Three stabilised voltage outputs are provided by each of the two new Ediswan Power Supply Units Types R.1260 and R.1280. In each case two major D.C. outputs variable from 0 to 300v. are provided, plus a low current—D.C. output of reverse polarity.

These units are very suitable power sources for experimental electronic circuits and can frequently be used in place of several single power supplies.

Both units work from normal A.C. mains supply and are designed for standard 19" rack mounting or for bench use. Meters are included.

**SPECIFICATION**

<table>
<thead>
<tr>
<th>Input</th>
<th>200-250v., 40-100 C.P.S.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outputs</td>
<td></td>
</tr>
<tr>
<td>1. High stability D.C. output 0 to 300v. in one range. Maximum current: type R.1260 75mA type R.1280 150mA</td>
<td></td>
</tr>
<tr>
<td>2. High stability D.C. output 0 to 300v. in one range. Maximum current (both types) 75mA</td>
<td></td>
</tr>
<tr>
<td>3. High stability D.C. output -200v. non-variable. Maximum current (both types) 25mA</td>
<td></td>
</tr>
<tr>
<td>4 and 5. Two independent 6.3v. 4 amp A.C. unstabilised outputs, both centre tapped.</td>
<td></td>
</tr>
</tbody>
</table>

**Notes:**

A. The negative terminals of the two 300v. supplies and the positive terminal of the 200v. supply are common.

B. Either output 1 or 2 may be taken with output 3 to give a supply of 200-500v. at 25mA.

**Stability**

With change of mains input voltage (outputs 1, 2 and 3):

A change of 10v. in the mains supply results in an output change of less than 0.1v.

With change of load: A change from zero to full load results in output voltage changes as follows:

Output 1 and 2 ... Less than 0.3v.
Output 3 ... Less than 0.1v.

**Output Resistance** (Outputs 1, 2 and 3):

Less than 3 ohms.

**Ripple**

Outputs 1 and 2 ... Less than 2mV R.M.S.
Output 3 ... Less than 4mV R.M.S.

**Output Circuits**

All outputs isolated from earth, and any point may be connected to earth. All terminals can be worked at up to 500 volts from earth. Outputs 1 and 2 may be switched without affecting any of the heater supplies.

**Output Resistance (Outputs 1, 2 and 3).**

Less than 3 ohms.

**Ripple**

Outputs 1 and 2 ... Less than 2mV R.M.S.
Output 3 ... Less than 4mV R.M.S.

**Output Circuits**

All outputs isolated from earth, and any point may be connected to earth. All terminals can be worked at up to 500 volts from earth. Outputs 1 and 2 may be switched without affecting any of the heater supplies.

**Meters**

Each 300v. supply has a meter which can be switched to be a voltmeter or milliammeter.

**Mounting**

R.1260 and R.1280 are both suitable for standard 19" rack mounting, or for bench use.

**Price**

R.1260—£78 nett
R.1280—£86 nett
Bench stand for R.1280—£2 nett

VOLUME 62 NO. 9
PRICE: TWO SHILLINGS
FORTY-SIXTH YEAR OF PUBLICATION

SEPTEMBER 1956
As in previous years, one of the Mullard contributions to the 1956 Radio Show is a stand supplying technical information to all those who use valves and other electronic devices—whether at work or for their hobby. These enthusiasts are often described as home constructors, but many professional engineers, dealers, service engineers, teachers, and students are included among their number. Our publication on transistors this year is called "Transistors for the Experimenter". Deliberately the rather vague term 'experimenter' has been introduced to cover a wide range of interests and requirements. The title does not mean that the booklet has a restricted appeal: on the contrary, nobody need feel left out.

Transistors give us all the opportunity to start afresh and to follow the subject through from its beginnings. A very large part of the booklet has therefore been devoted to the more instructonal aspects of transistor applications. More important, many circuits are given in the later pages. Most of the circuits are new, and the text has been completely revised and made several times larger than that given in "Junction Transistors for the Home Constructor". Material which has appeared in earlier advertisements in this series has been included.

Particular interest this year centres round the low power output OC72 junction transistor. Two circuits for a 200mW amplifier are supplied, one for operation from a 6-volt supply and the other for 4.5V. The output and sensitivity are sufficient for small portable equipment such as gramophones and personal radio receivers. A crystal pick-up will drive the amplifier fully. A number of possible r.f. front-ends for the amplifier are described, though the sensitivity requirements of these r.f. circuits are such that in general the amplifier will not be driven to its full output.

Circuits are included which show how the personal receivers can be made in a form which feeds into an insert earpiece. Other new circuits are: a two-transistor R-C coupled sinusoidal oscillator; a symmetrical multivibrator; a bridge balance indicator; and a sensitive e.h.t. voltmeter.

Each circuit is accompanied by notes which show, for example, the possible uses and operating ranges of the equipment. An explanation of the mode of operation of the circuit is given to help the reader grasp the applicational information in the rest of the booklet.

After the circuit descriptions the remainder of the booklet is fairly general. The design of transistor circuits is by no means a hit-or-miss or empirical affair. Although reasonably fully design procedure is described to show not only how it's done, but that it can be done, the more immediate and practical methods are not neglected.

Following some introductory notes on the circuit configurations etc., the most important new material comes under the following headings. Small-signal a.f. stages shows how small-signal parameters are applied to the earlier stages of amplifiers. D.C. stabilising gives a full treatment of this topic, including the preferred system using a potential divider and emitter resistor, and shows how production spreads are allowed for. Large-signal a.f. stages is devoted chiefly to Class B and the design of the output stage of the 200mW amplifier, with examples. Further sections indicate the problems encountered at high frequencies and in oscillator and switching circuits etc. "Transistor data" contains a discussion on the choice of limiting values.

"Transistors for the Experimenter" can be obtained at our Radio Show stand or after the show from the address below. No charge is made for this publication.
EVERY telephone subscriber knows that the G.P.O. instrument in his home or office remains the property of the Postmaster-General, and must not be tampered with. But most of us probably believe that the P.M.G., if he does not officially approve, turns a blind eye on the use of telephone attachments depending entirely on acoustic or inductive couplings, and so involve no mechanical tampering or the making of metallic electrical connections.

Apparently that belief is wrong. In Wireless World for July we published a description of a simple telephone answering machine. It seemed to satisfy the “no tampering” rule, and the descriptive article carried an implication that the device would meet Post Office requirements. The G.P.O. now tells us that implication was incorrect. The device described in our article has not been submitted for approval; further, in the official view, a reliable answering/recording service can only be provided by a self-contained appliance directly wired to the telephone installation.

Any telephone answering machine of necessity makes use of a two-way coupling to the Post Office instrument and may also present other electrical and mechanical problems. Instead of commenting on the Post Office statement just quoted, we will consider a much simpler kind of telephone attachment—the tape recorder pick-up. This consists merely of an inductor for attachment (usually by a sucker) to the body of the telephone instrument in order to provide an inductive coupling with the built-in transformer, and thus to allow the recording of incoming messages. These pick-ups, in one form or another, are offered by several manufacturers of tape recorders and are in widespread use. But do they have the official blessing of the Post Office?

The relevant section of “The Telephone Regulations, 1954,” reads:—

“A subscriber shall not, without the written consent of the Postmaster-General:—

(a) alter or remove an installation or any part thereof, or obliterate or deface any marks thereon;
(b) make any attachment to an installation, or place any thing in electrical connection therewith;
(c) place or use in any manner or position in relation to an installation any thing that may in the opinion of the Postmaster-General have a harmful effect on the installation or on its use for the purposes for which it is provided; or

(d) place or use any thing (unless provided for the purpose by the Postmaster-General) in such a manner or position in relation to an installation that it transmits or enables to be transmitted any message or other communication to or from the installation....”

According to the strict letter of the Regulations there is little doubt that even a recorder pick-up would rank as an “attachment,” though it might conceivably be admitted under paragraph (c) if it were considered to have no harmful effect. Wireless World has accordingly questioned the G.P.O. Engineering Department on that point, and finds the attitude to be distinctly frigid towards inductively coupled pick-ups. Only one tape recorder attachment has so far been approved, and that uses a directly wired connection, which is considered to be necessary. As to “harmful effects,” the main trouble—and that admittedly is not common—is said to be due to the transfer of h.f. bias currents from the recorder to carrier circuits, with consequent heterodyning. Official objections to inductive pick-ups are apparently more concerned with their alleged ineffectiveness and the fear that their use may bring discredit on the telephone service. Incidentally, our experience tends to show such fears are unjustified, as good recordings can be made after very little practice.

Although we do not question the superiority of the direct electrical connection for regular use, to insist on it seems greatly to restrict the applications of recorders as telephone adjuncts. Those who have only an occasional need for recording messages will probably be unwilling to go to the trouble and expense of having a break-in point installed by Post Office mechanics, though that procedure would not deter regular users. The inductive method of coupling has the great advantage of simplicity and cheapness and it seems a pity that the Post Office should turn its face too resolutely against it until the possibilities of overcoming the deficiencies have been explored. Transfer of bias current to the telephone lines could surely be prevented quite easily; we should imagine that the number of modern recorders in which a significant h.f. voltage is developed across the input terminals must be very small.
Communication via Meteors

LOW-POWER ALTERNATIVE TO IONOSPHERIC SCATTER

TELEGRAPHIC radio signals can be transmitted up to 1,000 miles by a new v.h.f. technique in which the waves are reflected from the ionized trails of meteors in the upper atmosphere. Developed by the Canadian Defence Research Board under the code name "Janet," the method is notable for requiring only a small radiated power and uses transmitters of about 1-kW output. It therefore offers a very economical alternative to the high-power ionospheric scatter system, with small, low-cost stations and simpler aerial arrays. Moreover, it appears to be unaffected by electrical and cosmic disturbances, while the spasmodic nature of the reflecting medium ensures a high degree of privacy. Reliability in transmitting messages is claimed to be 95%.

The meteors, which are about the size of pinheads, plunge into our atmosphere in the region of 60 miles up at a speed of roughly 100,000 m.p.h. They are burnt up rapidly in this process and as a result leave behind trails of ionized particles up to six miles long. Radio astronomers have been using these trails as reflecting media to measure the speed of the meteors by radar methods since about 1946. It has been estimated that some 8,000 million of the meteors enter our atmosphere each day, and there are hundreds of usable trails formed every hour between any two fixed points at the right sort of altitude.

Nevertheless the meteors are essentially spasmodic in their appearance, and the equipment of "Janet" has to be specially designed to take advantage of them when they come. A complete communication system has two ground stations, each with a transmitter and a receiver and carefully aligned directional aerials. The transmitters and receivers are on continuously, but no messages are passed until a meteor forms a trail across the spot in the atmosphere at which the aerials are directed. When this happens and the path becomes "conductive," the two receivers pick up a signal and automatically switch on devices which feed tapes carrying telegraphic messages to their respective transmitters at very high speed.

Signal Strength

Actually, the signal received when there are no meteors is approximately 0.1 µV and this is just about enough to tune the equipment in readiness. When the waves are reflected by a meteor trail this signal increases by some 60-80 dB. The frequency of operation is in the range 30-60 Mc/s, while the aerials used so far have been Yagi types with a gain of 10-12 dB.

Because each meteor trail can only be used for a short period—varying from milliseconds to a few seconds—the messages have to be stored before transmission (by magnetic tape equipment) then sent in short, fast bursts. The inquiring speed of messages to the store is 40 words per minute, while the actual transmission speed in the bursts can be as high as 2,000 w.p.m.—which, taking into account the breaks between meteors, works out to an average speed of 40 w.p.m. At the receiving end the incoming bursts of messages are again recorded on magnetic tape (since the code characters are too fast for standard teleprinter equipment) and then printed at normal speed in the intervals between transmissions.

There is a danger, of course, that some meteor trails may prove of too short a duration for effective

EDITORIAL ASSISTANT WANTED

Wireless World invites applications for the post of editorial assistant. The tasks, which are varied and interesting, could be fulfilled by a man aged 25-30 with a good grounding in physics and some experience in radio and electronics. The post should appeal to one who finds satisfaction in clarifying his own thoughts through the act of writing, and who would appreciate the atmosphere of technical journalism, a field offering exceptional opportunities for keeping abreast of developments.

Applications should be addressed to the Editor, Wireless World, Dorset House, Stamford Street, London, S.E.1.

WIRELESS WORLD, SEPTEMBER 1956
transmission and that the few code characters radiated in such bursts may not be properly received. Naturally, the equipment cannot "know" in advance how long the trails will be effective, so a device has been incorporated in the system which measures the duration of each burst and, if it proves to be unreasonably short, causes that part of the message to be repeated. In this way the high standard of reliability is maintained.

Transmitting Equipment

The 1-kW transmitters for use in "Janet" have been designed and built by Redifon (see photograph), and it is a notable achievement that they were in operation in Canada within six months of the date of the order being received in London. They are fairly conventional in design, having two crystal-controlled fixed frequencies available, normal drive circuits and Class-C push-pull output stages. The modulation is a high grade type of a.m., special precautions being taken to ensure that the short bursts of high-speed pulses are not mutilated by transient distortion. Further transmitters are being built for the Canadian and British governments and for N.A.T.O.

Low-power tests with "Janet" have been going on for some two or three years in Canada, and since August, 1955, the experimental transmissions have been on the relatively high power given by the 1-kW transmitters. Undoubtedly the system will bring considerable relief to the heavily overcrowded h.f. communications band. It is too early yet to say how many channels will become available, but the number should be quite large as the system occupies only a narrow bandwidth. Possible interference with television will, of course, have to be watched.

I.E.E. Awards To Authors

A LARGE number of the premiums awarded by the Institution of Electrical Engineers for papers read or accepted for publication during the 1955/1956 session will be received by authors of papers on radio and electronics.

The Kelvin premium (£25) is awarded jointly to A. Stott and P. E. Axon (B.B.C.) for their paper "The subjective discrimination of pitch and amplitude fluctuations in recording systems"; the Blumlein-Browne-Willans premium (£20) goes to R. S. Webley, H. G. Lubyszynski and J. A. Lodge (E.I.M.I.) for "Some half-tone charge storage tubes"; the Fahie (£10) is shared by Captain C. F. Booth (G.P.O.) and B. N. MacLarty (Marconi's) for "The new h.f. transmitting station at Rugby"; the Heaviside (£10) to I. A. Harris (M.O.S.) for a paper on co-axial resistor mounts and the Webber (£10) to W. C. Bain (D.S.I.R.) for two papers on direction-finding systems.

Recipients of the Radio and Telecommunication Section premiums are L. R. F. Harris (G.P.O.) who receives the Duddell (£20) for his paper on electronic telephone switching; Professor A. L. Cullen and J. C. Parr the Ambrose Fleming (£10) for "A new, perturbation method for measuring microwave fields in free space". £10 premiums also go to E. D. R. Shearman (D.S.I.R.) for two papers on ground back scatter and G. B. B. Chaplin (Harwell), R. E. Hayes and A. R. Owens (Manchester University) for a series of papers on transistor circuits. Three £5 section premiums were also awarded.

One of the £10 graduate and student premiums goes to G. A. Gibson (G.E.C.) for his paper on pulse circuitry.

BOOKS RECEIVED

"Electronic Machine-Tool Control"

Correction.—On page 384, penultimate paragraph, of this article in the August issue, the E.I.M.I. control system was wrongly stated to be shown on the stand of W. H. Kearns and Co. This should actually be Wadkin, Ltd.
V.H.F. Sound Broadcasting

A FURTHER six v.h.f. stations, bringing the total to sixteen, are to be built during the next two years by the B.B.C. With the introduction of these stations, the v.h.f. service will be within reach of 96% of the population.

The location of the new stations and the frequencies on which they will operate are given below. It is planned to have the first four in operation by the end of next year.

The Anglesey station will replace the temporary transmitter at Penmon at present radiating the Home Service on 94 Mc/s.

Only five of the original ten stations authorized are at present in full service—Wrotham, Pontop Pike, Divis, Meldrum and North Hessary Tor which came into service on August 7th on 88.1, 90.3 and 92.5 Mc/s. The B.B.C. plans to have the others, Norwich, Sutton Coldfield, Holme Moss, Blaen Plwy and Wenvoe (where a temporary transmitter is at present operating on 94.3 Mc/s), in service by the end of this year.

Sales at Home and Abroad

ALTHOUGH retail sales of sound and television receivers were higher in June than the previous month, the total sales for the first six months of the year were well below those of the same period in 1955. Television receiver sales were down 14%, sound receivers 19% and radiogramophones 40%. The comparable figures for the first half of each year are tabulated below:

Long-Distance Closed-Circuit TV

REMOTE control has frequently been employed to perform an opening ceremony, but not until this month has television been used in this country to enable the opener and the assembled guests to see the plant started and be "conducted" round the works whilst remaining some 200 miles away. The occasion was the official starting up by the Home Secretary of Britain's first "bulk" oxygen plant at Margam, near Swansea.

Television cameras, installed by Marconi's, at both the plant of the British Oxygen Co. and the works of the Steel Company of Wales, to which the oxygen is piped, were linked by radio to the G.P.O./B.B.C. cable from Wenvoe to London and fed to a number of monitors in the London office of the British Oxygen Company.

By fitting the television camera with "dark glasses" the interior of a furnace, into which oxygen was being injected, was clearly seen—a rigorous test for the camera; the contrast ratio of light-to-dark being of the order of 500:1 compared with a normal studio ratio of 20:1.
J. D. Stephenson, M.Sc., Ph.D., M.I.E.E., a director of the Mullard Radio Valve Company and Mullard Blackburn Works Limited, has also been appointed to the board of the parent company—Mullard Limited. After four years' research work at Durham University, where he took degrees in physics, applied science and electrical engineering, Dr. Stephenson joined the Mullard organization in 1933 and for the past ten years has been in charge of valve manufacture for the group.

H. A. Lewis, M.B.E., T.D., B.Sc.(Eng.), A.C.G.I., M.I.E.E., has resigned from Marconi's Wireless Telegraph Co., where he was manager of the broadcasting division, and has joined Electric and Musical Industries as personal assistant to E. J. Emery, managing director of the domestic electronics division. He had been with Marconi's since 1948. After taking his degree at Imperial College, University of London, in 1933, Mr. Lewis, who is 43, joined the B.B.C. as a student apprentice and was subsequently appointed to the newly-formed television section of the station design and installation department. During the war he was responsible for the formation and expansion of the branch of R.E.M.E. concerned with the installation and maintenance of Army telecommunications and radar equipment.

D. G. Smee, M.B.E., Assoc.I.E.E., is the new manager of Marconi's broadcasting division in succession to H. A. Lewis. Prior to war service, first in Royal Signals and then in R.E.M.E. rising to the rank of major, he was for seven years in Marconi's research laboratories. He was appointed an M.B.E. in 1945 for his work in the Middle East and Italian theatres of war, where he was responsible for the maintenance and repair organization of Army telecommunications and radar equipment. Mr. Smee rejoined Marconi's in 1946 and has held various positions including that of assistant commercial manager since 1951.

G. E. Condiffe, O.B.E., B.Sc., M.I.E.E., has relinquished the position of managing director of E.M.I. Research Laboratories Limited, which he has held since 1951, to become research and technical consultant to J. F. Lockwood, the chairman and managing director of Electric and Musical Industries Limited. Mr. Condiffe, who graduated at Manchester University, joined the research laboratories of the Gramophone Company (now in the E.M.I. Group) in 1925 and during the war was concerned with Government radar projects. He was appointed to the technical sub-committee of the Television Advisory Committee in 1953.

Owing to the illness of R. P. Browne, O.B.E., B.Sc., secretary of the Radio Industry Council, who has been in hospital for the past two months, his deputy, G. B. Campbell, has been appointed acting secretary. Incidentally, during the Radio Show all R.I.C. business will be conducted from Earls Court.

Denis Taylor, M.Sc., Ph.D., F.Inst.P., the new chairman of the measurement and control section of the I.E.E., is head of the electronics and instrumentation division at the Atomic Energy Research Establishment, Harwell. He went to A.E.R.E. in 1946 after seven years' service at the Telecommunications Research Establishment, where he played a leading part in the development of radar. For his work as a member of Sir Robert Watson-Watt's team, and especially for the development of G.C.I. (ground controlled interception), he was awarded £2,400. Before joining the Watson-Watt team at Bawdsey in 1939, Dr. Taylor was a lecturer at Hull Technical College and at Croydon Polytechnic.

D. R. Parsons, M.I.E.E., M.Brit.I.R.E., who for the past eight years has been chief engineer of Rediffusion (North-East) Limited, has been transferred to Rediffusion (Merseyside) Limited as general manager. He was previously with Eddystone, Whiteley Electrical and the G.E.C.

R. H. Hammans (G2IG), president of the Radio Society of Great Britain, was elected to preside over the recent International Amateur Radio Union conference held at Stresa, Italy. This was the second triennial conference of I.A.R.U. Region 1 societies which was attended by representatives of seventeen countries. Mr. Hammans is chief engineer of Granada TV Network—one of the I.T.A. programme contractors.

H. A. M. Clark, B.Sc.(Eng.), M.I.E.E.,(G6OT), R.S.G.B. representative on the technical committee of the conference, was elected chairman of that committee.

OUR AUTHORS

John M. Beukers, contributor of the article in this issue describing a switch-tuned f.m. unit, is now in the advanced development laboratory of Standard Telephones and Cables, having served a two-year apprenticeship in the company's radio division. He studied at the Northampton Engineering College, London, where he obtained his B.Sc.(Eng.) degree and a college diploma. Mr. Beukers won this year's B.S.R.A. committee prize with a pre-tuned f.m. receiver and a gramophone pre-amplifier.

J. S. Belrose, the writer of the article on a selective band-pass i.f. amplifier, graduated from the University of British Columbia in 1950 with a B.A.Sc. degree. From 1951 to 1953 he was in the radio physics laboratory of the Defence Research Board in Ottawa, Canada, where he was concerned mainly with the design of transmitting and receiving aerials and equipment for f.s.k. teleprinter transmission. In 1953 Mr. Belrose came to this country and has since then been a research student at the Cavendish Laboratory, Cambridge, experimentally studying the reflection of long waves from the ionosphere at both steep and oblique incidence.
OBITUARY

L. H. Bainbridge-Bell, O.B.E., M.C., M.A., M.I.E.E., whose absorbing personal interest was the presentation of technical information, especially in relation to circuit diagrams on which he has contributed to Wireless World (sometimes under the nom-de-plume Symbol Simon) died on August 7th, aged 63. Since his retirement in 1953 from the Admiralty Signal and Radar Establishment, which he joined in 1929, he had been a committee secretary in the electrical section of British Standards Institution. From 1927 to 1936 he was at the Slough radio station, developing the c.r. direction finder for atmospherics and ionosphere-sounding apparatus. During this period he was co-author of Watson-Watt's and Herd's "The Cathode-Ray Oscillograph in Radio Research." For his "contributions to the development of radar installations" as a member of Sir Robert Watson-Watt's team, he was awarded £2,400.

IN BRIEF

Television licences must now exceed six million for duration of the last available figure, the total increased by £8,547 to 5,922,070. The Midland Region, like the London Region, now has more television than sound licences—1,021,171 compared with 1,011,463. The overall total of broadcast receiving licences at the end of June was 14,332,356.

Awards to Inventors.—The fourth and final report of the (British) National Federation of Inventions (H.M.S.O. Cmd. 9744) lists 115 claims heard by the Commission since November, 1952. Among the radio claims not previously referred to in these pages is one for the disc-sole triode for which E. H. Ulrich, Dr. C. Nett Smyth, St. Charles and J. B. W. Persson were awarded £2,500. Claims received awards of £750 for the development of Yagi aerials, £500 for a capacitance switch and phasing switch and £1,500 for parabolic reflector type aerials were shared by R. V. Alred, J. F. Coales, M. J. Jones, W. T. Davies, E. F. Daly, A. Dooley and K. R. Soar.

I.T.A. Increased Power.—The e.r.p. at both Croydon and Lichfield has been doubled by operating two transmitters in parallel. The Croydon station's e.r.p. is now 120 kW and Lichfield 100 kW. The e.r.p. of the Midland station will eventually be increased to 200 kW—probably in the autumn. The transmitters at Croydon were installed by Marconi's and at Lichfield by Pye.

Lifeboat Radio.—The Royal National Life-boat Institution is to install v.h.f. radio-telephones in 50 life-boats to enable crews to keep in touch with pilots of helicopters and search and rescue aircraft. At present communications have to pass through the G.P.O. coast stations or coastguards. The equipment, which will operate on the "search and rescue, scene of action" frequency (138.78 Mc/s) used by the Royal Naval Air Service and the R.A.F., is being supplied by the British Communications Corporation.

A two-day exhibition of their receivers is being held by Champion Electric Corporation in the ballroom at the Mayfair Hotel, London, W.1, on August 23rd and 24th. Complimentary tickets are obtainable from Champion at 8, Eccleston Street, London, S.W.1.

"Ferroresonant Computing Circuits."—The authors of this article in the July issue ask its to state that the following two references should be added to the bibliography: British Patent No. 749,383 (R. H. Baker: assigned to N.R.D.C.); British Patent Application 5828/56 (R. S. Arbon and G. Philip-Jones).

"Broadcasting in the U.S.S.R."—In para. 4, p. 381, July issue, there was some confusion between cause and effect. In fact, films and O.B.s preponderate in Soviet television programmes because the available studio space is at present small. Also, on p. 380, the frequency of the latest radio link should be 3,000 and not 300 Mc/s.

A memorial plaque bearing the inscription "John Logie Baird, A.R.T.C.—1888-1946. A former student of the college. This plaque was erected to commemorate his inventive genius and outstanding contributions to the development of television," was unveiled by the Postmaster General at the Royal Technical College, Glasgow, in July. It is the first of three memorials sponsored by the college; the others being Baird lecture and a Baird prize to be awarded annually in the department of electrical engineering.

Brit. I.R.E.—The first London meeting of the session will be held at 6:30 on September 26th at the London School of Hygiene and Tropical Medicine, Keppel Street, W.C.1, when Dr. H. W. Loeb will read a paper on "Some aspects of transistor progress.

Teacher Training.—Garnett College, in the New Kent Road, London, S.E.1, still has a number of vacancies in the nine-months full-time course starting in September to train teachers of technical subjects for work in technical schools and colleges. It is stressed that it is a course of teacher training and does not deal with specific technical subjects, students being expected to possess the necessary engineering qualifications. The course leads to the teacher's certificate of the University of London Institute of Education.

Next year's British Plastics Exhibition (July 10th to 20th) is to become an international show. The exhibition in co-operation with the British Plastics Federation, will now occupy both the Grand and National halls at Olympia—an area of 250,000 square feet compared with 90,000 square feet at the last exhibition in 1955.

A programme has now been prepared for the Air Traffic Control Convention to be held at Southend-on-Sea on October 4th and 5th. Details can be obtained from the Guild of Air Traffic Control Officers, 118, Mount Street, Berkeley Square, London, W.1. The main objective of the convention is to bring together not only those who operate and use the air traffic control services but those who design and manufacture the equipment employed.

Amateur Television Convention.—This year's convention of the British Amateur Television Club will be held at the Bonnington Hotel, Southampton Row, London, W.C.1, from 10 a.m. to 7 p.m. on October 27th. It will include displays and demonstrations of members' equipment. Further particulars and admission tickets (price 5s) are obtainable from D. S. Reid, 4, Bishop Road, Chelmsford, Essex.

BUSINESS NOTES

Harbour radar is to be installed by Decca at the Southampton Harbour Board's Calshot Signal Station. The equipment (Type 32), which employs a beam of only 3rd degree and 1/20th microsecond pulse, will provide a radar picture of the Port of Southampton and its approaches.

Sound Equipment, Limited, of 5, Great Newport Street, London, W.1, which was a member of the Rank group, has become a wholly-owned subsidiary of the British Thomson-Houston Company and its name is to be changed to BTH Sound Equipment, Limited. The company will continue to supply and service cinema equipment and will also broaden the scope of its activities in this field.

As foreshadowed in our July issue, McMichael Radio has been taken over by Radio and Allied Industries, Limited, manufacturers of Sobell receivers. The McMichael office in the Strand, London, has been closed and the company's activities centred at Langley Park, Slough, Bucks. (Tel.: Slough 22201.) The service department will remain at The Plaza, Iver, Bucks. (Tel.: Iver 1171.)
Dagnall and Kendall, Limited, of Cranfield, near Bletchley, Bucks., have taken over the manufacture of the components previously made by the Igranic Electric Company, Limited. These include both 70° and 90° time-base components, deflection and focus coil assemblies for projection television and the complete range of Igranic wire-wound components. J. A. Field, who was in charge of the tooling and development section of Igranic's components division, has been appointed chief engineer of Dagnall and Kendall, and J. White, who was also in the division, is sales manager.

Atkins, Robertson and Whiteford, Limited, of Glasgow and London, manufacturers of components and industrial electronic equipment, have moved to a new factory on the North Bank Industrial Estate, Glasgow, (Tel.: Giffnock 1031/2.) Harry L. Ranson, formerly with the Furzehill Group, has been appointed general sales manager of the company.

Andec Limited is the new name adopted by Avis and Baggs, Limited, who have moved to larger premises in Bennet Road, Reading, Berks. During its seven years the firm has specialized in the application of electronics to industrial processes. It also undertakes batch or long-run production of transformers and fractional horse power electric motors.

The sales and service departments of Staar Electronics Limited, of 39, New Oxford Street, London, W.C.1 (manufacturers of the automatic record-playing equipment developed by Usines Gustave Staar, of Brussels), are now at 86, Palmerston Road, Walthamstow, London, E.17. (Tel.: Larkswood 5441/2.)

OVERSEAS TRADE

For the Damascus Fair (September 1st to 30th) Pye are setting up a complete television broadcasting station as did Bush at the same fair in 1954. 'T. P. Pye Ltd.' will have a stand on which will be featured export sound and television receivers using printed circuits. The television transmitter will operate on 625 lines in the U.K. channel 8. Seven other receiver manufacturers—Bush, Cossor, Ekco, Ferguson, G.E.C., Kolster-Brandes and Regentone—are putting on a combined demonstration under the auspices of the British Radio Equipment Manufacturers' Association in the British Pavilion.

Iran.—A £300,000 contract has been awarded to Marconi's by the National Iranian Oil Company for the installation of a complete v.h.f. multi-channel radio-telephone system along the route of their new 600-mile oil pipeline from Tehran. The order calls for the supply of 84 multi-channel equipments (Type HM181), together with a considerable quantity of telephone carrier equipment (to be supplied by the Telephone Manufacturing Company) and diesel electric power plant. The majority of the stations along the route will be unattended.

The equipment for the multi-channel v.h.f. radio-telephone system along the 200-mile route of the Sui to Multan gas pipeline in West Pakistan is being jointly manufactured by Pye, Limited, and Ericsson's Telephones, Limited.

Radio links, over which consumer demands will be transmitted to the electricity authority's headquarters for the automatic control of load shedding, are being supplied to New Zealand by Automatic Telephone & Electric Company, Limited. A supervisory and remote control system manufactured by A. T. & E. will be used to operate control equipment at one of the sub-stations. A. T. & E. will be supplying repeater equipment for the 80-kilometre coaxial cable (supplied by B. I. Callender's Cables), which will link Auckland and Hamilton, N.Z. It will initially provide 240 telephone circuits, but provision is made for this to be increased four-fold.

Switzerland.—A Marconi ST201 radar trainer is being modified by International Aeradio, Limited, for use by the Swiss air force.

International Aeradio, Limited, are to install and operate equipment to provide a communal radio-telephone service for six of the major oil companies prospecting in North Africa. The two main base stations will be set up at Benina and Tripoli, through which messages will be passed to and from the various mobile units operating in Libya.

Solartron, of Thames Ditton, Surrey, announce that they intend to establish a sales and servicing company in the near future; to hold stocks at Philadelphia, Cleveland and Los Angeles; and to make nation-wide servicing arrangements through suitable agents. They have a team of engineers already in the States with headquarters at Western Instruments, Inc., Burbank, near Los Angeles, California.

Plessey Incorporated has been formed, with offices at 41, East 42nd Street, New York City, to represent and control the interests of the Plessey Company in the United States. The company's Chicago office is being closed.

R.C.A. Great Britain, Ltd., announce that their high-fidelity equipment produced in this country is now being exported to twenty-eight countries, including the U.S.A.

Malaya.—Three Malayan public services—police, customs and fire brigade—are to be supplied with v.h.f. mobile radio telephone equipment by A. T. & E. (Bridge-north), Limited. All the 43 sets are standard six-channel 10-watt equipment (Type RL).

Pye radio-telephone equipment has been installed by their Belgian agents, Semobol, in a fleet of taxis in Brussels, stated to be the first permanent radio taxi service in the country.

NEW "WIRELESS WORLD" BOOKS

Correcting Television Picture Faults.—Some 150 end-of-tube photographs illustrating a wide variety of receiver defects are included in this 76-page book, by John Cura and Leonard Stanley. Other photographs illustrate the effects of many different kinds of interference. The text explains the nature of the defects and indicates what action should be taken to correct them. The explanation of the defects in simple form for the layman and are supplemented by more technical information printed in smaller type. The book costs 3s 6d (postage 3d).

Guide to Broadcasting Stations, 1956/57.—The present chaos in the medium-wave band is emphasized by a glance at the medium-wave section of the latest edition of this book, from which it will be seen that some 50 per cent of the broadcasting stations in Europe are operating on "pirated" frequencies. Some 700 European stations operating on long and medium waves and nearly 2,000 short-wave broadcasting stations of the world are listed, both in order of frequency and geographically. The operating details—frequency, wavelength, and power—have been checked against measurements made at the B.B.C. Receiving Centre, Tatsfield, Surrey. Within its eighty pages the book, which costs 2s 6d (postage 4d), also includes operating details of Europe's v.h.f. broadcast stations which now total nearly 400, and 170 television transmitters.

Radio Valve Data.—The 5th edition of this well-known manual has been revised and enlarged and includes characteristics of some 2,500 valves, transistors, metal rectifiers and cathode-ray tubes. An important feature is the improved presentation of the base connections, which are now given in diagrammatic form with the electrode connections marked against the appropriate pins. Price 4s 6d (postage 7d).

These books are issued for Wireless World by our Publishers, Iliffe and Sons Ltd., Dorset House, Stamford Street, London, S.E.1.
National Radio Show  
PREVIEW OF TECHNICAL EXHIBITS

With a preview for overseas visitors and invited guests on August 21st, the 23rd National Radio Show opens to the public at Earls Court on the 22nd.

A stand-to-stand survey of the technical exhibits, prepared from information provided by the exhibitors, is given in the following pages. For those attending the Show the report and the plan opposite should provide a useful guide to the stands.

Although there are bound to be some last-minute introductions by manufacturers, it is hoped that for those unable to visit the exhibition this survey will give a useful overall picture, which will be supplemented by the review of this year's trends in sound and vision receivers to be included in our next issue.

The Show is first and foremost an exhibition of domestic sound and television receivers, components and ancillary equipment. Of the 117 exhibitors, some 85 are manufacturers and of this number about 40 are makers of domestic receivers. Television Avenue, which has been a feature of the Show for some years, is discontinued but to each stand both B.B.C. and I.T.A. television transmissions are being piped for demonstration purposes. Most of the demonstration rooms are being fed with the B.B.C. v.h.f. sound transmissions.

The sponsors of the Show, the Radio Industry Council, have again provided, with the assistance of colleges and manufacturers, a "careers" display. Among the exhibits included in the display are the electronic air speed timing equipment used for the record-breaking flight of the Fairey Delta, guided missile equipment, a computer which will do sums for visitors and a radar screen with a scanner on the roof which visitors can operate.

</tbody>
</table>

Wireless World, September 1956
With this plan and the list of exhibitors opposite (arranged alphabetically under their trade names or abbreviated titles) visitors will readily be able to locate a particular stand. Demonstration rooms and offices are prefixed with "D."
ACOS (202)

Pickup replacement cartridges designed to give accurate groove tracing at high lateral accelerations ("Hi-g") are available to fit most record players and changers with removable heads. For use in extreme tropical conditions, a turn-over head with ceramic pickup element (GP61-1) is now being produced.

The exhibit will include a range of piezo-electric microphones ranging from the inexpensive MIC35 to the MIC16 sound-cell type for studio use.

Cosmocord Ltd., Eleanor Cross Road, Waltham Cross, Herts.

AERIALITE (51)

Wide spacing of elements in Band III aerials is advocated by Aerialite as a means of obtaining a wide bandwidth and less disturbance of characteristics in proximity to buildings. Models are shown with up to 11 elements.

Additions to the range of twin-band aerials include two new "Uniled" models, so-called because the interconnection between the two systems is effected in the factory and only a single downlead has to be fitted on erection.

Three Band III converters are now available: Model T/2 gives a single channel only; TCD, giving two channels at high sensitivity, has an r.f. stage, and MC continuous coverage. All three have Band I/Band III switching.

Aerialite, Ltd.; Castle Works, Stalybridge, Cheshire

AIRMEC (212)

Two interesting test equipments, one for servicing television sets and the other for sound receivers are to be shown this year. The former is the Televet Type 877 and is complete self-contained portable test room comprising pattern generator, oscilloscope, wobulator, a.m. signal generator, a.f. oscillator and valve voltmeter.

The other is for a.m. and f.m. receiver testing and again is a self-contained and comprehensive item of equipment. It embodies a signal generator covering 100 kc/s to 15 Mc/s and 85 to 100 Mc/s, an oscilloscope, wobulator and an a.f. oscillator. Both are mains operated.

Airmec, Ltd., High Wycombe, Bucks.

ALBA (61)

Separate sensitivity controls on Bands I and II enable programmes to be switched rapidly in the new T641 and T644 table model television receivers, which have 14-in and 17-in tubes respectively. Both models are fully screened against radiation. Two 17-in and two 21-in consoles, complete the television range.

There is a choice of four table-model sound broadcast receivers, six radio-gramophones and two portable record reproducers among which the Model 202 a.d.c./d.c./battery portable, Model C116 midget receiver, and Models 880 and 881 record reproducers are new.

AMBASSADOR (43)

Television receivers with 17-in and 21-in tubes are to be shown. They have turret tuning and vision-channel a.g.c. The 17-in is available as a table model, but the 21-in is in console form. The console form of the 17-in is unusual in being roughly triangular in plan so that it will fit closely into the corner of a room.

A sound broadcast receiver covers the medium- and long-wave a.m. bands and the f.m. band, for which there is a built-in v.h.f. dipole aerial.

Ambassador Radio & Television Ltd., Princess Works, Brighouse, Yorks.

ANTIFERENCE (69)

The "Hi-O" range of dual-band television aerials is based on what is described as "electronic coupling"; the Band III signal is transferred to the feeder by the proximity of the Band II dipole to the Band I element. The range has been extended and now includes no fewer than 17 different models.

A new one-piece coaxial plug has been introduced which simplifies the fitting of the cables. No loose outer grip is employed, the cable being firmly gripped by squeezing the sides of the body of the plug on to the woven copper sheath of the cable. The centre conductor is soldered in place. The plug is fully insulated by means of a Neoprene sheath.

Antiference, Ltd., Bicester Road, Aylesbury, Bucks.

ARGOSY (219)

Radiograms equipped for v.h.f. reception and with 4-speed record players are among the comprehensive new ranges of domestic equipment to be shown this year. Television receivers designed for long-range reception will be featured, and also automatic record players with the latest 4-speed motors. In external design of cabinets the "contemporary" style will be predominant.

Argosy Radiovision, Ltd., Abbey Road, Barking, Essex.

ARMY (302, 308)

A feature of the Army's exhibit, which is manned by the Royal Corps of Signals, is a demonstration of the complete cycle of training in a trade in the Corps. Examples of ancient and modern radio equipment are compared and the Army's present-day communications system is trained through brigade HQ, installations down to the latest "walkie-talkie" equipment.

ASSIMIL (307A)

A system of language instruction by gramophone records is offered by this firm, who have a preliminary course of eight double-sided 78-r.p.m. records, including text-book and tuition service, and an advanced course consisting of a further 12 records and tuition. The complete range of courses in Russian, French, German, Italian, Spanish and Dutch will be available for private listening on the stand.

AVO (3)

Some items of test equipment hitherto shown as prototypes are now available as production models; these include the two signal generators covering Bands I, II and III. "Mark III" covers 150 kc/s to 220 Mc/s with internal amplitude modulation. The other is the "Wide Band AM/FM Signal Generator," providing bandspread from 5 to 225 Mc/s and f.m. from 60 to 120 Mc/s with deviation up to ± 150 kc/s. Provision is made for checking the frequency and adjusting the scale cursor if necessary.

Another interesting Avo instrument is the "Universal Measuring Bridge Type 1" for resistance, capacitance and inductance measurements. In addition there is a full range of the well-known Ammeters.

B.B.C. (301)

Continuing the campaign to popularize v.h.f. sound broadcasting, the B.B.C.'s stand includes a demonstration theatre where visitors can compare direct reception of a programme on v.h.f., on medium or short waves.

Wireless World, September 1956
Antifrequency HL402/4K combined television aerial utilizing the "electronic coupling" principle.

long waves or by line from Broadcasting House.

Among various methods of instruction devised by the Engineering Training Department which can be seen on the stand are demonstrations showing the operation of the cathode follower and the diode detector and experiments in geometric optics. An automatic monitor for checking transmitter performance shows the type of equipment being installed by the Corporation to eliminate unnecessary routine jobs.

BELLING-LEE (49)

Although aerials are to be the prominent feature of this firm's display, Belling-Lee produce also a wide range of small parts such as fuses, terminals, thermal-operated switches, valveholders and a variety of plug and socket connectors.

The latest developments in aerials are the collapsible Band III models designed for more convenient operation but just as effective in use as the factory assembled models. Combined Band I/Band III aerials cover a very wide range, from a simple "Loftrod" (indoor type) to an "H" with two 6-element Band III Yagis arranged to form a broadside array. This type of fringe-area aerial is suitable for use where both B.B.C. and I.T.A. stations are co-sited. For use elsewhere separately orientated systems are available.

Aerial accessories shown include cable outlet sockets, aerial amplifiers, Band I/Band III filters and a comprehensive range of interference suppressors.

Belling and Lee, Ltd., Great Cambridge Road, Enfield, Middlesex.

BRIMAR (39)

A reasonable size of television set cabinet, combined with a big picture, is made possible by the new C21KM 21-in c.r. tube to be shown, which has a 90° deflection angle. A range of valves suitable for the time bases of such 90° tubes will also be seen.

Among the special-quality valves will be flying-lead types assembled with close-fitting cooling cans and mounted on nylon-loaded PTFE bases.

Transistors will include the comparatively new TS series (p.n.p. junction types) which are approximately half the size of their predecessors (TP and TJ series) and are hermetically sealed in metal cans.

Standard Telephones and Cables Ltd., Footscray, Sidcup, Kent.

BULGIN (34)

This firm specialize in the manufacture of signal lamps, switches, knobs, connectors and a host of small, but important, parts used in the radio and electronic industries.

New items shown this year include a pillar-type signal lamp, rather like a lighthouse with a 30° side window and with or without a transparent top. There is also an inexpensive type of key switch available in several styles, such as locking both sides or locking one side and spring-loaded the other, or spring-loaded both sides. Various contact combinations are available.

A toggle-action micro-switch and an ultra-lightweight version of the Lilliputian model shown last year, but operating with under 5 oz pressure, are also new.

A. F. Bulgin and Co. Ltd., By-Pass Road, Barking, Essex.

BUSH (17, 29)

Television receivers manufactured by this firm retain the form of station-selector mechanism introduced last year. Tuning is by a method which gives basically con-
Continuous tuning in each band but which is operated by a control moving it in steps and so giving the effect of a switch selector. The 14-in tube model is available in two styles of table cabinet, one of moulded Bakelite and the other of wood, and there is a larger type with a 17-in tube which is basically the same electrically.

Among the sound receivers the models including a v.h.f. band now outnumber the purely a.m. sets. The VHF 90, for example, has a double-triode for the v.h.f. "front-end." It is a two-band set covering v.h.f. and medium waves and it has a built-in dipole for v.h.f. and a ferrite-rod aerial for medium waves. Provision is made for the use of an external v.h.f. aerial.

CHANNEL (108)

New equipment shown this year includes two general-purpose power supply units. One, the Type PS12, gives a stabilized output variable from 200 to 400 V d.c. and an un-stabilized d.c. output of 550 V with an output impedance of less than one ohm. There is also an improved version of the Type T3 pattern generator which covers both television bands.

Channel Electronic Industries Ltd., Dunstan Road, Barnham-on-Sea, Somerset.

COLLARO (21)

Four-speed turntable drives (including 16½-r.p.m.) are now available in three new gramophone units—the AC4/564 single-record player, RC456 record changer and 4T-200 transcription unit. All these units are fitted with the "Studio" crystal pickup cartridge and the record changer can be switched to be operated manually for single discs.

A pre-amplifier and power pack are now available for use with the "Tape Transcriptor" magnetic recording mechanism. This employs four heads and both top and bottom tracks can be recorded and played back without changing over spoils. Tape speeds of 3½, 7½ and 15in/sec can be used according to the frequency range required for the material to be recorded.

Collaro Ltd., By-Pass Road, Barking, Essex.

Cossor (57)

Outstanding in the new range of television sets on show will be a 21-in table receiver, model 947. With a chassis layout and cabinet designed to facilitate easy servicing, it has 15 valves, an aluminized tube, self-centring flywheel sync and automatic contrast control. Ease of servicing is also a feature of the 17-in model 942 console receiver, in which the screen safety glass can be easily detached for cleaning the tube face. Another 17-in console (with full-length cabinet doors) will be on view, also a low-cost 14-in table set for areas of good signal strength, together with a long-range version, and finally a 17-in table receiver.

A v.h.f. waveband is included in the latest addition to the well-known range of "Melody Maker" sound broadcast receivers and also in the new model 529 radiogram, which has three speakers with a crossover network.

Printed circuit technique will be seen in the new "Melody Portable," which is a 4-valve battery superhet for long and medium waves with a ferrite rod aerial and a 5-in loud-speaker. With the batteries it weighs 6½ lb.

Cossor Instruments (206)

Construction kits for two instruments—the first of a series—will be introduced this year, one being a valve frequency meter and the other an oscilloscope. Also on show will be the model 1322 "Telecheck" and marker generator for Bands I and III—a frequency-modulated alignment oscillograph having a carrier frequency generator modulated by the sawtooth waveform of the display c.r.o. to provide the sweep. The display will be completed by a range of oscilloscopes and c.r.o. tubes.

DECCA (58)

Choice of seven television receivers is offered with tube sizes ranging from 14 to 21 in. The recently introduced table model DM4/17 in and its console version DM4/C are fitted with tambour (folding) doors to cover the tube face when not in use. Models DM4/C, DMC/18 and DMC/D21 incorporate a sound broadcast receiver for the v.h.f. service with switched selection of alternative programmes. Model 444 provides television, v.h.f., short, medium and long wave reception and includes a three-speed record changer.

There are three radio-gramophones with four-waveband receivers (including v.h.f.) and combined moving-coil and demagnetostatic loudspeaker systems in each case.

The "Panatrope" console record reproducer, "Portrolla" portable radio-gramophone and "Decallan" portable record changer are also available. The 'D lux' portable gramophones are continued.

Decca Record Co. Ltd., I-3, Brixton Road, London, S.W.9.

DEFIANT (35, 37)

Television receivers with 14-in, 17-in and 21-in tubes are being shown.

Turret tuners are used and flywheel sync is provided. Sound receivers include models covering the v.h.f. band as well as the long, medium and short wavebands.

There is also a portable record reproducer which includes a 4-speed automatic record changer.

Co-operative Wholesale Society Ltd., 1, Balloon Street, Manchester.

DE LA RUE (8)

The "Delaron" division of this firm is represented by a variety of furnitures including Delaron Copper Clad for printed (etched) circuits. A recent development is Delaron Neoprene Clad in which the synthetic rubber functions as a seal for the ends of electrolytic capacitors.

DOMAIN (107)

This stand is devoted to a display of tables for television sets and trolleys for apparatus, such as oscilloscopes.

DUBLIER (62)

This firm caters for the diversified requirements of the radio industry in respect to capacitors, resistors and volume controls of one kind or another. Among the latest additions are some sub-miniature electrolytic capacitors, plastic film dielectric tubular capacitors, encapsulated pulse-forming networks and a small 7-ampere choke for suppressing electrical equipment causing interference to television. This last item is an addition to the existing range of television and other types of suppressors produced for use with domestic electrical appliances.

Capacitors, resistors and volume controls are being produced with special terminations and connections for use in printed circuits.

DYNATRON (4)

A pre-tuned switch-controlled v.h.f. tuner is to be exhibited in which a.f.c. is employed and provides four channels with an output at audio. Save for the audio side, it is virtually a complete receiver and it forms the heart of the RG10 radio-gramophone. Here it is accompanied by an a.f.c. amplifier and pre-control unit and a bass-reflex loudspeaker.

Television sets have 17-in or 21-in tubes. The latter has provision for f.m. sound reception.

Dynatron Radio Ltd., The Firs, Castle Hill, Maidenhead, Berks.

E.A.P. (215)

The new "Elizabethan de luxe" tape recorder incorporates the "Collaro Transcriptor" and has facilities for mixing microphone and gramophone

Wireless World, September 1956

141
inputs, headphone monitoring and a voltage output for feeding an external amplifier. The internal amplifier is rated at 3½ watts and the loudspeaker is a 9in x 5in elliptical type.

The “Elizabethan” portable recorded has been redesigned and will be known as the “Elizabethan—56.”

E.A.R. (67)

Electric gramophones include the “1960” range with both portable and “Chairside” versions, the latter designed to serve also as a table for a television or sound broadcast receiver. A transistor portable gramophone will also be shown.

A new series of amplifiers with outputs from 4 watts includes the “Three-Nine-Five” for which the distortion at 20 watts is rated at 0.05 per cent.

Electric Audio Reproducers Ltd., The Square, Isleworth, Middlesex.

E.M.I. (16, 23)

Tape records of the “Stereosonic” kind will be seen amongst the comprehensive display of records from all the E.M.I. group on stand 16. Here there will also be a technical bureau with staff to answer questions about sound recording and reproduction.

Professional tape recording equipment to be shown on stand 23 will include a new and versatile recorder, the TR90, which is available in three versions—in two carrying cases, in rack-mounted chassis and in a glass-topped console. The latest 81in spools, giving increased recording capacity, will be seen in the new TR51 transportable machine. An accessory pack for tape jointing (including leader strips) will also be displayed.

Electric and Musical Industries Ltd., Hayes, Middlesex.

E.M.I. INSTITUTES (397)

A method of practical training by post in radio and electronics is provided by this institute, which is part of the well-known industrial organization. On display will be examples of the equipment which the student builds and studies at home alongside the theoretical instruction. Facilities will be available for private interviews.

EDISWAN-SIEMENS (19)

Two double-cone loudspeakers, 10in and 12in, with built-in mechanical cross-over networks will be among the new exhibits on this stand. Asso-

Collaro four-speed record changer (RC456)

Dubilier triple unit “Drilitc” capacitor, Type CRE/PC, for printed circuits.

Ediswan Clix radio components manufactured from fluorocarbons.

WIRELESS WORLD, SEPTEMBER 1956
ciated amplifiers will also be shown. Other electronic apparatus will include marine radio equipment.

Valves for f.m. and Band-III television will be displayed and c.r. tubes will include a new 24-in rectangular type. Industrial valves will be represented by a new vapour-cooled type ESV.1002, while at the other end of the size scale will be miniature diodes for electronic instruments.

Clix radio components will be on view and also an extensive display of high-performance fluorocarbon resins and components incorporating PTFE. The Edison Swan Electric Co., Ltd., 155, Charing Cross Road, London, W.C.2.

EKCO (24, 30) Among the television receivers to be shown by this firm are new 14-in and 17-in tube models, the T283 and T284. They have turret tuning and flywheel sync, automatic band-width control and automatic interference inverter. They are both table models. The T293 is similar to the T284, but has provision for the reception of Band II f.m. sound transmissions.

Sound receivers covering the v.h.f. band only are made and the new types include the A277 table model and the C273 console. A double-triode frequency-changer is used and there are two i.f. stages feeding a ratio detector. Two loudspeakers are used and provision is made for connecting a tape recorder and for using a record player.

ENGLISH ELECTRIC (40) Television receivers with 17-in and 21-in tubes are being exhibited. They are available in two forms, with and without provision for f.m. sound reception on Band II, the price difference being of the order of £5. All models cover Bands I and III.

English Electric activities in other fields are illustrated by photographs and models.

EVER-READY (54) The weights of the two new battery portables to be shown by this firm, "Sky Princess" and "Sky Baby," are only 6½ lb and 6½ lb respectively. They are 4-valve superfetas using low-consumption valves, and are designed in flat carrying cases with hinged lids on the "personal" principle.

The "Sky King" is another new battery set of larger and more conventional design. All have high sensitivity speakers and long and medium wavebands.

Among export receivers a new and improved version of the "Saucepan Special" will be shown. A stout metal cabinet is used and the components of the 4-valve superhet circuit are tropicalized.

A subsidiary company, Bereco Radio, Ltd., will also be exhibiting a complete range of portable receivers, the "Calypso," "Ballerina" and "Jester" being solely battery sets while the "Fiesta" is a mains/battery model. Ferrite rod aerials are used in all but the "Jester." As usual there will be a comprehensive display of dry batteries, including the compact layer types.

The Ever Ready Co. (Great Britain) Ltd., Hercules Place, London, N.7.

FERGUSON (12) A range of television sets, sound receivers and radio-gramophones is to be shown on this stand. Sound receivers include types covering the v.h.f. band as well as medium and long waves, and this applies also to the radio-gramophones.

New television models have 17-in and 21-in tubes. Among the latter is a table model, the 3081. Thorn Electrical Industries Ltd., 105-109, Judd Street, London, W.C.1.

FERRANTI (31, 68) This firm has now introduced v.h.f. reception into its radiograms. Three models will be shown: the 6-valve 355 with a 10-in speaker, the 8-valve 455 with push-pull output into twin 8-in speakers and the 12-valve 1055 with a short-wave band, separate bass and treble controls, and a push-pull output handled by 7-in and 12-in speakers. All models have three-speed record changers.

In television the latest introduction is a 20-in table projection receiver, model 20T6, which incorporates a paraphase video circuit to permit a large contrast range. There will also be a 24-in console projection receiver and, in direct-viewing sets, 14-in, 17-in and 21-in models.

Among the valves and cathode-ray tubes an outstanding exhibit will be a range of silicon power rectifiers. These are hermetically sealed junction types with very low reverse currents and an ability to work at high temperatures.

Ferranti Ltd., Holfonwood, Lancs.

G.E.C. (53) To meet the requirements of extreme fringe areas, a complete range of 14-in and 17-in television receivers fitted with flywheel sync will be shown. For those who prefer larger pictures there will be a new 21-in table model and a 21-in console model. A range of Band-III converters for use with earlier G.E.C. receivers will also be displayed.

In sound broadcast receivers there will be two new table models covering the v.h.f. transmissions, while three radiograms having the same facility will be exhibited.

The display of valves and c.r. tubes will include a new audio output beam pentode, KT88, xenon-filled rectifiers, silicon junction rectifiers, industrial c.r. tubes and valves for r.f. heating and radar. A model of a 2-W transistor a.f. amplifier will be shown, and demonstrations will be given (in room D34) of high-quality sound reproduction equipment.

A speech synthesizer developed as part of a programme of research into ways of transmitting speech more economically is being demonstrated. It consists of a pulse generator of variable repetition rate to represent the voice excitation, a random noise generator, and three adjustable electrical resonant circuits to impose the "formant" frequencies on the spectrum of the combined output of these two sources. For demonstration purposes a special control unit is being used so that simple words can be produced.

Other exhibits include an electronic sorter, electronic telephone switching, the prototype of the latest quartz-crystal controlled speaking clock and ERNIE, the Premium Bond "wheel of fortune," described on page 440.

**GARRARD (50)**

A new "transcription" pickup arm with many adjustments not normally provided, and a 45-r.p.m. battery-operated turntable (BA1) for use in miniature valve or transistor portable gramophones are likely to be centres of interest on this stand. The backbone of the exhibit will, as in previous years, be the range of multi-speed gramophone turntables and record changers which includes the RC120/4 and RC121/4 which are designed to occupy the minimum of cabinet space.

Pickup heads include a ceramic type (GCE4) and a moving coil of new design. The Garrard stylus pressure gauge has been redesigned and now includes a spirit level for checking the turntable.

**GOODMANS (105)**

The introduction of "pressure" units into the range of loud-speakers designed for high-quality reproduction is a new departure for Goodmans. In the "Midax" unit covering middle frequencies the horn is of rectangular section and the recommended cross-over frequencies are 750 c/s and 6 kc/s. The "Trebad" unit covers 5 kc/s to 16 kc/s and has a short built-in horn. Cross-over filters are available for coupling the two pressure units and for adding a low-frequency direct radiator cone unit for frequencies below 750 c/s.

A new cabinet ("Viscount") designed for use with the majority of Goodmans cone loudspeakers includes the recently developed acoustical resistance unit.

**GOODMANS Industries Ltd., Axiom Works, Wembley.**

**H.M.Y. (28)**

A new range of tape record reproducers to be shown by this firm include the 3031 table model with pre-amplifier and equalizer, giving an output suitable for high quality amplifiers, and the 3032, a console version with tape storage space. Model 3033 is a complete reproducer incorporating a 10-watt amplifier and a dual speaker system, while Model 3034 is for playing "Stereonic" dual-channel tapes. Model 3035 is a stereophonic tape deck.

Six speaker units, including an electrostatic ribbon type, cover the a.f. ranges in the 3052 high quality disc reproducer to be shown. The 18-watt amplifier has a response of 20 c/s to 30 kc/s. The associated pre-amplifier, incorporating tone control, equalization, etc., is a separate unit with remote control.

New radiograms incorporating v.h.f. reception will be exhibited, one having an ultra-linear amplifier and four speaker units in an acoustically loaded enclosure.

To compensate automatically for...
differences in strength between Band-I and Band-III signals a new 21-in television receiver incorporates an improved vision a.g.c. system. The sound receiver has a dual speaker system comprising a 10-in bass unit, which can be moved to either side of the cabinet, and a front-facing tweeter. Table (1847) and console (1848) versions will be on show.

The Gramophone Co. Ltd., Blyth Road, Hayes, Middlesex.

HART (209)
Several additions have been made to the range of radio cabinets in which this firm specialises. A novel design is the “Hartique Staturite” television table which can be erected or dismantled in a few seconds. The top when assembled measures 23 x 21 in and it is 23 in high; castors are fitted.

HUNT (25)
The manufacture of fixed capacitors of all kinds for the radio and electronics industries comprises the main activity of this firm. Their products include paper, ceramic and synthetic film dielectric varieties, as well as types designed for use in printed circuits.

Among the latest additions is a range of “Duoelectric Supermold-seal” capacitors, so called because they are constructed of metallized paper with synthetic film interleave and encapsulated by a cast resin technique providing a tough, heat- and water-resisting casing which withstands temperature changes of from -40°C to +100°C. This form of encapsulation is used for several other ranges.

I.T.A. (309, 310, 311)
This is the first time that the sponsors of the alternative television service have participated in the Radio Show. The I.T.A.'s stand, which is shared with the two London programme contractors—Associated Rediffusion and Associated Television, naturally stresses the growth of the alternative service in its first year. Part of the stand is devoted to a “conversion centre” where members of the Radio and Television Retailers’ Association give advice to viewers on the conversion of their sets.

Independent Television Authority, 14, Princes Gate, London, S.W.7.

INVICTA (65)
Two radiograms incorporating v.h.f. reception will be exhibited on this stand—the Model 59 console with a 3-speed automatic record changer and the Model 60, incorporating the latest type of 4-speed record changer. V.H.F. is also obtainable on the 6-valve sound broadcast receiver, Model 38. Notable for their light weight of under 7 lb will be two portable sets, the all-battery Model 26 and mains/battery, Model 27.

Television receivers to be shown will include a 14-in and two 17-in table models, two 17-in consoles and a 21-in console.

J. B. CABINETS (115)
This firm specialises in the production of radio, radiogram and television cabinets for the trade. An interesting feature of their display is a selection of cabinets made especially for the American market.

J. B. Manufacturing Co. (Cabinets) Ltd., Howard Way, Harlow, Essex.

J-BEAM AERIALS (1)
Pioneers of the skeleton-slot aerial, J-Beam has now introduced a skeleton-horn aerial for Band III, which, combined with a vertical dipole for Band I, has been named the “Hornbeam.” Two models are made, one with reflector and one without. The Band III gain, relative to a dipole, is 7 to 9 db and the bandwidth 170 to 230 Mc/s.

A wide range of individual Band I and Band III aerials, the latter embodying skeleton slots in multi-element systems, is also to be shown.

J-Beam Aerials Ltd., Westonia, Weston Favell, Northampton.

K.B. (29)
A newcomer to the range of sound receivers is the NR30, which covers medium and long waves as well as the v.h.f. band, with internal aerials. Three loudspeakers are included to improve the sound distribution. Among the existing models which are being continued is the FIB10FM, an f.m. receiver which can also be used as an a.m. adaptor with existing a.m. receivers.

Television sets have pictures in the three standard sizes of 14-in, 17-in and 21-in. All models have turret tuners and a form of automatic gain control.

Kolster-Brandeis Ltd., Footscray, Kent.

LABGEAR (203)
Two new indoor television aerials make their appearance this year. One is a dual-band type consisting of a Band III dipole with a compressed Band I aerial wound spirally around it. The centre insulator is common to both systems and can be plugged directly into the aerial socket on the television set. Alternatively it can be mounted elsewhere and a 75-ohm feeder used. This is known as the “Spiral” aerial.

The other indoor aerial is for Band I only and is intended for erecting in the loft. Described as the “Bi-Square” it is said to give a good performance up to 40 or 50 miles. The “Spiral” is for use at about 10 miles.

Aerial interference suppressors and cross-over filters are shown also.

Labgear (Cambridge) Ltd., Willow Place, Cambridge.

LINGUAPHONE (207)
Courses of instruction in foreign languages through the medium of gramophone records and books are offered by this company. Altogether 32 courses are available, the most recent additions being in South-American Spanish and Icelandic.

MCMICHAEL (59)
Several of the new television sets now embody a “black spotter,” a circuit feature which blanks out the white spots on the screen produced by severe ignition and similar inter-

Wireless World, September 1956
reference. This is generally far worse in fringe areas. The new sets offer the choice of 14, 17 and 21-in tubes and multi-channel tuners.

A 3-waveband a.m./f.m. chassis is included in the Model C417FM combined television and broadcast receiver. It has provision for a gramophone input and extension loudspeakers.

The majority of the new sound only sets have an f.m. range and built-in aerials for all bands are common, but there is provision for external aerials. One radiogram, M101RG, actually has push-button station selection operative on f.m. and a 4-speed automatic record changer.

McMichael Radio Ltd., Slough, Bucks.

MARCHONPHONE (23)
Electrostatic focusing is used in the 14-in c.r. tube of the new VT150 table television receiver to be shown, and is claimed to give an exceptionally sharp picture with accurate focusing over the whole screen. High sensitivity circuits are used, with extra gain on Band III channels. Another new set, model VC152, has the large screen size of 21 in and has special circuit features to counteract fading, aircraft flutter and variations in signal strength between Band I and Band III stations.

Among radiograms the new "Studio" model, ARG49A, is notable for its modern styling and low-level cabinet with a Warerite table top. It has a 6-valve a.m./f.m. circuit with a 3-speed automatic record changer, and this combination appears in several other radiograms to be shown.

The Marconiphone Co. Ltd., Blyth Road, Hayes, Middx.

MASTERADIO (15)
Complete home entertainment in a single unit seems to have been the aim of the designer of the TRG366, which combines the facilities of a 17-in television set, a radiogram and a tape recorder. Several other new television sets are shown with tubes ranging in size from 14 to 21 in.

There is a range of sound broadcast receivers, some of which include the f.m. band and one the troller band.

Cabinet styles employed include portable, table, console and bureau, the last-mentioned for radiograms.

MULLARD (33)
Applications of electronics in communications, navigation, medicine, industry and commerce will be illustrated by photographs, typical Mullard products and various working devices and demonstrations. There will also be an historical display of radio valves.

For the amateur constructor there will be a special demonstration room, D2A, containing examples of equipment built to Mullard circuits and free technical literature. Technical representatives will be available to answer queries.

MULTICORE (10)
A new solder alloy produced by this firm is said to prolong the life of the soldering bit by preventing the absorption of copper from the bit into the solder. The alloy contains a small percentage of copper. The main feature of the stand will be a demonstration of the new alloy being

J-Beam "Hornbeam 1" dual-band aerial.

Hunt "Duolectric Supermoldseal" capacitors for 750V and 1,000V d.c.

working.

Labgear "Spiral" dual-band indoor aerial for direct connection to the rec. v. r.

Marconiphone 14-in receiver, VT150.

Invicta 60 radiogram with 4-speed record changer.

Kolster-Brandes NR30 a.m./f.m.

receiver.

Wireless World, September 1956
used in the wiring and soldering of Alba midget sound receivers.

Other exhibits will include home constructors' solder for printed circuits, a solder thermometer and a magnetic tape splicer. The well-known BIB wire stripper and cutter will also be shown, with the new feature of 4 B.A. and 6 B.A. spanner holes in the handles.

Multicore Solders Ltd., Maylands Avenue, Hemel Hempstead, Herts.

MURPHY (42)

Television sets with tubes up to 21in and sound broadcast receivers are to be exhibited. The basic 17in models are the V280 (table) and V280C (console) and they are electrically similar to the 14in V270, but not identical. They have turret tuners and vision-channel a.g.c. The V280A (table) and V280CA (console) and V280AD (console with doors) are fringe-area models which differ in having an extra i.f. stage and flywheel sync.

Sound broadcast receivers include the v.h.f. band in their coverage. A v.h.f. mobile radio telephone is also being shown. It is crystal-controlled on both transmit and receive and can be obtained for the bands 60-90 Mc/s, 100-133 Mc/s or 133-174 Mc/s. The receiver is of the double superheterodyne type.

Murphy Radio Ltd., Welwyn Garden City, Herts.

NAVy (103)

A Sea Hawk naval fighter, complete with radio-communication equipment and navigational aids, is the dominant feature of the stand. The Admiralty Signal and Radar Establishment has provided a demonstration showing the use of ferrites in the development of radar and other electronic equipment. Among examples of marine radio-communication equipment to be seen on this stand is the gear supplied to members of the Royal Naval Volunteer (Wireless) Reserve for use at home and also a complete Royal Marine beach signal station. There is also a section devoted to radio aids to navigation.

nIxA (5)

Gramophone discs under this name, and Mercury, Vanguard and Emarcy records which are also marketed by Pye Ltd., will be featured on this stand.

opperman (319)

The Stirling single-valve Band 1/III converter, from which, it is claimed, there is no radiation, is to be shown by this company, whose main business is the manufacture of aircraft parts.

* E. Opperman Limited, Sterling Corner, Boreham Wood, Herts.

Pam "Transistor" portable.

Peto Scott television camera.

A prominent exhibit on this stand will be a 10-kw amplifier for vibration testing made by W. Bryan Savage, Ltd., an associated company.

PETO Scott (14)

A feature of the television sets exhibited by this firm is the provision of i.f. gain and contrast controls for the two bands selected by the band-switching. This is done to obviate the need for adjusting controls when changing from one station to another. Both 14-in and 17-in models are shown.

A television camera is also on view.

Peto Scott Electrical Instruments Ltd., Addlestone Road, Weybridge, Surrey.

PHILCO (22, 317)

Fully transistorized sound receivers, radiograms and record players will be a feature of this stand. The more conventional equipment will include v.h.f. receivers, a three-band "torch" receiver, car radios with push-button and stalk switches, and push-button sound and vision receiver, and for the bands 14-in to 21in.

An electronic device for use in training electronics technicians will also be displayed, while in the high-fidelity demonstration room D26a there will be a two-channel, four-speaker equipment for high-quality reproduction of gramophone records.

Philips (Great Britain) Ltd., Romford Road, Chigwell, Essex.

PHILIPS (44, 45)

Built-in dipole aerials for v.h.f. will be a feature of several of the a.m./f.m. receivers to be displayed, with ferrite rod aerials for medium and long waves. Also on show will be a 5-valve superhet clock radio and an "easy-to-fit" car receiver, for 6-V or 12-V operation, with a separate aerial built-in.

Automatic gain control on both sound and vision will be found in most of the television receivers, which range from a 14-in table model to a 23-in console projection set, while flywheel sync is used in the fringe-area models.

The 10-W "Novosonic" high-quality sound reproduction equipment will be demonstrated, and there will be a comprehensive display of radiograms, record players and automatic record changers.

PILOT (27)

A new model amongst the range of television sets on show will be the 17-in TV107 table receiver, which has a.g.c. on vision, flywheel sync, flyback blanking and a front-facing loudspeaker. Other receivers will range from 14in to 21in.

Sound receivers will include a new

(Continued on page 421)

Wireless World, September 1956
version of the "Little Maestro" a.c./d.c. 4-valve superhet with a ferrite rod aerial. Also on view will be a.m./f.m. receivers, one of them having a short-wave band, with an alternative version offering the traveller band instead.

Plessey (9)
The activities of this firm are devoted largely to the production of components, accessories and complete assemblies for the radio industry. This year is displayed a production model, the Type D15, of a loudspeaker working on the novel principle described in the Wireless World of January, 1952. Known as the "Ionophone" it has no recognisable moving parts as it functions by direct modulation of ionized air. Its only frequency limitations are those of the horn used with it.

This loudspeaker is particularly suitable as the "high frequency" reproducer in a multi-loudspeaker system, for which application a 2,000 c/s cross-over filter is advised.

Plessey Co. Ltd., Ilford, Essex.

Plus-a-Gram (216)
This firm is showing Dansette gramophones. The Minor has a three-speed motor and crystal pick-up and is of the portable type.

Portogram (46)
Twin elliptical loudspeakers are used in the new "Symphony Four" console record reproducer which incorporates the Collaro RC/456 four-speed changer unit and is designed for the small living room. Other new models are the "Auto-4-Gram" and "Bagygram" portable record reproducers.

The Model HP63 console with omnidirectional sound distribution and the TR100 high-quality reproducer, with alternative combinations of record-player, tape recorder and f.m. tuner, are continued.

Pye (13)
Demonstrations of amplifiers, loudspeakers, a.m./f.m. tuners and record reproducers will be given in room D6, entrance tickets for which will be available on the stand.

A comprehensive range of television receivers, from 14-in to 21-in, will be shown, together with a.m./f.m. sets, portables and radiograms. Also on view will be the "Talk Box" intercommunication system which operates over the electric mains wiring.

Pye Ltd., Cambridge.

R.A.F. (312)
Guided missiles and their associated electronic control and telemetering equipment are to be seen on this stand. The equipment shown in the section devoted to rockets includes a v.h.f. direction finder, u.h.f. gear and teletipper systems. The training of radio apprentices is also featured.

R.C.A. (103)
Sound reproducing equipment, built to the highest performance standards, and termed "New Orthophonic," will be shown and demonstrated. The basic units are a 20-watt amplifier and pre-amplifier to which may be coupled an f.m. tuner incorporating automatic frequency control and the new 6AL7 tuning indicator.

For record reproduction a transcription turntable is available with a choice of electro-magnetic pickups working on the 8-pole balanced armature principle and sealed against dust by a plastic moulding.

A three-unit cross-over loudspeaker system is housed in a cabinet of similar design to that used for the R.C.A.-Olson loudspeaker.

R.C.A. Great Britain Ltd., Lincoln Way, Windmill Road, Sunbury-on-Thames, Middlesex.

R.G.D. (52)
In the latest radio-gramophone introduced by this firm four loudspeaker units (two 8in x 5in elliptical, one 10in and one small cone "tweeter") are arranged to give wide sound distribution. The radio receiver includes a v.h.f. range, and the record changer has four speeds.

Another new product is the "B Fifty Five" small portable for mains or battery operation with push-button wavelength selection.

The R.G.D. programme includes four television receivers and five other sound receivers and radio-gramophones.

Radio Gramophone Development Co. Ltd., Eastern Avenue, Romford, Essex.

R.S.G.B. (305)
The theme of this stand is "An introduction to amateur radio" and

R.G.D. "B Fifty-Five" portable.

Wireless World, September 1956
this is emphasized by a short film "A guide to amateur radio." Among the exhibits is a complete amateur transmitting station including home-constructed transmitting, receiving and frequency measuring equipment. On the stand will also be found other examples of home-constructed equipment including a single-sideband transmitter for 144 Mc/s and a communications receiver.

R.T.R.A. (201)
Telesurance—the receiver maintenance and insurance scheme operated by members of the Association—is the main feature of this stand. The scheme, for which the charges vary according to the size of the tube, provides for replacement of defective components, servicing and insurance against burglary, fire and accidental damage.

Radio and Television Retailers' Association, 15/17 Goodye Street, London, W.I.

REGEN TONE (60)
A choice of no fewer than 22 models (four television, six sound receivers, seven radio-graphophones and five portable electric gramophones) is offered this year.

The principal new model is the "Continental" radio-gramophone with four-speed record changer, long, medium, short and v.h.f. sound receiver and a three-unit omnidirectional loudspeaker system.

Three other new radio-gramophones include a table model (FM109) with provision for v.h.f. reception.

Two new a.c./d.c. portables (DP2 and DW1) are shown and a "handbag" portable ("Double Two") which operates either from batteries or mains.

Regentone Radio and Television Ltd., Eastern Avenue, Romford, Essex.

ROBERTS (48)
This firm continues to specialize in the production of high-grade portable receivers and this year has produced a new compact lightweight model (R66) for a.c. mains or battery operation covering medium and long waves. A ball-bearing turntable is fitted so that the directional properties of the self-contained aerial can be effectively exploited.

Roberts Radio Co. Ltd., Creek Road, East Molesey, Surrey.

ROLA CELESTION (6)
The exhibit is designed to emphasize the wide range of loudspeaker types, both domestic and public address, which are made by this firm. Four new models have been introduced for the domestic market. C10A is a 10-in. unit designed to give a smooth response from 65c/s to 10kc/s and may be used in conjunction with the 4-in. C4A high-frequency unit (5 to 15kc/s). C8A gives the unusually wide frequency average, for an 8-in. unit, of 50c/s to 12kc/s. C68A is an elliptical unit to meet the demands of modern cabinet designs and has a range of 70c/s-12kc/s.

Rola Celestion Ltd., Ferry Works, Thames Ditton, Surrey.

S.T.C. (117)
The ability of silicon rectifiers to work successfully over a wide range of temperatures will be demonstrated by an apparatus which plunges the rectifiers cyclically into chambers at −40°C and 100°C respectively.

Improved performance for a given size is shown by a range of selenium rectifiers, Series 400, the plates of which are coated by a new vacuum evaporation process. Changes in design offer improved mounting and connecting facilities. Selenium is also used in a new range of rectifiers, designed for a.c./d.c. portables, which are notable for their compactness and novel construction.

SIMON (46)
Tape speeds of 3 ½ in/sec and 7 in/sec are provided in the Model SP/2 magnetic tape recorder. The frequency responses claimed for these speeds are 50-7,000c/s ± 3dB and 50-12,000c/s ± 3dB. Spoils up to 81-in. diameter can be used, and the amplifier, which can be used separately, has an output of 10 watts.

Accessories include a matching v.h.f. tuner unit and a new pressure microphone.

SOBELL (32)
Both 17-in. and 21-in. table television receivers are shown in table and console styles. Turret tuning and fly-
A new recorder, to be known as the “Sound” is based on the Collaro “Transcriptor” tape mechanism.

Tape Recorders (Electronics) Ltd., 784-788, High Road, Tottenham, London, N.17.

TAYLOR (106)
Apart from the introduction of several new pieces of test equipment a number of improvements have been effected to the existing range of test sets. Multi-range meters Types 77A and 88A have resistance ranges now extending to 50 MO with self-contained batteries, while the Taylor Junior (Model 120A) now has a 5A current range. The electronic test meter, Model 171A, is modified for f.m. discriminator measurements.
Among the newer models is the 94A, a comprehensive television test set embodying an a.m. and f.m. signal generator covering 4 to 230 Mc/s, a pattern generator and a voltmeter.
There is a new Model 33A miniature oscilloscope with a 2½ in tube.
Taylor Electrical Instruments Ltd., Montrose Avenue, Slough, Bucks.

TELEQUIPMENT (63)
In addition to the Type WG44 television pattern generator this firm are showing factory-type test equipment and a new Type 4A oscilloscope for checking G.P.O. television lines and terminal equipment. A modified version of this is available for television research applications where a wide-band, high-gain oscilloscope is required.
Telequipment Ltd., 313, Chase Road, Southgate, London, N.14.

TELERECENSION (18)
Delta matching of the feeder to the aerial principle which obviates the need to use a centre insulator and split dipole, has always been the distinguishing feature of all this firm’s television and v.h.f. sound aerials. They also introduced the tilted aerial and still include the feature in some of the multi-element Band I systems.
The most recent addition is a “Double Delta” Band III series of aerials for use in fringe and difficult close-in areas.
Telerection Ltd., Antenna Works, St. Pauls, Cheltenham.

ULTRA (41)
The range of television receivers includes 14-in., 17-in. and 21-in tube models. The tuner is of the 13-channel permeability type and includes coils for all channels. Fly-wheel sync is used and a phase-corrected i.f. amplifier.
The sound broadcast receivers include an a.c./d.c./battery portable and an a.m./f.m. receiver of the a.c./d.c. type. This is also available in radio-gramophone form with a three-speed record changer.
Ultra Electric Ltd., Western Avenue, London, W.3.
UNITED APPEAL FOR THE BLIND (114)
A number of radio factories employ blind people on assembly work; among them are Pye's, whose subsidiary, TV Construction, Ltd., Lowestoft, have provided the demonstration on this stand. Blind operators can be seen producing sub- assemblies for television receivers (Pam 500) and inspecting magstrip pillars. For the latter operation, Braille- adapted micrometers and gauges are used.
Examples of Braille wiring diagrams on plastic sheeting, a new Braille Avometer, and other aids for the blind to work alongside their sighted colleagues are to be seen.

VALRADIO (213)
For operating television receivers, tape recorders and radiograms from d.c. mains or battery supplies a range of d.c.-to-a.c. converters will be exhibited. Also on view will be heavy-duty vibrators for operation from 6V to 250V.
In the field of television there will be 10-, 11-, 12- and 13-channel tuners for home and overseas transmissions, and a range of viewing screens for front-projection television receivers.
Valradio Ltd., Browells Lane, Feltham, Middlesex.

VIDOR (11)
Two new portables make their appearance this year, the "Lady Margaret de Luxe" and the "Van- guard" an a.m./f.m. model. There is also a 45-r.p.m. battery portable record player known as the "Jamboree."
The Model CN4231 table model television set is also new; this has a turret tuner, 17 valves plus two crystal diodes and a metal rectifier and a 17-in rectangular tube with ion trap. A 7 x 4 in elliptical loudspeaker is fitted.
In addition to receivers, Vidor make a very wide range of dry batteries, including hearing-aid types.
Vidor Ltd., Erith, Kent.

WAVEFORMS (205)
The Radar 301 oscilloscope is intended for television work and has a signal amplifier with a 3-dB bandwidth up to 6 Mc/s and a calibrated and frequency-compensated attenuator. It has a Miller timescale with trace expansion to 20 cm. The maximum sweep is 0.5µsec/cm.
Television signal generators, a c.r.-tube reactivator and an e.h.t. measuring device are among the other exhibits.

WESTINGHOUSE (102)
High-temperature lightweight rectifiers, designed to operate at ambient temperatures up to 85°C, will be a feature of this stand. Constructed of aluminium, with cooling fins eliminated to reduce bulk, these units are very light and compact compared with ordinary h.t. rectifiers.
Contact-cooled rectifiers, where the heat is dissipated by chassis conduction rather than convection, will be displayed, and also tubular double- and quadruple-voltage rectifiers in normal and sealed types. The quadruple-voltage units are suitable for e.h.t. supplies in television receivers. Germanium diodes for radio circuit applications will again be featured.

WHITELEY ELECTRICAL (47)
An unusually wide range of choice in loudspeaker units for high-quality reproduction is offered by this firm, including many with a unique form of cambric cone. A new model, shown for the first time, is a combination of the moving-coil and electrostatic principles.
Cabinets designed to complement the characteristics of the various loudspeaker units are available and are supplied packed flat ready for home assembly with a screwdriver.
The WB12 quality amplifier and pre-amplifier appears in improved form and is now supplemented by a v.h.f. tuner unit.

WIRELESS WORLD, SEPTEMBER 1956
A large part of the stand is devoted to examples of the versatility of Whiteley Electrical's manufacturing facilities for making components and instruments, such as the meteorological "radio snow" for the Services, science and industry.

Whiteley Electrical Radio Co. Ltd., Victoria Street, Mansfield, Notts.

WOLSEY (2)

A new Band III aerial for loft mounting is introduced this year; it has a ball joint cross-arm fitting enabling the aerial to be mounted on sloping beams yet having the elements vertical or horizontal and oriented as required. Three-and-five-element models and a full range of outdoor types will be shown.

A special display is made of combined aerials embodying "arrow-head" style Band III elements. These are intended for use where the B.B.C. and I.T.A. stations are co-sited or virtually so.

A Band III convertor with turret tuning for the oscillator is now available. A cascade r.f. stage is used and the gain is 20 dB.

Accessories include cross-over networks, 75 to 3000 balun couplers and a solderless cable plug.

Wolsey Television Ltd., 43-45, Knight's Hill, West Norwood, London, S.E.27.

WOOD & METAL INDUSTRIES (115)

A spring-loaded castor is to be exhibited on this stand. The weight is taken by a thrust ball bearing against a spring so that, in addition to the normal action of a castor, there is a buffering action against shocks in the vertical plane.

LETTERS TO THE EDITOR

Noise in Carbon Resistors

THE article on "Characteristics of Fixed Resistors," by G. W. A. Dummer (Wireless World, June, 1956, p. 263), has probably suffered through being over-compressed from the author's book, but the note on the frequency spectrum of current noise calls for comment. Whereas Dummer refers to the spectrum of current noise "from below about 10 c/s", experiments on carbon composition resistors (Rollin and Templeton, Proc. Phys. Soc. B, 1953, vol. 66, p. 259) have shown that the inverse frequency power spectrum continues to as low a frequency as can be measured, which is so far a frequency of the order of a thousandth of a cycle per second. For carbon the spectrum follows very closely the law \( f^2 \Delta f/j \) where \( \Delta f \) is a narrow pass-band centred on \( f \). The noise in equipment of considerable bandwidth from \( f_1 \) to \( f_2 \) then has squared voltage proportional to the logarithm of the ratio \( f_2/f_1 \), not to the direct ratio as stated in the article.

The figures given in Table 3 are, of course, arbitrary acceptance limits, and related to the physical mechanism only empirically if at all. I have not a copy of RCS specifications to hand, so could the author please tell us what is the formula now used for the maximum acceptable noise from cracked-carbon resistors, in place of the rule of 0.5\( \mu \)V/V which was employed a year or two ago?

I assume that the + and - signs in Fig. 6 have been copied from Fig. 5 by mistake, since \( R_{2v} \) will not become negative. But why is it stated categorically (No. 3 of the conclusions) that a resistor for use at radio frequency should be of the film type when a rule has previously been given for the behaviour of composition resistors up to 1500 Mc/s?

To continue dotting i's and crossing t's, may I say to "Cathode Ray" that there is no harm in using a composition resistor across the input of a high-gain amplifier provided there is no steady current in it. I have often used composition resistors as a source of standard noise levels for the calibration of high-gain amplifiers, and all measurements show that at zero mean current the composition resistor produces good honest Johnson noise.

Technical Training

YOUR correspondent, S. J. Coe (issue of May, 1956), has apparently been misled into believing that City and Guilds certificates in Telecommunications Engineering can be gained only by those students who attend recognized technical college courses. This is not so.

The City and Guilds of London Institute, whilst strongly recommending attendance at a technical college wherever possible, has always recognized that there will be many students for whom no courses are available. This is particularly true in the case of the more advanced levels where the small numbers often preclude the establishment of appropriate college courses. The Institute has accordingly made special provision in its Regulations for the acceptance of such students as external examination candidates, and the Intermediate, Final and Full Technological Certificates in Telecommunications Engineering are available equally to internal and external entrants.

A perusal of the Institute's Regulations would have revealed to Mr. Coe that he could have made an entry to the examinations as an external candidate merely by applying to the authorities of the London technical college in February, seeking accommodation for the tests which take place in May.

CYRIL LLOYD.

Director, City and Guilds of London Institute.

Television Film Quality

YOUR Editorial on broadcasting from recordings (June issue) has stimulated me to comment upon the use of film in television. There are two aspects of this, the technical and the artistic, and I must say that very many of the films recently televised can only be considered thoroughly bad on both counts.

Good films are technically possible in television and as instances I may cite the old B.B.C. newsreels and many of the Peter Scott wild-life pictures. All too often, however, the picture is so lacking in tone gradation that a man in a dark suit is little more than a silhouette, while the sound quality is of the kind generally known as 90 per cent distorted.

Artistically, many of these films fail because they have been produced to suit the conditions of mass reaction which exists in the cinema but not in the television audience. Quite a different style of production is needed for television, but even then it can only compare unfavourably with "live" television. If anyone doubts this statement he has only to watch one of those programmes which is a mixture of "live" scenes and of film. It is very instructive to notice how the film breaks up the continuity of the programme and destroys the illusion of reality. The effect on the

WIRELESS WORLD, SEPTEMBER 1956
view is exactly the opposite to what the producer or exhibitor intends.

It may be objected that the viewer cannot distinguish film from "live" television when the film is good. He may sometimes be deceived into thinking it is a "live" show with rather a poor camera. But there is no disguising the horrible jerky motion in almost all the popular shorts which is a peculiarity of film and which is as evident in the cinema as in televised films.

W. TUSTING.

- Measurement of Rise-time

IN the February, 1955, issue of Wireless World, E. G. Dann described a method of measuring rise-time by replacing the normal timebase of an oscilloscope by a r.f. generator. He pointed out that the value given does not order the recurrent frequency of the square waves which may be measured by this method. Owing to the large difference in the frequency of the square waves, and that of the r.f. waves required to display several cycles during rise-time, there can never be sufficient constancy of frequency in practice to obtain a steady trace.

The problem is solved, however, if a multivibrator is locked on to the r.f. generator and the output from the "multi" used to trigger the square wave generator at its fundamental frequency. A rock-steady display is then readily obtained. Since a "multi" will lock quite positively as far as its tenth harmonic, by employing several in series, rise-times of the order of millimicroseconds may be measured for pulses or square waves where recurrent frequency is as low as a few cycles per second.

VICTOR DUMERT.

- Music Stations?

IN the Editorial of the August issue you say the B.B.C.'s v.h.f. service must be used mainly to reinforce transmissions on the normal wavebands, and cannot be conducted entirely, or even mainly, for those whose principal interest is in high-quality reproduction of music.

I suggest there are good reasons why at least one channel in each region might be devoted to items whose value is most dependent on high-quality reproduction; i.e., to music, more or less exclusively.

INTERFERENCE in interference on the a.m. bands has surely diminished their value for music transmissions very much more than for speech.

Hampton Hill, Middx.

J. S. PRESTON.

- Grandfather Clock Effect

WHEN the I.T.A. got going one of my colleagues made the necessary alteration to his receiver, and said he thought that would clear up the programme. At once he noticed a cyclic disturbance, slight on the picture, and more pronounced on the sound. As this effect was always present on the I.T.A. transmission and never on the B.B.C., he concluded that the trouble came from their end, so, with his faith in private enterprise slightly shaken, he just left it at that.

One day the penny dropped, so to speak, and he noticed the disturbance was exactly in phase with the pendulum of his grandfather clock. Stopping the clock stopped the interference, and vice versa.

This phenomenon is less obscure than the "Bournemouth Effect" described by your contributor "Diallist" and the cure is obvious, but so far my advice to reorient the clock, and/or fit it with a non-metallic pendulum, has not been heeded with enthusiasm.

Although this case may not be unique, it is certainly the first time I have heard of a weight-driven clock causing radio interference!

A. L. HUTTON.

- Morse Information

IT must surely have been a slip of "Free Grid's" usually accurate pen which led him to say (August issue) that letters in most frequent use convey most information. The opposite it true; they convey least.

The more unexpected a signal is, the more information it conveys. In the absence of any special indications the most likely letter is E, we are not surprised when we receive it and when we have received it twice this is the opposite of our total information by much. In a good code, therefore, it should not occupy much time. By the same argument we do not expect to receive V very frequently in the English language, and hence it conveys a lot of information and justifies a long signal.

Brentwood, Essex.

W. D. H. BLACKMAN.

- Aerial Cross-over Network

THE formula quoted by L. S. King (June issue) for a prototype half-section are not correct and should be:

\[ L_1 = L_2 = \frac{R_2}{2\pi f_i} \]  
(1)

\[ C_1 = C_2 = \frac{1}{2\pi f_i R_1} \]  
(2)

Hence for \( f_i = 95 \text{ Mc/s} \) (cross-over point)

\[ L_1 = L_2 = 0.126 \mu \text{H} \text{ and } C_1 = C_2 = 22 \mu \text{ F} \]

I would also like to know how Mr. King obtained different values for \( L_1 \text{ and } L_2 \text{ and } C_1 \text{ and } C_2 \), which according to (1) and (2) should have been the same.

London, N.W.2.

J. KASON.

- The Author Replies

J. KASON is, of course, correct in his criticism of the formula in the Appendix to my article. I quoted the usual formula for full-sections and inadvertently said that they were for half-sections. The formula were used correctly in determining the filter constants quoted and the error affects nothing in the body of the article.

L. S. KING.

- VL Amplifiers

IT may not be generally appreciated that the benefits of the "ultralinear" circuit for pentodes and tetrodes are not confined to the push-pull case. Having the data available I worked out the figures for a 6P6 valve and the results looked very promising for 30%, 40% and 50% taps. It was most convenient to test the 50% tap using a small multi-ratio push-pull output transformer which presented a 5,800-ohm load to the valve, the optimum being estimated at 6,000 ohms. The calculations used are shown in the diagram. R may be of any value between 220kΩ and 560kΩ. This value, together with the coupling capacitor to the previous stage may be chosen for the desired bass characteristic.

Although results are very satisfactory. The small transformer does not cope with bass tones so a deliberate cut is introduced from a turnover of 180 c/s. The middle and top registers are level and clean, and only sustained bass notes suffer by comparison; e.g., organ diapason and the low strings. As might be expected from the estimated distortion the individual instruments of an ensemble retain their identity. 10dB feedback over two stages has very little "clean-up" effect but is valuable for damping the cone excursion at bass resonance.

The power output drops from 3W at 4 to 6% distortion to 2W with less than 0.3%. The 1.7dB loss is negligible and if the straight pentode connection is reduced to 2W the distortion is still 3 to 4%.

Switched-Tuned F.M. Unit
Automatic Frequency Correction by Means of a Reactance Valve

By JOHN M. BEUKERS, B.Sc., (Eng.), Grad. I.E.E.

WHEN an f.m. receiver incorporating a ratio detector or a discriminator of the Foster-Seely type is tuned through an f.m. transmission there are three points at which detection occurs and two where severe distortion sets in; this phenomenon is due to the S-shaped characteristic of the detector which is illustrated in Fig. 1a.

The correct portion of the response curve for detection to take place is that lying between the two peaks (C, D, on Fig. 1a), and for minimum distortion this should be as straight as possible. It is usual to make the ‘peak separation’ considerably more than the maximum peak-to-peak frequency deviation to be expected of the carrier to which the receiver is to be tuned; for example, 100% modulation of a B.B.C. carrier corresponds to a frequency deviation of ±75 kc/s or 150 kc/s peak-to-peak, the peak separation of the discriminator would be some 300 to 400 kc/s.

The sensitivity of the detector is defined by the slope of the centre portion of the curve and since the latter is substantially straight the sensitivity remains constant over some 200 to 300 kc/s; in other words the audio output level remains constant while tuning over the useful portion of the curve. Thus if a receiver using this form of detector is tuned by ear the unsatisfactory situation may arise where the carrier is centred at one end of the working portion of the characteristic. The result is that normal distortion-free reception is obtained when the modulation is at low level but modulation peaks may be severely distorted.

Tuning indicators, if used, should work from voltages developed by the discriminator and not be peak-carrier indicators, since if the i.f. amplifier and discriminator are not exactly in alignment the receiver will be tuned to the centre of the i.f. pass-band (or if the coils are over-coupled, to one of the peaks in the pass-band) and not to the centre of the discriminator characteristic. Of the two zero frequency voltages available from the discriminator, one is constant (Vab Fig. 1b) over the pass-band and the other is zero when the receiver is in tune (Va Fig. 1b); this makes the design of suitable indicators a little troublesome. Two tuning indicators suitable for f.m. receivers have been described in Wireless World1-2.

The two discriminators mentioned give maximum a.m. rejection at the centre of their characteristics. It is therefore possible to tune the receiver for minimum background noise, but this is often difficult because the noise is masked by the programme.

Switch tuning removes the difficulties of manual tuning and makes a tuning indicator superfluous; as far as non-technical users are concerned pre-set tuning of an f.m. carrier is a blessing and whilst there are only the three B.B.C. programmes on Band II the writer feels there is much to be said for the system. Some Problems.—For a switch-tuned system to

2. Ibid., October 1956.

Fig. 1. (a) response characteristic of the discriminator: (b) the circuit arrangement.

Fig. 2. A.F.C. will shift the i.f. from the nominal point P on discriminator characteristic to point Q.
operator satisfactorily the stability of the oscillator
must be such that when the receiver is switched on
from cold the intermediate frequency produced by
mixing the oscillator frequency with the desired
carrier lies not far from the centre of the discriminator
characteristic; as the receiver warms up drift of the
oscillator should shift the intermediate frequency to
the centre of the detector characteristic.

Receivers for use on Band II will in general have
their oscillators running at about 100-110 Mc/s
and at this frequency it is virtually impossible to
obtain a simple lumped LC oscillator of the required
stability. Negative temperature coefficient capacitors
can be used giving an improvement, but drift during
the first two or three minutes while the oscillator
valve is warming up cannot be entirely overcome.
The use of crystal oscillators, one crystal for each
programme is one solution; another is to use
automatic frequency correction. A.F.C. may be
applied in a number of ways, one of which was
described in this journal recently. The present
receiver uses a reactance valve and derives the
necessary error voltage from the discriminator.

It is not possible to obtain perfect correction
using this method of a.f.c. for the following reason.
When the intermediate frequency is shifted by the
reactance valve towards the centre of the discriminator
characteristic the zero frequency error voltage is
reduced and thus a point of equilibrium will be
reached somewhere between the centre frequency
and the uncorrected frequency. The more "sens-
titive" the reactance valve the more perfect the
correction; in the present design the off-tune error
is reduced by between seven and ten times.

Fig. 4. Theoretical circuit diagram of the f.m. unit.
The application of a.f.c. immediately raises a problem, that of frequency stability of the i.f. and discriminator tuned circuits with changes of temperature. If the discriminator characteristic is not symmetrical about the nominal intermediate frequency employed then a zero frequency voltage exists when the intermediate frequency lies in the centre of the i.f. pass-band. The voltage will be fed back to the reactance valve (or any other device producing a.f.c.) which will shift the oscillator frequency thus bringing the intermediate frequency to one side of the i.f. pass-band as illustrated in Fig. 2. This may lead to deeply modulated signals being distorted due to working on the non-linear portion of (a) the discriminator characteristic and (b) the phase/frequency characteristic of the i.f. tuned circuits. To minimise drift of these circuits with temperature the positive temperature coefficient of the coil should be compensated by negative temperature coefficient capacitors.

**The Receiver.**—This is based on a design by Amos and Johnstone published in *Wireless World* last year;¹ those sections that have been modified are described in detail in this article. The reader is, however, referred to the original article for more information on the points not discussed.

The block diagram and the circuit are shown in Figs. 3 and 4 respectively. The received signal $f_x$ is fed into a tuned circuit designed to give a fair match between the aerial and the grid impedance of the r.f. amplifier. The local oscillator, which operates at a frequency above the received signal, is mixed with the output of the r.f. amplifier to produce an intermediate frequency $f_x - f_v$. $V_3$ and $V_4$ comprise the i.f. amplifier, $V_5$ being a straight-forward amplifier working at full gain and $V_4$ a high-level limiter the output of which feeds a ratio detector. To complete the unit a tone control has been incorporated and provision made to take the output from a crystal pickup. To make this possible a double triode is included, one half of which is used as an RC coupled amplifier and the remaining half the tone control to a design by P. J. Baxandall.²

---

¹ See *Wireless World*, September 1956.
The pickup is provided with a simple RC compensation for standard and long playing records, switching being effected from the front panel. The output level from the audio stages with the tone controls set to their mid positions is approximately one volt r.m.s. on both radio and gramophone.

The R.F. Stage.—The transmissions of the Home, Light and Third programmes on Band II from any one transmitter are spaced by 2.2 Mc/s and thus cover a band of 4.4 Mc/s. In the r.f. stage tuning of both grid and anode circuits is fixed and peaked to the middle of the band; this means that the bandwidth to the 3-dB points of the r.f. stage must not be less than 4.4 Mc/s in order that the sensitivity of the receiver on the three programmes remains substantially constant.

The grid circuit will unavoidably be of low impedance and low Q due to the input resistance of the valve and the loading of the aerial. Assuming a grid circuit Q of about 5 the anode circuit Q should be approximately 18. The natural coil Q will be very much higher than this value and therefore the coil must be damped down to give the required value of Q; this is effected by R5.

I.F. Coils.—The spacing between the windings in the i.f. coils is very critical as has previously been pointed out1 and this cannot be too greatly stressed. It must be remembered that unlike the reception of an a.m. transmission where insufficient bandwidth, or a distorted pass-band (amplitude) results in a poor frequency response, an f.m. transmission could suffer harmonic distortion which is far less tolerable. A method of achieving maximum phase linearity from the i.f. amplifier and discriminator tuned circuits is outlined in the alignment procedure.

For optimum results from the a.f.c. the i.f. coils should be temperature compensated; to do this the 50-pF silver-mica tuning capacitors should be replaced by two capacitors one with a positive and one with a negative temperature coefficient. The method for determining the values of these capacitors is given in the Appendix. In general a single layer inductor at the frequency employed for the i.f. will have a temperature coefficient of about plus 40 parts/million/°C, to compensate for this the combination

*Layout of the top of the chassis of the pre-tuned f.m. unit. The annotation shows location of the principal parts.*
of the two capacitors should have a negative temperature coefficient of the same value.

The Detector.—The ratio detector provides an output voltage which can be readily used for a.f.c. It has already been shown (Fig. 4a and b) that at the centre frequency (the frequency to which the i.f. coils and discriminator are tuned) the output voltage \( V_o \) from the discriminator is zero, and that if there is a frequency shift in either direction from the centre frequency a zero frequency voltage will be produced which will increase either positively or negatively with frequency depending upon the orientation of the diodes. A reactance valve when fed with this voltage can be used to change the frequency of the oscillator such that the intermediate frequency is shifted towards the centre of the discriminator characteristic. It is essential to wire the diodes correctly; if they are wired the wrong way round the zero frequency voltage fed back will tend to shift the oscillator frequency such that the intermediate frequency is moved away from the centre of the discriminator characteristic. It will be quite obvious if the diodes are the wrong way round since it will be impossible to tune the receiver to a carrier.

Low-Pass Filter.—When the receiver is tuned to a modulated carrier and the intermediate frequency is not quite coincident with the centre of the discriminator characteristic the output from the discriminator will contain two components (a) the zero frequency error voltage and (b) the audio output; normally the zero frequency component is blocked off with a capacitor and the audio is fed to further audio stages. To use the output from the discriminator for a.f.c. it is necessary to separate the zero frequency component from the audio, this is done in a low-pass filter consisting of \( R_{10} = 2.2 \, \Omega \) and \( C_{17} = 0.25 \, \mu F \).

Applying the audio to the reactance valve is a form of negative feedback since the reactance valve adjusts the oscillator so as to oppose any output voltage from the discriminator. It is interesting to note the possibilities of putting the de-emphasis network in the feedback path so that top cut is produced by reducing the deviation of the transmission at the higher frequencies.

Reactance Valve And Oscillator.—The reactance valve and oscillator is perhaps the most interesting section in the unit and for this reason a fair amount of detail is given, both electrical and mechanical. At the oscillator working frequency (around 100 Mc/s) the size, type, quality, placing of the components and position of wiring are of significance, for this reason it is unadvisable to change the layout and/or components without considering the effect of the change of distributed elements of the circuit. (By which is meant lead inductance, stray capacity and chassis r.f. resistance).

It may not be obvious from the circuit diagram how the reactance valve changes the oscillator frequency. A clearer picture may be obtained from Fig. 5 which depicts the reactance valve with only those components responsible for the working of the device. \( C_o \) and \( R_s \) form a phase-shift network such that at 110 Mc/s the grid voltage \( V_g \) is out of phase with the anode voltage \( V_a \) and thus the valve draws a current \( I \), having two components, one resistive which damps the oscillator tank circuit and one reactive which has the effect of altering the total reactance present, this in turn changes the oscillator...
frequency. To increase or decrease $I_r$, it is only necessary to vary the bias (and hence $gm$) on the reactance valve, this is done by the zero frequency component from the discriminator.

If the grid potential of the reactance valve is raised the frequency of the oscillator is lowered and this at once fixes the orientation of the diodes in the discriminator. The discriminator must be wired so that if the intermediate frequency increases, a positive voltage is fed back to the reactance valve which will tend to lower the oscillator frequency.

The design of the oscillator is quite conventional, but there are one or two points to mention. There is no physical capacitor across the anode coil, the tuning capacitance is made up of the valve electrode capacitance, the wiring and the trimmers. In order to make the a.f.c. reasonably sensitive the total tuning capacitance should be kept small, this should be borne in mind when aligning the receiver. The oscillator coil consists of an anode winding and a grid feedback winding; the anode winding is of No. 18 s.w.g. tinned copper wire and the grid winding is of No. 20 or 22 s.w.g. polythene covered wire if available. Polythene insulant is preferable because it is not so losey as PVC and thus damps the tuned circuits to a lesser extent.

The three trimmers $C_{1a}$, $C_{1b}$ and $C_{2a}$ are mounted on a brass bracket which is fixed to the back of a three-position rotary switch. This switch should be in good condition and of robust design; it will be appreciated that the trimmers are across the tuned circuit of the oscillator and therefore the contacts of the switch have to pass appreciable r.f. current. It is desirable although not mandatory that the switch wafer be ceramic. The switch and trimmers are shown on this page.

**Cathode Poisoning.**—When the unit is switched to gramophone the r.f. stage and i.f. stages are left connected direct to the h.t. supply and a resistor (R$_{14}$, 150 kΩ) is inserted into the oscillator feed. The reason for this is as follows: if certain valves are left for a period of time with their heaters on but with no h.t. the cathode becomes poisoned due to the building up of an interface on the cathode. So long as the valve is passing a small current the rate of build-up of this interface is slow.

**Alignment.**—Two methods of alignment are given, the first using a minimum of test gear and the second a somewhat more complicated procedure but one that will show up any discrepancies in the i.f. amplifier and discriminator and will also enable the receiver to be aligned more accurately. The latter is most important since for satisfactory operation it is necessary that the zero frequency voltage output from the discriminator be zero when the intermediate frequency lies in the centre of the i.f. passband.

For the first method a signal generator covering 10.7 Mc/s is required, also some form of valve voltmeter. There is no substitute for the generator but for those who do not possess a valve voltmeter the circuit shown in Fig. 6 will serve.

Switch on the receiver at least fifteen minutes before aligning, make sure that all the valves are drawing current and that the oscillator is oscillating. (If the oscillator is working correctly momentarily shorting its grid to ground will cause the valve to draw more current.) Join the junction of $R_3$, $R_{19}$, $C_{1a}$, $C_{1b}$ to chassis, this will make the reactance valve inoperative.

The alignment may now be carried out. Set the signal generator to 10.7 Mc/s and connect it to the grid of $V_{a1}$ adjust the output to about 0.1 volt. Connect the valve voltmeter to one side of the secondary of the discriminator and adjust $L_{10}$ for maximum deflection. Disconnect the generator and connect it to the grid of $V_{b2}$, adjust $L_9$ and $L_4$ for maximum deflection. As the coils come into tune it will be necessary to reduce the output from the generator, adjust this output to maintain approximately the same deflection obtained previously.

Wireless World, September 1956
Disconnect the generator and reconnect it to the grid of $V_2$, adjust $L_1$ and $L_2$, turning down the output from the generator to maintain approximately the original deflection on the valve voltmeter. Now transfer the meter to the junction of $R_{25}$ and $C_{34}$ and adjust $L_{112}$ as the core is screwed into the coil the meter should first deflect in one direction, come down to zero and then deflect in the opposite direction. The correct position for the core is when the meter passes through zero. The i.f. and discriminator should now be aligned to 10.7 Mc/s.

Next connect an aerial (or the signal generator if it covers Band II) to the aerial input socket and the audio output to a power amplifier. Set the trimmer corresponding to the Home service so that about 5° of the vanes are meshing, turn the station select switch to "Home" and adjust the oscillator coil $L_{13}$, $L_9$ until the Home service is received. (The Home service is transmitted on the highest frequency from Wrotham, the frequencies of the three transmissions being: Home 93.5, Light 89.1 and Third 91.3 Mc/s.) Now set the station select switch to "Third" and adjust the corresponding trimmer until the Third programme is received. Connect the valve voltmeter between $R_{17}$ and $R_{18}$ and adjust the aerial coil $L_{11}$, $L_2$ and the anode coil $L_3$ for maximum deflection. It may be necessary to make small adjustments to the Third programme trimmer during this operation since tuning the i.f. stage affects the oscillator frequency. Having completed this, turn the station select switch to "Light" and adjust the corresponding trimmer until the Light programme is received. Finally with the valve voltmeter connected to the junction of $R_{25}$, $C_{34}$ adjust each of the trimmers for zero output (again the correct point is when the meter deflection passes through zero).

It now only remains to put the reactance valve into service but before doing so it is advisable to check that the error voltage developed from the discriminator goes positive with increase and negative with decrease of the intermediate frequency. To carry out this check connect the valve voltmeter to the junction of $R_{25}$, $C_{34}$ and tune into a carrier, there should be zero reading on the meter. If now the hand is brought near to the oscillator circuit (adding capacity) the oscillator frequency will drop and this will result in a lower intermediate frequency; (the oscillator is working above the carrier) the valve voltmeter must register a negative voltage. Should a positive voltage be indicated the connections between the secondary of the discriminator

**Wireless World, September 1956**
and the two diodes should be reversed. Having performed this check the link connecting R19, C10, C17 may be removed, the reactance valve is now in operation.

The second method of alignment requires a signal generator covering 10.7 Mc/s and 87 Mc/s to 95 Mc/s, a valve voltmeter, an audio frequency generator and a single or double beam oscilloscope. Although not quite so convenient a B.B.C. carrier can be used for the signal in the 87 Mc/s to 95 Mc/s band and the 50-c/s heater supply can be used in place of the audio generator. The principle involved in this method is to use the audio source and the reactance valve to frequency modulate the input signal; the detected output from the discriminator and the modulation can then be applied to an oscilloscope in such a way as to display the combination of the i.f. frequency and the discriminator amplitude/frequency characteristics. In addition the i.f. band-pass amplitude characteristic can also be displayed.

The variation of effective reactance with zero frequency input voltage to the reactance valve is reasonably linear over at least 500 kV/s and so an audio frequency sinusoidal voltage applied to the valve will produce a sinusoidal frequency modulation of the oscillator with peak deviation as great as ±250 kV/s with little distortion. Fig. 7e and f are actual oscillograms of the detected output from the discriminator as a result of modulating the oscillator by means of the reactance valve; the modulating frequency is 1,000 c/s and the peak-to-peak frequency deviation of the oscillator running at 100 Mc/s is about ±100 kV/s. The source of audio frequency is ideally an a.f. signal generator, but if this is not available the 6.3V heater supply, suitably attenuated, can be used. An audio voltage of between 100 and 300 mV is required.

To display these characteristics the zero frequency error voltage and the low-pass filter (R13, C17) are removed from the reactance valve and the audio source connected in their place, the source should have a d.c. path to chassis for the grid of the reactance valve. Temporarily disconnect C34. If the oscillator is tuned to f1 and there is a carrier present of frequency f1, an intermediate frequency f2 − f1 will be produced which is frequency modulated by the audio source. (It does not matter if the carrier is already modulated). Applying the a.f. output to the Y-oscillator of an oscilloscope and using the audio source as the X sweep Fig. 7a will be displayed which is the overall i.f. phase/frequency and the discriminator amplitude/frequency characteristic. It may be necessary to place a simple r.c. phasing network in one of the two audio paths to correct for phase differences in these two paths.

Valve V4 has no grid bias and so in the presence of a signal grid current will flow producing a voltage across the grid resistors R17 and R23; this voltage is an indication of signal level and if applied to the Y-amplifier of the oscilloscope instead of the a.f. output the display produced will be the band-pass amplitude characteristic of the i.f. amplifier. Where a double-beam oscilloscope is available both the discriminator characteristic and the i.f. band-pass characteristic can be delineated at the same time, such a display is shown in Fig. 7c. This display will enable the discriminator to be accurately aligned and will also show up any phase irregularities within the i.f. amplifier (see Fig. 7d, e and f).

If the receiver is carefully aligned the performance will be such that when switched on from cold the programme selected tunes in not far from the centre of the discriminator characteristic; drift, whilst the receiver is warming up, is small and is in any case directed towards the centre of the characteristic.

Appendix

Let C be a capacitor having a positive temperature coefficient of αp.

Let Cn be a capacitor having a negative temperature coefficient of αn.

Now Cp + Cn = 50 pF

It can be shown

\[ \frac{C_p \cdot \alpha_p + C_n \cdot \alpha_n}{C_p + C_n} = \alpha_i \]

where \( \alpha_i \) is the required temperature coefficient.

Using a P100 capacitor \( \alpha_p = +100 \) parts/million/°C and an N740 capacitor \( \alpha_n = -470 \) parts/million/°C

Cp becomes 10.4 pF say 10 pF

Cn becomes 39.6 pF say 39 pF

So that the 50 pF tuning capacitor would become 10 pF P100 in parallel with 39 pF N470. The capacitors should be mounted inside the coil cans; the Erie non-insulated Ceramics will be found small enough for this purpose.

Selective Bandpass I.F. Amplifiers

Use of “Ferroxcube” Pot Cores in Conjunction with Negative Feedback

By J. S. BELROSE

The purpose of this article is to introduce designers to the use of “Ferroxcube” pot cores in selective bandpass filters. Designs have previously been described for very narrow bandwidths and the author now gives details of filters suitable for radio telephone working in congested wavebands.

For a radio-telephone system a bandwidth of 3 kc/s is near to optimum. A receiver having this bandwidth would be suitable for the reception of single-sideband speech, or for reception of only one sideband of an ordinary double-sideband, amplitude-modulated carrier when adjacent channel interference is particularly severe. This article discusses the application of high-Q “Ferroxcube” pot cores in the design of a bandpass filter of bandwidth 3 kc/s. The response of the circuit approaches the ideal square-edged frequency response and will give performance superior to that of any circuit at present in use in communication receivers, other than the symmetrical bandpass crystal filter\(^2\) and the electro-mechanical filter\(^3\).

The method used here, to give a level pass-band frequency response and to sharpen the attenuation outside this range is to use frequency-selective negative feedback\(^4\). Two parallel-tuned circuits are included in series between the cathode and earth, one tuned to the low side and one to the high side of the centre frequency of the pass band. These circuits provide negative feedback with considerable attenuation at the two resonate frequencies. Such a circuit is shown in Fig. 1.

Suppose the cathode circuits are designed to attenuate frequencies \(f_1\) and \(f_2\), which are symmetrically centred about \(f_0\) the centre frequency of the pass band. The frequency response due to the feedback circuits is shown in Fig. 2. If overcoupled circuits are used in the anode of the anode of the amplifier, then, by proper design, the feedback response can be made to neutralize exactly the trough due the overcoupled circuits, and so a flat-topped response can be obtained with very steep “skirts.”

Simplified Design Procedure—We will follow the procedure outlined by Sturley\(^5\) and use his generalized selectivity curves for the cathode feedback and for the overcoupled circuit responses. For a flat overall pass band the shape of the cathode feedback curve must be the reverse of the coupled circuit curve, and the former should fit exactly over the latter in the pass band.

In our case we choose \(f_0 = 100\) kc/s and we want a total bandwidth of 3 kc/s. Using Sturley’s notation \(\Delta f = 1.5\) kc/s (half the bandwidth). Suppose we design the maximum attenuation of the feedback circuits to be \(\pm 3\) kc/s about 100 kc/s (i.e., \(f_1 = 97\) kc/s and \(f_2 = 103\) kc/s). Our experience indicates that the maximum operating coil Q-factor we can easily obtain at 100 kc/s is about 180. We will design for this coil Q for the cathode coils.

To use the generalized curves of Sturley we need to calculate the parameter

\[
(Q F_i)^2 = \left[ \frac{180 \times 2 \times 3}{100} \right]^2 = 117
\]

since \(F_i = \frac{2 \Delta f_i}{f_0} = \frac{2(f_0 - f_i)}{f_0}\)

The response curve for \((Q F_i)^2 = 117\) is therefore

Wireless World, September 1956
redrawn on tracing paper from Sturley's Fig. 7.47, p. 540 with the correct frequency scale but with the loss reversed. This curve which is given in Fig. 3 is placed on top of the set of generalized selectivity curves for overcoupled circuits (Sturley's Fig. 7.8, p. 453) and is moved along until it fits as nearly as possible over the coupled curve out to 1.5 kc/s. The most suitable curve is for \(Q_k = 3\) and we find that \(\Delta f = 1\) intersects the coupled graph at \(Q_F = 2\). This fixes \(Q\) and \(k\). For \(QF = 2\) at \(\Delta f = 1\), \(Q = 100\) and \(Q_k = 3\), so \(k = 0.03\).

The overall response is obtained by plotting the difference (a dB scale) between the two curves. This is plotted also in Fig. 3.

**Cathode Circuit.**—The constants for the cathode circuit are given by

\[
R_D = \frac{0.414 (1 + Q^2 F)^2}{2 g_m}
\]

For \(g_m = 5.5\) mA/V, \(R_p = 4440\) ohms.

The cathode tuned circuits are transformer coupled. For Ferroxcube pot cores \(k \approx 1\), and so

**Fig. 8.** Complete circuit diagram of i.f. stage. With Mullard Type LA3 pot core, winding data are as follows:—Cathode transformers: primary 16 turns, secondary 191 turns, 36 s.w.g. enamelled wire. \(Q = 185\). Anode transformers: 191 turns tapped at 88 turns, 36 s.w.g. enamelled wire, \(Q\) shunted by 2 M\(\Omega\) = 125.
\[ R_p = 2\pi f_0 Q L \] where \( L_1 \) is primary inductance, and the Q of the circuit is assumed to be that of the tuned secondary.

Therefore \( L_1 = \frac{4440}{2\pi \times 100 \times 10^3 \times 180} = 39.3\mu H \)

The secondary coil \( L_2 \) is arbitrarily chosen so that it will tune to 100 kc/s with 500 pF. Hence \( L_2 = 5.06\) mH.

Ferroxcube pot cores type LA3 are recommended.*

For these cores \( n = 85\sqrt{L} \), where \( L \) = inductance (mH) and \( n \) = number of turns.

The cathode transformers then should have 191-turn secondaries with 17 turns primary wound over the secondary turns.

Anode Circuit.—The stage gain of the amplifier shown in Fig. 5 is

\[ G = \left( \frac{L'}{L} \right) g_m k^2 f_0 L \]

where \( L' \) = inductance of the tapped portion of the coil, \( L \) = total inductance, and the coupling between \( L' \) and \( L \) is unity.

If \( G = 110, g_m = 5.5\) mA/V, \( k = 0.03, Q = 100 \), then \( L' = 1.08\) mH.

Choose \( L = 5.06\) mH, and the coils should have 191 turns tapped at 88 turns. The coupling capacitor \( C_m \approx kC = 15\) pF.

Complete Circuit.—It is important to choose the correct wire size for optimum Q-factor. Several wire sizes were tried in order to obtain the desired Q-factors. Test coils of 191 turns were wound.

The variation with wire size of the Q-factor, and the capacitance required to resonate the coil to 100 kc/s are shown in Figs. 6 and 7. There is clearly an optimum wire size for maximum Q. The coils used in the test amplifier built by the author were wound with 36 s.w.g. enamelled wire (do not use silk-covered wire, for the losses are considerably higher).

The circuit which was built for test is shown in Fig. 8. A cathode-follower output stage was used for convenience in testing. A Mullard EF91 valve was used and so biased that its \( g_m \) would be about 5.5 mA/V.

Method of Adjustment.—The circuit was aligned with a signal generator and a valve-meter. More elaborate instrumentation would allow the optimum response to be more easily obtained (i.e., a panaromic type of display with an oscilloscope and a sweep frequency signal generator).

With the cathode earthed, the anode circuits should be peaked at 101.5 kc/s. The other peak should be found about 98.5 kc/s. Trim until a symmetrical response is obtained, centred on 100 kc/s. Remove

---

*Manufactured by Philips' Industries, Eindhoven, and Ferroxcube Corporation of America. Obtainable in Great Britain through Mullard Components Division, in Canada through Rogers Majestic (Toronto) and in U.S.A. through Ferroxcube Corporation of America. The above is Mullard's type number. Philips' type number is D-25/17.5-10.50-III B3 (i.e. type 25 pot core, total height 17.5 mm, air gap 1 mm since the length of the ring is 11.5 mm, of Ferroxcube IIIB3 material). The Philips' type pot cores type D-25/17.5 have been superseded by D-25/16 and D-25/12 (i.e. the total height of the assembly is 16 and 12 mm rather than 17.5 mm). The advantage of these new pot cores for our application is that larger air gaps are available, 1.8 and 1.25 mm respectively for the IIIB3 types, and so a slightly improved temperature stability. The author has not used these new types. No doubt satisfactory Q-factors can be obtained with optimum wire-size/turns ratio.
the earth to the cathode. Adjust the cathode circuits for maximum rejection of 103 and 97 kc/s. Take a frequency response of the circuit. If the response is not symmetrical with a flat top the tuning procedure must be repeated, perhaps slightly juggling the two rejection frequencies, until the desired response is obtained.

The response curve obtained with the circuit of Fig. 8 is shown in Fig. 9. The circuit is critical to adjust and must be carefully tuned if the curve shown in Fig. 9 is to be achieved. The response as shown was for an input of approximately 10 mV, so the voltage gain in the pass band is about 100. The anode coils were shunted, as shown, with 2 MΩ and the coil Q was 125, that is slightly higher than calculated. With the cathode earthed the gain at the centre frequency is 110 peaking to +6.3 dB at the two peak frequencies. That is because of the higher Q's the circuit is more over-coupled than we calculated, but by carefully juggling the positions of the two reject frequencies a satisfactory response was obtained. The Q of the cathode transformers was not measured with the cathode current flowing through the primary turns. The Q of the secondary was 185.

Sturley suggests that if a.g.c. is applied to the selective amplifier the circuit will function as an automatic variable bandwidth filter. With the circuit described here, however, it is absolutely necessary that the amplifier be operated at fixed bias, since any change in $E_n$ or cathode current upsets the shape of the response. It is quite easy to obtain ridiculous lop-sided, lop-eared response curves.

Use of the Amplifier with a Conventional Receiver.—The circuitry necessary to use the amplifier in conjunction with a standard receiver of, say, 455 kc/s i.f. is straightforward. One point of warning, however, which should be obvious but can be overlooked: the mixer anode circuit should have a wide bandwidth so as not to spoil the flat top of the pass band amplifier. If commercially manufactured 100 kc/s transformers are used they will most certainly have to be modified, i.e., shunted with resistors and the coupling increased to give a bandwidth which is quite flat to 3 kc/s. A suggested circuit is given in Fig. 10. The values given for the anode transformer are suitable if home-constructed coils are used, they are designed for a bandwidth of 8 kc/s. The overall gain of the circuit as shown is about 500, so only a few millivolts of 455 kc/s signal is needed.

**CLUB NEWS**

**Barnsley.**—The first meeting of the Barnsley and District Amateur Radio Club, after the summer recess, will be the annual general meeting on September 14th. On the 28th W. Lee (G6LZL) will "review modern receivers." Meetings are held at 7.45 at the King George Hotel, Peel Street, Sec.: P. Carburt (G2APY), 33 Woodstock Road, Barnsley.

**Birmingham.**—At the meeting of the Slade Radio Society on August 31st, R. G. Hackel, of Joseph Lucas, Limited, will deal with the diagnosis, measurement and possible cures of interference from car electrical systems. On September 14th P. Huggins, of T.I. (Group Services), Limited, will speak on automation. Meetings are held at 7.45 at The Church House, High Street, Erdington, Birmingham 23. Sec.: C. N. Smart, 110 Woolmore Road, Erdington.

**Birmingham.**—The meetings of the Midlands Group of the British Amateur Television Club will restart on September 13th at 7.45 at the White Swan Inn, Edmund Street, Birmingham, and will meet on the second Thursday of each month. Sec.: F. J. Rawle (G3HHz), 15 Kings Road, New Oscott, Sutton Coldfield, Warwicks.

**Bournemoutn.**—The Bournemouth Amateur Radio Society is organizing a mobile/portable rally for September 16th at Stoney Cross Aerodrome, 7½ miles west of Southampton. Three control stations will be operating from 10.30—G2HIP on 2m, GGYK on 80m and G3KYU on 160m. Those wishing to participate can obtain further details from the secretary. The Society meets on the first Friday of each month at 7.45 at the Cricketers' Arms Hotel, Windham Road, Bournemouth. Sec.: J. Ashford (G3KYU), 119 Petersfield Road, Boscombe East.

**Newbury.**—The Astronomer Royal, Dr. R. v. d. R. Woolley, will read a paper on "Astronomy and Cosmology" at the meeting of the Newbury and District Amateur Radio Society at 7.30 on September 28th at Elliot's Canteen, West Street, Newbury, Berks. Applications for tickets, which are free, should be sent to N.A.D.A.R.S., 83 Newtown Road, Newbury, Berks., enclosing a stamped addressed envelope.

**South Shields.**—At the town's annual flower show (August 24th to 26th) the South Shields and District Amateur Radio Club will operate a transmitter using the call GB3SFS. Reception reports will be welcome and certificates will be issued to the transmitter making the most contacts and the listener sending the most comprehensive report. The club meets regularly at Trinity House Social Centre, 134 Laygate Lane; the main meeting being on the last Wednesday of each month. Sec.: W. Dennell (G3ATA), 12 South Frederick Street, South Shields.

**West Ruislip.**—A radio club has been formed by the members of No. 114 Squadron, Air Training Corps, West Ruislip, Middlesex. Its transmitter, using the calls G3ALF and G4GB/A, will be on the air in the 40- and 80-metre bands on Sundays from 10.30 a.m. for two hours and on Tuesdays and Thursdays between 7.30 p.m. and 9.30 p.m. using phone and c.w. Reports will be welcome. Sec.: A. Morris, No. 114 Sdn. A.T.C., No. 4 Maintenance Unit, West Ruislip, Middx.

**Worthing.**—The annual general meeting of the Worthing and District Amateur Radio Club will be held at 8.0 on September 10th at the Adult Education Centre, Union Place. Sec.: J. F. Wells, 37 Salisbury Gardens, Worthing, Sussex.

**WIRELESS WORLD, SEPTEMBER 1956**
Too Old At — ?

AGE, HEARING AND "HI-FI"

By M. G. SCROGGIE, B.Sc., M.I.E.E.

HAVING for some time enjoyed the marvels of "ultra-linear" amplification, we may expect any time now to learn that the new electrostatic loudspeakers have brought us into the era of "ultrasonic hi-fi." Those of us who are not so young as we were, however, may be wondering why we should spend a lot of money on equipment for reproducing frequencies we cannot hear.

The fact that high frequencies are lost at an age when hearing is still good often dawns first when some member of the family complains of the loud 9-kc/s whistle that is now the normal accompaniment to medium-wave broadcast programmes after dark, and another cannot understand what he is talking about, being totally unable to hear it.

Fig. 1 shows the results of audiometer tests by C. C. Bunch on 353 hospital patients divided into age groups containing roughly equal numbers. The youngest group appears to have been taken as the reference level (0 dB). In the book "Hearing" by Stevens and Davis, from which this graph was taken, the authors mention that tests by H. C. Montgomery showed rather smaller losses with age—a discrepancy they attribute to hospital patients as a class being likely to suffer additional hearing loss as by-products of their ailments.

It occurred to me to compare these data with some measurements I had made on a few individuals (Fig. 2). They had been taken with a constant-output audio oscillator connected to moving-coil headphones through an attenuator having 5-dB steps. The victim was placed where the operator could not be seen, and asked to indicate by hand whether the signal was or was not heard. In this way guessing was eliminated. Care was taken, of course, to ensure that the switching was not only invisible but also silent—acoustically and electrically. The results were compensated for normal differences in acuity with frequency by means of the threshold-level Fletcher-Munson curve. Headphone characteristics were not compensated—a resonance is noticeable at 13 kc/s, for instance—but being the same for all a comparison of the curves is valid. The dB zero is quite arbitrary.

The numbers against the curves are the ages of the people tested. All had, as far as was known, normal hearing except the one aged 21, who had suffered an illness affecting the ear and—as might be expected from the graph—has some difficulty in following ordinary conversation. The measurements extended down to 40 c/s, but as there were no significant differences below 1 kc/s in any of the individuals—even the 21-year-old—those readings have been omitted.

Apart from the one clearly abnormal curve, these results illustrate again the steady decline of high-frequency hearing with age. They might give the impression that Fig. 1 by no means overstates the decline, but the number of people represented by Fig. 2 is too small to tell; actually only two come within the age groups included in Fig. 1. The really interesting features of Fig. 2 are what it shows regarding the younger ages and higher frequencies—absent from all published data that have been seen. It appears that substantial loss of high-frequency hearing occurs in quite early childhood. And that this loss at first takes the form of a lowering of a sharp cut-off frequency rather than the increasingly downward slope above 1 kc/s that characterizes ages above 20.

The statements made elsewhere suggesting that loss begins in the late teens may have resulted from not extending tests to sufficiently early ages and high frequencies. I was fortunate in happening upon a
5-year-old sufficiently intelligent and co-operative for the purpose; and in view of the precautions against fraud was frankly astonished to find no signs of cut-off even at 20 kc/s—well into the r.f. communication band!—and greatly regretted the absence of a quickly available extension of facilities to higher frequencies.

I still more deeply regret inability to possess once again hearing of this kind, for assessing the value of reproducers that work up to 20 kc/s or so. Unfortunately they seem to offer no advantage beyond the listener's cut-off, unless anyone is prepared to argue that the beating of supersonic components in the non-linear region of the reproduced audio components that would otherwise be heard. Personally I suspect that if anything does drop down in this way through the ceiling of audition it is more likely to reintroduce some non-linearity distortion that we would otherwise have been spared. But one has only to express almost any opinion on high-fidelity to provoke contradiction, so I expectantly leave it at that.

**PICKING THE WINNERS**

**Random Number Generator for Premium Bonds**

ON view at the Radio Show this year will be a version of the electronic machine known as ERNIE (Electronic Random Number Indicator Equipment) which is responsible for selecting the prize-winning numbers in the Government's new Premium Savings Bonds scheme. Its function is, of course, equivalent to the traditional method of drawing numbered counterfoils from a drum by hand. The numbers concerned will be made up of 9 digits and each of these digits will be generated separately by an independent piece of circuitry. This will safeguard the randomness of the numbers, in one respect, by ensuring that there is no correlation between individual digits of the 9-digit number.

Actually the second and third digits of the numbers will be alphabetical characters, but this merely means selecting randomly from a scale which is greater than the ten numerical characters. (That is, in the second digit position, where 23 alphabetical characters will be available; in the third position only ten characters will be used—the same as for numbers.) At the Radio Show the demonstration equipment will be generating only two of the digits.

The basic component of each digit-circuit is a cold-cathode gas discharge tube giving out a random noise waveform. This is followed by a clipping circuit which removes the low-amplitude fluctuations and leaves the remainder to be amplified and squared, giving an output of well-shaped pulses of constant amplitude. About 3,000 pulses are produced a second. The pulses are passed to a decade counter, which is started and stopped at regular intervals by a master timing pulse generator in such a way that the counting is done in periods of 160 milliseconds with gaps in between. At the end of each 160-msec period the number of pulses counted is read. This number might amount to something like, say, 487, and it is the digit in the units column, the 7, which is actually selected and indicated.

The counter is always started from the point at which it was left at the end of the previous 160-msec period. This gives a series of different starting points and ensures that the output digits will be more random (that is, equally likely to occur) than if, say, the counter were started from zero each time.

To guard against possible equipment failures each digit generator is duplicated. The two outputs from a pair of such circuits, each giving a different digit, are passed into a combining circuit which performs the logical operation of multiplying one by the other (but not actual arithmetical multiplication). This is done to avoid the possibility of a bias of periodicity appearing in the generated digits as a result of a fault in one of the gas discharge tubes. Multiplying a periodic series (from the bad tube) by a random series (from the good tube) always gives a random series as the product.

The digit outputs from the 9 combining circuits are transferred to stores, from which they are assembled, scanned and passed to teleprinters, together with fixed codes needed for the actual operation of the teleprinters—figure shift, letter shift, line feed, carriage return and spaces. The starting and stopping of the teleprinters (which are also duplicated) is done by the same master pulse generator which controls the counters. Circuits are incorporated for inhibiting random numbers above certain values, corresponding to ranges of Bonds not yet offered for sale, and these can be set before each draw. The equipment will also examine the first two digits of each number for the purpose of routing the numbers to appropriate teleprinter stations—each station being associated with a numerical register of a particular range of Bonds.

**Amateur Television Book**

"SELF-HELP" is the philosophy which seems to have inspired the amateur television transmitting enthusiasts throughout their difficult career. It has now been taken a stage further by Michael Barlow, a member of their organization*, in acting as his own publisher to produce his own book on amateur television. The work may not be up to the usual standards of professional publishing, but it contains a great deal of specialized information which certainly could not be obtained from any other single source. Starting off with a chapter on fundamentals, it passes on to the construction of flying-spot scanning apparatus, for both transparent and opaque subjects, then to mixers and modulators and finally to r.f. equipment. It also includes items on the B.A.T.C.*, their agreed transmission standards and the Post Office amateur television licence. A list of useful references is provided for those who wish to pursue the subject farther.

"An Introduction To Amateur Television Transmission" which contains 30 pages, can be obtained from Mr. Barlow at 10, Baddow Place Avenue, Gt. Baddow, Essex, price 3s 6d.

* The British Amateur Television Club.

Wireless World, September 1956
Improved Slide-back Valve Voltmeter  

BY O. E. DZIERZYNSKI

Applications in Test and Control Apparatus

At least two indicating elements must be employed when taking measurements with, say, a bridge or a slide-back voltmeter; namely, an adjustable calibrated variable resistor, condenser or inductance, and a balance indicator. Let us see what sort of indicators are available: (1) moving-coil, (2) "magic eye," (3) neon indicator, (4) lamp or similar device actuated by a relay. Each of these indicators has some advantages and disadvantages, but as the instrument to be described had to be used for industrial control as well as measurement, a relay as indicator was chosen. Regarding the circuit itself, a slide-back voltmeter combined with a d.c. amplifier and output relay or neon indicator was developed. Before considering this circuit in detail, we will refresh our memory of the working of the slide-back valve voltmeter (s.b.v.) and explain why it is considered necessary to employ a d.c. amplifier.

Principle of the Conventional S.B.V.—In the circuit of Fig. 1 the d.c. bias is adjusted by the potential divider to obtain the same anode current with and without a.c. input; then providing that the voltage to be measured is high enough and the valve has a sharp enough cut-off, the measured positive peak voltage has a value \( v - v_s \) when \( v \) and \( v_s \) are the corresponding readings of the d.c. voltmeter, \( V \).

The conventional s.b.v. measures the peak value of the signal, whereas we are generally interested in the mean or r.m.s. value. Other disadvantages are that two meters are required, and the accuracy is to some extent dependent on the valve cut-off characteristic and on the signal level.

Basic Circuit for Improved S.B.V.—In redesigning the voltmeter the first decision was to rectify the signal first and to derive a direct voltage representing its mean value. The next step was to replace the d.c. voltmeter, \( V \), by a calibrated potentiometer supplied from a d.c. stabilized source \( V_s \). In this way the actual bias voltage can be read directly from the potentiometer setting. Finally, the milliammeter in the anode circuit was replaced by a relay which is actuated from a certain threshold current upwards. The initial bias and the relay itself can be adjusted to cause movement of the armature from a given current upwards and with a determinable degree of accuracy.

Fig. 2 is a skeleton circuit of these new arrangements and it will be seen that a d.c. amplifier has been inserted between the input circuit and the relay. The need for this can be explained as follows. Relay RL has to indicate exactly the same total grid bias voltage before and after the signal is applied. Now if we assume that our smallest measured signal is, say, 1 volt (d.c.) and the required accuracy is \( \pm 5\% \), this would correspond to a change of anode...
current of say 2mA ±100µA—if only one triode is employed, without d.c. amplification. Consequently, if the relay has an initial current of, say, 4mA, the sensitivity of the armature going “on” and “off” has to be within limits ±100µA which represents only 2½% of 4mA. Unfortunately, in an ordinary relay this tolerance is much larger, and limits can be expected as high as ±10-30%.

Another factor to be taken into account is that relays usually have different “pull” and “release” currents and without certain circuitry modifications the figures quoted above might well be increased up to 60%.

The conclusion here is, that by amplification of the d.c. input signal all problems can be solved. Assuming that one stage of d.c. amplification would give us a gain of 20, we now have instead of ±100µA a change of ±2mA which represents ±50% of the initial relay current of 4mA. This means that 1 volt d.c. input can be measured within limits of accuracy of ±5%. Obviously, with larger signals the situation would improve—as 50mV (representing 5% of 1 volt) remains constant (as far as accuracy is concerned) for every signal. For instance, when applying –10 V d.c. to the grid and “sliding back” the potentiometer until the armature moves again, the accuracy of measurement would be 10 V ±50mV = 10V ±0.5%.

Circuit Stability and Accuracy.—Fig. 3 gives the final circuit. Before going into details it is important to analyse additional factors having influence on the stability and accuracy of measurements.

For reliable operation the current (given previously as 4mA) must remain constant within certain limits. Any drift from 4mA would involve additional error. Setting the limit for this error at, say, ±1% (total allowed ±6% of 1 V input), the permissible anode current drift would be 2/5 = 0.4mA.

Reducing drift of standing current is not a simple problem, as drift could result from several factors, as (a) variation of working voltage of stabilizer, (b) changing emission of both triodes, due to ageing, (c) fluctuation of emission (first triode particularly) due to heater voltage variations, (d) changing emission of each triode occurring very slowly during first 1-2 hours after switching on.

Let us analyse these factors. (a) Reference tubes types 85A1 and 150B2 were used, connected in series. 85A1 provides 85 volts, forming the negative part of the bias, V2; and also the positive and negative portions of the bias for V1 (developed across $r_1$, $r_2$ and $r_3$ respectively). Maximum percentage fluctuation of working voltage in this valve is 0.2%, i.e., 170mV, and it can be calculated from the ECC81 characteristics that this would affect anode current up to approximately 0.35 mA. On the other hand, every change of the stabilized 85V would affect simultaneously the grid bias of V1 which is of total value about –1.2V (negative value in cathode –2.2V (Continued on page 443)
Fig. 4. Circuit for compensating long-term drift of emission.

opposed by positive portion on \( r_s, r_2 \) which is 1V). Corresponding fluctuation would be \( \frac{5}{1.2} \times 170 = 2.4 \) mV, and this after amplification, say 20 times, would produce 48 mV to the grid V2 in opposite sense to the 170 mV. As a result, the grid of V2 will receive 170-48 = 122 mV and the current change would be 122

\[ \text{only } 0.35 \times \frac{170}{122} = 0.25 \text{ mA}. \]

We must remember here that all this is assuming no-signal conditions. With the presence of a signal, say -10V, after balancing relay to a current of 4 mA, the positive portion of V1 bias would be 10-1.2 = 8.8V. This 8.8V could vary from stabilizer fluctuation by 170 × \( \frac{-10}{8} \) = 17.6 mV, and to the grid V2 could be delivered as a total of \( -17.6 \times 20 + 170 = -80 \) mV. In effect the current change would be only 80

\[ \text{only } 0.35 \times \frac{170}{80} = 0.16 \text{ mA}. \]

From this it is apparent that working voltage fluctuations affect accuracy most when the smallest signal is being measured; with increasing signal level error is reduced until the balance condition between positive and negative biasing voltages in the grid circuits of V1 and V2 respectively is obtained.

Anode current fluctuations are here 0.25-0 mA and well within the required limits 0.4 mA.

(b) Changing emission of triodes has an obvious effect on the anode current drift, but this occurs gradually and accuracy of measurement is not affected if, every time the instrument is used, the initial current conditions are checked and adjusted (potentiometer \( P_s \)).

(c) Fluctuation of emission due to heater voltage variation has the largest effect on anode current drift. It was found that current changes proportionally to mains voltage at a rate of 1.5 mA per volt a.c. To minimize this effect two alternative methods could be used: to stabilize heater voltage or to design compensating methods by applying additional bias varying proportionately to mains variations and with amplitude and phase properly chosen. To stabilize heater voltage, constant-voltage transformers could be employed or heaters connected in series with conventional barretters. Special transformers are rather expensive and barretters are not recommended on account of the excessive heat developed in a normalized cabinet.

The compensating method was found very effective, simple and not expensive. A fraction of the negative portion of the bias of V1 (\( r_s = 150 \Omega \)) is derived from the heater supply through a small rectifier. The output is so adjusted, that any change of heater voltage produces an additional bias voltage in the grid circuit of V1, entirely compensating any change of anode current in V2 due to varying emission. Rather large smoothing condensers \( C_1, C_2 \) are chosen to make the time constant of the rectified output large, as variations of current due to mains fluctuation do not occur rapidly but with a certain delay. With proper adjustment of the ratio \( r_s, r_f \), compensation can be made very accurate and mains voltage variations between 200-250V did not cause drift of more than ±2% (of 4 mA).

(d) Slow drift of emission is of the order of 50/4 mA in valve ECC81, consequently the anode voltage drift in the first section of the valve will be around 400 mV, which is equivalent to a drift of 15 mV in the input circuit, representing only 1.5% of minimum measured voltage (IV). Obviously the effect of (d) can be disregarded in our circuit. However, if any reader would like to reduce this drift to improve accuracy, the circuit of Fig. 4 could be employed. In this case the first section of the ECC81 (V1) has to be replaced by a double triode with identical characteristics and a value of \( R_3 \) equal to \( 1/g_R \) where \( g_R \) is the mutual conductance of the right-hand half,

\[ \text{Output Circuit}. \]

The output relay, giving indication of identical voltage (and current) conditions in the circuit, has to fulfill certain requirements regarding winding and type of contacts to be employed. Before measurement, the current should be checked, by adjusting \( P_s \), to set for the moment when the armature of the relay is on the point of moving. Depending now on which direction the potentiometer is moved, some backlash effect will be experienced. This can be reduced by inserting a resistor \( R \) in series with the winding. Being short-circuited when the relay is “off” and opened while it is “on.” In this way the actuating currents for pull and release are compensated. Another way to improve this action is to adjust the gap between armature and core.

The next problem concerns the indicator itself. Three indicating lights are employed. Lamp A signals when the relay is “off,” B when the relay armature is in motion, and C when it is in the “on” position. Most important for our purposes is the new indicator B, which produces only a flash of light. Indicators A and C (pilot bulbs) are helpful in determining the setting of the slide-back potentiometer \( P_s \). For example, let us assume that a certain measurement has to be taken. After switching on the instrument and allowing a few seconds for “warming up,” one of the indicators A or C will be on; by adjusting \( P_s \), a change-over from A to C (or vice versa) will be found, and \( P_s \) must be left in a position close to this change-over, i.e., to the flash in B. After applying the unknown voltage to the input terminal, indicator C will be “on” and we have to turn \( P_s \), now in a clockwise direction until the change-over from B to C follows (indicated by flash in B). A reading of the input voltage can then be taken from the calibrated scale of \( P_s \).
Improved slide-back voltmeter with scale calibrated in db for use as an a.f. level indicator

Indicating System without Relay.—If the instrument is to be used only for measuring purposes and no further actuating action is necessary (such as switching heavy-duty mechanical contacts, etc.), it could be advantageous to dispense with the relay. This could be achieved by employing an additional double triode in a supplementary output circuit (Fig. 5 (a)). Here three neon indicators are used. Neon B is inserted between the two anodes of output triodes V3 and V4 and lights up only for given biasing conditions. This is a result of the fact that irrespectively of the signal d.c. voltage applied to the grids the biasing voltages of each section are opposed to each other for approximately 2 V (batteries \( b_1, b_2 \)).

While increasing signal voltage \( V_s \) (positive), valve V3, having the grid more positive, will start to conduct before V4 and a difference of potential will appear between the anodes of V3 and V4 lighting up the neon. Still further increasing the positive signal, this difference will reach a maximum and then decrease, as now valve V4 will start to conduct as well. Fig. 5 (b) shows how the d.c. voltage V depends on the positive signal on grid V for different biasing conditions. A bias difference of 2 V gives optimum conditions when the neon is lit up quite firmly and discrimination of output signal amplitude is within \( \pm 2 V \). Neons A and C indicate voltages respectively higher and lower than the voltage setting of the slide-back potentiometer.

Applications

Level Indicator.—The most important use of the complete instrument is in replacing the conventional d.c. microammeter bridge rectifier employed in a sensitive voltmeter. The photograph shows a level indicator in which the potentiometer scale is calibrated in decibels as in this case the differences in certain a.f. levels had to be measured and registered.

For this purpose two addition "limit" pointers are employed. Several frequencies are played back from a tape recorder and their relative response should be within, say, 6 dB (\( \pm 3 \) dB). When the reference frequency (1,000 c/s) is first reproduced, the s.b.v. control with all three pointers closed together is set to, say, 0 dB level and the latter is adjusted by the volume control in the tape recorder ("balance" neon on). Other frequencies might give different levels which have to be followed by turning the s.b.v. knob to keep the "balance" neon alight. While doing so, the right-hand loose pointer would be setting limits for higher levels and the left would be doing so for lower. Finally, when all frequencies are played back these two limiting pointers, by indicating maximum and minimum of level, tell us if the response is within required limits (6 dB). Using an ordinary meter indicator, these readings must be memorized, but here maximum and minimum of levels are recorded. Accuracy of setting can be improved considerably by replacing manual control by automatic setting. In this case the potentiometer can be driven by a small reversible motor actuated from the relay described before, and the neon indicators in such a system would have only auxiliary importance.

Supply Voltage Controllers.—The basic circuit of an electronic supply voltage regulator is given in Fig. 6 (a) in which a very similar circuit to the s.b.v. is employed. Unit A has
a d.c. amplifier characteristic as shown in the full-line curve at (b) and unit B must have a similar characteristic but with reversed phase. Biasing conditions and anode voltages of the left-hand sections of the double triodes are so adjusted that for only one input voltage \( V_{so} \) are the anode currents in both relays low enough not to actuate the armatures. Every change of \( V_{so} \) outside limits \( \pm 1 \) per cent will actuate RL\(_1\) or RL\(_2\) and would switch on the reversible servomotor which rotates the control of the supplying "Variac" transformer. If the mains voltage rises (\( V_{so} \) would rise, RL\(_1\) actuate; curve \( \ell_1 \)) the servomotor will turn the "Variac" in the direction to reduce output voltage—and vice versa.

By setting the control P, different a.c. mains outputs can be obtained, ranging between 190 and 260 V.

**Selective Calling for Ground-to-Air Communication**

A SELECTIVE calling device for use with long-range pilot-operated h.f. radio-telephone equipment now in use for air-to-ground communication has been developed by Motorola. Known as Secal, its purpose is to relieve the pilot of the need for maintaining a continuous radio watch. Calling the aircraft is effected by a ground-station unit which applies coded audio tones of short duration to the transmitter. In the aircraft these tones are fed into the airborne Secal unit which responds only to the particular combination for which it is set up and then sets in operation a flashing light and chiming sound to attract the pilot's attention.

Some changes in existing ground-station procedure may be necessary as with Secal in use only Secal-equipped ground stations can call an aircraft direct and those not fitted may have either to make contact through a station so fitted or by previously arranged schedules.

As for technical details of the system, 12 different tones between 312.6 c/s and 922.2 c/s, with tolerances held at \( \pm 0.15\% \) are used. Each call consists of two tones transmitted simultaneously for one second with an interval of 0.2 sec followed by a further two tones for one second. Each Secal-fitted aircraft is allotted a permanent four-letter (equivalent to four tone) call.

The ground-station Secal equipment consists of a small control unit having four twelve-position switches each marked "A" to "M" (I being omitted) and on these the code letters of the aircraft to be called is set up by the ground controller.

A push button then initiates the call and a lamp is illuminated which is repeated on other control units at the ground station to warn other operators that the Secal equipment is in use on any particular channel. It is usual to provide as many Secal control units as there are radio channels likely to be used simultaneously at any one ground station.

It is stated in the May, 1956, issue of the I.A.L. News, the magazine of International Airradio from which this description is taken, that a Secal-equipped aircraft can often be contacted by a ground station much quicker than would otherwise be possible, for when signals are weak the call might be difficult to hear on a busy channel whereas the calling device will respond immediately.
Wide-Band Linear R.F. Amplifier

Summary of Amplifier Characteristics
- Nominal Gain: 15 dB
- Frequency Coverage: 150 kc/s to 25 Mc/s
- Band-stop Filters: 400–535 kc/s, 1.6–3.8 Mc/s
- Inlet: 75Ω coaxial
- Outlets: 4 x 75Ω coaxial
- Cross-modulation Limit: 0.35 V
  - 1st I.M. Criterion: 50 mV
  - 2nd I.M. Criterion: 25 mV

Results of Tests to Check Performance of Amplifier and Filter

By B. F. Davies, A.M.I.E.E.

(Concluded from page 378 of the previous issue)

Linearity of a high order is necessary in an amplifier covering all broadcast bands, if inter- and cross-modulation products are to be kept down. This article gives the results of measurements on an amplifier (described in the previous issue) which was designed as part of a ship's communal aerial system. The filter used to suppress currents induced by the ship's transmitter must also meet a stringent specification.

Measured between 75-Ω impedances, the actual gain of the amplifier from input to any output was 14.6 dB, while the frequency response, which includes that of the filter, was as given in Fig. 9. Without the anode corrector coils in circuit, the 25-Mc/s response would have been some 6 dB down.

To make measurements utilizing two signals, the test circuit of Fig. 10 was set up. It was found necessary to have the isolating resistances in each signal-generator output in order to minimize reaction between the generators. Tests were commenced by first checking that, with the amplifier omitted and the generators delivering levels greater than that required for actual measurements, no unwanted inter- or cross-modulation effects could be detected on the receiver. The amplifier was then inserted, together with an attenuator to bring the voltage at the receiver back to the same level, and the measurement carried out.

The basis of the cross-modulation (X.M.) test was to find the level of a 30% modulated signal at the input that would produce modulation, 20 dB down (3% modulation level), on a small unmodulated carrier. A reference signal of 5µV at 1.4 Mc/s, 30% modulated, was applied to the input (the necessary allowance being made in all cases for the input test circuit loss), the receiver was tuned in and a reference output noted. The modulation was then switched off and the carrier increased to 50µV (+20 dB). The level of the other generator, 30% modulated, was then increased until the same reference output was read on the receiver output meter. The large interfering signal was, of course, kept off 1.4 Mc/s. From the results quoted, an input signal of 0.35 V could be handled. This means that if a filter is used which has an attenuation of 40 dB, the aerial input volts within the M.F. and I.F. bands could be as high as 35 volts.

At high frequencies the maximum input level falls about 3 dB but at 20 to 25 Mc/s high voltages on the aerial are likely to be a rare occurrence and, from available statistics, do not exceed 5 V when the ship's transmitter is working in the 22-Mc/s band. Should an H.F. band filter be used in the installation, the attenuation requirements would therefore not be so stringent as for the filters for the M.F. and I.F. bands. It should be remembered, however, that in the short-wave broadcast bands H.F. transmissions are made by other ships which will induce voltages into the aerial which will pass unattenuated to the amplifier input. The H.F. band filtering unit could not be relied upon to rectify this, as in practice it would only be switched into the aerial circuit by the radio operator during his own H.F. transmissions. The main reason for keeping the H.F. band filter out of circuit as often as possible is to avoid attenuation of some broadcasting bands, which conflict with the communication bands and also to avoid introducing a general insertion loss into the aerial circuit, which would be the case if several conventional-type filters were permanently inserted. Nevertheless, induced voltages greater than 0.35 V, caused by such transmissions from neighbouring ships, are extremely unlikely and immunity from cross modulation on all carriers can largely be guaranteed.

Test Requirements

When we come to testing for both forms of intermodulation, we must first consider how the test results will be interpreted. The 1st I.M. has been shown to be proportional to the product of the two carrier strengths, pq. As the same result could be obtained with carriers of equal strength (p = q) or with one very strong carrier (p > q), it is evident that the total input voltage applied to the amplifier (p + q) will not be indicative of the signal-handling capabilities where intermodulation is concerned. Fig. 11 shows how for a constant pq (neither carrier being considered modulated) the total voltage, as

* Formerly with the Marconi International Marine Communication Company Limited.
would be measured on a peak reading r.f. voltmeter, varies with $p$. To establish a criterion, we can use $\sqrt{pq}$, which for two equal carriers will be equal to the level of each individual carrier. If, now, the tests are carried out by injecting the two signals simultaneously at the same level, we need only quote the signal level of either carrier entering the amplifier to ascertain the I.M. handling capabilities. With two equal carriers ($p = q$) for a given I.M. criterion voltage, the input level will be twice the criterion voltage. With only one carrier of high level ($p$), the total voltage level that can be accepted by the amplifier can, to a good approximation, exceed the criterion figure by the amount that the next highest carrier ($q$) is below the criterion figure.

The tests were based on ascertaining the I.M. criterion level at which the intermodulation product at $(\alpha + \beta)$ or $(\alpha - \beta)$ was equal to a carrier level of 5$\mu$V, a level which for entertainment purposes on a broadcast receiver would be considered an insignificant signal. It should be remembered that the noise field in the close vicinity of a ship, due to electrical machinery, is if possible kept down to 5$\mu$V/metre which demands signal strengths of 50$\mu$V/metre to obtain signal to noise ratios of 20 dB. On test a 5$\mu$V signal from one signal generator at 1.4 Mc/s, 30% modulated, was injected into the amplifier and the receiver set to a given reference output. The two generators, one of which was modulated 30%, were then set to 0.65 Mc/s and 0.75 Mc/s so that $(\alpha + \beta)$ would correspond to 1.4 Mc/s and the levels increased simultaneously until the same reference output was obtained again. The push-pull balance control in this instance is used to obtain optimum results as it is capable of minimizing the 2nd harmonic distortion. Figures obtained for the I.M. criterion ranged from 50mV to 100mV according to the valves used. At 20 Mc/s and above, the results deteriorate due to the reduction in the linearization factor. For $(\alpha - \beta) = 1.4$ Mc/s where $\beta = 22$ Mc/s and $\alpha = 23.4$ Mc/s, the criterion figure was 25 mV. The question arises as to what happens when, say, $\alpha$ is at 22 Mc/s and $\beta$ at 13 Mc/s, and the I.M. product is at 9 Mc/s. A series of tests have shown that, providing one of the carriers in question is at a sufficiently high frequency for the linearization factor to suffer, the I.M. criterion figure will be affected. Tables II and III show that 1st I.M. products, derived from frequencies in the common s.w. broadcast bands, can in some cases fall within the same s.w. bands. The greatest liability to I.M. from such causes...
arises when there is a strong signal in the 13-metre band. Such interference from s.w. broadcasting bands is by no means the only interference due to 1st I.M. that could exist, there being many high-powered transmissions on communication frequencies, but such a consideration does serve to illustrate the possibilities of interference.

**Second-order Intermodulation**

When we come to the question of the 2nd order I.M., we must remember that the intermodulation term is proportional to $p^2q$ or $pq^2$. Fig 12 shows how the total input level $(p + q)$ will vary as $p$ is varied for a constant value of the product term. It will be seen that for the I.M. terms $(2\alpha + \beta)$ and $(2\alpha - \beta)$, where $k = p^2q$, the signal handling capacity $(p + q)$ rises more steeply below a certain minimum value: for $(2\beta + \alpha)$ and $(2\beta - \alpha)$ when $k = pq^2$, the rise below the minimum value is less. The converse case will apply for variations of $q$. Now in the 1st I.M. tests the criterion level corresponded to the minimum value of $(p + q)$, but in this case we can see from the graph that if we have $p = q$, it does not give a minimum for either sum of the 2nd I.M. terms. Actually, taking $p^2q$ or $pq^2 = 1$, the two minima shown, for $p = 0.65$ or 1.26, give $(p + q) = 1.89$, while if $p = 1$, $(p + q) = 2$, a difference of only 6%. We can, therefore, adopt the same method of expressing a 2nd I.M. criterion value for the input handling capacity as we used before with very little error, namely applying $p$ and $q$ of the same amplitude during test.

The other point that has to be considered is that if the 30% modulation is applied to the $p$ carrier, for I.M. terms proportional to $p^2q$, we will have twice the modulation detected by the receiver on the I.M. carrier compared with having 30% modulation on the $q$ carrier. By taking the worst possibility, we must ensure that the carrier representing $p^2$ or $q^2$ on test, is the one that is modulated.

The 2nd I.M. criterion level was found to be 50 mV, falling off only slightly above 20 Mc/s. Throughout the test, the reference frequency of 1.4 Mc/s was used for convenience, but there is no reason why other frequencies cannot be used, when similar results would again be obtained.

A point worthy of note is that 2nd I.M. products derived from $(2\alpha - \beta)$ can be important if $\alpha$ and $\beta$ are close together, as would be the case of two signals in the same s.w. broadcast band. The $(2\alpha - \beta)$ product would then probably fall within the same band. This also applies to the M.W. band and in Table IV a few cases in the European area are shown where two signals could interfere with a third. On the practical side, the case of two 50 mV signals is hardly worth considering, since it is likely to arise only in some districts lying inland between transmitters.

Another interesting point concerning inter-modulation arises when one high-level input signal is present which is just at the cross-modulation level. From the final amplifier characteristics it is evident that the cross-modulation limit is 17 dB and 23 dB above the 1st and 2nd I.M. criterion limits respectively. Now, for the 1st I.M. case, if $\sqrt{pq} = 50$ mV and $p$ is $+17$ dB on 50 mV, then $q$ is $-17$ dB on 50 mV, or 7.1 mV, and with no other signals above this figure no 1st I.M. would be present. In practice, a few signals, especially when near port, may exceed this figure. For the 2nd I.M. case, we will have two figures, using the criterion level of 25 mV for the

level of the smaller signal. When the input signal of 0.35 V corresponds to $p^+$, the small signal $q$ must be $-34$ dB on 25 mV, or 0.5 mV, but when the small signal corresponds to $q^+$ it need only be $-8.5$ dB on 25 mV or 9.4 mV, to prevent 2nd I.M. occurring under these conditions.

Conclusion

The main requirement of an aerial amplifier and its associated distribution network is that it should operate with the minimum of attention and to all intents and purposes should be as reliable as the proverbial “piece of wire.” Freedom from cross-modulation not only minimizes interference but ensures that secrecy is maintained in the transmission of messages from the ship. No aerial distribution system can be considered satisfactory if passengers’ radio telephone calls are to be heard on every station on the cabin receivers!

The wide-band amplifier that has been developed has necessarily been a compromise, but experience has already indicated that it is meeting all requirements.

AN INTRODUCTION FOR BEGINNERS

BY “CATHODE RAY”

To obtain, as it were, a transfer ticket from valves to transistors one must get to know something about their differences. The currents in valves are made of electrons emitted from a heated cathode and are controlled in a clear space made of vacuum. In transistors, the counterpart of the vacuum is a crystal of germanium or silicon, which is certainly not a clear space but a sort of latticework of atoms joined together by co-valent bonds. However, there is any amount of room throughout this latticework for currents to flow, just as there is in solid metal. But ideally there are no currents, because all the electrons are busy holding the crystal structure together. Free electrons can be introduced into the crystal by mixing with it a very small proportion of an element such as antimony that has one electron per atom too many to employ in the structure. These loose electrons make the crystal conduct; but because the “impurity” atoms are comparatively few the free electrons are far less numerous than in a metal and so the material (called n-type because the free electrons are negative charges) is only a semi-conductor. However, the resistance of the pieces that are commonly used is quite small because they are short and fat.

If on the other hand the crystal contains an impurity element such as indium, with one electron per atom too few, the shortage of an electron constitutes a “hole,” which appears to move from place to place by successively borrowing electrons from other atoms. Because a hole is equivalent to a positive charge, material with holes is called p-type.

Crystal rectifiers and transistors—or at least those classified as junction types—are made up of pieces of crystal divided into $n$ and $p$ regions.

We saw last month how it is that a simple $p-n$ junction works as a rectifier. If you were new to it you may have found the explanation rather complicated even though in fact it was simplified by leaving out some of the details. If so, you may be glad of a still simpler way of looking at it. Fig. 1(a) shows how current can consist either of negative charges flowing from $-$ to $+$ or positive charges from $+$ to $-$. Or, of course, both at once. When a thermionic diode is connected as at (b), current can flow because the heated cathode is an emitter of electrons, which are negative charges. But when connected as at (c) there is no current, because the anode does not emit electrons; neither does the cathode emit positive charges. But in a $p-n$ junction connected $p$ to $+$ (d) current flows because the $n$ region is an emitter of electrons and the $p$ region an emitter of holes, which are positive charges. When reversed (e) both regions emit the wrong charges, so there is no current.

One of the complications, which we did go into in some detail, is intrinsic conduction. The crystaline elements germanium and silicon in which $p$ and $n$ regions can be formed by impurities are also liable to have their own atoms broken up by heat or light into hole and electron pairs. Since their own atoms predominate in both $p$ and $n$ regions, these hole and electron pairs are formed regardless of $p$ and $n$ distinctions, and so there is two-way current through the material regardless of polarity. This effect, as regards a $p-n$ rectifier, can be represented as a conductor shunted across it, which is generally a nuisance. Light can easily be excluded by an opaque covering, but unfortunately the amount of heat at ordinary temperatures is sufficient to give germanium an appreciable amount of intrinsic conductivity, and at the sort of temperature one can easily get in electronic equipment it is enough to reduce the efficiency very seriously. This is the chief snag about germanium devices, and the reason why research departments are pressing on with silicon, which can go to a considerably higher

* For the information of newcomers to whom these bonds are less familiar than the premium kind, see the last two instalments, on “Semi-Conductors.”

Wireless World, September 1956

449

Fig. 1. Current can flow as electrons to positive and/or "holes" to negative (a). In a thermionic valve the cathode emits electrons, so current can flow if it is negative (b) but not if it is positive (c). A $p-n$ junction emits both electrons and holes simultaneously and current can flow if it is connected as at (d) but not if as at (e).
temperature before its intrinsic conductivity becomes comparable with its impurity conductivity. (Silicon, however, has its own particular snags.)

Those were the main findings of the last two months, leading to crystal rectification. Germanium and silicon rectifiers are still making tremendous progress for both signals and power. And not only up our particular street; the future policy of British Railways has been based largely on the extremely high efficiency of crystal rectifiers.

But transistors are our concern, so let us go right on to triple combinations of p and n materials, or double junctions if you prefer. There are two varieties, corresponding to the two varieties of sandwich chocolate provided by a well-known maker—milk-plain-milk or plain-milk-plain. They are—the semi-conductor junctions, I mean; not the chocolate—designated n-p-n and p-n-p. The chocolate analogy is quite a good one, for it too is a single slab containing three regions of essentially the same material but differing in the proportions of ingredients. The differences in the germanium are however too small to detect by chemical analysis, let alone visual inspection. So one must take the maker’s word for it, or investigate electrically. Most if not all of the junction transistors obtainable in this country are p-n-p type, but except for a reversal of sign the n-p-n type is the same in principle and rather easier to compare with a triode valve.

If an e.m.f. is applied from end to end, as in Fig. 2, the circuit consists of two rectifiers in series opposition, and it is obvious that except for the (normally small) “leakage” current due to intrinsic conduction no current can flow whatever the polarity of the e.m.f. A quick glance back at Fig. 1 tells us that when connected as shown nearly the whole of the total potential difference between the ends occurs across the boundary between the upper n region and the p, for those two regions make a rectifier in reverse and therefore a very high resistance, whereas the p and lower n are a forward rectifier, with a very low resistance.

So far the utility of the arrangement is not conspicuous. The next step (Fig. 3) is to give the p layer a small positive bias. This biases the lower rectifier in the forward direction and allows current to flow in circuit 1. That is precisely what one would expect, but what would hardly have been expected is that (A) the amount of current is much less than if only that circuit had been present, and (B) a relatively large current flows in circuit 2.

The resemblance between this n-p-n junction transistor and a triode valve now begins to appear. The chief difference is that the transistor is basically a current amplifier rather than a voltage amplifier. The upper n region is analogous to a triode's anode; the lower n region to the cathode; and the p region to the grid-controlled space in between. But they are not called by these names. Instead of the anode there is the collector; and instead of the cathode, the emitter. Both these names would be quite appropriate in a triode. But the middle electrode in the transistor is called the base, which seems curiously inappropriate. The reason for it, which will appear later, is historical rather than functional.

Before going on to consider the behaviour of this type of transistor in more detail, you are entitled to expect some explanation for the surprising outcome of the Fig. 3 experiment. How is it that current can flow freely the “wrong” way through the upper rectifier? The answer to this question comes if we recall why it is that current doesn’t normally flow this way through a p-n junction. It is because the only free current carriers present in substantial quantities in a p region are holes, which are expelled rather than attracted by a negative potential on the n region—the collector in this case. But the emitter, which is purposely made a high-impurity n region, has vast numbers of free electrons, and when the base is made positive they swarm across the frontier into it. In other words, the emitter emits electrons into an electron vacuum. There, they naturally respond to the attraction of the positive collector, much as electrons emitted into the vacuum of a valve by the cathode go to the anode.

Transistor Characteristics

If the grid of a valve were made positive like the base in this transistor, some of the electrons would be attracted to it, causing grid current. And so it is in the transistor. But the proportion that does so is relatively small because the base is made very thin—only one or two thousandths of an inch, or even less. In a transistor there is a third alternative for the electrons: they can combine with the holes in the base and so disappear. But because of the thinness of the base, and also because the number of holes in it is further restricted by making it of low-impurity material, the proportion lost in this way is very small.

The voltage amplification in a valve is related to the amplification factor $\mu$, which is the change of anode voltage caused in a constant-current anode circuit by one volt change of grid potential. In a transistor the ratio of change of collector current (at constant voltage) to the change of base current causing it is denoted by $\mu$ or $\alpha$, and may be anything from 10 to 100 or more according to type.

For an explanation of the p-n-p transistor, the same treatise will do again if “negative” and “positive” are interchanged, and also “holes” and “electrons.”

There is no corresponding inverted kind of valve, with a hole-emitter as the anode, so in push-pull circuits it is necessary to use phase-reversing transformers or other devices at input and output. This is not necessary with transistors if matched-characteristic n-p-n and p-n-p types are available. The fact that transistors of either polarity can be produced is a unique feature which could come in very useful.

Although the picture of an n-p-n junction transistor

(Continued on page 451)
EMITTER indicates generally, in very least ionic working balance. striking closely, when output horizontal main from zero, feature about the curves been 0071 transistor which shows voltage for various values of base are those grid so drawn, the most generally useful are those relating transistor. according to convention dry cell (1.4 V) as may still be straightening anode volts, valve voltage typical. But perhaps the biggest surprise is that input takes a little getting used to, but the fact that the zero-bias line more or less coincides with cut-off is rather convenient. The input impedance—as one would expect, seeing that it is a forward rectifier—is very non-linear, and, since input current control is as linear as Fig. 5 shows, it follows that input voltage control would be non-linear.

High-Frequency Effect

As we all know, the performance of a valve falls off at very high frequencies, for several reasons. One is that the interelectrode capacitances form a low-impedance shunt across the couplings. Another is that the time taken by the electrons to cross the space inside the valve is not negligible in comparison with a signal cycle, and the phase shift so introduced causes loss. Both these effects have their counterparts in transistors. Although the boundary area between base and collector in the low-power junction transistors now available is smaller than the electrode areas in valves, the thickness is less still, so the capacitance is usually somewhat greater. And although the distance across the base is very small, the speed of the electrons is far slower than in a valve, and holes are slower still. Junction transistors, in starts to do any work, whereas a transistor can give back in useful work a substantial proportion of a power supply totalling a fraction of a milliwatt.

Next, the linearity of the curves compares favourably with that of pentodes, and the evenness of their spacing right down to cut-off compares more than favourably with the tendency of pentode curves to close up steadily as the grid bias is increased. The transistor linearity is admittedly somewhat marred by the tendency for the slopes of the lines to vary, so that a load line drawn athwart them cuts them at unequal intervals, but it still looks better than a pentode. While the voltage scale is so much smaller, the output current scale is not unlike that for low-power pentodes, so the near-flatness of the lines doesn't mean such a high output resistance as for pentodes. The resistance represented by the steep rise is phenomenally small—of the order of 20 \( \Omega \).

Lastly, instead of the control being exercised by grid voltages from zero downwards it is by base currents from zero upwards. The idea of current input takes a little getting used to, but the fact that the zero-bias line more or less coincides with cut-off is rather convenient. The input impedance—as one would expect, seeing that it is a forward rectifier—is very non-linear, and, since input current control is as linear as Fig. 5 shows, it follows that input voltage control would be non-linear.

High-Frequency Effect

As we all know, the performance of a valve falls off at very high frequencies, for several reasons. One is that the interelectrode capacitances form a low-impedance shunt across the couplings. Another is that the time taken by the electrons to cross the space inside the valve is not negligible in comparison with a signal cycle, and the phase shift so introduced causes loss. Both these effects have their counterparts in transistors. Although the boundary area between base and collector in the low-power junction transistors now available is smaller than the electrode areas in valves, the thickness is less still, so the capacitance is usually somewhat greater. And although the distance across the base is very small, the speed of the electrons is far slower than in a valve, and holes are slower still. Junction transistors, in
though for rather different reasons—is suitable for amplifying at higher frequencies than the earthed emitter or cathode. Its performance is also rather less dependent on the somewhat wide variations of characteristics for which unfortunately transistors are noted.

For comparison with Fig. 5, Fig. 7 shows the output characteristics of the same transistor with emitter input (i.e., earthed base). Note the really high output resistance; the collector current is almost entirely unaffected by collector voltage from zero upwards, and a small negative voltage is needed to stop it. Then there is the comparatively high emitter current needed to control the output current; this means a low input resistance. The change of \( I_e \) caused by each milliamp change in \( I_b \) is in fact rather less than 1 mA, and the ratio of the two (which is the current amplification of this transistor arrangement) has been given the symbol \( \alpha \). It is easy to find the relationship between \( \alpha' \) and \( \alpha \) from the fact that \( I_e = I_a + I_b \). Let a small change in any of the currents be denoted by small \( i \). Then

\[
\alpha = \frac{i_e}{i_b} = \frac{i_e}{i_e + i_b} = \frac{i_e / i_b}{i_e / i_b + i_b / i_b} = \frac{\alpha'}{\alpha' + 1}
\]

This fractional current amplification looks as if it would strongly discourage use of earthed-base transistors, unless one remembers that the input resistance of this arrangement (being a forward-biased rectifier) is only a few ohms whereas Fig. 7 shows that the output resistance is vast—actually it is of the order of a megohm. So the voltage amplification—and hence the power gain—can be quite large, though not so large as with the earthed-emitter arrangement. But at high frequencies it may well overtake it.

You may be thinking there is something fishy about beginning with a quantity \( \alpha' \) and then discovering \( \alpha \). And you would be right. Because people first started using valves in earthed-cathode circuits, they didn’t have to start using transistors in earthed-emitter circuits. As it happened, for a reason that will become clearer in a moment or two, they started with earthed-base, invented \( \alpha \), then discovered that transistors could be used with earthed emitters, and hence the need for another amplification symbol, which became \( \alpha' \).

Another fishy feature (in my order of presentation) is the circuit symbol, Fig. 4, which by no stretch of imagination resembles a junction transistor. That, of course, is because the original transistor was not a junction transistor but a thing that really did (and still does) resemble Fig. 4—the point-contact transistor. It is simply a small block of germanium, usually \( p \) type, with two fine wire points pressing on it a few thousandths of an inch apart. I have introduced transistors out of historical order for the reason that, whereas a plausible explanation of how the junction type works is available, even the latest expositions of the point-contact type seem to me to be elaborate ways of saying that how it works is unknown.

Fig. 7. Collector characteristic curves for same transistor as Fig. 5 in earthed-base arrangement, with emitter current as parameter.

Fig. 8. Construction of point-contact transistor, which is obviously the basis for the standard circuit-diagram symbol for a transistor, Fig. 4.

Fig. 9. Collector characteristic curves of point-contact transistor, corresponding to those of Fig. 7 for junction type.

Fig. 10. The use of a base resistor in a point-transistor circuit is liable to cause trouble unless precautions are taken to limit collector current.
However a few things can be said. A point-contact transistor has to be “formed” by passing pulses of current through the contacts. It seems that this converts the n-type material around the points into p-type (Fig. 8), which is in accordance with the fact that the thing has the polarity of a p-n-p transistor. One can understand the need for the points to be very close together—about the same distance as the thickness of the base in a junction type, and for the same reason. And one would expect the “inter-electrode capacitance” to be much less than in the junction type with its relatively large area of contact. This is indeed so, and at least partly accounts for the higher frequencies at which point transistors can work. The fact that electric field intensity close to a sharp point is much larger than around flat or gently curved electrodes (which is why sharp points are avoided in high-tension apparatus, except for discharge purposes) accounts for the lower back voltage at which a point-contact rectifier breaks down. The small contact area would also suggest a relatively low-power-handling capacity.

But none of these things might instantly lead one to predict that point transistors are far more noisy than junction transistors (which in their turn are somewhat more noisy than valves). Or—even more important—that their $\alpha$ should, unlike that of the junction types, be greater than 1. Yet such is the fact. And not merely just greater than 1; a typical figure is 2.5. Fig. 9 shows some earthed-base characteristic curves, which should be compared with Fig. 7. First, one notices their curvature and their less perfectly even spacing. And then the higher scale of collector voltage. And perhaps last of all the fact that each milliamp change in emitter current increases the collector current by two or three milliamps.

Much has been written by the scientists to explain this. But so far the only conclusion the observer on the side lines is able to draw with any large amount of confidence is that the p-n-p description just given is an over-simplification. Some authorities, for instance, show several layers around the point.

And much is said about “trapping” and other effects I have spared you. Pending the results of further research we may just have to accept the $>1$ value of $\alpha$ as a fact.

It is an exceptionally important fact to remember, because it means that unless one uses a point transistor very carefully it may go into saturation or oscillation and destroy itself by excessive current quicker than one can think. It would be very unwise, for example, to make the connections to collector and emitter prior to that for the base (as in Fig. 2). Any current flowing through the e-b contact would (as Fig. 9 shows) cause a greater current to flow through the b-c contact, but that increased current would flow also through the e-b contact, which would increase the current still more . . . and so on until something went bust. Even a circuit based on the innocent-looking Fig. 10 is not safe. Here, following valve practice, $R$ is being used as a substitute for the emitter bias battery in Fig. 6(b). Fig. 9 shows that the directions of the currents will be as indicated by the arrows in Fig. 10, and $I_b$ through $R$ will bias the emitter positive, which is correct for a transistor with p-n-p polarity. But, whereas a cathode resistor in a valve causes negative feedback which tends to stabilize things, a base resistor in a point transistor causes positive feedback and possibly instability, as can be seen by considering Fig. 10 with the aid of Fig. 9 to show what happens when current is increased, say from zero on switching on. Remember that quite a small increase in emitter voltage causes a substantial increase in emitter current, for it is a forward-biased rectifier.

At the present time point-contact transistors are needed in spite of their disadvantages, because their high $\alpha$ is convenient for trigger circuits in computers, etc., and because available junction types are more or less ineffective at the higher radio frequencies. The high-frequency shortcomings having been already largely overcome in the laboratory, it is presumably only a matter of time for junction transistors to displace the point type almost if not entirely.

---

**SHORT-WAVE CONDITIONS Predictions for September**

THE full-line curves given here indicate the highest frequencies likely to be usable at any time of the day or night for reliable communications over four long-distance paths from this country during September. Broken-line curves give the highest frequencies that will sustain a partial service throughout the same period.

**Wireless World, September 1956**
More Lines or Colour?

Though it is generally believed that the next major step in television will be to add colour, the alternative of higher definition has had some support. In this article a studio producer gives his views

By IAN ATKINS*

COLOUR will not wait. When it is ready we shall get it, but that will not be until it is possible to make a good, stable receiver at a moderate cost. In my view, given the receiver, colour will be with us whether we like it or not. The alternatives we may expect surely are colour on 405 lines or colour with a higher standard of definition. "More lines or colour?" is an academic question. I shall give it a most unacademic answer.

From the purely selfish and personal point of view of the studio producer the key to the answer lies in another question. What do we want to present on the television screen? Television can now do some things well and others less well. Do we want to do even better the things we now do well? Or do we want as it were to balance things up and improve in the respects in which we are now lacking?

This "intimate, domestic medium," excels at present in the realistic. Actualities, outside broadcasts, travel programmes and other similar features are well served by the present standards of definition. The great popularity of the dramatized documentary programme is further proof of the success of realism on the television screen.

Writing in Wireless World for May, 1956, Dr. D. A. Bell said:

"The great advantage of the higher definition is that large-scale effects can be presented with adequate detail—e.g., a display of massed folk dancing—and solo artists are normally presented as three-quarter-length or full-length portraits, not head and shoulders only. It liberates television from the state of being a specialized art having limited effects at its disposal in order to represent some form of entertainment and makes it as free as the black and white film to reproduce visual entertainments where so desired, or use more natural "shots" if the moving picture is regarded as an artistic work." (Dr. Bell's italics.)

Dr. Bell is saying that higher definition will, above all, improve television's ability to report; he adds, by way of afterthought, that "if the moving picture is regarded as an artistic work" there will be some advantage in this direction also. This "liberation" is pretty cold comfort to the studio producer who sees television's task as in part to report, to reproduce and, equally important, in part to move towards establishing itself as an art form—in fact, to represent. The cinema is most memorable when, for all the freedom of its higher definition, it most un-

Monochrome Limitations

Television programmes cover a vastly wider range of type and style than the commercial cinema in its monochrome period. If the successes of the film documentary and avant-garde groups are added this disparity is perhaps not so great, but what is significant is that the areas in which television is, and black-and-white films were, less successful show a marked degree of identity. No really satisfactory way of presenting the dance on the black-and-white screen has been evolved; realism. In the unrealistic, the stylized is a much more chancy business; the black and white screen can be made to glitter, but it does not often glow.

It is in this realm of the unrealistic that I believe colour will open up vast new possibilities. Fussy detail and overcrowded background will give place to simplicity, but a warm and satisfying simplicity; neither cold grey emptiness nor hard black void.

Of course, we shall make mistakes with colour. We shall at first think of it for its own sake and not as a means to an end. People will say, as they say about any new technical advance in any medium that colour has "put television back twenty years." But we shall hope to make these mistakes during an experimental period. Where we shall be lucky is in the fact that, for obvious reasons, the introduction of full-scale colour programmes will be a gradual process. We shall be able to present in colour those programmes which manifestly gain from it and to

* British Broadcasting Corporation.

454

WIRELESS WORLD, SEPTEMBER 1956

www.americanradiohistory.com
take time to learn why in others the gain appears to be a minus quantity.

This literally rosy prospect will, however, be conditioned by one factor; whether colour is introduced on present standards or at higher definition. Whether “compatibility” in the strictly technical sense is a requirement of the system or not, a monochrome picture will undoubtedly be derived from the colour programme and that monochrome picture will have to be good. A considerable proportion of the experimental period will have to be spent in establishing the studio conditions necessary to give both good colour and good black-and-white.

The purely personal, selfish and parochial view of one studio producer, then, is “colour first and higher definition afterwards.”

Does a less selfish and more forward-looking consideration alter this view? Is colour on 405 lines really good enough? Does it yield pictures as good as the present black-and-white picture? Are we right in hoping that the introduction of colour will not reduce the apparent definition? (May not, in fact, the addition of colour enable the viewer to pick out details by differences in hue, whereas on a monochrome picture he can distinguish only between different shades of grey?) Is the compatible picture on a monochrome receiver up to the requisite standard? Is the “reverse compatible” black and white picture on a colour receiver up to the requisite standard? There is at present, I believe, sufficient diversity of view among the experts on the answers to these questions to frighten into silence the most foolhardy of the in-expert who cannot know whether a present defect is due to the system or standards in use on the one hand or to a particular piece of apparatus, a link in the electronic chain to-day, but due to be superseded to-morrow. We must trust the experts to make the right decisions. They have not let us down in the past.

More lines instead of colour, then? Surely to discuss the introduction of a higher standard of definition in the present Bands I and III is wishful thinking. Higher definition must mean, in this country, going to Bands IV and V. To do this without also introducing colour might be easier, but would it not also be lamentably un-courageous?

---

**Wired-in Valves**

By E. G. Rowe,* M.Sc., D.I.C., B.Sc.(Hons.), A.C.G.I., M.I.E.E.

In the past the valve as a component has taken the blame for 50% of all equipment failures—if it is fair to blame something for failing to stand up to conditions for which it was not designed. The Special Quality valve, however, has been designed to work under arduous conditions, and with such valves the basic reliability of this component has improved vastly. With this position established, and an assurance that if valves are used correctly and conservatively there will be a very low failure rate up to the normal length of life, then there is a good case for wiring-in valves in the same manner as other circuit components.

The major difficulty here is that of custom, and it is hard to change the mentality of the servicing technician whose first approach to the diagnosis of an unusable equipment is to pull out the valves. This tendency is overcome by making this instinctive action not possible and results in many advantages. Some 30-50% of the valves so removed are perfectly satisfactory when tested, whilst many modern equipments are so compact that the removal of valves often results in mechanical damage to them. Then again, the use of soldered-in valves highlights the importance of giving the earliest consideration to methods of fault diagnosis and makes it necessary for the equipment designer to supply detailed procedures that will enable the real faulty component to be removed—this will improve the “unreliability record” of the valve to a surprising extent!

At the same time, it will give emphasis to the value of marginal checking techniques. Valves must die eventually of general deterioration of characteristics, but by routine diagnosis of the equipment performance it is possible to forecast potential failures and thereby increase equipment reliability by a whole order or more.

Next, by making valves with flexible leads instead of pins the valve manufacturer is able to produce a stronger glass article, and because there is no

![Fig. 1. Examples of flying-lead valves suitable for direct wiring-in and clamping by the user.](image-url)
Fig. 2. Flying-lead valves already mounted in cooling cans and connected to soldering tags corresponding to conventional valveholders.

mechanical incompatibility between the valve pin spacings and the valveholder contacts there is no risk of strains being set up that will result in broken and leaky valves in service.

Finally, by dispensing with the conventional valveholder it is easier to provide satisfactory intimate metallic contact to the glass envelope and thus achieve greater cooling. The question of bulb temperature is now being studied extensively, and it is established that the life of a valve is very dependent on this temperature. Reducing it by 50-60°C can increase the life in many cases by four or five times. By using black metallic clamps specially designed to touch the bulb at as many places as possible the hot spots are evened out over the bulb surface, and then by secure fastening of the clamps to the chassis the heat is conducted away efficiently.

Many users purchase flying-lead valves in the form shown in Fig. 1 and design their own clamps to fasten the valves horizontally on the chassis. The ordinary U-shaped saddle, with the metal band situated at the hot spot of the glass envelope, is one of the simplest methods. Other users prefer to maintain their present circuit techniques and mount the valve in the usual vertical position. To suit such requirements a range of Special Quality valves is available in which the user is supplied with a "valve component" as shown in Fig. 2. This is a flexible-lead valve with its own cooling shield and with soldering tags in the conventional pin positions. The can has two lugs with normal hole fixings and the "valve component" replaces the usual arrangement of valveholder, valve and shielding cans or springs.

The time has now arrived when the adoption of such wired-in valves, used conservatively and correctly with approved maintenance and marginal checking procedures, will produce equipment reliabilities very much in excess of those at present being achieved.

COMMERCIAL LITERATURE

High Quality Amplifier, 5-watt (No. 1 "Symphony," Mark III) with flexible tone control for treble, middle and bass. Negative feedback and scratch-cut are incorporated and also tape "record" and "play-back" sockets. Other amplifiers, tuners (a.m., f.m. and a.m./f.m.), radiogram chassis and loudspeaker cabinets and baffles. Illustrated catalogue (C.24) with price list from Northern Radio Services, 11 and 16, King's College Road, Swiss Cottage, London, N.W.3.

Electronic Measuring Instruments by well-known makers. A current price list of the equipments supplied and maintained by F. C. Robinson and Partners, 122, Seymour Grove, Old Trafford, Manchester, 16.

American-Type Valves (Western Electric type numbers) manufactured by AB Svenska Elektronror, a subsidiary of Ericsson, of Stockholm, Sweden. Catalogue with full data and characteristics from the representatives for U.S.A., Canada and export, State Labs Inc., 649, Broadway, New York 12, N.Y., U.S.A.

Cable Eccentricity Gauge, electronic, working on comparison of capacitances between conductor or sheath of the cable and two external self-aligning electrodes. Sensitivity to 0.5 per cent of wall thickness. Description in a leaflet from the Addison Electric Company, 10-12, Bosworth Road, London, W.10.

Mobile Radio Systems; v.h.f. transmitters and receivers for fixed stations, transmitter-receivers for motor cycles and larger vehicles, h.f. and v.h.f. pack sets. Descriptive leaflets with detailed technical specifications in a folder from the British Communications Corporation, Second Way, Exhibition Grounds, Wembley, Middlesex.

Nickle-Cadmium Hermetically Sealed Cells, rechargeable like conventional accumulators. An article describing the use of the Perma-Seal types of the German Edison Accumulator Company for the liit. supplies of battery and mains/battery portables; arrangements for trickle charging, economy operation and vibrator h.t. supplies are outlined. Obtainable from A. M. Allen, of G. A. Stanley Palmer, Maxwell House, Arundel Street, London, W.C.2., agents for the cells.

Commercial and Accessories; an illustrated catalogue for August, 1956, from Radiospares, 4-8, Maple Street, London, W.1.

Stabilized A.C. Power Supply, giving 200 watts at 2.4 kc/s (quarter models) and 400 kc/s (half models). 1 kV, 1 kc/s, 115 V r.m.s.; regulation, less than 1 per cent change in output voltage from zero to full load; distortion less than 2 per cent. Descriptive leaflet from Shandon Automation and Electronics, 6, Cromwell Place, London, S.W.7.

Television Replacement Parts. Servicing hints on various commercial receivers and details of a transformer winding service are included in the latest illustrated catalogue from Direct TV Replacements, 134-136, Lewisham Way, New Cross, London, S.E.14. The price is 1s including postage.

Glass-Sealed Resistors (by Victoreen Instrument Co., U.S.A.), notable for high accuracy and long-term stability under extremes of temperature and humidity. Values 1000F- 1000Ω, tolerances 1-20 per cent, power ratings 0.5-10W, max. temperatures 100-200°C, temperature coefficients mainly negative. Leaflet from the U.K. agents, Anglo-Netherland Technical Exchange, 3, Tower Hill, London, E.C.3. Also a leaflet on Victoreen voltage regulator tubes.

Broadcast Transmitter, 5-kW, for 355-1,620 kc/s (as outlined), in fixed or mobile units. Current output 500-1000 A, audio response 50 c/s-10 kc/s ±2 db at 95 per cent modulation. Power consumption, 13 kW for average programme, claimed to be unusually low. Specification on a leaflet from Gates Radio Company, 13, East 40th Street, New York, N.Y., U.S.A.

Rotary Rheostats; three new models for replacing slider resistors in industrial control panels. Values between 273 mA and 12.9 A. Leaflet from The British Electric Resistance Co., Queensway, Enfield, Middlesx.

Wireless World, September 1956
Further Education

WITH the opening of the scholastic year we have received details of a course which a selection is given below.

Microwave Techniques.—A series of thirty lectures on techniques and microwave frequencies will be given by Dr. D. R. Workman at Battersea Polytechnic, London, S.W.11, on Wednesday afternoons (3.0 to 5.0) commencing on October 10th. The first twenty lectures (Part I) will cover the general practical techniques under microwave and Part II will deal with some of the applications of microwave techniques. The course is suitable for physicists and electrical engineers with a general knowledge of electrical and electronic principles. The fee for the course (or Part I only) is £2. Dr. Workman is also giving a parallel course on the theory of microwave circuits for graduates in physics, mathematics or electrical engineering, on Wednesdays at 6.15 p.m. (Fee £2.)

Colour Television.—The Television Society has arranged for a course of five lectures on colour television to be given during the autumn term in conjunction with the courses held in Battersea Polytechnic, London, S.W.11, on Wednesday afternoons, by P. S. Cox, of the G.E.C. Research Laboratories, in the Assembly Hall, Institute of Education, Malet Street, London, W.C.2. The lectures, which cover the fundamentals of transmission and reception of the N.T.S.C. system, will be given on four consecutive Mondays, beginning September 3rd, and on Friday, September 28th. Tickets for the course (fee £1) are obtainable from the Television Society, 164 Shaftesbury Avenue, London, W.C.2.

Advanced Courses.—Part-time courses in Higher technology, provided at colleges of the Home Counties, are listed in a bulletin issued by the Regional Advisory Council for Higher Technological Education. In general, the bulletin includes advanced courses in the various branches of engineering, science and chemistry which regularly appear in college calendars or prospectuses as part of a grouped course. Over thirty colleges and technical schools have submitted details of about 250 courses are given in the bulletin, which costs 1s 6d and is obtainable from the Regional Advisory Council, Cuffley Court, South, Tavistock Square, London, W.C.1.

Radar Maintenance.—The next two evening courses at the Norwood Technical College, Knight's Hill, West Norwood, London, S.E.27, in preparation for the Ministry of Transport radar maintenance certificate begins on September 24th. It will be held on Mondays and Tuesdays from 6.15 to 9.15. The college is also running a full-time course beginning on September 12th in preparation for the examination to be held early in December. The 1956/1957 prospectus from the college includes details of thirty-one part-time day and evening courses under the general heading "Telephone and Telecommunications."

Technical Writing.—A course of six lectures on the technique of technical writing is to be given by Geoffrey Parr (Educational Television Society) at the Borough Polytechnic, Borough Road, London, S.E.1, on Fridays at 2.30 p.m. commencing on October 12th. (Fee 10s.)

Northern Polytechnic.—The telecommunications section of the prospectus from the Northern Polytechnic, Hollo-

Sandwich Course.—Details of an engineering sandwich course (alternate weeks in college and industry) in communications, electrical or mechanical engineering, have been received from the South East London Technical College, Lewisham Way, S.E.4. The object of the four-year sandwich course is to provide a theoretical and technological training comparable with that of an engineering degree but so arranged that the student's theory will advance concurrently with his industrial training and provide a qualification acceptable for membership of the Institutions of Electrical and Mechanical Engineers.

Northern Polytechnic.—The telecommunications section of the prospectus from the Northern Polytechnic, Hollo-

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

SPECIFICATION:

OUTPUT POWER. 8 watts normal or 12 watts peak.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

Rumble Filter. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.

RUMBLE FILTER. A high-pass filter incorporated with fixed slope of 18 db per octave below 30 c/s.

HUM and NOISE LEVEL. Better than—40 db.

NEGATIVE FEEDBACK is applied through a triple-loop circuit.

OUTPUT IMPEDANCES. 3, 8 and 15 ohms.

FREQUENCY RESPONSE. 30 c/s to 15,000 c/s within ± 1.5 db at 6 watts output control level.

HARMONIC DISTORTION. Below 0.5% at 6 watts output up to 1,000 c/s.

These are overall figures including output and pre-ampl stages. LONDON, W.I.

LOUDNESS COMPENSATION. Extra bass and treble boost automatically inserted at low volume:

At 20 db below full output: 8 db lift at 50 c/s.

At 40 db below full output: 20 db lift at 50 c/s. 15 db lift at 10 Kc/s.
A New Resistance Alloy

DID you, I wonder, see the account of a new resistance wire, known commercially as Evanohm, which was published as an official N.P.L. communication in the July issue of Part B of Proc. I.E.E.? Evanohm is an alloy of 73 per cent nickel, 21 per cent chromium, 2 per cent copper, 2 per cent aluminium and 2 per cent other metals. Older alloys, such as manganin and constantan, have many good points; but it is exceedingly difficult to produce either commercially with the stability needed for standard resistors used at ordinary room temperatures. Evanohm, besides having three times the resistivity of manganin, can be given the required low temperature co-efficient by a simple heat treatment. The values of resistors made with it have been found to remain stable within a few parts in 100,000 per year. Almost its only disadvantage seems to be that hard soldering is necessary. This new alloy should be more useful in precision electrical apparatus, particularly in circuits whose time constants must be stable.

Terminology

UNLIKE A. Hardwicke (p. 282, June issue), I find the use of such expressions as “fire,” “fire at” and “trigger-off” expressive and useful electrical terms. After all, guns aren’t necessarily military weapons; they have their peace-time uses both for sporting purposes and for the mere filling of the pot. What the trigger does is to start a sudden violent action, and triggering-off seems to me just the right expression for what happens when, say, a pulse is applied to a flip-flop circuit. What, again, is an electron gun expected to do but fire electrons at a target? And doesn’t the intransitive fire describe most graphically the coming into action of a thyratron? No, I’m all for sticking to those useful words, but I’m not at all sure that we ought not to come into line with most other peoples of the world by making the word billion signify 10^12 instead of 10^10. As it is, when one comes across billion, trillion, and so on, in French, American and other foreign publications one has often to pause for a moment to find out how many noughts the writer intends to follow his first figure.

“You’re on the Air...”

HAVE you seen the leaflet “You’re on the Air, Mrs. Smith,” published by the G.P.O. and obtainable at any post office for the asking? It’s well and simply written and should bring home to many people the fact that a considerable variety of domestic and workshop appliances can, if they’re not fitted with suppressors, ruin both sound and television reception in neighbouring homes. I feel that the G.P.O. would do well to make it more widely known that this leaflet is available free of charge. In the week before this was written I asked a dozen householder friends if they’d seen the leaflet and not one had so much as heard of it. The next test was still more illuminating. During a visit to a neighbouring town I went into the head post office and asked for a copy. The man behind the counter looked puzzled, but, having received my assurance that it must be in stock, he consulted a colleague, who was equally baffled. He then retired into the bowels of the building to make further inquiries, and after a short wait I got my copy.

A British Speciality

OURS was the first country to make use of underwater television. The original underwater camera was built, if you remember, by Marconi’s in 1951 in response to a rush order from the Admiralty, who wanted the instrument as an aid to locating the wreck of the submarine Affray. Its success was beyond the wildest expectation. Several wrecks had been located on the sea bottom in the area where the disaster took place; but the TV camera identified one of them as that of the submarine without a shadow of doubt. As it was moved about the wreck the name-plate (I hope that’s the correct nautical term!) was seen on the receiving screen. Since then wide use has been made of Marconi and Pye submarine cameras not only by salvage vessels but also by marine biologists and oceanographers. Two years ago Pye designed a special model for the search for the Comet, lost off the island of Elba. Many of these have since come into use in Canada, Australia, New Zealand, the U.S. and other countries. I also hear that a further large batch of “Elbas” is likely to be used in next year’s investigation by American scientists of the polar ice-caps.

People Are Funny

WHAT queer ideas people do get about television! A friend told me the other day that he simply must...
get a receiver with a larger screen. He has a 10-inch screen, from which his eyes never move when cricket is being televised. When I asked why he needed something a size or two larger he said: “Because I want to be able to see the ball. With my set I can’t always do so, but I find that if the ball’s on my screen, it’s so small that I can’t see it.” Then the solution occurred to me. I asked how far from his set he usually sat. “Oh,” he said, “you won’t catch me out there. I do always what the experts recommend and sit as far as possible from the screen.” How he’d got hold of that idea I don’t know; but I found that he normally sat a good ten feet from the screen—and had been doing so for years! I demonstrated by means of the back of the proverbial old envelope that his picture viewed at five feet would appear to be of exactly the same size as Jones’s at about 8½ feet. Having now moved his chair to the right distance, he is able to enjoy his cricket without having to go round to his friend’s house.

**Triangular Cabinets**

FREE GRID’S suggestion that some enterprising manufacturer should turn out television sets with triangular cabinets because they fit so comfortably into the corners of rooms comes a little late in the day. The suggestion was made some years ago in “Random Radiations” for console sound receivers and radio-grams and was adopted by the Ambassador people, who found it very popular. Whether any television sets are made with such cabinets nowadays I can’t say offhand, though my impression is that there are one or two. Cabinets of this shape, whether used to house sound or television receivers, could benefit not only the listener or viewer but also the serviceman. If the cabinet is rectangular, only the back can be detached and many parts of the “works” are inaccessible unless the chassis is taken out. With a triangular cabinet, on the other hand, both of the sides behind the front panel could be made removable; or the back might consist of a single V-shaped piece. In this way the serviceman could get at much more of the inside of the set without having to take out the chassis.
Electronics on the Roads

I HAVE been studying an article in the American periodical Tele-Tech and Electronic Industries which deals with the question of reducing car accidents by electronic means. One suggestion which has real merit is the development of electronic "trainers." Presumably these would be on the lines of the system used in flying training and this has proved itself over and over again.

Other suggestions in the article are of less importance but nevertheless capable of considerable development. Many of them appeared in these columns a generation ago but I have never found time to put them into practice. For instance, Tele-Tech suggests the use of a capacitative pick-up on a car so that if it approached too close to an obstacle ahead, be it another car, ajaywalker or a wretch's telephone, the brakes would be automatically applied. I put forward a somewhat similar suggestion using photocells 23 years ago. The snag was that by the time the car got within range it would have been too late for the brakes to be applied. In my opinion this snag of too limited a range would apply with equal force to any capacitative arrangement.

The boldest and most unusual suggestion put forward by the writer is that "leader" cables should be buried in the ground on certain highways. These cables would carry control frequencies which could take complete charge of the car. The driver could then drop off to sleep like the coachman of the old horse-drawn trams who used to leave everything to the guiding effect of the rails and the intelligence of his horses.

Datatron

MOST of you will have read about the latest type of electronic machine, hailing from America, which composes the music for over a thousand songs an hour. It has been called the Datatron and when I first heard this name I thought it a very poor effort as it did not distinguish this mechanical Mozart from any other type of electronic computing machine for all of them have to be fed with data before they will do their stuff.

But as I realized later, I had wrongly jumped to the conclusion that the coiner of the word datatron had taken an old and familiar friend, the Latin word "data" and had carried it to the Greek suffix "tron." In this I was no better than the Ministry of Information official who noticed an article on the homodyne in this journal during the war (March, 1942) and passed a marked copy to the Ministry of Labour and National Service in case it might help them to solve the very pressing manpower problem.

I apologize to the man responsible for this ingenious name for it is not a miserable Latin-Greek hybrid. Not only is it all-Greek and, therefore, etymologically unobjectionable but it is a very descriptive word. The "data" part of it is obviously derived from the Greek verb δεδομένοι (dataomai) which means, among other things, "to tear to shreds."

Anybody who studied the doggerel and pedestrian piece of music published in the newspapers recently as one of the Datatron's efforts will at once realize that it is indeed music reduced to rags and tatters. These banal bars are well-deserving of the title of mangled music. In the past the B.B.C. has been accused of devoting too much of its programme time to canned concerts but at least the music was worth canning. None of our budding Beethoven's need fear the competition of this robot Rachmaninoff. No doubt an ACE will soon be constructed to turn out synthetic Shakespeare by the yard.

Sinister Servicing

I FEEL very uneasy when I learn that methods smacking of Himmler and the Gestapo have been introduced into the service department of a radio dealer. I am told the dealer has installed concealed microphones and other apparatus on his premises so that, when a customer brings in a set for repair, everything he says is recorded on tape so that it can be used in evidence against him if at some future date a dispute arises as to what the customer ordered to be done to the set. Even the poor wretch's telephone conversations are recorded.

Now at first sight this seems a harmless enough practice and one which serves as a safeguard to the customer as much as to the dealer; I have little doubt that in this particular case all is fair and above board. One can foresee, however, very unpleasant developments if the police start using concealed apparatus to take down the words used by some offending motorist whom they stop. Speaking as a motorist myself, I frequently say things in the heat of the moment which, acting on advice, I omit from my evidence when I go into the witness box, and there must be many motorists like me.

The unsavoury nature of this Star Chamber method of keeping records initiated by this radio dealer is bad enough but there is a far greater danger in that it is possible for the tapes to be faked by some unscrupulous future user of the system. Is it not possible to produce synthetic records of the human voice on magnetic tape as Rudolf Pfenniger did when he painted sound tracks on films? But then there is the chance of an unscrupulous gestapo-minded radio dealer, or other person concerned, from painting what he likes on a film track and then running it through a reproducer and re-recording it on magnetic tape.

All he needs is a preliminary secret recording of the customer's voice to tell him whether his accent is Oxon or 'oxtion.'

A.C.-Phobia in Scotland

MAY I thank the many readers who wrote to tell me why, in their opinion, the filaments of valves and lamps used for a long time on d.c. soon fail when put on to a.c. mains? Naturally the tendency of a.c.-carrying filaments to saggle in synchrony with the alternating magnetic field surrounding them is one cause of early filament failure, a cause everybody recognizes. In fact, an Aberdeen resident is convinced that the earth's magnetic field is a primary cause of early filament failure, and he tells me that he hopes to save many bawbees when he has found the correct angle to tilt his lamps so that reaction between the fields of earth and filaments is at a minimum.

He also points out that in Scottish latitudes the lines of force of the earth's magnetic field are packed closer together than south of the border. In other words, the magnetic field is denser so the filaments fail earlier. The result is that a.c. is none too popular among the thrifty Scots, and I hope the Electricity Board will take cognizance of it. But magnetism alone is no explanation why d.c.-nurtured filaments soon fail on an a.c. diet. The other ingredient which spells early failure is summed up in the word crystallization. The crystalline structure due to a d.c. diet differs from that due to a.c., and the effect of the change of diet is as disastrous as if a baby were suddenly switched from mother's milk to tripe and onions.

WIRELESS WORLD, SEPTEMBER 1956
WIDE BAND SIGNAL GENERATOR
Type T.F.M.

The design of this new Wide Band Signal Generator, operating throughout on fundamentals, is the outcome of considerable research and development work to meet the stringent requirements imposed by new frequency modulation and commercial television stations.

The frequency bands have been chosen in such a manner as to ensure maximum convenience when servicing and aligning T.V. and F.M. receivers.

Provision has been made for spot R.F. frequency calibration.

Facilities are provided to ensure adequate discrimination throughout the very wide frequency band covered by the instrument.

Sine and square wave audio frequency modulation provided.

The instrument is fitted with an R.F. carrier level meter.

A double-ratio slow-motion mechanism, together with interpolation dial, enables the instrument to be set with a high degree of accuracy. On the F.M. range an internal phasing control enables the modulating signal to be applied to the X-plates of an oscillograph to produce a picture of a discriminator response curve.

This compact and versatile instrument not only meets all U.K. requirements, but will also prove useful in many other parts of the world.

AM COVERAGE
5-220 Mc/s in 8 ranges, CW or 400 c/s sine/square wave modulation. Accuracy ±1%. Provision for spot frequency calibration.

FM COVERAGE
65-120 Mc/s. Accuracy ±1%. Maximum deviation ±150 Kc/s.

OUTPUT:
Minimum (about 2μV) to 100 mV continuously variable with decade multiplier. Force output 250 mV.

OUTPUT IMPEDANCE:
80Ω, 200Ω, balanced 80Ω and 300Ω.

OPERATING VOLTAGES:
100-120, 200-260 V, 50-60 c/s A.C. mains.

DIMENSIONS:
15½ x 10½ x 10ins, approx. with lid closed.

WEIGHT:
16 lbs, approx.

LIST PRICE:
£89

is not enough!

You need to be able to live with your high fidelity equipment as well as listen to it.

This RCA New Orthophonic High Fidelity speaker system uses advanced acoustical design to give a liveable size with clean aesthetic lines which will harmonise with any furnishing scheme. The system uses a ported bass reflex type enclosure including the exclusive RCA acoustic curtain damping feature. The special arrangement of the triple speaker assembly ensures even sound distribution to all parts of your room with perfectly balanced bass and treble response. This instrument with its great sensitivity captures those elusive elements of sound which make for completely natural reproduction. The RCA Loudspeaker is the latest addition to a complete range of perfectly matched High Fidelity units designed for studio quality, radio and gramophone reproduction in the home. Send for further details.

The above photographs show alternative arrangements of the same RCA New Orthophonic Loudspeaker. The plinth shown is a separate unit. Speakers can be supplied in light oak or continental dark walnut finish and without plinth if required.

TUBES WITH

Low Voltage Focus

Easier setting-up Adjustment of electrostatic focus for absolute minimum of aberration can be made quickly and without special skill.

Simpler E.H.T. The focus voltage swing required is only $\pm 200V$ about cathode—e.h.t. units need no longer be loaded with the current wasting potential dividers associated with earlier electrostatic focus tubes.

Lower cost No focus magnet or coil is required. Ordinary carbon track potentiometer across normal low-voltage supply is all that is needed to achieve fine focus.

Space saved Focus at ordinary h.t. potential means that e.h.t. generators can be smaller, and bulky high voltage potential dividers eliminated.

INCREMENTAL INDUCTANCE BRIDGE

Designed to measure the value of iron cored chokes and similar inductors in the range 0.01H to 1000H of Q value not less than 2.

Provision is made for passing any current up to 1 Amp d.c. through the winding and selectable a.c. excitation voltages of 1, 2, 5, 10 and 20V r.m.s. are provided.

Full technical information is available on request.

HOW MUCH (or how little)
should I pay for my Tape Recorder?

That's almost as awkward a question as "Which make of car should I buy?" Of course, it all turns on the purpose to which your Tape Recorder will be put.

If you intend to be a serious user — if you want to make recordings every bit as good as those issued by the big gramophone companies — if you are blessed (or cursed!) with a keenly critical musical ear — if you want something that will last for years without costing a penny for maintenance — then you'll be wise to look upon the 76 gns. you'll pay for a Ferrograph 2A as a long-term investment.

We know that there are many Tape Recorders on the market costing less — some, indeed, much less. But Ferrograph standards of performance and dependability have only been achieved by making cost considerations a secondary matter. The really important question we continually ask ourselves is "Does the Ferrograph still set the standard by which Tape Recorders are judged?"

We believe that it does. We believe, too, that a lot of people are proud of their Ferrographs.

** 3 Independent Motors • Synchronous
** Capstan Drive • Recording level Meter
** Use 8½" dia. Reels • Unique Single-knob Control
** 2 speeds with lever change • Base and Treble cuts
** All components tropicalised • 2 side-by-side Tracks
** Plays British and U.S. Pre-recorded Tapes • 2½ watts
** Undistorted Output • Automatic motor cut-off.

The superspeed
SOLDERING IRON
heats up from cold
in 6 seconds!

Manufactured for Enthoven Solders Ltd., by Scope Laboratories, Melbourne, Australia.

Designed on an entirely new principle, this light-weight, versatile iron is eminently suitable for soldering operations in the radio, television, electronic and telecommunication industries. For test bench and maintenance work it is by far the most efficient and economical soldering iron ever designed. Ideally suitable for use with Enthoven Aluminium Cored Solder (melting point 260°C, 500°F.).

TIME/TEMPERATURE CURVE CHART from the SUPERSPEED SOLDERING IRON
TIP/TEMPERATURE TIME CHECK

The effect of different voltages on initial heating-up time is shown. Whilst 4V is the standard voltage normally employed, 6V will cause no harm, and accumulators are a useful source of current supply.

* Activated by light thumb pressure on the switch ring. When pressure is released, current is automatically switched off — thus greatly reducing electricity consumption, wear on copper bit and carbon element.
* Length, 10"; weight, 3½ ozs.; can be used on 2.5 to 6.3 volt supply (4 volt transformer normally supplied) or from a car battery.
* More powerful than conventional 150-watt irons; equally suitable for light wiring work or heavy soldering on chassis.
* Simple to operate; ideal for precision work.
* Requires minimum maintenance — at negligible cost; shows lowest operating costs over a period.

For full particulars, including guarantee terms and free trial facilities, please write to the sole concessionaires in this country:

Distortion Detected—Transmission Perfected

The introduction of electronic techniques to the measurement and correction of telegraph distortion brings laboratory precision to the maintenance of modern line and radio telegraph circuits and all equipment, including teleprinters. The equipment described and illustrated on this page is representative of the contribution made by ATE to this field.

T.D.M.S. 5A

Sends an automatic test message, or characters, or reversals at any speed between 20-80 bauds with or without distortion. The CRO has a circular time base for distortion measurements on synchronous signals only, or relay adjustment. Weight 37 lb.

T.D.M.S. 6A

For distortion measurements on working circuits without interrupting service. Each element of a start-stop signal appears separately on the spiral time base display. Adjustable speeds from 20-80 bauds. Weight 33 lb. Higher speed versions can be supplied to order.

REGENERATIVE REPEATER TRR.1

is a start-stop, five unit code equipment, designed to correct distortion on long line or radio telegraph circuits. It covers the speed range 45, 50 or 75 bauds, and accepts signals with up to 49% distortion.

AUTOMATIC TELEPHONE & ELECTRIC CO. LTD.

RADIO AND TRANSMISSION DIVISION,
STROWGER HOUSE, ARUNDEL STREET, LONDON, W.C.2.
TELEPHONE : TEMPLE BAR 9262. CABLEGRAMS : STROWGEREX LONDON.
Special applications: Monitoring, Field Tests, Laboratory purposes –

The EDDYSTONE 770 V·H·F & U·H·F Communications Receivers

Superbly engineered and of advanced design, the two models offered possess excellent electrical characteristics and are robustly constructed for service in any climate. The “770 R” has continuous AM/FM coverage from 19 Mc/s to 165 Mc/s; the “770 U” from 150 Mc/s to 500 Mc/s. Both incorporate six-position turret tuning assemblies of unique design and giving high reliability. Fully illustrated literature with performance curves on request.

Manufactured by STRATTON & CO. LTD. BIRMINGHAM 31
THE NEW COLLARO TAPE TRANSCRIPTOR

This new High-Fidelity Tape Deck has been designed on Transcription quality principles for live recording, recording from F.M. Broadcasts, etc., and reproducing pre-recorded tapes. A twin-track model fitted with four heads, it runs at speeds of 3\(\frac{3}{4}\), 7\(\frac{1}{2}\) and 15 inches per second. It has low wattage input motors, and the tape tensioning is automatic. The operation and the braking are mechanical and performed without the aid of rubber belts or solenoids. The 3-speed mechanism effects the final drive through the periphery of a heavyweight flywheel and is instantaneously reversible. The drive pulleys retract automatically when the machine is switched off.

THE 456 HIGH-FIDELITY RECORD CHANGER — 4 SPEED

The latest and most reliable of a famous range of Automatic Record Changers, the 456 is a 4-speed instrument for 16 2/3, 33 1/3, 45 and 78 r.p.m. operation. It will play 7in., 10in. and 12in. records intermixed in any order—provided that all are of the same speed range—and is suitable for A.C. voltages of 100/125 and 200/250.

4-SPEED GRAMOPHONE TRANSCRIPTION UNIT

(Model 4T200) for truly faithful reproduction. Entirely new type 4-speed mechanism ensures absolutely uniform speed, with reproduction free from frequency modulation. A very heavy turntable is fitted with a ground and lapped spindle running on to a ball which takes the total thrust of the turntable, and results in correct speed with no detectable "wow" or "rumble."

2 'musts' for the home constructor

Two highly informative publications

THE G.E.C. "nine-one-two PLUS"
This publication contains step-by-step wiring instructions for this high quality Amplifier together with many additional features of exceptional interest to the Home Constructor.

PRICE 4/- from your dealer or by post—5d. extra—from the G.E.C. Valve and Electronics Dept.

THE "FM PLUS" TUNER
The "FM PLUS" Tuner is ideal for use with the 'nine-one-two PLUS' Amplifier and the publication gives constructional details and suggested circuits for interstation noise suppression and a "magic eye" tuning indicator.

PRICE 2/6 from your dealer or by post—5d. extra—from the G.E.C. Valve and Electronics Dept.

Both these publications are obtainable from the G.E.C. Stand at the Radio Show.

320 MODELS FOR 1955-56
In ONE Handy Volume

NEWNES
Radio and Television Servicing

Data in Constant Demand—A CERTAIN PROFIT MAKER in these days of CREDIT SQUEEZE!

HERE is the latest volume in Newnes RADIO AND TELEVISION SERVICING Library. It adds a total of 320 popular new models to your servicing range for immediate consultation and use. Service-men who are profiting from these yearly volumes of new models know their value in £ s. d. and snap them up as soon as they are published!

If you have not yet started building a Newnes library of Radio and Television data, this is your opportunity, and Free Examination will show you what you have been missing! One single servicing job can double and treble the low cost of the book, so claim a copy for Free Examination. Cut out this page (you will not spoil your "Wireless World"), fold as shown on back and post to-day—no stamp or envelope required.

FREE FOR 7 DAYS
JUDGE FOR YOURSELF — NO COST OR OBLIGATION

FULL LIST OF MAKES AND CONTENTS ON BACK

Please send me the 1955-1956 volume of Newnes RADIO AND TELEVISION SERVICING without obligation to purchase. I will either return the work within eight days or I will send the first payment of 10s. eight days after delivery, and 10s. monthly thereafter, until the sum of 50s. has been paid. Cash price within eight days is 45s.

The new TREBAX and MIDAX pressure driven reproducers are focal points of interest at the Radio Show. Designed to give smooth frequency response with extremely low distortion over the middle and top registers of the audio spectrum, these new pressure driven units are additional to the famous AXIOM and AUDIOM ranges of loudspeakers.

TREBAX and MIDAX can be used with either AUDIOM 60 (12 in. 15 watts), AUDIOM 70 (12 in. 20 watts) or AUDIOM 80 (15 in. 25 watts) bass loudspeakers. For full realization of the bass performance of AUDIOM loudspeakers, the complete three-way system should be housed in an AXIOM Enclosure incorporating the Acoustical Resistance Unit.

Trebax
A new high efficiency pressure driven reproducer. Frequency coverage 2,500 c.p.s. to 16 kHz.

Midax
A horn loaded pressure driven unit. Frequency coverage 400 c.p.s. to 8 kHz.

See these new products at the Show

WW956
New 3-speaker system  
by Wharfedale

AT £37-10-0 COMPLETE

HERE, at last, is a wide range, high quality speaker which can easily be accommodated in the average room, can be placed in the best position for listening, and be moved against a wall when not in use, with choice of Walnut, Oak, Mahogany and Maple Veneers.

SPECIFICATION
Size 34" x 31" x 12"
Weight 60 lbs.
Bass Resonance 30/35 c/s.
Impedance 8/15 ohms.
Max. input 10 watts.

UNITs:
The 12in. and 10in. units are in parallel.
This arrangement gives very smooth results over the full range with a 3 dB gain at low frequencies.
The Super 3 is again in parallel via 4 Mfd. capacitor and is mounted on a small baffle facing upwards.

The efficiency of the system is high and will give full domestic volume from any good 5-watt amplifier. The baffle is sandfilled; there is no cabinet resonance because there is no cabinet.
The 12in. and 10in. units are specially built and MATCHED FOR OPTIMUM RESULTS from this system. Baffles cannot be supplied separately.

Tropical model made with bonded plywood can be supplied at £2.0.0 extra.

Model SFB/3

With the following attributes:

★ Attractive appearance
★ Free-standing and easily moved
★ Resonance-free: Sandfilled Baffle
★ Omni-directional
★ Frequency range: 30 c/s to 20,000 c/s.
★ Moderate price

IMPEdANCE CURVE
Note the unusually level impedance which typifies the wide frequency response.

WIRELESS WORKS LTD.

IDLE - BRADFORD - YORKS

Telephone: Idle 1235-6
INSTRUMENTS

X-BAND OSCILLATOR
TYPE S.381
A variable frequency oscillator for the range 3.0 to 3.55 cms. using a CV.2346 Klystron in a co-axial cavity. The output remains constant within ± 2 db over the whole frequency range and the power will be between 15 and 35 mW according to the valve employed. Frequency stability 2 in 10⁶ and calibration 3 in 10⁴.

Price £125 net ex works.

R.F. BRIDGE — TYPE B.601
15 Kc/s TO 5 Mc/s
A highly accurate transformer ratio arm bridge for the measurement of capacitance, resistance and inductance within the range 0.01 pF to 0.02 µF, 10 Ω to 10 M Ω and 0.5 µH to 50 mH. It can be used to measure complex impedances, balanced or unbalanced, or between any pair of terminals in delta formation.

Price £150 net ex works (valve extra).

D.C. DECADE POTENTIOMETER — TYPE K.112
Five decades of Minalpha wire resistors arranged in potentiometer form to give ratios between 0 and 1 in steps of .00001. For ratios between 0.1 and 1, the accuracy is better than .01%. Total resistance 100,000 ohms—applied input voltage 300V maximum. The assembly is specially aged for long-term stability.

Price £225 net ex works.

FOR FURTHER DETAILS WRITE OR TELEPHONE
THE WAYNE KERR LABORATORIES LIMITED · NEW MALDEN · SURREY · MALDEN 2202
Model 1058
Single Beam
Oscillograph

Designed for laboratory use, this new oscillograph provides a Y amplifier with a very useful frequency characteristic extending from d.c. to 6 Mc/s. The display is presented on a new post deflection accelerator tube at an amplitude of not less than 6 cm over the stated frequency band. The maximum sensitivity of the channel is 0.25 V/cm and calibration is effected by means of the accurate test voltage provided. The time base of the instrument can be switched to fire repetitively from a trigger pulse of either sign derived from the Y amplifier signal or externally. A special refinement, of interest to the Television Engineer, is the provision for triggering from the Frame or Line sync. pulse in a 1 volt D.A.P. (positive) composite video signal. Five calibrated time base ranges are provided giving spot velocities from 30 cm/sec to 1.5 cm/microsec. An X amplifier with a maximum sensitivity of 0.5 V/cm and bandwidth 20 c/s—250 kc/s (—50%) is included and allows time base expansion, continuously variable, of up to five times. Time measurement is by calibrated shift control. The instrument operates from 100—130 or 200—250 volt mains supplies.

PERFECTED BY

PRINTED CIRCUITS

Now available to manufacturers of Radio, Electronic Instruments and other electrical equipment.

Since 1947 Cossor engineers have been studying the problems associated with Printed Circuits and Wiring. The present standard of perfection achieved and the experience gained over these years are now offered to the Electrical and Radio Manufacturing Industry which is ready to take advantage of this revolutionary technique.

Economy in materials, production time, weight and space, together with consistency of production, are the major attractions.

Above all, a reliability factor hitherto unobtainable is now within the reach of all manufacturers engaged on circuit and wiring problems.

Cossor engineers will be pleased to advise on designs for printed components and circuit assemblies, and complete layout designs.

Cossor printed circuit and wiring panels are subject to the most rigorous humidity and electrical tests prior to final approval by our Design and Development Section.

Please send your enquiry to the Technical Sales Department, A. C. Cossor Limited, Cossor House, Highbury Grove, London, N.5.
By Appointment to the Professional Engineer

'MULTICON' PLUGS AND SOCKETS

PAINTON
Northampton England
'MULTICON' PLUGS AND SOCKETS

The full range consists of 2, 4, 6, 8, 10, 12, 18, 24 and 33-pole sizes, and there is a complete variety of Plugs and Sockets with alternative mounting arrangements, cable-fixings, retaining devices and cover earthing facilities.

**DESIGN FEATURES**

1. The terminal numbering is moulded into both the plug and socket bodies, and appears not only in proximity to the appropriate soldering-tag, but also on the mating face. This not only facilitates wiring, but enables complete cable forms to be tested prior to inclusion in equipments without removing the plug socket or covers.

2. Four small distance pips are moulded on to the plug body and they keep the mating faces slightly apart even when the plugs and sockets are fully engaged. This eliminates the possibility of free moisture remaining between the plug and socket face, and is instrumental in the superior tropical performance of "Multicon" plugs and sockets.

3. The single-piece body mouldings are nylon-filled to provide a high insulation and tracking resistance.

4. All socket clips and plug blades are located in recessed cavities in the mouldings. This also provides a high tracking resistance between contacts, and, in the socket version, the enclosed contacts enable the maximum voltage to be safely utilised (provided the direction of voltage supply feed is from socket to plug).

5. Each socket clip has split limbs, so that there are four individual areas in contact with each plug blade. This ensures absolute reliability of contact, with a minimum life of 10,000 operations at low and constant contact resistance.

6. Panel or chassis mounting flanges are available with side or end fixing holes. Cut-out information given relates to Panel thicknesses up to 0.5". This enables rows of plugs or sockets to be mounted either end-to-end or side-by-side with a maximum saving in panel or chassis space.

7. In the 24 and 33-pole sizes the plugs are normally supplied with a large pin locator, which is also an electrical contact. This is provided to facilitate the engagement of these larger sizes, especially in unit applications.

8. Covers are provided with either a top cable-entry hole and clamp or a side cable-entry hole and clamp, to suit the needs of particular equipments and designs.

9. Two alternative facilities can be provided for earthing the plug or socket covers.

A. In one version an earthing tag attached to the moulding connects the inside of the cover to the highest numbered contact so that an earth lead in the cable form, connected to the highest numbered contact, automatically earths the cover.

B. In the alternative form, an earth tag is rivetted directly to the outside of the cover and is suitable for the direct connection of an earth lead.

10. All sizes of plug or socket covers can be fitted with retaining blades to secure the unit to the panel or chassis. Even under the most severe vibration conditions, therefore, or in the case of accidental interference with the cable form, there is absolute reliability of contact.

PAINTON
Northampton England
As leading exporters of Radio Tubes, we have pleasure in giving hereunder our up-to-date stock list which comprises approximately 1,900 types in large quantities.
Contracts to British Commonwealth and foreign Governments, for Army, Navy and Air Forces, Post Offices, Civil Air Lines, etc.
Tubes can be supplied Commercial, C.V., or JAN specifications.
Our organisation is A.R.B. approved.
Solenoids!

For several years we have been studying user requirement of Solenoids and are now tooling on a CAREFULLY DESIGNED RANGE.
First types are available and we can supply a wide range of samples.
Your immediate enquiries will assist us to meet your precise needs.
If your requirements are unusual, we are interested in discussing tool costs.

Magnetic Devices Ltd., Exning Road, Newmarket, Suffolk.
The Marconi TF 801B/1 Signal Generator

Marconi's new "/1" version of the TF 801B is now in production. It is a premium-grade instrument meeting all signal generator requirements for the design, manufacture and maintenance of a.m. equipment in the range 12 to 470 Mc/s.

Painstaking attention to detail in the design of the master oscillator and power amplifier circuits has yielded an instrument with an r.f. output of unusually high quality: f.m. on a.m. is less than 2 kc/s at all carrier frequencies up to 425 Mc/s; harmonic content is less than 2%; the calibration of the frequency dial is accurate to within 0.5%; drift is less than 0.02% over a 10-minute interval.

ABRIDGED SPECIFICATION

Frequency Range: 12 to 470 Mc/s in five bands.
Output: 0.1 μV to 1 volt modulated; 0.1 μV to 2 volts unmodulated.
Source Impedance: 50 ohms.
Internal Modulation: 1000 c/s sine a.m. monitored and variable to depths up to 90%.
External Modulation: Sine up to 20 kc/s or pulse at p.r.f.’s. up to 50 kc/s.
H.F. power transformers of outstanding efficiency are the latest additions to the Mullard range of high quality components designed around Ferroxcube magnetic cores.

Utilising the unique characteristics of Ferroxcube to the full, Mullard H.F. transformers are smaller, lighter, and less costly than transformers using alternative core materials. These advantages are particularly marked in transformers required to handle powers of up to 2kW, between the frequency range 2kc/s to 2Mc/s. Mullard transformers are already finding wide use in applications as diverse as ultrasonic H.F. power generators and aircraft power packs operating from an aircraft's normal A.C. supply. In the latter application, the low leakage field of Ferroxcube can eliminate the need for external screening, thereby reducing the size and weight of the transformer even further.

As with all Mullard high quality components, these H.F. power transformers are designed and built to engineers' individual specifications. Write now for details of the complete range of components available under this service.
THE NEW Airmec Signal Generator Type 852 produces a sinusoidal signal continuously variable from 500 microvolts to 50 volts peak with small distortion over the frequency range 0.03 c/s to 30 c/s.

A variable speed motor used in conjunction with a three-speed gear box drives a specially designed modulating capacitor which modulates a high frequency signal. The modulated signal is rectified and amplified in a direct coupled amplifier employing negative feedback. The output frequency is adjusted by varying the speed of the D.C. motor and is indicated on the dial of a 6in. meter.

Since the frequency of the output signal does not depend upon the use of very high value resistors or capacitors, a good long term stability is obtained.

**QUICK DELIVERY**

**PRICE £100**

*Full details of this or any other Airmec instrument will be forwarded gladly on request.*
For greater convenience and vastly improved performance, get 'SCOTCH BOY' Extra Play magnetic recording tape, No. 150. The new polyester base film is one-third thinner — and still it is stronger! — than other bases. That is why a reel carries half as much tape again, and gives you 50% EXTRA PLAYING TIME . . . 1800 feet of tape instead of the usual 1200 on a 7" reel!

The specially developed oxide coating of 'SCOTCH BOY' 150 tape is also thinner than usual. This new, potent coating gives exceptionally crisp and clear reproduction. Response to the higher frequencies is particularly improved.

'SCOTCH BOY' Extra Play 150 tape is limp, flexible, strong, and easy to handle. It hugs the contours of recording heads, winds trimly, and tracks smoothly. It has an indefinite life in storage and is the ideal tape if you are an archivist.

'SCOTCH BOY' 111, acetate-base tape, world-famous for faithfulness and clarity, is still available, of course, in lengths up to 1200 feet.

GO FOR THE TAPE THAT GIVES YOU BETTER PERFORMANCE AND 50% EXTRA PLAYING TIME

New channelling and specification standards for mobile radio are being introduced in the United Kingdom and many parts of the world. The "Ranger", Pye's latest V.H.F. mobile, has been designed to anticipate these and will, in fact, meet specifications for the next ten years. The Pye "Ranger" therefore combines superlative performance with the maximum technical life. No matter what your channelling requirements the Pye "Ranger" will meet them.

3 amplitude modulated versions are available
W = 100 Kc/s. channelling for aeronautical and multicarrier schemes.
N = 60 Kc/s., 50 Kc/s. or 40 Kc/s. channelling.
VN= 30 Kc/s., 25 Kc/s. or 20 Kc/s. channelling.

The Ranger has been designed to meet the following leading specifications.

Delaron
(by De La Rue)
does a double act for you

You already know DELARON as a laminated insulant of precisely known dielectric values and mechanical properties which fully meet all British Standard and Ministry specifications at every grade. It is used as a controller of electricity, from loudspeaker spiders to insulating washers.

But do you know about the second half of the double act by DELARON laminates?

In its copper-clad form it is the basis of most of the printed circuits in radio, television, radar and electronic computers—the new, simpler and cheaper method of circuit manufacture.

You should use DELARON laminates.
For information, advice and service get in touch with Dept. D8B Thomas De La Rue & Co Ltd 84-86 Regent Street, London, W1.
"ALL-PURPOSE"

Oscilloscope...Type 545

The Tektronix Type 545 is a "fast-rise" oscilloscope with high-performance characteristics. It can write the answers to the most difficult problems in high-speed pulse analysis on its screen. You have only to read them off... with full assurance of their accuracy.

But the Type 545 is not a specialized instrument, useful only in fast-rise applications. It is easily adapted to a multitude of other applications by inexpensive plug-in preamplifiers. Along with its unique sweep-delay facility, this plug-in feature helps make the Type 545 the most versatile oscilloscope you ever hoped for. Is the Type 545 the answer to your instrumentation problem?

MAJOR SPECIFICATIONS

Sweep Range
0.02 µsec/cm to 12 sec/cm.
24 calibrated steps from 0.1 µsec/cm to 5 sec/cm.
24 additional calibrated steps with accurate 5x magnifier.
Calibration accuracy within 3%.

Sweep Delay
Conventional, or triggered jitter-free delay
1 µsec to 0.1 sec in 12 calibrated ranges.
Range accuracy within 1%, incremental accuracy within 0.2% of full scale.

Versatile Triggering
10-KV Accelerating Potential
Square-Wave Amplitude Calibrator
Balanced 0.2 µsec Delay Network
DC-Coupled Unblanking
Electronic Voltage Regulation

AMPLIFIER AND CONTROL UNIT £37.10s. COMPLETE

THERMIONIC PRODUCTS LTD · HYTHE · SOUTHAMPTON Tel.: Hythe 3265/9

also at Morris House, Jermyn Street, Whitehall, S.W.1. Tel.: Whitehall 6422.
100 different versions

of flat-type rectifiers for voltages from 15 v to 600 v and current ratings ranging between 35 ma and 1,200 ma are included in our manufacturing programme.

An impressive figure testifies to their quality: 10,000,000 have been sold since 1950
These Mullard Loading Coils represent the latest technique in splice loading of voice frequency cables, whereby the exact number of coils may be installed to meet current requirements. The coils are cast in 'Araldite' epoxy resin which gives complete protection against climatic conditions and permits the use of shapes which will occupy the minimum of space in the joint. As no filling with compound is necessary, the use of coils cast in 'Araldite' allows free passage of gas in gas-pressurised cables.

'Araldite', as a potting or casting resin possesses qualities which make it ideal for use with electrical components. Its powers of adhesion to metals and solid insulating materials are unparalleled. It is an excellent insulator, tough, flexible, highly resistant to 'tracking' and has a low power factor. It does not cause corrosion, provides complete protection against tropical conditions and complies with service requirements relating to sealing of components.

'Araldite' epoxy resins have a remarkable range of characteristics and uses. They are used

* for bonding metals, porcelain, glass, etc.
* for casting high grade solid insulation.
* for impregnating, potting or sealing electrical windings and components.
* for producing glass fibre laminates.
* for producing patterns, models, jigs and tools.
* as fillers for sheet metal work.
* as protective coatings for metal, wood and ceramic surfaces.

'Araldite' epoxy resins

'Araldite' is a registered trade name.

T.V. Waveform & Alignment Generator

MODEL 94A

for all T.V. systems

(1) T.V. Pattern Generator.
(2) A.M. Signal Generator with variable audio output.
(3) F.M. Signal Generator.
(4) T.V. Sweep Oscillator.

4 BASIC INSTRUMENTS INCORPORATED IN ONE

T.V. PATTERN GENERATOR

Modulation. All patterns FULLY INTERLACED with accompanying line and frame blanking synchronizing (and equalizing on 625, 525 lines) signals. Three gradation patterns providing relatively high, medium and low frequency transients. Cross grid pattern for linearity checking. Cross bar pattern on which 1.5, 2, 2.5, 3, 3.6, 4, 4.5 Mc/s definition bars can be displayed. Horizontal bars. Vertical bars with switched Mc. bars. White raster. Black raster.

Output—R.F. Three position attenuator, 0, -20 and -40 db relative to 100 mV.
Output—Video. From cathode follower 2Kohms direct. Positive or negative 3V peak to peak.
Output—Synchronizing. Additional sync. output from 2Kohms through 8uF 10V peak to peak positive going waveform comprising line and frame synchronizing pulses, interfacing signals (and equalizing pulses on 625 and 525 lines).
Audio. From cathode follower 2Kohms direct. Variable A.F. voltage at 900 c/s approx. 3V peak-to-peak maximum. Optional mains lock facility.

Main features of A.M. Signal Generator F.M. Signal Generator & T.V. Sweep Oscillator:

Power supply: 105/125 V. or 200/250 V. A.C., at 40/100 c/s. Consumption 70 watts.

Weight: 20lb. Dimensions: 17in. x 9in. x 8in. (43 x 23 x 20 cm.).

LIST PRICE £75.00.

INSTRUMENTS LTD.
NEW

PORTABLE
TELEVISION
OSCILLOSCOPE

6 Mc/s BANDWIDTH
Sensitivity 100 mV/cm.

Entirely new time base circuit.
Extends to .5 us/cm

Fully enclosed. Stowage for
leads in removable door.

Built-in Stand.

Weighs only 19 lbs.

Here at last is the 'scope specially designed for
the TV engineer. Small and light enough to
carry around, its performance is far ahead of any
other oscilloscope in its price class. It Incorporates
an entirely new Miller-Multivibrator time base
circuit with trace expansion continually variable
to more than 20 cm. A 1 microsecond pulse can
easily be opened out to 2 cm. The special sync.
selector circuit facilitates solid synchronisation
from small signals and provision is made to
synchronise from the frame pulses in a complete
TV Waveform. The signal amplifier has a Constant
Bandwidth up to 6 Mc/s (3db) and a useful response
to 10 Mc/s. Calibration allows accurate measure-
ment of the applied signal. The Sensitivity is 100
mV per centimetre and a frequency compensated
attenuator is incorporated. The horizontal
amplifier terminals are brought out for use
with a wobulator.

CHECK THESE FEATURES
against instruments costing more than twice the
price.

EARLS COURT STAND No. 205
THE GARRARD MODEL 301 TRANSCRIPTION MOTOR

The Garrard Model 301 Transcription Motor is recognised as supreme in its class. With its introduction a hitherto unattainable standard in the manufacture of High Fidelity Gramophone Components has been reached. Features that the enthusiast will appreciate are the suppression of switch clicks, the extra heavy balanced turntable and the very fine degrees of speed control available... multi-speeds can be adjusted by approximately 24%.

Wow and Flutter have been reduced to the minimum, being less than 0.2% and less than 0.05% respectively. The unit is equipped for dual voltage ranges of 100 to 130 and 200 to 250 volts, 50 or 60 cycles according to the motor pulley fitted.

The Model 301 is finished in high quality grey tone enamel, is fully tropicalised and is supplied complete with a plastic stroboscope, a tube of special grease, all fixing screws, washers, template and instruction manual.

..... see your Dealer now.

THE GARRARD ENGINEERING AND MANUFACTURING CO., LTD.
Swindon, Wilts, England
The FIRST and ONLY Aerials with ELECTRONIC COUPLING

The HIL-O incorporates a completely new principle whereby the Band I Dipol Driven Element is "Electronically coupled" to a Band III Resonator (Prov. Pat. No. 21958/55). This eliminates the use of coupling bars, thus avoiding any impedance mismatch and at the same time has the advantage of utilizing the Band I Elements on both Bands I and III. For example the HIL-O Model HL402/4K (Band I Dipole and Director electronically coupled to 4 Band III elements) has an equivalent Band III performance to a 6-element Aerial. This same principle is a feature of the complete HIL-O range.

OFFERING ALL THESE ADVANTAGES

- 1 AERIAL ONLY FOR BOTH BANDS.
- 1 JUNCTION UNIT ONLY.
- 1 DOWN LEAD ONLY.
- NO FILTER UNIT REQUIRED.
- ACCURATE MATCHING.
- ALL CHANNEL COMBINATIONS.
- HIGHLY COMPETITIVE PRICE.

STOCK UP NOW!

ANTI-FERENCE LIMITED · AYLESBURY · BUCKS

MODEL
HL402/4K

Band I "H" (Dipole and Director) Electronically coupled to 4 Band III elements for CHIMNEY MOUNTING.

17 HIL-O Models are available in all popular types of mounting, suitable for most areas, in any Band I/Band III channel combinations.

All Antiference Aerials incorporate features which are fully protected by Patents or are the subject of Patents applied for.

LIST PRICE 102/6

The Antiference range of aerials includes models for Bands I, II and III reception with provision for indoor and outdoor mounting.

INTERNATIONAL ENDORSEMENT

for the largest range ever offered!

HIGH FIDELITY EQUIPMENT by Stentorian

-On our Stand at the Radio Show we are displaying testimony we have received from Canada, the U.S.A., South Africa, Australia and New Zealand, speaking with one voice in praise of our High Fidelity Equipment. This testimony—reinforcing that already received from leading experts in this country—proves that we have achieved our aim of High Fidelity at realistic cost. New items—shown for the first time at Earls Court—make this the largest range of such equipment ever offered, manufactured in a self-contained factory entirely devoted to High Fidelity research and production.

SEE THEM AT THE SHOW

STAND 47 & D19 AND D21

WHITELEY ELECTRICAL RADIO CO. LTD., MANSFIELD, NOTTS.
**CABINET CAT. NO. CAB/01**
A very high quality Cabinet in a modern design. Exterior veneered in a highly figured Walnut. Solid block-board lift-up top with all interiors veneered in Sycamore. Full silk front. 27in. x 16in. x 32in high.
CASH ONLY £8
Packing and carriage 15/-.

**CABINET CAT. NO. CAB/02**
A well-designed Bureau-type Cabinet in a medium size. Veneered in a highly figured Walnut. Outside dimensions, length 291in., depth 16in., height 32in. Sloping control panel on right-hand side approx. 13in. x 10in. Removable baseboard on right-hand side approx. 13in x 13in. Large record compartment inside the cabinet, located at the top on left-hand side.
CASH ONLY 12 Gns.
Packing and carriage 20/-.

**CABINET CAT. NO. CAB/03**
A magnificent Bureau-type Cabinet of the very highest quality in specially selected Walnut veneered exterior. Light Sycamore interior with Rexine lining to match. Outside dimensions, length 34in., depth 151in., height 33in. Sloping control panel on right-hand side approx. 16in. x 10in. Removable baseboard on right side approx. 15in. x 15in. Two full-sized felt lined compartments in the lower half.
CASH £16 2½ Gns.
Or on Credit Terms.  
Packing and carriage 25/-.

**F.M./VHF TUNERS**
Self powered. Six valves with grounded grid RF stage followed by additive mixture using a FCC85 twin triode in sealed permeability tuned unit. Two I.F. stages ensure maximum gain with 6ALS double diode as ratio detector. Frequency coverage of 85-101 megacycles allows adequate overlap. Very finest quality throughout.

**RADIO & RADIOGRAM CHASSIS**
Superhet. Chassis of Latest Design and Technique. General Specifications applicable to all models
A.C. 200/250 volts 50 cycles only. Suitable for multi-coloured glass dial of the horizontal type. Slow motion tuning drive. Full provision of Automatic Volume Control. Negative feed-back from output transformer secondary. Sockets provided for Aerial, Earth, Gram, Pick-up and Extension Speaker. Connections provided to Gram. Motor controlled by Chassis On/Off switch. All inductances have an exceptionally high Q value. The Audio Section is designed for first rate fidelity Crystal control.

**CAT. NO. FMT/A**
Complete Unit in Cabinet with Magic-eye tuning. Both 161in. long x 5in. high (approx.).

CAT. NO. FMT/B
Chassis only excluding magic-eye. Unboxed, 11in. long x 5in. overall depth x 4in. high.
CASH £13.15.0
Packing and carriage 12/6.

**DISC PLAYER**
Specially designed for the amateur builder. These Disc Players consist of the latest four-speed Automatic Record Changers, complete with crystal turnover pick-up head for long-playing and standard records, mounted on sycamore-lined base. Supplied complete with fitted mains lead and screened pick-up lead, ready for connecting up.

**AUTOMATIC RECORD CHANGERS**
All automatic Record Changers are of the latest type and unused.
CAT. NO. RC/A: This is the latest multi-speed Automatic Record Changer, complete with crystal turnover pick-up head for long-playing and standard records, fitted with high fidelity Crystal Turnover Pick-up Head. A.C. mains 200/250 volts, 50 cycles only. CASH £9.15.0
Packing and carriage 12/6.
CASH £13
Packing and carriage 12/6.

**Loudspeakers, Gram Amplifiers, Tape Recorder equipment, etc., available at keenest prices. Send for large illustrated catalogue**

Designed for the
QUAD II

by J. Christopher Heal F.S.I.A.

This cabinet is designed to house the QUAD II Amplifier, Control Unit, FM Tuner and suitable record player—each unit being skilfully placed to give full and effective control even from the comfortable depths of your armchair.

- Control Unit & FM Tuner tilted to give greater visibility and easier control.
- The Amplifier is fixed in a well-ventilated lower compartment.
- The lid covering the control panels opens to provide space for sorting records.

The price of the cabinet only, in Mahogany and Rosewood, is £30
—obtainable direct from
HEAL’S, 196 Tottenham Court Road, London, W.1
or through your local Hi-Fi suppliers

HUNTINGDON, HUNTS  Telephone: HUNTINGDON 361
Designed to protect electronic instruments and other sensitive equipment from VIBRATION and SHOCK

"BARRYMOUNT" Air-damped Isolators have been specially developed to provide assured protection for sensitive equipment against vibration and shock. An outstanding feature is their remarkably uniform performance over the full rated load-range.

Over 1,000,000 go into use every year for the protection of every type of air-borne equipment, from the lightest and most delicate instruments and electronic devices to apparatus up to 140 lbs. weight.

- Superior vibration isolation.
- Improved shock absorption.
- Low permanent set and drift.
- Operation over wide temperature range.
- Minimum side sway.
- Wide load range with uniform performance.

Type GB 896
(A.R.B. Ref. No. E3518)
For loads from 2 to 35 lbs.

Band-Leading Types

Just as the chosen few are recognised for their talent and versatility, so on all three bands we are nationally renowned for aerial installations: guaranteed and insured. The wise dealer places the responsibility with us, saves himself trouble and gains a good profit.

And remember that we operate a country-wide television repair service, including visits to customers' homes if required, all at generous trade terms.

There are Belcher branches throughout England. Phone us or send a postcard. Our Branch Manager will gladly discuss our service in detail.

Looking for a Radiogram

—that’s better-than-ordinary

In these days of automation, we, at Armstrong, adhere even more closely to our principle of individual craftsmanship—for has it not made our name synonymous with all that is excellent in high-quality reproduction. Our first thought is always to evolve the best design and select the finest components, to give the Armstrong standard of performance. With some trepidation we then add up the cost...but, to our relief, find that we can still offer a quality article at little—if any—above the ordinary commercial price.

Armstrong

SPECIALISTS FOR OVER 20 YEARS IN HIGH QUALITY REPRODUCTION

made by Ronette

RONETTE Microphones, world-famous for quality, uniformity and finish, are manufactured in a variety of models.

Experience, precision and skilled workmanship stand behind each RONETTE Microphone.

Address
**8 WAY STANDARD CONNECTORS**

- In 8, 12, 18 and 25 way
- Low priced Unitor
- Natural colour Nylon-PF moulding
- Silver plated contacts
- Breakdown voltage 3.5 KV

**9 WAY MICRONECTOR**

- In 9, 18, 26 and 34 way
- Precision miniature connector
- Brown Nylon-PF moulding
- Gold plated contacts
- Breakdown voltage 2.4 KV

**McMURDO connectors**

Covers can be supplied for either plugs or sockets or both in all these types.

**8 WAY STRIP CONNECTORS**

- In 2, 4, 6, 8 and 10 way
- Inexpensive flat connector for Printed Circuits
- Woodflour-filled PF moulding
- Cadmium plated contacts
- Breakdown voltage 3.5 KV

**RED-RANGE CONNECTORS**

- In 8, 16, 24 and 32 way
- Medium priced
- Low Insertion force — self-aligning
- Red Nylon-PF moulding
- Gold plated contacts
- Breakdown voltage 3.0 KV

THE McMURDO INSTRUMENT CO. LTD. ASHTEAD, SURREY. Telephone ASHTEAD 3401
YOU'RE ON THE RIGHT TRACK with EGEN components

In design, dependability, accuracy and freedom from wear these Egen components are quite outstanding. They are backed by unrivalled experience of the requirements of television and electronic equipment manufacturers.

DUAL POTENTIOMETERS
with concentric operating spindles. Incorporating many outstanding design features, including multiple contact rotors and thorough screening between sections. Control spindles can be supplied to suit customers’ requirements. Type 136 less switch. Type 137 with SPST switch. Type 138 with DPST switch.

PRE-SET POTENTIOMETERS
Completely enclosed in high-grade phenolic mouldings. Solder tags heavily silver-plated for quick soldering. Fully insulated spindles with integral control knobs. Tapped for 2-hole 6 B.A. fixing on 4" centres. Type 126, wire-wound. Type 127, carbon.

MINIATURE POTENTIOMETERS
0.3" diameter: utmost reliability within a very small compass. Positively located soldering tags, silver-plated for easy soldering. All steel parts rustproof. Standard values available, from 5000 ohms to 2 megohms. Type 115 less switch, Type 105 with specially designed 2-pole Q.M.B. switch.

CONCENTRIC SWITCH POTENTIOMETERS
Thorough screening between switch and potentiometer. Concentric operating spindles give independent operation of switch or potentiometer with ‘one-control’ simplicity. Quick make-and-break action mains switch. Knob location to suit specified requirements. Type 154 with SPST switch, Type 155 with DPST switch.

The wide range of EGEN controls includes also: Standard Carbon Potentiometers Type 102, Pre-set Resistors, Inductance Coil Assemblies, Sub-Miniature Potentiometers, (for use in miniature electronic apparatus) and TV Aerial Plug and Socket.

**FLEXIBLE SHAFTING**

*We can* operate any element requiring rotation or push-pull movement, or both, no matter if the controlled element is close to or at a distance from the control point.

*We can* operate from an accessible point, switches, valves and other electrical and mechanical devices located in inaccessible places.

*We can*, in fact, solve your problems.

Flexible Shaft Handbook available to technicians on request.

---

**THE ADAPHONE**

enables the deaf to hear TV and Radio programmes in comfort and safety and with a clarity unobtainable when using a hearing aid for this purpose. It is also ideal for those with normal hearing who wish to hear the programmes without disturbing others.

The Adaphone has an attractive grey plastic case (3in. x 2in. x 1 1/2in.). Weighted straps hold it in position on any chair arm. The input is matched for 2 to 10 ohms connection and the transformer tested to withstand 2,000 volts D.C.

The listener can adjust the volume to his individual need without affecting the loudspeaker volume.

Tone control is obtained by alternative output sockets; 'Normal' and 'High.'

The M3 model has Automatic Volume Compression.

A low-impedance insert-type magnetic miniature receiver of D.C. resistance 30-40 ohms is supplied, but a bone-conduction receiver is available instead, at extra cost, for those who prefer it.

**MODEL M4.** Complete with miniature ear piece, standard earmould, and leads £4 19 0

**MODEL M3.** Incorporating Automatic Volume Compression, complete as above £5 15 0

**MODEL MS.** Incorporating Loudspeaker Switch for "silent" listening £5 15 0

Obtainable through all leading Radio Dealers or direct from Multitone Electric Company Limited.

Enquiries should be addressed to

**MULTITONE ELECTRIC CO. LTD.**

PIONEERS IN SOUND AMPLIFICATION
Introducing the

**Viscount**

Goodmans' new "Viscount" Loudspeaker enclosure looks well in any setting. Handsomely styled in light mahogany with a contrasting front panel of woven plastic material, this attractive cabinet is built to the AXIOM ENCLOSURE Specification and incorporates Goodmans' famous ACOUSTICAL RESISTANCE UNIT. The "Viscount" can be supplied with or without loudspeaker fitted. **Height: 28 in., width: 24 in., depth: 21 in.**

Recommended units for use in this enclosure are the AXIOM 150 Mk. II or the AXIOM 22 Mk. II where a full range system is required. The AUDIOM 60 or the AUDIOM 70 may also be used in this cabinet as bass units in multi-channel High Fidelity systems.

AXIOM 150 Mk. II
- 12 in. 15 watts.
- Freq. coverage: 30 c.p.s. to 15 kc/s.
- Impedance: 15 ohms.

AXIOM 22 Mk. II
- 12 in. 20 watts.
- Freq. coverage: 30 c.p.s. to 15 kc/s.
- Impedance: 15 ohms.

"Viscount" Enclosure only ...... £19:19:0
"Viscount" & AXIOM 22 Mk. II ...... £35:0:0
"Viscount" & AXIOM 150 Mk. II ... £30:14:9

... another new product from Goodmans!
Provision is made for mounting TREBAX high frequency pressure unit in the front baffle. The aperture for this purpose is blanked off by a detachable panel, and a similar arrangement is made in the rear wall to facilitate the fitting of a variable attenuator for TREBAX. TREBAX may be fitted to the "Viscount" only with AXIOM 150 Mk. II and AXIOM 22 Mk. II loudspeakers: in each case crossover type XO 5,000 should be used.

See the "Viscount" at the Radio Show NOW!
Stand no. 105 ...... Demonstration Room D.7

Post the coupon for leaflet giving full details of this latest addition to the Goodmans range of High Fidelity components.

BASF magnetic recording tape

GIVES ALL FOR THAT LITTLE EXTRA

Wear doesn’t tear; nor do scratches impair . . . TAPE for recording designed for withholding all halts and all faults from sonic events . . . What’s more it prevents all defects on repeats . . . it’s as tough as tape can be since it’s based on PVC . . . for that little more initially you get precious durability.

In short:
You get so much more — For that little extra.

The BTH Dual Channel Loudspeaker

To those striving for perfect sound reproduction, the new BTH K10A SPEAKER is an essential component. Designed to meet an exceptionally exacting specification, the unit is now available with or without cabinet to the keen enthusiast.

The equipment comprises an 18-inch cone for low frequencies, with a co-axial pressure-type unit and horn for high frequencies, and is complete with cross-over network

The matching impedance is 15 ohms;
the cross-over frequency is 1700 c.p.s.;
and the total weight of unit and filter
is 38 lbs.

List Price (less cabinet) : £45

BRITISH THOMSON-HOUSTON
THE BRITISH THOMSON-HOUSTON COMPANY LIMITED. RUGBY, ENGLAND
Member of the AEI group of companies
A high standard of accuracy—simple to use—and moderately priced. That briefly summarises the reason for the established popularity of these three instruments amongst discriminating service engineers. Each is backed by the world-wide “Advance” reputation for products of unquestioned reliability.

**TYPE Q1**

for TELEVISION (including Band 3) SERVICING

Within this one instrument facilities are provided to deal with Bands 1, 2 and 3 of the five internationally allocated channels for television and V.H.F. broadcasting. The directly calibrated dial with a scale length of 37½ in. gives easy reading over the whole range.

Full details in Leaflet W123

**TYPE E2**

This well-proven instrument is characterised by its excellent frequency stability, calibration accuracy and its reliable attenuation. The RF output is variable from 1μV to 100μV and a force output of 1 volt is available at all frequencies. Facilities in internal and external amplitude modulation on the AF output 0-50 volts at 400 cycles is provided.

LIST PRICE IN U.K. £32.10s.

Full details in Leaflet W14

**TYPE PI**

An excellent Signal Generator at a most moderate price. The frequency calibration accuracy is ±1% at all frequencies and the RF output level is available from 1μV to 100μV. The RF output may be amplitude modulated 30% at 400 cycles.

LIST PRICE IN U.K. £22.5s.

Full details in Leaflet W22

Telcon Mumetal Screens for clear traces.

This screen has been developed in conjunction with the tube manufacturers and leading users. To facilitate the bolting together of several screens to form a stacked array, the screen has two flat parallel sides.

The screen is designed for use with the following C.R.Ts. and can be supplied with or without a base clamping bracket.

- **MULLARD TYPE DG16-22 (CV2352)**
- **MULLARD DEVELOPMENT TYPE VCRX 390**
- **20th CENTURY TYPE VCRX 390**
- **20th CENTURY TYPE VCRX 431**

Drillings and brackets can be supplied to customers' requirements.

Other standard screens are available for tubes:

- **MULLARD DG7-5 (CV2175); DG7-6; DG7-36; DG13-2 (CV2191)**

Further details and drawings supplied upon request.
In the vanguard of progress . . .

Since January 1956 Salford Electrical Instruments Limited have been in regular production of Vacuum-Deposited Selenium rectifiers employing aluminium base plates. This is one of the most outstanding technical advances in Selenium manufacture in this country in recent years. In conjunction with other improvements it results in reduced forward resistance and therefore increased current rating for the same size of elements, while at the same time maintaining the full inverse voltage rating. Further important advantages are an extended temperature range of operation, improved life and reduced weight.

A SIGNIFICANT CONTRIBUTION TO THE ADVANCE OF ELECTRICAL AND ELECTRONIC TECHNIQUES

AUTOMATIC COIL WINDING MACHINE

This machine is the most modern on the market and it possesses many exclusive refinements including:

- Dustproof construction throughout.
- Provision for winding up to four coils simultaneously.
- Micrometer traverse setting.
- Wire Gauge Indicator engraved with various wire gauges to which the machine can quickly be set.
- All steel parts are either cadmium or chromium plated.
- Instantaneous re-set counter reading up to 100,000 Turns.
- Entirely new Wire Tensioning Stand to hold two reels of wire.

We will be pleased to send you an illustrated leaflet giving a full technical specification on request.

Solderless terminals speed assembly eliminate rejects

The AMP precision method of wire termination reduces production costs and provides connections of the highest electrical and mechanical efficiency. The use of AMP precision crimping tools and automatic machines achieves exceptionally high rates of output, a uniformly high standard of quality and the elimination of human error. AMP terminations and connections are of particular value in electronics and aircraft installations. They withstand vibration, corrosion and provide high tensile strength, with low resistance, and no noise at R.F.

Brochure W.W. sent or demonstration at your own works on request.

Certi-crimp hand tool, Positive closure ensured.

Automatic wire terminator operates at up to 4,000 an hour.

Pneumatic hand tool eliminates operator fatigue.

AMP terminals are made for every type and size of wire.

**A SPARK OF GENIUS!**

I.C.S. training supplies the spark you need to further your career. The Courses I.C.S. offer are practical and up to date, they recognise the present emphasis on Frequency Modulation, and they can help you attain one of the many well-paid posts that exist today in the radio world. Prepare yourself now, at home and in your own time, with the expert help of I.C.S. tutors.

The cost of an I.C.S. Course is moderate and includes all books.

**Among the I.C.S. Courses available are:**

- **FREQUENCY MODULATION ENGINEERING**
- **T/V ENGINEERING**
- **RADIO SERVICING**
- **RADIO ENGINEERING**
- **RADAR ENGINEERING**
- **Basic Electronics**
- **Industrial Electronics**
- **Electronic Engineering.**

Complete the coupon below and post it to us today for further details of the Course which interests you. **Write to:** Dept. 223E, I.C.S., 71 Kingsway, W.C.2

The Royal National Lifeboat Institution is to install V.H.F. Radio Telephones in Life-boats around the coast of Great Britain for communication with Helicopters and Aircraft of the Air/Sea Rescue Service.

After extensive trials carried out over several months and evaluation of all types available, equipment made by British Communications Corporation has been selected. A wise choice where fine performance and utmost reliability are vital factors.

Connoisseur 3 SPEED MOTOR

The turntable with a 4% variation on all three speeds.

The Connoisseur motor is made for the perfectionist. It is one of the finest turntables in the world.

The speed change is arranged mechanically and gives a 4 per cent variation on all speeds. A synchronous motor, which is virtually vibrationless with low noise level and hum induction, maintains a constant speed at all settings. There is no braking action to obtain speed change.

The 12in. turntable is lathe turned in non-ferrous metal. The main spindle, which is precision ground and lapped to mirror finish, runs in phosphor bronze bearings.

A sound, precision engineering job, the Connoisseur motor provides the foundation for perfect reproduction.

Price £20, plus P. Tax £8/11/-

"The ultimate fidelity of a sound reproducing system can be no higher than that of any one of its individual units."

Announcing a new 25 watt high fidelity loudspeaker system . . .

. . . the feeling that the artists are with you in the room. In your mind's eye, you begin to see them as living persons interpreting a musical score, and their instruments as vibrant strings, shimmering brass and soft, mellowed woods. Such is the near magical, all-embracing presence of this outstanding new speaker system.

The Pye HF 25/SC has been specially designed to give living expression to the supreme reproductive power of the Pye HF25 Amplifier. It can be used with other amplifiers of comparable output.

Features: A high grade, dual-concentric loudspeaker housed in an elegant corner cabinet, heavily braced and lagged to give smooth bass response at all volume levels with complete absence of vibration or rattle. Frequency coverage: 30 to over 20,000 c.p.s. 25 watts undistorted output.

TYPE 10
10 KW AMPLIFIER

This is the latest addition to the Savage range of amplifiers—it is suitable for driving the Goodmans Vibrator VG108 or VG109.

Output
10 KVA when Power Factor of load exceeds 0.8.

Output Voltages
From 41½ V to 330 V.

Frequency Range
40 c/s—10,000 c/s @ 10 kW.
30 c/s 6.5 kW.
20 c/s 2.5 kW.

Harmonic Distortion
Less than 3% @ 10 kW @ 1 Kc/s.

Sensitivity
160 mV @ 600 ohm for 10 kW output.

Output Voltage Regulation
33%.

Noise
70 dB below 10 kW.

Mains Supply
350-450 volts 50 c/s 3 phase.

Further information on request.

W. BRYAN SAVAGE LTD

17, Stratton Street, London W.1.
YOU CAN COUNT ON COLD CATHODE TUBES

Continuing development in the field of cold cathode tubes has brought a new COLD CATHODE TRIODE XC18

This electrically reliable and mechanically robust tube is contained in a 10mm round bulb, 34 mms in length Vsa= 210V: Vma≈ 73V: Vst≈ 68V.

... two input signals displayed for direct comparison and their characteristics accurately measured by the turn of a knob ... such are the facilities and convenience afforded by the Mullard Dual Trace Oscilloscope, type L.101.

Well-engineered and reliable, the L.101 Oscilloscope is the oscilloscope where the demand is for a high grade general purpose instrument. It employs two identical amplifiers with bandwidths of 4 Mc/s irrespective of sensitivity. Each amplifier is aligned for good transient response, has a rise time of 0.1 μsec, and a maximum sensitivity of 20 mV pk-pk/cm.

The time base may be free running, synchronised or triggered. Its velocity is continuously variable between 0.1 μsec/cm and 10 msec/cm. Both time and voltage may be measured by the nul method and a well-regulated power supply preserves calibration accuracy.

**mark 2 features**

- Post Deflection Acceleration gives a brighter display at low repetition rates.
- R.C. Probe ensures that only negligible damping is imposed on high impedance circuits. (This probe is also available to users of the Mark 1 model.)
- Improved Triggering Circuit starts the time base with the minimum delay from either positive or negative signals of only 1½V amplitude.

Full details of the L.101 Mark 2 are readily available from Mullard at the address below or from any of their distributors.

Belfast: James Lowden & Co. Ltd., Tel. 57518. Birmingham: Gothic Electrical Supplies Ltd., Tel. CEN 5531.
London: Mullard Equipment Division, Tel. CHA 8421.
WE HAVE CHANGED OUR NAME FROM AVIS & BAGGS TO ANDEC LTD.

Since this Company was founded seven years ago, it has given exceptional service to industry by supplying custom-built Transformers, Electronic Equipment and small instrument type Electric Motors of a very high standard. Success and well earned confidence have enabled the Company to expand and, hand in hand with its change of name, has come the move to larger, well-equipped factory premises, while the old workshops are retained as an experimental station.

The application of electronics to industrial processes remains the speciality of ANDEC Ltd. This service comprises expert and practical advice with industrial research problems, development of prototypes, and the manufacture of custom-built equipment. Batch or long-run capacity is also available.

1 Megohm/Volt!
THE UNIQUE INSTRUMENT—
BPL TRANS RANGER

- Independence from mains voltage
- Very High Input resistance
- Equipped with DC Transistor amplifier
- No current drain —instant readings

Circuit covered by British Patent No. 710514

This multi-range transistor voltmeter is the first instrument of its kind to measure true open circuit voltages in high resistance circuits—having a resistance of one megohm per volt. Independence from valve maintenance results in the instrument being immediately ready for operation, no warming up period being necessary. Complete specification will be supplied on request.

EXPORTERS OF RADIO, TELEVISION AND INDUSTRIAL TUBES, HAVE PLEASURE IN INTRODUCING THEIR BRAND

AND INVITE ENQUIRIES FROM BUYING AND CONFIRMING HOUSES EXCLUSIVELY FOR EXPORT

SUPPLIERS OF RADIO COMPONENTS ELECTROLYTICS, AND CATHODE RAY TUBES.
Two types: Flexible - twistable.
Flexible - non-twistable.

The high quality of "Waveflex" waveguides is maintained because all production operations from selection of correct materials to final testing are completed within the one organisation.

The 'Neoprene' rubber sheath which is moulded and bonded to the guide, has been specially produced to give flexibility at extremely low temperatures.

Twistable waveguides are designed to take a plus or minus 30 degree twist per foot.

A standard range of "Waveflex" waveguides is made in lengths from 3' to 36' fitted with standard flanges. We shall be interested to investigate special guides to meet particular requirements.

"Waveflex" flexible waveguides to match rigid guides in WG. 10, 15 and 16 are in production, the final range will include WG. 11, 18 and 22.

"Waveflex" flexible waveguides are approved by the Radar Research Establishment of the Ministry of Supply, and by the Admiralty Signals and Radar Establishment. We are fully approved for A.I.D. and A.R.B.

HERE ARE THE TEST DETAILS
A typical specification of WG. 16. V.S.W.R. 97 minimum per end termination.
Attenuation 0.15 DB/ft. maximum.
Band width 8.2 to 10.7 k.m. c/s.

Monitoring tests are carried out on a unique rig which flexes and/or twists the "Waveflex" guides many hundreds of thousands of times to ensure reliability in use.

WAVEFLEX WAVEGUIDES

"WAVEFLEX" WILL BE EXHIBITED ON THE TECALEMIT STAND NO. 129 AT THE S.B.A.C. EXHIBITION

NEW ARCOLECTRIC SIGNAL LAMPS

For Low Voltage or Mains

Illustrated are a few signal lamps taken from our wide range. The insulation of every Arcolectric signal lamp will resist a flash test of 1,500 volts A.C. The S.L.90 illustrated here is a typical Arcolectric low voltage signal lampholder. It is designed to accept popular M.E.S. bulbs. The bulb is accessible from front or rear of panel. The domed plastic lens surrounded by a polished chrome bezel gives a most attractive panel appearance. This holder can be fixed in a single 3⁄4 in. hole. The mains voltage signal lamp S.L.88/N is supplied complete with an M.E.S. neon tube and a suitable series resistance.

Towards perfection

LOWTHER LINEAR AMPLIFIERS

Exclusive Lowther Design and Build

The new range "Lowther Linear" amplifiers surpass all previous multi-loop feedback or basic ultra linear technique by the utilisation of the suppressor grid of the Mullard power pentode EL34 into the distributed load circuit which enhances the performance in all detail.

Generous in design, the amplifier's performance will remain at its high laboratory test specification throughout many years of use.

DA6504
DUBILIER AUTOPACKS—designed primarily for loading hoppers for automatic feed systems—also solve the spiky problem of resistor storage. The resistors* are housed in packs of 50, 100, 500 and 2,500 for type BTS, and in packs of 100 and 500 for type BTB—all lined up with connecting wires dead straight, ready for immediate use—and taking up very little space in the process. The large and the small user would be well advised to take stock of these handy, space and time-saving packs.

No storage problems here!
This modest sized stack contains no fewer than one million separate resistors. A pack of 50 would occupy no more room than 10 cigarettes on the workbench. Whether you use resistors in tens, hundreds or thousands—see Dubilier about these new space-saving Autopacks today.

*The resistors are available in two ratings: BTS 1 watt, BTB 1 watt at 70°C. Resistance range is 100 ohms to 10 megohms (BTS) and 390 ohms to 22 megohms (BTB). Each type is completely protected by a phenolic resin housing which is sealed at the ends.
The New
AMBASSADOR
Table
Radiogramophone

This is Britain's finest Export Radiogramophone—far away ahead in appearance, technical design and performance. Long range with R.F. stage. Electrical Bandspreading. Twelve and a half inches of scale length to each separate bass and treble controls. A.C. operation only.
Model—TRG. 7856.

Most realistic sound on record

AMBASSADOR RADIO & TELEVISION LIMITED. PRINCESS WORKS, BRIGHOUSE, YORKSHIRE, ENGLAND.

RCA TRANSMITTERS. Type ET-4331. 1 kW. (telephone); 1.4 kW. (telegraph). Frequency range 3 Mc/s to 20 Mc/s.
RCA TRANSMITTERS. Type ET-4336. Complete with original speech amplifier, crystal-multiplier and VFO units. Unused and reconditioned. Can be supplied with very large quantity of spares.
COLLIN’S T.C.S. 6, 9, 12, 13. Complete equipment—Transmitter, Receiver, Rotary Converter (12 V.), Remote Control, Aerial Coupling Unit, Microphone, Key and Connecting Cables.
40 Line F & F TELEPHONE SWITCHBOARDS (complete).
V.H.F. TRANSMITTER Type 11312 or J. Frequency coverage 100/156 Mc/s. 50 watt output. Tropicalised. New.
A.R.88Ds, AR887 L.F.s, R.109.
METAL RECTIFIERS Type 1B, D.C. output 10 amps at 22 v., 50 c/s.
PETROL GENERATOR Type P.E. 95 G (10 k.w.).
All above items in excellent working condition. Working demonstration upon request.

Selenium, Germanium AND Silicon Rectifiers AND Devices

Examples representative of the wide range of Selenium, Germanium and Silicon rectifiers and devices can be seen on

STAND NO. 117

National Radio Show

Standard Telephones and Cables Limited

Registered Office: Connaught House, Aldwych, London, W.C.2

RECTIFIER DIVISION: EDINBURGH WAY · HARLOW · ESSEX
HIGH TEMPERATURE LIGHTWEIGHT RECTIFIERS

- For operation in ambients of up to 85°C
- Elimination of cooling fins for compactness
- Light alloy construction for lightweight
- High stability

are some of the salient features of this new range of rectifiers, primarily developed for Service requirements, but now available in production quantities for all applications. Units can be supplied with various finishes to comply with RCS.1000 categories H.1 and H.2.

Details of this new range of WESTALITEN RECTIFIERS can be obtained from See them on STAND No. 102, Radio Show, August 21st to September 1st. Dept. WW.9, WESTINGHOUSE BRAKE & SIGNAL CO., LTD., 82, York Way, King's Cross, London, N.1.

BABY ALARM. Amplifier and loudspeaker in lovely walnut case, with microphone and ten yards cable, including postage, £7/12/6.

MORSE KEY (U.S. manufacture), 7/- each.

TRANSMITTER/RECEIVER No. 22
2 mc.-8 mc. complete with all valves, power pack for 12 v. D.C., both installed in a carrier, headgear and microphone assembly. All in excellent condition, very economical current consumption. Ideal for mobile use. Price £11/15/- each. Carriage 20/- extra. Johnson's variable condenser type 500 E20 single 500PF 2,000 volt. 9/- each.

Insides yours - Outsides ours

There is no need for you to wrestle with problems of case production—you should be concentrating on the insides and leaving the outsides to IMHOFS—the instrument case specialists.

There are so many manufacturers who do—they look at our range of "standards" first and often make their choice there—sometimes a modification is needed—even a completely new design—but we haven’t failed them yet. Share your production worries—call and see us.

In many thousand homes throughout the American Continent, the Monarch U.A.8 four-speed automatic record changer is already a firm family favourite. Nightly it demonstrates its versatility and flawless fidelity—faultlessly. And it will go on doing so for many, many years to come!

The Monarch's superb performance and reliability have earned it top honours with leading American set makers. And in this traditionally hard market, honours are truly earned.

* Many manufacturers now install the Monarch exclusively, for, apart from its fine performance, they have found it free from profit-consuming after-sales problems. Please write for U.A.8 data sheet.

As in previous years, one of the Mullard contributions to the 1956 Radio Show is a stand supplying technical information to all those who use valves and other electronic devices—whether at work or for their hobby. These enthusiasts are often described generally as home constructors, but many professional engineers, dealers, service engineers, teachers, and students are included among their number. Our publication on transistors this year is called "Transistors for the Experimenter". Deliberately the rather vague term 'experimenter' has been introduced to cover a wide range of interests and requirements. The title does not mean that the booklet has a restricted appeal: on the contrary, nobody need feel left out.

Transistors give us all the opportunity to start afresh and to follow the subject through from its beginnings. A very large part of the booklet has therefore been devoted to the more instructional aspects of transistor applications. More important, many circuits are given in the later pages. Most of the circuits are new, and the text has been completely revised and made several times larger than that given in "Junction Transistors for the Home Constructor". Material which has appeared in earlier advertisements in this series has been included.

Particular interest this year centres round the low power output OC72 junction transistor. Two circuits for a 200mW amplifier are supplied, one for operation from a 6-volt supply and the other for 4.5V. The output and sensitivity are sufficient for small portable equipment such as gramophones and personal radio receivers. A crystal pick-up will drive the amplifier fully. A number of possible r.f. front-ends for the amplifier are described, though the sensitivity requirements of these r.f. circuits are such that in general the amplifier will not be driven to its full output.

Circuits are included which show how the personal receivers can be made in a form which feeds into an insert earpiece. Other new circuits are: a two-transistor R-C coupled sinusoidal oscillator; a symmetrical multivibrator; a bridge balance indicator; and a sensitive e.h.t. voltmeter.

Each circuit is accompanied by notes which show, for example, the possible uses and operating ranges of the equipment. An explanation of the mode of operation of the circuit is given to help the reader grasp the application information in the rest of the booklet.

After the circuit descriptions the remainder of the booklet is fairly general. The design of transistor circuits is by no means a hit-or-miss or empirical affair. Although reasonably full design procedure is described to show not only how it's done, but that it can be done, the more immediate and practical methods are not neglected.

Following some introductory notes on the circuit configurations etc., the most important new material comes under the following headings. Small-signal a.f. stages shows how small-signal parameters are applied to the earlier stages of amplifiers. D.C. stabilising gives a full treatment of this topic, including the preferred system using a potential divider and emitter resistor, and shows how production spreads are allowed for. Large-signal a.f. stages is devoted chiefly to Class B and the design of the output stage of the 200mW amplifier, with examples. Further sections indicate the problems encountered at high frequencies and in oscillator and switching circuits etc. Transistor data contains a discussion on the choice of limiting values.

"Transistors for the Experimenter" can be obtained at our Radio Show stand or after the show from the address below. No charge is made for this publication.

T.S.D. DATA and PUBLICATIONS SECTION, MULLARD LTD., CENTURY HOUSE, SHAFTESBURY AVENUE, LONDON, W.C.2

MVM 361
TO SPECIFY THE ASSEMBLIES

Replace the "F/" prefix on the flying lead valve code with one of the following prefixes:

- FF—unscreened on P.T.F.E. base
- XF—unscreened on nylon-loaded P.F.
- SF—screened on P.T.F.E. base
- SX—screened on nylon-loaded P.F.

Thus an F/6064 in a screened, P.T.F.E. assembly would be specified as SF6064.

BRIMAR are now able to offer a range of flying lead miniature B7G & B9A valves assembled on moulded bases suitable for chassis mounting and using the same fixing holes as the corresponding valveholders for plug-in valves. Two types of assembly are available: unscreened, with the valve mounted on a base only, or screened with a close fitting blackened metal can which provides electrical screening and conductive cooling of the envelope. Both these assemblies can be supplied with the bases moulded in nylon-loaded P.F., or in P.T.F.E. The nylon-loaded P.F. base has good electrical properties and is suitable for general use up to about 200 Mc/s, and the P.T.F.E. base, which is heat and moisture resistant with excellent electrical properties, may be used for all frequencies, under arduous conditions such as in situations of high humidity.

- Simplified and improved method for mounting wire-ended valves.
- Saves time in soldering.
- Eliminates contact resistance.
- No intermittent pin contact resistance troubles.

Cosmocord’s New Premises

mean even better all round service
to all users of ACOS products

An expanding business needs expanding premises, and as the limit has been reached at our Enfield Works we have moved to modern and much larger premises at Waltham Cross—right next to the railway station. Here we have more elbow-room for continued progress in the development and manufacture of ACOS Pick-ups, Microphones and Plastic Mouldings—and for providing even better service to customers throughout the industry.

* Incidentally, customers in the London telephone area who wish to telephone us can do so on the automatic system by dialling WA4 5206.
New Collapsible Aerials

We always look upon the Radio Show as our New Year’s Day, so with this issue another year commences. May it be a prosperous one for all our readers.

It is not often that we advertise aerials in the Wireless World though we talk about them quite a lot. The new range illustrated alongside is quite cunning and should appeal to the practical man. The time taken by the writer to position the crossarm and element correctly ready for fixing to the mast was under 45 seconds, without instruction or previous knowledge. Needless to say electrically they are up to the usual high “Belling-Lee” standard.

Emley Moor

We had a most successful lecture tour in July in Leeds, Sheffield and Hull. In each place we were able to show a good test card. We were a little surprised how it came through in Hull 70 miles away. Apparently the signal is disappointing in parts of Harrogate but we have hopes that some improvements may result from an alteration to the aerial which will have materialised by the time you are reading this.

We must remind readers, particularly those who may be connected with the Press, that the test transmitter is no longer our property. G9AED is “off the air.” It now functions as an I.T.A. transmitter and is manned by the Authority, so enquiries as to schedules, power, etc., should be made to them at Princes Gate. We are still interested in, and anxious to get reception reports so please let us have them and we will send the QSL card illustrated here.

AN ENTIRELY NEW RANGE

The full range of E type cores is embraced by the new Parmeko three-phase series, from miniature types to those capable of handling up 2.5 KVA at 50 c.p.s. (or greater ratings at higher frequencies). The smaller models are enclosed and hermetically sealed, the larger transformers—impregnated to R.C.S.C. standards—are built into open constructions. For complete details and dimensions write for Parmeko leaflet 456/W/1

PARMEKO TRANSFORMERS

for the Electronic and Electrical Industries

PERCY ROAD, LEICESTER, ENGLAND
NEW! THE PRACTICAL WAY of learning RADIO • TELEVISION • ELECTRONICS

An entirely new series of courses designed to teach Radio, Television and Electronics more quickly and thoroughly than any other method. Specially prepared sets of radio parts are supplied and with these we teach you, in your own home, the working of fundamental electronic circuits and bring you easily to the point when you can construct and service radio receivers, etc.

Whether you are a student for an examination; starting a new hobby; intent upon a career in industry; or running your own business — these Practical Courses are ideal and may be yours at very moderate cost.

With these outfits, which you receive upon enrolment and which remain your property, you are instructed how to build basic Electronic Circuits (Amplifiers, Oscillators, Power Units, etc.) leading to designing, testing and servicing of complete Radio and Television Receivers.

NEW TELEVISION COURSE including a complete set of equipment dealing with the design, construction and servicing of a high quality television receiver.

Courses (with equipment) also available in many other engineering subjects.

COURSES FROM 15/- PER MONTH

EMI INSTITUTES
An educational organisation serving the E.M.I. Group of Companies which include "HIS MASTER'S VOICE," MARCONIPHONE, COLUMBIA, ETC.
The latest advance by Standard in the field of communication engineering is the balanced pair cable for video transmission, utilizing expanded polythene as an insulant. This dielectric by its greater mechanical rigidity allows a more uniform location of the conductors than previous designs and gives an improved impedance uniformity, while retaining the characteristics of low attenuation and cross talk. These screened circuits are ideal for short television cable links.
From microphone to aerial through Marconi's experienced hands

In the surge of new television requirements, Marconi's have not forgotten that the majority of countries still look to them first and foremost for the supply, installation, maintenance and, in some cases, operation of sound broadcasting systems. Moreover, television programmes are not silent; sound broadcasting equipment and techniques must advance in step with vision. The unique experience and advanced technical knowledge of Marconi’s are at the disposal of broadcasting authorities all over the world.

75% of the world's broadcasting authorities rely on Marconi Equipment.
Marconi Television equipment is installed at all B.B.C. and I.T.A. Television Stations.

Up in the air

At the very heart of things, electronically speaking, you will find Mullard valves, tubes and other advanced electronic devices. In the sphere of modern aeronautics, Mullard have supplied these products to fit the specific needs of Design Engineers who are concerned in the origination and development of new equipments. And quite frequently, Mullard develop something new both in type and potential purpose, the benefits of which are passed on to Industry at large. Either way the result is PROGRESS.

Down to earth

The life's blood of progress is research. Practical evidence of this belief is to be found in the time and resources Mullard devote to this purpose. At the S.B.A.C. this year, you will find the Mullard Valve Information Centre at Stand No. 240. This is designed to serve as an informal introduction to the authoritative technical advisory service which is always available for consultation on any application.

LEARN THE PRACTICAL WAY
— COURSES WITH EQUIPMENT

With many courses we supply actual equipment thus combining theory and practice in the correct educational sequence. The equipment, specially prepared and designed, remains your property. Courses include: Radio, Television, Electronics, Draughtsmanship, Carpentry, Photography and Commercial Art, Amateur S.W. Radio, Electricity, Languages, Mechanics, etc.

Equipment supplied upon enrolment and remains your property.

EMI INSTITUTES
THE ONLY POSTAL COLLEGE WHICH IS PART OF A WORLD-WIDE INDUSTRIAL ORGANISATION

POST THE COUPON TODAY FOR OUR BROCHURE ON THE LATEST METHODS OF HOME TRAINING FOR OVER 150 CAREERS AND HOBBIES

THE ADVANTAGES OF E.M.I. TRAINING

★ The teaching methods are planned to meet modern industrial requirements.
★ We offer training in all subjects which provide lucrative jobs or interesting hobbies.
★ The student is taken carefully and thoroughly through his chosen subject.
★ A tutor is personally allotted by name to ensure private and individual tuition.
★ Free advice covering all aspects of training is given to students before and after enrolment with us.

PRIVATE AND INDIVIDUAL TUITION IN YOUR OWN HOME

Courses from 15/- per month

VORTEXION TAPE RECORDER

The amplifier, speaker and case, with detachable lid, measures 8½in. x 22½in. x 15¼in. and weighs 30lb.

PRICE, complete with WEARITE TAPE DECK £84 0 0

★ The total hum and noise at 7½ inches per second 50–12,000 c.p.s. unweighted is better than 50 dbs.
★ The meter fitted for reading signal level will also read bias voltage to enable a level response to be obtained under all circumstances. A control is provided for bias adjustment to compensate low mains or ageing valves.
★ A lower bias lifts the treble response and reduces distortion. A high bias attenuates the treble and reduces distortion. The normal setting is inscribed for each instrument.
★ The distortion of the recording amplifier under recording conditions is too low to be accurately measured and is negligible.
★ A heavy mu-metal shielded microphone transformer is built in for 15–30 ohms balanced and screened line, and requires only 7 micro-volts approximately to fully load. This is equivalent to 20ft. from a ribbon microphone and the cable may be extended 440 yds. without appreciable loss.
★ The .5 megohm input is fully loaded by 18 millivolts and is suitable for crystal P.U.s, microphone or radio inputs.

★ A power plug is provided for a radio feeder unit, etc. Variable bass and treble controls are fitted for control of the play back signal.
★ The power output is 3.5 watts heavily damped by negative feedback and an oval internal speaker is built in for monitoring purposes.

POWER SUPPLY UNIT

is almost essential for the professional or semiprofessional where a number of different items have to be mixed on one tape recording.

It is recommended by a number of tape recorder manufacturers for this purpose.

Any normal input impedance can be supplied to order, balanced or unbalanced, the standard being 15–30 ohms balanced.

The normal output is 0.5 volt on 20,000 ohms or less, but 600 ohms is available as an alternative.

The steel-stove enamelled case is polished and fitted with an engraved white panel suitable for making temporary pencil notes.

PRICE £18.

FOUR CHANNEL ELECTRONIC MIXER

PRICE £36 15 0

VORTEXION EQUIPMENT can be seen and heard at Griffiths Hansen (Recordings) Ltd., 32-33 Gosfield Street, Longham Street, London, W.I. Open 10.30 a.m. to 9 p.m. (including Saturdays) from Aug. 21st—Sept. 1st.

When you buy a tape recorder
your choice will be governed by two factors—
PRICE AND SPECIFICATION

The best tape recorder won’t be cheap—but it will be good value for money.

The Grundig 'Specialist' TK.820/3-D is the best value for your money. Its presentation, its versatility, its performance, its push-button track changeover, makes it the only possible choice for so many people. Provided the machine has the facilities, appearance and ease of control you demand, it remains to check whether or not its specification will stand up to your requirements.

Here is the complete technical specification of the TK.820/3-D. Read it critically—and write to us if there is anything else you would like to know.

**GRUNDIG**

Makers of the finest tape recorders in the world.

GR273
OLYMPIC HONOUR FOR BRITAIN

We are proud to announce that our TL/12 amplifiers have been chosen for use at the 1956 Olympic Games to be held in Australia.

It was in 1945 that H. J. Leak revolutionised the performance standards for audio amplifiers by designing the original "Point One" series, and we became the first firm in the world to market amplifiers having a total distortion content of 0.1 per cent. This claim was received with incredulity, but it was subsequently confirmed by the National Physical Laboratory and since then hundreds of TL/12 amplifiers have been used by the B.B.C., and Commonwealth and foreign broadcasting authorities, and thousands have been used by recording studios, leading musicians and music-lovers throughout the world. We were the only British exhibitor at the world's first Audio Fair which was held in New York in 1949 and the volume of our exports to the United States of America has grown steadily since then.

Further development work resulted in our producing, at a much lower price but with the same high performance standards, the TL/10 amplifier. The TL/10 amplifier and "Point One" pre-amplifier received such an excellent reception when they were first exhibited at the Audio Fair in New York in October, 1953, that we received an initial order for 1,000 sets. Since then several thousand sets have been sold throughout the world. The output of the TL/10 is ample for high-fidelity home music systems, and the quality of reproduction obtained is equal in every respect to that of the TL/12.

We always use the TL/10 amplifier and "Point One" pre-amplifier for our public demonstrations of high-fidelity reproduction of gramophone records and radio. The TL/10 amplifier, when used with the best available complementary equipment, gives to the music-lover a quality of reproduction unsurpassed by any equipment at any price. Even when the complementary equipment falls below that of the best obtainable, the use of these amplifiers will enable one to obtain very marked improvements in reproduction.

| **Mu-metal cased transformer** | £1 15 0 |
| **Trough-Line FM tuner unit with built-in power supply** | £25 0 0 p.t. £10 10 0 |

Those seeking to obtain the highest quality of gramophone and radio reproduction are invited to ask their dealer for a demonstration of Leak products which, with their tradition of excellence, represent the best that can be obtained.

**LEAK TL/10 AMPLIFIER, £17. 17. 0**  
& 'POINT ONE' PRE-AMPLIFIER, £10. 10. 0.

Prices made possible only by world-wide sales

**“POINT ONE” PRE-AMPLIFIER**

The handsome gold escutcheon plate contributes to the elegant appearance, and blends with all woods.

**Pickup**

The pre-amplifier will operate from any pickup generally available in the world. A continuously variable input attenuator at the rear of the pre-amplifier permits the instantaneous use of crystal, moving-iron and moving-coil pickups.

**Radio**

The radio input sockets at the rear permit the connection of the LEAK V.S. tuner unit. An input attenuator is fitted. H.T. and filament supplies are available from the pre-amplifier.

**Distortion**

Of the order of 0.1%.

**Hum**

Negligible, due to the use of recently developed valves and special techniques.

**Input selector**

Radio, tape, records: any and all records can be accurately equalised.

**Treble**

Continuously variable, + 9 db to - 15 db at 10,000 c/s.

**Bass**

Continuously variable ± 12 db to - 13 db at 40 c/s.

**Volume Control and Switch**

The switch controls the power supply to the TL/10 power amplifiers.

**Tape Recording Jacks**

An exclusive feature. Readily accessible jacks are provided on the front panel for instantaneous use with Tape Recorders which have built-in (low level) amplifiers.

**ELECTROSTATIC LOUDSPEAKERS**

Reprints of "The Gramophone" article (May, 1955) by H. J. Leak, summarising his work and findings on Electrostatic and Dynamic Loudspeakers, are available on request, free of charge.

**Write for leaflet W**

H. J. LEAK & CO. LTD., BRUNEL ROAD, WESTWAY FACTORY ESTATE, ACTON, W.3

Phone: SHEpherd's Bush 1173/4/5  
Telegrams: Sinusoidal, Ealux, London  
Cables: Sinusoldal, London
**THE TWIN 20**

This is a complete fluorescent light-blue fitting. It has built-in ballast and starter—stove enamelled white and ready to work. It is an ideal unit for the kitchen, over the work-bench and in similar localities. It uses two 20-watt tubes. Price, complete box tubes, 29/6, or with two tubes complete and insurance 3/6. Extra 20-watt tubes, 7/6 each.

**THE ORGONTONE**

5-Valve 5-wave band superhet covering long, medium and short wave. Ocean miniature valves are employed and low loss iron cored coils account for an excellent signal-to-noise ratio. Full A.V.C. is applied to both frequency changer and I.F. stages.

The output stage utilizes variable negative feedback. A grom position is provided and reproduction of records is particularly good.

Chassis size is 10 1/2 x 7 1/2. Scale size is 18 x 4 1/2. This receiver has been tested in certain extremely difficult areas and its stability and noise rejection have produced encouraging results. Price 21/10/-. carriage, etc., 7/6.

**THE "TREMENDO"**

This one is really superb. It has a 7-valve circuit with 6 scales output, fitted with independent bass and treble controls. It is really an efficient R.F. circuit coupled to a high-fidelity amplifier. The chassis size is the same as the Orgontone, namely 19 x 7 x 7, with the 19 x 4 1/2 multi-coloured scale, and it is built to the same exacting specification as the Orgontone. Price 35/10/-. carriage and packing 7/6. I.F. terms if required.

**BAND III CONVERTER ADDITA.**—Many hundreds in use

Any licence receiver, whether superhet or straight A.C. or A.C./D.C., house constructed or factory built, which present will receive R.B.C. will also receive L.T.A., if this converter is added. No modifications at all are necessary to the receiver. Simply plug in aerial lead and connect to A.C. mains. The converter is in a neat metal case with provision for fixing to the side or the back of the set. Price 20/10/-, or I.F. terms available on request if required.

**BUILD YOUR OWN CONVERTER**

You can save at least £2 on the above if you build the converter yourself. Price of all components including case is £3/10/- or £4/10/- if mains components are included. Extra is available free with the parts or available separately price 2/6.

**THIS MONTH'S SNIP**

The "ESTRONIC" Band III Converter

- To-day's best value in Band III converter suitable for your r.f. or money refound. Complete ready to operate. Comes without mains or 6/6 mains, post and insurance 3/-.

---

**ANNOUNCING THREE NEW SPECIALS**

1. THE "SKYSSEARCHER"

An all mains set for 19/6.

This is a 2-valve plus-metal rectifier set useful as an educational set for beginners, also makes a fine second set for the bedroom, workshop, etc. All parts, less cabinet, chassis and speaker, 19/6. Data free with parts or available separately 1/6.

2. THE "REALITE"

This is a complete metal fitting, stove enamelled white, with stater and ballast all ready to install. Price 25/-, plus 4/6 carriage and packing. 40-watt tube 10/-, no extra for packing, if ordered with fitting.

3. BABY ALARM

Unlike most baby alarms, this not only enables you to hear baby but also talk to him. Price complete with one microphone and 50ft. twin flex £6/19/6, carriage 3/6. Additional microphone 19/6.

---

**OFFERED FOR LESS THAN THE VALUE OF ITS COIL PACK**

This set, a product of one of our famous manufacturers, has H.F. stage, covers 5 wavebands including short waves to 11 metres. Offered less valves, power-pack, scale and drive, otherwise complete and unused.

Price £1/15/-, plus 7/6 carriage.

---

**NEW CIRCUIT**

OCCASIONAL 56—we have evolved a new T.B.P. circuit and have had really good results, equal in fact to many superhet. You really should try this circuit. All parts including valves (6X7, 6J7, 6L6, and 6X7) and Bakelite case with back cost only £5/10/-, plus 2/6 post and insurance. Data included with the parts is also available separately, price 5/-.

**4-SPRED & 3-SPRED GRAMOPHONE AUTO-CHANGER**

Latest types by all famous makers are invariably in stock at competitive prices. B.B.R., Monarch, Garrard, etc. Latest models from 27/10/-, plus 5/- carriage and insurance.

---

**HIGH VOLTAGE TESTER**

An instrument that will measure voltages up to 10,000 which draws no current from the source, will probably be a valuable addition to your workshop equipment. It is made entirely from odds and ends. Booklet giving full instructions, plans, etc. 2/6 post free.

---

**SERVICE DATA**

100 service sheets, covering British receivers which have been sold in big quantities, and which every service engineer is ultimately bound to meet. The following makes are included Aomamores, Albo, Bush, Cosmos, Elco, Ever Ready, Ferranti, Ferranti, E.G.C., H.M.V., Kohler-Brandsen, Lissell, Michael, Marconi, Mullard, Murphy, Philips, Pye, Ultra. Undoubtedly a mine of information invaluable to all who earn their living from radio servicing. Price £1 for the complete folder. Our Folder No. 5 consists of 100 data sheets covering most of the popular American T.R.F. and supertet receivers "all dry," etc., which have been imported into this country. Names includes Spartan, Eumestic, Admiral, Orostory, R.C.A., Vinton, etc. Each sheet gives circuit diagrams and component values, alignment, procedure, etc., etc. Price for the folder of 100 sheets is £3. Post free.

---

**THERMOSTATS**

211 x 11 x 41in. high. Useful for the control of appliances such as cookers, glides, volataries, hot plates, etc. Adjustable to operate over temperature range 70° F. fitted with heavy silver contacts. 13 amp. 3/6, each, 2 amp. QMB, 5/6; 2 amp. QMB, 15/-.

---

**CHASSIS ASSEMBLY**

Three-colour 3-waveband scale covering Long, Medium and Short wave-bands, scale pan, chassis, punched for standard 3-valve superhet, gaily driving head, opnights, etc., etc. Scale size 34 x 34 in. Chassis also 34 x 34in. deep. Price 15/- plus 1/6 post. Note—We can supply cabinet for this, 3/6, and 5/- p. and p.

---

**INDUSTRIAL OVERHEAD HEATER**

This overhead heater warms only the area within its radiant rays, and so effects a considerable saving of fuel. Its benefits are felt immediately, there is no warming-up period. It is essentially a personal type of heater, having controls within easy reach of the user. The controls give four variations of heat and " Off." At maximum heat the unit consumes 1 kW. The Inferno Major is of particular use—

(a) In large rooms, warehouses, halls, machine shops, etc., which the use of heating the whole room is too cumbersome and too great.

(b) In rooms which the main have to be heated, and where storage chambers, beer cellars, etc.

(c) Or in any situation where local heating is required quickly.

Price £2/7/10/-, carriage paid.
NEW MULLARD AMPLIFIER "310" A High Quality Amplifier designed by Mullard engineers. Robust high fidelity with a power output exceeding 10 watts and a harmonic distortion less than 4%, at 30 watts. Its frequency response is extremely wide and level being almost flat from 10 to 20,000 C.P.S.—three controls are provided and the whole unit is very suitable for use with the Collaro Needle and most other good pick-up armatures. Works off C.P.S.-three half day Thursday.

This amplifier is particularly useful if you wish to make up the unit made up and ready to work is 212/- extra. Alternatively this can be used for overload protection. Approximately 17 milliamps through the heater coil will cause the contacts to close. Useful for many applications such as delaying anode volts until the heaters are properly warmed up. Limited quantity—7/6 each, post and insurance 1/6.

This is a miniature type relay with change-over platinum contacts. Bobbins are 250 ohms each.

LIMITED QUANTITY—7/6 each, post and insurance 1/6.

### BARGAINS TO CLEAR

### MULTISPEED MOTOR

Wires off A.C./D.C. mains, fitted with gear box gives any speed from 1 r.p.m. 2/6., post and packing 1/6.

### SENSITIVE ALTIMETER

(Very good but not perfect)

These contain aneroid barometric movement. Price only 5/-, post, etc. 1/6.

### MINIATURE MOTOR

Net only 3/6., big by 1/4. inch, diameter. American 1/8. inch without polished pole and armature—laminated for high speeds. O.K. on lower D.C. voltages and A.C. with 100% output transformer—prices 10/6., post, etc. 2/6.

### RESISTORS

High stability types from 1-watt to 2-watt. Wire wound vitreous covered wire ended up to 20-watt. High powered types up to 150-watt mostly clip-in. Insulated and non-insulated carbon types preferred valves. High and low powered variable types. Big stocks available—send details of your requirements.

### ELECTRONIC PRECISION EQUIPMENT LTD.

249 Kilburn High Road, Kilburn, Middlesex.

Phone: MAI 4921
Half-day Monday.

152-153 Fleet St., E.C.4.

Phone: FLEET 2833
Half-day Saturday.

29 Stroud Green Road, Finsbury Park, N.3.

Phone: ARCHWAY 1049
Half-day Thursday.

### EXPERIMENTERS VALVE SNIP

Cats "eye" used for cutting in the dark. Will work burglar alarms, counting circuits, smoke detectors and the hundred and one other devices as will the simplest type of photo cell. Price 2/6 each, post and ins. 1/6.

Data will be supplied with application for the last of type.

### THERMAL DELAY SWITCH

Triode Type CV 10986

This is a high power air cooled triode. Specification of which is as follows: FILAMENT VOLTAGE 8.2, filament current 30 amps., anode dissipation 750 watts. Anode voltage 25 kv.

This valve is very suitable for R.P. heating at high frequencies and two of these are available for 1 minute. Alternatively this can be used for overload protection. Approximately 17 milliamps through the heater coil will cause the contacts to close. Useful for many applications such as delaying anode volts until the heaters are properly warmed up. Limited quantity—7/6 each, post and insurance 1/6.

### OFFICE INTERCOM

This is a battery motor unit, comprising an A.C. mains push pull amplifier with on/off switch. Bell. P.M. speaker-in polished cabinets with volume control and on/off switch. Suitable to work prices 25/10, with one sub-station—extra sub-stations 10/6 each—carriage and packing 4/6.

IN-LINE AERIALS WITH COMBINED COUPLING

The first combined Aerial patented and offered, needing NO MATCHING LINES, ONLY ONE JUNCTION BOX from which both frequencies are fed to a common downlead, and NO FILTER. Maximum energy transfer is gained by supplementing direct coupling with additional electronic coupling obtained by the “arrow” formation of the Band III elements corresponding exactly with the lobes of the larger elements polar diagram when receiving Band III. The folded dipole has been retained, being found essential for accurate matching at the higher frequency.
Furthermore, this design allows the full use of reflectors and consequent advantage of high directivity.

Recording and Playback units in “Brick” form

This form of construction, although not new, has not been applied in the field of magnetic recording in so complete a form, as the new units now available.

The “Brick” measures 13½” x 6½” x 3” and is a complete unit housing separate record and playback amplifiers, valve voltmeter record level circuit, bias oscillator and all necessary switching; during playback the record amplifier is switched as a power amplifier and will deliver an output of 3 watts into 15 ohms for connection to a suitable speaker.

The units are available in “split” form, e.g. two playback pre-amplifiers may be used for the playback of stereasonic tape records from a stacked head.

What the reviewers say about the RD JUNIOR

This month we have devoted our advertisement to extracts from two reviews which have appeared recently dealing with the RD JUNIOR Amplifier and Control Unit. Written by acknowledged authorities in the high fidelity field they speak for themselves.

"This amplifier has deservedly established a high reputation for itself. Wherever I have wandered during the past year, I have found universal praise for it from dealers and others who have had an opportunity of putting it through its paces."

"The amplifier is inherently stable under quite adverse conditions of load, and this means not only that high output power can be maintained with low distortion over the whole frequency range, but that the condition of stability will persist even as the valves and other components begin to age. No wonder the makers can afford to give "an unconditional two year guarantee against faulty materials and workmanship."

"The control unit has also been designed to give the utmost control that can be expected from its specification. What it means is that it takes a place as one of the best three or four 10-watt amplifiers that are available on the British market at present."

"It can be truthfully stated that the RD JUNIOR is an established product and is widely used as the basis of many average domestic high fidelity systems. For this reason it was chosen by us as one of the equipments installed for record playback purposes in the Gramophone Record Review demonstration room at the London Audio Fair."

"The units are constructed on robust chassis finished in various styles and with different finishes to suit the requirements of the buyers."

"Listening quality speaks for itself and I found the controls, particularly the low pass filter used in conjunction with the treble tone control, flexible enough to cope with modern LP's, old or worn 78's, and poor radio transmissions. Apart from the electrical and mechanical features of this design, the purchaser will be given confidence by the fact that the manufacturer is willing to supply complete circuit diagrams and components lists and guarantee the apparatus (excluding valves) for a period of two years."

"This RD JUNIOR Amplifier/Control Unit exemplifies a much sought after, but not so often achieved, combination of features. The RD JUNIOR FM Unit and RD JUNIOR Corner Horn enclosure."

A 12-page Illustrated Booklet devoted solely to the RD JUNIOR Amplifier and Control Unit, together with reprints of the full reviews appearing in the Gramophone Record and the Gramophone Record Review, post free on request.

Send also for details of companion equipment in the RD JUNIOR Home High Fidelity System—the RD JUNIOR FM Unit and RD JUNIOR Corner Horn enclosure.

Arrange a demonstration with your local Hi-Fi dealer.

**NEW! NEVER BEFORE!**

**The First**

OUT-OF-SIGHT T/V AERIAL

BI-SQUARE

FOR BAND I ONLY

(Patent pending)

The latest Labgear achievement in loft aerials
Outstanding in design, outstanding in performance...
...yet out of sight too—the new Labgear "Bio-
Square" aerial! Yes, here at last is a long-range aerial
that need not be a target for wind and weather
...nor for town-planning criticism either! Note
these features of the new "Bi-Square" aerial:

- Stands in any loft—much smaller than the ordinary Band I aerial.
- First-class reception up to 40-50 miles better than any other indoor aerial. Gain approximately 12dB.
- Delivered pre-assembled and folded-up neatly to under 6ft. long—takes only a few minutes to assemble ready for use.
- No special mounting is needed.

**Outdoor Version too—for ultra fringe reception!**
Made with heavier gauge material and extra supports. Overall size only 5ft. square. Performance equivalent to a multi-element array. Gain approximately 12dB.

---

**And the NEW Spiral**

(Patent pending)

The first plug-in dual band T/V aerial! For Bands I/III
Near, compact, unobtrusive—approximately 30 inches in length.
Simply plug it into the set; no extra fittings, no untidy flex, cables or "extras." Gives reception on both Band I and Band III.
Four versions: London, Midlands, North Western and North Eastern.
Average maximum range: 10 miles approximately. And the Spiral sells for only 39/6 complete.

**See these two new aerials on the Labgear stand No. 203 National Radio Show!**

Authorized distributors for Yorkshire: Northern Aerials Ltd., 141, Park Lane, Leeds, 1.

COMMERCIAL TELEVISION CONVERTER
SUITABLE ANY T.V. USING LOWER SIDE BAND
NO ALTERATIONS TO SET
Complete with built-in power supply, 220-250 v. A.C. mains. Crystal oscillator case 9x9m. long. 9in. wide. 6in. high. Incorporating gain control and band switch.

£3 - 19 - 6
Plus Post & Packing 5/6.

BAND III CONVERTER KIT
comprising 5 channel tuner, metal rectifier, electrolytic, 5 valves 12AT7 and all necessary components for A.C. mains operation. Complete with convolution box.

4 VALVE ALL-DRIEUPHRETHER PORTABLE KIT
Medium and long waves. In grey leatherette. Size 9in. x 7in. x 6in. Valve line up IT4, 1R5, 155, 34V. Complete kit of parts (last batteries).

£6 - 0 - 6
Plus 2/6 Post and Packing.

GARRARD RC/110
1-SPEED AUTOMATIC CHANGER
Will take 10 Records, 7", 10" or 12". Mixed, turnover crystal head, brand new, current model. A.C. mains 200/250 v. (list price £14/10/0).

£7 - 19 - 6

3-speed TRANSMISSION MOTOR
BY FAMOUS MANUFACTURER
Complete kit of parts comprising accurately balanced precision made heavy turntable with rubber mat, large constant speed condensor starting motor, base plate. Can be assembled in half an hour. A.C. Mains 200/250 v. Fully guaranteed. Parts sold separately.

£6 - 19 - 6
Post and Packing.

T.R.F. KIT IN PLASTIC CABINET

SIGNAL & PATTERN GENERATOR
Coverage 7.6 Mc/s.-210 Mc/s.
In five bands, all on fundamentals, slow-motion tuning, audio output, 6 vertical and horizontal bar, scanning. In grey hammer finished case, with carrying handle. Accuracy ± 1%.
A.C. mains 200-250 v.

SEND S.A.E. FOR ILLUSTRATED AND DESCRIPTIVE LEAFLETS

Modernise your old Radiogram

WE OFFER the latest 3 and 4 SPEED AUTOCHANGERS with modern RADIOGRAM CHASSIS and matched P.M. SPEAKERS at REDUCED PRICES. (H.P. Terms available.) A good varied selection is available... SEND S.A.E. for ILLUSTRATED and DESCRIPTIVE LEAFLETS.

TWO REALLY GENUINE PRICE REDUCTIONS

A BULK PURCHASE ENABLES US TO OFFER these RECEIVER CHASSIS at SUCH LOW PRICES. Each is BRAND NEW and FULLY GUARANTEED.

MODEL AW37

A 7-valve 3-waveband superhet chassis having a Push-Pull stage for approximately 6 watts output. PRICE £12-19-6

H.P. TERMS: Deposit plus 7½ carr. & ins. £6/9/9 and 8 monthly payments of £8/9

THESE THREE CHASSIS HAVE "GRAM" POSITION and are IDEAL REPLACEMENT CHASSIS FOR THAT "OLD RADIOGRAM" —Send S.A.E. for complete details.

MODEL B3

A 5-valve 3-waveband Superhet employing Negative Feedback over entire Audio Stages and having a single valve type 68W6 output for approximately 4 watts. PRICE £11-11-0

H.P. TERMS: Deposit £5/15/6 and 7 monthly payments of 19/4.

PRICE COMPLETE

READY FOR USE £43

TERMS: £11 Deposit and 9 months of £3/18/3, or £2/11/- Deposit and 12 months of £1/19/6. Curr. and ins. is £1/10/- extra, but we return £1 on return of packing case.

THE MODEL T.R.1/F. AMPLIFIER

Has been expressly designed to meet the requirements of enthusiasts for fidelity reproduction, and in particular to CORRECTLY operate the above TRUVOX DECK. It is supplied complete with a matched Elliptical 3 ohm P.M. Speaker. It incorporates an efficient Tone Control arrangement and has a Magic Eye Indicator (Operative on Record). A Coaxial Socket is also incorporated for MONITORING on Record, and this can also be used to feed an external amplifier. The Amplifier can also be used for high quality reproduction of gramophone records direct from a gram unit. Available for £14/14/-.

ACOS CRYSTAL MICROPHONE

MODEL MIC.33.1 Price £2/10/6

PORTABLE ATTACHE CASE

Is a neat, compact and attractively finished case, being covered with maroon rexine and having an ivory coloured speaker escutcheon. It contains concealed pockets to accommodate the Microphone, Mains Lead and a spare 1,200 ft. reel of tape. Price £5.

A high-quality replacement Radio or Radio- gram Chassis having provision for an FM Feeder Unit and incorporating separate BASS and TREBLE CONTROLS. PRICE ASSEMBLED and READY FOR USE £25/2/0

(Plus 7½ carr. and insurance.)

TERMS: £6/6/- Deposit and 9 months of £2/6/- or £12/11/- Deposit and 12 months of £1/3/3.

THE ARMSTRONG FC48

THE STERNS RADIAl LIMITED

Open Monday to Friday 9 a.m.—6 p.m. Saturday 9 a.m.—1 p.m.
A well designed unit for the home constructor.

Stern's "fidelity" pre-amplifier tone control unit.

"A design for the music lover"

This is the very latest design and needs no recommendation from us. Our kit is complete to Mullard's specification, including the latest GILSON ULTRA LINEAR OUTPUT TRANSFORMER and the entire MULLARD Valve line up. All component parts are supplied. Price of complete kit of parts (Plus 5/- carr. and ins.) £11/11/0

The full specification and building instructions for these three units are available for 1/6 each.

Special price reductions.

For purchasers of a complete "Hi-Fi" amplifier, we will supply (a) complete kit of parts to build the MULLARD "S-10" MAIN AMPLIFIER and the STERN's "fidelity" PRE-AMPLIFIER TONE CONTROL UNIT for £13/16/-, including 6/- P.M. speaker. (Main Amplifier only). A separate power amplifier unit is available for R4/11/0 Tuner etc. at this exceptional price.

"Hi-Fi" enthusiasts.

Stern's high quality 8-10 watt power amplifier. Comprises the main amplifier of our very popular 8-10 watt design, which we recommend as a great economic choice for the enthusiast of the high fidelity class who still wishes to keep the total cost to a minimum.

This unit has already proved itself for a tremendous reproduction up to 8 watts, employing a single standard valve and this in addition to supplying power to the amplifier has an output of 3.6 watts. Incorporates a good quality tone control, thereby ensuring a good selection of foreign stations.

"Hi-Fi" enthusiasts.

Stern's battery portable for the home constructor.

This is a completely new design and we cannot wait at the time of going to press produce an illustration. It incorporates the latest MINIATURE VALVES, and these have about half the battery consumption of the standard valve line-up normally incorporated in this type of Portable Set—batteries will therefore last about twice as long. The set consists of a 3-stage push-pull design covering both long and medium wavebands and incorporates a Goodmans 81/2" P.M. Speaker. Tunes itself very well through volume and station selection is excellent. Accommodates turntable and very attractive cabinet designed by Attache Case.

THE COMPLETE REPAIR LEAFLET (including ATTACH CASE) AND all components are available in kit form.

Tuning units for radio receiver.

Exceptional offer for cash only.

The B.S.R. MONARCH 3-FREQUENCY AUTOCHANGER is offered for £7/7/0 (plus 5/- carr. and ins.)

Record players.

The very latest models are offered at GREATLY REDUCED PRICES.

Transcription units and 3-speed autochanger with manual control position. Send S.A.E. for illustrated and descriptive Leaflet. This Leaflet also contains data of a PORTABLE TYPE GRAM AMPLIFIER which has separate BASS and TREBLE CONTROLS. (Price £4.12.6. Including 6d. P.M. Speaker). All components are available in kit form.

Exceptional offer for cash only.

The B.S.R. MONARCH 3-FREQUENCY AUTOCHANGER is offered for £7/7/0 (plus 5/- carr. and ins.) and this in addition to supplying power to the Amplifier has additional power available for Radio Tuning Unit etc. Price £2/12/6.

Stern's power supply units.

These units are fully supplied with all output connections terminated to connector blocks, thereby enabling ease of connection to a Radio Tuner Unit or Amplifier etc. (Overall size 9in. x 2in. x 2in.) Two Units are available. Type "B", unit incorporates type E611 valve and provides 250-300 volts at up to 100 mA, and 6.3 volts at 3.3 amperes. Price of complete kit of parts, assembled and ready for use £21/17/6. Type "B", unit incorporates type E611 valve and provides 250-300 volts at up to 100 mA, and 6.3 volts at 3.3 amperes. Price of complete kit of parts, assembled and ready for use £21/17/6. Type "B", unit incorporates type E611 valve and provides 250-300 volts at up to 100 mA, and 6.3 volts at 3.3 amperes. Price of complete kit of parts, assembled and ready for use £21/17/6.
EXPAND AND LABORATORY BALANCED. The TSL LORENZ LPH65-2 is a main bass, 12in. diaxial speaker combined with two LP+65 electro-magnetic high frequency TREBLE units permanently mounted coaxially across the front of the main bass speaker at such an angle to give full spherical dispersion. All are laboratory balanced and matched for perfect tone with a frequency range of 20 cycles to 22,500 cycles essentially level output. To ensure level frequency response the voice coils of the two treble speakers are fed through a specially designed crossover network which balances the frequency response of the three speakers as a combined unit.

IMPROVE ANY The TSL LORENZ LPH 65 is the basic treble speaker used in the TSL LORENZ Sound System. Round in shape to ensure smooth, melodious sound the plastic cone is fully tropicalised. Special features are the super high flux density magnets of 17,500 gauss and non-perforated back plate.

SOUND SYSTEM SPECIFICATION LP312-2 IMPEDANCE 15 ohms; FREQUENCY RANGE 20-22,500 c/s; POWER RATING AS A SINGLE UNIT 25 w. at 75 ohms; PEAK POWER RATING AS A SINGLE UNIT 50 w.; DIAMETER Bass 121 inches; Treble 2 inches; DEPTH Bass 71 inches Treble 2 inches; BAFFLE OPENING 21 inches; SPEECH COIL DIAMETER Bass 15 inches, Treble 1 inch; FLUX DENSITY Bass 17,500 gauss, Treble 17,500 gauss; INTERMODULATION FUNDAMENTAL RESONANCE Bass 20 c/s., Treble 1,600 c/s.; CROSSOVER FREQUENCY 2,000 c/s.; FINISH: Grey and blue vitreous anti-corrosion stove enamel.

SPECIFICATION LPH65 HIGH FREQUENCY CONE-HORN TYPE TREBLE UNIT. IMPEDANCE 5.5 ohms; FREQUENCY RANGE WITH SUITABLE HIGH PASS FILTER CONDENSERS 2,000-22,500 c/s; POWER RATING AS A SINGLE UNIT 3 w.; PEAK POWER RATING AS A SINGLE UNIT 5 w.; DIAMETER 21 inches; DEPTH 2 inches; BAFFLE OPENING 21 inches; PEAK POWER RATING AS A SINGLE UNIT 1 w., new and boxed, 2 for 30/-, post paid. 15/-, post 2/9. ROTARY TRANSFORMERS, Input 12-v., output 500 v. at 50 m.A., new and boxed, normally open, new unused, 119. post 4d., 18/- doz., post 1/3, reduction for quantity.

HAND GENERATORS, fitted gearbox and detachable handle, generates 28 V. L.T., 25/-, post paid. giving a final drive of either 320 or 160 r.p.m. for very superior powerful motor, original cost over £1, taken 11 lin. long, 1 lin. dia., taking 1.25 amps., up to 2 -amps. on load, speed balances a very superior powerful motor, original cost over £1, taken 11 lin. long, 1 lin. dia., taking 1.25 amps., up to 2 -amps. on load, speed.

DICTIOARY OF PHOTOGRAPHY

A comprehensive reference book, alphabetically arranged, covering every aspect of photography. It contains the essence of a dozen ordinary textbooks, and provides the answer to every photographic problem. This edition has been meticulously revised throughout, with particular attention to the sections on flash and colour photography.

SEPTEMBER, 1956 

SUPER HIGH FIDELITY THIS YEAR

Let your ears be your judge .... crisp clear, natural reproduction without coloration with TSL LORENZ speaker units. Ten years ahead in engineering and design, this speaker unit will enable you to design and build up a sound system in your own home which will truly add the miracle of LIFE to the magic of music.

No Extra Cost. You get these extra features at no extra cost with every TSL LORENZ speaker unit. Greater output and more sensitivity .... heavy duty oversize speech coil .... Super high flux magnet .... Permanently flexible self-damped cone .... Multi-parameter cone fully tropicalised .... Sealed in air gaps .... Built-in centralising device for perfect gap alignment.

Improve your own H.F. Sound System. For those devotees of high fidelity who possess bass speakers fitting one or more LPH65 treble units will greatly extend your range of super fidelity reproduction. They are, without a doubt, the most sensitive and efficient treble reproducers research has revealed to date. The non-perforated back plate ensures that the LPH65 can be used with any other speaker irrespective of make or type without interaction taking place.

SPECIFICATION LPH65 HUGHES D.C. MOTOR 12 VOLT, 500 V. 50 -cycle single phase A.C., we have supplied over a foot length of 18 SWG No. 18, soldered to the leads, each with angular accuracy, etc., test revealed to be the super high flux density magnet of 17,500 gauss and non-perforated back plate.

500 ohm reading 0 to 9999. Size 5in. long x 1in. x 1in. Price 5/- p.p.

AMPLIFIER CHASSIS

5in. x 3in. x 1in. with three ceramic international octal valveholder plus a quantity of components, 2/6 p.p.

BENDIX I.F. Transformers. 1.63 Mkc/c complete in cans, set of two new and boxed. Size 2 x 11 x 3fin., 5/- p.p. 1/6.

BENDIX Potted Audio Output Transformer complete with integral smoothing choke. Ratings 4 1/2 watt 9,000 ohm Primary. 600 and 4,000 ohm Secondary. Size 4 x 11 x 3in. New and boxed, 4/6, p.p. 1/6.

INSULATION TAPE

Perfect condition. 1in. wide, 25 yd. reels, foiled, in tins, 1/3 each, p.p. 8d.

ELECTRO MAGNETIC MICROPHONES

With switch and plug R.A.F. Type 48, new and boxed, 2/- each, p.p.

R.A.C. CROSSOVER NETWORKS

15 ohms 800 cycles, complete with chokes and condensers mounted on chassis measuring 7in. x 12in. Price 18/6 plus 3/6 p.p.

POCKET RADIO

The complete kit of parts includes a Type OL10 Hearing Aid (with Crystal microphone) in perfect working order with miniature ear phone and moulded ear insert attached, ferrite rod, germanium diode, components, circuit diagram and full instructions.

PRICE £2 6s. Od. Post paid

All components sold separately

Deaf Aid Unit with earpiece... £1 15 0
Plastic Ear mould........... 2 0
Ferrite Rod.................. 5 0
Conversion Components..... 4 0
Batteries 110 V H.T. (Type D 18) 30 v H.T. (Type B 119) 4 3

NOTE: As the crystal microphone is not used in the Pocket Radio, it can, if desired, be used as a general microphone and it does not require a matching transformer.

Make a miniature

Incorporating high “Q” technique using the New Ferrite rod. Made possible by simple conversion of an ex-Govt. Hearing Aid.

Technical Details. A Germanium Diode Detector circuit followed by the existing 3 valve Amplifier, giving adequate amplification throughout the medium wave band.

This conversion can be carried out in approximately 30 minutes.

SEE and HEAR this Miniature POCKET RADIO demonstrated.

PROOPS BROS. LTD.

BEACON

TRANSMITTER RECEIVER AN/PPN-2
comprising Transmitter Receiver RT-37/PPN2 complete with Valves, Antenna System (9'6" High, collapsible) Head Set HS/30 miniature light weight type, complete with cord. Canvas carrying case with shoulder harness. Instruction manual and circuit.

- Frequency 214-234 Mc/s in 5 channels.
- Valve line-up: Receiver—IR5, 3A5, 3 of 1S5. Transmitter 4 of 3A5.
- Power Output 8 watts.
- Power Supply operated from a 2 v. battery.
- H.T. obtained through 2 synchronous vibrator packs built in TX/RX.

Size: 14½in. high, 13in. wide, 9½in. deep.

New and in Original Packing complete with valves.

PRICE £5 10s. Od. Plus 10/- carriage.

AN/APN.1 TRANSDUCER
This Unit consists of Magnet, and Coil which is attached to an aluminium diaphragm suspended freely and perforated to prevent air damping. Mounted on a Ceramic cover which sits over the diaphragm is a form of 2-Gang capacitor which has a swing from 10-50 pF.
The above unit is used as part of Wobbulator described on page 252 of the June "Wireless World." PRICE 7/6 p.p.

AN/APN.1 A.F. AMPLIFIER
An Audio Frequency Amplifier in a sub-chassis 5 x 3 x 3½in. R x C coupled, using TWO 12S97 and ONE 12S7 valves; and can be used for Telephone Intercomms., Pre-Amplifiers, etc. Price, post paid 15/-

MINIATURE I.F. STRIPS
Size 10½ x 12½ x 3in. Frequency 9.72 Mc/s. 2 EF.92a and 1 EF.91 I.F. amps. EB.91 DET/AGC. EF.91 AGC. Amp. and EB.91. Limiter. Circuit supplied. Price 8/- less valves Post paid.

MAINS POWER UNIT
TYPE 234
(For use with Receiver R 1392)
Double Smoothed 200-250 v. 50c Input. 240 V. 100 mA. 6.3 at 6 amps. with Volt Meter reading input and output voltages. Size: 19in. x 10in. x 6½in. Standard Rack Mounting. Price £4/10/- each, plus 7/6 carriage.

RECEIVER TYPE R1132
Frequency 100-126 Mc/s. 11-valve Superhet.

Valve line-up: R.F. Amplifier VR.65 (SP.61); Frequency changer VR.65 (SP.61); Local Oscillator VR.66 (P.61); Stabilizer VS.70 (7455); 3 x I.F. Amplifiers VR.53 (EF.39); B.F.O. VR.53 (EF.39); DETector VR.54 (EB.34); A.F. Amplifier VR.57 (EK.32); Output VR.67 (6J5). Switchable A.G.C. and A.V.C. Standard Rack Mounting.

PRICE £3/7/6. Packing and carriage 15/-, 10/- returnable on Packing Case.

I.F. AMPLIFIER UNIT
(As illustrated)
460 Kc/s with T4 Brand New and Boxed. Fully Screened in plug-in Box. Size 2½in. x 1½in. x 4½in. Price, with circuit, 10/- ea., plus 1/- p.p.

MINIATURE TRANSMITTER STRIP
TYPE 81.

Just released! Compare the advantages! Treasure box, AM/FM and crystal controls!! For crystal or microphone input... A.C. mains 200/250 v. V. A.C. mains 200/250 v. Type Valve line-up: 6V6GT, 6557, metal 6107. Included are 201/2in. long, 91/2in. high, 71/2in. deep. Overall 13in. long, 91/2in. high, 71/2in. deep. Price is £19/17/6.

Please order by mail. Price £15/6/6 post free.
SEPTEMBER, 1956
WIRELESS WORLD

The "Superior" Four Kit.

Our new four-valve receiver, A.C. mains, 6K7, 6J7, 6V6, and a 45/-. This superhet-autostereo, doesn't incorporate any of the features that make our very successful "Economy Four" so valuable, but it is a set that will prove to be a real bargain at an even lower price.

The "Economy Four" T.R.F. Kit.

Three-valve plus metal rectifier receiver, A.C. mains, 275 v. D.C. 21/2 amp. We can supply all required components right down to parts like M.F. coils, 6L6, 57, 5796, 6L7, 6L6G. Catalyst ready-dried. Cabinet size 12 in. long by 4 in. high by 1 in. deep. Chassis ready-dried. This is the best choice for the do-it-yourself type of constructor. Complete instruction booklets with practical and theoretical diagrams. Each component brand new and tested prior to packing. Our price £1.95-0-0 complete. Remember this set is being demonstrated at our premises. We proudly claim that our fully illustrated instruction booklet is the most comprehensive available for this type of receiver. Booklet available at 1/- post free. This is allowed if kit is purchased later. Plus 2/- post charge.

The "Superior" Four Kit. Our new four-valve receiver, A.C. mains, 6K7, 6J7, 6V6, and a 45/-. We can supply all required components right down to parts like M.F. coils, 6L6, 57, 5796, 6L7, 6L6G. Catalyst ready-dried. Cabinet size 171/4 in. x 10 in. x 5 in. Width, Maximum depth at base, 71/2 in. at top sloping front. Very attractively finished in light walnut and walnut. Each component brand new and tested prior to packing. Complete instruction booklets with practical and theoretical diagrams is provided. Booklet available at 1/- post free. Our price for complete kit £2.95-0 complete. Please add 2/- packing and carriage if preferred. We can supply Cabinet Assembly only, comprising Chassis, tube-washer bracket, wire, dial, pointer, drum, etc. To be supplied on £5 deposit, plus 2/- post charge and carriage. N.B.-Our kits are now supplied with sufficient color for the job.

N.B. All our T.R.F. Kit circuits now include specially wound Denic "Maxwell" coils on polythene formers, improved perforation, and trimmers remain the same.

COMMUNICATION RECEIVER PCB-3 .

3-wave band, 135-190-790, 900-2,000 meters. Valve range 6SY, 6FQ2, 6L8 and 6KF19. Illuminated calibrated dial, fly-wheel mounting, alarm circuits. In black latched case size 171/4 in. x 10 in. x 5 in. Overall size 21 in. x 11 in. x 51/4 in. Priced £12/-0 only, plus 2/- post and carriage. With each set we supply full conversion details for A.C. mains. All required components for conversion available at 331/2 pence post free. We can now supply already converted sets. A.C. mains, 275 v. D.C. 21/2 amp, plus carriage. H.B. available.

METER SPECIAL. 1 ma. by O.C.T., at 9/-, also 5 ma. by O.C.T., at 9/-. We have a range of meters from 0.1 to 500,000 ohms. Fully smoothed and rectified, incorporating Warwick 6 volt 4 cycle vibrator type 80. Unit size only 31/2 in. x 21/2 in. Price 15/- plus 1/- 6d. post charge.

VIBRATING TRANSMITTER. 375-20 ohm. 8 volt, 100 ma. Fully smoothed and rectified, incorporating Warwick 6 volt 4 cycle vibrator type 88E. Unit size only 31/2 in. x 21/2 in. Price 15/- plus 1/- 6d. post charge.

NEW C.R. "HUMBER."—By Manufacturers. Superhet-all dry superhet. £4.25-0-0. All tubes are brand new, in original packing, plus 2/- 6d. post charge. We have also a special T.H. 311 at 5/- 6d. plus 1/- 6d. post charge. These meters are brand new, with full operating instructions and theoretical diagrams is provided. Booklet available at 1/- 6d. post free. Our price for complete kit £5.95-0-0 complete. Please add 2/- packing and carriage if preferred. We can supply Cabinet Assembly only, comprising Chassis, tube-washer bracket, wire, dial, pointer, drum, etc., etc., etc. To be supplied on £5 deposit, plus 2/- post charge and carriage. N.B.-Our kit, supplied as above, plus 2/- 6d. post charge includes all required components, and full assembly instructions. N.B.-This kit is completely self-contained in a metal box measuring 8 in. x 31/2 in. x 11/4 in. and is ideally suitable for any all dry portable receiver requiring 9 v. B.T. and 1.5 f.]

TRANSMITTERS: NULLARD TYPE 0.071. Available as stock at new list prices of £4/- each, post free.

Clyne Radio Ltd.
18, Tottenham Court Road,
Manufacturer-to-Consumer policy saves you at least one-third cost.

The No. 1 "SYMPHONY" AMPLIFIER MARK III is a 3-channel 5-stage Gram/Radio Amplifier with astonishingly flexible tone control. You can lift the trable, the box, or—and here is the feature—the middle frequencies to suit your own ear characteristics and the record or radio programme being heard. It is thus possible to arrange the frequency-response of the amplifier to a curve equal and opposite to the resultant curve of the other items in the chain so that what finally registers in the brain is as per original. This flexibility of control is even more important than the nominal linear response of the amplifier, as the pickup speaker, etc., are not linear. Independent Scratch-Cut is also fitted and special negative feedback circuit employed. The Amplifier can accommodate a wide variety of records from old 78s to new L.P.s, and there is full provision for Radio Tuner, Tape take-off and Playback. It is available with up to 4ft. flexible cable which simply plugs into the mains transformer. The scale is directly calibrated on all ranges with continuous ranges on fundamentals (NOT harmonics) either modulated or non-linear.

THE MODEL CR30 FLEXIBLE COIL CABINETS, 2/3 -3/4 -4/5 -5/6 and 6/7 in. £117 10/- each, Ready built, 15/- extra.

THE NEW No. 2 "SYMPHONY" AMPLIFIER MARK III, as No. 1 but with 10-watt Push-pull triode output and triodes throughout. Woden mains and output transformers. The scale is 5 to 7 and 12.5 and 15 ohms. Full provision for Tuner and Tape. Competes with the most expensive amplifiers on the market yet costs only 16 gns. (carriage 5/-). Fitted in portable Steel Cabinet 2 gns. extra.

"SYMPHONY" AMPLIFIERS WITH REMOTE CONTROL. Both the above model Amplifiers are available with all controls on a separate Control Panel with up to 4ft. flexible cable which simply plugs into the amplifier. Enables the Amplifier proper to be sat in the cabinet whilst the controls are mounted conveniently higher up. Extra 2 gns.

SG50 SIGNAL GENERATOR covers 100 kcs to 80 Mch in six continuous ranges on fundamentals (NOT harmonics) either modulated 400 cps or CW. Uses EF91, 6L6C and R81 with double winder mains transformer. The scale is directly calibrated on all ranges with scale length over 60 inches. In de luxe olive green metal case with carrying handle and engraved matching scale and perspex. The cost today is only £8/10/- plus 6/- carriage and packing. Hire Purchase £4/4/- deposit and five monthly payments of 17/-.

V590 VALVE VOLTOMETER measures up to 250 volts A.C., R.F. or D.C. with input impedance of 1 M. ohms. For mains operators only. Price £7/19/- plus 4/- carriage and packing. Hire Purchase £4/4/- deposit and five monthly payments of 17/-.

Further details sent on receipt of stamped and addressed envelope. Trade enquiries welcomed—supplied direct.

WE PURCHASE ALL TYPES OF RECEIVERS AND TEST GEAR

AMERICAN OSCILLOSCOPE BC. 1064A. Manufactured by Carolco Co., U.S.A. and supplied brand new and boxed. Special offer. Uses 3J9A CRT. Operation from 105-125 volts, 50-600 cycles. Supplied complete with test probe and circuit, £3 each.

TRANSFORMER BARGAIN. Admiralty pattern. Primary 230 volt 50 cycle. Two separate secondary windings each 14 volt centre-tapped 12 amps. This will give either 7, 14, 21 or 28 volts 12 amps. Brand new and boxed, £4.6 each.

BUZZERS. Brand new and boxed. Operate from 3/6 volt D.C. 2/6 each.

JACK PLUG LEADS. Brand new 6ft. X 325 chassis. Only 3:- each.

RADAR TRANSMITTER APQ-9. Supplied brand new. Complete with 931A photo multiplier cell and resistance network. Valves used are 2EAC7, 1EAC7, 2E607 and 2E612. Other features are, Lecher lines, cooled by blower motor, and mechanical counter in anode and grid circuit. Price only 79/6 each.

TRANSFORMER SNIP. Parmed type. Input 230 volt 50 cycle. Output 195 volts 0.5 ma, tapped 130 volts. 6.3 volt 5 amp. and 6.3 volt 0.3 amp. Brand new only £4.6 each.

DEAD AIR UNITS. Made by famous manufacturers. Complete less only outside bakelite case. Features include, battery space on chassis, cone and volume controls, output transformer matched to 30 ohms, extra sensitive crystal microphone, uses three sub-miniature valves. ONLY 19/6 each. Earpieces to match, 3/6 each. Batteries, 1/-.

SPECIAL OFFER OF GRAM MOTORS. 112A6 and I2K8. Price £9/6 each. A must have spare for this receiver. Only 112A6 new or in original packaging, 7/6 each.

EDDYSTONE 12 Volt POWER UNITS. Input 12 volt D.C. Output 180 volts 65 ma. House in grey metal case complete with all smoothing, £9/6 each.

SUB-STANDARD MILLIAMETERS. Basic movement 1 ma. Seven ranges 0.1, 0.5, 5, 10, 50, 100, 200 and 500 ma. 6th microamp scale calibrated 0-100 ma. Calibrated to an accuracy of 0.1%. Supplied brand new in polished wood case, £9/6 and 7/- each, complete with leather carrying case. Price £12/10/- each.

MARCONI CRYSTAL CALIBRATORS. Frequency coverage 170-340 mc/s. Directly calibrated, complete with 10位置 switch and crystal and spare set of 5 crystals. Price £5/6/- each.

THermal DELAY RELAYS. Belling-type, operation 12/4v. D.C. Brand new, 3/6 each.

SUBL--STANDARD VOLTMETERS. Six models: 0.75, 1.5, 30, 60, 150 and 300 volts D.C. 66 microvolt scale calibrated 0-150 volts, with knife edged pointer. Each instrument calibrated to an accuracy of 0.3%. Supplied in perfect condition in polished wood case, size 7 1/2 x 7 1/4 x 4 1/2. Price £4/16/- each.

HOURS OF BUSINESS: 9 a.m. - 6 p.m. Monday to Saturday.

COMMUNICATIONS RECEIVER R.1155

The famous ex-Bomber Command Receiver known the world over to be supreme in its class. Covers 3 wave ranges: 185.7-5 MHz., 7.5-3.0 M.cs., 1,500-600 kc/s., 500-200 kc/s., 200-75 kc/s., and is easily and simply adapted for normal mains use, full details being supplied. (ONLY £10/11/6.)

These are reconditioned, and in perfect working order, fully tested before dispatch.

A.C. MAINS POWER PACK OUTPUT STAGE, in black metal case, enabling the receiver to be operated immediately, by just plugging in, with full simplicity. Can be supplied as follows: WITH built-in 6J1. P.M. speaker, £5/6/6.; LESS speaker, £4/10/6.

DEDUCT 10/- IF PURCHASING RECEIVER AND POWER PACK TOGETHER.

Brand S.A.E. for illalated leaflet, or 13 for 14-page booklet which gives technical information, circuits, etc., and is supplied free with each receiver.

CLASS D WAVE METER

Another purchase of this famous crystal-controlled wave meter which has been repeatedly reviewed and recommended in the "R.S.G.B." Bulletin as being suitable for amateur transmitters. Covers 1.9-9.0 Mc/s. and is completely with 10001 kc/s. crystal, 2 valves ECH35, two 6-volt vibrators and instruction manual. Designed for 6 v. D.C. operation, but a simple mod. data for A.C. supplied. BRAND NEW IN MAKER'S TRANSIT CARTONS. ONLY £3/1/6.

COLLINS TCS TRANSMITTERS

Special offer of these famous American Transmitters. Frequency range 1.5-12.0 Mc/s. in 3 bands. Employs 7 valves, 2 of which use 2 valves EF54 and 2 valves EF50, 2 6-volt vibrators and in-1/2in. P.M. speaker. Simple mod. data for A.C. supplied. BRAND NEW IN MAKER'S CARTONS. ONLY £5/1/6.

The famous American Transmitters which can be used for a variety of purposes are offered at ridiculously low prices while stocks last. Complete with 6 metal type valves, 1 each of 12AX7, 12AT7, 12AU7, and 3 of 1257T, in aluminium case size 5in. x 3in. x 13in. A.C. circuits supplied. Choice of Models, BC555 (6-9 Mc/s.), 25/-; BC545 (3-6 Mc/s.), 27/6; BC543 (195-550 kc/s.), the renowned "Q Fiver," 35/6.- BRAND NEW IN MAKER'S CARTONS, 6/9/6.

WALKIE TALKIE TYPE 18.

Suitable for car battery. ONLY 20/- each.

AVOMINOR CARRYING CASES.

Size 5in. x 3in. x 2in., with long carrying strap. In high-quality leather with press stud flapping flap. Made with universal Avominor. BRAND NEW. ONLY 7/-.

AMERICAN 14-2 DYNAMOTORS.

Output 225 v. 60 mA. Ideal for car radio or running electric shaver from car battery. ONLY 45/-.

CHOKES.

10H 60 mA., 4/-; 5H 200 mA., 7/6.

SEPTEMBER, 1956
ABACs or Nomograms

By A. Giet—Translated from the French by H. D. Phippen and J. W. Head

Not only demonstrates the many and varied applications of the Abac or Nomogram, but shows how even those without highly specialised mathematical knowledge may construct their own charts. It deals with both Cartesian abacs and alignment charts and contains a large number of practical examples in mechanics, physics and electrical engineering. This edition has been especially adapted for English readers.

8½ x 5½ 235 pp. Illustrated 35s. net By post 35s.10d.

PHANTOM
Q-MAX CHASSIS CUTTERS
STILL the easiest and quickest way of cutting holes in SHEET METAL.

G.D.O.—1A GRIP DIP OSCILLATOR
is an ideal instrument for the determination of tuned circuit resonant frequency, tuning transmitters without application of power, for the determination of coil mutual and stray inductances and both fixed and stray capacitances. Covers 0.5 to 300 Mc/s, in eight ranges. PRICE 12 Gns. Complete. (0/6 Gns. Dep. and 12 monthly payments of 11/7.)

HATFIELD IMPROVES EVEN ON "PERFECT" WAVEFORM
(With apologies to you who know who)
Even on perfect waveform? Well, it's a bit difficult when the distortion is as low as 0.28 of 1%, but we have managed it, and, even more important, with fewer components, and the oscillator is now complete with directions for working at 50 Kc/s or up to 75 Kc/s.

Bias Oscillator Coils. The HATFIELD oscillator has COMPLEMENTARY STRIPPING, LESS THAN 0.28 of 1% distortion, R.M.S. output voltage 50% greater than the H.T. voltage, I valve, I coil, simple circuit.

Sounds incredible, but it is GUARANTEED.
Send for copy of N.P.L. report. The HATFIELD oscillator is now made with output impedances to suit any Head on the market.

TAPE RECORDISTS! Are you completely satisfied with your recordings? Bad waveform in an oscillator can cause DISTORTION due to intermodulation, NOISEY BACKGROUND due to D.C. component in an asymmetrical waveform and INTERFERENCE with radio due to harmonics beating with incoming signal. The fundamental frequency cannot cause audible beats.

COIL, complete with circuit, 10/6 post free. Patent app. for.

THE "VISCOUNT" tape recorder, successor to the "Herga" and making FULL use of the push-button facilities of the wonderful new Motek K8 deck, Servo brakes, Button control of Amplifier roller, pads and brakes. Adjustable Azimuth and possibility of changing from B.S.I. to Continental Standard. But write for leaflet and judge whether this is not the best value in recorders at 42 guineas, or 21/2/- down and 12 monthly payments of 21/8/6.

BIAS REJECTOR COILS
Even a small amount of bias frequency getting into the amplifier can cause a lot of trouble, and nearly all tape recorders need a rejector coil to prevent this.

COIL, complete with instructions, 5/6 post paid.

HATFIELD RADIO
78 STROUD GREEN RD., LONDON, N.4

PHILIPS ELECTRICAL INDUSTRIES LIMITED
require RADIO AND TELEVISION ENGINEERS for the Laboratories of their modern factory now nearing completion at Croydon. Candidates should possess either an Engineering degree or H.N.C. (light electrical) or C & G (Full Tech.), but those in the course of study for these qualifications will be considered and if appointed, assisted with their training. Facilities would be provided for obtaining further qualifications with a view to a progressive career which can involve moving to other spheres of activity within the Organisation.

Applicants should apply in writing to the Personnel Officer, PHILIPS ELECTRICAL INDUSTRIES LIMITED, Croydon Unit, Commerce Way, Purley Way, Croydon, quoting reference No. G/1.

ELECTRONIC MANUFACTURING COMPANY
is prepared to receive suggestions from Development Engineers and Inventors, with a view to manufacture.

Fair arrangements regarding Royalties and Patents.
Replies may be made in strict confidence to the General Manager,
c/o BOX 3062, WIRELESS WORLD, DORSET HOUSE, STAMFORD ST., LONDON, S.E.1.
Introducing

Power Point

Two and a half million Power Point cartridges have already been sold in the United States of America. E.V. Limited now make available in the United Kingdom this revolutionary Power Point.

Directly coupling the sapphire stylus to the ceramic element and encasing in nylon results in a miniature cartridge of outstanding performance.

A range of mountings is available to suit all tone-arm designs.

BAND III CHANNELS 8-9-10
A new CONVERTOR KIT is now available for LONDON—MIDLANDS—NORTH

Fit this new convertor not to your set but inside your set, even 9in. table models, and retain that professional look.

This convertor has been evolved since the I.T.A. transmissions began, and is based upon experience gained in the conversion of very many Band I sets in the London area.

It will convert any set, any age, TRF or Superhet. It includes station switching. It provides pre-set constant balancing. It uses only one aerial input for both bands. It provides manual tuning on Band III. It is totally screened. It completely rejects unwanted signals. It requires no additional power supply where either 6.3v. or 6v. amp line is available.

CONVERTOR wired and aligned with fitting instructions.

KIT complete in every detail, less knobs.

KNOBS each.

CIRCUIT and instructions in detail (free with kit).

BAND III AERIALS (send for list), from 1/3.

CROSS-OVER UNITS—Outdoor (printed circuits) 15/0.

AERIAL feeder cable per yard.

When ordering please state present B.B.C. Station and I.T.A. Orders over £2 post free.

Compiled by "Wireless World"

Comprehensive and up-to-date—operating characteristics of over 2,800 valves and C.R. tubes...

Lists over 1,600 of the world's broadcasting and television stations from booksellers and radio dealers

Guide to Broadcasting Stations, 1956-57

Compiled by "Wireless World"

All European long and medium-wave broadcasting stations and over 1,900 short-wave transmitters in 125 countries are listed both geographically and in order of frequency and wavelength in this revised edition. The information, checked against measurements made at the BBC receiving station at Tatsfield, has been corrected to mid-July. Frequencies of over 500 v.h.f. broadcasting stations in Europe and operating details of European television stations are also included.

L/P THE RECORD LIBRARY

OFFERS A UNIQUE LIBRARY SERVICE TO THE CLASSICAL L/P ENTHUSIAST

REMEMBER!

• Subscription includes postage and packing this end.
• Return of Post Changing Service.
• Special arrangements for members interested in new issues.
• Our completely comprehensive catalogue is currently extended to include virtually every recommended L/P issued.

For full details send S.A.E. to:

L/P THE RECORD LIBRARY

Because of Staff Holidays we shall not be open for changing records from August 25th until Sept. 1st.

IT COSTS AS LITTLE AS 1/- PER WEEK EACH L/P BORROWED

AND...

• We can supply a brand-new (guaranteed unplayed) factory fresh copy of any available L/P to order N.B. (except H.M.V.). With each purchase goes a POST FREE change of Library records.
• Many of the LIBRARY COPIES are themselves marked down for sale at most reasonable second-hand prices. (Surely the ideal way to buy a "used" record is to hear it first!)
• The L/P Record Library, Squires Gate, Station Approach, Blackpool, Lancs.

High Fidelity

is the convincing characteristic of the MOVING COIL MICROPHONE MD 21

Whenever it is essential to bring out the finest gradations of tone, this truly good microphone should be used.

The MD 21 is in the top class! On account of its wide frequency range, uniform from 50 to 15,000 cps., it has been installed by most Radio and Television Companies throughout Europe.

We are represented in the U.K. by:

Dimafon Ltd., 27, Craven Street, London, W.C.2

ELECTRONIC COMPUTING

The continuing expansion of the British Tabulating Machine Co. Ltd., in the electronic computing field, in collaboration with the General Electric Co., Ltd., and the International Computer Corporation of America, offers excellent opportunities for junior or senior engineers interested in the design and construction of computing and calculating machines. We undertake to train at full pay, by practical work on development projects, applicants with suitable qualifications but with no previous experience in this field.

The qualifications looked for include either a degree or Higher National Certificate in electrical engineering, physics, mathematics, or electronic experience.

Facilities include Pension Fund, Sick Pay, and further education arrangements. Assistance with housing can be given.

Applications or enquiries should be addressed to the Personnel Superintendent, quoting reference: WW/19.

THE BRITISH TABULATING MACHINE
COMPANY, LIMITED
Icknield Way, Letchworth, Herts.

MARCONI INSTRUMENTS LTD.

DRAUGHTSMEN

We require a number of Senior Draughtsmen with experience in the electronic field. Due to expanding activities men with experience and initiative can be sure of progressive advancement.

Comprehensive pension and assurance schemes are in operation.

On well served transport routes. Holiday arrangements made can be maintained.

Write for interview to:
DEPT., C.P.S., 336/7, STRAND, W.C.2.

DEVELOPMENT

ENGINEERS

E. K. COLE LTD., SOUTHEND-ON-SEA, ESSEX.

Vacancies exist for suitably qualified engineers at the Prittlewell works, where the Development and Engineering laboratories and workshops are being extended. Interesting and absorbing work in ideal conditions.

Write or call Personnel Manager.

M.W.T. RADAR. Marconi's Wireless Telegraph Company Limited, Chelmsford, invite applications for the following appointments in their Radar Division.

SYSTEMS DESIGN ENGINEER: Applicants must hold an H.N.C. as a minimum technical qualification and should have some operational experience of ground radar equipment. Experience in evolving radar systems desirable.

SYSTEMS PLANNING ENGINEER. Applicants must have installation experience of ground or ship-borne radar equipment. Technical qualifications up to H.N.C. standard desirable but not essential if applicants have sound experience.

SALES ENGINEER. This appointment is suitable for applicants who possess good technical experience of ground radar, obtained for example in a technical branch of the R.A.F. This experience should be coupled with a good technical qualification such as a University Degree or H.N.C.

All the above appointments are permanent and pensionable. Applications will be treated as confidential and should be addressed to Marconi's Wireless Telegraph Co. Ltd., Dept. C.P.S., Marconi House, 336/7, Strand, W.C.2.

Please quote Ref. 2060A.
'Belling - Lee' are looking for

**RESEARCH ENGINEERS (Technologists).**
For development of (1) VHF and UHF receiving aerials. (2) Interference suppressors and screened compartments. (3) Circuit protection devices (fuses, cutouts, etc.). Minimum qualifications Grad.I.E.E., H.N.C. (advanced) or equivalent.

**RESEARCH ASSISTANTS (Technicians).**
To act as assistants to the above. Minimum qualifications O.N.C.

**MATERIALS ENGINEER.**
To study and advise on suitability of existing or new materials for its products. Previous experience essential. Minimum qualifications: a degree in chemistry and proved knowledge of metallurgy.

**TECHNICAL WRITER.**
To prepare clear and concise reports from laboratory notes and précis suitable for advertisements, trade and internal circulation. This is a position for a man or woman with moderate technical qualifications, but a sound general education and a flair for writing are essential.

As part of the Company's plans for expansion the research department has recently been enlarged, and we have vacancies there for men and women of ability for whom there are excellent prospects of advancement.

We are well established and have an excellent record of technical achievement and integrity in the radio and electronic field: we manufacture an extensive range which includes components, fuses, cutouts, aerials, interference suppressors, screened compartments and electrical car accessories.

We think that this range of activities will appeal to those with a genuine interest in electronics, particularly as we do not "type" our research staff but encourage them to move from subject to subject according to their aptitude and ability.

The establishment is pleasantly situated on the outskirts of London at the edge of the Green Belt, and excellent facilities for further study exist at the Enfield Technical College: the appointments are permanent and include membership of a pension and life assurance scheme: we can arrange holidays this year.

Applications (which will be treated as strictly confidential) to the Secretary, Great Cambridge Road, Enfield, Middlesex, should give all personal details, experience, qualifications and some indication of the salary expected.
MWT RADIO AND RADAR RESEARCH. MARCONI’S WIRELESS TELEGRAPH COMPANY LIMITED offer opportunities for QUALIFIED ENGINEERS & PHYSICISTS for interesting appointments in their Research Department near Chelmsford for work on the following:

COMMUNICATION SYSTEMS
RADAR
GUIDED WEAPONS
MICROWAVE TECHNIQUES
APPLIED PHYSICS

The above appointments offer considerable scope for advancement. Please apply, in confidence, giving full details and quoting Ref. 2300 to Mr. J. L. Scott, Dept. C.P.S., Marconi House, 336/7, Strand, W.C.2.

MARCONI INSTRUMENTS LTD.
TEST ENGINEER/INSPECTOR
required

DUTIES: Fault finding and testing of telecommunication equipments and industrial electronic instruments on small scale production line with interesting work on new projects as developed.

QUALIFICATIONS: Wide practical experience of test methods and equipments in H.M. Forces or Industry backed by sound theoretical knowledge. Candidates should be first-class RADAR and RADIO Technicians, preferably possessing Higher National Certificate, or equivalent in telecommunications. Lack of academic qualifications should not serve as deterrent to engineers of proved ability.

Comprehensive pension and assurance schemes are in operation and Canteen and Social Club facilities are provided.

On well served transport routes.

Holiday arrangements made can be maintained.

Write for interview to:
DEPT. C.P.S., 336/7 STRAND, W.C.2.

or call any day including Saturday mornings at —
MARCONI INSTRUMENTS LTD.,
LONGACRES, HATFIELD ROAD,
ST. ALBANS, HERTS.

A book for every viewer, home-constructor and service engineer
Correcting TV Picture Faults

By John Cura and Leonard Stanley

Uses about 150 remarkable photographs of actual faults appearing on the screen of a television receiver to enable quick diagnosis of trouble. The accompanying text explains what action can be taken to remedy the faults and is primarily written in everyday language for the ordinary viewer. Further details of a more technical nature are included in differently displayed text for the service engineer, the advanced amateur, and the home constructor.

Over 150 illustrations of actual picture faults from all booksellers
Iliffe & Sons Ltd., Dorset House, Stamford St., London, S.E.1
AN OUTSTANDING OPPORTUNITY TO JOIN LEADING RESEARCH TEAMS IN THE FIELD OF ELECTRONIC ENGINEERING

The SOLARTRON ELECTRONIC GROUP offers excellent opportunities for progressive careers at its new Research Laboratories, designing and developing the electronic equipment of the future in the instrument and automatic control fields. With the successful Solartron Electronic Group you will find a fresh and stimulating atmosphere, the encouragement of individual responsibility, and superb test equipment facilities.

PROGRESSIVE OPPORTUNITIES FOR

SECTION LEADERS

With experience in leadership and proven ability in original circuit design work of advanced nature in the following fields: OSCILLOSCOPES, ELECTRONIC TEST EQUIPMENT. Candidates must sincerely believe in their ability to produce designs which will reach a new high in world standards.

PROJECT ENGINEERS

Skilled in developing electronic equipment from basic circuitry, and with a working knowledge of production design requirements. Men with drive, ambition, and a good eye for detail are particularly required.

JUNIOR ENGINEERS

With a sound theoretical background and keen to learn all aspects of instrument and automatic control equipment design practice. Degree, Higher National Diploma or Certificate, or equivalent experience essential.

Because these are outstanding opportunities recruitment will be very selective and will continue for several months. Salaries will be relatively high to match the standard required.

*Apply in writing, giving full information, to the Personnel Director:

Please write giving details of age, qualifications and experience to PLESSEY NUCLEONICS LTD., WEEDON ROAD, NORTHAMPTON, QUOTING REFERENCE P.N.8.

SIR W. G. ARMSTRONG WHITWORTH AIRCRAFT LIMITED

require an Assistant Chief Electronics Engineer to undertake work on general telecommunication problems. His main responsibility would be to take charge of the Electronics Laboratories but he would also be required to cover other sections of the overall development programme.

The appointment is of a senior nature carrying considerable responsibility and offering ample scope for initiative and the development of new ideas. The successful candidate will also be intimately connected with the expansion of laboratory facilities now in progress.

Applicants should have a minimum of five years experience in research and development in electronics or light current electrical engineering or equivalent experience. Qualifications should include a good degree in Physics or Engineering, it is also desirable that candidates should be corporate members of a senior engineering institution. Although not essential, Service radar or radio experience would be an advantage particularly in the guided weapons field.

The salary scale will be commensurate with the high degree of responsibility associated with this senior post, and an attractive superannuation scheme is in operation.

Applications will be treated in the strictest confidence and should be addressed to:—

Technical Appointments Officer,
Sir W. G. Armstrong Whitworth Aircraft Limited,
Baginton, Nr. Coventry.
Quoting reference E/2.

SENIOR ELECTRONIC ENGINEER

The Personnel Manager,
SIR W. G. ARMSTRONG WHITWORTH AIRCRAFT LIMITED,
Baginton, Nr. Coventry,
Fully Serviced and Guaranteed
Test Equipment

19 Buckingham Street, London, W.C.2.
Telephone: TRAfalgar 2371/2/3.

MARCONI TYPE TF-425 (for equivalent ex-service type) valve voltmeters, range 0-150 volts, £17.
MARCONI TYPE 12 OSCILLOSCOPE
Pedestal Model, Clin. screen, single beam.
Time base 3 to 30,000 c/s. Emminently suitable for demonstration purposes.
PRICE £45.
MARCONI TYPE TF-332C "Q" METER
"Q" range—10 to 500, frequency range .5 to 50 m.c/s., £80.
A.C. WAVE-METER, 0-100 watts scale, multiplier position X1, 2, 5, 10, 50, 100 and 200.
PRICE, in perfect operating condition, £42.
SIGNAL GENERATORS.
Marconi Type TF-144G. 85 kc/s to 25 m.c/s., £85.
Marconi Type TF-390G, 16-150 m.c/s., £25.
Marconi Type TF-517E, 150 to 300 m.c/s., £10.
Marconi Type TF-3I7F, 18-38 m.c/s. and 150-300 m.c/s., £35.
Marconi TF-675D Modulation Generator (Pulse Generator), repetition speed 500 to 3,000 c/s., pulse width 2.0 to 12.5 microseconds, £25.
1-22 Crystal Controller Signal Generator, range 8-15 m.c/s. and 150-230 m.c/s., £13/5/- Type BD4 General Radio/Federal Radio Signal Generator, range 7.5-330 m.c/s., £65.
T.S-14AP PORTABLE OSCILLOSCOPE.
2in. tube magnified to 3in. field, with built-in lens. Viewable Waveforms: 30 c/s.-1 mc/s. (sine-wave): .25-30,000 micosec., (pulse). Input voltage 1-100 volts.
PRICE, brand new, in carrying case and complete with full range of accessories, £35. Voltage Divider for the above, Type TS-29/1AP, extending the range to 20,000 volts, £12.
DUAL PEN EYEDASH Volt/Free Recorder. Range 160-240 volts, 8-day clockwork chart drive, complete with 12 charts, spare pens and accessories, £75.
WINSLOW TYPE 301 WHEATSTONE BRIDGE, with built-in Galvanometer, 4-decade type. Multiplier switch positions: 1/1000, 1/100, 1/10, 1/9, 1/4, 1/1, 10, 100.
PRICE £22.
R-54/PN-9 Receiver-Indicator Units (LORAN), comp. and teletype as F.O.B. requirements. PRICE, F.O.B. London, £120.

We urgently require Communication Receivers BC-342 and B-C312 (unmodified).

Please write for details of the above and other Test Equipment and Communication Receivers to:

Z. & I. AERO SERVICES LTD.
19 Buckingham Street, London, W.C.2.

GILSON
15 and 30 WATT TRANSFORMERS for U-L Amplifiers

VALVES WANTED
ALL types of valves British or American. A transmitting and receiving; freest cash prices paid. What have you to offer? - Write on Call Love Bros., 5a, Delphi Place, Putney Rd., N.W.1.

CABINETS
LEWIS RADIO have the best selection and finest finish. - See page 179.

REPAIRS AND SERVICE
MAINS transformers, new transformers to any specification, MOTOR rewinds and complete overhauls: first-class workmanship, fully guaranteed. F.M. ELECTRIC CO., Ltd., Potter's Biders, Warner Gate, Nottingham, Est. 1917. Tel. 2722.

SERVICE sheets, radio, TV, 4,000 models for loan; lists 1/6, enquiries s.a.e. - Teeney, 11, Maidland Rd., Preston.

MAINS transformers, E.R.T.S., chokes, coils, etc., promptly and efficiently renewed or manufactured to any specification. LADBROKE REWIND SERVICE, Ltd., 520a, Harrow Rd., W.12.

TRANSFORMER rewind service mains, E.R.T.S. transformers and chokes, prompt delivery, range of replacement types ex-stock or manufactured to your specification.

REWINDS and conversions to mains and output transformers, pick-ups, sockets, etc., from 4/6, P.P. equipment and components; a speciality, all work guaranteed. - R.L. Rewinds, 173, High Rd., Willesden Green, N.W.10. Tel. Wordsworth 7701.

D. G. BOULTON for repairs to any loudspeaker, specialists on heavy and P.A. types; one assemblies, field coils, repair accessories, pressure units, microphones; transformers rewound and to specification; motor re-winds - Lumbly St., Manchester Rd., Bradford. Tel. 2255B.

PAINTS, CELLULOSE, ETC.
PAINT spraying handbook. 3/6 post free, cellulose and synthetic paints and all spraying requisites supplied free.-Lionard Brooks, Ltd., 55, Harold Wood, Romford.

WORK WANTED

CAPACITY AVAILABLE
FACTORY Capacity available for the following categories:
PLATING Injection moulding (3 oz.), Aluminium Die-Casting, LITHO Engineering, ELECTRONIC & Electrical Assembly. Location Wiltshire. - Box 9077.

QUANTITY television chassis, completely wired, brand new, only finest quality components used. - Write Box 2655.

12000 capacity serials, retail 1/6 and 2/6, with showcard, to clear. - Box 3252.

TO wholesalers, manufacturers, etc., large stock Valve/ electrolyc, etc., to clear; - Box 1326.

25 " Vairadio" converters-200/250 D.C. to 500/250 A.C. each, ex. works. - ENTRYN, Cadbury Brothers, Ltd., Bournville, Birmingham.

YIELDS on transformers transferred to disc 70s or L.P.'s. - Write or phone Queensway Private Recording Studios, 193, Queensway, W.2, Tel. Bay 4992. Studio Recordings 16003.

METAL WINDING coils, bushes, etc., to your own specification; capacity available for small milling and capstan work up to 1in bar.

MFLIPPER'S METAL WORKS, Ltd. (G.6871).-Chapman St., Loughborough.

TAPE/DISC for composers, until Britain's oldest full-time transfer service; 40 min. L.P. 5/-, special proof qual. tape, 25/-, and Sound News Productions, 59, Breadstreet St., W.1. Amo. 0001.

BUILD your own TV and learn about its operation, maintenance and servicing, qualified engineer/tutor available whilst you are constructing and building. - Free brochure from E.M.I. Institutes, Dept. WW58, London, W.4 (Associated with H.M.V.).

COIL, Winding Machine, Neville’s Type Montreal. Only had very little use. Perfect condition including electrical equipment and real stand. Open to reasonable offer. - The Medical Supply Association, Ltd., 53, Park Royal Rd., W.14.

I.T.A. aerial assemblies for channels 8 or 9 consulting of director, 2 driven elements, 2 guided insulators and insulated bracket, these aerials are of American manufacture and reproduce all channels; very popular, 15/- plus 2/6 post and packing.

HIGH GRADE low loss coaxial cable, 1/- per yard, post and packing 1/6 extra.

MALTON'S WIRELESS LTD., 48, Stafford St., Wolverhampton. (G.5935)

MODEL AF 105—£37
AM and FM Tuners and High Fidelity Amplifier on one compact chassis
- FM, Long, Medium and two Short Waves. - Sensitivity on FM better than 10 microvolts with freedom from drift
- Exceptional Selectivity for Continental reception on the AM bands
- 10 watt push-pull amplifier
- Distortion: Less than 0.5% at 8 watts
- Frequency Range: 15-35,000 c.p.s. ± 1 db
- Independent and continuously variable Bass and Treble Controls with Visual setting indicators.

NEW MODEL FG 68—£25/2.0.
For those who do not require the FM band but wish to maintain the quality of gramophone reproduction and AM reception, the FC 48 can be recommended. It has substantially the same circuitry and AM circuit specification as the 105.

THE MISSING LINK—PABO 1
TAPE PRE-AMP AND ERASE UNIT with built-in Recording Level Indicator and Monitoring facilities.

ARMSTRONG WIRELESS & TELEVISION CO. LTD.
Warlers Road, London, N.7.

Telephone: NO 3213

PABO-1 provides the essential link up to the Tape Deck when used with a high fidelity Amplifier. £12 10 0
NOTICES

OPPORTUNITIES

British Sound Recording Association: Details of membership, open to professional sound recording engineers and all others interested in recording high quality reproduction and other branches of audio engineering, together with details of the London lecture programme and the Manchester, Portsmouth and Cardiff Centres, may be obtained from the Hon. Membership Secretary, H. J. Houlgate, A.M.I.E.E., 12, Strongbow Rd., Etham, S.R.E.

SITUATIONS VACANT

WAR DEPARTMENT

Vacancies exist for non-Permanent Civilian Instructors Grade III to teach Radio Technician, Line Technicians and Telephone Technicians up to Class III Standard. Applicants would have served an acceptable apprenticeship, be fully experienced in the trade and capable of teaching subjects included in one or more of these trades. The possession of Ordinary National Certificate, or equivalent qualification in mathematics will be required. Pay, Allowances and Promotions will be made after testing and interview by a Board of Officers, and will be subject to the availability of funds.

APPOINTMENTS will be made after testing and interview. Further details of the job opportunity for keen man: state age and full particulars will be sent FREE and without obligation.

SITUATIONS VACANT

NOINEE Engineers, Technicians and Laboratory Servicemen required by British Telecommunications Research, Ltd. REMUNERATION exist in departments concerned with (a) Wide band line communication system, (b) MEASURING and Testing equipment for (c) Magnetic materials and semi-conductors; TRANSISTOR applications to above fields, WAVE filters, transmitters and networks; ELECTRONIC computing. ATTRACTIVE posts are offered to appropriately qualified candidates who would be permanent. A complete syllabus for a superannuation scheme and offers very attractive working conditions with social and leisure arrangements, all good social and recreational amenities. Summary of general conditions, etc., is available on request.

A.L. applications will be dealt with in strict confidence and should be addressed to the Director of Research, British Telecommunications Research, Ltd., Taplow Court, moor park, Slough, Berks.

SENIOR and Junior Electrical and Mechanical Draughtsmen required for the Electronics Drawing office of the B.T.H. Co., Ltd. Please apply in writing to—Mr. Kay, Draughtsman, Drawing Office, British Thomson-Houston Co., Ltd. giving details of age, experience, etc.

COMPETENT television engineer required by firm who pride themselves on efficient service—permanent, good pay, assistance with accommodation. 48, High St., Deal, Kent.

 draughtsman required with experience of electronic equipment and circuitry—work with detail of expertise and salary required to Paramiko, Ltd., Percy Rd., Ayer's Park, Leamington.

APPLICATIONS are invited for the undermentioned posts which exist vacant in the Telecommunications Laboratory of British Insulated Calender's Cables Ltd. at Kirkby-in-Ashfield, near Nottingham.

1. EXPERIMENTAL ENGINEER with a wide variety of experimental measurement experience. A knowledge of circuits and test equipment is essential. He will be responsible for the production of prototype equipment. Previous experience in this type of work would be an advantage. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

2. JUNIOR Engineer to assist in the design and development of electronic test gear necessary for the testing and manufacture of Telephone Cables. Minimum qualification is National Certificate standard and candidates should possess a knowledge of valve applications.

3. GRADUATE in a branch of Electronic engineering and development of Electrical Measuring Equipment and systems. He will be responsible for the production of prototype equipment and should be capable of initiating and liaising with Drawing Office and Production for the production of prototype equipment. Previous experience in this type of work would be an advantage. Qualifications should include degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

4. JUNIOR Engineer to assist in the design and development of electronic test gear necessary for the testing and manufacture of Telephone Cables. Minimum qualification is National Certificate standard and candidates should possess a knowledge of valve applications.

5. EXPERIMENTAL ENGINEER with a wide variety of experimental measurement experience. A knowledge of circuits and test equipment is essential. He will be responsible for the production of prototype equipment. Previous experience in this type of work would be an advantage. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

6. JUNIOR ENGINEER to assist in the design and development of electrical equipment essential for the testing and manufacture of television picture transmission equipment. Previous experience in this type of work would be an advantage. Qualifications should include degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

7. EXPERIMENTAL ENGINEER required at the Middlesex Company's works. Salary £300 to £400.

A.S. 1. TECHNICAL assistant to assist in the preparation of published data on valves, tubes and semiconductor devices and enquiries connected therewith. He will be expected to have had previous experience in technical publications and should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection and written work. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

A.S. 2. TECHNICAL assistant to fill vacant posts connected with research work in the field of television and radio, and to assist the head of the Laboratory. Qualifications should include either degree in Physics or Electrical Engineering or Corporate Membership of the Institution of Electrical Engineers.

A.S. 3. TECHNICAL assistant to assist in the preparation of data connected with the field of communication and the supervision of laboratory and experimental devices in all branches of electronics. The salary will be in the £200 to £250 range. Candidates should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection, written work, etc. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

A.S. 4. TECHNICAL assistant to assist in the preparation of published data on valves, tubes and semiconductor devices and enquiries connected therewith. He will be expected to have had previous experience in technical publications and should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection and written work. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

The above posts are in permanent employment with progressively increasing salary up to £300.

The above posts are in permanent employment with progressively increasing salary up to £300.

A.S. 5. TECHNICAL assistant to assist in the preparation of published data on valves, tubes and semiconductor devices and enquiries connected therewith. He will be expected to have had previous experience in technical publications and should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection, written work, etc. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

A.S. 6. TECHNICAL assistant to assist in the preparation of data connected with the field of communication and the supervision of laboratory and experimental devices in all branches of electronics. The salary will be in the £200 to £250 range. Candidates should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection, written work, etc. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

The above posts are in permanent employment with progressively increasing salary up to £300.

A.S. 7. TECHNICAL assistant to assist in the preparation of data connected with the field of communication and the supervision of laboratory and experimental devices in all branches of electronics. The salary will be in the £200 to £250 range. Candidates should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection, written work, etc. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

A.S. 8. TECHNICAL assistant to assist in the preparation of data connected with the field of communication and the supervision of laboratory and experimental devices in all branches of electronics. The salary will be in the £200 to £250 range. Candidates should be capable of dealing with a wide variety of experimental measurement, circuit design, component selection, written work, etc. Qualifications should include either degree in Engineering or Physics or Corporate Membership of the Institution of Electrical Engineers.

SITUATIONS VACANT

TELEVISION engineers to join first class team in well-equipped and organized service department. Top wages for 1st class man.

HARVES & AVIS LTD., London Street, Reading.

A well-established London retail radio and TV business requires television service engineer, also trainer, with experience essential, good prospects for capable men: state age and details of experience—box 396.

M. B. MICHIEAL, RADIO, Ltd., Slough, Bucks. From time to time to three for electronic engineers to be engaged on Government projects; those wishing to be considered are invited to write fully to the Chief Engineer, Government Division, A V. M. Ltd.

T. D. Engineer, required for outside servicing; in busy and expanding establishment in North London area. Good prospects for the right man. Box 2530.

S. J. SENIOR Engineering with Experience of Transmission Circuits, required for North Western Electronic Equipment Ltd. Box 1236.

R. Y. Limited, Radio Works, Cambridge, invites applications for positions as Technical Assistants. Proficiency in English and some technical knowledge—Applications in writing to Personnel Officer.

ELECTRICIAN Test Engineers are required by the General Electric Co. Ltd., Radio and Television Works, Rowntree, Cambridge; candidates should have a good knowledge of electrical and mechanical engineering and possess suitable qualifications. Salary £570 £1,000. Write Chief Engineer, Ardenite Acoustic Laboratories, 62, Hornsey Avenue, London, N.8.

B. P. Limited, Radio Works, Cambridge, invites applications for positions as Technical Assistants. Candidates should have a good knowledge of electrical and mechanical engineering and possess suitable qualifications. Salary £300 £1,000. Write Chief Engineer, Ardenite Acoustic Laboratories, 62, Hornsey Avenue, London, N.8.

ELECTRICAL Installation Draughtsmen required in the television transmitter field: experienced in light power relay, switchgear, accessories and installation details; interesting posts in hand offering good future possibilities.—Please write to the Chief Engineer, P.V. Ltd., St. Andrew's Rd., Cambridgeshire.

A. L. Design draughtsmen required by firm engaged in radio and electronic instrument work: experience in this field highly desirable; these are senior staff positions. Applicants with details of experience and salary required to Personnel Officer, British Communication Corporation, Ltd., Exhibition Grounds, Wimbledon.

C. Good class radio and television dealers have a vacancy for an assistant at their Southampton branch, who would help to retain their high reputation for service, be well experienced and possess good mechanical knowledge and have an interest in service work. Salary £210 £300, possibility of a permanent position. Write to Personnel Manager, Adastra, Salisbury House, St. Andrew's Rd., Southsea.

B. British Overseas Airways Corporation have a vacancy at London Airport for an Assistant in the Communications Branch. The duties comprise: investigation and analysis of operational performance of communications and radio navigation systems development of test methods and procedures, liaison with the appropriate National and International organisations.

CANDIDATES will be required to have experience in development and application of aeronautical, and radio, and are invited from those possessing a degree in electrical engineering and/or membership of an appropriate professional body. Possession of a good knowledge of present-day knowledge of the essential techniques, waveform, pulse circuits, and electronic tubes, is essential. Good prospects for the right man. SALARY £475 to £1,195 according to ability and qualifications.

M. Generous pension, insurance and sickness schemes; excellent prospects and social activities.—Apply, giving full details of experience to Assistant Staff Manager, B.O.A.C., London Airport.

T. The National Institute for Medical Research has a vacancy in the Engineering Division for an Electronics Technician to be responsible for the repair and maintenance of all instruments. The initial salary will be within the range of £320-£420 p.a. The scheme and the appointment will be established later than the advertised date. Apply in writing to Personnel Officer, National Institute for Medical Research, The Ridgeway, Mill Hill, London, N.W.7.

RADIO AND RADAR TECHNIQUE

By A. T. STARR, M.A., Ph.D., M.I.E.E.

This important book concentrates present-day knowledge of the essential methods and techniques, paying particular attention to noise, microwave techniques, waveform, pulse circuit techniques, and electronic tubes.

Profusely illustrated. 830 pages. 60/- net.

"...will without doubt find a place upon the shelves of all the better technical and scientific libraries...will doubtless become a standard work." MACHINERY LLOYD.

PITMAN

RADIO AND Television engineer to join first class team of government officials to work on a new development or research project. Possessing a degree in Electrical Science and/or membership of an appropriate professional body. Excellent pension and other benefits. Competitive salary. Closing date 30th September, 1956.

A. L. STAMFORD
(Dept. D4), 20 College Parade, Salusbury Road, London, N.W.4.

CHIEF TEST ENGINEER
is sought to take charge of a department concerned with the production testing of a wide variety of electronic equipment. This is a responsible position requiring substantial previous practical experience of such test work, together with organizing ability and a high standard of technical integrity.
Continued expansion of the laboratories has also created further vacancies for
DEVELOPMENT ENGINEERS
to be concerned with the circuit design of ship and air-borne electronic INSTRUMENTS and COMMUNICATIONS EQUIPMENT. Experience in one of these fields is desirable but by no means essential. Candidates for the former position should preferably have qualifications to HNC standard or the equivalent; for the latter, qualifications up to and including this standard are acceptable.
All appointments are permanent and pensionable and carry attractive salaries, they offer excellent prospects and the opportunity to work on a variety of interesting projects.
Apply in confidence to the SUPERINTENDENT, ELECTRONIC DEVELOPMENT DIVISION, R. B. PULLIN AND COMPANY LIMITED, GREAT WEST RD., BRENTFORD, MIDDLESEX.

Ersin Multicore
5-CORE SAVBIT TYPE 1 ALLOY

Manufacturers of Alba Radio and Television are co-operating with Multicore Solders Limited to give the first ever demonstration of soldering at the Radio Show using Ersin Multicore SAVBIT Type 1 Alloy.

Like many manufacturers of radio, television and electronic equipment, A. J. Balcombe Limited are adopting the new Ersin Multicore SAVBIT Type 1 Alloy for exclusive use in their factory because it prolongs the life of copper solder bits by up to 10 times effecting considerable economies.

THE DEVELOPMENT OF ERSIN MULTICORE SAVBIT TYPE 1 ALLOY

After extensive research at the Multicore Laboratories it was discovered that the main cause of bit wear was absorption of the copper from the solder bit into the solder alloy. Ersin Multicore Savbit Type 1 Alloy which is supplied containing 5 cores of non-corrosive Type 366 Flux also contains a small percentage of copper.

It was tested under actual production line conditions and found to reduce absorption from the copper bit very considerably, with no effect on the speed of soldering.

Ersin Multicore Savbit Type 1 Alloy costs approx. £1 per cwt. less than standard 60/40 alloy of similar gauge.
