information contact our Advisory Centre on 0344-778800 or simply contact your local Commodore or Lightning dealer, or clip the coupon.

I would like you to send by return post further information on the Handic 64 range.

Thinking ahead

you can plug the monitor into your computer. Many monitors require very specialised signals to function: the new Cub is very tolerant.

And, if you plug it into your video tape recorder, and tune in a station, you can watch *Call My Bluff*.

Let us hope MicroVitek is prepared for people who will try to buy this thing to avoid paying their TV licence. It won't work, but they'll try. 'I don't have a TV set,' they will say.

Also, there will be people who buy a 'computer terminal' on business expenses, and plug it into the video recorder. Tsk, tsk.

Details on (0274) 727274, and the price is around £250.

Keeping tabs on Abraham

It is no fun for a shop going through the cash register printout or 'till roll' every evening, feeding the

information into a computer.

So two people now connect your micro to a cash register direct: Tabs, makers of the famous accounting programs; and Abraham Cash & Computer terminals.

Tablinks in to Omron cash registers. Abraham links a 'Globe' micro to a Gold 81 cash register, with software included. The cash register and software cost £1300. Incautiously, perhaps, Abraham has called the system the 'Golden Globe' — I hope he has a sense of humour.

Details on (0272) 47002. Tabs on (0264) 64166.

Wren dependent on Prestel

You get three months' free subscription to Prestel and Micronet 800 when you buy the £1000 Wren (Benchtested in this issue). It

will dial the number, log on, and get your mail, all by itself.

Honestly, Prism has done all it can for the Wren, building it compact, pricing it low, and being safe and orthodox in choosing CP/M Plus as the operating system. There should be no horrible surprises.

But the future is not in Prism's hands. It depends on Prestel.

One thing you can do with Prestel, if you are lucky enough to be included in the experimental service, is send telexes. So the Wren can be used to send telexes.

But it can't receive them, not yet. And it can't receive messages from people on Dialcom/British Telecom Gold electronic mail, nor send messages. And it cannot send messages overseas, either.

Word is that Prestel is about to do all these things.

If I were Prism, I would hold my thumb. And hope that it all happens soon enough that gangrene doesn't set in first.

Colourful future

The first serious alternative to the Pluto graphics board may be the Magus board, for Sirius, Future Computers, and IBM PC machines.

It provides very low-cost colour graphics at £500, and is the board chosen by Future as its built-in colour graphics unit.

Details on (0225) 60965.

Pascal software for Apricot

Pascal P-system software will now run on the Apricot.

The Pascal distributor, TDI,

demonstrated a Peachtree accounting system at the recent ACT show, boasting that 'it took us only two days to transfer the five packages from our development Sage computer (using a Motorola 68000 chip) to the Apricot.'

The software wasn't just demonstration: it costs £800 for the full suite.

Details from Peachtree on (0628) 32711, or TDI on (0272) 276447.

PCW Show news

Hooray! No more cramming into the Barbican exhibition hall (converted multi-storey car park) for the PCW Show!

It is moving to the new Olympia exhibition hall, in September. The dates are 19 to 23 September, and the hall really will be ready by then.

It still is the biggest and best computer show in Europe, so cast off your memories of the amazing crush of 1983, and make sure your holiday is a different week. (Also see Show time '84.) Details from Montbuild on (01) 486 1951.

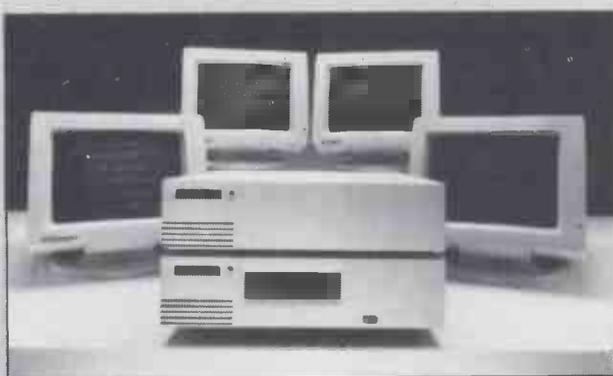

Did he fall or was he pushed?

Nobody actually *knows* anything about why Jack Tramiel left Commodore.

He had been given a nice new red Transam car by his family, and to their astonishment, instead of setting about a day of meetings with people at the Consumer Electronics Show, he just vanished over the horizon.

Speculation which sounds informed to me suggests that he was pushed.

There was no secret of the

Best news for me at the Which Computer? Show was the announcement by the established, respected Data Dynamics, that it had adopted the very good, but hopelessly underrated Sig-Net micro range.

The Shelton Sig-Net design was three years ahead of its time when it was launched: only low-key support and marketing has held it back from fame.

Possibly Data Dynamics can boost it onto the UK scene, if not the world market.

Shelton launched a multi-user version at the Show. Data Dynamics will not only market, but build the micro system.

Details on (01) 848 9781.

hostility between Tramiel and the company chairman, Irving Gould, who had considerably more shares. And Jack Tramiel's management style annoyed a lot of executives.

But losing something as unique as that management style can only mean an improvement in internal comfort. They will come to regret it. It'll all end in tears. You'll see.

Watch this space

Details of the new Amstrad computer are still hard to come by (Benchtested next month). However, it is known that the new machine is going to be supplied in two boxes—a keyboard plus tape deck in one, a monitor

plus power supply in the other.

So there will be one cable from screen to wall, and another from the keyboard to screen.

Price is said to be under £200 for a monochrome machine, but Amstrad boss Alan Sugar will release no details except to say 'wait till 10 April.'

There is also a rumour of a colour monitor, as an alternative to green monochrome, and a very MSX like Basic (MSX is the new Japanese standard, as found on the Spectravideo micro, Benchtested last month).

What impressed me, however, was the man heard boasting in a bar that he took a chess program from the Sinclair Spectrum, and had it up and running on the Amstrad inside a week.

Word is that all the big multiple stores (Rumbelows,

Dixon, etc) which carry Amstrad audio equipment, are eager to add this range to their stocks.

Computers in control

Computers in Control, the BBC's latest micro broadcasting venture, aims to show how processing power can be harnessed to mechanical devices. The five part series will be hosted by Ian McNaught-Davis, presenter of the original BBC Micro programme *Making the Most of your Micro*.

Although computer control is a complex technical subject, the series is devised to get ideas rather than theory across, so studio demonstrations and practical projects involving the BBC Micro will be used extensively. Input from industry experts will be combined with outside material on projects under development, such as Team Lotus' work on a computer-based suspension system for its racing cars.

Backup in the form of programme notes and demo software to be downloaded through Ceefax will be provided. The series is in five parts, and each part is repeated twice. The days and times are: first showing on Fridays at 12.30pm, BBC2; first repeat following on Thursdays at 11.30pm, BBC1; second repeat on Sundays at 12.35pm, BBC1. If you missed the first programme on 2 March you can still see its second repeat on Sunday 18 March.

Jerry Sanders

Micro patch

An enterprising patchwork quilt/computer addict has developed a program for designing patchwork quilts. Mary Hewson, who wrote

Patbuild, says it enables the user to construct patterns, allocate and rearrange colours and edit and store patterns on tape. Patbuild is available for the BBC Model B for £10 from Mary Hewson, 10 Christchurch Bay Road, New Milton, Hants BH25 7NU.

Margaret Spooner

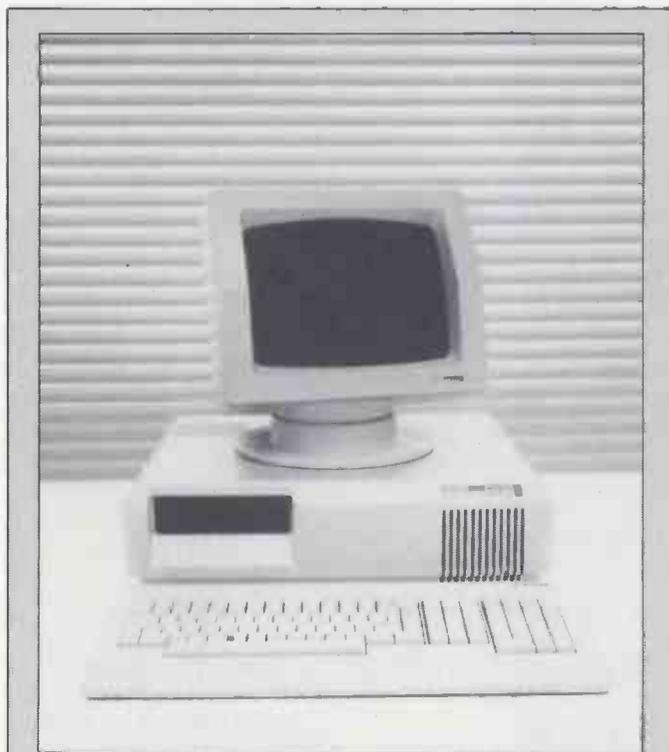

Deutscher MicroFrame

A cheaper, single board MicroFrame will be on show at the Hanover Fair in April—but it won't have the Tycom logo. Tycom has signed its first technology licensing deal for the new baby MicroFrame, which it designed, with Beta Systems International. The deal promises to yield a MicroFrame for under £2000.

Beta Systems is a Berlin-based electronics manufacturer. This is the first machine it has attempted as it majors on floppy disks and controllers. Beta has plans to distribute the 8088-based microcomputer throughout Europe using its own distribution channels. Tycom said that it plans to reimport the German MicroFrame, effectively its second source, and the first machines will be ready in April.

For around £1750 the new MicroFrame will carry its big brother's best features in a half-height system unit. An 8MHz 8088 with 128k of RAM, and 4MHz Z80 with 64k of RAM will offer both MS-DOS and CP/M as standard—future developments might also bring a 68000 plug-in board and the Unix-alike Xenix operating system intime.

The Microframe's 'heart'—its multi-purpose bus—is more or less the same. There will be a host of interfaces available as standard: Eurocard; RS232; serial keyboard; Centronics parallel port; and the SASI.

Next time Future Computers starts 3-D television advertising. I hope it runs 'future advertising' spots, so that the rest of us have a chance to get our red and green specs out.

The company has done its best to demonstrate Softnet on the system, and has proved that Digital Research still has not quite cracked networks.

And it has put a 120Mbyte hard disk into its IBM Thinkalike' box.

The easy way out of the micromaze.

If all Theseus needed to find his way out of the maze was a ball of thread, why hasn't the computer industry come up with something just as simple to navigate the micromaze?

At last it has.

Ashton-Tate's book

Through the MicroMaze is as valuable to the novice computer user as that ball of thread was to Theseus. It takes you right through the maze and back out again, arming you with the knowledge to protect your business against the evil forces of poor software.

Through the MicroMaze comes with FRIDAY!, software that demands no prior knowledge of computers. With FRIDAY!, you quickly turn your paper files into electronic files. It handles Mailing Lists, Invoices, Cheques, Sales, Inventory, Reports and just about anything that needs to be done.

With FRIDAY!, understanding is immediate. Through the MicroMaze provides the first stage in getting a computer to run your day to day activities. FRIDAY!'s manual takes up the story with a step-by-step tutorial. By the time you've worked through that, you will be running your own applications.

First-rate documentation, simple menus

and masses of help on the screens gives you a desktop file management system that is both powerful and easy to use. It works with other software too – with WORDSTAR, with 1-2-3 and, best of all, with dBASE II. So as your business grows your investment in computer software is protected.

If ever there was a complete package for the beginner it's. . . .

Friday!™

The idea of the Data/Voice box is that you don't have to wire your computers together in an office, because there is a nice intercom system already there.

The system provides networking of a sort for around £100 per connection, according to builder Xtec. Case does something equally clever, called Grapevine. It is supposed to be faster, but more expensive. Xtec is on (025 126) 4222.

With three out of four ports free, the new MicroFrame can hook-up directly to existing models.

Peter Williams, Tycom's marketing manager, reckons that Beta Systems will turn out 'no less than 10,000 units in the first two years'. While he was reluctant to give the royalty figure which Tycom received, Williams said that the deal would be worth at least £250,000 'minimum'.
Paul Walton

Rainbow 100+ review

Digital Equipment's enhanced Rainbow, the 100+, is claimed to be a rival to the XT version of the IBM PC.

That 'plus' is the integrated 5 or 10 Mbyte winchester hard disk which DEC has tucked away inside the system box of the original Z80 and 8088 Rainbow—significantly enhancing the performance and speed of its

progenitor (you can add your own hard disk too).

Just to recap, the original Rainbow—now called the 100A—was launched with 64k of main memory, and dual 5¼in, 400k, built-in disk drives. Main memory is now up to 256k as standard, expandable to a hefty 896k in the 100+. And DEC took the opportunity of adding some new ROMs in the 100+, largely to add extra functionality of the keyboard.

Field upgrading the Rainbow 100A to 100+ can be bought as a package from DEC. Its field engineers will do the job for you for £2390 for the 10 Mbyte version, or the 'special offer' (while stocks last!) of £1290 for 5 Mbytes. A winchester utility program and both operating systems are bundled in.

A unique feature of the 100+, useful for those in a hurry to run either 8-bit CP/M or 16-bit MS-DOS one after the other, is the ability to divide that winchester disk into four separate partitions. Switching on the system brings up a menu-choice of floppy-disk drives A, B, C, or

D, self-test option S or terminal emulation option T.

The winchester disk arrives set up to offer two equal partitions of the CP/M-86/80 operating system. These are logical drives E and F to the system, allowing the operating system or an application program to boot directly. Alternatively, there is yet another option to switch to either of the Rainbow's own installed floppy drives called A and B.

In order to repartition the winchester, and store the MS-DOS operating system or applications software, it is necessary to use the winchester utility program (on floppy) supplied by DEC. However, if you run into any problems I found they were answered with the most unerring courtesy and pace by DEC's customer service.

Ultimately, the winchester might be partitioned in the following combinations: one to four chunks of CP/M; one to four chunks of MS-DOS; one or two chunks of CP/M with the balance being MS-DOS; or just two enlarged chunks of MS-DOS without the original CP/M. The best of both worlds? It's more besides.

On the machine which I reviewed DEC had already loaded both the CP/M word processing package, Select-86, and an MS-DOS implementation of Lotus 1-2-3 which it distributes for the Rainbow. These occupied two of the four partitions available on the winchester. The voracious memory of Lotus 1-2-3 and some demonstration data unfortunately meant that it was not possible to load just MS-DOS alone, and I had to load operating system and application together before exiting back into the system, but this was a small price to pay for the sheer simplicity—and speed—of being able to boot an installed application program.

Another economical feature of the 100+ is the free version of the Select-86 word processing system, found masquerading as the CP/M

Editor. DEC explains that an almost complete version of this deluxe (it should be for £418) package is found in the CP/M menu as the Rainbow Editor, or RED.

The Benchmark timings were impressive as you might expect from the 4.815MHz 8088 chip running Microsoft's MBasic-86 (Revision 5.22 and, hence, not the latest) under CP/M-86/80 Version 1.1). The MBasic was running simple integer data, of single precision.

Language learning

Tansoft's Linkword series of language-learning programs for the Oric gets this month's most-wanted program award. Developed by psychologist Michael Gruneberg, who now has contracts with enough software houses to implement Linkwords on all the best selling home and business micros, it's an unprecedented success for a program that retails for £12.95—and includes an audio tape.

Linkwords works by creating bizarre, zany or just unusual images out of English words that sound the same as the word being taught. Imagine having a drunken argument with a friend about whether trout is spelt with four ls. Imagine a lobster with a sense of

dBASE II.®

dBASE II® is, quite simply, the best-selling database management system made for any computer, ever.

And because it is so powerful yet so easy to use, it has become the standard for managing data with a micro-computer.

Over 150,000 users.

So far.

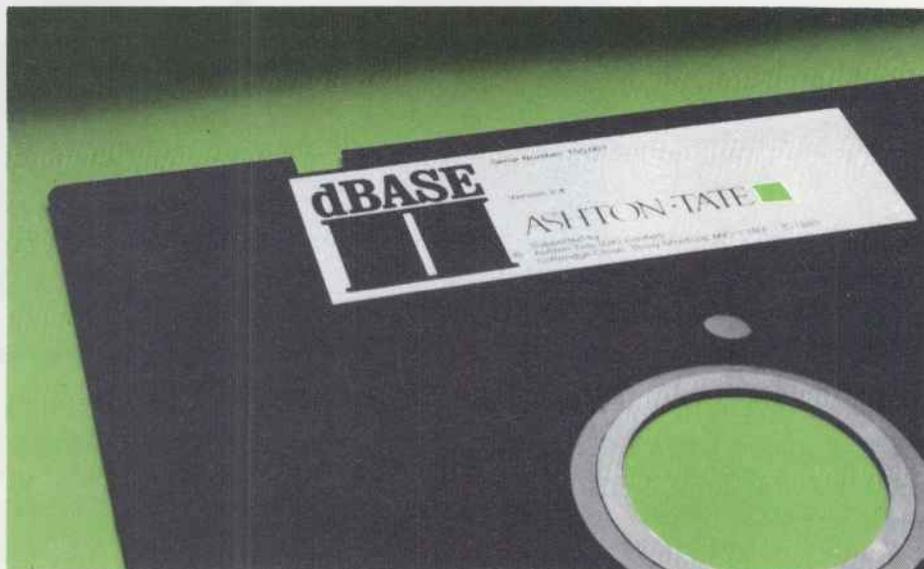

Doctors and lawyers, accountants and salespeople, stockbrokers and students, big businesses and small are all managing their data better with dBASE II. All over the country, around the world, users have found that dBASE II is the best solution to all their information needs.

Knowledge is power.

With dBASE II, you can quickly and easily create a full business information system that does exactly what you need done. A system that will handle today's problems yet grow with you.

All of your data is at your fingertips with dBASE II. Using simple English-like commands, you add, delete, edit, display, print and manipulate your information.

Once you've decided on what you want done, you save the instructions so that even your least experienced personnel can perform the most complex business functions with two words: **Do Invoices, Do Payroll, Do anything that needs to be done.**

A legend in its own time.

Already, books have been written about it. Hundreds of independent businesses are based on it. And other microcomputer programs measure themselves against dBASE II.

To see why, visit your nearest computer dealer and ask for a demonstration. Then take a package home and use it for 30 days. If it's not everything we said it was, return it and get your money back.

But we think you'll keep it.

Can over 150,000 users be wrong?

For the name of your nearest dBASE II dealer, contact: Ashton-Tate (UK) Limited, Cofferridge Close, Stony Stratford MK11 1BY. Telephone: 0908 568866

WHAT RESOLUTION FOR ONLY £230. (EX.VAT)

Our RGB high resolution colour monitors (580 × 470 pixels) sell for £229.95 (excluding VAT)—a saving of over £100 compared to other leading monitors of similar specifications.

That's a bargain we guarantee you won't see from any other micro retailer.

We've managed to acquire the sole distribution rights enabling us to offer these superb monitors at this unbeatable price.

And just because you're saving on price doesn't mean you're sacrificing quality. Here's what Personal Computer News had to say about our monitors.

"There is no doubt that the JVC range of ECM colour monitors is excellent value for money... there is no loss in quality of picture after long periods... remember as more and more resolution is available with new micros, the need for a better display will be that much greater."

For those who only require medium resolution we also have a model (370 × 470 pixels) at £149.95 (excluding VAT) which is equally excellent value for money.

Both units have a 14" screen and are suitable for the BBC Micro, Spectrum QL, Lynx, Oric, Apple, IBM and

Dynatech has launched a program generator that allows its user to create database application programs without having any previous computer knowledge. All the user has to do is define any records or screen layouts he requires and Home Filewriter will do the rest.

The package is available for disk versions of both the Atari and Commodore 64. It costs £39.95

Home Filewriter is the first part of the Codewriter package and allows the user to create, amend and delete database entries whether they be tax records, club membership records or home accounts.

For an additional £60 the rest of the Codewriter package can be bought, along with a backup copy of the first disk. This additional package adds more sophisticated sorting and searching routines, menu creative software and the facility to create formatted reports.

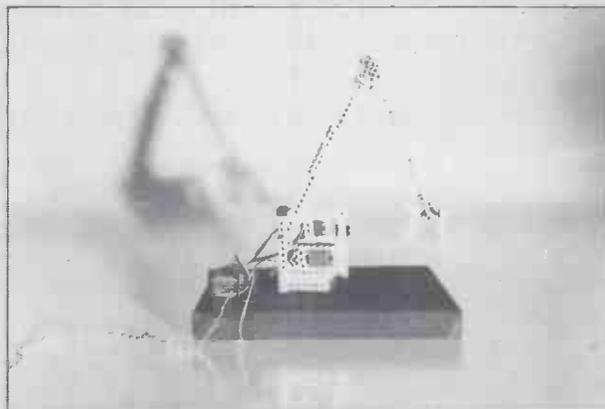

Tony Hetherington

humour. Imagine you had a hairy son holding a hedgehog. If you've managed to do all that, you've learned the meaning of the German words *Forelle*, *Hummer* and the French *erisson*.

Grammar is described in the same way — it's like remembering the punchline of a good joke. You start as an absolute beginner, and by the end of the program can cope with, for example, 'the pain is in my heart but the thief is with the telephone in the ambulance.'

The programs are notable for their absence of graphics. Gruneberg made it a condition that software houses write text-only programs — it's important for users to form *mental* images. This caused three software houses to turn the project down on the basis that programs without graphics don't sell, but the signs are that they've dropped a clanger.

Tansoft has launched French, Spanish, German and Italian versions, with Portuguese, Swedish and

Everybody who rang me up over the past year saying 'I know you can control a robot with the BBC Micro, but how?' should write to Commotion for details of the Beasty.

It will drive four 'servos' — electric motors that move things a precise amount and no further — and costs a mere £50.

Commotion also sells servos. Full details on (01) 804 1378.

Hebrew to come later this year. However, the first series only takes you as far as the present tense: demand will dictate if or when further steps will be marketed. The programs are available now from most computer retail outlets — or phone Paul Kaufman on (02205) 2261 for further details.

Jerry Sanders

Copyright protection

The Government intends to provide copyright protection for computer software, according to John Butcher, under-secretary of state for industry.

Speaking at the Computer Trade Association awards ceremony, at the LET Show in February, he said: 'I know that piracy of software, although a relatively new phenomenon, is causing concern. The UK software industry is a valuable part of the British economy and it is vital that it should have at its disposal the means to prevent illegal copying. The Government is aware of the

problems and intends, in the current review of the whole of copyright law, to put beyond doubt that computer software will enjoy copyright protection.'

It is hoped that copyright legislation will be brought before Parliament in the next session. However, final decisions have not yet been taken on all the issues in the 1981 Green Paper and among the difficult questions which remain to be resolved is unauthorised home taping.

A further move to provide software protection comes from the Computer Trade Association which will inaugurate the Society of Software Authors in May, to be affiliated to it. The Computer Trade Association has also established a Software Register which aims to provide a numeric coded system for registering software, similar to international standard book numbers. It will provide proof of the origin date of a piece of software and be a reliable evidential method if required in court.

Margaret Spooner

Mapping out the future

Grid computers has finally released its Compass portable micro in the UK.

The machine has been available in the States for some time and has even managed to hitch a ride in the Space Shuttle. Its major attraction is that it uses a very new (and very expensive) plasma flat panel display. This allows the machine to display a full 80 character by 25 line picture with none of the space problems associated with TV type displays.

The whole unit measures only 11.5ins wide x 15ins long x 2ins high and weighs only 10 pounds. Other technical highlights include an 8086, 16-bit main

HOW MUCH?

EPSON FX80 £315

MX100 £335

ACORN BBC (B) £305

COMMODORE CBM64 £151

SINCLAIR ZX81 £25

We also stock: Juki, Sanyo, Shinwa, Fidelity, B.M.C., Zappler, Olivetti, Oric, Tec, Oki, Epson, Hermes, Kokusai, Hitachi, Cannon, Riteman, Commodore, Acorn, Spectravideo, Cumana, C.A.L., Atari, Sinclair + All games and software, which you can purchase at wholesale price once you become a member of Computer Consortium. We already have 5,000 members in the USA, we want a similar number in the UK; in order to help us achieve that we are giving away over £15,000 in prizes.

1st Prize — IBM PC, value £3,500

2nd Prize — 10 BBC (B), value £3,999

3rd Prize — 20 Commodore 64s, value £4,500

4th Prize — 30 Sinclair Spectrum 48k, value £3,870

Don't delay, send off your application today, with your membership fee of only £9.95.

You will then automatically be entered in our prize draw competition.

You will receive your membership number, with all the information of product software, order forms and prices.

All applications for membership and entrance to the competition must reach us no later than 7th April, 1984.

Please enrol me as a member of the computer consortium. Send me my member start pack.

I enclose a cheque/PO for £9.95

made payable to COMPUTER CONSORTIUM

Show time '84

With the move to Olympia 2, PCW Show '84 promises more space for some really exciting features: 'STOP PRESS, STOP PRESS' — an exclusive display of new products at 'The Leading Edge': an absolute must for visitors seeking the latest launches at the show.

'Top 20 Games' — your perfect opportunity to try the top games on the market while choosing which one to buy.

If you have ideas for features you would like to see at the show, we'd like to hear from you — drop a line to Sue Holliday at PCW.

Meanwhile, put the dates and details in your diary now:

PCW Show, Olympia 2, 19-23 September, 1984.

processor supported by an 8087 maths co-processor and 256k of RAM upgradable to 512k. Secondary storage is provided by 384k of non-volatile bubble memory with the option of floppy or hard disk storage. Also included in the machine is a 1200/300 baud modem with integral driving software.

Grid describes the Compass as IBM-compatible (we all know what that means), but it does run MS-DOS version 2 as standard. Bundled software includes a spreadsheet, database, word processor, graphics package and various terminal emulators including IBM and DEC VT100.

The price hasn't been fixed at the time of writing, but it is likely to be very expensive.

Details on (0403) 64317.
Pete Bright

Logo for the Atari

Atari has announced a version of Logo for its range of micros.

Atari Logo is very much graphics oriented, with up to four independent turtles, collision-detection, a maximum of 128 colours and joystick capabilities. Atari claims that the quality of the graphics allows users to create video-game quality animated graphics.

The package includes two manuals — an *Introduction to Programming through Turtle Graphics*, and the *Atari Logo Reference Manual* — and retails at £60. A special deal has been arranged for schools and colleges, allowing them to buy an Atari

The Microsight image-analysis and Microscale image-processing packages (reviewed in PCW, October 1983) are now available for the IBM PC.

The system runs under PC-DOS and requires 256k RAM. A complete system, hardware and software, is available from £1950 plus VAT.

Supplier Digihurst has also announced that the BBC version now supports a resolution of 256x256.

Full details of either are available on (0223) 208926. Surya

600XL with Atari Logo for an inclusive price of £175.

Atari Logo recently reached the final of the British Microcomputing Awards 1984 in the Creative Software category. Details on (75) 33344.
Surya

Foreign letter writing

For the businessman who wants to impress his foreign correspondents, Longman has just announced a foreign language letter-writing program called Tick-Tack.

The system is based on a bank of selected sentences, divided into sections dealing with such matters as prices, delivery, insurance and accounts. Each sentence has a code-number which is the same in all languages. You write by keying in the code of the sentences that make up your letter, and the program converts them into the foreign language text.

Researchers throughout

Europe have checked all the target language used to ensure it's absolutely right for currency and idiom: in fact 15 languages have been researched, but those available now are French, German and Spanish.

For £150 (RRP) you get a language pair (English plus a foreign language) on disk, two hard copy dictionaries which reproduce the sentences available, a pair of commercial word lists containing a 200-expression vocabulary and a letter-writing guide for the chosen target language.

If you know a bit of the language already, you can draft up a letter and then personalise it by changing a word or phrase to suit. With a bit of programming knowledge as well, you can expand your disk dictionary pair to fill the entire disk.

The programs are designed to be run from within word processing software, and are available now for Apple II, IIe and III, IBM PC and Sirius. Contact Maggi Turfrey on (0279) 34622 for details of stockists.
Jerry Sanders

The Vector 4-S dual processor business micro has an automatic shift feature which detects different disk formats.

END

GAMES MACHINE LTD

Games Machine is a successful company producing games for home computers.

We are currently looking for good marketable games for the Commodore 64, Atari, Spectrum and BBC home computers. Games for other popular micros will also be considered.

If you believe that you have a good game to sell then contact us immediately.

Educational programs are also urgently required.

Join us and go places with the royalties you can earn from your programs.

BUILD YOUR OWN EXPERT SYSTEM

BRING YOU MICRO EXPERT

Micro expert is a general purpose Expert or Knowledge-Based System. It is widely used by government organisations, commerce, industry, universities and polytechnics.

It consists of an Advice Language Compiler and a Runtime System handling fuzzy logic, arithmetic and bayesian operations. It can use external functions to, access data bases, monitor plant, take some action or apply alternative means of inference etc.

Currently running on:-

IBM and DEC mainframes. IBM PC, IBM Displaywriter, APPLE II & III, Victor, Sirius, Northstar Horizon, CBM 8096, SAGE II & IV, and Torch.

Application Areas:-

Fault diagnosis. Decision Support Systems. Models of human reasoning and many others.

THE DRIVE FOR QUALITY

In the rapidly expanding world of computer peripherals there is one company which continually leads the field — Cumana. Whether it is the best Japanese components used in our top quality designs, the rigorous training which all staff receive, or the superb technical service we offer, everything must be of the highest standard.

Cumana disk drives have an independent power supply, 12 months warranty, and are fully assembled and tested before packaging; and they are now available for the BBC and Dragon Micros — at unbeatable value for money prices — from selected branches of W. H. Smith and Spectrum UK in addition to Cumana's nationwide dealer network.

For further information on these and other Cumana products — including dual slimline disk drives for the BBC Microcomputer — contact:

Cumana Limited, Pines Trading Estate,
Broad Street, Guildford, Surrey, GU3 3BH.
Tel: (0483) 503121 Telex: 859380

Dragon is the registered trademark of Dragon Data Ltd.

Small business can now stop going by the book.

For under £1,000 a small business can now equip itself with a BBC Microcomputer, a disc drive, a word processor and printer.

(All tax deductible by the way.)

Once you've parted with that money, you'll find that business has never been brisker.

Because now, there's a new series of floppy disc software specially for the smaller business.

It has been developed by Acornsoft, the software division of Acorn Computers who are the manufacturers of the BBC Micro.

For only £24.95, each disc can store volumes of vital bookwork which can be updated and amended in a fraction of the conventional time.

And there is a disc to cover most aspects of paperwork and book-keeping.

The Invoicing package.

This program stores details of products, VAT numbers and, of course, the names and addresses of your customers. As orders come in, you simply record them. Then, when it's time to invoice, you just press a few keys and each invoice or credit note is printed automatically in seconds.

Allowing for variable terms of trading, the system calculates and prints discounts. And it should help to improve your cash flow dramatically.

The Order Processing package.

With this program, you can confirm your customers' orders, prepare and print despatch notes and make fast analyses of individual orders or of all the orders stored on disc.

The Accounts Receivable package.

Now, it couldn't be easier to keep your customer accounts under control.

In an instant, you can analyse debtors, produce statements, keep a check on any credit limit and calculate VAT output automatically.

Using this package in conjunction with the invoicing package, you can also keep tabs on payments received against payments outstanding.

The Accounts Payable package.

This package will keep you fully up-to-date on how much you owe and who to. In addition, it calculates

input VAT and, used with the Accounts Receivable package, produces instant VAT returns.

It also highlights settlement discounts, produces remittance advices and provides an immediate analysis of all creditors.

The Stock Control package.

Touch a few keys and you have instant access to stock status and automatic analysis by quantity and value.

Consequently, it's easy for you to maintain correct stocking levels, having an early warning of out-of-stock situations or the likelihood of over-stocking.

Average value of the business they do with you, or whether they are good or bad payers.

Then, when you are doing a mailing, you simply choose the group or groups of customers you want.

At £24.95 each, these packages could be priceless.

Each package comes with clear instructions on how to get the program running so that you can devote much more of your time to more profitable activities.

If you're a credit card holder, you can order any or all of the packages by ringing: 01-200 0200 anytime. Or 0933 79300 during office hours.

(By ringing the same number, you can get the address of your nearest stockist, or full details of the BBC Microcomputer system if you don't already have one.)

Alternatively, you can order the packages by sending the order form below to: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL. Please allow 28 days for delivery.

☎ Credit card holders, phone 01-200 0200, anytime. Or 0933 79300, during office hours.

The Purchasing package.

All your suppliers' names and addresses go onto the disc. Then they can be retrieved instantly for preparing and printing orders.

All order data can be recalled in seconds, allowing you to check on orders, and suppliers' invoices and to record all deliveries.

The Mailing package.

Instead of the shotgun method of sending mailshots, this package enables you to refine each mailing down to the customers who are most likely to respond.

It gives you a rapidly accessible mailing file of your customers, according to any criterion you choose. Size of company, for instance, or type of business.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me the following business software packages at £24.95 each.

PROGRAM	QUANTITY	TOTAL	(Code Acornsoft use only.)
Invoicing			SNB 08
Order Processing			SNB 12

ACORNSOFT

Discover the remarkable NCR DECISION MATE V.

We've taken the best features of the proven micro-computers on the market. Made them even better. And combined them to make the NCR Decision Mate V.

For example, we don't think you should have to choose between 8-bit and 16-bit operating systems. So, with our dual processing system you can have the benefits of both.

What's more, you shouldn't have to decide right away whether you will ever need graphics, networking or large disk capacities. With the NCR Decision Mate V, graphics are built into every machine. And networking and large storage

capability can be added if you should need them.

You don't have to juggle lots of components either. The Decision Mate V has only two. You simply plug the keyboard into the computer. And the computer into the wall. And 20 program-mable function keys mean you can eliminate boring repetitive tasks.

A relationship you won't outgrow.

When you want to upgrade your machine with more memory, more storage or link it with other micro-computers (even if they are not Decision Mate Vs) you just plug them in. No expensive or time-wasting returns to the manufacturer.

Let's have a heart-to-heart talk.

NCR has been making computers for as long as there have been computers.

And we've been doing business in Europe since 1885. We have the experience, the technology and the service you can depend on.

So take a look at the NCR Decision Mate V. We designed it with a heart.

If the number of computer systems on the market leaves you totally bewildered, we don't blame you.

And that's not your only problem. If you are not very careful, the system you buy today could well be obsolete tomorrow. That's how fast computer technology is progressing.

But take heart. There is one computer system that won't become obsolete. Because it is modular in concept it can be expanded both inside and outside to accommodate extra capacity and new advances—as well as being able to increase in size and capability to keep pace with your own growth or changing requirements.

You have a choice from a virtually unlimited range of CP/M compatible application software. Plus the support of total dealer back-up.

And, most important, you won't find that you've bought a system that suddenly doesn't meet your needs. The Communicator offers the facility to enhance and upgrade existing models to take account of new applications.

Comart have also met the stringent CCTA requirements. Which means we are A1. In short, Comart Communicator systems can keep pace with both progress and innovation.

So don't get bogged down with obsolete equipment. Contact your Comart dealer for a demonstration now.

The Comart Communicator. One computer system that won't sink into obsolescence.

What's more, it's British.

At any one of the addresses listed below you can see the remarkable flexibility of a Comart Communicator system for yourself.

In under three years, it has become a complete family of compatible, fully expandable microcomputer systems, covering

20 models and including single user, multi-user and multi-processing systems.

To become technical for a moment, there's a choice of 8 or 16 bit processors, up to 1 megabyte of RAM and a wide range of floppy and hard disk storage capacities and add on modules.

NEW! NEW! NEW!

96 AND LAUREATE

The Keys to low cost Business Computing

CP/M

CP/M is the control program for business systems which is used more than any other. Usually the price for such a system, which provides access to a vast range of business software, is far higher than the cost of the LAUREATE.

PERFECT SOFTWARE

This is a range of packages specifically designed for business needs. There is a spread sheet for financial forecasts and calculations, a word processing package for letters and document production and a filer for storing, sorting and retrieving information such as mailing lists.

YOUR BUSINESS

Architects to Zoologists, Estate Agents to Warehousing, Haulage to Publications. Accountants to Retailing, Insurance to Printing, Builders to Transportation, Containers to Shipping and Finance to Textile. A Business hardly exists which cannot make cost effective use of the 96 or LAUREATE.

EVERY PICTURE TELLS A STORY.

GP 50A LOW COST DOT-MATRIX PRINTER

5" width roll printer. 40 cps printing speed. Graphics capability. All modes can be intermixed on a single line. Alternative colour ribbons optional with replacement ink reservoirs.

Available shortly is a dedicated Sinclair Spectrum version. £138.00

If you want to make the most of your micro, sooner or later you'll need to add on a printer. To help with preparing and debugging programs for example. Or preparation of reports. Or cataloguing, word processing and file listing.

Low Seikosha prices mean you can team up with the printer you want sooner rather than later. The wide range interfaces with virtually every computer from a Dragon or Spectrum right up to Apple and IBM.

Designs are sophisticated, performance is versatile and reliable and quality is all you'd expect from the name Seikosha.

Get hold of the full picture - ask for a demonstration at one of the dealers over the page.

GP 550A CORRESPONDENCE PRINTER

Standard dot-matrix and near letter quality printing. Print speed 50 cps (DP) or 25 cps (NLQ) modes. 8 fonts. £299.00

GP 100VC COMMODORE EXCLUSIVE DOT-MATRIX PRINTER

Built exclusively for VIC 20 and 64. Full graphic printing including all VIC characters. 30 cps printing speed. Supplied complete with dedicated cable interface. £229.00

GP 700A COLOUR PRINTER

4-hammer impact dot-matrix. 7 basic colours with 30 colour shades. Unique ribbon arrangement permits multiple colours in one pass. Graphics dump interfaces for Apple and BBC Micro available as options. Low noise level. £489.00

GP 100AS SERIAL DOT-MATRIX PRINTER

Serial version of the GP 100A. Ideal for Spectrum with microdrive, New Brain and Lynx. £229.00

GP 500A PERSONAL DOT-MATRIX PRINTER

A development of the extremely popular Seikosha 100A. 50 cps printing speed. Full graphics capability. Paper width adjustable up to 10". £249.00

Others may claim to be as versatile

Far from being all things to all men, the Toshiba T300 and T100 Micro Computers uniquely fulfill their respective roles.

They're the Hi-Fi of the Computing world.

The T300 has a 16 bit 8088 CPU with 192-512 KB RAM and up to 512 KB Video RAM. 5¼" floppy disks add another hefty 1.2 MB and there's an optional 10 Megabyte Winchester.

To the initiated, it means the basis for the kind of computing power to satisfy the most demanding professional, business or academic user.

Similarly, the T100, although ideal for every day problem solving and entertainment, makes use of sister technology to give high quality colours graphics on a precision-built VDU, alternatively just plug it straight into your TV via the T100's PAL adaptor.

To the man in the street, the T100 is a Personal Computer that stimulates the user to extend his interest far beyond the merely transient pleasure of video games. It is a respected micro computer with a powerful Z 80A Central processor making it suitable for businessmen and businesses.

SHORT SPECIFICATION T300

CPU: 8088 (16 bit)
STORE: 192-512 KB RAM up to 512 KB Video
DISPLAY: 80 characters X 25 lines, 640 X 500 Dot Graphics, 256 colours
DISKS: 2 X 5¼" floppy disks each with 640 KB, 5¼" internal 10 M Byte Winchester Disk
INTERFACE: Centronic Parallel RS. 232 V.24 I-EEE 488.
DIMENSIONS: 16.5" X 3.9" X 10"
OPERATING SYSTEMS: CP/M 86® MSDOS®
LANGUAGE OPTIONS:
BASIC, FORTRAN, COBOL, PASCAL.

Both are complemented by an exceptional printer that can print draft quality at a speedy 192 characters per second or letter quality at 100 c.p.s. Add to this 12 month's Warranty, nationwide service and minor details such as full colour graphics, sleek styling and the trust that goes with the Toshiba name-plate and we think you'll agree that Toshiba technology in Professional Micros is not just a poor relation to mainstream computing.

Find out more about Toshiba's T300 and T100—and discover true versatility in Computing

This man can use...

**46 Microcomputers 6 Word Processors
16 Printers 2 Mini Computers**

...all without leaving his seat!

Clearway

is a low cost Networking device allowing ALL minis, micros, printers, mainframes etc. to communicate with each other.

- From £150 per connection (node)
- No controller needed.
- Easy installation
- Connects any hardware device through an RS232 interface
- Up to 99 nodes on the same ring
- File sharing software available
- Enables printer sharing
- Has special hunting feature
- Other models available
- Over 3000 nodes currently installed
- Manufactured and supported in UK

SEIKOSHA DRG

“Leaves the Atari, Dragon and Lynx

Choosing a home computer is a bit like playing a video game. The more you play, the better you get. So you'd expect people who spend their working life choosing computers to be pretty good at the game. Quick to shoot down a fault. Pleased when they find an improvement.

Recently Which Micro? and What Micro? tested the SpectraVideo SV 318. Here's what they had to say:

“Every home computer coming on the market tends to be hailed as revolutionary. For once this really has to be true with the SpectraVideo SV 318.”

“The first cheap, high performance computer...”

“Double precision numbers... are ideal for companies with turnovers under £999,999,999,999.99.”

SpectraVideo SV 318: Memory – 32K ROM expandable to 96K, 32K RAM expandable to 144K: Keyboard – calculator type, 71 keys, 10 function keys, built in joystick/cursor control: Graphics – 16 colours, 256 x 192 high resolution graphics, 32 sprites: Sound – 3 channels, 8 octaves per channel: CP/M* compatibility – over 3000 existing software packages: Storage – cassette drive, 256K disc drive capacity: Suggested retail price – £186.

SpectraVideo SV 328: Memory – 32K ROM expandable to 96K, 80K RAM expandable to 144K: Keyboard – full word processor type, 87 keys, 10 function keys, built in cursor control: Graphics – 16 colours, 256 x 192 high resolution graphics, 32 sprites: Sound – 3 channels, 8 octaves per channel: CP/M* compatibility – over 3000 existing software packages: Storage – cassette drive, 256K disc drive capacity: Suggested retail price – £262.

A full range of peripherals are also available.

**Which Micro Hardware Review – SpectraVideo SV-318

*© CP/M is a registered trade mark of Digital Research Inc

gon, Commodore 64 for dead.”

Which Micro? Dec 83. **

“... a far better job with its keyboard than anybody else using soft keys.”

“... most people will notice how easy it is to produce graphics with the Basic.”

“This is a BBC class machine.”

“As a computer for the enthusiast it is well nigh perfect.”

“A good micro for tomorrow.”

Obviously, they had more to say. And we think you should have a look at the reports for yourself to prove that we haven't exaggerated their independent opinions.

Fill in the coupon today and we'll mail you the reports as well as a full technical specification brochure in colour of this amazing new personal computer or see the Spectravideo for yourself at most leading computer stockists.

WORLD BEATER

Ormbeta

In this complex world of business management, success comes easier with the right software. Faced with the bewildering complexity of microcomputer software systems now available, you need look no further than Ormbeta.

Ormbeta is the most flexible business software so far developed in the U.K. and can be found quietly and efficiently satisfying the integrated accounting demands of all businesses ranging from the mighty worlds of car manufacturing, shipbuilding, banking, construction right through to the local corner shop.

Systems include Sales, Purchase and Nominal Ledgers, Payroll (with full S.S.P. accounting), Stock Control, Invoicing, plus specialised packages for Membership Organisations, Estate Agents, Hotels and Restaurants and Golf Clubs. Written in UCSD PASCAL Ormbeta software is available for all the most popular micro-computers. Supplemented by first class dealer support and a genuine hot-line for all your queries, Ormbeta meets all your follow-up needs.

Now established in over 20 countries worldwide, Ormbeta is the true world beater.

ELECTRON & BBC MICRO USER SHOW

Don't miss
the great
Spring show
of all that's
new for the
Electron and
BBC Micro

New Horticultural Hall (*Westminster Exhibition Centre*)
Thursday to Sunday, March 29 to April 1

Here's your big chance to catch up on all that's been happening recently in the fast-developing world of the Electron and BBC Micro. And there's so much new to excite and intrigue you . . .

NEW programs from the fertile minds of Britain's leading software writers – games galore, plus a growing number of new packages for teachers and for industrial and business users.

NEW hardware add-ons that expand even more the power and versatility of your micro. Electronics wizards regard both the Electron and the BBC Micro as a challenge to their ingenuity. Their latest creations on display at the Electron and BBC Micro User Show will astound and delight you!

How to get there

School and College Groups

Entry only £1 per student if bookings are made in advance. Send your cheque (made payable to Database Publications) and SAE to:

Electron & BBC Micro User Show
68 Chester Road, Hazel Grove
Stockport SK7 5NY
Tel: 061 456 8383

Voucher worth
£1

This voucher is worth £1 per person off the normal admission price of £3 (adults) and £2 (children) (Valid for a maximum of 4 people)

Electron & BBC Micro User Show

10am - 6pm, Thursday, 29 March
10am - 6pm, Friday, 30 March
10am - 6pm, Saturday, 31 March
10am - 4pm, Sunday, 1 April

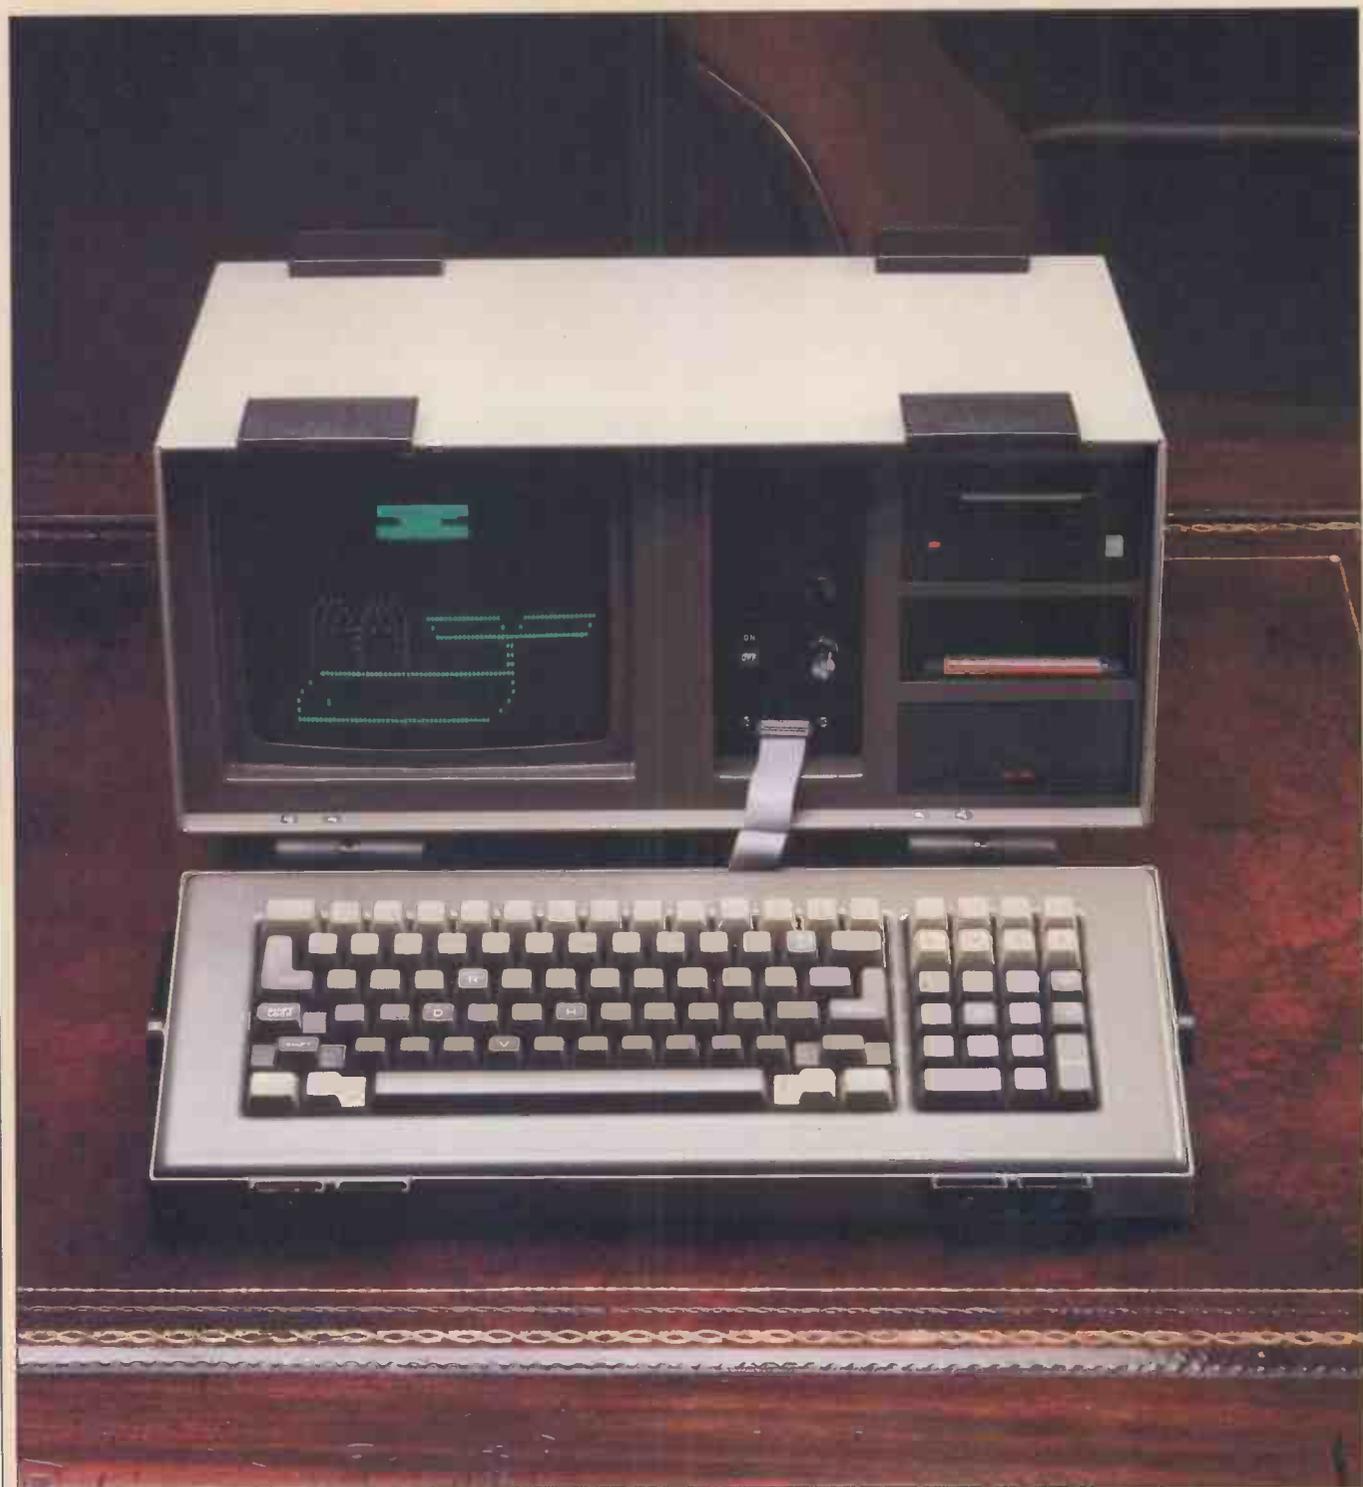

New Horticultural Hall
Greycoat Street, London SW1

Jonos

Aimed at the military as well as the commercial market, this versatile and durable 'transportable' is available in a wide variety of configurations.
Peter Bright dons his camouflage and makes his grand attack.

Military camouflage: the qwerty keys and numeric keypad are dark green and the rest of the keyboard is a paler shade

Before the release of the Osborne, if you wanted to move a micro, you had to pack it up and put it in the boot of a car. The Osborne put the main unit, disks and keyboard in one box, added a carrying handle and the portable was born.

Now everyone seems to be jumping on the portable bandwagon. Hardly a week goes by without a new 'portable' being released.

When I visited Compec last November, I came across a stand showing what appeared to be yet another portable. A closer look revealed that it was called a Jonos and it looked like anything but another boring portable.

The main claim to fame of the Jonos is that it's one of the first machines to use the new Rodime 3.5in 10Mbyte hard disks. These are very neat drives which take up less space than the equivalent floppy drives. The other main feature of the Jonos is that it's a bus based machine. This means it can be supplied in a wide variety of configurations ranging from a humble Z80 to a full blown Motorola 68000.

Jonos is trying hard to sell this machine into military markets as well as to the more usual business and engineering users. In order to compete in these sections, a machine has to be rugged and capable of enduring hard use. The Jonos satisfactorily proves its durability in both these respects.

Hardware

The Jonos is available in two finishes — either aluminium cased for military/engineering use or leather-bound for executive environments. The review machine was a military version and arrived complete with olive green camouflage paintwork.

When it's closed up the Jonos looks like a big metal box — no vents, nothing. This makes it quite weatherproof which must be a good thing in the field. It's also possible to run the Jonos off a 12 volt battery so that it can be used away from a power source.

The front and rear covers are held in

place by hinges and catches. The front cover folds down to reveal the keyboard (*à la* Osborne) while the rear cover reveals all the vents, I/O ports and so on. It's best to remove the back cover completely otherwise it obstructs the cables.

As an optional extra, the Jonos is available with an 80-column printer. This can be clipped to the back of the main unit when it's not in use and then unclipped when required.

The Jonos is well catered for as far as I/O is concerned. The review machine had two RS232 ports (one for a printer and one for a modem), a Centronics parallel printer port, and an external disk interface. The back board also has markings for an IEEE 488 machine control interface and two auxiliary I/O ports.

The overall finish of the machine is good — it certainly felt very robust. The only blemish I could see was where the case had been modified to take the hard disk. It looked as if someone had attacked the machine with a hacksaw and a none too steady hand. (Look closely at the photos to see what I mean.)

Inside

The Jonos is a bus based machine — its

Robust and weatherproof carrying case

core is a common carrier into which a variety of circuit boards can be plugged. In this case it's the STD bus system. All the main circuitry is contained on cards that can be plugged into the 10 slot card cage.

The great advantage of using a bus system is that it provides the flexibility to plug in different cards to customise your system to your needs. This is illustrated very well by the fact that the Jonos can be supplied with either a Zilog Z80A running at 4MHz, or Z80B running at 6MHz, an Intel 8088 running at 8MHz, or even a Motorola MC68000 running at 8MHz. All this is in addition to the in-built 8085 which controls the screen and keyboard. If you use the 8088, the Jonos is claimed to be IBM compatible. As the review machine did not have this processor I couldn't test this out.

The review machine was supplied with a Zilog Z80B running at 6MHz. The Z80B is a souped up version of the old faithful Z80A which had a maximum clock rate of 4MHz. When I first looked at the review model I thought it was going to be a fairly average 8-bit machine. I was wrong — this Z80B is very fast. This was first illustrated when I started to play with WordStar — everything seemed to be working at double speed. I then ran the Benchmarks and it raced through them too. A quick look at the Benchmark table will show that it's by far the fastest 8-bit, and it makes most 16-bit machines look very sick! The average would have been even faster but for BM8 where it let itself down.

Memory is another area where the Jonos differs from most other 8-bit machines. Normally the Z80 can only directly access 64k of memory (RAM or ROM), but because the Jonos uses CP/M version 3 (otherwise known as CP/M Plus — see 'Systems software'), it's able to use what is known as 'banked memory'. The review machine had 128k of RAM divided up into two 64k pages, one of which was reserved for CP/M, leaving the other free for the user. The machine also contains 8k of

B E N C H T E S T

ROM which is a bootstrap for CP/M.

Disks

The Jonos can also be supplied with a 322k RAM disk. This is a board containing volatile RAM chips which the machine sees as a floppy disk. This means that most normal floppy disk operations can be applied to the RAM disk. The main use of a RAM disk is to speed up the execution. For example, a program like WordStar which makes a great deal of use of the disk to pull in the help screens will run very fast on the RAM disk. Don't forget that if you reset the machine you will lose your data!

In use, everything worked very well; the only major annoyance was the cooling fan which was very noisy. Also, because it sucks air in at the back and blasts it out at the front, it can do quite a fair imitation of a fan heater after it's been switched on for a while.

The Jonos can be supplied with a very wide range of disks, depending on your needs. The basic model comes with twin single-sided 3.5in Sony micro-floppy disks. Other options include twin 5.25in IBM compatible drives, twin 5Mbyte Syquest hard disks — one fixed and one removable — and a single Sony microfloppy along with a 10Mbyte 3.5in Rodime hard disk.

The review machine had one 320k Sony microfloppy and a 10Mbyte 3.5in hard disk. This is the first time I have used a machine with one of these new 3.5in hard disks and I am very impressed. If you look at the picture of the front of the machine, you'll see that the hard disk actually takes up less frontal space than the Sony floppy drive. It's hard to believe that it holds 10Mbytes of data.

Normally, it wouldn't be a good idea to put a hard disk in a portable machine because hard disks tend to be fragile.

These new disks are supposed to be much more resistant to shock and are therefore more suited to portables — from my experience of the machine, this is certainly true.

The Sony drives now seem to be becoming the standard for business machines. In use, I found the drive reliable but noisy, clicking away quite happily to itself in a manner reminiscent of the old Sirius disks — it sounds like a demented chicken.

The ACT Apricot, which also uses these drives, has a reputation for being slow when accessing the drives under WordStar. I tried this out on the Jonos and found the disk accessing fast — certainly on a par with 5.25in disks. Under other applications the disk access is even faster. It loaded CP/M 2.2 in 0.8 seconds and CP/M 3.0 in eight seconds (compared with six seconds from the hard disk).

The only disk problem I encountered was the automatic shutter mechanism. These shutters are designed to cover the magnetic surface when the disk is not in use. The problem is that on some disks it's necessary to slide the shutter back manually, while on others it's done automatically when you insert the disk into the drive. Both sorts seem to be interchangeable; obviously the automatic type is best.

Keyboard

The keyboard can be used in a number of different positions. The recommended method is to hinge it down with the carrying handle at the back. This forces the main unit to tilt up, making the screen easier to see. The other method is to unhinge the keyboard completely. This allows it to be moved around but means that the screen isn't so easy to read. The disadvantage is that you can't move the keyboard very far because it's connected to the main unit by a very short length of ribbon cable. If the screen is tilted up it's possible for the main unit to slide off the hinges and come crashing down. The first time this happened I was worried that the hard disk might be damaged, but it seems to be made of old boots.

The keys themselves have to be tightly packed in order to fit into the available space. They are divided up into two main areas: the main qwerty typing area is on the left hand side with ten function keys distributed above it; and the numeric keypad and the cursor control keys are on the right hand side. In best army tradition the keys are coloured in various shades of olive green. The qwerty keys and the numeric keypad are dark green and the rest of the keyboard is a paler shade.

View from the rear: clearly marked interface ports

Inside the machine a spaghetti-like combination of wires

Looking for an easy-to-use cost effective
File Handling System?

Thank god it's
Friday! £185
by ASHTON-TATE

Friday will take care of your Files, Reports, Diary,
Mailing and much more. It enables electronic files to
be set up. Reports can be displayed and retrieved fast
from all or part of a file. Friday is fast and versatile. It is
designed for beginners.

Friday enables you to prepare custom reports
to suit your requirements and presentation.
Friday enables you to sort and select any field.

Friday uses on screen prompts and help
menus to guide you through the job
you are doing.

B E N C H M A R K T E S T

In use, the keyboard feels good. The keys have a very positive feel to them and there is no give in the keybase, something army touch-typists will appreciate. The 'F' and 'J' keys have sculptured tops so that your index fingers can find them easily. The '5' key at the centre of the numeric pad also has a pimple on the top to make it easier to find.

Whenever a key is pressed, the loudspeaker beeps annoyingly. This can be switched off by calling a COM file called 'Mute'.

The keyboard has one or two odd keys. For example, it has a 'newline' key and a 'backtab' key which are rather old fashioned now. The Jonos also tends to hide some of its keys away. For example, when I was looking for the '>' and '<' keys for the Benchmarks, I found them right up at the top with the function keys.

On any machines, the shift and caps lock keys have LEDs built into them to show they're in use. The Jonos does not use LEDs, instead it prints either SHIFT or CAPS on the 25th line of the screen. This is preferable because the user is more likely to be looking at the screen than the keyboard when typing.

My only real criticism of the keyboard is that it can sometimes be uncomfortable to use. This is because the outer casing joins the inner casing just where the palms of the hands rest, so it's easy for the join to cut into your hands—very painful. If I were to use this system for a long time I'd be tempted to put some foam rubber over the join.

Screen

On any portable the screen is always a problem. Space is limited and something has to give—usually the screen. The Jonos boasts a 9in (diagonal) screen which is very easy to read.

The screen dimensions are the standard 80 characters by 25 lines with the 25th line being used as a status line. If you use the high-res graphics option, the screen can display up to 640 x 250 pixels. It has an etched anti-reflective surface so that it doesn't glare. This works very well and is one of the best anti-reflective screens I've seen. The only control is one for brightness (a big rotary knob), but there's no contrast control. The characters on the screen are well formed and clear to read.

I have only two gripes with the display. First, the screen on the review machine had a slight sway to it. I hope this is not typical of all the machines.

The second gripe is one I always seem to be making—no tilt adjustment. The Jonos can either be flat on the desk or hinged up on the keyboard and that's it.

Systems software

There is a wide range of systems software. The choice ranges from CP/M 3.0 and MS-DOS, through BOS/5 and MBOS/5 up to Unix on the MC68000 board (the idea of a multi-user portable does seem rather strange).

The review machine was supplied with CP/M version 3.0 (2.2 was also available). Version 3 (also known as CP/M Plus) is the new all-singing, all-dancing creation from Digital Research. The main new points are that version 3 supports banked memory.

'The main claim to fame of the Jonos is that it's one of the first machines to use the new Rodime 3.5in 10Mbyte hard disks'

The main effect of this is that the normal memory limitations associated with 8-bit machines are removed allowing them to compete with 16-bit machines on better terms. CP/M 3 has also undergone technical modifications, including the use of hashing techniques to improve disk access speed. Another advantage is that the tedious routine of control-C'ing the drives, every time you change a disk, is no longer necessary.

This is the first machine I have reviewed that uses CP/M 3, and I was looking forward to having a long play with it. The trouble is that CP/M 3 manuals seem to be quite rare and Jonos couldn't supply me with one. As a result, I was forced to hack around the system looking for new functions.

In use

When you first boot up CP/M you are greeted by the usual 'A' prompt. A quick look at the utilities will show that most of the old favourites are still there, with the notable exception of 'STAT'. This has been replaced by two new utilities called 'SHOW' and 'DEVICE'. SHOW will provide all sorts of useful information about the status of the disks while DEVICE handles all the logical-to-physical device assignments that STAT

used to deal with. DEVICE is much more flexible than STAT used to be, with the advantage that you can use it to set baud rates and XON/XOFF protocols on the RS232 lines.

CP/M 3 also supports up to 16 different user areas (numbered 0 to 15). This allows each user to have his own file directory. It's easy to switch between directories by typing the number of the new directory followed by a colon. For example, to switch to directory 10 type "10:" CP/M will then respond "10A>", informing the user that he's in directory 10. In addition to

the 16 user areas there is also a system area which can be accessed directly by any of the users. This area usually holds the CP/M utilities.

I can't see a great deal of point in using different user areas. As far as I know it isn't possible to protect them (see below), so it would be easy for someone else to log into your area. The only justification I can see is that it does at least allow very large directories to be split into smaller sub-directories, making file-finding much more efficient.

Another new feature on version 3 is password protection for files and disks. If a password is set, it has to be entered after the filename. For example, if WordStar were protected and then 'WS' were to be typed in the normal manner, you would get a CP/M error message saying something like "CP/M error on A: Password error". If you want the program to run it's necessary to type "WS:PASSWORD".

If a password is to be set, it's necessary to use a utility known as 'SET'. This is a very wide ranging utility which can be used to set drives to read/write or read only, to initiate time stamping of files and/or to set passwords. To set the password for WordStar to 'Wombat', type "SET WS.COM [PASSWORD+WOMBAT]". Files can also be set to read only, read and write or delete only.

In addition to single files, it's also possible to set a password for a whole disk. This could be useful for protecting something like a data disk on a floppy based machine, but isn't much use on a hard disk system. A better idea would be to protect user areas, but as far as I can tell it isn't possible to protect just one user area on a disk. This means that if a user wanted to protect all his files, he would have to set up an individual

GRAPHICS

DIGISOLVE offer you a way to increase your graphics speed and resolution. Using a high speed graphics processor, our cards draw lines and characters **FAST**. The graphics processor works in parallel to the host machine and gives you the power of using a co-processor specifically designed for graphics. With drawing rates of up to 1,500,000 pixels per second, lines appear instantly to speed up your plotting.

With the resolution, we offer new possibilities for software and systems, both in monochrome and colour on a large range of computers.

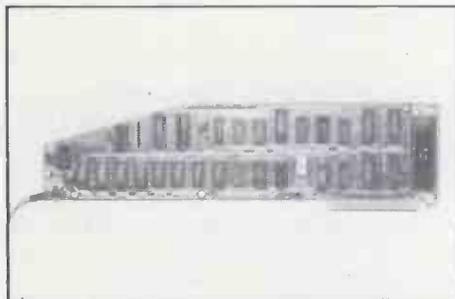

COLOUR GRAPHICS CONTROLLER

DIGISOLVE offer you high resolution colour graphics too. Designed to plug into any computer with a bus host adaptor. The VGP64 gives you 512 x 512 pixels in 64 colours. With its own vector processor and 384K bytes of memory, your computer can become a sophisticated graphics system. **64 COLOURS** or 8 if you insist, not many do! **4096 COLOURS** now you can really paint a picture. **384K BYTES** of RAM or 768K Bytes with 4096 displayed simultaneously. **2 PICTURE BUFFERS** give you help with animation. **GREY SCALE OUTPUT**. **EXT VIDEO SYNC LOCK** available for making video tapes. **APPLE, SAGE, PET, IBM, S100, VME BUS, MULTIBUS** all have interfaces available to make use of our fast hardware. New ones are coming along all the time so give us a ring if your requirements is not listed.

8 COLOURS £799.00, 64 COLOURS £899.00.

4096 COLOURS £1799.00 + P&P + VAT

SOFTWARE PACKAGES: Painting and Slide generation, Business graphics, Architectural 3D design.

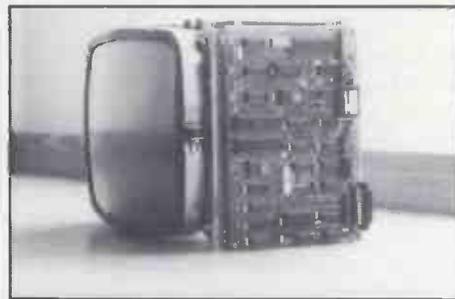

APPLE II

DIGISOLVE's Apple II High Resolution Vector Graphics Processor card quadruples the screen resolution and saves using up your Apple's memory. The enhanced Applesoft support disc supplied with our card provides powerful graphic functions and simplifies the conversion of existing software.

512 x 512 pixels resolution. FAST 1,500,000 pixels per second. MEMORY an extra 64K on the card. **TEXT** to 85 characters by 57 lines. **CURSOR** drawing features. **SOFTWARE** 18 new functions are added to Applesoft and extra utilities too, all with source listing. **OUTPUT** to a dot matrix printer or save images on a disc. **PASCAL** and **TASC** Compiles supported too.

£399.00 + P&P + VAT

SOFTWARE PACKAGES: Art and Design, Business graphics, Painting, Slide generation packages. Architectural design and modelling, Kitchen design and Visicalc preboots.

VDU BOARD

DIGISOLVE offer you the cheapest way to make a scrolling VDU with our intelligent 80 x 24 VDU card. With over 50 control functions, the card works up to 19.2K baud.

80 x 24 DISPLAY optional 40 x 24 or 40 x 12.

TRUE DESCENDERS on properly formed characters in an 8 x 12 matrix.

BLOCK GRAPHICS

FULLY SCROLLING display

UP TO 19.2K BAUD via RS232 communications port.

KEYBOARD AND RS232 DATA INPUT

£160.00. (1 off) + P&P + VAT.

COLOUR GRAPHICS TERMINAL

The new **FRONTIER** monochrome and colour high resolution graphics terminals are fully compatible with Tek 4014 terminals at an amazing price. The high line rate flicker free monitor and advanced electronics provide an exceptional graphic display terminal.

512 x 720 DISPLAY, 1K x 1K STORED PICTURE PAN, ZOOM & SCROLL to move the display about. **LOCAL EDITING** with macros and software definable character fonts.

PALLETTE OF 4096 COLOURS

Flicker free display due to high line rate monitor and advanced electronics working non-interlaced.

19" SCREEN OPTION AVAILABLE

PRICES FROM £1495.00 + P&P + VAT

CUSTOM DESIGNS

DIGISOLVE have staff dedicated to design consultancy and are helping many industrial users with custom design packages. Our experience in designing display equipment, character or graphic based, and microprocessor controllers may help you with your special projects. Please do not hesitate to contact us if you require further details.

password for each file.

Disk utilities

As it has both a hard disk and a RAM disk, the Jonos has some good utilities for formatting and copying disks. The Format/Copy utility for the Sony drive is known as 'FORMAT3'. This does the usual formatting and validating of the Sony disk, as well as allowing you to change the interleave factor. This doesn't normally change unless the access time has to be improved for a special set of software.

found on home machines, but I enjoyed playing it all the same.

Other games were mostly textual and included the obligatory version of Star Trek, and an interstellar trading game that kept me quiet for hours.

Jonos also seems to specialise in engineering applications software. From the hardware point of view the Jonos seems well suited to being interfaced with machinery. From the software angle, Jonos can not only supply standard engineering packages but is also able to write bespoke

always more expensive to make a bus based machine than a single board micro — perhaps better value for money for the flexibility you gain.

	£
Dual 3.5in Sony drives	2425
Dual 5.25 1Mb drives	2625
Dual 5.25 1.6Mb drives	2695
Dual 5Mb Syquest drives	4295
10Mb 3.5in Rodime and 3.5in Sony	4295

Conclusion

I like this machine — even in its 8-bit form it outperforms many 16-bit micros. The great advantage of the Jonos is that it's available in so many different configurations: from the entry level system with a Z80 processor and twin Sony drives to a Motorola 68000 machine with hard disks. There should be a model to fit every user's needs.

I'm not sure how relevant the portable aspect is to the average business user. As far as I can see, the main advantage of this type of 'portable' is that it takes up less desk space than a normal desktop — not that it can be carried around. However, I can see that the military/industrial version does benefit from portability.

I think it unlikely that the type of person interested in this machine will be worried about the odd few hundred pounds extra that it costs to buy. If you're looking for the cheapest machine on the market then there are many other 8-bit offerings that cost a good deal less.

The Jonos is apparently being aimed at specialist applications where performance takes precedence over price. This is emphasised by the fact that Jonos is looking for applications where the micro can be incorporated into other machinery and then sold as intelligent machine tools.

If you're looking for a high quality transportable micro where price is not too important, take a good look at this.

END

'available in two finishes — either aluminium cased for military/engineering use or leather-bound for executive environments.'

The hard disk utility is called 'FOCOR-OM'. This will happily format and verify as well as copy files from the floppy drive to the hard disk, but should only be used if something nasty happens to the hard disk.

The RAM disk doesn't need to be formatted, but files need to be copied from disk to it. To copy just a few files, it's best to use PIP. However, it's possible to copy an entire microfloppy onto the RAM disk by using a utility called RDLD. This can either load the contents of the floppy to the RAM disk or copy the RAM disk back onto the floppy. This utility is very fast — I filled a microfloppy with 320k of files and RDLD copied it to the RAM disk in 21 seconds. I then loaded it back onto the floppy again in 15 seconds.

Applications software

The Jonos is supplied complete with Microsoft's Multiplan spreadsheet, Lexisoft's Spellbinder word processor and Microsoft's Mbasic interpreter. Jonos is also in the process of implementing Software Limited's range of applications software, and Multiplan and Spellbinder are also available. A quick look at the Benchmark timings will show that the Mbasic implementation is very fast, especially when you consider that it's 'only' an 8-bit machine.

One of the user areas on the hard disk contains a range of games. This is unusual for a business machine but isn't as silly as it appears. Games are a good way of introducing the machine to new users who might otherwise keep away from the machine. One of the nicest games was called Aliens (very original) which runs in the best Space Invaders tradition. It seems strange watching aliens made out of 'O's and 'X's instead of the high-res graphics

engineering software.

Documentation

The documentation consisted of the biggest ringbinder I have seen in a long time, containing the basic users guide and the Mbasic, Multiplan, Spellbinder and Spellcheck user manuals. These were all photocopies of the manufacturers' documentation.

The main problem, as I said earlier, was that Jonos wasn't able to supply a CP/M 3.0 manual. As it turned out this was not too much of a handicap, but it was a pity because I hear that this is the first understandable manual Digital Research has ever produced.

Prices

These machines aren't cheap — the review machine would set you back £4890 which is a lot of money for a single user 8-bit machine. Having said that, you do get a state of the art 10Mbyte hard disk and a 320k RAM disk. The entry level price for a machine with two 3.5in Sony drives is £2425 which is still on the high side. Remember that it's

Technical specifications

CPU	Either:- Zilog Z80A running at 4MHz; or Zilog Z80B running at 6MHz; or Intel 8088 running at 8MHz; or Motorola 68000 at 8MHz; or Plus:- Intel 8085 to handle screen and keyboard.

Operating Systems	CP/M version 3.0, MS-DOS, BOS, MBOS, Unix

Newcomers start here

The baffling jargon of the micro world can be very off-putting at first. Life gets easier once you've been initiated. So here's our user-friendly answer to everything you've ever wanted to know about micro computing but were afraid to ask.

Probably the first thing you noticed on picking up this magazine for the first time was the enormous amount of unintelligible-looking jargon. In the words of *The Hitch-hiker's Guide to the Galaxy*: Don't panic! Baffling as it may sound, the jargon does actually serve a useful purpose. It's a lot easier to say VDU, for example, than 'the screen on which the computer's output is displayed'. This guide is intended to help you find your way around some of the more common 'buzzwords' you're likely to come across in the pages of *PCW*.

For those completely new to computing, let's start with the question: What is a microcomputer? We can think of a micro as: a general-purpose device in contrast to a typewriter, which can only be used for typing; a calculator, for performing calculations; a filing cabinet, for filing information, to name just a few of its functions. A micro can do all these things and more.

If it's to be of any use, a general-purpose device needs some way of knowing what to do. We do this by giving the computer a set of logical instructions called a **program**. The

general term for computer programs is **software**. Every other part of a micro-computer system is known as **hardware**: 'If you can touch it, it's hardware.'

Programs must be written in a form the micro can recognise and act on — this is achieved by writing the instructions in a **code** known as a **computer language**. There are literally hundreds of different languages around, the most popular of these being **Basic**. Basic is an acronym of **B**eginners' **A**ll-purpose **S**ymbolic **I**nstruction **C**ode. Although originally intended as a simple introductory language, Basic is now a powerful and widely used language in its own right.

Other languages you're likely to come across in *PCW* are **Forth**, **Pascal**, **Logo**, **C** and **Comal** to name but a few. These are known as **high level** languages because they approach the sophistication of a human language. You'll also see references in *PCW* to the **low level** languages, **assembly language** and **machine code**. We'll look at these in a moment.

The heart of a micro, the workhorse, is the **processor** or **Central Processing**

Unit (CPU). The processor usually consists of a single silicon chip. As with computer languages, there are a number of different processors available, the **Z80**, **6502**, **68000** and **8088** being just a handful (literally!) of the types in common use. The processor is nothing magical — it's just a bunch of electronic circuits. It's definitely not a 'brain'.

As it's electronic, the processor's circuitry can be in one of two states: on or off. We represent these two states by **binary** (base two) notation, the two binary digits (known as '**bits**') being 0 and 1. It's possible to program computers in binary notation, otherwise known as machine code (or machine language) programming.

Machine code is called a low level language because it operates at a level close to that 'understood' by the processor. Languages like Basic are known as high level languages because they are symbolic, operating at a level easily understood by people but not directly understood by the processor.

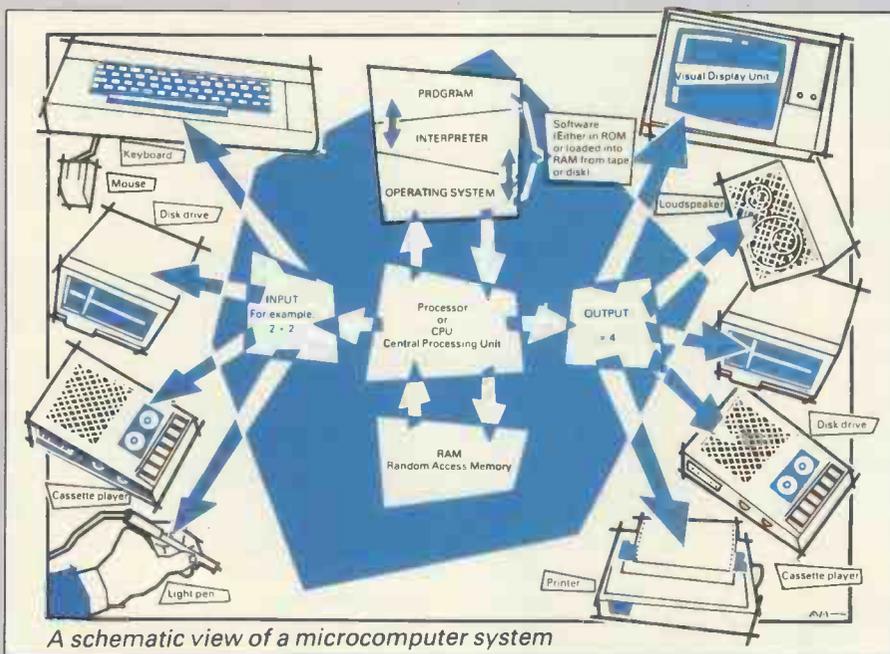

Between high level languages and machine code is a low level language known as assembly language or, colloquially, **assembler**. This is a mnemonic code using symbols which the processor can quickly convert to machine code.

Since everything has to be converted into binary form before the processor can make sense of it, we need some sort of code to represent each character to be processed by the computer. In order to simplify communication between computers, a number of standard codes have been agreed on. The most widely used of these codes is the **American Standard Code for Information Interchange, ASCII**. This system assigns each character a decimal number which the processor can then convert to its binary equivalent.

A program written in a high level language must be converted into binary before the processor can carry out its instructions. We could of course do this manually, but since this is exactly the sort of tedious job computers were designed to do for us, it makes much more sense to write a program to do it.

There are two types of program to do this translation for us.

The first of these is a **compiler** which translates our whole program permanently into machine code. When we **compile** a program, the original high level language version is called the **source code** while the compiled copy is called the **object code**. Compiled programs are fast to run but hard to edit. If we want to change a compiled program, we either have to edit it in machine code (extremely difficult) or we have to go back to a copy of the source code. For this reason there is a second translation program: an **interpreter**. An interpreter waits until we actually **run** (use) the program, then translates one line at a time into machine code — leaving the program in its original high level

A schematic view of a microcomputer system

language. This makes it slower to run than a compiled program, but easier to edit.

There are two unusual Basic words you're likely to come across: **POKE** and **PEEK**. When you program in a high level language, you are normally unable to choose in which part of the machine's memory the processor will store things. This makes programming easier as you don't need to worry about memory locations, but slows down the program since the processor has to 'look up' addresses for you. Using the **POKE** command, however, you can 'poke' a value directly into a desired memory address. 'POKE 10000,56', for example, puts the value 56 into memory location 10000. **PEEK** allows you to examine the content of a particular memory address. If you were to follow the above poke with 'PEEK (10000)', the computer would respond by displaying the value 56. **POKEing** and **PEEKing** is normally done to increase program speed, but may also allow us to do things which could not be done through Basic.

So far, we have a processor and a program. Since a computer needs somewhere to store programs and data, it needs some kind of **memory**. There are two types of memory: **Read Only Memory (ROM)** and the badly-named **Random Access Memory (RAM)**. ROM is so-called because the processor can 'read' (get things out of) its contents, but is unable to 'write to' (put things in) it.

ROM is used to store **firmware**, the name given to software permanently available on the machine. An interpreter is a typical example of firmware (stick with it: it gets easier!).

RAM differs from ROM in two important ways. Firstly, you can write to it as well as read from it. This means that the processor can use it to store both the program it is running and **data** (information). The second important difference is that RAM needs a constant power supply to retain its contents: as soon as you switch the computer off, you lose your program and data.

There is a type of RAM, known as **CMOS RAM**, which requires only a tiny amount of power to retain its contents. This is found in portable computers like the Tandy 100 and the Gavilan MC. It is usually powered by small ni-cad batteries so that programs and data are retained even when the main power is switched off. At present, CMOS RAM is extremely expensive and is not likely to be used in desktop machines for a little while yet. (CMOS stands for Complementary Metal Oxide Semiconductor).

Memory is described in terms of the number of characters we can store in it. Each character is represented by an 8 bit binary number. 8 bits make one **byte** and 1024 bytes make one **Kilobyte** or 1k. 32k, for example, means that the computer can store about 32000 characters in its memory. If 1024 sounds like

an odd number, remember that everything is based on the binary system, thus 1,2,4,8,16 . . . 1024 being the nearest binary multiple to 1000.

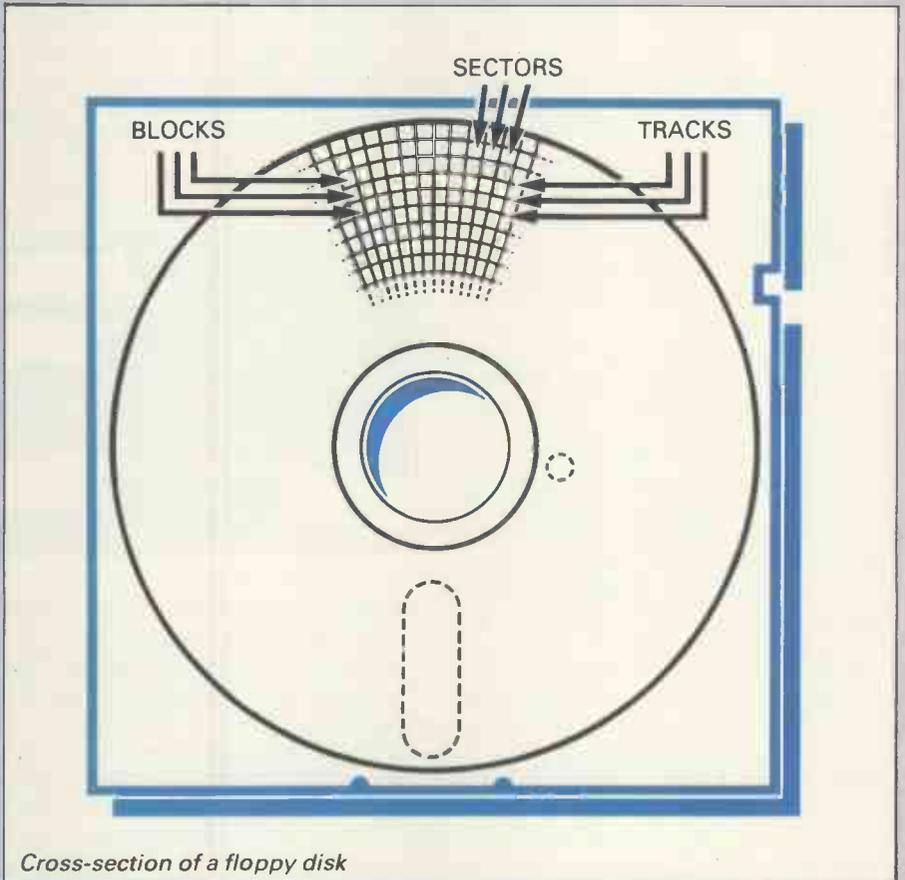

While we're on the subject of bits, you'll often see computers and their processors described in terms of their **bit power: 8-bit, 16-bit, 32:16-bit** and so on. This is a means of describing how large a binary number the processor can handle in one chunk. A binary number, incidentally, is known — confusingly — as a **word**. An 8-bit processor, for example, can handle 8-bit words, that is, up to 11111111 (255 in decimal). Anything larger than this has to be broken down into manageable chunks before it can be processed.

A 16-bit machine can handle bigger chunks of data at a time. This means it can handle ('address') larger amounts

form, turned into 16-bit, calculated and then the result turned back into 8-bit for transfer elsewhere, there may be little or no saving in time over an 8-bit system.

The other factor affecting speed is that the actual processing may form only a small part of the overall operation. A word processor, for example, spends most of its time passing files to and from disk and waiting for the user to type the next character. The processing itself consumes very little time. And if you look at the Benchmarks summary (PCW, December 1983, pp. 238-241), you'll see some 8-bit machines beating their 16-bit rivals — even in processor-bound operations like the PCW Benchmarks.

Returning to the subject of RAM for a moment, a word of warning: Don't rush

Cross-section of a floppy disk

of memory at one time. This is why most 8-bit machines have a maximum of 64k RAM while 16-bit micros usually have 128k upwards.

As 16-bit processors can handle larger words than an 8-bit machine, they ought to be twice as fast. In practice, however, there is a little more to it than that. While it may take a 16-bit machine half as long to work out that $2+2=4$, the actual processing is only part of the story.

The result of the calculation has to be placed into the appropriate memory location, passed to the screen or whatever is required. The transfers to and from the processor are often made in 8-bit form; this is why you'll hear people arguing that certain processors are not 'true' 16-bit. If the problem has to be handed to the processor in 8-bit

out with your new-found understanding to buy the machine offering you the most RAM for your money. Quite aside from the fact that the amount of RAM is by no means the only consideration when buying a micro (no matter how much manufacturers may stress it), different machines use differing amounts of RAM for things like graphics. Always check how much RAM is actually available to the user for program storage. Machines which proudly proclaim '64k' may well leave you with less than half of this in which to store Basic programs and data.

There are numerous forms of **permanent** or **back up storage**, but by far the most common are **floppy disk, floppy tape and cassette**.

Floppy disks or diskettes are circular pieces of thin plastic coated with a

magnetic recording surface similar to that of tapes. The disk, which is enclosed in a protective card cover, is placed in a **disk drive**. Disk drives comprise a high-speed motor to rotate the disk and a **read/write head** to record and 'play back' programs and data.

The disk is divided into concentric rings called **tracks** (similar to the tracks on an LP) which are in turn divided into small **blocks** by spoke-like divisions called **sectors**.

There are two methods for dividing the disk into sectors. One method is called **hard sectoring**, where holes punched in the disk mark the sectors, and the other is **soft sectoring** where the sectors are marked magnetically. The reason that disks from one machine can't be read by a different make is that each manufacturer has its own way of dividing up the disk. Recently, however, manufacturers have apparently begun to acknowledge that this situation can't go on forever, and they are working on making their disks compatible.

Since the computer needs some way of organising the disk, we have a program called a **Disk Operating System (DOS)**, usually known simply as the **Operating System (OS)**. The operating system does all the 'housekeeping' of the disks, working out where to put things, letting the user know what is on the disk, copying from one disk to another and so on. As you might expect by now, there are lots of different operating systems available, each with its own advantages and disadvantages. The three most popular OSs are **CP/M** (Control Program for Micros), **MS-DOS** (MicroSoft Disk Operating System) and **PC-DOS** (Personal Computer Disk Operating System). MS-DOS and PC-DOS, incidentally, are all but identical.

Disks can support what are known as **random access files**. That is, you can randomly choose a point in a file and the drive head will move directly to that point. You can then edit the file, and only the blocks affected will be rewritten. The rest of the file remains unchanged.

Floppy disks provide a reasonably fast and efficient form of secondary storage and are cost-effective for business machines. For home computers, however, the usual form of program and data storage is on ordinary cassette tape using a standard cassette recorder. This method of storage is slow and unreliable, but is very cheap and adequate for games, for example.

Cassettes can support only **serial access files**. That is, whenever a file is to be edited, the whole file must be written back to the tape. This makes certain applications — word processing being a prime example — extremely tedious.

Floppy tape drives are a compromise between speed and cost. They use a small continuous loop tape which, like a disk, is divided into blocks. Floppy tape drives rely on serial access files, but by rotating the tape at high speed and

using the block markers, they can simulate random access files. The Sinclair Microdrive is a floppy tape drive.

Another type of disk you'll see referred to is the **hard disk**. This is an extremely efficient method of storing large amounts of data. Hard disk capacity generally starts at around **10Mbytes** (10 million bytes) and rises to . . . well, you name it. Besides offering a much greater capacity than floppies, hard disks are more reliable and considerably faster. They are, however, much more expensive than floppy drives.

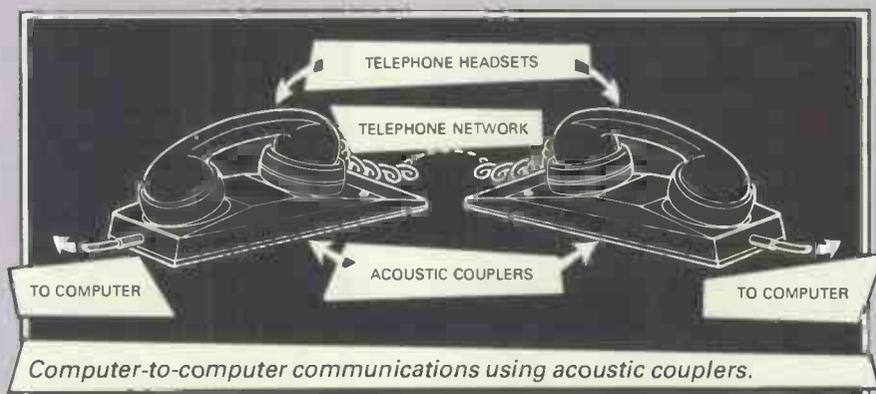

Since computers need some way of communicating with the outside world, we need **input** and **output** devices. Input and output devices include all manner of things from hard disk units to light pens, but the minimum requirement for most applications is a **type-writer-style keyboard** for input and a TV-like **Visual Display Unit** for output. The Visual Display Unit is variously referred to as a **VDU**, **Cathode Ray Tube (CRT)** and **monitor**.

The various component parts of

doing it (nothing is ever clear-cut in the world of micros — you'll get used to it). Both methods use the public phone network. The first is known as an **acoustic coupler**. This simply plugs into your computer, and has a receptacle into which you place your telephone handset. The acoustic coupler is convenient in that you can unplug it from one computer and plug it into another one in a matter of seconds. They are generally slow, however, and prone to interference.

The alternative method is to use a **modem**. Unlike an acoustic coupler, a modem is wired into the telephone system and you should get permission for this from British Telecom.

A term you'll hear used in connection with acoustic couplers and modems is **baud rate**. The baud rate is a measure of the speed at which a device can transmit and receive data. You can safely think of the baud rate as being bits-per-second, though the accurate definition is a little more complex. Therefore, a 300-baud modem can transmit/receive data at the rate of 300 bits (about 50 characters) per second.

Computer-to-computer communications using acoustic couplers.

a computer system (processor, keyboard, VDU, disk drives, and so on, may all be built into a single unit or they may be separate, connected by cables.

Take this paragraph slowly and it will make sense! When a computer communicates with an outside device, be it a printer or another computer, it does so in one of two forms — **parallel** or **serial**. **Parallel input/output (I/O)** requires a number of parallel wires. Each wire carries one bit, so with eight wires we can transmit/receive information one byte at a time (8 bits = one byte, remember). **Serial I/O**, in contrast, uses a single wire to transmit a series of bits one at a time (that's why it's called serial), with extra bits to mark the beginning and end of each byte.

To enable different devices to communicate with each other in this way, standards have been agreed for different **interfaces**. An interface is simply a piece of circuitry used to connect two or more devices. The most common standard serial interface is the **RS232** (or **V24**) while the Centronics standard is popular for parallel interfaces.

When two computers want to communicate with each other over a distance, there are again two ways of

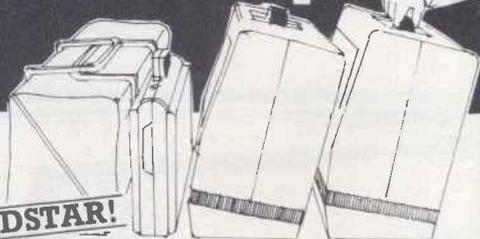

A 1200/75 modem means that it receives at 1200 baud but transmits at 75. Most modems are 1200/75 and acoustic couplers 300/300. By way of comparison, saving programs to cassette is normally done at between 300 and 1500 baud.

Finally, communications between computers is either **full** or **half duplex**. **Full duplex** is when the machine receiving the data echoes it back to the machine transmitting it and says 'This is what I think you said — is that right?'. If it's wrong, the section will be transmitted again. **Half duplex** is where no checking is made. If you're ever unsure of which to use, start with full duplex. If everything you type appears on your display twice, then you should switch to half duplex.

Now that you know the jargon, you'll excuse me while I go and initiate a file transfer from secondary memory to RAM in order to engage in some real time interactive processing with 32k 8-bit micro, using a direct entry input device and cathode-based visual feedback system. I never could resist a game of Pacman.

**COMPLETE BUSINESS COMPUTER
INSTALLED FOR UNDER £2,000**

Yes a complete system, Printer, Computer and programs for Accounting Spreadsheet and Wordprocessing. We supply spare disks, paper, dust covers, we even train your staff. Epson high quality equipment, Peachtree high quality programs (Peachtext, Mail list, Peachcalc) and Concordia expert help, an unbeatable combination to get you started. The simple to use QX 10. Ideal for the first time user, it also has the power and facilities to satisfy the most demanding expert. The price includes CP/M, MFBASIC twin double sided double density disk units, high resolution VDU, 192K RAM, a music generator and interfaces for RS232, Centronic parallel, and a light pen. Of course the QX 10 has 16 Bit precision, High resolution graphics, keyboard graphics, and many function keys. It also gives you 16 type faces to choose from and they all print out on the Epson printer. This package is really complete, no extras to buy, we even supply the 13 amp plugs. All you have to do is write the cheque (The price £1999 plus vat).

This could be the best investment you have ever made.

Lite Computers Ltd. is proud to announce the combination of the Lite 100 and Palantir, the most exciting word-processing package to hit the market to-date!

The LITE 100 can be used as a stand-alone word-processor, as a powerful 8-bit business computer, or it will convert your electronic typewriter into a word-processor without the need to purchase a printer! A wide range of application packages are available to run on the LITE 100 immediately, providing the facility for word-processing, accounting, stock-control, etc.

All this at the price of **ONLY £1,395.00!!**

Why not try **PALANTIR** for **ONLY £12.00?**

If you have an IBM PC, Sirius, Apricot or LITE 100 we will send you the entire software package so that you can use all the functions, including printing. Give the software a true test on your own system and when you buy the complete package (RRP £265, including the mailout facility) we will refund your £12.00.

We guarantee your satisfaction!

Make the most of your micro with these two new books

COMPUTING WITH THE ORIC 1

Ian Hickman

This new book is for all users of the Oric 1 micro. It complements the Oric Manual and can be used alongside it. An introductory section covers the initial switching-on and setting-up and is followed by some simple BASIC programming. Later chapters introduce more advanced BASIC, high-resolution colour graphics, the sound feature and interfacing, with a special section on the printer and another on machine code programming. A number of original programs are included in this practical guide.

Softcover 160 pages 0 408 01444 X £6.95

BBC MICRO PROGRAMS IN BASIC

Derrick Daines

A bumper collection of 27 games programs which utilise the excellent graphics and colour facilities of the BBC Micro. The games will run on the Model B or Model A with upgrade. Derrick Daines presents an absorbing variety of programs — you can run horse races, play word games, shoot torpedoes . . . even take on the role of Moses leading his people to the Promised Land! Each program is introduced with details of how it works, how to play it, the effects produced, and a list of variables used.

Comshare's trio

Mike Liardet examines three business spreadsheet products from Comshare: the inexpensive PlannerCalc, the compatible and up-market MasterPlanner, and the business solutions library.

There's a popular story that old computer hacks love to recount when mulling over their pint of real ale on a cold winter's night, concerning an XYZ International Mainframe Company. XYZ sells two versions of a computer—one cheap and low capacity, the other expensive and high capacity, and for a huge fee you can upgrade from the low to the high capacity. 'Well,' they say, expansively blowing cigarette smoke in my face, 'the only difference between them is a small jumper-lead which slows the cheaper one down!'

This story springs to mind when looking at Comshare's two spreadsheet systems. Comshare offers an inexpensive spreadsheet, PlannerCalc, and a compatible up-market product, MasterPlanner. PlannerCalc (Review, PCW, May 1983) is obviously intended as a loss-leader, just to get the users

moving the Comshare way. Then, when they become frustrated (or 'out-grow it', in marketing jargon) a simple upgrade to MasterPlanner should (hopefully) be the answer to all their prayers.

In practice, PlannerCalc has all the feel of MasterPlanner with a random sprinkling of 'jumper-leads', but does not hang together very well. I imagine that many users, frustrated by PlannerCalc, will be disinclined to opt for MasterPlanner. They might seriously consider taking their chances with an incompatible rival system, on the grounds that Comshare must have made an even worse job of the more complex product. In fact, they would be wrong to do this, since once Comshare lets out all those metaphorical jumper-leads (presumably put there by their marketing strategists), the software

comes to life and works in the way the writers intended in the first place. PlannerCalc actually serves as a poor advertisement for Comshare's more up-market product.

The third product under review is a 'business solutions applications library', a suite of pre-written MasterPlanner models with accompanying documentation. MasterPlanner is supplied with a ring-bound 150-page manual, organised into 11 chapters, five appendices and an index.

MasterPlanner is billed as an 'advanced business planning aid' for micros. In fact, it's available for three operating systems: CP/M, MS-DOS and CP/M86 (as a guideline, my review copy was for CP/M).

Getting started

MasterPlanner makes use of six function keys, to move cursor left, right, up and down, and an 'execute' and 'help' command. Using the installation program, it's possible to choose your own keystrokes for these keys. The documentation always refers to the 'execute' keystroke, and you must remember what key this represents on your own VDU.

The disks supplied by Comshare are not copy-protected, so it's possible to make working copies using the normal procedures appropriate to your operating system.

Once you have MasterPlanner on your working disks and installed for your VDU, you simply type 'MP' in response to the operating system prompt and off you go! The initial copyright screen gives the option of going straight into a 'help' session or

Spreadsheets—a guide for beginners

Spreadsheet software is useful to anyone who regularly uses a calculator.

The VDU screen acts like a 'window' on a large 'sheet' of numbers—neatly laid out rows and columns, occasionally interspersed with text headings.

By using a few quickly learned keystrokes it is possible to shift the VDU window to the desired point of interest. It is possible to enter text, a number or a 'formula' which can, if required, be a complex calculation referring to several other positions

on the sheet. The result of the calculation is displayed immediately with automatic recalculations throughout. Frequently an alteration on the top line of a spreadsheet can change everything from top to bottom in just two or three seconds—an exercise that would take several hours by hand!

Each month, the 'Which Spreadsheet?' series analyses and tests a different spreadsheet system. Further information for beginners can be found in the spreadsheet articles in the PCW February and December 1983 issues.

S · P · R · E · A · D · S · H · E · E · T

directly to 'command mode'. Choosing command mode causes the screen to clear and display 'status' information at the top, with a wide empty space in the middle and a 'command line' at the bottom. The empty space is reserved as a window on the spreadsheet itself, currently empty. The status information informs you of the amount of memory left, the name of the model you are currently working with, its 'width', and so on.

One of the most publicised features of MasterPlanner is its set of 'English'-like commands. Words like 'LINE', 'COLUMN', 'SUM OF', 'THRU' and 'CALCULATE' figure prominently in your dialogue with the system, but the usage of these words is very formalised and Comshare's claim is about as valid as the frequent but ludicrous claim that the Basic programming language is English-like. Nonetheless, a printout of the logic of a MasterPlanner model is eminently readable to the untrained eye. LINE 10 SALES = 100,200,300,400 causes two things to happen. Firstly, the word SALES appears at the top left of the VDU window with the numbers 100, 200 and so on to the right. Secondly, this text is retained in memory as part of the 'model'. The model and its spreadsheet display are maintained independently, and it's possible, by typing the MODEL and RESULT commands, to switch the display from one to the other. The use of 10 in 'LINE 10. .' has no connection with the tenth line of the spreadsheet but is used to determine the position of the LINE in relation to others in the model. If we now type LINE 9 COSTS = 30,40,50,60 the display changes with COSTS at the top and SALES immediately below it, because 9 precedes 10. The LINES are always displayed in the order they occur in the model. How do we insert a line between COSTS & SALES? MasterPlanner to the rescue! We can use line numbers with decimal places (9.5, for example). This is very similar to the way Basic works, and as with Basic we can change a LINE by simply retyping it. We can change the 30 above to 31 by typing LINE 9 COSTS = 31,40,50,60 which is a tedious way of changing one digit, so MasterPlanner also provides an editing facility for making changes of this nature.

The essence of any modelling system is in the 'logic' — the way calculations are performed. With MasterPlanner we

can enter LINE 11 PROFIT = LINE 10 - LINE 9, or alternatively LINE 11 PROFIT = SALES - COSTS.

The latter is preferable as it's comprehensible and doesn't need any modification if, for any reason, SALES or COSTS is moved to another LINE.

MasterPlanner provides a large number of facilities for building up the logic of your model and indicates shortcuts to circumvent excessive typing. LINE 24 OVERHEADS = 100, 200 FOR 10,300 will set up one 100, followed by ten 200s, and then 300s to the last column of the spreadsheet. LINE 3 INCOME = INPUT,30,40 requests the user to type the value for LINE 3 column 1 every time a calculation is made. This is especially helpful for what-if analysis: instead of entering values for every recalculation, the 'KEEP ON' command will temporarily override MasterPlanner's desire for INPUT. 'KEEP OFF' reverses its effect.

MasterPlanner also provides a GROW operation. LINE 38 COSTS = GROW LINE 3 [COLUMN 1] BY 10% results in a sequence of values each 10% greater than the previous. In this case, the first value is that contained in LINE 3 column 1.

For some models (for example, cash flow analysis) we need to introduce 'history' data for just a few lines of the model. With most spreadsheet systems whole columns need to be allocated for these few values, but not with MasterPlanner.

LINE 40 SALES (100,200,400) = 350,600,700
 LINE 41 GOODIES = .70 * SALES [-1 COLUMN]
 LINE 42 OKERS = .20 * SALES [-2 COLUMN]
 LINE 43 SODS = .10 * SALES [-3 COLUMN]

LINE 40 specifies that SALES for the first three months are 350, 600 and 700, and that they were 100, 200 and 400 in the last three months of the previous period. LINES 41 to 43 model our expectations of payments and show how row calculations can utilise 'offsets'. This model specifies that 70% of SALES will be paid for by the next month, thus the first value in the GOODIES line will be 280 (= .70 * 400). On the other hand, the first value in the SODS line will be 10 (= .10 * 100) and the next two values will also be calculated on the basis of the SALES 'history'.

By substituting 'COLUMN' for 'LINE', most of the above examples can be used to build up 'column-logic', but most modelling tends to require predominantly line-logic. Most COLUMN statements are used for assigning names to columns and the occasional

column total. For example:

COLUMN 1 JAN =
 ..etc..
 COLUMN 12 DEC =
 COLUMN 13 TOT = SUM OF COLUMN
 1 THRU COLUMN 12

As with LINES, COLUMNS are accumulated in the correct order in the model and always *after* the LINES. In some cases, it is convenient to allow a certain amount of LINE calculation to assign the wrong value to a particular cell, knowing that a subsequent COLUMN calculation will correct it. Conversely, it is also possible to protect a cell from a COLUMN calculation by prefixing it with a '#'.

Reporting

There are a variety of commands for controlling the report formats. Many apply equally to the screen layout although there are some screen-only commands, such as split-screening, which have no effect on reports.

Fig 1 is a complete printout of the model which produces the report in Fig 2. It provides a general idea of the extensive formatting facilities available

**BONSAI
INTRODUCES THE
£899
TAPE BACK-UP
for your IBM
Personal Computer XT**

If you've invested in an IBM PC XT or an IBM PC expansion unit, you're probably doing important things with your computer. Office work, lots of word processing or spreadsheets, even your whole company's accounts. Well done.

Now may we suggest that you think ahead to the unthinkable. Your hard disk may never crash and destroy all its files. Or you may never have a power failure right in the middle of a critical operation. Or human error may never intervene to erase vital information in a single careless flash. *But they may!*

That's why we've introduced the Sysgen Image. It lets you back up all your data — your entire hard disk — on a handy little tape cassette, in about five minutes. You can also back up and restore individual files and groups of files for even greater flexibility.

It's simply insurance against the unlikely event that you'll lose vital data from your XT's hard disk. If you can imagine what would happen if you somehow lost all your letters, cashflows, invoices, and addresses, we're sure you'll agree that at £899 the Image is very inexpensive insurance.

Ask your local IBM Personal Computer dealer for a demonstration. If he hasn't got an Image in stock yet, ask him to phone Bonsai. Or if you're in London, give us a ring to arrange a demo at our own showrooms.

Either way, don't wait until your first loss of data before buying your Image backup.

BonsaiTM
MICROCOMPUTER SYSTEMS
FOR PEOPLE IN BUSINESS.

in MasterPlanner.

It's possible to specify several lines of headings for the model using HEADING commands, optionally centering them (CENTER) and inserting spaces between them (SKIP). Lines or headings can be underlined (UNDERLINE), spacing between columns specified (SPACE), and numbers printed with decimal places (DECIMALS). These are

spreadsheet system, attempts to move off the edge of the area result in a realignment of the display to accommodate the new destination cell. This redraw is not as fast as I would like (see Benchmarks), but not slow enough to be frustrating.

Like some of the more sophisticated spreadsheet systems, MasterPlanner provides a split-screen facility: it also

are also DELETE and COPY commands for deleting and moving LINES or COLUMN's. Unlike most spreadsheet systems, there is no relative-copy facility. Normal spreadsheets need to have relative-replication for copying formulae typically across several columns, but MasterPlanner does not work this way — all columns are handled by a single formula.

It is also possible to edit in display mode. Move the cursor to the cell to be changed, press the return key, and MasterPlanner allows the number to be edited and redisplay your modification. This aspect of the software is quite ingenious, since the number changed may have been the result of a calculation and MasterPlanner also modifies the underlying LINE to be compatible with the new display. For example, if the third column in LINE 55 TAX = LINE 32 * 0.3 is changed to 123.45, then the LINE becomes LINE 55 TAX = LINE 32 * 0.3 FOR 2, 123.45, LINE 32 * 0.3

There is one method of editing to which the MasterPlanner manual gives no prominence. Models can be saved on disk in either internal or external formats. If you save a model in external format, it can be read by a word processor program and edited in the normal way. If you work this way, there is no guarantee that you are typing legal MasterPlanner commands, but as most word processors have a faster interaction than MasterPlanner then large sweeping changes or additions can be achieved more quickly by working this way.

Consolidation

Consolidation is needed when we have

	AUTUMN '83	WINTER '83	SPRING '84	SUMMER '84

NET INCOME	-1	18	33	67

Fig 2 MasterPlanner demo

just a few of the possibilities for designing a report. Note that a heading is centred on the page, not over the columns printed — thus the headings in Fig 2, printed on 132-character stationery, appear distinctly off-centre in this example.

Most of the above commands are not only applied globally, but can also be written for individual LINES or COLUMNS:

WIDTH FOR COLUMN 10 = 7

DECIMALS FOR LINE 8 = 5

will override the normal display requirements for the LINE and COLUMN indicated.

The PRINT command is used for making reports, not resulting in an instant printout but first presenting the user with a menu. The user can optionally exclude parts of the normal printout, printing direct to disk-file instead, change paper margins and so on. These options can be used to enable draft printouts to arrive that much quicker with headings excluded, and for printing models that are too wide for the printer in stages.

Spreadsheets & editing

MasterPlanner's normal display is predominantly a window on the spreadsheet itself. By pressing the 'execute' key (control-E on my VDU), MasterPlanner closely resembles an orthodox spreadsheet system, referred to as 'display mode' in the manual. A cursor appears over one of the cells, and this can be moved from cell to cell by pressing the arrow keys. Like any other

provides a quartering facility, where four disjoint areas can be on view simultaneously.

MasterPlanner provides several alternative methods of editing information. One method involves using the EDIT command applied to a LINE or COLUMN, which causes the original entry to be redisplayed on the command line. With a few keystrokes, characters can be deleted, added or overwritten. After pressing the return-key, MasterPlanner treats the new text as if it was entered from scratch. There

Fig 3 Merging information into corporate report

Into a world of chaos, clutter and conflict-OZ brings control!

OZ combines sophisticated management techniques with utter simplicity to give you total control over your business. Whether it's for corporate managers, small businesses, line managers, financial analysts, controllers, sales managers, engineers or investors OZ will change the chaos, clutter and conflict into simple, effective and total control.

CONSOLIDATION

Managers don't have time to teach their computers about business. With OZ they don't have to. OZ will actually store your organisation chart as an organisation chart and all data relationships will be controlled by this simple chart. So OZ will automatically perform consolidations for you on any organisation up to 50 units. OZ will make your re-organisations and mergers as easy as touching a key. It can't get much easier than that.

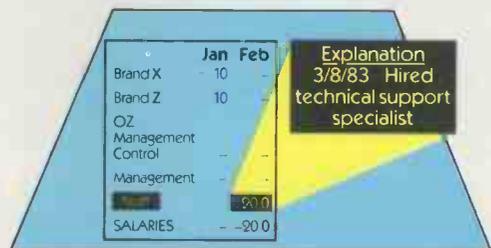

FINANCIAL REPORTS

Description	Y-T-D	O/U Budget
Brand X	10	-
Brand Y	15	-5
OZ	20	10

With OZ, the profit and loss forecast is always up-to-the-minute because OZ will up-date it automatically whenever it's needed. Not only that, but also the annual budget is always available for comparison at the touch of a single key.

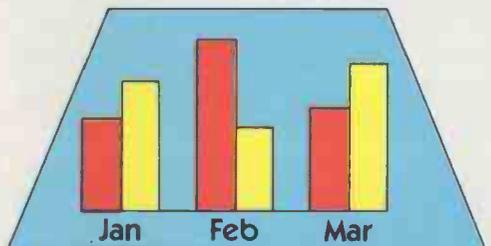

In addition OZ provides a complete reporting package with indicators such as: actual vs budget, quarterly actuals and full year forecasts. And as all reports are presentation-quality you can use them immediately. Finally, to back up reports OZ gives you a 3D financial analysis capability so you can view your information in a way that's precisely relevant to what you're analysing.

VARIANCE ANALYSIS

Business managers must know whether they are 'on plan'. OZ has a variance analysis system that will assist in understanding when and why performance is 'off the mark'. With OZ you can look at variances for all the line items by month and by department then, at the touch of a key, get the reasons which explain the variance. OZ gives you complete control over your costs.

COLOUR GRAPHICS

With just a single keystroke OZ lets you see important trends as a colourful chart on screen. There is a wide variety of formats and OZ prints or plots any chart instantly with just one keystroke.

CALL MICROCENTRE FOR CROMEMCO

CROMEMCO C-10MP

Cromemco's C-10 personal computer includes a Z-80A microprocessor with 64K Bytes RAM, 24K Bytes ROM, high resolution 12" green phosphor 25 x 80 screen, detached keyboard, 5" floppy disk drive with 390K Bytes capacity, communications and printer ports, terminal emulation, graphical characters, CDOS operating system and 32K Structured Basic.

In the C-10MP we add a software "Super Pak": a full screen editor, WordStar, MailMerge, Writemaster, CalcStar and PlanMaster spreadsheet programs, Chess game, MoneyMaster financial analysis and InfoStar data base management system.

The System One Hard Disk computer, with an integral 21 Megabyte Winchester hard disk, includes Cromemco's dual 68000/Z-80A DPU processor (featured below), with 256K Bytes of RAM and 390K Bytes of floppy disk storage.

The S-100 bus has eight card slots, sufficient for expansion utilising Cromemco's range of interface cards for high resolution colour graphics, process control, analogue-digital data conversion and telecommunications.

A choice of operating systems includes CDOS, CP/M and CROMIX.

CROMEMCO CS-1HD2

Cromemco's Dual Processor Unit is the ultimate professional micro-computer. It combines the flexibility of Z-80A 8-bit systems with the speed and versatility of 68000 16-bit technology and an address space of up to 16 Megabytes of RAM.

The DPU can be installed in several Cromemco computers, including the CS-1 featured above. For larger applications we recommend the CS-2, with up to 4 floppy disk drives, each of 390K Bytes capacity, an optional 21 Megabyte Winchester hard disk, screen and printer interfaces plus a 21 slot S-100 bus – sufficient capacity to cope with the most demanding industrial or laboratory requirements.

CROMEMCO DPU

With over 5 years experience of Cromemco systems, we are Cromemco's leading British distributors.

Fig 4 Logic for producing independent reports

several divisions in an organisation and we need to merge information into one corporate report (Fig 3 shows reports on Divisions A and B independently, and then on A and B combined). Both independent reports were produced using the same logic (Fig 4).

The consolidated report is produced by first loading the Division A model using the normal MasterPlanner command. Then the command CONSOLIDATE DIVIB reads in the Division B model and overlays it on the existing model, adding together values wherever they coincide. A quick change to the heading is all that's then needed to produce the consolidated report.

It is possible to consolidate more than two divisions by simply repeating the CONSOLIDATE command, and it's even possible to 'weight' divisions so that they don't all make an equal contribution to the final corporate report.

Fig 5 Models contained in business solutions applications library

tions may necessitate a long sequence of commands to be typed in, leaving room for error (for example, consolidating the same division twice). If spotted, you will have to start again, and if not spotted — that's even worse! Ideally, MasterPlanner should accept input from command files, where the entire sequence of commands can be set up on a file once and for all.

PlannerCalc v MasterPlanner

PlannerCalc does not have a consolidation command and lacks some of the powerful file-handling commands of MasterPlanner. Parts of MasterPlanner models can be selectively written to disk files, and it's possible to write MasterPlanner models or reports to disk in a format that can be read or written by other programs, such as word processors.

MasterPlanner has more formatting commands, more sophisticated report-

build up some of the more complex models. This library is analogous to the TK!Solver packs released by Software Arts (see TK!Solver review, PCW, February 84).

The 18 models cover a wide range of applications (see Fig 5). Each model is well documented, can be loaded in the normal way and freely modified.

Fig 6 gives a partial printout of a thirty year mortgage calculation. It's possible to build on this model to add mortgage extensions, tax concessions and so on, but the basic groundwork is already done for you.

Conclusions

The Comshare trio of products contains some very interesting features not found in any other spreadsheet products, but is somewhat let down by poor documentation and rough edges on the actual software design. The concept of two compatible products and an applications library is very neat, and (I believe) unique.

	1	2	3	4	5	6	7
Mortgage	61,000.00						
Int rate	0.14						
Annual cost	8,711.21	8,711.21	8,711.21	8,711.21	8,711.21	8,711.21	8,711.21
Month cost	725.93	725.93	725.93	725.93	725.93	725.93	725.93

Fig 6 Mortgage calculation (30 year term)

ing facilities and a larger capacity for holding models, and in general I found the MasterPlanner manual better (or rather less bad).

As an optional extra there is an applications library containing 18 different models for use with MasterPlanner, and with a few exceptions, PlannerCalc also. This library can serve two purposes — as a source of ready-worked applications, and also as tutorial material demonstrating how to

The nearest comparable product covered in Which Spreadsheet is Ashton-Tate's 'The Financial Planner' (PCW, December 83). I certainly preferred MasterPlanner to The Financial Planner in spite of its poorer documentation, but the world is still awaiting a properly engineered marriage of new spreadsheet technology with old financial planning techniques. Maybe a latter-day Lotus will come up with the goods!

END

Benchmarks & contacts

These tests were run on a 56k CP/M system with a 2 MHz Z80 processor. 16-bit operating system versions should have considerably greater capacity.

Spreadsheet size: 1000 columns wide by 5000 lines.

Max column width: 30 characters.

Benchmark 1 (a) Maximum rows accommodated: 70.

1 (b) and 1 (c) Recalculation time: 33 seconds (2+ rows per second).

1 (d) Vertical scrolling: 0.3 rows per second.

1 (e) Horizontal scrolling: 0.5 columns per seconds.

Benchmarks 2 & 3: Not tested.

PlannerCalc: £85 + VAT

MasterPlanner: £245 + VAT

It's lonely at the top TULIP SYSTEM[®] I of CompuData.

WANTED: THE U.K.'S TOP 50 DEALERS

CompuData markets one of the most powerful and fastest micro computers in the world.

This is due to the application of an 8086 microprocessor and an 8087 arithmetic co-processor. The fourth generation is now a fact; not only is speed important, but also the ergonomic requirements satisfied. The ease with which the TULIP SYSTEM[®] I can be operated is unparalleled, partly due to the vast keyboard with its 104 keys. What is more, TULIP SYSTEM[®] I can be used with many types of available software.

Internal memory capacity is 128 k minimum extensible to 896 k. Floppy disk units are 800 kb formatted. A 350 Kb unit is also available for low cost applications. For high speed and high capacity requirements, hard disk units, using Winchester technology, are available in capacities of 5 and 10 Mb.

The 8 standard character sets ensure maximum flexibility. The colors and the high resolution graphics make the TULIP SYSTEM[®] I unique. Contact your dealer, he can tell you all about it, or write CompuData.

Computer • Processor: 8086, 8087 (opt) • Clock: 8 Mhz • RAM: 128-896 Kb • Serial I/o: RS-232 • Parallel I/o: Centronics comp. • Interfaces: Hard-disk, tape, lightpen • Fl. disk controller: 8 inch + 5 1/4 inch • Buffered Keyboard: 104 keys
Storage • Floppy disk: Dual 5 1/4 inch; 1.5 Mb • Hard disk - fixed: 5 Mb, 10 Mb Display • Formats: 80 x 25, 64 x 31, 40 x 25 • Low res. graphics 100 x 160 • High res. graphics: 786 x 288 (opt) • Colour: 8 • Internat. char. sets: 8 softw. selectable.

Wren

UK company Wren Computers has adopted the tried and tested method of proven technology rather than leading edge innovation in the design of its business micro, the Wren. This £1000 transportable boasts something for everyone. David Tebbutt reports.

The Wren personal computer sets out to be all things to all men and, astonishingly, it seems to have succeeded.

At first glance it appears to be a good-looking, compact, transportable business machine. It has two disk drives, a proper keyboard and a normal 24 line by 80 column display. It runs a version of the CP/M operating system and is supplied with a range of useful business programs. Look below the surface and you discover that it has high resolution graphics and colour capabilities, although you'd need a separate colour monitor to take full advantage of these. Look even deeper and you'll find a version of BBC Basic and four sound channels. Finally, you

discover a three month free subscription to Prestel and Micronet 800 and a built-in modem which allows you access to these, and other, services.

Adam Osborne, the man who created the transportable market, once said: 'Those who operate at the cutting edge of technology shall be sacrificed upon it.' Wren Computers appears to have taken this advice to heart. In a sense the Wren is very traditional because it uses proven hardware and software components but has merged these in what I believe to be a unique and potentially successful way.

Wren is a new company jointly funded by Transam and Prism, who between them designed the machine. For those new to the personal computer

business, Transam is a well established London dealer and distributor which has also designed and sold its own computers. Prism is probably best known for its Sinclair distributorship although it has recently ventured into the home robot business too. The Wren is being manufactured by Thorn EMI and distributed by Prism.

Hardware

The Wren is a very good-looking machine in terms of size, layout and colour scheme. It is robust and well made. The pleasant blend of cream and dark brown somehow contrives to make the machine look light. It came as something of a shock when I picked up the prototype and found that it weighed

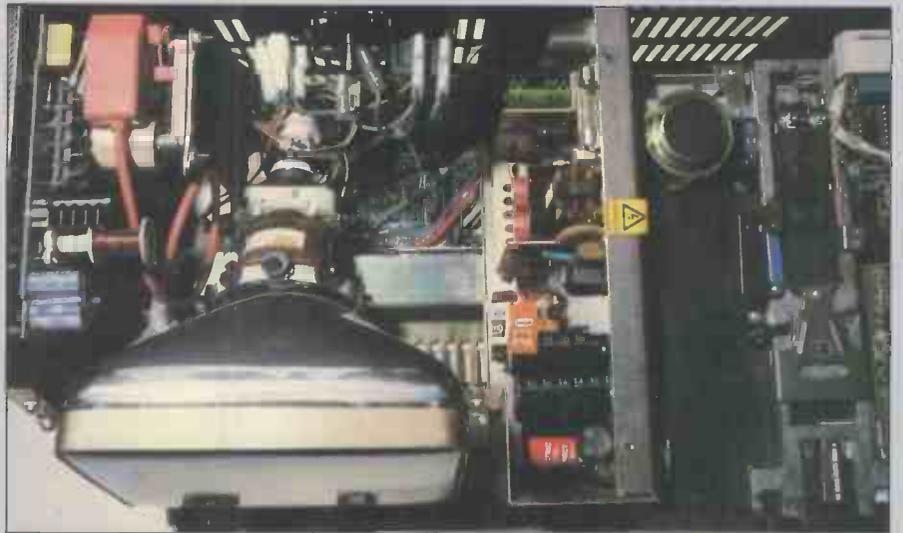

26lb. The production machine is expected to weigh a more healthy 20lb.

The machine is really in two parts, although you'd have a job to separate them. The flat base encases an enormous printed circuit board which contains all the central computer circuitry. The sloping keyboard is mounted at the front of this base, and a full width carrying handle at the back. A number of connectors are visible on the rear edge of the base. Reading from left to right, they are: modem, paddle controls, RS232C, winchester, printer and colour output. A tiny reset button is tucked between the last two ports.

The top part of the machine contains a 7in Toshiba flat-faced display screen and two half-height, horizontally-mounted 5¼in disk drives. The power supply lead enters the machine at the rear of this upper unit. A novel feature of the Wren is that the entire top part of the machine slides forward to cover the keyboard at the front and to reveal the carrying handle at the rear. A clip-over cover fits on the front of the assembly and there is enough space inside for your working papers and disks. The telephone and power supply cables fit nicely under a hinged cover at the rear when in transit.

The screen displays characters in a pleasant amber colour on a grey background. Eight shades may be displayed or, using an external monitor, eight colours. Most business applications would use the normal amber/grey built-in screen. In addition to the normal 24 x 80 layout, the screen can emulate Prestel's 24 x 40 characters or give 256 x 512 graphics pixels (picture elements or dots). A television adaptor is available as an optional extra which would be useful, for example, if you wanted to get the benefit of Prestel's colour displays but without the expense of a monitor.

The screen automatically blanks if the keyboard is inactive for more than

The enormous printed circuit board is well laid out

ten minutes. (You may vary this duration between one and 34 minutes with the CONFIGUR command.) A red light on the keyboard will remind you that the machine is still active. The prototype machine wasn't properly adjusted, a light band ran down the left hand side of the screen and the display was a little 'pin cushiony'. I also noticed that if column sixteen contained a character then a single column of the character matrix would repeat itself in the first column of the previous row. No doubt these problems will be resolved in the production machines. Brightness and contrast controls are under the cover at the back of the screen housing.

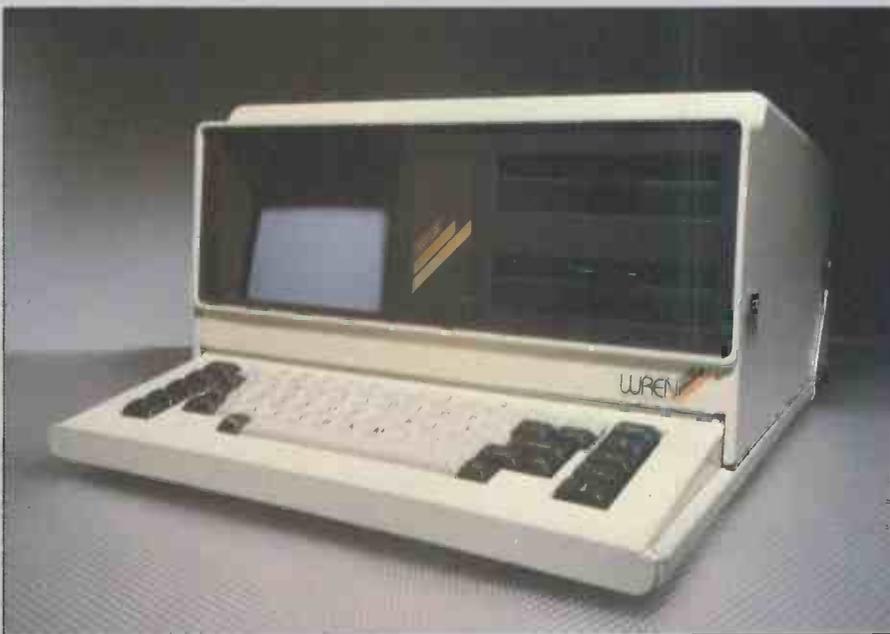

The disks are very compact units and they worked well. The catch on each drive was rather peculiar in use but Wren assures me that different ones will be used in the production models. The only other odd thing I noticed was that despite all the ventilation space inside the machine, the top disk drive did get rather hot. Each 40-track, single sided, double density disk has a usable capacity of 190k and the drives can read

SuperBrain format disks, something I found particularly useful because I run such a machine at home. I transferred a number of programs to the Wren with complete success. For some reason, and I suppose it could be seen as an advantage, the drive light stays on even after the motor has stopped.

Moving down to the keyboard, there is a perfectly pitched set of keys which at first feel rather toy-like because their travel is limited. It's like the difference between a conventional electric typewriter (remember them?) and a portable machine. The keys are not nearly as proud of their surround as is usual, but unless you are a real keyboard connoisseur, I don't suppose this will bother you. 67 keys are provided, comprising the normal qwerty set plus five function keys, two Prestel control keys (hash and asterisk), home and the four arrow keys. I don't do much mathematical work so I didn't feel the absence of a numeric keypad. Dispensing with the pad is a good way for transportable computer makers to keep the width, and therefore the weight, down.

A light shines on the CAPS LOCK key when it is locked into position — an unusual refinement in such a low cost machine. The function keys may be accessed in conjunction with SHIFT or CTRL giving a total of 15 user-definable functions from these five keys. The HOME and arrow keys are also user-definable and there's no reason why you should not use these as function keys too. The only restriction is that they have the same meaning regardless of the position of the SHIFT and CTRL keys. The only really peculiar thing about the keyboard is that it does not have a 'E' keytop although, as with many machines, it can be displayed using the hash sign. In fact, the entire character set may be redefined and alternative sets stored on disk.

An autodial modem is included inside the machine and using this I had no problems connecting up to Prestel and Micronet 800. Prestel transmits at 1200 baud and receives at 75 baud. Although

Aesthetically pleasing and hardwearing: the transportable Wren

B E N C H T E S T

I didn't try it, the Wren can handle 1200/1200 speeds as well. A supplied cable connects the Wren to the modern style of BT (British Telecom) wall socket. It is even possible to get application programs to make your phone calls for you. For this you would need a double socket — type 600 I believe —, one for your Wren, the other for the telephone.

The two DIN paddle sockets can be used for any type of analogue input to the computer. Up to six such inputs are catered for by this machine. The Centronics parallel printer port worked a treat and I almost managed to get my printer working from the RS232C serial port. I did send stuff down the line but I couldn't get the handshaking right. I ended up with gibberish on the paper and my first disappointment with the documentation.

At first I had trouble figuring out the CONFIGUR and DEVICE programs, both of which are necessary to set up the serial port. Incidentally, you can get this port talking at speeds from 75 to 19200 baud. More or less by trial and error I got all the software tuned up to my printer's requirements, but then I discovered that a much needed appendix was missing from the draft manual. This is the one which is going to explain what signals are expected on the various wires at the Wren end of the RS232C link.

Without that I was stumped and at 10pm on a Sunday evening there was no way I could be rescued by Prism or Transam. Get your dealer to show it working with a serial printer if you're worried. I'm certain that it will work. A winchester disk socket promises hard disks to come and the DIN RGB (Red, Green, Blue) socket gives splendid results when connected to a colour monitor.

Inside

Opening up the machine was simplicity itself. Two screws hold the metal base

in position. Once removed it was a simple case of grabbing the carry handle and sliding the base off to reveal the enormous PCB. Three more screws hold this down and their removal allows the PCB to be swung up (if the machine is upside down). The board is well made and very neatly laid out although there were quite a few extra wires taped around it. This is often the case with a prototype machine. I noticed that all the ports mentioned earlier are attached to the rear edge of this PCB and they have no other means of support. In other words, be gentle if you tend to plug and unplug printers and the like regularly.

For the technically minded, the Wren is driven by a 6MHz, Z80B processor which makes it very fast. Most machines of this type run at 4MHz. It is delivered with 64k RAM with an option for 256k and a separate 32k of video RAM gives the high resolution colour graphics without robbing the user of memory. 8k of ROM provides diagnostics which check the machine each time it is switched on. 50 bytes of battery-backed CMOS RAM are used to store the time and date.

The review machine had a grotty piezo-electric speaker sellotaped to a couple of the chips. The sound generator provides three sound channels and a noise channel. In this respect the Wren ceases to be a business machine and begins to feel more like an up-market home computer. And why not? Since it's transportable, who knows what its owners will get up to out of hours? I suspect that the musically-minded could have some fun with the eight built-in envelope shapes. Wren itself decided to use its sound facilities to implement a 'bell' which sounds when invalid keys are pressed — it's an impressive effort but it sounds ghastly.

The top casing of the machine is even easier to remove than the bottom. Two screws hold it in place and when these are removed a nudge forward and a lift

Integrated and compact disk drives

are all that's required to reveal the power supply, disk drives, screen and associated circuitry. Once again this is impressively constructed and extremely clean and airy.

Applications software

Transam, joint designer of the Wren, has been selling computer software for several years now and it has found Perfect Software's range of products particularly popular. Not surprisingly, it has chosen three of this company's products to give away free with each Wren. Perfect Calc, Perfect Writer and Perfect Filer give the popular spreadsheet, word processing and file management applications. Add to this a communications package, the CP/M Plus (alias CP/M 3) operating system, BBC Basic and Quantec's Executive Desktop and you begin to see what an impressive package the Wren represents.

I didn't try all of Perfect Software — the review would have taken months. I did, however, have a look at Perfect Writer and, despite my known addiction to Spellbinder, found it a very acceptable package. According to the manual, Perfect Writer can handle up to seven documents concurrently with two visible at the same time. It can create indexes and help concoct contents pages with the correct page numbering according to the content of your document.

Commands are mnemonic and, providing you know your way around the keyboard, are easy to find and use. Letters are used in conjunction with either the CONTROL or the ESCAPE key and you will find, for example, that 'F' is used for forward movements and 'B' for backward ones. Deletion is done with 'D' and so on. The letter 'A' was chosen to go to the beginning of things and Perfect Writer suggests you remember this by thinking of 'A' being the beginning of the alphabet. Corny perhaps, but it works.

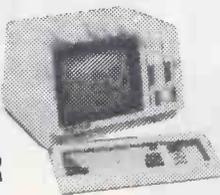

Neatly designed keyboard, even if the keys feel rather toy-like

BENCHTEST

A nice touch is the 'Yank back' facility (would you believe control-Y?). This brings back stuff you've accidentally deleted. Perfect Writer happily exchanged data with BrainStorm (see PCW January) which I was using to develop the Benchtest. All in all, I was impressed with my limited exposure to Perfect Writer which is more than I can say for my first sessions with WordStar.

I had a go at using the communications package and I found it excellent. I live outside London and it was a simple matter to change the telephone numbers of the various Prestel locations. Getting into Prestel was a doddle too, but what a disappointment once I was there! Unless you need bang up to date information I reckon Prestel is a pain. Even at 1200 baud it is a bit slow in operation. It's about 18 months since I last used Prestel in earnest and I must say that my impressions have not improved any. But then again, it is not expensive to use it occasionally and, who knows, it might get better.

I turned to Micronet's Bulletin Board hoping to find inspiration but, no, that was little better than graffiti. Nerds were leaving nerdy messages and, I regret to say, the staff of the service were adding almost nerdier replies. Finding that a big turn off, I thought I'd have a go at the lonely hearts mailbox. It was funny in parts but was really just the same sort of drivel but on a different subject. Still the link worked and for those of you who need to access Prestel or who have faith in it improving, you will encounter few problems using the Wren as your terminal. I was almost relieved when I left a magnetised screwdriver near the comms disk and zapped the terminal program.

Of course the 1200/1200 link has far more uses and that is supplied with the machine too. Domestic users pay £5 per quarter to belong to Prestel, £8 per quarter for Micronet and connect time costs 5p per minute during working hours (8am-6pm Monday to Friday and 8am-1pm on Saturday). At all other times there is no access charge. In addition you will pay the cost of a local telephone call for the duration of your connection and, occasionally, you will want to access a frame which will cost you money. In these days of electronic mail, I think we're all going to be hooked into using comms facilities sooner or later.

The Executive Desktop package was written by Quantec to Wren's requirements. It is an interesting suite of programs designed to be running on the user's desk pretty well at all times. Accordingly it contains many functions considered essential to a busy executive's well-being.

The suite is in seven parts: Time Management, Addresses, Deskfile, Filing, Calculator, Typewriter and Utilities. At first glance it's horrendously complicated but, like most packages, if you take your time and read the instructions you soon get the hang of it.

Time management is a diary system which can cater for appointments, events and straightforward notes.

Deskfile lets you design forms for different occasions. For example, you may have memos, letters, reports, budget forms or expense claims. With this system you simply enter the design once and every time you want to fill in a form, call it from this file.

The Filing system gives you an unusual arrangement of headings so that you can easily code each document for filing under a particular heading.

The Addresses file keeps your addresses in three categories: Business, Personal and Places. Since each directory is limited to 152 entries, this gives a total of 456 names and addresses online. This means the Deskfile is limited to 152 pages of information too but each page could be a different design. It also means that the diary is limited to around 30 working weeks.

None of these limits would bother the average executive. What might bother him is the effort needed to learn how to use Executive Desktop fully. The end product is not as slick as many programs you see on the market but it is definitely usable and I must admit that the more I used it and discovered short cuts, the more I enjoyed it. Executive Desktop can even make phone calls for

you and tell you when to pick up the handset.

Finally, the Calculator facility emulates a simple four function calculator with memories and the Typewriter actually lets you use the machine and printer like a typewriter. This is great for the swift memo. There were a number of aspects of the package which could best be described as untidy but then it does come 'free' with the Wren and I really don't think I should complain.

Other programs I ran were Microsoft's MBasic and Caxton's Cardbox. These worked perfectly which bodes well for other suppliers of standard CP/M packages. The Wren's comprehensive set of graphics characters were easily implemented to give smart screen displays. In general the screen attributes are compatible with the Televideo TVI 910.

Systems software

A Wren menu is supposed to be on every disk. This displays the programs available at any time and, using a combination of SPACE and RETURN keys, you can quickly and easily load and start running the program you want.

CP/M Plus is a vast improvement on the old-fashioned CP/M 2.2. It allows you to work in the old ways but is far more forgiving of errors and understanding of the user's needs. With the utilities provided you can design new character sets and switch between them. You can change the details of the function keys and access some of the more arcane aspects of CP/M through

CONFIGUR	sets up system characteristics
COPYSYS	was SYSGEN
CRAM	loads different character set
DESIGN	designs new character set
DEVICE	replaces device assignment aspects of STAT
DIR and DIRS	directory and directory of system files
DIR (options)	greatly enhanced DIR
ERASE	as ERA but with confirmation option
FC	format and copy
GET	can treat a file as console input
HELP	variety of explanatory notes on CP/M Plus
INITDIR	activates time/date stamp capability in directory
KEYDEF	defines function and home/arrow keys
PIP	good old PIP
PUT	diverts console output to printer or disk
RENAME	as REN but allows wildcards
SET	sets time/date and file/disk attributes. NOTE: timestamping reduces the directory size to 47 entries (from 64)
SETDEF	sets drive search sequence for program loading and sets display modes on and off
SHOW	displays drive information
SUBMIT	as old version but accepts parameters and data
TV	switches on TV 40 column mode on CRT or monitor
TYPE	as old TYPE but with page mode option
USER	as old USER

Fig 1. CP/M Plus overview

THE INDUSTRY STANDARD INTERFACE

**FULLY
MICRODRIVE
COMPATIBLE**

From
£39.99
Inclusive

At last you can have real print performance from your ZX Spectrum with the Kempston Centronics Interfaces. As the Interfaces allow you to link your ZX Spectrum to any of a vast number of printers with an industry standard centronics input, you can choose the printer that suits your needs – from high speed dot matrix to professional letter quality printers.

We recommend Epsoms, NEC, TEC, Seikosha, OKI Microline, Tandy GP115, Star DP 510, Shinwa, Brother HR15, etc.

NEW INTERFACE E – ONLY £55.00
Simply plug in and it's ready to use. All operating commands are held in an EPROM so LLIST, LPRINT and COPY can be used at any time without using up valuable user RAM. COPY will allow the reproduction of high resolution graphics with Epson (or derivatives) and Seikosha 80, 100 and 250 Series printers. Print width selection from 32 characters to full width depending on printer used.

INTERFACE S – ONLY £39.99
Visually identical to Interface E but without the EPROM, Interface S also recognises the LLIST & LPRINT commands and will allow print width selection from 32 characters to full width.

However, software routines will need to be loaded before use. Full screen dump to reproduce high resolution graphics is also

possible and supporting software is supplied to operate this facility with Epson and Seikosha printers. The software routines that are necessary to initialise the interface are held in the printer buffer so valuable user RAM will not be used up. There is a growing range of Business/Utility software that includes these routines. Details available on request.

Either interface simply plugs into the ZX Spectrum expansion port or interface and is supplied fully cased with a one metre ribbon cable which connects to the printer of your choice. Full instructions are included and driving software is supplied with Interface S.

KEMPSTON CENTRONICS INTERFACE COMPATIBLE SOFTWARE UTILITIES. FOR THE 48K SPECTRUM.

FINANCE MANAGER (OCP) – Menu driven program for all domestic and business accounting applications. **£19.95**

ADDRESS MANAGER (OCP) – Simple index filing system ideal for names, addresses, etc. Various search facilities. **£19.95**

FULL SCREEN EDITOR/ASSEMBLER (OCP) – Allows you to write Z80 assembly code using standard mnemonics on full screen. **£19.95**

WORD PROCESSOR (TASWORD TWO) – (TASMAN) A professional word processor allowing 64 characters per line and incorporating all usual editing facilities. **£13.90**

OMNICALC (MICROSPHERE) – The only spreadsheet written entirely in machine code. The easy and fast way of solving any numerical problem. Ideal for cash flow forecasting to concrete stress analysis. **£9.95**

MASTERFILE (CAMPBELL SYSTEMS) – Filing and retrieval system for domestic or business use. Files can be loaded and saved independently. Microdrive compatible. **£9.95**

NOW WE CAN ALSO SUPPLY YOUR PRINTER.

We've looked at the printers currently available and have selected what we feel is best value for money in dot matrix and daisy wheel printers:

EPSON RX-80 F/T – A dot matrix printer allowing full graphics dumping and a choice of printing styles. Speed: 100 C.P.S. **Price £325 Inc. VAT and Delivery**

BROTHER HR15 – A daisywheel printer ideal for letters, mail shots, documents, etc. Many typefaces available by changing daisywheel. Duplication facility but no graphics. Speed: Up to 18 C.P.S. **Price £425 Inc. VAT and Delivery**

plain English commands. For example, 'SHOW' and 'COPYSYS' are more meaningful alternatives to 'STAT' and 'SYSGEN'. Some things never change — 'PIP' is the same as it always was. (See Fig 1 for a summary of CP/M Plus.)

BBC Basic is the supplied language with the Wren. Although the processor is a Z80, a special version of the language has been written by RT Russell and published by M-Tec Computer Services. It follows standard BBC Basic but with a few variations to reflect the facilities available on the Wren. In particular the graphics, sound, analogue input, clock and direct access to CP/M facilities are covered by the new version.

Documentation

Four manuals are supplied — one for each of the 'Perfect' programs plus a Wren User Guide. I had a draft User Guide which lacked an index or diagrams but in other respects appeared complete. Its tone is certainly friendly and, in places, almost too conversa-

Benchmarks

BM1	1.2
BM2	3.1
BM3	7.6
BM4	7.5
BM5	8.4
BM6	15.3
BM7	23.8
BM8	3.9

The Benchmarks were run using interpreted MBasic. All timings in seconds. For a full listing of the Benchmark programs see 'Direct Access'.

tional. For example, 'This may not be very creative, but you wanted a simple computer!' Until you get to the heavier parts of CP/M and Executive Desktop it is quite a good read. It certainly covers the ground for an ordinary user. If you want to get technical or start programming then you will need to buy extra manuals. A technical guide is available from Transam and a BBC Basic manual from M-Tec, its publisher.

Everyone should copy their master disks before starting to use a new system. It was interesting to read in the User Guide that on this system you need to spend a couple of hours on this job because it involves reorganising the distribution of programs as you copy them to your new disks. I know that to push a machine out for a thousand pounds, Wren must have agonised over whether to use a couple of extra disks or make life more difficult for the user. Perhaps kind-hearted dealers could take note and reorganise the disks before parting with the machine. It need only cost a few pounds

All the usual ports plus winchester disk socket promises hard disks to come

and would save a lot of frustration just at the time the user really needs encouragement.

The other thing I noticed was that you shouldn't leave disks on top of the unit in case the TV tube magnets zap them. If that really is a serious risk then it should be emblazoned on the unit or at least given more prominence in the manual.

The 'Perfect' manuals supplied with the review machine were the original Perfect Software manuals as supplied with the unmodified product. Perfect is currently rewriting its manuals for the Wren versions of its programs. If the quality of the new manuals is anything like the existing ones then they will be large, clear and comprehensive. The Filer, Calc and Writer manuals together comprise a massive 940 pages.

The technical manual had not been finished at the time of the review but I was given a copy of the BBC Manual as it is currently supplied for the unmodified BBC Basic. It is definitely a reference manual and if you need to learn BBC Basic then you will need to find a book with a more tutorial approach.

Prices

There's only one price worth quoting and that's £1000 plus VAT for the Wren, Perfect Filer, Perfect Writer, Perfect Calc, BBC Basic, CP/M Plus, Communications and Executive Desktop.

Additional memory, a carrying case and the TV adaptor are the only extras I know of but the prices were not available at the time of writing.

Conclusions

If you are the sort of person who doesn't mind proven technology rather than leading edge stuff then this has got to be a machine worth considering. At £1000 (plus VAT) it appears to offer the best value for a twin disk, full screen transportable computer. And inside are plenty of hidden goodies such as the integral modem, the graphics and the colour capabilities.

It comes supplied with three popular business software packages: Quantec's Executive Desktop suite, a communications package; BBC Basic; CP/M Plus; and a three month subscription to Prestel and Micronet 800. Most CP/M packages will run on the machine which gives the user an enormous range of ready written applications from which to choose.

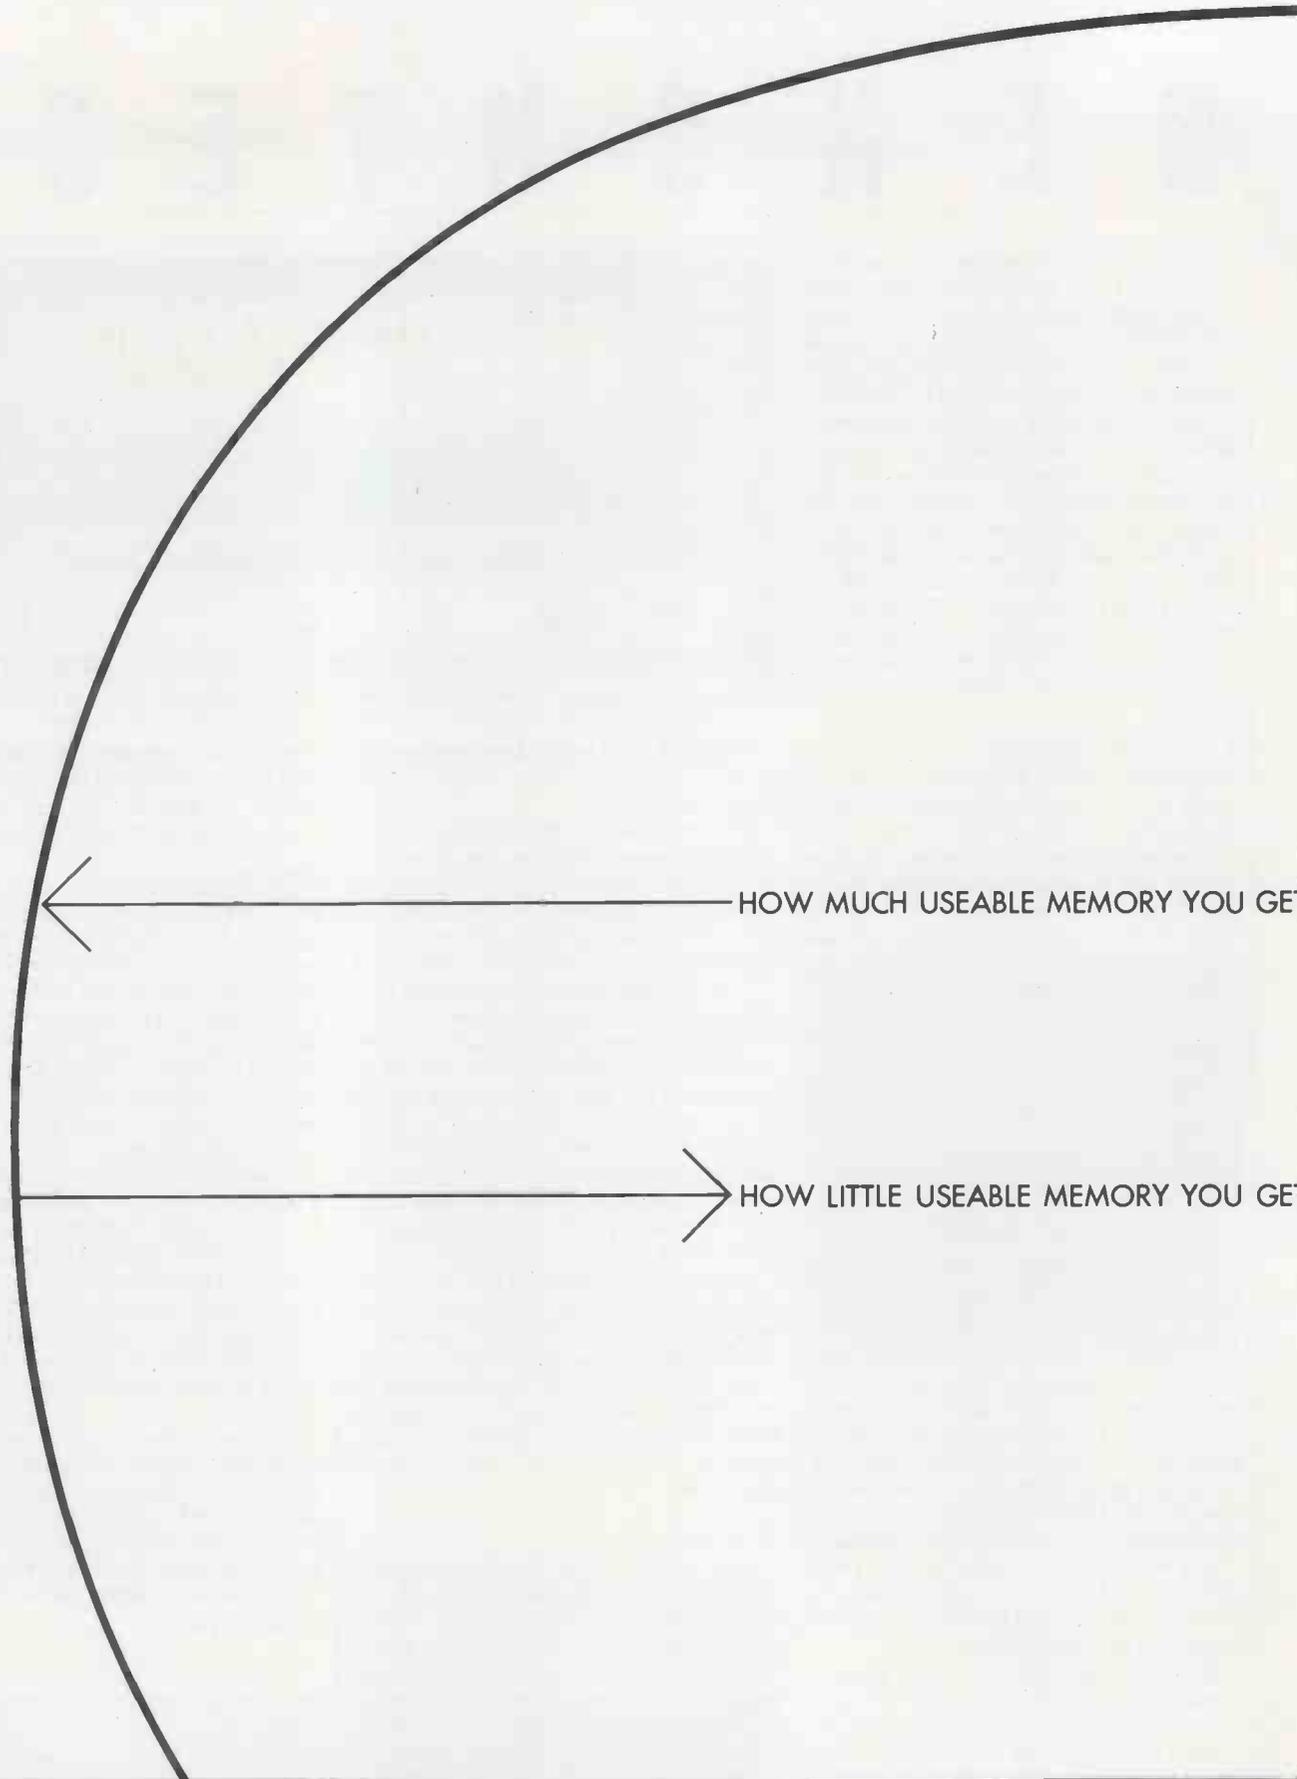

The prototype machine was very well made and I've no doubt that Thorn EMI will maintain the same standards, if not better, in the production models. As I had a prototype, I noticed the odd glitch but nothing which rang alarm bells.

My verdict? Good value for money and pretty, too.

END

Technical specifications

CPU	Z80B, 6MHz
RAM	64k (256k option), 50 bytes CMOS

HOW MUCH USEABLE MEMORY YOU GET

HOW LITTLE USEABLE MEMORY YOU GET

■ If you saw a computer labelled 32K, 48K or 64K you'd assume it had a large memory. Right?

Wrong. These figures bear little relationship to the actual amount of useable memory left once the computer is performing functions like text, colour, sound and even more importantly, high resolution graphics.

The Commodore, for instance, claims an "elephantine" 64K memory, yet uses up 26K producing high resolution graphics.

Under the same conditions, the Dragon 32K leaves 24K of useable memory, the Lynx 48K just 14K.

And the BBC Micro and Acorn Electron leave the operator a miserly 9K to play with.

However, there is one computer specifically designed to cope with these normal working functions as a matter of course. The new Oric Atmos 48K.

Why, even when you add peripherals like the new micro disc drive unit and colour printer (see technical details overleaf), its useable memory is never less than a healthy 37K.

Which not only caters for all the standard applications you'd expect from any home computer, but also for advanced

WITH THE NEW ORIC ATMOS.

WITH OTHER HOME COMPUTERS.

programming and very sophisticated games.

Talking of games, the new Oric Atmos starts off with a major advantage over most new computers, since it takes most of the software already written for the Oric-1.

And like the Oric-1, it has a powerful loudspeaker and amplifier inside its case.

The same unit, in fact, that prompted "Which Micro" (November) to quote... "At full volume this machine can compete with most arcade games. Its sound facilities have more in common with the £400 Beeb, than the rather pathetic beep of the Spectrum..."

Yet the Oric Atmos 48K costs a modest £170, including all the leads and adaptors you need to get it going.

But then what else would you expect from a British Company recognised for offering so much for so little?

The new Oric Atmos 48K. **ORIC**

Now we've whetted your appetite, here's something to get your teeth into.

Printer Technical Specifications

Atmos Technical Specifications

CPU	6502 A
Memory	Choice of 16K or 48K RAM
Memory (48K Model)	Minimum 48K RAM, max 64: 16K ROM external control signals allow use of full 64K RAM or maybe used externally to increase ROM/RAM
Language	Extended Microsoft basic
Keyboard	Typewriter style and pitch, 57 keys, standard computer layout, additional cursor control keys, autorepeat facility, tactile and acoustic feedback
Display	Output for B&W or colour TV, RGB output for colour monitor.
Text format	40 line x 28 rows
Character set	Similar to Teletext format, standard ASCII double height, flashing, 80 user definable characters
Graphics	240 x 200, 8 colours
Graphic Facilities	Points, lines, circles
Sound	Internal loudspeaker and amplifier. 3-Channel sound synthesiser envelope control, amplitude control 8 octaves, noise channel
Storage	Most cassette recorders via DIN socket 300 or 2400 BAUD. Disc Drive.
Interface	Centronics, expansion port, Hi-fi, RGB Monitor, UHF TV, cassette recorder
Other	Warm reset to regain control without clearing program or data

Micro Disc Technical Specifications

Formatted Capacity	160K bytes per side (double density as standard)
No. of Tracks	40 (80 available as option at a future date)
No. of Sectors	16
Bytes per Sector	256
Transfer Rate	250K Bits/Sec
	Supports up to 599 files per side, four drives single or double sided, 40 or 80 track. User definable configuration allows mixing of drive types including 5¼" (five and a quarter inch)
	Extensive wild card facilities
	Copy allows merging of basic and machine code files
<u>Utilities</u>	
The Utilities are as follows:	
1. Backup	Copy a whole disc
2. Copy	Copy a file to another
3. Del	Delete a file allowing wildcards
4. Dir	Display directory listing
5. Drv	Set the default drive number
6. Format	Format and initialise a disc
7. Load	Load a file (code data or basic)
8. Protect	Change protect status of file
9. Recall	Recall a basic array from a file
10. Ren	Rename a file
11. Save	Save a file (code, data or basic)
12. Store	Store a basic array as a data file
13. Sys	Change system configuration

Prices and data correct at time of going to press. Specifications on the above models may change without notice.

Available at Dixons, Laskys, Comet, Wigfalls, Rumbelows and all good computer stockists.

Sinclair QL

I have seen the Sinclair QL advertisement in your February issue, I think I'd like to buy one but two things worry me. Is it as good as the adverts say, and if I purchase it by mail order will I be letting myself in for a long wait like the Spectrum and the BBC?

Also, how can Sinclair get away with calling the 68008 a 32-bit processor?
David Campbell, London

At the time of writing no-one has seen a production QL. The only machines I've seen were pre-production models at the press launch. The specification certainly looks impressive. The only question mark for business use is the speed and reliability of the microdrives, but for £400 who can argue? Availability looks as if it may be a problem. Sinclair are already saying that demand is exceeding expectation so I'd treat the quoted 28 days delivery with some scepticism.

Calling the MC68008 a 32-bit processor must be regarded as artistic licence on the part of the ad-men. The 68008 actually has an 8-bit data bus but many of the internal registers are 32-bit. Motorola (the chip manufacturers) call it a 16-bit chip, so depending on your criteria you could call it an 8-, 16- or 32-bit. You pay your money and make your choice.

Peter Bright

TRS-80 software

I recently bought a Tandy TRS-80 Colour Computer for home use, but I'm finding it very difficult to locate suitable software—the Tandy shops have a limited

range. Where else can I purchase colour software?

Also, what is your opinion of this machine as a 'good' computer? At present we are using it as a learning tool for our children, who are becoming frustrated when they see the wide range of software available for the more common makes.

D. Sutherland, Merseyside

Official Colour Computer software is restricted to what Tandy are prepared to supply. Very few third party software authors have taken to the machine. The only independent company I know of which supplies Colour Computer software is Softek (tel: 01-240 1422). All is not lost, however; you should be able to run a lot of Dragon cassette software on your machine. The only problem is predicting which programs will work and which ones won't. Neither Dragon nor Tandy will tell you, so it's simply a question of trial and error.

The Colour Computer isn't the machine I would choose because of the lack of software. Generally, it's a better idea to stick with the mainstream manufacturers unless you have a specialist need that they can't fulfil.

Peter Bright

Graphics grappling

I am grappling with graphics on my Commodore 64, but having problems with POKE.

I understand the theory of the thing and POKE colour locations (I think).

However, according to my handbook if I POKE 1524,81 I should get a ball in the middle of the screen. I don't—and can't seem to POKE any other image into any other location either. What vital piece of information am I lacking?

I know from bitter experience that handbook programs tend not to work as they should, but this seems too simple to be bugged.

Bridget Clarke, Norwich

As with most irritating problems posed by computers the answer is simple—the only missing piece of vital information is how bad computer manuals can be. When you diligently POKEd location 1524 with the correct code for the ball it was indeed printed on the screen—you couldn't see it because it was printed in blue on a blue background. This is particularly confusing as anything typed from the keyboard appears in white. This is an unfortunate 'feature' of the 64 which we have to live with.

The answer is either to change the colour of the screen to RED by the command POKE 53281,2 or to print the ball in a different colour. The colours that characters are displayed in are held in a memory map (or 'array') called the colour memory map. This, along with the screen memory map (where you poked the ball) is the 64's archaic version of the PRINTAT command found on other micros.

To solve your problems you should use the following subroutine to print any characters at any screen position and in any specified colour:

```
10000 REM PrintAT
      subroutine
10010 POKE 1024 + 40*
      ROW + COL, COD
10020 POKE 55296 + 40 *
      ROW + COL, CLR
10030 RETURN
```

Obviously, before you use the routine you must assign the required values to the following variable:

ROW— row number
COL — column number
COD — character code number
CLR — colour number
Tony Hetherington

Extra printer speed

I have recently purchased an ACT Apricot with Wordstar and an ACT 120 character per second matrix printer with a centronics connector. My problem is that in Wordstar, the printer does not operate at anything like 120 cps: my estimate is nearer to 40 cps. Why is this and can anything be done about it, as I need the extra speed.

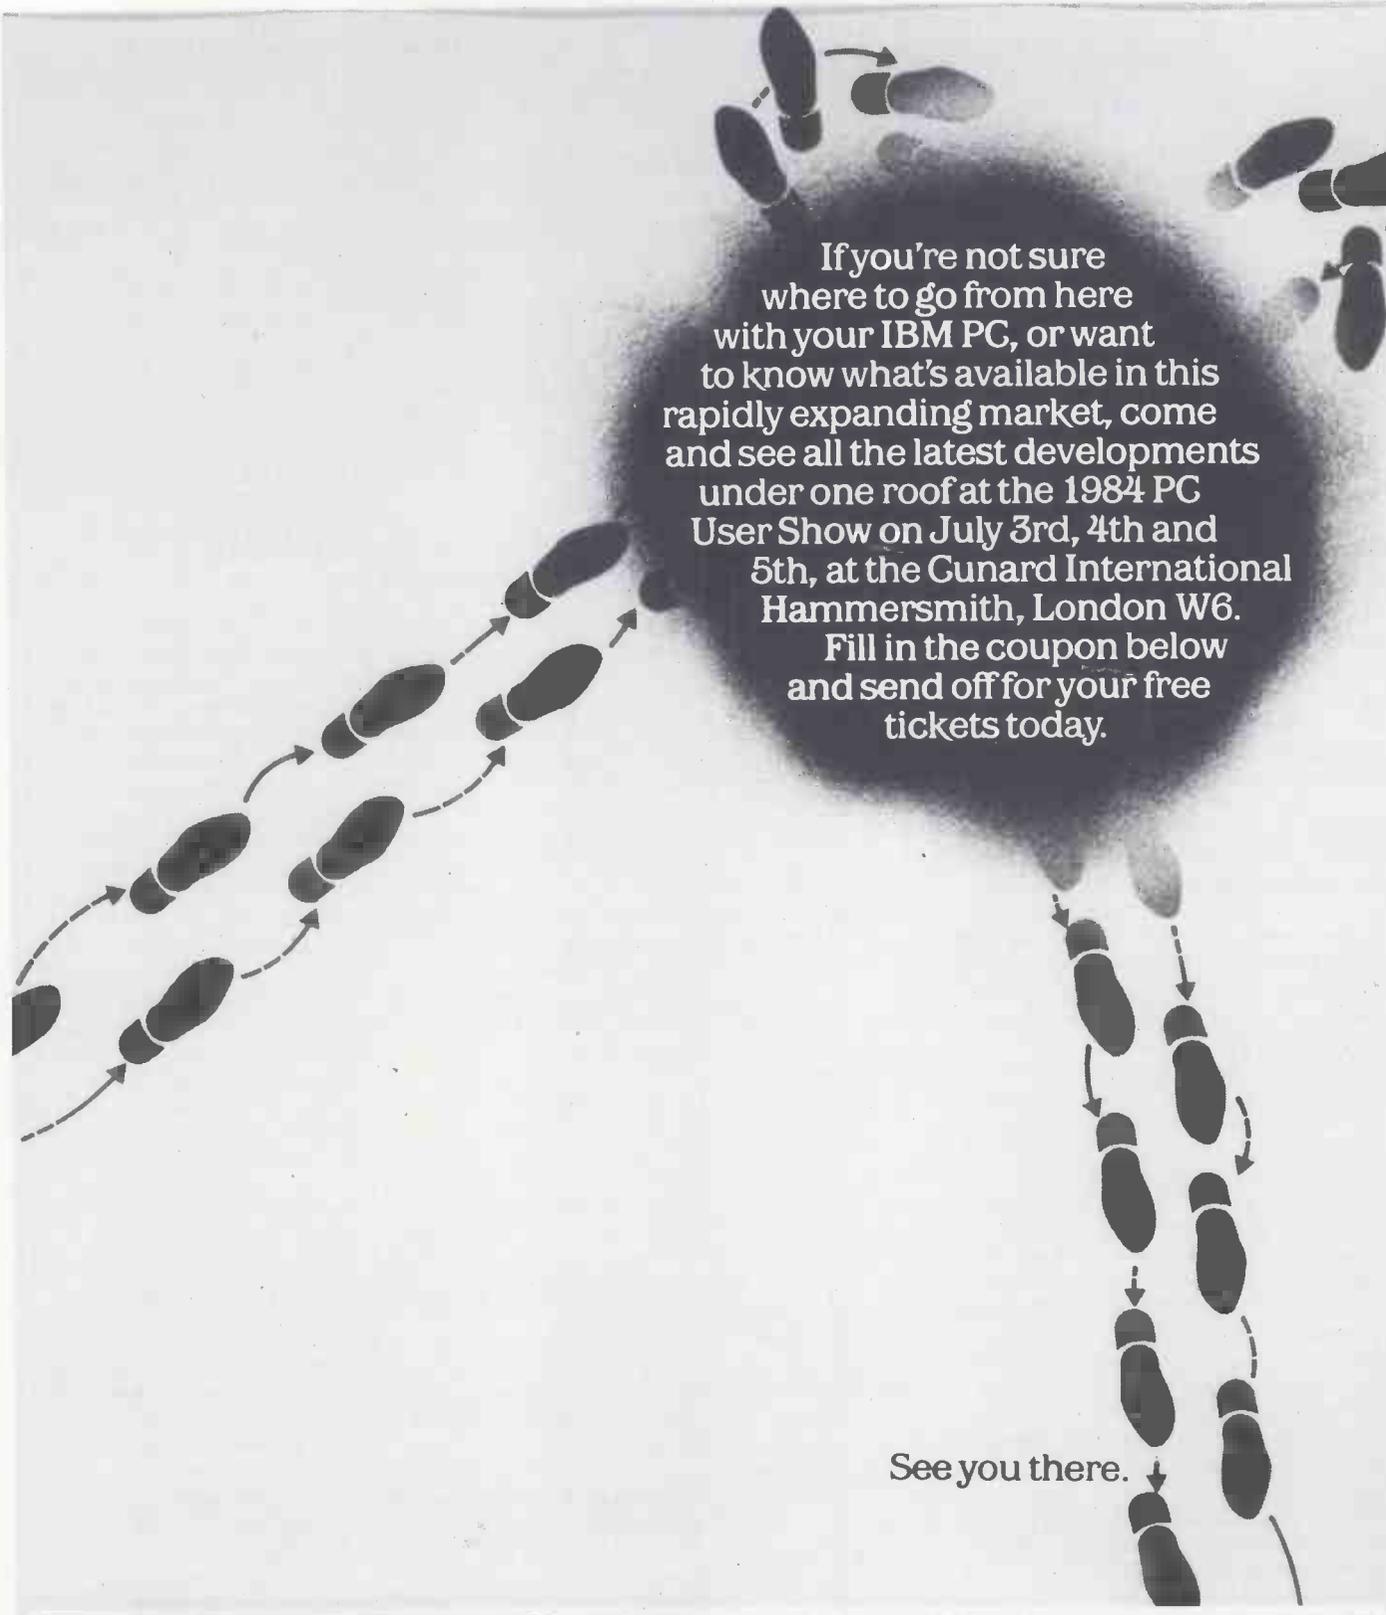

Name and address withheld

Your problem appears to lie with the software rather than the hardware—the Apricot should easily drive a fast printer. WordStar is designed to drive letter quality daisywheel printers, which are relatively slow (even the fastest can only manage around 40 cps). Modern matrix can run much faster than WordStar was ever designed to and this is where your problem lies.

When WordStar is printing a document it formats line by line—the effect is limited output speed. Unfortunately, because this is part of WordStar there doesn't seem to be an easy way around it.

The only solution is to prepare your text as a non-document file, then, when you want to print the document use the print to disk option to save the document as a formatted disk file. Use CP/M or MS-DOSs Ctrl P to turn on the printer and TYPE the formatted document file.

The only problem with printing this way is that you lose the fancy printing options associated with a normal WordStar print. All you'll get is a straight printout of the document.

UK101 in France

Having moved on to greater things some time ago, I have an old UK101 computer gathering dust. I would like to give it to a talented but impecunious young computer enthusiast, but my problem is that the said enthusiast lives in France. There are no power supply problems in France but the TV system is not compatible. Am I correct in thinking that it will only be necessary to change the modulator? If so, can you advise me where to get one?

Colin Bignell, Littlehampton

You're right about the differences between the two standards. We use what is known as the PAL standard while the French use two systems, SECAM and PERITEL.

Many people have the same troubles when they take their micros abroad. The most straightforward solution is to send an old PAL TV along with the UK101. The only company I know of selling its machines in France is Oric. The French Oric importer sells a kit which will convert a 625-line PAL signal into either SECAM or PERITEL depending on the system your friend uses.

Further information about the converter box can be obtained from:

User group liability

After four months of steady growth a Spectrum user group now meets each week in Gloucester.

As organiser I'm pleased,

although I make no charge and invite visitors at their own risk. What liability am I and others like myself actually undertaking?
BG Ledbury, Gloucester

Unfortunately, insurance is one of those areas where there are no clear-cut answers. I spoke to two insurance companies about the problem, and both said they would need full details of the individual circumstances before they would be able to comment.

However, they did confirm that the first thing to do is to contact the company covering your ordinary household insurance and ask them to find out if you are covered. If the answer is no, then I suggest you contact a solicitor to seek legal advice. Although no insurance company will sell you unnecessary cover, they are in business to (a) make money and (b) protect you, so they are likely to err on the safe side and recommend additional cover where there is any doubt.

Third party cover is normally covered by a minimum premium of perhaps £60 or £70, so is an expensive option. If you also require cover for accidental damage to machines while in your house, you will have to ask your individual members to check their own policies. If they are not covered it will be cheaper for them to arrange additional cover, which will probably only cost a few pounds per year on an ordinary household contents and personal effects policy.

Part of the problem with insuring computers is that insurance companies still apparently think of them as huge, expensive and vulnerable pieces of equipment. I was recently quoted an exorbitant premium for cover for a Tandy Model 100—I think they were afraid the valves would get broken in transit.

Perhaps the simplest (and possibly cheapest) solution is to ask a solicitor to draw up a simple disclaimer which all members will be obliged to sign on joining the club. This

is perfectly reasonable so long as you make no charges to members.

Electron operating system

I own an Acorn Electron, and although I'm very pleased with it I've been told that it should have a level 1-00 operating system, but when I type *HELP the computer responds with OS 1-00, indicating that I have a 1-00 OS.

Should I have an OS 1-00 or OS 1-20? If I press 'BREAK' and type 'REPORT', (C) 1982 Acorn is produced, which indicates a Basic II ROM. If this is correct and I should have an OS 1-00, can I get an OS 1-20 and fit it in the Electron? Where are they available and how much do they cost?

Keep up the good work.
George Brown, London E14

When Acorn launched the BBC Micro it had a temporary MOS which was labelled 0-1. When the full MOS was released, it was called 1-0 and Acorn got itself into trouble with BBC owners who objected to being charged a tenner in order to receive a fully-working machine (the charge Acorn made for the new MOS).

Shortly after the release of MOS 1-0, it was found to contain a number of bugs: these were supposedly corrected and version 1-1 was produced. This didn't work either, hence MOS 1-2—a theoretically bug-free MOS.

Meanwhile, Acorn was also rewriting BBC Basic to produce Basic II. All new BBCs are therefore fitted with MOS 1-2 and Basic II.

When it came to the Electron, Acorn rewrote BBC MOS 1-2 slightly to produce the Electron MOS. As this was the first Electron MOS release, it was called 1-0.

Basic II, however, is still called Basic II on the Electron. To anyone who understands the strange workings of Acorn Computers this will doubtless all seem perfectly logical. To me, it seems slightly silly.

Anyway, the upshot of all this is that, yes, you should have MOS 1-0 and Basic II on your Electron.

One last point worthy of note: the Electron cannot be expanded to a 100% BBC-compatible micro, merely what an Acorn spokesman described as an 'equivalent spec'.

Super Expander

I recently bought the Super Expander cartridge for my VIC 20. I have written many programs for the unexpanded version, so is there any way I can improve my programs with the Super Expander?
Paul Michaelidis, Athens, Greece

When memory expansion is added to the VIC 20 the memory map changes: the values you POKE for the screen and colour displays alter. Therefore, if you want to expand a program written for the unexpanded VIC so that it will run in your expanded machine you'll have to change every POKE in the program.

It would be ideal if there were a machine code program to alter these addresses for you, either on its own or as part of a toolkit, but such a program doesn't exist yet so you'll have to change them one at a time.

To add to the confusion, the new addresses you'll have to enter will vary depending on the available memory expansion. Consequently, you should look these up carefully in the documentation provided with your expander.

Tony Hetherington

END

'THE COMPANY COMPUTER' VS THE PERSONAL COMPUTER

Businessman Smith wants a microcomputer system for his smallish but buoyant company. He buys a typical Personal Computer to start things off. It costs him about £3000.

Businessman Brown, with a similar problem and a prudent eye on the future, opts for the SAGE. It costs him £5500, but it does have 4 times the capacity and can handle up to 6 users.

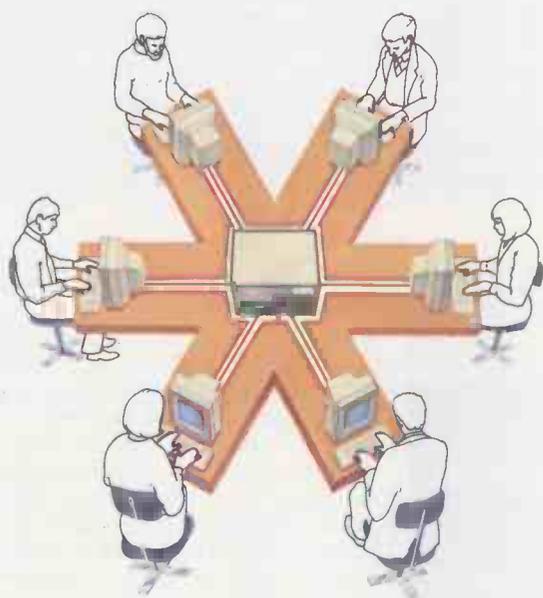

In no time, Smith's staff have taken to computing and want a second machine – another £3000.

Brown too organises a 2nd workstation – he only pays £595 for an additional screen and keyboard.

Both bosses are asked to supply printers. Smith has to buy two for his PC's, Brown only needs one because his SAGE was designed for sharing.

SAGE IV

Business is good for both companies, but whilst Brown's bill for a 6 user system is £11,000, poor Mr. Smith has forked out just over £21,000.

And his troubles aren't over yet...

Because his staff need to share the company's information, it's going to cost him at least an extra £4500 to network his system together. What's more, his dealer has recommended he does it with a SAGE!

Vital statistics

32-bit MC 68000
2 million operations per second
256K – 1MB memory
Up to 72MB storage
6 users plus printer
Total information sharing
Wide range of applications
SAGE monitor speed
up to 19200 baud.
SAGE II from £3130.
SAGE IV from £5850.
SAGE monitor/keyboard from £595.

Please send me the Sage brochure giving details and prices/ call me to arrange a demonstration.

Linnet Evans' selection from the bookshelf this month features database management and a revealing biography of wartime code-breaker Alan Turing.

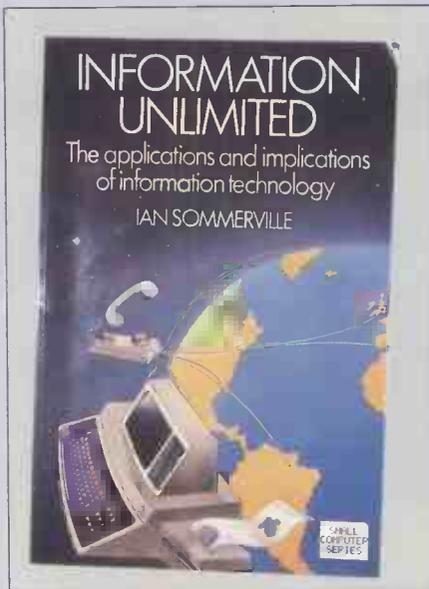

Information Unlimited

Much water has rolled under the silicon bridge during the thirty-odd years since Alan Turing's time, as this book bears witness.

With *Information Unlimited*, Ian Sommerville has provided a well-rounded summary of the state and status of microchip technology today in home and High Street. His main concern lies with applications, even more so with implications: the market forces that really enable computerised medical systems, for example, and the potential effects across the board on society.

If this sounds rather formal, let me add that it's written in tidy bite-size chunks and the kind of light, versatile style to suit any man and his dog in the High Street; at the end of each chapter the author even provides a summary. It's a nice gesture, even if smacking of those O-level revision crammer cards.

Most of what Sommerville presents is entirely good sense. A reasonable coverage, it's also sufficiently up-to-date to stay valid for a season or two.

Even so, he probably underestimates the unfathomable conservatism of the Great British public, particularly when hitting a target such as the cashless society. Forty per cent of adults in the UK don't have a bank account, and half of them — I'll bet *my* meagre week's

wages — will be privileged or smart enough to sidestep the great god EFT (electronic funds transfer) for a long time yet.

There's also the various flies in the ointment. The cash dispensers around any shopping centre have *always* run dry by 4pm on Saturdays.

Information Unlimited doesn't attempt to be a whole study of the subject, though it tries quite often to be a holistic one. Slightly annoying is the constant use, when looking to the future, of 'will' when 'might' or 'could' is the rightful mode.

But it's food for thought. For example, the black economy — the casual bar job, and so on — could this anarchically block the whole cashless society fandangos? After all, at the end of the line we'll all be too isolated and lost for words after being locked up with our TV monitors for years to be able to barter window cleaning for tax consultancy. On Prestel, of course.

Data Base Management Systems

Perhaps, if you had a Zenith instead of an Apple, you might be buying Mr Kruglinski's book instead of Mr Wadsworth's (see below). You would then find yourself with a slightly fatter volume for the same price, despite the truly minimalist dollar exchange rate. You'd very likely already be on the thought-path to spending a few dollars more on the genuine branded product.

Before that particular fate-worse-than, you'd have found again a neat and nimble intro to databases in principle. The author firmly believes that All Good Readers Deserve Databases, but since his scope runs from simple file management systems upwards, it's a democratic assumption.

His eye is now turned more to extended/business usage in the sense that questions of security, fail-safes and query languages come before the first utterance of 'zip code'. Equally, the reader is guided through the relative merits of file management, relational and network/hierarchical DBMS's (yup!) before the first 'social security number' shows its chilly face. This

section includes notes on some general points such as access time and disk capacity, with a sensible sideways glance at the hardware environment.

With this backdrop, the greater part

of the book then explores some proprietary systems, all CP/M. Prominent among these are Condor, dBasell, FMS-80 and MDBSIII. In each instance, a full manual-type description is given along with plenty of comment on the system's real-time performance — learning curve, Benchtest timings, and so forth. You should then be in a reasonable position to make your own judgements on these major packages.

A number of other packages are summarised, but more on the level of the DBMS overviews that appear in the glossy monthly business computing mags. Omitted altogether are Perfect Filer, now making inroads in this country, and the UK-grown Superfile. Meanwhile, The Quad and Selector V have not, to my knowledge, been seen on these shores at all (and would probably be taken for hangover Mod revival bands if they were).

These are minor criticisms, however, and shouldn't sully the real purpose of this business-like but very readable book.

Data Base Management Systems
Author: David Kruglinski
Publisher: Osborne/McGraw-Hill
Price: £12.95

BIBLIOFILE

Database Management for the Apple

Tubthump time. Why do publishers need to put a name (and a picture) of the particular computer on a book jacket? It's to sell a dedicated title to one group of dedicated owners, of course. This then means that all other punters go elsewhere.

Not that there's anything amiss with having a file on the kitchen table. There's a lot of them about. Some Apple owners are going to feel cheated in any case about shelling out £13 for what's at root a bumped-up program listing. The listing — the DBMS — is in Applesoft Basic, including (not surprisingly) the odd POKE and CALL. However, there's ultimately a great deal more that's general than specific to the great big red-and-green one.

That apart, *Database Management* is an entirely accurate title. Nat Wadsworth writes a pithy, punchy and

personalised intro to the subject of using *your* computer to organise and manipulate information. Enough is offered on file structures, soft/search routines and the like to give the operation some credence for the casual

user. However, he more actively 'sells' the subject with some real-time illustrations: the perennial glories of household budgets and mailing lists. He also spends quite some time checking through the detail, options and handling of these and other areas.

Centre stage sits *The Listing* (that is, line-by-line documentation), so it shouldn't be too difficult (given the correct addressing) to translate it to any other appropriate dialect. As the author clearly notes at the beginning, an FMS scripted for simplicity of workings and presentation — which is true — will hardly meet everyone's requirements for speed and smartness, never mind any other criteria. But as a DIY kit job it provides a useful baseline for Higher Things, and it's got to be a bit of fun as well.

So the Apple's just jam on the bread.

Database Management for the Apple

Alan Turing: The Enigma

A straw poll among colleagues revealed that, of those who'd even heard of Mr Turing, not one had much idea of who he was or what he'd done. Hence the title of this book, which also refers punningly to the one project he is usually known for — breaking the coded messages generated by the German Enigma machines.

Alan Turing was born in London in 1912, and died in 1954. He was (not only by this account) a wayward, awkward figure: blunt, scruffy, politically naive, a great lover of the natural world as well as a mainline mathematician and a fine amateur athlete. His working career was as chequered as his private life, with an exhausting jumble of hostility and support, triumph and neglect from start to finish.

The Enigma project, with its utter urgency (and underfunding and red tape), was an almighty bootstrap to the emergence of electronic data processing, culminating in the Colossus. A backdrop to this was a paper that Turing wrote before the war, *On Computable Numbers*, which resurrected an interest of the long-gone Charles Babbage: if you construct a (initially mechanical) device to handle one set of mathematical operations then it should be possible to extend this in principle to handle any set — in other words, to be universal.

The Enigma is not the first biography of Alan Turing, that honour going

curiously to Alan's mum. It's a substantial book of over 500 pages, a fact which mitigates Andrew Hodges' rather annoying love of finding common themes and imagery at every turn. It's also a substantial story told with both freshness and great attention to detail. Vox-pop quotations are kept to a minimum, but the author very clearly followed an immense number of leads and talked with dozens of colleagues and contacts.

Hodges judges, I feel rightly so, that a certain amount of mathematical and cryptanalytical background is necessary at certain points to illustrate the moves in Turing's life. Generally these are sensibly and sensitively handled and shouldn't be a problem for non-

mathematicians reading the book, either as a straight biography or as a history of computer science. If anything, it might have been helpful to have a little more straight historical/political background in the main body of the book, instead of banking up so much for the final chapter, the *denouement*.

Probably only now is it possible to tell this kind of story with anything like the 'truth'. This is not only because wartime records are now declassified, but also because we have a quite different attitude towards nonconformity.

Turing had intimate knowledge of British and foreign intelligence methods just a few years earlier. At one point he had acted, incredibly, as the sole go-between from this country to the States. Accepting Turing's homosexuality today makes possible a sting in Hodges' scorpion's tail: in those witch-hunting years, was Alan Turing a security risk for the British Government ranking with Burgess and Maclean?

Whether Turing's death shortly afterwards, apparently from arsenic poisoning, was mishap, suicide or the proof of some mathematical law of probability, remains a pure enigma.

Alan Turing: The Enigma is a major work at any level. Recommended.

Price: £18.00 (hardback)

A SUPERB RANGE OF GAMES SOFTWARE FOR SHARP MZ-700 SERIES

FROGGER — £6.95

This most popular of arcade games has been totally recreated for the Sharp computer. Superb graphics and as fast as you like from beginner's level up to 'Superhuman'. Get each of four frogs over the busy motorway, then hop from boat to raft to log to crocodile until safely home sitting on a lily pad. Terrific fun.

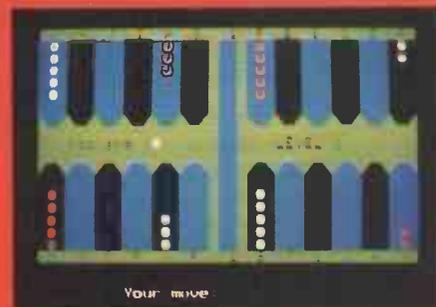

SPACE PANIC — £7.95

How long can you survive in the multi-storey building filled with alien bugs. This machine-code programme accurately simulates the arcade game where you climb ladders and dig holes to catch the aliens then fill them in again once they are caught. The red ones must fall through one floor, the green ones, two floors and white ones, three floors. Red aliens who have time to dig themselves out get rather cross and become green. PANIC!! Joy stick or keyboard control.

GALAXIANS — £7.95

A high-speed machine-code version of the popular arcade game where the massed space invaders must be cleared from the skies. After a few seconds they will begin to swoop and dive at you, showering you with scatter bombs as they go. The game becomes progressively more demanding as you kill more and more of the marauding aliens. Very entertaining — hours of fun!!! Joy stick or keyboard control.

BACKGAMMON — £7.95

Now available for the MZ-700, this traditional board game can now be played against the computer. Simple to follow instructions for the beginner — higher levels available for the more experienced player.

NIGHTMARE PARK — £6.95

If you have never played this type of game before, you're in for a treat. As you make your way along the intricate pathways to the exit, you are constantly given tasks to perform or games to play. Each of these must be successfully completed before you are allowed to continue. It takes a lot of doing. You must remain quick and alert at all times. A little luck is handy. Amazing graphics and sounds!!!

FIGHTER COMMAND — £6.95

A mission flown completely on instruments where you are pursuing a fleet of ten enemy aircraft fleeing from you. They will show on your long range radar screen and you must manoeuvre your craft to get them within range of your missiles. If you get too near, they will fire at you and warp away to safety. You only have one chance to destroy incoming missiles with your lasers.

CHESS — £9.95

Suitable for the rank beginner through to the more experienced player, this Chess program may be used in three different ways.

1. As a referee between two players, checking for valid moves, CHECK and CHECKMATE situations.
2. As an opponent with 14 levels of intelligence to match your skills.
3. As a teaching aid when asked to play against itself or show you the best move if you get into difficulties.

Long games may be saved on cassette for completion at a later time and a print-out of all moves made is available.

XANAGRAMS — £9.95

Not only a terrific spelling test but also a great game. You are asked to guess up to five words, represented by blocks on the screen in a crossword format. All the letters that you need are shown on the right of the screen in alphabetical order and the computer will give you the first letter if you ask it nicely. Suits almost any age with 3 skill levels and from 1 to 5 words to be guessed. Really habit-forming!!!

LIGHTNING PATROL — £3.95

Choose your rank in the RAF and you are immediately sent on a mission to catch and shoot down ten enemy Mirage jets that are fleeing after their attack on your airbase. You must manoeuvre your plane to get them in your gun-sights whilst they are weaving about the sky to avoid being hit. Limited ammunition and fuel available so efficiency and accuracy are all important to your completion of the mission. Promotion for the successful but poor performances can mean you are asked to leave the air force. Joy stick or keyboard control.

PLUS AN EXTENSIVE RANGE OF OVER 100 GAMES, BUSINESS AND EDUCATIONAL SOFTWARE FOR THE SHARP MZ 700 SERIES — FREE COLOUR CATALOGUE AVAILABLE

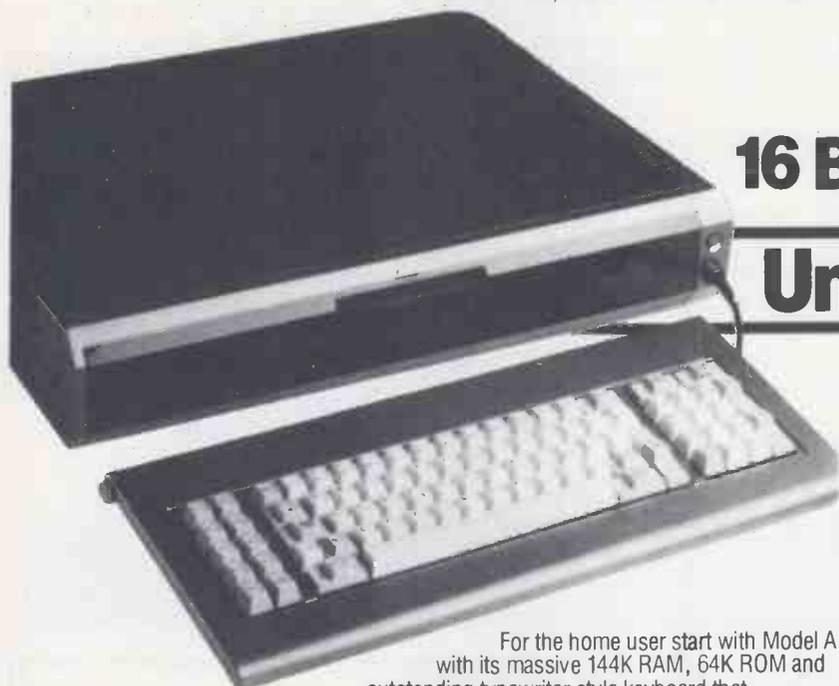

SOLO SOFTWARE

NEW

For home or business the IBM compatible Advance 86^a

16 Bit Micro-Computer

Under £350*

For the home user start with Model A with its massive 144K RAM, 64K ROM and outstanding typewriter style keyboard that fits within the base unit for portability and storage.

Note the large return key and position of the numeric keyboard. Fast retrieval from storage and fast action on games is achieved by the use of the Intel 8086 16 bit micro-processor running at 4.77 MHz.

The Advance 86A runs IBM PC software.

Specification

CPU Type	16-bit 8086 running at 4.77 MHz.
RAM	128K or 256K with parity plus 16K video
ROM	64K.
ROM Contents	Diagnostics, Basic, Cassette O/S
Languages Included	Basic
Type of Keyboard	Full 84 keys tactile
Keyboard Facilities	10 programmable keys
Character Set	256 in ROM
Method of Display	TV, RGB, Comp/Sync colour or monochrome monitor
Display Facilities	Full screen handling, 4 screen paged
Text	80 x 25 or 40 x 25
Graphics Resolution	320 x 200 or 640 x 200
Colours Available	16
Graphics Facilities	Scroll, reverse image
Cassette Recorder	Audio
Interfaces Included	Cassette port, light pen, joystick, Centronics
Sound	Built-in speaker
Operating System	Built-in ROM
Printers	Any using Centronics parallel interface
Comments	Hardware and software compatible with IBM PC User-upgradeable to Model B Provision for 8087 Arithmetic Processor

The business user can upgrade to Model B by adding the Advance Expansion box containing 2 x 5.25" disc drives providing 720K storage at £902.18.

The Advance 86 Model B offers the business micro-computer buyer an IBM compatible disk-based system with twin drives, with Perfect writer, Calc, Filer and Speller software (MS/DOS) for only £1250 plus VAT & Delivery.

Advance 86 Models A & B are designed and marketed by Advance Technology UK Ltd.

128K expansion £125 + VAT

Delivery within 30 days from receipt of payment.

THE FABULOUS WANDA AND THE SECRET OF LIFE AND THE UNIVERSE AND EVERYTHING for COMMODORE 64

An adult fantasy game with Arcade Action

You are travelling far from home looking for good times around the Universe, when you are intercepted by the evil Brutus of the Federation. Brutus forces you to go and seek the Secret of Life, the Universe and Everything - known only to the Fabulous Wanda, a hostess in the Spaced-Out Inn in Highsville on the planet COPUS. You are teleported down to Highsville where the Customs man demands money for Teleport Tax. There is a video game in the Terminal with 3 credits left. Now you are on your own and you must decide how to proceed to Highsville Mainstreet to find the various establishments to enter and

SKULL 48K SPECTRUM

The object of the game is to collect treasure from a maze without losing lives and thus to achieve the highest score possible. Each item of treasure is worth a number of points, the more treasure collected, the higher the score. There are a number of hazards within the maze, pitfalls, trapdoors, portcullis and wandering SKULLS. The SKULLS will attempt to guard the treasure by catching you but you may find within the maze a green cross which will give you a period of safety during which you may attack the SKULLS.

Other features of the game are:

- Inventory of collected treasure.
- Totally random maze generation.
- 9999 levels of maze.
- Score up to 999999.

£6.95

NEW RELEASE
AAARGHI CONDOR for Commodore 64

100% fast action machine code. Avoid the obstacles and hazards to climb the mountain to reach the Spear. Then slay the Condor before it carries your bird off!

BARRELDROP! for 48K SPECTRUM

Poor Gordon! His drainpipes are blocked again and the only way to clear them is to drop barrels down them. Gordon stands on the top of his roof with 5 barrels. When the game starts he'll roll one down the roof. Press SPACE to drop it through the roof accurately into the centre of a drainpipe and you'll score the number of points in the pipe, which will start to flash, and Gordon will get the barrel back for another go. The barrel will be lost if the drop is inaccurate, or into a pipe already filled, but Flash the dog is on hand! If you know you're going to lose the barrel and you can see Flash peeping out from the bottom-right corner, press D and Flash will save it! Once you clean all 5 pipes, you will get a bonus, but there's a surprise in store before you get the next set of pipes to fill

SUPERSNAILS for 16K or 48K SPECTRUM

Snails specially imported from West Africa are being kept in Dr. Van Winklehoff's laboratory for genetic experiments. The Doctor has turned them into a super-breed of snail who now leave behind a trail of super glue that will trap any snail touching it. Two of the snails, continually moving and controlled by the players, escape from their pens into the laboratory. Unfortunately, only one of the snails can escape from here into the outside world without raising the alarm. You must therefore trap your opponent and then try to escape through the small door which will then appear.

- Features:-
- Fast Action - 100% Machine Code
 - Nine levels of difficulty
 - Keyboard or Joystick Control

£5.95

EGBERT for COMMODORE 64

A fast Arcade Action Game for all the family to play.

Written in 100% Machine Code for super-fast action! Egbert works on the production line at 'LEYSPEACE'. It was a comfortable life until the invasion of the TEBBITES from the planet TOR. Egbert's union has been exterminated and the Tebbites have left their deadly Pets running wild in the workplace. As if that wasn't enough, the evil invaders have forced Egbert to take care of an Egg - damaging the Egg will have fatal consequences for poor Egbert. Egbert is now on piecemeal - can he earn a decent wage? Can he even survive? WARNING! You may get an ulcer by playing this game.

SIX LEVELS OF SKILL ANYBODY WHO CAN DO LEVEL 6 SHOULD WRITE AND LET US KNOW!

ARITHMETIC FUN-TIME for T199
Elementary addition, subtraction, multiplication and division exercises providing valuable practice and drill for young children who are developing their basic mathematical skills. Uses colour graphics and sounds to give a good presentation with the sums appearing in large letters on a blackboard. The Computer plays back sums which the child has difficulty with showing the child the correct solutions. Uses the basic T199 console. £5.95

DEALERS AND DISTRIBUTORS REQUIRED. GAMES AND EDUCATIONAL PROGRAMMES WANTED FOR ANY HOME COMPUTERS.

We've arrived!

We are **ONE TO ONE**. The service that sends your written correspondence more quickly and cheaply. From your own microcomputer or word-processor you dial us on your ordinary telephone line and send us your messages. Our computers will despatch them as telexes, priority letters, or instant mail, **WORLDWIDE**.

Telex: The **ONE TO ONE** Telex service can save the cost of a dedicated terminal and telex line. It's as simple as typing any message. **ONE TO ONE** enables you to use your microcomputer or word-processor to send and receive telexes worldwide, utilising your own telephone line.

Letters: The **ONE TO ONE** Letter is a high quality message (with no size limitations) in an envelope with all the urgency of a telegram. You can be sure that it will be delivered next morning in the post — and opened first!

Instant Mail: For less than the cost of a postage stamp you can send messages instantly to your regular business contacts, your colleagues in other offices, your clients and suppliers. With our Instant Mail service we give you an electronic mail box which will store and deliver messages to your instructions. Create your own communications network!

When you need to send the same message to a number of different destinations — from just one message we will create your correspondence in a combination of telex, letters and instant mail — according to your instructions.

Dealer Network: You may already have a micro-computer or word-processor — if not, don't worry, our nationwide dealer network will help you choose the best machine for your business needs. They will also supply you with a Modem which connects your hardware to the telephone line so your messages can travel down the line to us. With your subscription you'll have our easy to use software program with straightforward instructions and a dealer dedicated to give you full support.

The **ONE TO ONE** service is so versatile and cost effective that any business should use it regardless of size. For the full facts just complete and post the coupon or call us on our Information Line, any day, 8am to midnight for immediate details. **Give the pigeon a rest — do it today — and watch your profits soar!**

one to one

Information Line — 01-730 1155

Please send me further details of **ONE TO ONE** as well as the location of my local **ONE TO ONE** dealer.

ASSEMBLY LANGUAGE FOR ARCADE GAMES AND OTHER FAST SPECTRUM PROGRAMS

STUART NICHOLLS

The first book to teach how to use Assembly Language!!

This book deals with the techniques of Assembly Language programming for games and fast moving simulations. It assumes that the reader has some familiarity with Assembly Language Programming. Content includes keyboard, pixel movement, hi-res animation, interrupts, sound, and much more — all pulled together into useful programs towards the end of the book.

★ Contains many useful subroutines and ideas for use in the reader's own programs.

★ Complete machine-code frogger style game — 'CROSS'

★ All Assembly Language Programs listed in the book can be assembled directly with the McGraw-Hill 'ZX Spectrum Machine Code Assembler'.

07 0847290 £7.95

Useful routines to help you build your own programs!!

SPECTRUM ARCADE GAMES ROUTINE

This is a support tape which contains a selection of Assembly Language and Machine Code Routines that will help you produce arcade-style games programs.

The routines include:

PLOTDEMO, illustrating machine-code routines for fast screen plotting.

REACTION, demonstrating the machine-code high speed counting and scoring system.

MOVEMENT, demonstrating high-resolution multiple movements.

RND/DEMO, fast screen graphics, using a machine-code RAND function.

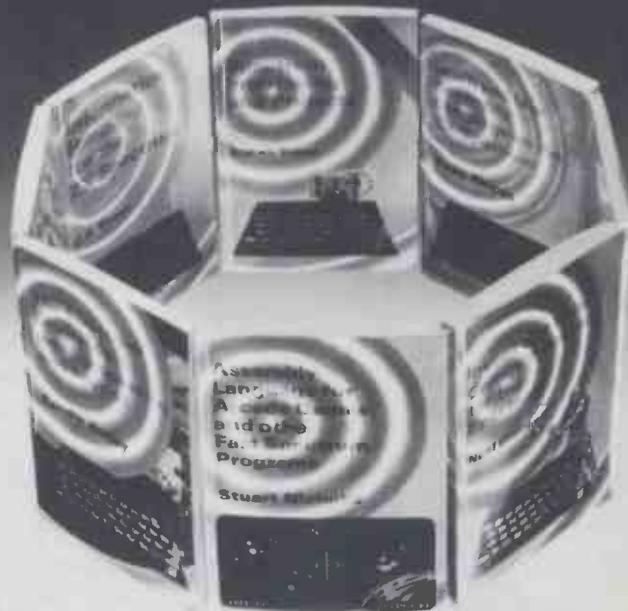

SOUND, machine-code routines for arcade games sounds, including 'white noise' for explosions, gun shots etc.

CROSS, a full arcade-game using these techniques — if you like 'frogger', you'll like cross!

*McGraw-Hill Software Support service available to all purchasers of software.

Repunits

This month Mike Mudge takes a long look at Repunits and Repdigits

The first part of this month's problem, although very simple to formulate, should encourage the development of certain general integer length arithmetic routines. See, for example, DE Knuth's, *The Art of Computer Programming*, Vol 2, Semi-numerical Algorithms, Addison Wesley, 1969; such algorithms once optimised will prove invaluable in any future empirical number theory.

The second part, somewhat tenuously related to the first, is in response to numerous requests for further problems relating to Prime Numbers; and is an opportunity to mention the possible sinister significance of such numbers in 1984, hinted at by A Berry, *The Daily Telegraph*, 9 January, 1984 together with the paper *The Fascinating Hunt for Prime Numbers* by C Pomerance in *The Scientific American*, December (1982).

- 1) Defining a Repunit by $R_n = (10^n - 1)/9$, an integer consisting of a string of n 1's. The problem is to factorise R_n completely for a given n . Thus $R_2 = 11$, $R_3 = 3.37$, $R_4 = 101.11$, $R_5 = 271.41$.
- 2) Noting that Repdigits (defined in the obvious way) other than Repunits are always trivially composite (not prime), it is known that in common with Repunits they can occur as long strings in primes. Thus R_{317} , 2222222222 222222222

39, 33333333333333333333 01, 1733333333 3333333333 33, 4444444444 4444444444 51 are all primes!

Furthermore, $10^{564} + 10^{282} - 1$ consisting of 1 followed by 282 0's and 282 9's is also prime.

Find primes containing lengthy Repdigits 5,6,7 and 8.

It is likely that this section will involve considerable library work and hopefully not too much computing, as a variation on the usual balance between these two activities in Numbers Count.

A prize of £10 will be awarded to the 'best' entry received by 1 June, 1984. Please address all entries to Mr MR Mudge, Room 560/A, Department of Mathematics, University of Aston in Birmingham, Gosta Green, Birmingham B4 7ET.

Note. Criteria of judgement include limitations imposed by hardware and the programming language chosen, so details of these should be supplied.

The Persistence of an Integer Review — November 1983

The Persistence of an Integer provided a popular challenge: with typical results to (c) examining powers up to 2^{9764} radix 3 in about 32 hours of Basic on a BBC Micro.

Parts (d) and (e) are still very much closed books and results relating to them would most certainly be of interest to myself and to this month's prizewinner, Mr Alan Prior of 41 Walnut Tree Road, Shepperton, Middlesex.

Alan used Basic on his Sharp MZ-80A with 48k and a 2MHz processor, having first rejected Pascal and Forth: the former due to the limitations of his version; and the latter due to lack of time to become familiar with the language.

In six hours two minutes (and eight seconds) he established 2777777 88888899 as the smallest number with persistence 11 using a program which handles 78 digit integer input and 255 digit integers internally.

Attempts to find the smallest integer with persistence 12 have so far been unsuccessful, although tables of persistence of n for $n = (1) 24999$, if extended, may shed light on this problem, should some underlying pattern be revealed.

The origins of this problem, to the best of my knowledge, are to be found in NJA Sloane's *The Persistence of a Number*, *Journal of Recreational Mathematics*, Vol 6 1973 (pp 97-98).

Note. Submissions will only be returned if a suitable stamped addressed envelope is provided.

LEISURE LINES

Quickie

If 250 players enter a darts knockout tournament, how many matches will have been played by the time the tournament is finally won?

Prize puzzle

C			

here so that the row and column marked 'P' contain a prime number, those marked 'C' contain a perfect cube,

by J J Clessa

and those marked 'S' contain a perfect square.

January prize puzzle

A very mediocre response to the January puzzle, about 50 entries only. Perhaps it was more difficult than usual, or maybe my readers are spending their time on the puzzles to win the Apricot.

However, many of those who did submit entries found quite a lot more to the puzzle than I realised. Clearly, there are many solutions, the smallest of which (with 7 digits) is 1000146, whose divisors total 2286144 (1512^2). The largest is 9998508 which is 5040^2 .

The winner was chosen by a draw,

and the lucky entrant was from Milan, Italy — Mr Giorgio Vincenti. He only submitted one solution, 1380527, whose divisors sum to 1176^2 but it was enough to win the prize. Congratulations, Giorgio, your prize is on its way.

Incidentally, solutions should always be submitted on postcards or the backs of sealed envelopes. Normally solutions on letters are ineligible for prizes, but since we forgot to state this in the January puzzle we let it go by this once. But don't forget — letters if you want to correspond, postcards for the puzzle entries.

Computer Puzzles

Tired of completing The Times crossword in no time at all? Looking for the greatest mental challenge since the Rubik Cube? Tony Hetherington presents a new breed of computer programs designed to test and tantalise your puzzle-solving abilities.

The claim to fame of computers is their ability to solve problems and puzzles thousands of times faster than the average human. So it is strange to find a family of programs which enables computers to set problems for humans to solve.

Man has been obsessed with puzzles for generations, ranging from why toast always falls on the carpet jam side down to the infuriating Rubik Cube, so perhaps computer puzzles are just a natural progression in man's quest to boggle his mind completely.

It is important to establish the range of programs mentioned since one could argue that many of the so called 'adventure games' are little more than a series of puzzles. The problem is confounded by the many solo games which are little more than simple puzzles.

In this article I shall attempt to concentrate on the true breed of computer puzzles: digital developments of puzzles, usually wooden, which occupy coffee tables with the sole ambition of annoying people at cocktail parties.

The main drawback in transferring brainteasers to computer is that the hopeful solver only has a screen to stare at. The absence of something tactile means that such puzzles must and can only be solved while the user is in front of the screen. This is unfortunate since puzzles enjoy great popularity among travellers, and it's uncertain that the same interest will remain in a less portable medium. Although portable computers may well be the answer, at present the gamut of puzzle software is only available for the more popular and stationary micros.

What are the advantages a computer can offer to a resourceful puzzler? The following reviews illustrate the main advantage of a digital puzzle — the use of more than two dimensions. The three dimensional crossword puzzle,

for example, is easily programmed into a computer while it is totally beyond the resources of newspaper presentation.

Computers tend to hide the solution from 'accidental' glances, therefore almost eliminating cheating. I say 'almost', since cheats are a particularly innovative breed. Besides, at least one of the puzzles below can be solved with the aid of a video recorder.

So what should you look for if you want to buy a computer puzzle? As with computer games, you should first look for an original idea that captures your imagination, otherwise you will tire of the product rapidly and will feel you have wasted your money. The puzzle should use the facilities of the computer well: the graphics and sound should enhance the program rather than hinder it. It should also be interesting and challenging while not impossible to fathom out: only a few eccentrics enjoy pursuing the unobtainable.

Finally, the program should be good value for money, particularly as a computer cassette is about ten times the price of a standard puzzle book. Consequently, it is an advantage if the puzzle is still a challenge after several attempts.

It is difficult to put a numerical value to these requirements, but in order to present meaningful reviews I shall attempt to do just that. Following each review is a series of marks, expressed as percentages. These ratings summarise my opinion of that particular computer puzzle. Here is an explanation of the scoring:

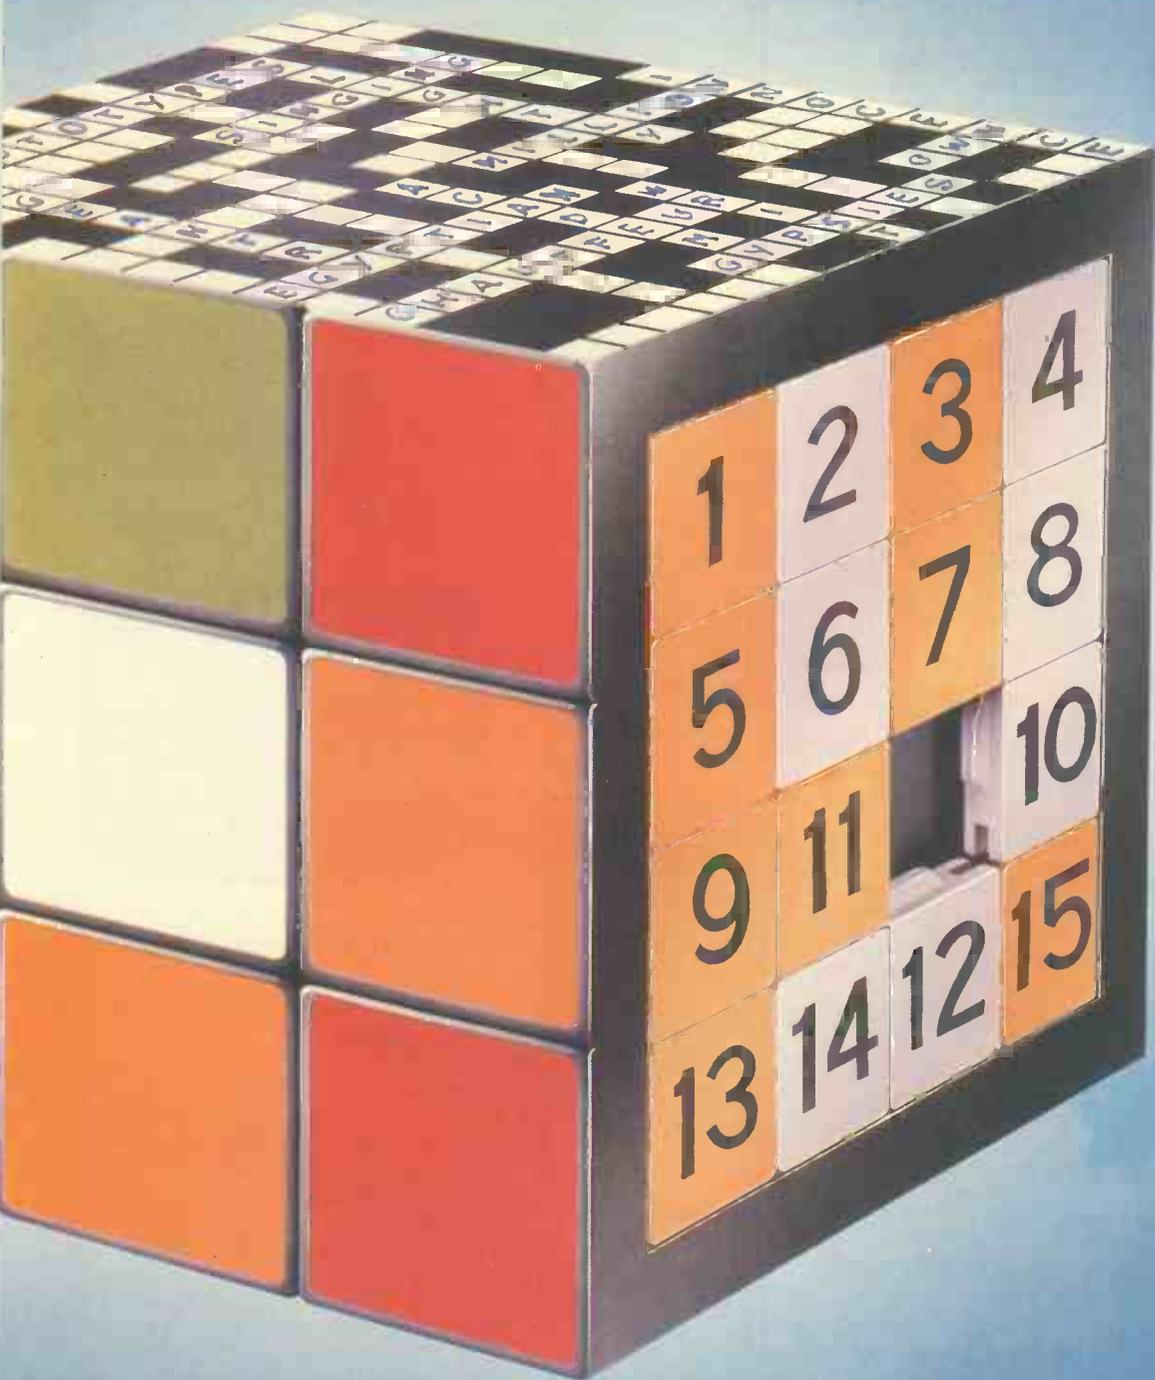

Novelty: an indication of the originality of the idea behind the puzzle.

Use of machine: how well the computer's abilities have been utilised.

Grey matter: a measurement of the percentage of 'intelligence' required to solve the puzzle.

Value: taking everything into account, is it worth the money?

Jumbly

Supplier: DK'tronics
Computer: ZX Spectrum
Price: £6.95

Jumbly is the computer version of those squared-slider puzzles, where squares are moved around inside a plastic frame until a picture is formed.

Jumbly has taken this idea and developed it into an extremely neat package containing numerous such puzzles. The reward for solving one puzzle within a set number of moves is access to the next. You can jump a few by guessing the name of future pictures, but in my experience this is a particularly non-productive pursuit.

Luckily, DK'tronics was kind enough to furnish me with the names of other pictures so I could sample them without having to work up the hierarchy.

The later ones proved to be impossible, since not only do they contain animated pictures but some scroll across the screen. In other words, you are trying to match continually changing pieces. To help you, only pieces that are correctly placed are displayed in full colour, the others appear in inverse or only two colours. Be warned, however — in some screens the entire colour scheme changes, throwing you completely off the track.

The graphics, particularly the animation and screen scrolling, are reason enough to buy this excellent program.

Novelty	65%
Use of machine	100%
Grey matter	70%
Value	80%

The Ultimate Crossword

Supplier: Alien
Computer: BBCB, Commodore 64 and Spectrum
Price: £14.95

If you've ever stared with envy at the

commuters who complete *The Times* crossword in no time at all between London and Brighton, then The Ultimate Crossword is for you.

Humble crosswords have been the source of many ideas as the market has been bombarded with interacting word products — from crossword wallposters to toilet rolls and jigsaw puzzles. This is not the first computer crossword puzzle, but it does put the computer's powers to good use as it's a three dimensional crossword.

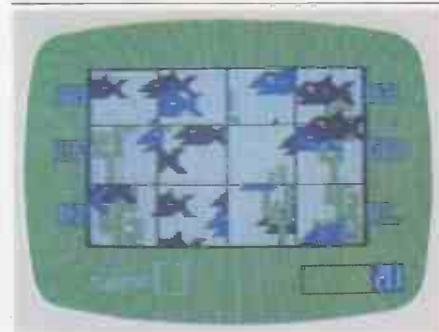

The puzzle is 30 normal crossword puzzles intertwined to form a 15 by 15 squared cube. Fifteen of these puzzles lie on top of each other and when the cube is viewed from the side a further fifteen puzzles are formed. Consequently, as solutions are entered for one crossword, you will be filling in letters in the others. A ten letter answer will affect eleven of the puzzles — the one containing the word and the ten the word passes through. This means that you must be sure of your answer before entering it because mistakes have drastic effects.

The instruction book supplied with the program contains all the clues (approximately 40 per puzzle) and the coordinates at which the answers should be entered. These can be entered in any sequence and changed at will.

Any crossword puzzle is only as good as its clues: I only managed to solve ten. I'm sure this program will provide a challenge for most crossword buffs.

The only remaining problem is finding somewhere to plug your computer in on the 08.22 to Kings Cross.

Novelty	60%
Use of machine	70%
Grey matter	95%
Value	80%

Puzzler

Supplier: Shards Software
Computer: Dragon 32
Price: £8.95

Puzzler is another unscramble-the-picture style puzzle and contains three different versions with a common theme. A two-colour picture is displayed on the screen for a few moments before it is jumbled up for you to solve. By means of swapping pairs of pieces the picture is unscrambled.

The choice of pictures is disappointing — only four to choose from. The graphics are also a let down: fuzzy and very slow. The different versions must

be loaded in separately, and have the inspiring titles Puz1, Puz2 and Puz3.

In Puz1, the picture is divided into 12 pieces and a choice of four skill levels determines the number of swaps available to solve the puzzle. You are only given a set amount of time to enter your move, otherwise the computer will do it for you. Obviously this time limit is generous in level 1 of Puz1, but as the levels rise it becomes a challenging feature of the puzzle.

Puz2 divides the pictures into 24 pieces and drastically reduces the time available for entering moves.

In Puz3, one of the swapped pieces changes colour and this must be corrected (by swapping it with itself) before the puzzle can be solved.

Novelty	40%
Use of machine	60%
Grey matter	50%
Value	55%

The Slicker Puzzle

Supplier: DK'tronics
Computer: Commodore 64, VIC 20, BBC and Spectrum
Price: £6.95

A quick glance at the cover of this puzzle and you would be excused for thinking that it's called The Sucker Puzzle, which is appropriate since you have to be some sort of sucker to attempt it in the first place.

The puzzle consists of 16 rows of 16 coloured triangles arranged symmetrically. These are jumbled up by the computer which moves whole rows and columns, and it's up to you to unscramble it within a target set by the machine.

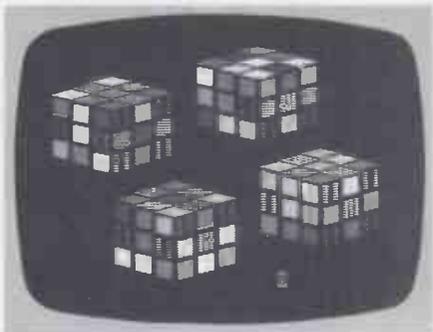

Should you be successful then a garbled message is displayed on the screen. This remains garbled until you successfully solve a puzzle at level 8 which, believe me, is almost impossible.

The rows and columns are moved in

the Commodore 64 version either by pressing the required key letter or by moving the joystick and pressing the fire button. Each press of the button shifts a row or column along one piece. To give you some idea of how the puzzle's difficulty increases as you go through the eight levels, level one requires approximately 10 moves whereas level eight puzzles must be solved in around 160 moves.

To make this program completely irritating the program actually demonstrates how to solve the puzzle before you attempt it. This is unfortunately performed at warp factor six and impossible for the human eye to follow, so in general you're on your own.

Novelty	85%
Use of machine	80%
Grey matter	90%
Value	85%

Romik Cube

Supplier: Romik Software
Computer: Dragon 32
Price: £6.99

No survey of puzzles, computer or otherwise, is complete without the inclusion of the Rubik Cube. This puzzle has been the cause of more brain and finger mangling than all the others put together. The computer version extends the puzzle to impossible limits. Included in the package are three offerings: a standard or practice cube, a time cube and a four dimensional version.

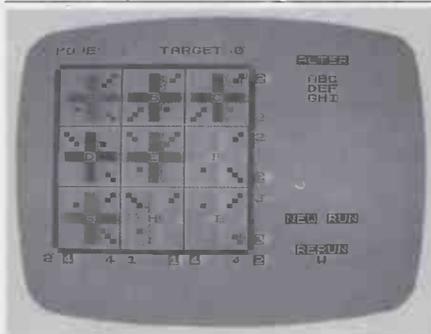

The practice option is a standard Rubik Cube and is supplied to enable you to learn the necessary commands in order to rotate the faces and thereby solve the cube.

Once you have mastered the practice cube you are ready to tackle the time cube. Initially this seems deceptively simple, as it only has three colours instead of the usual six, but whenever you're about to solve the cube (approximately every 80 seconds), the faces change colour. The object is to solve the puzzle in such a way that it stays solved, even after a colour change.

When you're ready to move on from the time cube, either because you've solved it or you've pounded your Dragon to death, you should try the 4D or 'space' cube. The 4D cube is four standard cubes that must be solved simultaneously. However, they are interconnected so if you move a face on one cube then the same movement will

be performed on the others. You can also move segments from one cube to another which may or may not help.

Novelty	80%
Use of machine	70%
Grey matter	75%
Value	70%

Flippit

Supplier: Sinclair
Computer: ZX Spectrum
Price: £9.95

Flippit is Sinclair's deceptively simple entry into the mind-boggling market. The puzzle consists of nine Flippit pieces which are divided up into three groups of coloured pieces: red, blue and green. Each piece has arranged around its corners 0, 1, 2 or 3 dots, and the object of the puzzle is to arrange the pieces so that every row, column and main diagonal adds up to exactly nine dots.

To enable you to do this, pieces can be swapped, turned clockwise and anticlockwise and even flipped around any of four axes.

I should warn you that each colour group of pieces has a unique arrangement of dots and no amount of turning or flipping will turn a blue piece into a yellow piece.

Each piece has a single letter code by which it is flipped and turned through a

series of simple commands. For example, AM turns piece A clockwise by 90 degrees. These commands are permanently displayed on the right hand side of the screen, as are running dot totals for each row, column and diagonal. These indicators show the difference between the row total and the required nine dots: red numbers if there are too many dots, inverse for too few.

Should you find a correct solution then all the pieces turn red and the computer bleeps at you as a reward for all your efforts.

Flippit can also be played competitively, with the players solving the puzzle in turn within a target set by the first player. This is displayed on the screen alongside the running total of moves taken.

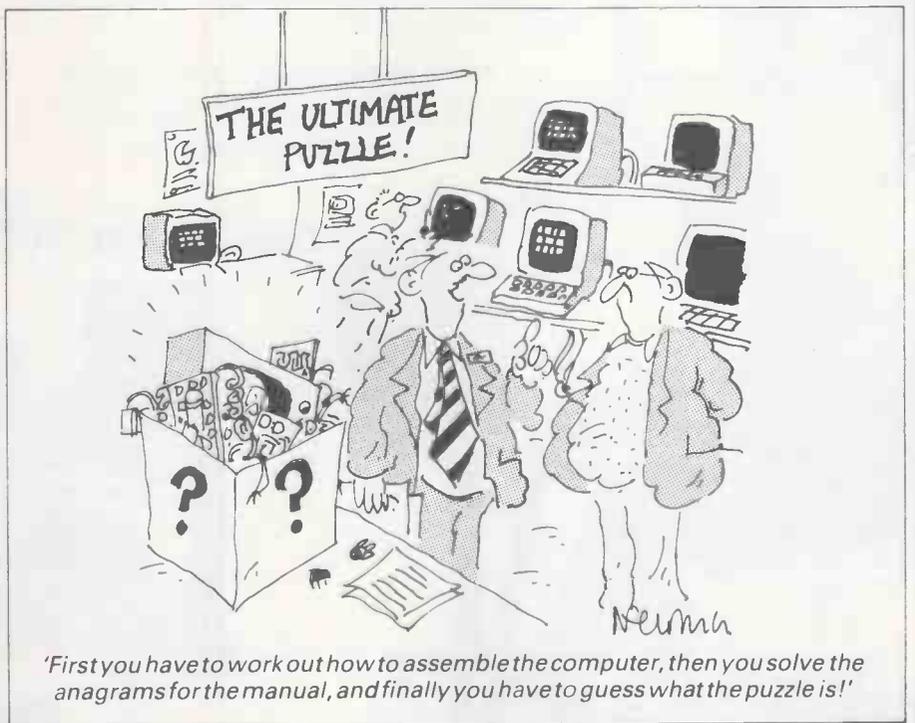

Should you not only solve the puzzle but also beat your opponent's target, you are given the ultimate in Flippit accolades: red pieces, bleeping noises and a new colour border!

To add to the excitement, you can choose between re-running the puzzle with the same initial piece positions or starting afresh with shuffled dots—you can even swap the dots for numbers.

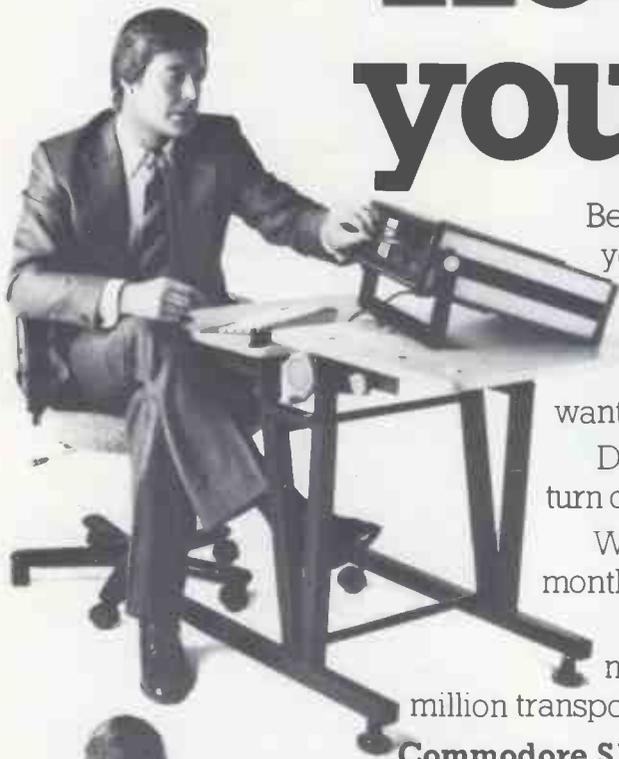

The graphics are sufficiently quick and smooth so as not to distract the concentration needed for success. Incidentally, don't be too surprised if Flippitees indulge in strange gesticulations while in the depths of concentration: they will merely be trying to determine the resulting dot pattern after a piece has been flipped.

Although Flippit is enjoyable to solve and is well implemented on the Spectrum, I can't help feeling that it would be more at home on a coffee table in a more tangible format.

How many mi you try before All of

Before you buy a micro, you'll need to ask yourself some searching questions.

Exactly why do I want one?

Do I want my kids to turn out like Mr. Spock?

Will I get bored in six months?

Do I want to develop my taxi into a multi million transport corporation?

Commodore SX 64

Have I got enough in the bank this month or do I need credit?

You'll need to ask some equally searching questions of the salesman you're likely to encounter.

First snag. You may find they know less about the machines than you do.

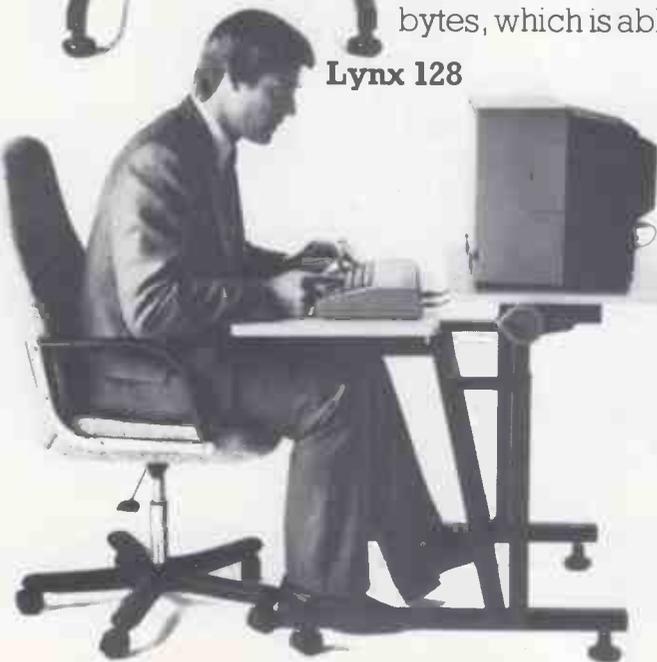

In case you know less than them, here's a quick grounding in the jargon.

Sinclair Spectrum 48

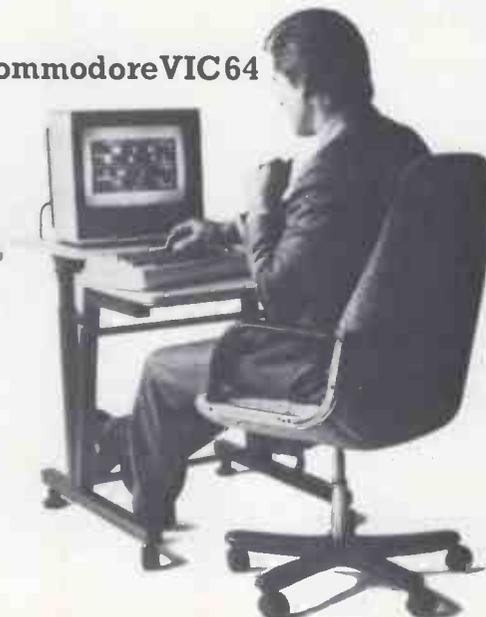

Computers store information in the form of a binary code.

A single digit in that code takes up a byte. A Kylobyte is about a thousand bytes, which is abbreviated to K.

Lynx 128

Commodore VIC 64

A 1K computer would have a memory big enough to store about 25 lines of text, not really enough to be of any use.

And not all of that memory would be available for your use.

Read Only Memory (ROM for short) is the part of the computer's memory that you don't have access to.

Instead, it is used to store the information the computer needs for its operations.

The memory you're interested in as a user is RAM or Random Access Memory.

You use this part of the memory to load your information onto.

But when you switch the machine off, it promptly forgets all the information you spent ages typing in.

You need to be able to store it somewhere.

The easiest and cheapest way to do this is on an audio cassette recorder.

More information can be stored

Micros should you buy one? them.

on floppy disks. The normal 5¼" size
can store more than 100K.

If that information was news to
you, you'd probably be interested in
trying the Sinclair Spectrum, or the
Atari 600XL.

Both are ideal starter computers,
with 16K memories, and both can be
upgraded with add on memory packs
and a wide range of hardware. And,
most important of all there's already
masses of software available.

You can plug game cartridges
straight into the Spectrum and with
the Atari you can start with 'My First
Alphabet' and go right through to
'Teach Yourself Conversational French'.

Add on the optional 64 K memory,
and you'll have a useful small business
computer, complete with software like
Atari Writer for word processing. (You
will also be able to boast that you built
your own Atari 800X).

If you truly have ambitions for
your business, there's the Commodore
SX64 personal computer.

It has built-in high resolution
monitor and disk drives, which
means it's transportable, com-
pact and doesn't have spaghetti
problems.

So it makes your business look
smarter before you've even run a
financial planning programme.

Acorn BBC-B

These are just some of the
computers you can have a hands-on
experience with at Laskys.

Prices start at £99 and there's
interest free credit and a very pro-
fessional after sales service. (We know
what it's like having your whole
business depending on the reliability
of a computer.)

As you can see, we've done
everything to make it easy for you to
find your way to a micro that you'll be
happy with.

Commodore 64

And if you think trying all the
micros in Laskys sounds like a lot of
trouble to go to, it's a lot less hassle than
trying to make do with the wrong micro.

A word of advice about micros:

B E N C H T E S T

Coleco Adam

Some time ago, Atari realised that it wouldn't take a lot of work to turn its games machine into a micro. Now Coleco, the company which produced Cabbage Patch Kids, has done the same for its ColecoVision home entertainment centre. Surya takes a look at its Adam computer module.

There are probably three main routes into the home computer manufacturing business: the electronics companies like Sinclair which moved naturally into computing; the business computer companies like Commodore which moved downward into the home market; and finally the electronic games companies which have expanded into the home computing market as we have seen with Atari. Coleco belongs to the third category. The company has recently gone the same way as Atari and produced an 'add-on' system to turn the ColecoVision TV games console into a standard microcomputer.

A standalone Coleco Adam system is expected to be available later on this year. To begin with you will buy the ColecoVision Computer 'Module' add-on, which is the product reviewed here.

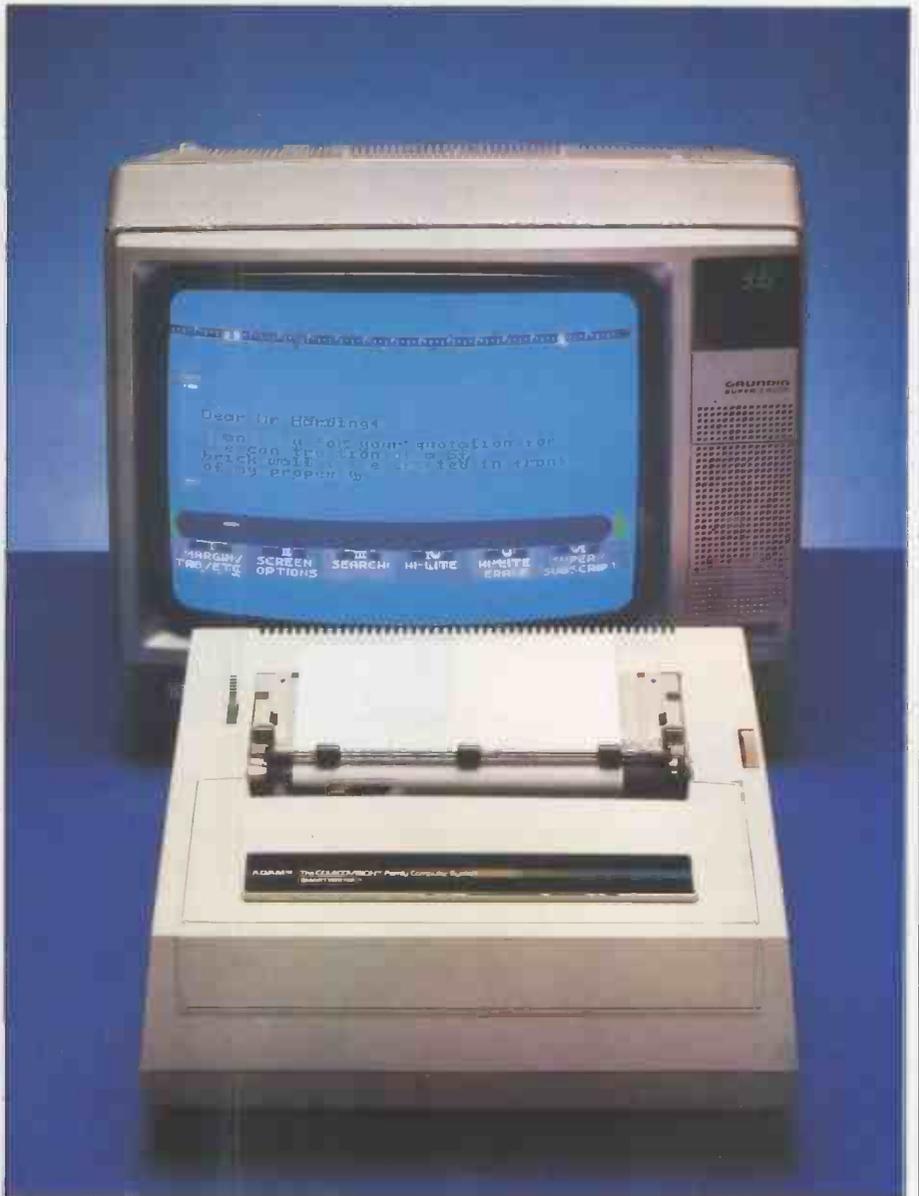

Hardware

The add-on system presupposes that you already have the ColecoVision games console. If you don't have this, add £150 to the price and become the proud owner of a games console.

Everything else you need comes in a single, very large box. It contains the 'memory module', keyboard, daisy-wheel printer, power-pack, three manuals, a frame for connecting the memory module to the games console together with all the necessary connecting leads and a clip-on joystick holder. The memory module incorporates a digital cassette drive, and three cassettes are supplied for use with this. Connecting the individual units takes about ten minutes the first time, but is a two-minute job once you know where everything goes.

The keyboard is slightly smaller than an Electron. It is connected to the main unit via a 75cm long coil cable. The connector is like a scaled-down telephone jack. The keyboard has 75 keys, and one of the ColecoVision joysticks can be clipped onto the right hand side of the keyboard to provide a useful numeric keypad too. I liked this arrangement, since it gives the choice of an extended keyboard with the convenience of a numeric keypad, or a more compact one without.

The feel of the keyboard is spongy. I've used far worse, but the Adam keyboard doesn't compare with something like the BBC. But the layout is well designed. All the standard keys are where you'd expect to find them, and special-purpose keys are sensibly placed. Cursor-control keys are laid out in a diamond shape, with the HOME key in the centre. The six keys dedicated to the built-in text editor are in a block above the cursor keys, and the programmable function keys run across the top of the keyboard. The keyboard is colour-coded: the qwerty keys are white; SHIFT, RETURN, TAB, are grey; and the programmable keys are black. The programmable keys are labelled

'...like splintering bamboo canes' — the SmartWriter printer

using Roman numerals to avoid confusion with the ordinary numeric keys. The RETURN key is well-placed and adequately sized.

The system has two reset keys. The first is the games console reset, which selects and initialises the ColecoVision system. The second is located on the top of the memory module. This initialises and selects the Adam, auto-loading whatever happens to be in the data drive or, in default, dropping into the built-in text editor. Either reset is fatal if you are in the process of creating either a program or text file, but both are well away from the keyboard and therefore unlikely to be pressed accidentally. The Adam's reset switch has an additional safeguard in that it is recessed and must be pulled towards you rather than pressed.

Digital data packs

The data drive differs from a standard cassette player in two ways: firstly, it uses preformatted tapes so that it can simulate random access files; and secondly it records data in digital rather

than analogue form. It is very similar to the Ikon Hobbit (reviewed in *PCW* January), except that the Adam drive uses standard-sized cassettes whereas the Hobbit uses minicassettes.

Unlike the Hobbit or Microdrive systems, Adam data cassettes are not formatted by the system but are supplied preformatted by Coleco. This is less than ideal in that — as with Microdrives — users are dependent upon a single supplier: both price and availability are correspondingly uncertain. Coleco's justification for this policy is that users would otherwise be tempted to buy poor quality tapes which are not data-certified in order to save money — and then blame the system when they find that subsequent loading and saving prove unreliable.

The total formatted capacity of a data cassette is 500k. On Coleco's estimate of an average 2k text per A4 page, this equals 250 pages per cassette — a respectable capacity even by disk standards. The system has room for a second data drive, though this is not available as yet.

B E N C H T E S T

The data drive has reasonable access times — a file directory takes about ten seconds to read in from tape. Second and subsequent file directories take only two or three seconds. I assume from this that the Adam stores the last directory and tape identifier in RAM and simply checks whether the tape has been changed. I say 'assume' since none of the supplied documentation comes anywhere near being a technical reference manual, and details such as how the system works are obviously not intended for the likes of you and me.

The memory module and ColecoVision system together give — according to Coleco — a total RAM capacity of 80k. While 64k of this is available to machine code programs, 'PRINT FRE(1)' in Basic responds with 28k.

Printer

Coleco is, to my knowledge, the only manufacturer to supply a printer as a non-optical part of a complete home computer system. The policy is an odd one: the home computer market is a fiercely competitive one, and this printer probably accounts for about £200 of the total price. Though a printer would be essential to some users and is always a useful thing to have around, to most hobbyists a printer is a luxury to be considered once their bank balance has recovered from the purchase of the computer itself. This policy perhaps is evidence that Coleco believes that it can make its mark on the business as well as the home market — a bundled printer would not be out of place in a business system.

I don't think I'm doing the 'SmartWriter' printer any injustice by saying that it is apparent from both appearance and operation that the designers were told to come up with a printer which could be produced as cheaply as is humanly possible. It works. That's the only thing I can honestly find to say in its favour. The 'SmartWriter' is slow (8-10cps) and extremely noisy. It sounds like someone splintering about half a dozen bamboo canes excruciatingly slowly. The company comments: 'It's no more noisy than a typewriter would be.' The print quality is more on a par with a cheap electric typewriter than a letter-quality printer.

The whole system takes its power via the printer. A single lead connects the printer to the system unit, carrying power via the printer to the computer, and data from the computer to the printer. The dual-purpose lead is a good idea. Provided the two sets of wires are well-insulated from each other — as they appear to be — it's an effective method of cutting down on the number of leads wandering around. The prob-

The 75-key keyboard: spongy, but well laid-out

lem is that the power goes via the printer to the Adam, and not the other way round. This means that the computer cannot be used without the printer attached. The printer is quite large — measuring 37×35×14cm — and the connecting lead is not long enough to allow the printer to sit underneath the desk holding the computer. By the time you've got the games console, memory module, keyboard, printer and TV onto your desk, there's not a lot of room for anything else.

There are no parallel or serial interfaces. You have a printer already, of course, and Coleco promises an add-on modem, but in either case you either like the one Coleco supplies or do without. The only uncommitted interface is the edge-connector at the right hand side of the memory module, though if Coleco produces the 64k RAM pack, modem and disk drive as promised, this interface is going to be kept pretty busy.

The display, too, is limited to a TV: there are no sockets or leads to allow any form of monitor to be hooked up. This is a pity, since the Adam's graphics are quite impressive. It also belies the idea of the machine being used for business use: I can't see business users putting up with the quality of a TV display.

Software

The Adam has an advantage over most new machines in that it already has an established library of games software: since you have to buy the ColecoVision games console as part of the system, you can, of course, run any of the ColecoVision games cartridges. The catch is that you are buying games console software designed to be operated using a joystick with fire buttons, a

numeric keypad and no more. Consequently, there is no shortage of all-action, arcade-style, machine code games with flashy graphics and impressive sound affects, but that's it. 'Donkey Kong' may be fun, but it very quickly grows tiresome.

The Adam comes supplied with three pieces of software: a Basic interpreter, an arcade-style game 'Buck Rogers' and a text editor built into ROM. The text editor has a similar name to the printer: 'SmartWord'.

When you switch the machine on, the system checks for a tape in the data drive. If the tape is either blank or contains text files, the system assumes that you want to use SmartWord. If the tape is a machine code program, it loads and runs it. If the tape contains the Basic interpreter, it loads this. If there is no tape in the drive, the Adam defaults to SmartWord. This is the first justification I've seen for the word 'Smart' which is plastered over practically everything.

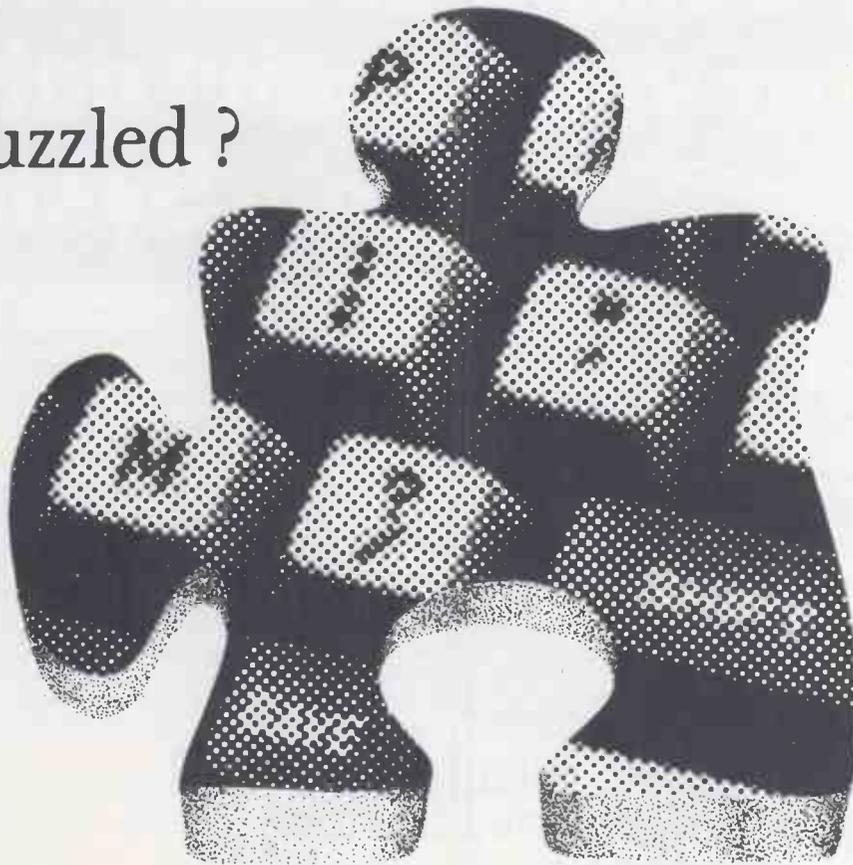

SmartWord

Assuming you have either nothing, a blank tape or text files in the data drive, the system calls SmartWord from ROM. The printer resets itself, noisily, and the 'Adam's Electronic Typewriter' display appears on the screen.

'Adam's Electronic typewriter' is just that. You press a character on the keyboard, and it is immediately printed on the printer. To enter the full text editor, you press the ESCAPE/WP key.

Since the 'SmartWriter' screen is only 36 columns by 20 lines, it cannot work on the 'what-you-see-is-what-you-get' principle. It overcomes this handicap remarkably well, tackling the problem by displaying both horizontal and vertical rulers. These rulers indi-

Puzzled ?

cate the current margin and tab settings, and give a graphical indication of the current cursor position as it will appear when it is printed.

When you first enter SmartWord, the display shows horizontal and vertical rules, a 72-character 'current line' window at the bottom of the screen and the functions assigned to the programmable function keys. You are automatically in a new, as yet unnamed, file. All you have to do to begin your document is start typing.

As you enter text, it appears in the black 'window' at the bottom of the screen. This window is designed to look like a typewriter platen which I tried to think of as just part of the wonderful variety of life. It didn't make it any less silly, but it helped. By default, the line-length is 60 characters. When you reach the right hand margin, SmartWord automatically wordwraps and scrolls the text upwards.

Editing is straightforward, and you can edit any part of the document: the highlighted window has no significance other than to indicate the part of the document you are working on. As you use the cursor keys to find the text you want to edit, the screen scrolls upwards or downwards until the line to be edited appears in the window. To overwrite, you simply position the cursor using the arrow keys and type in the new text. The old text is overwritten. To insert text, you press the INSERT key. The prompt 'Insert/Type text' appears on the screen, and text entered at this point is inserted at the cursor position. The function key definitions change to allow you to insert page breaks and subscript/superscript control codes. When you press function key 'VI' to indicate that you are 'DONE', the auto-wordwrap sorts itself out, reformatting as necessary.

The procedure for deleting text is much the same. You position the cursor and highlight the text you want to delete. Function key 'IV' toggles the highlighting on/off, 'V' cancels highlighting (so that you can change your

mind) and the DELETE key then performs the deletion. When you press the DELETE key, it will check by displaying an 'Are you sure?' prompt. If you press DELETE to confirm, the deletion is carried out. If you do not want to proceed with the deletion, ESCAPE cancels the command.

Be warned, however! If you press the DELETE key before highlighting the text, SmartWord assumes that you know what you are doing and does not present the 'Are you sure?' prompt.

If you do accidentally delete text, though, all is not lost provided that you realise your mistake before pressing anything else. For the Adam has that most wondrous of keys, UNDO! SmartWord has two dangerous options: delete text; and clear text from memory. When the program performs either of these operations, the text is not actually deleted from RAM, but merely cleared from the screen and marked as OK to overwrite. The UNDO key simply removes the 'OK to overwrite' flag and restores the text to the screen.

Function key 'I' takes you into the print-format menu. This allows you to set vertical and horizontal margins, tabs, line spacing and insert page breaks. Line spacing is set to single by default, and stepped up or down in increments of 1/2 by keys 'IV' and 'V'. The minimum line spacing is 1, but there appears to be no upper limit.

Key 'II' allows you to configure the display to your own tastes. The three options set the 'paper' colour, the sound, and change the window. The default colour is black text on a light blue background; other options are black on white, green or grey, and white on black. The sound option allows you to select from 'full' sound (a short beep when each key is pressed, and a 'ping' for the CR or function keys), 'partial sound' (pings only!) and, thankfully, no sound.

The windowing option allows you to switch off the 72-character window and use the whole screen as a window onto the document. The difference is that in

the default mode, words wrap around so that whole lines are visible on the screen — the second half of the line appears underneath the first half, and is reformatted when it is printing. In full window mode, only a 36-character wide section of the line is visible at one time, and the cursor keys are used to scroll the screen left and right.

Key 'III' allows you to perform a literal (that is, ignoring case) search for specified text, once only or repeatedly. A 'find-and-replace' option is also offered. Searching is fairly slow, but not staggeringly so.

Key 'IV', as we have already seen, toggles highlighting on/off, while key 'V' cancels highlighting. Finally, key 'VI' inserts subscript or superscript control characters. Since the printer is a daisy-wheel, all this does is to move the roller 1/2 line up or down to print the text.

Loading and saving files is both easy and friendly. The Adam checks that you have a suitable tape in the drive before attempting a save, asking you to insert a tape if necessary. If you are loading a file, SmartWord gets the file directory from the tape and asks you to use the four arrow keys to select the file you want. If you load a new file while you still have text in the workspace, SmartWord sensibly appends the new file to the bottom of the existing one.

SmartBasic

A manufacturer producing a new home machine has a choice of two main paths when it comes to the Basic interpreter. The first is to design a completely new and original one — as Acorn did with the BBC Micro — and the second is to use one of the old 'tried-and-trusted' varieties with whatever modifications are necessary for the machine in question, as do most manufacturers. Coleco took the latter route and came up with SmartBasic.

SmartBasic bears a great resemblance to Applesoft Basic. The commands, statements and functions appear to be 100% identical in purpose, format and syntax — right down to shape tables, a notable Apple peculiarity. Even the graphics-handling is the same. I'm quite sure that — with PEEKs, POKEs and other address-dependent statements removed — you could show a SmartBasic listing to any number of Apple programmers without any of them suspecting that the listing was anything but an Apple program. Even the prompt is an Apple one!

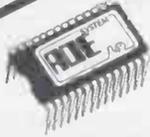

The strange part about Coleco using such an Applesoft-like Basic is that it has only gone halfway: the memory addressing is different, and hence any

SYSTEM SOFTWARE

ADE is a complete program development package on 16k ROM for assembly language programmers.

ASSEMBLER

A full 6502, 2-pass MACRO assembler using standard Mostek mnemonics. It has the facilities you would expect on an assembler for a much larger machine. Features include MACROS with LIBRARY facilities; nestable CONDITIONAL ASSEMBLY; flexible LISTING OPTIONS; hex, decimal, binary and ASCII data formats; full range of ARITHMETIC and LOGICAL OPERATORS; symbol table sort and dump; file chaining; 29 powerful PSEUDO-OPS. Source and object programs are kept on disc so NO LIMIT ON PROGRAM SIZE or location.

DEBUGGER

The renowned SPY DEBUGGING MONITOR! Instantly available for inspecting, modifying, debugging and dis-assembling machine code programs. Features include easy-to-read COLOUR display; hex, ASCII or DIS-ASSEMBLED display modes; SINGLE-STEP; BREAKPOINT; MEMORY SEARCH; DIS-ASSEMBLER and much more!

EDITOR

A dynamic TEXT EDITOR with WORD PROCESSING CAPABILITY! Designed with the programmer in mind to produce both programs and documentation. Features include SCREEN EDITING and DEFERRED EDIT modes; MACRO commands; NO LIMIT on document size; sideways SCROLLING; COLOUR display; full use of FUNCTION KEYS. A fully STRUCTURED COMMAND LANGUAGE makes this editor THE MOST POWERFUL YET DEvised for the BBC Micro.

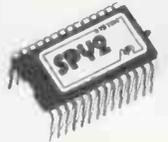

£60 incl. vat
OS1.0 or above
Use with disc or tape

ADE

is complete with a 160 page comprehensive reference manual including tutorial and reference sections as well as details on how to code your own 'sideways' ROMs. Demonstration/ utilities/macro library disc available in 40 or 80T format. Please specify.

The HR1

Bi-directional - 17 CPS - some features as below, but without keyboard and lift off facility.

CROWN RANIER - The leader of all interfaced daisy wheel printer/typewriters: Here's why:

The unbeatable Crown Ranier is the only heavy duty daisy wheel printer/typewriter which runs on a linear motor - no belts or cables to break, stretch or wear - and uses the IBM ribbon and lift off correctors. The reliability has become legend in these days of expensive electronic typewriter breakdowns.

CENTRONIC - IEEE - RS232 INTERFACES - No external boxes - interchangeable daisywheels - variable pitch - three free daisy wheels - automatic whole line correction - easily copes with standard printed forms - 195,000 characters per ribbon (at least twice the average character length) - standard lift off correctors - a printer/typewriter at the flick of a switch.

Perfection as a typewriter (now used by local authorities and multi-nationals), perfection as a printer.

Beware of lightweight, low cost machines - these can never give long term reliable service. THIS MACHINE WILL!! The professional machine.

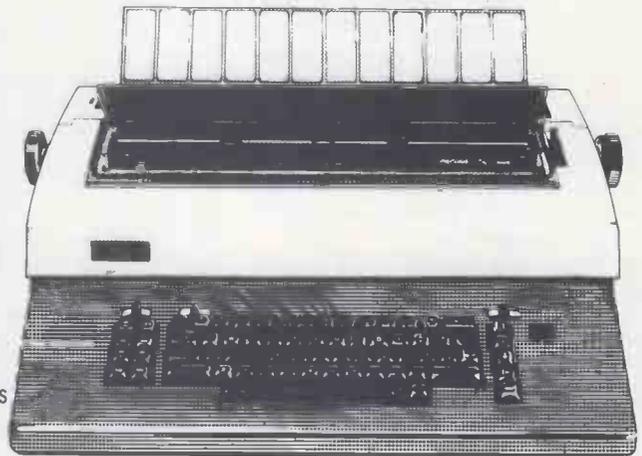

Ask you local computer or office equipment dealer for further information. EX STOCK DELIVERY.

The memory module incorporates a 500k digital data-drive

Apple listings involving POKEs, PEEKs, assembly or machine code will not run on the Adam, and visa versa. And as Apple programmers will know all too well, it is difficult to persuade an Apple to do anything useful without a fair sprinkling of POKEs and PEEKs.

The graphics are impressive: the high-res screen has a resolution of 256x159 and 16 different colour shades

The joystick acts as a numeric keypad

available using the standard Applesoft graphics statements.

There's not a lot I can say about the Basic. As far as I can see, it's Applesoft by another name.

Documentation

The documentation supplied with the Adam is written in an overbearing, patronising, American style, which I find infinitely worse than terse, unfriendly prose. Some of the demonstration programs in the Basic tutorial almost defy description, though puerile and infantile come close.

The authors seem to work on the principle that if a three-sentence explanation is clear, then a thirty-sentence one must be ten times as clear. On the positive side, I don't think anyone would have any difficulty understanding how to use the system!

Conclusions

During this review, the Adam was running continuously for 26 hours. The power pack grew too hot to touch, but the machine ran without error performing a variety of tasks.

In general, I tend to view upgrades to TV games machines as a less than ideal way to buy a computer. If the computer

has to adapt to the games machine rather than the other way about, it is very easy to end up with a system which is clumsy, limited and overpriced. The Adam appears to be neither clumsy nor limited, though I think it is likely to be overpriced.

The built-in text editor is an idea which seems to be catching on among micro manufacturers. SmartWord is friendly, easy to learn and easy to use. As a general text editor for correspondence and similar tasks, it is ideal. Given an 80-column monitor output, I think it would also be suitable for more ambitious tasks. As it stands, the 36-column by 20 line display limits its usefulness. For someone needing an easy to use text editor for general correspondence and so on, the Adam could well be a worthwhile investment for this purpose alone. The data drive does not compare to a disk system, but is certainly adequate for home and semi-professional use.

As an arcade-style games machine, it is impressive, but then you only need the games console for this! The only advantage of the rest of the system is that you can also load games from cassette.

As a programmers' machine, Applesoft-like SmartBasic is a reasonably pleasant implementation of the language and—thanks to the popularity of the Apple—there are a wealth of books available to help you. The graphics resolution of 256x159 compares well with all but the BBC, and the graphics statements are quite powerful. The digital data drive, too, is attractive, offering reasonable access speeds and reliability.

However, the Adam does have a number of serious drawbacks. The main one is the total lack of standard interfaces, particularly a serial port of some description. The UK price is as yet unknown, but is likely to be £600-£700 plus the cost of the ColecoVision games console (£150).

The BBC, as ever, is strong competition; a model B with a Hobbit data cassette and one of the £200 daisy-wheel printers which have recently begun to appear on the market gives an equivalent system for about the same price. The BBC, however, offers parallel and serial interfaces, a superior keyboard and a more powerful and elegant Basic. You also have a fairly wide range of single-disk micros to choose from which with a £200 printer could cost the same or less.

The Adam should be available in High Street shops in April or May. Details from CBS Electronics on (0734) 698188.

END

Nucleus

Is Acorn attempting to justify the price of its upgrade Z80 processor for the BBC Micro by bundling in a comprehensive selection of business software?

Tony Harrington begins his in-depth series by looking at Nucleus, a package which allows users with no programming knowledge to create their own database applications.

When Acorn won the BBC contract back in November 1981, part of the agreement was that it would make available a business upgrade to future BBC Micro users. The Z80 processor, due to be released in late April or May, is that long-promised upgrade.

At a price of £399, the Z80 box is designed to offer all users a cheap route into the vast treasure-house of CP/M-based programs.

Of course, the real cost of upgrading your Beeb is considerably more than this. You will need twin floppy drives (currently nearly £800), a monitor and a printer.

This pushes the cost of upgrading the BBC Model B into a realm where users are likely to consider buying one of the many existing business systems instead. After all, for £1500 there is a fair range of business machines from which to choose.

To stop such thoughts from entering their minds, Acorn has put together a seductive bundle of free software to accompany each purchase of its Z80 second processor.

One of these packages is Nucleus, the program generator from Compact Accounting Services, which won the Rita Award for the best software program of the year at the Which Computer? Show.

The full list of goodies supplied with the Z80 is shown in Fig 1 (the estimated retail value of the software is £3000).

Nucleus is the only applications program to have carved out a name for itself so far in this country. 'The main difference between Nucleus and other program generators is that you don't need to know the first thing about programming to use it,' David Parson, director of Compact, maintains. In general, Nucleus is accessible to the beginner. One of the major reasons for Acorn's interest in Nucleus, according to Parson, is that it offers a route for people who have progressed beyond the rank beginner stage and want to experiment with more advanced Basic programming. Hitachi apparently agrees, since it has bought the licensing rights to Nucleus for its new micro.

The attraction for the fledgling programmer is that Nucleus-produced programs can be listed and amended. Acorn feels that this will allow users to see how simple programs are written: the idea is that these programs will provide them with a starting point, but this can only be true for certain kinds of Basic programs.

It is important to realise that Nucleus is designed to produce business-related programs. It is not a graphics generator: it won't write computer games for you and it won't build a financial modelling program. What it will do is build almost any sort of file-oriented business system. It can create procedures for adding transactions to files and updating related files,

and you can carry out a range of arithmetical operations on data.

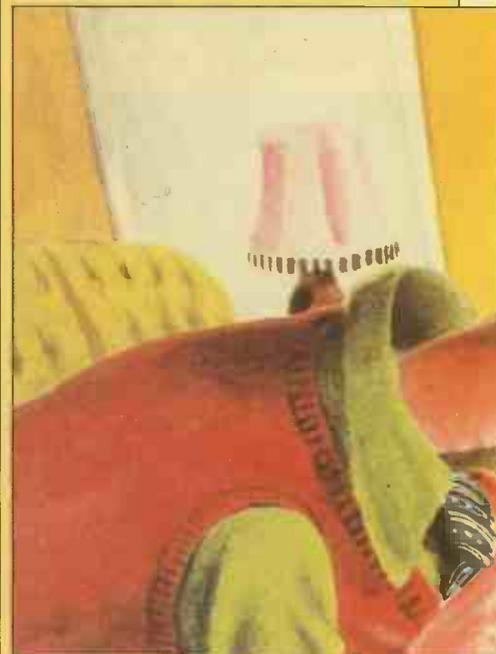

Background

A little history might help to clarify this. Nucleus was designed by Compact to satisfy two different kinds of demand. As a program generator running on 16-bit machines like the Sirius, it was designed to give Compact dealers a swift and easy way of 'writing' one-off applications for customers. Dealers are continually being asked for such systems: it could be the secretary of the local golf club wanting a membership and handicapping system, or it might be the local garage wanting a spares indexing system. In either case, if a Compact dealer, with minimal training, could whip up a system in a few hours to meet needs as diverse as this, he would have a powerful sales tool.

Nucleus was designed to be compatible with Compact's standard range of business software; this means that as a report writer (or more strictly, as a program generator capable of writing tailor-made programs to extract and

1. **Graph Plan:** a spreadsheet financial modeller with a colour graphics extension (supplier: Chang Laboratories, US. Digital Research supplies the colour graphics extension).
2. **Fileplan and Mailplan:** a database package with mailmerge (supplier: Chang Laboratories).
3. **Memoplan:** a word processing package (supplier: Chang Laboratories).
4. **Nucleus:** a program generator and report writer (supplier: Compact Accounting Services).
5. **Accountant:** a business system cum cash book (supplier: Compact).
6. **BBC Basic:** runs under CP/M (supplier Acorn).
7. **CIS Cobol** (together with Animator): a debugging program.
8. **Forms 2:** an interactive programming aid.

Fig 1. Free software packages and languages supplied with Z80 processor upgrade to BBC Micro.

present data from existing data files), Nucleus gives Compact's existing user base a way of generating special reports. Any data file from any Compact package can be accessed by special report programs written using Nucleus.

Once Nucleus had been designed and tested, it occurred to Compact that there might be a reasonable demand in the computer market-place for an easy-to-use program generator cum report writer. The Acorn and Hitachi contracts endorse this theory.

BBC Micro users will find that instead of Nucleus programs being written in MBasic, as they are in the 16-bit version, the language used is Mallard Basic by Locomotive Systems. This is because Acorn failed to get what it considered to be a decent licensing price from Microsoft (Acorn, it is rumoured, wanted a fee of no more than £2 per package but Microsoft refused to budge below £10, despite the BBC Micro user base figures). Acorn asked Locomotive Systems to write a Microsoft-style Basic — the result: Mallard Basic.

So what will it do for BBC users? Well, they can design and write a variety of applications for which they would otherwise require a database system (remember that users will have a free database package in Fileplan). They can even write applications programs for sale to other BBC users. The only size limitation is that the total field size of any record should not exceed 250 characters. The limitation on the number of records in a file is the standard CP/M limit of 32,000 (of course, at anything like this level your system will run so slowly as to be worthless).

As is usual with program generators, the programs Nucleus produces don't need Nucleus to run, but they do need a copy of Compact's Start-of-Day program on the applications disk, and they need Mallard Basic. This is not a problem though, as the user gets the licence to both of these along with his

purchase of the Z80 processor. This is a good deal, as dealers have to get a licence from Microsoft and from Compact (for the MBasic and the Start-of-Day program respectively) for any Nucleus programs they sell.

Procedure

The procedure for running a program generated by Nucleus on the BBC is simple. Switch on the Z80 processor; load the disk containing the Start-of-Day program; key 'B' to boot up CP/M; type 'Compact2' to boot up the Start-of-Day program; type in the date in response to the prompt which then appears; and then load up the program disk and the data disk for your Nucleus-produced application. Note that you don't need Nucleus itself at this stage.

Creating a program with Nucleus is reasonably straightforward, providing you have a clear idea of the system you want to produce. There are a number of steps to be worked through and you are prompted through each stage by menus.

Nucleus is a menu-driven package. All Compact programs have the same menu structure, starting with a 'company level' menu. This can be personalised with the user's own name by using the CMPARMS command on the Start-of-Day program. The CMPARMS option is also used to set the printer parameters, to tell the program what codes your printer needs to move to bold face type or to print in condensed mode (that is, 132 characters on 80 character paper). These parameters are automatically copied across to any new program generated by Nucleus. The company level menu allows multi-company systems to be built up.

Next is the 'system' menu, which appears on screen when a level from the company menu has been selected.

The system level menu for BBC users is '1 Nucleus—Definition'. Now you get the main Nucleus menu up on the screen, which is ordered according to

the sequence you have to follow to write a program. It looks like this:

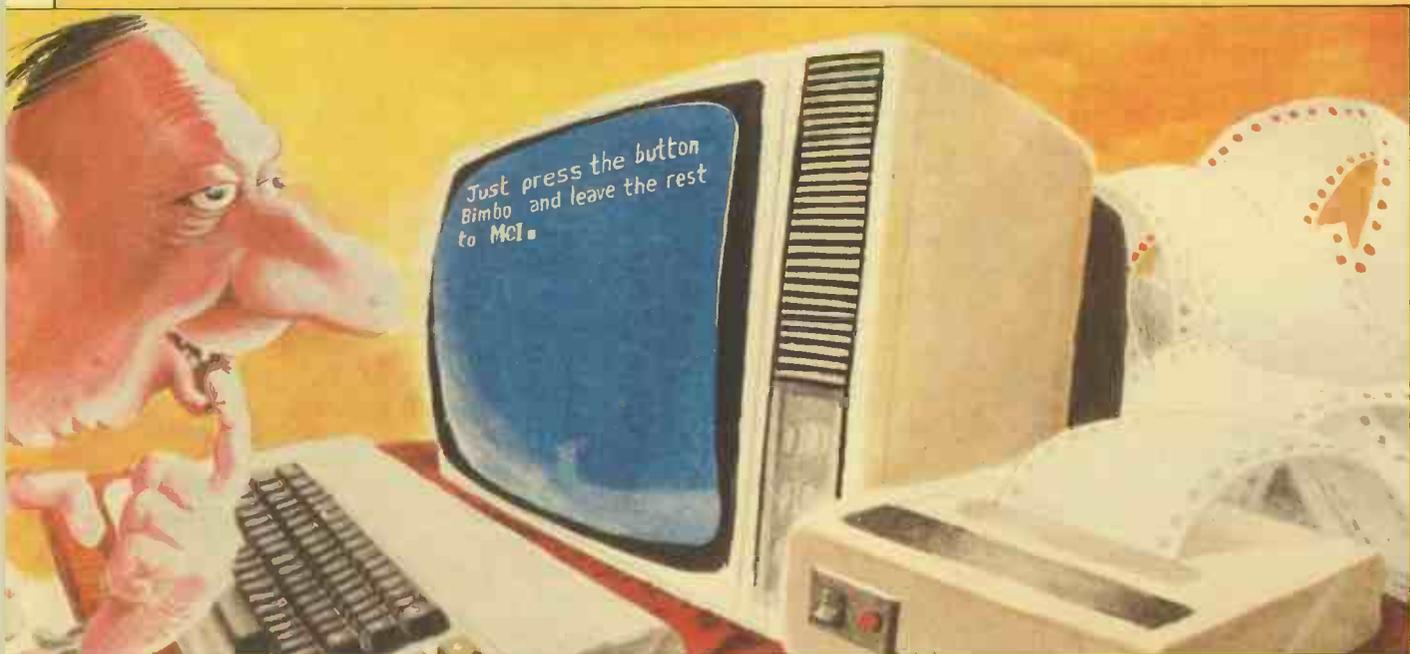

- | Nucleus Definition | Program Level |
|----------------------------------|----------------------|
| 1. Create Nucleus Parameter File | |
| 2. Create System Definition | |
| 3. Create File Definition | |
| 4. Create File Linkage | |
| 5. Print File Definition | |
| 6. Create Update Program | |

The BBC version of Nucleus differs from the 16-bit version in that the report writing side of the package has been moved to a separate disk. The system level menu on the second disk has three options: 1. Nucleus — Reporting; 2. Nucleus — Document Writer; and 3. Nucleus — Letter Writer.

Each of these system options has its own program level menu. Selecting option 1 (Nucleus — Reporting, to get into the report writer) brings up three choices: 1. Create M/F Print program; 2. Create Selected Report Program; and 3. Create Label Print program. In the Sirius version of Nucleus, these last three choices constitute options 7 to 9 on the Nucleus — Definition menu given above.

The pyramid of menus and sub-menus sounds confusing, but moving up or down the pyramid is very easy. Keying 'Return' instead of an option number automatically takes you to the next highest level. Hit a couple of returns simultaneously and you are out of Nucleus and back to CP/M and the 'A>' prompt.

The first two stages (Create Nucleus Parameter File, and Create System Definition) don't involve the user particularly. Option 1 writes the house-keeping and menu routines to the program disk in Drive B. Option 2 gives you a chance to tell Nucleus what your program is to be called (up to 20 alphanumeric characters). This name will appear hereafter on the System Menu whenever you load this program disk. Nucleus automatically assigns an option number to all the programs loaded onto this particular disk (the

C ♦ H ♦ E ♦ C ♦ K ♦ O ♦ U ♦ T

numbers are stored in the parameter file on the disk). The numbering starts from 20. Numbers 1 to 19 are reserved for Compact's business programs.

The actual program creation begins with option 3: File Definition. You need to work out the shape (that is, the number of fields in each record, relationships between files, calculations, and so on) in detail before you begin. Nucleus allows only limited room for you to change your mind. Each stage of the program creation has an 'OK Yes/No?' prompt: if you answer 'Y' (Yes) then that is what you are committed to.

Each file created has to be named (up to 20 alphanumeric characters). Nucleus recognises two different types of files, master files and transaction files. The difference between them is that master files have a unique key to access each record. A stock file, where each stock item has its own stock code number, would be a 'master file'. You would opt to create a transaction file whenever a unique key wasn't appropriate: for example, if you were designing a sales ledger file where a number of transactions were to be posted to the same customer account number.

A program can consist of more than one file since Nucleus has a facility for linking files. The next step, after selecting the filetype and naming the file, is to work through the 'field definition' menu.

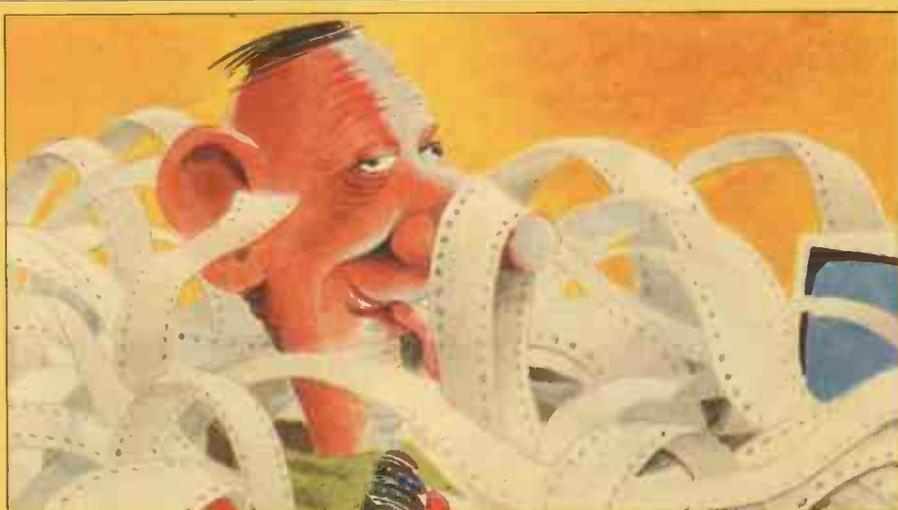

A file consists of a number of records, each of which has a number of fields. Anyone familiar with database packages such as dBase will find the field definition screen familiar:

DESCRIPTION OF FIELD
TYPE OF FIELD (A, AN, D,)
NUMBER OF CHARACTERS
NUMBER OF LINES
NUMBER OF DIGITS BEFORE POINT
NUMBER OF DIGITS AFTER POINT
ALLOW NEGATIVE VALUES?
MINIMUM VALUE
MAXIMUM VALUE
DELETE PROTECT?

Key fields

The Nucleus manual provides a good, clear account of what each of these prompts means and non-programmers should have little difficulty in using this to construct their file. Once each field has been specified, the program needs to be told which fields will be the key fields for searching and indexing. A point to note here is that while you can specify all the fields in a file as key fields, the more key fields you have, the slower the system runs when you are adding new records to the finished program.

A useful touch is that you can specify how many of the characters of a key field should be used in the key. The

longer the key field, the more memory space it takes up, so if you were building a customer address file, for example, you might decide to sort on just the first five characters of customer names.

The next stage is to specify the relationships between any linked files. The point of linking files is to cut down on memory overheads (the more compact a program, the faster it will run). For example, a club with various categories of membership would find it convenient to record the membership as a two character code on the members' master file, and to link the code to a full description of the membership category, held on a second file. This means that the category description is only held once, and not many times over, against each member's name on the master file disk. Again, the manual provides a reasonable guide to the concept and its application.

There are two more major stages before the creation of a program is complete. These are: the setting up of 'update' routines for adding data to a file; and the creation of reports, to reveal the contents of your files.

Each update program is given a name (for example, 'Update monthly sales') and it then becomes a numbered option on the main menu that Nucleus creates for your program. Designing the update program is guided, as in the file creation stage, by a set of screen prompts. The only difficulty is deciding what maintaining your files is going to mean in practice.

Nucleus' report writing is fairly flexible. If you opt to create a detailed report, Nucleus displays all the fields in the file, file by file. You work through these files indicating which fields are to be printed in the report, what order they're to be printed in, the fields to be totalled and what the spacing between fields should be. There is also the facility to create a program which will dump your master

file to a printer.

Document Writer is included in Nucleus so that more complex reports can be created. An example of this type of report is where invoices or statements are to be printed. Here you need a 'header' part to the report, giving the customer name. But you also need a 'transaction' part listing all the items bought by a particular customer.

Letter Writer is a very limited form of word processing which simply gives users the ability to pull information from data files into text, making the production of standard letters and other mailmerge functions possible.

One major criticism of Nucleus in the past (in its 16-bit format) has been that the Report Writer side of the package only operated with a printer. It was not possible to design reports which could be sent to the screen, allowing on-screen enquiries into files.

BBC Micro users will benefit from recent improvements to Nucleus which provide the user with limited screen enquiries. At the moment, it's not possible to do selected searches on screen (these have to be dumped to a printer), but you can page through records sequentially starting at whatever record number you choose. Since the whole point about Nucleus programs is that they can be amended, users might well want to try writing their own routines to plug this gap.

Commitment

Compact's David Parson reckons that the company is committed to including full screen reporting routines in future updates of Nucleus. To date, it has given greater priority to producing a colour version of Nucleus (as demanded by Hitachi) and to sorting out the Mallard Basic.

Next month: Accountant

Micro Disc Drive for the BBC Micro

The Micro disc drive offers a method of low cost quick access to programs. The drive is essentially a small version of a 5¼ inch disc drive and offers similar features to the larger drive. The data is stored on a 3 inch disc, this is enclosed in a protective hard plastic cassette which features a write protect switch.

The micro drive requires the standard Acorn disc interface, but a new disc filing system rom. Acorn DFS may be exchanged for the micro DFS for £12.00. The new micro disc filing system allows 60 files per disc surface and it can read and write to Acorn DFS discs. Thus if a 5¼ inch and a micro floppy were connected on the same cable files could be transferred between them.

ELBUG FOR THE ACORN ELECTRON

IF YOU HAVE AN ACORN ELECTRON OR ARE THINKING OF BUYING ONE THEN YOU SHOULD JOIN THE ELECTRON USER GROUP.

Members receive 10 copies of the magazine **ELBUG** each year. **ELBUG** is devoted **EXCLUSIVELY** to the **ELECTRON MICRO**. It is packed with news, Reviews, Hints, Tips, Programming ideas, Major articles, plus Regular program features including games and useful utilities.

ELBUG, is produced by **BEEBUG Publications Ltd.**, publishers of **BEEBUG**, the magazine of the National User Group for the BBC Micro. **BEEBUG** now has some 20,000 members, and has achieved a high reputation both in this country and abroad. **Acorn** and the **BBC** have both taken out multiple memberships, for example, and our articles are now syndicated in Australia. (For further details of **BEEBUG**, see separate advertisement elsewhere in this issue.)

The formula which makes **BEEBUG** an invaluable companion for users of the BBC micro will be applied to **ELBUG**.

By subscribing to **ELBUG** you gain all the advantages of a single-micro magazine, with no space wasted on programs and articles for other computers.

Further benefits of membership:

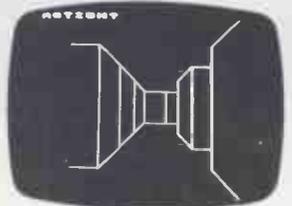

Members' discount scheme with national retailers of software, hardware and books, with savings of up to 25%.

Members' software library with a growing range of titles at special prices for members.

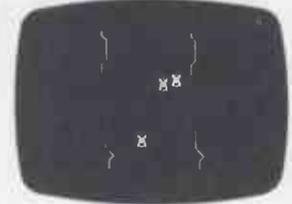

SPECIAL OFFER

SUBSCRIBE NOW, AND GET A FREE INTRODUCTORY CASSETTE CONTAINING 8 TESTED PROGRAMS FOR THE ELECTRON.

1. **SPACE CITY** Defeat the invading Aliens with your laser, and save the city.
2. **3D NOUGHTS AND CROSSES** Pit your wits against the **ELECTRON** on a 4x4x4 board.
3. **RACER** Guide your racing car to victory, avoiding other cars and obstacles on the track.
4. **3D MAZE** In this challenging game, you must escape from the maze — The screen displays a 3D view from inside the maze.
5. **PATCHWORK** A multicoloured display of continuously changing patterns.
6. **KEY SET ROUTINE** A program to set up the user function keys.
7. **MEMORY DISPLAY** An efficiently written utility to display the contents of memory (ROM and RAM).
8. **CHARACTER DEFINER** Define individual graphics characters with this useful utility for use in your own programs.

BANKS'

Rapport!

The emergence of a universal standardisation in the computer hardware/software industry is long overdue. Martin Banks prays for a miracle.

Someone sidled up to me recently with one of those, you know, significant looks in their eye and whispered: '1984 is going to be the year of interesting operating system developments, did you know that?'

Under the circumstances, I had to answer that I didn't know what he was talking about, partly because he was speaking in Esperanto. This tended to make the oral/audio communications interface protocol translation problem loom just a little large in my life. This man then wandered off, muttering something that sounded vaguely disrespectful, though I couldn't be sure.

The incident set me to wondering, however. Although, through the benefit of artistic licence, I did manage to interpret what the man said, there are a million occasions every day when two or more people of different cultural and language backgrounds fail entirely to communicate with each other in any meaningful way.

This is not totally dissimilar in general principle to what has happened in the computer business. Each manufacturer, for sound business and technical reasons, has tended to go off and do its own thing. This has meant that each brand of computer is different, not just cosmetically, but fundamentally.

In the microcomputer business the situation has been, on the surface at least, different. Apart from the three early star companies — Commodore, Apple and Tandy, each of which followed the traditional route of producing machines that were compatible only with their own — the micro business threw up a degree of theoretical commonality that was surprising, and which bucked the trend.

The trend bucking was only theoretical, however, as anyone who has tried to stick bits of 'similar' equipment or software together will have found.

On the hardware side, for example, the S-100 bus structure rapidly grew up. Many computers were made to this hardware 'standard', yet the circuit boards from one would, more often than not, fail entirely to work with another, even though they were 'the same'. It was no different in software.

There rapidly grew to prominence this thing called CP/M, the operating system to which all self-respecting program developers paid considerable deference.

With CP/M there was a degree of standardisation, in theory at least. A program written to run under CP/M would run on any machine that would run CP/M. Unfortunately, it was never quite that easy in practice. It depended which version of CP/M was in use and what machine it had been prepared for. In practice, each CP/M was different, which meant that it could not be assumed that a program would run on one computer just because it ran on another.

The old tradition of separatist development had, to all practical purposes, managed to rear its ugly head once again. The head is still very much in view, though software technology would seem at last to be shaping up to offer a means of knocking it back down again.

The mention of Esperanto at the beginning offers some pointer. Although that language has singularly failed so far to become the universal verbal communications medium it was designed to be, the need for something like it shows the validity of the attempt. By the same token, the computer industry needs its own Esperanto so that the vagaries of hardware and software separatism no longer become important.

Knowing the computer industry as well as we do by now, it goes without saying that it has come up with a new buzzword to cover this particular problem. This actually falls into a well-defined sub-set of computer jargon that has been around for some time — the Virtuals.

This started with Virtual Memory, which refers to the ability of a computer to swap data rapidly into and out of disk in such a manner to appear as though it is equipped with a large — virtual — main memory, when in practice it only has a small(ish) one. Then came Virtual Machine, which was a method of making one computer configuration appear to a piece of software as though

it were a different computer.

This latter was a forerunner of the latest addition to the virtuals — Virtual Environment. This type of virtual environment is one where it matters not a jot what language an application program is written in, or what operating system it should run under. With oven ready virtual environment™ installed in your computer, it will run. Sadly, the availability of such a product is some way off, but the early signs that it will be a working, practical reality are emerging.

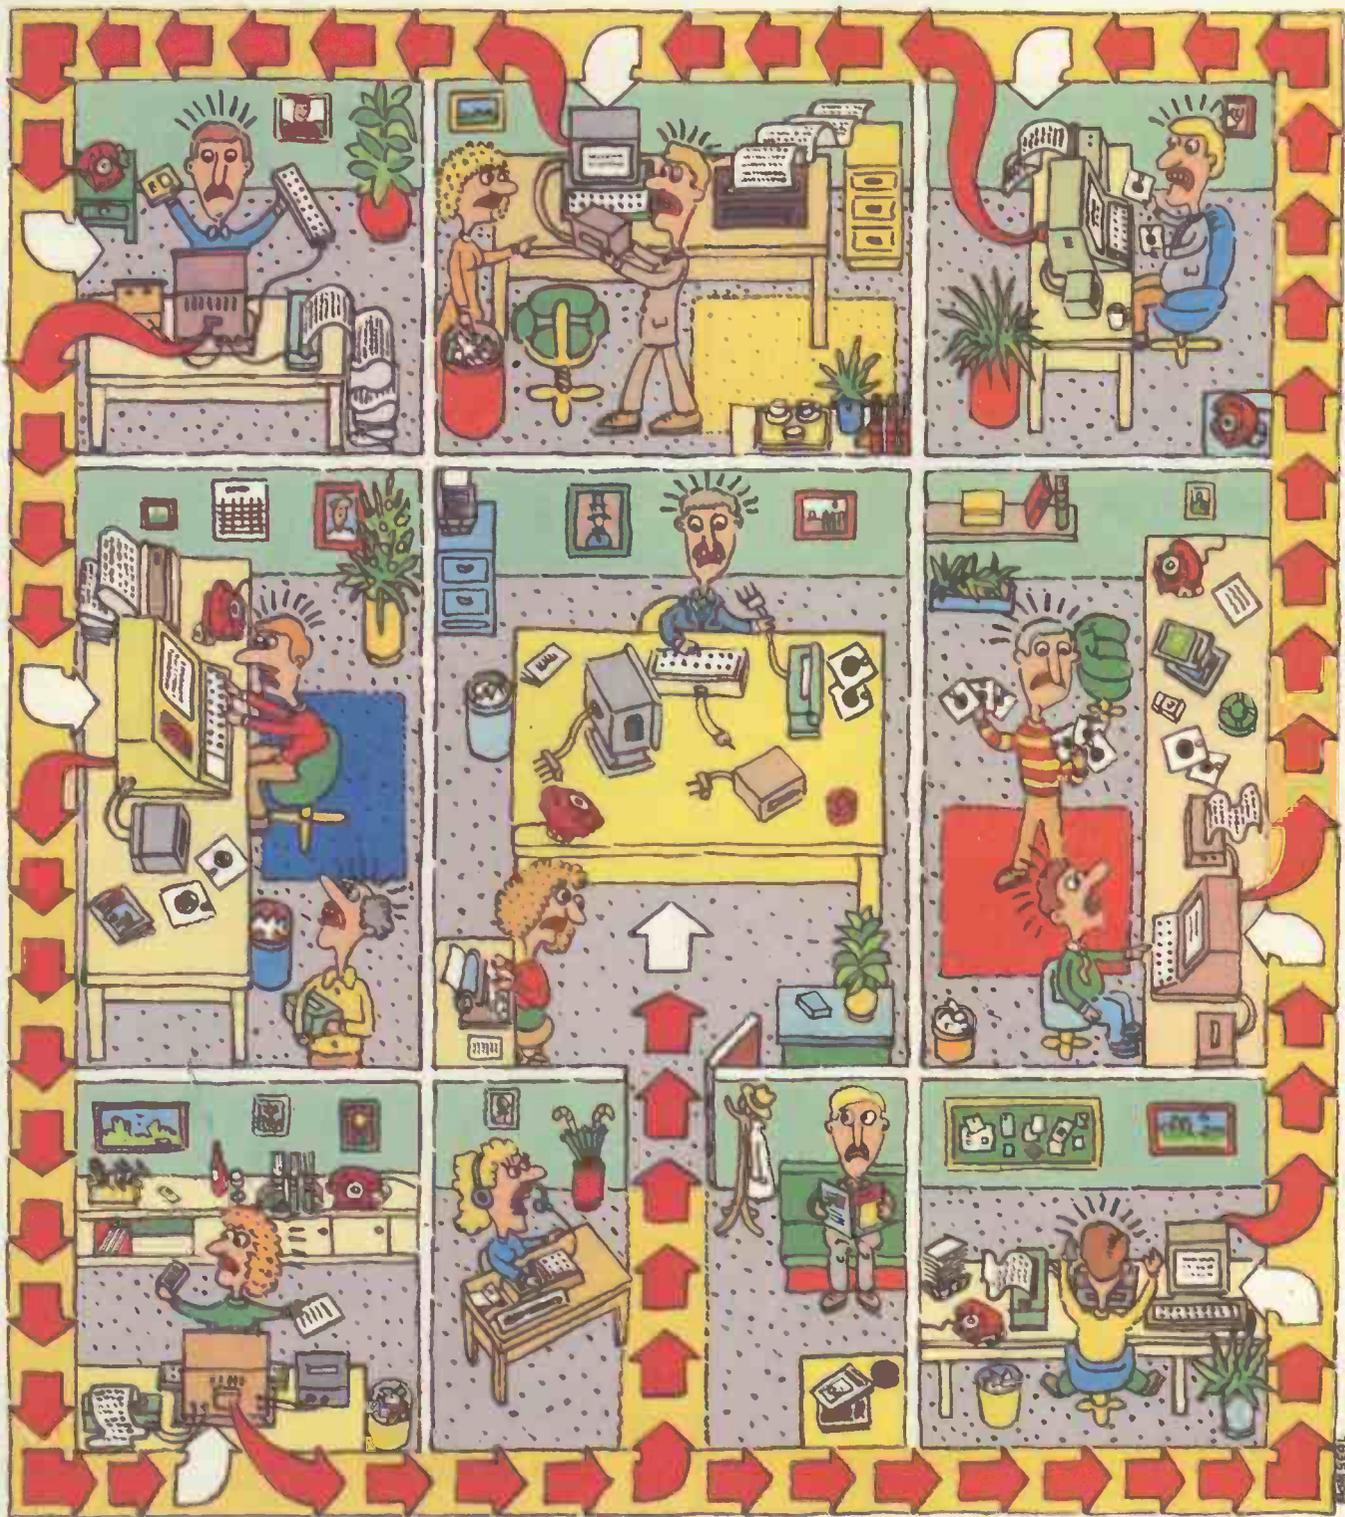

If it works, and if it actually does mark the start of the 'something' I feel it ought to be, then this virtual environment stuff is likely to prove very interesting to the millions of users, both existing and potential, who sit in corners sucking thumbs when it comes to solving multifarious and usually stupid operating problems caused by computers.

The reason it will prove interesting, if it all works, is that it will no longer matter about the details of software. The user will be able to load it into a machine and its operating system will sort out what should be done to make the thing run properly.

No longer will it be necessary for the user to ensure that a newly purchased applications program is written to a specific version number of a specific operating system, or whether the operating system, under which the selected application program label says it has been written, is the one specifically available on a particular computer. The user, who normally has better things to do than kick the cat because the software won't run, will only have to load the disk into the machine — end of story, start of use for application.

For software developers as well this should promote a certain degree of interest. Any method of standardisation in software, however ghastly, brings with it the practical possibility of writing a new application program once only, and then having the entire potential market place available. No more rewriting, tailoring, editing, changing, modifying *et al* to fit the application into each new operating system/machine environment (there's

STATEMENT

that word again).

How will this miracle be achieved? Well, just take a look at one particular product.

Buy an IBM PC if you will, and then run PC-oriented applications under the latest version of Concurrent CP/M from Digital Research. This will mean that other, non-PC-DOS programs can be run as well.

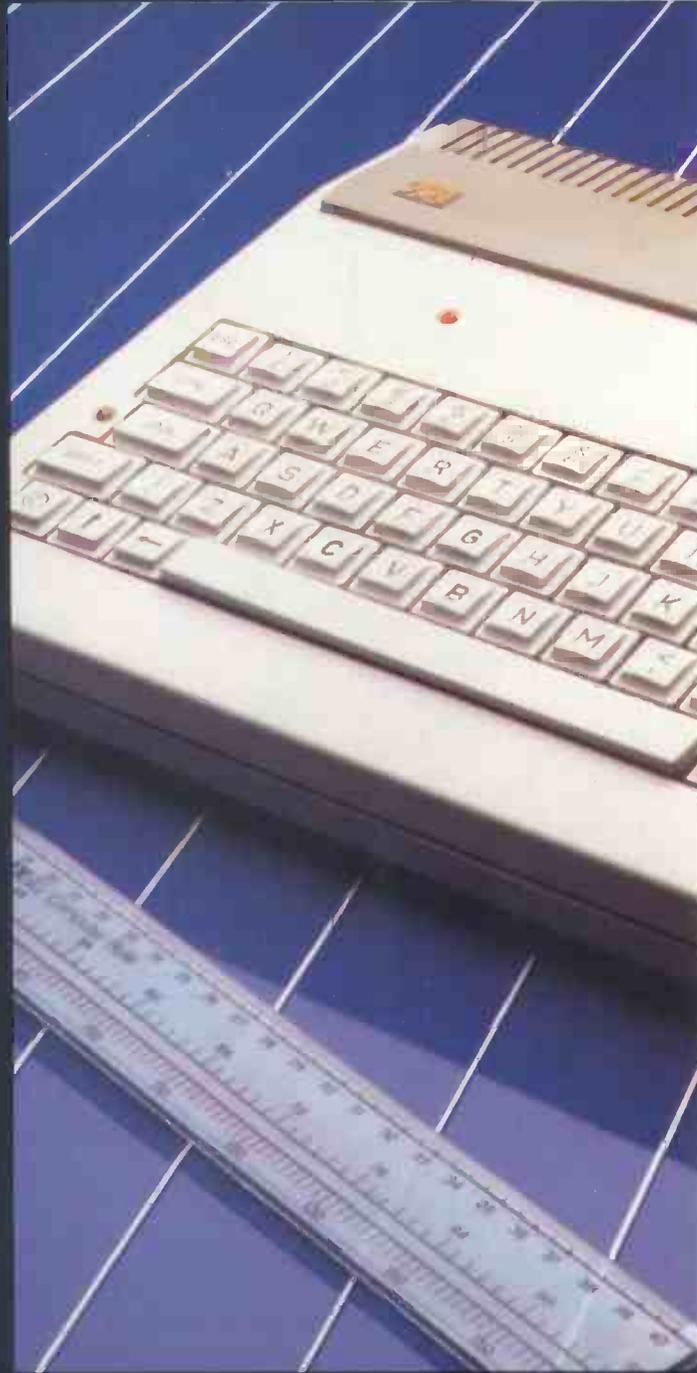

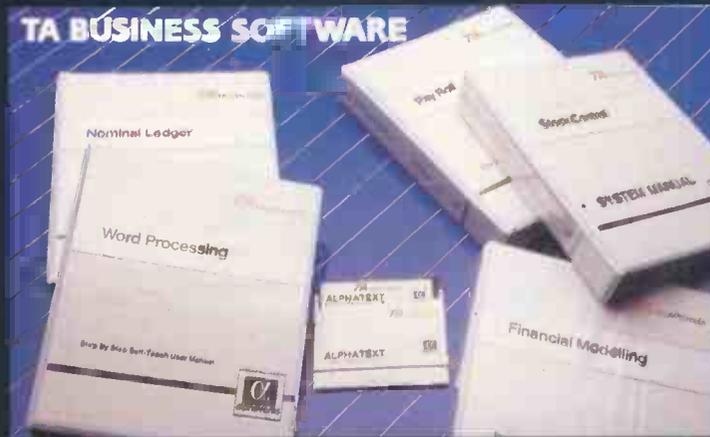

The alternative looks even more

intriguing. You will be able to purchase, in theory at least, any computer capable of running Concurrent CP/M. This is essentially any of the 8086/8088-based machines with a goodly chunk (256k or more) of memory on board. If it is the latest Concurrent, then that machine will also be able to run PC-DOS Version 1.1 applications software. At a stroke, an IBM-look-alike computer will be turned into an IBM clone, or pretty

damned near. It's a long way from the full meaning of 'virtual environment' but it is a step, I feel, in the right direction. When even experienced software developers get caught out in the maze of 'which-version-for-what-machine' permutations (as I have seen happen before) then it's time something was done.

END

The Alphatronic

The Alphatronic Personal Computer makes playing, learning and working more fun, more fulfilling, more rewarding. But when you put it to work, then it really means business. In fact it's probably the cheapest way to access business programmes through CP/M software.

The games first though — enough for the most ardent player. Some just plug into a socket at the back, with their own 16K Rom module. Others can be played from virtually any cassette recorder. There are arcade games to sharpen reflexes and test imagination. Educational programmes to increase knowledge, plus chess and other traditional games.

You'll benefit from the learning programs. There are cassette instruction courses on writing programs in BASIC. Other cassettes get you and your family off to a flying start into skills like typing, household budgeting, tax returns and investment management. And of course there's our own

instruction and BASIC interpreter manual.

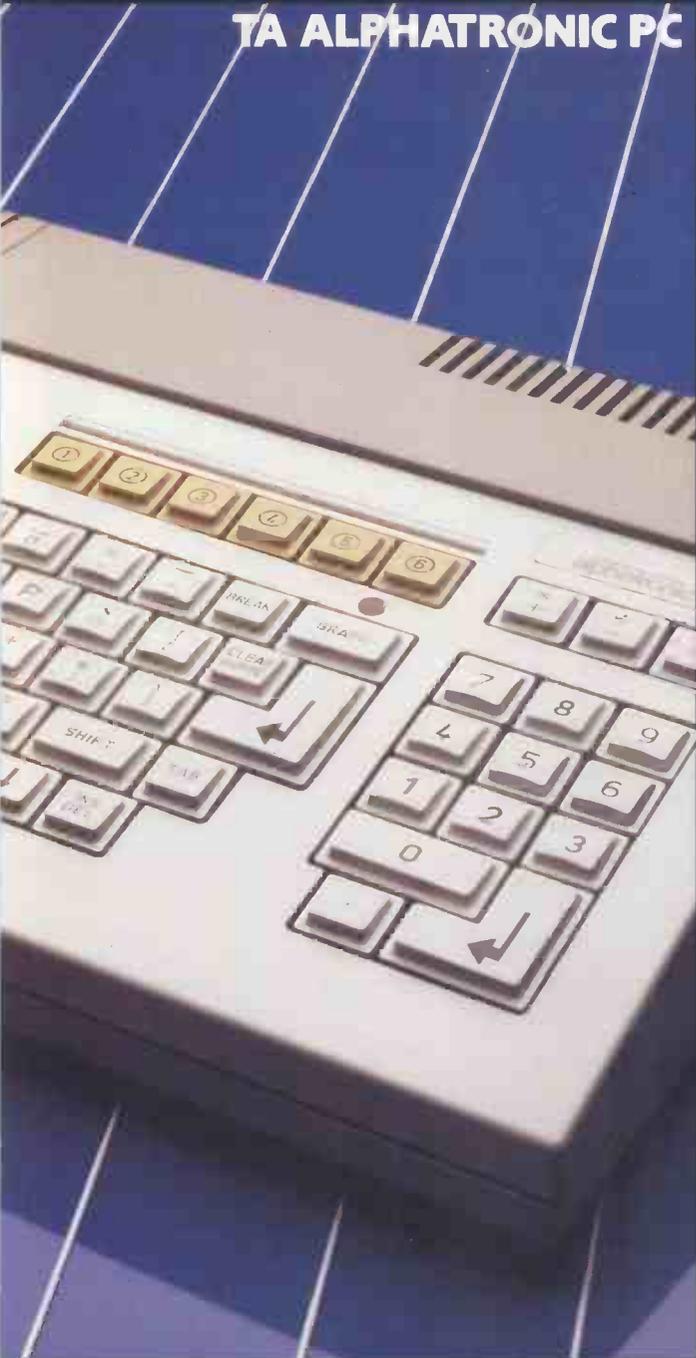

Now to business. The Alphatronic PC is unusual in giving you low-cost access to a complete version of CP/M, the world's most popular operating system for business software. You just connect up one or two floppy disc drive and a printer, then you can run a whole host of new management programs: office word processing, business accounting packages and financial planning — the choice tremendous.

The keyboard is a real delight compared with competitive models. There are very few confusing multi-function keys, and a really professional numeric keypad is included. Six separate keys can be programmed and indexed for special routines. And the full alphanumeric keyboard is just like a modern electronic typewriter.

You may recognise the keyboard, because the

C means business

TEACH YOURSELF ASSEMBLER

Addressing refers to how we specify the location of the operand, or, the byte or bytes upon which the instruction will operate. This month we look briefly at some of the addressing modes you need to be familiar with.

Each of the processors we are using has instructions to enable specified internal registers to be incremented or decremented. As an example, the 6502 uses INX to increase the value of the X register by one. The instruction when assembled results in a single object code byte. The 'address' of the operand (which in this case is the X register) is specified within the 'op code'. This form of addressing is termed 'implied' or 'implicit'. It is used in instructions such as register-to-register transfers and register increment/decrement.

If an instruction uses **immediate addressing**, it gets its operand byte/s from the location or locations immediately following the op code in memory. One example is in the loading of constant values into registers or register pairs.

These instructions, when assembled, result in two bytes of object code being produced—the op code followed by the data value. As we have seen previously, the 8080 and Z80 also have instructions that load register pairs with 16 bits of data, resulting in three bytes of object code being produced when the instructions are assembled—the op code byte plus the two data bytes.

Absolute addressing specifies a memory byte using a full 16-bit address. Such instructions, three bytes long, consist of the op code followed by the two byte address giving the location of the operand. POKE address, value . . . is a typical 'absolute addressing' Basic statement.

In the case of **relative addressing**, instead of an address we give a displacement to be added to the value already in the program counter. Such displacements are restricted on 8-bit micros because they have to be specified with one byte.

Up to now, the addressing modes we have looked at may be regarded as 'static', or to put it another way, once the program has been written the memory locations upon which the various instructions will operate are

fixed, completely defined by the instructions you have selected. **Computed addressing** enables the address of an operand to be computed at run time and falls into two categories—indexed and indirect addressing. This month we look at indexed addressing and give you an idea of its usefulness.

Indexed addressing

Indexed addressing uses an address that is obtained by modifying a specified 'base address' given in the program. The 6502 load accumulator instruction LDA has several forms of addressing options including indexed. The mnemonic form LDA address,X is an example of absolute indexing using the X register. The effect is to get the value present in the X register and add it to the specified base address. The base address is specified by you at assembly time in the same way that you specify an ordinary 'absolute' address, but the X register can be used by the program to compute the offset during program execution.

As an example, suppose that you have a table of 20 data items held in memory and have labelled the lowest byte location BASE (think of them as being 'numbered' from zero to 19). The instruction LDA BASE,X will access the base value if X is zero, the byte above this if X is one, and so on. In general, it will access the X'th data item of the table:

	MEMORY LOCATIONS	
etc.		
4th		It is this location that is addressed if the X register has the value 4.
3rd		
2nd		
1st		
BASE:		

You've probably used similar ideas in your Basic programs, for example, FOR I% = 1 TO 9: PRINT X (I%):NEXT I%. When I% = 4 you are referencing X(4). Indexed addressing is particularly useful for accessing successive data ele-

ments from tables or blocks of data. On the 6502 both the X and the Y registers are available as 8-bit index registers. The limitation on the 6502 is that X and Y are 8-bit registers, so the indexing offset is restricted. The 8080 processor has no indexing facilities at all. The Z80 has two 16-bit index registers but these are used to hold the base addresses, not the offset values.

Connect Four game

Let's illustrate indexing by examining one way to represent the game Connect Four. The essential details of the game are that two players have sets of coloured counters which are dropped (one at a time by alternate players) into one of seven columns. The first player to get four counters in a vertical, horizontal, or diagonal line wins the game. We want to look at how such a game can be represented within a computer and restrict ourselves to some simple beginnings:

- 1) Write a subroutine to set up (clear) the board representations.
- 2) Write a subroutine for players' moves (column number).
- 3) Write a subroutine to check that move is valid.
- 4) Write a subroutine to make the move on the computer's boards.
- 5) Write a subroutine to identify change of player for next move.

To define how we are to represent the game internally, each player will be represented on a separate board created by seven bytes of memory. Each byte will therefore constitute one column of the games board: bear in mind that the boards are 'twisted sideways in memory'. The base locations we have labelled are the 'column 0' bytes. As the game is played, column 0 is on the left hand side, column 6 on the right (Fig 1 should help you get the general idea). We've numbered the seven columns from 0 to 6 because of the way we'll use indexing to access them. The six rows, however, have been numbered from 1 to 6 because the row number then represents the 'bit position' within the byte.

The presence of a counter in a certain position will be indicated by setting the equivalent bit to 1. Our bytes are eight bits wide and we'll use the inner six bits of the bytes. We'll also select one byte of memory to act as a player switch, and change its value with each move to identify which player is making a move. Seven bytes will be used to count how many 'pieces' have been placed in a given column, and a further seven bytes used to identify the position of the last piece placed in a given column.

We'll discuss the overall ideas in terms of 6502 coding, but the layout of the boards and the general principles will be similar on the Z80; differences will be discussed, together with any changes needed after each individual subroutine discussion.

No indexing facilities are available on the 8080, so we must look at ways to

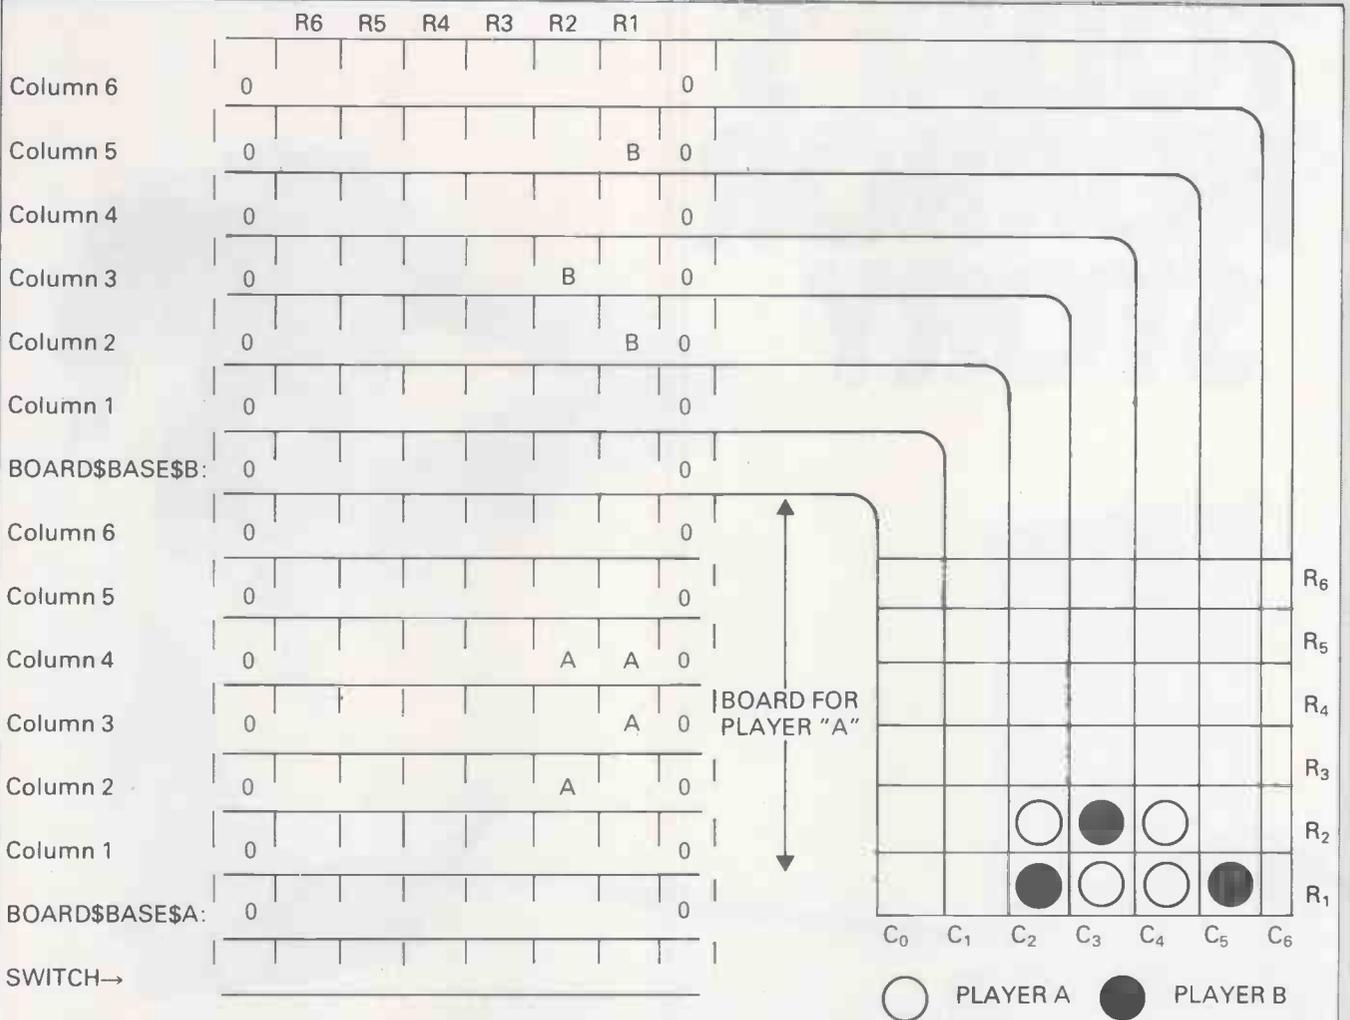

Fig 1 How layout of boards in memory relates to the normal 'playing' position of boards in practice.

create equivalent effects without indexed addressing.

Clear memory subroutine — 6502

We will, at the end of a finished program, use an assembler pseudo operation to reserve certain memory locations for use by our program: the operation is usually called 'reserve data storage space'. Our assemblers use the letters DS N to reserve N memory locations, and in our case, this space will 'sit' immediately above the actual program code.

We must write a subroutine to clear the area of memory assigned for the boards, and make the initialisations needed to the switch byte (we'll arbitrarily set to zero to indicate player 'A' and to FF hex to indicate player 'B'). We initialise the seven bytes starting at the location labelled ROW\$POINTER\$BASE so that they contain the binary value 00000001, and will be using an operation called a left shift to push those single bits from right to left as the game progresses.

We initialise an area of memory by loading the accumulator with the number we wish to store, loading an index register with the number of bytes to initialise and then using a loop that implements indexed addressing to store the contents of the accumulator.

We decrease the index register by one each time we pass through the loop, repeating until the index value becomes zero. Bear in mind that because we don't branch back once the index register has become zero, we must initialise the base location

operations on labels, addresses, and so on. In Fig 3, we use the instruction STA BASE-1,X so that the base address refers to the byte below that, labelled BASE. In this case, we must set the X register to the number of bytes we wish to reference. The equivalent form of the

```

START: LDA #value      ;Value we wish to store
        LDX #n         ;n is the offset value
        STA BASE,X     ;This is the indexed addressing bit
        DEX            ;Decrease the value in X by 1
        BNE START      ;Back for next byte if X <> 0
        STA BASE       ;This does the base location

```

Fig 2 Typical 6502 form

separately.

The arrangement in Fig 2 is fairly straightforward, but you may consider it more convenient if we handle the base location within the loop itself. In actual fact we can, by using a typical 'trick' — we reference the byte below

first 6502 example is shown in Fig 3.

In our finished routines we use two loops, one to initialise the memory between the byte labelled COUNTERS\$IN\$BASE and the top of board 'B' with zeros, the other to initialise the seven row-pointer bytes.

```

START: LDA #value      ;Value we wish to store
        LDX #N         ;Number of bytes
        STA BASE-1,X   ;This is the indexed addressing bit
        DEX            ;Decrease the value of X by 1
        BNE START      ;Back for next byte if X <> 0

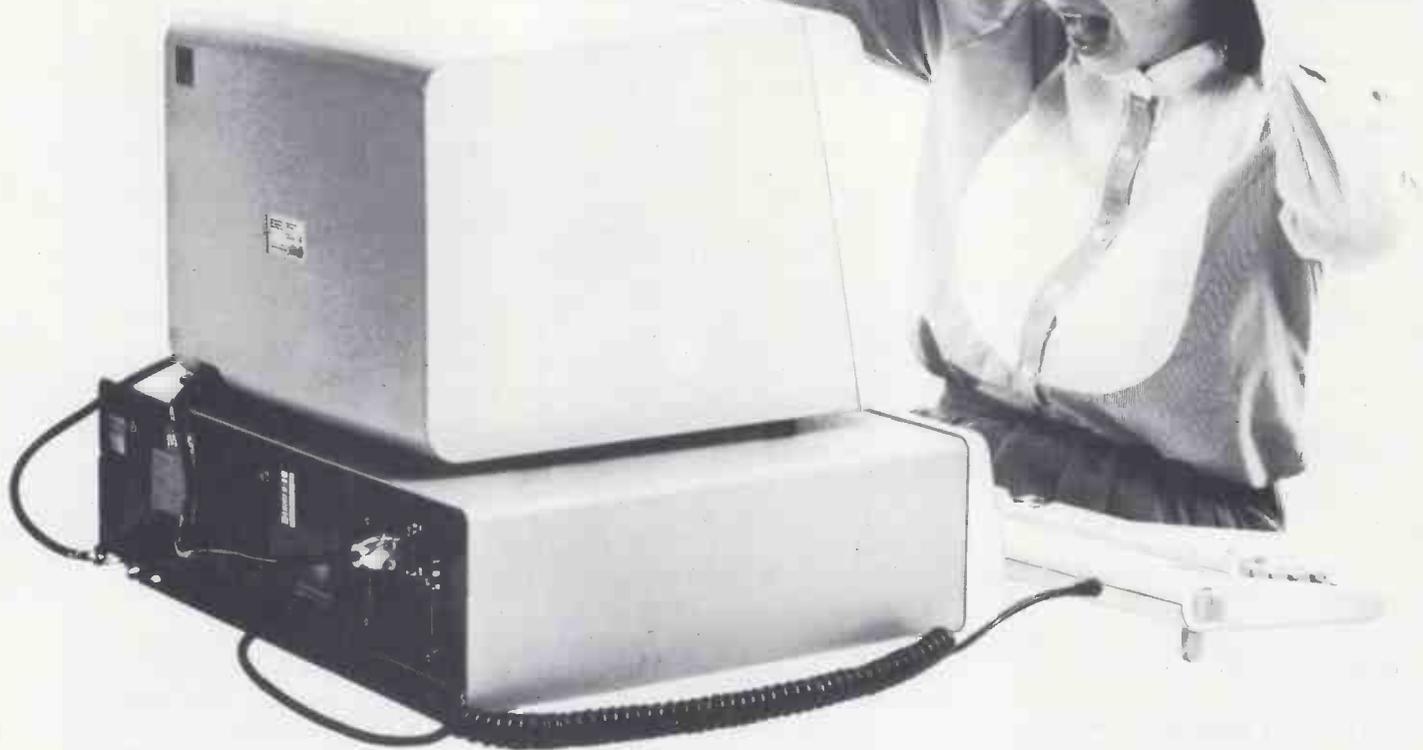

```

the base. In practice, we make use of another facility of modern day assemblers: we can perform simple arithmetic

Clear memory subroutine — Z80/8080
Indexing on the Z80 is implemented somewhat differently to the 6502. The

TODAY'S HORROR STORY

You have a micro and a winchester. Maybe even a local area network. By now you have probably realised two things. Backing it up is... well, let's say **inconvenient**. And discovering that it wasn't backed up when it went wrong was... well, **stressing**. If only you could have a removable winchester – but they're not generally available and anyway they're too small for most purposes.

How about a 200MB removable winchester for **£1800?**

Well not quite. In fact it's a 200MB continuous loop cartridge. And the computer **thinks** it is a winchester

(same thing almost). So what's the catch?

It is cheap. And it is 200MB. And it is removable. But it's not as fast. 100MB and 200MB cartridges have average 'seek' times of 5 and 10 seconds. (When they've found the data they read/write at disk speeds.) So the only problem really is that you don't have one. And that's a problem that's easy to solve!

FEATURES Omninet local area network compatible.

index registers IX and IY are used to hold base addresses and not offset values. The indexed instructions on the Z80 offer the inclusion of a displacement value within the mnemonic form of the instruction. As an example, the instruction LD (IX+number),value loads the memory location whose address is 'IX+number' with the specified value. When assembled in memory, the layout of the instruction is as shown in Fig 4.

successive locations in memory. The mnemonic INX represents an 8080 register pair increment instruction.

```

LD IX,BASE ;Set up index register IX
LD C,n ;Number of bytes
START: LD (IX+0),value ;Value stored at address in IX
INC IX ;Increase register IX by 1
DEC C ;Decrease counter C
JR NZ,START ;Back for next byte if C<>0
  
```

Fig 5 Z80 version 1

Note that we have an instruction here with a two byte op code, resulting in a total instruction length of four bytes. Let's use this instruction to create a simple loop to store a constant value in a set of adjacent locations (see Fig 5).

DCR, however, is a single register decrement.

We have given versions of the 'clear memory' subroutine for all three processors: each uses two loops to perform the initialisations shown in Fig 1.

```

LD IX,BASE-1 ;Byte below base address
LD IH,TARGET+2 ;HL points to displacement
LD (HL),N ;N is the number of bytes
TARGET: LD (IX+0),value ;Run time modified displacement
DEC (HL) ;Decrease displacement
JR NZ,TARGET ;Back for next byte if displ.<>0
  
```

Fig 6 6502 variable displacement implementation

You'll notice that within this loop we are essentially using the index register as a 'pointer' to the location in which we wish to store the data item. We are not using 'indexing' in the true sense of our original definition, but are effectively using the IX register to specify an address which is then used to store the

At the end of the Z80/8080 routines we also set B and D registers to zero.

Get move subroutine 6502/Z80/8080

We use a system input routine to collect a column number in the accumulator. One immediate problem is that the ASCII character codes for the numbers 0 to 9 on the keyboard are not the

```

LXI H,BASE ;Initialise base value
MVI C,number ;Number of bytes
START: MVI M,0 ;Store "immediate value" at location HL
INX H ;Increase HL
DCR C ;Decrease counter C
JNZ START ;Back for next byte if C<>0
  
```

Fig 7 8080 version

data. If we wish to implement the variable displacement found on the 6502, we use the HL register pair to 'point' to the byte holding the displacement, and modify it during execution by using a DEC (HL) instruction as shown in Fig 6.

The first Z80 example offers some insight into an equivalent 8080 version. On the 8080, the HL register pair are frequently called the 'primary data pointer', with instructions existing to retrieve/store data in memory at the location specified by the current contents of HL. The standard notation for 8080 assemblers is to use the letter 'M' to signify a byte whose address is specified by the current contents of the HL pair. Thus, MVI M,6 will store the value 6 at a location specified by an address in HL. The example in Fig 7 is a direct translation of the Z80 version and also uses the HL register pair to point to

numeric values of the numbers themselves. The values are as follows:

DECIMAL	BINARY	ASCII VALUE
0	00000000	00110000
1	00000001	00110001
2	00000010	00110010
3	00000011	00110011
4	00000100	00110100
5	00000101	00110101
6	00000110	00110110
7	00000111	00110111
8	00001000	00111000
9	00001001	00111001

To convert the ASCII form to a real binary equivalent of the input number,

ACCUMULATOR	00111001	<----- ASCII "9"
OTHER BYTE	00001111	<----- "MASK"
RESULT	00001001	<----- REAL "9"

Fig 8 Effect on the ASCII code for the number 9

we need to set the upper four bits of the ASCII form to zero. This can be accomplished by using an 'AND' operation. Essentially, two bytes, one of which is the accumulator, are compared bit by bit. If both bits are set to 1 then the corresponding accumulator bit is set to 1, otherwise the accumulator bit is set to 0. Fig 8 shows the effect on the ASCII code of the number 9.

The value we compare against is often called a 'mask'. On the 6502, several addressing modes are available with the AND operation. We'll use an immediate addressing mode to compare the accumulator with 0F hex (00001111 binary). The mnemonic will thus take the form AND #0FH, with the '#' sign signifying the immediate addressing form. Having obtained a proper numeric representation of the input character, we store it in the X register by using a transfer to X register (TAX!) instruction. We then have the column number for the user selected column in the X register.

On the Z80 and 8080 we use similar AND operations to mask the upper four bits of the accumulator, but we'll use the C registers to store our results. The code for all three processors is shown in Fig 9.

Computing offset into board area 6502

The offset into the boards is dependent on whether player A or player B is being dealt with. We use the value held in the switch byte in conjunction with a 6502 instruction called BIT. This is similar to the AND operation, but the result of the ANDing is not stored in the accumulator. It does, however, affect the following flags: bit7 is placed into the 'N' flag, the 'V' flag is set equal to bit six of the byte being tested and the 'Z' flag is set or reset depending on the result of the ANDing. It's a strange instruction but it turns out to be very useful. We'll use it to test bit7 of our switch byte, to place bit7 into the N flag. We can then use a 'branch on plus' conditional branch instruction to either add seven to the value present in the accumulator (so that offset refers to board B), or to avoid doing so. Note: it is the contents of the byte labelled SWITCH that is being tested (illustrating an absolute addressing instruction).

Accept for now that it's necessary on the 6502 to use a 'clear carry flag' CLC instruction before adding a number to

Fig 9 Processor codes for results

the accumulator. The reasons will be explained later in the series when we look at arithmetic operations in detail. CLC combined with an 'add with carry' ADC instruction will result in a 'normal' addition. CLC followed by ADC #7 will therefore add seven to the value of the accumulator. The final value in the accumulator is either the offset required (column number) for the A board or the equivalent offset for board B (relative to the base BOARD\$BASE\$A). We copy this value into the Y register by the method shown in Fig 10.

of the accumulator to the left (think about this carefully if you find it difficult to 'picture'). The single bit, after this instruction has been performed, will be in the bit position corresponding to the bit position on the board to be updated for this move. This representation has been arranged for reasons that will now become clear. If it has been shifted to the bit7 position, the move is illegal because the column already has six pieces. How can we tell? The ASL instruction on the 6502 affects the carry, the zero and the N flags. The N flag is used to determine the status of bit,

	BIT SWITCH	;N flag set if B's move
	BPL G\$M\$1	;Branch if A's move
	CLC	
	ADC #7	;Board B needs additional offset
G\$M\$1:	TAY	;Board offset in Y now

Fig 10 Final accumulator value in Y register

Computing the offset into the board area Z80/8080

As one of several alternatives, we load the accumulator with the contents of the switch byte and then add the contents to itself. This sets or clears the sign flag which is then used to add, or not add, the offset for board B. We have chosen to store the result in the E register.

Check move is valid subroutine — 6502/Z80/8080

On most microprocessors it's possible to shift bytes and registers to the left or right. The 6502 has instructions to perform various shifts and we'll make use of the instruction ASL, which is an arithmetic shift left. Our row pointer bytes are initialised to the value 00000001 binary by the 'clear memory' coding. If we consider the effect on the accumulator we can describe the shift effect diagrammatically:

```

00000001 <----- initial value of
                accumulator
00000010 <----- accumulator
                after one ASL
                instruction
00000100 <----- accumulator
                after two ASL
                instructions

```

The bit at the right hand side is always set to zero, the bit on the left hand side is shifted into the carry. If we use the instruction ASL A then we perform the above shift on the contents of the accumulator.

We want to load the accumulator with any one of seven bytes, depending on the value of the X register. We can do that easily on the 6502 using indexed addressing. We use the instruction LDA ROW\$POINTER\$BASE,X followed by ASL,A to shift the contents

because on the 6502 all data movement and arithmetic instructions will set the N flag to the value of bit7. The type of coding we use is shown in the following example:

```

LDA ROW$      ;
   POINTER$
   BASE,X     ;Get column image
ASL A        ;Shift to left

```

The Z80 also has shift instructions available, and the instruction SLA A will shift the contents of the accumulator to the left. With the 8080, shifting as we have described is not available. We could use one of the 'rotate' instructions but these do not affect the sign flag (the bit7 flag). To overcome this problem, we choose instead to add the contents of the accumulator to itself. This produces the equivalent effect of a left shift which does affect the sign flag.

Making the move subroutine — 6502
After the 'check move' subroutine has been performed we'll have an image of the new move held in the accumulator. The first step is to store the contents of the accumulator back in the location used in the 'check move' subroutine. We can do this easily by using a 'store accumulator' STA ROW\$POINTER\$BASE,X instruction. Following this, it's necessary to add the new move into the appropriate board column. Let's take a typical example to illustrate the effect we wish to obtain to 'create the new move' (see Fig 11).

Another logical function exists called

OR, that tests the accumulator with another specified byte. It will set any accumulator bit to 1 if either or both respective bits in the accumulator or the other byte specified is set to 1.

The 6502 has an instruction called ORA which 'ORs' the accumulator with another specified byte. We're going to use the instruction in an indexed addressing form in order to OR the image of the current state of the column in question with the new move present in the accumulator. The updated column will then be replaced into its correct memory position by using the equivalent 'store accumulator' (STA) instruction. Having done this, we increase the value of the corresponding numerical count of the number of pieces in the column. This is achieved with a single indexed addressing instruction INC COUNTER\$IN\$BASE,X which increments the value currently in memory. The combined code to store the new row position byte, create the new move in memory and update the numeric count is achieved as follows:

```

STA ROW$POINTER$BASE,X
ORA BOARD$BASE$A,Y
STA BOARD$BASE$A,Y
INC COUNTER$IN$BASE,X

```

Making the move — Z80/8080

In the clear memory routines we set B and D registers to zero. Since the column number and board offset for a move are held in the C and E registers, it should be apparent that the value of the BC pair is C and the value of the DE pair is E. This has been arranged in order to use an instruction that will add BC or DE to the HL register contents. If we load HL with BOARD\$BASE\$A, then use the Z80 instruction ADD HL,DE (DAD D for 8080), we set HL to the value HL+DE. In our case (DE=E), we are adding the offset E to the base address in HL which creates the equivalent of an indexed addressing instruction.

Changing the 'Player' subroutine — 6502/Z80/8080

We change players by changing the value of the byte we have labelled SWITCH. We set it to zero when we perform the clearing of memory. After each move we want to change the value, so that it alternates. We have seen examples of AND and OR as logical functions: another logical function is called 'exclusive OR'. This is similar to the OR described earlier, except that if both bits being tested are high, that is, are 1, then the accumulator bit will be set to 0 and not 1.

It's indirect addressing next month plus full listings of all the Connect Four subroutines discussed here, and the main block coding needed to run the programs.

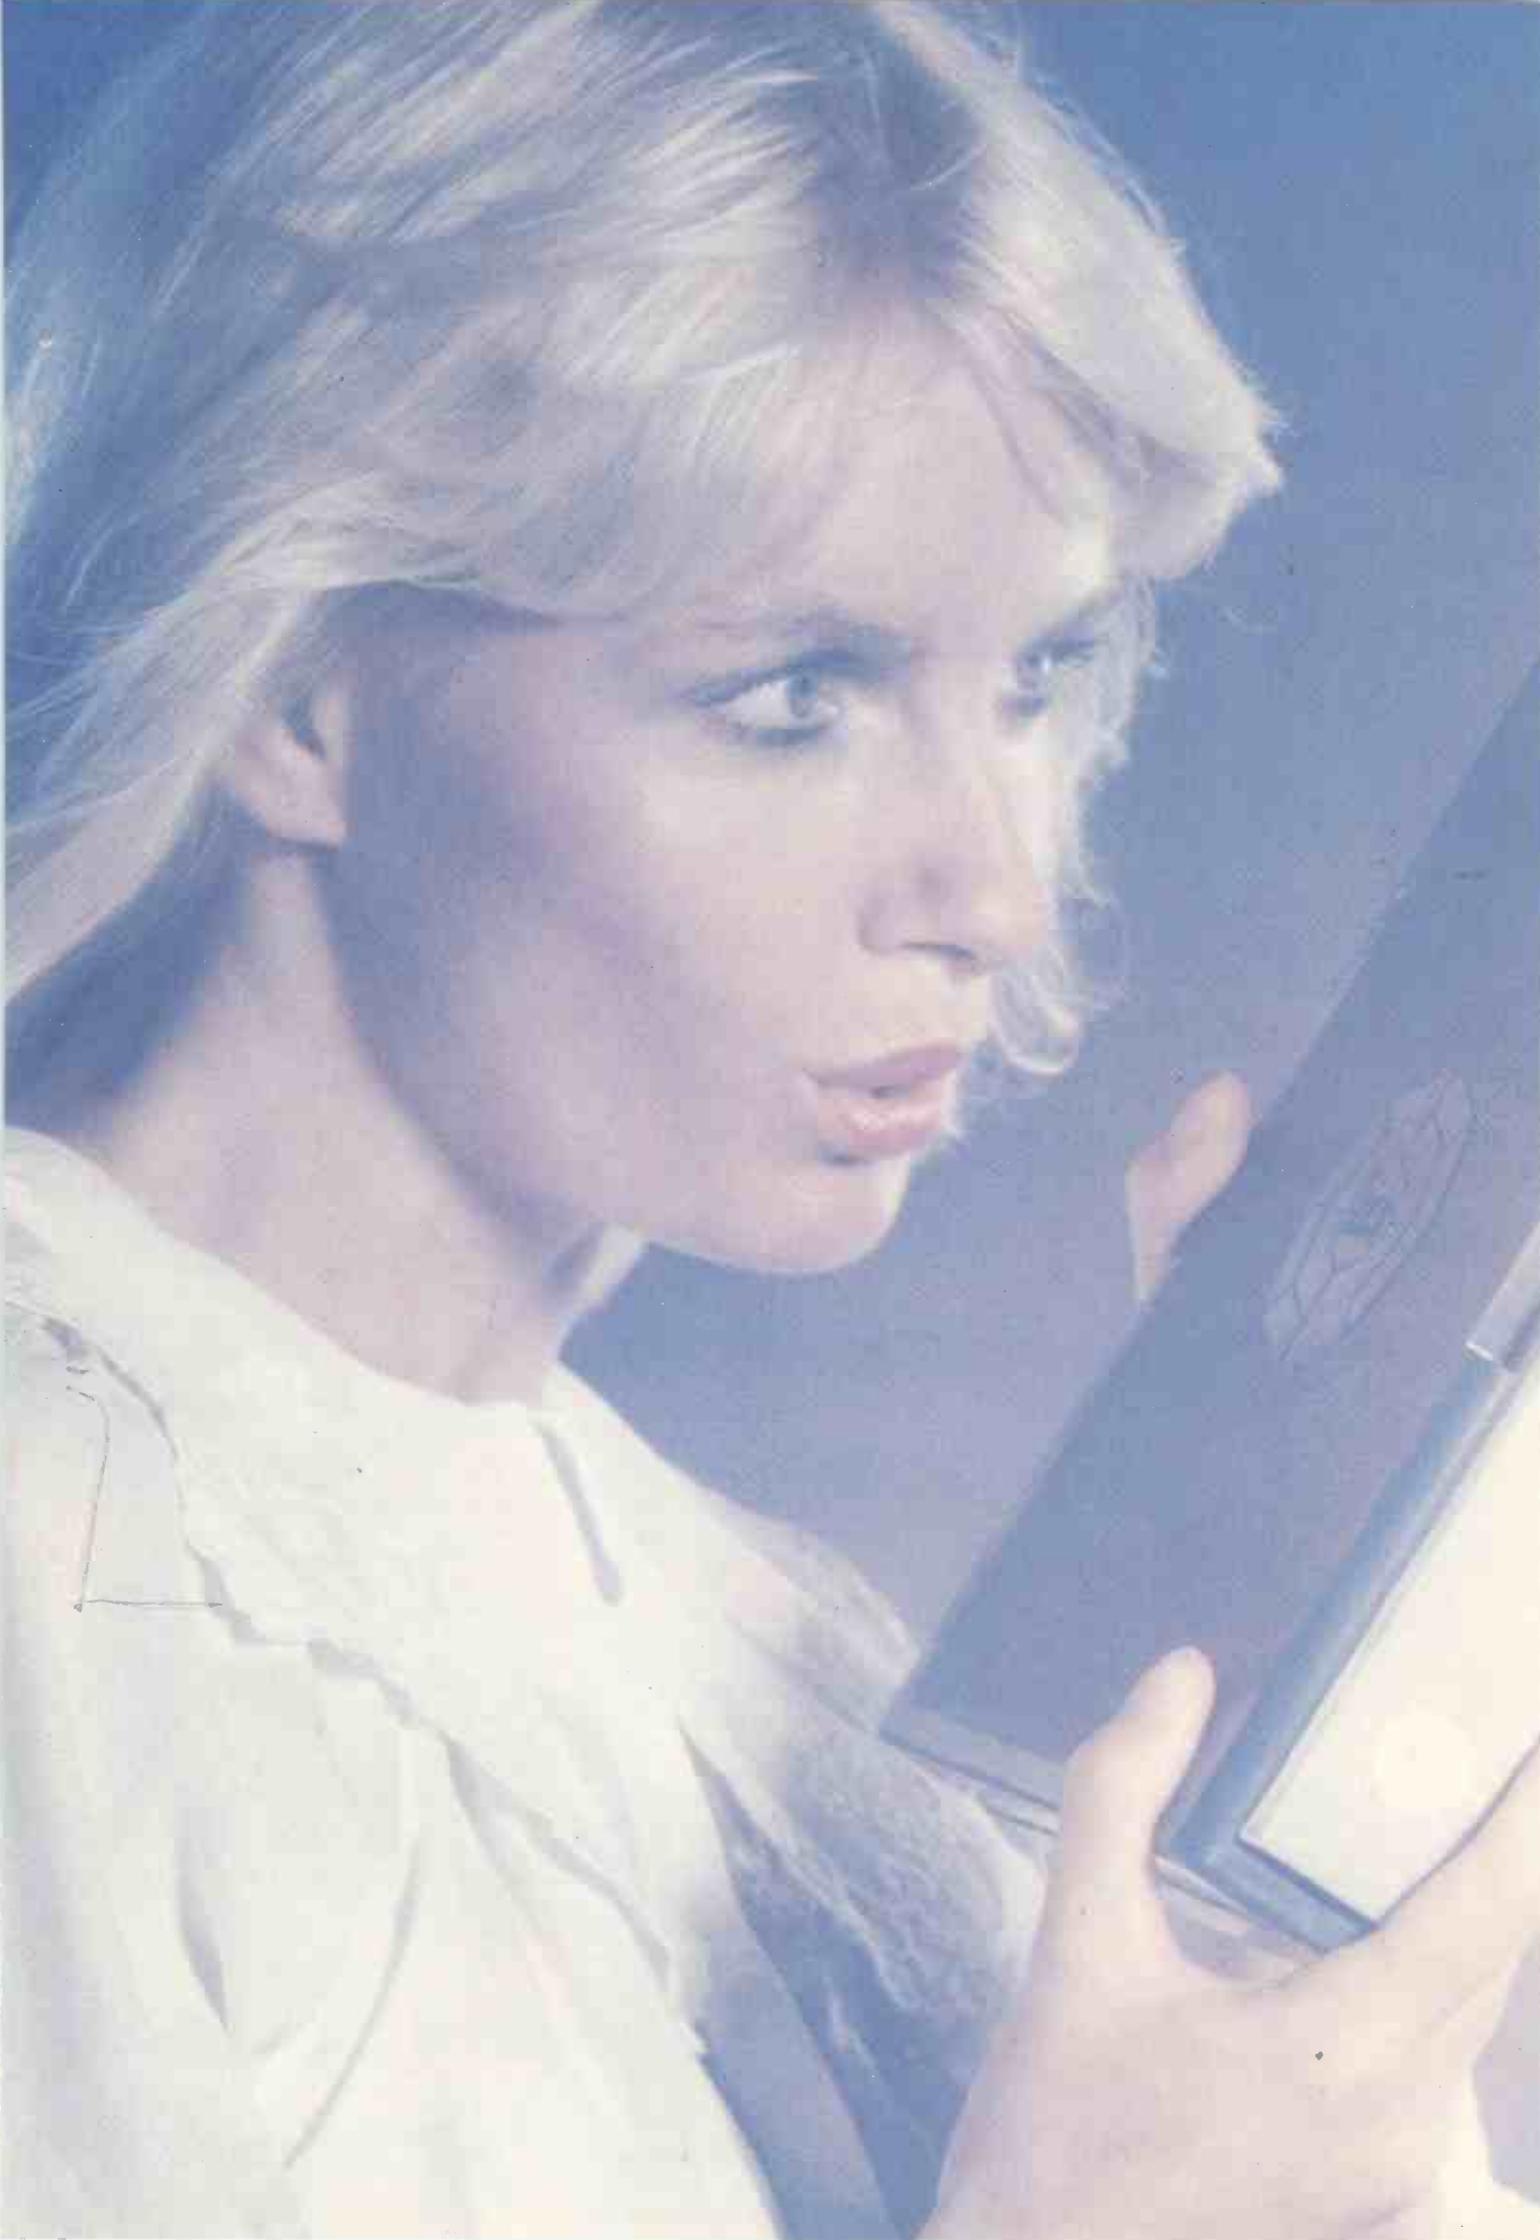

END

```

BYTE ... ROW$POINTER$BASE,X ..... 00000100←image of the new move
                                     in the accumulator
BYTE ... BOARD$BASE$A,Y ..... 00000010←current column state
RESULT NEEDED IN ACCUMULATOR ... 00000110←required new state

```

Fig 11 Creating a new move

PULSAR BLUE

Heaven sent for IBM users.

Pulsar, the 16-bit business software which became a best seller on the Sirius 1 microcomputer is now available for IBM PC users. Already over 10,000 Pulsar systems have been sold, bringing the benefits of true 16-bit computing to multinational companies, small businesses and institutions throughout the UK.

Pulsar Blue is an integrated range of commercial accounting, office systems, planning and modelling software from ACT bringing a new dimension to personal computing. Pulsar Blue is powerful, but friendly. Help routines, concise documentation and simple menus built in to the programs ensure that first time users can quickly familiarise themselves with even the most sophisticated systems. This combination of user friendliness and powerful processing has made Pulsar the most successful 16-bit business software in the country. And its available from IBM dealers now.

Pulsar Blue – a gift from heaven for IBM users.

MICROCOMPUTER RENTAL

From Micro-Rent, Britain's top-value specialist in microcomputer rental.

- Try before you buy
- Flexible terms to suit your needs
- Immediate delivery of all these models
- No capital outlay

Micro-Rent is Britain's top-value microcomputer rental specialist. You can hire on a short-term basis, try the leading machines fully in your own business before deciding which one is the right choice for your particular needs.

Micro-Rent is completely independent of any manufacturer, and offers expert impartial advice on all aspects of microcomputer use.

CALL TODAY 01-607 8797

*Prices quoted are based on 3-month rental, excluding VAT.

PHILIPS

Every small business can be a step ahead with The Philips Portable Computer P2000 C

The P 2000 C goes from desk to desk providing computer efficiency to many people in a small company. The P2000 C portable is easy to move and can be set up in a flash. And it is easy to use even if you have never used a computer before.

A secretary can type with the P2000 C just as with a typewriter only it's faster, easier and better. You can organize your records with it, do forecasts, projections and estimates, analyze

your costs and prices. The accountant can do his bookkeeping and billing and keep track of outstandings. In fact any business task can be done more easily and quickly.

Feature Highlights

- 1 9" screen, 24 x 80 display, 32 KB video RAM
- 2 64 KB RAM user memory 256 KB RAM disk optional
- 3 Two 5 1/4" floppy drives with up to 640 KB per disk
- 4 CP/M[®] and p-System[™] provide access to a large range of available software
- 5 Interfaces: serial printer, external floppy drives, hard disk, data communication, slave monitor, IEEE-488

[®] CP/M is a trademark of Digital Research Inc.
[™] p-System is a trademark of Softech Microsystems Inc.

COMPUTER TOWN UK! NEWS

Margaret Spooner brings you the latest news on Computer Towns.

Computer Town UK! receives an interesting variety of correspondence — see Chip Chat for one amusing example. A more serious request comes from Chelsea College, which is interested in locating any currently available software in the Health Education field suitable for a variety of user groups, such as school groups, home users, antenatal clinic visitors, and so on. The work is being carried out for the Health Education Council.

Since it's possible that some CTUK! members have worked in these areas, I

am passing on this request to you in the hope that anyone who has written relevant software will contact Wendy Riddle, Development Officer, Chelsea College, University of London, Bridges Place, London SW6 4HR.

Wendy mentions that human biology, medical matters, life choices and personal relationships are among the broad scope of areas that are of interest.

And now news of the inaugural meeting of a new Computer Town at Hayes Library. About 100 people turned up to the delight of organiser Martin

Haugh. He confessed to being 'somewhat overwhelmed', but expects numbers to settle as the merely curious people drop out. Those attending were of all ages and both sexes.

A steering committee was formed and will draw up a programme of forthcoming monthly meetings, alternating between formal talks, informal demonstrations and hands-on sessions. A demonstration of Micronet is planned for the second meeting. A final request from Martin: 'Any old television sets would be appreciated.'

Computer Town UK! is a rapidly expanding network of computer literacy centres where members of the public are given free access to all sorts of computer equipment. This is courtesy of those willing to offer time/resources. You can find a Computer Town anywhere — they're often in libraries or schools. The aim is to make micros enjoyable and non-threatening, so axe-grinding of any sort is banned. Guidelines are available for those interested in starting up their own 'Towns. Write to: Margaret Spooner, Computer Town UK!, PCW, 62 Oxford Street, London W1A 2HG. Remember to enclose an A4 SAE for your reply. Please don't ring for information as Computer Town UK! is entirely a spare time activity.

FOR THE BBC MICRO SOFTWARE

TINY PASCAL

Pascal-T is a 16k Eprom program capable of compiling Source Pascal into a compact and very fast threaded-interpretive-code. Full editor and disc-support are included and the program is supplied together with comprehensive documentation. **PRICE £59.00 + V.A.T.**

X CAL

An eXpert Computer Aided Learning package in 16k Eprom and support disc. No programming skill required to construct learning 'sessions' as the program is 'screen' driven. Facilities include Text pages, Graphics and Histograms. **PRICE £65.00 + V.A.T.**

FORTH

FIG-FORTH in 8k Eprom together with manual. **PRICE £34.72 + V.A.T.**

LOGO-FORTH

A 16k Eprom program introducing this very powerful but extremely friendly Turtle-Graphics language. Users also have full access to the Fig-Forth support nucleus. Full documentation is included. **PRICE £59.00 + V.A.T.**

M-UTS

Powerful machine code monitor with disc utilities. **PRICE £19.95 + V.A.T.**

(Special discounts available for educational establishments for all the above software)

HARDWARE

Always in stock Printers, Disc Drives IC's etc.

FOR THE EPSON HX20

SOFTWARE

FORTH ROM including full documentation. **£34.72**

DUCKWORTH HOME COMPUTING

a new series

All books written by Peter Gerrard, former editor of *Commodore Computing International*, author of two top-selling adventure games for the Commodore 64, or by Kevin Bergin. Both are regular contributors to *Personal Computer News*, *Which Micro?* and *Software Review*.

USING THE COMMODORE 64 Peter Gerrard

A complete look at the latest home computer from Commodore Business machines. Starting with a refresher course in Basic Programming, it moves on through machine code, before considering in great detail sprites, graphics and sound. A section on peripherals, and then the heart of the book: an in-depth look at the chips that make it work, including the 6581 Sound Interface Device and the 6566 Video Controller Chip, as well as the heart of the computer, the 6510. The comprehensive appendices cover the full Basic and Machine Code Instruction sets, as well as several useful reference tables, and a complete machine code assembler/disassembler listing.

Personal Computer News said: "In this case, we are dealing with a gem of a book. It deserves a place on the bookshelves of every 64 user whether beginner or expert."

Available now £9.95

THE BEGINNER'S GUIDE TO COMPUTERS AND COMPUTING Peter Gerrard

Written for the person who knows absolutely nothing about computers, this book introduces you gently to this exciting and fast-moving world. It guides you through the history of computers into the 1980s and introduces you to many of the personalities who dictate how computers will develop in the future. It comes complete with a glossary of computing terms, including all the often used 'buzz words', and even an 'alternative' computer glossary.

Available now £6.95

Other titles in the series include *Sprites & Sound on the 64*, *12 Simple Electronic Projects for the VIC*, *Will You Still Love Me When I'm 64*, *Advanced Basic & Machine Code Programming on the VIC*, *Advanced Basic & Machine Code Programming on the 64*, as well as *Pocket Handbooks for the VIC, 64, Dragon, Spectrum and BBC Model B*.

Write in for a descriptive leaflet (with details of cassettes).

HISOFT PASCAL DEVPAC

Quality ZX SPECTRUM* Software HISOFT PASCAL 4T

"... I haven't seen any other compiler that could match Hisoft's Pascal" ... *Using the Spectrum Micro — Autumn 1983*

"This is a very impressive product ... of benefit to any Spectrum programmer ... "David Bolton ZX COMPUTING Aug/Sept 1983

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well-known — fast, self-documenting, and above all, structured programs and now, with Hisoft Pascal, you can reap all these benefits on a wide range of home computers, including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1,000 times faster!

Hisoft Pascal supports FOR ... DO, WHILE ... DO, REPEAT ... UNTIL, CASE ... OF, INTEGERS, REALs, CHARACTERS, RECORDs, POINTERS, SETs, ARRAYs etc. etc. — it is not a Tiny Pascal but a virtually full implementation of the language allowing the user to develop true high-level language skills while attaining execution speed close to that of machine code. Complete with a 70-page manual.

Hisoft Pascal is also available in a variety of disk formats, including sequential FILE handling.

HISOFT DEVPAC 3

"... DEVPAC is most highly recommended. The documentation is first class." *Your Computer May 1983*

"... if you write programs in machine code, buy DEVPAC — it is the best currently on the market." *Adam Denning, ZX SOFT in Which Micro September 1983*

Two comments from reviews of earlier versions of DEVPAC — now we have DEVPAC 3 available: a powerful Z80 assembler with conditional assembly, assembly from tape (to enable generation of very large code files), ORG, EQU, DEFB, DEFS, DEFW, DEFM, labels of any length — in fact all you need for fast (3,000 lines per minute) and powerful assembly programming. But it doesn't stop there: DEVPAC 3 also includes an incredible debugger/dis-assembler giving you a 'front panel' display of the Z80 system and allowing extensive debugging of your machine-code program, including single-stepping programs EVEN IN ROM!! Open up the secrets of low-level programming with DEVPAC 3.

Prices:

Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive
(NewBrain, SHARP MZ700 etc) £35 plus VAT
Hisoft Pascal 4D, many disk formats £46 inc.

Hisoft DEVPAC 3 (ZX SPECTRUM) £14 inclusive
(NewBrain) £25 inclusive

*****STOP PRESS***** Hisoft Pascal for the SPECTRUM now comes complete with a Turtle Graphics package allowing fast and easy production of complex graphic displays.

Hisoft Pascal and Hisoft Devpac also available on ZX Microdrive, please write for details.

NOW YOU CAN HAVE THE BEST OF BOTH WORLDS WITH THE INFRASCOPE COMMUNICATOR II A VERSATILE LOW COST ELECTRONIC TYPEWRITER AND A COMPUTER PRINTER — ALL IN ONE!

- ★ Dual purpose Electronic Typewriter and RO Printer
- ★ Adaptable to a wide range of computers
- ★ Incorporates a 2K buffer
- ★ Only approved interface for SCM EC 1100 electronic typewriter

The electronics expertise of Infrascop has been used to create a new approach to the dual need for an electronic typewriter and an RO computer printer resulting in the COMMUNICATOR II. Based on the Smith Corona EC1100 the machine has a 100 character daisywheel, 46 character correction memory, 10/12/15 pitch, and is portable with a free carrying case. The RS232 compatible interface enables the COMMUNICATOR II to be linked to almost any microcomputer making it ideal for both the busy office and the home computer enthusiast. One year guarantee.

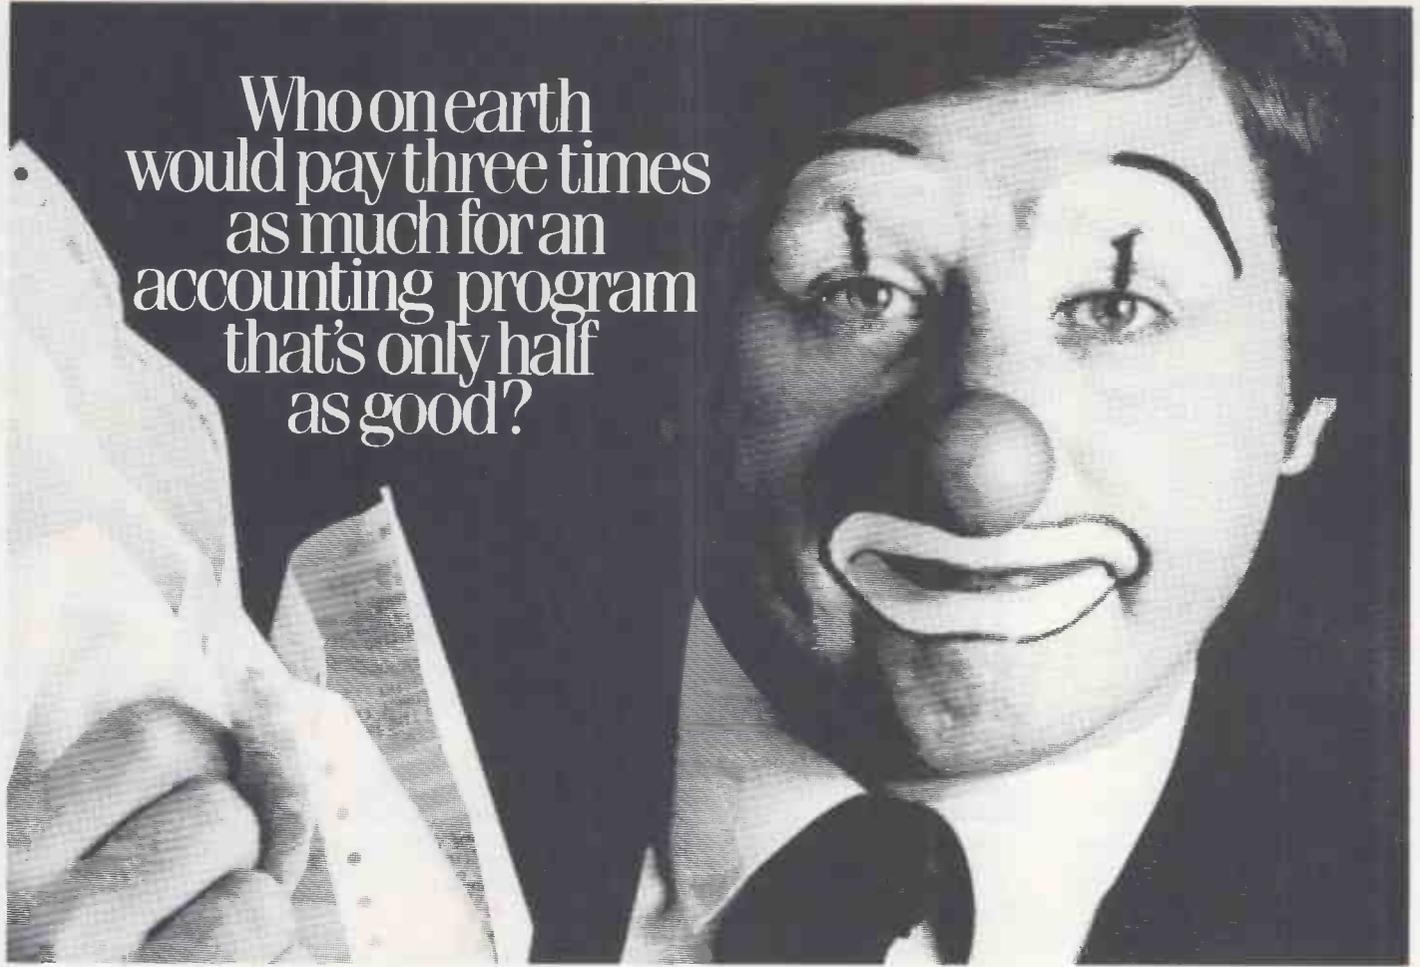

COST £447 including VAT and carriage VISA/ACCESS accepted

Telephone: 0642 472549**

Infrascop is a member of the Weyfringe Group of Companies

Who on earth
would pay three times
as much for an
accounting program
that's only half
as good?

There's no room for a comedy of errors when it comes to choosing the right accounting program.

The wrong decision will produce a very sad clown indeed.

You can, if you really wish, pay £1,000 or more for a sprawling, highly complicated, 4-7 disk monster, with a manual you can't lift without a course of weight training, or understand without a brain transplant. Alternatively, for just £375, you can discover the unique simplicity of SAGE.

SAGE produce an accounting program which is truly integrated and uses only one program and one data diskette.

- Sales and Purchase Ledgers,
- Nominal Ledger, ● Cash Book,
- Journal Entries, ● Trial Balance,
- VAT Return, ● Monthly and Annual Accounts, ● Age Analyses,
- Statements and Audit Trail - every accounting function you need in one compact and comprehensive package. The SAGE program is also widely used for Incomplete Records Accounting (without requiring modification). It can therefore be used by practising accountants for both functions. Its efficiency is built on simplicity - and its simplicity accounts for the price.

The SAGE accounting program is easy-to-learn and easy-to-use, with a short, clear and simple manual.

It's fully automatic - which means no shuffling through the program to find the section you need.

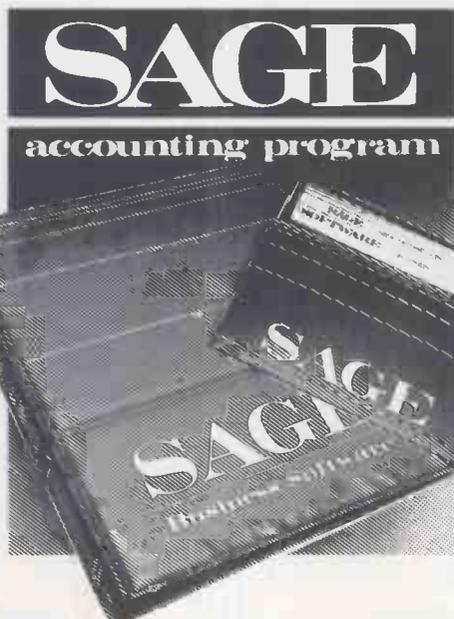

It's complete and self-contained - no expensive modules to buy every time you need an extra function.

It's suitable for use on CP/M or MS-DOS machines and has so far been implemented on Osborne, Superbrain, Epson QX-10, Sirius, Victor 9000, IBM PC, BBC/Torch Z80 and I'IT with others in the pipeline.

What's more, the SAGE accounting program has been successfully tested in hundreds of installations and is the only system of its type - is as effective in a one-man business as in a multi million pound corporation.

Check it out and we'll turn the smile the right way up.

Return the coupon and we will send you more information and the name of your nearest dealer.

Please send me your 8 page explanatory brochure.

Please arrange for me to have a demonstration.

Our innovation accounts for our price!

DETAILS

Level 9 Computing specialise in high, pure-text puzzle adventures with detailed scenery and a wealth of puzzles. All games have over 200 locations and a save game feature, and cost £9.90 inclusive.

MIDDLE EARTH ADVENTURES

1: COLOSSAL ADVENTURE. A complete, full size version of the classic mainframe game "Adventure" with 70 bonus locations added.

2: ADVENTURE QUEST. Centuries have passed since the time of Colossal Adventure and evil armies roam The Land. With cunning, you must overcome the many obstacles on the road to the Black Tower, source of their demonic power, and destroy it.

3: DUNGEON ADVENTURE. The trilogy is completed by this massive adventure, set in the rich caves below the shattered Black Tower. A sense of humour is essential!

THE FIRST SILICON DREAM ADVENTURE

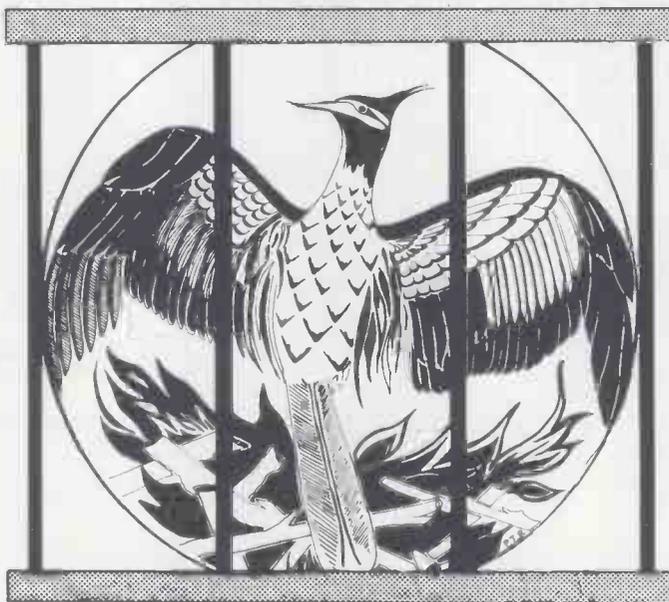

4: SNOWBALL. The first of Pete Austin's second trilogy. The giant colony starship, Snowball 9, has been sabotaged and is heading for the sun in this giant game with 7000 locations.

THE LORDS OF TIME SAGA

7: LORDS OF TIME. Our congratulations to Sue Gazzard for her super design of this new time travel adventure through the ages of world history. Chill to the ice-age, go romin' with Caesars legions, shed light on the Dark Ages, etc. etc.

LEVEL 9 ADVENTURES

**BBC 32K COMMODORE 64 SPECTRUM 48K
LYNX 48K NASCOM 32K ORIC 48K ATARI 32K**

Level 9 adventures are available at £9.90 from good computer shops, or mail order from us at no extra charge. Send order, or SAE for catalogue, to the address below - and please describe your micro.

LEVEL 9 COMPUTING

Dept W, 229 Hughenden Road, High Wycombe, Bucks HP13 5PG

REVIEWS

"Adventures which have a fast response time, are spectacular in the amount of detail and number of locations, and are available to cassette owners. . . Simply smashing!" - *Soft, Sept 83*

"Colossal Adventure is included in Practical Computing's top ten games choice for 1983: "Poetic and tough as hell." - *PC, Dec 83*

"To sum up, Adventure Quest is a wonderful program, fast, exciting and challenging. If you like adventures then this one is for you" - *NILUG issue 1.3*

"Dungeon Adventure is recommended. With more than 200 locations, 700 messages and 100 objects it will tease and delight!"

- *Educational Computing, Nov 83*

"Snowball. . . As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denizens. . . this program goes to prove that the mental pictures conjured up by a good textual adventure can be far more vivid than the graphics available on home computers."

- *Which Micro?, Feb 84*

"Lords of Time. This program, written by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue. . . As we have come to expect from Level 9, the program is executed with wonderful style - none of those boring "You can't do that" messages! Highly recommended." - *PCW, 1st Feb 84*

MAGIC MEMORY is the application of micro technology combined with the sophisticated operating techniques usually only associated with large mini computer systems. Literally hours each week can be saved with **MAGIC MEMORY** both by increased performance with the micro cache and by not waiting for printing to finish before being able to resume working. All this is available to users from £195 for 64K up to £595 for a full 512K, from dealers or direct from DATAFLEX. More details available from PHILLIP BERGE or DAVID LOW at DATAFLEX LIMITED on 01-748 4176.

Communications FROM £99

After many years of typing letters and placing them in the box (below left), some people will be surprised to learn that the smart, black box (right) will help them to perform the same function, quickly and economically, and do much more. May we suggest that you use the old-fashioned method (perhaps for the last time) in order to discover today's alternative.

Spreadsheet or Financial Planning

SPREADSHEET

Splitscreen display, menus and matrix, scrolling without losing row descriptions, comprehensive matrix and file manipulation, flexible data input.

FINANCIAL MODELLING

Spreadsheet plus comprehensive procedural language; IF, THEN, ELSE, GOTO, and WHILE. Shorthand models (R3 = R1 + R2) or in plain English 'Total Cost' = 'Fixed Costs' + 'Variable Costs'.

ANALYSIS AND SORTING

Sort data by row, by column, in ascending or descending order, even by row name. Highlight values meeting specified criteria, statistics include regression for forecasting.

JOB AUTOMATION

Compiled job streams make running comprehensive systems quick and easy; options allow for operator prompts and choices to be built in.

REPORT WRITER

Compiled for fast production of formal reports with graphics, sorting comprehensive formatting and display facilities.

DATA INPUT

Direct into spreadsheet or from files built in Encore, or from files external to Encore. Plus random number generation and arithmetic on entry.

GRAPHICS

'Quick and Dirty' from spreadsheet or comprehensively from Exec. Provides over ten different chart types. Can be used with external data files.

EXEC!

A compiled language for systems writing, includes formal reports, graphics, menus, over 100 commands for writing comprehensive systems, perfect for consolidations!

EDIT

A powerful screen text editor for writing models and procedures, or letters and memos.

dBASE™

CLIP — Compressed Library Interchange Program

CP/M CP/M-86 MS DOS MS DOS 2.0 £95.00

- Backs up a Winchester on to floppies.
- Compresses text or data to less than half size.
- Large files can span multiple discs.
- Selective backup or retrieval, on an inclusive or exclusive basis.

CLIP has no equal in reputation, convenience, power or economy. **CLIP** comes standard with the **CIFER** Business Management System, and with all Winchester systems supplied by **COLT** and **RML**

CLIP offers effortless backup.

You can create new commands using a menu procedure, and give each command a name, for later use. To repeat that command, the name alone is sufficient.

With **CLIP's** powers of selection and compression, the user can expect a four-to-one saving over global copying, with no effort except to feed discs on cue.

Or, **CLIP** can select just the new/updated files and reduce the backup load still further.

All prices excl. VAT, post free in U.K.
Most popular disc formats from stock.

dBASE II is a trademark of ASHTON-TATE

...sheets are out of date.

plan. Data transfer to word processing and other systems lets you incorporate figures in reports and output to a data base. It also has extensive formatting facilities which means you can produce reports that wouldn't look out of place in the board room.

It can store up to 25 standard reports to run when you need them. It's got full WHAT IF? analysis and direct editing of both spreadsheet and logic display.

JUST AS EASY TO USE

All this increased power doesn't mean you'll need a degree in advanced computing to understand MasterPlanner.

It works on exactly the same system as PlannerCalc and models written on PlannerCalc run without modification on MasterPlanner.

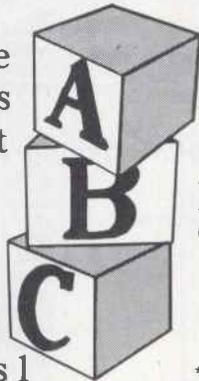

16 BIT VERSION

A new version of MasterPlanner has been specifically designed for the 16 bit micros like the Sirius 1 under TMCP/M-86 or the IBM personal using either CP/M-86 or TMMS DOS 1.1. With a vast matrix size of over 7000 cells on 128K and even more with larger memory, you'll at last be able to make the most of your micro.

ULTIMATE POWER

Fastplan II is the top Comshare micro planning system.

It's file-based, allowing development of large scale models; with a staggering 115,000 cell matrix; full financial functions plus backwards iteration, file input and output; and much more. Yet, because it can be menu driven it is easy to use. For the full story, tick the Fastplan box when you return the coupon.

OVER 10 YEARS EXPERIENCE

When you invest in MasterPlanner or PlannerCalc you're not just getting the best software money can buy.

You're also getting the kind of back up and after-sales service that only a company of Comshare's track-record can guarantee.

If you'd like to know more about any product, call in at your local dealer or fill in the coupon and send it to us. *Plus VAT and post & package.

COMSHARE

PLINK 86

THE TRUE LINKAGE EDITOR

An overlay linkage editor that can bind together individually compiled modules of a programme into one or more files, that may be loaded and executed by the operating system.

* An interactive or batch-link leader

* Works on CP/M-86, PC-DOS and MS-DOS, and fully supports the MS-DOS2 Directory Tree Structure.

* Is a true 16-bit overlay linker.

* Can create MS-DOS programmes under CP/M86 and then pull these programmes across.

* Under MS-DOS, Plink-86 can be used with the following languages:

MICROSOFT LATTICE C
FORTRAN
PASCAL
BASIC
COBOL
ASSEMBLER

* Under CP/M86, Plink-86 can be used with LATTICE C.

* Input to Plink-86 can be free-format and multi-line.

ORDER INFORMATION

When ordering software please specify the format you require. All software items are subject to VAT. Manuals, when purchased separately, are not subject to VAT. Please add £3.75 (plus VAT) for postage and packing for the first item purchased, and then £2.00 for each extra item. For overseas please add £6.50 for the first item and then £2.15 for each extra item required. Most software in this advertisement is available from stock. These details are current as of January 1984 (Telephone at time of purchase to confirm latest prices.) All payments must be in Sterling and drawn against a U.K. bank. Prices may change without notice due to fluctuations in the dollar exchange rate. Please confirm price at time of ordering.

THE COMPUTER PROFESSIONALS

As one of Britain's leading distributors of computer products and northern area distributor for Acorn, we sell only leading brands. Qualified electronics engineers are always on hand to service the vast majority of the equipment which we sell in the fully-equipped workshops which are part of our modern sales, service and administration centre in Bradford.

COMPUTERS

BBC B
 BBC B with disc interface
 SINCLAIR SPECTRUM
 ELECTRON
 COMMODOR 64
 ORIC
 Awaiting delivery of Sinclair Q.L. and Elan.

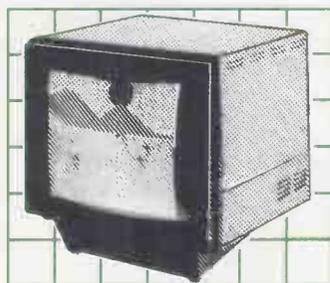

DISC DRIVES

TORCH Z80 Disc Pack – comes complete with software – GREAT VALUE!
 ZEP 100 Z80 – Already own a twin disc drive? Then this is all you need.
 SINGLE 100K 40 TRACK with integral power supply
 SINGLE 100K 40 TRACK powered from the computer
 SINGLE 200K 80 TRACK with integral power supply
 TWIN 400K 80 TRACK powered from the computer
 TWIN 800K 80 TRACK powered from the computer
 TWIN 800/400K 80/40 TRACK switchable, powered from the computer
 All the above complete with manual, leads & utilities.

DATA RECORDERS

BBC DATA RECORDERS – complete with lead for connection to BBC computer
 BUSH CASSETTE RECORDERS

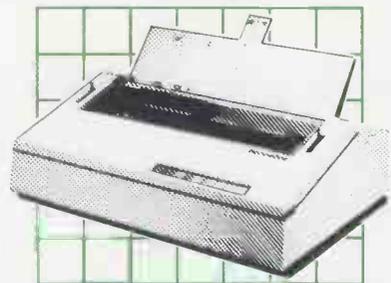

MONITORS

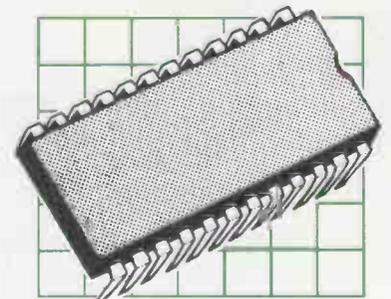

FULL RANGE OF MICROVITEC COLOUR MONITORS IN ALL RESOLUTIONS
 NEW MICROVITEC RGB/PAL MONITORS WITH AUDIO
 BBC – green screen monitors
 PHOENIX – green screen monitors

PRINTERS

EPSON RX 80 Parallel printer
 EPSON RX 80 FT Parallel printer

EPSON FX 80 F/T III Printer 160 cps parallel
 EPSON FX 100 F/T Parallel printer
 BROTHER HR 15 Daisywheel printer – Parallel with 3K Buff
 BROTHER KB 50 Keyboard – connects to – BROTHER HR 15 printer
 SHEET FEEDER – for HR 15
 TRACTOR FEEDER – for HR 15
 TEC F10-40 Daisywheel printer
 CENTRONICS – printer cables
 GRAPHIC DUMP ROM – for the BBC computer

ROMS

ACORN SOFTWARE VIEW – Word processor for the BBC computer
 COMPUTER CONCEPTS WORDWISE – powerful word processor

COMPUTER CONCEPTS DISC DOCTOR – disc utilities

COMPUTER CONCEPTS BEEB CALC – powerful spread sheet for BBC
COMPUTER CONCEPTS GRAPHICS ROM enables Sprite graphics to be generated
APTL SIDEWAYS ROM BOARD
Plus a wide selection of terminal ROMS

BOOKS

ELTEC STOCK THE WIDEST SELECTION OF TITLES FOR BBC, SINCLAIR, COMMODORE etc.

SOFTWARE

ACORN : SUPERIOR : IJK : IMAGINE :
MICROPOWER : SALAMANDER : GEMINI :
DOCTOR SOFT
Plus the widest range of Educational software

JOYSTICKS

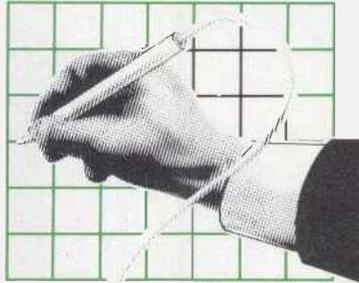

BEEBSTICK – single high quality joystick
BBC JOYSTICKS – pair of games joysticks
SURE SHOT – single joysticks
SURE SHOT – double joysticks
KEMPSTONE – joystick with interface
SINCLAIR INTERFACE 2 – for use with joysticks

PROTECTIVE COVERS & CARRYING CASES

AVAILABLE IN POLYESTER COTTON, SOFT PVC AND HARD PLASTIC, PLUS COMPLETE COMPUTER AND CASSETTE/DISC DRIVE CARRYING CASES.

UTILITIES

CLARE: GRAF DISC – on cassette or disc, computer aided design program
CLARE: THE KEY – utilities for discs
CLARE: SHADOW – cassette back up program
CLARE: REPLICA II – transfer your favourite programs on to disc
SALAMANDER EGD GRAPHICS PACKAGE – on cassette or disc

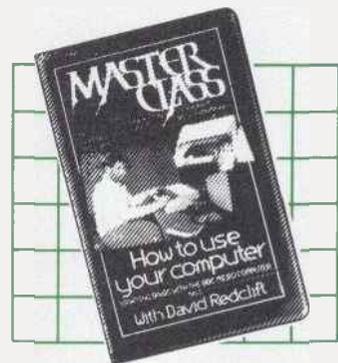

GENERAL HARDWARE

SPEECH SYNTHESISER – for BBC computer
TELETEXT ADAPTOR – for BBC computer
MODEM 1000 – for Prestel, Viewdata, etc.
MODEM 2000 – Duplex version
ACOUSTIC COUPLER – for Prestel/Viewdata/B T Gold

VTX 500 SPECTRUM COUPLER
RH ELECTRONICS LIGHT PEN
SOUND PICK-OFF MODULE
ATPL EProm Programmer
ATPL EProm Eraser
THE PLUG – removes unwanted mains spikes from entering computer

VIDEO CASSETTES

FOR BETAMAX & VHS
MASTER CLASS – The BBC micro in Primary Education. Demonstrates some of the uses of the computer in the classroom.
MASTER CLASS – How to use your computer – starting Basic 1

MASTER CLASS – How to use your computer – further Basic 2
MASTER CLASS ELECTRON – The operation and programming

TORCH NET – Local Area Networking – VERY POWERFUL!

Torch Net uses the ECONET network standard developed by Acorn Computers Ltd. for the BBC Microcomputer. Torch Net provides advanced but easy to use facilities above the Econet level which allow computers running sophisticated business programs to communicate with each other and share information. Torch Net is easily expandable from a network of 2 Torch computers to a 254-computer network.

LOOK AHEAD WITH

VISION 80 PRODUCTS

VISION 80

Simply the most versatile 80 column card available for the Apple II+ /IIe. Its 9x11 character set matrix is the largest and sharpest available, giving a crisp clean display. On-board communications software allows the Apple to act as a terminal with a wide range of databases and a number of different machines, including Apple to Apple communications.

- Character dot matrix is 9 x 11 which provides three lines of dots for full descenders on lower case letters. The full ASCII set of 128 characters is provided.
- Shift key does what you would expect it to do, and also has a shift lock facility and a visual LED shift lock indicator.
- Character set also includes twelve additional keys not normally available on the Apple keyboard.
- This card includes a built in softswitch ie no cable changes necessary when switching between 40/80 columns and graphics.
- The built in communications software driver gives your Apple the ability to be used as a true interactive intelligent terminal to mainframe computers or communications facilities. Fully compatible with CCS serial cards and Apple communication cards etc.
- The Vision 80 typeface is of an attractive appearance and is highly legible due to its large 9 x 11 character font.
- It supports all Applesoft commands including the text Window ie Home, Text, GR, HGR, HGR 2, Tab etc. It has inverse and normal display ie Highlight and Lowlight in CP/M and Pascal.
- It is possible to change the cursor character to either a block cursor or an underscore cursor. The speed of cursor blink can be altered and it is also possible to re-define the character set with your own personalised font.
- The card comes complete with demonstration utilities disc and is simple to install. It also includes a comprehensive users manual.
- For use with Apple II+, IIe. Supports DOS, Pascal and CP/M Software.

£185 + VAT

VISION AWII

For users of the Apple Writer II word processor, the software on this disc automatically carries out all necessary preboot procedures to display Apples word processor output in 80 column format.

£18 + VAT

VISION 128/256

The Vision 128/256 Ramcard is an inexpensive means of providing up to 256 Kilobytes of additional RAM main storage for the Apple II, II+, IIe. The card can be used as a fast scratchpad, supplementing the local storage of data arrays for application programs that can utilise this facility directly (eg. Visicalc etc), alternatively with appropriate utility software support, the card can be 'masked' to appear as a fast disc storage unit. The Vision memory expansion is available as a basic 128K card which can be upgraded to 256K RAM as required. The card, which is fully compatible with the Vision 80, is fully buffered allowing lower power consumption and giving greater reliability. The card also features 6 L.E.D. indicators to indicate the current bank selected and read/write enabled.

£240 + VAT

VISION VCE

This preboot disc for use with the Vision 80 allows VisiCalc users to see a full 80 columns displayed on the monitor, it also makes use of the extra memory available in the Vision 128 (upto 143K in all).

£39 + VAT

VISION COMBO PACK

Save £40 with this Combo Pack containing: Vision-80 80 Column Text Card; Vision-128 128K Memory Expansion Card; Vision-VCE VisiCalc Expander Preboot Disk.

£424 + VAT

TORCH Z-80 DISC PACK

Your BBC computer can be converted into a business machine with the addition of a TORCH Z80 disc pack. The Torch pack with twin disc drive and the Z80 processor card greatly enhances the computer's data storage and processing capability. Z80 card comes complete with 64K RAM and a CP/M compatible operating system. In addition to BBC owner's user guide and systems disc the package is supplied with PERFECT software package comprising of DATABASE, WORD PROCESSOR & SPREADSHEET and COMANEX an interactive business management game. Complete Package for £730 + £8 carr.

SMARTMOUTH — SPEECH

SYNTHESISER FOR BBC — The 'infinitive vocabulary' self-contained speech synthesiser unit. Uses only 5-10 bytes per word — no ROMs required — simply plugs into the user port. (Has Aux. Audio output Skt.). Supplied with Demo/Development programs and simple software instructions £37 + £2 p&p.

BBC EPROM PROGRAMMER

A fully self-contained Eprom programmer with its own power supply, able to program 2516, 2716/32/32A/64/128 single rail Eproms.
 * Personality selection is simplified by a single rotary switch.
 * Programming voltage selector switch is provided with a safe position.
 * Warning indicator to show programming in progress.
 * Programmer can read, blank check, program and verify at any address/addresses on the EPROM.
 * Simple menu driven software supplied on cassette (transferable to disc).
 * Full editor with ASCII disassembler.
 Programmer complete with cables, software and operating instructions: £89 + £2 p&p.

PRODUCTION PROGRAMMER

P8000 provides reliable gang programming of up to 8 EPROMS simultaneously with device sizes up to 16K x 8 bytes. Devices supported range from 2704 to 27128 in single and three rail versions. Simple menu driven operation ensure easy eprom selection and reliable programming in minimum programming times. £695 + £6 carriage.

EPROM ERASERS

UV1T Eraser with a built-in timer and mains indicator. Built-in safety interlock to avoid accidental exposure to the harmful UV rays. It can handle up to 5 eproms at a time with an average erasing time of about 20 mins. £59 + £2 p&p.
 UV1 as above but without the timer £47 + £2 p&p.
 UV140 up to 14 Eproms £61
 UV141 as above but with timer £79

RH LIGHTPEN

The Acorn-approved superior design, with a programmable 'push tip' switch, status indicator LED and an interface box. Supplied complete with manual, full software and basic demo programs. Colour graphics programs will be available separately. £39.50

**Wren Computers have just
launched their Executive System.
It's great value at £1,000.
We designed the Wren and
we're demonstrating now
with ex-stock delivery.**

**We market a comprehensive
range of computers and peripherals
from major manufacturers like
Epson, Texas, Sharp, NEC,
Commodore, Sinclair & ACT.**

Whatever the question, you're more likely to find the answer at Transam.

We recognise that the choice of microtechnology is becoming overwhelming, and it's growing all the time.

That's why we're redesigning and enlarging our showroom to accommodate one of the widest ranges of business, home and portable micros.

Doesn't that make the choice more difficult?

Not with the advice and expertise available at Transam.

A wide range enables us to explain, demonstrate and compare systems and software more objectively.

We can answer all your questions on software, peripherals and upgrades and provide a comprehensive range of books and manuals to give you more insight at every level.

Where else could you find all this in one store?

That's one question we can't answer.

Transam Microsystems Limited
59/61 Theobalds Road London,
WC1X 8SF Telephone: 01-404 4554

Transam
MICROSYSTEMS LIMITED

**Our software division
is continually developing
evolutionary software
to support all our
users requirements.**

**We design, develop
and manufacture our own
successful range of
computers and
software.**

THE computer store.

BEEF UP AN IBM SOUP UP A SIRIUS

PC EXPRESS

Another Great Idea from Intelligence Research

**AT LAST
TRUE 16 BIT
PROCESSING WITH
AN INCREDIBLY
FAST 10MHz 8086
PROCESSING BOARD**

Introducing the PC Express expansion card from Intelligence Research.

PC Express not only trebles the processing speed of an IBM PC or Sirius/Victor but expands the memory up to 512K.

Installation is fast and simple. The card plugs straight into one of the machine's expansion slots leaving the others available to meet your future needs.

PC Express is fully compatible with existing hardware and software

and is produced with the performance and reliability for which our products are renowned.

Make sure that you get our brochure. It will explain why PC Express is the most advanced new enhancement card on the market.

Currently available for IBM PC, IBM XT, ACT SIRIUS 1, VICTOR 9000.

Our business is making sure your business gets the right computer...

Deciding which computer system to invest in can be a real headache. Especially when truly independent and expert advice seems hard to come by.

Visit your local dealer and he'll bombard you with the hard sell for a particular model. Could it be that his life—or more accurately his livelihood—depends on the commission he receives from the manufacturer?

Post off the coupons from all the computer magazines, and you'll be inundated with piles of glossy brochures. But do they really answer all your questions?

There is a way to get expert and

independent advice on hardware—and software. Talk to Primary Business Systems.

We will talk to you and your staff about the systems your business operates and make recommendations for improvement. Should those recommendations include computerization, we'll select the right system; hardware and software (We do not actually sell either, so the system we choose will be the one that is best for you, not the one which gives us the biggest margin).

And in the vital first few weeks following installation, we can be on hand to offer training and support.

...and the right software.

The Primary Business Systems service does not stop there.

Because your business is unique—no other company has exactly the same computing requirements—an off-the-shelf software package may not fulfil your needs.

Primary Business Systems can devise a software package that will conform to your current procedures, and do it in a way that is perfect for you and your business. Complete and self-contained, it will be as efficient and easy-to-use as your computer allows.

And customised software need not be expensive. Our wide experience in the field,

combined with in-house software tools, make a unique tailor-made program more economical than you might think.

If you are retailer, publican, or a small businessman, you can subscribe to the PBS accountancy bureau. It covers all aspects of your bookkeeping from Daily Gross Takings through Expenditure Analysis to VAT returns and Trading Accounts. It's computerization with the minimum of fuss and outlay.

If you are thinking about computerizing your business and want some advice you can depend on, call us or post the coupon, today. It's our business.

ENHANCE YOUR ATARI® 810

HAPPY 810 ENHANCEMENT

Speed up program development, loading, execution, and copying time by reading disks up to 3 times faster. Complete compatibility with existing software, with faster disk initialization, and reduced wear on the disk drive mechanism. No soldering or trace cutting required, complete installation instructions included, or contact your dealer. Diagnostic program included.

SOFTWARE ENHANCEMENTS (require HAPPY 810 ENHANCEMENT)

HAPPY BACKUP PROGRAM

Guaranteed to produce executable backup copies of any disk which can be read with a standard ATARI 810* disk drive. Backup those important disks in your library or use HAPPY BACKUP for small scale software production. Completely automatic duplication of format and data content of the source disk. Single and multiple drive versions available. Backup copies will work on a drive without the enhancement.

HAPPY COMPACTOR PROGRAM

Combines self booting programs which reside one per disk into one disk with many self booting programs using the HAPPY COMPACTOR file structure. Programs are then executed from the self booting HAPPY COMPACTOR menu, and may later be extracted back onto a single disk. Compacted programs disk will execute only on a drive which has the HAPPY 810 ENHANCEMENT. Pays for itself by reducing the number of backup disks you need, in addition to the added convenience.

HAPPY CUSTOMIZER PROGRAM

User friendly program to generate source disks with custom track format. Format is specified on a per track basis. Examples of usage and interpretation of results are included. This system requires a more advanced level user.

HAPPY 810 ENHANCEMENT WITH SINGLE DRIVE HAPPY BACKUP \$249.95
MULTIPLE DRIVE HAPPY BACKUP PROGRAM \$ 49.95
HAPPY COMPACTOR PROGRAM \$ 49.95
HAPPY CUSTOMIZER PROGRAM \$ 99.95

Brother EP44

The Brother EP44 is an electronic typewriter, text editor, computer printer, calculator and serial terminal all in one. At under £300, Surya wondered whether it was all too good to be true.

When I saw the Brother EP22, I thought it looked rather impressive. It was an electronic typewriter with a 15-character 'type-ahead' buffer, and it had an RS232 interface to enable it to be used as a computer printer. It could also store up to 4k of text in RAM for printing later, enabling it to be used as a simple portable text editor. Being cheap (£220), compact and battery-operated it seemed like a useful idea, and I made a mental note to take a closer look at one.

As things turned out, this didn't happen until the 1984 Which Computer? Show, by which time Brother had produced a new model: the EP44. The

EP44 does everything the EP22 does, except that the 44 is capable of transmitting data through the RS232 port as well as receiving it. In addition to being a typewriter, printer, text editor and calculator, it can also be used as a serial terminal. And the price? It retails at £253.

Hardware

The 44 has a non-impact, dot-matrix print mechanism capable of use with a ribbon onto normal paper, or without a ribbon onto thermal paper. If a 'non-impact', dot-matrix printer sounds like a contradiction in terms, it's not. The

ribbon is 'burnt' onto the paper rather than hammered through a ribbon, as is usual with dot-matrix printers. The display is a 15-character LCD window, adjustable for viewing from different angles.

The lid covering the keyboard and display simply lifts off, revealing a full-sized, standard, qwerty/type keyboard with two shift keys, a shift lock (not a caps lock) and a full-sized space bar. There is also a key marked '2nd shift': this gives access to an alternative character set comprising a varied assortment of accents, foreign letters, currency and mathematical symbols.

The EP44 is attempting to perform three different tasks. Firstly, it's a straightforward portable typewriter. Secondly, it operates as a computer printer and thirdly, it can be used as a dumb terminal.

Typewriter

The EP44 comes complete with an instruction manual, a connections guide book, two packs of paper, a sheet illustrating the correct way to insert the ribbon cartridge and — a welcome surprise — a set of batteries. Since the 44 can use a ribbon or print without one, Brother supplies both thermal and ordinary glossy paper.

The first time you use the machine, you will have to insert the batteries and ribbon cartridge. Thereafter, all you have to do is remove the lid, switch on and feed in a sheet of paper.

Typewriters fall into three classes: manual, electric and electronic. The difference between the last two is that an electric typewriter is a mechanical machine using an electromagnet to strike the paper. An electronic typewriter, in contrast, is capable of simple formatting, storing small amounts of often-typed text (perhaps your address) and will normally have a 'type-ahead' buffer. The Brother EP44 is electronic, and offers some features normally reserved for large desk-top typewriters.

To use the machine as a standard typewriter, the three-position switch labelled 'NP CP DP' is set to DP (Direct Print). Everything you type is then immediately printed, the characters being simultaneously displayed on the 15-character LCD screen (the LCD screen is needed since the print head obscures the last few characters typed).

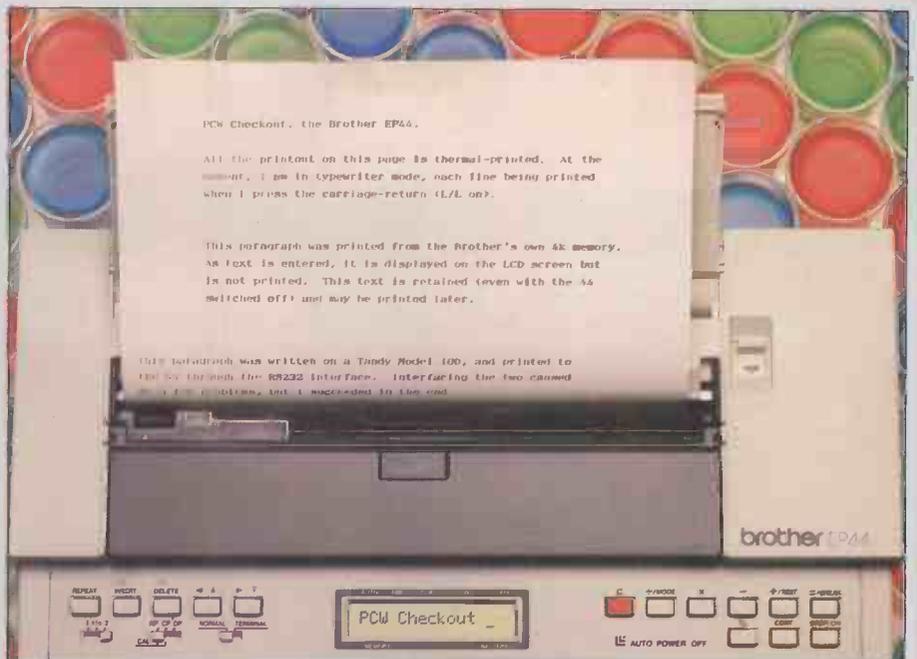

In this mode, the only clever thing the 44 does is to perform carriage-returns automatically by detecting the right hand margin and waiting for the next space. When you type the space, it does a carriage-return instead. This is useful for people like me who get so engrossed in what they're writing that they forget to hit the carriage-return, in spite of warning bells or bleeps. The feature is toggled on and off by holding down the blue 'CODE' key and pressing '4'.

The margin setting on the 44 allows you to exceed the right hand margin by six characters. If you need to go any further, you have to press the margin-release key. The six-character limit made me aware of just how many seven letter words there are in the English language!

In direct print mode, there is no method of correcting characters other than the old Tipp-Ex and backspace routine. The Brother therefore supports a correct-before-printing (CP) mode.

In CP mode, the characters appear on the LCD display as they are typed but are not printed on the paper until 15 characters later.

When you type 'The quick brown fox', the letter 'T' is printed as you type the

Print quality in either ribbon or thermal form is extremely good

space after 'brown', enabling you to correct any immediately obvious errors (spelling mistakes) before they are printed. This is called a 'type-ahead' system, since you are typing 15 characters ahead of the typewriter.

The editing facilities offered in CP mode are impressive. As well as the obvious destructive backspace, you can go back and delete forwards, overtype and insert. Let's suppose that you were writing a letter to Mr Smith and had just typed 'Further to our conversation this morning'. You would then decide that Mr Smith might not remember the conversation without prompting, and might want to rewrite the opening to read 'Further to our conversation about the EP44 this morning'. To do this, the cursor-left key is used to move the cursor to the 't' of 'this' and the 'INSERT' key is pressed. The cursor changes shape as a visual reminder that you are in insert mode and you can type in the additional text. When this is done, you press 'INSERT' once more to switch it off and use cursor-right to return to your previous position. The delete function works in a similar way.

Although the 15-character type-ahead buffer is useful, the text to be correct will often be more than 15 characters back. For this reason, there is a 'line-by-line' (L/L) print option in CP mode, which is toggled on and off by CODE-7. With the L/L facility on, the 44 does not begin printing until you reach the end of the line and you (or the 44, if the automatic carriage-return option is on) press the carriage-return. Until then, you can edit anything on the current line, giving you a type-ahead buffer of anything up to 80 characters (the maximum column width).

Other facilities available in CP mode are 'right-margin flush' (RMF) toggled by CODE-5, and centred (CTR) toggled by CODE-6. With RMF on, the text is

printed flush with the right-hand margin instead of the left. With CTR on, the current line is centred midway between the two margins. RMF is useful for printing your address at the top of a letter, and centred text good for headings.

One of the continual problems of business correspondence is the need to keep copies of almost everything. With the 44, this is a problem no more. The machine has 4k of RAM built in and can store a three page letter in memory as it's typed. To do this, you simply press CODE-N for New text. Everything typed after this (or rather up to 4k's worth) will be stored in RAM as well as printed. When you have finished the letter, remove the printed letter, insert a fresh piece of paper and press CODE-P to Print the contents of RAM — an instant copy. You can repeat this process when required if several copies are needed.

The 44 has a built-in calculator. Its typewriter keyboard has all the standard mathematical functions but there is a special keypad at the top right hand corner with +, -, /, x, % and = signs. If you use the keypad when typing a line such as '25+25+50+100', the Brother will calculate and print the result when you press the equal key. If you want to print these functions without performing a calculation, you use the standard typewriter keys instead of the calculator keypad.

The calculator is more intelligent than I first realised. As well as inserting carriage-returns in between figures without affecting the calculation, it will also insert text. Any non-numeric characters typed in the middle of a calculation are printed by the typewriter but ignored by the calculator. This means you can enter 3500 words x 0.85p per word = 2975 (the total was printed by the Brother when I pressed the equal key). After using cursor-left to insert a pound sign and decimal point, you then

C H E C K O U T

have 3500 words \times 0.85p per word = £279.50. Similarly, you can type a whole column of items and prices while the 44 keeps a running total.

I have mentioned that the EP44 is also a text editor. It can be used as such by placing it into the third mode, NP (Non-Printing). In NP mode, you press CODE-IN for new text and move the selector switch to NP. Up to 4k of text may now be entered and stored in RAM. It is not printed as it is entered, so you don't need to have paper in the machine at the time.

You can use the cursor-control keys to move to any point in the document and then overtype, insert and delete at will. You can also embed control characters for underlining, text-formatting, subscript and superscript, and print-pause.

If you embed a CODE-S (Stopprint) in the text, the printer will pause at that point, allow you to insert text if required, and then carry on when the CONTINUE key is pressed. This allows personalised form letters to be produced — simply leave the name and perhaps an individual greeting line blank, insert a CODE-S and enter the desired text when the printer pauses.

Of course, you cannot compare the limited editing facilities of the 44 with a microcomputer-based word processor. The Brother has three major limits. Firstly, 4k is only 800 words: while this is perfectly adequate for most business correspondence, it is obviously of no

The RS232C port enables the machine to be used as a serial printer

use for anything longer than a letter. Secondly, the 15-character 'window' is less than ideal when it comes to locating a specific piece of text. Thirdly, the nicad backup battery can only retain text for an hour when the machine is switched off.

Printer

The 44 has an RS232C port to enable it to be used as a serial printer. You also need a custom-wired RS232 cable costing £20-30 from a good computer dealer. Brother supplies a connecting applications guide which details the necessary wiring details and communications protocols for the Apple II,

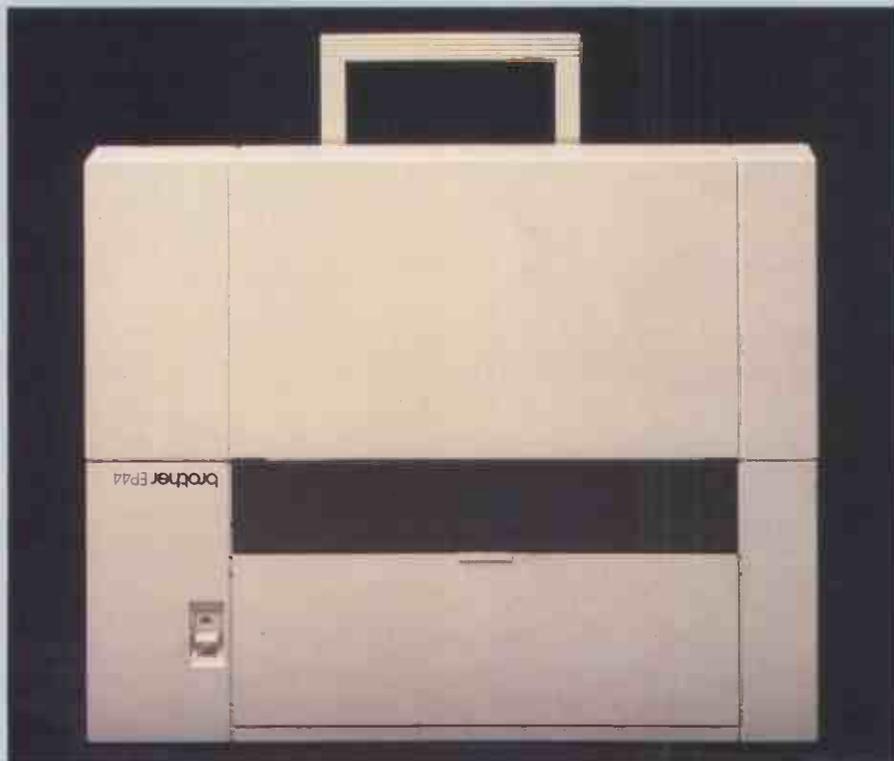

Atari, Commodore 64/VIC 20, TI-99/4A, TRS-80 Model 100, Epson HX-20, NEC PC-8201 and 8801, Sharp PC1500 and the Sord M223 Mk III. It can be used with other computers provided they support serial access, but I suggest you talk to Brother's technical support department if your machine is not listed. I tested it as a printer using a Model 100.

The EP44 is attractive to users of 'lap-held' computers since the printer is as portable as the computer. Easily carried and running on batteries, it frees portable users from the need to return to their home/office in order to print a file or get a hardcopy listing of a program. Perhaps the people who would benefit most from this are travelling sales representatives. It's impressive to be able to dial your office from the customer's home or office and obtain latest prices, place orders and so on — but it's much more impressive to be able to produce a neat printout on the spot for the customer to keep. Lugging your average office printer around the country is no joke, so the 44 will fill this need nicely.

The print quality in either ribbon or thermal form is extremely good: there is very little difference between the two. In thermal form, of course, you need to use thermal paper. This is relatively expensive (£4.88 per 100 sheets) and the pack supplied with the machine is single-sheet rather than continuous form-feed stationery. This is of little consequence when the 44 is used as a typewriter, but single sheets are inconvenient when using the machine as a computer printer. Roll paper is also available, and is suitable for listings.

The way in which the 'paper-end' detector works makes it easier to use singlesheets than it is on some printers.

Once you have the necessary cable, the 'NORMAL/TERMINAL' switch should be set to terminal. The message

A protective lid with carrying handle slips over the keyboard

FACIT

NO PRINTER PROBLEMS -ONLY SOLUTIONS.

With our reputation for product design and development, Facit are dedicated to providing intelligent solutions to any data problem that arises.

The Facit 4512 where options are standard is no exception. The Facit 4512 is a versatile 140 CPS, 132 column serial matrix printer. Among its many standard features are selectable Facit or IBM /EPSON protocols. These are enhanced by the optional IBM character generator, enabling the Facit 4512 to fully utilize the IBM personal computers extensive graphics set. These include 96 character national sets, near letter quality, high resolution 2 pass (18 x 17) mono or proportional spaced font.

In addition, its 64 block graphic Viewdata (Prestel) compatible characters, and 7 or 8 pin graphic mode enables a 1:1 aspect ratio and three different resolutions, thus ensuring more complete control over the dot pattern by the data source.

Further details of how the Facit 4512 can provide the solution to all your business, text and graphic requirements, are available from Facit or one of our authorised distributors.

So when comparing data peripherals think Facit – the intelligent solution to all your data problems.

C H E C K O U T

'OFF LINE' appears on the display. Pressing the 'MODE' key allows you to configure the Brother to whatever communications protocols your machine prefers. The default protocols are 300-baud, 8-data bits, no parity, carriage-return and line-feed on receipt of CHR\$(13), XON. These are easily-changed, however.

The applications guide recommends 300-baud for use with a Model 100; when I tried this, the 44 could not quite keep up — it missed characters occasionally. But occasional or not, missed characters are unacceptable even for rough text printouts, and can cause real headaches when generating hardcopy program listings. I switched to 110-baud which worked perfectly. When I informed Brother of the problem, it suggested that low batteries might be the problem — the 44 needs more power as a printer than as a typewriter, and the 'battery-low' indicator on the review model was set for typewriter mode (this problem has now been corrected). I tried again at 300-baud with new batteries, but found the 300-baud transfer only worked with new batteries. A mains adaptor would be a good idea when using the 44 inside, but doesn't help when printing files away from a mains power supply. 110-baud, though, is acceptable on these occasions.

Resetting the Brother's communications protocols is straightforward. The MODE key is used to advance to the next parameter, while the CR key steps through the available settings.

The 44 allows single, one-and-a-half or double line spacing to be hardware set, but the left and right margins must be software set when in terminal mode. Since the Model 100 TEXT program does not allow margins to be set, it is necessary to direct text output through some form of formatting program when using this or the NEC.

When the 44's 'paper-end' switch is triggered, printing is suspended and the message '# PAPER EMPTY' appears on the LCD display. If you press the CONT key at this point the next line will be printed, and printing will halt again with the same message. This allows you to finish printing the current paragraph before inserting a new sheet. Once the new sheet has been inserted, simply press CONT to continue printing.

Any single sheet printer is inconvenient for anything longer than two or three pages, so it's possible to use roll rather than sheet paper. This is particularly suitable for program listings which do not normally need to be 'paged'. A roll holder is available for £6, and roll-paper — thermal or ribbon — is slightly cheaper than sheet.

Wherever special paper is required, the price of the paper is an important factor to be taken into consideration: there's little point in buying a cheap printer if you can't afford to buy paper for it! So far as the Brother is concerned, the paper is not cheap but neither will it break the bank. Plain paper costs £2.25 per 100 sheets, or £2.87 for a roll (equivalent to 107 sheets). 40,000-character ribbons cost £1.75. Thermal paper is more expensive at £4.88 per 100 sheets, £4.02 per roll — rather pricey for rough listings. I found that ribbon printing gives readable copy on ordinary Bond paper, though the quality is not suitable for letters. This is another reason why the 44 will not be at home in an office — it doesn't give correspondence quality on standard letter-headed paper.

Terminal

With a 15-character display and/or printout, nobody is going to buy the EP44 as a terminal, but if you've bought the machine as a typewriter/printer, the ability of the machine to double as a dumb terminal is a great bonus.

I logged onto a couple of bulletin boards using the EP44 as a terminal. Waiting for the printer to catch up with the incoming data was slightly irritating, but it worked perfectly. I took great pleasure in leaving a message informing the Sysop of one board that I was logged onto his board with a typewriter...

I wrote part of this review on the EP44 in non-print mode and uploaded it later to a Model 100: this gave me a chance to test both text-editing and uploading. I quickly discovered that 4k of text is something less than 20 minutes writing, and it's difficult to edit a document with only a 15-character window. But by printing out sections and editing from the hardcopy, it was workable.

The piece of text in question was well-travelled by the time it reached

the printed page. It started life at home on the EP44, was uploaded to a Model 100 in Hyde Park (well, the sun was out!), and was then further uploaded at the PCW office (after editing) to a Torch Diskpack where it took its rightful place in this review.

One of the main uses I found for the machine's terminal capabilities was in recovering hardcopy of messages left for me on bulletin boards. This is easier than the process of downloading the message to RAM or disk, and then printing the file to a printer later. The Brother functioned perfectly on TBBS and CBBS boards, as well as Prestel and Telecom Gold.

Prices

	£
Brother EP44	253.00
Optional soft carrying-case	30.00
Optional roll-paper holder	5.95
40,000-character ribbon	1.75
100 sheets of thermal paper	4.88
100 sheets of standard paper	2.25
Roll of thermal paper (107 sheets)	4.00
Roll of standard paper (107 sheets)	2.87

All prices include VAT. Available from WH Smith, Boots and other large department stores. Brother can be contacted on (061) 330 6531.

Conclusions

The Brother EP44 shows great promise. As a typewriter alone, it is expensive but offers very sophisticated features. Its size and weight enables it to be transported easily. Although the editing facilities cannot be compared to a microcomputer-based word processor, the 44 is a quantum leap from an ordinary electronic typewriter.

As a printer, it's aimed pretty squarely at the home rather than the business market: the lack of form-fed stationery alone makes it unsuitable for most business applications. As a home printer, it is cheap, produces high quality output and is compact. As a companion to a portable computer, its size and battery-power make it ideal. The communications protocols may be a little daunting to an inexperienced user but these will be quickly learnt, and most users will keep them on one setting. The fact that the printer is very quiet in operation may also be important to all-night hackers — an ordinary dot-matrix printer can sound positively deafening at 3am!

I wouldn't expect anyone to buy the machine primarily as a terminal, but it's a worthwhile bonus to anyone needing a typewriter and/or printer.

Brother has packed a lot of features into a very compact machine at an equally compact price.

Revelation

Peter Bright assesses Revelation, a sophisticated database and applications generator utilising a Pick-like operating system. This easy to use but expensive system may well find its niche in the medium-sized business market.

The advent of 16- and 32-bit micros has opened the door to minicomputer software on small machines. The most obvious example is the use of Unix on the new breed of 'supermicros'. Another is Pick which is an operating system/database manager. It is usually found on multi-user systems but I've been testing an implementation on the IBM PC.

Called Revelation, a complete Pick-like operating environment with database, it was designed by Cosmos Inc in the USA. It is imported into this country by Doncaster-based Interactive Data Machines ('IDM').

Pick was conceived back in the 1960s by Dick Pick, and its major selling points are that it provides some very powerful database management tools and is easy to use.

In use

To run Revelation you need an IBM PC XT with a 10Mbyte hard disk, at least 500k of RAM and an Intel 8087 maths co-processor chip — that little lot adds up to quite a hefty system. The pairing of the IBM's 8088 main processor with the additional 8087 maths co-processor greatly enhances the computing power of the IBM PC, especially in the case of floating point arithmetic. This combination is known as the iAPX88/20.

IDM will supply the 8087 as part of its Revelation package — you just plug it into the socket next to the main 8088 processor. The only points to watch are that you don't bend any pins and that you remember to plug the chip in the right way round.

The software is equally straightforward to install. It is supplied on two floppy disks which are copied onto the hard disk. If your IBM is running version 2 of PC-DOS you will also need to create a new directory.

Revelation can be called from PC-DOS simply by typing "REV". This produces the main copyright screen which gives dire warnings about software theft, promising a reward of \$500 for the successful prosecution of 'violators'. This is strange when you consider that the system isn't copy protected. The only protection is that each copy has a serial number matching a little

stick-on label which is fixed to the machine. If the numbers don't match then the software must have been stolen.

In order to perform any useful tasks you must tell the system which user account you wish to work on (an account is a way of grouping files together). For example, each user can have his own account or there may be a different account for each application. Accounts can also be password protected, in which case you'll need to enter the account name followed by the password: you have three attempts at getting the password right. Absolute beginners use an account called SYS-PROG, containing tutorial files for use with the user manual.

New accounts can be created by using the 'CREATE-ACCOUNT' command followed by the new account name.

The first time I tried to enter 'SYS-PROG' the machine wouldn't accept the input, because I typed it in lower case and the machine was looking for upper case. This is a dead giveaway that the system hails from unfriendly minis. No self-respecting piece of 'friendly' micro software would be case-dependent.

After you have successfully entered the account name, the machine displays a 'Welcome to Revelation' message and then attaches all the files used by your account. It will then display a ':' — the standard Revelation control level prompt.

System commands

Revelation has all the tools and utilities normally found on any operating system. Some, such as essential disk utilities, are not dealt with here because of lack of space. I'll deal with the Basic compiler later.

COPY. This does all the normal file copying. It also copies files between Revelation and PC-DOS formats (very useful when you're trying to bring over old PC files).

CREATE-FILE. Unlike most other micro operating systems, Revelation applications won't open their own new files. Before you start you must create the file by typing CREATE FILE followed by the filename, followed by an estimate of

the number and average size of the records it will contain.

PC and EXIT. These utilities allow you to call PC-DOS commands. Typing 'PC' will take you back to the PC-DOS command line complete with the 'A' prompt. You can then execute PC-DOS commands, and to re-enter REVELATION you simply type 'EXIT' to get back in the REVELATION command mode.

EXECUTE and RETURN. The EXECUTE command allows you to suspend what you're currently doing, do something else, and then come back and carry on where you left off by using the RETURN command. This is useful if you forget a vital piece of information when half way through editing a Basic file.

File and database structure

One of the major advantages claimed for Revelation is that it supports variable length records. In general, micros can only support fixed length records where a fixed amount of file space is allocated for each record. The problem with this approach is that when you are allocating the space you must budget for the longest possible record even if the majority will only be half as long. The result is a great deal of wasted disk space. The advantage is that fixed length records are very easy and quick to manipulate.

Variable length records only take up the amount of space needed by each data element. Different data elements are separated by special characters so that the machine can tell where one ends and the next begins. It makes much more efficient use of disk space but is difficult (and slow) to manipulate. One of the reasons for the addition of the 8087 is to speed up calculations for disk access.

Disk access efficiency is further enhanced by the use of cache memory: up to the last nine frames that have been read off the disk can be stored in RAM. It reduces the number of disk reads because it's likely that the information required will be in RAM. As RAM access speed is much faster even than a hard disk, the response time of the machine is faster. The amount of RAM available

Illustration by Geoff Kelly

C H E C K O U T

for cache memory varies according to the other current demands.

Revelation also uses a hashing algorithm which allows direct record accessing to increase disk access speed. The combination of the two makes for a fast system.

Revelation has three key parts geared to database management/applications design: R/Design, a database builder; R/List, which interrogates the database; and R/Basic, which is a version of Basic geared to database management.

R/Design

R/Design is made up of ten different functions covering all aspects of database creation. All the options are presented in menu format.

DEF: the first stage in creating a new database. All it does is create the datafile. Input takes the form of a filename followed by a 'Q pointer' which allows synonyms to be set up for the datafile. You also input the name of the file owner and the approximate number of records and fields which are to be retained by the file. The system will be quite happy with a rough approximation for the last two items.

BUD. Revelation relies heavily on the idea of the data dictionary. For every datafile there is a dictionary, holding information on the size, length and type

of each field plus system data for the retrieval of each record. Bud sets up the dictionary.

When Bud is selected the screen displays a list of headings. The first is the name of the datafile to which the dictionary relates — this is always the same as the name defined in DEF.

The remaining entries relate to the type of data contained in each field. All the information has to be entered separately for each field.

One of the most interesting features here is that the value of a field can be the result of any piece of R/Basic code. It's conceivable that you could enter a small basic program as the formula, which will allow very complex formulae to be built up.

PGMR. After the data dictionary has been designed, you start to build the program to enter data onto the database.

PGMR asks for the program name and the file to be accessed. The actual program can be in one of three forms: R/List for simple database queries; Interpreted for simple database accessing; and R/Basic code for more complex applications. If R/Basic is chosen then the program generator will need to be used.

SEL, SCR.GEN and SCR. These define how the data entry screen will look. SEL selects the fields to be displayed

on the screen. SCR.GEN will generate a standard entry screen based on the output of SEL. SCR allows you to take the standard screen, move items around and generally customise it.

ENTER. Now you're ready to start entering data onto the database. For an interpreted program this is done with the ENTER function. If you are using a R/Basic compiled program, then you only need to call the program.

R/Basic program generator:— Included with Revelation is the best code generator I've seen — it produces excellent R/Basic code. The generator is called by entering GEN from the R/Design main menu. It takes its information from the definition set up in the previous R/Design stages.

Basic code generators have been around for many years. Perhaps the most famous is 'The Last One' which was launched in a blaze of publicity in 1981. The problem with most code generators, however, is that the code produced is almost impossible to read. The machine may have known what it was doing, but if you try to alter the code manually you're in for a long job. Revelation produces clear, easy to read listings. It uses meaningful variable names rather than the meaningless '\$=' approach. It even puts REM statements into the listings so that it's easy to tell what's going on. It's

Our monitor at £69.00

Apple's monitor at £149.00

That's right a good quality 12" green screen monitor for only £69.00 – it is fully supported by U-Microcomputers and available through your local dealer.

Technical specs: 12" green screen, 90° deflection, composite video input, 15 MHz bandwidth.

Use it with Apple, BBC micro or with most of the popular micros.

To order:
5-1020 U-VIEW 12" green monitor.
Prices exclude VAT & delivery.

£69.00

U-MICROCOMPUTERS

Of course our monitor (like Apples) is made in the Far East.
Technical Improvements excepted

From Keyzone 80 column cards

Expandable at the flick of a switch (for IIe)

Upgrade Kit
8 x 64k. Fit the chips and slide the switch. **£40**

Standard 80 column card
for aux slot of IIe. **£50**

Extendable 80 column card for aux slot
Full 80 column features but supplied without 64k RAM
To upgrade plug in 8 x 64 chips (available from Keyzone £40) and slide the switch **£60**

Fully extended 80 column card for aux slot
With 64k RAM. Ready for use **£89**

RGB Colour Card

For Apple II & IIe

Spectrogram

read and write registers, which can be software programmed, giving new scope to standard Apple graphics facilities. Text and background of 16 colours. Foreground colours can be hidden within the background colour – Animation can be achieved with just a few simple pokes. Apple colour in prom is the default condition of the card. Redefined colours are stored in ram of up to 255 user defined colours.

Card for slot 3 of Apple II/IIe
Uses 6845 screen controller
U/L case text line graphics
Normal/inverse output **£120**

4-CHANNEL A/D CONVERTER

8 Bit **£100-00**
10 Bit **£110-00**
12 Bit **£120-00**

£120-00

LEAD PACKS (Other sizes available)
3LP26 – 3 x 2m leads for parallel **£25**
3LP20 – 3 x 20 pin/26 pin Conversion leads **£28**

C H E C K O U T

comparatively straightforward to customise the code after it has been generated.

When the generator is called it asks for a filename in which the program is to be stored and then proceeds to create the program. The amount of time it takes depends upon the complexity of the database you are trying to create. I tried it on a fairly simple database and it took 11 minutes to generate 360 lines of R/Basic code.

I only encountered one problem when using the generator. This occurred when I tried to generate a very large program. The machine thought about it for twenty minutes and then exited with an 'Out of String Space' error. IDM explained that the minimum amount of RAM a system should have is 500k. My IBM only had 320k so the generator simply ran out of memory.

R/Basic

R/Basic is a highly stylised version of the language. It's also compiled rather than interpreted which makes it even more unusual in the micro world.

I showed an R/Basic listing to the Programs Editor and he thought it had more than a hint of Cobol about it. This is especially true of the listings produced by GEN. One of the most obvious differences is that line numbers are used purely for reference. All GOTOs, GOSUBs and so on are addressed to labels rather than line numbers, so instead of saying GOTO 10, you would say GOTO TOP or GOTO HEAVEN.

This looks like a very powerful implementation of Basic. As you would expect, most of the extended features relate to handling complex file structures, but because of the 8087 maths chip it should be possible to handle complicated arithmetic very quickly.

Since it's a compiled language, getting an R/Basic program to run can be quite time-consuming. The line editor has to be called to create the program file, then you have to save the program, compile it and run it. The editor is a fairly standard line editor and it really isn't up to standard in comparison with modern editors.

The way programs are stored is interesting. Usually you have a separate disk file for each program, so you might have two files called PROG1 and PROG2. In Revelation, you only have one file which you might call BP, containing all your Basic programs as records. PROG1 and PROG2 would be two records within the file BP: this may seem strange but it works well enough.

Before a program can be run for the first time it must be compiled, which is done by using the Basic command followed by the filename and program

name. To compile PROG1 you say BASIC BP PROG1. The compiler will then print a series of asterisks on the screen to show that it's doing something useful. Assuming the compilation was successful, the program can be run by typing RUN BP PROG1.

R/List

Now that you've introduced the information into your database, it might be a good idea to find a way to retrieve it. There are two ways of doing this. The first is to write an R/Basic program — R/Basic is normally used to produce all your standard monthly reports. The second method is to use R/List, a query language useful for producing one-off *ad hoc* reports.

The most commonly used verb in R/List is the LIST command. This displays the contents of any file in any order. At the most fundamental level, you might say LIST CUSTOMERS COMPANY PHONE. This will look in the CUSTOMERS file and display all the company names and phone numbers contained in the file.

One major advantage of R/List is that it understands English-like phrases. For example, you could type LIST CUSTOMERS WITH CITY BETWEEN 'A' AND 'M' OR WITH ZIP UNDER 30000 and the machine will print all the customers who conform to those criteria. The system can also understand words like YESTERDAY, TODAY and TOMORROW, and can be made to ignore words such as THE to allow queries to read better. If you don't like the words the machine responds to, they can be altered by editing one of the system files called VOC. This makes R/List very flexible.

R/List also has a powerful sort option. On typing in LIST CUSTOMERS BY STATE BY CITY, for example, it will sort on the state and city fields. Any number of fields can be sorted but it does take rather a long time.

Fields are totalled in one of two ways. You can either use the TOTAL on its own to give a total at the bottom of the column, or it can be used in conjunction with the BREAK-ON command. If the BREAK-ON feature is used, a total will be produced every time the value of a specified field changes, which is useful where you need to show sub totals by department.

Documentation

Revelation is supplied with two instruction manuals. One contains an introduction to the system plus tutorials for R/List and R/Design. The second manual covers R/Basic. Both look like large paperback books and consist of photocopied pages.

I was impressed with the R/List tutorial — the left hand page contains instructions and the right hand page shows what should be happening on the screen. It was very easy to work through the examples checking that what appeared on the screen matched the examples. However, as I worked my way through the tutorials I became more frustrated that the required information wasn't in the book or was hiding away at the bottom of the page. My opinion of the manuals now is not very high. They were fine when I was starting out, but as I progressed they were of little help.

Conclusions

Revelation is a sophisticated package: any product requiring a minimum of 500k of RAM, a hard disk and a maths co-processor must be fairly complex.

IDM asked me not to categorise the product because it feels that it goes beyond the boundaries of normal database classification, and I have to agree on that point. Revelation is an operating system, database and applications generator all rolled into one. I suspect that most people will use it as an applications generator. It's very easy to design a file and then generate the R/Basic programs to input data and produce reports.

R/Basic will look very strange to anyone who is used to the more traditional Microsoft style of Basic, but it's extremely powerful. When combined with the in-built code generator it allows sophisticated programs to be produced quickly.

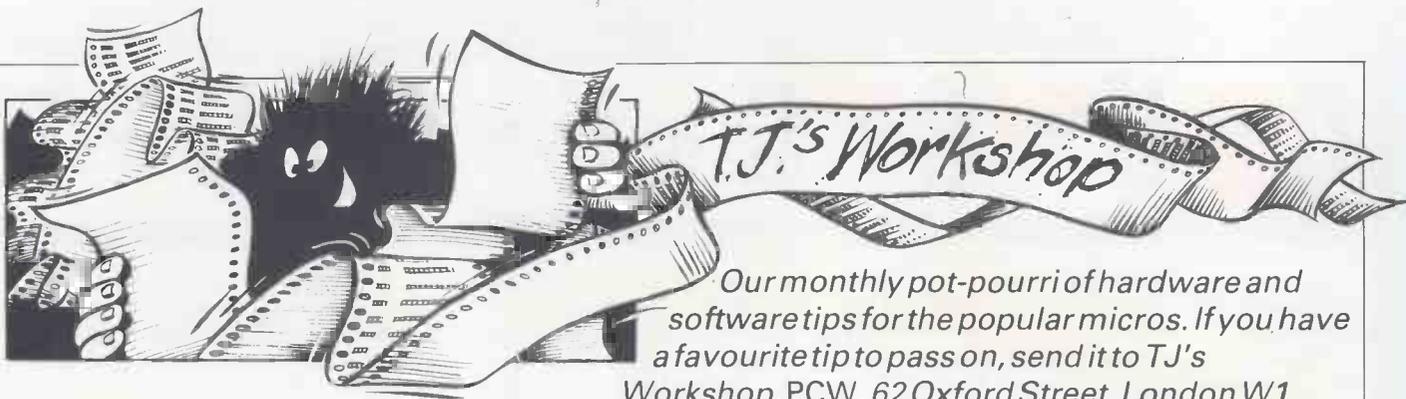

R/List contains features for producing *ad hoc* reports. Its major advantage is its ability to understand English-like phrases.

All in all I was very impressed with Revelation. The Pick approach of combining powerful database handling facilities with a friendly and (comparatively) easy to use operating system will become very popular.

Although Revelation is not a full implementation of Pick, it packs a great deal of power into what is a fairly mundane machine.

It's more difficult to predict who will use Revelation. The price of £1330 makes it one of the most expensive single user database products on the market and its power means that it will only be used to the full in complex applications. The main demand will come from medium to large companies who use a mini or mainframe for most of their major database work but who also have a need for powerful departmental databases.

Our monthly pot-pourri of hardware and software tips for the popular micros. If you have a favourite tip to pass on, send it to TJ's

Workshop, PCW, 62 Oxford Street, London W1.

Please keep your contributions concise. We will pay £5-£30 for any tips we publish. PCW can accept no responsibility for damage caused by using these tips, and readers should be advised that any hardware modifications may render the maker's guarantee invalid.

Spectrum Helpscreen

'Helpscreen' simulates a help key on the 48k ZX Spectrum. The program allows a screen of information to be saved into memory. The information may then be recalled at any time by pressing the 'Symbol Shift' and 'Space' keys together. Once the information has been examined the computer will return to its previous task on pressing the keys again.

The program has been written in machine code using the Artic assembler. It consists of four routines, save and activation, interrupt service, deactivation and display. The program is loaded at location 50431 and extends to 64469. Included in this memory allocation are two areas for storing display and attribute files: 50646 to 57557 (SCREEN1) and 57558 to 64469 (SCREEN2).

The save and activation routine is used to save a Helpscreen picture. It consists of moving the current display and attribute files to the location SCREEN1, then it activates the interrupt service routine. Activation consists of loading a pointer into the interrupt vector and setting interrupt mode 2. An alternative entry point may be used to activate the routine without saving the screen. This allows a Helpscreen to be read into SCREEN1 from tape.

Once activated, the interrupt service routine is called whenever there is an interrupt (50 times per second). The routine commences by checking to see if the keys are pressed. If

they are not pressed then a RST0038 instruction is executed which allows the ROM to scan the keyboard, then a return is executed. If the keys are pressed, the current display and attribute files are moved into SCREEN2, then the Helpscreen is transferred to the screen. The program waits for the keys to be released and pressed again; at this point the original screen is restored then a further wait is made until the keys are released, at which point a return is executed. The deactivation routine must be used before overwriting any memory locations between 50431 and 64469 otherwise the machine may crash. This routine returns the processor to interrupt mode 1.

The display routine may be used by a program to display and modify the Helpscreen. It consists of copying the Helpscreen into the display and attribute file area.

The example program, written in Basic and including the machine code in DATA statements, may be used to illustrate the use of the routine. Running the program will load the Helpscreen routines and then draw a wheel. This screen is stored as a Helpscreen and the interrupt service routine is activated. The Helpscreen may now be recalled at any time by pressing Symbol Shift and Space. The program then draws another wheel. Once this is complete the two wheels may be displayed successively by pressing and then releasing the keys; this gives the effect of a rotating wheel. Pressing 'Capital Shift' and 'Break' while the Helpscreen is not displayed will halt the program. List the

program and then press the Symbol Shift and Space keys. The Helpscreen will then be displayed. Press again and the listing will return. RANDOMISE USR 50533 will display the Helpscreen to allow modification. RANDOMISE USR 50518 will deactivate the routine.

The Helpscreen may be used to recall useful information such as

instructions for games. This information may be recalled at any time halting the current program. When the program resumes, it restarts from exactly where it left off. One use that I have found for it is to make a list of the Basic keywords and the corresponding keys for easy reference when typing programs in.

BBC operating system commands

The BBC Micro operating system commands are those which start with an asterisk.

For example, *MOTOR, *CAT or *FX.

The operating system commands are passed to the Command Line Interpreter ('CLI') when encountered. The CLI is vectored, and as a result it is possible to intercept the command line before it is passed onto the

AT YOUR FINGER COMPLETE NEW RANGE

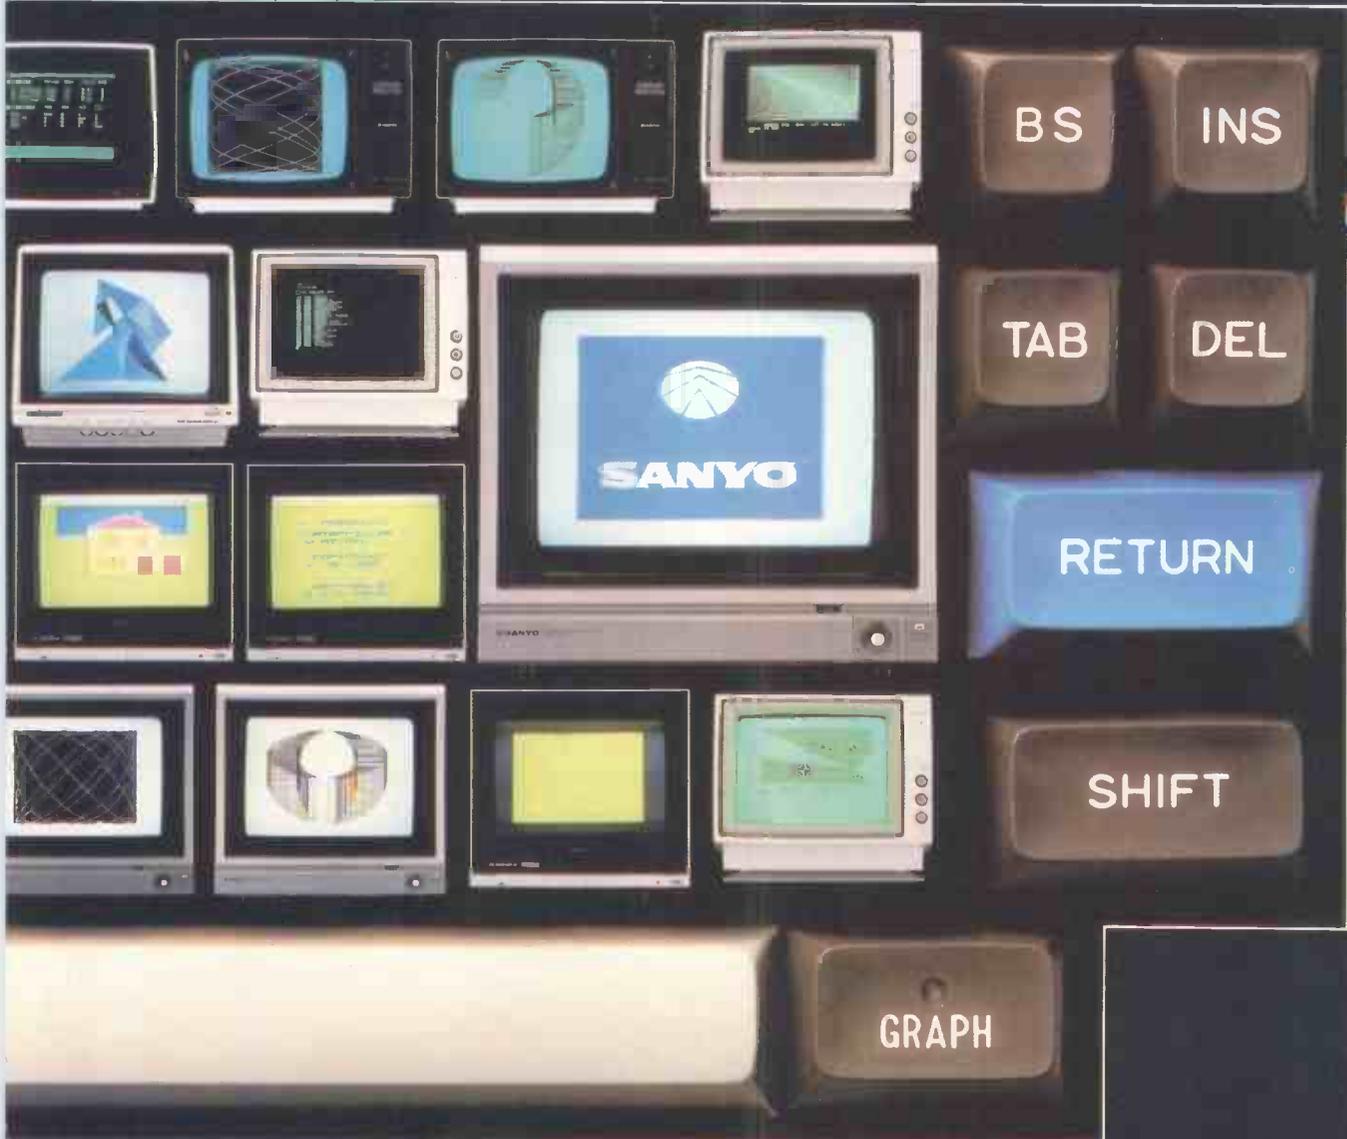

This is Sanyo's new range of normal to high resolution graphic display monitors. Designed for the customer who specifically demands a high quality product at a realistic price.

A complete range in every sense (size, colour capability and input versatility) that has evolved directly from the experience and advanced technology of one of the

TIPS, THE KEY TO A RANGE OF DATA MONITORS.

world's leading colour television and computer product manufacturers.

A range that's available now at your fingertips.

If you're investing in business micros for the first time, or just simply extending your present system, phone STC on 0279 26777 or Micro Peripheral on 0256 3232.

Alternatively, clip the coupon and we'll tell you all about Sanyo, the key to a complete new range of data monitors.

SEE SANYO, THEN DECIDE

CLI. This in turn allows the user to write his own commands which can be invoked either in the interactive mode or in Basic programs.

The technique employed is to place in the CLI Vector (CLIV) the address of a user written routine which examines the command line for new commands before passing unrecognised commands to the original CLI. The example listed here is a simple new command *CLEAR which sets all internal variables to zero. The new command is not particularly interesting in itself, but serves to illustrate the technique.

The program is fully commented but a few words of explanation are necessary.

Lines 90 to 100 setup the addresses of OSBYTE and CLIV.

Lines 270 to 350 set up the break action address. This means that once the routine is installed, it is resident until the machine is switched off. Pressing the break key causes the routine 'install' to be invoked.

Lines 400 to 500 are the

routine 'install', which sets CLIV to point to the routine 'newcliv'.

Lines 590 to 830 are the routine 'newcliv'. This routine first stores the X and Y registers in &F2,&F3. The CLI uses the X and Y registers to point to the memory address where the command is located. The CLI uses &F2,&F3 to hold this base address of the command line. The subroutine &E039 (line 620) is a subroutine used by the CLI to strip leading spaces and asterisks from the command. The routine then checks to see if the command is the user's new command. If it is not, the X and Y values are restored and the command passed to the CLI to be dealt with. If it is, control is passed to the code which executes the user's command (lines 940 to 1000).

The remaining section of the program demonstrates that the technique works.

The ability to create new commands opens up all sorts of possibilities to the machine code programmer; any favourite utility can be invoked by direct command rather than by CALLing it.

John Hearn

Lynx serial port

Little information is given by Computers relating to the Lynx's serial port. The following data should be of use to Lynx owners wishing to hook up their machine to printers, modems and other computers or peripherals.

The serial facility is provided by a UART (Universal Asynchronous Receiver/Transmitter). On the Lynx, this UART is arranged to provide a serial output and accept a serial input at RS232 compatible levels comprising eight data bits, one start bit and one stop bit. There is no parity bit. Should this data format not

be suitable for our application, it is possible to alter it by simple hardware modifications. The baud rate (speed at which transmission and reception is carried out) can be selected to be either 2400, 4800 or 9600 bits per second. Normally the Lynx will be set to the 2400bps rate.

To introduce a parity bit to the data stream on transmission, and to check for correct parity on reception, you should locate pin 35 of the UART chip (the UART is the forty pin package which is upside down relative to the other two forty pin packages. On my machine it is marked COM

8017, but could easily be marked IM 6402 or AY 3 1013 on yours). Pin 35 is normally connected to +5V. To enable parity it should be grounded instead. If odd parity is required, pin 39 also should be changed from its current +5V to 0V. If even parity is required, leave pin 39 as it is. The number of bits per character is set by pins 37 and 38 which are normally both tied to +5V, selecting eight bits. Fig 1 shows how to select other character lengths. The number of stop bits to be appended to each character on transmission is set by pin 36. A logic 1 (+5V) selects two stop bits and a logic 0 (0V) selects one. Normally this pin is tied to 0V. The baud rate is set by a small plug and socket assembly, called link 7. It can be found on the circuit board just below the row of din sockets. There are six pins on the male side and the socket joins one horizontal pair of pins at a time. When the plug is on the lowest two pins (as it is normally) the baud rate used by the UART is 2400 bits per second. Moving the plug to the middle set of pins gives 4800bps and the top set gives 9600bps. Although limited to three speeds, this gives the port extra flexibility.

On the software side, the UART appears as two distinct ports. One—&82—is the data port and the character to be read or written passes through this port. So OUT &82,50 will put 50 serially onto pin 1 of the din socket marked serial at the back of the Lynx. PRINT INP (&82) will display the last character which was received on pin 3 of the din socket. Note that while output is in 'real-time'—that is, the character is sent as soon as the instruction is executed by the processor—input is not. A serial data stream on pin 3 of the din socket will be taken by the UART whenever it appears and the character represented is stored within the UART to be read at the convenience of the processor. This facility means that the computer can send and receive data simultaneously—that is, it can have full duplex

operation.

The other port connected with the UART is port &84. It informs the processor of the status of the UART. This information is bit coded and the port is read only. Of the eight bits in this port, only four are used. The others are permanently one (bits 5, 4, 3 and 0). Bit 7, the DAV flag, goes zero when data is available in the input register. To avoid over run (see below) data should generally be read (through port &82) as soon after DAV goes low. Once read DAV will return to a one until another character is received. Bit 6 is the TBE flag. It indicates that the transmitter buffer is ready to receive another character when zero. So if this bit is a one, do not try outputting data. Bit 2, the PE flag, indicates that a parity error exists in the last character received. Normally this bit is a one, but if, as detailed earlier, your computer is modified to check parity, the bit will go zero to indicate the failure of the parity check. Bit 1 is the OR flag and indicates, when zero, that more than one character has been received since the UART was last read by the processor. This state is called over run and can be avoided by regular checking of the DAV flag.

Finally, it should be noted that the Lynx serial port is not a full implementation of the standard RS232 link. In particular it does not allow handshaking between communicating devices. Therefore it should not be taken for granted that the computer can be linked to any piece of RS232 equipment, although a little software can often overcome difficulties. As proof of this I can say that I have been using a daisywheel printer with my computer for several months now with no problems and the minimum of software. If you wish to experiment with the port I suggest you first try the program given in Fig 2. If you have, or get hold of two computers, you might like to try connecting the two serial ports together—0V to 0V, In to Out, and Out to In, typing the program into both

machines, and running it. It allows instant communication between the two computers.

Alternatively, if you haven't got two computers, you can simply join the Out and In pins on one machine

with a piece of wire, and talk to yourself. Proof that the data is actually going through the port can be obtained by simply pulling out the wire and observing the result.

Spectrum on error

I have recently found a way of simulating the ON ERROR NEW and ON BREAK NEW command on the ZX Spectrum and I think that other Spectrum owners might be interested in the method.

What you do is PEEK the two byte system variable, ERR SP. This gives you the address on the machine stack holding the address in memory to which program execution jumps after an error has occurred. Usually the address held by ERR SP holds the address 4867, but if you POKE the address held in ERR SP to 0, when an error occurs in the Basic program, or BREAK is pressed, or the program ends, then program execution will start from address 00, which will have the same effect as typing PRINT USR 0. This will reset the computer to the same state it was in when first switched on.

Here's a short routine which should be put at the beginning of a program and

will reset the computer if break is pressed, an error occurs, or the program ends.

```

1 >LET err sp = PEEK
  23613+256*PEEK 23614
2 LET err rtn = PEEK (err
  sp)+256*PEEK (err sp+1)
3 POKE err sp,0:POKE (err
  sp+1),0
Line 1 PEEKS the system
variable ERR SP.
Line 2 stores the contents of
the address held in err sp and
err sp+1, in the variable err
rtn.
Line 3 POKES the address
held in ERR SP, and the
address after it to 0.

```

Once this routine has been run any attempt to stop or end the program will cause a machine reset. If you want to be able to turn this effect off from within a program then you should type in a routine such as the one below.

```

1000 >LET err sp = PEEK
      23613+256*PEEK
      23614
1010 POKE err sp,err rtn
      -256*INT (err rtn/256)
1020 POKE (err sp+1),INT
      (err rtn/256)

```

This will allow the program to be stopped in any of the usual ways.

The Future Computer range is distributed in the following countries

WEST GERMANY, SWITZERLAND, NORWAY, CYPRUS, HOLLAND,
FRANCE, SWEDEN, TURKEY, VENEZUELA, DENMARK, AMMAN,
JORDAN, SINGAPORE, USA, THAILAND, GREECE.

Here is your Future

COMPUTERS

FUTURE EVOLUTION

Built in local area network means you can grow with plug-in simplicity.

A powerful independent microcomputer with built in LAN

Stand Alone microcomputer with an integral Winchester hard disk

Low cost terminal

Network Processor with a Winchester hard disk

British and beautiful, the new Future Computer range is the best buy in business micros today.

- **Low price** – £1875 or less, buys a lot of power.
- **Power** – 128K to 1 Mbyte as standard.
- **Speed** – Around 60% faster than other 8088 micros.
- **IBM compatible** – A perfect IBM 'think alike'.
- **'Future Evolution'** – Built-in Local Area Network for plug-in growth.
- **O/S Choice** – CP/M86, CCP/M, MP/M86, MS/DOS.
- **User comfort** – VDU tilts and swivels; separate keyboard & processor can be slung from desk side.
- **Range** – From terminals to network processors.
- **Dependability** – Continuous 'Check Guard' diagnostics.
- **2 YEAR WARRANTY.**

Micro Animation

This month we bring you news of the prizes to be won in our competition and details of Martin Colbert's image manipulation program for the BBC Micro. Instead of publishing the complete listing we are offering readers the opportunity to receive the entire program, free, on tape!

The top prizes in PCW's Micro Animation Competition are microcomputer systems from Fujitsu, Japan's leading computer manufacturer. Two FM16S 128k systems complete with software are waiting to be won together with an FM7 64k system, the uniquely-styled, 8-bit machine from the Fujitsu stable.

We're also pleased to announce the names of the judges who'll be deciding on the winning entries: Barry Norman, TV film critic and presenter of BBC Radio 4's *Chip Shop* will chair the panel; he'll be assisted by Roger Handley, Fujitsu's NW Europe Sales Manager, Hedley Griffin of Griffin Films and our own editor, Jane Bird.

3D graphics produced by Martin Colbert

In the 'Patterns' article of the March 1982 issue of PCW, Alan Sutcliffe introduced an algorithm to solve the 'hidden lines' problem in 3D graphics. I have written a program on my BBC Model B which uses the methods Sutcliffe described.

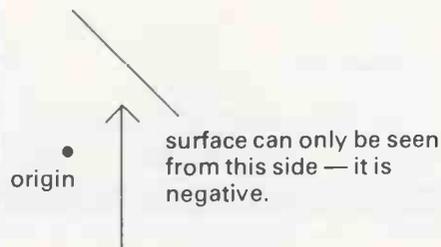

The program allows the user to create simple solid models; save the data for these models on tape and load them back at a later date; edit the model; print out data for the model; display the model rotated through any angle about the X, Y and Z axes at any distance; and create 'sequence' files so that the program will automatically

display the model in a series of predetermined positions — the user also being able to save and load these sequence files.

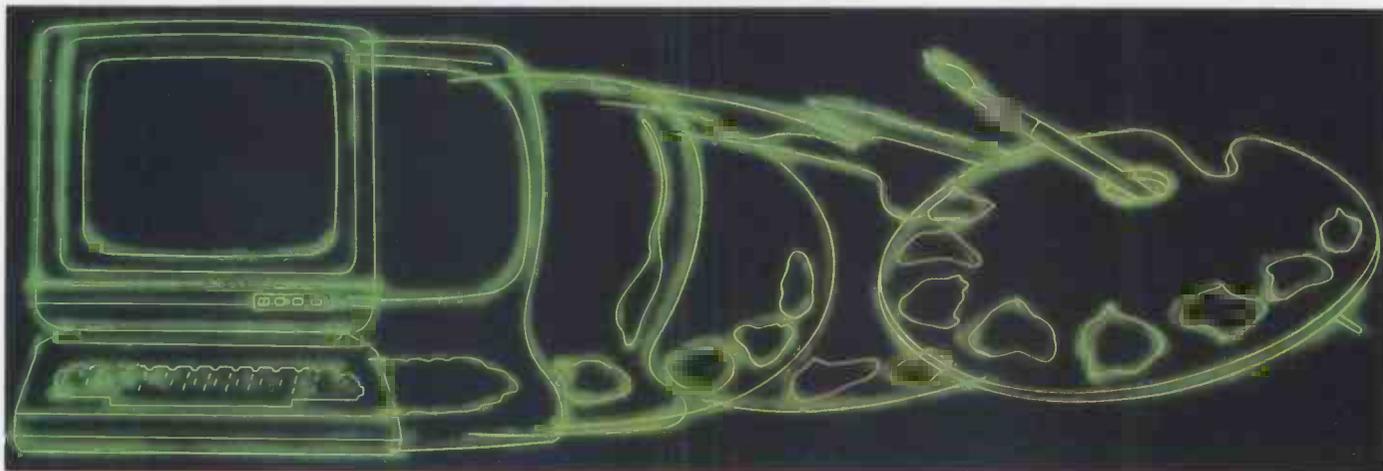

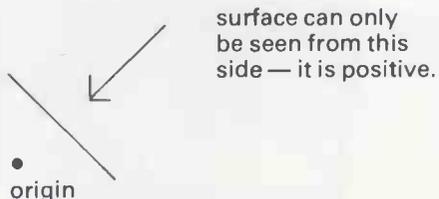

Options

To create a new model you must first decide how many surfaces the model will have, for example, a cube will have six. Remember, however, that all surfaces are (as described here) single-sided. If you want your model to contain a surface which can be seen from both sides, this must be entered as two separate surfaces; the only difference being their signs. You then enter how many points there will be in each surface so that one array can be dimensioned to contain all the points in a model, and another array to point to this array to show where the points are and how many there are for each surface.

The data must then be entered for each surface in turn — the sign is entered first. A surface is negative if it can be seen from the origin, and is positive if it cannot:-

The coordinates for each point must then be entered, together with whether or not the point is connected to the next one. The X and Y coordinates are as normal, with Z representing depth. The program is designed so that if a point is entered as 200,300,1 and the model is viewed at a distance of 1000 units, when the model is drawn (with the origin redefined to the centre of the screen), the point will be at the position corresponding to screen coordinates 200,300. When asked if the point is connected to the next one, the usual answer will be 'Y', but for the last point in a surface the answer will be 'N'. Entering N causes a point to be connected to the first point or, if N has already been entered for one of the previous points in a surface, it will cause the point to be connected to the point following the point for which N was already entered. This allows surfaces with windows to be created — for example, the entry for each respective point in the diagram (see Fig 1) will be

Y,Y,Y,N,Y,Y,Y,N, causing point 4 to be connected to point 1 instead of point 5, and point 8 to be connected to point 5 instead of point 1.

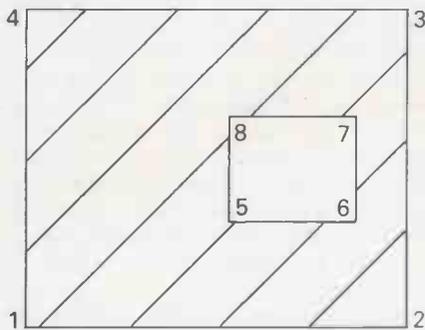

Fig 1

Finally, the drawing instructions for the surface must be entered. These are based on the triangle-drawing facility of the BBC Micro. They cause a surface to wipe out any lines from other surfaces which are behind it. The letters used are 'M', 'P' and 'R'. M causes a

MOVE to the specified point, P causes a PLOT 85 instruction using the specified point and R tells the program that the drawing instructions are the same as those for the specified surface. The drawing instructions for a surface with four points would be M1M2P4P3, and if surface 5 of a model has the same drawing instructions as surface 2, then for surface 5 you would enter R2. If a surface has a window then the drawing instructions cause triangles to be plotted over the 'solid' part of the surface but leave the window untouched.

When the coordinates for a surface have been entered, the program calculates an equation surface plane. At this point, a division by zero error may occur due to the method used to calculate the equation. To rectify this, option 6 from the main menu should be used to alter the coordinates of the surface slightly. Luckily, this rarely happens, and the best way to avoid it is never to enter zero as one of the coordinates of a point — use one instead.

When all this has been done for each

surface, which does not take as long as you might imagine, the program will calculate the plotting order of the surfaces using the method described here. The program will handle everything including 'frustrated loops': the only thing it cannot handle is the planes of two surfaces intersecting each other. It is left to the user to ensure that this does not happen.

Main menu option 2 may be used to save the data for the model as a named file and option 3 is used to load the data back again.

Option 4 is used to display the model. After choosing the foreground and background colours, you are asked if you want to create a sequence file. If N is typed you'll then be asked if you want to execute a sequence file. If N is again typed, you'll be asked if you wish to see the object being drawn. This allows you to choose between seeing each surface being drawn until the model is complete or simply seeing the complete model appear at once after a pause.

Next, the distance at which the model is to be drawn is asked for. This will depend on the size of the model but, on average, entering 500 will give a good view. Then the rotation of the object is requested. This is the number of degrees the model will be rotated about the X, Y and Z axes, Entering 0,0,0 will cause the object to remain still.

Following this, the screen will blank and pressing SPACE BAR will cause the model to be drawn. At the top of the screen, a line showing the distance to the model and its rotation about each axis will be displayed. The A and Z keys can now be used to alter the distance, the left and right cursor keys used to alter the rotation about the Y axis, the up and down cursor keys used to alter the rotation about the X axis and the DELETE and COPY keys used to alter the rotation about the Z axis.

Once the required distance and rotations have been set, pressing the SPACE BAR will cause the model to be drawn at the new position. To return to the menu press M.

If you type Y when asked if you wish to create a sequence file, a series of positions can be stored which the computer will later use to display the model automatically at these positions.

```

C · O · M · P · E · T · I · T · I · O · N

After typing Y you'll be asked for a number of frames: this is the number of positions you wish to store. The model can then be displayed in the normal way. When the model is in a required store position, pressing the '@' key will cause the distance and rotations to be stored in the sequence file. When you've stored the positions you want (the number of frames stored is indicated at the top of the screen), in order to cause the model to be displayed at the stored positions, return to the menu and again choose option 4. This time, use reply 'Y' to the question: 'Do you wish to execute a sequence?' After entering the time for which each frame will be displayed, the computer will display the model at each of the stored positions and when the model has been displayed at all of these, the computer will start again at the beginning of the sequence.

Option 7 may be used to save a

named sequence file and option 8 to load it back again.

Option 5 will print the data for a model either in paged mode or on a printer.

Option 6 may be used to alter the data for a model. This option cannot be used to alter the number of surfaces or points in a model. To do this, option 9 must be used. This loads a file, making room for the extra surfaces and points. The user can then alter the number of points in existing surfaces and specify the number of points in any extra surfaces. After doing this, option 6 should be used to alter any existing data, if required, and to add new data for the extra surfaces.

Pressing ESCAPE at any time causes a return to the menu — this is the only way to achieve this when the program is executing a sequence. If the menu is already being displayed then pressing ESCAPE will cause the program to end.

The program, with some modifica-

tion, can be used to create simple animated sequences of solid objects. A routine can be inserted at line 595, which would save the entire screen memory to disk as a file, if a sequence were being executed (seq%=TRUE). When a number of screens have been saved to disk, a separate short program can be used to load rapidly each screen in turn, so producing the effect of animation.

An alternative would be to store the equivalent VDU code and data for every graphic instruction executed (PLOT, DRAW, and so on) during a sequence. By using a separate machine code routine to access the VDU codes, you can then execute them rapidly using an OSWRCH call, again creating the effect of animation.

Free offer

Included in this article is a procedure from 3D solids: PROCFind Order creates drawing routines. Instead of printing a full listing, we've decided to offer readers a free copy of the program instead.

To take advantage of this offer, send in the logo tab from the corner of this page plus a blank C15 cassette and a stamped, addressed, padded envelope.

As this is an experimental offer and we can only speculate as to the response, be prepared to wait a couple of weeks before you receive the program.

Rules & Categories

Due to lack of space we are unable to print the competition rules and categories this month. These will be printed in the June issue together with the entry form. The closing date for entries is 15 July, 1984.

Next month: Micro Animation at Lanchester Polytechnic.

END

Micro Animation Competition Prizes

Schools Overall Winner: Fujitsu 16S microcomputer (*)

Individual Overall Winner: Fujitsu 16S microcomputer (*)

Schools Category Winners: 48k Spectrum, Microvitec colour monitor, Sinclair Macmillan software

Individual Category Winners: Oric Atmos 48k microcomputer

Best Animated Sequence: Hantarex high quality colour monitor

Special Category Winner: Fujitsu FM7 microcomputer (*)

Best New Brain Entry: 200k NewBrain integrated disk drive and controller plus CP/M disk and licence

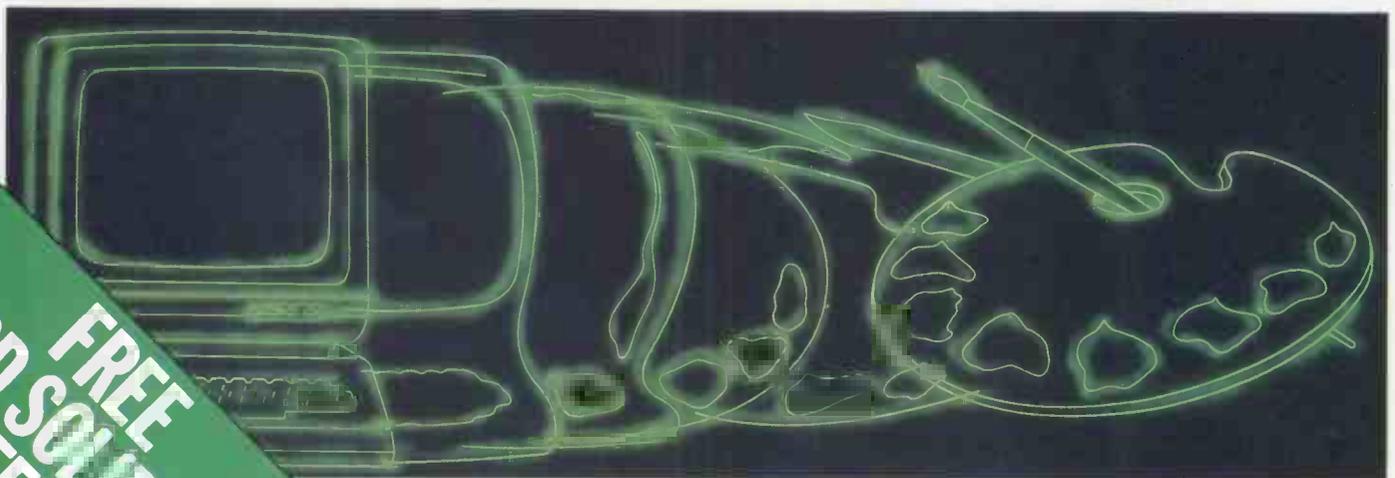

Other prizes to be awarded at the discretion of the judges: Atari 600 XL microcomputer; two £100 libraries of microcomputer books; and a host of software prizes for all makes of micros

(*) Fujitsu specifications

16S: 128k RAM, 2x320k double-sided, double-density drives, 6809 plus Z80A plus 8086 processors, colour monitor, CP/M-86, WordStar, Supercalc 2, FBasic, software selection to suit.

FM7: 64k RAM, 48k video RAM, 6809 and Z80A processors, colour monitor, CP/M-80, WordStar, Supercalc 1, FBasic, software selection to suit.

Our thanks to: Fujitsu Mikroelektronik, Sinclair Research, Oric Products, Microvitec, Hantarex (UK), Brainwave Software, Atari Inc and Century Publications for their interest and sponsorship of this competition

Portable Power from Vic's

THE NEW RANGE OF
PORTABLE COMPUTERS
FROM

KAYPRO

FREE!

Software worth £1000

All Kaypros come complete with a great software package - Profitplan, Word Processing, Microsoft BASIC, CP/M Control Program, Games, and more - all FREE.

Introducing the 'Kaypro II' - a powerful, portable computer series packed with professional features... the ultimate in go-anywhere hardware.

Each Kaypro has a big, clear 9" screen with easy-to-view green text. The keyboard with its responsive, full-size typewriter-style keys, is detachable from the computer itself, and includes a separate 14-key rapid-entry calculator-type key pad.

Memory? Quite apart from the computer's 64K RAM, the '2' and '4' models feature twin 5 1/4" disc drives - 191K single-sided for the '2', 392K double-sided for the '4'. The top '10' model is the first-ever portable computer to feature a built-in 10 Megabyte Winchester Hard Disk drive plus a 392K 5" floppy disk - all within the same compact case.

You can see this superb computer at Vic Odden's NOW!

NEW

These programs cover a wealth of basic concepts every child will meet in primary education. They are produced by professional educators and have been thoroughly tested in a primary school. Designed to go beyond drill & practice they promote learning through interaction and discovery. Programs range from counting and simple arithmetic to ones dealing with volume, balance and direction, mostly in form of games. Each program is short but powerful and comes with full documentation.

EPROM PROGRAMMER

Compatible w/all Rs 232 serial interface port * Auto select baud rate * With or without handshaking * Bidirectional Xon/Xoff and CTS/DTR supported * Read pin compatible ROMS * No personality modules * Intel, Motorola, MCS86, Hex formats * Split facility for 16 bit data paths * Read, program, formatted list commands * Interrupt driven, program and verify real time while sending data * Program single byte, block, or whole EPROM * Intelligent diagnostics discern bad and erasable EPROM * Verify erasure and compare commands * Busy light * Complete w/Textool zero insertion force socket and integral 120 VAC power (240 VAC/50Hz available)

DR Utility Package allows communication with 7128, 7228, and 7956 programmers from the CP/M command line. Source Code is provided. PGX utility package allows the same thing, but will also allow you to specify a range of addresses to send to the programmer. Verify, set the Eprom type.

MODEL 7316 PAL PROGRAMMER
Programs all series 20 PALS. Software included for compiling PAL source codes.

Software Available for CPM,¹ ISIS,²

TRSDOS,³ MSDOS.⁴

1. TM of Digital Research Corp.
2. TM of Intel Corp.
3. TM of Tandy Corp.
4. TM of Microsoft.

Post Office Box 289
Waveland, Mississippi 39576
(601)-467-8048

Avocet Cross Assemblers are available to handle 8748, 8751, Z8, 6502, 680X, etc. Available for CP/M and MSDOS computers. Order by processor type and specify kind of computer.

Model DE-4 U/V Products hold 8, 28 pin parts. High quality professional construction.

S879 stand alone
MODEL 7956

MODEL 7956 GANG PROGRAMMER
Intelligent algorithm. Stand alone. Copies eight EPROMS at a time. With RS-232 option \$1099.

\$549
MODEL 7316

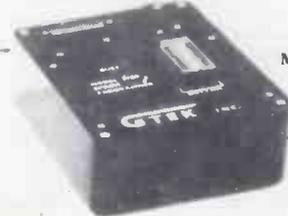

\$1195
MODEL 7324

MODEL 7324 PAL PROGRAMMER
Programs all series 20 & 24 PALS. Operates stand alone or via RS232.

Do you own or use two or more computers with incompatible disk formats? Then you need our universal

«FILE MOVER»

This easy-to-use file transfer program enables you to transfer any type of files — including .COM-, .CMD- and .EXE-types of files — from one computer to another by means of a serial link — even if they use different operating systems! A special protocol with checksums and automatic retransmission ensures error-free file transfers.

Available for CP/M, CP/M-86 and MS-DOS (PC-DOS).

Prices: For CP/M	: £ 49.95
For CP/M-86 or PC-DOS (MS-DOS)	: £ 69.95
For any two o/s's	: £ 99.95

We also offer the following easy-to-use and well-documented utilities:

- XSUB for CP/M-86 : £ 39.95
- DISK UTILITY PACKAGE for CP/M (2.2) : £ 79.95

Includes disk dump and patch, disk test, duplication and various file recovery utilities.

«The file recovery aid alone makes it worth the price». «... very well -designed and friendly human interfaces» (Microsystems).

- TERMINAL for CP/M, CP/M-86 and PC-DOS (MS-DOS) : £ 99.95

converts your microcomputer into a powerful terminal. Includes ASCII file upload and download facilities.

Disk Formats available: 8" ss/dd, IBM-PC/XT, DEC Rainbow 100, Osborne, Zenith hard and soft sector, Superbrain (JR), DEC-VT 180 (DD), TI Professional (DD), Kaypro II, Access ss/dd, NEC PC-8001 A, XEROX 820 (SD), Xerox 820-II (DD), TRS-80, Mod I (Omikron (CP/M), TRS-80, Mod 3 (MM/CPM), Morrow Micro Decision.

Include £ 5 per order for handling and shipping. Specify computer, disk format and o/s.

VISA accepted.

EPROM PROGRAMMER for 12K ATOM and BBC B

Designed as a low cost practical solution for the serious computer hobbyist. Program supplied on tape. Plugs into Acorn bus connector on Atom and into user port on BBC machine.

NOTE — 6522 VIA must be fitted to Atom and BBC machine together with appropriate external connectors.

NEW MODEL — Will program 2716, 2532 & 2732 on 12K Atom (larger ROMs if extra memory available). Will program 2716, 2532 2732 & 2764's on BBC Model A and additionally 27128's on the Model B (or 32K 'A' with 6522 fitted).

MENU DRIVEN — it will:

- 1 Copy from EPROM into memory
- 2 Copy from memory into blank EPROM
- 3 Verify EPROM against memory
- 4 Check for blank EPROM

Software supplied on tape can also be put into EPROM
Supplied in a sloping box complete with connecting cable,
instructions, standard 28 pin socket

only £35 + VAT p&p £1

or including a high quality textool 28 pin ZIF socket

ONLY £45 + VAT p&p £1

ROM EXPANSION CARD FOR ATOM

Plugs into utility ROM socket inside case. Allows up to 4 off 4K EPROMS to be software selected. Assembled and tested board.

£13.00 + VAT + 50p p&p

SIDEWAYS ROM EXTENSION RAM/ROM CARD FOR BBC

Allows up to 13 additional ROMS to be fitted OR 16K or RAM + 5 additional ROMS. Provision also for 2 of the sockets to be used to hold 2764's and to simulate a 16K ROM. All address and data lines fully buffered.

RAM allows programs to be downloaded from disc or tape and run as a sideways ROM. Any write signal to the sideways ROM area will appear in the RAM.

Also will allow programs to be developed for subsequent insertion into sideways ROM.

High quality PTH Board, assembled and tested.

£29.50 + £1 p&p

BUTTERFLY BOARD FOR BBC

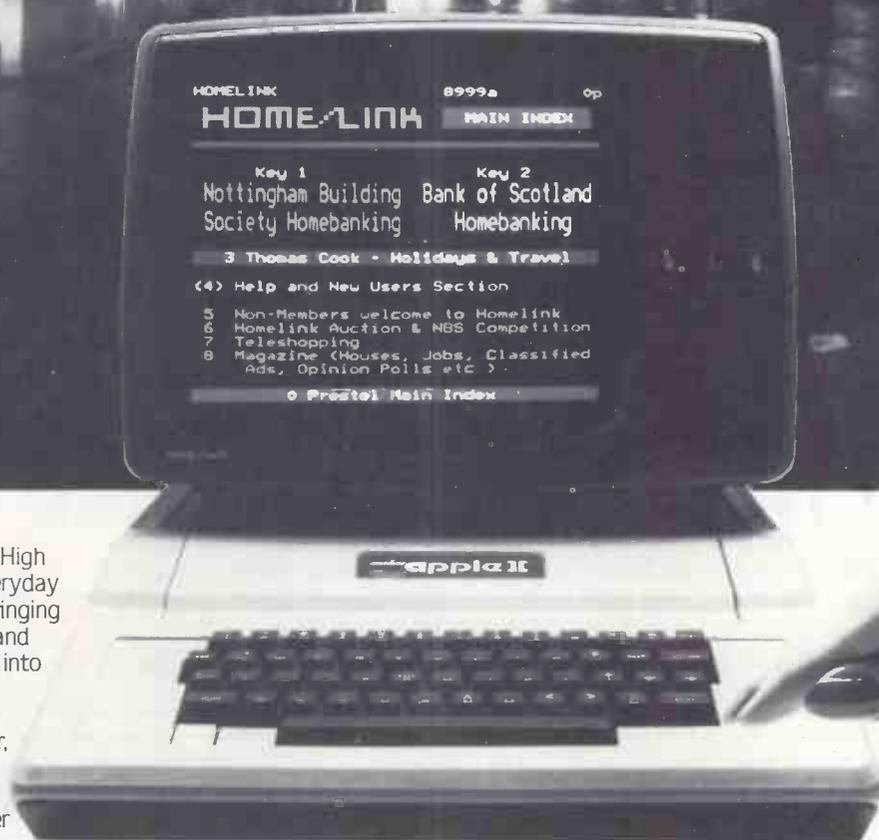

Fits into one of the sideways ROM sockets and allows a 16K program to reside in two low cost 2764's to simulate a 27128 ROM. Built and tested

£15.00 + VAT
+ 50p p&p

IS THERE LIFE BEYOND YOUR MICRO?

Link your micro to the High Street. Use it to make everyday life so much simpler by bringing banking, building society and shopping services directly into your own home or office.

Homelink makes it all possible - money transfer, bill paying, discount shopping, and 2-way communication with other Homelink users - 24 hours a day, 7 days a week.

Many popular home computers (e.g. BBC models, Apple II and Commodore Vic 20 and 64) can be linked via a modified Homedeck which has an RS232 interface. This unit allows independent access to HOMELINK through a remote control keyboard and in addition the facility to link to the microcomputer to download software programs from Prestel and edit messages off line. The Sinclair Spectrum 16K and 48K

can be linked via a conversion kit - the VTX5000 modem. Remarkably, the kits can be FREE* to thousands of micro users.

Transfer £1,000 or your mortgage to Nottingham Building Society and when you consider the time and money that Homelink will save you, it's a bargain because your investment will be earning full interest. Find out more today. Post the coupon. FREEPHONE HOMELINK or Prestel *444#, or obtain literature from any Thomas Cook Travelshop.

Homelink: Four Building Societies joined together with British Telecom and Bank of Scotland. (The London Commercial and the Nottingham, Grantham and Lincoln Building Societies). Nottingham Building Society, 5-13 Upper Parliament Street, Nottingham NG1 2BX. Tel: (0602) 419393. Prestel *444#.

Prestel and the Prestel symbol are trademarks of British Telecommunications

*FREE LOAN of Home Deck with minimum account balance of £4,000 (£2,000 for VTX5000) - excluding £9.20 per annum maintenance and insurance. Modest weekly charges for lower account balances.

Some of the things you can do with Homelink.

- Book holidays
- Send and receive electronic mail
- Apply for a loan
- Enter auctions and competitions
- Discount shop
- Check your bank, mortgage and savings accounts

DON'T WASTE A SECOND. Please send me full details of HOMELINK.

Homelink

And now the moment you've all been waiting for. Jerry Sanders brings you details of the Nottingham Building Society's games competition for Homelink, its home banking system, and the great prizes to be won.

The Nottingham Building Society ('NBS') is offering first-class prizes in return for great ideas from *PCW* readers. Homelink, the NBS's home banking system, runs on a 2Mbyte mainframe computer. At the moment it has a lot of spare capacity. One of the ways the NBS plans to fill it, is by offering Homelink members a computer game option.

This is where you come in. Submit your idea for a game playable on Homelink/Prestel-type technology. Successful games will almost certainly minimise the amount of 'live' telephone time required to play. You should also bear in mind that different kinds of equipment may be used by Homelink members, ranging from a 'dumb' alphanumeric keyboard with any memory to 16k micros. Other members will have access to microcomputers; therefore you might include options to allow owners of different kinds of equipment to take part, or submit an idea for the 'lowest common denominator' of terminal and

suggest how the use of more sophisticated equipment could permit the game to be developed.

Possible alternatives would be for games playable against the mainframe, by individuals or families, or, using the mainframe, between participants in different houses.

The three best ideas submitted by *PCW* readers and considered suitable for implementation on Homelink will be awarded prizes as follows:

First Prize. £250 investment in the Nottingham Building Society plus £250 in cash, plus a Tandata Home Deck providing a full Homelink service.

Second Prize. £250 investment in the Nottingham Building Society, plus £100 in cash, plus a Tandata Home Deck providing a full Homelink service.

Third Prize. £250 investment in the Nottingham Building Society, plus £100 in cash, plus a Tandata Home Deck providing a full Homelink service.

Each prizewinner will receive, in addition, a free Prestel subscription and use of Homelink for one year.

You may submit as many ideas as you wish, but only ideas received before the closing date of 30 April, 1984 will be valid. The winning entries will be published in *PCW*.

No copyrights will be acknowledged for the basic ideas submitted in this competition. It is intended that the software for the winning ideas will be written by the Homelink computer teams and used on the Homelink service as soon as possible. *There is no need, therefore, to submit any programs to illustrate your ideas unless you wish to do so.*

Entries should include sufficient information to indicate how the games would be played on Prestel/Homelink technology (see last month's *PCW* for a review of the Homelink system). The address for submissions is Homelink/*PCW* Competition, Nottingham Building Society, 5-13 Upper Parliament Street, Nottingham NG1 2BX, tel: (0602) 419393.

Remember the closing date for ideas is 30 April, 1984.

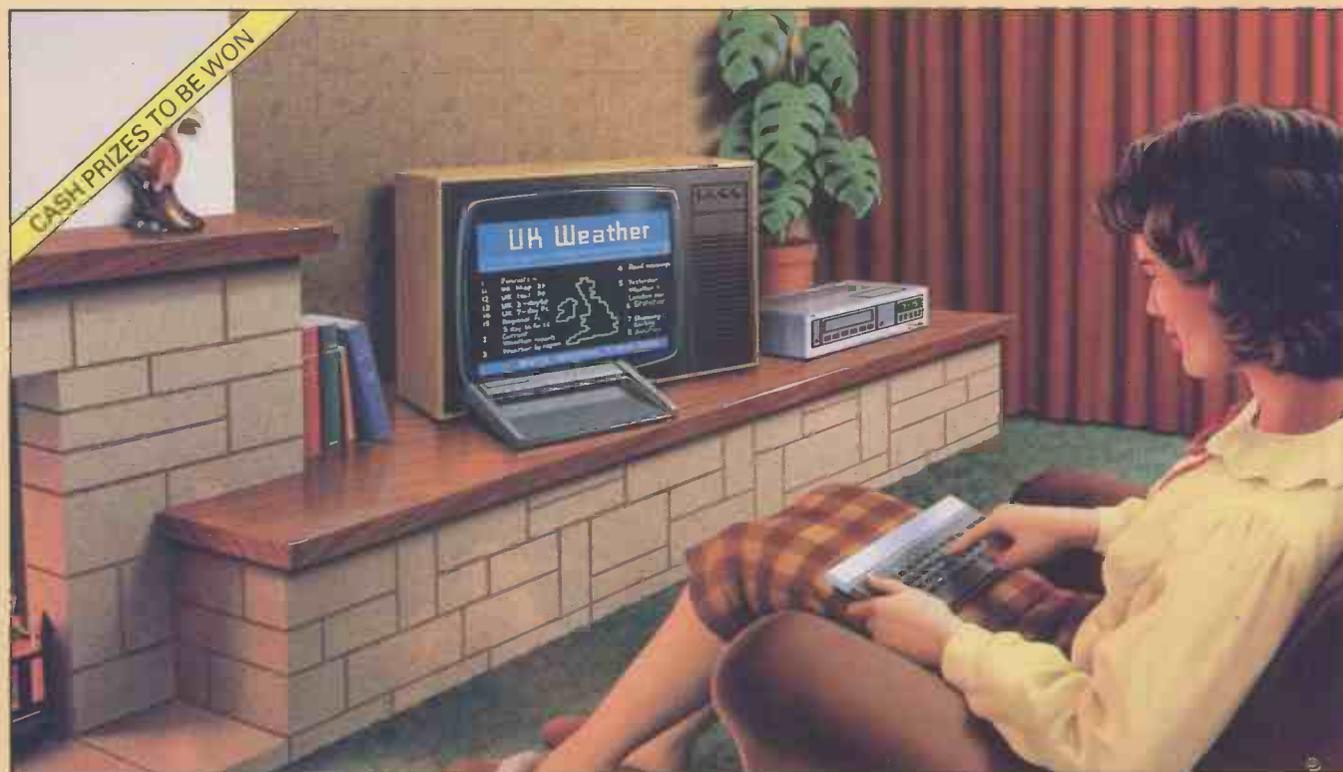

Illustration by David Draper

NewBrain software

If Jerry Sanders' ever-growing collection of software is anything to go by, the NewBrain is alive and well and showing remarkable versatility. Here he presents a selection of programs for this long-suffering but resilient micro.

This month we look at a selection of software for the NewBrain: programs have been received from all the major NewBrain software suppliers. It's surprising how much software is available for this machine, and encouraging to note that as far as the software houses are concerned, the machine is still very much a going concern.

Othello

Suppliers: Brainwave Software & Angela Enterprises
Price: £5.75

These two versions of Othello gave me the opportunity to play the programs one against the other, and turned out to be a real contest! Advantages can be won and lost very quickly, making it an enjoyable and gripping game. The idea is to populate an eight by eight grid with men of your own colour.

Both versions offer three levels of play, but whereas Angela Enterprises ('Angela') limits itself by offering a 40 or 80 column screen and reverse video if required, Brainwave bristles with options worthy of a chess program. Both contain on-screen instructions but you can only play against the computer with Angela, whereas Brainwave will play with itself, with you, or stand idly by while you and a friend make fools of yourselves. Moreover, Brainwave lets you set up positions before starting so that Othello analysis work can be done. It also lets you choose who starts:

Angela always goes first, without any discussion.

Move-plotting times are the same for both programs, although I'm sure Brainwave put up its own conquests faster than mine when I played it. Thinking times differ though, with Brainwave taking three to seven seconds longer: Angela's maximum on level one was 23 seconds and I beat it. On level two, the machine's thinking time goes up to 27 seconds and the game gets harder. On level three, the machine first contemplates its chips for twenty seconds: if it finds a move it likes, it plays, otherwise it twitches (yes,

twitches) and allows itself a further 20 seconds thought (my only hope was a power failure).

The programs use different move-entry methods. Angela asks for target square coordinates, but Brainwave gives you a cross-hair to move with the cursor keys. Angela acts on your input immediately (that is, two key strokes only for each move) but Brainwave demands a NEWLINE once you're on target. Although this is more gutsy than entering a coordinate, it's a lot less efficient when there are more than a dozen pieces on the board and your move is *over there*.

The Brainwave program loads in three minutes 40 seconds, much longer than Angela. Was all the extra used up in fancy options, or would it hammer Angela with its superior algorithm? Angela opened and for ten goes each it was neck and neck, but Angela got the upper hand in the end.

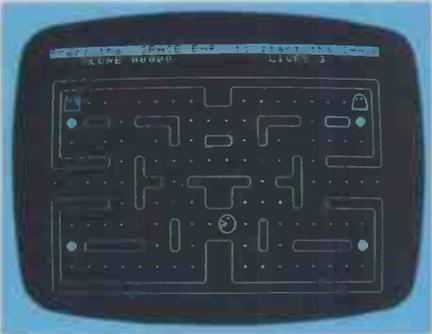

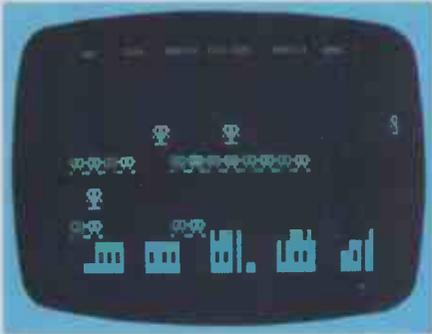

The game took an hour and a half to play. It doesn't prove Angela's superiority beyond doubt — what would have happened had Brainwave started? Editor Bird wasn't going to be pleased if I spent another hour and a half refereeing two psyched-up NewBrains. Incidentally, cheating wasn't possible as the score was kept by Brainwave.

I used Brainwave's position options to start one game with a piece in each corner, making any move illegal. The program responded by crashing out with an error 28 (illegal switch value) and returning to Basic. Then — no call

	Angela	Brainwave
1.	F4 (After me)	D6 (See if I care)
2.	F3	C6
3.	E3	F5
4.	F6	D3
5.	C3	E6
6.	F2	G3
7.	H3	F1 (1st edge to Brainwave!)
8.	C5	C4
9.	B6	C7
10.	C8 (revenge)	A6 (The two programs mirror)
11.	D7	E8 (Brainwave's third edge)
12.	G4	D2
13.	C1 (mirror)	G6
14.	E7	E2
15.	D1	C2
16.	H6 (weee!...)	F7
17.	B1	G5
18.	B4	A3
19.	G8	B5 (I could do with a drink!)
20.	B3	H5
21.	H4 (A2
22.	H7	D8
23.	F8	H2
24.	H1 (corner!)	G7
25.	H8 (another!)	B2
26.	A1 (another!)	—Brainwave cannot move
27.	B7	A8 (small compensation)
28.	A4	A5
29.	B8	A7
30.	G1	E1
31.	G2	(Last move: Brainwave loses 47/17)

Fig 1 Othello: Angela v Brainwave

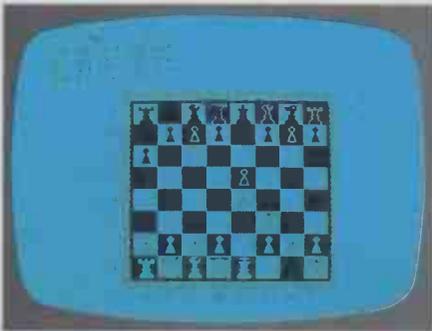

code, no more Othello except by reload. If you do reorganise the start positions, make sure both sides have legal moves available to them. This reload nightmare is revisited in Brainwave's Woodcutter, also featured here.

Invaders & Brainchase

Supplier: Angela Enterprises
Price: £9 each

At last the NewBrain can call itself a real computer. Why? Because you can play Pacman and Space Invaders! These examples from Angela Enterprises are true machine code versions, look like the real thing and give the player real wrist ache, too. For Atari and Spectrum freaks used to multicoloured splats and pow!s they will seem tame, but for NewBrain owners it might be a whole new experience!

NewBrain Chess 2

Supplier: GFG Microsystems
Price: £15

The Grundy Business Systems Chess program by CP Software is acknowledged by the few that know and love it to be a good one. Once again, the tape GFG Microsystems provided had a 'Copyright Deep Thought' label, but the Chess 2, once loaded (two minutes 55

seconds), had a CP Software copyright message on the screen. I loaded Chess 2 into the NewBrain that had lost at Othello, and Chess 1 (three minutes 15 seconds) into another. At level two of seven, fast mode for both programs and with Chess 1 playing white to try and even things up, Chess 2 still achieved checkmate.

Although Chess 2 has no documentation, it appears to have all the features of Chess 1: play and analyse modes, seven levels ranging from a five second response (for beginners) to hour-long responses. Moves are input algebraically with invalid moves rejected. Castling and *en passant* are supported: pawn promotion is automatic to queen, but can be altered if required. By keying 'R' during your turn, the programs will recommend a move which you can accept or not.

Altogether, two of the best games programs around for the NewBrain. What a shame they weren't entered for the 4th European tournament held last year.

Woodcutter

Supplier: Brainwave Software
Price: £5.75

A game in which you rush about madly in forests grabbing gold. Grab enough and you graduate from pine to birch and finally to oak thickets. A limited amount of strategy is required since you can munch trees that get in your way, but this scores minus points. The graphics are good but limited — the woodcutter figure about-turns as he weaves left and right through the forests. The three species of trees actually look different on screen.

Each level is timed to 80 seconds, and if you don't reach the required forest upgrade score you go no further. The screen redraws itself if you have another go, taking 20 seconds or 25% of playing time. Make sure you really want to stop when you decide you've had enough. If you say NO when prompted to play again it really is curtains — there's no program left to RUN, and there's no manual to help you.

NewBrain Draughts

Supplier: GFG Microsystems
Price: £15

The label on the tape says 'Copyright 1983 Deep Thought', but the welcome screen says 'Draughts Master, copyright CP Software 1983' — Whoops?

Nine skill levels are offered, together with the option of full capture search. After choosing your colour, pieces are drawn up and the game begins. Make a move by entering source and target square coordinates. For example, my first move was g3 h4, to which the program responded b6 c5. Unfortunately, after four moves each the program declared all my moves illegal and prompted me for new ones, so I couldn't take the challenge any further.

Word Processors

Brainwriter is Brainwave Software's word processor. Written in relocatable object code, it loads in two sections: the second (main) part takes two minutes 47 seconds.

The first menu offers 13 options:

- Create document
- Load document
- Save document
- Print document
- Display/amend document
- Format document
- Reformat document
- Set printer speed
- Search text
- Search and replace text
- Right justify
- Copy
- Finish

On selecting option 1, prompts are issued for left margin (min 2), right margin (max 80) and number of lines (max 66).

The document page is bounded at top and bottom by a rule in traditional word processor style, but has no menus. The left and right margins appear on the rule: if a page is greater than 25 lines in length scrolling takes place.

The search function highlights a found word in reverse video, but takes note of upper case. If you search and replace with a longer word, the new word oversteps the right margin and the text must be reformatted using main menu option six, format text. Option 7, reformat text, is used to change the format to a new layout. The search and replace function replaces all, with no reject option on individual encounters.

Block copies are enabled between pages and to the same page: no block is actually displayed and you are returned to the main menu once the copy has been effected. Wordwrap is standard and efficient.

The tape-based program allows for a maximum of two and a half pages to be worked on before saving to tape is necessary (an EPROM version holds three pages). The current page number is displayed on the main menu. Each page holds a maximum of 66 x 78 characters, or 1000 words. Documents are known to the program as Page 1, Page 2 to begin with, but when the save option is used a name can be given: up to eight characters are used. The delete page option is missing on the main menu. Once you've saved the pages you are working on, use the create page option and your previous work will be automatically erased as the new page is created.

According to the manual, the stop key should get you back to the main menu without saving the text, but my stop key did nothing. 'Stop' followed by 'escape' gives you this option.

The program comes with a five-page buff handbook, and overall it's a good

simulation of a 16-bit word processor—handy to use, with a back-up copy provided on side two of the tape.

Braintext is a mini word processor from Angela Enterprises. It loads in one minute 40 seconds, and offers a nine option menu:

1. Create page
2. Directory list
3. Load page
4. Display page
5. Print page
6. Save page
7. Delete page
8. Printer installation
9. End

The create page option gives the choice of a 40 or 80 column page (page length is initially 33 but may be reset by altering line two of the program). The page offered is a blank screen with no frills: no wordwrap is available, so you must end a word before the line ends. If you go over, you lose the first character of the new line. Control E exits from the page with a save page option. If you say yes, you are asked for a header (title). The number of free bytes is always displayed on the main menu to give an idea of how much text can still be input. Braintext will only load pages created by Braintext: if you try to load another word processor's file you get the message '??? Not a BRAINTEXT FILE???'.

The printer initialisation option asks for baud rate, and also asks which device is to be used (printer or comms), so the pages can be output on either (Brainwriter only accesses the printer port).

No copy option is given on the menu, but if you display a page and then exit immediately, choosing to save the page, you will be given a copy or replace option. 'Copy' makes a copy of the page on the next available page number: 'replace' saves the current page as it now appears on the screen as the page number displayed.

Many pages can be created, as each empty 80 column page plus its header only occupies 13 bytes of memory. The free-bytes count indicates the amount of space you have left as each is used.

None of the word processors reviewed here use virtual screens. When you request a page, it types itself out on the screen as you watch rather than appearing all at once. Braintext comes on one side of the tape only. No manual is supplied, you have to rely on two sheets of A4 paper. One excellent feature is the use of control C (for 'cut') to mark the page end — this saves memory and paper. Printer control codes may be embedded in the text and output prior to printing.

After fiddling with the recorder volume settings, **Propen 32** from the **Elstree Computer Centre** loaded in two parts. Part one offers seven printer options: Oki, Epson, Star, Walters, Shinwa, CP80 and Matrix. A further two and a half minutes loading takes place, and you are asked for the number of

lines required for a page (max lines 250, max width 79). These parameters remain set for the rest of the session. If you choose a 39-wide page you still get the small characters used on the 80 column wide screen. As soon as the second parameter is returned you go into a blank screen (the page): blank, that is, except for a single prompt character. This, and the fact that no menus are offered anywhere during use, leads to a rather unfriendly program after the initial prompt-response phase.

Unlike the previous two programs, Propen's text entry and cursor travel speed are not slower than normal immediate NewBrain operation. The functions available are comprehensive (see Fig 2) but didn't work in my version. Mr Fish at Elstree confirmed that there was a bug in some copies of Propen, but said that anyone who had bought this version will be supplied (for the cost of the postage) with a bug-free updated version which includes some extra facilities.

Forwarder Computer Resources has specialised in NewBrain software for some time in the area of complex forms processing for industry. It has now launched some of its range on the 'open' market, including **OE(t)** and **NewWord**. The remarkable thing about Forwarder's programs is that they are the first programs for cassette-based machines to work on the program generator principle. Each time Propen

is used, you must wait for the printer specs to be loaded in. With NewWord, you create a custom designed program from the generator tape once, and then use the tailored version thereafter. You can, however, create more than one custom version.

The manual recommends starting with the customised example version, which I did. On entering RUN, a prompt OE(t)v.01 appears and you are asked to fill in the date. After a brief pause, the prompt Command> appears: type WORDS or RUN. At this point, the program begins to operate like a CP/M system — prompts and file names all conform to CP/M types. A menu appears:

```
Create Document
Print Document
Edit document
Directory
Change Settings
Exit
```

Selection is by moving the prompt arrow with the cursor keys. On selecting Create Document, the user is prompted for Output file and Document. Output file can be entered (for example, Myfile) and the system adds the extension .txt. Like CP/M, the true filename of a file includes the disk drive identifier, so by specifying t2: Myfile, in NewWord, output will be written to tape port 2. Once these parameters are entered, you are prompted to set the tape recorder to record, with a blank tape in position. On pressing return, the

Feature	Brainwriter	Propen	NewWord	Braintext
Price	?	?	?	?

Fig 2 Word Processor Comparisons

details are written to cassette and the screen changes to show a header line and an end-of-page line, with Document name and page number also shown. Pressing newline again erases the header and leaves the page number written at the bottom of the page: typing can now take place. When the escape key is pressed, the top three lines clear (no text is lost, just stored in memory), the command prompt reappears and commands can be entered. These include Next (write current page to tape and clear screen), Print, Document (write new header to tape file and reselect page number to 1), Find, Page (write page number at specific line and column), Wipe (clear current page without saving to tape), Cut, Tabs, Justify, End and Quit.

A second series of commands operates at immediate level using the control key sequence. For example, word wrap may be set with Ctl R — it's slightly slower in operation than the Brainwriter program.

alphabetic sort on field 1: curiously, this transaction is not documented in the 9-page (Grundy Business Systems) manual supplied. Option 40 allows the creation of a new database, while 99, the closedown option, is the gateway to saving your base onto tape.

As a point of comparison, I looked at another database program received from Grundy, **Solid State Database** by **Dean Software**. Before the database manager is loaded (NW1CDBV1.1) you need to run the SETUP program to create the database you will work on. Using two programs gives more space for manipulating records, and a better selection of options than the General Purpose Database from Sum-it.

On running the set up program you are invited to set up the page details for the database program. The first question asked is: 'Have you read the manual?' If you answer no, 'MESSAGE — WELL WE STRONGLY RECOMMEND THAT YOU DO!' appears on the screen and you are locked out of the

through the base at about six seconds per record: this can be overridden using the F(oward) B(ack) P(rint) and L(ock printer on) keys. H(alt) resets the printer lock to off and halts the browse, which can be repeated using G(o). Browse direction can be R(eversed): any other key returns to main menu.

The calculator mode offers six options: A+B=C; A-B=C; A*B=C; A/B=C; A*CONSTANT and SUM OF FIELD A. Prompts are issued to enable you to specify the relevant fields: calculator mode fails if alphabetic data is in the chosen field.

This calculation mode is a very attractive feature of the database which is excellent throughout. The search option copes with numbers within a specified range as well as string data. The facility to reorder fields within a record means that, in practice, it's possible to sort on any field, since the key field will always be the first field on the first page. Thus, if the database has been set up with field five as SURNAME, by making SURNAME the first field on the first page of record one, all records will be sorted into surname order. ASCII code order is used, so all capitals will be sorted before lower case characters.

This database is the same as that marketed by Kuma on behalf of Dean Software for the MZ-80K, MZ-700 and Commodore machines. Although the version I saw came in Grundy Business Systems ('GBS') packaging, it is now available from Kuma and I highly recommend it.

Dean's other NewBrain program, **Solid State Accounts** has not been well received. Dean's managing director, Peter Nobblett, said that GBS had altered a line of code before duplicating the program, with the result that the program was ruined. The philosophy is the same as that of the database — run a SETUP program first to define the

'... as far as the software houses are concerned, the machine (NewBrain) is still very much a going concern.'

NewWord Generation Tape comes with a 40-page manual and is designed to be used under OE(t). Its main advantage is that since all storage and access is via tape I/O there is no limit on the size of documents it can handle. It's a professional package to the standard of disk-based word processors, but has the disadvantage of slow recall time. NewWord files are CP/M compatible and can therefore be used if your system is upgraded to CP/M operation.

A quick word about Forwarder's OE(t) (Operating Environment (Tape)). This is the equivalent of a disk operating system utility package for tape based applications. 18 standard commands are supported, and it provides a standard base for applications development. It's a novel and original approach, which will enable NewBrain users to capitalise on the machine's two tape ports. It remains to be seen whether the slow response time of tapes against disks makes this environment a true alternative to a CP/M upgrade. Tab and margins can be changed at any time to create multi-column text.

On to a database now, with **Sum-It's General Database** program. The main transaction menu is split between field enquiry options and four transactions: create new database, sort data, add new data and closedown. I created a database for my NewBrain software with five fields, giving an average field length of 15 characters with up to 250 records — up to 12 fields are allowed. Once created, the main menu alters so that the enquiry options match my fields. Option 20 allows new data to be entered. Option 30, labelled 'Sort data in ascending fields', performs a strict

program: no choice but to read the manual. Almost no choice... any key gets you on to question two. Do you wish to see a sample page? Question three asks for pages per record (1-10).

Whatever you choose, the next screen tells you how many records and fields this size of page will allow: one page gives 255 records of 10 fields. Question five asks for a page header of up to 20 characters: once entered the record is displayed on screen — any keys gets you through to the field naming menu. Fields are limited to nine characters. Print options for record and summary print are then offered, including printer baud setting menu: you then

'Although the version... came in Grundy Business Systems packaging, it is now available from Kuma and I highly recommend it.'

set up the report from the record order. Finally you are prompted to assign a name to the datafile (up to 25 characters). The set up base is then recorded onto tape, ready for its input into the management half of the program which must now be loaded.

Once in, reload the created base skeleton: this leads to a nine point menu:

1. Set up a record
2. Delete a record
3. View a page
4. Calculator
5. Browse
6. Search
7. Print labels/summary
8. Sort file
9. Save data and end program

The number of free bytes is also given. Option five, browse, scrolls

income and expenditure categories, save the record type to tape and then input it to the manipulation program. The SETUP program appeared to work, and NW1CACv1.4 (the account management program) loaded properly, as did the file cassette. However, when I attempted to enter data, an error 30 message flashed up and the program came to a stop with an END OF PROGRAM message. Peter Nobblett had told me that I should be able to type goto 2000 when this happened and get back in the program: when I did, I caught sight of the message ERROR 30 IN LINE 2120 before the END OF PROGRAM message recurred.

GBS are looking to correct this error so the accounts program may well re-appear, also through KUMA.

END

The NewBrain State of Affairs

Take it from us: buying a NewBrain remains one of the best investments you can make.

As the Dutch importer, we were well aware of NewBrain's special features. Now we produce this tiny computer ourselves, and our research staff has analysed its layout and system software. And there is only one conclusion: the NewBrain belongs to the select group of ingenious British designs; the machine is a survivor.

Sounds like producer's propaganda? Sorry, but we know what we're talking about. Tradecom International is active in the world of big mainframe computers. We supply terminals, printers and other peripherals and adapt them, if need be, to our clients' requirements.

Designing data communications networks is another of our specialities; we offer multi-colour solutions connecting IBM, DEC, Burroughs and any other protocol in the book. Our clients rank among the big multinationals; the names which keep coming back in the headlines of the stock exchange pages.

In addition to mainframes, we also know what minicomputers are all about. We design and deliver, for instance, a system custom-designed for medical specialists, based on the Hewlett-Packard/250 minicomputer.

Tradecom International is no mass-producer; our products are made to measure.

The NewBrain fits well in our marketing philosophy. We don't regard it as a refined game-machine (although we do offer the best of these as well). It is, instead, a professional tool for professional applications.

Among the applications lies the field of education. So we've designed the Masternet, a module which can link up to 15 NewBrains, together with floppy disk drives, printer, cassette recorder and

eventual sub-modules — each bringing into use another 15 NewBrains.

This sophisticated classroom network allows teaching by computer. The possibilities are myriad. Using the Masternet, the teacher can communicate with one pupil, a group or the entire class for lessons in more than computer programming. Geography, mathematics and more can be laid open to the pupil using our system.

And we've written a program for language training as well, which allows the loading and recording of correct spelling and pronunciation on the same tape. The image on the screen can be combined with instructions from the recorder; a handy and functional tool for any school.

These examples show the way we see the NewBrain. It gives the best performance in a professional environment; a quality you may benefit from at home.

We don't consider it our job to offer glib solutions. We provide tools to solve problems.

So don't expect yet another model from us every season. We aim for carefully thought-out extensions and improvements. (The term of depreciation on your NewBrain has taken a turn for the better, dear buyer. Take it from us: you've made a sound investment.)

Expansion interface, disk controller and disk drives (200, 400 and 800 Kbyte) are now available. Standard CP/M¹⁾ programs can be run on your NewBrain. And there is much more to come.

As you'll understand, reorganisation and rescheduling is currently the order of the day at NewBrain. But we'll surmount these problems and grow.

With a period of rumour and liquidation behind, it is now 1984: NewBrain's future has only just begun.

STIRLING MICROSYSTEMS

THE MICRO COMPUTER STORE

241 Baker Street, London NW1. Telephone: 01-486 7671

24-Carat Gold

Menno Aartsen bought himself a Tandy Model 100 with the specific intention of using it for word processing via a communications service. Here he tells of his experiences with British Telecom Gold.

Tons of expert writing about computer communications bear witness to the fact that making microprocessors talk to each other is very difficult: even within one family of micros, differences are vast. They may be a challenge for the real computer buff, but the rest of us have increasingly come to rely upon services like Prestel, BL's Comet and Telecom Gold to give the answer to reliable computer communications. As long as an RS232 interface is provided, micros can chat to each other, and even that can sometimes be dispensed with: a lowly 16k Spectrum with Prism's VTX 5000 modem will do the job just as easily as Apple's Lisa.

Satellites

Even Arthur C Clarke never envisaged the use of satellites as a communications device enabling two-way traffic between ordinary citizens. What made me see the light was the conversation I had with a Dutch PTT official, who told me that I was, in fact, accessing my London Telecom Gold mailbox, via the Dabas network, from Holland via New York. Once you've conquered your amazement, it makes sense, but think of it — the most efficient way to talk to British Telecom's Prime 750 from Europe is through an Amsterdam satellite uplink, switched back to London by an ITT Dialcom system via the undersea cable linking New York and London . . . It puts New York in an entirely different perspective . . .

Don't for a minute think this facility is only for 'big' business — the eight minutes connect time I used cost me 12p exactly, on top of the standard charges. In fact, all ITT Dialcom systems (just one of the many communications networks, which happened to be the first to expand worldwide) are permanently interlinked through what is known as a 'packet switching system', enabling the user of any member system to call up any other, as long as he or she knows the system number. As a Telecom Gold user, I can talk to any subscriber to The Source without incurring more than local London call charges plus BT's computer charges

(currently 10.5p per minute standard rate and 3.5p cheap rate), plus a remote connect charge of 30p.

Purpose

But what is the point? It may be fun to have access to 'computercomms', but does it serve a purpose? For those of you who subscribe to Prestel through Micronet, the answer is probably yes. Micronet has grown quickly, and its various communications services, from the Sympatico dating bulletin board to Micronet's Helpline are very busy. Prestel, however, is not necessarily the best medium for communications — at a sending speed of 75 bits per second, anything over 20 words takes an age to transmit. That's where a service like Telecom Gold comes in; at baud rates from 300/300 full duplex to 1200/1200, it is all things to everyone: I use Tandy's TRS-80 portable and an acoustic coupler to access, but my office can use the aforementioned Spectrum just as easily as Philips' new P2000C transportable on any of the speeds mentioned.

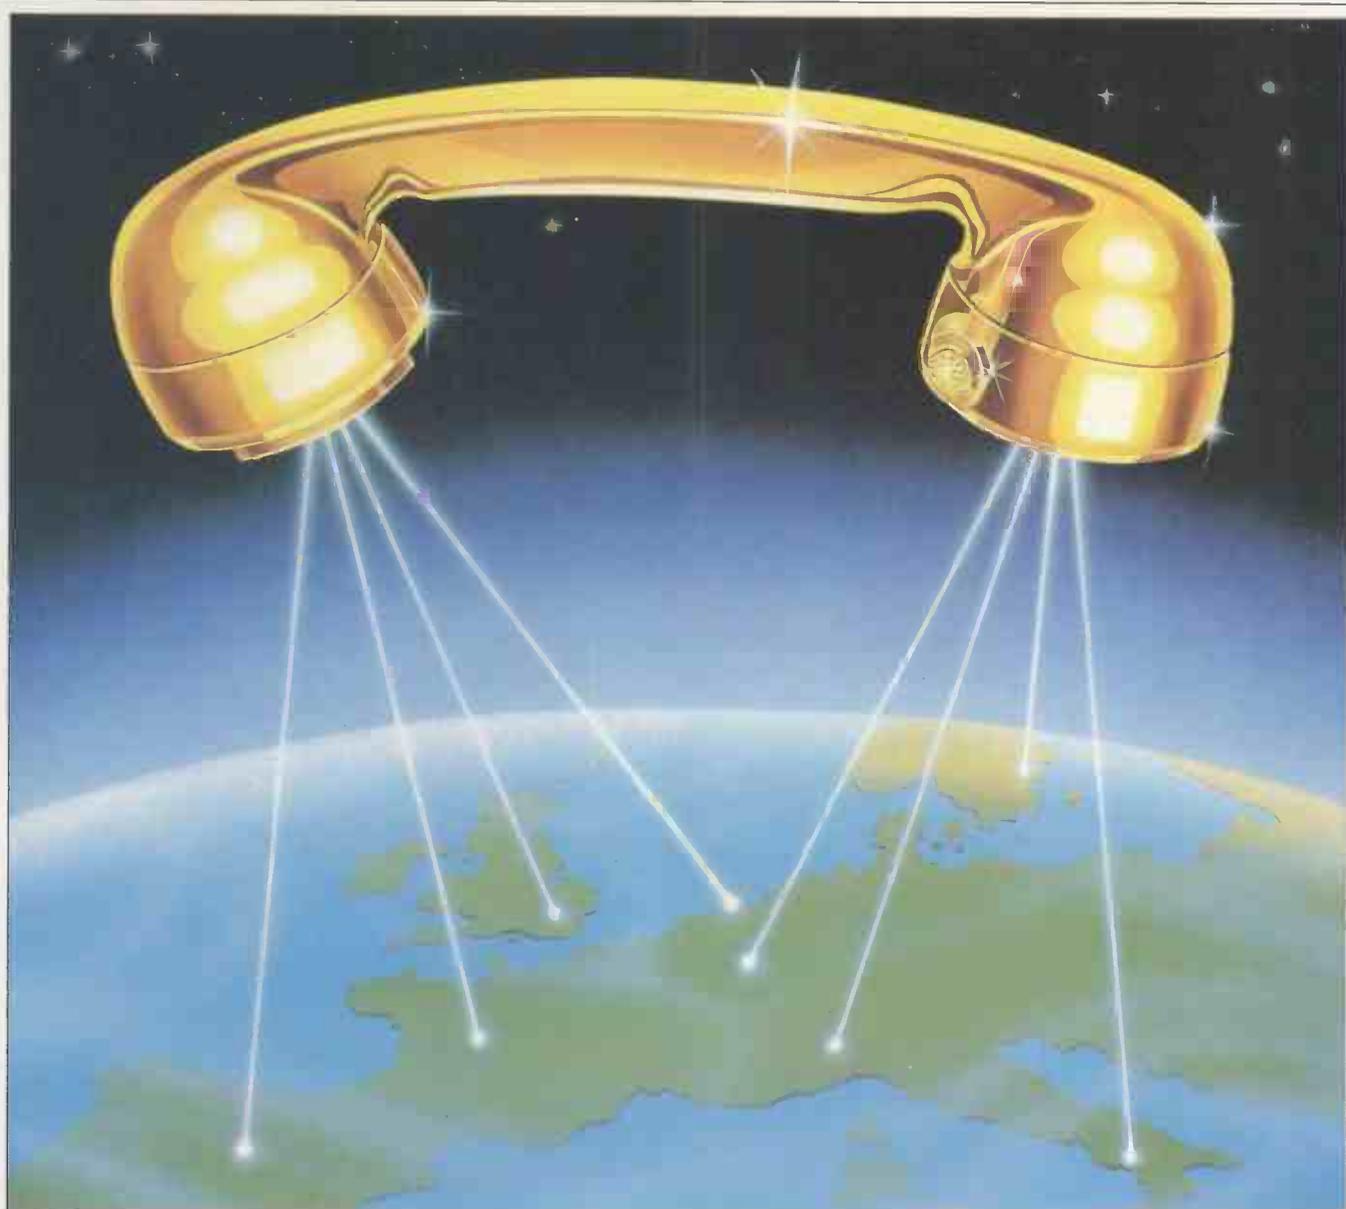

One of the companies cashing in on the success of viewdata and networking services is Tandata of Malvern, Worcs. Theirs is the home terminal supplied by the Nottingham Building Society and the Royal Bank of Scotland for the Homelink Service on Prestel (see *PCW*, p232, March '84). Its new range of terminals now feature an infra-red remote keyboard, up to 13 pages of memory and a full range of interfaces — UHF and VHF TV, RGB monitor, RS232C, Centronics parallel and a cassette port, not to mention an internal modem and an autodial facility with multiple number storage.

Obviously, most business micros will support Viewdata and Videotex in their standard software packages, but the latest success story originates in Japan, where Kyocera Ceramics produces NEC's PC, Olivetti's M10 and the Tandy TRS-80 Model 100. All three machines sport both a text editor and a telecommunications package in ROM. Although they're not much use in their cheapest version (8k of memory

doesn't last long), the more expanded models make good comms machines, especially with Sendata's 300/300 acoustic coupler. In conjunction with Telecom Gold and a daisywheel printer, these portables turn into a very powerful word processor at a fraction of the price one would ordinarily expect to pay. The Prism modems with their Scion software for turning home computers into Prestel or Viewdata terminals work well, too, but the transmission rate of 75 bits per second is a disadvantage for longer pieces of text or messages.

To see what practical use these things are, let's first look at what Telecom Gold does. Currently running on Prime 750 minicomputers, the Dialcom package (it calls itself 'Automated Office Services') provides subscribers with a password-protected gateway by which they can use the mini as well as communicate with other users. Twenty seven such systems are currently in use in the United States, while the system also operates in Australia, Canada, Singapore and Hong Kong. In Britain, the Dialcom package (already 10 years old when it was bought by ITT in November 1982) runs on three Primes, which currently serve the whole of Western Europe via PSS's. The best known exponent of ITT Dialcom is the American 'The Source', which is to Americans what Prestel is to us. The advantage of using a standard package — even though it is old, supports no graphics and uses complicated protocols — is that it works. It's tried and tested: you phone it up and it does what it's supposed to do. I was impressed when I first acquired my mailbox: one set of application forms sent off, one Tandy bought off the shelf with only its built-in software, one telephone call and *voilà*: I was in! But what do you do if you're in and you've got bored with mailing friends and playing poker?

Since there is no standing charge and a cheap rate is available at night and at weekends, systems like Prestel and Telecom Gold can be used efficiently at low cost. Using a micro enables sub-

scribers to prepare their material during the day, and go online during cheap rate times. For word processing, machines like the Tandy are ideal — its own simple facilities let you do most of the work, while more sophisticated functions like right justification, copying and sorting are available online. Even a long document can be uploaded within 10 minutes at 300 baud, and since the graphics are non-existent a TV screen or monitor isn't a necessity — an eight-line display will do nicely.

Business users have many more facilities at their disposal. Telecom Gold's Infox will allow you to write your own programs to build and manage a database, do spreadsheet calculations and write reports. There is also worldwide telex access, which allows you to transmit telexes and telegrams worldwide from any telephone and give an instant copy of your output. By the end of 1983, more than 7000 mailboxes were in regular use, mostly by the 500 companies that subscribe, but some even by deaf people who can now use a telephone for the first time in their lives.

An estimated 20% of 'System 81',

which is the Prime minicomputer British Telecom makes available to clients, is used by overseas customers. Elaine Sharp, customer support executive at Telecom Gold, put it all in a nutshell: 'I get to talk to people I would otherwise never have met,' she says. That argument is valid for any of the gateway services: it is as easy to communicate on Prestel with someone in Cardiff or Hull as it is on Telecom Gold with someone in Paris or Berlin. All you have to do is leave a message on the electronic bulletin board and someone will respond. Anything goes, from selling and buying cars via booking airline tickets to making a reservation in a night club (in the Dutch Viditel public viewdata system).

Efficiency

A very important feature of communications services is the timeshift they allow. For example, suppose a reader disagrees with me about some of the contentions in this article — he or she will phone me. Now you're never rude to readers, so you listen and respond, and lose valuable time.

If the same reader were to leave his

comments in my mailbox (PR0001, by the way), I could attend to the comments when it suited me, and the reader could even check whether or not I'd read the message. He/she could even carbon copy his/her comments to like-minded friends (or solicitor) and let me know. All of a sudden, I'd be in touch with a group of interested people (anywhere) and they would be in touch with me.

I wouldn't advise anyone to try and do this on a Spectrum (unless they'd worked out a fast way of transmitting a carriage return) but it is possible. If you have any of the other micros, a modem and some telecomms software, do try. It's great fun — and a way to talk to PCW direct. Maybe the modem will do for us what CB did for truckers — come back?

For the record: this article was written on a 32k Tandy portable, justified on Telecom Gold using the Sendata 300/300 acoustic coupler, took nearly 10k of memory plus 2.0k for editing, while online computer time (24 minutes) cost 97p plus an additional 15p in telephone charges.

END

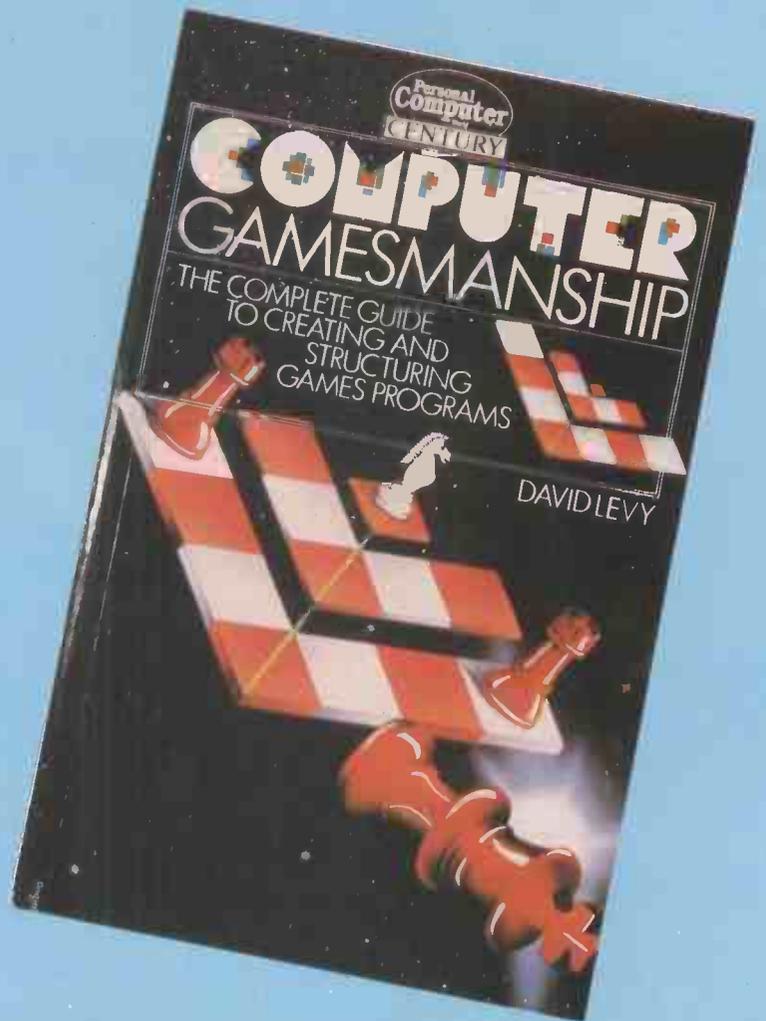

DON'T WASTE YOUR MONEY BUYING GAMES SOFTWARE—WRITE YOUR OWN

If you subscribe to *Personal Computer World* this month you will receive not only 12 issues of the best micro magazine in Europe just as soon as it comes off the presses, but you will also get a FREE copy of David Levy's book *Computer Gamesmanship*, worth £7.95.

Computer Gamesmanship was written by chess champion and programming expert David Levy and it will show you how to create your own structured games and baffle yourself with challenges more demanding than anything the software companies have thought up. It is one of the popular series of books published by PCW in association with Century Communications.

To get your copies of PCW and your FREE copy of *Computer Gamesmanship*, all you have to do is fill in the subscription order opposite and send it off to us. Lucky existing subscribers who want to take advantage of this offer can do so by just extending their subscriptions for another year.

DON'T WAIT. GET YOUR COPY NOW—BEFORE THEY RUN OUT.

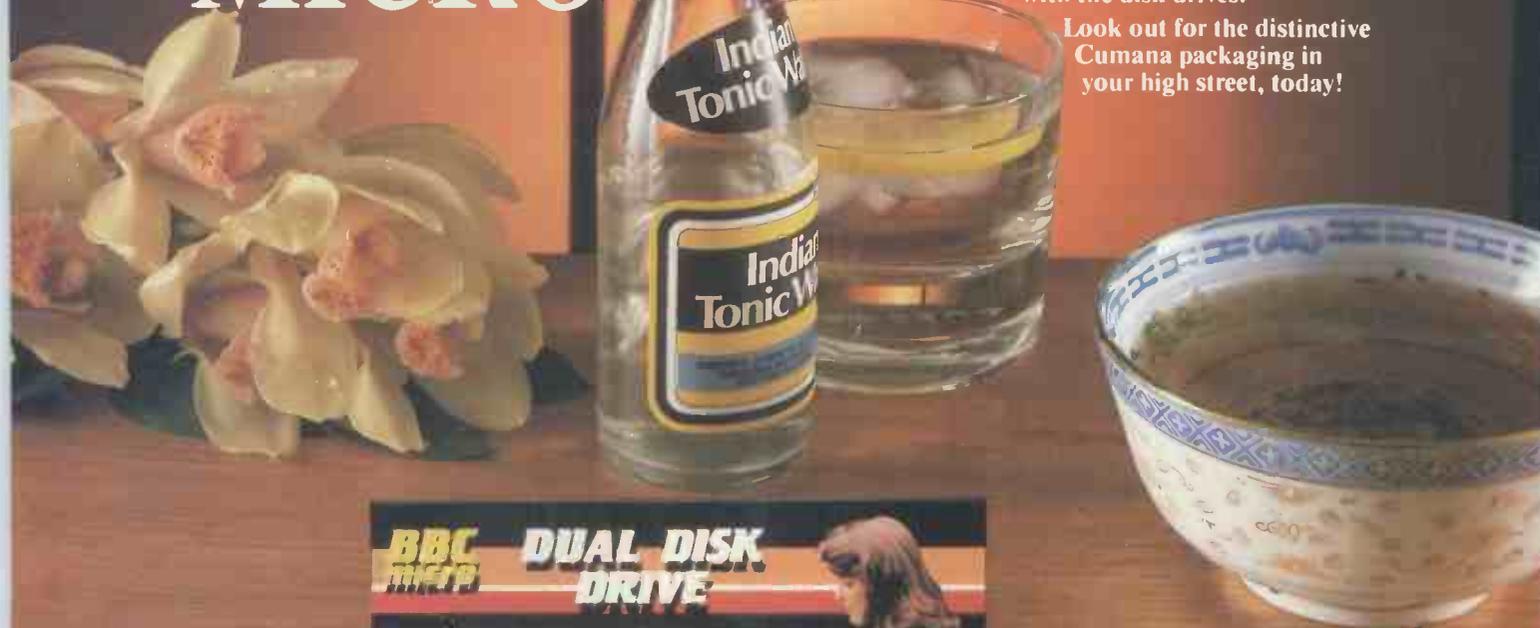

A SLIMLINE TONIC FOR THE BBC MICRO

Cumana 5 1/4 inch slimline dual disk drives for the BBC Micro are now available from well known high street outlets, including W. H. Smith, John Lewis and Spectrum UK, as well as from Cumana's national dealer network.

The dual drives are available in two versions, as shown, including a 'switchable'. This version enables either drive to be switched independently between 40 and 80 track modes.

Each unit has an independent power supply, 12 months warranty, and is fully assembled and tested before packaging. A drive connecting cable, user manual, formatting diskette, power supply lead and plug are all supplied complete with the disk drives.

Look out for the distinctive Cumana packaging in your high street, today!

CUMANA

PCW 3 84

Dyneer monitors... the perfect definition

THE DYNEER 14CMI Colour Monitor, pictured above, offers full IBM PC compatibility with 16 vivid colours.

Add to this the special dark glass, high-contrast CRT. This gives the user a crisp alphanumeric display even in 80-column mode, whilst retaining true colour quality and balance.

Full IBM PC compatibility is also a major feature of the 12MHI, a 12 inch monochrome monitor featuring an anti-glare, P31, dark glass, chemically etched CRT. This high quality display incorporates high resolution – 900 lines minimum horizontal – with an unbeatable video amplifier response.

Two more monitors complete the Dyneer Family – the 14CHI is a Texas Instruments PC compatible Colour Monitor incorporating many features from the 14CMI, but offering even higher resolution and greater band-width.

The 12MHC is a Monochrome Monitor designed for composite video input requirements, but having exactly the same video attributes as the 12MHI.

And whether it's colour or mono, every Dyneer Monitor is built to the highest engineering standards and features the Dyneer Hallmarks – Quality, Reliability, and Unbeatable Price/Performance.

Ring us, and we'll tell you how.

PCW SUBSET

This is your chance to help build a library of general-purpose routines, documented to the standards we have developed together in this series. The documentation enables you to use the routines, even if you don't understand the code. You can contribute a Datasheet, improve or develop one already printed or translate the implementation of a good idea from one processor to another. PCW will pay for those contributions that achieve Datasheet status. Contributions (for any of the popular processors) should be sent to SubSet, PCW, 62 Oxford Street, London W1A 2HG.

ELEGANT SOLUTIONS

The problem, given in November's Sub Set, was to put graphics dot information (binary 00 to 11) according to dot number (0 to 3) in a target byte without disturbing any information relating to the other dots. The dot

information and number were in the least two significant bits of two separate bytes. The format of the target byte was:

bit	7	6	5	4	3	2	1	0
dot	0	1	2	3	0	1	2	3

There was too big a response for all good entries to be mentioned. This is a mixture of the best and most unusual contributions.

6502
6502 solutions follow our convention of referring to zero page locations as M0—MF in the mnemonics and ZZ in the machine code.

The big decision was whether to get the information in the correct

position by processing or by picking it from pre-arranged tables. Processed solutions tended to be shorter but slower. The best processed solution (if you sent a better one, we haven't received it yet) was from DA Stanford of Kinross:

* * *

Input—M0 low byte target address
M1 high byte target address
M2 dot number
M3 dot information

Length—32 T-states—54 to 95

DOT1:	LDA M3	;reform	A5ZZ
	LSRA	;dot	4A
	RORA	;information	6A
	PHP	;from	08
	LSRA	;bit	4A
	LSRA	;pattern	4A
	LSRA	;000000AB	4A
	PLP		28
	RORA	;to	6A
	STAM3	;A000B000.	85ZZ
	LDA # \$77	;set mask to 01110111.	A977
	LDYM2	;get dot number.	A4ZZ
	BEQINSRT	;no shift if dot no. zero.	F007
SHIFT:	LSRM3	;move mask and dot	46ZZ
	SEC	;information to	38
	RORA	;correct	6A
	DEY	;position.	88
	BNESHIFT		D0F9
INSRT:	AND(M0),Y	;reset dot data in target.	31ZZ
	ORAM3	;get new dot pattern.	05ZZ
	STA(M0),Y	;load new pattern in target.	91ZZ
	RTS	;return.	60

By replacing the first 10 instructions of DOT1 with a 4-byte table and three instructions, DA Stanford produced DOT2, one byte shorter and 15 T-states

faster. He doesn't think this is as elegant as DOT1, which raises the question many of you asked: 'What do you mean by elegant?' These are the replacement bytes:

DATA:	\$00	;reform dot	00
	\$08	;information	08
	\$80	;from bit	80
	\$88	;pattern	88
DOT2:	LDYM3	;000000AB	A4ZZ
	LDADATA,Y	;to	B9YYYY
	STAM3	;A000B000	85ZZ

The most table intensive, and the fastest solution, was given by Oscar Burke, writing from the United Oxford & Cambridge University Club.

Some speed is achieved by entering with Y and X already loaded, which might well be the case in a complete application:

* * *

Input—M0 low byte target address
M1 high byte target address
M3 dot information
Y index to target byte address at M0
X dot number

Length—19 + 20 = 39

T-states—43

DOT3:	LDA MASK,X	;store mask value to clear	BDYYYY
	PHA	;previous information.	48
	TXA		8A
	ASLA		0A
	ASLA		0A
	ORAM3		05ZZ
	TAX	;X=0000ppii	AA
	PLA	;mask part to be replaced	68
	AND(M0),Y	;of old screen value.	31ZZ
	ORAVAL,X	;insert replacement info	1DYyyy
	STA(M0),Y	;and store the result.	91ZZ
	RTS	;return.	60
MASK:	DB %01110111,%10111011, %11011101,%11101110		
VAL:	DB %00000000,%00001000, %10000000,%10001000		; for dot0
	DB %00000000,%00000100, %01000000,%01000100		; for dot1
	DB %00000000,%00000010, %00100000,%00100010		; for dot2
	DB %00000000,%00000001, %00010000,%00010001		; for dot3

A good compromise from Glen Slade of Southampton:

* * *

Input— M0 low byte target address
 M1 high byte target address
 M2 dot number
 M3 dot information

DATNO:	BYT	\$88,\$44,\$22,\$11	
DTINF:	BYT	\$00,\$0F,\$F0,\$FF	
DOT4:	LDYM2	;choose DATNO byte by	A4ZZ
	LDADATNO,Y	;value of dot number	B9YYYY
	PHA	;and store it.	48
	EOR #\$FF	;flip bits and AND	49FF
	LDY #0	;with target byte to	A000
	AND (M0),Y	;get the unaffected	31ZZ
	STAM4	;3 pixels into M4.	85ZZ
	LDXM3	;choose DTINF byte by value	A6ZZ
	PLA	;of dot information & AND	68
	AND DTINF,X	;with DATNO byte giving	3DYYYY
	ORAM4	;pixel. insert pixel.	05ZZ
	STA (M0),Y	;store new target byte	91ZZ
	RTS	;and return.	60

Something quite different came from W Anderton of Hampton. He decided that the way to change information within a composite byte was to rotate it. As each successive bit is moved off the end of the

target byte into the carry, it is changed there at the correct stage of the rotation before being rotated back into the other end of the byte. This ingenious method produces compact code at 32 bytes but is slow:

* * *

Input— M2 dot number
 M3 dot information

Length— 32 T-states— average about 140

TARG:	EQUXXXX	;absolut ad of target byte.	
DOT5:	LDA #\$04	;find position of	A904
	SEC	;required 1s bit	38
	SBCM2	;in target byte.	E5ZZ
	TAX	;rotate 1s bit	AA
	JSRROLL	;into the carry.	20YYYY
	LSRM3	;put new 1s bit	46ZZ
	LDX #\$04	;into the carry.	A204
	JSRROLL	;ms bit into the carry.	20YYYY
	LSRM3	;new ms bit into the carry.	46ZZ
	LDXM2	;rotate the	A6ZZ
	INX	;target byte	E8
	JSRROLL	;back home	20YYYY
	RTS	;and return.	60
ROLL:	ROR TARG	;	6EYYYY
	DEX	;	CA
	BNE ROLL	;	D0FA
	RTS	;	60

Z80
 None of the many Z80 entries used tables. Getting tired of counting T-states, we took timings of the 16 possible dot position and information combinations repeated 64k

times at 2MHz. These are the times shown here. Colin Hogben of Folkestone tried to find the smallest solution in Z80 code and did in fact provide the shortest routine received:

* * *

Input— HL = address of target byte
 B = dot number
 C = dot information

Length— 21 Time— 2 minutes 40 seconds

DOT7:	LDA,10H	;set bit 4 of A.	3E 10
	INCB	;increment B so not zero.	04

	CALLDOTA	;process low nibble target	CDYYYY
	LDA,B	;byte. recover bit mask.	78
	LDB,4	;rotate 4 times for hi nbl.	0604
DOTA:	RRC A	;rotate bit mask	0F
	DJNZDOTA	;B times.	10FD
	LDB,A	;save copy of mask in B.	47
	OR(HL)	;get byte and set bit.	B6
	RRC	;do we want the bit set?	CB 19
	JRC,DOTB	;yes—OK, else	3801
	XORB	;reset bit.	A8
DOTB:	LD (HL),A	;put byte back	77
	RET	;and return.	C9

Several entries rotated the dot information and the bit mask in two separate loops. The secret of achieving speed was to arrange the code so that they were

rotated in the same loop. The next two contributions both do this. First, the fastest received from PJ Greaves of Romsey:

* * *

Input— HL = address of target byte
 B = dot number
 C = dot information

Length— 25 Time— 1 minute 39 seconds

DOT8:	BIT 1,C	;test msb of info bits.	CB49
	JRZ,SD1	;go if it's zero	2804
	RES 1,C	;else, reset it	CB89
	SET 4,C	;and set bit 4.	CBE1
SD1:	LDA,3	;A = maximum dot number.	3E03
	SUB B	;A = 3 - dot number.	90
	LDB,A	;put count in B register.	47
		;B0 if dn 3, 1 if dn 2 etc.	
	LDA,0EEH	;A = mask bits 11101110.	3EEE
	JRZ,SD3	;go if count is zero.	2805
SD2:	RLC	;move the info bits	CB01
	RLCA	;and the mask. Decrement	07
	DJNZSD2	;count & go if non zero.	10FB
SD3:	AND (HL)	;reset old info bits	A6
	ORC	;and insert the new.	B1
	LD (HL),A	;store revised target	77
	RET	;byte and return	C9

Neither the shortest nor the fastest but a good compromise came from Paul Vaclik of Hayes. It could have

been a bit shorter and faster had it used the B register for the dot number like most other entries:

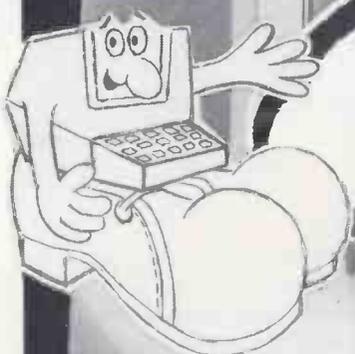

* * *

Input— HL = address of target byte
 C = dot number
 B = dot information

Length— 23 Time— 1 minute 52 seconds

DOT9:	RRCB	;place 1sb in bit 7.	CB08
	JRNC,ZERO	;jump if bit 7 is 0.	3004
	RES 7,B	;place bit 7 in bit 4.	CB88
	SET 4,B	;data now in bits 4 and 1.	CBE0
ZERO:	LDA,0EEH	;bit 4 and 1 mask.	3EEE
	INCC	;	0C
LOOP:	RRCB	;rotated data	CB08
	RRC A	;and mask	0F
	DECC	;until	0D
	JRNZ,LOOP	;in correct place.	20FA
	AND (HL)	;mask out old data.	A6
	LD (HL),A	;	77
	LDA,B	;	78
	ADD A,(HL)	;place new data	86
	LD (HL),A	;in required bits.	77
	RET	;return.	C9

CLEAN UP WITH THESE PCW SPECIAL OFFERS

Your VDU Screen may not look dirty, but if you try the FREE GIFT in this issue you'll be surprised at the results. Just look at what is deposited on the MICROWIPE tissue! Clean screens will reduce eye strain and increase accuracy.

Personal Computer World SPECIAL OFFER

30% DISCOUNT OFFER
MICROKIT - THE ONLY CLEANING KIT DESIGNED FOR THE MICRO USER.

When you try the FREE SCREEN CLEANING KIT you're sure to want more so Personal Computer World have arranged a SPECIAL OFFER PACK for only £2.49 (plus 37p VAT and 24p P&P) AVAILABLE ONLY TO READERS OF PERSONAL COMPUTER WORLD. The pack contains 10 SAFECLENS - Anti-static Screen Wipes. 10 MICROWIPES - Lint free absorbent wipers To order use the special offer coupon on this page (offer ends May 31st).

Having seen the effect of dust and grime on a VDU screen - imagine what it is doing to the rest of your equipment!

The MICROKIT comes in a compact and durable case specifically laid out for ease of use and contains products carefully selected to enable micro-computer and wordprocessor users to keep their equipment in pristine condition.

SAFE 16 KIT CONTAINS:- 1 SAFECLENE AEROSOL - cleaning fluid. 1 FOAMCLENNE - an anti-static foam cleanser for cases, especially crackle finish. 10 SAFECLENS SACHETS - for clean screens. 20 SAFEBUDS - for hard to reach areas. 1 SAFE TAPE - for cleaning tape heads. 10 MICRO WIPES - lint free wipers. **SAFE KIT 17 FOR FLOPPY DISC BASED SYSTEMS ALL THE ABOVE plus** 1 JACKET and 10 CLEANING DISCS.

SAFE 16 KIT: D.N.C.S. CATALOGUE PRICE £15.00 (plus £2.55 VAT) OFFER PRICE £10.50 (plus £1.57 VAT and £2.25 P&P)

SAFE 17 KIT: D.N.C.S. CATALOGUE PRICE £18.50 (plus £2.77 VAT) OFFER PRICE £12.95 (plus £1.94 VAT and £2.25 P&P)

ALL ORDERS INCLUDE CATALOGUE

You'll find the full range of cleaning products (though not at 30% discount!) plus 96 pages of computer supplies, furniture and magnetic media in the New 1984 D.N.C.S. Catalogue. Free on request.

D.N.C.S. WE'RE ALL YOUR COMPUTER NEEDS.

GO 4th WITH NATIONWIDE

apricot

Incorporating
Sirius Nationwide
Join us at the Apricot and
Sirius show.

The FIRST, Fourth Generation Personal Computer

Foremost distributors of the U.K.'s best-selling ACT Sirius the Nationwide Dealer Group now offer the very latest personal computer product from the ACT stable—Apricot. Designed and manufactured in Britain, Apricot is the first, fourth generation personal computer—a computer that for the first time works with you rather than just for you, hardware and software co-ordinating perfectly.

Apricot's many unique features include: a second screen located on the keyboard, which can be used without the main monitor to provide a truly portable briefcase-size system; a built-in calendar; calculator and time display; revolutionary 3½" diskettes which are convenient and compact, yet offer increased storage capacity; plus full 16-bit processing, multi-processor architecture and a powerful 256K RAM as standard.

Apricot and Nationwide

Nationwide are one of few specialist suppliers that can offer an Apricot system tailored to your exact needs and provide service and support facilities literally anywhere in the U.K.

Nationwide's library of available software covers everything from Word Processing, Database management, Accounting and Finance (including graphics output) to software for specific businesses and professions. And expert Nationwide staff will make sure you choose the software that is just right for you.

If you'd like to talk to Nationwide about an Apricot computer system, clip the coupon or telephone the nearest Nationwide Dealer listed here...there's probably one right on your doorstep.

Teletext adaptor

Teletext is the television broadcasting viewdata service available free to viewers with a decoder in their TV sets. For those without this utility, Acorn has produced an adaptor which converts the BBC Micro into a Teletext terminal. Richard Dearlove plugged in, watched and waited.

Teletext is the term used to refer to the BBC and IBA's viewdata service. It's offered free to viewers equipped with a decoder in their television sets. The information is received alongside the normal television service as digital information broadcast in the previously unused top lines of the television picture. It's possible to see this information on some older sets as a series of dots flickering at the top edge of the screen.

The decoder turns these signals into readable 'pages', broadcast in rotation: the service is similar to a computerised book which is only able to go through the pages one by one, in consecutive order. When the end page is received it cycles back to the start. As in a book, each page has a number which allows each one to be called up individually,

but there is a time factor depending on where the current page is in relation to the page counter.

Information is displayed in the same format as that of Prestel. Both have a display of forty columns by twenty five lines, in eight colours with simple block graphics (six chunky pixels make up one character). The information can only be displayed in this low resolution due to the limits placed by a few screen lines devoted to carrying large amounts of information. Fortunately the display is very clear and pleasing to the eye.

Teletext differs from Prestel in two main ways. Prestel is accessed by connecting up a terminal to one of the many Prestel computers situated across the country: the connection is made in the form of a local telephone

call. As the computer is linked by the telephone network the person accessing the information is able to communicate with the Prestel computer, enabling the user to perform tasks as diverse as ordering goods and booking tickets for an airline flight. Using the telephone network means there is a charge for the time spent using it, but there is also another charge for the use of the Prestel computer. Teletext is broadcast with the television signal, so the user is only able to receive information; it is thus one-way communication. This means the service is free.

Hardware

Acorn has produced a box which allows Teletext signals to be received and decoded, thereby converting the BBC Micro into a Teletext terminal. But, as

an added advantage, it allows BBC Micro owners to receive and download 'Telesoftware'. These are programs broadcast as Teletext information which the computer receives and translates in order that they may be saved on tape or disk and run.

The Acorn adaptor measures approximately 31cm x 6.5cm x 22cm and is the same style and colour as the BBC Micro. The overall effect is very professional. It connects to the computer by a 34-way ribbon cable, which is only long enough to allow the adaptor to be placed a few inches to the left or right of the computer. This presents no problems unless your computer is placed on a small workspace or is housed in an add-on box designed for the tidy storage of your peripherals. The cable slots into the 1MHz Bus connector.

insulating material provided. It must be placed in the socket to the left of the operating system chip; if not, the Teletext ROM will be the default operating system after a hard reset or immediately after switching on.

Documentation

The documentation comes in the form of a 73-page ring-bound manual. It contains chapters on setting up, loading Telesoftware, the format of Teletext information, command words, fitting the Telerom, a large section devoted to using the adaptor at assembly level and technical information. Neatly set out in a similar format to the User Guide, it has step by step examples to give confidence to beginners. There is a chapter on how to fit a 1.0 operating system chip in cases where it is not already fitted. After going through some of the

system, the screen will appear blank. To remedy this, press break. If Teletext is not the default operating system, then the screen will say:

BBC COMPUTER 32k
ACORN TFS
BASIC

If the adaptor is not correctly connected or is not switched on, it will say, after Acorn TFS, 'No Power'. To enter Teletext, the manual says that pressing break and 'T' simultaneously will achieve the desired result. This is not so: you have to type *Teletext, or the shortened version, *TE.

The first time you use the adaptor it won't be tuned in, so a tuning program is provided in the Telerom. To access it, press the red function key labelled 'F4' followed by the channel number, then the shift key and F4 simultaneously. To tune in the channel turn the red dials on the back of the adaptor. When the channel is nearly in tune a yellow bar will appear and move along the scale to show how strong the signal is. When the bar is as near to 100% strength as possible, press the space bar. The process is repeated for each channel. Care must be taken to get the right channel on the right dial as each one is capable of receiving all four signals.

In the area where I live, the BBC1 signal is good but not brilliant, whereas BBC2 and ITV are very strong. I have no problem with the latter two channels but Channel 4 is awful. On certain days, the signal appears to move around. As this channel is so difficult to tune into, it's extremely irritating to have to adjust the dial each day to receive a mediocre signal.

Another problem with Channel 4 and

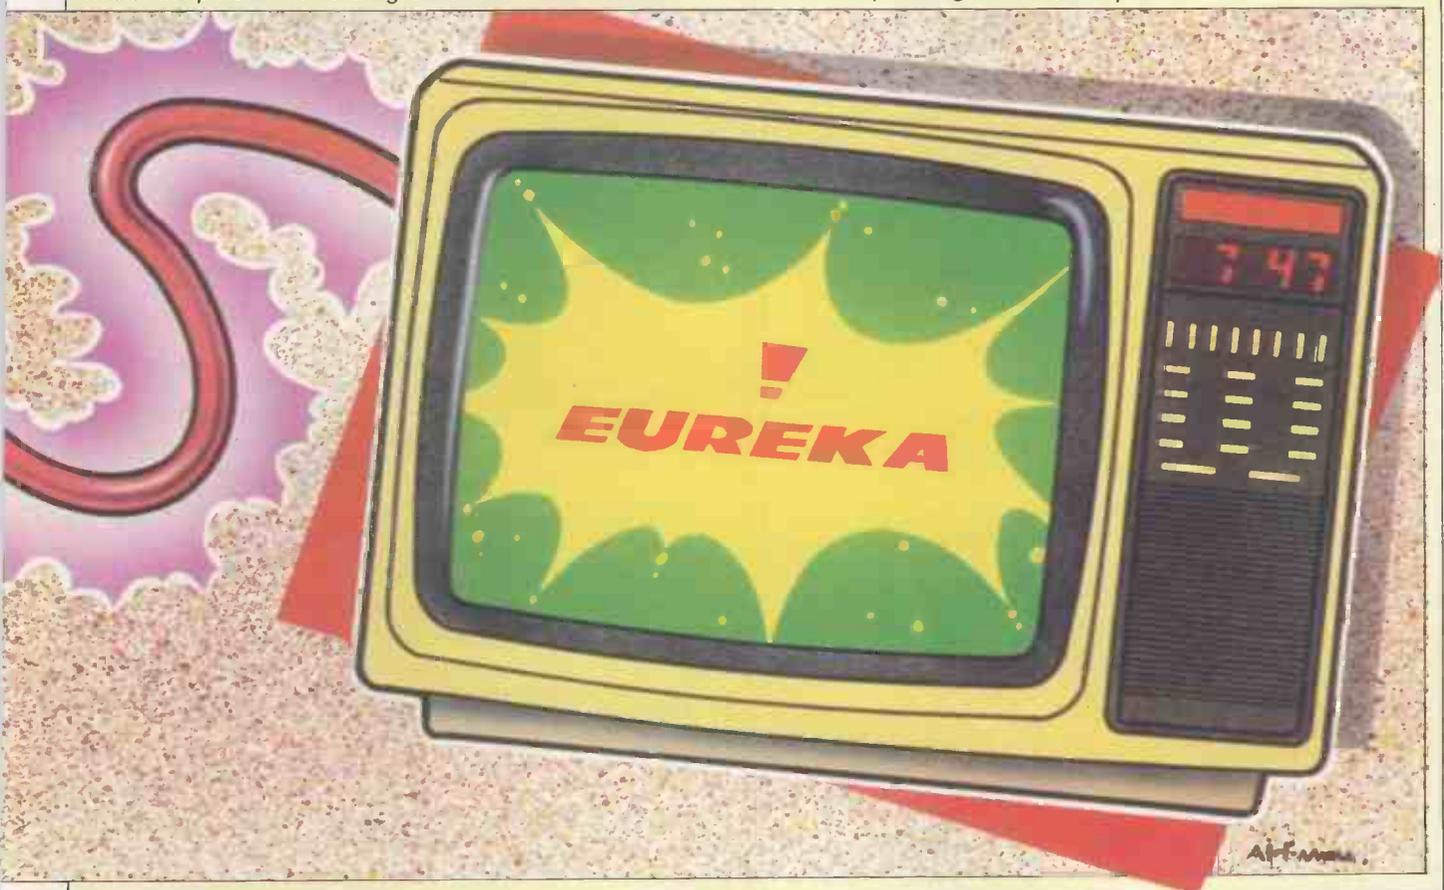

'... a box which allows Teletext signals to be received and decoded, thereby converting the BBC Micro into a Teletext terminal.'

The adaptor alone is not enough to be able to start receiving and decoding signals: a new ROM must be fitted in one of the spare ROM sockets found on the bottom right of the PCB. If there are no spare ones left, it will be necessary to buy an expansion ROM board. The ROM is described by Acorn as a Telerom and, in keeping with the BBC Micro philosophy, is recognised as a filing system. Care must be taken while fitting the chip — I managed to bend two of the pins while holding it with the

Telesoftware I found two commands not described in the manual, 'Hon' and 'Hoff', which turn the Teletext header, comprising of current page, date and time, on and off respectively. My manual was stamped Issue I, June 1983, so there may be changes in later editions.

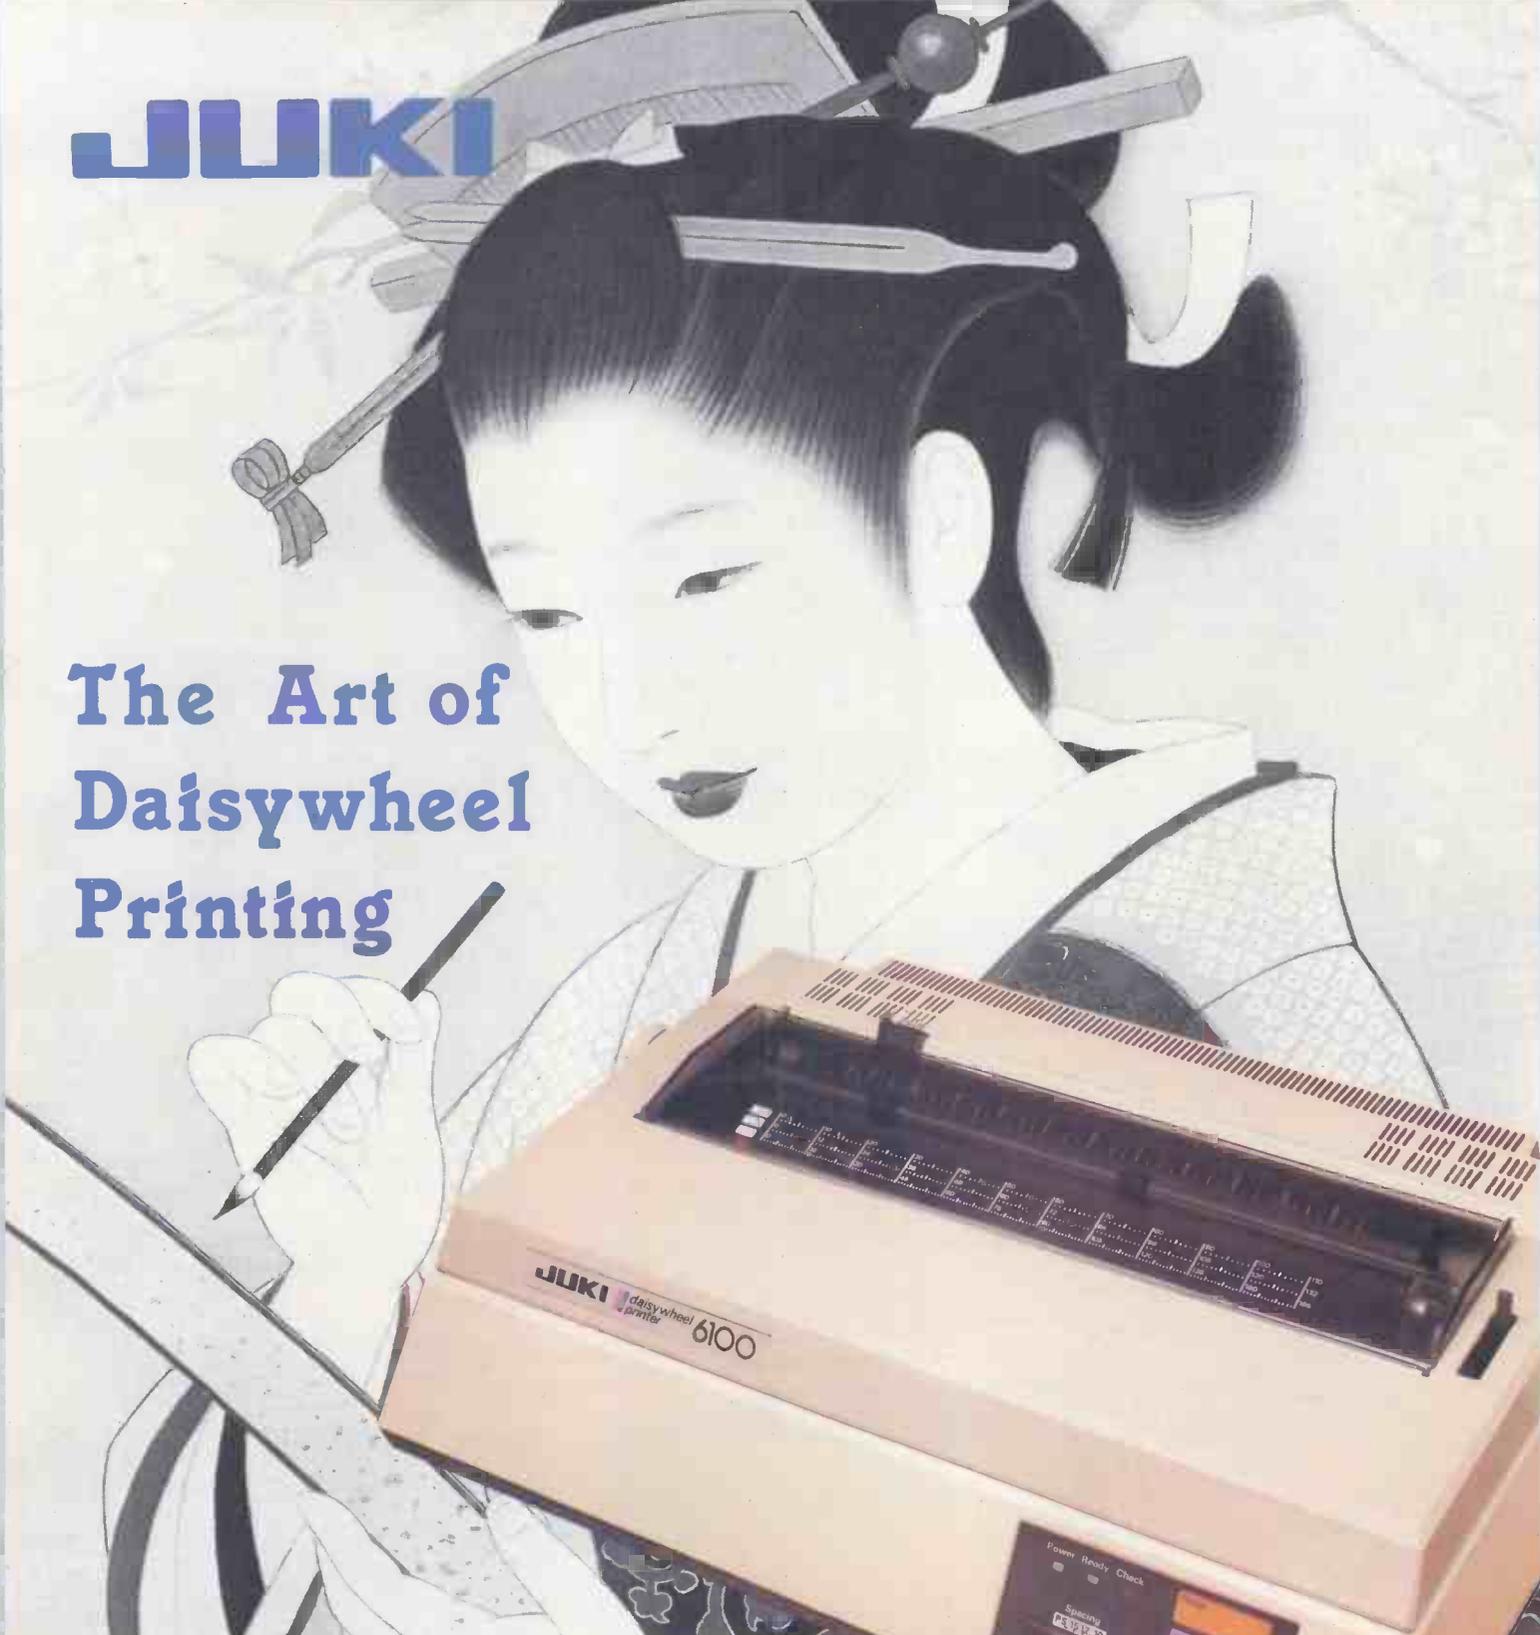

In use

The adaptor must be switched on before the computer. If this is not done and Teletext is the default operating

JUKI

The Art of Daisywheel Printing

The new Juki Model 6100 letter quality daisy wheel printer, has full features you'd expect to find on a more expensive printer.

It can support word processing and graphic functions, print 20 CPS and use a simple drop-in daisy wheel.

The 6100 has 10/12/15 pitch, proportional spacing, utilizes IBM standard Selectric ribbons, has 2K buffer memory, parallel interface both tractor feed and serial interface are available as options.

That's only the beginning – Best of all, the low-noise Juki 6100 is extremely reliable.

Your can pay more, but you can't buy better than the Juki 6100.

FEATURES:

*20 CPS (max.) print speed *Bold and shadow printing *Subscripts and superscripts *Wordstar compatible *Diablo protocols *Auto Underlining *Standard 2K buffer *1 year parts and labour warranty *Comprehensive user friendly manual

C ♦ H ♦ E ♦ C ♦ K ♦ O ♦ U ♦ T

ITV is that they don't carry status report signals and are thus difficult to lock onto properly. When tuning into Channel 4, I have to ignore the strength bar because, while the scale may depict a strength of 100%, on returning to the pages, the header carrying the page number and date changes into unreadable blobs, so this tuning scale is not totally accurate.

The best way to tune into this difficult channel is to find the area with the scale and revert to normal display then tune the channel in by watching the header until it becomes as steady as possible, normally when a regular series of numbers is displayed in the header. Unfortunately, the headers for ITV and Channel 4 pages do not have a com-

continuously.

I was faced with this problem, and left the adaptor seemingly trying to load a program for half a day. Experiments with aerials and tuning came to no avail. The next day I went to the PCW Show expecting an Acorn representative to be able to give some help. It transpired that Acorn had also been having problems; the company's advice was to change my aerial, but judging from past experience this was wrong. When I discovered the real problem, I rang Customer Services at Acorn headquarters to explain. I was informed that they already knew this. I then explained that I had received an electric shock from the aerial connection at the back of the adaptor — Acorn

*Help followed by any one of these gives a list of connected commands. *Help Telesoft prints up a description of new commands which may be included in Basic programs. This enables users to access information such as shares figures, the headlines, or the daily recipe, for use within a larger program.

Telesoftware

Every two weeks the programs are updated: page 701 carries a list and page numbers of each program. Page 702 carries a description and page 703 contains 'Rem', a fortnightly information service.

At the time of writing the programs are of good quality and are primarily educational. Each fortnight a different sorting routine is broadcast to be included within a user's program. Other programs have been multiple choice tests, word shapes and number problems. A geography program included some excellent graphic representations of Ordnance Survey symbols on which children were required to answer questions. There has recently been a 'Star Trek' program but this was not included on the list of broadcast programs.

There is obviously a future for the system in the educational field as many of the programs have been written for the MicroElectronics program. It seems to be of less use at home for the time being, unless the programs change dramatically in content.

Price

Adaptor: approximately £225 inc VAT. It is available from: Vector Marketing Ltd, Dennington Estate, Wellingborough, Northants NN8 2HL. The adaptor requires a BBC Model B with a 1.0 or above operating system. A voucher is supplied to allow the purchaser to receive a new OS ROM free.

'... as an added advantage it allows BBC Micro owners to receive and download "Telesoftware".'

pletely regular series. On each of these channels, there are two sets of displayed page numbers and the header juggles between the two. On ITV the numbers are either in the 100s or the 300s, which leads to confusion as to whether or not the channel is completely in tune. ITV and Channel 4 pages always have a 'no check' message in the bottom right hand corner of the screen because there is no status report on which to check for errors.

The signals vary greatly in strength, so it's a good idea to find the best aerial position. The Teletext User Guide suggests moving indoor mounted aerials onto the roof to get a clearer signal. During the early days after receiving the adaptor I spent many hours climbing in and out of the loft to adjust the direction of the aerial. I wasted my time as although one day all the channels appeared to be perfect, the next day they were weak again. I now settle for a happy medium. If the Teletext Adviser were to ask for comments on the service I would suggest that the Telesoftware pages be duplicated on both BBC channels to enable people to load the programs on the stronger of the two channels.

To many users, the most important advantage of Teletext will be Telesoftware, but here another major problem may occur. If the Telerom has not been placed to the left of the Basic chip, it is impossible to load Telesoftware correctly. In order to do so, the user must initially have been in Basic and Teletext mode. Normally, when a program is loading, it scrolls up the screen at intervals and while waiting for a page it is replaced by the word 'searching'. If the chip is incorrectly positioned, 'searching' scrolls up the screen

was very concerned and suggested I return it to the maker.

A call to Vector Marketing produced a label for free return postage, but I forgot to include my manual and fitting voucher. A week and a half later the replacement arrived along with another manual and voucher. The new adaptor also gave me an electric shock so perhaps it's not a fault after all!

One quibble with the terminal program (the name given to the operating system entered after typing *Teletext) is the location of the command used to dial a page. To achieve this you must press 'F O' followed by the page number. This may sound simple, but more often than not it's easy to forget to press the function key, so another command is entered instead. This command calls up linked pages which have something in common and have therefore been grouped together. In order that you don't have to type the

'There is obviously a future for the system in the educational field as many of the programs have been written for the MicroElectronics program.'

page numbers of these linked pages, all that's required is to press the cursor keys in the direction required. At the moment this facility is not fully implemented but news pages carry sample links to test this feature out.

The chip also contains a 'help' menu like that found in the disk filing system (DFS). If *Help is typed in, the computer prints:

```
TFS 1.00
TELETEXT
TELESOFT
OPT
OS 1.20
```

Conclusions

The question which all potential users must be asking is: 'Is it value for money?' If you had ordered the adaptor two years ago when the price was only £115, the answer would definitely be yes. Now that the price has been fixed at £225 it is an expensive buy. However, with the added advantage of Telesoftware and the extra commands, it is a useful piece of equipment which will prove invaluable to many users. I was very pleased with its ease of use and scope.

END

Superstar

Tony Harrington examines the story behind the reluctant launch of the Superstar from SciSys and compares it with the Novag Constellation.

Last year was not a rosy one in the chess computer industry, at least from the suppliers' point of view. While the public took pleasure in the fact that there were more, and better, chess computers on the market than ever before, the large number of different sets available meant tight profit margins and hard times for the companies producing them.

For SciSys, one of the leading suppliers, it was a particularly tricky year. Its Mark V system, the set that won the Trevemunde World Microcomputer Chess Championship in 1981, had aged somewhat (although it will still beat most casual players). The Mark VI module that SciSys intended to be the natural upgrade path for Mark V owners found few takers, partially because of production problems and partially because it never really proved itself to be conclusively stronger than the Mark V.

Fortunately for SciSys, Hegener and Glaser ran into problems producing a working, bug-free version of the Mephisto III, and Fidelity dithered over the European launch of the new version of its Chess Challenger 9. Unfortunately for SciSys, Novag moved with great speed and had its Constellation in the

shops by the end of 1983. Priced at around £150, the Constellation rapidly proved itself to be a very successful machine.

SciSys's answer to the Constellation, developed through 1983 and launched at the end of that year, is Superstar. Its first appearance, in pre-production form at the Budapest World Championships in October last year, was distinctly ordinary. It came 13th, with three out of seven points. The fact that this was the same number of points as that obtained by the commercial version of the Novag Constellation was little consolation.

Novag, Fidelity and the Mephisto

for second place with five points each. Against this sort of showing, Superstar, as SciSys's best offering, didn't promise much.

But, as Andrew Page, SciSys's European marketing manager points out, no conclusions about Superstar's strength should be drawn from that first appearance.

'You have to consider the background to our participation in that event,' he explained. 'We decided in May last year to develop a new chess computer to be programmed by Julio Kaplan.'

Originally, we expected a launch date around October this year. Word got out

Fig 1	1	2	3	4	5	6	7	8	9	10	Score
Superstar:	½	1	1	0	0	1	0	1	1	0	5½
Constellation:	½	0	0	1	1	0	1	0	0	1	4½
No of moves	56	81	66	27	22	57	57	67	89	40	

people could all point to experimental versions which displayed great promise in Budapest. The Fidelity Elite finished top with six out of seven points. The Mephisto X (an extravagantly expensive machine costing around 5000 Deutschmarks), and the Novag X (due in the shops by July) tied

that we were at work on a new version and Lazlo Lindner, the organiser of the Budapest tournament urged us to enter. We told him well in advance of the event that there was no way we could get a version of Superstar ready in time, but he persisted and in the end we decided, at the last moment, to allow an early experimental version of Superstar to compete.'

This version, Page points out, was the twelfth in the development line. SciSys was already on version 16 at that time, but although version 16 was better in some respects, version 12 was deemed to be more reliable for competition purposes. Its major weakness was that the tournament clocks built into the set were not yet bug-free.

Page reckoned that SciSys intended version twelve of Superstar to be entered anonymously. The organisers overlooked that, and the Superstar started life under its own name. The result is that it now has a poor performance to live down. The main fact to bear in mind is that as a

Micro Chess—a guide for beginners

Micro Chess covers all the news and events in the busy world of computer chess. With new chess programs and new chess computers appearing all the time, we evaluate their strengths and weaknesses as they become available. We shall be presenting profiles of programmers, both amateurs and professionals, which will cover their methods and their interest in chess programming, and we shall be talking to suppliers and looking at their plans. Computer Chess affects computer

enthusiasts in two different ways. For some, the fact that they can now play chess against either their home computer or a dedicated chess computer has opened up the delights of the game. For others, the real interest is not so much in playing chess as in trying to build a chess program. Micro Chess aims to meet the interests of both.

Chess is a game that can be as exciting for the beginner as it is for the grand master. So if you haven't played before, get yourself a good introduction to the game — there are dozens in the bookshops — and get to it. Remember, with computer chess a game can be as fast or as slow as you want.

development project, it was barely four months old on that first appearance.

So how does the finished version of Superstar now compare to machines like the Constellation? Part of that answer has been provided by SciSys. It asked KK Chang, the second highest rated chess player in Hong Kong (where SciSys is based) to carry out a series of games between Superstar and Constellation. Chang was also asked to make suggestions about possible ways of improving Superstar's play and to comment on its playing style.

Chang supervised ten games, with Superstar playing on level B2 and Constellation on level 6; both levels being equivalent to tournament play at the rate of 40 moves in two hours, followed by 20 moves per hour thereafter.

The result table is shown in Fig 1: Superstar plays the white pieces in all the odd numbered games.

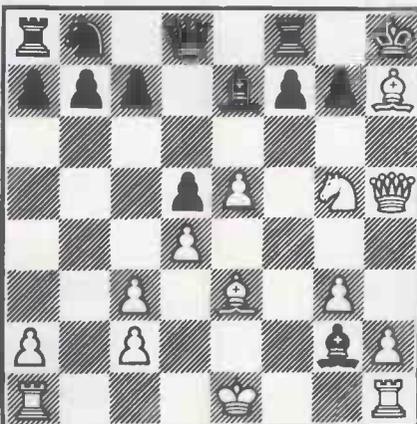

The openings, incidentally, were reasonably varied. In order, starting with game one, they were: Sicilian, Alekhine's Defence, Queens Gambit Accepted, Ruy Lopez, Ruy Lopez, Alekhine's Defence, English Opening, Dutch Defence and King's Indian Defence.

The one factor that emerges from these games, aside from the obvious fact that the two programs seem to be of approximately equal strength, is that the longer a game went on, the better Superstar's chances of winning seemed to be.

The two programs have very different styles of play. Constellation plays a relatively more aggressive game in the opening stages. This paid off in several of the games, where it caught Superstar with some sharp play directed at the enemy kingside. But Superstar is strong in the endgame (for a chess computer). It converted some drawn games into wins by capitalising on one or two relatively weak end game moves by Constellation.

With the honours about even in playing strength, one has to turn to the features each machine offers. Both are touch sensitive machines; both have LEDs down the two axes of the board and indicate moves by showing the rank and file of the piece to be moved; both are pleasantly designed and are roughly the same size. Superchess definitely has the more sophisticated level-setting mechanism, as well as offering a wider range of playing conditions. Unlike previous level setting devices, which have basically involved pressing the 'level' key five times if you want to play at level five, with Superstar you only need to press 'level', then the square that corresponds to the mode of play you want. You can also change levels during play.

Levels A1 to A8 are the 'casual play' levels. They range from a two second average response time to 10 minutes. Levels B1 to B8 are rather more complicated and need to be considered

Fidelity Elite vs Mephisto Excalibur

individually:

B1 is what SciSys calls 'fast tournament' mode, 30 moves per hour.

B2 is standard tournament mode, 40 moves in two hours and 20 moves per hour after that.

B3 is Grandmaster tournament mode, 40 moves in two and a half hours and 16 moves per hour thereafter.

B4 is one hour for the entire game (though how anyone can know in advance how many moves have to be played to meet this criterion is a mystery to me).

B5 takes two hours for the entire game.

B6 is five minute chess.

B7 is a useful little feature which gives you 10 seconds per move, with an acoustic reminder when the 10 second period is up.

B8 is the analysis mode, where the machine will continue computing until you tell it to move.

Levels H1 to H8 are the problem modes with the level number corresponding to mate-in-one, mate-in-two and so on up to mate-in-eight. As Superstar has a replay key, you can step through all the moves leading up to a mate in eight once the computer has found the solution.

This replay key, used in conjunction with the 'take-back' key, enables the player to step backwards and forwards through an entire game. It's a useful way of recovering a game that you haven't recorded as you've gone along. Both Constellation and Superstar have excellent facilities for setting up problem positions or adjourned positions.

One point which augurs well for the future is that plans are afoot for Gary Kasparov (in London recently to play his semi-final world championship match against Victor Korchnoi) to mastermind an openings repertoire for a future Superstar module. Page took Kasparov out to dinner one night and the net result of their discussions is that you can expect to see a Kasparov endorsement of SciSys computers in the near future. Kasparov, it seems, was impressed enough to take one or two machines back home with him. Whether the openings module ever sees the light of day depends on the gods of the market-place.

Games section

White: Fidelity Elite. Black: Mephisto Excalibur. World Microcomputer Chess Championship, Budapest 1983. Vienna Gambit. Notes by David Levy.

1 e2-e4 e7-e5
2 Nb1-c3 Ng8-f6
3 f2-f4

(An exciting opening dating from the 19th century, which is now rarely seen in master chess. It often leads to lively positions in which one error can be immediately fatal.)

3 ... d7-d5
(The best reply.)

4 f4xe5 Nf6xe4
5 Ng1-f3 Bf8-e7
6 d2-d4 0-0
7 Bf1-d3 Be7-h4+

(A wasted move. Correct is 7... f7-f5 8 e5xf6 Be7xf6 9 0-0 Nb8-c6, with approximately equal chances.)

8 g2-g3

(Naturally not 8 Nf3xh4 Qd8xh4+ 9 g2-g3?? because of 9... Ne4xg3.)

8 ... Ne4xc3

(Forced, otherwise Black loses a pawn when the bishop retreats.)

9 b2xc3 Bh4-e7
10 Bc1-e3 Bc8-h3?

(Hoping to prevent White from castling K-side.)

11 Nf3-g5 Bh3-g2?

(If 11... Be7xg5 12 Qd1-h5, and if 12... h7-h6 13 Be3xg5 followed by 14 Qh5xh3. This would have offered roughly equal chances, and Black ought to have tried this continuation. The text, however, is an attempt to justify Black's previous move.)

12 Bd3xh7+ Kg8-h8

13 Qd1-h5 Be7xg5

14 Bh7-e4+ Bg5-h6

15 Be4xg2

(White has won a pawn, and Black's king is now rather exposed.)

15 ... Kh8-g8

16 Be3xh6 g7xh6

17 Qh5xh6 Nb8-c6

18 Ra1-b1 Nc6-a5

19 Qh6-h5 Qd8-d7

20 Qh5-g5+ Kg8-h8

21 Qg5-h6+ Kh8-g8

22 0-0

(Now White threatens 23 Rf1-f6, followed by Qh6-g5+ and Rf6-h6 mate.)

22 ... Ra8-c8

23 Qh6-g5+ Kg8-h8

24 Rf1-f4

(This is just as good. On 24 Rf1-f6, Black can prolong the game with 24... Qd7-e6.)

24 ... f7-f6

25 Rf4-h4+ Qd7-f7

26 Rh4xh7 Kh8xh7

27 e5xf6 Resigns.

Not a great game, but a demonstration of the Elite's efficiency at capitalising on its advantage.

A quantum leap

Recruited by Sir Clive Sinclair to work on the design and development of the QL, David Karlin stands foremost among the team of people responsible. Here he talks modestly to Tony Hetherington about himself, and particularly about his 'baby'.

David Karlin is one of a small group of people who stand almost unnoticed in the shadow of Sir Clive Sinclair, but it's now time for David to step into the limelight as the man behind Sinclair's new micro, the QL.

When he joined Sinclair in July 1982 he had a vision of the minimum machine he would like to find on his desk: the QL is that machine.

He was born 25 years ago in London and pursued his education at Cambridge before working for Fairchild in Singapore and America. He returned to England in early 1982 to concentrate on his main interest: chip design.

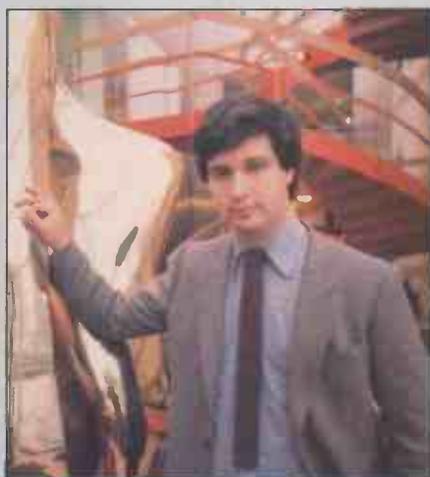

David is a shy, modest and retiring man, but he possesses the self-assurance often found in those who know exactly what they're doing.

In keeping with his character he inadvertently applied for and got that infamous position of 'the world's best computer designer', the job advertised at Sinclair Research. He was dealing with an agency regarding another position and found himself in an interview with Sir Clive. The rest is history.

David was brought in to work on the QL project leading the development team as senior computer engineer. Unlike the Spectrum and the earlier Sinclair machines, where the original concept came from Clive, the QL was more of a team effort. 'It came out of a melting pot of ideas after a long series of meetings to thrash out the details. There was a spec but this was modified almost every day.' It is characteristic of David Karlin to undermine his own influence on the project. Later on in our discussion he said of the QL: 'It was the machine I wanted to build, although it went through various permutations en route.'

Cost is always a limiting factor in the design of Sinclair computers, and David spent six of the 14 months it took to design the QL reducing the number of pins on the two customised chips to reduce drastically their cost.

It's impossible to list chronologically David's work during this 14 month period, since he was covering several areas at once. For example, while he

David Karlin

'It (the QL) was the machine I wanted to build, although it went through various permutations en route.'

was waiting for a prototype chip to be built he wrote part of the operating system. Karlin says that the development of the QL was almost trouble free. In fact, the most difficult problem the team encountered was how to assemble the case!

Once the cut-down version had been designed, David had the unusual luxury of being able to add features to the machine, such as the 128k standard memory and the second processor (8049) to handle the graphics.

The main processor in the QL is the Motorola 68008 chip, and David is keen to clear up the confusion this chip has caused since the QL's launch. 'The 68008 is simply a 32-bit processor chosen for the amount of memory it can address. It has an 8-bit bus so externally it appears as an 8-bit processor. To add to the confusion it also has some 16-bit instructions in its instruction set.'

The omission of a cassette port, 'a useless addition', coupled with the fact that the winchester interface is coming soon means that the success of the QL rests largely on the reliability of the built-in microdrives. David was quick to

leap to the defence of these stringy floppies and insists that they have greatly improved the mechanics since the early Spectrum models. They have regulated the motor speed and improved the low inertia mechanism, so reducing the risk of stretching the high quality video tape. 'Besides, if anyone saw inside a winchester (which has an excellent reliability record) they would be horrified.'

It is particularly illuminating to hear David talk about the QL's software, since his loyalties must lie with the hardware. Surprisingly, perhaps, he admits that 'You don't sell hardware, you sell the ability to use software'.

He's obviously pleased with QDOS and has absolutely no doubt in his own mind why the QL has its own operating system rather than uses one of the standard systems like CP/M or MS-DOS: 'All the others are so awful. WordStar's the best standard software available, but that's still unfriendly.' According to David, the problem with operating systems is the way they are designed: 'Most are designed to get in the way of you and the machine. Ours is designed to help programmers through features such as multi-tasking and device independent I/O.'

Potential

David agrees with Sir Clive about the marketing potential of the QL—he feels it will create its own market. 'The Spectrum had a piggyback on the ZX81 but the QL will find a new market. It should appeal to the professional and business market alike as it offers more than an intelligent terminal at a fifth or tenth of the price.'

David is full of fatherly pride for the QL. Quick to defend any criticism of his creation (for example, the membrane keyboard can be finely tuned), he is unhappy that anyone might want to attack his 'baby'.

As we all await the first production models and speculate about the QL's impact on the market, one thing is certain. From now on, David Karlin will be extremely busy. He's currently involved with production engineering but after that? 'No comment.'

END

Unless you're an efficient touch-typist, the conventional qwerty keyboard can be a frustrating obstacle in the quest to master your micro. Conall Boyle unearths some historical facts and describes a future vision for this established means of communication.

The keyboard is, quite literally, the point of contact with your microcomputer. It also represents for many the first stumbling block. The layout of the keys is most illogical. How many millions of first time users have cursed the horrors of qwerty? And why is the keyboard set up like that? The simplest explanation, is that qwerty is the standard typewriter keyboard layout.

Qwerty is the standard layout throughout the known universe. Spain has it, Denmark has it, even Yugoslavia has it (but Y and Z inter-changed). Even those alphabets which look strange to English eyes — Greek, Cyrillic (Russian), and the like — use a local variant of the 'standard' keyboard. The only slight variation to this almost universal pattern is to be found on German and related language keyboards, where the Z and Y are switched.

It would be pleasing to think that this uniformity was based on widespread acceptance of the best available prac-

tice. Indeed, ask your average micro-computer user why such an inconvenient layout was chosen. Nine times out of ten the answer will be: it's the layout which allows the maximum speed of typing. Would that it were! The fact is that the keyboard layout as we find it today was designed, not to give the quickest typing speed, but to slow you down as much as possible.

Beginnings

To discover the reason for designing the keyboard to be as *slow* as possible, we must go back to 1873. In that year C Latham Sholes (1819-90) finally perfected his design for a writing machine. He signed a contract with the Remington Gun and Sewing Machine Company of New York to produce 1000 of what he called 'Type-writers'. As with all inventions, Sholes was building on the efforts of those who had preceded him.

Nevertheless, his was the first

commercially successful typewriter. In essential detail, the Sholes machine was similar to the mechanical typewriter of today.

But to make it work Sholes had to overcome many hurdles. One of the most intractable problems he faced was that of jamming keys. The engineering of the day was just not up to the task of making a smooth striking set of keys. At this point, Sholes engaged the skills of his brother-in-law, a teacher of mathematics, to design a keyboard layout. The aim was to ensure that letters struck one after the other, as far as possible from opposite sides. After much experiment, the familiar qwerty keyboard layout was born.

Sholes was guilty of a monstrous fraud concerning his qwerty keyboard. He had the nerve to peddle his machine as 'scientifically designed'. He omitted to mention, of course, that the keyboard was designed scientifically to slow you down!

Of course, Sholes was not the only inventor working on a machine to produce writing mechanically. Many other designs of typewriter, with different keyboard layouts, came on the market after 1873. However, a dramatic, and quite unplanned event in 1877 sealed the fate of the chief rival, the Caligraph keyboard (the layout of this alternative typewriter is shown in Fig 1). Instead of the four rows of keys with a shift for upper-case, the Caligraph had six rows of keys, with separate upper and lower-case buttons. The event which proved Sholes' to be superior was a speed typing competition. Frank McGurrian, a touch-typist who used the Sholes keyboard, challenged Louis Taub, a Caligraph typist, who used four

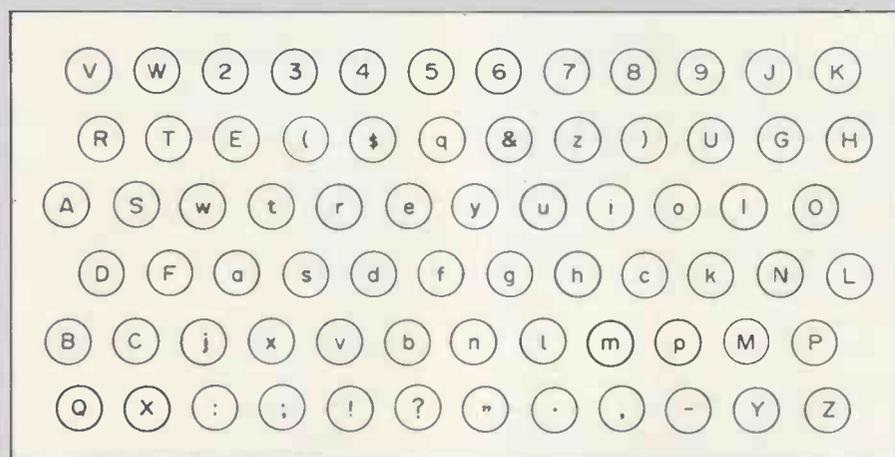

Fig 1 Caligraph keyboard

Fig 2 Dvorak keyboard

fingers; the winner being whoever could copy the most script inside forty five minutes. The contest became what we would now call a 'media event'. The convincing victory of the Sholes typewriter was widely reported. After that the reign of qwerty was assured. Manufacturers quickly changed over to the now standard layout.

Reform

As time went by, it was realised that qwerty was not just a poor layout for speed and convenience, it was probably the worst possible layout ever devised. A major conference was held in 1905 to thrash out a rational alternative. Although there was little enough agreement on the proposed keyboard, it was the teachers of typewriting who voiced the loudest opposition to any change. They had spent a long time learning the existing layout, and were reluctant to change, whatever benefits the users might gain.

The next significant development is attributed to Dr August Dvorak of Seattle, Washington. In 1932 he announced his rational keyboard, which he claimed would increase typing speed by around 35%. The actual layout is shown in Fig 2. Despite its obvious advantages, the Dvorak keyboard did not catch on. It is still a contender as an alternative to the Sholes qwerty keyboard. In the administration of at least one state in the United States, the Dvorak (pronounced Di-vor-ack) keyboard is enforced on all office machines. Apart from this one

Fig 3 Sinclair keyboard

exception, Sholes' qwerty keyboard reigns supreme.

Microcomputer explosion

The advent of cheap microelectronics had many effects. One was to make it relatively cheap and easy to adopt any form of keyboard layout. Electronic typewriters could be re-tooled to the Sholes, Dvorak, or any other desired layout. However, most people had been brought up on qwerty, and

case — were on lower case. Sinclair, on the other hand, adopted his multi-function key method, whereby a single key could have up to six different functions (see Fig 3 for Sinclair keyboard layout). It is interesting to note that PET (whose name was changed to Commodore because 'pet' means something rude in French!), has reverted to an absolutely standard qwerty keyboard. Yet again, Sholes' 'scientific' keyboard layout seems destined to win out over all its rivals.

French directory

However, the days of the qwerty keyboard may yet be numbered. One interesting proposal has come from France, where, in an effort to modernise the telephone system, an online telephone directory is to be made available to every subscriber. France has about ten million telephone subscribers, most of whom do not use a typewriter, and would be baffled by qwerty. In this new situation, the decision was made

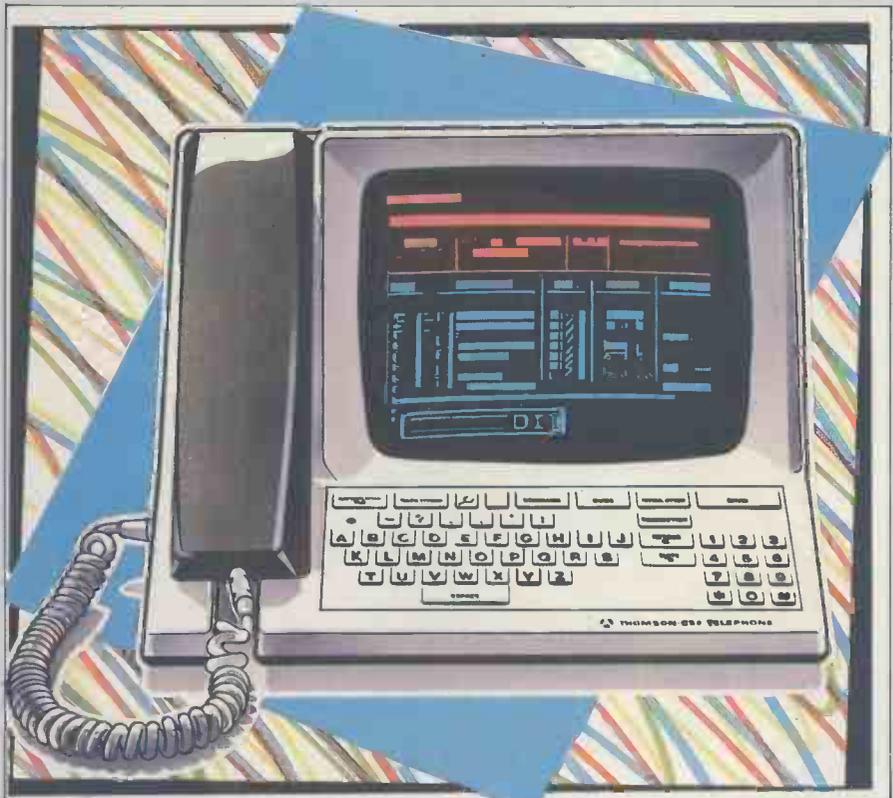

Fig 4 French telephone directory

wanted a familiar layout. This was true even for machines like card-punches and VDU terminals, which were used mainly in the office environment.

The arrival in the mid-1970s of the microcomputer brought in a whole new category of keyboard users — the home computing buffs. With a million computers already installed in homes in the UK the time must be fast approaching where most keyboards are attached not to typewriters, but to microcomputers.

In this whole new ball game, what keyboard should be adopted? For Tandy and Apple the answer was simple — standard qwerty. PET tried a slight variation: all characters used in Basic, such as ?, (,) — all normally upper

to go for an ABCDEFG layout — alphabetic order, in other words. A picture of an ABCDEFG keyboard is shown in Fig 4.

This layout has also been adopted for the French version of Teletext. This is not only to make the keyboard user-friendly; it is also an attempt to distance it from the typewriter. One of the problems that's been found with computers to be used by management — such as Teletext terminals — is the degrading effect of using a keyboard.

Managers are reluctant to be seen using a keyboard; as this puts them in the same category as the office typist!

Whether this attempt to replace qwerty with ABCDEFG is successful is now open to some doubt. The election of a Socialist government saw the telephone directory project severely curtailed. It still exists, but only in a small area of Brittany.

Microwriter

You may have seen Denis Norden extolling the virtues of an innovative, if somewhat pricey alternative, method of setting data into your computer/word processor. This is based on the simple binary principle that six switches can give two-to-the-power-of-six combinations of code (that's 64 characters). The layout of the Microwriter is shown in Fig 5. You will notice that the keys are ergonomically positioned under each finger, with the thumb given a choice of two buttons. Characters are formed by pressing combinations of keys simultaneously.

To operate this device is not nearly as complicated as it sounds. Mr Norden assures us that a few hours will convert us into speedy typists, and if he can do it...! One slight drawback is the price — around £500 (recently reduced to £230) and beyond the reach of most home computing enthusiasts.

Fig 5 Microwriter

Voice input

Remember HAL, the voice controlled on-board computer in the film *2001, A Space Odyssey*? In the end, HAL got ideas above his space station and had to be dismantled. With his dying gasp, HAL gave us a tinny rendition of 'Mary had a little lamb'.

The idea of voice input has attracted much research effort, notably among the Japanese. After all, speech is how most of our communication is executed. It seems a natural extension of this to have voice input to the computer as well. At present, voice recognition systems are limited to a modest (*circa* 256 words) vocabulary. To teach the computer to respond to these few words, you have to train it to recognise your voice. There is still a long way to go before we have a HAL-like voice input, capable of decoding normal human speech.

As well as wondering whether a true voice input system will ever be possible, we might ask if voice input is really worthwhile at all. The implication that we might do away with writing in favour of speech would mean the end of all hard copy. Could we really do without our bits of paper?

Musical keyboards

The trendy present to have last year was a Casio VL Tone, which can be described as a calculator that thinks it's a piano! Fig 6 shows the layout. For £35 you set a device which plays tunes, a bit like an electronic organ. You can also record the notes you play, and play them back at will. At the flick of a switch it's a calculating machine, capable of

doing all the usual arithmetic.

There's nothing startlingly novel in all this, especially for the 'Space Invader' generation. What I find fascinating is the historical echoes it creates. Remember C Latham Sholes, the inventor of the qwerty keyboard? Prior to Sholes, there were many attempts to perfect a mechanical writing machine. One reason why many of them came to grief was the impossibility of making a machine capable of working with the proposed keyboard. For the Beethoven generation, the most common keyboard was the piano. For exactly the same reason that qwerty was adopted for computers, early (unsuccessful) inventors struggled to make a piano-style typewriter.

Technically, it's now simple to achieve the early inventor's dream — a piano-style keyboard — but, as yet, I know of no manufacturer who produces such a keyboard.

On the face of it, a typing piano with one letter on each key would not be very efficient, worse even than our old friend qwerty. But sound feedback in the form of musical notes could be very helpful. Sound registers with the brain most effectively — have you ever played *Space Invaders* with the sound off? The beeps are an essential feature in creating the excitement. In the same way, musical typing could be a boon to typists of all levels.

One aspect of piano playing which is markedly different to typewriting is the number of notes/letters struck simultaneously. In typing, the letters are hit one after the other: an essential requirement for real-time mechanical typewriters. On the piano, notes are usually struck together, in the form of chords. Taken together with the Microwriter technology of simultaneous key pressing to produce letters, perhaps there is the germ of a *genuine* learn-to-play-the-piano-and-type machine. I await future developments.

Conclusions

Qwerty has been with us now since 1873. After dominating the keyboard for 111 years, perhaps the reign of qwerty is drawing to a close. Who knows, we may soon be learning to type and play the piano at the same time!

END

We've just won an award for blowing

away the cobwebs.

You know the story, the Micro you thought would give endless hours of fun soon becomes a five minute wonder. You get bored and dump it on the shelf to gather dust.

With the introduction of Micronet 800 you now have access to a vast mouth-watering menu of facts, figures and fun.

If we said it was a major breakthrough in microcomputer technology we wouldn't be going over the top.

Just recently at the Which Computer Show we picked up the prestigious RITA award for Systems Innovation of the Year.

RITA is the 'Oscar' of the computer industry. Judged and sponsored by the major forces in related institutes, associations and publications.

Incredibly all it costs is just a pound a week to take up a subscription to the Micronet system. Plus, for most of you, a local telephone call whenever you want to connect up.

Then you've got 30,000 pages at your fingertips, including Computer News Flashes, all that Prestel has to offer, and Micronet's SwapShop. Where you can buy anything from joysticks to second-hand computers.

Interact with our daily news update. You can even take over the world; competing against hundreds of other subscribers on the system, in our 'Starnet' game.

If we haven't won you over with that then try downloading our wide selection of free games and other tele-software.

Naturally, you can run household accounts, manage businesses, talk to other subscribers nationwide using the system.

The list is endless and so is the fun.

The only addition you need to connect with Micronet 800 is a modem unit.

Apart from that all you'll want is a pen to fill in the coupon for more information. Then we'll have you linked up in no time.

Before the dust settles, in fact.

Please send me the full facts about Micronet 800.

ACTUAL APPLE II PRINTOUT USING GRAPPLER+ AND EPSON MX100

With The
Grappler+
Printer Interface

 **Orange Micro**
inc.

THE GRAPPLER+ The Most Intelligent Apple® Printer Interface

The Grappler+ has become the first name in intelligent printer interfacing, with nearly 150,000 units sold worldwide. The newly revised Grappler+ has over 27 built-in text and graphic features, including support for the Apple IIe 80-column and double Hi-Res screens and special graphic dumps for Epson's new printers.

The Grappler+ is compatible with most popular dot matrix printers with a simple flip of a switch. Printers supported include Epson, Star Micronics, Okidata, Apple DMP and more. There is also a Grappler+ for IDS printers, with full color printing abilities. For quality, performance and compatibility, the answer is the Grappler+.

THE BUFFERBOARD

Ask your dealer about the economical Bufferboard. Your current system can now be upgraded to include up to 64K of buffering.

Epson is a registered trademark of Epson American, Inc.
Apple is a registered trademark of Apple Computers, Inc.

© Orange Micro, Inc. 1982

All rights reserved.

NEW! THE BUFFERED GRAPPLER+ The most powerful Apple Printer Inter- face you can buy.

All the features of the standard Grappler+ now merged with an expandable printer buffer. The Buffered Grappler+ will store up to 20 full pages of text data, freeing your Apple for its next task. Make the most of your Apple and printer with the Buffered Grappler+.

NEW! THE ORANGE INTERFACE

Over 15 built in text features at a budget price. The Orange Interface will work with most all parallel printers, and includes such features as text screen dumps, margin sets, page lengths and more. For real text power, it's the Orange Interface.

Sharp contrast!

Maurice Hawes compares the Sharp MZ-80A with its predecessor, the MZ-80K, and provides upgrade tips and some helpful routines to improve performance.

The MZ-80A is laid out like the MZ-80K, but with a much improved keyboard. There are still one or two irritating features; in particular, the absence of a SHIFT LOCK key and an ALPHA LOCK facility. To stay in lower case it is necessary either to hold down a shift key, or do CTRL 'A'. Another CTRL 'A' will unlock the shift. A 'CR' will unlock the shift under SA-5510, but will not do so under SP-5025 or any of its extensions, without a special modification (see below). On the whole, the procedure is rather cumbersome because when the lock is in operation the whole keyboard is shifted. This means that the number keys in the top row produce their shifted symbols, and all the cursor keys produce the opposite of what you would expect.

The GRPH key toggles into and out of the graphics keyboard mode. This works very well and gives an excellent range of graphics characters from the keyboard. As with the MZ-80K, however, not all the characters in the machine's so-called 'ASCII' set are available from the keyboard. Those that are available are not always the same as on the MZ-80K.

Sharp has done nothing to clear up the confusion caused by its idiosyncratic character and display sets on the MZ-80K. The MZ-80A 'ASCII' set is non-standard and the display codes are different from the 'ASCII' codes. As neither set is exactly the same as on the MZ-80K, you may have some problems on this score when converting programs from the K to the A.

One of the selling points of the MZ-80A is that you can have a double-size memory area devoted to the screen and scroll the display around in this area. This could be useful, but I have found that the display sometimes becomes jumbled or disappears altogether when running under 'K' type interpreters in this mode. Fortunately, it is possible to switch the machine so that its screen memory map is the same as the MZ-80K's.

However, the double screen-handling routines do give rise to other problems. In the 'A' VRAM mode, the displayed part of the memory does not always start at D000H. To make room for the extra pointers needed by the

more complex screen system, such as PAGETOP at 117D-EH, the 40/80 line pointers (48 of them) are stored as bits in six locations, instead of being stored as 24 bytes in 24 locations as in the 'K' mode. This means that any screen-dumping routine which works in the 'K' mode may not work in the 'A' mode, and vice-versa. Sharp has fallen into its own trap here — the new COPY/P1 command in Basic SA-5510 (not available in SP-5025) does not work on the MZ-80A when it is switched to its 'K' VRAM mode, because it picks up the 'address' of the first screen location from 117D-EH. In the 'K' mode, this is occupied by line pointers!

There are fairly simple solutions to the shift lock and screen dump problems. The shift lock flag (00 for the upper case and FF for the lower case) is stored in the monitor work area at 118FH. The appropriate value loaded into this location in a machine code program, or POKEd by Basic into decimal location 4495, will shift the keyboard permanently, until the flag is reversed.

As far as screen dumping is concerned, a routine which dumps from D000H will work successfully in the 'K' mode, and will also work in the 'A' mode providing that the display concerned is to a clear screen and has

not been scrolled. I have even managed to get a routine working which picks up the 40/80 line pointers in the 'K' mode and sends full 80-column lines to the printer where these appear as two lines on the screen. This would be very difficult in the 'A' mode due to problems locating the correct 'bits' in the line pointer buffers.

If you wish to modify the COPY/P1 command in SA-5510 so that it always dumps from D000H, change the code at 33C6-33C8H from 2A 7D 11 to 21 00 D0.

MZ-80A monitor ROM (SA-1510)

On account of the different keyboard layout and the more sophisticated method of handling the screen memory, the monitor code for the MZ-80A is significantly different to that used in the MZ-80K (SP-1002). Nevertheless, there is a lot of built-in compatibility in this area, thanks to Sharp's method of routing calls to the most frequently used routines via a jump table which is in the same location in both monitors. In this way, most calls to the monitor will be intercepted by this table and directed to the correct code, whichever monitor is being used. This means that large parts of a machine code program written for an MZ-80K will be suitable

The MZ-80A's big selling point: a double size memory area devoted to the screen.

Cramped and unergonomic keyboard on the MZ-80K

for an MZ-80A, and vice-versa.

However, problems may arise when calls are made directly to monitor routines which are not in the table. In such cases there is some chance either that the routine does not exist in both monitors, or that it does exist in both monitors but not at the same location. The handbook provided with the MZ-80A (a very much better publication than the one provided with the MZ-80K) is a considerable help, as it contains a complete listing of the SA-1510 monitor code and a lot of other useful information on the layout and coding of the keyboard. Armed with this handbook and the listing of SP-1002 (which is still available), I have been able to solve individual problems. Some examples are given below, which illustrate the sort of problems that occur.

There is one other problem with SA-1510. The PRNT routine, called at 0012H, does *not* behave as stated on p125 of the MZ-80A handbook. Most of the codes in the range 00-20H are treated specially, and codes in the range 60-68H produce video control effects instead of graphics! Some of the implications are discussed below as they arise, but this appears to be a hardware error.

Monitor/Disassembler BA00

This very useful program, by Tanswell, runs without any modification on the MZ-80A, but with the following rather disconcerting results:

- Screen locations which should be blank are filled with curly brackets.
- In the 'D' command sequence, any response to the OPTION request other than 'T' reverses the video display.
- The disassembler listing scrolls so fast that it is impossible to read.
- Any line of disassembled code containing an instruction in the range 60-68H will upset the display; for example, a complete line will disappear altogether if it happens to contain the instruction 68H !!

The curly brackets arise from one of the changes in the MZ-80A 'ASCII' set. The solution is to change the code at BBFAH from 80H to 20H.

The video reversal is due to a routine which sends 00 to the screen if the key pressed is not 'T'; on the MZ-80K this prints a blank, but on the MZ-80A it reverses the display. The remedy is to change the code at BE9B from 0B to 0C.

Faster scrolling is normal on the MZ-80A. My solution here is to build in a delay routine to cause a pause between the lines of code as they are sent to the screen. I chose to make room for this by shortening the error message in the printer routine, which is at CD34H. The code is as follows:

CD34	DB 4EH, 4FH, 20H, 50H, 54H, 52H, 0DH; 'NOPTR'	
CD3B	PUSHHL	E5
CD3C	LDHL, 2000	210020
CD3F	DECHL	2B
CD40	LDA, H	7C
CD41	ORL	B5
CD42	JRNZ, CD3F	20FB
CD44	POPHL	E1
CD45	CALL 0006	CD0600
CD48	RET	C9

The delay may be altered by changing the value loaded into HL at CD3D-EH, but I found 2000 to be about right. The routine above should be called at BD16H. Change the code there from CD 06 00 to CD 3B CD.

Characters in the range 60-68H do not upset the screen display on the MZ-80K, but they do on the MZ-80A. There is no room for code to cut them out exclusively, so I settled for replacing all codes below 20H and above 5FH by apostrophe marks. The changed section of code is as follows:

BCF6	CP 20H	FE20
BCF8	JRC, BCFE	3804
BCFA	CP 60H	FE60
BCFC	JRC, BD00	3802
BCFE	LDA, 27H	3E27
BD00	CALL BB72	CD72BB

With the above changes, Monitor/Disassembler BA00 works perfectly on the MZ-80A, and I used it to research all the information here. The effects of

characters 00-1FH and 60-68H, when sent to the screen, are discussed in more detail in the next section.

Basic interpreters on the MZ-80A (SA-5510)

The most surprising feature of SA-5510 (supplied with the machine) is its size. It has very few extra commands compared with SP-5025, yet the start of the Basic source text is far higher — 505CH as against 4806H in SP-5025. Closer inspection reveals that Sharp has followed the pattern of SP-5025 by including a large unused area, which is presumably intended for future expansions. The interpreter code ends at 4231H; the work area does not begin until 4900H. Thus the unused area is 06CEH bytes long — slightly more than in SP-5025. Should you ever want more room than this for extra routines, the address 505C is stored at the following locations:

18B4.1958 1AC8 1AE2 1B14 1B1C 1C7E
1EC2 2D44 2F24 303C 3042 (All in hex)

One new feature of SA-5510 is a special routine, called at 11FDH, which copies the interpreter to tape but replaces itself with a C9 (RETURN) in the process. Thus copies cannot be made from copies.

The extra commands are AUTO, CHARACTER\$, COPY/P1, CSRH, CSRV, CURSOR, PAGE/P, SPACES\$ and STRING\$. Full string comparisons are implemented, though the routine treats length before content and therefore will not give a true alphabetic sort unless all the compared strings are padded out to the same length. The COPY/P1 command will not work with the machine in the 'K' VRAM mode, as explained above.

Some of the new features of SA-5510 are not fully explained in the handbook, and others are not mentioned at all. The most useful of these is the facility to send control codes using CHR\$(0)-(31). However, as these use the SA-1510 routine at 0012H, there are undocumented effects in many cases when such characters are sent to the screen, as shown below:

CHR\$(0)	—	REVERSE VIDEO
CHR\$(1)	—	PRINTS RIGHT ARROW
CHR\$(4)	—	SCROLLS DISPLAY UP ONE LINE (IN VRAM MODE 'A' ONLY)
CHR\$(5)	—	SCROLLS DISPLAY DOWN ONE LINE (IN VRAM MODE 'A' ONLY)
CHR\$(16)	—	PRINT DOWN ARROW
CHR\$(17)	—	CURSOR DOWN
CHR\$(18)	—	CURSOR UP
CHR\$(19)	—	RIGHT CURSOR
CHR\$(20)	—	LEFT CURSOR

CHR\$(21) — HOMECURSOR
 CHR\$(22) — CLS
 CHR\$(23) to CHR\$(30) PRINT VARIOUS
 ODD GRAPHICS CHARACTERS

Characters omitted from the above list print a blank on the screen.

Linked with the above, CTRL Q to CTRL V also have undocumented effects. These are CURSOR DOWN, UP, RIGHT, LEFT, HOME and CLEAR SCREEN in that order.

CHR\$(96) — CHR\$(104) also produce undocumented effects, as follows:

CHR\$(96) — DELETE LAST CHARACTER
 CHR\$(97) — INSERT FOLLOWING CHARACTER
 CHR\$(98) — CHANGE TO ALPHA MODE
 CHR\$(99) — CHANGE TO GRAPHICS MODE
 CHR\$(101) — REVERSE VIDEO
 CHR\$(102) — CARRIAGE RETURN
 CHR\$(103) — SCROLLS DISPLAY UP ONE LINE (IN VRAM MODE 'A' ONLY)
 CHR\$(104) — SCROLLS DISPLAY DOWN ONE LINE (IN VRAM MODE 'A' ONLY)

Since the 'ASCII' table on p210 of the MZ-80A handbook shows that codes 60-68H are meant to produce graphics characters, it would appear that some, if not all, of the above effects are unintentional. Moreover, as the effects stem from the SA-1510 monitor, they will affect all types of program (as has been seen already with Monitor/Disassembler BA00); the detailed discussion is put here only because SA-5510 demonstrates all the points very conveniently.

Overall, SA-5510 is a definite improvement over SP-5025, but still has to be classified as rather limited for its size. The most obvious omissions are RENUMBER and APPEND; and the data filing routines are still as SP-5025, and are therefore very slow compared with those in some other interpreters available. Furthermore, machine code segments written to run under SP-5025, and calling routines from it, will not run under SA-5510 because those routines, even if they exist in SA-5510, will be in different locations. This problem can only be solved by referring to complete listings of both interpreters, and I shall not attempt to deal with it here.

SP-5025

The SP-5025 interpreter, written for the MZ-80K, works satisfactorily on the MZ-80A. It is useful to have SP-5025 available on the MZ-80A, to run programs written for the MZ-80K, and may also be useful when memory space is at a premium. SP-5025, with the extensions written by Gladman, also works

without modification. Extended SP-5025 may be used in place of SP-5025, and is more versatile.

Speed Basic

Speed Basic contains several calls and two conditional jumps to the monitor which are not correct on the MZ-80A. Some are to routines that no longer exist, and some are to routines that have been moved. The most obvious problem is caused by a small addition to the keyboard-handling code, which makes a conditional jump to a monitor routine that has been moved. This means that the moment you attempt to write *anything* from the keyboard after loading the interpreter, it crashes! You can't even type BYE to get back to the monitor!

Fortunately the MZ-80A has a reset switch, so if you load Speed Basic and then immediately press RESET to get back to the monitor, you may then load another program; for example, Monitor/Disassembler BA00 by Tanswell, modified as explained above to make the following changes:

1 At 3E19-3E1BH, change C2 DE 0F to C2 E5 0E. This is the conditional jump in the keyboard-handling code referred to above, to a POPPER routine.

2 At 41D9-41DBH, change CA 62 0A to CA 5F 03. This is in the code for DUMP and all it does is jump to the monitor to pick up POP HL:RETURN!

3 At 3DE8H, change 7C to 20. This puts the PAUSE control for LIST, DUMP and SLOW on to the Space Bar (7C is not available from the 'A' keyboard).

4 Rewrite the SPEED DATA filing routine at 43C2-43FFH, by changing all the Monitor addresses below, noting that some occur twice:

Change 04D4 to 04CB
 Change 0733 to 071A
 Change 06B2 to 06A3
 Change 0563 to 0552
 Change 0767 to 0D3E (twice)
 Change 0780 to 0D57 (twice)
 Change 0466 to 0461

5 The following routine needs to be put into some space location, and called at 4179H and 419FH:

C5 D5 E5 1A BE 20 0B 05 28 08 FE 0D 28
 04 13 23 18 F1 E1 D1 C1 C9

It replaces the SP-1002 routine at 0180H, which has no counterpart in SA-1510, and is used by the new keyword handler, and by PRINT @.

If you are using the standard Sharp printer routine, you can shorten the long error message at 3CE0H to 'PTR OFF' and put the above code at 3CE8H.

If you are using a special printer routine, you may be able to find room in it to do something similar; otherwise, raise the start of the Basic source text to, say, 4850H (PCW, March '83, pp178-81) and put the code at 4806H. Wherever you put it, don't forget to call it at 4179H and 419FH!

Those are all the changes. But before you take a security copy of the modified interpreter, check for the known 'bugs' in Speed Basic, at 1BC9-AH (which

should contain 57 45) and at 40C2H (which should contain 5C).

Speed Basic on the MZ-80A is quite a powerful tool for its size, since the features it lacks compared with, say, Basic Plus 2 are mostly provided by the MZ-80A itself. Furthermore, the fast data filing routine as rewritten above could be used with other interpreters on the MZ-80A.

Basic Plus

This package, by Hearn, contains a major rewrite of the MZ-80K keyboard-handling routine which will not work on the MZ-80A and would be very difficult to modify. If this routine is cut out by reverting to the MZ-80A user handler at 0003H, only two other modifications are necessary: one to cover a call in the Basic Plus 2 error-handling routine which is to a routine that does not exist in the 'A' monitor; and another to direct those keywords that are not applicable to the 'A' to a suitable error message.

You may load Basic Plus on the MZ-80A and it will not crash. However, if your copy has been recorded (as mine was) with the REPEAT function 'on', you will not be able to enter anything from the keyboard. Do BYE or a reset, and then load the Monitor/Disassembler and carry out the following modifications:

1 Check the flag at 3DEDH, which should be 00. Alter it if necessary.
 2 At 1ED4-6H AND at 4064-6H, change CD 90 40 to CD 03 00. This reverts to the normal MZ-80A keyboard handler.

3 To sort out the error-display routine, two steps are required:

a) At 4277-9H, change the code from CD 99 00 to CD 20 43.

b) At 4320H, add new code as below:

4320	PUSH AF	F5
4321	PUSH BC	C5
4322	PUSH DE	D5
4323	LD B,05H	0605
4325	LD A,(DE)	1A
4326	CP 0DH	FE0D
4328	JP Z,0EE6	CAE60E
432B	CALL 0BB9	CDB90B
432E	CALL 096C	CD6C09
4331	INC DE	13
4332	DJNZ 4325	10F1
4334	JR 4323	18ED

This relocatable code replaces the SP-1002 routine at 0999H, which has no counterpart in SA-1510. The area 431B-43FFH is spare in Basic Plus.

4 Two steps are necessary to direct unwanted keywords to an error message:

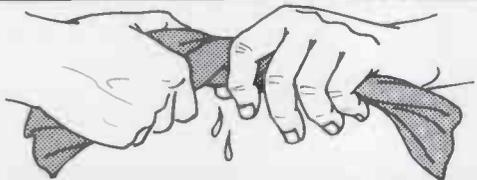

a) Change the code to F03F at each of the following pairs of locations: 3EDC-DH, 3EDE-FH, 3EE0-1H, and 3EEA-BH.

b) Change the message at 3FFC-4013H to:

'Not on the MZ-80A!'

This version of Basic Plus offers AUTO, display of ERROR position, PAUSE on listing, LINK ('Programe') and CLS. It is well worth incorporating in an 'A' interpreter, but of course it is

At The Byteshops we've helped countless companies of all shapes and sizes improve their efficiency by the introduction of microcomputers. Generally these are required to perform routine business tasks, but however similar the application, we invariably find that no two customers have *exactly* the same requirements. When you come to us you'll notice our staff are especially interested in finding out what jobs you require the computer to do – both now and in the future. We then tailor a system including not only the hardware but the software and the peripherals to meet your individual needs. We believe this is the only sensible way to avoid a lot of frustration, disappointment and unnecessary expense. We're also totally committed to after sales service including advice and maintenance plans. You'll find a number of top, evaluated, 'ready to run' systems on this page to show comparative costs. However, we won't sell one to you – unless you force us – without asking a few questions first! Pay us a visit soon.

THE WINDOW CLEANER WHO CAN NOW SEE THINGS CLEARLY

Windowgleam Co. Ltd are a thriving specialist hotel and industrial cleaning company who are, in a number of ways, typical of many business customers who contact us. They purchased a Comart Communicator System four years ago to exclusively look after the payroll for 30 employees. Previously they had been using an outside bureau and the cost savings were immediate. They now employ over 100 staff and also use the Communicator for Word Processing and Invoicing. They are now considering adding an Accounting Suite and Financial Planning to further increase their efficiency. Initially they had little prior knowledge of computers and purchased from The Byteshop London because the staff were "very helpful, professional and gave them confidence".

COMART COMMUNICATOR

With 15 models in the range, there is almost certainly a model which is exactly right for your requirements. Communicators are competitive with the best desk tops as a single user system, are perfect for companies planning to expand and for multi users, nothing else compares. Because Communicator's are modular, you can add-in extra capacity or add-on storage and back up units to keep pace with your future needs. There's a choice of 8 or 16 bit single and multi user systems with up to 1 megabyte of memory and 40 megabytes of data storage.

IBM PC'S WERE A SHOT IN THE ARM FOR CYANAMID

Cyanamid of Gt. Britain Limited, one of the fastest growing companies in the U.K., may not be a name familiar to most people but many will have unknowingly benefited from their Lederle, Davis & Geck ranges of pharmaceutical and surgical suture products. As a company with an annual turnover of £100M, they also manufacture animal and plant health products as well as speciality chemicals used for example in effluent treatment.

Alongside an extensive range of real time systems running on an IBM 3083 Mainframe, there have been several departmental stand-alone applications developed on IBM PCs. These include Financial Modelling, Cash Management, and Tax/Dividend Analysis which previously had been classic 'pencil and rubber jobs'.

Cyanamid have used The Byteshop as their sole supplier of IBM PCs and have been pleased with the after sales service, which was not solely confined to hardware. "The staff have also offered practical solutions to problems and were very good at sorting out software and technical queries – as well as being a useful source of general information and consultancy."

DISKETTES

Full range of Dyan 5 1/4", 48 & 96 TPI soft & hard sectored single/double sided & double density diskettes plus 8" IBM 3740 format & PULSAR 3 1/2" Microfloppies stocked. From £1.70 ea. (Normally sold in boxes of 10)

PROGRAMMERS CORNER

Wide selection of programming languages, plus utilities and tools from Microsoft, Digital Research, Microfocus, Xitanj & Pulsar incl. Basic, Fortran, Cobol, Pascal, Assembler, C & PL1.

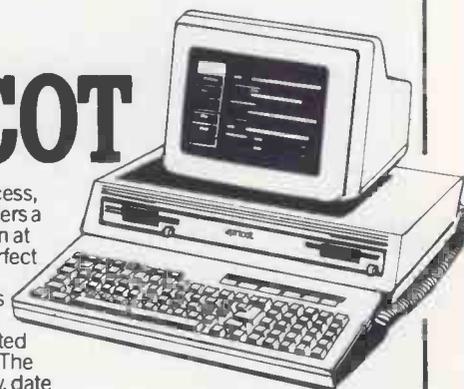

THE BYTE SHOPS - W ON GETTING THE R

ACT APRICOT

Already an outstanding success, the transportable Apricot offers a comprehensive specification at very low cost, making it a perfect solution for the small businessman. Noteworthy is the 'Microscreen', a two line LCD display with six associated keys on the main keyboard. The Microscreen can display day, date and time; double as a calculator; provide labelling selection; serve as an information entry line or act as a display window when a full monitor is not available. Other features include a 'mouse trap', 256K byte memory expandable to 768K b and Sony 3.5" disk drives offering 315K bytes of storage each. Included in the price are three operating systems MS DOS 2.0, CP/M-86, Concurrent CP/M-86 together with Microsoft and Personal BASICS, Supercalc, Superplanner and Asynchronous File Transfer Software.*

HERE YOU CAN COUNT ON A LIGHT COMPUTER.

IBM/PC

As one of the largest authorised IBM dealers in the country, you can come to us in complete confidence that we will not only sell you the basic machines but the software, peripherals and technical support you need to get the best out of them. The IBM PC's versatility means that it's equally at home in a small business or as a stand alone desk top in a large corporate company linked to a main frame. Should you require extra performance or speed, the IBM PC XT is an obvious choice.

4000H and run the subroutine in that form.

The code will then sit at 8D14H, and will make sense apart from the first hex digit of any location reference within the program, when disassembled there.

Problems

Keyboard and screen:

There are a few small residual problems when running 'K' type interpreters on an MZ-80A. They have already been mentioned in passing, but are discussed more fully below.

a) Shifted keyboard does not return to normal on 'CR'

This problem arises because the 'K' interpreters were not written to cope with this particular situation. It may be solved by inserting a very short routine at the beginning of the main Edit loop:—

1257	JP XXYY	C3YYXX
XXYY	PUSH AF	F5
+1	XOR A	AF
+2	LD (118F), A	328F11
+5	POP AF	F1
+6	LD A,(4565)	3A6545
+9	JP 125A	C35A12

The above routine is obviously relocatable, and may be put in any spare location, the appropriate address then going in at 1258-9H. This routine will work with any version of SP-5025 known to date.

In this connection it is worth reminding yourself that the value stored in 118FH when the keyboard is shifted is FF, not 01 as might have been expected from MZ-80K experience; and that location 1170H (4464D) stores the so-called KANA or graphics flag, the values of which are 00 (GRPH off) or 01 (GRPH on).

b) Display lost or muddled; INSERT jams up in first half of 80-column line.

These problems arose several times during my tests, but only when I was using a 'K' interpreter in the 'A' VRAM mode. In every case I was able to recover by jumping out of the program, switching to 'K' VRAM mode, and then jumping back in again. Clearly, the problem is caused by the different screen pointer storage systems refer-

available on the keyboard of the MZ-80A, compared with the MZ-80K. This means that in a 'K' program which requires the operation of graphics keys, you may have to change the code to find a suitable mode of operation on the 'A'. This comment applies to all types of program.

Interface unit and printer

The custom-built interface board is designed to be fed with +5V from pin 18 of the printer, though it can be modified to take +5V from the computer. It plugs straight into the MZ-80A slot. A modifier tape was supplied to enable the interpreter to send the correct ASCII

The least attractive feature of the MZ-80A package is its Basic interpreter. SP-5510 is just a little better than SP-5025, but that is hardly a recommendation, and the facilities offered by SA-5510 are very poor for its size. One can only assume that Sharp must have plans to offer more facilities in the space it has left unused. If it does not, it is hard to see the reason for the layout of this interpreter.

The advanced input routine given in Fig 1 improves any program very significantly. The ability to type in input strings up to 255 characters long, combined with the SHIFT LOCK toggle

'The MZ-80A is a pleasant machine to use, and its keyboard, though it has its weaknesses, is a great improvement over its predecessor, the MZ-80K.'

codes for lower-case letters, and control codes. This modifier will work with all the versions of SP-5025 mentioned above. Without the modifier (that is, running on the Sharp printer routine) the system worked correctly in upper case but could not deal correctly with lower case or control codes. With the modifier tape loaded, the system coped with lower case automatically, and with control characters by special code sequences. I had no trouble in using these to select printer character style and size, and to set various parameters such as tabs and form length.

Conclusions

The MZ-80A is a pleasant machine to use, and its keyboard, though it has its weaknesses, is a great improvement over its predecessor, the MZ-80K. As I expected, Sharp's superb tape system behaved perfectly during a month of very hard use, including a lot of data filing and re-loading. The 40-column video display was clear and steady; the double-screen memory system is a good idea, but it is not compatible with SP-5025 or its extensions, and raises problems when these interpreters are used, or when the machine is in the 'K' VRAM mode.

on one key and the disabling of CLS, HOME, BREAK and 'QUOTES' gives a professional feel to the machine. And fast data filing at about three times the speed of SA-5510 revolutionises one's approach to data handling.

Crystal Basic 3, when it appears for the MZ-80A, may well prove to be a strong competitor. My criticisms of Crystal Basic 3 on the 'K' were its lack of precision, and its lack of a numeric keypad facility. The 'A' has a numeric keypad. If Crystal Basic 3 for the MZ-80A turns out to offer higher precision, in addition to its already standard features of 'line input', fast data filing, a standard set of ASCII codes for lower case letters, and a built-in extended machine code monitor, it could be the best available. With all these features, the MZ-80A at its current price level is an attractive buy.

'K' machine code programs other than interpreters can be dealt with by the same general methods as have been used above to deal with interpreters and the disassembler. In principle, one must examine the code in detail to find any jumps or calls to the MZ-80K monitor which are not correct for the MZ-80A monitor. This sounds rather laborious, but in practice one soon builds up a list of addresses that are safe, and another list of addresses that are not, and the process then becomes relatively easy. Other minor changes, due to the different 'ASCII' and display codes or the slightly restricted range of graphics characters available from the MZ-80A keyboard will not be necessary very frequently, and will be quite straightforward in any case.

The interface card and modifier tape, supplied by Border Computing and Programming, offers an economical and convenient method of using a parallel-interface printer with the MZ-80A, if you are not considering other peripherals such as disk drives.

'In the course of changing the keyboard layout, Sharp has reduced the numbers of graphics and special characters available on the keyboard of the MZ-80A . . .'

red to above. The simple solution is to work in the 'K' VRAM mode whenever you are running under a 'K' type interpreter. I have the feeling that a software modification to cover this one could be difficult.

c) Keys not available on the MZ-80A

In the course of changing the keyboard layout, Sharp has reduced the number of graphics and special characters

Sharp seems to have got into a groove over its own private 'ASCII' set, and although one can see the point of compatibility with the 'K', it was an odd decision to make just a few changes rather than a clean sweep to the standard set. There appears to be a bug in SA-1510, which causes codes 60-68H to produce control effects instead of graphics when sent to the screen.

No.1136401

Mr. J. Radley,
Allfit Stationers,
12, The Hill,
Newtown,
Yorks.

12th Feb 1984

Dear John,

Just a quick note to let you know that our troubles are over. I've just discovered an amazing way to keep in touch with you in the future - it will also make my business much more efficient.

Last week I spent £195.00 on a computer program called DMS+. Sue typed your name and address on to disk, as well as all my other long-suffering clients. She added a few details about everyone, and now DMS+ will automatically write to you whenever I've got something important to tell you - such as a special offer, or a new product that you ought to know about.

DMS+ is a special program that combines a really easy to learn letter writing program with a marvellous record keeping program. It means that I can ask my computer to select all my clients who live in a certain area, or who specialise in certain markets, etc. Then it writes 'personalised' letters for me, and even prints the self adhesive labels. In fact, this letter was written by DMS+, and all I have to do is sign it! I'm going to use it for my club subscriptions, various management reports, VAT (it has it's own calculation program), and probably my stock file too.

Sue went on one of Compssoft's training courses the other day. She actually enjoyed learning DMS+, and tells me that if ever we outgrow DMS+ we can exchange it for another Compssoft program called Delta. This one costs £495.00 but by all accounts its the most powerful and sophisticated database on the market.

So be warned - you're going to find us a lot more efficient in the future.

Yours faithfully,

DAVID BROWN,
MANAGING DIRECTOR

P.S. DMS+ works on virtually any microcomputer. If you want to know more about DMS+ for your own use, ring Compssoft on Guildford (0483) 898545 and they'll send you a complete full colour guide.

Mammuthus Columbi

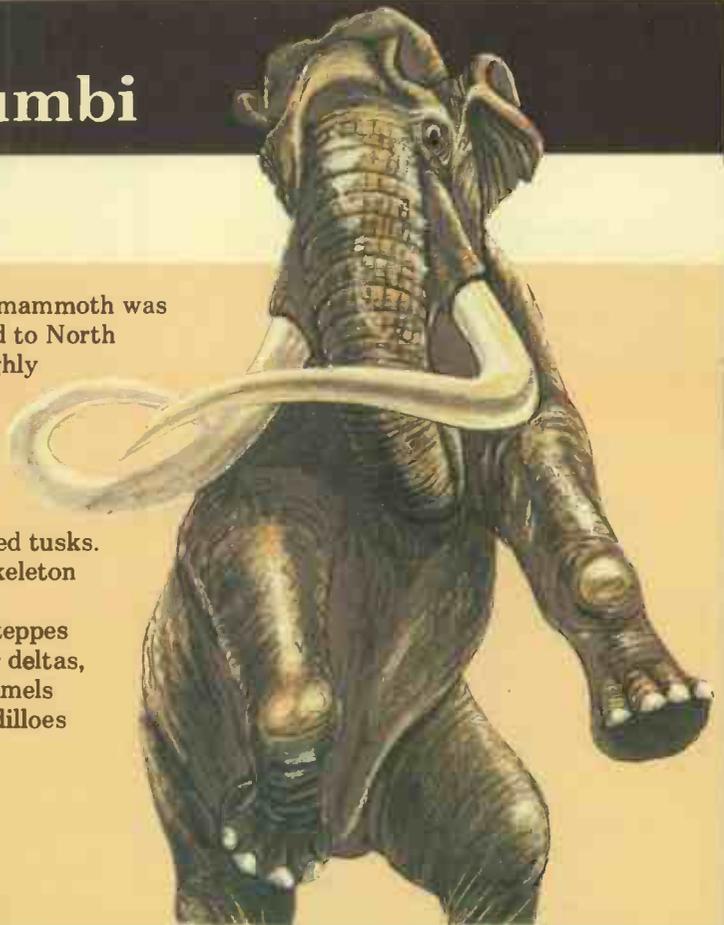

Circa 60,000 BC

Like the emperor mammoth, the Columbian mammoth was also a descendant of mammoths which immigrated to North America during the Irvingtonian time (which roughly approximates to the Holstein interglacial in Europe). It inhabited the south-eastern part of the USA (South Carolina, Georgia, Louisiana) and may have extended still further south into Mexico.

It was a large elephant, with curiously twisted tusks. The Amherst Museum (USA) possesses a whole skeleton found near Melbourne in Florida.

The Columbian mammoth inhabited warm steppes with meandering rivers, or the regions round river deltas, where it lived in the company of horses, bisons, camels (Camelops), steppe antelopes (Capromeryx), armadilloes (Glyptodon) and edentates (Northotherium).

It died out at the end of the Pleistocene.

Digivision
LEICESTER

Circa 1984 AD

Unlike the *Mammuthus Columbi*, DIGIVISION of Leicester have kept up with progress and remain very much alive. They have become known as the leaders in the field of data display monitors throughout the World, by their innovative design and manufacture.

The most recent additions to their extensive range are the 14" PC14 colour monitor and the 12" PM12 green screen monitor, designed specifically for the personal computer user in schools, in the home, in the office, wherever a personal computer is used.

Success of the DIGIVISION range of monitors is founded on a simple mechanical design combined with circuitry that provides high quality display performance with unrivalled reliability.

COMPSOFT

THE EVOLUTION OF DATABASE MAN

From the beginning of time man has been fascinated by his inability to solve even his simplest problems ...

As man's knowledge grew, so did his problems ... and so did his inability to solve them ...

And man's knowledge was vast. – And so were his problems. But he was no nearer solving them ...

From the beginning of **Delta**, man has been fascinated by his ability to solve even the most complicated problems quickly and effortlessly.

Delta is the most comprehensive and sophisticated database program on the market today. Faster and more powerful than ever before, Delta offers a unique 'three dimensional' file structure. Users can create their own records, sort, select, print reports, labels and print automatic personalised letters, do calculations, and link to other software including Lotus 123, Multiplan, Wordstar, Peachtext, etc. Users can design their own 'menu' of options, thus producing dedicated database systems. Delta is perfect for stock recording, personnel, parts files, clients records, brokers, libraries, Local Authority records, etc, etc, etc. Available for most business microcomputers with the PCDOS, MSDOS or CP/M operating systems, including the IBM PC, SIRIUS, APRICOT, XEROX, EPSON, WANG, and many more. Full colour guide, plus technical specification free on request on Guildford (0483) 898545.

The Panther

a superb printer at a printable price

The Panther has arrived. A fast, sleek, good looking printer from DATAc that's leaving other printers standing. Just look at the features that make The Panther the most exciting printer available today:

- Friction feed and tractor feed for varying paper widths.
- A Viewdata character set as standard.
- True one line buffer with 1152 Bytes.
- Precision printhead for sharp

quality printing and durability.

- Bi-directional logic seeking carriage.
- 4,000,000 character life ribbon cartridge.
- Centronics interface as standard.
- Compatible with the BBC Micro and most micros.

All this plus more for only **£278**, + VAT + p.p.

Place your order today. Complete the coupon and send to DATAc at the address below.

What the competition hasn't been waiting for.

Latest version of Forth for the BBC
(Is not rehased Forth 79 Code)

Unique Stack Display Utility

16k Eprom type 27128

Multi-tasking operating system
for Real-Time use.

Here's the Forth Eprom for the BBC Micro that makes all others out of date.

It's Multi-Forth 83 from David Husband who has built his reputation for Quality Forth products with his ZX81-Forth ROM, Spectrum Forth-I/O Cartridge and now New Multi-Forth 83 for the BBC Micro. This is not rehased Forth 79 Code, but a completely new version of the Forth 83 Standard. It's unique in that it Multi-tasks, and therefore the user can have a number of Forth programs executing simultaneously and transparently of each other.

Multi-Forth 83 sits in the sideways ROM area of the BBC along with any other ROMs in use. It is compatible with the MOS, and specially vectored to enable a system to be reconfigured. It contains a Standard 6502 Assembler, a Standard Screen Editor, and a Unique Stack Display Utility.

With this Forth, David Husband has provided the BBC Micro with capabilities never before realised. And being 16K rather than 8K is twice the size of other versions. Multi-Forth 83 is supplied with an

extensive Manual (170 pages plus) and at £40+VAT it is superb value. Order it using the coupon adding £2.30 p&p (£5 for Europe, £10 outside) or if you want more information, tick that box instead. Either way, it will put you one step ahead of the competition.

Please send me Multi-Forth 83 for BBC Micro. £40+VAT De-luxe System inc. Disc £80+VAT

A BBC WORD PROCESSOR TO REALLY TAKE ADVANTAGE OF YOUR DISC DRIVE.

SCRIBE is a word processor which frees the user from the limitations of computer memory. Now it is possible to create a single document with as many pages as the disc will hold. These are automatically swapped between memory and disc at the touch of a key without you even knowing it's happening. This means that your disc is being used in the way it was intended and not just as a fast cassette. Why go to the expense of buying a disc system and then use simple software really only designed for cassette?

The superb features include:

- All functions menu driven - no knowledge of the computer system necessary.
- Edit in 80 column mode (40 optional) see it as it's printed! INCLUDING UNDERLINING.
- Create up to 255 pages, right justify, word wrap, insert, delete, move, copy and centre.
- Edit Basic programs, produce and merge basic and text files.

Plus many, many more professional features.

SCRIBE comes in ROM with five minute fitting instructions, printer utilities on disc and a comprehensive manual. (Currently recommended for Acorn & Watford DFS)

PRICE £59.95 (incl. VAT) (Post and packing 60p)

AVAILABLE SOON - a superb database to integrate with SCRIBE or to stand alone. Create over 2000 records on disc. One record equivalent to a screenful of information. Find any record in 2 seconds. Format printer output using SCRIBE. Link screens etc. etc.

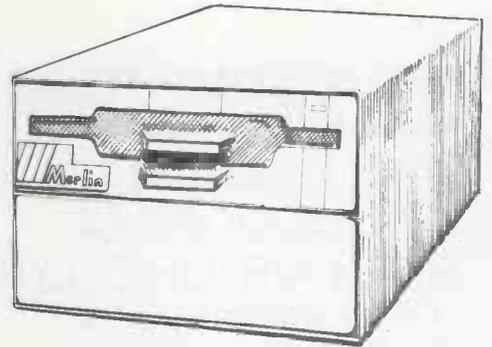

MERLIN DISC DRIVES

ABSOLUTE TOP QUALITY Shinon drives - aluminium chassis, head load light, band stepper motor, silent operation, latest half height dimensions. Guaranteed fully compatible with the BBC.

40 track, double density specification; systems disc containing formatting routine plus ADDBOOK - a superb disc based address book program. Create any size address file up to the maximum capacity of your disc. Also acts as a teaching example on how to write random access files. Comes with a highly comprehensive manual plus all cables and connectors. GUARANTEE ONE YEAR!

PRICE 100K single £182.50 (incl VAT) 200K dual £325.00 (incl VAT);
(Securicor delivery £8.00)

MERLIN REAL TIME CLOCK/CALENDAR

Now - highly accurate time and date continuously available on your BBC - timing not interrupted when computer is switched off.

- Battery backup, connects to user port.
- Resolution 0.1 sec.
- Generates interrupts 1/min, 5 sec, 0.5 sec.
- Handles leap years automatically.
- Day/week calendar, software included for clock display etc.

PRICE £39.95 plus VAT (Post & packing 30p)

S-LOGO

A superbly comprehensive version of this educational asset. This is a graphics version - each instruction controls the movement of a pen on screen. Each program produces a picture.

- Vocabulary of over 50 instructions.
- 20 pre-set shapes (sprites).
- Printer screen dump and Program listing.
- Super editor.
- Colour and scale choice.
- Error diagnosis.
- Use variables.
- Use BASIC expressions.
- Show results of calculations.
- Draw on compass-bearings, colour-fill, draw circles etc.

PRICE £19.95 plus VAT (Post & packing 25p)
Includes full Instruction Manual with Teaching examples.

New-Sinclair QL

There's no comparison chart,

The Sinclair QL is a new computer.

Not just a new Sinclair computer, but a totally new sort of computer – nothing like it exists anywhere.

It's not just a bit better than this, or a bit cheaper than that – it's a computer that's very hard to compare with anything. Just check the features below – and if you don't agree, take up the challenge at the end of the advertisement.

If you do agree, there's only one course of action you can take... get yourself a Sinclair QL at the earliest possible moment.

The Sinclair QL has 128K RAM. Big deal?

Several micros offer 128K RAM, or more, as standard. The 'What Micro?' table for December 1983 lists over 50 of them – but 40 of the 50 micros listed cost over £2,500!

The Sinclair QL offers you 128K RAM for under £400, and an option to expand to 640K. That's a lot of bytes to the pound!

The Sinclair QL has a 32-bit processor. Who else?

Under £2,700, nobody. Even the new generation of business computers, such as the IBM PC, are only now beginning to use 16-bit processors.

At prices like this, the Motorola 68000 family – widely regarded as the most powerful microprocessors available – will remain a luxury.

Yet with the Sinclair QL, the 32-bit Motorola 68008 is available for less than £400.

You can also be sure that the QL will not become outdated. 32-bit architecture is future-proof.

32-bit processor architecture, 128K RAM, and QDOS combine to give the QL the performance of a mini-computer for the price of a micro.

Exclusive: new QDOS operating system

No competition! QDOS sets a new standard in operating systems for the 68000 family of processors, and may well become the industry standard.

QDOS is a single-user, multi-tasking, time-sliced system using Sinclair's new SuperBASIC as a command language.

One of its most significant features is its very powerful multi-tasking capability – the ability to run several programs individually and simultaneously. It can also display the results simultaneously in different portions of the screen. These are features not normally available on computers costing less than £7,000.

Eleven input/output ports

QL ROM Cartridge slot

2 x Joystick ports 2 x RS-232

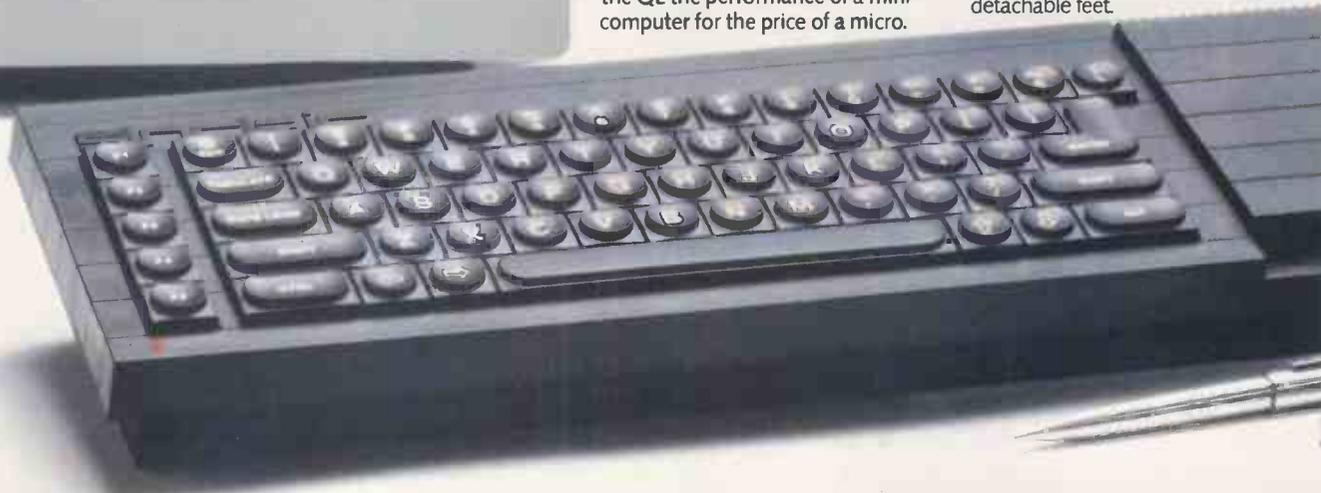

New professional keyboard

The QL keyboard is designed for fast input of data and programs.

It is a full-size QWERTY keyboard, with 65 keys, including a space bar; left- and right-hand shift keys; five function keys; and four separate cursor-control keys – key action is positive and precise.

A membrane beneath the keyboard protects the machine from dust (and coffee!), and for users who find an angled keyboard more comfortable, the computer can be raised slightly at the back by small detachable feet.

£399

Because there's no comparison!

Advanced new friendly language – Sinclair SuperBASIC

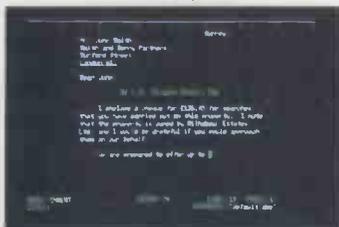

The new Sinclair SuperBASIC combines the familiarity of BASIC with a number of major developments which allow the QL's full power to be exploited.

Unlike conventional BASIC, its procedure facility allows code to be written in clearly-defined blocks; extendability allows new procedures to be added which will work in exactly the same way as the command procedures built into the ROM; and its constant execution speed means that SuperBASIC does not get slower as programs get larger.

Included – superb professional software

The suite of four programs is written by Psion specially for the QL and incorporates many major developments. All programs use full colour, and data is transportable from one to another. (For example, figures can be transferred from spreadsheet to graphics for an instant visual presentation.)

Word-processing

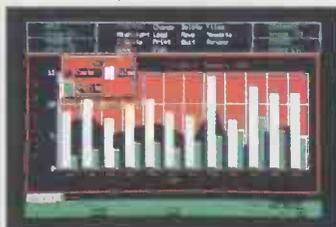

Certain to set a new standard of excellence, QL Quill uses the power of the QL to show on the screen exactly what you key in, and to print out exactly what you see on the screen.

A beginner can be using QL Quill for word-processing within minutes.

QL Quill brings you all the facilities of a very advanced word-processing package.

Business graphics

QL Easel is a high-resolution colour program so easy to use you probably won't refer to the manual! It handles anything from lines, shaded curves or histograms to overlapping or stacked bars or pie charts. QL Easel does not require you to format your display before entering data; it handles design and scaling automatically or under your control. Text can be added and altered as simply as data.

Spreadsheet

QL Abacus makes simultaneous calculations and 'what if' model-construction easier than they've ever been. Sample applications are provided, including budget-planning and cash-flow analysis. QL Abacus allows you to refer to rows, columns and cells by names, not just letters and numbers. Function keys can be assigned to change a variable and carry out a complete 'what if' calculation with a single key-stroke.

Database management

QL Archive is a very powerful filing system which sets new standards, using a language even simpler than BASIC. It combines ease of use for simple applications – such as card indices – with huge power as a multi-file data processor.

An easy-to-use labelling facility means that you don't have to ask for your file by its full name – a few letters are enough.

New – the Sinclair QLUB

The QLUB is the QL Users Bureau. Membership is open to all QL owners. For an annual subscription of £35, QLUB members receive one free update to each of the four programs supplied with the QL, and six bi-monthly newsletters. Sinclair has also made exclusive arrangements for QLUB members to obtain software assistance on QL Quill, Abacus, Archive or Easel by writing to Psion.

The Sinclair QL challenge

If you're seriously considering any other computer, post the coupon for a blow-by-blow comparison. We'll take a published comparison chart for the machine you're considering (not one we've created ourselves) and give you the Sinclair QL figures, detail by detail.

Take action today!

To order by mail

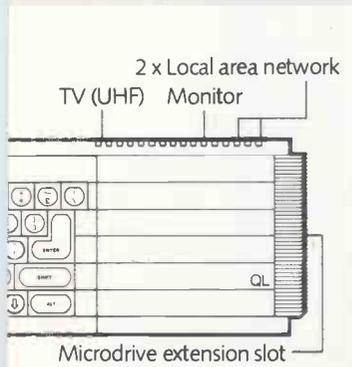

– complete the coupon and send it to the FREEPOST address below. For credit card holders it may be possible to extend your credit limit. Full details will be sent when we acknowledge your order.

To order by telephone

– phone Camberley (0276) 685311; – have your credit card (Access, Barclaycard, Trustcard) number ready. It may be possible to extend your existing credit limit. Please ask our telephone staff for more details. Please do not use this number for other enquiries.

For more information

Phone Camberley (0276) 686100, or use the coupon to get a QL brochure. Due to demand, delivery may take more than 28 days. Your order will be acknowledged immediately with an expected shipment date. Remember that Sinclair offers a 14-day money-back undertaking.

Two 100K microdrives built in

The Microdrives for the Sinclair QL are identical in principle to the popular and proven ZX Microdrives, but give increased capacity (at least 100K bytes each) and a faster data-transfer rate. Typical access speed is 3.5 seconds, and loading is at up to 15K bytes per second. The Sinclair QL has two built-in Microdrives. If required, a further six units can be connected.

Four blank cartridges are supplied with the machine.

BY NEXT YEAR, EVEN IBM MIGHT HAVE ONE.

This is the Sanyo MBC 555.

The first high performance business machine of its kind to offer the compatibility and versatility of a true 16-Bit business micro for less than £1,000 + VAT.*

A revolutionary price for a revolutionary machine because with 128K RAM expandable to 256K RAM, both the twin drive MBC 555 and the single drive MBC 550 have an 8 colour graphics capability (640 x 200 dot resolution), an 8088 CPU for high-speed processing, a Centronics parallel printer interface and free bundled software.

Add to this the support of a compatible

*EXCLUDING MONITOR.

range of peripheral equipment, a comprehensive selection of software and a price tag of less than £1,000 + VAT (MBC 550 £749 + VAT) and you'll probably understand why this package is so attractive.

But the real beauty of the MBC 555/550 series is that you don't have to wait until next year for them.

If you want to see these two innovative machines from Sanyo's proven range of Micro phone LOGITEK on 0257 426644 or STC on 0279 26777 or ICARUS on 01-485 5574 or clip the coupon and we'll show you how to stay one step ahead.

Information Management

Set up data files and store records simply and efficiently with this new database from BPI of Texas. Kathy Lang investigates.

Information Management from BPI of Austin, Texas is distributed in this country by Thames Computer Systems and is available on the IBM and Wang PCs, with other computers planned. It is based on a package widely available in the US on the Wang PC, where it has the name AIMS+Plus and is described as an applications generator. Information Management is exceptionally easy to use for a package with such a wide range of facilities, and for a while I almost forgot my dislike of menus. The good points include intelligent use of the IBM PC's highlighting capabilities and consistent use of its function keys.

The basic unit of information within Information Management is a record within a file: records are stored in a fixed format and use a fixed amount of space no matter what they contain. You can set up a data file very simply and the structure can be modified later. Records can be retrieved through any field, or a combination of fields, using some easily constructed rules. Reports are either the usual columnar type, or sets of repeated documents such as personalised letters. Facilities for combining files are limited to the reporting stage.

Information Management is distributed as a set of three program disks and a sample data disk, for the benefit of users with single-sided PCs; those with double-sided drives can combine the three program disks into two, with one being used for designing files and reports and the other for all ordinary data operations. Information Management distinguishes between the 'manager', who will carry out this design work, and who has one password, and

the 'operator', who needs a separate password to gain access to data. Each file has its own operator and manager passwords.

The main limits imposed by Information Management are shown in Fig 1. The most noteworthy is the limit on the length of a field: you must not exceed 76 characters for the combined length of the data field and its associated 'description', or name. Another important limit on floppy disk systems is that there's no way to use both drives when changing the structure of a file, so in practice you are limited to a file half the size of the capacity of one disk. On the double-sided drives I used for the Benchtest, I got close to this limit with a file containing 1000 records, each of 153 characters.

Setting up a data file for simple applications is a very straightforward

task. The minimum information you must specify is the name and the size of each field. If this is done, then all fields are assumed to be alphanumeric; that is, you won't be allowed to do arithmetic on them, and records will be displayed in the order entered. The layout of the record on the screen can be specified by using a simple version of the paint-a-screen approach: the field name and format are displayed, and the cursor keys are used to move around a picture of the format to the appropriate place on the screen. The Page Up and Page Down function keys are used to move between screen pages.

You may define up to nine highlighted fields, which is a very useful feature. Whenever records are displayed, they appear one per line with just the highlighted fields on the screen.

What is a Database?

If you want to process information which has some form of structure (such as accounts, personnel records, job costing), you can use an off-the-shelf package which will probably not be quite what you want, and hard to adapt. Alternatively you could write a program specially, which will cost a lot in time and money and still contain errors. The third possibility is to buy a data management package. These packages allow you to store, process and report on structured information.

Most of the cheaper packages are based on a traditional card index, where each card or set of cards about

one person, order or item of stock is stored in a single record, and a group of like records are stored in a file (corresponding to the index card box). Each item which would be recorded on the card — name, job title, part number, stock quantity — is stored in a field within the record. Usually, each record within one file must have the same number and size of fields — they are 'fixed length fixed format' records.

Some more sophisticated packages can relate several files together, so that you can process groups of unlike but related records. The costs range from £155 for a simple card-index-like system to nearly £1000 for a complex package which can be used by several people at the same time.

Fig 1 Summary of facilities

This is a good way to see a group of records together without overwhelming yourself with information. You have to decide these fields at the start in the file design phase, but can amend your selection later quite easily.

At the design stage you may also define numeric fields as being based upon calculations (irritatingly referred to as 'math'). Validation of fields is of two kinds: simple type checking on numbers, dates, and so on, and more complex definitions such as characters only and upper case letters only. You can specify that a field must have a value; you may also specify that the value of a field is to be carried over from the previous record.

You may specify the order in which the file is to be maintained, which may be up to five fields in all. When the whole file is printed or records from it displayed, this is the order used.

Once the file design has been set up, you are ready to enter information into the records. The structure of these records may still be changed after data has been entered, but this is a slow process — you will see the time for adding one new field to each of my records in Fig 2.

Data input and updating

When you want to enter or amend records, you may identify them directly using the sort key specified when the file was set up. However, the way this is handled means that it's important to keep this key as short as possible, since

you must specify the key exactly; you can't choose to have a partial match, or regard upper and lower case letters as equivalent. If you have chosen a key of thirty characters or so, it's difficult to remember it precisely.

There are two alternative approaches to recalling records for amendment. You can look through the file in sort key order, starting at the beginning or at a record with a specified sort key value.

The alternative is to select a set of records and then use the techniques described to find and display the records to be edited. If you want to edit the records of all those people who are due to go on holiday next month, you can select them, list each record selected and edit as before.

When records are added to the file, or

amended in a way which affects the sorted order, the order is not automatically maintained; you may still access the file in all the usual ways, but records which have been changed or added will not appear in their correct place in the sequence. To reorder the file, you must do a maintenance sort. This maintenance also expunges all records which have been marked for deletion; until then, these records still appear in the file, and the deletion marker can be removed if necessary.

Once you have found the record to be amended, information is entered by typing into the appropriate display fields. You use the cursor arrow keys to move around between fields, and two of the adjoining keypad keys to move between screens of a record. The new version of the record can be saved at any editing stage using a function key. Information Management always asks for confirmation that a record is correct before saving it, and allows you to re-edit if you wish — any changes already made are preserved. Alternatively, you can abandon the edit altogether at any time, again using a function key.

In addition to amending records directly on the screen, you may set up a batch update process; for instance, you can ask for a field to be incremented by 10%, or for a date to be replaced by 'today'. The batch update may be applied to all records, or to all which meet a set of selection criteria.

There are two main ways to display records on the screen: one record per screen or set of screens, using the format defined when the file was created; and one record per line, showing only those fields selected for highlighting. In addition, you can specify that printed reports must be shown on the screen, so that not only can other display formats be obtained in this way, but you can also carry out all Information Management's functions without a

NOW A TRUE SPREADSHEET, FUNCTION GRAPHING, EQUATION SOLVING, DIFFERENTIAL PLOTTING, INTEGRAL FINDING, GRAPH MANIPULATING, MATHS TEACHING PACKAGE IS AVAILABLE

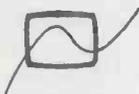

It's called **CARTESIAN** and it's more fun than a game. High resolution graphics and excellent documentation mean that in a short time you should absorb most of the concepts relating to calculus and the solution of polynomials.

Then the real fun starts . . .

FROM

FLITE
software

**Findrum, Convoy,
Co. Donegal, Ireland**

FOR **BBC 'B'** & **APPLE IIe**, **CARTESIAN** does the following:

- ★ Handles transcendental functions, circles, ellipses, polynomials
- ★ Graphs function to extremely high or low values of X axis
- ★ Plots differential curve in conjunction with primary
- ★ Extracts roots precisely using Newton Raphson method
- ★ Magnifies curves for fine detail examination
- ★ Determines definite integral (area under curve)
- ★ Solves complex equations
- ★ Brings with it an 18 page booklet which is well written and explains all the underlying mathematical principles
- ★ Spreadsheet feature allows almost infinite travel up or down the x axis

Price: Cassette **£24.90** Disk **£27.75**

Includes P&P No VAT on UK or NI orders

printer if necessary — not a universal feature among data management systems. In addition to the display of data in these normal formats, you can also ask for display of bar charts.

Printed reports

Information Management provides two kinds of printed report. Standard reports show the data in columns; the format may be a default layout in which Information Management prints as many fields as possible in a five-line-per-record format, or the format may be defined by the user using a paint-a-screen approach as in screen format design.

In the standard reports, you may include information from another data file if you wish. Totals and sub-totals may be requested; if you are printing from the main file, then sub-totals will be calculated as the value of the sort key changes, while if you are printing from a set of selected records, then the sort order specified for that set will be used. Page-breaks will occur if you ask for them, after the printing of sub-totals.

Free-format reports are intended for use in constructing personalised letters. Such a report may contain one page of up to 88 lines, and within those lines you can ask for the inclusion of data fields from the file. Information Management automatically formats the report appropriately according to the amount of information in the data fields.

Selection

In addition to the exact matching of the sort key, records can be selected in two ways. Searches within fields are set up by filling in on the screen a 'blank' form showing all the fields in the file. A field value may be tested for equal to, not equal to, less than or greater than the given value; for equality, the test may be set up in such a way as to give a 'wild code' facility. For instance, a character field of four letters can be tested to see if it has the letter B in the second position, and any character in any other position. If more than one test is used, then all of them must be passed for the record to be selected.

If you are not sure which field to test; for instance, if you are looking for a post

town which may be in any of two or three address lines, you can use a global search. This allows you to enter a word or phrase to be searched for, without specifying where in the record to look, so the match will be found wherever it occurs.

Either of these two approaches involves a complete sequential read of the data file, which takes several minutes for a file of any size. However, once all the records have been read and the matching records selected, you can then proceed to carry out operations on this subset of the records. All of Information Management's data handling facilities can be used, so that the process actually creates a kind of workbench of records to analyse further. Although the selected records are described by Information Management as being 'in a temporary file', any changes made to records selected from the temporary file are recorded on the records in the main file, so records can be selected for amendment in this way.

Alternatively, you can use the selection made as the basis for further selections; at each stage, Information Management will tell you how many records have been stored in the temporary file.

Calculation

Calculations on field values take place either at data entry or during a batch update. These calculations involve other fields or constants or both, and the usual arithmetic operators, but not parentheses. It's difficult to see how precedence of calculation could be changed, since calculations are built up using a question-and-answer approach which does not readily lend itself to such sophistication. Such calculations may also use dates, so you can calculate and store time-lags. Work fields can be included to allow quite complex calculations to be built up.

Facilities for aggregation across records are more limited — you can have totals, averages, and so on, as part of printing reports, and display bar charts of any field, but there are no more general calculation facilities.

Unfortunately, you cannot write to more than one file at a time, but information can be incorporated from

several files in a single report.

Each file may be protected, by password, from changes to its structure and from unauthorised access to its information. Separate passwords are used for authorising design changes and for authorising data access.

The basic file handling facilities, deleting and copying, are provided. It is also an easy matter to get a list of all available Information Management files, and to change to process a different data file. Otherwise — to format a disk, for instance — you must use the operating system facilities.

An ASCII text file from another program or package may be read in to Information Management using the File Loader, which is an optional extra. I used a pre-release version of the program; the production version should be faster and more flexible.

User image

Information Management is clearly aimed at providing reasonably sophisticated facilities to fairly naïve users, and therefore its approach needs to be simple without being verbose. By and large, it succeeds in this aim very well as the package is controlled almost entirely by menus.

Once you have selected and set up a task, which does not require your intervention, then Information Management will show how it is progressing. Usually, this involves showing a large open rectangle on the screen, which gradually fills with a highlighted block as the task progresses; when the rectangle is filled in, the task is done. For some tasks, such as the lengthy sort process, Information Management also shows the proportion of the task completed. This is an excellent feature which I would like to see more generally provided.

Documentation

Information Management has one manual which acts as tutorial and reference guide. It also has a detailed index, but some of the finer points of the package — such as the wild code facility I noted — do not seem to be documented at all. Nor is there a road map or a reference summary.

Conclusions

Information Management is a reasonably powerful and flexible package, with a helpful approach which should prove popular with inexperienced users. It's a little on the pricey side, but if you have an IBM or Wang PC and are looking for a good data management package which is relatively easy to use, you should have a close look at this.

END

Summary

Package Type	Data management, menu-driven, fixed format, fixed length records. Good compromise between power and ease of use for straightforward tasks

Superbase 64

The natural development for Commodore 64 users

If you want to unlock the full potential of your disk-based Commodore 64, you need Superbase 64 – the complete records-handling system that puts business-style power and practicality at your fingertips.

Invoices/Finance & Banking/Membership/Collections/Recipes/Personal Filing/Stock/Prospects/Management Accounts/Car Fleet Records and many, many more!

Superbase 64 solves a host of filing problems with its easy record formatting, powerful indexing and sorting, extensive outputting options, and its 'Superbasic' programming capability.

And Superbase 64 comes with a simple-to-follow manual and audio-learning cassette so you'll have no trouble getting the benefits straight away.

Superbase 64 – The complete information control system for the Commodore 64.

THE RAINBOW 10

0 + HAS ARRIVED

In the deluge of computers, at last there's a ray of light.

The Rainbow 100+ personal computer. The latest addition to the Rainbow range from Digital.

It allows you to cope with increasing business demands by having a more powerful memory. (Up to 896Kb for the technically minded.)

It lets you change programmes from CP/M to MS DOS by simply pressing a key. (When using the integral 10MB Winchester Disk drive.)

A choice of monitors is available. High resolution monochromes or colour,

for graphics and text.

Lotus 1-2-3 has been added to the leading range of software that already covers most types of businesses.

Two days at one of our 25 personal computer training courses are included in the price of £4,200.

As are full customer support, and twelve month on-site servicing warranty.

And of course our telephone helpline.

Call our Customer Information Centre on 0256 59299 for more about the new Rainbow 100+.

Think of it as the pot of gold.

1-2-3 is a Trade Mark of Lotus Development Corporation.

B-Port: Compiles source on 8000 series to run on 700/B-128 series _____ £450.00

X-700: Integer compiler compiling on 8000 series giving machine code executable on 700/B-128 _____ £450.00

GIVE YOUR VIC OR 64 FULL IEEE AND RS232

Not a cartridge. Compatible with any software.

Interpod: Free-standing interface giving IEEE488 and RS232C capabilities to CBM64/VIC20 _____ £99.95

SPECIAL OFFER

Order 5 or more Interpod and get a free Portspeed!

All prices are exclusive of VAT. There is also a small charge for post and packing. Dealer discounts are available on all products except the 700 cross-compilers.

Compilers are supplied ex-stock; Interpod supplied 7-days ex-stock.

COMMODORE SOFTWARE

Native compilers for the CBM 64 and the 700/B-128 are available only from Commodore.

VISA ACCEPTED

NEW HOME COMPUTER CABINET

£79.95
incl. VAT & Delivery

JUST CHECK THESE STANDARD FEATURES

- 1 Smooth sliding shelf locks in position just where you require it — and neatly glides away after use.
- 2 The computer shelf has been designed to allow adequate 'knee room' for you to sit comfortably, and will avoid 'programmers backache'.
- 3 Adequate room to position tape recorder, printer, disk-drives, etc, alongside computer for ease of use.
- 4 All cables neatly and safely out of sight, while allowing all units to be permanently connected if desired.
- 5 Lots of storage space for cassettes, cartridges, books, listing paper, joysticks, etc.
- 6 With shelves and doors closed, instantly becomes an elegant piece of furniture.
- 7 The lower shelf accommodates all makes of video recorders currently available.
- 8 Smart teak effect finish.
- 9 Supplied as a flat-pack. Very simple to assemble, using just a screwdriver. Full instructions supplied.
- 10 Measurements: Height 32½ins, Width 36ins, Depth 16¾ins.

TERMS OF OFFER UK Mainland Customers only. Please allow up to 28 days for delivery. Money back guarantee if not satisfied provided the goods are returned undamaged within 72 hours of delivery.

HOW TO ORDER Send Cheque or Money Order for £79.95 to: MARCOL CABINETS, PO Box 69, High Street, Southampton. For further details telephone: (0703) 731168.

THE SOFTWARE

'CFACC' is rapidly becoming the industry standard – the one others are judged by. Prove this by seeing the others first – BUT DON'T COMMIT YOURSELF.

'CFACC' has been tried and tested the hard way, over the last 3 years by real customers in a real business environment and many modifications have been incorporated as a result of the feedback obtained.

REAL INTEGRATION

'CFACC' is designed and written as a complete integrated system. It is not a collection of individual programmes joined together.

COMPATIBILITY

The data file written by 'CFACC' are in a format which can be accessed by other programmes such as WordStar.

THE USER

Most people can effectively use 'CFACC' after one day's 'trial and error' without even having to refer to the comprehensive Users Manual. You only need to enter invoices, payments and receipts for 'CFACC' to produce everything on the Main Menu.

THE HARDWARE

'CFACC' can be supplied for any 8 BIT or 16 BIT microcomputer with a CP/M 86, PCDOS or MSDOS operating system and a minimum of 64K RAM.

PRICES

From £1,250 for our small business version and from £1,650 for standard "CFACC".

AVAILABLE FROM

Our main distributor, "M.E. Marketing Ltd" 9, Woburn Street, Amptill, Beds. 0525 404262 and from approved dealers.

MEM Computer Systems, 9 Woburn Street, Amptill, Beds, MK45 2HP. Tel: 0525/404262

NETWORK NEWS

Peter Tootill gives his summary of what's happening in the telephone networking world.

There is such an increase of interest in telephone networking that new boards are springing up all over the place! There are a couple more to report this month, as well as another German system.

System information

There are a few items to report on the BBS front this month. Firstly, the BASUG board had some teething problems with both hardware and software. However, all should now be well and it has been running 24 hours a day on (0742) 66 79 83 for a few weeks.

The *Computer Answers* BBS has also been running 24 hours a day on its permanent number. That number is (01) 631 3076. A bulletin board run by a micro magazine is a very interesting development, and there are a number of possible applications including tele-software. *PCW* hopes to set up its own very soon (see box).

CBBS-Surrey is another new CBBS board. It runs 24 hours a day on (04862) 25174.

Hamburg University has started a mailbox system. The number is (01 01 49) 40 4123 3098. I haven't had a chance to try it myself, but knowledge of German would be useful.

Multi-mode modems

As most 'micro networkers' will be aware, there is a fundamental incompatibility between the modem standard used by bulletin boards and that used by the Prestel system. Prestel (and hence Micronet 800, Viewfax 258, and so on) uses the 1200/75 (V23 type) standard while the majority of other systems, including bulletin boards, use 300/300 (V21) type. This presents the prospective modem buyer with something of a dilemma: which sort of modem to use. Admittedly, you can use Prestel at 300 bits/sec, but you lose the graphics and it's only available on a

London number, unlike normal Prestel, which is available as a local call in most parts of the country. One answer is to choose a multi-standard modem which will operate in V21 and V23 modes. The new generation of chips is beginning to make these accessible to the hobbyist and business user. Unfortunately, such a modem with BABT approval still costs more than a Micronet modem and a cheap V21 modem together! However, if demand rises, prices will fall (or is it the other way round?). I have listed below details of four readily available multi-mode modems, and I hope to be reviewing some or all of them in *PCW* in the near future.

Minor Miracles WS2000

This modem covers UK and US standards including CCITT V21 and V23 and Bell 103 and 202. An auto-dial, auto-answer option is also available at around £35 extra. It costs £99 plus VAT (£116 inc VAT and postage). Details from:

Minor Miracles, PO Box 48, Ipswich IP4 2AB. Tel: (0473) 50304

Microprocessor Applications MPA2123

This modem also covers UK and US standards (CCITT V21 and V23, Bell 103 and 202) and includes auto-answer as standard. It was devised by a couple of hobbyists, and although they produce it in limited quantities, they are looking for a company which would be interested in taking it up and steering it through the approval process. It costs £180 (no VAT) plus carriage. Details from:

T Hutchinson, 41 Ashgrove Avenue, Banbridge, Co Down BT32 3RG
Tel: (08206) 23996

Dacom DSL 2123

A BABT approved modem providing full V21 and V23 operation. There is also a GT version which includes auto-dial and auto-answer with automatic detection of whether the call is V21, V23 or

even voice. The auto-dialler will store up to 32 telephone numbers, each of which may be up to 18 digits. The DSL 2123 costs £280 plus VAT. The DSL 2123 GT costs £480 plus VAT. Details from: Dacom Systems Ltd
16 Alston Drive, Bradwell Abbey, Milton Keynes MK13 9HA
Tel: (0908) 311885

Interlekt Portman

Another UK/US modem providing full CCITT V21 and V23 standards. Bell 103 and 202 standards are available by changing an internal link. BABT approval is expected shortly. An auto-answer option is available for £15, and software switching options and rack mounted versions are also available. It costs £199 plus VAT plus carriage. Details from: Interlekt Electronics Ltd, Reacis House, Portman Road, Reading RG3 1LU
Tel: (0734) 589551

Mailbox-80 Liverpool

Regular callers to Mailbox-80 Liverpool will have noticed that the board now has a 'messages to *PCW*' section. Any messages can be left on the board, and will normally be read by us within 24 hours.

Peter has kindly arranged this facility, so please do make use of it. At present, we can receive messages **ONLY** on this board, but we are hoping to set up our own *PCW* Bulletin Board running TBBS software. In order that we can get an idea of the interest for this, please let me have your comments and suggestions — either by writing to me at *PCW*, or through Mailbox-80 Liverpool or TBBS London. In either case, please address messages to 'Surya'.

The *PCW* Bulletin Board would allow down-loading of *PCW* programs, message facilities, computer answers and (possibly) uploading of program submissions.

CCITT Modem Recommendations

Speed Bits/sec	Format: Asynchronous or synchronous	Full/Half Duplex	CCITT Reference	BT Datel Service	Bell Ref.	US Compatible? with CCITT
0-300	A	Full	V21	200	103	No
1200 2400	A&S	H/F	V22 V22bis	1200 —	212A	Yes at 1200b/s
1200 1200/75	A A	Half Full*	V23 V23	600 600	202	Sometimes

* The Prestel 1200/75 type of service is sometimes referred to as 'asymmetric duplex'.

TBBS, London . . . Tel: (01) 3489400. Hours: daily 9am-7am.

Note: Estelle. Tel: (0279) 443511 V21 (Datel 200); (0279) 441188 (Datel 600); (0279) 441222 (Datel 1200). For customers of STC Electronic Services. Office hours only.

Southern BBS. Tel: (0243) 511077. Messages, downloading. Hours: 8pm-2am daily (ring-back system).

* Ring-back system — dial the number, let phone ring once and then ring back.

UK systems run by commercial organisations, which are free at least in part:

DISTEL. Tel: (01) 679 1888. Run by Display Electronics (new and surplus electronic and computer equipment, components, etc). The system provides information about stock lines, credit card sales, and some message facilities. 300 baud only at present. Cost: free. 24 hours.

REWTEL. Tel: (0272) 236628. Run by *Radio and Electronics World*, the publishing side of Ambit (electronics components suppliers). Information on stock lines, some message facilities, credit card sales; the latter only for subscribers. 300 baud only at present. Cost: limited areas free, remainder £10 pa. 24 hours.

MAPTEL. Tel: (0702) 552941. Run by Maplin (electronic components and micro-computers). Provides information on stock levels, credit card sales to existing customers only. 300 baud only. Cost: free. 24 hours.

Subscriber commercial systems in the UK:

PRESTEL. Subscribers only: Prestel consists of a database made up of individual pages provided by many different organisations (not by Prestel itself). 1200/75 baud service at local call rates for a large percentage of potential users. 300 baud service on London telephone number only, at present. Cost: domestic subscribers £5 per quarter and no time charges outside peak periods, 80 per cent of pages are free. Business users: £15 per quarter and 5p/minute up to

6pm and Saturday mornings, no time charges outside these hours (time charges also apply to domestic users). Information: tel: Freefone 2296.

MICRONET 800. An organisation providing information within the Prestel database specifically aimed at microcomputer users. Service details as Prestel. Cost: £50-£75 joining fee (covers acoustic coupler and software — for a limited range of machines at present) and £8 per quarter on top of normal Prestel charges. Information: Micronet 800, 8 Herbal Hill, London EC1R 5JB. Tel: (01) 837 3699.

Subscriber business systems in the UK:

Commercial systems aimed at business users:

TELECOM GOLD. Info from: Julie Ireland, 42 Weston

Street, London SE1 3QD. Tel: (01) 403 6777.

COMET. Message handling system giving user facilities for leaving and retrieving messages: costs £30 per month. Info from: John Douglas, BL Systems Limited, Grosvenor House, Prospect Hill, Redditch, Worcs. Tel: (0527) 28515.

UK networks:
CBBS North East . . . Tel: (0207) 543555. Hours: 2.30pm-9am daily. Hours: midnight-8.30am Bell (US) standards.

CBBS South West . . . Tel: (0626) 890014. Hours: 24 hours daily.

Mailbox-80, Stourport . . . Tel: (0384) 635336*. Hours: 6pm-8am daily (ring-back system).

Forum-80 Hull . . . (Forum-80 HQ) Tel: (0482) 859169.

International electronic mail, library for up/down loading.

Forum-80 Users Group, PET Users section shopping list system. Hours: Tues/Thurs

ELFA	ABC-MONITOR	010.468 730 0706	Half duplex
	Sweden		
ABC-Banken	Halmstadt, Sweden	010.463 511 0771	
ABC-MONITOR	ABC Club of Sweden	010.468 801 523	Passwords required
CBBS	Gothenburg, Sweden*	010.463 129 2160	75/1200 baud
	Helsinki	010.463 169 0754	300 baud
		010.358 072 2272	

* After receiving the tone and connecting your modem, either type <C/R> or type: <COM C/R>. The system then asks for a password which is: 'cbbs' in small letters!! If you only get '>' when you dial up, the system needs resetting and you type <I> C/R.

The HX-20. For business on the move.

In today's fast moving business world, your information has to move with you. Over the past few years there has been an increasing demand for a totally portable computer with the ability to meet so many challenges.

Epson, with over 20 years experience in designing and manufacturing high quality printers, have produced the HX-20, a precision machine with its own rechargeable power supply that can be used for just about any task within today's discerning business; from data capture to word processing, from card indexing to sales order entry.

The HX-20 with the acoustic coupler has transformed it from being just another portable computer into a powerful communications terminal for sending and receiving personal telexes, electronic mail and communicating with other computer systems.

Don't be fooled by its size, the HX-20 has all the software back-up you'd expect from a much larger machine and incorporates many "bigger computer" features - 16k RAM expandable to 32k with serial interfaces, a full size typewriter keyboard, it's own built in LCD

screen and a dot matrix microprinter. A microcassette facility is available as an optional extra.

A complete computer that will either stand on its own or could be the obvious extension to your existing system.

More and more people are finding out just how big the small compact HX-20 is. Why don't you find out for yourself - you owe it to your business.

EPSON

**Extraordinary product.
Exceptional quality.**

Epson (UK) Limited, Freeport,
Wembley, Middlesex HA9 6BR.
Sales Enquiries: Freefone EPSON.

FUJITSU

FUJITSU

Personal Computers from Fujitsu. Japan's Leading Computer Manufacturer.

Think of microtechnology and you think of Japan. The undisputed leaders and innovators. The home of virtually every world-famous name in the field.

At the heart of all microtechnology is the computer. And Japan's leading computer manufacturer is Fujitsu. We make everything from one-chip micros to large-scale systems.

Now, Fujitsu are launching their personal computers in Britain. And because we manufacture all our components ourselves, we can offer superb personal and business systems at competitive prices.

We are making a long term commitment in Britain. And we're looking for dealers. Dealers who are experienced and well supported. Dealers who wish to make a long term commitment for a solid future.

We're going right to the top. Make sure you're there with us.

FUJITSU MIKROELEKTRONIK 1 Curfew Yard, Thames Street, Windsor, Berkshire SL4 1SN. Telephone number 07535 50551.

Basicode

Despite the differences between individual Basic dialects, virtually every machine supports a minimal subset of this standard programming language. The Dutch Broadcasting Corporation, NOS, has used this subset to form Basicode, a computer 'esperanto'. Surya explains.

In 1962 at Dartmouth College a programming language was born. Intended only as an easy to learn beginners' language introducing people to the concepts of programming, the language caught on.

The original aim of the language — a first step to learning Fortran — was quickly forgotten as it was improved and developed. An endless succession of dialects appeared, firstly for mainframes, then for minis and finally for micros. Today, that language is the most widely used programming language in existence. Probably more than any other influence, it is responsible for turning computer programming from a specialist and mysterious activity into a popular hobby shared by millions around the world. I am, of course, talking about Basic.

Dartmouth Basic was extremely simple. It had a total of 30 statements and commands. Over a period of 22 years it has been added to, modified and adapted countless times. The result is literally hundreds of dialects of what purports to be the same language. Some of the differences between dialects are trivial (PLOT instead of SET, for example), while others reflect differences in approach and philosophy (the Pascal-like structure of BBC Basic against the more down-to-earth style of many other dialects). But, however incompatible different Basics may be in their more sophisticated features (sound, graphics, file-handling), the original Dartmouth standard remains evident in the core of many of the most popular dialects. It is this core which forms the basis of Basicode.

Basicode was developed after Hobyscoop, a Dutch radio programme dealing with science and technology, began broadcasting computer programs over the air in 1978. These broadcasts eventually became a regular weekly feature, broadcasting Apple, Exidy Sorcerer, PET and TRS-80 software. The main problem with this arrangement was that each broadcast was aimed at only a tiny minority of listeners. The non-computerised majority objected to seven or eight minutes of loud, unintelligible noise!

Klaus Robers, an amateur radio operator, hit upon a possible solution. Given that each of the four machines supports a common subset of Basic, why not devise a new interpreter and broadcast programs in the hybrid language? To do this, he needed to devise a method of loading and saving programs in a standard format, as well as agreeing an acceptable subset of Basic. The result was the original Basicode. Basicode had several teething problems and limits, so an improved version, known as Basicode-2, was developed by Klaus Robers and Jochem Herrmann. Basicode-2 supports a much wider range of machines and is now the standard version for all Basicode broadcasts. (The terms Basicode and Basicode-2 are used interchangeably in this feature.)

Successful Basicode-2 broadcasts have been made regularly since the beginning of 1983, and listeners from various parts of Europe — including southern Britain — report that they have successfully downloaded Basicode programs.

Basicode only attracted widespread interest in the UK when the BBC began making Basicode broadcasts in conjunction with 'The Chip Shop' programme on Radio 4. Although the first series of the programme has now ended, a second series is planned for later in the year.

Working Basicode

Basicode has to overcome two problems before it can be implemented on a particular machine.

The first problem is that of detokenising keywords. When you write a Basic program, the program is stored in RAM in tokenised form. The line '100 PRINT A', for example, is not stored as 11 characters. All the keywords in a program are compacted into keyword 'tokens', which are used because they are more efficient than the full keywords in terms of both memory and execution speed.

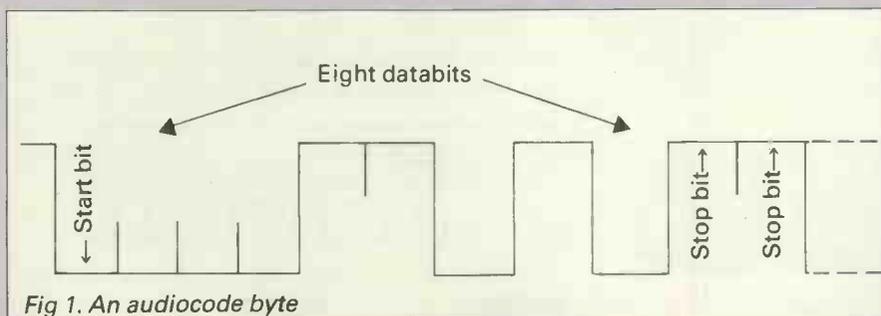

When a program is saved to tape, the micro transfers the contents of the appropriate part of RAM onto tape in tokenised form. The problem is that each micro uses a different set of tokens: we need to convert these tokens into a standard code before we can save them to tape in a standard form.

The second problem concerns the signals used to store programs on tape. Programs are saved to tape in binary form, '1's being represented by one pattern of audio cycles, '0's by another. Each byte must be saved as eight bits (known as databits — see 'Newcomers start here' in this issue for an explanation of bits and bytes). Other bits, known as start and stop bits, are used to mark the beginning and end of a block.

Again, although the principle is the same for all micros, different machines use different baud rates and pitches, and may also have a different number of start, stop or checksum bits.

Basicode overcomes the first problem by converting everything to ASCII form, the universally accepted code for communication between computers. The second problem is solved by developing a standard 'audiocode'. Once Basicode-2 has been loaded into the machine, all loading and saving is done using the standard code. This audiocode comprises one startbit (logic zero), eight databits (the ASCII byte, least-significant bit first) and two stopbits (logic 1). Ones are represented by two cycles of 2400Hz, zeros by one cycle of 1200Hz (see Fig 1). The overall pattern of a Basicode program is a leader (five seconds of stopbit), the ASCII code for 'start-text' (&82), the program, a checksum digit (an EOR of all previous bytes) and a trailer (five seconds of stopbit). The baud rate is 1200.

END

Next month: how to load and run a Basicode program and details of Basicode-supported machines.

CHEMIPLANT

H & H SOFTWARE PRESENTS 3 NEW TAPES for the BBC 32K COMPUTER

to add to their existing range of games
and educational software.

LOONEY LIFT

A new action packed arcade game with hi-res graphics, full colour and sound. Keep your guests jumping, operate the lift and watch out for the luggage. The alternative is the sack!

£7.50

CHEMIPLANT

Another first? A chemical plant simulation. Avoid explosions, spills and other disasters on your way to your first million. Plant manual included. Hi-res graphics.

£7.50

STORY

Electronic storytelling!

First make up some scenes using pictures from the computer bank or use your own drawing skills. Then write your story. Up to 7 screens can be displayed, saved and printed.

£6.50

To get more information about our new and existing software, ask for a catalogue. Please send a s.a.e.

Have computer-will travel

IBM XT Apple IIe

Courses conducted by
Nick Levy DMS MBIM MIIM

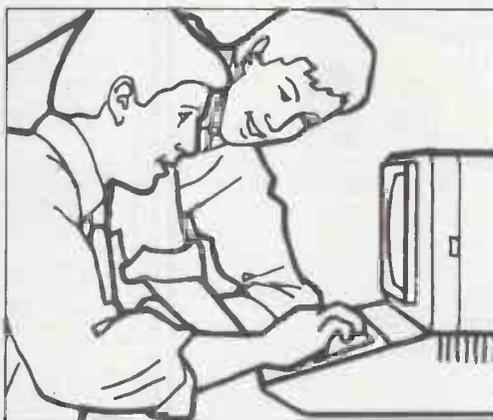

Lecturer in Managerial
Economics and author of
the VisiCalc Column in the
international computer
magazine *Apple User* and
regular contributor to the
1-2-3 column in the *PC
User*.

Training in *VisiCalc, Advanced VisiCalc, SuperCalc, Multiplan and Lotus 1-2-3* is now available on an in-house basis.

The fees for one day training for up to six participants is £360 or £560 for a two day session. These fees include the use of *three Apple IIe computers or one IBM XT computer provided by Interface Management.*

Training is provided by Nick Levy, lecturer in Managerial Economics, author of the VisiCalc Column in the

international *Apple User* magazine and regular contributor to the 1-2-3 column in the *PC User*.

How Interface Management in-house training can be of immediate benefit to your organisation:

Companies running two or more days in-house training on any of the above packages, are given assistance in producing their own financial and management accounting worksheets.

In-house induction training is also available in *word processing* and in using *data base management systems*.

To discuss your company's in-house training requirements in using computers and allied software telephone Nick Levy on (0734) 475375 or fill in the coupon below.

VIDEO MONITORS

5" CASED Superb little unit made by HITACHI in ergonomically designed free standing case. Very high definition will display small but readable 132 columns wide! 12v DC opp. @ 800 ma, so ideal for mobile use. Supplied in AS NEW condition complete with data. Composite 75 ohm vid in; Black & White CRT **£45.00** or Green CRT **£55.00** Carr & Ins £5.00.
 12" CASED. Made by the British KGM Co. Designed for continuous use as a data display station, unit is totally housed in an attractive brushed aluminium case with ON-OFF, BRIGHTNESS and CONTRAST controls mounted to one side. Much attention was given to construction and reliability of this unit with features such as, internal transformer isolated regulated DC supply, all components mounted on two fibre glass PCB boards - which hinge out for ease of service, many internal controls for linearity etc. The monitor accepts standard 75 ohm composite video signal via SO239 socket on rear panel. Bandwidth of the unit is estimated around 20 Mhz and will display most high def graphics and 132 x 24 lines. Units are secondhand and may have screen burns. However where burns exist they are only apparent when monitor is switched off. Although unguaranteed all monitors are tested prior to despatch. Dimensions approx 14" high x 14" wide by 11" deep. Supplied complete with circuit, 240 volt AC operation. **ONLY £45.00 PLUS £9.50 CARR.**
 24" CASED. Again made by the KGM Co with a similar spec as the 12" monitor. Originally used for large screen data display. Very compact unit in lightweight alloy case dim. 19" H x 17" D x 22" W. All silicon electronics and composite video input make an ideal unit for schools, clubs, shops etc. Supplied in a used but working condition. **ONLY £55.00 PLUS £9.50 CARR & INS.**

Pro Pascal goes like Blaises!

Pascal is now recognised worldwide as one of the standard languages for microcomputers. It is named after Blaise Pascal, a French mathematician and mystic who in 1644 constructed an "arithmetical machine".

The electronic wonder which is today's microcomputer would make Pascal jump for joy. And in Pro Pascal, the user of such an arithmetical machine has a marvellous tool for converting his reliable, well-structured code into fast, efficient machine programs.

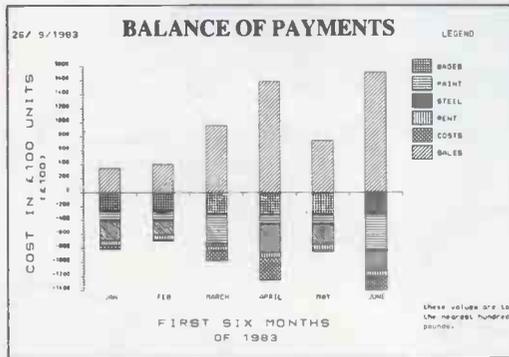

For the serious programmer, Pro Pascal is a passport to the three most important microcomputer environments: the 8-bit CP/M world, and the newer 16-bit worlds of CP/M-86 and MS-DOS.

The 16-bit compilers run on 8086/88-based micros with 70K user RAM and MS-DOS or CP/M-86; the price of either version is £320 + VAT. The 8-bit compiler runs on Z80-based micros with 50K user RAM and CP/M or equivalent; the package costs £220 + VAT.

LEARN TO PLAY BRIDGE ON YOUR HOME COMPUTER

Enjoy learning to play bridge with Bridgemaster, a complete bridge tutor professionally prepared with world expert Terence Reese.

Listen to the commentary as you are coached step by step through the game. While you listen you will learn and play bridge. Bridgemaster contains commentary and computer tapes and a useful reference book — everything you need to learn bridge.

"Bridgemaster really does bring the game alive for the beginner..." **Soft.**

"A really professional program... 100% value for money." **Home Computing Weekly.**

For the Sinclair ZX Spectrum 16/48K, Commodore 64,
BBC B and Electron — **£24.95**

Sinclair ZX81 1K/16K — **£19.95**

BRIDGE MASTER

Available from Boots, WH Smith and computer stores or direct from Bridgemaster, Freepost, DEPT WM1, PO BOX 163, SLOUGH SL2 3YY.

Prices include VAT, post and packing. Remittances payable to Bridgemaster.

Teach yourself software in minutes. Not hours.

Insert an ATI training disk, and presto! Three minutes later, you're practicing usable skills. Within an hour, you're proficient.

Even if you're never touched a computer before.

ATI's self-prompting disk simulates the actual software on the screen of your personal computer. If you have a question later, the helpful handbook is set up to give you the answer in 15 seconds.

ATI Training Power is faster because it's Performance Based. Instead of taking time teaching you how a program works, ATI shows you how to put it to work. Right away.

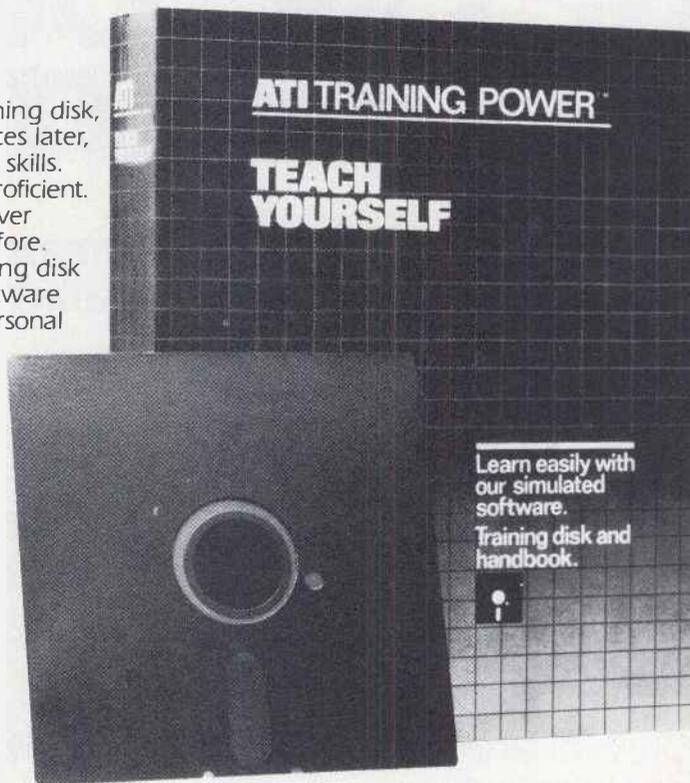

ATI's unique Performance-Based Training is widely used by many Fortune 500 companies, such as IBM, DEC, Xerox, NEC, and Toshiba. Not to mention thousands of small businesses.

ATI's training programs operate in virtually every business oriented microcomputer.

Match ATI's selections with your software library, and order today.

Integrated Software

ATI Training Power makes it easy to learn and use the powerful new integrated software packages currently entering the market.

Word Processing

ATI's Word Processing Series teaches you how to create, edit, move, and print text with popular programs, fast! A must for executives and secretaries alike.

Database Management

To get the most out of your data base, learn to use these programs fast, with ATI's Database Management Series.

Financial Planning

What if you could learn to do a complete "what if" spreadsheet analysis in less than an hour? ATI's Financial Planning Series teaches you this and more. Turn software packages into powerful management tools, quickly.

Operating Systems

Learn to prepare, monitor, maintain, and troubleshoot your own system like a pro, with ATI's Operating Systems Series.

Programming

ATI's Basic Programming Series teaches you how to write, enter, debug, and use programs that analyse business expenses, organize mailing lists, and more.

Accounting

Now it's easy to put your accounting on computer, with an outstanding software package and ATI Training Power to get you (and your bookkeeper) up to speed, rapidly and cost-effectively.

Please rush me ATI Training Power™ programs, at \$75 each for this software:

JUDGE FOR YOURSELF

We've taken the risk factor out of buying software! So much so that we are prepared to refund you the full purchase price on any of our Apple software products within 21 days of purchase if you're not satisfied with it! At present our range includes:

Invoicer

This will print invoices and generate information which can also be used by our Bookkeeper package. Invoicer will use standard pre-printed forms but we also include a small utility program which will pre-print "forms" on blank paper. Invoicer will hold a price list and customer list in memory (making for very *fast* operation with a core of fast-moving lines and good customers). Much larger lists can also be held on disc. Items and customers not on existing lists can easily be entered via the keyboard.

Bookkeeper

An *essential package* for bookkeeping exercises, i.e. Sales Day Book with analysis by category, list of debtors with dates, etc; Purchase Day Book with analysis; Cash Book; Petty Cash Book; home accounts, etc. Bookkeeper takes care of VAT calculations and allows you to produce analysed and selected figures as and when required, i.e. management figures, etc.

Access

A superb Apple II+/IIE database manager (DBM). Access has *all the power and versatility* you would expect in an Apple DBM, regardless of price. It is also very fast, for instance it will find an indexed item in approximately 3 seconds, and will retrieve a record with complex sets of criteria, such as AND, wildcard, range search, in less than 23 seconds. This package was previously available for £199.95 including VAT and even at that price users found it to be good value for money.

Payroll

This package takes care of Payroll calculations and record-keeping for the smaller business and will *handle all levels of pay*, tax codes (including NT: No Tax) and National Insurance at standard, reduced, over pension age, or nil rates, contracted out or not. Payroll works with batches of 50 employees at a time and is being used, successfully, by companies with up to 100 employees, as well as larger organisations, for confidential processing. Only information which has

changed since the last Payroll run need be entered – employee, tax and National Insurance details are stored. The Inland Revenue specifications are followed accurately; no error of calculation has ever been reported since the first version of Payroll was tested in 1980. Users have found that Payroll is very easy to use with very little knowledge of computers or payroll procedures necessary for successful operation. In addition to all usual calculations, Payroll will compute gross pay and deductions for a given net pay.

SSP (Statutory Sick Pay)

A free-standing program that will compute Statutory Sick Pay as required by law. It will compute SSP for all cases, including the most complex. It is not necessary to understand about the linking of periods of incapacity for work, reasons for exclusion from SSP, etc. All information required by law, and by you, is printed out at the end of each calculation. Only information which is actually needed must be entered: for example, it is not necessary to enter pay details for someone earning £80 per week plus overtime (the average pay is obviously above the £65 threshold). SSP is so *easy* to use that it is suitable for training staff or even for unusual cases such as a pregnant employee who has been with the company for less than 3 months and falls sick while in custody outside the EEC! This is another of our highly successful packages where no errors have been reported.

All our software packages are priced at £75.00 each plus VAT.

You've got nothing to lose, so why not see your local dealer or contact us NOW for your 21 day trial packages. If you would like further information ask for our Apple product sheet.

Soft Machine is the trading name of Fabstar Computers Ltd.

ADS. THE ULTIMATE IN PERIPHERALS FOR THE SPECTRUM, JUPITER ACE & BBC MICROCOMPUTERS

"Highest quality peripherals at the lowest possible prices" — that's the philosophy at Advanced Digital Systems. Our team of highly experienced designers use the very latest techniques to produce adaptable home computer peripherals — at a price you can afford.

- Boards are designed using CAD/CAM, giving a neat optimum layout.
- Gold plated connectors are used, wherever possible, to ensure good electrical contact.
- All products carry a 12 month guarantee.
- All units are "Plug in and go".

1 **PRINTER INTERFACE 1**
Centronics Interface for the Sinclair Spectrum. £34.50 inc. VAT. Comes complete with approx 1 metre of cable, centronics plug and software.

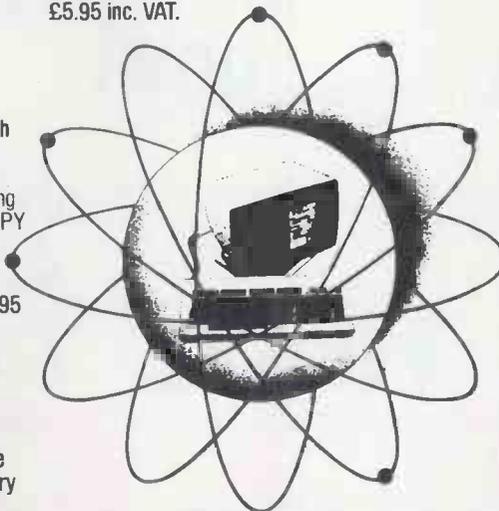

- Software recognises LLIST and LPRINT enabling Print-outs direct from Basic. Also adaptable COPY routine for graphics printers.

2 **PRINTER INTERFACE 2**
Centronics Interface for Jupiter Ace. £39.95 including VAT and Software.
Same unit as the Spectrum Interface but with adapter card.

3 **PERIPHERAL INTERFACE 3 — ZX ACE**
Package Using the adapter card and the Software supplied, the Sinclair ZX Printer can be connected to the Jupiter Ace. Special Introductory Offer £9.95 inc VAT.

4 PERIPHERAL INTERFACE 4 ZX BBC Adapter £24.95 inc. VAT.

Enables the connection of Sinclair Peripherals to the BBC Model B. First Software package included gives an amazingly cheap entry into printing on the BBC model B by allowing you to use the ZX Printer — ideal for listings. Please allow 28 days for delivery. Unit requires 1.2 Amp power supply: either the ZX P.S.U. or the equivalent available from us at £5.95 inc. VAT.

SOFTWARE LIMITED

**SOFTWARE FOR
SPECTRUM AND ZX81**

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate, cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match" £5.00
Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball" £5.00
Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort, etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator" £12.00
Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1". Business Applications £7.00
Ready-made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2". Home Computing £7.00
Ready-made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview" £5.00
Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual 'slide-show' mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw" £5.00
Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send s.a.e. for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE"	Forerunner of "Day of the Match"	£4.00
"TEST-MATCH"	Forerunner of "Ball by Ball"	£4.00
"VIDEO-PLAN"	Forerunner of "Superplan"	£7.00
"VIDEO-AD"	Forerunner of "Superview"	£7.00
"VIDEO-SKETCH"	Forerunner of "Superdraw"	£7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf, immediate delivery basis. Prices include VAT, post and packing in U.K. Add a bit for postage if you live in Outer Mongolia. (Note: "Day of the Match" not available until late October 1983).

IF YOU THINK YOU WITHOUT YOU CAN PROE WITHOUT

On the other hand, you too may have come to realise that a microcomputer without software is about as much use as a car without petrol.

In which case you need to read SOFT every month.

SOFT is the only micro-software magazine you can buy. A magazine you can trust to investigate and explain the importance of packages which will help you get the most from your micro.

SOFT will help if you use your micro for business. With more comparative reviews than any other magazine – of wordprocessors,

databases, spreadsheets, and every other application – SOFT tells you whether new really is best or whether the old standard is still the one you should go for.

SOFT will help if you use your micro for education. Whether you're teaching yourself or your kids, SOFT examines how well packages live up to their claims, and assesses which products really are appropriate for you and your family.

And SOFT will help if you use your micro for fun. Unlike some magazines, SOFT isn't flooded with hundreds of three-line reviews of boring "zap the

CAN SURVIVE SOFTWARE, BABY SURVIVE SOFT.

Klingons" variations. From Ant Attack to Zaxxon via Eastern Front and Flight Simulator, SOFT carries only in-depth evaluations of games which deserve to be big sellers. And SOFT's reviews are at least as entertaining as the games themselves.

From March, SOFT has been substantially revamped to report, review and comment on even more packages every month. SOFT is available at all good

newsagents or, alternatively, you can use the coupon for a post-free sample of the latest issue.

Please send me a copy of the latest issue of SOFT. I enclose a cheque/postal order for 85p made out to SportsScene Specialist Press Ltd.

MICRO-DIGITAL

S100

BOARDS

A new series of S100 boards designed to operate in 8-bit or dual 8/16 bit systems, fully meeting the IEEE 696 specification.

- CPU 88** Dual processor board with 4MHz Z80A and 5MHz 8088, an 8-bit wide data bus. Either processor can be switched at any time.
- 256k DRAM** A full 256k of memory with 24 bit addressing and 8-bit or 16-bit data path. Self refreshing and bank selectable.
- COMBO 1** Designed to handle all I/O and subsidiary functions, 2 RS232 with software selectable baud rate, 'Centronics' parallel output, Floppy Disc Controller, Konan Winchester Controller interface, Real Time Clock Calendar, software selectable 8-bit wide EPROM.

In addition we also offer a 4 MHz Z80A processor board (SBMC), a Floppy Disc Controller (DFDC), 64k Static RAM (SRAM), 4channel serial I/O (S104), Motherboards and Card Cages, and a frame (DM8000) to form a complete system. The DM 8000 is complete with 15 slot Card Cage with Motherboard, two cut-outs for full height 5 1/4" drives, and a power supply capable of handling Winchester Drives.

SYSTEMS

These complete systems are based on the DM 8000 frame and come complete with 10, 20 or 40 Mbyte Winchester with floppy back up. All systems have 256k dynamic RAM (expandable) as standard and 2 serial I/O ports.

- DM 8100** Dual Z80A and 8088 processors available with CP/M-80 and CP/M-86 or MSDOS.
- DM 8200** A full 16-bit computer, available with CP/M-86 or MSDOS.

Totally devoted to you!

Oric Owner is the official magazine devoted to the Oric 1 and Atmos home computers.

It's crammed full of in-depth information, advance news on the latest add-ons, superb programs and interviews with the engineers who designed it.

The first issue is absolutely free when you buy your Oric, so why not keep ahead of the latest developments and subscribe to further issues. A years subscription of 6 issues is now only £10 (£15 overseas) so post the coupon today.

Can you imagine life without it?

ORIC OWNER SUBSCRIPTION FORM

ARIES-B20

Add 20K to your BBC micro in five minutes

Features

- ★ Adds 20K of useable RAM to your BBC Micro
- ★ Run programs up to 28K long in ANY SCREEN MODE
- ★ Extra memory can be used directly from BASIC I and II, VIEW 1.4, FORTH, LISP, and many other existing programs
- ★ ARIES-B20 is compatible with all correctly written BBC Micro software, on cassette, disc, sideways ROM or cartridge
- ★ Don't be deceived: this product is unique - no other expansion unit has these capabilities
- ★ Complete compatibility - ARIES-B20 uses only documented MOS facilities
- ★ Fitted in 5 minutes using only a screwdriver
- ★ Simply plugs in inside the case
- ★ No soldering or cutting
- ★ (Unlike some add-on products) will cause no damage to your

- BBC Micro - can be removed at any time
- ★ Incredibly simple to use
- ★ Patent applied for
- ★ Designed in Cambridge by BBC Micro experts
- ★ Top quality manufacture
- ★ Unquestionably the most important add-on ever produced for the BBC Micro
- ★ Top software houses are racing to produce the "super-programs" made possible by the extra capacity
- ★ 1 year guarantee.
- ★ Available mail-order only
- ★ Official purchase orders accepted from bona-fide educational establishments, all other trade cash-with-order

- ★ Price £99.95 including post, packing and VAT
- ★ If not completely satisfied with your purchase, we will refund your money in full providing you return the ARIES-B20 in good condition in its original packaging within 14 days

Machine requirements:

- ★ BBC Micro model B
- ★ MOS 1.2 or later
- ★ Plugs into CPU socket and 1 sideways ROM socket

Also available IEEE-488 interface.
Coming soon: Compatible ROM expansion board.

Please allow up to 28 days for delivery.

If you are not satisfied we shall of course refund your money, if you return the case undamaged within 14 days.

Smart executive-type case, purpose built, with locks, special hinges and lift-off lid. **£44⁹⁵** (plus p & p)

Internal console allows neat installation of computer, power supply and printer in fitted recesses. Provision for housing tape recorders up to 28cm x 15cm.

Aluminium switch panel eliminates constant removal of plugs for both save/load and power off facilities and provides sockets for tape recorder leads, to allow operation in convenient position shown.

All internal wiring and leads supplied to allow easy plug-in installation.

Case lid fitted with shock absorbing foam to protect components when closed and with retaining straps for neat storage of mains and T.V. aerial leads.

Turbo Charge your ZX81 with our ZX81-FORTH ROM with multi-tasking

Replaces your basic ROM to give you a totally new system. The unique screen editor allows you to edit programs while other programs are executing. Runs more than 10 tasks at once. Schedule tasks to run from 50 times per second to once a year. Ideal for control purposes. Uses all ASCII characters and restores the keyboard to normal operation. It contains a real-time clock and a large number of 32-bit words. Supports the ZX Printer. Allows machine code definition and needs at least 2K of memory. Supports 16K, 32K and 64K RAM-packs. Three times faster than fig-FORTH, but fig compatible. Available as a 'fit-it-yourself' EPROM, with an extensive manual for £25 plus VAT. Some ready-converted ZX81's available.

Floating-point extension ROM – out soon!

We'll open your eyes to what you can do with your personal computer.

Visi On is a revolutionary new type of business software from the makers of Visi Calc. Until you've seen it in action you won't believe it. You won't believe how in minutes you can use your PC screen like the top of your desk shifting information from file to file. Or how simply you can learn to integrate spreadsheet calculations with word processing and business graphics and many other applications. You won't believe how much better budgeting, faster forecasting and extra personal productivity you can get from your PC... Until you've had a 'hands-on' demonstration at your nearest computer dealer.

SAGE BUSINESS SOFTWARE

With a SAGE fully integrated Sales, Nominal & Purchase ledger system costing only 375.00 how can you go wrong?
 In fact they even let you try-before-you-buy for only 20.00, and refund that against your purchase. Please call for a full list of packages and prices. We will enclose a FREE pack of ten diskettes with every SAGE software package sold.

NORMAL ORDERS - WE NOW WELCOME ALL OFFICIAL GOVERNMENT ORDERS
 We welcome orders from all Government Bodies including Schools, Universities, Colleges, Hospitals, the Utilities, Research Establishments, Armed Forces, the Ministries and local Authorities etc. We will despatch within 4 working hours from receipt of your official order number received either by post or over the telephone.
 Everyone else cheques with order please payable to DISKING. If you are a large establishment, and cannot raise cheques without an invoice please post or telephone us with your order, and we will send a pro-forma invoice by return, for your accounts department to pay against. Also bear in mind, that you do have to pay VAT, which will be added to these prices.
 If you are in any doubt, please telephone us for assistance.

CREDIT CARD ORDERS
 We welcome Access (Mastercharge), Barclaycard (VISA) & Diners Club International, & there is NO credit card surcharge. You may write your C Card No. on your order or telephone the order day or night, 365 days a year. You may speak for as long as you like (but please speak up and don't leave long gaps otherwise our machine thinks you've gone home) and don't forget to give the following details:
 1. Day time telephone number
 2. Cardholder Name & Address
 3. Delivery Invoice Address if different
 4. Your Credit Card Number
 5. Part Nos and quantity of what you wish to order
 6. Normal, First Class or Special Post
YOU MAY LEAVE THE REST TO US!!

URGENT ORDERS
 If you're posting your order, omit the word FREEPOST from our address, and use our normal postcode GU30 7EJ and do not forget to stamp it FIRST CLASS. If you are a Government body as defined under 'NORMAL ORDERS' and are telephoning your official order OR are an individual or company using your Credit Card No, please make it clear that you wish to pay for your goods to be sent to you by FIRST CLASS POST.

PROGRAMS

PCW is interested in programs written in any of the major programming languages for all home and small business micros.

When submitting programs to PCW please include the following:—

(a) A cassette or disk of the program

(b) A listing on plain, white paper (typewritten if no printer available)

(c) Comprehensive but brief documentation (d) A suitable sae

Please mark (a), (b) and (c) with your name, address, program title, machine (state minimum RAM where appropriate) and—if possible—a daytime phone number. All programs must, please, be fully debugged.

Programs are paid for at the rate of £50 per page of published listing, plus a £100 bonus for the Program of the Month, and must be the original work of the author and not previously published. Send contributions to:
Surya, PCW Programs, 62 Oxford Street, London W1A 2HG.

A program for each of the three Commodore home micros this month. 'Wordsquare' is an aid to designing puzzles of the same name on a PET. 'Tax analysis' is a VIC 20 program which calculates your tax liability for the preceding financial year. 'Plane attack' is a fast action game for the Commodore 64.

BBC users have five programs to choose from. 'Terminal programs' comprises two simple communications programs for the Model B. 'Splash!' is a complex board game—the instructions are straightforward, working out the best move is the

complicated bit! 'Abacus' is an educational program graphically illustrating the use of an abacus. 'Pursuit Ship' is an enjoyable game with an annoying soundtrack. 'Disassembler' is included mainly on the merits of its speed and the easy-to-follow display.

Program of the Month BBC SPLASH! by Jeff Aughton

'Splash!' is an infuriating strategy game for a 32k BBC Micro. A colour display is essential to the game unless you happen to be a genius at working out grey scales!

The game is played on a 7x7 board and is based on waves. If you drop a stone into a pond, ripples will spread outwards from the centre. If you then drop another stone into a different part of the pond, the second set of ripples

will interfere with the first. Predicting the way in which a further stone will affect the existing pattern of ripples is what the game is all about. Full instructions are given within the program.

Seasoned PCW Programs readers will spot the Jeff Aughton touch—who else could call a delay procedure with the statement PROCrinate?

MICROMART

Isn't it time you stopped running your computer at printer speed?

In ten seconds, your computer can output enough print data to keep your printer busy for five minutes, or longer.

With some applications, this simple fact can mean that the computer spends 90% of its working day waiting for the printer, instead of computing. But the solution is cheap, effective, and painless — and it's here today.

Concurrent printing saves time and money.

Plug a print buffer into your micro system, and profit from the one really useful feature of concurrent processing: computing while you print.

Next time you are locked out of your computer by invoice printing, graphics dumping, or whatever, remember that installing one of our buffers will get your computer back to computing, fast.

For the IBM PC matrix printer and Epson MX and FX printers, the E/Buffer with 16k of data storage capacity is just £109.25, including postage and VAT. The 32k version is £143.75; the 64k version £201.25.

Data buffers for all other printers or plotters, and for use with other micro and mini computers, in RAM sizes from 2k to 256k.

A-Line Computer Systems

Distributors of data buffers, print buffers; buffered and unbuffered protocol converters

SOPHISTICATED GAMES FOR VIC 20

VIC CRICKET. Realistic game of skill and luck with all the major rules of cricket correctly interpreted. Full scorecard, printer and game save facilities. Needs 16K expansion. **£5.99.**

LEAGUE SOCCER. League championship game for two to 22 teams/players. Automatic fixtures, full action commentaries, match facts, League tables, results check, postponed games, etc. Non league matches also playable — the Vic will even make the cup draw. Printer and game save. Needs 16K expansion. **£5.99.**

WHODUNNIT? Twelve guests have gathered for drinks at Murder Manor. However one of them has more than drinks on his mind. Thrilling detective game for one to six players, with genuinely different murder every time. You can even rename the suspects! Needs 8K expansion. **£4.99.**

TOP OF THE POPS. Money making game about the music business. Make your own records and see them climb the chart. Printer and game save facilities. Needs 8K expansion. **£4.99.**

VIC PARTY 4. Contains MASTERWORD, A DAY AT THE RACES, GAME X (Strip Poker), and CONSEQUENCES. Four games ranging from the serious to the ridiculous. All good fun — nothing offensive. Needs at least 3K expansion. **£5.99.**

Available from
SOPHISTICATED GAMES, Dept. WORLD, 27 Queens Road, Keynsham, Avon BS18 2NQ. Tel: 02756-3427.

omitted together with TAB statements (which have different effects on different machines), both listings should run on most machines without modification.

The idea of both programs is to check that your tax liability is being correctly assessed by the Inland Revenue. The programs ask a number of straightforward questions about your income, savings, investments and so on, and

then calculate your liability.

'Tax analysis' should not be treated as a substitute for a consultation with a qualified accountant (of which the author is one), but it can be used as a rough guide. If you find that you are paying significantly more tax than the liability calculated by the program, you may well find it worthwhile to check with your tax office that you are being correctly assessed.

MICROMART

PROLOG INTERPRETERS

PROLOG is superior to conventional languages (Basic,Pascal,C,Ada) in the development of intelligent data-base systems and other non-numeric applications. More powerful than LISP, and yet easy to learn and use, PROLOG is the core language in the Japanese fifth generation project. We supply PROLOG-1 by Expert Systems and MICRO-PROLOG by Logic Programming Associates on most disk formats.

PROLOG-1	CP/M-80	£250 + VAT
PROLOG-1	CP/M-86	£330 + VAT
PROLOG-1	MS-DOS	£330 + VAT
MICRO-PROLOG	CP/M-80	£135 + VAT

GREY MATTER

4 Prigg Meadow, Ashburton, Devon TQ13 7DF.
TEL. (0364) 53499

HAVE YOU CONSIDERED BAR CODES

Bar-codes give a speedy and error free means of data entry and provide a foolproof method of identification for any item or document. Typical uses include stock control, libraries, filing systems, security and checkpoint verification, point of sale terminals, spare parts identification, etc. etc. Already most grocery products are bar-coded at source and many other areas of industry and commerce are following. Bar-codes will soon be commonplace.

APPLE 2 PET BBC micro

A complete low cost bar-code identification system is available for these micros. It contains all the hardware, software and documentation needed to read and print bar-codes, (using an Epson dot matrix printer). Most bar-code formats may be read and the system may easily be patched into an existing applications program.
£199.00 + VAT

★★★ NEW ★★★ RS232 bar-code reader

This new stand-alone unit decodes the bar-code and converts it into ASCII for transmission to the host computer via a RS232 port. Complete with scanning wand, power supply and cables. Works with virtually any computer.
£385.00 + VAT

More information on these products is available on request. Please state your micro and area of interest. The decoder board is available separately to OEMs.

Laboratory Microsystems FORTHS — the professional FORTHS complete with editors, assemblers, turn-key compiler, many system utilities, multi-tasking, and extensive documentation. These FORTHS are available for 8080, Z80, 8086/88, and 68000 processors using CPM-80, CPM-86, MSDOS/PCDOS, or CPM-68K.

CPM-80	£60
CPM-86	£105
MSDOS/PCDOS	£105
CPM-68K	£190

NEW - FORTH+ packages have 32-bit stacks and can access the full address space for both program and data.

CPM-86/MSDOS/PCDOS	£190
CPM-68K	£290

Nautilus Systems Cross-compilers — transport FORTH to different processors, generate ROMmable code, these compilers will run on any of the FORTHS above. The complete development system — a real time saver. Choose targets from — 8080, 8086/88, Z80, 6800, 6301/6801, 6809, 68000, 1802, Z8, 9900/99000, Z8000, LSI-11. First compiler from £230, additional targets from £95.

NEWBRAIN FORTH in PROM — screen editor, full integration to NEWBRAIN i/o and tape files, complete Z80 macro-assembler, decompiler, utilities, and manual — £55 + VAT.

EPROM/RS232 card and comms software also available.

DRAGON FORTH cartridge — full fig-FORTH with editor, colour, graphics, sound, — manual includes source code of ALL supplied software — £45 + VAT.

??? !!! JUPITER ACE DISC CONTROLLER !!! ??? Well ain't that magic — just add power and a disc drive — 3", 5", or 8". Includes full FORTH DOS software — £98 + VAT. Additional disc utilities £15.

DIY FORTH kits — cheap portable FORTH-Installation manual — How to do it, model, definitions, editor £7. Source code listing for one processor — choose from 6502, 6800, 6809, 8080, Z80, 8086/8088, 9900, 1802, 68000, Z8000, VAX, Apple II, LSI-11, Eclipse £7.

Comprehensive range of FORTH books includes —

'Starting FORTH' by Brodie — the classic £16
'Systems Guide to fig-FORTH' by Ting £26

DISK COPYING SERVICE

Moving data and program files from one machine to another is often made difficult because different manufacturers have adopted different disk format standards.

We can copy your files to and from almost any disk format including CP/M, MSDOS, PCDOS, TRSDOS, ISIS, APPLE, SIRIUS, PDP11, VAX, and IBM.

Disks are normally despatched on the day they are received.

Our charge is £10.00 + disk + VAT. Special prices for quantities and tape to disk transfers.

For more information call us.

NEWBRAIN

(a) **MINI RAM-DISC UNIT** only £59.95 This unit provides the Newbrain user with fast, reliable, non-volatile storage of BASIC and machine code programs and data. Self-installing software is supplied resident in the unit and this offers not only disc emulation but also over 20 useful extensions to the Newbrain BASIC.

- * 8k CMOS RAM with battery back-up
- * DISC TYPE COMMANDS include: DIR, ERA, OPEN, CLOSE, LOAD, SAVE, MLOAD, MCSAV etc
- * DEV command allows default backup device to be RAM DISC, TAPE1 or TAPE2
- * TRACE, FAST, SLOW and HOLD facilities
- * MACHINE CODE load and save commands
- * HEX and BINARY numbers and arithmetic
- * HEX, BINARY string tests & conversions
- * WORD PEEK WORD POKE and other commands
- * Comprehensive DOCUMENTATION & EXAMPLES
- * MACHINE CODE MONITOR included FREE
- * Unit can be just a MEMORY EXPANSION to allow larger screens and programs

(b) FULLY IMPLEMENTED RENUMBER

- * To reside in MINI RAM DISC £10
- * On tape for unexpanded Newbrain £10

MICROTRONIX

19 BIRKBECK PLACE, OWLSMOOR,
CAMBERLEY, SURREY

READY.

MZ-80K LABEL PRINTER by Frank Rooney

'Label printer' runs under Sharp Basic SP-5025 or, with minor modifications, under Basic 5060. In common with all MZ-80K programs not involving graphics, it will run on the MZ-80A and 700 using one of the above interpreters.

The program allows the user to design labels which are then printed onto standard computer labels using an Epson MX-80 printer. It can also be used with other Epson-compatible printers, though some of the print options may not be available.

'Label printer' supports condensed, expanded, normal, subscript, condensed subscript and enlarged print styles. Automatic centering is available as an option and the program is menu-driven. The Sharp's screen editor is available when entering the content of the label. Please note that CHR\$(124) is used as a demarcation symbol in data statements in place of commas. This is not an 'X', but is the graphics character at the bottom-right of the keyboard. This allows commas to be printed.

For conversion to Basic 5060 (avail-

able through the Sharp users club, Yeovil College) the following printer codes should be changed:

Cursor-down: CHR\$(15)

Cursor-up: CHR\$(14)

Cursor-left: CHR\$(27)

To cancel condensed: CLR=CHR\$(18)

To cancel enlarged: CLR=CHR\$(15)

For conversion to other machines, USR(62) sounds a beep to prompt the user for input (usually BEEP or PRINT CHR\$(7)); POKE 4466,X prints X lines down the screen (usually achieved by LOCATE x,y, VTAB(x) or PRINT\$(x,); all other POKES and printer-control characters are explained in remarks within the program.

Lines 1190-1210 allow spaces to be entered at the beginning of inputs (leading spaces would otherwise be ignored). As the program stands, 'Label printer' copes with three types of label: 1 column of 3 1/2 x 1 7/16in, 2 columns of 4 x 1 7/16in and 3 columns of 2 3/4 x 1 7/16in. To modify the program to handle other types of labels, change the TAB data in lines 1350-1430.

MICROMART

MODULA-2 COMPILERS

MODULA-2 represents the state of the art in programming languages.

Designed by Niklaus Wirth, the creator of Pascal, MODULA-2 features include modules, program libraries, separate compilation, concurrent processes and low-level machine access. It will supersede Pascal and offers programmers a powerful alternative to both C and Ada.

We offer a selection of MODULA-2 compilers by Volition Systems, Logitech Corporation, and JRT Systems to run on CP/M-80, PC-DOS, CP/M-86, APPLE, SAGE, and UCSD with prices ranging from £75 to £360 + VAT.

For more information call us.

IOSUBS

A complete set of subroutines written in BASIC allowing the programmer to easily develop professional user friendly software.

Subroutines allow:-

- 1) Alphanumeric, numeric, date, password data to be input/output anywhere on the screen.
- 2) Automatic validation of input data.
- 3) Reverse video, Highlighted, Underlined attributes on input/output fields.
- 4) Full editing facilities available during data input mode.

Price £55 with demo software. inc VAT
Available on ACT Sirius 1 and Apricot

AIR-RAID

A fast action graphics game

Price £11.15 inc VAT

Available on ACT Sirius 1 and Apricot

M & J SOFTWARE

DRAGON fig-FORTH £12
A cassette-based implementation of FORTH which includes a powerful text editor and a 6809 macroassembler. All the power of Basic is retained by being able to access Basic commands from FORTH. Do not be fooled by the low price of this package — it represents unbeatable value for money and comes complete with extensive documentation.

fig-FORTH ASSEMBLY SOURCE LISTINGS £7 each
Available for the following Processors:—
6502, Z80, 6809, 8080, 1802, 9900, 6800, 68000, 8086/88 & PDPI1

MVP-FORTH ASSEMBLY LISTINGS £7 each
Available for 6502, 8086/88 & 8080 Processors.
These listings provide the source for an implementation of FORTH up to 79 standard.

fig-FORTH INSTALLATION MANUAL £5
A complete 'how to do it' guide to the implementation of FORTH from the above listings. This manual contains the FORTH source written in FORTH, an editor, an extensive glossary and lots more.

ALL ABOUT FORTH by Haydon £7.95
An excellent reference book with cross references to fig-FORTH, the FORTH-79 standard and Starting FORTH. This book should be next to every FORTH Programmer's compiler.

6809 & 6502 MACROASSEMBLERS £5 each
Written in fig-FORTH, these listings require the minimum of alteration for any fig implementation. Copies on tape can be supplied for Dragon and Micromart users at £1 extra.

DRAGON COMPANION £4.95
A useful source of information on the workings of the DRAGON, it includes a full 6809 disassembler.

BBC TERMINAL PROGRAMS

by T Harvey & M Orr

BBC 'Terminal programs' enable a program to be rapidly transferred from one BBC Micro to another using the RS432 serial ports, and two BBCs to communicate with each other telex-style.

Listing 1 enables a program to be transferred from one machine to another. The primary use of the program is in schools or sites where there are more machines than disk drives. A program can be loaded from disk to one machine, and then rapidly transferred to others without the need for full networking.

To use the program, use an RS432 lead wired for communications (your local Acorn dealer should be able to supply this). Connect the two

machines, and type *FX 2,1 on the machine to which you intend to send the program. This disables the keyboard, with the exception of the BREAK key, and tells the machine to accept input from the RS432 port as if it were being entered from the keyboard.

You should then run the 'Master terminal' program on the transmitting machine and load the program to be transferred, then follow the instructions given in the program. BREAK restores the host machine to normal use and OLD recovers the transmitted program.

The second program comprises two listings. One should be typed into each machine to enable the two to communicate with each other using the RS432

PROGRAMS

link as above. As it is, the program is rather uninteresting but, as our referee points out, the technique used could form the basis of some very imaginative software involving two machines. An 'Eliza' program, with two machines talking to each other, could be fun! Adventure programs, with two human characters playing simultaneously, are

also interesting or — for the more ambitious — an arcade-style game with two spacecraft battling it out, each player controlling one craft and receiving data on the other player's movements. If anyone wants to write something for PCW Programs along these lines, let me know.

COMMODORE WORDSQUARE

by Antony Gerrish

'Wordsquare' was written on a PET, but should convert easily to both the Commodore 64 and VIC 20. A printer is essential.

The program generates wordsquares of the type found in puzzle books using words entered by the user. The words you enter will be hidden in a grid of letters, and may read in any one

of eight directions — up, down, left, right and the four diagonal directions.

The program also offers an optional answer sheet, showing the positions of all the words without the dummy letters used to fill the grid. The program contains no instructions but is easy to use by simply following the prompts.

When typing in the listing, please

BBC DISASSEMBLER by S James & R Nurse

'Disassembler' is a fast machine code disassembler for the BBC models A & B. When run, the program displays a standard disassembly of the contents of RAM beginning at the specified address. 'Disassembler' also displays a hexadecimal and ASCII version of the code, the hex to the left of the disassembly, the ASCII to the right.

The start address should be given in hex, but without the leading '&'. The

output has been made extremely easy to follow by highlighting unconditional jumps (JMPs and JSRs) in green, with conditional branches in red.

Two points to note are (a) in the ASCII column, all screen display codes are replaced by asterisks, and (b) the same codes are likely to play havoc with your printer. The program was tested on itself and on parts of the BBC ROM.

```

64 PROGRAMMERS WANTED!

If you've written a program for the Commodore 64 that's good enough to be featured in our full page colour adverts phone Peter Calver on 01-861 1166 now!

We pay good royalties and will treat you fairly. And by the way, if you're writing in machine code on the 64 you ought to buy yourself a copy of our MIKRO assembler cartridge. It's powerful, easy to use, and worth every penny of £50 plus VAT.

DRAGON TRAKTRAP

by Bob Chappell

Dragon 'Traktrap' is a Snake by another name, running on the Dragon 32/64. trail is red, yours is yellow. The first to win ten rounds is declared the winner.

The computer and player each lay a trail, the idea being to trap the computer while avoiding crossing your own or the computer's trail. The computer's Use the arrow keys to control your direction. The computer controls the speed of the game.

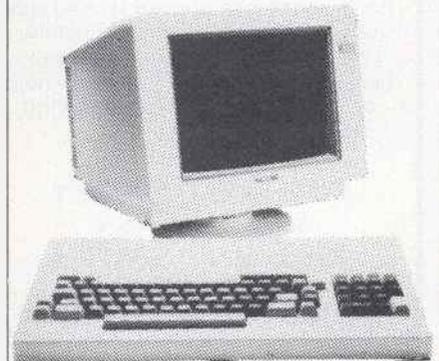

```

MICROMART

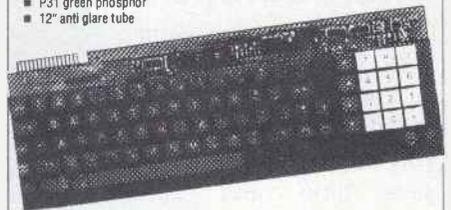

VT100 COMPATIBLE TERMINAL ONLY

£399 per single unit

- VT100 & VT52 compatible
- Rugged metal case
- Swivel & tilt stand
- Printer port
- Real time clock on 25th status line
- Line/local switch
- Menu set up mode
- P31 green phosphor
- 12" anti glare tube
- Advanced video attributes
- Character graphics (Note: No 132 column, smooth scroll and double size characters)

MODEL 401 £399

ASCII Keyboards

- Upper & Lower Case plus Control
- Low Power Consumption
- Shift & Alpha Lock

- Autorepeat (Model 777)
- Parallel Data Output
- Metal Mounting Frame
- Suitable for Tuscan, Tangerine etc.

Accessories available include
 Metal Case £15.95
 Edge Connector £2.25
 DC to DC Connector £5.50
 (for operation off single 5V supply)

Model KB756A 56 Key £44.50
 Model KB710 Numeric Pad £7.50
 Model KB771 72 Key £57.00
 Model KB777 77 Key £65.00

HITACHI WORKSTATION

Compatible with IBM PC, IBM XT
 Software available for 3270PC, 3270, 3870, & DEC VT100 emulations.

STANDARD FEATURES
 14" High res. colour monitor with 192K video ram advanced basic, MS DOS, RS232 comms. XT version with 15Mbyte winchester. 2 year on site maintenance.
MODEL MBE16002 from £2595

U.K. orders add 15% VAT on order total. Overseas Orders add £6.50 to cover part cost postage and documentation. Delivery all items ex stock.

MICROSOFT BASIC INLAY CARDS

by Ian Masters

'Inlay cards' is a short and simple print program, producing blank cassette inlay cards which have space for up to 21 programs per side. Inlay cards supplied with cassettes often don't have enough room to record details of

all the programs on a C-60 or C-90 tape. Written in completely standard MBasic, the program should run on any machine supporting an LPRINT USING statement.

```

10 'CASSETTE BOX INSERTS by Ian Masters
20 '28 Sept 1983 in Microsoft Basic
30 'For use with MX100 Printer and 128
35 'column paper.
40 'The program will produce 6 cassette
50 'box inserts per sheet of 128 col by
60 '11 inch paper. Don't be tight, use
70 'good paper 80gsm and a good ribbon,
80 'for best results.
90 '140 sets line spacing to 1/6th inch
100 '150 sets the emphasised mode ON.

Atari Pseudo-DOS by Michael Jackson

Atari 'Pseudo-DOS' is an extremely useful utility for Atari programmers. One of the problems with Atari Basic is that it doesn't support much in the way of operating system commands: it's often necessary to repeatedly exit to perform disk-based functions.

'Pseudo-DOS' gets around the problem by providing a selection of DOS commands which are accessible from Basic. As well as supporting standard Atari DOS commands in a more-or-less standard format, the author has added three extra commands of his own —

MATRIX TRANSFORMATION

by T Scott

'Matrix transformation' is an educational program for the BBC model B running OS 1.2.

The program illustrates the way in which matrix multiplications are performed. The user enters a matrix and the coordinates of an object, and the computer calculates the resultant image. The object and/or image can then

be plotted on the screen.

The scale can be changed to allow for different-sized images and the program is menu-driven. As an educational tool, it works alongside traditional teaching methods: the program helping the user to understand the way in which the theory applies in practice.

WIN THE POOLS?

SPECTADRAW 2 — THE MOST POPULAR POOLS PREDICTION PROGRAM OF 1983. NOW EVEN BETTER VALUE IN 1984!!!!

AS REVIEWED IN PCW MARCH 1984

- ★ Supplied with a database tape containing data on over 8,000 matches since 1980.
- ★ Database is updated each week by user.
- ★ Match and Division names already in the program — no tedious typing every week!
- ★ Program is menu driven for simplicity of use.
- ★ Errors can easily be corrected — the program even checks your entries!
- ★ Comprehensive instruction manual designed to make the program easy to understand.
- ★ Will also forecast the least likely draws for those who prefer to bet on fixed odds.
- ★ Supplied together with SPECTASORT — the Perm Generation Program which takes SPECTADRAW 2's predictions and turns them into ten 8 from 10 full cover perms. Complete your coupon direct from the screen!!

SPECTADRAW 2, 8,000 MATCH DATABASE, SPECTASORT AND INSTRUCTION MANUAL, THE COMPLETE POOLS PREDICTION PACKAGE FOR THE 48K SPECTRUM — NOW AT THE UNBEATABLE PRICE OF £9.95 INCLUSIVE. (Cheques/Pos payable to B. S. McAlley).

SPECTRUM

The very latest
NEWS
from Spectrum

BIT PRINTER

An
inexpensive
quality printer
for the BBC 'B'

Just look at our fantastic low price on this super Dot Matrix printer! The ideal machine for the home user, the Bit Printer combines practicality with low cost - now you can list programs for debugging without spending a three-figure sum.

The Bit Printer interfaces directly with the BBC 'B' and you can see it at your local Spectrum dealer now!

SPECTRUM
PRICE ONLY **£89⁹⁵**

• There's up to £1,000 worth of Instant Credit available on a Spectrum Chargecard. See your local SPECTRUM dealer for written details (UK mainland only) Typical APR - 30.6%

Another first from
SPECTRUM!
Introducing the exciting new

ORIC ATMOS

- Lots of exciting programs available
- Built-in centronics printer interface (no RS232 needed - just plug in your printer)
- Full-featured keyboard with

- sculptured keys
- Separate keys for cursor control
- Built-in speaker
- Special sound effects for game programmers

HERE'S ANOTHER FANTASTIC FIRST IN HOME MICROS FROM SPECTRUM - the brand new and tremendously exciting Oric ATMOS 48K computer!

The ATMOS has taken a remarkable step forward in home computer technology. But how?

Most Micros 'waste' a large amount of memory on operating functions like graphics, colour and sound. Oric saw that by running these tasks from a ROM memory, a huge amount of the ATMOS's valuable 48K RAM capacity could be freed for more advanced operations.

So the colour capability (8 graphics, 8 background), powerful sound synthesis and high-resolution graphics of the ATMOS are achieved with fewer demands on computing power than its competitors.

So what else makes the ATMOS so exciting? There's now a typewriter-style full-response keyboard; it's directly compatible with most domestic cassette players; and there's a wide choice of software. The ATMOS is designed for convenience, too - it uses extended Microsoft BASIC; your printer plugs in without an RS232; and it comes complete with leads and everything you need to get going.

We've a 4-colour Oric printer (which accepts normal paper) at a terrific value-for-money price. Soon, a 3" Microdisc Drive will be available, too, to complete the system. Take a look at the superb new Oric ATMOS, in its highly distinctive black-and-red trim, at your Spectrum dealer NOW!

SPECTRUM PRICE

£169⁹⁹

Now from Spectrum - a complete business computer system for under £900

FT launches program for financial modelling

FINANCIAL TIMES REPORTER

THE FINANCIAL TIMES has made its first move into publishing computer software with the launch yesterday of a financial modelling program to be run on the more popular personal computers.

The program is a co-operation between Moneywise Software, an independent company...

The move is a diversification of the Financial Times business. Last month the Financial Times Corporate Information Service established a national news service. Mr...

Buzzbox

The Micro Modem

FROM
£69.50
 (EXC. VAT)

HAVE YOU HEARD THE BUZZ?

Designed for the hobbyist and professional user alike, the Buzzbox is a low-cost, micro-sized 300bps modem that offers superb data communications at an affordable price.

You can talk to other Micros, Bulletin Boards, Bureaux — and exchange programs with each other, or discover what's happening around the world.

Buzzbox main features include:

- 300bps full duplex CCITT V21
- Originate & Answer ● No-fuss installation — just plug in ● Micro size
- Battery powered with mains adaptor option.

The unit is fully British Telecom approved for direct connection to the 'phone line — therefore eliminating most of the errors normally associated with the use of acoustic modems.

From only £69.50 (exc. VAT), the Buzzbox is within the reach of all computer users.

Scicon Limited — please call (0908) 567567 for further details on the Buzzbox or other Data Communications Products.

Ordering Information: Buzzbox £69.50, Mains Adaptor £9.50, Modular Adaptor £5.50 (optional Jack 420, £5.00), Carriage £3.50. All prices exclusive of VAT. Dealer enquiries welcome.

APPROVED for use with telecommunication systems run by British Telecommunications in accordance with the conditions in the instructions for use.

Scicon

Just clip this coupon and post to SCICON LIMITED,
 Brick Close, K/iln Farm, Milton Keynes MK11 3EJ. Tel: (0908) 567567.
 Please send me more details of the Buzzbox and a Buzzbox order form

PETE & PAM - THE APPLE, IBM

AUTHORISED FOR APPLE SALES IN LANCASHIRE

THE APPLE PROFESSIONAL HOME COMPUTER

Pete & Pam distribute Apple 8 bit products to a network of approved Pete & Pam dealers. If you feel that you come up to the high standard of dealership required, apply now. It could be the start of a profitable relationship!

YOU GET:

- An Apple IIe. — Disk Drive with Controller.
 - TV Modulator (Colour and Sound). — Exclusive Apple Bag.
 - Plus **MONEY OFF VOUCHERS FOR:**
 - £25 off Apple IIe Monitor (£149 + VAT).
 - £25 off 1 of the Apple discovery games.
 - or Apple Logo — or Applewriter IIe — or Quickfile IIe.
 - 46% off Micronet 800 Service a saving of £79.95 which includes:
 - Modem.
 - British Telecom Jack Plug Installation.
 - Communications Card.
 - Postage/Packing/Insurance.
 - 1 days FREE training at an Apple Training Centre Value £100.
 - Various Vouchers for money off Pete & Pam distributed software. £999 including VAT
- Get into Personal computing in a big way!*

Rental RENTAL RENTAL

Want to rent an Apple?

Or an IBM PC...a QX10... a Printer or anything else you can think of? Call either of our offices for a quote — from one machine to fifty, from one day to a thousand years.

“CABLES UNLIMITED”

We can make any cable to your specifications. Our “CablesUnlimited” staff will cut and solder to sort out your cable problem - fast!

SOFTWARE WHOLESALE

Pete & Pam distribute a wide range of computer software to discerning computer dealers throughout the world.

We offer computer dealers the best prices and support on a whole range of products, from publishers such as Ashton Tate, Microsoft, Micro Pro, Software Publishing and Softword Systems (Multimate IBM PC). You may not be getting the best deal from your present hard-selling distributor, no matter how big the name and reputation. Call us now, it could be the start of something good.

APPLE IN EDUCATION : SPECIAL NOTICE

OF GREAT INTEREST TO UNIVERSITIES, COLLEGES, POLYTECHNICS, ITEC'S, SCHOOLS, YOUTH TRAINING SCHEMES

As part of a Pan-European incentive scheme, Apple are offering very substantial discounts to educational users of all Apple equipment except Apple IIe bundles, Lisa, and Apple 32. The offer starts in January and ends 31st March, 1984.

PLEASE CONTACT US NOW FOR DETAILS — DISCOUNTS UP TO 40% ARE AVAILABLE! — MAKING THE APPLE IIe EVEN GREATER VALUE FOR MONEY!

Crosstalk

The crosstalk 16 Xvi communications package can emulate many other terminals. It can capture data and transfer data files with error checking.

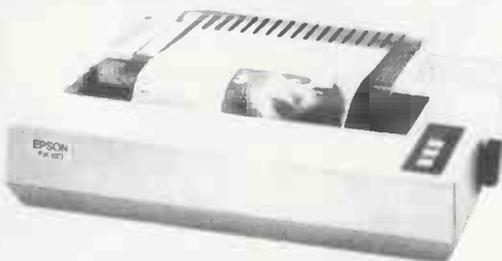

You can instruct it to call up “LOG IN” and “S” commands to another computer. It is simple to operate and has a “help” facility. It is fast and comes set-up to operate on IBM 3101, DEC VT 100, ADDS Viewpoint, Televideo 910/920. Supports IBM PC and ACT SIRIUS.

£134.48 + VAT

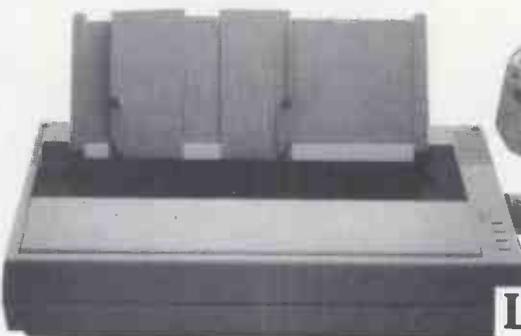

EPSON PRINTERS - WHOLESALE

Pete & Pam distribute EPSON, OKI, and other fine printers to computer dealers throughout the country. If you're a computer dealer and haven't yet discovered the advantages in buying from Pete & Pam, give our sales staff a call NOW. We pride ourselves on excellent prices, fast delivery, top class technical support and service facilities. You've nothing to lose and a lot to gain.

PC, & EPSON SPECIALISTS!

AND LONDON, AND IBM PC IN LONDON.

THIS IS "BUY-YOURSELF-A-BUFFER-MONTH"

You'll never again have to waste time waiting for your printer!
A buffer will instantly increase your efficiency, and eliminate, the frustration of waiting for a printer to finish. Now you can simply dump your printing data directly to a buffer and CONTINUE PROCESSING! Buffers come in a variety of styles, methods, and sizes. There is a buffer available for any combination of computer/printer. If in doubt, ask our staff for advice.

MICROBUFFER IN-LINE

FOR ALL OTHER COMPUTER/PRINTER OR COMPUTER/MODEM COMBINATIONS

The Microbuffer In-line is a stand-alone printer buffer with a minimum of 32K. It is easily upgraded to 64K with four user-installed RAM chips. It can be further user-upgraded, 64K at a time, to up to 256K by adding low-cost memory expansion modules.

Microbuffer In-line features a front panel with three Touch Sensor controls; one to clear the buffer, one to perform complete self-test, and a copy button to reproduce the last document up to 256 times without any computer intervention. (When a document takes several hours to prepare and a copy machine isn't available, this feature can save a great deal of time.)

Both the parallel and the serial versions can be used with virtually any computer (including TRS-80, Atari, IBM, Apple, Osborne, NEC, etc.) and any printer (including Epson, Centronics, NEC, C.Itoh, IDS, Anadex, Qume, Diablo, TI-810, etc.).

Microbuffer In-line requires no user modification of software—it installs easily, in seconds.

- 32K Parallel In-line £199 + VAT
 - 32K Serial In-line £199 + VAT
 - 64K Parallel In-line £225 + VAT
 - 64K Serial In-line £225 + VAT
 - 64K additional add-on (max 256K in total) £116 + VAT
- ALL BY PRACTICAL PERIPHERALS INC.

EPSON INTERNAL PRINTER BUFFERS

- These buffers go inside the printer and use its power supply.
- 16K Practical Peripherals Parallel (upgradable to 64K) £115 + VAT
 - 8K Practical Peripherals Serial (upgradable to 32K) £115 + VAT
 - (Supports hardware handshake + XON/XOFF up to 19200 baud)
 - 8K Wizard Parallel (upgradable to 64K) £109 + VAT

APPLE INTERNAL BUFFERS

Bufferboard docks to your existing interface, takes up one slot and using the Apple power supply.

- 16K Bufferboard £109 + VAT
 - 64K Bufferboard £169 + VAT
- Available for Apple parallel/Epson parallel/and Grappler Interfaces.

BUFFERED INTERFACES

Combined printer interfaces and buffers, taking up one slot and using the Apple power supply.

- 16K Buffered Grappler Parallel £179 + VAT
- 16K Microbuffer II Parallel £139 + VAT
- 16K Microbuffer II Serial £139 + VAT
- 16K Gram Serial/Parallel £129.95 + VAT
- 64K Gram Serial/Parallel £218 + VAT

The Apple Macintosh

Peter Fisher of Pete & Pam says "I've been using a Macintosh for a couple of weeks now. The machine is excellent. It's fast, using a 32/16 bit 68000 processor, and has many superb features, employing software techniques that are years ahead of competitors. The mouse pointer and "pull-down" menus make the machine one of the easiest to learn I have come across. I recommend that every potential purchaser of a micro computer for personal/business/office use see the MACINTOSH before making a decision. Ask for a copy of a 10 page review now.

BASF FINE FLEXIBLE DISKS WHOLESALE

If you're a computer dealer, and want the best disk media at the best price - call us. We offer fast shipments and competitive prices on a whole range of disk media.

- 10 Disks for the price of 9!
 - Single Sided Single Density suitable for Apple.
 - 10 for £16.11 + VAT
 - 100 for £148.50 + VAT
 - Double Sided Double Density suitable for IBM PC.
 - 10 for £24.75 + VAT
 - 100 for £225.00 + VAT
 - Double Sided 96tpi suitable for Sirius/Victor.
 - 10 for £30.60 + VAT
 - 100 for £279.00 + VAT
- A whole range of other disks available - ring for details.
- 5 1/4" Disk Boxes £1.95 + VAT
 - 5 1/4" Head Cleaning Kits £15.95 + VAT

SIDEWAYS™

FOR EASY-READING HARD COPY

Now you can print all the columns of your spreadsheet, all at one time, all on one continuous page. Sideways, the ingeniously simple software program, causes your hard copy to print out — you guessed it — sideways. So your spreadsheet columns need never fall off the edge of your printer paper again.

System requirements:
IBM Personal Computer. — Parallel/Serial printer interface. — One of these graphics printers: — Epson MX-80/100, FX-80/100. — IBM Graphics Printer. — Okidata Microline series. — C.Itoh Prowriter. — IDS Prism, 460 or 560.

Compatibility:
SIDEWAYS is compatible with spreadsheet programs such as Lotus 1-2-3, VisiCalc, Multiplan, and SuperCalc, as well as most word processors.

A new accent on PC performance

These instantly installed plug-in expansion boards offer major functionality enhancement for the IBM PC and other micros. They come with full software support on floppy disk.

FORTE MODEL PC 78

Gives your PC direct access to your mainframe (IBM 43xx through 30xx). A single plug-in board connects to your IBM 3274/3276 Cluster Controller via existing coaxial cable. No extra phone lines, modems or peripherals.

- Entire functionality on floppy disk, no PROM changes.

- Parity check memory on display RAM.
- Complete configuration from keyboard.
- Re-configures colour attributes to taste.
- Choice of Basic or C, with broad sub-routine library.
- Serial interface.
- User-friendly, high-speed file transfer.

PARADISE MULTI-DISPLAY BOARD

Saves a slot in the PC. Colour display controller, monochrome display controller and printer interface all on one plug-in board.

- Compatible with PC/XT and all the best productivity software.
- High-resolution colour graphics, fully IBM compatible.
- 2 pages of high-resolution graphics, facilitating animation or high demand graphics operation.

- Flicker-free scrolling, even in colour.
- External switch or software control for monochrome or colour mode.
- IBM character sets and test modes.
- Compatible with widest range of RGB and composite video monitors.
- IBM type printer port.
- IBM-compatible light pen and RF modulator ports.

VLSI 1553-NET

The ultimate in user-friendly Local Area Networks (LAN's) — very low cost, very high speed, plus reliability that approaches a $1.0E^{-17}$ bit error rate.

- Connects IBM PC, Apple II/IIe and any S100 bus micro.
- 3 megabit/sec transmission rate, operating at around 15% utilization and giving a throughput which approximates to that of current 10 megabit bandwidth LAN's.
- Superior error checking, collision detection and collision avoidance.

- Lives entirely within constraints of host operating system, preserving upward compatibility; e.g. the interface to the IBM PC is at the ROM BIOS level.
- Simple coax connection.
- Up to 4000 feet, without the use of repeaters.
- Protocol entirely contained in software, permitting various implementations of LAN protocols.
- Variable blocks sizes supported, from 20 bits to over 64K bytes.

ACCENT ON PERFORMANCE

Accent Computers is a new European force in specialised hardware distribution, bringing you selected state-of-the-art products from some of the world's most innovative designers and manufacturers.

PACKAGES

PCW's 'Packages' section is produced bi-monthly, alternating with our 'In Store' hardware guide. We have confined coverage to business packages which are available and supported at national level and which have been in use for at least six months in a minimum of five sites. Producers of packages which fall within these constraints should send for details or updates to: Tracy Dear, PCW, 62 Oxford Street, London W1.

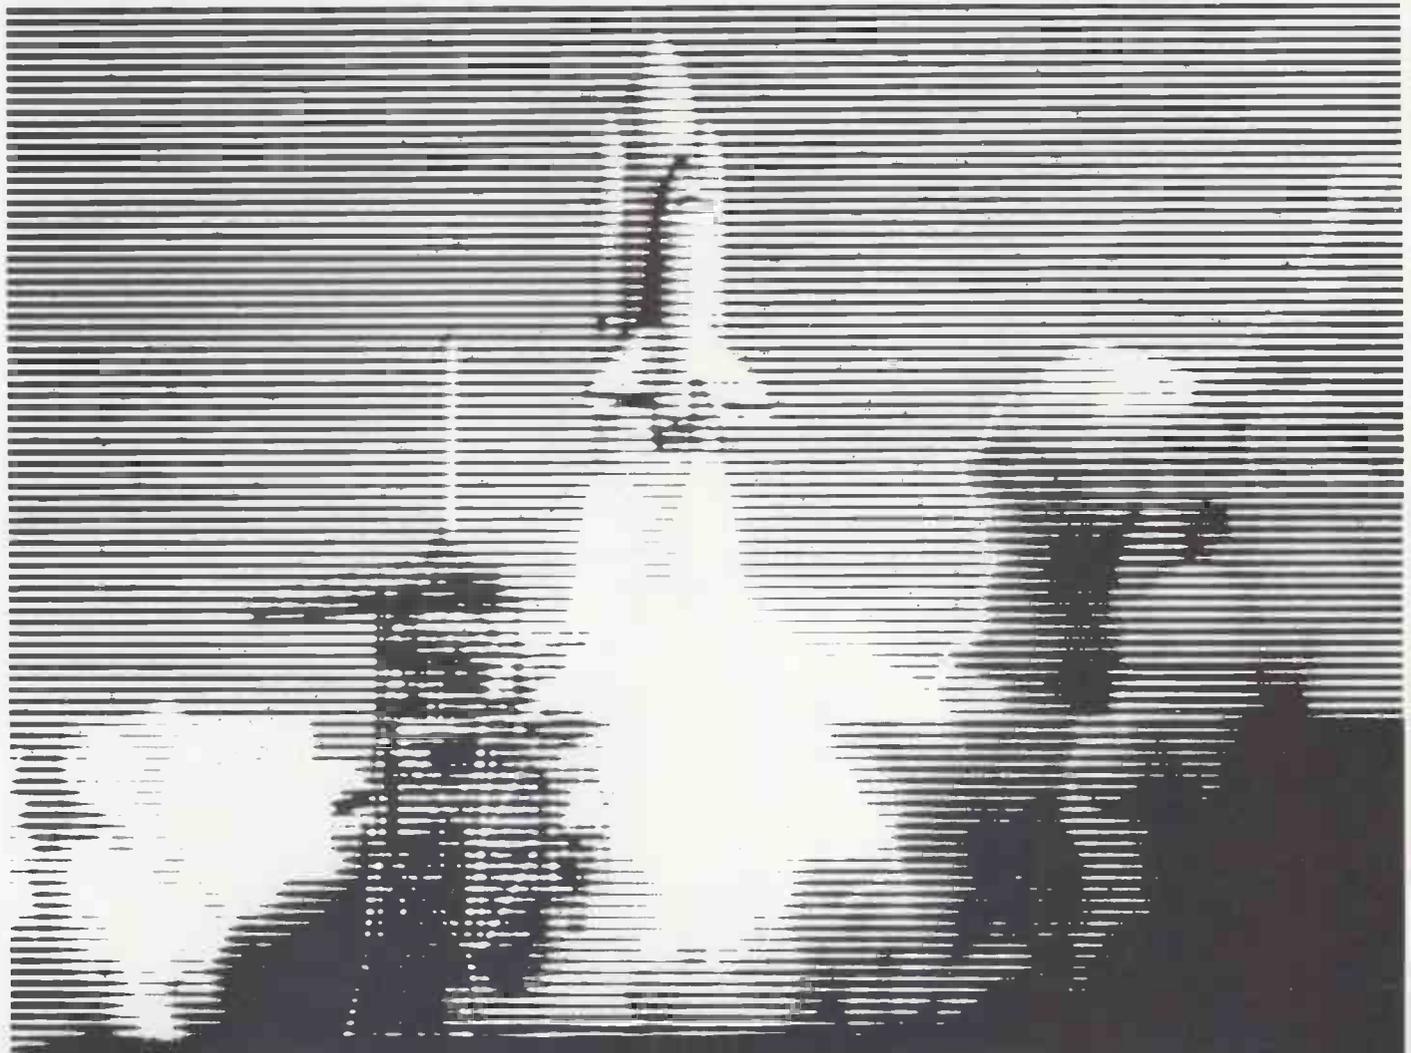

The layout has been designed to allow you to discover which packages are available for the application you have in mind and to show you which packages are available for your computer if you already have a machine. In either case the code enables you to look up the supplier's name and telephone number in the table below.

All details published are the latest made available — some may have changed since this issue went to press.

Nothing On Earth Compares With **DATA FLEX™**

THE DATABASE THAT LEAVES THE OTHERS GROUNDED

DataFlex . . . available in single and multi-user versions for 8 and 16 bit systems. Plus extensive support for local area networks.

And with DataFlex, 16 bit operation means 16 bit! Not 8 bit converted. That means at least 12 open files with 10 indices and up to 6 fields per index. Just compare that with some other so-called 16 bit databases.

Fully interactive transactional updating, multifile screens and reports, up to 125 data files, 255 fields, 4K per record and 8

megabytes per file . . . these are just some of the attributes of DataFlex.

CP/M and MS DOS compatible. You can use it with your SIRIUS, IBM PC, and EQUINOX EQUATOR to name a few.

You can start with single user and expand to multi-user. MS DOS and CP/M networks, MP/M-86, Novell Sharenet, PC-net, DMS Hi net, TURBOdos. DataFlex supports all of these and many others.

If you are going up in the world, lift off with DataFlex.

DATA FLEX™

THE further prospects of S
have been seriously affected

CAN YOU AFFORD SIMPLY TO HOPE YOUR INSURANCE IS O.K.?

Following the continuing success of 'DATACOVER' computer insurance for users we have developed 'DEALERCOVER' for computer dealers, software houses and allied businesses giving:—

- ★ WIDE COVER 'All Risks' anywhere in the U.K. including transits, demonstrations, hotels, exhibitions, equipment 'on loan'. Professional Indemnity and Legal Expenses insurance optional.
- ★ SAVINGS 'DEALERCOVER' gives you excellent value for money with significant premium savings. Are your present premiums based on 'video' rates?
- ★ SECURITY All 'DEALERCOVER' and 'DATACOVER' policies are underwritten by members of the British Insurance Association.
- ★ DISCOUNTS Extra savings for members of the Computer Trade Association.

'DATACOVER' Computer Insurance for Users gives:—

- ★ SAVINGS Very significant savings over the cost of a full maintenance contract
- ★ CHOICE Repairer of your choice coupled with a speedy, efficient claims service
- ★ AUTOMATIC ADDITIONAL COVER
 - a) 'All Risks', including transit, on all equipment
 - b) Additional expenses, including those of hiring alternative equipment and recompiling data etc.

● **RESEARCH** machines 380Z, 12k ROM, 32k RAM, RS232 board, Fast,

ACC NEWS

have a number of advantages. At a place of work, a computer club has easy access to premises (and possibly equipment); the people are familiar and (if the meetings are lunchtimes or early evenings) an almost captive audience.

By their nature, closed clubs do not generally advertise their existence to the world at large, but I have nevertheless heard of many; I'm sure it's an effective way to run a computer club in the right surroundings. Nevertheless, such groups tend to be under the eye of the Boss and are hardly practicable in small firms where there won't be enough interested people. Also, spending more time at work may not be everybody's cup of tea.

While easy to set up, closed clubs can be a second best compared to a good local club. A local computer club is an entirely independent body, at which computer hobbyists meet from the local area. Some local clubs cover a small area (there are a large number within London, for example) while others tend to cover a larger area, such as some of the Scottish clubs which cover 500-1000 square miles each.

Some local clubs specialise in a particular type of computer, such as the BBC Micro. At such clubs, everybody will be a Beeb person, and Beeb ideas will be almost exclusively discussed. One of the problems with such an arrangement is that as technology develops, machine specific local groups run a risk of being left behind; this has happened to some TRS-80 groups. Also, a machine specific group is less likely to become involved in new ideas, which can be important to preserving the vitality of the club.

One difficulty always faced by local clubs is somewhere to meet. Ideally, a meeting point should be free (or extremely cheap) and conveniently situated, with a decent number of mains points, and it should be available in the evenings. A telephone line (even if restricted to local calls by PABX circuits) is also very useful. Most local clubs have to manage with rather less than this, but if you know of a venue for your local club that is possibly better than its present one, for goodness sake tell the club about it.

Local clubs publicise themselves in a number of ways such as notices in libraries, articles in the local paper, interviews on local radio and through technical colleges. They also gain publicity through national media, such as computer magazines. The ACC (the Association of Computer Clubs) maintains an up to date list of clubs around the country, which is published from time to time in PCW. Various old pirated versions of the ACC list are published in some magazines (including clubs that have folded and/or moved), so be warned — if it doesn't say ACC, the list is

likely to be out of date.

Of course, the ACC club list only remains up to date if people tell us when a club is formed (or, sadly, ceases). Write to me at the address below and I'll make sure the list is updated. At the major computer shows, the ACC runs a database program containing the clubs list, and visitors can find out their local computer club. It could be *your* club — if it's on the list. We also answer enquiries by post — write to me for the address of a nearby computer club. Commercial users: when we mail out to our clubs, we provide a free set of labels in exchange for your mailing our material out with your mailshot. Write for details.

The third category of computer club is the **National User Group**. This type of club is machine specific or sometimes manufacturer specific (for example, the BBC Micro, or Commodore). Unlike the other categories, the national groups do not hold meetings although they occasionally hold conferences. They work essentially by newsletter, exchanging information between members. Some have arrangements for obtaining discounts on software or hardware, and some market their own. Others have libraries of programs contributed by the members. National user groups are involved in other activities such as Club Spot 800 on Prestel (some local clubs are here as well), and most appear at the major shows and exhibitions in a 'Club Avenue', consisting of groups such as BASUG, BEEBUG, ICPUG, LASERBUG, NATGUG and so on.

The ACC clubs list includes the National User Groups for the rarer machines as well as the more popular micros. Write to me for details of the national group for your machine. My

advice is that if you're looking for more from your personal computer, you should join both the National User Group appropriate to your machine and a local club. It's probably worth looking around for a local club before starting your own, as many clubs are short of active members, and one good club is better than two so-so ones. Of course, if there is a closed group appropriate to your situation, then you should consider joining that instead of, or as well as, the local club.

Club news

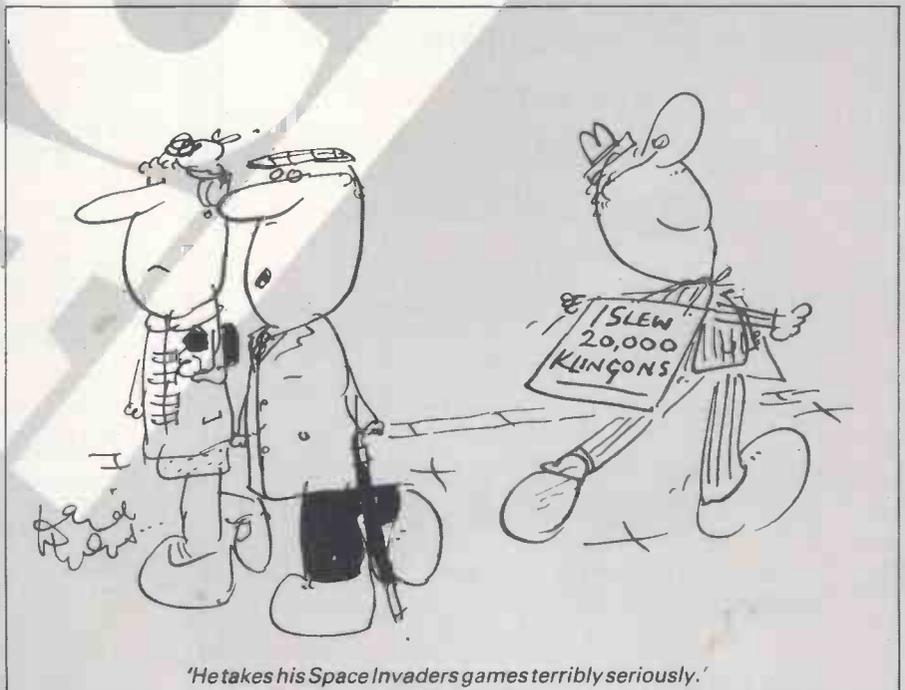

After the information about types of club, here are some reports from clubs around the country.

Mr P A Golder of 6 North Avenue, Swanton Morley, Dereham, Norfolk NR20 4LG writes to tell me of NOGATUG (Norfolk Genie and TRS-80 User Group). His phone number is Swanton Morley 491, and he'd be delighted to welcome new members to his group.

On a different note, Mr Ken Robson of Traquair, Innerliethen, Tweeddale EH44 6PJ writes to tell me of the Peebles Amateur Radio and Computer Club. The club was formed nine months ago and has 20 members, but they're likely to expand. So, if computers talking to each other over the air (or computer transmission/reception of morse) is your thing, this computer club will be of special interest to you.

Dr J A Lack writes from The River House, Coombe Bissett, Salisbury, Wiltshire SP5 4LX to tell me that he has started a Salisbury BBC user group. Write to him or mailbox him on Prestel/Micronet number 072277303.

And finally for this month, the Nottingham Microcomputer Club has formed a BBC Micro User Group (other user groups within the Nottingham

'He takes his Space Invaders games terribly seriously.'

ENHANCE YOUR ATARI® 810

HAPPY 810 ENHANCEMENT

Speed up program development, loading, execution, and copying time by reading disks up to 3 times faster. Complete compatibility with existing software, with faster disk initialization, and reduced wear on the disk drive mechanism. No soldering or trace cutting required, complete installation instructions included, or contact your dealer. Diagnostic program included.

SOFTWARE ENHANCEMENTS (require HAPPY 810 ENHANCEMENT)

HAPPY BACKUP PROGRAM

Guaranteed to produce executable backup copies of any disk which can be read with a standard ATARI 810* disk drive. Backup those important disks in your library or use HAPPY BACKUP for small scale software production. Completely automatic duplication of format and data content of the source disk. Single and multiple drive versions available. Backup copies will work on a drive without the enhancement.

HAPPY COMPACTOR PROGRAM

Combines self booting programs which reside one per disk into one disk with many self booting programs using the HAPPY COMPACTOR file structure. Programs are then executed from the self booting HAPPY COMPACTOR menu, and may later be extracted back onto a single disk. Compacted programs disk will execute only on a drive which has the HAPPY 810 ENHANCEMENT. Pays for itself by reducing the number of backup disks you need, in addition to the added convenience.

HAPPY CUSTOMIZER PROGRAM

User friendly program to generate source disks with custom track format. Format is specified on a per track basis. Examples of usage and interpretation of results are included. This system requires a more advanced level user.

HAPPY 810 ENHANCEMENT WITH SINGLE DRIVE HAPPY BACKUP	\$249.95
MULTIPLE DRIVE HAPPY BACKUP PROGRAM	\$ 49.95
HAPPY COMPACTOR PROGRAM	\$ 49.95
HAPPY CUSTOMIZER PROGRAM	\$ 99.95

The ultimate Crossword

The puzzle that needs a computer

Alien present the ultimate in word puzzles - 30 integrated crosswords which form a cube. All locations of this 3 dimensional puzzle are contained in the computer programme and you can complete any part you wish using the display on your TV and computer keyboard. Understanding all the relationships between the

crosswords is not possible without the computer but as you proceed you will discover new routes to help achieve the solution. Features: Solution Store, Instant Display, Anagram Function, Character Location in memory. This is a tough puzzle with a degree of difficulty - it's the ultimate but it's not impossible. Full instructions are included with the programme.

£1000 PRIZE
to sender of first correct taped solution run on our computer on 1st June 1984

Please mail me copies of the Alien Ultimate Crossword puzzle programme at £14.95 per copy inc. P & A. For the BBC Model B Commodore 64 Spectrum 48K I enclose £_____ or my Access/Visa Card No. is _____

PCW welcomes correspondence from its readers but we must warn that it tends to be one way! Please be as brief as possible and add 'not for publication' if your letter is to be kept private. Please note that we are unable to give advice about the purchase of computers or other hardware/software — these questions must be addressed to Peter Bright (see 'Computer Answers' page). Address letters to 'Communications,' Personal Computer World, 62 Oxford Street, London W1A 2HG.

Hypnosis

I would like to appeal through your pages for help in a rather delicate matter. I refer to Computer Aided Hypnosis (CAH), with which I and a few friends have been experimenting recently. Our work has unfortunately led us into a rather embarrassing situation, and we need some expert advice as soon as possible. The facts are as follows.

We started playing around with computers a couple of years ago, using a Commodore Pet. We played games and taught ourselves to program, but after a year or so we became bored and began to look around for more interesting things to do with our computer. One of our number had recently visited a summer entertainment at Blackpool which involved a stage hypnotist, and had been made to do some rather strange things by this man. We decided to experiment with CAH.

At first, progress was slow. We made no real progress at all until we acquired a more modern computer with a colour monitor, since it had become obvious that both colour and good graphics were essential in establishing the initial trance. It took three months to crack this part of the problem, and we realised we had made the necessary breakthrough when young Len Boot, who was at the keyboard testing our latest idea, suddenly went all glassy-eyed and fell off his chair. It took us three hours and much alcoholic beverage to get him back to

normal.

We had great difficulty de-bugging at this stage, because anyone who sat down to put the system through its paces soon found themselves in the same difficulty as young Len — they tended to fall to the ground and require a certain amount of rehabilitation afterwards. We eventually got round the problem by having Mrs. Goodbody (she does odd jobs for us) stand next to the screen with instructions to count backwards from five and snap her fingers loudly whenever the operator began to sway.

It dawned on us at about this time that the system we had devised was open to misuse, and almost immediately our fears were realised. One of our number came in one afternoon following a long, liquid lunch and began to modify the communications routines in a fairly relaxed way. The results were unfortunate, particularly since it was the vicar who had volunteered to be our guinea pig that

evening. In response to the computer, our dear reverend suddenly stood up, climbed on to the coffee table and began to sing an extremely vulgar song. Further embarrassment was avoided only by the presence of mind of Mrs. Goodbody, who snapped her fingers just as he began to remove his trousers.

We — that is to say, the more responsible members of our group — were naturally scandalised at such behaviour on the part of a colleague, and we immediately asked him to gather up his floppies and find another group elsewhere. Unfortunately, since he laid claim to a quarter share in the colour monitor, we could not get rid of him until we had had a whip round to pay him off. This was our biggest mistake of all.

Of course, you can guess what happened. Before he finally departed he found time to modify the system quite extensively without our knowledge, so that when the rest of us eventually got

back to working on it we found that a number of post-hypnotic-suggestion (PHS) routines had been incorporated where they were least expected, and we all, at one time or another, fell foul of them.

But there's more. There are several prosecutions outstanding as a result of our recent behaviour. One of us has been apprehended three times for directing traffic outside the town hall, and another is on probation for attempting to hijack the 16.22 Victoria to Dover train.

It is vital that we reverse the effects of our CAH software, but we are unable to modify it for fear of what it might make us do while debugging it! We need to contact an experienced CAH man immediately — perhaps someone working in the field at a university — who can show us how to solve this problem. If such a person would be kind enough to contact me via these pages we would all appreciate it very much. I regret having to do it this way, but my colleagues feel they have enough on their minds at the moment without the publicity that might follow the publication of our address.

WF Harrison, Chatham, Kent

Political asides

Is it really necessary to indulge in smug political asides in a computing publication of PCW's calibre?

C·O·M·M·U·N·I·C·A·T·I·O·N·S

I refer to the reference to Automata UK and the Atari defence contract in February's Chip Chat. Implying that those who fight wars are childish is a callow attitude in a world already burdened with tyranny and arrogance, not least that of the cravenly anonymous Guy Kewney responsible for this section. One might as well suggest that Ms Bird lay down arms in her single-minded war on sexism, thus saving the English language from further mutilation.

N Vincent, London WC1

(Guy Kewney is not responsible for Chip Chat — Ed)

Upstart

I find that the very handy 'BBC Word' — December PCW's Program of the Month — also works a treat on the upstart Electron.

Pernickety programmers might want to amend lines 350, 500 and 580 to read Mode6, and Electronspeak prefers # to £ in lines 3020, 3050, 3160, 3190 and 3210.

In practice, mind you, it doesn't make a scrap of difference.

If only Acorn weren't quoting 'about a year' for the necessary hook-up to a printer!

David Taylor, West Clandon, Guildford

Magazine criticisms

I am writing to tell you that I think the new layout and lettering of your magazine is awful.

Most articles' titles have dots everywhere and the letters are too far apart. What happened to the old 'Benchtest' triangle? I thought it looked very eye-catching: now we have

stripes with clashing colours. Is there a chance that you will revert to the old style? When you changed it in December 1981 it was quite adequate, and I'm sure many of your readers will agree with me.

I just hope the quality of the articles doesn't deteriorate as has the image.

I was also annoyed to see that in the February issue, Paul Overaa's assembly language article does not include the 6809 microprocessor, as this is the only 8-bit processor that isn't hopelessly out of date. Surely his course is more suited to a February 1980 issue? The 8080 is almost completely forgotten (sorry, DAI owners), the Z80 is hanging from its last thread, and CP/M and the 6502 because of Commodore and Acorn's obstinacy in not accepting new technology. The 6809 is virtually software-compatible up to and including the 6502, so there shouldn't be too much trouble translating old 6502 programs/languages.

Does Mr. Overaa realise how many 6809 users there are, how many Dragon 32s have been sold?

Could PCW give more attention to today's technology rather than outdated microprocessors?

Paul Hills, Cornwall

(Editorial now has more colour which, together with the new logos, is designed to help you find editorial pages immediately. We left out the 6809 because so few machines use it, but Teach Yourself Assemblers should still be useful to Tandy and Dragon owners — Ed)

Latin Quantum Leap

As if computer user manuals weren't unintelligible enough.

No sooner do you publish a cartoon commenting on the lamentable standard of English language used in many instruction manuals supplied with microcomputer software, than Clive Sinclair comes up with the solution (possibly as a result of some of his dealings with MENSA!).

In order to attract only those with a classical education to his 'Quantum Leap' micro, it appears that the manual for this system is written in Latin (see page eight of the brochure accompanying the latest issue of PCW), thus ensuring that, as it's unlikely that anyone without a grasp of Latin will be able to produce programs for it, those that are produced will be beautifully documented.

Or isn't the manual ready yet?

David J A Clarke, Trent Micro Systems, Nottingham

Check digits

I read with interest Michael Grose's article on check digits in your December 1983 issue. However, I think there's a danger that readers might assume that, because of its pedigree, the specific system discussed (the International Standard Book Number system) is one to be recommended. In fact, it has certain weaknesses.

It will not detect all multiple transcription errors involving two or more consecutive, identical, digits. For example, the transmission of 11122111 as 11166111 will go undetected.

Similarly, the system is weak in connection with shift errors in codes in which adjacent digits add up to 11. For example, the transmission of 380000 as 3800000 will go undetected.

If a reader is just starting to design a coding system and wishes to include check digits, then he should consider using the remainder from dividing a code by 97. For example, for

the basic code 45703, 45703/97 = 471 remainder 16; thus this code is always quoted as 4570316.

Such a system will detect all single transcription errors, multiple transcription errors involving two or more consecutive identical digits and transposition errors, has no obvious weaknesses with regard to shift errors (this is a difficult error to be more specific about) and will detect 99.0% of all errors.

WG Wild, Fareham, Hants

Software piracy

I cannot say how deeply I, and I am sure many others, regret the article on page 13 of February's PCW. Far from helping 'the fight against software piracy', you have weakly and cravenly caved in to what amounts to a denial of the reasonable rights of purchasers — and incidentally, since the matter was settled out of court, it does not create a legal precedent.

I am completely opposed to software piracy, as to any other method of defrauding an author of the fruits of his labour. However, anti-copying devices are a totally unreasonable answer and should be banned. If I buy a painting, I am entitled to reframe it, to photograph it for insurance purposes or private study, and even to modify it: what I cannot do is to make and sell prints of it.

If I buy software, I should have an absolute right to copy it for backup purposes, to modify or configure it to my particular needs, and to make it more convenient or faster to load and use.

I am not interested in games personally, but I am outraged at the suggestion that, having paid out money for cassettes, I cannot resave a selection onto disk. This nonsense will hardly, for example, help the sale of Sinclair Microdrives when

the most obvious use is to re-save a selection of games cassettes for easy selection and fast loading.

You have a duty to your readers (who are the customers of your advertisers and the only reason the latter are in business), to ensure that purchasers receive value for money, which includes being able to make use of the software they buy in any way that does not infringe the reasonable intellectual property rights of authors.

In a business application, an uncopyable program could well be in breach of the Sale of Goods Act as 'unfit for purpose' if good user practice required the ability to make copies. Either software protection should be made illegal, or software houses should be required by law to exchange protected copies for unprotected on the purchaser signing a licence agreement, the fee for which, to avoid oppression of customers, should be set by law at not more than 50% of the purchase price of the original program. In addition, you should refuse software advertisements unless they state whether or not the programs are protected and, if they are, the terms on which copyable versions for proper uses are available.

I therefore hope you will rethink your position, which is retrograde and harmful to the reasonable rights of those who have paid for software and have a right to make full proper use of it.

William Lyons, London NW3

Acorn replies

We fully support Mr Lyons' assertion that those who have paid for software have a right to make full proper use of it. However, his use of a painting as an analogy is not really a good comparison since the possibility for 'piracy' is small; few people would accept a photograph of a painting as a reasonable substitute for the original, and to set up and make high quality prints of a painting would be an expensive undertaking. The reason why software piracy is such a problem is that unless a cassette is protected, a user can obtain a perfect copy,

indistinguishable from the original, at no more than the cost of a blank cassette. We therefore feel it is essential to protect our software with locking devices; however, these are only designed to inhibit the unlawful user, and it is a definite policy that these should not hamper the honest user.

Without these locking devices we are certain that illegal copying of our programs would be far more widespread and it is not only the software companies like ourselves who suffer — many authors rely on royalties from sales of our programs to reward their work and every illegal copy is depriving authors of their rightful royalty.

Also, the cost of developing certain types of software, particularly the more serious software applications, is generally very high and the only way that we can charge a low price for such applications is if we are fairly sure that the original investment in developing this software will be recouped over a large number of sales. If copying is not discouraged, software companies may find it uneconomic to develop these types of programs or to publish specialist titles where the envisaged number of sales is fairly small.

Unfortunately, we do not know of any way of preventing unlawful copying while allowing the rightful owner of the program to make backup copies, or to transfer a cassette copy to disk. However, we do offer a free of charge replacement service for any faulty cassette or disc returned at any time during its use, and we have organised a cassette replacement scheme whereby customers can return their cassettes and receive brand new disc copies at half price.

We feel that these policies provide the only feasible compromise to giving a free rein to piracy on the one hand, and unnecessarily restricting software publishing on the other.

David Johnson-Davies
Managing Director
Acornsoft
Cambridge

No government approval

Now that portable large-memory micros are available (Husky Hunter, for example) that can run CP/M programs such as WordStar and Supercalc, a whole new dimension has opened up to the software piracy industry. How can anyone stop people downloading programs to a portable and re-loading them elsewhere?

Also, although the British Government (via the MoD) is a major user of portable micros, the Central Computer & Telecommunications Agency, which evaluates micros and recommends machines to prospective users in government departments, apparently has no category for portable micros, and cannot actually approve them.

Odd?

Pet Wave conversion

PCW Programs are excellent. Keep up the good work. Does anyone have a conversion of the Pet Wave Simulation, PCW, October 1983, pages 280-82, for the BBC model B?

William Cooper, Swansea

Dear PCW subscriptions

Well, you just lost one subscriber to PCW. Don't get the wrong idea — I'll still read PCW, I just refuse to pay £3.33 for the privilege of having the magazine sent direct from you to me when for 85 pence (plus p&p) I can get the same magazine a few days later.

Unless you can justify £2.45 as postage and packing this is one reader who will (grudgingly) wait a few days.

D Harker,
Ipswich

(We're very sorry about the increase in subscription cost — the postage is very expensive. Why not reserve an issue each month at your newsagent? See the newsagent card in this issue — Ed)

Program listings problem

I can see the need for small print for long program listings.

I can see how a coloured background discourages photocopying.

16 BIT COPAM INTELLIGET PC-301 PERSONAL COMPUTER

PC301 SPECIFICATIONS:

Microprocessor: Intel 16 bit CPU 8088
 Operation System: MS DOS 2.0
 User Memory: 128K Expandable to 512K
 Disk Drives: Dual DSDD 720 Kbyte
 Interface: 2 Serial RS-232 Port
 1 Parallel Centronics Port
 8 Expansion Slots
 Power Supply: 100W Enough to Support Hard Disk
 Keyboard: Capacitor Type 50 Million Strikes
 Resolution: 640 x 400 Dots with 16 Colours
 Calendar Clock

SOFTWARE

COPAM INTELLIGENT PC-301 uses the MS-DOS 2.0 as operating system. COPAM INTELLIGENT PC-301 can be used to run countless package those are designed under MS-DOS such as 1-2-3, Multiplan, Wordstar, VisiCalc, DBASE II, Copy II PC . . . etc. IBM PC compatible package can be used on CPAM INTELLIGENT PC-301, this compatibility will assure you the ever increasing supply of more powerful package in the future. The CP/M-86 will run the COPAM INTELLIGENT PC-301, the meaning of this compatibility is the software which developed under CP/M-86 can be used on the COPAM INTELLIGENT PC-301.

But my eyes are dim, I cannot see.

Us grandparents, who have the time and patience to type in these programs have a problem!

Brian Gill Oldham

(I do sympathise. Sorry things have been coming out small sometimes—watch out for an improvement, or you can also download our programs Micronet—Ed)

No NewBrain information

I was very interested in G McMullon's letter in the January issue of *PCW*, as I have a NewBrain with twin disk system and expansion unit but cannot get hold of any detailed information to enable me to make proper use of it. The Technical Notes to which Mr McMullon refers seem to be just what I want.

I have written to Tradecom International, Brainwave Software Ltd and AJ Electronics quoting the substance of Mr McMullon's letter and asking for information.

Perhaps through your columns I might ask all users of NewBrain disk systems to add their support by writing to Tradecom and Brainwave, thus adding weight to my request to them.

**Robert W McCall,
Maidstone, Kent**

The party's just beginning

Martin Banks may enjoy reminiscing about the good old days of the DIY computer market but this is no excuse for accepting defeat in front of the IBM onslaught. As he more accurately says at the end of his article 'On the other hand...', the British

home computer market with its ferocious independence and reputation for entrepreneurship will not easily knuckle under to the threat from its big blue brother from over the water. IBM may have a stranglehold on the business market but this is only because standardisation is so very desirable among firms whose very livelihood may depend on their computers and the speed at which they can communicate with each other.

Indeed, against competition like Sinclair, Acorn, Commodore and Atari, who are well versed in the ways of the bitter back-biting of the home computer market, IBM may have bitten off more than it can chew. As Martin says, TI and Mattel have already retreated licking their wounds despite large resources, and IBM, with its large corporation may well misread what is a highly volatile situation in which the average 14 year old computer whizz-kid will not take kindly to being dictated to by the likes of IBM.

IBM is certainly 'looming ominously' over the market, but with the launch of the new Sinclair QL it would appear that David has it in for Goliath once again. After all, who is going to pay enormous sums (to the home user anyway) for a PC Junior when an only slightly inferior QL can be obtained for £400? In fact, if the current trend continues the two big markets developing upwards and downwards respectively look like meeting head on in the middle, which will certainly shake up the computer market and it may well be IBM that retires with a sore head.

The main problem IBM can pose to the current market leaders is through its ability to support the product with massive resources and reliability. However, it seems to have arrived on the scene just too late for this to have the impact it might once have had. Sinclair, Commodore

and Acorn have all had their problems in supplying both hardware and software on demand, but in three or four years they have learnt many lessons that IBM still has to face, particularly that of dealing with production schedules of over 100,000 machines a month, something that even IBM may find tough to deal with.

Next year seems to be the year, not in which the fun will come to an end, but the one in which the computer user will be treated to a bloodthirsty battle the like of which can never be matched on any computer screen. As for buying India for jaded executives, that may be the only place the IBM executives will find work if they lose this particular battle.

Bob Wade, Orpington, Kent

Unreliable

Mr. Whitfield's letter in your February issue struck a responsive chord with me. As a professional technical translator, I make full use, all day and every day, of the full facilities of a word processor.

A few months back, the adulatory reviews of the BBC Micro led me to think that I should bring my equipment up to date and order a BBC machine, complete with the essential disk drive.

In due (delayed) course the machine arrived, but minus the 'non available' disk drive. Attempts to familiarise myself with it showed that it would print only gibberish, and further investigation revealed that I had been given a bonus in the shape of an inter-bus short circuit in the printer interface section.

Enforced use of cassettes soon introduced me to the Acorn philosophy that cassette program buyers need to spend a further £10 on a book that tells them how to use the program. However, most books of this kind are not available.

My dealer has now

received the necessary interface chips for the disks, but on fitting them found once again that the system was inoperative, and after much delving into the works found an IC holder minus contacts for the IC pins.

Fortunately my trusty 'obsolete' Genie II plus 'obsolete' Word-for-Word keeps my professional practice going. I naturally feel that I have been the victim of a racket when I survey the very expensive pile of Acorn junk littering my office, but more to the point I am extremely concerned that such an unreliable product, marketed by a company whose marketing methods my solicitor forbids me to describe, should be receiving powerful official support from the BBC and from government ministries in its introduction into educational establishments.

**RA Fereday, OBE., PhD.,
Hove, East Sussex**

Out of stock

I recently had to replace the power supply unit on my BBC Micro. Living close to central London, I rang the Acorn shop at Covent Garden and was told that not only did they not have one in stock, but were also unable to order one. It seems the reason for this is that the shop does not have an order number allowing them to order spares; the shop is owned by Acorn!

The shop was unable to give me the name of a dealer who would be able to supply a power unit, offering me instead the telephone number of the Customer Services department in Cambridge—'they might be able to help'. Perhaps not suprisingly, if this incident is typical, the customer services number seems to be permanently engaged.

Any ideas on where I can buy a BBC power supply unit, anyone?

Sean Phillips, EC2

CHIPCHAT

Amid cries of 'ageist product promotion', writers on the new US magazine *PCjr* aren't getting the chance to write at all because the launch has been delayed.

David Schissler, director of the publishing house hoping to produce the periodical, blames IBM for not getting the machines to the dealers on time. At the last count, each store had one PC Junior in stock for window shopping only.

* * *

The QL almost swept the micro market clean before it was announced. QDOS, the operating system with kudos, was originally to have been known as Domestic Operating System, DomesDos for short. Goes on working even after the rush (for QLs that is), killing 99% of all known bugs.

* * *

New York publisher Harper and Row has produced a glossary for Gweeps which should be groked by users and lusers alike. This glitch-free manual provides a canonical reference to the cuspy talk we're supposed to flame. *Time* magazine has given it a rave review, but it's certain that this moby mumble will punt before login to language used in the *real world* (Noun, singular: where hacks don't live).

* * *

Junk food becomes junkie fodder for four programmers from Imagine Software. Their cruel boss has locked them in a dungeon for three months

with nothing but limitless supplies of soft drinks and take-away toasties. If they haven't produced the biggest and best games ever for the Spectrum and Commodore 64 by launch time in May, they'll be sent to a fate worse than the biggest and best game ever written. The signs are that targets will be met: with only six weeks gone, both programs already have titles.

* * *

Model Brigade describes itself as 'a small select group of working models and promotion girls with a wealth of experience: efficient, attractive and conscientious, and aiming to satisfy both client and girls by ensuring that financial arrangements are sensible, in so far as the client is not overcharged and the girls are suitably rewarded for their endeavours.' This pen portrait comes in a letter to Computer Town UK! suggesting that personality girls will enhance CTUK! events. Well, Model Brigade, all CTUK! events depend on the voluntary service of participants: ChipChat is sure you'll agree this is a sensible financial arrangement, and we look forward to seeing you soon.

* * *

Radio 4's Roger Cook featured restaurateur Peter Sanders on a recent 'Checkpoint' programme. Mr Sanders, ex-barrister and Ferrari owner, runs West End restaurant La Vie en Rose, where Hitachi launched its PC.

Cook interviewed a number of people who were far from happy with Sanders' business practices; we hope Hitachi managed to escape without serious commercial damage from its association with Mr S. Anyone else contemplating La Vie en Rose as a press conference venue might be wise to have a chat with Roger Cook first.

* * *

Have you heard about the Metropolitan Police Computer Group? The group newsletter's communications page is rumoured to begin: 'My program was proceeding in an orderly fashion when I observed a bug acting in a manner likely to arouse suspicion.'

* * *

10 MEWN "A
20 GAN X = 1 AT 10 CAM 3
30 PROCIO(A + 1000),X
40 NESAS X

No, not another newhack lingo, but Basic Cymraeg 700 for the Sharp MZ-700. Welsh TJs are keen to compute in the vernacular, so David Computer Software of Stockport has come up with the answer. A company spokesman told ChipChat: 'Oh yes, in mid-Wales particularly they prefer to do everything in their own language.' Well, I mean, don't we all?

* * *

Oh dear, there goes another petard, and hoist with it is Commodore Computers UK, whose recent adverts have been promising 'peripherals not promises'. Customer Richard Hargrave waited six months for a 1526 printer

before cancelling his order, but — and here's the rub — Richard is a member of the legal profession and has written to the Advertising Standards Authority (ASA). Tough luck on Commodore, but good news for all those consumers who, after much frustration with a variety of manufacturers, end up trying to forget the whole sorry business of their missing equipment. In fact, anyone can — and should — write to the ASA with details of advertising apparently 'calculated to deceive the consumer'. The more we let 'em get away with it, the more they try it on.

* * *

The single most expensive item on the Royal shopping list last year was a £9 million refit for the Royal Yacht Britannia. Maintenance on palaces ran to £8 million, so in an attempt to tighten belts and improve efficiency in palace budgeting, £133,000 has been spent in the last two years on a Burroughs 930 minicomputer and seven microchip-based word processors. A select committee of Palace security staff is expected to announce soon that tourists in the 1985 summer season will be able to watch the Changing of the Robots at 11 am and 4 pm.

* * *

Word processors are revealing the truth about their users, and the truth is that the users can't write. IBM gets at least one call a week from US universities begging for a program to teach good writing habits, and willing to pay anything for one. So, IBM has developed algorithms for style-checking software — a prototype is soon to be installed in Carnegie University. One option under consideration is a sexist-prose checker. Have you put that hyphen in the right place?

* * *

BLUDNERS

BBC 'Video Credits Generator' (*PCW*, February) suffered an attack of the gremlins. In lines 160, 170, 180 and 200, the 'less than' (<) and 'greater than' (>) signs crept off the page

when nobody was looking. The relevant lines should read 'IF C1<1 OR C1>7 ...'; 'IF C2<1 OR C2>7 ...'; 'IF 0<1 OR 0>2 ...'; and 'IF S<1 OR S>10 ...'.

Line 230 also wrapped

onto the next line at a rather unfortunate place: there should be a space between the quotes, or the last part of the line can be written as '...GET\$=CHR\$(32)'.

Grow with CEEDATA Systems

From £850 to I.B.M. Compatibility

FREE SOFTWARE AVAILABLE WITH OUR "NEW" MODEL

CEEDATA Hi-Tech Systems feature the ability to grow with low cost in mind and supports your needs and skills at all times.

Invest in our system and be sure that Improvement does not mean Replacement.

All our computers are fully upgradeable from the basic model right through to full networking and I.B.M. compatibility.

Each computer comes complete with 1 year's "On-Site" guarantee.

Our "K2" keyboard with user-friendly function keys (processor in the keyboard as well) will show you how to find your way round all sorts of home and business packages.

We have many configurations to suit individual needs and your dealer will be only too pleased to help you to more fully understand and operate our up-gradeable system.

System 8500

The following are just some of the very useful and interesting pieces of software that you will find very easy to operate using the CEEDATA micro. and K2 keyboard.

Maximising

The British computer industry is small when judged by international standards. Two large American companies control 90% of world markets. They can do this because their products represent the standard by which others are judged. When these standards are accepted by the marketplace they have the effect of stabilising the technology. Thus CP/M is accepted as the industry standard operating system for 8 bit processors, and subsequent computer development has employed this standard, with the dual effect of making both man and machine portable. Operators can use different computers, with CP/M, and software can be switched from machine to machine. For the end user the emergence of

technology

these standards is critical because they allow him to experiment with the technology without risk of entering blind alleys where systems and products disappear. In order to avoid this situation Memotech has employed these standards within the MTX Series.

In the UK there has been such rapid development in microsystems that in many cases users have been seduced by the technology rather than the standards they should be following. In educational and business applications the need for continuity is obvious. This is accentuated by the development of database technology, where very large information files are accumulated, the primary expense being the input of data.

Companies and schools will not relish the idea of trying to rescue data when the standard 32 bit machines appear in two years time.

There has been a tendency for manufacturers to launch machines which are still on the drawing board, and for which no software standards exist. CPM 80, the industry standard micro operating system, supports tens of thousands of commercially available software packages. IBM take the view that things should be done properly and then released to the user. This is a well tried and clearly well tested premise which Memotech has implemented in the MTX series.

The MTX Series begins with the MTX500, which costs £275.00 including VAT. The

MTX512, illustrated below, costs £315.00 including VAT, has 64K of User RAM plus 16K of dedicated Video RAM, and comes with extended BASIC, a powerful assembler/disassembler, Front Panel machine level editor/monitor, and Noddy, a new text and graphics processing language.

Also included in the series, and available now, are the DMX80 printer at £295.00 and the CMX and MMX monitors.

CHES

A fully comprehensive chess package. Ten levels of play, from novice to championship standard. Pitch your wits against the computer with this fast, versatile machine code program.

TOADO

The object of the game is to navigate each of **five toads** across a road and two rivers without being run down or drowning (toads can't swim).

ALICE IN WONDERLAND

A fully interactive machine code adventure game set in **Wonderland**. You play the part of **Alice**, and explore the fascinating world of Wonderland, full of excitement and suspense. Delve deep into tunnels, caves and wells in search of hidden treasure.

KILOPEDE

Eliminate **mushrooms** and the descending segmented **Kilopede** to gain bonus points — avoid killer **crabs**, **fleas**, **spiders** and **jellyfish** which chase you across multiple levels of increasing difficulty.

SUPER MINEFIELD

The object of the game is to get from one side of the minefield to the other without being **blown up**. You only get one life so be careful — not all the mines are visible. The only way you can tell how many mines are nearby is by looking at the **mine detector** in the top right hand corner of the screen.

BLOBBO

Run at high speed around the maze collecting **treasure** and **fruit** worth bonus points — but don't get caught by the **Blobbo-eaters**! Tactical dodging must be employed to avoid them. If you're caught or step on a skull and crossbones you lose one of your three lives.

KNUCKLES

Move **Knuckles** around his maze, using a joystick to kick **Roks** and **Magic Squares**. The object is to line up the Magic Squares, using the fire key, and so advance to the next level, gaining a level bonus.

Please send for our free colour catalogue of Business, Education and Games Software.

OVER 20,000 PEOPLE CAN'T BE WRONG

ACT SIRIUS 1

£2,195

£2,895

Powerful 1.2Mb data storage with 128K RAM and including two of the industry standard operating systems at 16-bit level, CP/M-86 and MS-DOS. PLUS Basic 86.

2.4Mb data storage with a big 256K RAM for the really demanding business applications. Includes CP/M-86, MS-DOS and Basic 86.

Above are two very good reasons why more people have bought the ACT Sirius 1 than any other 16-bit microcomputer in the U.K. Here are a few more:

ACT Sirius 1 is a superb user-friendly machine incorporating a comprehensive 'soft' keyboard, a 12" high resolution screen for crisp, clear definition and a wide range of memory options including a 10Mbyte Winchester version and a choice of three plug-in expansion boards.

The range of available software is simply unrivalled in the personal computer field.

Over 1,000 software packages now exist to provide complete solutions to the needs of large and small businesses alike.

And of course the ACT Sirius 1 is backed by the strength and resources of ACT. The Pulsar range of true 16-bit software for accounting, planning and word processing; ACT Training Centres open to all; nationwide field service; a full range of printers and consumables.

And, the most complete and professional dealer network in the U.K.

Over 20,000 people are rightly convinced that the ACT Sirius 1 is the best machine of its kind in the country.

CAN YOU REALLY AFFORD TO BE WRONG?

ACT SIRIUS 1, THE UK'S BEST SELLING 16-BIT MICROCOMPUTER.

Please send me details of the ACT Sirius 1.

This month the mutant camels strike back, with plumbers, manic train drivers and cosmic guerillas bringing up the rear. Commodore 64, Atari, Spectrum and Oric machines make further strategic moves.

REVENGE OF THE MUTANT CAMELS

Supplier: Llamasoft
Computer: Commodore 64
Price: £7.50

Remember the mutant camels that invaded the Earth in last month's Screenplay? Well, they're back, but this time they're on our side.

A group of these camels has apparently been convinced of their loyalty to Earth (with the aid of 10,000 telepathic MetaGoats), so a brave band of them (five per game) are off to do battle with the Zzaxians on their Psychological Disorientation Warfare Development planetoid, Phensyk III. This planetoid is used to develop bizarre disorientation weapons sche-

duled for use against Earth but now thrown against the attacking camels.

It's this variety of nasties that supplies the flavour of this sequel game. There are 42 different screens of nasties for your camel to plod through before you achieve the usual goal of a high score.

To survive, and thereby achieve a decent score in Revenge, you must discover tactics for each of the screens you meet. The tactics employed are as varied as the screens themselves. In some screens there are safe spots where your camels can walk unhindered. In other areas you must shoot your way out, and yet in others the aliens' nastiness is directly related to your own aggression.

Before the action begins, each screen title is displayed in the form of a pun, which rapidly wears thin as the humour

is lost along with your camels. These screen titles include: 'Mind your axe Eugene', 'Manic Minter', 'Inky, Pinky, Blinky and Thud' (Pacman characters), 'Through pastures blue' (exploding sheep), 'No Cruise is good Cruise' and 'Haven't we met somewhere before', which features an attack by ships similar to those in the original 'Attack of the Mutant Camels'.

'Revenge' is an object lesson in both the use of sprites and the Commodore 64's sound capabilities, but as the gametactics are learned and practised by the player, the game's addictive qualities rapidly decrease. **TH**

DELTA 4

Supplier: Nectarine
Computer: 48k Oric
Price: £8.95

As if designed deliberately to bear out my remarks on arcade clones in the Spectrum reviews, here's a 'new' arcade game for the 48k Oric. Delta 4 consists of four individual games, at least two of which you will recognise immediately, linked together in a 'lasergramme' on the cassette inlay that

informs you that the Galactic Alliance is under permanent attack on four fronts. You have the option of going on a 'tour of duty' which covers all battle fronts in turn, or you may select any one front on which to fight. Your enemy is a force of implacable invading alien androids.

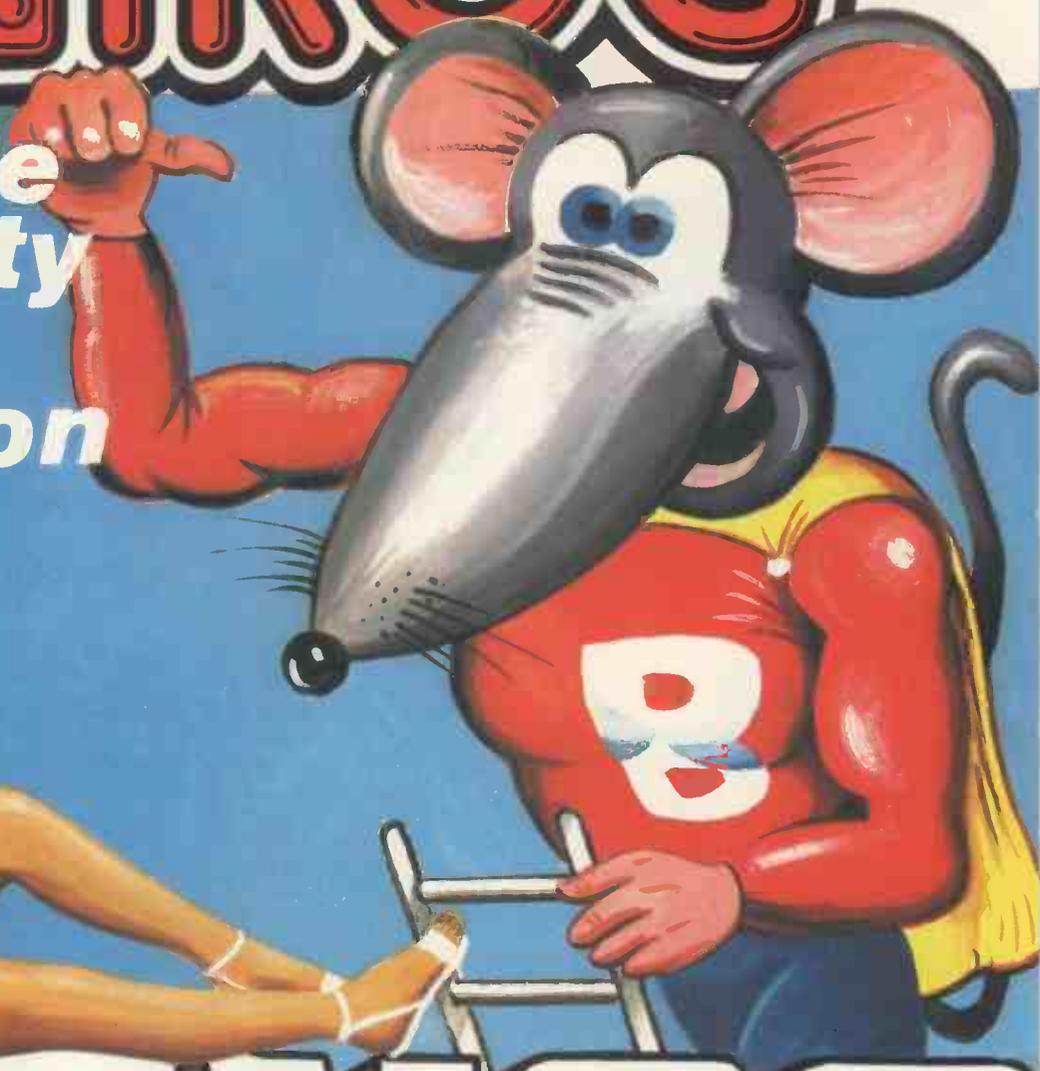

Delta 4 loads very easily — which is just as well, as it's recorded at 'fast' speed only. Once the tape has loaded, a tap of the space bar takes you into — stop me if you've heard this before — Space Invasion. As the inlay tells you: 'An armada of invading aliens seems to

be sweeping inexorably down to annihilate our planet'. You can stop them by positioning your laser base and firing at them as they descend. If a single alien reaches the planet surface you will lose all your lives, and perhaps I should mention that there's the occasional chance to take a potshot at the alien Mother Ship; this scores a bonus...

After seeing off the Space Invaders, you move on to Crossfire. Here you control a swivelling turret gun at the crossroads of four channels, down

which the robots pour in a kamikaze-style attack.

Then it's onwards, ever onwards, to Cosmic Guerrillas, in which two flights of robots are lined up in formation, one on each side of the defending bases. Protecting the bases are three layers of protective pods. The robots move inwards to remove the pods one at a time, thus exposing the bases themselves to attack. You attempt to thwart them by firing upwards from the bottom of the screen. Destroy the guerrillas and the pods will re-form for the next wave.

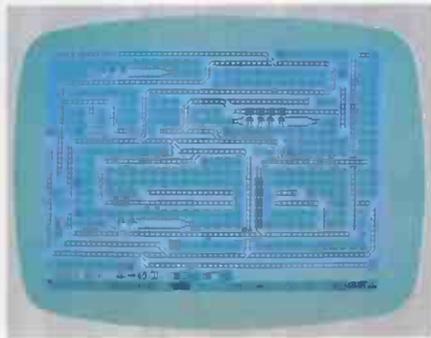

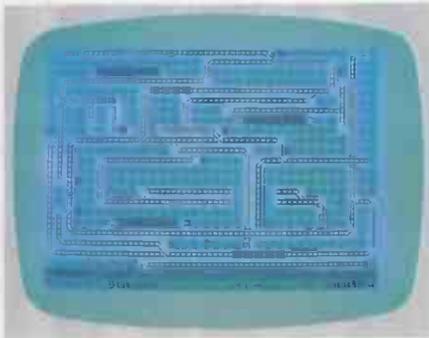

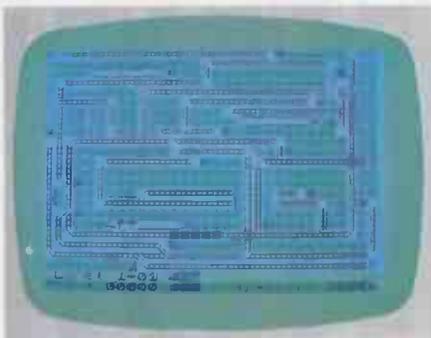

The final part of the Delta 4 package will also bring on a touch of *déjà vu*. Missile Command is, surprisingly, Missile Command. This particular version limits you to 10 missiles per wave for each of your three turrets, so you must be careful to avoid wasting shots.

Each of the games has eight levels of difficulty, and on completion of a game the player moves automatically to the next game at the same level. When you can beat all four games at one level you will move onto the next automatically. The Hall of Fame gives an overall score, rather than displaying individual high scores for each game.

Despite the fact that there's nothing too new here, it must be said that this cassette is very professionally produced. There are demo modes for all four games, plus a digitised photograph of author Andy Green, which certainly shows off the capability of the Oric's hi-res mode. At the lower levels, Space Invasion in particular is abysmally slow-moving, but things improve considerably as the levels get higher. The controls are kept very simple, and the graphics and sound are certainly as

good as they need to be. I found the procedure for moving directly to any game other than Space Invasion rather tiresome — you must wait until the demo mode cycles to your chosen game, then press CTRL while the game is being displayed. Still, if you are an arcade freak who owns an Oric and you don't yet possess a copy of Missile Command or Space Invaders, you might as well try this. Taken individually, the games may not be quite as good as other versions that have the luxury of the whole of addressable RAM to draw on, but they do the job more than adequately. **SM**

THE TRAIN GAME

Supplier: Microsphere
Computer: 16/48k Spectrum
Price: £5.95

The Train Game has been on sale for a few months now, but earns its place here as an example of an increasingly rare breed — a totally *original* home computer game. With very few exceptions, the monthly batches of 'new exciting' games for the popular machines are, on closer examination, mere anagrams of themselves — like Status Quo singles! Conventional arcade games all fall into a few clearly defined formats and, while not denying that some companies do manage to maintain a high standard of stunningly good games, I find that the bulk of the material that arrives for review consists of the same old games, disguised with the aid of various cosmetic differences. This is best illustrated by taking as an example Quicksilver's Games Designer package — the blurb boasts that the Games Designer will allow the user to create a whole range of professional-looking arcade games, but in fact all these games must operate in one of four formats. Using the Space Invaders

format, one game features witches on broomsticks who must be shot down in the usual manner. The graphics for this are certainly well done — but this can't disguise the fact that you are still playing Space Invaders . . .

The Train Game, refreshingly, refuses to be pigeon-holed — there's not an alien, a ghost, a frog or a robot in sight. Instead, it harkens back to those far-off days when every small boy's dream was an electric train set — and when every proud father would buy one so that he could play with it himself. Load the cassette, and a plan view of a railway network appears with a blue train chugging merrily around the circuit. Pressing any number between one and seven gets rid of the demo and puts you in charge of the train. At the simplest level, all you need do is guide the train around the circuit, switching points as necessary and stopping at the stations to pick up passengers. All the points are labelled with a single letter and pressing the relevant key determines the path the train takes. To stop at a station you need only press the '1' key. Of course, there are hazards — a wrong points setting leads to derailment, and if you delay too long before stopping at a station there's a good chance that one

or more of the passengers will go white with rage and hijack the train when it finally arrives, or else the platform will fill up and members of the public will end up on the tracks. You start with four lives and lose one with each of these incidents. Onscreen at all times is a display showing your current level, the number of lives left, the speed of the train and your score.

This is all great fun, but the novelty would soon wear off if this were all that happened. However, picking up 25 passengers allows you to move to the next sub-level. At level 1 your blue train is replaced by a red one and things proceed as before, with the exception that this time you must remember to press '2' to make the train stop at a station. Another 25 passengers and on you go to sub-level 3 and a magenta train . . .

Progress through the levels is automatic, but as you become more proficient you may elect to start off at a more difficult stage. The Train Game gets very difficult indeed — as you reach the higher levels you find yourself in charge of three trains at once, any one of which may only pick up passengers of the same colour. If nothing else, it'll do wonders for your keyboard techni-

que—you must hit the right key out of a choice of 20 or so, and you must do it without hesitation. Just to add to the fun, the odd 'lost' express or goods train will appear from the tunnel at the bottom right of the screen. The only way to get rid of these interlopers is to send them back whence they came—but make sure that one of your own trains doesn't follow or it's another lost life. There are also 'bonus' games, in which train direction is changed by means of a turntable instead of points-switching.

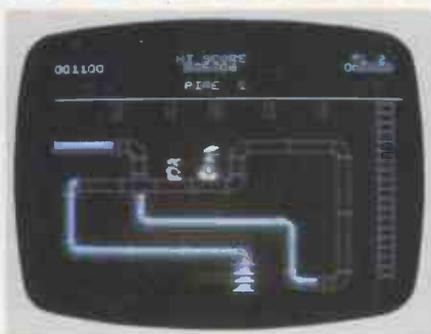

All in all, there are seven main levels of play. Levels 1-6 each have five

sub-levels while level 7 features no less than nine. Each sub-level has a unique combination of trains and speeds, and when you finally get bored with all the alternatives you can go through the whole thing again using a different track layout.

The Train Game impressed me greatly. After the initial period of familiarisation I soon got the hang of the controls, and the action at the higher levels is fast and furious enough for anyone. The huge number of possible combinations ensures that this is not a game that will pall quickly, and the sheer novelty of the concept

makes a very welcome change from the hordes of arcade clones. The Spectrum even manages a passable imitation of the noise of a steam engine, although this does grate after a while (it may be switched on or off as desired). The graphics could have been a little better, but this is a minor quibble in this instance and in no way detracted from my enjoyment of what is a very well thought out and hugely entertaining game.

SUPER PIPELINE

Supplier: Task Set
Computer: Commodore 64
Price: £6.90

Despite the label 'arcade games', there are very few so-called games that would actually survive the coin-slot test. I doubt the enjoyment of these games at 20p a go. Super Pipeline would do very well if it were installed in pubs and arcades alongside the Galaxians, Pacmen and fruit machines. In fact, I wouldn't be at all surprised if it were the first game to make the transition from home computer to arcade against the flood of games moving from the arcade to the home.

The idea behind the game is basically simple, as are all the best games. You

are a plumber whose job it is to ensure that oil flows along the pipe that winds from the top left hand corner of the screen down to the barrel at the bottom. The oil flows through at a steady rate until 1000 gallons are collected.

Obviously, this would be too easy without any nasties acting against you and so the Commodore 64 organises a three-pronged attack.

To the right of the pipe is a ladder, up which two of the attacks approach. The first is a series of men who run up the ladder and along a shelf above the pipe, dropping plugs that break the pipe and stop the flow. Being a good union man, you don't repair these breaks yourself, as it's the job of your mate to do the work. All you have to do is lead your mate to the damaged pipe.

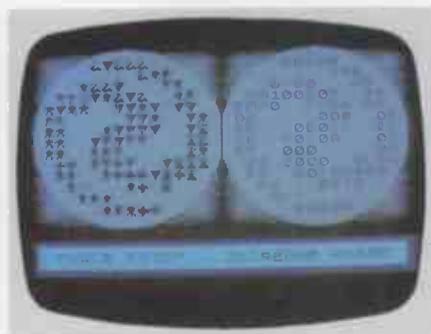

However, the ladder is also the entry

point for spiders which drop down on the pipe and try to bite (kill) you. Luckily you are provided with a gun to shoot these spiders (and the men while they're on the ladder) and if all else fails your plumber's mate is dispensable, since as one dies another is employed.

The third prong of the attack is more deadly and consists of lobsters which cannot be shot, and pursue you until they taste blood.

When the barrel has been filled you move on to the next screen which consists of a longer pipe, more spiders and more frequent lobsters.

that involves planning and strategy rather than just good coordination and a quick trigger-finger, took me to a small shop-cum-office in darkest Stoke Newington. Here, a large sign saying 'CONFLICT' leads into the lair of the lads from Red Shift, all of whom seem to hate arcade games but who positively wallow in the delights of war-gaming. (For the uninitiated, it should be stated that 'war-gaming' is a term that covers a wide range of activities, from recreated battles of the past fought out on a table-top, using painstakingly exact scale models of the troops of the period, to board games like Diplomacy.)

A computer is an ideal aid to this sort of gaming. It will map out the playing area, keep track of the relevant moves and the relative strengths of the combatants, and can be used as an opponent when no humans are available.

I had initially been attracted by Red Shift's adverts for Apocalypse, a game which can be best described as 'all-encompassing'. Documentation for Apocalypse points out that play may last from four hours to four years (yes, years!), and expansion packs may be bought, allowing, for example, scenarios from the fall of the Roman Empire, the Napoleonic Wars or future wars in

distant galaxies to be played out by two to four players (any millenium between 0 and 7999 AD may be selected). However, as a newcomer to this type of computer gaming, I allowed myself to be persuaded that Apocalypse could be left to a later occasion, and instead picked up a copy of Nebula for this review.

Nebula is described as 'a game of strategic galactic conflict'. Players (any number between one and five) take the roles of emperors attempting to expand and control their empires, all of which are based in different star systems. Inhabitants of the various systems are forced to serve their emperor, but imperial control may be threatened by war with other empires, civil unrest and plague.

To start with, it is necessary to select a galaxy in which to play. Nebula offers a choice of four different galaxies, and the documentation explains which one is best for one-player games, or for short or long encounters. There are six different races inhabiting the galaxy, and a seventh — the Drakar — appears only when the one-player option is selected. Two different maps of the selected galaxy are displayed side by side on the screen: the left hand map

shows the distribution of the six races, while the right hand map is colour-coded and shows the resource levels of the systems. To win the game, the victory conditions must be set, and tailored to suit the length of game desired.

Andy at Red Shift assured me that the computer would thrash me at my first attempt (it did), and that the instructions, although confusing at first glance, are in fact easy to follow if you accept Red Shift's recommendation to load Nebula first and then go through the instructions while actually playing the game.

I found Nebula to be an extremely absorbing game; the graphics are clear enough, although this game would benefit from a computer that uses the full screen size, as the two adjacent maps mean that the figures are quite small. It's certainly a game that will stand up to repeated playing, and is recommended to anyone who can stand to put a bit more thought into their games-playing. **SM**

SS ACHILLES

Supplier: Beyond Software
Computer: Atari 400/800 with 48k + one joystick
Price: £19.95

When I first saw this game in the office I thought it was a version of an excellent board game produced by TSR Hobbies called the 'Awful Green Things From Outer Space'. It's based on those awful Sixties space films where countless spaceships were invaded by aliens with a common aim: to destroy the Earth. SS Achilles is obviously inspired by those same films but they have missed their chance to produce a really good game, in which the crew would fight the aliens with whatever weapons they could find.

Unfortunately, the crew of SS Achilles has given up without a fight and is

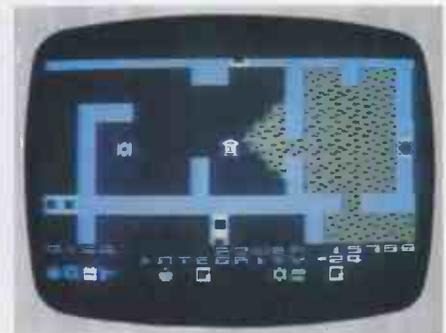

content to collect its ill-gotten gains before escaping in a shuttle.

Realism takes a day off, as this game results in a version of the age-old maze format. Happily, there are still sufficient differences to make the game worth playing but I can't help feeling that SS Achilles is the game that got away. Having said that, the game is a race against time and is well worth playing.

The objective is to collect as many of the alien relics (acquired from earlier exploits) as possible, before escaping in the shuttle. Of course, ever present in your mind, and indeed the ship, is the alien growth which is slowly taking over. The growth starts from a seed and gradually spreads throughout the ship. Ultimately you must destroy the growth but its progress can be delayed by sealing doors with sealant guns.

To add to your troubles, additional seeds infect the ship and start other

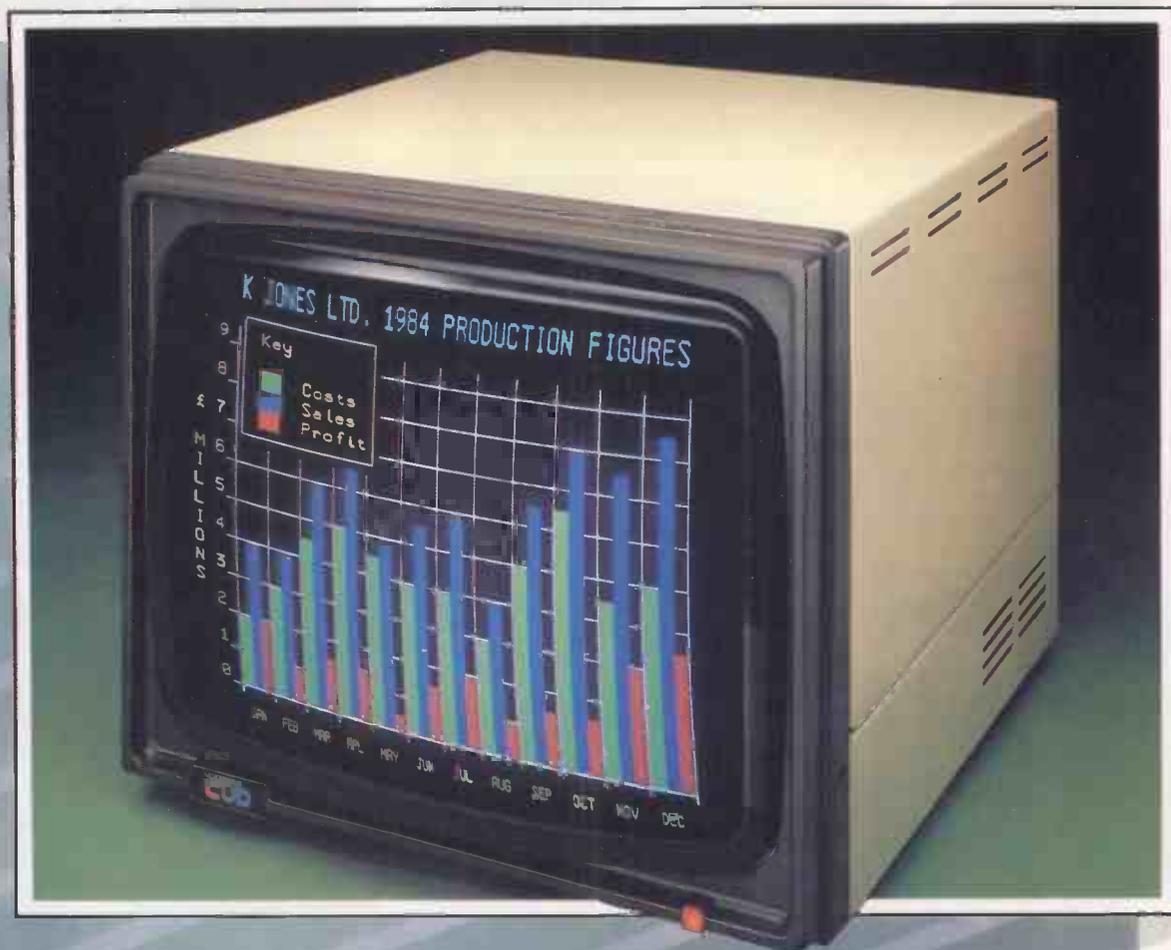

growths. Alien spores also move freely around the ship and are a hazard that should be avoided.

The game is played at any of five skill levels which range from INEPT to EXPERT. It lasts about twenty minutes and ends when you are killed or escape in the shuttle. Your performance is then assessed and a rating is awarded, ranging from a Commendation (the lowest of the low) to a Platinum Imperial Medal.

The graphics are adequate but disappointing when compared with the title page illustration of the ship itself. The game is initially confusing but, as a passing colleague commented: 'It grows on you.' **TH**

SERIOUS DECISIONS NEED THE SUPPORT OF OUR 80 COLUMNS

Most serious users of micro computers require the facility to display in 80 columns, especially for word processing. Try this on most monitors and the result will be a frustratingly fuzzy image.

The Microvitec CUB 653 gives the user not only glowing colour, but also pin-sharp-images, thanks to a medium resolution screen 653 pixels wide by 585 high, plus a selective transmission

panel giving super-high contrast. These features make this model from the CUB range of monitors the perfect partner for the high resolutions generated by BBC B, SINCLAIR Q.L., I.B.M.,

MICROVITEC

IBM

FORTUNE

FUTURE

What name would **you** give a personal computer store with the best hardware, software, service, support, training and maintenance?

We named it

Personal Computers Ltd.

We pride ourselves in being able to offer you a combination of expertise with hardware and software that will provide the most suitable system for your particular needs.

Our hardware products are from the world's most reputable manufacturers including Apple, IBM and DEC and our software is proven and totally reliable from companies such as Lotus, Microsoft, VisiCorp, Ashton Tate and Systematics. We want to ensure that you get total 'value for money' from your system so as well as providing the best hardware and software, we also have excellent training facilities where classes are deliberately limited in numbers to enable each attendee to benefit from maximum personal attention and 'hands-on' experience. Our training centre is located at our showroom in Bishopsgate and is well equipped and staffed by full-time professional personnel. The courses include an introduction to personal computers as well as specific courses on applications products covering word processing, information management and financial planning using Lotus 1-2-3.

Another important part of our after-sales support is our service and maintenance department, employing engineers who have been expertly trained by the manufacturers. We believe that total after-sales service is imperative, so we also provide a hot-line telephone service ready with support and advice to enable you to maximise the benefits of your investment.

Your satisfaction is our priority.

To find out more, phone 01-377 1200 to arrange an informal meeting or attend one of our free business seminars.

Personal Computers Ltd.
