

Phase Linear 8,515,200 watts later.

Back in '71 Phase Linear was Bob Carver, an audiophile with 200 square feet in the basement of an A & P store in the Pacific Northwest and one all-consuming obsession: to design and build the world's most powerful stereo amplifier.

Today Phase Linear Corporation is an acknowledged leader in high power technology, selling a complete line of amps and pre-amps throughout the world, operating out of one of the most advanced stereo component plants in the industry.

Phase Linear is now a household word among serious listeners, a word synonymous with power, quality, reliability and way-out-front technology.

And Bob Carver, Steve Johnson and A. P. VanMeter have come to be

recognized as the gurus of state-of-the-art amplifier design and development.

Phase Linear has dispensed over 8½ million watts of power to music lovers everywhere, starting with the famous super reliable, virtually distortion free Phase Linear 700, the first successful 700 watt amplifier. The popular Phase Linear 400 watt amplifier quickly followed. The incredible Phase Linear 4000 pre-amplifier was then perfected followed by a smaller version, the Phase Linear 2000. Recently the Phase Linear 1000 Noise Reduction System was added to the line . . . and there are many more advanced products in the wings.

Technological milestones along the way have included a unique Amplifier Protection Circuit (Patent # 3,727,148).

the first practical Expansion System, the innovative Auto Corra tor Noise Reduction System and a unique Ambience Injection System for pre-amps.

Phase Linear has come a long way from that basement lab of Bob Carver's. But products are still made one at a time, and one out of every three people in production is involved in quality control or testing.

And that's the way it'll be for the next 8,000,000 watts.

Phase Linear
A POWERFUL DIFFERENCE
