20 Come Fly With Us
To The 1994 Dayton Hamvention
Rob Mannion G3XFD brings you some exciting
news of the PW 1994 Hamvention trip

21 Radio Personality
Pat Hawker G3VA.
PW finds out about the man behind the prolific
pen.

25 Review

**The Thurlby Thandar TSA250 Spectrum
Analyser Adaptor**
Tex Swann G1TEX tells you what he thinks of
this useful spectrum analyser adaptor.

28 Adding To Your
Bookshelf
PW reviews a selection of test equipment
related books.

28 Special Offer
The Radio Amateurs Prefix Map Of The World at
a special price.

30 PW Robin
Lowering The Display Power
Requirements.

Mike Hughes
shows you his
modifications
to reduce the
overall
current
consumption
of the PW Robin Frequency Counter and how it
can be powered from batteries.

32 A Simple Tester For
Bipolar Transistors
Martin Michaelis DK1MM describes a useful
project for testing transistors and diodes using
a built-in r.f. oscillator.

33 Off The Shelf
The PW team browse around the shelves to
guide you through what's available in the
world of test equipment.

38 Cable Health Tester
David Turtle G1OLZ has come up with a simple
but effective cable tester that tells you the
state of the cable under test.

40 Basic QSOs in Spanish
Part 2
Gareth Roberts GW4JXN and Ildefonso Sevilla
EA7BW continue the Basic QSOs in Spanish
series.

43 All Through The Night
John Worthington GW3COI takes a light
hearted look at bedtime listening.

61 Tool Club
Introducing the PW Tool Club.

Other Regular Features

44 Antenna Workshop
Peter Dodd G3LDO looks at antenna and transmission line
impedance.

46 Bits & Bytes -
The Computer In Your Shack
Peter Hunter G0GS2 discusses some interesting programs.

48 Valve & Vintage
Ron Ham opens the PW vintage wireless shop to talk
about your memories, reconstructing and renovating
valved equipment.

50 HF Bands
Paul Essery GW3KFE with his monthly report on the h.f.
bands.

53 Satellite Scene
Pat Gowen G3IOR covers the topic of awards given for
satellite operating achievements.

54 VHF Report
David Butler G4ASR brings you news of DX openings on 50
and 144MHz.

56 Packet Panorama
Roger Cooke G3LDI with news on the latest on Russian
packet radio.

57 Broadcast Round Up
Peter Shore reports on some interesting changes to the
BBC's French Service, satellite testing and stations to
watch out for.

FRONT COVER ACKNOWLEDGEMENT

This month's main front cover photograph
was taken by Rob Mannion G3XFD at the
1993 Dayton Hamvention. Rob spotted this
enormous selection of (bargain price) test
equipment in the flea market and it was
only one stand from among 2000!

THE THREE POINTS OF THE KENWOOD TRIANGLE REPRESENT ADVANCED TECHNOLOGY, QUALITY AND STYLE

DON'T BE SEDUCED BY
ITS GOOD LOOKS.

BE SEDUCED BY ITS
PERFORMANCE.

If someone can make a dual-band transceiver as small and feature-packed as this, who cares about its looks?

Especially if it's also so sturdy that it shrugs off the knocks and shocks of a lifetime's use.

And especially if it has a host of product features, from built-in DTSS and paging functions to alphanumeric

memory, simultaneous dual-frequency receive and message paging.

We'll tell you who cares

Kenwood cares.

Which is why the TH78E isn't just the neatest dual-band transceiver you can buy, it's also the best designed. Right down to thoughtful touches like the sliding keypad cover.

So visit your nearest Kenwood

approved dealer, pick up the TH78E and admire its ergonomic curves at close quarters. Or simply take in the wonders of its specification.

Either way, it's love at first sight.

Kenwood TH78E is part of a range of hand portables from £240 to £430.

The best receiver ATU around. Thousands in use. Improves signals, front-end selectivity and reduces background noise.

Great news FREE HAM RADIO CATALOGUE

The best ever produced!

For the first time ever you can obtain a copy of this catalogue packed with Ham Radio equipment and accessories, some never before advertised. You get the full specification with pictures and accompanying price list. Forty four pages of absorbing reading and it's all FREE! Just call in and collect one from our Hockley or Hornchurch stores. Alternatively send two first class stamps to cover postage.

Frank in control of mail order despatch

HB-400 Amazing! £13.95!

P&P £2.00

Hand-held mount
The easy way to mount your hand-held or scanner in the car. Fits any hand-held using the belt clip. Gives firm mounting for safe driving.

Kenwood HF

NEW! TS-50 £Phone

The amazing 100W mobile rig. No bigger than many 2m FM boxes it give you all hf bands. 1.8-30MHz plus 500kHz-30MHz receive! SSB/CW/FM/AM. Memories, Dual VFO, Scan, Noise Blanker etc.

TS-450S

£Phone

1.8MHz-30MHz 100W transmit plus receive 500kHz-30MHz. Optional ATU, triple conversion, IF shift, notch filter, dual mode noise blanker, reverse CW, CW pitch control, 100 memories. Send for details.

TS-850S

£Phone

The most popular 100W transceiver in 1992 SSB/CW/AM/FM super dynamic rx range. IF slope tuning, IF notch filter, tx monitor, true rf speech processor, full break-in CW, 100 memories and more!

Ameritron Linears

We can supply most models from stock 1.8-30MHz with built-in power supplies. Ameritron linears are rugged and well built. It's the sure way of working the DX. We also supply free connecting leads to match your transceiver on request. We can supply the AL-811 rated at 600 Watts pep for **£539** and the beefy **AL-808X** with an output of 1kW for **£1499**. We also have a very nice second-hand AL-80 which has been completely checked over and is "as new"; the price of this is **£999!**

MASPRO! from Japan

A new range of aerials from Japan that feature superb engineering and amazing prices. Probably the best new range of aerials we have seen for a long time. They are particularly attractive to FM users as the optional stand-off kit allows you to mount the aerial vertically and away from the mast for perfect radiation pattern.

144-WH5 2m 5 el. 0.93m 6.6dBd**£29.95**

1750Hz tone
Mic and hardware

£329

Your chance to purchase a top performer at a discount price!

Hurry

ALINCO

DR-130 2m 50W

The new DR-130 has arrived! 20 memories and 50 Watts output. The really nice touch is the ability for channels to be displayed instead of frequency. Good for quick glance mobile or those with impaired sight. You also get CTCSS encode included free of charge. Now available from stock.....**£349.95**

HF MOBILE WHIPS

A completely new range at a sensible price. Single band makes sense. You buy what you need and no more. Fibreglass helical construction with tunable whip and total length of approx. 2.25m makes these really efficient 3/4" studs. (PL-259 adaptor £3.95).

PHF-160 160m 15kHz bw	£54.95
PHF-75 80m 35kHz bw	£24.95
PHF-40 40m 60kHz bw	£22.95
PHF-20 20m 150kHz bw	£19.95
PHF-15 15m 200kHz bw	£19.95
PHF-10 10m 500kHz bw	£19.95

2M ON-GLASS!

GM-144 2m on-glass halfwave. 50W with 14' of cable + PL-259**£29.95**
Re-mounting kits**£9.95**

ADI in stock!

2m or 70cms

Now back in stock, these transceivers offer a real bargain to the UK customer. Keypad entry 20 memories, 2 Watts output and all the normal scanning and search facilities. 1750Hz tone is included and the 70cms version is ideal for the Novice.

ADI-145 2m 2W	£199.95
ADI-450 70cm 2W	£219.95

Memories: 42 Channels
Sensitivity: 12dB SINAD -15dBu.
Tone: 1750Hz
DTMF: Built in
CTCSS: Built in
Size: 132 x 58 x 33mm
Weight: 410g.

£449.95

PUT LOWE TO THE TEST

No matter how much or how little you spend on radio equipment, sooner or later you're going to need some test gear. You can get by with just the bare minimum needed under the licence terms (the good old wavemeter !) but most people will want to go that little bit further - that's where we come in.

OPTOELECTRONICS

As the appointed distributor in the UK for Optoelectronics, we can offer a full range of high-quality, low-cost digital frequency meters. Small enough to be carried in a tool box but accurate enough to be in use with many of our professional customers for frequency measuring and security applications

Have you seen our new price list yet? Four first class stamps and your name and address are all we need to send one out to you with a bumper info pack on all that's good in amateur radio

DIAMOND

The most popular range in the world, Diamond can offer an excellent range of accurate and reliable SWR/PWR meter. Several models ensure that you get the right one for your frequency range and power handling requirements. Ask us now for full details of this exciting range. The first time you blow one of the PA slabs on your new dual-band mobile, you'll realise that a good meter would have paid for itself!

Need our second-hand list? Why not try our new Fax-on-Demand service. Simply dial 0629 580008 from your fax machine and listen for the voice instructions. Service available 24HRS.

MALDOL

Maldol offer just two SWR meters, which will probably be more than enough for most people. The MR1000 covers 3.5 to 150 MHz with power ranges of 50 and 200 watts, whilst it's twin brother the MR2000 covers 140 to 525 MHz at the same power levels. Why not buy a matching pair?

The best "antenna" you can buy for your rig is a dummy load. There's little point performing any SWR bandwidth tests on an antenna, unless you can be sure that your transmitter output is consistent over the range you are testing. You can only find that out if your load is consistent. So, don't be a dummy! You don't need to be loaded to buy our DL60

KENWOOD

We've got a super deal on a few remaining Kenwood SW2100 meters. With power handling up to 2kW, this is the ideal meter for those who like the cosy glow of a pair of good bottles on HF. At over £375.00 for a matched pair of 3-500Z's, can you afford not to have a quality meter?

LOWE ELECTRONICS

When the music stops.....

We've been doing a little musical chairs recently to bring you better service both up here in the Dales and out in the sticks around our branches. Lots of our people have been moving around and we have a few new faces to introduce. Steve Jelly, G6URJ, who has run our Kent branch for the last few months is our new showroom manager here at Matlock. Steve's causing quite a commotion at the moment, planning to move the showroom around a bit and upgrading our datacomms section - hopefully getting it ready for our open day, which this year is on 25th September.

The empty slot at Maidstone has been filled by Brian Underdown, G1LIJ. Brian is a very experienced VHF/UHF DXer, well known on the bands and very knowledgeable on VHF and UHF antenna arrays. I'm sure regular customers there already know Brian but if you don't, pop in and say hello.

For some time now we've had our very own "New Age Traveller". For the last two years, Dave McEchran, GW6CWA, has travelled the length and breadth of the UK as our relief manager and knows many of our customers from Cumbernauld to Bournemouth. Dave is now hanging up his caravan and settling in to our Bristol branch, ably assisting Tony, G4CYE who will be able to concentrate a little bit more on the service side.

Also moving around is Fred, G4RJS. Fred used to run our Eastcote branch and can now be found at our Heathrow branch together with Steve. Steve's not long passed his Morse and now sports the newish callsign of G0TKD. Catch him on the air on HF most mornings, chatting to Dave Brown G4KFN/M on his TS50S as he makes his way from Carlisle to open up our Newcastle branch.

Not content with that little lot, our Cambridge branch is on the move! Not far though, just a few doors up from the old place so you can still park in the same place. Tony, G4NBS is looking forward to welcoming old and new customers to his new larger premises. There might even be space for you to sit down now! Ask him now for your invite to the "official opening"!

THE NEW STANDARD C408

The latest in the "standard" range is probably the smallest set yet produced.

It has 230 MW R.F. output from 2 x AA cells – ideal for local Q.S.O's and repeater working. An idea that comes to mind for those of you with dual banders that will act as a repeater, is that you will have a portable microphone anywhere around the house!

We are waiting for full specs and leaflets.

The projected price is just under **£200.**

DUE TO THE FLUCTUATING EXCHANGE RATE, PRICES MAY VARY – PLEASE PHONE BEFORE ORDERING –

Lee Electronics

I met many readers and other friends at this year's Longleat Rally. It was a very hot day, and while I was enjoying the shelter of a tree with a group, one of my companions brought up the subject of mobile equipment insurance.

We were chatting generally about insuring our amateur radio mobile gear, and everyone in the group said they actually kept their transceivers in the car. Our discussion led me to do some research, and I have some news that will come as a shock to many mobile amateur radio operators.

I spoke to several major insurance organisations. But I'll try to keep a long and complicated story as simple as possible.

Basically speaking, insurance problems may arise if you install your mobile equipment permanently in your car. If the equipment is in view and in a position where the driver can operate it safely - it seems that the insurance position could be compromised.

None of the insurance organisations I spoke to, would specifically state that they would refuse to cover the full cost of replacing stolen amateur radio equipment, permanently mounted in a car. However, they all clearly stated their requirements, and unfortunately these seem to conflict with the permanent (and safe) mounting of amateur radio equipment in cars.

The insurance companies advise (although I interpret this as a requirement) that ALL amateur radio equipment be removed when the vehicle is left unattended. Any equipment left in the vehicle should be out of view of potential thieves, and they apparently regard the common practice covering of dashboards (to obscure mounted equipment) as being an enticement to steal rather than a deterrent.

So, you'll probably realise that anyone with equipment fitted permanently in the car could have a problem. My own insurance company (I've been with them for almost 30 years!) weren't particularly helpful when I asked for advice on keeping

Keylines

equipment in the car permanently.

When asked about insuring ever more expensive amateur radio equipment in cars, my insurance company's spokesman said "Why pay all that money and keep the equipment in the car anyway"! When told that installing equipment of this nature, which is mostly designed for permanent installation in any case, the spokesman repeated the advice given by other insurance companies. "Remove the equipment when you leave the vehicle unattended".

There does not seem to be a way round the mobile equipment insurance problem. When told of my (it's a daydream really!) intention of getting a Kenwood TS-50 h.f. dedicated mobile transceiver, my insurers weren't impressed and suggested that something so valuable would be better off in the main shack rather than used mobile!

Obviously, we must work together with the insurance companies and police on the matter of equipment security. To this end, I would like to hear from readers on the subject of insurance.

Have you had equipment stolen from your car? If so, what was the reaction from the insurance company? I feel sure that many readers will be able to help via 'Receiving You'. I think that we'll be able to learn from previous thefts from readers' cars, details on resultant insurance pay-outs, any subsequent insurance 'loading', and conditions of future insurance.

So, get writing! Your misfortune may stop others falling into the same trap, and together we'll try and make it even more difficult for the thief.

Finally, I must thank everyone who came to my rescue at the Longleat rally when I lost the back door key for my car, especially the group from Wales. The key turned up later in the week, jammed in the rubber seal of the rear estate door! I much appreciated everyone's help. Thank you.

Rob Mannion G3XFD

Receiving You

Wireless Chase

★★ STAR LETTER ★★

Dear Sir

I recently returned to the hobby after a lapse of some years and currently operate on 144MHz f.m. mobile. As my knowledge needed updating, I asked my wife to get me a copy of *PW*. Because of the word 'Wireless' in the title, she was convinced that she was on a wild goose chase, particularly as our own children didn't understand what 'Wireless' is! After a half-hearted attempt, she gave up.

Fortunately, I was able to go out and buy a copy and prove her wrong. I think that the format of your magazine is excellent as you cover a wide range of topics without becoming too technical, which makes for easy and interesting reading. I am now a regular reader.

On another point it seems to me that certainly locally, there is a lot less activity on 144MHz f.m. than I remember, say seven years ago. I wonder why this is so?

**J. Sones G8JBK
Essex**

Editor's reply: The term 'Wireless' may seem outdated, but many readers have said they prefer the original title for the magazine. We reverted from the acronym *PW*, to the full title for our Jubilee year in 1992, as many of you had asked us to do. As regards 144MHz f.m., it always seems fairly busy here in Dorset!

Unprotected Radio Spectrum

Dear Sir

Following Donald Elkington's lucid letter on legitimate spectrum allocations and usage, spare a thought for those who try to use 'unprotected' parts of the radio spectrum.

Some time ago I set up a v.l.f. system on a long wire antenna to record the signal strength of the MSF Rugby standard frequency station on 60kHz. This was to detect solar flares and other ionospheric disturbances.

This went well for about six months, until one day the signal was swamped by switching 'dirt' of some high power 50Hz system which ran continuously. I contacted Midlands Electricity, who were very helpful and installed a computer logger on my supply for a week. This confirmed that there was 1.5V of r.f. at 60kHz riding on the neutral!

The computer drew a spectrum of the noise from 10kHz to 150kHz. This showed the interference to be within EMC limits on the long wave broadcast band, so there was nothing they could do but sympathise!

I tried to get round the problem by building a v.l.f. frame aerial (200 turns tapped every 50 turns on 4ft diagonals). This tunes down to audio, and by turning it I can null the interference out and get a d.f. fix as well.

Unfortunately the source (a pumping station) is in the same direction as MSF Rugby. So I'm no better off, although the v.l.f. signals from static and geomagnetic effects are fascinating, provided I don't turn the frame off the null and get the 'radio pumping station' full blast!

The 'legal' pollution of the spectrum outside broadcast bands is more difficult to tackle than the light pollution problem facing astronomers. It's nobody's responsibility, so nobody in authority will do anything about it because power line filters cost money. Unlike light pollution, there's no visible energy waste for a public focus. Have *PW* readers any ideas how (or whether) the æther outside broadcast bands should be protected from silicon controlled rectifier 'transmitters'?

**Tony Hopwood
Worcester**

Brass Stock For DIY Morse Key

Dear Sir

Rather than me wittering on about this supplier, I would like to suggest you write for a copy of their catalogue to: **J. A. Crew & Co., Watery Gate Farm, Dovers Hill, Chipping Campden, Gloucestershire GL55 6QU.**

For the price of a £1 stamp (no cheques please) you will have something to keep you busy. The catalogue is full of items (including electronic surplus and other fascinating bits) handy for home-brew enthusiasts, including brass stock for the recently-published Jim Lycett G0MSZ design.

I have been intending

to write with my views on computing in radio. But, I started an engineering (electronics) degree course last September and I have been exceedingly busy ever since.

As an impoverished student who is lucky enough to live in an area with a high water table, I would really like to see a detailed DIY article on multiband h.f. vertical. (Just thought I would mention that).

I hope you had a good trip to Friedrichshafen this year. I will be sweltering through exams while you are enjoying yourself.

**Ian Wye GOOKY
Nr Scunthorpe**

Illegal Network On 6MHz

Dear Sir

I refer to the letter from Roy Nicholls G7NUW July 1993 *PW*, concerning transmissions in the 6MHz band, and your reply to the effect that these are an illegal network of long standing.

I have listened to this activity on a number of occasions, and refer to them as 'The alternative 40 metre net'. Also they operate below 3.5MHz. In the main they appear to be UK based using Yaesu or Icom equipment and a mixture of amateur and CB type jargon.

Why are they allowed to continue this activity? They are operating within the confines of the aircraft frequencies with the possibility of harmful interference to that essential service.

I wrote to the RSGB several years ago concerning these pirates. But I received only a negative reply to the effect that as they are not operating within the standard amateur bands, there was little that could be done.

Why? Surely someone is capable of locating these pirates in this day of modern d.f. equipment and then bringing them to court. Or does it need an aircraft transmission to be blocked and danger caused first?

They have been there many years. It is time that they were stopped.

John Randall G3OAZ, Hampshire

Send your letters to the editorial offices in Broadstone. They must be original, and not duplicated in any other magazine. We reserve the right to edit or shorten any letter. The views expressed in letters are not necessarily those of *Practical Wireless*. The Star Letter will receive a voucher worth £10 to spend on items from our Book or other services offered by *Practical Wireless*. All other letters will receive a £5 voucher.

Editor's reply: Thanks for the information Ian. I sweltered in the (incredibly) hot sun at the Longleat rally this year, instead of Friedrichshafen. I like your distinctive callsign by the way!

Amateur Radio Visitor Licences

Dear Sir

I am writing to draw your attention to the subject of the Amateur Radio Visitor's Licence facility. I had applied to Subscription Services Ltd., in Bristol for a temporary licence for my friend N8KXY, who was visiting the UK for the first time, and had completed the application form I sent him.

I sent the £15 fee off with the application, although I queried why someone only staying in the UK need pay so much. The visitor's licence costs the same amount whether the person stays for one day or one year, presumably because it's too difficult to arrange an ascending scale of charges which could be implemented economically.

Upon receipt of the licence through the post, I noted the following:

- 1: The paper on which the licence is printed bears no watermark.
- 2: The document layout comprised of a much amended standard UK Amateur Radio Licence, but with all references to CEPT removed.
- 3: No serial issue number appears at the top of the form, giving the impression at least, that no record is held of the issue of this official document, which would most certainly be required by law in possible court cases. Personally, I would seriously challenge any person in possession of this licence, as to its authenticity.
- 4: The licence was handwritten, not typed, giving the impression that it was falsely or improperly issued. Any person could take a colour photocopy from the original, and with the aid of typewriter correction fluid simply overwrite the required details.

Upon contacting the SSL offices direct and complaining about the poor appearance of the licence, the issuing officer stated that it was impossible to produce a computer typed version, as they did not have typewriters in the office! I wrote to the Radiocommunications Agency, stating my concern. Mrs Karen Scott replied, and I was told SSL will shortly be laser printing all temporary validation documents. In addition, a suitable numerical issue system is currently under review, so that the documents are easier to trace.

Mrs Scott also explained that the £15 required for the visitor licence is because of the work involved in vetting the applications, even though they may only be required from a short period. The RA also needs to recover all the costs when setting the licence fee. She suggested to me that it would perhaps be easier if a visiting amateur operated under the supervision of a UK licensee, using the UK operators callsign, if the visit is only for a few weeks or less.

I was thanked for bringing the matter to the attention of the RA and I was assured that they would be keeping a close eye on the situation. I was pleased with the response, and it's nice to know that my efforts were not in vain. The problem is that N8KXY never did get his laser printed licence to frame!

Paul Fry G0FUS
Winchester

July QRP Special Issue

Dear Sir

Very many thanks for the July 'QRP Special' issue received today via W. H. Smith's. Well done *PW* team, you certainly did us proud!

Perhaps I should introduce myself. I'm Dave G0NEZ, The QRP Novice Manager of the G-QRP Club. I studied my RAE/Morse under Angus Taylor G8PG, Communications Manager of the Club, through the Rapid Results College, correspondence course, and passed first time with Credits.

I am responsible in helping the Novices (2E0 and 2E1) plus many 'first time QRPers' who are unsure. Gus G8PG receives about 300 letters every year, and I about 150.

I found the general 'QRP Special' very interesting. Our QSL Bureau Manager - Bob - does a great job and the general camaraderie amongst QRPers is well known. After passing the RAE, and putting in some three years QRP c.w., G8PG and I have become firm friends, as have many others in the club.

I spent three years on a straight key. I experiment with antennas, and my latest end loaded Doublet design may be reported in *Sprat* soon.

Once again I congratulate *PW* on the QRP Special Issue.

David Gosling G0NEZ
Hertfordshire

Editor's reply: The *PW* team are pleased you enjoyed the QRP Special issue David, and we hope you like and will eventually build the projects and enjoy using them.

Radiocommunications Agency Reply To G4GLM

Dear Sir

In your August issue, Dr G. Manning G4GLM questions the powers of the Radiocommunications Agency to act against the sale of non-licensable radio equipment and states that sale cannot be stopped apart from some very specific exceptional cases.

Such equipment can cause serious radio interference, including to safety-of-life services. It is all well, therefore, that your correspondent's statement is a considerable over-simplification. I would not wish anyone to be misled into committing a criminal offence so though it would be helpful to clarify the position.

The sale of some categories of radio equipment is a specific offence under the Wireless Telegraphy Act 1967. Apart from a.m. CB radios, this applies also to unapproved cordless telephones because of their interference potential. In addition, suppliers of any other type of unproved radio transmitter or transceiver which cannot legally be used may be guilty of

the common law offence of incitement. A disclaimer that the device cannot be used in the UK is not a sure defence as a number of suppliers have found to their cost. The Agency has successfully prosecuted several suppliers for inciting customers to contravene the Wireless Telegraphy Act 1949 and sizeable penalties have been imposed by the courts.

As for the power the Agency can seize equipment at the point of sale, authorised officers of the Agency can seize equipment as evidence under powers in the Telecommunications Act 1984. There are also powers in that Act and the 1949 Act to apply for forfeiture.

The Agency's powers and the offences in the legislation go wider than Dr Manning implies. There is not room in this short letter to go into all the legal details. If any of your readers are in any doubt, they should check very carefully before they act. Further information is available from the Agency at Waterloo Bridge House (public enquiry point 071-215 2150).

L. B. Green
Radiocommunications Agency

Following the successful use of photographs in 'Receiving You' in our Diamond Jubilee issue, October 1992 *PW*, we would like to again include the occasional photograph with your letters. So, if you have a photograph of yourself or something appropriate to your letter send it in and the best ones will end up in print.

Tri-band Hand-Held

Icom (UK) Ltd. have recently introduced a new model to their hand-held range of transceivers. The IC-Δ1E (Delta 1) tri-band f.m. hand-held transceiver is the first of its kind ever produced for general sale.

The IC-Δ1E covers 144/430MHz plus all of the 1296MHz band and is said to have many advantages over the common dual-band transceivers. These include simultaneous three band monitoring and reception, incremental tuning on 1296MHz and 78 memory channels.

Other features of the IC-Δ1E are, a built-in DTMF encoder/decoder, four DTMF memories, four l.c.d. contrast levels with backlighting, as well as optional tone squelch and pocket beep functions that can be set independently on each band.

The IC-Δ1E is available from **Icom (UK) Ltd., Sea Street, Herne Bay, Kent CT6 8LD. Tel: (0227) 741741, for £759 inc VAT.**

Bank Holiday Sale

Garex Electronics in South Devon, following the success of previous sales are holding a Bank Holiday Monday Sale on August 30 1993 between 10am and 1pm.

On offer you'll find, new and second-hand scanners, antennas, components, audio and miscellaneous electronics, as well as junk and stores clearance items at 'Must Go' prices.

Garex are easy to

find and have ample free parking. To find them just head for South Brent, which lies just off the A38 between Exeter and Plymouth and then follow the signs for the town centre. Turn right into Station Road, immediately left before the railway bridge and into Station Yard. Garex are on the right at the end of the yard.

For more details contact **Garex Electronics, Station Yard, South Brent, South Devon TQ10 9AL. Tel: (0364) 72770.**

RAE Courses

Brighton College of Technology are to begin running RAE courses from 13 September. The courses will run on two evenings. Mondays from 6 - 8.30pm covering theory and Wednesdays for Morse and Practical Project Building.

Details of enrolment, fees, etc., are available from T. F. Strickland G4EQA on (0273) 667788 ext. 433 or 730.

Chesham: The Whitehill Centre. Morse classes commence on Monday 13 September and RAE classes on Tuesday 14 September. The tutors will be Shirley G4HES and Ron G3NCL. For more details Tel: (0494) 776420.

The City of Westminster College, Science & Technology Department, 25 Paddington Green, London. Tel: 071-723 8826, will be running an RAE course, commencing in September and running until the May 1994 examinations. Class A and B licences will be catered for and it is hoped that an Advanced Morse course will also be run, taking in candidates up to 22 - 25w.p.m. with an insight into professional and marine procedures.

For enrolment details contact **Ann James** at the above address.

Doncaster College, Division of Engineering, School of Electrical & Electronic Engineering, Waterdale, Doncaster DN1 3EX. Tel: (0302) 322122 Ext. 287. Commencing September on Tuesday evenings, 6pm and running until the May 1994 RAE. The course will be in two parts, taught to five words for the Morse test in the subsequent ten weeks.

At the end of the course, arrangements will be made for RSGB examiners to test in the college. All enquiries to be made to **Doncaster College.**

East Kent Hilderstone Radio Society. Commencing late September in the Canterbury area. This course is designed for those wishing to sit the RAE in 1994. The tutor for this course will be G3JIX. For more details contact the **Secretary on (0843) 859812.**

Kingston College, Kingston Hill Road, Kingston-upon-Thames, Surrey KT1 2AL. Tel: 081-546 2151 ext. 2066, will be running the following amateur radio courses in the forthcoming year: City & Guilds 7650 - Radio Amateurs, City & Guilds 8280 - Radio Servicing Theory (includes construction & fault finding), City & Guilds 7730 - Novice Licence Training, Practical Introduction to Digital Communications. Enrolment is on Monday September 6 in the Engineering Department. For further information contact the college direct.

Merton College, Morden Park, London Road, Merton, Surrey SM4 5QX. Tel: 081-640 3001, will again be running an RAE course this year. Commencing September and running until early May on Wednesday evenings at 7pm. The tutor for this course will be David Bowman G0MRF and enrolment is the 1st & 2nd week in September. Anyone interested should contact the college direct.

The North Cheshire Radio Club, Morley Green Club, Morley Green, Nr Wilmslow, Cheshire will be running an RAE course on

Sunday evenings. Enrolment will be on Sunday September 19 at 8pm, each Sunday thereafter the course will start at 7pm.

For further details contact **Jill on 061-485 5036.**

North Trafford College, Talbot Road, Stretford, Manchester M32 0XH. Tel: 061-872 3731 are offering another RAE course this year, starting in September. The course tutor will be J. T. Beaumont G3NGD. Theory will be on Monday evenings or Wednesday mornings, Morse on Tuesday evenings or Wednesday afternoons, Amateur Television on Wednesday mornings and an Advanced Radio Course Tuesday afternoons.

The all day course (Wednesdays) should appeal to retired or unemployed people, as a successful student could apply for an A licence at the end of the first year.

Enrolment dates are September 1, 2nd & 3rd. For further details on the course contact the college at the above address.

Reddish Vale Evening Centre, Reddish Vale Road, Reddish, Stockport SK5 7HD. A full RAE course of 25 sessions, commencing Monday September 27. The classes will run on Mondays, 7 to 9pm. Facilities will be available for students who register for the course to sit the examination in December 1993, either for those wishing to obtain the licence quickly, or for students needing to resit one or more components. These examinations are held in the centre.

They will also be running a Morse course of 25 sessions, up to 20w.p.m. The sessions will run on Thursdays, 7 - 9pm, commencing

Thursday September 30. Enrolment for both courses will be on September 13, 14th & 16th between 7 & 8pm.

Further details from course tutor **Dave Wood** on **061-430 6246.**

Sony Broadcast Amateur Radio Training Group, Jays Close, Basingstoke, Hants RG22 4SB. Commencing on Monday September 13 from 6.30 - 8.30pm. Entries will be made for both the December 1993 and May 1994 examinations.

There is also a distance learning package nearing completion for those who are unable to attend the evening classes.

Further details are available from **Stephen Harding** at the above address.

Southdown ARS will again be running weekly evening classes to introduce newcomers to amateur radio and to assist in the preparation for the RAE. The classes will start on Friday 1 October 1993, 7.45pm and run until May 1994, at the **Lagoon Leisure Centre, Vicarage Lane, Hailsham.**

The first part of the course, leading up to Christmas will feature various aspects of amateur radio as well as an introduction to basic electronics and radio theory. As from 7 January 1994 the classes will follow a 17 week course to prepare for the May examinations.

For more details contact **John Vaughan G3DQY. Tel: (0323) 485704** or **Vic Robins G0THX. Tel: (0323) 846774.**

New Opening Hours

Harry Lemming G3LLL of Holdings Amateur Electronics, Blackburn, has advised *Practical Wireless* of new opening hours.

Due to escalating prices caused by the £'s 25% fall against the Yen, Harry has experienced an increased demand for repairs on second-hand equipment. In order to meet this demand, Holdings Amateur Electronics, as from August will close for one extra day a week. The new opening hours will be: Tuesday, Wednesday, Friday and Saturday 9.30am - 12pm & 1.30 - 5pm. For more details on the repair services offered contact

Holdings Amateur Electronics, 45 Johnston Street, Blackburn BB2 1EF. Tel: (0254) 59595.

Extreme Miniaturisation Exhibition

The National Museum of Science & Industry, London are currently holding an exhibition on the beginnings of nanotechnology and the benefits of extreme miniaturisation.

The exhibition, 'How Small Can We Go?', which is running until 26 September 1993 is the sixth in the Science Box series sponsored by Nuclear Electric Plc. and explores nanotechnology or the technology of atom sized dimensions.

Visitors to the exhibition can see US Engineer William McLellan's rotating electric motor measuring 0.4mm, as assembled in 1959. Also on display is a model of a Toyota car measuring

4.8mm long, complete with hub caps, number plates and a working electric motor.

The highlight of the exhibition is the opportunity to see the TopMetric Atomic Force Microscope (AFM) in action. This microscope can produce a three dimensional picture of a surface.

For further details of 'How Small Can We Go?' contact the **Science Museum, Exhibition Road, London SW7 2DD. Tel: 071-938 8080/8008.**

- Obituary -

Peter Rouse GU1DKD

“ I am glad, that at long last fashion designers have come to realise that Radio Amateurs are not a load of old fuddy duddies who do nothing but wear sensible pullovers and sandals. I was therefore delighted to receive an invitation to the first of Pierre Cardigan's (YF-RONT) fashion shows for those of our persuasion. The highlight was the 'Hamorak' in either Pye blue or real-ale brown. This stylish jacket was mottled with simulated silicone grease stains and soldering iron burns (beautifully styled holes that were delightfully crispy and brown around their edges). This must be ideal wear for a visit to the club or rally. Several sweatshirts were also on offer (this year's colours are 'Box Black' and 'Import Grey') and carried such logos as 'Hams don't do it but they talk about it'.

I was also impressed with his beard-boom-mic (it just clips on); the ideal accessory for those amateurs who work 144MHz at rallies and do not like things strapped round their head or attached to their glasses.

Pierre of course, also provides a matching range of cosmetics. His E-layer friendly aerosols will come as a delight to amateurs young and old. There's the 'Speco-mist'; just a squirt (Roland Acne) makes the average lens look as if it has not been cleaned for weeks and as if it is covered in several greasy fingerprints (he's even working on pre-grimed sticking plaster for on-the-spot repairs that don't look as if they've just been done). However, the real show-stopper was the 'bargain counter clearer'. Now, how often have you been to a rally and had to fight your way to the counter with the best bargains? It need be no more. Pierre's scientists have developed a special chemical spray based on a scent secreted by female pigs when they do not want to breed. (It is actually a synthetic substitute based on raw Garlic). A quick squirt on your 'Hamorak' is guaranteed to clear all space for a radius of twenty feet. Finally, Pierre has perfected spray-on Dandruff which, I swear, looks just like the real thing and is guaranteed to stick to clothing for at least a fortnight.

Finally, like most Fashion designers, Pierre also includes accessories. I was particularly taken with his home-brew selection which included a set of six unmatched control knobs and a kit of blown fuses, which come complete with ready cut strips of cigarette packet foil (Galols appear to be just as good as the more familiar British brands).

”

The extract on the right was part of a series of 'occasional barefaced lies about products and developments' that came from the prolific pen - or rather the wordprocessor - of a very special person. It was published in *Practical Wireless* in April 1990 and was written by Peter Rouse GU1DKD. Peter was a dedicated radio amateur with a fantastic sense of humour. He had the rare ability to explain in simple, readable terms the technicalities of radio, or, as in this instance to make his readers laugh while getting to the point. This gift he put to good use, writing several books and many technical features on one of his favourite subjects - radio.

Readers of our sister title *Short Wave Magazine* will remember Peter best for his very popular monthly column 'SSB Utility Listening'. This was Peter's own idea stemming from his interest in this particular facet of the hobby. The way in which the column developed was almost entirely due to his enthusiasm and boundless energy. Even during his recent illness he could still dream up fresh ideas for future use in the magazine.

Peter was well-known in the Channel Islands as a television presenter for Channel Television. In fact he was so well known on Guernsey that when I asked in St Peter Port which bus would get me to St Andrews Parish Church for two o'clock, the bus inspector knew that I was attending Peter's funeral. The funeral itself, although tinged with sorrow, was not a sombre affair - just as Peter himself would have wished. He leaves behind Val and children James, Abbi and Arron.

Practical Wireless will miss the humour and wisdom of Peter's writing.

Dick Ganderton G8V FH

Stop Press...See the 'Lynch Mob' at these great summer events...
Bristol - 5th Sept...Telford - 5th Sept (yes, we're at both events)...

Lynch's Third Year At

To celebrate the third year at our Northfields showroom, we're having the biggest sale ever offered by a Radio Retailer. Very **LOW DEPOSITS ON INTEREST FREE**, (isn't it funny how everyone seems to have caught on to this one!), or **CASH purchase**, (**TRADE-IN's** still welcome), the savings on all **NEW & USED AMATEUR RADIO EQUIPMENT** will be offered during **SEPTEMBER ONLY** and will not be available at these prices again.

Thanks to all my loyal U.K. and Overseas customers, **MARTIN LYNCH** has had another successful year. Over **TEN THOUSAND** customers have poured through the front door or telephoned to place an order. Even more important is that you keep coming back to support your "Independent Retailer", realising that we really can offer objective and unbiased advice, giving you the very best in customer care.

More recently, you may have had a call from Brian, G3THQ. He's the latest member to join my sales team, his role being somewhat unusual. His job isn't to make sales, (albeit I'm the last to stop him!), it's actually to liaise with you **AFTER** the sale is made. Without landing you in it with the other half, Brian's role is to make sure you're satisfied with the purchase and ensures that nothing is left out of the transaction. In other words, if you're delighted with the service you've received from **MARTIN LYNCH**, then he is satisfied. So am I. How many other retailers contacted you - after the sale?

Young Lynch learning his trade...

Massive Cele

...and now, with John Tett G0OID. The first U.K. TS-50S owner.

The **NEW KENWOOD TS-50S Mini HF Transceiver**.

Deposit only **£99.95** & Twelve payments of **£75 Interest Free**

John Tett, G0OID near Dorking in Surrey has been a long standing customer of **MARTIN LYNCH**. When he phoned me and said he wanted the new TS-50S from Kenwood the day of issue, he wasn't kidding! When we said how about being the **VERY FIRST** owner of one in the U.K., he said great!

Just how long will Kenwood have to wait until the other manufacturers catch up. Word is, a very long time. The ultimate Mobile h.f. OR THE IDEAL BUDGET base rig, the TS50s really fit the bill. Look at the **LOW LOW** deposit this month...

The NEW ICOM DELTA ONE

World First Triple Band Handie
 It had to come, all three bands in one neat & robust unit. Full coverage of 2, 70 23cm, three separate displays, three volume & squelch controls, this is 3 radios in one small box.

Deposit only **£159**.
 Twelve payments of **£50 INTEREST FREE**.

The NEW ALINCO DJ-Z40

Not another handheld I hear you cry! Yep. But one with a difference. The guys at Alinco have given you a **PANORAMIC DISPLAY** showing you three channels either side of your operating frequency! Remote Digital Microphone, (wonder where they got that idea from?), throw in receive on 2 metres plus all the usual features of scanner-wide frequency coverage, Nicads, charger and the rest, and you'll see why ALINCO is good value for money.

Price ? Haven't a clue - **PHONE FOR UPDATE!**

The Universal Range of Decoders Direct From The USA

M-400

As featured in August Short Wave Magazine, the NEW UNIVERSAL M-400 decoder is a must for those who want a serious RTTY, SITOP, FEC, WEATHER FAX plus much more CODE CONVERTOR at a sensible price. Available from stock.

£379.95 incl. VAT
PSU extra at £19.95.

M-1000

Got a PC and want a powerful decoder using your own computer as part of the system? The UNIVERSAL M-1000 is a complete CODE CONVERTOR on a single card, ready to slot into an IBM compatible PC. Full colour on screen graphics are at your disposal. This one IS fully recommended - our Chief Engineer uses one!

£379.95 incl. VAT

M-900

Similar in features to the M-400, the M-900 has a powerful FAX-to-SCREEN processor built in, enabling weather and other 'picture' transmissions to be viewed by a simple video monitor, before dumping to printer.

£499.95 incl. VAT

M-8000

The ultimate in all mode code converters. Mainly used by commercial organisations throughout the world, UNIVERSAL have managed to engineer the package at a price within reach of the true hobbyist. A true colour VGA output is given to enhance the incredible definition obtainable in all modes by this advanced piece of hardware. It's easier to use than you think - a few hours will soon bring decoded data to your own screen from around the world. Open your eyes to a new world just waiting for you to explore. Put your NRDS35 or R5000 or Drake R8E to real use today!

& £1199.95 incl. VAT. A 10" VGA HIGH RES
COLOUR Monitor is available for only £179.95

That TWO YEAR WARRANTY...

Several telephone enquiries have bought about the topic of 2 year warranties being offered at present. This was an old selling tactic introduced years ago and every now and again, it re-appears. Quite frankly, we can all start offering 2 years, indeed why stop there, why not 3 or 4 or even 10? Without wishing to preach to the converted you know as well as I do, most faulty electronic equipment goes wrong within seconds of pulling it out of the box. This is usually due to insufficient test before dispatch. Alternatively, a malfunction can happen a few hours or even weeks after use. Generally, todays manufacturing methods & design have pushed the MTBF, (mean time between failures), so far down the road, that offering a Two Year warranty is relatively meaningless.

Whats far more important is how your retailer responds to a problem with your faulty purchase. For example, will he:

- Collect your faulty transceiver, (within the U.K.), the same day, (if phoned through before 12:00), for rectification - at HIS EXPENSE?
- Offer a replacement if the equipment is in as new condition and only recently purchased?
- If a repair is required, get it fixed within 10 working days (subject to spares), & return it to you at HIS EXPENSE? Most companies lead times to their workshop is 4-6 WEEKS - then it gets repaired!
- Keep you informed of the progress with your warranty claim?
- Out of warranty claims charged at a minimum - our servicing charges are one of the lowest in the country.

Who else offers a "MENU" fixed price repair service for most equipment?

If the answer is YES to all of the above, then you're probably using me already! If not, there's always that 10 year warranty available.....

The complete range of AMATEUR RADIO PRODUCTS held by the showroom is on special offer and O.T.T. trade-in prices will be offered for clean equipment. Anything over £200 can be bought on INTEREST FREE, no catches, just free interest loans. If you want a particular product that's not listed then get dialling, or call in. MAXIMUM DISCOUNTS AVAILABLE TO EXISTING CUSTOMERS or CALLERS TO THE SHOP. **SEPTEMBER ONLY!**

Libration Sale!!

The Yaesu FT736RDX -
 the best selling VHF/UHF Base Station

Since the introduction of the muTek RDX Front-End boards replacing the originals, sales of the transceiver have gone through the roof Hundreds of engineering hours by both Mike Dorset, (if muTek who designed the boards) & Graham my Chief Engineer, who carefully fits each one individually, have helped make the YAESU FT736RDX the best performance, most economically priced Base Station available today.

To celebrate the MARTIN LYNCH THREE YEAR CELEBRATION, I will actually PAY YOU £100 towards your deposit, on Interest Free, over a whole twelve months!

PHONE TODAY FOR A TAILOR MADE QUOTATION

The NEW ICOM IC737
 H.F. Base Station Transceiver

Reviewed in September Radcom, Icom have

given you a top flight H.F. Rig, with all the frills at a sensible price. (They obviously shot the chap who usually prices ICOM kill). Mr HENRY LEWIS G3GIO, or "MR FAMOUS" for short, reviewed this in the LYNCHY Spring newsletter and comparing it with his TS950SD, reckoned it stacked up very well. Not bad seeing the Kenwood is more than DOUBLE the price!! The auto atu is simply staggering, so is the display, electronic keyer, receive performance and Icom quality "feel". Come on lads, get those eight year old IC735s in on Part-Exchange. I'll give you a silly trade-in offer you can't refuse!

Deposit £295.00 & Twelve payments of £100 INTEREST FREE

The NEW YAESU FT530R
 Dual Band Handie

It's the most expensive, but it is, in our opinion, probably the best. Capable of dual receive on ONE BAND, full duplex on 2/70, digital remote speaker microphone, yes it actually has a display BUILT IN, plus

payment over a whole year, interest free gratis?

Deposit only £53.00 & twelve payments of £39.75 Interest Free. Or with Digital Mic. Deposit £61.00 & twelve payments of £45.75

The NEW KENWOOD TH-78E

I remember when these were as rare as price reductions in Ham Gear, they were just unobtainable! Now KENWOOD U.K. are here doing the biz on distribution, I've got a wall of them! Dave, or "RAVE" Wilkins at Kenwood thinks that life wouldn't be worth living without caressing his little '78 each morning. I wouldn't know, but it is the most popular Dual Band Handie next to the Alinco DJ-580. I've knocked the deposit to a minimum and thrown in FREE CARRIAGE to anywhere in the U.K. next day, GUARANTEED!!

Deposit only £46.95 & twelve payments of £35.25 INTEREST FREE

DRAKE

Drake R8E - To own one of these receivers is a dream in itself - everything you could ever want in facilities and performance is in the R8E. Drake are no newcomers to radio - they have been No. 1 in the USA since 1943! Unlike other expensive receivers the Drake has all its filters fitted as standard, therefore, there are no hidden extra costs. Its performance is truly staggering! With an excellent dynamic range coupled with superb filtering it takes a lot of beating! Multiple scan facilities, easy use 100ch. memory, all mode coverage and synchronous detector for improved AM reception are just a few of its extensive range of facilities.

- ★ Twin VFO's ★ Selectable AGC ★ Passband Tuning
- ★ Timer Function ★ RS232 Interface ★ Builtin pre-Amp ★ Dual Noise Blanker ★ Non-Volatile Memory
- ★ 100kHz - 30MHz Wide Coverage

NEW HAND-HELDS

ALAN CT-145 - Fully featured 2M handheld with options for DTMF & CTCSS PAGING. 5 watts output is available when powered from external 12V DC supply. Now with extended receive - 130-169MHz. Excellent reliability & performance...£199.00

ALAN CT-450 - Fully featured 70cms H/held with facilities and options similar to the CT145...£225.00

VECTRONICS

Canadian made high quality ATU's
HFT1500
 1.8 - 30MHz
 1500 watt cw,
 3000 watt pep!
 Easily matches all types of antenna's coax, long wire and balanced inputs (with a 4:1 balun included)
 ★ Peak and average power reading meters
 ★ 3 way antenna switching
 ★ Heavy duty roller coaster for continuous coverage
 ★ Slow motion variable capacitor control...£399

OUTBACKER

Outstanding new mobile antennas from Australia. A commercial design proven in the Outback for 22 years. If you are going mobile, this new antenna is all you need. The Outbacker covers from 160 thru' to 10m including all VWARC bands, without the need for an ATU. Lookout for the reviews which will be coming shortly. We have been running around with these antennas and the new Kenwood TSSO for the last few weeks, working everything in sight. The antenna is constructed of fibreglass with copper helical windings covered with a coating of urethane for strength, durability and protection. Top points for each amateur band are clearly engraved on the antenna.

OUTBACKER
 1.7m long, 300w, 80 thru' 10m...£189.95

OUTBACKER (T)
 As above but including top band...£219.00

OUTBACKER JUNIOR
 1.2m long, 100w, 80 thru' 10m...£179.95

PERTH
 2.1m long, 300w, 80 thru' 10m...£199.95

Perth (T)
 As above but including top band, 100w...£235.00

Heavy duty bass spring...£59.95

VECTRONICS

VC300 DLP
 150 watt (300W pep)
 1.8-30MHz
 This small ATU has a host of features
 ★ Cross pointer SWR/power meter
 ★ 300w built in dummy load ★ Built in 4:1 balun ★ Peak/Average power readings
 ★ 3 way antenna selection ★ Illuminated meter
 Due to bulk purchase we can offer a special price...£129.95

TRADING POST

We buy as well as sell new and used radio equipment, please feel free to call Paul or John on our Hotline for an instant quote on either P/X or Buy-ins.

STARTEK FREQUENCY COUNTERS

Model 1350
 ★ Covers 1-1300 MHz
 ★ 3 Gate times. An entry level counter that offers excellent value for money...£129

NEW ATH™ SERIES FEATURES INCLUDE

"Hands Free" operation to automatically Read & Hold a signal as quick as 80ms or 8% of a second the ATH™ Circuitry is super fast because it does not require the time for multiple readings like digital filtering techniques.

SAY GOODBYE TO RANDOM COUNTING AND FALSE READINGS WITH THE ATH™ SERIES

ATH 15
 ★ 1-1500MHz
 ★ High speed - 6 fast gate times
 ★ Bar graph reads to 4GHz signal strength
 ★ Extra bright LEDs
 ★ Automatic clean dropout...£199

ATH 30
 ★ 1-2800MHz. Same features as ATH 15 but with one shot feature on top of the unit - this allows the counter to hold the first reading until manually reset.
 ★ Extra bright LEDs
 ★ 4GHz bar graph for signal strength
 ★ High speed - 6 fast gate times...£269

A new range of advanced inexpensive, portable counters from the U.S.A. All came complete with telescopic antenna and UK power supply.

Come Fly With Us - To The 1994 Dayton HamVention

Join Rob Mannion G3XFD and friends on the Practical Wireless 1994 HamVention trip - we promise that the aircraft is bigger than this vintage model at the US Air Force Museum near Dayton - and you'll have an unforgettable holiday!

The Annual Practical Wireless holiday trip to the Dayton HamVention has established itself as something very special. Readers enjoyed the 1993 week's trip so much, that we've planned an extra special trip for the 1994 Dayton HamVention, which is being held between April 29 and May 1.

The 1994 Practical Wireless HamVention holiday will again be a week long trip. Following the success and greater convenience of flying to Cincinnati in 1993, we're doing the same in 1994 and I'm delighted that once again, I shall be leading the party during the week in the USA.

We've also up-graded our Hotel accommodation, and the Practical Wireless party will be staying at the Holiday Inn at Englewood, Dayton. The Hotel is comfortable, has private facilities in every room, including TV and direct dial telephone. There's also a restaurant, swimming pool and sauna.

Holiday Costs

The 1994 Practical Wireless HamVention holiday will cost £630 per person sharing a twin bedded room. Single rooms are available, at a further cost of £205.

There's optional travel insurance for £40 and the holiday costs include the following: Scheduled return flights to Cincinnati with meals on board and return coach transfers Cincinnati to Dayton. It also includes seven nights' accommodation in the Holiday Inn at Dayton, two day excursions by coach and admission ticket to the HamVention.

Gatwick To Cincinnati

The 1994 Practical Wireless Dayton HamVention holiday starts on Monday April 25. Departure is at lunchtime, and we fly from Gatwick direct to Cincinnati on a scheduled flight. We'll be returning on Tuesday, May 3.

The PW party arrives in Cincinnati in the late

afternoon. We'll be transferred by coach direct to the Holiday Inn Hotel in Dayton.

On the Tuesday morning, our private coach will take us to the United States Air Force Museum, on the outskirts of Dayton. It's an appropriate place to site the museum - it's one of the largest in the world - because Dayton was the home of the pioneer aviators Wilbur and Orville Wright.

Having experienced the Air Force Museum myself, I know it needs at least a day's visit. There's a good, reasonably priced restaurant in the Museum and there'll be an opportunity to visit the world famous IMAX three dimensional cinema.

On the Wednesday, we'll have a free day to explore Dayton and surrounding area. For those who want to shop, there are various shopping 'Malls' and they are easy to get to by express bus or taxi.

Keen radio types will no doubt head for Mendelson's Electronic Surplus at 340 East First Street in Dayton. Mendelson's describe themselves as, "The world's largest surplus store". Having visited it, I can tell you it's HUGE!, and a ride in the massive passenger lift provides an inkling of what's in store!

On the Thursday, we'll again have the use of our private bus. We're planning a day excursion and there are several possibilities, including two radio orientated special visits. However, this part of the trip we'll finalise later on, but you can guarantee that it will be a good day out.

Friday sees the opening of the HamVention at mid-day. However, the gigantic flea market is open for business from around 6am! Courtesy bus services are usually available from our Hotel, but if you're really keen to get the bargains no doubt you'll take an early morning taxi.

Incidentally, if you buy anything during the show, Delta Airlines (they're based in Cincinnati) have a very efficient, reasonably priced 'Pack & Despatch' service working throughout the weekend.

On the Sunday evening, we're planning a final evening meal and get together. Everyone thoroughly enjoyed the 1993 impromptu celebration so much, that we're planning ahead this time. We'll be eating out at a good restaurant.

After a very busy and enjoyable week, Monday May 2 sees the start of our trip home. We'll depart in the afternoon from Dayton and travel by coach to Cincinnati. As our flight is an evening take-off and overnight flight, you may wish to enjoy the attractive Cincinnati City with its majestic buildings, fascinating shops and elevated walkways. There's even a British style fish and chip shop to try before we fly home, arriving home on the morning of Tuesday May 3.

Professional Tour Operator

Although I'm leading the Practical Wireless party on the holiday itself, the holiday has been planned and organised in conjunction with the Bristol-based professional group and conference travel specialists RCT International.

As organisers and operators of specialised tours and holidays all over the world, RCT International are providing us with a first class service. Annette Oxley is handling the PW holiday arrangements, and she will be delighted to send you full details and an itinerary of the tour. So, don't delay - send off your coupon today for the full travel details of the Practical Wireless 1994 Dayton HamVention Holiday.

As we have a test equipment themed issue this month, it seems entirely appropriate to feature Pat Hawker G3VA, as this month's Radio Personality. Pat is, of course, the well-known personality behind the long-running and popular 'Technical Topics' in the RSGB's Radio Communications magazine where so many excellent ideas have been covered over the years.

By anybody's reckoning, 60 years - 57 of them as a licensed radio amateur - is a long time to have been involved with short wave radio. Pat Hawker G3VA's stint started in 1933-34. This was when as an 11 year-old schoolboy he began to build a series of crystal sets on which to receive programmes from the then recently opened BBC transmitters at Washford Cross, six miles from his parents' home in Minehead, Somerset.

By 1935 Pat's sights were firmly fixed on the fascinating spectrum below 200 metres. He then built a two-valve 'blooper' (regenerative detector plus one stage of audio amplification) receiver. At first only the strong broadcast stations were found.

But, Pat's discovery of the 7 and 14MHz amateur bands led to form-filling to get a licence. Then there was a search for character references, birth certificates, including those for his father, to whom nominally the 2BUH 'Artificial Aerial' licence was issued.

Bureaucracy but no examinations marked the path in those days to obtaining the 'AA' non-radiating permits. These allowed the holder to build and install transmitters that could be operated only into dummy loads.

Pat's first time in print, was in his school magazine in 1936. This is where he described short wave listening to such stations as Pittsburgh W8XK, Schenectady W2XAD. There was also Sydney VK2ME, with its laughing kookaburra interval signal.

His early writings led to a 1938 report on early 405-line television at the 1937 Television Exhibition at the London Science Museum. Then in the 1939 edition there was an article with the teaser title 'G3VA'.

The pattern was then setting into what would become his profession in the post-war period: technical journalism. This included book editing, specialising in radio communications, radio and television broadcasting.

Short Wave Listening

In the 1930s, radiating licences were issued only to persons over 16 years old. This gave Pat two years of short wave listening and time to learn Morse code to the standard, then as now, of 12 words per minute.

Pat admits he found learning Morse irksome and difficult and gave up more than once. But he says he's never regretted the time spent, and believes that a Morse requirement is a unique way of encouraging a lasting commitment to the hobby.

Pat's now famous callsign, G3VA, was issued in October 1938. Since then, h.f. operating using c.w. has been his main interest ever since a brief initial fling on 1.8 and 7MHz phone in 1938-39.

Second World War

By the time the Second World War came in September 1939, Pat was beginning to feel reasonably confident in copying Morse at up to about 25w.p.m. (later at 35w.p.m.). This was just as well since, in early 1940, along with many pre-war British amateurs, he was recruited by Lord Sandhurst as a 'Voluntary Interceptor' for the Radio Security Service (then an agency of MI-5).

Although Pat Hawker's wartime exploits provide fascinating reading, he has made it clear in his various articles that others often paid the Supreme Sacrifice. This photograph taken in the Second World War, shows a group of young Belgians who provided daily weather reports for the RAF by clandestine radio. Organised by Albert Touissant ('Beagle') - on the left of the picture - the group operated for several years until Belgium was liberated. Not all the group survived.

G3VA

This led to a special duties enlistment in November 1941 in Special Communication Unit (SCU) No. 3 at the Hanslope Park special intercept station. Pat monitored German Military Intelligence (Abwehr) traffic until Spring 1943.

Then, with some others, he swapped interception for two-way working with the secret intelligence and Resistance radio agents in German occupied Europe. Most of these were equipped with simple low power transmitter-receivers such as the 'Paraset' (Mk VII/2 - two-valved receiver, 6V6 crystal controlled power oscillator) built by SCU1 at Whaddon, near Bletchley.

There was the thrill of getting the cipher messages. But there was also the trauma of knowing, when a station suddenly went off the air, that the operator may have fallen into the hands of the German direction finding teams, or was engaged in a shoot out in a desperate attempt to escape.

Special Joint Operation

For the 1944 Normandy invasion, there was a special Allied joint Intelligence operation.

Pat Hawker G3VA, operating a 1971 special event station which marked the 60th anniversary of Wireless World.

Christened operation 'Sussex', it involved parachuting into France some 50 two man teams of French agents.

The agents were equipped with very low power battery h.f. transmitter-receivers and 35MHz 'Ascension' f.m. equipment for talking to aircraft that carried wire-recorders. To provide liaison between this secret intelligence operation and 21st Army Group, a No 2 Intelligence (Underground) Section was set up with an SCU9 signals section attached.

The result was that Pat landed on the Mulberry Harbour at Arromanches in July 1944. He was in Paris by August 27, a day after its official 'liberation', but he says it was "still a memorable experience".

It seemed the war in Europe was virtually over - but the Arnhem disaster in September proved this was far from the case. Pat found himself in Nijmegen where IS9 (WEA) under Major Airey Neave (later killed by a car bomb planted by Irish terrorists in the Houses of Parliament car park) was attempting to bring back the hundreds of evaders hidden by the Dutch Resistance.

Then from 1 January, 1945 Pat was loaned to the Netherlands Intelligence Department (Bureau Inlichtingen). He worked as chief operator at the Abbe Museum, Eindhoven where there was a control station for a Dutch clandestine radio network operating in the occupied north of the country.

The group of stations, set up by 'Lange Jan' (Jan Thijssen) of the Council of Resistance (RvV) and the Orde Dienst (OD), included a number of Dutch pre-war amateurs as well as some professional radio operators.

Tremendous Respect

Pat still recalls with tremendous respect the work of Jack Verhagen, a former marine radio officer Jack who sent him a stream of cipher telegrams at average speeds of over 25 five-letter groups per minute from a secret station set up by Jan Zandbergen PA0ZY, in the nurses bathroom of the St Elisabeth hospital in Alkmaar.

The Alkmaar station carrying traffic from the Amsterdam headquarters of the Dutch Resistance Forces was one of the very few that survived. Most of the other operators and associates, including Jan Thijssen, were arrested and executed by the Germans.

Some six-months as radio-operator at Secret Intelligence stations in the Rhineland, gave Pat further insight into the complexities (and absurdities) of most secret intelligence operations. He returned to Bletchley in February 1946 as a 'main-line' operator for what was, in 1947, to become the Diplomatic Wireless Service.

Pat had already decided not to stay with the organisation. However, he retained a profound and lasting respect for those who had been prepared to operate radio transmitters in occupied territory.

Pat was duly discharged as 'services no longer required' in the Autumn of 1946. But after six years of Signals Intelligence and then Secret Intelligence, he found it difficult to resume uneventful civilian life as an articled clerk to a Minehead firm of Chartered Accountants.

To compensate, Pat became very active on the h.f. bands using a home-brew communications receiver based on the pre-war Tobe tuner. But in September 1947, he departed for London as an assistant to John Clarricoats G6CL, the General Secretary and Editor for the Radio Society of Great Britain, for three years making Amateur Radio a profession as well as a hobby.

Technical Books

In early 1951 Pat Hawker joined the Technical Books Department of George Newnes Ltd. He worked in the adjacent suite of offices to those of the 'Practical' magazines group headed then by F. J. Camm. Despite this, there was little contact between Camm and the Technical Books Department headed, by Edward Molloy who had originally recruited Camm for Newnes.

Molloy, like Camm, believed in keeping his staff hard at work. Pat was soon editing and/or compiling the many volumes of *Radio & Television Servicing*, the bulky *Radio & TV Engineers' Reference Book* and many other titles.

From 1953-58, following his marriage at

Christmas 1952, Pat operated all home-brew equipment. The rig was normally concealed in a built-in cupboard in a first-floor flat in a Bloomsbury garden square.

Despite all the difficulties of putting up an effective antenna without access to the roof - and the growing problem of TV1 - G3VA once again made DXCC on 14 and 21MHz c.w.

In 1958 Pat launched his column 'Technical Topics' for the *RSGB Bulletin* (now *Radio Communication*). It has so far run without a break for over 35 years. That year he also took over the editorship of *A Guide to Amateur Radio* (editions 6 to 19, but currently out of print).

Leafy Suburb

Wire antennas have proved less of a problem in the leafy south London suburb of Dulwich, to where Pat, his wife Gwen and their two children, Philip and Victoria moved in October 1958. Here the equipment again remained all home-brew until the 1970s.

It was in the 1970s when some second-hand items were acquired by G3VA. These included a 1940s Hammarlund HQ129x general coverage receiver, a Labgear LG300 table-top transmitter with 813 p.a. and a KW2000a s.s.b./c.w. transceiver.

Pat still (very occasionally) makes an appearance on 'phone using the KW2000a, although 99.9% of his contacts are made with manual Morse. Keeping old equipment in working order has become a way of life for G3VA!

Communications Editor

For five years, between 1963-68, Pat was Communications Editor of *Electronics Weekly*. This was a job G3VA admits to having thoroughly enjoyed. His news reports and features now appeared within just a few days, rather than weeks or months later.

Magazine work was so different from the slow grind of book publishing. There was also travel to Europe, the USA and even Ascension Island as an added bonus!

Then in October 1968 Pat made his final career move to the Independent Television Authority's Engineering Information Service in Knightsbridge. Here he remained until his 'retirement' in 1987.

The ITA became the IBA (Independent Broadcasting Authority) in 1972. This was when it became responsible also for commercial radio broadcasting in the UK.

Today, as a result of the 1990 Broadcasting Act, the old IBA has been broken up. The radio side has been hived off to form the Radio Authority.

The former IBA Engineering Division has now been privatised into the National Telecommunications Ltd (NTL). On the administration side, the regulatory aspects of television (including satellite and cable-TV) merged

into the Independent Television Commission which has now moved from Knightsbridge to Foley Street.

Pat wonders whether these are changes for the better, or, as he believes, for the worse only time will tell. However, Pat is pleased to recall that during most of his time at the IBA, there was an ethic of public service broadcasting, funded commercially rather than market driven.

Pat's Paradox

In his amateur radio activities, Pat freely admits to being in something of a paradox. This happens because of his work as a technical columnist, he's doing his best to keep abreast of the fast moving solid-state technology, although his station remains based on the classic valved approach!

Pat confesses that even electronic keying is rejected in favour of his straight Morse keys that date back to 1914. He suggests that this alter ego also reflects a keen interest in the history of radio and television.

He wryly admits that his personal approach to the hobby may be a sign of technical immaturity. Perhaps it's a hankering after what may or may not

have been 'the golden age' of radio, an era when the ability to pluck signals out of the ether with simple, home-built equipment germinated a sense of wonder that has never left him.

G3VA

Pat's Progress

Like many others, Pat remembers his progression from crystal set to battery valve sets, and the commitment involved in learning the Morse code. Then this was followed by mains operated and superhet receivers. It was a path followed by many of those who were attracted to the near-magic of wireless as schoolboys in those now distant days.

Pat wonders whether today's youngsters, who are fed on a diet of world wide TV relays and instant dialled telephone conversations across global distances will ever come to share his profound sense of wonder. It was that profound sense that sparked off a lifelong commitment to a hobby which, in Pat's case, turned out to be much more than a hobby.

EASY TO BUILD HOWES KITS!

Building your own equipment is half the fun of amateur radio! Whether you are a novice or an old hand, you should find an interesting project in our range.

CTU30 Antenna Tuning Unit covering all shortwave bands and 6M. 30W RF rating for reception or QRP transmitting. Suits all antenna types. Top quality performance.
CTU30 kit plus **HA30R** hardware pack: **£57.80**

Antenna Tuner

XM1 Crystal Frequency Marker for calibrating receivers and helping to meet amateur licence requirements. Voltage regulator, marker ident facility and harmonic rich output covering LF to UHF. A very handy piece of test equipment.
XM1 kit plus **HA11R** hardware pack: **£28.80**

Crystal Calibrator

		Kit	Assembled PCB
AP3	Automatic Speech Processor	£16.80	£24.90
CV100	Adds Medium & Shortwave to VHF scanners	£27.50	£39.90
CM2	Quality Microphone with VOGAD	£13.50	£18.90
DCS2	"S Meter" for our receivers	£10.90	£15.90
DFD4	Add-on Digital Read-out for superhet radios	£49.90	£69.90
DFD5	5 Digit 35MHz Frequency Counter	£54.90	£79.90
ST2	Morse Side-tone/Practice Oscillator	£9.80	£15.90

Optional hardware packs are available for most of the above, please enquire.

ST2 Kit + HA12R Hardware

DXR10 + DCS2 Kits + HA10R Hardware

RECEIVERS

TRF3 Easy to build TRF receiver with AM, SSB & CW shortwave reception from 5.7 to 12.8MHz in 3 bands
Kit: **£15.50** Assembled PCB: **£22.90**

DcRx Single Band SSB/CW receiver for 160, 80, 40 or 20M Amateur Bands or 5.45MHz HF Air (air-sea rescue etc.)
Kit: **£16.90** Assembled PCB: **£24.90**

DXR10 Three Amateur Bands, 10, 12 & 15M SSB & CW receiver with excellent sensitivity and dynamic range
Kit: **£27.50** Assembled PCB: **£42.50**

Optional hardware packs are available to go with the above receiver electronics kits. The amateur band receivers can all be expanded into transceivers by adding on the relevant transmitting kits.

TRANSMITTERS

		Kit	Assembled PCB
AT160	80 & 160M Bands AM/DSB/CW 10W PEP adjustable	£39.90	£62.90
CTX	QRP CW Transmitter, 40M or 80M versions	£15.50	£22.90
MTX20	20M 10W (adjustable) CW Transmitter	£29.90	£39.90

All the above transmitters are crystal controlled. Matching VFO kits are available and these enable transceive operation with the relevant receiver kits. There are also kits to build a 10 & 15M SSB transmitter (super Novice rig).

ACTIVE ANTENNAS AND PRE-AMPS

AA2	150kHz to 30MHz Active Antenna Amplifier	£8.90	£13.90
AA4	25 to 1300MHz Active Antenna	£19.90	£27.90
AB118	118 to 137MHz Optimised VHF Air-band Antenna	£18.80	£25.90
SPA4	4 to 1300MHz Receiver Pre-amplifier	£15.90	£22.90

ADD EXTRA SELECTIVITY!

DUAL BANDWIDTH AF FILTER: £29.80

• Reduce noise and interference! • Sharp SSB/Speech filter with faster roll-off than IF crystal filters! • 300Hz bandwidth CW filter • Printed and punched front panel • All aluminium case • Simply connects between radio and external 'speaker or 'phones • Suits all general coverage receivers and transceivers • Excellent receiver upgrade!

ASL5 Filter Kit (£15.90) + HA50R Hardware (£13.90) = £29.80

PLEASE ADD £1.50 P&P for kits or £4.00 P&P if ordering hardware.

HOWES KITS contain good quality printed circuit boards with screen printed parts locations, full, clear instructions and all board mounted components. Sales, constructional and technical advice are available by phone during office hours. Please send an SAE for our free catalogue and specific product data sheets. Delivery is normally within seven days.

73 from Dave G4KQH, Technical Manager.

The Thurlby Thandar TSA250 Spectrum Analyser Adaptor, being used in conjunction with a 20MHz bandwidth Beckman 9020 oscilloscope.

Tex Swann GITEX, the PW Technical Projects Sub-editor is happiest when he can get his hands on computers or test equipment. This month, he's had a chance to try out a useful spectrum analyser adaptor, and here's what he thinks....

The Thurlby Thandar TSA250 Spectrum Analyser Adaptor

One of the most effective pieces of test equipment available to any r.f. engineer (or anyone interested in that field) is the spectrum analyser. Unfortunately, these are usually the most expensive items of test equipment.

However, the spectrum analyser is really useful. This oscilloscope-like device can show, in real time, the emissions from a particular piece of radio related equipment.

The spectrum analyser can also detect the spurious signals causing reception problems, or help you see if that 'super-duper' low-pass filter you've just bought is really working. But, it really comes into its own when you're testing and tuning up a transmitter.

Among the pieces of test equipment I have at my disposal at the PW office, are many items each costing several thousands of pounds. As most radio enthusiasts (including me!) don't have the ability to spend this much, I'm going to look at a piece of test gear that costs much less, providing a much cheaper alternative to a self-contained spectrum analyser.

Add On Analyser

The instrument I had the chance to try, is an add-on spectrum analyser unit from Thurlby Thandar. It's available at a price level that is much easier on the pocket than a self-contained analyser.

But how good is this adaptor in reality? To answer that question, I took a close look.

I should say at this point, that anyone wanting to do measurements to a very fine degree, with precise measurement of frequency and power levels can stop reading now. I'm writing for the benefit of the 99% of radio amateurs who would like a greater insight into the workings of a particular circuit.

To make use of this add-on unit, you'll need a reasonable oscilloscope with the capability of driving the X and Y plates by external signals. The bandwidth of the 'scope is largely immaterial.

Any 'scope with a bandwidth over 1MHz should be adequate in conjunction with the add-on unit. And, don't forget that the size and type of 'scope screen affects only the quality and definition of the display, not the measurements.

Fig. 1: Diagrammatic representation of a test being carried out.

Fig. 2: The display obtained from the TSA250, when receiving 0-50MHz signals from an 18m long wire antenna (1mW power level).

Fig. 3: Photograph of screen display showing Band II v.h.f. f.m. signals (see text).

Fig. 4: Photograph showing screen display of 50MHz marker signals on the TSA250 (see text).

My thanks for the loan of the review unit go to Cirkit Distribution Ltd., of Park Lane, Broxbourne, Herts EN10 7NQ. Tel: (0992) 444111. They can supply the Thurlby Thandar TSA250 Spectrum Analyser Adaptor for £399.90 inc. VAT.

One Input

The Thurlby Thandar TSA250 has only one input (signal), two outputs (X sweep and Y sweep) and three controls - Centre Frequency, Scan Width and Scan Rate). So operation couldn't be simpler (I've discounted On/Off and calibration markers).

To use the unit, two connections have to be made to the 'scope, and one to the circuit under test as shown in Fig. 1. The slim multi-lingual instruction book adequately explains how to do the initial setting-up.

It was at this point that I found my practical experience, disagreeing with the manual. It suggested that the 'scope should have d.c. coupling on the X plate drive. Actually, I found that setting up was so much easier when a.c. coupling was used.

Screen Pictures

I've included several display screen pictures to illustrate the usefulness of this adaptor. The 0-50MHz sweep, Fig. 2, actually shows all the signals arriving down an 18m antenna wire. The 200mV plus signal levels show that, on h.f. at least, vast quantities of r.f. gain are not necessary.

On the 0-100MHz sweep I measured, there were some strange signals around the 47-75MHz range. These were easily explained, as I live in an area where there are many Taxi firms, all using radio control.

The Band II radio station sweep, Fig. 3, is interesting. It shows that all the v.h.f. f.m. broadcasting stations are available at a signal strength that's more adequate for stereo reception using cheap equipment.

Radio Amateur Use

From my description, it may seem to be a nice piece of gear. But, in the 'real' r.f. world of the radio amateur, you may ask how useful is it, and why should you use it? To answer the obvious questions, let's take a look at a common enough procedure - setting up a p.a. strip.

When most of us set up a p.a. strip, we merely put a power meter on the output and tune for 'maximum smoke'. Of course, we can only assume that all the energy being thrown out is at the desired frequency!

With a spectrum analyser on the output as well (with a suitable attenuator) you can now see that about 10% (-10dB) is actually harmonic rubbish. By turning back the gain - while watching the spectrum analyser display - you'll see that a much cleaner signal is available.

On the display, you'll be able to see that the 'jump' in power level is in reality an oscillation in the p.a. stage. Furthermore, this oscillation is nowhere in the band you were hoping to produce power!

Using the analyser, you can actually set-up a low-pass filter. This can be done by feeding 'white' r.f. noise into the input and then displaying the output of the filter relative to frequency.

You can take this idea a little further. For example, you can adjust band-pass filters for minimum ripple within the band, or check that the second (third or otherwise) harmonic trap really works.

Marker Signals

After trying out the adaptor unit, my first criticism concerns the marker signals, Fig. 4. There is provision for a marker signal at 50MHz only, and the output level is only strong on odd harmonics.

In fact, I would like to see even more harmonic production for the markers on this unit. Additionally, I would also have liked, at the very minimum, to have seen a 10MHz marker available.

It's not so easy to zoom in to an area of the spectrum, and know (with any certainty!) where you are. A minus point there I feel.

The second criticism, is that I consider the internal receiver's bandwidth is rather too wide. This doesn't help

when you're carrying out intermodulation measurements using the two-tone method of checking linear amplifiers. These have to be guessed from looking at the overall spectrum output.

Even though the method is not easy, it does make setting up linear amplifier very much easier than waiting for the complaints to come in!

Summing Up

In summing up, I feel that the manufacturers have conceived a very nice oscilloscope add-on. That's not to say the TSA250 unit is perfect, nothing can meet that requirement (not at a really sensible price!).

For example, exceeding the maximum input of 10mW causes internal non-linearity, giving rise to spurious harmonic readings. The nominal input is 1mW, and keeping below this gives good readings.

There must be many clubs whose members could all benefit from the availability of such an exceptional item of r.f. test equipment. The unit would be good value at twice the price, but at this price it is excellent value for money.

PW

Manufacturer's Specification

The following specifications are with an oscilloscope with a 10-division horizontal and vertical scales and set to 0.5V per division in both X and Y axis.

Frequency range	400kHz to 250MHz (min.)
Centre frequency	
Range	0-250MHz
Accuracy	2% (typical)
Calibration markers	50MHz (and harmonics at 100, 150, 200 and 250MHz)
Receiver bandwidth	250kHz @ -6dB
Gain flatness	±1.5dB (1-250MHz typical)
Frequency scan	10 - 250MHz total (variable) 1-25MHz per division
Maximum input	+10dBm 50V d.c., 35V a.c. < 400Hz
Scan speed	0.5 - 5ms per division
Screen amplitude	represents -70 to 0dBm (nominal)
linearity	10dB ±1.5dB (typical) per division
Marker calibration	-30dBm (±1dB) at 50MHz harmonics uncalibrated
Input impedance	50Ω
Oscilloscope	access to X and Y amplifier at 0.5V per division
Bandwidth	not critical
Power requirements	operable over the a.c. input voltages of 99-132V or 198-264V set internally
Power consumption	10VA maximum
Size	260 x 88 x 235mm excluding handle and feet
Weight	1.4kg

Adding To Your Bookshelf

Technical writing, by its very nature, tends to attract specialists. Some names become established in their own particular fields, and that of R. A. Penfold is one example. This prolific author is well-known for his readable approach to what could be daunting subjects for the non-professional radio or electronic enthusiast.

To help you get the best from the hobby, and as we have a test equipment theme in this issue of *PW*, it's a good time to look at what's available from the PW Book Service for your library dealing with this wide subject area. Fortunately, the well-known publishers Bernard Babani Ltd., have a range of books to suit the needs and pocket of the enthusiast in the workshop.

Everyone should have a multimeter to hand in the workshop. It's the basic tool for trouble-shooting and testing. Many enthusiasts, even those with a lot of experience, could find *Getting The Most From Your Multimeter* a useful book.

Covering the choosing of a multimeter, whether analogue or digital, components and testing, along with a host of other useful topics, this book will help you use your meter to the full.

Getting The Most From Your Multimeter BP239

R. A. Penfold
102 pages, £2.95 from PW Book Service.

Once you've got your multimeter and have gained more experience, there's another title to help you, entitled *More Advanced Uses Of The Multimeter*. Including topics such as testing unijunction transistors, integrated circuits, t.t.l. outputs, static dynamic testing and component analysis, this book is complimentary to the first title.

More Advanced Uses Of The Multimeter BP265

R. A. Penfold
96 pages, £2.95 from PW Book Service.

Many enthusiasts like to make their own radio gear, and *Test Equipment Construction* starts off by introducing the reader to audio test gear. You can make your own Wien Bridge, a test bench amplifier, and among other projects, a

useful audio millivoltmeter.

In his second chapter, R. A. Penfold explains how to make a high resistance voltmeter, a transistor tester and a useful capacitance meter. He also describes an audio frequency meter before dealing with test probes. The book concludes with a look at analogue, c.m.o.s. and t.t.l. probes.

Test Equipment Construction BP248

R. A. Penfold
104 pages, £2.95 from PW Book Service.

Taking his approach further, *More Advanced Test Equipment Construction*, the author leads the keen builder into the techniques behind digital measuring equipment, attenuator circuits, a current tracer and a heatsink thermometer amongst many other projects and ideas. The second part of the book deals with a crystal calibrator, a bench power supply, logic pulser and a dynamic transistor tester.

More Advanced Test Equipment Construction BP249

R. A. Penfold
102 pages, £3.50 from PW Book Service.

Finally, as many radio enthusiasts aim to eventually have their own workshop oscilloscope, R. A. Penfold has prepared the way by writing *How To Use Oscilloscopes And Other Test Equipment*. He starts off by introducing you to oscilloscope basics, and explains their use, with the aid of diagrams representing typical screen displays. Other equipment is also covered, including the versatile dip-meter.

How To Use Oscilloscopes And Other Test Equipment BP267

R. A. Penfold
104 pages, £3.50 from PW Book Service.

Post and packing, add £1 (UK), £1.75 (overseas) for one book, £2 (UK), £3.50 (overseas) for two or more books.

Special Offer

Wherever in the world is it? You certainly won't have to ask that question if you have a copy of our special offer map.

Editorial Assistant Zoë Shortland and Production/News Editor Donna Vincent are pictured next to the map, so you can see that it's an ideal size for your shack wall. The map is clearly printed in a variety of colours, complete with zone numbers and prefix letters for each country. Improve your knowledge of our fascinating world, and quickly locate where that rare prefix is by getting your copy of the 7th Edition Of The Radio Amateurs Prefix Map Of The World for only £2 (original price £3.50 plus £1 P&P), plus 50p P&P UK 75p overseas (surface mail).

To: Practical Wireless (Special Offer September),
FREEPOST, Arrowsmith Court, Station Approach, Broadstone,
Dorset BH18 8PW.

Please send me copy/copies of 7th Edition Radio Amateurs Prefix
Map Of The World for £2 plus 50p P&P UK, 75p P&P overseas
(surface mail).

HAMSTORES

SPECIAL EVENT DAY AT 'BIRMINGHAMSTORE'

Last year we claimed to have one of the best Ham Radio Showrooms in the country... this year we know we have. Come and see for yourself between 10am & 4pm on

Saturday 18th September

Come and see how we have developed and help us celebrate our second year in Birmingham with a glass of Buck's Fizz and some nibbles, you might even get

your teeth into a NEW RADIO! There will be some EXTRA SPECIAL DISCOUNTS ON OFFER PLUS...

- Selection of second-hand radios
- 2m/70cms transceiver checks
- Video presentations on Amateur Radio
- Advice on the Radio Amateur's exam
- Guidance on the Novice course
- Local Radio Club representation
- Radio Station GB5IT demonstrating modes of operation including RTTY, PACTOR and PACKET
- Shortwave listening & weather chart reception
- Operating desks c/w rigs by all the major manufacturers
- Extensive stocks of new gear
- Scanning radio displays
- Mobile radio aerials and accessories
- Portable radios of all kinds
- Loads of Radio books
- Data sheets to mull over, in fact everything for Radio Hobbyists, be they listeners or transmitters
- ICOM Marine, Avionic and PMR radios will also be on display
- HAMSTORES stock AEA, AKD, Alinco, AOR, Barenco, Comet, Cushcraft, Davis, Dee Comm, Diamond, Icom, JRC, Kenwood, Lowe, Microset, MFJ, RSGB books, Toyo, Yaesu and Yupiteru gear
- Low deposit, interest-free credit is available on most radio purchases
- Gordon, John and Ray are all looking forward to greeting you on the 18th!

(An hours drive from Sheffield, Manchester, Nottingham, Leicester, Luton, Oxford, Bristol & Cardiff).

PW Robin - Lowering The Display Power Requirements

Mike Hughes has modified the PW Robin Frequency Counter. His modification reduces the overall current consumption. Now it can be powered from batteries for use in the field.

The design for the PW Robin Frequency Counter by Mike Rowe G8JVE is first rate. It's a small low-cost unit capable of operating up to at least 450MHz.

However, having produced a similar design, using the 'all displays on all the time' method, I had discovered one major disadvantage of the design. The overall power consumption can be quite high, all the i.e.d. segments require power whenever they are on.

To calculate the typical maximum current consumption for one display, take the current of one segment and multiply it by seven. For simplicity's sake, let me assume that the i.e.d. voltage is 2V. The voltage

across any of the limiting resistors is then 3V. Each limiting resistor is 270Ω , so the current flowing is 11mA. Each display has seven segments and there are eight displays. The worst case condition is when all segments of all displays are lit (displaying 88888888 even though this would be very unusual). This condition gives a current consumption in excess of 0.5A for the display alone. So I looked for a method of reducing this power drain.

The method I chose to reduce the power consumption is multiplexing the display digits. In display multiplexing, each display digit is turned on for a short time, then off again for a longer period. In this long off period the other displays, in turn, are switched on and then off again in a similar sequence. No two displays are on at the same time, so the overall consumption should be reduced by a factor of eight. The number of times each display is turned on (and off) per second is called the switching rate. If the switching rate is fast enough, the eye and brain are

Circuit Operation

unaware of the flickering on and off. Persistence in the retina of the eye, keeps the image for a short time and fools the brain into believing that the segments are on all the time. After all not many of us see the flying spot on the screen of the television. An absolute minimum switching rate for this project is around 20 times per second, whereas the TV uses 25 complete (50 half picture) pictures per second.

The part circuit (of the PW Robin) Fig. 1, shows a section of the decode/display in the original circuit. The dual 4-bit data outputs of the counter i.c.s (74HC390) are decoded in the seven segment drivers (each a 4511 type).

The outputs of the i.c.s feed the current limiting resistors for each of the displays. The displays are of the common cathode type and Pins 13 and 14 of each dual display have to be connected to the 0V line to turn both digits on. If this connection is not made then the display is off and has minimal power consumption.

My modification multiplexes the displays to reduce the power consumption. By looking now at the drawing of my circuit, Fig. 2, you will see that only a few additional components are necessary. The multiplexing circuit is controlled by the outputs of the new counter i.c. (IC1a) which is a decade divider with each of ten output pins going high (then low again) in sequence. Of the ten decoded outputs, only one will be on (high) at any time.

With each falling edge ('1' to '0' signal change) of the clock input, the active output line goes low and the next line goes high. The '9' output line going high is used to provide a reset pulse to the master reset of the i.c. The first output then becomes active (high) again, so the i.c. is now effectively a one-of-eight decoder.

The eight outputs, via transistors Tr1a - Tr8a, each control one display digit. It is possible to have a separate clock generator to drive the decade divider i.c. but in the PW Robin design the final output stage of the 4060 divider should provide a suitable clock rate of 256Hz. This signal is available on Pin 3 of IC1 (Pin 10 of IC2).

In theory it is possible to achieve a reduction in current consumption of 87.5%, although in practice the display will appear dim. To counteract dimming of the displays, the current limiting resistors (to the displays) can be reduced in value to make the displays brighter.

A value of about 100Ω for these resistors (R29a-f to R36a-f in the original circuit) will produce a much

Fig. 1: Part of the original PW Robin decode and display section.

Fig. 2: This is the simple circuit of the additional parts to multiplex the original display.

brighter display but the circuit is still able to provide substantial current savings. When you fit this modification to the PW Robin design, you can easily implement it into the original design by cutting the tracks to Pins 13 and 14 of each display and having the circuit

on a small piece of Veroboard or p.c.b.

This modification can reduce the current drain to such a point that it will be possible to use the PW Robin Frequency Counter on batteries during tests outdoors.

Additional Reading

'PW Robin frequency counter' by Mike Rowe G8JVE, PW July and August 1991.

Fig. 1: The prototype bi-polar transistor tester as built by Martin Michaelis DK1MM.

A Simple Tester For Bipolar Transistors

Martin Michaelis DK1MM describes a useful little project that will test transistors and diodes using its built-in r.f. oscillator. It's ideal for testing all those 'bargain' transistors and diodes you've got lying around in the junk box.

Most transistor testers are only able to test the d.c. parameters. With the tester described in this article you can test the function, the doping (*pn*p or *np*n) and approximately the maximum frequency range of oscillation (f_{max}). Equally we can test diodes with this tester.

The circuit is shown in Fig. 2. The heart of the tester is a Colpitts oscillator formed by L1, Ca & b and the transistor to be tested. Under test, a good transistor will oscillate and the diode D1 rectifies the resultant r.f. The meter M1 indicates the relative strength of the oscillations.

Frequency Change

The two-pole six-way switch, S1a & b, selects the frequency range. The toggle switch S4a & b changes the polarity for the doping test.

Using the potentiometer R1, the full-scale reading of the meter M1 may be adjusted for the gain of the transistor under test. The two-pole changeover switch, S2a & b acts as the 'test' control, S2a discharging the 10nF capacitor C6.

The combination of the Zener diodes D2 & 3, with the associated resistor R3, forms a limiting voltage divider connected by the toggle switch S4a & b and the resistor R3 to the circuit.

The diode, D1, is normally in circuit. However, it's disconnected by the switch S3, when a diode is under test, and the Diode Test switch, S3 is operated.

I chose to use a separate power supply, which should be regulated, and in the range of 8 to 12V d.c. Alternatively, an external battery supply can be used.

The test oscillator frequency range depends on the values of Ca, Cb and L. The details for the value of Ca & b, together with the inductors for the frequency ranges are shown in Table 1.

Easy and Cheap

Building the tester is easy and cheap. This is because all the parts may well be found in your junk box, or can be bought surplus or from the flea market at rallies.

The oscillator itself is a simple arrangement. Another useful factor is that the oscillator's frequency stability is not critical in this application. The switch S1a, shown in Fig. 1, is one half of a two-pole six-way type, selects the coils and capacitors for each frequency range. The coils and capacitors are mounted between the front section and the rear section of S1a & b.

I chose to mount most of the components on the underside of the front panel. Only the power socket and the Zener diodes D2 & 3 with resistor R5 are mounted on

See Table 1 for the combinations of inductance and capacitance values for each range.

Fig. 2: Circuit of the transistor tester (see text).

Fig. 3: The coils for the various ranges mounted on the selector switch, as suggested by the author (see text).

the rear panel of the cabinet on my prototype.

Be careful if you use a meter with a full scale deflection (f.s.d.) other than the one I suggest. If you do, make sure that the correct value of resistance is used for R1. When using a different f.s.d. meter, for correct adjustment - full scale at half power voltage - you should substitute another value for potentiometer R1. I suggest you use a 100kΩ linear type.

The connections between S1a & b to the Transistor Under Test socket, must be as short as possible. In practice, I soon found that it's better to use four short leads, made up from insulated braided wire (for base, emitter, collector and common connection) with alligator clips.

Using The Tester

Using the tester is quite straightforward. For example, to test bipolar transistors you should first connect the transistor leads to the correct alligator clips on the tester. Then, select the lowest frequency range on S1.

To begin the actual test, put the switch S2 to the Test Position. If the meter deflection is lower than half scale, switch S1 to the next frequency range, and then check again by operating S2. You may find that a transistor will oscillate (for example) at 50MHz and not 50kHz.

If the meter does not show any deflection at all, turn S4 to the other position and start the tests again. This will tell you if the transistor under test is a *npn* or an *npn* type.

When you're testing a transistor with unknown pin connections, you'll have to try different connection combinations. At two thirds clockwise rotation of R5, a good transistor will give a meter deflection of 80-100% f.s.d.

Testing Diodes

When testing diodes, because of the way it works, a working transistor is needed as well! The diode under test

Suitable box (aluminium chassis box or die-cast type), meter movement (400μA f.s.d. used in author's prototype), sockets and leads or crocodile clips, see note in text regarding test connections. Two-pole, two-way switch (can be either toggle or push-to-change type to suit) S2. Two-pole two-way changeover switch, S4. Single-pole changeover switch, S3. Two-pole, six-way switch, S1. Suitable knobs and battery/power supply connectors.

Fig. 4: The main components for the tester, mounted behind the front panel.

actually replaces D1 in the test circuit.

So, to start the diode test you must connect a good transistor to the alligator clips on the test leads. The next stage is completed by connecting the diode under test to the diode-test clips.

Make sure you connect the diode the right way round, ensuring that the polarity is correct. Then, switch S2 and S3 to their test positions. The diode's maximum working frequency may be found by switching S1, step by step from Range 1 to Range 6.

Although it's a simple design, this transistor tester provides a very useful range of practical tests. By using it, you'll be able to find out much more than whether or not all those 'bargain' transistor or diodes in your junk box work or not.

The PW team have been busy finding out what test equipment is available and who can supply it. So carry on browsing around the shelves, you never know what you may find.

Off The Shelf

To help you we have arranged the test equipment into various sections to make it easier to search for the special item you need. Where a supplier appears in more than one section, their address will appear in full only the first time they are mentioned.

Power Supplies

Power supplies (p.s.u.s) cover all sorts of voltages and current ranges. Many amateurs look to buy a 13.8V p.s.u., at current levels up to 50A, to supply the home station. But other output types are available from the suppliers.

Alpha Electronics can supply a variety of power supplies from the Thurlby Thandar range. From highly accurate (to within 0.1%) 0-30V 1A supplies, to low-cost units suitable for powering novice projects. For more information contact them at Units 5 & 6, Linstock Trading Estate, Wigan Road, Atherton, Greater Manchester M29 0QA. Tel: (0942) 873434 or FAX: (0942) 873558.

Cirkit Distribution have a selection of laboratory grade p.s.u.s available. Their catalogue, costing £1.90, is available through the larger high street newsagents. In cases of difficulty contact Cirkit direct at Park Lane, Broxbourne, Herts EN10 7NQ. Tel (0992) 444111 or FAX: (0992) 464457.

Electromail have an 18 page section, in their massive three part catalogue, dealing with p.s.u.s of all types, sizes and power levels. Copies of the

current 1800+ page catalogue are available, costing £6.50, from Electromail at PO Box 33, Corby, Northants NN17 9EL. Tel: (0536) 204555 or FAX: (0536) 405555.

Greenweld have a catalogue that is rich in all sorts of things. Amongst these items is a section dealing with power supplies all at very reasonable prices. They have multi-output mains driven switch-mode p.s.u.s for computer projects, plug style low power p.s.u.s or the parts to make your own. Their catalogue is available from 27 Park Road, Southampton SO1 3TB. Tel: (0703) 236363 or FAX: (0703) 236307

Henry's Audio and Electronics catalogue contains a section on p.s.u.s to suit many low to medium powered items. Items such as 13.8V 5A supplies are available. For a copy of their catalogue, price £4, contact Henry's at 404

Not a new-look computer, but a digital storage oscilloscope available from Martron Instruments.

Count up to 1.3GHz with either of these digital counters from SAJE Electronics.

The low cost, Alan MT Plus microphone tester available from Nevada Communications.

Edgware Road, London W2 1ED. Tel: 071-258 1831 or FAX: 071-724 0322.

Jaytee Electronic Services are suppliers of the toroidal transformer for the PW Marchwood high power 13.8V p.s.u. They can supply the whole range of ILP toroidal transformers, which includes low profile encapsulated transformers for direct p.c.b. mounting. Contact Lee Adams at 143 Reculver Road, Beltinge, Heme Bay, Kent CT6 6PL. Tel: (0227) 375254 or FAX: (0227) 365104.

Lowe Electronics have p.s.u.s to suit most needs. For details of your closest Lowes shop, see their advertisement in this issue.

Maplin Electronics have a catalogue featuring a variety of single and dual rail power supplies, with up to 60V or 10A output type, to suit most situations. The 700+ page catalogue, costing £2.95, is available through the larger newsagents, or direct from Maplin at: PO Box 3, Rayleigh, Essex SS6 2BR. Tel: (0702) 554161 or FAX: (0702) 553395.

Martin Lynch has a constantly changing stock of new and second-hand equipment. contact him to see what is in stock at: 286 Northfield Avenue, Ealing, London W5 4UB. Tel: 081-566 1120 or FAX: 081-566 1207

Nevada Communications can supply a variety of p.s.u.s from small battery charger types to items capable of sourcing 50A at 13.8V. They also have variable and twin output p.s.u.s. Their catalogue was free with the June 93 issue of PW or costs £2 from Nevada Communications at 189 London Road, North End, Portsmouth, Hampshire PO2 9AE. Tel: (0705) 662145 or FAX: (0705) 690626.

SAJE Electronics can supply the Maxcom MX-9000 four-in-one test unit. Reviewed in the March '93 issue of PW it features a triple output p.s.u. with a d.v.m., counter timer and signal generator thrown in for £399. Contact SAJE at 117 Lovell Road, Cambridge, Cambs CB4 2QW. Tel: (0233) 425440 or FAX: (0233) 424711.

South Midland Communications can supply power units suitable for the wide range of transceivers they stock. Contact SMC at: S.M. House, School Close, Chandlers Ford Ind. Estate, Eastleigh, Hants SO5 3BY. Tel: (0703) 255111.

Waters & Stanton stock the Microset range of power supplies. The range covers from 5-30A supplies at 13.8V. These p.s.u.s are good value for money and are available with built-in meters to monitor the load. Contact them at 22 Main Road, Hockley, Essex SS5 4QS. Tel: (0702) 206835/204965 or FAX: (0702) 205843.

Meters & Oscilloscopes

This section deals with equipment to measure and displaying signals. Most suppliers will have a variety of test meters to measure Volts, Amperes and Ohms, and some meters can check transistors or measure capacitance. But space doesn't allow us to mention every product

offered by every supplier. The following is only a small selection of what's available.

C. M Howes are manufacturers of many items of test equipment for meet the needs of an amateur radio station. Their DFD5 digital frequency meter is available as a kit of quality parts to make your own 35MHz counter. All Howes projects are well designed, and have a harmonised look to them. For more information contact Dave Howes at Eydon, Daventry, Northants NN11 6PT. Tel: (0327) 60178

Cambridge Kits say they make "electronics YOU can make". In their growing list of kits is a sound level meter. Useful for checking sound pressure levels in noisy environments. For more details of this and their other kits contact them at 45 Old School Lane, Milton, Cambridge CB4 4BS. Tel: (0223) 860150.

Cirkit Distribution Ltd. source a range of multimeters of digital or analogue varieties to suit all pockets. The world reknowned AVO Model 8 is not cheap, but is a superb analogue multimeter. See p.s.u. section.

Cricklewood Electronics Ltd. are updating and reprinting their catalogue (due out late October), this is to include a test equipment section. For more details about their range, contact them at: 40 Cricklewood Broadway, London NW2 3ET. Tel: 081-452 0161 or FAX: 081-208 1441.

Eastern Communications stock the Sigma SC40SP digital power/s.w.r. meter. This unit, with a remote sensing head, is available from them at Cavendish House, Happisburgh, Norfolk NR12 0RU. Tel: (0692) 650077.

Electromail have many pages in their catalogue devoted to measurements of all electrical, and mechanical, values. If you fancy measuring a.c. currents up to 1000A then they can help. See p.s.u. section.

Exsell Technical Communications Ltd. are suppliers of Wavetek's Griffin range of multimeters. The top of the range DM15XL model, measures ttl logic pulses up to 20MHz, as well as the more mundane Volts and Amps. They may be contacted at Dock Office, Trafford Road, Manchester M5 2XB. Tel: 061-872 6310 or FAX: 061-872 4504.

Gould Electronics have an ingenious signal measuring and monitoring system. Based on a high-tech storage oscilloscope, this data acquisition system can capture, store and display signal waveforms up to 150MHz. For more information about this and their other oscilloscopes, contact Gould at: Roebuck Road, Hainault, Ilford, Essex IG6 3UE.

Grosvenor Software can supply the BMKMULTY computer program to display the incoming audio spectrum of RTTY and Amtor signals. See at a glance, the state of the signal. A small simple interface unit is needed between the radio and computer. For more information write to 2 Beacon Close, Seaford, E. Sussex BN25 2JZ. Tel: (0323) 893378.

Hesing Technology import the laboratory quality, Krenz Electronic measuring equipment. The range includes data and signal monitoring displays that may be interfaced with a PC for control and storage. These items are capable of so many functions it is difficult to put them into any one category. For more information about the range, Hesing may be contacted at: Cromwell Chambers, 8 St. John Street, Huntingdon, Cambs PE18 6DD. Tel: (0480) 433156 or FAX: (0480) 413357.

ITT Instruments supply the MX50 series of digital multimeters that feature the ASYC® safety designs. They have min/max, true r.m.s. decibel and frequency measurements available in the range, which includes a model for potentially explosive environments. For

more information contact them at: 346 Edinburgh Avenue, Slough, Berkshire SL1 4TU. Tel: (0753) 511799 or FAX: (0753) 694983.

Kanga Products is an enthusiastic supporter of QRP working, and their product lines reflects this. Listed in their A5 sized catalogue are dummy loads, power meters (v.s.w.r. measurements) and other test equipment for amateur radio use. Their catalogue is available from them at: Seaview House, Crete Road East, Folkstone CT18 7EG. Tel/FAX: (0303) 891106.

Lake Electronics manufacture a range of r.f. power and s.w.r. measuring kits that are also available ready-built. Both the PM20, a terminated 1/20W power meter, and the TUA1 s.w.r. meter (reviewed PW Nov. '92) are suitable for novice construction and use. For more details about these or other products, see Alan Lake at a rally, or at: 7 Middleton Close, Nuthall, Nottingham NG16 1BX. Tel: (0602) 382509.

Maplin Electronics can supply test equipment to measure both d.c. and r.f. For instance they have almost 20 pages devoted to their range of analogue and digital meters. There are other sections covering oscilloscopes, and audio

The Sigma SWR/Power meter with remote head, available from Eastern Communications.

Left: A Crystal calibrator from C.M. Howes, could help you check your receiver's tuning accuracy.

Below: EMC/RFI problems? Hire or buy this portable field strength unit from Martron Instruments.

Digital multimeters for use in explosive environments are available from ITT Instruments.

A multi-purpose item from Thurlby Thandar, combines d.v.m., data analyser and counter timer into a digital storage oscilloscope.

test equipment. For their address details see the p.s.u. section.

Martron Instruments produce a portable field strength meter suitable for EMC/RFI testing. The PMM-8051 meter unit measures radiation of 20Hz to 18GHz at field strengths between 0.05-1000V/m. Able to display the values in a variety of forms, the units are available for short term hire on a weekly basis. For more information write to them at: Wellington Road, Cressex Ind. Estate, High Wycombe, Bucks HP12 3PR. Tel: Martin Ball on (0494) 459200.

Nevada Communications catalogue contains many items of test equipment and a recent addition is the ALAN MT PLUS microphone tester unit. Priced at £19.95 this unit will check the major manufacturer's microphones for all facilities. Contact address is in the p.s.u. section.

SAJE Electronics Have a range of test equipment that covers almost every field of measurement. Their hand-held frequency counters are particularly cost effective, with a

maximum count of 1.3GHz. More details in the p.s.u. section.

Thurlby Thandar have an unusual multimeter, the SM620 ScopeMaster model, that combines a d.v.m. with a digital storage oscilloscope, a counter-timer and data analyser unit. For more information about the SM620, or their other products contact Thurlby Thandar's John Cornwell at: 2 Glebe Road, Huntingdon, Cambs PE18 7DX. Tel: (0480) 412451 or FAX: (0480) 450409.

Waters & Stanton import s.w.r. and power meters in the Diamond and Revex ranges. They can also supply the MFJ-249 HF/VFH SWR analyser (Antenna Workshop PW August '93). See the p.s.u. section for address details.

Signal Generation

One of the most useful items available to a radio amateur or electronics enthusiast is a signal generator. In this section we offer a selection of suppliers for many types of signal generators. These will include audio, r.f. and pulse generators. Most firms can supply the range of items so it would be useful to check them all out for your exact requirements.

Alpha Electronics Carry the range of Thurlby Thandar signal generators. See the p.s.u. section for details.

Badger Boards not only supply the p.c.b.s for PW projects, but they supply a variety of electronic kits for signal generators of audio r.f. or digital types. For more details contact John Badger at 87 Blackberry Lane, Four Oaks, Sutton Coldfield B74 4JF. Tel: 021-353 9326.

C. M. Howes have a crystal calibrator kit available, providing signals from v.l.f. up into the u.h.f. band.

Cirkit Distribution have many pages of signal generators in their catalogue.

Electromail carry an extensive range of audio, r.f. and pulse generators.

Henry's audio and electronics catalogue contains a few items of mainly audio related generators.

Kanga Products offer several test oscillators for radio related use in their catalogue.

Levell Electronics Ltd. can supply a fine range of pulse and digital test oscillators. Their 233 and 240 models cover from 0.5Hz to 50MHz. The 233 model being doubly useful as it is two independent oscillators in one box. For more information about these, and their other items of test equipment, write to Technology House, Mead Lane, Hertford, Hertfordshire SG13 7AW. Tel: (0992) 501231 or FAX: (0992) 500028.

Maplin Electronics have a catalogue section devoted to their various types of signal generator.

Martin Lynch has been known to take all sorts of items in part exchange. Phone him and find out.

SAJE Electronics supply a variety of signal generators, some of which are integrated into other items of test equipment.

Thurlby Thandar manufacture many types of test oscillators, most are available from themselves or other distributors mentioned on these pages. **PW**

Special Offer From PDSL

It isn't necessary to have test equipment to evaluate electronic circuits. Manufacturers now create working models using computers at every stage of design and manufacture. **Public Domain Shareware Library (PDSL)** have a special offer for readers of *PW*.

The CDROM, 'Libris Britannica', costs only £45 +VAT and contains more than 1300 megabytes of PC/AT programs. Design, and predict electronic circuits, and then to design a p.c.b. layout to suit. For more details contact PDSL Winscombe House, Beacon Road, Crowborough, Sussex TN6 1UL.

SUMMER 1993 CATALOGUE

The new enlarged Cirkit Catalogue is out now!

- 32 more pages
- New range of Kenwood 'scopes
- The latest scanning receivers and accessories
- New section of low cost security products
- Extended range of Velleman kits including: 250W 12Vdc to 220Vac inverter, in-car amplifier power supply, 200 and 400W amplifiers, suppressed lamp dimmer, halogen lamp dimmer, day/night thermostat and telephone remote control unit
- New test equipment, includes: 2.3GHz bench frequency counter, EPROM emulator/programmer, portable 'scopes and bench function generators
- Host of new components, including: compression trimmers, variable capacitors, connectors, fuses, and fuseholders, potentiometers, IC's, soldering irons and lead free solder
- Published 27th May 1993
- Available from most large newsagents or directly from Cirkit
- **Send for your copy today!**

£229.95 + £5P&P LIMITED STOCK

SKY SCAN

Desk Top Antenna Model Desk 1300

Built and designed for use with scanners. Coverage: 25 to 1300MHz. Total height – 36ins – 9ins at widest point. Comes complete with 4 metres of RG58 coax cable and BNC connector fitted.. Ideal indoor – high performance antenna and can also be used as a car antenna when your car is static. REMEMBER YOUR SCANNER IS ONLY AS GOOD AS YOUR ANTENNA SYSTEM! **£49.00 + £3.00 p&p**

SKY SCAN V1300 Antenna

Most discons only have horizontal elements and this is the reason that they are not ideal for use with a scanner. Most of the transmissions that you are likely to receive on your scanner are transmitted from vertically mounted antennas. The Sky Scan V1300 discone has both vertical and horizontal elements for maximum reception. The V1300 is constructed from best quality stainless steel and aluminium and comes complete with mounting pole. Designed and built for use with scanners.

£49.95 + £3.00 p&p

SKY SCAN Magmount MKII

For improved performance, wide band reception, 25 to 1300MHz. Comes complete with protective rubber base, 4m RG.58 coax cable and BNC connector. Built and designed for use with scanners. **£24.95 + £3.00 p&p**

Cable Health Tester

David Turtle
GIOLZ has come up
with a simple but
effective cable tester
- that tells you the
state of the cable
under test.

Like many radio amateurs I've had instances where I've been unable to decide if the cause of a high v.s.w.r. was due to a badly set up antenna, or a problem with the coaxial feed. There are two problems that can occur with coaxial cables, and this unit will display the results of tests to determine whether either of these conditions exists.

The two possibilities of a poor cable are: an open circuit in either the inner or outer of the cable, or a short between inner and outer of the cable. Two simple tests are all that are needed to determine the overall state of a coaxial cable.

Although initially aimed to check coaxial cables, this handy little unit can also be adapted to checking any cable with any number of connections. All that is needed is access to both ends of the unconnected cable. This design I'm describing, provides a simple descriptive indication of the state of the cable by means of a seven segment display. The display will

should cater for a reasonable tolerance plus circuit resistance.

It is possible to modify the unit for use with other values of terminating resistance by substituting a value of twice the test resistance in place of the 100Ω (R1) resistor. There is no need for the purposes of this d.c. test to match the terminating resistor to the characteristic impedance of the coaxial cable under test. That need only be done if the cable is being tested at r.f. frequencies.

Connectors on coaxial cables are particularly difficult to inspect, as few can be easily disassembled for a visual inspection. A short circuit can be identified from one end only, but continuity or open circuit can only previously be tested either by use of an additional cable or removal of the cable for testing.

The cable under test is connected to the TEST terminals of the unit and a terminating resistance is connected at the far end. Assuming the cable and connections are in good condition, the TEST terminals are then presented with this resistance (plus a little for the cable itself). There will be a voltage of three volts (or one third of the battery voltage) at the TEST terminals.

Resistor R2 (1kΩ) and two diodes (D1 and D2) give some degree of protection against moderate user abuse. This terminal voltage (3V) will be present at terminals 5 and 6 of IC1, the quad comparator.

The terminal voltage is compared with a reference voltage from a divider chain, consisting of R3 (6.8kΩ), R4 (1kΩ) and R5 (3.3kΩ). This chain of resistors provides two reference values of 2.7V at terminal Pin 7 of IC1, and 3.5V at Pin 4 of the comparator i.e.

If the TEST terminal voltage lies between these two values (2.7 and 3.5V) the outputs (open collector) pins 1 and 2, will both go low driving the segments required to produce the letter H. If the test circuit is low or a short exists, the test voltage will drop below this window area. Pin 2 will drop turning on segment G and Pin 1 will now rise shutting off segments B and E. At the same time Pin 13 output will drop so turning on segments D and A. The letter S results. In the case of open circuit Pin 1 and 14 are low and the letter O results. The latter two comparators are wired to act as a NOR gate.

Circuit Layout

The circuit layout is non-critical and can be made on a piece of Veroboard or a small section of perfboard. Power is supplied from a small 9V battery (PP3) with a small push-to-make switch turning the unit on when a cable is under test.

The unit can perhaps best be built in a small hand-held case that holds a PP3 battery. These are listed in both Maplin and Electromail component catalogues.

I fitted my prototype unit with two SO239 connectors. One of these connectors was labelled 'TEST', and the other connector was wired with a 47Ω resistor (or a pair of 100Ω in parallel).

You could use almost any combination of coaxial connectors on the casing of the test unit. Belling Lee, DIN, BNC, TNC, Jack or Cannon connectors could easily be wired up in parallel for either the TEST terminal or the termination terminal.

If this were the case you could then test cables with different connectors on either end. Another

Fig. 1: This is the circuit diagram of the cable health tester.

show the letters O, H or S for open circuit, healthy or short circuit.

Those checking coaxial cables are specifically catered for as most will have access to a 50Ω dummy load. If this is fitted to the far end of the feeder and the near end is connected to the test terminal, the unit will instantly display the state of the circuit.

The particular virtue of this unit is that you do not need to have both ends of the cable within reach of the test position.

Fig. 2: This is the 'standard' layout.

Bridge And Windows

The operation of the unit is based on a bridge and window comparator. This, with the marked components, allows a tolerance of around ±20% in the value a 50Ω test resistor. These values

advantage of putting connectors on the test unit case is, that you will now be able to do the tug-and-twist test on the connections. This check is used to see that the cable is not subject to movement faults. This test is almost impossible to carry out when using measuring the cables using probes on a multimeter.

The ultimate setting up is now over to you. Add your adaptation-specific needs to this basic unit.

Any cable connector with an even number of cores can be easily tested. In this case the test load resistor would be better suited to being made up of smaller value resistors. A four cored cable could be tested using two 18Ω resistor at the 'far' end the 'near' ends being joined by a 15Ω ($18+18+15 = 51$)

If you try this method out, don't forget to include any shielding wire in the overall conductor count.

PW

Fig. 3: This is just an idea for testing multi-way cables (with even numbers of cores), such as this four-way cable example.

If you're travelling long distances to rallies, it could be worth phoning the contact number to check all is well, before setting off.

August 29: Castle Hall Computer, Electronics & Radio Rally will be held at Castle Hall Exhibition Centre, Stalybridge, Cheshire. Doors open at 11am to 4pm (10.30 for disabled visitors). Over 200 stalls, Bring & Buy, refreshments available. Talk-in on S22. Enquiries to 061-681 0569.

August 29: 2nd Gloucester Radio Rally & Car Boot Sale is being held at Naas Lane, Queddley, Gloucester. Sign-posted from Junctions 11 & 12 on M5. Talk-in on S22 & Bring & Buy stall run by Stroud Radio Club. Mike on (0452) 503786.

August 30: Coleraine & District ARG Radio Rally & Bring & Buy will be held in The Golf Links Hotel, Portrush, Northern Ireland. From 12 noon to 5.50pm. Traders welcome free of charge, food & refreshments available. Admission £1. Talk-in S22. Raymond G14MFM on (0266) 558230.

August 30: Huntingdonshire Amateur Radio Society will be holding their Annual Bank Holiday Monday Rally at St Germain Street, Huntingdon (easy to find, drive around the ring road until you find us!). Doors open at 10am, admission £1, free car parking. Talk-in on S22. David Leech G7DIU on (0480) 431333.

September 5: Milton Keynes & DARS will be holding their 7th Annual Radio Boot Sale at Cranfield Airfield, Cranfield, Beds. Ray G1LRU on (0908) 660798.

September 5: Vange Amateur Radio Society Annual Rally will be held at the Laindon Community Centre, Laindon High Road/Aston Road, Laindon, Basildon, Essex. Doors open from 10.30am. Admission 75p. Trade stands, Bring & Buy, raffle, refreshments, car parking. Talk-in on S22. Sign-posted approach roads. Mike Musgrave G4NVT on (0268) 543025.

***September 11:** The Scottish Amateur Radio Convention will be held in Cardonald College, 690 Mossspark Drive, Glasgow G52. Full trade show, lecture theatres, Bring & Buy, Morse tests, bar & restaurant. Free parking. Talk-in on S22. Tom Hughes GM3EDZ on 041-882 5753.

***September 12:** Lincoln SWC Hamfest will be held at Lincolnshire Showground & Exhibition Centre, four miles north of Lincoln on A15 Lincoln/Scunthorpe Road. Doors open 10.30am. Usual trade stands, Bring & Buy, refreshments, licensed bar. Lots of attractions for whole family. Admission £1 by lucky programme, free parking, caravans welcome by arrangement. Talk-in on S22. Denis G1XZG on (0522) 684214.

***September 12:** The BARTG Rally will be held at Sandown Exhibition Centre, Esher, Surrey. Bring & Buy, refreshments, many exhibitor & special interest groups. Doors open 10.30am to 5pm. Admission, adults £1.50 & OAPs £1, under 14s free if accompanied by an adult. Well sign-posted. Peter Nicol on 021-453 2676.

September 18: The Annual Isle of Wight Wireless Rally will be held at the National CEM Wireless Museum, Arretton Manor, Nr. Newport, Isle of Wight. Doors open at 11am. Bring & Buy, refreshments, covered accommodation if wet. Free admission for all, including traders, free parking. Talk-in on S20 by G3IOW. Douglas G3KPO on (0983) 567665.

September 19: The Peterborough Radio & Electronics Society will be holding the East of England Rally at The East of England Show Ground, Oundle Road, Peterborough. Doors open at 10.30am, admission £1. Traders, Bring & Buy, Car Boot, flea market. Free parking, full catering & bar facilities. Mike G0CVZ on (0733) 222588.

September 26: The Harlow & District Amateur Radio Society will be holding its 35th Annual Amateur Radio Rally & Computer Show at Harlow Town Sports Centre, off Fifth Avenue Harlow (easy access off M11 Junction 7, A414 follow the signposted route). Doors open at 10.30am. Admission £1, OAPs & children 50p. Varied selection of traders, Bring & Buy, free parking at & near to the site. Disabled parking & lifts available. Mike G7BNF on (0850 487863 or Ken G0HRR on (0279) 426647.

October 10: The Computercations 1993 Amateur Radio & Computer Rally will be held at Hillhead Campsite, Kingswear Road, Brixham, Devon. Trade stands for computer & radio, Bring & Buy, raffle, refreshments. Unlimited free parking with overnight camping available. Talk-in on S22. Bill Trezise G6ZRM on (0803) 522216.

Rig and Antenna

The rig here is
I'm using a transceiver.
I have here a receiver and transmitter/with a linear amplifier.
I am putting out 10, 20, 50, 100, 150 watts.

Mi equipo es
Estoy usando un transceptor.
Tengo aquí un receptor y transmisor/con amplificador lineal.
Estoy poniendo en antena diez, veinte, cincuenta, cien, ciento cincuenta vatios.

Mee equeepo es
Estoy wsando oon trantheptor.
Tengo aki oon rethektor ee transmissior/con amplifeteecador lineal.
Estoy ponviendo en antena dee-eth, vayintay, seenkooentah, see-ehinseenkooentah vatios.

The rig is home brew with modifications.
My antenna is a dipole/is a trap dipole.
A beam with three elements.
With horizontal/vertical/circular polarisation.
With a gain of
A quad/a long wire/an end fed Zeppelin.

Equipo casero con modificaciones.
Antena dipolo/dipolo con trampa.
Antena de haz con tres elementos.
Con polarizacion horizontal/vertical/circular.
Con una ganancia de
Una cuadracubica/hilo largo/una Zepp alimentada en extremo.

Ayquepo kasayro con modifikathiones.
Antena deepolo/deepolo con trampa.
Antena day ath con trehs elementos.
Con polarithathion orizontal/vertical/sircoolar.
Con oona gananthia day
Oona kwadracobika/feelo largo/oonaa Zep alimentahda en extremo.

A centre fed Zeppelin.
The antenna is about metres above ground level.
The QTH is metres above sea level/at sea level/below sea level.
The antenna has a rotator.
I'll turn the antenna on you during the next over.

Una Zepp alimentada en cento.
La antena tiene metros de la tierra.
Mi QTH está a metros sobre nivel del mar/al mismo nivel del mar/bajo nivel de mar.
La antena es giratoria.
Voy a girar la antena hacia su direccion durante el proximo cambio.
Giro la antena a mano.
La antena esta en el jardin/atico/en un mástil de metros.

Oona Zep alimentahda en thentro.
La antena tee-enay metros day la tee-erra.
Me ccotay-ah esta a metros souvre neeval del mar/al mesmo neeval del mar/hacho neevel del mar.
La antena es hiratoreea.
Voy a hira la antena athia soo direkthion doorange el proximo cambio.
Hiro la antena a mano.
La antena esta en el chardin/atiko/en oon mastil de metros.

I am testing the rig.

ALL THROUGH THE NIGHT

One of the hazards of using a bedside receiver in the case of a shared room or bed, usually means that you can't do anything but use the type of earphone that actually fits in the ear canal if you do not wish to disturb anyone. I have yet to find a satisfactory earpiece and conclude that most manufacturers have given up trying to make one. The new type that fits in the outer ear (about the size of a 2p) gives quite good quality but is easily dislodged.

The so called 'pillow' speaker which is quite a thin unit to be placed under the pillow is not satisfactory on two accounts. Firstly, it is uncomfortable unless you turn up the gain and place it almost out of pillow 'cover' and secondly when you turn over it becomes inaudible.

So you are forced to use the midget earpieces, which are quite cheap but require a modification. This is because in their leads are much too fragile to withstand the flexing of more than a few restless nights. Therefore you have to fit them with heavier flex and then you can get up to six months service.

Chosen Carefully

Receivers for bedtime listening need to be chosen carefully. The modern keyboard operated (and usually very expensive) models are not really very good because it is very awkward to manipulate push buttons when lying on your side. The illuminated frequency read-out is also too bright for either your own sleep or anybody else's.

The best type to go for are those with the 'old fashioned' tuning knob such as the Trio R1000 and the Yaesu FRG-7 etc. Personally, I still prefer the old valve receivers in spite of their drifting propensities but I have to admit that a battered R1155 in the boudoir begets bags of ear bashing. (The hum from the mains supply in older receivers is also excessive).

The thing to do is to acquire something that is completely user-friendly, as when you are lying on your side enveloped in bed clothes you do not have more than a

very short range of digital and hand movement. There's nothing worse than having to get both arms out from under the blankets on a cold night to change bands!

Antennas are a relatively simple problem to solve if you have one of the receivers mentioned above, as they will operate very well indeed on a humble end-fed piece of wire. This can be unobtrusively led to the nearest window when the world is your oyster. There should be absolutely no need for a.t.u.s or baluns as you shouldn't have to be bothered with such labour in this environment.

Positioning Important

The positioning of the receiver is important, as you must be able to re-tune without having to strain your sleepy muscles. I use an old dinner trolley as I find the upper shelf is just the right height.

The bottom shelf is also very handy for cups of tea and copies of *Practical Wireless*. It is just no good putting up with the receiver on the floor or above the bed's headboard. Although in the past I have found such places and have even had the receiver half under my pillow, but in that case it was a tiny single band commercial rig, popular as a mobile receiver.

Best Time

When I said bedtime was the best time for listening, I really meant that it is a good time for propagation on many bands and in no way is it my intention to promote insomnia. Many keen listeners like myself are used to nights which are best described as fitful and there is nothing more boring than lying awake and thinking about your mortgage or whatever.

However, if you can switch on an easily tuned receiver it can actually promote sleep paradoxically speaking. In my own case I often find that concentrating on a c.w. QSO or broadcast gets me back to the Land Of Nod in no time!

PW

John Worthington GW3COI, PW's cartoonist gives you some hints on bedtime listening. John says there can be little doubt that in any period of 24 hours, the best time for listening is arguably when most folk sleep and he explains how to achieve the best results here.

...Awkward to manipulate...

Antenna Workshop

In this session Peter Dodd G3LDO looks at antenna and transmission line impedance.

An antenna element is a tuned circuit. At resonance the capacitive and inductive reactances are equal and opposite, making the feed point impedance purely resistive. At frequencies above and below resonance the feed point has inductive or capacitive reactance elements.

Impedance has two parts; a resistive part (R), and a reactive part (X), usually shown R + (or -) jX. By convention, inductive reactance is positive and capacitive reactance is negative. The j character indicates the values must be treated separately because as they represent phase difference. The phase relationship of current and voltage in an antenna element (or tuned circuit) can be any value between 0 and $\pm 90^\circ$.

The method of showing impedance, expressed in two parts, might present a problem. But consider the map of the world shown in Fig. 1. A position on a map, such as 60° North, 25° West can be understood by everyone. Impedance can also be represented using a chart

with similar Cartesian co-ordinates.

Look now at Fig. 2 that shows an impedance chart using Cartesian co-ordinates, with straight lines of equal resistance and reactance. The dotted circles represent s.w.r.s of 1.5:1 and 2:1 for 50 Ω coaxial cable. An impedance of $80R + 40jX$ is plotted at point X.

If we use this as an analogy for an impedance chart, Latitude (vertical) represents resistance (R) and longitude (horizontal) reactance (Z). We can now give an impedance 'location'. Resonance (inductive and capacitive reactances equal and opposite) exists only on the 0 reactance (vertical centre) line.

Distance And Angle

A geographic location may also be expressed giving the distance and angle from a reference point. The polar map, Fig. 3, illustrates the method. This projection shows the North Pole in the centre, with the South Pole all around the outside. A map analogy for this method, is a

great circle projection map for your location.

Before proceeding any further, perhaps it might be useful to say why we bother with measuring impedance at all. After all, measurements taken when matching an antenna to a transmission line are almost exclusively by measuring the voltage standing wave ratio (v.s.w.r.).

Almost every shack I've visited has an (v.)s.w.r. meter amongst the equipment. It's well known that the s.w.r. will be 1:1 if a transmitter is connected to an antenna whose impedance is 50 Ω when using 50 Ω transmission line. Most operators also know that if the antenna impedance is 100 Ω or 25 Ω then the s.w.r. will be 2:1.

But is the s.w.r. value the whole story? As mentioned earlier, impedance is a combination of two parts, resistance and reactance.

If we were to plot, on our impedance chart, all the impedance points that could result in an s.w.r. of 2:1, the result would be a circle as shown in Fig. 2.

Note that the 1.5:1 s.w.r. circle is a smaller diameter than the 2:1 circle. The lower the s.w.r. the smaller the diameter of the s.w.r. circle. An s.w.r. of 1:1 would be a single point at $50R + 0jX$.

Because the circle only gives a contour (I'm using the map analogy

again) of constant s.w.r. the antenna impedance cannot be determined. However, this doesn't prevent the s.w.r. being used to adjust an antenna.

Optimum Matching

We use an s.w.r. meter to adjust the length of a simple antenna (a dipole or a single band vertical) for optimum matching. This method is usually done by altering the antenna length, or the frequency we are taking the s.w.r. measurement at, and noting if the s.w.r. value increases or decreases.

Sometimes it is not possible to get a low value s.w.r. In this case the s.w.r. meter cannot tell you why this should be.

An example is shown in Fig. 4. This shows the s.w.r. curve of a short 3.5MHz mobile antenna. The lowest s.w.r. is just less than 2:1, and no amount of adjustment of the antenna length will bring the s.w.r. down below this point.

However, if we plot the impedance of the antenna at a number of spot frequencies, Fig. 5, then the reason we are unable to obtain a low s.w.r. becomes apparent. The resistance at resonance is far too low. Some form of matching arrangement is required. The ability to measure impedance allows us to decide what sort of matching section is required.

The chart can be redrawn with the

Fig. 2: An impedance chart using the Cartesian co-ordinate method.

Fig. 3: Circles of constant distance (resistance) radiate from a single point. Direction offset (reactance) is measured by angular measurement from a reference direction (North).

Fig. 4: The v.s.w.r. curve for a typical 3.5MHz whip antenna.

Fig. 5: Measured impedance characteristics for a typical 3.5MHz whip antenna

Fig. 8: The manufacturer's s.w.r. curve for a Tonna F9FT 14-ele 144MHz Yagi antenna.

Fig. 6: Morphing the shape of the basic chart of Fig. 2, gives us the Smith Chart.

Fig. 7: A restricted impedance range Smith Chart.

lines of constant resistance (horizontal) and impedance (vertical) lines bent into circles rather than straight lines. If the distance, between the lines of constant resistance and

reactance, are also made logarithmic instead of linear the whole universe of impedances can be contained within the chart.

This new chart is the familiar

Smith Chart. It appears in every antenna book of note.

In addition to being an alternative graphic method of displaying impedance the Smith Chart has various other applications. These include determining the input impedance of a transmission line (provided the length and terminating impedance is known) the design of matching networks and converting impedance to admittance (the inverse of impedance).

In spite of the apparent usefulness of the ingenious Smith Chart I have never met anyone who has used it to solve an amateur radio antenna problem. Why should this be? I can think of two possible reasons.

I think the first of these reasons is, because the Smith Chart has a rather intimidating appearance.

The second reason is more practical.

Before the Smith Chart can be used to do some conversion or transformation it is necessary to arrive at a starting point. This transformation can only be achieved with impedance measurements.

There are very few designs for simple (but accurate) impedance measuring equipment to be found in amateur radio literature. I hope to remedy this failing in a later 'Antenna Workshop'.

But to return to the Smith Chart.

The chart can be simplified considerably by making it so that it doesn't cover all impedances from zero to infinity.

Most amateurs measure impedances indirectly with an s.w.r. meter, as described above. They can cover a range from 10 to 400Ω or so. A Smith chart with a restricted impedance range is shown in Fig. 7. It isn't very much different from the chart of Fig. 2. Note that the resistance scale is inverted, with diminishing resistance towards the top. One distinct advantage of Smith Chart is that the circles of s.w.r. are concentric, unlike the chart shown in Fig. 2.

Antenna Brochure

The Tonna antenna brochure is the only one that I know of, that includes an impedance plot with all the other antenna data. The plot of Fig. 8 shows the s.w.r. curve for a 14-ele 144MHz Yagi antenna. There is a double dip in the s.w.r. curve. The impedance plot of Fig. 9 shows the reason for the double dip in the curve. The table shows the frequencies where the impedance measurements were taken.

That's all I have space for this month, but I will be returning to this subject in future sessions of 'Antenna Workshop'. PW

Fig. 9: The Smith Chart impedance plot for a Tonna 14-ele 144MHz Yagi antenna. Note this is shown rotated to the left compared to Fig. 7.

*The Computer
in Your Shack*

BITS & BYTES

Peter Hunter opens his postbag once again and discusses some interesting programs.

This month I've got some news of some interesting programs. But first the post. **Roger Rowthorn G7CSE** wrote in with information for BBC computer users.

Roger has found a postal computer club that produces a bi-monthly disk-based magazine. For more information write (enclosing an s.a.e.) to the following address: **Ron Marshall - Solinet, 41 Westbrook Drive, Rainworth, Mansfield, Nottinghamshire NG21 0FB.**

Incidentally, Roger would like to hear from other readers using any model BBC with radio. His QTH is: **19 Woodlee Gardens, West End, Southampton SO3 3GA.** Or, via packet, **G7CSE @ GB7XJZ.**

World Wide Club

Simon Adlem 2E1AGM has started a world-wide packet radio 'club' for the Novice Licensees. Simon uses a Commodore C64, J & P Electronics TNC and Digicom 64 version 4.0.

Using the Commodore set-up, Simon sends out a monthly newsletter, via packet. Look out for a bulletin addressed to "NOVICE @ WW".

If this is of interest to you, then contact Simon, either by packet, **2E1AGM @ GB7VRB.#38.GBR.EU.** Alternatively you send him a FAX on (0903) 502094.

Database

Tim Anderson G0GTF sent me a couple of disks. On the disks is AMISCAN, a very powerful, and comprehensive database program for all wide band receiver users.

To use the system, you just select the band you want to look at for a detailed list of who is using what frequency. The second disk has two programs. These are TXWATCH and IDWATCH.

The TXWatch program is a very detailed database of worldwide Band I TV transmitter frequency offsets. This facility is

invaluable for identifying F2 and Sporadic E signals. IDWatch is a useful database of station IDs etc. There's also a great deal of specialised and comprehensive amateur radio data, including beacons and repeaters.

Both disks are available for the IBM PC and AMIGA (A500, A600, A1200 etc.).

Fig. 1: The Monologue package, reviewed by Peter Hunter G0GSZ this month.

Amiscan costs £7.50 and TXWatch/IDWatch costs £8. These prices include VAT and P&P. Contact Tim at: **2 Burry Rd, St. Leonards, East Sussex TN37 6DX.**

Coil Program

A long-time friend and supporter of *PW*, **Martin Michaelis DK1MM**, has sent me a air-coil program that may be of interest to the experimenter. It's a short program, written in GWBASIC, that Martin wrote for his own use.

The program, called AIR-COIL.BAS helps you calculate all the appropriate measurements, (capacitance, inductance, diameters, etc.), accurately, and speedily. Martin has very kindly made this program available free to *PW* readers. If you want a copy send me a formatted disk and return postage.

Something Different

And now for something completely different! It's called Monologue, **Fig. 1**, and it's a product of the USA based company First Byte.

Monologue is a program that gives all your text based applications (word processor, spreadsheet, electronic mail, etc.) the power of speech. Monologue is a memory resident program, activated by a simple key press.

To use it, you just highlight the text you want to 'Hear' then sit back and listen. It's ideal for having an 'on-disk manual' read out whilst you're working. Or proof reading your letter to 'Receiving You'!

Monologue can be run from floppy or hard

disk. A simple to use installation program is included on the supplied disk.

Once installed on disk, you load the program into your computer's memory by typing 'mono' and pressing the <Enter> key. From then on you activate Monologue by holding down the <Alt> key and pressing T (though this is user configurable, it can be changed to suit you).

There's another file on the disk, titled 'Sayfile'. Once Monologue is loaded in the RAM you can have a file, or group of files, read straight from the hard (or floppy) disk, by just typing 'Sayfile' followed by the filename.

I'll quote an example. I use Lan-link on packet radio, and when I receive messages Lan-link saves them in a file that has today's date as its name, and .RUN

as the extension.

To listen to my messages, while I get on with other things, I can just type the command **sayfile *.run** and my messages are spoken to me. This is just one use for this program, and I'm sure you can think of others.

Monologue will run on any IBM PC, XT, AT, PS/2 or compatible, with at least 384Kb memory (though 640Kb is recommended). It also needs MS-DOS or PC-DOS version 3.0 or higher.

The handbook states that Monologue will work from the PC's built-in speaker, although I couldn't get it to work on mine. However, I've been using it successfully with a Covox 'Speech Thing' (an amplified speaker). While this is acceptable, a full blown sound card would give best results.

I've been using the DOS version of Monologue. A Windows version is also available, but I haven't any details about it.

At the time of writing this, the asking price for Monologue for DOS is £89 which includes postage, but not VAT. For further, up-to-date information, please contact the UK Distributors: **IANSYST Ltd, United House, North Road, London N7 9DP.** Tel: 071-607 5844. My thanks to Iansyst Ltd for the loan of the review copy.

And that's it for this month. I look forward to hearing from you, so please keep in touch. 73 de Peter, G0GSZ @ GB7LDI.#35.GBR.EU: 2 Mayes Close, Bowthorpe, Norwich NR5 9AR. Tel/FAX: (0603) 748338.

Ron Ham welcomes you once again into the PW vintage 'wireless shop'. This month he talks about reconstructing and renovating bread-board receivers, and your memories.

I'd like start our chat this time by talking about the reconstruction and renovation of the 'bread-board' receivers. A good example is the Scott Taggart 300, shown in Fig. 1, including the cabinet and loudspeaker that has been rebuilt by John Tye (Dereham) and it's shown being tried out by his wife Joan.

Although John runs the set from a 'modern' power supply, he made up a dummy high-tension battery and an accumulator to look like the real thing. John says that, of the seven controls on the front panel, five are employed for tuning and two for wave-change and on/off.

Collecting Old Receivers

A good number of vintage wireless buffs specialise in collecting old home-made receivers. And there are many newcomers who would like to add one to their collections, but are unsure of where to start.

To begin with, early wireless books are a valuable source of information. This is because, in addition to the contemporary text, a lot can be learned from illustrations such as that showing the use of an intervalve transformer, Fig. 2.

A basic intervalve transformer

Fig. 3: A vintage receiver design, used as an example (see text).

has two windings, primary (input) and secondary (output). The energy developed in the first winding is induced into the second without a direct electrical connection. This is known as inductive coupling.

The high-tension voltage for the anode (signal output) of the first valve is fed through the primary winding of the transformer. The control grid (signal input) to the second valve is connected via the secondary winding. This circuit also shows the valve filaments wired in parallel and the (push-pull) on/off switch in the positive feed.

Front Panel

A push-pull on/off switch is shown on the left of the front panel in Fig. 3, in front of the intervalve transformer. The valve holders themselves are recessed into the chassis so that most of the wiring is underneath.

It was common practice to drill a small hole close to the terminal on a component above the chassis. This was to let the connecting wire through. No doubt the centre and right hand terminals on the aerial coil (right) go to the corresponding terminals on the far right of the chassis.

The left terminal on the coil is directly connected to one leg of the grid 'condenser' while the other goes through the chassis to the (input) grid-pin of the detector valve. In many cases the aerial coil would have a metal cover to prevent signals being collected there instead of via the aerial input.

Don't forget, however simple or complicated a piece of wireless apparatus may be, the design of the chassis, with the cabinet in mind and the layout and position of components is very important for the efficient working of the set.

One Valve Receiver

The short-wave enthusiasts among you who are keen to build a vintage-type one valve receiver should look for a copy of *Newnes Short-Wave Manual*, shown in Fig. 4. It was edited by that very practical man, F. J. Camm, who was of course the founding Editor of *PW*.

Another good one by Camm is *Everyman's Wireless Book*. These sometimes appear in second-hand books shop or possibly your public library. Don't be afraid to ask the librarian in the reference section if they have any early wireless books in their stores, because they cannot display all that they have.

The copies of the books I've got on my shelf were published in 1941 and 1945 respectively. And, believe me, their pages are packed with information for the bread-board constructor.

There is some form of circuit, with practical and theoretical explanations on most pages. Because of this I think the books will be a great help to all who plan to collect such sets.

Looking back (and from memory) the receiver description 'O-V-O', means one valve only. The term 'O-V-1' means there's an audio amplifier after the valve and '1-V-1'

Fig. 1: Joan Tye, trying out the Scott-Taggart 300 rebuilt by her husband John.

Fig. 2: A lot can be learned from illustrations such as this drawing demonstrating the use of an intervalve transformer.

Paul Essery GW3KFE takes his regular look at what's happening on the h.f. bands, and starts off with some advice.

Report

S
BANDS
B
B
H F

I'm often asked by newcomers about equipment and antennas. The factors that matter are simple: operating skill and the antenna.

It really doesn't matter whether you have the latest super-brew transceiver or an old station having separate transmitter and receivers so long as they work to specification. A skilled QRP operator with a monoband beam and a key, will work far more than 100W of s.s.b. into a low-mounted G5RV over a wet window-box, even if the rig is a 'Sooper-Dooper Special'.

Antennas are important. They should be erected as high as possible. Going from say ten, up to 15 metres in height will make an enormous difference.

Time spent 'tweaking up' for the best s.w.r. in the middle of the band isn't wasted. If you are stuck with a Marconi type of antenna, needing an earth or counterpoise, then work on that too. A metre of copper pipe driven into the ground looks good but doesn't work too well!

The key to it all, though, is operating know-how. When you can't hear the good operator, he's listening. So you should do the same.

Compare the skilled operator's methods with the

Fig. 1: Keen QRP operator Eric Masters GOKRT.

ways of the clots. Learn what and what **NOT** to do to achieve success. Only then do you think to switch the rig on.

Now, if your antenna isn't very competitive, plug in your key. The 'twits' who write to complain in the letters columns about c.w. being 'obsolete' refuse to accept a cold hard fact: that for equal operating skill, antenna and power c.w. is more useful by a couple of S-points.

Another way of getting some more countries booked in, is to operate in one of the world-wide contests. I suggest the ARRL, CQ WW, and WAE as examples.

Often, a keen contester will appear from some rare spot in hopes that their callsign will provide a winning score. However, this only applies to the major world-wide contests.

Band Conditions

It's time to look at band conditions now. Unfortunately, National Field Day this year, coincided with some pretty awful radio conditions, even if the sun did burn the skin off various noses and arms.

Sunspot counts on some days this last month have been well down. I recall GB2RS quoting only 11 on one day! And right to the time of writing, it has continued below normal, at least when I've been on.

Events

It's expedition and event time now. Rumours of an Andamans Islands expedition, near the top of the 'most wanted' list, have come to nought.

About the only chance for the Andaman expedition in the foreseeable future, might be an expedition set up by the VU gang. On the other hand, Wake Island (OTA OC-053) seems set to start on September 1. The Brazilian Natal DX Group are set for a St Peter & St Paul Rocks jaunt, early in 1994. The Spratly, 9MOS

exercise actually came off, to the tune of 37 000 contacts, protected by the Malaysian Navy base at the other end of the reef. Some 10 000 of the contacts were on the WARC bands. And, thank Heaven, nobody died this time.

Reports around June 15 indicated 5A0RR was on from Libya, it sounded like Romeo. However, nothing more has been noted to the time of writing.

The recent VR6BX/P operation was the first ever from Ducie Island. It's a 283 nautical-mile trip from Pitcairn Island.

More Beacons

I've heard of a couple more beacons which could be of some use. They both run 1kW into a non-directional antenna, and the frequencies are: 5.470, 7.870, 10.407, 14.405, 10.945MHz for VK4IPS in Brisbane Australia. The other beacon, LN2A in Norway, uses 14.405, 20.945, 5.470, 7.870 and 10.407MHz.

Each station is on one frequency for four minutes at a time. They start at the first mentioned frequency on the hour, so they cycle through each frequency three times every hour throughout the 24 hours.

The Postbag

It's time to look at the postbag now. The Scottish Expedition Group, by way of GM2TW, wrote to mention they are putting on GB2SEG, 6/7/8 August from Balmacara Wester Ross, and October 1/2/3 from Dunnet Head - the most northerly point of mainland Scotland.

The SEG intend to make five or six expeditions like the 1993 annually. They're also planning to have a Lighthouse Award for working them. Further details are available from GM2TW who is QTHR.

A cynical GMOIRZ in Dundee suggests there should be a priority facility such as is given to the letters QRP in a pile-up. He

suggests the use of QWS for 'I am operating on a wet string'.

Somehow, I'm not sure DXpeditions will respond to GMOIRZ's suggestion. Alternatively, he could try living in the west, where the string never manages to dry out!

Let's look at your reports, and I'll start off with a QRP operator. Grandfather's old roll-top desk is the operating position for **Eric Masters GOKRT** (Worcester Park).

Eric, Fig. 1, runs 1W from a Lake DTR7 into the top of a W3EDP against a quarter-wave counterpoise. This time he reports that UA6LAM with OZ3AAA for the best contact with low-power both ways.

Output from the receiver goes through the contents of an old margarine box - an audio filter and clipper - and then to speaker or headphones. The former is a miniature hi-fi unit bought for under £2 on a market stall. Hi-fi or not, Eric in common with most c.w. operators, prefers using headphones.

Looking out to the Far East over the sea helps **John Heys G3BDQ** (Hastings) by a couple of S-points. On 14MHz VK and ZL, but on 21MHz XX9AS, ET3SID, XU3ENF (PA3ENF in Kampuchea) came in plus S92YL for Sao Thome and an all-time new one.

John G3BDQ of course, is well known for his books on antennas. His strong signal backs theory with practice.

Among the listeners, **Luciano Marcqardt** (Hereford) also found a new one, by way of FO5IW. Luciano has also received cards from S79FLB (Seychelles), S92YL, and CU2BD.

Well, that's your lot for this month. Keep writing - and don't forget those photographs of you and your station. Send them to me at: 287 Heol-y-Coleg, Vaynor, Newtown, Powys, Wales SY16 1RA.

E N D

THE RSGB NEEDS YOU

EACH AND EVERY ONE of you involved in the world of amateur radio is able to use

all the frequency bands and modes allocated for your use without fear or favour. Yet it is your National Body, the Radio Society of Great Britain, which has gained these facilities for your use.

The radio spectrum is at a premium. Commercial interests want more allocations; where will it come from - Amateur Bands?

At the present time only 50% of licensed amateurs belong to the RSGB. A strong National Body will benefit the whole amateur radio community and will provide a strong voice for the battles ahead.

Ultimately it comes down to you, the individual, but please think ahead; not this year, maybe not next year, but sometime, the commercially interested parties may force their way into the spectrum which we currently enjoy. Support the RSGB now and the battles ahead can be won.

It's never been easier to join.

HC18/U, HC25/U (11mm can) 10.0-225 MHz add £1.00 per crystal.
HC17/U (fits FT243 socket) 1.5-225 MHz add £1.00 per crystal.
Unless otherwise specified crystals above 2 MHz will be supplied in HC25/U (HC50/U holders).

COMMERCIAL CRYSTALS: Available on fast delivery and at competitive prices.
EXPRESS SERVICE: Add 50% to the cost of made-to-order crystals for 5-day service.
TERMS: Cash with order post inc. to UK & Northern Ireland.
Cheques & PD's to OSL LTD.

PRICES INCLUDE P&P and VAT

B.A.R.T.G. RALLY

SUNDAY 12th SEPTEMBER 1993

SANDOWN EXHIBITION CENTRE, ESHER, SURREY.

EASY ACCESS BY CAR, PLENTY OF FREE PARKING,
WELL SIGNPOSTED, TALK-IN S22, PLENTY OF TRADER,
S.I.G. & LOCAL A.R.G. STANDS IN LARGE EXHIBITION HALL

***** BRING 'n' BUY *****

Admission: Adults £1.50 OAP's £1.00
Children Under 14 FREE (if accompanied by an adult)
Open: 10.30am to 5.00pm

ON-SITE CATERING: HOT AND COLD MEALS, SNACKS, BEVERAGES AND LICENCED BAR
Further details from: Peter Nicol, 38 Mitten Avenue, Rubery, Rednal, Birmingham. B45 0JB ☎ 021 453 2676

Welcome to the world of amateur radio in orbit. This month, I'm going to look at 'award chasing' for satellite users.

Just as with h.f. and v.h.f. terrestrial communications, certificates, diplomas and awards as well as a few 'specials' are available to those able to demonstrate their operating skills and achievements by satellite. The easiest and simplest satellite award is the Satellite Communicators Club Certificate, the SCCC.

The SCCC is available for making just one QSO via satellite! No forms or QSLs are required. Just send your two-way satellite QSO information details with an addressed envelope and \$2 to **AMSAT SCCC Manager, PO Box 27, Washington DC 20044, USA** and the award will be sent to you.

American Award

The 'Ten American Districts Award' (TAD) with satellite endorsement is sponsored by the **Lockheed ERC Amateur Radio Club, QTH W6LS, 2814 Empire Ave., Burbank, CA 91504, USA.**

To qualify for the TAD, you must produce evidence of satellite contacts with all ten USA call areas W1 to 0. (Don't just rely on the prefix - be sure that they are in the call area districts, as I often work W6s in Florida, W0s in Texas and the like).

Make a list of your ten contacts. Show all details and pertinent information, particularly that they were obtained through satellite QSOs. Get your list validated and signed by two other amateurs or your local radio club secretary, and send with \$2 to the address above.

Popular Awards

The popular WAC, WAS and DXCC awards from the ARRL are all available for through-satellite QSOs. For WAC (Worked All Continents) you should submit proof of your contact with a station in each of the world's six regions, i.e. Europe, North

This month Pat Gowen G3IOR covers the topic of awards given for satellite operating in full, and explains how you may obtain some of the many diplomas, certificates and awards available.

America, South America, Asia, Africa and Oceania.

You should ensure that each QSL submitted has indication of an actual QSO for a satellite. For example: mark it as 'via OSCAR-13 Mode B', or frequency 145/435MHz, 29/145MHz, etc., and then send it to the ARRL, address supplied below.

For WAS (Worked All States) you should provide evidence of QSLs of satellite contacts with a station in each of the 50 USA states, including KL7 and KH6. The complete rules and the application form are available for a self addressed envelope plus two IRCs sent to **The American Radio Relay League, 225 Main Street, Newington, CT 06111, USA.**

To get DXCC Satellite, you need evidence of satellite QSOs with 100 different established countries. Whilst this award was extremely difficult via the earlier satellites, it's now very easy by using OSCAR-13.

The first step is to send an addressed envelope and two IRCs or \$1 to the ARRL (QTH above). You should ask for forms CD-164 and CD-253 on which you must establish and list the different country contacts.

The Satellite DX Achievement Award DX-1000 also comes from the ARRL.

For this you need to accumulate 1000 points. Each different continent gives 250 points, and each country 50 and each new station ten. Thus, your very first contact, coming into each category, starts you off with 310 points!

No fees are required from ARRL members, but costs must be covered for others. Sending an addressed envelope plus two IRCs to ARRL QTH will provide the form and full details.

Awards from AMSAT

The AMSAT organisation sponsor several awards. These include the AMSAT OSCAR Award, the AMSAT Sexagesimal Award and the

Fig. 1: A collage made up from some of the handsome certificates and awards available to satellite operators, prepared by Pat Gowen G3IOR.

OSCAR Century Award, presented for 20, 60 and 100 satellite QSOs respectively.

A qualifying card is one showing a satellite QSO with a different country, a different US state or Canadian call area in any combination. You can get endorsements for additional steps of ten in all levels.

You must send to AMSAT (QTH as above), your QSL cards plus return postage costs with \$3.50 if you're an AMSAT member. But it's \$5.00 if you're a non-member.

The AMSAT organisation also provides the ZRO memorial award. This award is in honour of Kaz Dexter K2ZRO, who was AMSAT's treasurer.

The ZRO award is really a test of your receiver and antenna engineering skills and your discrimination ability. Periodically, at times and frequencies given out on the numerous AMSAT Nets, (or you can send an addressed envelope with two IRCs to **AMSAT ZRO Test, PO Box 177, Warwick, NY 10990, USA** for details) a station is set up to transmit code groups through OSCAR-13, with a series of ever-decreasing power levels.

The ZRO test station runs from level 1, full nominal power though -3dB steps to level 9, which is very tiny. You can easily get a certificate for level 1, but for level 9 you need a very good

station set up and keen ears to boot!

The **AMSAT South Africa Organisation, Box 13273, Northmead 1511, Republic of South Africa**, produce the Satellite Communication Achievement Award. It's awarded for 25 two-way contacts through the Phase II satellites (Any RS satellite, the Fujis, or OSCARs 6, 7, and 8, but not OSCAR-10 or 13, as they are Phase III satellites). For this award you must send your fee in South African Rands.

Our own **AMSAT-UK** organisation provide an award for working UK Counties. The form needed and the details are available from the General Secretary, **Ron Broadbent G3AAJ, AMSAT-UK, London E12 5EQ.**

Any Other Awards?

The awards I've mentioned, are all the shack wall adornments that I know of. But if you have news on any others, please let me know for future columns.

That's the lot for this month's look at amateur radio in orbit. See you next month, and don't forget that you can write to me at 17 Heath Crescent, Hellesdon, Norwich, Norfolk NR6 6XD.

E N D

This month David Butler G4ASR has news of DX openings on both the 50 and 144MHz bands. David also reports that conditions were very good during June, and that stations were worked via a number of propagation modes.

Report

The main DX propagation mode during the summer months is Sporadic-E (Sp-E). During June it occurred on the 50MHz band every single day.

Sporadic-E also occurred on the 144MHz band (in the UK) on June 8, 10, 11, 12, 13 and 20. However, I'll concentrate on the 144MHz band now, and cover the 50MHz openings later.

Last month, I described the Sp-E opening to Greece on May 12. Reports indicate that there were actually two active areas, one over north-eastern Italy, and one about 400km south-east of that.

Northern Area

The more northern area of Sp-E was supporting a path from the UK to southern Italy. The southern area was supporting a path from Switzerland to Greece.

It's quite probable that the station of SV3KH and other SV operators were worked via a little 'chordal-hop' between the two areas which were ideally placed. Incidentally both areas displayed some westwards drift, in excess of 100kph, the northern area drifting more rapidly than the southern patch.

The first Sp-E opening of the month, on June 8, was not widely reported. **Jim Smith G00FE** (I090) worked three OK stations and one OM station between 0907-0922UTC.

At 1057UTC Jim was also fortunate to work SV2JL (KN10). At exactly the same times **Silvio Rua IW1AZJ** (JN35) was also enjoying the propagation. He worked into LA and OZ between 0910-0920UTC during the first opening and later into HA, YO and YU between 1020-1050UTC.

Two days later, on June 10, an excellent opening occurred during the evening between 1515-1915UTC. It enabled contacts to be made from the UK with large parts of Europe from Poland through Italy, Malta and around to Spain.

Sporadic-E Reports

For your Sporadic-E reports, I'll start with details from Scotland and the first comes from **Paul Bradbeer GM7GUC** (I086). Paul missed the beginning of the opening, but was aware that something was brewing when Italian v.h.f. Band II broadcast stations could be heard on his car radio.

Arriving at his home QTH, a quick check by Paul revealed that the 144MHz band was wide open to the south-east. After working one station (his first via Sp-E) he decided to go out portable from a local hilltop with an Icom IC275-H and a 13-element Yagi.

Fortunately the band was still open, and stations were contacted in DL, HA, I, OE, OM, YU and 9A. The best DX worked was YU1EV and YU1LA, both in locator KN04.

Ray James GM4CXM (I075), found the band open when he arrived home. Between 1550-1912UTC he worked stations in 41 locator squares.

Ray made a total of 110 contacts, with stations situated in EA, EA6, F, HA, I, OE, OM, S5, YO, YU, 4N, 9A and 9H. The Maltese station 9H1AP (JM75) was at a distance in excess of 2600km! Ray wonders if anyone in GM has worked 9H before?

Propagation extended into Northern Ireland. **Noel Moore G17CMC** (I074) reports that in addition to himself, G11CET, G11JLA, G11JUS, G14EIZ, G14KSO and G14OWA were also getting in the action. Noel uses 50W and a 7-element Cushcraft Yagi, and managed to make 55 s.s.b. contacts in 10 countries.

Although I didn't receive any reports from the Republic of Ireland I did get packet radio messages from IW1AZJ and S59AX. Between them, they mentioned working EI3GE, EI4AEB, EI4CI, EI4HG, EI5FK, EI7BFB, EI7HP, EI8GQ and EI9HW.

Moore DX

Rob Moore GW0MOH (I083) has only been active on the 144MHz band for a few months. And the first DX he worked was a YU station in the Sp-E opening on June 8.

On 144MHz Rob runs an FT-290, a 30W amplifier and a 5-element Jaybeam Yagi at 8m above ground. In the opening on June 10, he made 18 contacts in 9 countries.

Having whetted his appetite for DX, Rob is planning to replace the antenna with a 13-element Tonna Yagi and change the UR76 feeder. He's also going to complete the 300W 4CX250B amplifier.

In my propagation log for June 9 I wrote "It's going to be good tomorrow"! This was based on my perceptions that the 50MHz band had been particularly good that evening.

Sure enough, when I checked the 50MHz band at 0600UTC on June 10 it was 'bubbling'. This is an indicator to me that indeed it was to be a good day.

The opening on the 144MHz band started at my QTH (I081) at 1520UTC, and finished abruptly at 1915UTC. Unfortunately a thunder storm and intense rain static made me close down for nearly two hours.

In the remaining time I made 54 s.s.b. QSOs with stations in DL, EA, HA, I, LZ, OE, OK, OM, S5, SP, UB, YO, YU and 9A. The best DX contacts were with LZ2WY (KN23) 2284km, RB5GU (KN69) 2529km, UB5BDC (KN29) 1982km and Y03JWV (KN34) at 2358km.

Down on the south coast of England **Jim Smith G00FE** (I090), runs a Kenwood TR-751E, a 170W amplifier and a 12-element Yagi. Jim made contact with stations in 8 countries, the most notable being UB5BAE (KN29).

Also on the south coast, **Steve Damon G8PYP** (I090), managed to catch a few minutes of the opening. He worked HG8QG, S51OT,

LZ3UF, 9A1CCY and 9A1EZA.

Finally it's over to the east coast to the QTH of **John Regnault G4SWX** (J002). He made a total of 42 s.s.b. QSOs between 1614-1916UTC with stations in eight countries.

Most of John's QSOs on June 10 were with stations in Italy. But contacts were also made with LZ2WY, LZ3UF, UB5BDC and Y03LEA.

Another Opening

Another opening on the 144MHz band occurred on June 11 between 0630-0900UTC. It was a little patchy, but operators on the western side of England reported contacts with stations in I, S5, T9, YU and 9A.

It was a similar situation on the following day, June 12. Between 0900-0945UTC contacts were made by stations in southern England with I and IT9.

There was also a good opening on June 13 between 0946-1040UTC. I detected it simply by having my receiver tuned to 144.300MHz and having the antenna pointing towards the south-east.

At 0946UTC up popped HA9RC (KN08). A quick contact was made and then I went on to make 33 contacts with stations in HA, OK, OM and YO.

The station of **John G4SWX**, had pretty much the same results. John made 25 s.s.b. contacts with stations in HA, I, OE, OM and YO.

Later in the morning, around 1114UTC, there was a brief opening to northern Italy. Unfortunately, very little seems to have been worked.

The last 144MHz Sp-E opening in June, was recorded on the 20th. It was an early morning event, from 0715-0815UTC. At the beginning of the opening the path extended into Greece.

A number of operators in J001 and J002 worked SV1BRL/A and SV8JE (KM08). However after a few minutes the propagation path had shortened, and

contacts were made with the more usual area around Italy and Yugoslavia.

Tropospheric Openings

Now we'll take a look at tropospheric openings. During some of the Sp-E events, and at other times throughout the month of June, the v.h.f. bands were in excellent shape via tropospheric enhancement.

The tropo openings in June caused some confusion. For example, some stations reported working German stations, during Sp-E openings.

To sum up, during June the v.h.f. and u.h.f. bands were open to Denmark, Norway, Sweden, Germany, Switzerland, southern France and Spain. The locator map, Fig. 1, shows the DX worked from the QTH of G4SWX via Sp-E and tropo during June. It certainly was a good month!

The 50MHz Band

As I've already mentioned, Sp-E propagation was prevalent every day on the 50MHz band during the month of June. I haven't space to give details of the multitude of contacts made, you'll just have to assume that every country in Europe with a 50MHz allocation was worked many times from the UK!

While on the subject of countries, it reminded me about some letters I've received asking for details of all those new prefixes. So, to help, I've made up a chart, Fig. 2, which should explain what you've been working recently on the 50MHz band and perhaps on the 144MHz band too.

During June, some of the rarer European stations worked from the UK included C31HK (JN02). He's always to be found on 50.203MHz. There was also CU1EZ (HM76) and an appearance of HV4NAC (Vatican City) within the Italian allocation.

The station of JX3EX (IQ50) on Jan Mayen was reported by G7LNO on June 15 at 1737UTC. Also, OY9JD (IP62) was worked on a number of occasions.

Activity from Greece has now increased with many stations being reported from SV1. There was SV5TS (KM46), SV7CO (KN20) and SV8JE (KM08).

Activity from eastern Europe was also high. Many operators reported working EV5M (K042) the expedition by DL5BAC and EV8A/EV9A operating from various

locators including K032, K042, K043 and K044.

The stations of UC2AA (K033) and RU1A (KP40) were in much demand. Some were even luckier and managed to find RA3YO (K078) and UB5BW.

A little further afield is the continent of Asia. From there, the stations of 4X11F and 4Z4TT (KM72) provided the DX. The beacons OD5SIX (KM74) on 50.079MHz and 5B4CY (KM64) on 50.499MHz were also copied.

African Continent

It was also possible to work the African continent in June. The easiest way of accomplishing this was to work the various CN8 or EH9 stations on the band.

Other African stations of note included CT3FT (IM13), EH8ACW and EA8/DJ30S. However, you should note that the latter expedition may well turn out to be an invalid operation.

The beacons EA8SIX (50.075MHz) and ZD8VHF (on 50.032MHz) were heard on a few occasions. But, the only 'real' African stations to be found on the 50MHz band were from Malawi.

Ken G4IGO (IO80), worked 7Q7JL on June 13 around 1900UTC. At my station in Herefordshire, I found 7Q7LA (KH75) and 7Q7RM (KH74) both on c.w. in an opening between 1650-1745UTC on June 26.

North America

And if all the activity I've mentioned on 50MHz wasn't enough, there were the multi-hop Sp-E openings to North America! Although they weren't spectacular there were a number of them.

The first North American QSO to be reported was on June 5. This was when Ted Collins G4UPS (IO80) heard VE1XDX and VE1ZZ at 2142UTC.

The band had been open from Portugal to the USA 25 minutes earlier. The next opening occurred on June 11 between 1830-2015UTC and seemed to favour stations located in northern England.

Stations reported being worked on June 11 included K1DAT, K1TOL, KM1H, WA1OUB, W1DU and W1JR. Dave Ackrill G0DJA (IO93) was very pleased to contact VE1MQ as he was only running 5W into a 5-element Yagi.

Later in the evening of June 11, at 2110UTC, the VO1ZA beacon (50.040MHz)

Fig. 1: Map showing contacts made by G4SWX during June (see text).

was heard by Neil Carr G0JHC (IO83) and at 0012UTC on June 12 he heard S59AM working K8WHZ.

Statistical Data

The statistical data on 50MHz, will show that the transatlantic path will normally open (provided the right conditions are present!) between 1900-0000UTC. There's a minor peak between 1400-1700UTC.

Despite this, events on June 12 were such that it should teach you a lesson not to put all your faith into statistics! The first report

These included AB4J (EM64), KA2DRH (EM64), KB4UG (EM86), KC4IS (EM76), KC4YO (EM75), W4CMA (EM74) and WA4CQG (EM72). The opening closed around 2100UTC. A remarkable day!

The VO1ZA beacon in locator GN37 was heard on June 14 at 1955UTC. However, it was a brief opening and nothing seemed to have come of it.

Another event took place between 1900-2100UTC on June 25, although it was rather a patchy affair. At my QTH (IO81) contacts were made with K1TOL (FN53), KM1E (FN54), W1AIM (FN34), WA1OUB (FN43), VE1MQ

Fig. 2: New call signs for old after the changes in eastern Europe

New	Country	Old
ES	Estonia	UR

S5	Slovenia	YU3
T9	Bosnia	YU4
Z3	Macedonia	YU5
YU	Yugoslavia	YU

that something unusual was happening came at 0500UTC when NI2C (FN31) heard the GB3SIX beacon on 50.020MHz.

At 0945UTC Colin Morris G0CUZ (IO82), using only a dipole, heard K1TOL. A number of stations in the English Midlands then made contacts with stations situated in the W1 call area.

Later in the day at 1915UTC, the 50MHz band opened up again to allow contacts to be made with stations in the W4 call area.

(FN66) and VE1ZZ (FN74) between 1915-2105UTC. All of the signals were weak and exhibited much fading.

That's about it for this month. Please send your reports to me at Yew Tree Cottage, Lower Maescoed, Herefordshire, HR2 0HP or via packet radio @ GB7MAD or the DX Cluster system.

E N D

Panorama

PACKET

Roger Cooke G3LDI, brings you the latest news of Russian packet radio.

There is a lot of enthusiasm in Russia for packet radio, despite the difficulties in obtaining suitable equipment. Although it's really quite surprising to learn just how some of the modern rigs, such as the Icom 751 etc., are obtained over there.

There are several forwarding stations operating at present and traffic flows quite reliably on both 21 and 14MHz. My main forwarding partner in Moscow is **Leo Labutin UA3CR**.

Leo visited me in 1986 and took lots of information and some equipment back to Moscow. His was the first h.f. packet BBS and we've been forwarding traffic now for several years.

Unfortunately, Leo Labutin has been in poor health just lately and has been in hospital. Not to be separated from packet operation, he took a complete packet station with him and operated his h.f. station at home, via an v.h.f. link from his hospital bed. Such is his enthusiasm!

Several other stations have become active in Russia and I now forward (mostly on 21.105MHz) with **Misha (Michael) UA6LU**. Leo is normally active on another frequency but 'auto-QSY's to my nominal frequency, if he has traffic. For this he uses the Adventure Club call of **RK3KP**. The photograph, Fig 1, shows Leo at that station in Moscow, with h.f., v.h.f. and satellite links.

The station **RK3KP** forwards to **DK0MWX** and

SM5BK1 on a regular basis. The BBS call, **RK3KP-9**, is also available for **GB7LDI**, **SV1IW**, **IK1JNS**, **EA4BS**, **HB9JAM**, **4X1RU** and several USSR calls.

Also available for users on v.h.f. are the calls **RK3KP**, **RK3KP-1**, **RK3KP-2**. Channels 5-18 are used for forwarding

practically impossible to work with **MIR** over Moscow due to strong QRM from Europe, but over Africa Alain **TR8CA** can transfer more than 10K per pass.

A Holiday

Shown in the photo, Fig 2, is

Fig. 2: Left to right, **Misha UA6LU**, **Boris UA6LQ**, **Ken G0NKZ**, **Bob KC3VO** and **Igor UT4UX**.

to **RS3A** and **UA3CR**.

In future the plans are to scan the 3.5 and 10MHz bands for USSR users in the European part of the country. Leo's call, **UA3CR**, will still be available, and he has many interesting plans to use satellites and h.f. for forwarding.

Using h.f. p.s.k.

Misha UA6LU. On the far left, **Boris UA6LQ**, **Kenn G0NKZ**, **Bob KC3VO** and **Igor UT4UX**. Kenn and Bob took a holiday in Rostov-on-Don.

Kenn enjoyed the holiday so much, that he plans to return, together with his wife **G0SZO**, in 1994. Kenn runs an h.f./v.h.f. gateway on a daily basis for the locals at the

is between **RZ6LZB** in Taganrog on the coast of the Azov Sea and Rostov, a distance of 75km.

The Taganrog station uses modified p.m.r. type equipment on 14MHz with 9-ele Yagi antenna. Control is from a PC AT/286 with a home-made Baycom modem.

The modem is based on 4046 i.c.s with Baycom v1.4. software. When they have built other equipment, a full BBS will be set-up.

Obviously, with the availability of suitable radio equipment, a v.h.f. network is the next step and could be very useful. However, some of the distances involved could be prohibitive and may have to be done on the h.f. bands.

This month the featured packet BBS is **Misha's: SYSOP: UA6LU**, **Michael Bondarev**, P.O. Box 416 QTH: Rostov-on-Don, 344007, Russia

Computer: PC clone, 640 KB RAM, 21Mb hard disk, 2 ports and 9 channels (see Table 1 for more details). Software: **FBB Release 5.14d**.

Well, that's it for this month, next session, I shall be giving some more details from Rostov-on-Don, together with some more

Fig. 1: **Leo Labutin UA3CR** at the Adventure Club Station in Moscow.

forwarding has been very popular in the Pacific area for the last few years and at 1200baud it represents quite an improvement on the 300baud links. The link, of course, must be good enough to support it in the first place.

Leo also has regular skeds with **U2MIR** via the **TR8CA** node and exchanges information with **Musa**. It is

Worthing Radio Club, to keep in touch with Rostov.

Boris UA6LQ, runs a BBS in Rostov to feed traffic to Africa and the Middle East. He has a v.h.f. Gateway to **Misha UA6LU**. Misha has been forwarding to Western Europe and also v.h.f. links.

The latest news from Misha, is that he has now established the first v.h.f. city to city packet link in Russia (Leo uses v.h.f. over about 20km but all in Moscow districts). The link

pictures. My thanks go to **Kenn G0NKZ**, for the photographs. It looks a very nice place for a holiday!!

73 and happy packeting - Roger, G3LDI @ GB7LDI QTHR.

E N D

This month Peter brings you news of changes to the BBC's French Service, satellite testing and stations to watch out for.

Round-up

BROADCAST

Welcome once again to our monthly look at the world of short wave listening. I start this month with news of the BBC's French Service that closed somewhat unexpectedly, on 2 July.

The BBC service reduced some months ago from short wave covering the whole of French-speaking Europe to medium wave transmissions on 648kHz, which reached just about to Paris, and dwindling audiences meant that the service was not cost effective.

While the French Service to Africa remains on short wave, European output has adopted a new approach. A 24-hour-a-day music and news service has come into operation, fed to radio stations in France by digital satellite link. The stations pay a fee, depending on how much of the output they take, and the BBC can then be heard with CD quality on f.m. in cities from Mulhouse to Lyon and Paris to Marseille.

Meanwhile the much-vaunted *BBC for Europe* trilingual service on 648kHz is now down to two languages, just English and German. The monthly programme guide, *BBC Worldwide*, has not yet caught up with the change: the August issue still shows French on 648kHz!

The Voice of America has announced that its German language service will close in October of this year, and cuts are likely to Portuguese, French and Spanish services. Meanwhile there has been speculation in the press in the United States and in Eastern Europe that some of Radio Free Europe's services may be cut soon. The rumours have been denied

by RFE in Munich, but it is debatable how much longer RFE and sister station Radio Liberty can survive without merging with the Voice of America.

Country To Watch

Nigeria could be a country to watch at present. As this column went to press, the country's president, General Babangida, had just annulled the first multi-party elections in years, and prevented the candidates who stood for the presidency from taking part in new elections.

It used to be relatively easy to tune to the Voice of Nigeria here in Europe. They used a 15MHz channel early in the morning (which was monitored by various authorities in case a coup had occurred overnight).

Transmitter faults mean that only an African service is operated, in addition to the Radio Nigeria domestic

service. English to Africa is heard at

1700 to 2305 closedown on 4.99 and 3.326MHz.

Further north in Africa, the Voice of America's new relay station in Morocco started operations at the end of June. The new site is larger than the existing Tangier site and will eventually boast ten short wave transmitters. Only two are operational at present,

English language news bulletin at 2030 GMT on 918kHz which gives good reception in northern Europe, despite a Spanish station on the same channel. Radio Yugoslavia's international service can be heard with English at 0030 on 11.87 and 9.58, at 0130 to 0200 on 9.58, at 1400 (with other languages) on 9.505, at

and can be heard broadcasting English and west African languages at 1600 to 2200 on 15.41 and 17.785 MHz. The introduction of the new transmitting facility means that broadcasts from the US site at Greenville will stop.

Satellite News

In satellite news, Astra 1C has been testing since the beginning of June, although the satellite was not co-located with Astra 1A and 1B. If you have a steerable dish, try to find the satellite at around 18° East and tune to 10.920GHz.

Radio France Internationale will be joining the international broadcasting community on Eutelsat in the autumn. Further details will be known shortly.

In the meantime, you can tune to the English service of RFI at 1230-1300 on 15.365, 15.195, 15.155, 11.67 and 9.805; at 1400 to 1500 on 17.695 and 17.65; and at 1600 to 1700 on 17.85, 17.795, 17.62, 15.53, 11.705 and 6.175MHz.

Radio Slovenia has an

1830 on 17.71, 7.20 and 6.10MHz, at 2100 on 9.505, 7.20 and 6.10 and finally at 2130 on 9.72 and 6.10MHz.

The Voice of Turkey in Ankara could be a station to watch as the Kurdish resistance movement continues to cause disruption to Turkish interests across Europe. English can be heard at 0300-0400 on 9.445 to North America; at 1230-1300 on 9.675 to Asia; at 2000-2100 on 9.445 to Europe and finally at 2200 to 2300 on 11.895, 9.445 and 7.185 to Europe, the Middle East and North America.

That's all I've room for this month, so until next time good listening and don't forget to keep sending your letters to me via the PW offices.

0455 to 0700, from 0900 to 1100, 1500 to 1700 and 1900 to 2100, all on 7.255MHz. Other languages include French, Hausa, Swahili and Arabic.

The domestic schedule with multilingual programming is: 0430 to 1000 on 4.99 and 3.326 MHz; 1000 to 1700 on 7.285 and 4.99 and

Airband listening

AOR - Specialist manufacturer of
communications equipment

AR1500EX - One of many receivers & products produced by AOR. The very compact AR1500EX hand-held wide range receiver offers all mode reception including SSB as standard. Newly designed printed circuit boards have been incorporated to ensure this new version offers the very best performance. Frequency range is 500 kHz ~ 1300 MHz without gaps, all mode reception AM, FM(N), FM(W) & SSB (USB, LSB & CW - with BFO). The AR1500EX offers full coverage of the VHF, UHF and Shortwave Airbands plus Broadcast, Amateur band, Utility services etc. Many accessories included: NiCad pack, Charger, Dry battery case, DC lead, Soft case, Belt hook, DA900 VHF-UHF aerial, SW-wire aerial, Earphone, Comprehensive Operating manual... **Suggested Retail Price of £349.00 inc VAT.** (UK Carriage free)

New ABF~125

VHF Air Band Filter for better strong signal performance...
The ABF125 is a receive bandpass filter especially designed to improve the strong signal handling characteristics of receivers for VHF commercial Airband listening. The ABF125 is suitable for connection to most airband and wide range receivers on the market, it is not designed just for AOR branded products. The addition of this filter to the aerial signal path will provide additional selectivity which will enable the receiver's circuitry to cope much more easily with strong interfering signals such as Band-2 Stereo or Shortwave broadcast transmissions which can be manifest in many ways such as 'hissing', mixing of many signals together, music breakthrough and desensitisation of the receiver. **Suggested Retail Price £24.50 inc VAT.** (UK Carriage £1.50)

Many other receivers and products are available from the AOR range. Please phone or send a large S.A.E. (34p) for full details. Dealers throughout Europe... fast mail order available for direct orders.

AOR UK Ltd is a subsidiary of AOR Ltd Japan. E&OE.

The PW Shopping Arcade

Welcome to the *Practical Wireless* 'Arcade'. In this section of the magazine, you'll be able to find all those important services 'under one roof' - just like the shopping arcades you see in the High Street.

Let your eyes 'stroll through' the Arcade every month and you'll find all departments open for business including: The Book Service, PCB Service, Binders and details of other *PW* Services. Make a regular habit of 'visiting' the Arcade, because in future, you'll have the chance of seeing special book offers and other bargains. And don't forget, this Arcade is open wherever you're reading *PW*!

Services

Queries:

Practical Wireless,
PW Publishing Ltd., Arrowsmith Court,
Station Approach,
Broadstone, Dorset BH18 8PW.

We will always try to help readers having difficulties with *Practical Wireless* projects, but please note the following simple rules:

- 1: We **cannot** deal with technical queries over the telephone.
- 2: We **cannot** give advice on modifications either to our designs, to commercial radio, TV or electronic equipment.
- 3: All letters asking for advice **must** be accompanied by a stamped self-addressed envelope (or envelope plus IRCs for overseas readers).
- 4: Make sure you describe the problem adequately, with as much detail as you can possibly supply.
- 5: Only one problem per letter please.

Back Numbers

Limited stocks of many issues of *PW* for past years are available at £2.00 each including post and packing. If the issue you want is not available, we can photocopy a specific article at a cost of 85p per article or part of article.

Over the years, *PW* has reviewed many items of radio related equipment. A list of all the available reviews and their cost can be obtained from the Editorial Offices at Arrowsmith Court, Station Approach, Broadstone, Dorset BH18 8PW for a stamped self-addressed envelope.

Binders

PW can provide a choice of binders for readers' use. Plain blue binders are available, each holding 12 issues of any A4 format magazine. Alternatively, blue binders embossed with the *PW* logo in silver can be supplied. The price for either type of binder is £5.50 each (£1 p&p for one, £2 for two or more).

Send all orders to PW Publishing Ltd., FREEPOST, Arrowsmith Court, Station Approach, Broadstone, Dorset BH18 8PW.

Constructional Projects

Components for *PW* projects are usually readily available from component suppliers. For unusual or specialised components, a source or sources will be quoted.

Each constructional project is given a rating to guide readers as to the complexity.

Beginner: A project that can be tackled by a beginner who is able to identify components and handle a soldering iron.

Intermediate: A fair degree of experience of building radio or electronic projects is assumed, but only basic test equipment will be needed to complete any tests and adjustments.

Advanced: A project likely to appeal to the experienced constructor. Access to workshop facilities and test equipment will often be required. Definitely not for the beginner to attempt without assistance.

Mail Order

All items from *PW* are available Mail Order, either by post or using the 24hr Mail Order Hotline (0202) 659930. Payment should be by cheque, postal order, money order or credit card (Mastercard and Visa only). All payments **must** be in sterling and overseas orders **must** be drawn on a London Clearing Bank. Practical Wireless, September 1993

PW PCB Service

Enquiries, orders and remittances should be sent to:

Badger Boards, 87 Blackberry Lane, Four Oaks, Sutton Coldfield B74 4JF. Tel: 021-353 9326, marking your envelope PW PCB Service. Cheques should be crossed and made payable to **Badger Boards**. When ordering please state the article title as well as the board number. Please print your name and address clearly in block capitals and do not enclose any other correspondence with your order.

We have talked to Badger Boards about the club and group discount on orders, and they are happy to continue this service. Club secretaries and group leaders should contact Badger Boards direct for the new discount rates. Please allow 28 days for delivery.

AMSTRAD REPAIRS AND SECOND USER SALES

SECOND USER EQUIPMENT Prices have dropped yet again so I am now offering starter systems from as little as £100 (at this rate the delivery will soon cost more than the computer). Now is an ideal time to get in to packet radio or get a second PC for the kids.

UPGRADES Our very popular 3.5" disk drive upgrade kits for PCW 8256/8512/9512 and PC1512/1640 are still available. A phone call will get you advice and a price.

REPAIRS Phone for a diagnosis and estimate. 73's John G3TLU

UNIT 5, STANLEY HOUSE, STANLEY AVENUE, WEMBLEY, MIDDX HA9 4JB

PACTOR Why pay over £200 to join in the fun of the latest HF digital mode? This user friendly system includes all the unique PACTOR features like data compression, Memory-ARQ and automatic 100/200 Baud operation. Pactor is much better on HF than Packet Radio. Complete RX & TX system for IBM PC/AT (286 or faster)

AMTOR + PACTOR + RTTY Modem and G4BMK software: ONLY £129
 Add PACTOR to your existing BMK-MULTY: ONLY £35
 State call sign, disk size, and 9 or 25 pin RS232

Introducing The Practical Wireless Tool Club

Finding suitable specialist tools to help us in the radio hobby can be very difficult. Not everyone can get to radio rallies and shows, and even then, you've really got to search for that 'special' tool. To help overcome the problem, PW is introducing its own Tool Club. From time to time, and whenever we find a particularly useful tool, we intend to offer it to readers.

This month's introductory offer is a really useful, miniature (and very neat) reversible ratchet socket screwdriver set. Attractively manufactured in steel, this set offers 5 and 7mm screwdriver blades, plus a variety of crosshead drives for screw types that frequently appear in radio and electronics work. Particularly useful are the 3, 4, 5, and 6mm Allen Key sockets. All the various adapters are kept safe in a special semi-flexible plastics holder. In use, the small size and neat construction of the reversible ratchet-wrench (it's only 110mm long) will prove to be very useful for getting into those awkward spaces in radio equipment. Additionally, the extra torque should help shift those often difficult-to-move crosshead screws and Allen Key headed screws.

You can buy your Reversible Ratchet Screwdriver Set for only £9.50, inclusive of postage and packing.
 Add versatility to your tool box - join the **PW Tool Club Today!**

To: **Practical Wireless Tool Club (September), FREEPOST, Arrowsmith Court, Station Approach, Broadstone, Dorset BH18 8PW.**

Please send me **Reversible Ratchet Screwdriver Set/s @ £9.50** inc. P&P UK. Overseas readers please apply for prices.

B O O K S

The books listed have been selected as being of special interest to our readers. They are supplied direct to your door. Some titles are overseas in origin.

HOW TO ORDER. PLEASE USE THE ORDER FORM ON PAGE 65.

POST AND PACKING; add £1.00 for one book, £2.00 for two or more books, orders over £40 post and packing free, (overseas readers add £1.75 for one book, £3.50 for two or more for surface mail postage) and send a postal order, cheque or international money with your order to **PW Publishing Ltd, FREEPOST, Arrowsmith Court, Broadstone, Dorset BH18 8PW.** Please make your cheques payable to PW Publishing Ltd. Payment by Access, Mastercard, Eurocard or Visa also accepted on telephone orders to Poole (0202) 659930. Books are normally despatched by return of post but please allow 28 days for delivery. Prices correct at time of going to press. Please note: all payments must be made in Sterling.

LISTENING GUIDES

AIR BAND RADIO HANDBOOK

(4th Edition)

David J. Smith

Extensively revised & updated (October 1992). Air band radio listening enables you to listen-in on the conversations between aircraft and those on the ground who control them, and is an increasingly popular and fascinating hobby. A new chapter on military air band has been added. The author, an air traffic controller, explains more about this listening hobby. 190 pages. £9.99

DIAL SEARCH 1992/94

George Wilcox

The listener's check list and guide to European radio broadcasting. Covers m.w., l.w., v.h.f. & s.w., including two special fold-out maps. Also includes a full list of British stations, a select list of European stations, broadcasts in English and 'Making the Most of Your Portable'. 46 pages. £4.25

FLIGHT ROUTINGS 1993

Compiled by T.T. & S.J. Williams

This guide was produced with the sole aim of assisting airband listeners to quickly find details of a flight, once they have identified an aircraft's callsign. Identifies the flights of airlines, schedule, charter, cargo and mail, to and from the UK and Eire and overflights between Europe and America. 122 pages. £5.95

FERRILL'S CONFIDENTIAL FREQUENCY LIST 8th Edition

Compiled by Geoff Halligey

Spirally bound, this easy-to-use reference book covers 1.6 - 28MHz in great depth, all modes and utility services, with new reverse frequency listing showing every known frequency against each callsign, who's using what frequency and mode, what's that callsign? These are some of the answers this book will help you find. 544 pages. £17.95

GUIDE TO FACSIMILE STATIONS

13th Edition

Joerg Klingenfuss

The new edition of this super reference book covers the world's facsimile stations, their frequencies and methods of working. There is section covering the equipment needed to receive FAXes over the radio. To give you an idea of what is available there are many pages of off-air received FAX pictures. 392 pages. £18.00

GUIDE TO UTILITY STATIONS 11th Edition

Joerg Klingenfuss

This book covers the complete short wave range from 3 to 30MHz together with the adjacent frequency bands from 0 to 150kHz and from 1.6 to 3MHz. It includes details on all types of utility stations including FAX and RTTY. There are 19549 entries in the frequency list and 3590 in the alphabetical callsign list plus press services and meteorological stations. Included are RTTY & FAX press and meteor schedules. There are 11800 changes since the 10th edition. 534 pages. £24.00

HF OCEANIC AIRBAND COMMUNICATIONS 4th Edition

Bill Laver

HF aircraft channels by frequency and

band, main ground radio stations, European R/T networks and North Atlantic control frequencies. 31 pages. £3.95

INTERNATIONAL RADIO STATIONS GUIDE BP255

Peter Shore

As in 'Broadcast Roundup', his column in *PW*, Peter Shore has laid this book out in world areas, providing the listener with a reference work designed to guide around the ever-more complex radio bands. There are sections covering English language transmissions, programmes for DXers and s.w.l.s. Along with sections on European medium wave and UK f.m. stations. 266 pages. £5.95

INTERNATIONAL VHF FM GUIDE (THE) 7th Edition.

Julian Baldwin G3JMK & Kris Partridge G8AUU

This book gives concise details of repeaters & beacons world-wide plus coverage maps & further information on UK repeaters. 70 pages. £2.85

MARINE UK RADIO FREQUENCY GUIDE Bill Laver

A complete guide (reprinted January 1993) to the UK s.w. and v.h.f. marine radio networks. Useful information, frequency listings and the World Marine Coastal Phone Stations. 62 pages. £4.95

NEWNES SHORT WAVE LISTENING HANDBOOK

Joe Pritchard G1UQW

A technical guide for all short wave listeners. Covers construction and use of sets for the s.w.l. who wants to explore the bands up to 30MHz. Also covers the technical side of the hobby from simple electrical principles all the way to simple receivers. 276 pages. £15.95

POCKET GUIDE TO RTTY AND FAX STATIONS (THE)

Bill Laver

A handy reference book listing RTTY and FAX stations, together with modes and other essential information. The listing is in ascending frequency order, from 1.6 to 26.8MHz. 57 pages. £3.95

RADIO LISTENERS GUIDE 1993

Clive Woodyear

This is the third edition of this radio listener's guide. Simple-to-use maps and charts show the frequencies for radio stations in the UK. Organised so that the various station types are listed separately, the maps are useful for the travelling listener. Articles included in the guide discuss v.h.f. aeriels, ROS, the Radio Authority and developments from Blaupunkt. 56 pages. £2.95

SHORT WAVE INTERNATIONAL FREQUENCY HANDBOOK

Formerly the Confidential Frequency List and re-published in April 93, this book covers 500kHz-30MHz. It contains duplex and channel lists, callsigns, times and modes, broadcast listing and times. 192 pages. £9.95

SOUNDS EASY The complete guide to Britain's radio stations

Compiled by Ken Davies

A guide to the numerous local radio stations throughout the UK. If you do a lot of travelling this book is invaluable. Itemised by areas, it makes finding your kind of sounds easy. 52 pages. £2.95

VHF/UHF AIRBAND FREQUENCY GUIDE 4th Edition

A complete guide to civil & military airband frequencies including how to receive the signals, the frequencies and services. VOLMET, receiver requirements, aeriels and much more about the interesting subject of airband radio are included. 123 pages. £6.95

VHF/UHF SCANNING FREQUENCY GUIDE (THE)

This book gives details of frequencies from 26MHz to 12GHz with no gaps and who uses what. Completely revised and enlarged (February 1993), there are chapters on equipment requirements as well as antennas, the aeronautical bands, as well as the legal aspect of listening using a scanner. 156 pages. £9.95

WORLD RADIO TV HANDBOOK 1993

Country-by-country listing of f.l.w., m.w. & s.w. broadcast and TV stations. Receiver test reports, English language broadcasts. The s.w.l.s 'bible'. £15.95.

ANTENNAS (AERIALS)

AERIAL PROJECTS BP105

Practical designs including active, loop and ferrite antennas plus accessory units. 96 pages. £2.50

ANTENNA EXPERIMENTER'S GUIDE (THE)

Peter Dodd G3LDD

Although written for radio amateurs, this book will be of interest to anyone who enjoys experimenting with antennas. You only need a very basic knowledge of radio & electronics to get the most from this book. Chapters include details on measuring resonance, impedance, field strength and performance, mats and materials and experimental antennas. 200 pages. £8.90

ANTENNA IMPEDANCE MATCHING

Wilfred N. Caron

Proper impedance matching of an antenna to a transmission line is of concern to antenna engineers and to every radio amateur. A properly matched antenna as the termination for a line minimises feed-line losses. Power can be fed to such a line without the need for a matching network at the line input. There is no mystique involved in designing even the most complex multi-element networks for broadband coverage. 195 pages. £11.95

ARRL ANTENNA BOOK (THE)

16th Edition

A station is only as effective as its antenna system. This book covers propagation, practical construction details of almost every type of antenna, test equipment and formulas and programs for beam heading calculations. 789 pages. £14.50

ARRL ANTENNA COMPENDIUM (THE)

Volume One

Fascinating and hitherto unpublished material. Among the topics discussed are quads and loops, loop periodic arrays, beam and multi-band antennas, verticals and reduced size antennas. 175 pages. £9.50

ARRL ANTENNA COMPENDIUM (THE)

Volume Two

Because antennas are a topic of great interest among radio amateurs, ARRL HQ continues to receive many more papers on the subject than can possibly be published in *QST*. Those papers are collected in this volume. 208 pages. £9.50

ARRL ANTENNA COMPENDIUM (THE)

Volume Three

Edited by Jerry Hall K1TD

As the title suggests, this book is the third in the continuing series on practical antennas, theory and accessories produced by the ARRL. The book reflects the tremendous interest and activity in antenna work, and provides a further selection of antennas and related projects you can build. 236 pages. £9.50

BEAM ANTENNA HANDBOOK

W. I. Orr W6SAI & S. D. Cowan W2LX

Design, construction, adjustment and installation of h.f. beam antennas. The information this book contains has been compiled from the data obtained in experiments conducted by the authors, and from information provided by scientists and engineers working on commercial and military antenna ranges. 268 pages. £7.50

G-QRP CLUB ANTENNA HANDBOOK (THE)

Compiled and edited by P. Linsley G3PDL & T. Nicholson KA9WRI/GWOLNO.

This book is a collection of antenna and related circuits taken from *Sprat*, the G-QRP Club's journal. Although most of the circuits are aimed at the low-power fraternity, many of the interesting projects are also useful for general use. Not intended as a text book, but offers practical and proven circuits. 155 pages. £5.00

HF ANTENNA COLLECTION (RSGB)

Edited by Erwin David G4LOJ

This book contains a collection of useful, and interesting h.f. antenna articles, first published in the *RSGB's Radio Communication* magazine, between 1968 and 1989, along with other useful information on ancillary topics such as feeders, tuners, baluns, testing and mechanics for the antenna builder. 233 pages. £9.50.

INTRODUCTION TO ANTENNA THEORY (AN) BP198

H. C. Wright

This book deals with the basic concepts relevant to receiving and transmitting antennas, with emphasis on the mechanics and minimal use of mathematics. Lots of diagrams help with the understanding of the subjects dealt with. Chapters include information on efficiency, impedance, parasitic elements and a variety of different antennas. 86 pages. £2.95

NOVICE ANTENNA NOTEBOOK

Doug DeMaw W1FB

Another book from the pen of W1FB, this time offering "new ideas for beginning hams". All the drawings are large and clear and each chapter ends with a glossary of terms. It is written in plain language and you don't need to be a mathematician to build and erect the support structures that are presented in this book. 124 pages. £6.95

PRACTICAL ANTENNA HANDBOOK

Joseph J. Carr

As the name suggests, this book offers a practical guide to everything to do with antennas, from h.f. to microwaves. It also has sections on propagation, transmission lines, antenna fundamentals and a helpful introduction to radio broadcasting and communication. The book neatly balances a practical approach with the minimum of mathematics, good diagrams and a lively text. 437 pages. £20.95

SIMPLE LOW-COST WIRE ANTENNAS FOR RADIO AMATEURS

W. I. Orr W6SAI & S. D. Cowan W2LX

Efficient antennas for Top Band to 2m, including 'invisible' antennas for difficult station locations. Clear explanations of resonance, radiation resistance, impedance, s.w.r., balanced and unbalanced antennas are also included. 188 pages. £7.50

W1FB'S ANTENNA NOTEBOOK

Doug DeMaw W1FB

This book provides lots of designs, in simple and easy to read terms, for simple wire and tubing antennas. All drawings are large and clear making construction much easier. There is no high-level mathematics in this book, just simple equations only when necessary to calculate the length of an antenna element or its matching section. 123 pages. £6.95

WIRES & WAVES

Collected Antenna Articles from *PW* 1980-1984

Antenna and propagation theory, including NBS Yagi design data. Practical designs for antennas from medium waves to microwaves, plus accessories such as a.t.u.s, s.w.r. and power meters and a noise bridge. Dealing with TVI is also covered. 160 pages. £3.00

YAGI ANTENNA DESIGN

Dr James. L. Lawson W2PV

This book is a polished and expanded version of a series of articles first published in *Ham Radio* following on from a series of lectures by the author, who was well-known as the expert on Yagi design. Chapters include simple Yagi antennas, loop antennas, effect of ground, stacking and practical antenna design. 210 pages. £10.95

25 SIMPLE AMATEUR BAND AERIALS BP125

E. M. Noll

How to build 25 simple and inexpensive amateur band aeriels, from a simple dipole through beam and triangle designs to a mini-rhombic. Dimensions for specific spot frequencies including the WARC bands are also given. 63 pages. £1.95

25 SIMPLE INDOOR AND WINDOW AERIALS BP136

E. M. Noll

Designs for people who live in flats or have no gardens, etc., giving surprisingly good results considering their limited dimensions. Information is also given on short wave bands, aerial directivity, time zones and dimensions. 50 pages. £1.75

25 SIMPLE SHORT WAVE BROADCAST BAND AERIALS BP132

E R V I C E

E. M. Noll

Designs for 25 different short wave broadcast band aeriels, from a simple dipole through helical designs to a multi-band umbrella. Information is also given on short wave bands, aerial directivity, time zones and dimension tables that will help spot an aerial on a particular frequency. 63 pages. £1.95

25 SIMPLE TROPICAL AND MW BAND AERIALS BP145

E. M. Noll

Simple and inexpensive aeriels for the broadcast bands from medium wave to 49m. Information is also given on band details, directivity, time zones and dimensions. 54 pages. £1.75

MORSE

INTRODUCING MORSE

Collected Articles from PW 1982-1985

Ways of learning the Morse Code, followed by constructional details of a variety of keys including Iambic, Triambic and an Electronic Bug with a 528-bit memory as well as a practice oscillator and Morse tutor. 48 pages. £1.25

SECRET OF LEARNING MORSE CODE (THE)

Mark Francis

Updates for the Novice Licence. Designed to make you proficient in Morse code in the shortest possible time, this book points out many of the pitfalls that beset the student. 84 pages. £4.95

SATELLITES

NEWNES GUIDE TO SATELLITE TV

Derek Stephenson

This book, the 2nd edition, is a hard bound volume, printed on high quality paper. The author is a satellite repair and installation engineer and the book covers all information needed by the installation engineer, the hobbyist and the service engineer to understand the theoretical and practical aspects of satellite reception with dish installation and how to trouble-shoot when picture quality is not up to anticipated reception. Mathematics has been kept to a minimum. 284 pages. £12.95

SATELLITE BOOK (THE) - A complete guide to satellite TV theory and practice

John Breeds

This book deals almost exclusively with television broadcast satellites and is a comprehensive collection of chapters on topics, each written by an expert in that field. It appears to be aimed at the professional satellite system installer, for whom it is invaluable, but it will be appreciated by a much wider audience - anyone interested in satellite technology. 280 pages. £30.00

SATELLITE EXPERIMENTER'S HANDBOOK (THE) 2nd Edition

Marin Davidoff KZUBC

The book is divided into four main sections - History, Getting Started, Technical Topics and Appendices. It provides information on spacecraft built by, and for, radio amateurs. In addition, it discusses weather, TV-broadcast and other satellites of interest to amateurs. 313 pages. £14.50

SATELLITE TELEVISION A layman's guide

Peter Pearson

Pictures from space, that's what satellite television is all about. Orbiting satellites, 35000km high, receive TV signals from stations on the earth and re-transmit them back again. This book explains all you need to know to set up your own satellite TV terminal at home, dish and accessories, cable and tuner. 73 pages. £1.00

SATELLITE TELEVISION INSTALLATION GUIDE 2nd Ed

John Breeds

A practical guide to satellite television. Detailed guide-lines on installing and aligning dishes based on practical experience. 56 pages. £13.00

WEATHER SATELLITE HANDBOOK

4th edition

Or Ralph E. Teggart WB800T

This book explains all about weather satellites, how they work and how you can receive and decode their signals to provide the fascinating pictures of the world's weather. Plenty of circuit diagrams and satellite predicting programs. 192 pages. £14.50

AMATEUR RADIO

ALL ABOUT VHF AMATEUR RADIO

W. I. Orr W6SAI

Written in non-technical language, this book provides information covering important aspects of v.h.f. radio and tells you where you can find additional data. If you have a scanner, you'll find a lot of interesting signals in the huge span of frequencies covered, 100-300MHz & 50, 470, 902 & 1250MHz bands. 163 pages. £9.50

AMATEUR RADIO CALL BOOK (RSGB)

1993 Edition

Over 60000 callsigns are listed including EI stations. Now incorporates a 122-page section of useful information for amateur radio enthusiasts and a new novice callsign section. 444 pages. £9.50

ARRL HANDBOOK FOR RADIO AMATEURS (THE) 1993

This is the 70th edition of this handbook and contains the best information from previous issues. New for this edition is some information on feedback-loop design for power supplies, a new gel-cell charger project, updates on antenna systems and new coverage of baluns, propagation programs are compared and colour SSTV and telephone FAX machines are also covered. Finally there's a new section on 'for the workbench' with new projects for the reader to build. 1214 pages. £18.95

ARRL OPERATING MANUAL (THE)

Another very useful ARRL book. Although written for the American amateur, this book will also be of use and interest to the UK amateur. Topics covered range from short wave listening through operating awards to repeaters, operating and satellites. 684 pages. £12.95

ARRL SATELLITE ANTHOLOGY (THE)

The best from the Amateur Satellite News column and articles out of 31 issues of QST have been gathered together in this book. The latest information on OSCARs 9 through 13 as well as the RS satellites is included. Operation on Phase 3 satellites (OSCAR 10 and 13) is covered in detail. 97 pages. £5.95

ARRL UHF/MICROWAVE EXPERIMENTER'S MANUAL (THE)

Various Authors

A truly excellent manual for the keen microwave enthusiast and for the budding 'microwaver'. With contributions from over 20 specialist authors. Chapters covering techniques, theory, projects, methods and mathematics. 446 pages. £14.50

COMPLETE DX'ER (THE) CD

Bob Locher

This book covers equipment and operating techniques for the DX chaser, from beginner to advanced. Every significant aspect of DXing is covered, from learning how to really listen, how to snatch the rare ones out of the pile-ups and how to secure that elusive QSL card. 204 pages. £7.95

HINTS AND KINKS FOR THE RADIO AMATEUR

Edited by Charles L. Hutchinson and David Newkirk

A collection of practical ideas gleaned from the pages of QST magazine. Plenty of projects to build, hints and tips on interference, c.w. and operating and snippets of information from amateurs who've tried and tested the idea. 129 pages. £4.95

HOW TO PASS THE RADIO AMATEURS' EXAMINATION (RSGB)

Clive Smith G4FZH and George Benbow G3HB

The background to multiple choice exams and how to study for them with sample RAE paper for practice plus maths revision and how to study for the exam. The majority of this book is given to sample examination papers so that candidates can familiarise themselves with the examination and assess their ability. 88 pages. £6.70

INTRODUCTION TO AMATEUR COMMUNICATIONS SATELLITES (AN)

BP290. A. Pickard

This book describes several currently available systems, their connection to an appropriate computer and how they can be operated with suitable software. The results of decoding signals containing such information as telemetry data and weather pictures are demonstrated. 102 pages. £3.95

INTRODUCTION TO AMATEUR RADIO (AN) BP257

I. D. Poole

This book gives the newcomer a comprehensive and easy to understand guide through amateur radio. Topics include operating procedures, jargon, propagation and setting up a station. 150 pages. £3.50

INTRODUCTION TO RADIO WAVE PROPAGATION (AN) BP293

J.G. Lee

How does the sun and sunspots affect the propagation of the radio waves which are the basis of our hobby? They affect the ionosphere, but differing frequencies are treated differently. Find out how to use charts to predict frequencies that will be the most profitable. What effect will noise have on the signal? Find out with this book. 116 pages. £3.95

INTRODUCTION TO VHF/UHF FOR RADIO AMATEURS (AN) BP221

I. D. Poole

An excellent book to go with the new Novice or full callsign. Nine chapters and an appendix deal with all aspects and frequencies from 50 to 1300MHz. Topics include propagation, descriptions of the bands, antennas, receivers, transmitters and a special chapter on scanners. 102 pages. £3.50

PASSPORT TO AMATEUR RADIO

Reprinted from PW 1981-1982

The famous series by GW3JGA, used by thousands of successful RAE candidates in their studies. Plus other useful articles for RAE students including emission codes, explanations of diodes, s.s.b. and decibels. 87 pages. £1.50

PRACTICAL GUIDE TO PACKET OPERATION IN THE UK

Mike Mansfield G6AWD

Introduces the concept of packet radio to the beginner. Problem areas are discussed and suggestions made for solutions to minimise them. Deals with the technical aspects of packet taking the reader through setting up and provides a comprehensive guide to essential reference material. 205 pages. £8.95

QRP CLASSICS

Edited by Bob Schetgen

Operating QRP is fun. The equipment is generally simple and easy to build, but often performs like more sophisticated commercial equipment. Some QRP Field Day stations operate a full 27 hours on a car battery - it's the perfect equipment for emergency communication when the power fails. Extracts from QST and the ARRL Handbook. 274 pages. £9.95

RADIO AMATEUR CALLBOOK

INTERNATIONAL LISTINGS 1993 71st Edition

The only publication listing licensed radio amateurs throughout the world. Also includes OXCC Countries list, standard time chart, beacon lists and much more. Over 1400 pages. £19.50

RADIO AMATEUR CALLBOOK NORTH AMERICAN LISTINGS 1993 71st Edition

Listings of US amateurs (including Hawaii). Also contains standard time chart, census of amateur licences of the world, world-wide QSL bureau, etc. Over 1400 pages. £19.50

RADIO AMATEUR'S QUESTIONS & ANSWER REFERENCE MANUAL (THE)

4th Edition.

R. E. G. Petri G8CCJ

This book has been compiled especially for students of the City and Guilds of London Institute RAE. It is structured with carefully selected multiple choice questions, to progress with any recognised course of instruction, although it is not intended as a text book. 280 pages. £7.95

RAE MANUAL (THE) RSGB

G.L. Benbow G3HB

The latest edition of the standard aid to studying for the Radio Amateurs' Examination. Updated to cover the latest revisions to the syllabus. Takes the candidate step-by-step through the course. 127 pages. £6.70

RAE REVISION NOTES

George Benbow G3HB

If you're studying for the Radio Amateurs' Examination, this book could be useful. It's a summary of the salient points of the Radio Amateurs' Examination Manual, the standard textbook for the exam. It's A5 size and therefore can be carried with you wherever you go. Easy-to-read, it's divided into 13 chapters with topics like receivers, power supplies, measurements, operating procedures, licence conditions and a summary of the formulae all dealt with 92 pages. £4.00

VHF/UHF DX BOOK (THE)

Edited Ian White G3SEK

An all round source of inspiration for the v.h.f./u.h.f. enthusiast. Written by acknowledged experts this book covers just about everything you need to know about the technicalities of v.h.f./u.h.f. operating. 270 pages. £18.00

W1FB'S DESIGN NOTEBOOK

Ooug DeMaw W1FB

This book is aimed at the non-technical amateur who wants to build simple projects and obtain a basic understanding of amateur electronics. Your workshop does not need to be equipped like an engineering lab to be successful as an experimenter. Don't let a lack of test equipment keep you from enjoying the thrills of experimentation. 195 pages. £8.50

W1FB'S HELP FOR NEW HAMS

Doug DeMaw W1FB

This book covers everything from getting acquainted with new equipment to constructing antennas, station layout, interference and operating problems to on-the-air conduct and procedures. 155 pages. £6.95

W1FB'S QRP NOTEBOOK

2nd Edition

Doug DeMaw W1FB

The new improved and updated 2nd edition of this book, covers the introduction to QRP, construction methods, receivers and transmitters for QRP. This workshop-notebook style publication, which is packed with new designs for the keen QRP operator, also covers techniques, accessories and has a small technical reference section. 175 pages. 0/5

YOUR GATEWAY TO PACKET RADIO

Stan Horzepa W1LOU

What is packet radio good for and what uses does it have for the 'average' amateur? What are protocols? Where, why, when? Lots of the most asked questions are answered in this useful book. It included details of networking and space communications using packet. 278 pages. £8.95

THEORY

ARRL ELECTRONICS OATA BOOK (THE)

Doug DeMaw W1FB

Back by popular demand, completely revised and expanded, this is a handy reference book for the r.f. designer, technician, amateur and experimenter. Topics include components and materials, inductors and transformers, networks & filters, digital basics and antennas and transmission lines. 260 pages. £8.95

AUDIO (Elements of electronics - book 5) BP111

F. A. Wilson

This book studies sound and hearing, and examines the operation of microphones, loudspeakers, amplifiers, oscillators, and both disk and magnetic recording. Intended to give the reader a good understanding of the subject without getting involved in the more complicated theory and mathematics. 308 pages. £3.95

BEGINNERS GUIDE TO MODERN ELECTRONIC COMPONENTS (A)

BP285. R.A. Penfold

This book covers a wide range of modern components. The basic functions of the components are described, but this is not a book on electronic theory and does not assume the reader has an in-depth knowledge of electronics. It is concerned with practical aspects such as colour codes, deciphering code numbers and the suitability. 166 pages. £3.95

EVERYBODY ELECTRONICS DATA BOOK

Mike Tooley BA

This book is an invaluable source of information of everyday relevance in the world of electronics. It contains not only sections which deal with the essential theory of electronic circuits, but it also deals with a wide range of practical electronic applications. 250 pages. £8.95

FILTER HANDBOOK A practical design guide

Stefan Niewiadomski

A practical book, describing the design process as applied to filters of all types. Includes practical examples and BASIC programs. Topics include passive and active filters, worked examples of filter design, switched capacitor and switched resistor filters and includes a comprehensive catalogue of pre-calculated tables. 195 pages. £30.00

FROM ATOMS TO AMPERES BP254

F.A. Wilson

Explains in simple terms the absolute fundamentals behind electricity and electronics. Topics include the use of SI units, gravity, magnetism, light, the electron, conduction in solids and electrical generators. 244 pages. £3.50

NEWNES PRACTICAL RF HANDBOOK

Ian Hickman

This book provides an easy-to-read introduction to modern r.f. circuit design. It's aimed at those learning to design r.f. circuitry and users of r.f. equipment such as signal generators and sweepers, spectrum and network analysers. 320 pages. £16.95

PRACTICAL ELECTRONICS CALCULATIONS AND FORMULAE

BP53. F. A. Wilson

This has been written as a workshop manual for the electronics enthusiast. There is a strong practical bias and higher mathematics have been avoided where possible. 249 pages. £3.95

REFLECTIONS Transmission Lines & Antennas

M. Walter Maxwell W2DU

This will help dispel the half-truths and outright myths that many people believe are true about transmission lines, standing waves, antenna matching, reflected power and antenna tuners. 323 pages. £14.50

BOOKS

SOLID STATE DESIGN FOR THE RADIO AMATEUR

Les Hayward W7Z0I and Doug DeMaw W1FB

Back in print by popular demand! A revised and corrected edition of this useful reference book covering all aspects of solid-state design. Topics include transmitter design, power amplifiers and matching networks, receiver design, test equipment and portable gear. 256 pages. £10.95

TRANSMISSION LINE TRANSFORMERS

Jerry Seveck W2FMI

This is the second edition of this book, which covers a most intriguing and confusing area of the hobby. It should enable anyone with a modicum of skill to make a balun, etc. Topics include analysis, characterisation, transformer parameters, baluns, multimatch transformers and simple test equipment. 270 pages. £13.50

RADIO

AIR & METEO CODE MANUAL

12th Edition. Joerg Klingentuss
Detailed descriptions of the World Meteorological Organisation Global Telecommunication System operating FAX and RTTY meteo stations, and its message format with decoding examples. Also detailed description of the Aeronautical Fixed Telecommunication Network amongst others. 358 pages. £18.00

HIGH POWER WIRELESS EQUIPMENT

Articles from *Practical Electricity* 1910-11
Edited by Henry Walter Young
A reprint of interesting practical articles from the very early days of radio, when materials and methods described are from another era. Subjects covered ranges from aerials through detectors to things like Tesla and his wireless age. 99 pages. £7.70

MARINE SSB OPERATION

J. Michael Gale

How do you stay in touch when you sail off over the horizon and into the blue? What you need is a single sideband radio, a marine s.s.b. This book explains how the system works, how to choose and install your set and how to get the best out of it. There is also a chapter on amateur radio with the emphasis on the increasingly important maritime mobile nets. 96 pages. £9.95

MARINE VHF OPERATION

Michael Gale

A v.h.f. radiotelephone is essential equipment for any sea-going boat. But what can you do with it? Who can you call, and how do you make contact? Which channel do you use, and why? What is the procedure for calling another boat, calling the family through the telephone system, or making a distress call? This book will tell you. 47 pages. £6.95.

PASSPORT TO WORLD BAND RADIO

1993
This book gives you the information to explore and enjoy the world of broadcast band listening. It includes features on different international radio stations, receiver reviews and advice as well as the hours and language of broadcast stations by frequency. The 'blue pages' provide a channel-to-channel guide to world band schedules. 416 pages. £14.50.

RADIOTELETYPE CODE MANUAL

12th Edition

Joerg Klingentuss

This book gives detailed descriptions of the characteristics of telegraph transmission on short waves, with all commercial modulation types including voice frequency telegraphy and comprehensive information on all RTTY systems and c.w. alphabets. 96 pages. £11.00

SCANNERS (Third Edition)

Peter Rouse GU1DKD

A guide for users of scanning receivers, covering hardware, antennas, accessories, frequency allocations and operating procedures. 245 pages. 0/P

SCANNERS 2

Peter Rouse GU1DKD

The companion to *Scanners*, this provides even more information on the use of the v.h.f. and u.h.f. communications band and gives constructional details for accessories to improve the performance of scanning equipment. 261 pages. £10.95

SHORT WAVE COMMUNICATIONS

Peter Rouse GU1DKD

Covers a very wide area and so provides an ideal introduction to the hobby of radio communications. International frequency listings for aviation, marine, military, space launches, search and rescue, etc. Chapters on basic radio propagation, how to work your radio and what the controls do, antennas and band plans. 187 pages. £8.95

SHORT WAVE RADIO LISTENERS' HANDBOOK

Arthur Miller

In easy-to-read, non-technical language, the author guides the reader through the mysteries of amateur, broadcast and CB transmissions. Topics cover equipment needed, identification of stations heard & the peculiarities of the various bands. 207 pages. £7.99

WORLDWIDE HF RADIO HANDBOOK

Martyn R. Cooke

This book lists high frequencies used by aircraft and aeronautical ground stations. Divided into sections, Military, Civil, etc. The book should be easy to use. 124 pages. £6.95

WRTH EQUIPMENT BUYERS GUIDE

1993 Edition

Willem Bos & Jonathan Marks

A complete and objective buyer's guide to the current short wave receiver market. For the novice and the experienced listener, this guide explains how to make sense of the specifications and select the right radio for your listening needs. 270 pages. £15.95

1934 OFFICIAL SHORT WAVE RADIO MANUAL

Edited by Hugo Gernsback

A fascinating reprint from a bygone age with a directory of all the 1934 s.w. receivers, servicing information, constructional projects, circuits and ideas on building vintage radio sets with modern parts. 260 pages. £11.60

BEGINNERS

BEGINNER'S GUIDE TO RADIO 9th Edition

Gordon J. King

The book takes you in logical steps from the theory of electricity and magnetism to the sound you hear from the loudspeaker. Radio signals, transmitters, receivers, antennas, components, valves & semi-conductors, CB & amateur radio are all dealt with. 266 pages. £14.95

ELECTRONICS SIMPLIFIED - CRYSTAL SET CONSTRUCTION BP92

F. A. Wilson

Especially written for those who wish to take part in basic radio building. All the sets in the book are old designs updated with modern components. It is designed for all ages upwards from the day when one can read intelligently and handle simple tools. 72 pages. £1.75

INTERFERENCE

INTERFERENCE HANDBOOK (USA)

William R. Nelson WA6FGG

How to locate & cure r.f.i. for radio amateurs, CBers, TV & stereo owners. Types of interference covered are spark discharge, electrostatic, power line many 'cures' are suggested. 250 pages. £9.50

DATA REFERENCE

NEWNES AUDIO & HI-FI ENGINEER'S POCKET BOOK

Vivian Capel

This is a concise collection of practical and relevant data for anyone working on sound systems. The topics covered include microphones, gramophones, CDs to name a few. 190 pages. Hardback £10.95

NEWNES COMPUTER ENGINEER'S POCKET BOOK

This is an invaluable compendium of facts, figures, circuits and data and is indispensable to the designer, student, service engineer and all those interested in computer and microprocessor systems. 255 pages. Hardback £12.95

NEWNES ELECTRONICS POCKET BOOK 5th Edition

Presenting all aspects of electronics in a readable and largely non-mathematical form for both the enthusiast and the professional engineer. 315 pages. Hardback £12.95

NEWNES RADIO AND ELECTRONICS ENGINEER'S POCKET BOOK

18th Edition

Keith Brindley

Useful data covering math, abbreviations, codes, symbols, frequency bands/allocations, UK broadcasting stations, semi-conductors, components, etc. 325 pages. Hardback £10.95

POWER SELECTOR GUIDE BP235

J. C. J. Van de Ven

This guide has the information on all kinds of power devices in useful categories (other than the usual alpha numeric sort) such as voltage and power properties making selection of replacements easier. 160 pages. £4.95

FAULT FINDING

GETTING THE MOST FROM YOUR MULTIMETER BP239

R. A. Penfold

This book is primarily aimed at beginners. It covers both analogue and digital multi-meters and their respective limitations. All kinds of testing is explained too. No previous knowledge is required or assumed. 102 pages. £2.95

HOW TO USE OSCILLOSCOPES & OTHER TEST EQUIPMENT BP267

R. A. Penfold

Hints and ideas on how to use the test equipment you have, to check out, or fault find on electronic circuits. Many diagrams of typical waveforms and circuits, including descriptions of what waveform to expect with particular faults, or distortion in audio amplifiers. 104 pages. £3.50

MORE ADVANCED TEST EQUIPMENT CONSTRUCTION BP249

R. A. Penfold

A follow on from *Test Equipment Construction (BP248)* this book looks at digital methods of measuring resistance, voltage, current, capacitance and frequency. Also covered is testing semi-conductors, along with test gear for general radio related topics. 102 pages. £3.50

MORE ADVANCED USES OF THE MULTIMETER BP265

R. A. Penfold

This book is primarily intended as a follow-up to *BP239, Getting the most from your Multi-meter*. By using the techniques described in this book you can test and analyse the performance of a range of components with just a multi-meter (plus a very few inexpensive components in some cases). The simple add-ons described extend the capabilities of a multi-meter to make it even more useful. 96 pages. £2.95.

OSCILLOSCOPES, HOW TO USE THEM, HOW THEY WORK

3rd Edition

Ian Hickman

This book describes oscilloscopes ranging from basic to advanced models and the accessories to go with them. Oscilloscopes are essential tools for checking circuit operation and diagnosing faults, and an enormous range of models is available. 248 pages. £15.95

TROUBLESHOOTING WITH YOUR TRIGGERED-SWEEP OSCILLOSCOPE

Robert L. Goodman

This book steers you through the various features - old and new - that scope technology provides and is an invaluable guide to getting the best out of your scope. An overview of available scopes will help you choose

the one that best suits your needs.

Areas covered include spectrum analysis, test applications, multiple-trace displays, waveform analysis, triggering, magnified sweep displays, analogue and digital scopes, etc. 309 pages. £17.50.

TELEVISION

ATV COMPENDIUM (THE)

Mike Wooding G6IQM

This book is for those interested in amateur television, particularly the home construction aspect. There isn't a 70cm section as the author felt this was covered in other books. Other fields such as 3cm TV, are covered in depth. A must for the practical ATV enthusiast. 104 pages. £3.00

GUIDE TO WORLD-WIDE TELEVISION TEST CARDS

Edition 3

Keith Hamer & Gerry Smith

Completely revised and expanded, this is a very handy and useful reference book for the DXTV enthusiast. Over 200 photographs of Test Cards, logos, etc., world wide. 60 pages. £4.95

CONSTRUCTION

COIL DESIGN AND CONSTRUCTION MANUAL BP160

B.B. Babani

Covering audio to r.f. frequencies, this book has designs for almost everything. Sections cover such topics as mains and audio output transformers, chokes and r.f. coils. What is the required turns ratio? This book will show you how to find out. Text and tables. 106 pages. £2.50

HOW TO DESIGN AND MAKE YOUR OWN PCBs BP121

R. A. Penfold

The purpose of this book is to familiarise the reader with both simple and more sophisticated methods of producing p.c.b.s. The emphasis of the book is very much on the practical aspects of p.c.b. design and construction. 66 pages. £2.50

MORE ADVANCED POWER SUPPLY PROJECTS BP192

R. A. Penfold

The practical and theoretical aspects of the circuits are covered in some detail. Topics include switched mode power supplies, precision regulators, dual tracking regulators and computer controlled power supplies, etc. 92 pages. £2.95

POWER SUPPLY PROJECTS BP76

R. A. Penfold

This book gives a number of power supply designs including simple unswitched types, fixed voltage regulated types and variable voltage stabilised designs. 89 pages. £2.50

RADIO/TECH MODIFICATIONS NUMBER 3

This book is intended as a reference guide for the experienced radio technician. Produced for the US market it contains modification instructions for a wide variety of scanners, CB rigs and amateur equipment including Alinco, Icom, Kenwood, Yaesu and other makes. 160 pages. £9.95

SHORT WAVE SUPERHET RECEIVER CONSTRUCTION BP276

R. A. Penfold

A general purpose receiver to build, from antenna to audio, described in understandable English. 80 pages. £2.95

TEST EQUIPMENT CONSTRUCTION BP248. R.A. Penfold

Describes, in detail, how to construct some simple and inexpensive, but extremely useful, pieces of test

equipment. Stripboard layouts are provided for all designs, together with wiring diagrams where appropriate, plus notes on their construction and use. 104 pages. £2.95

50 (FET) FIELD EFFECT TRANSISTOR PROJECTS BP39

F.G. Rayer

50 circuits for the s.w.l., radio amateur, experimenter or audio enthusiast using f.e.t.s. Projects include r.f. amplifiers and converters, test equipment and receiver aids, tuners, receivers, mixers and tone controls. 104 pages. £2.95

COMPUTING

BASIC PACKET RADIO

Joe Kasser W3/G3CZC

Joe, who has worked on packet radio for some time, is the author of the excellent Lan-Link computer program. So it comes as no surprise that it features in this book. Well suited to beginners and experts alike this book is a mine of information. 364 pages. £19.95

INTRODUCTION TO COMPUTER COMMUNICATIONS (AN) BP177

R. A. Penfold

Details of various types of modem and their applications, plus how to interconnect computers, modems and the telephone system. Also networking systems and RTTY. 72 pages. £2.95

NEWNES AMATEUR RADIO COMPUTING HANDBOOK

Joe Pritchard G1UQW

Shows how radio amateurs and listeners can 'listen' to signals by reading text on a computer screen. This book also covers the application of computers to radio 'housekeeping' such as log-keeping, QSL cards, satellite predictions and antenna design as well as showing how to control a radio with a computer. 363 pages. £19.95

UPGRADE YOUR IBM COMPATIBLE ANO SAVE A BUNDLE

Second Edition

Aubrey Pilgrim

Aimed at the owners of the IBM compatible computer, this book provides a very straightforward and easy to read guide on upgrading. The author has adopted a friendly and informative style and the there are many excellent illustrations. Typically American in approach and style, the book provides much information and an excellent read. 245 pages. £16.95

MAPS

RADIO AMATEUR'S MAP OF NORTH AMERICA (USA)

Shows radio amateur prefix boundaries, continental boundaries and zone boundaries. 760 x 636mm. £3.50

RADIO AMATEUR'S PREFIX MAP OF THE WORLD (USA)

Showing prefixes and countries, plus listings by order of country and of prefix. 1014 x 711mm. £3.50

QTH LOCATOR MAP OF EUROPE

Traxel DK5PZ

Radio Map Service
This comprehensive map of the European call sign area has now been updated and enhanced. This well thought out, coloured map covers from N. Africa to Iceland and from Portugal in the west to Iran in the east. Folds to fit into the 145 x 240mm clear envelope. 1080 x 680mm. £5.95

ORDER

SUBS CLUB

Be sure of your copy of *Practical Wireless* every month and qualify for the Subscribers' Club as well. Special offers and discounts are normally available to all members, including those abroad.

To match our test equipment theme this month, we're offering Subscribers' Club Members the chance to buy a rather useful book, aimed at helping you to get the best out of your triggered-sweep oscilloscope. Even if you don't own a 'scope of this type, when you read how useful they can be - perhaps you'll be first in the queue to buy one soon!

Our special offer this month is *Troubleshooting With Your Triggered-Sweep Oscilloscope*, written by Robert L. Goodman and published by TAB Books. This American book is packed with excellent, clearly printed and well laid out photographs, drawings and other illustrations. As well as providing much information on triggered 'scopes generally, it takes a very useful look at instruments available to the professional and amateur user. The modern 'scope shopping list, I found to be particularly useful.

The ten chapters also cover oscilloscope features and functions, controls and operation, understanding 'scope operations and measurements, measurement techniques, analysing electronic and TV circuit waveforms. Among other topics it also covers spectrum and signal analysers.

I found it a very interesting and useful book. All I need now is the oscilloscope! Rob Mannion G3XFD.

Practical Wireless Subscribers' Club Members can buy their copy of *Troubleshooting With Your Triggered-Sweep Oscilloscope* for £13.50, (original price £17.50 plus P&P) plus £1 P&P (UK) £1.75 (overseas). Offer open until 9 September 1993 (UK), 14 October 1993 (overseas).

THE IC-737, VERY DESIRABLE FEATURES AT A VERY DESIRABLE PRICE OF ONLY £1495

- Bright and large LCD shows modes, receive and transmit frequencies.
- Push ANT to select antenna (two connections are available).
- Push FULL to activate full break-in (QSK) function.
- Push TUNE/TUNER to instantly activate the internal 160-10m automatic antenna tuner and match your rig to the selected antenna.
- Push ATT or PRE AMP to reduce pulse type noise interference.
- DDS (Direct Digital Synthesis) provides crystal clear reception and transmission.
- Adjust KEY SPEED to vary the speed of the internal electronic keyer.
- Press SSB, CW/N, AM, or FM to select desired operating mode.
- Press MP-R to recall memo pad memories for intermediate use.
- Press MP-W to automatically write the present operating frequency and mode to memo pad memory.
- Using the KEYPAD, select a desired band or directly enter frequencies.
- Retain your last selected frequency and modes with DBSR (Double Band Stacking Registers-Two frequencies per band), use one for the CW and of the band and one for SSB.
- Hold SPLIT down for one second to start the split mode function and initiate QUICK SPLIT feature, equalizing both VFOs to the same frequency.
- Rotate MEMORY CHANNEL SELECTOR to select a channel from 101 available memories (memories store frequency, mode, antenna selection and tuner on/off condition).
- Adjust PBT to reduce interference.
- Push RIT and/or ΔTX to change the transmit or receive frequency +/- 2.5 KHz or +/- 1.25 KHz (selectable).
- Press NOTCH and adjust to eliminate annoying beat signals.

ICOM manufacture a full range of base-stations, mobiles and handheld transceivers and receivers to cover all popular Ham frequencies... and beyond.

No matter what your requirements, ICOM have the radio for you.
