

New Zenith Allegro® brings deeper, richer sound to 4-channel.

Here's how:

You're looking at the Zenith Allegro tuned port.* It's part of a sound system with a difference.

You see, a lot of speakers (even air-suspension types) trap deep, rich bass inside the speaker cabinet, so you never hear it. But this tuned port channels out more of that sound, so you can hear it. (In fact, if you put your hand over the port you can even feel it.)

With a specially-designed woofer for solid bass and mid-range tones, plus a horn-type tweeter for crystal-clear high notes, Allegro delivers virtually the full range of sound of the original performance. And does it so efficiently that other systems with comparable-size air-suspension speakers need amplifiers with twice the power to match Allegro's overall sound performance.

But that's not all. Because behind this remarkable speaker system is some equally remarkable componentry.

A solid-state tuner/amplifier designed specifically for use with Allegro speakers, and featuring AM, FM, and even 4-channel matrix FM reception, where available. A 4-channel discrete 8-track tape player. A precision record changer for 4-channel matrix records.

And you can even play (and greatly improve the sound from) stereo broadcasts, tapes, and records.

Zenith Allegro 4-channel. Once you hear it, you'll know how 4-channel sound should sound.

patent pending

The surprising sound of Zenith.

ZENITH Allegro

The quality goes in before the name goes on™
