## a **TOUGH** self-fluxing winding wire

**For continuous operation at "hottest-spot" temperatures of up to 120°C.**

**Adherent and resistant to solvents.**

**Can generally be used without changes in coil design, winding or impregnation.**

Developed in BICC's own laboratories, Bicelflux is an enamel covering for winding wires with toughness approaching that of vinyl acetal or epoxy resin coverings but—*much easier to solder.*

Bicelflux is self-fluxing, with an action comparable to that of organic activated rosin fluxes.

As a result, Bicelflux windings are ideal for applications where large numbers of soldered joints are required, for example in radio and telecommunication equipment.

Further details are given in BICC Publication No. 376—yours for the asking.

# Distortion

# in Transistor Amplifiers

In high quality amplifiers, low distortion is essential. Hence a knowledge of the causes of distortion in transistor amplifiers, the means of estimating distortion and reducing it should prove extremely useful. The following account includes a brief analysis of distortion in low level transistor stages and a graph from which distortion in OC70 and OC71 stages can be obtained.

### Causes of Distortion

In a transistor amplifier operated with grounded emitter, distortion results from two causes. First, for a sinusoidal voltage input the input current is non-sinusoidal because of the intrinsic non-linearity of the voltage-current characteristic of the emitter junction. This is the input circuit distortion. Second, for a sinusoidal current input to the base, the collector current is non-sinusoidal due to variation of the collector-to-base current gain ( $\beta$ ) with the collector current. The distortion due to the latter is normally small and can usually be neglected.

### Input Circuit Distortion

The input characteristic consists of two parts: that of the base-emitter junction itself and that of the part of the base between the junction and the soldered connection. The voltage-current relationship of the semiconductor junction is exponential:  $i \propto e^v$ .

The effective incremental resistance of the junction  $r_{exp}$  at the working point, as seen from the base is given by the formula

$$r_{exp} = \frac{25}{I_e} \beta \text{ ohms,}$$

where  $I_e$  is in milliamps.

The base resistance  $r_{bb'}$  is how ever nearly ohmic and approximately equal to  $450\Omega$  in the OC70 and OC71 for values of  $I_e$  between 0.5 and 5mA. The main component of distortion produced by the non-linearity of the junction characteristic is second harmonic ( $D_2$ ) and only this is considered.

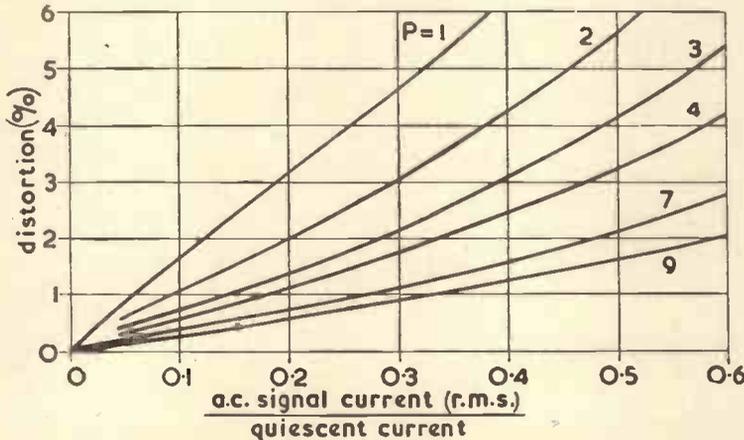

It can be shown that distortion is proportional to the ratio of the r.m.s. signal current to quiescent current, and inversely proportional to  $1 +$  ratio of total ohmic resistance to  $r_{exp}$ , i.e.

$$D_2 \propto \frac{i_e \text{ (r.m.s.)}}{I_e} \text{ and } \frac{1}{D_2} \propto 1 + \frac{R_b + r_{bb'}}{r_{exp}}$$

where  $R_b$  is the external input circuit resistance. These two relations give the variation of distortion with circuit and operating conditions. The accompanying graph shows actual values of distortion plotted against the ratio of r.m.s. emitter signal current to quiescent emitter current at  $I_e = 2\text{mA}$  for several values of a parameter  $P$  which is the ratio of total ohmic resistance to exponential resistance in the input circuit.

$$P = \frac{R_b + 450}{r_{exp}} = \frac{(R_b + 450) I_e}{25\beta}$$

The graph may be applied without serious inaccuracy to OC70 and OC71 stages operating at  $I_e = 0.5$  to  $5\text{mA}$  and the input circuit distortion can therefore be derived from it for all likely practical amplifiers.

### Distortion due to Current Gain Variation

The collector-to-base current gain varies with the collector current ( $I_c$ ), but this variation is small over the operating range; the gain reaching a maximum at about 1.5mA for an OC71.

When the operating point is at the current for

maximum gain, distortion due to  $\beta$  variation will be negligible. Provided that  $I_c$  is kept above 0.2mA the effect of  $\beta$  non-linearity is small and may add to or subtract from the input circuit distortion, depending on whether  $I_c$  is less than or greater than the value giving maximum  $\beta$ . The amount of distortion can be estimated from the transfer characteristic by conventional methods. Thus the accompanying table gives the amount of second harmonic distortion corresponding to the ratio of the amplitude of the two half-cycles of the output waveform.

Ratio	1.01	1.02	1.04	1.08	1.16
$D_2\%$	0.25	0.5	1	2	4

### Emitter Feedback

When an external series emitter resistance  $R_e$  is used to linearise the characteristic, its effect is equivalent to the addition of an external base resistance of value  $R_e\beta$ . Thus the graph can still be applied provided that the value of  $P$  is calculated from the formula

$$P = \frac{R_b + \beta R_e + 450}{r_{exp}}$$

Emitter feedback also reduces the distortion due to variation in current gain.

## COLOUR TELEVISION PITFALLS

There is a risk that the demonstrations of colour television given recently to Members of Parliament may have been too successful. Quality of the transmission was so good that it might well have provoked the light-hearted and over-optimistic decision that we need look no farther before adopting the British version of the American N.T.S.C. system for our national service.

According to a growing weight of informed opinion, that would be a premature and probably disastrous decision. Nobody denies that the N.T.S.C. system is ingenious and elegant or that the British adaptation of it preserves all the good points of the original. But American experience alone gives the warning signal for extreme caution. In almost every respect colour television in the United States has so far been a failure; the receivers have proved to be too expensive, to require too much maintenance and to be too difficult to adjust. There is no reason to believe that adoption here of the Anglo-N.T.S.C. system in its present form would have a significantly different outcome.

One of the shortcomings of the N.T.S.C. system is that it was planned basically for use with an inherently expensive and complex display device—the three-gun shadow-mask tube. What is still lacking is a cheap and simple display device, which surely must be necessary for an economically practicable colour service. Dr. E. L. C. White, writing in the February *Wireless World*, developed the argument for evolving a system not tied to the three-gun tube.

The question of compatibility inevitably arises. The general belief is that a colour service would be economically impossible in the near future unless it were receivable on existing black-and-white receivers. That is probably true; but, if there is any validity in what we have just said, it is equally true that, as no economically practicable system offers itself at present, there is no prospect whatever of starting a regular service during the next three or four years. If that be so, the question of compatibility becomes of lesser importance. In five years' time, say, the revenue from licence fees may be expected to have reached a figure large enough to support a parallel colour service without any need for compatibility.

## VALVES IN THE LIMELIGHT

Everyone knows—though usually in quite a vague way—that valves are sold in rather a peculiar manner. Sales to manufacturers of broadcast receivers and other equipment are at prices which are disproportionately low in relation to the retail price. The report of the Monopolies Commission, referred to on another page, shows the position to be a good deal more complicated than that. The valve is at the heart of our affairs, and probably nothing but good will come from bringing these matters into the limelight. It has been argued that the policy has been justified by results and that it has helped to keep the prices of all equipment at a low level: further, that the cost of maintaining stocks of replacement valves justifies their price. It is to be hoped that these matters will now be freely debated by all sections of the industry.

# Television Interference Problem

BEAT EFFECT ON RECEPTION  
FROM NORTH HESSARY TOR

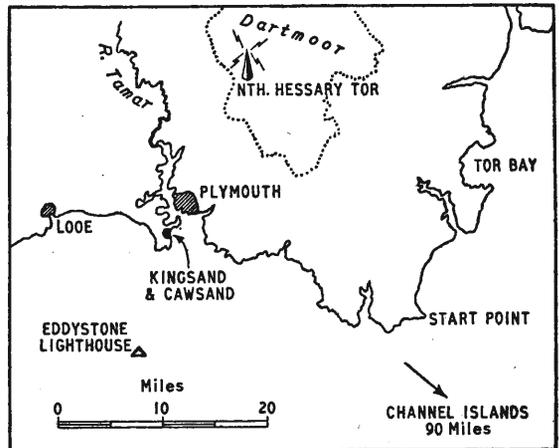

By **JAMES P. GRANT**, *Assoc. Brit. I.R.E.*

**W**HEN the North Hessary Tor television station came into operation in Channel 2 in December, 1954, reception from the temporary transmitter and 150-ft mast was reasonable in the Plymouth area. However, at Kingsand and Cawsand on the Cornish side of the River Tamar, close under a 450-ft hill which screens the two villages from the transmitter, reception was generally poor. Four-element aerials were necessary, and even then reception was marred by a constant pulsing effect. This took the form of a beat with a repetition frequency of around 40 a minute, giving fluctuating brightness and line pulling.

This effect was generally considered to be a symptom of the low power, low transmitting mast and high intervening hill. Viewing was possible and the inconvenience was endured for 14 months in the belief that the permanent station and high mast would cure the trouble. There was some dismay, therefore, in February, 1956, when the permanent transmitter came into service with the temporary 150-ft mast. The pulsing effect was certainly no better—if anything a little worse. Moreover, when in May, 1956, the main transmitter started to radiate from the high mast, the pulsation was so increased as to make viewing virtually impossible at times.

Rotating radar beacons have been eliminated by practical experiment, and tests indicate a reflection of the Hessary Tor transmission by some unknown object seawards which combines with the direct wave to form a fluctuating signal with a frequency of between 35 and 50 a minute. The reflection is not sufficiently well defined to show a definite ghost, but it has been estimated to be as much as 7% of the main 300- $\mu$ V signal. The amplitude and speed of the beat vary from hour to hour, from day to day, and between daylight and darkness.

The effect is always present when Hessary Tor is transmitting, but is more severe on high power than during breakdowns and test periods on reduced power. It can be observed only on sites shielded from Hessary Tor by high ground open to the sea and within the limits of Start Point and Looe. It is fairly certain that the beat is present at all sites within this area, but is observable only when the shielding of the direct signal renders the reflection

Map showing the district in which the interfering beat effect is experienced.

a significant part of the whole received signal. The maximum effect is at Cawsand at about the centre of the affected area, and the intensity of the beat reduces progressively towards the outer limits.

There is no recorded signal throughout the band when Hessary Tor is not transmitting. During severe beating there are ghosts, which successively reduce in intensity and appear to continue to the end of the line scan. Up to nine have been counted, more or less evenly spaced, and they appear to beat separately from the main signal and alternately change their polarity. During slight beating there is only one well-known local ghost.

During the summer a fairly consistent reduction in the beat was observed at dusk, so much so that a severe beat almost disappeared within an hour, only to return when it was quite dark.

Commercial directional receiving arrays have been tried in order to reduce the seaward pick-up, but to achieve this the main lobe must be turned towards the hills and multiple ghosting is exchanged for the beat. Horizontal aerials give only a slight reduction of the reflection. Although about the same distance from Hessary Tor, and having similar terrain, Tor Bay does not seem to suffer from the effect.

Since May, 1956, the Post Office and the B.B.C. have been investigating the problem without reaching any very definite conclusion. The B.B.C. are of the opinion that the beat is caused by a reflection from the surface of the sea. I cannot entirely accept this theory, as it does not account for all the peculiarities and anomalous propagation effects which have been observed during the past two years.

During the extensive observations of the beat in connection with the tide, weather, and atmospheric conditions, only one consistent factor has emerged, i.e., humidity. Reception conditions are good when the humidity is above 80%, and become sharply worse as the humidity drops below this figure. The only exception is when the humidity is 100% during severe sea mist and low cloud conditions, when receiving conditions may be either very good or very poor. (By good I mean practically no beating.)

It is my own theory that the reflection may be from the multiple, long, sloping-wire receiving aerials in the Channel Islands, with a path via the troposphere in each direction. Probably there is also a secondary reflection from the sea, as suggested by the B.B.C.

**COMMENT.**—*Having felt that the effect described above might be associated with weather conditions, "Wireless World" asked a meteorologist, A. H. Hooper, for his views. These are strictly personal opinions.*

THE experiences of Mr. Grant pose several problems and it is necessary to consider how the receipt of a second and delayed signal at the receiver can lead to variations in brightness. One visualizes either a second signal of constant delay but varying strength, or a second signal of varying delay and of strength which may or may not vary. The former condition leads in general to a fixed ghost picture of varying brightness which, with appropriate delay, may coincide with the main picture and so be indistinguishable. The last-mentioned condition gives a ghost picture drifting across the main picture and fluctuating alternately positive and negative in character as the carrier waves of the two signals alternately add and subtract.

When the reflecting object is stationary variations in signal strength can arise due to propagation changes acting on one of the two paths more than the other, or from rotation or eclipsing of the object in a cyclic manner. If, as it appears, the second signal arrives from a seaward direction then its path clearly passes close to the surface, whereas the direct path to Kingsand is well up in the air until the final stage of diffraction over the nearby hilltop. In such circumstances differential propagation effects appear very probable.

However, it is very difficult to visualize any such effect capable of yielding such rapid and continuous fluctuations as those observed. Examples of fluctuations in reflectivity of a fixed object are: (1) vibrations such as of the limbs of an aerial array—this would vary with wind speed, (2) rotation of radar scanning aerials, and (3) eclipsing of rocks out to sea by waves, although not generally at the rate observed in this instance. Moreover, the last effect would vary with state of tide and sea. It has been suggested that certain aerials on the Channel Islands are reflecting energy back toward the South Devon coastline. These islands, however, lie to the south-east and would also radiate energy towards the Tor Bay area (where beating is not experienced).

The one object lying out to sea and capable of radiating energy towards the coastline between Start Point and Looe is the Eddystone lighthouse. This is about 20 deg west of south from Hessary Tor and is within the direct line of sight, which passes right over Plymouth, out over the Sound and between the headlands of either side and then on to the lighthouse. Kingsand lies on the western side of Plymouth Sound, just off this line. Neither Hessary nor the lighthouse is directly visible to Mr. Grant, although the lighthouse would be visible from many coastal sites. The reflected signal could possibly vary with rotation of the lighthouse lantern assembly, but this occurs only after dusk. The distance from Hessary to Kingsand is about 27 km direct and about 61½ km via the lighthouse, giving a delay of about 1.15 lines. This may, in fact, be one of Mr. Grant's ghosts.

Turning now to the possibility of reflection from moving objects, it has been suggested that this could occur from extensive discontinuities in the atmosphere moving at a suitable steady rate and popularly referred to as meteorological fronts. Although the basic structure of meteorological fronts is in the opposite sense to that required, it happens that a proportion of such fronts are immediately preceded by a shallow layer of suitable structure and in such circumstances reflection becomes possible. With full allowance for marginal circumstances the number of fronts passing over Ply-

mouth and possessing this suitable structure is quite few, with the result that the total possible duration of beating due to their presence is small. One would expect beating to occur occasionally for a few hours prior to the passage of each of such fronts, whereas Mr. Grant reports the effect as being semi-continuous.

Another moving source of reflections is to be found in sea waves and swell. The waves, however, will vary in height, length and direction and would only give optimum scatter for the Plymouth area when travelling to or from the S.S.W. Waves would appear—of equal significance—in Tor Bay, and when due to surface wind would often have substantially the same orientation as in the Plymouth area. As the line of propagation towards Tor Bay is perpendicular to that towards Plymouth one would expect any scatter effect to occur simultaneously at both places but of differing magnitude, with occasional extreme cases occurring on a given occasion in only one of the two areas. For the very long sea-wave lengths due to swell coming in from the Atlantic/Biscay area, it is to be expected that, although present off the Plymouth coastline, they would not penetrate into Tor Bay. Presumably it is necessary to demonstrate that reflections from a vast area of scatter sources can add to give an overall wave train of reasonable approximation to the original.

It has been suggested from three separate sets of circumstances that the beating effect increases with the strength of the main signal and depends upon sufficient amplitude of delayed signal. As already remarked, the ratio of the two signals is very likely to be modified by meteorological conditions. This agrees with the appearance of several ghosts when beating is strong. Thus a boosting of the delayed signal by anomalous conditions near the surface is accompanied by a boosting of the reflections from nearby objects which are normally too weak to be visible. This dependence upon refraction is supported, too, by the summer-time variations experienced about dusk when low-level changes due to the setting sun are occurring.

We are faced apparently with an effect involving movement of reflecting (or scattering) objects. The effect is continuous and is apparent over a considerable length of coast. It is claimed that the delayed signal arrives from the general direction of the sea. In such circumstances the one common feature is the surface of the sea itself. However, the effect does not occur along another coastline in largely similar circumstances. The discernible differences between the two sea areas are the presence both of a prominent reflecting object (a lighthouse) and of long-wavelength swell in one of them. Whether this is significant is hard to say, and one wonders whether similar circumstances exist elsewhere.

## AWARDS TO AUTHORS

FORTY articles were submitted last year to the panel of judges for consideration for the Radio Industry Council's technical writing prizes. These are awarded annually with the object of encouraging the publication of clearly written expositions on British achievements in radio and electronics. One 25gn premium is given for each of the following:—

"Weather avoidance with airborne radar" by P. L. Stride (Ekco Electronics); *British Communications and Electronics*, April.

"Particle accelerators and their applications" by D. R. Chick (Research Labs., A.E.I.) and C. W. Miller (Research Dept., Metro-Vick); *British Communications and Electronics*, October and November.

"Klystron control system" by R. J. D. Reeves (E. K. Cole); *Wireless Engineer*, June, July and August.

"Two-channel stereophonic sound systems" by F. H. Brittain and D. M. Leakey (G.E.C. Research Labs.); *Wireless World*, May and July.

"Tridac—a research flight simulator" by J. J. Gait (R.A.E.) and J. C. Nutter (Elliott Bros.); *Electronic Engineering*, September and October.

# WORLD OF WIRELESS

## Organizational, Personal and Industrial Notes and News

### Colour Television

FOR the benefit of members of Parliament special colour television programmes were recently transmitted by the B.B.C. using the N.T.S.C. system modified for 405 lines. The programmes included "live" studio material and film. Through the courtesy of Marconi's, *Wireless World* was able to see one of the transmissions at Chelmsford, where the field strength is only about 1 mV/m.

No receiver adjustments were needed during the half-hour's programme, and results were quite outstanding. In the "live" shots and in some of the film the colour rendering was admirable and greatly enhanced the entertainment value of the programme, compared with black-and-white reproductions. In spite of the fact that the effective video bandwidth is necessarily restricted by the presence of the colour sub-carrier, the apparent definition was so increased by the colour contrast that the final picture appeared appreciably sharper than a monochrome one.

The tests have certainly demonstrated that an entirely adequate colour picture can be obtained with 405 lines and that colour is very desirable. It now remains to develop an economically acceptable system.

### Colour at TV Show

SO FAR colour television on the anglicized American standard has been seen in this country by a privileged few. The closed-circuit demonstrations to be given at the forthcoming Television Society Exhibition will therefore be the *pièce de résistance*. Demonstrations are being arranged jointly by Cintel, Bush and Murphy.

The show, in which some 25 exhibitors will be participating, will be held at the Royal Hotel, Woburn Place, London, W.C.1, on March 5th, 6th and 7th. The first day is for members only, but on the other days it will be open to ticket holders from 12.0 to 8.0. Tickets are obtainable free from the Society at 164, Shaftesbury Avenue, London, W.C.2. Applicants must send a stamped addressed envelope.

The exhibitors at the time of going to press are:—Avo, B.B.C., B.R.E.M.A., C. H. Banthorpe, Belling-Lee, Bush, Cossor, Cinema-Television, E.M.I., Edison Swan, Ever Ready, Fielden, G.E.C., Hallam, Sleigh & Cheston, Leyland Instruments, Livingston, Marconi's, Mullard, Murphy, Philco, S.T.C., T.C.M.C., Thorn, 20th Century and W. Vinton.

### Physical Society Exhibition

AS IN the past the emphasis at the Physical Society's 41st Exhibition, to be held in the halls of the Royal Horticultural Society, London, S.W.1, from March 25th to 28th, is on new developments in scientific instruments and apparatus, and on possible applications. Tickets are obtainable by sending a stamped addressed envelope to the Society at 1, Lowther Gardens, Prince Consort Road, S.W.7.

The exhibition will be officially opened at 11.0 on March 25th by Professor P. M. S. Blackett, F.R.S., but admission is limited to members and the press until 2.0. It opens on the three following days at 10.0 and closes at 7.0, 9.0, 7.0 and 4.30 respectively. A lecture-demonstration on "The International Geophysical Year" will be given by Sir Harold Spencer Jones at 6.15 on the 25th and another on "Recent Trends in Acoustics" by Professor E. G. Richardson at the same time on the 27th.

The Exhibition handbook of some 300 pages is obtainable from the Society, price 7s 6d, including postage.

### International Instrument Show

OVER 50 instrument manufacturers from eight countries are exhibiting at the third International Instrument Show being staged at Caxton Hall, London, S.W.1, from March 25th to 29th. The show opens at 12.0 on the first day and at 10.30 on other days, and closes at 6.30 except on the last day, when it closes at noon. Tickets are obtainable free on application to the organizers, B. & K. Laboratories, Ltd., 57, Union Street, London, S.E.1.

The exhibitors, listed nationally, include:—

- Austria:** Ludwig Seibold;
- Denmark:** Bruel & Kjaer, Disa Elektronik, Industrial Controls, Streuers, Chemiske Laboratorium;
- Holland:** Peekel Laboratorium voor Electronica;
- Sweden:** Magnetic AB, Sivers Lab.;
- Switzerland:** Metrohm, Hans Muller Barbieri, Vibro-Meter;
- U.K.:** Advance Components, Avo, G. & E. Bradley, Cambridge Instrument, Cossor, Grayonics, Taylor;
- U.S.A.:** Advance Electronics Labs., Allen-Bradley, Associated Specialties, Audio Devices, Ampex, Brush, Crosby Labs., Demornay-Bonardi, Electrical Industries, Electro-Measurements, El-Tronics, Heath, Huggins Laboratories, Kay Electric, Krohn-Hite Instrument, Laboratory for Electronics, MB Manufacturing, Narda Corp., Nuclear-Chicago Corp., Panoramic Radio Products, Polarad Electronics Corp., Polytechnic Research & Development, Raytheon, Sperry, Sprague, Texas Instruments, Universal Atomics Corp., Varian Associates, Waterman Products;
- Western Germany:** Belzer-Werk, Deutsche Elektronik, Hackethal, Erich Herion, Heinrich Schneider, Wissenschaftlich-Technische Werkstätten.

### Balance of Trade

PROVISIONAL figures for radio equipment exported last year show an increase of some 20 per cent on the 1955 figure; £40,3M compared with £33M. As will be seen from the details below, the largest increase was in the direct export of capital goods—transmitters, communication equipment, navigational aids, etc. The striking increase in the export of sound-reproducing equipment continued, and it is worth recalling that the overseas sales in 1947 were less than half a million pounds.

	1956 £M	1955 £M
Capital goods	16.6	13
Sound and television sets	3.8	4
Sound reproducing equipment	7.6	5.7
Components and test gear	8.8	7.5
Valves and c.r. tubes	3.5	2.8
	40.3	33

The industry's import-export trade gap has improved considerably, for whilst exports increased by £7M imports decreased by £2M (from 13.1 to 11.2).

## Monopolies Report

THE Report of the Monopolies and Restrictive Practices Commission on the supply of valves and cathode-ray tubes\* is described by the British Radio Valve Manufacturers' Association (B.V.A.) as an historical document, for it bears little relationship to present conditions in the industry as it covers the most prosperous four years (1951-54) in its history.

The commission found that B.V.A. members—who supply 93% of U.K. valves and tubes—so conducted their affairs as to restrict competition.

Since the opening of the investigation in 1954 the terms of reference of the commission have been changed, and it could, therefore, do no more than present a factual report without making any recommendations. It is left for the reader of the 194-page report to form his own opinion as to the effect of the activities of the B.V.A. and its members on the cost and supply of valves and tubes. The report throws a searchlight on the valve industry as a whole and makes interesting reading.

## U.K. Display in New York

THE offer by the American Institute of Radio Engineers of space at its New York Convention and Show (March 18th-21st) for a collective U.K. display of radio and electronics equipment has been accepted. A number of firms or their U.S. agents are participating in the display in what will be known as the Great Britain Room. The venture is being supported by the R.E.C.M.F. and B.V.A. and among the manufacturers exhibiting are Belling & Lee, Egen, G.E.C., Marconi's, Muirhead, Mullard, S.T.C., and Solartron.

*Wireless World* will be seen on the stand of British Radio & Electronics, Ltd.

## Communications into Electronics

ACCORDING to the annual report, activities of member-firms of the Radio Communication and Electronic Engineering Association are tending increasingly to swing from communications into electronics. During the year under survey an Electronic Data Processing Section has been formed to serve the many firms concerned with computers and allied equipment. An exhibition dealing with data processing is planned for the autumn of 1958.

Proposals were made last year for securing industrial representation in frequency planning. Further discussions with G.P.O. officials have clarified the industry's position.

A revised performance specification for marine radars has now been agreed by all concerned and is being accepted throughout the world. The industry to-day produces radars at the rate of five per day.

## Receiver Sales

RETAIL sales of television receivers reached the record number of 1,484,000 last year. Figures issued by the British Radio Equipment Manufacturers' Association show that this was an increase of 11% on the 1955 figure of 1,335,000. The sales of sound receivers dropped by 6% to 982,000, and those of radio-gramophones by 21% to 212,000.

Hire-purchase or credit sales accounted for 50% of television sets sold, 32% of sound receivers, and 56% of radiograms.

## April Shows

ARRANGEMENTS have now been made for the allocation of tickets for both the Components Show and the Audio Fair. Double tear-off tickets providing admission to both sections of the Components Show (April 8th-11th, Grosvenor House and Park Lane House, London, W.1) are obtainable free, by engineers and technicians in the "user" industries, research and the Services, from the organizers, Radio and Electronic Component Manufacturers' Federation, 21, Tothill Street, Westminster, S.W.1.

Tickets for the Audio Fair (April 12th-15th, Waldorf Hotel, London, W.C.2) are being distributed through exhibitors and audio dealers. Readers can obtain tickets from the editorial office of *Wireless World*. Applications, stating the day of visit, should be accompanied by a stamped addressed envelope.

## Narrow-channel Mobile Radio

FURTHER details now available of the Toronto demonstrations (see page 57, February issue) of the Pye "Ranger" v.h.f. radio-telephone equipment reveal that these embraced both 15-kc/s and 30-kc/s channel spacing with both a.m. and f.m.

The 30-kc/s equipments were oven-controlled at the base stations but not in the mobiles, while the 15-kc/s versions employed crystal ovens for base and mobile transmitter and receiver oscillators and additional i.f. transformers in all receivers.

A comprehensive series of tests was conducted and the general conclusions reached were that 30-kc/s a.m. systems can be operated in the same areas quite satisfactorily. Intermodulation was the main limiting factor, but modulation limiters and filters in transmitters, and the latest reception techniques, go a long way towards eliminating its worst effects. The tests showed that 15-kc/s channel would be practicable with suitable geographical separation.

Direct interference with an a.m. system by an f.m. transmission in an adjacent 30-kc/s channel and at close range was not unduly troublesome, but more investigation seems desirable.

## PERSONALITIES

F. S. Mockford, this year's chairman of the Radio Communication and Electronic Engineering Association, has been commercial manager of Marconi's since 1947. He joined the company in 1930, having previously been for ten years in charge of radio at Croydon airport, where he was responsible for much of the early planning and organization of the communication and direction-finding services.

H. G. Sturgeon has resigned from the board of Ultra Electric (Holdings), Ltd., and its subsidiary Ultra Electric, of which he had been chief engineer since 1946. He joined Ultra in 1944 and has been particularly concerned with the development of electronic equipment for the aircraft industry. He was appointed O.B.E. in last year's Birthday Honours.

Professor F. C. Williams, O.B.E., D.Sc., F.R.S., is to be the first recipient of the Benjamin Franklin Medal of the Royal Society of Arts, which is being awarded annually "to individuals who have attained early distinction, with promise of future achievement, in the promotion of arts, manufactures and commerce." Dr Williams, who is 45 and is professor of electrical engineering in Manchester University, receives it "for his contributions to electrical engineering." He joined the Bawdsey radar research station in 1939 and was employed throughout the war on the development of radar circuitry. In 1946 he resigned from Government service on being appointed to the Chair of electrical engineering at Manchester University, where he has been working on the development of electronic digital computers.

## IN BRIEF

In the December licence figures issued by the Post Office it is shown that the North West Region (which covers Westmorland, Cumberland, Lancashire and west Yorkshire) has joined the London and Midland Regions in having more television licences than "sound only" licences: London 1,405,884 (1,232,786), Midland 1,102,760 (947,627) and North West 938,402 (925,952). During December the number of television licences throughout the U.K. increased by 136,680 bringing the total to 6,570,097. The overall total of broadcast receiving licences at the end of the year was 14,434,127.

**R.C.E.E.A. Council.**—The member firms and, in parenthesis, their representatives forming the 1957-58 council of the Radio Communication and Electronic Engineering Association are: B.T.H. (V. M. Roberts), Cossor (F. J. Dellar), Decca Radar (C. H. T. Johnson), E.M.I. (S. J. Preston), Ferranti (J. N. Toothill), G.E.C. (M. M. Macqueen), Kelvin & Hughes (C. G. White), Marconi's (F. S. Mockford), Metrovick (L. H. J. Phillips), Mullard (T. E. Goldup), Murphy (K. S. Davies), Plessey (P. D. Canning), Redifon (A. V.-M. E. B. Addison), and S.T.C. (R. McVie).

**Schools TV.**—Television receivers especially designed for use in schools are announced by two manufacturers. Ferguson have produced two sets, one a projection receiver giving a picture 24-in by 18-in, and the other with a 21-in tube for direct viewing. Cossor's two sets are both for direct viewing, one with a 24-in tube and the other a 21-in tube. Each has a built-in viewing hood to reduce ambient light.

In the note on v.h.f. coverage on page 54 of our last issue the Third Programme was listed as being radiated from Wenvoe on 92.1 Mc/s. Although this is eventually to be so, at present the West of England Home Service is radiated on this frequency.

**"Output Transformerless Amplifiers."**—In Fig. 4 of this article (February issue) the cathode of the lower output valve should be fed from a separate negative h.t. supply as in Fig. 7, and not from earth as shown. In Fig. 9 the cathodes of both the phase splitter and lower output valve should be fed from a separate negative h.t. supply.

**National Gramophone Conference.**—The bi-annual conference of the National Federation of Gramophone Societies will be held at High Leigh, Hoddesdon, Herts, from April 5th to 7th. Hugh Brittain, of G.E.C., and Percy Wilson, of *The Gramophone*, are among the speakers. Details are obtainable from the Hon. Conference Secretary, 106, Streatfield Road, Kenton, Harrow, Middlesex.

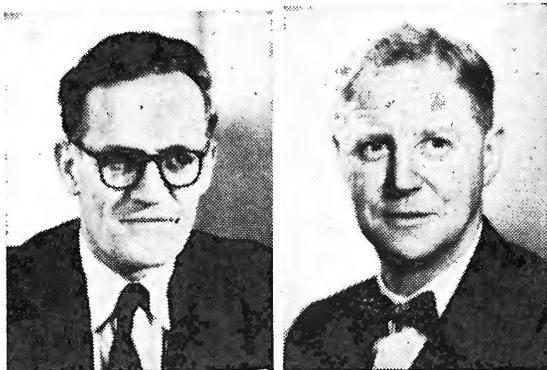

An exhibition of Airmec electronic instruments is being held at the Napier Hall, Vincent Street, London, S.W.1, from March 25th to 28th. Tickets are obtainable free on application to Airmec, Ltd., High Wycombe, Bucks.

A conference on physics of the solid state is being organized by Professor L. B. Bates, F.R.S., from April 8th to 10th in the Physics Department of the University of Nottingham. Details of the conference, in which contributors from universities and research establishments are participating, are obtainable from the Physical Society, 1, Lowther Gardens, Prince Consort Road, London, S.W.7. (Fee 10s.)

## BUSINESS NOTES

A Decca Navigator chain of mobile stations is to be used in connection with the nuclear tests which will be held in the Central Pacific later this year.

A television camera, measuring under 3-in in diameter and 24-in long, has been produced by Pye for installation at Calder Hall. It is fitted on a mechanical grab which is lowered into the fuel channels of the graphite core to remove possible obstructions.

Dr. F. C. WILLIAMS

BRUCE WILKINSON

Bruce Wilkinson, formerly managing director of Electronic Tubes, Ltd., has joined the Plessey Company as divisional manager of the Swindon Components Division. After graduating as a Bachelor of Electrical and Mechanical Engineering from Sydney University in 1929, he joined the engineering department of Amalgamated Wireless (Australasia), Ltd. the following year. In 1946 he resigned from A.W.A., where for some time he was in control of the Research Laboratories, and came to England to take up an appointment as commercial manager of E.M.I. Factories. In 1949 he was appointed director and subsequently managing director of Electronic Tubes, an associated company of E.M.I.

## OBITUARY

Marchese Luigi Solari, the last survivor of the original associates of Marconi, died in Rome on February 6th, aged 83. He first met Marconi in 1896, and was present when in July, 1897, Marconi gave the first official demonstration of ship-to-shore transmission over a distance of 18km—then thought to be considerable. In his book "Storia della Radio" he throws some interesting sidelights on early wireless experiments. In it he describes the Solari mercury detector used by Marconi during the transatlantic tests in 1901, during which Solari was at Poldhu.

Air Vice-Marshal O. G. Lywood, C.B., C.B.E., who became a director of Automatic Telephone & Electric Company on his retirement from the R.A.F. in 1946, died on February 3rd at the age of 62. Owing to ill-health he resigned from the board in 1955 but continued as chairman of A.T.E. (Bridgnorth), Ltd. For some time during the last war he was director of signals in the Air Ministry.

T. W. Price, A.C.G.I., A.M.I.E.E., who had been on the staff of Ediswan for 34 years, died on January 28th at the age of 54. He was intimately concerned with the development of cathode-ray tubes, and one of his major post-war contributions was his work on aluminizing. He was a member of the council of the Television Society.

**Ferranti Radio and Television Limited** is the name adopted for the new company formed by E. K. Cole, Ltd. (as a wholly-owned subsidiary), to market Ferranti sound and television receivers. It was announced some time ago by Ferranti's that arrangements for the marketing of Ferranti receivers would in future be undertaken by E. K. Cole, Ltd. The head office of the company, which officially commences operation on April 1st, will be at 41/47, Old Street, London, E.C.1.

**Emidicta** recorders modified to permit a continuous repetition of the recorded message are being supplied by E.M.I. to the Post Office for the extension of the telephone weather service to seven provincial centres. The magnetic disc recording-replay instrument has been modified so that the reproducing head automatically returns along the tracking arm at the end of the recorded forecast.

For some time **Cossor** have had a television "know-how" agreement with Titan Television, Ltd., of Sydney, New South Wales, but they have now acquired a share in the equity of the company, which manufactures both Titan and Cossor receivers.

Closed-circuit television equipment is available on hire from **Audio and Video Rentals, Ltd.**, of 8, Devonshire Mews West, London, W.1 (Tel.: Welbeck 5137), who also rent audio equipment and film scanners. The company, of which Irvin C. Pannaman is managing director, uses Pye industrial television cameras modified for studio use. Prices for hire of a single camera unit, with monitor and sound equipment, range from £7 10s an hour to £75 per week.

**Adhesive nameplates, dials, scales, etc.**, in brass, aluminium, steel or plastic are now provided for the trade by Millett, Levens (Engravers), Ltd., Stirling Corner, Barnet By-Pass, Borehamwood, Herts. (Tel: Elstree 2871.)

**Carbion**, a new kind of corrugated paper with considerable elasticity and exceptional crush resistance, is now being manufactured by Spicers, Ltd., 19, New Bridge Street, London, E.C.4. In the form of sleeves, it provides protective packaging for valves and the like.

The electronics division of **Studio Irwin Technical, Ltd.**, 8, Breams Buildings, London, E.C.4, offers to industry a service for preparing **instruction manuals** and other technical literature.

**HARD WORDS.**—A writer in the current issue of *Design* strongly criticizes "the current collection of formless packages which pass for cabinets," but of this Murphy A262 a.m./f.m. receiver he writes "flowing lines and a definite style give this set a character of its own." He complains of the cautious approach towards cabinet design in this "middle-aged industry" in which manufacturers "instead of continuing to look ahead are looking sideways at each other."

**Mercia Enterprises, Ltd.**, of 30, Silver Street, Coventry, have been appointed sole concessionaires in Great Britain for the A.E. low-voltage stabilizers manufactured by L'Accumulateur Etanche, S.A., of Brussels, Belgium (see *Wireless World*, February, 1956). Five types are available with current ratings of from 20 mA to 1 amp.

Additional production facilities for components (including transistors), electro-medical and sound equipment and fluorocarbons (PTFE and PCTFE), are provided by **Siemens-Ediswan's** acquisition of a factory at Brantwood Road, Tottenham, London, N.17.

A service department has now been opened at the London office of the **Champion Electric Corporation**, 8, Eccleston Street, S.W.1 (Tel.: Sloane 9838).

**Winter Trading Co., Ltd.**, have opened a warehouse and trade counter at 118, Hampton Road, Ilford, Essex (Tel.: Ilford 6203).

## OVERSEAS TRADE

First overseas installation of the new **Marconi 16-mm television film recorder** is for the Bavarian broadcasting authority, Bayerischer Rundfunk. Similar equipment has also been ordered for one of the Australian commercial television stations. The outstanding feature of the equipment is the fast pull-down film mechanism which ensures that each frame of film is moved into position during the blanking period between television frames—from 1.4 to 1.8 milliseconds. (See "Technical Notebook," page 137.)

Last April **Automatic Telephone & Electric Co.** and **Marconi's W.T. Co.** concluded an agreement for mutual co-operation in the telecommunications field. A.T. & E. have been awarded a contract for the supply and engineering of a complete v.h.f. frequency-modulated wide-band **radio-telephone link** in Portugal, and Marconi's are providing and installing the radio equipment, which is designed around three new travelling-wave tubes. The installation, which will span the river Tagus at Lisbon—a distance of about nine miles—will initially provide 60 telephone channels and ultimately 240.

**RCA Great Britain**, an associate company of the Radio Corporation of America, last year exported to the dollar markets \$800,000 worth of **British-made audio equipment**. In addition capital equipment exports to the dollar markets were valued at \$350,000.

**Kelvin and Hughes** are exhibiting at the **Leipzig International Fair** (March 3rd-14th) and among the equipment being shown will be a miniature supersonic flaw detector, high-speed pen recorders, electronic temperature controllers, and magnetic recording head.

Equipment for a further chain of four ground stations is to be supplied by **Cossor** as part of the plan to provide **Gee** coverage for the whole of Western Europe and Southern Scandinavia.

Transmitters, aeriels and studio equipment for a new **broadcasting station** being built at Omdurman are being supplied by **Marconi's**. The station, which is to supplement the service provided by the Khartoum transmitter, is to be equipped with two 20-kW h.f. transmitters.

Representation in **Italy** of U.K. manufacturers of sound and television receivers is being sought by **Filotechnica Salmouraghi S.p.a.**, Via Raffaello Sanzio 5, Milan.

**Viet-Nam.**—Tenders for the supply of nine h.f. transmitters and 16 communications receivers covering the 2-32-Mc/s band, and sundry other radio and electrical equipment, are invited by **Co-Quan Mai-Dich Ngoai-Vien**, 29-bis Phan-Dinh-Phung, Saigon. The purchase is being financed by the **International Co-operation Administration**. Specifications can be obtained from the **Viet-Nameese Embassy**, 12, Victoria Road, London, W.8, or the **Export Services Branch**, B.O.T., Lacon House, Theobalds Road, London, W.C.1.

# Inexpensive High-Quality

## CLASS A PUSH-PULL CIRCUIT WITH 5-WATT RATING

IN this article the design and construction of an amplifier rated to give 5 watts output is given. An inexpensive output transformer is employed, but an adequate stability margin has been provided for a wide range of output conditions.

The author holds that 5 watts is sufficient for high-quality reproduction in the average living room, and in a subsequent article will put forward evidence in support of this view.

The amplifier is suitable for use with the author's gramophone and microphone pre-amplifier described in *Wireless World* for January and February 1955 or with a simplified pre-amplifier to be described later.

**T**HE aim has been, in the design of this amplifier, to keep the cost as low as possible consistent with achieving a performance not audibly inferior to that given by amplifiers of the most luxurious class.

By careful attention to circuit details, wide stability margins are maintained under all likely conditions of use, despite the simplicity of the output transformer, which was specially designed by the author for this amplifier.

The amplifier has an h.t. voltage of 300 V and, with the circuit as shown in Fig. 1, requires a sine-wave input of approximately 4 V r.m.s. for 5 watts output into a resistive load. It is, therefore, suitable for use with the pre-amplifier described in the January and February, 1955, issues of *Wireless World*, or simplified versions of that design. A

much simpler pre-amplifier, primarily intended for use with crystal pickups and radio tuner units only, and employing only one valve, will be described later.

By the addition of two electrolytic capacitors and two resistors to the Fig. 1 circuit, 5 watts output may be obtained for a sine-wave input of only 1.4 V r.m.s., the performance in other respects being substantially unaltered.

In the author's opinion, an amplifier rated at 5 watts, provided its performance is clean up to the full output, is quite adequate for domestic reproduction of the highest grade, assuming a loudspeaker of good efficiency—and it should be remembered that moving-coil loudspeaker efficiencies have tended to increase considerably as better magnet materials have been more widely adopted.

**Output Stage.**—The most expensive component in a high-quality amplifier is normally the output transformer, on which the outlay is sometimes over £5. The cost of an output transformer is dependent on many factors, but a very high ratio of shunt inductance to leakage inductance is always expensive because it necessarily involves dividing the windings into numerous interleaved sections.

In the present amplifier design, the output valves operate under pure class A conditions, and a clean high-frequency performance can consequently be obtained with quite a simple transformer, since there is no need for the leakage inductance between the two halves of the primary to be as low as is necessary under class AB or class B conditions.

<sup>1</sup> "Gramophone and Microphone Pre-Amplifier" by P. J. Baxandall, *Wireless World*, Jan. and Feb., 1955.

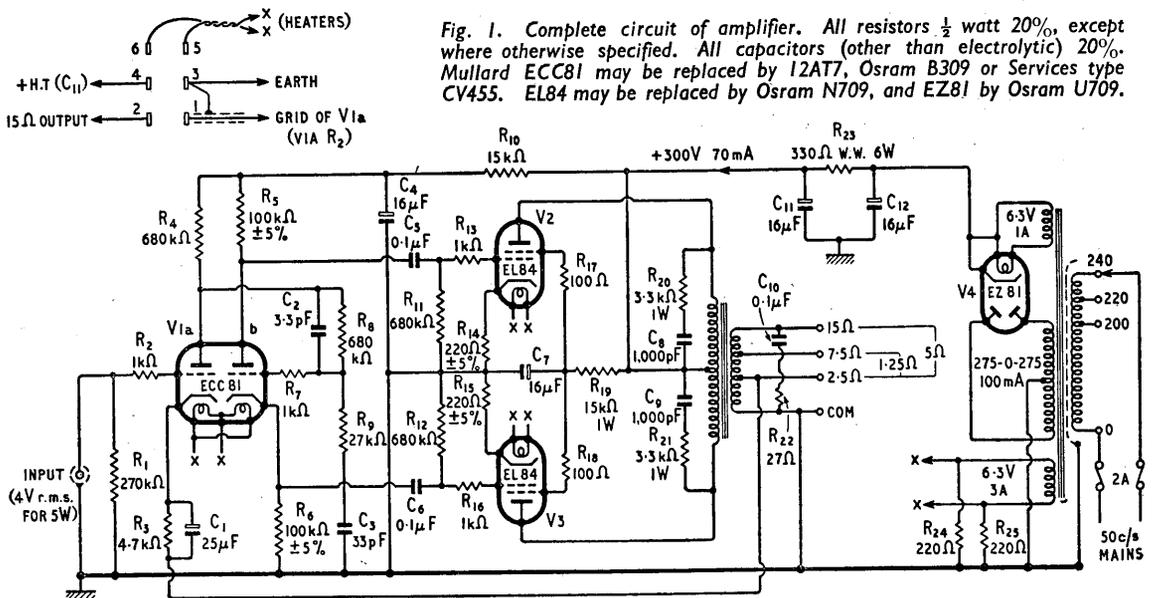

Fig. 1. Complete circuit of amplifier. All resistors  $\frac{1}{2}$  watt 20%, except where otherwise specified. All capacitors (other than electrolytic) 20%. Mullard ECC81 may be replaced by 12AT7, Osram B309 or Services type CV455. EL84 may be replaced by Osram N709, and EZ81 by Osram U709.

# Amplifier

By P. J. BAXANDALL, B.Sc. (Eng.)

The transformer has, in fact, only two primary sections, with the secondary in one section between them.

A further advantage of class A operation is that the audible distortion is less, for a given unweighted total harmonic distortion, than in class AB or class B systems<sup>2</sup>. The efficiency is admittedly lower, but since 5 watts is considered to be sufficient for the purposes for which this amplifier is intended, the lower efficiency is regarded as of little importance.

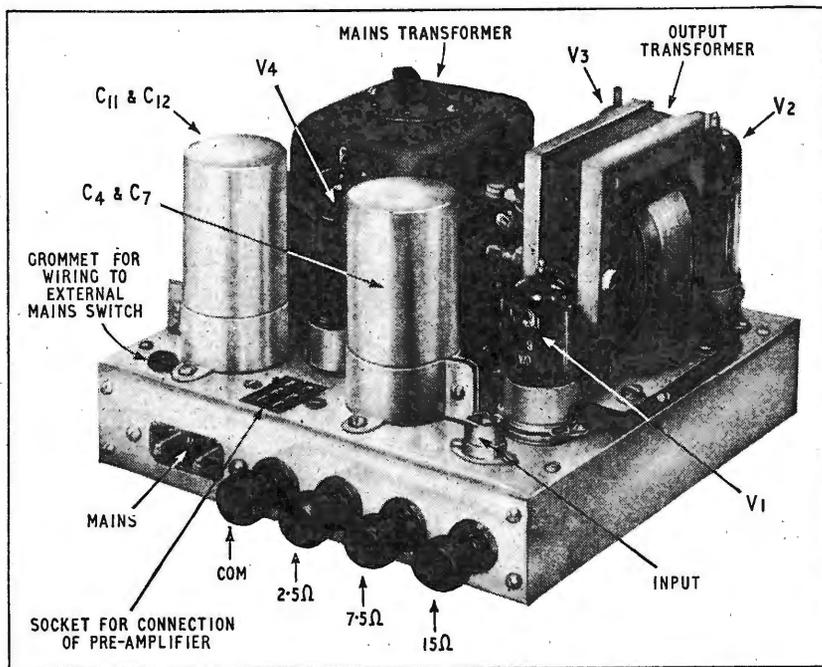

The stated output rating of 5 watts is actually rather conservative, as will be seen from the measured results given later on; this is intentional, and makes it possible to predict with confidence that *all* amplifiers built to this design will be comfortably capable of giving an output of 5 watts, at adequately low distortion, throughout the frequency range 35 c/s to 10 kc/s, despite the effects of tolerances on components and valves.

The nominal d.c. operating conditions give a quiescent anode dissipation in each output valve of 9.5 watts, the maximum dissipation permitted by the makers being 12 watts. With this margin to spare, it is unlikely that the valve rating will be exceeded in any versions of the amplifier built, and a long average valve life should be obtained.

Negative feedback is taken from a tapping on the secondary winding, and not from a tertiary winding as was done in an earlier design by the author<sup>3</sup>. Whilst the use of a tertiary winding is still regarded as an excellent scheme, it unfortunately increases the cost of an output transformer more than might at first be expected for the following reasons:—

(a) The manufacturer has to pay a patent royalty on each transformer.

(b) It would appear to be desirable, when using a tertiary winding for feedback, to adopt a symmetrical winding arrangement with a central partition on the bobbin. With cheaper unsymmetrical winding arrangements, there will be some output at high frequencies from both the secondary and tertiary windings due to push-push even-harmonic distortion current fed to the primary, and it is unlikely that such distortion voltages will be induced equally effectively into secondary and tertiary

General view of amplifier. The chassis in this prototype was made with 18 s.w.g. aluminium and measures  $6\frac{1}{2}$  in  $\times$   $6\frac{1}{2}$  in  $\times$   $1\frac{1}{8}$  in.

windings. Consequently, at high frequencies the application of a large amount of negative feedback via the tertiary winding may not reduce the distortion, as measured at the secondary, by as large a factor as would otherwise be the case.

The increase in cost resulting from having to employ a bobbin with a central partition, compared with a simple winding arrangement in which all layers occupy the full winding width, is necessarily quite large, especially since, with the latter scheme, a very satisfactory transformer can be made commercially without side cheeks at all, i.e., using a paper interleaved and impregnated winding on a simple tubular former.

The author is indebted to R. F. Gilson, Ltd., and Partridge Transformers, Ltd., for much useful information relating to other less obvious factors affecting transformer cost. The original output transformer designed for this amplifier used a size of core which was later found to be not very readily available commercially. Moreover, a stack of twice the width of the middle limb was adopted in the interests of improving the ratio of shunt to leakage inductance—but it was pointed out that the use of such proportions would necessitate winding the transformer at lower than normal speed, resulting in a considerable increase in cost.

The final design uses a square stack of size 429 "waste-free" laminations made of ordinary silicon iron material, e.g., Stalloy. Waste-free laminations have proportions as shown in Fig. 2, which permit two "E" laminations and two "I" laminations to be stamped out of one rectangular sheet with no

<sup>2</sup> "The Influence of High-Order Products in Non-Linear Distortion" by D. E. L. Shorter, *Electronic Engineering*, April, 1950.

<sup>3</sup> "High-Quality Amplifier Design" by P. J. Baxandall, *Wireless World*, Jan. 1948.

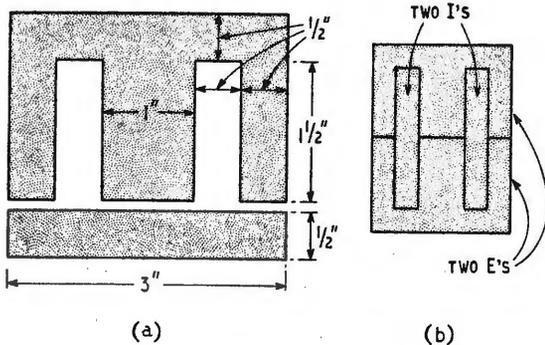

Fig. 2. (a) Dimensions of "waste-free" laminations used in the output transformer. (b) Showing how two "E's" and two "I's" are punched out of one sheet of material, leaving no waste. If grain-oriented material is used, the preferred magnetic direction runs vertically.

waste material left over, thus keeping down the cost. It will be seen from Fig. 2 that these laminations give a rather small winding depth in relation to the cross-section of the iron, compared with typical laminations of earlier design, but this is a help in giving a good ratio of shunt to leakage inductance with simple winding arrangements.

An incidental advantage of having the secondary in only one section, as in the present design, is that simple tappings may be provided for matching different load impedances, thus avoiding the inconvenience of series-parallel interconnection changes between secondary sections and perhaps the necessity for altering the values of components in the feedback network. Furthermore, if, for example, a 15-ohm tweeter is found to be too sensitive when used in conjunction with a particular 15-ohm bass speaker, the tweeter (and its associated cross-over components) may be connected instead across the 7.5-ohm or 5-ohm output terminals. Or, to give another example, a 3-ohm tweeter could be used in conjunction with a 15-ohm bass speaker by connecting it to the 5-ohm, 2.5-ohm or 1.25-ohm terminals, the choice depending again on the relative sensitivities and being made on the basis of aural judgment. In the author's opinion, a frequent cause of unpleasant reproduction is bad balance between the sensitivities of bass and treble speakers, particularly when the treble speaker is the more sensitive of the two; a difference in sensitivities of 6 dB is then enough to give quite strident reproduction, assuming a cross-over frequency in the region of 1 kc/s.

It will be seen from Fig. 1 that an unusual feature of the circuit is that no bypass capacitors are connected across the output valve bias resistors, which results in the application of a small amount of negative feedback to each output valve. Whilst this feedback undoubtedly improves the linearity of each valve, it is nevertheless found that the valve distortion, at a given output voltage, introduced by the complete output stage, in the absence of overall feedback, is not appreciably reduced by the local feedback. This result, perhaps surprising at first, is mainly due to the fact that each valve gives much more second-harmonic distortion than third; the local feedback gives a substantial reduction in second-harmonic distortion, and consequently in

total distortion, in each valve, but, under the particular operating conditions used, happens to leave the third-harmonic distortion almost unaltered\*. The second-harmonic distortion is, however, cancelled out in a balanced push-pull stage, so that the total distortion at the output, mainly third harmonic, is almost unaltered.

Thus, in the present design, the omission of the cathode bypass capacitors does not result in a useful reduction in output stage distortion (in the absence of overall feedback) when matched valves are used. The reasons for omitting the capacitors are, however, as follows:—

(a) Saving in cost and space.

(b) The reduction in forward gain makes it practicable to obtain very good stability margins when applying overall feedback directly from the 2.5-ohm tapping on the output transformer, thus avoiding the need for two resistors which would otherwise be required for giving a suitable value of feedback factor  $\beta$ . Furthermore, with the arrangement used, a sine-wave input of approximately 4 V r.m.s. is required for the full rated output of 5 watts, which is convenient in that it is the same as previously adopted by the author<sup>1, 3</sup>.

(c) If the output valves have unequal mutual conductances, the local current feedback largely offsets the effects of this and the performance of the

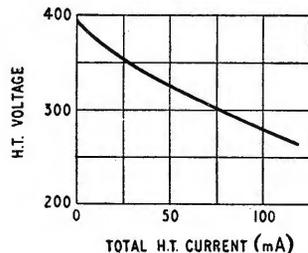

Fig. 3. Regulation curve for power supply shown in Fig. 1, measured at a mains voltage of 225 V on the 220-230 V tapping.

amplifier is affected less by the poor matching of valves than would otherwise be the case.

(d) The overload behaviour at high frequencies is made somewhat cleaner by the local current feedback, due to the reduction in push-push second-harmonic current fed to the output transformer primary.

It is appreciated, however, that some readers, not wishing to use pre-amplifiers based on the author's designs, may prefer a higher gain than that given by the Fig. 1 circuit. The necessary modifications are as follows:—

(a) Connect a 50- $\mu$ F, 12-V electrolytic capacitor across each bias resistor in the output stage.

(b) Connect two resistors in series, of 180 ohms and 100 ohms, between the 2.5-ohm transformer tapping and earth, the 100-ohm resistor going to earth, and take the feedback from their junction.

The performance of the amplifier will not be significantly changed by this modification, except that

\* It may be shown that, assuming a valve to introduce only second-harmonic distortion, i.e., to have a simple parabolic transfer characteristic, the application of negative feedback results in the introduction of higher-order harmonic distortion; all harmonics, however, ultimately become negligible if enough feedback is applied. Also, the effect on distortion of applying feedback separately to each valve in the manner adopted is not the same as that of applying the same amount of feedback over the complete output stage; the signal current flowing in each cathode resistor differing from the signal current component that flows through the complete transformer primary, since the former includes also the push-push second-harmonic current which is ineffective as far as the transformer is concerned.

an output of 5 watts will now be obtained for a sine-wave input of approximately 1.4 V r.m.s. instead of 4 V r.m.s.

**Input Stage and Phase Splitter.**—The first half of the double triode is a straightforward amplifying stage, d.c. coupled to the second half which operates as a phase splitter. With this arrangement, the only significant elements that give phase lead at low frequencies are the output transformer and the resistance-capacitance coupling between the phase splitter and the output valves; a large margin of stability can then easily be obtained by making the coupling time-constant sufficiently large, which can be done without exceeding a coupling capacitor value of  $0.1 \mu\text{F}$ .

At high frequencies, the attenuation of loop gain is controlled by means of a resistance-capacitance network between the two halves of the double triode† and by further R-C networks across the primary and secondary of the output transformer. Whilst not all of these elements are absolutely essential, it should be emphasized that great care has been taken over this aspect of the design, to secure large stability margins under all likely conditions of load, and also on no load. It is confidently predicted that, if the circuit is built as specified, no troubles whatever will be experienced with instability, even with the most extreme combination of effects due to component tolerances.

The tendency to design and test amplifiers on the assumption of a pure resistance load of the correct value is to be deprecated; for a moving-coil loudspeaker has an impedance that rises considerably at high frequencies, and, when a long speaker lead is used, there will be appreciable shunt capacitance also. The safe procedure, for an amplifier for general use, is therefore to design for large stability margins not only on a 15-ohm resistive load but also in the extreme condition of capacitance load only. In the present design, speaker leads up to at least 100 yards long may be safely used, and no tendency to instability will result even if the speaker at the far end is temporarily disconnected for any reason.

The resistance-capacitance shunt across the secondary is a very effective dodge for increasing the stability margin on no load; when it is present, adding  $0.01 \mu\text{F}$  across the output transformer secondary produces almost no effect on the no-load square wave response, and, in the prototype at least, even  $0.05 \mu\text{F}$  does not produce oscillation. Without the R-C shunt, adding  $0.01 \mu\text{F}$  on no load gives

†The arrangement used is preferable, with a triode stage, to the simpler one of shunting a series combination of C and R directly across the anode load. With the latter, as the frequency is raised, the shunt becomes effective in reducing the gain only when its impedance has fallen to a value comparable with the a.c. resistance of the valve, which is very much lower than the value of the anode load resistor. At much lower frequencies than this, however, the resistance-capacitance shunt will severely limit the anode voltage swing that is available without overloading.

pronounced ringing, and  $0.05 \mu\text{F}$  gives violent oscillation.

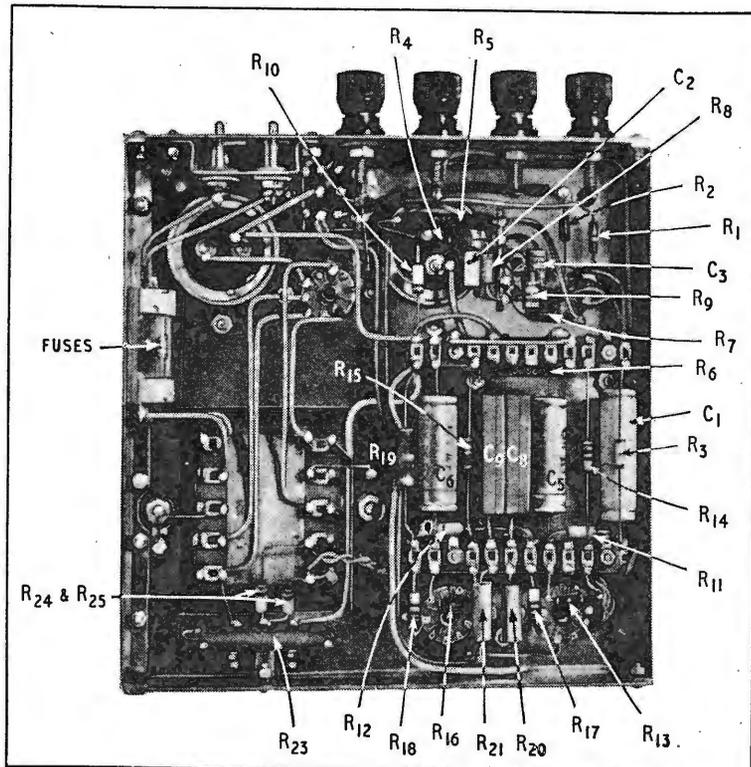

**The Power Supply.**—In the interests of economy, a capacitor-input rectifier circuit is used, with a smoothing resistor in place of the more usual choke. The regulation curve for the power supply is shown in Fig. 3. Because of the pure class A operation of the output valves, the total h.t. current taken by the amplifier varies by less than 2 per cent between zero and full rated output, so that there is very little fluctuation, with programme volume, of the h.t. voltage available for operating pre-amplifiers, peak programme meters, etc.

With the rectifier valve and mains transformer specified (the prototype was supplied by Stern Radio, Ltd.), a total h.t. current up to 100 mA may be delivered without exceeding the rating of these components. Since the h.t. current taken by the amplifier itself is unlikely to exceed 80 mA, allowing for reasonable effects of component and valve tolerances, h.t. current up to about 20 mA may be safely supplied to external units. Readers wishing to supply more external h.t. load than this should modify the power supply design appropriately; just how this is done is unimportant, so long as the resultant h.t. voltage lies within the limits 280 V to 320 V and does not contain much more than 2 V r.m.s. of 100 c/s ripple.

**Construction.**—The layout adopted in the prototype is shown in the photographs. The amplifier and its power supply occupy, roughly speaking, separate halves of the chassis, so that substantially the same layout may be adopted by readers who wish to build them as separate units.

The layout is not critical, however, and there is

Layout of components on the underside of the chassis.  $R_{22}$  and  $C_{10}$  are mounted on top of the chassis between the transformers.

no reason why other layouts should not be used, provided that the following points are watched:—

(a) The components associated with the coupling network between the two halves of the double triode should be mounted close to the valve holder in order to reduce unwanted stray capacitances.

(b) The output stage anode leads should not be allowed to come too near to the wiring of previous parts of the circuit.

(c) The 330-ohm smoothing resistor should be so mounted that its heat will not harm other components.

(d) The transformers should be so positioned that the hum voltage induced into the output transformer by the stray magnetic field from the mains transformer does not give rise to an undesirably high hum output from the amplifier. In case of doubt, a simple experiment may be done before building the

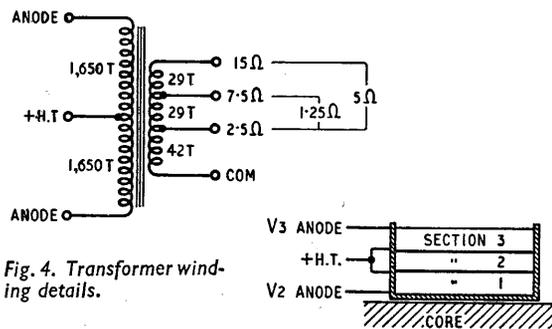

Fig. 4. Transformer winding details.

amplifier, as follows. Connect the primary of the mains transformer to the mains and the secondary of the output transformer to a loudspeaker. On moving the transformers about, it will be found that, even when they are very close together, there are certain positions in which the hum is almost zero. One such position is with the axis of the windings on the mains transformer passing through the centre of the output transformer at 90° to the axis of the windings on the latter. In the author's layout, the transformers are not quite arranged in this ideal way—to have adopted it would have required an increase in chassis size—but the hum, whilst just noticeable on first switching on, falls to a completely negligible level as soon as the amplifier warms up and feedback becomes effective in reducing the hum output.

It will be seen that in the prototype tag strips have been used instead of a group board. The type of tag strip employed, which has tags at  $\frac{1}{4}$  in spacing, has much to recommend it for home-constructed equipment; it is easily cut to length, tags may be removed where necessary for fixing screws, and two strips may be mounted at just the right distance apart to accommodate the particular components used in an elegant manner. The strip is readily available, e.g., from G. W. Smith & Co., 3, Lisle Street, London, W.C.2.

A 6-pin socket\* is provided for making connections to pre-amplifiers, etc. The amplifier input lead in the corresponding cable should be separately screened, but none of the other leads in this cable need be screened. In the prototype, a Belling-Lee coaxial socket is also provided for the input, which

\* The socket may be obtained from Painton & Co., Ltd., Kingsthorpe, Northampton, and has the catalogue number 500472. The corresponding cable entry plug has the number 500198.

may be found convenient in cases where the input source does not obtain its power supply from the present amplifier. A further provision is that one pin on the 6-pin socket is connected to the 15-ohm output terminal of the amplifier; this enables a simple peak programme meter, whose circuit will be given later, to be built into the pre-amplifier unit, if desired, but supplied with signals from the output transformer secondary.

Large screw terminals (Belling-Lee Cat. No. L. 1004/11) are used for the loudspeaker connections, and whilst these are more expensive than a socket strip, they are, in the author's opinion, much the most desirable form of connector for the purpose. Socket strips tend to lead, sooner or later, to the use of match-sticks!

**Transformer Details.**—A transformer suitable for this amplifier may be obtained from R. F. Gilson, Ltd., and is known as Type WO 893. A similar transformer may be obtained from Partridge Transformers, Ltd., and is known as their type P4076. For readers who prefer to wind their own transformer, the winding details are given below.

#### Core

In stack of laminations (inter-Services size 429A) as Fig. 2, 0.014-in thick in ordinary silicon iron such as Stalloy (111A), Silcor II (29A) or Strantranis No. 1 (43A). The laminations may be interleaved alternately in the normal manner.

The frequency down to which the amplifier is capable of delivering its full rated output may be appreciably lowered by using "Unidi" or "Unisil" laminations. These are made of grain-oriented silicon iron, such as is used normally in C-type cores, and have superior magnetic properties in the rolling direction but not at right-angles to this direction. With "waste-free" laminations, however, as may be appreciated from Fig. 2, the laminations may readily be stamped so that, throughout the major part of the magnetic circuit, the flux is in the preferred direction in the material. Despite the technical advantage of this material, the author doubts whether its use in the present amplifier would confer any *audible* advantage whatever on any kind of musical programme. A transformer with "Unidi" laminations, otherwise similar to the normal model, can be supplied by R. F. Gilson, Ltd., and by Partridge Transformers, Ltd., who describe it as their type P4077.

#### Bobbin

To suit core,  $\frac{1}{8}$  in material.

#### Windings

Section (1). 1,650 turns of 38 s.w.g. enam., in nine or ten layers, with 0.002 or 0.003-in transformer paper between layers.

Cover with three layers of 0.005-in Empire cloth before winding section (2).

Section (2). In three layers, with 0.002 or 0.003-in paper between layers, as follows:—

- 1st layer—42 turns of 22 s.w.g. enam.
- 2nd layer—29 turns of 20 s.w.g. enam.
- 3rd layer—29 turns of 20 s.w.g. enam.

All connections between layers to be brought out as shown. (Fig. 4.)

Cover with three layers of 0.005-in Empire cloth before winding section (3).

Section (3). As section (1) and wound in same direction.

(Continued on page 113)

Cover the outside of section (3) with Empire cloth for protection.

If the secondary is wound with the bobbin rotating in the same direction as for the primary sections, then the feedback will be negative, as required, when the outside of section (3) is connected to the anode of the output valve whose grid is fed from the cathode of the phase-splitter.

The home constructor is recommended to bring out the actual winding wire for connections to all sections. The alternative method of soldering flexible (stranded) lead-out wires to the primary winding, whilst reducing the danger of lead breakages after completing the winding, introduces lumps into the winding where the taped joints occur and hence makes uniform winding on a simple hand winding machine (e.g., hand-drill) considerably more difficult. It is not hard, given reasonably careful handling, to avoid breaking the 38 s.w.g. leads during construction of the transformer, but connec-

tion to the external circuit should be via a tag board or terminal board so arranged that the 38 s.w.g. leads to the back of the board cannot readily be damaged.

#### Tests

The following figures were obtained on a prototype from R. F. Gilson, Ltd.:

Total primary resistance .. ..	422 ohms
Total secondary resistance .. ..	0.45 ohm
Leakage inductance, measured at at 1,000 c/s across whole primary with whole secondary short- circuited .. .. .	54 mH
Leakage inductance, measured at 1,000 c/s across one half of primary with the other half short-circuited .. .. .	77 mH
Total primary inductance, mea- sured at 50 c/s and 10 V r.m.s.	60 H

(To be continued)

## Automatically Tuned Direction Finder

Pilot-Operated Navigational Aid for Large Aircraft

RADIO direction finding plays, and will undoubtedly continue to play for some time, an essential role in air navigation over the principal air routes of the world. A new direction finder was recently announced by Marconi's; it takes the form of an automatically tuned DF set (ADF) designed especially to meet the requirements of modern high-speed passenger and transport aircraft. A miniaturized version for Service aircraft is also made.

The Type AD712, as the civilian version is called, was shown as a prototype at Fareborough last year and is now in production form. It is particularly suitable for pilot operation as it is necessary only to initiate the tuning by "clocking up" the frequency of the land station required on a small controller and the receiver makes all necessary tuning adjustments and displays the bearing, accurate to within  $\pm 2$  degree, on a 0- to 360 degree bearing indicator.

This simplicity of operation is made possible by a unique tuning system involving the use of some 36 crystals. Setting up a frequency on the controller selects a particular combination of crystals, which, by the sum and/or difference of their frequencies, provides a reference frequency with which is compared a continuously tunable oscillator (the first mixer). The difference frequency is used to control a tuning motor driving a chain of dust-iron cores which form the tuning elements of the set.

The receiver is a double superheterodyne with a near normal first i.f., but a rather low second one. The wavebands covered are 100 to 415 kc/s and 490 to 1,799.5 kc/s and selection of a frequency within these limits can be effected in steps of 0.5 kc/s. Two bandwidths are provided;  $\pm 700$  c/s and  $\pm 1.5$  kc/s, measured between -6 dB points.

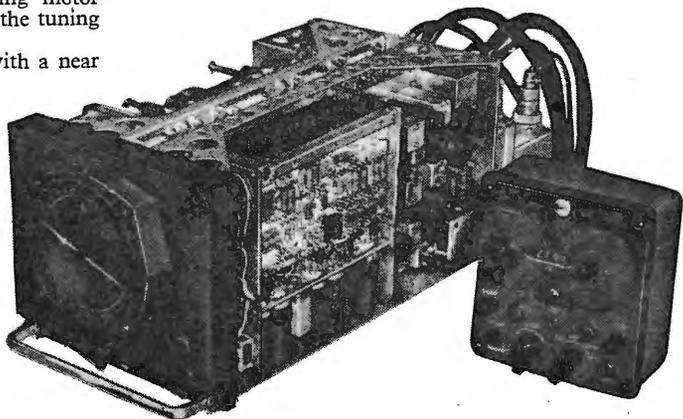

For ADF operation signals are fed to the

receiver from a pair of dust-iron cored crossed loops housed in a thin fibre-glass moulding of suitable contour and aerodynamic form for mounting on the outside of the aircraft skin.

Signals from the crossed loops are fed to a quadrantal error correction unit, thence to a goniometer and after suitable "processing" the resultant signal is mixed with the output from an omni-directional "sense" aerial and passed to the i.f. and detector stages. The modulation is used to drive the goniometer search coil to the null-signal position. The goniometer motor drives also the pointer of the DF indicator on the front of the receiver and a selsyn-type system repeats the bearing on a remote indicator in the pilot's cockpit.

A low-power audio output provides aural reception with headphones, or over the aircraft's intercom, as required. Ground beacons, radio ranges and Consol are receivable and the set can be used, within its frequency ranges, as a communications receiver.

For a  $\pm 2$  degree overall DF accuracy the field strength required at the aerials is  $25 \mu\text{V/m}$ ; and for communications  $5 \mu\text{V/m}$  with 30% modulation of the signal give a signal/noise ratio of 6 dB. Power requirements are, 140 VA at 115V, 400 c/s and 1 A at 28 V d.c.

Marconi Type AD712 ADF set removed from its case. The remote controller is shown on the right.

# The Short-Circuited Turn

DETERMINING THE CONDITIONS UNDER WHICH IT MAY BE HARMFUL,

USEFUL OR JUST HARMLESS

By THOMAS RODDAM

**I**F a quick skimming through the standard books is any guide, nobody seems to have bothered very much about the short-circuited turn, although it leads a life which at first glance is comparable to that of Jekyll and Hyde. The faulty low-frequency coil does not prevent us using a brass slug to tune our high-frequency coils. Why is there this split behaviour? Where does the division between the useful and the useless lie?

The obvious thing to do is to draw the actual circuit of a coil with a short-circuited turn and calculate its impedance. If the result can be expressed in simple terms we should be able to build up a behaviour picture: if the result is just a long mathematical expression we shall have to work out enough special cases to provide the foundation for a general pattern. Fortunately, it turns out that, if you make the right approach, the result can be expressed in terms which are already familiar in quite a different context. And then we see that this is just what we might have expected.

The basic circuit is shown in Fig. 1(a). The wanted circuit is an inductance  $L_1$  having resistance  $R_1$ . This is itself a simplification, because shunt losses are neglected, and at high frequencies the series resistance will not be constant. However, it is better to understand a simplified system than to fail to understand the phenomena at all. The short-circuited turn, which may be more than a single turn, of course, is taken to be the separate winding  $L_2$ , imperfectly coupled to  $L_1$ , and this is considered to have what we may call a self-resistance of  $R_2$ .

The transformer  $L_1L_2$  can be replaced by its equivalent circuit to give the network of Fig. 1(b). This is one of the equivalents given some time ago in *Wireless World*<sup>1</sup>. Moving over to the other side of the ideal transformer we get the form shown in Fig. 1(c). Now we are ready to write down the impedance of our coil with its short-circuited turn.

The parallel combination of  $k^2L_1$  and  $k^2n^2R_2$  has an impedance  $Z$  of

$$\frac{1}{\left(\frac{1}{j\omega k^2L_1} + \frac{1}{k^2n^2R_2}\right)} = \frac{j\omega L_1 k^4 n^2 R_2}{j\omega L_1 k^2 + k^2 n^2 R_2}$$

so that the total impedance is

$$\begin{aligned} & R_1 + j\omega L_1(1-k^2) + j\omega L_1 k^4 n^2 R_2 / (j\omega L_1 k^2 + k^2 n^2 R_2) \\ &= R_1 + j\omega L_1(1-k^2) + j\omega L_1 k^4 n^2 R_2 / (k^2 n^2 R_2 - j\omega L_1 k^2) / (\omega^2 L_1^2 k^4 + k^4 n^4 R_2^2) \\ &= R_1 + \omega^2 L_1^2 k^4 n^2 R_2 / (\omega^2 L_1^2 k^4 + k^4 n^4 R_2^2) \\ &+ j\omega L_1(1-k^2) + j\omega L_1 k^4 n^4 R_2^2 / (\omega^2 L_1^2 k^4 + k^4 n^4 R_2^2) \end{aligned}$$

After some multiplying and rearranging we come to the form:

$$Z = R_1 \frac{1 + \frac{\omega^2 L_1^2}{n^4 R_2^2} \left(1 + \frac{n^2 k^2 R_2}{R_1}\right)}{1 + \frac{\omega^2 L_1^2}{n^4 R_2^2}} + j\omega L_1 \frac{1 + \frac{\omega^2 L_1^2}{n^4 R_2^2} (1-k^2)}{1 + \frac{\omega^2 L_1^2}{n^4 R_2^2}}$$

Still, you may think, pretty intractable. But now let us substitute  $f^2 = \omega^2 L_1^2 / n^4 R_2^2$  and  $r = n^2 k^2 R_2 / R_1$  and we have

$$Z = R_1 \frac{1 + (1+r)f^2}{1 + f^2} + j\omega L_1 \frac{1 + (1-k^2)f^2}{1 + f^2}$$

In this expression "f" is proportional to frequency. If  $f$  is zero, the impedance reduces to  $R_1 + j\omega L_1$ , just as we should expect, because the transformer action to the short-circuited turn is ineffective. If  $f$  is very large indeed, the impedance is  $Z = R_1 + n^2 k^2 R_2 + j\omega L_1(1-k^2)$ . Looking back to Fig 1(c)

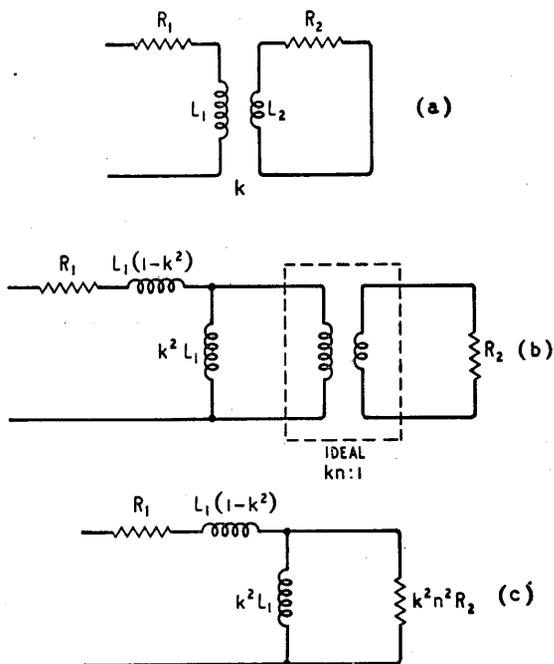

Fig. 1. (a) The short-circuited winding  $L_2$  has a "self-resistance" of  $R_2$ . It can be transformed via (b) to the simple network (c).

<sup>1</sup> "Some Electrical Theorems," by W. Tusting, November 1954

this again is just what we should expect, because  $j\omega L_2$  is so large compared with  $n^2k^2R_2$  that we can neglect it. Can we easily find out what happens in between?

The resistance and reactance terms each have the form

$$M = (1 + a^2f^2)/(1 + f^2)$$

If we can deal with this, we can deal with each of the components of  $Z$ . Let us take logarithms:

$$\log M = \log(1 + a^2f^2) - \log(1 + f^2)$$

You may already have recognized the form of the expression: you may recognize the form  $\log(1 + f^2)$ . Just in case you have not connected it up, consider the circuit of Fig. 2. For this circuit

$$\left(\frac{V_1}{V_2}\right)^2 = 1 + \omega^2 C^2 R^2$$

and if we put  $\omega^2 C^2 R^2 = F^2$  the frequency response is  $10 \log(1 + F^2)$  decibels.

This is a very familiar shape indeed. In some articles on feedback problems in *Wireless World*<sup>2</sup>, I described how straight-line approximations could be used to sketch out characteristics of this form. You can find a summary of this in Langford-Smith, "Radio Designer's Handbook" (p. 363). In very simple terms, we assume that if  $F$  is less than unity we neglect it: if  $F$  is greater than unity, take  $(1 + F^2) \approx F^2$  so  $\log(1 + F^2) \approx 2 \log F$ . This is a straight line on graph paper using a logarithmic scale for frequency. A rather better sketch is obtained by noting that at  $F=1$ ,  $10 \log(1 + F^2) \approx 3$  which gives a point at the corner to enable it to be rounded off.

With this connection established, the form of  $M$  becomes familiar too. It is a "step" characteristic, the shape we introduce in our feedback amplifiers to manoeuvre past a point of inadequate stability. In its simplest approximation form it consists of two horizontal sections,  $M=1$  and  $M=a^2$ , joined by a sloping line. The corners are at  $f=1$  and  $f=1/a$ . All we need to do, then, is to draw this pattern, remembering to use logarithmic scales. It isn't, of course, necessary to hunt out log-log graph paper for this. I prefer to use centimetre squares, scaled in octaves. This is much cheaper, and it gets over the difficulty that only too often one has a supply of one maker's log paper one year, and another maker's the next. Centimetres are always the same size.

Now let us turn back to  $Z$ . The corners of the resistance characteristic are at  $f=1/\sqrt{1+r}$  and  $f=1$ , and the corners of the reactance at  $f=1/\sqrt{1-k^2}$  and  $f=1$ . For the sake of an example, let us take

$$r=3 \text{ and } (1-k^2)=0.25, \text{ i.e., } k^2=0.75, k=0.865.$$

The step heights are: for  $R$ , 4

for  $L$ , 4

and the corner frequencies: for

$$R, f=1 \text{ and } f=\frac{1}{2}$$

$$L, f=1 \text{ and } f=2.$$

Fig. 3 shows the simplified shapes which are obtained.

We are now in a position to look more generally

Fig. 2. For this network  $V_1/V_2 = 1 + j\omega CR$ , so  $|V_1/V_2|^2 = 1 + \omega^2 C^2 R^2$ .

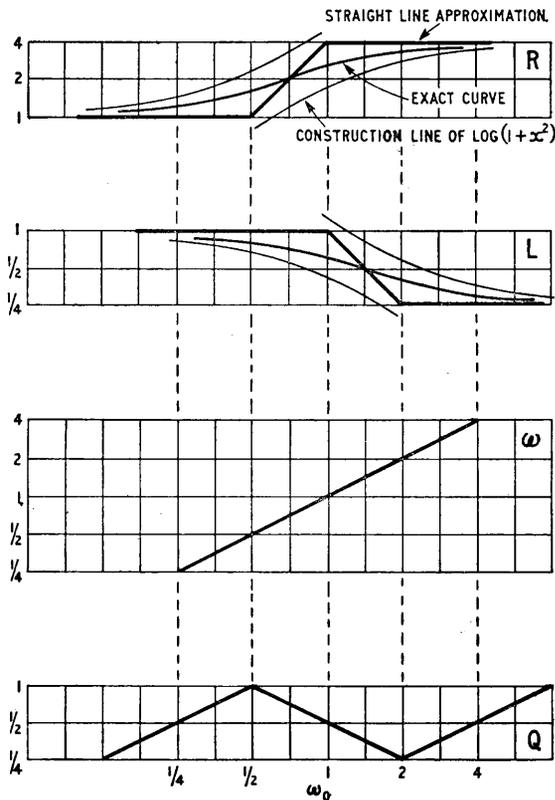

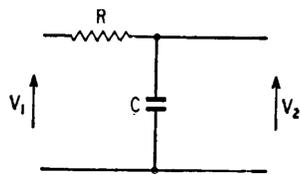

Fig. 3. Typical shapes obtained using the straight-line approximation method for the conditions discussed in the text.

at what happens. The key frequency is obviously given by  $f=1$ . Looking back we see that

$$f = \omega L_1 / n^2 R_2$$

so that the key frequency  $\omega_0$  is given by

$$\omega_0 = n^2 R_2 / L_1$$

Below this frequency the resistance has already been increasing, while the inductance has stayed unchanged; above this frequency the inductance is falling, but the resistance has already reached its limit.

The next important frequency to consider is given by  $f^2 = 1/(1+r)$  so that it is just

$$\omega_2 = \omega_0 / \sqrt{1+r}.$$

This tells us where  $R$  starts to rise.

The third important frequency is where  $f^2 = 1/(1-k^2)$  when  $L$  reaches its final value. It is, of course,  $\omega_2 = \omega_0 / \sqrt{1-k^2}$ .

Before going on to explore these details, let us just add to Fig. 3 a line showing frequency as a function of frequency—a straight line, as you might expect, and then a simplified graph for  $Q = \omega L/R$  which on a log-log scale gives us  $\log Q = \log \omega + \log L - \log R$ .

<sup>2</sup> "Stabilizing Feedback Amplifiers," March 1951.

To draw this we simply add and subtract, as indicated, the lines already drawn. We see that  $Q$  increases up to  $\omega_1$ , with  $Q \propto \omega$ , then decreases with frequency between  $\omega_1$  and  $\omega_2$  with  $Q \propto 1/\omega$  and finally, above  $\omega_2$  increases with frequency again. This  $Q$ -factor is not, in general, the true  $Q$  of the coil, because it takes account only of the copper loss, and even this is assumed to be constant. The effect of the short-circuited turn is, however, clearly shown. In general terms it reduces the limiting  $Q$  by a factor of  $(1-k^2)/(1+r)$ .

## Some Numerical Examples

Now, perhaps, we might go on to discuss some of the implications of our results. If we have a true short-circuited turn, by which I mean that  $L_2$  is actually part of  $L_1$ ,  $nR_2=R_1$  because the area of the conductor is the same for the two windings (or parts of the winding). Consequently

$$r = n^2 k^2 R_2 / R_1 = nk^2.$$

In a low-frequency coil,  $k^2$  will be near enough to unity not to be worth keeping in the picture, so that  $r \approx n$ . The key frequency is  $n^2 R_2 / L_1$  or  $nR_1 / L_1$ .

Let us try some numbers: a coil for a low-frequency filter might well have an inductance of 100 mH, with 1,000 turns and a resistance of 10 ohms. At 1,600 c/s, this coil would have a  $Q$  of 100. It is, in fact, a good coil. Now let us assume we have a short-circuited turn. The resistance will start to rise at a frequency

$$\omega_1 = \omega_0 / (1+n)^{1/2} \quad (\text{since } r=n)$$

$$= nR_1 / L(1+n)^{1/2}$$

$$\approx n^3 R_1 / L \quad (\text{since } n \text{ is large enough for } 1+n \approx n).$$

$$\text{Thus } \omega_1 = n^3 10 / 0.1 = 100n^3.$$

The maximum value which  $n$  can take is 1,000, when a single turn is shorted. Then  $\omega_1 = 3,000$ , roughly, and the frequency is 500 c/s. If a block of 10 turns is short-circuited,  $\omega_1 = 1,000$ , and the frequency is about 160 c/s. The values of  $\omega_0$  lead to frequencies of 16,000 c/s and 1,600 c/s. As we have seen, it is only above the key frequency  $\omega_0$  that the inductance starts to fall. A test at 1,000 c/s, then, would show the correct inductance but very high losses. As we have already seen, the resistive term tends towards  $(1+r)$  times its normal value, so that on the basis of the straight line approximation the resistance will be 10,000 or 1,000 ohms for the two values of  $n$  at  $\omega_0$ .

Now let us look at the brass tuning slug. In a high-frequency coil we might make  $k^2 = \frac{1}{2}$ , and since the slug is very much thicker than the wire of the coil,  $nR_2$  will be much less than  $R_1$ . To get some figures, let us consider a 10-turn coil, and a slug made up of 10 turns in parallel. Then  $R_2 = R_1 / 100$  and  $r = \frac{1}{2} \times 100 \times \frac{1}{100} = 0.5$ . The resistance of this coil will be increased by 50%, while the inductance is brought down to one-half its original value. To adjust the coil we withdraw the slug, and as we make  $k$  smaller,  $L$  will rise and  $R$  will fall. If we only need a 10% reduction in  $L$  we can take  $k^2 = 0.1$  so that  $R$  only rises by 10%. That certainly is not too expensive.

These two examples confirm the result which we might have derived from our expression for the impedance: in most practical situations the first parameter to examine is  $r$ . If  $r$  is small, nothing much will happen to the loss of the coil. If  $k$  is very

small, nothing will happen to the inductance either, but a small value of  $k$  does not necessarily mean a small value of  $r$ . It helps, though, as you would expect, because if the short-circuit isn't coupled to the coil it can't do much harm. Keeping  $R_2$  low keeps  $r$  small, so that a silver-plated slug will be slightly better than a brass one. But for a small adjustment,  $k$  will look after this, and as we saw, you may only be losing 10%. It is interesting to notice that if we had altered our 10 parallel turn slug to a two-"turn" slug, each turn made up of 5 standard turns, although  $n^2$  would have fallen to 25,  $R_2$  would have risen to  $R_1/25$  and  $r$  would not have been affected.

Having checked for good or bad by examining  $r$ , a test for the active frequency region begins with the determination of  $\omega_0$ . This tells you whether your application is likely to find the shorted-turn disturbing the inductance or the resistance.

In all the discussion above we have used the straight line approximation. Of course, the whole analysis is based on an approximation, but for the benefit of those who want to see how much the smooth-curve solution deviates from the straight-line form, I have added the smooth curve to Fig. 3. The basic smooth curve can be found as in Fig. 7.55D of "Radio Designer's Handbook," and a general survey is given on pages 363-365. All that need be done is to add the smooth standard curves instead of the approximation. The straight line approximation is at its worst near the corners of the characteristic, so that Fig. 3 makes it look just about as bad as it can be. With a little practice it becomes fairly easy to sketch in the rounding and to produce a freehand curve quite close enough to the correct one. Fig. 7.55F of the above shows how this sort of technique comes out in practice.

## Screening Problems

Can we make use of all this work for any other purpose? Life is not all slugs and defectives. One fairly obvious application is to the problem of screening coils. The screen is just a short-circuited turn, and the problem resolves itself into the determination of  $k$  and  $R_2$ . The only simple expression I have been able to find is given by Terman ("Radio Engineer's Handbook," 1st Edition, p. 71, equation 87). He gives an approximate expression for the coefficient of coupling between two coaxial concentric coils as  $k = a^2 / A^2 x$ , where  $a$  and  $A$  are the radii of the inner and outer coil, and  $2l$  and  $2x$  are their respective lengths. If we assume the screen to be twice the length of the coil itself and the screen radius to be twice the radius of the coil, this gives us  $k = \frac{1}{8}$ . From what we have already seen, the limiting inductance is  $L_1(1-k^2)$  so that we lose rather under 2% of our inductance. If we also assume that the screen is the same kind of conductor as the wiring we get back to the expression  $r = nk^2$ .

For a 10-turn coil, then,  $r = 0.156$ . In this particular case the inductance drops 1.56% but the resistance goes up by 15.6%.

Unfortunately these figures are in violent disagreement with those given in Section 10.1 vii of Langford-Smith. The RCA curves for  $k^2$  rather suggest a misprint in Terman, because there would be fair agreement if Terman's expression were actually for  $k^2$ . This leads us to the conclusion that the effect of the screen is to drop the inductance about

12% and increase resistance to more than double its initial value.

It is rather a pity that there is this disagreement. However, the RCA curves for  $k^2$  can always be used, and the expression for  $r$  enables us to get some idea of what will happen to the losses. We can also get some idea of the frequency range over which  $L$  will be varying. This is important, because we often find it convenient to test a coil at one frequency and use it at another. A screened coil may have a different inductance when the frequency is changed. When measuring the self-capacitance, too, we assume that the inductance itself is constant. With a screened coil this is not necessarily so.

One feature of our results not yet discussed is that there is a worst value for the quantity  $n^2R_2$ . If  $n$  is fixed, this means that there is a worst value for  $R_2$ ; if  $nR_2$  is fixed, the case of a short-circuit on a uniform winding, there is a worst value of  $n$ . To examine this effect we may proceed to differentiate the expression for  $Z$ : I haven't done this, because it seems to be one of the easiest ways to cover a lot of paper without arriving at any results. Let us try a rather more roundabout approach, confining our attention for the moment to the resistance. In fact, it is only the resistance which behaves in this way, but the proof of that I shall leave to the reader.

We have

$$R = R_1 \frac{1 + (1+r)f^2}{1+f^2} = R_1 \left( 1 + \frac{rf^2}{1+f^2} \right)$$

The only term which varies is the factor  $rf^2/(1+f^2)$ . This is a maximum if  $(1+f^2)/rf^2$  is a minimum. So now we need only think about

$$\frac{1}{rf^2} + \frac{1}{r}$$

and this is

$$\begin{aligned} \frac{R_1}{n^2k^2R_2} \cdot \frac{n^4R_2^2}{\omega^2L_1^2} + \frac{R_1}{n^2k^2R_2} &= \frac{R_1}{k^2} \left[ \frac{n^2R_2}{\omega^2L_1^2} + \frac{1}{n^2R_2} \right] \\ &= \frac{R_1}{k^2\omega L_1} \left[ \frac{n^2R_2}{\omega L_1} + \frac{\omega L_1}{n^2R_2} \right] \end{aligned}$$

It is fairly well known, and fairly easy to prove,

that a quantity  $(a+1/a)$  has a minimum value when  $a=1$ . A quick numerical check will show how very plausible this is. Therefore if

$$\frac{n^2R_2}{\omega L_1} = 1$$

the resistive term is a maximum. Since

$$\frac{1}{rf^2} + \frac{1}{r} = \frac{2R_1}{k^2\omega L_1}$$

at this point, the circuit resistance will be

$$R = R_1(1 + k^2\omega L_1/2R_1).$$

If you like bringing in  $Q$ , you can write  $\omega L_1/R_1 = Q$  giving  $R = R_1(1 + k^2Q/2)$  and the peak occurs when

$$\frac{n^2R_2}{R_1} = Q$$

An application of this part of the analysis can be found in "Recent Developments in Long-Distance Telephony," A.C. Timmis, *J.I.E.E.*, Vol. 78, p. 601, June 1936.

In an appendix we find Fig. 4 (based on Fig. 15, *loc. cit.* p. 615). This shows how the resistance term in the basic characteristics of telephone cable varies with the thickness of the copper tape used for screening. The screen acts as a short-circuited turn coupled to the long narrow loop formed by the pair of conductors. Roughly speaking,  $R_2$  will be inversely proportional to the thickness of the screen. As we expect, there is a worst value of  $R_2$  for any particular frequency. As the frequency is increased, this maximum occurs at higher values of  $R_2$ , or lower thicknesses. And the figure shows, too, that the incremental resistance at the maximum is roughly proportional to the frequency of the maximum. All in accordance with theory.

### Other Applications

Although only a very rough picture can be obtained, the theory of the short-circuited turn does give some idea of why you need to use thinner laminations in an iron-cored coil if you want to get a good  $Q$  at higher frequencies. Each lamination, is, in section, a small shorted-turn. The thinner the lamination the higher the value of  $\omega_0$ , the key frequency. Different material resistivities alter  $\omega_0$ , too; the results are only of value in providing a general concept, because the current distribution across the lamination alters with frequency, and  $R_2$  is by no means constant.

As any reader who has progressed this far will have seen, the short-circuited turn is worth a detailed study. The theory has wider application than would appear at first sight; it shows us that there are some mathematical operations which come in useful for all sorts of purposes and it leads to an agreeably tidy solution. There is, of course, no great new discovery involved. All this article has attempted is a tidying up operation: it has certainly tidied up my own ideas on this pleasantly ordinary problem.

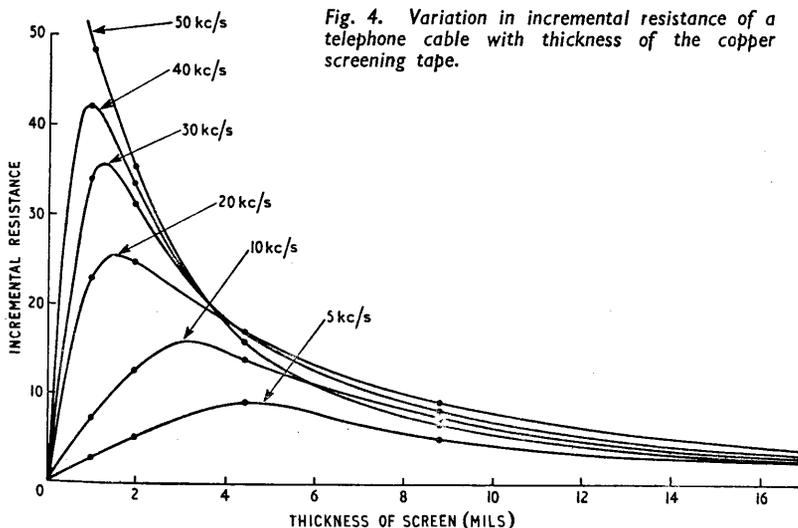

Fig. 4. Variation in incremental resistance of a telephone cable with thickness of the copper screening tape.

# LETTERS TO THE EDITOR

*The Editor does not necessarily endorse the opinions expressed by his correspondents*

## Colour Television

WHILE the B.B.C. were transmitting some NTSC-type colour television for the benefit of M.P.s a few weeks ago I happened to look in at the monochrome version, and I must say I was not at all impressed by the compatibility. The pictures had an unaccustomed soft look, which might have been due to sub-carrier interference (visible on my set), or to some fault of gamma correction, or to the loss of luminance detail by gamma correction described by Dr. White in your February issue. It would be interesting to hear an explanation from the B.B.C.—and also if they were using a “notch” filter to reduce sub-carrier interference, or some other method.

I would certainly mark the effort as “8+” or “well tried,” but for me, at any rate, compatibility has got to be perfect. Such pictures would not be at all acceptable as a regular thing—although I must say I enjoyed the show rather better than the normal B.B.C. programmes! (Perhaps it was necessary to “sell” compatible colour to the hon. Members.)

London, S.E.22.

K. R. McALISTER.

WHILST I am in no position to discuss the attitude of our General Post Office in relation to the possible transmission standard for colour television signals, R. F. Colville may like to know that a similar state of affairs to that prevailing here exists in the United States and throughout a large area of Europe.

The American approach is rather interesting as it is a guide to the mysteries surrounding the preoccupation with a 405-line colour TV standard in this country. In short, the ATT and Bell networks convert the NTSC full-specification signal to a “Narrow Band NTSC Signal,” the relative details are that the colour sub-carrier is shifted to 2.66 Mc/s approximately. Apart from scanning rates, therefore, the total occupied spectrum (3 Mc/s) closely resembles that currently used in the B.B.C. tests.

Speaking personally, I feel that it will be quite a long time before the Television Advisory Committee reaches a final decision, and even then they will be influenced by the viewpoint of the major manufacturers and the overall economic situation.

Winston Electronics, Ltd.,  
Shepperton, Middx.

G. LEVINE.

EXISTING systems of colour television are governed by two constraints: (a) the receiving apparatus is assumed to use a three-component method of reconstructing the coloured picture and (b) the transmission is required to be compatible.

If it were not for these constraints, the obvious method of transmitting a colour picture which would still be usable on monochrome receivers would be to transmit luminance, hue and saturation, the first according to the existing monochrome standards. But hue and saturation are not convenient variables for the reconstruction process. So far as I know the only variable-hue device is an adaptation of the Kerr cell, which implies a projection receiver, and there is no direct variable-saturation device.

In a linear system the luminance, hue and saturation signals could be translated in the receiver into red, blue and green intensities, but this is excluded if gamma correction is applied at the transmitter to anything more than the simple luminance signal. It could be removed from the latter by an inverse gamma correc-

tion at the receiver before setting about the construction of three colour components. In these days when crystal diodes are quite cheap, is it really impracticable to require the manufacturer of the receiver to incorporate in it the non-linear circuit which is needed to compensate the gamma of the picture tube? One could then transmit true luminance and colour signals.

A realistic assessment of the importance of absolute compatibility depends on a forecast of transmission schedules. Will all transmitters go over to colour for the whole of their transmissions as soon as a colour system is established, or will there be at least an intermediate stage in which some programmes will still be transmitted in monochrome? Will the cost of colour receivers remain so far above the cost of monochrome receivers that there will still be a market for the latter, and will programme production costs be much higher in colour than in monochrome?

Only in the light of answers to these questions can one decide whether the whole future of colour television should be prejudiced for the sake of absolute compatibility.

Birmingham.

D. A. BELL.

## Scale Distortion Again

WHILST I fully agree with the arguments put forward by your reviewer, M. G. L., in his reply to Stanley May (p. 30, your January issue) I think he did less than justice to Vox Productions in his review of their record DL130, “This is High Fidelity.”

The main part of the booklet issued with the record was a photo-copy of the American version. But a number of comments that seemed to be required to adapt the text to British practice was made in a foreword which the British company asked me to write. In that foreword the point was specially made that most British acoustic engineers did not concur in the American advocacy of a “compensated gain control” based on the Fletcher-Munson curves.

It has always seemed to me that far too much importance has been attached to these curves (which after all are only an empirical expression of the average of a number of observations made during a particular series of experiments); and, indeed, that they have been applied as authoritative evidence in circumstances which are outside their terms of reference. They purport to show the intensities of pure tones of equal loudness at different frequencies, the loudness being based on the average of the judgments of the persons who were concerned in the experiments. But it does not by any means follow that if a piece of music is reproduced at a volume level greater or less than the original (whatever that may mean!) the frequency response should follow the contour of a Fletcher-Munson curve. Logically, there is no necessary relationship between the two. An entirely different set of experiments would be necessary to determine (even if it could be determined with any precision) what are the rules that should be applied to reproduction at different volume levels in order that the result may sound natural.

The beginnings of such a research were started by G. A. Briggs and his associates at his Festival Hall demonstrations. They showed conclusively that the intensity level which reaches our ears in a concert hall is much smaller than we had previously assumed, and indeed that it is possible to achieve the same level in one's home without the music sounding over-loud, even to the ladies. But they told us nothing at all about the desirable frequency response for reproduction in the

home, whether at that intensity or at higher or lower intensities.

Assumptions which are extrapolations of observations in particular experiments are very risky in the field of hearing. Who, for example, could have supposed on a *priori* grounds that when a complex sonorous vibration from a loudspeaker is presented to the ear it will be resolved, not into a set of constituent tones, but into a series of groups of tones, one group representing a violin, another group a piano, another an oboe and so on? Why doesn't the ear do something analogous and sort out what one might term (for shortness) the stereophonic components in the vibration?

I suggest that until we have specific *ad hoc* evidence in this matter of loudness *v.* frequency response we had better reserve judgment and simply adjust our controls to please our womenfolk.

Technical Editor,

"The Gramophone."

PERCY WILSON.

## Information Theory and Broadcasting

SO the human mind is to be turned into a "black box" of calculable capacity for insertion into a communication chain! That thought (editorial comment, your January issue) rather shocks me. Anyway, I doubt if you have succeeded in showing how Information Theory can be applied directly towards improving broadcast programmes. All the same, I agree that the programme people might benefit from studying the underlying philosophy.

Take the information content of television pictures. V. J. Cooper, after pointing out (your April 1956 issue) that the vision bandwidth is 100 times greater than that of the accompanying sound, went on to assert we get very poor value for the extra Mc/s. Your editorial set me trying to verify Mr. Cooper's assertion. After spending quite a lot of time in watching typical programmes, my conclusion was that he did not exaggerate. Indeed, there were occasions when the *semantic* information content of the picture seemed to be a negative quantity! The sound transmission alone sometimes evoked in my mind a visual image that turned out to be more satisfying, pleasing or appropriate than the picture seen on the screen when I reopened my eyes. And I am not supposed to be a highly imaginative type.

Reading, Berks.

C. J. STRATTON

THE editorial of your January issue advances strong arguments which show that the B.B.C. should make a complete reappraisal of the regional broadcasting system.

I had hoped that when the v.h.f. network spread it would carry a cosmopolitan programme of the most general interest, leaving the medium waves for the Regions, but, alas that was not to be. I fear that the eagerly awaited v.h.f. station at Rowridge will carry the West Region service instead of the far more apposite London programmes.

Romsey, Hants.

B. JAMES.

## Television Interference

IN your February issue "Diallist" refers to, and expresses some surprise at, a few cases reported from the Leeds area of interference from the Holme Moss v.h.f. sound transmissions with television reception from the same station.

This is most likely second-channel interference on television receivers having non-standard i.f.s. in the 20-Mc/s region with, of course, their local oscillators "high." There are still quite a few of these receivers in use, and the second-channel rejection of some is unfortunately not all that could be desired. The trouble can usually be overcome by the use of a simple stub rejector consisting of a section of coaxial feeder cut to the appropriate length and connected at the aerial input to the

receiver. The alternative of fitting some sort of second-channel rejection circuit inside the receiver or changing the i.f. is not always convenient, but may be necessary in some cases.

Second-channel interference has also been experienced by viewers in the Norwich area since the v.h.f. sound station sharing the same site as the Norwich television station was brought into operation in December. Here the trouble affected television receivers having i.f.s of 19.5 Mc/s (sound) and 16.0 Mc/s (vision), which when tuned to Channel 3 for reception of the Norwich station 56.7 Mc/s (vision) and 53.25 Mc/s (sound) are prone to second-channel interference on vision from the v.h.f. Light Programme transmitter on 89.7 Mc/s and on sound, but to a lesser degree, from the v.h.f. Third Programme transmitter on 91.9 Mc/s. The B.B.C. has given advice on the problem, and thanks to the energetic efforts of the radio trade and of local Post Office engineers the complaints that have been received are being dealt with effectively. None of this trouble is, of course, being experienced on television receivers with i.f.s of 38.15 Mc/s sound and 34.65 Mc/s vision, which have now been adopted as standard by the radio industry.

Engineering Information

Department, B.B.C.

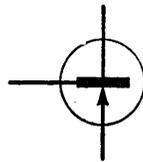

L. W. TURNER.

## Transistor Symbols

I FIND I have been guilty of unconscious plagiarism in submitting the transistor symbol shown in your last issue. Something very similar appeared earlier in the December, 1956, issue of the *Journal of Scientific Instruments* (see sketch) in a paper by Bane and Barber. My apologies are nevertheless tinged with satisfaction at getting this support from such an august body as The Institute of Physics (which publishes the *Journal*) and from the authors, who are N.P.L. people.

London, S.E.5.

JAMES FRANKLIN.

## Etymological Inexactitude

"CATHODE RAY" rebukes me in his letter (Feb. issue) for treating the word "data" as singular. In so doing I was, strictly speaking, as fully guilty of an etymological inexactitude as he himself is in his letter when he uses the word "panchrome" instead of the puristically proper word "pantochrome." No doubt he is consistent and takes his offspring—or, more correctly, little Fluorescences—to the "panmime" which pedantic people still call a pantomime.

But, seriously, although we are obviously both trying to follow modern usage, I have by far the stronger case. Nowadays the word "datum" has a special positional meaning as in the sentence "sea level is the datum for measuring mountain height." In English, it is no longer the singular of "data." The word "data" has virtually become a singular noun in its own right in the same way as the word "agenda," to which, Sir, you so rightly call attention. Whoever heard the Chairman of a committee say "Gentlemen, the agenda *are* rather long to-day"; and if there be only one item on it, does he call it an *agendum*?

"FREE GRID."

## Peak or R.M.S.?

I HAVE always been under the impression that there was a convention that all audio and r.f. voltages which would normally be measured by a valve voltmeter were expressed as peak values, and I have for a number of years used a valve voltmeter which starts with a diode probe.

I notice lately, however, that there is a tendency for other forms to become popular. For instance, the instru-

ment shown on page 611, December issue, measures the mean or average value, although it may be calibrated to read r.m.s. or peak on some definite waveform. There is another one advertised on p. 144 (Dec.) which may be similar.

Many makers of recording tape and recorders do not state whether the figures they quote for erase, bias and signal voltages are peak or not, and I think I have seen one tape advertisement where r.m.s. figures are quoted.

This all seems to be adding up to some confusion.  
Bideford, Devon. THOMAS G. WARD.

## Guarantees

I AGREE with your February editorial that guarantees are usually unsatisfactory.

Our firm's guarantee reads "Departures from the specification during the first 12 months of proper use will be corrected free of charge." This at least has the merit of brevity, and our customers evidently like it.

Servomex Controls, Ltd. R. C. STEEL.  
Jarvis Brook, Sussex.

## Radar Displays

I REGRET to take issue with anything which Dr. Eastwood has to say on the subject of radar displays. I believe that the substance of his comments in his letter in your issue for December is perfectly correct until it makes the claim that the first perfected comprehensive fixed-coil display system used in this country was developed and produced by Marconi's Wireless Telegraph Company in association with the R.R.E.

There is perhaps little credit in any case in being first in the field, but for the record I should like to point out that the Liverpool harbour radar, designed and developed by A. C. Cossor Limited for Sperry Limited, incorporates a fixed-coil display which has proved satisfactory in operation since it was officially commissioned at an opening ceremony on July 3rd, 1948. The first M.T.I. radar in operation at London Airport, also designed by A. C. Cossor Limited, which was installed there in July, 1953, incorporated a fixed-coil display and interscan provision for a C.R.D.F. presentation.

A. C. Cossor Ltd., K. E. HARRIS.  
London, N.5.

## COMMERCIAL LITERATURE

**Signal Sources**, including noise and pulse generators, take pride of place with some 90 pages in the 1957 catalogue of measuring instruments from Marconi Instruments of St. Albans, Herts. There are also instruments for measuring voltage, power, frequency, f.m. deviation, distortion, field strength, Q and standing waves. An industrial section includes X-ray apparatus, moisture meters and pH meters. The catalogue is lavishly illustrated with photographs and functional diagrams.

**Non-Soldered Connections** by means of "taper receptacles" or small tubular units of silver-plated brass into which tapered pins are inserted. These and many other types of terminals (for soldering) and accessories are listed and illustrated in a catalogue from Harwin Engineers, Nibthwaite Road, Harrow, Middlesex.

**Tape Amplifiers**, for recording and reproduction, designed for various well-known makes of tape decks and also for double-channel stereophony. Four models, as well as two other amplifiers for sound reproduction, are described (with specifications) in an illustrated catalogue from Shirley Laboratories, Worthing, Sussex. Overseas distributors are Sound Diffusion (London), Duracraft Works, Portslade, Sussex.

**Electronic Reading Machine** for recognizing printed characters at 120 per second and recording the information on punched cards, or tape, or magnetic tape, for computer input. This is one of the new projects under development outlined in a review of progress by the Solartron Electronic Group for 1956. Available from the company at Thames Ditton, Surrey.

**Interlocking Storage Trays** for small components, suitable for factory assembly benches. A new "midjet" range, moulded in phenolic material, is illustrated in a leaflet from Precision Components (Barnet), 13, Byng Road, Barnet, Herts.

**Polythene Sheets** in gauges between 0.01in and 0.125in. Physical properties and applications of "IRIDON-1000" are described in literature from the Iridon Division of Commercial Plastics, 1, Avery Row, Grosvenor Street, London, W.1.

**Coated Soldering Bits** with thin layer of an iron alloy over the copper to protect it against oxidation. Claimed to last 10 times longer than conventional bits. Various sizes and shapes, for screwing or plugging into irons, with notes on use and care, are given on a leaflet from the Hexacon Electric Company, 276, W. Clay Avenue, Roselle Park, N.J., U.S.A.

**Barium Titanate Pickup** cartridges claimed to be impervious to distortion from humidity and temperature changes. Change of styli (normally sapphires) by turnover method. Weight: 5 grammes. Frequency response curve

and other performance data given in a leaflet from Technical Ceramics, Wood Burcote Way, Towcester, Northants.

**A.M./F.M. Signal Generator** covering 7.5Mc/s to 230Mc/s. Internal frequency modulation: 1,000c/s with fixed deviation of  $\pm 60$ kc/s, or mains frequency with variable deviation of 0 to  $\pm 150$ kc/s. External modulation: between 20c/s and 20kc/s for deviation up to  $\pm 150$ kc/s. Amplitude modulation: 10% or 30% at 1,000c/s. Crystal calibration at 5-Mc/s intervals. Specification on a leaflet from Advance Components, Roebuck Road, Hainault, Ilford, Essex.

**Pencil-Type Soldering Irons**. A range of six Oryx models for low voltages between 6V and 50V, lengths 6-7in and bit sizes  $\frac{1}{16}$  to  $\frac{3}{16}$ in, are described in a leaflet from Antex, 3, Tower Hill, London, E.C.3. Mains step-down transformers are also available.

**Subminiature Electrolytic capacitors**, suitable for transistor circuits and hearing-aids. Five new types (CE58) with capacitances from 0.25  $\mu$ F to 6  $\mu$ F and working voltages of 25 V to 1.5 V, measuring only  $\frac{3}{16}$ in long  $\times$   $\frac{1}{16}$ in diam., listed in Technical Bulletin No. 51 from The Telegraph Condenser Company, North Acton, London, W.3. Also a miniature range,  $1\frac{1}{8}$ in  $\times$   $\frac{3}{16}$ in and 2-100  $\mu$ F in Bulletin No. 52.

**Crystal Set** using a germanium diode. Leaflet from the British Distributing Company, 591, Green Lanes, Harringay, London, N.8.

**Moving-Coil Pickup**, with diamond stylus for microgroove and sapphire stylus for standard records. Response: 20 c/s-16 kc/s constant velocity on microgroove. Compliance: better than  $6 \times 10^{-6}$  cm/dync. Stylus pressure: 5 grammes. Leaflet on model GMC5 from The Garrard Engineering and Manufacturing Company, Swindon, Wilts.

**Miniature "3000" Relay**, with twin silver contacts, buffered springs, and coil consumption in the region of 0.075-0.2 watts, depending on contact arrangements required. Coil resistance, any value up to 5,000  $\Omega$ . Overall size,  $1\frac{1}{2}$ in  $\times$   $1\frac{3}{8}$ in  $\times$   $\frac{1}{2}$ in. Made by PAR of Nottingham and distributed by D. Robinson and Co., 58, Oaks Avenue, Worcester Park, Surrey.

**Valve Retainers** of various types. A manual listing a large number of CV valve types and their commercial equivalents with appropriate data on retainers and top-cap connectors. From Electrothermal Engineering, 270 Neville Road, London, E.7.

**Simplified Relay**, for a.c. up to 440 V and d.c. up to 110 V, departs from the normal "pile" method of mounting the contact blades and has them brought out directly on to insulating panels. This makes it possible to remove any set of contacts without disturbing the others. Leaflet from Electrical Remote Control Co., East Industrial Estate, Harlow New Town, Essex.

# Grid-Dip Oscillator

NOVEL APPLICATION FOR A  
CATHODE-RAY TUNING INDICATOR

By H. B. DENT

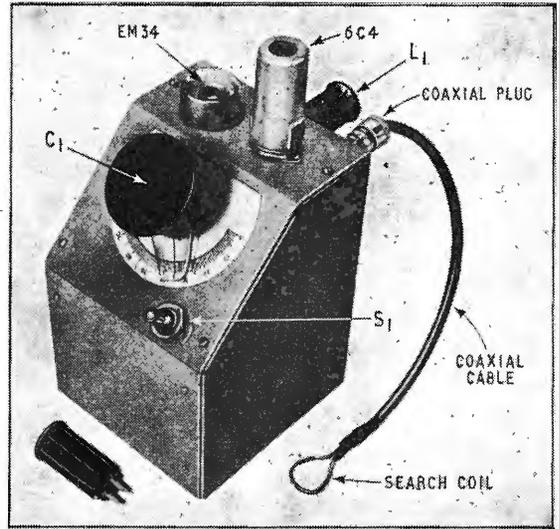

THE grid-dip oscillator can be likened to an absorption wavemeter used in reverse, for instead of absorbing energy in the process of measurement it has energy extracted from it. The absorption principle is used with oscillating circuits and the grid-dip method with quiescent circuits, the two being complementary in test gear.

Basically, a grid-dip oscillator (GDO for short) consists of a tunable r.f. oscillator with a very sensitive current measuring meter in its grid circuit. Two typical arrangements are shown in Fig. 1. Fig. 1 (a) will be recognized as one of the Colpitts family, while (b) obviously belongs to the Hartley group.

The instrument derives its name from the manner of operation. When the coil L is coupled to the inductive element of a non-oscillating circuit a "dip" in grid current occurs whenever the two circuits come into resonance.

No circuit changes are needed to either Fig. 1 (a) or Fig. 1 (b) to convert them into absorption wavemeters: all that need be done is to lower the anode voltage until the valve ceases to oscillate. There is some regeneration when the value is just short of the oscillating point, but this will improve rather than impair the performance as an absorption wavemeter.

When used as a grid-dip oscillator the changes in grid current are often quite small, especially when v.h.f. circuits or awkwardly placed h.f. circuits are

Form of construction adopted for the GDO described in the text. The power supply occupies the base part and the oscillator the top part.

involved which preclude coupling the GDO tight enough. Consequently very sensitive current meters are required in the grid circuit. Despite the manifold usefulness of this type of test set it is not always in such constant demand as to justify tying up an expensive microammeter for this one purpose. Plug-in meters can, of course, be employed but the writer has always disliked the idea of having to search round for a lot of loose items before a test set can be used.

What seemed to offer a solution to the problem appeared in the September issue of the New Zealand journal *Break-in*. It was a description of a grid-dip oscillator built round an EM80 cathode-ray tuning indicator. The really unique feature of this design is that the "triode" part of the EM80 is used as the r.f. oscillator, while the "magic eye" functions as the indicator of resonance. The circuit is shown in Fig. 2 and, with a suitable set of coils, is said to cover a frequency range of 80 kc/s to 200 Mc/s.

A "breadboard" version of Fig. 2 was assembled using an EM34 in place of an EM80 as the former was, but the latter was not available and the EM34 was said in the original article to be a likely substitute. A few minor changes in the circuit were made; for example, the two "anodes" of the EM34 were strapped together and joined to a single anode resistor, also the "frills"  $S_1$ ,  $S_2$ ,  $R_2$  and  $R_4$  were omitted. These are included in the original design to enable the unit to be used either as a GDO or as an absorption wavemeter.

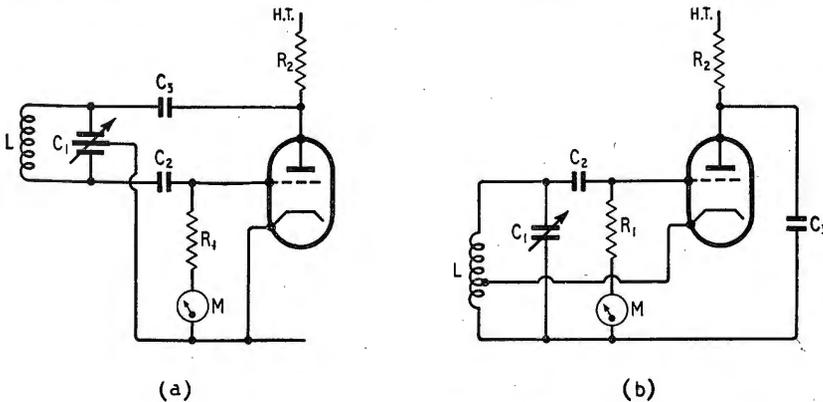

Fig. 1. Two typical circuits used for grid-dip oscillators; (a) is a Colpitts and (b) a form of Hartley sometimes called an "electron-coupled" oscillator.

Despite the temporary layout being rather unsuitable for v.h.f. operation it was possible to obtain oscillation up to about 120 Mc/s. The lower frequencies were not explored, but it is reasonable to assume there will not be much difficulty in this region. The temporary layout served to confirm the practicability of the scheme and the "eye" winked most satisfyingly whenever an external circuit was coupled to the coil (L) and tuned through the resonant frequency of the oscillator, or *vice versa*. The only drawback (if it can be regarded as such) was that the EM34 required an h.t. supply of the order of 200 V for the "valve" to oscillate, and this seems also to be the requirement of the EM80 as the h.t. line was 250 V. Even with 200 V h.t. the anode resistor of the EM34 had to be dropped well below 100 kΩ to achieve oscillation in the v.h.f. bands. The general sensitivity appeared to be comparable to that of an orthodox GDO circuit using a sensitive grid-current meter.

As it was desired to limit the h.t. to 120 V or so the tuning indicator idea was embodied in a GDO

built round a 6C4 triode oscillator, as shown in Fig. 3. In this case the tuning indicator, an EM34, is operated by the rectified d.c. voltage which in all "grid-leak" oscillators appears as a negative bias on the grid of the valve and coexists with the grid current, so that indirectly the tuning indicator responds to "dips" in grid current. Thus there is no need to find another name for the unit. As the quiescent voltage on the grid of the EM34 is negative the indicator segments normally tend to close and open whenever a "dip" in grid current occurs in the oscillator.

Using 120 V h.t., and the circuit values in Fig. 3, the 5-V segment of the EM34 can be made to close fully with a suitable cathode tapping on L<sub>1</sub>. The h.t. consumption is very light, being about 2.5 mA at 120 V. Of this the 6C4 takes 2 mA and the EM34 0.5 mA. Of course, the EM34 is not as brilliant as when operated at the normal 250 V but it is adequate for all normal purposes. The h.t. and l.t. are supplied by a small double-wound transformer T<sub>1</sub> (home made) giving 130 V and 6.3 V at 0.4 A, an RMO

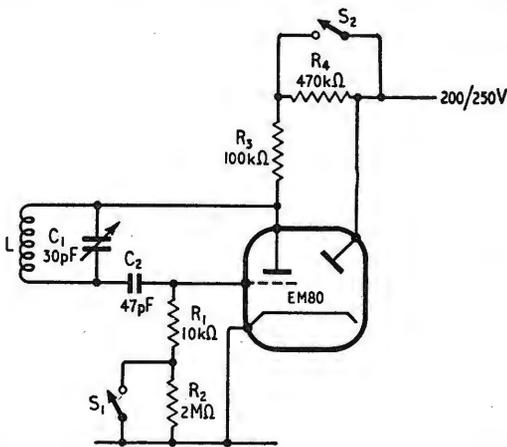

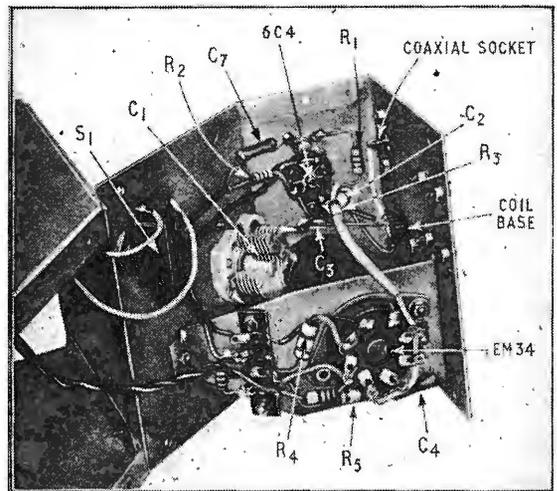

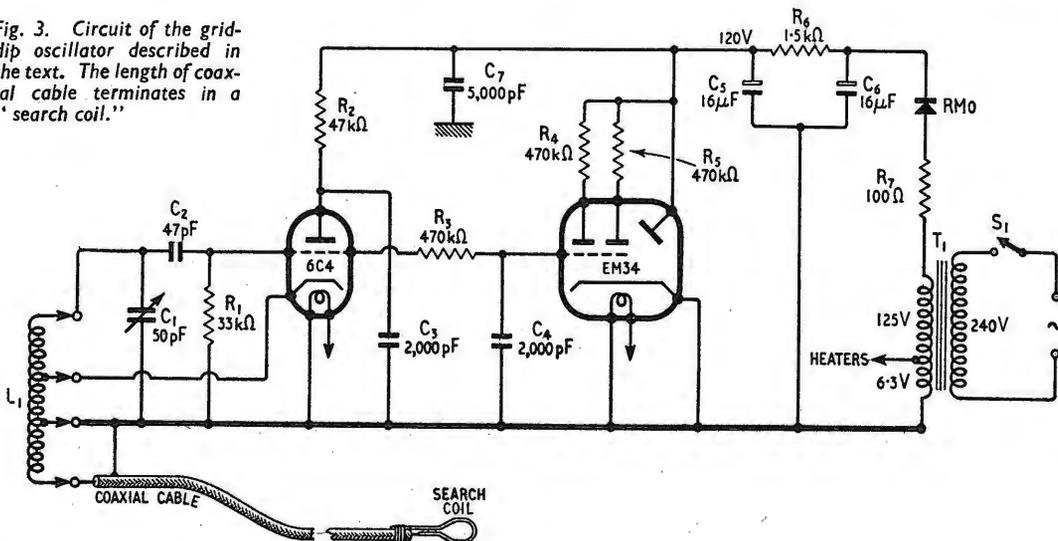

Fig. 2. Circuit of a grid-dip oscillator built around a single cathode-ray tuning indicator (described in September 1956 Break-in).

The oscillator is laid out to enable all connecting leads to be kept short. The tuning indicator is seen in the background.

Fig. 3. Circuit of the grid-dip oscillator described in the text. The length of coaxial cable terminates in a "search coil."

"Centercel" rectifier, and the smoothing network shown. Incidentally  $C_5$  and  $C_6$  are 150-V working electrolytics.

The length of coaxial cable terminating in a loop shown in Fig. 3 is included to enable this GDO to be used in conjunction with v.h.f. equipments where it is often difficult to obtain a tight enough coupling to produce a measurable "dip" in grid current. The cable terminates in a coaxial plug and the "coupling coil" part of  $L_1$  is taken to a coaxial socket on the back of the unit.

The "search coil" idea is not without its snags but the only troublesome one is that the cable has a self-resonance determined by its construction and length. If the resonant frequency falls in the tuning range of the oscillator absorption occurs and the indicator "winks," just as it will when coupled to any other tuned circuit. However, with a 10in length of "Standard Aeraxial" cable the resonant frequency fell just above 120 Mc/s, which is the highest frequency covered by the experimental unit. No originality is claimed for the "search-coil" idea as the writer has a recollection of seeing it used somewhere before, but neither the place nor the details can be recalled.

Two  $L_1$  coils have been made so far; one covers 52.5 to 120 Mc/s and the other 24 to 53.5 Mc/s. The higher-range coil consists of  $5\frac{1}{2}$  turns of No. 18 s.w.g. tinned copper wire  $\frac{3}{16}$ in diameter and spaced to occupy  $\frac{3}{16}$ in. Tappings are made to it two turns from either end and the coil is slipped down inside an Eddystone Type 763 miniature coil former. Connections are made to the pins as shown in Fig. 4. The second coil is connected in the same way but consists of  $8\frac{1}{2}$  turns of No. 26 s.w.g. enamelled copper wire wound on the outside of an Eddystone Type 765 former, which is ribbed and threaded 21 t.p.i. The tappings are taken in this case  $2\frac{1}{2}$  turns from one end for the earth tap and  $4\frac{1}{2}$  turns from the other (grid) end for the cathode tap.

Calibration is always a problem unless a signal generator or wavemeter is available. However, with

the help of a v.h.f. receiver and the shortwave bands of a receiver, and also a lot of patience, acceptable calibration curves can be produced. Great accuracy is not needed in a GDO and for the same reason there is little to be gained by fitting a slow-motion tuning dial.

A fairly wide frequency coverage is desirable with any one coil and at the higher frequencies a 2-to-1 frequency range is satisfactory. This is easily achieved with a tuning capacitor of 0 to 50 pF. Nevertheless stray capacitance must be kept at a minimum.

The form of construction is unimportant and the GDO can be self-contained with the h.t. unit included and mounted on a handle so that the coil, which must be outside the case, can be poked into the insides of equipments. Another form is to have the power supply separate, and still another is the form shown in the illustrations. The latter has no particular merit except that it enables the leads to the three vital components, the valve, the coil holder and the tuning capacitor to be kept short. The power unit is in the base part. The arrangement shown leaves a little to be desired as the earthy return path of the capacitor is a little longer than is desirable for v.h.f. purposes. It would be better to use a Colpitts circuit if v.h.f. were the only requirement; the reason this circuit was not used in the present case is that a split-stator capacitor of suitable capacitance could not be found. One of 100+ 100 pF and reasonably small physically was required. This is the main reason why no attempt has been made to reach a higher frequency than 120 Mc/s.

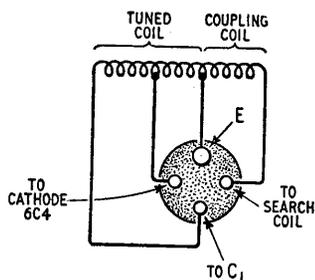

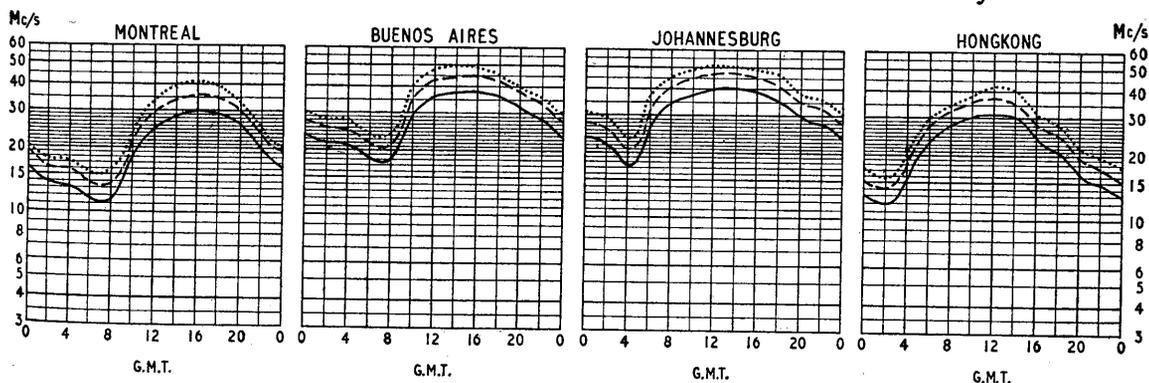

Fig. 4. Connections of the coil  $L_1$  in Fig. 3 to the base pins of the Eddystone former.

## SHORT-WAVE CONDITIONS

Prediction for March

THE full curves given here indicate the highest frequencies likely to be usable at any time of the day or night for reliable communications over four long-distance paths from this country during March.

Broken-line curves give the highest frequencies that will sustain a partial service throughout the same period.

- ..... FREQUENCY BELOW WHICH COMMUNICATION SHOULD BE POSSIBLE FOR 25% OF THE TOTAL TIME
- PREDICTED AVERAGE MAXIMUM USABLE FREQUENCY
- FREQUENCY BELOW WHICH COMMUNICATION SHOULD BE POSSIBLE ON ALL UNDISTURBED DAYS

By G. G. JOHNSTONE, B.Sc.\*

## 3—The Ratio Detector; Analysis of the "Idealized" Circuit

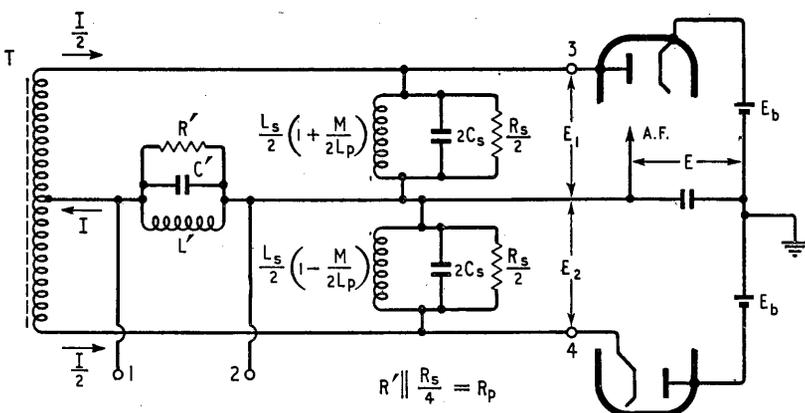

THE circuit of the conventional ratio detector circuit is essentially similar to that of a Foster-Seeley discriminator, and is shown in simplified form in Fig. 1. It differs from the Foster-Seeley circuit in that one of the diodes is reversed in sense, and in addition a capacitor of the order of 4–20 microfarads is connected in parallel with the load resistors  $R_L$ . Because of this capacitor, the voltage across the load resistors cannot change rapidly, and for the purpose of analysis, the two halves of the load circuit can be replaced by two batteries of appropriate voltage. This substitution is justified provided that the rate of variation of the carrier envelope is small compared with the time-constant of the load circuit. We shall return to this qualification later.

In part 1 of this series, an equivalent diagram for the phase-difference transformer shown in Fig. 1 was derived; this equivalent circuit is shown in Fig. 2. The analysis can be considerably simplified by assuming what we propose to show, namely, that the two tuned circuits connected between terminals 2, 3 and 2, 4 fed with equal currents provide a detector inherently insensitive to amplitude modulation. Thus we can ignore the tuned circuit connected between terminals 1, 2 initially, because its effect is to amplitude-modulate the current fed to the centre-tap of the "ideal" transformer T.

The latter transformer ensures that the current divides equally between the branches connected to its ends.

We shall first consider two loss-free tuned circuits fed with equal currents with perfect diode detectors, i.e. rectification efficiency is 100 per cent. We shall use the circuit values appropriate to the phase-difference transformer, but the results are equally applicable to an arrangement of two tuned circuits, connected as shown in the equivalent circuit to be analysed (Fig. 3).

**"Idealized" Ratio Detector.**—Consider first the current flowing in the two diodes. Each diode conducts when the applied voltage reaches its peak value and a short pulse of current flows. It is a property of such a pulse that the d.c. component  $I_{dc}$  is equal to half the peak value of the fundamental frequency a.c. component  $I_{ac}$  in the equivalent frequency spectrum. These currents can be shown

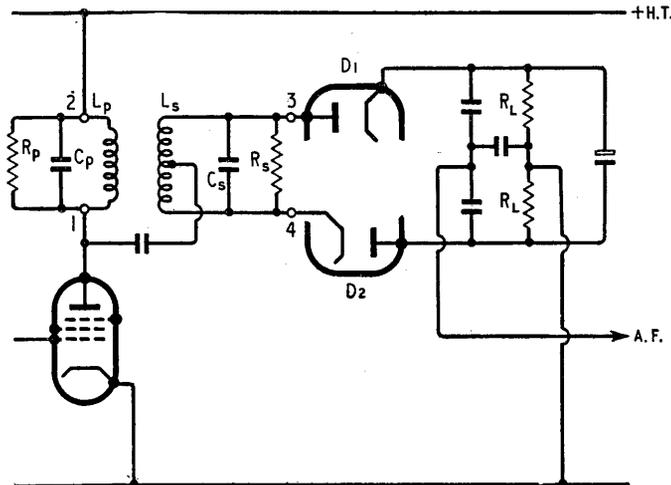

$$R' \parallel \frac{R_s}{4} = R_p$$

$$L' \parallel \frac{L_s}{4} = L_p$$

$$C' + 4C_s = C_p$$

Above: Fig. 2. Equivalent circuit of Fig. 1.

Below: Fig. 1. Simplified circuit diagram of ratio detector.

as loop currents flowing in the paths indicated in Fig. 4. There are currents at harmonic frequencies also, but we shall assume that the loop impedances are very low at these harmonic frequencies, and hence the voltages arising from these components can be ignored. There is only one path for the direct current in both diodes, and hence these currents must be equal. It then follows that the fundamental frequency a.c. components must also be equal in magnitude, although not necessarily in phase.

\* B.B.C. Engineering Training Department.

The voltages across the tuned circuits are  $E_1$  and  $E_2$  respectively, and the fundamental frequency a.c. component in each diode is in phase with its applied voltage; this is again a property of the components of a short pulse of current. The tuned circuits are loss-free and the currents  $I_1$  and  $I_2$  fed to them are in quadrature with the applied voltages. Thus we may write  $(I/2)^2 = I_{ac}^2 + I_1^2$  and  $(I/2)^2 = I_{ac}^2 + I_2^2$  where  $I/2$  is the input current to each half of the circuit. From these equations it follows that the magnitude of  $I_1$  is equal to the magnitude of  $I_2$ . Thus a basic property of this circuit is that equal currents are fed to the two tuned circuits.

The magnitudes of the voltages  $E_1$  and  $E_2$  will be written as  $|E_1|$  and  $|E_2|$  and the magnitudes of the currents  $I_1$  and  $I_2$  as  $|I_1|$  and  $|I_2|$ . If the magnitudes of the impedances of the tuned circuits are  $|Z_1|$  and  $|Z_2|$ , then  $|E_1| = |I_1| \cdot |Z_1|$  and  $|E_2| = |I_2| \cdot |Z_2|$ .

We have assumed the diode rectification efficiency to be 100 per cent and hence  $|E_1| = E_b + E$  and  $|E_2| = E_b - E$ , where  $E$  is the a.f. output voltage. We can thus write

$$E_b + E = |I_1| \cdot |Z_1|$$

$$E_b - E = |I_2| \cdot |Z_2|$$

Adding and subtracting these expressions gives

$$2E_b = |I_1| (|Z_1| + |Z_2|)$$

$$2E = |I_1| (|Z_1| - |Z_2|)$$

and dividing gives

$$E = E_b \frac{|Z_1| - |Z_2|}{|Z_1| + |Z_2|}$$

This expression shows that the signal-frequency output voltage is independent of the input current  $I$ , i.e. that the circuit is not responsive to amplitude modulation.

To derive the relationship between the output voltage and signal frequency, it is convenient to replace the terms  $Z_1$  and  $Z_2$  by their corresponding admittances  $Y_1$  and  $Y_2$ . Writing  $1/Y$  for  $Z$  yields

$$E = E_b \frac{|Y_2| - |Y_1|}{|Y_1| + |Y_2|}$$

But

$$Y_1 = 2j\omega C_s + 2/j\omega L_s(1 + M/2L_p)$$

$$Y_2 = 2j\omega C_s + 2/j\omega L_s(1 - M/2L_p)$$

These expressions can be simplified by using  $\Delta f_1$  and  $\Delta f_2$  defined as

$$\Delta f_1 = f - f_1$$

$$\Delta f_2 = f - f_2$$

where  $f_1$  and  $f_2$  are the resonance frequencies of the two tuned circuits and  $f$  is the signal frequency.

In the neighbourhood of  $f_1$  and  $f_2$ ,

$$Y_1 = 4jC_s\Delta\omega_1 \text{ where } \Delta\omega_1 = 2\pi\Delta f_1$$

$$Y_2 = 4jC_s\Delta\omega_2 \text{ where } \Delta\omega_2 = 2\pi\Delta f_2$$

These expressions can be given in terms of the half bandwidth  $\Delta F = (f_1 - f_2)/2 = \Delta\Omega/2\pi$ , and the separation  $\Delta f = \Delta\omega/2\pi$  of the signal frequency from the centre frequency  $f_0 = (f_1 + f_2)/2$ .

Then

$$\Delta f = \Delta f_1 - \Delta F = \Delta f_2 + \Delta F$$

Thus

$$Y_1 = 4jC_s(\Delta\omega + \Delta\Omega)$$

$$Y_2 = 4jC_s(\Delta\omega - \Delta\Omega)$$

The values of  $|Y_1|$  and  $|Y_2|$  are plotted in Fig. 5, together with  $|Y_1| + |Y_2|$ . The resultant characteristic of  $E_b (|Y_2| - |Y_1|) / (|Y_1| + |Y_2|)$  is plotted in Fig. 6. This shows that the idealized ratio de-

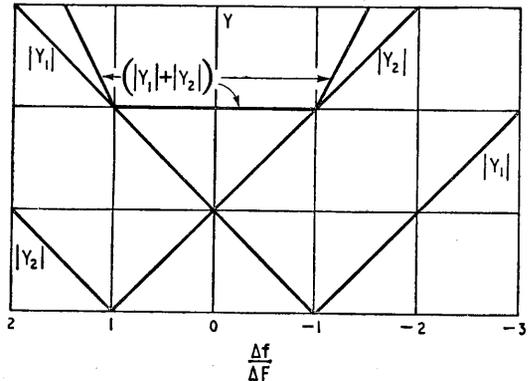

Fig. 5.  $|Y_1|$ ,  $|Y_2|$ , and  $(|Y_1| + |Y_2|)$  plotted against  $\Delta f/\Delta F$ .

detector has perfect linearity over the range between the resonance frequencies of the circuits, the output in this range being given by  $E = -E_b \Delta f/\Delta F$ . In practice, of course it is not possible to realize loss-free tuned circuits and diodes with 100 per cent efficiency. An approach to this condition might be made by applying regeneration to the tuned circuit, but this has not been done to the author's knowledge.

The a.m. rejection properties of a ratio detector must be considered in two parts (a) the degree of

a.m. rejection, and (b) the working range of signal amplitude over which this rejection is maintained. In the idealized ratio detector considered above, the output was shown to be independent of  $I$ , the r.f. input current; thus the detector has no response to a.m. However, it was implicit in the analysis that the input current input was sufficient to maintain current in the diodes at all times, i.e. that the peak voltage across each tuned circuit never fell below that of the battery. The condition where the diodes are cut-off can only occur when the amplitude of the input signal is decreasing, i.e. there is "downward" amplitude modulation. There is no corresponding limit if the signal amplitude increases.

The maximum degree of "downward" amplitude modulation that the detector can handle can be calculated readily. As stated above, the limit occurs when the current through the diodes falls to zero; under these conditions, all the input current ( $I/2$ ) flows into the tuned circuit. Near the centre frequency, the impedance of each tuned circuit is approximately equal in magnitude to  $1/4C_s\Delta\Omega$ , and the voltage across each tuned circuit is equal in magnitude to  $E_b$ . The resultant current is of magnitude  $E_b/4C_s\Delta\Omega$ . The fundamental frequency a.c. component in the diodes is  $2E_b/R_L$  (i.e. twice the d.c. component). These two components are in quadrature and hence

$$(I/2)^2 = E_b^2(16C_s^2\Delta\Omega^2 + 4/R_L^2)$$

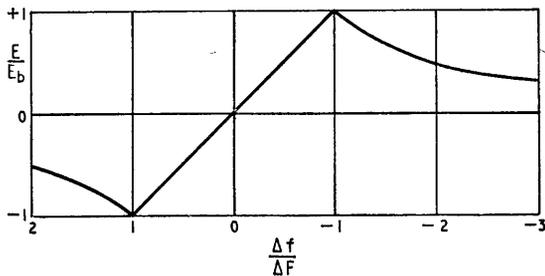

Fig. 6. Audio output plotted against frequency for "idealized" ratio detector.

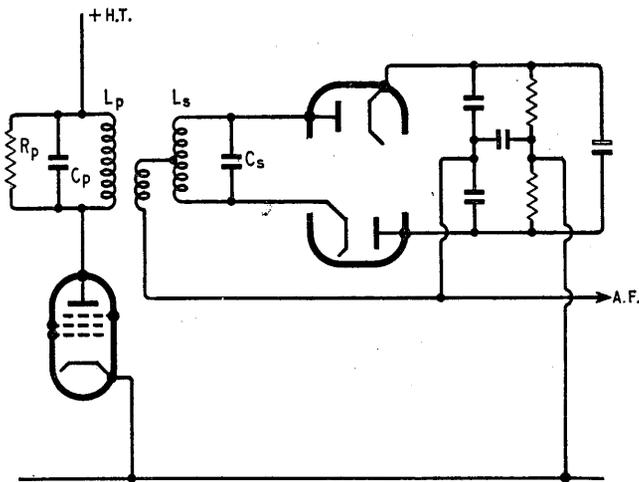

Fig. 7. Ratio detector with tertiary winding closely coupled to primary winding.

When the diode current is cut-off, the input current  $I'$  is given by

$$(I'/2) = E_b(4C_s\Delta\Omega)$$

Thus the maximum amplitude modulation depth that the detector can handle is given by

$$\begin{aligned} m_{max} &= 1 - I'/I \\ &= 1 - \sqrt{\frac{16C_s^2\Delta\Omega^2}{16C_s^2\Delta\Omega^2 + 4/R_L^2}} \\ &= 1 - \sqrt{\frac{4R_L^2C_s^2\Delta\Omega^2}{1 + 4R_L^2C_s^2\Delta\Omega^2}} \end{aligned}$$

This can be simplified by rearranging the terms, and introducing  $Q_w$ , the working Q-value of the tuned circuits, i.e. the Q-value measured under quiescent conditions with the diode circuit damping present. The damping due to the presence of the diode load resistor is equivalent to a resistance of  $R_L/2$  in parallel with each circuit, and thus the working Q-value may be defined as

$$Q_w = \frac{R_L}{2} \frac{1}{(L\omega_o/2)} = R_L\omega_oC_s$$

Then

$$m_{max} = 1 - \sqrt{\frac{(2Q_w\Delta F/f_o)^2}{1 + (2Q_w\Delta F/f_o)^2}}$$

If  $m$  is large, the expression simplifies to

$$m_{max} = 1 - 2Q_w(\Delta F/f_o)$$

From the expressions derived above, the conditions that the detector should have good "downward" a.m. rejection properties are apparent. These are that  $Q_w$  and  $\Delta F$  should be small, and  $f_o$  should be large. In general the half-bandwidth  $\Delta F$  cannot be decreased indefinitely, or distortion results. Similarly  $f_o$  is fixed by other considerations. Hence  $Q_w$  is the only independent variable. If, for example,  $\Delta F = 75$  kc/s, and  $f_o = 10.7$  Mc/s and the detector is required to handle a.m. to a modulation depth of 0.9, then

$$0.9 = 1 - 2Q_w(75/10700)$$

$$Q_w = 7.2 \text{ approximately.}$$

In terms of circuit values, this requires that the load resistor be 1,150 ohms approximately, if the tuning capacitance of the phase-difference transformer is 50 pF.

The above calculations show clearly that the conditions for good "downward" modulation handling capabilities require a narrow bandwidth; thus if a wide-band detector is required, it must be preceded by a limiter stage, since its inherent ability to deal with a.m. is seriously impaired by its wide bandwidth. This situation cannot be remedied by reducing  $Q_w$ , since in a practical circuit there is a limit to this imposed by considerations of diode efficiency.

To complete the investigation of the "idealized" ratio detector we will deduce the sensitivity of the circuit. It was shown above that the a.f. output voltage is proportional to  $E_b$  and, other parameters being fixed, it is desirable that  $E_b$  should be as large as possible. The usual way of achieving this object is to employ a tertiary winding closely coupled to the primary circuit as shown in Fig. 7. This steps up the input current and reduces the impedance level.

The use of a tapped primary circuit  
(continued on page 127)

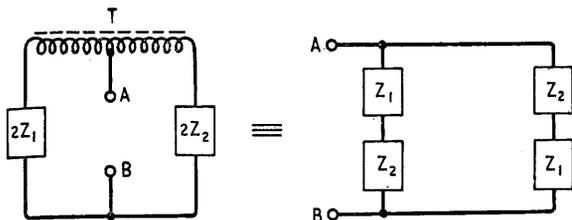

Fig. 8. Equivalent circuit to determine impedance measured between terminals A and B.

was discussed in part 2 of this article, where it was shown that the primary circuit proper must be replaced before the analysis is commenced by another tuned circuit, whose parameters are given below. The fraction  $a$  represents the fraction of the primary circuit voltage tapped off by the tertiary winding.  $L_p' = a^2 L_p$ ;  $C_p' = C_p/a^2$ ;  $R_p' = a^2 R_p$ ;  $I' = I/a$ ;  $M' = aM$ .

To determine the value of  $I$  we must calculate the input impedance presented at the centre tap of the transformer  $T$  in the equivalent diagram of Fig. 2. This can best be done by utilizing one of the intermediate stages in the derivation of the equivalent circuit, which was given in part 1; this is shown in Fig. 8. At the centre frequency, the input impedance  $R_{in}$  is purely resistive and can be shown to be

$$R_{in} = (R_L/4) / \{1 + (2Q_w \Delta F/f_o)^2\}$$

We shall assume that the signal is close to the centre frequency. This is the resonance frequency of the circuit connected between terminals 1 and 2 and hence the reactive component of its impedance can be ignored. Since  $R_L/4$  is infinite, the equivalent circuit reduces to that of Fig. 9.

The proportion of the input current  $I_{in}$  fed to the centre-tap of the transformer  $T$  is thus given by

$$I = \frac{I_{in}}{a} \cdot \frac{a^2 R_p}{R_{in} + a^2 R_p} = I_{in} \frac{a R_p}{R_{in} + a^2 R_p}$$

This reaches a maximum value when

$$a^2 = \frac{R_{in}}{R_p} = \frac{1}{R_p} \frac{R_L}{4 \{1 + (2Q_w \Delta F/f_o)^2\}}$$

At this value of  $a$

$$I = I_{in}/2a$$

If we assume that  $(2Q_w \Delta F/f_o)$  is small, as required for good "downward" a.m. handling capacity, the expression for  $a$  simplifies to

$$a^2 = R_L/4R_p$$

We have shown earlier that the output voltage  $E = -E_b \Delta f/\Delta F$ . The value of  $E_b$  can be determined simply when the value of  $a$  is chosen for power matching as described above, when  $I = I_{in}/2a$ . The power delivered to the centre-tap of the transformer  $T$  is  $P = \frac{1}{2}(I_{in}/2a)^2 R_{in} = \frac{1}{8}(I_{in}/2a)^2 a^2 R_p = \frac{1}{8} I_{in}^2 R_p$ .

The network has no losses, and hence this power is delivered entirely to the load circuit. This power is given by

$$P = 2 E_b^2 / R_L$$

whence

$$E_b = \frac{1}{4} I_{in} \sqrt{R_p R_L}$$

Thus for maximum output for a given value of  $\Delta f$ ,  $R_p$  and  $R_L$  should be large, and  $\Delta F$  small. But  $R_L$  is directly proportional to  $Q_w$ , and it was shown

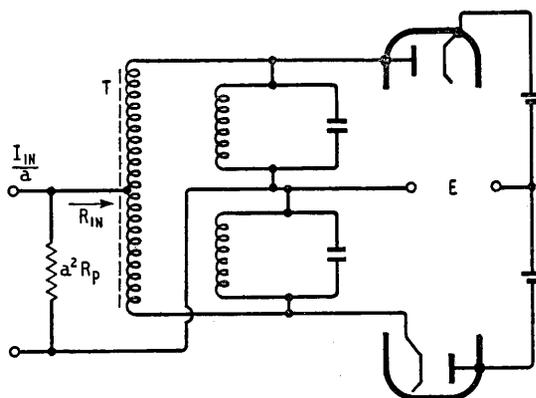

Fig. 9. Circuit for determining division of input current  $I_{in}/a$ .

earlier that for good "downward" a.m. handling capacity,  $Q_w$  should be small. This is diametrically opposed to the condition for maximum sensitivity as shown by the expression above, which requires  $R_L$  large. The expression shows also that a wide-band discriminator can only be secured at the expense of sensitivity, and as shown earlier, at the expense also of the "downward" a.m. handling capacity.

(To be continued)

## New "Wireless World" Books

**Foundations of Wireless** by M. G. Scroggie, B.Sc., M.I.E.E. This well-known book on the basic theory of radio transmission and reception has now reached its sixth edition. An introductory section on the use of algebraic symbols, graphs and circuit diagrams clarifies the small amount of mathematics that is included. The fundamental laws of electricity and the theory of valves are discussed and no previous technical knowledge on the part of the reader is assumed. Subjects which are treated include television, radar and transmission lines. There is a new chapter on semi-conductors, which, with other additions, keeps this book right up-to-date. The book has 349 pages and costs 12s 6d (postage 1s).

**Television Receiving Equipment** by W. T. Cocking, M.I.E.E. The advent of Band III and other new developments in television have necessitated almost complete rewriting, and the addition of 169 pages of new material to this, the fourth, edition of a book which has become one of the classics of the subject. Topics discussed in fuller detail in this edition include magnetic deflection (greatly expanded) and the increasing problems of interference. The comprehensive treatment covers both theoretical and practical aspects of the subject. Modifications necessary to deal with systems other than the British are also discussed. The book has 454 pages and costs 30s (postage 1s 6d).

**Television Engineering, Vol. III** by S. W. Amos and D. C. Birkinshaw. This volume in the series of B.B.C. Engineering Training Manuals covers the properties, generation and application of the various waveforms used in television (sinusoidal, rectangular, sawtooth and parabolic). The treatment is mainly devoted to the generation of these waveforms, and being more fundamental and descriptive, is less mathematical than the two previous volumes. Vol. IV (in preparation) dealing with the various circuit techniques, will complete the series. The book has 226 pages and costs 30s (postage 11d).

These books are issued for *Wireless World* by our Publishers, Iliffe and Sons Ltd., Dorset House, Stamford Street, London, S.E.1; publication date, March 7th.

# Electroluminescence

A NEW "COLD LIGHT" AND ITS APPLICATION TO ELECTRONICS

By D. W. G. BALLENTYNE\*, B.Sc.

**P**HOSPHORS have been used extensively in the electronic industry for television and radar displays for many years. A phosphor is a substance which absorbs quanta of energy from an exciting source and converts part of this energy into visible light. The primary excitant may be either a photon (e.g., ultra violet light) or a charged material particle (e.g., an electron). The lighting industry is concerned with the manufacture of phosphors of the first type, photoluminescent phosphors, which have a strong absorption for one of the lines of the mercury arc spectrum, whilst the electronic industry is interested in phosphors which are excited by an electron beam, i.e., cathodoluminescent phosphors. In general, phosphors of both these classes are inorganic crystalline solids consisting of a "host" crystal which, of course, must be transparent and which has incorporated in it by heat a small quantity of another substance, the activator.

It is intended to discuss in this article a relatively newly investigated type of luminescence produced by the application of an alternating field. As long ago as 1920 Gudden and Pohl noticed that the decay of an ultra violet excited zinc sulphide phosphor activated with copper was affected by the application of a steady field, and during the intervening years much work has been done on this phenomenon, which has become known as electrophotoluminescence. In 1938 G. Destriau noticed that sustained emission of light could be obtained from a previously unexcited phosphor by the application of an alternating field to the phosphor suspended in the dielectric of a capacitor. This phenomenon is known as electroluminescence. This work was reported fully in a series of articles in 1947<sup>1</sup>. At the time, however, the efficiency of the phosphors was so low and the electroluminescent device so cumbersome as to be of no practical importance.

In 1950, E. C. Payne *et al*<sup>2</sup> indicated how electroluminescence could be put to practical use and, since this time, an increasing volume of work has gone into the production of more efficient phosphors and their incorporation in panels for use as lighting sources. Unfortunately, however, at the voltages and frequencies available domestically the light output is poor and electroluminescent panels are of use only as large-area low-level light sources. The same limitations in voltage and frequency do not exist in electronic equipment, where the brightness of the emission is limited only by the breakdown voltage of the dielectric in the electroluminescent capacitor—and thus it may be that this phenomenon will be found more useful in flat

displays or light amplifiers for television and radar.

A large number of different inorganic compounds have been used as the host crystals for luminescent materials but only one of these classes has been found to be efficient when excited by an alternating voltage. All electroluminescent phosphors used industrially are zinc or cadmium sulphides or selenides activated with copper. The original electroluminescent phosphors prepared by Destriau were mixed crystals of zinc oxide-zinc sulphide containing copper but, as has already been pointed out, the light output of these was feeble. Phosphors containing copper normally give a greenish light, but other colours—notably yellow, blue and orange—can be obtained by varying the amount of copper and adding very small quantities of other substances such as aluminium, manganese and lead. It is obvious that an additive white may be obtained by mixing together a blue, green and orange phosphor. A better rendering of white could be obtained if an efficient red phosphor could be prepared, but at the moment the red phosphors, usually containing zinc selenide, are not efficient.

The electroluminescent effect was first demonstrated by Destriau in a cell as shown in Fig. 1. A suspension of the phosphor in castor oil placed upon a copper block was covered with a mica sheet. The upper surface of the mica sheet was wetted with glycerined salt solution and the field was applied between this electrode and the copper. This device could not be of practical importance.

The practical light source generally used is shown in Fig. 2. The phosphor suspended in a dielectric is applied to a sheet of conducting glass, another opaque conducting layer being applied to the back of this film. Conducting glass is easily prepared by the application of stannic chloride vapour to the glass sheet, heated to a temperature just below the softening point of the glass when atoms of tin diffuse

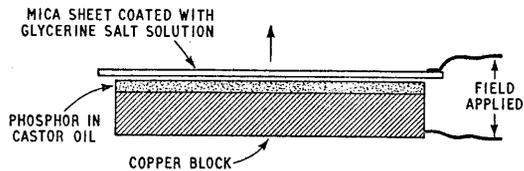

Fig. 1. Destriau's original electroluminescent cell.

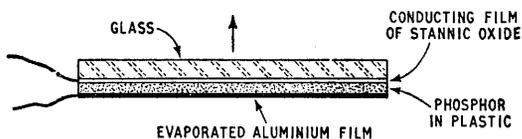

Fig. 2. A conventional electroluminescent light source.

\* Marconi's Wireless Telegraph Company. This article is based on a paper which appeared in *The Marconi Review*, 19, No. 123 (4th Quarter 1956).

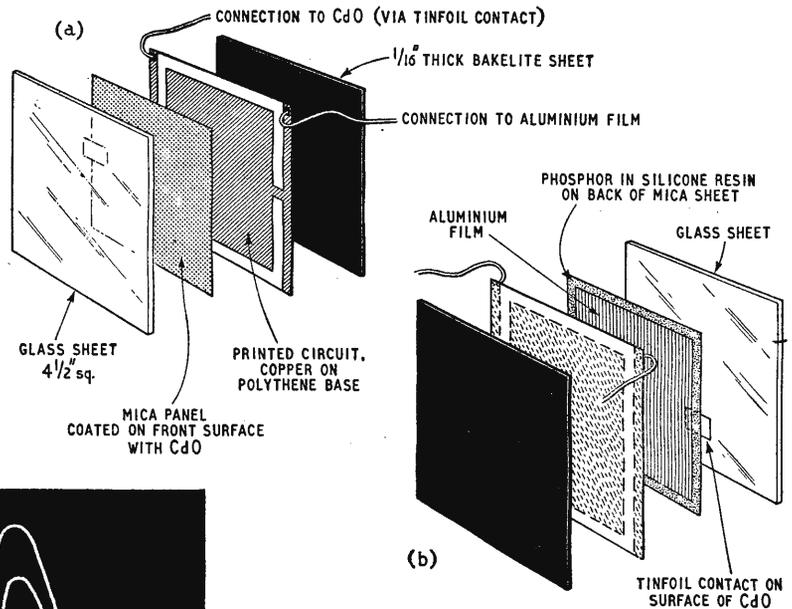

into the surface and form a semi-conducting layer. The conducting back electrode can be either an evaporated film of aluminium, or a sprayed layer of silver or graphite. The last-mentioned two substances have the disadvantage that they absorb part of the light, while, of course, an aluminium layer reflects the light and so produces an apparent increase in brightness.

The continued life of such panels depends upon the dielectric strength of the plastic layer and although such panels are easily prepared for use at low voltages<sup>3</sup> we feel that a more robust panel may be necessary for continued operation at higher voltages. The design of the panel used by us is shown in Fig. 3 (a) and (b) in an exploded view. The phosphor suspended in a silicone resin is applied to one side of a mica sheet, and an aluminium electrode is evaporated on to this film after it has been cured. A conducting layer is then applied to the other side of the sheet. A number

of substances have been used for this layer. The best film for the purpose appears to be a sputtered layer of cadmium oxide. This layer is susceptible to fingermarking and should be protected by a film of silicone lacquer. Contact is made to both the front and back electrodes by means of a printed circuit on a flexible base. The whole cell is clamped together and beeswax is poured between the Bakelite backing sheet and the glass. Panels constructed in this fashion can be excited by voltages of up to 1,500 but at 230 volts and 50 c/s are of the same order of efficiency as commercially available panels.

It was shown by Destriau that the application of an alternating voltage to an electroluminescent panel produced a light output whose amplitude varied with time. The exact nature of the variation depends to some extent upon the phosphor. Thus Fig. 4 shows the variation of the amplitude of the brightness with time for various voltages for a zinc sulphide phosphor activated with copper.

Right. Fig. 3. Exploded views, (a) front and (b) back, of an electroluminescent panel constructed in the author's laboratory. In (b) there is a tinfoil connection between the printed circuit contact and the cadmium oxide surface of the mica panel.

Below. Fig. 4. Brightness waves for a zinc sulphide phosphor actuated with copper and aluminium. The relative phase of the exciting voltage is shown by the dotted sine wave.

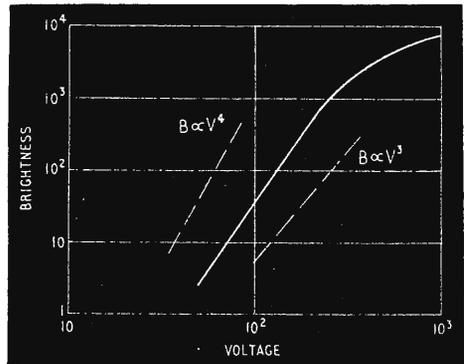

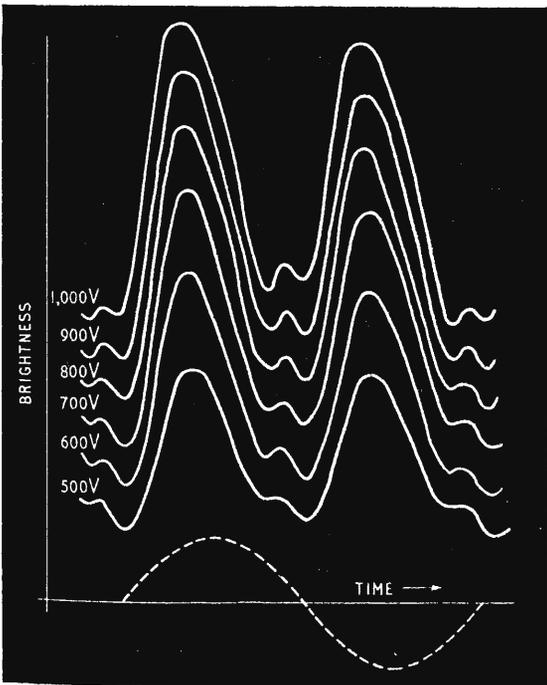

Fig. 5. Variation of mean brightness of an electroluminescent panel with applied voltage.

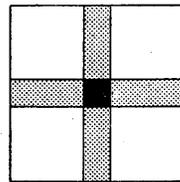

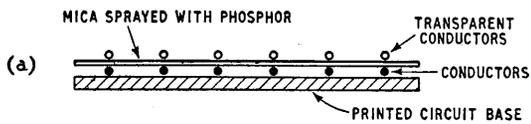

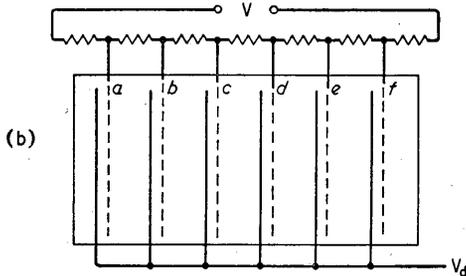

Fig. 6. A black-spot electroluminescent display system: (a) edge view, (b) front view showing electrical connections, (c) a black spot produced by two non-emitting strips at right angles.

it can be seen that there are two primary brightness maxima and two so-called secondary maxima for each cycle of voltage.

For all practical purposes the variation of brightness with mean applied voltage can be expressed by the relation

$$B = a V^n \dots \dots \dots (1)$$

where  $n$  lies between 3 and 4 (Fig. 5). It is obvious that this relation is true only at low voltages and, in fact, the variation of voltage with brightness more exactly follows a law of the form

$$B = a V^n \exp(-b/V) \dots (2)$$

where  $a$ ,  $b$  and  $n$  are constants and  $n$  has a value between 1 and 3, depending upon the phosphor, but which is generally equal to approximately 2.

Although the brightness is considered above as a function of voltage it must not be forgotten that electroluminescence is a field effect and the effective quantity is not voltage but voltage/distance. As the panels are of constant thickness the use of voltage rather than field will not affect the theoretical considerations except to the extent of introducing a numerical proportionality constant.

The marked dependence of brightness on voltage is of great importance for, as the voltage applied to a panel need not be limited in an electronic device, a great improvement in the brightness of the panels can easily be obtained. The ultimate limit to the applied voltage will be set, as pointed out above, by the strength of the dielectric layer.

The frequency of the applied alternating voltage also affects the brightness of the panel, and according to Destriau the way in which it does so varies from phosphor to phosphor. In general, at low frequencies and for singly activated phosphors most workers agree that the effect is linear. At higher frequencies some saturation occurs and even in some extreme cases a maximum is observed. Multiple activated phosphors behave in a different fashion, for the intensity of light due to the emission band of each activator may vary differently with frequency and thus the colour of the phosphor may change as the frequency increases. Hence a zinc sulphide phosphor activated with copper and manganese is orange at low frequencies due to the manganese emission and green at high frequencies when the colour is determined by the copper emission. This dual dependence on frequency leads, in general, to a variation of brightness with frequency which is not linear<sup>4</sup>.

The efficiency of an electroluminescent panel is not affected appreciably by increasing frequency. At low frequencies there is a slight increase in efficiency while at higher frequencies the efficiency decreases slightly, probably due to the impedance of the conducting glass film. The variation of electroluminescence efficiency with voltage is more difficult to understand. At low voltages it increases roughly as a third power of the voltage but it reaches a maximum at voltages of the order of 500 volts/mil and then decreases. This effect is most noticeable at low frequencies.

Many attempts have been made to devise an equivalent circuit which will explain the various properties of these phosphors. Some of these circuits<sup>5</sup> are most complicated. Probably the simplest circuit which will represent the behaviour of an electroluminescent panel is a resistor in series with a capacitor which has another resistor in parallel with it. In a previous paper<sup>6</sup> it has been demonstrated that if the parallel resistor is assumed to be voltage dependent, a relationship between brightness and voltage of approximately the correct form can be deduced, provided the assumption is made that the brightness is proportional to the power available for dissipation. A calculation of the efficiency to be expected under these conditions leads to the result that at low frequencies the efficiency should approach unity and it should decrease as the voltage increases. The reason for the experimentally observed initial increase in efficiency is not clear.

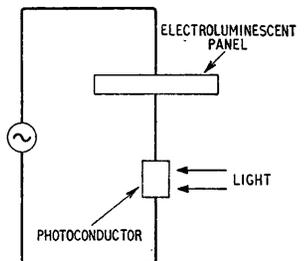

Fig. 7. An elementary light amplifier.

Destriau's original conception of a capacitive electroluminescent light source has not been advanced significantly since the announcement of a practical panel in 1950<sup>2</sup>. In general, until the brightness of the panels is increased by an order of magnitude when excited at 230V and 50 c/s they will not constitute a serious threat to the more conventional types of light source. There are, however, a number of uses to which panels have been put which depend upon two unique properties of these lights—their thinness and the fact that no heat is dissipated during operation. Hence electroluminescence is suitable for low-level lighting where space is restricted, for lighting in silhouette and for luminous signs and dials.

A specialized and important application of this phenomenon is in photographic processing. As is well known, only non-actinic lights can be tolerated

in the darkroom and, conventionally, such lighting is provided by the light transmitted by a suitable filter placed in front of a light box. Because white light must not be allowed to escape from the box, cooling presents a difficult problem and inefficient cooling results in a rapid deterioration of the filter. An electroluminescent panel is a considerable improvement on the conventional light box.

Illuminated signs in cinemas and theatres are another application of this type of light, for exit signs, indicating obstructions such as the risers of a staircase, and in general for lighting the gangways.

Electroluminescence offers an improved method of lighting instrument dials, as the lettering on the dial itself is illuminated and thus distortion and errors in reading caused by parallax are reduced to a minimum. Uses of this kind are increasing in the aircraft industry where a 400-c/s supply is available in the aircraft with its attendant increase in brightness of the panel. A comprehensive review of these uses is given by Bowtell and Bate<sup>3</sup>.

## Television Display

The most obvious use for a light source which can be made to emit by the application of a field is for the display of information and here one naturally thinks of television. Display of information can be accomplished in two ways, either by applying a voltage sufficient to make the phosphor luminesce at a point  $(x, y)$  or to apply this voltage to the whole panel and to remove it at the point  $(x, y)$  by the application of a biasing voltage.

The first method, which requires that the electrodes of the panel shall consist of two sets of orthogonal strips, is in essence the easier way but the problems of commutation of the strips is formidable. Mechanical commutation, although possible, is obviously so cumbersome as to be an unattractive solution of the problem. A line of investigation worthy of study would appear to be the use of a scanned cathodoluminescent phosphor in conjunction with a set of photoconductor elements, one element actuating each strip in the grid. Such a method waits, however, on the preparation of a photoconductor with a rapid decay, as the persistence of the image on the display screen will be determined by the rate of decay of the photoconductor or, if this is very fast, by the decay time of the cathodoluminescent phosphor. Such a decay is essential when using electroluminescence to display information, as electroluminescent phosphors themselves have an undetectable persistence.

A device of the other type has been described<sup>4</sup>. Fig. 6(a) and (b) show one-half of such a device. It consists of a printed circuit on which a set of conductors is laid down, a piece of mica on which the phosphor has been sprayed, and another set of transparent conductors evaporated on to the other surface of the mica sheet. The voltage at  $a, b, c$ , etc., is determined by the resistors and varies from  $V_a$  to  $V_f$ , whilst the voltage applied to the continuous electrode can be set between  $V_a$  and  $V_f$  but is always  $180^\circ$  out of phase with the voltage on the other strips. In the diagram it has been set at  $V_a$ . The voltage at  $d$  is zero, while a residual voltage appears on each of the other strips and light will be emitted from all strips except  $d$ . If it is supposed that another such cell is placed in contact with the first cell but with the conductors orthogonally disposed to those on the first cell, a

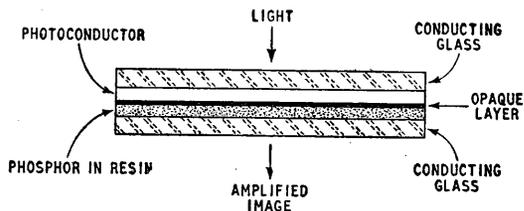

Fig. 8. Conventional construction of a light amplifier.

black spot will appear as shown in the diagram at (c).

Experiment has shown that such a device will only become feasible with phosphors of greatly increased efficiency which will give an appreciable amount of light at low fields, otherwise the resolution of the device becomes poor. An increase in resolution is limited by the dielectric strength of the material, for a voltage approaching  $V \times f$  is applied to strip  $a$  when strip  $f$  is extinguished, and for a device with a reasonable number of strips using phosphors available to-day such a voltage is prohibited by the dielectric strength of the panel.

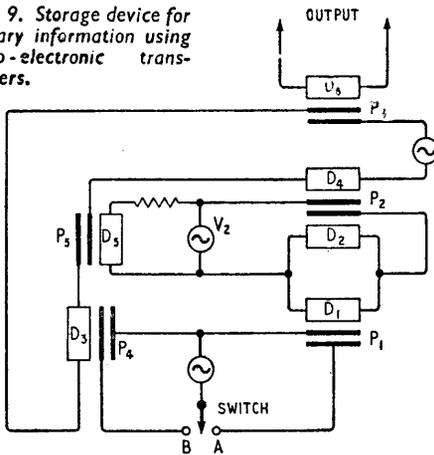

The consideration of an electroluminescent panel in series with a photoconductor leads to many new devices of great importance.

Suppose that a source of light is focused on to the photoconductor in Fig. 7; the impedance of the circuit will decrease, current will flow and light will be emitted. The intensity of the emitted light will be independent of the intensity of the exciting light. The construction of a light amplifier now becomes possible. A number of such devices have been described and amplifications of between five and 24 have been claimed. In essence such devices are simple to construct and a light amplifying panel such as that shown in Fig. 8 should produce an image of a projected picture. The amplifier consists of a sheet of conducting glass on to which a phosphor is applied, suspended in a resin. An opaque layer is applied to the baked resin and then a thick layer (20 mils) of a photoconducting cadmium sulphide is laid down. Finally a transparent backing electrode, usually another sheet of conducting glass, is applied to the back of the device. Light incident on the photoconductor will reduce its resistance and therefore the voltage applied to the phosphor layer will be determined by the intensity of the light. Under these conditions a picture projected on to the photoconductor will be reproduced on the electroluminescent panel and, as the brightness of the emitted light is independent of the exciting light and is only dependent on the exciting voltage, light amplification may be achieved. In fact, of course, the resolution of such a simple device is poor but many more complicated systems have been devised to overcome this defect and some of them are reviewed by B. Kazan and F. H. Nichol.<sup>8</sup> A promising field of application of the light amplifier is as an image converter to convert ultra violet or infra red radiation into visible radiation.

## Binary Storage Devices

F. E. Loebner<sup>9</sup> has discussed the use of electroluminescent panels in series with crystalline cadmium sulphide photoconductors in various devices to which the generic name "opto-electronic transducers" has been given. The physical dimensions of these devices

Fig. 9. Storage device for binary information using opto-electronic transducers.

are small. They consist of an electroluminescent panel ( $\frac{1}{4}$ in  $\times$   $\frac{1}{4}$ in) in contact with a cadmium sulphide crystal to which electrical contact is made by a cats-whisker. There are many uses for devices of this type—for instance, in the construction of storage cells and shift registers for computers.

Fig. 9 shows diagrammatically an elementary storage cell. The information is supplied in the form of a pulse by throwing the switch to A. This causes panel P<sub>1</sub> to light for a short period of time. Panel P<sub>1</sub> illuminates detector D<sub>1</sub> and causes its resistance to decrease and panel P<sub>2</sub> to light. The illumination from P<sub>2</sub> reduces the resistance of D<sub>2</sub> and thus, although the resistance of D<sub>1</sub> returns to its static value, panel P<sub>2</sub> remains on. Thus the information is stored. If the switch is thrown to B panel P<sub>4</sub> becomes illuminated, causing the resistance of D<sub>3</sub> to fall. The system is so arranged that a fall in the resistance of D<sub>3</sub> or D<sub>4</sub> on its own is not sufficient to light the panel P<sub>3</sub>. Thus if no information is stored in P<sub>2</sub> the connection of the switch arm to B will not produce a light pulse at P<sub>3</sub> but if P<sub>2</sub> is on, P<sub>3</sub> will light up and a voltage will appear at the output. Simultaneously P<sub>5</sub> will light up, reducing the resistance of D<sub>5</sub> to a small value and shorting the voltage source V<sub>2</sub>. Panel P<sub>2</sub> is now extinguished and the whole system returns to an unlit condition ready to receive further information.

From a consideration of this elementary circuit the endless possibilities of devices of this type are apparent. For most uses, however, it is necessary that the decay time of the detector elements should be very rapid and at present this cannot be achieved practically.

## Nine-Kilowatt Audio System

EVEN the most rabid high-power audio enthusiast should be satisfied with the power available from a system described recently.\* This uses three 3-kW amplifiers to drive an array of 240 loudspeakers.

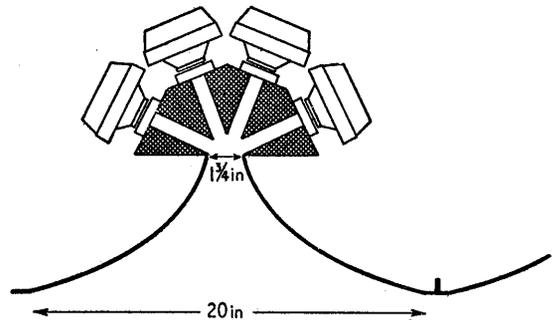

The system is installed in a B26 aeroplane for transmitting speech to the ground. Within a quarter of a mile of the projected flight path it provides what is referred to as "marginal" intelligibility for a period of fifteen seconds when the aircraft is flying at 150 m.p.h. at a height of 6,000ft.

The loudspeakers are horn loaded, three separate twin horns being used to decrease the distortion produced by excessive air pressures, and also to fit into the space available. A section of one such horn with the beginning of its corresponding twin is shown in the accompanying drawing. There are ten loudspeakers in each of the four rows; and the throat from each loudspeaker is exponentially flared in a direction at right angles to the cross-section plane.

The horns cut off at 400 c/s and from here to the designed upper frequency limit of 4 kc/s response is flat within  $\pm 5$  dB. At the full input of 37 watts to each speaker their operating life is several hours. They are connected in a series-parallel arrangement to give an impedance of eight ohms. In this arrangement some of the voice coils have high instantaneous audio voltages on them ( $\approx 150$  volts), and there was a tendency for these coils to arc-over to the earthed magnet. This was avoided by initial testing and selection of speakers.

Response of the special lightweight amplifier is flat from 400-4,000 c/s within  $\pm 0.1$  dB, and the distortion at full output is about 10%.

As the loudspeakers are rather directional, an increase in the intelligibility period to thirty seconds is obtained by partially rotating them to follow the objective of each

Cross-section of half-twin horn with drivers.

transmission. The directivity is somewhat irregular at high frequencies owing to the use of twin horns. This irregularity could be avoided by using the same arrangement of throats and driver units combined to feed a single horn which has been developed. Although this single horn has a larger throat area, the rate of flare is decreased, since it has the same length; and the distortion arising in the horn is unfortunately increased.

The input system contains a high-pass filter to protect the loudspeakers, and a symmetrical peak clipper to protect the amplifiers. In the conditions of use high-frequency air losses are considerable. The speech is therefore high-frequency pre-emphasized to give an equal output at all frequencies. This only partially compensates for the air losses; but any further pre-emphasis would decrease the available power at the lower frequencies, and these are the most useful for speech reproduction.

# Series or Parallel?

In Which Negative Resistance Again Raises Its Head

By "CATHODE RAY"

**Q**UITE a long time ago\* I offered a small collection of very simple circuit problems of the kind that are apt to provoke considerable controversy. The first of them, Fig. 1, is repeated here. I was reminded of it by the negative resistance problem discussed in the last two issues, which arose out of Thomas Roddam's article of the same name more than two years earlier (July 1954, to be exact). Mr. Roddam started his article with exactly the same Fig. 1 as I did in 1946 (and here now), but he added considerable spice to the question by supposing  $R_1$  to be negative.

Quoting me, he agreed that the parallel combination as a whole is negative if the *smaller* of the two resistances is negative. The values we tried were

$R_1 = -15\text{ k}\Omega$  and  $R_2 = 20\text{ k}\Omega$ ; then the resistance of the two in parallel, by the usual formula,  $R_1 R_2 / (R_1 + R_2)$ , is  $-60\text{ k}\Omega$ . So the combination would be unstable. But he also pointed out what I did not on that particular occasion, that the two resistances in Fig. 1 can equally well be regarded as being in series, in which case the resistance of the whole combination is  $R_1 + R_2 = -15 + 20 = 5\text{ k}\Omega$ ,

which, being positive, means that the thing is stable. So it is both stable and unstable at the same time!

Just to make this absurdity even more convincing, let us follow up this particular example. The value of any resistance, of course, is the ratio of voltage across it to current flowing through it. This applies whether the resistance is positive or negative, the sign being decided by which way the current flows. Resistance is regarded as positive when it absorbs power, which it does when the current flows from high to low potential within it; that is to say, from the positive to the negative end. So when we find a part of a circuit where current is coming out from the positive terminal instead of going in, so that it can be used as a source of power, we can regard it as a negative resistance.

In Fig. 2 let us suppose that 1 mA is coming out of the positive end of  $R_1$ . The voltage across it must therefore be 15 V. So it is supplying  $15 \times 1 = 15\text{ mW}$  of power. That much is the same in both (a) and (b). But how do we make the ratio of voltage to current right for  $R_2$ ? The direction is right, of course, for what comes out of the positive end of  $R_1$  goes into the positive end of  $R_2$ . If the whole 1 mA went in, the voltage across  $R_2$  would be 20, whereas it must actually be 15. We can make things balance by bleeding off  $\frac{1}{4}\text{ mA}$ , as at (a); the negative resistance is then supplying not only

the  $11\frac{1}{4}\text{ mW}$  represented by the  $\frac{3}{4}\text{ mA}$  going into  $R_2$  down a 15-V slope, but can spare  $3\frac{3}{4}\text{ mW}$  wherever the  $\frac{1}{4}\text{ mA}$  goes. The resistance of the combination is therefore negative, as we calculated at the start.

An alternative method is to supply the extra 5 V needed to drive the full 1 mA through  $R_2$ , as at (b). Here, the 15 mW provided by  $R_1$  is insufficient for the 20 mW absorbed by  $R_2$ , and needs a supplementary 5 mW from the voltage generator—the 5-V battery.

In one case the system has power enough and to spare; in the other (which is really the same, for the component values are identical!) it has to be subsidized. The question is, once more, how the circuit decides whether it is a power exporting or importing unit. On paper it can be either, as Fig. 2 shows. What decides whether its net resistance is  $R_1 + R_2$  or  $R_1 R_2 / (R_1 + R_2)$ ; positive or negative?

This paradox is just another form of the problem of how two voltage/current graphs crossing one another at an angle—one representing a positive resistance and the other a negative—can together represent either a stable or unstable condition. Readers of the last issue will, I hope, be clear that the key to the question is that negative resistance comes in two kinds. With ordinary positive resistance, in which voltage and current are in direct proportion, either voltage or current can be the cause and the other its effect. But negative resistance means that an increase in one corresponds to a decrease in the other. Such conduct being, as it were, "agin' Nature," does not result from normal properties of materials as in resistors, but from some kind of secondary effect, which introduces a one-way causative direction not found in ordinary resistance. Until we grasped this, our interpretation of V/I graphs went badly astray, for they can be the opposite of true if cause and effect are assumed to be interchangeable for negative slopes as well as

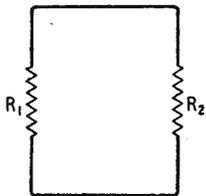

Fig. 1. Are  $R_1$  and  $R_2$  in series or in parallel?

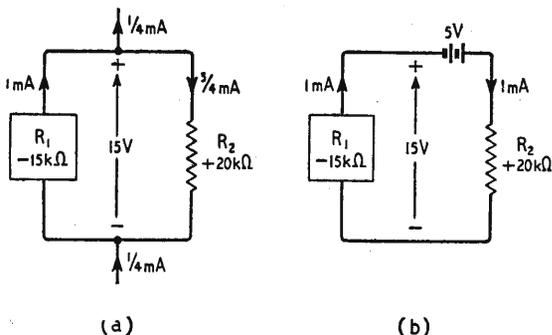

Fig. 2. Although the values for  $R_1$  and  $R_2$ —the only circuit components—are the same in both diagrams, and the voltages and currents are correct for both, (a) can be seen to export power, while (b) has to import it from a 5-V battery. How can this be?

\*"Conventions and Viewpoints," *Wireless World*, September 1946. (Chap. 30 in *Second Thoughts on Radio Theory*.)

positive. The slope itself doesn't show which; one has to look to see which way the slope bends back to positive resistance at its ends.

Let us try the same key on Fig. 2. When graphical treatment let us down, we discovered the nature of its limitations by examining typical negative-resistance devices—dynatron and point-contact transistor. Both of these probably being unfamiliar in practice to most readers, it may be a good idea this time to take a simple valve circuit which can easily be arranged to provide both kinds of negative resistance (Fig. 3). It is in any case a particularly useful and versatile circuit, which everyone ought to know\*. The components required are few and common: almost any twin triode, connected as a resistance-coupled stage and cathode follower.

Disregarding very low and high frequencies, at which  $C_1$  and stray shunt capacitances respectively cause phase shifts, we find that the impedances between terminals  $S_1$  and  $S_2$  and between  $P_1$  and  $P_2$  are both negative resistances. The circuit can be made into an oscillator by connecting a simple LC tuned circuit between either pair of terminals. But if it is connected to  $P_1 P_2$  the other pair must be joined together and L and C must be in parallel (rejector circuit), whereas if connected to  $S_1 S_2$  they must be in series (acceptor circuit) and  $P_1 P_2$  left open-circuited. As a negative-resistance device, Fig. 3 resembles the dynatron between  $P_1 P_2$  and the transistor between  $S_1 S_2$ .

### Technician's Viewpoint

If we pause to ponder this distinction, the circuit technician will no doubt point out that  $P_1 P_2$  is obviously a high-impedance part of the circuit— $R_3$  is usually of the megohm order, to have just enough conductance to stabilize the potential of the grid, where current is practically zero—and a rejector circuit provides the high impedance needed to prevent loss of amplification; whereas the reverse applies at  $S_1 S_2$ , where an acceptor provides the low impedance needed to feed back enough of the said amplification to cause oscillation. Since we would appear to him very dim-witted to be having any hesitation at all about the series and parallel natures of the two connections, he might (if a kind chap, tolerant of others' mental handicaps) draw Fig. 4 for us, showing with almost painful simplicity essentially the same system as Fig. 3—an amplifier with part of the output fed back from across a potential divider. Taking care to use easy words, he would point out that oscillation is promoted by *high* resistance between  $P_1 P_2$ , in *parallel* with the amplifier-feedback loop, in order to pass on an operating *voltage*, and that the same tendency results from *low* resistance between  $S_1 S_2$ , in *series* with the loop, in order to pass on an operating *current*.

That is all very obviously true, but when in the early days I enquired about the essential difference between a voltmeter and an ammeter, and I was informed that a voltmeter has many turns of fine wire, giving it a high resistance, whereas an ammeter is wound with few turns of thick wire, giving it a low resistance, it seemed to me rather unconvincing that a mere matter of degree—of how much resistance—should account for a difference in kind, between volts and amps. So I am

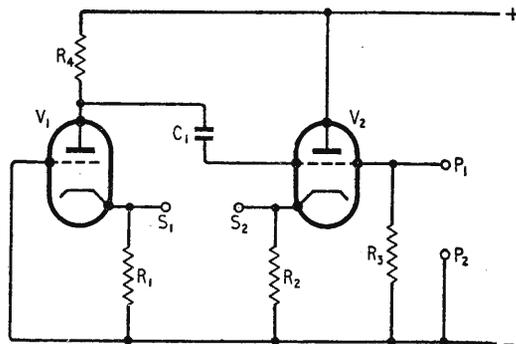

Fig. 3. Practical circuit suitable for providing two different kinds of negative resistance.

anxious that our circuit technician should leave no one with the idea that the distinction between the S and P connections depends on the amount of resistance involved. We know that there is something more far-reaching than that, because increasing the externally connected resistance increases the tendency to oscillate if the P terminals are used, but reduces it if the S terminals are used.

The more significant fact—both with this circuit and the meter question—is the method of connection: series or parallel. It is clear enough from Fig. 4 (or even Fig. 3) which is which, so that may be taken to answer our original Fig. 1 question. But with other types of negative-resistance device—the dynatron, for example—it may not be so obvious. What I would like to know is how one can tell the difference even if the negative resistance is in an unopenable black box and only the two terminals are accessible. If the Fig. 3 circuit were inside, how could one tell whether the terminals were  $S_1 S_2$  or  $P_1 P_2$ ? (We can assume that if they were  $P_1 P_2$  then  $S_1 S_2$  would be shorted.) An obvious and simple practical way would be to test whether there was an oscillatory voltage between the terminals (in which case they would be  $P_1 P_2$ ) or had to be joined by a low resistance to obtain an oscillating current through it. But that wouldn't get at the underlying principle.

We still haven't used our cause-and-effect key. Let us try what happens when current and voltage are used as the cause, at each pair of terminals.

If the box contained just ordinary positive resistance, as in Fig. 5, any current made to flow would cause the terminal at which it entered to become positive, relative to the other. And any e.m.f. applied (E) would cause current to flow in the direction shown, out of its own + terminal and into the more positive box terminal. It doesn't matter which is regarded as cause and which effect.

Now suppose the box terminals happen to be  $S_1 S_2$  in Fig. 3. Feeding current into  $S_1$  certainly makes that terminal go positive, for  $R_1$  and  $V_1$  are both positive resistance. But there is a secondary action, for this positive "signal" is amplified by the earthed-grid valve  $V_1$  and passed on via the cathode follower  $V_2$  to  $S_2$ , which consequently goes more positive than  $S_1$ . So the ultimate result of making current flow from  $S_2$  to  $S_1$  is to make  $S_2$  positive relative to  $S_1$ . This, being the opposite to events in Fig. 5, indicates negative resistance.

Next, let us reverse the order and apply an e.m.f. between  $S_1$  and  $S_2$ , with the object of making  $S_2$

\*"Cathode-Coupled Amplifier," by K. A. Pullen, Jr., *Proc. I.R.E.*, June 1946, p. 502.

more positive than  $S_1$ . If what was previously the cause of this effect now became the effect, current would flow from  $S_2$  to  $S_1$ , again proving the contents of the box to be a negative resistance. But instead we find that current flows in the direction of the applied e.m.f., from  $S_1$  to  $S_2$ , indicating positive resistance.

Clearly, then, the negative resistance must be of the current-operated type only. Because the effect of current fed into  $S_1$  is to make  $S_2$  go positive, we can describe the device in the box as a current-operated voltage generator.

Now let us work out what the results of the same pair of tests would be if the terminals were in fact  $P_1 P_2$ . Feeding current into  $P_1$  would make  $P_1$  go positive, just as with  $S_1$ . The cathode would follow, most of the way, and being joined to  $S_1$  would make that positive, as before. But this time the amplified positive would arrive at the terminals into which the current was flowing— $P_1$ —which would lead us to conclude that the internal resistance was positive.

But the second test—applying an e.m.f. to make  $P_1$  positive—would again make  $P_1$  go more positive, by amplification, making current flow out from  $P_1$  into the source of applied e.m.f. This would show that the box had negative resistance to voltage only—a voltage-operated current generator, in fact.

One can think of a rough sort of mechanical analogy by supposing a man standing facing one panel representing  $S_1$  or  $P_1$  and with his back to another, representing  $S_2$  or  $P_2$ . Distance between them represents potential difference between terminals. If he were to press on the panel in front, and it happened to be  $S_1$ , its motion, amplified by a servo-mechanism, would be communicated to  $S_2$ , giving him a violent kick in the pants and sweeping him forward, with a minimum of space between the panels. But if it were  $P_1$ , that panel would be swept rapidly away from his astonished hands, causing a large inter-panel spacing.

Just as in this analogy the man could tell at once by the feel of the thing which type of mechanism he was up against, so an electrical signal can tell at once which sort of negative resistance it is connected to, even if the number of ohms be the same in both.

The question now (ignoring any hints Fig. 4 may have given, and not attempting to guess what might be behind the choice of letters for labelling the terminals in Fig. 3) is, which kind of negative resistance is which in Fig. 2?

Let us go back to the original question, Fig. 1.

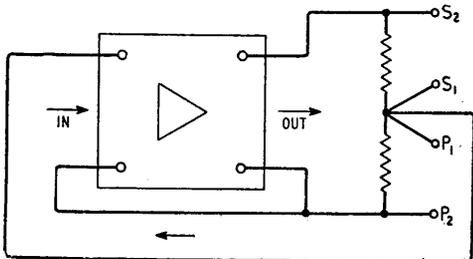

Fig. 4. That the circuit of Fig. 3 is an amplifier in which feedback is introduced by joining  $S_1$  to  $S_2$  is shown by this block diagram, where the respective roles of  $S_1 S_2$  and  $P_1 P_2$  are brought out more clearly by bringing them together into a potential divider.

If  $R_1$  and  $R_2$  were both positive resistances, the circuit would be a merely passive affair, with no current and no voltage anywhere. "Series" and "parallel" would then have no significance. To be in series, the same current must flow through both; to be in parallel, the same voltage must be across both. As I said about Fig. 1 in 1946, in order to answer the question one has to know the position of the generator. When it is in series with the resistors, they are in series with one another; when in parallel, they are in parallel.

If  $R_1$  is a negative resistance, it must in effect contain a generator; otherwise it couldn't feed power into  $R_2$ . We have discovered that one kind of negative resistance is a current-operated voltage generator and the other a voltage-operated current generator. Now in Fig. 2(a) it is clear that the negative resistance is behaving as a current generator. It is supplying not only the  $\frac{3}{4}$  mA needed to maintain 15 V across the circuit but also  $\frac{1}{4}$  mA for export. This corresponds with the behaviour of the Fig. 3 device between the  $P_1 P_2$  terminals.

We can therefore say that when that device is connected via  $P_1 P_2$  to a resistor it is in parallel with it, and stability or instability must be calculated accordingly, by the  $R_1 R_2 / (R_1 + R_2)$  formula.

Since this type of negative resistance is voltage-operated, the current generated in Fig. 2(b) must be regarded as caused by the 15 V across  $R_1$  and  $R_2$ . If that voltage is altered, the current alters in direct proportion, in accordance with

the meaning of  $R_1$ . With our 20-k $\Omega$   $R_2$  connected straight across a 15-k $\Omega$   $R_1$  between terminals  $P_1 P_2$ , there is no other parallel path for the surplus current, so it is bound to go through  $R_2$ . That raises the p.d. across it, and since the p.d. is the operating agent for the  $R_1$  current generator, more current comes. The p.d. rises more, and so on, until the valves are overloaded, bringing up the value of  $R_1$  until it exactly balances  $R_2$ .

If  $R_2$  were less than  $-R_1$ , say, 10k $\Omega$ , it would need 1.5mA to sustain a p.d. of 15V across it; and since that amount of current is not forthcoming from  $-15k\Omega$  at 15V the p.d. would keep on dropping until it ceased altogether. But at least  $R_1$  would reduce the amount of power that would have to be fed in from elsewhere to maintain any required p.d. across  $R_2$ . Of the 1.5mA at 15V, that 15V calls for 1mA from  $R_1$ , leaving only  $\frac{1}{2}$ mA to be found. Half a milliamp at 15V represents 30k $\Omega$ . So the effect of putting a negative resistance in parallel with  $R_2$  is to raise the combined resistance; in this case, threefold.

If, on the other hand,  $R_1$  happened to be Fig. 3 via  $S_1 S_2$ , it would be a current-operated voltage generator. In this event, the 15V across it is the result of the 1mA through it. If this 1mA is to go through the 20-k $\Omega$   $R_2$ , however, 5V must be imported to bring the 15V from  $R_1$  up to 20V.

It is interesting to consider how the source of this import affects the situation. If it were a fixed-

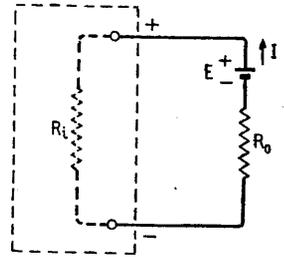

Fig. 5. Polarity of the potential difference between the terminals of a positive resistance when current is driven through it.

voltage source with negligible internal resistance, its voltage—unlike that of  $R_1$ —would be independent of the current flowing through it. This would mean that the current could not be other than 1mA. The 1mA situation would be definitely stable. Without the 5V there would be no current at all, for  $R_1$  alone is unable to maintain any. So the 1mA appears to be due entirely to the 5V, leading one to reckon the resistance it is up against as  $5/1=5k\Omega$ , which of course is the same as one gets by adding  $-15k\Omega$  to  $20k\Omega$ .

If, on the other hand, the 5V came from a  $-5k\Omega$  resistance—or, what comes to the same thing,  $R_1$  were increased to  $-20k\Omega$ —the current could be anything. In practice this would not be so, because any practical negative resistance is negative only over a limited range of current, and even within that range is not perfectly linear. So although in theory the current through a circuit having zero resistance would stay indefinitely at any value it was set to, in practice this setting would be unstable, the slightest disturbance causing it to grow or dwindle, according to the way the negative-resistance characteristic curved.

If  $R_2$  were lower than  $-R_1$ , there would be a net surplus of volts, which could be used elsewhere.

These actions should all be reviewed in relation to some actual negative-resistance device, such as Fig. 3 via  $S_1 S_2$ . The voltage across the terminals (15V in Fig. 2(b)) due to the current is easily identified as the amplified voltage delivered at  $S_2$ . If  $S_1 S_2$  were bridged by a  $20-k\Omega$  resistor, the negative resistance being  $-15k\Omega$ , any initial current disturbance would at once die out. A 5-V source would however drive 1mA, as if the  $20k\Omega$  had been only  $5k\Omega$ . What really happens, of course, is that for every volt applied externally the "black box" contributes 3 volts unseen. But since we aren't supposed to know what is in the box, the credit for the 1mA goes entirely to the external 5V. Which is why the resistance seems so low.

Note that in order to measure negative resistance by observing the amount of negative current it yields from an applied voltage (or vice versa) it is necessary to prevent it from affecting the measuring gear. So the parallel type must be measured by applying a voltage from a zero-resistance source—a perfect voltage generator—and the series type must be measured by feeding in a current from an infinite-resistance source—a perfect current generator. In practice, this means either approximating so closely to these perfect sources that the difference is

negligible (sometimes rather difficult with the current source) or allowing for the imperfection. The plotting of the characteristic curves of the dynatron and transistor was a method of allowing for the imperfection. But the resistance of the source must at worst be respectively lower and higher than the negative resistance to be measured, or the circuit would be unstable. That was why voltage was applied to the dynatron through a low resistance and to the transistor through a high resistance.

It should hardly need mentioning that all the currents and voltages we have been talking about are "signals," over and above any that may be needed to bring the negative resistance device to its working conditions. And with a negative resistance device with reactive couplings, such as Fig. 3, these signals must necessarily be alternating, within a certain range of frequency. To obtain oscillations containing only a single frequency (i.e., of pure waveform) it is necessary to arrange that  $R_2$  is on the stable side except at that one frequency.

This at once suggests acceptor and rejector circuits, for the acceptor has a low resistive impedance at one frequency and a higher impedance at all others (Fig. 6(a)), and the rejector has a high resistive impedance at one frequency and a lower impedance at all others (b). The trick, of course, is to adjust the amount of this resistive impedance—or, more usually, the negative resistance—until it is just balanced out by the negative resistance. If that were done too perfectly, the amplitude of oscillation would fluctuate at every slight change of resistance, so in practice the net circuit resistance is given a reasonable margin on the negative side, making the oscillation amplitude grow until it restores the balance itself; by driving a valve round its bend, for instance.

The lower a negative resistance of the parallel type, the easier it is to get high-loss (i.e., low-impedance) LC circuits to oscillate. It may seem rather surprising that a circuit that cannot be made to oscillate by connecting directly to the negative resistance can be made to do so by adding positive resistance in series. Take an LC circuit whose resistance at resonance is only  $12k\Omega$ , in parallel with a negative resistance that cannot be made numerically less than  $-15k\Omega$ . Total parallel resistance is positive; no oscillation. But if  $3k\Omega$  is put in series with the LC circuit the total positive is brought up to  $15k\Omega$ , enough to bring it to the threshold of oscillation. By this means it would seem possible to make the most inefficient circuit

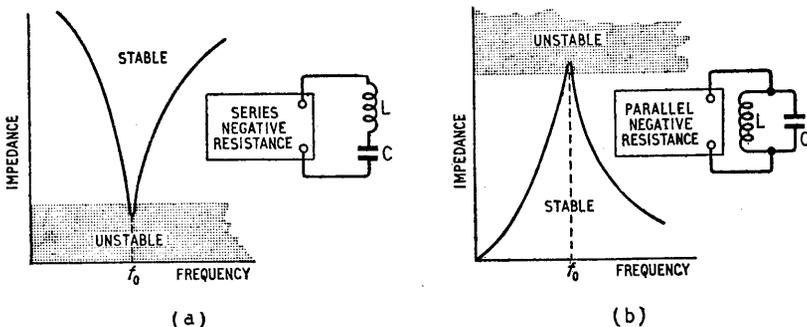

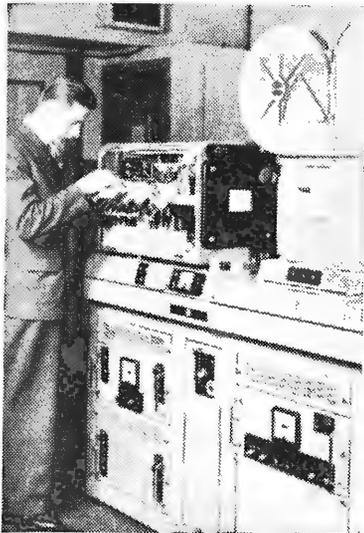

Fig. 6. Arrangement of frequency-determining circuit LC to oscillate at frequency  $f_0$  with (a) series and (b) parallel type of negative resistance.

oscillate with the feeblest negative resistance. But, as one always suspects when one seems to be getting something for nothing, there are snags, which increase with the resistance gap to be filled. The resonance curve of the LC is made even flatter, and there may be trouble with stray reactance in connection with the series resistance.

With series negative resistance, an acceptor circuit with too much resistance to oscillate can correspondingly be persuaded by resistance-shunting it.

**High-Quality TV Recording** is obtained with a new Marconi equipment in which the 16-mm film is mechanically pulled down in the brief blanking period between television frames. This is only 1.4-1.8 milliseconds. Hitherto the pull-down times in conventional interrupted cameras have been too long to make this possible, and the usual practice has been to record only alternate television frames and use the intervals between for pulling down the film. This means that only half the picture information is recorded in the picture period and there is consequently a reduction in quality. Another system of recording, in which the film is moved con-

tinuously, does give the full picture information, but has mechanical and optical disadvantages from the operational point of view. The B.B.C. have recently installed one of the new Marconi equipments for test purposes.

**Cyclotron Type Valve** used for detecting presence of electromagnetic waves at about 3,000 Mc/s. An analysis of the performance is given by P. G. Baird in a D.S.I.R. unpublished report.

**Ferrites for V.H.F.**, with initial permeabilities of the order of 10, at all frequencies up to 500 Mc/s, have been developed and are reported by G. H. Jonker, H. P. J. Wijn and P. B. Braun, in *Philips Technical Review* for November 1956. The new materials, to be known as Ferroxdure, are more closely allied to Ferroxdure (a permanent magnet ceramic) than to the "soft" Ferroxcube, and have a hexagonal rather than a cubic crystal structure. But whereas the Ferroxdure materials have a preferred direction of magnetization along the hexagonal axis, in Ferroxdure this is an abhorred direction and magnetization is

# Technical Notebook

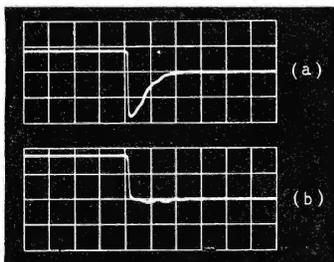

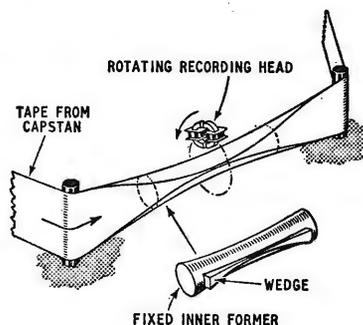

easiest in any direction in a plane at right angles to the hexagonal crystal axis. Of greater practical importance is the fact that the ferromagnetic resonance frequencies of the Ferroxdure materials, for a given initial permeability, are five times higher than Ferroxcube, with a corresponding extension of the working range. The resistivity and saturation magnetization of the new materials are said to be of the same order as in Ferroxcube.

**Feedback Stabilized Servo** system using the back e.m.f. of the d.c. drive motor, separated from the power supply circuits, as the feedback signal. A D.S.I.R. unpublished report by J. Leeder.

**Avalanche Junction Diodes** are semiconductor devices, generally used for switching or pulse work, which utilize a current-multiplying "breakdown" effect rather like the sudden ionization in a gas discharge tube. Normally, junction diodes have a slow response when they are rapidly switched from forward voltage to reverse voltage, because storage of current carriers prevents the diode current from immediately falling to its normal reverse-voltage value, as shown at (a). A certain recovery time is necessary, which sets a limit to the operating p.r.f. The avalanche diode, however, works with a reverse bias just short of the breakdown voltage, instead of at zero voltage, and the applied switching pulse initiates the avalanche effect. But since the diode voltage is never reversed and there is a strong electric field maintained by the bias, the time taken for the electron and hole products of the avalanche to be absorbed in the respective *n* and *p* layers is very short. There is no storage, in fact, and the recovery characteristic is improved as in (b), the time scale being 0.1  $\mu$ sec per

square. A discussion on the use of existing diodes in this way is published in a letter from J. E. Scobey, W. A. White and B. Salzberg in *Proc.I.R.E.* for December, 1956. Special avalanche diodes have been developed by Bell Telephones, however, with closely controlled characteristics. Their breakdown voltage, for example, can be predicted and controlled in production to within about 5 per cent.

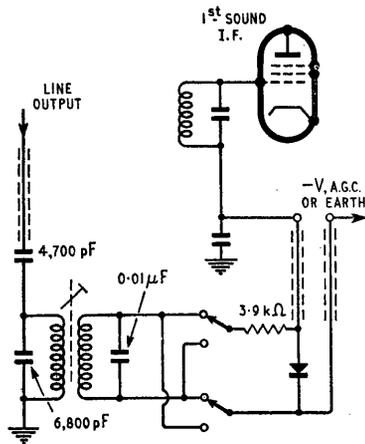

**Television on Tape.**—The main problem in recording signals of 3-Mc/s bandwidth by conventional methods on magnetic tape is, of course, the high speed at which the tape must run in order to resolve the information. In the RCA recording equipment, for example, it is 20 ft/sec. Various suggestions have been made for avoiding this by recording transversely with a moving head across a wide tape, the idea being that while the effective speed remains high the actual longitudinal motion of the tape over the capstans can be reduced to about 15 in/sec. The Ampex equipment in America uses this principle. All the schemes depend on rotating heads or fixed heads with rotating pole-pieces. One suggestion on how the tape can be arranged for a rotat-

ing head has been sent to us by R. M. Larsson. After leaving the capstan the tape is fed between formers (only the inner one is shown) which bend it round into a tubular shape. Beyond the recording head it returns to its flat state. The information is actually recorded on the "tube" in the form of a spiral, but on reverting to the flat state this becomes a series of almost straight rows across the tape. To keep the tape in con-

tact with the recording head Mr. Larsson suggests that compressed air should be fed into the inner former (which would be hollow) to emerge through a circumferential gap corresponding with the head rotation. This would then press the tape gently against the rotating head assembly.

**Bilingual Television.**—A French system for providing two different sound accompaniments to the picture was described in our last issue (p. 79) and it was mentioned that only a very simple and inexpensive "decoder" unit was required in the receiver. A full account of this gating device has actually been pub-

lished in the January, 1957, issue of *Television* (see diagram). An LC circuit is shock-excited from the line output stage and is coupled to another LC circuit which gives an almost pure sine wave shifted in phase by 90°. The switch is used to reverse the phase of this sine wave (depending on which of the two interlaced pulse trains in the sound channel is to be gated), while the semiconductor diode limits the positive peaks to produce flat-topped gating pulses. These are available at the output terminals of the unit, which, as shown, are simply wired into the grid circuit of the first sound i.f. stage.

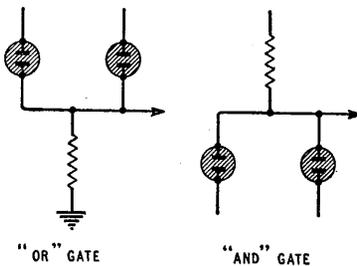

**Multi-Element Diodes** and bi-stable devices constructed from semiconductor materials. A brief summary by E. B. Dale, M. W. Aarons, M. Pobereskin and J. E. Gates in a D.S.I.R. unpublished report.

**Vertical Scanning Radar** for aircraft has been suggested by L. J. Battan, of Chicago University, as a means of avoiding icing conditions and for giving a continuous picture of the terrain below for clearance purposes. Normally, of course, airborne cloud-and-collision warning radar scans in azimuth, though it can be tilted up and down slightly. In a report in

*Aeronautical Engineering Review* for December 1956, Mr. Battan discusses the results obtained from a 3-cm airborne equipment modified so that it scans in a plane perpendicular to the flight path, and he gives photographs of typical responses on the c.r.t. screen. The height of clouds and terrain can be measured in this way, while the detection of possible icing conditions in the clouds depends on the fact that ice particles have only one-fifth of the reflectivity of water droplets of the same size. The ideal arrangement, of course, is a radar set which will scan in both vertical and horizontal planes.

**Magnetic-Coupled Multivibrator** in which the magnetic core is used for controlling the frequency of operation in inverse proportion to the magnetic flux. Unpublished report by R. L. Van Allen, available from the D.S.I.R.

**Neon Computing Elements.**—The ordinary neon tube, as an "on-off" two-state device, may have advantages for use in the logical "OR" and "AND" gates required in great numbers in electronic digital computers. It is considerably cheaper than the semiconductor or thermionic diodes commonly used, and in the gate circuits it is relatively insensitive to variations of characteristics between different tubes. The two circuits illustrated are taken from a comprehensive study of the possibilities by C. E. Hendrix in *I.R.E. Transactions* CP-3 for September, 1956. In the "OR" circuit, a positive pulse is produced at the output if either of the tubes is fired by a positive pulse applied to its upper plate. In the "AND" gate, a positive output pulse is only produced if both of the neons have positive pulses applied to their lower plates to reduce the p.d. and prevent them from firing. (Otherwise, when either of the neons

is fully conducting, the output is reduced to the voltage across the tube.) One disadvantage arises from the "stabilizing" voltage across the tubes when they are fully conducting. This means that the output level in the "OR" circuit is always a good deal lower than the highest input voltage, while in the "AND" circuit it is always a good deal higher than the lowest input voltage. Another difficulty is the comparatively slow

response of the glow discharge, which limits the operating p.r.f. to about 30 kc/s.

**Semiconductor Camera Tube** for television, devised by J. R. Pierce, of Bell Telephones, is comparable with the image orthicon except that its target consists of a thin wafer of germanium or silicon instead of glass. This is coated on the lens side with a thin transparent layer of metal through which the optical image passes, while the other side is scanned by a low-velocity electron beam. An image focused on the target produces hole-electron pairs in the semiconductor. The electrons move towards the metal layer while the holes are repelled towards the semiconductor surface, where they become trapped. This gives a positive charge pattern, corresponding to the optical image, which modulates the scanning beam. The return beam therefore carries the video information, and it passes through an electron-multiplier (near the cathode) which gives the video signal at its output. High sensitivity, output and resolution are claimed for the tube, of which a diagram is given in the January 1957 issue of *Radio-Electronics*.

**Magnetic Field Regulation** by a feedback control system using the phenomenon of nuclear magnetic resonance for sensing purposes. A D.S.I.R. unpublished report by F. A. Hadden.

**"Through" Electron Multiplier**, in which the secondary electrons are generated not from the front surface of the dynodes but by transmission through a series of thin insulating layers, has been developed by E. J. Sternglass and M. M. Wachtel, of Westinghouse in America. The insulating dynodes consist of layers of potassium chloride spaced 0.2 inch apart. They are faced with very much thinner layers of gold, which serve to scatter the incident electrons so that they expend more energy in the insulator and give a greater yield of secondaries. The device has advantages for amplification of high-speed pulses, since the uniform length of all electron trajectories and the close dynode spacing (as well as higher accelerating voltages between dynodes) result in a greatly reduced "spread" of the pulse rise-time during multiplication. The main disadvantage at present is the high rate of deterioration of the dynodes under electron bombardment. A full account is given in *I.R.E. Transactions*, NS-3, for November 1956.

*Unpublished Reports mentioned above come from various sources but can be obtained from the Technical Information and Documents Unit of the Department of Scientific and Industrial Research, 15, Regent Street, London, S.W.1.*

# Manufacturers' Products

NEW EQUIPMENT AND ACCESSORIES FOR RADIO AND ELECTRONICS

## Whip Aerials

THE latest whip aerials made by Antiference are fitted with a new type vertical rod consisting of three 6ft lengths of tough aluminium alloy tube tapering from  $\frac{3}{4}$ in at the base to  $\frac{1}{2}$ in at the top and joined by reducing ferrules designed to withstand winds up to 80 m.p.h.

One model, known as the "Extat," is fitted with screened downlead and matching transformers covering 10 to 2,000 metres and is for use where electrical interference is troublesome. Elsewhere the companion "Vra" model, which is a plain whip type, is suitable.

With chimney lashings the "Extat" costs £9 12s and the "Vra" £4 3s 6d; with wall brackets the prices are slightly less.

The makers are Antiference, Ltd., Bicester Road, Aylesbury, Bucks.

## Parabolic Band-III Aerial

THE illustration shows an unusual type of Band-III television aerial. It consists of a single vertical dipole mounted at the focal point of a parabolic array of eight reflectors. Relative to a plain dipole the forward gain is given as 14 dB, its back-to-front ratio as 36 dB and the acceptance angle  $20^\circ$ , measured to the half-power points.

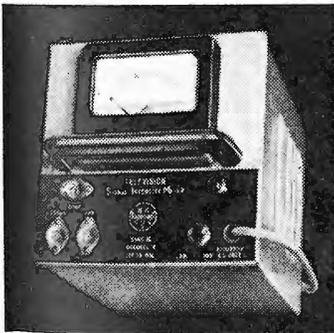

The comparatively narrow acceptance angle (in azimuth) ensures rejection of unwanted signals and interference of one kind and another, over an unusually wide angle.

Mechanically the aerial seems soundly designed and should stand up well to all weather conditions. It is made by The Meadows-Dale Manufacturing Co., Ltd., The Dale, Willenhall, Staffordshire, and the price is £10 10s with a 10ft mast and double chimney lashing.

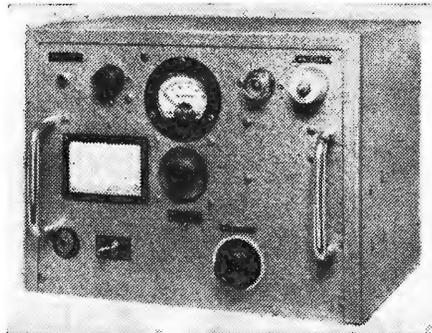

## Band-III Signal Intensity Meter

A COMPACT and portable a.c.-operated meter for measuring the average television signal intensities on Band III has been introduced by Radio-Aids. It can easily be taken to the site where it is proposed to erect the aerial in order to ascertain the type of aerial required and whether the chosen site is the best one or not.

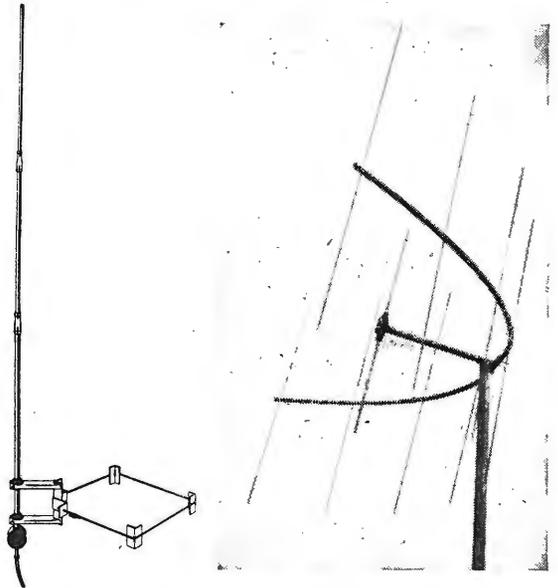

Similar in general design to the Band-I model introduced some time ago, it uses a t.r.f. circuit consisting of four cascode r.f. stages, a germanium diode detector, sensitive microammeter and voltage-stabilized power

Radio-Aids Band-III TV signal intensity meter.

Sea Wave Communications marine transmitter, Type MTX25.

Left: New "Extat" vertical rod aerial made by Antiference. Right: Dale parabolic Band-III television aerial.

supply. Thermistor compensation for temperature variation is included.

Full-scale meter readings are 200  $\mu$ V, 2 mV and 20 mV respectively, the three ranges being selected by plugging the aerial feeder into one of three sockets used in place of switching.

Known as the Type SIM III, the instrument weighs 8 lb, measures 7in  $\times$  6in  $\times$  6in and costs £33. It is obtainable from the sole distributors, W. J. Picton (Heath Electronics), Ltd., 57, High Road, Bushey Heath, Watford, Herts.

## Compact Marine Transmitter

A VERY compact 25-watt 'phone and c.w. marine transmitter, measuring only 12in  $\times$  9in  $\times$  10in, has been introduced by Sea Wave Communications for use in the smaller types of vessel. It provides immediate choice of any one of six crystal-controlled frequencies in the band 2 to 18 Mc/s and the marine distress frequency of 2,182 kc/s is separately marked for instant selection. Aerial matching on changing channel is reduced to the simplest possible operation.

A land-station version of this marine MTX25 model will be available shortly and this will provide 25 watts telephony and 40 watts c.w. and both variable master oscillator and crystal control will be embodied.

The transmitter is obtainable from Sea Wave Communications, Ltd., 13, South Molton Street, London, W.1. The price of the marine transmitter, MTX25, is £65 complete.

# Picture-

By

J. R. GREENWOOD,\* B.Sc.

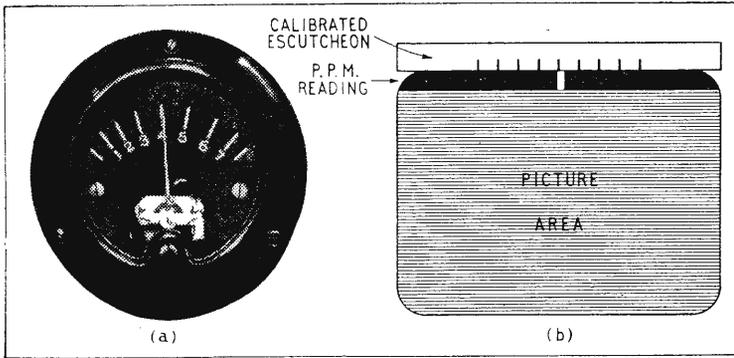

Fig. 1. (a) Dial of the B.B.C. peak programme meter; (b) the corresponding display on the monitor tube face.

WHEN monitoring television programmes it is difficult to keep both sound and picture monitors in view at the same time. The reason for this is, of course, that while the picture is displayed on the screen of a cathode-ray tube the peak levels in sound output are indicated by the pointer of a separate meter movement operating as a peak-reading voltmeter.

Obviously, presenting the indication of programme sound intensity on a portion of the monitor tube face is the logical way to overcome the difficulty. Viewing a constantly changing sound waveform on the face of a c.r. tube, however, causes a good deal of eyestrain. Before the war a special sound processing circuit which lessened eyestrain was developed by the B.B.C. This piece of equipment is called a "peak programme meter" and has proved very satisfactory in all respects when driving the meter movement mentioned previously. This article will describe the additional equipment required to display the peak-programme-meter readings on the c.r. tube without interfering with the c.r. tube's primary purpose of showing the transmitted television picture.

In Fig. 1 can be seen the dial of the existing peak programme meter, while alongside is a sketch of the corresponding type of indication provided on the c.r. tube face. Modifications to the front panel of the picture monitor entail only the provision of a calibrated escutcheon, which takes the form of an approximately evenly tempered scale calibrated from 1 to 7, that is, a 6dB step between 1 and 2, and 4dB steps per division over the rest of the scale.

Fig. 2 is a schematic diagram of the existing sound processing circuit. The main objective is to have a continuous indication of the peak voltages to which the main programme chain equipment will be subjected when a sound signal is being transmitted, and, at the same time, to avoid affecting the performance of the main chain. The indications of most value are:—

(a) The line-up condition, which represents 40%

modulation of the transmitter. This is on meter reading "4," when 1000-c/s line-up tone is fed along the programme chain prior to transmission.

(b) Maximum signal condition, which represents 100% modulation. This is on meter reading "6."

(c) Minimum permissible signal condition, which is controlled by the optional minimum signal/noise ratio thought to give satisfactory radio reception. This is on meter reading "1."

## Sound Processing Systems

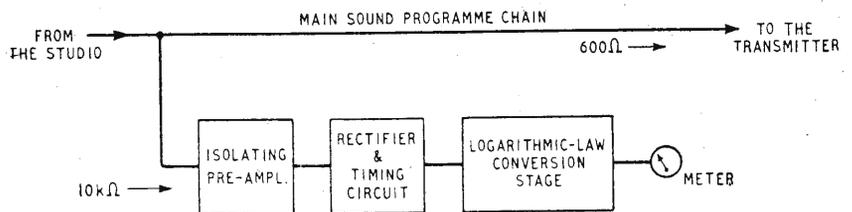

The isolating pre-amplifier protects the signal proceeding along the main programme chain from being affected by the non-linear input impedance of the double-diode rectifier and timing circuit, which would otherwise cause harmonic distortion to appear on the sound signal fed to the transmitter. The rectifier and timing circuit takes the sound signal and processes it so that the feed to the law conversion stage carries only the information necessary to ensure the accurate registration of peak voltages on the meter. The circuit will be dealt with in more detail later.

The logarithmic law conversion stage is necessary on account of the ear's logarithmic response to varying sound intensities, which implies a very wide range of audible sound intensities to be compressed within the permissible programme dynamic range. In consequence, the broadcast engineer is concerned with obtaining as wide a dynamic range as possible; the accepted figure, for the present, being in the region of 30 dB, with possibilities of slight extension where only f.m. transmitters and receivers are used. The programme meter has to give accurate indication of peak voltages over the entire dynamic range with some divisions to spare at either end of the scale.

In order to avoid a long technical description of the peak programme meter (which is only incidental to this article) it is sufficient to show the type of

\* B.B.C. Engineering Training Dept.

Fig. 2. Schematic of B.B.C. sound processing circuit used for the peak programme meter.

# Tube Sound Monitoring

METER-TYPE DISPLAY ON THE RASTER OF A TELEVISION MONITOR TUBE

waveform which will be fed into the system as the "processed sound signal." Fig. 3 shows the response of the peak programme meter to a given input signal. The waveforms demonstrate that the timing circuit has a fast registration time, so that peak values are recorded faithfully, and a slow discharge time constant (1 second), so that extraneous meter-needle movement is reduced to an extent where eyestrain is greatly diminished. A signal of approximately 215 volts peak value having a waveform as in Fig. 3(a) is available at the output terminals of the programme meter, the generator impedance being approximately 150 k $\Omega$ .

From Fig. 1(b) it can be seen that the type of indication required necessitates a number of beam brightening pulses being formed. These will have to occur during a portion of each of the first few lines of each frame of the raster. The objective is to form a vertical bright bar covering a portion of the first 10 successive picture lines. The bar has to be positioned relative to the escutcheon so that the instantaneous value of the processed sound signal voltage can be seen clearly.

The phasing of the brightening pulse with respect to the line scan is actually achieved by a coincidence circuit. Each value of voltage on the processed sound waveform has an equivalent value on the slope of the line sawtooth, and the coincidence circuit produces a beam brightening pulse of short duration whenever the equivalence is satisfied. The general principle can be followed with the aid of Figs. 4, 5 and 6. In Fig. 4, one signal input is derived from the line sawtooth generator and the other from the processed sound signal source. The points of coincidence are shown in Fig. 5(a) and (b). Here, A and C are the ones of interest; B and D have no significance and occur during flyback. Fig. 6 shows the effect as seen by the observer, illustrating that the spot moves from position A at time  $t_1$  to C at  $t_2$  according to the value of  $V_2$  at the respective times.

## Independent Sound Presentation

The television waveform is of a highly complex nature. One feature of the waveform which initiated this idea is that, prior to the commencement of active picture elements of the signal, 8 broad pulses and 10 suppressed lines are radiated in order that the average receiver or monitor frame timebase will have more than ample time to return the electron beam to its starting position at the top of the tube before the next frame becomes "active."

That is the reason why the sound indicating system can be superimposed on the television picture monitor tube face without interfering with the picture. However, up to this point no mention has been made of the suppressor circuit which is included in the complete schematic diagram of the system, Fig. 7.

The action of the suppressor circuit and pulse amplifier combined is to suppress brightening pulses from the coincidence circuit whilst the active lines

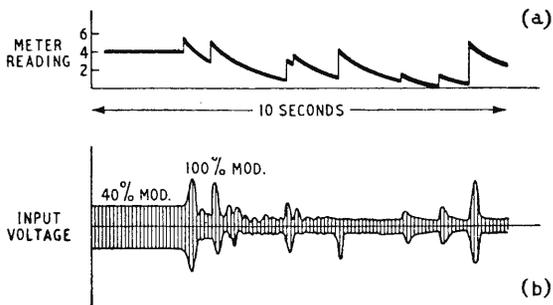

Fig. 3. (a) The response of the peak programme meter to an input signal (b).

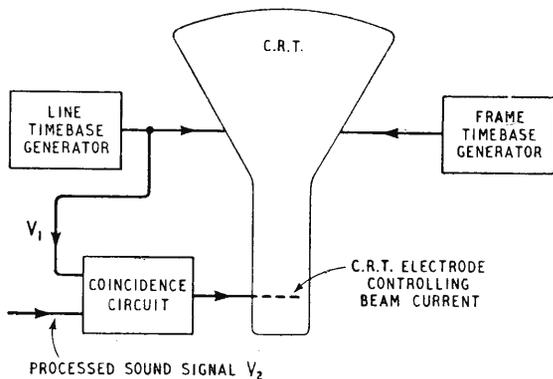

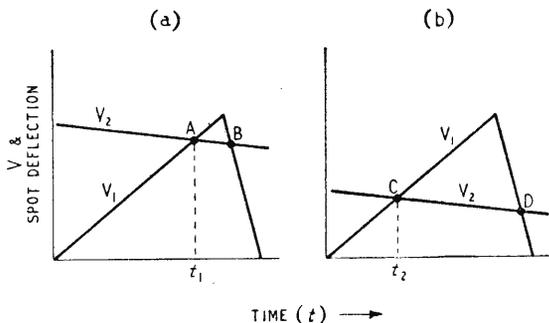

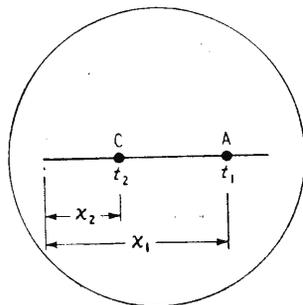

Fig. 4. Schematic showing the basic principle of the c.r. tube indication system.

Above: Fig. 5. Points of voltage coincidence on the waveforms of the frame timebase and the processed sound signal, at two different times (a) and (b).

Left: Fig. 6. Positions of the brightened spot across the tube face at times corresponding to  $t_1$  and  $t_2$  in Fig. 5.

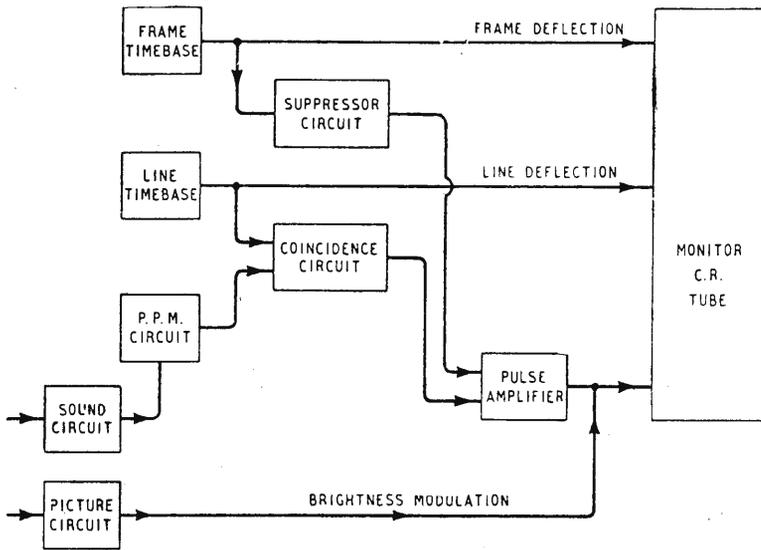

Fig. 7. Schematic of the complete indicating system.

constituting the centre of the picture are being displayed. The suppressor is fed from the frame timebase and is arranged to derive a signal of approximately 1 to 2 milliseconds duration. Only during this time does the pulse amplifier pass the brightening to the appropriate electrode on the c.r. tube to give the indication shown in Fig. 1(b).

Whilst the sound signal is being processed in the peak programme meter circuit to provide one signal input to the coincidence circuit, the output signal from the monitor line timebase is used to deflect the c.r. tube beam and as a second signal input to the coincidence circuit. The sound signal input has a registration time-constant of 1 millisecond and a discharge time-constant of 1 second. The two input signals act on the coincidence circuit so that a pulse of the order of 1- $\mu$ sec duration is produced. The coincidence circuit takes care of the phasing of the pulse so that the positions of the brightened spots on the tube face are related to the peak programme meter output.

The pulse amplifier is normally biased-off during the active lines of the picture and only becomes operative immediately after the suppressor circuit receives the frame flyback signal. During the period of flyback the suppressor is supplied with a voltage pulse from the frame timebase circuit. The voltage so derived is stored in a CR circuit having a time-constant of 1 to 2 milliseconds. The time-constant

of the storage circuit is so chosen that the normally inactive pulse amplifier comes into operation over the period of the remainder of 10 following inactive lines of the raster.

Since the line frequency is approximately 10 kc/s (the total duration of 10 lines is about 1 millisecond and the time-constant of the peak programme meter discharge circuit is one second), the 10 consecutive brightening pulses for each individual frame will be in the same phase relationship to the line sweep voltage and the 10 spots produced will be in a vertical line.

The phase relationship will not change greatly between frames except at times when a sound peak is in the process of being registered. So that, on a long-term basis, the visual effect will be one of observing the moving

bright bar slowly drifting from right to left whilst the peak programme meter registration circuit is discharging after each successive charge brought about by a peak of programme volume. The times when the bar will be visible are separated by only extremely short intervals during which time the peaks are being registered, therefore the indication is almost continuous as shown by the thickened lines in Fig. 3(a).

One of the advantages of the system is that the space occupied by the extra information on the tube face is utilized only on those monitors which need to be fitted with the sound indication. The television waveform in the main chain and in all subsidiary chains remains unaffected and the 10

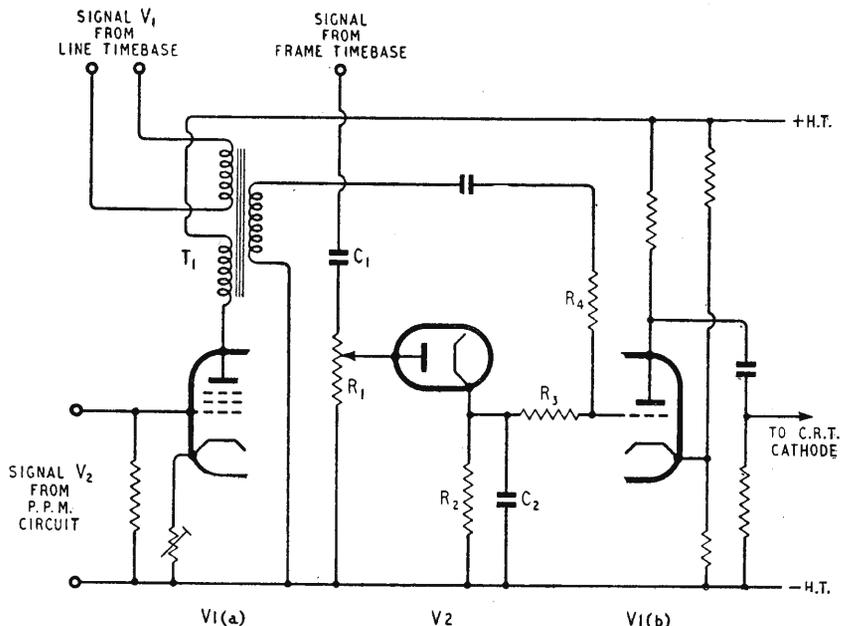

Fig. 8. Circuit for the coincidence detector, suppressor and pulse amplifier shown in Fig. 7.

suppressed lines would remain available for carrying other information such as stepped light wedges. Also, if the facility is no longer required at a particular point it can be readily discontinued simply by disconnecting the sound input.

In the following part of the article a scheme is suggested upon which the design of the subsidiary apparatus required to convert an existing monitor can be based. The design is in its most basic form and is only one of many systems which would probably work quite successfully.

The problem to be solved, then, is one of producing pulses, for trace brightening purposes, in the period when the picture signal is suppressed at the start of each picture frame. In order to obtain pulses in the correct time sequence to provide an intelligible visual indication of sound output, a coincidence circuit has been suggested. During the part of the frame made up by active lines the above pulses will have to be suppressed.

### Brightening-pulse Circuit

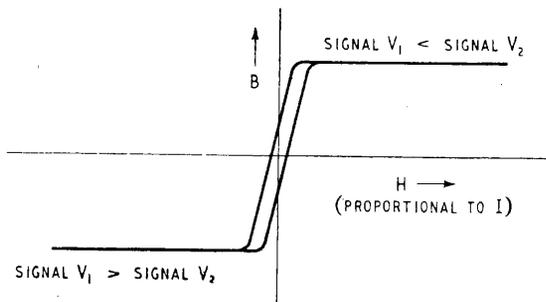

The circuit in Fig. 8 is one example of the many that could be used. Here,  $T_1$  is the heart of the circuit, and should possess a good high-frequency response together with a magnetic core which is easily saturated. Ferrite cores such as Ferroxcube seem to have the desired properties. Also, peaking transformer techniques appear to be of assistance.\*

The two input signals are arranged to oppose each other and the one which predominates produces a saturating magnetic flux in the core. The core is, in fact, saturated over almost all of the cycle of events. However, just at the point of change-over, when the signals are very nearly equal, the polarity of the magnetic flux will reverse (Fig. 9). The third winding of the transformer is connected so that the change of flux at the coincident point A (Fig. 5) produces a positive-going pulse at the grid of valve V1(b). This polarity of connection ensures that pulses produced at coincidence point B will be negative-going and therefore have no effect. It is arranged so that the amplitudes of the positive-going pulses alone are insufficient to cause V1(b) anode current to flow. V1(b) has a high positive bias on the cathode (say 50 volts) so that it is cut off.

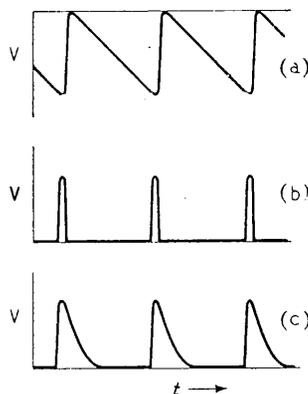

It is required that the pulses will only take effect on the part of the frame immediately following fly-back. This is taken care of by deriving a voltage from the frame timebase generator, Fig. 10(a), and differentiating it by the action of  $R_1C_1$  (b), then sustaining the positive-going pulse by the action of  $R_2C_2$  in conjunction with V2, as at (c). The action of V2 is of particular interest because it operates in the same way in both the rectifier and timing circuit of the peak programme meter and in the suppressor circuit. Its action can be easily followed if we think of the input signal in terms of a squared pulse.

If the frame timebase waveform is such that fly-back takes a time equal to the duration of two lines the voltage across  $R_1$  will be a squared pulse of 0.2-msec duration occurring at the rate of 50 pulses per second. And if the diode is considered to have a characteristic as shown in Fig. 11 its  $r_a$  will be a constant corresponding to the slope of the line. Then for the duration of each pulse the equivalent circuit will appear as in Fig. 12. And since  $R_2$ ,  $R_3$  and  $R_4$

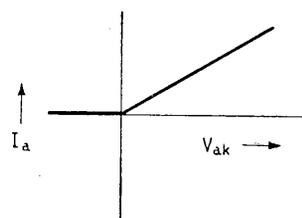

\* "The Design of a Peaking Transformer," by Adin B. Thomas. Brit. I.R.E. Journal, October, 1953, p. 486.

Right: Fig. 10. Voltages derived from the frame sawtooth (a) for gating purposes: (b) after differentiating, (c) after lengthening.

Left: Fig. 11. Characteristic of the diode V2 in Fig. 8.

Below: Fig. 12. Equivalent circuit of the diode gating system.

(as will be shown later) are greater than  $R_{gen} + r_a$  the simplification of the circuit to series CR does not unduly affect the issue.

Whilst the charging voltage is present between times A and B, capacitance  $C_2$  will be charged with an exponential rise in terminal voltage and, if the time-constant is chosen correctly, will charge to 90% of the applied voltage in 0.2 msec. As soon as the charging pulse has ended the cathode retains its positive potential after the potential has disappeared at the anode. Hence the diode V2 presents an open

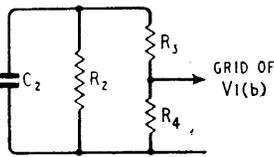

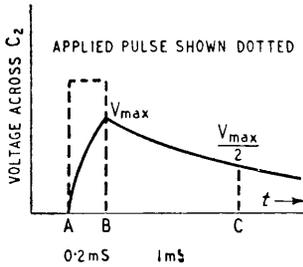

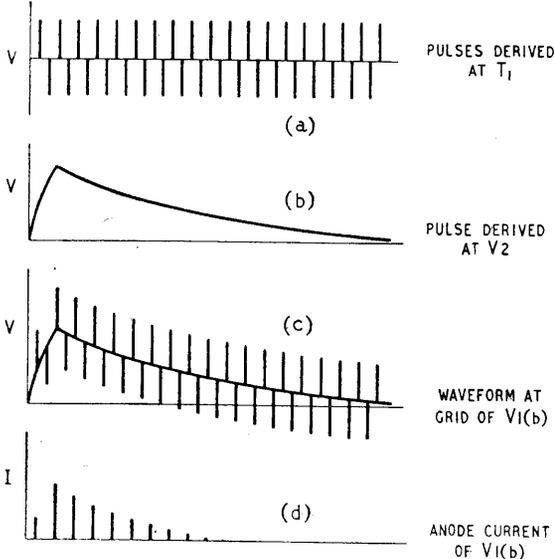

Fig. 13. Effective portion of the gating circuit remaining when the diode presents an open circuit.

Right: Fig. 14. Behaviour of the circuit in Fig. 13.

Below: Fig. 15. Combination of waveforms from T<sub>1</sub> and V2 producing the waveform (c) at the grid of V1(b) and the resultant anode current pulses (d).

circuit, and the effective portion of the circuit remaining, being of the form shown in Fig. 13, behaves as shown in Fig. 14.

It has to be arranged that the discharge of  $C_2$  will take 1 msec to reach 50% of maximum value in order that the grid of V1(b) will become positive with respect to the cathode when each of the first 10 beam brightening pulses arrives from  $T_1$ .

$$\text{Then } C_2 \left[ \frac{R_2(R_3+R_4)}{R_2+R_3+R_4} \right] \text{ is 1 to 2 msec}$$

and  $C(R_{gen}+r_a)$  is about 0.1 msec

and the initial assumption that  $\frac{R_2(R_3+R_4)}{R_2+R_3+R_4}$  is greater

than  $R_{gen}+r_a$  is correct.

At this point it requires little imagination to see how a full-wave rectifier can be used in the peak programme meter rectifier and timing circuit to produce the waveform shown in Fig. 3(a) from that in (b).

To continue the argument, the waveform seen in Fig. 15(b) is applied to the grid of V1(b) via  $R_3$  and that seen in (a) via  $R_4$ . The resultant effect is to allow pulses of anode current to flow in V1(b) at times corresponding to the times of the first 10 scan-

ning lines as shown in (d). Without going into too great an amount of detail, it can be said that the pulse width of pulses derived at  $T_1$  will have to be in the region of 1  $\mu$ sec, otherwise the visual indicating bar will be too large on the monitor tube face. It can also be deduced that  $C_2R_2$  will have to be in the region of 1 to 2 milliseconds.

An interesting point to notice is that with this circuit, unlike some others, the size of successive pulses of V1(b) anode current are in diminishing order. The effect on the tube face will be to produce a bar of unequal brightness, the bottom end of the bar being least bright and blending into the top of the picture below it. This is advantageous because it means that the spot may be allowed to stray on to the top few active lines of the picture without causing too great a distraction.

Finally, the author would like to express his thanks to Dr. K. R. Sturley, head of the Engineering Training Department of the B.B.C., and his staff, for their helpful criticisms and suggestions.

## CLUB NEWS

**Birmingham.**—The March programme of the Slade Radio Society includes "Circuit applications of transistors" by J. Chandler and A. Wates, of B.T.H. (1st); a talk on the radio amateur emergency network by A. E. Matthews (15th); and "Radio direction finding" by N. B. Simmonds (29th). Meetings are held at 7.45 at Church House, High Street, Erdington. Sec.: C. N. Smart, 110, Woolmore Road, Erdington, Birmingham, 23.

**Bury.**—A. A. H. Moss (G8VF) will give a talk on receivers at the March 12th meeting of the Bury Radio Society to be held at the George Hotel, Kay Gardens. Sec.: L. Robinson, 56, Avondale Avenue, Bury, Lancs.

**Chester.**—March meetings of the Chester & District Amateur Radio Society include a description of a double superhet on the 19th. The club, which meets at the Tarran Hut (Y.M.C.A.), has decided to grant free membership to "juniors who have no income." Sec.: D. Rickers, 97, Ruanon Road, Wrexham, Denbigh.

**Derby.**—Meetings of the Derby and District Amateur Radio Society are held each Wednesday at 7.30 at 119, Green Lane. The March meetings include "My recent trip to U.S.A.," by T. Darn (G3FGY) on the 6th, Mullard film strip "The story of television" (13th) and a demonstration, film and discussion on frequency modulation (27th). Sec.: F. C. Ward (G2CVV), 5, Uplands Avenue, Littleover, Derby.

**Newbury.**—"Colour television—the problems" is the title of the paper which C. A. Marshall, of *British Communications and Electronics*, is reading at the March 22nd meeting of the Newbury and District Amateur Radio Society. The meeting begins at 7.30 at Elliott's Canteen, West Street. Particulars of club activities are obtainable from 83, Newtown Road, Newbury, Berks.

**Wellingborough.**—At the March 7th meeting of the Wellingborough and District Radio and Television Society M. Homer will deal with television interference. Meetings are held each Thursday at 7.30 at Silver Street Club Room. Sec.: P. E. B. Butler, 84, Wellingborough Road, Rushden.

During the International Jamboree at **Sutton Coldfield** (August 1st-12th) to mark the jubilee of the foundation of the Boy Scout movement, an amateur radio station will be operated at the camp by a group of amateurs. Arrangements are in the hands of an organizing committee including representatives from the Slade Radio Society, Midland Amateur Radio Society and the Birmingham group of the British Amateur Television Club.

## WIRELESS WORLD INDEX

The index to the material published in Volume 62 of *Wireless World* (1956) is now available. It includes both general and classified indexes and is obtainable from our Publishers price 1s (postage 2d).

# Ionosphere Review, 1956

Approaching Sunspot Maximum

By T. W. BENNINGTON\*

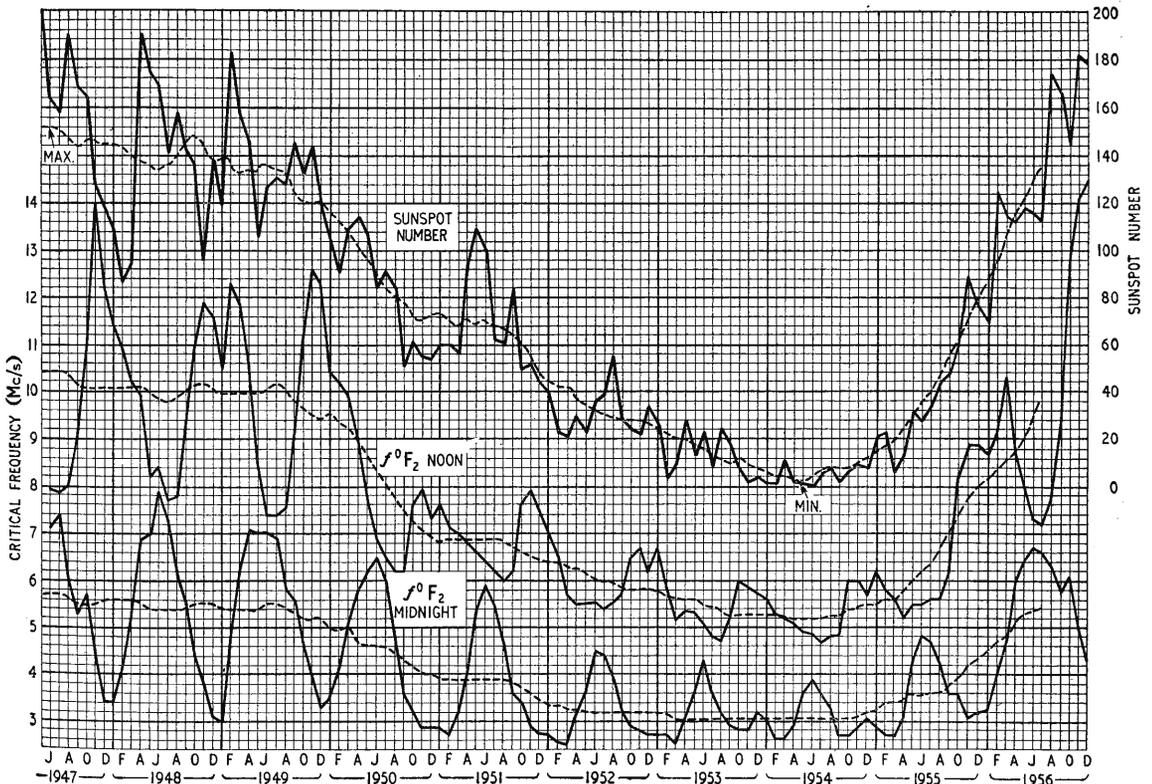

**D**URING 1956 the extremely rapid increase in solar activity, which had become apparent early in 1955, continued in its course. By the end of the year the activity had reached a level comparable with that recorded at the last sunspot maximum, in 1947. So far as radio propagation is concerned "quasi maximum" conditions may be said to have prevailed throughout most of the year, for from February onwards the daytime ionisation of the  $F_2$  layer, over one or another part of the earth's surface, reached those high levels which render it capable of sustaining the propagation over long distances of frequencies well into the v.h.f. band. In fact the year must have been the record one for such propagation since high-frequency radio communication first began. During its last few months, frequencies of 50 Mc/s and higher, which hitherto have seldom been propagated to long distances, were being often so propagated at certain times of day. At the end of the year the solar activity was still increasing, though it now seems likely that the epoch of sunspot maximum is not far distant.

**Course of the Sunspot Cycle.**—The variations in the solar activity during the past few years, and their effects upon the  $F_2$  layer ionisation, may be

seen from the chart. The top full-line curve gives the monthly values of the sunspot number (the last twelve values are provisional numbers), and the *average* level of the sunspot activity is given by the top dotted line, which is a plot of the twelve-month running average of the monthly sunspot numbers.

The two lower full-line curves give respectively the monthly values of the  $F_2$  layer critical frequency for noon and midnight, as measured at the D.S.I.R. ionospheric station at Slough. These curves exhibit large seasonal fluctuations, such that high noon values exist during winter with low values during summer, and high midnight values during summer with low values in winter. Superimposed upon the seasonal fluctuations is the long-period variation due to the changes in solar activity, and the two lower dotted lines, which give the twelve-month running average of the monthly values of noon and midnight critical frequency, illustrate this long-period variation clearly. They show a close correlation between the average level of solar activity and the average value of the  $F_2$  layer critical frequencies, between which there is, in fact, an *approximately* linear relationship, at least up to a sunspot number of about 100. Since the

\* The Research Department, British Broadcasting Corporation.

Course of sunspot cycle, with corresponding variations in ionospheric conditions throughout the period.

maximum usable frequencies for long-distance communication are directly related to the  $F_2$  layer critical frequencies, the former may be assumed to have a long-period variation approximately proportionate to that shown by the dotted lines, and correlated in a similar way with the variation in solar activity.

**Highest Maximum Recorded.**—From the sunspot maximum in May/June, 1947, to the minimum in April/May, 1954, there was a time lapse of 6.8 years, during which period the average sunspot number fell from about 152 to about 3, and the critical frequencies and m.u.f.s. decreased by about 2 to 1 at the season and time of day when they are highest. Since the minimum only 2.7 years has elapsed, and during this short period the sunspot number has increased at a rate, which if maintained, points to a higher value being reached than at the last maximum. The average sunspot number (its exact value cannot yet be estimated) also appears to have reached a greater value than at the last maximum. Solar cycles with high maxima are, in fact, nearly always of a "sawtooth" shape, having a short increasing phase followed by a long decreasing one. In this respect they are quite unlike those with low maxima.

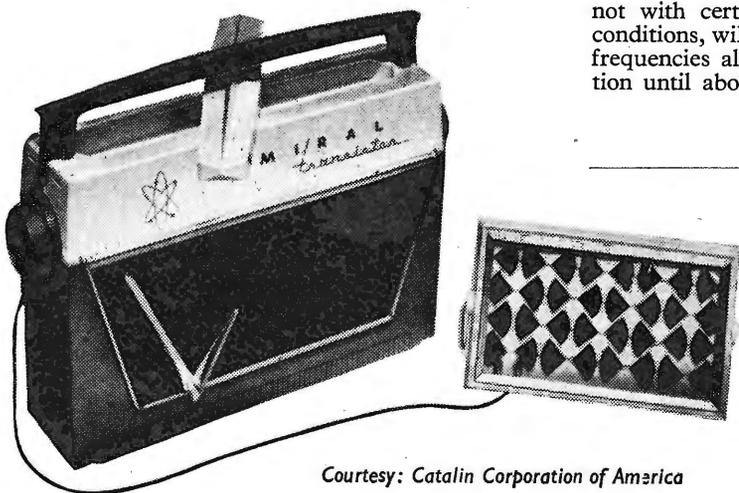

During 1956 there was a remarkably rapid increase in the average solar activity and in the average  $F_2$  layer ionisation, and at the end of the year both were still increasing. The highest sunspot maximum so far recorded is that of 1778, when the average sunspot number was about 159. The coming maximum therefore promises to be the highest ever recorded, for it looks as if the 1778 value will almost certainly be exceeded. During 1957 solar activity may thus reach the highest level it has had for at least 208 years. Nevertheless, according to the astronomers, sunspot maximum is likely to occur early in 1957, perhaps as early as February. Thereafter solar activity will begin to decrease, though there may be large short-period fluctuations. The point is, though, that the average activity is likely to decrease at a far lesser rate than that at which it has lately been increasing.

**Usable Frequencies.**—During 1956 the usable band of frequencies for long distance communi-

cations was extended considerably at the high-frequency end. Throughout the year frequencies in the 26-Mc/s broadcast band were successfully used for long distance broadcasting and the 28-Mc/s amateur band was very frequently usable. During March U.S.A. police and business radio transmissions on frequencies up to 35 Mc/s were frequently received here, whilst the Channel 1 television signals from this country were being received regularly in various parts of southern Africa. During the summer there was, as usual, a considerable decrease in the occurrence of this v.h.f. reception, but towards autumn it was again renewed. During November and December U.S.A. business radio transmissions were receivable here almost daily on frequencies up to 43.5 Mc/s, the American amateurs on 50 Mc/s were very frequently heard and occasionally frequencies up to 57 Mc/s were propagated across the Atlantic. At this time the British Channel-1 television signals were being received in the U.S.A., and pictures, of a kind, were obtained, whilst, for the first time, the sound channel was received in Australia. These few cases of long-distance v.h.f. reception are cited as examples of the practical effects of the high level of  $F_2$  layer ionisation, which is the result of the present high solar activity. They indicate that, under such conditions as now prevail, frequencies far exceeding those normally used for the purpose do become usable for long-distance communication over certain paths at the appropriate times of the day.

As for 1957 we may expect that, taking the year as a whole, there will be little alteration in the propagation conditions over the various paths as compared with the latter part of 1956.

About February the maximum daytime frequencies may be slightly higher even than those quoted above, and it may be that the sunspot maximum will occur during that month. But, since after that event the solar activity is likely to decrease quite slowly, the usable frequencies are likely to remain very high throughout the year. During the summer the daytime m.u.f.s. (from this country) will, of course, decrease somewhat from the present values, but they will rise again to high values in the autumn. Highest night-time frequencies will be reached during the period May to August. And looking even further into the future we may anticipate, though not with certainty, that "quasi maximum" radio conditions, will permit the regular use of the highest frequencies allocated for long-distance communication until about the end of 1959.

## SUN-POWERED PORTABLE

POWER for this transistor portable, made by the Admiral Corporation of America, is supplied by 32 silicon junction photocells which are sufficiently sensitive to operate the receiver even on overcast days. Alternatively the set can be energized by 6 dry cells. The rotatable rod aerial fits into a recess in the high-impact styrene moulded case.

## MARCH MEETINGS

### LONDON

1st. R.S.G.B.—“Modern amateur communication receiver design” by R. G. Lane (G2BYA) at 6.30 at the I.E.E., Savoy Place, W.C.2.

4th. I.E.E.—“Electronics in administration—a survey” by Dr. D. C. Espley at 5.30 at Savoy Place, W.C.2.

7th. I.E.E.—“Cathodic protection” by L. B. Hobgen, K. A. Spencer and P. W. Heselgrave at 5.30 at Savoy Place, W.C.2.

7th. London U.H.F. Group.—Members’ display of u.h.f. gear at 7.30 at the Bedford Corner Hotel, Bayley Street, W.C.1.

13th. Radar Association.—“The applications of radar techniques in science and industry” by Sir John Cockcroft at 7.30 at the Anatomy Theatre, University College, Gower Street, W.C.1.

15th. B.S.R.A.—“Ultra-linear amplifiers” by D. M. Leakey at 7.15 at the Royal Society of Arts, John Adam Street, Adelphi, W.C.2.

15th. Television Society.—“Return of electrostatic focussing” by Dr. R. Pearce (E.M.I. Research) at 7.0 at 164, Shaftesbury Avenue, W.C.2.

20th. I.E.E.—“Recent developments in X-ray and electron microscopy with some applications to radio and electronics” by Dr. V. E. Cosslett and C. W. Oatley at 5.30 at Savoy Place, W.C.2.

20th. British Kinematograph Society.—“A new approach to telerecording” by A. E. Sarson and P. B. Stock with an introductory survey by L. C. Jesty at 7.15 at the Royal Society of Arts, John Adam Street, Adelphi, W.C.2.

25th. I.E.E. (Students).—Address by Sir Gordon Radley, president, at 6.30 at Savoy Place, W.C.2.

27th. Brit. I.R.E.—“Disk recording” by Dr. G. F. Dutton at 6.30 at the London School of Hygiene and Tropical Medicine, Keppel Street, W.C.1.

28th. Physical Society.—Annual general meeting of acoustics group and symposium on sound recording: “Factors limiting the performance of magnetic recording systems” by Dr. P. E. Axon, “Standardization of recording characteristics” by H. J. Houlgate, “Application of magnetic recording to computers and automation” by B. W. Pollard, and “Magnetic strip on cinematograph film” by J. Moir at 4.0 at the Royal Institute of British Architects, 66, Portland Place, W.1.

29th. Television Society.—“Studio production techniques” by Ian Atkins (B.B.C. Television) at 7.0 at 164, Shaftesbury Avenue, W.C.2.

### BIRMINGHAM

25th. I.E.E.—“The B.B.C. sound broadcasting service on very-high frequencies” by E. W. Hayes and H. Page at 6.0 at the James Watt Memorial Institute, Great Charles Street.

### CAMBRIDGE

5th. I.E.E.—“Cathodic protection” by L. B. Hobgen, K. A. Spencer and P. W. Heselgrave at 8.0 at the Cavendish Laboratory.

### CARDIFF

11th. I.E.E.—“Transistor power amplifiers” by R. A. Hilbourne and D. D. Jones, and “Transistor d.c. converters” by L. H. Light and P. M. Hooker at 6.0 at the South Wales Institute of Engineers, Park Place.

### CHESTER

27th. Society of Instrument Technology.—“The future of semi-conductors in industry” by D. D. Jones (G.E.C. Research) at 7.0 at 5, King’s Buildings, King Street.

### EDINBURGH

15th. Brit. I.R.E.—“Applications of particle accelerators” by C. W. Miller at 7.0 at the Department of Natural Philosophy, University of Edinburgh.

### FARNBOROUGH

27th. I.E.E.—“Frequency-modulation radar for use in the mercantile marine” by D. N. Keep at 7.30 at the R.A.E. Technical College.

### GLASGOW

27th. I.E.E.—“The B.B.C. sound broadcasting service on very-high frequencies” by E. W. Hayes and H. Page at 7.0 at the Institution of Engineers and Shipbuilders, Elmbank Crescent.

### LIVERPOOL

4th. I.E.E.—“Electronics and automation: some industrial applications” by Dr. H. A. Thomas at 6.30 at the Liverpool Royal Institution, Colquitt Street.

6th. Brit. I.R.E.—“The preparation of service and technical data sheets” by E. A. W. Spreadbury (*Wireless Trader*) at 7.0 at the Chamber of Commerce, 1, Old Hall Street.

### MALVERN

11th. I.E.E.—“Vacuum techniques” by D. J. Taylor, “Temperature control” by J. P. King, and “Cutting of semi-conductors” by J. R. Walford at 6.0 at the Winter Gardens.

### MANCHESTER

7th. Brit. I.R.E.—“Electronic musical instruments” by A. Douglas at 6.30 at the Reynolds Hall, College of Technology, Sackville Street.

13th. I.E.E.—“The electronic age” by Dr. R. C. G. Williams at 6.45 at the Engineers’ Club, Albert Square.

### NEWCASTLE-ON-TYNE

4th. I.E.E.—“An experimental study of high-permeability nickel-iron alloys” by C. E. Richards, E. V. Walker and A. C. Lynch at 6.15 at King’s College.

### PORTSMOUTH

6th. I.E.E.—“Germanium and silicon power rectifiers” by T. H. Kinman, G. A. Carrick, R. G. Hibberd and A. J. Blundell at 6.30 at the Central Electricity Authority, 111, High Street.

29th. B.S.R.A.—“Hearing aids and audiometers” by S. Kelly at 7.15 at the Central Library.

### READING

18th. I.E.E.—“The transatlantic telephone cable” by R. J. Halsey at 7.15 at the George Hotel, King Street.

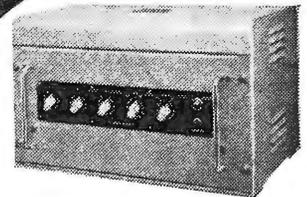

### RUGBY

12th. I.E.E.—“Ferrites” by Professor F. Brailsford at 6.30 at the Rugby College of Technology and Arts.

### WEYMOUTH

1st. I.E.E.—“Analogue Computers” by R. Postlethwaite at 6.30 at the South Dorset Technical College.

# TRIX SOUND EQUIPMENT

The models above: G7822 ribbon microphone, T635 30-watt amplifier and A9 cabinet loudspeaker, form the vital links in a typical chain of Sound amplification. The TRIX organisation has had nearly 30 years' experience of all types of installations and the range of equipment covers even the most unusual of specialised requirements. Our comprehensive leaflets, which we will gladly send you on request, will help solve all your Sound problems. May we help you?

THE TRIX ELECTRICAL CO. LTD.  
MAPLE PLACE, TOTTENHAM COURT RD  
LONDON, W.1

# RANDOM RADIATIONS

By "DIALLIST"

## No, No, Sir!

"CATHODE RAY" was considerably off the rails in his mild criticism of my use of monochrome as an alternative to black-and-white in describing the television picture. White, he suggests, is as far removed as it could be from monochrome, since it is a combination of all the colours of the spectrum. True; but if he'd thought for a moment, he'd have realized that the television "white" isn't white, but a very pale grey. The dictionary defines the word monochrome as referring to a representation or image in different tints of the same colour. The television picture exactly fits in with this, for it consists of nothing but greys, from the very pale to the very dark. As for his suggested alternative, "panochrome," words fail me, as I'm sure they do my *confrère* "Free Grid." "Pantochrome," if you like, "C.R.," but not such a verbal monstrosity as panochrome. Yes, I know there's a photographic term panchromatic; but that must have been coined by some fellow with "little Latin and less Greek."

## Projection v Large Tube

A READER takes me to task for having said in these notes that a projected television picture is less obviously liney than that on the screen of a large cathode-ray tube. The number of scanning lines, he points out, is precisely the same in both instances. True enough, but, am I not right in saying that on the very small tube of a projection receiver the spot, no matter how sharply you focus it, is relatively a good deal larger than that painting the pictures directly on the screen of a 17-inch or 21-inch tube? Hence, if there are any gaps between the lines of an interlaced scan, they are narrower and less noticeable than those on the screen of a big-tube, direct-viewing receiver. Though he doesn't appear to realize it, my correspondent himself proves the truth of my contention. His projection set, he writes, gives a 36x27-inch picture and he and his wife sit 10 to 12 feet from the screen. Now, a useful rule of thumb for direct viewing is that, without spot-wobble, the minimum viewing distance in feet is just about

half the size in inches of the c.r.t., say, 10 feet for a 21-inch tube. Well, my correspondent and his wife are sitting at about that distance from a projected picture more than twice the size of the image on a 21-inch tube and having no bother with liness. To give a direct picture of the same size you'd need a 42-in c.r.t. (!) and would have to sit over 20 feet from it to get rid of the lines.

## A Marine Radar Point

"DEAR Mr. Diallist," wrote a Birmingham reader, "weren't your radiations a little more random than usual when you wrote recently [December issue] of the need for a radar predictor?" He goes on to point out that if the bearing of another ship remains constant while the range decreases, you are on a collision course. Everyone who's had anything to do with marine radar knows that, for it's one of the basic rules. The trouble is that if officers don't plot it isn't always realized that the bearing is staying put and the range shortening. And this is particularly true when one or both ships make changes in course and speed. I remember attending one court case in which that's exactly what happened. Only one ship had radar. No plotting was done; but every order given by the navigating officer made a collision more and more inevitable.

And this on the open sea and the "blip" of the victim first seen on the radar screen when the range was the best part of ten miles!

## Television in France

YOU may recall that in the last issue I expressed surprise at the distribution of French TV stations. They seemed, according to the map in the December issue, to be mainly concentrated on the north coast and round the northern and eastern frontiers. Hardly had my copy gone to the printer when the post brought me from Paris the January issue of that excellent magazine *Télévision*. On its cover is a map showing the layout of the French television system as it will be when the nationwide plan, now well under way, is completed. It can't have been an easy task to devise a scheme for the TV coverage of the whole of France, for considerable parts of the country are mountainous and therefore "difficult," and, due to the bandwidth needed by the French system, only twelve channels are available in Bands I and III. As it now stands, the scheme is most ingenious. Amongst the big problems to be solved were those of inter-station interference, of blind spots and of a vast network of cable and radio links. Directional aerials will be used for at least 16 of the main stations so as to

give a strong signal where it is wanted. The blind spots will be catered for by low-powered satellites or relays.

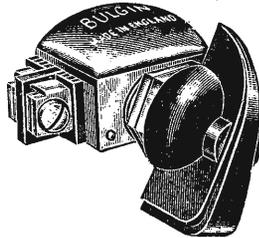

### A Four-year Plan

Altogether 40 main stations are to be used, of which 17 will have an e.r.p. of 100 kW or more, in certain directions at any rate. Thirteen of these are rated at 200 kW and two at 300 kW. At least 20 main stations will be on the air by the end of this year, and the whole scheme completed by 1960. It's a bold step, for so far television sets have been slow in making their way into French households. The R.T.F. firmly believes—and I'm sure they're right—that there will be a snowball increase in the number of domestic TV receivers as more and more transmitters come into action. French television certainly deserves to succeed, for the courageous decision some years ago to adopt the 819-line standard means that France has potentially the best television pictures in the world to-day. Our own Television Advisory Committee originally had in mind that some similar standard should eventually come into use here; if you remember, they recommended years ago that research should go forward with a view to developing a system of the order of 1,000 lines. A pity that so far it hasn't come to anything and doesn't look like doing so.

### A Question of Efficiency

HAVE you ever thought what hopelessly inefficient pieces of apparatus domestic sound and television receivers are from one point of view? The average mains-operated sound set needs about 30 watts input to its l.t. and h.t. circuits to produce an output of some 2 watts from its final a.f. stage. The ratio is better in battery sets. For television receivers the average input from the mains is some 150 watts for an audio output of 2-3 watts, and no great amount of power from the line-scan, frame-scan and e.h.t. circuits. What an improvement there'll be in a few years' time, when transistors come into more general use. Sooner or later, I suppose, sets drawing their power from the transmitter will be common in primary service areas. I hardly think that even now "Free Grid" need fear being run in for stealing electricity, the property of the B.B.C. What you have broadcast is surely no longer your property. Haven't you made a gift of it to anyone licensed to receive it?

# TRADE **BULGIN** MARK

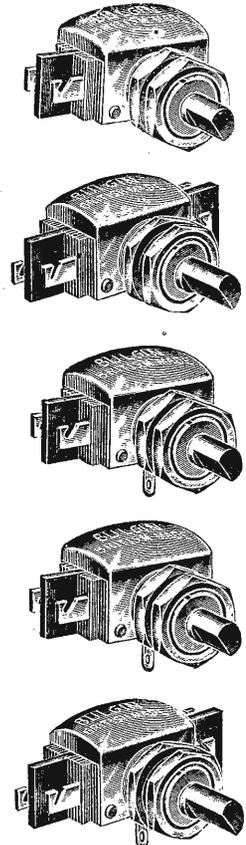

**Semi-rotary** Q.M.B. switches with  $\frac{1}{4}$ " diameter flatted shafts to accept pointer knobs are often preferred to the lever or dolly operated toggle action types. We manufacture a wide range of semi-rotary switches, both single and double pole, in make-break and change-over contacting with standard or long bushes for different panel thickness of: up to  $\frac{1}{4}$ ",  $5/16$ " to  $15/16$ ";  $15/32$ " dia. hole required.

## MINIATURE SEMI-ROTARY SWITCHES FOR MAINS USE

Steel encased for strength, highly electroplated with high grade laminated S.R.B.P. insulation and silver plated solder tags (*alternatively 6 B.A. terminals on some types*), Ratings: 6 to 250 volts a.c. basis, maximum test voltage=750 peak. Insulation resistance, not less than 40M $\Omega$ . Contact resistance, not greater than 0.01 (10m $\Omega$ ) at 6 volts and 2 x rated amps.

**Pointer knobs** for use with these switches are available as extras, and many different styles are listed on pages 18 to 26 in the latest edition of the Bulgin catalogue. Particular attention is drawn to the K.370 pointer knob (*Illustrated*) in highly polished bakelite with heavy brass insert, and the range of various escutcheons.

For full details of all Bulgin Components, send now for our fully illustrated comprehensive catalogue giving electrical and physical data. 144 pages. Price 1/- Post Free.

## Electronic Torsothermer

ONE of the gossip-column writers of an evening newspaper has just discovered the principles of electronic cooking which was first dealt with in these columns and elsewhere many years ago. This particular writer has just heard of the invention from New York and has given his readers all the usual wonders about the ability of an electronic oven to cook the inside of a cake without burning to a cinder the outside.

Well, there is nothing new in that to readers of *Wireless World* but it has set me thinking about a problem of my own. For many years I have used an electric blanket. I have no complaints about it except that it is unnatural as it warms my outside and the heat then travels inwards. When I eat food it generates heat inside me and this heat travels outwards. By means of electronic cooking technique surely it would be possible for me to warm myself in the same manner as nature does it. To do the whole thing electronically, instead of merely electrically as I do at present, would, of course, give me great psychological satisfaction.

The only thing is that my knowledge of the techniques of electronic heating and cooking is rather slender, and I am not at all sure how to set to work with safety. As you will appreciate, an error whereby, say, the liver was raised to an inordinately high temperature might be fraught with serious medical consequences. If any of you have any real knowledge about this matter I shall be very glad to hear from you. This is, of course, really a question for electro-physiologists and maybe a paper on the subject has been presented at a meeting of the Electro-Physiological Technologists' Association.

## Antenna in Excelsis

I SEE that Dr. R. S. Scorer recently told the Minister of Power that in his view domestic chimneys are responsible for far more pollution than a lofty factory chimney. One factory chimney will, of course, discharge far more smoke and other harmful substances than a domestic chimney and so to make a fair comparison several of the latter should be taken into account so that they are together discharging the same quantity of smoke as the factory chimney. Even so the factory chimney will do far less damage as, owing to its greater height, it disperses its noxious substances over a far greater

area than do the domestic chimneys; in other words, the concentration is less.

Surely the logical theory to follow would be to make domestic chimneys illegal? A tall, factory-type chimney could be erected at the end of each road. To this chimney all domestic smoke could be fed by special underground ducts using forced draught.

This would at once make possible my favourite idea of a communal TV aerial for each road. The tall communal "factory" chimney would be an ideal site for it. Not only would its great height enable TV range to be greatly increased, but whole masses of unsightly roof aerials would be wiped away; indeed, the very disappearance of domestic chimneys would *literally* undermine the very foundations of our present aerial eyesores.

If any of you cavil at the ugliness of a factory chimney at the end of each road, I would point out that with proper architectural design it could be as graceful as the tall and slender campanile of Westminster Cathedral.

## Eupeptovision

MANUFACTURERS of television sets in this country don't seem to have made any provision to enable their customers to view continuously throughout the evening now that the hour's interval between 6 p.m. and 7 p.m. has disappeared. All of us, no matter whether we belong to the U or non-U sections of the community, have hitherto been able to use that interval to snatch a hurried meal.

Now, of course, we eat and view simultaneously. What is needed is a set with four faces like Big Ben to "cover" each of the four sides of a dining table so that all members of

the family can eat while they view. I have hastily knocked up a table set of this eat-while-you-view type and it is so successful that I should like manufacturers to make a similar type available to everybody.

But the four faces should not merely be paralleled up. Each tube should be independent and switchable to the B.B.C. or I.T.A. to cater for the differing tastes of various members of the family. In case any of you are asking, "But what about the sound for each service?" I would add that this can be easily catered for by the use of hearing-aid-type earpieces.

One of the greatest advantages I have derived from my own E.W.Y.V. set is that it checks any tendency for me to bolt my food in order to get back to the television programme. Thus it is greatly conducive to eupepsia.

## An Electronic Miss Smith

SOME years ago I had a few words to say about the sad day in the future when all the fair Miss Smiths in our offices will be replaced by electronic typewriters. That day is a lot nearer now judging by an article I have been reading about the research work that is being done in various parts of the world and more particularly at University College, London.

The monstrous machine which is being developed there has, so far, a vocabulary of only 140 words and it spells them in a manner not found in the O.E.D. In these respects it is, therefore, not unlike the dumb blondes which grace, or disgrace, some offices.

Another point of similarity between this machine and its human counterpart is that it gives of its best only when working for one particular person. In the machine, the reason is that it responds best to the particular type of pronunciation for which it has been developed; but with the ladies, there are other considerations.

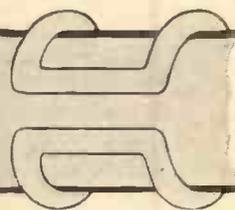

However, nothing will induce me to persuade my directors to invest in one of these contraptions until it reaches the stage when it can take over *all* the duties of our deft-fingered dactylographers who, metaphorically speaking, smooth our brows and bring a humanizing influence into the soulless cathedrals of commerce.

My E.W.Y.V. receiver.

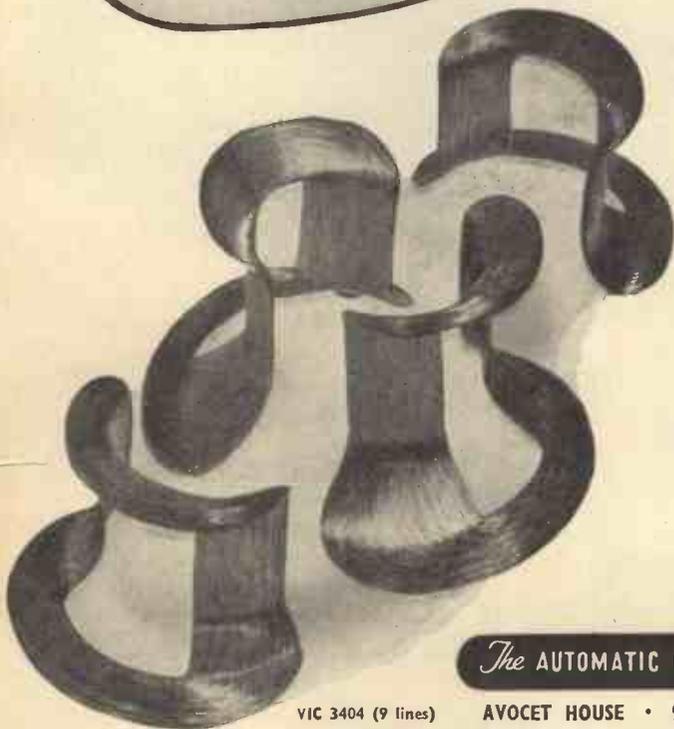

**So  
easy**

**to  
make**

*... with the right machine*

... and so quickly. The right machine to wind T.V. Deflector Coils winds them efficiently, quickly (20-30 seconds per coil), economically, and with precise uniformity of electrical characteristics. Bonding of the coils is effected before removal from the machine.

The machine that winds these coils is now available at an economical cost. It is surprisingly simple to use. It is the modern easy answer to a hitherto difficult production problem.

Ask us for full details.

# DUBILIER

## box clever

with four new  
autopacks for  
**RESISTORS**

**DUBILIER AUTOPACKS**—designed primarily for loading hoppers for automatic feed systems—also solve the spiky problem of resistor storage. The resistors\* are housed in packs of 50, 100, 500 and 2,500 for type BTS, and in packs of 100 and 500 for type BTB—all lined up with connecting wires dead straight, ready for immediate use—and taking up very little space in the process. The large and the small user would be well advised to take stock of these handy, space and time-saving packs.

50

100

500

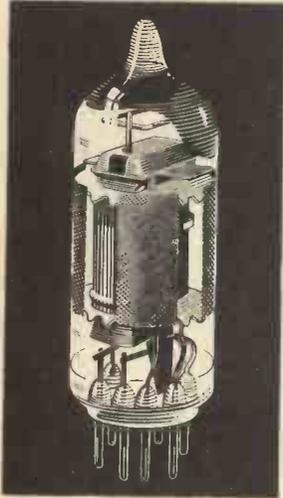

2500

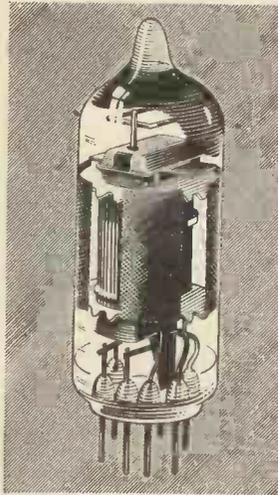

### No storage problems here!

This modest sized stack contains no fewer than one million separate resistors. A pack of 50 would occupy no more room than 10 cigarettes on the workbench. Whether you use resistors in tens, hundreds or thousands—see Dubilier about these new space-saving Autopacks today.

\*The resistors are available in two ratings: *BTS*  $\frac{1}{2}$  watt, *BTB* 1 watt at 70°C. Resistance range is 100 ohms to 10 megohms (*BTS*) and 390 ohms to 22 megohms (*BTB*). Each type is completely protected by a phenolic resin housing which is sealed at the ends.

# SPECIAL QUALITY VALVES

and special quality valves

*... there is a difference*

Mullard Special Quality valves can be supplied in accordance with various standards of reliability including, for instance, the full British Government CV4000 specification and the American MIL specifications. An economical choice of types is therefore available for equipment designers to satisfy particular standards of reliability which would include future NATO requirements.

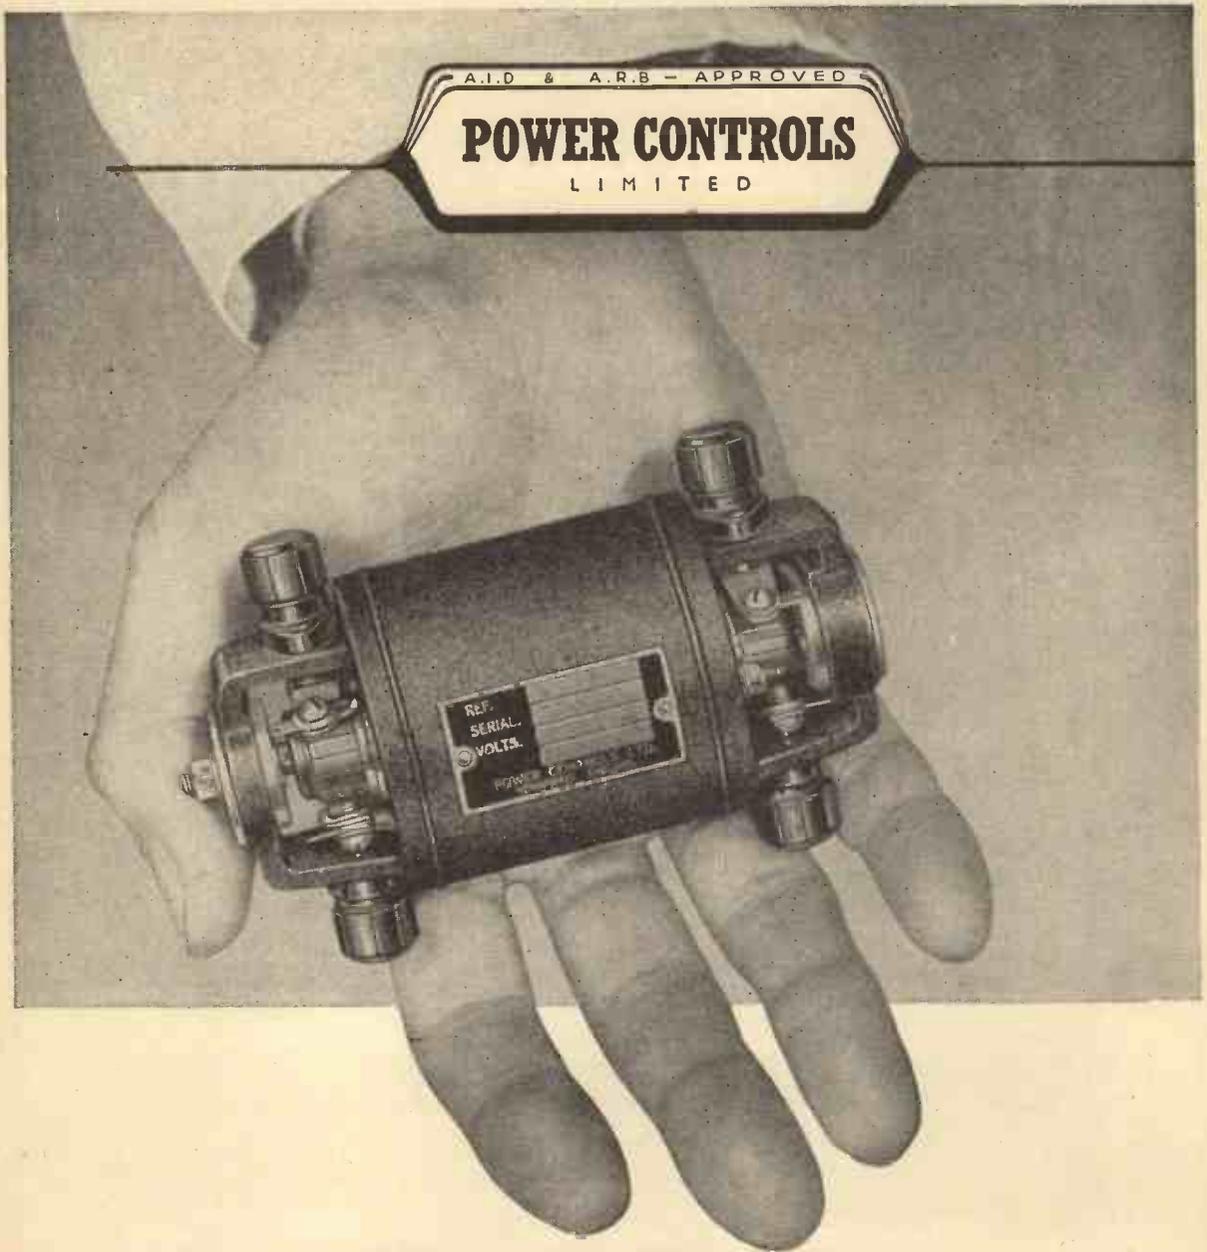

Mullard achievement in the production of Special Quality valves to defined standards is indicated by the fact that Government establishments have already been supplied with many hundreds of thousands of Mullard valves to the rigorous and complicated full CV4000 specification.

Details of the range of Mullard Special Quality valves for military and industrial applications are available from the address below.

Assistance in selecting the most suitable types for particular applications may also be obtained from the Technical Advisory Service at the same address.

MULLARD LIMITED • MULLARD HOUSE • TORRINGTON PLACE • LONDON • W.C.1

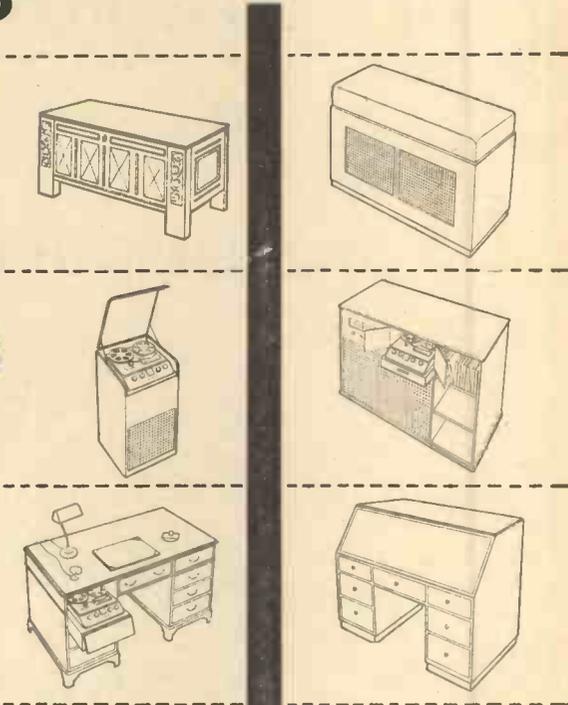

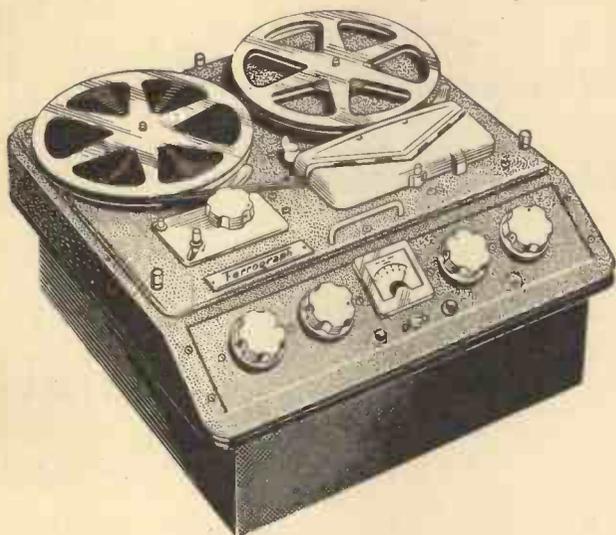

# Rotary Transformers

Power Controls Ltd., Exning Road, Newmarket, Suffolk  
 Telephone: Newmarket 3181. Telegrams: Powercon, Newmarket

Have you a transformer problem? If so, we can help you. We can undertake to develop and manufacture rotary transformers to your specification. The illustration shows a typical transformer which we are manufacturing for a specific requirement. Made for 6, 12 or 24 volts D.C. input, it can supply a continuous D.C. output of 350 volts at 30 mA, or an intermittent output of 310 volts at 60 mA. The no-load current consumption is 2.2 amps. at 11.5 volts and the ripple voltage is less than 6 volts r.m.s. on 60 mA. load. The size is only 4-9/16" long by 2-21/32" across the brush terminals.

# Six cabinet ideas for the Ferrograph "66"

Portability in a Tape Recorder isn't always an advantage. On the contrary, it can prove a costly handicap if valuable—and often irreplaceable—recording opportunities are lost because the instrument is not set up for immediate use. Hence the rapidly growing popularity of this new Ferrograph unit designed for use with an external loud speaker system.

When the Ferrograph 66 is given a worthy home in a piece of furniture to match its surroundings it becomes the last word in home entertainment. For with it can be permanently associated an F.M. Tuner and a Gramophone Turntable. This arrangement not only permits tape recordings of the highest quality to be made from radio, disc or microphone at the turn of a switch, but the owner can use the high fidelity amplifier incorporated in the base of the Ferrograph with the F.M. Tuner as a superb radio receiver or with the Turntable as a luxury gramophone. He has, in fact, acquired three instruments in one at a very substantial saving in space and cost.

All metal construction, with overlap to fit snugly on any flat surface with opening 15 $\frac{3}{8}$ " x 16 $\frac{1}{2}$ ". Incorporating all Ferrograph proved features of design, including synchronous capstan motor, playback tone controls, two speeds, 2 $\frac{1}{2}$  watts undistorted output, source selection switch, automatic motor cut-off. Finished in gold bronze with cream knobs and accessories.

**Up and over . . .** NEW YORK LONDON

The Monarch has established itself as a top favourite in the hard-to-win American market—radiogram manufacturers there have geared production to meet the increasing demand for the U.A.8. When the tight delivery schedule was threatened by the New York dock strike the problem was tackled in the grand manner—a manner worthy of the Monarch—we made air transport history!

Constellations were chartered and loaded exclusively with Monarchs, these dollar-earners flew the Atlantic TONS AT A TIME AND our American friends shared the cost.

*Monarchs by air . . .  
Monarchs by the ton!*

**America couldn't wait for the**  
**Monarch UA8**

**NOTE THESE STAR POINTS:**

- ★ Plays ten 12", 10" or 7" records at 78, 45 or 33 r.p.m. and the new 16 r.p.m. records
- ★ Intermixes ten 7", 10" and 12" records of the same speed
- ★ Manual play position for playing single records
- ★ High-fidelity crystal pickup with dual sapphire styli
- ★ Exquisitely styled—choice of two beautiful duo-tone finishes.

**BIRMINGHAM SOUND REPRODUCERS LTD., MONARCH WORKS, OLD HILL, STAFFS.**

**Question** "Why don't dealers stock and recommend our Amplifiers and Tuners, etc?"

**Answer** "Because they cannot afford to as we give their discount to YOU (the public.)"

This direct trading explains why our products, though in the top class, are so much cheaper than our competitors'.

*What we are and what we do.*

Firstly we are quite large manufacturers of Audio Amplifiers, Radio Feeder Units, Tape Recorders, Portable Record Players, Speaker and Amplifier Cabinets and custom built Complete High Fidelity Radio and Record Reproducers.

Secondly we are Retailers of Gramophone Units, Autochangers, Speakers, Tape Recorders, etc., etc.

We recommend only that which we know to be of good performance and of sound construction. We are not in the group of traders who sell job lines at apparently low prices because they are obsolete or faulty. On the other hand our finances are such that we do not have to sell you an expensive article if we know that a less expensive unit will do your job perfectly.

If any reader should have his mind set on a high-priced amplifier of

another make and would like to save money if possible, we should like to make the following clear-cut offer: If he buys one of our "Symphony" Amplifiers or Tuners and is not entirely satisfied with it he may return it for full credit against any other amplifier or tuner on the market. It should be emphasised at this stage that we can supply any Amplifier, Radio Tuner, etc., advertised.

Our chief Engineer, who is operating a Technical Guidance Service, is available daily including Saturdays from 10 a.m. to 6 p.m. or will deal with enquiries by return of post.

Our new illustrated Catalogue and supplement will be a great boon to those desiring quality equipment for modest expenditure. Send two 2½d. stamps for your copy now. It may well save you pounds! All our equipment is on demonstration at our showroom in conjunction with a variety of Pickups, Speakers, etc. If you can possibly call we shall be pleased to see and help you. H.P. facilities available.

*It is essential to mention "Wireless World" when requesting Catalogue or when ordering.*

**The New No. 1 "SYMPHONY" AMPLIFIER MARK III** is a 3-channel 5-watt Gram/Radio Amplifier with astonishingly flexible tone control. You can lift the treble, the bass, or—and here is the unique feature—the middle frequencies to suit your own ear characteristics and the record or radio programme being heard. It is thus possible to arrange frequency-response of the amplifier to a curve equal and opposite to the resultant curve of the other items in the chain so what finally registers in the brain is as per original. This flexibility of control is even more important than the nominal linear response of the amplifier, as the pickup speaker, etc., are not linear. Independent Scratch-Cut is also fitted and special negative feedback circuit employed. The Amplifier can accommodate a wide variety of records from old 78s to new L.P.s, and there is full provision for Radio Tuner, Tape take-off and Playback. It is available to match 2/3 or 15 ohms speakers. Price 12 gns. (carriage 7/6). Fitted in portable Steel Cabinet, 2 gns. extra.

**The New No. 2 "SYMPHONY" AMPLIFIER MARK III**, as No. 1

but with 10-watt Push-Pull triode output and triodes throughout. Woden mains and output transformers and choke. Output tapped 3, 7.5 and 15 ohms. Provision for Tuner and Tape. Competes with the most expensive amplifiers on the market yet costs only 16 gns. (carriage 7/6). Fitted in portable Steel Cabinet 2 gns. extra.

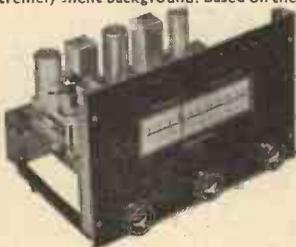

**"SYMPHONY" AMPLIFIERS WITH REMOTE CONTROL**

Remote Control Panel

Both the above model Amplifiers are available with all controls on a separate Control Panel with up to 4ft. flexible cable which simply plugs into the amplifier. Enables the Amplifier proper to be sat in the bottom of a cabinet whilst the controls are mounted conveniently higher up. Extra cost 2 gns.

**No. 1 "SYMPHONY" F.M. TUNER.** High grade Instrument with extremely silent background. Based on the latest type of permeability-tuned Coil Assembly of advanced design housed in anti-radiation shroud giving extreme sensitivity and high music/noise ratio Suitable for amplifiers in the highest fidelity class. £15/8/-.

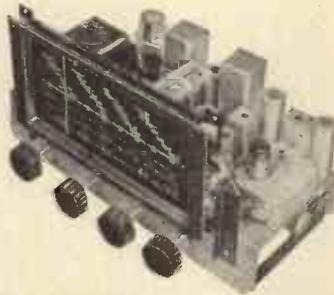

Power Pack £3/7/6. Magic eye £1 extra if required.

**N.R.S. EMPRESS FM/VHF TUNER/ADAPTOR** Fine little job. Will plug into any radio and add F.M. £13/15/-. Magic eye assembly £1 extra if required. Ditto mounted in beautiful dark walnut cabinet complete with magic eye 17 gns. Carriage 7/6.

**No. 2 "SYMPHONY" AM/FM TUNER.**

Combining all the specifications of our Long, Medium and Short wave Superhet AM Tuner and our No. 1 FM Tuner. Separate Coil Assemblies and 1Fs Fully self-powered on one chassis 26 gns.

**"SYMPHONY" AM/FM RADIOGRAM CHASSIS Mk II** Very high grade Radiogram Chassis incorporating the Long, Medium, Short and VHF Bands; nine valves including new fan-type, built-in Magic Eye; push-pull output for high quality reproduction. Input sensitivity adequate for Studio. Professional quality (P) and transcription (PX) pickup cartridges. New type ultra-sensitive, anti-radiation, no-drift F.M. front-end; built-in ferrite rod A.M. aerial; plug-in F.M. indoor dipole aerial supplied free. Negative feedback; 15 ohms tapped 3 ohms output, entirely new-look German-type dial and knobs in gold, brown and cream, measuring 15in. x 6in. horizontally. Depth front to back 8in. An extremely attractive up-to-the-minute instrument. Price complete with 10in. Goodmans Loudspeaker. 26 gns. plus carriage 10/-. Alternatively, allowance made on standard Speaker against a more expensive, high fidelity speaker. Delivery from stock.

**RECOMMENDED GRAMPHONE UNITS**

All current Collaro Units in stock for immediate delivery

**NEW MODEL GARRARD RC88 AUTOCHANGER**

£15/11/4. RC98 £17/10/3. Prices less head. Variety of pickup cartridges available in Garrard shell to fit RC88 and RC98. Leaflets on Collaro and Garrard Gram. Units on request.

**LENCO GL50.** 4-speed continuously variable from above 78 r.p.m. to below 16 r.p.m. Special Autostop. Price with Studio "O" or "P" head or Gpldring variable reluctance head, £21/17/10.

**LENCO GL55,** as above but without pickup and autostop but fitted with Special Device for Groove Location and knob which completely disengages drive-wheel. Suitable for use with any pickup, especially transcription types and B.J. Arm. Price £17/10/4. Immediate delivery guaranteed.

**GOODMANS "SHERWOOD" (VISCOUNT) ENCLOSURES** Walnut or mahogany, complete with Acoustical Resistance Unit, 19 gns. or less A.R.U., 16½ gns. **MIDAX/TREBAX CABINET.** To match "Sherwood" (Viscount) 8 gns.

**"SYMPHONY" BASS REFLEX CABINET KITS.** 30in. high, consist of fully-cut ¾in. thick, heavy, inert, non-resonant, patent acoustic board, deflector plate, felt, all screws, etc., and full instructions. Bin. speaker model, 85/-; 10in. speaker model, 97/6; 12in. speaker model, £5/7/6. Carriage 7/5. Ready built, 15/- extra. As above but fully finished in figured walnut veneer with beautiful moulding and speaker grille 10in. £11 12in. £11/10/-. Other veneers to order.

**NORTHERN RADIO SERVICES**

DEPT. WW., 11, KINGS COLLEGE ROAD, ADELAIDE ROAD, LONDON, N.W.3.

Phone: PR1/mrose 3314

Tube: Swiss Cottage and Chalk Farm. Buses: 9, 13, 31, 113 and 187

**CONSOLE AMPLIFIER CABINETS.** 33in. high, lift-up lid with piano hinge, take Tape Deck, Gram Unit or Autochanger, Amplifier, Pre-Amplifier, and Radio Feeder Unit, finished medium walnut veneer. De luxe version, price 12 gns. Oak or mahogany veneers and special finishes to order. Carriage according to area. We will quote by return.

**NORDYK CABINETS.** Speaker Enclosure £5/17/6. Table Model Amplifier/Gram Unit Cabinet £5/19/6. Table Model Tape Recorder, Tape Amplifier or Radio Tuner Cabinet £5/19/6. Record Storage Cabinet holding 150 records £4/17/6. All above cabinets measure (internally) 19in. wide x 13in. high x 13in. deep and finished in polished walnut, thus enabling a complete installation to be built up unit by unit in matching style cabinets and added to as required. We can supply Amplifiers, Tuners, Gram units, Tape Decks and speakers mounted in these cabinets. Examples on demonstration.

**TAPE RECORDER DEPT.**

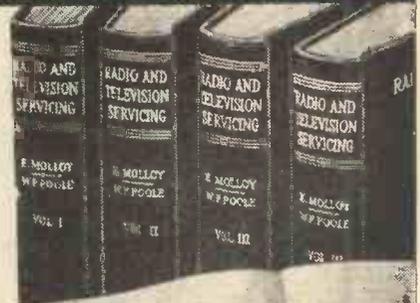

We are specialists in the supply of tape gear for use in conjunction with High Fidelity Equipment. We are familiar with all worth-while Tape Recorders and Decks on the market and are in a unique position to advise on Tape Recorders, Tape Decks, Tape Amplifiers and Tape Pre-Amplifiers and give unbiased opinions and demonstrations. All those intending buying a Tape Recorder or adding Tape facilities to their present systems are advised to consult us before spending money, as we might well be able to save you money and dissatisfaction. Call for a demonstration, or write.

**THE "SYMPHONY" DELUXE TAPE RECORDER.**

2-speed, twin-track, microphone, radio and gramophone inputs. Facilities for playback through high quality internal elliptical speaker or through external high fidelity speaker or through external high fidelity amplifier. Automatic head demagnetisation. Wide frequency range heads. Housed in handsome polished walnut cabinet. Fantastic value for money at 49 gns. or 9 monthly payments of 6 gns. Also available with built-in revolution counter for 52 gns. or 9 monthly payments of £6/13/-. Recommended microphones Acos £3/8/- or Lustraphone, 3 gns. Plus ear and pkg. £1. Full details in catalogue.

## A CONFIDENTIAL STAFF LOCATION SYSTEM!

**Verbal Orders Quickly and Quietly**

It's new and it's *unique*—the Multitone Staff Location System. There've been loudspeakers, bells, lights and even buzzers, but not a system in which confidential messages can be delivered to individual members of a staff—whether numbered in tens or hundreds. However compact or scattered an organisation may be, this is going to be the biggest business time-saver yet. Originally developed in conjunction with St. Thomas' Hospital, this system is now far in advance of anything yet made and is sold at a highly competitive price!

**HOW IT WORKS.** A magnetic induction loop is laid round the building from the Coder/Oscillator unit. Anyone needed to be on call carries a receiver (only 5" long, 1" diameter and it only weighs 5 oz. with battery!). On being alerted by his call signal, which is received by him alone, he can hear a direct speech message without anyone else being disturbed.

**WHAT IT COSTS.** The average cost of an installation with 50 receivers would be under £1,500 including the cost of the loop. The receiver incorporates four transistors and is powered by a single cell. Since the quiescent current is less than 0.5 m.a. it will only cost a few shillings a year to run each receiver—considerably less than any other electronic system.

# multitone

## STAFF LOCATION SYSTEM

Here is an organisation which  
can solve 99%  
of YOUR  
**Radio Tube Problems.**

We have in stock over **2,000** types of Receiving, Transmitting and Special Purpose Tubes, covering most American and European types.

Amongst our customers are the Army, Navy, Air Force, Civil Airlines and Post Office Departments of most European countries, the Near and Far East, Commonwealth, etc.

Tubes can be supplied to C.V., JAN and MIL Specifications. Our organisation is A.R.B. approved.

Price and Stock Lists available on application. Your enquiries for Special Types welcomed.

Type  
TF 1064

## Signal Generator Type TF 1064 Transmitter and Receiver Output Test Set Type TF 1065

The TF 1064 and TF 1065 are complementary instruments. Together, they fulfil all the main testing requirements for mobile transmitter/receiver equipments. Each is completely self-contained and, being light and portable, they are particularly suitable for use in the field.

Signal Generator TF 1064 provides r.f. outputs—f.m. or a.m.—in the ranges 68 to 174 and 450 to 470 Mc/s, i.f. outputs at five spot frequencies, and also an a.f. output.

Test Set TF 1065 comprises an r.f. power meter and deviation indicator for use up to 500 Mc/s, a dual-impedance a.f. power meter, and a multi-range voltmeter.

Each instrument can be supplied separately.

# Don't spoil your ship!

In terms of cost the solder content of your products may be negligible. In terms of quality, dependability, *your* reputation, it is all-important. Why not act today? You've only to tell your buyer — "*Switch to Superspeed*" — and you can relax in the knowledge that all your risks are underwritten by the greatest name in soldering history.

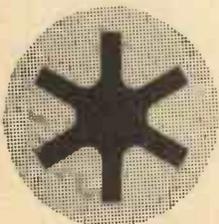

## ENTHOVEN

### *Superspeed*

incorporating Enthoven's unique 6-channel stellate core, is unchallenged as the most efficient cored solder wire for general assembly work on radio, television, electronic and telecommunication equipment. But remember, too, that there is an Enthoven solder product for every other engineering and manufacturing application. And

Enthoven *always* means the best! If you use solder, please write today for the new edition of our brochure "*Enthoven Solder Products*" — or consult us, quite freely, on your particular problems.

Whenever soldering is discussed, *ENTHOVEN* enters the argument. It's a name that represents 150 years' experience in non-ferrous metals, and an incomparable record in research and development.

# Delaron

*(by De La Rue)*

## does a double act for you

You already know DELARON as a laminated insulant of precisely known dielectric values and mechanical properties which fully meet all British Standard and Ministry specifications at every grade. It is used as a controller of electricity, from loudspeaker spiders to insulating washers.

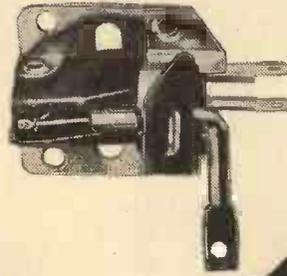

But do you know about the second half of the double act by DELARON laminates?

In its copper-clad form it is the basis of most of the printed circuits in radio, television, radar and electronic computers—the new, simpler and cheaper method of circuit manufacture.

You should use DELARON laminates.

For information, advice and service get in touch with Dept. D&F, Thomas De La Rue & Co Ltd 84-86 Regent Street, London, W1.

*This is the way to play it*

All the recorded sound—that's the way the 'Sonotone' equipped radiogramophone will play it! The revolutionary 'Sonotone' pick-up head—a superior, highly sensitive product—represents the first basic improvement in sound head technique for a decade. It is completely humidity and temperature proof, produces no magnetic hum and has a great many other technical advantages which are discussed fully in T.C.L. publication No. 102. Design Engineers are invited to ask for a copy and for any further technical information they may require.

for precise control of superior electronic equipment

— moulded track potentiometers by

**COMPACT**

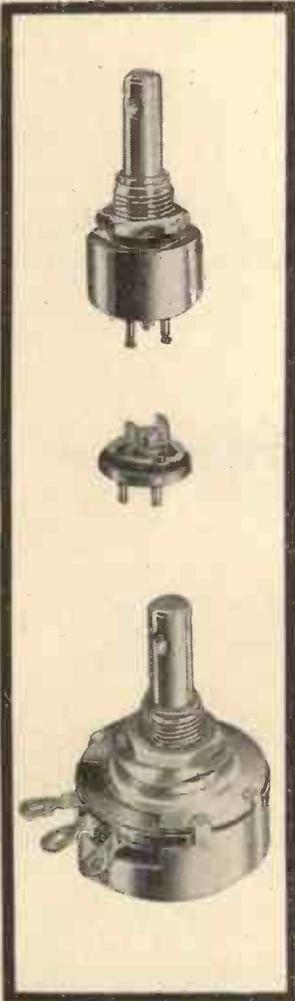

The physical confines and electrical parameters of modern electronic equipment makes unprecedented demands on the component manufacturer. His product must almost invariably be smaller than its predecessor and more efficient and durable. These potentiometers provide an outstanding example of what can be achieved to meet the present requirement.

**ACCURATE**

Moulded track potentiometers by Plessey possess a high standard of stability within a wide range of operational temperatures and can be stored for extended periods without deterioration. They can be manufactured to conform, within strictly specified limits, to a designed pattern of values at various positions on the track.

**DURABLE**

The outstanding reliability of these potentiometers is a tribute to the Plessey Research and Development engineers whose efforts to meet the stringent Services requirements and the critical demands of the Commercial market have resulted in products of superior design and function.

**Miniature Type M H 2**

A high quality potentiometer for commercial laboratory and Services application. Services Specification RCS122. The standard version is fitted with spindle and panel humidity seals.

**GENERAL SPECIFICATION**

Rating: ambient 70°C .....	¼ watt
Temperature Cat. ....	40/70°C
Humidity Class .....	H2
Minimum Resistance .....	50 ohms max.
Overall Diameter .....	.23/32 in.
Overall depth of control from mounting face, including tags .....	5/8 in.

**Sub Miniature Type G**

Type Approved to Certificate No. 974 Issue 1, Ref. TA1373, this pre-set, open-type control is of particular interest to industrial communication and Service equipment manufacturers.

**GENERAL SPECIFICATION**

Range Linear ±20% .....	1,000 ohms to 2 megohms
Rating: ambient 70°C .....	¼ watt total track rating
Minimum Resistance .....	50 ohms max.

**Spindle and Panel Sealed Type E H 2**

For military and para-military applications, this control is particularly resistant to conditions of extreme humidity.

Type Approved to Certificate No. 906, Issue 2, Ref. TA1230.

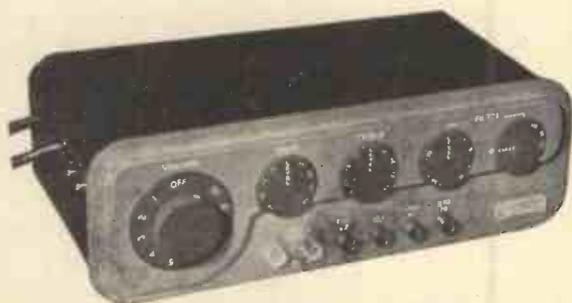

**GENERAL SPECIFICATION**

Rating: ambient 100°C .....	1 watt
Temperature Cat. ....	40/100°C
Voltage Limitation .....	500V
Humidity Class .....	H2
Minimum Resistance .....	50 ohms max.
Overall Diameter .....	1-5/32 in.
Overall depth of control from mounting face .....	21/32 in.

for the closest  
 approach to the  
 original sound

The criterion, as always, is that the reproduced sound shall be the closest approach to the original—that the enjoyment and appreciation of music may be unimpeded. This is reflected throughout the design of the QUAD II. It is reflected, too, in the straight-forward and logical system of control, achieved without the sacrifice of a single refinement or adjustment capable of contributing to the final objective.

# LEARN-AS-YOU-BUILD

## PRACTICAL RADIO COURSE

**LEARN  
RADIO**

as you build your own  
receiver and testing  
instruments

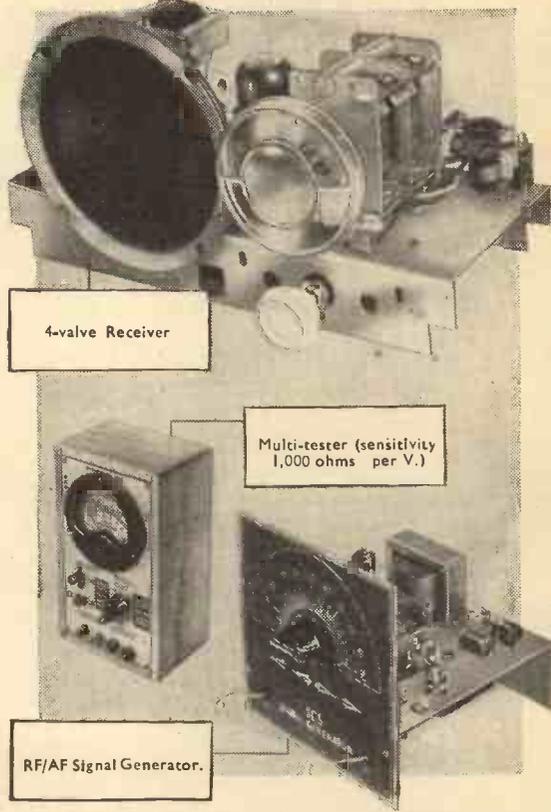

This new addition to the unrivalled I.C.S. range of technical training courses offers you a double opportunity. Here is your chance to gain a sound knowledge of basic Radio and Electronics theory—under expert tuition—whilst building your own 4-valve radio receiver, signal generator and high-quality multi-tester.

**WHAT YOU GAIN** At the end of the course you will have gained not only three pieces of equipment of permanent practical usefulness: you will have accumulated a personal "library" of reference material—I.C.S. Instruction Manuals, expertly edited and presented—which you can keep by you always for guidance. Furthermore, you will have gained immeasurably in knowledge, through a balanced combination of study and practical work—with the specialised help of the world's largest correspondence school.

**TRAINING TO SUIT YOUR NEEDS** Whether you plan to have a business of your own, to become a service engineer, to pursue a career in the radio industry, or to take up radio as a serious hobby—this course provides the ideal way of obtaining a firm foundation of essential knowledge. If you are an intending examination candidate, I.C.S. training offers you the most thorough preparation you could have.

There are I.C.S. courses to meet your needs at every stage of your career.

*Other courses include: RADIO ENGINEERING, RADIO SERVICING AND SALES, BASIC RADIO, RADAR ENGINEERING, BASIC RADAR, F.M. ENGINEERING, TELEVISION ENGINEERING, TELEVISION SERVICING, BASIC TELEVISION, ELECTRONIC ENGINEERING, INDUSTRIAL ELECTRONICS, BASIC ELECTRONICS, and guaranteed coaching for professional examinations.*

All the equipment shown here is sent to the student as part of the course and the cost is included in the fee.

# HIGH FIDELITY STARTS HERE

## MODEL HF25

The amplifier has been critically designed to give living expression to recent improvements in recording and broadcasting techniques. Clear life-like reproduction is ensured by the low harmonic distortion and by the infinite damping factor. 25 watts undistorted output is ample for any home system.

## MODEL HF25A

The pre-amplifier has phono-jack inputs for radio, microphone, pick-up, tape recording and 4 equalisation positions for U.S. LP, EUR. LP (R.I.A.A.), U.S. 78 and EUR. 78. Amplifier can be controlled from distances of 20 ft. without loss of performance. In walnut and sycamore veneered cabinet or chassis form.

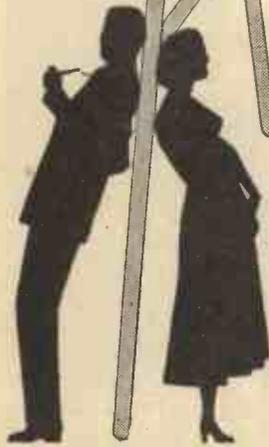

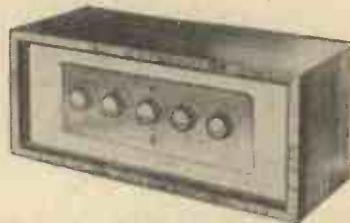

The highest standard of performance and reliability is ensured by neat chassis layout and superlative workmanship.

Very wide frequency range, 2-160,000 c.p.s. 26 db of negative feedback over the entire audible range.

A range of plug-in pick-up compensators allows quick and easy matching of any type of pick-up.

## PACKAGED HI-FI

These small matching Pye plug-in units are bringing high fidelity to the ordinary listener at a price he can afford. They're simple to operate, install in minutes and blend at once with modern furnishings.

# valve range for equipment

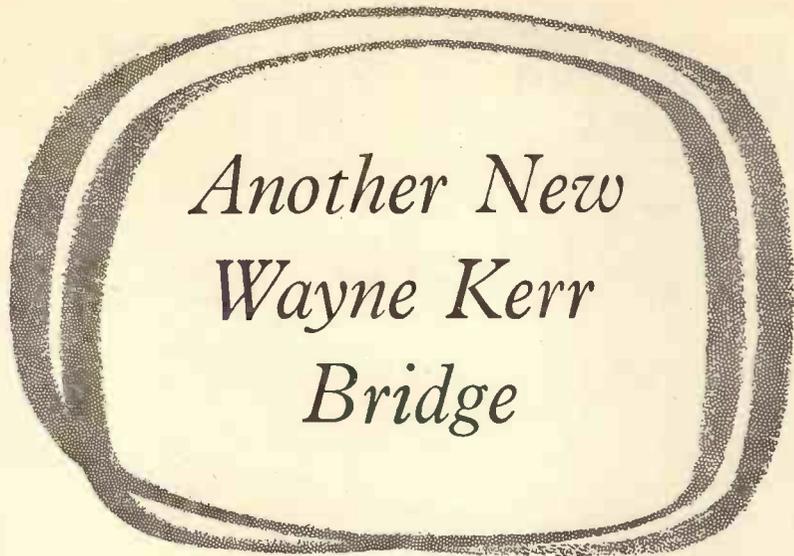

This extensive range of work-proven transmitting valves fills the wide and diverse needs of communications equipment manufacturers. The performance of this valve group extends to frequencies as high as 3,000 Mc/s for 0.5W and to powers up to 6.9kW at lower frequencies.

The Mullard technical advisory service is always at the disposal of manufacturers to answer questions relating to the applications and suitabilities of these valves.

## Transmitting Valve Data

◀ The chart on the left has been compiled to acquaint designers with the range and scope of Mullard transmitting valves available for communication purposes, and to facilitate the selection of suitable types for given applications. The power quoted is the maximum valve output available with Class C telegraphy operation up to the frequency indicated by the junction of the solid and broken lines. The extent to which a valve may be used at higher frequencies with reduced ratings is given by the broken line. More detailed information may be obtained from a leaflet on this range of valves and from individual data sheets—all of which are available on request at the address below.

**THE WAYNE KERR COMPONENT BRIDGE  
FOR LABORATORY OR WORKSHOP**

**B.521**

**T**HE moderately priced B.521 is the second of a range of new instruments of very advanced design resulting from concentrated development of the transformer ratio-arm technique.

Operating at mains frequency, the B.521 has an effective ratio of  $10^{12}:1$  and is intended for the rapid and direct measurement of virtually all components and networks likely to be encountered in electronic apparatus, whether in the laboratory or the service workshop.

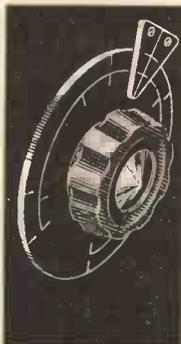

The usual three-terminal facility associated with bridges of this design permits the measurement of complex impedances in situ, that is to say, an impedance between two terminals can be determined regardless of the presence of

other impedances between either or both terminals and a third point. A simple re-arrangement of the test leads covers four-terminal measurements when required.

The low impedance ranges together with the in situ facility make it possible to measure switch contact resistance, dry joints, earth bonding efficiency, high value electrolytics, etc.

**SPECIFICATION**

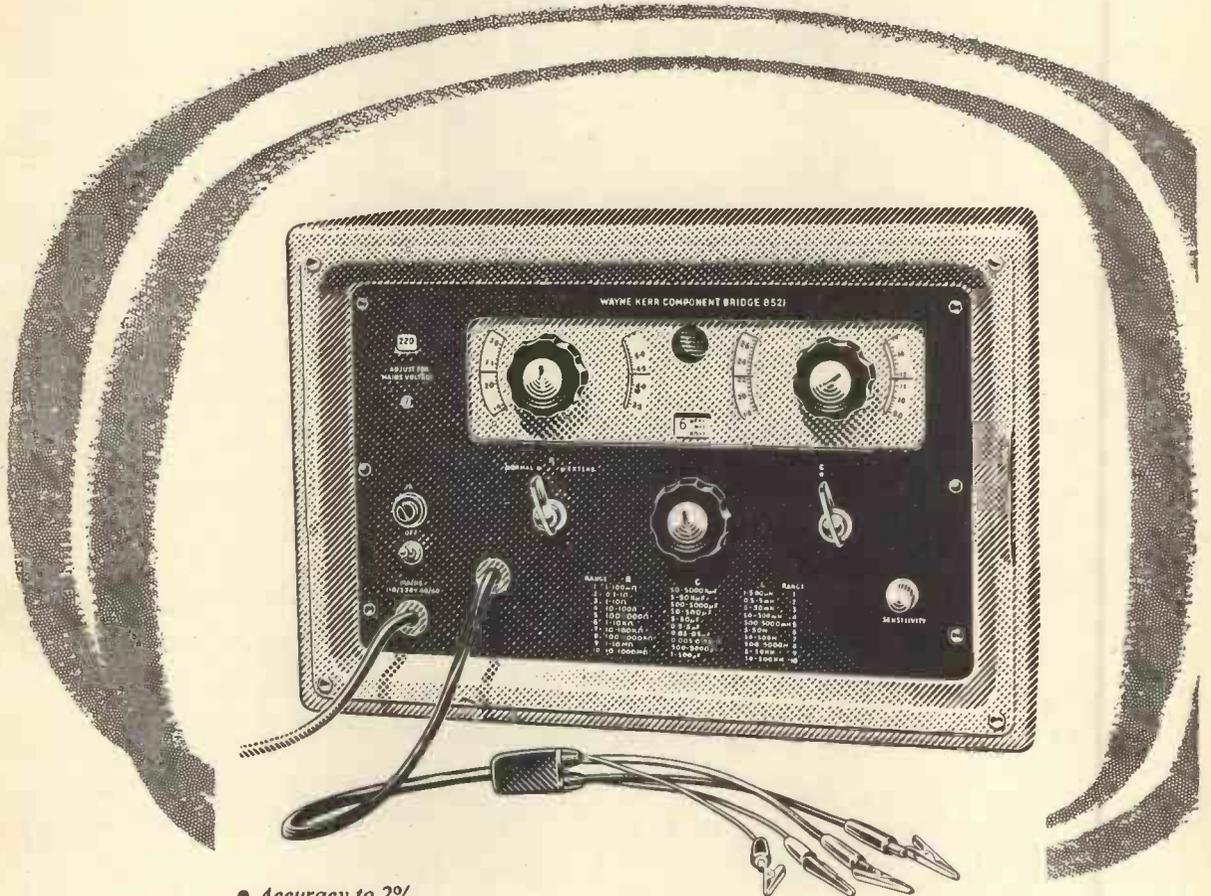

Capacitance : 1 pF to 5F · Inductance : 1 μH to 0.5 MH.

# You need a PHILIPS dual-cone loudspeaker

(Made in Holland)

**PHILIPS ELECTRICAL LTD**

E. L. A. and Musical Equipment Dept. • Century House • Shaftesbury Avenue • London • WC2

The special dual-cone construction of Philips high fidelity loudspeakers ensures a smooth response over the entire audible range, with efficiency and transient response of a high order. The spatial distribution of acoustic energy is excellent — even at the highest frequencies.

Both cones are driven by the same coil and magnet, resulting in similar sensitivities for high and low frequencies. The air gap has been made long and the coil moves in a homogeneous magnetic field at all times; a copper ring is incorporated in the air gap to keep the voice coil impedance constant over the whole frequency range.

Available in two sizes: 8" and 12" price 6½ gns. (*tax paid*) and 10 gns. respectively. There is also a single cone version in the same sizes: price £6.2.6 (*tax paid*) and £10.0.0 respectively.

*N.B. These speakers may be used on their own or with another suitable speaker, using a crossover network.*

\*Your high fidelity dealer can obtain these loudspeakers for you.

(PR633)

# Teleradio\* 5A

**SIMPLE EFFICIENT**

Made by AWA, Australia's largest manufacturer of telecommunications equipment of all types. AWA are approved contractors to the Crown Agents.

The 5A is in use by Governments and private networks in many places. Please write for details.

## SPEECH COMMUNICATION

The AWA Teleradio 5A is a low-power H.F. transmitter-receiver for distances up to several hundred miles over land or sea.

One to four channels between 2 and 9 mc/s may be pre-tuned in the crystal-controlled transmitter. The receiver also tunes from 550 to 1540 kc/s.

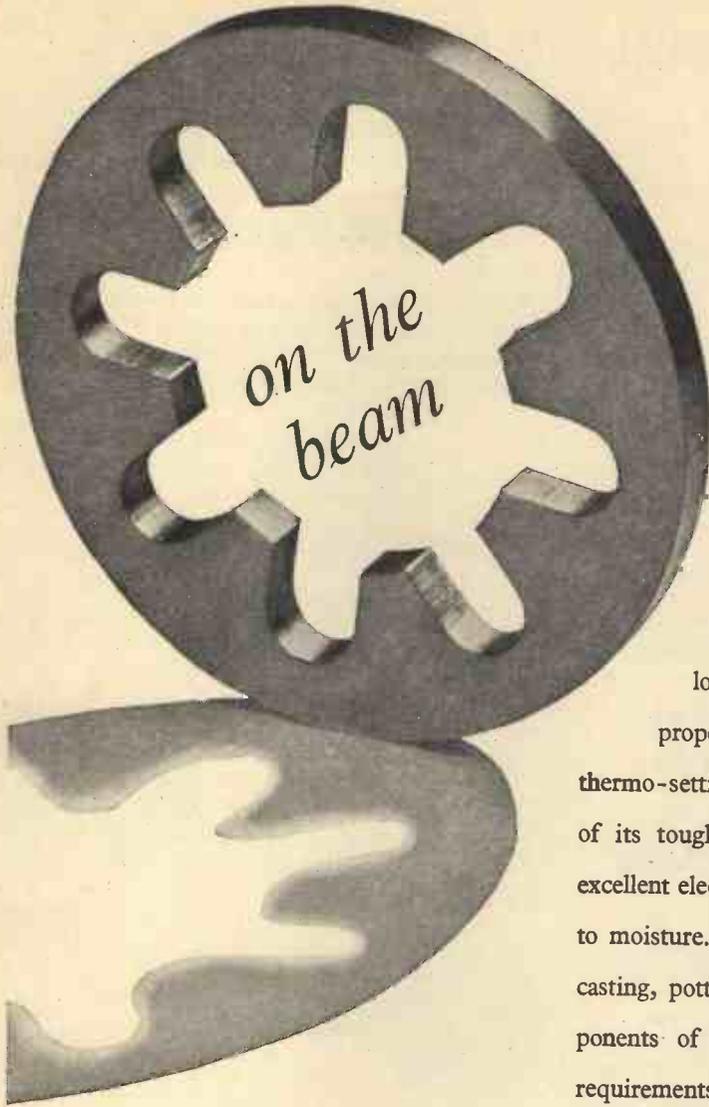

The standard model operates from 12-volt battery. An A.C. model is also available.

\* Regd. Trade Mark 34699 (Aust.)

**AMALGAMATED WIRELESS (AUSTRALASIA) LIMITED**

47 YORK STREET, SYDNEY, N.S.W.

99 ALDWYCH, LONDON

Cores for Cathode ray beam deflection made by Salford Electrical Instruments Ltd. are formed by powder metallurgy incorporating 'Araldite' as a constituent. Construction of these cores calls for durability, low dielectric losses and good machining properties, whilst the resin used must be thermo-setting. 'Araldite' was chosen because of its toughness, remarkable adhesion to metals, excellent electrical properties, stability and resistance to moisture. This outstanding material is the ideal casting, potting or sealing resin for electrical components of any size, and complies with service requirements relating to sealing of components.

*'Araldite' epoxy resins have a remarkable range of characteristics and uses:*

- They are used
- ★ for bonding metals, porcelain, glass, etc.
  - ★ for casting high grade solid insulation.
  - ★ for impregnating, potting or sealing electrical windings and components.
  - ★ for producing glass fibre laminates.
  - ★ for producing patterns, models, jigs and tools.
  - ★ as fillers for sheet metal work.
  - ★ as protective coatings for metal, wood and ceramic surfaces.

## *the* LABGEAR BI-SQUARE *outdoor*

The most remarkable advance in aerial design. Only half the size of ordinary Band 1 arrays, the BI-SQUARE is light in weight, easy to erect and gives 11-12dB gain. Factory pre-assembled and supplied complete with 12 ft. mast and double chimney lashings.

Model 110 (head only) £6.10.0      Model 110/X3 (Complete) £10.17.6

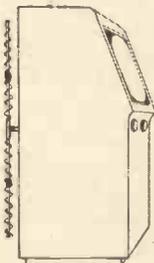

### LOFT MOUNTING VERSION

The first long range loft mounting aerial, this version of the BI-SQUARE eliminates installation problems and under average conditions provides first class Band 1 reception up to 40/50 miles.

Model 110/L £6.10.0

## *First of its kind* The Spiral

Another new Labgear development! Designed to meet the demand for a neat, unobtrusive aerial for Bands I and III, the Spiral has a range of approximately 10 miles and is supplied ready to plug into the set.

Send now for Labgear Wall Chart giving complete details of all aerials for B.B.C., I.T.A. and V.H.F./F.M.

YOU'RE ON THE RIGHT TRACK with

# EGEN components

In design, dependability, accuracy and freedom from wear these Egen components are quite outstanding. They are backed by unrivalled experience of the requirements of television and electronic equipment manufacturers.

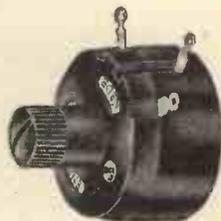

### DUAL POTENTIOMETERS

with concentric operating spindles. Incorporating many outstanding design features, including multiple contact rotors and thorough screening between sections. Control spindles can be supplied to suit customers' requirements. Type 136 less switch. Type 137 with SPST switch. Type 138 with DPST switch.

### PRE-SET POTENTIOMETERS

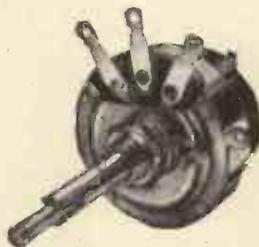

Completely enclosed in high-grade phenolic mouldings. Solder tags heavily silver-plated for quick soldering. Fully insulated spindles with integral control knobs. Tapped for 2-hole 6 B.A. fixing on 1/2" centres. Type 126, wire-wound. Type 127, carbon.

### MINIATURE POTENTIOMETERS

1/2" diameter: utmost reliability within a very small compass. Positively located soldering tags, silver-plated for easy soldering. All steel parts rustproof. Standard values available, from 5000 ohms to 2 megohms. Type 115 less switch, Type 105 with specially designed 2-pole Q.M.B. switch.

### CONCENTRIC SWITCH POTENTIOMETERS

Thorough screening between switch and potentiometer. Concentric operating spindles give independent operation of switch or potentiometer with 'one-control' simplicity. Quick make-and-break action mains switch. Knob location to suit specified requirements. Type 154 with SPST switch, Type 155 with DPST switch.

The wide range of EGEN controls includes also: Standard Carbon Potentiometers Type 102, Pre-set Resistors, Inductance Coil Assemblies, Sub-Miniature Potentiometers, (for use in miniature electronic apparatus) and TV Aerial Plug and Socket.

## Acos, diamond and disc

The business point of a stylus  
inescapably points to diamond, provided  
it can be shaped accurately and economically.

After much hard work on this hard problem,  
we are now introducing a diamond stylus  
for all current Acos pick-ups and cartridges.

Improved techniques of shaping and polishing,  
and individual testing at 500 times magnification,  
give this diamond stylus a life twenty times that of sapphire.

It costs less in the long run.

It maintains optimum conditions of  
reproduction throughout its useful life.

It reduces record wear all the time. Altogether,  
*the Acos diamond stylus is a disc's best friend.*

# OHMS? RATING? TOLERANCE?

..... it's easy with **LAB**  
Continuous Storage Units

Thousands of LAB Continuous Storage Units are daily solving the problem of control and storage of the great range of resistors. Compact, and capable of storing up to 720 separate resistors, LABpak make selection positive, simple and speedy. Now that Ceramicaps, Histabs and Wirewound resistors have been added to the carded range, the usefulness of LABpak storage units is enhanced.

FREE with any purchase of the LABpak range, these units are the complete answer to the storage problems of small production units, laboratories, etc.

**MAKE UP YOUR ORDER TODAY**  
**— DELIVERY EX-STOCK**

All LABpak resistors are carded in ohmic value, rating and tolerance, colour indexed and tabbed for easy selection.

The LAB Continuous Storage Units are available from your normal source of supply, but more detailed information and literature can be obtained from:

# Thorn pillar lampholders for the illumination of instrument panels . . .

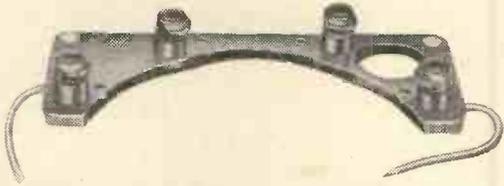

Originally designed for aircraft control panels (and widely used throughout the British aircraft industry) these Thorn pillar and bridge piece lampholders are of universal application for industrial use wherever instrument panels require illumination. A full range of these components is available.

Single pillar lampholder supplied completely prewired with 3 ft. leads ready for immediate installation.  
Reference No. 80/10/0155

# . . . and bridge pieces

The special advantage of Thorn pillar and bridge pieces is their notable economy of panel space and the clear illumination they provide. Wiring arrangements are extremely simple and bridge pieces can be quickly added to existing control panels without any difficulty.

Bridge pieces are supplied with double entry leads for emergency stand-by lighting if required.

The present range of bridge lighting units is as follows:—

TYPE A	Mk. G4B Gyro Compass	4 lamps
TYPE B	Artificial Horizon	2 lamps
TYPE C	Large S.A.E. Case (4BA screws)	2 lamps
TYPE D	Small S.A.E. Case (4BA screws)	2 lamps
TYPE E	Horizontally mounted Double Desynn	2 lamps
TYPE F	Large S.A.E. Case (2BA screws)	2 lamps
TYPE G	Small S.A.E. Case (2 BA screws)	2 lamps
TYPE H	Large Air Ministry Case	2 lamps
TYPE J	Instruments with 3" P.C.D. fixing	2 lamps
TYPE K	Double Desynn mounted vertically	2 lamps

**SPACE SAVING:**  
All these components are of minimum size because they are designed round the unique Atlas Midget lamp only 0.575" long and 0.249" in diameter.

Three types of Thorn midget panel bulbs are available.  
28 volts 0.04 amps  
12 volts 0.1 amps  
6 volts 0.1 amps

# Reflectograph

## RR series 102

### METAL CASED RECORDER

Incorporating the "BRICK" type construction of Record/Playback units. This instrument permits continuous monitoring from the tape during recording, the Playback Amplifier delivering an output power of up to 3 watts, either to the built-in speaker, or to an external (15 ohms) output socket, while a 600 ohms balanced output of 1 mW is also available.

A "Breakin" switch is provided, so that the incoming signal can be sampled and directly compared with the outgoing recorded signal. The recorder measures 21½ in. x 15½ in. x 13 in. deep and weighs 56 lbs. It can be supplied fully tropicalised if so required.

The RR. Series 102 supersedes the Reflectograph Series P Recorders.

For specification and full information on the Reflectograph range please write to the manufacturers

# Connoisseur 3 SPEED MOTOR

The turntable with a 4% variation on all three speeds.

The Connoisseur motor is made for the perfectionist. It is one of the finest turntables in the world.

The speed change is arranged mechanically and gives a 4 per cent variation on all speeds. A synchronous motor, which is virtually vibrationless with low noise level and hum induction, maintains a constant speed at all settings. There is no braking action to obtain speed change.

The 12in. turntable is lathe turned in non-ferrous metal. The main spindle, which is precision ground and lapped to mirror finish, runs in phosphor bronze bearings.

A sound, precision engineering job, the Connoisseur motor provides the foundation for perfect reproduction.

Price £20, plus P. Tax £8/11/-.

Matching Connoisseur Pick-up Mark II with a frequency range from 20-20,000 cycles:

Pick-up complete with 1 head fitted with Diamond armature £8/19/- plus P. Tax £3/16/6.

# PHILIPS

## Stepless Variable Transformers

(Products of N.V. Philips,  
Eindhoven, Holland)

There are many applications for these handy transformers! Both bench and panel mounted types are available for use in the laboratory or for incorporation as standard components in manufacturers' equipment.

- Continuously variable from zero up to 20% above input voltage
- Toroidally wound
- Extremely low "no load" losses
- Can be mechanically coupled for series, parallel or 3-phase (star connected) operation
- Generously rated
- Fully tropicalized
- Individual units rated up to 2 kVA

*Write or telephone for further details*

## THE DYNATRON VHF TUNER UNIT

PROVIDES TRUE HIGH FIDELITY LISTENING

- 7/8 VALVE TUNER
- PRE-TUNED 4 FIXED FREQUENCIES
- AUTOMATIC FREQUENCY CORRECTOR
- PRE-TUNED 4 FIXED FREQUENCIES

The first version of this tuner appeared over 2 years ago and was an immediate success. It became the first British pre-tuned tuner and is now generally recognised amongst radio engineers as the most advanced unit available today. It is used by the B.B.C. and relay organisations as both a main and monitor receiver.

Constant stability has been obtained by a perfected system of automatic frequency correction and four correctly tuned channels are provided by rotary switch. Maximum freedom from noise and distortion is secured by the use of a Foster-Seeley detector with two limiter circuits, the now accepted method of combating multi-path reception distortion. The compact chassis can be operated from each end by means of a single shaft with flexible couplers giving, if necessary, "off centre" operation and permitting simple installation in most radiogramophones. It is the ideal instrument to complete a high fidelity audio installation.

Two models, one with a low voltage output .2 of a volt and the other with an extra valve as LF store giving 2 volts output, are offered. A separate power unit is also available.

Write for full details of the latest Dynatron FM Tuner and learn what true high fidelity listening means.

### LOWTHER T.P.I CORNER REPRODUCER

This is a very compact speaker and preserves to an amazing degree true relationship between fundamental and harmonics whether it be low or high frequency. Speech is smooth, forward, and gives a feeling of the presence of the artist. Strings, brass and percussion alike have a clarity comparable to a concert hall performance.

**Price £96 . 0 . 0**

With this Loudspeaker we also demonstrate the Lowther LL16 Ultra Linear Amplifier together with the Master Control Unit Mark II. The feature of this latter is that it can reproduce direct from a tape head, R.I.C.C. network being incorporated in the unit. Price of this with amplifier £64. For a Gram Unit to go with this equipment we can strongly recommend the Connoisseur motor and Connoisseur Mark II pickup with a diamond stylus, total price £40 12 10. We also carry a complete stock of the Lowther Speaker Units, the P/M/4 having a gap flux of 25,000 gauss, £48; the P/M/2 with a flux of 19,500 gauss, £35; and the P/M/6 with a flux of 17,500 gauss at £18. Each of these units can be used in a compound horn which is priced at £30.

We shall be pleased to quote you for easy payments on this equipment and also to take your existing equipment as part exchange. We also have a large selection of cabinets and our workshops are fully equipped to build these units into complete installations.

# Solderless terminals speed assembly eliminate rejects

The AMP precision method of wire termination reduces production costs and provides connections of the highest electrical and mechanical efficiency. The use of AMP precision crimping tools and automatic machines achieves exceptionally high rates of output, a uniformly high standard of quality and elimination of human error. AMP terminations and connections are of particular value in electronics and aircraft installations. They withstand vibration, corrosion and provide high tensile strength, with low resistance, and no noise at R.F.

Automatic wire terminator  
Operates at up to 4,000 an hour.

Pneumatic hand tool.  
Eliminates operator fatigue.

Certi-crimp hand tool.  
Positive closure ensured

Write or phone NOW and learn more about AMP Solderless Terminations the CREATIVE approach to better Wiring.

AMP terminals are made for every type and size of wire.

# THE RD JUNIOR

## TABLE CABINET

The RD JUNIOR Table Cabinet has been designed to house the units forming the RD JUNIOR Home High Fidelity System comprising Amplifier, Control Unit and FM Unit. In addition it houses the Motor Unit, the illustration showing the Collaro Model 2010 Transcription Unit fitted. Extremely compact the cabinet measures only 20½" wide x 15" deep x 14½" high while styling follows that of the Corner Horn enclosure, the two together forming an attractive two-part High Fidelity System.

The standard finish is Australian Walnut, the edges and interior of the motor compartment being contrasted in Birdseye Maple. Selected veneers are used and each cabinet is hand polished to a pleasing eggshell finish.

PRICE: ready cut to take each unit £10-10-0d. (ex works.)

### PART OF A COMPLETE HOME HIGH FIDELITY SYSTEM

Comprehensive literature on the complete range of matched units forming the RD JUNIOR Home High Fidelity System may be had on request.

For use with the Corner Horn enclosure we can particularly recommend the outstanding new Louther PMS Pressure Unit—owners of existing cabinets will be pleased to know that the PM6 can be fitted without modification. Demonstrations may be had at our Catford Showroom, week-days between 10 a.m. and 5 p.m. (the Showroom is no longer open on Saturday mornings).

# KT88

## A New Audio Output Valve with an anode dissipation of 35 watts

An addition to the well tried and popular range of G.E.C. Audio Valves, of which the KT66 has set a standard in its class the world over, the new G.E.C. KT88 is now available to meet conditions of use requiring higher power.

### POINTS ABOUT THE KT88

- 1** The KT88 is a beam pentode with aligned grids for maximum efficiency.
- 2** 50 watts output is available from a pair connected in the ultra linear circuit with auto bias and an H.T. line voltage not exceeding 500.
- 3** 100 watts output is available from a pair connected in the ultra linear circuit with fixed bias and an H.T. line voltage not exceeding 560.
- 4** 25 watts output is available from a pair triode connected with auto bias and an H.T. line voltage not exceeding 500.
- 5** The mutual conductance of the KT88 is 11 mA/V.
- 6** An all-glass ring seal replaces the conventional pinch seal giving increased strength, higher rating and reduced dimensions.
- 7** The valve is mounted on an international octal base and has a heater rating of 6.3 volts., 1.8 amps.

Full particulars of these valves can be obtained from the  
G.E.C. VALVE & ELECTRONICS DEPT.

# The EDDYSTONE '820'

HAS SUCH EXCELLENT EFFICIENCY AND STABILITY IT CAN BE USED SUCCESSFULLY IN MANY BADLY SCREENED OR EXTREME-FRINGE RECEPTION AREAS.

V.H.F.

*F.M. Radio Unit*

SPECIALLY DESIGNED TO PRECEDE HIGH FIDELITY EQUIPMENT

Built by Britain's leading manufacturers of V.H.F. communications equipment and of superb construction and workmanship. The fully tuned pre-amplifier, separate limiter and Foster Seeley discriminator combine to ensure the highest performance.

Self-powered, easy to mount and install, the '820' adequately meets the needs of the enthusiastic music lover.

## PRECISION High Fidelity 4 SPEED TRANSCRIPTION UNITS

WITH VARIABLE SPEED ADJUSTMENT.

### MAIN FEATURES

- Speed continuously variable from 29 r.p.m. to 86 r.p.m. Pre-set adjustable "click-in" position for 78, 45, 33½ and 16 r.p.m. Playing old celebrity discs requiring speeds above 78 r.p.m. Tuning record pitch to a musical instrument. Correcting for mains frequency variations.
- Accurately balanced heavy precision made turntable eliminates Wow and Flutter.
- Unique VERTICAL EDGE-DRIVE PULLEY principle, eliminates Rumble.
- Less than 1% change in speed for up to 13% change in Line Voltage.
- Large resilient 4-pole constant velocity motor.
- Model G.L.50/4 and G.L.56 fitted with weight adjustable precision Pick-up-Arm with plug-in shell, incorporating the Superb Goldring Variable Reluctance Cartridge No. 500.

## AUDIO OSCILLATOR WITH CRYSTAL CALIBRATION

*The unit is designed to give a sinusoidal output of a relatively high order of amplitude and frequency stability over the frequency range 50 c/s to 50 kc/s. Distortion level is less than 2% and accuracy at check points approaches that of the crystal itself i.e. 0.01%. Accuracy and stability of the equipment is assured by the high quality of construction.*

## M. R. SUPPLIES Ltd.

(Established 1935)

Some excellent NEW OFFERS available in limited quantities. Immediate despatch, carefully packed. All prices nett.

**VERY MINIATURE L.V. MOTORS.** 3 to 6 v. D.C., low consumption only 100 m.a. at 4.5 volts, body 1in. by 1in. with mounting flange and shaft and pulley. Fine bargain for model makers, 7/6 (des. 6d.).

**POWERFUL SOLENOIDS,** rated for 24 v. D.C., but quite suitable for 12 v. D.C. Size of pot 2 1/2in. by 3 1/2in. 1/4 inch 50lbs. pull. Brand new, in individual moisture-proof pack, 10/6 (des. 2/-).

**TOTALLY ENCLOSED A.C. MOTORS** (English Electric Co.), 230/250 v. 50 c. 1 ph. 1,425 r.p.m., split-phase induction, ball bearings. Conservatively rated at 1/10th H.P. for continuous duty—developing 1/8th H.P. Frame size approx. 7in. by 5 1/2in. dia. Brand new £3/15/- (des. 5/6).

**NEWMAN 1/4th H.P. MOTORS,** 230/250 v. 50 c. 1 ph. 1,425 r.p.m. split-phase induction Enclosed ventilated. New, very slightly soiled, £4/7/6 (des. 6/-).

**PAINTON STUD-TAP POTENTIOMETERS,** 50,000 ohms. in 15 stud-taps, wire elements. In screened housing 2 1/2in. dia. by 3in., 10/6 (des. 9d.).

**WIRE-WOUND POTENTIOMETERS** (Colvern). Brand new dual, 5,000/5,000 ohms. 10 watts, 360 deg. rotation, ball bearing. Size 3 1/2in. dia. by 3in. deep, with 1/2in. shaft. Remarkable bargain 7/6 (despatch 1/6). Also Dubilier Miniature Potentiometers, 10K, 20K, or 100K, any one, 2/9 (des. 6d.).

**AIR COMPRESSORS** (B.T.H.). Ex-Govt. In fine condition as new. Up to 250 lbs./sq. in. Bore 1in., stroke 1in. (approx.). Power required about one-quarter H.P. Limited supply at only 25/- each (des. 2/-).

**SHADED POLE INDUCTION MOTORS** (Hoover). We have been fortunate in securing a further limited supply of these popular units. 200/250 v. A.C. very silent running. Ideal for many lab. and domestic applications, stirrers, fans, extractors, etc. SP302, torque 150 grm./cms., 950 r.p.m., 3 1/2in. by 2 1/2in., 27/6 (des. 1/6). Also the high duty SP302, torque 400 grm./cms., 1,200 r.p.m., 3 1/2in. by 3in., 39/6 (des. 2/-).

**SYNCHRONOUS TIMER MOTORS.** 200/250 v. 50 c. (G.E.C., brand new). Compact motors, 2 1/2in. by 1 1/2in. by 1 1/2in. with 1in. shaft pro's. Self-starting, high torque, 6 r.p.m. suitable also for display turntables, 57/6 (des. 1/-).

**AMMETERS.** 0/5 amp. D.C. m/coll. 2in. square flange. Another rare opportunity, 12/6 (despatch 6d.). Also 2in. round, 0/500 microammeters D.C. m/coll, 17/6. Also 2 1/2in. round 0/20 volts A.C./D.C. m/iron, 10/6.

**SYNCHRONOUS TIME SWITCHES.** 200/250 v. 50 c. Brand new Sangamo-Weston. In compact black housing, 4in. dia. by 3 1/2in. deep, providing up to three on-off operations per 24 hours, with day-omitting device (use optional). Capacity 20 amps. A.C., £5/8/6 (despatch 2/-). Two circuit model (Smith's Relyon), £8/18/-.

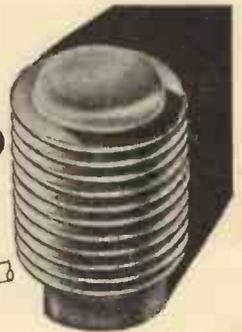

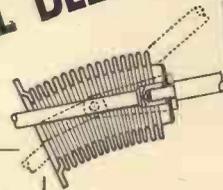

**COMPLETE SEWING MACHINE MOTOR OUTFITS.** There is no better quality job at any price. 200/250 v. A.C./D.C., fitted radio and TV suppressors, including motor with fixing brackets, foot control, needle light, with switch, belt, etc., with instructions for fixing to any machine. £6/15/- (despatch 2/9).

**EXTRACTOR FANS.** Very well made new units at much below normal price. 200/250 v. A.C. (induction motor, silent running, no interference). With mounting frame and back grille, ready for easy installation. With 8in. impeller (12,000 c. ft./hr.) £5/5/- With 10in. impeller (15,000 c. ft./hr.), £5/12/6 (despatch either, 3/-).

# MINIATURE Syncroverter Switch

Actual size

## SETS NEW PERFORMANCE STANDARDS

Recently introduced from the United States, Bristol's Miniature Syncroverter Switch is a polarized, single-pole, double-throw, non-resonant chopper providing break-before-make action in synchronism with the current wave of the driving source. Applicable for use over the excitation frequency range of 0-1,800 c.p.s., it converts low power D.C. signals into alternating voltages which can be amplified and applied to electronic, electrical and servo systems. It can be used also as a Precision Synchronous Rectifier. It is outstanding for its reliability, long life, light weight (only 1.7 ounces), low noise level and clean wave form. Send for details.

*The full range of Electrical Measuring Instruments Division products includes switchboard instruments, electrical recorders, portable instruments, testing sets, relays and tachometers.*

### TYPICAL OPERATION

	400 c.p.s.	500 c.p.s.
Coil voltage	6.3V. sine, square, pulse wave	6.3V. sine, square, pulse wave
Coil current	55 milliamperes	45 milliamperes
Coil resistance	85 ohms	85 ohms
*Phase lag	$55^\circ \pm 10^\circ$	$65^\circ \pm 10^\circ$
*Dissymmetry	less than 4%	less than 4%
Temperature	$-55^\circ \text{C. to } 100^\circ \text{C.}$	$-55^\circ \text{C. to } 100^\circ \text{C.}$
*Switching time	$15^\circ \pm 5^\circ$	$15^\circ \pm 5^\circ$

Mounting—any position—fits 7-pin miniature socket

\*These characteristics are based on sine wave excitation

**REMOTE CONTROL ?**

We cannot do the Indian Rope Trick but with

**FLEXIBLE SHAFTING**

We can operate any element requiring rotation or push-pull movement, or both, no matter if the controlled element is close to or at a distance from the control point.

We can operate from an accessible point, switches, valves and other electrical and mechanical devices located in inaccessible places.

We can, in fact, solve your problems.

# A NEW directly heated subminiature beam tetrode for Radio Frequency Equipment

## XR4

The new HIVAC XR4 is equivalent to the U.S. Type 6397.

It is designed for use as a Class A or Class C amplifier or as a frequency doubler for output frequencies up to 400 Mc/s.

It is rated at an anode dissipation of 1.5 Watts.

### TYPICAL OPERATION

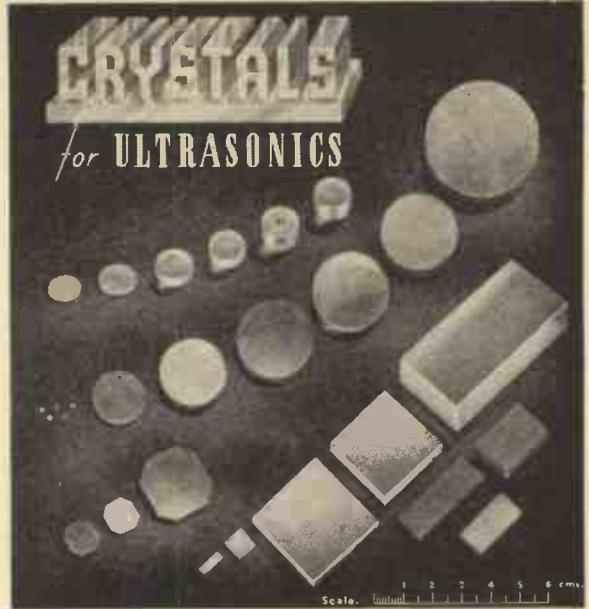

Filament Voltage .....	1.25V	2.5V
Filament Current .....	125mA	62.5mA
Anode Voltage .....	125V	
Screen Grid Voltage .....	125V	
Control Grid Voltage .....	-7.5V	
Anode Current .....	7mA	
Screen Current.....	1.1mA	
Mutual Conductance .....	1.95mA/V

# NOW New Orthophonic High Fidelity FROM VHF/FM

The RCA FM Tuner incorporates many new refinements, enables you to realise the great advances made in broadcasting bringing into your home a thrilling, living, realism.

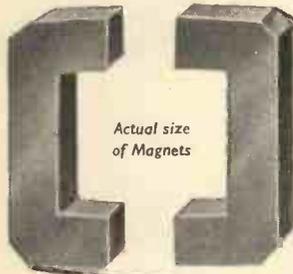

- ★ **Precision Tuning**  
*The new RCA Electron Ray Tuning Indicator makes exact tuning simplicity itself.*
- ★ **No interference**  
*The FM system coupled with RCA circuitry results in exceptional signal-to-noise ratio.*
- ★ **Extended Tuning Range**  
*87.5-108 Mc/s covers the entire international F.M. broadcasting band.*
- ★ **Great Sensitivity**  
*2 microvolts for 20 db quietening—extends the 'fringe' 7 valves plus 2 crystal diodes and Electron Ray tuning indicator.*
- ★ **High Fidelity**  
*Wide range response within 1 db from 20-15,000 c/s for true High Fidelity reproduction.*
- ★ **No Matching Problems**  
*Adjustable output levels.*
- ★ **Automatic Frequency Control**  
*Ensures complete freedom from drift.*
- ★ **Power Requirements**  
*230-390 volts D.C. at 40 milliamps H.T. supply. 6.3 volts, 2.25 amps heater supply (available from RCA New Orthophonic High Fidelity power amplifier).*

## TELEVISION EXPLAINED

By **W. E. Miller**, M.A. (CANTAB.), M.BRIT.I.R.E.

Revised by **E. A. W. Spreadbury**, M.BRIT.I.R.E.

Television Explained is specially written for those who require a simple, non-mathematical, but fully comprehensive description of the British television system and how receivers are designed to work with it.

The sixth edition has been completely revised, and enlarged to about twice the size of the previous edition in order to cover many recent advances in television receiver design.

Assuming a knowledge of sound radio receivers, but requiring no previous knowledge of television circuits, this new edition will prove more valuable than ever to students, engineers and technical-minded owners of television receivers.

The immense popularity of this unique book is illustrated by the consistently large demand for the previous editions. Over 40,000 copies have been sold.

### Contents

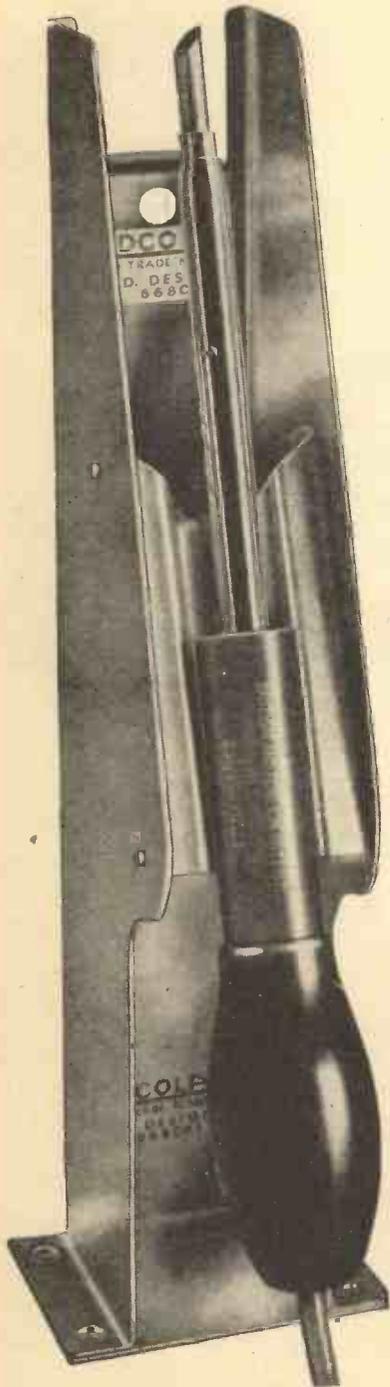

<i>Aerials</i>	<i>The Cathode-Ray Tube</i>
<i>The Signal</i>	<i>Time-Base Oscillators</i>
<i>The Receiver Outlined</i>	<i>Time-Base Output Circuits</i>

# 55 volts - a really low voltage stabiliser

The G55/1K is a miniature cold-cathode, gas-filled, voltage stabiliser for use in industrial and radio equipment where a stable source of voltage is required. The outstanding feature of this valve is the low maintaining voltage of 55 volts.

### MECHANICAL DATA

Maximum overall length	66.7	mm
Maximum seated height	60.3	mm
Maximum diameter	19.1	mm
Base	B7G	
Net weight	8.5	g

### CHARACTERISTICS

Maximum striking voltage	90	V
Stabilising voltage	55	V
D.C. operating current	2 to 30	mA
Maximum peak current (10 seconds max.)	75	mA
Nominal regulation 2 to 30 mA	3	V
Maximum regulation 2 to 30 mA	5	V
Ambient temperature range	-55 to +90	°C

# THE LINEAR 'DIATONIC'

## A HIGH FIDELITY ULTRA LINEAR AMPLIFIER WITH INTEGRAL PRE-AMP

A special feature is the compactness of the unit. Full advantage has been taken of latest component miniaturisation developments to produce a 10-watt Hi-Fi push-pull amplifier incorporating tone control preamplifier stages within the measurements of 10 x 6 x 6in.

In addition two high impedance input sockets are provided for microphone and gram, etc. Each input has its associated vol. control, five B.V.A. (Mullard) valves are employed, ECC83, ECC83, EL84, EL84, EZ81.

H.T. and L.T. power supply point is included for a radio tuner.

### L45 MINIATURE 4/5 WATT QUALITY AMPLIFIER

Size only 6 x 5 x 5 1/2 in. high. 12 d.b. Negative Feedback. Sensitivity 30 m.v. for full output. 3 Mullard valves, ECC83 Twin Triode, EL84 Power Output, EZ90 Rectifier. Separate Bass and Treble Controls. Mains switch incorporated in control. For 200—250v. 50 c.p.s. A.C. Mains. An ideal unit for use with Gram. or 'Mike.'  
Retail Price £5-19-6

SIZE ONLY 10—6—6ins.

Weight: 12 1/2 lbs. Power consumption 90 watts  
For 200-230-250v. 50 c.p.s. A.C. mains.  
Outputs for 3 and 15 ohm speakers.

Chassis finish stoved gold  
—Bronze hammer.

Why are there  
**TWO SWEEP GENERATORS**  
in these **Tektronix** oscilloscopes ?

The extra sweep generator makes an oscilloscope much more useful. With the Tektronix delaying sweep you can . . .

**1 START THE OSCILLOSCOPE SWEEP WITH THE FIRST TRIGGER RECEIVED AFTER A CONTROLLABLE TIME-DELAY PERIOD.**

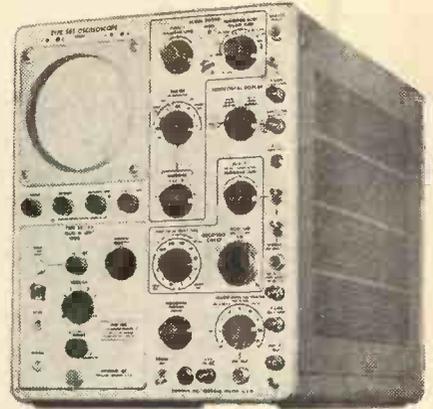

This is an important reason for the extra sweep generator and its associated pickoff circuit in Tektronix Type 535 and Type 545 Oscilloscopes. Triggering the delayed sweep by the observed signal guarantees a jitter-free display . . . ideal for examination of time-modulated pulses and signals with inherent jitter.

**2 START THE OSCILLOSCOPE SWEEP AT THE END OF A CONTROLLABLE TIME-DELAY PERIOD . . . convenient for observation of occurrences after an accurately determined time interval.**

**3 MAKE MORE ACCURATE TIME-INTERVAL MEASUREMENTS.**  
A calibrated ten-turn time-delay control divides each of the twelve delay ranges into a thousand units. Range accuracy is within 1%, incremental accuracy on any range is within 0.2% of full scale.

**4 TRANSFER PART OF A DISPLAY TO A FASTER SWEEP.**  
By initially displaying a signal on the extra, delaying sweep, and then transferring it to the main oscilloscope sweep, a continuously adjustable horizontal expansion can be obtained. Degree of magnification is determined by the time/cm ratio between the two sweeps. The average jitter of 1 part in 25,000 permits practical use of very large magnifications. Further, the exact portion of the display on the delaying sweep that will appear on the faster main sweep is positively identified by trace brightening. Unblinking pulses for both sweeps are applied to the crt grid, causing the main sweep to show up as a brightened portion of the display on the delaying sweep.

**5 ARM THE OSCILLOSCOPE SWEEP FOR TRIGGERED ONE-SHOT OPERATION.** A front-panel pushbutton or an electrical signal from a remote location can be used instead of the internal delayed trigger to arm the sweep. After the button is pressed, or the pulse received, the next trigger causes the main sweep to fire once and revert to the locked-out condition. Photographic recordings of a single transient made in this manner cannot be blurred by spurious signals following its occurrence. Because the single sweep can be triggered any time after the button is pressed or the pulse received, the time of occurrence need not be accurately predictable.

**GREATER VERSATILITY PREFERRED**

Customer preference for the Tektronix Oscilloscopes with a delaying sweep, Type 535 and Type 545, indicates that the increased utility is valued at much more than the small additional cost. Application possibilities of these versatile instruments make them worthy of your serious consideration.

**TYPE 535 and TYPE 545 CHARACTERISTICS**

**Delay Specifications**

A calibrated twelve-step range control and a ten-turn precision control provide for continuously-variable coverage of the full sweep-delay range—1  $\mu$ sec to 0.1 sec. Range accuracy is within 1%, incremental accuracy within 0.2% of full scale. Time jitter is less than 1 part in 20,000 in conventional sweep-delay operation. Display is completely jitter-free in triggered operation. The delaying sweep can be used as a rate generator, producing trigger rates from 10 cycles to 40 kc, continuously adjustable. The delayed trigger is available at a front-panel connector for external applications.

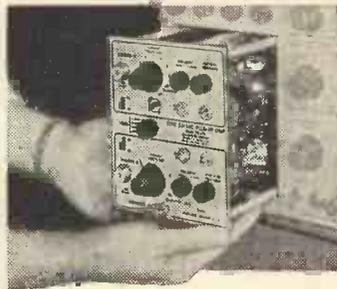

**Other Specifications**

Main-sweep range is 0.02  $\mu$ sec/cm to 12 sec/cm continuously variable, with 24 calibrated steps accurate within 3%. Accelerating potential is 10 kv. Vertical-amplifier response with Type 53/54K Fast-Rise Plug-in Unit . . . Type 535, dc to 11 mc—Type 545, dc to 30 mc. Seven plug-in vertical preamplifiers are available for complete signal-handling versatility.

**Type 535** (without plug-in units) . . . £525.0.0  
**Type 545** (without plug-in units) . . . £586.0.0

**FOUR-SIDED BLANK CHASSIS**

Made in our own works from commercial quality half-hard aluminium of 16 s.w.g. thickness, these chassis will carry components of considerable weight and normally require no corner strengthening.

Standard stock sizes (in inches) are as follows:—

6 x 4 x 2	5/-	12 x 5 x 3	7/11	13 x 10 x 2½	9/9
7 x 5 x 2	5/6	12 x 7 x 2½	8/-	14 x 10 x 2½	10/-
10 x 4 x 2½	6/4	11 x 8 x 2½	8/3	12 x 10 x 3	10/3
9 x 7 x 2	6/6	10 x 8 x 3	8/6	15 x 10 x 2½	10/6
12 x 4 x 2½	6/10	13 x 8 x 2½	8/10	17 x 10 x 2½	11/3
9 x 8 x 2½	7/6	12 x 9 x 2½	8/11	17 x 9 x 3	11/6
10 x 8 x 2½	7/10	14 x 7 x 3	9/6	17 x 10 x 3	12/3

The above are sizes for which we have most demand, but we can also make other sizes to order (at a small extra charge) within the following limits:—

Depths 1in., 1½in., 2in., 2½in. and 3in. only.  
Minimum length 1½in. Minimum width for 2in. depth is 3½in.  
Minimum width for 3in. depth is 5in. Minimum width for 1½in. depth is 3in.  
Minimum width for 2½in. depth is 4in. Minimum width for 1in. depth is 2in.

We cannot undertake to make odd shapes, extra bends, lips, etc.  
To arrive at the approximate cost of a special size of chassis take the nearest standard size above and add 2/6.

**PANELS**

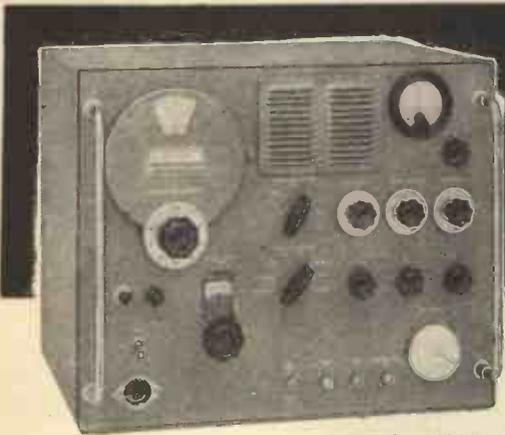

We can also supply the aluminium for use as panels, screens, etc., cut to any size up to 3ft. by 3ft. at 4/- per square foot.

NOTE.—A panel cannot be sent through the post if the length plus twice the width exceeds 6ft. Keep this list for reference

# SIGNAL GENERATORS

## NEW! -hp- 626A/628A shf Signal Generators

- 10 to 21 KMC, 10 mw output
- SWR 1.2, high accuracy
- No calibration charts
- Pulse, FM, square wave modulation

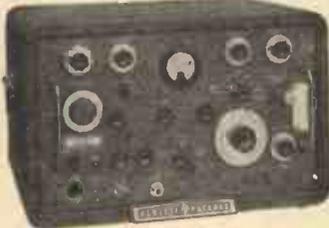

Typical-hp-signal generators

-hp- 608D vhf Signal Generator

-hp- 612A uhf Signal Generator

-hp- 624C X Band Test Set

\* Rack mounted instrument available for \$15.00 less

New -hp- 626A/628A are the first commercial signal generators to bring the wide range, high power, convenience and accuracy of lower-frequency signal generators to the 10 to 21 KMC range. -hp- 626A covers frequencies 10 to 15.5 KMC; -hp- 628A, 15 to 21 KMC. Operation of the instruments is typical of -hp- generators. Frequencies are directly set and read on one dial. No calibration charts are required. Output voltage is directly set and read. Output is 10 to 20 db better than previous spot-frequency generators. SWR is better than 1:2 at 0 dbm and lower. Internal pulse, FM or square wave modulation is provided, together with facilities for external pulsing or FM'ing. -hp- 626A, \$3,250.00. -hp- 628A, \$3,000.00.

### OTHER -hp- SIGNAL GENERATORS

Instrument	Frequency Range	Characteristics	Price
-hp- 608C	10 to 480 Mc	Output 0.1 $\mu$ v to 1 v into 50 ohm load. Pulse or CW modulation. Direct calib.	\$950.00
-hp- 608D	10 to 420 Mc	Output 0.1 $\mu$ v to 0.5 v. Incidental FM less than 0.001% entire range.	\$1,050.00
-hp- 612A	450 to 1,200 Mc	Output 0.1 $\mu$ v to 0.5 v into 50 ohm load. Pulse, CW or square wave modulation. Direct calibration.	\$1,200.00
-hp- 614A	800 to 2,100 Mc	Output 0.1 $\mu$ v to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calib.	\$1,950.00
-hp- 616A	1,800 to 4,000 Mc	Output 0.1 $\mu$ v to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calib.	\$1,950.00
-hp- 618B	3,800 to 7,600 Mc	Output 0.1 $\mu$ v to 0.223 v into 50 ohm load. Pulse, CW, FM or square wave modulation. Direct calibration.	\$2,250.00
-hp- 620A	7,000 to 11,000 Mc	Output 0.1 $\mu$ v to 0.223 v into 5 ohm load. Pulse, FM or square wave modulation.	\$2,250.00
-hp- 623B	5,925 to 7,725 Mc	Output 70 $\mu$ v to 0.223 v into 50 ohm load. FM or squar. wave modulation. Separate power meter and wave meter section.	\$1,750.00
-hp- 624C	8,500 to 10,000 Mc	Output 3.0 $\mu$ v to 0.223 v into 50 ohm load. Pulse, FM or square wave modulation. Separate power meter and wave meter section.	\$2,265.00*

# Hunts Hi-Fi CAPACITORS

## FOR CROSS-OVER NETWORKS

Hunts patented Metallised Paper Capacitors are particularly suitable for loudspeaker crossover networks and are used extensively for this application. They have negligible self inductance with consequent lack of self resonance within the audio frequency range, and with the special method of end connections used on the capacitor unit, the equivalent series resistance down to zero applied volts is extremely low. The capacitors listed below are considerably smaller in dimensions than conventional types, occupying only 25-30% of the space required for their lowest voltage counterparts in foil and paper construction.

A basic circuit for a twin speaker combination is shown on the left. The number of circuit elements and their capacitance and inductance values depends on the number of loudspeakers, their individual characteristics, and the required crossover frequencies.

# '360' ADD-ON AERIALS WITH FULL ORIENTATION

Fitted in seconds for any angle any direction.

The Wolsey "Add-on" aerials, incorporating the new '360' clamp can be mounted in apposition to the stand-off arm and provide unlimited orientation in every direction.

Available in  
BAND III aerials, 3, 5 and 8 elements and  
BAND II aerials, "H" type and Yagi 4.

### NOTE THESE PLUS FEATURES

- 1 360 degrees orientation in all 3 planes irrespective of angle of stand-off arm.
- 2 Can be supplied to fit stand-off arms or masts  $\frac{7}{8}$ ", 1" or  $1\frac{1}{8}$ " (please specify when ordering).
- 3 Attaches aerial direct to stand-off arm or mast thus eliminating unnecessary sag (no extra arm required).
- 4 Attaches by hinged collar to stand-off arm or mast in seconds (no dismantling necessary).
- 5 Locks positively at any angle, in any situation by the tightening of one non-slip nut.

### AND NOTE THESE RETAIL PRICES

## THE IDEAL *Portable* HIGH VOLTAGE TEST SET

FOR EVERY TEST LABORATORY

### CUBICLE

Strongly constructed portable steel case with lifting handles, adequately ventilated, finished in attractive grey "hammer" finish enamel.

### DIMENSIONS

Height 17 1/2 in. by length 20 in. by width 12 1/2 in.

### WEIGHT 34 lb.

### CONTROL

Continuous and smoothly variable from zero to 2,500 volts by means of continuously variable regulating transformer.

The test voltage is applied smoothly without high stress from voltage surges.

### PROTECTION

A miniature magnet circuit breaker in the primary circuit and double pole on-off switch with double pole mains fuses provide perfect protection.

### VOLTMETER

A high-grade instrument connected in the primary circuit but scaled to read output voltage.

2.5 KV at 500 VA  
INSULATION TEST SET  
Price £40.8.6

Complete with test prods.

# from the new Mullard catalogue

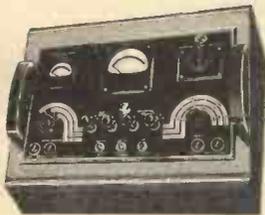

### Precision Oscilloscope L140

The type L.140 Oscilloscope provides a laboratory standard for pulse analysis. Time and voltage measurements are clearly displayed on direct reading illuminated scales conveniently positioned on either side of the 5" C.R.T. The long term measuring accuracy is within 3% of the quantity measured from 1.5 $\mu$ s to 150ms and from 300mV to 300V (4% down to 10mV).

The Y amplifier is direct coupled for sensitivities from 150mV to 300V/cm peak to peak and has a rise time of 0.05 $\mu$ s.

For sensitivities between 4.5mV and 150mV/cm the amplifier is a.c. coupled (useful frequency range 5c/s to 10Mc/s) and has a rise time of 0.06 $\mu$ s.

Signals are applied to a high impedance probe with variable backing-off facilities so that selected portions of the input waveform can be expanded for examination.

### Transistor Tester L264

The Mullard Transistor Tester has been developed to provide a rapid means of checking general characteristics and ascertaining if a transistor has been damaged in circuit. Facilities for measuring the important parameters,  $\alpha$ , base-collector short-circuit current gain, as well as  $I_{CO}$ , and the collector turnover voltage are provided. Although designed as a simple testing unit, it has an accuracy of  $\pm 5\%$ .

### Dual Trace Oscilloscope

L101/2

This high grade, general purpose instrument incorporates two identical amplifiers with sensitivities of 20mV/cm over a bandwidth of 4Mc/s. Voltage measurements ( $\pm 5\%$ ) and time measurements ( $\pm 10\%$ ) are by null methods. The time base may be free running or triggered, and sweep speeds are from 0.1 $\mu$ s/cm to 10ms/cm.

### Precision Pulse Generator

L141

The pulse generator type L.141 provides two main pulses with accurately controllable amplitude, duration, p.r.f., and separation, together with additional pulses for triggering or synchronising.

The amplitude of the two main pulses is continuously variable between 300 $\mu$ V and 100V, their duration from 0.5 to 100 $\mu$ s, and the separation between them from 0 to 100ms.

# RCA BASIC TELEVISION STATION

provides complete facilities for versatile programming with minimum investment

Centralized Control Room for Basic Station

Typical Floor Plan—scaled in one foot squares

**EQUIPMENT "PACKAGE"** for basic TV station consists of an RCA vidicon film camera chain, picture and waveform monitoring facilities, 16-mm film projector, slide projector, multiplexer, studio synchronizing generator, master audio-video switching console, stabilizing amplifier, turntable, microphone, transmitter, antenna, audio editing equipment, spare parts, installation tools and materials.

A complete television broadcasting "package", comprised of equipment basic to all television stations, is offered by RCA to those planning television broadcasting on a small but highly efficient scale. The Basic Television Station enables the broadcaster to start programming with a relatively small investment, and reduces operating costs to the minimum.

All units in the "package" meet RCA's world-famous standards of good engineering for high quality performance. Proved and tested in the field, this equipment assures continuous, dependable service with minimum operating and maintenance personnel. The Basic Television Station offers many important advantages:

**ECONOMICAL ONE-MAN OPERATION** . . . One man can easily operate all program controls which are located in the unique two-section Audio-Video control and switching console. The operator of this centralized

control can also handle any additional live and film cameras that might be added later.

**PROGRAMMING VERSATILITY** . . . The RCA Basic TV Station provides facilities for: Network or incoming "off-air" satellite programs; local 16-mm programming; local film and slide programs; local live programming.

**EASILY EXPANDED** . . . "Matched" design permits quick and easy expansion—without obsoleting the basic equipment. "Matched" live camera and remote pickup facilities can be added when desired; or an increase in power can be made at a later date with RCA "Add-On" Amplifiers or higher power transmitters.

See your RCA Distributor for additional information on the RCA Basic Television Station. Or write Dept. TV49C, RCA International Division, Radio Corporation of America, 30 Rockefeller Plaza, New York 20, N. Y., for free booklet giving complete details.

# You'll do better

**SAFETY FIRST!** BUILD THESE  
PREMIER TELEVISORS WHICH GIVE COMPLETE  
SAFETY TO THE CONSTRUCTOR.

These Televisors use a double wound mains transformer which gives you complete safety from contact with the mains supply when handling the chassis or controls

★ **B.B.C. & I.T.A. DESIGN No. 1 with NEW TURRET TUNER**  
MAY BE BUILT FOR £33-7-11 PLUS COST OF C.R.T.

★ **B.B.C. (ALL CHANNELS) DESIGN No. 2**  
MAY BE BUILT FOR £27-9-4 PLUS COST OF C.R.T.

BUILD IN 5 EASY STAGES. FULL CONSTRUCTION DETAILS AVAILABLE. INSTRUCTION BOOK 3/6 POST FREE INCLUDES BOTH DESIGNS.

CONSOLE CABINETS with full length doors for 14in., 16in. and 17in. tubes PRICE £14/14/-. H.P. Terms: Deposit £7/7/6 and 9 monthly payments of 18/6. CONSOLE CABINETS, Half door, previously advertised, still available at £12/12/-. H.P. Terms: Deposit £6/6/- and 8 monthly payments of 18/3.  
On above cabinets add 21/- for pkg. and carr.

## The NEW "PREMIER" TAPE RECORDER

- ★ Case finished in Brown and Antique Fawn. Size 15in. x 12½in. x 7½in., with the very latest type continental gilt fittings. For A.C. mains 200-250 volts 50 cycles.
- ★ Two speeds 7½ and 3½ in. per sec. playing time of 1 hour and 2 hours.
- ★ Standard 7in. reels 1,200ft.
- ★ Drop-in tape loading.
- ★ Positive brakes no tape "spilling" after braking.
- ★ Fast rewind forward or reverse without removing tape.
- ★ One knob for deck operation.
- ★ Amplifier may be used for gramophone or microphone purposes giving high-quality reproduction.
- ★ Superb reproduction of pre-recorded tapes.
- ★ Microphone compartment.
- ★ Complete with reel of Scotch Boy Tape (1,200ft.), and spare reel.
- ★ Acos type 33-2 microphone with on/off switch.
- ★ Latest type Lane Mark 6 Tape Deck.
- ★ Dual input channels providing mixing facilities.
- ★ Detachable lid and control cover.
- ★ Control panel finished in matching colours with the tape deck.
- ★ Elliptical speaker of the latest type 7in. x 4in.
- ★ Magic eye recording level indicator.

£5 DEPOSIT & 8 MONTHLY  
PAYMENTS OF £4.18.6 or  
CASH PRICE £40 plus 21/- pkg. & carr.

H.P. Terms: Deposit £20 and 12 monthly payments of £1.17.1

## THE NEW "WHARFEDALE" SFB/3

### 3-SPEAKER SYSTEM

Consists of Speakers W12CS, Bronze 10CSB, Super 3HF and a special Crossover Unit fitted into a very attractive Cabinet, size 34in. x 31in. x 12in. Weight 60 lb. Cash £39/10/-, Credit

deposit £5/0/0 and 8 monthly payments of £4/17/-, or H.P. deposit £19/15/- and 12 monthly payments of £1/16/8. Packing and carriage 21/-.

### 4 WATT AMPLIFIER

MAY BE BUILT FOR **£4. 10. 0** Plus 2/6 Pkg. & Postage

Instruction Book 1/- post free. A steel case is now available, complete with engraved panel, for 15/6 extra. The amplifier may be supplied complete for £5/5/- plus pkg. and post 3/6, or fitted in case at £6 plus pkg. and post 3/6. Engraved panel 3/6. Post Free.

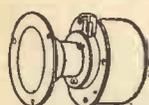

### ALL DRY BATTERY PORTABLE RADIO RECEIVER

MAY BE BUILT FOR **£7. 8. 0** Plus 3/- Pkg. & Postage

4 Miniature valves in a super-het circuit covering medium and long waves. Resiline-covered cabinets 11 1/2in. x 10in. x 5 1/2in. in two contrasting colours, wire with grey panel. Instruction book 1/6 post free, which includes full constructional details and list of priced components.

## New GOODMAN TREBLE UNIT THE TREBAX

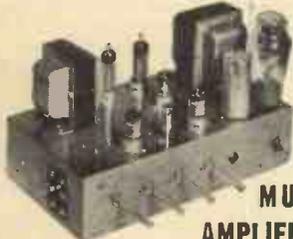

At £6/4/- is a high efficiency pressure driven reproducer covering 2,500 c.p.s. to 16 kc/s. It makes an excellent 2-speaker system when used with the Axiom

150 Mark II at £10/15/9. A special Crossover Unit type X05000 is available at £1/19/-. The complete system £18/18/9 cash. Credit terms deposit £2/7/9 and 8 monthly payments of £2/6/6, or H.P. Terms deposit £9/9/4 and 11 monthly payments of £1/1/-.

## THE NEW TSL FM TUNER HIGH STABILITY MODEL

6 Valves including Magic Eye and Power Supply using the latest type Gordier permeability Unit complete with first audio stage and preset output volume control. Maximum radiation less than 10 microvolts per metre. Sensitivity better than .5 microvolts. Cash price £17/10/- (inclusive) or on H.P. terms, deposit £8/15/- and 9 monthly payments of £1/1/8. Credit terms deposit £2/3/9 and 8 monthly payments of £2/3/4. Postage and packing 5/- extra.

Why not make the best!

### MULLARD AMPLIFIER KIT

NOW SUPPLIED WITH ULTRALINEAR OUTPUT TRANSFORMER. All the components for model 510, PLUS pre-amplifier on one chassis (total six valves) chassis gold hammer finished. May be purchased for £12/12/- plus pkg. & post 7/6, or pre-amplifier and tone control in a separate unit £14/14/- plus pkg. and post 7/6.

## IS THERE A BABY IN THE HOUSE?

The famous Premier Baby Alarm which is device to enable Baby's cries, or even breathing, to be heard in any selected room in the house. May be left permanently connected. Extra Microphones in different rooms may be used. The microphone may be positioned up to 100ft from the main unit. Suitable flexible lead can be supplied at 5d. per yard extra.

Completely wired and tested at **90/-** Plus 2/6 post and pkg

### 2-BAND TRF RECEIVER MAY BE BUILT FOR £5.15.0

plus pkg. & post 3/-

### 3 BAND SUPERHET RECEIVER

MAY BE BUILT FOR **£7. 19. 6** Plus 3/- Pkg. & Postage

These two receivers use the latest type circuitry and are fitted into attractive cabinets 12in. x 6 1/2in. x 5 1/2in. in either walnut or ivory bakelite or wood. Individual instruction books 1/- each, post free.

## WILLIAMSON AMPLIFIER

MAY BE BUILT FOR **£15. 15. 0** Plus 7/6 Pkg. & Postage

Supplied completely wired and tested for £20, or available on H.P. or Credit terms, postage and packing 10/-.

## PRE-AMPLIFIER & TONE CONTROL UNIT

Available completely constructed, £5/5/- plus 2/6 packing and postage.

### PREMIER BUREAU DE LUXE

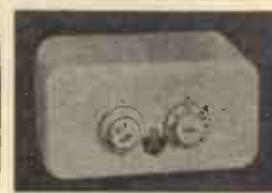

A superb cabinet in finely figured walnut veneer. Interior light sycamore, with resin matching lining. Overall dimensions: 33in. high, 34in. long, 17 1/2in. deep. Uncut control panel on board or left hand side 15 1/2in. x 10 1/2in. long, 13 1/2in. deep. Two full size felt-lined storage cupboards in the lower part of the cabinet.

right hand side approximately 16in. x 10 1/2in. long, 13 1/2in. deep. Two full size felt-lined storage cupboards in the lower part of the cabinet. Cash price 16 1/2 gns. H.P. Terms, deposit £8/13/6 and 12 monthly payments of 16/1. Credit Terms, deposit £2/3/10 and 8 monthly payments of £2/2/10. Packing and Carriage 26/- extra.

### SPECIAL OFFER!

**GOODMANS AUDIOM 50. £4/17/6** plus packing and postage 5/-.

## THE WOLSEY BAND III CONVERTER

This converter has been designed to receive alternative programmes on Band 3 Channels 6 to 13, selection of Channel being made by rotation of Switch Knob. Mains supply 200/250 v. A.C. only. The high

gain of this Converter (minimum 30dB) together with low noise factor ensures good picture quality. A variable gain control makes it possible to balance a Band 1 and Band 3 signal inputs to the receiver. Any single channel Receiver of either T.R.F. or Superhet design may be fed from the Converter. Separate input sockets are provided for Band 1 and Band 3 inputs. Cash price £9/19/6. Credit Terms deposit £1/5/6 and 8 monthly payments of £1/5/6. IMPORTANT, please state your Band 1 station. Packing and postage 3/- extra.

LATEST TYPE RUBBER ESCUTCHEON SUITABLE FOR 17in. RECTANGULAR TUBES AT A SPECIAL PRICE OF 10/- PLUS PACKING AND POST 1/6.

### THE NEW COLLARO TAPE TRANSCRIBER

SPEEDS 3 1/2 & 15 inches per Second £20 plus pkg./post 7/6

We carry a comprehensive stock of components by all leading manufacturers.

## CABINETS - PORTABLE

MODEL PC/2	
Grey Lizard Rexine covered	45/6
Overall dimensions 15in. x 15in. x 6in. Clearance under lid when closed 3in.	
MODEL PC/2 DE LUXE	
Two colours, wine and grey, with cutout for speaker and amplifier	55/6
Dimensions as above.	
MODEL PC/3	
Grey Lizard Rexine covered	69/6
Overall dimensions 16 1/2in. x 14 1/2in. x 10 1/2in. Clearance under lid when closed 6in.	
MODEL PC/3 DE LUXE	
As above but with cutouts for Speaker and Amplifier	79/6
Dimensions as above.	

THE ABOVE CABINETS ARE COMPLETE WITH CARRYING HANDLE FASTENERS AND PANEL Packing and Postage 3/- each.

Juncton Transistors 10/- each  
Equivalent of the OC70 Type

A RANGE OF BAND 3 AND F.M. AERIALS IS NOW AVAILABLE

Air spaced co-axial wire, 1/9 per yard.

Teletron Ferrite Rod Aerials. Medium Wave 8/9. Medium Long Wave 12/9.

### PREMIER VARIABLE IMPEDANCE "MATCHMAKER" M.O.15 OUTPUT TRANSFORMERS

Designed to meet the demand for an efficient variable ratio output Transformer, 11 ratios from 13:1 to 20:1, all centre tapped and can be used to match any output valves either angle or push-pull. Class "A", "AB1", "AB2" or "B" to any low impedance speech coil or combination thereof. Primary Inductance 50 henries 15 watts audio 100 mA. Price 45/-.

### PREMIER MAINS TRANSFORMERS

All primaries are tapped for 200-230-250 v. mains 40-10 cycles. All primaries are screened.

SP175B. 175-0-175, 50 mA., 4 v. @ 1 a., 4 v. @ 2-3 a.	15/-

★ IT WILL PAY YOU TO VISIT OUR NEW HI-FI DEMONSTRATION ROOM.

## MAKE YOUR OWN ROD AERIAL

Ferrite rod 6in. x 5/16in., complete with descriptive constructional details. These aerial rods are suitable for medium and long wave reception. Price 5/3. post free.

## THE JASON "ARGONAUT" MW/FM DESIGN

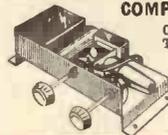

All Premier Components are designer approved

The very latest FM Receiver design PLUS a medium waveband, as described in "The Radio Constructor." ALL components to build the complete Receiver, including output stage, may be purchased for £15/5/-, or all components less output stage but including Power Supply for £13/19/6, plus packing and postage 3/6 on each. The chassis, front plate, dial flywheel drive assembly special tuning condenser and wavechange switch (which includes mains switch) supplied completely assembled. This is also available separately at £4/4/- plus packing and postage 2/6.

### SEND 2 1/2d. STAMP FOR OUR NEW 1957 CATALOGUE

### COMPACT GRAM AMPLIFIER

Complete, ready to connect to any Type of Pick-up and Speaker (3 ohms) A.C. Mains 200/250 volts. Volume and tone control fitted with knobs. Overall size 7 1/2in. long x 3 1/2in. wide x 2 1/2in. high. £2. 19. 6 Plus packing and postage 2/6

**WHY BUY SURPLUS OR RE-CONDITIONED TUBES WHEN THESE FULLY GUARANTEED WIDE ANGLE TUBES ARE AVAILABLE? THE LATEST TYPE 17" RECTANGULAR TUBE MW43/64 BY TELEFUNKEN AT £17 (INC. TAX) POST AND PACKING 21/- EXTRA. ALSO 14" RECTANGULAR TUBE TYPE 14 LP4 £13.17.6 (INC. TAX). PKG. & CARR. 15/- EXTRA.**

turnover crystal cartridges

WORLD PATENTS PENDING

tone-engineered

by 

Designed to fit all standard pick-up arms. Easily and instantaneously removed from snap-fork housing for examination, cleaning and replacement of styli. Fitted with precision ground sapphire styli, which can be quickly replaced when worn out. Turnover mechanism is exact and foolproof. Styling is modern, streamlined and refreshingly practical.

## T.C. 8 M.

A high fidelity cartridge, designed to give maximum listening pleasure from the finest high fidelity equipment or the simplest amplifier.

Has a flat response ( $\pm 3$  d.b.) up to 12,000 cps.  
Output (at 1,000 cps) at 12 cm sec. .3 volts.

## T.C. 8 H.

A cartridge designed to meet the increased demand for a high output turnover type cartridge which is suitable for use with low gain amplifiers, as used in the vast range of small record players.

A cartridge that gives very pleasant listening.  
Has a flat response ( $\pm 3$  d.b.) up to 7,000 cps.  
Output (at 1,000 cps.) at 1.2 cm sec. .9 volts.

Fitted to the *Monarch*  
World's Finest 4-Speed Autochanger!

# Distortion

# in Transistor Amplifiers

In high quality amplifiers, low distortion is essential. Hence a knowledge of the causes of distortion in transistor amplifiers, the means of estimating distortion and reducing it should prove extremely useful. The following account includes a brief analysis of distortion in low level transistor stages and a graph from which distortion in OC70 and OC71 stages can be obtained.

### Causes of Distortion

In a transistor amplifier operated with grounded emitter, distortion results from two causes. First, for a sinusoidal voltage input the input current is non-sinusoidal because of the intrinsic non-linearity of the voltage-current characteristic of the emitter junction. This is the input circuit distortion. Second, for a sinusoidal current input to the base, the collector current is non-sinusoidal due to variation of the collector-to-base current gain ( $\beta$ ) with the collector current. The distortion due to the latter is normally small and can usually be neglected.

### Input Circuit Distortion

The input characteristic consists of two parts: that of the base-emitter junction itself and that of the part of the base between the junction and the soldered connection. The voltage-current relationship of the semiconductor junction is exponential:  $i \propto e^v$ .

The effective incremental resistance of the junction  $r_{exp}$  at the working point, as seen from the base is given by the formula

$$r_{exp} = \frac{25}{I_e} \beta \text{ ohms,}$$

where  $I_e$  is in milliamps.

The base resistance  $r_{bb'}$  is how ever nearly ohmic and approximately equal to  $450 \Omega$  in the OC70 and OC71 for values of  $I_e$  between 0.5 and 5mA. The main component of distortion produced by the non-linearity of the junction characteristic is second harmonic ( $D_2$ ) and only this is considered.

It can be shown that distortion is proportional to the ratio of the r.m.s. signal current to quiescent current, and inversely proportional to  $1 +$  ratio of total ohmic resistance to  $r_{exp}$ , i.e.

$$D_2 \propto \frac{i_e \text{ (r.m.s.)}}{I_e} \text{ and } \frac{1}{D_2} \propto 1 + \frac{R_b + r_{bb'}}{r_{exp}}$$

where  $R_b$  is the external input circuit resistance. These two relations give the variation of distortion with circuit and operating conditions. The accompanying graph shows actual values of distortion plotted against the ratio of r.m.s. emitter signal current to quiescent emitter current at  $I_e = 2\text{mA}$  for several values of a parameter  $P$  which is the ratio of total ohmic resistance to exponential resistance in the input circuit.

$$P = \frac{R_b + 450}{(R_b + 450) I_e} = \frac{r_{exp}}{25\beta}$$

The graph may be applied without serious inaccuracy to OC70 and OC71 stages operating at  $I_e = 0.5$  to  $5\text{mA}$  and the input circuit distortion can therefore be derived from it for all likely practical amplifiers.

### Distortion due to Current Gain Variation

The collector-to-base current gain varies with the collector current ( $I_c$ ), but this variation is small over the operating range; the gain reaching a maximum at about  $1.5\text{mA}$  for an OC71.

When the operating point is at the current for maximum gain, distortion due to  $\beta$  variation will be negligible. Provided that  $I_c$  is kept above  $0.2\text{mA}$  the effect of  $\beta$  non-linearity is small and may add to or subtract from the input circuit distortion, depending on whether  $I_c$  is less than or greater than the value giving maximum  $\beta$ . The amount of distortion can be estimated from the transfer characteristic by conventional methods. Thus the accompanying table gives the amount of second harmonic distortion corresponding to the ratio of the amplitude of the two half-cycles of the output waveform.

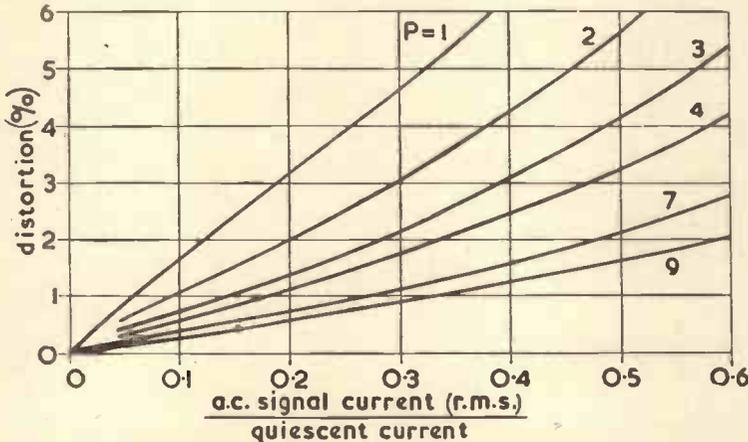

Ratio	1.01	1.02	1.04	1.08	1.16
$D_2\%$	0.25	0.5	1	2	4

### Emitter Feedback

When an external series emitter resistance  $R_e$  is used to linearise the characteristic, its effect is equivalent to the addition of an external base resistance of value  $R_e \beta$ . Thus the graph can still be applied provided that the value of  $P$  is calculated from the formula

$$P = \frac{R_b + \beta R_e + 450}{r_{exp}}$$

Emitter feedback also reduces the distortion due to variation in current gain.

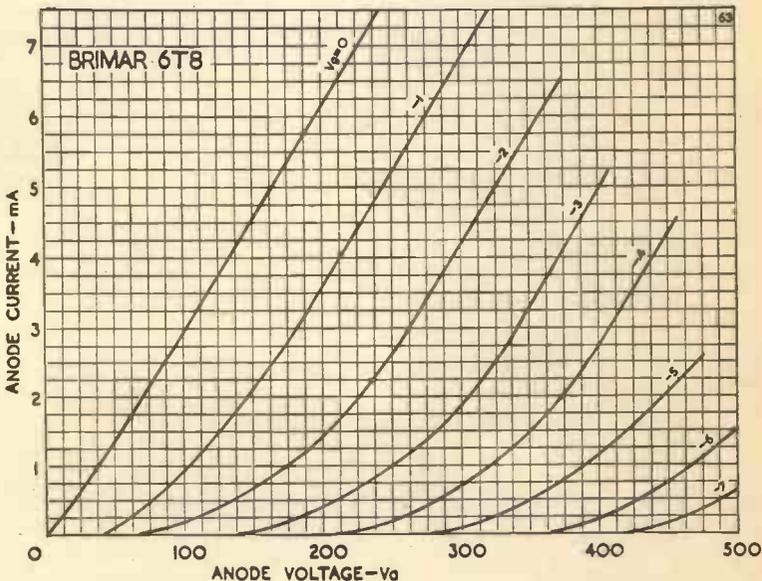

# BRIMAR 6T8

## TRIPLE DIODE TRIODE

The Brimar 6T8 is a triple-diode-triode in which one diode has a separate cathode. The triode section has a high amplification factor making the valve suitable for use in AM/FM receivers in the demodulation and first stage audio circuits. The diodes may be used in series shunt limiter circuits, for example in the audio sections of television and communications receivers, followed again by the triode section for A.F. amplification.

Typical Triode Operating Characteristics as an R.C. coupled amplifier.

Anode Supply Voltage	...	...	...	250	250 volts
Anode Load Resistor	...	...	...	0.25	0.25 megohms

FOOTSCRAY · SIDCUP · KENT · FOOTSCRAY 3333

With a new factory and enlarged technical staff, Acos are creating a new, consolidated range of cartridges and styli. Each unit in the series is made specifically for a particular kind of record player: highest output for popular instruments, medium output, and highest fidelity for the exceedingly exacting. Every cartridge will have the right characteristics for its job; a stylus individually inspected at 500 times magnification and easily exchanged in the new slip-in fitting; and very low weight. We should like to demonstrate.

**acos**

**ARE DOING THINGS IN STYLI**

The P.V.C. moulding fits tightly around the screw head, preventing the screw from twisting loose and falling out.

# “BELLING-LEE” FLEXIBLE TERMINAL BLOCKS

U.K. Patent 680406

## A SCREW LOOSE?

There's no danger of losing it. The \*unique feature of “Belling-Lee” Flexible Terminal Blocks is that they hold their screws *captive*. Even when the blocks are mounted upside down and the screws totally disengaged from their inserts they cannot fall out.

“BELLING-LEE” FLEXIBLE TERMINAL BLOCKS have many outstanding features. Their versatility gives them an almost unlimited range of applications.

They cannot break, but can be cut easily with a knife into smaller sections.

The terminal screws cannot fall out—see above.

They are mechanically shock-proof, safe against vibration.

They can be secured to curves or irregular surfaces.

Three fixing holes are provided between each pair of terminals.

\*Dictionary definition: *Unique: Unmatched, unequalled, having no like or equal.*

Three sizes are available in 12-way strips with brass inserts. Blocks are moulded in grey P.V.C.

L.1325 (7.140in. x .765in.). Rating 15 amps.

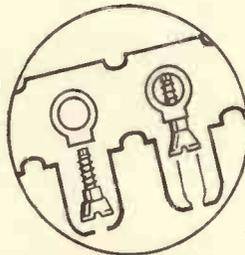

L.744 (5in. x .750in.). Rating 5 amps.

L.744/N.I. (As above, but with

nickel plated inserts for greater corrosion resistance.)

L.1350 (3.75in. x .625in.). Rating 2 amps.

This smaller version will be available in March, 1957.

### “BELLING-LEE” NOTES

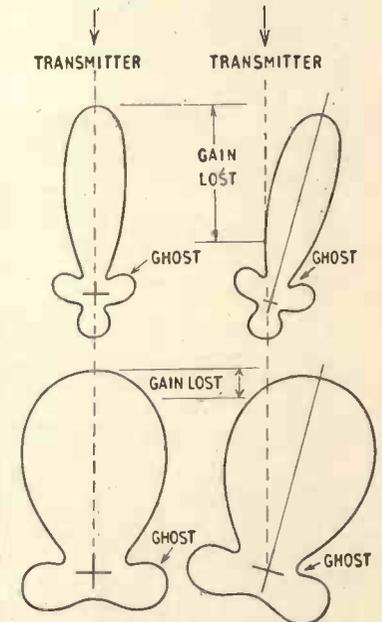

#### Why a wide fronted response pattern is generally a good feature

With a very wide beam like that drawn in the lower sketches, the aerial is sensitive over a wide forward area. This property can be used with advantage in swinging an aerial to try to reduce a reflected image or interference. Reflected rays or “ghosts” generally arrive from the side or slightly behind the aerial.

For example, in the top sketch we show a narrow lobe where, in order to swing the aerial to place the reflected signal in a **minimum** of the response pattern, all forward gain has been lost; but with a wide fronted pattern, swinging the aerial through the same angle produces negligible loss in the forward direction.

A very narrow pattern is certainly advantageous under extreme fringe conditions where everything must be accomplished for gain and to reduce interference coming from the sides and the rear.

The most effective response pattern depends a good deal on conditions prevailing at the point of reception and in difficult locations it is just not practicable to order an aerial “off the shelf” and expect to obtain optimum results.

A useful hint when reading the response pattern of a V.H.F. aerial.

# From microphone to aerial

## through Marconi's experienced hands

In the surge of new television requirements, Marconi's have not forgotten that the majority of countries still look to them first and foremost for the supply, installation, maintenance and, in some cases, operation of sound broadcasting systems. Moreover, television programmes are not silent; sound broadcasting equipment and techniques must advance in step with vision. The unique experience and advanced technical knowledge of Marconi's are at the disposal of broadcasting authorities all over the world.

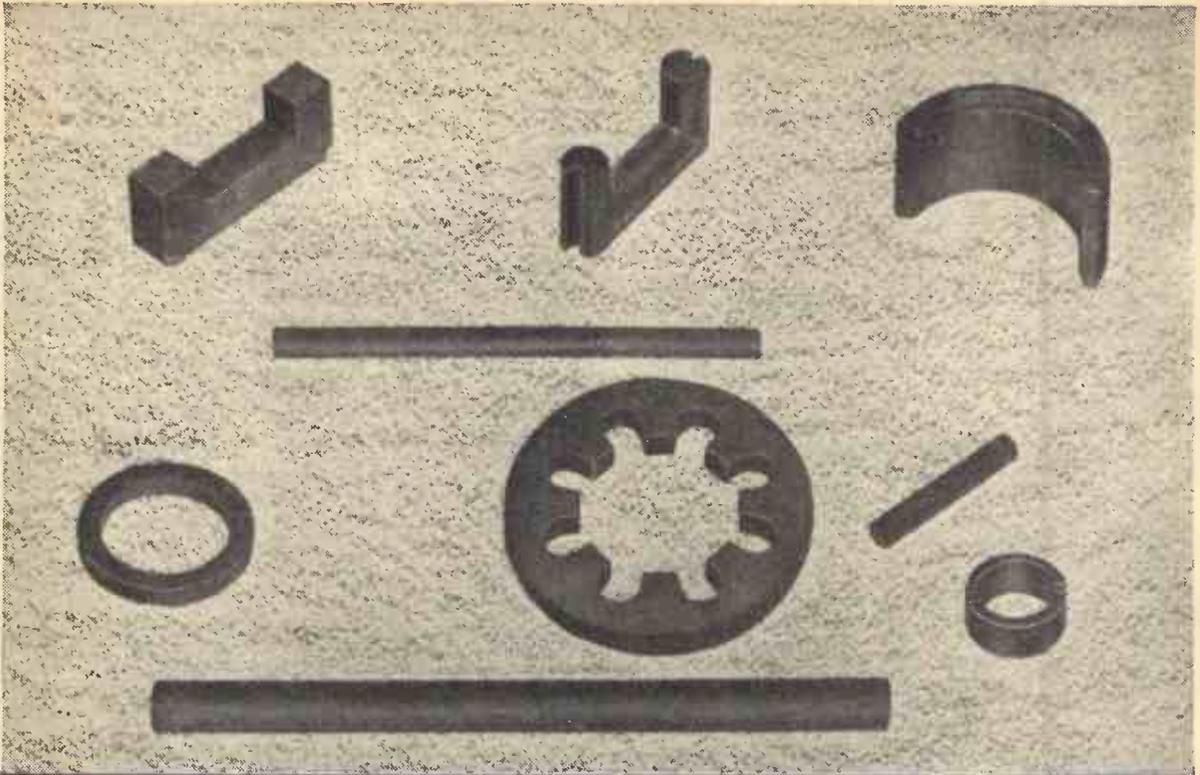

*75% of the world's broadcasting authorities rely on Marconi Equipment.  
Marconi Television equipment is installed at all B.B.C. and I.T.A. Television Stations.*

## ... Plessey ferramic materials

Ferramic (Regd.) ferrites are available in several grades—each grade having its own particular applications:

### Ferramic NW6 and NW10

Ferramic NW6 rods used in radio receivers in place of conventional frame aerials, give increased efficiency in extremely compact form. NW6 was developed primarily for long and medium wave use, whilst NW10 has had its useful working range extended up to 20 Mc/sec. Both have particularly good stability and temperature coefficient.

### Ferramic NW1

This low loss material for frequency range 1 kc/sec to 500 kc/sec is particularly suitable for high Q coils where high

stability of inductance is important. Available in various sizes of pot cores and supplied in either rod or tube form.

### Ferramic NW8

This grade with its high saturation flux density, high maximum permeability and low losses is well suited for use as line output transformer cores for T.V. applications. Special shapes and sizes are available for 90° angle tubes. The material is also available in the form of rods or conventional E-cores.

# ELECTRONIC TACHOMETERS

for **ACCURATE** speed measurement

## TACHOMETER TYPE 2

- Covers most requirements for speed measurement
- Frequency measurement 2 c/s to 20,000 c/s in 4 ranges (Accuracy better than 2%)
- Inputs either photo-electric probe or voltage pulses

By using the photo-electric or other suitable transducers the instrument will measure any rotational speed desired. An output is available to allow the use of the instrument in conjunction with a pen or other similar recorder.

## TACHOMETER TYPE 1

- Designed for the precise measurement of shaft speeds. Can be readily adapted to measure velocity, length, pressure, flow, etc.
- Accuracy is to within 1 part in  $10^4$  over range 40-40,000 pulses per sec.

The tachometer counts the number of impulses occurring during a pre-set period of 1, 2 or 4 secs., displaying total on 4 dekatron valves. Count (max. 9,999) held for 0.5 secs when counting period is 1 second and for 1 second when period is 2 or 4 seconds. Totals automatically cleared and counting recommences. Also 'manual' press button operation.

This instrument is designed to operate with any suitable type of Transducer such as the E.M.I. Photo-electric Transducer Type 1B.

*High Grade*  
**QUARTZ  
 CRYSTALS**  
*by*  
**Standard**

High quality, stable characteristics, robust construction, proven performance, are inherent features of the quartz crystal units developed and manufactured by S.T.C.

Crystals in hermetically sealed cans to meet the rigid Inter-Service specification; crystals in evacuated glass envelopes with wire ends or with valve base; G.T. Cut crystals for absolute frequency standards; high frequency Overtone crystals for V.H.F. applications . . . these are the principal types in the S.T.C. range.

There is almost certain to be an S.T.C. quartz crystal unit to meet your specification . . . if not, our engineers are ready to discuss your special requirements.

*The quartz crystal units illustrated are in hermetically sealed cans equivalent to the Inter-Service Style "D" or the American HC6U. This unit has been widely adopted for use in modern equipments.*

A new radiation cooled triode

*Specially designed for Industrial R.F. heating equipment*

TENTATIVE CHARACTERISTICS

$V_f$	10 volts
$I_f$	18 amps
$V_a$ Max	5 kV
Max. operating frequency at full rating	40 Mcs.
$\mu$	40
$g_m$	8 mA/V

The Ediswan ES.1001 is a radiation-cooled triode with rugged graphite anode and thoriated tungsten filament designed specially for use in Industrial R.F. heating equipment. Its maximum anode dissipation is 1 kW, but being radiation-cooled no complicated cooling arrangement is required although an air flow is needed when the valve is used at full ratings.

*Further information available on application*

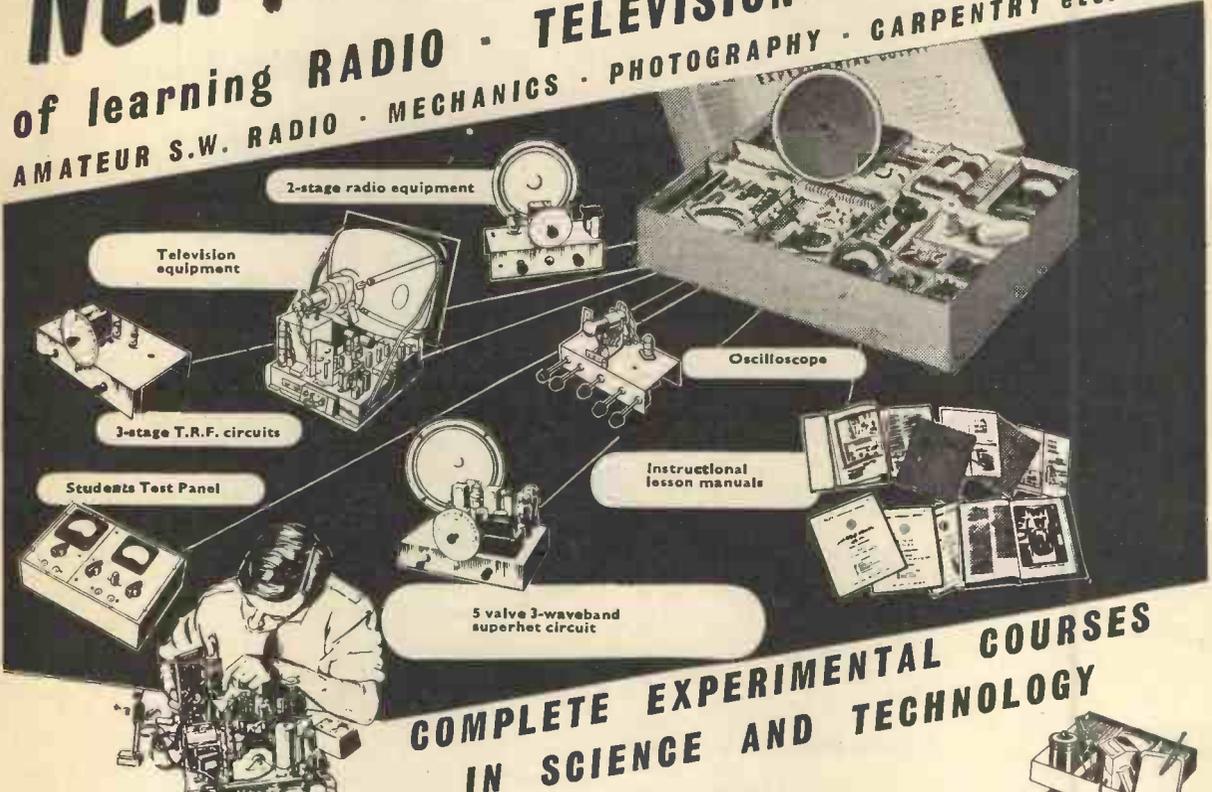

A forced air cooled triode with thoriated tungsten filament and with a maximum anode dissipation of 12 kW at 40 Mcs. will also be available shortly.

# Vortexion TAPE RECORDER

★ The total hum and noise at  $7\frac{1}{2}$  inches per second 50-12,000 c.p.s. unweighted is better than 50 dbs.

★ The meter fitted for reading signal level will also read bias voltage to enable a level response to be obtained under all circumstances. A control is provided for bias adjustment to compensate low mains or ageing valves.

★ A lower bias lifts the treble response and increases distortion. A high bias attenuates the treble and reduces distortion. The normal setting is inscribed for each instrument.

★ The distortion of the recording amplifier under recording conditions is too low to be accurately measured and is negligible.

★ A heavy mu-metal shielded microphone transformer is built in for 15-30 ohms balanced and screened line, and requires only 7 micro-volts approximately to fully load. This is equivalent to 20ft. from a ribbon microphone and the cable may be extended 440 yds. without appreciable loss.

★ The .5 megohm input is fully loaded by 18 millivolts and is suitable for crystal P.U.s, microphone or radio inputs.

★ A power plug is provided for a radio feeder unit, etc. Variable bass and treble controls are fitted for control of the play back signal.

★ The power output is 3.5 watts heavily damped by negative feedback and an oval internal speaker is built in for monitoring purposes.

★ The play back amplifier may be used as a microphone or gramophone amplifier separately or whilst recording is being made.

★ The unit may be left running on record or play back, even with 1,750ft. reels, with the lid closed.

## FOUR CHANNEL ELECTRONIC MIXER

is almost essential for the professional or semi-professional where a number of different items have to be mixed on one tape recording.

It is recommended by a number of tape recorder manufacturers for this purpose.

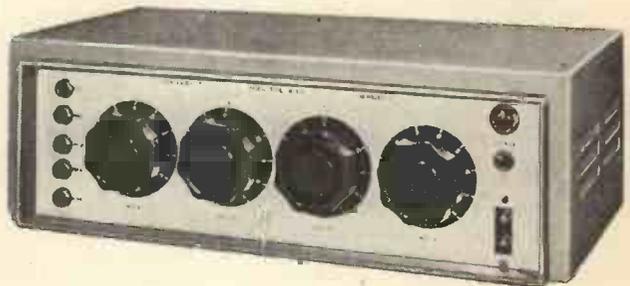

Any normal input impedance can be supplied to order, balanced or unbalanced, the standard being 15-30 ohms balanced.

The normal output is 0.5 volt on 20,000 ohms or more, but 600 ohms is available as an alternative.

The steel stove enamelled case is polished and fitted with an engraved white panel suitable for making temporary pencil notes.

An internal screened power pack and selenium rectifier feed the five low noise non-microphonic valves.

Used in many hundreds of large public address installations and recording studios throughout the world.

**GRUNDIG 'SPECIALIST'**

Mains voltage: suitable for A.C. only, 105-115, 190-210, 210-230, 230-250 volts, 50 cycles. Power Consumption: approximately 90 watts maximum. Mains Fuses: 2 amps (for 105-115 volts), 1 amp (for 190-250 volts). H.T. fuses: 500 mA Surge Resisting, 120 mA Surge Resisting. Valve line-up: EF 86, ECC 81, EL 84, EL 42, EM 71 + 2 metal rectifiers. Mains tapping panel and fuses instantaneously available. Two tape speeds — 3½ ins/sec and 7½ ins/sec: speed change instantaneous by electrical means — heavy duty dual speed split phase induction motor: recording time (with 1,200 feet recording tape) 2 × 30 minutes at 7½ ins/sec — 2 × 60 minutes at 3½ ins/sec: half track recording, track change without spool reversal: track changeover by press button approximately 2 seconds. Trackbutton remains down to indicate which track was played last: frequency range 50-9,000 cycles at 3½ ins/sec, 40-14,000 at 7½ ins/sec: noise is down at least 40 dBs and wow and flutter less than 0.3% at 7½ ins/sec, less than 0.5% at 3½ ins/sec.

Automatic stop foil at end of spools: fast forward and fast rewind time approximately two minutes per full spool. Illuminated precision place indicator: recording level meter by 'magic eye', tone control for treble or bass emphasis.

Loudspeakers: elliptical high-flux permanent magnet moving coil + two 2½ inch tweeters. Special four-position speaker control. Connections for low impedance extension speaker and high impedance external amplifier remote controls, earphones. Microphone, diode and radio input sockets.

Overall dimensions: 17 inches × 17½ inches × 9½ inches. Weight approximately 48 lb.

Retail Price 98 gns.

# Britain's finest Hi-Fi Equipment . . .

It was in 1945 that H. J. Leak revolutionised the performance standards for audio amplifiers by designing the original "Point One" series, and we became the first firm in the world to market amplifiers having a total distortion content as low as 0.1 per cent. This claim was received with incredulity, but it was subsequently confirmed by the National Physical Laboratory and since then hundreds of TL/12 amplifiers have been used by the B.B.C., and Commonwealth and foreign broadcasting authorities, and thousands have been used by recording studios, leading musicians and music-lovers throughout the world.

Further development work resulted in our producing, at a much lower price but with the same high performance standards, the TL/10 amplifier. The output of the TL/10 is ample for high fidelity home music systems, and the quality of reproduction obtained is equal in every respect to that of the TL/12. We always use the TL/10 amplifier and "Point One" pre-amplifier for our public demonstrations of high fidelity reproduction of gramophone records and radio. The TL/10 amplifier, when used with the best available complementary equipment, gives to the music-lover a quality of reproduction unsurpassed by any equipment at any price. Even when the complementary equipment falls below that of the best obtainable the use of these amplifiers will enable one to obtain very marked improvements in reproduction.

We shall be pleased to send you full details of

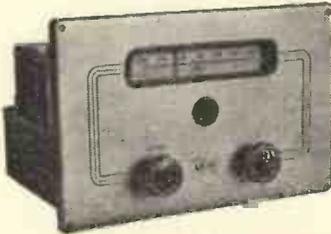

HIGH FIDELITY EQUIPMENT

Below:

**LEAK TL/10 10-watt Amplifier, 17gns.  
and "Point One" Pre-amplifier, 10gns.**

Prices made possible only by world-wide sales

Harmonic Distortion 0.1% 1,000 c/s, 7.5 watts output.

On Left:

**LEAK TROUGH-LINE F.M. Tuner, £25**

plus 10 gns. P.T.  
A Trough-line inductor and AFC eliminate drift. Very high sensitivity for fringe area listening. Quieting control plus high fidelity discriminator. Cathode-follower output. Self powered to operate with any amplifier.

Above:

**LEAK Dynamic (moving coil)  
Pickup**

This new pickup results from five-years' continuous development of our first moving-coil design. Reports from users have justified our earlier belief that the pickup might earn recognition as the best in the world.

Leak dynamic pickup: Arm ...	£2.15.0	p.t. £1.3.1
LP head with diamond stylus	£5.15.0	p.t. £2.8.4
78 head with diamond stylus	£5.15.0	p.t. £2.8.4
Mumetal cased transformer...	£1.15.0	

rREL is the trade name of the Leak Full-range Electrostatic Loudspeaker which will be available to the public in 1957. The design is original and has great theoretical and practical advantages over previously described electrostatic loudspeaker systems. It is the result of intensive research and development work carried out by H. J. Leak, M.Brit.I.R.E., and A. B. Sarkar, M.Sc., who are the authors of a paper, describing the basic design principles of this loudspeaker, which was published in the "Wireless World," October 1956. A reprint of this paper will be supplied on request.

The first name  
in High Fidelity . . .

Telephone: SHEphers Bush 1173/4/5

Telegrams: Sinusoidal, Ealux, London

Cables: Sinusoidal, London

**OVERCURRENT RELAY**

Beautifully made by the famous American Westinghouse Company. These are clear surface through panel type with clear Pyrex glass covers. They have coils for remote push button resetting. Type A—calibrated for currents between .1 and 4 amps. Type B—calibrated for currents between .5 and 2 amps. Price, unused and perfect, £3/17/6 each.

**CIRCUIT DETAILS**

Diagrams and other information extracted from official manuals. All 1/6 per copy, 12 for 15/-.

**DON'T BE CAUGHT LIKE THIS**

**CAR STARTER CHARGER KIT**

All parts to build 6- and 12-volt charger which can be connected to a "flat" battery and will enable the car to be started instantly. Kit comprising the following.

Mains transformer	22/6
5-amp. rectifier	17/6
Regulator Stud Switch	3/6
Resistance Wire	2/6
Resistance Former	2/6
Mains on/off Switch	2/6
0-5 amp. Moving Coil Meter	12/6
Construction Data	1/6

or if bought a/l together price is 62/6, plus 2/6 post and packing.

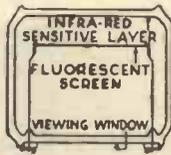

**FLUORESCENT LIGHTS**

These are complete fluorescent lighting fittings. Built-in ballast and starter—stove enamelled white and ready to work. Ideal for the kitchen, over the workbench and in similar locations. Single 40. 4ft. 3in. long, uses a 40 watt tube. Price 39/6 complete with tube. Carriage and ins. 5/6. Twin 20. Uses 2 20-watt standard tubes. Price 29/6 less tubes. Carriage and ins. 4/6.

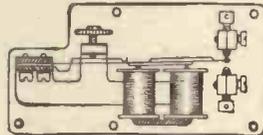

**FREE THIS MONTH**

To all "Wireless World" readers who send S.A.E. we will present free a copy of our booklet—"MAKING AN ELECTRIC BLANKET"

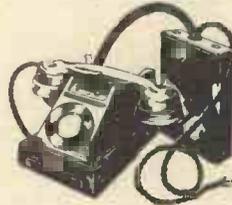

**"SNIPER-SCOPE"**

"Cats eye" used for seeing in the dark. Will work burglar alarms, counting circuits, smoke detectors and the hundred and one other devices as will the simpler type of photo cell. Price 5/- each. Post and ins. 1/-. Data will be supplied with cells if required.

**OFFICE TELEPHONES**

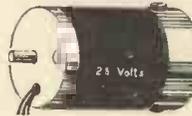

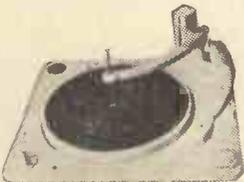

New G.P.O. telephone sets with internal bell and push button switch easily connected together to form office intercom. Price £2/10/- each. Post, etc., 2/6.

**HIGH SPEED RELAY**

This is a miniature type relay. with change-over platinum contacts. Bobbins are 250 ohms each. Brand new—7/6 each, post 1/6. 6 post free.

**MINIATURE MOTOR**

Size only 2 1/2 in. long by 1 1/4 in. diameter. American made, laminated poles and armature, intended for 28 volt D.C. but O.K. on lower D.C. voltages and A.C. mains, through step-down transformer. Price 10/6. Post, etc., 2/-.

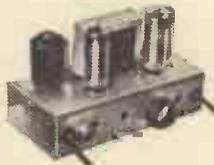

Sent for 30/-

**4-SPEED & 3-SPEED GRAMOPHONE AUTO-CHANGER**

Latest types by all famous makers are invariably in stock at competitive prices. BSE Monarch, Garrard, etc. Latest models from £3/10/-, or deposit £1/10/- and 8 payments of £1 plus 6/- carriage and insurance.

**The "ESTRONIC" BAND III CONVERTER**

To-day's best value in Band III converters suitable for your T.V. or money refunded. Complete ready to operate, 59/6 non mains or 85/- mains, post and insurance 3/6.

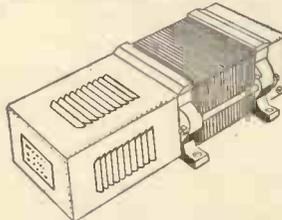

**14" T.V. CABINET**

14in. T.V. cabinet of the latest styling made for one of our most famous firms—beautifully veneered and polished—limited quantity—19/6 each. Carriage and packing 3/6 extra.

**CONSTANT VOLTAGE TRANSFORMERS**

Made by the famous Advance Company, all brand new and unused. Specification: Type No. MTZ 267U, input 85-110 volts, 50 c.p.s., output 350 volts R.M.S. output current .83 amps. Price 37/6 each. Carriage and insurance 5/-.

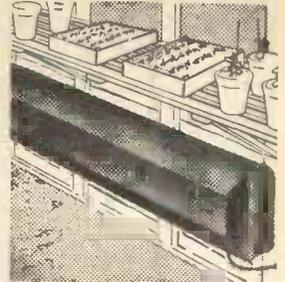

**EX-ROYAL NAVY SOUND POWERED TELEPHONE**

These require no batteries and will go for long periods without attention. Complete with generator and sounder which gives a high pitched note easily heard above any other noise. Also fitted with an indicator lamp which in quiet situations can be used instead of the sounder, or where several telephones are used together, will indicate which one is being called. Size 7 1/2 x 9 x 7 1/2 in., wall mounting, designed for ships' use but equally suitable for home, office, warehouse, factory, garage, etc. Price 57/6 each, plus 4/6 carriage.

**INSTANTUS HEATER**

Convector heater, 1 kW. rating, 4ft. long, made from heavy gauge sheet steel (galvanized). Can be used for greenhouse, workshop, aviary, etc., etc. Price £2/10/-, or with thermostat, £4/5/-, carriage 5/- GUARANTEED 5 YEARS.

**MULTI-SPEED MOTOR**

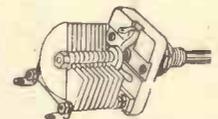

Works off A.C./D.C. mains; fitted with gear box, gives any speed from 1 r.p.m., 22/6, post and packing 1/6.

**POCKET TRANSISTOR RECEIVER**

All the parts to build cigarette box receiver, £2/17/6, includes Ferrite aerials but not the earpiece, battery or case.

**FINE TUNERS**

Ceramic trimmers all with 1/4 in. spindle of fair length. 5, 10, 15, 30, P.F. at 2/3 each or 24/- per dozen.

**WESTINGHOUSE (U.S.A.) METERS**

All moving coil flush mounting type, outside diameter of face 3 1/2 in.

0-500 v. D.C.	25/-
0-1.5 kV D.C. external multiplier	35/-
0-2.5 kV D.C. external multiplier	35/-
0-15 v. A.C.	30/-
0-1 mA.	25/-
0-50 mA.	25/-
0-100 mA.	25/-
0-150 mA.	25/-
0-250 mA.	25/-
0-500 mA.	25/-

**THERMAL DELAY SWITCH**

Hermetically sealed with 4-pin base, heater resistance approx. 1,500 ohms. This can be used for overload protection. Approximately 17 milliamps through the heater coil will cause the contacts to close. Useful for many applications such as delaying anode volts until the heaters are properly warmed up. Limited quantity—7/6 each, post and insurance 1/6. 6 post free.

**INDUSTRIAL OVERHEAD HEATER**

This overhead heater warms only the area within its radiant rays, and so effects a considerable saving of fuel. Its benefits are felt immediately, there is no warming-up period. It is essentially a personal type of heater, having controls within easy reach of the operative. The controls give four variations of heat and "OFF". At maximum heat the unit consumes 1 kW.

The Infray Major is of particular use:—  
 (a) In large rooms, warehouses, lofts, machine shops, etc., where the cost of heating the whole room to a comfortable level would be too great.  
 (b) In rooms which in the main have to be kept cool, e.g., food storage chambers, beer cellars, etc.  
 (c) In any situation where local heating is required quickly.  
 Price is 27/10/-, carriage paid.

**ELECTRIC BLANKET WIRE**

Waterproof P.V.O. covered, so blanket washable, 16½ ohms per foot—1/6 per yard. 14 yards. Ideal for average blanket, 2/1, post free.

**MINIATURE COMPONENTS**

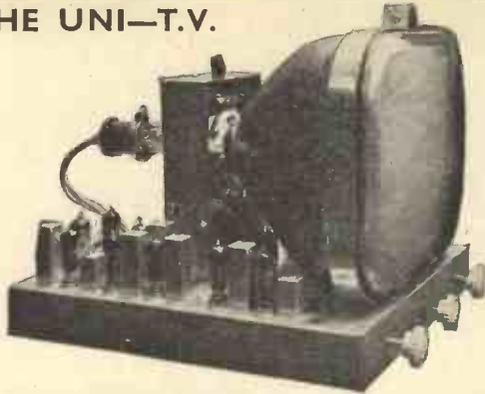

Made by Fortiphone and other famous firms. Intervall transformers N22 10/-, N23 10/6. Push-Pull input transformer A203, 15/6. Push-pull output transformer A204, 15/6. Earphone, 250 ohm, L 18/-. Plastic Earplug, 2/9. Tinsel leads and plug for earphone. 5/-. Slide switch ref. 3W5, 4/-. Pots with switch, ½ meg., 2/-. Very small resistors, many values, 6d. Very small condensers, prices from 6d. Tinsel leads without plug, 6d. Dent aid case with clip for pocket, 2/6. Plastic box with lid, 4½ x 3in. x 1½in., 2/6.

**F.M. TUNER**

This tuner is based upon the very successful circuit in the booklet published by Data Publications. We have made up models at all branches and will be glad to demonstrate. Cost of all parts including valves, prepared metal chassis, wound coils and stove enamelled scale, slow motion drive, pointer, tuning knob, in fact everything needed to make the complete unit, is 28/12/6. Data is included free with the parts or is available separately, price 2/6.

**THE UNI-T.V.**

Undoubtedly the most up-to-date television for the home constructor. You can build all or only part and the set when finished will be equal to a factory made equivalent. What other constructor T.V. has all these features?

- Made up units if required
- All miniature valves
- Metal rectifier
- No expensive transformers
- 13-channel circuitry
- Multi-vibrator time bases
- Ferro cube, E.H.T. and scan coils
- 34/38 mc/s. I.F.
- Suitable for any modern 12, 14 or 17in. tube
- Modern contemporary cabinet if required

The building cost (less tube) is only 229/10/- plus 10/- carriage and insurance. All parts guaranteed twelve months. Full information and data free with parts or available separately, price 3/6.

**THE "CRISPIAN" BATTERY PORTABLE**

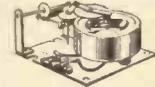

A 4-valve truly portable battery set with very many good features as follows:

- Ferrite Rod Aerial.
- Low consumption valves (DK96 range).
- Superhet circuit with A.V.C.
- Ready built and aligned chassis if required.
- Beautiful two-tone cabinet.
- Guaranteed results on long and medium waves anywhere.

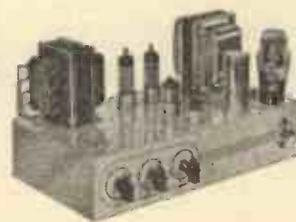

All parts, including speaker and cabinet, are available separately or if all ordered together the price is £7/15/- complete. Post and insurance 3/6. Ready built chassis 30/- extra. Instruction booklet free with parts or available separately 1/6.

**METER MOTORS**

These are very small A.C. mains operated motors which have many applications for driving toys or other light loads. All are in good condition, but not new, having been stripped from electric light meters. Final speed of approx. 1 rev. per hour. Price 8/6 each. Post and insurance 2/-.

**THE MULLARD 510 AMPLIFIER**

A High Quality Amplifier designed by Mullard engineers. Robust high fidelity with a power output exceeding 10 watts and a harmonic distortion less than .4% at 10 watts. Its frequency response is extremely wide and level being almost flat from 10 to 20,000 C.P.S.—three controls are provided and the whole unit is very suitable for use with the Collaro Studio and most other good pick-ups. The price of the unit completely made up and ready to work is £12/10/-, plus 10/- carriage and insurance. Alternatively, if you wish to make up the unit yourself we shall be glad to supply the components separately. Send for the Mullard amplifier shopping list.

**MINI-RADIO**

Uses high-efficiency coils—covers long and medium wavebands and fits into the neat white or brown Bakelite cabinet—limited quantity only. All the parts, including cabinet, valves, in fact, everything, 24/10/-, plus 3/6 post. Constructional data free with the parts, or available separately, 1/6.

19/6  
Post 2/6

Powerful three-valve Mains amplifier, ideal for dances, parties, etc. Complete less chassis cabinet and speaker (available if required)—data 1/6 (free with parts).

**T.V. Commercialising**

**Outfit** DO IT YOURSELF IT'S REALLY QUITE EASY

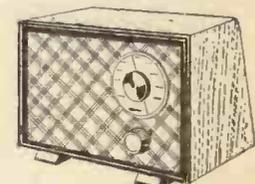

You will manage it in an evening and we guarantee SUCCESSFUL RESULTS OR MONEY BACK

Our parcel contains: I.T.A. Aerial, 36ft. I.T.A. Down Lead, I.T.A. E.B.C. Interference Eliminator, I.T.A. Converter. A special bargain price for all the above items if bought together is 28/10/-. Or 21/10/- down and 8 monthly payments of £1. Post and ins. 4/6. Full details with illustrations 1/6.

**THE SKYSEARCHER**

An all mains set for 19/6

This is a 2-valve plus-metal rectifier set useful as an educational set for beginners, also makes a fine second set for the bedroom, workshop, etc. All parts, less cabinet, chassis and speaker, 19/6. Post & ins. 2/6. Data free with parts or available separately 1/6. 3-valve battery version also available at the same price.

**TRANSISTORS**

Red spot replace Mullard OC71, etc. 10/- Blue spot suitable R.F. up to 1.8 Mc/s 15/- each. Mullard OC71, 20/- OC72, 30/-

**ELECTRONIC PRECISION EQUIPMENT LTD.**

266 London Road, Croydon. Phone: CRO. 6558 Half-day Wednesday.

249 Kilburn High Road, Kilburn. Phone: MAI 4921 Half-day Thursday.

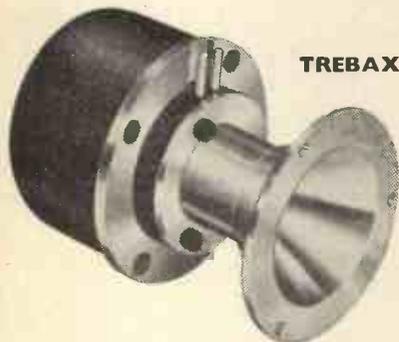

42-46 Windmill Hill, Ruislip, Middlesex. Phone: RUISLIP 5780 Half-day Wednesday.

152-153 Fleet St., E.C.4. Phone: FLEET 2833 Half-day Saturday.

29 Stroud Green Road, Finsbury Park, N.4. Phone: ARCHWAY 1049 Half-day Thursday.

Post orders should be addressed to E.P.E. LTD., M.O. Dept. 2, SUTTON ROAD, EASTBOURNE. All enquiries to Eastbourne address and please enclose S.A.E., terms are cash with order.

# 25 - WATT 3 - WAY HIGH FIDELITY LOUDSPEAKER SYSTEM

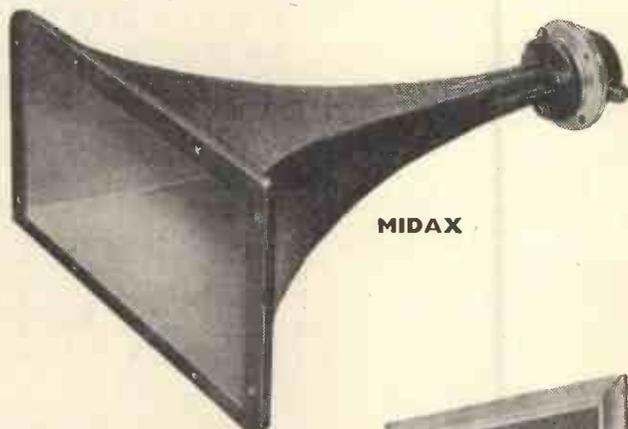

TREBAX

*This system comprises specially designed components which, used together, form a magnificent reproducer having very low distortion with wide frequency range, and generous power handling capacity. Each loudspeaker unit is a "specialist" for its own part of the musical register, so that the overall design does not suffer from compromises such as are necessary with a single unit "wide range" loudspeaker. The extreme flexibility of this system enables its performance to be adjusted accurately to individual requirements.*

The TREBAX High Frequency Pressure Driven Unit is a precision instrument covering the treble register from 2,500 c/s to 16,000 c/s, with absolute freedom from irregularities in response. It incorporates a unique self centering diaphragm assembly which can be replaced without the use of special equipment. To allow for the overlap region with the mid-range unit the crossover point should be placed at 5 Kc/s.

The MIDAX Mid Range Pressure Driven Unit covers the middle register from 400 c/s to 8 Kc/s with very low distortion. Crossover points should be placed at 750 c/s and 5 Kc/s to allow proper overlaps with bass and treble units. Special features include the use of an easily replaced self centering diaphragm assembly and a robust casting for the horn.

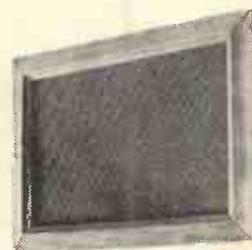

MIDAX

AUDIOM 80

The AUDIOM 80 (Bass) is a 15 in. direct radiator bass unit, of the massive construction and with the design refinements so necessary for absolute reliability and freedom from distortion under full load conditions. The crossover point to the mid range unit should be placed at 750 c/s. The Audiom 80 (Bass) Unit employs a cast chassis, with a plastic treated diaphragm suspension.

For optimum bass performance the Audiom 80 (Bass) loudspeaker should be housed in an enclosure loaded by an Acoustical Resistance Unit (Type 280). The construction of such an enclosure is extremely simple. The Midax and Trebax Units may be housed in the same enclosure, provided due allowance is made for the volume which they occupy.

280 ARU

*Crossover networks should be of the half section type, with 15 ohm terminations. 750 c/s, Type XO/750; 5000 c/s, Type XO/5000*

# Telcon Metals announce

a new Mumetal Shield for the 4"  
Emitron Cathode Ray Tube type 4 E.P.I.

This Shield has been designed with the assistance of Electronic Tubes Ltd., and is now fully tested and approved to produce maximum magnetic screening.

The Shield is manufactured in two halves in 0.036" thick Mumetal and is attractively finished with silver hammer stove enamel exterior and matt black heat absorbing interior.

Dimensional drawings are available on request.

Provided that additional tooling is unnecessary slight modifications can be effected to the screen at little extra cost.

**Immediate Delivery**

**THE TELEGRAPH CONSTRUCTION & MAINTENANCE CO. LTD**  
Metals Division, Telcon Works, Manor Royal, Crawley, Sussex. Tel: Crawley 1560  
HEAD OFFICE: MERCURY HOUSE, THEOBALD'S ROAD, LONDON, W.C.1. HOLBORN 8711.

## THE BRAYHEAD TURRET CONVERTOR

... foremost in performance and design  
... the Tuner for hundreds of models

By I.F. injection of the converted signal no break-through or patterning associated with aerial convertors arises. Each type of a particular I.F. frequency is capable of converting a very wide range of receivers. Supplied with any two sets of detachable moulded segments on which the R.F. transformers, aerial and oscillator coils are mounted. Additional segments are available for all channels, Bands I and III.

### FIVE TYPES AVAILABLE

Type	Sound mc/s.	Vision mc/s.	Heaters Series

## CHAS. H. YOUNG, LTD.

**3IN. AERIAL INSULATORS.** Ribbed glass. 1/6 each or 6 for 7/6. 12 or more post free.

**CONDENSERS.** TCC type III, 8 mfd. 1,000 v. List over £3. Only 10/6. Post 1/9. 8 mfd. 750 v. 5/6 each. Post 1/6.

**SHADED POLE MOTORS.** Heavy duty type totally enclosed made for professional tape deck. 35/- each. Post 2/6.

**AMERICAN 807 VALVES.** New, boxed, 7/6 each; 4 for 25/-.

**ELECTRON MULTIPLIERS.** Type 931A. Only 35/- each, or 2 for £3. Holders available at 2/- each.

**CRYSTAL HAND MICROPHONES** with polished grille and handle, four foot of screened lead. Only 21/- P. & P. 1/- WORTH DOUBLE.

**POWER UNITS IN BLACK METAL CASE.** 200/260 v. input. 200/250 v. 60/80 m.a. output, fully smoothed and filtered, also gives 31 v. D.C. and 6.3 v. 3 a. A.C., fitted with 5X5 rectifier. Only 50/- each. Carr. paid.

**COPPER AERIAL WIRE.** 14 g. H/D 140ft., 17/- 70ft. 8/6. P. & P. 2/- Stranded 7/25, 140ft. 10/- 70ft. 5/- P. & P. 2/-.

**RACK MOUNTING PANELS,** all 19in. long by 5½in., 7in., 8½in. or 10½in., 5/9, 6/6, 7/6, 9/- respectively. Post 2/-.

**ABSORPTION WAVEMETERS.** 3 to 35 m/c. in 3 switched bands, complete with indicator bulb. 15/- Post 1/-.

**TRANSMITTER TUNING CONDS.,** by Johnson U.S.A. 500 pf. 1,550 v. rating, ceramic insulation. 15/- each. Post free.

**HEADPHONES.** High resistance (4,000 ohms.), very sensitive. Bargain price only 12/6 pair. P. & P. 1/6.

**AMERICAN BREAST MIKES.** Swivel head. Push to talk and lock on switch. Beautiful job. Only 12/6. P. & P. 1/6.

**BRITISH BREAST MIKE UNIT,** complete with pair of 4,000-ohm phones in strong wooden carrying case, 8½ x 4½ x 7½. Ideal for mobile operators. Only 17/6. P. & P. 2/-.

**LOW RESISTANCE HEADPHONES.** New ex-W.D. stock. C.L.R. type. Only 8/6 pair. P. & P. 1/6. Special Terms Quantities.

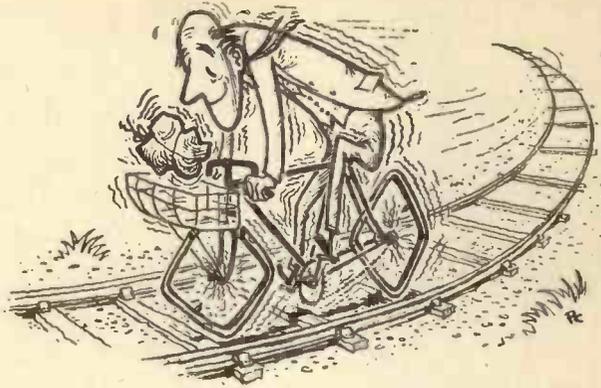

Most comprehensive stock of HiFi Equipment in the Midlands, including QUAD, LEAK, W.B., RCA., ROGERS, WHARFEDALE, GOODMANS, etc. Details and demonstrations with pleasure.

NO C.O.D. UNDER £1.

All Mail Orders to Dept. "W." Please print your name and address.

Phone CENTRAL 1635

## VIBRATION TESTING ?

No, we do *not* recommend this method!

We offer, instead, SAVAGE 'VLF' and 'LRF' Amplifiers, giving

## A SOURCE OF POWER

where it is required for vibration and fatigue testing of structures, components, engineering products, engines, special metals, etc.

In this direction, the applications of this equipment are countless, as they are, also as a variable frequency power source for transformers, meters, motors and electrical component design.

This equipment is inexpensive to purchase, simple and economical to use; gives complete and accurate control at all times.

### RANGE OF AMPLIFIERS

Power	Type	Freq. Range
1 kW	"VLF"	6 c/s to 2,000 c/s (100 watts at 3 c/s)
1 kW	Mark II Star	50 c/s to 10 kc/s
1 kW	"LRF"	5 kc/s to 100 kc/s
10 kW	Type 10	40 c/s to 10 kc/s

## VIBRATORS

*for fatigue testing*

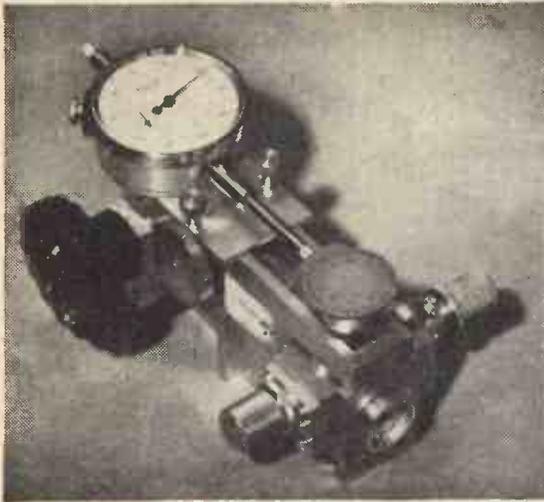

*Guided missiles, aircraft and all forms of industrial components.*

**TYPE V 1000** - This vibrator is designed to produce a peak alternating thrust of  $\pm 500$  lb. (unblown) at 1 kW. A forced draught into the vents provided in the base will allow increased input current for a correspondingly increased thrust. Unit construction has been adopted and careful attention to detail has produced a vibrator that can quickly and easily be stripped and reassembled should repairs become necessary—the design is such that no routine maintenance is required.

★ Ask us TO-DAY for full details without obligation. Or let us know your problem in this field and we will gladly help you.

W. BRYAN SAVAGE LTD

## wavemeter components for the 8-10 mm band

wavemeters and reference cavities,  
standing wave indicators (*ill.*), attenuators,  
directional couplers, waveguide switches,  
isolators, crystal holders,  
thermistor mounts,  
drawn or precision electroformed guide,  
waveguide benches and pillar supports. etc.

All components are based on the standard size WG 22 with internal dimensions of 0.280in. by 0.140in. They are normally fitted with U.K. standard, pressurized, screwed-ring connectors with plain flanges but choke flanges or U.S.-type flanges are also available. The usual external finish is silver plating flashed with rhodium (satin chrome for benches and pillar supports). All components are made with the necessary high order of precision.

## ADAPTATAPE

is the name of the new SONOMAG Pre-Amplifier recommended on page 238 of the November "Hi-Fi News" to those already owning Hi-fi equipment and wishing to add tape reproduction of the same quality.

This is the **ONLY** pre-amp. at present available designed specially for the new Collaro Transcriber, and rigidly fixed as a unit to it.

Demonstrations to all hi-fi enthusiasts of our pre-amp. used in conjunction with the Collaro Transcriber Tape Unit, Collaro Transcription Motor, Leak Dynamic Pick-up and Diamond stylus, Leak Trough-line F.M. Tuner, Wharfedale Baffle 3-speaker system and Leak main amplifiers, will convince you of the fine standard of recording possible. Day, or evening (by appointment).

**Price 32 gns.**

(Power pack, if required, 4 gns. extra.)

Fitted into Fireside Console cabinet, oak, walnut or mahogany finish, 40 gns.

Your own Collaro Unit fitted, aligned, tested and guaranteed (at our factory only) for 16 gns.

Complete Tape Recorders, including Collaro Microphone and 1,200ft. tape. Portable 48 gns. Console (with extra large speaker) 58 gns.

Leaflet on request.

## TEST METERS

American multirange, in handsome polished wooden case with leather carrying handle. Size 6in. x 6in. x 3in. 400 microamp basic movement. A.C. and D.C. volts 0-2.5, 10, 50, 250, 1,000, and 5,000. (1,000 ohms per volt.) D.C. current 0-1, 10, 100 m/Amps., and 1 Amp. Ohms 0-500, 100 K., and 1 Meg. Decibels -10 to +69. Complete with test probes, leads, circuit, instructions, and battery. New condition, £5/19/6.

**INSULATION TESTERS** by Record Electric. 0-50 MegOhms. Test voltage 500. In perfect working order. Complete in leather carrying case. £9/19/6.

**OUTPUT POWER METERS.** Ex-W.D., No. 3, Mk. 2 (Windsor 150 A.). Impedance ranges 2.5 to 20,000 Ohms in 40 steps. Power ranges 0.5, 50, 500, milliWatts, and 0-5 Watts. Also scaled in dB. 3in. M/C meter. In oak case, 10in. x 8in. x 5in. In good condition. Tested. £15.

**AVO TEST BRIDGES.** Capacity 5 pfd. to 50 mfd. Resistance 5 Ohms to 50 MegOhms. Inductance can be measured against external standard. Balance is indicated on a meter, which can also be used a valve voltmeter, from 1 to 15 volts. Has leakage test and Power Factor control. For A.C. mains operation 220-240 v. Good condition. Tested. £8/19/6.

**AVO VALVE TESTERS** in Good Condition, with panel. For CALLERS only.

**MARCONI SIGNAL GENERATORS** TF390G, 4-32 and 50-100 Mc/s.... £25 0 0  
TF390G, 16-150 Mc/s..... £27 10 0  
TF517F, 18-58 and 130-260 Mc/s. £35 0 0  
All complete with Instruction Book, spares, Calibration Charts, etc. In original transit cases. Brand new. We have large stocks of similar quality Laboratory type equipment available to callers at very reasonable prices.

**VIBRATOR PACKS.** Input 6 v. D.C. Output approx. 100 v. at 30 m/Amps. D.C., fully smoothed and RF filtered. Size 6in. x 5in. x 2in. Fitted with Mallory 629C Vibrator. Brand new, boxed, 12/6.

**HEAVY DUTY BLOWERS.** For A.C./D.C. mains 200-250 v. 300 watts, 1in. diam. outlet. Suitable for industrial use, forges, etc. With spare filter pads and brushes. Brand new. £4/19/6.

**HEAVY DUTY LT TRANSFORMERS.** 230 v. A.C. mains input. Secs. 5-0-5 v., 5-0-5 v., and 5-0-5 v., all at 5 amps., each winding, 5, 10, 15, 20, 25, or 30 v. at 5 amps., or other possible combinations. 4in. x 4in. x 6in. high. Wt. 12lb. BRAND NEW, 29/6. ANOTHER, 230 v. A.C. mains input, two separate secondary windings, each 14 v. C.T. 12 amps. 7, 14, 21, or 28 v. at 12 amps., or other possible combinations. Wt. 21lb. Ex Admiralty. Brand new, 42/6.

**U.S.A. potted type, input 210/220/230 v., 5 secondaries, 7.5 v. 4 a., 7.5 v. 4 a., 7.5 v. 8 a. and 2.5 v. 5 a. ALL centre tapped, and 6.3 v. 4 a. These can be connected to give many useful voltages up to 31 v. 4 a. Size 6in. x 5in. x 4in. Wt. 14 1/2 lb., price 35/-.**  
**G.E.C. 200-250 v. A.C. mains input, 30 v. (centered at 10 v.) 36 amps. output. 5 1/2 in. x 6in. x 7in. high. Wt. 24lb., 55/-.**

**SELENIUM BRIDGE RECTIFIERS.** Funnel cooled. A.C. input 45 v. R.M.S. D.C. output 30 v. 10 amp. 47/6 each.

**HEAVY DUTY SLIDER RESISTORS.** 250 watts. Rated to carry 25 amp. 4 ohm resistance. For charging boards, etc. Worm drive. On metal stand 9in. x 4in. x 6in. high. BRAND NEW 7/6 each. ANOTHER, 12 amps. 1 ohm, 150 watts, 6/6. ALSO 14 ohms, graded 1 to 4 amps., 7/6.

**FIELD TELEPHONES.** Army type D, Mk. 5. Buzzer calling. Ideal for building sites, farms, workshops, etc. Complete with handset and batteries. Tested, 39/6 each.

**CRYSTALS.** 200 Kc/s American GEC, 10/- each. 100 Kc/s R.C.A. bars, 19/6 each.

**5FT. P.O. TYPE 19in. RACKS.** "U" channel, heavy angle base, 59/6.

## TOP BAND R1155 L's!

Superior version of the R1155 with super slow-motion drive. 200 kc/s to 18.5 mc/s. in 5 ranges, covering the 100-200 metre trawler and shipping bands. Although not packed in original transit cases, these are in every way equal to BRAND NEW, and are fully guaranteed. Never before available at the low-price of ONLY £12/19/6. Carriage 10/6. R1155A equal to new and fully guaranteed. £10/10/-.

ALL R1155's are supplied with free booklet, re-aligned, and tested before despatch, and gladly demonstrated. Send S.A.E. for details of receivers and power packs, or 1/3 for 14-page illustrated booklet.

**A.C. MAINS POWER PACKS WITH OUTPUT STAGE.** Just plug in, NO modifications. Heavy duty quality job, guaranteed 6 months. Type A, £4/10/-; Type B, with 6in. speaker, £5/5/-; Type C, in specially designed black crackle steel cabinet, with 8in. speaker de luxe, £6/10/-.

**SAVE £££. DEDUCT 10/- WHEN PURCHASING R1155 AND POWER PACK TOGETHER.**

## WIRELESS SET No. 19, Mk. 2.

Two transmitter-receivers and an Intercomm. amplifier in one case. "A" set covers 2-8 Mc/s. R/T and CW, and "B" set 240 Mc/s R/T only. Complete with dynamotor for 12 v. D.C. operation, 6 K7G, 2 6K8G, 2 6V6G, 6B8G, 807, EF50, EB34 and 500 microamp check and tuning meter. S.A.E. for full details and specification. Technical data available. Made in Canada, in first-class condition, £5/10/- plus 15/- Carr. and Pkg. Or less dynamotor, £4/19/6.

**WIRELESS SETS NO. 17 Mk. 2.** A portable 2-valve transceiver for R/T communication, freq. 44-61 Mc/s. Easily converted to the new 70 Mc/s band! Complete with valves, HR headphones and microphone. Requires 120 v. H.T. and 2 v. accumulator. Brand new Ex-Govt. surplus, tested. With circuit diagram and operating data. In wooden cabinet, with carrying handle. 15in. x 14in. x 9in. Wt. 35lb. 59/6.

**MEDIUM WAVE COMMAND RECEIVERS.** 550-1,500 Kc/s. Ideal for car radio. These have not been on the market for years! Few available. First class condition. ONLY 79/6. Still available, BC453 (Q5'er), 59/6, and BCXXX (Top band) 1.5-3 Mc/s. NEW, BOXED, 75/-.

**FREE CIRCUIT WITH EACH RECEIVER. TRANSMITTERS.** Complete with 1626, 1629 and 2 1625's and crystal. BC457 4-5.3 Mc/s., 22/6. NEW ditto, 29/6. BCZZZ 2.1-3 Mc/s., unboxed, 29/6.

**PYE 45 Mc/s IF STRIPS.** Complete with 7 valves and CIRCUIT. New. ONLY 39/6.

**MINIATURE 9.72 Mc/s IF STRIPS.** Only 10 1/2 x 2 1/2 x 3in. Ideal for FM conversion. 2 EF92's and 1 EF91 IF Amps., EB91 Det/AVC, EF91 AVC Amp., and EF91 noise limiter. Brand new, with circuit, 45/-, or less valves 7/6.

**RF UNITS. ALL BRAND NEW AND BOXED.** RF24 10/-, RF25 12/6, RF26 25/- Post 2/6.

**RT37/PPN2 BEACON TRANSMITTER-RECEIVER.** 214-234 Mc/s. Size 13in. x 10in. x 5in. Contains 5 3A5, 3 1S5, 1 1R5 and 2 2 v. synchronous vibrators. Operates from 2 v. accumulator via 2 built-in vibrators. Complete with telescopic mast antenna system (9ft.), lightweight headphones. Technical Manual, super quality carrying haversack, cords, co-ax. cables, plugs, etc. Total wt. 28lb. BRAND NEW, boxed, American equipment, 72/6.

**TWO-WAY MORSE TRAINING SETS, W/T Mk. 3.** Consists of 2 valve oscillators (ARP12's) (one with pitch control), for 1 or 2 operators. Has provision for creating "atmospherics." In polished oak case 12in. x 10in. x 8in., wt. 16lb. Complete with valves, leads, 2 keys, 7-way terminal board, circuit and instructions, but less batteries and phones. Ideal for Cadets, Scouts, etc. SNIP, 19/6, Carr. 7/6.

**COMMUNICATIONS RECEIVER CR100.** Covers 60 Kc/s to 30 Mc/s in 6 ranges. 2 RF's and 3 IF's, variable selectivity, B.F. Osc., etc. Operates from 210-250 v. A.C. mains. Size 16in. x 12in. x 16in. deep, wt. 82lb. S.A.E. for illustrated details. Overhauled, first class condition, £21. CR100/2 with side-tone facility, superb control, £25. Plus £2 carr. and pkg. (£1 refund when pkg. case returned.)

**INDICATING UNIT 277.** Contains lin. C.R. Tube type VCR522 (same as used in G.E.C. "Microscope"), 4 EF50, 2 EA50, and a host of useful components. Has "Focus" and "Brightness" controls, etc. Size 5 1/2 in. x 7in. x 12in. deep. All Tubes tested. 39/6.

**INDICATOR UNIT 62A.** Has VCR97 with Mu-metal screen, 12 EF50, 3 EA50, 2 EB34, 4 SP61, Muirhead SM Drive, and a host of pots, switches, etc. On double-deck chassis. Ideal for 'scope. In wooden transit case. Brand new condition. 59/6.

**METAL RECTIFIERS.** 250 volt, 100 m/A 6/9. 230 volt, 60 m/A 5/-.

TRADE ENQUIRIES INVITED

FOR ALL RADIO BARGAINS

WE PURCHASE ALL TYPES OF RECEIVERS AND TEST GEAR

### 50 MICROAMP METERS

A 2 1/2 in. flush mounting meter housed in a grey instrument case, complete with a chrome handle. Resistance 800 ohms. Supplied brand new and tested, 59/6 each.

### MODULATION TRANSFORMERS.

Collins type, potted. Push-pull 807 to parallel 807, 20 watts audio. Brand new 12/6 each.

### HEADPHONE ADAPTORS.

High to low impedance matching, brand new, 1/3.

### COPPER AERIAL WIRE.

Ex-U.S.A. 300ft. reel, 3/6.

### WESTON DUAL RANGE OHMMETERS

American test instruments by two famous manufacturers. Incorporates a 2 1/2 in. moving coil meter, ranges 0-2,000 and 0-200,000 ohms. Price 39/6 each, brand new with leads and leather carrying case.

### 1.5 VOLT DRY CELLS.

Type 5. Large tubular size, extra long life. Brand new and sealed, 1/3 each.

### EX. A.M. SWITCHBOXES.

Contains three separate 5 amp. on/off switches moulded in one Bakelite block. Brand new 1/9 each.

### ROTARY CONVERTORS.

Input 24 volt D.C. Output 50 volt A.C. 50 watts. Brand new, 29/6 each.

### 6 VOLT VIBRATOR PACKS

6 volt D.C. input. Output 120 volts 60 m/a. Fully smoothed, uses standard Mallory 4-pin vibrator. Compact in size. Supplied brand new and boxed, 15/- each.

### WAFER SWITCHES.

Small. 2 p. 2 w. 1/6. 3 p. 4 w. 2/6. 4 p. 3 w. 2/6. 2 p. 6 w. 2/6. 1 p. 12 w. 2/6. Meter switch 2 p. 11 w. 2 bank, 2/6. Ceramic 4 p. 4 w. 2 bank, 3/6. Large Tx. ceramic, 2 p. 6 w. 2 bank, 7/6.

### SOUND POWERED EARPIECES.

Can be used as a two way communication, no batteries required. Brand new 3/6 each. Brand new sound-powered telephone handsets, 19/6 each.

### VIBRATOR POWER UNIT 173.

24 volt D.C. input. Output 120 volt 60 m/a., fully smoothed. Uses 12 volt 4-pin vibrator and contains transformer, choke, condensers, and 2 mains 60 m/a. metal rectifiers. Unused, price 11/6 each.

### A.R.88 WAVECHANGE SWITCHES

Ceramic, 8 bank, 6 position, complete with screens. BRAND NEW and boxed, 17/6 each.

### CRYSTAL MICROPHONE INSERTS.

Extra sensitive, ideal for amplifiers etc., 4/6 each.

### HEAVY-DUTY SLIDER.

1 ohm, 12 amps. Brand new 6/6 each.

### ADMIRALTY REFLEX RE-ENTRANT P.A. LOUDSPEAKERS

Twin units. Impedance 15 ohms. Extremely sensitive and directional. Ideal for all outdoor P.A. work. Price 32/6 each.

### TRANSMITTER/RECEIVER

No. 19 Mk. II

Equipment comprises 3 separate units built into one chassis and separate power pack.

Specification: "A" set. Transmitter/receiver. Frequency coverage 2-4.5 mc/s. and 4.5-8 mc/s.

For R.T., C.W. or M.C.W. Range on R.T. 15 miles, C.W. 50 miles. Superhet receiver, 465 kc/s I.F., B.F.O., etc. Rx. Valve line-up: 6K7, RF, 6K8 mixer, 2 6K7 I.F., 6B8 det. A.F. phone output. Tx: 6K8 mixer, BFO, EF50 buffer, EB34 ADC, 807 P.A. "B" set. Transmitter/receiver 229/241 mc/s. Local use up to 1 mile. Valve line-up: CV6, 2 6K7 and 6V6. Inter Com. set. 2 valve A.F. amplifier for vehicle crew inter-communication. Valve line-up: 6K7 and 6V6.

A 2 1/2 in. meter is built in reading L.T. and H.T. voltages, drive, etc. POWER UNIT. 12 volt D.C. input. Output 275 volts 110 m/a., and 500 volts 50 m/a.

Equipment is of American manufacture and is supplied in good condition. Price, complete with power pack only 25/10/- each, plus 15/- carriage. Less power pack £4/19/8.

### BENDIX COMMAND RECEIVERS

Brand new and boxed, complete with all valves and circuit. Top band model, 1.5 to 3 mc/s. 75/- each.

BENDIX COMMAND TRANSMITTERS. Complete with all valves and crystal. Coverage 2.1 to 3 mc/s. 29/6 each. Coverage 4-5.3 mc/s, brand new, 29/6.

### R.1155 COMMUNICATION RECEIVERS, MODEL L

Latest issue by the Ministry. Similar to the model N, incorporating the trawler band. Frequency coverage, 200-500 kc/s., 600-1,500 kc/s., 1.5-3 mc/s., 3-7.5 mc/s., 7.5-18.5 mc/s. Supplied as

new, aerial tested and complete with illustrated descriptive leaflet. Price £12/19/6 each. A combined A.C. mains power pack and output stage can be supplied for the above receiver at an additional cost of 85/- each.

### MARCONI U.H.F. SIGNAL GENERATOR T.F. 517, MODULATION GENERATOR T.F. 675

Complete station comprising TF 517 signal generator, frequency coverage 16-58 mc/s. and 150-300 mc/s. and TF 675 pulse modulator, repetition speed 50-3,000 cycles, pulse width 2-12.4 µs. Supplied brand new in original transit case with instruction book and full complement of leads. £42/10/- each.

### POWER UNIT TYPE 3

A complete A.C. mains power pack, input 200/250 volts. Output 250 volts D.C. 100 m/a. and 6.3 volts 4 amps. Fitted with H.T. voltmeter and current meter. Fully smoothed, choke and paper condensers. Housed in grey case for 19 in. rack mounting. Supplied in brand new condition, 72/6 each.

### FIELD TELEPHONES

Type Don Mk. 5. Buzzer calling. Ideal for inter office or house communication. Supplied complete with two 1.5 volt cells, tested and ready to operate. Price only 39/6 each.

### BARGAIN MAINS TRANSFORMERS

All new and unused.

### PANORAMIC ADAPTORS

Brand new and boxed Ex-U.S.A. For use with receivers having an I.F. of 455/475 kc/s., giving a bandwidth of 200kc/s. 110/230 volt A.C. operation. Price £30 each.

#### INSTRUMENT POTENTIOMETERS.

Brand new and boxed. Rating 100,000 ohms, 10 watts, 3 1/2 in. dia. Ideal for bridges, etc., 10/6 each. Ditto, twin gang, 5 k. ohms, 10/6.

#### ROTARY CONVERTORS

Input 24 volts D.C. Output 230 volts 50 cycles A.C. 100 watts. Brand new 92/6 each.

### G.P.O. BELL UNITS No. 1.

Supplied brand new in wooden box, complete with two bells, induction coil and condenser, 7/6 each.

**AMERICAN MULTI-RANGE TESTMETERS**

1,000 ohms per volt, 400 microamp basic movement. Ranges as follows: A.C. and D.C. volts, 0 to 5,000 volts in 6 switched ranges. D.C. current, 1ma., 10ma., 100ma. and 1 amp. Resistance measurement from .1 ohm to 1 megohm. Decibels from -10 db to +15 db. The instrument is housed in a polished wood case, complete with leather carrying handle, test prods and battery. Guaranteed perfect order and tested before despatch. Price £5/19/6 each.

**MAINS NEON PANEL INDICATORS.** Chrome escutcheon. 200/250v. Red, amber or clear, 3/9 each.

**460 kc/s B.F.O. UNITS.** Brand new and complete with IS5 valve, fully screened in aluminium case, only 8/6 each.

**EDDYSTONE POWER UNITS.** 200/250 volts input. Output 175 volts 65ma., and 6.3 volts 3 amps. Fully smoothed, 5Z4 rectifier, 32/6 each.

**SMOOTHING CHOKES**

**ALL NEW AND UNUSED**

G.B. 20h. 175ma., 10/6; Parmeko 8H. 250ma., 10/6; Parmeko 9h. 100ma., 7/6; Parmeko 8h. 50ma., 5/6; Parmeko C core, 4h. 22.5ma., 4/6; Collins 8H. 100ma., 8/6; Parmeko swinging choke, 3.6-4.2H. 250ma. 20H. no D.C., 10/6; 15H. 60ma., 5/6; STC 10H. 60ma., 4/6.

**MARCONI CRYSTAL CALIBRATOR** Frequency coverage 170/240 mc/s. Directly calibrated, accuracy .001%. Operation 200/250 volts A.C. Supplied complete with 5 mc/s crystal and spare set of 5 valves, in original transit case, brand new with instructions. £4/19/6 each.

**SURPLUS SPEAKER BARGAINS**

**All new and unused**

Elac 5in. 3 ohm, 17/6; Elac 6 1/2in. 3 ohm, 17/6; Elac 8in. 3 ohm, 19/6; Elac 10in. 3 ohm, 27/6; Elac 7X4 elliptical 3 ohm, 18/6; Plessey 2 1/2in. 3 ohm, 16/6; Plessey 10X7 elliptical 3 ohm, 27/6; Goodmans 3 1/2in. 3 ohm, 17/6; Std. pentode o/p transformer, 4/6.

**A.C. MAINS BLOWER MOTORS**

220/230 volt 300 watts. 1 1/2in. diameter outlet. Housed in metal box and fitted with dust filter pads. Supplied complete with 4 spare filters, 2 way outlet adaptor and 2 lengths of hose. Brand new only £4/19/6 each.

**GERMANIUM CRYSTAL DIODES.** ONLY 10d. R.E.P. dual range crystal coil with circuit, 2/6. .0005mfd. air spaced tuner, 3/6. 2,000 ohm headphones, 12/6 pr.

**GRAM MOTORS**

Special offer. Garrard 200/250 volt A.C. gram motors with turntables. Speed adjustable from zero to 45 rpm. A real bargain at only 22/6 each.

**AVO VALVE TESTERS**

A superb offer of these fine test instruments which are supplied in new condition in original cases. Equipment is in 2 parts. One is the valve panel with selector switches and the other the meter with voltage adjustment controls, etc., and incorporates an automatic cut-out. Existing bases on valve panel are: B3, UX4, B7, UX7, 1/octal, Mazda octal, B5, UX6, B7, loctal, UX5, B9G. 3 blanks are provided to fit latest type bases, i.e. B9A and B8A. Extremely simple to operate. Only £5/19/6 each.

**EX-NAVY SOUND POWERED TELEPHONES**

This type requires no batteries to operate. Fitted with hand generator for calling giving a high pitch note. Can be fitted anywhere. Ideal for factories, offices, field activities, etc. Only 45/- each.

**MODULATOR 67**

These bargain Instruments contain a COMPLETE A.C. MAINS POWER PACK, input 230 volts 50 cycles. Output 350 volts. 120ma. and 6.3 volts 5 amps. Choke and condenser smoothed and uses 5Z4 rectifier. (Transformer actually 200 ma.) Also included in the unit are 11 other valves, 5 SP61, 1 YR116, 2 EB34 and 3 EA50, and many other useful components, pots, resistors, switches, etc. Size of case 18 x 9 x 7in., which is finished in grey. Supplied brand new, 49/6 each.

**EXPLODERS-CONDENSER-DYNAMO MK1**

This unit was designed for detonating an explosive charge but can be used alternatively as a portable photo flash generator, the advantage being that no batteries are required. Operation is by hand generator supplying A.C. pulses, stepped up through a transformer, rectified by 2 J 50 recs and a final charge is developed across a 6mfd. paper condenser of 1,800 volts. A neon indicates when charged, press button to fire. Supplied brand new with circuit, £3/19/6 each.

**AMERICAN GEARED MOTORS**

American 24 volt D.C. motors with built-in precision gearbox giving twin outputs 20 r.p.m. and 6 r.p.m. Will also operate on 12v. giving reduced outputs. Size 7in. x 1 1/2in. Shaft dia. 1/4in. Supplied brand new only 29/6 each.

**AMERICAN BEACON TRANSMITTER/RECEIVERS**

RT 37/PPN-2. Brand new and boxed, complete with instruction book. Equipment comprises transmitter/receiver with 9 valves (5 3A5, 3 1S5 and 1 IR5), with built-in 2v. vibrator power pack, spare vibrator, headset, connector leads and 10ft. collapsible aerial. Frequency coverage 140/238 mc/s. Price 72/6 each.

**AMERICAN ROTARY GENERATORS**

Input 12 volt D.C. Output 250 volts 80ma. Fitted with blower attachment which can be easily removed if desired. Brand new 22/6 each. Ditto with 22 volt input 22/6 each.

**MARCONI SIGNAL GENERATORS**

Model TF390G. Frequency coverage 16-150 mc/s. 200/250 volt A.C. operation. Supplied brand new in original transit case, complete with calibration charts, £25 each. Also TF-144 85kc/s-25 mc/s. Supplied fully overhauled, guaranteed, £75. Marconi Valve Voltmeters TF-428B. Brand new, £25. Marconi "Q" meters, fully overhauled, guaranteed, £75

**P/O RELAYS AND KEY SWITCHES** Extensive stocks available at "CHEAP" prices. All enquiries welcomed. Special American relay offer. Typel. 3,500 ohm coil, 1 pr. changeover contacts, 12v. 6ma., 5/6. Ditto 6,500 ohms, 2ma., 6/6 each.

**DEAF AID EARPIECES.** Brand new, 30 ohm resistance, 3/6. Leads 1/-. Midget valve CK505, 2/6. 1 meg. pots w/switch, 1/-. Switch 1 pole 4 way, 1/-. Output transformer, 2/6.

**AMERICAN MULTI-RANGE TESTMETERS**

Precision series, fitted with the larger 4 1/2" meter. 1,000 ohms per volt. Ranges as follows: A.C. and D.C. volts 0-6,000 volts. D.C. current 0-12 amps. Resistance 0-10 megohm. Six output ranges and six DB ranges -12 to +78 DB. Supplied brand new in wooden carrying case complete with leads and instructions, £8/19/6 each.

# LOWTHER LINEAR AMPLIFIERS

**Exclusive Lowther Design and Build**

**Lowther Linear Amplifier**  
**LL.10 £25**

The new range "Lowther Linear" amplifiers surpass all previous multi-loop feedback or basic ultra linear technique by the utilisation of the suppressor grid of the Mullard power pentode EL34 into the distributed load circuit which enhances the performance in all detail.

Generous in design, the amplifier's performance will remain at its high laboratory test specification throughout many years of use.

# LASKY'S RADIO

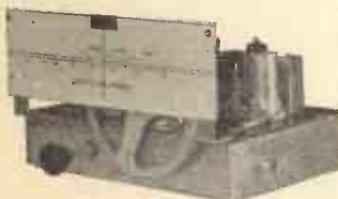

**TAPE DECK CASES  
ALMOST HALF-PRICE**

Strongly made and finished with light grey leatherette with black/silver bands, strong hinges and clasps. Pocket in lid for tapes and spools, door for microphone, etc. Overall dim.: 15 1/2 in. long, 13 1/2 in. wide, 9 in. deep. Inside dim.: 14 1/2 in. x 12 1/2 in. x 5 1/2 in. A real general purpose job; will take almost any type of Deck including Collaro Tape Transcriber, also almost any type of Record Changer including RC.80, etc.

**LASKY'S PRICE 59/6** Post 3/6.

**LARGE SELECTION OF CABINETS** for TV and radiograms, also carrying cases for record players, tape recorders, etc. We have a Case for any type of unit or combination of units. Your enquiries invited.

## LASKY'S F.M. TUNER

**FOR HOME CONSTRUCTION ON A PRINTED CIRCUIT**

*A really first-class Unit.*

- Note these star features:—
- ★ HIGH SENSITIVITY.
  - ★ ALL BRAND NEW T.C.C. CONDENSERS.
  - ★ AERIAL COIL AND R.F. COUPLING COIL PRINTED ON CIRCUIT.
  - ★ 5 VALVES AND 2 GERMANIUM DIODES.

By the use of a printed circuit the I.F. and R.F. amplifiers are extremely stable at maximum gain and results are consistent on all tuners.

- Valve line-up:—
- R.F. Amplifier, Z719 or EF80.
  - Mixer and Osc., B719 or ECC85.
  - 1st I.F. amp., W719 or EF85.
  - 2nd I.F. amp., W719 or EF85.
  - 2 Germanium Diodes GEX.34.
  - Driver Limiter, Z719 or EF80.

**CAN BE BUILT FOR 8 GNS.** (Including Valves)

Write for full instructions, data and illustrations, 2/6 post free.

All parts available separately.

**SAVE POUNDS! ORDER BY POST IF YOU CANNOT CALL**

**WE STRONGLY RECOMMEND THE LATEST**

## Brenell TAPE EQUIPMENT

**DECK Mk. II, 18 gns.**  
**AMPLIFIER Mk. II, 4 watts, for use with 3 ohms speaker. Magic Eye, 18 1/2 gns.**  
**CARRYING CASE, £4/18/-.**

**COMPLETE EQUIPMENT** less mike, with tape, in carrying case, ready for use, 48 gns.

Come and inspect it and have a demonstration. Note these features.

- ★ Convertible to Stereophonic Recording
- ★ 3 independent motors ★ 3 recording speeds: 3 1/2, 7 1/2 and 15 i.p.s.
- ★ twin track recording on 7 in. reels
- ★ fast forward or reverse in 45 secs.
- ★ plays all types of pre-recorded tapes
- ★ Magic Eye recording level indicator
- ★ baffle-mounted elliptical speaker
- ★ 4 watts undistorted output.

Demonstrations at both addresses. Full details post free.

## BIG BARGAIN IN ALL DRY POWER UNITS

By Decca. Suitable for any battery radio using 1R5, 1T4, etc., 67 1/2 volts H.T., 1 1/2 volts L.T. Mains input 200-250 adjustable. On metal chassis with rubber feet and black plastic cover. Size: 7 in. x 5 in. x 1 1/2 in. Mains lead and on/off switch. Complete with two metal rectifiers ready for use. Listed at £4/15/-.

**LASKY'S PRICE 35/-** Post 3/6.

Note: If this unit is too large to fit into your portable, remember you stand your set on or by it.

## NEW W/B F.M. TUNER

Gives outstanding performance due to the specialised design incorporating advanced circuits. Wide freq. range—87.5 to 108 Mc/s. Price **£25** Full details on request.

## NEW JASON switched-tuned F.M. UNIT

A new 4-valve F.M. Tuner in which the desired programme is tuned-in by a 3-position switch. Stable, easily pre-tuned and easily installed. **£19/16/2**

Full details on request.

## JASON "ARGONAUT"

A super-sensitive Tuner for F.M. and medium waves. Complete parcel with power supplies, £13/19/6. Post 3/6. Data Book, 2/- . All components available separately. Chassis Assembly, 57/9, post 2/6. I.F. and Coil Set, 78/-, post 1/6.

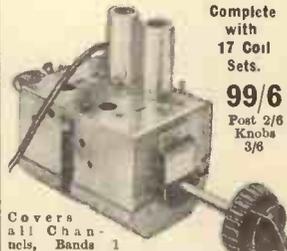

## JASON F.M. TUNER

Special parcel containing data book, chassis, front panel, dial, drive tuning condenser, full sets of coils. I.F.'s ratio detector, etc. Post 2/6. **£8/9** DATA BOOK with price list 2/-. Note: This tuner uses 4-6A36 and 2 crystals and can be built for £8/15/- plus 3/6 post.

## DULCI F.M. TUNER

Incorporates its own power supply and provides complete F.M. coverage. Complete **£17.10.0** Carr. & Pkg. 7/6. **DULCI AM/FM TUNER £20/17/-**

## FAMOUS MAKE TURRET TUNER

Complete with 17 Coil Sets. **99/6** Post 2/6 Knobs 3/6

Covers all Channels, Bands 1 and 2. Valves used: PCC84, B.F. double triode, cascade B.F. amplifier, PCF80, triode pentode, f.o. and mixer. I.F. output 33-38 Mc/s. Easily modified to other I.F. outputs. Full instructions and circuit diagram supplied.

## New TSL F.M. TUNER

High Stability model that will work well in extreme fringe areas. 6 valves including Magic Eye and Power supply using the latest Gortler permeability Unit. Frequency 85-101 Mc/s covering all present and future FM/VHF transmissions. A Tuner of high sensitivity and high stability. Complete **£17/10/-** Full details on request.

## METER BARGAIN

2 1/2 in. moving coil. Brand new micro-ammmeters. F.S.D. 0-750 micro-amps., 15 ohms resistance. Post extra. **15/-**

## LARGE RANGE OF TAPE DECKS

Collaro "Tape Transcriber," £20.  
Truvox.....23 gns.  
Lane.....£18/10/-  
Brenell.....18 gns.  
Wearite £35 and £40.

## TAPE RECORDERS

Large range, Elizabethan, Truvox, Sound, Vortexion, Brenell, etc.

## TAPE DECK MOTORS

Anti-clockwise, shaded pole. Collaro 25/- . Garrard 26/6. B.T.H. 29/6. Post extra.

## NEW PLASTIC RECORDING TAPE

"Ferrovoice," on plastic spool, 1,200ft. List, 32/6. **LASKY'S PRICE 25/-** Post 1/- . Spare 7 in. spools, 3/6.

**SPECIAL OFFER!** Magnetic Recording Tape, kraft base. On Cyldon metal spools: 1,200ft. 11/6; 600ft.

On plastic spools: **7/6** 1,200ft. 12/6; 600ft. 9/6. Post 1/-

**PURETONE Tape** on plastic spool, 1,200ft., 14/11. Post 1/- extra.

All makes of Tape including thin long-playing.

WHARFEDALE

3-SPEAKER SYSTEM

SFB/3. Consists of 3 low resonance speakers and special crossover unit fitted in a handsome resonance-free cabinet, size 34 in. x 31 in. x 12 in. Free range 30 c/s. to 20,000 c/s. **£39.10.0** New Price, complete, Free demonstrations at Tottenham Ct. Rd.

LORENZ 3-SPEAKER SYSTEM

A highly efficient system specially designed to give the widest angle of sound distribution and unsurpassed frequency response. Comprises one 12in. Unit and two treble Units **£14.19.6** Complete.

HI-FI ELECTROSTATIC SPEAKERS ("TWEETERS")

Easy to fit to any radio, TV receiver or amplifier. Full data and circuit diagram supplied. LSH75. For outputs up to 6 watts, 9/-, LSH518. For outputs of 10-12 watts, 12/8, LSH100. For outputs up to 20 watts, 14/-, LPH65. Moving coil Tweeter. Imp. 5.5 ohms, freq. range 2,000-2,200, 50 c/s. For outputs up to 6 watts. 2 1/2 in. diameter, All post free. 39/6.

LASKY'S RADIO CONSTRUCTOR PARCELS

PARCEL No. 1

Contains everything to build a 4-valve 3-wave superhet for 200/250 A.C. mains. Uses 6K8, 6K7, 6Q7, 6V6 valves. Attractive wood cabinet, walnut veneer, or plastic cabinet as illustrated. Size 12 x 6 1/2 x 5 1/2 in. deep. **CAN BE BUILT FOR £7.19.6** Carr. and packing 2/6.

PARCEL No. 2

Contains everything to build a T.E.P. 3-valve set for 200/250 A.C. mains, medium and long wave. Uses 6K7G, 6J7, 6V6 and metal rectifiers. Neat plastic cabinet, walnut or ivory finish, or wood cabinet. Size 12 x 6 1/2 x 5 1/2 in. deep. **CAN BE BUILT FOR £5.10.0** Carriage and packing 2/6.

INSTRUCTION BOOK for either above sets 1/- post free.

GABINETS ONLY, plastic or wood, 17/6. Post 2/6. All components available separately.

ALUMINIUM CHASSIS

18 S.W.G. undrilled, 4 sides, reinforced corners. Depth 2 1/2 in. 6 x 4 1/4; 12 x 8 7/8; 16 x 10 8/3; 8 x 6 5/8; 14 x 9 7/6; 12 x 3 4/9; 10 x 7 6/8; 16 x 9 8/8; 12 x 6 6/6. Post 1/- per chassis extra.

FILAMENT TRANSFORMERS

All 200-250 v. 50 c.p.s. primary, finest quality, fully guaranteed. 6.3 v. 1.5 amp. .... 5/11 6.3 v. 3 amp. .... 9/6 6.3 v. 1 amp. .... 4/6 0-30 v. 2 amp. tapped voltages 19/6

RII55 RECEIVERS

Few only left. Let us have your enquiry. Prices from £7/19/6.

TRUVOX "SENIOR" SPEAKER DRIVING UNIT (pressure type)

New and unused in maker's cartons. Power handling capacity 15 watts peak. With a 12ft. cinema horn will reproduce down to 17 c.p.s. Listed at £7/15/-. **LASKY'S PRICE 59/6.** Carr. 5/-.

BRAND NEW AND PERFECT 16" METAL COE C.R.T. AT ENORMOUS SAVING

Convert to big picture television at a price you can afford. Note especially that these are not "seconds" but perfect tubes without fault, and supplied in original cartons. Brief specification: 6.3 v. heater, ion trap, 14 Kv. E.H.T., wide angle 70 deg., standard 38 mm. neck, duodecal base, magnetic focus and deflection. Maximum length 17 1/2 in. Gives large 11 x 14 1/2 in. black and white picture. **GUARANTEED BY US FOR 3 MONTHS.** Full data, connections and suggested time bases supplied with every tube.

LISTED AT £23.9.10 **LASKY'S PRICE £8.9.6**

Carr. and Insur. 22/6 extra.

Masks, Anti-Corona, Bases and Ion Traps available.

H.P. TERMS AVAILABLE on certain goods. Write stating your requirements.

# R.S.C. BATTERY CHARGING EQUIPMENT

All for A.C. MAINS 200-250v., 50 c/s. Guaranteed 12 months

## ASSEMBLED CHARGER

6 v. or 12 v. 2 amps.  
Fitted Ammeter and selector plug for 6 v. or 12 v. Louvred metal case, finished attractive hammer blue. Ready for use with mains and output leads. Double Fused.

Only **47/9** carr. 3/6.

## ASSEMBLED CHARGERS

6 v. 1 amp. . . . . 19/9  
6 v. or 12 v. 1 amp. . . . . 25/9  
6 v. 2 amps. . . . . 29/9  
6 v. or 12 v. 2 amps. . . . . 38/9  
6 v. or 12 v. 4 amps. . . . . 56/9  
Above ready for use. Carr. 2/9.

### HEAVY DUTY KIT

12 v. 30 amp. Suitable for garage or firm with a number of vehicles. Mains input 200/250 v. 50 c/s. Outputs 12 v. 15 amp. twice. Consists of Mains Trans. 2 Metal Rectifiers. 2 Meters. 4 Fuses. 4 Terminals. 2 Rheostats and circuit. Only 9 gns., carr. 15/-.

## BATTERY CHARGER KITS

Consisting of Mains Transformer, F.W. Bridge, Metal Rectifier, well ventilated steel case, Fuses, Fuse-holders, Grommets, panels and circuit. Carr. 2/9 extra.

6 v. or 12 v. 1 amp. . . . . 22/9  
6 v. 2 amps. . . . . 25/9  
6 v. or 12 v. 2 amps. . . . . 31/6  
6 v. or 12 v. 4 amps. . . . . 49/9

## MAINS TRANSFORMER AND F.W. RECTIFIER

To provide mean charging rate of 5 amps. Circuit supplied. 42/6 plus 3/- carr.

## Assembled 6 v. or 12 v. 4 amps.

Fitted Ammeter and variable charge selector. Also selector plug for 6 v. or 12 v. charging. Double fused. Well ventilated steel case with blue hammer finish.

**69/6**

Ready for use with mains and output leads. Carr. 3/9.

# R.S.C. A6 ULTRA LINEAR 30 WATT AMPLIFIER

NEW 1956 DESIGN. HIGH FIDELITY PUSH-PULL UNIT EMPLOYING SIX VALVES. Tone Control Pre-amp stages are incorporated. Sensitivity is extremely high. Only 30 millivolts minimum input is required for full output. **THIS ENSURES THE SUITABILITY OF ANY TYPE OR MAKE OF MICROPHONE OR PICK-UP.** Separate Bass and Treble controls give both "lift" and "cut" with ample tone correction for long playing records. **AN OUTPUT SOCKET WITH PLUG IS INCLUDED FOR SUPPLY OF 300 v. 20 mA. and 6.3 v. 1.5 a. FOR A RADIO FEEDER UNIT.** Price in kit form with easy-to-follow wiring diagrams. **9 GNS.**

Only **9 carr. 10/-**. Or Factory built with 12 months' guarantee, **50/- extra. TERMS ON ASSEMBLED UNITS** with extra input. **DEPOSIT 28/9** and 9 monthly payments of 28/9. If required an extra input with associated vol. control can be provided so that two separate inputs such as "mike" and gram., etc., etc., can be simultaneously applied for mixing purposes. Extra cost of this 13/- . Cover as illustrated 17/6 extra.

Type 807 output valves are used with High Quality Sectionally wound output transformer specially designed for Ultra Linear operation. Negative feedback of 17 D.B. in main loop. **CERTIFIED PERFORMANCE FIGURES ARE EQUAL TO MOST EXPENSIVE UNITS AVAILABLE.** Frequency response  $\pm 3$  D.B., 30-20,000 c/cs., 12 D.B. "lift" at 50 c/cs., 12 D.B. "lift" at 12,000 c/cs., Hum and noise 70 D.B. down. Good quality reliable components used. Chassis finish blue crackle. Overall size 12 x 9 x 9in. approx. Power consumption 150 watts. For A.C. mains 200-230-250 v. 50 c/s. Outputs for 3 and 15 ohm speakers. **EQUALLY SUITABLE FOR THE CONNOISSEUR OR FOR LARGE HALLS, CLUBS, or OUTSIDE FUNCTIONS. IDEAL FOR USE WITH MUSICAL INSTRUMENTS SUCH AS STRING BASS, ELECTRONIC ORGAN, GUITAR, etc. FOR DANCE BANDS, GARRISON THEATRES, etc., etc.** We can supply Microphones, Speakers, Rotary Converters, etc., at keen cash prices or on terms with amplifiers.

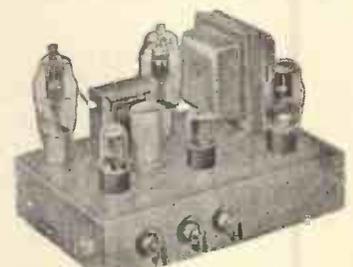

**EXPORT ENQUIRIES INVITED**

**R.S.C. TA1 HIGH QUALITY TAPE DECK AMPLIFIER** FOR ALL DECKS WITH HIGH IMPEDANCE RECORD/PLAYBACK AND ERASE HEADS. Such as Lane, Truvox, etc., or matched to low impedance erase heads as fitted latest COLLARO TAPE TRANSCRIPTOR. Chassis size 12-7-3in. Overall size 12-7-6in. For 230-250 v. 50 c/s. A.C. mains. Output for standard 2-3 ohm speaker. Only 15 millivolts input required for full recording. Only 2 millivolts minimum input required from recording head. Magic Eye recording level indicator. Provision for feeding P.A. amplifier. Can be used as gram. amplifier with input of 0.75 v. R.M.S. Negative feedback equalisation. Linear frequency response  $\pm 3$  D.B. 50-11,000 c/cs.

**11** Ready for use GNS. Carr. 7/8

Facilities for recordings at 15in., 7in. or 3in. per second. Automatic equalisation at the turn of a knob. When switching from record to playback position automatic demagnetisation of heads is assured. **PERFORMANCE IS COMPARABLE WITH UNITS AT OVER TWICE THE COST. LEAFLET 6d.**

## R.S.C. ULTRA LINEAR 12-WATT AMPLIFIER

### NEW 1956 MODEL A8 HIGH-FIDELITY PUSH-PULL AMPLIFIER WITH "BUILT-IN" TONE CONTROL, PRE-AMP. STAGES

High sensitivity. Includes 5 valves (807 outputs), High Quality sectionally wound output transformer, specially designed for Ultra Linear operation, and reliable small condensers of current manufacture. **INDIVIDUAL CONTROLS FOR BASS AND TREBLE "LIFT" and "Cut."** Frequency response  $\pm 3$  db. 30-30,000 c/s. Six negative feedback loops. Hum level 71 db. down. **ONLY 70 millivolts INPUT required for FULL OUTPUT.** Suitable for use with all makes and types of pick-ups and practically all microphones. Comparable with the very best designs. For **STANDARD or LONG PLAYING RECORDS.** For **MUSICAL INSTRUMENTS** such as **STRING BASS, GUITARS, etc.** **OUTPUT SOCKET** with plug provides 300 v. 20 mA. and 6.3 v. 1.5 a. For supply of a **RADIO FEEDER UNIT.** Size approx. 12-9-7in. For A.C. mains 200-230-250 v. 50 c/s. Output for 3 and 15 ohm speakers. Kit is complete to last unit. Chassis is fully punched. Full instructions and point-to-point wiring diagrams supplied. Unapproachable value at **£7/15/-** or factory built

45/- extra. Carriage 10/-. If required louvered metal cover with 2 carrying handles can be supplied for 17/6. Where an extra input socket with associated volume control is required for mixing purposes this can be provided for 13/- extra. **TERMS ON ASSEMBLED UNITS** with extra input as mentioned above. **DEPOSIT 25/6** and nine monthly payments of 22/4.

**LINEAR "DIATONIC" 10-WATT HIGH FIDELITY AMPLIFIER.** Incorporating pre-amp. For A.C. Mains input 200-230-250 v. 50 c/s. A compact attractively finished unit with two separately controlled inputs, and output for 3 and 15 ohm speakers. Separate Bass and Treble controls. Five latest type miniature Mullard valves. Only 12 Gns. Carr. paid. Send S.A.E. for leaflet.

**W.B. "STENTORIAN" HIGH FIDELITY P.M. SPEAKERS.** HF1012, 10 watts, 15 ohm (or 3 ohm) speech coil. Where a really good quality speaker at a low price is required, we highly recommend this unit with an amazing performance. **£4/10/9.** Please state whether 3 ohm or 15 ohm required.

#### SUPERHET FEEDER UNIT

Design of a high quality Radio Tuner Unit (specially suitable for use with any of our Amplifiers). A Triode Heptode F/Changer is used. Pentode I.F., and double Diode Second Detector. Delayed A.V.C. Ac/Grid F/C Coupling is by bottom end Condenser Coupling giving freedom from alignment troubles when Ae. of varying lengths and capacity are used. Both Frequency Changers and I.F. valves are A.V.C. controlled from the very low distortion Double Diodes so arranged that very high Percentage modulation of the Transmitter can be handled without distortion. The Feed for the delayed A.V.C. is arranged so that A.V.C. distortion is avoided. The W. Ch. Sw. incorporates Gram. position. Controls are Tuning, W. Ch., and Vol. Output will load most Amplifiers requiring 500 MV. input depending on Ae. location. Only 250 v. 15 mA. H.T., and L.T. of 8.3 v. 1 amp. required from amplifier. Size of unit approx. 9-6-7in. high. Send S.A.E. for illustrated leaflet. Total building cost is **£4/15/-**. Point-to-Point wiring diagrams and instructions, 2/6.

**H.M.V. LONG PLAYING RECORD TURNTABLE COMPLETE WITH CRYSTAL PICK-UP (SAPPHIRE STYLUS).** Speed 33 1/3 r.p.m. BRAND NEW. CARTONED. Only **£3/10/6** (approx. half price). Carr. 5/- (for 200-250 v. A.C. Mains).

### R.S.C. 4-5 WATT HIGH GAIN AMPLIFIER TYPE A5

A highly sensitive 4-valve quality amplifier for the home, small club, etc. Only 50 millivolts input is required for full output so that it is suitable for use with the latest high-fidelity pick-up heads in addition to all other types of pick-ups and practically all mikes. Separate Bass and Treble controls are provided. These give full long playing record equalisation. Hum level is negligible, being 71 D.B. down, 15 D.B. of negative feedback is used. H.T. of 300 v. 26 mA. and L.T. of 6.3 v. 1.5 a. is available for the supply of a Radio Feeder Unit or Tape Deck pre-amplifier. For A.C. mains input of 200-230-250 v. 50 c/s. Output for 2-3 ohm speaker. Chassis is not alive. Kit is complete in every detail and includes fully punched chassis (with baseplate) and the blue ham 'ner finish, and point-to-point wiring diagrams and instructions. Exceptional value at only **£4/15/-**, or assembled ready for use **25/- extra**, plus 3/6 carriage.

### GARRARD 3-SPEED AUTOMATIC RECORD CHANGERS.

Latest Model Mixer Type RC110. Fitted high fidelity turnover crystal pick-up head with dual point sapphire stylus. Baseboard size 14 x 12 1/2 in., height above, 4in. Below, 2 1/2 in. For 200-250 v. A.C. mains. Limited number. Brand new cartoned. Only **£7/19/6**, plus 3/6 carriage.

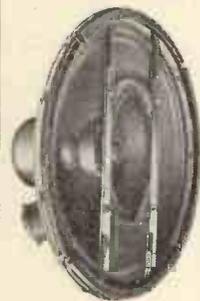

**LINEAR MINIATURE 4/5 WATT QUALITY AMPLIFIER.** Suitable for use with Garrard B.S.R. or any other record playing unit, and most microphones. Total negative feedback 18 db. Separate Bass and Treble Controls. For convenience when mounted in cabinet, mains switch is incorporated in control. For A.C. mains input of 200-250 v. 50 c.p.s. Output for 2/3 ohm speaker. Three miniature Mullard valves used. Size of unit only 6 x 5 x 5 1/2 in. high. Chassis is fully isolated from mains. Guaranteed 12 months. Only **£5/19/6**.

**MICROPHONES.** High fidelity crystal types. Acus 33-1 hand or desk type, 50/-. Plezecz with heavy floor base and telescopic stem, **£8/10/6**.

**RCA 20 WATT RE-ENTRANT SPEAKERS.** For 15 ohm or 600 ohm matching. Brand New. Ideal for any outdoor work. Only 8 Gns.

### PLESSEY DUAL CONCENTRIC 12 in. P.M. SPEAKERS

(15 ohms), consisting of a high quality 12in. speaker, of orthodox design supporting a small elliptical speaker ready wired with choke and condensers to act as tweeter. This high fidelity unit is highly recommended for use with our A8 or any similar amplifier. Rating is 10 watts. Price only **£5/17/6**.

### R.S.C. A7 3-4 WATT QUALITY AMPLIFIER

A highly sensitive 4-valve amplifier using negative feedback and having an excellent frequency response. Pre-amplifier and Tone Control stages are incorporated with separate Bass and Treble controls giving full tone compensation for Long Playing records. Suitable for any kind of pick-up including latest high fidelity types. H.T. of 250 v. 20 mA. and L.T. 6.3 v. 1.5 a. available for supply of Radio Feeder Unit, etc. **ONLY 40 millivolts input** required for full output. Fully isolated chassis with baseplate. For A.C. mains 200-250 v. 50 cycles. Output for 2-3 ohm speaker. Complete kit of parts with point-to-point wiring diagrams and instructions. Only **£3/15/-**, carr. 3/6 or factory built **25/6** extra. **P.M. Speakers** recommended for use with above amplifiers. Plessey 10in. 3 ohm with high flux density magnet. Only **28/9**.

**P.M. SPEAKERS.** 2-3 ohm, 6in. Goodmans, 17/9. 7 x 4in. Elliptical, 19/6, 6in. R.A., 15/9, 8in. Boia 19/9, 10in. R.A., 23/9, 12in. Plessey, 29/11. 12in. Plessey 10 ohms, 10 watts, 3 gns.

**Radio Supply Co. (LEEDS) LTD.**

**32 THE CALLS. — LEEDS, 2.**

Terms C.W.O. or C.O.D. No C.O.D. under £1. Postage 1/9 extra on all orders under £2, 2/9 extra under £5 unless carriage charge stated. Full Price List 6d. Trade List 5d. Open to Callers: 9 a.m. to 5.30 p.m. Saturday until 1 p.m.

# There is always a fine selection of equipment at

## A room - to - room telephone . . .

Ideal for two-way conversation, house-to-garage or internal communication.

- No batteries required
- No soldering required
- Just connect it up and it works

The sets consist of 2 high-quality microphone/receivers (new and boxed) and 15 yards of twin wire.

**COMPLETE FOR 8/6**  
plus 1/6 postage

### RII55 RECEIVERS

Air Tested, in good secondhand condition. Price £6/5/-, plus 10/- packing and carriage.

### TWIN COUNTERS

(Gallons gone) 24V, reading 4 figures and reset contained in housing, size 4in. dia. by 5in. long, 15/- plus 2/- p.p.

### NICKEL IRON CELLS

1.2 volt, size 3½in. x 2½in. x 1in., unfilled 5/- each, plus 1/- p.p.

### AN/APN.1 TRANSDUCER

This Unit consists of Magnet, and Coil which is attached to an aluminium diaphragm suspended freely and perforated to prevent air damping. Mounted on a Ceramic cover which sits over the diaphragm is a form of 2-Gang capacitor which has a swing from 10-50 pF.

The above unit is used as part of Wobulator described on page 252 of the June "Wireless World." PRICE 7/6 p.p.

### GRAM MOTORS

A.C. mains (B.S.R.), brand new and boxed 19/6 p.p.

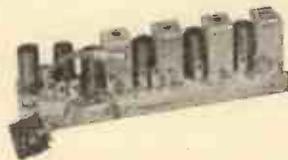

### ALTITUDE SWITCHES

(U.S. manufacture) containing a double pole 11-way switch (Yaxley type) and 14 2.5 K ohms 1 watt resistors 10% contained in metal box 3in. dia. by 5in. long with 1½in. skirted pointer knob. Brand new and boxed 4/- p.p.

### MINIATURE I.F. STRIPS

Size 10½ x 2½ x 3in. Frequency 9.72 Mc/s. 2 EF.92s and 1 EF.91 I.F. amps. EB.91. DET/AGC. EF.91 AGC. Amp. and EF.91 Limiter. Circuit supplied.

Price 8/- less valves.  
Post paid.

### BATTERY CHARGING LEADS

2 yds. of cab tyre twin cable, and 2 large crocodile clips; new and boxed 3/- p.p.

### INDICATOR LAMPS

American panel type complete with 6 v. bulbs in set of 4. 3 green jewels and 1 red jewel, 10/6 post paid.

### TRANSMITTER Type T1131-L

Frequency 100 to 156 Mc/s. Output 50 W. Crystal controlled. 200-240 v., 50 c.p.s. Power supply. Housed in 6ft. standard on 19in. rack. In new condition complete with valves.

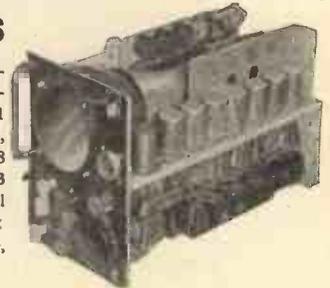

Send for full details.

### APQ.2. RADAR/JAMMING UNIT

Freq. 450-710 Mc/s. Containing 931a Photo Multiplier Cell complete with resistance network and light proof box. Wide band amplifier 2 6AC7, 1 6AG7, 2 388a. This unit is similar to the A.P.Q9 Jamming Unit. Brand new £5 plus 10/- carriage.

### TYPE 62A INDICATORS

Ideal for conversion to oscilloscopes, T.V. units, etc. Containing VCR.97, 12 VR.91 (EF.50), 2 VR.54 (EB.34), 3 VR.92 (EA.50), 4 CV.118 (SP.61). Slow-motion dial, 13 Pots and scores of useful components. Size 8½ x 11½ x 18in. In wooden packing case, £3, carriage 7/6.

### BENDIX TRANSMITTERS

TYPE T.A. 12B Master oscillator type transmitter. 4 channel 40 W. operation provide telephone, CW or MCW in frequency ranges of 300-600 kc/s, 3-4.8 Mc/s., 4-6.4 Mc/s., 4.37-7 Mc/s. Each of the 4 channels has its own oscillator and uses a 12SK7. The IPA stage consists of an 807, while the PA is two 807s in parallel. Size 10½in. x 6½in. x 15½in. Price £3/15/-, plus 10/- carr.

### INVERTERS

Miniature 3-phase (ex-compass unit) 24 v. input with 17 v. 3-phase, 400 c/s. output. These have been used by model makers as motors and are known as the "5/- Motor." Will run quite successfully on 12 volts. 5/- plus 2/- p.p.

### POWER UNIT Type 173

24 volt D.C. input, 120 v., 60 mA. output. Containing Vibrator Transformer, 12 volt Vibrator, two 120 volt Selenium Rectifiers. Chokes and Condensers. Size 10½in. x 6in. x 3in. Price 12/6 post paid.

### 2in. MAGSLIPS

50 v. 50 cycle transmitter and receiver units. Accurate to 1/10th deg. Guaranteed good working order, 35/- a pair, plus 3/- p.p.

### MORSE SIGNALLING LAMPS

(Aldis type) 5in. dia. with sighting arrangement, 2 handles, keying switch, and 2 yards cable. In wood carrying case, 10/- plus 3/- p.p.

### SPECIAL OFFER

#### MALLORY VIBRATOR PACKS

12 volt, 150 volt 40 mA. Brand new and boxed, size 5½in. x 5½in. x 3in., 12/6 each p.p.

### EARPIECES

2,000 ohm C.H.R. or balanced armature type, low resistance single units 3/6 each, plus 6d. p.p.

### STUD SWITCHES

20 segment 5/16in. studs, base 5in. square with handle and housing. New and boxed, 5/- each, plus 1/6 p.p.

### POST OFFICE COUNTERS

500 ohm, 4 figure. no reset; size 5 x 1½ x 1in. 5/- each, p.p.

**All these fine offers are on display at**

# PROOPS BROS. LTD. —

# The Walk-around Shop

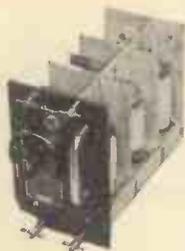

## R.F. UNITS

R.F.24 20-30 Mc/s. Switched Tuning. Valved 9/6 each.

R.F.25 40-50 Mc/s. Switched Tuning. Valved, 9/6 each.

R.F.26 50-65 Mc/s Variable tuning, valved. Damaged dials 20/- each; perfect: dials 25/- each.

Packing and postage 3/- each.

## CR.300/1 RECEIVER & POWER SUPPLIES

Available for callers only.

## RECTIFIERS

Chassis cooled, brand new, 125 volt, 80 mA., 4/9 p.p.; 250 volts, 50 mA. 8/3 p.p.

## BEACON RECEIVER BC-1206-A

Covering 200-400 Kc/s. Valve line up: 6K7 R.F.; 65A7 frequency changer; 6SK7 I.F. amplifier; 6SQ7 det.; 28D7 O/P. This was designed to run on 24/28 V. D.C. HT/LT. Excellent basis for car radio. Size: 6 x 5 x 4in. Good working order. £3/5/- each plus 3/- carr.

## VALVE TESTERS MODEL 314

This model is of American manufacture and versatile, free-point return valve tester. Its design is such that it enables the user to test any type valve, regardless of its filament voltage or base wiring. Flexibility is attained by using individual lever switches for each valve element. Complete coverage of American Series including Acorns.

PRICE: £10 Plus 10/- carriage.

## REFLECTOR (RADAR)

Dinghy type 3 x 3 x 3ft. aluminium struts and 12 wire mesh planes. Originally used as a device for rescue detection. Brand new and boxed 4/- plus 2/- p.p.

## MARCONI RECEIVER B29

Frequency 15-560 Kc/s in 4 bands. Brand new £10 plus £1 p.p.

## 3 cm. TEST SET

### TYPE 263

Containing transmission type w/meter complete with detector unit 9280-9480 Mc/s, attenuator unit, 2 coaxial to waveguide feeders, impedance matching unit, medium power dummy load, standing wave indicator with lock using CV.263 indicator valve, metered indicator unit, various connectors. Suitable for testing medium and low power radar installations. Price £20 carriage paid.

## WAVEMETER TYPE W.1310

Coverage 155 to 230 Mc/s. continuous, complete with Test Prod. Input 230 v. 50 cycles. New condition, £3/10/-, plus 7/6 carr.

## SMALL MAINS TRANSFORMERS

Input 230 volt 50 cycles, output 250 volt 40 mA., 6.3 volt 1.5 amp. Size 3.9 x 2.4 x 2in. Ideal for TV converters. Price 12/6 each, plus 1/- p.p.

## CHARGER TRANSFORMERS

For 6 or 12 volt, 230 volt 50 cycles input, 9 and 17 volt 3 amp. output. Price 15/6 each, plus 1/- p.p.

## HEATER TRANSFORMERS

6.3 volt, 1½ amp. Brand new, 6/6 each plus 1/- p.p.

## I.F. AMPLIFIER UNIT

460 kc/s. with IT4. Brand new and boxed. Fully screened in plug-in box. Size 2½in. x 1in. x 4½in. Price, with circuit, 10/- each, plus 1/- p.p.

## THROAT MICROPHONES

Type T30. U.S. Manufacture

Complete with elastic strap. Lead terminating at 2-pin plug PL.291, and socket JJ-048. New and boxed, 3/- each, post paid.

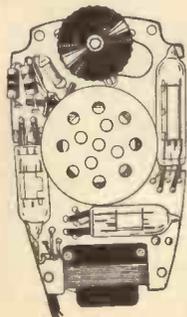

## Make a miniature POCKET RADIO

Incorporating high "Q" technique using the New Ferrite rod. Made possible by simple conversion of an ex-Govt. Hearing Aid, size: 3½ x 2½ x 1in.

Technical Details. A Germanium Diode Detector circuit followed by the existing 3 valve Amplifier, giving adequate amplification throughout the medium wave band.

This conversion can be carried out in approximately 30 minutes.

SEE and HEAR this Miniature POCKET RADIO demonstrated.

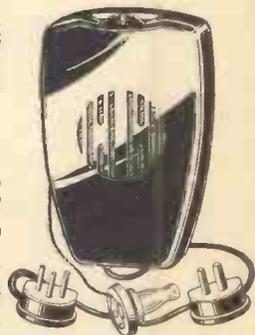

THE COMPLETE KIT OF PARTS includes a Type OL10 Hearing Aid (with Crystal microphone) in perfect working order with miniature earphone and moulded ear insert attached; ferrite rod, germanium diode, components, circuit diagram and full instructions.

PRICE £2 6s. 0d. Post paid

### ALL COMPONENTS SOLD SEPARATELY

Deaf Aid Unit with earpiece ..	£1 15 0
Plastic Ear mould .....	2 0
Ferrite Rod .....	5 0
Conversion Components .....	4 0
Batteries 1.5v L T (Type D 18)	8
30 v H T (Type B 119) .....	4 3

NOTE: As the crystal microphone is not used in the Pocket Radio, it can, if desired, be used as a general microphone and it does not require a matching transformer.

NOTE: Carriage prices quoted apply only to England and Wales.

HIGH FIDELITY RECORDER EQUIPMENT FOR THE CONSTRUCTOR

The "fidelity" TAPE AMPLIFIER Model HF/TR2 WITH POWER SUPPLY UNIT

Price £16.0.0 (Carriage and insurance 6/- extra)

H.P. TERMS: Deposit £8 and 9 monthly payments of £1.  
CREDIT TERMS: Deposit £4 and 9 monthly payments of £1/10/8.

This amplifier has been expressly designed to meet the requirements of the enthusiasts for High Fidelity reproduction. It is based on a new design, completed by the Mullard Technicians and only really high grade components are incorporated, truly HIGH FIDELITY Recordings are obtainable whilst "Hi Fi" reproduction is assured by use of a high quality Output Transformer by Gilson. It incorporates a "magic eye" Recording Level Indicator, a two position equaliser for 3 1/2 in. and 7 1/2 in. speeds, and an effective Tone Control arrangement. Monitoring and Extension Speaker Socket are incorporated and in addition a position is provided to enable it to be used as an independent Amplifier for Gramophone Records or Radio Tuning Unit. Overall size: 11in. x 6in. x 6in. high.

When ordering, please advise make of deck in use.  
Send S.A.E. for full details  
A complete kit of parts to build this amplifier and power unit will be available mid-March. Price £12.

THE NEW TRUVOX MkIV TAPE DECK

THIS IS UNDOUBTEDLY ONE OF THE BEST TAPE DECKS ON THE MARKET. WE HAVE A FEW ONLY AVAILABLE.

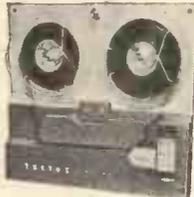

PRICE £25 . 10 . 0

(Plus 10/- carr. and ins.)

EXCLUDING COUNTER

CREDIT TERMS: Deposit £8/7/6 and 9 monthly payments of £2/8/9.

H.P. TERMS: Deposit £12/16/0 and 12 monthly payments of £1/3/8.

SPECIFICATION:—● 3 B.T.H. shaded pole motors with silent friction drive eliminating "wow" and "flutter." Limits on tape travelling speed variation have been kept down to an absolute minimum. ● Push button controls, electrically and mechanically interlocked (patented). ● Patented electric type push button controlled brake. ● Facilities: Record; playback; fast forward; fast reverse (a complete 1,200ft. reel can be re-spooled in less than one minute); inching to assist editing; tape loading on the drop-in principle; accommodation for reels of 7in. diameter containing 1,200ft. of standard tape or 1,800ft. of thin tape. ● Tracking sense. To British and American standards. ● A conversion set, TB.2028, will convert the machine to Continental playing standards. ● Playing times: Up to 3 hours with L.P. Tapes) 60 minutes per track at 3 1/2 in. per second for standard tape; 90 minutes per track for long playing tapes; 30 minutes per track at 7 1/2 in. per second for standard tapes; 45 minutes per track for long playing tapes. ● Two tracks, side by side, with safety gap. ● Playing time indication by precision revolution counter or large visual type indicator plate, according to choice. Positive Azimuth adjustment of Record/Player Head. With a suitable amplifier, the equipment covers a frequency range from 50-12,000 cps. at 7 1/2 in. per second. ● High Impedance Heads are designed for Supersonic Bias and Erasing from a common oscillator. No matching transformers are required. ● The panel has a washable finish that is highly resistant to any form of mechanical damage; the metal work is Gold Hammered finish. ● Overall size 14 1/2 in. x 12 1/2 in., from top of face of panel, overall depth 5 in. Weight 14 1/2 lb.

WE ALSO HAVE A FEW DECKS WITH REV. COUNTERS Price £29.

OTHER TAPE RECORDER EQUIPMENT IN STOCK

- (a) The BRENELL 3 speed Tape Deck £18/18/-

HOME CONSTRUCTORS

WE MAKE SPECIAL PRICES TO PURCHASERS OF TAPE EQUIPMENT (i.e. buyers of Deck and Amplifier together etc., etc.) . . . SEND YOUR ENQUIRY TO US . . . H.P. and CREDIT SALE TERMS ARE AVAILABLE.

PORTABLE CASE

IDEAL FOR RECORD PLAYERS

Price Only £3.3.0

(Plus 3/- Carr. & ins.)

Attractively finished in High Grade Rexine and Robustly constructed with initial measurements at 13 1/2 in. x 15 1/2 in. high. It will be seen therefore that it will accommodate all makes of Record Players including Autochangers. An uncut baseboard is also supplied.

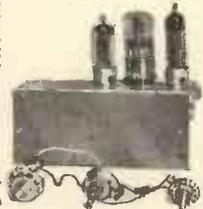

A GENERAL PURPOSE GRAM AMPLIFIER

HAVING SEPARATE BASS and TREBLE CONTROLS

Price assembled and ready for use £4.5.0

(Plus 5/- Carr. & Ins.)

This model has been designed to meet the demand for a small Amplifier providing GOOD QUALITY REPRODUCTION in particular Gram Records. It incorporates an EL84 in the output stage for approx. 3 watts. The three controls (Bass, Treble and Volume) are left on "floating" leads thereby making for easy accommodation in almost any case or cabinet. Overall size 7in. x 6 1/2 in. x 4 1/2 in.

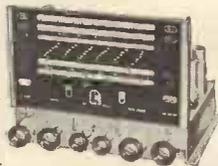

THE ARMSTRONG MODEL AF105 AM/FM RADIOGRAM CHASSIS

Developed to meet the needs of those who require really high quality radio and record reproduction but who, for reasons of expense or lack of room in existing or proposed cabinets, cannot consider the normal high-fidelity systems. The A.F.105 is as good as, or better than, all but the most expensive Amplifiers, and Associated units. Independent and continuously variable Bass and Treble controls give a wide range of control. SEND S.A.E. FOR DETAILS.

PRICE £37 (Plus 7/6 Carr. & Ins.)

CREDIT SALE TERMS: Deposit £9/5/- and 9 monthly payments of £3/7/10.  
HIRE PURCHASE TERMS: Deposit £18/10/- and 12 monthly payments of £1/14/4.

STERN'S "COMPACT 5" AMPLIFIERS

The "Compact 5-2"

EXPRESSLY DEVELOPED FOR VERY HIGH QUALITY REPRODUCTION OF GRAM RECORDS and PARTICULARLY SUITABLE FOR HIGH QUALITY REPRODUCTION OF THE F.M. TRANSMISSIONS.

A 2-stage high sensitivity amplifier having SEPARATE BASS and TREBLE CONTROLS and designed to give up to approx. 5 watts with very pleasing quality. PRICE £6/ 6/-

The "Compact 5-3" A 3-stage version of the "5-2" model but in this case having an additional stage and incorporating negative feedback. PRICE £8/18/-

The Amplifiers are compact and very attractively designed having a "Hammered Gold" finish with a fully engraved front panel by which the entire Amplifier is conveniently mounted into a Cabinet, occupying no more space than a conventional Tone Control Unit. Send S.A.E. for illustrated Leaflet.

POWER SUPPLY. Is obtainable from a small separate Unit which apart from supplying power to either Amplifier, also has additional supply available for a Radio Tuning Unit. PRICE (additional to above), £2/10/-.

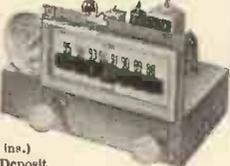

Stern's "fidelity" F.M. TUNING UNIT

A 5-Valve Tuner incorporating the latest Mullard Permeability Tuned Unit. Price assembled less Power Supply:

£14.10.0

(Plus 7/6 carr. & ins.)

TERMS: (a) H.P. Deposit £7/5/- and 9 monthly payments of 18/4; (b) Credit Deposit £3/12/6 and 9 monthly payments of £1/6/7. Provides "Hi-Fi" reproduction with any make of Amplifier and many Radio Receivers. It incorporates: ● The latest Valve line-up—ECC85, 2 type EF85, EF91 and EM80. ● A "Magic Eye" Indicator. ● Power consumption is 1.7 amps. at 6.3 volts and 25 m/a. at 250 volts.

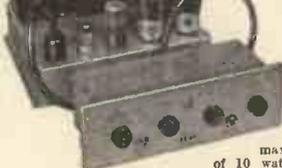

STERN'S "fidelity" COMBINED A.M. and F.M. TUNING UNIT

This is IDENTICAL to the Stern's F.M. Tuner illustrated above, but in addition incorporates the MEDIUM WAVE-BAND and thereby also provides a selection of foreign stations.

Price £18.18.0 (Plus 7/6 carr. and ins.)

TERMS:—(a) H.P. Deposit £9/9/- and 10 monthly payments of £1/1/-; (b) Credit Deposit £4/15/- and 9 monthly payments of £1/14/7. Send S.A.E. if further data required.

THE LEAK "TL/10" AMPLIFIER and "POINT ONE" PREAMPLIFIER

Provides a maximum output of 10 watts, maintains in every respect the renowned Leak reputation for precision engineering, fine appearance and fastidious wiring. PRICE COMPLETE £28 . 7 . 0

(Plus 7/6 carr. and ins.)  
TERMS: Credit: Deposit £7/7/- and 9 monthly payments of £2/11/4. H.P. Deposit £14/4/- and 12 monthly payments of £1/6/- . Send S.A.E. for fully illustrated leaflet.

Open Monday to Friday 9 a.m.—6 p.m.  
Saturday 9 a.m.—1 p.m.

STERN RADIO LIMITED

### THE FAMOUS INVERTER—COMPARE THE PRICE

Handsome walnut cabinet. Suitable all areas. Contains own power supply. Simply connect to aerial. Four-valve circuit. Complete with all instructions. £6/10/6 plus 3/6 P. & P.

### PRE-SET TUNER UNIT (Manufacturers' surplus.)

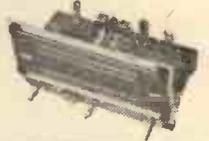

This is a two valve (TH41, VP41) superhet tuner unit covering, in original stage, two pre-set stations: Light and Home Service, with provision for adding a third station. Station selection is by means of an attractive illuminated Perceps knob. A small modification, the addition of a Germanium diode, is all that is required to enable this unit to be used in conjunction with any amplifier or tape recorder capable of supplying the necessary power: 200 v. D.C. at 20 ma. 4 volts at 2 amps. heaters. Alternatively built-in power supplies may be added. This is an exceptionally well made unit producing a "clean," good quality output. Dimensions of Tuner: 9in. L. x 3 1/2in. W. x 7 1/2in. H. Overall. Unit only 45/-, plus 2/6 P. & P. We can also supply all the components for built-in power pack with full modification details at 20/-.

### DULCI AM/FM CHASSIS H4

Illustrated leaflet available. L., M. and Short Waves plus F.M. This is a quality chassis 6 latest B.V.A. Mullard Valves, including magic eye. High Q inductances throughout, also Ferrite rods. Price is £24/6/6 cash—or H.P. terms.

### SPECIAL PURCHASE! MANUFACTURER'S SURPLUS

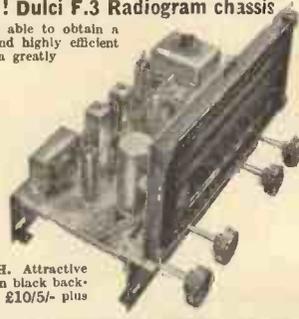

Owing to favourable purchase we can offer strictly limited quantity of these handsome chassis. AC/DC 200/250 v. for Medium and Long Waves, plus gram position. Incorporates own frame aerial. Valve line-up: U107, N108, DH107, W107 and X109. Overall chassis size 12 x 5 1/2 x 7 1/2in. high. Attractive bronze dial with gold and cream lettering. Dial size 1 1/2 x 4 1/2in. Scale length 7 1/2in. Logging scale provided. Price £7/19/6 only, tax paid, plus 3/6 P. & P. H.P. terms, £4 deposit plus four monthly payments of 22/-.

### Splendid unrepeatable offer!! Dulci F.3 Radiogram chassis

We have been very fortunate in being able to obtain a limited quantity of this well known and highly efficient chassis which we are able to offer at a greatly reduced price.

**Specification:**  
Three wavebands: long 1,000-2,000 metres; medium 187-540 metres; short 16-50 metres. Valve line-up: X79, 6BA6 or 7WA7, GA76 or DH77, EL84 or N709, 6X4 or U78.  
Four controls, tone-on-off.  
Volume wavechange.  
Tuning: output 4 watts matched to 3-5 ohms. Incorporates latest Ferrite Rod Aerial. Pick-up sockets and mains supply for Gram motor. Overall dimensions: 12in. L. x 7in. D. x 7 1/2in. H. Attractive dial with red, gold and green lettering on black background. Size 1 1/2in. x 4 1/2in. Price only £10/5/- plus 3/6 P. & P.

### JUST RELEASED!!! THE NEW R.C. TRANSISTOR/CRYSTAL RECEIVER KIT

This receiver, covering medium waveband, which can be assembled in about 1 hour, will give amazing volume and tonal quality when used in conjunction with a good aerial and earth. Incorporating PNP Transistor and Germanium Diode. For headphone reception. Included with the kit of parts is a handsome plastic case in black and white, measuring 4 1/2 x 2 1/2 x 1 1/2in. This case accommodates the complete receiver, including battery. **PRICE OF COMPLETE KIT: 25/- plus 1/3 P. & P.** Lightweight high resistance headphones can be supplied separately at 15/- pair. If, however, the kit is purchased complete with headphones this will be supplied at a **SPECIAL INCLUSIVE PRICE OF 37/6 plus 1/3 P. & P.** Optional extra, 1000c. coil single 7/36 coloured P.V.C. covered wire, suitable for both aerial and earth. 2/6 only.

**TRANSISTORS!!!** Now available, manufacturer's surplus transistors. Suitable for use in Audio stages, etc., and for experimental purposes. P.N.P. type. Only 10/- each, post free. Blue spot type available for R.F. up to 1.6 Mc/s. 15/- each.

### AM/FM KIT

Introducing the JASON AM/FM KIT for medium waves and F.M.I. As illustrated this is a very high quality chassis incorporating 8 of the latest miniature valves, plus DM70 magic eye. Kits are available for chassis complete with output stage at £15/5/-. Also less output stage but with own built-in power pack at £13/19/6 only. These are high fidelity units and exceptional value at these prices which include all required components and full constructional details. Fully illustrated Data Booklet with full construction details, plus individually priced component list, available per return a post at 2/- post free. Both plus 3/6 P. & P.

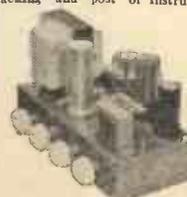

### DULCI H4T AM/FM TUNER

This unit has been designed for Quality Reproduction and built to the highest technical standards. Contains own power supplies. Brief specifications: four wavebands: VHF 87-101 mc/s. Short, 16-50 metres. Medium, 187-540 metres. Long, 1,000-2,000 metres. Intermediate Frequencies: 10.7 mc/s. and 471 Kc/s. Full A.G.C. on all A.M. Bands and amplitude limitation on F.M. Band. Three controls: ON/OFF, Volume, Tuning and Wavechange. Valve line-up: ECC85, ECH81, EP89, EABC80, EM80 and EZ80. Attractive dial in Black with Red, Green and Gold lettering, size 1 1/2in. x 5 1/2in. Chassis size (overall) 12in. W. x 7 1/2in. H. x 8 1/2in. D. A low impedance of 47K ohm output makes matching to amplifier non-critical. Weight 12lb. Price is £20/17/-, plus 5/- P. & P.

### THE R.C.3/4 WATT AMPLIFIER KIT

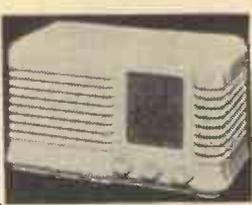

Compare the advantages! Treble, bass AND middle controls! For crystal or magnetic pick-up! A.C. Mains 200/250 v. Valve line-up: 6V6GT, 6S6GT, metal 6X5GT. Negative feedback. Built on stove enamelled steel chassis, measuring only 8in. x 4in. x 1 1/2in. Four engraved cream knobs are included in the price of the complete kit with all necessary practical and theoretical diagrams at £4/5/- only, plus 2/6 packing and post or Instruction Book, fully illustrated for L.. Post free! This amplifier can be supplied assembled, tested, and ready for use at £5/5/- plus P. and P. Hearing is believing.

Our advantageous H.P. terms are available on any single item over £5. Let us have your enquiries.

Please add postage under £1, or Cash with order. C.O.D. charge extra—open 9 a.m. to 6 p.m. Monday to Friday. Sorry but we close 1 p.m. on Saturday

**THE "ECONOMY FOUR" T.R.F. KIT.** A three-valve plus metal rectifier receiver. A.C. mains 200/250 v. Medium and Long waves. We can supply all required components right down to the last nut and bolt. Valve line-up 6K7, 6J7 and 6V6. Chassis ready drilled. Cabinet size 12in. long by 6in. high by 5in. deep—Choice of ivory or brown Bakelite, or wooden walnut finish cabinet. Complete instruction booklet with practical and theoretical diagrams. Each component brand new and tested prior to packing. Our price £5/10/- complete—Remember this set is being demonstrated at our shop premises! We proudly claim that our fully illustrated instruction booklet is the most comprehensive available for this type of receiver—Booklet available at 1/6 post free. This is allowed if kit is purchased later. Plus 2/6 packing and carriage for complete kit.

**THE "SUPERIOR FOUR" KIT.** Our new four-valve receiver. A.C. mains. 200/250 v. M. and Long waves. As with our very successful "Economy Four" all required components are supplied. Valve line-up: 2 6XG7, 6 X6GT and 6 V6GT. Chassis ready drilled. Cabinet size 10 1/2in. x 10in. wide. Maximum depth at base 5in. tapering to 3 1/2in. at top. Sloping front. Very attractively finished in light walnut and peach. Each component brand new and tested prior to packing. Complete instruction booklet with practical and theoretical diagrams is provided. Booklet available at 1/6 post free. Our price for complete kit, £6/9/6! Please add 2/6 packing and carriage. If preferred, we can supply Cabinet Assembly only, comprising Cabinet and bracket wave-change switch, dial, pointer, drum pulleys, drive spindle, drive spring and knobs, at 45/-, plus 2/6 packing and carriage. N.B.—Our kits are even supplied with sufficient solder for the job.

N.B.—All our T.R.F. Kit circuits now include specially wound Denoc "Max-Q" coils on polystyrene formers, improved performance! Price remains the same.

SPECIAL U.S. 0-1 mA. 2 1/2in. Moving coil. Thermo = Thermo-coiled. F. Sq. = Flush Square. F.R. = Flush Round. M.I. = Moving Iron.				

**METER RECTIFIERS.** 1 mA. by G.E.C. at 6/6, also 5 mA. by G.E.C. at 6/6.

**METER SPECIAL.** We have a limited quantity of aircraft electrical thermometers. Brand new, by Weston, 2in. moving coil meter, flush square fitting. These meters have a luminous scale graduated 40-140 degrees centigrade, but the full scale deflection is approximately 150 microamps! Price 12/6 each only, plus 1/- P. & P.

**SPECIAL PURCHASE!! LIMITED QUANTITY ONLY.**

**A.A. PREDICTOR MK. I—OSCILLOSCOPE No. 11.** This ex Govt. unit readily lends itself economically to conversion to oscilloscope for domestic use. For 115 v. or 230 v. 50 cycle A.C. mains—comprising 2 1/2in. C.R.T. type ACRI0-4 EF91, EBC33, 6J5, 6X5GT, SU2150A, and EA50. Continuously variable and stepped attenuator on Y amplifier. Internal X and Y shifts. Brightness and focus controls. Time base speeds can be increased by simple modification to cover 5 kc/s to 30 kc/s. Details are supplied. Overall measurements of chassis as illustrated are 7in. high, 12 in. deep and 19in. long. This unit, which is of recent manufacture and absolutely brand new, is offered at £12/10/- plus 1/6 packing and carriage. This is a fraction of original cost and a bargain not to be missed!

**SPECIAL PURCHASE from Ministry BRAND NEW No. 17 Mk. II TRANSMITTER/RECEIVER**

Built into strong wooden cabinet 15in. x 14in. x 9in. Complete with headphones and microphone. Range 6-9 miles with simple aerial. Frequency coverage: 44-61 mc/s. (5-7 metres). Uses standard 120 v. H.T. and 2 volt L.T. batteries. Complete with full operating instructions. 59/6, plus 3/6 C. & P. No. 17 Mk. II, as above, but secondhand, in good condition and complete, 45/-, plus 3/6 C. & P.

**MAINS TRANSFORMER—SPECIAL**  
Removed from chassis but clean and guaranteed. 200/240 v. Input. 350-0-350 at 250 mA. 6.3V. 8 amps. 8.3V. at .6 amp. 5 at 3 amps. Only 30/- plus 1/6 P. & P.

**CONTINUITY TESTER.**

Comprising well made polished wooden carrying case 9 1/2in. x 5 1/2in. x 3 1/2in. with hinged lid and web carrying strap, 50 mA. 2 1/2in. flush wound meter (unshielded) mounted on paxolin panel with 10 ohm wire wound "zero set" pot, complete with leads, heavy duty test prod, and battery compartment. Ideal for conversion to multi-range test meter. In new condition. Only 17/6 plus 1/6 P. & P.

**THE R.C. RAMBLER ALL-DRY PORTABLE KIT**

Full assembly details with practical and theoretical diagrams can be supplied at 1/6 post free. This is a truly professional 4-valve superb—all dry—for medium and long waves. A cream plastic top panel, with dial engraved in red and green adds to the very imposing appearance of this model which is housed in an attractive cream and grey leatherette covered attache-case type cabinet: measuring only 9in. x 7in. x 5in. Weight less batteries 4 1/2lb., with batteries 6 1/2lb. This set really has everything. Built-in frame aerial, high quality, extremely sensitive, and very adequate volume from the 5in. speaker. Valve line-up 3V4, 1R5, 1R5, 1T4. Also the required components, exactly as specified, including cabinet, can be supplied from stock at the special inclusive price of £7/7/- plus 2/6 p. and p. (less batteries). Uses Ever-Ready 90 v. H.T. type B126 at 10/-. Also L.T. 1.5 v. A.D. 35 at 1/6

**RAMBLER MAINS UNIT!** At last we are able to offer our special mains unit kit for using our popular all-dry "Rambler" on A.C. Mains. Complete kit, which when assembled fits snugly into battery compartment, can be supplied at 47/6 plus 1/6 packing and postage. Price includes all required components, and full assembly instructions. N.B.—This unit is completely self-contained in a metal box measuring 7in. x 2 1/2in. x 1 1/2in. and is ideally suitable for ANY all-dry battery portable requiring 90 v. H.T. and 1.5 L.T.

**THE R.C. 2 AMP. BATTERY CHARGER KIT.**

Our new 2 amp. charger kit is now available. Includes handsome well-ventilated black stove-enamelled steel box, size 7in. x 3 1/2in. x 3 1/2in. Fully shrouded first quality transformer, brand new G.E.C. rectifier. Mains use, etc., or charging 6 or 12 v. batteries at 2 amp. Absolutely complete kit with full practical and theoretical instructions. Price £3/6 plus 2/6 P. & P. Can be supplied assembled and tested at 41/6 plus P. & P. Heavy duty crocodile clips suitable for car battery lugs, optional extras at 1/6 per pair.

**INEXPENSIVE INTERCOMM!**

A pair of ex-W.D. high-grade sound powered brand new microphone/receivers and 15 yds. of twin wire. Simply connect for one-to-one working. No batteries required. Only 8/6 pr., plus 1/- P. & P.  
**SOUND POWERED TELEPHONE HANDSETS.** The luxury version of the above! No batteries required, simply connect with twin wire and use as telephone, 35/- per pair including 15 yds. flex, plus 2/6 P. & P. 100 yds. of twin flat transparent P.V.C. flex, suitable for long distance, or all radio or electrical work, at 22/6 per coil, plus 1/- P. & P.

**RECORDER AMPLIFIER**

(Well known manufacturer's surplus.) This is a brand new amplifier designed for use with a famous wire recorder. A simple modification is all that is required to make this unit ideal for use with any Tape Deck. Being very compact it is particularly suitable for inclusion in portable equipment. Specifications: valve line-up: 7C5, 12AU7, 6BE7, 6BE7, 6X4. Neon Record Lever Indicator. Controls: Volume/Record Level, Tone Control, Record/Playback Switch, High and Low level inputs for Mike and Radio. External Speaker Socket. Built-in 5in. Loudspeaker with High Flux magnet. Separate Power Pack. Dimensions: Amplifier 5 1/2in. H. x 1 1/2in. W. x 2 1/2in. D. Power Pack 6 1/2in. x 6in. x 5in. High (overall). Full modification details are supplied. Price £8/10/6, P. & P. 3/6.

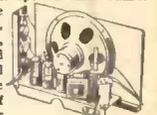

**HEADPHONES.** Low resistance. Brand new ex-W.D. type CLR, 7/6 per pair, plus 1/6 p. & p. Brand new ex-W.D. type DHE, 4,000 ohms, 15/- per pair. High resistance 4,000 ohms brand new lightweight. 15/- per pair, plus 1/6 p. & p.

**FOUR-SPEED CHANGERS!**

The new B.S.R. 4-speed auto-changer in attractive cream and gold finish now available from stock at £8/15/- only, plus 3/6 p. and p. H.P. terms available.

**THE "R.C. STALLION."**

This is the latest addition to our range of gramophone amplifiers and is supplied complete with high flux 8in. P.M. speaker and baffle. Incorporating three octal-type valves. 6Q7, 6V6 and 6X5, this robust and well made unit is ideal for use in the larger type of record player or radiogram, and is equally suitable for use in conjunction with a radio feeder unit. Separate bass and treble controls are provided; also provision is made for an extension speaker and mains supplies to gram. motor. Output approx. 4 watts. Size overall 13in. x 4in. x 9in. High. For use on A.C. mains 100/200/250 v. Price £5/19/6, plus 2/6 P. & P. This amplifier will fit our portable cabinet type "G" without modification. Cabinet price 85/-, plus 6/6 P. & P. Will also accommodate any standard Record Changer!

**RECORD PLAYERS CABINETS—**

to suit all types of single record and auto-changer units. Priced from 45/-. Send stamp for fully illustrated list.

**BUREAU CABINET.**

Handsome walnut finish. French polished. 33in. high x 31 1/2in. x 15 1/2in. At ready cut out for B.S.R. Monarch but suitable for RC54, etc. Uncut board for amplification portion measures 14 1/2in. x 10 1/2in. Two record storage compartments. Price £15/15/- plus 15/- carr. H.P. TERMS AVAILABLE.

THE LONDON

## AUDIO FAIR

1957

will be the most comprehensive public demonstration of High Fidelity equipment ever staged in this country.

The growing demand by the discriminating public for music in the home akin to what they hear on the concert platform has forced great technical advances in sound reproduction.

All leading manufacturers will be exhibiting and demonstrating under domestic conditions, the latest developments in audio equipment.

Lovers of music of all types, if they are true to their enthusiasm should hear for themselves how exactly and faithfully their favourite passages can be played back to them.

**COMPLIMENTARY TICKETS AVAILABLE FOR EACH DAY\* FROM YOUR RADIO, MUSIC OR GRAMOPHONE DEALER. IF YOU HAVE ANY DIFFICULTY SEND STAMPED ADDRESSED ENVELOPE TO:**

**Exhibition Office, 42 Manchester Street, London, W.1**

**INSTRUMENT RECTIFIERS.** Full Wave Bridge 1 m/a. 8/6, 5 m/a. 7/6, 50 m/a. 5/-, Post 6d.

**TELEPHONE UNITS. SOUND POWERED. NO BATTERIES REQUIRED.** Just connect with twin flex for 2-way conversation, 9/- per pair. Twin Flex 4 1/2 yd. Post 1/6. One pair each end will avoid changing over from mouth to ear, 18/-, Two pairs each complete with cord, plug and socket, 27/6.

**HANDSETS, G.P.O. type,** but sound powered, complete with cord, plug and socket, 50/- per pair, post 2/6. The ideal job for home or office, just connect with flex.

**BELL SETS, G.P.O. type 25, 17/6 ea.** Post 2/-.

**RINGING GENERATORS** for same, 10/6. Post 2/-.

**BATTERY CHARGERS.** Output up to 22 v. 10 amps., controlled by two 4-position rotary switches for fine and coarse control. Input 200/250 v. A.C. 50 cy., fused for A.C. and D.C., clear scaled ammeter. Brand new, made by S.T.C. £17/10/-, Cge. 15/-.

**CHARTBOARDS.** With pantograph arm, perspex scale, protractor head, as used in the R.A.F. for navigation purposes, 17 in. square. Brand new, will make a useful drawing board. 25/-, Post 3/-.

**RADIATION MONITORS.** Philips Type 1092c. A portable self-contained unit in haversack, measuring Gamma Radiation. Scaled 0 to 10 milliroentgens per hour, using Mullard Geiger Counter MX115. £25.

**HEADPHONES.** Balanced Armature Type DHR, 17/6 per pair. Post 1/6.

**HEADPHONES.** High resistance 4,000Ω Type CHR, new, 12/6 pair, post 1/6.

**VARIAC TRANSFORMERS.** Oil filled type. 80 CO 7.5 amps enables 230 v. A.C. mains to be kept constant. 130/-, Cge 7/6.

**RACKS—POST OFFICE STANDARD.** 6ft. high with U-channel sides drilled for 19 in. panels, heavy angle base. 4ft. 10 in. also in stock.

**INSPECTION LAMP.** Fits on forehead leaving hands free, battery case clips on belt 7/6. Post 1/6. Takes E.R. Battery No. 1215 2/9, post 9d.

**PHOTOMULTIPLIER No. 931A.** Ideal for film scanning, spectography, Alpha counting, colorimetric measurement, etc., supplied complete in lightproof chamber with lamp, wired with the resistor network, 70/-.

**VERNIER DRIVES.** Muirhead scaled 0/180 deg. Ratio 38 to 1. Diam. 3 in. 10/6. Post 1/6.

**SLOW MOTION DIALS.** 6 in. Scaled 1/100 reduction 200 to 1 or direct. 5/6. Post 2/-.

**MASTS TELESCOPIC.** Extending to 12ft. in 7 sections. 15/6. Post 2/6.

**TELEPHONE SETS.** For perfect communication between 2 or more positions. Wall Type, one, pair of units, £5. Batteries 5/6. Twin wire 6d. yard. Desk Type, now available, latest modern style. Two complete units ready for use, £8/17/6. Wire 6d. per yard. Post 3/-.

**ROOM THERMOSTAT.** Adjustable between 45 and 75 deg. Far. 250 v. 10 amp. A.C. Ideal for greenhouses, etc., 35/-, Post 2/-.

**GEARED MOTORS** for the model maker. Small but very powerful. 12/24 volts D.C. 4/8 R.P.M. 35/-, Post 2/-.

**VENT-AXIA FANS—EXTRACTION OR INTAKE.** 230/250 volts A.C. 6 in. diam. blades 130/-, 12 volt D.C. 90/-, post 2/9.

**RATIO ARM UNITS.** Sullivan. 600 ohms + 600 ohms, 50/-, Post 2/-.

**WHEATSTONE RESISTANCE BRIDGE.** 1 to 10,000 ohms. Plug type £5.

### ELECTRO MAGNETIC COUNTERS

Post Office type 11A, counting up to 9,999, 2 to 6 volts D.C. 3 ohm coil, 12/6 each. Post 1/-, Many other types in stock.

**ROTARY CONVERTERS.** Input 24 volt D.C. Output 230 volt A.C. 50 cy., conservatively rated at 100 watts, 92/6. Also available in a strong ventilated metal case with switch, input plug and output socket, 105/-, Cge. 7/6.

**CHARGING RECTIFIERS.** Full wave Bridge 12 volts 2 amps., 13/6, 4 amps., 22/6, suitable transformers 2 amp., 24/-, 4 amp., 27/3, post 2/-.

**VARIABLE RESISTANCE.** 180 ohms, 2 amps., on 10 1/2 in. Twin formers, gearing with control handle. Suitable for dimming, 35/-, post 2/9.

**TERMINAL BLOCKS** 2-way fully protected. No. 5C/430. 4/- doz., or box of 50 for 15/-, 3-way, 8/- doz., post 1/6.

& TELEPHONE EQUIPMENT  
(RADIO) LTD.

**5, Harrow Road, Paddington, W.2**  
PADDINGTON 1008/9 and 0401  
OPEN MONDAY to SAT. 9-6. THURS. 1 o'clock

**TRANSMITTER/RECEIVER**  
ARMY TYPE 17 MK. II

This well-known R/T Transceiver is offered complete with Valves, High Resistance Headphones, No. 3 Handmike and Instruction Book giving complete details and circuit, contained in strong cabinet. Variable tuning.

Frequency Range: 44.0 to 61 Mc/s.  
Range approximately: 3 to 8 miles.  
Power requirements: Standard 120 v. H.T. and 2 v. L.T.

Ideal for Civil Defence and communications.

BRAND NEW **59/6**  
Calibrated Wavemeter for same 10/- extra.

**QUARTZ CRYSTALS**

TYPE FT243 fundamental frequencies. 2 pin  $\frac{1}{4}$ in. spacing. 120 TYPES. 6675 kc/s. to 8650 (in steps of 25 kc/s.). 80 TYPES. 5706 kc/s. to 8340 kc/s. (in steps of 33.333 kc/s.).

ALL BRAND NEW **10/-** each.

Special price for complete sets of 80 or 120. Above are suitable for re-grinding.

TYPE FT241A 54th harmonic Crystals. 2 pin  $\frac{1}{4}$ in. spacing 80 TYPES AVAILABLE 20 Mc/s.—27.9 Mc/s. (in steps of 100 kc/s.). COMPLETE SETS AVAILABLE.

Also	32.5 Mc/s.	36.4 Mc/s.
	32.6 Mc/s.	36.5 Mc/s.
	32.7 Mc/s.	36.6 Mc/s.
	36.3 Mc/s.	39.7 Mc/s.

ALL BRAND NEW **7/6** each.

FT241A 200 kc/s. 10/- each.  
Crystal Holders for both Types 1/3 each.

**OVER 50,000 VALVES IN STOCK**  
SEND STAMPS FOR NEW 1957 28-PAGE CATALOGUE

**TRANSMITTER/RECEIVER SCR 522**

Comprising the well-known RC625 and BC624A. Units complete with 17 valves types 2-832, 3-12AC, 3-128G7, 3-9003, 9002, 6G6G, 1216GT, 12A7GT, 12C3, 68S7. The Complete unit is in very good condition having very useful parts including Relays, Transformers, Condensers, etc.

Less valves, 23/10/- carr. paid. With valves, 27/10/-, carr. paid.

**TRANSISTOR PUSH-PULL AUDIO AMPLIFIER**  
(150 MILLIWATTS OUTPUT)

Build this Push-Pull Amplifier which is ideal for Crystal or Magnetic Pick-up Amplification, Baby Alarm, Microphone Amplifier, etc. Powered by 6-volt Dry Battery lasting for months.

Complete Kit of Parts including 4 Transistors and all Components with Circuit (less speaker), 24/10/-.

**TRANSISTORS**  
JUNCTION TYPE (Red-Spot) (P.N.P.)

These Red Spot Transistors are ideal for most circuits including "W.W." Pocket Transistor Receiver and Transistor Amplifier. All Transistors are British Manufactured and Guaranteed. Send for Circuits and Data.

**10/-** each  
(Tested and complete with Data & Circuits)

N.B. These Transistors may be used in place of Mullard OC71 or similar Transistors.

R.F. Transistors (Blue-Spot) 1.6 Mc/s. **15/-**

**PRE-SELECTED SEVEN TRANSISTOR PUSH-PULL PORTABLE SUPERHET**

Just switch to your favourite Station. No tuning, no aerial or earth. Pre-select 3 stations. Complete with all components and seven Transistors 7 x 4 Elliptical speaker. Teletron Superhet Coils and I.F.T.'s. Powered by 7 $\frac{1}{2}$  v. dry battery which lasts for months. 150 Milliwatts output. All the above with Circuits, etc. **£9/17/6**. Carr. paid.

Or with Matched Mullard OC72's (200 Milliwatts Output) and 7 x 4 Elliptical High Resistance Speaker 30/- extra.

Suitable Plastic Cabinet easy to assemble 18/6.

Call and hear demonstration model working.

N.B.—The above is an improved version of the Transistor Six, giving greater output and selectivity. To those customers who purchased the Six Transistor version we offer the components and transistor required for modification for 17/6 post free.

**"EAVESDROPPER"**  
THREE TRANSISTOR POCKET RADIO  
(No Aerial or Earth required)

Pre-selected to receive the Light and Home Stations. Total cost, as specified in "Radio Constructor," including Transistors, Transformers, Coils, Condensers and Battery, etc., with circuit (less insert). **77/6** POST FREE

Acos Insert 15/6, Single Headphone 4/6 or Miniature Hearing Aid 24/-.

**SPECIAL OFFER**

Set of four Transistors including one R.F. Transistor ... **42/6**

Set of six Transistors including one R.F. Transistor ... **60/-**

**TRANSISTOR SIGNAL TRACER**

Complete Kit with 2 Transistors, Components, Phones with Circuit. **42/6**.

**TRANSISTOR SQUARE WAVE GENERATOR**

Ideal for signal tracing. Complete Kit with 2 Transistors Components and Circuit. **25/-**

**62A INDICATOR UNIT**

Containing VCR97 with Mu-Metal Screen 21 Valves: 12-EP50, 4-8P61, 3-EA50, 2-EB34. Plus Pots, Switches, H.V. Cond., Resistors, Muhead E.M. Dial, Double Deck Chassis and Crystal. BRAND NEW ORIGINAL CASES, 67/6. Carr. free.

**1355 RECEIVER**

Complete with 11 valves 8-8P61, 5U4G, VU120, VR92. As specified for inexpensive T.V. In absolute new condition, 27/6, carr. 6/-

R.F.24 10/-, R.F.25 12/6, R.F.26 25/-  
Brand new with valves, carr. 2/6.

**RECORD-CHANGERS**

B.S.B. 3-speed—Plays Mixed Records **£7/10/6**

B.S.B. 4-speed—Plays Mixed Records **£8/15/6**

ALL BRAND NEW

**MALLORY 6 v. VIBRATOR PACKS**

Output 180 v. 40 m/a., 15/- Brand new. P. & P. 2/-.

**F.M. CONVERTER UNIT**  
88/100 Mc/s.

Containing 6 valves—2-6BA6, EB91, VR137, 2-EF54. Two I.F. stages and separate local oscillator, graduated Vernier tuning. Just plug into your radio and obtain good listening on F.M. Voltage required 250 v. 50 ma. and 6.3 a. 2 amps.

**£7. 19. 6**

**CRYSTAL MICROPHONE INSERTS**

Ideal for Tape Recording, Gramophone Amplifier, etc. Very sensitive. Guaranteed and Tested, 5/-.

**MINIATURE I.F. STRIP TYPE "373" 9-72 MEG.**

Brand new miniature I.F. Strip size 10 $\frac{1}{2}$ in. x 2 $\frac{1}{2}$ in. x 3in. high. Valve line-up 2-EP92, 3-EP91 and EB91. With circuit.

With valves, 45/- (less valves 2/- post free). This I.F. Strip is part of above equipment.

**INDICATOR UNIT TYPE 182A**

Unit contains VCR517 Cathode Ray tube, complete with Mu-Metal screen, 3 EP50, 48P61 and 1 5U4G valves, 9 wire-wound volume controls and quantity of resistors and condensers. Offered BRAND NEW (less relay) at 67/6. Plus 7/6 carr. "Radio-Constructor" scope circuit included.

**DEMOBBED VALVES MANUAL 2/6**

Giving equivalents of British and American Service and Cross Reference of Commercial Types with an Appendix of B.V.A. Equivalents and Comprehensive Price List. We have still some Valves left at very old Budget Rates (33 1/2%) which are actually sold at the old price. (1951)

**THE NEW '2,000' AUTOMATIC BLOW TORCH**

Burns methylated spirit. Completely Automatic and safe for all kinds of tin and silver soldering, glass bending, etc. 2,000 deg. Fahrenheit. **14/7** Post free only

**Great Britain's Valve Mail-Order House**

**RADIO BULLS VALVES**  
46 HIGH ST. HARLESDEAN W.W.

**ELECTRIC CLIPPERS**

Easy instructions in illustrated 12-page booklet with every set. Packed in luxury presentation case with cleaning brush, oil for lubrication and two special detachable combs for graduating fineness of cut. On/off switch, 6ft. of flex, and two-pin plug. A.C. only 200/260 volts. Fully guaranteed for twelve months. £5/5/- or only 2/- down and seven monthly payments of 18/9.

**AMERICAN type, British-made PAINT SPRAYER**

New model for up & down spraying of all painting jobs in & out-doors. 3/- down & 6 m/y of 9/6 or Cash Price Reduction Offer at **67/6**.

**3/-**

Full Guarantee

**TALK on your Own Radio - RADIOMICROPHONE**

**Ex-W.D. BARGAIN**

Ideal for parties, Socials, Functions, Meetings, Dances, etc. Self-energised, on/off switch fitted, table stand and hand grip. 3ft. cable. Limited quantity only. Two for 26/- Post free.

**12/6**  
Post 2/-

**ELECTRIC PAINT STRIPPERS**

Simple and safe—strips paint clean without scorching of woodwork and with the minimum cleaning down. Sturdy for trouble-free service and backed by a twelve-month guarantee. A.C. or D.C. 200/250v. Special voltages to order. Prices 39/6, or 42/8 with built-in switch.

Or 5/6 down and 8 monthly of **5/6**

Do it yourself. It's so easy. Save money and get B.B.C. & I.T.A. Commercial at the flick of a switch.

You simply place our Silver TV Converter on or near your TV set. No alterations to your set—just connect with A.C. mains and aerial. Packed complete with easy instructions. Only 21/- down and 6 monthly of 21/- or cash £6/6/-

**Chassis Cutters with Keys**

The easiest and quickest way of cutting holes in sheet metal. The cutter consists of three parts: a die, a punch and an Allen screw. The operation is quite simple. Prices incl. key: Size 1/4", 13/0; 1/2", 14/6; 3/4", 14/6; 1", 14/6; 1 1/4", 17/6; 1 1/2", 19/6; 1 3/4", 22/-; 2 3/32", 35/9; 2 1/2", 40/8; 1m. sq. hole 27/- Post 1/-

### C.R.T. ISOLATION TRANSFORMERS

For Cathode Ray Tubes having Heater/Cathode short circuit for C.R. Tubes with falling emission.

Type A. Low leakage windings. Ratio 1:1.25 giving a 25% boost on Secondary.

2 volt	10/6 each	With Tag
4 volt	10/6 each	Panel and
6.3 volt	10/6 each	Solder Tags
10.8 volt	10/6 each	
13.3 volt	10/6 each	

Ditto with mains primaries 12/6 each.

Type B. Mains input 220/240 volts. Low Capacity. Multi Output 2, 4, 6.3, 7.3, 10 and 13 volts. Input has two taps which increase output volts by 25% and 50% respectively. This transformer is suitable for all Cathode Ray Tubes. With Tag Panel 21/- each.

Type C. Low capacity wound transformer for use with 8 volt Tubes with falling emission. Input 220/240 volts. Output 2-2.2-2.4-2.1-3 volts at 2 amps. With Tag Panel 17/6 each.

All Isolation Transformers are individually boxed, labelled and clearly marked with relevant data.

NOTE—It is essential to use mains primary types with T.V. receivers having series connected heaters.

RESISTORS. All values. 10 ohms to 10 meg. 1/4 w. 4d.; 1/2 w. 6d.; 1 w. 8d.; 2 w. 1/-.

HIGH STABILITY. 1/4 w. 1%. 2/-.

All preferred values 100 ohms to 10 meg.

WIRE-WOUND RESISTORS

10 watt	25 ohms—10,000 ohms	1/3
15 watt		1/6
15,000 ohms—50,000 ohms	5 w. 1/9; 10 w. 2/3	

WIRE-WOUND POTS. 3 WATT LAB. COLVERN, ETC. Pre-set Min. T.V. Type Standard size Pots. 2 1/2in. Knurled Slotted Knob. Spindle High Grade. All All values 25 ohms to 300 Values. 100 ohms to 50 K. K. 3/- ea. 50 K. 4/- 5/6; 100 K. 6/6. Ditto Carbon Track 50 K. W/W EXT. SPEAKER to 2 Mca. 3/-.

CONTROL 10D. 3/-.

O/P TRANSFORMERS. Heavy Duty 50 mA. 4/6. Multi-ratio push pull, 6/6. Tapped small pentode, 3/9. Hygrade Push Pull 7 watt 15/6.

L.F. CHOKES 15 E. 10/965 mA. 5/-; 25/20 H. 100/120 mA. 11/6; 20/15 H. 120/150 mA. 12/6; 5 H. 250 mA. 15/-.

MAINS TRANS. 350-0-350, 80 mA. 6.3 v. tapped 4 v. 4 a. 5 v. tapped 4 v. 2 a., ditto 250-0-250 80 mA., etc. 21/-.

I.F. TRANSFORMERS 7/6 pair

465 Kcs Slug tuning Miniature Can, 2 1/2 x 1 1/2 in. High Q and good band width. By Fyo Radio. Data sheet supplied.

Wearite M800 IF Transformers 465 Kcs 12/6 pair.

HEATER TRANS. Tapped 200/250 v. 6.3 v. 1 1/2 amp, 7/6 COPPER PLATED AERIAL RODS. 1/2 x 12in. push fitting, 3/ oz. Post 1/-.

ALADDIN FORMERS and cores. 1in. 8d.; 1 1/2in. 10d. 3in. FORMERS 5937/8 and Cans TV1/2. 1in. sq. x 2 1/2in. and 1in. sq. x 1 1/2in. 2/- complete with cores.

SLOW MOTION DRIVES. Epicycloid ratio 6:1, 2/3. TYANA. Midget Soldering Iron. 200/220 v. or 230/250 v. 16/9. BOLTON MIDGETS IRON. 25 w. 24/-.

MIKE TRANS. Ratio 50:1 3/9 ea., new and broken. MAINS DROPPERS. 3 x 1 1/2in. Three Adj. Sliders. 3 amp. 750 ohms, 4/3. 2 amp., 1,000 ohms, 4/3.

LINE CORD. 3 amp., 60 ohms, per foot, 2 amp., 100 ohms, per foot, 2 way, 6d. per foot, 3 way, 7d. per foot.

CRYSTAL MIKE INSERT by Acos

Precision engineered. Size only 1 1/2 x 3/16in. Bargain. Price 6/6. No transformer required.

# COMPLETE RADAR TRANSMITTER & RECEIVER INDICATOR

## MAIN COMPONENTS:

Radio Transmitter T-25/TPS-2  
Receiver Indicator R-36/TPS-2  
Generator PU-9/TPS-2  
Engine PU-9/TPS-2  
Antenna AT-17/TPS-2 and Mast  
Tent and Pegs

Manufactured  
by G.E.C. (U.S.A.)

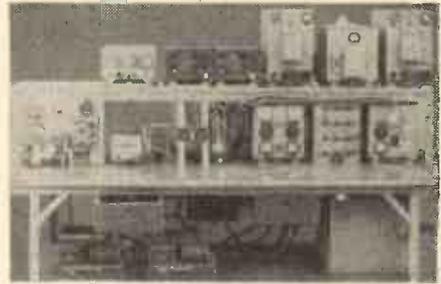

## Spares include:

Cathode Ray Tube  
Valves:  
4—CV53A, 2—466A,  
2—715A, 3—3B24,  
2—503A, 2—3E29  
Spare Engine and  
Tools  
Spare Generator  
Test Meter, Cables,  
Tubes and Ropes.

# TRANSMITTER/RECEIVER PACK Complete TABLE & EQUIPMENT

Manufactured by Bendix

## Consisting of:

2—Transmitters Type TA/2J/24  
2—Receivers Type RA/18  
(Frequency Range .150-1.50, 1.80-15.0 megacycles)  
1—Receiver Type MN/26C Radio Compass  
(Frequency Range 150-1,500 Kilocycles)  
2—Dummy Aerials Types MT/76a and 77a.  
1—Coupling Unit  
1—Loop Aerial Type MN/24B  
2—Double Dynamotor Power Units  
All Cables and Leads

Limited quantity. All new and complete in Makers' cases.  
Enquiries to view and offers invited.

# TELEVISION AERIAL COMPONENTS

DESIGNED FOR CONSTRUCTING BAND I & BAND III T.V. AERIALS  
ELEMENT DIMENSIONS SUPPLIED FOR ALL CHANNELS

Selecting at random from our new multi-page catalogue:

- ★ Band III Folded Dipoles (As illustrated)
- ★ Reflector and director rod holders
- ★ Masthead Fittings for ¾", 1", 1½" and 2" Masts.
- ★ Mast Coupling units for 2" Masts
- ★ Insulators, both Rubber and Plastic (As illustrated)
- ★ Alloy Tubing for Elements, Cross boom and Masting

Send 1/- P.O. for the revised, fully illustrated catalogue to:

R. & A. 8 1/2 in. M.E. Speaker, with O.P. trans. field 440 ohms, 10/6. P. & P. 2/6.

Volume Controls. Long spindles, less switch, 50K, 500K, 1 meg., 2/6 each. P. & P. 3d.

Volume Controls. Long spindle and switch, 1/2, 1 and 2 meg., 4/- each. 10K and 50K, 3/6 each. 1/2 and 1 meg., long spindle, double pole switch, miniature, 5/-, P. & P. 3d. each.

Trimmers. 5-40 pf., 5d. 10-110. 10-250, 10-450 pf., 10d.

Twin Gang .0005 Tuning Condenser 5/-, With trimmers, 7/6.

Twin Gang .0005, with feet, size 3 1/2 x 3 x 1 1/2 in., 6/6.

3-gang .0005, with feet, size 4 1/2 x 3 x 1 1/2 in., 7/6.

T.V. Coils, moulded former, non-cored wound for re-winding purposes only. All-can 1 1/2 x 1 1/2 in., 1/- each. 2 iron-core All-can 2 1/2 x 1 1/2 in., 1/6 each. The above coil formers are suitable for the "Wireless World" F.M. tuner.

Used Metal Rectifier, 250 v. 150 mA., 6/6. Metal Rectifier, 250 v. 45 mA., 6/-.

Metal Rectifier, BM2, 125 v. 100 mA., 3/6.

Valve Holders, moulded octal Mazda and octal, 7d. each. Paxolin, octal Mazda and octal, 4d. each. Moulded B7G, B9A and B9A, 7d. each. B7G moulded and B9A with screening can, 1/6 each.

**BATTERY CHARGER**

**6 or 12 v. 4 amp.**

A.C. Mains 200-250 v. Fitted ammeter, selector switch, fuses, battery clips, indicator lamp. Incorporating G.E.C. Metal Rectifier. Ready for use. In grey hammer finish case. Wall fixing.

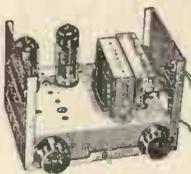

**59/6** P. & P. 3/6.

**COMMERCIAL TELEVISION**

**CONVERTER SUITABLE ANY T.V. using lower side band NO ALTERATIONS TO SET**

Complete with built-in power supply, 230-250 v. A.C. mains, long, 3 1/2 in. wide, 4 1/2 in. high. Incorporating gain control and band switch.

**£3-19-6** Plus Post & Packing 2/6.

Illustrated with cover removed.

**AC/DC MULTI-METER KIT**

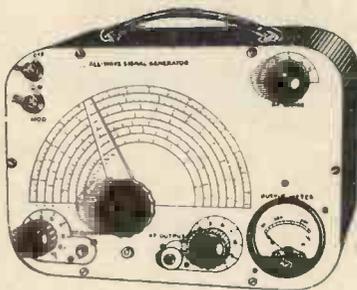

Comprising 2 1/2 in. moving coil meter, scale calibrated in A.C./D.C. volts, ohms and milliamperes. Voltage range A.C./D.C. 0-10, 0-100 and 0-500. Milliamperes 0-10, 0-100; ohms 0-10,000. Front panel, range switch, wire wound pot (for ohms zero setting), two toggle switches, resistors and meter rectifier. Point-to-Point wiring diagram 1/- Free with complete kit.

Complete in case, grey hammer finish. **19/6** P. & P. 1/6.

**COMPLETELY BUILT SIGNAL GENERATOR**

Coverage 120 Kc/s.-250 Kc/s., 300 Kc/s.-900 Kc/s., 900 Kc/s.-2.75 Mc/s., 2.75 Mc/s.-8.5 Mc/s., 8 Mc/s.-28 Mc/s., 16 Mc/s.-56 Mc/s., 24 Mc/s.-84 Mc/s. Metal case 10 1/2 in. x 6 1/2 in. x 4 1/2 in. Size of scale, 6 1/2 in. x 3 1/2 in. 2 valves and rectifier. A.C. mains 230-250 v. Internal modulation of 400 c.p.s. to a depth of 30 per cent., modulated or unmodulated. E.F. output continuously variable 100 millivolts. C.W. and mod. switch, variable A.F. output and moving coil output meter. Grey hammer finish case and white panel. Accuracy plus or minus 2%. 24/19/6 or 34/- deposit and 3 monthly payments 25/-. P. & P. 4/6 extra.

**T. R. F. KIT IN PLASTIC CABINET**

3 valve plus metal rectifier, A.C. mains 200-250 v. Medium and long waves. In pastel blue or brown. Valve line-up: VR655 and VT62. Size 15 1/2 in. long by 9 1/2 in. high by 7 1/2 in. deep.

**£3-19-6** P. & P. 4/6

A point-to-point wiring diagram, 1/6. Free with complete kit. All parts supplied separately.

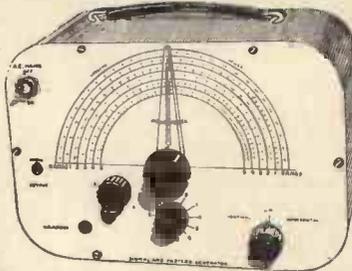

**SIGNAL & PATTERN GENERATOR**

Coverage 7.6 Mc/s.-210 Mc/s. in five bands, all on fundamentals, slow motion tuning, audio output, 8 vertical and horizontal bars, logging scale. In grey hammer finished case with carrying handle. Accuracy ± 1%. A.C. mains 200-250 v.

**£6-19-6**

P. & P. 5/6. Or £3 deposit. P. & P. 5/6 and 3 payments of 30/-.

**RADIO AND T.V. COMPONENTS (ACTON) LTD.**

23 ACTON HIGH STREET, LONDON, W.3

GOODS NOT DESPATCHED WHERE CUSTOMS DECLARATION IS APPLICABLE

Terms of Business: Cash with order. Where post and packing charge is not stated please add 1/6 up to 10/-, 2/- up to £1, and 2/6 up to £2. All enquiries S.A.E., lists 5d each

Germanium Crystal Diode. 1/6. post paid.

Line O.P. Transformer in aluminium can mounted in rubber. 12/6.

Line and E.H.T. Transformer, 14 Kv., using ferrocart core, complete with line and width control, and corona shields. U87 rectifier winding. 35/-. P. & P. 2/6.

Line and E.H.T. Transformers, 9 Kv. using ferrocart core, complete with built-in line and width control. Mounted on small all-chassis. Overall size 4 1/2 x 1 1/2 in. EV81 rec. winding, 27/6.

Scan coils, low line low impedance frame, complete with frame transformer to match above 27/6. P. & P. 2/6.

Line and E.H.T. Transformers, 9 Kv. ferrocart core, EV81, heater, winding, complete with scan coils and frame output transformer, and line and width control. 35/-. P. & P. 3/6.

As above, but complete with line and frame blocking transformers, 5 Henry 28 mA. choke, 100 ohm, and 150 mfd. 250 wkg. 380 mA. A.C. ripple, 22/9/6. P. & P. 3/6.

P.M. Speaker, 6 1/2 in. closed field, 13/6. 8 in. closed field, 20/6. 10 in. closed field, 25/-, 12 in. closed field, 25/-, P. & P. on each 2/-.

Extension Speaker, in polished walnut complete with 8 in. P.M. P. & P. 3/-, 24/6.

**COLLARO RC54**

3-speed automatic changer, current model. Brand new, 10 records mixed. Studio "O" pick-up. A.C. mains 200-250 v.

**£7-19-6** Plus P. & P. 5/6.

Standard Wave Change Switches. 4-pole, 3-way, 1/9; 5-pole 3-way, 1/9; 3-pole, 3-way, 1/9; 9-pole 3-way, 3/6. Miniature type, long spindle 3-pole, 4-way, 4-pole 3-way and 4-pole 2-way, 2/6 each. 2-pole 11-way, twin water, 5/-; 1-pole 12-way single water 5/-, P. & P. 3d.

Ion Traps for Mullard or English Electric tubes, 5/-, post paid.

Standard 465 Kc. iron-cored I.F.s. 4 x 1 1/2 x 1 1/2 in., per pr., 7/6.

1,200 ohm. High impedance Recording Tape on plastic spool, 12/6. Plus 1/-, P. & P.

Miniature wire ends, moulded. 100 pf. 500 pf. and .001, each 7d.

Combined 12 in. mask and esatobehon in lightly tinted Perspex. New aspect edged in brown. Fits on front of cabinet, 12/6. As above for 15 in. tube, 17/6.

Frame Oscillator Blocking Trans., 4/6. Line Osc. Blocking Trans. 4/6.

Wide Angle P.M. Focus Units. Verrier adj. state tube, 15/-.

P.M. Focus Unit for Mullard tubes with verrier adjustment. P. & P. 2/-, 15/-.

**FAMOUS MAKE TURRET "TELETUNER"**

**99/6** Post 2/6. Knobs 3/6.

Covers all Channels, Bands 1 and 3. Valves used: PCC84, R.F. double triode, cascade R.F. amplifier, PCF80, triode pentode f.c. and mixer. I.F. output 33-38 Mc/s. Easily modified to other I.F. outputs. Full instructions and circuit diagram supplied. Complete with 12 Coil Sets.

INTRODUCING a new range of  
HETERODYNE

## FREQUENCY METERS

... for Laboratory, Field & Factory

Designed and built to rigid Services Specification, these instruments are Crystal-controlled, portable heterodyne-type Frequency Meters used for Field testing and measurement of pulsed, modulated, or C.W.R.F. transmitters, receivers and signal-generators.

TYPE 7475.

Frequency Range: 85 to 1000 megacycles.

TYPE 7474.

Frequency Range: 20 to 250 megacycles.

Frequency Calibration accuracy: .002% at 25°C.  
(or .01% between -20° to +70°C).

FITTING-OUT  
NUMBER

## OSCILLOSCOPE No. 11

Made for Anti-Aircraft Command, and just released by Ministry of Supply. Manufactured by A. C. Cossor in 1952, this is a First Grade L.F. Oscilloscope incorporating a Hard Valve Time Base, with existing speeds of 1.5-40 milliseconds, but is easily converted at a cost of a few shillings to produce speeds of 3 cycles per second to 30 kc/s. Has High Class Amplifier with Fine and Coarse gain controls, plus Brightness and Focus controls, and X and Y shifts. Conservatively rated Mains Power Pack is for nominal 115 v. and 230 v. input, and is adequately fuse protected in all circuits. Tube employed is 2½in. ACRI0. Will make up into an ideal workshop or servicing oscilloscope. Has grey and black engraved front panel size 19in. x 7in., depth of unit being 12in. Illustrated in heavy steel transit case, in which it can be used, or removed for standard 19" rack mounting. Complete with leads and suggested modification data. BRAND NEW IN MAKER'S PACKING CASES. ONLY £12/10/- (carriage 15/-).

**RF UNITS TYPE 26.** For use with the R.1355 or any receiver with a 6.3 v. supply. This is the variable tuning unit which uses 2 valves EF54 and 1 of EC52. Covers 65-50 Mc/s. (5-6 metres). Complete with valves, and BRAND NEW IN MAKER'S CARTONS. ONLY 25/- each.

**MARCONI BAND III CRYSTAL CALIBRATORS.** Frequency range 170-240 Mc/s. Incorporates 5 Mc/s. crystal for better than .001 per cent. accuracy. Directly calibrated dial, internal A.C. mains pack. Complete with spare set of valves and instruction manual in maker's transit cases. BRAND NEW. ONLY £4/19/6.

**CLASS D WAVEMETER**  
Another purchase of this famous crystal-controlled wavemeter which has been repeatedly reviewed and recommended in the "R.5.G.B." Bulletin as being suitable for amateur transmitters. Covers 1.9-8.0 Mc/s., and is complete with 100/1,000 kc/s. crystal, 2 valves ECH35, two 6-volt vibrators and instruction manual. Designed for 6 v. D.C. operation, but simple mod. data for A.C. supplied. BRAND NEW IN MAKER'S TRANSIT CASES. ONLY £5/19/6. Transformer for A.C. modification, 7/6.

**A.C./D.C. BLOWERS.** 220/250 volts, 300 watts. 1½in. diam. outlet. Complete with filter pads. BRAND NEW. ONLY £4/19/6.

**INSULATION TESTERS (MEGERS).** Read up to 20 megs. at 500 volts pressure. Overhauled, and in perfect order. With leather carrying case. ONLY £9/19/6.

**POWER UNIT TYPE 3.** Primary 200/250 v. 50 cycles. Outputs of 250 v. 100 mA., and 6.3 v. 4 amps. Fitted with H.T. current meter, and voltmeter. For normal rack mounting and has grey front panel size 19in. x 7in. ONLY 90/- (carriage, etc. 7/6).

**EHT TRANSFORMERS.** 5.5 kv. (Rect.) with 2 v. 1 a., 79/6. 7 kv. (Rect.) with 2 v. 1 a., 89/6. 2.5 kv. (Rect.) with 2-0-2 v. 1.1 a., 2-0-2 v. 2 a. (for VCR 97 tube, etc.), 42/6 (postage 2/- per trans.).

**159 RECEIVER UNIT.** Contains 1 each valve, types EF50, EA50, SP61, RL37 and 24 v. selector switch. ONLY 7/6.

## TRAWLER BAND R 1155s.

The latest version of this famous Communications Receiver to be released by the Air Ministry. Covers 5 wave ranges: 18.5-7.5 Mc/s., 7.5-3.0 Mc/s., 3.0-1.5 Mc/s., 1.5 Mc/s.-600 kc/s., 500-200 kc/s. As used by Coastal Command, Air-Sea Rescue Launches, etc. All sets thoroughly tested and in perfect working order before despatch, and on demonstration to callers. Have had slight use, but are in excellent condition. ONLY £12/19/6.

**A.C. MAINS POWER PACK OUTPUT STAGE,** in black metal case, enabling the receiver to be operated immediately, by just plugging in, without any modification. Can be supplied as follows: WITH built-in 6½in. P.M. speaker, £5/5/-, LESS speaker, £4/10/-. With Bin. P.M. speaker, £6/10/-. DEDUCT 10/- IF PURCHASING RECEIVER AND POWER PACK TOGETHER.

Send S.A.E. for illustrated leaflet, or 1/3 for 14-page booklet which gives technical information, circuits, etc., and is supplied free with each receiver.

Add carriage: 10/6 for Receiver, 5/- for Power Unit.

## FREQUENCY METERS TYPE L.M.

The United States Navy version of the BC221. Frequency range 125-20,000 kc/s with better than 0.01% accuracy. Contains a Crystal Controlled Oscillator, a Heterodyne Oscillator, and an Audio Frequency Amplifier. Can be used as Signal Generator, having CW-MCW control. BRAND NEW and UNUSED. Quotation on request.

## WIRELESS SET NO. 19 MK. II.

The famous Army Tank Transmitter-Receiver. Incorporates "A" set (TX/RX covering 2.0-8.0 mc/s., i.e., 37.5-150 metres); "B" set (VHF TX/RX covering 230-240 mc/s., i.e., 1.2-1.3 metres), and Intercomm. Amplifier. Complete with 15 valves as follows: 6 of 6K7G, 2 of 6K8G, 2 of 6V6G, and 1 ea. 6BBG, 6H6, E1148, EF50, 807, and booklet giving circuits, notes, etc.

Size 17½in. x 8½in. x 12½in. Magnificently made by famous American firms.

## IN BRAND NEW CONDITION.

ONLY £4/19/6 (carriage, etc., 10/6). OR with 12 volt Rotary Power Unit £5/10/- (carriage, etc., 15/-).

## MARCONI SIGNAL GENERATORS TF-390G

Frequency coverage 16-150 Mc/s. BRAND NEW IN MAKER'S ORIGINAL TRANSIT CASES, with instruction manual. For normal A.C. mains operation. A unique opportunity to acquire Laboratory Equipment at a fraction of original cost. ONLY £27/10/-.

## L.T. HEAVY DUTY TRANSFORMERS.

Ex-Admiralty, with 230 v. 50 cycles primary. 1. Secondaries 5, 10, 15, 20, 25, 30 volts at 5 amps. ONLY 29/6. 2. Secondaries 7, 14, 21, 28 volts at 12 amps. ONLY 42/6. (Postage on either 2/9.)

## 100-0-100 VOLTS METERS by Sangamo Weston.

2½in. circular, basic movement being 500-0-500 microamps. A really first-class centre zero meter for hundreds of uses. BRAND NEW IN MAKER'S CARTONS. ONLY 27/6.

## POCKET VOLTMETERS.

Not ex-Govt. Read 0-15 v. and 0-300 v. A.C. or D.C. BRAND NEW AND UNUSED ONLY 18/6.

## WALKIE TALKIE TYPE 18.

Covers 6.0-9.0 Mc/s. Transmitting and receiving units in meta case, complete with valves. In excellent condition. ONLY 79/6.

## TR1196 TRANSMITTER SECTION,

complete with valves EL32, EF50, CV501, and all components. BRAND NEW. Price ONLY 12/6.

## TRANSFORMERS. H.T.

Fully shrouded upright, mounting, 250-0-250 v. 60 mA., 6.3 v. 3 a., 5 v. 2 a. ONLY 21/-, 250-0-250 v. 100 mA., 6.3 v. 6 a., 5 v. 3 a. ONLY 37/6. 350-0-350 v. 180 mA. 6.3 v. 5 a., 5 v. 3 a. ONLY 37/6 (postage 2/- per trans.).

Cash with order please, and print name and address clearly

**12 MONTHS' GUARANTEE ON USED****17in. £7.10. 14in. £5.10. T.V. TUBES**

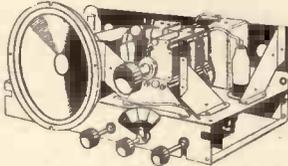

We are now able to offer this wonderful guarantee. 6 months' full replacement and 6 months' progressive. Made possible only by improved high quality of our tubes. Carr. and Ins. 15/6.

**Convert your 9in.—10in.—12in. to 14in.—15in.—17in.**

Our pamphlet is FREE, and on many sets it costs only the tube to give you these giant pictures. **SPECIAL OFFER:** 14in.—15in.—16in. T.V. Tubes £5. Perfect. See them working in our shops. 12in. T.V. TUBES £5. Shortage may cause delay, enquire first and save petrol. We may have alternative and can tell you delay if any. 15/6 carr. & ins. on all tubes.

**ELECTRIC CONVECTOR HEATER, 99/6**

Hotter and cheaper than oil. 1d. an hour. A.C./D.C. Switched for 1 or 2 k. watt. Total purchase. Third of normal price. Carr. and ins. 10/6.

**IDEAL RADIO OR R/GRAM. CHASSIS, 39/9.**

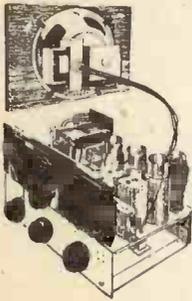

3 w/band. s/het. and gram. 5 valve internl. octal. Ideal for table gram., but still giving high quality output. 4 knob control. 8in. P.M. speaker, 7/9 with order. Set of knobs, 2/- Chassis, 15in. x 6in. x 7in. Less valves. Ins., carr., 4/6.

**RADIO-GRAM CHASSIS 29/9**

Including 8in. speaker, dial and knobs. 5 valve s/het. 3 wave band. A.C. mains. Complete, tested, guaranteed. Less valves. Post and packing 4/6.

**8in. P.M. SPEAKERS 8/9**

Stock cannot last. Have you had all you may require? Complete with O.P. trans., 10/- All are money back guaranteed. P. & P. 1/9.

**14in. T.V. CHASSIS £13.19.6**

Complete with tube and speaker, modified ready working. Fully guaranteed for 3 months. These are demonstrated in our shops. LESS valves. As above with 5 valves £15/19/6. With all the valves £19/19/6. (Some delay on the latter.) Ins., carr., tube incl., 25/-  
17in. TUBE RECTANGULAR on adapted chassis. LESS valves, £19/19/6. With 5 valves £21/19/6. Or complete with all valves, £25/19/6. Ins., carr., 25/-.

**T.V. CHASSIS UNITS**

**SOUND AND VISION STRIP, 27/6.** 5/het. Complete v/strip (uses EF91 valves, etc.). Less valves. FREE drawing. Post 2/6.  
**TIME BASE, 10/6.** Containing scanning coil, focus unit, line trans., etc. FREE drawing. Post 3/6.  
**POWER PACK AND AMP., 22/6.** 325 v. 250 mA., 4 v. at 5 a., 6 v. 5 a., at 4 v. at 5 a., centre tapped. Output Pen.45. Carr. 5/6. Less valves.  
**MAINS TRANSFORMER, 5/9.** 350-0-350 v. 80 mA. 6 v., 5 v. heaters. Prim. 200-250 v. Post 2/9.  
**MAINS TRANS., 3/9.** 350-0-350 v. 80 mA. 12 v., 4 v. heaters. Pri. 100-250 v. Ideal auto trans. Post 2/9.  
**O.P. TRANSFORMERS, 1/3.** Std. 2-5 ohms. 9d. post. 12/- doz. 5/- carr.  
**ELECTRIC FIRES, 19/6.** Hammered finish. 200-250 volt. 750 watt. P. & P. 3/6.  
**COAX CABLE, 6d.** yard. Any length. Allow 1d. yd. post.

**V.H.F. 1466 RECEIVER 27/6**

With 6 valves, ex-W.D., new condition, 6 channel tuning. Receives T.V. sound, police, fire and amateurs. 30.5 mc/s. to 40 mc/s. I.F. 7 mc/s. Post 2/6. Drawings and Conversion data free with each set. (Similar to 1124 set but with slow motion dial.)

**BURGLAR ALARMS 2/3**

Made by Truvox. New. Boxed. Ex.-W.D. P. & P. 2/3.  
**COIL PACKS, 3/9.** 3 w/band, including 2 gang condenser, pair 465 I.F.s. Printed dial. P. & P. 2/3.  
Send for FREE Catalogue. Rail, L'pool St. to Manor Park, 10 mins. Money back guarantee (14 days).

## Television Engineering Handbook

**DONALD G. FINK**

Co-director of Research Operations, Philco Corporation

Black-and-white and colour television are both fully described in this new handbook for engineers and technicians. The presentation is simple and concise and not unduly technical; it includes much unpublished material. The systems and standards used in Britain, the United States, France and the CCIR European group are all covered.

Detailed design information is given for every type of television receiver, colour or monochrome. Important new sections deal with colorimetry, video waveforms and spectra, the design of wideband amplifiers and the design of deflection systems.

**THE RECORDER WHICH SELLS ON THE STRENGTH OF ITS QUALITY**

An instrument of professional quality for the high-fidelity conscious, achieving a truly high standard of recording and play-back at a remarkably moderate price. Automatic equalisation of output at each speed ensures perfect reproduction. Incorporating the new Collaro Tape Transcriber, upper and lower track recordings can be made in quick succession without spool reversal while a safety device prevents accidental erasure. Three speeds; 3 $\frac{1}{2}$ in., 7 $\frac{1}{2}$ in. and 15in. per second.

## Built to the highest standard!

### CABINETS

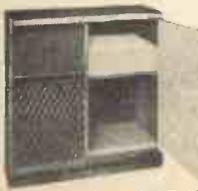

**CAT. NO. CAB/02.** A well-designed Bureau-type Cabinet in a medium size. Veneered Walnut. Outside dimensions, length 29 $\frac{1}{2}$ in., depth 16 $\frac{1}{2}$ in., height 32in. Sloping control panel on right-hand side approx. 13in. x 10 $\frac{1}{2}$ in. Removable baseboard on right hand side approx. 13 $\frac{1}{2}$ in. x 13in.

Large record compartment inside the cabinet, located at the top on left-hand side. **CASH ONLY 12 Gns.** Packing and carriage 20/-.

**CAT. NO. CAB/03.** A magnificent Bureau-type Cabinet in specially selected Walnut veneered exterior. Light Sycamore interior with Rexine lining to match. Outside dimensions, length 34in., depth 17 $\frac{1}{2}$ in., height 33in. Sloping control panel on right-hand side approx. 16in. x 10 $\frac{1}{2}$ in. Removable baseboard on right side approx. 16 $\frac{1}{2}$ in. x 15in.

Two full sized felt lined compartments in the lower half. **CASH 18 $\frac{1}{2}$  Gns.** Or on Credit Terms. Packing and carriage 25/-.

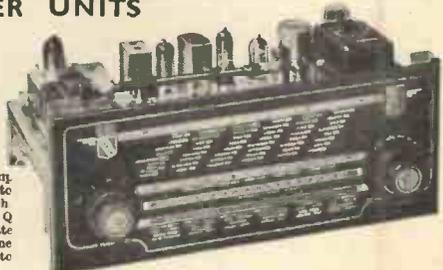

**CAT. NO. CAB/04.** Walnut veneered deluxe cabinet with sycamore lined interior and pull-out base on the right hand side running on high quality ball bearings. Large silk covered baffle-board with speaker cut out of right hand side below chassis control panel. Overall size 32in. long x 32in. high x 16in. deep. **CASH 13/10/-** or on credit terms. Packing and carriage 11/-.

### CHASSIS AND TUNER UNITS

**CAT. NO. CE/AFM 49/PP.** Complete radio Chassis of latest Design and Technique.

9 valves, 4 wavebands including FM/VHF Band. Push Pull output stage, including special 10in. high-flux speaker. A.C. 200/250 volts 50 cycles only. Suitably lit multi-coloured glass dial of the horizontal type. Slow motion tuning drive. Full provision of Automatic Volume Control. Negative feedback from output transformer secondary. Sockets provided for Aerial, Earth, Gram. Pick-up and Extension Speaker. Connections provided to Gram. Motor controlled by Chassis On/Off switch. All inductances have an exceptionally high Q value. The Audio Section is designed for first rate reproduction on Radio and Gramophone. The tone controls have been given an extra wide range to embrace all types of recordings. **CASH 28 Gns.** Or on Credit Terms. Packing and carriage 15/-.

**AM/FM (FOUR WAVEBANDS) TUNER CHASSIS.** Six valves Superhet with permeability tuned FM/VHF band. Magic Eye Tuning. FM band sensitivity of 0.8 microvolts. Minimum oscillator radiation. Less than 20 kilocycles drift. Signal to noise ratio better than 38db. Size 16in. long x 6 $\frac{1}{2}$ in. high x 7 $\frac{1}{2}$ in. deep. Guarantee 12 months for chassis and 3 months for valves. **22 Gns.**

**SINGLE WAVEBAND FM TUNER UNITS** Self powered. Six valves with grounded grid RF stage followed by additive mixer using a POC85 twin triode in sealed permeability tuned unit. Two I.F. stages ensure maximum gain with 6AL5 double diode as ratio detector. Frequency coverage of 85-101 megacycles allows adequate overlap. Very fine quality throughout. **22 Gns.**

**CAT. NO. FMT/A.** Complete Unit in Cabinet with Magic-eye tuning. Boxed, 13in. long x 6 $\frac{1}{2}$ in. overall depth x 7 $\frac{1}{2}$ in. high (approx.). **16 $\frac{1}{2}$  Gns.** Or on Credit Terms. Packing and carriage 12/6.

**CAT. NO. FMT/B.** Chassis only excluding magic-eye. Unboxed, 11 $\frac{1}{2}$ in. long x 6 $\frac{1}{2}$ in. overall depth x 4in. high. **Cash 13/15/-.** Packing and carriage 12/6.

Loudspeakers, Automatic Record Changers, Gram Amplifiers, Tape Recorder Equipment, etc., available at keenest prices. Send for large illustrated catalogue.

**ALL FULLY GUARANTEED. Generous extended credit terms on orders exceeding 15.**

Dealers supplied at full discounts.

## JASON "ARGONAUT"

A.M.  
F.M.  
TUNING  
UNIT

for building as a  
Tuner or Receiver

The Jason "Argonaut" will be found ideal for those wishing to enjoy selected reception of overseas transmissions as well as the superlative quality of F.M. It is recommended particularly for experienced builders, and may be built as a tuner-unit, or self-powered unit with quality output stage. The chassis, supplied ready punched, accommodates either version. F.M. sensitivity—15 microvolts. Switching and wiring are absolutely straightforward. Supplied with chassis, dial and specially designed Jason tuning assembly. Centre front-panel holes are blocked by easily removed plastic discs.

Book of the Jason "Argonaut" by Data Publications, 2/- (2/3 post paid).

All parts (less valves) to build tuner, £10/10/-.  
All parts (less valves) to build as complete receiver, £11/10/-, self-powered.

● OTHER JASON SPECIALISED F.M. EQUIPMENT

**AMPLIFIERS**

**THREE VALVE TYPE (ECC83, EL84, EZ80).** A high quality amplifier designed to satisfy the requirement of the more discriminating record enthusiast. Three controls give a very wide variation of tone. Output approx. 2 watts. Fully isolated chassis. Overall size approx. 8 1/2 in. x 6 in. x 2 1/2 in. Price £4/10/-, plus 2/6 postage and packing. 2-3 ohm O/P transformer 6/- extra. **THREE VALVE (EBC41, EL41, EZ41).** Ideal for use in a lowdr. lced record player. Output approx. 2 watts. Two controls—volume and tone. Mains transformer and fully isolated chassis, less output transformer which is available separately. Overall size approx. 8 1/2 in. x 6 in. x 2 1/2 in. PRICE £3/10/6 plus 2/6 postage and packing. 2-3 ohm O/P Transformer 6/- extra.

**S.R. 3-4 watt AMPLIFIER**  
High quality three valve three watt amplifier for A.C. Mains 200/250 volts. Four controls give a wide tone variation. 3 ohm speaker output. Chassis fully isolated. Valve line-up: 6S67, 6V6, 6X5. Bronze finished chassis size 8 in. x 4 in. x 6 in. high. Supplied built and tested and guaranteed for twelve months (90 days valves). PRICE £5/15/- plus 3/6 postage and packing. **RECORD PLAYERS.** Latest four speed auto-changers single play units by Collaro, BSR and Garrard.

**EIGHT FIDELITY AMPLIFIERS.** We can supply any of the high-quality amplifiers and pre-amplifiers by LEAK, QUAD, ARMSTRONG, GRAMPIAN and WHITELEY; also home constructions kits suitable for OSRAM 912 and MULLARD 610.

**QUALITY SPEAKERS.** A good quality speaker is an essential part of any radio or sound system. always in stock, speakers from 3 1/2 in. to 12 in. by GOODMAN'S, WHITELEY, WHARFEDALE, G.E.C. and ELAC.

# GEE RADIO LTD.

**AIRCRAFT RADIO RECEIVER (BY RCA Model No. CRV. 4451).** Freq. 195 kc/s. to 9050 kc/s. (33-1,500 metres) continuous. For 28 v. D.C. input with built-in dynamotor. This 6-volt receiver with 2 R.F. stages and 2 I.F. stages with B.F.O. and C.W. is in our opinion one of the finest sets so far released by the Air Ministry. With instruction diagram to convert for mains. For the very modest price of £10/10/-, carr. paid. In good working order.

**VITAVOX PRESSURE UNITS.** Heavy duty. P.M. 20 watt. Brand new, £4/9/6. Also ditto, second-hand, in good working order, 40/-, carr. 7/6.

**B.C. 929ACRT INDICATOR UNIT.** Containing 1-3PBI 3in. C.R.T. 6-6SN7s, 2-6H6s, 1-6G6, 1-6X5, 1-2X2; 7 valves in all. Ideal for 'scope conversion. New, in original sealed cartons. 70/- carr. 5/-.

**15 WATT 12 v. D.C. AMPLIFIER (BY PERMEKO, ex-ADMIRALTY).** Fitted for mike and gram, with "Fader" control. With 2-EL35s in push-pull output. Speaker output 15 ohms. Housed in metal case, size 14in. x 9in. x 9in. Ready to use, guaranteed in perfect order, £12/10/-, carr. 10/-.

**PARMEKO MOVING COIL HAND MICROPHONE.** 200 ohm imp. Fitted on/off switch, complete with 12 yds. flex, 30/-, p.p. 2/6.

**RE-ENTRANT LOUD HAILERS.** Heavy duty 20 watt all-metal. 15 ohms. By Parmeko. £6/10/- carr. paid.

**PARMEKO TWIN BAKELITE LOUD HAILERS (ex-Admiralty),** complete on metal base. 10 watts, 50/-, carr. 7/6.

**RCA BRAND NEW.** 15in. 15 ohms 30 watt P.M. speakers. £9/19/6, carr. 12/6.

**C.M.G. 25 PHOTO CELLS (OSRAM).** Brand new, 15/-, p.p. 1/-.  
**AC/DC POWER SUPPLY UNITS.** 230 v. A.C. 50 cycles input. 100 v. D.C. at 1 amp. out. Housed in strong metal case, ex-G.P.O. New and unused £4/10/-, carr. 7/6.

**TRANSFORMERS.** 110-230 v. Primary. Sec. 26 v. tapped to 41 v. at 14 amps. New and boxed. £3/10/-, carr. 5/-.

**P.E. 103 H.P. POWER SUPPLY UNIT.** New and boxed. Complete with connecting cables and mounting rack, £15, carr. extra.

**APQ9 TRANSMITTER.** Containing 931a Photo Electric cell (complete with network). 2-6AC7's, 1-6AG7, 2-807's and 2 blower cooled 8012's. With rev. counter. Brand new, 79/6, carr. 7/6.

**SELENIUM METAL RECTIFIERS. FULL BRIDGE**

6 or 12 v. 1 amp.....	7/6	24 v. 1 amp.....	13/6

**SPEEDY DELIVERY OF L.T. RECTIFIERS TO ORDER.**  
**ELECTRIC LIGHT SLOT METERS.** 200/250 v. A.C., 5-10 amps. 1/- in slot. 6d. or 7d. per unit. By Measurement Ltd. All Bakelite case, in very good condition, 50/- p.p. 3/-.

**SOUND POWERED HEADPHONES.** Can be used for speaking or receiving. 15/- per pair, p.p. 1/6.

**BC. 454.** 3-6 Mc/s. New and boxed, 35/-, p.p. 3/-.  
**BC. 455.** 6-9 Mc/s. (Command set). New and boxed, 35/-, p.p. 3/-.

**3AS VALVES.** Brand new (DCC.90), 12/6, p.p. 9d.  
**TEST METER.** Model 420 S.P. (by Radio City Products U.S.A.). This is a pocket size instrument, 3in. sq. meter, in polished wood carrying case, covering a wide range of voltage at a sensitivity of 1,000 ohms per volt for both A.C. and D.C. tests. In addition to this, the instrument will measure resistances up to 1 meg. and D.C. current up to 1 amp. Complete with full instruction data. Tested before despatched. £5/19/6 only. Carriage, etc., 7/6.

**AVO TEST BRIDGE.** No. 1 M.K.1 for 230 v. A.C. mains operation. Will test all condensers from .00001 to 50 mfd., also resistances from 5 ohms to 50 megohms. A very useful instrument, tested before despatched. £8/19/6. Carriage, etc., 7/6.

**WEE-MEGGER (Evershed & Vignoles),** 500 v.-50 megohms. As new. £12/10/-, Post paid.

**TRANSFORMER.** 2.8 kv. E.H.T. at 5 mA., with additional 4 v. heater supply for 230 v. input. A sound job built to the highest specifications. Tested before despatched. 37/6. Carriage, etc., 5/-.

**VARIAC TRANSFORMER (Zenith),** 200-230 v. input with controlled output voltage from 200-250 v. at 8 amps. Brand new in maker's sealed cases. £4/19/6. Carriage, etc., 7/6.

**DON "8" TWIN TELEPHONE CABLE,** on 1 mile and ½ mile drums. £5 per mile, 25/- per ½ mile, carr. extra.

**VALVE TESTER (by Radio City Products, U.S.A.),** model 314. Brand new, unused with instruction manual. 110-220 v. A.C. 50 c/s. Will test most American valves from 1.1 v. to 200 v. £10, carr. 5/-.

**ROTARY CONVERTERS.** 24 v. D.C. to 230 v. A.C. 50 cycles. 100 watts. Fully tested, £4/12/6, carr. 7/6.

**HEAVY DUTY TWIN 12in. P.M. 15 ohms SPEAKERS.** Housed in H/D 1in. thick Cabinet (slightly soiled). Size 36in. x 18in. x 12in. Felt padded inside. As used by the Admiralty P.A. Ideal for portable amplifier, etc. Limited quantity only. £12/10/-, carr. 10/-.

**METERS (new and unused)**

0-1 m/a., 2½in. flush mounting.....	25/-
0-30 m/a. ditto.....	15/-
0-300 v. A.C. ditto.....	25/-
"S" meter, 2in., as used in AR-77 receiver.....	25/-
2½in. D.C. pocket voltmeter 0-15 v., 0-250 v.....	15/-

**ACCUMULATORS.** Bakelite cased. 2 v. 100 ampere. 75 actual. Ex-Govt. New and unused. Complete with carrying handle. Ideal for coupling 6 or 12 v. storage batteries. Size 6½in. x 6½in. x 3½in. 15/- each. Carr. 3/6 each, or 3 sent for 7/6 or 6 for 12/6.

## BAND III CHANNELS 8-9-10

### A new CONVERTOR KIT is now available for LONDON - MIDLANDS - NORTH

Fit this new convertor not to your set but inside your set, even 9in. table models, and retain that professional look.

This convertor has been evolved since the I.T.A. transmission began, and is based upon experience gained in the conversion of very many Band I sets in the London area.

- IT will convert any set, any age, TRF or Superhet
- IT includes station switching
- IT provides pre-set contrast balancing
- IT uses only one aerial input for both bands
- IT provides manual tuning on Band III
- IT is totally screened
- IT completely rejects unwanted signals
- IT requires no additional power supply where either 6.3V or 3 amp line is available.

**CONVERTOR** wired and aligned with fitting Instructions ..... £4 2 6

**KIT** complete in every detail, less knobs ..... £2 12 6

**KNOBS** each ..... 1 0

**CIRCUIT** and instructions in detail (free with kit) ... 3 6

**BAND III AERIALS** (send for list), from ..... 12 6

**CROSS-OVER UNITS**—Outdoor (printed circuits) 15 0

**AERIAL** feeder cable per yard ..... 10

When ordering please state present B.B.C. Station and I.T.A. Orders over £2 post free.

## C. & G. KITS

**285, LOWER ADDISCOMBE ROAD, ADDISCOMBE, CROYDON, SURREY**

Phone: ADDiscombe 5262

**THE MODEL CR50 BRIDGE** measures from 10 pFd. to 100 mFd. and from 1 ohm to 10 megohms in fourteen ranges, having a total scale length of over 120 inches. The controls are arranged so that quick and accurate readings may be taken. Indication of balance is given by a magic eye fed from a high gain pentode. A leakage test is incorporated for condensers. All internal standards are Constantan 1% resistors. The CR50 was specially designed for bench use having a heavy gauge steel case finished black crackle with a sloping panel for ease of reading. Complete with all valves

and instructions, ready for use from 200/250 v. 50 cycle mains. Price £7/18/- plus 4/6 carriage and packing.

**SG50 SIGNAL GENERATOR** covers 100 kc/s to 80 Mc/s in six continuous ranges on fundamentals with internal modulation or CW. Uses EF91, 6C4 and RMI. Directly calibrated scale of engraved perspex and de luxe metal carrying case of silver grey. Price £8/10/-, plus 6/- carr./packing.

Further details will be sent by return of post on receipt of self-addressed and stamped envelope.

As prices will shortly rise we suggest you send your order now to—

## MIDLAND INSTRUMENT CO.

**CHASSIS, U.S. mfr.**, all aluminium, size 12 1/2 in. x 8 in. x 5 1/2 in., complete with top cover, some items have been removed, remaining arc—25 Amphenol midget ceramic v-holders, 7B6 type, complete with cans, over 70 resistors, all 1% colour-coded, also many ceramicous and other conds., trimmers, padlocks, fixed and variable inductances, transformer, v-control, etc., etc., new unused, bargain 10/-, post 3/-.

**MOTOR GENERATORS, U.S. mfr.**, totally enclosed, 4 1/2 in. long, 2 1/2 in. dia., input 27 v., 1.5 amps., output 250 v., at 60 mA., output from 12 v. supply is approx 150 v., new, unused, 12/6, post 2/-.

**VIBRATOR UNITS, 6 v. input**, provides all L.T. and H.T. supplies for the 18 and 38 sets, fitted Mallory Type 650, non-syns. vibrator, rectifiers and elaborate smoothing, in metal cases 9 in. x 6 1/2 in. x 3 1/2 in., complete with leads, new, unused, 17/6, post 3/-.

**VENNER TIME DELAY SWITCHES, 24 v. clockwork pattern**, in smart metal cases, fitted external press wind, electro-magnetic release, 5-pole cam-operated contacts, etc., new, boxed, 5/-, post 1/6.

**BOHEC VACUUM PUMPS**, rotary vane type, fitted 2 in. long 3/4 in. dia., spinned shaft, inlet and outlet ports, size less shaft, 5 1/2 in. long, 4 in. dia., also suitable as compressors (30lb. sq. in.), new, boxed, 22/6, post 2/6.

**HUGHES 12-VOLT D.C. SHUNT MOTORS**, taking 1.25 amps., up to 2-amps. on load, speed 5,000 r.p.m., external reversing terminations; size 3 1/2 in. long, 1 1/2 in. dia., 1/2 in. shaft, weight 20 oz., oil impregnated bearings, balanced armature, a very superior powerful motor, original cost over 27, our price new unused 10/-, post 1/6, 2 for 20/-, post paid. D.H.O., fitted reduction gears, giving final drive of either 320 or 160 r.p.m. (state which required), 12/6, post 1/6, 2 for 25/-, post paid.

**ACHROMATS** by Ross or Taylor Hobson, new and perfect, 5 types all 40 mm. dia., f/1.7, f/2, f/2.3, f/2.7, f/3, focal lengths are approx. 2 1/2 in., 3 in., 3 1/2 in., 4 in. and 4 1/2 in., respectively, unmounted, 10/- each, post 6d.

**MAINS BLOWERS, 250/250 v. A.O./D.O., 1/2-amp.**, 5,000 r.p.m., consists of the motor with attached enclosed fan, end tunnel intake 1 1/2 in. dia., side outlet 1 in. x 1 1/2 in., pinth base 5 in. x 4 1/2 in., finish black enameled and die cast aluminium, size overall 9 in. long, 4 1/2 in. wide, 5 in. high, weight 7 1/2 lb., a very superior blower, offered at a fraction of original cost, new, unused, 25/-, post 3/-.

**ILLUMINATED MAGNIFIERS**, has low and high power lens system, special lamp giving light directly on the subject viewed, the holder takes a No. 8 battery, fitted switch and resistance dimmer, nickel plate and black crackle finish, complete with spare lamp in velvet lined instrument case, fraction of original cost, new, unused 20/-, post 1/6.

**PROJECTION UNITS**. Consists of the enclosed lampouse, containing a 24-v. 12-watt lamp, polished reflector, in line with the optical mount, which contains a concave/convex ground glass forming a graticule, also a 40 mm. dia. f/2.3, 3 1/2 in. focal length achromat projection lens, in perfect condition, 12/6, post 1/6.

**SLYDLOK FUSES, 250 v. 16 amp. type**, end and back connection, new unused, fraction of original cost, 1/-, post 4d.; 10/- doz., post 1/6.

**BURGESS MICRO SWITCHES, 2 types**, red spot (normally closed), or green spot (normally open), new, unused, 1/6, post 4d.; 15/- doz., post 1/3.

Many other Bargains; send stamped addressed envelope for lists.

## COMPUTER MAINTENANCE

British Insulated Callender's Cables Ltd. invite applications for the following posts with their Computer Department at Prescot:—

(a) **SPECIAL SERVICE ENGINEER** to undertake a Specialist Maintenance and Advisory Service for the department. Applicants should preferably hold an Honours Degree in Physics or Electrical Engineering, and have experience of Electronic Valve applications and Pulse Techniques.

The successful candidate would be required to undergo a period of training on Computers in the London Area, and subsequently would be attached to the staff of the Company's Telecommunications Laboratory, where opportunities would exist for participation in the development of Electronic Test Instruments.

(b) **MAINTENANCE TECHNICIAN**

A vacancy also exists for a Maintenance Technician for the Computer. Candidates should have experience of servicing Radar or similar equipment, and preferably be qualified to O.N.C. standard. A period of training in the London Area would be arranged for the successful candidate.

Applications should be submitted in writing giving details of age, qualifications and experience and quoting P/5/57 to the Staff Officer, British Insulated Callender's Cables Ltd., Prescot, Lancs.

**PHILIPS ELECTRICAL LTD.**, require a **CORRESPONDENCE CLERK** for their Service Department at Waddon, Surrey. The work involves the ability to dictate good English and the interpretation of technical points so that they can be understood by the layman. Applicants should have experience in dealing with business correspondence and also have a basic technical knowledge of the circuits used in radio and television receivers.

Staff appointment, 5-day 39½ hour week, canteen. Superannuation scheme.

Write giving details of age, education and experience to the Personnel Officer, Beddington Farm Road, Croydon, quoting reference GDS.

## CABINETS

Many and varied designs in Bureau, Piano, Console and Table models.

### The Contina Cabinet

The exterior is finished in high polished dark walnut veneer and panelling picked out with gold metallic strip work. The interior also is complete in its high standard of finish and is veneered in light mahogany. Size: 3ft. 1½in. long, 1ft. 3in. deep, 2ft. 9½in. high, including legs which are 10in. from the floor. Motor board 12½in. x 17in. Dial aperture 17½in. x 9½in.

Send for our Monthly Bulletin.

Will accommodate an 8in. speaker. Also full storage space is provided. The half length doors are skid on metal runners and are provided with gold inset finger plates. An excellent cabinet for the modern home. Boards completely uncut.

Send also for our detailed wholesale list for cabinets, wire chassis FM/AM. Complete TVa. Radio Aerials, converters & sundry Electrical components. E.G. shavers, etc.

Trade only supplied.

**V.E.S. WHOLESALE SERVICES Ltd.**

Dept. (W.W.), 11, Gunnersbury Lane, Acton, W.3

**ALKALINE BATTERIES.** Crates of five cells giving 6 v. at 53 A.H. Size of wood crate 15 x 5½in. x 11½in. £5/19/6, plus carr. 7/6. Single cells 2.4 v. 18/20 A.H. Size 4½ x 6 x 3½in., 15/-, carr. 2/-.

**36FT. AERIAL MASTS.** R.A.F. Type 50. Complete kit consists of a tubular steel section. Length 4ft. Dia. 2in. Set of pickets. Top plate. Base plate. Guys and all fittings. Supplied new in canvas carrying bags. Ideal for T.V. aerial masts. £7/10/-, carr. 7/6. Extra sections 15/- each, carr. 2/-.

**NUTS, BOLTS, WASHERS.** Special bargain offer. 5/- Cartons of mixed 2, 4 and 6 B.A. nuts, bolts and washers. Postage 1/-.

**CARBON RESISTORS.** ½-2 watt. 10/- per 100. Large selection of values. Postage 1/-.

**HIGH GRADE SLEEVING.** 1½ mil.-5 mil. Mixed bundle. 2/6, postage 1/-.

**169/171 Edgware Road, London, W.2. Tel.: PAD 7851**

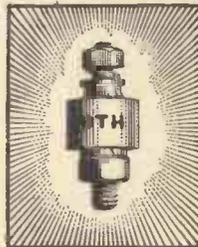

**125 Tottenham Court Road, W.1. Tel.: EUS 4982**

All orders and enquiries to our Edgware Road branch, please. This is open all day Saturday.

## GERMANIUM JUNCTION RECTIFIERS

For medium-power application where high efficiency is essential but space limited, these diffused alloy junction-type rectifiers give outstanding performance. They are sturdily constructed, easily mounted and have a working life of many thousands of hours. A new moulded form of construction provides greater stability in service.

### Small Size

Overall length including fittings 1½ in. Diameter 1 in. The rectifier is illustrated actual size.

### High Efficiency

Excellent forward conduction characteristics which do not deteriorate with age. Voltage drop less than 10% of that across an equivalent thermionic, or dry plate rectifier.

### Low Heat Dissipation

At full rating in an ambient temperature of 55°C the dissipation is less than ¼ W.

TYPE	Peak Inverse Voltage (V)	FORWARD CURRENT (H/A)		
		at 25°C	at 55°C	at 80°C

GJ5 - M	300	550	175	—
GJ6 - M	100	750	400	60

## BRITISH THOMSON-HOUSTON

THE BRITISH THOMSON-HOUSTON COMPANY LTD · RUGBY · ENGLAND

Member of the AEI group of companies

**MECHANICAL DESIGNERS AND DRAUGHTSMEN**

**PHILIPS CROYDON WORKS LIMITED** invite applications from Mechanical Designers and Draughtsmen for a number of vacancies now available in the Design Laboratories of their new Radio & Television plant at Croydon, Surrey.

**DRAUGHTSMEN —**

these posts are concerned with manufacturing development for mass production from designers' sketches or models of radio/electronic equipment, and applicants should have experience in light engineering. Production experience would be an advantage.

**DESIGNERS —** to design electro/mechanical equipment for production in large quantities by flow-line manufacture. Applicants should have a knowledge of press work, automatics, plastic moulding and die casting, and experience of wood cabinet construction and assembly methods would be an added advantage. Candidates should preferably be of HNC standard with workshop experience.

The starting salaries for draughtsmen of the standard required would be £850, per annum, and for designers with the requisite experience and qualifications the minimum starting salary would be £1,000 per annum.

In addition to a progressive salary policy, the Company operates a generous pension and life assurance scheme, together with extended sick-pay and holiday plans.

Applicants who are interested in these opportunities are invited to write to:—

**The Personnel Officer,  
Philips Croydon Works Limited,  
Commerce Way,  
Purley Way,  
Croydon, Surrey.**

quoting reference: No. DD/R.

**A. W. F.**

**Radio Products, Ltd.**  
**SERVE WEST LONDON DEALERS**

*Wholesale Suppliers to Service Retailers*

- Trade Counter Service (WES. 5202).
- Send for our comprehensive catalogue. Free and post free, TRADE ONLY.

**170-172 WARWICK RD., LONDON,**  
Between Earls Court & Olympia. W.14.  
Office-WEStern 5201 — Counter-WES. 5202  
**ALSO AT BRADFORD, YORKS.**

**VACANCIES IN GOVERNMENT SERVICE**

A number of vacancies, offering good career prospects, exist for:—

- Radio Operators—Male**
- Cypher Operators—Male and Female**

Apply, giving details of education, qualifications, and experience to:—

Personnel Officer,  
G.C.H.Q. (FOREIGN OFFICE),  
53 Clarence Street,  
Cheltenham, Glos.

**TECHNICAL ASSISTANT**

with O.N.C. or H.N.C. required for work on the development of electronic amplifiers, stabilisers and oscillators in connection with research on new techniques in spectroscopy.

Apply, quoting reference 'L.7', to:—

**The Personnel Manager,  
Metropolitan-Vickers  
Electrical Co., Ltd.,  
Trafford Park, Manchester 17**

**RADIO TECHNICIANS IN CIVIL AVIATION**

A number of appointments are available for interesting work providing and maintaining aeronautical telecommunications and electronic navigational aids at aerodromes and radio stations in various parts of the United Kingdom.

Applications are invited from men aged 19 or over who have a fundamental knowledge of radio or radar with some practical experience. Training courses are provided to give familiarity with the types of equipment used.

Salary £561 10s. at age 25 rising (subject to a practical test) to £671. The rates are somewhat lower in the Provinces and for those below age 25. Prospects for permanent pensionable posts for those who qualify.

Opportunities for promotion to Telecommunications Technical Officer are good for those who obtain the Ordinary National Certificate in Electrical Engineering or certain City and Guilds Certificates. The maximum salaries of Telecommunications Technical Officers are Grade III £790, Grade II £925, Grade I £1,160.

Apply to the Ministry of Transport and Civil Aviation (ESB1/RT), Berkeley Square House, London, W.1, or to any Employment Exchange (quoting Order No. Westminster 5788).

**Murphy Radio ELECTRONICS DIVISION**

Vacancies exist in an expanding laboratory for senior and junior engineers and draughtsmen in the following fields: V.H.F. and U.H.F. transmitters and receivers for use in

**NAVIGATIONAL AIDS, MOBILE COMMUNICATION SYSTEMS and PULSE CIRCUITS.**

**AERIALS.**

**TELEMETRY EQUIPMENT.**

In addition opportunity will arise for applications of **TRANSISTORS** in these equipments.

Posts are pensionable, Sports Club and other recreational facilities are available. Applications should be addressed to:

Personnel Department (E.29),  
Murphy Radio Limited,  
Welwyn Garden City, Herts.

**APPLIED ELECTRONICS LABORATORIES**  
of **THE GENERAL ELECTRIC CO. LTD.**,  
Brown's Lane, Allesley, Coventry have the  
following vacancies in a Group concerned with the  
Design of Test Equipment for Airborne Radar.

- (1) **DEVELOPMENT ENGINEER** to work on the integration of Automatic Test Equipment with a complex radar. An applicant having a minimum of two years' experience of Radar circuits including data transmission and servo systems would be suitable.
- (2) **DEVELOPMENT ENGINEER** for work on automatic switching circuits and precision signal parameter converters. Experience with electronic and electro-mechanical switching circuits is required. A thorough knowledge of fundamental measurement techniques is essential. Applicant must have had two years' minimum experience of a similar type of work.
- (3) **JUNIOR DEVELOPMENT ENGINEERS** required who must have a sound knowledge of electronics and mechanical principles, with some previous practical experience. Good opportunities exist for advancement.

HOUSE AVAILABLE FOR A SELECTED APPLICANT FOR (1) OR (2).

Reply stating age, qualifications and experience to Personnel Manager (ref. R.G.).

**A. V. ROE & CO., LTD**

*have a number of Vacancies for*

## **QUALIFIED ELECTRONIC ENGINEERS**

to work on Britain's most advanced  
supersonic aircraft.

Applicants should have experience  
in one of the following :—

**ANALOGUE COMPUTER DESIGN  
SERVO MECHANISM DESIGN  
DIGITAL COMPUTER DESIGN  
PULSE CIRCUIT DESIGN**

Applicants to have at least Higher National Certificate in Electrical Engineering or equivalent qualification, and at least three years' practical experience on development work.

Apply in writing, quoting Ref. AC/ET/R.174/H to :—  
Personnel Manager,  
A. V. ROE & CO., LIMITED  
Greengate, Middleton, Manchester.

## **THE DE HAVILLAND ENGINE COMPANY LIMITED**

has vacancies in its Electro-Dynamics Department, at Stag Lane and Hatfield, and invites applications from Engineers and Physicists who are interested in problems connected with Gas Turbines and Rocket Motors, to fill the following posts:

- 1 **PHYSICISTS OR ENGINEERS** to be responsible for specialised instrumentation on development engines and aircraft.
- 2 **ELECTRONIC ENGINEERS** to work under the direction of senior men.
- 3 **SENIOR MECHANICAL ENGINEERS** with a knowledge of stress analysis and mechanical vibration problems.
- 4 **JUNIOR MECHANICAL ENGINEERS** interested in experimental stress analysis and vibration problems.
- 5 **DESIGN DRAUGHTSMAN** for specialised instrument design.
- 6 **INSTRUMENT MAKER** to be engaged in the manufacture of a variety of transducers, instruments, etc.
- 7 **LABORATORY ASSISTANT**, male or female, preferably with G.C.E., to assist in general laboratory experiments and film analysis.

Applicants for the senior posts should be of Degree or H.N.C. standard, but lack of these qualifications need not deter people with experience in these fields.

Salaries will be in accordance with qualifications and experience.

Applications should be made to:—

**The Personnel Officer,**

**The de Havilland Engine Company  
Limited,**

**Stag Lane, EDGWARE, Middx.**

**INSTRUMENTATION  
RESEARCH  
ENGINEER**

**D. NAPIER & SON LTD.,  
ACTON.**

A Senior Appointment is to be made in the near future. Professional Engineers or Physicists with design or development experience in the field of electronic instrumentation circuitry, and capable of initiating and directing such work are invited to apply.

Write in the first instance, giving a full history of experience to date, to Dept. C.P.S., 336/7, Strand, W.C.2, quoting Ref. WW.795B.

**Have Vacancies for  
HIGHLY QUALIFIED

**WAR DEPARTMENT**

Vacancies exist for eight temporary civilian instructors Grade III to teach Radio Technicians, Line Technicians and Telegraph Technicians in the theory, installation, repair and maintenance of modern Services telecommunication equipment. Applicants should have served an acceptable apprenticeship, be fully experienced in the trade and capable of teaching subjects included in one or more of these trades.

The possession of Ordinary National Certificate, or equivalent qualification in Telecommunications is desirable.

Appointments will be made after testing and interview by a Board of Officers and will be subject to six months' trial.

**Salary:**

Grade III £716 (at age 28) rising by annual increases subject to satisfactory service to £833, for a 5½ day week of 44 hours.

Apply in writing to:

**Officer Commanding,  
1st Training Regiment,  
Royal Signals,  
Catterick Camp, Yorkshire.**

Closing date for receipt of applications is 9th March, 1957.

**ENGLISH ELECTRIC COMPANY LIMITED  
STEVENAGE HERTS**

have immediate vacancies for  
**TELEMETRY ENGINEERS**

in the newly formed Test Department of the Company's Guided Weapons Division.

Applications are invited from engineers who are experienced in Instrumentation Planning and in the preparation and testing of Missile Telemetry Systems.

Housing assistance available.

Apply to Dept. C.P.S. 336/7 Strand, W.C.2., quoting Ref. WW1312A.

## ENGINEERS

(Electrical and Mechanical)  
PHYSICISTS

Required for work on development, manufacture and circuit application of special radio valves, including microwave devices.

Minimum Qualifications, H.N.C. or DEGREE.

Experience is desirable but not essential.

Initial training at The Research Laboratories of The General Electric Company will be available for selected candidates.

These are progressive positions with good opportunities for advancement.

Apply quoting TC/1 to:—

M.O. Valve Co.,

Osram Works,

Brook Green,

Hammersmith, W.6.

MANUFACTURERS

OF VALVES FOR G.E.C.

## TESTERS REQUIRED

for

## RADAR & ELECTRONIC WORK

Holding of Ordinary or Higher National Certificate an advantage, but men with suitable Service or Civilian experience will be considered. Opportunities for advancement available for progressive candidates.

Good rates of pay, conditions, canteen facilities, etc.

Apply in person or in writing to:—

Employment Department.  
**Metropolitan-Vickers  
Electrical Co., Ltd.,  
Trafford Park, Manchester 17**

N.B.: For the convenience of applicants the Employment Department is open for interviews as follows:—

Monday and Friday 8.30 a.m. to 4 p.m. Tuesday, Wednesday and Thursday 8.30 a.m. to 6.30 p.m., and Saturday 8.30 a.m. to 11.30 a.m.

## MULLARD RESEARCH LABORATORIES

require  
Engineers, Physicists  
and  
Mathematicians.

The Telecommunications Division of Mullard Research Laboratories has some vacancies in expanding research teams engaged in radar, microwave, telecommunications and particle accelerator programmes. Engineers, physicists and mathematicians who enjoy working in an atmosphere of enthusiasm and who wish to extend their interests and experience to new fields are invited to apply. Recent research or advanced development experience will be an advantage. In general, university graduates will be appointed to fill these vacancies, but applications from holders of the Higher National Diploma or Certificate will be sympathetically considered.

Excellent conditions of employment, including Superannuation and Life Assurance Scheme. Apply Mr. G. A. Taylor, Personnel Officer, Mullard Research Laboratories, Cross Oak Lane, Salfords, Redhill, Surrey, quoting reference RNG.

## THE MULLARD RADIO VALVE CO. LTD.

require an

### ASSISTANT ANALYST

with Inter. B.Sc., or equivalent, for work of a non-routine and varied nature. Applicants should not be aged more than 35.

The work is carried out in a modern Laboratory on the outskirts of South London.

The commencing salary would be according to age, experience and qualifications. The Company's salary policy can be considered to be progressive, and there is a Pension Scheme and long service holiday plan.

Applications in writing should be addressed to the Personnel Officer, The Mullard Radio Valve Company Limited, New Road, Mitcham Junction, Surrey.

## ENGLISH ELECTRIC VALVE CO. LTD.

CHELMSFORD

Have opening for Electrical Engineer, Physicist or Chemist able to speak and to write fluently in Spanish; a similar knowledge of Portuguese is also desirable.

There is a non-contributory superannuation scheme and the Company will assist successful candidates to obtain suitable accommodation.

Please write to Dept. C.P.S., 336/7, Strand, W.C.2. quoting Ref. WW 1516A.

## THE MULLARD RADIO VALVE CO. LTD.

require a

### LABORATORY ASSISTANT

with Inter. B.Sc. or Higher National Certificate in Chemistry for investigational work on problems associated with materials used in manufacturing and development in the Electronic Industry.

The work is carried out in a modern Laboratory on the outskirts of South London.

The commencing salary would be according to age, experience and qualifications. The Company's salary policy can be considered to be progressive, and there is a Pension Scheme and long service holiday plan.

Applications in writing should be addressed to the Personnel Officer, The Mullard Radio Valve Company Limited, New Road, Mitcham Junction, Surrey, quoting reference JFG/MRL.

## TEST ENGINEERS

required for interesting work in connection with Radar, Television Film Projectors, Camera Channels, Microwave Links and similar electronic equipment. Applicants must have sound theoretical knowledge of electronics backed by practical experience in H.M. Forces or Industry. Staff positions and Superannuation Scheme. Single accommodation available. Apply giving full details to the

Personnel Dept. (C.E./21),  
E.M.I. Ltd., Hayes, Middx.

# Z & I AERO SERVICES LTD.,

## Fully Serviced and Guaranteed Test Equipment

**MARCONI TF144G "STANDARD" SIGNAL GENERATOR**, range 85 kc/s to 25 mc/s; output 1 $\mu$ V to 1 volt; completely overhauled, with mains and output leads ..... £85 0 0

8in. **SCALE EDGEWISE MOVING COIL INSTRUMENTS**, originally designed for remote pressure indication; calibrated 20 to 800 or 10 to 400 mm. Hg. Sensitivity of the order of 30 microamps for F.S.D. .... £7 15 0

**MARCONI TF390G SIGNAL GENERATOR**, range 16 to 150 mc/s; indirect calibration; output 1 $\mu$ V to 100 mV; 400 c/s internal modulation; complete with output lead and attenuator pad ..... £25 0 0

**MARCONI TF517F SIGNAL GENERATOR**, range 18 to 58 mc/s (indirect cal.) and 150 to 300 mc/s (direct cal.); output 200 mV max; 1,000 c/s internal modulation sine wave and square wave; complete with two concentric leads (mod. and output) and 26db att. pad ..... £35 0 0

**EVERSHED TWIN PEN VOLTAGE RECORDER**, range 160-250V A.C., clock-work movement ..... £75 0 0

### INSULATION TESTERS

**EVERSHED WEE MEGGERS**, 500 V. £12 10 0

**EVERSHED WEE MEGGERS**, 250 V. £11 10 0

**RECORD 500 V. INSULATION TESTER** £10 0 0

All the above instruments are complete with leather cases.

**EVERSHED 500 V. MEGGERS**, 40 MO £22 10 0

**EVERSHED 1,000 V. MEGGERS**, 100 MO £27 10 0

**EVERSHED 1,000 V. BRIDGE MEGGER**, 200 megohms ..... £55 0 0

**THERMOCOUPLE TEMPERATURE INDICATOR**. Edgewise type, 9in. wide scale, calibrated 0 to 200°C. for Cu/Constantan Thermocouples, sensitivity approx. 80 microamps for F.S.D. .... £15 15 0

**MARCONI TF144F "STANDARD" SIGNAL GENERATOR**, range and output as above, complete with output and mains lead ..... £75 0 0

**MARCONI TF428B/I VALVE VOLT-METERS**, range .15 to 150 volts, brand new, in transit cases, complete with spare valves ..... £35 0 0

**COSSOR TYPE 339A OSCILLOSCOPE, DOUBLE BEAM** ..... £30 0 0

**TS89/AP VOLTAGE DIVIDER**, for extending a voltage range of an oscilloscope, providing ratios of 100 to 1 and 10 to 1, with a maximum voltage of 20,000 ..... £5 0 0

**AVOMETER Mod. 40 BAKELITE BACK CASES** ..... 7s. 6d.  
**AVOMINOR UNIVERSAL FRONT PANELS** ..... 7s. 6d.

All the above instruments are covered by our three months' guarantee. The prices are ex our Warehouse. Packing and carriage at cost.

# Z & I AERO SERVICES LTD.,

19 Buckingham Street, London, W.C.2 Tel.: TRAfalgar 2371'2'3

We buy high-class British Test Equipment, American Test Equipment, American Communication Equipment, particularly: Transmitters ART13, Transmitter/Receivers ARC1, ARC3, Radio Compass Receivers ARN6, ARN7, Communication Receivers BC312, 342, 348, etc.

## M. & J. PEARSON

Radio, Television & Radar Equipment

### OFFER THE FOLLOWING AMAZING BARGAINS

- 1.—Evershed 100 volt Bridge Meggers complete with 4-decade Resistance Box. As new ..... £3 19 0
- 2.—R.F. 24 Units. Brand new In cartons 12/6 each
- 3.—Parmeko Moving Coil Hand Microphones. Black Bakelite with on-off switch and 12 yards screened cable. All new and boxed ..... £1 2 6
- 4.—Hoover Blower Motors, 230 volt, AC/DC, outlet 1 $\frac{1}{2}$ ", new and boxed ..... £3 0 0
- 5.—Miniature I.F. Strip complete with 6 valves. 9.72 meg. .... 30/-
- 6.—Red Spot Transistors ..... 10/- each
- 7.—10" Ex Naval Loudspeakers, 3 ohm, with tapped Transformer and Switch, in wood cabinets 16" x 14" x 8", in nice condition ..... £1 12 6

## OPPORTUNITIES IN RADIO

Get this FREE Book!

'ENGINEERING OPPORTUNITIES' reveals how you can become technically qualified at home for a highly paid key-appointment in the vast Radio and Television Industry. In 144 pages of intensely interesting matter, it includes full details of our up-to-the-minute home study courses in all branches of **TELEVISION and RADIO, A.M. Brit. I. R. E., City & Guilds, Special Television, Servicing, Sound Film Projection, Short Wave, High Frequency and General Wireless Courses.**

We definitely Guarantee

**"NO PASS—NO FEE"**

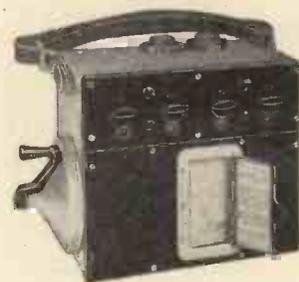

If you're earning less than £15 a week this enlightening book is for you. Write for your copy today. It will be sent FREE and without obligation.

BRITISH INSTITUTE OF ENGINEERING TECHNOLOGY  
389a COLLEGE ROAD,  
29-31, WRIGHT'S LANE,  
LONDON W.3.

## Bridge Meggers

(E & V Series 2)

In perfect condition, 250v.

**£25** Pkg. & Crg., 12/6.

### METERS

4" sq. 0-50 microampere, £5.10.0 p.p.

### REPAIRS

All types and makes of single and multi-range meters repaired and converted to your requirements.

METERS SUPPLIED TO YOUR SPECIFICATIONS. Microampere meters our speciality.

## WARNING

Readers are warned that Government surplus components and valves which may be offered for sale through our displayed or classified columns carry no manufacturers' guarantee. Many of these items will have been designed for special purposes making them unsuitable for civilian use, or may have deteriorated as a result of the conditions under which they have been stored. We cannot undertake to deal with any complaints regarding any such items purchased.

### NEW RECEIVERS AND AMPLIFIERS

**EPIGRAM** model 3-3-3, transistor 3-speed fully portable record reproducer.  
**EPIGRAM** fully portable amplifier with built-in power supply, independent of the mains.  
 FOR details and nearest dealer, write to W.W. Penco Products, Kings Langley, Herts, England. [6728]  
**SHIRLEY LABORATORIES, Ltd.**, 3, Prospect Place, Worthing, Sussex. Tel. 30536.  
**THE TWA/1515** stereosonic tape recording and replay amplifier, separate meter monitoring on record and playback on both channels, 15watts O/P each channel, 96gns; TWA/15 tape recording and reproducing amplifier, 13watts O/P, or Wearite and Collaro decks, 45gns; TW/PA recording and replay pre-amplifier, 30gns; both with valve voltmeter monitoring; type SB/1-15E high-fidelity amplifier, exceptionally wide tone-control system, 40mv sensitivity, 20gns; with two inputs and 5-position gram filter, 22gns; specialized amplifiers for the musical and scientific industries including the Mullard 20watt. [0095]

**ARMSTRONG** chassis, all models in stock.—157, Bromsgrove St., Birmingham. Mid. 1054. [6563]

**SPENCER-WEST** Distribution and Communal Reception Amplifiers cater for all requirements.—Full data and leaflets on request to Spencer-West, Ltd., Quay Works, Great Yarmouth Norfolk. Tel. 4794. [0007]

**BEFORE** buying that replacement chassis we suggest you send for literature; save yourself money by buying direct from us; our chassis have separate channels for AM and FM, variable N.F.B. tone control; 4-position w/c switch FM, Med. Long, Gram; trade enquiries invited; 2/- stamp for leaflets.—Bayly Bros., 46, Pavilion Drive, Leigh-on-Sea, Essex. [6820]

### RECEIVERS AND AMPLIFIERS—SURPLUS AND SECONDHAND

**WILLIAMSON** main amp, with Axiom 150; nearest £30; (B'ham).—Box 6406. [6817]

**CAR** radio, 5 bands, 6-volt, £8; communication receiver, 14-1,500m, £5.—Box 6399. [6814]

**CHAPMAN** tuner type S6BS, cost £44, accept £20, perfect condition.—316, Canford Lane, Westbury-on-Trym, Bristol. Tel. 682940. [6832]

**HRO** Rx's and coils in stock, also AR85, BC348R, CR100, etc.—Requirements please to R.T. & I. Service, 254, Grove Green Rd., London, E.11. Ley 4986. [0053]

**LEAK** V.S. receiver, £15; Hartley-Turner whistle filter, £1; Hartley-Turner multi-ratio output transformer, £1.—Payn, 10, Melbourne Terrace, Saltcoats, Ayrshire. [6794]

**R.F. Unit No. 2** of Receiver R.209. Comprises compact unit, approx. 6 1/2" x 7 1/2" x 1 1/2" deep with RF stage (IT74) Osc. (IT74) and mixed stage (IR5) covers 4 bands 1-20mgs with super tuning drive (calibrated) and band spread dial marked 0-100 degrees; stabilized oscillator supply; the ideal front end for any communication receiver; complete with valves and brand new in makers packing; this unit could be easily altered for a.c. supply using 2-277 & X78 valves; complete as above 69/6 & 2/6 post & packing; or complete with stabilizer but less valves 39/6 plus 2/6 post and packing.

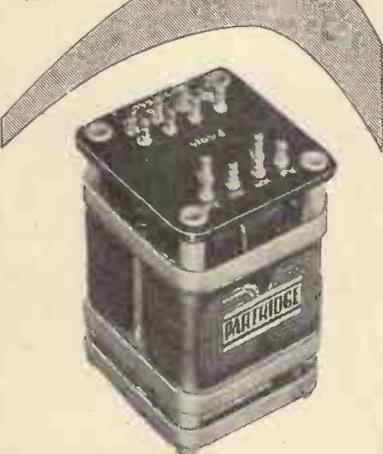

**WALTONS WIRELESS STORES**, 46, 47 & 48, Stafford St., Wolverhampton. [0146]

"**WIRELESS** World" 7-valve F.M. tuner, unused, with cathode follower, mag. eye, and power supply for use on 200-250 volts A.C. fitted with latest type F.M. components of the highest grade including specified temperature compensating capacitors; price £14/15 including 7 valves, accurately aligned and tested ready for use; approx. 1/2 original price; exceptionally good reproduction, ideal for use with all high fidelity amplifiers and recorders; as above but including high-grade cabinet 14 1/2" x 9 1/2" x 9 1/2", £18/10, limited number; bargain; above are despatched by passenger train in boxes lined with foam rubber to ensure safety in transit.—Box 5084. [6741]

## PARTRIDGE TRANSFORMERS for Special Applications

Many current amplifier designs, such as those published by Mullard and G.E.C., specify and approve Partridge Output and Mains transformers. Examples are given below of types suitable for use in two Mullard circuits.

### Type P4014

Output Transformer for the Mullard 5-10 Distributed Load Version.  
 Price: 98/6

### Model P4073

Output Transformer for the Mullard Tape Amplifier Type A.  
 Price: 45/-

### Type P4013

Mains Transformer for the Mullard 5-10 Amplifier.  
 Price: 86/6d.

### Type MC/5

High Fidelity Input Transformer. (Ratio 1:50.) Fully screened in mu-metal case.  
 Price: 38/6d.

The above are available now for immediate delivery from your local retailer. If any difficulty write direct to:

**PARTRIDGE TRANSFORMERS LTD.**  
 TOLWORTH, SURREY  
 Phone: ELMbridge 6737

**RECEIVERS AND AMPLIFIERS—SURPLUS AND SECONDHAND**  
**WILLIAMSON** amplifier, complete with tone and scratch filter; and radio; also Goodman's Reflex Bass Corner Speaker; R.1155 receiver; reasonable offer.—Tel. Arc. 5634. [6768]

**BARGAIN**—G.W.18 amplifier, P.F.A. pre-amp. "Chapman" tuner, F.M., unit; "Connoisseur" gram unit with P/U and 2 leads, Mk. 1; all in walnut cabinet, plus 12in Goodman's speaker in bass reflex cabinet, perfect condition; £80.—115, London Rd., Chelmsford, Essex. Tel. Chelms. 55408. [6712]

**TV RECEIVERS AND AMPLIFIERS—SURPLUS AND SECONDHAND**  
**PHILIPS** projection television chassis, complete and working; £12/10.—Hall, 24, Nevron Mansions, Warwick Rd., London, S.W.5. Fremantle 9631. [1809]

**LOUDSPEAKERS—SURPLUS AND SECONDHAND**  
**VOIGT** speaker, energized; offers or exchange anything photographic.—Box 5968. [6736]

**G.E.C.** metal speaker, presence unit; £9/10, post paid.—Lewis, Hereford Rd., Shrewsbury. [6829]

**VOIGT** domestic corner horn with 150mm record, speaker and energising unit; £30 o.n.o.—Box 5370. [6735]

**DYNAMOS, MOTORS, ETC.—SURPLUS AND SECONDHAND**

**BRIDGE** connected rectifier units (large), 12 and 24V charging auto cut-outs, 300 amp starter relays, 12 and 24V working, heavy duty transistor pushers; please see advert of October's "Wireless World," page 175.  
**T. W. PEARCE**, 66, Great Percy St., W.C.1. [0012]

**TEST EQUIPMENT—SURPLUS AND SECONDHAND**

**G.R.C.** std. sig. gen., type 603-A (mains converted), £12; also S.T.C. sig. gen., 420-660 Mc/s, cost £120, sell at £7. Box 5908. [6710]

**OSCILLATING** wavemeter covering 200-550m and 800-2,000m for sound radio, rapid alignment check; £5/12; please write for details to A. G. Lobban, 22, Bell St., Shaftesbury, Dorset. [6806]

**SIGNAL** generators, oscilloscopes, output meters, valve voltmeters, frequency meters, multi-range meters in stock; your enquiries are invited.—Requirements to R.T. & I. Service, 254, Grove Green Rd., London, E.11. Ley. 4986. [0056]

### NEW GRAMPHONE AND SOUND EQUIPMENT

**3-SPEED** portable transistor gram (operates on 4 1/2 volt battery); 27gns.  
 200mW Transistor amplifiers; 10gns  
 4-WATTS Hi-Fi models soon.  
**TRANSISTOR** pre-amps; still £9/15.  
**COLLARO** decks £20, amps 23gns and 25gns.  
**WEARITE**, Reflectograph decks, and amps available.  
**HARDING ELECTRONICS**, 120a, Mora Rd., Cricklewood, London, N.W.2. Gladstone 1770. [0032]

**SPECIAL** tape offer, (few only left, prof. tape at 1,200ft. 22/6, 21/- each 6 and above); 1/6 P.P. plastic not paper, guaranteed; satisfied users everywhere.

**RECORDERS** by Ferragraph, Leavers-Rich and the new wonder recorder, Brenell. Disk recorders, blank disks, microphones.  
**TAPE/DISK** service, specialists in music recording and editing.

"**ERICA**" **RECORDING STUDIOS** (1949), Recorder House, Peel St., Eccles, M.C. Eccles 1624. Director Thurlow Smith, A.R.M.C.M. [0122]

**TRUE** Hi-fidelity; have you heard Vortexion tape recording equipment in use with the latest Wharfedale and Goodman's Hi-Fi speakers? Why not arrange a personal demonstration, when we can give you our undivided attention and help you with your Hi-Fi problems? Write or phone for appointment.  
**GRIFFITHS HANSEN (RECORDINGS)**, Ltd., 32-3, Gosfield St., Langham St., W.1. Mus. 2771/0642. [6755]

**CINE-VIX** disc recording equipments, type C71, for high-quality recordings from existing microphone equipment; price from 28gns; also available as a complete channel inclusive of mic., amplifier and playback equipment, at 70gns; type C7 for highest quality professional requirements—recorder mechanism at 48gns, or complete channel at 110gns; demonstrations arranged in London.

**PLEASE** write for details to K.T.S., Ltd., "Coplow," Park Rd., Braunton, N. Devon. Tel. Braunton 224. Callers by appointment only. [0210]

**ALL** Hi-Fi enthusiasts please note! We are supplying the Collaro tape transcripter complete with pre-amplifier and power pack ready to plug into any amplifier, for only 36gns, making it one of the lowest priced quality tape recorders on the market! A vast experience in tape recorders is at your disposal; all other makes in stock; easy terms available.—Sound Tape Vision (Dept. W.W.), 71, Praed St., London, W.2. Pad. 2807. [0211]

## LONDON CENTRAL RADIO STORES

**SELENIUM RECTIFIERS.** 230 volt, 1 amp. Size 9 x 4 x 4in. 30/-.

**WESTERN ELECTRIC** extending mike with single earpiece. Has heavy base fixing rod and extends approx. 22in. 38/6.

**AVO UNIVERSAL TEST METER.** Model 40 recommissioned as new. In perfect working order. £10/10/-.

**0-50 MICROAMMETER.** 2 inch flush mounting. Brand new and boxed. 50/-.

**VENNER 8-DAY CLOCKWORK TIME SWITCHES.** 230 volt, 1 amp. 3 1/2 x 2 1/2 x 3 1/2in. 25/-.

**8in. P.M. SPEAKERS.** 3 ohm. In good working order, 11/6.

**GYRO COMPASS TEST SET** for flux gate compasses. Brand new and boxed. £10.

**EX-G.P.O. RELAYS.** 500 ohm coil, 10 leaves, 4/6.

**A.C./D.C. VOLTMETER.** 0-150, 0-300 moving iron, 6in. scale. In case, with carrying handle. Size 7 1/2 x 4in. £1/15/-.

**AVO VALVE TESTER.** Roller panel type in wooden carrying case. Perfect order. £9/10/-.

**UNISELECTOR SWITCHES.** Have many applications including automatic tuning, circuit selection, etc. Operates on 25-50 v. Full wipe 4-bank, double coils. 32/8. Half wipe 6-bank. 12/6.

**2 and 3-CORE CABLE.** Heavy duty P.V.C. Suitable for lighting, outdoor use, etc. 9/6 per dozen yards.

**MIRROR GALVOS.** Instrument resistance, 190 ohm. External resistance 1,400 ohm. Sensitivity 2,200 M.M.S. In wooden transit box. Size 13 x 6 x 6. £3/10/-.

**CARBON HIND MIKE.** Type No. 4. 8/6.

**MOVING COIL HAND MIKE.** Type No. 7. 8/6.

**SINGLE FLARE RE-ENTRANT SPEAKERS.** Bakelite 15 ohm impedance. Suitable for P.A. work and all outdoor functions. Size 18 x 18 x 1 1/2in. 30/-.

**HAND MARCHING COMPASSES.** Magnetite type. Bakelite with luminous dial and reflector. Course setting ring. New and boxed. Size 3 x 2 x 1 1/2in. 15/-.

All prices include carriage.

23 LISLE ST. (GER. 2969) LONDON, W.C.2  
Closed Thursday 1 p.m. Open all day Saturday

**GRAMOPHONE AND SOUND EQUIPMENT—SURPLUS AND SECONDHAND**

**GRUNDIG 700L** tape recorder, good condition; £35; tape and mike.—Box 6388. [1812]

**ARMSTRONG** radiogram, chassis model AF105, as new, cost £37; bargain £29.—Box 6321. [6804]

**E.M.I.** high fidelity disc recording equipment, portable, little used, priced £180; offers over £100 invited.—Box 6424. [16330]

**VALRADIO** converter, 200/250 d.c., 200/250 a.c., type 350/110A for 3-speed radiogram, little used; £6.—Box 6139. [16763]

**FERROGRAPH 2A/NH** special facilities, list £90, absolutely as new, £58; endless loop, £3; Manchester area.—Box 6393. [1813]

**GRAMOPHONE AND SOUND EQUIPMENT WANTED**

**A DISC** records wanted, must have w/e head, Surden preferred.—Price and details to Box 6292. [16796]

**NEW COMPONENTS**

**CRYSTAL** microphone inserts (Cosmo 250 Mic 6/4), in steady demand by Hams and Sound Engineers; guaranteed newly made and boxed; 15/6 post free.—Radio-Aids, Ltd., 29, Market St., Watford. [01699]

**COMPONENTS—SURPLUS AND SECONDHAND**

**RADIO CLEARANCE, Ltd., 27, Tottenham Court Rd., London, W.1. Tel. Museum 9188.**

**ELECTROLYTICS:** Capacity, voltage, size, type of mounting, price post paid, 25, 25v, 1/2 x 1 1/4, W/E 1/3; 500, 12v, 3/4 x 3/4, W/E 2/1; 1,000 + 1,000, 6v, 1 x 3, clip, 3/3; 1,000, 6v, 1 x 2, clip, 2/3; 1,000, 2,000, 6v x 3, clip, 5/9; 100, 12v, 3/4 x 3/4, clip, 1/2; 2,000, 12v, 1 1/2 x 2, clip, 3/6; 50, 25v, 3/4 x 1 1/4, clip, 1/9; 100, 25v, 3/4 x 1 1/4, clip, 1/9; 3,000, 25v, 1 x 3, clip, 4/-; 3,000, 25v, 1 1/2 x 4 1/2, 5/-; 5,000, 25v, 1 1/2 x 4 1/2, 6/6; 2,500, 50v, 1 1/2 x 4 1/2, 6/6; 5, 150v, 3/4 x 1 1/4, W/E 1/3; 8, 150v, 3/4 x 1 1/4, clip, 1/3; 40 + 40, 150v, 1 x 2, clip, 2/3; 100, 275v, 1 1/2 x 3, clip, 3/-; 60 + 250, 275/350v, 1 1/2 x 4 1/2, clip, 6/-; 16 + 24 + 3, 450/525v, 1 1/2 x 2, clip, 5/-; 20 + 10, 450v, 1 x 3, clip, 4/-; 8, 500v, 1 1/2 x 2 1/2, clip, 2/3; 32 + 32 + 8, 350/425v, 1 1/2 x 3, clip, 5/-; 32 + 32, 350/425v, 1 1/2 x 2, clip, 4/-; 100, 350/425v, 1 1/2 x 3, clip, 4/-; 2, 350, 1 1/2 x 2 1/2, clip, 6/6; 50 + 50, 1 x 2, clip, 3/-; 32 + 32 + 8, 275v, 1 1/2 x 2, clip, 4/3; 100 + 200, 350v, 1 1/2 x 4 1/2, clip, 7/-; 50 + 50, 350v, 1 1/2 x 3, lug, 4/6; 200, 250v, 1 1/2 x 3, clip, 1/6; 16 + 8 + 4, 275v, lug, 3/-; 200 + 250 + 250, 275v, 2 x 4 1/2, clip, 8/6; 32, 450v, 1 1/2 x 2, W/E 3/3; 60 + 100, 350v, 1 1/2 x 2 1/2, clip, 6/6; 50 + 50 + 50, 350v, 1 1/2 x 3, lug, 5/6; all ALL cans, some with sleeves, all voltages WKG, surge V where marked, all new stock guaranteed.

**TELEVISION** chassis, cadmium plated steel, size 14 x 13 x 2 1/4in. complete with 15 valve holders, 4-B, 2-B, 4, 1-B, 4, Cer, 2-B, 7G Per, 1-Int. Oct. amp), 20 various tag strip cut away for metal rect., line trans., etc., 9/11 each, post paid.

**FRONT** and rear tube mounts to fit above chassis, 3/- pair, post paid.

**P.M. focus** rings wide angle, tetrode tube, fully adjustable, 9/11, post paid.

**SCANNING** coils, wide angle, with mounting lugs 19/6, post paid.

**T.V. metal** rect. 250v 250ma, H.W. size 2 1/4 x 4in. 12/6, post paid.

**C.V.Y.F.'s** 34Mc/s, 2nd, 3rd, 4th, vision cans 13/16 x 13/16 x 2 1/2in, slug tuned, set of three 5/6 post paid.

1000 w/w pots, 3w, 1in spindle; 2/6.

**RADIO CLEARANCE, LTD., 27, Tottenham Court Rd., London, W.1. Tel. Museum 9188. [0015]**

**SOUTHERN RADIO SUPPLY, Ltd., 11, Little Newport St., London, W.C.2. See our displayed advertisement, page 160.**

**1420** crystal units, type FT243, wide range, individually packed in dehydrating agent and sealed; each in original carton; to clear; all for £110, or nearest offer.—Box 6164. [6770]

**CATHODE** Ray tubes, all sizes, all makes, singly or in quantity: 12in £3/10, 14in £4, 15in £4/10, 17in £5/10; used, but with 3 months' guarantee; carriage 12/6.—B.P.H. Distributors, 379, Staines Rd., Hounslow, Middlesex. [16750]

**ILLUSTRATED** catalogue No. 13 containing over 450 items of Government surplus and model radio control equipment; 2/- post free, refunded on purchase of goods; 2/6 overseas; seamail.—Arthur Sallis Radio Control, Ltd., 93, North Rd., Brighton. Tel. 258906. [6790]

**MAGSLIPS** at low prices, fully guaranteed, 3 in Resolver No. 5 (AP 10861), 50v, 50c/s, unused, each in tin, 35/-, post 2/1; large stocks of these and other types.—P. B. Crawshaw, 94, Pixmore Way, Letchworth, Herts. Tel. 1851. [0087]

**GABINETS**

**LEWIS RADIO** have the best selection and finest finish.—See page 162. [0224]

**TWO** 2-phase inverter cabinets, also excellent solid oak (3/4in thick) radiogram cabinet, £12.—Weedy, Penlgera, Nr. Swansea. [16753]

**VALVES**

**1500** T.T. II valves, best offer the lot or lots of 100.—Box 5844. [16898]

**VALVES WANTED**

**ALL** types of valves British or American, transmitting and receiving, keenest cash prices paid. What have you to offer?—Write or call Lowe Bros., 9a, Diana Place, Euston Rd., N.W.1. [4485]

## COMMUNICATIONS EQUIPMENT

**WIRELESS SET 19 MK. III.** Frequency 2-8 Mc/s, and 235 Mc/s. Antenna output 8 watts. Systems A.1, A.2, A.3. Power source v. battery with operating equipment for mobile or ground use.

**AMPLIFIER R.F. NO. 2.** For use with Wireless Set No. 19 Mk. III. Boosts antenna output to 30 watts.

**WIRELESS SET X32D.** Frequency 2-8 Mc/s in two switched bands. C.W. and frequency modulated and amplitude modulated R.T. Remote control facilities. Mobile or fixed station use. Power source 12 v. D.C.

**WIRELESS SET 62 Mk. II.** Frequency range 1.6-10 Mc/s. In two switched bands. Crystal controlled. For mobile use. Systems A.1, A.2, A.3—with operating equipment. Power source 12 v. D.C.

**CRYSTAL CALIBRATOR NO. 10.** For use with Set 62.

**MOBILE RADIO TELEPHONE.** 70-90 Mc/s, complete with loudspeaker, hand microphone, etc.

**HANDY TALKIE SCR-538.** Frequency range 3.5-6 Mc/s. Complete with spare coils, etc.

**TCS TRANSMITTER/RECEIVER STATIONS.** complete. Frequency range 1,500 kc/s-12,000 kc/s. Output 10 watts phone, 25 watts C.W. All operating equipment including Remote Control with loudspeaker and choice of Dynamotor Supply (12 v., 24 v., or 115 v.)

**AIRCRAFT RADIO COMPASS.** Installation Type SCR289G. Frequency coverage 200 kc/s-1750 kc/s in three switched bands. Superhet communications receiver with compass circuit elements. Remote Control facilities and motor driven aerial loop complete with all operating accessories.

**AIRBORNE VHF EQUIPMENT.** ARC-1 multi-channel transmitter/receiver, complete. 100-156 Mc/s. ARC-3 10-channel transmitter/receiver complete. 100-156 Mc/s.

**MICROPHONE INSERT.** G.P.O. Carbon, 2/6 each.

**TELEGRAPH AND TELEPHONE EQUIPMENT**

Filter, line and directional.

High Speed Morse Telegraph Transmitters. Telegraph Tape Printers.

Terminal Units Apparatus VF Speech + Duplex. Apparatus VF Speech + 5 Impulse.

Apparatus two-tone Telegraph.

Carrier Terminals 1 + 1.

Carrier Terminals 1 + 4.

Apparatus VF 3-channel Duplex.

Field Telephone Sets types D.F.H. and L.

Switchboards, universal call, 6-line and 10-line.

Prices and further details on request.

Transmitting valves, types 803, 805, 832.

Masgipe Hunter 3in. used, at 8/6 each.

Morse Keys, totally enclosed, A.M. type, at 1/6 each.

Aerial winches, Air Ministry type 5, at 2/6 each.

Filters, 7H, 6in coil, 6-line and 10-line.

**ATTENUATOR ASSEMBLIES** for "T" networks 21 steps vitreous wire wound Resistors.

Tel. Worthing 8719 and 30181.  
Cables 'GIL WORTHING.' Codes BENTLEY 7 and

## SURPLUS

- **AERIAL EQUIPMENT.** Poles, Masts, Dipoles, Yagi, Microwave arrays, Whips, 12in. Whips to 90ft. Masts.
- **CABINETS AND RACKS.** 36in. to 96in. high, standard 19in. wide.
- **CONDENSERS** up to 10,000 mfd. and 50 kV.
- **FUSES.** Cartridge and E.S. 1/2 amp. to 600 amps.
- **INSULATORS** 80 different patterns.
- **LOUDSPEAKERS** 3in. dia. to 50 watt Theatre Systems.
- **METERS.** 2in. to 12in. dia. 120 different types.
- **POWER SUPPLIES.** Generators, Rectifiers, Vibrators, Inverters, Dynamotors from 2 volts 100 amps. to 36,000 v. 1/2 amp.
- **RECEIVERS.** 80 types available from 15 Kcs. to 600 mc/s. including portable, D.F., Table, Rack and Pedestal.
- **TEST GEAR,** American over 100 different types, Meters, Calibrators, Signal Generators, etc.
- **TELEPHONE AND TELEGRAPH EQUIPMENT.** Single and multi channel apparatus, filters, switchboards, power supplies.
- **TRANSFORMERS** Audio and Power. 200 types from 2 volts to 18,000 volts and up to 15 kVA.
- **TRANSMITTERS,** 60 different types from UF-1 Handie Talkie to G-50, 2,500 watts.

## SOUTHERN RADIO'S WIRELESS BARGAINS

**TRANSRECEIVERS.** Type "38" (Walkie-Talkie). Complete with 5 valves. In metal carrying cases. Ready for use. Less external attachments, 30/- per set. **ATTACHMENTS** for use with "38" TRANSRECEIVER HEADPHONES, 15/6; THROAT MICROPHONE with Lead and Plug, 4/6; JUNCTION BOX, 2/6; AERIAL, 2/6.

**TRANSRECEIVERS.** Type "18" Mark III. TWO UNITS (Receiver and Sender) contained in Metal Case. Complete with Six Valves, Microammeter, etc. LESS EXTERNAL ATTACHMENTS, 44/10/-.

**TRANSmitters.** T1154. Complete all valves, etc., etc. Perfect order. 3 frequencies. £2/7/6, in transit case. Delivered U.K.

**BONDSIGHT COMPUTERS.** Ex-R.A.F. BRAND NEW. A wealth of Components. GYRO MOTORS, REV. COUNTERS, GEAR WHEELS, etc., etc. Ideal for Model Makers, Experimenters, etc., £3.

**LUBRA HOLE CUTTERS.** Adjustable 3in. to 3 1/2in. For Metal, Wood, Plastic, etc., 7/-.

**RESISTANCES.** 100 ASSORTED USEFUL VALUES. Wire Ended, 12/6 per 100.

**CONDENSERS.** 100 ASSORTED. Mica, Metal Tubular, etc., 15/- per 100.

**PLASTIC CASES.** 14in. x 10 1/2in. Transparent. Ideal for Maps, Display, etc., 5/6.

**STAR IDENTIFIERS.** Type I A-N. Covers both Hemispheres. In case, 5/6.

**CONTACTOR TIME SWITCHES.** In sound-proof case. Clockwork movement. 2 impulses per sec. Thermostatic Control, 11/6.

**REMOTE CONTACTORS,** use with above, 7/6.

**MORSE PRACTICE SET** with Buzzer on Base, 6/9. Complete with Battery, 9/6.

**MORSE TAPPERS.** Scd., 3/6; Midget, 2/9.

**CRYSTAL MONITORS.** Type 2. New in Transit Case. Less Valves, 8/-.

**METERS AND AIRCRAFT INSTRUMENTS.** Only need Adjustment or with broken Glass. TWELVE INSTRUMENTS, including 3 brand new Aircraft Instruments, 35/- for 12. Postage or carr. extra. Full list of Radio Books, 2 1/2d.

- 5 Wave bands including VHF
- Independent Bass & Treble boost & cut controls
- High Flux Pre-speakers
- Wide range Pick-up

**THE TWIN £74.16.6**

The TWIN has been designed to suit the smaller type of room without sacrificing quality of reproduction. This has been achieved with a compact cabinet (31in. high, 27in. wide and 14in. deep) soundly constructed, and finished in elegant Walnut veneer. Twin 10in. P.M. Speakers give faithful reproduction, free from distortion and resonance, and the latest 4 speed COLLARO Auto-changer is fitted. The radio chassis is housed in a unique "hopper" arrangement permitting armchair control over all operations.

**THE STANDARD £88.4.6**

The STANDARD is a full size Radiogram (35in. high, 41in. wide and 19in. deep) constructed to give the best possible tonal quality, and fitted with an Adjustable Bass Reflex Chamber. It is beautifully finished in two tone Walnut, and has exceptionally generous record storage capacity (200 records).

The other components have been selected to maintain this high standard. The Record Player is the latest COLLARO 4 speed fully mixing autochanger fitted with the Studio Turnover Crystal Pickup head. The Speaker is a 10in. GOODMAN P.M. having a very high flux density (12,000 lines).

**DEMONSTRATIONS** at our Holloway Showrooms every weekday (inc. Saturday) 9-6 p.m.

**HIRE PURCHASE** facilities are available.

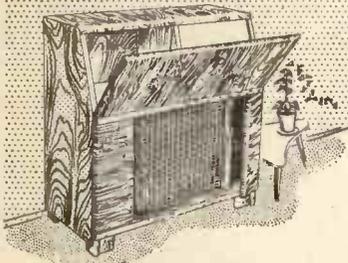

**ARMSTRONG WIRELESS & TELEVISION CO. LTD.**

Walters Road, London, N.7.

Telephone: NORTH 3213

## CABINETS AND HI-FI EQUIPMENT

We can supply any Cabinet to your own Specifications.

"The Bureau" £16.10

This ever popular bureau cabinet is veneered with the finest selected Walnut and beautifully polished in a medium shade. Designed to accommodate any type of Automatic Record Changer, Tape Deck, Amplifier, chassis, etc., and to give generous storage compartments.

We can also supply and fit this or any cabinet with the latest Hi-Fi amplifiers, tuners, transcription units, record changers, speakers, etc.

Send for comprehensive illustrated catalogue of cabinets, autochangers, speakers, etc., all available on easy H.P. terms.

## SITUATIONS VACANT INSTRUMENT Mechanics

ARE required by THE United Kingdom Atomic Energy Authority, Industrial Group at Windscale Works, Sellafield, and Calder Hall Works, Calderbridge, Cumberland.

DUTIES cover maintenance of instrumentation in reactors and chemical plants, plus a wide range of specialized electronic equipment. CANDIDATES must be experienced in industrial instrumentation or electronics, either through apprenticeship or equivalent training. TRAINING in maintenance of specialized instruments will be provided as necessary. RATE of pay for 44-hour week is 189/-, a job grading scheme operates; the work is divided into three grades (A, B & C) and additional lead rates of 42/-, 30/- and 12/-, respectively, are paid.

MARRIED applicants living outside daily travelling distances of the works will be given consideration for housing within a reasonable period after recruitment.

APPLICATIONS, giving details of qualifications and experience to Works Labour Manager, Windscale Works, Sellafield, Cumberland. [6807

## FERRY AIRPORTS, Ltd.

APPLICATIONS are invited, radio mechanics and licensed radio engineers, permanent vacancies, hangar and flight duties, Bristol Freighter and Dakota aircraft.

EXPERIENCE STRI2D, STR9Xe, MR80, AD7092, BC433G and Ultra 1/C preferred, not essential; modern heated hangar canteen and assisted travel facilities.—Write particulars, Engineer Superintendent, Ferryfield Airport, Lydd, Kent. [6789

## R. B. PULLIN & Co. Ltd

OFFER the following appointments in their expanding organisation:—

1. DEVELOPMENT Engineers to be concerned with the circuit design for a variety of Electro Medical Apparatus, ship, and air-borne instruments and communications equipment.

VARIOUS degrees of seniority are involved. nence qualifications ranging from O.N.O. to degree standard are acceptable.

APPLICANTS should have had previous experience of valve circuit design, not necessarily in one of the above fields.

THE appointments offer excellent prospects and the opportunity to work in well-equipped laboratories on interesting projects which require considerable technical responsibility and initiative.

2. A Transformer Production Engineer to assume overall responsibility for the quality and performance of small inductors, transformers and filter assemblies whose manufacture by the company is steadily expanding.

THIS is a responsible position requiring considerable previous experience of the production of the above types of component, and preferably also experience of their design.

A minimum qualification of H.N.C. or the equivalent is desirable but not essential. ALL appointments are permanent, pensionable and carry attractive salaries. Apply in confidence to:

THJ: Superintendent, Electronic Development Division, R. B. Pullin & Co., Ltd., Great West Rd., Brentford Middlesex. [6834

NON-DESTRUCTIVE testing techniques.

ATTRACTIVE and responsible positions are offered in the development of new techniques for the non-destructive examination of materials.

SENIOR and junior staff are required with qualifications or experience in the fields of physics or physical metallurgy with particular reference to the non-destructive examination of materials or industrial instrumentation and measurement.

SALARIES commensurate with qualifications and experience will be paid.

APPLICATION should be made in writing in the first instance giving full details of qualifications, previous experience, age and salary required, and be addressed to Personnel Department, Kelvin & Hughes, Ltd., New North Rd., Barking, Essex. [6722

NON-DESTRUCTIVE testing techniques.

TWO attractive positions are offered which will involve hard work and extensive travelling in the United Kingdom and Europe, the successful applicants will be concerned with the development and industrial application of modern non-destructive testing techniques, they must have the following qualifications:—

1. INITIATIVE in the industrial application of modern electronic techniques and/or mechanical design; it is desirable that they should also have adequate academic qualifications.

2. EXPERIENCE in the industrial application of modern electronic techniques and/or mechanical design; it is desirable that they should also have adequate academic qualifications.

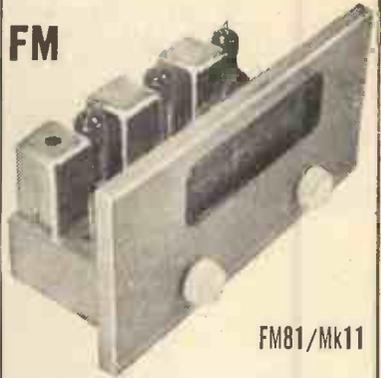

3. AGE 23 to 30 years. SALARIES will be commensurate with the candidate's qualifications and experience. APPLICATION should be made in writing in the first instance giving full details of qualifications, previous experience, age and salary required, and be addressed to Personnel Department, Kelvin & Hughes, Ltd., New North Rd., Barking, Essex. [6723

RADIO and TV engineer, permanent position offered.—H. J. Gifford, Ltd., Basingstoke, Hants. [6759

WIREMAN wanted with experience of Type 3000 Relays: small works, Paddington area.—Tel. Amb. 6623. [6787

# TUNERS

FM

FM81/Mk11

F.M. V.H.F. TUNER completely stable drift free tuning. Volume control. Tuning indicator, A.V.C. Sensitivity better than 4  $\mu$ V for 20 db quieting. 21 gns tax paid.

AM

S6BS

A.M. 9-band all-wave tuner. 13 m.-570 m. Band spread, variable selectivity. Tuning indicator. Logging scale, delayed amplified A.V.C. Tropicalised. Sensitivity better than 2  $\mu$ V for 250 mV output. £46/4/- tax paid.

FM/AM

S5/FM

FM/AM: World Wide A.M. in 2 ranges. S5E/FM 12.5 m.-37 m.; 35 m.-100 m.; 90 m.-250 m.; 190 m.-250.

S5/FM: 16 m.-50 m.; 195 m.-550 m.; 880-2,000 m. Sensitivity better than 10  $\mu$ V on all ranges. PLUS completely stable drift free VHF.FM. Sensitivity better than 8  $\mu$ V for 20 db quieting. Tuning indicator on all bands AM and FM. £34/2/6 tax paid.

All tuners suitable for modern high quality amplifiers. Most tuners available with Escutcheons in Gold, Silver or Bronze.

Export Enquiries Invited

**"AUTOMAT" CHARGERS and POWER PACKS**

as supplied to Ministries, Airline Co.s, etc., up to 600 watts. Correct design, best materials and workmanship.

Selenium rectifier stacks, 40 ma. to 10 amp., with or without transformers.

**"AUTOMAT" SELF REGULATING CHARGERS**  
"Export" model as illus. for 6 V. 12 v. 24 v. smps. using S.T.C. selenium rectifier, damp-proof, ultra reliable, wt. 16lb., for 215/245 v. A.C. £6/5/- Carr. 4/6 extra. Gtd. 12 months. Also our well-known 12 v. 3 amp. charger with protective ballast and glow indicator, 69/6, ditto, 6 v. 2 amp./12 v. 2 amp. 69/6.

**FOOLPROOF CHARGER KITS.** Genuinely trouble free and ultra reliable. As sold for 11 years through "W.W." with full data sheet and instructions. No. 1 Kit. Westalite 3 amp. rectifier, 65 watt tapped, impregnated trans., ballast bulb, for 2 v., 6 v., 12 v. charger, all rectifier troubles eliminated, 46/6, p.p. 1/10. Handsome steel case, ready punched, louvered, enamelled, 12/6. No. 1A Kit. 3 a. rectifier, 65 watt, trans., ballast res., ammeter for 2 v., 6 v., 12 v., 3 a., 52/6, p.p. 1/10. No. 2 Kit. 12 v. 2 amp. rect., 45 watt trans., ballast/indicator bulb for 2 v., 6 v., 12 v. charger, 36/6. Case 12/6, p.p. 1/10. Wt. 8lb. with case. Minor Kit. 6 v. 2 amp., 32/6, p.p. 1/10, case 12/6 extra. Senior Model, for 6 v./12 v. at 4 to 5 amp., 12 v. 5 amp. S.T.C. rect., 85 watt trans., ballast bulb, 64/-, p.p. 2/-. Slider Kit, 120 watt trans., 14 v. 6 amp., large flanged type rect., slider res., high grade ammeter, wt. 17lb., for 6 v./12 v. charger, 24/13/-, carr. 4/-.

**SELENIUM RECTIFIERS,** new stock not surplus. 6 v., 1 a., 4/-, 2 a., 7/6, 4 a., 15/-, 12 v. 0.5 a., 5/-, 1 a., 7/6, 2 a., 9/6, all p.p. 6d. 12 v./14 v. 3 a., to 3.4 a., 15/6, 5 a., 27/-. Large flanged 6 a., 32/-, p.p. 10d. 24 v., 50 mA., 2/9, 24 v. 0.3 a., 9/-, 1.5 a., 15/-, 3 a., 27/-, 5 a., 42/-, 8 a., 62/-, all p.p. 6d. 1.5 a., 15/-, 3 a., 27/-, 47/-, 230 v. 1 a., 97/-, p.p. 1/6. H.T. rectifiers, 120 v. 80 mA., R.M.2. 3/4, 135 v. 30 mA. etim., 5/8, 250 v. 60 mA., 7/-, 250 v. 100 mA. bridge, 14/6. All p.p. 6d. Many other L.T. and H.T. types in stock.

**CHAMPION PRODUCTS**

43, Uplands Way, LONDON, N.21. Phone LAB 4457

**SITUATIONS VACANT**  
TANGANYIKA Broadcasting Corporation.

APPLICATIONS are invited for a vacancy for a Broadcasting Engineer in the service of the Tanganyika Broadcasting Corporation, with salary scale £981 rising to £1,863 a year.

The successful candidate will be appointed on contract terms with gratuity at the rate of 15% of total salary drawn, and will enter the salary scale at a point determined by qualifications and experience. The term of contract will be for one tour of 30 to 36 months and passages by air or sea will be granted from the U.K. and return for the officer and his family. Housing or rent assistance will be provided.

**QUALIFICATIONS:** Applicants should be over the age of 28 and be Graduates of the Institution of Electrical Engineers or have an engineering degree or diploma granting exemption from Sections A and B of the Institution's examinations and have had not less than two years' experience which can be directly related to broadcasting.

**DUTIES** include staff management and responsibility for the maintenance, installation and operation of broadcasting studios and transmitters.

**WRITE** to the Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M2C/42138/WF. [6717]

**HIGHER** technical officer (radar) required by

**NIGERIA FEDERAL GOVERNMENT** for one to two (2-24 months) in first instance. Appointment either (a) on agreement with prospect of permanency in salary scale (including inducement addition) £984 rising to £1,410 a year, or (b) on contract in salary scale (including inducement addition) £1,134 rising to £1,674 a year with gratuity at rate of £100/£150 a year. Commencing salary according to experience. Outfit allowance £60. Government quarters at rent £62/£115 a year. Free passages for officer and wife. Assistance towards children's passages and grant up to £150 annually towards maintenance in U.K. Liberal leave on full salary. Candidates who must be competent radar mechanics with at least four years' experience, must be able to maintain G.L. III and other meteorological radio and radar equipment. They must also be able to take charge of the Radar Wind Section.—Write to the Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M2C/42138/WF. [6774]

**WIRELESS** telegraphy operators required by **FALKLAND ISLANDS GOVERNMENT.** Wireless Station, Port Stanley, for one tour of three years in first instance. Salary scale (including expatriation allowance) £390 rising to £500 a year. Commencing salary according to experience. Full board accommodation obtainable at £12-£14 a month. Free passages. Liberal leave on full salary. Candidates must be single and have had good practical operating experience, P.M.G. certificate an advantage.—Write to the Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M2C/41891/WF. [6775]

**SIGNALS** officers (Inspectors of Police, Grade 1) required by **KENYA** Government for 2 years on probation for permanent employment. Commencing salary according to experience in scale (including Inducement Pay). £753 rising to £1,095 a year. Outfit allowance £60. Free uniform. Separation allowance payable to married men under certain conditions. Free passages. Liberal leave on full salary after tour of 30-45 months. Candidates, preferably unmarried, aged 25-35, should be at least 5ft 7 1/2 in without footwear, intelligent and of physical strength and development. Must be of good education with normal vision and hearing without aids. Candidates must be capable of installing and maintaining E.F. and V.H.F. radio equipment and accessories and have at least 4 years' experience of telecommunications work with a radio firm, Government Dept., or H.M. Forces. Knowledge of diesel and/or petrol electric sets an advantage.—Write to the Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M1/45137/NF. [6803]

**MUIRHEAD & CO., LTD.,** Beckenham, Kent, require **DEVELOPMENT** Engineers to undertake work on development of synchros and servo motors. In particular the vacancies require:  
1. Qualified Engineers with Honours degree, industrial experience not essential.  
2. E.N.C. with practical experience, or without academic qualifications but having a good engineering background.  
**TECHNICAL** Assistants for development of test equipment for Synchros and Magnslips, preferably with a degree in Engineering or Physics or E.N.C.  
**APPLICANTS** without academic qualifications and with good industrial background would be considered.  
**SALARIES** commensurate with qualifications and experience; a pension scheme is in operation and the company has its own sports ground, excellent recreational, social and canteen facilities are available. Please write, giving full details, to the Personnel Manager. [6718]

**ELECTRONIC** wireman required for small workshop in Paddington area; only man fully conversant with type 3,000 relays need apply.—Box 6428. [6833]

**BENSON'S BETTER BRINGS**

**TRANSCIEVERS,** Type 18 (Rx and Tx separate), with valves, less attachment, 50/- (carr. 7/8). Type 46 (Walkie-Talkie), with 1/7P25, 5/7P25, 1/1EL31D, 1/10P25, 1A/T4. 2 xials, headset/mic. satchels, aerial, 65/-  
**INDICATORS** 62A. New. VCR97, 12/VR91, 2/VR54, 3/VR92, 4/CV118, 55/- (carr. 10/-). Headphone Adaptors C-10, 2/6. Condensers, block 0.06 15 kV. (USA), 15/-, Control Unit 301. Input 100/240 v. 60 c. or Bat., for remote TX control. Contact: 2 relays, 2 met. res., 4/35, Indicators, jacks, grey case, 12 x 8 x 8 1/2 in., 55/- (carr. 7/6). Valves, VR91, ex-new equipment, 8 for 21 LAMPS: Projector, 120 v. 750 w. pre-focus, 3/-; Flood, 200/250 v., 250 w. E.S. Rd., 4/6; Standard BC 25 v. 60 w.; 35 v. 25 w.; 40 w.; 60 w.; or 150 v. 1/-.  
**Transformers:** Vibrator 12-0-12 v. to 300 v. 100 mA., poted, 12/6; "C" core, input 200 v., output 6.3 v. 2 A. three 13/6. Flex Drivers, 31in. long, jin. dia. ends, 3/6.  
**VIBRATORS.** Maltory G629C 12 v. 4 pin, 7/6. 3 pin plug and socket (brass) on 1 yd. cable, 3/-. Bomb release, relay operating claw, with heater, 5/-.  
**THROAT MICS.,** new, 2/6. BC84A. (BC8522). New condition, with 16 valves; 100/150 m.c/s. Less xials and relays, 40/- (incl. 5/-). KEYS, Morse, large, covered, 10/6; small 2/6.  
**COMMAND RXS.** Brand new, with valves. Med. wave 52/1.5 Mc/s., 97/8. 1.5-3.0 Mc/s., 55/-; BC454. 3-6 Mc/s., 45/- (post 3/-). Condensers, var. apindled, ceramic, 15, 25 or 50 pfs., 1/3; 75 pfs., 1/6; butlytry 25 pfs., 1/6. RXS.1211/4 (TR1947), with 3/6P31, 3/6L01, 5 gang tuner, new, 37/6, less valves, 7/6. (Circuit 1/1). **MOTORS:** Synch. 100 v. 3,000 r.p.m., 10VA, 10/-.  
**SUPPRESSORS,** radio interference, ex-A.M., 5/6 (post 2/-). **BRAND NEW RF.** 26, 27, 27/6 (postage 2/8); RP24, RF25, 10/6. **DYNAMOTORS** (post 3/-): 12 v. to 250 v. 65 mA., and 6.3 v. 2.5 A., 10/6. **EDDYSTONE,** 12 v. to 190 v. 75 mA., 11 v. to 300 v. 200 mA., cased, 15/- (carr. 8/6). **METAL RECTIFIERS:** 600 v. 30 mA., 6/-; 500 v. 500 mA., 10/6. 240 v. 30 mA., 3/6. 1,000 v. 30 mA., 7/6. **IF AMPLIFIERS** 178, 18.0 Mc/s., with valves, 15/6 (postage 2/6) each. L.P.T.'s 10/13 Mc/s., cased, new, 1/3. £1155 Colpinks, used, 9/6. **GEOCKES,** L.P. Ferranti, 10E, 120 mA., screened, 7/6. 10E, 500 mA., 8/6; 5H, 200 mA., 4/8. "C" core 10H, 150 mA., 12/6. **VIBRAPACKS,** 12 v. to 150 v. 30 mA., smoothed, filtered, 12/6; 2 v. to 480 v. and 150 v. (dual-vibrator), smoothed, filtered, 25/- (post. each 3/-).

**OPPORTUNITY BEFORE ELECTION  
SPECIAL OFFER WHILE STOCKS  
LAST**

Complete Portable Vehicle Loudhailer operates on 12 v. or 24 v. supply, output 6 watts. Can be fixed easily.

Comprising of Power Pack, Loudhailer, Hand Powered Microphone. Weatherproof. Very heavy metal case.  
PRICE EACH £7/10/-.  
Carr. & Packing 10/-.

### LOUDHAILER SPEAKER UNIT

Impedance 75 $\Omega$ , 6-8 watts output. Weight 10lb. Size 7 $\frac{1}{2}$ in. Depth 10in. Diam. Easy Fixing.

Weatherproof. Spun solid steel. Grey crackle finish.

PRICE £3/15/-.

Carrage & Packing 5/-.

**BOTH ITEMS IDEAL FOR  
SPORTS EVENTS, ELEC-  
TIONEERING AND SOCIAL FUNCTIONS.**

**BRAND NEW TAPE RECORDER MOTOR  
AT HALF MANUFACTURER'S COST**

Single phase motors suitable for tape recorders, radiograms, workshops, etc., etc. Has many uses. Reversible 200-230 v., 5in. oz. torque. 1,400 r.p.m. Capacitorstart. Weight 4 $\frac{1}{2}$ lb. Length overall 5in., spindle both ends.  $\frac{3}{16}$ in. x  $\frac{1}{16}$ in. Price, inc. P. & P. and capacitor, 55/-.

**SIEMENS HIGH SPEED RELAYS.**  
250 ohm. double coil. Price 8/6 each.

**OVER 100 VALUES OF 3,000 TYPE  
P.O. RELAYS ALWAYS IN STOCK.**  
PLEASE SEND FOR LIST.

### HEADPHONES. SPECIAL OFFER

**D.L.R.2** low resistance balance armature complete with band and plugs. Price 10/6 each. P. & P. 1/6.

**D.L.R.5** BALANCED ARMATURES 3/6 each or £2 per doz.

### ROTARY TRANSFORMERS

H.T.31 11.5 volt in 250 volt out at 125 m/a. price on application.

H.T.32 11.5 volt in 490 volt out at 60 m/a. price on application.

Type 47 9 volt in 20 watts 450 out at 50 m/a. price 35/-.

American 27 volt in at 1.75 amps. output 285 v. at .075 amps. Price 37/6 each. P. & P. 2/-.

American 12 v. in at 1.75 amps. output 285 v. at .075 amps. Price 57/6 each. P. & P. 2/-.

**HEAVY DUTY SLIDING RESISTORS**  
250 w. at 25 amps. Resistance 0.4 ohms. Price 12/6 each. P. & P. 3/-.

1 ohm. at 125 watts. 12 amps. Price 12/6 each. P. & P. 3/- each.

Both brand new and boxed.

**MINIATURE JONES PLUGS AND  
SOCKETS.** 6 pin or 8 pin, rear entry socket. 36/- doz., 3/3 each.

P. & P. 1/6 doz. Ex. units.

**Blower Motors**  
(6-12 or 27 volt)

Complete with blower 22/6.

P. & P. 2/6.

See our Jan. issue for more detailed stocks.

### SITUATIONS VACANT

**PYE TELECOMMUNICATIONS, Ltd.,** Ditton Works, Cambridge.

HAVE a number of vacancies for sales engineers, interesting work including systems planning for VHF multi-channel, Microwave TV Links and Aeradio, some vacancies cover survey and installation work in the field at home and abroad; excellent salary and prospects.—Apply in writing giving details and quoting ref. CET to the Personnel Manager. [6661]

**RADIO and TV engineer.**—Apply stating experience and wages required to N. P. Haynes, Lynnmouth, N. Devon. [6791]

**TRAINEE** required by old-established London retail radio and electrical business; good prospects for keen man; able to drive; state age and full details of career.—Box 6422. [6827]

**APPLICATIONS** are invited from suitably qualified engineers for vacancies on the development staff engaged on telecommunication transmission.

**ACTIVITIES** in this field are being expanded under the control of Dr. J. A. Pim, Ph.D. B.Sc. M.I.E.E. with special emphasis on work connected with:—

(a) **ELECTRONIC** circuits based on the use of transistors.

(b) **NETWORK** development including the design of filters and transformers.

These vacancies offer opportunities for wide experience and advancement in a compact working group, experimenting with and applying important new techniques. Senior and Junior positions are available. In both cases qualifications of Honours degree standard in Electrical Engineering, Mathematics or Physics are required but the actual possession of an Honours degree is not insisted upon. For senior grades several years additional, practical experience in appropriate fields will be expected.

**STARTING** salaries are offered in accordance with age and experience from £950 upwards for senior engineers and from £600 upwards for assistant engineers. All are pensionable staff posts with good prospects.

**AS** the main works are in London the technical staff can participate in the activities of the professional institutions and attend a wide range of lectures and courses. There is a liberal pension scheme in operation and assistance with housing difficulties, if required, may be available in approved cases. Excellent sports club and canteen facilities.

**APPLICATIONS** giving a preliminary outline of qualifications should be sent to the Staff Officer, Ref. 744/59, Siemens Bros. & Co. Ltd., Woolwich, S.E.18. [6698]

**SENIOR** TV and radio service engineer required by progressive company, South Bucks area, write stating age, experience, etc.—Box 5884. [6727]

**PERSONAL** assistant required by owner of London retail radio and electrical business of good standing; congenial position for capable and conscientious person; state age and full details of career.—Box 6423. [6828]

**DRAUGHTSMEN.** Vacancies exist in our industrial electronics group for draughtsmen with experience in electronic equipment design, preferably with H.N.C. or equivalent standard.

**HOUSING** assistance will be given to successful applicants from the London area.

**APPLICATION**, which will be treated in confidence, giving full details of education and career, to W. H. Sanders (Electronics), Ltd., Gunners Wood Rd., Stevenage, Herts. [6751]

**FIRST-CLASS** TV engineer required for Bush, Murphy, Pye dealers, good wages and conditions, must be able to drive, permanency to right man.—Garlicks, Northallerton, Yorks. [6707]

**TELEVISION** Engineers, able to drive, required by leading Murphy dealers; permanency, first-class salary and conditions.—Singer's, 211 Kilburn High Rd., N.W.6. Maj 6408. [6222]

**TECHNICAL** Sales Representatives required for Birmingham and Manchester areas by leading internal telephone company; must have all-round experience in selling and servicing of sound and telephone equipment.—Box 6407. [6822]

**STANDARD** Radio and Television Components.—Representative required calling on radio and television factories for radio control knobs and trade mouldings by well-known manufacturers.—Write Box Q.633, Willings, 362, Grays Inn Rd., London, W.C.1. [6764]

**COIL** winding inspector required, good rate of pay for the right man, must have first-class experience of coil winding, machine setting and wire checking.—Apply Personnel Officer (Factory Division), Decca Radar, Ltd., 2, Tolworth Rise, Tolworth, Surrey. [6798]

**AUDIO** Enthusiast.—Harrods, Ltd., require an engineer to service gramophone reproducers, manual and auto mechanisms; store closes 5 p.m., Saturdays 1 p.m.; permanent and pensionable position.—Apply Staff Manager, 44, Hans Crescent, S.W.1. [6781]

**ELECTRONICS** Laboratory.—Assistants are required in the research and development laboratories of a group working on guided missile systems; some experience of electronics is required; the work will provide excellent opportunities for successful applicants to improve their theoretical and practical knowledge.—Apply to Personnel Manager (Ref. 129A), de Havilland Propellers, Ltd., Hatfield, Herts. [6740]

# GILSON TRANSFORMERS

are popular with

- ★ Lighting
- ★ High Voltage
- ★ Fatigue test
- ★ Nuclear
- ★ Radar
- ★ Sound equipment

and other ENGINEERS

and have been

FOR MANY YEARS

It is therefore not surprising, though very gratifying to us, that they have now proved equally popular with AUDIO ENGINEERS and AMATEUR enthusiasts.

We are now producing

a range of

TRANSISTOR AUDIO TRANSFORMERS

including those specified for the

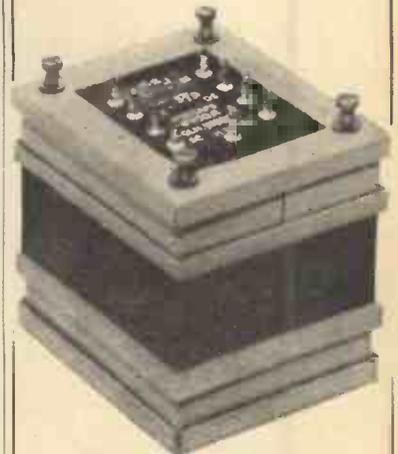

MULLARD

200 milliwatt AMPLIFIER

**SITUATIONS VACANT**

**O**PPORTUNITY for senior electronic engineer, B.Sc. or equivalent, versatile and with design experience of commercial equipment; good salary.—Write Box 5684. [0173]

**T**ELEVISION engineer required, must be experienced and able to drive; we hold all main agencies and are an old established firm in South Wales; we have accommodation and pay good wages.—Apply giving full particulars and also wages required to Box 5940. [6721]

**T**/V and Radio Manufacturer in West London area requires senior design/development engineer for receiver development and original design work; excellent salary, pension scheme.—Write, stating age, experience, qualifications, to Box 5882. [6705]

**R**ADIO Engineers.—To deal with an expanding design programme several engineers are required by the Radio Division of this Company. There are good prospects for the right men and conditions include sick pay and non-contributory pension schemes.

**DETAILS** of vacancies indicate types of experience which would be advantageous but any radio engineers with recognized qualifications are invited to apply.

**PRODUCTION** Engineering Dept.—Engineer to assist in prototype and pre-production work on new models.

**TEST** Engineering Dept.—Engineer to assist in design of test gear and other equipment associated with automation.

**DEVELOPMENT** Laboratory.—Junior Engineer to assist with receiver design.

**APPLY** in writing in first instance to the Employment Officer, The Ever Ready Co. (G.B.), Ltd., Radio Dept., Park Lane, Wolverhampton. [6734]

**T**RAINEE-SALES Representative required for interesting developments on industrial process (R.F.) heating; full training given on technical and sales matters; splendid opportunity for young, ambitious, well-educated man.—Write fully to Box 6349. [6810]

**E**LECTRONIC Engineer of Higher National standard required to assist in the development of high power R.F. generators; some experience in this similar field desirable; excellent prospects for enthusiastic man in a small but expanding company.—Apply Box 6227. [6784]

**A**CIRCUIT Engineer is required to specialize in transistor applicators for servo-amplifier work; this is a splendid opportunity for anyone wishing to become expert in this new field.—Apply to Personnel Manager (Ref. 124B), de Havilland Propellers, Ltd., Hatfield, Herts. [6738]

**D**RAUGHTSMEN.—E. K. Cole, Ltd., South-end-on-Sea, have vacancies for draughtsmen for the design and production drawing of electronic apparatus or radio and television for mass production.—Write, stating age, qualifications and experience, to Personnel Manager. [6800]

**R**ADIO mechanics, experienced; successful applicants will be based at London Airport, but must be prepared to travel to other parts of the country from time to time and even overseas for short periods.—Apply Mr. Thomas, Decca Navigator Co., London Airport, Feltham, Middlesex. [6797]

**L**ABORATORY technicians, senior and junior grades, required for research work on all aspects of television wire broadcasting.—Apply, stating age, qualifications, experience and present salary to C.E. Dept., British Relay Wireless, Ltd., 397, Albany Rd., Camberwell, S.E.5. [6795]

**T**ELEVISION Engineer with good technical and practical training to take charge department of projects for right man; wages to commence £12-£14 per week, also help with accommodation after proving period.—Electronic Precision Equipment, Ltd., Sutton Rd., Eastbourne. [6753]

**C**ARDIOLOGICAL technician, grade II, required at the Hospital for Sick Children, Great Ormond Street, W.C.1. Salary £390 to £520, according to age and experience, plus London Weighting, lunch and tea facilities.—Application forms obtainable from the Secretary. (C). [6793]

**R**EQD. Technical Assistant, expcd. in design or mainte. and repair of television and radio receivers, 16mm film projectors, etc., preferably qualified; salary up to £817 p.a.—Appln. form from Chief Engineer (57B), London County Council, County Hall, S.E.1. (116.). [6785]

**A**SSISTANT required by London Chartered Patent Agents with view to training for qualifying as a patent agent; knowledge of electrical or mechanical engineering; good opening for right type.—Write, giving details of age, experience, etc., to Box No. D.5054, c/o White's, Ltd., 72, Fleet St., E.C.4. [6786]

**C**HIEF Inspector.—London firm employing 150 in manufacturing special components for the electronic industry request application from men with experience in modern inspection methods and government procedure; good electrical knowledge essential because mainly electrical testing involved.—Write Box 5942. [6725]

**P**YE, Ltd., Radio Works, Cambridge, invites applications for positions as technical authors and illustrators for the compliance of maintenance handbooks dealing with radio equipment; applicants must possess command of English and some technical knowledge.—Applications, in writing, to Personnel Officer. [6771]

# TELENG

(REG. TRADE MARK)

## H.F. INDICATOR METER TYPE 2

Covers many desirable requirements for alignment work in lab. or test bay not usually met by H.F. Valve voltmeters, 3 to 300 mc/s. Shunt C at RF=1.5 pf. 20 m/V to 2.5 V in 3 ranges. Stabilised Valve Bridge Circuit. Very small insulated probe unit.

List No. I.M.2

### COMPLETE RANGE OF EQUIPMENT FOR EXTENDED AERIAL AND WIRED T/V SYSTEMS.

### WIDE BAND AMPLIFIERS

Mark III—40 to 220 mc/s (covering ALL Bands 1, 2 and 3) Gain 20 db  $\pm$  2 db. 75 ohms in and out, Rack Mounting.

Mark IV—A cheaper version of the impeccable Mark III. Same performance, steel case.

Type 3—40 to 70 mc/s (Band I) Gain 33 db  $\pm$  1 db, Wall Mounting. Indoor or Outdoor Cases. Line powering facilities, 75 ohms in and out. Extensively used for urban T/V relay systems.

**ALSO MAST BOOST AMPLIFIERS.** Any channel 1 to 13. Weather proof mast unit with cascade stage powered via signal co-ax from variable gain base unit. Total gain 18 db.

**SINGLE CHANNEL OR F.M. "STRIP" REPEATERS and AERIAL AMPLIFIERS.** Comprehensive range with or without A.G.C. Gains up to 56 db. Incorporating combining and splitting circuits.

**AND CABLE ACCESSORIES.** Equalisers, Splitters, Combiners, Tappers, Load Units, etc. Outdoor units with cable glands or indoor models available.

COMPREHENSIVE ILLUSTRATED LISTS ON REQUEST

### SITUATIONS VACANT

**ELECTRICAL** measurements/test engineer (senior) required for laboratory of electronic component manufacturers (London); would take charge of quality control, calibration, test specifications and A.I.D. inspection.—Write Box 6386. [6792]

**ELECTRONIC and Electrical Circuit Draughtsmen** required for interesting and varied work, first-class working conditions, salaries in excess of A.E.S.D. rates, 37½-hour 5-day week, three weeks' holiday with pay after 12 months' service, superannuation fund. Please write for appointment to: PROMECON, LIMITED, Empire House, Hanger Green, Western Avenue, Ealing, W.5 (adjoining Park Royal Station). [6714]

**SALES:** Leading ultrasonic flaw detector manufacturers seek suitably qualified and experienced man to be responsible for U.K. sales organization; technical foundations laid for rapid expansion to £150,000 annual sales; good starting salary, pension scheme and generous terms offered.—Ultrasonoscope Co, Sudbourne Rd., Brixton. [6772]

**COMMUNICATIONS Engineer,** practical man for development work, previous experience electronic mechanical devices, including magnetic recording; C. & G. in telecomms. or similar qualifications desirable; well-established company with pension scheme.—Full details of previous career and salary required to S. E. Opperman, Ltd., Boreham Wood, Herts. [6765]

**THE Research Laboratories of the General Electric Co., Ltd.,** North Wembley, Middlesex, have several vacancies for technical assistants; applications are invited from young men who are free from National Service commitments.—Please write to the Staff Manager (Ref. RLB 116), giving details of experience, qualifications and age. [6744]

**MURPHY RADIO, Ltd.,** have vacancies in the radio and television laboratories for senior and junior engineers; these posts offer excellent prospects of advancement.—Applications, giving full details of experience and qualifications, should be addressed initially to Personnel Department (R6), Murphy Radio, Ltd. Welwyn Garden City Herts. [6568]

**YOUNG Electronic Engineer** required for service and maintenance of specialized electronic machinery; some travel involved; qualifications not so important as an understanding of the fundamentals of electronics; an out of the ordinary job with excellent prospects for a man with energy and initiative.—Apply Box 6226. [6783]

**DRAUGHTSMAN, Senior or Intermediate,** required by Electronic Instruments, Ltd.; previous electronic experience not essential but desirable; 5-day week, canteen, social club, pension scheme; application for this vacancy should be made now. Please write to Electronic Instruments, Ltd., Lower Mortlake Rd., Richmond, Surrey, or 'phone Richmond 5656. [6706]

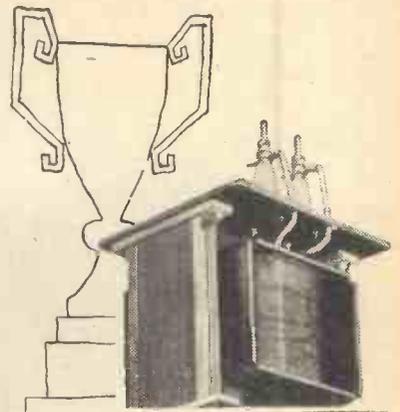

**CINEMATOGRAF Engineer** required for servicing of 35mm and 16mm projection equipment in the Middle East based in Cyprus. Must be car driver and preference will be given to single applicants. Periodic U.K. leave, return passages paid and local leave. Pension scheme. Write with details of past experience to R.A.F. Cinema Corporation, Africa House, Kingsway, W.C.2. [6756]

**FIRST-CLASS Electronic Service Engineer** required to maintain Electrical and Mechanical Instruments throughout the United Kingdom and abroad. Interesting variety of work. Apply in writing with full details, age, qualifications, etc., to Personnel Officer, Davy and United Engineering Co., Ltd., Darnall Works, Prince of Wales Road, Darnall, Sheffield 9. [6755]

**GRADUATE or experienced Electronic Engineer** required to assist in the design and development of new Electronic installations including Servo mechanisms. Excellent prospects. Apply in writing with full details, age, qualifications, etc. to Personnel Offices, Davy and United Engineering Co., Ltd., Darnall Works, Prince of Wales Road, Darnall, Sheffield, 9. [6754]

**DRAUGHTSMEN and Designer Draughtsmen** are required by the electronic division to meet an expanding and varied programme of work; these permanent posts will interest all draughtsmen who wish to obtain a position with a good salary which will broaden their experience.—Write, giving details of age, experience, etc., to Personnel Department (E.30), Murphy Radio Ltd., Welwyn Garden City, Herts. [6782]

**EXPERIMENTAL officers/assistant experimental officers** required by Ministry of Supply at Royal Ordnance Factory in South Wales for routine health physics operations in workshop processing radioactive materials, operation and maintenance of radiation monitors and other electronic instruments in correct working order, quals.: H.S.C. (science) or equiv. but general science degree including physics an advantage, applicants should be familiar with engineering workshops, experience in duties above essential, selected candidates may be required to undergo training, appointments according to age, experience, etc.; salary within range E.O. (min. age 26) £900-£1,105. A.E.O. £357/10 (age 18) £780.—Forms from M.L.N.S., Technical and Scientific Register (K) 26, King St. London S.W.1, quoting A 3/7A. Closing date March 12, 1957. [6745]

# out of the top drawer

One of our many contented customers described our service as "the kind you dream about but seldom get." This is also the kind of service that he will enjoy from the special transformer we designed and made for him. As with all our instruments, it received meticulous, painstaking attention during every stage of its manufacture resulting in a unit of the finest possible performance and reliability. Right out of the top drawer, in fact.

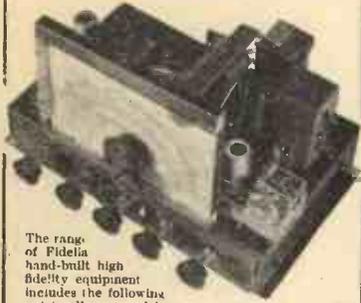

**SAVAGE TRANSFORMERS LTD.**

Candler System Co., Denver, Colorado, U.S.A.

### SITUATIONS VACANT

**YOUNG** electronics engineers (male) with good honours degree and at least three years' works practice wishing to improve their position by entering the service of a medium-sized progressive company, are invited to communicate in strict confidence with the Managing Director of Newport Clocks, Ltd., 102, Hatton Garden, London, E.C.1. (Holborn 6647.) [6747]

**SCOTLAND:** Electronic engineer, opportunity for young man with basic technical knowledge to undertake servicing of very varied electronic equipment, to develop, and eventually control a service department which will be located in Glasgow; commencing salary £550 p.a., with increments of at least £25 p.a. every six months up to £750 p.a.; staff profit sharing. —Box 6047. [6748]

**TELEVISION design engineer.**—E. K. Cole, Ltd., require a senior design engineer to work in the laboratories of their subsidiary company in Sydney, Australia; bachelor preferred, but consideration given to married men; salary according to qualifications.—Apply, stating age, qualifications and experience, to Personnel Manager, E. K. Cole, Ltd., Southend-on-Sea. [6731]

**ENGINEERS** required for installation and service duties in connection with nuclear instrumentation and V.H.F., A.M. and F.M. communication equipment; applicants should have sound technical electronic training and, preferably, servicing experience in the electronic field.—Write, stating age and details of experience, to Personnel Manager, E. K. Cole, Ltd., Southend-on-Sea. [6730]

**RADAR** and radio experienced men with Higher National or C. & G. Certificates in electrical engineering and telecommunications wanted by a firm of consulting geophysicists; initial salary £900; permanent career offered to men of initiative, prepared to accept responsibility and work in camp conditions in all parts of the world; liberal home leave and allowances.—Apply Box 4849. [0188]

**CHIEF Mechanical Designer** required for leading radio and TV manufacturer, West London area; applicants must have ability to handle the design/development mechanical work on receivers up to production stage. Knowledge of modern materials and manufacturing techniques essential. Excellent salary and prospects, pension scheme.—Write, giving full details, to Box 5890. [6709]

**ELECTRONICS Assistants** with experience of the circuit layout, mechanical design and manufacture of prototype electronics equipment are offered positions in the laboratory engaged in work on the new de Havilland project; applicants would find that a knowledge of machine tool operation would be advantageous.—Apply to the Personnel Manager (Ref. 60B), de Havilland Propellers, Ltd., Hatfield, Herts. [6739]

**ROYAL DEVON & EXETER HOSPITAL.** EXETER, invite applications for the post of Recordist Grade I in technical charge of the Electrocardiography and Electroencephalography Department; salary scale £540×£20(4) ×£25(2) to £870 plus £25 technical maintenance allowance; candidates should have a sound knowledge of electrical and electronic equipment, with five years' experience of similar work in hospitals or industry. APPLICATIONS, stating age, education, qualification and previous experience, together with testimonials or the names of two referees, to the Hospital Secretary. [6808]

**MUIRHEAD & Co., Ltd.**, Beckenham, Kent, require Design Draughtsman, H.N.C. (Mech.) for work on Design and Detailing of high class electro-mechanical instruments. Good prospects for men of proven experience and ability. A Pension Scheme is in operation and the Company has its own Sports Ground. Excellent recreational, social and canteen facilities are available. Please write giving details to the Personnel Manager. [6757]

**RADIO technicians** required by International Aeradio, Ltd. for overseas service; permanent and pensionable positions; inclusive salary from £894 per annum to £1,373 per annum, tax free, according to marital status; free accommodation; kit allowance; free air fares; generous U.K. leave.—Qualified candidates, to whom replies only will be sent, please write, quoting RT to Personnel Officer, 40, Park St., W.1. [0262]

**AMBASSADOR RADIO & TELEVISION, Ltd.**, have vacancies for Development Engineers in their television and radio laboratories, due to an expanding production programme; men of degree standard or its equivalent are preferred, but lack of recognised qualifications will not exclude, providing the applicant has a keen technical interest and possesses initiative; previous experience of this class of work is an advantage, but is not essential. WRITE in first instance, giving details and salary required, to Technical Director, Princess Works, Brighouse, Yorkshire. [6821]

**ELECTRONICS technician.**—May & Baker, Ltd., Dagenham, Essex, require an electronics technician (aged 25-30) to construct and maintain electronic apparatus for research in the laboratories of their Biological Research Group; workshop experience is expected; ability to design circuits would be advantageous but is not essential; the position requires a keen practical interest in electronics and personal initiative, since the work is varied and not routine; salary according to experience and qualifications.—Apply initially by writing, quoting reference No. 17, to the Personnel Officer. [6742]

first book of its kind  
to be published on  
fixed capacitors!

## RADIO AND ELECTRONIC COMPONENTS

### Vol. 3. Fixed Capacitors

By G. W. A. Dummer, M.B.E., M.I.E.E.

This book will enable the user to choose the best component for his particular requirement. It discusses the characteristics and specifications of all types of fixed capacitors and includes comparison charts—so that the characteristics of similar types of components can be seen at once. Experimental and future types of fixed capacitors are also dealt with and a unique bibliography deals with literature and patents on the subject. Illustrated.

From all booksellers, 45/- net.

**TELEPHONE SETS**

IN ATTRACTIVE BAKELITE CASE  
BRAND NEW EX-GOVT. "F" TYPE

Ideal between 2 or more positions up to five miles. STORE FACTORY AND OFFICE BUILDINGS; GARDENS; HOUSE. 2 sets in individual carrying cases, complete with long life batteries, bells, ringer and 100ft. telephone cable.

£7.10.0 per pair  
Carr. (G.B.) 7/6

**SPECIAL OFFER OF AERIAL MASTS**

R.A.F. TYPE 50

**36ft. HIGH**

Kits comprise—9 2in. dia. Tubular Steel (Copper Plated) Sections of 4ft. length, top-section and base, Pickets, Guys and Fittings.

YOU can purchase this normally expensive MAST for a fraction of its cost, i.e.,

**£7.10.0 ONLY**

(Carr. 7/6)

Please add £1 for (returnable) wooden carrying case.

The MAST is particularly suitable to take aerials for Tx., Rx., F.M. and T.V. (especially COMMERCIAL), and has many other uses. Extra 4ft. sections can be supplied at 11/6 per section.

U.S.A. 45ft. AERIAL MAST (10 sections 4ft. 6in. x 2in., guys, etc.). This entirely new and complete set in canvas carrying bag £12/10/- each, carr. 12/6 or 2 sets with additional low and high frequency antenna £25 pair. Carr. extra.

**ARMY TYPE 32FT. MASTS** similar to above but 10 lin. screw-sections, suitable for permanent lightweight installation. Kit in canvas bag, £5/10/-, carriage 7/6.

**Brand New TELEPRINTER EQUIPMENT**  
**CROED AUTOMATIC TRANSMITTER**  
No. 654/N for telegraph working, in original cases.

**RECTIFIER UNITS 26B.** Input 110/230 v. A.C. Output 80+80 volts. In original cases.

**TERMINAL UNITS 80+80.** Can be used with above 26B units.

**TELEGRAPH RELAYS 299 AN.**

Also other equipment.

**TELEPHONE SWITCHBOARDS**

- Rectifier Supply Unit
- 10 years' spares
- Fused Protector
- Head and Breast Set
- SWITCHBOARD A, D, 1240.

The complete installation as manufactured for the Air Ministry has 2 exchange lines + 14 externs. + operator. Easily modified. Data sheets and photos will be sent for 20/- (returnable).

**G.P.O. SWITCHBOARD TL.1806** 10 lines, thru' connexion, £12/10/-, carriage 15/-.

Quantity & Export enquiries are invited for above items, also other Electronic Component parts.

**HATTER & DAVIS (RELAYS) LTD.**

126, KENSAL ROAD, LONDON, W.10. LADbroke 0686

**SITUATIONS VACANT**

**DEVELOPMENT Engineer** with knowledge of telephone practice required for work on voice frequency communication equipment, good salary and responsible position available in medium-sized company. Engineer with initiative and experience in designing equipment for production; well-equipped laboratory in modern factory with canteen in Sunbury, Middx. area.—Apply, stating age, qualifications, experience and salary required, to Box 6225.

**BRITISH OVERSEAS AIRWAYS CORPORATION** urgently require radio/electrical mechanics for employment as simulator mechanics working on electro-mechanical analogue computer equipment at London Airport. Duties include maintenance/overhaul of amplifiers, servo-mechanisms, etc., and circuit wiring. Some workshop experience and knowledge of aircraft would be an advantage. Hourly rates of pay allow flat rate of £10/14 for 44-hour week, attracting proficiency pay of 3d an hour, shift working averaging 65/- per week.

**VACANCIES** also exist FOR simulator engineers for servicing and design development work in connection with modifications on electronic flight simulators, employing analogue computers; salary, including shift and allowances approximately £950 to £1,100 per annum. Generous insurance, sickness and pension schemes; excellent staff restaurant facilities; wide range of sports and social club activities.—Write, giving details of experience, to Assistant Staff Manager (Appointments), B.O.A.C., London Airport. [6826]

**JUNIOR development engineers and technicians** are offered an opportunity to broaden their experience and scope to use their initiative in a newly-formed department primarily concerned with the development of electronic equipment for the Services; there are interesting positions for a number of grades of electronic engineers with or without experience in this field of development.—Those interested should write giving details of career to date to the Personnel Manager (REF. JE.), The General Electric Co., Ltd., Spon St., Coventry. [6657]

**SELENIUM Rectifiers.**—Senior Executive required by expanding company in North Midlands area to direct research and production of selenium Rectifiers; a knowledge of Germanium and Silicon Rectification would be useful; this is an important appointment with a progressive organisation and offers exceptional opportunities to the successful applicant with suitable experience, initiative and energy.—Applications marked "PERSONAL" to Managing Director, Box 5146, quoting details of education and training, qualifications, career, age and salary required. All applications will be treated in strictest confidence. [6559]

**ELECTRONICS engineer.**—A vacancy exists for a qualified electronics engineer to take charge of a small Development Laboratory in the West London Area; the work is in connection with the design and manufacture of electronics equipment for use in the design and testing of supersonic aircraft; experience in any of the following would be an advantage: analogue computers, digital computers, servo mechanisms and low power pulse circuits; good salary and excellent prospects for an engineer with initiative and enterprise.—Apply quoting Reference No. AC/CHERT/R. 195W to: Personnel Manager, A. V. Roe & Co., Ltd., Green-gate, Middleton, Manchester. [6743]

**AIRCRAFT electrical engineers, senior & junior** are required for development of aircraft relays and switch gear, the work is of great interest involving electromechanical principles, experimental and manufacturing techniques; initiative and ability to handle all stages of development are essential for senior posts; experience of similar work is not essential for the junior posts although applicants should have completed National Service; excellent prospects and good salaries for the right people; contributory pension scheme.—Apply in writing quoting ref. No. B 7055 to Employment Department, Thorn Electrical Industries, Ltd., Great Cambridge Rd., Enfield. [6778]

**THE Decca Navigator Company, Ltd., Technical Publications Section.**—Require a radio engineer with an interest in technical writing and/or training, to undertake the preparation of handbooks and to take charge of short training courses on specialist radio navigational equipment, ex officers or senior N.C.O.s with suitable technical qualifications and experience would be considered; this new vacancy, resulting from the rapid and continuous expansion of the Decca Navigator System, offers excellent prospects in a field of unusual technical interest.—Apply in writing, giving full details to Personnel Officer, Decca Navigator Co., Ltd., Shannon Corner, New Malden, Surrey. [6726]

**A VACANCY** occurs for a development engineer in a design group concerned with a wide range of small transformers of types used in radio equipment, fluorescent lighting and similar applications. Preference will be given to applicants having experience of this class of work, but young engineers with a sound basic training and limited experience will be considered, and, if successful, will have the opportunity of gaining practical knowledge of design problems met in fulfilling commercial and military specifications. A attractive salary is offered together with good future prospects, the company's main laboratory is situated in the London area but there are also several vacancies in our Portsmouth unit.—Please reply, giving details of qualifications and experience to Box 6394. [6811]

## SITUATIONS VACANT

**ESTIMATING.** E. K. Cole, Ltd., Malmesbury Wilts. vacancy for estimator. Company is engaged on electronic equipment. Applicant should have had a wide experience in estimating this class of work and small quantity production. Good practical shop training is considered essential. An engineering apprenticeship desirable. Good salary will be offered and there is a possibility of housing accommodation being available to suitable applicant. Full welfare facilities and contributory pension scheme. Please apply in writing with details of education, training and experience to Personnel Manager. [6758]

**ELECTRONICS engineer.**—The Morgan Crucible Co., Ltd., wishes to engage a young engineer to work in a section which is responsible for the installation and maintenance of the instruments in use in their factories and laboratories; candidates, aged 25/35, should for preference be of ONC standard, and must have had experience in servicing and building factory and laboratory test equipment and have some knowledge of proprietary electronic equipment; this post is permanent and pensionable, with good working conditions, canteen and 5-day week.—Please apply, in confidence, to the Staff Department, Barseley Church Rd., S.W.11, and quote Ref. UZ/15. [6805]

**ENGINEERS,** assistant engineers and laboratory assistants are required by Louis Newmark, Ltd., for its expanding laboratories at New Addington, Surrey; the work includes the design, development and flight testing of automatic pilots for helicopters; (a) engineers with degree or equivalent and/or experience in design and development of light electro-mechanical devices, servo-mechanisms or aircraft electrical equipment; (b) assistant engineers with O.N.C. or Inter-B.Sc. and/or experience in development of light electro-mechanical devices; (c) laboratory assistants with experience of electrical, electro-mechanical or electronic development work.

**PENSION scheme.**—Apply in writing giving full particulars to Personnel Officer, Prefect Works, Purley Way, Croydon, Surrey. [6724]

**ELECTRONIC Engineers** who wish to specialise in the handling of Hollerith Electronic Computers (HEC) are invited to apply for employment with The British Tabulating Machine Co., Ltd. The applicants should have had varied experience either in industry or in the services (i.e., P.O. Radio Electrician, E.N. and etc.) on radar, television or similar complex electronic equipment. Preference will be given to qualified men holding H.N.C. Electronics, H.N.C. Electrical or similar City and Guilds Radio and Telecommunication; although this will be waived for ex-E.M. Forces candidates who have received appropriate service training, but a high standard of mathematics is desirable. Good salaries are paid during training and subsequent progress will be according to ability. The staff appointment is with a non-contributory sick pay scheme, a contributory pension scheme and etc. Suitable qualified applicants aged 25/25 years of age should apply in strictest confidence to the Staff Manager, Field Engineering, The British Tabulating Machine Co., Ltd., 17, Park Lane, W.1. [6732]

**TECHNICAL Assistants Grade I** required by the Kumasi College of Technology, Ghana, Department of Electrical Engineering (M2C/41848/WF) and Radio Research Laboratory (Ionosphere Research) (M2C/42178/WF). Appointment for two tours normally of ten months each in first instance, either on agreement with prospect of pensionable employment salary scale (including 5% non-pensionable addition), £871, rising to £1,060 a year, or (b) on contract with above salary scale plus 10% contract addition and gratuity at rate of £150 a year. Commencing salary according to experience. Outfit allowance up to £60. Furnished quarters available for officer and family. Free passages. Leave on full salary normally granted annually. Preservation of superannuation rights under F.S.S.U. Scheme might be arranged. Candidates must possess H.N.C. or equivalent and have experience in research laboratories of manufacturer of telecommunications equipment or of an operating organization.—Write to the Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience, and quote the reference number shown against the post applied for. [6875]

**I.B.M. UNITED KINGDOM LIMITED** requires engineers for training on electric and electronic data processing machines (punched card accounting machines and digital computers). Men aged 21-30 who have reached H.N.C. standard or equivalent and who are desirous of a career in office automation are invited to apply. Selected men will first receive a period of basic practical and theoretical training at the Company's training centre in London, followed by approximately four months' training with senior engineers on installations in customers' offices and will then be appointed to specific installations, every consideration being given to preferred locations. Subsequent training, mainly on computers, arranged as necessary. Starting salary is £600 p.a., which is increased by £50 at the end of the four months' basic course. Subsequent increases based on merit will reach £1,000 in 4-8 years, and there are excellent opportunities for promotion. Free insurance comes into operation after one year's service. Applications for next course (March) as soon as possible in own handwriting, please, to the Personnel Manager, 100, Wigmore St., London, W.1, quoting Ref. C.E.22. [6715]

#### TRANSFORMER DEVELOPMENT

Junior Development Engineer is required to assist in the design and development of transformers and coils for use on telecommunications and other electronic equipments. An interest in the economic aspects of design and development. Preference will be given to those persons possessing a technical background. Applicants should write giving details of experience, etc. to the

**Personnel Department,**  
**Messrs. Pye Telecommunications Ltd.,**  
**Haverhill, Suffolk.**

#### NEW ZEALAND

We are looking for a

"DESIGNING/ENGINEER DRAFTSMAN"

who is experienced in car radio and T.V. receiver design.

A single man is preferred and we will pay passage to New Zealand for a suitable man. Application by Air Mail (which will be treated as strictly confidential) to: **The Secretary, Autocrat Radio Limited, P.O. Box 47, Ellerslie, Auckland, New Zealand, S.E.6.** Should give all personal details, experience, qualifications, education and indication of salary expected.

**SPECIAL OFFER  
G.E.C., B.T.H.  
WESTINGHOUSE  
GERMANIUM CRYSTAL  
DIODES**

1/- each. Postage 2½d.

Diagrams and three Crystal Set Circuits Free with each diode.

A large purchase of these fully GUARANTEED diodes from the manufacturers enables us to make this attractive offer.

**COPPER INSTRUMENT WIRE**  
ENAMELLED, TINNED, LITZ,  
COTTON AND SILK COVERED

All gauges available.

B.A. SCREWS, NUTS, WASHERS,  
soldering tags, eyelets and rivets.  
EBONITE AND BAKELITE PANELS.  
TUFNOL ROD, PAXOLIN TYPE COIL  
FORMERS AND TUBES.

ALL DIAMETERS.

SEND STAMP FOR LIST. TRADE SUPPLIED.

**POST RADIO SUPPLIES**  
33 Bourne Gardens, London, E.4

**NEWTON CHAMBERS & COMPANY LIMITED  
THORNCLIFFE NEAR SHEFFIELD**

**COMPUTER TECHNICIAN**

The Company invite applications for an appointment, effective from 1st May, 1957, as STAFF TECHNICIAN to undertake the maintenance of the Company's electronic computer installation which serves the Company's accounting and other administrative functions. Applicants must be of at least H.N.C. standard in electronics or equivalent and have some practical experience in the field of electronics—possibly gained in a radar branch of H.M. Forces. Full training in the construction and working of this particular installation would, however, be given. An attractive starting salary would be paid. Please reply listing relevant details, including Forces experience, to STAFF OFFICER.

**RADIO AMATEURS AND ENGINEERS.**  
We stock the Leak TL/10 and "Point-One" Amplifier and Pre-Amplifier, the new 4-speed Monarch Changer, W.B. Speakers and Cabinets, T.S.L. range of goods, and Price and Bernard's Books. We also supply valves, condensers, resistors and a wide range of components at keen prices. 6d. in stamps will bring a list from: *The Mail Order Specialists.*

# "SUPERLYTICS" HIGH QUALITY ELECTROLYTICS

These small, high capacity electrolytics have the electrical advantages of paper dielectric, due to the use of carefully selected materials and special processing.

Their inherently low-leakage current makes them suitable for very low-frequency amplifiers where high I.R. is essential for the lower registers. Telephone equipment and circuitry working unattended over long periods benefit from the long life factor of "Superlytics".

The graph shows the extremely low leakage in comparison with that of the standard electrolytic. I.R. is maintained even after six months idling and 100 megohms/ $\mu$ F is attained after only three minutes of applied working voltage, rising rapidly to 10,000 megohms/ $\mu$ F if left in circuit.

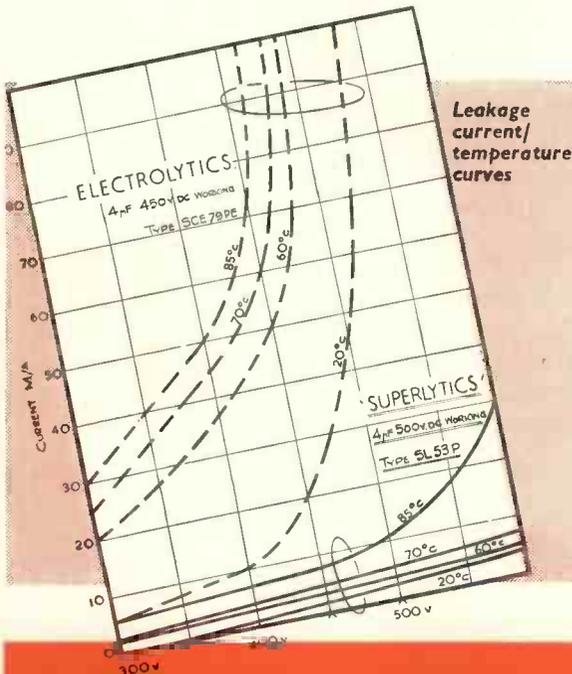

**Capacity Tolerance:**  $-20\% +50\%$ .

**Working Temperature** is  $-20^{\circ}\text{C}$ . to  $85^{\circ}\text{C}$ . without voltage derating; if raised to  $100^{\circ}\text{C}$ . the life may be only a thousand hours or so.

**Polarity** is clearly indicated by colour of end seals.

Dear Sirs,  
  
For some weeks past, as you know, we have been giving your new 5-core SAVBIT solder a very thorough test in our factories.  
  
You will be glad to hear that we find this new product of your Company highly satisfactory, and that it fully upholds the claims which you make for it as regards the reduction of wear upon the soldering iron bits used by our operatives.

It occurred to us that you might care

## BUSH RADIO LTD

W. T. DEUCHRASS, WORKS DIRECTOR, states that Bush Radio Ltd. have tested Ersin Multicore Savbit Type 1 alloy on the production line and found it to be highly successful.

Bush Radio Ltd. are now using substantial quantities of this 5-core solder which reduces the amount of copper absorbed from the solder bit, extending the useful life of bits by up to 10 times.

Savbit costs less than 60/40 alloy. Full technical details and advice will be gladly supplied by the Multicore Technical Service Department on request.

British Patent Nos. 704,763. 721,881.

### SAVBIT PACKS

#### 7 LB. REEL

Savbit Type 1 Alloy which contains 5 cores of non-corrosive Ersin Flux is supplied in 3 gauges on 7 lb. reels for factory use. Ersin Multicore 5-core Solder is also available on 7 lb. reels, in 6 standard tin/lead alloys and 9 gauges. Prices on application.

#### 1 LB. REEL

Approximately 170 ft. of 18 s.w.g. Ersin Multicore Savbit Type 1 Alloy is wound on the 1 lb. reel. This is a convenient quantity for factories where each operative uses a comparatively small quantity of solder at a time. 15/- each (subject).

#### SIZE 1 CARTON

5/- each (subject)

Savbit Type 1 Alloy is also available in cartons containing 53' of 18 s.w.g. Ersin Multicore Solder is also available in 4 other specifications.
