MODERN technical books

A complete list of Radio and Television books published for "Wireless World" will be sent free on application to the address below.

RADIO LABORATORY HANDBOOK

By M. G. Scroggie, B.Sc., M.I.E.E. This well-known practical work describing laboratory equipment and methods of operation has now been entirely re-written and greatly enlarged. Among the subjects considered are layout and furnishing of premises, methods of measurement, sources of power and signals, indicators and other instruments and circuit and signal measurements. There is a comprehensive reference section, and the text is supplemented by many photographs, diagrams, graphs and tables. Sixth Edition.

FOUNDATIONS OF WIRELESS

By M. G. Scroggie, B.Sc., M.I.E.E. Covers the whole basic theory of radio, from the most elementary principles. Receiver, transmitters, aerials, power supplies and transmission lines are dealt with, and television and radar techniques are introduced. No previous technical knowledge on the reader's part is assumed. $8\frac{3}{4} \times 5\frac{1}{2}$ in. 328 pp. 236 illustrations.

SHORT WAVE RADIO AND THE IONOSPHERE

By T. W. Bennington (Engineering Division, B.B.C.). Shows how existing ionospheric data can be applied to everyday problems of short-wave transmission and reception. An edition of the work was first published six years ago under the title Radio Waves and the Ionosphere. This is to all intents and purposes an entirely new book. It has been completely re-written, re-set in a new type, and 56 illustrations have been added. $8\frac{3}{4} \times 5\frac{1}{2}$ in. 138 pp. 61 illustrations. Second Edition.

ADVANCED THEORY OF WAVEGUIDES

By L. Lewin. Sets out the various methods that have been found successful in treating waveguide problems—the author selecting for discussion a number of topics as representative of the field in which the centimetre-wave engineer is now engaged. Many of these examples are concerned with the rectangular waveguide, but the reader will be able to apply the general principle to most of the cases encountered in practice.
